3 per cent. 1957 and 1958 were unchanged at Rs. 99-13 and Rs. 99-10, respectively, at which rates, the Reserve Bank was a buyer. 3 per cent. 1959-61 was maintained at Rs. 98-2, but there were buyers at that rate. 3 per cent. 1963-65 was in demand an anna higher at Rs. 95-3. 3 per cent. 1964 had business at the self-same rate of Rs. 95. 3 per cent. 1966-68 changed hands an anna higher at Rs. 93-5. 3 per cent. 1970-75 gained As. 2 to Rs. 90-2, at which level there were buyers. Business in 3 per cent. 1986 Conversion Loan was put through an anna higher at Rs. 77-8. 3½ per cent. 1961 was in demand As. 2 higher at Rs. 99-13. 3½ per cent. 1964 was done an anna higher at Rs. 98-12. 3½ per cent. 1965 gained an anna to Rs. 98-11, following the rise in the Reserve Bank's selling rate to that level. State loans were dull with no change in prices.

There was a marked fall in the value of rupee in terms of the U.S. dollar during the week under review, following the recession in sterling. The banks' selling rate of ready dollars moved from Rs. 476¼ per $100 to Rs. 477¾ per $100 and their buying rate from Rs. 472¼ per $100 to Rs. 473½ per $100. In New York, spot sterling weakened from $2.80¾-2.80¾ to $2.80¾-2.80½ and three months' forward from $2.79¼-2.79⅜ to $2.78¾-2.79. Transferable sterling declined from $2.78-3/5-2.78-7/10 to $2.77⅞-2.77-17/20.

LINSEED SUPPLIES SCARCE

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 28*th May*

There has been no improvement in arrivals from the centres. Firm conditions upcountry, to which the continued abnormal prices of mustard oil have contributed largely, have caused a local scarcity of ready goods. To this unhappy state of affairs has been added a decline in the linseed oil market. Seed prices have shown no sympathetic reaction whatever and mills are unable to work profitably. Overseas prices for linseed oil are out of parity and conclusions have yet to be reached about the fate of former contracts, only a proportion of which have already been implemented. Local shippers have withdrawn from the market.

The latest available quotations are: Ready Rs. 22-10 and May-June Rs. 22-8 per maund.

HIDES ARRIVALS LARGE

(*From Our Own Correspondent*)

KANPUR, 26*th May*

During the week under review, the hides and skins market ruled quiet. Fresh arrivals were considerable, though the contribution to the total by the local butcheries was small. It was reported that consumption of meat had gone down considerably, due to extreme heat. The main purchasers were the local tanners and the Madras dealers.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 260 and 3rd grade Rs. 110 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces.

GOLD SHOOTS UP

(*From Our Own Correspondent*)

BOMBAY, 30*th May*

Gold captured the limelight of trading in the bullion market during the week under review, with a rise of Re. 1-11 per tola in forward and Rs. 2-11 in ready. This appreciation in the value of gold was in refreshing contrast to the successive recession noted in the previous four weeks which had brought down the yellow metal by Rs. 7-11 per tola in the forward section and by Rs. 6-8 in the ready. Silver, on the other hand, ruled irregularly lower, the decline being more marked in the ready section than in the forward.

The rise in gold was due to a spurt in demand for ready metal from Madras, in the face of lower arrivals. The result was that the premium for ready over forward widened from Re. 1-12 to Rs. 2-12. In silver, ready, which had dropped by Rs. 4-11 over the week, was affected by the heavy arrivals of Tibetan silver coins. These arrivals were evidently the result of import commitments that had been made earlier. With the decline, registered during the week, the drop in ready price over the last four weeks comes to Rs. 13-1 per 100 tolas. At the same time, the premium for ready over forward has narrowed down from Rs. 7 to Rs. 3-8. Forward silver was marked down by only Re. 1-3 over the week, thanks to a partial revival of speculative support.

The large arrival of silver coins from Tibet, despite the heavy fall in prices in the local market, is explained in market circles thus: the silver coins now being brought in were purchased at very low prices long before the free import of silver from Tibet was permitted and the import duty was doubled. The transport of these coins from that country to India is also arduous and takes a long time to reach the markets of India. Despite the higher import duty and the recent fall in local prices, the importers of these coins have a fair margin of profit.

To revert to the market trend. Forward silver (26th June settlement) dropped from Rs. 167-12 to Rs. 166-4 early in the week. After a sizable improvement to Rs. 167-14 yesterday, it reacted to Rs. 166-9 at the close today.

Ready silver (.996 mint) slumped from Rs. 174-12 to Rs. 168-8 and, after a short-lived advance to Rs. 171-8, gave way to Rs. 170-1 at the close.

The floating stocks of silver are estimated at 500 bars. The daily average offtake was 35 bars.

Gold for forward delivery (25th June settlement) moved up from Rs. 98-7 to a high of Rs. 100-6 before closing at Rs. 100-2.

Ready gold gained from Rs. 100-3 to Rs. 103-2, but wound up a shade lower at Rs. 102-14.

The floating stocks of gold are reported to be 14,000 tolas. The daily average arrivals were 1,500 tolas, while the offtake was 4,000 to 5,000 tolas on an average.

In London, both silver and gold prices were marked up. Spot silver advanced from 78¾d. to 79¼d. but closed at 79d. yesterday. After moving up from 78¼d. to 78¾d. forward silver declined to 78¼d. Gold gained ground from 249s. 2d. to 249s. 4d. In New York, silver was unchanged at 90¾c.

The following comparative table shows the trend of market during the week under review:

	30-5-56	Highest	Lowest	23-5-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

HIDES RECEDE

(*From Our Own Correspondent*)

MADRAS, 28*th May*

The E.I. tanned hides and calf market remained lifeless during the week under review. Importers' enquiries were meagre and selective. Prices were lower than those for the earlier purchases and these were nearer the levels current during the slump period in 1952. As the kip trade depends mostly on U.K. buying, the lower prices offered and the continued absence of enquiries for regular quantities from the U.K. have been causing great anxiety to the trade. Demand for lower grade kips for inland consumption was small and this was another bad feature in the market.

There was little or no call for ordinary qualities in buff calf and cow calf. The buff hides market ruled weak.

In the tanned skins section, there was good clearance of lining sheep probably on account of the low prices taken by weak stock-holders. There were some enquiries for middle class and common sheep from Japan. Arrivals of goat skins were moderate and clearance slow.

SPOT COTTON DULL

(*From Our Own Correspondent*)

BOMBAY, 30*th May*

The coming week will be a crucial one for the cotton market. For it is in this week that the whole issue of resuming forward trading in cotton is expected to be finally settled. The Hedge Contract Committee has already received the views of the two sections, one advocating only a single contract and the other favouring two contracts side by side for longer and shorter staples. The views were discussed by the Committee at a meeting held on the 28th inst., but, since the Committee was itself divided sharply over the question, no decision was taken. The Committee, met again today. At this meeting, eight members were reported to have favoured two contracts and four members wanted one contract. In view of the divergence of views, no decision was taken and the question was referred to the Board of the East India Cotton Association which will discuss it at its meeting on Friday next.

In the meantime, it is learned that the Union Minister for Commerce and Industry will be visiting the City in a few days. The Minister, it is said, will hold discussions with both the representatives of the cotton trade, and the Forward Markets Commission. The outcome of the discussions is awaited with considerable interest. The visit of the Minister has been tipped by a report "as the most opportune time for something definite in respect of all the loose ends of the cotton tangle to take shape." The optimism seems to be somewhat justified, considering that the new President of the East India Cotton Association, Mr. Madanmohan Ruia, has started off fairly well in the task of resumption of forward trading in cotton. Immediately after assuming office as President, Mr. Ruia came came out with a statement in the Press in which he appealed for understanding and co-operation on both sides, that is, the Government and the Association. While offering his fullest co-operation to the Government, he assured the cotton trade that the hedge contract—to be formulated—"would not only provide the necessary protection alike to the trade and to the growers, but also help rehabilitate the persons who have been thrown out of employment as a result of the continued closure of the forward market for the last five months."

Since the attention of all cotton traders is focussed on the deliberations of the Hedge Contract Committee, the spot cotton market has put on a rather dull note, although prices continue to rule firm. Buying enquiries are not very encouraging, as operators prefer to watch the trend of cotton prices after the resumption of forward trading. Some are inclined to believe that the new crop contracts are unlikely to reflect immediately any marked bullish sentiment. In fact, they expect that futures cotton would be cheaper than spot cotton. In support of this view, it is pointed out that, given normal favourable weather, the domestic crop next season will be at least 5 million bales (of 400 lbs. each). Consequently, daily turnover has been reduced and prices of domestic styles are moving narrowly, the general tendency being slightly upwards.

The following table gives the latest quotations for a few popular styles of cotton from the Sewri market, as compared with the rates prevailing a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	30-5-56	23-5-56	16-5-56
Bengal *Deshi*	640	640	660
Berar Jarillas	810	810	800
Khandesh	820	820	810
Vijay	985	980	965
Oomra *Deshi*	710	710	710
Moglai	725	725	720

In the foreign cotton section also, interest is subdued. Thanks to the bearish view of the American cotton situation, deals put through in new crop U.S. styles are only moderate, with prices drifting lower. Good Middling 1.5/32" was done during the week at Rs. 1,405, as against Rs. 1,435-Rs. 1,445 a week before. The volume of business put through in Pima, Sudans and East Africans is also small, with prices recording a fall. There are no enquiries for Egyptians.

There was no notable development in the Karachi cotton market during the week under review. The sharp break in values suffered last week evoked some buying support which led to a recovery. The recovery was, however, not marked enough to make up for the last week's losses, so that yesterday's closing quotations were still substantially lower than those a fortnight before. The latest available quotations—in rupees per 82 lbs.—from the Karachi cotton market, as compared with those a week and two weeks before, are given below:

	29-5-56	22-5-56	15-5-56
N.T.R.G. May	*92½	90⅝	91
N.T.R.G. July	86½	86⅞	85½
N.T.R.G. January ...	77⅜	—	—

Punjab Roller	91½	91½	95½
S.G.	96½	95½	100
289F N.T. Roller ...	92½	92	96
S.G.	97½	96	102½

*Deleted on 23-5-56.

The firm trend noted in the Alexandria cotton futures market last week gathered considerable momentum this week. In fact, conditions akin to boom were in evidence. This was due to tight supply position and unfavourable reports about the progress of new crop. Buying support, therefore, broadened and cotton prices forged further ahead.

The following are the latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market, as compared with those a week and a fortnight before:

	29-5-56	22-5-56	15-5-56
Karnak:			
May	133.50*	123.00	116.50
July	133.00	118.75	112.75
November ...	126.80	115.30	109.30
Ashmouni:			
June	96.30	87.75	88.45
October ...	89.05	83.65	80.15

* on 25-5-56.

The Government of Egypt has decided to revoke its decision to tax commissions paid to foreign agents on sales of cotton effected abroad by Egyptian shippers. Accordingly, such commissions are not subjected now to taxation on commercial and industrial profits. This decision is a sequel to the representation made by the cotton trade.

Barring Egyptian and Sudan cotton contracts which ruled strong, the Liverpool cotton futures market exhibited an easy note this week also. The easiness was due to reports that the U.S. Senate had upheld the section in the Farm Bill under which the Agriculture Department should offer cotton abroad at prices cheaper than at present. Some selling ensued, as a consequence, and old and new contract prices tended to look down. The following are the latest available quotations—in pence per lb. —from the Liverpool cotton futures market:

Old contract : May-June 26.33 and July-August 25.75. *New contract*: May-June 29.95; July-August 27.50; October-November 25.20; December-January 24.90; March-April 24.55 and May-June 24.40. *Egyptian Karnak cotton*: May-June 62.75; July-August 62.55 and November-December 62.55. *Sudan cotton contract*: July-August 51.75; September-October 50.55 and November-December 50.50.

Conditions in the New York cotton futures market were distinctly easy, thanks to reduction of one cent in the minimum acceptable price of cotton by the Commodity Credit Corporation and to the Senate's approval of the section in the Farm Bill which forces the Agriculture Department to cut prices of cotton offered for sale abroad to 25.50 cents (Basis Middling 15/16" at ports). These factors led to liquidation and selling, with the result that cotton prices moved down. The decline would have been more marked but for small mill and local buying.

The new Farm Bill was signed by President Eisenhower on Monday this week. As its chief feature, the Bill is built on the President's soil bank plan and a programme for payment of up to $1,200,000,000 a year to compensate farmers for taking land out of surplus-producing crops. Under the new Bill, the Secretary of Agriculture is directed to sell up to five million bales of Government-held cotton each year in world markets at competitive prices to help cut down the cotton surplus.

The U.S. Agricultural Department will sell up to 5 million bales of Government-owned cotton at or below the floor price of 25.50 cents per lb., the price at which the Department sold 1 million bales of surplus cotton in January and February last. Under the current cotton sales programme started this month, the Department has sold about 234,000 bales at the floor price of 27.50 cents per lb.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	29-5-56	22-5-56	15-5-56
Spot	36.55	36.55	36.70
July	34.45	34.20	34.46
October	32.29	32.74	32.77
December	32.45	32.87	32.84

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 30*th May*

Steady conditions prevailed in the sugar market during the week under review. Arrivals of indigenous sugar into the market were negligible, being only 3,000 bags, as against 10,500 bags a week before. This factor influenced the sentiment of operators favourably and prices registered a slight improvement. The improvement would have been marked, had there not been a fall of Re. 1 per bag in ex-mill quotations for Bombay-Deccan sugar on rumours of a further monthly release of sugar towards the week-end.

In the ready section, small grain indigenous sugar hardened by As. 8 to Rs. 89-Rs. 90 per bag. Medium grain rose by a like amount to Rs. 90-Rs. 93. Large grain was fully firm at Rs. 93-Rs. 98. British refined sugar advanced by As. 14 to Rs. 85-4 per bag of 2 cwts., with keen buyers at this price. The spurt in the price of this sugar is attributed to its concentration in the hands of one party. During the week, about 7,000 tons of British refined sugar stocked at Calcutta were sold at Rs. 28¾-Rs. 28⅞ per maund. Simultaneously with this disposal, about 10,000 tons stocked at Bombay were sold at Rs. 30-8, leaving a balance of only 2,500 tons of damaged sugar with the Regional Directorate (Food), Bombay.

In the forward section, *Shravan* delivery contract for 'C' grade sugar moved up from Rs. 89-14 to Rs. 90-8. *Vaisakh* delivery was squared up at Rs. 89-12.

The ex-mill quotations for Bombay-Deccan sugar have, as already stated, receded by a rupee per bag in anticipation of a further monthly release. The fall is in distinct contrast with the rise of As. 4 per maund in the price of North Indian sugar. Despite this fall, the ex-mill quotations in the Bombay-Deccan are still considered to be artificially high and trade circles anticipate a further drop in quotations.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

RAYON YARN FIRM

(From Our Own Correspondent)

BOMBAY, 30*th May*

The rayon yarn market presented a firm trend during the week under review. The firmness was aided by renewed rumours of an upward revision in prices of yarn by overseas suppliers and paucity of stocks of tenderable quality. Operators were interested in extending their commitments on expectation of a further hardening tendency, and rayon yarn registered a handsome rise in prices. The staple fibre yarn section, however, ruled easy, thanks to limited offtake locally, as well as in the important consuming centres. The cotton yarn section also ruled easy, in the absence of any encouraging development.

Snia rayon yarn (120 dull cones) for August delivery met with good buying support and rallied Rs. 9 to Rs. 802. June delivery advanced by Rs. 8 to Rs. 805. In the spot section, 150 Italy was sought an anna higher at Rs. 3-14. 120 Italy strengthened by half an anna to Rs. 3-13. 120 Japan was better by three pies at Rs. 3-13-6. 150 Japan was throughout fully maintained at Rs. 4-4. Among indigenous yarns, 150 Bt. cones 1st grade picked up six pies to Rs. 3-8-3. 120 Bt. cones 1st grade gained a like amount to Rs. 3-11.

Foreign staple fibre yarns (80x2) came in for heavy selling and prices moved downwards. Paramounts were the worst sufferer, their quotation declining by As. 3-6 to Rs. 6-9-6. Fujis and K'Suns dropped As. 3 each to Rs. 6-12 and Rs. 7-1, respectively. Suicos shed an anna to Rs. 7-11. H'Races lost a similar sum to Rs. 6-11. Among indigenous yarns (40x2), Kohinoors decreased by six pies to Rs. 3-9-3. Citys eased by three pies to Rs. 3-9-3. Centurys were quiet at Rs. 3-8-9, same as last week. Staple fibre yarn (40x2) for June delivery lacked support and receded by a rupee to Rs. 685.

Activity in the cotton yarn section was greatly restricted. Traders were cautious in making fresh purchases of yarn, as they preferred to watch the trend of cotton prices, as also developments in piecegoods markets. Consequently, prices moved narrowly. Ten counts Podars rose by As. 2 to Rs. 14. Moderns were unchanged at Rs. 14-4 and Elphinstones at Rs. 13-4. Among 20s, Hinds lost an anna to Rs. 18-5. Edwards were quiet at Rs. 17-6, Elphinstones at Rs. 17-6, Podars at Rs. 18 and Kumlas at Rs. 17-13. Thirty counts Sarojas changed hands As. 2 higher at Rs. 24. Among 40s, Chinas were unaltered at Rs. 33-8. Minaxis shed As. 4 to Rs. 28-14 and Moderns As. 2 to Rs. 29-4. Among 80s, Mahendras were quiet at Rs. 73. Moderns were favoured a rupee higher at Rs. 70-8. Business was reported in 60 counts at lower prices. Moderns slipped by Re. 1-8 to Rs. 63-8. Finlays and Barodas dropped As. 12 each to Rs. 64 and Rs. 56, respectively. Raghuvamshis decreased by As. 8 to Rs. 60-12.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	30-5-1956	23-5-1956	16-5-1956
Art Silk yarn (per case of 200 lbs.)–	Rs. a.	Rs. a.	Rs. a.

OILSEEDS WEAK

(From Our Own Correspondent)

BOMBAY, 30*th May*

Trading in the oilseeds market during the week under review was characterised by long liquidation and bear pressure. The Central Government's decision to close out forward contracts in castorseed (barring non-transferable specific delivery contracts) at the closing rates as on the 23rd inst. throughout India, excluding Hyderabad, was interpreted as a prelude to further official intervention in the oilseeds market. Reports of rains in upcountry centres and fears of decline in overseas demand for oils further adversely affected the sentiment of operators. Rumours of an upward revision in the export duty on castorseed also acted as a damper. The cumulative effect of all these bearish influences was the sharp break in the prices of oilseeds and oils. The undertone of the market was distinctly weak.

The castorseed section was particularly depressed, thanks to the reported move of the U.S. Government to offer a large quantity of oil from the old stocks in the auction to be held shortly and to the possibility of a rise of $6 per ton in the freight rates for oil shipments to the U.S. Castorseed May delivery was subjected to heavy selling pressure which resulted in its decline from Rs. 152-2 last week-end to Rs. 142-10 before closing a shade better at Rs. 143-6. September delivery slumped by Rs. 10-6 to Rs. 146-14. Ready F.A.Q. dropped Rs. 2 to Rs. 28. Kanpur and Madras fell by Re. 1-12 each to Rs. 26-12 and Rs. 28-4, respectively. Castor oil B.S.S. receded by Re. 1-1 to Rs. 16-10. Commercial quality suffered a loss of As. 14 to Rs. 15-10.

In the groundnut section also, there was a landslide in prices, which followed an appreciable fall in demand from crushers, as a result of enlarged arrivals of oil from North Indian markets. Groundnut August-September delivery climbed down by Rs. 2 to Rs. 34. June-July lost a similar amount to Rs. 33-4. Ready bold F.A.Q. decreased from Rs. 34-12 to Rs. 33. Coromandel and Khandesh finished the week each Re. 1-8 lower, the former at Rs. 33-12 and the latter at Rs. 33-14. Groundnut oil June delivery eased by Re. 1-3 to Rs. 17-13 and July delivery by Re. 1-12 to Rs. 18-3. Ready railway receipt declined by As. 15 to Rs. 17-12. Ex-mill shed As. 11 to Rs. 18.

The linseed section ruled weak, owing to a large increase in floating stocks of oil, which was due to lack of enquiries from shippers. The incidence of heavy export duty on linseed oil was reported to have encountered buyers' resistance in overseas markets. Linseed August-September dropped Rs. 2-2 to Rs. 30-14. June-July climbed down by Rs. 2 to Rs. 31-12. Ready Indore fell by Rs. 3-10 to Rs. 30-4. Kanpur declined by Re. 1-14 to Rs. 30 and bold by Re. 1 to Rs. 32-12. Linseed oil ready was transacted lower at Rs. 18-8, as against Rs. 19-10 last week-end.

In sympathy with the general trend of the market, the prices of other oilseeds drifted lower. *Niger* seed ready F.A.Q. and Madras both retreated by Re. 1-4 to Rs. 27-12. *Kardi* seed lost As. 12 to Rs. 19-4.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	30-5-1956	23-5-1956	16-5-1956

PEPPER FIRM

(Messrs. Parekh and Co.)

BOMBAY, 30*th May*

After a continuous dullness for a pretty long time, Malabar black pepper, during the week under review turned firmer, following the broadening of enquiries for new shipments from New York where spot material is reported to be getting scarce owing to smaller shipments during the last two to three months. New York dealers must thank themselves for the situation because when the trade from India and Singapore was offering at lower prices, they refused to buy and asked for further concession at every new bid. Recently, one of the main topics of the discussion among trade circles in all the primary markets is whether pepper has now really turned the corner or that the present advance is a temporary one. The future alone can answer this question. But analysts in the trade believe that the worst is now over and that the market will improve, for the following reasons among others:

(1) Scarcity of spot stock in the U.S.A. and Europe; (2) sizable short sales in Sarawak black for June-July-August both at Singapore and overseas; (3) eagerness on the part of American and European buyers to buy in advance against the possible expansion of demand during the coming autumn; (4) possibility of political unrest in Singapore following the resignation of Mr. Marshall after the breakdown of the London-Singapore talks; (5) unwillingness on the part of Sarawak assemblers to sell forward; (6) holdings capacity of the Indian and Indonesian growers and (7) possibility of Russian and Chinese buying.

Spot in New York improved from $0.28½ to $0.30¼ while Sarawak black improved from Str.$68 to Str.$73. In India, Alleppey rose from Rs. 737½ to Rs. 781½ while garbled at Cochin moved up to Rs. 133¾. In the A.S.T.A. section, May shipment changed hands from $0.27 to $0.29¼, while June from $0.27 to $0.29½ and July-August-September from $0.27½ to $0.29¾.

In the delivery section, June delivery moved from Rs. 732½ to Rs. 755 with scarcity of sellers.

The short-range view for pepper appears bullish in view of the approaching autumn demand and resistance to lower prices from both Indian and Sarawak growers. However, the real arbiter of prices is New York and, therefore, one should closely watch that market.

Following are today's nominal quotations: Ready Rs. 106 per Bengal maund; June Rs. 727½-732½ and July Rs. 727½-732½ per candy of 5¼ cwts.

FANNING TEAS IRREGULARLY DEARER

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 24*th May*

Almost 775,000 lbs. were on offer in sale No. 12 which was held on Tuesday, 22nd May. The sale opened to a strong demand for all fannings grades and these types were irregularly dearer. Middle East type fannings met with competition and any teas with a show of tip sold well. Broken grades were in less demand and prices were fully As. 2 lower. Rates for high grown teas reflected the decline in quality. Orange pekoes were rather difficult of sale, but there was some demand for pekoes and flowery pekoes. The following are the quotations:

	Rs. a. p.
Plain B.P.	1 10 0
Low medium B.O.P.	1 13 0
Medium B.O.P.	1 15 0
Good B.O.P.	2 6 0
	to 2 8 0
Well made black leaf O.P.	2 3 6

The average price realised in Sale No. 12 was Rs. 2-3-2 per lb., as against Re. 1-14-1 per lb. in the corresponding sale of 1955. This brings the average from 1st January to 22nd May 1956 to Rs. 2-3-9 per lb., as compared with Rs. 3-2-8 per lb. for the same period in 1955.

London Market.—No sales this week, due to Whitsun holidays.

Colombo Market.—Except for thin liquoring or weathery sorts, strong demand continued to strengthen throughout, particularly for useful coloury teas and brighter liquoring Uvas. Prices fully firm to dearer, in spite of inferior quality. Off grades very strong substantially dearer, particularly useful liquoring fannings.

Calcutta Market—Export.—22,000. Fair general demand. Price for all but black medium Assams, neat Orange pekoes and some fannings irregularly one anna to As. 2 easier.

Internal.—21,600 Dust. Fairly good demand. Strongest feature medium Assam good liquoring. Selective buying Middle East types. Best C.T.C. fully firm. Others one anna to As. 2 easier.

Export Quota.—There has been an easier tendency for special licence and business has been done at 6 to 7 pies. 1956-57 export quota is changing hands at 36 pies.

Forthcoming Auctions.—Sale No. 13 will be held on Tuesday, 29th May.

As we go to press, Messrs. Forbes Ewart and Figgis (Private) Ltd. wire:

"*Sale* 13:—1,100,000 lbs. Irregular demand. Practically no enquiry for medium and low medium B.O.P.'s with heavy withdrawals. Good medium and best liquoring B.O.P.'s useful demand. Keen competition for all fannings grades which are dearer. Whole leaf less demand and easier."

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 28*th May*

After last week's active conditions, the sugar market again ruled quiet during the week under review. Outside buying enquiry was slack and small demand from Madras could not be met, thanks to want of loading facilities to that area. Supply position was reported easy, as some of the factories were still crushing for the season and anxiety was reported from some centres that the factories would not be able to crush the cane still left in the fields. The cane crop for the next season, which was hitherto considered very good, is now reported to be suffering from pests in some parts of the State.

The latest mill delivery prices of sugar at Hapur are: Jaswant Rs. 27-14, Simbhauli Rs. 28, Mowana Rs. 27-13, Daurala Rs. 29, Amroha Rs. 27-8, Bijnore Rs. 27-8, Mansoorpur Rs. 28 to Rs. 29, Rampur Rs. 30-8; retail Rs. 30 per maund.

Easy loading facilities to consuming areas of Gujerat accounted for a rise of As. 4 in the price of *gur* which stood at Rs. 10-8 per maund. The week's offtake aggregated 28 wagons, being mostly to Gujerat, and small daily arrivals were nominal, at an average of 150 maunds out of the stocks retained by the producers. Local stocks dwindled to 90,000 maunds.

Future *gur* prices eased on bear pressure. The latest price as on Monday for *fagun* delivery were Rs. 8-11-6, as against the last week's opening of Rs. 9-5-7½.

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 28*th May*

Foodgrain prices which had recorded a strident advance during the major part of the week eased towards the week-end, following substantial fall in future prices and increased arrivals which were at their peak. The Union Food Minister said that the Government had already taken suitable remedial measures to bring down prices in the urban areas, such as ban on exports, issue of wheat from Central sales depots freely at Rs. 14 per maund, and release of substantial quantities of rice from Central stocks to State Governments at Rs. 16 per maund. Wheat prices at Hapur which had touched peak levels during the mid-session to Rs. 13-10 per maund for average quality and to Rs. 15-2 for farm quality declined at the close of the week to be quoted at Rs. 13-4 and Rs. 14-12 per maund, respectively, on Monday. Arrivals were 4,000 maunds, most of which were absorbed by local stockists, with the result that the stock has gone up to 42 *khaties*. The total arrivals of wheat since the beginning of the season were put at 62,000 maunds, as against 72,000 maunds by this date last year.

Rice prices ruled quiet, following the Government of India's agreement to import two million tons of rice from Burma in the next five years. Half of this quality would be imported in the next two years. The latest prices of rice at Hapur are: *Rangooni* Rs. 16-12, *basmati* Rs. 24 to Rs. 31-8, *manipuri* Rs. 19, and coarse quality Rs. 15-6 per maund. After touching the highest during mid-session at Rs. 11-2 per maund, gram Punjab quality prices eased towards the week-end to Rs. 10-14 per maund. Stock was put at 14 *khaties*. The other coarse grain prices also eased. Today's prices were: *Bejhar* Rs. 9-10 and barley Rs. 9-12. Stock of *bejhar* was put at 4 *khaties*.

Owing to bullish activity in the last few weeks, peas arrivals increased to 5,000 maunds today. There was, therefore, a fall of As. 8 per maund in *dara* green prices to Rs. 10-4. White quality was transacted at Rs. 12 per maund, with stock position put at 35 *khaties*. *Arhar* stock swelled further by 10 *khaties* during the week to 78 *khaties*, due to heavy arrivals from Punjab and east U.P. Prices also eased towards the week-end to Rs. 11 per maund.

REFLECTIONS OF A RETIRED BANKER

(*Concluded from page* 1049)

"I am an advocate of very great powers for the management of money. Amongst inventions to the credit of man's genius, I reckon money as the most necessary social tool; and, because it is so wayward, unpredictable and unmanageable, it has to be managed strictly, and its manager must possess vast powers. But that is not the same thing as saying that the manager need not hold the technical qualifications and the experience necessary for the job; nor that the possession of authority and discretion *ipso facto* implies that they are always used wisely. In demanding statutory right for bankers to be consulted, I had no desire to belittle the huge paper work that is done in the Economic Division of the Reserve Bank, but, on the analogy of what prevails in other countries, to provide for the monetary authority a practical touchstone on which to test their conclusions. Capacity to collect statistics and data is not the same thing as ability to interpret them correctly.

"I repeat again that a right to give advice is not the same thing as duty to accept it. In opposing such a simple argument, the *Economic Weekly* has unjustly condemned, and perhaps unintentionally, the bankers of the country as ignorant, meddlesome and irresponsible, and also advocated autocracy in money and finance. Democracy thrives through discussion, but autocracy shuns advice and arguments.

"The *Weekly* condones violations of confidential relations between customers and bankers. This raises a serious issue. Does it advocate that the central monetary authority should be a super secret service of Government? And, in that case, why not abrogate the law, whereby relations between solicitors, lawyers, doctors and bankers and their clients are held sacred." Why should the trade secrets be recognised in law? Why are employees, officers, directors and auditors of banks required to sign undertakings to keep strictly secret, facts concerning bank accounts?

"The issue is not that banks encourage malpractices. All facts cannot be read correctly into accounts. There may be impression or even suspicion, but that is not proof. Obviously, banks cannot usurp the role which is reserved for judges and magistrates. But bureaucratic eyes are always full of suspicion. If they are encouraged in witch-hunting among business men, which results in annoyance to people, the latter would shun banks. And the country needs more banks, and greater discipline over money and credit, though increased banking. Otherwise, why plan opening of 400 new branches by the State Bank? The Shroff Committee, by which my critic swears, draws the attention of the Central and State Governments, in para 111 of its reports, 'to the necessity of doing everything possible to maintain the secrecy of banker-customer relationship and of developing and fostering the banking habit.'

"A case recently decided in the Punjab court, in which a number of bank officials were criminally prosecuted on the information said to have been supplied by the Reserve Bank to the police—the Bank must have obtained the information in the course of its inspection—shows that such a role can be damaging to the prestige, fair-mindedness and dignity of the Bank. The accused have been acquitted. Why should the Bank go outside the purpose of inspection, to look after depositors' interests, and assume a responsibility which law has not devolved upon it —and which in fact is repugnant to banking practices all over the world?

"Once Society concedes the right to witch-hunting, then we cannot be far from the rule of gestapo. We shall revert to the days of inquisition of the middle ages. It would be far simpler and easier to advocate abolition of democracy and establishment of totalitarian authority.

"I agree with my critic when he says that the world is moving and we need newer concepts. The federal management in money is certainly newer than the old unitary type of management. And obviously, the bureaucrats, brought up in the old traditions of suspicion, with emphasis on, and trained in, law and order at any cost, are not the newer type of managers needed for India's financial and economic institutions. The Government's recent decision to recruit administrators for its industrial and trading enterprises from the mercantile community shows that the bureaucrat is least fitted to hold any office outside normal civil administration.

"In my writings in your esteemed paper I had deliberately withheld some of the more serious mistakes and violations in the working of India's central banking institution, because my object was not to create sensation or encourage ghoulish delight, but to improve conditions, so that our economic plans should not suffer, from wrong monetary concepts or from mistaken policies in regard to credit and currency.

"In order to achieve national purpose and improved standard of living, we need maximum co-operation between all sections of population, intelligent and unbiased management, and help and guidance of builders in industry and finance. But, above all, we require correct and fearless thinking on India's political and economic problems."

[The aforesaid letter was delayed in transit. Had it reached us in time, it would have been published in our last issue.—ED.]

SURVEY

(*Concluded from page* 1046)

Assam offering courses in civil engineering and the other in Orissa offering courses in electrical, mechanical and civil engineering. The grants recommended by the Committee for the two colleges were Rs. 24 lakhs and Rs. 38 lakhs, respectively. The Committee also approved of grants for several institutes—Rs. 7 lakhs for opening a civil engineering diploma institution at Berhampore, Rs. 6 lakhs for the Bihar Institute of Technology, Sindri, Rs. 5.2 lakhs for the Jadavpur College of Engineering and Technology, Rs. 4.5 lakhs for setting up a polytechnic at Asansol, and Rs. 1 lakh each for the Assam Civil Engineering Institute and the Hooghly Institute of Technology. This is a good beginning but will hardly meet the growing need for technical personnel during the second Plan. Further, the authorities will have to see that the students that are turned out of these institutions get sufficient practical training that will enable them to discharge efficiently the responsibilities entrusted to them.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y.=Accounts published yearly. H.=Accounts published half-yearly. P.=Company has Preference shares. T.=Company has Debentures. N.=Nominal quotations x.d.=Ex.Dividend. x.d.=Cum. Dividend. I.=Interim Dividend. F.=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

BANKING STANDARDS IMPROVE

WHEN the Banking Companies Act 1949 was on the anvil, many members of Parliament (it was then known as the Constituent Assembly) desired that the Reserve Bank of India, as the authority controlling the commercial banks, should submit to the Central Government every year a report on the trend and progress of banking in the country. Accordingly, a section—36(2)—was introduced in the Act; this section authorises the Reserve Bank to include in such annual reports its suggestions, if any, for the strengthening of banking business throughout the country. The object in making this provision was that Parliament and the public must know what is happening in the banking world, what action the Reserve Bank has been taking to ensure progress of banking with stability and what further steps the Bank wants to be taken to achieve this objective. The latest annual report under this section, covering the year ended 31st December 1955, makes interesting reading and is fully in conformity with the letter and the spirit of the law. It contains a mass of statistical data preceded by a rapid but critical survey of banking trends. It recites the action taken by the Bank to remove the unhealthy features of the banking system and offers a few suggestions for bringing about further improvement. In the light of the demand by a section of politicians for nationalisation of banks, this latest report acquires special significance. It is to be hoped that these politicians, at least those who have not developed a closed mind, will read the report carefully before extending any further support to this demand.

Nationalisation of banking has been demanded on two grounds. One is prevalence of malpractices and the other is ideological. There are vague charges that commercial banks are not being properly run and that, in some of them, the managements are indulging in malpractices of a nature injurious to the community, in general, and the depositors, in particular. The ideological argument is that, as banking is a basic service, without which a modern economy cannot exist, its ownership in the hands of the private sector, which works essentially on the basis of profit-motive, will not be conducive to the progress of a socialist economy. Such a basic service, runs the argument, must, therefore, be owned and manned by the State. Further, so long as this service is in the hands of the private sector, there will be, it is stated, a strong impediment to the extension of the public sector.

Of late, the spokesmen of the Government, not excluding the Prime Minister, who only a few months ago categorically stated that banking must ultimately be in the public sector, have realised that this ideological argument holds good only in theory and that it is not essential to nationalise the entire banking system to bring into existence a truly socialist structure of society. Yet there are quite a few among the leaders of this country who still feel that, without nationalisation of banking, socialism cannot be a live force in India. To them we must commend the latest annual report on banking. They will see therefrom that the State has already complete control of the banking system through the Reserve Bank, that no bank of any substance has refused to co-operate with the controlling authority and that, with the nationalisation of the Imperial Bank of India as part of the programme for carrying banking facilities to rural and semi-urban areas, the public sector has come to occupy the most strategic position in the field of banking. Properly administered, the State Bank of India should be able to correct the lopsided growth of branch banking. Despite these "momentous" and "far-reaching" organisational changes, if anyone were to harp upon nationalisation of banking, he would be an incurable doctrinarian.

If there is little ground for nationalising banks even on ideological considerations, there is none whatever for doing so on charges of malpractices. The Reserve Bank's report is pretty clear on this point. Its conclusion, arrived at after a careful inspection of banks and a continuous watch over their activities, is that whatever defects there were are being gradually rectified. "Though they have not yet been completely eliminated," to quote from the report, "inspections of banks and the advice given by the Reserve Bank in following up the inspections have tended to bring about a change for the better. Steps are being taken by the management of many banks to conform to the normal standards and banks, in general, are receptive to the advice of the Reserve Bank and, in many cases, have taken action to set their affairs right." This is a very clear verdict. Coming as it does from an institution dominated by the Government and managed by civilians, this judgment should dispel any doubts that may still linger about the quality of Indian banking.

Unlike the Department of Controller of Insurance, which is alleged to have been slack in exercising its authority for eliminating malpractices in the insurance world, the Reserve Bank has been vigilant and active. Being an autonomous institution, it has perhaps been in an advantageous position as compared with the Controller of Insurance whose office constituted a subordinate department of the Finance Ministry. It is noteworthy that the association of non-officials on the Board of the Reserve Bank has not stood in the way of a thorough inspection of banks in the private sector. This is as much a tribute to the Governor and the Deputy Governors of the Reserve Bank as it is to the non-official members on the Board. It must be said to the credit of the Bank that it has done an excellent job of inspection. When it assumed this responsibility, it hardly had the requisite type of staff for this purpose nor the necessary facilities for training the personnel. Yet the Bank has not only completed the first round of inspection of all the 453 reporting banks but also reinspected 247 of these banks more than once—a remarkable achievement indeed.

It is true that the number of banks still to receive a licence (which in actual practice is a certificate, testifying that the bank is being run on sound lines) was as large as 422 on 31st December last, but the vast majority of these consisted of small banks. What is more significant is the fact that the 46 commercial banks, which have received the licence, and the four banks, which do not require a licence as they have been brought into being under separate statutes, together account for as much as Rs. 980.9 crores out of the total bank deposits amounting to Rs. 1,082.30 crores as at 31st December last. In other words, 90.8 per cent. of total deposits of all banks are with banks which have been licensed or do not require a licence, as, for instance, the State Bank of India. It may be argued that even the balance of about 10 per cent. is a fairly big one, in that it means banks with Rs. 101.40 crores of deposits are still unlicensed. But there is the assurance of the Reserve Bank that, though unlicensed, the affairs of these banks are under its effective surveillance and that it is actively pursuing the rectification of the defects observed in their working. It is obvious that, if the Bank is unable to give a licence to these banks, it is mainly because of the delay by the latter in improving their affairs and quality to the required standard.

A brief reference to the type of inspection carried out by the Reserve Bank will be relevant. The inspection seems to have been of a thorough character. This is evident from the steps taken to rectify the undesirable features noticed in some banks. These include "replacement of the chief executive officer by a suitable person and the appointment of a Banking Adviser, curtailment of the powers of particular persons on the Board of Directors, the recalling of any advance or group of advances which are defective in more than one respect, and restrictions on the grant of further advances." It will be clear from these steps that the central banking authority has been doing a lot of policing. It is not surprising, therefore, that one often hears of complaints of excessive interference by the Reserve Bank. But it is not known to what extent the inspection work of the Bank is impeding the growth of genuine commercial banking. It is suggested by some that, as the Reserve Bank is all-powerful, only a confidential enquiry conducted by an impartial body, in which there will be no representative of the Reserve Bank, can bring forth sufficient evidence. Such an enquiry, however, may not be practicable, in view of the present political climate which is by no means friendly to the private sector. Nor will it be conducive to happy and fruitful co-operation between the Reser

mushroom banks and indiscriminate branch expansion, a feature witnessed during the war years with the consequent unfortunate results. The banks, however, can minimise the need for controls by the Reserve Bank to arrest this trend, if they themselves remain alert and "make every effort to use their resources in a manner which not only brings profit to them but also accords with the priorities laid down in the Plan." In this context, the following advice by the Reserve Bank is commendable:

> "The importance of sound management is of particular relevance in a period of sizable increase in bank resources and the wider opportunities for credit expansion which the growth of the economy would open out. The emphasis in banks' credit policies should be rather more on channelling finance for desirable purposes and to limit extension of credit to the genuine requirements of trade and business. It would be necessary for banks to avoid adopting methods to attract business which cannot but fail to have deleterious effects on the system, in general, and affect the position of individual units. . . . The expansion in resources would naturally have a favourable effect on bank earnings. It would be necessary for banks to make a judicious use of their earnings by way of adding to their reserve. Where reserves are at present inadequate, this would be imperative and even where they may appear to be adequate now, prudence would require them to be strengthened further, so as to help inculcate confidence in the system which, in the last resort, is the only guarantee for a proper and orderly growth of banking."

In endorsing the above advice, one is conscious of the fact that it is easy to preach, but difficult to practise. Nevertheless, it cannot be denied that the aforesaid advice of the Reserve Bank is quite appropriate and timely.

Lest one should jump to the conclusion from what has been stated thus far that undesirable practices have been widespread in the banking world, it must be emphasised that the Reserve Bank itself mentions in the report that these practices "have been observed in the operation of some banks" only. It must be further pointed out that the Bank has been fair enough to concede that "one of the structural weaknesses of the Indian banking system, and, in particular, of its non-scheduled sector, has been the existence of a large number of small and often uneconomic units." A fairly effective and logical solution to this weakness lies in the amalgamation of these units. The Bank is quite conscious of the efficacy of this remedy. And yet there has hardly been any amalgamation. What is the reason? The Bank quite candidly attributes it to labour legislation and Awards. How correct is its explanation will be seen from the following quotation from the report:

> "A major factor which should normally be in favour of amalgamation of banking units is the eventual rationalisation of branches and staff, with the resultant economy in working costs. But the attitude of the public towards the problem of unemployment and underemployment which is attracting a great deal of attention in the country and the necessity of maintaining cordial relations with labour, as also the effects of labour legislation, have made the prospects of any such reduction of staff remote even in the event of an amalgamation. Further, the Bank Award classifies banks into different categories and, if, as a result of amalgamation, the new unit falls into a higher class than that of any of the amalgamating units, the costs are likely to rise. Heavy compensation is also payable to staff which may be rendered surplus and may have to be consequently retrenched. These factors make amalgamations rather an unattractive proposition to banks."

It is, indeed, gratifying that the Reserve Bank has not hesitated to tell the truth, even though it may be unpalatable to many in authority and to trade union leaders. The authors of the Banking Companies Act had imposed upon the Reserve Bank a responsibility to tell the Government as to how banking could be strengthened all over the country. Well, here is one constructive comment. It is for the people's representatives to decide whether the country should have uneconomic banking units or face for a while a little bit of unemployment among the workers belonging to them. As the banking system is on the threshold of a new phase of expansion, now is the time to eradicate the structural weakness referred to, for the staff rendered surplus by amalgamation of the smaller units can be absorbed by others that are expanding, as, for instance, the State Bank of India, which will require personnel to man the 400 branches it is obliged to open before the end of June 1960. It will be interesting to know the Government's reaction to the solution implied in the Reserve Bank's observation.

U.S. FARM LEGISLATION

THE new U.S. Farm Bill, signed by President Eisenhower towards the close of last month, is a compromise between the original Bill which he vetoed on 16th April and the Administration's ideas of what a farm Bill ought to be. Although the vetoed Bill carried the essence of the President's farm policy, namely, the Soil Bank plan, it stuck to rigid price support for commodities against which the President had protested. In taking his decision to veto the Bill, the President showed commendable courage, for he then acted against the advice of his own Party leaders who feared unpopularity among farmers and the consequent risk of losing the forthcoming elections. The new Bill, though it is far from incorporating all that the President would have liked, is an advance on the vetoed Bill, in that it retains the Soil Bank plan, as well as accepts the principle of flexible price support.

The two main features of the new Bill are thus the Soil Bank programme and flexible price support. Briefly, there are two aspects to the Soil Bank scheme—the acreage reserve programme and the conservation reserve programme. Under the acreage reserve programme, the farmers will be encouraged to take land out of cultivation and paid for doing so. The payment will be made in certificates redeemable by the Commodity Credit Corporation either in cash or in commodities at specified rates. Under the conservation reserve programme, the farmers who co-operate with the Administration in setting aside land needing conservation measures, will receive annual payments for the contracted period.

The second feature of the Bill, namely, flexible price support, is just as important as the first. The Bill provides that the Government's price supports will vary within certain limits, depending on the product, the supply and the price situation from year to year. These limits will range from 70 to 90 per cent. parity. In American farm parlance, by "parity" is meant the statistical measure of the prices farmers should receive for the produce they sell in relation to the prices of the things they must buy. The Bill, of course, continues another feature which has been part of the U.S. farm policy for many years—acreage restrictions.

It will be seen that the entire Bill is designed to prevent the growth of burdensome surpluses. Indeed, it is the presence of these surpluses that compelled the President to evolve a new farm policy. He realised that, so long as the Government was forced to support farm commodities at high and rigid levels, there would be no incentive for farmers to cut costs or to put their land to its most efficient use and there would inevitably be surpluses from year to year. With the Government compelled to carry reserves of farm products valued at about $9,000 million and obliged, under the law, to continue to support a wide range of agricultural commodities at high price levels, there could be only one result—excess production for the country and large expenditure for the Government. But, in the U.S., the farm vote is politically so significant that no party can afford to incur the wrath of the farmers. Although many Americans were convinced that the country's imprudent farm policy was at the root of the problem of surpluses, they had stuck to it, because any attack on it would be politically inexpedient. It, therefore, reflects great credit on the President that he has at least been able to take the first step in the direction of a less rigid farm policy.

The new Farm Bill, as stated at the outset, is a compromise Bill. The Congress, accepting the President's farm programme, has abandoned rigid price support. But the farmers are partly compensated by increased price support for certain crops. Thus, the President has agreed to an increase in the 1956 support level for foodgrains (other than corn) from 70 to 76 per cent. parity with no restrictions on plantings. This feature is not in tune with the spirit of the President's farm policy. But it is nearer the spirit than the provision in the vetoed Bill which set the price support for foodgrains at 85 per cent. parity. As a further concession, the Administration, it is stated, has agreed to the freezing for another year of the present "transitional" parity prices for wheat, corn and peanuts. The new legislation also increases 1956 corn allotments to 51 million acres from the 43 million acres previously established, raises the funds for purchases of pork and other perishable commodities in temporary abundance and authorises payments to cover ocean freight on surpluses disposed of through welfare organisations.

Under the Soil Bank programme, the Government will pay farmers up to $1,200 million per year as an incentive for taking land out of cultivation. Of this amount, $750 million will be available to farmers who agree to withdraw land from production of basic crops (wheat, cotton, corn, peanut, rice and tobacco). The additional $450 million will be payable for conversion of the land to grass, trees and similar soil-conservation uses on a long-term basis. It is believed that it is now too late for the Soil Bank to operate on any sizable scale this year. It will, however, have come into force in 1957. Further, it is only when the Government-held surpluses decline to more reasonable levels that the farm prices would begin to show any sustained rise. This would, according to some estimates, take three or four years.

From the point of view of the Administration, the new law is a very bad compromise in respect of two commodities, cotton and rice. In cotton, with Government-held stocks estimated at about 12 million bales, the Administration has already inaugurated a programme to dispose of the reserves at competitive world prices. The new law approves this programme, directing the U.S. Agriculture Department not only to sell up to five million bales of cotton on the world market but also to go as low as 25.50 cents a pound or even lower, if necessary. At the same time, additional curtailment of cotton plantings have been forbidden for the next two years. In the case of rice, the law permits—but does not require—the Department to put into operation a two-price plan for two years beginning 1957 or 1958. If this plan were adopted, rice would be supported at parity levels in the U.S., while, in the world market, it would be offered at competitive prices.

The section of the new law dealing with cotton, Mr. Eisenhower said, would have to be administered with "extreme caution." It remains to be seen how far the Administration will be able to live up to this ideal. It is clear that the Congress wants the Administration to follow a relatively more aggressive sales policy. The Congressional directive will make it difficult for the Administration to adopt a flexible sales policy for cotton which will not disrupt world markets. Again, the fact that additional curtailments of cotton plantings are forbidden for the next two years means that there is no escape from heavy crops and continued surpluses. Further, the new cotton policy, it is feared, may compel the Administration to subsidise textile exports.

The immediate impact on farm prices of the new law has been favourable. After having declined for some three years, farm prices have been rising. Also, the index of farm prices received to farm prices paid (the so-called parity ratio based on the 1910-14 average as 100) has advanced from 80 in December 1955 to 85. The improvement in farm prices is due partly to the confidence generated by the increase in price supports on 1956 crops and dairy products by the Administration and partly to seasonal factors and reports of poor wheat crops in several European countries. But the worth of the new farm legislation cannot be judged from short-term trends in commodity prices. It is not meant to offer an easy or immediate solution to the problem of agricultural surpluses. Its importance lies in the gradual and effective solution it seeks to provide to this problem.

So far as India is concerned, the U.S.'s new farm policy can have no direct relevance. But India is interested in imports and exports of cotton and also in exports of textiles. The fact that the new turn in the U.S.'s policy will make for lower cotton prices and that there is also the possibility of subsidy for American textile exports means that India may possibly gain on its cotton import front, but lose a part of its export market in cotton and textiles. The significance of the new American policy to the current trends in this country for a price support programme for agricultural produce is not very great, in view of the fact that no serious attempt has been made here to support agricultural prices. But the Government cannot possibly avoid taking a decision on price support for farm commodities for a long time. When it does take such a decision, it will do well to profit by American experience and avoid rigid price support policies.

INDUSTRIALISTS QUITE OPTIMISTIC

COTTON TO HAVE TWO HEDGE CONTRACTS

THURSDAY, 5 P.M.

MARKET GOSSIP

A FEELING of optimism has come to prevail among the industrialists. The diffidence created by the new Company Law, nationalisation of life insurance and the taxation proposals contained in the last Central budget seems to have melted away. The Company Law is, of course, irksome, but business men have quickly learned to adapt themselves to it. The experience in the last two months has shown that the Government is not as inquisitive or strict as was feared at the time the Law was being framed. The spirit of tolerance that is displayed by the Company Law Administration has come as a pleasant surprise to many. The business community, too, is reconciled to the necessity of abiding by the official interpretation of the Law, for it has realised that it does not pay to fight the Government. Apart from the fact that it has no strong backing from the public, the fear that, even if the Courts were to uphold its point of view, no useful purpose would be served as the Government would suitably amend either the Law or the Constitution, must be responsible for this docile attitude.

It is now nearly five months since life insurance went out of the hands of the private sector. The business community appears to have felt no particular handicap as a result. On the contrary, the one-way operation by the custodians in the share market—these persons have only bought shares, never sold any—have helped to cushion the shock provided by the budget and strengthen the equities, thereby creating an atmosphere of buoyancy.

As for the after-effects of the budget, the dividend tax appears less onerous than the one on bonus shares. Several companies have, therefore, postponed capitalisation of reserves, and this in turn has led to the expectation that these companies would declare higher dividends. Moreover, with many leading companies incurring heavy capital expenditure, they will have a long period of tax-holiday and as such even the dividend tax is not expected to have any inhibiting effect on payment of dividends. In fact, the possibility of being able to escape the present high rates of company taxation is inducing many an industrialist to expand the activities of their companies either by raising their existing lines of production or by taking to new lines. "Beg or borrow, but expand investment." This is the policy of almost all the leading industrial houses in the country at present. The recent statements of the Prime Minister on the scope for the private sector has greatly strengthened this attitude.

Some instances of the great stir in the major industrial houses may now be given. To take Tatas first. They are going ahead with the expansion of steel industry; there are unconfirmed reports that they may be allowed to raise their capacity further, that is, over and above the additional million tons of ingot already permitted. The TELCO factory, too, is likely to be expanded and it may be that, sooner or later, the Company may enter the capital market with a fresh issue. The Tata Chemical has plans for raising its capacity to 400 tons of soda ash per day from 200 tons now aimed. The Company has already received the licence for it. Besides, Tatas have also entered into arrangements with a West German firm for the manufacture of refractories needed by the iron and steel industries.

Similarly, Birlas, too, have big plans for expansion. Rayon, staple fibre, rayon pulp, heavy engineering, cement and paper are the industries on which they are concentrating their attention. Sahu Jains, Khataus and Kasturbhai Lalbhais have also large industrial projects on hand. Thus, the private sector is up and doing. It is fully conscious that, because of physical limitations, the public sector cannot expand as fast as it wishes and that the Government may, therefore, find it necessary to lean on the self-same *entrepreneurs*. A time may come in the near future when the Government will go out of its way and ask the private sector to shoulder more responsibilities. This will, of course, happen only if the industrialists keep themselves in readiness with the blue prints of their projects.

The optimism among industrialists is at the root of the current buoyancy of share markets. The fear that there may be some fireworks against the private sector at the A.-I.C.C. meeting has not, as was anticipated in these columns last week, materialised. While it was a foregone conclusion that the keymen of the Congress Party would say nothing against the private sector, it was thought that at least some of the back-benchers would say something hostile to it. Even this did not happen. The deplorable behaviour of railway workers, who staged a number of lightning strikes, supplemented by violent demonstrations, must have made the climate for the left-wingers in the Congress somewhat uncomfortable. The Prime Minister, who had been greatly annoyed by the misdemeanours of railway workers, would have definitely chided them had they repeated their usual performance.

* * * *

There is a sense of relief in the ranks of cotton traders. After all the controversy generated by the suspension of the futures trading in December last, they are happy that the Board of the East India Cotton Association has been able to see its way to the resumption of such trading. The Board, it is learned, decided this week to commence such trading on the basis of two hedge contracts. A general body meeting is scheduled to be held tomorrow at which nearly all the proposals made by the Forward Markets Commission are expected to be approved. If things go as well as they have gone in the recent past, futures trading should commence on Monday the 18th inst.

The decision to resume forward trading on the basis of two contracts is a sequel to the recommendations of the majority of the Hedge Contract Sub-committee which favoured two hedge contracts. The minority, however, advocated the continuance of the present single contract system, with certain modifications. It said that the Indian cotton crop was largely dependent upon the vagaries of the monsoon and no definite forecast of the crop would be possible. It contended that, unless the country enjoyed a crop of 5 million bales continuously for two to three seasons, one could not expect an increase in the basic carryover. Till then, in the interest of the trade and smooth working of the futures contract, a single hedge contract would be the only correct solution. Secondly, the Government had permitted, the minority in the Committee argued, futures trading in Akola and Indore, where the markets would cater to the whole of the Jarilla tract and take care of cotton of ¾" and/or 25/32" staple and below. Thirdly, the Government was anxious to curb inflationary forces. A single hedge contract would help in keeping prices at reasonable levels. Fourthly, the authorities might not tolerate any departure from the normal difference in prices between the two contracts. Thus, assuming that the difference between the basic staples of the two contracts is 3/32", the difference in prices of the two contracts should be about Rs. 75 or Rs. 85, since, generally speaking, the staple difference value for 1/32" is Rs. 25. It was, however, quite possible, argued the minority, that, owing to the anomalies of nature, the actual difference between the two contracts might turn out to be more or less than the theoretical difference between their prices. This might invite criticism from the authorities to the effect that there was unhealthy speculation.

The Board has apparently not been impressed by these arguments. It has, on the contrary, been inclined to favour the majority view. The main defect in the present single-contract system, according to the majority opinion, is that varieties having a premium value even to the extent of Rs. 400 or more over the lowest variety are tenderable against the contract. This factor, it points out, divorces the contract price from the actual spot value, thereby affording no hedge protection to the spinner, merchant or grower. Under the two-contract system formulated by it, all Indian varieties, except the *deshi* varieties, would be tenderable. And the premium values over the basic varieties in each of the two contracts would not exceed Rs. 100-150. The system would afford real hedge protection to the spinner, the merchant and the grower and the contract price would also be as near the spot prices as possible. By and large, this seems to be the correct view to take of the situation. An omnibus contract of the type which has prevailed in recent years has not served as a real hedge. In this connection, it may be mentioned that Egypt, with less than 50 per cent. of India's cotton crop, has always operated on a two-contract basis—the long-staple Karnak contract and the medium and short-staple Ashmouni contract.

Under the two-contract system advocated by the majority of the Sub-committee, the basis for the first contract will be Fine M.G. Jarilla (A), of staple 25/32" as per standard to be prepared from Jarilla or Virnar (197/3) cotton grown in Khandesh District or Madhya Bharat, tenderable upto two classes 'on' and one class 'off' for grade and upto 2/32" 'on' and 1/32" 'off' for staple. In the case of M.G. Jarilla (B), M.G. Dholleras and Rajasthan American, with basic staple of ¾", there will be no 'off' value for 1/32" staple. The regions in which M.G. Jarilla (B) will be tenderable are Hyderabad and Bombay States (stations to be specified later, if possible). The standard for Jarilla (B), it is stated, should be prepared from Jarilla cotton grown in Hyderabad State.

The basis for the second contract will be Fine M.G. Vijay staple 27/32" as per standard to be prepared from Vijay cotton grown in Bombay State, tenderable upto two classes 'on' and one class 'off' for grade and upto 2/32" 'on' and 1/32" 'off' for staple.

The months of delivery for the first contract will be March, May and July, while those for the second are April, June and August. The Sub-committee has suggested that the Government should permit trading in the first contract for new crop before the end of June every year and in the second contract before the end of July. The suggested floor and ceiling prices for the first contract are Rs. 500 and Rs. 825, respectively, for Fine Jarilla 25/32" staple and Rs. 450 and Rs. 775 respectively, for Dholleras (including Cutch) of ¾" staple, the corresponding rates for the second contract being Rs. 625 and Rs. 975, respectively, for Fine Vijay 27/32" staple. There will be a weightage of 6¼ per cent. except for the basic varieties. Tendering differences, it is suggested, should be fixed on the basis of the forward contract rate and not on the basis of the spot rate, as at present. The invoicing back of cotton rejected in survey should also be on the forward rate and not on the spot rate of the basic cotton and the rejection penalty should be Rs. 10 per candy. Further, fresh trading during delivery period, except for the purpose of squaring up of contract—that is, liquidation of commitments—should be prohibited.

(*Continued on next page*)

THE RUINOUS SPIRAL

From Our Own Correspondent

LONDON, *2nd June*

LONDON LETTER

THINGS are beginning to move fast on the inflation front. The Chancellor of the Exchequer having made one appeal for wage restraint has now come out with an even more severe warning in which he goes so far as to say that wage earners should expect some rise in prices from the last set of wage increases, but should refrain from attempting to catch up by any further increases. He put the problem succinctly when he said: "If every rise in price resulting from previous wage increases is now to be regarded as ground for further wage increases, then we are certainly on the road to ruin.

His speech was accompanied by two significant moves which illustrated the difficulty of the whole position. The railway engine drivers in conference resolved to submit a claim for a 15 per cent. increase in pay—no doubt before hearing of Mr. Macmillan's speech—on the other hand—and no doubt in anticipation of the speech—the engineering employers passed a resolution to give notice *in advance* that they would refuse to consider further wage claims. Of course, the Chancellor is right that a beginning to end inflation has to be made somewhere, and equally the employers will be ready to concede that they will make a beginning by not conceding further wage claims. It is the trade unions who are going to feel the effect most severely, because their members will be faced with rises in the cost of living and, accordingly, some fall in the buying power of their wage packets in comparison with what they were getting after their last wage gain. They will, therefore, be loth to draw the line or, to use the Chancellor's simile, to agree that the chapter should be closed.

Yet, in default of restraint by the unions (or to be fair, one should add of restraint by producers not to put up the price of their products as their costs rise), outside forces will take a hand. The Chancellor, addressing the Association of British Chambers of Commerce, said that international competition at present was "something of which the country had no experience since the war"; he instanced America, Japan and Western Germany as growing and severe competitors to our export trades, and pointed out that constant rounds of wage increases would accentuate the existing trend in which British exporters were already losing ground to countries which, up to now, had been enjoying steadier prices. He philosophised on the results of falling exports, unemployment in the export trades, unbalance in the country's overseas payments and restrictions on imports leading to even more serious unemployment. But are the unions going to accept that all these potential evils are as real as the acceptance of an immediate reduction in living standards through not pursuing wage claims? We have the near parallel of the Standard Motor Company involved in a dispute over automation. The Company has now decided to declare over 2,000 men redundant and the general expectation is that 11,000 employees will go on strike. The unions can clearly be relied upon to fight on the immediate issue rather than take the long view.

But then they are not alone in this. The Chancellor of the Exchequer, referring to the recent rises in the cost of fuel, thought that the effect on industrial costs would only be about two or three per cent. and he urged that an increase of this order should be absorbed in manufacturing costs, not added to prices. It remains to be seen whether this appeal to voluntary restraint will be respected. The trouble is that the Chancellor's philosophy on the ruinous spiral is impeccable, but he is bound to be seen by both sides as a man standing outside, but too much involved in, the battle and arbitration is likely to be left to events. It may be, as a recent development in Western Germany has shown, that our competitors in export markets will find themselves in a similar quandary which will certainly relieve the consequences of inflation at home; but the problem will still remain for all countries to face.—*All Rights Reserved.*

A French professor has succeeded, for the first time, in creating the synthesis of granite. The experiment was carried out on natural glass, obsidian, from the Lipari islands. A few grammes of glass were subjected to a temperature of 500 degrees Centigrade and a pressure of 3,000 atmospheres. In a few days, the French professor obtained fragments of rock which were entirely crystalline with the mineralogic constituents of granite.

EQUITIES BUOYANT

ALL-ROUND SPECULATIVE SUPPORT

(From Our Own Correspondents)

BOMBAY, *7th June*

THE share market shook off its lethargy during the week under review and bloomed into activity. There was all-round speculative buying and heavy covering by short-sellers which lifted up equity values to a marked extent. Towards the close, however, there was corrective profit-taking which brought down the closing levels well below the week's highest. Nevertheless, the gains over the week were sizable.

The absence of any unfavourable pronouncements at the A.-I.C.C. session, the Congress High Command's decision about the future of Bombay City, absence of any bearish news and expectations of favourable Government policy regarding textile industry were all factors which cumulatively led to a fresh bout of bull support.

In the steel section, the Stock Exchange authorities fixed the *cum*-right making-up value of Tata Ordinaries for the 8th June settlement at Rs. 253, the rate at which the shares closed on 1st June, that is, on the eve of being listed *ex*-right. The *ex*-right value of the shares was fixed at Rs. 195 and the value of the letters of renunciation (rights) at Rs. 58. The members were, however, given the discretion to adjust the rates of the *ex*-right shares and the rights, so long as the overall rate was maintained at Rs. 253. The *cum*-right shares advanced from Rs. 250-8 to Rs. 253, before being listed *ex*- right. The *ex*-right shares opened at Rs. 193-12 and advanced to Rs. 202-12, but profit-taking brought them down to Rs. 200-4 at the close The rights jumped from Rs. 57-8 to Rs. 66-12, but reacted at the close to Rs. 64-8. Indian Irons rallied from Rs. 37-6 to Rs. 38-14½ before shading off to Rs. 38-8½.

Textiles presented a cheerful tone, with an all-round rise in prices. Bombay Dyeings were marked up from Rs. 650 to Rs. 674-6 before finishing at Rs. 668-12. Century Mills were taken up to Rs. 572, as against the previous week's closing of Rs. 555-12, but at the close they reacted to Rs. 566. Kohinoors were keenly sought and rose from Rs. 374 to Rs. 381, but a substantial part of the gain was wiped out at the close when the shares were done at Rs. 375-8. Central Indias were marked up by Rs. 2 to Rs. 141-8. Finlays gathered Rs. 3 to Rs. 341 and Gokaks Rs. 2-8 to Rs. 233. Indu Ordinaries were favoured and rose by As. 8 to Rs. 13-14½. Indore Malwas gained Rs. 5 to Rs. 147-8, while Khataus were unchanged at Rs. 240. Morarjee Goculdas changed hands Rs. 6-4 higher at Rs. 248-12 and New Greats Rs. 5 better at Rs. 255. New Citys picked up Re. 1-14 to Rs. 180. Shree Niwas improved by Rs. 3-12 to Rs. 212-8. Simplex moved up from Rs. 220-8 to Rs. 225-8, but closed at Rs. 223. Standards put on Rs. 2-8 to Rs. 443-12. Svadeshis staged a smart rise from Rs 229-8 to Rs. 241-8 and Tata Mills from Rs. 53-4 to Rs. 55-8. Dawn Mills were keenly bid and advanced by Rs. 10 to Rs. 142-8. Madhusudans were done at Rs. 111-4, a rise of Rs. 2-8 over the week, and Podars were taken up Re. 1-4 higher at Rs. 185.

Banks were steady with enquiries in select counters. Barodas were in demand at Rs. 96. Bank of Indias rose smartly from Rs. 161 to Rs. 163-4. Central Banks were done As. 4 higher at Rs. 51-8 and their New shares gained As. 8 to Rs. 52-8. Punjab Nationals staged a rise of Rs. 4 to Rs. 55-4, while United Commercials were a shade quiet at Rs. 50-8.

Insurance shares were featureless and enquiries were very much restricted. New Indias were bid up to Rs. 44, as against Rs. 42-12 and Indian Mercantiles gained Re. 1 to Rs. 43. Vulcans were a shade lower at Rs. 14-4.

Electricity shares were steady, though business reported done remained restricted. Ahmedabad Electrics gained As. 3 to Rs. 97-8, while Bombay Suburbans receded from Rs. 114-1 to Rs. 113-7. Surat Electrics rose by Re. 1-4 to Rs. 121-4. Tata Hydros were maintained at Rs. 131-8 and Andhra Valleys at Rs. 1,222-8, while Tata Powers advanced by Rs. 7-8 to Rs. 1,318-12.

The miscellaneous section ruled firm in consonance with the general trend. Sugar shares, in particular, shaped well. Belapurs hardened from Rs. 231 to Rs. 239-8, but closed lower at Rs. 236. Phaltans moved up by Rs. 7 to Rs. 157 and Walchandnagars by Rs. 6-4 to Rs. 253-12. Bhopals held their own at Rs. 13-10. Cement shares scored modest gains, A.C.C. rising from Rs. 217 to Rs. 218-8. Digvijays were slightly better at Rs. 190-4. In the engineering and mining group, Alcocks were in the limelight and were taken up from Rs. 352-8 to Rs. 363-12. Tata Locos were, however, marked down from Rs. 157-8 to Rs. 154-8, despite expectations of a maiden dividend. Larsen and Toubros were steady at Rs. 16-6. Premier Constructions provided a lively feature on keen buying from knowledgeable circles and rose by Rs. 11-4 to Rs. 188-4. Shivrajpurs were bid Rs. 2-8 higher at Rs. 103-8. Indian Coppers scored a gain of As. 3½ to Rs. 6-14. B.B. Petrols were better at Rs. 4-2, as against Rs. 4-0½.

Shipping and transport shares shaped well. Scindias were lifted up from Rs. 18-4 to Rs. 19-2, before they closed at Rs. 18-14½. Great Eastern Shippings moved up by As. 6 to Rs. 18-2. Bharat Lines stood at Rs. 76. India Steamships gained from Rs. 9-5 to Rs. 9-7 *cum-div.* Hindustan Motors were in demand and rallied from Rs. 9-8 to Rs. 10-8. Premier Automobiles also gained from Rs. 92-8 to Rs. 94. Among miscellaneous industrials, Bombay Burmahs received keen attention on optimistic expectations about dividend and rose from Rs. 648-12 to Rs. 665, but heavy profit-taking at the close wiped out a part of the gain and the shares closed at Rs. 657-8. National Rayons advanced from Rs. 245 to Rs. 250, before finishing at Rs. 246-4. British India Corporations ruled steady at Rs. 11-4. Killick Industries dropped from Rs. 162-8 to Rs. 160. Tata Chemicals gathered As. 13 to Rs. 18-15½, Dhrangadhra Chemicals As. 8 to Rs. 125-8 and Tata Oils As. 12 to Rs. 53-4. Wimcos were maintained at Rs. 189.6.

Calcutta Stock Exchange

CALCUTTA, *6th June*

The Calcutta Stock Exchange put on a rather dull appearance during the week under review. In the absence of any fresh incentives, operators did not evince much interest in fresh business. Consequently, turnover was small and values moved within narrow limits. The speculative counters evoked sizable profit-taking, but offerings were quickly absorbed. The undertone of the market was generally easy.

The coal section experienced continued selling on apprehensions of reduced profit from collieries, following the upward revision in wages granted by the All-India Industrial Tribunal. Bengals came down by Rs. 9 to Rs. 536. Harriladihs dropped Re. 1-2 to Rs. 22-8. Burrakurs receded by As. 13 to Rs. 13-1. Western Bengals fell by As. 10 to Rs. 6-5. Raneegunges declined by As. 6 to Rs. 11-2 and New Bheerbhooms by As. 3 to Rs. 19-3. Central Indias were quiet at Rs. 7-4.

Tea shares also lacked support and prices drifted lower. Teliaparas retreated from Rs. 175 to Rs. 170. Banarhats and Rungamatees decreased by Rs. 2 each to Rs. 369 and Rs. 102, respectively. Brooke Bonds suffered a loss of As. 12 to Rs. 23-2 and Brahmapootras of As. 11 to Rs. 9-5. Sungmas were lower by As. 2 at Rs. 11-6. Darjeelings and Chinchonas were quiet at Rs. 170. Oodlabaris, however, scored a gain of Re. 1-12 to Rs. 51-12 on special buying enquiries.

Jute shares, too, failed to evoke follow-up support, despite the possibility of the Central Government taking steps to enhance the competitive capacity of Indian jute goods abroad. Anglo-Indias dropped Rs. 4 to Rs. 179. Nuddeas shed Re. 1-10 to Rs. 42-2. Orients decreased by a rupee to Rs. 163. Reliances lost As. 7 to Rs. 11-1. Howrahs eased by As. 4 to Rs. 23-8. Champdanys, however, had some buyers a rupee higher at Rs. 164. New Centrals were in request, the quotation spurting by As. 9 to Rs. 18-1. Birlas improved from Rs. 18-11 to Rs. 19.

Engineering shares ruled generally strong. Burn Cos. provided the brightest spot, the values forged ahead by Rs. 46 to Rs. 382. Indian Irons went up by Re. 1-1 to Rs. 38-9. National Irons put on As. 7 to Rs. 8-4. Marshalls gathered an anna to Rs. 6-10. But Textile Machinerys were somewhat neglected at Rs. 24-8, as against Rs. 25-1 last week-end. Jessops eased by As. 8 to Rs. 35-13.

Mining shares were dull and values fluctuated irregularly. Burma Mines lost As. 2 to Rs. 3-13. Consolidated Tins declined by an anna to Rs. 2-10, while Indian Coppers strengthened by As. 2 to Rs. 6-14.

Among cement shares, Assam-Bengals received good enquiries and hardened by As. 13 to Rs. 8-4. Dalmias picked up As. 4 to Rs. 17-8. Sone Valleys, however, slipped by As. 3 to Rs. 8-13.

In the miscellaneous section, Jardine Hendersons receded by Re. 1-8 to Rs. 99-8. Balmer Lawries were lower by a rupee at Rs. 168. Calcutta Electrics and National Insulated Cables decreased by As. 7 each to Rs. 13-4 and Rs. 22-15, respectively. National Carbons declined by As. 4 to Rs. 27-2, India Steamships by As. 3 to Rs. 9-2 and Dunlop Rubbers by As. 2 to Rs. 30-10. Indian Aluminiums, however, changed hands As. 12 higher at Rs. 22-12. Alkali and Chemicals met with support and improved by As. 10 to Rs. 21-4. Rallis registered a rise of As. 8 to Rs. 36-8. Indian Tobaccos gained As. 6 to Rs. 14-14. B.B. Petrols appreciated by a similar sum to Rs. 4-1. F. & C. Oslers gathered As. 2 to Rs. 11-6. British India Corporations were better by an anna at Rs. 11-3.

* * * *

Madras Stock Exchange

MADRAS, *5th June*

The firm tendency noted on the Madras Stock Exchange in the past two weeks continued unabated during the week under review. The firmness was aided principally by the recent assurance of the Union Finance Minister not to take recourse to compulsory loans from industrialists for covering the gap in resources needed for financing the second Five-year Plan. Optimism regarding increasing Government assistance to the private sector also influenced operators favourably. It was based on the indication which Mr. T. T. Krishnamachari gave in Parliament the other day that the export duty on tea might be reduced, should the cut effected by Ceylon adversely affect India's exports. To add to these factors, there was, of course, the renewed prospect of heavy inflation in the coming years. Consequently, operators were inclined to be active and, on their support, shares recorded further gains all round.

The following were the dividend announcements made during the week under review:

Company		Dividend per cent. for the year ended December 1955	1954
South Arcot Electric	...	6¼	6¼
Lucky Valley Tea Estates	...	10	Nil
Haileyburia Tea Estates	...	15(f)*	25
Twyford Tea Co.	...	10(f)†	25
Cannanore Spg. and Wvg.	...	15‡	12

f Final.
* Making a total of 25 per cent.
† Making a total of 20 per cent.
‡ Year ended 31st March 1956.

Induced by persistent buying support, the textile section continued to rule buoyant and most of the scrips forged further ahead. Dhanalakshmis were particularly sought with their quotation jumping up by Rs. 20 to Rs. 390. Radhakrishnas rallied Rs. 11-8 to Rs. 316-8 *cum-div.* Premiers hardened by Rs. 11 to Rs. 215 and Vasantas Rs. 10 to Rs. 295. Lakshmi fully paids spurted by Rs. 9 to Rs. 215 and A shares strengthened by Rs. 4-8 to Rs. 107-8. Saradas firmed up by Rs. 6-8 to Rs. 141-8. Ranga Vilas advanced by Rs. 6 to Rs. 107. Coimbatore Cottons and Krishna Rajendras rose by Rs. 5 each to Rs. 350 and Rs. 220, respectively. R.C. Amlkais were higher by Rs. 3-8 at Rs. 220, Balasubramania 'B's by Rs. 3 at Rs. 145 and Vijayalakshmis by Rs. 2-8 at Rs. 130.

Support for coffee shares was sustained, owing to renewed rumours of an early export quota announcement, Bababudins and Consolidateds put on As. 8 to Rs. 11-8 and Rs. 20-14, respectively. Coffee Lands gathered As. 4 to Rs. 24-10. Amalgamateds hardened by As. 2 to Rs. 10-12. Mysore Coffees were better by half an anna at Rs. 2-13. Kadurs were firm at Rs. 2-14.

Tea shares were favoured well. United Nilgiris moved up by As. 11 to Rs. 26-3. Mlamalays increased by As. 8 to Rs. 76-8. Nilgiris gathered As. 4 to Rs. 14-10 and Nonsuch Teas As. 2 to Rs. 37-8. Periakaramalais were fully maintained at Rs. 9-5, as also Peermades at Rs. 37-2 *ex-div.* and Coorg Teas at Rs. 12.

Among rubber shares, Cochin Malabars rose by As. 3 to Rs. 9-8. Teekoys gained an anna to Rs. 11-8. Rajagiris, however, came in for selling and receded by As. 4 to Rs. 25-4. Midlands declined by As. 2 to Rs. 22-4. Travancore Rubbers lost a like amount to Rs. 25-6. Kailas were unchanged at Rs. 6, Malankaras at Rs. 33 and Thirumbadis at Rs. 2-4-6. The Thirumbadi Rubber Co., Ltd., has purchased the Calicut Estate from the Kerala Calicut Estates Ltd., with effect from 1st March 1955 and the management of the estate is vested in the Company as and from 16th May 1956.

The banking section which had all along been dull sprang to activity this week. Andhra Bank fully paids advanced by Rs. 3-8 to Rs. 115 and Rs. 75 paids by Rs. 3 to Rs. 85. Indian Rs. 65 paids rose by Rs. 2 to Rs. 124. Fully paids gathered a rupee to Rs. 183. Punjab Nationals recorded a gain of As. 12 to Rs. 53-4. Travancores were better by As. 4 at Rs. 17-6.

In the miscellaneous section, sugar shares attracted good attention. Indias hardened by As. 12 to Rs. 17-10. Deccans picked up As. 9 to Rs. 11-1. Travancores gathered As. 2 to Rs. 13-10. Among other miscellaneous industrials, Rallis were supported well, their value advancing by Rs. 6 to Rs. 43. Ranes strengthened by As. 8 to Rs. 11. Andhra Cement 'A's rose by a similar sum to Rs. 167-8. Travancore Cements improved by As. 2 to Rs. 13-1.

PAKISTAN INTERNATIONAL AIRLINES

MARKET GOSSIP

(Concluded from previous page)

As regards emergency provisions, the Sub-committee has recommended the payment of deposit calculated at Rs. 35 per bale when the prices in the respective hedge contract are Rs. 50 below the ceiling price or Rs. 50 above the floor price. This deposit will be automatically increased to Rs. 50 per bale when the price of each contract reaches a level that is Rs. 25 below the ceiling price or Rs. 25 above the floor price. This provision, it is stated, should be made only if the Government accepts the floor and ceiling prices it has recommended. In the case of a bear raid, the weightage will be increased to 25 per cent. The Sub-committee has further suggested that, when the difference between the ruling prices of the two hedge contract narrows down to Rs. 25 or less, an emergency should be deemed to exist and that the provisions relating to squeeze, corner or bear raid should be made applicable to either of the contracts which is declared by the Board to be in the wrong position.

NEWS IN BRIEF

THE Government of India has fixed the price of tea, for the purpose of determining export duty, at Rs. 3-5 per lb., as against Rs. 2-4-3 per lb. in force from 1st May 1956. There is no change in the existing rate of duty of As. 6 per lb.

A three-day conference of State Agriculture Ministers will be held at Mussoorie on 28th June to discuss schemes for increasing food production in the country. The Conference will also discuss policies relating to higher targets not only with regard to foodgrains but also oilseeds, cotton and jute.

The freight rate on tapioca flour and chips from Indian ports to foreign ports has been reduced from Rs. 151 to Rs. 107 per ton, following the intervention of the Government of India on a representation made by the Travancore-Cochin State Government to the Central Government, with a view to encouraging trade in tapioca starch and other products.

Talks between the Government of India and Burmah-Shell for setting up a fertiliser factory in Bombay with a maximum capacity of about 36,000 tons of fixed nitrogen by the utilisation of waste gases from the oil refineries have ended in failure, following the withdrawal of the Company's earlier offer to co-operate with the Government in the venture.

The Government of India has liberalised the face value restriction from 33⅓ per cent. to 50 per cent. on import licences for electric motor starters up to 50 h.p. This will mean that not more than 50 per cent. of the face value of the licences, or Rs. 500 whichever is higher, can be utilised for the import of motor starters up to 50 h.p. The liberalisation is consequent on the rise in the price of such motors due to inadequate supplies.

Utilisation of atomic energy in agriculture will be one of the important questions to be discussed at the eleventh meeting of the Crops and Soils Wing of the Board of Agriculture and Animal Husbandry of the Indian Council of Agricultural Research to be held in Simla from 14th to 23rd June 1956. The Conference will review methods of reclamation of saline and alkaline soils with special reference to agronomic practices, afforestation and crop rotations.

An agreement has been signed between the Government of India and the International Technical Co-operation Mission of the United States providing for the allocation of $144,000 by the International Co-operation Administration for obtaining consultant and technical services for the completion of a steel casting foundry at the Chittaranjan Locomotive Works. The Government of India's contribution to the project will be Rs. 3,00,000. The present agreement is a supplement to the technical co-operation programme agreement signed between the Governments of India and the United States on 5th January 1952.

The total land area in this country under cereals during 1954-55 was 208,823,000 acres, having expanded from 193,314,000 acres in 1950-51. Out of this total area, the land under wheat in 1954-55 was 26,842,000 acres, whereas in the beginning of the first Plan period in 1950-51 it was 24,082,000 acres. The total production of cereals in this country increased from 41,744,000 tons in 1950-51 to 55,327,000 tons in 1954-55. The production of wheat during this span also rose from 6,360,000 tons in 1950-51 to 8,539,000 tons in 1954-55. The average yield of wheat per acre also registered an increase from 592 lbs. per acre in 1950-51 to 713 lbs. per acre in 1954-55.

With a view to feeding the printing industry with trained personnel, a scheme for the establishment of a Department of Printing Technology in Bombay has been sanctioned by the State Government. The proposed school, which will be one of the regional schools in the country, will provide facilities, to begin with, for training 25 students in letterpress printing during the first year. Additional courses will be introduced later on. During the past few years, there has been an unprecedented expansion of the printing industry, but simultaneously with this expansion there is no provision for feeding the industry with trained experts.

Investigations by the Geological Survey of India in the south-eastern part of Nepal have revealed the existence of large reserves of limestone, an essential raw material for the cement industry. Survey of the limestone deposits was undertaken at the request of the Nepal Government. The limestone reserves in these areas are estimated at 25 million tons to 70 million tons up to a depth of every 100 feet. The cement grade limestone content of these deposits varies from 30 to 60 per cent. According to the report of the Indian geologists who conducted the investigations, the quantity of cement grade limestone in each of the deposits appears to be sufficient to support a cement plant of the capacity of about 1,000 tons per day.

The total cattle population in India in 1952-53 stood at 155,099,000, out of which 49,848,000 were cows and 21,842,000 buffalos yielding about 510 million maunds of milk per year, according to the *Indian Livestock Statistics* (1952-53) brought out recently by the Directorate of Economics and Statistics, Ministry of Food and Agriculture, Government of India. The publication, which contains other particulars in regard to farming, also gives some statistics about milk products, poultry, etc. According to it, India produced 11,727,000 maunds of ghee and 2,035,000 maunds of butter in 1951. Nearly 1,407,200,000 eggs were produced during that period.

The Government of India would consider "almost immediately" the recommendations of the Ambar Charkha Committee, according to Mr. K. C. Reddy. The recommendations are expected to come up for discussion at a conference of the representatives of the Governments—Central and State—the Khadi and Village Industries Board, the Handloom Board, the Planning Commission, and other all-India bodies to be convened by the Union Production Ministry at New Delhi on the 20th inst. The main items on the agenda of this conference relate to the programmes drawn up by the various organisations, the organisational aspects of the programmes, avoidance of overlapping of functions, and ways as to how best allotment of funds for different organisations can be spent.

The Ahmedabad Textile Industry's Research Association (A.T.I.R.A.), India's premier scientific laboratory for textile research, has plans to apply atomic energy for testing and improving textiles, and thereby making it faster, easier and more economical to produce them. Although the plans are still in the formulative stage, 120 research scientists are already at work at the A.T.I.R.A. laboratory. They have on hand 60 research projects which will help Indian manufacturers to improve quality, speed, production and reduce costs on numerous textile products. In order to enable the Association to fulfil its vital new role in India, several U.S. and international organisations are co-operating with the Institute. These include the U.S. Government under the Technical Co-operation (Point-4) Programme, the world-famous Massachusetts Institute of Technology, the I.L.O., and the U.N.E.S.C.O. Five of A.T.I.R.A.'s top research scientists have been educated or trained in leading U.S. institutions (one is in America now), while outstanding American technicians are assisting their counterparts by working in the Institute's laboratories.

* * * *

From Abroad

The Malayan and Singapore Governments are considering the plan to establish a central bank in Malaya.

The Malayan and Singapore Governments have lifted the embargo on Malayan rubber exports to China. Shipments of "reasonable quantities" will be permitted under licence. The relaxation would mean an increased demand for Malayan rubber.

The Goodrich-Gulf Chemical Company, one of the manufacturers of synthetic rubber in the U.S., has reduced its price of GR-S synthetic rubber by 9/10 cent to 23 cents per lb. The cut has been effected consequent on the fall in natural rubber prices.

The Japan Mining Company, the largest producer of copper in Japan, has reduced its "special price" for copper by 50,000 yen to 430,000 yen per ton *ex*-refinery with effect from 1st June. The ordinary price remains unchanged at 410,000 yen per ton. The "special price" applies to 30 per cent. of the total output to cover high costs of imported ore and scrap.

Keen anxiety in U.S. Government and labour union circles is being expressed over increasing unemployment in the U.S. automobile industry which is said to be spreading outside Detroit also. Last week, 18,000 workers in the car industry lost their jobs, bringing the total number of unemployed in the automobile industry to 185,000 out of a total of 709,700.

The three-year-old freight war between the Mitsui Shipping Line and the U.K.-Japan Homeward Freight Conference ended last week-end with the signing of an agreement. The agreement is, however, subject to confirmation by a full conference meeting in London this month. It is estimated that the agreement will raise the earnings of Mitsui and the two Japanese members of the Conference by 1,000 million yen per annum. The Mitsui Shipping Line will continue its east bound round-the-world service, which for three years has been the main barrier to an agreement.

The British House of Commons approved this week the double taxation agreement with India in respect of estate duty reached in April last. The Financial Secretary to the Treasury, speaking on the agreement, regretted that the efforts of the British Government to get deleted the provision relating to the liability of a British company for Indian estate duty on the value of a deceased shareholder's share at the rate of 7 per cent. proved a failure. The Government, he said, reluctantly came to the conclusion that it must accept the agreement with the defect in it.

The prices of all grades of pithead coal in Britain have been raised by 8 per cent., or an average of 6s. per ton, with effect from 1st June. Coke prices have also been raised from that date by 8s. 4d.—9s. 6d. per ton. The increase in coal prices is expected to bring in about £35 million in 1956 and £61 million in 1957, which will enable the National Coal Board to reduce its deficit from £36.6 million at the end of 1955 to about £15 million at the end of 1956 and to earn a surplus next year.

A very large extension of public ownership in Britain has been suggested by Mr. Aneurin Bevan, Labour M.P., as the only way to make effective economic planning possible. Among the industries which, he said, should come under public ownership are steel, chemical and machine tools. He added that, unless land was nationalised, food production would never go up. He believed that the National Boards should be made directly responsible to Parliament, because it was only in that manner that the workers could control them.

PERSONAL

MR. G. D. Birla, who had been on a business tour of the U.S., Europe and the U.K., returned to India on Friday last week.

Mian Ziauddin, former Pakistan's Ambassador to Japan, has been appointed High Commissioner for Pakistan in India, *vice* Raja Ghaznafar Ali Khan.

Mr. M. Bhaktavatsalam, Minister for Agriculture and Labour, Government of Madras, and leader of the Indian delegation to the I.L.O. session, left for Geneva to attend the session.

Mr. T. M. B. Nedungadi, Deputy Chief Controller of Imports and Exports, Cochin, and Chairman of the Cashew and Spices Promotion Council, has been appointed Chairman of the Coir Board, *vice* Mr. K. Narayana Menon.

Mr. Dalip Singh, formerly officer on special duty in the Union Finance Ministry in connection with the implementation of the Taxation Enquiry Commission's recommendations on sales tax, has been appointed Secretary, Industrial Finance Corporation of India.

Mr. S. N. Ramanna has been re-elected President of the Indian Planters' Association of Mysore for the year 1956-57. Mr. A. M. Basava Gowda has been elected Vice-President and Messrs. B. K. Narasimhamurthi and C. Veera Gowda, Honorary Secretaries of the Association.

Mr. B. T. Narayan, Director of Research, and Mr. Narasimhaswami, Botanist, Indian Coffee Board, have been deputed to visit Kenya, Uganda and Tanganyika to study the cultural practices and experimental work in regard to production of coffee. They will be leaving in about two weeks.

Mr. P. N. Thapar, Secretary, Ministry of Food and Agriculture, left for Rome on Monday this week. He will represent India at the next meeting of the Co-ordinating Committee of the United Nations Food and Agriculture Organisation, which will be held in Rome, to draw up the programme of work of F.A.O. for the next two years.

Mr. Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd., and Mr. N. Dandekar, Managing Director of the Company, who had been to the U.K. for talks with Vickers Ltd. and Babcock and Wilcox Ltd. in connection with the setting up of a factory to produce cement manufacturing machinery, returned to Bombay on Friday last week.

SERVICE IN INDUSTRY

By N. BARWELL and S. S. KAR

Demy 8vo — 995 pages — Rs. 37-8

This is the Second Volume of the monumental work on the Law of Service in India and, as the title indicates, deals exhaustively with all the industrial legislation in this country with particular reference to service. It contains

1. The Factories Act
2. The Factories (Amendment) Act, 1954
3. The Workmen's Compensation Act
4. The Workmen's Compensation Rules
5. The Mines Act
6. The Dock Labourers Act
7. The Dock Labourers Regulations
8. The Plantations Labour Act
9. The Dock Workers (Regulation of Employment) Act
10. The Employment of Children Act
11. The Apprentices Act
12. The Employees' Provident Fund Act
13. The Employees' State Insurance Act
14. The Employees' State Insurance (Central) Rules
15. The Employees' State Insurance (General) Regulations
16. The Mines Maternity Benefit Act
17. The Payment of Wages Act
18. The Minimum Wages Act
19. The Trade Unions Act
20. The Industrial Disputes Act
21. The Industrial Disputes (Central) Rules
22. The Industrial Tribunal (Central Procedure) Rules
23. The Industrial Disputes (Appellate Tribunal) Act
24. The Industrial Disputes (Appellate Tribunal) Rules
25. The Industrial Disputes (Appellate Tribunal) Rules Regulating Practice and Procedure

With exhaustive commentaries and up-to-date case law.

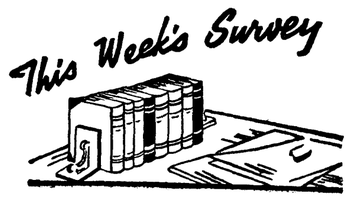
Invaluable for practising lawyers, students of law, trade unions and employers and employees in commercial organisations, factories, mines, plantations and Docks.

Initial bulk stock received from binders nearly exhausted and further bulk quantities expected shortly.

For further details write to:

ORIENT LONGMANS

Nicol Road, Ballard Estate, Bombay 1



CEILING ON INCOMES

IF there are any in this country who are still unconvinced of the unwisdom of ceiling on incomes even after the effective exposition of the case against it by no less a person than Mr. Nehru, they will do well to ponder the advice tendered by the British tax expert, Prof. Kaldor, now in India. This distinguished visitor is known for his leftist views. He is a strong believer in egalitarian ideals. But even he has declared, in a report submitted to the Government of India, that the proposal for a ceiling on incomes is a "spectacular but meaningless" one. He thinks that the current agitation for a ceiling on income proceeds from "any but the highest moral and social motives." We are not so sure of that. We are rather inclined to believe that it proceeds from an irrational hatred of the rich rather than a genuine love of the poor. Be that as it may, he has done well to warn that the agitation would do considerable harm if it were to lead to lower top salary scales for top executive personnel in the newly established State enterprises. Proceeding, he remarks:

"I think it is essential to the success of India's current approach to her future development—the socialistic pattern of society—that the important enterprises in the public sector should be able to attract the best available talent; and this means that they should be able to pay remuneration on a scale that is fully competitive with that offered by private industry."

He admits that the marginal tax on income, which has already reached 97.5 per cent., could clearly be raised to 100 per cent. without making any radical difference. Obviously, what he means is that there could be no insuperable technical difficulty in making the change. But he rightly holds that such a change would lead to the elimination of "desirable social incentives." Further, economic inequality, he points out, cannot be reduced through introduction of absolute ceilings so long as wealth continues to be privately owned. The proposal for a ceiling on income can acquire some meaning, only if ceilings are "meant to comprise a ceiling on ownership of wealth and not only on annual accruals." He adds:

"Interpreted in this comprehensive sense, however, the proposal is not one which a country like India could adopt without seriously compromising her prospects of growth and improvement or of even the maintenance of existing standards. Soviet Russia discovered to her cost that economic incentives cannot be eliminated without perilous consequences, except perhaps at a stage of economic well-being which is far above that of even the richest nation (like the U.S.), let alone India."

Prof. Kaldor concedes that there is a strong case for reducing the prevailing degree of economic inequality. But the way to do this, as he points out, is by making the tax system "comprehensive and administratively effective, not by introducing absolute ceilings." From this point of view, he seems to favour "comprehensive and effective taxes on wealth" rather than the "spectacular but meaningless (and indirectly harmful) notion of an income ceiling." It is not, however, clear from the published version of Prof. Kaldor's report how he would implement a tax on wealth in a country where property is not held in forms in which their value is easily ascertainable. It is true that a similar problem occurs in the collection of estate duty. But the difference between estate duty and tax on wealth is that, whereas the former is collected only once on property, the latter is meant to be an annual collection. Further, India has only recently introduced estate duty, so that it has not yet faced and solved all the problems involved in the estimation of the value of different forms of property.

The British expert feels that there might be a case for a ceiling on landholdings, but, in his view, this does not justify a ceiling on income. Elucidating his view, he says: "Since the effective size of farms in India is relatively small, land ownership above a certain amount serves no economic purpose and is merely a method of exploiting the peasantry, and often a positive impediment to improvement in productivity on the land. This is certainly not true of the high incomes earned through a successful business or professional career or the accumulation of fortunes through successful enterprise." In his laudable attempt at building up a valid case against ceiling on incomes, Prof. Kaldor has apparently over-stated the case for ceiling on landholdings. The fact is that the arguments which could be urged against limitation of incomes could, with equal justice, be used against ceilings on holdings. It is not true that land-ownership above a certain level serves "no useful purpose." Actually, large holdings, far from being an "impediment to improvements in productivity on the land," facilitate scientific agriculture whereas small holdings hinder it. Nor is it true that large landholders exploit the peasantry. They are often in a position to pay better wages than small landholders. The case for a ceiling on land is just as weak as that for a limitation on incomes.

ONE-WAY TRAFFIC IN MONEY

The thesis about the one-way movement of money to rural areas, which Mr. B. M. Birla presented the other day as the Chairman of the West Bengal Financial Corporation, deserves wider notice and patient investigation. Speaking at the last annual meeting of the Corporation, Mr. Birla averred that the tendency in recent years was for money to flow into rural areas from which it seldom returned to the cities. He deplored that, while this trend continued, the urban population was being subjected to an increasingly heavier burden of taxation. This made the problem of finding equity capital for industries more difficult, inasmuch as the urban classes, who have been the mainstay of the capital market, have come to possess less money than they had formerly. He stated, in effect, that the position might have been different if the banking facilities were more extensive in rural areas for that would have served to siphon off this excess supply in those regions into the main money stream.

To reinforce this thesis about the supply of money to rural areas, Mr. Birla cited the pattern of expenditure under the first Plan. He pointed out that, out of a total outlay of Rs. 2,356 crores, about Rs. 1,485 crores were allocated for such schemes as agriculture and community development, irrigation and power, village and small-scale industries, road transport and water-supply. A very large part of the money on these schemes was spent in the rural sector. Even under the second Plan, rural development will claim Rs. 2,300 crores or about 50 per cent. of the expenditure in the public sector. Mr. Birla admitted that it is only "when the purchasing power of the people increases that industry can find a ready market for its products." But he contended that, since the spending habits of the people were still conservative and there were no banking facilities either, all that money was neither available to the Government nor to industries. This trend, Mr. Birla rightly suggested, will adversely affect the supply of credit to industries—and the money rates too—and the Government's loan programme, and will also necessitate greater deficit financing and higher taxation. But the main point which he urged was that, if rural savings were not tapped, or only insufficiently tapped, and if industrial development were held up through absence of credit facilities, it would greatly increase the inflationary potential within the country.

The obvious remedies to such a situation are extension of banking facilities to the rural areas and the creation of the urge in the rural sector to improve its living standards. It is true that banks cannot be carried to the villages overnight. This is a long-term reform. The other remedy is not so difficult. It should be possible for industrial enterprises through effective and adequate salesmanship to capture an increasingly larger share of the rural market. The rural consumer should thus be made to fill part of the vacuum created by the diminution of the urban investing classes. Meanwhile, efforts should be made to encourage the investment habits in both the rural and urban classes, to build up a broad-based property-owning democracy. And here, the Government has a vital role to play. It can, through abandonment of unhelpful fiscal policies and pursuit of vague egalitarian ideals, create a climate in which investment habits could become more strongly and more widely established.

LABOUR AND MANAGEMENT

The constructive suggestions for improving employer-employee relations in industrial establishments put forward by Mr. J. K. Srivastava, Deputy Chairman, the Employers' Association of Northern India, Kanpur, at the annual meeting of this body held last week, merit the wholehearted attention of all those who have at heart the prosperity of industry. For many labour problems still remain unresolved, while new ones are being added every day to the detriment of industrial progress. Demand for new concessions to labour shows no signs of abatement. The question of rationalisation of industry is still hanging fire, as a section of labour continues to oppose the move. Strikes and the resulting loss of man-days have not been infrequent. Competition among labour leaders for gaining hold of power over workers' unions has been the bane of the labour movement in post-independent India, bringing in its wake suffering and privations to workers who follow them. And there is the move drastically to amend the provisions of the Industrial Disputes Act which is likely to add further burdens to industry. Consequently, if proper attention is not paid to these problems, industrial progress under the second Five-year Plan is, as was warned by Mr. Srivastava, likely to lag behind schedule.

For some time now, there has been a move to have workers associated with managements through a council of management. This move has had the approval of not only the Joint Consultative Board of Industry and Labour but also the Planning Commission. The move has no doubt much for commending in its favour, but has also certain demerits, chiefly owing to illiteracy amongst vast sections of labour and lack of a healthy labour movement. Although Tatas have succeeded, to a certain extent, in associating workers with the management for certain limited objectives, the move is yet to be tried in the country and fuller association of workers is only possible by gradual stages in the light of the experience gained by each unit in each industry. Consequently, the suggestion made by Mr. Srivastava that the proposal should be tried "as an experimental measure in specified large industries on the distinct understanding that all matters pertaining to finance and general administration should be excluded from the purview of the Council" sounds practicable.

Mr. Srivastava is also not opposed to the principle of profit-sharing as advocated by the Joint Consultative Board since it promotes better work. He is, however, not in favour of payment of bonus out of capital reserves of a company, as such a principle, in his opinion, would tantamount to the voluntary depletion of working capital. He considers that the Joint Consultative Board has done good work in the sphere of harmonious industrial relations. As this is a body working at the national level, he desires that it should be organised industry-wise and, at a later date, even at the unit levels.

Being the chief office-bearer of a leading association of employers in Kanpur, Mr. Srivastava could not help referring to the big strike staged last year by workers of the cotton mill industry in that city. He said that the strike demonstrated the recklessness with which some of the labour leaders sacrificed the true interests of labour to suit their own ends. At the Nainital Tripartite Conference these leaders had accepted, in principle, that rationalisation, must be carried through. When the U.P. Government set up a committee to work out a programme of rationalisation, some leaders dropped out and launched an anti-rationalisation campaign. It is this campaign that culminated in the strike. As many as 27,000 workmen participated in it, involving a loss of 1.7 million man-days, 50 million yards of cloth, nearly 15 million pounds of yarn, over 7 million yards of jute fabric, and over Rs. 55 lakhs in wages. The strike finally ended in the acceptance, once again, of the very principle of rationalisation to prevent which the strike was launched. The whole episode reflects irresponsible character of labour leadership and unhealthy trade unionism in U.P. Multiplicity of labour unions that exists in the Kanpur textile industry is stated to be responsible for the inability of the industry there to reach a bonus agreement similar to that achieved in Bombay, Ahmedabad and Jamshedpur. It is, however, expected that the co-operation of labour in the city would soon be forthcoming for implementing the rationalisation programme now being drawn up by the Kanpur Cotton Textile Rationalisation Enquiry Committee on which labour representatives are serving at present. The Committee is expected to complete its work by the end of this month.

Since Kanpur has experienced labour unrest in recent months, it is but natural that Mr. Srivastava should have dealt at length with the question of establishing a sound system of trade unionism. According to him, there is a need for changes in two directions, namely, a drastic revision of the Trade Union Act and a radical change in the attitude of labour. In order to improve the tone of the unions, Mr. Srivastava favours debarring, by law, participation of outside elements in workers' unions. He advocates the acceptance of the principle of one union for one industry and incorporate the same in the Trade Union Act. He pointed out at the meeting referred to above that the recognition of trade unions must depend not only on their numerical strength but also on the acceptance by the unions of the principle of resorting to strikes only in the last resort after the failure of all other steps for reaching an amicable settlement of the dispute across the table.

The decision reached at the recent meeting of the Labour Panel of the Planning Commission to raise the rate of contributions to Employees' Provident Fund from 6¼ per cent. to 8⅓ per cent. is viewed with a certain amount of anxiety by Mr. Srivastava. According to the present law, employees are free to contribute, if they so desire, upto the maximum of 8⅓ per cent. But the employer is not bound to raise his share of contribution correspondingly. But, if the Labour Panel's decision is given effect to, it would mean that employers, too, must raise their contribution. Accordingly, if the move materialises it would place further burden on industry.

ENGINEERING PERSONNEL

It was only last week that we stated in these columns that it was unfortunate that the Planning Commission should have reduced the provision for technical education in the second Plan from Rs. 80 crores originally allocated to Rs. 48 crores. The criticism was based on the ground that the revised outlay was too meagre to meet the growing requirements of technical personnel to man the enterprises in the public as well as the private sector. That there is no exaggeration whatever in this statement is clearly brought out in the following extract from the report of the Planning Commission's Engineering Personnel Committee, a summary of which has just been published:

"In 1960-61, India will be in short supply of engineering personnel to the extent of 1,800 graduates and 8,000 diploma holders in different branches. If the existing institutions are expanded fully, it may be possible to secure, on an average, a 20 per cent. increase in the output of graduates and 25 per cent. increase in the case of diploma holders. The total cost of creating additional training facilities will be in the neighbourhood of Rs. 16 crores."

Considering the high priority given to heavy industries and mining in the second Five-year Plan, the need for ensuring an adequate supply of engineering personnel is, indeed, imperative. Equally imperative is the need for a new orientation in engineering studies, so as to enable future engineers to handle both men and machines with equal facility. It is reported that there has been a certain lowering of standards in engineering education, thanks to dearth of teachers of right calibre, inadequate facilities for practical training, ineffective methods of examinations, and insufficiency of equipment. The Engineering Personnel Committee has done well to draw pointed attention to this aspect and lay great emphasis on qualitative rather than merely quantitative improvement. "The strength and effectiveness of our future development," as the Committee says, "will depend, to a large extent, on the quality of engineering personnel available for absorption. No efforts should, therefore, be spared in achieving a high level of competence in engineers who will be trained by various methods during the coming years."

The Committee has put forward several general recommendations of far-reaching importance. Among them, four stand out prominently. They relate to (i) creation of suitable deployment machinery to co-ordinate release of personnel from one project and their absorption in another; (ii) making foreign training more purposeful by an advance mapping of the field in which training is needed and earmarking personnel for suitable positions in the country on their successful completion of training; (iii) grant of scholarships for specialised training in urgently needed techniques; and (iv) affording facilities for advance work in specialised fields. For improving educational standards, the Committee has suggested that the service conditions for teaching staff should be on a par with those obtaining in executive positions under the Government. The other suggestions in this regard are: Sparing competent and experienced men from Government cadres for teaching in colleges; promotion of advanced work and research in universities; encouraging consulting work by university staff; and allowing servicing engineers who display a special aptitude and potentiality for research to enter work on adequate remuneration.

These recommendations apart, the Committee has also suggested certain interim measures to meet the shortages in engineering personnel. They include promotion from lower ranks, more balanced utilisation of available talent, retention of superannuated persons for considerable periods, and organisation of functional training at the supervisory level.

The aforesaid recommendations of the Engineering Personnel Committee deserve to be implemented in right earnest. Otherwise, there is the danger of the progress of development schemes being hampered considerably by lack of adequate technically trained persons.

FOODGRAINS TARGET

The National Development Council has directed the Planning Commission to step up the target of additional foodgrains production from 15 per cent. to 40 per cent. during the second Plan period. This would mean an increase in the target for foodgrains to be produced by 1960-61 from 75 million tons, envisaged in the draft Plan, and the estimated output of 65 million tons in 1955-56, to 91 million tons. Evidently, the Council's decision to step up the target has been prompted by the consideration of the need for countering the possibilities of inflationary pressures resulting from the implementation of the series of development schemes and of other factors such as the rise in population, need to improve *per capita* consumption, increase in urban population, and effects on food consumption of improvement in national income.

The National Development Council's directive is no doubt commendable, but the question is whether such a substantial increase as 40 per cent. suggested by it can be achieved. In fact, some are of the view that to think in terms of a 40 per cent. rise in additional foodgrains production in five years is no more than wishful thinking. Alluding to this view in his speech on the second Plan in the Lok Sabha the other day, Mr. Jawaharlal Nehru said: "I do not think it is wishful thinking. I think it is possible that we can achieve nearly 40 per cent. increase and, if not 40 per cent., something like 35 per cent." Mr. Nehru no doubt admitted that the change in the target from 15 to 40 per cent. was a tremendous one, but felt confident that it was not beyond practicability. Giving reasons for his optimism, he stated: "Our agricultural production today is almost the lowest in the world. And we have shown in parts of India that we can increase it by a hundred-fold. It is true the whole of India cannot be treated on the basis of a model farm, but, if we can increase it a hundred or hundred-and-fifty-fold in a model farm, we can no doubt achieve an increase of 40 to 50 per cent. on an average." Mr. Nehru, of course, took care to qualify his statement by stressing that one must apply enough thought and energy to produce actual results. He thought that increase in food and other agricultural production should be made the special work of our community schemes. In this connection, he made the following observations:

"Thus far, these Community Projects and others have aimed at what might be called 'amenities' like roads, tanks, wells, school buildings and so on and so forth. Perhaps, it was right, because we have to create that atmosphere. People should see that what they do produce results. Still, some attention was paid to food production and, in all the Community Project areas, the percentage of increase in food production there is from 20 to 25 in the last three years, which is really considerable. And this, when they were not paying very special attention to it; they were paying some attention, but they were paying more attention to other matters. Now we want them to pay special attention to food production and to the growth of small-scale and cottage industries. That means two things, production, industrially and agriculturally. I have no doubt that, in those areas, certainly our agricultural production should increase rapidly, and reach at least the 40 per cent. mark that we propose to lay down for the next five years."

While Mr. Nehru's anxiety to reach the revised target of additional foodgrains production is clearly understandable and should be fully appreciated, there is no denying the fact that the fulfilment of the foodgrains target depends considerably on the rate of investment on agriculture. The Union Food and Agriculture Ministry puts the additional capital outlay at Rs. 100 crores. This estimate seems to be a very conservative one. For the cost of augmenting yields from more intensive and efficient agricultural operations will be very high. It is calculated by experts that, on an average, a sum of Rs. 100 is required to be spent on nitrogen (as ammonium sulphate), in order to produce an additional ton of foodgrains. The response of food crops to 20 lbs. nitrogen per acre, it is computed, varies from crop to crop. Thus, the additional yield is 4.1 to 4.3 maunds for rice, 2.8 maunds for wheat (irrigated), 1.7 to 1.8 maunds for wheat (unirrigated) and 2.6 to 2.8 maunds for maize. It will be interesting to note here that the all-India average yield per acre is at present about 9 maunds for rice and maize and 8 maunds for wheat. On this basis, the capital outlay required for securing the additional rise of 26 million tons during the second Plan period works out to a very much higher figure than that estimated by the Food Ministry. Even if this sum is found, it is doubtful whether foodgrains production can be stepped up by 40 per cent. For, as we had pointed out on an earlier occasion—*vide* page 946 of our issue dated 19th May 1956—the State Governments, under whose jurisdiction agriculture falls, are unlikely to rise to the occasion, what with the general elections and the reorganisation of States. There are also serious obstacles such as land reforms of doubtful value and absence of adequate credit as well as storage facilities. Unless all these obstacles are removed and earnest steps taken to ensure adequate and regular supplies of irrigation water for agriculture, the target of a 40 per cent. rise in foodgrains production may remain unhit for a long time to come.

COTTON YARNS
OF ALL DESCRIPTIONS
FOR HANDLOOM, POWERLOOM AND HOSIERY FACTORIES
MADURA MILLS COMPANY LIMITED
Phone: 250 (5 Lines) —MADURAI— Telegrams: 'Harvey'
SOUTH INDIA
MILLS AT MADURAI, TUTICORIN AND AMBASAMUDRAM
5,00,000 Spindles Counts up to 80's
We Supply:
WARP YARNS, COMBED YARNS, HOSIERY YARNS,
CONE, CHEESE AND HANK YARNS, SINGLE AND FOLDED
SPECIALITIES
Yarns for the Manufacture of ROPES — HEALDS — CANVAS — TAPE
BELTING DUCK — TYRE CORD FABRIC — SEWING THREAD
MULTI-PLY AND CORD YARNS
MANAGERS: A. & F. HARVEY LIMITED
PANDYAN BUILDING, MADURAI, SOUTH INDIA

ALL EYES ON MR. C. D. DESHMUKH

WILL HE QUIT THE GOVERNMENT?

From A Special Correspondent

NEW DELHI, *5th June*

THE centre of interest this week was shifted, as it were, from New Delhi to Bombay, where the political *pundits* and luminaries of the party-in-power assembled together, with a view to taking stock of the situation and coming to a decision on the measures necessary for implementing the second Plan. The meeting also discussed a number of important pending political problems, prominent among them being the Goa question, the linguistic States, the future of Bombay City, etc.

DELHI LETTER

While the Congress Party was holding its Committee meetings in Bombay, some disquieting tendencies in the country's economic and political life began to manifest, naturally causing some concern to those interested in the welfare of this country. The wave of unrest and discontentment among a section of the labourers employed in the railways, resulting in strikes and loss of public property, was being taken due note of in the Capital and, after due investigation into the causes of these unpleasant happenings, it is expected that suitable action will be taken in future in order to prevent such unfortunate recurrences. Fortunately, these strikes proved to be a temporary phenomenon. The Government is of the view that there should not be any atmosphere of violence in the country. It is recognised here that some of the essential factors for ensuring the success of the second Plan are peace, internal and international, a high sense of discipline among the people, a spirit of sacrifice and mutual co-operation. When unrest manifests itself in the form of strikes in some essential services like the railways, the ability of the country to implement its development plans will be seriously jeopardised. In the Capital itself, the train services were dislocated for about two days, causing considerable inconvenience to countless passengers and citizens. The serious situation at the Kalka Railway Station also had its adverse repercussions on some other railway junctions, such as Ambala, for instance.

Stocking of Essential Materials

If the dislocation to the train services in these parts had persisted, it would have seriously endangered the construction of the Bhakra Dam where the work is being done continuously both day and night. This is, perhaps, the first time, when the temporary strike of railway men has caused considerable anxiety to the engineers in charge of the construction work at Bhakra. However, in the construction work of this type, it is extremely essential to keep some reserve stocks of cement, iron and steel, etc., so that, in the event of any unforeseen events happening, these reserve stocks could be utilised and the construction work could be carried on smoothly and without interruption. It is extremely unwise to depend on the day-to-day movement of cement and other construction materials. It is to be hoped that the latest developments in the railways will have their own lessons on the people engaged in the nation-building activities of the country, and keep them more alert in regard to stocking of essential materials.

The verdict of the Prime Minister that the City of Bombay should be Centrally administered, with the concession that, at the end of five years, "the citizens of this great City should be the arbiters of its destiny" was not unexpected. It is, however, felt here that it should not be allowed to result in any Cabinet changes in the Centre It is a known fact that Mr. C. D. Deshmukh had already submitted his resignation on this issue but it is being hoped that the Finance Minister will not take any precipitate action and quit the Central Government. The Prime Minister's significant remarks to the effect that the Central administration for the City would not mean the creation of a barrier between the people of the City and the surrounding Konkan and Thana districts as regards employment, etc., and that the people in the City's offices would not be thrown out of employment, etc., are expected to allay the misapprehensions entertained by Mr. Deshmukh that the economic and employment interests of the people of his constituency, namely, the Kolaba District, would be exposed to considerable jeopardy if the City of Bombay were cut off from Maharashtra. In view of the aforesaid assurances by the Prime Minister, normal conditions in the City of Bombay will be maintained in the coming years. Hence, there is no point in Mr. Deshmukh resigning from the Central Cabinet on this issue.

It is fully recognised that Mr. Deshmukh has been doing a splendid job in his capacity as the Finance Minister of the Central Government for the last five years and more. Great credit is due to him for not only maintaining the solvency of the Government but of improving it to a substantial extent. He has been able to curb inflation in the country at the commencement of the first Plan, restore normalcy, augment the revenue resources for the Government coffers and carry out many ambitious development schemes in a methodical and orderly way. He has raised the status of the Indian rupee in the international money markets and laid out plans for implementing the second Plan. It is an acknowledged fact that his financial and administrative calibre is of a very high order and it is being hoped in the Capital that he will continue to lend his weight and wisdom on the side of Government, especially as the Government has embarked on a more ambitious planned development.

The presence of Mr. Deshmukh in the Central Cabinet is also extremely necessary, for giving effect to the proposed changes in the tax structure. In view of his wide knowledge and long experience, he may be able to single out what is practicable and easily workable from the many novel suggestions that are being offered by financial experts.

Inter-State Sales Tax

It was only in the last week of May that the Lok Sabha placed taxes on inter-State sales and purchases in the Union list of taxes when it passed the Constitution Amendment Bill on sales tax. The Finance Minister claimed that the Bill, when enforced, would achieve a great deal of uniformity in the levy of sales tax on inter-State transactions. He pointed out that the Government had broadly accepted the view of the Taxation Enquiry Commission that sales tax should continue to be under State taxation essentially and that only inter-State taxation should be the concern of the Central Government. A small board of experts in sales tax is expected to be constituted shortly by the Central Government in order to bring about improvements in the system of this particular levy prevailing in various States. The Finance Minister also hoped that the logic of events would finally drive the States to come together closer in their rates of levy. The expert body has yet to prepare a list of commodities and manufactured articles which should come under the list of inter-State sales tax.

Apart from the many recommendations of the Taxation Enquiry Commission which are yet to be implemented, Prof. Nicholas Kaldor, the U.K. economist and taxation expert, who had recently been invited by the Finance Ministry of the Government, to give his expert advice on tax reform in this country, has come out with a number of suggestions. Broadly speaking, he has made five suggestions, important among them being the lowering of the income and super taxes to about 45 per cent., as against the present 92 per cent., the introduction of new taxes on capital gains, the annual value of capital tax, gifts and personal expenditure tax, etc. In order to counter the alleged large-scale tax evasion in the country, he has suggested the institution of a comprehensive return and compulsory reporting of all property transfers and other transactions of a capital nature. He is also for doubling the land tax. The Government of India is now engaged in a detailed study of the suggestions of Prof. Kaldor from all angles and will soon consider as to which of them could be profitably incorporated into the tax structure of this country. For all these matters, an experienced person like Mr. Deshmukh will be necessary to adorn the Treasury Bench.

The Government of India has under consideration the starting of a drugs and chemicals industry, according to Mr. K. C. Reddy, Union Minister for Production. The Production Ministry is considering at present certain proposals and preliminaries in this connection.

LATEST ECONOMIC TRENDS IN U.S.

THIRD QUARTER MAY BE LEANER THAN EXPECTED

DESCRIBING the latest economic trends in the U.S., the June issue of the *Monthly Letter* of the First National City Bank of New York observes as follows:

"The month of May has brought a mixture of good and bad business reports. The strong spots in industry, which in general are the capital goods lines, seem to have become stronger, for new evidence has appeared that business plans for plant and equipment expenditures are still expanding and unfilled orders in these lines have risen further. The soft spots, on the other hand, are softer, with automobile sales disappointing, production cut further, and estimates of the year's output reduced. The leading automobile companies now say that passenger car sales this year will fall below 6,000,000, as compared with estimates of 6,500,000 last January and with 7,400,000 domestic sales in 1955.

"In terms of overall production and trade, it is unlikely that the sideways trend on a high level, which has persisted for a good many months, has been significantly altered. In business comment and sentiment, however, a shift of emphasis is apparent. The buoyant confidence of last winter appears to have given way to a tendency to stress the soft spots. The sharp decline in stock prices both reflects and adds to unsettlement. Money policy has been increasingly criticised. Inventory accumulation and estimates of a reduced level of housing starts have come in for more attention. There are indications that the flow of orders has slackened in some lines, although the evidence is conflicting. During April, the volume of new durable goods orders continued to exceed shipments, and order backlogs rose further.

Business is Spotty

"In a period of mixed reports such as this, there are two ways of looking at almost any item in the news. The cut of over 40 per cent. in weekly passenger car production since last December is depressing, but the fact that other activities have absorbed the curtailment with only a minor drop in overall production and employment should be encouraging. The industrial production index (seasonally adjusted, 1947-49=100) edged up slightly from 141 in March to 142 in April as the result of a general advance in durable goods output. Factory employment rose moderately on a seasonally adjusted basis, after declining from November through March. The number of new homes started in April increased somewhat more than seasonally to 106,000 units. To some these reports are heartening. For others, the reaction is one of disappointment that all three series continue a little lower than they were early last fall, and of belief that they will go lower before they turn up again.

"For many months, the business trend has been sideways and inconclusive. In some lines, the 'pause' has been more than a pause; it has cut deep. Yet the country is fortunate in the smoothness with which large-scale adjustments have cancelled out, leaving an overall pattern of stability. The shift from one type of demand to another—from an automobile and home building boom to a producers' equipment boom—explains why business is so spotty and why some industries are faced with sales and inventory problems while others experience shortages and delayed deliveries. In some localities and industries, unemployment and business failures have increased; in other areas, the pressure on supplies of materials and manpower is great enough to warrant anti-inflationary action.

The Causes of Concern

"In the main, the change in sentiment seems to apply to the short-term outlook. The immediate causes of concern are passenger car inventories, too much steel in the hands of the automobile industry, farm implement curtailment, spotty weakness in some household appliances and textiles, and pessimism about housing. It is plain that many of these weaknesses are real, and that adjustments must occur before the economy is ready to move forward again as a whole. No one can be certain when that will be. But the impression has spread that the third quarter will be leaner than was earlier expected. A longer range concern is whether consumer spending will be affected or capital goods programmes curtailed.

"It is hard to feel pessimistic, however, when so much basic strength is visible. An economy straining at the limits of materials, manpower, and financing, as is the case in the capital goods industries today, is not weak, but dynamic. In retrospect, it may appear that the moderation of optimism during these recent weeks was timely. The automobile companies are facing up to the problem of high stocks and disappointing sales now, rather than see it get worse during the summer. Further cuts in production must come. But in the fall, introduction of the 1957 models should revive sales. Probably, some buyers are holding off for the new cars. Farm implement curtailment is cutting into excess stocks. In business generally it was time for careful examination of inventory policy, after five consecutive quarters of rising stocks.

"Judging by available business indicators the economy is neither soaring perilously high nor starting to slide dangerously. Nor is it likely to swing to either extreme in the near future. The best hope for a resumption of long-term growth by the end of this year lies in a speedy completion of the necessary inventory adjustment and a continuation of the strong advance in business spend-

FIRST FIVE-YEAR PLAN AT WORK

PROGRESS DURING 1954-55 REVIEWED

THE summarised version of the progress report on the first Five-year Plan for 1954-55 not merely assesses the extent of the fulfilment of targets envisaged in the Plan but also indicates what remained to be achieved in the last year of the Plan, namely, 1955-56. The report claims perceptible signs of improvement in the economic situation at the end of the fourth year as compared with that obtaining in the beginning of the Plan. The economy as a whole, it says, presented a picture of added strength and stability. According to it, the year witnessed a further intensification of developmental effort. The Plan outlay in the public sector was stepped up substantially and investment in the private sector recorded an improvement over the level of the previous two years. What exactly all this development expenditure signified in economic idiom is described by the Planning Commission as follows:

The high level of agricultural production attained in the preceding year (1953-54) was more or less maintained (during 1954-55) and industrial production increased further. The quantum of foreign trade expanded and the external payments position showed a small current account surplus. The rise in domestic production, coupled with a budgetary deficit and the balance of payments surplus, was accompanied by an increase of about 6 per cent. in money supply with the public. This increase arrested the downward trend in agricultural prices which, for a time, had caused some concern. During the fourth year of the Plan, business outlook and confidence, which had shown signs of recovery in the preceding year, further improved. The capital market maintained a tone of buoyancy. . . . By the end of the fourth year, it was evident that the Plan was succeeding in respect of its immediate objectives, namely, to correct the imbalance between supply and demand by augmenting the production of certain essential goods and to lay the foundation for further progress through judicious investment mainly in the economic and social overheads.

Agriculture

Some of the targets set in the Plan and the progress made towards their fulfilment are given in the table appearing at the bottom of columns 2 and 3. It will be seen from that statement that agricultural production as a whole rose by 19 per cent. during the fourth year of the Plan, as compared with the base year 1950-51. In 1954-55, while output of wheat and pulses registered a further improvement, rice production, because of the extensive damage caused by floods in Assam, Bihar, Orissa and West Bengal, suffered a decline, with the result that the overall food production in 1954-55 showed a decline, from 68.4 million tons in 1953-54 to 65.6 million tons. All the same, food production in 1954-55 was higher by 11.6 million tons as compared with the base year and had thus again exceeded the five-year target. A part of the increase in food production is, of course, attributed to successive good monsoons. The additional area brought under irrigation over the first four years of the Plan is estimated at 10.3 million acres—4.0 million acres from major irrigation works and 6.3 million acres from minor irrigation works.

Industrial Sector

During 1954-55, the industrial sector showed considerable advance. Some entirely new products were produced for the first time in the country. The index of industrial production (1946=100) which was 137 in 1953-54 rose to 148 in 1954-55. Five of the major State enterprises, namely, the Hindustan Cable Factory at Roopanarainpur, U.P. Government's Cement Factory, the Hindustan Machine Tools Factory at Jalahalli, the Penicillin Factory at Pimpri and the Madhya Pradesh Government's Newsprint Factory went into production during the year. Mention is also made of the completion of the two petroleum refineries during the year, both of which have started production. Mill cloth production exceeded the target substantially. In locomotives, cement and ammonium sulphate, the Plan targets were realised by the fourth year of the Plan was 85 per cent., 82 per cent. and 79 per cent., respectively. The production of ammonium sulphate at Sindri was 298,300 tons in 1954-55, as against 249,000 tons in 1953-54. Production of iron and steel and jute manufactures showed considerable advance during the fourth year.

Railways and Transport

As a result of the steady implementation of the rehabilitation programme of the railways and the completion of works for augmenting line capacity, loadings on railways showed noticeable improvement; in 1954-55, they increased by about 6 per cent. over 1953-54. The demand for railway traffic has been continuously increasing in the period of the Plan, with the result that, even with increased loadings, the railways have not found it possible to move all the traffic offered. In 1954-55, 80 miles of new lines were added and 293 miles of dismantled lines restored.

Under the national highways programme, construction of 140 miles of new roads, building of five major bridges and improvement of 1,200 miles of existing roads was completed in 1954-55. Progress on other roads was also satisfactory. Work on the special programme of inter-State roads and roads of economic importance, which was included in the Plan in 1954-55 and for which Central grants of Rs. 10 crores were made available to State Governments, also proceeded satisfactorily.

In the field of education, medical services and public health, progress in the fourth year of the Plan was distinctly better than that in the previous years.

Satisfactory progress was maintained in regard to the expansion of the Community Development and National Extension Programmes. The target for these programmes for the first Plan period was to cover one-fourth of the rural population. This target required the opening of about 1,200 development blocks. As against this, by the end of the fourth year, about 726 blocks covering over 83,000 villages with a population of about 53.7 million had been started.

Progress of Expenditure

The progress of expenditure on the Plan in the first three years was rather slow, the total outlay over the three-year period amounting to Rs. 872 crores. The working of the Plan during that period had shown that there was likelihood of shortfalls in expenditure under certain heads of development. On the other hand, under certain heads, it was felt that the Plan needed strengthening, if employment opportunities on an adequate scale were to be created. Additions to the Plan of the order of Rs. 288 crores were, therefore, made which raised the size of the Plan to Rs. 2,357 crores.

In the fourth year of the Plan, there was a considerable stepping up of the developmental expenditure; the revised estimate of outlay for 1954-55 works out at Rs. 514 crores, as against Rs. 340 crores in 1953-54, Rs. 273 crores in 1952-53 and Rs. 259 crores in 1951-52. For 1955-56, the budgeted outlay is placed at Rs. 734 crores.

The capital market showed, as already stated, a buoyant tone in 1954-55. Public borrowings in this and the preceding year received an encouraging response from the market. Prices and yields of Government securities remained relatively steady.

The effect of improved domestic production was reflected in the improved balance of payments position. In the first year of the Plan, because of the large imports of food and other consumer goods, external payments position on current account showed a large deficit of Rs. 142 crores. Subsequently, with the improvement in domestic production, imports of food declined substantially, with the result that, during the three following years, the external payments position showed surpluses, Rs. 66 crores in 1952-53. Rs. 38 crores in 1953-54 and Rs. 9 crores in 1954-55.

Investment Outlay

There has been a progressive stepping up of the investment outlay in the public sector. In the private sector, however, the growth of investment in the period of the Plan has been rather uneven. There was a decline in private investment in 1952-53 and 1953-54, as compared with 1950-51, mainly by way of de-stocking in these years. Domestic production of capital goods continued to expand, but imports of producer goods like machinery, metals and vehicles in 1952-53 and 1953-54 were lower as compared with 1951-52. Private investment again looked up in 1954-55 and the trend, as seen from such indices, as new issues, imports of capital goods from abroad, and domestic production of capital goods, appears to have been maintained in the last year of the Plan.

The table below gives estimates of outlay on the Plan from year to year. Figures for the first three years are "accounts," while those for 1954-55 and 1955-56 are "revised" and "budget" estimates respectively:

(In crores of rupees)

	Centre	States	Total
1951-52 Accounts	129.9	129.3	259.2
1952-53 Accounts	127.1	146.0	273.1
1953-54 Accounts	178.9	161.2	340.1
Total for 3 years ..	435.9	436.5	872.4
1954-55 (Revised Estimates) ..	303.2	210.5	513.7
1955-56 (Budget Estimates) ..	437.3	296.9	734.2
Total for 5 years ..	1,176.4	943.9	2,120.3

Briefly, the position with respect to the financing of the above outlay may be put as follows:

(In crores of rupees)

	1951-52 (Accounts)	1952-53 (Accounts)	1953-54 (Accounts)	Total for 3 years	1954-55 (R.E.)	1955-56 (B.E.)	Total for 5 years
Domestic budgetary resources ..	204.6	146.8	243.4	594.8	266.9	251.2	1,112.9
External assistance ..	64.9	45.6	18.6	129.1	25.5	75.3	229.9
Increase in floating debt, sale of securities held in reserves and drawing down of cash balances ..	—10.8	80.7	78.1	148.5	221.3	407.7	777.5
Total resources for and outlay on the Plan ..	259.2	273.1	340.1	872.4	513.7	734.2	2,120.3

Indications are that actual outlays incurred in the fourth and the fifth year of the Plan would turn out to be lower than those given above.

Resources Position

An outstanding feature of the resources position in the first Plan was the encouraging success of the borrowing programme. Net receipts from loans over the five-year period were estimated at Rs. 202 crores, as against the target of Rs. 115 crores. Net borrowings of the Centre worked out at about Rs. 50 crores, as against the target of Rs. 36 crores. In the case of States, receipts from their loans, together with their share out of the proceeds of the National Plan Loan of 1954-55, worked out at Rs. 152 crores. Funds for Government borrowing were largely provided by the public out of their savings. In the first four years, net long-term borrowings of the Centre and States amounted to about Rs. 112 crores

In the scheme of finance envisaged for the Plan, it had been assumed that the States would raise about Rs. 230 crores over the five-yea

INDIAN BANKING KEEPS PACE WITH TEMPO OF ECONOMIC ACTIVITY

DEPOSITS OF SCHEDULED BANKS INCREASE

JUDGED by its performance in 1955, the banking system in India may be expected to acquit itself well in meeting the demands that might be placed on it during the second Five-year Plan period. The year was significant not only for the increased volume of banking business but also for the momentous and far-reaching changes in the overall organisational structure of banking. Reflecting the high level of economic activity experienced by the economy, resources of banks expanded and so also their loan portfolios. On the organisational side, the transformation of the former Imperial Bank of India into the State Bank of India in July 1955 marked, as the Reserve Bank's annual report on the *Trend and Progress of Banking in India During* 1955 says a new chapter in the history of Indian banking. In addition, steps were also taken to ensure wider banking facilities and to strengthen the banking structure so as to equip it better for its important role of financing diverse forms of economic activity during the coming years.

A small section of banks was, however, not free from certain defects. These, in fact, fall under two categories: (1) defective advances and investments and (2) deficiencies of management and control. Defective advances covered generally those cases where credit was given without regard to the safety or liquidity of the proposition. Again, a high proportion of advances was given without taking into account the borrowers' resources and ability to pay. Advances were also given against unrealisable securities. The deficiencies of management and control took the form of indifference of directors to their responsibilities, inadequate reserves, low levels of investment in Government securities and unsatisfactory provision for investment depreciation. These defects are, however, being rectified as a result of the various regulatory and remedial measures taken by the Reserve Bank. It is said that a gradual improvement in the financial position as well as methods of operation of a number of unlicensed banks is being achieved, and it is heartening to note, from the Report mentioned above, that "reserves are being built up, outstanding borrowings in chronic cases are being reduced, liquid assets have been considerably augmented and the position regarding the disproportionate extent of unsecured advances and those against real estate is being appreciably improved." The Report adds further that, "although defects do still exist in the working of certain banks, the various corrective measures already taken are gradually bearing fruit and the banking system in this country has been steadily improving."

During 1955, the growth in banking business reflected the rising requirements of an expanding economy. Production in industry continued to mount, the general index of industrial production recording a rise of 8.3 per cent. to 122.3. The index of agricultural production at 113.9 was only slightly below the level of 114.1 of the record year 1953-54. The volume of trade, both internal and external, rose and prices were generally looking up.

Money Supply

The expansion in output was more than matched by an increase in the volume of money. In 1955, money supply with the public rose by Rs. 209 crores, as against Rs. 121 crores in 1954. Most of this increase was in the currency component of money supply, as the increase in deposits amounted to no more than Rs. 48 crores. In the previous year, however, the increase was more equally shared by currency and deposits. The busy season of 1956 witnessed a larger expansion of Rs. 232 crores in money supply than that of Rs. 171 crores in the 1954 busy season. Again, in the slack season of 1955, money supply showed a contra-seasonal rise of Rs. 5 crores, with the result that, at the start of the current busy season, the volume of money was considerably higher. Despite this expansion in money supply, prices in general did not record any net rise over the year.

In 1955, the deposits of Scheduled banks increased by Rs. 91 crores to Rs. 1,013 crores, crossing thereby the Rs. 1,000-crore mark for the first time in seven years. The expansion in deposits, though of the same magnitude as in 1954, differed markedly in one important respect. During the year under review, the rise in time deposit was somewhat more significant at Rs. 48 crores as against an increase of about Rs. 43 crores in demand deposits, but in the preceding year, demand deposits had shown a much larger rise at Rs. 56 crores than time deposits which had gone up by Rs. 35 crores. There was no change in the share of savings deposits in the total deposits.

While deposits showed a sizable growth, the banks' own funds in the shape of capital and reserves increased by Rs. 1 crore. In the result, the ratio of capital and reserves to total deposits dropped by 0.5 per cent. to 6.3 per cent. The reserves of Indian Scheduled banks as a proportion of their paid-up capital increased by 2 per cent. to about 86 per cent. while, in the case of Non-scheduled banks, reserves for the first time accounted for a little over one-half of the paid-up capital.

Scheduled Bank Credit

Over 1955, Scheduled bank credit expanded by Rs. 80 crores. This, however, conceals seasonal variations. The early months of the year coincided with the most active part of the busy season, 1954-55, during which the total expansion in Scheduled bank credit amounted to Rs. 107 crores. Of this, the increase in the first eighteen weeks amounted to Rs. 89 crores. In the ensuing slack season, the return of funds to the banking system was only Rs. 32 crores. This meant that well over two-thirds of the total credit made available earlier remained in the pipeline. The Report interprets this tendency as a reflection of the beginning of a somewhat deeper underlying trend of a general increase in, and lengthening of credit demands, as a result of the growing diversification of the Indian economy.

The expansion of bank credit, however, did not mean any significant change in the distribution either between the various groups of banks or as between different purposes. Indian Scheduled banks continued to account for a little over two-thirds of total advances. The share of Exchange banks was less than a fourth and that of non-Scheduled banks over 6 per cent. Again, industry continued to claim a little over a third of all Scheduled bank credit and commerce about one half. Production credit for agriculture remained insignificant. The fact that the proportional shares of both industry and commerce in the total bank credit registered no variations, despite an increase in bank credit, indicates that the activity in both kept pace with the rising tempo of economic development. Taking the five-year period ended December 1955 as a whole, however, it is seen that the proportion of industrial to total advances rose by 2.3 per cent. to 34.3 per cent. while the proportion of commercial advances declined from 51.8 per cent. to 50.1 per cent. This trend should be welcomed in that it reflects a marked departure in the attitude of banks towards industries. For, industries have complained in the past of the difficulties experienced by them in getting accommodation from commercial banks.

Lower Cash Ratio

Although the increase in bank credit was smaller than that in bank resources, principally deposits, Scheduled banks drew down their cash reserves from Rs. 103.6 crores to Rs. 100.2 crores, thus bringing down their cash ratio from 11.2 per cent. to 9.9 per cent. The reduction in cash reserves occurred in the balances held with the Reserve Bank. This lower cash ratio was possible because of the more liberal borrowing facilities available from the Reserve Bank.

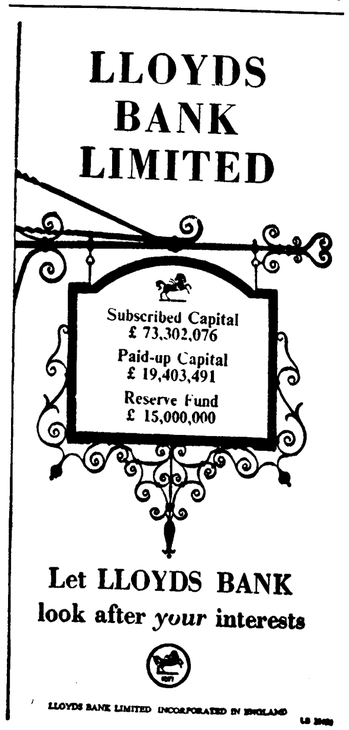
The relatively larger increase in bank deposits than in bank credit and the reduction in cash helped Scheduled banks to add to their investment portfolio by as much as Rs. 42 crores, of which more than Rs. 36 crores represented investments in Government securities.

On the whole, the resources position of the Indian banking system in 1955 was considered to be fairly comfortable. A notable feature of the Reserve Bank's lending was the interest shown by Exchange banks in the Bill Market Scheme of which the Indian banks were the main patrons hitherto. The Report observes that this development strengthens the belief that "the Indian money market is acquiring a greater degree of autonomy." Higher borrowing rates abroad were chiefly responsible for this trend.

The profit and loss accounts of 18 big Indian Scheduled banks showed that, during 1955, their gross earnings rose by Rs. 3.8 crores to Rs. 35 crores. Over three-fifths of this rise was due to an increase in interest and discount earned. The total expenses also rose by Rs. 3.4 crores to Rs. 29.3 crores. Of the increase, establishment expenses accounted for Rs. 1.8 crores. The net profits of the banks rose by Rs. 40 lakhs to Rs. 5.7 crores.

Another notable development of the year was an increase, for the second consecutive year in the post-war period, in the total number of offices of banks. The increase was mostly in the offices of Scheduled banks which rose by 91 to 2,793. There was an increase by one to 66 in the offices of Exchange banks, while the number of offices of Non-scheduled banks declined by 28 to 1,258. 111 new offices were opened by Indian Scheduled banks during the year. Statewise, 33 offices were opened in Madras, 26 in Bombay, 9 in Uttar Pradesh, 7 each in West Bengal and Delhi, 6 in Hyderabad, 3 each in Andhra and Mysore, 2 each in Bihar, Madhya Pradesh and Vindhya Pradesh, 1 each in Assam, Orissa, Punjab, Madhya Bharat, P.E.P.S.U., Rajasthan, Travancore-Cochin, Bhopal, Coorg, Cutch and Himachal Pradesh. Of the 48 offices of Non-scheduled banks closed during the year, 30 offices were accounted for by banks which either went into liquidation or converted themselves into non-banking companies or otherwise ceased to function and the rest were closed by the existing banks.

The Report reminds the banks that they would have to play a more significant role in the second Plan period by extending their area of operations, as well as range of functions. They are advised to prepare themselves for meeting the requirements of trade and industry of a relatively larger magnitude than at present as also to participate in granting production credit to agriculture. The deposit expansion would also place on the banks greater responsibilities in regard to the proper utilisation of their resources. Proceeding, the Report says: "The importance of sound management is of particular relevance in a period of sizable increase in bank resources and the wider opportunities for credit expansion which the growth of the economy would open out. The emphasis on banks' credit policies should be rather more on channelling finance for desirable purposes and to limit extension of credit to the genuine requirements of trade and business." Finally, it warns against the tendency of bidding up interest rates to attract deposits, a tendency which became pronounced during the current busy season.



PEOPLE'S CAPITALISM IN U.S.—IV

CLASSLESS SOCIETY COMES INTO BEING

By A Special Correspondent

HOW does the American economy work? What rewards does it offer its workers, its managers, its investors? How does it achieve its mass markets? How does it manage to boost the U.S. standard of living? The late Frederick Lewis Allen—author of "The Big Change," an account of American economic growth over the last half century—cited a simple incident to illustrate his theme.

He told of watching a crew of labourers ripping up New York City's streets for repairs. One of the workmen, in a pause between spells of digging, was using his pick axe to practice his golf swing. The labourer's golfing stance and form showed experienced skill—testifying to a good many hours spent on the golf course. And Mr. Allen commented that a half century earlier such a thing would not have been likely.

A labourer in 1900 would not have had the leisure time to devote to a sport like golf. He might not have had the money to spend on golf clubs and equipment or on the fees for playing on neighbouring golf courses. And in 1900 golf was something of a rich man's game—a distinction which may be the nearest thing to a class distinction America has had.

Today, nearly any American who chooses can play golf—from labourers to presidents. The 40-hour work week—which for some industries and trades has already shrunk to a 37- or 35-hour week—gives leisure to American wage and salaried workers. And because of this growing leisure, sports equipment makers—and others catering to American recreational wants—have produced cheaper goods and services for more and more customers. Another mass market has been found.

Everyone knows that mass production is a characteristic of the American economic system. Not everyone, however, gives too much thought to the basic qualities of the mass market, the essential ingredients that make large-scale production possible and profitable. What are the reasons for American leadership in this field?

In part, the American mass market arises directly from the classless nature of American society. Political and social factors, as well as economic ones, are at work here. Universal free public education has long been part of U.S. life. Constant economic expansion has offered constant economic opportunities for jobs, or better paying jobs, or for new businesses or new farms. And then there is the melting-pot tradition—the nation's capacity to absorb and assimilate successive waves of immigrants from abroad and to benefit from their collective creativeness.

All these disparate elements contribute to the social freedom on which overseas visitors to the United States frequently comment. There is a feeling of equality, a social mobility, that seems unusually marked when compared with the conditions of many other countries.

As pointed out by a leading sociologist, David Riesman, the social prestige of great wealth has been declining under the influences of mass production and the managerial revolution which has largely supplanted owner-managers of business enterprises with professional executives. Luxury articles have become increasingly standardised and within the reach of practically all consumers.

As late as 1930, a Ford and a Lincoln automobile represented vastly different levels of motoring pleasure and appearance, but, by 1955, many people considered the differences between low-priced and high-priced cars, except in size, difficult to distinguish. The large house, in 1900 the chief symbol of wealth, has become increasingly rare, because of the virtual disappearance of "live-in" servants and for other reasons such as high property taxes and maintenance expenses.

Americans, no matter what their job or status, do not feel bound by caste or custom. Bosses and workers often call each other by their first names; they frequently regard each other as members of the same team, working toward the same end—a better productive machine that will enable earnings for both worker and investor to rise.

They know that, in order to achieve an improvement in real wealth for themselves, they have to produce better quality goods at a lower price for their customers—the consuming public. And they know that they themselves—worker, manager, investor—constitute the country's consumers.

This realisation that the nation's workers also are a mass market for every conceivable kind of goods is the basis for the wage policy attributed to Henry Ford a generation ago. The automobile maker announced firmly in 1914 that he was going to pay every worker at least $5 a day, doubling the existing wage rate, because of his conviction that high wages would mean more car sales.

The prospect of more car sales, Mr. Ford argued, would help him achieve lower unit costs of production. With lower production costs, he could set his prices lower, enabling him to sell still more cars. And his profits, although relatively small for each car, would mount with larger and larger volume of production and sales. His idea proved 100 per cent. right.

Not every American industrialist followed Ford's lead in doubling wages. Instead, labour's fight for higher wages has been marked by difficult episodes in the United States, just as it has elsewhere. But the principle that Ford expressed is now almost universally accepted by American business managers. The idea of high volume of production and relatively small profits per unit is a first principle of American business.

And the concept that labour must share in the rewards of higher productivity both as a matter of right and as a matter of business—because the worker also is a customer—is equally ingrained in the People's Capitalism in the United States.

Today, the national income is being shared more evenly than it used to be. Early in the century, only one in every 10 American families had an income of $4,000 or more yearly. Today, half of all U.S. families have incomes of $4,000 or more. And because American income taxes are based on ability to pay, the proportion of income left after taxes is larger for lower-income groups than for the higher-income groups. The Federal personal income-tax rate ranges from 20 per cent. on $2,000 of taxable annual income to a maximum of 91 per cent. on taxable income of $200,000 or more.

In comparison with the past, today's worker spends a lesser share of his income on basic necessities such as staple food items and shelter and more on so-called "discretionary" goods. He may not actually need a television set, a new car, a new hat, an album of long-playing phonograph records of an opera, a set of golf clubs. But he buys more and more of them. And he and his family—and his fellow workers and their families—make up the expanding American mass market.

These Americans—all 166 million of them—are the essential part in the cycle of greater production and the wider sharing of the resulting abundance. They are the spur that keeps American industry seeking and adopting the latest advances in technology. And they are the inspiration for the continuing American economic revolution—the reason for calling the American economic system People's Capitalism.

(Concluded)

BANK OF RHODESIA AND NYASALAND

The Act establishing the Bank of Rhodesia and Nyasaland came into operation on 15th March last. On 1st April the Bank took over the assets and liabilities of the Central Africa Currency Board.

The Bank of Rhodesia and Nyasaland Act provides that the Bank may not lend to, or directly purchase Treasury bills or notes from the Federal Government so that the amount outstanding at any one time exceeds 20 per cent. of the Federal Government's estimated revenues for the financial year in which such advances are made; nor may the Bank invest in Federal Government securities with a maturity longer than six months a sum exceeding the capital and general reserve fund of the Bank plus 20 per cent. of its liabilities to the public in the Federation. It is required to maintain a reserve of gold, sterling, or foreign assets convertible into gold or sterling equal to at least 25 per cent. of its liabilities to the public. The Minister of Finance may, however, suspend this requirement for a period not exceeding 60 days, and may extend the period of suspension for further periods not exceeding 60 days each. If suspension is to continue longer than six months, a resolution of the Federal Assembly is required. Every commercial bank carrying on business in the Federation is required to submit monthly returns to the Bank of Rhodesia and Nyasaland, and to maintain with the Bank a minimum reserve balance to be determined by the Bank, but not less than 6 per cent. or more than 25 per cent. of its demand liabilities in the the Federation, and not less than 3 per cent. or more than 10 per cent. of its time liabilities.

The Bank is prohibited from buying or selling sterling at rates which differ by more than 1 per cent. from the parity determined by the Governor-General. A Federal Government notice states that the value of one pound unit of currency which is legal tender in the Federation shall be one pound sterling.

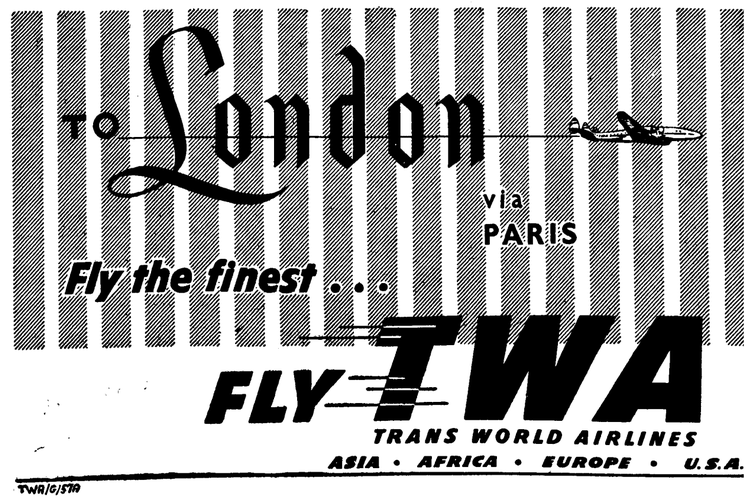
NATIONAL INCOME OF INDIA

A reference to the national income estimates for the year 1954-55 prepared by the Central Statistical Organisation (C.S.O.) was made in these columns two weeks ago. These estimates differ substantially from those subsequently given by the Planning Commission in the Five-year Plan Progress Report for 1954-55, as will be seen from the following comparative statement:

	Central Statistical Organisation		Planning Commission	
	1953-54	1954-55	1953-54	1954-55
At 1948-49 prices—				
Net output (Rs. crores) ..	10,040	10,170	9,950	10,224
Per capita net output (Rs.) ..	269.0	269.0	266.5	273.8
At current prices—				
Net output (Rs. crores) ..	10,490	9,910	10,600	10,892
Per capita net output (Rs.) ..	281.0	262.1	286.9	294.8

The foregoing figures reveal that the C.S.O. puts the extent of real increase in national income during 1954-55 at Rs. 130 crores or 1.29 per cent., while the Planning Commission estimates the net rise at Rs. 274 crores, or about 2.75 per cent. Similarly, the estimates of *per capita* income given by the two bodies vary. According to the C.S.O., the *per capita* income does not show any change; it is estimated at Rs. 269, same as that for the previous year. But the Planning Commission places the figure for the year under review higher at Rs. 273.8, as against Rs. 266.5 for 1953-54.

It is regrettable that the estimates of national income prepared by the two expert bodies should be at great variance. It is all the more regrettable, because the C.S.O. is under the control of the Finance Minister who is also a key member of the Planning Commission. Considering that national income is the only mirror which reflects the actual progress of the country on the economic front, utmost care should be taken in making the estimates of national income.



SERICULTURE INDUSTRY IN INDIA

WORK OF CENTRAL SILK BOARD NOT QUITE SATISFACTORY

ALTHOUGH more than seven years have elapsed since the Central Silk Board was set up to organise the development of the silk industry in India, the progress actually achieved by it has not been quite satisfactory. True, the production of raw silk, which had gone down from 2.23 million lbs. in 1950 to as low as 1.75 million lbs. in 1952, has since moved up, the estimate for 1955 being placed higher than 2.40 million lbs. But the production still falls considerably short of the estimated requirements of over 8.00 million lbs. No wonder then that the prices of silk continue to rule high in all conscience. The average difference between the fair selling price of indigenous silk and the landed cost (without duty) of foreign silk comes to very nearly 50 per cent. The quality of silk, excepting that produced in a few centres, does not also compare so favourably with foreign silk. If, therefore, the silk industry is to be set on a more solid and sound footing, it is of the utmost importance that the quality of silk should be improved and the production costs reduced. Mr. V. Nanjappa, I.C.S., Textile Commissioner and Chairman of the Board, did well to stress this aspect in the course of his speech at a meeting of the Board held at Bangalore last week. Mr. Nanjappa said:

"The silk industry has suffered on account of its inferior quality in comparison with imported silk, apart from high costs. Both the charkha and the filatures should be modernised, with a view to producing high grade silk at reduced prices. I have been thinking of having a survey conducted for assessing the position of filatures and taking steps for the production of modern machinery, as also evolving methods by means of which financial assistance can be given to the old institutions."

Incidentally, Mr. Nanjappa gave a brief account of the future programme of the Board. The Board, we are told, has evolved a standard reeling unit that can be introduced in charkha reeling establishments. It is considering what steps should be taken to give the necessary assistance in this connection. The marketing of silks is to be organised on a co-operative basis and the scheme submitted by the Government of Mysore is before the Centre for sanction. Similar marketing organisations will be set up in Madras, West Bengal and elsewhere. Adequate funds have been provided in the second Five-year Plan for these purposes. The sub-committee of the Board has recommended the opening of a central training institute at a cost of Rs. 9.56 lakhs for training higher officers for all the States. The Board has approached the Centre for sanction.

It is, however, not so much the programmes as the way in which they are implemented that is important. A look back at the working of the Central Silk Board in the past years will reveal that the Board has been more a talkie than a movie. That there is no exaggeration whatever in this view will be evident from the statement of no less a person than Mr. K. C. Reddy, Union Production Minister, who, in the course of his speech at the meeting, said: " . . . . we have not been able to make as much progress as we hope for or like to." During the last seven years, Mr. Reddy pointed out, it had not been able to spend more than 25 per cent. of the sums sanctioned by the Centre for the development of sericulture. Mr. Reddy attributed this state of affairs to the following two factors:

The first factor relates to the policy of 'matching' grants. The States are required to spend from the funds a certain percentage of the sums sanctioned by the Centre. There seem to be some difficulties on account of the financial procedure adopted. Mysore has a full-fledged Sericulture Department with experienced officers, while the position in other States is not known.

The second factor responsible for the non-utilisation of the sanctioned grants and non-implementation of schemes has been the lack of necessary staff and lack of organisation.

Drawing attention to the latter factor, Mr. Reddy declared that it is up to the members of the Board to see how best they could gear up their organisational efforts. He added that the Central Government was thinking of suitable measures for checking the progress of the schemes taken up for implementation. He further stated that the Board had suggested setting apart 4 per cent. of the estimated cost of any scheme for meeting the expenditure on administration.

A notable pronouncement made by the Production Minister was that the question of shifting the offices of the Central Silk Board to Mysore would receive very urgent and serious consideration at the hands of the Government of India. This statement is, indeed, very reassuring. As readers are aware, the Board is at present located in Bombay—that is, in a place which is not at all in the silk-producing region—whereas Mysore is the major seat of the silk industry. The State of Mysore, with the addition of Kollegal, accounts for about 80 per cent. of the total silk output in the whole of India. It would, therefore, be quite appropriate, as Mr. K. Hanumanthiah, Chief Minister of Mysore, rightly said while inaugurating the meeting, to have the headquarters of the Board somewhere in Mysore State.

In the course of his speech, Mr. Hanumanthiah urged that the sericulture industry should be freed from "unfair and unhealthy competition." To quote him: "Personally, I feel that we should, to a great extent, restrict imports and allow the sericulture industry to grow to its full stature in the country." The anxiety of Mr. Hanumanthiah to see that the domestic sericulture industry is not adversely affected from foreign competition is no doubt understandable. But, in adopting that policy, every care should be taken to safeguard the interests of the consumer also. As it is, there is a wide gap between actual production and the requirements of silk. This gap is bound to widen further considerably in the coming years, what with the rising demand for silk fabrics following the increase in population and the improvement in the standard of living as a result of the implementation of the series of development schemes under the second Plan. If, therefore, adequate supplies of silk are not ensured, a situation is bound to arise where there will be a virtual silk famine in the country with spiralling prices. This aspect must be taken into account while formulating the import policy for silk. As Mr. Reddy rightly declared, imports of silk can be restricted only if there is rise in production and improvement in quality. Moreover, foreign silk will continue to be required for the weaving of certain high grade fabrics such as brocades and georgettes.

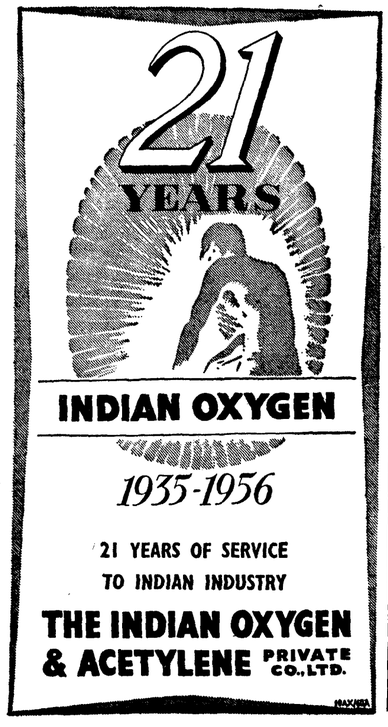
Referring to the export of silk waste, Mr. Reddy gave the assurance that it would be the endeavour of the Centre to see that there were no exports of silk waste in a way which would adversely affect the needs of the spun silk industry. The Government has been planning, according to him, to establish one or two more spun silk plants in the country. Assam, West Bengal and Bihar are thought of in this connection. If the proposed factories were to come into being and the Mysore spun silk factory worked to full capacity, there would be no need to export silk waste out of the country.

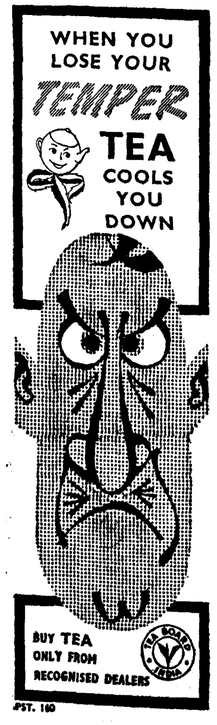
CLOTH PRICES

Question-time in the Rajya Sabha on Thursday last week was primarily marked by much concern at the rising prices of cloth. Several members wanted to know the causes for the rise. Mr. Nityanand Kanungo, Minister for Industries, attributed this tendency to two factors, (1) increase in raw cotton prices and (2) domestic demand for cloth outstripping supply. One member asked whether the shortage of cloth was due in any measure to the controversy over the Ambar Charkha and the ceiling on mill production. Replying to the question, Mr. T. T. Krishnamachari said that the Government was not in a position to enlighten the member. He, however, added that the steps proposed to be taken by the Government were all under consideration and it would not be wise to divulge them at the present stage until the proposals were formulated finally and orders issued. In this connection, he observed:

"I have no knowledge of the information collected by the Reserve Bank of India about the credit given by banks. But the information I have been able to gather shows that there is no appreciable increase in the stocks held by retailers or wholesalers. The demand for exports has actually fallen and, to this extent, there has been an increase in internal consumption of cloth. Normally, prices of raw cotton, taking *jarilla* as the standard, range between Rs. 700 and Rs. 720 at this time of the year. There is now an increase of about Rs. 80 to Rs. 90. This indicates a rise of 12½ to 15 per cent. in the price of the raw material. But the rise in the price of raw cotton is only one of the causes for the increase in the price of cloth, and not the main cause."

The U.S. cotton textile industry would appear to be very much dissatisfied at the reluctance of the Government to regulate imports of foreign textiles. Addressing the annual convention of the South Carolina Textile Manufacturers' Association at Sea Island (Georgia) the other day, Mr. Robert Jackson, Executive Vice-President of the American Cotton Manufacturers' Institute, for instance, declared that the cotton industry could expect little assistance from the Eisenhower Administration in dealing with the textile import problem. The industry's efforts towards the establishment of a control system over foreign imports, he said, had been bolstered by the Tariff Commission which, in its report to the Senate Finance Committee, had expressed its inability to undertake a detailed study of the inflow of goods from abroad. This, Mr. Jackson added, was an indication of the Government's helplessness in curbing unrestricted imports. To quote him: "Lacking any signs of interest by the executive branch of the Government other than polite expressions of sympathy, the textile industry is compelled to seek relief in legislative actions."





VARIATIONS IN COTTON AND YARN PRICES ANALYSED

FURTHER FALL IN EXPORTS

From A Special Correspondent

MANCHESTER, *29th May*

FOR well over a year one of the main reasons for the depression which has existed in all sections of the industry in Lancashire has been the fear of lower cotton prices, arising from the large stocks held in many parts of the world. If traders could have foreseen the trend of values 12 months ago their attitude would in all probability have been very different and business would have flowed far more freely.

MANCHESTER LETTER

It is far easier to possess "hindsight" than foresight but a glance back at the prices ruling a year ago shows that much of the nervousness which has intervened need never have arisen. The trouble is that the current outlook is very little better than it was in 1955 and the threat of lower values at some time in the future still overhangs the market.

Traders continue to feel that the accumulation of supplies built up over recent years must cause some dislocation as they are, however slowly, dispersed. The possibility of a sudden fall in values is now less likely; in fact, the paradox has arisen of dearer rates in certain growths due to a tight supply situation of free stocks.

The following table shows the fluctuations in spot rates in the Liverpool cotton market and variations in yarn prices in Lancashire over the past 12 months:

(In *d.* per lb.)

Only in the past quarter has any material change taken place in prices, and that has been in Egyptian qualities, but the firm tone which has prevailed throughout the period can be observed. In assessing the price of yarn the steady rise in costs of production must be taken into account, culminating in the wage advance to the operatives at the beginning of the current month.

Although raw cotton costs are an important part of the general level of prices, many items of incidental expenditure must be included when establishing quotations. Few, if any, of these charges have declined during the year and warnings have already been given that further advances will have to be met in the near future.

Trade Prospects in Pakistan

Mr. Noel S. Belan, United Kingdom Trade Commissioner, at Karachi, said in Manchester, this week, that Pakistan offered excellent long-term prospects for British exports but vigorous efforts would be needed to retain this country's position in the market. "If we let up in our efforts the Germans will be ready to step in. We are facing strong German competition," said Mr. Belan, speaking at the Manchester Chamber of Commerce at the start of a four-day visit for discussions with North-West export firms.

Referring to opportunities for Lancashire textile exports, he said there was a fund of goodwill towards this country and now was the time for manufacturers to try to make progress in the market with quality fabrics. Pakistan was quickly becoming self-sufficient in the ordinary type of cheap textiles but would continue to require better quality textiles such as those produced in Lancashire. Although some of Pakistan's new mills were equipped with British-made plant, the Japanese textile machinery industry had succeeded in obtaining a good deal of business, helped by Pakistan's foreign exchange position.

Fall in Exports

The Government returns relating to exports of British textile goods for last month were not expected to be encouraging and there are indications of a further decline in foreign trade. Cotton cloth exports to the end of April were 158,161,000 square yards, valued at £20,449,580. A year ago the total was 205,231,000 square yards and the value £26,813,165. Yarn exports for the same period were 12,857,547 lbs. as against 13,802,902 lbs. last year, the value being £5,300,292 as against £5,926,894.

So far this year Australia has taken 26,436,000 square yards as against 38,821,000 square yards in the same period of 1955. India continues to improve her imports from the United Kingdom, the totals for this year being 3,897,000 square yards as compared with 1,115,000 square yards. Traders with Pakistan are also doing better, as so far 3,048,000 square yards have been exported as against 659,000 square yards in the same period of 1955.

The chief market for yarn remains Australia but exports to that Dominion compared with a year ago have fallen from 2,448,778 lbs. to 1,960,627 lbs. this year. On the other hand, Canada has taken 1,498,646 lbs. as against 1,062,824 lbs. while shipments to India have also improved from 723,705 lbs. to 1,277,205 lbs.

Several causes contributed to the fall in earnings incurred by Crosses and Heatons Ltd., the Bolton fine spinning group, during the year which ended on 31st March. Colonel Benjamin W. Heaton, the Chairman, refers to various factors which have affected the industry in his annual report. He mentions the fall in cotton values, short-time working, labour shortages and unsatisfactory margins for fibre yarns as some of the reasons for the Company's disappointing showing during the past 12 months. A certain amount of loss of production and increased expense due to a temporary shortage of staple fibre was also responsible for the group's difficulties.

Since the revival of trading in futures on the Liverpool Cotton Exchange, Col. Heaton has been critical in his reports of the facilities offered for hedging long-stapled cottons and on this occasion he emphasises that companies in the fine spinning section are exposed to considerable risk. "We are faced with the problem of either securing our cotton when this comes to market and risking the price or, alternatively, endeavouring to buy from hand to mouth," he says. The latter method was impracticable and not conducive to the maintenance of quality. As a result of being forced to buy cotton without sufficient hedging facilities, fluctuations in trading results would occur from year to year, he warns, but the recent introduction of a Sudan futures contract in Liverpool was welcomed in the hope that it would eventually broaden sufficiently to afford adequate cover for spinners.

In the past 10 years the group has spent £1,800,000 on new machinery and modernisation of existing plant, while over £920,000 has been spent on general maintenance of fixed assets.

Textile Machinery

India continues to head the list of purchasers of British textile plant this year. Supplies sent to India have in fact been more than three times as much as to any other country, the total for the first four months being 151,816 cwts. out of aggregate exports from the United Kingdom of 615,170 cwts.

The value of this plant exported from Britain was £16,561,433 and India's share in this trade has been £3,558,010. Second biggest buyer is the Soviet Union with 42,099 cwts. valued at more than £1,000,000. The major quantities of textile plant exported have been in looms and other weaving machinery, amounting to 114,006 cwts., while preparatory plant has accounted for 82,629 cwts. and spinning machinery 54,998 cwts.

The U.S. Agriculture Department experts have begun working out the details of the new farm programme, which is expected to result in reduced crop surpluses through operation of the so-called Soil Bank provisions. As was noted in his statement issued on signing the measure into law, President Eisenhower considers the Soil Bank provisions, under which the farmers will be paid for taking acreage out of production, "the heart" of the legislation. "Its acreage reserve," Mr. Eisenhower said, "will help bring production of certain crops into balance with their markets. . . . It is a concept rich with promise for improving our agricultural situation." The Agricultural Department experts are also concentrating on those provisions of the legislation which the President accepted with reluctance. In his statement, Mr. Eisenhower pointed out that the provision of the law which relates to cotton export sales "will have to be administered with extreme caution." A Department spokesman gave an assurance that every effort would be made to avoid working hardship on other cotton exporting countries. He said that the American price on cotton sold on the world market would not be reduced arbitrarily.

FURTHER INCREASE IN COTTON SUPPLY

CURRENT TRENDS IN FREE WORLD REVIEWED

THE strenuous efforts that are being made by the U.S. to dispose of its surplus cotton reflect not only the conditions of abundant supplies in that country but the relatively more comfortable state of supply in the free world. The total supply of cotton in the free world during the 1955-56 season, according to the estimate of the International Cotton Advisory Committee, Washington, is 51.4 million bales (of 478 lbs. each), consisting of carry-over stocks of 20.5 million bales, production of 30.6 million bales and imports of 300,000 bales from the U.S.S.R., as against 48.7 million bales in the 1954-55 season, made up of carryover stocks of 18.9 million bales and the crop of 29.5 million bales and import from the U.S.S.R. of 300,000 bales. As regards disappearance of cotton, the Committee's preliminary ideas are that the consumption in the current season may reach, if not exceed, last year's level of 27.6 million bales and exports to communist countries may aggregate some 700,000 bales, as against 500,000 bales last season. Making an allowance of 100,000 bales for "destroyed" cotton, the end of this season will see a carryover of 23 million bales, as against 20.5 million bales at the end of the 1954-55 season and 18.9 million bales at the end of the 1953-54 season.

Record High

The main point that deserves to be noted in the supply position of cotton in the current season is that the free world production, now estimated at 30.6 million bales, will be an "all-time record high." It is also noteworthy that this high level of production has been reached, in spite of the restriction of acreage under cotton in the U.S. This has happened, because there has been a marked improvement in per-acre yield of cotton in the U.S. and an expansion of the land under cotton in the other major and minor cotton-producing countries. The following table sums up the trends in acreage, yield and output in the cotton-producing countries of the free world:

(Acreage in million acres; yield in lbs. per acre; production in million lbs.)

Country	Average 1934-35* 1938-39	Average 1949-50* 1953-54	1954-55	1955-56*	Change
Acreage—					
United States	28.4	24.5	19.3	16.9	−2.4
Other countries	41.1	38.0	43.0	46.1	+3.1
Major†	37.0	33.0	36.7	39.2	+2.5
Minor	4.1	5.0	6.3	6.9	+0.6
Free world total	69.5	62.5	62.3	63.0	+0.7
Yield—					
United States	212	283	341	416	+75
Other countries	137	161	177	167	−10
Major†	141	165	178	168	−10
Minor	105	134	167	159	− 8
Free world total	169	209	227	232	+ 5
Production—					
United States	12.4	14.5	13.6	14.5	+0.9
Other countries	11.8	12.8	15.9	16.1	+0.2
Major†	10.9	11.4	13.7	13.8	+0.1
Minor	0.9	1.4	2.2	2.3	+0.1
Free world total	24.2	27.3	29.5	30.6	+1.1

* Preliminary.
† Mexico, India, Pakistan, Turkey, Syria, Egypt, Sudan, Uganda, Belgian Congo, Brazil, Argentina and Peru.

In the U.S., the national acreage allotment, as is well known, was set at 18.2 million acres for the current season, of which 17.5 million were planted and 16.9 million harvested. Acreage was 2.4 million or 12 per cent. less than in the 1954-55 season. On the other hand, the aggregate free world acreage outside the U.S. increased by roughly 3 million. The Committee observes that, although the increase in acreage was fairly world-wide, it was concentrated in the major cotton-producing countries, namely, Mexico, India, Pakistan, and Brazil, and, to a lesser extent, in Egypt, Syria and Turkey. Aggregate acreage in the smaller countries rose by an estimated 600,000 acres or 10 per cent, but the increase occurred chiefly in the Central American countries, Greece and Spain.

A feature of the cotton economy in recent seasons has been the marked improvement in the per-acre yield. For the 1955-56 season, the average per-acre yield in the free world is placed at 232 lbs., as against 227 lbs. in 1954-55 and 169 lbs. being the average of the yields in the pre-war period 1934-35 to 1938-39. The yield in the U.S. touched a "new all-time record" of 416 lbs. per acre. Referring to this factor, the Committee observes: "Theoretically, the overall increase in yield in the U.S. this season contributed some 2.5 million bales to production and largely explains the increase in the final production estimates compared to earlier ones." In the countries outside the U.S., yields generally were lower, particularly in the major producing countries. Thus, in these countries, the average per-acre yield was 168 lbs., as against 178 lbs. in the 1954-55 season. Nevertheless, it was higher than in the pre-war years when it was only 141 lbs.

Per-Acre Yield

It is the increase in per-acre yield that explains the increase in the output of cotton in the U.S. in the current season. When the acreage allotment was restricted in that country, it was originally believed that the crop would be lower by a million bales than in the 1954-55 season. But the crop eventually turned out to be 14.5 million bales as against 13.6 million bales in the last season. Referring to the upward trend in per-acre yields of cotton in the U.S., the Committee says: "In the light of recent experience, it appears probable that the improvement in yield may be permanent, though, obviously, there will be variations from year to year. With cotton acreage restricted and with only limited opportunity for crop substitution, growers tend to produce more intensively and, given normal growth conditions, yields can be expected to be higher than a few years ago."

As regards the trends in acreage and output in the free world outside the U.S., the Committee points out that increased acreage seemed to herald a further significant increase in production this season, possibly by as much as one million bales. However, as the season progressed, it became evident that yields in many countries were much under last season and on present expectations the increase in production will be insignificant. The only real increases in production this season are in Mexico and possibly Brazil but smaller increases in many other countries add up to a sizable amount. On the other hand, despite an increase in acreage, production in India could be down by up to half a million bales. The same is true of Egypt where acreage increased by 14 per cent. and production turned out to be somewhat under last season.

Staple Length

An analysis of the free world's cotton crop by staple-length shows that the production of extra-long staples (1⅛" and longer) has remained unchanged at approximately one million bales. The upward trend in long staples (1⅛" to 1⅛") has continued, but the largest increment has taken place in the medium-staple group (⅞" to 1⅛"). The slight decline which is estimated to have taken place in the short-staple group (below ⅞") is attributed to extensive damage from floods in India and Pakistan.

The following table gives the estimated output of cotton by staple-lengths in the 1953-54, 1954-55 and 1955-56 seasons:

(In thousand bales)

Country	1953-54	1954-55	1955-56*
1⅛" and longer			
Egypt	507	531	552
Peru†	46	79	370
Sudan	360	350	370

Communist Countries

Production in the communist countries is thought to be around 8.95 million bales in the 1955-56 season, as compared with 9.1 million bales in the last season. For the current season, the crop in China, the U.S.S.R. and East Europe is placed at 3.5 million bales, 5.3 million bales and 150,000 bales respectively as compared with 3.1 million bales, 5.8 million bales and 160,000 bales for the last season. In East Europe, the land under cotton has declined from 590,000 acres to 560,000 acres. But there has been an expansion of land under cotton in both China and the U.S.S.R. where it was 10 million acres and 5.1 million acres, respectively, as compared with 9.6 million acres and 5 million acres in the 1954-55 season. It is noteworthy that, between the 1954-55 and the 1955-56 season, the per-acre yield of cotton improved from 154 lbs. to 167 lbs. in China, remained unchanged at 130 lbs. in East Europe and declined from 554 lbs. to 497 lbs. in the U.S.S.R. Even at the current season's low level, the per-acre yield in the U.S.S.R. is appreciably larger than in pre-war years when it was 292 lbs.

The Committee, after its survey of the trends in cotton economy, makes many notable observations. It notes that, although favourable weather must not be ignored in explaining the increase in the cotton output in recent years, the "fact still remains that conscious effort is being made to augment yields not only in the U.S. but in other countries as well." It further notes that acreage control of the kind that is enforced in the U.S. and Egypt will not by itself necessarily achieve the desired result, unless it is "much more drastic and widespread than it has been so far." In any case, such control on acreage "does not guarantee that production will be reduced proportionately." It suggests that there is a "chronic tendency" to overproduction of cotton in the world which, in the absence of acreage restrictions in the U.S., would have been more pronounced than now. Apparently, the Committee realises that such abundance could be easily absorbed by raising the overall world demand for cloth. Perhaps, it is inclined to regard it as only a long-term solution, for it emphasises that, the short-term solution to the problem of surpluses must be found through controlling the supply of cotton. It says that, in the short period at least, the establishment of an equilibrium between supply and demand and liquidation of surpluses is "primarily a supply function." In its opinion, the problem is to discourage excess production whether by control of acreage or through price disincentives or both. But experience, as the Committee itself admits, has shown that acreage control by itself is no effective solution to the problem. The other method, namely, price disincentives, could be tried, only if the main cotton-producing country, namely the U.S., is willing to give up high and rigid price supports.

U.N. WORLD SUGAR CONFERENCE

MOVE TO IMPART STABILITY TO TRADE

HOW to prevent overproduction of sugar in the world and yet keep the commodity at a price that would suit the pocket of everybody? This was the question posed before the International Sugar Conference which commenced at New York on 23rd May 1956. The Conference, it will be recalled, was convened by the United Nations at the request of the International Sugar Council when it met in London on 1st December 1955. Delegates from 37 countries, including India, Ceylon, Israel and Syria, participated in the Conference. There were, besides, observers from Ethiopia, Pakistan and Turkey. The Conference was presided over by Mr. Paul de Kronacker of Belgium. Mr. Amaded Lopez Castro of Cuba was elected the first Vice-Chairman and Mr. M. Gopala Menon of India the second Vice-Chairman.

No detailed information on the deliberations of the Sugar Conference and the decisions taken thereat is available at the time of writing. From the scattered reports in the Press, it is, however, gathered that, in the course of their speeches, the representatives of several countries stressed the imperative necessity for augmenting sugar consumption the world over and for bringing more countries into the World Sugar Agreement on price and quotas. Indeed, the speakers warned that the world sugar price and quota agreement would collapse, unless a larger number of countries joined it.

The warning is based on fears that, if the present state of affairs were to continue, the problem of effecting a balance between free market supplies and requirements under the World Sugar Agreement would become extremely difficult, especially because of the continuously upward trend in world sugar production. The estimate for the current (1955-56) season, it may be noted, is placed at 38.61 million tons, as against 37.87 million tons, 38.88 million tons and 35.04 million tons in the three previous years, respectively. But, along with the rise in output, consumption of sugar has also expanded and will doubtless expand in the coming years, what with the increase in population and improvement in the standard of living of masses in many countries, particularly in the underdeveloped and undeveloped region.

Indicative of this trend is the reduction in the aggregate world stocks of sugar which are expected to amount to 11.09 million tons at the end of the season, as compared with 11.86 million tons a year before and 12.22 million tons two years before. How else can one explain, for instance, the distinctly steady trend of the world sugar market that has been in evidence in the past few months? Not only has the downward tendency in sugar prices been arrested, but prices have, in fact, registered a marked recovery. Raw sugar (spot No. 4 world contract) in the New York market, which had gone down very much below the minimum of 3.25 cents per lb. fixed under the World Sugar Agreement—the actual quotation as on 2nd December 1955 was 3.13 cents—improved by stages to touch 3.38 cents on 7th May, the latest quotation being 3.36. This is the highest price since early November 1955, when buying resistance, together with the influence of larger crop reports and the unsettling effect of barter deals, took the sugar price in the world market to a level lower than the Agreement minimum.

The following table indicates the world statistical position of sugar during the current season (September 1955 to August 1956), as compared with that in the three preceding seasons:

(In million tons)

	1955-56*	1954-55	1953-54	1952-53
Opening stocks	11.86	12.22	10.72	10.81
Production	38.61	37.87	38.88	35.04
Total supplies	50.47	50.09	49.60	45.85
Consumption	39.38	38.23	37.38	35.13
of which exports	N.A.	14.79	15.48	15.22
Closing stocks	11.09	11.86	12.22	10.72

* Estimates. N.A.—Not available.

To the extent consumption of sugar has improved and stocks have fallen, the immediate problem of effecting a balance between free market supplies and requirements under the World Sugar Agreement has been rendered less difficult. Even so, much significance attaches to the International Sugar Conference, thanks to the series of stresses and strains to which the Agreement is at present being subject. Particular mention must be made of the struggle between cheap and large-scale producers, including Cuba and the Dominican Republic, and high cost producers such as the European beet sugar producers. Speaking at the Conference, the delegate from Cuba—the world's largest sugar producer—for instance, declared that the main objective of the Conference was to get countries which did not import large quantities of sugar to buy more at a price they could pay. It was necessary, he said, to face the fact of increased production in some countries where there were all the characteristics of an artificial industry maintained by excessive protection. At the same time, the delegate made it clear that Cuba had reached the 'limit' of its agreed restrictions on production.

Mention may also be made of three other notable developments. First, when the World Sugar Agreement was negotiated in 1953, supply of rice was somewhat scarce. Formosa had changed over some of its cane acreage to paddy fields. Now, with its reversion to cane sugar, the sugar output in this country has gone up, the estimate for the current season being placed at 800,000 tons, as against 512,000 tons in 1951-52 and 400,000 tons in 1950-51. It has, therefore, been demanding a bigger sugar outlet. It had even threatened to withdraw from the Agreement some time ago.

Secondly, Cuba's share in the U.S. requirements of sugar will be reduced from next year, thereby forcing Cuba to look elsewhere for an outlet for its sugar. This has naturally thrown a further strain on the working of the Agreement. For, under the U.S. Sugar Act amended recently, the domestic producers of sugar are given 55 per cent. of any increase in quotas beyond 8.35 million tons, the balance of 45 per cent. being divided by foreign sugar growers, including Cuba. For the calendar year 1956, however, Cuba will continue to receive 96 per cent. of the foreign participation and full-duty countries the remaining 4 per cent. But, commencing with 1957, Cuba would receive 75 per cent. of the foreign share and full-duty countries 25 per cent. Cuba's share in the rise over and above an initial domestic requirement quota of the U.S. will thus be reduced greatly. Consequently, Cuba has entered into several barter transactions by selling large quantities of sugar in exchange for tunnel, highways and hotel construction projects at very favourable terms to buyers. When the sugar thus contracted is unloaded, the world sugar market will naturally be affected.

Thirdly, the countries in the Far East have gone a long way towards complete recovery from war-time devastation and sugar production in this region, particularly in the non-signatory countries, has, increased considerably.

Considering all the aforesaid developments, the task before the International Sugar Conference was, indeed, formidable. The success of the Conference will be judged by the extent to which it was able to bring about a conciliation between the conflicting interests of the countries concerned. It is to be hoped that the Conference was able to find a satisfactory solution for these problems.

CANE ZONES TO BE REVISED

The State Governments would be asked by the Centre to revise the sugarcane zones, so that the zonal areas might produce just that quantity of cane as the mills could crush. This was revealed by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the course of his reply to a half-hour debate on heavy accumulations of uncrushed cane in several parts of Bihar in the Lok Sabha on 25th May. During the debate, anxiety was expressed over the hardship caused to cane growers by large sugarcane crops standing in the fields which the sugar mills were refusing to buy for crushing. The Government was criticised for not doing anything to reduce the hardship. Initiating the discussion, Dr. Ram Subhag Singh, a Congress member from Bihar, said that the sugar millowners adopted the policy of starting crushing cane late and many crushed the cane produced at their farms. These sugar mills had existed all these years, because of the protection given to the industry, and they were like public utility concerns. He regretted that, by their refusal to crush cane, the factories had caused considerable hardship to the cane growers.

Replying to the debate, Mr. Jain pointed out that there was no other alternative to the problem except revision of zones where sugarcane is grown for consumption in mills. "I have," he disclosed, "already advised the U.P. Government in this respect and I am going to advise the Bihar Government to revise the zonal areas." Mr. Jain no doubt admitted that such a revision might not be totally in the interest of the cane growers, but felt that that was the only alternative left.

MINIMUM WAGES FOR COAL MINERS

INDUSTRY'S CAPACITY TO PAY

THE All-India Industrial Tribunal, while giving its award on a fair minimum wage for workers in coal mines—the main features of the Award were discussed in the course of a leading article in our last issue—has also taken into consideration the factors other than the needs of the workmen. One of the factors which have, however, not received adequate attention is the capacity of the industry to pay the minimum wage recommended by it. The Tribunal has, of course, given its reasons for not taking into account this factor.

The question whether or not the industry's capacity to pay a minimum wage should be taken into account is not a new one. On the other hand, it is an old one and has figured before the Fair Wages Committee, the Bombay Textile Labour Enquiry Committee, the Bihar Labour Enquiry Committee and the U.P. Labour Enquiry Committee. The contention of the coal miners is that the capacity of industry need not be a material factor for consideration in fixing a minimum wage. For they are of the view that, if the capacity to pay is examined, it will be found that, even on the basis of the present controlled price, the coal industry has a sufficient margin of profit and that it will be more so if the future prospects for the industry are taken into account. They further contend that, if the prices fixed do not leave a sufficient margin for the industry to pay a minimum wage, the workmen cannot be asked to accept a wage, which is below what may be termed a fair living wage, for no fault of theirs. The employees point out that the price of coal in India is low as compared with the prices in other countries and that, "after fixing the prices of coal in such a manner that the margin of profit left is too narrow to permit payment of a fair wage to workmen, by whose sweat the coal is produced, they cannot be told that the controlled prices are not high enough to allow a fair wage to be paid to them." The colliery owners, on the other hand, claim that the consideration of the capacity of the industry to pay is not only important but also most imperative.

The Fair Wages Committee, it will be recalled, had expressed the view that the payment of a minimum wage was an imperative necessity which should not be made to depend on capacity. It had further stated that "an industry incapable of paying minimum wage should cease to exist." The late Mr. Justice Rajadhyaksha in his Postal Award, as well as the U.P. Labour Enquiry Committee, had also endorsed the view of the Fair Wages Committee that the payment of minimum wage should not be made to depend on capacity. The Government of India also did not allow the capacity of the industry to come in the way of the workers getting the wages awarded by the Conciliation Board, when, as a result of that Award, it raised the price of coal. Similarly, when the contribution towards provident fund was raised recently, a rise of As. 3 in the price of coal was granted by the Government.

The question, namely, the capacity or incapacity of the industry to pay, also figured prominently during the arguments before the All-India Industrial Tribunal. The Tribunal was required to consider the question from two aspects: (a) whether capacity to pay was relevant for determining the minimum wage, and (b) if it was, whether the capacity of the industry to pay in the case before the Tribunal could be correctly assessed. As regards the first, the Tribunal has expressed the view that "the capacity of the industry to pay is a factor to be taken into consideration only when any wage higher than the minimum is fixed and not for minimum wage." The Tribunal is also in complete agreement with the Fair Wages Committee that an industry incapable of paying a minimum wage should cease to exist. So far as the second aspect is concerned, the Tribunal has expressed the difficulty in assessing correctly the capacity of the industry; for the discussions before the various committees which had gone into the question earlier have shown that views on the 'capacity' vary widely. Moreover, it depends on so many factors. In the dispute before the Tribunal, it had to deal with 960 collieries, the conditions of which differ widely from place to place, depending on many factors. It was impossible for the Tribunal to find out the capacity of each unit. The only practical method

(Continued on page 1127)

ATOMIC RESEARCH IN BRITAIN—IV

SCIENTISTS WORK ON TROUBLE-FREE REACTORS

By K. E. B. Jay

DURING its first years, Britain's Atomic Energy Research Establishment, at Harwell in Southern England, was occupied chiefly with providing information for the designers of the production factories, particularly the plutonium factory.

It was originally intended that this factory, at Windscale, Cumberland, should be equipped with water-cooled graphite-moderated piles similar to those built during the war at Hanford, Washington, for producing plutonium. However, it was much more difficult to find sites suitable for piles of this type in a highly-populated country like Britain than in the United States and the designers began to consider gas cooling.

Calculations indicated that by using extended cooling surfaces on the aluminium sheaths enclosing the uranium rods, it should be possible to cool even a high power pile by blowing air through at atmospheric pressure, without excessive consumption of power in the blowers. These calculations were confirmed by experiments on a model of the pile channel at Harwell.

Theoretical Studies

In fact, the Windscale piles are not unlike Bepo, one of the atomic piles at Harwell, except that they are much larger and are not provided with facilities for experimental work; they are intended strictly for making plutonium. The Establishment did the theoretical calculations for the design of the piles and much experimental work, especially in connection with the cooling, the fuel elements (the sheathed rods of uranium), and the moderator structure; the Establishment also designed the electronic instruments for controlling the piles and monitoring their operation.

During this period, not much effort was available for considering the problem of reactors as electric power generators, but nevertheless theoretical studies were made of a wide variety of reactors. These studies included calculation of critical masses and investment of fissile material, determination of excess reactivity and of poisoning by fission products, heat transfer, and the general assessment of practicability of a design.

Broadly, nuclear reactors can be classified in terms of the speed of neutrons causing fission into fast, intermediate or resonance, and slow or thermal. In the thermal reactor the neutrons are allowed to bump about among the atoms of a moderating material, losing energy at each collision, until they are in thermal equilibrium with the moderator; an advantage of this type is that it will work with natural uranium fuel. In the intermediate reactor the neutrons are slowed only until they reach energies intermediate between fission energy and thermal, at which there is a strong probability of fission in uranium; this type needs less moderator but the fuel must contain a higher proportion of fissile atoms than natural uranium. Finally, in the fast reactor the neutrons cause fission while still moving at high speed; no moderator is needed but the fuel must be highly concentrated.

Within these broad classifications innumerable variations are possible, in type of fuel, moderator, coolant, and so on. Many of the variants can be dismissed at once as impracticable, but there still remain a number worthy of closer study. It is not possible to make a pilot-scale experiment with a nuclear reactor, and because the cost is so great it is essential to be sure that any reactor that is built is likely to be reasonably successful. Therefore, the Establishment spent a long time looking carefully at many different designs.

From these theoretical studies a few promising types were chosen for full-scale feasibility (or design) studies. In a feasibility study a much closer investigation is made of the proposed reactor; engineering difficulties are considered in some detail, the practicability of fabricating suitable fuel elements is examined, chemical and metallurgical experiments are made on materials of construction, and the economic aspects are discussed. Only if this study shows promise of an economically-successful outcome is there any question of building the reactor.

As the pressure of work for the production factories slackened, the Establishment has been able to turn more and more effort over to these feasibility studies for power-producing reactors.

One of the first was an examination of the possibility of adapting the gas cooler to power production. If reasonable efficiencies were to be obtained, it was necessary to reduce to a minimum the power consumed in pumping the gas coolant through the core. It was seen that this could be done by keeping the gas under pressure, but then, the whole core of the reactor would have to be contained in a pressure vessel.

Heavy Water As Moderator

In fact, the design was dictated less by nuclear considerations than by the maximum size of a pressure vessel capable of withstanding the proposed pressure which could be fabricated. Notwithstanding considerable engineering difficulties, this design did seem to be very promising and the Government decided to build a prototype power station along the lines suggested. This is the station now being built at Calder Hall in Northern England.

The Establishment also considered a thermal reactor in which heavy water was used as moderator, instead of graphite. Heavy water is a more efficient moderator and leads to greater economy of neutrons, but it is expensive and there are complications in cooling the reactor. The first study was directed to designing a large reactor for use as a research and development tool. Following this, it was decided to build a smaller machine for experimental use and isotope production only; for this the fuel was to be enriched uranium. This is the reactor now known as Dido which is being built at Harwell.

Work has also been going on for some time on a fast-fission power-producing breeder reactor. Very much less practical experience is available of this type than of thermal reactors and at the same time the design problems are in many respects more formidable. The absence of a moderator results in a small core in which very large amounts of heat are generated; the thermal stresses are consequently extremely high and heat transfer is difficult.

When the design began many aspects of the physics of the reactor were not known in detail and for this reason the low power reactor Zephyr was built at Harwell so that experimental information could be obtained. Considerable progress has, however, been made in the design and a prototype reactor of this type is being built at Dounreay, Scotland.

We have mentioned graphite and heavy water as moderators. Ordinary or light water also serves and is interesting because of its cheapness. When it is used as coolant as well as moderator, an inherently safe reactor can be designed. A disadvantage of light water is that it absorbs neutrons to a greater extent than heavy water; consequently enriched uranium is necessary for fuel. For some time the Establishment has been investigating light water reactors, first for experimental purposes and subsequently for power production units of about 100 MW of electricity.

A major difficulty in all reactor development is to design a fuel element which can be left in the reactor long enough to ensure that a reasonable fraction of the fissile atoms is burned. There are two causes of this difficulty. The first is that some of the fission products—the two bits into which an atom splits on fission—are strong neutron absorbers; consequently as these nuclear ashes accumulate they will tend to stop the reaction, to put the nuclear fire out.

Metal Becomes Distorted

The second cause is that the fuel metal becomes distorted after a time owing to the effect of the intense local heating that accompanies fission and to the damage to the crystal lattice of the metal caused by the motion of fission product atoms; after a time this distortion may be so severe as to necessitate removing the fuel element.

A great deal of research has been done at the Establishment to elucidate the exact mechanism of this distortion and to devise metallurgical treatments to reduce it. For example, one type of distortion is the wrinkling of the surface of the uranium; it has been shown that this wrinkling is related to the grain size of the metal and techniques have been worked out for modifying the grain size by heat treatment or alloying.

Fuel elements removed because excessive amounts of neutron-absorbing fission products have accumulated, still contain large quantities of unused fissile material. It is, therefore, necessary to remove the fission product poisons, as they are called, so that the fissile material can be put back into the reactor. Also fertile material in the blanket of a breeder reactor will contain, after a time, fission products and newly-bred fissile material; the latter has to be extracted to be used as fuel in the core of a reactor.

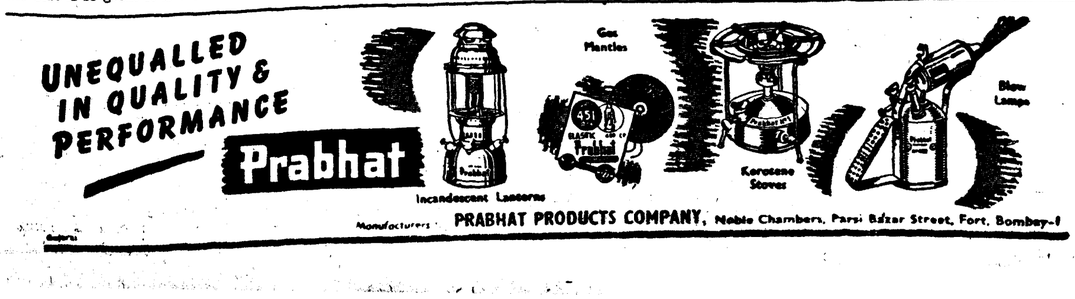
Extraction processes for both these purposes—decontamination from fission products and extraction of fissile material—are being studied at Harwell. A solvent extraction process is now in use at Windscale but this achieves a degree of decontamination unnecessarily high for modern reactors and has the disadvantage that the metal is extracted as a solution and must subsequently be reduced to metallic form.

Important Objective

An important objective of current research is to find cheaper processes in which, if possible, the desired product is kept in metallic form throughout and only the minimum necessary decontamination is achieved. Pyrometallurgical processes are particularly promising; these include melting the fuels and skimming impurities from the melt, electrolysing the fuels at high temperatures in fused salts, and dissolving the wanted metal in other molten metals, also at high temperature.

The troubles inseparable from solid fuel elements are avoided altogether if the fuel is used in liquid form as in the so-called homogeneous reactors. Typical of these is the homogeneous acqueous reactor in which the fuel is a solution of uranyl sulphate in heavy water, the latter acting as moderator. A design study of this general type is going forward at Harwell.—*Exclusive to Commerce.*

(Concluded)



LABOUR APPELLATE TRIBUNAL'S VERDICT ON JUTE MILLS' DISPUTE

PLEA FOR FULL FINANCIAL RELIEF REJECTED

THE judgment delivered at Calcutta on 31st May last by a Special Bench of the Labour Appellate Tribunal on appeals arising from the award on labour disputes in jute mills given by the West Bengal Government on 12th July 1954, will be welcomed by the mills for several reasons, belated though it is. While acknowledging the justified complaints of the employees with regard to the full implementation of the earlier awards, the Bench has displayed a sense of realism in deciding that it is "unable to give fuller relief of financial compensation or by way of an increase of total emoluments", for the simple reason that it "feels reluctant to impose a further burden on the industry." It seems to be satisfied also that there is nothing to show in the accounts and documents placed before it that the employers had resorted to manipulation of these accounts in order to present a disquieting economic picture of the industry. Thus, the L.A.T. says: "For want of substantial and sufficient materials, we are unable to hold that the accounts and the profits are not fairly and honestly expressed in the relative documents before us." These appreciative remarks deserve to be noted particularly by those who have a tendency to view with a certain amount of suspicion the profit and loss accounts presented by employers generally.

The appellants were the Indian Jute Mills Association (representing 95 mills), three individual mills and three jute mill workers' unions. In its appeal, the I.J.M.A. questioned (a) the competency of the Government to make a reference, (b) the validity of the reference itself, and (c) the jurisdiction of the Tribunal to give an award on the ground that the second award had not terminated in terms of section 19(6) of the Industrial Disputes Act. The L.A.T. overruled these objections on the ground that the provision did not stand in the way of this reference.

The workers' unions had demanded that the basic wages and dearness allowance of all categories of workmen should be revised. For the lowest paid workman, their demands varied between Rs. 74-12 and Rs. 100 per month. This meant an increase ranging between Rs. 11-6 and Rs. 36-10 per month over the then existing rates. Acceptance of this demand meant, according to the L.A.T., an additional expenditure of about Rs. 3.30 crores to Rs. 10.80 crores a year. This, the L.A.T. considered, was beyond the financial ability of the industry. Even the alternative demand by the workers for a payment of Rs. 71 per month or an increase of about Rs. 4 above the rates allowed in the award under appeal, required, according to the Bench, an additional recurring expenditure of Rs. 2.40 crores or Rs. 1.20 crores over the burden of a like amount given by the award under appeal. The L.A.T. further added that an expenditure of double this amount would be necessary, if these demands were allowed to take effect retrospectively, from 7th April 1954. In the circumstances, the L.A.T. said that it was a moot question whether the financial capacity of the industry was strong enough to bear this burden.

Financial Position of Mills

Examining the financial position of the industry, the L.A.T. stated that the industry had gradually built up a substantial reserve which, at the time of hearing the appeal, amounted to Rs. 25.17 crores, an increase of Rs. 3.57 crores over that of 1948. Leaving out the Korean boom of huge profits and the years of loss, the average net profits of the last few years of normal business amounted to about Rs. 2 crores a year. Capitalised bonus shares of the value of Rs. 6 crores were issued between 1948 and 1954. Dividends paid between 1948-49 and 1952-53 were at an overall average of 11.5 per cent, which according to the L.A.T. was "a very handsome dividend."

Although the Tribunal characterised the above as a fair picture of the financial position of the industry, it held that it was not complete without a critical analysis of the whole position, since the industry's stability depended on its trading prospects, present and future. Its observations in this context are as follows:

"The industry is old and well organised and is doing a steady business. It stands on a fairly solid foundation. Its difficulties have been progressively overcome and there has been some improvement in its overall situation. Whether this improvement is going to be permanent or not is another matter. It is not possible to make any prediction about the future of any industry, much less about jute where speculators traditionally get a free hand in controlling the market. Its trading prospects are neither bleak nor discouraging. At least there does not seem to be any cause for panic now or in the near future.

"The situation even now requires observing economy to keep the expenditure well under control and keeping down the price level of finished goods effectively to meet the challenge of growing competition in the overseas market. It is, therefore, advisable in the best interest of the industry, to proceed with due caution in imposing any extra financial burden on its resources. At no time the need for forbearance on the part of both labour and capital in the matter of incurring extra expenditure was so conspicuous as it is at present."

The unions had also pressed the case for an increase in the rate of dearness allowance to cover fully the rise in the cost of living. This point too was not conceded by the L.A.T. To quote the Bench again: "It has been the policy of industrial tribunals, including this tribunal, like all other wage-fixing machinery, not to allow under present conditions in the country, a hundred per cent. neutralisation for the rise in the cost of living." The L.A.T. held that, while the earnings of the teeming millions in India were much lower that what industrial workers got, it was natural to expect the latter also to make some sacrifice like every other citizen. This is a very pertinent point which many labour leaders conveniently ignore when voicing the demands of workers for higher and still higher wages.

Although the L.A.T. was reluctant to impose special burdens on the industry, it seems strange that it should have considered it necessary to modify, in an upward direction, the award of the primary tribunal favouring certain categories of employees. According to the modification, the basic wages of *jamadars, havildars,* and *durwans* will be raised by Rs. 8.67 instead of Rs. 8 as awarded by the tribunal. With this increase the basic wages of these three classes of employees will be Rs. 73.67, Rs. 58.67 and Rs. 44.67, respectively. Those who are already enjoying higher basic wages and scales of increment will continue to do so under the existing conditions. The increment of Rs. 8.67 will not apply to them.

The Jute Industries group in Dundee reports a rise of 27 per cent. in the productivity per worker during the past five years. The increase has been mainly achieved through the installation of modern machinery, but a large number of workpeople has accepted redeployment and modern methods of work evaluation for which they have been duly rewarded. The industry is introducing a new method of fostering efficiency by the use of what is called a "*productivity ladder.*"

You feel better, work better

—in an office cooled by the *NEW* model

Unobtrusively smart, the new model 'CRYSTAL' fits into a window, a ventilator or a small space in the wall — blends with your office furniture

THERE'S no doubt about it — your efficiency is doubled when you work in a cool, clean office! And that's the atmosphere you get with the new model 'CRYSTAL', finest room air conditioner yet made for the Indian climate.

Installation costs are low, running costs are low — and what wonderful health- and -efficiency dividends the 'CRYSTAL' pays! Get your secretary to write to Voltas Limited now for details of the new model 'CRYSTAL'!

ATTAINING SELF-SUFFICIENCY IN ROLLING STOCK FOR RAILWAYS

ESTIMATES COMMITTEE'S SUGGESTIONS

ALTHOUGH the Indian railway system was established more than a hundred years ago, it is only in recent years that considerable attention has been given to the attainment of self-sufficiency in rolling stock. Among the measures that have been taken in this direction, mention must be made of the setting up of the Chittaranjan Locomotive Works, which went into production in January 1950, and the Integral Coach Factory, which commenced production in October 1955. These two factories have been rightly acclaimed as projects of national importance, considering the large foreign exchange they help save for the country, besides the employment they provide. These two projects have been the subject of investigation by the Estimates Committee, which has made a number of recommendations designed to improve and extend their working.

The national importance of these two projects will be clear from the fact that India has generally depended on imports for its locomotives, carriages, wagons and their components which, during the period 1938-39 to 1954-55, accounted for Rs. 138 crores. A small beginning was no doubt made in the direction of locomotive manufacture in the Railway Workshops in 1885 at Jamalpur and in 1896 at Ajmer. But, by and large, these workshops, like all others of their kind in the country, were merely repair workshops. In 1939, a Committee was appointed to go into the question of locomotive manufacture. The report of the Committee received no serious consideration till 1945. It was only in 1947 that the site for location of the factory—Chittaranjan—was finally chosen. The Chittaranjan Locomotive Works (C.L.W.) went into production in January 1950. Over the five years ended 1955-56, it has exceeded the target of 268 locomotives by producing 341 locomotives. It is now turning out locomotives at the rate of 12 per month.

Second Plan

The country's requirements of locomotives during the period of the second Plan are very large. This question has to be viewed in the context of the anticipated increase in passenger traffic by 6,180 passenger miles (by 15 per cent.). increase in goods traffic by 47 million tons (by 4 per cent.) and construction of 850 miles of new lines (2.5 per cent. increase in route mileage). Taking into account these factors, the number of B. G. locomotives that would be required have been estimated at 2,110, made up of 1,048 locomotives for additional traffic (138 for passenger traffic, 834 for goods traffic and 76 for shunting purposes) and 1,062 locomotives for rehabilitation (318 for passenger, 553 for goods and 191 for shunting purposes). The Railway Plan envisages electrification of 800 miles. If this materialises, less steam locomotives will be needed. India will then need about 1,595 locomotives—533 for additional traffic and 1,062 for rehabilitation purposes. The C.L.W. will not be able to meet all the requirements of B. G. locomotives in the first few years of the Plan. But, when its outturn increases to 300 locomotives per year, it will be able to meet most of the annual requirements of standard passenger and goods B. G. steam locomotives.

The C.L.W. is now engaged in the manufacture of goods engines, though it proposes to undertake the manufacture of passenger locomotives also. For the B. G. main line passenger and goods services, the W.P. and W.G. types of steam locomotives are considered most suitable. The C.L.W. now manufactures only the W.G. type. It proposes to undertake the manufacture of the W.P. type in due course. The Estimates Committee has suggested that "it would be advisable to make a small beginning in the manufacture of W.P. locomotives also simultaneously" and that "a suitable target for manufacturing W.P. locomotives may be set up at an early date." The Railway Board, it is stated, is also considering the question of manufacturing electrical locomotives in India. Emphasising the importance of such manufacture, the Committee suggests that the "matter should be pursued vigorously."

Production Costs

It would appear that the actual cost of the locomotives manufactured by the C.L.W. is not available. A scientific system of costing has only recently been introduced. The estimated cost of a W.G. locomotive during 1955-56, it is stated, was about Rs. 5.1 lakhs, exclusive of interest charges on the capital-at-charge. Referring to production costs, the Committee observes: "Considering the fact that the locomotive works has been in existence for only a few years, the Committee note with satisfaction that the cost of the indigenous locomotives does not compare unfavourably with that of the imported ones." It expresses the hope that, with greater experience in the technique of production and more rigorous control, the cost would be reduced further. It may be recalled here that, in the course of his reply to a question in Parliament early in December last, Mr. O. V. Alagesan, Deputy Minister for Railways and Transport, stated that the cost of locomotives produced at Chittaranjan had already begun to come down. In 1954-55, it was Rs. 4.81 lakhs excluding interest charges, as against the estimated landed cost of Rs. 5.25-5.50 lakhs for a similar type of imported locomotive. The cost estimate of the Estimates Committee is, however, higher than Mr. Alagesan's estimate by Rs. 30,000.

Some notable recommendations have been made by the Committee in regard to the manufacture of components. In the manufacture of locomotives, most of the components are manufactured by processing of raw metal and basic materials; there are a few proprietary articles and other fittings, some essential and others desirable, like vacuum and pressure gauges, electric lighting equipment, roller bearings, asbestos mattresses, etc., which are obtained from outside sources. In Chittaranjan all processing shops have been fully developed and given the basic materials, 100 per cent. of the components for production of a locomotive can be manufactured. At present, a certain quantity of some of the components, which are produced in Chittaranjan Locomotive Works, are also obtained from outside sources to maintain optimum production from Chittaranjan Locomotive Works. The Committee suggest that the question of setting up subsidiary industries in the private sector for the manufacture of such of the parts as are not manufactured in the Chittaranjan Locomotive Works should be given prompt attention. The Committee understand that, at present, the assistance received from indigenous sources is not appreciable; it is limited to supply of cotters, split pins, rivets, bolts and nuts, minor fabrications and light steel castings.

Standardisation

Locomotives recently standardised for the Indian railways vary widely both in size and power. These variations range from 51 tons to 239 tons by weight and from 13,700 to 66,600 lbs. in tractive effort. With the establishment of locomotive manufacture in India, however, it became necessary to fix a standard unit for locomotive production. The Central Standards Office for Railways evolved a standard unit for evaluating production. This unit is a locomotive weighing 93.5 tons and with the surface area (index 93.5) 2/3=20.25. For practical purposes, however, the standard unit is taken as the HGC class locomotive, with weight 89.95 tons and surface area index of 20.25. The amount of work involved in the production of a WG locomotive, it is stated, is 1.23 times that of the standard locomotive. Assuming that the C.L.W.'s output is increased to 12 WG locomotives per month it will mean a rate of production of 15 standard locomotives or 180 such locomotives per year.

Integral Coach Factory

The Integral Coach Factory (I.C.F.) at Perambur (Madras), as is well known, is the result of a technical aid agreement concluded, in May 1949, between India and the Swiss Car and Elevator Manufacturing Corporation. Planned for an output of 350 B.G. coaches annually (on a single-shift basis), the factory is intended to make India self-sufficient in the matter of supply of coaches. The project has been named "Integral Coach Factory" after the integral type of coach of modern design that will be manufactured in the factory. Claimed as the latest in the field, it incorporates three major factors, which contribute towards the comfort and safety of the travelling public, namely, smooth running, light-weight and strength of the coach. The tubular character of the coach forms a structure of great strength along its axis. The design incorporates all-welded trough floor system, integral with the body and permits the forces sustained by the coach to be borne by the entire body including the skin. It is this feature of the coach that gives it the name "Integral Coach." At the coach is light-weight, being seven tons lighter than the conventional 42-ton coach, more integral coaches can be hauled by an engine without any extra cost in fuel. The extent to which overcrowding will ease can very well be imagined by the fact that in a train of 10 bogies, there would be a saving of 70 tons of deadweight, i.e., equivalent of two additional coaches.

The sanctioned estimate for the whole project is Rs. 7.35 crores; the approximate expenditure upto end of August 1955 was Rs. 4.06 crores. The factory, which went into production in October 1955, is expected to reach its target of 350 coaches in five stages: 1st year 20 coaches; 2nd year 100 coaches; 3rd year 200 coaches; 4th year 300 coaches and 5th year 350 coaches. The Swiss engineers and specialists in the factory are on a 3-year contract. Indian engineers and technicians are under training both in the factory in India and in the factory of India's technical collaborators. The Committee has urged the Railway Ministry to see that a nucleus of trained men is available in time for building adequate number of coaches and locomotives during the third Plan period. It has also stressed that the "import of rolling stock should be put a stop to by the end of the second Plan period, if not earlier."

The Committee has made a comparison of the production costs of coaches built at the Integral Coach Factory and the Hindustan Aircraft Ltd. The all-metal conventional type B.G. coach (fully furnished III class) built at the Hindustan Aircraft, costs about Rs. 1,37,731. The cost of the first unfurnished coach at the Integral Coach Factory has been estimated at Rs. 1,80,000 and the cost of furnishing at Rs. 60,000. But it is believed that, when the factory is in full production, the cost will come down to about Rs. 1,17,000 per unfurnished coach.

The authorities of the Integral Coach Factory, according to the Committee, expect that the factory will be able, from the fifth year of production, to manufacture all the parts, except wheels, axles, springs and certain proprietary articles. The coach to be manufactured consists of 1,043 components, of which 769 are to be manufactured in the I.C.F. itself. The remaining units, it is stated, cannot be manufactured on an economic basis in the factory. It is, however, proposed to obtain wheels and axles and certain other items from Tatas. The Committee notes that the supply of wheels, axles and springs will improve as and when the new steel plants go into production. It has recommended that the Railway Ministry should ensure that all the components required for the Integral Coach Factory are manufactured within the country itself.

FOUNDRY INDUSTRY

The shortage of raw material has been the primary cause of what the Indian Foundry Association, Calcutta, calls the "crisis" in the foundry industry. In a memorandum submitted to the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, the Association estimates the total capacity of the foundries in India at 1,166,560 tons per annum. On the basis of expansion in various industries, the Planning Commission has estimated that the demand for foundry pig iron would go up to 700,000 tons per year, by 1955-56. The Engineering Capacity Survey Committee has estimated that the industry is working at only 40 per cent. capacity. An important reason for the idle capacity is the shortage of pig iron and scrap. In 1954, only about 302,000 tons of pig iron were given to the industry. It would appear that the other source of raw material, namely, cast iron scrap, is

(Continued on page 1111)

NEW PRODUCTS AND PROCESSES

Zirconium Alloys

EXPERIMENTS with a number of different types of zirconium alloys which have been carried out by the Battelle Institute, 44, Bryanston Street, London, W. 1, indicate that zirconium alloys containing tin, molybdenum, or, alternatively, aluminium, and niobium, had particularly promising tensile properties, hardness and resistance to creep. Alloys of this type are, it is claimed, easily fabricated when hot and show good strength and ductility at room temperature. Zirconium alloys having these two types of composition are said to maintain excellent creep-resistance at 500°C. The experiments also showed that the metallurgical effects of the alloying additions were related to their effects on temperature at which zirconium underwent transformation. Thus molybdenum, niobium, tantalum and vanadium, which tend to lower the transformation temperature, can be used to strengthen zirconium at temperatures below 500°C. and above.

Building Material

An expanded shale building material which has been used in the U.S. for a number of years is to be produced in Britain by the Butterley Company. Aglite, as it is to be known in the U.K., is a light-weight aggregate which is claimed to be stronger than anything produced in Britain up to now. Butterley hopes to have its first plant in Derbyshire producing at full output of 1,000 cubic yards of aggregate a day in September. Development of this plant, together with initial research, has cost about £150,000. The Company plans to locate further plants throughout the country until national distribution is achieved. As well as considerable strength in relation to weight, Aglite aggregate is claimed to produce good thermal insulation and sound absorption qualities, to be inert with a high resistance to fire, and to be economical in the use of cement.

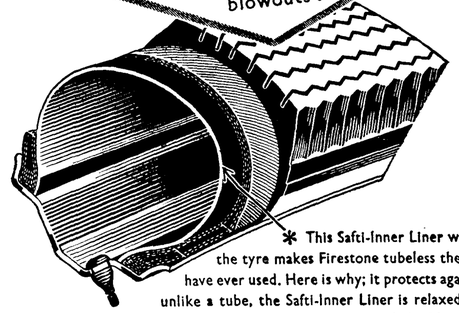
Bulk Handling of Salt

A new system of bulk handling for dried vacuum salt has been developed by Imperial Chemical Industries. A delivery service has been established by which salt, carried in special vehicles, is pumped by compressed air direct from the vehicle into containers on the consumer's premises. The new system keeps costs down—an essential consideration in dealing with a low-priced basic product—and also dispenses with laborious handling of bags. Although all grades of salt have in the past been despatched in bulk, it is not always possible to discharge the delivery vehicles conveniently and economically. This was particularly true of dried vacuum salt which, because of its free-running nature, had to be sent in enclosed bottom-discharge hopper vehicles. As a result, only a few large users took bulk delivery, while most customers took dried salt in bags in order to avoid having to provide (for their relatively small tonnages) the underground bins and elevators needed for bottom-discharge vehicles. The new service, it is claimed, offers many advantages and should be of interest to relatively small users of salt as well as to large users. As the salt is discharged by means of compressed air it is unnecessary to use conveyors and elevators to take it from the vehicle to the customer's storage points. The consumer is enabled to locate a silo or saturator at the most convenient point for his process and to have salt delivered directly into it. The type of special delivery vehicle which is being operated by I.C.I. consists of a Leyland "Octopus" chassis on which are mounted light alloy pressure vessels manufactured by Marston Excelsior, of Wolverhampton. A compressor on the chassis provides the compressed air needed to discharge the load.

Detection of Flaws

An increasing number of X-ray non-destructive testing units are being used to examine both materials and finished products for possible flaws or weaknesses. The newly developed industrial X-ray unit of this type which has been designed and produced by Philips Electrical, Century House, Shaftesbury Avenue, London, W.C. 2, can be operated at any voltage from 200-250 volts alternating current. The apparatus consists of two main parts —the X-ray tube head and the control unit. The former comprises a cylindrical tank, containing the X-ray tube, a filament transformer and high tension transformer. Since the tube head is 40 inches long and 14½ inches in diameter it can be passed through narrow apertures which are normally inaccessible to X-ray inspection apparatus. The unit, called the "Compactix 150," is rated at 150 kilowatts penetration, 10 mega-amperes and the X-ray tube has a focal spot of 3 millimetres by 3 millimetres. The whole tube head assembly is oil immersed and water cooled. The controls include a penetration selector, which will give step-less penetration adjustments from 50 or 150 kv., a milli-ampere selector, a synchronous motor exposure timer, with a range of from 0 to 30 minutes, a series of indicator lamps showing "no water flowing" and "high tension on," and mains and high tension "on" and "off" push buttons. A number of alternative mountings are available for the tube head which will enable it to be slung either vertically, or horizontally, from a hoist, or crane, or as an alternative, it can be mounted on a mobile stand. It is claimed that the tube head of the unit will fit snugly into the boot of a small car, while the control desk can be carried on the rear seat, and that both parts of the unit can be easily man-handled. The unit complies with the international recommendations on X-ray protection, and therefore is both ray-proof and shock-proof.

Safti-Inner Liner*
more than a tube
the modern tyre—tube Combination
that protects against
blowouts!



* This Safti-Inner Liner which is a part of the tyre makes Firestone tubeless the safest tyre you have ever used. Here is why; it protects against blowouts—unlike a tube, the Safti-Inner Liner is relaxed and not under tension (thus, not tending to explode like a toy balloon.) It protects against punctures—any penetrating object is gripped by the Safti-Inner Liner which prevents rapid loss of air.

why not get the extra safety of a Firestone Tubeless tyre —it costs no more than a regular tyre and tube.

ECONOMIC SURVEY OF ASIA AND THE FAR EAST 1955

The Survey is a publication of exceptional value to those concerned with the economy and trade of Asia and the Far East. The regional economic situation is fully covered. The subjects reviewed are: agricultural and industrial production, transport, trade and payments, monetary developments, and development planning and implementation.

In addition to the overall study of the regional situation, detailed survey are given of seventeen countries in the area which analyze their economic problems and developments. 235 pages.

NEW INDIA'S RESULTS ENCOURAGING

GENERAL PREMIUM INCOME NEAR RS. 5-CRORE MARK

LAST year, when the New India Assurance Company, Ltd. (Managing Director: Mr. B. K. Shah, Bombay) celebrated its silver jubilee, having completed 25 years of useful existence, it was an occasion of national rejoicing, for, both in India and abroad, the Company had established its reputation as a very progressive composite office. Now that the Company, thanks to nationalisation of life insurance, has gifted away its life portfolio to the nation, it is reduced to the status of a purely general office. As a general insurer, however, New India continues to maintain its leading position. And the results of its working for 1955 are yet another proof of the pioneering zeal, hard work and business acumen of those who guide the Company's destinies.

For New India, as for all composite offices in India, the year 1955 represents the last year of their career as composite insurers. The Report and Accounts of the Company for that year, now published, do not contain an account of the Company's life business. This is because the Company's life business, like that of all other insurers in India, is under the management of a custodian appointed by the Government. We are told that the Company "does not have access to the books of accounts of the controlled business, and the Board of Directors are unable to incorporate herein the accounts thereof for the year ended 31st December 1955." It is, however, understood that the custodian will be issuing a separate report for the life department of the Company. The report under review, therefore, covers only the Company's general departments.

Premium Income

It is encouraging to note that the pace of progress of the Company has been higher. Thus, between 1953 and 1954, the premium income from its general departments moved up from Rs. 3.89 crores to Rs. 4.36 crores or by Rs. 47 lakhs, whereas it increased to near the Rs. 5-crore mark in 1955, to Rs. 4.97 crores to be precise, thereby showing an increase of Rs. 61 lakhs over the previous year. Some doubts had been expressed as to whether the management, in view of the loss of the life department, would be willing to maintain the dividend at previous levels. These doubts were authoritatively set at rest soon after the nationalisation of life insurance. It is not, therefore, surprising, though it is certainly gratifying, to know that the Directors have recommended a dividend of Rs. 2-8, the same as last year. Incidentally, the fact that the Directors have thought it fit to maintain the dividend, despite the loss of the life department, shows that they are confident of being able to maintain the dividend in future years. Incidentally, this suggests that the dividend policy pursued by the Company in previous years was, if anything, conservative. This proves how erroneous is the impression in certain quarters that shareholders of insurance companies have received rich dividends in the past.

The increase of Rs. 61 lakhs in the general premium income of the Company, to which reference has been made above, is shared by all the three principal departments of the Company. In the fire department, the premium income moved up from Rs. 2.50 crores in 1954 to Rs. 2.74 crores in 1955, in the marine department from Rs. 1.00 crore to Rs. 1.15 crores and in the miscellaneous department from Rs. 85.5 lakhs to Rs. 1.09 crores. The following table gives the premium income of the Company in all the three general departments over the four-year period ended 31st December 1955:

Premium Income (Rs. in lakhs)

	1955	1954	1953	1952
Fire Department ..	2,74.1	2,50.3	2,33.3	2,29.3
Marine Department ..	1,14.5	1,00.7	84.0	91.1
Miscellaneous Department ..	1,08.9	85.5	72.3	65.5
Total ..	4,97.5	4,36.5	3,89.6	3,85.9

An analysis of the claims experience of the Company shows that there has been a slight worsening of the position in the fire and marine departments. Thus, in the fire department, the claims ratio was higher at 37.5 per cent., as against 36.1 per cent. in 1954, and in the marine department, it advanced from 74.1 per cent. to 75.6 per cent. in 1955. In the miscellaneous department, however, the ratio declined from 49.8 per cent. to 49.6 per cent. There was a notable improvement in the commission and expenses ratio in the fire and marine departments where it declined from 46.1 per cent. and 26.8 per cent. to 43.0 per cent. and 22.3 per cent. respectively. In the miscellaneous department, however, it increased from 32.6 per cent. to 35.3 per cent.

The fire department has yielded a profit of Rs. 40.4 lakhs as against Rs. 35.36 lakhs in 1954, after providing for unexpired risks on a 42.1 per cent. basis and strengthening the additional reserve by Rs. 2.7 lakhs. After maintaining the reserve on a 100 per cent. basis and increasing the additional reserve by Rs. 0.48 lakh, the marine department shows a deficit of Rs. 7.9 lakhs as compared with a deficit of Rs. 14.12 lakhs in the previous year. In the miscellaneous department, the reserve for unexpired risk has been provided on a 40 per cent. basis and the additional reserve strengthened by Rs. 2.9 lakhs; the underwriting profit in the department was Rs. 5.4 lakhs as against Rs. 9.36 lakhs in 1954.

After taking into account the profit from the fire and miscellaneous departments, the profit transferred from the shareholders' life profit account (Rs. 7.76 lakhs) and income from other sources and providing for the deficit in the marine department, for taxation (Rs. 18.05 lakhs) and other expenses there was a balance of Rs. 36.5 lakhs which, together with Rs. 71,250 brought forward from the previous year's accounts, made in all Rs. 37.30 lakhs. Out of this sum, the Directors have appropriated Rs. 3.46 lakhs to exchange reserve and Rs. 15 lakhs to general reserve. The payment of the recommended dividend of Rs. 2-8 per share will absorb Rs. 17.80 lakhs, leaving Rs. 1.03 lakhs to be carried forward to current year's accounts.

Subsidiary Companies

During the year under review, the Company acquired, by purchase of shares, the Bombay Fire and General Insurance Company, Ltd. and the Jayabharat Insurance Company, Ltd. as its subsidiaries. The Sentinel Insurance Company, Ltd., is a subsidiary of the Jayabharat Insurance Company. Ltd. South India Insurance Company. Ltd. is another subsidiary company of the New India. In accordance with section 212 of the Companies Act, 1956, the reports and accounts of all the subsidiary companies have been appended to the main report. The following is a summary of the results of the working of the subsidiary companies:

South India Insurance Company Ltd.—Balance transferred to profit and loss appropriation account Rs. 89,037; balance brought forward Rs. 8,276; transfer to general reserve Rs. 40,000; provision for proposed dividend at Re. 1 per share Rs. 50,000; balance carried forward Rs. 7,313.

Bombay Fire and General Insurance Company Ltd.—Balance transferred to profit and loss appropriation account Rs. 2.83 lakhs; balance brought forward Rs. 4.09 lakhs; provision for taxation Rs. 1 lakh; transfer to general contingencies fund Rs. 1.5 lakhs; provision for proposed dividend at Rs. 3 per share (Rs. 40 paid-up) and As. 12 per share (Rs. 10 paid-up) Rs. 31,467; balance carried forward Rs. 4.10 lakhs.

Jayabharat Insurance Company Ltd.—Balance transferred to profit and loss appropriation account Rs. 7.85 lakhs; balance brought forward from previous year Rs. 61,323; transfer to reserve for taxation Rs. 3.25 lakhs; to general reserve Rs. 1.50 lakhs; provision for payment of dividend at Rs. 6 per share Rs. 3 lakhs; balance to be carried forward Rs. 71,789.

Sentinel Insurance Company Ltd.—Balance transferred to profit and loss appropriation account Rs. 7,557; balance brought forward Rs. 15,170; balance carried forward Rs. 22,727.

To revert to the report and accounts of the parent Company. As a result of the year's operations, the total funds have increased by Rs. 49.70 lakhs. The financial position of the Company is strong. Besides a capital of Rs. 1.07 crores, the Company has reserves and funds aggregating Rs. 5.81 crores inclusive of a fire fund of Rs. 1.81 crores, miscellaneous fund of Rs. 74 lakhs and marine fund of Rs. 1.56 crores.

INSURANCE BILL

Several important issues relating to compensation to insurers and the organisation of nationalised insurance were raised last week in the Rajya Sabha during the debate on the Life Insurance Corporation Bill. Although the Rajya Sabha passed this Bill, both Congress and non-Congress members were sharply critical of some features of the Bill and even more critical of the way in which they had been denied a fuller discussion of the Bill. They protested against "rushing through the Bill at the fag end of the session." They were indignant that none of the amendments—nearly 75 had been tabled—were considered on their merits.

The Republican member from Madras, Mr. H. D. Rajah, moved an amendment seeking to refer the Bill to a select committee of the Rajya Sabha. Mr. Raju said that many of the important provisions of the Bill had to be considered carefully. One objectionable feature of the Bill was the setting up of a monolithic corporation "with 15 wiseacres" to conduct its affairs; these men were replacing 159 executives of insurance companies. He pointed out that the Corporation would become a "semi-controlled bureaucracy" and there would be no initiative to develop insurance business. He drew the attention of the House to the fact that many countries had tried the experiment and failed. Except Costa Rica with a population of eight lakhs, all other countries had to give up the experiment. Formerly, a policyholder could get a loan against his policy in two hours, whereas it now took ten days. He pleaded for representation of policyholders on the Corporation and provision for bringing to book the investment committee of the Corporation in the event of bad investment of funds.

Before Mr. Rajah's resolution was put to vote and lost, the Union Finance Minister, Mr. C. D. Deshmukh, raised a point of order. Mr. Deshmukh said that the question of referring the Bill to a joint committee was considered at the time of referring the Bill to a select committee of the Lok Sabha, but it was felt that the Bill could not be referred to a joint committee as it was a finance Bill and thus such reference would contravene the relevant article of the Constitution. The Deputy Chairman, Mr. Krishnamurthy Rao, however, ruled out the point of order, on the ground that, so far as finance Bills were concerned, the Rajya Sabha had got as much powers as the other House in referring them to a select committee. The rules of the Rajya Sabha provided that, if there was no joint committee and a Bill was referred to a select Committee of the Lok Sabha then the Rajya Sabha had powers to refer it to a select committee of its own. Opposing the motion, Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, said that a reference of the Bill to a select committee of the Rajya Sabha would mean considerable delay. Even as matters stood, they would be able to set up the Corporation only in August and any further delay might bring in additional difficulties.

The need for subjecting the Corporation to the audit of the Comptroller and Auditor-General was emphasised both by Dr. H. N. Kunzru and Mr. P. N. Sapru. Besides, Dr. Kunzru wanted the Corporation to function under company law. Some members were apprehensive that, in the absence of competition, the Corporation would have no incentive to extend business or to improve its working. Mr. P. S. Rajagopal Naidu (Congress) felt that the nationalisation of co-operative insurance would result in a setback to the co-operative movement. He said that a separate co-operative corporation should be set up by amalgamating all the co-operative insurance societies, so that there might be competition between the two bodies. Communist members criticised the compensation provisions as being too generous to shareholders and pleaded for representation of employees on the Corporation.

In the course of his replies to the debate, Mr. Shah explained the Government's point of view. He said that the Government had given an assurance not only to agents but also to the employees that there would be no retrenchment and that they would be treated very sympathetically. On the question of introducing an element of competition, Mr. Shah said that the main principle of nationalisation was that the monopoly of life insurance business should be vested in the Corporation. If competition was allowed all the malpractices would prevail again. Explaining why the Government did not take over general insurance, the Minister said that general insurance was confined to business circles while life insurance concerned every individual in the country. Therefore, the Government thought it proper for the present to leave general insurance to the private sector.

WORLD INDUSTRIAL PRODUCTION

TEN PER CENT. RISE LAST YEAR

WORLD industrial production in 1955 registered a 10 per cent. increase over that in the preceding two years. As compared with the average level of output in the two pre-war years of 1937 and 1938, the rise is more than 100 per cent. Thus, the combined index of mining and manufacture in 1955, according to the April 1956 issue of the U.N. publication, *Monthly Bulletin of Statistics*, stood at 110 (Base: 1953=100), as compared with 100 in the two preceding years, and 54 the average for the pre-war years 1937 and 1938. The increase in output was due to a number of factors such as enlarged supplies of raw materials, thanks to a substantial rise in the output of most of them, the continuation of the boom in Western Europe, the recovery in industrial output in the U.S. and Canada after the decline in 1954 and a marked improvement in the production of coal, crude petroleum and electricity all over the world.

The table below containing the world index of industrial production in 1955, as compared with that in the previous two years as also in 1937 and 1938 shows at a glance the trend of production in (*a*) the world, (*b*) the world excluding the U.S., and (*c*) Europe:

World Index of Industrial Production*

Base: 1953=100

Year	World output	World output excluding U.S.	Europe
1937	56	69	74
1938	51	68	72
1953	100	100	100
1954	100	108	110
1955	110	118	120

* Excluding U.S.S.R., China, Bulgaria, Czechoslovakia, Eastern Germany, Hungary, Poland and Rumania.

The industrial output in Europe rose by 10 per cent. in 1954 and 20 per cent. in 1955, as compared with that in 1953. More or less a similar increase took place in world industrial production excluding the U.S.; the index figure rose from 100 to 108 in 1954 and to 118 in 1955. As compared with these increases, the total world production last year was at a relatively lower level because, as already stated, the U.S. and Canada had to stage a recovery to offset the setback suffered in 1954.

The chief contributory factor for the rise in world industrial output was the marked improvement in the production of almost all important raw materials. Thus, iron and steel in 1955 exceeded all previous records by a wide margin, being as much as 12 per cent. in the case of pig iron and 14.7 per cent. in crude steel as compared with that in 1953, the previous record year. In absolute figures world production of pig iron rose from 138.4 million metric tons in 1953 to 155.1 million metric tons in 1955. During the same period crude steel production rose from 92.9 million to 114.7 million metric tons. During the three-year period ended 1955, cement production rose from 159.3 million to 183.8 million metric tons, as the need for cement was felt owing to the generally high level of construction activity. There were gains in production of a number of important non-ferrous metals. As compared with the output levels of 1953, copper production rose by 10 per cent., zinc by 13 per cent., lead by 7 per cent., and aluminium by 22 per cent. The output of tin, however, suffered a fall of 2 per cent. over that of 1953.

The table below gives the world production of different raw materials and fuel energy during each of the three years ended 1955:

(In million metric tons)

	1953	1954	1955
Raw materials—			
Cement	159.30	169.60	183.80
Pig iron	138.40	126.20	155.10
Crude steel	194.20	180.10	220.80
Copper	2.47	2.48	2.72
Zinc	2.08	2.11	2.34
Lead	1.64	1.74	1.75
Tin	1.84	1.86	1.80
Aluminium	2.18	2.45	2.66
Rubber	1.75	1.88	1.92
Fuel energy—			
Coal	1,385.00	1,288.00	1,388.00
Crude petroleum	668.00	680.40	700.80
Electricity (in mill. kw.)	1,112.00	1,196.00	1,338.00

It is clear from the table above that, excepting tin, all other materials had established record production in the past year.

As mines and factories turned out goods at the highest level ever recorded, the energy requirements of the accelerated economic activity were fulfilled by increases in the production of coal, crude petroleum and electricity. The downward trend in coal output which began in 1952 was reversed, and 1955 closed with production standing 4 per cent. above that of 1953 and slightly higher than in 1951, the previous record year. Electricity and crude petroleum production continued to reach new heights as they had done in every year since the war, except for a slight fall in petroleum in 1948-49.

During 1955, the petroleum industry underwent the greatest development in its history, with production of crude petroleum and natural gasoline rising by 82 million metric tons to a total of more than 788 million metric tons, 11½ per cent. above the peak attained in the previous year. All regions, except Africa, shared in this development, as indicated below:

	Million tons		% acreage 1954 to 1955
	1954	1955*	
North America	340.9	369.0	8.2
Middle East (including Egypt)	137.8	160.9	16.8
Caribbean†	122.3	137.5	12.4
Eastern Europe—U.S.S.R.—China Mainland	72.8	84.7	17.2
Far East	17.3	18.7	8.1
Western Europe	8.2	9.3	13.4
Other America‡	7.6	8.2	7.9
Africa (excluding Egypt)	0.2	0.2	..
World	706.6	788.5	11.6

* Preliminary data.
† Mexico, Central America, the Caribbean Islands, Venezuela and Colombia.
‡ South America and Venezuela and Colombia.

In North America, the absolute increase in production was the second largest in history, but North America's share in world production continued its decline, falling to less than 47 per cent. as compared with more than 48 per cent. in the previous year, over 53 per cent. in 1951, and 64 per cent. in the pre-war period. The Middle East, in contrast, increased its share in world output from 19.5 to 20.4 per cent. and lesser gains occurred in the East Europe-U.S.S.R.-China Mainland area and in the Caribbean.

STATE TRADING CORPORATION STARTS OPERATIONS

The State-sponsored two-week old State Trading Corporation seems to have started its trading operations briskly and in right earnest. Reports emanating from New Delhi indicate that this infant organisation has already transacted business worth nearly Rs. 3 crores. The Corporation has contracted for the sale of 500 tons of coffee to Russia and 200,000 tons of iron ore to Poland. It has also entered into a contract with Pakistan to buy 150,000 tons of gypsum, and with Poland to purchase 150,000 tons of cement, in pursuance of the agreements signed by the Government of India with these countries. The Corporation is likely to monopolise the trade with communist countries and to take over the import of chemicals, raw silk and cement.

The Corporation will get from China, East Germany and Britain large quantities of soda ash and caustic soda, the prices of which have risen considerably in recent months. It is reported that the Government of India will place orders during the next few weeks for importing 20,000 tons of soda ash and 15,000 tons of caustic soda with a view to curbing prices in the country. In fact, about 7,000 tons of soda ash and 12,000 tons of caustic soda already contracted for by the Government are shortly to arrive from abroad, and the Corporation will arrange for the distribution of these imported chemicals through the existing trade channels.

Incidentally, it may be mentioned here that the present production of caustic soda and soda ash in India is about 36,000 tons and 80,000 tons per annum, respectively. In the second Five-year Plan, the targets set are 135,400 tons and 230,000 tons, respectively. As, however, a part of the output will be used by the producing concerns themselves for conversion to other products, only about 106,000 tons of caustic soda and 185,000 tons of soda ash will be available for sale through private trade channels. When domestic production goes up, the private trade will certainly stand to benefit, a factor that will offset the loss of import business, thanks to the State's entry into that sphere.

The State Trading Corporation will also handle the Government of India's deal with Pakistan for importing 150,000 tons of gypsum required by the fertiliser factory at Sindri. The Indian delegation which negotiated the deal a fortnight ago in Pakistan included Mr. B. S. Grewal, Joint Secretary, Ministry of Production, Mr. Satish Chandra, Joint Secretary, Ministry of Commerce and Industry, and Dr. Ramaswami, Production Superintendent, Sindri. Under the contract, the Pakistan Industrial Corporation will begin to supply gypsum in about six weeks and complete the deliveries over a period of about seven months. It is stated that the Corporation will despatch daily train-loads from West Pakistan to Sindri.

The Pakistan gypsum will cost India Rs. 13 per ton f.o.r. Wagah. Its price at Sindri will be nearly Rs. 6 per ton more than that of Rajasthan gypsum. As Pakistani gypsum is, however, of a superior quality, its import at the stipulated price is considered to be an economic proposition. Besides, the production of gypsum in Rajasthan cannot cope, it is stated, with the rising demand for the raw material at Sindri. In passing, it may be recalled that, a few years ago, India had placed an order for more than 10,000 tons of Pakistan gypsum, but no more than 5,000 tons were actually imported as the prices were exorbitant.

The Board of Directors of the Corporation, at its first meeting held at New Delhi last week, decided to organise Import and Export Departments on commercial lines and to set up branch offices at Calcutta, Bombay and Madras. Mr. K. B. Lall, Joint Secretary, Ministry of Commerce and Industry, who is the Chairman of the Board, presided. The Corporation aims to play a leading role in promoting exports of ores, particularly iron ore, manganese ore and chrome ore from India. The Board decided to take over the rights and obligations devolving on the Government of India under the contracts recently included for the import of cement and the export of iron ore and coffee. The Board also gave consideration to organisational problems for handling and developing trade with countries having a State-controlled economy and other monopolistic trading organisations abroad.

SPURT IN INDUSTRIAL PRODUCTION

The large spurt in industrial production during 1955-56 was, to some extent, the result of concerted efforts to achieve the first Plan targets before the end of the Plan period, according to the *Annual Report of the Development Wing of the Ministry of Commerce and Industry*. The general index of industrial production rose from 112.9 in 1954 to 122.3 in 1955, with the base 1951=100.

The *Report* adds that this increase was due to the progress made not only in the expansion of existing units but in the establishment of several new industries. Among other favourable factors which led to the increase in industrial activity were the assistance given by the Central and State Governments in the form of export and import regulations and tariff protection as well as financial aid in the form of loans.

The number of licences issued during 1955-56 for the establishment of new undertakings was 164 and for the expansion of existing industries 319. The corresponding figures for the previous year were 110 and 226. The new industries for which licences were issued included newsprint, sheet glass, insecticides, antibiotics, several important heavy chemicals and industrial machinery of various types.

Among the engineering industries, there was a phenomenal increase in the production of textile machinery, machine tools, bicycles, electric motors, incandescent lamps, sewing machines, razor blades, etc. During the year, there was greater demand for electrical cables and wires, transformers, radio receivers and automobiles. Many of the industrial units engaged in the production of these articles, particularly automobile ancillaries, worked multiple shifts to meet the growing demand.

Referring to metallurgical industries, the *Report* says that in the case of aluminium, production of virgin metal increased from 4,886 tons in 1954 to 7,245 tons in 1955. Two new lead refineries were put up and one of them has gone into production. In many other important industries, particularly copper and antimony, production was maintained at or near capacity level.

Most of the chemical and allied industries showed satisfactory progress during the year. Some of the important items, whose manufacture was undertaken for the first time during 1955, were penicillin, D.D.T., newsprint, plastic emulsion paints and sheet glass. Increased production of rayon, paper and glass was also achieved by expansion of the installed capacities.

THE BOMBAY FIRE AND GENERAL INSURANCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Twenty-first Ordinary General Meeting of the above Company will be held at the Registered Office of the Company, Henley House, Graham Road, Ballard Estate, Bombay, on Thursday the 28th June 1956, at 3 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Revenue Accounts, Profit and Loss Account, Profit and Loss Appropriation Account and Balance Sheet for the year ended 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of Mr. Manoobhai Doongursee, and Mr. Pallonji Shapoorji Mistry who retire under Article 95 of the Articles of Association of the Company and being eligible, offer themselves for re-election.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Share Transfer Register of the Company will be closed from 7th June to 28th June 1956 (both days inclusive).

By Order of the Board,
K. K. DASTUR,
Manager.

BOMBAY, 28*th May* 1956.

N.B.—A member entitled to attend and vote at the General Meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

The Dividend when sanctioned at the General Meeting will be paid on or after the 2nd July 1956, to those Shareholders whose names stand on the Company's registers on 28th June 1956.

HARINAGAR SUGAR MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, No. 207, Kalbadevi Road, Bombay, on Saturday, 30th June 1956, at 4 p.m. (S.T.), to transact the following business:

1. To receive and adopt the Directors' Report and audited statements of accounts for the year ended 30th September 1955.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring under Articles 99 and 92 of the Articles of Association of the Company.
4. To appoint Auditors and fix their remuneration.
5. To pass ordinary resolution waiving the age limit prescribed under Section 280 of the Companies Act, 1956, in respect of Shri Lachhmandas H. Daga.
6. To pass ordinary resolution in respect of the borrowing powers of the Directors, as required under Section 293(1) of the Companies Act, 1956.

as per detailed Notice, with explanatory statement, posted to the shareholders.

The Share Transfer Books of the Company will remain closed from Saturday, 23rd June 1956 to Saturday, 7th July 1956, both days inclusive.

A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
HARINAGAR SUGAR MILLS, LIMITED,
NARAYANLAL BANSILAL,
Managing Agents.

BOMBAY, 1*st June* 1956.

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FOURTH ORDINARY ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT DALMIAPURAM (DIST. TIRUCHIRAPALLI) on FRIDAY the 20th July 1956 at 12 Noon, to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1955.
2. To declare Dividend.
3. To elect a Director in place of the retiring Director, Shri M. Satyanarayana, who retires by rotation and is eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., the retiring Auditors, are eligible for re-appointment.
5. Any other business that under the Articles of Association of the Company may be transacted at an Ordinary Annual General Meeting.

The share transfer books of the Company will remain closed from THURSDAY the 21st June 1956 to FRIDAY the 20th July 1956, both days inclusive.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LTD.,
For HARI BROTHERS PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

Dated 22nd May 1956.

Note.—The Dividend if declared will be payable on or after 10th August 1956 to the Registered Shareholders as on 20th July 1956.

Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be shareholder. The proxies should, however, be deposited at the registered office of the company not later than 42 hours before the commencement of the meeting.

The dividends for the year ending 31st March 1956, when sanctioned, will be made payable to those shareholders whose names stand on the Share Registers of the Company on Monday the 30th July 1956.

By Order of the Directors,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
J. R. D. TATA,
Director.

BOMBAY, 5*th June* 1956.

SECRETARY—ACCOUNTANT

HIGHLY QUALIFIED YOUNG Accountant, well versed in the New Companies Act, desires change of employment with Companies of standing. Prepared to work anywhere in India. Decent salary expected. Write to Box 957, c/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.

ENGINEERING

(*Concluded from page* 1104)

not also yielding as much as it was doing formerly. This is because the railways, which till recently made available scrap iron for the foundries, are believed to be using their scrap themselves. The result is that scrap prices have increased from Rs. 115-130 per ton in 1953-54 to Rs. 250-270 per ton. Meanwhile, there has been a "phenomenal" increase in the requirements for castings necessitated by the increased industrial activity in India and the decision of the Railway Board to place orders for cast iron sleepers on the local foundries. There has, however, been no increase in the production of pig iron in the country.

The Association feels that the demand for castings will go up to 750,000-875,000 tons by 1960-61. The two steel plants in the private sector and the one belonging to the Mysore State are, however, expected to produce 573,000 tons of pig iron by 1959, as against their current output of 202,200 tons. The Government-sponsored steel plants are not likely to supply pig iron before 1959. It is, therefore, felt that the present acute shortage of raw material for the foundry industry is likely to continue up to 1958. In this connection, the Association deplores that the Government should have allowed exports of pig iron to take place. It, however, learns that licences for export have not been issued after February 1956. It also learns that the Government is trying to arrange for imports of pig iron from Russia, Poland and certain other European countries. While welcoming these efforts, the Association urges the Government to take into account the fact that the c.i.f. price of imported pig iron would be about Rs. 380 per ton as against Rs. 163 per ton being the price of the best quality of Indian pig iron.

In the light of the situation caused by shortage of raw material in the country and the higher prices of imported pig iron, the Association has made a number of suggestions. In the first place, it says that, since the shortage of raw material is likely to last at least for the next two years, it is desirable that arrangements should be made to import pig iron from countries which can offer the best terms. Secondly, the difference between the high cost of imported pig iron and the low cost of domestic pig iron should be made good. The Government could see that imported iron is used by the Railways for the manufacture of cast iron sleepers, since it is the heavy demand from the railways for this purpose that explains the present shortage of the raw material for the foundry industry. This would mean that the entire community bears the burden of the high-cost imported iron. Alternatively, the Government could evolve, as in the case of steel, a scheme of equalisation fund for the purpose of meeting the extra cost of pig iron. Thirdly, the Government should ban all export of pig iron. Finally, the Government should overhaul the existing system of distribution. Thus, allocations should be made only to genuine foundries. Further, in the context of acute shortage of raw material, the present system of distribution through controlled stockists, it is stated, is likely to lead to anti-social practices. Unbroken ingot moulds should not be allotted to stockists who have neither the breaking arrangement nor any direct consuming interest. The Government could also control all sources of supply of cast iron scrap and distribute it equitably among the different units of the foundry industry.

REFRIGERATION AND AIR CONDITIONING

The Indian Standards Institution has published three Indian standards relating to refrigeration and air-conditioning a safety code for air-conditioning, a safety code for mechanical refrigeration and a code of practice for insulation and safe operation of cold storages. The manufacture of refrigeration and air-conditioning equipment in this country consists mainly of assembling the different types of units for which a large part of the major components are imported. The assembling operation involves putting together imported components and indigenously manufactured parts to produce units having the same performance as that of a fully imported unit. These codes have been prepared to serve as a guide to the manufacturer regarding the performance requirements expected of the units and further to assist the consumer in satisfying himself that requirements of safety and efficiency of operation have been met.

The code for air-conditioning covers the safe design, construction, installation, operation and inspection of air-conditioning equipments and systems. The safety code for mechanical refrigeration includes features in the design, construction, installation, operation and inspection of mechanical refrigeration systems including working conditions in the plant room considered necessary to safeguard life, health and property. The code for insulation and safe operation of cold storages covers construction and safe operation of cold storages with special reference to insulating and finishing the structures of permanent construction such as brick, steel, concrete, etc.

RADIO AIDS IN NEW CARGO SHIP FOR EASTERN SERVICE

A particularly comprehensive range of the latest radio equipment is being installed in the Ellerman liner *City of Winnipeg*, which is being built at Dundee (Scotland) for cargo services to the East. Primarily designed as a cargo carrier, the new ship is of 10,200 tons gross and has accommodation for a few passengers. A transmitter and receivers for medium and high-frequency communication are included in the wide range of Marconi equipment being used. Radio aids to navigation include a long-range direction finder, and marine radar equipment with a peak power of 50 kW. and a maximum range of 40 miles. Portable transmitter/receiver sets will be supplied for use in the ship's lifeboats.

ENCOURAGING PERFORMANCE OF LARSEN AND TOUBRO

SALES AND PROFIT AT RECORD LEVELS

THE Directors' report and audited accounts of Messrs. Larsen and Toubro Ltd. (Managing Agents: L. & T. (Management) Private Ltd., Bombay) for the year ended 31st March 1956 show that there has been a considerable expansion in the activity of the Company during the year and that the earnings also have correspondingly increased. Reflecting the expansion in turnover is the rise in sale proceeds of about Rs. 44 lakhs to a record level of Rs. 358 lakhs. The gross profit has advanced from Rs. 16.01 lakhs to Rs. 18.48 lakhs, a record in the history of the Company. It will be interesting to note here that, barring a slight recession in 1953-54, the profit has maintained its upward trend since 1948-49. During this period of seven years, it has grown from Rs. 5.88 lakhs to Rs. 18.48 lakhs, that is, it has more than trebled itself.

The net profit, after providing for managing agency commission, depreciation and taxation, for the year under review amounts to Rs. 8.81 lakhs, also a new high, and represents a rise of Rs. 1.72 lakhs over the year. Out of the net profit, the Directors have written off Rs. 1.90 lakhs, being the expenses relating to previous years borne in 1955-56. They have also written back Rs. 1.50 lakhs, being the excess provision for taxation set aside in previous years. After raising the allocation to the general reserve from Rs. 2.75 lakhs to Rs. 4 lakhs, the Directors propose to maintain the dividend on ordinary shares at 10 per cent. per annum for the seventh year in succession. It must, however, be noted that the latest dividend is on an increased capital raised in December 1955 by a fresh issue of Rs. 5 lakhs. The additional capital, however, bears only proportionate dividend for the three months ended 31st March 1956.

The following comparative table provides a broad idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	279.96	209.44	192.16	162.80
Other income	10.91	11.80	13.47	8.95
Cost of sales	218.02	156.75	146.02	113.66
Other expenses	54.37	47.98	44.55	42.60
Gross profit	18.48	16.01	15.06	15.49
Managing Agents' commission..	1.62	1.84	1.29	1.28
Depreciation	2.25	2.57	2.11	2.72
Taxation	5.80	5.00	5.00	5.45
Net profit	8.81	7.09	6.84	6.05
Goodwill written off	..	..	..	0.95
Commission and brokerage on issue of shares written off	..	..	0.10	0.43
Deferred expenditure written off	..	..	0.48	..
Expenses relating to previous years	1.90	..	..	..
Excess provision for taxation made in previous years written back	1.50	..	..	..
To general reserve	4.00	2.75	2.25	1.00
Dividends—				
5 per cent. preference ..	0.75	0.75	0.65	0.65
Ordinary	3.62	3.50	3.20	3.20
	(10%)	(10%)	(10%)	(10%)
Carry forward	0.29	0.25	0.16	0.18

The Company's direct sales amounted to Rs. 279.96 lakhs, having risen from Rs. 209.44 lakhs for the previous year. Indirect sales, that is, indent sales for overseas principals and sales effected as selling agents, have, on the other hand, declined from Rs. 105 lakhs to Rs. 78 lakhs. Total sales are, however, higher at Rs 357.96 lakhs, as compared with Rs. 314.44 lakhs for 1954-55. The sale of caterpillar tractors and earthmoving machinery continued to increase. Substantial orders for mobile cranes for ports were duly executed. The Company also completed important orders for tube-well drilling equipment and tube-well pumps. Many orders were executed and several new orders were secured for industrial plant and equipment, notably for dairy plant, paper and pulp-making plant and machinery and electrical power generating plant. The work on the tube-well drilling contract undertaken in North Gujerat for the Bombay Government progressed satisfactorily, with the result that the Government has placed another order with the Company for drilling additional wells. The Company expects to complete the work in June-July 1956.

During the year under review, the Company's workshops at Powai were expanded and were engaged to full capacity in the manufacture and assembly of dairy equipment, electrical switchboards for industrial uses and earth consolidating machinery. It was granted a licence by the Central Government for manufacturing Sheeps Foot roller and more than 50 of these machines have so far been manufactured and supplied.

As already stated, the Company's paid-up capital was raised during the year under review from Rs. 50 lakhs to Rs. 55 lakhs by the issue of 50,000 ordinary shares of Rs. 10 each. The response to the issue was gratifying and the issue was oversubscribed. The reserves and surplus aggregate Rs. 10.29 lakhs. The provision for taxation stands at Rs. 21.44 lakhs. The current liabilities amount to Rs. 131.87 lakhs. The gross block of the value of Rs. 29.07 lakhs has been written down to Rs. 12.81 lakhs. The current assets amount to Rs. 205.78 lakhs and exceed the current liabilities and provision for taxation by a margin of Rs. 52.47 lakhs.

Regarding the outlook for the current year, the Directors strike a note of cautious optimism thus:

"Price competition is keen; and, while a number of the overseas manufacturers whom the Company represents are extremely heavily booked with orders and their time of deliveries consequently tends to increase, a number of competitors, with less heavily filled order books, are in a position to offer more prompt supplies. The Company expects to meet that situation by maintaining inventories at a high level and by efficient planning of its purchases.

"The considerable number of orders on hand which have still to be executed and the increasing number of important enquiries, the requirements of the public and the private sectors under the second Five-year Plan and the steady progress of the Company in the field of sales, local manufacture and service, justify the Directors' confidence in the continuing expansion of the Company's business."

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 16-7 *cum-div.*, as against Rs. 13-4 *cum-div.* a year ago. On an *ex-div.* basis, the dividend for the year under review provides a yield of 6.5 per cent. per annum, free of income-tax.

MYSORE CHEMICAL MANUFACTURES

Satisfactory progress is disclosed by the audited accounts of the Mysore Chemical Manufactures Ltd. (Chairman, Board of Directors: Mr. S. Ramanathan, Bangalore) for the year ended 31st March 1956. The sale proceeds of the Company have gone up from Rs. 16.98 lakhs to Rs. 22.76 lakhs, which shows that the hopes expressed by the Company's Chairman at the last annual general meeting that the demand for the Company's copper sulphate and the newly produced copper fungicide and iron-free sulphate of alumina would go up during the year under review have materialised.

The gross profit has improved from Rs. 2.76 lakhs to Rs. 3.15 lakhs, thus maintaining the upward trend for the fourth year in succession, having risen from Rs. 1.09 lakhs in 1951-52. The net profit is, however, a shade lower at Rs. 1.01 lakhs, as against Rs. 1.12 lakhs in the previous year, consequent on the larger provisions for depreciation and taxation. The provision for depreciation has been raised from Rs. 47,174 to Rs. 76,443 and that for taxation from Rs. 98,264 to Rs. 1,24,990. The managing agency commission has absorbed Rs. 29,420, as against Rs. 25,012 for 1954-55. Since the close of the year under review, the Company is being managed by the Board of Directors, the managing agents, Messrs. Krishna & Co., Ltd., having resigned on 31st March 1956.

Out of the net profit for 1954-55, a sum of Rs. 28,781 had to be written off, being the loss on sale of investments. No such loss has had to be provided for in the profit for the year under review. Nevertheless, the dividend on ordinary shares has been maintained at 20 per cent. per annum, to which level it had been raised last year from 12½ per cent. per annum for 1953-54 and 10 per cent. per annum for the two years 1951-52 and 1952-53. The dividend on ordinary shares absorbs Rs. 60,000 and that on 6 per cent. cumulative preference shares Rs. 12,000, leaving a sum of Rs. 97,410 to be carried forward (as against Rs. 68,600 brought in), without any addition to the reserves. It may be noted here that the Company has not strengthened its reserves for the last 11 years.

The paid-up capital of the Company is Rs. 5 lakhs, made up of 30,000 ordinary shares of Rs. 10 each and 20,000 6 per cent. (tax-free) cumulative preference shares of Rs. 10 each. The reserves and surplus amount to Rs. 4.97 lakhs. The current liabilities aggregate Rs. 1.94 lakhs and provision for taxation stands at Rs. 1.17 lakhs. The gross block of the value of Rs. 6.80 lakhs has been written down to Rs. 3 lakhs. The current assets amount to Rs. 10.08 lakhs and exceed the current liabilities and provision for taxation by a large margin of Rs. 6.97 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted on the Madras Stock Exchange at Rs. 24-8 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8.9 per cent. per annum, free of income-tax.

VASANTA MILL RAISES DIVIDEND AGAIN

PROFIT NEARLY MAINTAINED

FOR the second year in succession, the Directors of Vasanta Mills Ltd. (Managing Agents: Messrs. R. K. Shanmukham Chetty & Bros., Coimbatore) have stepped up the dividend on ordinary shares of the Company. Thus, the dividend, which had been raised from 12 per cent. per annum paid for the year ended 31st December 1953 to 15 per cent. for 1954, has been increased to 20 per cent. for 1955. The latest enhancement in dividend does not, however, follow any expansion in profit, on the other hand, the latter is a shade lower than that for the previous year.

The gross profit for the year under review amounts to Rs. 18.28 lakhs, as compared with Rs. 18.58 lakhs for 1954. This shrinkage, albeit small, is in distinct contrast to the sharp rise of Rs. 6.05 lakhs noted in the previous year and is also in contrast to the experience of cotton mills, in general, during the year under review. The net profit is, however, better at Rs. 7.25 lakhs, as compared with Rs. 6.46 lakhs for 1954, to which level it had risen successively from Rs. 3.95 lakhs earned in 1952. The increase in net profit is mainly accounted for by the cut in the provision for taxation from Rs. 6 lakhs to Rs. 5 lakhs. A sum of Rs. 4.67 lakhs has been set aside for depreciation, as against Rs. 4.73 lakhs provided in the previous year. While the transfer to the general reserve has been drastically cut from Rs. 3 lakhs to Rs. 50,000, a sum of Rs. 2 lakhs has been added to the dividend equalisation reserve, which had not received anything in the previous year.

The following comparative table, giving the salient features of the Company's working results for the past four years, provides an idea of the progress since 1952:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	160.92	160.57	131.50	140.88
Raw materials and stores consumed	112.87	112.07	95.68	112.54
Expenses	30.17	30.55	23.81	20.10
Gross profit	18.28	18.58	12.53	8.52
Managing Agents' commission..	1.36	1.38	0.90	0.55
Depreciation	4.67	4.73	3.55	2.52
Taxation	5.00	6.00	3.50	1.50
Net profit	7.25	6.46	4.58	3.95

The sale proceeds of cloth, yarn and waste and raw materials and stores consumed during the year under review do not indicate any expansion in output. There was a further increase in spindleage during the year under review by the addition of 6,720 spindles, following the installation of 4,000 spindles in 1954. The additional spindles installed in 1955 were, however, brought into commission only on 1st December 1955, so that the full benefit of the latest increase in spindleage was not derived in the year under review. Of the expenses, mill salaries and wages account for a decline from Rs. 24.20 lakhs to Rs. 22.49 lakhs, while other expenses have gone up from Rs. 6.35 lakhs to Rs. 7.68 lakhs.

The Company's financial position, as seen from the latest balance-sheet, is sound. The paid-up capital stands at Rs. 25.50 lakhs, made up of 21,000 ordinary shares of Rs. 100 each, 3,000 6½ per cent. cumulative preference shares of Rs. 100 each and 1,500 6 per cent. cumulative preference shares of Rs. 100 each. Of the ordinary capital of Rs. 21 lakhs, as much as Rs. 14 lakhs were raised by the capitalisation of reserves in 1947 when two bonus shares were issued for every share held. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 35.06 lakhs, of which general reserve alone accounts for Rs. 16 lakhs, reserve for replacement and renovation of machinery for Rs. 11 lakhs, dividend equalisation reserve for Rs. 5 lakhs, reserve for contingencies for Rs. 2 lakhs and investment depreciation reserve for Rs. 50,000. The provision for taxation stands at Rs. 6.14 lakhs. The current liabilities amount to Rs. 25.81 lakhs. There has been an addition of Rs. 15.55 lakhs in gross block during the year, bringing the total value to Rs. 71.83 lakhs; this has been written down to Rs. 31.20 lakhs as at the end of the year under review. The current assets aggregate Rs. 61.31 lakhs, exceeding the current liabilities and provision for taxation by a margin of Rs. 29.36 lakhs.

Points From The Chair

Industrial Development of Rajasthan

"WE are hearing for some time past that in the second Five-year Plan a number of new industries are proposed to be started in Rajasthan. But how these dreams are going to be fulfilled, unless we have prepared the necessary background for them? The Government has little correct statistical data and other necessary information available with them. It will be dangerous to take up any plan haphazardly, lest it should prove a failure after some time. What is required is to have an immediate industrial survey of the whole State to find out the possibilities of industrial expansion. This is a long-felt need and ought to be done without any delay. It is high time now that this important task should be taken in hand, so that the proposed industrial development of this State may be taken up, and new projects may be started. I note that some work has been done in this connection by the Mining Department of the Rajasthan Government to find out the possibilities of developing the mineral resources of the State. But what other industries could and should be started in the State should be got thoroughly examined by a team of experts. The Saurashtra Government got such complete industrial survey made and that has resulted in large-scale industrial activity in that State."

RAMNATH A. PODAR,
Rajasthan Financial Corporation

Employment Under Second Five-year Plan

"This shift of emphasis in the policy gives a new hope to our State which is most densely populated and industrially very backward in the whole of India. The allotment for our State under the second Five-year Plan is Rs. 72 crores, which is only 1 per cent. of the estimated expenditure of Rs. 7,200 crores for the whole of India. The population of our State is more than 2.5 per cent. of that of the Union of India. The proportion of unemployed to the total population is indisputably much higher in our State than the rest of India. The Government of India expect to provide employment for 10 million people under the various schemes in the second Five-year Plan. The number of unemployed at the commencement of the Plan is estimated at 5 million. Taking into consideration the increase in the number of unemployed during the period, the Government expect that there would be a balance of 2 million unemployed at the close of the period. I do not desire to burden you with figures. A simple calculation will convince anyone that the number of unemployed in our State would only be increased by more than 60 per cent. even after the expenditure of Rs. 72 crores during the five-years, though in India, as a whole, it would be reduced by 60 per cent.

A. S. DAMODARAN ASAN,
Travancore-Cochin Financial Corporation

Handicaps of State Financial Corporations

"Advances by the Government under the Aid to Small-scale Industries Scheme must also necessarily have its repercussions on the scope of operations by the Financial Corporation. In order not to curtail the usefulness of the Corporation, we requested the State Government that the Corporation should be permitted to act as Agent of the Government in the matter of scrutiny of applications, sanction and disbursement of the loans and collection of interest and instalments, consistent with the policy laid down by the Government in this behalf. Acting as agents of the Government would, however, involve suitable amendment to the State Financial Corporations Act. This matter is being taken up by the Central Government, but pending such amendment, the work of disbursement of the loans has been entrusted to our Corporation by the State Government in an informal way and it is expected that the Corporation would be adequately remunerated for such agency work. Nevertheless, the Corporation will have to face the competition from this direction and it was, therefore, proposed to the State Government that our Corporation should be recognised as the appropriate agency for canalising the funds allocated for the small-scale and other industries, as otherwise there would be a multiplicity of agencies for the same purpose with the attendant difficulties for co-ordination. At present, all applications for loans which are not eligible for assistance from the Corporation are being forwarded to the Industrial Trust Fund. It was suggested by us that where an industry is considered by the Government to be of such importance as to warrant assistance, the Corporation would be willing to entertain such applications upon such terms and conditions as the State Government decides, provided the Government would also guarantee such loans. The Government were not agreeable to this suggestion."

C. DAMODAR REDDY,
Hyderabad State Financial Corporation

(*Concluded from previous page*)

With the aforesaid addition of 6,720 spindles in 1955, the installed capacity of the mill has been raised to 44,424 ring spindles and 4,550 doubling spindles. The consequent increase in the spinning output is expected to bring "reasonably decent profit" during the current year.

The construction of 32 tenements under the Government of India Industrial Housing Scheme taken up last year has been completed and the construction of a further 96 tenements has been taken up by the Company. Seventy-two of these tenements are expected to be completed this month.

The Rs. 100 fully paid-up shares of the Company are being quoted at Rs. 285 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares is 7 per cent. per annum, free of income-tax.

COMPANY MEETINGS AND DIVIDENDS

NATIONAL IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 11th June 1956. Transfer books remain closed from 5th to 11th June 1956.

ASSAM SILLIMANITE LTD. Annual General Meeting, Gauhati, 14th June 1956. Transfer books remain closed from 31st May to 14th June 1956, both days inclusive.

PERIYAR AND PAREEKANNI RUBBERS LTD. Annual General Meeting, 14th June 1956. Transfer books remain closed from 7th to 14th June 1956, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 15th June 1956. Dividend: Rs. 6 per share. Transfer books remain closed from 15th May to 9th June 1956, both days inclusive.

ANDHRA CEMENT CONSTRUCTION CO. (PRIVATE) LTD. Annual General Meeting, Vijayawada, 15th June 1956. Dividend: Rs. 3 per share, payable on and after 15th June 1956. Transfer books remain closed from 1st to 15th June 1956, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 15th June 1956. Dividend: As. 12 per share. Transfer books remain closed from 4th to 15th June 1956, both days inclusive.

GONDALPARA JUTE MILLS LTD. Annual General Meeting, Calcutta, 15th June 1956. Transfer books remain closed from 4th to 15th June 1956.

MCFARLANE AND CO., LTD. Annual General Meeting, Calcutta, 15th June 1956. Dividend: *Nil*. Transfer books remain closed from 7th to 15th June 1956.

ANDHRA CEMENT CO., LTD. Annual General Meeting, Madras, 16th June 1956. Dividend Rs. 10 per 'A' ordinary share (includes bonus of Rs. 2-8) and Re. 1 per 'B' ordinary share (includes bonus of As. 4 per share), payable on and after 16th June 1956. Transfer books remain closed from 2nd to 16th June 1956, both days inclusive.

KAMANI ENGINEERING CORPORATION LTD. Annual General Meeting, Bombay, 19th June 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 19th June 1956, both days inclusive.

LARSEN AND TOUBRO LTD. Annual General Meeting, Bombay, 20th June 1956. Dividend: Re. 1 per ordinary share, payable on or after 27th June 1956. Transfer books remain closed from 26th May to 20th June 1956, both days inclusive.

ASHOK LEYLAND LTD. Annual General Meeting, Ennore, Madras, 21st June 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 21st June 1956, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Annual General Meeting, Chikbanavar, Bangalore District, 23rd June 1956. Dividend: Rs. 2 per share, free of income-tax, payable on or after 25th June 1956. Transfer books will remain closed from 10th to 23rd June 1956 both days inclusive.

GANESH FLOUR MILLS CO., LTD. Annual General Meeting, Subzimandi, Delhi, 23rd June 1956. Transfer books remain closed from 3rd to 23rd June 1956, both days inclusive.

DEVKARAN NANJEE INVESTMENT CO., LTD. Annual General Meeting, Bombay, 26th June 1956. Dividend: As. 13 per share, free of income-tax. Transfer books will remain closed from 12th to 26th June 1956, both days inclusive.

RANEEGUNGE COAL ASSOCIATION LTD. Half-yearly General Meeting, Calcutta, 27th June 1956. Transfer books will remain closed from 14th to 27th June 1956, both days inclusive.

MAHABOOB SHAHI KULBURGA MILLS CO., LTD. Annual General Meeting, Bombay, 27th June 1956. Transfer books will remain closed from 20th to 27th June 1956, both days inclusive.

WALFORD TRANSPORT LTD. Annual General Meeting, Calcutta, 29th June 1956. Transfer books will remain closed from 16th to 29th June 1956, both days inclusive.

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram, Tiruchirapalli, 20th July 1956. Dividend: Re. 1-4 per ordinary share and As. 2 per deferred share payable on or after 10th August 1956. Transfer books will remain closed from 21st June to 20th July 1956, both days inclusive.

INDIA UNITED MILLS LTD. Dividend of As. 2 per deferred share (final) and As. 5 per ordinary share (final), for the year 1955. Transfer books will remain closed from 22nd June to 12th July 1956, both days inclusive.

BALMER LAWRIE AND CO., LTD. Dividend of Re. 1 (10 per cent.) per share for the year ended 31st December 1955.

SPENCER AND CO., LTD. Interim dividend of As. 8 per share, for the period ending 30th June 1956. Transfer books remain closed from 8th to 15th June 1956, both days inclusive.

COMPANY REGISTRATIONS

U. D. PATEL & CO., PRIVATE LTD. (First Director: Mr. Ramabhai Lallubhai Patel.) Business: Importers and exporters. Authorised capital: Rs. 10,00,000. Private company. Address: 11, Bank Street, Bombay.

MERCURY IRON AND STEEL CO. PRIVATE LTD. (First Director: Mr. Sorabji Hormusji Commissariat). Business: Manufacturers and dealers in iron and steel goods and other receptacles, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 50, Nesbit Road, Bombay 10.

ASHOK VELVET MANUFACTURING CO. PRIVATE LTD. (First Director: Mr. Vinodrai B. Mody). Business. Importers, exporters, merchants, agents and dealers in textile, yarn, cotton, silk, art silk, rayon, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 144, Dharavi Road, Bombay 17.

QUESTION HOUR IN PARLIAMENT

Match Factories

ABOUT 200 'D' class match factories will be set up every year during the second Five-year Plan by the All-India Khadi and Village Industries Board. The location of these factories will be decided after the funds are allotted. It is also proposed to establish small-scale co-operative match factories, at least one in each State, to provide additional remuneration to the women belonging to the lower middle class income groups. Such factories have already been set up at Delhi, Hyderabad, Poona, Vijayawada, Allahabad and Madras. Proposals to set up more factories in other States are under consideration.

—*T. T. Krishnamachari*

New Caustic Soda Units

Seven new schemes for the manufacture of caustic soda and three new schemes for the manufacture of soda ash have been licensed in the private sector. The progress of these schemes is satisfactory. No unit has been set up in the public sector for the manufacture of caustic soda or soda ash. Facilities for the development of these industries are given for selection of a location for the plant, determination of the process used and the capacity of the plant, and licences for import of machinery and raw materials.

—*Nityanand Kanungo*

Zinc Smelter Plant

A zinc smelter plant may be established in India, if attempts to increase the present zinc ore mining capacity from 250 tons per day to 1,000 tons succeed. At present, there is no concrete proposal before the Government for starting a zinc smelter plant. For setting up the plant on an economic basis, we would require at least 1,000 tons a day. The Government are hoping to raise the capacity to 1,000 tons and hope to do it very soon when it would be possible to put up a smelter plant.

—*M. M. Shah*

Tourist Traffic

The number of foreign tourists who visited India during 1955 was 43,645. The amount of foreign exchange earned in 1953 and 1954 as assessed by the Reserve Bank of India was Rs. 2.7 crores and Rs. 3.6 crores, respectively. The corresponding provisional figure for January-June 1955 is Rs. 1.8 crores.

—*Lal Bahadur Shastri*

Sugar Position

There is no cause for any shortage of sugar in any part of the country, except due to temporary difficulties of transport. There was a carry-over of 5.42 lakh tons on 1st November 1955, and the estimated production during the 1955-56 season is 18.50 lakh tons, which is an all-time record. Last week, there was a total stock of 12.55 lakh tons available with the factories. There is no proposal to import any sugar during the year. On the contrary, India may export some. There is no abnormal rise in the price of sugar except to a certain extent in Madras. There, it is due to the sales tax and not due to any shortage or other reasons.

—*Dr. Punjabrao Deshmukh*

Oil Refinery

The Government have not yet initiated the question of setting up an oil refinery in Assam either with the Assam Oil Company or with anyone else. It is, however, open to the Assam Oil Company to make any proposal to the Government for the refininig of crude oil in Assam. I cannot give an assurance that the refinery would be established in Assam itself and not anywhere else. However, I would assure that it is the desire of Government to have a refinery in Assam, if it is possible on grounds of economy and technically.

—*K. D. Malaviya*

Rail Fares

The suggestion made by Prof. John Kenneth Galbraith of Harvard University, recommending to the Government to enhance the railway passenger fare in order to discourage rail travel, is under the consideration of the Government. The report of Prof. Galbraith has been placed before the Railway Board. The Government have not taken any final decision in the matter.

—*Raj Bahadur*

Private Power Companies

On the basis of figures for 1953 which is the latest year for which figures are available, foreign capital invested in power generating private companies is Rs. 14.20 crores, as against the total investment of Rs. 52.67 crores in such companies. The percentage of foreign investment works out to approximately 27.

• • • •

Rural Electrification

The number of villages and towns electrified during the first Five-year Plan period is 7,761. Information about the cost involved is not available, as no separate provision for rural electrification was made by State Governments in the Plan. About 11,100 villages and towns are proposed to be electrified during the second Plan period. A sum of Rs. 75 crores has been allotted for rural electrification in the second Plan.

• • • •

Hirakud Dam Project

Owing to the substantial completion of the spillway of the Hirakud Dam Project, 404 employees borne on work charged establishments are rendered surplus. There will, however, be no retrenchment of staff on regular establishment. All the surplus personnel are offered alternative employment on the project. About 271 have been so transferred and 133 have not joined. Most of them are *mazdoors* and helpers.

—*Jaisukhlal Hathi*

KAMANI ENGINEERING REDUCES ARREARS OF PREF. DIVIDEND

PROFIT OF BENGAL FLOUR DECLINES

Kamani Engineering Corporation Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kamani Brothers Private Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1955.

The following appropriations have been made out of the profit of Rs. 5,42,179 (Rs. 3,36,247) made by the Company during the year:

To depreciation fund Rs. 3,21,296 (*nil*), to reserve for doubtful debts Rs. 10,000 (Rs. 10,000) and to gratuity reserve Rs. 40,000 (Rs. 40,000) leaving an available balance of Rs. 3,71,296 (Rs. 10,124 after deducting the previous year's loss of Rs. 2,79,123). After providing a sum of Rs. 3,71,296 (Rs. 50,000) as above, the amount available (together with the surplus of Rs. 10,124 from the last year, subject to arrears of depreciation) comes to Rs. 1,81,007 (Rs. 10,124) which the directors recommend to be utilised as follows:—

To payment of dividend on 5½ per cent. (less income-tax) cumulative preference shares of Rs. 100 each for two years ending 30th September 1953 and 1954 at Rs. 5-8 per share absorbing Rs. 1,65,000 (*nil*), leaving a balance to be carried over to next year's account Rs. 16,007 (Rs. 10,124).

The working of the Company during the year under report has shown improvement over the previous year. The following review gives the activities of the Corporation.

Manufacture and Galvanisation of Steel Transmission Line Towers:—

More than half the quantity of the order for towers received from Damodar Valley Corporation has been successfully executed, in addition to other orders placed by Government and semi-Government bodies for towers and other light structurals.

The Corporation's work in this line proved quite efficient with the result the directors are hopeful to secure more orders from the Government for various Hydro-Electric projects to be undertaken in the country under the second Five-year Plan. However very often the Company has to face keen competition from foreign firms and consequently has to reduce its margin in order to secure orders.

Erection of Transmission Line Towers:—

The Erection work of Duduma-Rayagada 132 kv. transmission line in Orissa and 33 kv. line at Delhi is nearing completion. Further erection work for Railway's Electrification scheme at Calcutta has been secured and the directors expect to secure further orders for such erection.

Wagon Assembly Plant at Okha:—

For few months the wagon assembly work had to be curtailed owing to non-arrival of wagons from abroad. As these have now started coming to India, the work is now well in progress.

Manufacture of Road Rollers:—

The production of this could not be commenced during the period under report. The production has now started in right earnest from April in the current year at an average of six Road Rollers per month which would be expanded to make twelve numbers.

Agency Business:—

Earnings from agency business showed good progress during the year under report. It is expected to improve in the next Five-year Plan.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,96,250	Block ...	48,72,066
Reserves ...	2,71,833	Stock-in-trade ...	18,82,029

Provision for taxation ...	29,168	Debts, deposits and advances ...	63,13,449
Liabilities ...	80,73,571	Investments ...	1,26,660
Profit and loss account ...	1,81,007	Cash ...	2,75,983
		Lahore assets	8,32,805
Rs.	1,56,25,145	Rs.	1,56,25,145

Bengal Flour Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

The profit for the half-year (including items relating to previous years), after providing for taxation and depreciation was Rs. 94,456 (Rs. 3,45,028) to which is added transfer from equalisation of dividend account of Rs. 1,00,000 (*nil*) and the balance brought forward of Rs. 72,375 (Rs. 67,309) making a total of Rs. 2,66,830 (Rs. 4,12,336). The directors have transferred Rs. 1,00,000 (Rs. 50,000) to general reserve leaving a balance of Rs. 1,66,830 (Rs. 2,72,336 after placing Rs. 90,000 to tax contingency reserve) available for distribution, which they recommend be dealt with as follows:—

Pay a dividend on 1,20,000 shares at 15 (30) per cent. per annum, absorbing Rs. 90,000 (Rs. 1,80,000) and to carry forward Rs. 76,830 (Rs. 92,336).

The demand for the Company's products continued during the half-year and the milling showed a substantial increase. The allotment of imported wheat by Government of India was not reintroduced until late November, when the price was increased. During the previous five months indigenous wheat only was available. Whilst the demand was sustained throughout the half-year, the margin of profit was reduced as a result of the overall fall in prices of finished products. Indian wheat prices commenced rising at the end of September and continued during the remainder of the year, reaching a high level in December. Whilst the average cost of wheat in the period under review showed a small reduction compared with the previous half-year, the selling price of flour registered a substantial decrease. The directors report that the Mills ran satisfactorily throughout the period under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	7,32,000
Reserves ...	9,10,000	Stock-in-trade ...	8,29,049

Rs.	36,77,248	Rs.	36,77,248

Palani Andavar Mills Ltd.

The directors of the above Company (Managing Agents & Secretaries: Baghyalakshmi & Co., Udamalpet) submitted the audited accounts of the Company for the year ended 31st December 1955.

After meeting all expenses and providing Rs. 1,56,954 (Rs. 3,55,526) towards depreciation, the year's trading resulted in a net profit of Rs. 5,62,943 (Rs. 5,25,751). Adding to this, the carryforward balance of last year's profit, amounting to Rs. 9,122 (Rs. 551) and deducting therefrom, Rs. 3,456 (Rs. 12,180) spent for charity and donations, there remained a balance of Rs. 5,68,609 (Rs. 5,14,121) available for distribution, which the directors disposed of as follows:—

Paid a tax free dividend of 7 per cent. on preference shares Rs. 14,000 (Rs. 14,000), paid a tax free dividend of 24 (24) per cent. on ordinary shares Rs. 2,40,000 (Rs. 2,40,000), provided for contingencies Rs. 50,000 (*nil*), provided for taxes Rs. 2,50,000 (Rs. 2,51,000), and carried forward to next year Rs. 14,609 (Rs. 9,122).

The directors are glad to report that orders have been placed for 18,400 spindles and they have begun to arrive. It is hoped that the entire machinery will go into production before the end of the year.

Accounts in brief were as under:—

Rs.	41,59,878	Rs.	41,59,878

Periyar and Pareekanni Rubbers Ltd.

The directors of the above Company (Managing Agents: East India Agencies Private Ltd., Palai, T.C. State) submit the audited accounts of the Company for the year ended 31st December 1955.

The Periyar and Pareekanni Estates owned by the Company comprise a total area of 1,787.5 acres, of which 1,555 acres are planted with rubber and the remaining 232.5 acres consists of sundry cultivations, buildings, roads, etc.

The Company took possession of the properties on the 1st January 1955. The crop harvested during the year was 3,69,600 lbs. rubber. The average cost including estate expenses, overhead charges and depreciation works out to Rs. 80 per 100 lbs. The average price realised was Rs. 141 per 100 lbs. The average price realised was Rs. 141 per 100 lbs. The price of rubber which remained fixed at Rs. 138 per 100 lbs. for No. 1 quality was raised to Rs. 150 per 100 lbs. with effect from the 15th February 1955. A further revision to Rs. 155-12 per 100 lbs. was made on 24th September 1955 along with the enhancement of excise duty from As. 8 per 100 lbs. to Rs. 6-4 per 100 lbs.

After meeting all charges and expenses, commission on shares and debentures and preliminary expenses there is a net profit of Rs. 1,77,369. Out of this the dividend on preference shares for the period ended the 31st December 1955 absorb Rs. 13,212. The directors recommend that the balance of Rs. 1,64,157 may be utilised as follows:

To dividend on ordinary shares at 12 per cent. Rs. 60,000, to debenture redemption fund Rs. 40,000, to reserve for taxes Rs. 62,000 and to carry forward Rs. 2,157.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	9,02,096
Debentures ...	4,00,000	Stock-in-trade ...	1,53,760

Profit and loss account ...	1,64,157	Debts, deposits and advances ...	55,905
		Cash ...	2,43,382
Rs.	13,59,595	Rs.	13,59,595

N.B.—Figures within brackets relate to the corresponding period of the previous year.

NEW REFRACTORY PLANT IN ORISSA

The tiny village of Belpahar, 100 miles from here in the Sambalpur district of Orissa, has been chosen as the site of a new plant to manufacture refractory bricks. This project, jointly sponsored by Indian and German interests, will have an initial annual capacity of 60,000 tons of refractory bricks, with scope for expansion to 120,000 tons to meet the growing needs of the country's steel industry.

The capital of Rs. 2 crores required for this joint Indo-German enterprise is being subscribed in the proportion of 65:35 by the Tata Iron and Steel Company, Ltd. and its nominees, on the one hand, and Didier-Werke A.G. of West Germany and its nominees, on the other. The German firm will act as technical consultants and will be responsible for all engineering work. Their patents and know-how will also be available to the Indian company. Indian personnel will be trained in Didier works in West Germany, and will eventually replace foreign technical staff to be engaged in the initial period. Indigenous items will represent a third of the total capital cost, while world-wide tenders will be invited for the balance.

The central location of the plant in relation to the three Steel works at Tatanagar, Bhilai and Rourkela is considered particularly advantageous. Fireclay, the principal raw material, is plentifully available close to the site while silica rock will be obtained from Rakhamines in Bihar, chrome ore from Sukhinda in Orissa and magnesite from Salem and in the Madras State. Power will be drawn from the Hirakud grid. The installation of the plant, as also the construction of quarters and other amenities at this undeveloped site, are expected to be completed by January, 1958.

Seeing is believing

... AND WHAT THEY SEE IN **TRAYOPHANE*** PRINTED BAGS THEY BUY!

Many tests with manufacturers and retailers have shown that *Trayophane* bags bring in bigger sales. The customers like them because they're hygienic, convenient, weather-proof. The shop-owners know that Trayophane bags reduce waste, save time at the counter!

Now for the first time Trayons offer these colourful eye-catching bags in a range of sizes—up to 12.5/8" x 23.1/32". You can order your own special bag—with your name printed on it. Write for particulars today!

TRAYOPHANE* PRINTED BAGS — ECONOMIC! HYGIENIC! CONVENIENT!

NO CHANGE IN MONEY

(From Our Own Correspondent)

BOMBAY, *6th June*

Conditions in the short-term money market during the week under review disclosed that funds were readily usable and that banks were still keen borrowers to meet the persistent demand for bank credit. The return of funds from the trade was not sufficiently large to change the complexion of the market. Banks had often to seek accommodation from the Reserve Bank and the State Bank. An idea of the keenness of the demand at this time of the season can be had from the fact that borrowings of banks against usance bills during the week ended 1st June 1956 had amounted to no less than Rs. 13.79 crores.

Inter-bank call money was in demand at 3¼ per cent. and house money at call was also offered at 3¼ per cent. Deposits fetched 3¼ per cent. for one to three months and 3¼ to 3⅜ per cent. for four to six months.

The Reserve Bank of India statement for the week ended 1st June 1956 shows a further shrinkage of Rs. 4.29 crores in notes in circulation following the drop of Rs. 19.76 crores in the previous two weeks. Notes held in the Banking Department are up by Rs. 4.46 crores. The consequent small rise is covered by a similar increase in rupee coin. There has been a fall of Rs. 4.97 crores in foreign securities, which is offset by a corresponding increase in rupee securities. In the Banking Department, a rise of Rs. 2.21 crores is noted in deposits of the Central Government and of Rs. 1.14 crores in those of other Governments. There has been no notable variation in deposits of banks. Balances held abroad show a decline of Rs. 1.83 crores, while loans and advances other than to Government has risen by Rs. 1.72 crores, of which outstanding borrowings by banks against usance bills account for Rs. 1.36 crores. As already stated, fresh borrowings by banks against these bills during the week aggregate Rs. 13.79 crores, one of the largest amounts borrowed in any one week, having been exceeded only twice during the current year so far. Investments have gone up by Rs. 1.65 crores.

A rise of Rs. 6.79 crores in demand deposits and of Rs. 1.74 crores in time deposits is disclosed by the consolidated statement of position of Scheduled banks for the week ended 25th May 1955. Inter-bank borrowings are also higher by Rs. 41 lakhs, while borrowings from the Reserve Bank stand reduced by Rs. 3.64 crores, of which those against usance bills account for Rs. 1.89 crores. For the second week in succession, advances show a fall, albeit small, of Rs. 1.06 crores. Bills purchased have also declined by Rs. 2.01 crores. Cash balances have improved by Rs. 1.45 crores.

The Gilt-edged market maintained a firm tone during the week under review. There was good demand for medium and long-dated issues, but scarcity of sellers restricted business. It is generally expected that the new loan will be issued in the first week of July, if not in the last week of this month.

3 per cent. 1957 and 1958 were unchanged at Rs. 99-13 and Rs. 99-10, respectively, the Reserve Bank being a buyer at these rates. 3 per cent. 1959-61 was on offer at Rs. 98-2, at which rate the Reserve Bank was a buyer against switches. 3 per cent. 1963-65 was placed at Rs. 95-1 *ex*-voucher, as against Rs. 95-3 *cum*-voucher. 3 per cent. 1964 was in demand at Rs. 95. 3 per cent. 1966-68 had sellers at Rs. 93-4. 3 per cent. 1970-75 picked up As. 3 to Rs. 90-5 on good enquiries. 3 per cent. 1986 Conversion Loan changed hands As. 2 higher at Rs. 77-10. Among 3½ per cent. loans, 1961 was on offer an anpa lower at Rs. 99-12, while 1964 was done at the self-same rate of Rs. 98-12. 3½ per cent. 1965 had business an anna higher at Rs. 98-12. State loans were featureless.

There was a further weakening of the rupee in terms of U.S. dollars during the week, in consonance with the drop in sterling abroad. Banks' selling rate of ready dollars moved up from Rs. 477½ to Rs. 478½ per $100 and their buying rate from Rs. 473½ to Rs. 474 per $100. In New York, spot sterling receded from $2.80½-2.80½ to $2.80-2.80½. Three months' forward dropped from $2.78½-2.79 to $2.78½-2.78½ and transferable sterling from 277.75-277.85 cents to 277.30-277.40 cents.

TANNED COW HIDES RECEDE

(From Our Own Correspondent)

MADRAS, *4th June*

Arrivals of E.I. tanned cow hides were on the usual scale during the week under review, and clearances restricted. Prices were week, as U.K. demand was negligible, due to dressers following a cautious, though not necessarily a pessimistic, policy.

Importers seem to be waiting for prices to decline further, despite the fact that E.I. kip prices have declined to very low levels. There were a few enquiries for top marks cow calf and buff calf for higher selections in which supplies were short. F.A.Q. marks and lower selections have been accumulating in the bazaar on which tanners will lose heavily. Arrivals of buff hides were moderate and offtake slow, due to poor demand from U.S. buyers and from dealers catering for local trade.

There was some call for prime tanned goat skins 11/12 lbs. run at 12s. and 5½/6 lbs. at 13s. 3d. to 13s. 6d., while market qualities were neglected. There was good clearance of market lining sheep at low prices, and some demand for inferior class sheep fifths and inferiors for shipment.

Shipments during May amounted to 2,563 bales cow hides, 399 cow calf, 31 buff hides, 423 buff calf, 946 goat, 412 sheep to the U.K. ports; 7 bales cow, 495 goat, 67 sheep to the Continent; 21 bales cow calf, 60 buff hides, 13 buff calf, 110 goat, 25 dry-salted goat to the U.S., and 7 bales goat, 318 sheep to Japanese ports.

SILVER BUOYANT

(From Our Own Correspondent)

BOMBAY, *6th June*

A strident advance in forward silver on strong speculative support was the notable feature of trading in the bullion market during the week under review. Gold, which had staged a spurt in the previous week, was less buoyant this week, though the trend was irregularly higher.

Absence of any arrivals of silver coins from Tibet this week and rumours that the issue of *licences to import silver coins* would be restricted confounded the bears, who were forced to cover their sales, and encouraged the bulls to tighten their grip over the market. A fairly good demand in the ready section also helped sentiment.

Gold was relatively subdued, due to rumours about arrivals of smuggled gold in the city and a fall in offtake. However, the demand from Madras was sufficiently strong to keep the prices higher.

Forward silver (26th June settlement) rallied from Rs. 166-9 to Rs. 170-8, but closed a shade lower at Rs. 169-13.

Ready silver (.999 mint) moved up from Rs. 170-1 to Rs. 172-10 and, after a shortlived recession to Rs. 169-6, recovered to close at Rs. 171-5. The premium of ready over forward, which had narrowed down from Rs. 7 to Rs. 3-8 in the previous week, shrunk further to Re. 1-8 today.

The floating stocks of silver are estimated at 700 bars. The daily average offtake was 25 bars.

Gold for forward delivery (25th June settlement) gained from Rs. 100-2 to Rs. 101-14 before closing at Rs. 101-5.

Ready gold came up from Rs. 102-14 to Rs. 104-5, but reacted to Rs. 103-5 at the close.

The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was slightly higher at 3,500 tolas per day.

In London, silver was unchanged at 79d. for spot and at 78⅞d. for forward. Gold, however, displayed strength, reflecting the weakness of sterling, and advanced from 249s. 4d. to 249s. 9½d. In New York, silver held its own at 90⅜c.

The following comparative table shows the trend of market during the week under review:

	6-6-56	Highest	Lowest	30-5-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, *6th June*

Last week's firmness in Malabar black pepper proved short-lived and prices eased a little in sympathy with New York where spot pepper, after touching $0.30½, came down to $0.29. New York grinders withdrew as Sarawak began to offer pepper at lower prices under pressure of increasing arrivals. Competitive offers from Indonesia also affected adversely the sentiment in the market. Indian growers, however, presented comparatively steady front, for they expected expansion of demand from New York during the coming weeks. They anticipated a pick-up in inland demand too.

Alleppey and Cochin, after coming down to Rs. 737½ and Rs. 727½ respectively, are reported steady with minor fluctuations. June shipment during the week changed hands from $0.28½ to $0.28 while July-August-September was done at $0.28 with sellers reserved. At the present prices neither bulls nor bears are aggressive as both of them prefer to watch the development at New York as well as at Singapore. Most of the Indian exporters and dealers are bullishly inclined, while almost all the Singapore commission houses are reported to be only short sellers as they expect Singapore to go down still further, affecting both the U.S.A. and Europe.

In the delivery section, price for June delivery came down to Rs. 695-705.

Following are today's nominal quotations: Ready delivery Rs. 102 per Bengal maund and June delivery Rs. 695-705 and July delivery Rs. 695-705 per candy of 5½ cwts.

LINSEED WEAK

(Messrs. A. Bradley and Co.)

CALCUTTA, *4th June*

Poor demand for seeds and lack of interest in oil characterised the trading in linseed during the week under review. With a much reduced daily output, crushers showed limited interest in seeds while freer offers were being made from upcountry. The oil market was devoid of any buying interest and declined appreciably.

The latest available quotations are: Ready Rs. 22-4 and June Rs. 22-2 per maund.

TWO HEDGE CONTRACTS ACCEPTED

(From Our Own Correspondent)

BOMBAY, *6th June*

It now looks as though the way has at last been made clear for the resumption of futures trading in cotton. The Board of the East India cotton Association (E.I.C.A.) has accepted the majority view of the Hedge Contract Committee that two contracts should be run simultaneously, one having fine M.G. Jarilla (A) staple 25/32" as the basis (Contract No. 1) and the other having fine M.G. Vijay staple 27/32" (Contract No. 2). The adoption of two hedge contracts is advocated on the following grounds:

Considering the current trend of cotton production, consumption and export, a single hedge contract does not afford adequate protection, either to the grower or to the trader or to the spinner. For, in the case of single contracts, there are occasions when varieties, having a premium value of about Rs. 400 over the lowest variety, are tenderable against the contract. This evidently means that there is no selection between the contract price and the actual spot price. If, however, there are two hedge contracts which make all varieties grown in India (except *deshi* styles) tenderable against the contracts, the premium values will hardly exceed Rs. 100 or Rs. 150. What is more, the gap between the contract and the spot prices will be small.

In the opinion of the majority section of the Committee, the months of delivery should be March, May and July for Contract No. 1 and April, June and August for Contract No. 2. The Government should permit trading in the two contracts for new crop before the end of June and July every year, respectively. The tendering differences under By-law 55 must be fixed on the basis of the forward contract rate and not the spot rate. Similarly, the invoicing back of cotton rejected in survey must be on the forward rate, and not the spot rate, of the basic cotton; rejection penalty is fixed at Rs. 10 per candy. Fresh trading during delivery period, except for purposes of squaring up, that is, liquidation of outstanding contracts, should be prohibited.

At a special meeting held today, the E.I.C.A. Board accepted the two contracts scheme. The decision of the Board will be communicated to the Forward Markets Commission which, it is believed, will accept it and will give permission for the resumption of futures trading with effect from the 13th inst. Simultaneously, with the grant of permission by the Commission, the Government of India is expected to announce a downward revision in the ceiling price for the standard variety 13/16" Jarilla from Rs. 840 to Rs. 815. With regard to the margin system, the Board decided to impose margin above the level of Rs. 7,500. A slab system, had been proposed by the majority of the directors, that is, 5 per cent. on Rs. 15,000, 7½ per cent. for the business between Rs. 15,000 to Rs. 20,000, 10 per cent. for the business between Rs. 20,000 to Rs. 25,000. To fix the revised floors and ceilings for the new contracts, an informal meeting of the general body has been called by the Board on Friday next.

The spot cotton market continued to rule dull during the week under review. Mill enquiries for domestic cotton were not large, but the prices of staple styles maintained their firm tendency on expectation of enlarged spinner demand from the South Indian mills, following the restoration of power cut in Madras. Exportable styles also met with limited support, the small deals put through being in Zoda and Yellow pickings.

The following table gives the latest quotations for a few popular styles of cotton from the Sevri market, as compared with the rates prevailing a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	6-6-56	30-5-56	23-5-56
Bengal *Deshi*	640	640	640
Berar Jarillas	810	810	810
Khandesh	820	820	820
Vijay	985	985	980
Oomra *Deshi*	710	710	710
Mogtal	725	725	725

In the foreign section, too, spot and shipment business was slack. There was moderate turnover in Californian new crop at lower prices, yesterday's quotation being Rs. 1,400 (October-November Calcutta delivery), as against Rs. 1,405 a week before and Rs. 1,435-Rs. 1,445 two weeks before. The fall in prices was due to the provision in the new U.S. Farm Legislation directing sales of surplus cotton to be made at more competitive prices. East Africans were neglected. B.P. 52 was quoted at Rs. 1,680 and Busoga at Rs. 1,560. These prices were lower by Rs. 30 and Rs. 45, respectively, as compared with those prevailing a week before. Some business was, however, reported in new crop Pima 1 9/16" for October-November shipment at slightly higher prices.

Last week's recovery in cotton prices at Karachi proved short-lived and the market turned easy once again this week. The buying support which had emerged after the sharp break in values in the preceding week failed to persist. Thanks to this and to the liquidation of holdings by stockists, prices of cotton drifted lower. Over the week, N.T.R.G. July delivery dropped Rs. 2-9 to Rs. 83-15. January delivery lost As. 6 to Rs. 77-4. The spot prices also tended to look down. The latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton are given below:

Sind *Deshi* 99; 4F Roller 86-3; S.G. 90-11; Punjab Roller 90-3; S.G. 94-3; 289F N.T. Roller 86-12; SG. 93-7; 289F Punjab Roller 94-7; S.G. 100-3.

The firm trend noted in the Alexandria cotton futures market in the past two weeks abated dur-

ing the week under review. In fact, the market exhibited a distinctly easy note. The easiness was due to reports that there was no fresh export business in current or new crop cotton, since overseas enquiries were negligible. Consequently, cotton prices suffered a recession. The following are the latest available quotations—in tallaries per lb.—from the Alexandria cotton futures market, as compared with those a week and a fortnight before:

	5-6-56	29-5-56	22-5-56
Karnak:			
July	120.75	133.00	118.75
November ...	113.75	126.80	115.30
January ...	109.30	119.25*	—
Ashmouni:			
June	87.25	96.30	87.75
October ...	79.65	89.05	83.65

*On 30-5-56.

Irregular conditions prevailed in the Liverpool cotton futures market. Thus, nearby contracts elicited commission house and trade buying, while distants tended to be easy on hedge selling and local liquidation. The Egyptian Karnak contract was dull, although prices were a shade better. The Sudan contract was easy with limited offtake and prices were slightly lower. The following are the latest available quotations—in pence per lb.—from the Liverpool cotton futures market:

Old contract: July-August 25.80. *New contract*: July-August 28.45; October-November 25.05; December-January 24.50; March-April 24.08; May-June 23.93. *Egyptian karnak cotton*: July-August November-December and January-February 63.00. *Sudan cotton contract*: July-August 49.10; September-October 47.65; November-December 47.60.

The New York cotton market ruled fully steady during the week under review. Nearby July position registered an improvement in price, reflecting tight free supply situation. In sympathy and induced by some trade buying and local demand, distant positions also tended to move up.

The Commodity Credit Corporation sold recently 28,725 bales of cotton under the new export sales programme, bringing the total sales so far to 262,766 bales. The C.C.C. accepted prices ranging from 27.50c. to 30.37c. for basis Mid. 15/16" gross weights average location. It is understood that most bidders were reluctant to bid much above 25.50c. which accounted for the small quantity sold. The new Farm Bill has now gone into the Statute Book. The law includes a direction to the C.C.C. that it should attempt to regain the historical share of the U.S. of the cotton world market, construed presently as 5 million bales of annual exports. In order to achieve this end, the C.C.C. has been instructed to accept bids of even 25½ cents per lb. for basis Mid. 15/16" at ports. If competition of even cheaper priced comparable foreign growths should retard the attainment of the present export objective, the C.C.C. has also been authorised to meet such competition by accepting even lower prices. This export provision of the new legislation has caused great concern because of the uncertainty regarding the minimum price the C.C.C. will accept. Responsible trade circles continue to plead strongly for a specific export subsidy *in lieu* of the present competitive bid basis. It is also reported that there is the possibility that the C.C.C. will sell cotton to domestic mills also at the world prices, provided an equivalent quantity of textile fabrics that can be manufactured out of the cotton thus bought is exported by them.

Commenting upon the Government's decision to suspend temporarily sales of its cotton stocks to overseas buyers, the U.S. Secretary of Agriculture, Mr. Benson, stated the other day that the decision was intended to permit the Agriculture Department to study the new farm legislation. Mr. Benson told a news conference in Washington that the temporary suspension would also permit the Department "to develop any new terms and conditions necessary or desirable" regarding cotton sales in the world market and "to develop plans to sell its cotton in an orderly manner in accordance with the new legislation." He said that the U.S. would "exercise extreme caution" in carrying out its new cotton export programme, in order to "avoid disrupting world market prices."

The Commodity Credit Corporation, a Government agency, originally announced that it would accept offers to buy domestic cotton for export, but the acceptance of offers was later withdrawn. Mr. Benson said that, "after the new legislation is thoroughly reviewed, the sales announcement will be amended to include any new items and conditions, and offers will be accepted on 19th June." The U.S. officials have stressed that sales of U.S. cotton on a competitive basis under the new export programme starting 1st August 1956 will be made in an orderly manner to avoid disrupting the world market and impairing the traditional competitive position of other countries. Reviewing the new Farm Act, Mr. Benson noted that the legislation provided for U.S. payment of ocean freight charges on American farm products donated to other countries for relief purposes. He estimated that, under the provisions of the Act, it would take the U.S. about three or four years to reach the goal of a balance in production and consumption of farm products. This, he pointed out, would be accomplished under the Soil Bank Programme, whereby the Government would pay farmers for taking crop lands out of production and putting the land in cover crops or trees.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	5-6-56	29-5-56	22-5-56
Spot	36.65	36.55	36.55
July	34.60	34.45	34.20
October	32.57	32.29	32.74
December	32.67	32.45	32.87

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, *6th June*

Conditions in the yarn market were distinctly bearish during the week under review. Cotton yarns were particularly depressed, thanks to weak advices from South India. The restoration of power cut in Salem, Coimbatore and other places led operators to believe that the consequent improvement in the yarn output by the mills would result in enlarged arrivals into the local market. Nor were reports of offtake in consuming centres encouraging. Selling pressure ensued as a consequence and cotton yarn prices slipped downwards. Rayon yarns were also subdued, due to slackness in demand from handlooms and powerlooms associated with the onset of monsoon. Further, heavy arrivals of yarn also added greatly to the floating stocks. Staple fibre yarns, too, ruled easy in the absence of sufficient enquiries from consuming regions and reports of booking difficulties to Delhi and Ludhiana sides.

Snia rayon yarn (120 dull cones) for August delivery fell by Rs. 6 to Rs. 796. June delivery receded from Rs. 805 to Rs. 800, before closing at Rs. 802. The spread between the two contracts widened from Rs. 3 last week-end to Rs. 6 today. In the spot section, 120 Japan declined by fifteen pies to Rs. 3-12-3. 120 Italy lost half an anna to Rs. 3-12-6. 150 Japan was quiet at Rs. 4-4 and 150 Italy at Rs. 3-14. National Rayons 150 Bt. cones, 1st grade, eased by three pies to Rs. 3-8. 120 Bt. cones, 1st grade, however, were a shade better at Rs. 3-11-3.

In the forward staple fibre yarn section, 40 x 2 June delivery was subjected to heavy selling and slumped by Rs. 16 to Rs. 669, but recovered to Rs. 674 at the close. Among spot (40 x 2) indigenous yarns, Centurys decreased by nine pies to Rs. 3-8. New Greats receded by six pies to Rs. 3-8. Citys and Kohinoors lost a similar amount to Rs. 3-8-9. Deals in foreign yarns (80 x 2) were put through at lower levels. Paramounts fell by 18 pies to Rs. 6-8. K'Suns and H'Races shed an anna each to Rs. 7 and Rs. 6-10, respectively. Suicos were unchanged at Rs. 7-11, as also S'Sellos at Rs. 6-9.

Cotton yarns, as already stated, were depressed. Forty counts were the worst to suffer. Moderns climbed down by Re. 1-6 to Rs. 27-14. Minaxis gave way from Rs. 28-14 to Rs. 27-14. Chinas dropped As. 8 to Rs. 33. Among sixty counts, Raghuvamshis slumped by Rs. 2-12 to Rs. 58. Finlays fell by Rs. 2 to Rs. 62 and Moderns by Re. 1-14 to Rs. 61-10. Business was reported in 20 count yarns. Moderns and Hinds declining by As. 2 each, the former to Rs. 18-4 and the latter to Rs. 18-3. Among 10s, Podars fell by As. 3 to Rs. 13-13. Moderns were unchanged at Rs. 14-4 and Elphinstones at Rs. 13-4. Among 80s, Moderns lacked support and decreased by As. 8 to Rs. 70. Mahendras were quiet at Rs. 73.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	6-6-1956	30-5-1956	23-5-1956
Art Silk yarn (per case of 200 lbs.)–	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia June ..	802 0	805 0	797 0
August ..	796 0	802 0	793 0
120 Japan (per lb.)	3 12½	3 13¼	3 13¼
150 Japan (per lb.)	4 4	4 4	4 4
120 Italy (per lb.)	3 12¼	3 13	3 12¼
150 Italy (per lb.)	3 14	3 14	3 13
Staple fibre yarn (per case of 200 lbs.)–

80s Modern	70 0	70 8	69 8

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *6th June*

The trend of the oilseeds market this week revealed no marked change from that reported last week. The undertone continued to be easy. Under the cumulative pressure of bear selling and tired long liquidation, prices of both oilseeds and oils moved further down, with setbacks occurring at every small recovery. Reports regarding the favourable onset of monsoons, absence of any bullish advices from overseas markets, and prospects of a further decline in values caused hesitancy among operators. Neither shippers nor crushers showed any eagerness to enter into fresh commitments. And the market wound up the week with closing quotations registering losses all round.

The castorseed section was devoid of any interest during the week under review. Under sustained selling pressure, September delivery, which had opened the week at Rs. 148-6, moved successively to lower levels till yesterday when the week's lowest was seen at Rs. 141-4. The low level attracted some support and the quotation improved to Rs. 143-2. But profit-taking which emerged later brought down the quotation at the close to Rs. 142. In the ready section, F.A.Q. lost As. 14 to Rs. 27-2. Ready Madras receded by a rupee to Rs. 27-4. B.S.S. oil shcd As. 4 to Rs. 16-6. Commercial oil declined further by As. 7 and finished the week at Rs. 15-3.

Trading in groundnut was adversely affected by the sharp decline in castorseed futures. Crushers bought sparingly at declines. June-July delivery contract was done at Rs. 32-12, as against Rs. 33-4 a week ago. August-September shed As. 9 at Rs. 33-7. Khandesh quality was, however, fractionally better at Rs. 34 as compared with Rs. 33-14 last week. Groundnut oil ex-mill was lower by As. 2 at Rs. 17-14. Railway receipts were, however, slightly better at the same rate, namely, Rs. 17-14.

Linseed also presented an easy trend. June-July delivery was dealt in at Rs. 30-14, as against Rs. 31-12. August-September was As. 4 lower at Rs. 30-10. Indore quality receded sharply from Rs. 30-4 to Rs. 28-12. Linseed oil ready fell by Rs. 1-2 to Rs. 17-6.

The prices of other oilseeds, too, were a shade lower, depicting thereby the generally weak trend of the market. *Niger* seed ready F.A.Q. retreated by As. 12 to Rs. 27 and Madras by As. 8 to Rs. 27-4.

• • • •

On the advice of the Forward Markets Commission, the Government of India, has granted recognition to the Ahmedabad Seeds Merchants' Association, Ltd., Ahmedabad, for conducting futures trading in castorseed and cottonseed for a period of three years. Mr. D. N. Mahta, Member of the Commission, will formally inaugurate the Association on Thursday, 7th June 1956 at Ahmedabad and the Association will begin trading in the September 1956 contract in castorseed from that date. Trading in cottonseed is expected to start in July in the January 1957 contract.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	6-6-1956	30-5-1956	23-5-1956

SUGAR MOVES UP

(From Our Own Correspondent)

BOMBAY, *6th June*

The sugar market continued to rule steady during the week under review and there was a further rise in prices. The operators were interested in extending their commitments, thanks to the delay in the issue of monthly release of sugar by the Union Food Ministry, as also to good spot demand induced by pre-monsoon upcountry enquiries. There was persistent support from Malabar coast. Rumours of the Government considering proposals for allowing export of sugar also influenced the operators bullishly. The enlarged arrivals of indigenous sugar into the market—being 7,500 bags, as against 3,000 bags in the previous week—were readily absorbed and prices of sugar continued their upward march.

In the ready section, large grain indigenous sugar advanced by a rupee to Rs. 94-Rs. 99 per bag. Medium grain rose from Rs. 90-Rs. 93 to Rs. 91-Rs. 93. Small grain was fully maintained at Rs. 90. British refined sugar rallied Re. 1-8 to Rs. 86-12.

In the forward section, *Shravan* delivery contract for C grade sugar improved from Rs. 90-8 to Rs. 90-14, but was lower at Rs. 90-8 today. The increase in price early in the week was due to rumours that the Government of India would soon conclude a deal to export 200,000 tons of sugar, the countries interested in Indian sugar being Pakistan, Burma and Ceylon. It is, however, understood that no such deal has been completed yet, although it is considered possible that the Food Ministry is examining tentative proposals from interested countries for barter arrangements.

The Union Food Ministry is reported to have turned down the offers from a couple of dealers to take up the entire stocks of British refined sugar—estimated at 11,000 tons—in the City. This decision is a sequel to the representation made by about 20 genuine wholesale dealers in sugar who offered to take up the entire stocks, including slack, torn and damaged sugar, at Rs. 30-8 per maund. The Government, it is said, has viewed this offer favourably, in view of the need for avoiding any monopolistic cornering of stocks of British refined sugar.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

JUTE GOODS ACTIVE

(From Our Own Correspondent)

CALCUTTA, *5th June*

Following the expectation that minimum export prices would be fixed higher than the present levels, there was keen speculative activity in jute goods during the week under review. Sentiment in raw jute also improved, following heavy rains experienced during this week in almost all jute districts in both Pakistan and India. Reports that New Delhi was thinking in terms of fixing minimum export prices for jute goods continued. Despite these reports, overseas buyers were in no hurry to cover their requirements at the prevailing prices. They were apparently thinking that, if the minimum prices were fixed higher than the present prices, the scheme might not be a success. The price which Pakistan is demanding for its raw jute is high and, as a result, as also due to increased labour costs, the Continental mills are unable to compete with India in world markets. Indian mills are only partly dependent on Pakistani jute. The natural result of these circumstances has been that Indian mills have been able to export more jute goods. However, profits of mills have woefully declined, and reports of loss have been a common feature of the working results of many a mill. Closely following such a disquieting trend in one of the country's premier export industry came the Tribunal Award in July 1954 which had increased the wage bills of employers in an industry which spends as much as 66 per cent. of its total expenses on raw jute. The mills appealed, and the Labour Appellate Tribunal, modifying the judgment of the primary tribunal, has increased the basic wages of jamadars, havildars and durwans by Rs. 8.67 instead of Rs. 8 as per the original award. This means a further increase in the wage bills of mills.

That the industry is finding it difficult to meet all these burdens is only too clear from the working results of mills. If then the prices of jute goods are increased, traders fear that mills' stocks would increase, landing them in further financial problems. What mills need is more supplies of the indigenous fibre at lower prices. If this problem engages the attention of the powers-that-be in New Delhi, the market feels that a step in the right direction would have been taken. All things considered there is a strong case for lower prices for raw jute, which should not, however, deter the incentive of cultivators to grow more. By producing more and reducing the selling prices, cultivators of raw jute may not be called upon to sacrifice anything. However, it is common knowledge that the cultivators and middlemen have made enough money during recent years; even if they are called upon to cut down prices in the interest of the industry, their sacrifice would be worthwhile as that would turn to their favour in the long run.

During the week, prices improved steadily. Speculators were very active but mills were reserved. Shippers also evinced interest and accepted some offers at hardening rates. Figures so far available regarding shipments during the month of May gave the market the impression as though the month-end stocks would show a further rise. Between 1st and 25th May, sackings shipped were 23,400 tons and hessians 20,700 tons respectively, both lower by 6,500 and 3,300 tons respectively as compared with the corresponding figures for April. However, this circumstance did not deter speculators to go in for as much as their funds permitted them to buy, since they believed that New Delhi would fix minimum export prices, higher than the present levels. This led to the early recovery to Rs. 105-14 from Rs. 105-2 in ready B. twills, although ready 40" 10 oz. hessians was unchanged at Rs. 37-12. It was on Thursday last when profit-taking intervened to bring down ready B. twills to Rs. 105. Speculative support soon followed and pushed up ready B. twills to Rs. 106-12 by the week-end and 40" 10 oz. hessians to Rs. 38-7. Yesterday there was a further gain in quotations, B. twills advancing to Rs. 107-4 and 40" 10 oz. hessians to Rs. 38-12.

Raw jute prices were maintained at previous levels. Mills made purchases sparingly off and on. Sellers were not making any offers of new crop, as such forward contracts had usually put them to severe losses in the past. This was a factor for raw jute prices being firm despite negligible purchases by mills. During the week there was heavy rain. Reports of floods have been received from many centres and rivers are rising. Damage to crop is feared, and in certain West Bengal districts, where sowing has not yet been done, great delay is apprehended. The latest quotations are given hereunder:

IRREGULAR DEMAND FOR TEAS

(Messrs. Forbes, Ewart & Figgis (Private) Ltd.)

COCHIN, *1st June*

Approximately 1,100,000 lbs. were on offer in sale No. 13 which was held on Tuesday, 29th May. From the outset, demand was irregular and there was practically no enquiry for low medium and medium B.O.Ps. As a result there were heavy withdrawals of these types. Good medium and medium brokens met with a useful demand and prices were around valuations. There was keen competition for all fannings grades, and, in particular, good liquoring fannings which can be quoted dearer. Although there was a fair demand for the few O.P. grades on offer, there was less demand for other whole leaf teas and these were generally easier. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 9 0*
Low medium B.O.P.	1 12 0
Medium B.O.P.	1 14 0
Good B.O.P. ... Rs. 2 4 0 to	2 6 0
Well-made black leaf O.P. ...	2 4 0

* Nominal.

London Market.—Sale of 28th May 1956:—C.T.C. teas irregularly 2d. to 4d. lower. Black leaf coloury fannings firm. Others ½d. to 1½d. lower.

Sale of 29th May 1956:—Best quality teas about steady. Others appreciably lower.

Colombo Market:—No sale this week.

Calcutta Market.—Export:—10,200 packages. New seasons' Darjeelings came to a fair general, but very selective demand. Any good flavoured teas sold well and strong bazaar support forthcoming for lower types.

Internal:—21,700 dust. Fair general demand. Opened one anna to As. 2. Easier closed As. 2 to As. 3. Any black leafy dusts firm. Few C.T.Cs. fairly well supported. 3,800 internal leaf met fair demand at easier rates.

Dust Sale 'K':—Almost 500,000 lbs. were on offer in dust sale K which was held on Thursday, 31st May. The sale opened to a good general demand for all types. Milled dusts were occasionally slightly easier, but prices for medium dusts remained steady. There was a very strong demand for Middle East types which were As. 2 to As. 3 dearer. Best liquoring dusts sold well at firm rates.

Export Quota:—Business is still being done freely in special export licence at 5 pies. The quotation for 1956-57 export quota remains steady at 36 pies.

Forthcoming Auctions:—Dust Sale L will be held on Thursday, 14th June.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 14:—1,150,000 lbs. Medium and low-medium B.O.Ps. still neglected. Good medium and best liquoring B.O.Ps. about steady, but prices following quality. Good demand for all fannings grades, but rates tending easier."

HIDES STEADY

(From Our Own Correspondent)

KANPUR, *4th June*

During the week under review, conditions in the hides and skins market were more or less stabilised. There were many customers for the upper level goods of the wet salted buff and cow category. The main purchasers were, of course, the local tanners. Fresh supplies were ample.

The latest available quotations are: Wet salted cow, 1st grade Rs. 280, 2nd grade Rs. 260 and 3rd grade Rs. 110 per score; wet salted buff, 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep, 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces.

FOODGRAINS RECOVER AT CLOSE

(From Our Own Correspondent)

HAPUR, *4th June*

After an early fall, the foodgrains market recorded a steady trend towards the week-end. The Government is determined to stop the rising trend and a programme to make ample imports has been chalked out, with a view to building up sufficient stocks and to thwart hoarders and speculators. India imported 178,950 tons of wheat until the first week of May from the beginning of the year and about

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. n.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters A and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, at stand or the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

MARKET REPORTS

(*Concluded from page 1117*)

700,000 tons of wheat have been bought from Australia and the U.S.A. for the half-year ending October 1956. Besides continuing sales of wheat at Calcutta and Bombay, it is proposed to supply wheat at Rs. 14 per maund to all flour mills in the country. The Government proposes to build up a reserve of 200,000 tons of wheat in the U.P., 100,000 tons in Delhi and 50,000 tons each in the Punjab and Bihar. Storing facilities to the capacity of 50,000 tons are being built at Hapur in the form of masonry godowns.

Wheat prices at Hapur, after touching the lowest level of Rs. 13 per maund for average quality during mid-session, recovered at the close to Rs. 13-6 per maund. Farm quality was quoted at Rs. 14-12. Arrivals were at an average of 3,000 maunds daily and they were mostly absorbed by stockists, as outside, support was wanting. Stock position, as a result, improved to 55 *khaties*. Firm Punjab and Madras advices accounted for further gains in gram prices to Rs. 10-12 per maund for local quality and to Rs. 11 for Punjabi quality and stock position was put at 15 *khaties*. Other coarse grain prices also recorded modest gains in sympathy with wheat to be quoted at: Barley Rs. 9-12 and *bejhar* Rs. 9-10 per maund. *Jowar* was very much in demand and, due to poor local stocks, prices improved fractionally to Rs. 14-10 per maund.

Peas in which there was bullish activity in the last few weeks was a bit quiet during the week under report. Arrivals which had mounted to 2,500 maunds daily declined towards the week-end to 1,000 maunds today. Prices, after touching the highest at Rs. 11 per maund for *dara* green quality, eased to Rs. 10-6 per maund quoted today. Stock position had gone up to 44 *khaties*, the corresponding figure last year being 41 *khaties*, when peas *dara* was quoted at Rs. 5-5 per maund. *Arhar* prices also lost a part of the gains to Rs. 11-6 per maund today. Local stock had swelled to 84 *khaties*, as against 24 *khaties* only last year when *arhar* was transacted at Rs. 6-6 per maund. Other pulses ruled quietly steady during the week.

Pulses futures advanced in all sections during the week. The latest quotations as on Monday are: Peas *jeth* Rs. 10-3-3 and *bhadon* Rs. 10-8-9; peas white *jeth* Rs. 10-10-9 and *bhadon* Rs. 11-1-9; *arhar jeth* Rs. 11-4 and *bhadon* Rs. 11-10-9.

* * * *

In view of the decision of the International Wheat Conference in London to curtail production, it is interesting to review the prospects of the crop position this year. The problem of overproduction confronts many other staple commodities, besides wheat, and the proper solution lies in the removal of the root cause which affects the economic well-being of the world at large. There can be no gainsaying the fact that reduction in production will ease matters to a certain extent, but so long as the purchasing power of the people remains at the present low ebb, there can scarcely be any real improvement of the situation. Means and methods must be devised to increase consumption. Artificial maintenance of prices by curtailment of production is merely an expediency, the effect of which is neither conducive nor permanent. The International Conference has, therefore, done well in laying stress on the desirability of a careful exploitation of all avenues for greater utilisation of wheat, both for food and other purposes. Press comment shows some disappointment in the small results of the conference. It is, however, generally agreed that very little could be expected from a first gathering of the kind and that the contacts established and the views exchanged will lead to results later. The chief conclusion reached by the International Conference of 11 wheat-exporting countries was that where possible a reduction in the area devoted to wheat should be undertaken.

SUGAR RULES DULL

(From Our Own Correspondent)

HAPUR, 4*th June*

The sugar market ruled dull and featureless. Though demand from South Indian markets was fairly good, despatches were hampered for want of loading facilities. The total production of indigenous sugar in the country is expected to touch an all-time high of 1.85 million tons. By 15th May 1956, the production had aggregated 1,724,901 tons, as against 1,536,942 tons a year before. The despatches this year were heavy at 874,509 tons, as against 528,773 tons, and the closing stock with the factories as on this date was 1,262,649 tons, as against 1,050,243 tons on the same date last year. Nearly half of the mills in U.P. are still crushing and, due to ample supply of cane, the State Government has asked some of the factories to extend crushing operations upto the end of June. The production in this State alone is expected to exceed 1 million tons. Owing to a steep fall in agricultural prices last year, the agriculturist produced more sugarcane and, with *gur* prices falling unduly and the crushing season of the mills having started a little late, supplies of cane to factories was heavy and, despite a prolonged season, some of the cane will still remain uncrushed.

The latest mill delivery prices of sugar at Hapur are: Jaswant Rs. 28; Simbhauli Rs. 28-2; Mowana Rs. 27-15; Daurala Rs. 29; Amroha Rs. 27-10; Bijnore Rs. 27-10; Mansoorpur Rs. 28 to Rs. 29; Rampur Rs. 30-10; retail Rs. 30; and *khandsari* Rs. 23 to Rs. 26-8.

Ready *gur* prices eased slightly to Rs. 10-2 per maund for want of support. Arrivals were scanty, the average being 150 maunds daily and offtake during the week was also small, due to want of loading facilities. Local stock was put at about 85,000 maunds.

Gur fagan ruled quietly steady. Opening at Rs. 8-11-6 on Monday last, it was quoted at highest level of the week at Rs. 9-1 today.

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2363 BOMBAY, 16TH JUNE 1956 PRICE Rs. 1/8

MINERAL POLICY

THE Union Government's mineral policy is still in the melting pot. Hitherto, it was an incoherent policy of *ad hoc* and halting decisions. The authorities are now trying to evolve a more purposive policy designed to encourage mineral development. But, so far, only the negative aspects of this policy seem to have received adequate emphasis. These aspects are conservation of minerals and reservation of certain minerals for exclusive exploitation by the State. There is something to be said in favour of these two aspects, more particularly in respect of conservation. Since minerals are a wasting asset, it is necessary to conserve their reserves if we are not to rob future generations of their share of this limited wealth. Nevertheless, even this policy could be carried too far. The danger is that, in the name of conservation, minerals may fail to be adequately exploited. It is well to recognise that conservation must follow, not precede, exploration and mining.

The other aspect of mining policy is the Government's desire to participate more directly in mineral development. This could be justified only in so far as this desire is dictated by strategic considerations, such as the necessity for State ownership of minerals of defence significance, or by considerations of facilitating development of particular minerals in the event of marked disinclination of the private sector to undertake their exploitation. But there are good reasons to think that the Government's policy is dictated by considerations other than defence or development. The proposed, but almost certain, nationalisation of gold mines in Kolar and of the diamond mines at Panna is a case in point. Clearly, these measures are dictated by ideological considerations. And such considerations will retard the development of the mining industry in this country.

Indeed, the Government, by administering one shock after another to the mining industry, has undermined the confidence of prospectors to such an extent that the prospect of rapid development of minerals now appears very bleak. It dealt the first blow at such confidence when it amended the Constitution to the effect that no law providing for the extinguishment or modification of any rights accruing by virtue of any agreement, lease or licence for the purpose of searching for, or winning, any mineral or mineral oil, or the premature termination or cancellation of any such agreement, lease or licence, shall be deemed to be void on the ground that it is inconsistent with, or takes away or abridges any of the rights conferred by Article 14, Article 19 or Article 31. One thought that this amendment, together with the one making compensation a non-justiciable issue and other mining laws, had invested the Government with sufficient powers to ensure that mining in the private sector was carried on efficiently and in the national interest. Apparently, the Government was not satisfied with those powers but wanted exclusive monopoly for mining certain minerals and opportunity for participation alongside the private sector in others. This is the genesis of the new twist given to mineral policy by the Industrial Policy Resolution.

Under this Resolution, the minerals and mining processes, the future development of which will be the sole responsibility of the State, are: iron and steel, heavy plant and machinery for mining, coal and lignite, mineral oils, mining of iron ore, chrome ore, gypsum, sulphur, gold and diamond, mining and processing of copper, lead, zinc, tin, molybdenum and wolfram. Next come the minerals or mining industries which will be progressively State-owned and in which the State will, therefore, take the initiative in establishing new undertakings, but in which private enterprise will also be expected to supplement the effort of the State. In other words, this is a field in which the private sector will continually face the threat of nationalisation. In this category are included all other minerals (except the minor minerals as defined in section 3 of the Mining Concession Rules, 1955), aluminium and other non-ferrous metals not included in the first category and manufacture of ferro-alloys and tool steels.

What then is the prospect before an able prospector or an industrious miner? His field is strictly limited. And, if he does well, he runs the risk of inviting nationalisation. And, if he does badly enough, he fares no better, for that will be sufficient justification for the cancellation of his lease. Surely, it is not under such a dispensation that a country can hope to build up a prosperous mining industry. For it must be remembered that in few other industries is the role of reward for pioneering effort more important than in prospecting and mining of metals and minerals. No one will brave the inhospitable jungles or uninviting deserts or work in fair and foul weather if there is no adequate reward for the labour involved. The recent amendment to the Constitution, the Industrial Policy Resolution, the unhelpful attitude of the Government towards the coal industry and the recent moves for nationalisation of gold and diamond mines have all served to make one wonder whether the Government is really serious about laying the foundations for an expanding mining and mineral industry in India.

There is one factor which must make the Government take a more realistic view of its role in mining and mineral development. India, according to present knowledge, is not too plentifully endowed with metals and minerals. This, of course, is true of all countries in the world. No country can boast of complete self-sufficiency in all ores. India too presents a mixed pattern. This is not surprising. At the same time, one should recognise that India lacks some essential metals and minerals. It is well endowed with ores of ferrous and certain other metals, particularly iron, manganese, chromium and titanium. It has no good deposits of nickel, cobalt, molybdenum and tantalum. As the country's steel industry expands and alloy steels begin to be manufactured, these metals will have to be imported. There are deposits of mica, magnesite and barytes and other minerals used for the manufacture of paints and refractory materials. There are also good deposits of ores for the manufacture of aluminium and magnesium but only limited reserves of copper, lead and zinc. There is coal but no large proved deposits of petroleum. In other words, India can be classified in the list of countries which are only reasonably endowed with metals and minerals. But this is in so far as present knowledge goes. Future prospecting may well reveal fresh sources of supply or new metals and minerals. From this point of view, the Government's policy should be so calculated as to make such prospecting possible and attractive. Apart from this consideration, there is the far more immediately relevant consideration of technical personnel. It is well known that the Government has no large trained personnel. Indeed, it is this consideration which has compelled the Union Government to be chary of lending its officers even to the State Governments for purposes of mineral development. In this context, the Government would be well advised to enlist the co-operation of as many private agencies (both national and foreign) as possible.

Against this background, the assurances given to the private sector by the Union Minister for Natural Resources, Mr. K. D. Malaviya, at the recent meeting of the Mineral Advisory Board, held at Bangalore, are welcome. He emphasised that the recent declaration of industrial policy "should not cause any alarm in the minds of the miners." The policy of the Government, he explained, would "continue to be flexible and designed to maintain not only the balance between our internal requirements of minerals and the exportable quantities but also a healthy balance between the private and the public sector." Obviously, the value of this assurance lies in the way it is implemented. It is, however, reassuring to be told that the private sector would be given mining leases for areas already prospected by it. At the conclusion of the session, Mr. Malaviya reiterated that the new Industrial Policy Resolution did not shut out the private sector from participating in the development of mineral industry.

Considering that India is a vast country, the Government has done well to think in terms of regional mineral development. The Minister announced the formation of regional boards and the creation of zonal mineral advisory boards with headquarters at Ajmer, Calcutta, Nagpur and Bangalore. The Mineral Advisory Board, after its recent session, set up a seven-member committee (Chairman: Dr. M. S. Krishnan, Officer on Special Duty in the Ministry of Natural Resources) to consider the questions relating to liaison between the Bureau of Mines and the organisations, if any, set up by the State Governments. The Minister further announced that the Government had decided, in consultation with the Railway Ministry, to set up a Mineral Transport Advisory Committee which will take measures designed to improve the transport of minerals. Meanwhile, the Board has recommended that the railway authorities should examine the question of reducing railway freight on mineral ores for export and building materials, as, in its view, there was a case for such reduction.

An important question to which Mr. Malaviya referred in his address was that of terms of leases granted to private mine-owners. There is no doubt that some of these leases have conferred excessive rights on owners, some of whom have probably no clear idea of how to utilise the benefits. Some leases have been granted in perpetuity or for unconscionably long periods, extending in some cases to 999 years and covering 100-sq. mile units of area or even more. These terms have to be altered in the light of the Mines and Minerals (Regulation and Development) Act, 1949, and the Mineral Concession Rules. The current prescribed limits are a period of 30 years (with the right of renewal for a similar period) and an area of 10 sq. miles. These terms appear to be reasonably fair, sufficient to encourage genuine *entrepreneurs* to

take the plunge. It is stated that the draft rules for the modification of the old leases have been framed and also revised in the light of comments by the State Governments and the mining industry. The Minister announced that care had been taken to provide for compensation on an equitable and even liberal basis to the holders of old leases whose areas are likely to be reduced as a result of the operation of these rules.

There are two subjects which have not yet received the attention of the Mineral Advisory Board. One is the general problem of making men more mineral-minded and the other, the more specific question of tax relief for efficient, enterprising and honest mine-owners. So far as the general problem is concerned, the real task is to instil in men the love for minerals and a spirit of adventure that will make them undertake prospecting. There is need for wider dissemination of knowledge about minerals and mineral prospecting. The specific question of tax relief no doubt lies within the province of the Finance Ministry. Even so, the Board, as the informed spokesman of the mining industry, could give a correct lead by suggesting measures designed to provide such tax relief to miners as would lead to a rapid expansion of the mining industry and eventually to a larger revenue to the Government. The Taxation Enquiry Commission has itself recognised that the "mineral industry in India is yet in an underdeveloped state and requires encouragement." Among other measures, it has suggested that capital expenditure incurred for acquiring minerals, expenditure on successful exploration and development of mines should be allowed to be charged against profits. These and other suggestions, made by the Commission, as well as the constructive fiscal policies adopted in other countries in relation to mining industries, deserve to be examined. It is to be hoped that the Board will include these questions in its agenda for the next meeting. Meanwhile, the Ministry will do well to prepare and circulate a tentative study of these questions.

FEDERATION ON RESERVE BANK AMENDMENT BILL

THE grounds on which the Federation of Indian Chambers of Commerce and Industry has criticised the proposed amendments to the Reserve Bank of India Act are, to say the least, not convincing. In fact, some of them are so puerile that it is surprising that they should have at all been urged by an apex commercial body like the Federation. There is a special reason for making this remark, for, about a year ago, it was the Federation which proposed, in all seriousness, a Rs. 7,200-crore plan. The main defect in that Plan was the absence of any indication of the manner in which the required resources would be found. Surely, the authors of the Plan must have contemplated a large volume of deficit financing, larger than that envisaged in the second Plan of the Government of India. And yet the very same source is opposed to the Government's move to delink the currency reserve requirements from the total notes issued, one of the three features of the amending Bill now pending before Parliament.

As readers are aware, at present the Reserve Bank Act requires currency reserves to be maintained at a fixed ratio related to the note issue. Thus, the total notes issued should be backed 40 per cent. in gold and foreign securities. This has a restrictive effect on the quantum of notes that can be issued, as every expansion has to be matched by gold and/or foreign securities to the tune of two-fifths. Since the Plan envisages heavy investments, there would naturally be a sizable expansion in notes issued. If the present system of reserve ratio were retained, it would be extremely difficult to create the additional requirements of currency, more especially because a considerable amount of foreign exchange would be needed to cover the imports of plant, machinery, and technical services necessary for implementing the Plan. It is with a view to overcoming this difficulty that it is now sought to abandon the proportionate reserve system in favour of a fixed reserve system. According to the Bill, the minimum reserves are to be reduced to an absolute figure of Rs. 400 crores in foreign securities and Rs. 115 crores in gold. Incidentally, gold is now being shown at Rs. 40 crores. This is to be revalued at the current I.M.F. value of $35 per fine ounce and raised to Rs. 115 crores. There is also a provision that, in exceptional circumstances, the minimum level of foreign securities can be lowered to Rs. 300 crores, but only with the previous permission of the Government.

While the Federation is not opposed to a reduction in the proportion of backing to the currency with a view to facilitating the second Plan's progress, it feels that the reserve requirements should continue to bear some relation to the actual note issue. One would like to know what, in the opinion of the Federation, will be the right ratio, if the existing 40 per cent. is conceded as being high in the light of Plan requirements. An indication of its mind on this question would have enabled one to judge whether the Federation is practical or theoretical in taking the stand it has. It will be pertinent to note here that, assuming the expected increase of Rs. 1,000 crores in note circulation during the second Plan period to be correct and taking Rs. 1,480 crores as the total notes issued at the commencement of the second Plan, the minimum reserve of Rs. 515 crores will mean a reserve ratio of 20.80 per cent. at the close of the second Plan. Will this be inadequate in the opinion of the Federation? In times of forced economic development, forced either by war or extreme poverty, it is not unusual for a country to reduce its currency reserve requirements. During the Second World War, for instance, when the U.S. was faced with the problem of a rapidly declining currency reserve under the pressure for more notes, it did not hesitate to reduce the statutory currency reserve limit from 40 per cent. to 25 per cent. The aforesaid figure of about 21 per cent. is not very far from 25 per cent. From a practical angle, therefore, the Government's move is not something that need adversely affect people's confidence in the rupee.

The remark that the Federation's criticism is theoretical may sound trite to orthodox currency managers. But its objection in principle to a minimum fixed currency reserve system is based on a theory which is out of date by at least a quarter of a century, if not more. In a world of managed currencies, the insistence on a high level of foreign currency reserve closely related to the note issue is to carry the principle of minimum safeguard too far. What is the backing for sterling, dollar, franc and D.Mark? What guarantee is there that these currencies will not suffer from excessive inflation and the consequent devaluation? What happens to national currencies that are created on the basis of reserves in these foreign currencies when the purchasing power of the latter goes down in value? In posing these queries, the intention is not to say that there is no value at all in keeping a sufficient volume of foreign currency reserve but only to point out that the value of such a safeguard should not be exaggerated.

The importance of reserves in foreign currency and gold is more relevant to the balance of payments position than to the total note issue. It is in realisation of this that certain underdeveloped countries in Latin America and Asia have related the reserve requirements to their international payments position. Even from this point of view, it is not necessary to lay down a proportionate reserve system. For a country of India's size and development requirements, such a system will prove too rigid. The examples of countries following this system are not quite appropriate to this country, because, first, they are all small economies based on limited productive resources and dependent upon a few commodities and, secondly, India is a relatively developed economy based on a wider structure of economic resources. Today, its *per capita* national income may be smaller than in Latin-American Republics, the Philippines or Ceylon. But, when its economy gathers momentum as a result of the present developmental efforts, it will be far ahead of these small nations. In any case, it is worth noting that the existence of a rigid foreign currency reserve ratio based on balance of payments position has not acted as an effective check against heavy inflation in some of those countries which boast of modern central banking laws.

Viewed from the balance of payments angle, it would appear that a minimum sterling balance of Rs. 400 crores is not so low as to cause any anxiety either in India or abroad. Such a minimum, together with Rs. 115 crores in gold coin and bullion, will give a total reserve of Rs. 515 crores. This is, as was pointed out by this journal on an earlier occasion, more than 50 per cent. of the average annual imports during the second Plan period. With such a minimum currency reserve, India should be able to supplement its foreign exchange requirements by borrowings from the International Monetary Fund and regulate the position through import-export controls, in the exercise of which it has acquired sufficient experience.

The necessity for ensuring the confidence of people, both within and outside the country, in the Indian rupee has been rightly stressed by the Federation. The best way to ensure such confidence is to run the affairs of the country on sound lines. And this is a question of choosing the right type of people for governing the country. The Federation is fully aware of it, for it admits that "good currency management is secured not so much by rigid rules as by men of ability and wisdom." But it is afraid that a weak administration may misuse the power for creating unlimited expansion of currency and bring ruin to all. While there is, of course, some force in this argument, it cannot at the same time be denied that history is full of instances where, despite all the best monetary and currency laws, bad governments had come into vogue and mismanaged the affairs of the State. No Government has been effectively restrained by such man-made laws. For effective checks against a bad Government one must rely on other means, the most important of which is a vigorous, true democracy. It is the duty of associations such as the Federation to be ever vigilant and mobilise public opinion whenever there are signs of a Government—in effect, it means the party-in-power—becoming autocratic.

It is in this context that the absence of any comment by the Federation on the proposal to abolish the Local Boards of the Reserve Bank is a deplorable lapse. The significance of this step was clearly explained by Mr. B. T. Thakur in a widely publicised article, *vide* page 955 of *Commerce* dated 19th May last. As he rightly pointed out, the abolition of the Local Boards of the Bank is a retrograde step, for it will strengthen the trend towards bureaucratism and too much centralisation of power in certain spheres where such will be quite undesirable. It is true that the Local Boards have only limited functions and powers at present. In fact, following the complete State ownership of the Bank, they have hardly any work. But that is no reason for their abolition. On the contrary, they can be of great help to the Reserve Bank in the discharge of its new task, namely, extension of rural credit through the State Bank and the co-operatives. Further, India is a vast country, with varying levels of economic development in different States. The problems of banks all over India are not the same. They vary widely and are not amenable to uniform solutions. The Local Boards will be useful in interpreting them against their proper background and in arriving at the right kind of solutions. They can also assist the Bank in selecting the staff suited to their respective areas. Mr. Thakur was perfectly right when he remarked:

"In notes on clauses in the Bill, it is explained that, with nationalisation of the Reserve Bank, the need to retain Local Boards has disappeared, because they attended to share transfer work. But why should the functions of the Local Boards have been restricted only to the transaction of this formal business? There is nothing in the Reserve Bank Act to utilise them only for such a purpose. And, if it was actually so, that was against the will of the framers of the original and the nationalising Acts; and was a misreading of the purpose and functions of these Boards. The main function of a Local Board, or regional committees, is to keep the central authority fully informed of local facts, conditions and requirements, so that there should be correct basis for the formulation of monetary policy. If the authorities in charge of the Reserve Bank have not vested these Boards with bigger and better tasks, the fault is not of the Boards but of their appointors, who want to work independently of local advice. Today, the need for such consultations is greater than ever."

In short, the Local Boards can be of great service in several ways. What is needed, therefore, is not their abolition but reorganisation and extension to all the States. It is a pity that the Government which talks so much about decentralisation of production has failed to realise the value of decentralisation of certain functions in the sphere of central banking. And it is a greater pity that the Federation, the accredited mouthpiece of the business community, should have chosen to remain silent on this important issue.

The views of the Federation on the amendment relating to the Reserve Bank's control over commercial bank credit will be examined at some length in our next issue. Meanwhile, it must be said that they are also unrealistic and obsolete.

PREMIUM ON INDIAN IRON NEW ISSUE DISAPPOINTS OPERATORS

PEAK IN BANK RATES REACHED—IS IT WISE TO RESUME FUTURES TRADING IN COTTON NOW?

THURSDAY, 5 P.M.

THE share markets have had two unpleasant shocks this week which have completely transformed the sentiment. Confidence has been badly shaken and weak bulls have been selling out in a rush, with a view to cutting their loss or booking their profit before it is too late. It was thought yesterday that the nervous selling would be quickly absorbed and that the markets would stabilise.

MARKET GOSSIP

This view was supported at today's official trading when the trend was remarkably steady, with a minor rise in several scrips. But, all of a sudden, late in the evening today, there was a revival of selling pressure at the kerb. It remains to be seen whether the worst is over. The bulls have, however, been sadly disappointed at the sudden turn of events, so that, even if there were to be no further big drop in values, the recovery might be a slow process.

The first shock was provided by the report that the Government was contemplating certain measures which would impose an additional burden on the cotton textile industry. There is no point in commenting on this report at this stage; since the new policy is in the making at the time of writing, it is better to wait till it is made public officially. It would, however, appear that the widespread impression that the mills are making handsome profits has emboldened the Government to think of taxing them further under some pretext or other. To readers of this column, this development could not be a surprise. We had warned from time to time of the possibility of cotton textile industry being mulcted further by the Treasury.

In the bullish fervour which had overcome them, the speculators had apparently ignored this warning. Many of them had entered the market in the belief that textile shares would touch new high levels. They were talking of Rs. 700 for Bombay Dyeings, Rs. 400 for Kohinoors and Rs. 600 for Centurys. Evidently, they had started pushing up the values rather too fast. Otherwise, it is difficult to explain the quick fall in these counters. From the highest levels seen on Saturday last, Dyeings had withered, within a couple of days, by Rs. 32, Centurys by Rs. 14-8 and Kohinoors by Rs. 13-8. Though today's official closing rates were higher by a few points, the trend in the kerb market reveals a certain amount of underlying weakness.

* * * *

The second shock was even more serious and contributed to the demoralisation of speculative counters to a much greater extent than the first one. It was provided by the Government's decision to permit the Indian Iron and Steel Company Ltd. to issue new shares at a premium of Rs. 3-8 per share, as against Re. 1-8 to Rs. 2-8 anticipated earlier. Within a few minutes of the news, the counter lost a rupee, the rate coming down from Rs. 39 to Rs. 37-12. It then hovered between Rs. 37-14 and Rs. 37-4, but gave way further at today's kerb to Rs. 36-11, which compares with Rs. 39-4 witnessed on Saturday last. Tata Steels, too, declined in sympathy, from Rs. 202-8 on the 9th inst. to Rs. 196 at the kerb today.

In the months of March-April, the expectation in the market was that the premium on Indian Iron's new issue would be Rs. 2-8 per share. Last month, knowledgeable circles were of the opinion that it would be no more than Re. 1-8. It was this view that had led to strong buying support to this scrip. Our enquiries go to show that the Department concerned itself had felt that a premium of Re. 1-8 would be appropriate and had recommended that rate. Later, at higher levels in the Ministry, this rate was raised to Rs. 3-8. The Finance Minister and the Secretary of the Department concerned are stated to be mainly responsible for this decision. It may be noted here that the Company's management had requested the Government for permission to issue the shares at par.

* * * *

In the light of the Government's decision in regard to the terms of the new issues of T.I.S.Co. and A.C.C., a premium of Rs. 3-8 sounds pretty high for the I.I.S.Co. The face and paid-up value of T.I.S.Co. shares is Rs. 75. The premium fixed for the new issue of this Company is Rs. 30, that is, 45 per cent. of the paid-up value. In the case of A.C.C., the shares of which are Rs 100 each, the premium is Rs. 20 only, that is, at half the rate applied to T.I.S.Co. This was done perhaps on the ground that the new issue was to be only at the rate of one share for every two shares, as against one for one in the case of T.I.S.Co. The I.I.S.Co. also proposes to raise new capital at the rate of one for one, but the premium fixed in its case is 35 per cent. Considering that the financial position of this Company is less strong than that of either the T.I.S.Co. or A.C.C., a premium of 35 per cent. is clearly large. Why then did the Finance Ministry choose this rate? We believe that it must have done so for the following reasons:

(1) It was time, that is, when it was the [illegible] all well-established concerns working at [illegible] new shares at a substantial [illegible] on the market value of [illegible] a minimum [illegible] had to tended to raise additional capital at a premium of Rs. 7-8 per share.

(2) On the stock exchanges, Indian Irons were always bid at rates which gave an appreciably lower yield than Tata Steel Ordinaries. When the yield on the latter ranged between 4.5 and 6 per cent., it used to be between 2.5 per cent. and 3.5 per cent. on the former. In other words, the market evaluation of the prospects for Indian Irons was more optimistic than for Tata Steels. The same yardstick should be applied for determining the premium for the new issue of I.I.S.Co.

(3) The heavy bull speculation in the shares of I.I.S.Co. itself showed that the operators felt that the scrip was worth more than was believed to be so by those who proposed the rate of Re. 1-8 per share.

(4) The spurt in the value of T.I.S.Co.'s rights for the new share from Rs. 57 to Rs. 65 and in that of the ex-right quotation for T.I.S.Co. shares from Rs. 193-12 to Rs. 202 must have created the impression in the Finance Ministry that they were deliberately misled by Tatas that their Company's shares could not bear a premium of Rs. 50, and much less Rs. 75, per share proposed by the Government. The rise in the value of A.C.Cs. in recent weeks must have also strengthened this view. It would be recalled that Tatas were arguing that even a premium of Rs. 35 would be too heavy and would not attract the support of investors. Subsequent developments have belied their contention. There are keen buyers for both the rights and the shares. When the rights stood at Rs. 65, it meant that the *cum*-right value of this scrip was as high as Rs. 287. The Finance Ministry must have felt that it should not allow itself to be "fooled" again by the private sector.

The "victim" of the Ministry becoming wise after the event has unfortunately been the I.I.S.Co. But this is hardly just. There cannot be one rule for X. and another for Y., both belonging to the *same* field and *category*. The market, however, cannot complain on this score. It is the exaggerated notions of speculators and their price-boosting tactics that have led to the Government's latest stiff decision.

It must be added that there are still some optimists who argue that, even at the current price of about Rs. 37, Indian Irons are not overvalued. Their line of reasoning is that, if one buys the scrip at this level and pays Rs. 13-8 for the new share, one will get two shares for Rs. 50-8, or, say, a round figure of Rs. 51-0, allowing for brokerage, and transfer charges. This means that each share will cost Rs. 25-8 net. If the Company maintains the dividend at Re. 1 per share on the increased capital, the yield will be a little less than 4 per cent. Having regard to the bright prospects for the Company, even this yield should, in their opinion, be regarded as attractive. It is further pointed out by them that, unlike the T.I.S.Co., the I.I.S.Co. is yet to make a bonus issue and that, when all the expansion programmes are completed, it would be able to declare higher dividends. According to their information, the Company is said to be making profit at the rate of Rs. 4 per share, whereas it is now paying a dividend of only Re. 1 per share. This school of thought, therefore, believes that, after the present shake-out is over, the scrip would quickly rise again. An additional point that is mentioned in favour of this view is that the Company has permission to make the new issue only after 1st November 1956, thereby giving ample time for investors to get the necessary capital ready.

* * * *

The capital market is being reserved for the Central and State Governments for a period of four months from the 1st proximo. During this period, no flotations by the private sector will be allowed. This was the reason why the Hindustan Motors rushed through its Rs. 5-crore preference issue. And it is for the same reason that the I.I.S.Co. has been told by the Government that its new issue can be made only after 1st November 1956. The last big capital offer of this season by the private sector will be the long-awaited issue of Cauvery Sugars and Chemicals Ltd. This issue is for an aggregate sum of Rs. 49 lakhs, consisting of Rs. 20 lakhs in 6 per cent. (tax-free) cumulative preference shares of Rs. 100 each and Rs. 29,00,000 in ordinary shares of Rs. 100 each. Both the shares are being offered at par. The list will open on the 28th inst., and will remain open until 12th July 1956, unless closed earlier at the discretion of the Directors, but not before 4th July.

Although only two weeks are left for the month of June to come to a close and the rains have set in, the money market is still fairly tight. The repayment of commercial advances of seasonal nature is being offset by fresh demand for credit from industries and trade. If these conditions continue in the coming fortnight also, it is doubtful whether the Central Government's new loan will be floated in the first week of July. Since, however, the monetary authorities are alive to the fact that seasonal variations in the short-term money market are thinning down, it will not be surprising if they decide not to wait beyond the first week of next month. Indeed, the chances are that the flotation of new loan may lead to perceptible stringency in the money market. Several institutional investors are keeping their funds liquid with banks on a call basis at 3 to 3½ per cent. When they draw these funds for investment in the new loan, the banks will have to go to the Reserve Bank for accommodation, unless the present demand for credit eases.

Last year, the banks were the principal supporters to the new loan. This year, it is doubtful whether they can take up the forthcoming issue on the same scale. Apart from their present tight position, last year they could borrow funds from the Reserve Bank at 3 per cent. against usance bills and buy with such funds the new loan carrying interest at 3½ per cent. In this bargain, they thus gained ½ per cent. Now, however, the cost of borrowing against usance bills has gone up to 3⅜ per cent., with the result that the margin of profit will be only ⅛ per cent., too low to induce the banks to take all the trouble of drawing a usance bill, getting the customer's signature, and discounting it with the Reserve Bank and then applying for the new loan. If this reading of the situation is right, the Reserve Bank, the State Bank and the insurance companies will have to take up the bulk of the issue. Considering this prospect, there is little likelihood of a long-term loan giving a yield of 4 per cent. being issued by the Centre, in addition to the customary 3½ per cent. medium-dated loan.

* * * *

By and large, world money rates in recent months have pursued a one-way traffic. They have moved up. The Bank rate in more than one country has been revised upwards. This cannot altogether be a matter of unconcern to India which depends for the success of its Five-year Plan on large imports of capital goods—if not of capital. If the interest rates in the overseas countries continue to rise, India cannot possibly get advantageous credit terms for its imports. Interest rates in the industrially advanced countries are, therefore, a matter of utmost concern to India. What, then is the prospect for these rates? The outlook varies, of course, from country to country. But an interesting feature is that in many of the countries where the Bank rate has been raised there is a growing section of opinion which feels that the time has arrived for the interest rates to be lowered. In the U.K. itself, there is a section of bankers which feels that the dear money policy has been overdone. Another section feels that it is tending to make Britain's exports costlier than they need be. There is even a section which seems to feel that dear money has failed to achieve the results expected of it. In the House of Commons, the U.K. Chancellor of the Exchequer was heckled last week by a member who asked when the Government proposed to reduce the Bank rate, now that the higher rate had failed to check inflation. The Chancellor, of course, refused to admit that the Bank rate had not been effective. But the incident shows how strongly people react to the continued operation of a high Bank rate.

In Germany, the increase in Bank rate has led to open disputes in the cabinet itself and between the Government and the Central Bank. Dr. Adenauer has described the Bank's action as "a heavy blow to the German economy, probably unnecessary and perhaps of no avail." Incidentally, it shows how even nationalised banking institutions in these countries can adopt policies which the Government of the day may not approve. One is compelled to admire the sense of financial independence of the central banking authorities in the Western world. Be that as it may, the fact remains that the West German Government is opposed to high Bank rates.

The official rates of discount of the Federal Reserve Bank, as is well known, have gone up in the U.S. also. This policy too has been the subject of criticism, though not in so open a manner as in West Germany. It would appear that some of the leading members of the Republican Party are opposed to this change. In any case, the rates may be revised downwards, if industrial unrest, which has reared its ugly head in that country, were to spread more widely than now.

This brief survey should indicate that in none of the countries where the interest rates have been raised are the authorities very happy over the situation. In any case, the chances of any further increase in Bank rates in the Western world are very, very remote. One can, therefore, infer that the peak levels in Bank rates have been seen. Further, the monetary authorities would not, generally speaking, like to maintain these rates at their high levels for a moment longer than is necessary. Surely, this is a prospect that India should welcome heartily.

* * * *

The stage is ready for the resumption of forward trading in cotton with effect from 18th Inst. The general body of the East India Cotton Association has voted in favour of two hedge contracts and approved of all the decisions of the Board. Since the Board has generally adopted all the suggestions made by the Forward Markets Commission, it is now understood that the Commission will raise no obstacle to the reopening of the futures. The Commission has yielded on the question of the continuance of the present system of surveying of cotton while the Board is reported to have accepted the Commission's view relating to the fixation of tending differentials on the basis of forward, rather than spot prices. Apart from these changes, there have been no major alterations—that is, alterations other than those that had been anticipated already. The whole decision now rests with the Government to which the Commission is reported to have forwarded the Board's proposals, apparently with its endorsement. The Government's permission is expected any time now.

If there is one thing that is difficult to predict about the futures trading it is its future. The two chief uncertainties are the crop and Washington's cotton policy. Little can now be predicted about the crop. If the crop turns out to be less than normal, there is bound to be a recurrence of the kind of crisis which the market faced last year. Indeed, the prospect for such recurrence is greater, considering the

(Continued on page 1179)

EQUITIES MARKED DOWN

HEAVY SELLING IN INDIAN IRONS

(From Our Own Correspondents)

BOMBAY, 14*th June*

EQUITIES on the Stock Exchange presented a two-sided movement during the week under review. The buoyancy noted in the previous week could not persist further than the opening day of the week. For, in the following two sessions, the market experienced a sharp setback on speculative offerings. At the close, however, there was again a moderate recovery, but such was not strong enough to make good the earlier loss. On balance, therefore, equities finished with modest losses over a wide range.

The chief event of the week was the announcement by the Indian Iron and Steel Company, Ltd., of the terms of its new issue to the effect that the Government of India had sanctioned the fresh issue of ordinary capital on the basis of one new share at Rs. 13-8 for each ordinary share of Rs. 10 now held. This meant a premium of Rs. 3-8 per share, or 35 per cent., on the new shares, as against 40 per cent. insisted by the Government in the case of Tata Iron and Steel and 20 per cent. in that of A.C.C. The speculators were, however, quick to cash their holdings on the pretext that the premium was Re. 1 higher than their expectations. The heavy selling orders which were unleashed depressed Indian Irons and with them the other main sections of the market succumbed to sizable selling.

Another factor which affected the sentiment was the rumour that the Government of India might increase the excise duty on mill cloth to mop up the extra profit resulting from the reported proposal to allow mills to increase their spindleage and loomage by 10 per cent. for catering to the needs of the export markets. This dampened the enthusiasm of operators who hastened to liquidate their purchases, especially in textile shares. This, too, helped acceleration of selling pressure in other sections.

In the steel section, Tata Ordinaries gathered strength early in the week from Rs. 200-4 to Rs. 202-8, but soon reacted to Rs. 193-4. Towards the close, however, they recovered to Rs. 198-4. Tata Rights were done at the close at Rs. 64, as against Rs. 64-8 a week ago. Indian Irons moved up from Rs. 38-8½ to Rs. 39-3½ before receding to Rs. 37-4. The closing was a shade better at Rs. 37-7.

Textile shares were erratic. Bombay Dyeings advanced early in the week from Rs. 668-12 to Rs. 675-10, but the subsequent selling brought them down to Rs. 643-12. On replacement buying and bear covering the shares finished better at Rs. 651-14. Centurys closed Rs. 2 lower at Rs. 564, after touching earlier a low of Rs. 556. Kohinoors finished with a loss of Rs. 5-8 at Rs. 370. Central Indias, however, provided an exception with a rise of Rs. 8-8 to Rs. 150. Ednas shares were also higher by Rs. 4 at Rs. 62. Finlays were quiet at Rs. 340. Gokaks gathered on balance Rs. 2-4 to Rs. 235-4. Indu Ordinaries lost As. 1½ to Rs. 13-13. Lakshmis receded by Rs. 5 to Rs. 690, Mysores by Rs. 2-8 to Rs. 112-8 and New Greats by Rs. 3 to Rs. 252. Shree Niwas shed Re. 1-4 to Rs. 211-4, Simplex Rs. 2 to Rs. 221 and Standards Rs. 3-12 to Rs. 440. Svadeshis were, however, keenly sought and they shot up by Rs. 11-8 to Rs. 253. Tata Mills were lower by Re. 1 at Rs. 54-8 and Vishnus by Rs. 3-2 at Rs. 185-10.

A sharp drop of Rs. 6-4 to Rs. 157 in Bank of Indias was the feature in the banking section. After advancing from Rs. 96 to Rs. 98-4, Barodas gave way to Rs. 97. Centrals were steady at Rs. 51-8 and their new shares at Rs. 53. Punjab Nationals rallied further from Rs. 55-4 to Rs. 57-8. Union Banks changed hands As. 2 higher at Rs. 6-12. United Commercials were done As. 8 better at Rs. 51.

Insurance shares met selling pressure. New Indias were brought down from Rs. 44 to Rs. 42-12, before closing at Rs. 43-2. Orientals slipped from Rs. 3,900 to Rs. 3,855. Empire of Indias suddenly slumped from Rs. 600 to Rs. 325. Indian Mercantiles reacted from Rs. 43 to Rs. 41-8.

Except for a few select counters which were marked up modestly, the miscellaneous section ruled quiet in consonance with the general trend. In the sugar group, Belapurs were lifted up early in the week from Rs. 236 to Rs. 240-8. After reacting from this level to Rs. 234-8 they closed at Rs. 237-8. Bhopals were As. 2 better at Rs. 13-12 and Walchandnagars gained Re. 1-4 to Rs. 255. Phaltans were, however, lower by Re. 1 at Rs. 156. In the cement group, A.C.C. moved narrowly and closed a fraction lower at Rs. 218. Trading in these shares on an *ex*-right basis will commence on 18th June. The Stock Exchange authorities have decided that for the purpose of *badlas* that will take place on 15th June the unit will be 10 shares, instead of five. Thus, for the current settlement (22nd June) the contract will be for 10 old shares on *cum*-right basis, but for the ensuing 6th July settlement there will have to be a contract of 10 old shares at *ex*-right price plus a cash contract of five new shares by letters of renunciation. Digvijays were bought Re. 1-4 higher at Rs. 191-8.

In the engineering and mining section, Alcocks were on offer to decline from Rs. 363-12 to Rs. 356-4. Tata Locos fell by Rs. 4 to Rs. 150-8 and Premier Constructions by Rs. 2-4 to Rs. 186. Shivrajpurs were in favour and rose by Rs. 3-12 to Rs. 107-4 on favourable reports from the manganese market. Indian Coppers finished As. 6 better at Rs. 7-4, following encouraging working results of the Company and the declaration of a final dividend of 10 per cent. and a bonus of 25 per cent., making a total dividend of 20 per cent. and a bonus of 25 per cent. for the year ended 31st December 1955, as against a dividend of 15 per cent. and a bonus of 10 per cent. for 1954.

Shipping and transport shares were quiet. Scindias closed at Rs. 18-12½ (as against Rs. 18-14½ a week ago) after going down to a low of Rs. 18-7. Great Easterns shed As. 2 to Rs. 18. India Steamships were placed at Rs. 9 *ex-div.*, as against Rs. 9-7 *cum-div.* Hindustan Motors eased from Rs. 10-8 to Rs. 10-0½. Premier Automobiles, which were admitted to the cash list of the Stock Exchange today, were done Rs. 2 lower at Rs. 92. Among miscellaneous industrials, Bombay Burmahs fluctuated widely between Rs 663-12 and Rs. 640 before closing at Rs. 657-8 with no change over the week. B.I.Cs. were fairly steady at Rs. 11-3½. National Rayons were marked up on balance by Rs. 3-4 to Rs. 249-8. Tata Chemicals were featureless at Rs. 18-15, while Dhrangadhra Chemicals were bought Re. 1 higher at Rs. 126-8.

* * * *

Calcutta Stock Exchange

CALCUTTA, 13*th June*

Mixed conditions were in evidence on the Calcutta Stock Exchange during the week under review. During last Thursday and Friday, a steady trend was maintained. However, from Monday prices eased, following the Government's announcement which, although it fixed uniform prices for iron and steel throughout the country, virtually raised the prices to consumers in Calcutta. Speculative counters were particularly affected when the market knew that any proposal for rights issue in Indian Irons in the proportion of 1 to 1 would only be sanctioned by the Government, if the rights carried a premium of Rs. 3-8 per share, i.e., the rights should be issued at Rs. 13-8, as against the face value of Rs. 10 per share

Sectionwise, sentiment broadened in the textile section on the prospect of a more realistic policy towards mills. Kesorams were a star feature and jumped to Rs. 19-10 from Rs. 18-4, although subsequently the rate gave way to close steady at Rs. 18-14. Elgin Mills at Rs. 28-10 gained As. 12, with Bengal-Nagpurs moving to Rs. 9-8 from Rs. 9-2 previously. At Rs. 8-15, Cawnpores represented no change.

Earlier in the week the lower levels attracted buying support to the coal section, but from Monday the recovery received a setback. Burrakurs recovered to Rs. 13-11 from Rs. 13-1, giving way subsequently to Rs. 13-8. Bengals sagged to Rs. 538, after moving up to Rs. 542 from Rs. 536. Western Bengals at Rs. 6-15 were higher by As. 2, and New Beerbhooms were pushed to Rs. 19-7 from Rs. 19-3. East Indians were unchanged at Rs. 33-4.

Jutes shares moved within narrow limits. Nationals, after improving to Rs. 25-12 from Rs. 25-6, were dealt with at Rs. 25-6. However, New Centrals, after declining to Rs. 17-13 from Rs. 18-1 on profit-taking, closed better at Rs. 18-4. At Rs. 238 Kelvins were weaker by Rs. 2, and Champadanies at Rs. 163-8 recorded a recession. Anglo-Indias were neglected and on offerings receded to Rs. 167-8 from Rs. 181. Reliances were unchanged at Rs. 11-2.

Indian Coppers in the mining section were fully steady, and rose to quote as high as Rs. 7-4 from Rs 6-15. The rate was subsequently maintained too. On interested buying, Orissa Minerals were raised to Rs. 27-12 from Rs. 24-6. Burma Mines revealed considerable strength as evidenced in the recovery to Rs. 4-2 from Rs. 3-11. The section was not, however, devoid of a weak spot as indicated by the recession in Karanpura Developments to Rs. 24-8 from Rs. 25-2.

Engineering shares received a setback for the reasons already stated, but this setback should prove only temporary. Burn & Cos. eased to Rs. 376 from Rs. 382. Texmacos were dealt with at around Rs 24-10 and declined to Rs. 24-6. Richardson & Cruddas at Rs. 26-10 were a few annas lower. Indian Irons, at one time, had improved to Rs. 39-2 from Rs. 38-10 on the prospect of an immediate rights issue, but subsequently declined to as low a rate as Rs. 37-8, when it was learnt that any rights issue would be allowed by Government only after 1st November and that the issue would carry a premium of Rs. 3-8 per share.

Cement shares continued to be firm. Asokas at Rs. 12-2 maintained the higher rate. Assam Bengals were better at Rs. 8-9. Sone Valley had buyers at the higher rate of Rs. 9-0, as against Rs. 8-13 earlier.

Among paper mills, India Paper Pulps registered steadiness at Rs. 25-13. Orients were fully steady at Rs. 39 earlier before giving way to Rs. 38-12. At Rs. 44-14, Titaghurs accounted for a fractional improvement. Among shippings, India Steamships were favoured and as a result, they impressively rose to Rs. 9-10 from Rs. 9-2. Sugars were steady with Darbhangas being put through at Rs. 24-3 as against Rs. 23-3 a week ago. Carew & Cos. at Rs. 8-15 picked up As. 3. Belsunds were held firm at Rs. 11-5.

Selected counters in the miscellaneous industrials section were favoured at higher rates. Thus Indian Aluminiums had a number of enquiries and in the transactions that followed the rate improved to Rs. 23-2 from Rs. 22-10. Alkali & Chemicals were another favourite and advanced to Rs. 21-8 from Rs. 20-13. Niccos were fully steady at Rs. 24-9 and from Rs. 49-8 Rallis rose to quote Rs. 51. B.I. Corporations were steady at Rs. 11-6. Clive Row Investments were lifted to Rs. 12-10 from Rs. 11-10, while Dunlop Rubbers were unchanged at Rs. 30-10. Angelo Bros. came to business at Rs 21-12, as against Rs. 21-6 previously.

Teas received more attention at around previous levels on expectations of prices rising at the auctions.

* * * *

Madras Stock Exchange

MADRAS, 12*th June*

Barring a fractional recession in some planting shares, the general undertone of the share market was steady this week. Under the lead of textile shares, which hardened further on a good amount of investment support, the market moved forward with many leading counters recording notable gains on balance. Reports from Delhi that the Government of India might revise its policy regarding cotton textile industry would appear to have influenced the sentiment favourably, although later on reports, which suggested that the Centre was likely to mop up the additional profit of mills by an increase in excise duty on cloth, caused a contraction of enquiries towards the close. Miscellaneous industrials also received some support, but buying was selective. Planting shares presented a mixed pattern, while banks were in favour.

The following dividend announcements were made during the week under review:

Company	*Year ended*	*Dividend* Per cent.
Kumbakonam Electric ..	31-12-55	10 (8½)
Negapatam Electric	31-12-55	8½ (8½)
Balanoor Tea	31-3-56	15 (f) (15)
Devon Tea	31-3-56	15 (f) (15)

Figures in brackets represent the corresponding dividends of the previous year. f = Final.

Sectionwise, the buoyancy in textiles noted in the previous week gathered further momentum. Bangalore Woollens were steady at about Rs. 571-4, while Buckinghams gained Re. 1 to Rs. 195. Cambodias were, however, quiet at Rs. 14-4. Cannanores advanced by Rs. 4 to Rs. 186. Coimbatore Cottons jumped by Rs. 7-8 to Rs. 357-8, Coimbatore Kamala Rs. 100 paid-ups by Rs. 4 to Rs. 100 and Rs. 50 paid-ups by Re. 1 to Rs. 50. Coimbatore Pioneers gathered Re. 1 to Rs. 282-8. Dhanalakshmis were again a feature with a smart rise of Rs. 12 to Rs. 402. Janardhanas were taken up As. 8 higher to Rs. 118-8. Krishnarajendras changed hands Rs. 4 higher at Rs. 112, Lakshmis Rs. 5 better at Rs. 220 and Lakshmis 'A' Rs. 2-8 at Rs. 110. Loyal Textiles shed As. 12 to Rs. 51. Despite the lock-out declared by the Madura Mills the shares of the Company met with no heavy offerings. On balance, they lost only As. 8 to Rs. 51. Mettur Industries gained Rs. 2-8 to Rs. 502-8. Palaniandavars 'B' moved up by Rs. 9 to Rs. 235 and Premiers by Rs. 2 to Rs. 217. Radhakrishnas Rs. 100 paid-ups hardened by Rs. 3-8 to Rs. 320 and Rs. 50 paid-ups by Rs. 5 to Rs. 160. Rajalakshmis firmed up by Rs. 2-8 to Rs. 176-8, Ramalinga Choodambikas by Rs. 5 to Rs. 225, Rayalseemas by Rs. 2-8 to Rs. 136 and Saradas by Re. 1-8 to Rs. 142. Travancore Rayons were well held around Rs. 15-8. Vasantas were lifted by Rs. 5 to Rs. 300 and Vijayalakshmis were done Rs. 5 higher at Rs. 135.

In the planting section, coffee shares continued to receive support. Amalgamated Coffees were sought after and they gained As. 12 to Rs. 11-8. Bababuddins rose by As. 8 to Rs. 12. Mysore Coffees were steady at Rs. 2-12½. Rajendras picked up As. 3 to Rs. 9-2. Consolidated Coffees were, however, lower by As. 4 at Rs. 20-10 and Coffee Lands by As. 2 to Rs. 24-8.

Tea shares were a little quiet on reports that withdrawals in tea auctions were heavy, except in the case of quality teas. Balanoor Teas moved up by As. 4 to Rs. 24-8, on the announcement of a final dividend of 15 per cent., making 25 per cent. for the year ended 31st March 1956, the same as for the previous year. Chembra Peaks were dull at Rs. 5-6. Coorg Teas lost As. 4 to Rs. 11-12, Devasholas As. 8 to Rs. 29-12 and Emerald Valleys As. 8 to Rs. 8-12. Devon Teas gathered As. 8 to Rs. 24-12 on declaration of a final dividend of 15 per cent., making 25 per cent. for the year ended 31st March 1956, thus maintaining the distribution. Haileyburias were lower by As. 4 to Rs. 28-8, while Highland Produces were a shade better at Rs. 18-15. Kalasa Teas were also an exception to the general trend with a rise of As. 2 to Rs. 16-14. Nonsuch Teas softened by As. 4 to Rs. 37-4 and Peermades by As. 2 to Rs. 37. Periakaramalais were featureless at Rs. 9-4. Twyford Teas reacted from Rs. 25-6 to Rs. 24-8. United Nilgiris fell by As. 3 to Rs. 26.

Among rubber shares, Cochin Malabars were dull at Rs. 9-7. Kailas Rubbers were steady at Rs. 6-1. Kalpettas were featureless at Rs. 34-12. Malankaras were marked down by As. 4 to Rs. 32-12, while Midlands hardened by As. 2 to Rs. 22-6 and Nenmeny by As. 2 to Rs. 24-14. Pullangodes lost an anna to Rs. 4-12 and Travancore Rubbers As. 2 to Rs. 25-4.

In the miscellaneous section, Andhra Cements were in the limelight with a rise of Rs. 2-8 to Rs. 170. Dalmia Cements were, however, lower by As. 8 to Rs. 17-10 and Travancore Cements by As. 4 to Rs. 12-14. Binnys shot up by Rs. 5-8 to Rs. 184. Indian Aluminiums changed hands As. 14 higher at Rs. 22-8. Mysore Chemical Manufactures gained As. 4 to Rs. 24-12 and Mysore Stonewares As. 6 to Rs. 10-12. Rallis provided another feature with an increase of Rs. 7-4 to Rs. 50-4. Ranes gained further by Re. 1 to Rs. 12. Textools shaped well, having been marked up by Rs. 6 to Rs. 179.

NEWS IN BRIEF

THE next session of the Lok Sabha will commence on 16th July and end on 7th September.

The Government of India has decided to continue free licensing of linoleum for export up to the end of December 1956 to all permissible destinations.

The Government of India has decided to license freely the export of hand-printed cotton *saris*, meant for domestic consumption, till the end of December 1956.

The Travancore-Cochin Government has sanctioned a scheme costing Rs. 6.16 lakhs for the development of cashew plantations in the forest lands of the State.

A consignment of 500 tons of coffee, valued at Rs. 40 lakhs, will be shipped in a few days' time from Cochin to Russia by a Russian vessel on behalf of the State Trading Corporation, New Delhi.

The management of the Madura Mills Ltd. has declared a lock-out of the mills, as a sequel to workers in the ring frame and winding departments staging a stay-in-strike for four days. The lock-out will affect 12,500 workers.

The Government of India is planning the setting up of technological research centres and organisations for directing exploration and exploitation of solar and wind power in the country. Proposals in this connection are being studied by the Government.

The President has given his assent to the Hyderabad General Sales Tax (Amendment) Bill, 1956. The Bill seeks to achieve additional resources for implementing the second Five-year Plan by increasing the sales tax on certain commodities and to subject to sales tax certain other commodities which have hitherto been exempt.

Negotiations for a new trade agreement between India and Burma began in New Delhi on Monday this week, between the Burmese Ambassador in New Delhi and the Joint Secretary, Union Ministry of Commerce and Industry. A general discussion was held on a draft trade agreement, which will be examined in detail later.

A three-member railway delegation has left for China and Japan to make a detailed study of the working of important marshalling yards and control offices in the two countries. It will also study the regulation of movement of traffic, the working of the centralised traffic control system, the capacity of single-line sections by diesel and by electric traction, operation of heavy mineral traffic like coal, iron, etc., and compilation of statistics in the two countries.

The Government of India has decided to intervene in the dispute between the Mysore Government and the management of the Kolar Gold Mining Companies over the question of compensation to the Companies in the event of their nationalisation. Talks between the State Government and the Companies, which had failed recently at Bangalore, have been resumed in New Delhi at the instance of the Central Government.

Orders for the supply of additional plant and machinery for the Integral Coach Factory at Perambur, near Madras, will be placed shortly, global tenders for which were invited on behalf of the Government of India earlier this year by the Swiss Car and Elevator Manufacturing Corporation Ltd., Switzerland. The Government of India has an agreement with this firm for providing technical aid for the establishment of full production at the Integral Coach Factory.

The Madras Government will shortly finalise the list of commodities on which sales tax is proposed to be levied at a single point, instead of the present multi-point levy. The Government is taking steps to ensure that the change does not result in a fall in revenue. As the single-point levy is easier of evasion than the multi-point one, the change is proposed as an experimental measure and will be confined only to commodities wherein the risk of evasion is very little.

The National Small Industries Corporation Ltd., New Delhi, has drawn up a scheme of hire-purchase of machines with a view to providing the small-scale industrial units having limited financial resources with facilities for acquiring machines and equipments on easy instalment basis. Machines will be supplied to deserving units against an initial advance deposit, not exceeding 40 per cent. of the value of the machines to be purchased, to be paid as earnest money. The balance will be recovered in easy instalments spread over a number of years.

The Indian Statistical Institute has set up an industrial management research unit for planning, with headquarters at Bangalore. The main functions of the new research unit are: (1) To study and report on the nature of organisations most suited for State enterprises, (2) to formulate methods for maximum utilisation of resources, (3) to investigate problems in relation to industrial development, such as economics of location, mechanisation and inter-industrial relationships, and (4) to supply all the necessary technical data for work connected with long-range planning.

The Government of India has decided to set up a steel foundry at Chittaranjan for the production of locomotive steel castings, which are at present imported. The capacity of the proposed foundry will be 7,000 long tons of finished steel castings annually, with scope for expansion to 10,000 long tons. Proposals have been invited from a number of American firms of consulting engineers for setting up the foundry. The U.S. Technical Co-operation Administration will finance the dollar expenditure incurred on the services of the consulting engineers.

The President has given his assent to the Indian Trade Unions (Bombay Amendment) Bill, 1956. Under Section 33 of the Indian Trade Unions Act, 1926, the Registrar of Trade Unions may make complaints in respect of offences under Section 31(2) within six months of the date on which the offence was committed. The Bombay Government found that, in most cases, the offences come to the notice of the Registrar after the expiry of this period. It, therefore, considered that Section 33 should be amended to enable the Registrar to make complaints six months after the offence came to his notice. The aforesaid Bill was, accordingly, drawn up to achieve this objective.

* * * *

From Abroad

Jordan has become a member of the International Finance Corporation.

The East Pakistan Government has set up a jute advisory committee to advise the Government on general matters relating to jute, particularly prices.

More U.S. cotton textile mills propose to cut production on account of the rising Japanese competition. One of the mills has also postponed indefinitely its plans for expansion programme costing $10 million.

A meeting of member-countries of the International Tin Agreement will be held in London on the 29th inst. to decide the date on which the Agreement will come into effect. Most probably, the date will be 1st July 1956.

The U.S. House of Representatives has passed the Foreign Aid Bill after cutting the demand by $1,100 million to $3,800 million. The amount sanctioned by the House is still $1,000 million more than the appropriation voted by the Congress last year. The Bill is now before the Senate.

A West German firm has secured a contract worth DM. 78 million (about £6.5 million) for building a coke oven plant for the combined foundry and steel plant of the Hindustan Steel Company in Rourkela. The plant will have an annual capacity of one million tons of steel and will be built in North Orissa.

Ceylon is reported to have decided to break away from the International Wheat Agreement. The main reason for such a step is said to be that, under the Agreement, Ceylon does not benefit from the decline in world wheat prices. It may sign bilateral agreements with wheat-producing countries to get its annual requirements of 200,000 tons of wheat and flour.

A tripartite conference is being held at Karachi to explore the possibilities of launching a joint shipping enterprise, financed equally by Iraq, Iran and Pakistan. The aim of the joint company is to start coastal shipping between Pakistan and ports on the Persian Gulf. This is the first time that three Muslim countries of this region have come together to discuss a commercial venture on a co-operative basis.

A contract for printing machines which will take two years to fulfil has been placed by the Government of India with a U.K. firm. The order for the 22 reel-fed rotary presses to be built for India is one of the biggest ever placed with a printing-machine manufacturer for this type of equipment. Costing several thousand pounds, each of the presses will be used for printing Government forms.

The Soviet Union's population has now been officially estimated at 200.2 million, about 20 million less than the estimate made by Western countries, according to the official publication, *The National Economy of the U.S.S.R.*, released for public sale. The publication also gives statistics of industrial production, of which steel accounts for an output of 45.3 million tons in 1955, as against 18.3 million tons just before the German invasion in 1941.

The U.K. Government has decided to drop the proposal contained in the Finance Bill to increase the taxation liability of foreigners and Commonwealth citizens working in Britain for overseas firms. An amendment to the Finance Bill will be made which will have the general effect of restoring the existing position for persons domiciled overseas who work in the U.K. for overseas employers. Such persons, who had been hitherto liable on the remittances basis, will continue to be liable on that basis and not on their full pay.

Japan is planning to set up in July a special office in New York to render after-service to ships manufactured in Japanese shipyards. The office will be staffed with several technicians who will handle repairs and arrange for spare parts necessary to maintain the ships exported by Japan in first-class condition. After-service has become an indispensable part of the ship export programme as in the case of plant exports. Complaints have been heard from time to time that it is difficult to make even minor repairs because spare parts are not immediately available at the ports of call of the ships made in Japan.

The British Government has turned down the suggestion made in the House of Commons last week that it should try to reach an amicable settlement with India in respect of limiting the latter's export of cotton textiles to Britain. When a member pointed out the existence of a similar agreement between the U.S. and Japan, Mr. Thorneycroft, President of the Board of Trade, said that Britain itself had limited by quota imports of Japanese cotton cloth. He added: "Our relations with India as a fellow member of the Commonwealth are not analogous to those between the U.S.A. and Japan. In the present circumstances, the Government would not feel justified in changing the basis of our trade arrangements with India."

The Bulgarian Government is doing its utmost to make the Plovdiv Fair a great success this year too. The Fair, which is the seventeenth of its kind, is scheduled to open in that city on 2nd September next and will continue till 20th of that month. Preparations are already in full swing, new pavilions are being built and general improvements on international standards are being introduced. Elaborate arrangements are being made to attract foreign exhibitors to participate in this Fair. Participating foreign exhibitors will be granted an allowance up to a maximum of $180 per square metre of covered floor space and a maximum of $80 per square metre of outdoor space.

In 1955, the Fair city extended over an area of 380,000 sq. metres, of which 105,000 sq. metres represented total floor space. Half the floor space was allotted to foreign exhibitors who were able to establish valuable business contacts with business men from France, West Germany, Austria, Switzerland, Sweden, Holland, Greece, Turkey, Japan and several other countries.

The Plovdiv Fair is playing a major role in Bulgaria's economic life. It has opened new opportunities for the further extension of economic collaboration between Bulgaria and the countries of Europe and the Near Middle East. During the past several years, it has acted as a great stimulant to the development of Bulgarian industries. In this year's Fair, the Bulgarian Industrialists are looking forward to put on show their best wares.

PERSONAL

MR. J. R. D. Tata, Chairman, Messrs. Tata Sons (Private) Ltd., left for Geneva on Sunday last.

Mr. L. Francis Hartley has been re-elected Chairman of the International Wool Secretariat for the ensuing year.

Mr. Lyman Thomas Newell, Aviation Electronics Adviser to the Technical Co-operation Mission at the U.S. Embassy at New Delhi, has left for Colombo.

Dr. K. S. Krishnan, Director, National Physical Laboratory, Delhi, left for Paris this week to attend a meeting of the Executive Board of the International Council of Scientific Union now being held there.

Mr. B. K. Nehru, Joint Secretary, Union Ministry of Finance, who has been deputed by the Government of India to study the money market conditions in foreign countries as a preliminary to obtaining financial credit to implement the various projects under the second Five-year Plan, left for London last week.

Prof. C. N. Vakil, Director, School of Economics and Sociology, University of Bombay, has been appointed a member of the Experts Committee of the International Labour Office which is to submit a report on industrial and human relations. Prof. Vakil will leave for Geneva on the 28th inst. to participate in the deliberations of the Committee between 2nd and 12th July. Later, he will attend the first Congress of the International Economic Association to be held at Rome from 6th to 11th September.

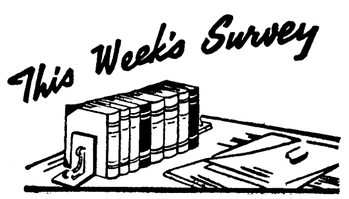
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 13*th June*

Economic Difficulties in India

The economic difficulties of India are only partially to be attributed to the fall in the price of silver, or political unrest, according to Sir Atul Chatterjee, the High Commissioner for India in London, who speaking at the International Labour Conference at Geneva last week-end, said that the complete collapse of agricultural prices throughout the world amply accounted for the agricultural slump in India, thus contracting markets for Indian produce. The advance in industrial conditions in the West could not be attained, he said, unless Asiatic and other overseas countries participated in it. Sir Atul's diagnosis is quite correct. India, as we are all aware, is at once one of the greatest of agricultural countries and also, by international recognition as expressed through the League of Nations, one of the eight principal industrial countries of the world. But her industries, while already important enough to secure her this position, are at present small in comparison with her agriculture, and small also in relation to the future extension which they are no doubt destined to achieve. The development which India contemplates may be presumed to be in the direction in which Canada has already made such progress, that of an improvement in the technique of economical agricultural production combined with the simultaneous enlargement of industrial and commercial activity. In this development it may be anticipated that, as in other countries and probably more than in most, the active assistance and guidance of Government and the official machinery is an essential necessity.



MR. L. S. VAIDYANATHAN

LIFE insurance is so great a cause and attracts men of such diverse talents that it is difficult to attribute its progress in any country to a single individual. In India, however, few men, taken individually, have been more responsible for shaping it than Mr. L. S. Vaidyanathan, who retired last week as the Manager of India's oldest and largest life office, the 'Oriental.' It is certainly remarkable that, in this country, where insurance is comparatively underdeveloped, there should be a man of Mr. Vaidyanathan's calibre—a man who can hold his own against the best of insurance executives in the relatively more advanced Western world. Mr. Vaidyanathan combines in himself an erudition and a galaxy of achievements sufficient to make several men well known, if not famous. He has had, as the address presented to him at a meeting held last week in Bombay under the chairmanship of Sir Cowasjee Jehangir, Bart., pointed out, several "firsts" to his credit. The address said:

"It is heartening to recall on this occasion, that you crowned your college career with a First Class First at the M.A. examination of the Madras University, that you were the first Indian to qualify as a Fellow of the Institute of Actuaries, that you were the first to introduce mechanisation in the field of insurance operations in India, that you were the first Indian to investigate into the mortality of Indian population from the Census Report, that you were the first seriously to think of directing the growth of Indian insurance on sound and healthy lines (as witness your work in connection with the Insurance Act, 1938, and again the Insurance Enquiry Committee in 1945), that you were the first Indian to become the Superintendent of Insurance and that you were the first Indian to become the Manager of the Oriental Government Security Life Assurance Company, Ltd., one of the largest life assurance companies in the East."

To this list must now be added the distinction of his being the only manager of an insurance office to be appointed by the Government as the Custodian for the same office. It is also on the cards that he will be the first Managing Director of the proposed Insurance Corporation.

Although Mr. Vaidyanathan may not be one of those who will suffer fools gladly, it is also true that his faith in insurance and enthusiasm for work could be easily infectious. Mr. K. R. Srinivasan, the Actuary of the "Oriental," who has had unusual opportunities of observing from close quarters his chief at work, paid a well-deserved tribute to him when he said that Mr. Vaidyanathan's "towering personality continues to fill the insurance horizon with a magnificence that can hardly be equalled at any time anywhere." Mr. Srinivasan added: "Endowed with a brilliant intellect and an immense capacity for work and animated by a high sense of duty and integrity, Mr. Vaidyanathan has earned universal admiration and respect from all those with whom he came in contact."

It is not, of course, as the mere manager of a large and expanding life office, the traditions of which he maintained as well as improved, that Mr. Vaidyanathan's name will go down in insurance history. He has rendered great service to insurance in India and to the cause of actuarial science itself. He was nominated a member of the Central Legislative Assembly before it enacted the Insurance Act, 1938, in the shaping of which he played a very notable part. The Government again drew upon his services in 1943 when he was appointed Superintendent of Insurance. And when it decided in 1945 to institute a Committee to inquire into insurance, Mr. Vaidyanathan was the obvious choice as its member-Secretary. His investigation into the mortality of Indian assured lives based on the experience of the 'Oriental' for the decade 1925-35, as Mr. Srinivasan points out, is a contribution of the highest value to Indian insurance.

Sir Cowasjee Jehangir, paying his tributes to Mr. Vaidyanathan, said that they were now in a new world in which the retiring manager of the 'Oriental' was prepared to serve with the same purity, integrity and perseverance which distinguished his career in the old world. He hoped that the Government would not allow such talent to remain idle. He also expressed the hope that his formal retirement would turn out to be a "bogus retirement" and that he would continue to give the benefit of his experience to the country for a very long time.

In the course of his reply to the address presented to him, Mr. Vaidyanathan recounted his experience in handling the problems relating to insurance which he met during his 31-year old connection with the Company and his association with the Government. He deplored the recent trends in insurance, prior to nationalisation, which took the "ugly shape of worshipping the golden calf of huge figures and sacrificing on its altar the real interests of the policyholder." Referring to what he called the Government's "bold and, at the same time, an extremely desirable step in nationalising life insurance," he said that he did not see any reason why it should not be a success, with the "willing co-operation given, as is already evident, by persons who have already acquired considerable knowledge and experience in running their respective life insurance companies."

There is no doubt that among the persons on whom the Government relies for guidance, assistance and support in making nationalised insurance a success—after all, even the worst critics of nationalisation of insurance will not want to see the experiment fail, for that would be a national disaster—Mr. Vaidyanathan is the foremost. Indeed, it has been stated that a responsible Minister of the Government told his friends, at a private gathering, that he had no idea of how the life insurance industry should be run and so would leave it to Mr. Vaidyanathan to "swim or sink" in this effort. The whole country will certainly wish him success in this endeavour.

PROMOTION OF TOURISM

Although India has frequently been described as a paradise for tourists, it is only in recent years that any concerted effort has been made to publicise India's centres of tourist interest and to create the facilities that are needed to attract foreign visitors to India and to promote internal tourism. Some of the problems connected with the development of tourist industry were reviewed by Mr. O. V. Alagesan, Deputy Minister for Transport, Government of India, at the recent session of the Central Tourist Advisory Committee, held at New Delhi. He revealed that the Government had taken steps to strengthen the tourist organisation both in India and abroad "commensurate with the resources available."

There are now a dozen tourist offices functioning in India and the Government proposes to open three more such offices at Bhopal, Bhubaneshwar and Cochin. So far as foreign countries are concerned, India opened a tourist office in New York in 1953. Since then, offices have been opened in London, San Francisco, Paris and Colombo. In the near future, the Government proposes to open tourist offices in Australia and West Germany. Mr. Alagesan deplored that most of the foreign tourists visited only centres in Northern India, whereas only a few went to South India. This is not, of course, due to lack of centres of tourist interest in the South which can, in fact, boast of as many good spots as the North, if not better. It is due to lack of adequate publicity and paucity of tourist amenities. It would appear that the Tourist Division of the Transport Ministry is doing its best to put South India on the tourist map. It is to be hoped that its efforts will bear fruit and more tourists, from North India and abroad, will be attracted to the South.

For promotion of internal tourism, and more particularly, for attracting foreign tourists, the most important consideration is the existence of amenities for the visitors. Among such amenities must be mentioned clean and well-equipped hotels. Indeed, the entire tourist industry, as Mr. Alagesan himself admitted, is built round the hotel industry. In recent weeks, some correspondence has appeared in the daily Press wherein some foreign visitors have deplored that the service available at the hotels in India is far from satisfactory and that the guides available to them did not also render much help. These complaints need to be investigated and, if proved correct, the Government should take the necessary remedial action. Meanwhile, it is gratifying to learn that the Government has given assistance to hotel owners in procurement of materials and importation of plant and equipment. A scheme to promote the hotel industry on a large-scale, it is stated, is being prepared by the Government. There is also a proposal in hand to start a hotel training school. So far as training the guides is concerned, special training courses have been held at Delhi, Bombay, Calcutta, Madras, Banaras and Jaipur. The Government proposes to start similar courses at other centres.

The proposals under the second Plan for tourist development fall into three categories. The first contains proposals for the development of tourist amenities at centres usually visited by foreign tourists. Expenditure on such items is borne entirely by the Union Government. The estimated cost of the schemes under this category is Rs. 144.80 lakhs. Next comes schemes for the provision of amenities of moderate standard for home tourists of middle and lower income groups at the same centres as are included in the first category. Here the expenditure is shared equally by the Centre and the State Government concerned. A provision of Rs. 84 lakhs has been made in the second Plan for schemes of this nature, the Union Government's share being limited to Rs. 42 lakhs. Expenditure on other schemes, not included in the first two, will be incurred by the State Governments themselves. Of the proposals contained in the first category, a few important projects, estimated to cost Rs. 17.38 lakhs, have been approved for execution in 1956-57. These proposals relate to centres like Ajanta and Ellora, Elephanta Island, Khajuraho, Mahabalipuram and Simla.

The Union Transport Ministry will open tourist offices at 15 selected centres of all-India importance. For the general promotion of internal tourism, tourist bureaux are to be set up at other centres of tourist importance; the Union Government will give financial aid to the State Governments or private organisations for setting up such bureaux. It would appear that tentative details for setting up some 17 State tourist bureaux in 1956-57 have been drawn up. Each State Government is to name sites of local interest in its region where such a bureau would be opened. The Union Government would consider subsidising each of these units, the maximum grant, now proposed, being Rs. 5,000 a year.

An important factor which will help promote tourism is the simplification of the procedure relating to customs and other formalities. Some of these regulations, made particularly rigorous during the war years, are rightly resented by foreign tourists now. It is gratifying to note that the Government has realised the importance of simplifying these regulations, thereby making it easier for the tourists to comply with the minimum regulations that may be needed. Thus, the Government has introduced a system of oral customs declaration for air passengers and of simplified embarkation and disembarkation cards. These measures, it is stated, have now brought India on par with the leading tourist countries of the West in this respect.

TAX EXPERT'S VIEWS

Some more light has been thrown on the report submitted to the Government of India by Prof. Nicholas Kaldor, the British tax expert. It is not clear why his report continues to be made available in fragments without official blessings. In view of the importance of the report, one would think that the Government would itself publish the text of the report. This would enable the public to discuss it in much the same way as the Taxation Enquiry Commission's report was reviewed in the Press and by the interests concerned. It is true that the expert's views are meant to be available only to the Government. But then, the fact that they are of great significance to the taxpayers should induce the Government to take the public into confidence. There does not seem to be any particular gain in secrecy.

Be that as it may, Prof. Kaldor, it is now learnt, has advocated a capital gains tax, annual tax on wealth, tax on personal expenditure and tax on gifts. Describing the suspension of the capital gains tax after only two years of its operation as unjustifiable, Prof. Kaldor has urged its reintroduction as early as possible. He has recalled that the tax was given up on the ground that the anticipated yield (Rs. 1 crore) was small, and that the tax, through curbing free movement of securities in the capital market, would hinder investment. He feels that neither of these grounds provides an adequate justification for the abandonment of the tax. In the first place, the yield in the first few years was Rs. 6 crores, so that he wonders how the low Rs. 1-crore estimate was made at all. In the years following the imposition of a tax, the yield from it is less than what it should be. From this point of view, the yield from capital gains tax, he points out in effect, would have been progressively greater. Secondly, he argues that it is a contradiction to say that the yield from the capital gains tax would be low and yet hold that it would have a disincentive effect. In the Indian context, however, the two arguments are certainly not mutually contradictory. For the Indian capital market is still in an underdeveloped stage. Sometimes, even good securities do not find a ready market. To impose a capital gains tax at this stage of the country's economic development is to rob one of the incentives for investment. Further, it is not clear whether Prof. Kaldor has examined the possibilities of evasion in this form of tax.

Prof. Kaldor is also reported to have suggested an annual tax on wealth at the rate of Re. 0.3 per cent. per annum on the lowest slab of Rs. 1 lakh to Rs. 4 lakhs, rising to Re. 1.5 per cent. per annum on the highest slab, say, on the value of property in excess of Rs. 15 lakhs. Referring to the economic arguments against the tax, namely, the discouraging effect of the tax on productive enterprise, he says that it is true that a tax on capital has such an effect in relation to no taxation at all. But it has a smaller discouraging effect than an equivalent amount of tax collected from the taxpayer in the form of income-tax. He, however, admits that, though annual taxes on property at one time formed part of the legislation in over a dozen countries, only a few of them, the Scandinavian countries and Japan, now possess a tax on the lines recommended by him.

In order to induce investment, Prof. Kaldor has suggested a tax on personal expenditure. A progressive personal tax on expenditure, according to him, is a most potent weapon for inducing economies in personal spending among the well-to-do classes. He also feels that such a tax would make the administration of income-tax more effective. Since the taxpayer would have to make a return of his income as well as expenditure, it would be easier, according to him, to detect cases of evasion which would be reflected in unduly low figures for personal expenditure. Further, he has pointed out that his suggestion for lowering the maximum rate of income-tax to As. 7 in the rupee is part of wider reforms which envisages the replacement of the present super-tax by a personal expenditure tax and the introduction of an annual tax on wealth. It is extremely doubtful whether it will be a feasible proposition to collect an expenditure tax on the lines suggested by him without providing room for large-scale evasion.

As regards his proposal for a tax on gifts, Prof. Kaldor defends it on the ground that, if the Estate Duty was justified, there is no reason in equity for differentiating between the right to pass on property through gift and the right to pass on property by bequest. There is, therefore, a *prima facie* case for supplementing estate duties with taxes on gifts made *inter vivos*. An additional reason for the taxation of *inter vivos* gifts, according to Prof. Kaldor, is that the imposition of the Estate Duty itself has stimulated the *inter vivos* transfer of property to heirs and successors so as to avoid the tax. Before a tax on gifts is imposed, it will perhaps be better to await the results of the working of the Estate Duty and also to examine whether large gifts do take place in order to evade the duty.

WORLD TRADE

It is with some satisfaction that the Secretariat of the General Agreement on Tariffs and Trade (G.A.T.T.) has viewed the trends of world trade during 1955 in its fourth annual report published at Geneva last week. The rise in the volume of international trade in that year, the Secretariat observes, was not only a continuation of the growth which began in 1952 but also represented a further acceleration in its speed. Thus, the volume of world exports during 1955 was higher by as much as 8.6 per cent., as against 6.4 per cent. in 1954 and 4.3 per cent. in 1953.

The renewed expansion of world trade, though remarkable, should not, however, be taken to mean that all is well on the international economic front. For the rise in world exports has increasingly been accounted for by trade among the industrial countries only, while the relative importance of the non-industrial areas—both as markets and as suppliers—has continued to decline. This is certainly a disquieting trend, inasmuch as it indicates lack of balanced progress in the distribution of productive activity, which is the basis for international exchanges of goods and services and the entire working of world trade. Indeed, the share of world trade between the industrial and non-industrial camps "continues to change steadily to the disadvantage of the latter." This trend should be corrected, if the world economy were to be set on a more rational and secure footing.

The G.A.T.T. report highlights two major developments in the sphere of world trade during 1956. First, there was a revival in North American exports, thanks to the growing dependence of Western Europe on supplies of raw material and fuels from that source. Secondly, with a view to meeting the severe competition in world markets, many industrial countries adopted more liberal import policies. The underlying idea here was to import from the most economic source of supply; apparently the U.S. was such a source. Exports of non-industrial areas, however, suffered a setback, notwithstanding a substantial improvement in the terms of trade in their favour. This is attributed, among others, to (*a*) a fall in the ratio of raw material prices to the gross value of industrial production, (*b*) development of manufactured substitutes for certain raw materials, and (*c*) decline of the textile industries *vis-a-vis* other manufacturing industries in the traditional industrial areas. Commenting on the first two causes, the report observes: ".... the import requirements of the industrial areas would have been roughly 40 per cent. larger in, 1955, had the home-produced substitutes not existed. While their production started in most cases as the result of war-time shortages, the rise in the relative prices of natural raw materials has certainly contributed to the further growth of production since the war." If this trend were to persist, the advantages reaped by the non-industrial areas from improved terms of trade might, the report warns, "vanish rapidly."

A notable feature of world trade during 1955 was the improvement in the world dollar balance. The dollar deficit on merchandise account of the industrial areas was narrower at $1,770 million, as against $1,950 million in the previous year, while the dollar surplus of the non-industrial areas was very much larger, being $620 million, a rise of $470 million as compared with 1954, despite the marked rise of $1,820 million in exports from North America to these areas. Another notable feature of world trade was the favourable experience of Western Europe as exporter of capital goods and other manufactures to non-industrial areas.

The G.A.T.T. report has also analysed the growing importance of the communist group—the U.S.S.R., Eastern Europe and mainland China—in world trade. The analysis reveals that there was a "significant increase" in the turnover of trade transacted by this group, with an apparent export surplus. The East European countries, especially Czechoslovakia, Poland and Hungary, adopted active measures to expand their trade with the non-industrial areas, in particular Latin America, Asia and the Middle East, by means of long-term bilateral agreements. Although the bulk of capital goods imported into these areas continues to come from the West, the U.S.S.R. and East European countries have increased their sales, "thanks to the priority given to heavy industry." The communist countries appear to have a competitive advantage, "as a result of a more advanced technical integration in the form of exchange of designs, etc., as well as of the specialisation that takes place in the exports of the various countries of the area." Among other reasons given by the report for the expansion in the export trade of the communist countries, mention is also made of the long-term credits, technical aid and the readiness with which they accept payment in kind for a number of years.

U.K.-AUSTRALIAN TRADE TALKS

Australia is keen on negotiating a fresh comprehensive trade agreement to replace the Ottawa Agreement on trade preferences signed twenty-four years ago in the Canadian capital. It is evidently dissatisfied with the Imperial Preference system of trade. It finds this system as outdated and outmoded to serve the changed conditions in both Australia and the world alike. When the Ottawa Agreement was signed, Australia held the field in primary production and exported mostly wool and wheat. Since then, along with this, it has expanded secondary industry which has now reached a point at which it must vigorously enter the export field. It has derived the advantages of an excellent steel industry, mineral resources of growing value and a nearness to export markets likely to assume greater importance than at present. Australian productivity is also increasing and would increase further, if there is more capital per worker. Meanwhile, similar changes have taken place in other parts of the globe. There, too, secondary industries have been developed with the help of new techniques and new processes. More competitors have entered the world markets and those who have been able to deliver the goods at the most competitive prices have held the field. And Australia is feeling that if its commodities, both agricultural and industrial, are to enter world markets successfully, it should also be able to sell them at competitive prices. Unfortunately, the country has not succeeded to the extent desired. According to the Australian Government's economic survey published a fortnight ago, the outlook for Australian exports appears to be, in some respects, far from encouraging. Among the adverse factors mentioned in the survey are: (*a*) a probable levelling off in world trade; (b) the question of disposal of U.S. farm surplus and (*c*) agricultural protectionism in Europe.

For all these reasons, Australia is now desirous of a change in its trade relations with the U.K., its potential customer, so that the Ottawa Agreement could be replaced by a better one, which would ensure enlarged trading between the two countries. Justifying the desire to replace the twenty-four-year-old agreement, Mr. Menzies, Australian Prime Minister, said recently that world trading conditions had changed greatly since it was made, and that it provided no solution for new problems. Australia was confronted with balance of payments problems, and consequently, with import licensing controls. To help solve its problems, it was necessary, said Mr. Menzies, to reach wider understanding with the U.K. This understanding should ensure that each party had reasonable access to the market of the other and fair opportunities to compete in the market on competitive terms.

Mr. Menzies intends to avail himself of the forthcoming Commonwealth Conference in London to carry on the projected trade discussions with the U.K. The talks would be in two stages. The first, which would be between Ministers, would be directed towards reaching agreement on broad but basic principles providing the outline for the new agreement. The second would be between officials who will work out details in the light of the principles laid down by the Ministers.

It is yet too premature to surmise the shape the trade talks would take. For there are several barriers to be overcome. At present, Australia is granting a higher margin of preferential treatment to British goods. In return, it gets very little useful preferential tariff from Britain, because of the nature of the goods it exports to Britain. Britain buys, for instance, wool and wheat and these commodities are free of duty, irrespective of their source. To please Australia, Britain can hardly give any preferential treatment to them. Australia is also worried about British policies of agricultural protection. Here it is likely to press for some concessions, by reason of its being the biggest customer for British goods. The Commonwealth countries will, no doubt await with considerable interest the outcome of these talks.

Fourteen member-nations of the Coffee Federation of America and observers from Brazil and Colombia approved of a resolution calling for an agreement on coffee price at a meeting of the Federation held last week. The U.S. was opposed to such an agreement. The Brazilian delegate said that, although the present coffee situation was satisfactory, production was constantly increasing, while consumption was fluctuating. In order to correct the disequilibrium, prices must be stabilised and the possibility of new markets explored.

TASK BEFORE FINANCE COMMISSION

EVOLVING EQUITABLE BASIS FOR ALLOCATION OF REVENUE TO STATES

From A Special Correspondent

NEW DELHI, 12*th June*

THE new Finance Commission that was recently constituted under the chairmanship of Mr. K. Santhanam, the former Lieutenant-Governor of Vindhya Pradesh, began its work this week with a Press conference. Mr. K. Santanam, himself an experienced journalist, knows fully well the importance of publicity. And since the Commission is concerned with the work of intricate and abstruse financial matters, he has apparently thought it prudent at least to draw the attention of the people to the scope of the work of the Commission. It is needless to add that the Santanam Commission has an important task to perform, particularly in the matter of arriving at a more equitable distribution of the divisible pool of the proceeds of some of the Central taxes between the Centre and the States.

DELHI LETTER

Considerable changes have taken place almost imperceptibly in the financial relations between the Centre and the States during the last few years. It may be true that the State Governments have been enjoying a large measure of financial autonomy during the last two or three decades. Some distinct transformation in this relationship would, however, appear to have come about during the last few years, especially after the advent of the idea of economic planning. In other words, the influence and the power of the Centre in determining the course of development expenditure in the States have been growing at a rapid pace. The Centre has been trying to direct and regulate, albeit indirectly, the economic policies of the States in such a manner as to conform to the best interests of the country as a whole.

Divisible Pool

From another angle also, the influence that the Centre has begun to wield over the States in the economic sphere has increased to an appreciable extent. During the days when Sir Otto Niemeyer pronounced his award regarding the division of the income-tax between the Centre and the States, the former was getting a total revenue of about Rs. 85 crores per annum. The divisible pool of income-tax was about Rs. 12.7 crores only. In those days, the Centre was also paying a few crores of rupees to some of the jute-growing States, namely Bengal, Assam, Bihar and Orissa, as their share in the export duty on raw jute and jute goods. Besides, it was occasionally giving a few lakhs of rupees as grants-in-aid to some States whose revenue position became adversely affected as a result of famine or for specific beneficial schemes.

During the first Plan period, the financial help to the States from the Centre by way of division of income-tax, Central excise duties, grants-in-aid, loans, etc., has become a predominant factor in determining the economic development of the concerned States. For instance, the States' share of income-tax in 1951-52 stood at Rs. 52.86 crores while in 1955-56 it was marked up to Rs. 73.60 crores. It will be remembered that the Neogy Commission recommended a moderate share in the Union excise duties to the States, as a result of which the States secured as high as Rs. 16.92 crores in 1955-56. For the current fiscal year, the estimated share of the States from these taxes, including the revenue from Estate Duty amounted to Rs. 74.51 crores.

These apart, the grants and subventions which the States have been receiving from the Centre during the last few years have recorded an impressive rise. In 1951-52, they stood at Rs. 33.89 crores whereas in 1955-56 they improved to a high level of Rs. 97.65 crores. For the current year, the figure is still higher at Rs. 121.99 crores. A sizable share is now being absorbed by the community development projects and the national extension service schemes, grow-more-food schemes, rehabilitation plans, etc.

The biggest item in determining the course of the economic development in the States is the Centre's loans to the State Governments. The loans are being given for specific schemes, especially for the promotion of irrigation, the handloom and small-scale industries, industrial housing, grow-more-food plans, etc. In 1951-52, all these accounted for Rs. 73.30 crores while in 1955-56 they increased to Rs. 261.73 crores. For the current fiscal year, the allocations under this head are still higher at Rs. 283 crores. The tax revenue of all the States is now computed at between Rs. 325 and Rs. 350 crores at present while the financial aid from the Centre by way of all forms of assistance is computed at as much as Rs. 480 crores. In other words, the Centre is now responsible for contributing nearly 60 per cent. of the total expenditure of the States.

Broadly speaking, the principles that were followed by the preceding Commissions and eminent individuals in the matter of allocation of revenues between the Centre and the States were as under: About 20 per cent. weightage was given for the place of collection and about 80 per cent. weightage for population. Before the war, the income-tax was the only tax that came to be divided between the Centre and the States on a certain basis. The Neogy Commission included some of the Central excise duties for the purpose of division. Now that the yield from the Central excise revenue has been steadily growing at a rather rapid rate, it is certain that almost all the States will insist on a greater share under this tax. Again, it is likely that some States, like Assam, where intensive exploration work is being carried on for locating mineral oil may claim, at a future date, a share in the aggregate yield of this valuable product.

Defence Budget

These apart, the Santanam Commission will have to view the problem of allocation of resources between the Centre and the States from other angles. Until now, the approach was from the revenue side only, such as the place where the tax was collected, the capacity of the people to pay, the *per capita* income in the States, the relative population of each State, the relative volume of industrial labour in each State, etc. There is another angle from which the whole problem should be studied afresh. Although the data for a detailed study may not be available it is not impossible to have a broader view of the whole problem. For instance, the defence expenditure of the Central Government which is as high as Rs. 200 crores per annum is being concentrated in certain regions of the country. At the present time, this expenditure is being spent in areas like the Punjab, Jammu and Kashmir and some cantonment areas. States like Orissa or Bihar are not at all being benefited from this type of expenditure. In view of the defence strategy, etc., this expenditure is being largely spent in the north rather than in the south with the result that the people of some of the peaceful States have not been deriving any benefit from this expenditure.

During the last one or two years, considerable emphasis is being laid on the development of the public sector of industries. Although it may be conceded that the industries will have to be developed in areas where adequate raw materials and transport facilities exist, the money spent on them will doubtless go to the benefit of some States only. It is but natural that the States where industries are being developed, will become more prosperous in future and that the standard of living of the people of these States will become relatively higher than that prevailing in some of the backward States. In order to reduce the regional disparity in wealth, the Centre must take some special measures. The Centre should constitute a separate fund from which it could make grants to the backward States or finance some specific schemes in those States.

The Commission has another important aspect to bear in mind. Now that the help from the Centre has begun to exceed the actual revenue receipts of the States by a wide margin, the Centre has a special responsibility to see that the money allocated to the States is spent in a useful manner. In certain quarters it is felt that some States have been able to secure a better hearing from the Centre because the authorities in these States have personal contacts with the men at the Centre or by reason of the inability of their officials to present their case well. In order to set at rest these allegations, the Commission should clearly lay down the principles that should guide the authorities in respect of allocating grants-in-aid, etc. At the same time, it should consider the feasibility of setting up a special expert committee of, say, three members, experienced in accounting procedure including a judge of the Supreme Court, in order to study the manner in which the States have spent the money allocated to them by the Centre. The States which have been most prudent in the matter of spending and achieved maximum beneficial results from the Centre's allocations should be given a prize while extravagant States should be asked to take a cut.

MUDDLE OVER MONEY

MR. MACMILLAN HECKLED

From Our Own Correspondent

LONDON, 9*th June*

EVERY time the Chancellor speaks one looks for a further statement on impending disaster, and this has had a steadily growing effect abroad very far from that which Mr. Macmillan intended. The weakness of sterling has been the result. On Tuesday of this week, however, after the announcement earlier of further gain in the gold reserves—from which all joy was taken by the manner in which the gain was made—the Chancellor became involved in an altercation in the House over the success of his Bank rate policy. He was asked by a Government supporter whether he would not now reduce the Bank rate as it was no longer effective. The Chancellor replied that it *was* effective. The Opposition waded in to criticise his general reliance on monetary weapons and the Chancellor then made a rather ambiguous statement. "I am not saying," he said, contrasting the use of Bank rate by itself against the general monetary policy, "that we have yet absolute proof whether the re-introduction of these methods is going to succeed or not, but I am very confident, . . . that we are beginning to overcome our difficulties so long as we do not throw unnecessary spanners into the works." He was then challenged to make a statement in relation to sterling and the Bank rate. He refused to undertake this and said, "I repeat that the results of the gain we have made on the reserves and the result of the gain in the balance of payments in the last five months, give us great confidence in the future."

LONDON LETTER

The ex-Chancellor on the opposite benches could not resist rising to this succulent fly, to exclaim mid the cheers of his supporters, "If things are going as well as the Chancellor suggests, why does he keep on making speeches about the coming disaster?" That led Mr. Macmillan to explain that he did not say that things were going so well but that a steady pursuance of his present policy would overcome our difficulties. This is much more the kind of thing that overseas operators in sterling like to hear and if he persists in this slightly more optimistic tone then the June gold figures will make a better showing.

In May, the reserves went up by the equivalent of $41 million but of this $29 million were receipts from the European Payments Union arising out of the *April* balance which had already been discounted. It is already known that the E.P.U. settlements for May show an adverse balance and that $17 million will have to be *paid back* to the Union in June. Therefore, excluding E.P.U. and American aid, the May figures showed a surplus of only $9 million, as compared with an average for the first five months of this year of nearly $50 million. As we are now moving into the period in which, traditionally, heavier payments for imports are made, it is not surprising that the May figures were not taken as a good augury.

But where does the difficulty lie? Visible exports to North America continue to run at record levels. The rest of the sterling area has not been so successful as a result of the fall in the prices of some of its export commodities; but the cynics are inclined to say that the economic position is very much better as Mr. Macmillan was forced to admit it in Question and Answer in the House on Tuesday (after all the gold reserves have risen by some £90 million this year) than he has been portraying in his recent vivid speeches—and that the less he speaks the stronger sterling may become.—*All Rights Reserved.*

WHAT IS NEW IN CHEMICALS

WIDE VARIETY OF PRODUCTS ON VIEW AT B.I.F.

By E. N. Pullom

NEVER before has Britain's chemical industry provided such a representative display of chemical technology and production as it did at this year's British Industries Fair. Over 29,000 sq. ft. of space at London's Olympia was occupied by stands of companies representing all branches of modern chemical manufacture—heavy chemicals, solvents, dyestuffs, insecticides and fungicides, plastics, perfumery compounds, laboratory reagents and pharmaceuticals, and many other classes of products.

The chemical industry, as a whole, is expanding at a rate twice that of other industries in Britain and now ranks fourth of her exporting industries. It sends overseas about one-third of its total output. In 1955, exports of chemical products amounted to £233 millions, as against £204 millions in the previous year.

To this export achievement the British pharmaceutical industry contributed £36 millions in 1955, as compared with £32 millions in the previous year and Britain is second only to the United States as an exporter of drugs and medicines.

The Commonwealth countries were, and continue to be, the principal buyers of Britain's chemical products, but the United States also took more chemicals in 1955 than in 1954—£7.6 millions, as against £7.09 millions.

Petrochemicals

The petrochemical industry, which provides so many of the raw materials of chemical manufacture—for paints and plastics, detergents and nitrogenous fertilisers—is fast expanding in Britain. Several large plants are increasing output, while scheduled expansion programmes are estimated to increase the size of the industry by some two-thirds at a cost of over £30 millions by 1958. Already, the industry has an output that exceeds any other country in the world, excluding the United States. The expansion of petrochemicals will make a considerable saving in Britain's dollar imports.

It is against this backcloth that the 1956 exhibition of Britain's chemicals must be seen.

Of outstanding interest in the "heavy" chemicals side of the industry is the development of a new process for the production of titanium, a metal that was little more than a laboratory curiosity only a few years ago. Titanium, possessing the strength of stainless steel without its weight, is increasingly being used in aircraft construction, both for engine parts and for structural purposes.

Commercially, the new process is a great success, for it has enabled the company responsible to reduce prices of raw titanium, so that their quotation compares favourably with that of transatlantic producers. A new plant at Wilton, Yorkshire, England, is operating this sodium process for making titanium. It has a scheduled output of 1,500 tons a year of granular titanium of very high purity.

Titanium was first discovered in England—in black sands at the Cornish port of Falmouth in 1790. The ores of titanium are now known to be widespread and the element itself is the world's fourth most abundant constructional metal. Previously, titanium used to be produced by reacting titanium tetrachloride with magnesium. The new process, which employs sodium instead of magnesium, provides a highly ductile metal and the makers are already engaged on a programme of work designed to bring down the cost of production still further as well as to make more improvements in quality.

Anti-flame Finish for Textiles

A synthetic resin containing the phosphorus compound THPC (tetrakis-hydroxymethyl phosphonium chloride) is the basis of a new durable anti-flame finish for textiles. When first introduced a few months ago, all the treated material went into the manufacture of protective industrial cloth. Now, however, increasingly large quantities of cellulosic fabrics are being treated and the finish is a marked advance in the control of the fire hazard. "Proban," as it is called, will be supplied under licence to textile finishers.

The makers say that the finish cannot be described as being "fireproof," "flameproof" or "flame-resistant," since none of these terms provides an accurate description. All textiles, excepting those made of glass-fibre or asbestos, will char when subjected to flame and be destroyed. Material treated with the new finish will only show charring where it is in direct contact with the flame and the charred area will not smoulder and spread.

Weathering Properties

Clothes and other materials made from textiles treated with the finish may be freely laundered and dry-cleaned without loss of protection and treated fabrics have improved weathering properties and are very resistant to attack by moulds and bacteria. The resin in the finish is an amino-formaldehyde precondensate, similar to the type used by the finisher to provide "anti-crease" properties to the fabric. It makes for a full resilient handle to the cloth; staple viscose rayon fabrics usually have a soft full handle when treated with "Proban," while that of cotton fabrics may range from soft to somewhat firm.

Plastic Materials

Two plastic materials introduced recently are both improvements on older products in the same ranges. Lustrex T-11, a polystryrene moulding powder, is claimed to produce articles with outstanding toughness, that are rigid without moulded reinforcement. Articles made from the plastic have a high resistance to breakage and can be produced using standard injection moulding techniques. Alkathene HD is a new polythene, produced by a modification of the maker's high pressure process. Whereas the standard polythene is a "low density" flexible product, the new product is of high density and is stiff. Apart from this property of stiffness, the newer polythene has a much greater resistance to heat and can be sterilised—subjected to a temperature of 110 degrees Centigrade for 15 minutes, products made from it show no distortion.

Organic Borates

Amorphous boron, of very high purity, is now available from one British maker; the same company is producing a number of organic borates (some of which are solid esters) with exceptional resistance to hydrolysis. Another product recently introduced by a Manchester company is "Sulfan," a stabilised form of liquid sulphur trioxide, which will be of interest to users carrying out sulphonation or chlorsulphonation processes. Aluminium "alcoholates," for use in the manufacture of the so-called "non-spillable" paints, were featured by one manufacturer, while another showed a new range (Sobenite) of anti-corrosive compounds.

The newer pharmaceutical products are many and it would be invidious to pick out any few items as being worthy of special mention. There has been increasing interest in nutritional problems and deficiency diseases and this is reflected in products for both human and animal consumption.

If we may be so bold as to forecast likely developments for the pharmaceutical industry, we should say that nutritional products, together with the development of medicinal products for tropical diseases, will play an increasingly important part in the next few years.—*Exclusive to* COMMERCE.

AUTOMATION'S IMPACT ON BRITISH WORKER

NO DANGER OF ROBOT REVOLUTION

By John Walton

WILL automation put me out of a job? If not, what will it do to the job I hold? These questions have flashed through the mind of every British worker who has heard that automation is on the way to his firm. They are natural enough. But what of the answers? These are not so easy, though they may be less difficult to frame now than they were before. One reason is the appearance of a new, sober, but nonetheless stimulating survey which knits together the information about current automation developments and offers some forecasts for the future. Another is the very real ferment of discussion inside British trade unions about the impact of automation on the workers they represent.

The report from the Government's Department of Scientific and Industrial Research (D.S.I.R.) comes as a necessary corrective to the science-fiction approach of those who overdramatise current automation developments into an imminent and total robot revolution—a danger to which James Crawford, Chairman of the Production Committee of the Trades Union Congress (T.U.C.), recently drew attention.

Never dogmatic, but always candid, this report aims to stimulate discussion among all who work by giving them a glimpse into what industry will be like when more automatic machines and processes come along as part of what the D.S.I.R.'s Chief Scientific Officer has called "a slow, inevitable, and massive movement." In this movement, the coal miner, the builder, the land worker, and the clothing worker are far less likely to meet automation than workers in oil, chemicals, engineering, printing, textiles, and insurance and banking. Already in most of these industries, some form of automation has arrived; and there is more to come.

Until now, automation in individual firms has caused few dismissals, though it has brought striking savings of up to 50 per cent. in labour costs on some processes. To avoid redundancies, firms have transferred workers to other jobs and have adjusted their rate of recruitment. Indeed, as the report stresses, the planning of labour is among the essential steps in a smooth change-over to automatic processes.

Advice to Firms

This, then, is its advice to firms about introducing automation as painlessly as possible: Plan both manpower and technical policy; Consult the trade unions about the plans. Ensure that the workers know how it is going to affect them. And, if necessary, organise training for workers either to operate new machines or to work in other departments.

In this, the report finds common ground with the views expressed by many trade unions at their annual conferences this year. The first point in a resolution passed by the Amalgamated Engineering Union—an organisation whose members will more and more be affected by automation—was "no automation without prior consultation." And as long ago as last September, the annual Trades Union Congress passed a policy statement on automation in which the emphasis was on negotiation and consultation. Later this summer, the T.U.C. plans another important statement on automation. It will be the result of many months' discussion in the T.U.C.'s Scientific Advisory and Production Committees, which have taken into account the views of individual unions with experience of automation in the industries where they organise.

With unions setting so much store by consultation at the place of work, the D.S.I.R. report arouses interest in its comments about the changes it expects there. For example, piecework generally goes when automatic processes come in. In automated firms, pay packets will more and more tend to reflect how the team or the factory works as a whole. Then, automation increases the pressure for more shift working to make the introduction of costly plant worthwhile. Hence the impact of rearranged hours on the way the home is run and on health and efficiency.

Team Spirit

On the other hand, the report looks to happier and more satisfied workers. Fully automated processes can banish dirt, danger, and drudgery, as well as irritation that workers often feel when their job is paced by the machines they serve. By becoming more of an onlooker, the worker will see more of the process; he is likely to develop a sense of being part of a team

(*Continued in previous column*)

(*Concluded from next column*)

in his co-operation with maintenance men and technical managers.

But what of the skills on which non-automated industry depends so much today? The D.S.I.R. report suggests that when automation comes, rarely is there a sharp break with existing skills. Re-training may take only as much as 10 weeks. Workers will have to know when to stop the machine, because the failure to correct faults could be costly. All this will give them more responsibility and more satisfaction.

In addition, there will have to be more skilled managers and technicians. And, by introducing training schemes of their own, firms can set their workers on the road to being candidates for these jobs. Automation continually increases the demand for scientists and technicians; it is a challenge industry and the Government must face. If they do not, the shortage may put a brake on essential developments.

The D.S.I.R. report does not claim to be anything like the last word on automation; it recognises that so much more needs to be known. To this end, the Department proposes to continue its job of investigating. Of one thing it is certain: "automation will not make robots of us all. On the contrary, it will demand wider knowledge, greater ability, and a higher degree of skill from manager and worker alike."

AMENDMENT TO RESERVE BANK OF INDIA ACT

VIEWS OF FEDERATION OF INDIAN CHAMBERS

THE Federation of Indian Chambers of Commerce and Industry, the premier apex organisation of Indian business men, would appear to be not quite happy with the amendments to the Reserve Bank of India Act, 1934, as embodied in the amending Bill introduced in Parliament some weeks ago. This Bill did not come up for discussion during the last session but may do so when the Lok Sabha meets again in July. The Federation feels that the proposed amendments may not only result in shaking the confidence of the public in the Indian rupee but also prove detrimental to the development of banking in India. This feeling appears to have been born of the fear that a too flexible currency law may expose the monetary authorities to the temptation of resorting to it very frequently and thus cause disturbance to the economic life of the country. Whether the Federation is justified in entertaining the fear or not, it is worthwhile to note its viewpoints, if only to avoid the dangers visualised by it.

One of the clauses in the Reserve Bank of India (Amendment) Bill seeks to amend section 33 of the principal Act to the effect that the total amount of gold coins or gold bullion and the amount of foreign securities held in the Issue Department shall not be less than Rs. 115 crores and Rs. 400 crores, respectively. If further permits lowering of the amount of foreign securities to be held by the Bank to Rs. 300 crores for short periods, but this could be done only with the previous sanction of the Government of India. In other words, the clause seeks to do away with the proportionate reserve system under which the gold and foreign assets to be held as backing to the currency are linked to the total amount of note issue. This proposed change is considered by the Federation as one of far-reaching significance. It points out that, whereas under the existing Act, there is a check on the note issue, as every expansion is to be backed by gold and foreign securities to the extent of 40 per cent. of such expansion, the new proposal reduces the minimum reserve requirements to an absolute figure of Rs. 515 crores, irrespective of the size of note issue.

Confidence in the Rupee Necessary

Commenting on this proposed change, the Federation says that it is aware that the reserves in the Issue Department are primarily needed for meeting the country's foreign obligations and that they create and maintain the confidence in the paper currency. But it warns the Government that, in its enthusiasm to remove technical impediments in the way of implementing the second Five-year Plan (involving an envisaged deficit financing of Rs. 1,200 crores), it should not be unmindful of the necessity for maintaining confidence in the rupee both at home and abroad. "The Indian rupee is," it adds, "already being increasingly used as a medium for international transactions in countries of West Asia; and in places like Bahrein and Kuwait, the rupee is used both for internal and international purposes. Any loss of confidence in the intrinsic value of the rupee or its stability will result in its being replaced by some other currency and our earnings will be affected."

Harm Possible

The Federation further expresses the fear that in a country like India where the niceties of currency are not understood or appreciated by the layman, considerable harm may be done, if confidence in the note issue is lost as a result of expansion of currency. Stating that the law of the land must provide for good and bad administrations alike, the Federation observes that, for a weak administration, the power of unlimited expansion conferred by these amendments may prove to be an irresistible temptation to resort to printing of currency to meet Government expenditure. Hence, it feels that reserve requirements should still continue to bear some relation to the actual note issue, although there may be a need to reduce the proportion of backing to currency to meet the requirements of the Plan.

Another amendment proposed in the Bill relates to the control over commercial bank credit by the Reserve Bank of India. At present, commercial banks are required to keep with the Reserve Bank reserves to the extent of 5 per cent. of their demand liabilities and 2 per cent. of time liabilities. The Bill suggests that those percentages should be increased to 20 and 8, respectively. The purpose of acquiring this power is to control the secondary expansion of credit which may follow the increase in note circulation as a result of deficit financing. Expressing its views on the proposed change, the Federation contends:

"The system of variable reserve ratios, the Committee note, is a recognised means of Central Bank control over bank credit. But clause 10 gives power to increase reserve requirements by as much as four times the present legal minima. It is doubtful whether the power to make such drastic increases will be necessary especially in view of the fact that the amount of deficit financing is to be kept, as is claimed by Government, within safe limits and if the initial expansion of note issue is kept within check as suggested above. Moreover, the proposal may adversely affect the earnings of the Scheduled banks as a considerable part of their working capital will be immobilised and they would not get any commercial yield on the same. Even in the United States, where the system of variable reserve ratios prevails, the maximum increase which can be made is limited to only twice the legal minimum. The Committee, therefore, suggest that the power of increasing reserve requirements should be limited to 10 per cent. of the demand liabilities and 4 per cent. of time liabilities only. This will also prevent the possibility of an undue restriction of credit which would occur if the power to make a drastic increase in reserve requirements was given to the Bank and such power was exercised in the midst of a busy season."

Payment of Interest

The Federation, however, welcomes the provision regarding payment of interest by the Reserve Bank of India to Scheduled banks on the excess balance required to be maintained with it. In this context, it points out that the language of the relevant clause in the Bill does not make it clear whether interest will actually be paid or not, and if so, the rate at which it will be made. The Federation, therefore, stresses that the Act "should specifically mention that interest at a rate above the prevailing Bank rate will be paid to all Schedule banks on such excess balances as may be required to be kept with the Bank." It seeks to justify the insertion of such a specific clause on the ground that clause 10 (*b*) of the Bill prescribes specific penal interest rates on the amount by which the balances fall short of the prescribed minimum to be kept by the banks with the Reserve Bank. "It is hardly fair to the banks," according to the Federation, "that, if they fail to maintain the required balance, they would be liable to pay interest at penal rates, but, if they comply with the Reserve Bank notification, they are not assured of reasonable earnings on the immobilised funds which could otherwise be put to a profitable use."

Further, clause 10(*a*) of the Bill provides that the Reserve Bank may require that every Scheduled bank should keep an additional balance calculated with reference to any increase in its demand and time liabilities during any period. The Federation considers that, in practice, the exercise of this power is likely to discriminate against those banks which have shown greater initiative and enterprise and succeeded in increasing their deposits as compared with others. But those banks which have not increased their deposits during the prescribed period will escape the liability of keeping additional balances altogether. In other words, the progressive banks which attract deposits will be penalised. "This is hardly the type of policy," to quote the Federation, "which will be conducive to the development of banking." The power which clause 10(*a*) (1A) seeks to confer on the Reserve Bank will not be necessary, if the initial expansion of the currency is kept within limits and the various weapons of control, including the new power to vary reserve requirements, are wielded promptly and judiciously."

The foregoing views of the Federation indicate that it is not in favour of any drastic changes in the law relating to the central banking authority. But such an attitude is hardly suited to the ever-changing conditions in the country which are rendering out-of-date traditional concepts and theories. In fact, some of the changes proposed in the Bill have been adopted by a number of central banks in the world. It is needless to add that the proposed changes are the result of experience gained in these countries and, therefore, they should by themselves hardly cause any anxiety. This is, of course, not to say that, in exercising the new powers, the monetary authorities have not on them a very great responsibility. It is to be hoped that they will use these powers with due care and caution in order to avoid any adverse repercussions on the economy.

STERLING AREA RESERVES

The sterling area gold and dollar reserves went up by $41 million to $2,369 million in May 1956. The rise compares unfavourably with the increases in the two preceding months, April and March, amounting to $51 million and $67 million, respectively. The reserves have, however, increased by $249 million over the first five months of the current year, as compared with $76 million in the corresponding period of last year.

A notable feature of the gold and dollar movements is Britain's surplus with the E.P.U. for the second successive month. In April, the surplus amounted to £14 million and in May it was £8 million. These surpluses followed a year of deficits which ended with March this year. Britain received in May $29 million from the E.P.U. This represented a 75 per cent. settlement in gold of Britain's April surplus of £14 million, the balance being applied to a reduction of book debt. May's surplus of £8 million falls due for payment during the current month when Britain will receive £6 million or about $17 million in gold.

During May, Britain received $3 million by way of American aid. Excluding this as well as other gold and dollar movements amounted to $9 million, as against $47 million in April and $80 million in March this year.

No particular reason is provided for the small surplus in May. It is presumed, in London financial circles, to be due to lower world prices for sterling area raw materials.

Commenting on the position of Britain's overseas balances, at the annual meeting of the Associant., Mr. R. A. Butler, Lord Privy Seal and former Chancellor of the Exchequer, stated that these balances were more important than the budget. The Government should always give priority, he observed, in its policies to anything likely to improve the U.K.'s overseas balances.

Referring to the further measures which the country might take, Mr. Butler said that such depended on whether wages and profits remained at their existing levels. He pointed out the need for everyone in the country to get together and do his best to stop spiral of wages and prices, in order to achieve stability. He was optimistic of the future, as the country which made a great recovery in 1952, when it faced greater difficulties than today, could make a great recovery again.

COMMITTEE TO REVIEW CO-OPERATIVE LAW

The Government of India has set up a Committee to simplify the present law governing the working of co-operative societies. This Committee, which will be under the chairmanship of Mr. S. T. Raja, Joint Secretary, Union Ministry of Food and Agriculture, will not only rationalise and modernise the co-operative law but examine in the light of the recommendations made by the Rural Credit Survey Committee, the modification necessary in the Co-operative Societies Act and incorporate in it the concept of State partnership in share capital and State participation in the management of co-operative societies.

Besides, the Committee will also review the existing provisions relating to various types of co-operative societies such as credit, marketing, processing, irrigation, dairying, farming, small-scale and village industries, consumers, construction and housing and transport.

The appointment of the Committee stems from the necessity to lay down a simple and expeditious procedure for registration and regulation of co-operative societies, so that the co-operative sector can play an important role in the economic development of the country. It may be mentioned here that the Rural Credit Survey Committee has also advocated the need for reorganisation of co-operative institutions on the basis of State partnership.

The Committee is expected to submit its report within six months.

WORLD BANK LOANS

According to the President of the World Bank, Mr. Eugene R. Black, during the year ended June 1956, the Bank is likely to establish records for (*a*) loans granted, (*b*) profits, and (*c*) reserves.

The World Bank has approved so far in this fiscal year 23 new loans. An additional five loans, now under negotiations, would probably also be approved, bringing the total of loans for the current fiscal year up to $420 million which would exceed the previous record of $410 million established in 1954-55.

Earnings of the World Bank during the current year are expected to reach a new peak of $29 million, while reserves at the end of June would probably also rise to a new record of $225 million.

Mr. Black said, at Washington last week, just before leaving for Europe and the Middle East on a short tour, that there was no indication that the Bank would need to replenish its funds by floating new bonds in the near future.

The Turkish Central Bank has raised the discount rate from 4½ per cent. to 6 per cent. The increase has been made with a view to checking inflation in the country. This is the second increase in a period of one year. In June 1955 the Bank had raised its discount rate from 3 per cent. to 4½ per cent.

RESULTS OF FOUR MORE STATE FINANCE CORPORATIONS

APPLICANTS FOR LOAN SHOULD BE ASSISTED BETTER

IN some of our previous issues, we have reviewed the results of working of a few State Financial Corporations during the year ended 31st March 1956. The Corporations so far covered are those relating to Bombay, Hyderabad, Assam, and the Punjab States. We have since then received the Directors' report and statement of accounts of four more State Financial Corporations, namely, of Andhra, Saurashtra, Rajasthan and Travancore-Cochin. A perusal of these reports reveals some interesting trends in the activities of these Corporations. It confirms the view that the Corporations are still in an infant stage, passing through teething troubles. They are not yet in a position to extend financial assistance to industries on any appreciable scale. They are, of course, not suffering from want of borrowers, for each of them is flooded with demand for funds, but for some reason or other, legal or otherwise, a large number of applications are being rejected. These rejections call for some serious thinking on the part of all those interested in the rapid expansion of industries, especially medium and small-scale. The authorities of the Corporations may be right in turning down applications on some sound grounds. But their work should not cease with the refusal; if it does, progress of industrialisation will also become slow. They should re-examine the schemes and find out how the schemes could be improved upon and made creditworthy. After all, no prospective borrower will take the trouble of preparing an application for loan and submit it to the Corporation, unless he sees some chance of making money out of it. It is up to the staff of the Corporation to analyse the scheme, note its deficiencies and procure such assistance as necessary to make it worthy of acceptance for granting credit.

There is now a number of financing agencies—such as the Industrial Finance Corporation of India, the State Financial Corporations, the National Industrial Development Corporation floated by the Commerce and Industry Department of the Government of India, and the Industrial Credit and Investment Corporation. All these are specially meant for providing development finance to industries. Besides these, there are the commercial banks and the State Bank of India which has been assigned a special role in the development of rural areas. In addition, the Central and State Governments themselves are directly providing finance to industries in the form of loans, debentures, preference shares and equity capital. There is an urgent need to bring about co-ordination among these bodies so that there may be no overlapping and a common agency to look into the difficulties of borrowers and solve them. This need has already been recognised by the Reserve Bank of India, as witness its plea for the evolution of a scheme of integrated credit. It is regrettable that not much progress has been made in this direction. There has, however, been a small beginning by the State Bank of India. It is gratifying to note from the latest Directors' Report of the Andhra State Financial Corporation that the State Bank has recently evolved a scheme as an experimental measure by setting up co-ordination committees and working parties for pilot schemes. It is the intention of the State Bank to render assistance to institutional agencies by furnishing them with confidential reports on the applicants from centres where the financing agencies are not represented. The progress of this experiment will doubtless be watched with interest.

Reorganisation of States

The impending reorganisation of States will necessitate a corresponding reorganisation of the State Financial Corporations also. While some of the Corporations are facing merger, others are to break up a part of their business and cede it to the adjacent corporations. One or two, however, as, for instance, the Punjab Corporation, may actually derive additional strength.

The Andhra State Financial Corporation was established only in November last as a consequence of the formation of the Andhra State out of the old Madras State. This Corporation is now proposed to be merged with the Hyderabad State Financial Corporation which is deemed to be the financial corporation of the new Andhra State, following the proposed merger with it of the Telugu Districts of the present Hyderabad. Again, since the Bombay State Financial Corporation will become the Corporation for the proposed new Maharashtra State, the Gujerat areas of the Bombay State will be served by the Saurashtra Financial Corporation. As regards the Travancore-Cochin State Financial Corporation, it will serve a bigger area than now, as the new Kerala State will receive the districts of Malabar now belonging to the Madras State. It is true that four taluks of Kerala will be transferred to the Madras State, but what it cedes to Madras is only a fraction of what it takes over. The transfer of territories thus from State to State involve redistribution of the areas of operation, and assets and liabilities among the various Corporations. The consequences of States Reorganisation are being studied and tackled by the Corporations affected. It will, therefore, take some time for them to settle down to their legitimate work of financing industries.

Andhra Financial Corporation

The bulk of the share capital of the Andhra State Financial Corporation having been received only about the middle of January 1956, no loans were granted by the Corporation during the period ended 31st March 1956. Five applications for loans amounting to Rs. 8.40 lakhs were received but none of them was complete, inasmuch as they did not contain full information. The Madras Industrial Corporation Ltd. had made five advances to industrial concerns in the Andhra territory up to the formation of the State of Andhra. These were assigned to the Andhra Government later. Of these, four with outstandings aggregating Rs. 8.07 lakhs were transferred to the Andhra State Financial Corporation early this year.

After payment of expenses of administration and taxes, the net profit of the Andhra Corporation amounted to Rs. 8,320. Out of this, Rs. 1,000 was allocated towards reserves. The balance of Rs. 7,320 was utilised for payment of the guaranteed dividend at the rate of 3½ per cent. As the amount required to pay the shareholders for the three months ended 31st March 1956 aggregated Rs. 43,750, the State Government was requested to make good the balance of Rs. 36,429 as subvention.

Rajasthan Corporation

The Rajasthan State Financial Corporation received during the period between 8th April 1955 and 31st March 1956, 43 applications for Rs. 78.06 lakhs. Out of these, loans aggregating Rs. 7.28 lakhs to seven concerns were sanctioned. Ten applications for loans aggregating Rs. 12.46 lakhs were rejected or withdrawn. The total amount of loans disbursed up to 31st March last was Rs. 1.85 lakhs.

For the period under review, the net profit amounted to Rs. 2.11 lakhs. Of this, Rs. 97,000 was earmarked for taxation and Rs. 5,000 credited to reserve fund. The balance of Rs. 1.09 lakhs was utilised for payment of the guaranteed dividend requiring Rs. 2.88 lakhs, the balance of Rs. 1.79 lakhs being received from the Rajasthan Government by way of subvention.

Saurashtra Corporation

The Saurashtra State Financial Corporation received 23 applications for Rs. 61.29 lakhs during the year ended 31st March 1956, as compared with 37 applications for Rs. 62.22 lakhs in the preceding period of operations. Of these, 11 applications for Rs. 28 lakhs were sanctioned, as against a similar number of applications for Rs. 15.4 lakhs in the preceding year. During the year 13 applications for Rs. 14.07 lakhs were rejected, the corresponding figures for the previous period being seven and Rs. 2.77 lakhs. Loans actually advanced aggregated Rs. 17.55 lakhs as against Rs. 6.10 lakhs a year before.

The industries for which loans were sanctioned included cotton textiles, chemicals, bonemeal, silicate of soda, biscuit manufacturing, R.C.C. span pipes, clock manufacturing, cotton ginning and flour mills.

The net profit of the Corporation aggregated Rs. 3.23 lakhs. After transferring Rs. 17,000 to reserves and Rs. 1.50 lakhs to taxation, the balance of Rs. 1.56 lakhs was available for disbursement of the guaranteed dividend, taking up Rs. 3.50 lakhs. The shortfall was made up by drawing Rs. 1.94 lakhs as subvention from the Saurashtra Government.

It is encouraging to note that the Government has agreed to exempt the loanees of the State Corporation from payment of stamp duties on their loan deeds for a period of two years.

T-C. State Corporation

The number of applications received by the Travancore-Cochin State Financial Corporation during the year ended March 1956 amounted to 26, as against 34 in the previous year. But the number of applications disposed of was 29, as against 24. The loans sanctioned amounted to Rs. 43.25 lakhs, as against Rs. 37.15 lakhs. Since its inception, the Corporation had received 63 applications for an aggregate accommodation of Rs. 109.32 lakhs. Of these, 50 applications for Rs. 80.40 lakhs were sanctioned, three for Rs. 1.90 lakhs were rejected and 10 applications valued at Rs. 7.60 lakhs were pending disposal. At the end of the period, the total amount disbursed stood at Rs. 62.69 lakhs. Loans, advances and debentures outstanding at the end of the year amounted to Rs. 61.87 lakhs.

Of the total amount of Rs. 80.40 lakhs sanctioned, textile mills accounted for Rs. 21.49 lakhs, tea factories for Rs. 16 lakhs and rubber manufactures Rs. 10.85 lakhs. Among the others were cashew, oil and soap, coir, tile, and fertiliser industries.

The result of working during the year ended 31st March 1956 was a profit of Rs. 4.34 lakhs. Of this, provision for tax absorbs Rs. 1.89 lakhs. After transferring a sum of Rs. 21,696 to reserves, there was a balance of Rs. 2.22 lakhs. Since the sum fell short by Rs. 1.27 lakhs for the payment of the guaranteed dividend to shareholders of the order of Rs. 3.49 lakhs, the Government was requested to make good the shortfall by way of subvention.

ROLE OF MAN-MADE FIBRES IN WORLD TEXTILE ECONOMY

NEW PLANT CAPACITY CONTINUES TO BE ADDED

REVIEWING the trends in world apparel fibre economy, the U.N. Food and Agriculture Organisation had observed some time towards the end of 1954 that there was a fairly consistent tendency for increased use of man-made fibres in practically all regions. The truth of this observation, made in 1954, continues to be borne out by events. During 1955, man-made fibres, according to the International Cotton Advisory Committee, Washington, continued to fare much better than cotton in competition for markets. The aggregate free world output of man-made fibres in that year was as much as 11.0 million bales (of 445 lbs. each), which is nearly double the production in 1949. The rise of 5.3 million bales in the output of these fibres since 1949 thus has fully equalled the gain in cotton consumption. Taking the year 1955 alone, it is seen that the production of man-made fibres was higher by 1.2 million bales, while that of cotton improved by only 300,000 bales.

The upward trend in man-made fibre output is expected to gather further momentum in the future, what with the installation of new plant capacity. The *Textile Organ* estimates total plant capacity by the end of the current calendar year at about 14.8 million bales, as against 13.4 million bales in March 1955. Although rayon continues to account for the major part of the rise in capacity, the newer synthetics, including nylon, dacron, terylene, orlon, perlon, etc., are increasing rapidly in importance and it is expected that the capacity will aggregate 2.0 million bales by December 1956. The table at the foot of this column will indicate the trend of free world production of man-made fibres and consumption of cotton in the past seven years. It will be seen therefrom that all sections of the man-made fibres industry have participated in the trend towards enlarged production, but the percentage increase has been the greatest for the new synthetics and least for continuous filament rayon yarns. The largest increase in the production of rayon in the last two years has been in Japan. There has also been substantial improvement in nearly all countries of Western Europe, as well as in the U.S. and Latin America.

An idea of the trend in man-made fibres and cotton consumption in the principal textile manufacturing countries of the world can be had from the statement given at the foot of the second and third columns. This statement reveals that consumption of rayon has gone up much more than that of cotton in all countries, except India where the synthetics industry is yet in its infancy. In the Federal Republic of Germany and Japan, consumption of rayon (exclusive of other synthetics) is now around three-fourths as large as cotton consumption. The percentage of the market won by man-made fibres in the other major countries, though smaller, is generally rising. Cotton's showing *versus* man-made fibres would have been more unfavourable but for the rising cotton consumption in a number of countries in the Asian, African and Latin American regions, where textile industries are growing in importance.

There are several factors which govern the competition between man-made fibres and cotton. Among them, four stand out prominently. They are (1) quality characteristics as applied to end-use requirements; (2) comparative prices; (3) promotion and other activities to develop consumer preferences; and (4) preferences for domestically produced *versus* imported fibres.

Although increasing attention is devoted to cotton research, the amount of research that is being conducted to improve the quality characteristics of man-made fibres continues to be far greater. It is this factor that has undoubtedly been the most important in raising the competitive capacity of man-made fibres *vis-a-vis* cotton over the years. The recent improvements in rayon include development of high-tenacity yarns for uses where strength is a key factor—for example, tyre cord—and of additional types for particular applications such as carpet staple. Of great importance, however, is probably the rapidly rising production of a large variety of newer synthetics. With the prices much higher than cotton or rayon, the use of these fibres depends on superiority in performance for given uses. Much of the competition from these fibres is with rayon. Wool and cotton are also noticeably affected in a long list of end-uses.

The prices of rayon remained largely unchanged during 1955. Although cotton prices declined and then rose during the year, it is likely that the net competitive price position of cotton strengthened and there are prospects of further improvement in future. Nevertheless, the prices of rayon staple in all the main textile countries continue to be below all cotton prices, barring those of the poorest qualities. Substantial reductions were made in the prices of new synthetics in 1955. Thanks to those reductions, the competitive capacity of the synthetics relative to cotton tended to improve, though they continued to be priced several times higher than cotton, as is shown below:

(In cents per pound)

	U.S.A.		Japan	
	April 1956	April 1955	April 1956	April 1955
Cotton middling 15/16"* ..	37.3	35.3	31.0	37.0
Cotton U.S.S.M. 1-1/16" ..	40.6	39.7	42.4	40.8

* Price at mills.

A more active and co-ordinated effort is, no doubt, now being made to promote consumption of cotton. But this effort may be offset, to some extent, by increased activity on behalf of man-made fibres. With the consumption of all textiles faring badly in competition from other industries for consumer favour, there is, perhaps, something to be gained by all sections of the textile industry from the growing promotional activities.

For those countries which must economise on foreign exchange expenditure, there is a temptation to favour domestically produced man-made fibres, as against cotton or, perhaps, the reverse sometimes. A survey by the International Cotton Advisory Committee indicates that this is not as much a consideration as formerly. According to the Committee, there are only isolated instances where the problem is of any real import.

BURMA'S TEXTILE IMPORTS

The prospects of India exporting a larger quantity of cotton textiles to Burma would appear to be quite bright. The Burmese Government, for instance, has announced that it intends to speed up imports of textiles, with a view to offsetting the recent rise in prices. Again, the fresh trade agreement now being negotiated between the two countries is expected to provide for the import of larger quota of Indian cotton textiles by Japan. As readers are aware, India has suffered a severe setback in the cotton textile market of Burma, owing chiefly to restrictions on imports and partly also to severe competition from other countries, especially Japan. The total shipments of Indian cotton textiles to Burma during 1955 were not more than 14.41 million yards, which compare very unfavourably with 40.00 million yards in 1954. During the same year, Japanese exports to Burma amounted to 42.58 million yards which were, however, lower than the figure of 68.12 million yards for 1954.

The Executive Committee recently appointed by the Burmese Government to implement anti-inflationary measures has decided to issue next week licences for the import of nearly 1.25 crore kyats worth of textiles from West Germany and 4.16 crore kyats worth of textiles from Japan. Discussions are also under way with India and the U.K. for the purchase of textiles valued at 3.00 crore kyats.

Meanwhile, Burma has encountered "major difficulties" in arranging for the U.S. raw cotton to be processed elsewhere and in utilising the credits from rice sales, mainly to communist countries. "Swift and appropriate action" will, it is said, be taken to make arrangements for the processing of U.S. cotton. If the efforts in this direction fail, the Government will issue extra licences for textile imports up to a value of 5.00 crore kyats.

The wool growers of Australia, New Zealand and South Africa have decided to press forward with the rapid intensification of wool research by doubling the expenditure available, while, at the same time, the world budget for promotion in the fourteen countries has been increased, according to the statement issued by the Executive of the International Wool Publicity and Research Fund (con-Wool Secretariat) at the end of the series of meetings held at London recently. At the meetings, expansion of joint promotions with the wool industry was planned and the decision of the American Sheep Producers Council to make a contribution of $425,000 for wool promotion, in conjunction with the activities of the Wool Bureau in the United States, was welcomed. Overseas Directors attended the Executive meeting for the first time to give a firsthand account of the work of the International Wool Secretariat throughout Europe and in Japan.

Thanks to mounting Japanese competition in the U.S. domestic textile market, several cotton piecegoods manufacturing units are cutting production. The Spring Cotton Mill in the southern U.S. has postponed indefinitely the implementation of a $10-million expansion programme. Announcing this, Col. Elliott Springs, President of the Mill, said at Lancaster the other day that the Japanese were gaining every day. He complained that the Commodity Credit Corporation had sold cotton to Japan 10 cents a pound cheaper than he could buy. "We have," to quote Col. Springs, "always been able to meet competition without fear, but we can't lick the State Department, the Secretary of Agriculture and the $64,000-million give-away programme while Congress twists our arm."

A Russian party is reported to have bought raw wool "quite heavily" from the Bombay market last month. Estimates of these vary between 1.5 and two million lbs. at rates ranging from 74d. to 76d. per lb. C. & F., clean basis. Trade circles assess the total value of these purchases up to date at approximately Rs. 40 lakhs. It may be recalled that, in terms of the Indo-Soviet trade agreement signed on 2nd December 1953, raw wool was among the goods agreed for export from India into the U.S.S.R.

Following the recent visit to India of a Soviet purchasing Mission, it is understood that negotiations are under way for the sale of woollen goods to the U.S.S.R., according to the I.W.S. News Service. While a sizable quantity is reportedly being negotiated, no final decision on the deal has been made, pending settlement of the terms of the contract, particularly in respect of inspection and arbitration. This is the first time that the U.S.S.R. has entered the Indian woollen textiles market for direct purchases.

World Production of Man-made Fibres and Consumption of Cotton

THE NATIONAL RAYON CORPORATION LTD.

SPEECH OF THE CHAIRMAN, MR. KASTURBHAI LALBHAI

THE following is the text of the speech of Mr. Kasturbhai Lalbhai, Chairman of the National Rayon Corporation Ltd., delivered at the Ninth Annual General Meeting of the Company held at Bombay on Thursday, 14th June 1956:

"I have great pleasure in welcoming you this afternoon and present to you for adoption the ninth Directors' report and audited statement of accounts for the year ended 31st December 1955. Since these have been in your hands for some time now, I believe, I have your permission to take them as read.

"This meeting was originally convened on the 24th of May 1956 but, from the announcements that appeared in newspapers some time by the end of April, it was found that this day was declared as a public holiday under the Negotiable Instruments Act. Since under the provisions of the Companies Act, 1956, holding of general meetings on public holidays has been prohibited, fresh notices had to be issued to convene this meeting for today. The inconvenience caused to you all is very much regretted.

"The accounts in your hands contain as usual the corresponding figures for last year. Some of the important points pertaining to the accounts have also been covered in the Directors' report. The amount of salaries, wages and allowances, appearing in the profit and loss account, however, needs some further explanation. This amount not only includes the sum of Rs. 7,08,135 shown in the profit and loss account as payment in respect of previous year which includes bonus for the year 1954 and the difference in wages but also includes the sum of Rs. 6,93,255 provided for payment of bonus for the year 1955 and since paid to the employees of the Company.

"Though the actual production in the year 1955 was higher than the previous year, the profits earned by the Company have remained almost the same, mainly due to lower rates realised for the sale of the Company's yarn.

Plant Expansion

"The expansion of the rayon plant and also putting up of the caustic soda chlorine plant are progressing at the plant site according to schedule. Recently, steps have been taken to order out further machinery and, with the placing of this order, the duplication of the rayon plant, as originally envisaged, is likely to be achieved in the near future.

"The advantage conceded by section 15C of the Income-tax Act, exempting from tax profits upto 6 per cent. of the capital employed by new industrial undertakings cannot be availed of by this Company even in this the fifth and the last year of the benefit period. Since the Company does not expect that the profits hitherto made will catch up with the depreciation and unabsorbed depreciation, the dividends to be received by the shareholders this year also will continue to be liable for tax in their hands, though there will be no deduction of tax at source. The Finance Act of 1956 has imposed fresh burdens on companies by way of super-tax on dividends declared in excess of 6 per cent. on the paid-up equity capital. However, the Company may not have to pay this tax, as there is expected to be no assessable income for the year 1955 as explained earlier.

"You are, perhaps, aware that, effective from 1st of April 1956, the facility afforded to industries by way of initial depreciation on new buildings has been withdrawn. Whereas it is conceded that it is necessary to find out new sources of taxation for raising finance for implementing the ambitious Second Five-year Plan, the withdrawal of this concession would coincide with the scarcity in the country of building materials such as steel and cement which will compel the use of imported materials at a much higher cost. It is to be hoped that the combined effect of these will not go to retard the expansion programmes undertaken by the private sector.

Power and Fuel

"As I said last year, adequate supply of power and coal are a must for expansion of industry as a whole. The electrical energy required for meeting the expansions undertaken by the Company are expected to be met from public sources of supply. However, the position regarding the supply of wagons for the movement of coal is most unsatisfactory. It appears that the railways are behind schedule in increasing the carrying capacity to cope with the increased movement demands, consequent upon the successful implementation of the First Five-year Plan. Demands on the transport system are bound to increase when the Second Five-year Plan is in the process of implementation, particularly when the capital goods for the huge steel and electrical projects begin to arrive. It is to be hoped that the steps being taken by the Government in this connection would bring out satisfactory results and that the transport bottlenecks experienced by the industries would be solved, enabling the industries to play their due part in the planned development of the country.

"The policy regarding the import of rayon yarn adopted by the Government appears to have suffered a slight shift towards liberalisation for some time past. Whereas it was expected that, with the increased indigenous production, Government would take steps to reduce imports from abroad, the actual figures of imports disclosed by the official figures for the nine months ended December 1955 reveal an import of as much as 38 million lbs. of rayon yarn into this country. At this rate, the total imports for the financial year ended March 1956 are likely to be about 51 million lbs. which, together with the actual production of the indigenous industry, would make available to the country a much larger quantity of rayon yarn than the estimated annual requirements of the country of about 45 million lbs. The unhealthy competition by foreign manufacturers referred to in my last speech that they sell the two popular deniers of 150 and 120 at the same rates in this market, maintaining much higher rates for their domestic sales, continues. Our Government, I am sure, will bear this in mind while formulating the import policy for the next period.

Freight Charges

"This time last year the Conference Line of Steamers had contemplated to levy a surcharge of about 35 per cent. on the freight rates on cargo shipped to the ports of Bombay and Calcutta. Thanks to the timely intervention of the Central Government and the speedier clearance of cargoes at both these ports, the contemplated surcharge was not enforced. It is to be hoped that the speedier clearance and turnover effected at these important ports will continue to be maintained hereafter also for the general good of the industrial progress of the country.

"In order to fall in line with a few important provisions of the new Companies Act, certain resolutions have been placed before the annual general meeting for your approval. They are incorporated in the notice convening the meeting. Explanatory notes have also been printed and sent along with it. I hope the same will, when moved at the proper time, receive your due consideration."

(Concluded from next column)

and the disparity disappears after a month or two when raw jute flows in.

In fine, the present period is one of transition. With an estimated Indo-Pakistan crop of 150 lakh bales in the ensuing season, the jute mills will have plenty of raw materials at cheap prices to meet world demand. To decide the policy for the whole year on the basis of the present transitional period will be to commit a grave blunder and create chaos and dislocation in trade.

The unfortunate position in which some of the mills find themselves today is a result of their not doing simultaneous business in jute manufactures at the time of making their purchases of raw jute with the speculative motive of deriving higher price for their finished products later on.

As regards the proposal for fixing minimum prices, with no one to support them, never has any such scheme found favour in the history of jute trade, though the jute industry has passed through several vicissitudes in the past. Even in the 1930's when hessian (40-6 oz.) sold at Rs. 6 only and B. twills at Rs. 18, no minimum prices were fixed. Besides bringing hostile reactions from foreign consumers, the scheme will put the Indian mills in a very desperate position, as compared with their confreres in Pakistan and Europe and cause great suffering to the industry and trade alike.

MINIMUM PRICE OF JUTE GOODS

NO NEED FOR THEM

By Debiprasad More

IN 1952, the Ministry of Commerce and Industry expressed grave concern over the fact that the position of the Indian jute industry, which had been unchallenged for decades, had become serious. It realised that "the continental mills, by installing the latest types of machinery, have captured some of the ground formerly held by Indian jute products in foreign markets." Since then, the entire efforts of the Government and the I.J.M.A. were directed towards developing the exports of Indian jute goods by selling them at competitive rates. In this drive, they were quite successful, inasmuch as the year 1955-56 witnessed a recovery of our lost markets by a considerable increase in our exports. The value of jute goods exports in 1955-56, though much higher than the two post-Korean years 1952-53 and 1953-54, came, surprisingly enough, to be also higher than 1954-55 which was an exceptional year of sky-rocketing prices owing to a very short crop of only 80 lakh bales in both India and Pakistan.

Even last year, as an expression of the Government's anxiety over high prices, the following statement emanated from New Delhi:

"Though competition from European manufacturers as well as the new industry in Pakistan continues, the I.J.M.A. with the assistance of the Government is carrying on a successful campaign to increase the consumption of jute goods, not only on traditional lines but also by finding out new uses for jute products. *It has been realised by the mills that, in the present context of keen competition, not only from the jute industries in other countries but also from substitutes, it is only through cheapness and a sustained sales campaign that Indian exports can be maintained at a satisfactory level.*" (Italics mine.)

In order to implement this idea of making jute goods cheaper, the Government of India have laid down a production target for raw jute at an annual rate of 7 million bales to be attained at the end of the second Five-year Plan. But it is rather very surprising that all on a sudden an attempt is being made to undo past work. The long-enunciated policy of meeting foreign competition is now being forsaken and much concern is being shown over the present position which is not so bad as is being seriously thought of and at least not worse than last year when the above statement advocating cheaper prices was made. At that time, the price of raw jute (Assam Bottom) was Rs. 27-8 per maund and B. twills Rs. 107. Now, the same are Rs. 26-8 and Rs. 106 respectively. A lot of proposals, including one to fix minimum prices, are said to be under consideration, though no official announcement has yet been made to remove the uncertainties prevailing in the market.

The gravity of the present situation has been measured by two factors, namely, (1) stocks of jute goods, (2) uneconomic position of jute mills. As regards the present stock position of jute goods, it can never be called as too big as it amounts only to a little over one month's production. Even a single buyer of ours, namely, the U.S.A., keeps a stock of 26 crore yards of hessian while our mills have got a stock of only 15 crore yards. The jute mills should keep at least one and a half to two months' stock, to meet any eventuality. The following figures well illustrate the position of present stocks, as compared with that in some previous years:

(In 1,000 tons)	*Hessian*	*Sacking*	*Others*	*Total*
October 1945 ...	73.7	118.0	4.4	196.1
,, 1946 ...	106.2	140.8	2.1	249.2
February 1948 ...	51.9	98.8	6.2	156.9
May 1953	47.7	89.2	1.9	138.8
,, 1956	40.6	71.1	7.4	119.1

It may be noted from the above figures that the present stock position is not at all excessive. Further, it is a fact that the stocks usually increase in the January-June period and decrease in the July-December period. Hence, the normal forces of demand and supply will automatically bring the stocks to their normal levels.

As regards the present disparity between the prices of raw jute and jute goods, it is only fictitious and not real. As already mentioned, the present disparity is no wider than that prevailing in June last year when the Government was advocating further cheaper prices. It is further claimed by some of the jute mills with modern machinery that their present cost of B. twills is about Rs. 95. Leaving these considerations apart, the vital factor must be borne in mind that, usually in June and July, the prices of jute manufactures move and adjust themselves according to the outlook on the new crop of jute

(Continued in previous column)

FREE WORLD'S COTTON CONSUMPTION IN 1955-56

ESTIMATE PLACED AT 27.6 MILLION BALES

THE consumption of cotton in the free world has increased from year to year, thanks to the increase in population and the establishment of textile industries in many countries which were formerly dependent almost exclusively on imports of cloth. During 1954-55, the free world consumed 27.6 million bales (of 478 lbs. each) and the communist countries 9.0 million bales, as compared with 26.9 million bales and 9.1 million bales, respectively, in the previous season and 22.4 million bales and 8.0 million bales in the pre-war year 1938-39. The consumption of cotton in the free world in the current season, namely, 1955-56, according to the International Cotton Advisory Committee, will probably be maintained at the 1954-55 level. This factor, the Committee then goes on to point out, may be of "special significance" to the cotton surplus problem, in that it indicates that, "in the short run, at least, consumption can be counted on to play only a limited role in the process of equating supply and demand."

There are two most notable changes in the regional pattern of consumption of cotton. In the first place, there has been a decline in consumption in some of the older textile producing countries which import cotton, such as the U.K. Secondly, there has been an increase in the consumption of cotton in the cotton producing countries such as the U.S. and India. The following table gives the regional pattern of cotton consumption in the free world in 1934-38 (average) and in each of the three years ended 1955-56:

(In million bales of 478 lbs. each)

	1934-38 (Average)	1953-54	1954-55	1955-56
U.S. and Canada ..	6.8	8.9	9.2	9.6
W. Europe	7.5	7.3	7.3	8.7
Japan	3.5	2.4	2.1	2.0
India	3.1	4.0	4.1	4.2
Others	1.5	4.3	4.9	5.1
Total ..	22.4	26.9	27.6	27.6

Explaining the geographical changes in cotton consumption, the Committee says that the reasons for these changes are to be found in the "variations in yarn and textile trade, the movement of cotton textile production away from the traditional manufacturing countries towards the sources of supply of raw cotton and the inexorable growth in production of rayon and synthetic fibres." In the shorter period, these changes are influenced by cyclical factors and governmental policy and this season, especially by the uncertainties surrounding the future price trend of raw cotton.

An important factor which influences cotton consumption in the textile-exporting countries is the level of export trade. In many countries, this level has fallen. Between 1954 and 1955, exports from the U.S. fell from 605 million square yards to 542 million square yards, and those from the U.K. from 637 million square yards to 555 million square yards. A similar trend was noticeable in India which sent 773 million square yards in 1955, as against 861 million square yards in 1954 and in Japan, where the corresponding figures were 1,139 million square yards and 1,278 million square yards, respectively.

In the U.S., the upswing in textile activity which commenced early in 1955 has continued during the present season. This is reflected in higher cloth prices and mill margins and a significant decline in the ratio of stocks of broad woven goods to unfilled orders. Mill margins declined in February for the first time in many months as a result of an increase in raw cotton prices. Mill consumption of cotton for the first eight months aggregated 6.3 million bales compared to 6.0 million in the same period last season. The comparable average daily rates were 36,286 bales and 34,440 bales. Official sources predict that if the monthly rates for the ensuing months show normal seasonal changes, consumption for the 1955-56 season will probably be about 9.2 million bales or some 400,000 bales or 5 per cent. higher than in 1954-55. This increase in cotton consumption has been achieved despite greatly increased imports of both cotton and rayon textiles, lower textile exports, and a marked increase in domestic production of rayon and synthetic fibres. *Per capita* consumption of cotton for the calendar year 1955 rose for the first time since 1951 but was still about 16 per cent. under that year. Furthermore, cotton's share of the total market continued to decline to less than 66 per cent. the lowest on record. Conversely, in 1955, the man-made fibres took a record 28 per cent. of the total textile market.

As regards European countries, the Committee quotes the report of the Organisation of European Economic Co-operation which attributed the difficulties facing the textile industry in these countries to the uncertainty surrounding the evolution of the U.S. cotton policy which has compelled the "traders to adopt hand-to-mouth buying tactics at all stages of production and distribution." It was no mere coincidence that the downtrend in cotton consumption in many countries began soon after the first indication was given early in 1955 that there would be a change in U.S. cotton policy. Imports subsequently declined and stocks in net importing countries are now several hundred thousand bales under what they were a year ago. The O.E.E.C. report stresses another long-term factor in the adverse textile situation, namely, the competition from the Asian industries, mainly India and Japan. The European industry is faced with the need for large capital expenditures to modernise the industry at a time when the future is far from reassuring.

The following table gives the consumption of cotton in European countries in the first half of 1954-55 and of 1955-56:

(In 000 bales)

	First half of		Per cent. change
	1954-55	1955-56	
U.K.	939	787	—16
France	677	594	—12
W. Germany	636	650	+ 2
Italy	402	350	—13
Netherlands	167	170	+ 2
Belgium	231	221	— 4
Others	728	708	— 3
Total ..	3,780	3,480	— 8

For most European countries, the decline in textile exports is a comparatively recent phenomenon. Even allowing for the declining trend, exports in most cases are significantly higher than in the immediate pre-war period. In the United Kingdom, however, the shrinkage in textile exports has been more protracted and significant. Exports now are well under half their pre-war volume and show a downward trend nearly every year. Shipments of cotton piecegoods from this country registered a further steep decline in 1955 and, from all accounts, there is certainly no sign of any improvement in export demand.

During the first six months of the current season, the consumption of cotton in the U.K. was 16 per cent. below the comparable volume last season. Consumption is presently estimated at 1.55 million bales or the minimum post-war level. In France, some improvement has been noticed more recently. Nevertheless, for the season as a whole, consumption is estimated at 1.1 million bales or one of the lowest levels for many years. Similarly, consumption in Italy may fall below 750,000 bales in the current season as compared with 800,000 bales in the last season. The fall is attributed to decline in textile exports. In Germany and the Netherlands, consumption so far this season has been higher, thanks to increased exports. The Committee stresses the fact that, in Europe, the mixing of cotton with synthetic fibres is on the increase. It adds: "In summary, all things considered, consumption is expected to decline in most European countries and in total is likely to be off by at least half a million bales as compared with last season."

IMPORTS OF COTTON

During the period 1st September 1955 to 26th May 1956, actual arrivals of foreign cotton in India aggregated 442,507 bales, as against 647,521 bales for which licences were issued. The following are the figures relating to actual arrivals and quantity licensed during the period under review:

(In bales of 400 lbs. each)

	Quantity Licensed	Actual Arrivals*
Sterling Area cotton		
East Africans	280,043	126,991
Egyptians	210,278	202,694
Sudans	107,502	95,166
Peru and others	26,566	6,543
	624,389	431,394
Dollar Area cotton		
U.S.	23,132	11,113
Total ...	647,521	442,507

*Arrivals include quantity licensed in the previous season.

MEN WHO WILL MOULD OUR FUTURE

Our scientists are the pilots of our destiny . . . the men who will chart our industrial progress. And in order to provide them with every equipment and facility, 11 National Laboratories were established in the First Plan. In the second Five Year Plan over Rs. 20 crores will be spent on scientific and industrial research.

In the work of our scientists, as in the training of research students in our universities, paper will play an important part. In laboratories all over the country paper will provide the means of computation and instruction.

FEW SIGNS OF REVIVAL OF DEMAND FOR CLOTH IN U.K.

LABOUR ON DUTY-FREE TEXTILE IMPORTS

By Our Special Correspondent

MANCHESTER, *5th June*

THERE are very few signs at the moment in Lancashire of any revival of demand in cotton yarn and piecegoods and the same influences are still at work which have caused the slack state of affairs in business for a long time back. The two outstanding factors in the situation are still lack of confidence in prices and the effect of substantial imports of foreign cloth into the home market.

MANCHESTER LETTER

There seems to be a possibility at an early date of more stability in rates for United States cotton at a slightly lower level following the passage of the Farm Bill just signed by President Eisenhower. There is uncertainty, however, as to competitive prices from other growths which have been purchased by Lancashire mills in preference to the United States staple.

Local spinners have now experienced the spinning value of many of these outside growths and in some instances they have discovered advantages which have not been known in the past. To that extent growers in the United States may find that these alternative raw materials are preferred against the cotton grown in the United States on a similar price basis. It will be interesting to watch this factor when competition between other growths is more acute. For some time back very little yarn has been spun in Lancashire from entirely United States cotton, blending with other qualities now being almost universal.

Home Market

The other factor which has affected Lancashire so drastically for over 12 months back has been the receipt of foreign cloth, especially from India and Hong Kong. This has cut very severely into production of goods for the home market. Recently, however, some Lancashire cloths have been in better demand because earlier delivery can be offered than by importing materials from other countries.

In some quarters the opinion is now held that the balance between yarn output and cloth production in Lancashire may be disturbed as the weaving branch appears to be suffering from the depression to a greater extent than the spinning section. The general situation remains very unsatisfactory and all producers are struggling very hard against the problems which beset them. It is often suggested that more could be done by greater efficiency but it takes courage for firms to spend money on re-equipment when the outlook is so uncertain.

The British Government's attitude on foreign cloth imports meant quite plainly that the cotton textile industry must continue to suffer from these cheap labour imports and, quite regardless of all consequences, must reduce its production potential, according to Mr. Charles Schofield, General Secretary of the 50,000 strong Operative Spinners' Amalgamation in a report issued last week. The Report said: "Presumably this is part of the Government's plan of reciprocal trade with India and Hong Kong, particularly the former. The export of capital goods shall be paid for, at least in part, by duty-free import of cotton textiles."

Proceeding, the report observed: "In view of the extent to which capital goods are at present being exported to these countries, it may not be long before we shall be seeing a substantial importation of goods other than textiles, manufactured by the machinery shipped from this country. With the application of present methods of production this may develop earlier than many people may think."

Mr. Schofield said that although it appeared an impasse had been reached, the industry must continue its efforts to "bring about a reasonable and fair condition of trade."

Shift Work Claims

Contrasting reports and reviews continue to come to hand about the progress of the industry in Lancashire and prospects for the future. Company chairmen—almost daily—indicate the difficult year through which the industry has passed, but their comments about existing conditions and the outlook are by no means uniform.

Considerable interest has been taken in the report issued by Hayeshaw Ltd. which has spinning units at Leigh and Bolton. Since 1948 the group has spent more than £1,150,000 on replacements, modernisation and extension of plant and machinery. According to the chairman, Mr. W. A. Grierson, all this machinery is running on a two- or three-shift system. "If precious labour is being wasted on traditional and obsolete methods of operations, if two people are doing a job which one can perform on modern machinery operated on the well-tried work study basis, then the extension of shift working must be disappointingly slow," he declares.

In view of past criticisms levelled against Lancashire for its inability to match competing nations in the number of spindle-hours operating, it is significant that the Chairman of Hayeshaw Ltd., can claim that in the group's re-equipped ring mills the number of spindle-hours worked during the past year was 3,720. This compares very favourably with the majority of West European countries, whose average it exceeds, with the exception of Holland.

Mr. Ibrahim el Mufti, Sudan's Minister of Commerce, Industry and Supply, began a two-day visit to Manchester and Liverpool this week, for an exchange of views with Lancashire industrial leaders.

In talks with textile trade representatives, at the Manchester Chamber of Commerce, he urged Lancashire millowners to buy more Sudan raw cotton. In the next three years, he said, the acreage under cultivation for cotton in Gezira-land would be increased from a million to 1,800,000 and would greatly increase the country's supplies.

Agreements Under Fire

Antagonism between British merchants and the spinners and doublers in Lancashire over the effect of current price regulation schemes on the competitive effectiveness of the industry has often been voiced. Fresh impetus to the argument has come from the annual report of the Cotton and Rayon Merchants' Association, which in its annual survey of the state of trade has commented on the recent controversy over the size, structure and organisation of the industry.

The dominating issue in such discussions, according to the merchants, is the competitive position of the trade as a whole. They believe in the "fundamental necessity to achieve maximum efficiency in all sections of the industry as reflected in quality, price and service." This they regard as essential if Lancashire is to maintain an export trade in the face of foreign competition and growing local production in overseas markets.

The spinners and doublers contend that without their price schemes the rest of the trade would lack the sheet-anchor which has proved invaluable when conditions have not been entirely satisfactory. The opposing view is that current systems are too rigid. It is made clear in the yarn section of the merchants' annual report that this aspect of the situation is to be the subject of further attacks. "In spite of strenuous efforts on the part of your representatives for some degree of flexibility in the minimum price scheme," says this sectional review, "the Yarn Spinners and Cotton Yarn Doublers' Associations are still apparently adamant that it should continue in its present form. Competitors of Lancashire overseas have full knowledge of Lancashire's yarn prices and can cut their yarn prices without fear of retaliation."

In order to have the appropriate background for a fresh approach to the producers, the merchants are gathering information about the prices of foreign yarn which they intend to use in further negotiations.

Some idea of the cost to the various sections of the trade in financing the sales promotion scheme under the "Buy Britain's Cottons" tag can now be gained. It is known that the Cotton Board is providing the first £50,000 towards the £250,000 bill covering the 2½ years' duration of the programme.

The trade unions have already recommended their constituent amalgamations to combine in making a £10,000 contribution to the scheme. It has been worked out that this amounts to about 1s. 3d. per operative or the equivalent of perhaps a quarter of an hour's wages.—*All Rights Reserved.*

WHAT IS HIGH COST OF SUGAR DUE TO?

DEFECTIVE LOCATION AND HEAVY TAXATION

THERE is no exaggeration whatever in the statement made by Mr. T. S. Venkataraman, an acknowledged authority on the sugar industry, in the course of his presidential address at the Eleventh Conference of Sugarcane Growers held at Cuddalore (Madras) recently, that India can produce sugarcane as cheaply as any other country in the world. The climate of India is quite suited for the cultivation of tropical and sub-tropical sugarcane. The wild cane of India, as Mr. Venkataraman said, can stand any strain due to climate. Nevertheless, the conditions in the sugarcane economy have all along been none too happy. Not only is the per-acre yield of cane very low as compared with the other sugarcane-producing countries but the quality of the cane also is relatively poor. Thus, on an average, one acre of land in India gives a yield of not more than 14 tons, which compares very unfavourably with 62.1 tons in Hawaii, 56.2 tons in Java, 41.1 tons in Peru, 30.4 tons in Egypt, 28.3 tons in Formosa and 27.1 tons in the Philippines. The recovery per cent. of sugar in cane grown in India is very low, the all-India average being about 9.5 to 10.0, as against 14.33 in Australia, 12.93 in Formosa, 12.33 in Peru, 12.23 in Puerto Rico, 12.25 in Cuba and 12.06 in Mauritius.

What is this state of affairs due to? The answer to the poser is not far to seek. As readers are aware, the sugar industry is unduly concentrated in the States of Uttar Pradesh and Bihar, the sub-tropical climate of which is not quite suitable for cane development. Despite the implementation of several sugarcane development schemes in these States for the past few years, the average level of yield and sucrose-content continue to be low, lower than even the all-India averages. It is this factor which has all along been largely responsible for the high cost of sugar produced. The truth of the statement is clearly borne out by the remarks of no less a person than Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture. Inaugurating the Cane Growers' Conference at Cuddalore, Mr. Jain said: "The sugar industry is the second biggest in the country. It is unfortunate that it should have been started in that part of the country which is unsuited to it. It was started 20 or 30 years ago in Uttar Pradesh. The Government gave protection to it and the protection is continued even today. Although the industry is run efficiently, its price is higher than that of imported sugar."

Tax Burden Heavy

While the high price of sugar produced in India is largely due to the defective location of units, there is no denying the fact that the heavy incidence of taxation—Central and State—has also been an equally important cause. Taxation alone accounts for as much as 25 per cent. of the total price a consumer pays for his requirements of sugar. Nowhere in the world is such an essential item of consumption as sugar subjected to so heavy a tax burden. Indeed, several sugar-exporting countries give concessions—as, for example, subsidies—to the industry. No industry will, of course, succeed, as Mr. Jain said, by subsidy, for its ultimate success depends upon the ability to produce cheaply. But the point is that the ability of the Indian sugar industry to produce sugar cheaply has been greatly nullified by the tax policies of Governments. In their anxiety to raise as much revenue as possible, the Governments—Central and States—are treating the sugar industry as their milch cow. How can Mr. Jain say that it is up to the sugar industrialists and the cane growers alone to adopt measures which would reduce the cost of production?

The cost structure of the sugar industry is so rigid that there is not much scope for a reduction. One of the main solutions to the problem of high sugar prices, therefore, lies in the downward revision of taxes. This is especially the case with regard to the cess on sugarcane, the raw material. The rate of cess is very high, amounting to as much as 15 per cent. of the cost of cane. The levy of such a high level of tax on a raw material is wrong in principle. When raw cotton—the raw material of the textile industry—and rubber—the raw material of rubber goods manufacture—are not liable to any cess, one fails to understand why the imposition of a heavy cess on sugarcane alone should be continued. In actual effect, since the cess is levied only on the cane crushed by sugar factories, it is a tax that denies to the consumer the full benefit of technological advance and amounts to a penalty on efficiency. It may be noted here that no cess is levied on the cane crushed for making *gur*, a process in which quite a lot of sucrose is left in the cane to be dried up by the sun. It is pertinent to recall here that sugarcane in many countries is treated as a plantation industry like tea, coffee and rubber. Mr. C. K. N. S. Nagarajan, Chairman of the Reception Committee, did well to draw attention to this fact, in the course of his welcome speech. Mr. Nagarajan rightly urged that the same status should be given to sugarcane in this country also.

To revert to Mr. Jain's address. There is considerable force in his statement that, by scientific research and technology, it would be possible to reduce the price of sugar and make it profitable. Mr. Jain claimed that sugarcane cultivation in India had improved in the past 20 years. Here he quoted the example of Walchandnagar where one acre of sugarcane yielded 100 tons. Coimbatore cane is the most popular in the world; in Egypt, 90 per cent. of the cane is of Coimbatore variety. Nevertheless, Mr. Jain opined that there was still scope for further improvement. In this connection, he observed: "During the first Five-year Plan, greater stress was laid on the development of agriculture than in the second Plan. But, in a country like India, for a long time to come, the strength of the nation's economy will depend on agriculture. Therefore, Mr. Nehru has envisaged an increase in the target from 15 to 40 per cent. and I fully share the Prime Minister's feelings. Accordingly, more allocation of money is being made and my Ministry is examining it."

Progress of Sugar Industry

Proceeding, Mr. Jain reviewed briefly the progress made by the sugar industry in recent years. According to him, sugar production last year (1954-55) was 50 per cent. more than in 1953-54, the quantity actually produced being nearly 1.5 million tons. As a result of this marked rise in output, import of sugar was reduced. The foreign exchange thus saved was diverted for the purchase of machinery. The record of last year has been beaten in the current year which is expected to witness a production of about 1.8 to 1.9 million tons of sugar. But, side by side with production, consumption of sugar is also on the increase. The installed capacity of the sugar industry a couple of years ago was 1.5 million tons. So the Government decided to issue licences for another 1.0 million tons; most of the licences were only to South India, which is most suited for cane growing. Mr. Jain regretted that some persons to whom licences had been granted did not make use of them. He made it clear that, since the Government was anxious to bring about a balance between production and consumption, the licences would be cancelled if they were not used.

Addressing the cane growers, Mr. M. Bhaktavatsalam, Minister for Agriculture, Madras State, emphasised the need for cultivating different kinds of crops, instead of sticking to paddy alone. He sought to allay the fears expressed by some cultivators that, by growing sugarcane, production of paddy would diminish. Mr. Bhaktavatsalam stated that the Government had granted licences for starting sugar factories on a co-operative basis in North Arcot, Chingleput and Coimbatore. In Salem also, a co-operative sugar mill would be established. He promised to see to it that a co-operative factory was started in South Arcot, even though a similar factory would soon be opened in the nearby Pondicherry State.

MANUFACTURE OF SUGAR MILL MACHINERY

The Government of India has approved of four schemes for the manufacture of sugar machinery in the country. It will be recalled that, at present, the country makes only machinery for sugar mills other than cane crushing mills and centrifugals. There are six Indian firms which undertake their manufacture against specific orders. In addition to these, there are other firms in India which manufacture machinery for sugar mills, but on a smaller scale. It is expected that a large number of new sugar mills will be established in the country during the second Five-year Plan period. Keeping this in view and the requirements of the existing factories by way of replacement, the Government of India has for some time been considering the possibility of manufacturing the complete range of machinery for sugar mills indigenously. After studying different schemes, it has been decided to approve the schemes of the following firms :

Name of firm	*Name of firm's collaborator*
Walchandnagar Industries Ltd., Bombay.	Skoda Works Ltd., Praha, Czechoslovakia.
Protos Engineering Co., Bombay.	Maschinen Fabriek Buckau R. Wolf A.G., West Germany.
Textile Machinery Corporation Ltd., Belghurriah.	Stork Werkspoor, (Holland).
Indian Sugar and General Engg. Corporation, Yamuna Nagar (Punjab).	A. F. Craig and Co. Ltd., Paisley (Scotland).

It is expected that these undertakings will start production shortly and attain full capacity by 1961 when they will be able to make machinery for eight sugar mills per year.

U.N. WORLD SUGAR CONFERENCE

The United Nations World Sugar Conference at New York is expected to last at least for six to seven weeks more, contrary to anticipations at the time of the commencement—23rd May 1956—that the Conference would terminate at the end of two weeks. The sessions of the Conference are being held in secret. Meanwhile, the world sugar market continues to rule fully steady, with the New York No. 4 (world) contract price not varying much outside the 3.37 cents to 3.40 cents a pound mark. Analysing the recent trends in the world market, the *Financial Times* observes:

"Recently, Japanese buying has provided the greatest interest in world raw sugar markets. The largest tonnages have again been bought from Cuba, but, as a result of the trade agreement signed last week between Formosa and Japan, the latter is now expected to take a minimum of 250,000 tons of Formosan sugar in the year commencing April 1956. Japan is, of course, one of the traditional outlets for Formosan sugar; in the meantime, however, Formosa has been finding substantial outlets among other Far Eastern and Middle Eastern countries. This year appears to have been a disappointing one for British refiners in export markets. By 31st May, Cuba had sold nearly 1.6 million tons of raw sugar, as against just over 1.4 million tons on the same date in 1955."

STABILITY OF TEA INDUSTRY

TEA BOARD TAKES STEP TO INCREASE INTERNAL CONSUMPTION

THE need for bringing about stability in tea prices by establishing equilibrium between supply and demand was emphasised by Mr. H. C. Bannerman, Chairman of the Indian Tea Associaton (London), at the annual Assam Dinner held in London last week. He struck a somewhat alarmist view of the present position of the tea industry when he said that the position today was somewhat akin to that which existed in 1952.

It is true that instability of prices brings no good either to the producer or to the consumer and that it will be desirable to establish some equilibrium between supply and demand, but few will agree with Mr. Bannerman that the present position of the industry is akin to that in 1952. No doubt, production of tea in principal producing countries of the world has gone up sizably over the three years, but this rising production must be viewed against the background of a rising level of consumption in the world, particularly in the tea-growing countries themselves. The economy of the various underdeveloped countries has considerably improved during these three years and there is every prospect of a further improvement in the coming years. There is no doubt a surplus of tea in the world, but such at a time when the level of consumption shows a rising trend should not be viewed with the same degree of concern as it was a few years ago, when consumption was more or less stagnant. With prospects of a rise in the national incomes of consuming countries in years to come, a further steady expansion in consumption of tea, the cheapest beverage so far produced, can be expected. It must, however, be noted that more and more new producers of tea, such as East Africa, have come in the field in recent years and they will considerably add to the world supply. Nevertheless, there is no reason to be unduly pessimistic about the outlook for the industry. The fact that more and more countries are taking to production of tea is itself an indication of the scope for increasing consumption of this beverage.

In order to ensure a greater price stability, Mr. Bannerman said that two factors must be relied on, namely, (1) an international tea agreement, and (2) a renewal of campaigns to expand tea consumption.

International Tea Agreement

From 1933 onwards until 31st March 1955, when it expired, the International Tea Agreement had been administered by the International Tea Committee in such a way that the world suffered neither a shortage nor a glut of tea. This was the boast of Mr. Bannerman. But what was the success of the Agreement due to? The main reason was political. It will be pertinent to recall here the fact that, out of the four signatories to the Agreement, three had remained under the control of the U.K.—the largest consumer of tea in the world and sponsor of the Agreement—while the fourth was dominated by the Netherlands. It suited both Britain and the Netherlands to be of one mind on this issue. The position is now different. The four signatory countries are politically independent and strongly nationalistic in their outlook, with one of them at loggerheads with another. While India has always been in favour of an international agreement on tea, others have not been very keen about it. Indonesia was, of course, ready to toe the line drawn by India, but Ceylon and Pakistan raised numerous issues. The latest position is that, while Ceylon is willing to come in, Pakistan it still reluctant. It has been putting forward a number of proposals which do not appeal to others. In short, the main impediment to reviving the Agreement is provided by Pakistan, evidently due to political differences with India. As far as we can see, there is no prospect of agreement being reached in the near future.

The only other factor on which the equilibrium between supply and demand depends is the expansion in consumption. Mr. Bannerman regretted that, in some parts of the world, the vigorous pre-war propaganda campaigns had not been renewed. In the U.S. and Canada, he said, the post-war campaigns had been well conceived, though the industry had too many disappointments in these countries in the past to be able to build firmly on results there. According to Mr. Bannerman, India offered the most helpful field for expansion of consumption. He felt gratified that the Indian Tea Board intended to "revive the somewhat moribund campaigns in that country."

A step in this direction was taken by the Tea Board last week with the inauguration in Bombay of the first Tea Centre in India. One of the primary functions of the Tea Board is to conduct propaganda both in India and abroad so as to increase the consumption of Indian tea. Though it is three years since the statutory body was set up, it is only now that the first practical step towards increasing internal consumption has been taken. The Tea Board has accepted that, while for many years to come the foreign market is vital to the growth of the Indian tea industry, it cannot overlook the fact that, in the ultimate analysis, only a sound internal consumption can give the right measure of stability to a product which, apart from being influenced by foreign demand, is subject to all the vagaries of an agricultural product. In other words, while India's need of foreign exchange, in the present context of its industrial development, impels that more tea from this country should be sold abroad, yet, in the larger interests of the industry, it is vitally important that the internal consumption must be increased from the present low *per capita* consumption of less than 0.5 lb. per annum to a decent level which will enable the industry to weather any storm in times of crisis in foreign markets. Of the total Indian production of about 640 million lbs., foreign consumers account for 450 million lbs. and Indian consumers for 180 million lbs.

Tea Centre

The Tea Centre opened in Bombay last week is perhaps the first of its kind in Asia. Plans are now being formulated to open the second tea centre at Madras, followed by two more at Delhi and Calcutta. The tea served at the Tea Centre, Bombay, is beyond the means of the middle class, not to speak of the workers belonging to the low-income group. But this does not mean that the Tea Board has no idea of carrying on propaganda among these workers also. Plans are afoot to open canteens in industrial centres and other areas where people with low incomes work. That apart, the chief function of the Tea Centre already opened in this city is to provide the main propaganda platform. The Centre is also demonstrating to the public how tea should be prepared correctly. The activity of the Board is not going to be confined to the cities only. It is being extended to villages through field units. At present, the field units are operating in more than 100 towns scattered throughout the country. Gradually, they will be extended to villages also.

So far as propaganda outside India is concerned, opening of tea councils in various countries on the lines of the Councils in the U.S. and Canada may be taken up by the Tea Board. In fact, Mr. Bannerman suggested that a tea council should be formed even in Britain, where the tea habit is widespread, and expressed the hope that Mr. H. V. R. Iengar, Secretary, Ministry of Commerce and Industry, Government of India, would be able to initiate the formation of such a body during his forthcoming visit to Britain. We, however, wonder whether such a high priority, as has been suggested by Mr. Bannerman, should be given to the opening of a tea council in the U.K., inasmuch as tea is already well known to Britishers and does not require any special propaganda drive.

AUTOMATIC TEA-MAKER

One of the methods by which tea drinking habit can be spread is the adoption of a simple process for tea making, which does not involve too many movements. Experiments done in the U.S. in this connection during the past five years have met with success and an automatic tea maker, like that of an automatic coffee maker, which is already in vogue in the U.S., has been invented, though its production on a commercial scale is yet to be undertaken. This automatic tea maker does away with the separate movements, such as boiling of water, handling the crockery, straining the tea and adding milk and sugar. It is still a commercial secret, but a machine has been presented to the American Tea Trade Association for trial. It is stated that the machine will be very useful to industrial canteens where tea has to be made on a large scale at a given time. It will, of course, be a long time before India takes to automatic tea making, but its adoption in America itself on a large scale will stimulate consumption of tea, the benefit of which is bound to be felt by this country too.

JUTE STOCKS MOUNT UP

MINIMUM PRICE IDEA NOT YET GIVEN UP

WITH the accumulation of more jute goods, the position of jute mills has worsened further. The latest returns of the Indian Jute Mills Association reveal a rise of 11,200 tons to 119,000 tons in the stocks of jute goods held by them at the end of May last. Although this rise is less than the increase of 12,300 tons noted at the end of the previous month, the fact that the upward trend in stocks has continued month after month ever since October 1955 only underlines the urgency for initiating measures to restore the solvency for jute industry. The accumulation of stocks is, as stated in these columns a fortnight ago, chiefly due to increased production and a fall in overseas offtake. The slackness in demand is attributed to high prices occasioned by the high cost of raw jute.

The table below shows the stocks of jute goods at the end of each of the three months ended May 1956 as also at the end of May 1955:

(In tons)

	As on 31st May, 1956	As on 30th April, 1956	As on 31st March, 1956	As on 31st May, 1955
Hessian	40,600	35,900	30,300	40,600
Sacking	71,100	63,300	55,200	52,900
Others	7,400	8,700	9,500	1,200
Total ..	119,100	107,900	95,000	94,700

As will be seen from the table above, the increase in stocks has taken place in both hessians and sackings. Hessian stocks have risen by 4,500 tons to 40,600 tons and sackings by 7,800 tons to 71,100 tons. In marked contrast to the continuous rise in these two main categories of goods, there has been a steady decline in the stocks of other varieties of goods. Thus, from 9,500 tons in March 1956, they had come down to 8,700 tons in April and still further to 7,400 tons in May.

The worsening position of jute mills calls for some quick remedies calculated not only to arrest the rot but also to reverse the trend. It is gratifying to note that the Government of India is seized of the problem. It seems to entertain the view that the stock position could be improved by fixing a minimum export prices for jute goods. The futility of such a step has been pointed out in these columns ere now, and it is needless to refer to it once again. The proposal has been referred to the I.J.M.A. for consideration and this body has discussed the problem for several days during the past fortnight. The industry is stated to be generally opposed to it because it seems to fear adverse reactions from the American market, the most important outlet for jute goods. It has, however, come to no final decision. This delay reflects the industry's hesitance to accept the Government's proposal and in a way goes to confirm the stand already taken by us on the issue, namely, that mere fixation of minimum export price is unworkable and will do more harm than good.

The proposal for fixing a minimum export price first found public expression at the recent meeting of the Export Advisory Council, where Mr. T. T. Krishnamachari, the Minister for Commerce and Industry, expressed his willingness to issue immediate orders disallowing shipment of any goods at rates less than a minimum for hessian and *pro rata* for heavier goods. He added: "Why should your buyer be extremely sensitive when you are selling him at a price far cheaper than what you did after reduction of duty." Advising exporters of jute goods to hold a meeting and evolve a workable solution to the export problem, he said: "Should a minimum export price be fixed, every export contract entered into by an exporter will, I understand, have to be reported to the Government." It is stated that the Government is concerned seriously with the exports of jute goods, because it desires to see that the industry is not beaten down to a low price, owing to the foreign buyers' strong position at the moment.

In addition to fixation of minimum export price, the Government is stated to be paying attention to other measures also in order to reduce the stocks. One of the suggestions put forward before it for this purpose is curtailment of production. The Government, according to Press reports, is averse to limiting production. For it expects that there is bound to be an increased demand for jute goods, on account of the expected rice purchases from Burma and increased consumption of cement in India, both of which require substantial quantities of gunny bags in the near future.

UNIFORM PRICES FOR STEEL AND PIG IRON FIXED

RELIEF GIVEN TO CONSUMERS IN THE INTERIOR

THE chief objective of the new price policy for steel and pig iron, announced by the Government of India last week-end, is to give a fillip to consumers of these products in the interior and to introduce into the sphere of pig iron consumption the principle of equalisation in prices—that is, uniform prices for imported and indigenous varieties—which has been successfully operated so far in the matter of steel supplies. Steel and pig iron will be available at an average price of Rs. 525 and Rs. 225 per ton at any railhead in India, inclusive of freight.

The position hitherto was that steel was sold at Rs. 500 per ton at Bombay, Calcutta, Madras, Jamshedpur and Burnpur and varying freight rates were charged for the commodity at other railheads, depending upon the distance from the port towns. This structure of prices dates back to a time when the Indian producers of steel had to quote the lowest prices at port towns in order to compete with imported steel. This consideration has now lost its force, thanks to the fact that Indian steel is much cheaper than imported steel. The continuance of the original arrangement of quoting attractively low prices at port towns is, therefore, regarded as an anomaly. Some steps had no doubt already been taken to rectify this position even before last week's price changes were announced. Thus, the freight element charged for steel in different parts of the country was made subject to a maximum. Further, more recently, prices of steel in Jamshedpur and Burnpur, the two main centres of steel production in India, were brought to the same levels as those in port towns. Previously, the consumer of steel in Jamshedpur, the home of steel, had to pay a higher price than his counterpart in Bombay or Calcutta.

Price Changes

Explaining the significance of the price changes, announced now, an official Press note says: "The basic consideration underlying this change is the desire of the Government to encourage the decentralisation of industries and to reduce the disparities in levels of development between different regions. Hitherto, the price of steel has been the cheapest at ports and the price at all other railheads has been determined by adding to the port price an extra on account of freight. Under the revised arrangement, the freight element will be pooled on an all-India basis." It would appear that many of the inland States, such as Uttar Pradesh and the Punjab, had been urging the Government to improve the position under which the existing price structure placed them at a disadvantage in regard to the development of new industries.

Although the Government realised that it is but natural that the actual cost of transport should be paid by the consumer, so that the growth of industries is based on sound economic considerations and that natural advantages of an area producing a raw material are not neutralised by what can be regarded as a subsidy to the distant consumers, it came to the conclusion that, in regard to iron and steel, a uniform price would be in the best interests of the country. The cheapness of steel at port towns, it is stated, has led to gravitation of most of the industrial units to the port areas. To counter balance this and to secure a balanced development of industries as between different regions of the country, the Government felt that an all-India price for iron and steel would be most advisable.

The effect of the new prices for steel is that consumers in cities like Kanpur and Amritsar will pay Rs. 35 per ton less than what they do now, whereas consumers in the two chief steel producing centres and in the port towns, namely, Calcutta, Bombay and Madras, will have to pay an additional Rs. 25 per ton. Generally speaking, towns beyond 200 miles from the five "ports" will benefit by the measure, while the consuming centres within this distance will have to pay a higher price than now. The average price of steel will, however, be the same for all consumers at railheads. The Government, it is stated, is likely to import about two million tons of steel this year. Nearly half of this quantity will be subsidised from the steel equalisation fund. A substantial quantity—about 400,000 to 500,000 tons—has, however, been imported by private parties who are prepared to pay the non-subsidised rates.

Pig Iron

As regards pig iron, its price has now been raised from Rs. 163 per ton, exclusive of freight, to Rs. 225 per ton inclusive of freight. This increase in price has been effected, because the output of pig iron in the country falls far short of the demand, so that substantial quantities of this raw material have to be imported from abroad this year at prices higher than those ruling in the country. A few weeks ago, it may be noted here, the Government had abolished the import duty on pig iron in order to bring down its cost to consumers. Last week, we referred in these columns to the Indian Foundry Association's estimate of the demand for castings. The demand, according to this estimate, will go up to 750,000—875,000 tons by 1960-61. The two steel plants in the private sector and the one belonging to the Mysore State are, however, expected to produce 573,000 tons of pig iron by 1959 as against their current output of 202,000 tons. The Government-sponsored steel plants are not likely to supply pig iron before 1959. So, for the next two or three years, at least, India will have to augment its supply of pig iron by heavy imports.

The Government, it is learnt, is trying to arrange for import of pig iron from Russia, Poland and other European countries. While negligible quantities were imported last year, India's imports of pig iron in the current year are expected to exceed the indigenous production of 463,000 tons. But the c.i.f. price of imported pig iron is about Rs. 380 per ton, as against the price of Rs. 163 (exclusive of freight) which prevailed till last week in the country. The Government has now raised the price to Rs. 225 per ton (inclusive of freight). But this price will apply to the high-cost imported pig iron as well as to indigenous pig iron. In other words, the principle of equalisation, which has prevailed in the realm of steel prices, is now being made applicable to pig iron. This is an arrangement which the pig iron consumers have themselves advocated. It should, however, be clear that the arrangement will be beneficial to the consumers only if the Government succeeds in importing large quantities of pig iron from abroad.

A notable change in the organisational set-up in regard to steel control is the Government's decision to open two regional offices of the iron and steel control at Bombay and Madras. The Bombay office will cover, besides the Bombay State, the States of Madhya Pradesh, Madhya Bharat, Rajasthan, Saurashtra, Ajmer, Bhopal, Kutch and Vindhya Pradesh. The Madras office will have jurisdiction over the States of Madras, Andhra, Hyderabad-Mysore, Travancore-Cochin, Coorg and Pondicherry. The main function of the new regional office, it is stated, will be to facilitate the issue of import licences and customs clearance permits to the Western and Southern zones of the country and to keep a proper check on the movement of imported steel to the consuming centres without any loss of time.

CORROSION BY SEA-WATER

The centre for oceanographic research and studies in France, founded in 1948, is an organisation which specialises in questions concerning corrosion by sea-water and air. This centre has established a Commission for the co-ordination of sea corrosion, and the fouling of ships, the members of which belong to all those public or private organisations which are interested in these problems. As soon as it was formed, this Commission decided to create two testing stations, one at La Rochelle and the other at Abidjan. The former is situated in the port of La Pallice, and includes a test raft in the floating dock, a spray testing station at the end of the south jetty and a sea-air testing station on the roof of the submarine base. As for the Abidjan testing station, it comprises the same equipment as that of La Rochelle, but because the raft is rapidly fouled by the water, two rafts have been installed and are cleaned alternatively without interrupting the tests. Corrosion is also much more intense than in temperate regions.

The activity in these testing stations is divided between research and the testing of materials and of protective products. Research is being undertaken on such questions as the resistance of bare steel, of protected steel, of light materials and heterogeneous combinations, the working out of a method for the observation, detection and determination of fouling and its growth and the effects of certain anti-fouling paints. In addition, the water is being analysed systematically (temperature, salinity, pH, etc.) near various testing points of La Pallice, and the characteristics of the microclimate of the two stations are being determined.

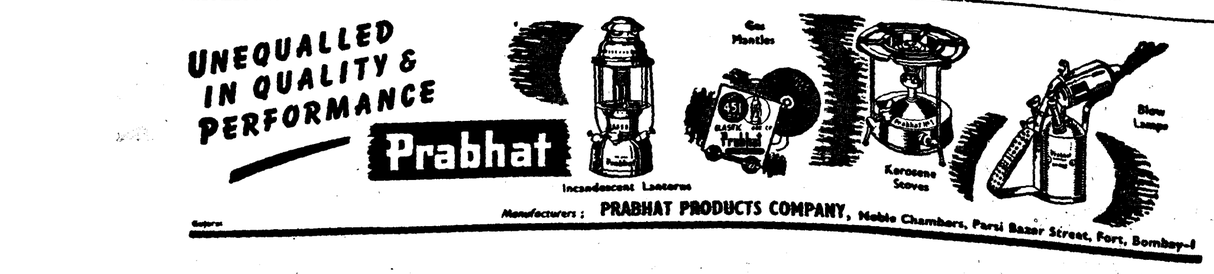
The tests, which are being made at the request of certain public and private bodies (the technical department of the Air Service, the central office for naval building and weapons, the light metal industry, paint manufacturers, etc.) consist in exposing to salt air or to spray certain materials or protective products, particularly anti-corrosive or anti-fouling paints. The samples sent by the applicants are exposed or submerged for a year, during which anti-corrosive paints are examined every quarter, and anti-fouling paints every month, in order to detect the moment when they begin to be corroded or fouled. Tests can be made at any time for anti-corrosive paints; but the anti-fouling paints are generally submerged in March at the La Pallice station, and in October at the Abidjan station, when fouling is most intense. At the end of each test, an official report is sent to the applicant.

DISTRIBUTION OF NATURAL GAS: AIRIAL PIPING

Lamagistère is a small, peaceful and pleasant town of 1,000 inhabitants between Moissac and Agen, in the valley of the Garonne, in France. The town had never been equipped with gas, and it wished to use the natural gas of Saint-Marcet naturally, without too much expense. This would have been difficult if the ordinary methods had been used, for underground pipes involve much expense. Lamagistère has been chosen to carry out a revolutionary and conclusive experiment; the Saint-Marcet gas is carried through pipes above ground.

The gas is extracted near the town under a pressure of 30 kg. per cm 2, the pressure then being reduced in a specially-built station—the "pylon cabin"—where at the same time the gas is filtered, measured and de-odorised. It is again submitted to a maximum pressure of 4 kg., and circulates in a circuit made of very narrow aluminium pipes glued together, or connected by screwed joints. V-shaped cables support the pipes when they cross over a street. These pipes are fitted with a safety device at both extremities which automatically stops the gas when the pipe is broken. The overhead network of Lamagistère, which follows the outlines of the house-fronts, is no more visible than the ordinary electric wires. After a last relaxing of pressure, the gas is delivered to consumers in a "block" which is most often placed inside the habitation. This block about the size of a fist, includes a stop cock, a safety valve and an ordinary meter. A simple device allows the supervisors of the network to find out immediately when consumers are deprived of gas. Several areas can also be supplied with other sources of natural gas, more particularly by a set of mobile containers.

Thus the technique for the laying of overhead piping has been perfected in France. Owing to the excellent results obtained at Lamagistère, this technique will be used at Libourne in the near future—for the distribution of natural gas—and at Sarlat—for the distribution of propane. This achievement, it is stated, is particularly interesting now that plans for the transportation of the Lacq gas are under consideration.



NEW PRODUCTS AND PROCESSES

Radioactive Isotopes

Radioactive installations for automatisation of technological processes are undergoing tests in coal mines in Chelyabinsk region in the U.S.S.R. Such radioactive devices have been used in Pit N 4-6 of the Kopeisk Coal Trust to keep a record of loaded coal trucks taken up to the surface by cage. On the same level as the trucks was an irradiator on one side and an indicator on the opposite side, and the passing trucks absorbed the rays. During this time, the ray counter does not register and the relay functions. The device's supply circuit, in which the truck counter at the control operator's desk is included is closed and the hand on the counter moves ahead one division, thus recording the passing truck. At the 42-Kapitalnaya pit a check was made on how full the skip was loaded.

Vulcanised Fibre

Vulcanised fibre, used for many years by industry, is beginning to find new outlets in consumer products. A laminated plastic made from cotton cellulose bonded in layers by chemical treatment, it is very light in weight and highly shock, wear and abrasion resistant. Some of the uses into which it is moving, according to the U.S.'s biggest manufacturer, National Vulcanised Fibre Company, are hampers and wastepaper baskets. Other markets envisaged include camping goods, toys, containers and apparel accessories. This should broaden the market for the product beyond the highly diversified industrial uses up to the present time. In industry vulcanised fibre is used in all types of handling receptacles, and in specialised applications ranging from textile loom shuttles to parts for bomb sights, from hypodermic needle washers to railway track insulations. Between 1945 and 1955, sales of the product rose from some $16 million to around $28 million.

Mass Mailing

A machine which the U.S. manufacturer, the Burroughs Corporation, claims may cut the production costs of vast mailings, such as magazine subscription and mail order house lists, in half is now on the market. The equipment can handle name and address printing at the rate of 900 lines a minute. Burroughs claims that this is faster than any type of punch card machine so far on the market. In a specific comparison, it is stated that the machine can process a million names and addresses in 75 hours, for a cost of $2,400. On existing equipment this would take five machines some 200 hours, at a cost of $5,300. The equipment is an electronic machine weighing about two tons. It can sort out by electronic "inspection" certain address cards from the total for a specified mailing by passing all the cards through the input mechanism and extracting those required. This process takes less than a minute. In addition to application in high-speed printing of addresses, the equipment may also be used for such purposes as fast billwriting for large utilities and cheque-writing for banks. The cost of a machine outright has not yet been determined. Burroughs Corporation has arranged to rent the equipment at between $1,650 and $5,000 a year, according to the number of simultaneous operations required.

New Safety Aid

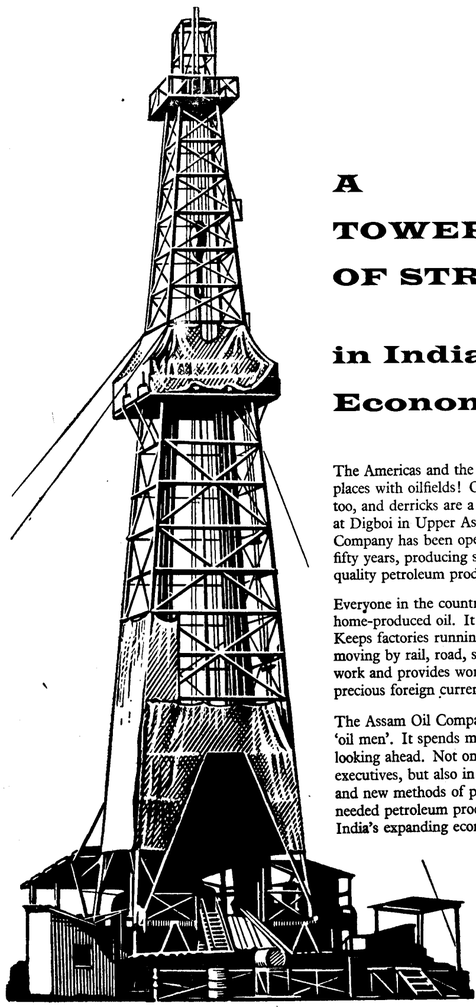
A new type of periscopic television unit, incorporating industrial TV equipment developed by a British firm, has been installed at a London power station for remote observation of the interior of a boiler furnace. With furnaces of the latest type, such as are installed at the power station, it is essential that the jet-injected pulverised fuel remain ignited at all burners—otherwise a serious explosion might result. Safety has hitherto been ensured by constant observation through small inspection doors, but modern boilers have now become so tall that a complete tour of inspection could take half an hour and involve climbing more than 100 ft. of galleries and ladders. The new periscopic TV unit solves this problem by enabling all burners to be observed by one television camera, the resultant picture being displayed on a monitor screen, or screens, at any convenient points in the power station.

Rustproofing

A liquid metallic coating for rustproofing steel surfaces subjected to high temperatures, such as steel chimneys, has been developed by a British firm. The coating is applied cold and does not depend on high temperature to stove, cure, or alloy it to the steel, as is the case in some special aluminium high-temperature-resistant coatings. This is important because most steel chimneys, for example, operate at temperatures below 600° F. The company claims that the liquid metal can withstand temperatures up to 600° F. It can be applied with a paint brush or spray gun. When dry, the coating leaves an anodic metal skin on the steel surface, which gives it cathodic protection.

Mica Plant

An English firm which is the sole manufacturer of chemically-pure wet ground mica in the United Kingdom has just opened a £250,000 extension to complete what is claimed to be the most up-to-date mica processing plant in the world. The new unit is noteworthy in that it is almost entirely mechanically operated—it covers a floor space 224 ft. long and 145 ft. wide and houses 250 items of plant, all looked after by 15 men working in three 12-hour shifts of five each. In the past 12 months about 170 tons of the powder has been exported to Austria, France, and the Netherlands, and among other countries with which trade is being done are India, Australia, Belgium, Canada, Czechoslovakia, Denmark, Finland, Germany, Greece, Hong Kong, Iceland, the Irish Republic, Israel, Italy, New Zealand, Portugal, Siam, South Africa, Sweden, and Switzerland.



A TOWER OF STRENGTH in India's Economy

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

INSURANCE AND THE ATOMIC AGE

PROVIDING COVER FOR ACCIDENTS

THE generation and use or application of atomic energy have been rightly acclaimed as the most important development of modern life, destined to mark a revolution in world economy more significant than what the use of steam or electric power meant in the last two centuries. Insurers in the West are therefore becoming alive to the necessity for soon equipping themselves with the necessary knowledge about the atomic progress and its effect, so as to be able to provide cover for the risks which this development means to life and property. In the U.K., the Atomic Energy Committee of the British Insurance Association is investigating this subject, while in Europe, a sub-committee of the *Comite' European des Assurances* is engaged in a similar task. The U.S. Atomic Energy Commission, in March 1955, set up an Insurance Study Group to review the insurance problem created by industrial utilisation of atomic energy.

Both the British Committee and the American Study Group have now issued their preliminary reports. The British Committee has emphasised that the insurance market should offer cover for atomic risks "recognising these developments as of the greatest importance in Britain's industrial progress." The Committee considers that the fire and explosion risk is not greatly different from those of a good many modern factories, but there is a quite novel hazard in radio-active contamination that can involve damage both to the power station itself, and the consequent liability to third parties for personal injuries and for damage to their property. The general interim conclusions reached by the U.S. Study Group are that adequate insurance will be available to meet atomic hazards and, in particular, that workmen's compensation hazard could be handled by existing insurance facilities and that the public liability hazard resulting from damage to persons or property arising from the manufacture, construction, ownership or operation of power reactors can be insured by existing insurance facilities up to the limits of liability normally available to the more hazardous types of industrial progress.

Third Party

The Study Group, however, felt that third party liability would be a serious problem in view of the large claims that might occur as a result of a possible, though not necessarily probable, catastrophic accident. It underlined the importance of stringent safety standards, of periodic inspection of licences and of increased experience and knowledge in the power reactor field. Also, it called for further examination of insurance against radio-active contamination of plant and equipment.

The effect of radiation and radio-activity on human beings has been the subject of special study in recent years. The International Commission on Radiological Protection has defined safe maximum permissible levels of exposure which have now been internationally accepted. In the British atomic industry, the recommendations of the Commission have been used as a basis for radiological protection. Reviewing the experience in the U.K., in the London *Financial Times*, Mr. W. G. Marley, Head of the Division of Health Physics, Atomic Energy Research Establishment, Harwell, states that the medical records show very satisfactory standards of health in the atomic industry at present. He adds: "Although the industry in the U.K. has only been in existence for some 10 years, there is already a cumulative experience of over 50,000 man-years and it is thought that significant deductions may now well be made. Partly as a result of the emphasis on radiological safety, the atomic energy industrial accident rate also is remarkably good at 2,000 per 100,000 man-years, and is equivalent to the safest occupations." As regards radio-active wastes, he says that the present methods enable the Atomic Energy Authority to dispose of all waste from present operations in such a way that there can be no conceivable hazard to human beings, farm animals or fisheries. He adds: "Extensive investigations at Harwell have already shown that there will be no insurmountable long-term problem in the safe manipulation, storage or disposal of the enormously increased quantities arising in the generation of nuclear power."

These are, of course, some broad conclusions on the subject. But there is a vast, and still growing, mass of information on this subject which is engaging the attention of the atomic insurance experts. In a lecture at the recent educational conference of the U.K.'s Chartered Insurance Institute, held at Oxford, Mr. A. G. M. Batten, a leading spokesman on atomic insurance, reviewed the information relating to atomic risks. According to a summary of his speech in *The Review*, Mr. Batten said that, so far as insurance reactors were concerned, the chance of accident did not at present seem to be great. But the question of scale of loss, if accident does occur, according to Mr. Batten, looms large, owing to the huge plant and fuel values involved, the wide area over which the effects of the disaster may be felt and the long period of dislocation which may be caused not only to the plant itself and its dependent industries but to the neighbourhood affected. Contractors engaged in the construction of atomic plant also face a risk in that a reactor may "run away" through some negligence of the contractor or fault in the work done. This risk, it is stated, is outside the purview of the usual contractors' insurances.

Householders' comprehensive and other policies may have to be extended to cover both damage due to the reactor, loss due to contamination from the reactor, loss of use if premises have to be evacuated owing to contamination, and depreciation during such evacuation when buildings and contents cannot be cared for. In theory, of course, the sufferer should be able to look for compensation to the owner of the reactor, but in practice he will probably prefer to insure the risk and leave his insurers to their abrogation rights. Insurance against aircraft and articles dropped therefrom is analogous. It is understood that, to be on the safe side, fire brigades will avoid those parts of burning buildings which they know to contain isotopes, whatever the degree of danger from the particular isotope. Such buildings will, in fact, be left to burn. This is a factor which insurers will have to accept; no doubt it will be allowed for in the rating. Meanwhile, as these atomic by-products are coming into increasing use, all industrial firms should be asked from time to time whether they are now using radio-isotopes. Mr. Batten feels that such use is now such a matter of public notoriety that non-disclosure by an insured could not be held against him, the onus really being on insurers to make the enquiry, rather than on the insured to reveal the information.

Transport

The transport by air, sea and land of atomic goods raises certain problems. There are, according to Mr. Batten, two aspects: the risk from the vehicle, and the risk of contamination of goods carried. Until commercial use of atomic-powered transport begins, the latter is academic only. So far, owing to the bulk of the shielding equipment necessary, only sea transport has been tried to any extent; there are several experimental vessels, including two submarines, in being. Accident to an atomic-powered vessel might cause a disaster, of course, if it occurred in harbour or inshore, but the risk should be much less if the ship were damaged on the high seas. In fact, it is not the chance of mishap with the atomic apparatus as such which causes concern in connection with transport, but the risk of collision, or, in the case of aircraft, of crashing. Experiments will go on; at what stage, insurers will be asked to carry the risk, whether for the experimenter or the victim, is yet unknown. Chemical processes ancillary to power generation by nuclear fission, for the purpose of recovering valuable waste products, are becoming an increasingly important factor. The waste products themselves are radio-active and dangerous, and elaborate precautions have to be taken. Insurance will presumably be required for such works, and also to cover the ultimate dumping (usually in deep waters) of the final irreclaimable waste. Finally, there is reinsurance. This covers the question of the appropriate limits to be observed by direct insurers, how and where they are to find reinsurance protection, and the chance of accumulation of risk by professional reinsurers.

Atomic insurance is still in a fluid state. But, as the generation and application of atomic energy to industrial purposes become more widespread than now, there is no doubt that insurers will be called upon to cover the many risks involved in this development. It is not clear whether the Government of India, which is also actively interested in promoting the peaceful uses of atomic energy, is sufficiently alive to the importance of atomic insurance. If it is not already seized of the problem, it is time it gave its attention to it. Meanwhile, private insurers should at least appoint a group of experts to study these developments and to keep close contact with the men and organisations in overseas countries who are interested in this subject.

INDIAN TRADE AND GENERAL

The Indian Trade and General Insurance Company, Ltd. (General Manager: Mr. T. M. Sturgess, Bombay), has, in the course of its bare 12 years of existence, grown from strength to strength until it now ranks with some of the leading insurers in India. There are, in this country, men who decry successful business enterprises in the private sector as being essentially anti-social. They will do well to ponder some of the telling facts and figures which the Chairman of the Indian Trade and General, Lala Karam Chand Thapar, has quoted in his statement accompanying the Company's report and accounts for 1955. During the 12 years of its existence, the Company's income aggregated Rs. 3.42 crores. In some men's minds, income gets mixed up with "profit." It is well to remind them that a large part of this income had to be spent in keeping the business going. Total expenditure consisted of: Claims, paid and outstanding Rs. 1.48 crores (43.3 per cent.); commission Rs. 33.73 lakhs (9.86 per cent.); expenses of management Rs. 1.09 crores (31.72 per cent.); reserves for unexpired risks Rs. 38.41 lakhs (11.22 per cent.) and other provisions and reserves Rs. 9.50 lakhs (2.77 per cent.). All this left a meagre Rs. 3.9 lakhs or 1.14 per cent. of the total income for the shareholders who, from their hand-earned savings, gave Rs. 24 lakhs for the establishment of this enterprise. As against the Rs. 3.9 lakhs received by the shareholders, the 300 men who serve this office received Rs. 10 lakhs by way of salaries, wages and bonuses. The Chairman said: "It will not be out of place to add that we paid bonus to staff long before shareholders received any return on their investment. The founder of your Company, an ex-Managing Director and the present Chairman has throughout this period of 12 years entirely waived the remuneration of Rs. 20,000 a year to which he was entitled under the Articles of Association." These facts should serve to dispel the two popular, but erroneous, impressions that private enterprise has no social conscience and that shareholders of companies receive a disproportionately large return on their investments. Incidentally, we commend to other managements the Indian Trade and General's method of presenting the facts about the Company. In a democracy it is not enough if private enterprise is engaged in public service. The public should be constantly reminded that it is being served.

To turn now to the report and accounts for the year ended 31st December 1955, it is satisfactory to note that the net premium income from all the three general departments aggregated Rs. 58.63 lakhs or Rs. 1.52 lakhs more than in 1954. This increase was shared by both the fire and miscellaneous departments. In the fire department, the net premium income moved up from Rs. 27.67 lakhs to Rs. 28.87 lakhs and in the marine department from Rs. 18.80 lakhs to Rs. 19.77 lakhs. There was, however, a slight decline in net premium income of the miscellaneous department where it was Rs. 9.99 lakhs as against Rs. 10.63 lakhs in 1954. The improvement in underwriting results is reflected in the increased return to shareholders—Rs. 2 per share as against Re. 1-8 paid last year.

In the fire department, net claims, paid and outstanding, accounted for 44.8 per cent. of the premium income, as against 39.5 per cent. in 1954 and commission and expenses of management for 45.8 per cent. as against 45.6 per cent. After maintaining the reserve for unexpired risks at 50 per cent. level, the underwriting profit was Rs. 2.14 lakhs as compared with Rs. 3.25 lakhs in the previous year. The Chairman has stated that indications this year point to an "increase of business in this branch and a possible improvement in underwriting results."

Claims in the marine department accounted for 67.1 per cent. as against 60.1 per cent. in 1954. In this connection, the Chairman has deplored the rise in the volume of damage claims and the fact that "current rates are still below those prevailing in 1939 when conditions all round were infinitely better." Commission and expenses absorbed 30.2 per cent. as compared with 26.9 per cent. The department showed a loss of Rs. 1.10 lakhs, as compared with that of Rs. 1.13 lakhs. But this loss, as the Chairman pointed out, would have been converted into a small profit had the Directors decided to maintain the reserve for unexpired risks at 90 per cent. instead of increasing it, as they have done, to 98 per cent.

A notable feature of the working of the miscellaneous department is that the loss ratio declined from 63.9 per cent. to 52.0 per cent. thanks to selective underwriting. Commission and expenses accounted for 45.7 per cent. as against 39.9 per cent. After maintaining the reserve for unexpired risks at 50 per cent. level, there was an underwriting profit of Rs. 48,843, as compared with a loss of Rs. 1.44 lakhs.

After including the balance carried forward from the 1954 accounts which amounted to Rs. 17,211, there was a balance of Rs. 1.45 lakhs. The payment of a dividend of Rs. 2 per share of Rs. 40 paid-up will absorb Rs. 1.2 lakhs, leaving Rs. 25,247 to be carried forward to current year's accounts.

The financial position of the Company is quite strong. Besides a capital of Rs. 24 lakhs, the Company has reserves and funds aggregating Rs. 41.43 lakhs inclusive of a fire fund of Rs. 14.44 lakhs, marine fund of Rs. 18.98 lakhs and miscellaneous fund of Rs. 5 lakhs.

THE INDIAN TUBE COMPANY
(1953) LIMITED

A TATA-STEWARTS AND LLOYDS ENTERPRISE

General Services .	Screwed and Socketed Tubes, Class 'A,' 'B' and 'C' (Galvanised and Black) to B.S. 1387, upto and including 6" n.b., and Pipe Fittings.
Power	Cold drawn, Hot finished and Electric Resistance Weld Boiler Tubes.
Poles	Tramway, Transmission, Lighting.
Public Services ..	Air, Gas, Water and Sewage Mains.
Mechanical ..	Seamless and Electric Resistance Weld Tubes for Rollers, Conveyors and other mechanical purposes.
Steel Strip ..	High Tensile Steel Box Strapping and Cold Rolled Steel Strip for manufacturing purposes.

FINANCE ACT OF 1956—I

SALIENT FEATURES ANALYSED

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

EVERY year now, we have the Finance Act, which not only fixes the rate of tax, which it is primarily intended to do, but also amends the *Income-tax Act*, in order to tap new sources of revenue or plug any loopholes discovered for evasion of tax or tighten the screws on the existing provisions.

The advantage from the Government point of view of tacking on the Income-tax Amendment Bill to the Finance Bill is to secure that the amendments come in force simultaneously with the Finance Act. From the point of view of the public, the disadvantage is that, as the Finance Bill is not referred to a Select Committee, the Income-tax Bill also gets an exemption from this necessary important stage of careful, quiet and studied consideration for shaping it by amendments, alterations and additions, so as to meet the largest common measure of agreement amongst the public.

Let us consider here some new features that the Finance Act has introduced this year.

Registered Firms

The most important change that has been introduced is the levying of income-tax on registered firms. A registered firm has been defined as a firm registered under the provisions of section 26A. The effect of registration under this section is that the firm itself is not taxed to income-tax or super-tax, but the individual partners are subjected to both income-tax and super-tax on their individual share. Unlike the unregistered firm, it is, *therefore, not* taxed as an entity at the rate applicable to its total income.

The Finance Act, 1956, levies for the first time a separate tax on a registered firm calculated as follows:

		Per rupee
(1)	On the first Rs. 40,000	*nil*
(2)	On the next Rs. 35,000	9 pies
(3)	On the next Rs. 75,000	12 „
(4)	On the balance	18 „

In order that small partnership may not be affected by this, an exemption is provided upto Rs. 40,000. In other words, a registered firm whose income is Rs. 40,000 or less will not be required to pay this new tax.

The partner of such registered firm is, however, given some relief in respect of his share in the profits of the firm as is equal to the difference between his share in such total income of the firm and his share in such total income excluding income-tax payable by the firm—the share in either case being computed in the manner laid down in section 16(1)(b) of the Act.

If the firm were a registered firm of professionals and not of business men, for example, a firm of solicitors, accountants and architects, each partner shall be assumed to have paid income-tax as well as super-tax on the above difference.

An Illustration

To illustrate it in figures, let us suppose a registered firm has business income of Rs. 2,00,000. It has four partners with equal shares. The share of each partner will be Rs. 50,000. Now on Rs. 2,00,000 the firm is called upon under the Finance Act to pay a tax at the abovementioned rate amounting to Rs. 11,016. Assuming that the partners have no other income, each partner for purpose of income-tax (not super-tax) will be assumed to have paid tax on 25 per cent. of Rs. 11,016, that is, Rs. 2,754, at the rate applicable to the total income of Rs. 50,000. If he is a professional, each partner will be assumed to have paid income-tax as well as super-tax on Rs. 2,754 at the rate applicable to his income of Rs. 50,000.

In justification of the impost, it was stated by the Finance Minister in his Budget speech as under:—

"In the case of the registered firm, no tax is imposed on the firm as such, but its profits are taxed in the hands of the partners according to their respective shares and at rates applicable to them individually. In the case of unregistered firm, the tax is imposed on the firm as such at rates applicable to personal income."

It is true that, between an unregistered firm and a registered firm, the latter enjoys certain benefits, but is that sufficient ground for imposing a tax on this differentiation—which is at best a law-made fiction? Nowhere in the world does such a distinction obtain. The Government first creates an artificial distinction. Then, based on this artificiality, it tries to justify a tax. If such fine distinctions are to be drawn, one may well justify a surcharge rate of tax on salary income as compared with business or professional income. Salary income is regular and is earned without any risk of losing, whereas a business income fluctuates and is uncertain. A person who takes greater risk to earn a certain quantity of income should surely be taxed less than the one who has non-risk income. A person who earns income passively is less favourably treated than one who earns income actively by giving the former and denying the latter "earned income" allowance, which is but a tax relief. Well, when the Government needs money for the crying need of financing its projects and plans, one cannot expect these niceties of a golden scale to prevail.

Dividend Tax

The next salient feature introduced is the change in the corporation tax. Under the Finance Act, 1955, a rebate of income-tax of one anna in a rupee was allowed on the amount by which the total income of a company, to which section 23A did not apply, exceeded the amount distributed as dividend. This rebate has been discontinued. That means the Government thinks that companies conserving their resources do not need any encouragement by means of giving a rebate on their undistributed profits. But, whenever such profits—which previously were subject to a rebate—are now distributed, the Government has taken care to recover back the rebate by the process of rectification under section 35, which in this respect has been expressly amended.

Another feature of the Finance Act, 1955, was an additional income-tax on excess dividend. This has also been discontinued. But, instead, a new feature is introduced of taxing such dividends declared in excess of 6 per cent. of the paid-up capital. The new feature is this. In addition to normal super-tax payable by a company, a special super-tax has been now levied on dividends distributed by it during the previous year in excess of 6 per cent. of the paid-up capital. The rates of this additional super-tax are as follows:

As. 2 in a rupee on the amount of dividend in excess of 6 per cent., but not exceeding 10 per cent.; and

As. 3 in a rupee on the excess over 10 per cent.

This extra super-tax will not apply to all companies in which the public are substantially interested having an income not exceeding Rs. 25,000.

Thus, the only exemption given is to a company, which although a public company and in which the public are substantially interested, has an income not exceeding Rs. 25,000. It is, therefore, clear that all other companies fall within its net, namely, a public company having an income over Rs. 25,000 as well as a private company or a compay in which the public are not substantially interested, known as section 23A companies.

23A Company

There seems to be some well justified complaint against bracketing "Section 23A company" for the levy of this super-tax. The justification for such a tax seems to be that, if the company distributes more than a reasonable portion of its net profit among the shareholders—which the Government thinks should not exceed 6 per cent. on the paid-up capital of the company—the Government is justified in imposing a tax on such excess dividend. Therefore, the underlying idea here is to discourage dividends over 6 per cent. But, when it attacks section 23A companies, which by law are required to distribute at least 60 per cent. of their total income, less taxes, and if they do not, the law will impose additional tax of 8 annas in a rupee in case of an investment company and 4 annas in a rupee in case of other companies on the balance of undistributed profits, the justification for excess dividend tax in their case seems to be rather void of any logical principles. On one hand, the Government compels distribution and, on the other hand, "punishes" such distribution by a tax.

On the Government side, however, it may well be urged that a private company being more or less an *alias* for a partnership, we should levy super-tax at the maximum rate of As. 6-9. There is enough justification for differentiating such companies from public companies in which the public are substantially interested. Now, if this is granted, in other words, if this justification is well-founded, then the levy of super-tax on both public and private companies blunts much of the edge of the controversy, for the excess dividend tax and bonus tax are but forms of rebate adjustment.

Rebate Withdrawn

Part D of the Finance Act, 1956, states:—

	Rate
"In the case of every company—	
On the whole of total income ...	Six annas and nine pies in the rupee."

This overall rate is subject to the following rebates:

(1) A rebate at the rate of 5 annas per rupee of the total income, in case of a company which—

(a) in respect of its profits liable to tax under the Income-tax Act for the year ending 31st March 1957 has made prescribed arrangements for declaration and payment within the territory of India, of the dividend payable out of such profits and for deduction of super-tax under section 18(3D);

(b) is a public company with total income not exceeding Rs. 25,000 to which provision of section 23A cannot be made applicable.

(2) A rebate of 4 annas per rupee of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b) of the preceding clause;

(3) A rebate at the rate 3 annas and 6 pies per rupee on so much of the total income as consists of dividends from a subsidiary Indian company, and

(4) A rebate at the rate of one anna per rupee on any other income included in the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses, e.g., a foreign company operating in India.

Now the new tax on excess dividend and bonus shares is, as already stated, nothing but a readjustment of these rebates.

Tax on Bonus Shares

We have dealt with excess dividend. There is a tax on bonus share issue also. An extra super-tax at the rate of 2 annas in a rupee is imposed on the face value of bonus shares issued during the previous year.

The extra super-tax on excess dividends and bonus issues taken together will not exceed an amount calculated at the rate of 4 annas or 5 annas in a rupee, as the case may be, on the total income of the company. This means, in any event, super-tax on the company shall not exceed 6 annas 9 pies in a rupee, the maximum rate of super-tax imposed.

The Act, therefore, provides that the amount of the rebate under clause (1) or clause (2), as the case may be, of the preceding proviso shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as under:

(a) on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital, except to the extent to which such bonus shares or bonus have been issued out of premiums received in cash on the issue of its shares, at the rate of 2 annas in a rupee;

(b) in addition, in the case of a company referred to in clause (2) of the preceding proviso which has distributed to its shareholders during the previous year dividends in excess of 6 per cent. of its paid-up capital, not being dividends payable at a fixed rate—

on that part of the said dividends which exceeds 6 per cent. but does not exceed 10 per cent. of the paid-up capital	2 annas in a rupee
on that part of the said dividends which exceeds 10 per cent. of the paid-up capital ...	3 „ „

Where the sum arrived at in accordance with sub-clause (a) or sub-clause (b) or both the sub-clauses of clause (1) of the proviso exceeds the amount of rebate arrived at in accordance with clause (1) or clause (2), as the case may be, of the preceding proviso, only so much of the amounts—

(a) issued as bonus shares or as bonus, and
(b) distributed as dividends,

as is sufficient, *in that order*, in accordance with the rates specified in clause (1) of this proviso, to reduce the rebate to *nil*, shall be deemed to have been taken into account for the purpose.

This means that, where super-tax both on bonus shares and excess dividend is levied and together it exceeds the rebate of 4 annas or 5 annas in a rupee, as the case may be, the rebate shall abate, in the order, namely, first abatement will be given to bonus shares tax and then to excess dividend tax.

It further provides that super-tax payable by a company, the total income of which exceeds Rs. 25,000, shall not exceed—

(a) the super-tax which would have been payable by the company if its total income had been Rs. 25,000, and

(b) half the amount by which its total income exceeds Rs. 25,000.

This is a provision for marginal relief in the case of a public company having its total income just over the margin of Rs. 25,000.

Dividend and Paid-up Capital Defined

Excess dividend is to be calculated on "paid-up capital," which is defined as—

"The expression 'paid-up capital' means the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment year 1956-57, increased by any premiums received in cash by the company on the issue of its shares, standing to the credit of the share premium account as on the first day of the previous year aforesaid."

The expression "dividend" is also defined as follows:

"The expression 'dividend' shall be deemed to include any distribution included in the expression 'dividend' as defined in clause (6A) of section 2."

Therefore, not only dividend as understood under the Companies Law shall be treated as dividend, but also capital distribution deemed to be dividend under section 2(6A).

Agricultural Incomes

Lest in computing excess dividend tax agricultural income or incomes, which have been statutorily exempt, should come to be taxed, the Finance Act provides thus:

"Where any portion of the profits and gains of the company is not included in the total income by reason of such portion being exempt from tax under any provision of the Income-tax Act—

(1) the amount of paid-up capital of the company,

(2) the amount distributed as dividends (not being dividends payable at a fixed rate),

(3) the amount representing the face value of any bonus shares, and

(4) the amount of any bonus issued to shareholders

shall each be deemed to be such proportion thereof as the total income of the company for the previous year bears to its total profits and gains for that year other than capital gains or capital receipts reduced by such allowances as may be admissible under the Income-tax Act which have not been taken into account by the company in its profit and loss account for the year."

There is also a provision that, where premium on shares is capitalised as bonus shares, it shall not be taxed, the reason being that capitalisation is not out of profits, but out of cash paid as premium.

Proposals Summarised

To summarise the proposal of new taxes on companies:

(1) A super-tax at the rate of 2 annas and 3 annas per rupee on excess dividend over 6 per cent. of the paid-up capital of the company shall be levied;

(2) paid-up capital shall include premium on shares;

(3) it shall exclude capital entitled to a dividend at a fixed rate, that is, preference capital;

(4) dividend shall be deemed to include dividend as defined in section 2(6A);

(5) but shall exclude dividends from profits and gains exempt from tax and as such not included in the total income of the company;

(6) in the latter case—

(i) the amount of "paid-up capital" of the company;

(ii) the amount of dividend, excluding preference dividend;

(iii) the amount of the face value of any bonus shares, and

(iv) the amount of any bonus issued to the shareholders

shall each be deemed to be such proportion as the total income of the company for the previous year bears to the total profits and gains, other than—

(a) capital gains or capital receipts and

(b) reduced by allowances permissible under the Act which the company has not taken into account in its profit and loss account, for example, depreciation allowance at prescribed rates;

(7) no bonus tax will be levied where capitalisation is out of premium on shares received in cash.

(To be continued)

"TAX-FREE" OFFERS TO U.K. SHIPPING COMPANIES

Two countries in the British Commonwealth—Bermuda and Jamaica—have extending invitations to British shipowners to consider the advantages of tax concessions which will follow the establishment of shipping companies in those countries. Disclosing this in an interview after the Council meeting of the U.K. Chamber of Shipping, in London last week, Viscount Simon, Vice-President of the Chamber, said that Jamaica's Minister of Finance would be visiting the U.K. shortly in this connection.

INDIAN TRADE AND GENERAL INSURANCE COMPANY, LTD.

ANOTHER YEAR OF SATISFACTORY RESULTS—DIVIDEND RAISED

LALA KARAM CHAND THAPAR'S STATEMENT

THE public will be in a position to judge in two or three years' time whether the nationalisation of life insurance, which had proved a failure in almost every other country in the world where it had been tried, will be a success in India. This view is expressed by Lala Karam Chand Thapar, Chairman of the Indian Trade and General Insurance Company Ltd., in his statement accompanying the accounts of the Company for the year ended 31st December 1955. In answer to criticisms of private enterprise, Lala Karam Chand cites a few facts about the Company. These facts should convince the discerning few that the Company's business is being conducted on sound and conservative lines.

The following is the full text of Lala Karam Chand's statement:

"Once again, I am happy to be able to report further expansion of your Company's business and, if this has not been so marked this year as in the last few years, I hope you will agree that the accounts presented disclose a continued strengthening of your Company's reserves which will enable us to play a full part in the increased tempo of industrial expansion which plays such a large part in the Government of India's second Five-year Plan.

"What is of paramount importance is that we have been able to maintain our place amongst the leading Indian insurance offices, an achievement which should not be lightly disregarded in these highly competitive days. Our gross world-wide premium for the year fell a little short of a crore of rupees and our net premium in all departments totalled Rs. 58,63,163, as against Rs. 57,10,597 in 1954.

"To the net premium income of Rs. 58,63,163 must be added interest and dividends (less income-tax) amounting to Rs. 1,91,571 and miscellaneous receipts of Rs. 13,587; the total income of the Company thus amounted to Rs. 60,68,321; claims paid and outstanding take Rs. 31,40,787 (53.5 per cent.), commissions, expenses of management and foreign taxes Rs. 23,75,359 (40.5 per cent.); and bad debts and other debits account for a further Rs. 1,19,803 (2.04 per cent.) leaving a balance of Rs. 4,32,372, to which must be added the balance carried forward from the previous year amounting to Rs. 17,211, making a total credit balance of Rs. 4,49,583 (7.67 per cent). Out of this balance, an amount of Rs. 2,59,303 (4.4 per cent.) has been placed to the reserve for unexpired risks in all departments and, after making a provision of Rs 43,033 for taxation, there is an available balance at the end of the year of Rs. 1,45,247.

"Having regard to the satisfactory underwriting results combined with the favourable margin between the aggregate book and the market values of our investments at the close of the year, your directors have decided to recommend an increase in the dividend from Re. 1-8 to Rs. 2 per share, free of tax.

"The sum of Rs. 1,20,000 which it is proposed to distribute to shareholders is well covered by net interest earned by the Company on its investments which amount to Rs. 1,91,571.

Fire Department

	Net premiums Rs.	Surplus Rs.	Percentage of premiums
1955	28,87,406	2,13,827	7.4
1954	27,67,331	3,25,415	11.7
1953	25,97,027	2,47,846	9.5

"In my statement to shareholders last year I said that, consequent upon the reduction of fire premium rates combined with some serious fire losses reported in the early months of 1955, it was unlikely that the very favourable underwriting results of 1954 would be repeated this year and my prediction has, unfortunately, been justified in the event.

"In the circumstances, however, results can be considered satisfactory and credit is due to those in charge of the Company's underwriting in this department.

"That there was only a modest increase of 4.3 per cent. in the premium income is to an appreciable extent due to the devaluation of the Pakistan rupee and the substantial reduction in the fire premium rates to which I have already referred.

"Indications this year point to an increase of business in this branch and a possible improvement in the underwriting results; let us hope that events will in due course justify my guarded optimism in this regard.

Marine Department

	Net premiums Rs.	Fund as at 31st December Rs.	Percentage of premiums
1955	19,77,035	18,97,941	96
1954	18,80,133	16,92,120	90
1953	16,75,458	13,25,967	80

"There is little change in market conditions since my statement last year.

"There are possibly some signs of a slight improvement in claims for theft and pilferage, but, on the other hand, the very small profit margin on which shippers are operating in the present 'buyer's' market is, undoubtedly, reflected in the volume of damage claims received and one is sometimes led to believe that we are now expected to cover trading losses however they may arise.

"One welcome event is the reintroduction of a limitation of the period of cover after discharge of cargo, but current rates are still below those prevailing in 1939 when conditions all round were infinitely better and there has been no halt in rate cutting, notwithstanding the substantial reduction in 'war' rates.

"The continuation of the present competition for premium income irrespective of results can serve nobody's interest but the assured's.

"Once again we have thought it prudent to strengthen the marine fund by a transfer from the profit and loss account which brings our reserve up from 90 to 96 per cent. of our premium income—it is not out of place, however, to remark here that, had your directors decided to maintain the previous level of reserve at 90 per cent., there could have been a small underwriting profit on the account.

Accident Department

	Net premiums Rs.	Surplus Rs.	Percentage of premiums
1955	9,93,722	48,843	4.9
1954	10,63,133	(1,48,726)	(13.5)
1953	9,03,662	86,104	8.9

"I said in my statement last year that, as a result of more selective underwriting, there was likely to be a fall in premium and this has proved to be the case; on the other hand, we have, as a result, succeeded in reducing our loss rate from 63.9 to 52 per cent. and are once again able to make a transfer to profit and loss account.

"Private motor car business, however, continues to be unremunerative and the level of premium rates bears no economic relation to the ever-increasing cost of claims; in this context it is astonishing to find people occupying positions of responsibility saying the same breath that, whilst the loss experience displays an upward trend and a further increase of rates for private car comprehensive cover is warranted, we should not rely on increased rates to enable us to put this business on a profitable basis. With more and more private car traffic on the roads and the ever mounting cost of repairs, premium rates have fallen once again well below an economic level and an upward revision of rates is already well overdue.

"It has only been by developing other branches of miscellaneous accident business that we have been able to produce a surplus in this account.

Balance Sheet

"The balance-sheet follows the same pattern as the previous year and calls for no particular comment; interest and dividends less tax deducted at source give the satisfactory return of 4.23 per cent. on the aggregate book value of our investments.

"On these occasions I am expected to say something about major events which may directly or indirectly affect our business and, of course, the nationalisation of life assurance early this year must take pride of place; however, so much has already been said on this subject that there is little point in my adding to the many and various views already so freely ventilated; in two or three years' time we shall be in a position to judge whether this experiment, which has proved a failure in almost every other country in the world where it has been tried, can be a success here in India.

"The repercussions are twofold; first, composite companies are now undergoing a surgical operation which will separate the life from the general section of their business and, whilst I have no doubt that the operation will be pronounced successful, I fear that many of the weaker patients will not long survive the surgeon's knife.

"Secondly, general insurance offices, such as yours, are now in the limelight and those who think that nationalisation is the panacea for all ills now focus their gaze on us.

Progress of the Company

"At a time when it is fashionable to decry private enterprise and those who have devoted all their time, talent and energy to building it up, I may perhaps be permitted to present a few facts about your own Company which, if they prove nothing else, may convince the discerning few that, far from having anything to be ashamed of, we can, on the contrary, take pride in the sound and conservative lines upon which we have managed and continue to conduct our business.

"I set out below an analysis of the total net income and outgo of your Company over the period of 12 years since we commenced business in 1944:

	Rs.		
Total premium income	3,26,72,376		
,, interest and dividends	13,17,874		
,, miscellaneous receipts	2,80,437		
	3,42,20,687		
Total claims paid and outstanding ..	1,48,18,004		43.29
,, commissions paid —net ..	33,78,278		9.86
,, expenses of management ..	1,08,58,843		31.72
,, reserves for unexpired risks ..	38,41,005		11.22
,, other provisions and reserves ..	9,49,557		2.77
,, dividends	3,90,000		1.14
	3,42,20,687		100.0

"The total commission and management expenses at 41.58 per cent. of the net premium will bear comparison with almost any company anywhere in the world and there can surely be no room for criticism on this account, whilst the claims ratio most certainly reflects the soundest underwriting principles.

"As against just over Rs. 21 lakhs of reinsurance premiums ceded abroad in 1955, we received Rs. 38 lakhs of net premiums from our overseas connections—surely this does not justify criticism on account of mismanagement.

"We give employment to a staff of over 300 to whom we paid last year in salaries, wages, contribution to provident fund and bonuses in the aggregate a sum exceeding Rs. 10 lakhs; it will not be out of place to add here that we paid bonus to our staff long before shareholders received any return on their investment. The founder of your Company, your ex-Managing Director and present Chairman, has throughout this period of 12 years entirely waived the remuneration of Rs. 20,000 a year to which he was entitled under the Articles of Association. I sincerely hope that these few facts and figures will be sufficient to convince you that we are quite capable of running our business in accordance with the best traditions and hardly merit the wild allegations constantly levelled against the industry from certain ill-informed quarters.

Ills of the Industry

"Although the Government have recently repeated their assurances that they have no intention of nationalising general insurance, it cannot be denied that our industry suffers from certain longstanding ills which must be put right; in this connection, I strongly deprecate the feeling, often expressed by some executives of insurances offices, that we should ask Government to put these matters right for us; surely, it is not impossible for Indian offices acting together with patience and forbearance to find an equitable solution to their problems, and it is a terrible confession of ineptitude and weakness in the trade, if we cannot put our heads together and find a remedy for our own ills.

"I sincerely hope that those now seeking a remedy will have learned from the lessons of the

DEVELOPMENT OF FISHERIES

OUTPUT TO BE RAISED BY 50 PER CENT. IN TEN YEARS

THE importance of developing fisheries in India can hardly be exaggerated. Every year, fisheries contribute about Rs. 27 crores to the country's national income, keep engaged about 75,000 craft of various types along a coastline of about 3,000 miles and give employment to some 750,000 fishermen. Although the role thus played by fisheries in the economy of the country is noteworthy, it could be increased three to four times more effectively by the adoption of progressive and scientific methods of deep-sea fishing. This is evident from the discoveries of Mr. G. S. Illugason, an Icelandic master fisherman, employed by the Food and Agriculture Organisation on a fisheries mission to India. According to him, the use of nylon gill-nets introduced by the F.A.O. to the fishermen on the east coast of India has resulted in as much as 500 per cent. increase in catches and in about 300 per cent. increase in the earnings of these fishermen. Giving details of his experience at the F.A.O. headquarters in Rome, recently, Mr. Illugason said:

"I have been working along the Madras and Andhra Coasts, demonstrating the nylon bottom gill-net. The fishermen on the east coast mostly fish from catamarans which are log rafts and use bag nets made of cotton. We have demonstrated that they can catch five times as much fish, if they use bottom set nylon gill-nets. What is more, they catch bigger fish and species they rarely trap in their cotton nets. The important fact is that nylon gill-nets can be used from the bigger catamarans. A five-log catamaran with a crew of four can use a set of five 30-fathom long nylon gill-nets, and the men can increase their earnings by at least 300 per cent., a factor of far-reaching economic and social significance."

Motor Boats

Mr. Illugason demonstrated the superior efficiency of motor boats to the fishermen. These latter now seem to have learnt the art of handling the boats and gear and fish effectively on their own, and thus have multiplied their earnings. This has created a strong demand for small mechanised boats and the Madras Government is making several such craft available to the fishermen under the Five-year Plan.

The Icelandic master fisherman has also discovered a "gold mine" in the form of a vast shrimp ground stretching more than 140 miles along the Malabar Coast. The shrimps (water animals) average about 4 to 5 inches in length and live in about a four-mile wide strip stretching from Beypore in the north to Mangalore in the south. Between 21st March and 18th April last, the local fishermen were able to catch 11,306 lbs. of shrimp and fish. It is stated that the commercial and economic consequences of the discovery will be most favourable to fishermen. With their big nets, they could only catch shrimp during the monsoon in small quantities. Now with mechanised boats they can catch, it is stated, ten times as much during mid-winter and spring and increase their earnings. A private fish processing company has already started an export trade in frozen shrimp. The F.A.O.'s naval architects have designed 30 and 32-foot boats, powered with 30 h.p. engines to travel in the new region. If full encouragement is provided to the fishermen on the West Coast, the prospects for building up a lucrative export market in shrimps will undoubtedly be bright.

State Assistance

In recent years, efforts have been made to increase the production of both fresh-water fish and sea fish. Progress in this field has received an impetus from the Central and State Governments alike. The technical and other assistance, received under the Indo-U.S. Technical Co-operation Programme, the Indo-Norwegian Fisheries Community Development Programme and, as stated above, from the F.A.O. has also helped enhance the pace of progress.

In the first Five-year Plan, provision was made for an expenditure of Rs. 5 crores. In the second Plan, the outlay on fisheries has been raised to Rs. 12 crores. Of this, the Centre's share is Rs. 4 crores and that of the States Rs. 8 crores. It is to be hoped that in implementing the programmes for development, the Central and State Governments will give priority to the suggestions of Mr. Illugason.

It will be appropriate to recall here the progress of fisheries in India under the first Five-year Plan. At the beginning of the first Plan, India produced about one million metric tons of fish per annum, the average catch per head being near 2,500 lbs. The improvements effected in the means of production during the Plan period increased the yield by about 10 per cent. and production in 1955-56 was estimated at 1.1 million metric tons. These improvements included new methods of fishing, bringing under fish culture large sheets of water currently lying fallow, introduction of new methods of scientific fish farming, and better forms of storage, transport and marketing. Research helped to reduce the mortality rate of fry and fingerlings in nursery and rearing ponds as well as during transport. Developments of fisheries in larger reservoirs was for the first time undertaken as an organised experiment. Some State Governments undertook legislation to bring neglected waters under fish culture.

Steps to Augment Output

In the maritime States, mechanisation of indigenous craft and introduction of trawler fishing have been the steps taken to augment fish production. While mechanisation will step up sea fish production, the possibilities of a good haul will still be limited without adequate mechanical know-how. Private enterprise has been attracted to carry on trawler fishing, based on the results of the exploration conducted by the Government of India. Small power vessels are, therefore, being used for introducing new techniques of fishing such as fishing with flat trawl, shrimp trawl, improved types of gill-net and drift-net. Instruction in these techniques is being given under the foreign aid programmes.

Another significant achievement during the first Plan period was the organisation of about 800 fishermen co-operatives for credit production and marketing.

Development schemes of the State Government under the second Plan are expected to cost about Rs. 8 crores, as stated already. The schemes covered by this expenditure relate to fish farming and demonstration, improvement of fishing craft and mechanisation, and development of fishing harbours, training and extension. Provision is also made for the supply of fishery requisites, intensive seed collection and distribution and introduction of fish culture in lakes and fishermen's co-operatives. Further, attention is being paid to scientific development in spheres where effete methods have failed to increase India's fish production. If all the development plans currently envisaged are implemented, fish production will go up, it is stated, by 50 per cent. in the next ten years.

IRREGULARITIES IN TWO STATE-OWNED UNITS

The Estimates Committee's twenty-seventh report submitted to Parliament recently embodies its conclusions and recommendations on the activities of the Hindustan Antibiotics Ltd., Pimpri, and the Hindustan Insecticides Ltd., New Delhi. Both the concerns are owned by the Ministry of Production. The Committee's investigations into the activities of both the concerns reveal a number of irregularities and lapses. The Hindustan Antibiotics Ltd. was registered under the company law on 1st June 1954. It took over the Penicillin Bottling Plant at Bombay on 1st February 1955. The plant, located at present in a new building at the Haffkine Institute in the city, is to continue to be operated there till the filling and packaging section is ready at Pimpri.

The penicillin factory at Pimpri was initially planned to produce 3.6 million mega units of penicillin per year to start with, rising subsequently to 9 million mega units per year. The total estimated expenditure on the project was Rs. 1.86 crores, of which Rs. 1.29 crores were to be contributed by the Government of India, the balance being the cost of imported equipment contributed by the U.N. International Children's Emergency Fund. According to the original schedule, production ought to have started by 1st December 1953, but actually the first step, namely, the seeding of penicillin, was undertaken on 14th December 1954, and trial operations commenced only in March 1955.

The original estimates provided for the manufacture of streptomycin. But, as the cost of penicillin equipment alone absorbed the entire estimated amount, the plant for streptomycin was not supplied. The Estimates Committee has recommended that negotiations for getting equipment for the manufacture of streptomycin should be expedited.

The management, it is stated, had not prepared its accounts within 18 months after its incorporation and placed before the Company for approval, as required by the Articles of Association. This lapse has been criticised by the Estimates Committee.

Of the sale proceeds of all the products of the factory amounting to about Rs. 47 lakhs, as much as Rs. 10 lakhs were spent on staff. This sum is considered to be very high. The Company has been advised to cut down the staff wherever necessary. The Estimates Committee notes that there is scope for further improvement in the replacement of imported raw materials by indigenous materials.

The Committee is evidently not satisfied with the existing selling arrangements for the Company's products through only one firm. It has advised a revision of this policy after the expiry of the term of the present agent, so that many firms all over the country may be given the chance of selling its products.

The Committee is of the view that, as far as possible, care should be taken to fix the selling price not below the cost of production and that the price should also include a certain amount of return on capital. With a view to increasing the outturn in the factory, it has advocated the introduction of the system of payments of wages linked to outturn. It has also recommended the manufacture of penicillin ointment after consultations with experts.

It is stated that the Company has approved of a plan to give facilities to a glass factory to set up a fully automatic machine for making neutral glass vials, adjacent to the present penicillin factory. In this connection, the Committee suggests that care should be taken to avoid any commitment with the proposed glass factory, before hand, without paying attention to the quality, price etc., of the glass products manufactured by the latter.

Similarly, the Committee does not seem to have been satisfied with the way in which the Hindustan Insecticides Ltd. was established at New Delhi. It has noticed many drawbacks and lapses which do not speak well of a Government that proposes to play a very dominant role in building up industries in the second Five-year Plan period. The construction of the D.D.T. factory, for instance, did not proceed according to plan for lack of a workable plan drawn by those connected with it. Although the equipment needed by the factory and supplied by U.N.I.C.E.F. came earlier than the original schedule, it had to remain idle for one year. The explanation given for the delay, namely, lack of experience, has not been accepted by the Committee, since experienced personnel for constructing buildings and erecting the structural works for the factory were available in the country. The story did not end there; for even after the machinery was set up, production difficulties had been experienced owing to lack of spare parts and the difficulty in obtaining them. And some of the new features of the D.D.T. plant were new even to the advisers made available to the factory by the U.N.T.A.A. The Committee, therefore, suggests that, in future, the Government should satisfy itself that the advisers appointed under any agreement are persons who are conversant with all the detailed technical matters connected with the agreement.

The management of the Hindustan Insecticides is involved also in another trouble. It is experiencing difficulties in acquiring the land on which the factory is at present situated. It was chosen because it was near to the Delhi Cloth Mills and Chemical Works in Delhi so that it would be convenient to have raw materials such as chlorine, sulphuric acid and alcohol. Before undertaking the construction work, full examination of the ownership of the land was not made nor were the terms of agreement for the purchase or taking the land on lease finalised.

Another defect noticed by the Committee is the conclusion of an agreement for the sale of the hydrochloric acid produced by the Company to the D.C.M. Chemical Works for a period of six years. The price at which it is sold is not revealed. The Committee, however, feels that had the Government insisted on the agreement for the disposal of hydrochloric acid forming part of the agreement for further supply of the raw materials by the D.C.M. Works, it would have been in a better position to obtain a more favourable rate for the acid.

Although the defects and lapses noted above are regretted, it is to be hoped that the experience gained now would help the Government in avoiding a repetition of the mistakes in future at least.

JAPAN-THAILAND TRADE AGREEMENT

Japan has entered into a trade agreement with Thailand, with a view to promoting the trade between the two countries. The agreement was signed at Bangkok by Japanese and Thai representatives on 9th April last. Under the new agreement the payments will be on a cash basis. The agreement provides for the suspension of old open account formula governing the trade between the two countries under the payments agreement signed in September 1952. The outstanding balance under the open account formula remains in favour of Japan to the extent of $14.8 million in actual and $26.7 million in projected balance. In order to dispose of these balances, the two nations have agreed to adopt the following methods: (1) The open account formula should be used in payments for rice which Japan will import this year. (2) Japan should make every attempt to purchase Thai commodities under the old account formula. (3) The final payment of the overall net balance should be made in cash on or before the end of July 1957 and thus abolish the open account system.

Hitherto, trade between Japan and Thailand has been carried on very smoothly, Japan buying rice and other goods from Thailand and the latter purchasing from Japan textiles machinery and metal products. Japan's exports amounted to $55.4 million in 1954-55, as against $61.0 million in 1953-54. The country's offtake of Thai goods amounted to $73.3 million in 1954-55 as compared with $72.1 million in the previous year. Thailand accounts for about 3 per cent. of Japan's total trade.

The Thai-Japan trade agreement now concluded reflects, it is stated, the recent world-wide trend towards liberalisation of trade. It also stems from the difficulty experienced by Thailand in keeping track of payments under the open accounts system, since it abolished its foreign exchange centralisation system last year.

THE INDIA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Ordinary General Meeting of the Shareholders of THE INDIA UNITED MILLS, LIMITED, will be held at the Registered Office of the Company at Indu House, Dougall Road, Ballard Estate, Bombay, on Thursday the 12th July 1956 at 3-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statements of Accounts upto 31st December 1955.
(2) To sanction the declaration of a Dividend on Ordinary and Deferred Shares.
(3) To elect a Director in place of Shri Shri Gopal Nevatia who retires by rotation but is eligible for re-election.
(4) To elect a Director in place of Shri Chinubhai C. Dalal who retires by rotation but is eligible for re-election.
(5) To elect a Director in place of Shri Basudev Somani who retires by rotation but is eligible for re-election.
(6) To appoint Auditors for the current year and to fix their remuneration.

AND for the purpose of considering, and if thought fit, of passing with or without amendments the following Resolution as a Special Resolution:—

SPECIAL RESOLUTION

"RESOLVED that Shri Rameshwarprasad Bagla, a Partner of Messrs. Agarwal & Co., the Managing Agents of the Company, be and he is hereby re-elected a Director of the Company and that pursuant to Section 261 of the Companies Act, 1956, the Company consents to and approves of such election."

Explanatory Statement as required by Section 173 (2) of the Companies Act, 1956

Shri Rameshwarprasad Bagla is a Partner and consequently an associate of Messrs. Agarwal & Co., the Managing Agents of the Company, and to comply with the requirements of Section 261 of the Companies Act, 1956, it is necessary to have a Special Resolution for his re-election.

Shri Bagla was originally an Ex-Officio Director. Later he was appointed as additional Director and under Article 92 he retains his office until the next Ordinary General Meeting of the Company but is eligible for re-election.

It may be added that Shri Bagla has been a Director since 1943 and the Chairman of the Company since October 1950. He takes a prominent part in the Management and his presence on the Board is in the interest of the Company.

Accordingly, a Special Resolution as mentioned in the Notice will be placed before the Annual General Meeting called on 12th July 1956.

Two Shareholders have given Special Notice to the Company of this Resolution, and the Directors commend this Resolution for your consideration.

Note.—Every Shareholder entitled to attend and vote is entitled to appoint one or more Proxies to attend and vote instead of him/her, and such a Proxy or Proxies need not be Shareholders.

The Share Transfer Books of the Company will be closed from Friday the 22nd June 1956 to Thursday the 12th July 1956, both days inclusive.

By Order of the Board,
AGARWAL & CO.,
Agents.

BOMBAY, *23rd May* 1956.

Note.—The Dividend, when sanctioned, will be payable from Monday the 13th August 1956, to those Shareholders whose names stand on the Register of the Company on the 12th July 1956, and Dividend Warrants will be posted to the registered addresses of such Shareholders.

To,
THE SHAREHOLDERS OF THE INDIA UNITED MILLS, LIMITED.

THE CALCUTTA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE OF EXTRAORDINARY GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the registered office of the Company at Stephen House, 4th Floor, No. 4, Dalhousie Square East, Calcutta, on Friday the 6th July 1956, at 3 p.m., to consider and if thought fit to pass with or without modification the following resolutions:

(As an Ordinary Resolution)

(1) "Resolved that with effect from 1st April 1956 the consent of the Company be and is hereby accorded to the Board of Directors borrowing moneys which together with the moneys already borrowed by the Company may exceed the aggregate of the paid-up capital of the Company and its free reserves that is to say reserves not set apart for any specific purpose and that borrowings shall be exclusive of the temporary loans obtained or to be obtained by the Company from the Company's bankers in the ordinary course of business."

(As an Ordinary Resolution)

(2) "Resolved that the Company do hereby consent and authorise its Managing Agent or any associate of its Managing Agents with effect from 1st April 1956 to retain any commission or other remuneration earned or to be earned by such agents or associate as the Managing Agent, Manager, Agent, Secretary or Selling and Buying Agent of any other firm, body corporate or other concern in respect of any goods, power, freight or other service (including effecting insurance of any kind) whatsoever relating to or arising out of the affairs of the Company for the sale, purchase, supply or rendering of which a contract has been or will be entered into by such firm, body corporate or concern with the Company at rates which are not less favourable to the Company than the market rates or which are otherwise favourable."

(As a Special Resolution)

(3) "Resolved that the Company approves of contracts to be entered into or being entered into with the associates of the Managing Agents for sale, purchase or supply of articles in which the Company or the associates do regular trade or business provided that the prices or amount charged or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

Explanatory Notes

In respect of item (1) of the above notice, under Section 293 sub-section (1) of the Companies Act, 1956, the Board of Directors is not entitled to borrow money after the commencement of the Act without sanction of the Company if the amount already borrowed (except the temporary loan) and the amount to be borrowed exceed the paid-up capital of the Company and its free reserves and hence this resolution is necessary to enable the Board to borrow money in case of necessity.

In respect of item (3) of the above notice, full particulars of each such contract and all particulars relating thereto will be entered in a separate register to be maintained by the Company under Section 360 of the Companies Act, 1956.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

PATHIRAPPALLY, *8th June* 1956.

INDIAN TRADE AND GENERAL INSURANCE COMPANY LTD.

(Concluded from page 1154)

past; these can in my view be summed up very simply as follows:—

(1) No amount of legislation will turn bad management into good management.

(2) What might be termed 'police methods' are no more likely to be successful in the future than they have proved to be in the past.

"The present state of affairs arises entirely from the lack of confidence between one company and another and it is quite obvious that an entirely fresh approach must now be made; any new approach to be successful must spring from the utmost good faith for without this any measures taken, no matter what they may be, are foredoomed to failure; I feel confident, however, that before very long commonsense and the hard school of experience must succeed, as it has done in other countries of the world, in building up a sound and virile Indian insurance industry.

"Another milestone in the history of insurance in this country is the formation of an Indian reinsurance corporation which it is expected will shortly commence operation; there is no doubt that, properly managed, as I have every reason to believe it will be, such an institution will perform a useful function in our domestic affairs and there is no reason why, in the course of time, it should not broaden its activities to embrace the larger markets of the world.

"Your Company has expressed its confidence in the future of this Corporation and as promoters have already agreed to take shares of the total face value of Rs. 5,70,000 which is the maximum amount to which we are entitled to subscribe on the present basis of allocation of shares; I would like to take the opportunity here afforded to wish this brave new venture every success in its operations.

Outlook

"What of the future? I firmly believe that, if we continue to apply all our energies and resources to the proper fulfilment of our functions as a necessary adjunct to the industrial and economic progress of the country, we cannot but grow and prosper with it.

"Within the limits of our resources we are doing what we can to train and build up a body of young men who will be technically and otherwise equipped to fill responsible positions in our organisation in the future, and we are also doing everything we can to support and encourage the recently formed Federation of Insurance Institutes (J. C. Setalvad Memorial) which gives such excellent opportunities to those in our profession who wish to equip themselves with that technical knowledge of the various branches of our business which is so essential to sound management in the future.

"One of our greatest assets and one which does not figure in the balance-sheet must always be in the persons of those who represent us in India or abroad, and if this is a tribute to them for good work put in in the past, I hope it will also act as a spur to even greater efforts in the future.

"I cannot conclude without once again paying tribute to Mr. T. M. Sturgess, our General Manager, and the executives and staff of the Company, wherever they may be, for their continued devotion to the interests of your Company, and finally I must thank those good friends of ours at home and abroad whose confidence in us has contributed so largely, to the position which your Company has been able to build up and maintain amongst the leading insurance offices in India."

HAILEYBURIA'S PROFIT LOWER

DIVIDEND MAINTAINED—FINANCIAL POSITION GOOD

AFTER two years of successive advance, from Rs. 2.33 lakhs in 1952 to a record level of Rs. 16.24 lakhs in 1954, the gross profit of the Haileyburia Tea Estates Ltd. (Managing Agents: Messrs. Parkins Ltd., Kottayam) for the year ended 31st December 1955, has suffered a marked fall to Rs. 10 lakhs. The net profit, too, has dropped to Rs. 5 lakhs from Rs. 9.04 lakhs, to which level it had gone up from a low of Rs. 1.47 lakhs in 1952. Notwithstanding this recession, the profit for the year under review is one of the highest in the Company's history and is, in fact, higher than that earned in any of the years preceding 1954.

The setback in results has necessitated a cut in the allocation to reserves from Rs. 5.50 lakhs to Rs. 1.75 lakhs, the latest addition representing the sum transferred to the development reserve. In the previous year, the Directors had added Rs. 2 lakhs to the general reserve, Rs. 1 lakh to the dividend equalisation reserve and Rs. 2.50 lakhs to the debenture redemption reserve. The dividend has, however, been repeated at 25 per cent., a level which is being maintained for the third year in succession, though it is on an increased capital of Rs. 12.50 lakhs for 1954 and 1955 raised by the issue of 50,000 new shares of Rs. 10 each in 1954.

The progress of the Company during the past three years is clearly shown in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds of tea	21.42	26.56	14.55	7.08
Stocks	12.59	11.01	5.65	8.69
Estate expenditure	24.38	20.27	12.08	12.85
Other expenses	0.51	1.09	0.62	0.60
Gross profit	10.00	16.24	6.93	2.33
Managing Agents' commission..	0.94	1.35	0.52	0.17
Depreciation	0.81	0.35	0.29	0.35
Taxation	3.26	5.50	2.20	0.35
Net profit	5.00	9.04	3.92	1.47
To reserves	1.75	5.50	1.90	0.87
Dividends—				
5 per cent. preference ..	0.12	0.12	0.12	0.12
Ordinary	3.12 (25%)	3.12 (25%)†	1.87 (25%)	0.75 (10%)
Carry forward	0.37	0.37	0.03	0.06
Tea crop harvested (lbs.)	1,603,876	1,322,630	942,823	893,428
Cost of production (cents per lb.)	152	153.21	134.51	143.13
Net average sale price realised (cents per lb.)	212.05	285.27	215.51	176.56

† On the increased capital of Rs. 12.50 lakhs raised by the issue of 50,000 shares of Rs. 10 each in 1954.

The crop harvested during the year under review, at 1,603,876 lbs., is a fresh record and represents an increase of 281,196 lbs. over that for the previous year and of 228,876 lbs. over the estimate. The sizable increase in output has not brought any substantial reduction in the cost of production, the fall being of the order of only 1.21 cents per lb. The cost is, however, very much less than that estimated last year; for, since the estimate was made, the slab system of export duty took the place of the fixed rate of As. 10 per lb. levied earlier.

There has been a sharp fall in average price realised from 285.27 cents to 212.05 cents per lb. This is only in consonance with the general trend of tea prices during the year, when prices fetched were well below the peak of 1954. In fact, in the second quarter of the year, prices were below the cost of production. Thereafter, the market began to improve and, although it was irregular for the rest of the year, the undertone was strong. It may also be noted that the net average sale price realised by the Company for the year under review is lower than that for 1953, though higher than that for any of the preceding years. For these reasons, the decline of Rs. 5.14 lakhs in the Company's sale proceeds for 1955 is accompanied by a rise of Rs. 4.11 lakhs in its estate expenditure.

The Company's financial position is sound. The paid-up capital at Rs. 15 lakhs (made up of 125,000 ordinary shares of Rs. 10 each and 2,500 5 per cent. tax-free cumulative preference shares of Rs. 100 each) is supplemented by reserves and surplus aggregating Rs. 17.87 lakhs, of which Rs. 3.75 lakhs represent capital reserve, being premium received on new shares issued, once in August 1951 and again in 1954, and Rs. 8.50 lakhs general reserve. The reserves stand at such a high level, despite the capitalisation of a sum of Rs. 3.75 lakhs, once in 1949 when 2,500 preference shares were issued as bonus shares in the ratio of five preference shares for every 100 ordinary shares held and again in 1950, when 12,500 ordinary shares were issued as capital bonus in the ratio of one share for every four ordinary shares held. There is also a debenture liability of Rs. 2.30 lakhs, having been reduced by the repayment of 20 debentures of Rs. 1,000 each during the year under review. The provision for taxation stands at Rs. 3.38 lakhs and current liabilities aggregate Rs. 9.14 lakhs. The gross block of the value of Rs. 31.57 lakhs stands written down to Rs. 26.61 lakhs. The current assets amount to Rs. 22.96 lakhs, exceeding the current liabilities and provision for taxation by a large margin of Rs. 10.44 lakhs.

The current year's crop is estimated at 700,000 lbs. from Haileyburia to be produced at a cost of 162.39 cents per lb. and 870,000 lbs. from Semni Valley Estate at a cost of 164.30 cents per lb.

An idea of the outlook for the Company can be had from the following extracts from the Chairman's statement accompanying the accounts for the year:

"Our new clearings have been doing well and I expect yields of well over 1,000 lbs. per acre in the very near future from these clearings. The work of extending the Semni Valley factory was started and is now in progress. The new drier on order is expected shortly and I expect the work to be completed before the end of the year.

"We are still awaiting the rules under the Plantation Labour Act. The extension of the Provident Funds Act to plantations is likely to take place in the very near future. In the meantime, the recent bonus agreement for 1953 and 1954 will make heavy demands on our resources. A tripartite committee is still considering the other labour demands, which has been referred to a special tribunal. While the tea industry is, on the one hand, being asked to carry more than its fair share of the welfare State, the demands from Government like the new dividend tax, etc., are piling up, on the other side. I expect the current year's results will not be unfavourable. Though bad weather conditions have affected our crop during the first half of the year, I do not visualise a serious drop in the final figures."

The Rs. 10 fully paid up ordinary shares of the Company have become one of the favourite counters in the planting section of the Madras Stock Exchange; they are strongly held at Rs. 28-12 *cum-div.* (final dividend: 15 per cent.) as against Rs. 27-8 *cum-div.* a year ago. On an *ex-div.* basis, the dividend for the past year provides a yield of 9.2 per cent. per annum.

AZAM JAHI AND OSMANSHAHI MILLS

Distinctly better results are disclosed by the audited accounts of the Azam Jahi Mills Ltd. and the Osmanshahi Mills Ltd. (Secretaries, Treasurers and Agents: The Industrial Trust Fund, Government of Hyderabad) for the year ended 30th September 1955, as compared with those for the previous year. The Azam Jahi has earned a gross profit of Rs. 9.12 lakhs for the year under review, in refreshing contrast to the loss of Rs. 1.73 lakhs for 1953-54, and the Osmanshahi Rs. 25,018, as against a loss of Rs. 3.72 lakhs for the previous year.

The Azam Jahi has set aside Rs. 7.50 lakhs for writing off depreciation on fixed assets, as against *nil* in the previous year. After providing Rs. 0.26 lakh for Secretaries and Treasurers' commission, the Directors have carried forward the balance of Rs. 1.36 lakhs. In the case of Osmanshahi, after providing Rs. 30,000 for Secretaries and Treasurers' commission, there is a loss of Rs. 4,982, which has been covered by the profit of Rs. 44,591 on sale of machinery and by writing off unclaimed dividend amounting to Rs. 37,403. The resulting profit left to be carried forward is Rs. 74,722.

The Directors of the two Companies have, however, decided to pay dividend for the year under review, by drawing the required sums from the dividend equalisation funds of the respective Companies. A dividend of 3½ per cent., absorbing Rs. 2.52 lakhs, has been declared on the Azam Jahi shares and 2½ per cent. on the Osmanshahi shares (requiring Rs. 2.19 lakhs) while, in the previous year, the Directors had to pass over the dividends of both the Companies following the loss suffered by them.

The improvement in the results for the year under review is the result of more satisfactory trading conditions and the increase in offtake of cloth, although competition in export markets was keen. The share of the Azam Jahi in the export trade during the year fell by about 50 per cent. from that of the previous year. Apart from making a profit, the working of the Azam Jahi Mill is stated to have shown definite improvement. "Efficiency, both of spinning and weaving," the Directors report, "improved to a satisfactory extent and production increased." The average efficiency of the Osmanshahi Mills also improved to some extent and the range and attractiveness of the Mill's products were extended. However, the comparatively less satisfactory results of the Company is mainly due to illegal strikes of workers, at different times during the year, over the question of bonus and other demands.

The following synopses of the Companies' latest balance-sheets give an idea of their financial position:

	As on 30th September 1955	
	Azam Jahi	Osmanshahi
	I.G. Rs.	I.G. Rs.
Capital	61,71,428	87,19,600
Reserves and surplus	36,75,295	55,88,268
Liabilities	1,52,41,518	69,01,682
Gross block	1,84,91,530	1,69,09,989
Less—Depreciation	50,78,582	61,91,861
Net block	1,34,12,948	1,08,08,128
Stock-in-trade	34,95,380	47,02,547
Stores and spares	13,15,304	13,04,318
Debts, deposits and advances ..	43,88,685	30,63,094
Investments	24,05,030	12,22,801
Cash	70,294	1,05,662
Total .. Rs.	2,50,88,241	2,12,09,550

The accounts of the Azam Jahi Mills for the year under review are presented in I. G. currency, while those for the previous years were in O.S. currency. This change follows the demonetisation of the O.S. currency. The paid-up capital of the Company, amounting to Rs. 72 lakhs in O.S. currency (made up of 72,000 ordinary shares of Rs. 100 each), is equivalent to Rs. 61,71,428 in I.G. currency. The Directors have decided to convert the above capital in O.S. currency into an equal amount in I.G. currency, that is, to convert the shares of O.S. Rs. 100 each into shares of I.G. Rs. 100 each. This is proposed to be done without calling upon the shareholders to make up the difference. On the other hand, the exchange difference of O.S. Rs. 12 lakhs, equivalent to I.G. Rs. 10,28,571-7, is proposed to be met from the general reserve of the Company. The necessary sanction for the above proposal has been obtained from the Central Government.

The Directors of both the Azam Jahi and the Osmanshahi have decided to utilise Rs. 12,48,394 and Rs. 47,01,896 from the general reserves of the respective companies to write off depreciation on fixed assets of the companies, as adequate depreciation has not been written off the assets up to date. Having regard to the Companies' business, the Directors feel that it will be some time before depreciation is completely written off out of the profits of the Companies.

If the aforesaid proposals are carried out, the general reserve of the Azam Jahi will stand reduced from Rs. 32.77 lakhs to Rs. 10 lakhs and that of the Osmanshahi from Rs. 52.02 lakhs to Rs. 5 lakhs. It may also be noted, in this connection, that the general reserves of the two Companies include also provisions for taxation which are not shown separately.

SEEBPORE COAL

The audited accounts of the Seebpore Coal Co. Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), for the half-year ended 31st December 1955 show an encouraging performance. The gross profit of the Company, which had dwindled slightly from Rs. 3.43 lakhs to Rs. 3.27 lakhs in the half-year ended 30th June 1955, has staged a recovery to Rs. 3.67 lakhs for the six months under review. What is more gratifying is the fact that the latest half-year's profit is the highest earned by the Company since the six months ended 31st December 1945 when it aggregated Rs. 4.59 lakhs.

The net profit is, however, a shade lower at Rs. 1.06 lakhs, as compared with that of Rs. 1.11 lakhs for the previous half-year, though it compares favourably with Rs. 0.94 lakh earned in the corresponding six months of 1954. To the net profit is added a sum of Rs. 13,000 being the excess provision made in previous half-years for taxation. As in the previous half-year, a sum of Rs. 50,000 has been added to the general reserve. The dividend on ordinary shares has been maintained at Re. 1-4 per share of Rs. 7, or at 35.5/7 per cent. per annum, to which level it had been raised in the previous half-year from Re. 1 per share paid for each of the two half-years of 1954.

The Company's progress during the past three half-years can be judged from the following comparative table:

	For the half-year ended			
	31-12-55	30-6-55	31-12-54	30-6-54
	Rs.	Rs.	Rs.	Rs.
Sale proceeds	12,31,020	10,66,337	11,91,243	10,31,120
Stocks	47,024	43,582	45,988	1,10,621
Colliery expenses	2,37,062	2,18,781	2,60,863	2,25,016
Other expenses	6,37,300	5,82,405	5,23,190	4,62,472
Gross profit	3,67,013	3,27,196	3,45,137	2,46,097
Managing Agents' commission..	26,901	23,420	22,419	15,410
Depreciation	69,000	67,000	92,500	75,000
Taxation and cesses	1,65,000	1,26,000	1,34,500	77,000
Net profit	1,06,112	1,10,776	95,788	78,687
Transfer from taxation provision	13,000			
To general reserve	50,000	50,000	30,000	25,000
Dividends—				
5 per cent. preference ..	10,000	10,000	10,000	10,000
Ordinary	50,000	50,000	40,000	40,000
Per cent.	(35-5/7 p.a.)	(35-5/7 p.a.)	(28-4/7 p.a.)	(28 4/7 p.a.)
Carry forward	49,299	40,187	39,411	25,543
Raisings (in tons) ..	65,970	61,696	65,879	55,705
Despatches (in tons) ..	65,531	61,757	71,646	63,168

The raisings of coal for the half-year under review are substantially larger than those for the previous half-year and are, in fact, the highest in the past five half-years. Despatches are also higher as compared with the previous half-year, but are sizably lower than those in the corresponding six months of 1954. Sale proceeds, on the other hand, show a rise over those for either of the two previous half-years. This is evidently due to the slight increase in coal prices, once in July 1955, when the price of grade I and above was raised by As. 3 per ton, and again in November, when a similar increase was granted for selected 'A' and 'B', grade I and II coals.

The latest balance-sheet of the Company shows that the reserves and surplus aggregate Rs. 8.86 lakhs, as against a paid-up capital of Rs. 6.80 lakhs. The provision for taxation and cesses stands at Rs. 2.96 lakhs and current liabilities amount to Rs. 5.67 lakhs. The gross block of the value of Rs. 29.99 lakhs has been written down to a book value of Rs. 10.92 lakhs. The current assets amount to Rs. 13.37 lakhs, of which cash balances alone account for Rs. 6.84 lakhs and provide a large coverage to the current liabilities and provision for taxation.

Since the close of the half-year under review, the Directors report, the Poniati and Koithi Seams at Pretoria colliery of the Company have been finally worked out. Raisings at this colliery have, therefore, been suspended and the future of the colliery is engaging the attention of the Directors. Lachipur colliery, the raisings at which were 38,622 tons of selected 'B' grade coal for the half-year, however, continues to work satisfactorily and there is a good demand for this coal.

The Rs. 7 partly paid-up shares of the Company are being currently quoted at Rs. 31 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8.4 per cent. per annum.

ASSOCIATED CEMENT COMPANIES LTD.

Addressing the shareholders of the A.C.C. at the extraordinary general meeting held on Friday last week to confirm the recent decision of the Company to issue new shares at a premium of Rs. 20 per share, Mr. Dharamsey M. Khatau, Chairman of the Company, outlined the progress made towards the establishment of a company for the manufacture of cement-making machinery and other equipment in collaboration with foreign concerns. Mr. Khatau who had returned from the U.K. only last week, after preliminary negotiations with Messrs. Babcock and Wilcox Ltd. and Messrs. Vickers Ltd., said that there would be three principal partners in the venture, instead of two proposed earlier, the new entrant being Messrs. Babcock and Wilcox. Originally, Messrs. Vickers and A.C.C. had agreed to contribute 49½ per cent. each to the capital of the new venture. The balance of 1 per cent. was to be contributed by the managing agency house, namely, Cement Agencies Ltd. Mr. Khatau disclosed that, despite the association of Messrs. Babcock and Wilcox, the contribution of the A.C.C. to the capital of the new company would not be affected, its share would remain at 49½ per cent. There would be no change in the share of the Cement Agencies Ltd. either. The share of Messrs. Vickers would, however, be shared equally between the firm and Messrs. Babcock and Wilcox.

It will be seen from the foregoing arrangement that the controlling interest rests in Indian hands, an important consideration for securing the consent of the Government of India to participation of foreign capital in Indian industries.

Mr. Khatau added that following the entry of the third partner, the field of manufacture would be extended to boilers also. The shareholders were assured that there was full agreement among the three parties concerned on the fundamentals. The details of the Plan would be submitted to the Government of India shortly, after they were approved by the Board, for obtaining a licence. This is expected to be received by the end of August.

As regards the new issue of shares, Mr. Khatau admitted that the premium of Rs. 20 per share insisted by the Government was reasonable in the existing circumstances. He revealed that at one time the Government had fixed the premium of Rs. 25 per share and agreed to reduce it to the present level only after considerable and prolonged discussion.

The new shares will cost Rs. 120 per share, that is, Rs. 100 paid-up and face value and Rs. 20 premium. The Company proposes to call up Rs. 60 on application, of which Rs. 10 will be towards premium. The balance of Rs. 60 (including the premium of Rs. 10) will be called up later, but sufficient interval will be given to the shareholders between the two calls.

SIRSILK AND SIRPUR PAPER

The demonetisation of the Osmania currency in Hyderabad and the adoption of the I.G. currency throughout the State has necessitated changes in the capital structure of many companies there. The latest companies to move in this direction are Sirsilk Ltd. and the Sirpur Paper Mills Ltd. The proposals of the two companies to bring about the necessary changes differ from each other in one respect. Whereas in the case of Sirsilk the change is being effected by lowering the face value of the shares, in the case of Sirpur Paper it is sought to be done by increasing the paid-up value of the shares.

The paid-up capital of Sirsilk is made up of 157,005 ordinary shares of O.S. Rs. 70 each and 233,333 preference shares of O.S. Rs. 100 each. The nominal value of the ordinary shares is proposed to be reduced from O.S. Rs. 100 each, or I.G. Rs. 85-11-5.1/7 to the present paid-up value of O.S. Rs. 70 each which is equivalent to I.G. Rs. 60 each, by extinguishing the uncalled liability of Rs. 25-11-5.1/7 per share, so that the paid-up ordinary capital will be I.G. Rs. 94,20,300, made up of 157,005 shares of Rs. 60 each. Each of these shares will then be sub-divided into six shares of Rs. 10 each.

The 233,333 preference shares of O.S. Rs. 100 each, or I.G. Rs. 85-11-5.1/7 each, will be consolidated in such a manner that every seven existing shares will constitute six shares of I.G. Rs. 100 each. As the 233,333 preference shares issued so far cannot be consolidated in the aforesaid ratio, without leaving a fraction, the Directors propose to allot further five shares, so that the reconstituted paid-up preference capital will consist of 200,004 preference shares of Rs. 100 each fully paid-up.

The present paid-up ordinary capital of the Sirpur Paper Mill consists of 242,836 shares of O.S. Rs. 100 each. In terms of I.G. currency, the paid-up value of each share is Rs. 85-11-5.1/7. The Directors propose to raise the paid-up value of these shares to I.G. Rs. 90 by capitalising a sum of Rs. 10.41 lakhs from out of the general reserve and utilising the same towards payment in full of the unpaid balance of Rs. 4-4-6.6/7 per share. Thereafter, the shares will be sub-divided into 5,850,000 ordinary shares of Rs. 10 each fully paid-up. The Directors also propose to consolidate the existing issued and fully paid-up 42,560 preference shares of O.S. Rs. 100 each, or I.G. Rs. 85-11-5.1/7, in such a manner that seven existing shares shall constitute six preference shares of Rs. 100 each, that is, into 36,480 preference shares of Rs. 100 fully paid-up.

BENGAL PAPER

Readers will recall our brief reference in our issue of 24th March 1956 to the cornering activities in shares of leading joint-stock companies and the trafficking in managing agency by some moneyed people. One of the victims of such activities was the Bengal Paper Mill Co., Ltd., under the managing agency of Messrs. Balmer Lawrie & Co., Ltd. Since then, the matter has been taken up by one of the Directors of the Company with the Central Government. He filed a complaint to the effect that, as a result of a change in the ownership of shares held in the Company, a change in the Board of Directors was likely to take place which, if allowed, would affect prejudicially the affairs of the Company. The Central Government, in exercise of the powers conferred by sub-section (2) of Section 409 of the Companies Act, 1956, has directed that, pending the completion of its enquiry under sub-section(1) of the above section, no resolution passed or action taken to effect a change in the Board of Directors of the Company after the date of the complaint, namely, 12th April 1956, shall have effect, unless confirmed by the Central Government.

Points From The Chair

Government's Industrial Policy

"THE long-awaited statement on the new Industrial Policy of the Government has been announced in the Lok Sabha. As you know, industries have been divided into three categories, the first of which includes 17 industries whose development is to be the exclusive responsibility of the State. While generation and distribution of electricity are included in this first category, it is felt that there is no immediate threat of nationalisation to existing undertakings, but they must reconcile themselves to very strict control by the State. The new policy statement has not gone as far as it might have done to allay the fears generally expressed by investors all over India, because it has stated that the industries which are now left to the initiative of the private sector are not immune from future State intervention. However, I am hopeful that it will soon appear quite clearly that whoever is doing a good job is a good chap and not to be hindered. India has need of all the good jobs she can get done, and all the skills she can get to do them, regardless of sectors. This cannot be too often said, or too forcibly emphasised."

K. G. MILNE,
Surat Electricity Co., Ltd.

Future of Indian Jute Industry

"Originally, the Indian jute industry owed its prosperity, amongst other factors, to the Indian monopoly of the raw material. With the division of the sub-continent, this disappeared and it is very doubtful whether India can ever become independent of Pakistan for supplies of jute. This is reflected in an unfortunate feature of recent years, namely, the disparity between the price of the raw material in relation to the manufactured article. While there is, undoubtedly, an expanding market in India for the products of the Indian mills, competition from Pakistan will affect their products in overseas markets and the general outlook for Indian mills is not so favourable as in the past. So far as the mills of the Champdany Jute Company, Ltd., are concerned, I am glad to be able to report that production was well maintained, the tendency being for this to increase during the year. Costs of production have, therefore, been kept at a level which compares well with those of mills of similar standing, but the future must be described as somewhat obscure, because of the high costs which have to be paid for jute in relation to the prices obtained for jute manufacture."

W. H. MARR,
James Finlay & Co., Ltd.

India—A Promising Market for Tea

"With the general outlook so uncertain, it is of great importance to the tea industry as a whole that the International Tea Agreement should be renewed without delay. Unfortunately, the Governments of the participating countries have failed to reach any settlement over their respective standard export figures and the future of the Agreement, which expired over a year ago, is still in the melting pot. Indian producers have an immense market on their doorstep and it is to be hoped that the Tea Board will take active steps to promote sales in India and increase the pace of expansion of this most promising market."

W. H. MARR,
Consolidated Tea and Lands Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

LUKWAH TEA CO., LTD. Annual General Meeting, Calcutta, 20th June, 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 10th to 20th June, 1956, both days inclusive.

GANESH FLOUR MILLS CO., LTD. Annual General Meeting, Subzimandi, Delhi, 23rd June 1956. Transfer books remain closed from 3rd to 23rd June 1956, both days inclusive.

RANEEGUNGE COAL ASSOCIATION LTD. Half-yearly General Meeting, Calcutta, 27th June 1956. Dividend: As. 6 per share. Transfer books remain closed from 14th to 27th June 1956, both days inclusive.

KALAPAHARI COAL CO., LTD. Half-yearly General Meeting, Calcutta, 28th June 1956. Dividend: Nil. Transfer books remain closed from 15th to 28th June 1956, both days inclusive.

SEEBPORE COAL CO., LTD. Half-yearly General Meeting, Calcutta, 28th June 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 15th to 28th June 1956, both days inclusive.

HOWRAH-AMTA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 29th June 1956. Dividend: Rs. 6 per share, less income-tax. Transfer books will remain closed from 19th to 29th June 1956, both days inclusive.

HOWRAH-SHEAKHALA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 29th June 1956. Dividend: Rs. 3 per share, less income-tax Transfer books will remain closed from 19th to 29th June 1956, both days inclusive.

UNITED PROVINCES ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 29th June 1956. Dividend: Rs. 5 per share. Transfer books will remain closed from 23rd to 29th June 1956, both days inclusive.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 29th June 1956. Dividend: As. 10 per share. Transfer books will remain closed from 23rd to 29th June 1956, both days inclusive.

PUNJAB MINERALS CO., LTD. Annual General Meeting, Calcutta, 29th June 1956. Dividend: *Nil*. Transfer books remain closed from 15th to 29th June 1956, both days inclusive.

HOOGHLY MILLS CO., LTD. Annual General Meeting, Calcutta, 29th June 1956. Dividend: Re. 1-4 per share. Transfer books will remain closed from 22nd to 29th June 1956, both days inclusive.

WALFORD TRANSPORT LTD. Annual General Meeting, Calcutta, 29th June 1956. Dividend: As. 2-6/25 per ordinary share As. 1-23/25 per preferred ordinary share. Transfer books remain closed from 16th to 29th June 1956, both days inclusive.

HAILEYBURIA TEA ESTATES LTD. Annual General Meeting, Kottayam, Travancore-Cochin, 2nd July 1956. Dividend: Rs. 2-8 per share. Transfer books will remain closed from 24th June to 5th July 1956, both days inclusive.

BORREA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 7th July 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 23rd June to 7th July 1956, both days inclusive.

BURRAKUR COAL CO., LTD. Half-yearly General Meeting, Calcutta, 7th July 1956. Dividend: As. 5 per share. Transfer books will remain closed from 23rd June to 7th July 1956, both days inclusive.

ONDAL COAL CO., LTD. Half-yearly General Meeting, Calcutta, 7th July 1956. Dividend: As. 8 per share. Transfer books will remain closed from 23rd June to 7th July 1956, both days inclusive.

STANDARD COAL CO., LTD. Half-yearly General Meeting, Calcutta, 7th July 1956. Dividend: As. 8 per share. Transfer books will remain closed from 23rd June to 7th July 1956, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 12th July 1956. Dividend: As. 2 per deferred share (final) and As. 5 per ordinary share (final), payable from 13th August, 1956. Transfer books will remain closed from 22nd June to 12th July 1956, both days inclusive.

METAL BOX CO. OF INDIA LTD. Annual General Meeting, Calcutta, 18th July 1956. Dividend: Re. 1 per share, (final) making Re. 1-10 for the whole year (with As. 10 interim dividend).

DALMIA CEMENT (BHARAT) LTD. Annual General Meeting, Dalmiapuram, Tiruchirapalli, 20th July 1956. Dividend: Re. 1-4 per ordinary share and As. 2 per deferred share payable on or after 10th August 1956. Transfer books will remain closed from 21st June to 20th July 1956, both days inclusive.

COMPANY REGISTRATIONS

MERCURY IRON AND STEEL CO. PRIVATE LTD. (First Director: Mr. Sorabji Hormusji Commissariat). Business: Manufacturers and dealers in iron and steel goods and other receptacles, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 50, Nesbit Road, Bombay 10.

ASHOK VELVET MANUFACTURING CO. PRIVATE LTD. (First Director: Mr. Vinodral B. Mody). Business. Importers, exporters, merchants, agents and dealers in textile, yarn, cotton, silk, art silk, rayon, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 144, Dharavi Road, Bombay 17.

WALFORD TRANSPORT STEPS UP DIVIDEND

RESULTS OF TWO MARTIN BURN GROUP ELECTRIC COMPANIES

Walford Transport Ltd.

THE directors of the above Company (Manager: Mr. R. R. Aiyer, Calcutta) submit the annual accounts of the Company for the year ended 31st December 1955.

After writing off Rs. 59,839 (Rs. 55,020) for depreciation and setting aside Rs. 1,86,274 (Rs. 1,15,703) for taxes, the available profit for the year is Rs. 3,77,429 (Rs. 3,58,141) including Rs. 1,34,123 (Rs. 1,38,899) carried forward from the last account. It is recommended that this sum be dealt with as follows:—

By payment of a dividend of 12 (11) per cent. per annum on 2,10,200 preferred ordinary shares, absorbing Rs. 25,224 (Rs. 23,122), payment of a dividend of 14 (12) per cent. per annum on 8,40,800 ordinary shares absorbing Rs. 1,17,712 (Rs. 1,00,896), transfer to contingency reserve of Rs. 1,00,000 (Rs. 1,00,000) thereby bringing it to Rs. 7,00,000 (Rs. 6,00,000) and to carry forward Rs. 1,34,493 (Rs. 1,34,123).

From the point of view of volume of sales, the year under review may be considered satisfactory. Total sales in value were 28 per cent. higher than in 1954, but the ratio to turnover declined due largely to reduced margin. Early this year the Company took up the Hindusthan Landmaster franchise for the districts of West Bengal. Owing to new Government policy, the DeSoto franchise in Assam is being discontinued; also the Studebaker dual franchise for West Bengal. It is not yet known what the directors will do to replace these agencies. It will thus be seen that some of the franchises the Company holds may change during the year. The second Five-year Plan has brought with it additional activity all over the country, but the Company can participate in the benefits only after it gets itself lined up with new or substitute agencies. The future operations is not thus clear and possibly difficulties lie ahead. It would thus appear prudent to provide for as large a reserve and carry forward balance as possible to the 1956 accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	10,51,000	Block ...	4,25,514
Reserves ...	18,68,266	Stock ...	28,24,744
Provision for taxation ...	1,86,274	Stores ...	25,658
Liabilities ...	17,07,673	Goods-in-transit ...	2,54,135
Profit and loss account ...	3,77,429	Work-in-progress ...	72,434
		Debts, deposits and advances ...	12,31,137
		Investments	41,250
		Cash ...	3,15,770
Rs.	51,90,642	Rs.	51,90,642

United Provinces Electric Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

As will be seen from the following schedule, satisfactory progress is being maintained.

Half-year ended	*Units sold*	*Revenue* Rs.
31st March 1953 ...	28,300,538	34,62,595
30th September 1953 ...	31,257,135	37,86,990
31st March 1954 ...	30,249,935	37,97,207
30th September 1954 ...	34,269,077	39,84,423
31st March 1955 ...	31,849,909	41,29,830
30th September 1955 ...	35,756,720	40,67,114

After providing for all charges, and placing Rs. 1,00,000 (Rs. 1,00,000) to reserve for redemption of debentures, Rs. 67,046 (Rs. 61,686) to statutory contingencies reserve, Rs. 10,000 (*nil*) to reserve for bad and doubtful debts, and Rs. 80,000 (*nil*) to general reserve, there remains a balance of Rs. 3,60,098 (Rs. 3,60,681) including Rs. 77,157 (Rs. 83,389) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year absorbing Rs. 2,80,000 (Rs. 2,80,000) and in carrying forward to next half-year Rs. 80,098 (Rs. 80,681).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	56,01,185	Block ...	1,54,28,364
Debentures	30,00,000	Stores, coal, fuel, etc. ...	20,88,435
Reserves ...	53,93,741	Tools and instruments	1,53,487
Liabilities ...	71,92,486	Expenditure on capital work in progress	7,36,836
Profit and loss account ...	3,80,098	Other assets	77,269
		Debts, deposits and advances	17,34,701
		Investments	6,56,600
		Cash ...	6,71,818
Rs.	2,15,47,510	Rs.	2,13,47,510

Upper Jumna Valley Electricity Supply Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

Satisfactory progress is being maintained as indicated in the following schedule.

Half-year ended	*Units sold*	*Revenue* Rs.
31st March 1953 ...	3,537,022	6,96,433
30th September 1953 ...	3,659,582	6,96,992
31st March 1954 ...	3,758,678	7,37,088
30th September 1954 ...	4,379,345	7,43,320
31st March 1955 ...	4,568,387	7,98,142
30th September 1955 ...	5,283,394	9,12,734

After providing for all charges and placing Rs. 4,403 (Rs. 3,797) to statutory contingencies reserve and Rs. 15,518 (*nil*) to general reserve, there remains a balance of Rs. 59,383 (Rs. 45,218) including Rs. 31,490 (Rs. 27,667) brought forward from the previous half-year available for distribution, and this the directors recommend be disposed of as follows:—

By payment of a dividend at the rate of 10 (10) per cent. per annum free of income-tax for the half-year absorbing Rs. 24,875 (Rs. 24,875), by an additional payment of As. 2 (As. 2) per share free of income-tax Rs. 6,219 (Rs. 6,219) and in carrying forward to next half-year Rs. 28,289 (Rs. 14,124).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	4,98,750	Block ...	9,83,503
Reserves ...	5,55,284	Stores ...	5,73,855
Provision for taxation ...	30,758	Tools and instruments	12,810
Liabilities ...	17,43,845	Expenditure on capital work in progress	22,189
Profit and loss account ...	59,383	Debts, deposits and advances ...	6,78,346
		Investments	1,69,363
		Cash ...	4,47,954
Rs.	28,88,020	Rs.	28,88,020

Lucky Valley (Nilgiri Hills) Tea Estates Ltd.

The directors of the above Company (Secretaries: Messrs. Matheson, Bosanquet and Co. Private Ltd., Coonoor, Nilgiris) submit the audited accounts of the Company for the year ended 31st December 1955.

Crop.—A record crop of 2,18,124 lbs. was secured against an estimate of 2,00,000 lbs. The cost of production was 160.27 cents per lb., sold at an average of 242.16 cents.

The profit for the year after providing for depreciation and for Central income-tax and Madras State Agricultural Income-tax was Rs. 84,429. The directors recommend the following appropriations:—

Transfer to general reserve Rs. 20,000 and pay a dividend of 10 per cent. free of Indian income-tax absorbing Rs. 50,000, leaving a balance of Rs. 14,429 to be carried forward.

Estimates for 1956.—A crop of 2,10,000 lbs. of tea is estimated to cost 130.28 cents including 16.45 cents for manuring.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	5,00,000	Block ...	8,19,860
Reserves ...	20,000	Stock-in-trade	77,220
Provision for taxation ...	42,500	Stores ...	21,243
Liabilities ...	3,74,015	Other assets	10,941
Profit and loss account ...	14,429	Debts, deposits and advances ...	20,002
		Investments	1,000
		Cash ...	678
Rs.	9,50,944	Rs.	9,50,944

Lukwah Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Tantia Brothers (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

Crop.—The crop weighed out at 12,965 mds. against the estimated figure of 12,000 mds. and were disposed off at an average price of Rs. 2-5-9 per lb. for graded tea and at the rate of Re. 0-5-9 per lb. for stalky and broken tea.

After allowing for depreciation and managing agents' commission there remains a net profit of Rs. 4,84,908 to which is added the balance brought forward from last year of Rs. 64,942, making a total of Rs. 5,49,850. The directors recommend to deal with this as follows:—

To reserve for taxation Rs. 2,09,000, to carry to general reserve Rs. 1,00,000, to pay dividend on 47,500 preference shares at 5 per cent. (free of income-tax) absorbing Rs. 23,750, and on 80,000 ordinary shares at Re. 1-8 per share (free of income-tax) Rs. 1,20,000, leaving a balance to be carried forward to next year of Rs. 97,100.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,75,000	Block ...	6,90,061
Reserves ...	8,33,987	Stock of tea	7,70,939
Provision for taxation ...	5,82,400	Stores ...	1,94,111
Liabilities ...	2,49,745	Other assets	1,738
Profit and loss account ...	5,32,956	Debts, deposits and advances, etc.	10,26,419
		Investments	6,57,533
		Cash ...	1,33,267
Rs.	34,74,088	Rs.	34,74,088

Devkaran Nanjee Investment Co., Ltd.

The directors of the above Company (Chairman: Mr. Pranlal Devkaran Nanjee, Bombay) submitted the audited accounts of the Company for the year ended 31st March 1956.

The net revenue for the year under review amounted to Rs. 84,610 (Rs. 66,736) after providing for Rs. 13,033 (Rs. 10,576) payable to the managing agents. The underwriting commission has been further written off by Rs. 6,500 (Rs. 1,000). This leaves a balance of Rs. 78,110 (Rs. 65,736) to which has been added Rs. 3,394 (Rs. 12,658) brought forward from the accounts of the last year making a total of Rs. 81,505 (Rs. 78,394), which the directors recommend to appropriate as follows:—

To dividend at As. 13 (As. 12) (free of income-tax) per share Rs. 81,250 (Rs. 75,000) and to carry forward (subject to taxation from 1st April 1951) Rs. 255 (Rs. 3,394).

Messrs. Dena Sons Limited resigned as the Managing Agents of the Company and their resignation was accepted by the Board of Directors with effect from 1st April 1956.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Cash ...	3,12,956
Reserves ...	1,00,000	Investments	22,87,314
Liabilities ...	25,027	Furniture and fixtures ...	1,262
Revenue account ...	81,505	Underwriting commission	1,05,000
Rs.	27,06,532	Rs.	27,06,532

Pankaja Mills Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. C. S. Ratnasabapathi Mudaliar & Sons, Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1955.

The directors report that the year's working has been fairly satisfactory as envisaged by them last year. After meeting all expenses including 2 months bonus to operatives paid under protest and providing a sum of Rs. 1,08,630 (*nil*) towards depreciation for the year 1955, the year's trading has resulted in a net profit of Rs. 3,88,343 (Rs. 2,41,401). Depreciation for the three years 1952, 1953 and 1954 was not provided as stated in the respective reports. Instead of providing for all those years out of the profits of the year, the directors propose to set off the profit for the year 1956 against the carry forward loss. By doing so, the loss will get reduced to Rs. 14,98,897 (Rs. 18,87,240) and this will be carried forward. In the circumstances the directors recommend that a dividend of 4 (*nil*) per cent. per annum be paid from out of the dividend equalisation fund which will absorb a sum of Rs. 60,000 (*nil*) and leave a balance of Rs. 40,000 in the fund account.

Trade condition remaining normal, it will be possible to maintain the improvement and show satisfactory results in the future years.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,00,000	Block ...	16,66,341
Reserves ...	2,25,000	Stock-in-trade ...	18,82,819
Liabilities ...	41,49,543	Stores and accounts ...	14,98,897
		Debts, deposits and advances ...	6,23,113
		Investments ...	7,750
		Cash ...	22,737
		Profit and loss account ...	14,98,897
Rs.	58,74,543	Rs.	58,74,543

N.B.—Figures within brackets relate to the corresponding period of the previous year.

OUTLOOK FOR BRITANNIA BISCUIT

Addressing the shareholders of the Associated Biscuit Manufacturers, Ltd., London, Mr. Philip Carr, Chairman said:

"Our Indian subsidiary (The Britannia Biscuit Company, Ltd.) again had a satisfactory trading year ended 31st March 1955, and, as anticipated in my last report, results were somewhat better than those for the previous trading year. The trading and business community in India has, however, many problems with which to contend, as a result of some of the policies of the Indian Government, and the management at Calcutta, Bombay and Delhi are now meeting, and will, I fear, continue to meet, their full share of these problems. I am glad to say, however, that despite these problems the results for the current year are expected to compare favourably with those for the year brought into the accounts now before you."

MONEY UNCHANGED

(From Our Own Correspondent)

BOMBAY, 13*th June*

There was a perceptible increase in the return of funds to banks during the week under review, but the demand for money was so strong that the influx could bring about little change in the state of the market. The trend, therefore, continued to be one of stringency and the rates of interest remained unaltered at the levels reported last week. Thus, inter-bank call money and house money at call were bid at 3½ per cent. Short-term deposits fetched 3½ per cent. for one to three months and 3¼ to 3⅜ per cent. for four to six months.

The customary statement of the Reserve Bank of India for the week ended 8th June 1956 is not available at the time of going to press.

The consolidated statement of position of Scheduled banks for the week ended 1st June 1956 shows a drop of Rs. 6.55 crores in demand deposits, in distinct contrast to the aggregate rise of Rs. 12.97 crores noted in the previous two weeks. Time deposits have, however, maintained their upward trend, with a further increase of Rs. 1.74 crores. Inter-bank borrowings show no worthwhile variation, but borrowings from the Reserve Bank have gone up by Rs. 1.81 crores. Borrowings from the State Bank have, on the other hand, declined by Rs. 1.22 crores. A rise of Rs. 1.20 crores is noted in advances, as against a decline of Rs. 3.37 crores in the previous two weeks. Inland bills purchased and discounted are lower by Rs. 4.19 crores, while foreign bills are higher by Rs. 2.10 crores. Investments stand reduced by Rs. 3.11 crores and cash balances by Rs. 87 lakhs.

The Gilt-edged market presented steady conditions, with enquiries confined to selected counters. The volume of business was restricted, in view of the forthcoming issue of Central Government loan.

3 per cent. 1957 and 1958 continued to find a buyer in the Reserve Bank of India at Rs. 99-13 and Rs. 99-10, respectively. 3 per cent. 1959-61 had sellers at Rs. 98-1½. 3 per cent. 1963-65 was marked up by an anna to Rs. 95-2, while 3 per cent. 1964 was unchanged at Rs. 95. 3 per cent. 1966-68 was on offer at Rs. 93-5, while 3 per cent. 1970-75 continued to be the cynosure of buyers and business was done As. 2 higher at Rs. 90-6. 3 per cent. 1986 Conversion Loan was on offer and declined by an anna to Rs. 77-9. 3½ per cent. 1961 was marked down by an anna to Rs. 99-11. 3½ per cent. 1964 was bid an anna lower at Rs. 98-12, while 3½ per cent. 1965 had sellers at Rs. 98-12. Little interest was evinced in State loans.

After two weeks of successive weakness, the rupee gained some ground in terms of the U.S. dollar during the week under review, following the strength of sterling. Banks' selling rate of ready dollars fell from Rs. 478¼ to Rs. 477¼ per $100 and their buying rate from Rs. 474 to Rs. 473¾ per $100. In New York, spot sterling recovered from $2.80-2.80⅛ to $2.80-7/16-2.80-9/16 and three months' forward from $2.78⅛-2.78⅜ to $2.78⅞-2.79. Transferable sterling firmed up from 277.30-277.40 cents to 277.60-277.70 cents.

HEAVY WITHDRAWALS OF MEDIUM TEAS

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 7th *June*

There were 1,175,000 lbs. on offer in sale 14, which was held on Tuesday, 5th June. The market followed the same pattern as the previous week. Low medium and medium B.O.Ps., were virtually unwanted and withdrawals of these types were again heavy. Good medium and best liquoring brokens met with a fair demand and prices were about steady. Once again all fannings grades were well supported and met with some competition. Prices, however, showed a slight decline on last rates. Whole leaf teas were in less demand, with the exception of a very small quantity of high grown leaf teas.

The following are the quotations:

		Rs.	a.	p.
Plain B.P.		1	8	0*
Low medium B.O.P.		1	10	6
Medium B.O.P.		1	12	0
Good B.O.P. ...	Rs. 2-3-0 to	2	5	0
Well made black leaf O.P. ...		2	2	0

*Nominal.

The average price realised in sale No. 14 was Rs. 2-2 per lb., as compared with Re. 1-14-11 per lb. in the corresponding sale of 1955. This brings the average price realised from 1st January to 5th June 1956 to Rs. 2-3-8 per lb., as against Rs. 2-15-10 in the corresponding period of 1955.

London Market: Sale of 4th June 1956.—Good teas and all off grades strong to dearer. Others, particularly stalky kinds, 1d. to 2d. easier.

Sale of 5th June 1956.—Best quality firm. Others slightly easier.

Colombo Market: Sale of 4th June 1956.—Good demand. Stalky broken mixeds lower. Better sorts firm. Better liquoring off grade fannings very strong, generally dearer.

Sale of 5th June 1956.—Active demand throughout, particularly for colourv sorts and better liquoring Uvas. Highgrowns generally up 10 to 20 cents, mediums up 10 to 15 cents and small leaf lowgrowns up 30 cents. Persian Gulf types much dearer.

Calcutta Market: Export.—5,300 packages. Fair demand, mainly for internal consumption, with prices generally tending lower. Offerings almost exclusively end of season semi-residue types.

Internal.—21,000 dust. Fair general demand As. 1 to As. 3 easier, except Middle East strongest and commonests firm.

Export Quota.—Special licence continues to change hands at 5 pies. 1956-57 export quota remains steady at 36 pies.

Forthcoming Auctions.—Sale No. 15 will be held on Tuesday, 12th June.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:—

"*Sale* 15: 1,200,000 lbs. Market irregular. Much less demand. Low-medium and medium As. 2 to As. 3 lower. All grades and heavy withdrawals. Best liquoring useful enquiry around valuation. Whole leaf rather dearer."

BULLION LISTLESS

(From Our Own Correspondent)

BOMBAY, 13*th June*

The bullion market was featureless during the week under review. Both silver and gold moved irregularly within a narrow range, but the undertone in gold remained steady, thanks to the fairly good demand in ready, while silver was somewhat quiet on reports of some arrivals from Calcutta.

In the earlier half of the week, silver staged a recession on selling by the importers of Tibetan coins. Sentiment was also affected by rumours that more coins will come into the market within the next two weeks. Latterly, however, there was a recovery on revival of support influenced by the improvement in offtake in the ready section. At the close, there was again profit-taking which pruned the gain. On balance, ready silver suffered a fall of Re. 1-2 and forward As. 6 per 100 tolas.

After a mild decline at the opening of the week on rumours of arrivals of unauthorised metal, gold gained ground due to slackness in arrivals, accompanied by an expansion in offtake. Over the week, gold disclosed a fractional gain.

Forward silver (26th June settlement) gave way from Rs. 169-13 to Rs. 168-10, but gained strength to touch Rs. 170-1 today before closing at Rs. 169-7. Trading in the next settlement (July) commenced on Monday, the official starting rate being Rs. 168-6. Opening at Rs. 168-3, silver forward (July settlement) came down to Rs. 167-13 before gaining to Rs. 169-5. The closing was, however, lower at Rs. 168-13.

Ready silver (.996 Mint) slipped from Rs. 171-5 to Rs. 169-10 earlier in the week. After recouping to Rs. 170-15, it reacted to Rs. 170-3 at the close.

The floating stocks of silver are estimated at 700 bars. The daily average offtake was 25 to 30 bars.

Gold for forward delivery (25th June settlement) fell early in the week from Rs. 101-5 to Rs. 100-9, but slowly advanced to Rs. 101-14 and closed at Rs. 101-11. The official starting rate for the July settlement was fixed at Rs. 99-15. On the Exchange, however, business in this settlement opened at Rs. 100-3. After declining to Rs. 99-12, the price improved to Rs. 100-4 at the close today.

Ready gold moved down from Rs. 103-5 to Rs. 102-4 before advancing to Rs. 103-10. The closing was done at Rs. 103-7.

The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was 3,000 tolas.

In London, silver prices were marked down by ¼*d.* per fine ounce, the spot metal from 79*d.* to 78¾*d.* and the forward from 78¾*d.* to 78⅝*d.* Gold also reacted from 249s. 9½*d.* to 249s. 6*d.* In New York, silver was unchanged at 90¢.

The following comparative table shows the trend of market during the week under review:

	13-6-56	Highest	Lowest	6-6-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Gold				
Ready (.99 fine Mint) ..	103 7	103 10	102 4	103 5

* 25th June, settlement.
† 26th June, settlement.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, 11*th June*

Linseed prices depressed further, owing to generally slack demand. They reached as low as Rs. 21-8 during the middle part of the week. Latterly, however, with some deterioration in supply position, prices staged recovery. The condition of the linseed market was dull, with crushers showing very limited interest. The oil market was inactive, with buyers more or less out of the market, while millers were unwilling to reduce prices in the absence of any appreciable decline in the value of seeds. Interest from overseas was negligible and no fresh business was reported. The latest available quotation for Ready-June is Rs. 21-12 per maund.

COTTON FUTURES TO BE RESUMED ON MONDAY

(From Our Own Correspondent)

BOMBAY, 13*th June*

Kalbadevi will once again spring to activity at 10.17 a.m. on Monday, when the futures trading in cotton will be resumed after a break of nearly six months. The trading will be on the basis of two hedge contracts—Contract (short staple) No. 1 based on M.G. Jarilla (A) staple 25/32" and Contract (long staple) No. 2 based on M.G. Vijay staple 27/32". The two contracts will run simultaneously, being subject to the ceilings and floors fixed by the Forward Markets Commission. It is not yet known at what levels the ceilings and floors will be decided. Indications are that they will be fixed as proposed by the East India Cotton Association. The suggested floor and ceiling prices for the two contracts are given below:

(In rupees per candy of 784 lbs.)

	Floor	*Ceiling*
Contract No. 1		
Jarilla Fine 25/32"	500	825
Dhollera (including Kutch) ¾"	450	775
Contract No. 2		
Vijay Fine 27/32"	625	975

The Commission is expected to approve of the aforesaid rates, as also four other suggestions of the Association. These relate to (1) weightage of 6¼ per cent., except for basic varieties; (2) fixation of tendering differences on the basis of forward contract rate, instead of on spot rate; (3) linking the invoicing back of cotton rejected in survey to forward rate, the rejection penalty being Rs. 10 per candy; and (4) prohibition of fresh trading during delivery period, except for the purpose of squaring up of contract, that is, liquidation of commitments.

With less than a week remaining for the resumption of futures trading in cotton, speculation is rife in cotton circles over the question: *What will be the trend of spot rates?* Although the poser looks simple, it is rather difficult to answer it with any degree of certainty. A section of traders is somewhat inclined to feel that the prices of cotton futures would be lower than those of spots. In support of its contention, this section draws attention to possibilities of a bumper crop next season, recent recession in agricultural commodity markets, and bearish advices from overseas cotton markets. Reflecting this feeling, those operators who had gone long at higher prices would now appear to be interested in reducing their holdings. It is no wonder, therefore, that the spot prices of cotton have staged a retreat.

The following table gives the latest quotations for a few popular styles of cotton from the Sewri market, as compared with the rates prevailing a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	13-6-56	6-6-56	30-5-56
Bengal *Deshi*	625	640	640
Berar Jarillas	790	810	810
Khandesh	800	820	820
Vijay	970	985	985
Oomra *Deshi*	690	710	710
Moglai	700	725	725

Along with domestic styles, foreign cottons have also tended to recede, thanks to continued slackness in demand. Busoga, for instance, was quoted lower yesterday at Rs. 1,555-R.N. 1,560, as against Rs. 1,580 a week before. Similarly, Jinja was done at Rs. 1,392, as against Rs. 1,410. New crop Californian good middling 1-5/32" recently came in for moderate turnover around Rs. 1,355 per candy for October-November shipment.

After exhibiting a firm trend early in the week, the Karachi cotton futures market developed a distinctly easy tendency on the 7th inst. which persisted till the close yesterday. The initial firmness was aided by good Chinese demand for Pakistan cotton. Shippers, therefore, lent support and cotton prices forged ahead. The upward trend was, however, checked on Thursday when, following higher official estimate of 1955-56 crop, selling pressure ensued and prices drifted lower. N.T.R.G. July delivery hardened from Rs. 83-15 to Rs. 85-11, but receded to Rs. 82-8. January delivery, after improving by Rs. 2-1 to Rs. 79-5, fell to Rs. 77 yesterday. In contrast to the forward section, the spot market ruled quite strong and prices tended to look up. The latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton are: Sind *Deshi* 100; Punjab *Deshi* 94; 4F Roller 85-2; S.G. 87-10; Punjab Roller 88-10, S.G. 91-10; 289F N.T. Roller 86-2; S.G. 91-2; 289F Punjab Roller 93-2; S.G. 99-10.

The fourth official estimate of area under cotton in Pakistan for the year 1955-56 shows an increase of 12.7 per cent. in respect of American variety and an increase of 4.1 per cent. in respect of *Deshi* variety over corresponding estimates for last year. The estimate puts the area under cotton crop for the year at 3,537,000 acres (American and *Deshi* varieties: 2,956,000 acres and 5,81,000 acres, respectively), as against 3,181,000 acres (American and *Deshi* varieties: 2,623,000 acres and 5,58,000 acres, respectively), as reported in the corresponding estimate for last year.

Last week's easiness of the Alexandria cotton futures market gathered considerable momentum during the week under review and there was a further sharp fall in prices. Despite tight statistical situation and firmness in spot premiums, the market experienced selling pressure, induced by fears of official action to stop speculative increases, should prices continue to spiral unchecked. Large profit-taking sales were also in evidence. The fall in futures did not, however, lead to any revival of interest among foreign spinners. The following are the latest available quotations—in tallaries per lb.—from the Alexandria cotton futures market,

as compared with those a week and a fortnight before:

		12-6-56	5-6-56	29-5-56
Karnak:				
July ...	...	108.60	120.75	133.00
November	...	105.10	113.75	126.80
January	...	101.30	109.30	119.25*
Ashmouni:				
June ...	...	80.50	87.25	96.30
October	...	76.35	79.65	89.05

*On 30-5-56.

Barring nearby contracts which met with support from Commission houses and traders, the Liverpool cotton futures market depicted an easy note. Operators showed limited interest in fresh business, as they preferred to await details of U.S. surplus sale of cotton. Egyptian contracts were subjected to hedge selling, following weak advices from Alexandria. The Sudan contract was depressed by attempted hedge selling and absence of buying interest. The following are the latest available quotations—in pence per lb.— from the Liverpool cotton futures market:

Old contract: July-August 26.25; *New contract*: July-August 28.50; October-November 25.30; December-January 24.60; March-April 24.10; May-June 23.92; *Egyptian Karnak cotton*: July-August, November-December and January-February 57.80; *Sudan contract*: July-August 47.45; September-October 46.05; November-December 46.00.

Thanks to uncertainties regarding the operation of the new cotton export programme, the New York cotton futures market was in a state of suspense this week. The Commodity Credit Corporation was reported to have suspended export sales till the implications of the new farm legislation were fully understood. Business was, therefore, confined to routine transactions, with operators generally disinclined to enter into fresh commitments. The C.C.C. preponed the date for the acceptance of bids from the 19th to 12th inst. This decision, it is said, is a sequel to the representation made by the cotton industry and trade. Protesting against the postponement of C.C.C. export sales, the cotton interests said that such postponement would seriously affect shippers who had committed themselves heavily to August shipments, steamship companies which had arranged the routing of their vessels to undertake this business, and foreign spinners who were awaiting August shipment cotton.

Following the passage of the U.S. Farm Bill, the U.S. Department of Agriculture has resumed sales of surplus cotton with effect from the 12th inst. The Department has assured traders that prices would be consistent with recent Congressional directive. It may be recalled that the Congress gave out that sales of surplus Upland cotton should be 'at or lower' that of 25.50 cents per pound. It is also stated that, in accordance with the provisions of the Agricultural Act of 1956, the C.C.C. will make its Upland cotton available without quantity limitations for the time being. The Department has also laid down that the bids would be accepted every two weeks after the 12th inst.

The following are the latest available quotations, as compared with those a week and a fortnight before:

YARNS DEPRESSED

(From Our Own Correspondent)

BOMBAY, 13*th June*

The yarn market continued to rule depressed this week also. Speculators and weak holders were busy clearing their stocks, a natural phenomenon on the eve of the monsoon. Consequently, prices moved downwards. The decline was shared by all kinds of yarns, with the exception of fine count cotton yarns which evoked good demand, thanks to shortage of supplies.

Staple fibre yarns were subjected to pressing sales for forward delivery by local as well as upcountry mills. A leading group of mills was reported to have sold a large quantity of yarn As. 2-As. 4 per lb. lower than the rates at which the previous sale was made. June delivery contract for 40 x 2 staple fibre yarn was hammered down by Rs. 17 to Rs. 657. July contract was done at Rs. 651. In the spot section, foreign yarns (80 x 2) suffered a sharp break. Suicos dropped As. 3 to Rs. 7-8. Paramounts receded by As. 2 to Rs. 6-6. K'Suns and H'Races slipped by a like amount to Rs. 6-14 and Rs. 6-8, respectively. S'Sellos lost an anna to Rs. 6-8. Among indigenous yarns (40 x 2), New Greats and Citys shed an anna each, the former to Rs. 3-7 and the latter to Rs. 3-7-9. Kohinoors declined by nine pies to Rs. 3-8. Centurys eased by a similar sum to Rs. 3-7-3.

Rayon yarns were also subjected to heavy selling, induced by considerable slackness in demand in the wake of continued large arrivals from abroad. Huge stocks were said to have been accumulated with dealers. To quote one report: "Important consumers, including silk weaving mills, have been buying very little and some of them have already large stocks with them which they are eager to dispose off but without finding buyers. Even the well-known brands are difficult to find buyers at any reasonable prices, not to talk of unknown brands which are not saleable at all." Snia rayon yarn (120 dull cones) for June delivery fell by Rs. 5 to Rs. 797. August delivery drifted lower from Rs. 796 to Rs. 792. Shot 120 Japan declined by 15 pies to Rs. 3-11. 150 Japan lost half an anna to Rs. 4-3-6. 120 Italy was quiet at Rs. 3-12-6 and 150 Italy at Rs. 3-14. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade eased by an anna to Rs. 3-10-3. 150 Bt. cones 1st grade shed nine pies to Rs. 3-7-3.

The cotton yarn section ruled generally quiet, despite weak advices from the cotton market where there was a sizable fall in prices. Ten counts Moderns were unchanged at Rs. 14-4, as also Podars at Rs. 13-14. Twenty counts Hinds shed an anna to Rs. 18-2. Moderns were neglected at Rs. 18-4. Among 30s, Mahendras receded by As. 8 to Rs. 72-8. Moderns and Finlays were unaltered at Rs. 70 and Rs. 78, respectively. Cotton yarns of forty and sixty counts, however, elicited enlarged buying enquiries and tended to move up. Among 40s, Minaxis improved by As. 6 to Rs. 28-6. Moderns gathered As. 2 to Rs. 28. Among 60s, Raghuvamshis put on As. 8 to Rs. 58-8. Moderns gained As. 6 to Rs. 62. Finlays were better by As. 4 at Rs. 62-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	13-6-1956	6-6-1956	30-5-1956
Art Silk yarn (per case of 200 lbs.)–	Rs. a.	Rs. a.	Rs. a.

OILSEEDS STEADY

(From Our Own Correspondent)

BOMBAY, 13*th June*

The oilseeds market witnessed a two-sided movement during the week under review. In the first three sessions of the week, the market put on a somewhat cheerful note. Operators showed interest to enter into commitments, following the appearance of a few shippers to cover their sales overseas. Reports from the U.S., too, were encouraging. There was, besides, brisk offtake of groundnut by crushers and traders from Gujerat and Saurashtra. Prices of both oilseeds and oils, therefore, recorded sizable gains.

The improvement proved, however, a short-lived affair in the remaining sessions. At higher levels, the market showed lack of drive and energy. There was no follow-up support, while a few longs showed eagerness to take profits on reports of good monsoons and weakness of other produce market. Besides, the commencement of the new December-January delivery contract at a discount of Rs. 5 over the August-September position adversely affected the sentiment of the market. In the result, prices reacted to stay more or less at last week's levels. The undertone was steady at close.

In the castorseeds section, September contract was subject to considerable variations. On favourable U.S. advices, September delivery improved from Rs. 142 to Rs. 145-14 but subsequently staged a retreat to close at Rs. 139-8 today. F.A.Q. was As. 2 better at Rs. 27-4, while ready Madras revealed no change at Rs. 27-4. Kanpur quality was, however, As. 4 better at Rs. 26-4. Castor oil B.S.S. quality declined from Rs. 16-6 to Rs. 16-4. But Commercials were an anna higher at Rs. 15-4.

On sustained support, groundnut bold improved from Rs. 33 to Rs. 34-8 but reacted to Rs. 33-4 today. June-July delivery, however, put on As. 10 to Rs. 33-6. August-September, however, lost As. 7 to Rs. 33. Khandesh quality rose from Rs. 34 to Rs. 35, but relapsed again to Rs. 34. Groundnut oil *ex*-mill advanced from Rs. 17-14 to Rs. 18-6. Railway receipts too were better by As. 6 to Rs. 18-4.

In the linseed section, Bold variety, lost As. 4 to Rs. 30-8. As similar loss was noticed in June-July delivery at Rs. 30-8. Indore had some business done at Rs. 30-14, as against Rs. 29-12. Satna, however, was unchanged at Rs. 28-12. Linseed oil railway receipts was done at Rs. 16-14, as against Rs. 17-6 a week ago.

Among others, *kardi* seeds improved by As. 8 to Rs. 18-10 and *niger* seeds by a rupee to Rs. 28.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 13*th June*

Distinctly firm conditions prevailed in the sugar market during the week under review. Thanks to the meagre release issued by the Union Food Ministry to the Bombay-Deccan and South Indian mills, the ex-mill quotations in this region and even in the U.P., registered an improvement. This factor, coupled with reduced arrivals of indigenous sugar into the market—being 4,800 bags, as against 7,500 bags in the previous week—induced good buying support and prices of sugar registered a handsome improvement.

In the ready section, large grain indigenous sugar advanced from Rs. 94-Rs. 99 to Rs. 95-Rs. 102 per bag. Medium grain spurted by a rupee to Rs. 91-Rs. 94. British refined sugar rallied Re. 1-12 to Rs. 88-8 per 2 cwts.

Shravan delivery contract for 'C' grade sugar hardened from Rs. 90½ to Rs. 91-12 before being quoted today at Rs. 91-10.

The quantity of sugar released for sale in the free market is, as already stated, meagre. It will be recalled that, as the release of sugar issued last month was very small, the markets in the Deccan and South India had been starved of sufficient supplies. It was anticipated that the release in the current month would be satisfactory. This anticipation was, however, believed. In the face of heavy pre-monsoon demand, sugar prices registered a spectacular rise. This rise is termed "scandalous," especially in view of the fact that sugar output in the current season is expected to touch an all-time record of 1.85 million tons.

Meanwhile, there are rumours of large-scale smuggling of indigenous sugar into Pakistan where there is reported to be a virtual sugar famine. It is said, in this connection, that all the areas in South India, including Mysore, Madras, Cochin and Calicut, are aggressive buyers of sugar in the Deccan. The fact that these centres are such keen buyers, dspite the abnormally high freight charges from the North and Deccan areas to the South, shows that there has been a distinct rise in consumption.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

NARROW MOVEMENTS IN PEPPER

(Messrs. Parekh & Co.)

BOMBAY, 13*th June*

During the week under review Malabar black pepper moved narrowly, with undertone uncertain in view of the absence of new incentive. New crop a consequence, arrivals at Singapore are increasing from week to week. Sarawak growers are weak holders. They want to sell at the best market price. This is making the position of Singapore market rather precarious. Discouraging advices from Singapore and Sarawak, in their turn, are causing weakness in India as well as in New York. Dealers in the U.S.A. and Europe are marking time for covering their fall requirements. In the declining market, they wait for a still lower bottom and wish that someone else should make a start. This has caused shortage of spot stock in almost all the consuming countries. As such, a slight appearance of grinders' aggressive demand will be enough to make the market active. New York market tried to lift its head twice during the last fortnight. But it proved short-lived for want of holding capacity of Sarawak. The present stalemate in the conditions of the world's pepper markets is not likely to improve, unless seasonal pressure in Sarawak is relieved by a fairly good demand from Europe and America. Since the last two seasons, Sarawak has proved itself a controlling factor in the world market.

Alleppey after rising to Rs. 750, went down to Rs. 731-8, while garbled at Cochin from Rs. 128-4 to Rs. 125. For want of any new development most of the exporters are sidelining. They refuse to offer below parity to meet foreign buyers, because they are not certain to get pepper in quantity from the growers, if once the market begins to move up. The market in India seems to have stabilised at round about the present price, but unless Singapore market steadies up, there remains a small chance of good buying by the U.S.A. Russia and China are reported to be at present out of the picture, but growers, in general, are banking upon the reappearance of Russia as a potential buyer if not now, after some time.

Early June shipments were purchased from changed hands locally from $0.28¼ to $0.28¾. July-Aug-Sept. from $0.28¼ to $0.28¾.

In the delivery section the market is in the doldrums with prices moving narrowly with tone downward.

Following are today's nominal quotations: Ready delivery Rs. 100 (as against Rs. 102 a week ago) per Bengal maund. June Rs. 700-705 (Rs. 695-705), July Rs. 705-15 (Rs. 695-705) per candy of 5¼ cwts.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, 12*th June*

Prices of both jute goods and raw jute were maintained during the week under review. The announcement during mid-week that stocks of finished goods with mills at the end of May rose by 11,200 tons to 119,100 tons did not cause any setback to prices, although such a large rise was read with concern. For, a higher increase had been anticipated. The major rise was in sacking goods amounting to 7,800 tons. Hessians advanced to 40,600 from 35,800 tons, while miscellaneous constructions declined to 7,400 tons from 8,700 tons. In normal circumstances, such a huge increase of 11,200 tons would have forced down quotations, but the New Delhi report which believed that Government which was averse to mills curtailing production would take active steps to reduce stocks of mills to a reasonable level caused cheer. Increased imports of rice from Burma, stepping up production of indigenous cement, and more imports of cement would all require more gunny bags. Also with the increased tempo of industrial activity, there would be more movement of industrial production within the country. All these would, in course of time, balance mills' production with demand. The idea of fixing minimum export prices is still being considered but members of the Indian Jute Mills Association are believed to hold different opinions on this matter. European mills are generally opposed to such a prospect but most Indian mills favour a measure of this kind.

What New Delhi will finally decide on the proposal is difficult to say. For, such a measure as fixation of minimum prices can be formulated only after full consideration of all aspects. Prior agreement of the mills would strengthen authority. However, mills are reluctant to give their support, as they fear if prices are fixed higher than those prevailing now, American buyers may turn to using more substitutes at the cost of the Indian industry. The situation is certainly confusing, but there is wisdom in the point of view of mills, inasmuch as the continued reports of this proposal have failed to frighten buyers. All that the rumours have done is to encourage bazar dealers to absorb as much offers as possible, and, indeed, one operator has bought all that has been offered to him. And that explains why during the week under review prices were firm.

Early in the week, ready B. twills were fully steady at Rs. 106-14 and hessians 40″ 10 oz. at Rs. 38-4 on sustained speculative support.

Profit-taking soon followed, and, in the absence of genuine business for substantial quantities, prices sagged. Thus B. twills declined to Rs. 106-2 and 40″ 10 oz. hessians to Rs. 38-1 on Wednesday. At these levels mills showed keen interest in selling forward, and in fact a fair amount of business was done both for forward and near positions. At this stage, shipping figures for the month of May were available, and these showed that shipments of both hessians and sackings were very near the April record. Details of stock soon followed and since the increase was below earlier expectations prices recovered fractionally on Thursday. B. twills were quoted at Rs. 106-8 and 40″ 10 oz. hessians at Rs. 38-2. Genuine buyers, however, slowed down activity, since the huge increase in stocks was a factor in their favour. So by the week-end, ready B. twills lost to Rs. 105-14 and 40″ 10 oz. hessians to Rs. 38-0. However, yesterday there was lively interest shown by bears, and covering demand pushed up ready B. twills to Rs. 106-2 and hessians 40″ 10 oz. to Rs. 38-5. The 8 oz. hessians were priced at Rs. 31-10, as against Rs. 32-4 a week ago.

Raw jute was fully steady, and rates were maintained. Mills bought small quantities of the old crop. They also evinced keen interest in new crop and entered into some deals on the basis of Rs. 25-8 per maund for August-September delivery. However, sellers of the new crop were reserved and fearing losses, they did not enter into any large commitment. As such mills' demand could not be fully satisfied. It is now learned that damage to crop, following the recent heavy rains, was insignificant. The condition of the plants is reported to be excellent, and a bumper crop is still anticipated. QUALITY TEAS FAVOURED

(From Our Own Correspondent)

CALCUTTA, 12*th June*

The new season's first export sale was held yesterday when a quantity of 24,759 chests of new season's teas and 123 of old season's teas was offered. Contrary to earlier expectations, withdrawals of medium and poor grades were heavy, but quality teas were absorbed in no time. There was good demand for Darjeelings with flavour, and for stylish whole leaf grades. Dooars, with useful first flush quality, realised prices above brokers' valuations. However, subsequent offerings were of poor quality, and among these, Cachars and Assams with plain liquors withdrawals were heavy.

Prospects for tea gardens during the season 1956-57 are considered good as world demand is running at a higher level. During the season 1955-56, most producing countries including India reported increased production with the result world output reached a record level, which, however, was absorbed without causing serious setback in prices. For world consumption also increased. India's own consumption increased by as much as 30 million lbs., and this is attributed to the rising standard of living. For the same reason, it is expected that internal sales during this year would further improve. The fact that stocks at the end of last month in the U.K. were lower by 36.5 million lbs. as compared with those at the close of the corresponding month of last year shows that British buyers should get busy. During this season substantial support to the Indian market is expected from Russia which is likely to lift as much as 80 million lbs. All these factors indicate that demand during the export and internal auctions of the current season tend to go higher, and if it is remembered that last year's record world output, including that in India, was due to favourable climatic conditions, the repetition during this year of the same performance depends on certain factors. Chances are that output may decline. The combined production figures of the Indian gardens (South and North), Ceylon, and Pakistan for the first four months of this year are about 19 million lbs. lower than last year's comparative figure. The decline has been caused by bad weather. However, all these factors did not make buyers rush to the offers during yesterday's auctions; the reason attributed to this is that it will not be until a few auctions conditions can get settled. Buyers would have to study the trends carefully in the meantime.

Offerings during last week's internal sale comprised 21,150 packages. Clean commons went down by As. 3 and good liquoring grainy Assams by an anna to As. 2. However, good support at higher rates was forthcoming to black leafy teas suitable for export to the Middle East. The commonest residue teas found buyers at firm rates. Among C.T.C. Assams, the best lots were steady, while the remainder declined. The quotations were: best Assam C.T.C. Rs. 2-8 to Rs. 2-10 (nominal), medium Assam grainy dust Re. 1-6, and medium Dooars Re. 1-4.

Offerings of leaf grades amounted to 167 packages. Prices were lower, despite keen demand and the meagre quantity on offer.

GOOD DEMAND FOR HIDES

(From Our Own Correspondent)

MADRAS, 12*th June*

The volume of trading in the hides and skins market was better than last week. Clearance of cow hides was good, though at lower prices. Inquiries from the U.K. were patchy, as buying was selective.

Demand for buff calf and cow calf (market qualities) was poor, though a few odd parcels of top marks were sold at full prices. There was limited clearance of buff hides at unchanged prices, due to internal demand and to buying on U.S. account.

As regards tanned skins, prices ruled unchanged, and shipment business was limited, due to stiff prices quoted at origin here.

* * * *

(From Our Own Correspondent)

KANPUR, 10*th June*

During the week under review, the hides and skins market ruled fully steady. Demand for both cow and superior buff was keen. Madras dealers made heavy purchases of lighter cow and goat. The local tanners made the major purchases while the country tanners were eager purchasers of inferior cow.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 200 to Rs. 240 and 3rd grade Rs. 135 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat skins 1st grade Rs. 215 and 2nd grade Rs. 180 per 100 pieces; sheep skins 1st grade Rs. 180 and 2nd grade Rs. 130 to Rs. 140 per 100 pieces.

FOODGRAINS STEADY TO FIRM

(From Our Own Correspondent)

HAPUR, 11*th June*

Steady to firm conditions prevailed in the foodgrains market during the week. Prices of wheat were particularly firm, despite the warning administered by the Union Food and Agriculture Minister that, in order to maintain prices of foodstuffs at reasonable levels the Government would crush the anti-social tendencies like hoarding and speculation. Hoping to get better prices in the off season, the stockists were making large purchases. Arrivals were below average, indicating that the crop as a whole has been poor. Wheat average quality prices improved by As. 10 to Rs. 14 during the week and, with arrivals at an average of 2,000 maunds daily, stock position improved to 70 *khaties*, as against 80 *khaties* at this time last year when average quality wheat was quoted at Rs. 10 per maund. Farm quality prices, however, recorded a gain of only As. 4 to Rs. 15, due to want of outside buying enquiry at higher rates.

The Government of Uttar Pradesh is anxious to check the rising trend of prices and is reported to have asked the Centre to allow it to ban export of foodgrains outside the State. The Centre has also diverted about 40,000 tons of imported wheat to the U.P. for sale, in order to check the rising trend.

Rice and other cereals also depicted a firm trend. Despite sale of Burma rice at Bombay, *rangooni* rice prices rose by As. 8, due to good demand from the South. Barley and *bejhar* prices also advanced fractionally, in sympathy with wheat and following good seasonal demand. Gram prices improved on good enquiry from Madras side. The latest available prices are: Rice: *rangooni* Rs. 17-8, *basmati* Rs. 25 to Rs. 33; coarse Rs. 15-8; *barley* Rs. 10-4; *bejhar* Rs. 10, gram: local Rs. 10-14 and punjabi Rs. 11-4 per maund.

Pulses ruled irregular. While peas was unchanged at Rs. 10-4 per maund for *dara* quality and at Rs. 11-12 for white quality, *arhar* rose by As. 4 to Rs. 11-8 per maund. Peas arrivals were small, being 1,000 maunds daily, and stocks improved to 52 *khaties*, while *arhar* stock was higher at 94 *khaties*. Other pulses recorded minor gains to be quoted at: *Urd* Rs. 17 to Rs. 18-8, *moong* Rs. 14-12 and *masoor* Rs. 13 per maund.

Pulses futures moved both ways. Jeth delivery ruled quietly steady and *bhadon* delivery ruled quiet. The latest quotations as on Monday were: Peas *jeth* Rs. 10-3-3, *bhadon* Rs. 10-10, peas white *jeth* Rs. 10-12-6, *bhadon* Rs. 11-4-9, *arhar jeth* Rs. 11-4-9 and *bhadon* Rs. 11-13.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, 11*th June*

Better pre-monsoon demand from all sides—mainly from markets in the South—coupled with improved loading facilities accounted for an advance in the mill delivery prices of sugar during the week. The total production of indigenous sugar up to 22nd May was above 1.75 million tons. The Government has released about 145,000 tons of sugar for sale in the free market, thus bringing the total releases made out of the 1955-56 production to 811,000 tons. In addition, 177,000 tons of sugar have been made available for consumption from imported stocks.

The latest mill delivery prices of sugar at Hapur are: Jaswant Rs. 28-5, Simbhauli Rs. 28-4, Mowana Rs. 28-3, Daurala Rs. 29-4, Amroha Rs. 27-12, Bijnore Rs. 27-12, Mansoorpur Rs. 28-4 to Rs. 29-8, Rampur Rs. 30-8, retail Rs. 30 and *khandsari* Rs. 23 to Rs. 27 per maund.

Owing to easy loading facilities, there was heavy offtake of *gur* to Gujerat during the week with the result that prices went up by As. 8 to Rs. 10-12 per maund. Daily arrivals were small, the average being 150 maunds out of producers' stocks and local stocks amounted to 80,000 maunds. The standing cane crop is reported to have suffered by pest, due to continued easterly winds, and is now in need of rains.

Gur futures moved both ways. Opening at Rs. 9-1, *fagun* delivery touched the highest at Rs. 9-4-6 and the lowest at Rs. 8-15 and were quoted today at near the best level of the week at Rs. 9-4. The firm trend was due to bull support, influenced by better ready prices.

INDUSTRIAL FINANCE CORPORATION OF INDIA

KEELING ROAD, NEW DELHI

NOTIFICATION

IT IS HEREBY NOTIFIED THAT THE SHARE Register of the Corporation will be closed and the registration of transfers suspended from the 16th June 1956 to the 30th June 1956 (both days inclusive).

By Order of the Board,
H. V. VENKATASUBBIAH,
General Manager.

Dated the 5th June 1956.

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT IN CONnection with the financing of the cost of the further expansion which the Company is required to undertake in contribution towards the increase of steel production under the Second Five-Year Plan, application was made to Government for consent to the issue of further Ordinary shares at par on the basis of one new right share for each Ordinary share held. Advice has now been received that Government have sanctioned the issue of new Ordinary share capital at a price of Rs. 13-8 per share.

In according their sanction Government have stipulated that no fresh issue of capital shall be made until after the 1st November 1956.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations. x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

FREEZE ON TEXTILE FRONT THAWS

WHAT economic logic and practical wisdom failed to achieve in this country, normal market forces have. The revised cotton textile policy of the Government is proof of this statement. It is not three years of preaching, propaganda and friendly advice from competent sources that opened the eyes of the Government to the defects in this policy but rising prices, falling exports and the possibility of a famine in cloth for domestic consumption in the near future. Even now the Government does not seem to have fully realised the extent to which its policy has been faulty, for it has rectified the defects only in part. Apparently, it is yielding to the inexorable economic laws only reluctantly, little realising that these laws are no respector of persons or ideology. Even the all-powerful monolithic States, such as Russia and China, could not hold back the operation of these laws for long. They have had to yield to them and step up their investments for production of consumer goods on modern lines. It is unfortunate that India's ministers should take such a long time to realise this truth.

Wise planning would have avoided the defects in the textile policy. But ideological conflicts and domination of outmoded economic theories have reduced the clarity of our planners' vision. It was evident long ago that a ceiling of 5,000 million yards for the mill industry was untenable in the context of the plan for raising the living standards of the masses, and that the handlooms would not be able to fill the gap either in time or by producing cloth at a price that will suit the purse of the common man, without, at the same time, denying the cotton grower his due. Yet, the Government prevaricated and tried to evade the issue in the usual bureaucratic fashion by referring it to committee after committee. First, it was the Kanungo Committee; then the Karve Committee and thereafter the Khera Committee. The alliteration here may be purely accidental, but it is fascinating, though not the recommendations of these committees. There was some sense in the suggestions of the first committee at least, but hardly any in those of the subsequent two committees. In fact, it has been a case of from good to bad and from bad to worse. It is to be hoped that the cycle will end here, if not reverse itself. If the saying that things must get worse before they can improve is not to be disproved, the next committee that may be appointed to look into the clothing needs of the people and the export requirements of the country must do better than recommend schemes of dubious value.

The time and resources absorbed by the Karve and Khera Committees are a waste which a poor country like India can ill-afford. This is evident from the lines on which the textile policy has been modified now. The work of these committees has contributed precious little to this change. On the contrary, the spell cast by these committees on an influential section of the Union Cabinet and the Congress Party still lingers, causing considerable damage to the country's economic progress. It may be argued that it is not the committees that should be blamed but those who appointed them. While there is some force in this contention, the committees, too, are not completely free from blame. They are at fault to the extent they put forward impracticable proposals, in anticipation of the wishes of their masters. One wonders, for instance, whether such a distinguished I.C.S. officer as Mr. Khera would have supported proposals of the nature contained in the report if the committee bearing his name when he was under the British regime or had he been serving the Commerce and Industry Ministry. There is little hope of salvation for the country once the top-ranking officials of the Secretariat fail to take an independent stand and act according to the courage of their conviction at least when they are asked to tender advice, and offer only such advice as would, in their opinion, please the Ministers.

The revised textile policy has been dictated by force of circumstances rather than by any forethought on the part of the Government, as it should be in a planned economy. This is borne out by all the three features thereof. Take the decision to permit installation of 14,600 automatic looms in the mills. What brought the Government to it is not the rising domestic demand, but falling exports of cloth at a time when India needs more foreign exchange to finance the second Plan. From experience, the Commerce and Industry Ministry has learned that India cannot hope to hold a prominent place in the world trade in textiles as an exporter, unless its mills are modernised and brought on a par with its foreign confreres in the matter of equipment. It has realised that automatic looms are particularly suited to the production of coarse and medium cloth, the main export varieties of India, and that cloth produced on such looms is more even and has fewer defects as compared with that manufactured on ordinary powerlooms. Since these automatic looms are to be utilised only for producing cloth for export, a penal excise duty will, we are told, be levied on such cloth if it is diverted to the domestic market. There can be no objection to this proposal in principle, especially in the light of the necessity for earning foreign exchange. Further, it will be no exaggeration to say that, if today's conditions in the cloth market were to continue when the automatic looms go into production, it would pay many a manufacturer to bear the penal excise duty and sell the cloth in the internal market rather than make special efforts to export it. Such is the disparity in the profit-margin on sales for export as compared with that on sales for home consumption.

It is, however, of little value to comment on this aspect now. For it will take some two to three years for all the automatic looms to be installed and go into production. Who could say at this stage as to what would be the conditions in export markets then? If the export markets slump and Indian cloth becomes unsaleable, despite the best will in the world, does Mr. Krishnamachari think that he can levy a penal excise duty on the undisposable cloth meant for export? Conversely, if the demand from both domestic and export markets is so heavy as to create an acute scarcity of cloth within the country, does he think that the Government will not find it necessary to place any restriction on exports, so that supplies for domestic consumption can be increased? In such an event, can a penal excise duty on automatic loom cloth sold for domestic consumption be levied? Practical-minded millowners must have realised these points and hence their silence on this particular aspect of the Government's policy.

As an automatic loom is capable of producing 25,000 yards per annum, 14,600 of such looms will give an output of 365 million yards. If all this quantity is to be exported over and above the current level of exports, it will mean a total export of approximately 1,200 million yards. It remains to be seen whether Indian mills, with only about 7 per cent. of its loomage automatic, will be able to compete effectively with mills in foreign countries having a considerably larger percentage of automatic looms. Up to now, India has had an advantage in the shape of low-priced cotton but this advantage is rapidly diminishing and may disappear altogether in the next two or three years. The position may actually worsen, if internal production costs rise as a result of inflationary pressures that may be generated by large-scale developmental expenditure seriously contemplated in the second Plan. In the sphere of international trade, the spirit of bilateralism is gaining momentum, supplemented by triangular deals, to the detriment of multilateralism, the goal of the Bretton Woods and Havana charters. The only silver lining to these pessimistic clouds is the possibility of a steady increase in the living standards of the people of Asia and Africa and the resultant broadening of the market for cloth. In any case, it is obvious that, even if exports are to be held at 1,000 million yards, a much larger number of automatic looms than the 14,600 now sanctioned will be required. Perhaps, the entire quantity of 1,000 million yards may have to be produced on automatic looms, in which case Indian mills will need as many as 40,000 of them. It is to be hoped that the Government will review the position from time to time and follow a more liberal policy in this respect.

The expansion of 350 million yards in the output of mill-made cloth now permitted is only a little more than 20 per cent. of 1,700 million yards of additional production necessary to give a *per capita* consumption of 18.5 yards in the second Plan period, after allowing 1,000 million yards for export. The estimated rise in per *capita* consumption is, in the opinion of experts, on the low side and compares adversely with 22 yards assumed by the millowners in their calculations. One cannot, however, be dogmatic on this point, for *per capita* consumption will be governed by a number of factors, the most important of them being the price of cloth and the purchasing power of the people. Both these factors are easily influenced by the Government's fiscal and financial policies which are unpredictable. Given, however, a stable price level and an increase of 25 per cent. in the national income, 20 to 22 yards *per capita* before the end of the second Plan are not an over-optimistic estimate. In view of the large inflationary potential of the Plan, it will certainly not be wrong to aim at a target for cloth production higher than the one that has been just decided. It is true that Mr. T. T. Krishnamachari has assured the public that Government would not be unprepared to raise the target on the basis of a per capita consumption of 20 yards if between now and the next 12 months consumption were to rise materially. Welcome as this assurance is, it is not wholly satisfactory for two reasons. First, production of cloth cannot be stepped up at a moment's notice, especially when the industry is already working to cap

city. It will require considerable advance preparation. The Minister himself has admitted that the results of the present revision of the policy will be reflected in production only after about two years. Secondly, there is no certainty that the mill industry will be allowed to provide the entire increase in production that will be needed for ensuring a *per capita* consumption of 20 yards. Failure to do so will, of course, mean great hardship to consumers.

Even as it is, there is sufficient ground for doubting the availability of 18.5 yards of cloth *per capita* at reasonable prices. For the allocation of additional production of cloth among the four sectors of the industry has not been done on realistic lines. Thus, out of 1,700 million yards of additional production, the most economic sector, namely, the mills, has received only 350 million yards. Since the whole of this increase is meant for export, in addition to the quantity now being exported, the consumer can hope to get little benefit from the addition to mill production. If some mills are not able to export the cloth produced out of the automatic looms and have to divert it to domestic consumption, they will be subjected to a penal excise duty on such cloth, thereby denying the consumer the full advantage of automatic looms even when export trade becomes slack. Accordingly, almost all further increase in the *per capita* consumption of cloth will have to be met from the output of high cost handlooms, Ambar charka and powerlooms, which are, of course, a little more economical than the first two. We advisedly say almost, because the Government has not yet made up its mind as to which sector should be given the unallocated portion of 150 million yards of the increase in production.

While powerlooms in the handloom sector may be in a position to fulfil the target of 200 million yards, it is a moot question whether the handlooms can step up their production by 1,000 million yards in the next five years. During the past four years, this sector could raise its production by no more than 300 million to 400 million yards, despite intensive efforts and the creation of a sellers' market in cloth in the past 20 months. It may be that the machinery for giving a push to handlooms is now in better shape and can be more effective in the coming years than it has been all along. But, as against this advantage, there is the handicap provided by Ambar charka. It is a part of the scheme that, out of the 1,000 million yards earmarked for the handloom sector, 30 per cent., or 300 million yards, are to be produced from yarn spun on Ambar charka, a crude machine the economic soundness of which is yet to be established beyond doubt. If this charka fails as a commercial proposition, there will be a drop of 0.75 yard in the *per capita* availability of cloth as is worked out now. If it succeeds, it can do so only at the expense of the taxpayer and to that extent his capacity to buy cloth will be affected.

The new textile policy is typical of the Congress Party's weakness, namely, reluctance to face squarely an inconvenient issue, even when the right solution to it is obvious beyond doubt. Its old textile policy has proved to be a costly failure. This policy has impaired the competitive capacity of Indian mills in the overseas markets, brought a lower return to cotton growers, made cloth dearer to consumers and led to a waste of several crores of rupees of taxpayers' money in the form of subsidy and other assistance to the handloom industry. Yet, the departure made from it now is half-hearted and not substantial. The millowners have, of course, welcomed it, because for them something is always better than nothing. The threatened freeze on spindleage has been prevented, a few automatic looms have been allowed, and the imposition of the much-feared additional excise duty has been stayed. In view of all these, the welcome accorded by them to the new policy is quite understandable. And there is one more reason for it. They know very well that Mr. Krishnamachari had to wage a tough battle even for these small concessions with the *Sarvodayists* who are still wielding a strong influence over the Government and the party-in-power. It would have certainly disheartened him had they not extended a warm welcome to this policy, unsatisfactory though it may be in several respects. It is also a question of tactics, if not politics. From experience, they have found that the best way to get things done by the Government is to flatter it and not to grouse and ask for more, like Oliver Twist. Indeed, in his anxiety to please the Government, one of the leading millowners, considered to be an expert on cotton textiles, has gone out of his way to declare boldly that "there is no enlightened industrialist in the country who is not in favour of Ambar charka." This, of course, is not true, for several industrialists have opposed it, including the Millowners' Associations of Bombay and Ahmedabad, and none can say that all of them are unenlightened persons. One should not, therefore, let oneself be misled by the chorus of approval that has emanated from the representatives of millowners.

More than the millowners, the protagonists of Ambar charka have every reason to feel satisfied with the new policy. They have succeeded in getting a firm foothold for their favourite machine as the fourth sector of the cotton mill industry. True, they could not get a ceiling placed on the spindleage of mills. But they have won substantial backing for Ambar charka in other ways, such as, large sums of subsidy and elaborate marketing arrangements. This is just a beginning and it will soon be the story of the camel and Arab tent. It will be pertinent to recall here how Mr. T. T. Krishnamachari had to yield more and more ground to the handloom industry, after his initial unsuccessful fight with Mr. C. Rajagopalachari, who, as the Chief Minister of Madras State, demanded and succeeded in partitioning the cloth market into handloom and mill sectors. Now that a leading millowner himself has capitulated in favour of Ambar charka, our misgivings are by no means unwarranted. All this cannot but be a disturbing development to consumers of cloth and growers of cotton.

FEDERATION ON RESERVE BANK AMENDMENT BILL—II

IN our last issue, we examined some of the views of the Federation of Indian Chambers of Commerce and Industry on the amendments to the Reserve Bank of India Act now awaiting the approval of Parliament. For considerations of space, we could not complete the task then. What was left over related to the system of variable reserve ratios. We propose to deal with this subject now.

While the Federation is not opposed to the introduction of this system with a view to enabling the central banking authority to have control over commercial bank credit, it has made three points. First, the maximum ratios proposed are unduly high; secondly, the interest payable by the Reserve Bank on excess balances required to be maintained with it should be above the prevailing Bank rate; and, thirdly, the power sought to be given to the Reserve Bank to vary the reserve ratio from bank to bank is likely to result in discriminatory treatment. It is not so much these objections as the grounds on which they are based that are unrealistic and unconvincing. The reserve ratios are sought to be raised from a minimum of 5 per cent. of demand liabilities and 2 per cent. of time liabilities to a maximum of 20 per cent. and 8 per cent. respectively. The Federation's contention is that, if and when such high ratios are enforced, the earning capacity of Scheduled banks would be adversely affected and that, as even in the U.S., where the system of variable reserve ratios prevails, the maximum increase which can be made is limited to only twice the legal minima, the power of increasing reserve requirements should be limited to 10 per cent. and 4 per cent. of demand and time liabilities, respectively.

There is not much force in these arguments. The Reserve Bank will use these powers only sparingly and when required by the exigencies of the situation. As national interests will be the chief criterion for action, the Bank can be depended upon not to overdo it and bring about unhealthy consequences to the economy of the country as a whole. While power is being taken to fix the reserve requirements up to 20 per cent. of demand liabilities and 8 per cent. of time liabilities, it does not necessarily mean that these maximum ratios will be prescribed every now and then. The example of the U.S. does not hold good fully, because there the statutory minima themselves are higher than in India, as will be seen from the following figures:

	Percentage of deposits	
	Minimum	Maximum
Demand deposits:		
Central reserve city banks ...	13	26
Reserve city banks	10	20
Country banks	7	14
Time deposits:		
Central reserve and reserve city banks	3	6
Country banks	3	6

In some cases, of course, the maxima in the U.S. are lower than those proposed in the amending Bill. But, instead of classifying the banks into three and two categories for demand and time deposits as in the U.S., the Bill seeks to vest power in the Reserve Bank of India to use its discretion in order to avoid hardship to certain classes of banks which would arise if uniform ratios are fixed for all banks. After all, in India, there are banks of varying sizes and strength. They have been classified into four categories for purposes of awards by industrial courts. A similar classification will not be quite suitable for purposes of determining reserve ratios, for the growth of deposits even among banks of a particular category may not be uniform. Realising this difficulty apparently, the framers of the Bill have given discretionary powers to the Reserve Bank to fix differential ratios. The Federation's fear that this provision will lead to discrimination against banks showing initiative and enterprise in attracting deposits is far-fetched or born of either misunderstanding of the provision or distrust of the central banking authority. The real merit of this amendment is that it will ensure that the anomaly created by the application of reserve requirements on banks having unequal rates of deposit growth is set right by prescribing that a specific percentage of new deposits is impounded in respect of all banks, thereby making the impact even for all. Thus, the object of this provision is not to discriminate between banks and banks but to enable the Reserve Bank to be just to all banks when the economic situation demands the imposition of reserve ratios.

On the subject of interest on excess balances maintained by banks with the Reserve Bank, the Federation's demand is unreasonable and the argument put forward in support of it is absurd. In order to avoid any misunderstanding, we quote below the relevant portion from its memorandum:

> "While it is gratifying to note that the necessity of paying interest on immobilised funds is recognised, the clause, as it at present stands, does not make it clear whether interest will in fact be paid or not and, if so, at what rate. The Committee have to stress that the Act itself should specifically mention that interest at a rate above the prevailing Bank rate will be paid to all the Scheduled banks on such excess balances as may be required to be kept with the Reserve Bank. Clause 10(b) of the Bill prescribes specific penal interest rates on the amounts by which the balances fall short of the prescribed minimum to be kept by the banks with the Reserve Bank. It is hardly fair to the banks that, if they fail to maintain the required balances, they would be liable to pay interest at penal rates, but, if they comply with the Reserve Bank notification, they are not assured of reasonable earnings on the immobilised funds which could otherwise be put to a profitable use."

To mention the rates of interest used to levy a penalty on erring banks as an argument for asking remunerative rates on impounded deposits is surely not the right way of presenting a case, because it is not in good taste. As for the demand for a rate of interest higher than even the Bank rate, it is so extravagant that we wonder whether the banks themselves will support it. In advancing such a demand, the Federation seems to have ignored the social purpose of banking. In a period of excessive money supply, the growth of deposits will be easy and swift. It is the result of large-scale development expenditure undertaken by the State for the benefit of the people as a whole. When a part of these deposits is immobilised, it is done with a view to checking inflation, that is, for the benefit of the public. In such a circumstance, will it be fair on the part of banks to expect to make a profit out of such money? All that they can legitimately expect is that they are not put to any loss by having to maintain reserves in excess of the minimum levels. In other words, the rate of interest on such balances should be related to the cost of deposits. Since this may not be easy of determination, the Treasury Bill rate may be taken as a reasonable basis for this purpose.

An important point which many a critic of the variable reserve ratio system seems to have missed is that, when put into operation, the system will act as a restraining factor on the activities of not only the private sector but also of the public sector, inasmuch as it will restrict the capacity of banks to subscribe to all State obligations. It is thus a valuable instrument of protection in the hands of a central banking authority for keeping a check on the spending propensity of Governments also in times of inflation.

MARKETS NOT UPSET BY MR. DESHMUKH'S IMPENDING EXIT

DR. MATTHAI TO QUIT STATE BANK?—VAST SCOPE FOR CONSUMER GOODS INDUSTRIES

THURSDAY, 5 P.M.

MARKET GOSSIP

THE main event of the week, so far as city markets are concerned, was the resumption of futures trading in raw cotton and groundnut, with effect from the 18th inst. The break in hedge trading in cotton has been only a few months, while that in groundnut has been as long as a dozen years. It is not clear as to why the Government permitted trading in these two important commodities so early in the year when no picture of the crops concerned can be formed. It is common knowledge that the Government now wants prices of commodities to go down. Perhaps, the Government feels that, as speculators are taking a bearish view of the next season's crops, they will accelerate the downward trend in commodity values which has already started, if they are given an opportunity to do so. The behaviour of these two commodity futures since they were allowed to begin shows that initially at least the Government's expectation has been fulfilled. After opening at Rs. 136, groundnut February has quickly receded to Rs. 132. Castorseeds have slumped by Rs. 7 in two days to Rs. 125-8. In sympathy, spot positions in all oilseeds and oils have declined. The experience of the cotton market also is similar. Jarilla and Vijay contracts have receded from the opening rates of Rs. 681-4 and Rs. 830 to Rs. 642-8 and Rs. 803-8, respectively. The spot market also is quiet, with turnover remaining limited. The bearish view of commodity futures is based on expectation of good monsoon, resulting in bigger crops. The fact that so far rains have been satisfactory has strengthened this expectation. But Indian monsoons are known for their unpredictable vagary. It will, therefore, be nothing short of gambling to take a view of the markets in the hope that the monsoon will behave all right and enable India to reap a bumper harvest of agricultural crops. How does such speculation square with the Government's conception of a planned economy and socialist pattern of society?

• • • •

Neither the downward trend of commodities nor the opening of fresh avenues for speculators has had any adverse effect on the Stock Exchanges. On the contrary, a part of the ground that had been lost by the leading equities in the past week has been recovered and the undertone is fully steady. The report that the resignation of Mr. C. D. Deshmukh, Union Finance Minister, has been accepted and that Mr. Nehru will relieve him after his return from foreign tour in the third week of next month has caused neither a ripple nor a sigh in the market. Rightly or wrongly, an impression has come to prevail in the share market that his exit would augur well for the private sector and investors. This impression stems from the belief that he has been principally responsible for some of the recent acts of socialisation, such as the nationalisation of the Imperial Bank and life insurance, as well as for steepening the incidence of taxes. It is even stated that, but for Mr. Nehru, the last Central budget would have been worse than the Liaquat Ali budget of 1947-48, so severe were some of the taxes contemplated by Mr. Deshmukh. Then, of course, it is on record that he is the author of some of the scathing and provocative attacks against the private sector. Business men will not, of course, easily forget some of the exaggerated statements made by him while supporting nationalisation of life insurance, an act that brought him down in the estimation of the capital markets in Europe and America also. He has the distinction of being the first Minister of the Central Government to make the unprovoked suggestion for an enquiry into the working of the private sector. His historic statement to this effect in Bangalore strengthened the hands of left-wingers in the Congress Party, as well as in the Cabinet, in their move to restrict the scope for and freedom of the private sector. Of late, Mr. Deshmukh has become so unpopular that it will be no exaggeration to say that many a business man will heave a sigh of relief when he actually lays down the office of Finance Minister. The good work that he has done for the country has fast receded to the background.

• • • •

The resignation of Mr. S. K. Handoo, Managing Director, State Bank of India, has caused not a little stir in the City. It is being asked how the Government hopes to attract men of ability to it if it cannot even keep the able men it comes to have as a result of nationalisation. Many still wonder whether a last-minute compromise cannot be evolved in order to retain the services of a banker of Mr. Handoo's eminence. As it is, Mr. Handoo's resignation will come up for consideration by the Board of the Bank at the end of this month. It remains to be seen whether the resignation will be accepted or Mr. Handoo persuaded to stay. Meanwhile, it is reliably understood that there may be further defections from this nationalised institution. Some Directors of the Bank, including the Chairman, though friendly with the Government and anxious to place their knowledge, experience and services at its disposal, are known to be sharply critical of the Government's economic policies. If they should ever resign, as they are reported to have done, that would, of course, be still more unfortunate.

What is the cause for this provocation? Could it be that the Government did not like some of the candid criticisms of Dr. Matthai on its economic policy, the Planning Commission and the Second Plan? Rumours are that the Government has sent a communication to the Directors of the Bank which amounts to placing an indirect restriction on their freedom to criticise the Government in public. It is further understood that socialist-minded directors as Mr. A. D. Gorwala are putting forward proposals which are unbusinesslike but which receive the support of the Finance Ministry, thereby causing annoyance to other directors who are trained to think in terms of profit and business. In short, there seems to be cleavage of opinion among the directors of the Bank.

It is believed that Mr. Handoo's resignation stems from the fact that the Union Deputy Minister for Finance, Mr. B. R. Bhagat, gave an equivocal reply to a question in Parliament about the salaries of top executives of the State Bank. He is reported to have said that, as some continuity had to be maintained in a credit institution, a "concession" was made in the shape of retaining the services of the officers who had served the Bank in pre-nationalisation years. This reply, it is held, takes no account of the fact that the men agreed to serve the Bank despite a reduction in their emoluments. The continuance of their services which springs from their loyalty to the institution, it is felt, is being unjustifiably interpreted by the Government as a concession from it.

Whatever may be the outcome of this resignation, which is genuinely regretted in commercial circles, many sober men feel apprehensive over the state of affairs under which salaries of public servants are raised to the status of issues of national significance, discussed by politicians and widely commented upon by the columnists in the Press.

• • • •

The investors who risk their savings in the consumer goods industries are not likely to regret their decision. It has been evident for a long time now that, given an era of peace and reasonably adequate level of employment, India offers a vast and expanding market for all varieties of consumer goods. Indeed, this is true of all underdeveloped countries. For any increase in the level of incomes in these countries is bound to be reflected in higher demand for primary necessities of life, and, at a subsequent point of time, in a rising demand for all those modern amenities such as cycles, radios, sewing machines, electric lights, and motor cars. This is precisely what is happening in this country. Shrewd industrialists have always anticipated this trend in consumption. And events have fully justified their faith in India's almost limitless capacity for absorption of consumer goods.

It is to this trend that the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, deservedly known for his uncanny grasp of India's industrial problems, drew the pointed attention of the Central Advisory Council of Industries, at its meeting, held this week, in New Delhi. He averred that the demand for consumer goods during the first Five-year Plan had exceeded the "optimistic expectations" of the planners. And yet, this demand, large as it was, "is, perhaps, nothing as compared with what we should expect as the implementation of the second Plan gathers momentum." This is a point which the industrialists, as well as the investors, will do well to note. As population increases—"family planning" scheme will affect only a fringe of the population—and living standards rise, the demand for consumer goods is bound to go up. But here, the planners no doubt face a basic dilemma. If people are allowed to spend all increment in their income on consumer goods, there may be little left for financing further schemes of development. In a totalitarian regime, the dilemma is easily resolved through compulsion. People will simply be denied the consumer goods and compelled to save their income. Such a method may or may not have its virtues. But the fact remains, it cannot work very smoothly in an underdeveloped country and a democracy. Mr. Krishnamachari rightly said that "austerity is a virtue which only the prosperous can indulge in." He added:

> "If economic progress is to have meaning for the average Indian, he must be able to raise his standard of living and to afford some of those things which he has at last begun to clamour for. You cannot ask people who are starving to tighten their belts. In fact, they can afford no belts. Planning in a democracy has got to give the highest priority to the daily needs of the mass of people. One could, of course, for a short period of time ask people to put up with shortages or high prices as a price to be paid for future prosperity. But such a course can only be taken in a desperate situation and for a short period of time. If the occasion arises, I have no doubt that the people of India would be prepared to respond to such an appeal. I see no occasion today at least to make such an appeal to them. Instead, I would ask our industries to increase their production to meet this challenge which is also their opportunity."

Perhaps, it is the increased demand for consumer goods that explains the fact that a large proportion of the applications for licences for establishing new undertakings under the Industries (Development and Regulation) Act, came from those who intended starting units manufacturing such goods. Since July 1955, the Licensing Committee has approved 450 applications, consisting of 144 applications for the establishment of new manufacturing units and the rest for expansion of existing undertakings. Of the applications for new enterprises, approved by the Committee, 104 related to textiles, 35 to sugar, 21 to silk and art silk fibre textiles, 22 to pharmaceuticals and drugs, 33 to bicycles, 32 to glass and ceramics, 17 to vegetable oils and 9 to radio receivers. All these are consumer goods industries. Other applications included: iron and steel (53), machinery used in industry (27); machinery and equipment for generation and transmission of electric energy (24); heavy chemicals, including fertilisers (19); automobiles (32); cement (14) and ferro-manganese (2).

Since the demand for consumer goods is expected to go up even further in the next few years, the Government has done well in setting up a separate division in the Commerce and Industry Ministry for keeping the problems relating to supplies of such goods under constant scrutiny. There is also another urgent reason why these problems deserve special treatment. This arises from the fact that any increase in purchasing power, which might take place as a result of deficit financing, will impinge itself primarily on consumer goods. Unless these goods are available in reasonably large supply, it will be difficult to hold the inflation, caused by deficit financing, in check. The Government seems to be fully aware of this aspect of its responsibility. For Mr. Krishnamachari, in the course of a press conference at New Delhi, this week, said: "If inflation is to be avoided, the supply and demand position for consumer goods will have to be continually watched and targets adjusted where necessary. In fact, it has already been decided that there will be annual plans within the framework of the Five-year Plan and that the Plan targets are not to be regarded as ceilings." In other words, consumer goods are rightly being treated as the first line of defence against inflation. This is as it should be, considering that the alternative is either open inflation or suppressed inflation through the imposition of controls and rationing. Past experience has shown that nothing makes a government more unpopular than the imposition of controls. It is significant that, while the public has forgotten the men who, in difficult times, worked out the administrative regulations relating to controls, it continues to regard as national heroes men like C. R. and the late Mr. Kidwai, who courageously removed the controls.

Although consumer goods are thus the absorbers of the inflationary shocks, which are perhaps unavoidable in the context of a developing economy, it must be recognised that it is the producer goods industries that lay the foundations for enduring economic development. Indeed, without producer goods industries, the consumer goods units will also be condemned to a state of abject dependence on imports for all their vital needs of plant and equipment. In the interests of balanced progress, it is obviously necessary to develop both the sectors. A new stimulus is being given to the producer goods industries. The Heavy Industries Division of the Commerce and Industry Ministry will be in charge of these industries, while the National Industrial Development Corporation is expected to lend financial assistance to the establishment of a few heavy industrial units. This Division will be responsible for both providing the industries with the raw material they need and looking after their development. Among raw materials, steel and pig iron, as is well known, are in short supply. It would, however, appear that the situation already shows signs of improvement. Arrivals of steel in the current year are expected to be more than 1½ million tons. From next month, pig iron is expected to arrive on a substantial scale.

The Government is also exploring the possibilities of setting up plant to build up heavy machinery for the needs of the producer goods industries and is expected to take a "big step" towards this end in the next two or three months. A technical team from the U.S. is arriving shortly to advise the Government on the setting up of one or more aluminium plants. In the chemical field, the National Industrial Development Corporation will concentrate on basic and intermediate products required for drugs and dyestuffs. The Government has been impressed by the report submitted on this subject by Russian experts. It is stated to be an eye-opener, in that it deals with the production of alkaloids from Indian herbs.

With the projected expansion in the output of steel and non-ferrous metals, establishment of a wide range of producer goods industries and increase in the production of consumer goods, India bids fair to reach a significantly higher level of industrialisation in the near future. Mr. Krishnamachari has expressed the hope that India would emerge at the end of the third Five-year Plan from the position of a semi-developed country to one of the industrially advanced countries of the world.

There will, of course, be many obstacles before this goal is reached. A reference deserves to be made to three chief obstacles—capital resources, transport and manpower. And it is noteworthy that the Government is aware of the existence of all these three obstacles. From the point of view of the Government, capital resources may appear to be a less urgent problem, since it is open to the Government to increase the burden of taxation in order to derive the resources it needs. But this will leave less resources for the private sector. The deficiency in capital resources, whether in the public or the private sector, could be made good by larger inflow of foreign capital. Mr. Krishnamachari said that it might not be a good thing to seek the aid of foreign capital. At the same time, he pointed out that "in the long run, if you do not have the resources, you must ask help from such people as would be willing to give." He thought that any dislike of foreign capital did not generate from the Government and remarked: "It is completely neutral in this matter.

EQUITIES RECOVER

SHARP RISE IN TATA STEELS

(From Our Own Correspondents)

BOMBAY, 21*st June*

THE share market maintained a steady tone during the week under review, under the leadership of steels and textiles which found fairly good support. The main inspiration was provided by not only the bright outlook envisaged for the steel industry but also the announcement of the Union Government's cloth policy. Even in these two sections, the rise in values was not very marked, except in the case of Tata Ordinaries. This was due to several reasons, such as (1) the strings attached to the permission to raise cloth production, (2) the apathy of investors to follow the market, (3) frequent profit-taking at higher levels, and (4) political developments regarding the future of Bombay City, such as the reported resignation of Mr. C. D. Deshmukh, Union Finance Minister, and the threat of Maharashtrian leaders to secede from the Congress Party.

The eagerly awaited Union Government's textile policy was announced on Monday this week. Though the policy was generally welcomed by the industry and was greeted by the share market with a moderate rise in share values, the allocation to the mill industry out of an additional quantity of 1,700 million yards of production was considered inadequate. Nevertheless, the permission to install additional loomage given to mills for raising the production would have been well received, but for the strings attached to it, namely, (1) the reservation of additional production for exports, and (2) the imposition of a penal excise duty, if the output of the additional looms is directed to the home market.

In the steel section, the upward trend in Tata Ordinaries noted towards the close of last week gained strength during the week under review, rising from Rs. 198-4 to Rs. 205-12 before closing a shade lower at Rs. 204-4. Tata Rights moved up by Re. 1-4 to Rs. 65-4. Indian Irons advanced from Rs. 37-7 to Rs. 38-4½, but wound up at Rs. 37-14.

Textile shares were marked up, but the rise in values was moderate. Thus, Bombay Dyeings gained only Rs. 2-8 to Rs. 654-6, although they touched during the week a high of Rs. 663-2. After moving up from Rs. 564 to Rs. 572, Centurys shaded off to Rs. 569. Kohinoors rose by Rs. 3-8 to Rs. 373-8. Central Indias put on Rs. 2-8 to Rs. 152-8. Finlays were unchanged at Rs. 340, while Gokaks were dull at Rs. 235 and Indu Ordinaries at Rs. 13-12. Indore Malwas were up by Re. 1-4 at Rs. 148-12, whereas Khataus declined by Rs. 3-2 to Rs. 237-8. New Greats gathered Rs. 2 to Rs. 254, Shree Niwas Rs. 5-10 to Rs. 216-14. Simplex, on the other hand, fell by Rs. 2-8 to Rs. 218-8, despite the increase in dividend for the year ended 31st March 1956 from Rs. 10 to Rs. 12 per share. Standards were maintained at Rs. 440 and Svadeshis at Rs. 253. Tata Mills were bid Rs. 2-8 higher at Rs. 57.

Bank shares were featureless, but steady. Barodas were a fraction better at Rs. 97-4 and Centrals at Rs. 52. Bank of Indias were sought Re. 1-4 higher at Rs. 158-4. United Commercials put on As. 12 to Rs. 51-12, while Unions shed As. 2½ to Rs. 6-9½.

A rise of Rs. 3-4 to Rs. 46-12 in New Indias was the feature in the insurance section, following the announcement of a bonus issue, in the ratio of one share for every three shares held. Indian Mercantiles regained from Rs. 41-8 to Rs. 43.

Electricity counters ruled quiet with a slight marking down in values. Ahmedabad Electrics shed As. 10 to Rs. 96-9. Surat Electrics were placed at Rs. 121 *ex-div.*, as against Rs. 121-14 *cum-div.* last week. Tata Hydros dropped Rs. 2 to Rs. 129, Tata Powers Rs. 2-8 to Rs. 1,272-8 and Andhra Powers Rs. 17-8 to Rs. 1,197-8.

Activity in the miscellaneous section was restricted and fluctuations in prices were narrow. In the sugar group, Belapurs were steady at about Rs. 238. Phaltans were held at Rs. 156, while Walchandnagars were a fraction higher at Rs. 255-10. Among cement shares, A.C.C. were done at Rs. 155 *ex*-right, as against Rs. 218 *cum*-right a week ago. Digvijays rose by Re. 1-8 to Rs. 193. In the engineering and mining section, Alcocks were lower by Re. 1-4 at Rs. 355, while Tata Locos were dull at Rs. 150. Premier Constructions were a firm feature with a rise of Rs. 4-8 to Rs. 190-8. Shivrajpurs were a shade better at Rs. 108. Indian Coppers gained As. 2 to Rs. 7-6 and B.B. Petrols As. 5 to Rs. 4-5½.

Among shipping and transport shares, Scindias moved within a narrow range and closed steady at Rs. 18-12. Great Easterns gained As. 2 to Rs. 18-8 and India Steamships As. 5 to Rs. 9-5. Hindustan Motors gained from Rs. 10-0½ to Rs. 10-4 and Premier Automobiles from Rs. 92 to Rs. 93. Among miscellaneous industrials, Bombay Burmahs staged a rise from Rs. 657-8 to Rs. 661-14, but reacted sharply to Rs. 653-12. National Rayons were marked down from Rs. 249-8 *cum-div.* to Rs. 232 *ex-div.* (div. Rs. 12). Rl.Cs. were quiet at Rs. 11-1. Tata Chemicals were steady at Rs. 19, while Dhrangadhra Chemicals were favoured to stage a rise of Re. 1 to Rs. 127. Tata Oils were keenly bid and they rose by Rs. 3-8 to Rs. 56, on expectations of higher dividend. Wimcos receded by Rs. 4-6 to Rs. 185.

* * * *

Calcutta Stock Exchange

CALCUTTA, 20*th June*

Trading was lively during the week under review on the Calcutta Stock Exchange. Gains were recorded in almost all sections, and there was an impressive increase in the volume of transactions. News of the reported acceptance of the Finance Minister's resignation by the Prime Minister did not influence sentiment, although market circles were unanimous in their extreme regret in the Finance Minister's exit at this stage when the country was embarking on the second Plan and felt that a man of Mr. Deshmukh's calibre was required to pilot the country's finances. They realised that Mr. Deshmukh's success lay in mixing the party's idealism with realism.

Operators' enthusiasm at the Government's new cloth policy as announced by Mr. T. T. Krishnamachari, the Commerce and Industry Minister, was fully reflected in trading. The permission now given to mills to increase production of cloth by 350 million yards a year will invite more attention to textile shares. Mr. Krishnamachari's assurance that there would be no pressure on private enterprise was noted with satisfaction and contributed to steady sentiment. Bulls put to good use the recent increase in prices of essential commodities. The week's best news to the market was provided by the announcement of a sumptuous dividend of 10 per cent. plus a bonus of 25 per cent. for Indian Copper Corporation. With this declaration, the dividend for 1955 comes to 45 per cent., as against 25 per cent. in 1954 and 10 per cent. in 1953. Prospects for coming years for the Corporation are indeed brighter.

Sectionwise, interest in coals widened, and several counters recorded a smart recovery. This was due, first, to lower levels and secondly to expectations of an imminent increase in prices for the fuel. It was believed that the question of price was being considered by the Government. Mr. Malaviya's re-exposition of the Government's mineral policy wherein he told private collieries that the existing mining leases would be renewed also contributed to higher sentiment. From Rs. 19-15, New Beerbhooms rose to Rs. 20-9. Burrakurs gradually recovered to Rs. 14-9 from Rs. 13-8. On interested buying, Central Indias hardened to Rs. 7-14 from Rs. 7-3. At Rs 31-2 Equitables collected Re. 1-2. East Indians rallied to Rs. 33-4 from Rs. 32-12. Pench Valleys at Rs. 23-8, was better off by Re. 1-8.

Textile shares forged ahead. Kesorams, on good support, advanced to Rs. 20-11 from Rs. 18-11. Muir Mills came to business at Rs. 88, as against Rs. 84 previously. Elgin Mills gathered strength to quote Rs. 29-2 from Rs. 28-1. Bowreahs were as high as Rs. 165, as against Rs. 155 previously.

Jute shares were quiet, although the business volume tended to increase. Nationals, after being better at Rs. 25-2, gave way to Rs. 24-9. New Centrals opened at Rs. 17-14 and soon gained to Rs. 18-8, but subsequently lost the entire gain. Anglo-Indias eased to Rs. 169 from Rs. 173, Cheviots to Rs. 203 from Rs. 208, and Kinnisons to Rs. 171 from Rs. 175.

Mining shares were steady with a note of buoyancy in Indian Coppers for reasons already stated. This counter rose to as high as Rs. 7-7 from Rs. 7-1. Burma Mines were maintained at Rs. 7-1. Orissa Minerals were fully steady at Rs. 27-10.

Engineering shares moved within narrow limits. Indian Irons opened at Rs. 37-6 and after moving around rates within Rs. 37-12 gave way to Rs. 37-2 by the week-end. Since Monday the variation was between Rs. 37-2 and Rs. 37-12, retaining the higher level at each stage of the rise. Jessop and Cos. after being easy at Rs. 34-14 gained to Rs. 35-4. Richardson and Cruddas were quiet at Rs. 26-4. Texmacos were held around Rs. 24, but Hooghly Dockings, on interested buying, spurted to Rs. 125 from Rs. 120. Kumardhubis, although unchanged, were nevertheless fully steady at Rs. 10-10.

Among miscellaneous industrials Electric Constructions gained to Rs. 14-9 from Rs. 14-1 with Alkali and Chemicals moving to Rs. 21-12 from Rs. 21-5. India Steamships were wanted at Rs. 9-6 with few sellers. Niccos were a shade better at Rs. 25-2, with Clive Row Investments improving to Rs. 12-13 from Rs. 12-5. Orient Papers advanced Rs. 39-6 from Rs. 38-11. Indo-Burma Petroleums were put through at Rs. 40-12 as against Rs. 40-8 previously.

Teas were shown selective attention with Sapois steadily improving to Rs. 26 from Rs. 23. Methonis changed hands at Rs. 25-4 and were a favourite of buyers at that level. Dhelakhats were taken to Rs. 22-12 from Rs. 22-2.

* * * *

Madras Stock Exchange

MADRAS, 19*th June*

During the week under review activity on the Madras Stock Exchange centred round textile shares which were in good demand on expectations of a favourable cotton textile policy. The other sections were listless and business was selective. The undertone, however, remained steady. Planting shares again presented a mixed pattern, though the range of variations was small.

The long-awaited policy of the Government of India regarding expansion of cloth production was announced in New Delhi yesterday, under which the Government decided to sanction the establishment of 14,600 automatic looms for export promotion and to grant licences for the installation of 2.1 million spindles. The absence of any pronouncement regarding levy of additional excise duty (except for a penal levy in case the production from the additional looms is diverted to home consumption), anticipated earlier, was also a welcome feature of the policy.

The following dividend announcements were made during the week:

Company	*Year ended*	*Dividend*
		Per cent.
Highland Produce ...	31-12-55	+13¾ (18¾)
Emerald Valley ...	31-12-55	+12½
Mettur Industries ...	31- 3-56	42½ (35)
Balasubramania Mills ...	31-12-55	15 (13)

Figures in brackets represent the corresponding distributions of the previous year.
+Final

In the textile group, Anglo-French staged a sharp rise of Rs. 2-8 to Rs. 99. Balasubramanias were unchanged at Rs. 82 *cum-div.* (Rs. 40 paid-ups) and Rs. 145 *cum-div.* (Rs. 70 paid-ups). Bangalore Woollens were a fraction higher at Rs. 572. Buckinghams were done Rs. 3 better at Rs. 198. Cannanores gathered Rs. 4 to Rs. 190. Coimbatore Cottons spurted from Rs. 357-8 to Rs. 367-8 and Janardhanas gained Re. 1 to Rs. 119-8. Sri Krishnarajendras were bid Rs. 2-8 higher at Rs. 114-8. Loyal Textiles were a shade quiet at Rs. 50-4. Maduras changed hands As. 8 higher at Rs. 51-8. Mettur Industries shot up from Rs. 502-8 to Rs. 532-8, following the stepping up of the dividend from 35 per cent. to 42½ per cent. Radha Krishnas (Rs. 100 paid-ups) were placed at Rs. 300 *ex-div.*, as against Rs. 320 *cum-div.* last week, and Rs. 52 paid-ups at Rs. 150 *ex-div.*, as against Rs. 160 *cum-div.* R. C. Ambikais rose by Rs. 3 to Rs. 228 and shed Rs. 2 to Rs. 105. Vasantas advanced by Rs. 7-8 to Rs. 307-8 and Vijayakumars by Rs. 3 to Rs. 129.

In the planting section, coffee shares were steady. Amalgamated Coffees were maintained at Rs. 11-8. Blue Mountains were done at Rs. 5-14½. Coffee Lands gained an anna to Rs. 24-9 and Consolidated Coffees As. 3 to Rs. 20-13. Tea shares were quiet. Coonoor Teas declined by Re. 1-4 to Rs. 29 and Coorg Teas by As. 4 to Rs. 11-8. Devasholas shed As. 12 to Rs. 29. Emerald Valleys fell by As. 12 to Rs. 8 *cum-div.* The proposed sale of the Company's estates was not accepted by the general body of the shareholders and the proposal has, therefore, been dropped. Haileyburias were lower by As. 4 at Rs. 28-4. Highland Produces were, however, better by As. 5 at Rs. 19-4. Kil Kotagiris were a shade higher at Rs. 8-5, Nelliampathys at Rs. 4-0½, Nilgiri Teas at Rs. 14-12 and Parksides at Rs. 19. Peermade Teas dropped As. 4 to Rs. 36-12, Talayar Teas As. 6 to Rs. 13-10, Twyford Teas As. 4 to Rs. 24-4 and United Nilgiris As. 12 to Rs. 25-4. Rubber scrips were also lower. Cochin Malabars were dull at Rs. 9-6. Malankaras were marked down by As. 4 to Rs. 32-8, Midlands by As. 5 to Rs. 22-1, Rajagiris by As. 6 to Rs. 24-12 and Travancore Rubbers by As. 4 to Rs. 25.

Interest in miscellaneous industrials was selective. Andhra Cements were placed at Rs. 161 *ex-div.* (div. Rs. 10), as against Rs. 170 *cum-div.* last week. Binnys were done Rs. 2 higher at Rs. 186. F.A.C.Ts were listless at Rs. 6-13. India Cements dropped As. 2 to Rs. 35-10. Mysore Chemicals Manufacturers were bid As. 12 higher at Rs. 25-8. Mysore Papers were quiet at Rs. 17-10. Rallis reacted from Rs. 50-4 to Rs. 47-8. Travancore Cements fell by As. 6 to Rs. 12-8.

Bank shares were steady, but support was confined to selective counters. Punjab Nationals were again marked up by Re. 2 to Rs. 86-8. Travancore Banks had some business As. 6 higher at Rs. 15. Indian Banks (Rs. 90 paid-ups) gained a fraction to Rs. 161, while Bank of Mysores were a shade lower at Rs. 243-8 and Indian Overseas at Rs. 148

NEWS IN BRIEF

THE Tariff Commission will hold a public enquiry into the prices of automobiles on 28th and 29th June 1956.

The erection of a new lighthouse, 184 feet high, one of the 25 to be erected under the first Five-year Plan, has been completed on the rocky coast of Bhatkal between Karwar and Mangalore, at a cost of Rs. 4 lakhs.

The Government of India is reported to have agreed to supply on loan 10,000 tons of ammonium sulphate to East Pakistan, on an urgent request from the Pakistan Government, notwithstanding a shortage of fertilisers in India.

India will import 550,000 tons of steel from different countries during the current year to meet a part of the deficit of 1 million tons, according to Mr. M. M. Shah, Union Minister for Heavy Industries. Substantial quantities of cement will also be imported.

The Central Government has decided to continue free licensing of cotton fishing nets for export to all permissible destinations other than the Portuguese possessions in India, within a ceiling, for shipment till 31st December 1956 or upto the date of reaching the ceiling, whichever is earlier. The existing licensing procedure will continue for the July-December 1956 period.

Exports of coal from India during May 1956 reached a new high level of 100,131 tons, as against 83,107 tons in the previous month and 51,725 tons in March last. Coastal shipments amounted to 100,307 tons, as against 42,569 tons in April, bringing the total despatches by sea during the month to 200,438 tons, as compared with 125,586 tons in the previous month.

The Government of Bihar will soon fix the ceiling on land holding and the subject is not going to be shelved indefinitely, according to the State Revenue Minister. The proposed Land Ceiling Bill will give the Government about 600,000 acres of land for distribution among the landless. The Minister is of the view that land must be evenly distributed among the State's 8.6 million landless persons, if agricultural production is to be stepped to an appreciable extent.

Experiments carried on in Uttar Pradesh show that wheat yields can be increased by giving the land a ploughing in summer. The ploughing should be done with a soil-inverting plough soon after the harvest of the *rabi* crop. Ploughing is easy at this stage. Experiments in various soil-climatic regions in the State showed that wheat yields increased by 12 per cent. on an average. On this basis, an average farmer whose average wheat yield is about 16 maunds an acre can get an extra two maunds per acre.

The railways in India built 40,000 quarters for their staff during the first Five-year Plan. During the Plan period, electricity was taken to 784 small stations, covers over platforms were provided at 198 stations, platforms were raised, surfaced and extended at 922 stations, waiting halls were improved or extended at 184 stations, new waiting halls were provided at 214 stations, waiting rooms were improved at 212 stations, new waiting rooms were built at 226 stations, and improved water-supply arrangements were made at 510 stations.

A semi-commercial plant capable of producing 1,500 tons of electrolytic copper per annum is likely to be set up in Calcutta. Various suggestions in this connection were recently examined by the Council of Scientific and Industrial Research which recommended the erection of a pilot plant for production of electrolytic copper. Experts consider that a plant of 10,000-ton capacity is economic for a small electrolytic copper refinery, but, in view of the doubts regarding the availability of raw materials for a plant of this capacity, it is proposed to have a semi-commercial plant of 1,500-ton capacity.

The total gross sea and land customs revenue collected in the Indian Union during April 1956 amounted to Rs. 12.09 crores, as compared with Rs. 12.14 crores in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 10.43 crores, as against Rs. 9.63 crores, export duties for Rs. 1.54 crores, as against Rs. 2.27 crores and land customs and miscellaneous for Rs. 12 lakhs, as against Rs. 24 lakhs. The total gross collection of Union excise duties amounted to Rs. 12.09 crores, as compared with Rs. 10.96 crores. The grand total of gross customs and Union excise revenue realised during the month under review thus amounted to Rs. 24.18 crores, as compared with Rs. 23.10 crores during the corresponding month of the preceding year.

Two new marshalling yards are to be built on the South-Eastern Railway to cater to goods traffic in connection with the new steel plants at Bhilai and Rourkela. The Railway Board has ordered surveys to be undertaken immediately by the South-Eastern Railway in connection with the layout of these yards. The yard at Bhilai is needed for handling 13 goods trains daily carrying raw materials for the plant and three trains daily carrying finished products from the steel plant. This yard will also deal with the anticipated increase of traffic to the tune of ten goods trains daily due to heavy movement from the Central India coalfields. The yard at Rourkela will handle more than 13 trains of raw materials and two trains of finished products daily for the steel plant and also for general traffic on the main line.

The President has given his assent to the Industrial Employment (Standing Orders) (Bombay Amendment) Bill, 1956. The original definition of "employer" in the Industrial Employment (Standing Orders) Act, 1946 was very wide and made the employer responsible for persons employed on work which was not ordinarily the work of the particular establishment. The present Bill, therefore, provides that the employer (owner) of the establishment will not be responsible in respect of workers employed through a contractor for work not ordinarily part of the industrial establishment; in respect of workers employed through contractors on work which is ordinarily part of the establishment, the employer will be responsible only for those workers who do the work on the premises of the establishment.

In a telegram addressed to the Government of India, the Committee of the Bharat Chamber of Commerce, Calcutta, has opposed the reported proposal for fixation of minimum prices for jute goods meant for export. The Chamber considers the proposal as undesirable and risky and expresses its apprehension that in view of the accumulation of stocks in all the competing countries, fixation of minimum price by India may provide an opportunity for its competitors to price out India from the foreign market. It mentions that the Indian jute industry, at present, produces roughly 58 per cent. of the world's jute goods and thus 42 per cent. of supply came from competing foreign countries and thus India enjoys no monopoly so as to be able to maintain a minimum price. The Chamber observes that the present stock and price crisis may prove only temporary in view of the recent floods in Eastern India and Eastern Pakistan. The Chamber, however, opines that the industry may be justifiable in expecting some temporary assistance from the Government in one way or the other but not through fixation of minimum prices.

From Abroad

An international meeting of fish processing technologists, organised by the F.A.O. Interim Committee on Fish Handling and Processing, will be held next week at Rotterdam, Netherlands.

Burma and the U.K. have signed an agreement, under which Britain will supply Burma with cotton textiles of the value of 1.25 crores of kyats. Payment will be in the form of U.S. raw cotton made available to Burma under the U.S. aid programme.

The Goodyear Tyre and Rubber Company has reduced its prices for Plioflex general purpose type synthetic rubber by 0.15 cent per lb. This brings the price for a popular grade down to 24.10 cents per lb. for quantities of 60,000 lbs. or more.

The U.S. Senate Foreign Relations Committee has approved of the Foreign Aid Bill, recommending a sum of $4,502 million. This represents an increase of $702 million over that voted by the House of Representatives, but falls short by $398 million of the amount sought for by the President.

The U.S. House of Representatives Armed Services Committee disapproved last week of the proposed sale of the Government-owned alcohol butadiene plant at Kentucky. It also decided to extend the life of the Rubber Producing Facilities Disposal Commission up to 1st July 1957.

The first batch of motor cars to be manufactured by China will come out in the autumn of this year. All the spare parts and the steel are produced in factories in various parts of China. In order to develop China's motor car industry, steel production at the steel centres like Fusin and Anshan will be increased.

A revolving store with customers sitting in front of merchandise conveyed to them for push-button recording of purchases was forecast at the 52nd annual convention of the Advertising Federation of America, held recently. A merchandising expert said self-service will extend to nearly all categories of merchandise.

The Malayan Government has decided to refund to the rubber producers the anti-inflationary cess amounting to M.$53 million collected, whenever the price of rubber stood over $1 per lb. The repayment will be made to estates in four equal instalments. The refund to small holders will be in the form of a reduction of 4½ cents on the export duty.

A five-day conference on earthquake engineering was held last week at the University of California, marking the fiftieth anniversary of the San Francisco earthquake, at which Japan, India, Germany, Colombia, Chile, New Zealand, Turkey, Pakistan, Mexico and Italy were represented. The topics discussed included effects of earthquakes on soils and foundations and the design of earthquake-resistant structures.

A new shipping company, known as American Coal Shipping Corporation Inc., is to be formed jointly by American coal producers, exporters, miners' union and coal hauling railroads. The new $50 million corporation will buy ships to carry U.S. coal to export markets. Foreign demand for U.S. coal is said to be permanent and even expanding and contracts have been signed for three to five years ahead. U.S. coal exports since July 1955 amount to 3.55 million tons per month on an average, or an annual rate of 42.63 million tons.

The world citrus production during 1955-56 shows an increase over previous years, according to data collected by the U.S. Department of Agriculture. The orange and tangerine crop in the Northern Hemisphere is estimated at 297 million boxes, about six per cent. higher than the previous year's record crop of 281 million boxes. Grapefruit production in the Northern Hemisphere increased from 47 million boxes in 1954-55 to 51 million boxes in the current season. Last year's production of limes in the world was 4.6 million boxes. Lemons grown in the Northern Hemisphere remained at about the same figure as last year, 27 million boxes. The Northern Hemisphere produces about 75 per cent. of citrus fruits grown in the world. Figures for the Southern Hemisphere for the 1955-56 season will not be available until the current crop matures.

More than 100 countries and territories received last year technical aid from the United Nations, according to a report of the United Nations Economic and Social Council. The report shows that, during the period, about 1,400 experts were engaged, in various parts of the world, in improving agricultural and industrial production, health, education, public administration, and communications. Britain supplied the largest number (348) of these experts. The U.S. provided 236 experts and France 209. Britain also took pride of place as the country where most recipients of technical assistance fellowships went during the year. A total of 351 went to Britain to study. Two hundred and fifty-one went to France, 248 to the U.S., and 176 to West Germany.

Pan American World Airways added a fifth around-the-world flight to its schedules with effect from 1st June 1956. "With the addition of this new around-the-world flight," Willis G. Lipscomb, Vice-President, Traffic and Sales, said, "we now offer a new pattern of service in the Middle East that links Ankara, Teheran and Karachi with direct flights for the first time. Previously, passengers in Ankara or Teheran who wanted to continue on our routes had to backtrack to Istanbul or Beirut to pick up planes bound for Europe or Asia." Between London and Tokyo, service is in Super Six Clippers and between Tokyo and the United States in double-decker Strato Clippers. The round-the-world fare is Rs. 6,309 (approx.) in tourist class and Rs. 9,048 (approx.) in first class.

PERSONAL

MR. Jose Cochrane de Alencar, Brazilian Ambassador to Pakistan, has been appointed Ambassador to India.

Mr. A. K. Mukerji, who has been appointed First Secretary (Commercial) in the Indian High Commission in London, left for the U.K. on Friday last week.

Mr. P. N. Thapar, Secretary, Union Ministry of Food and Agriculture, has been elected Vice-Chairman of the Co-ordinating Committee of the United Nations Food and Agriculture Organisation.

Mr. M. Gopala Menon, Consul-General for India in New York, has been elected Vice-President of the United Nations Sugar Conference, which is scheduled to re-convene at Geneva early in October next.

Mr. D. L. Crawford, who has been appointed Trade Commissioner for Australia in Bombay, assumed charge on Friday last week. Mr. R. T. M. Rose, his predecessor, is returning to Australia on completion of his term of office in India.

Mr. M. B. Madgavkar, a member of the Managing Committee of the Western India Automobile Association, has been elected President of the Association for the current year. Mr. B. N. Karanjia and Mr. V. C. Setalvad have been elected Vice-Presidents.

Mr. T. P. Barat, Director, Messrs. Nowrosjee Wadia and Sons, who are the Managing Agents of the Bombay Dyeing and Manufacturing Company, Ltd., left for the U.K. on the 22nd inst. as a delegate to the forthcoming H.R.H. Duke of Edinburgh's Commonwealth Study Conference on Human Problems of Industrial Communities.

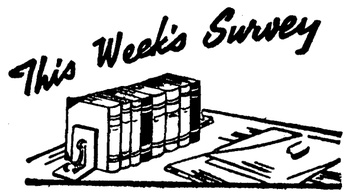
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 20*th June*

Duty on Pig Iron

In a recent communication to the Government of India, the Bihar Chamber of Commerce charged the Central Government with shelving the report of the Tariff Board on its enquiry into the duty on pig iron. The enquiry was started in 1928, evidence was recorded in March 1929, and the Board's report was submitted to the Government of India in November 1929 and yet until last month the report was not made public. And the Central Government seemed so obdurate in the matter that it refund to receive any deputation from the Bihar Chamber of Commerce in that connection. The Bihar Chamber further complained that the continuation of high prices of pig iron adversely affected Indian foundries and retarded the development of the iron and steel industry in India. The Government of India has since released the report for publication and announced, in a resolution in the *Gazette of India*, that it accepts the finding of the Tariff Board that no case has been made out upon which the Board could base any recommendation for removal of the revenue duty on pig iron and that no serious harm, according to the Board, would be done to any consumer, if the duty were retained, until the whole position is re-examined in the next statutory enquiry into the steel industry to be held in 1933-34 or earlier.



BAD LUCK FOR TAXPAYER

THE advocates of the Ambar charka who have been sharply critical of what they have regarded as the Government's apathy, if not antipathy to this tool, will no doubt be delighted by the new scheme announced by the Government this week. If official high-pressure salesmanship and assistance were all that were needed to rectify the economic deficiency of the Ambar charka method of textile production, the present scheme should go a long way towards its success. Under this scheme, no effort will be spared to spread the Ambar habit in the village. And the scheme visualises a widening use of the Ambar yarn by the handloom weavers. It remains to be seen how far official patronage will enable this instrument, which represents at best only a slight improvement on the rudimentary equipment, the charka, to meet the growing demand for quality cloth.

The scheme, prepared by the Committee headed by Mr. S. S. Khera, Secretary, Union Ministry of Production, and accepted by the Government of India, envisages the introduction of 200,000 Ambar charkas by the end of 1957-58. At the first instance, about 75,000 charkas will be introduced in 1956-57. The operation of the scheme will be reviewed at the end of the current calendar year, when further measures for popularising it will be adopted. The Committee, which has by no means been unanimous in its conclusions, has recommended that the programme should be implemented so far as possible, in areas where cotton is locally available, where handloom-weaving is intensively practised and where there is greater need of providing employment. Whether, and if so to what extent, all these objectives can be easily reconciled is a moot question. One will not be wide of the mark in saying that, wherever handloom weaving is being intensively practised, there can be no unemployment now, because in all such centres the weavers are known to be fully employed. Equally right one will be in saying that the need for providing greater employment exists to a larger extent in places where there are no handlooms than in those having the looms.

An important aspect of the scheme is that weavers' families, in preference to non-weavers, will be trained and supplied with Ambar charka. Presumably, this is intended to overcome any resistance the weaver may have to use Ambar yarn. A weaver, if he is also a spinner, will acquire a vested interest in the yarn he produces. But the success of this appeal will depend on whether weavers as a class will take to Ambar charka. No weaver will lose the chances of making better cloth out of mill-made yarn for the sake of utilising his own Ambar yarn, though, in the Committee's general view, such yarn is "fairly even, strong and suitable for weaving." One will do well to take note of the guarded use of the adjectives by the Committee to describe the quality of Ambar yarn. No comparison is made with the mill yarn, as should have been done if the Committee were to be true to itself. Those who have made such a comparative study of the quality of Ambar yarn have found it to be considerably inferior to mill yarn. It has also been found from experience in some South Indian centres that a weaver who uses Ambar yarn will be able to earn only half of what he can by using mill yarn, *vide* page 1052 of *Commerce* dated 2nd June 1956.

Incidentally, it will be interesting to know whether the Committee visited South India where there is a large concentration of handlooms and tried to know the reactions of weavers in this region, and whether it consulted the concerned State Governments and, if so, what were their views on this subject. It is significant, in this connection, that, so far, there have been no signs of enthusiasm for Ambar charka in that part of the country. Neither weavers' organisations nor any of the State Ministers have publicly voiced their support to this mechanised form of charka. South India, it may be further borne in mind, is noted not only for handlooms but also for the large army of employable unemployeds. Consequently, if there is any real merit in Ambar charka as an efficient provider of yarn or as an economic means of employment, South India should surely be shouting for it from the house tops. The very fact that Mr. T. T. Krishnamachari himself has been a strong critic of Ambar charka is proof enough to show that this charka will be more a handicap to handlooms than a help.

Another aspect of the scheme is the replacement of the traditional charka by the Ambar variety. This, of course, might be more easily accomplished, in view of the higher technical efficiency of the new charka.

The implementation of all the proposals, made by the Committee, it is stated, will cost Rs. 4 crores. There is, of course, a large element of subsidy in the scheme. The Committee has recommended a single-point subsidy of a minimum of As. 4 in the rupee for Ambar cloth. It is not, however, clear how this subsidy will be paid. Perhaps, the Committee is itself convinced that this is large subsidy for it has stressed that the objective should be to eliminate the need for subsidy, and that, in the first instance, special effort should be made to bring down the subsidy to As. 2 in the rupee, exclusive of the cost of training, subsidised cost of the Ambar units and interest on the working capital advanced to co-operatives. Despite all the assistance, the scale of wages the scheme promises to the spinners is likely to remain a pittance. A flat piece-rate of six pies a hank for all counts, for the present, is reasonable in the Committee's opinion. As the productivity of the Ambar charka is estimated at about six hanks a day, a spinner will earn only As. 9 a day, or Rs. 14-10 per month of 26 working days. Considering that those who have to work on this charka will have to undergo a certain amount of training, one wonders how many persons will come forward to take up this profession.

The yarn produced on the Ambar charka, according to the Committee, should be confined to counts upto 24 only, since the charka is believed to be best suited for the manufacture of yarn up to this count. This may not suit the needs of a large bulk of the weavers, who, as producers of special varieties of fabrics, will require yarns of much finer counts, with a higher degree of dyeing characteristics.

Obviously, the implementation of the scheme implies considerable organisational effort. The institution of finishing and stocking centres for Ambar cloth and a network of emporia and sales depots and sample rooms has been recommended. An annual review of the progress made, the Committee has said, should be undertaken and further progress of the scheme should be examined with special attention to technical improvement, quality of the product, productivity, workers' earnings and subsidy element. Village carpenters from the Ambar charka areas should be trained and supplied with minimum precision parts from a central agency for the purpose of manufacturing these charkas. The charka, it is pointed out, should not be manufactured in any central factory or in a number of manufacturing centres. At the same time, efforts should be continued to improve the design of the Ambar charka and a design competition should be organised. The Committee has further recommended the establishment of a textile research centre, mainly devoted to decentralised spinning and weaving; regional centres may be set up later. Special emphasis has been laid on the training of both spinners and instructors.

The Government is thus experimenting in a textile policy which combines high-precision automatic equipment at one end and technologically backward tools, like the Ambar charka, at the other. The policy is an ill-assorted mixture and is bound to end in fiasco. That the Government should decide to continue the experiment on a vast commercial scale, in spite of best advice against it by competent technical experts —Indian as well as foreign—is a great pity. We are convinced that the crores that are being "invested" on this charka constitute good money thrown down the drain. It is just bad luck for the taxpayer of this country that his hard-earned money, taken by the Government, is not being put to better use.

COMMERCE AND INDUSTRY MINISTRY REORGANISED

The Government of India has announced the reorganisation of the Ministry for Commerce and Industry. The Ministry now consists of three separate divisions, each headed by a Minister. The Minister for Industrial Development will be in charge of heavy industries. The Minister for Industries will be responsible for consumer industries, while trade will be entrusted to the care of the Minister for Commerce. Each division has a State-owned Corporation attached to it, in order to provide a flexible and positive instrument of policy as distinct from the regulatory functions of the administration. This reorganisation of the Ministry is intended to ensure co-ordination, flexible and efficient planning and execution in each of the three major fields, so that the Ministry, as a whole, may discharge efficiently the functions set to it under the second Five-year Plan. These functions fall under three categories, namely, development of heavy industries, supply of adequate consumer goods to fight inflationary tendencies, if any, and lastly, procurement of essential imports and promotion of exports for earning foreign exchange needed for financing the Plan.

Thus, geared to undertake the implementation of the second Plan, the Ministry seems to have drawn a tentative but integrated programme of development in the next five years. An idea of this programme was given by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, at a Press Conference on Monday this week. The Ministry is expected to take a big step in two or three months, towards the setting up of plants to build heavy machinery for the needs of producer industries. This programme will cover a period of ten years, at the end of which, India could expect 66 per cent. of its machinery to be manufactured within the country. The machinery produced is expected to cater to the requirements of jute, steel, cement, sugar and coke oven industries. The location of the various machine manufacturing units remains yet to be decided. The Heavy Industries Division, which will be responsible for setting up the units, is also required to look after the needs of industries both in the private and public sectors in respect of raw materials such as steel, pig iron, cement, chemicals. It is also proposed to set up one or more aluminium plants in areas where abundant supply of electricity is available.

The second Five-year Plan envisages, as readers are aware, a rise in the demand for consumer goods such as textiles, bicycles, sewing machines, electric lamps, tyres and tubes of automobiles. If inflation is to be avoided, arrangements must be made for the supply of these goods to meet the demand. The Consumer Industries Division is entrusted with this work. It will also undertake the functions connected with the decentralisation of industries and development of small-scale production. It will supervise the establishment of Industrial Estates to encourage the small *entrepreneur*. Technical assistance and credit will be made available to him on favourable terms.

Since the execution of the industrial and other development plans requires a large increase in the level of imports, the Trade Division of the Ministry will look after this work. It will enter into trade agreements with different countries for getting the key commodities and initiate export promotion measures to make exports pay for the commodities imported. This Division is expected to pay special attention to increasing the exports of ores, oils and oilseeds, raw cotton and other traditional items and to developing new lines of export, both commoditywise and countrywise. The State Trading Corporation established last month is scheduled to play a leading role in discharging this function.

Although the Ministry for Commerce and Industry has thus an ambitious programme, it remains to be seen how far it will be in a position to fulfil it. It is common knowledge that the barriers it has to overcome are innumerable, the biggest one being the availability of technical personnel. It is true that it is considering the question of establishing a Directorate of Manpower and an Industrial Management Service. To a certain extent, these agencies may be helpful in procuring the personnel but the requirements are so large that it is doubtful whether all the required number and type of personnel could be found in time and at reasonable cost. Besides there is also the difficulty of securing plant and machinery, as much depends on the supply position abroad. These problems may not be beyond solution, but they need careful thinking and planning, in order to avoid loss of time and excessive cost.

SCOPE FOR MORE PAPER MILLS

A number of decisions of far-reaching importance to the Indian paper industry were taken by the *Ad Hoc* Committee at its meeting held at Srinagar on the 12th inst. This Committee, which was appointed by the Central Government in November last, is headed by the Inspector-General of Forests, Mr. C. R. Ranganathan, and consists of heads of Forest Departments of States as well as representatives of the Ministry of Commerce and Industry, the Planning Commission and the Railway Board. The appointment of this Committee was a sequel to the decision that a survey of the raw materials available in the country for the manufacture of paper should be undertaken by the States. This decision was taken at the conference of State Forestry Ministers and officials which met at Delhi in October 1955.

According to the terms of reference, the *Ad Hoc* Committee has to advise the Government on the preparation of a basic plan for the expansion of the paper industry from the point of view of raw material supply. It has to consider measures for ensuring full exploitation of bamboo and other groves by private contractors for supply to paper mills. It has also to examine and devise methods for increasing the availability of cellulosic raw material for future expansion of the paper industry in the third and subsequent five-year plans by using new raw materials and by a planned programme of plantation of suitable species. The Committee has also to investigate the existing specifications for bamboos required by paper mills with a view to relaxing them where possible so as to enlarge the available supplies. It has also to consider utilisation of fibrous raw materials for production of various kinds of paper and suggest standard terms of lease (royalty) for working bamboo and other fibrous material-bearing trees and examine the zones of supply of the existing mills with a view to ensuring sustained supply of raw materials to them, on the one hand, and to advise how best to utilise any surplus availability, on the other.

The present rate of production of paper in India is a little less than 200,000 tons per annum. It is proposed to step this up to 600,000 tons by the end of the second Plan period. Since the success of the Plan hinges directly on the availability of raw materials such as bamboos, sabai grass and coniferous woods, the *Ad Hoc* Committee took up the question of assessing those resources. In this context, it considered at the Srinagar meeting a brief report submitted by an Italian expert committee on the utilisation of fir forests in the Western Himalayas for the production of newsprint. This Expert Committee had suggested extraction in the form of short-length logs for mechanical conversion, portions of which were capable of being utilised as timber and the diversion of the rest for the manufacture of newsprint. This recommendation did not, however, find favour with the *Ad Hoc* Committee, mainly on the grounds that logs of larger girths available in these forests would not lend themselves to floating. But the Committee recognised the need for urgently developing the newsprint industry in the country. It felt that attempts should be made to utilise resources of fir trees in U.P. The Committee, therefore, recommended the adoption of artificial methods of regeneration in these areas in order to enable regeneration to keep pace with the probable consumption of fir wood by the newsprint industry. With a view to examining the issue further, a sub-committee consisting of heads of the Forest Departments of U.P., Punjab, and Jammu and Kashmir was appointed by the *Ad Hoc* Committee.

The *Ad Hoc* Committee considered the reports from the various States on the available resources of bamboo submitted by the heads of State Forest Departments. These reports indicated that, in Assam, considerable resources awaited utilisation by new units of the paper industry. At present only a portion of the State's bamboo production was being made use of by the paper mills in Calcutta. In Orissa, where the scope for a new mill with a daily production capacity of 50 tons had already been accepted, the bamboo resources appeared to exceed even the previous estimates.

The *Ad Hoc* Committee agreed that there was room for the establishment of a paper mill with a rated capacity of 100 tons per day in Vindhya Pradesh, without interfering with the existing supply of raw material to mills outside the State. Madhya Pradesh is stated to have claimed the existence of a surplus of 100,000 tons of bamboo per year to feed a new unit. Madras estimated that a mill of 80,000 tons at Bhavanipur and another of about 60,000 tons at Mettur could be set up immediately. It claimed a bamboo potential of over 350,000 tons in the Nilambur Valley.

The findings of the Committee are to be welcomed, in that they remove the impression which had prevailed hitherto that India had almost reached a stage of exhaustion in the matter of supplies of raw material for the paper industry and that the scope for setting up new paper mills was very limited. With the continued increase in the country's population, the growth of literacy in the country and the rise in the standard of living, the demand for paper of all kinds is bound to expand in future. There is, therefore, need to expand the rated capacity of paper manufacture in the country. It is, therefore, comforting to note that the country has still raw material potential for starting some more paper factories.

During the first Plan period, a sum of Rs. 11 crores was invested in the paper and paper board industry. At the end of 1955-56, the rated capacity of the industry stood at 210,000 tons, while the output, as stated already, was at the rate of about 200,000 tons per annum. In the second Plan, the targets for rated capacity and production are fixed at 450,000 tons and 350,000 tons, respectively, as against the estimated requirements of 350,000 tons. The Plan envisages an investment of Rs. 44 crores to reach these targets.

STOCK EXCHANGE REFORM

Stock Exchanges play a vital role in the economy of a free country, providing, as they do, means for channelling the savings of people for its industrial development. Their functioning is a matter of concern not only to the investors who stake their savings in stocks and securities but also to the institutions the securities of which are quoted or are likely to be quoted thereon. In short, the economy of the country largely depends on the efficient and sound functioning of stock exchanges. Viewed from this angle, it will be noted that expansion of stock exchange activities in India will certainly contribute to the growth of joint-stock enterprises and capital formation, which are vitally necessary for the successful implementation of the Five-year Plans.

The reform of stock exchanges forms part of the Government's policy of regulating and controlling institutions which affect the nation's economy. The Securities Contracts (Regulation) Bill, 1954, which is yet to be passed by Parliament, is a measure which seeks to regulate the business of dealing in the securities on stock exchanges. The provisions of this Bill were subjected to a critical scrutiny by Mr. Chunilal B. Mehta, President of the Indian Stock Exchange, Bombay, in the course of his address at the annual meeting of the Exchange this week. Mr. Mehta was of the opinion that the Bill lays more stress on the suppression of stock exchange activities, instead of encouraging the formation and development of more stock exchanges. He said that clause 19 (which prohibits stock exchanges other than those recognised by the Government) and sub-clauses (e) to (i) of clause 23(1) which levy penalties for contravention of the provisions of the legislation) would, in effect, force even the existing stock exchanges to close down, if they were not recognised by the Government, even though they might be working satisfactorily as *bona fide* ready delivery markets. He added that it was reasonable to expect that the Government, without compelling the different bodies to close down by a stroke of the pen, should see that the interests of those bodies, which were financially sound and working satisfactorily at present, did not suffer as a result of the passing of the Bill. The different persons who were in the trade should be enabled and have the opportunity to continue the trade. This would be possible, Mr. Mehta said, only if all the existing exchanges were accorded recognition. "In the event, however, of the Government deciding to recognise only one exchange in any one area," he added, "a voluntary or compulsory merger of institutions working in the same area should be brought about on the lines of mergers effected in several forward markets dealing in the same commodity such as cotton, bullion, oilseeds, metal and yarn."

UNIVERSAL REGRET OVER FINANCE MINISTER'S RESIGNATION

FERTILISER PRICES RAISED

From A Special Correspondent

NEW DELHI, 19*th June*

THE Prime Minister is scheduled to leave the Capital for the United Kingdom before this week-end in order to attend the Commonwealth Prime Ministers' Conference. During the period when he is away from India, the political and social life in the Capital is expected to become largely static and dull. The Finance Minister, Mr. C. D. Deshmukh, will also be out of Delhi for about a month, spending the period mostly in the South. Many of the leading Cabinet Ministers are also likely to leave the Capital during the coming week to some cooler climate. But for the Prime Minister's impending departure on foreign tour, these high Government dignitaries would have left New Delhi by now to avoid its enervating, sultry and slumbersome summer.

DELHI LETTER

There is universal regret at the resignation of Mr. C. D. Deshmukh, Finance Minister to the Government of India, on the issue of Bombay City in the States Reorganisation scheme. Although he is expected to be relieved of his high office only a month hence, his resignation will certainly create a sort of vacuum in Government circles. From all standards, Mr. Deshmukh is the ablest of all the Finance Ministers that have adorned the Treasury Bench during the last few decades. Perhaps, his only comparison may be found in Sir Basil Blackett, who was the Finance Minister in the twenties of this century. Sir Basil's name is generally remembered for the manner in which he was able to shape the Government of India's Gilt-edged loan policy. Mr. Deshmukh's name will be remembered not only for his efficiency as an administrator but also for his ability to bring about considerable stability in the economy of the country during one of its critical periods. He has been the financial architect of the First Plan and has achieved great success in the sphere of his work. It will be a difficult task for the Prime Minister to get a suitable person to replace him. One possible successor may be Mr. T. T. Krishnamachari. He has capacity, drive and business and financial shrewdness to handle the Finance portfolio but his hands are full at present due to his preoccupation with the establishment of three steel factories, heavy machinery industry, etc. Pandit Govind Ballabh Pant, the present Home Minister, may have the requisite calibre and understanding, but it is a moot point whether his delicate health would permit him to devote full time for handling this difficult portfolio. If and when he takes over this responsibility, it will be only for a short period.

T.T.K.'s Ministry Expands

In September 1946, that is nearly ten years ago, when the Congress formed the interim Ministry at the Centre, Mr. Nehru, in his capacity as the Prime Minister, paid a visit to all the Ministries then located in the Secretariat. At that time, the first question he asked the Joint Secretaries or Secretaries who received him, was invariably as to how much the concerned Ministry had expanded during the wartime. The same question was repeated when he visited the then Ministry of Commerce and the reply that was given to him then was that the Ministry had not expanded much, the only expansion being the Import and Export Control Departments.

Perhaps, the present Ministry of Commerce and Industry has now begun to expand with a vengeance. Where there was formerly one Minister, there are at present four Ministers with all the paraphernalia of personal and private secretaries. Where there were formerly two Joint Secretaries, there are at present six. Of the number of Deputy Secretaries or Under-Secretaries, it has become extremely difficult to keep count of them, much less to remember their names and the work they are doing. But all this inflation in the size of the Ministry merely reflects the nature of expanding work it is now being called upon to handle.

Some indications of this were given at the latest Press Conference of Mr. T. T. Krishnamachari, Minister for Commerce and Industry. Over the next five years his Ministry, he stated, will have to discharge three important functions to implement the second Five-year Plan, namely, (i) co-ordinated development of heavy industries, which will lay the basis for further industrialisation; (ii) provision of adequate supplies of consumer goods, which will be required as the standard of living increases, and (iii) securing essential imports and promoting exports to earn the foreign exchange needed for the Plan.

Diversification of Trade

Through a series of bilateral trade agreements, the Government of India has been able to bring about a certain amount of trade diversification, particularly with the Soviet nation. The Minister revealed that the supply position of steel was already showing signs of improvement and that the arrivals of steel from abroad during the current year would come to the high figure of 1.5 million tons. Arrangements were also made, he said, to import about 500,000 tons of cement to supplement the internal production. He stated that, in order to co-ordinate steel production and imports, he would be shortly constituting a Steel Board. He reported that the plans for the establishment of heavy machinery industries for producing plants for the steel, sugar and cement industries had reached an advanced stage and that the whole programme of work was being implemented on a ten-year basis, so that, after this period, the country may be in a position to manufacture its own machinery to the extent of 60 to 70 per cent.

The extent of trade diversification as revealed by the Minister presents a heartening picture. He revealed that the Indo-Russian trade agreement was working very satisfactorily. Russia has exported 86,000 tons of steel and about Rs. 8 to Rs. 10 crores worth of drills, rigs and equipment for the Bhilai Steel Plant. In turn, the U.S.S.R. has used its rupee earnings to buy hides and skins, jute goods, shellac, coffee, pepper, raw wool and tea. Russia, he said, had stopped making further purchases in the country for the time being, as it has no more money available in this country to buy Indian goods. He added that India would import steel and other equipment from Russia to the extent of Rs. 90 to Rs. 100 crores during the next three years. In addition, India was exploring the possibilities of Russian help for setting up drugs and dyestuffs industries.

Realism in Policy

All these indicate considerable realism in Government's economic policy. This week, the Prime Minister declared before a gathering of Congress workers at Narora (Uttar Pradesh) that they should not overemphasise the beneficial aspects of the cottage industries. While he is reported to have conceded that the advancement of cottage industries was desirable as they ensured larger scope for employment than big industries did at present or might provide in the near future, he is also said to have made the remark that larger employment should not be sought at the cost of production. The decline in production that would result from restrictions on large-scale industries might engender inflation, jeopardising the second Plan, which was based on considerable deficit financing. The situation, he said, called for a delicate balance between encouraging the cottage industries, on the one hand, and increased production, on the other, to ward off inflation. These observations of the Prime Minister must be considered very significant, inasmuch as he attended this political meeting almost immediately after the Cabinet discussions on the future textile policy.

It is well known that the Prime Minister, being a student of science, is well aware of the importance of technology in the modern world. At the time of initiating the debate in Parliament the other day on the second Plan, he made an important reference to the necessity of India keeping itself abreast of the latest scientific and technological developments. He said: "If India is to advance, India must advance in science and technology. ... When we talk of planning, more so, when we talk bf anything else, we have to think in technological terms, because it is this growth of science and technology that has enabled man to produce wealth which nobody could ever dream of. It is that which has made other countries wealthy and prosperous, and it is only through the growth of this technological process that we shall grow and become a prosperous and wealthy nation; there is no other way.". It is only these realisations that are responsible for the Government of India coming to a sensible decision on the future of textile industry, according to which the mills are permitted to have a specific number of automatic looms and install more spindles. The Government could have, of course, been more liberal, but it must be conceded that even this is a great advance from its earlier stand.

Fertilisers

The Government of India has announced an increase of Rs. 15 per ton in the pool issue prices of sulphate of ammonia supplied to industrial consumers and to tea and coffee plantations. The industrial consumers of ammonium sulphate will henceforth have to pay Rs. 340 per ton as against Rs. 325 hitherto. The price for coffee and tea plantations will now be Rs. 335 per ton as against Rs. 320. All will have to bear the extra cost on actual rail freight, if that exceeds Rs. 35 per ton. The retail price for plantations, however, would not exceed Rs. 365 per ton.

The pool issue price will continue to be Rs. 315 per ton in respect of purchases made by the State Governments. They will not, however, be permitted to charge a margin exceeding Rs. 30 per ton for distribution to cultivators in villages. They have been asked to open a number of retail depots in such a manner as to ensure that cultivators do not have to travel more than five miles for receiving their requirements.

The new prices came into effect from the 18th inst. and will remain in force up to 31st March 1957. The upward revision of prices has been necessitated, we are told, by the increase in procurement cost.

PRESTIGE AND OIL POLITICS

INVESTMENT SOLD FOR EARNING DOLLARS

From Our Own Correspondent

LONDON, 16*th June*

WHY has the proposed Trinidad Oil deal caused such a rumpus of excitement in this country and particularly in the House of Commons? So far as the City is concerned, it did not take long for the political and prestige feelings involved to give place entirely to solid satisfaction at the purely financial aspects of the deal. These are that the American Texas Oil Company is prepared to pay £63 million, or $180 million for the ordinary shares of the British-owned Trinidad Oil Company. The shareholders of the British Company get double the former market value of their investments, the coffers of the sterling area gain gold to the tune of $180 million and Britain gains a new refinery at Southampton. As soon as the take-over bid of the American Company became known, the price of the Trinidad shares soared rapidly and, in spite of the political repercussions, have crept to a point not far from, though not quite as high as, the proposed take-over price.

LONDON LETTER

But why then, if financially, in both a private and public sense, the deal is so favourable, has there been so much opposition? There is no doubt that the basis of the feeling has been that Britain is selling part of its heritage for, in biblical terms, a mess of pottage. The fact that apologists in this country for the transfer as well as advocates of it in Trinidad point out that Britain cannot afford the necessary capital investment and the Commonwealth must be prepared to accept it wherever it can get it, only strengthens this feeling. But, before dismissing such a view as mere sentimentalism, let one look at the actual physical aspects of the transaction. The Trinidad Company produces half the oil in Trinidad and supplies this country from that source with about one half of 1 per cent. of its oil requirements. But the refineries in Trinidad take Venezuela oil and now refine more imported petroleum than is produced in the Island. In this country, the Company has a half share in the important Regent distribution network which supplies one-tenth of domestic requirements. The take-over will give the American Company additional refining capacity in Trinidad, it will give it an increased interest in distribution in Canada and a controlling interest in the British Regent Distributive Company in which it already has a part share. The political opposition have no doubt put their finger on the point when they say that the take-over is really the means to strengthen American distributive oil interests in this country.

But does this matter? The internal distributive oil mechanism is already largely under the control of American interests but that is in the way of ordinary business and does not take control of this vital industry domestically away from the Government if the Government should ever wish to intervene. Power in oil lies in the source of supply and in the points of refining. The source of supply in this case is of very little interest to the U.K. in volume: not a large enough interest to weigh. On the other hand, the building of the Southampton Refinery, which it is doubtful whether the Trinidad Company could have financed by itself, will increase the sinews of oil power under the control of the British Government.

The remaining issue is the effect of the transaction on Trinidad itself, but that is a matter which the Government of Trinidad has weighed up with full allowance for the projected new Dominion or Caribbean Confederation. There are two obvious dangers of American acquisition of the principal Trinidad industry. The first that the industry might be regarded by the acquiring Company as unimportant and be let to languish. The second that, in multi-racial Trinidad, the American colour bar would bring strife to a civilised community. The British Government whose sanction in this matter is that of authorising a currency exchange transaction, have, in consultation with the Government of Trinidad, imposed conditions that production in Trinidad must be increased as far as possible and that racial discrimination will not be tolerated. Provided these aspects of the matter, fundamental to the life and society of Trinidad, are respected, there is no economic reason why the transfer should be regarded with disfavour.—*All Rights Reserved.*

DELHI LETTER

(Concluded from previous page)

The increase in pool issue prices of ammonium sulphate is illtimed, in that it will raise the cost of production of the crops mentioned above and is bound to work harsh on coffee and tea plantations which have been perforce required to bear a number of other burdens under the various laws applicable to them. It may also act adversely on the consumption of artificial fertilisers, which has gone up rather markedly since 1952 as will be seen from the table below:

Year	*Consumption of Ammonium sulphate in tons*
1951	282,400
1952	276,340
1953	426,600
1954	453,600
1955	552,400
1956 (estimates)	625,000

The estimated consumption of the fertiliser will be double the quantity consumed in 1952. It is expected to go up to 1,850,000 tons by 1960-61. These expectations are likely to materialise only under certain conditions, namely, a reduction in the price of the fertiliser, its ready availability in adequate quantities and at the appropriate time. The latter condition can be fulfilled only if there are proper marketing arrangements and prompt provision of transport facilities.

BRITAIN BATTLES WITH INFLATION

RESULTS SLOW BUT STEADY

ALL the sectors of British economy, excepting, of course, labour, would appear to be responding to the anti-inflationary measures initiated by the British Chancellor of the Exchequer, Mr. Harold Macmillan. But the trouble is that this response has not been fast enough and far enough to win the battle of inflation. This is evident from the remarks made by the Chancellor himself at the luncheon of the Press Association, London, last week. He said that the "modest but unmistakable gains in the battle of inflation are encouraging not merely because of the limited ground won, but because it tends to confirm our judgment of the general strategy that we have employed."

The Chancellor appears to be sanguine that things are beginning to work in the right direction. Thus, consumer demand has been slackening. Up to April this year, retail sales have been one per cent. below the last, and the output of consumer durables has fallen substantially. Government expenditure is being cut back, productive investment and the output of goods continue to rise, but less precipitately than before. Above all, exports have been increasing steadily, and the preliminary trade figures released by the Board of Trade reveal that exports in May resulted in record earnings. With the month's earnings, the average value of all exports in the first five months of the year has risen by 6¼ per cent. Exports to the dollar area in the same period have risen by a third. All these indicate that Britain has moved away from the brink of an economic crisis. But British official circles are conscious that there is no room for complacency. The Chancellor of the Exchequer, for instance, commented on the record level of exports in May thus: "While it would be a mistake to overlook such effects as the anti-inflation campaign is having or to miss their significance as pointers to the correct judgment of policy, it would be an even more dangerous mistake to build too much on these figures. It is always risky to assume that one month's figures are reliable evidence of a long-term trend. But, even supposing that the improvement lasts, it is no more than we need very urgently in order to cure the persistent weaknesses that have handicapped our progress ever since the war."

Smallness of Reserves

The main difficulty facing Britain is the smallness of the reserves which are inadequate to absorb any adverse swings in balance of payments. There is, in fact, a long way to go before the deficit of just over £100 million last year is converted into a surplus of between £300 million and £400 million, which the country needs to meet its debts and to finance overseas investment. It needs a surplus of this size not for a month or two, but over a fairly long period, if not permanently. Continued surpluses are only possible by building an effective export market. Britain has, of course, proved that it can do it. The fact that in May its exports reached a record demonstrates that its goods have not been priced out of the world markets. Its industries enjoy the benefit of exceptionally cheap coal and steel. World trade had gone up by 10 per cent. last year and it is likely to move up further this year. Britain may, therefore, be expected to hold its own. This pleasant thought, however, should be tempered by a certain amount of caution. This is clear from the observations of the Chancellor who said: "We have to face the prospect of increasing foreign competition. For instance, in the first four months of this year, German exports rose twice as fast as ours compared with a year before. Moreover, the experience of recent months shows that, in addition to American, German, and Japanese competition, we must now begin to take serious account of the exporting efforts of the industrial countries in the Soviet orbit."

Inflationary conditions at home have been mainly responsible for weakening British competitive ability in world markets. In the country's battle against inflation, success has been obstructed by a continued rise in wages and production costs. To quote Mr. Macmillan again: "An analysis of our economic affairs in recent years shows that this has been the most persistent obstacle to our progress against inflation. Though now our various fiscal, monetary and other measures have enabled us to make a little headway, this will certainly be stopped, if the rising tendency of our labour costs and prices continues." He added that further rises in industrial production costs, whether through higher wages outrunning increased production or from any other cause, could put at risk all that the country had gained since the war. He stressed that progress had all along been handicapped by the constant tendency of wages to run ahead of output and drove up prices. He warned that, if the country went ahead too fast with money incomes, Britain would price itself out of export markets. There are, however, no indications that labour has realised the importance to the country's economy of moderating its demand for a further increase in wages.

Nevertheless, there seems to be a growing belief that prices in the U.K. are likely to remain more stable this year than last. According to Sir Anthony Eden, Prime Minister of Britain, prices may not go up by more than two or three points this year, as against a rise of six or seven points last year. These estimates take into account all the increases that can be foreseen as a result of the Government's measures already taken or initiated, namely, the ending of the subsidy on bread, the halving of the milk subsidy and rises due to wage increases in the nationalised industries. Sir Anthony, therefore, believes that "Britain has reached the point where there is a real chance of breaking the vicious spiral of rising prices and wages." He wants the earnings of industry, both wages and profits, to expand but they cannot, he points out, expand faster than production with any benefit to anybody.

INTERNATIONAL FINANCE CORPORATION

The prospects for bringing into existence the International Finance Corporation, the new affiliate of the World Bank, have further improved, now that action to join the Corporation has been completed in 25 countries. The Corporation can come into being only when a minimum of 30 countries have joined with subscriptions amounting to at least $75 million. The capital subscriptions of 25 countries now amount to $64.5 million. The five countries which have completed action since April last are El Salvador, Jordan, Norway, Pakistan, and Sweden.

Some 27 other countries have expressed their intention to join and several of these have completed the necessary legislative action to enable them to do so. Their adherence to the Corporation is expected in the near future.

Last year, India initiated legislative action to become a member of the Corporation. Its contribution to share capital amounts to Rs. 2.11 crores ($4.43 million) and the payment towards this was made in November last.

The Corporation is intended to serve the purpose of furthering economic development by encouraging the growth of private enterprise in member-countries belonging to the less developed areas.

AMENDMENTS TO RESERVE BANK ACT

SOME REFLECTIONS

By Dr. K. K. Sharma

A BILL was recently introduced in the Lok Sabha to grant additional powers to the Reserve Bank of India to regulate credit extension by other banks and to check any inflationary trends that might threaten to develop in the country due to deficit financing in the second Five-year Plan. There are several factors which lead to a rise in money supply in the country. First, an increase in the monetised sector must lead to a rise in money supply and, as the effects of economic planning become visible, production, trade, internal and foreign, employment, incomes and living standards must rise. Secondly, some spurt in prices is inevitable to augment production and a rising price level requires an increase in money supply. Thirdly, the second Five-year Plan envisages an annual increase of five per cent. in production which ought to warrant a rise in money supply. Finally, a rise in *per capita* income must lead to a rise in consumption and living standards of the masses.

All these factors will bring about a rise in money supply. And money supply here both bank money in the form of deposits, created and made in cash, and legal tender money circulation or note circulation.

The process of planned economic development necessarily implies a certain amount of credit creation and a consequent increase in the note issue. The Reserve Bank of India must, therefore, be enabled to increase the money supply in the country with a view to enable the successful impiementation of the second Five-year Plan. The proposed amendment to section 33 of the Reserve Bank of India Act is directed with this object in view.

Section 33 (2) of the Reserve Bank of India Act provides that "of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or foreign securities: provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value." This means that the proportion of gold and foreign assets to the total note circulation should be forty.

Total Assets

According to the statement of affairs of the Reserve Bank of India for the week ended 30th March 1956, the total assets of the Department were Rs. 1,478,41,10,000. Gold and foreign securities were worth Rs. 696,48,31,000 or 47.107 per cent.

In 1951-52, the average of Friday figure of notes in circulation came to Rs. 1,163.21 crores and the total of the Issue Department came to Rs. 1,217.62 crores. The total assets rose from this figure to Rs. 1,478.41 crores by the end of March 1956. This means that the assets rose by Rs. 261 crores or by about 21 per cent. during the first Plan period. The notes in circulation rose from about Rs. 1,190 crores in 1951-52 to about Rs. 1,467 crores on 30th March 1956 or by 23 per cent. Thus, as against a rise in production of about 18 per cent. in the national income during the first Plan period, the note circulation rose by 23 per cent.

In the second Plan period, production is expected to rise by 25 per cent. The pace of rise in the second Plan will be 33 per cent. higher than in the first Plan. Roughly to maintain a moderate rise in price level, note circulation may rise by about 30 per cent. It may go up to about Rs. 1,900 to Rs. 2,000 crores by the end of March 1961, that is, the end of the second Plan.

According to the present provision of the Reserve Bank of India Act, 40 per cent. of the total assets must be in gold or foreign securities. That means that, if the total of the Issue Department rises to Rs. 2,400 crores, the minimum percentage reserve must be Rs. 960 crores in gold or foreign securities. As pointed out above, gold and foreign securities on 30th March 1956 amounted to about Rs. 697 crores. That means that, under the existing percentage reserve system, a large amount of foreign assets must be immobilised which the country can ill-afford. In fact, the demand for foreign exchange in the second Five-year Plan will be near about Rs. 1,600 to Rs. 2,000 crores. The existing percentage reserve system, will, therefore, lock up a large part of our foreign assets.

Under the proposed amendment to section 33(2) of the Reserve Bank of India Act, there is to be a minimum holding of Rs. 400 crores in foreign securities and Rs. 115 crores in gold in the Issue Department of the Reserve Bank of India. The fixed minimum reserve method will lead to greater elasticity in currency and credit which will become indispensable in the second Five-year Plan period, when, for the various reasons discussed above, a rise in note circulation to near about Rs. 2,000 crores at least will become indispensable.

It may be recalled in this connection that, in England, under the Currency and Bank Notes Act of 1939, restrictions are imposed on the Issue Department. It is allowed to issue notes to the value, at the official market price, of the gold it holds; but the Bank in fact holds practically no gold and this provision is ineffective. The Bank is allowed to issue notes without gold backing to the value of £300 millions, or whatever sum may be agreed upon by the Treasury on application by the Bank. Of course, Treasury permission to raise the fiduciary issue has to be notified to Parliament and in January 1952, the fiduciary issue limit was £1,450 millions.

Section 33(4) of the Reserve Bank of India Act provides that gold coin and gold bullion shall be valued at 8.47512 grains of fine gold per rupee. This means that the existing gold is valued at the statutory price of Rs. 21-3-10 per tola. The world price of gold is Rs. 166 per oz. which means about Rs. 75 per tola. This section is being amended to revalue gold at the rate agreed to by the International Monetary Fund. At the international price of gold, the existing gold now shown at Rs. 44 crores is really worth about Rs. 160 crores.

Further, under section 37 of the Act, the assets requirements of the Issue Department of the Reserve Bank may be suspended initially for a period of 30 days only which may subsequently be extended of and on by periods not exceeding 15 days at a time. The amended provision seeks to permit such suspension initially for a period of six months which may be extended from time to time by periods not exceeding three months at a time.

Tax Provision

The existing provision regarding payment of tax to Government when the holding of the assets of the Issue Department falls below the minimum prescribed by sub-section (2) of section 33 is being deleted as the nationalisation of the Bank has secured the entire surplus profit of the Bank for the Government and the implication is that the provision relating to the payment of the penal tax has lost its significance.

This provision should, however, be retained. The surplus profit of the Bank is, of course, payable to the Government; but, according to accountancy principles, the net profit is arrived at after deducting the tax and deletion of the provision will inflate the profits and hide the real state of affairs from the public.

Deficit financing will increase bank reserves and it will increase the power of banks to create credit. The Bill, therefore, seeks to empower the Reserve Bank to control bank credit by varying the reserve requirements. The present provision is that Scheduled banks have to maintain 5 per cent. of demand liabilities and 2 per cent. of time liabilities free of interest with the Reserve Bank. The amendment empowers the Reserve Bank to vary reserve requirements of Scheduled banks within the range of 5 to 20 per cent. in respect of demand liabilities and 2 to 8 per cent. in respect of time liabilities and to require them to maintain additional reserves in respect of any increase in deposits with them after a specified date and the additional reserves required to be maintained may be up to 100 per cent. of such increase. The overall reserves so to be maintained should not, however, exceed 20 per cent. of demand liabilities and 8 per cent. of time liabilities.

The aforesaid percentages are the outer limits and within them the Reserve Bank is being authorised to prescribe ratios in such a manner as to immobilise the maximum amount of deposits necessary, without, at the same time, adversely affecting such banks as have not participated in the rise in deposits. The amendment also provides for payment of interest to Scheduled banks at the discretion of the Reserve Bank. Such interest is not, however, payable if the prescribed minimum balance is not maintained.

A similar provision exists in the Federal Reserve Bank Act. The requirements in effect in late 1953 in the Federal Reserve Banking system are:—

	Range	In effect
Demand deposits:		
Central reserve city banks ...	13 to 26	22
Reserve city banks	10 to 20	19
Country banks	7 to 14	13
Time deposits for all member-banks	3 to 6	6

It may be pointed out that the American system which treats different banks in different manner is more suitable than the proposed amendment to the Indian Act. The Reserve Bank will, of course, take into consideration the extent of rise in deposits, while fixing these ratios, but it would be proper to lay down some principles, according to which the ratios would be fixed by the Reserve Bank of India. There can be some such criteria as are laid down with regard to capital standards for different banks in the country.

So far, the Reserve Bank of India was not empowered to control credit through the method of varying the cash reserve ratios of the banks. It has now become necessary to give this power to the Reserve Bank, because of the growing deposits of banks in our country. The importance of this method in respect of credit control grows with the growth of bank money in relation to currency in circulation.

In 1950-51, the total money supply with the public in our country was Rs. 2,006 crores, of which deposit money (demand deposits) came to Rs. 667 crores. The corresponding figures for 1954-55 are Rs. 1,981 crores and Rs. 669 crores, respectively.

The total deposits of Scheduled banks in India rose from Rs. 918 crores in 1951 to Rs. 996 crores in 1954. The deposits of Non-scheduled banks rose from Rs. 26 crores to Rs. 67 crores during the same period. The total went up from Rs. 944 crores to Rs. 1,063 crores during the period. The note circulation went up from Rs. 1,190 crores in 1951-52 to Rs. 1,196 crores in 1954-55. Thus the supply of bank-money is fast catching up with that of legal tender money. Hence the importance of arming the Reserve Bank of India with this new method of credit control in the second Five-year Plan, with particular reference in the context of deficit financing, is great.

The Federal Reserve System: Purposes and Functions, a publication of the Federal Reserve Board, Washington, 1954, describes the effects of changes in reserve requirements thus: "Because changes in reserve requirements affect at the same time and to the same extent all member-banks subject to the action, they are a potent instrument. Their immediate incidence . . . is upon the operating reserves and liquidity positions of the affected banks. Increasing or decreasing the available reserves and liquidity of banks tends to find prompt response in the rate of bank lending and investing, in the tone of the whole credit market, and in the rate of monetary expansion. The fact that the multiplying power of bank reserves is affected exerts either a dampening or an accelerating influence on the expansion of bank credit and money."

Time and Demand Deposits

The distinction between time deposits and demand deposits is mainly due to the limitation of the right of the public to exchange time deposits for cash. According to Sayers, the cash reserve ratios were based on the protection of the public against banking illiquidity rather than on the significance of the cash ratio for central banking control. According to him, the lower ratio to be held against time deposits than against demand deposits may be a source of embarrassment to the efficiency of central bank control. He writes that "despite much discussion on this point, the confusion between legal regulation of cash reserves to protect the public against banking illiquidity and legal regulation of cash reserves to give control to the Central Bank has continued to appear in new central bank charters (as, for example, in those of New Zealand, the Argentine, and India). For purposes of central bank control, one flat rate is highly desirable. Open market operations may then be relied upon to cause a predictable change in the aggregate supply of bank deposits in the country." (*Modern Banking*, pages 127 and 128, Third Edition.)

In America, member-banks may not allow their cash reserve ratios to fall below the legal minima. They may, however, raise the reserves above the legal minima. Of course, the profit motive may be relied upon to prevent the maintenance of excess reserves. Exceptions will occur only when the earning assets available for banks are not sufficiently attractive. In the nineteen-thirties in the U.S.A., gold influx was so great that the supply of bank cash greatly increased. The demand for commercial bank loans was low. As a result of the banking crisis, the banks were unwilling to touch whole classes of assets. They had purchased enormous amounts of Government securities on which the yield was very low. They were, therefore, unwilling to stuff their portfolios with Government securities *ad infinitum* and preferred to allow their cash ratios to rise far above the old legal minimum The surplus reserves of the member-banks rose so high that the Reserve Banking system could not bring any contractionist pressure to bear by selling securities. The security reserve might be exhausted before member-bank reserves had been brought down to the legal minima. With boom conditions again, the system could not check the enormous amount of bank credit as the demand for it developed. It was to meet this extraordinary position that in 1949 the fixed ratios of the earlier period were replaced by the variable reserve ratios. The system has been able to prevent undesirable expansion of bank credit by raising the ratios. A rise in the required ratio, by immobilising the former excess cash, is equivalent to a destruction of cash by open market security sales. In the reverse case, a fall in required ratios releases cash from legal requirement and adds to excess reserves. The result is that credit expansion by banks is encouraged.

Reserve Ratio

It is this variable reserve ratio system that is being adopted in India, with the Reserve Bank of India being armed with the necessary powers to exercise credit control to prevent inflationary pressures from developing as a result of deficit financing. The public debt of the country has risen considerably since the second World War. It has gone up from Rs. 1,200 crores to about Rs. 3,300 crores since the beginning of World War II. It is likely to go up as a result of the success of loans that may be floated in the second Five-year Plan period. Thus, the Reserve Bank of India will have scope to pursue effectively open market operations policy along with the power to vary the cash reserve ratios of banks.

One word more about the variable reserve ratio provisions which are being introduced in the Reserve Bank of India Act. The proposed ratios are 5 to 20 per cent. in the case of demand liabilities and 2 to 8 per cent. in respect of time liabilities. In the U.S.A. the Board's Regulation D was amended in 1954 so as to reduce the reserves required to be maintained by member-banks with Federal Reserve Banks. The percentage applicable on time deposits for all member-banks was reduced from 6 to 5 per cent. and the percentages on net demand deposits were reduced from 22 to 20 per cent. for central reserve city banks, from 19 to 18 per cent. for reserve city banks, and from 13 to 12 per cent. for all other member-banks. (Source: Page 50 of the *Forty-first Annual Report of the Board of Governors of the Federal Reserve System*, 1954.) The proposed maxima in the Indian Bill seem to be higher than in the U.S.A. prevailing at the present time. The statutory maxima for time deposits should be 5 per cent. as in the United States, while those for demand deposits can be fixed within 20 per cent. for different banks from time to time.

With regard to the effect of changes in reserve requirements, it may be said that such changes do not directly alter the total of reserves but they do change the proportion of bank deposits that must be held as reserves with the Reserve Bank of India. Hence changes in reserve requirements affect the liquidity position of member-banks and consequently the amount available for lending or investing. These changes also affect the rate of multiple expansion of deposits for the entire banking system. As explained in *The Federal Reserve System: Purposes and Functions*, a publication of the Federal Reserve Board: "On a 15 per cent. reserve requirement against demand deposits, $100 of reserves will support a deposit volume of $666 . . . and on a 10 per cent. basis it will support $1,000 of deposits.

Thus changes in reserve requirements are a powerful instrument for influencing the volume of bank credit and money. It may, however, be pointed out that this instrument of credit policy is not adapted to day-to-day changes in banking and monetary conditions. Even small changes in reserve requirements of one or two percentage points result in large changes in the available reserves and liquidity positions of member-banks. Frequent changes in requirements would be disturbing to member-banks and to the credit market. Hence this method of credit control is usually employed only when large-scale changes in the country's available bank reserves are necessary.

The Local Boards are also to be abolished as a result of the proposed amendment. Another change seeks to empower the Reserve Bank of India to make loans and advances from the National Agricultural Credit (long-term operations) Fund recently established as a result of the recommendations of the Rural Credit Survey Committee. Such loans and advances include medium-term loans to State Co-operative Banks for agricultural purposes. These banks will be able to lend money to small and medium cultivators for such purposes as are allied to or will assist agricultural activities, such as purchase of shares in co-operative societies.

In my opinion, the Reserve Bank of India Act should be changed in fundamental respects to permit of the establishment of regional Reserve Banks on the American model.

India is a vast country whose different regions have different industries and grow different agricultural crops. Their credit and economic problems differ in needs. Regional Federal Reserve Banks should, therefore, be set up in the country, which will be in effective touch with their constituents, subject to the overall control of the Central Board. This aspect must be examined with a view to seeing how far it can be applied in our country.

WORLD WOOL CONSUMPTION

SIZABLE INCREASE RECORDED IN FIRST QUARTER OF CURRENT YEAR

UNLIKE cotton, which is known to be yielding place to the synthetic fibres, wool is apparently able to hold its own. Indeed, world wool consumption is on the increase. Thus, during the first quarter of the year, according to the latest estimates of the Commonwealth Economic Committee, consumption of wool in the world was about 5 per cent. higher than in the previous quarter and 10 per cent. higher than in the corresponding period of 1955. It must, however, be added that the first quarter of the current year is not strictly comparable with the previous quarter, inasmuch as the former had a larger number of working days in all the chief manufacturing countries than the latter period. Even if allowance were made for this fact, consumption in the first quarter of the current year was greater than in the previous quarter. Thus, the daily rate of consumption in the first three months of 1956 increased by a little over four per cent. over the previous three-month period.

An outstanding feature of the quarter under review was the improvement in consumption in the U.S. and Japan which was 11 per cent. higher in each case than in the fourth quarter of 1955. There was a marked rise in France and a lesser improvement in the U.K. but W. Germany and Italy appear to have experienced a slight setback.

The combined figures for the United Kingdom, U.S.A., France, W. Germany, Japan, Italy, Belgium, Australia, the Netherlands, Canada and Sweden show wool consumption in the January-March quarter of this year to have been 474 million lbs. (clean), which was higher than in any quarter of last year and compares with 451 million lbs. in the October-December quarter, which was the highest three-monthly figure during 1955.

The production of wool and hair tops in the eleven major producing countries, it is estimated, increased by about 9 per cent. in the first quarter of 1956, as compared with the previous three months and aggregated 277 million lbs. The largest increase was in the United Kingdom where output rose by 6.3 million lbs. (8 per cent.) to 84 million lbs. In the United States, production expanded by 5.3 million lbs. (16 per cent.) to 39 million lbs. and in France by 4.7 million lbs. (11 per cent.) to 49 million lbs. There was also a 4-million-lb. increase in Japanese output, which rose by 18 per cent. Although figures for tops production in Uruguay are not available, some idea of the trend of output in that country can be obtained from export returns, since the greater part of the production is known to be for export. Preliminary returns indicate that exports in the first quarter of 1956 amounted to some 8½ million lbs. or a shade lower than in the previous three months. As compared with a year ago, total production of tops in January-March showed a rise of 13 per cent. Practically every country recorded an increase, except Sweden, the output of which fell by 15 per cent.

Yarn Output

Aggregate output of woollen and worsted yarn in the eleven major producing countries came to 645 million lbs. in the first quarter of 1956, or only one per cent. higher than in the previous quarter. Most of the reporting countries recorded declines in output, the largest being in W. Germany and Belgium (10 per cent. in each case). There were reductions of 4 per cent. each in French, Australian and Swedish production, with smaller declines in the United Kingdom and the Netherlands. These falls, however, were offset by an estimated rise of 13 per cent. in United States' output from 162 to 183 million lbs. and by smaller increases in Italian and Japanese production.

An important factor which influences the production of woollen fabrics and, therefore, of consumption of raw wool is the state of the export trade. In many Western countries, the wool industry is one of the leading export industries. Thus, in the U.K., this industry has contributed a great deal to the country's export earnings, especially on dollar account. Nevertheless, the U.K. faces, according to the Bradford correspondent of the London *Financial Times*, competition from both Japan and Italy. This competition, it is stated, is regarded as unfair because it is based on "subsidised prices or double pricing." Referring to Italian competition, the correspondent says: "In West Germany, Italian competition is especially strong at prices which appear to be a third of the British and other European cloths. West Germany accounts for about 40 per cent. of Italy's European trade in cloth and Britain 30 per cent. The Italian cloths are cheap woollens and, in this type of trade, the Batley, Morley and Colne valley districts of the West Riding have built an enviable reputation for great skill in producing attractive materials often from the most unpromising raw materials." Competition from behind the Iron Curtain is also stated to be increasing. Thus, Polish cloths are competing with the British in several European countries.

Nor is competition confined to Britain's export markets. Imports into the U.K. have also increased. This means that Britain's woollen industry is faced with conditions which resemble those of its cotton industry. Nevertheless, imports, it is stated, have not reached a level at which the industry as a whole feels impelled to make any protest. Only, in the case of competition from both Japan and Italy, the industry feels that it should be protected by the Government. It is likely to press the Government to expedite the proposed legislation for acquiring powers to deal with dumping.

U.S. TEXTILE INDUSTRY

A notable feature of world textile trends in recent years is the emergence of the U.S. as one of the leading exporters of textiles. Whereas some of the older textile-producing countries like the U.K. find it difficult to export even half the quantity they exported in pre-war years, the U.S. has been able to show a sizable improvement in its export trade. Thus, between 1938 and 1955, U.S. exports of cotton textiles increased from 320 million square yards to 542 million square yards. Between these two years, exports of cloth from the U.K. declined from 1,386 million square yards to 554 million square yards. The U.S. has been able to reach a high level of technical efficiency in textile production through the installation of modern equipment and adoption of advanced technical processes. In this connection, a review of the American textile industry, which forms part of the survey of economic and commercial conditions in the U.S., published by the U.K. Board of Trade in its "Overseas Economic Surveys" series, will be read with interest.

Approximately 8,000 firms, according to the Survey, are engaged in the manufacture of textile products. There have been two major developments in the textile industry since the Second World War. The first is the trend in the cotton industry to move from New England to the south-eastern States. Since 1951, 14,000 cotton and rayon looms have closed down in the New England area while new factories have sprung up in the States of Georgia and North and South Carolina. There are several reasons for this move, the main one being the cost of operation in New England, owing partly to the necessity of modernising mills and to labour costs.

The second development is the great increase in the use of the new artificial fibres as opposed to the older rayon and acetate fibres. Production of these new fibres has increased from 47¼ million linear yards in 1948 to about 296 million linear yards in 1954. There has also been a spectacular rise in the use of nylon, output of which has increased from 32½ million yards in 1948 to some 364 million yards in 1954. As a result of this increase, the relative consumption of both cotton and wool has fallen. Cotton made up 85 per cent. of the total fibre used in 1939; by 1954 the proportion had fallen to about 68 per cent. Wool has also fallen from 9 per cent. of the total fibre used in 1939 to about 8 per cent. in 1954. The trade estimates that by 1975 cotton may provide 53 per cent. of the fibre used, rayon 23 per cent., synthetics 18 per cent. and wool 6 per cent.

While the proportion of cotton in the total fibre used throughout the world has fallen by about 7 per cent. between 1937 and 1954, it has fallen by 17 per cent. in the United States. The proportion of synthetics in the total fibre used throughout the world has increased by about 7 per cent. over the same period whereas in the United States it has increased by 20 per cent. By 1975 the proportion of cotton used in the United States is expected to have fallen by about 32 per cent. compared with 1939 and the proportion of synthetics to have increased by about 38 per cent. Synthetic fibres are being increasingly used in the manufacture of tyres. This is a trend that is likely to continue and it is thought that shortly there may be no cotton used in the manufacture of tyres.

Production of cotton piecegoods has remained fairly constant over the past five years at between 9,500 million and 10,200 million linear yards per annum. Within this total the yardage of printed fabrics rose from about 3,650 million to 3,900 million between 1950 and 1954 while the yardage of narrow sheetings and allied coarse and medium yarn fabrics fell from about 2,700 million to 2,500 million. The number of spindles in the cotton industry has remained constant at approximately 22 million. Over half of the cotton mills are now situated in Carolina and in Georgia, about 15 per cent. are in New England and another 15 per cent. in the New York, New Jersey, Pennsylvania area.

Production of rayon broad woven fabrics suffered a fall in 1953 of some 500 million linear yards from the peak year of 1950 when production was 2,406 million linear yards. Production in 1954 was lower still at about 1,625 million yards. The most important section of the rayon industry is that engaged in 100 per cent. filament, rayon and/or acetate fabrics, though output has declined from 1,600 million linear yards in 1950 to about 850 million in 1954. Following this in importance, with somewhat less than one-half of the present output of filament fabrics, is 100 per cent. spun rayon and/or acetate fabrics. The balance of the total is made up of mixtures of filament and spun rayon and acetate, pile, upholstery and tie fabrics and various other specialised manufactures. Output of rayon and acetate filament yarn in 1954 was 707 million lbs. and of staple and tow 379 million lbs., compared with 887 and 310 million lbs. respectively in 1953.

Manufactures of woollen and worsted fabrics have declined steadily since 1946, in which year 603 million yards were produced. In 1954 this figure had fallen to 338 million yards and the decline seems likely to continue. The proportion of woollen fabrics to worsted was, in 1954, 196 million yards to 104 million yards and this proportion seems to be more or less constant. Although half of the woollen and worsted mills are still located in New England, since 1951, some 9,500 woollen and worsted looms have closed down in that area which has always been the heart of the textile industry. The New England States are seeking new industries to compensate for the loss of employment caused by the reduction in textile activity. Apart from the transfers of operations to the South referred to above, another cause for the reduction in wool textile activity is the use of synthetics for summer suits instead of tropical worsted which, although it is probably still the most satisfactory cloth, is more expensive.

The yardage of 100 per cent. nylon broad woven fabrics manufactured in the United States has increased from 32½ million yards in 1948 to about 365 million yards in 1954. This increase has been followed by other and newer man-made fibres that have passed the period of testing and have now reached a point where they are receiving public approval. It is likely that their increasing rate of production, particularly of blends with other fibres, will continue. Estimated production of nylon in 1953 was 160 million lbs. and "Dacron" ("Terylene") 8 million lbs. Output of "Dacron" in particular doubtless rose substantially in 1954.

JAPANESE MILLS

Nearly all Indian visitors to Japan have been struck by the rapid recovery of that country after the ravages of the last war, and, more particularly, by the progress of that country's textile industry. A recent Indian visitor to Japan was Mr. Babulal Bubna, Director, Hind Mills Ltd., who too has been impressed by productivity levels in that country. Summing up his impressions, Mr. Bubna says:

"The textile industry in Japan is composed of three groups, the large enterprise (generally known as the 'Big Ten'), the medium and the small enterprises. The wages and conditions vary considerably according to the type of the mill, with the 'big ten' mills having much better wages and conditions. After the war, Japan had a textile industry composed of little more than two million spindles as most of it had either been destroyed or dismantled during the war years. At present, however, there are many modern mills containing every up to date technical development. It will be realised that the capital required for the re-establishment of the textile industry is so great that it was impossible to meet the cost out of the reserves. Large sums were, therefore, borrowed and the industry now carries a heavy burden of debt, having to pay 9½ per cent. interest on an average.

"Generally speaking, the working conditions in Japanese mills are of the European standards. At present, there are about seven million spindles, out of which five million spindles had been installed after the war and the lay-out of these new mills is excellent. The wages of the textile worker in Japan reveal a rather surprising uniformity. In all larger mills owned by the Big Ten, wages are at their highest, whilst at the medium sized mills they are lower. On an average, wages are 7,000 yen per month. The work-load per worker in Japan is far more than in India, one worker attending to 60 looms and a piecer attending to 2,000 spindles. One remarkable feature is that the workers, who are usually girls, are all very young, the average age being 21, and the period for which they work being not more than five years. Males are found only in the supervisory grades and their average wage is 15,000 yen per month. The textile industry in that country has made rapid progress and it can compete with any other textile manufacturing country because of the modern machinery and rationalised labour."

STAIN-REPELLENT COTTON FABRICS

Cotton fabrics incorporating a new stain- and water-repellent finish are being shown in London by the directors of a British firm who are about to begin a 50,000-mile world tour to introduce the fabrics to the export market.

In a demonstration, ink, tomato sauce, sherry, and other heavy-staining liquids were poured on the treated cotton fabric. When water was sponged over it, the stains disappeared, and the fabric, when shaken, dried immediately. The originators of the process claim that the fabric stands up well to any kind of hard laundering treatment. It is expected that the cottons will be available for the British as well as the export market by the end of the year.

SUGGESTION FOR CURTAILING IMPORTS OF CLOTH FROM JAPAN

SHARE OF COMMONWEALTH IN BRITAIN'S TEXTILE EXPORTS

From Our Special Correspondent

MANCHESTER, 12*th June*

NOT for the first time has Mr. Cyril Lord taken it upon himself to whip up the somewhat flagging enthusiasm for the cause in favour of protection against foreign cloth imports. His new and original approach to M.Ps. has caused a good deal of talk. If publicity is what the case requires, Mr. Lord is the man to seek, and usually get, it.

MANCHESTER LETTER

It has been suggested in some quarters that whatever the leading organisations may feel on the subject the rank and file of cotton workers will be behind the agitation. That the Government itself is not impressed was quickly established by the comments of Mr. Low, Minister of State, at the Board of Trade. He shifted not one inch from the Government's recognised position of rejecting any claim for protection.

Mr. Lord's solution is directed mainly against the Japanese, whose imports he suggests should be severely curtailed. In their place he proposes that India and Hong Kong grey cloth should be used, after finishing in this country, for re-shipment to British Colonies in direct competition with Japanese products.

There are details in the case presented by Mr. Lord which do not quite square with the accepted facts. Foreign imports of cotton cloth into this country have fallen to some extent and are not in any case as large as they were in the 1949-51 era. Whatever the future may bring, Japanese exports of cotton goods last year suffered a severe setback and the quantity so far imported into the United Kingdom in the first four months of 1956 has been very much smaller than a year ago.

World Trade

The vital factor which cannot be ignored is that world trade in cotton goods as a whole is steadily shrinking. There is increasing competition for the remaining markets while formerly backward countries are slowly becoming industrialised and beginning to make their own requirements. It is impossible to put back the clock and Lancashire's main task is to retain as much trade as possible in the adverse circumstances prevailing. From this viewpoint it is legitimate to endeavour to maintain our close contacts with Commonwealth markets and if the means are available for securing foreign cloth on advantageous terms for finishing here and re-export this system should be maintained.

There is little or no argument in Lancashire on that score. Where the outcry arises is in the "open-door" policy, providing foreign competitors with the means to send duty-free goods to compete with locally-made products at home. Here, Mr. Lord appears to have no fresh proposals to make other than the complete protection which he called for at last year's Harrogate conference and which the Government has steadfastly refused to provide.

Empire's Share

Local dependence on export trade with British Commonwealth markets has frequently been commented upon in the past. The situation is just as true today as it has been in recent years and the latest developments on the export front show that despite the general decline in cotton cloth shipments abroad the proportion of goods sent to Empire markets has remained constant.

The following table gives the leading Commonwealth customers so far this year as well as recent comparative figures:

(In million square yards)

Destination	1955	First four months of	
		1955	1956
Sierra Leone	14.4	4.9	5.2
Gold Coast	44.2	16.3	7.3
Nigeria	48.1	21.7	9.7
South Africa	55.6	21.4	19.1
Rhodesia and Nyasaland	21.8	9.2	9.1
India	6.5	1.1	3.9
Pakistan	6.6	0.7	3.0
Singapore	4.1	1.3	1.6
Malaya	3.6	1.6	0.9
Ceylon	9.4	3.5	3.2
Australia	99.8	38.8	25.4
New Zealand	37.4	13.8	9.6
Canada	8.4	2.7	3.2
Commonwealth total	409.1	158.8	113.9
World total	554.5	211.3	158.2

Although these markets combine to take nearly three-quarters of Lancashire's overseas turnover there has lately been a slight movement towards increased trade with other areas. The proportion of shipments to Empire countries throughout last year was 73¾ per cent. but in the early part of 1956 this figure has fallen to below 72 per cent. The sharp contraction in business recorded for the West African colonies, Australia and New Zealand is to a large extent responsible for this development.

The ground gained in other directions, moreover, is relatively small, but it is significant that dollar sales to the United States have made some headway this year. Exports to the end of April were 4,759,000 square yards, as against 3,904,000 square yards. Trade with South American countries, which provided a substantial turnover for Lancashire firms before the war, has now been practically eliminated.

In assessing the further drop in export trade in Lancashire cotton textiles, the official returns show that the decline has spread over all types of cloth. The major drop, however, has been in printed fabrics, which account for less than 55,000,000 square yards this year as against 81,000,000 in the same period of 1955.

Imports of Empire cotton into this country last year were slightly lower at 417,500 bales but the proportion of total arrivals improved from 21.4 per cent. to 25.6 per cent. The report of the Empire Cotton Growing Corporation points out that, in 1952, purchases represented 30 per cent. of all imports.

Although Lancashire spinners continued to buy similar total quantities of Empire-grown cotton, the survey records big and important changes in its distribution. Imports from East Africa, for instance, fell from 87,000 bales in 1954 to only 22,000 bales in 1955. Arrivals from Nigeria increased from 142,000 bales to 187,000 bales, the whole of the crop exported being sold to this country.

The big drop in imports and consumption figures for East Africa is a disappointing feature. Lower freight charges to India undoubtedly helped to stimulate the use of the cotton in that country but, as the report says, they do not explain why Continental spinners last year used so much more East African cotton that did Lancashire mills.

Increases on minimum wage rates for 24,000 workers in the narrow fabrics section of the textile industry have been announced by the Joint Industrial Council for the industry. The increases operating from the first week in July, range from 3*s.* 9*d.* to 9*s.* 4*d.* a week. Workers receiving more than the new minimum rates will get from 3*s.* 9*d.* to 5*s.* 7*d.* a week more. Workers in the narrow fabrics industry produce ribbons, braids and tapes.

Latest details of the labour force in the Lancashire cotton industry given by the Cotton Board show that in twelve months the mills have lost nearly 24,000 workers. At the beginning of May this year, the number of workers in the spinning, doubling and weaving sections of the industry had fallen to 251,880 from a total of 275,740 on the comparative date last year. Losses in the weaving section amount to over 13,000 and in spinning to 9,000.

Production of cotton and rayon cloth in the month to 28th April averaged 46,440,000 yards weekly as against 46,340,000 yards in the previous month and 48,320,000 yards in the corresponding month last year. Cotton Board figures of cotton and rayon yarn output in the week ended 26th May show that Whit-week holidays restricted production to 14,090,000 lbs. This compared with 17,650,000 lbs. in the previous week and 18,030,000 lbs. in the corresponding week last year.—*All Rights Reserved.*

EXPORT TRADE

At a recent meeting with representatives of North West export firms in Manchester, Mr. A. R. W. Low, Minister of State at the Board of Trade, said it had been the most successful he had held in Manchester, since he became a Minister, and also the most valuable since he started visiting different parts of the country for discussions on the export situation. Among the questions raised were market restrictions and subsidies and dumping practices on the part of other countries. During a Press Conference, Mr. Low figured in a clash with Mr. Cyril Lord, the Lancashire textile manufacturer, who said he represented a national newspaper.

Mr. Low said that in the past few months the Board of Trade's export services branch had dealt with 33 per cent. more enquiries than at the same time last year. Earlier, he had told exporters the Government was determined to end inflation.

"We cannot be competitive in our price if costs of production are constantly rising, and we cannot be competitive in delivery if the demand at home sucks up too much industrial effort," he said.

INNOVATION AND CHANGES IN U.S. ECONOMY

AUTOMATION REGARDED AS BEGINNING OF SECOND INDUSTRIAL REVOLUTION

By Dr. Henry Tenenbaum

LECTURER IN ECONOMICS, AMERICAN UNIVERSITY, WASHINGTON

THE United States is rightly known as the country of the pioneer. Ever since the first settlers started the penetration of this vast continent, they were faced with the necessity of coping with entirely new problems which an unknown environment imposed upon them. It is this tradition of exploring the unknown, of constant adaptation to new conditions, of finding solutions to problems without precedent, that has decisively shaped the psychology and attitudes of the American people. Even today, at a time when the achievements of the American economy with respect to production and technology are well known, the spirit of pioneering and change is still as much alive as ever before.

The basic idea which guides American economic thinking is that of an expanding economy. The belief in the continuous growth of the economy is not only based on the deep-rooted optimism in the country's future but also on the factual record. In 1940, the country had a gross national product of $100,600 million and a labour force of 55.6 million people. In 1955, the gross national product amounted to more than $387,000 million with a labour force of 65.8 million people. The gross national product for 1965 is estimated at $500,000 million with a working population of 10 million more.

Moreover, the growth of the national product has resulted in the working population sharing increasingly in the country's wealth and prosperity. The personal income of the American people amounted to $96,300 million in 1941. By 1955, it had risen to $303,100 million and it is expected to grow further with the increase of the gross national product. This increase in personal income translates itself into an increase of the purchasing power of the population and assures the manufacturer of a continuously growing market for his products. As a result, the American manufacturer does not hesitate to invest huge amounts in new plants and equipment.

An ever-expanding international trade, an exchange of goods—and ideas—with other countries, is another expression of the spirit of the American economy, which is fully aware of its interdependence with economic developments in other nations.

While the American economy is producing higher incomes for its population, it is also gearing its ingenuity and creative thinking towards the development of an ever-increasing variety of new designs and products. These are diversifying the consumer's choice, making life easier and providing more leisure for the average man and his family. New real and hidden needs in all fields of human activities are thus constantly being created and satisfied.

The dynamic character of the American industry involves a steady abandonment of established production and consumption patterns. Competition being keen, the manufacturer knows that he has to turn out new ideas and products if the company is not to lose its market to competitors who are more eagerly catering to the desire of the consuming public for new and better goods. The constant change in production and consumption patterns has developed a keen awareness in business of the need for continuously exploring new products, designs and ideas and, at the same time, for studying all the factors determining the demand for its products. Today, one of the chief assets of an American corporation is its investment in research and development.

Thus, American business, while carrying out its task for the present market, is steadily planning for and anticipating the future. It is generally admitted that a product which is a great earner today could possibly be a loser tomorrow. Therefore, it is a matter of survival for American business to take changes in its stride and to welcome them.

Anticipation of Risks

It is the anticipation of the risk factors involved in such a dynamic economy that explains, for example, the present trend towards diversification of production and investments in industry. Companies want to diminish their risks by taking advantage of the growth potential of other and particularly new industries. A leading rubber tyre company recently bought a motion picture studio. A food company has become a leader in the electronics field. This trend towards diversification is a dramatic proof that American industry has no tendency to adhere to rigid patterns and the *status quo*.

These changes and innovations create, of course, problems of adjustment for business, labour and the general public. In this respect, it can be said that all elements of the American economy show the highest degree of flexibility. This flexibility reveals itself particularly in the mobility of labour, capital, scientific knowledge, technical skill and managerial "know-how". Migrations of people from all walks of life are a permanent feature of the American scene. The creation of new plants never fails because of difficulties in attracting people to move to new locations. Wage incentives and the creation of community facilities similar to those at home make the move worthwhile.

What applies to labour is also true for capital. Many reasons may be in favour of a company choosing the site of a new plant far away from the chief establishments. The problems and alternatives involved are carefully studied. When the decision is made, all of the obstacles, be they lack of labour, power, transportation, community facilities such as housing, churches, and schools, are sure to be overcome.

Flexibility

Such flexibility and the continuous changes engender, of course, problems of community and business dislocations and the like. However, people are prepared to take these hazards in their stride. None of the inconveniences or even hardships are considered insuperable.

There are some instances of industries suffering from economic dislocation. The latter generally affects individual firms as well as entire communities or regions as a result of the closing down or the slow decline of the town's or area's only industry. However, the solution of problems of depressed areas, as they are called, is being sought by a multitude of means. Through self-help, the organisation of appropriate bodies, such as development corporations in which all responsible elements of a town or area participate, a wider industrial diversification and frequently more employment than before are brought into the area.

Problems of depressed areas are not only being attacked locally but also by State and Federal Governments. State development agencies are functioning throughout all the states. The Federal Government assists by placing Government contracts and defence facilities in those areas, in addition to advising them through the Office for Area Development, specially created for handling such matters within the U.S. Department of Commerce. In his Economic Report to Congress on 24th January, President Eisenhower said that the Office of Area Development has been enlarged so that it could better serve local area needs. The President also recommended a new Area Assistance Programme for aiding communities that have experienced persistent and substantial unemployment.

Problems of maladjustments, or anticipated changes and innovations, are constantly being studied by all segments of the American people. They are discussed in universities, research institutions, business, labour and civic organisations, on radio and television, and, of course, by the Executive Branch of the Government and Congress.

Automation

Thus, the problem of automation is presently being given a great deal of attention. The trend towards automation in industry and business is regarded by leading experts as the beginning of a second industrial revolution in America. The development of automation is going to have a profound impact upon the future society and eco-

OUTLOOK FOR TEA IN CURRENT SEASON

WARNING AGAINST RISING COST OF PRODUCTION

THE season 1955-56 for tea closed on a buoyant note, in refreshing contrast to the gloomy prospect that greeted the opening sales of January with world supply apparently far outstripping demand. The change in the complexion of the market during the closing months of the season was due to (1) the strong demand from internal buyers attracted by the "ridiculously" cheap price of common tea and (2) the withdrawal of restriction by the Government of India on the shipment of teas for London auctions. The latter step provided an additional indication of a possible internal shortage and internal operators were encouraged to replenish their stocks.

By the time the sales for the season came to an end, it became apparent that internal demand had accounted for more than 200 million lbs. of the crop and the U.K. buyers were operating vigorously in the Calcutta auctions as late as May, a rather unusual feature, as the stocks in London had fallen to a low of 100 million lbs. The statistical position at the end of the season, therefore, augured well for the new season and there is a widespread belief that the current season will witness a buoyancy in tea prices. This view is also shared by Messrs. J. Thomas & Co., Ltd., the well-known tea brokers of Calcutta. Referring to the outlook for 1956-57, they observe in their annual report for the season 1955-56: "Good as the prospects appear, however, the buoyancy of the market must as always be conditional on certain factors being favourable." While the control of some of these factors may be in the hands of the industry, they point out, there are others whose fate must rest with nature or other countries.

Low Stocks in U.K.

The first bullish factor which is apparent immediately is the fact that "the record world production manufactured during the season 1955-56 appears to have been fully absorbed by the world markets." Secondly, none of the consuming countries appear to be holding now any excess of tea above their normal requirements. At the end of May, the stocks in the U.K., the world's largest consumer of tea, were 36.5 million lbs. less than those on the corresponding date of 1955. This decline in stocks shows that the U.K. buyers have not been stockpiling, but buying only their immediate needs. The same tendency is visible in most of the other larger consuming countries.

Another important factor on which the fortunes of the Indian tea industry depends is the level of internal consumption. The experience of the previous seasons shows that whenever price declines to an attractive level internal consumption shoots up. Last season, there was an increase of about 30 million lbs. in internal consumption over the previous year and this was the major factor which was responsible for the revival in tea prices during the closing months of the season. Messrs. Thomas & Co. feel that "there is every likelihood that this increased rate of absorption in India will be maintained so long as tea is retailed at an inexpensive price to the Indian consumer." Even otherwise, there is reason to believe that the level of consumption in India will increase with the rise in the general standard of living, as a result of the implementation of the Five-year Plans.

Yet another factor on which the outlook depends is the production of quality teas. The record crops manufactured by all producing countries in 1955 were mainly due, according to Messrs. Thomas & Co., to the "coincidence of favourable growing conditions occurring in all tea-producing areas throughout the world in the same year." They feel that another extraordinary coincidence of climatic conditions favourable for heavy production occurring simultaneously in North and South India and Ceylon is unlikely. As climate in this country appears to go in cycles, and as North-East India has had favourable growing weather for three years out of the last four, there is a fair chance that the climate in 1956-57 will be conducive to quality production, rather than quantity. Moreover, producers have come to realise that larger output of poor quality teas is not a profitable proposition and there are indications that "increases in crop are being tempered by improvements to quality and manufacture."

The last bullish factor on which Messrs. Thomas & Co. base their optimistic estimate for the current season is the likelihood of Russian buying of Indian tea. No indications are at present available of the Russian intentions to purchase, but it is rumoured that it may buy 20 to 30 million lbs. of tea under its barter agreement with India. If this materialises, Messrs. Thomas & Co. feel, a "strong market should result for all types of tea."

Rising Cost

The optimistic estimate of the outlook for the current season by Thomas & Co. is, however, subject to two bearish factors. In fact, they have drawn pointed attention to these two. The first is the danger of rising cost of tea production and the second is the increased competition from other countries, as well as from other beverages. Referring to this, Messrs. Thomas & Co. observe:

"As the cost to the producer continues to mount, so must the cost of tea as a drink to its consuming public, both in India, and all over the world. As new beverages of various kinds are continually being marketed and gaining popularity daily, it is vital that the price of tea does not rise to a level beyond which its present consumers can afford to make it their staple drink. Although the United Kingdom still remains, and is likely to remain for some time, the largest consumer of tea in the world, it does not follow that she will continue to purchase the major portion of her requirements from India if she is able to procure adequate supplies at cheaper prices elsewhere. It is an undeniable fact that tea is being produced in increasing quantities yearly, by other producing countries, at costs considerably below that of India. Although *per capita* consumption in Great Britain is still estimated at approximately 9.3 lbs. per year, this is no longer a matter for complacency, which fact was forcibly stated by Mr. C. A. Crossle, a Director of Lyons, in his speech as Chairman of the Tea Trade Dinner in London, on Friday the 4th of May this year. He informed the members of the trade assembled at this dinner that by the end of 1955 the use of beverages had shown a significant change compared with that of pre-war. Although the population of the country had increased 6½ per cent., tea consumption had grown only 10 per cent., compared with milk's 76 per cent., coffee 100 per cent. and soft drinks 125 per cent.' The implications of this well-informed statement should, to say the least, give us members of the tea industry food for thought."

In this connection, Messrs. Thomas & Co. draw attention to the various imposts by the Central and State Governments in India on the industry which have gone to increase the cost of production of tea. It is difficult to say to what height the price of tea will eventually rise, but there must obviously be a point at which the world's tea consumers will find it too expensive as compared with other beverages.

(*Concluded from previous page*)

nomy. It harbours many potential risks for America's working population. However, the problems that are anticipated from the advent of these mechanical devices do not frighten American business, labour or the Government. In October 1955, extensive hearings were held before a subcommittee of the Joint Congressional Economic Committee where authorities from representative segments of the American economy discussed and analysed the effects of automation on America's future.

Such hearings indicate the concern of the Government and the public over such problems. As a result, possible dislocations and hardships will undoubtedly be anticipated. Moreover, with the co-operation of business, labour, government, and science, ways and means will be found to make the process of adjustment as smooth as possible through retraining workers, social security and other devices.

America thus faces its problems with the same deep faith in the future of the country as it has done since its beginning.

The quantity of tea shipped from Ceylon during March was 29.5 million lbs., as compared with 27.7 million lbs. in February, and resulted in a total of 84.8 million lbs. for the first quarter. There was a change in the pattern of exports during the first quarter of this year, brought about by a marked reduction of exports to Australia (consequent on the dock strike in that country) but the shortfall was made up to some extent by an increase of exports to the Middle East.

SUGARCANE DEVELOPMENT UNDER SECOND PLAN

MAIN EMPHASIS TO BE ON RAISING SUCROSE CONTENT

THE problems relating to sugarcane development are expected to figure prominently at the Conference of Agriculture Ministers to be held at Mussoorie from the 28th to 30th inst. The Conference will consider whether and to what extent the existing target of sugarcane production fixed under the second Five-year Plan can be successfully hit. With this objective in view, the Conference will examine (*a*) the schemes that should be undertaken, in order to step up cane output to the desired level, (*b*) the financial implications of these schemes, and (*c*) the minimum price for cane which the cultivator should get, if he is not to be discouraged from resorting to improved methods of cultivation, such as use of fertilisers, better seeds, pumps, implements, etc.

The deliberations of the Conference and the decisions taken thereof will be awaited with much interest, especially because of the sad experience of sugarcane development during the first Plan period, not only was the production target set in the Plan not realised but even the quantity of cane produced during the last year of the Plan (1955-56) fell short of the figure for the first year (1951-52), as will be seen from the following table:

Year	Production (in terms of million tons *gur*)
1950-51	5.6
1951-52	6.1
1952-53	5.0
1953-54	4.4
1954-55	5.5
1955-56	6.8*
1955-56 (target)	6.3

* Estimated.

The relatively low level of sugarcane production is not encouraging. It indicates that the development schemes have not been implemented in right earnest. The trend must be reversed now, for, otherwise, there is the danger of the agricultural sector of the sugar industry lagging far behind the manufacturing sector. As readers are aware, the consumption of white sugar and *gur* has increased steadily in recent years. During 1954-55, as much as 1.7 million tons of white sugar were consumed, as against 1.07 million tons under conditions of control in 1950-51. The consumption is bound to rise further in the coming years, what with the rise in population and improvement in the standard of living as a result of implementation of the series of development schemes. The Planning Commission has, accordingly, raised the targets for the sugar industry's installed capacity and production to 2.50 million tons and 2.25 million tons, respectively, as against the estimated output of 1.85 million tons in 1955-56.

Supply of Sugarcane

The successful fulfilment of the aforesaid target will depend, to a large extent, on the availability of adequate supplies of sugarcane. Realising this and also the need for providing for higher *gur* consumption, the Planning Commission aims at an additional cane production of 1.3 million tons (in terms of *gur*). the rise envisaged being from 5.8 million tons in 1955-56 to 7.1 million tons in 1960-61. The target will be achieved through schemes for the intensive cultivation of sugarcane which include provision of irrigation facilities, establishment of seed nurseries, distribution of disease-free and improved varieties of seeds, supply of manures and fertilisers, control of pests and diseases, organisation of demonstrations and crop competitions. The main emphasis will, it is said, be on augmenting the sucrose content of sugarcane and ensuring maximum supplies of cane during the crushing season.

Considering the importance attached to improvement of sugarcane cultivation both quantitatively and qualitatively, the part played by the sugarcane research institutes will, indeed, be vital. The institutes should not confine themselves merely to more intensive research work; they must also endeavour to see that the results of research undertaken actually reach the grower on the field without delay. It will not be out of place if a reference is made here to the progress of sugarcane research. The schemes relating to research on cane are implemented by the State Governments, with the usual subsidy of 50 per cent. towards pay and allowances of staff from the Indian Central Sugarcane Committee. The latter has appointed *ad hoc* sub-committees to draw up the programme of sugarcane development, as also *gur* and *khandsari* research, under the second Five-year Plan. It is shortly starting a quarterly journal on cane research and development. Two documentary films, one on cane cultivation and the other on the technique of *gur* manufacture, are under preparation.

The research work on the various problems of cane cultivation done at the Indian Institute of Sugarcane Research, Lucknow, has yielded satisfactory results. The Institute has commenced issue of monthly news letters, containing results of research carried out, for cane research workers. During 1955, about 368 varieties were planted for varietal performance tests. The farm of the Institute, comprising an area of 555 acres, is being gradually levelled and laid out into plots of uniform size. It is proposed to raise the area under cane from 54 acres last year to 95 acres this year, in order to provide a large number of experimental plots for agronomical, mycological and entomological trials. The seeds of promising varieties are multiplied for distribution to cultivators.

Sugarcane Breeding

The Sugarcane Breeding Institute at Coimbatore and its sub-station at Karnal have also been doing useful work. The Institute has carried out successfully the breeding programme, the number of crosses effected during 1955 being 227, a record number. In that year, some important commercial canes were imported from abroad for cross-breeding. Special crosses were also made to induce disease resistance and, to produce soft-rinded chewing canes, 50 new co-canes were released. About 680 seedlings were under trial at the Karnal substation. The Institute has evolved a new technique of breeding new varieties of cane, under which it will be possible to release planting material of new varieties in the second year itself for simultaneous testing at Karnal and Coimbatore. According to the old technique, it is only in the fifth year after the cross has been effected that it is possible to send seedlings to experimental stations. The exploration work under the Spontaneum Expedition Scheme has already been completed. The Botanist of the Institute has been deputed to certain neighbouring countries for survey and collection of the wild form of *Sacchasum* and allied genera. The construction work of the new laboratory buildings has commenced and this is expected to be completed by the end of this year. The Karnal sub-station has been allocated 30 acres of additional land for more experimental plots.

Research in Bombay

In the State of Bombay, sugarcane research is carried out at the main station in Padegaon and the seven sub-stations. The water requirements of the various crops are also studied at the research station, Arbhari. New varieties are being evolved at the Coimbatore Research Station every year and these are tried out for suitability to the conditions in Bombay at the Padegaon Research Station. These trials extend over a period of years and those varieties which show better performance than the existing varieties in cultivation are introduced. About 55 new varieties were tried during 1955-56. Considerable research is done on irrigation-*cum*-fertiliser requirements of the sugarcane crop. The problem of maintaining soil fertility under intensive cultivation is also being investigated. Experiments on manures have shown that groundnut cake as a manure can be replaced without any loss in yield of sugarcane. This is a very important finding, because groundnut cake is a valuable cattle feed and must be conserved for this purpose. The study of the requirements for producing good quality *gur* is being done at Padegaon. It is said that earth-worms help improve the physical condition of the soil. The use of soil cultured with these worms is being tried and indications are that yields would register an improvement.

By 1959-60, Pakistan expects to produce 38 per cent. more sugarcane as compared with 1954-55. The target for cane production fixed in the Five-year Plan is 1.46 million tons (*gur*), as against 1.06 million tons. The increase in output, it is said, will be achieved largely through augmenting the per-acre yield and partly through bringing a larger area under cultivation. The Plan provides for research for the evolution of improved varieties of sugarcane, preparation and use of chemical fertilisers, plant protection, etc.

AWARD TO COLLIERY WORKERS

MORE REFLECTIONS ON ITS IMPLICATIONS

IN our issue of 2nd June 1956, we commented on the Award of the All-India Industrial Tribunal (Colliery Disputes), which have conferred substantial benefits on the workers. Here are a few more jottings, indicating the implications of the Award to the collieries, in particular, and industries, in general. These notes are the result of information gathered by us subsequent to our first thoughts on the subject:

The impact of the Award on the cost of coal has not been accurately gauged but estimates in various regions vary, with about Rs. 4 in respect of Bengal and Bihar fields and about Rs. 6 in the case of collieries in Orissa, with the cost in other outlying collieries coming in between.

Hitherto, the wages in the mining industry have accounted for 70 per cent. of the cost of production and the immediate effect of the Award will be an increase in wages of a further 40 per cent.

Even before the May 1956 Award of the All-India Industrial (Colliery Disputes), the position of collieries was becoming untenable, because of their continuing to operate on the basis of prices fixed in 1947. Since then, there have been radical changes in the costs of production and the increase in costs has tended to make the coal price structure unrealistic.

The Government contemplated the setting up of a Price Revision Committee as early as 1955 and one of the questions posed by the Committee was:

Do you think that a general review of prices is called for at this stage? If so, do you consider that the present method of fixing prices is satisfactory and need not be altered?

There was, therefore, an implied recognition that coal prices should be revised, even before the effects of the recent Tribunal Award were known.

Individual units of the coal industry have made available for examination of the investigating officers appointed by the Coal Price Revision Committee annual accounts, cost sheets, etc., to enable an accurate survey of the present cost of production being made.

The Conciliation Award in 1947, in fixing the prices, had taken into account the various amenities to colliery labour and had fixed a profit margin of Re. 1-8 per ton or approximately 10 per cent. of the selling price. For an extractive industry, this was then considered reasonable. Subsequently, various selling price reductions were imposed by Government, until it was demonstrated clearly by a past Chairman of the Indian Mining Association in 1953 that the total profits—as opposed with profits distributed to shareholders—over a group of 51 companies in the industry amounted to no more than 2½ per cent. of the total working funds.

A 2½ per cent. return in a wasting industry like coal mining certainly does not offer sufficient incentive for raising equity capital. Another factor which militates against raising capital for the industry is the non-availability of bank loans against coal stock. During the past few years, the story of coal industry has been one of dwindling profits, falling dividends and diminishing reserves.

It should also be borne in mind that it is only from profits that colliery owners can find most of the money needed to finance the cost of new plant and replacements. The prevailing demands for credit in the market, caused partially by procedural delays in Government concerns, has added not inconsiderably to the shortage of funds in the industry, and it is, therefore, of prime importance that Government should fix the margin of profit at such level as to maintain a 10 per cent. profit on selling prices.

With the case for a price increase of not less than Rs. 4 per ton in respect of Bengal and Bihar coalfields and up to Rs. 6 per ton in other outlying fields having been established, the point for consideration is the effect of the price increase in other industries using coal. It has been estimated, in the *Census of the Indian Manufacturing Industries*, 1952, that the cost of solid fuel (coal and coke) expressed as a percentage of the gross factory value of a representative range of Indian Industries is no more than 1.96 per cent. The effect of the increase in the price of coal on other industries will thus be in no way serious.

It is generally not realised that coal prices in India compare very favourably with other countries, and, even with the proposed increase in price from Rs. 4 to Rs. 6 per ton, the price of coal in India will be very much below that in other countries. The price of coal for industry in the U.K., for instance, is of the order of 65s. per ton (about Rs. 44).

The implementation of the Colliery Award by employers is dependant on an immediate increase in coal prices, at least to the extent necessary to meet the impact of the Award. It is needless to add that there should be no undue time lag between the implementation of the Award and the price increase.

Colliery labour in India is full of expectations following the award, and it would not be surprising if greater demands are made by it before long. The implementation of the Award, therefore, cannot be avoided in the interest of industrial peace which means that both Government and industry at large must reconcile to the necessary price increase. The alternative is for the Government to withdraw the control over distribution and prices of coal, so that coal price would find its economic level. There are, however, reasons to believe that the adoption of this alternative will lead to many other complications. Accordingly, it will appeal neither to Government, nor to industry, not to mention labour.

The output of coal in India increased from 3,358,077 tons in February 1956 to 3,360,456 tons in March 1956, according to the official statistics released by the Chief Inspector of Mines in India. Despatches of coal during the month amounted to 2,835,244 tons, as against 2,696,604 tons in the preceding month. Coal stocks at pitheads amounted to 3,899,650 tons at the close of the month.

During the month under review 839 collieries were reported to be working, with an average daily employment of 333,269 workers.

Nine coke plants at collieries and elsewhere produced 358,179 tons of hard, soft and other kinds of coke during the month and despatched 170,911 tons.

NEW MAN-MADE NATURAL RUBBER

GOODRICH-GULF CHEMICALS TO COMMENCE PRODUCTION

NATURAL rubber planters all the world over will have received with concern the report from the U.S. that "natural" rubber has been produced by synthetic process on a laboratory scale and plans are well ahead to manufacture it on a commercial scale. Goodrich-Gulf Chemicals, Inc., a firm jointly owned by the B. F. Goodrich Company and the Gulf Oil Corporation, claims to have produced in the laboratory the true molecule of tree rubber, which is said to be really the base of natural rubber. Called Ameripol SN, the synthetic "natural" rubber is said to be chemically and physically identical with the *Hevea* grown on rubber plantations. X-ray defraction photography and infra-red studies have all confirmed the identity of the laboratory product with the natural one.

The construction of a plant to manufacture the synthetic "natural" rubber on a commercial scale is well advanced and production is expected to commence by the end of 1956. In the first instance, however, the output will be confined to a quantity that can be offered to rubber users for test. The raw materials from which the product has been developed are kept a secret, but it is stated that they are neither styrene nor butadiene from which the regular synthetic rubber is produced. They are believed to be petrochemicals which also form the source of the synthetics. What is more significant from the point of view of the plantation product is the possibility of the Goodrich-Gulf Chemicals Inc. producing its man-made "natural" rubber at prices that will make it competitive with the higher grades of plantation rubber.

It will, however, be noted that there is no immediate threat to the plantation rubber from the "natural" rubber produced in laboratories; for it will be some years before the latter is produced commercially on a scale that is required to compete effectively. Much will depend on the availability and adequate supply of the raw material which forms the basis of the synthetic "natural" rubber. It also remains to be seen how far the new synthetic product of the Goodrich-Gulf compares favourably, so far as price is concerned, with the present synthetic. It is not known whether the existing synthetic rubber plants, in which the private sector in the U.S. has invested huge capital upon their being taken over from the Government, can be used for the manufacture of the new synthetic. It will be interesting to recall here that, only very recently, the leading tyre manufacturers of the U.K. joined hands and formed a company, known as the International Synthetic Rubber Company, Ltd., thanks to the efforts of the Dunlop Rubber Company, Ltd., which had been engaged on research in synthetic rubber for many years. It had also under constant review the project for the construction of a synthetic rubber factory. It was not, however, until last year that the project became economically practicable, leading to the formation of the Company mentioned above. The plant, which is yet to be built by the International Synthetic Rubber Company, will be designed to produce 50,000 tons of GR-S rubber per annum, almost the entire quantity to be used for tyre manufacture. It will probably take about two years for the plant to be built and come into operation. The capital outlay on the project is estimated at not less than £7 million, not to speak of the considerable capital cost to the suppliers of essential raw materials. All these efforts and expenditure will be a huge waste if it is ultimately found that the new man-made "natural" rubber is more economical and the existing plants cannot switch over to its manufacture.

Anyway, the report about the manufacture of man-made "natural" rubber has had no effect on plantation rubber prices. On the other hand, the No. 1 R.S.S. spot rubber in London is ruling steady around 23¾d. per lb., having risen by nearly 2d. over the week, following some consumer interest in both London and New York, due partly to fears about higher prices and partly to the announcement by the U.K. Board of Trade to the effect that it was not intended to reduce the U.K. stockpile of natural rubber just now, in spite of the suggestions in the White Paper on Defence. It may be noted that the General Services Administration, U.S., also has denied reports that the U.S. would lend rubber from its stockpile to ease the squeeze in July futures in New York. It is noteworthy that the recovery in natural rubber prices has occurred, notwithstanding the recent reductions in the price of some varieties of synthetic rubber in the U.S. This shows that much use is still found for natural rubber. Leading rubber goods manufacturers are of the view that the demand for natural rubber will continue to grow. Lord Baillieu, Chairman of the Dunlop Rubber Company, Ltd., for instance, said, in his address to the shareholders of the Company at their annual general meeting held in London last week, that the manufacture of synthetic rubber elsewhere and in Britain should not give rise to the apprehension that was still evident in some quarters about its consequences to natural rubber. During the last 10 years, world consumption of rubber (natural and synthetic), he pointed out, had increased from 1.47 million tons to 2.9 million tons. In the U.K., in particular, consumption had risen from 127,000 tons to 267,000 tons. There was plenty of evidence to support the belief that this growth would continue. Lord Baillieu also drew attention to the fact that, but for the establishment of synthetic plants in America, there would have been a scarcity of rubber in recent years. He firmly believed in the future of natural rubber alongside that of the synthetic product. It was also possible, he added, that, with the increasing use of synthetic rubber, rubber goods manufacturers might enjoy a more stable price for natural rubber.

(*Concluded from next column*)

every effort should be made to ensure supply of raw jute at reasonably low prices, so that the industry may cut its costs of production. Export drive should also be intensified in the U.S., Canada, Australia and South American countries to press sales of gunnies in these areas. Special agreements may be reached with China and the U.S.S.R. for the purchase of jute goods from India.

A variety-wise analysis of jute goods production in May 1956 discloses that the increase has been shared by all the three principal categories, as indicated in the table below:

Jute Goods Production

(In tons)

	May, 1956	April, 1956	March, 1956	May, 1955
Hessian	35,800	32,900	34,800	32,200
Sacking	59,600	55,000	57,800	46,200
Others	6,300	6,000	6,700	3,300
Total ..	101,700	93,900	99,300	81,700

Thus, hessian output has risen from 32,900 tons in April to 35,800 tons in May 1956. Similarly, production of sackings has improved from 55,000 tons to 59,600 tons and that of others from 6,000 tons to 6,300 tons.

With the output in May the total production of jute goods during the first 11 months of the season 1955-56 amounts to 996,045 tons as compared with 917,542 tons in the corresponding period of 1954-55. Consumption of raw jute during the period by mills may be estimated, on the basis of production, at 5.77 million bales, as against 5.32 million bales during June-May of 1954-55.

JUTE OUTPUT IN MAY

FRESH RECORD TOUCHED

THE output of jute goods in May 1956 amounted to 101,700 tons, an increase of 8.3 per cent. over that in April. The May output has, in fact, been the record for any single month since December 1948 when the jute mills produced 103,600 tons—a post-war peak. The record output in May in a way indicates the desire on the part of the mills to put their resources to fuller use in order to reduce costs. The increased production has been facilitated also by the unsealing of 7½ per cent. of the looms since January-February this year. Secondly, though raw jute prices have been generally higher, supplies of raw jute have been relatively better than they were last year. Thus not only was there an increase in the output of jute crop in 1955-56 but there were also increased arrivals into Calcutta and mill stations this season. Thus the total crop in both India and Pakistan in 1955-56 is estimated (official) at 9.72 million bales, as against 7.6 million bales in 1954-55. Similarly, arrivals of raw jute into Calcutta and mill stations in the first ten months of the 1955-56 season were 5.7 million bales, as against 5.0 million bales in the corresponding period of the season 1954-55. Of these arrivals, jute from indigenous sources amounted to 4.32 million bales and that from Pakistan 1.37 million bales. The corresponding figures for 1954-55 were 4.0 million bales and one million bales.

The record output in May accounts for the large accumulation of stocks with mills, as pointed out in these columns a week ago. But the increase in stocks of jute goods at the end of May occurred despite a marked rise in despatches from mills, on account of both export and internal consumption, from 81,000 tons in April to 90,500 tons. Evidently, the offtake of jute goods has not kept pace with production for reasons mentioned in these columns ere now, namely, (*a*) relatively high prices of Indian jute goods, and (*b*) competition from packaging substitutes such as cotton and paper bags.

In the result, the jute industry is facing the problem of reducing the stocks that are accumulating with them. The problem has been engaging the attention of the industry as well as the Government for some time now but no decision seems to have been taken so far. As readers are aware, the Government seems to favour fixation of export minimum prices for jute goods, while the industry favours curtailment of production. It is even stated that proposals for mills to shut down for a specified period each month over an unspecified length of time have been placed before the Government as well as the I.J.M.A. for consideration.

Either of the alternative proposals is unsuited to meet the situation, since both of them are likely to do more harm than good in the long run. Any hasty step, therefore, should be avoided at all costs. After all, the stocks now lying with the mills, namely, 119,100 tons, are only just four or five weeks' output and there were months in the past when they were as high as 248,000 tons, and the industry was able to get through without much difficulty. It is possible that demand for the goods may develop, as envisaged by the Government, on account of increased purchases of Burma rice and a rise in the consumption of cement. Meanwhile

TEXTILE MILL FOR SALE BY PUBLIC AUCTION

THE HYDERABAD (Dn.) SPINNING & WEAVING COMPANY LTD.
(In Creditors' Voluntary Liquidation)

situated at Secunderabad (Deccan), having lands, factory buildings, godowns, etc., spinning and weaving machineries of the capacity of about 12,000 spindles and 241 looms (including electric motors, calender machine, sizing machine, baling press, etc.), will be sold by Public Auction at Mill premises below Husain Sagar Bund between Secunderabad and Hyderabad (Deccan) on SUNDAY the 22nd July, 1956, between 3 p.m. and 4 p.m. Detailed list of the properties can be obtained from the undersigned from 1st July, 1956 to 20th July, 1956, between 9 a.m. to 10 a.m. and 5 p.m. to 7 p.m. and at the Office of the Mahaboob Shahi Kulburga Mills Company, Ltd., Begumpet (Dn.), between 1 p.m. to 4 p.m. on all working days.

All the previous lists in the hands of parties issued till 30th June, 1956, are not valid.

Legal charges for the finalisation of the sale shall have to be borne by the purchaser.

Date, 18*th June* 1956.

116, Park Lane,
Secunderabad.

INDIA'S SEARCH FOR OIL RESOURCES

GOVERNMENT UNDERTAKES PRELIMINARY OPERATIONS OVER WIDE AREAS

THE general opinion of oil experts, who are competent to speak with authority on the subject, is that conditions in this country are at least as favourable as in other countries where oil has been found recently. It is also well recognised that the chances of successful exploration for oil and establishment of production are linked up with exploration on a large-scale, followed by intensive prospecting, including drilling in promising areas. The policy of the Government of India is to carry out exploration for oil and natural gas on a large scale. With this objective in view, it has set up, with effect from January this year, the Oil and Natural Gas Directorate as part of the Ministry of Natural Resources and Scientific Research.

The Ministry has drawn up proposals for the Government's entry in the oil industry which include a Rs. 29-crore scheme for exploration of oil in four areas under Government auspices and a Rs. 11-crore scheme for collaboration with private firms engaged in the industry. Provisions have also been made for training a large number of Indians in oil development and technology in the U.S.S.R., Rumania, West Germany, the U.S. and the U.K. So far as exploration under Government auspices is concerned, the most important of the four areas chosen for this purpose is in Jaisalmer in Rajasthan where the work will include intensive geological and geophysical survey followed by test drilling. The work will be done in three phases extended over five years at an estimated cost of Rs. 8.6 crores. Exploration in Uttar Pradesh and the Punjab (in the plains of the Ganga basin and the Siwalik Hills) will also be carried out in three phases at an estimated cost of Rs. 2.24 crores. This work will be confined mainly to geological and geophysical investigation of the areas. The third place selected for exploration is the Sunderbans in W. Bengal, at an estimated cost of Rs. 5.5 crores. It would appear that this region holds promise of revealing oil. But there are certain special difficulties to be met with in this region in view of the fact that it is marshy and just about the level of the sea. Work in this region involves the use of specially constructed vehicles and other equipment with which India is not familiar. The Government is engaged in studying the type of exploration made in Venezuela and the Gulf Coast of the U.S. where a search for oil has been carried on under similar conditions. A scheme for oil exploration in Saurashtra has been drawn up. In Cambay in this region, some geophysical and geological work has already been conducted. A provision for Rs. 7.5 crores has been made for drilling in this area and in the Sunderbans.

Nahorkatiya

Of the schemes for collaboration with the private sector mention must be made of the joint venture with the Assam Oil Company which has been carrying out aerial and aeromagnetic survey as well as geophysical surveys on the ground for some time and a scheme for contriving collaboration with the Standard-Vacuum Oil Company. So far as the Assam Oil Company's efforts are concerned, the authorities are developing a new oilfield at Nahorkatiya near Digboi. In this connection, it is interesting to note that the prospect of Nahorkatiya being able to provide a million tons of oil a year for India "for at least 20 years to come," is mentioned by Sir Kenneth Harper, Chairman of the Burmah Oil Company Ltd., in his review of prospecting and oilfield development operations in India during 1955. This estimate refers only to the area so far proved by the Assam Oil Company in its Assam Valley prospecting programme, which began in 1951 with the start of drilling operations at Nahorkatiya Well No. 1. The latest well to be completed in the valley is No. 16. The "million-tons-a-year" figure does not include output from the Digboi oilfield. The Chairman says: "Drilling results at Nahorkatiya have confirmed previous expectations that the structure is geologically complicated but I am pleased to say that, on the whole, they have been successful. Potential production in the area so far proved is judged to be sufficient to maintain a refinery throughput of one million tons a year for at least 20 years. Discussions are being held with the Government of India regarding the formation of a rupee company with Indian participation to take over and develop the oilfield at Nahorkatiya and certain other concessions in Assam. Additional refining capacity will be required. The location of this and the transportation of the crude oil are subjects which are also under discussion with the Government of India."

Faint but promising indications of oil have just been reported by the Assam Oil Company from Digboi from the test well at Moran. A routine inspection of rock cuttings brought to the surface during drilling operations showed slight signs of petroleum when examined under a fluoroscope. The discovery was made shortly after the drill had penetrated sandstone rocks at the extreme depth of 11,065 feet (more than two miles). Drilling operations are continuing, and a careful watch is being kept for further oil indications as the well goes deeper into the zone of sandstone rocks. Whether the new well is capable of producing oil will not be known until production tests have been carried out. This is the first time oil has been noticed in this area of the Brahmaputra valley, where test drilling began on 27th March.

Several Wells

The story of oil in the Brahmaputra valley makes interesting reading. Oil in the valley was first discovered in 1953 at No. 1 Test Well at Nahorkatiya at a depth of 11,715 feet. Proof of oil there not only led to further drilling in the same area but also opened the way for geophysical survey to continue more hopefully down the valley. Since mid-1953, 14 wells have been completed in the alluvial areas of the Brahmaputra valley of Upper Assam. The average depth of these 14 wells is 10,827 feet or more than two miles. All the wells put together add up to a total depth of over 28 miles. The Assam Oil Company has now applied to the Government for lease over certain adjoining areas. A rupee company is proposed to be set up for working this new lease and, in this venture, the Government may participate to the extent of Rs. 4 crores.

A new petroleum refinery will be erected in India if further resources of crude oil are discovered in Upper Assam to justify a substantial increase in production. Announcing this from Digboi, the Assam Oil Company states that further intensive exploratory and development drilling will be necessary before anyone can say how much additional crude oil will be obtained. A preliminary assessment is now being made by experts, and if the results show that extra refining capacity will be needed, the choice of the site for the new plant will be governed by economic considerations. Among the factors to be taken into account are the quality of the crude oil, the method of transporting it to a refinery and the facilities required for moving the finished products to market. The Company emphasises that there is no intention or possibility of moving the Digboi refinery. Indeed, as the demand in its supply area increases, the capacity of the Digboi refinery, far from being reduced, will sooner or later have to be examined to meet it

It is believed that more foreign or Indian interests may come forward for collaboration with the Government in the exploration for oil in the country. Accordingly, the Government has made a provision of Rs. 5 crores for such collaboration with private agencies. It may be recalled that Mr. K. D. Malaviya, Minister for Natural Resources, made a reference to this aspect of the Government's policy in the course of his address at the recent meeting of the Mineral Advisory Board. The Minister said: "We are willing to work in partnership with foreigners to work a portion of our oilfields, but that partnership should be consistent with the policy laid down by the Government." He further added, "it may, however, be noted that our association with the foreigners can only be on the clearest terms and has to be consistent not only with the dignity of our country, but also with its interest. Many bases of work which are in vogue today in some countries of Asia and Latin America are not quite clear to us. We must understand them more clearly if they have to be adopted by us. We shall, therefore, pursue in our efforts to welcome co-operation of foreign oil interests and persuade them to our viewpoints."

The task of oil exploration naturally implies the availability of large number of trained personnel. Accordingly, the Ministry has drawn up a training scheme in the light of the informal discussions the Minister for Natural Resources and Scientific Research has had with the Soviet and the Rumanian experts during his recent tour of these two countries. India is particularly lacking in experts in the technology of oil exploration and production and well-trained mining engineers who can tackle difficult problems connected with mining of non-ferrous metals. Provision for training of Indian technicians in various countries, including the U.S.S.R., Rumania, West Germany, U.S.A. and the Commonwealth countries would be necessary. This would require both long-term and short-term training and it is proposed to make provision for half a dozen officers per year under this group.

So far as organisational set-up is concerned it is proposed that the organisation which will undertake all work in connection with prospecting, exploration and development of oil and natural gas fields in this country should take the form of a commission or statutory board consisting of a chairman and two or three members. The chairman is being vested with powers of an additional secretary to the Government. The commission should consist of high ranking technicians—men well versed in some branch of work connected with oil and natural gas exploration and development It should be autonomous and should have sufficient powers to manage the affairs of the organisation without having to encounter the numerous procedural obstacles that make for delays. It would have full powers for the purchase of stores, equipment and recruitment of personnel.

Experts' Views

The technical reports relating to prospects for oil in India submitted by the foreign experts to the Central Government have not been published. But it is believed that the reports submitted by the Russian experts are far more encouraging than those of other foreign experts. In this connection, the ratio of success to failure in drilling quoted by some foreign companies, according to some Press reports is doubted. The recommendations recently made by Russian oil experts independently are stated to have substantiated the Government of India's belief that India is wealthy in oil in several regions, including West Bengal. It is felt that there is no justification for delaying drilling operations on which the further programme of action depends. A ratio of one to twenty is regarded antiquated, particularly with increased knowledge in exploration methods. The figure of one to seven, quoted by a foreign company, is presumed to be a fair average of oil failures

ZONAL COUNCILS FOR MINERAL DEVELOPMENT

The Government of India has, as already announced by the Union Minister for Natural Resources, Mr. K. D. Malaviya, at the fourth meeting of the Mineral Advisory Board, decided to set up four Zonal Councils in order to expedite the execution of the programme of mineral development. The four zones are: (1) Ajmer or the North-west Region, comprising Jammu and Kashmir, Punjab, Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan; (2) Calcutta or the Eastern Region, comprising West Bengal, Bihar, Assam, Manipur and Tripura, Orissa and the Andamans; (3) Nagpur or the Central Region, comprising Madhya Pradesh, Madhya Bharat, Vindhya Pradesh, Bombay, Saurashtra and Hyderabad; (4) Bangalore or the Southern Region, comprising Andhra, Madras, Kerala, Karnataka and Coorg.

The Zonal Councils will consist of the senior Regional Officer of the Geological Survey of India, the Regional Officer of the Indian Bureau of Mines, a representative of each of the State Governments in the region, a Member of Parliament and four to six members of the mineral industry and consumer industry in the region. The Members of Parliament and the representatives of the mineral industry will be nominated by the Ministry of Natural Resources and Scientific Research. The State Governments may nominate either an official or a member of the State Legislature.

The functions of these Zonal Councils will be: to review periodically the programme and the progress of exploration and investigations undertaken in the zone; to make suggestions and advise regarding future programmes; to review and advise on the requirements of minerals for consuming industries, the programme, potentialities, and difficulties of the mining industry including transport by rail or by road; and generally to advise on the exploitation and utilisation of minerals and allied natural resources of the region.

MINERAL PRODUCTION IN ASIA

India is not the only country in Asia to undertake vast schemes for the development of mineral resources. Mineral production, especially of coal, petroleum and iron ore, has continued to increase in Asia, according to a report on Mining Development in Asia and the Far East 1954-55, prepared by the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.). Most prominent production increases in the E.C.A.F.E. region at the beginning of 1955 were: coal 169 million tons as against 160 million tons in 1953; crude oil 18,171 million tons as

(Continued on page 1227)

NEW PRODUCTS AND PROCESSES

Experimental Solar Still

AN experimental solar still to remove minerals from water has been erected at Mildura in Australia, the U.N.E.S.C.O. reports. The device consists of a glass structure set over a shallow trough of black plastic. Water to be treated is siphoned into the trough and evaporated by the sun shining through the glass canopy. The vapour condenses and drains into storage tanks. Designers of the solar still are hopeful that it can be used to provide an inexpensive method of purifying water from artificial wells for agricultural and household uses in areas that receive little rainfall.

Gas-cooled Reactor

The U.S. Atomic Energy Commission has announced plans for a project to develop small gas-cooled atomic-powered electric generator plants for civilian and military use. A.E.C. estimated the project will cost $4 million over a period of several years. The announcement said that the gas-cooled reactor is the "eighth type chosen by the commission for research and development work in the programme to achieve economic reactor power systems for civilian application as well as for possible military applications."

Evaporation from Water

Research work by the Australian Commonwealth Scientific and Industrial Research Organisation in the use of cetyl alcohol to reduce evaporation from water storages has caused much interest in some parts of the United States, the Minister in Charge of the C.S.I.R.O., Mr. R. G. Casey, said recently. Recent tests in four Australian States, carried out with the co-operation of several water authorities (State, Municipal and private), on dams and reservoirs, with areas ranging from two to 20 acres, have confirmed earlier small-scale tests in showing that evaporation may be reduced by between 20 to 70 per cent., depending on conditions. In Australia's arid regions, where water supplies are inadequate and often unreliable, evaporation losses of up to eight feet of water occur annually. This loss may be greater than the amount of water which remains for use. The process evolved by Mr. W. W. Mansfield of the C.S.I.R.O., maintains a thin invisible film of cetyl alcohol (or hexadecanol as it is sometimes called) on the surface of the water. This restricts the transfer of water to the air, but does not prevent oxygen being dissolved from the air to keep the water fresh. Where normal evaporation is eight feet per year, a saving of 45 per cent. means a saving of 1,000,000 gallons of water for every acre of reservoir surface. The cost of treatment calculated from the recent experiments amounted to about 2½d. per 1,000 gallons of water saved.

Diesel Engine Under Water

A British manufacturer has successfully installed an engine for permanent operation in water. A six-cylinder engine inside a steel-framed, 400-gallon glass tank runs at the touch of a button. The engine can be stopped and re-started while submerged, although the starter motor is also under water. Four pipes for the air intake, exhaust, fuel, and lubricating oil are above water level. The dynamo is under water, and charges when the engine is running. The main object of the installation is to show the ability of the maker's Diesel engine to operate under the most adverse conditions of moisture.

Painting Lines on Roads

Several oversea orders have already been received for a new British petrol-driven machine that paints white lines down the middle of roads. It is claimed to lay straight, uniform lines over long stretches of road in far less time than that taken by older methods. The machine enables the driver to see both the road and the line as it is being laid, enabling one operator to repaint an old line, whether continuous or broken, curved or straight. A new type of plastic paint can be used with the machine. Existing types of road line paint have a very short life under modern traffic conditions, showing bad signs of wear after only a few weeks. The new material is claimed to have several advantages. It has lasted over 12 months, the makers say, on some main roads. In addition, it has outstanding colour and quick-drying properties, enabling traffic to cross the line within four to six minutes of application.

Isotopes in Steel Industry

Instruments making use of radioactive substance properties are widely applied in the Soviet iron and steel industry. Such an instrument has recently been installed at a blast furnace of the steel plant in Dnieprodzerzhinsk, Ukraine. The instrument is used to watch the process of smelting and the movement of the stock in the furnace. It will make for better quality metal and faster heats. At the Kuznetsk Steel Mill, Siberia, radioactive substances are used to study the process of refractory lining wear in the blast furnace. The findings thus obtained have helped to considerably increase the life of the lining. With the help of radioactive instruments the engineers of the Cheliabinsk plant in the Urals have determined the sequence and rate of steel ingot crystallisation and have decided upon more rational methods of charging the open hearth furnace.

DUNLOP RUBBER COMPANY LIMITED

LORD BAILLIEU'S SPEECH

THE Fifty-seventh Annual General Meeting of the Dunlop Rubber Company, Ltd., was held in London, on 11th June 1956.

The Rt. Hon. Lord Baillieu, K.B.E., C.M.G., the Chairman, in the course of his speech said:

"The reserves and surplus of the Group increased during the year by some £2½ million. They now cover the ordinary share capital more than one and a half times, and you will see from the report that, of our capital expenditure in the last ten years, practically one-half has been provided out of these retained profits appropriated to reserves.

"In my speech last year I referred to the fact that trading in 1954 had followed the pattern of the previous year, and again in 1955 this continued, reflecting the state of full employment and an increasing demand for our products. In fact, in many sections of our business during the year it was difficult to satisfy the demands of our customers. During the year the Group sales to customers amounted to £219 million, as compared with £191 million in the previous year. As you will appreciate, it is difficult with our very wide variety of products to measure accurately variations in volume, but we estimate that during the year the sales volume of the Group in terms of quantities increased by 6 per cent. This follows an increase of 15 per cent. in the previous year, and in the last ten years we calculate that our volume has increased by over 100 per cent. Including supplies within the Group, our total turnover for 1955 was £302 million.

Rubber Prices

"You will have already noted from the Directors' report and from the Press from time to time the impact on our trading and results this year, as in previous years, of the movements in the price of natural rubber. Charts of price fluctuations over the last ten years shown in our report illustrate the nature of our problem. In 1955, we again had some very considerable fluctuations; in January, the London spot price was 30d. per lb., and by March this had fallen to 26d. per lb. Thereafter, the price steadily increased, reaching a peak of 43d. per lb. in September. It then dropped back quickly, finally finishing the year at 37d. per lb. Accordingly, during the year the price fluctuated by no less than 17d. per lb., or, put another way, the range of the price increase was 65 per cent. or 26d. per lb. to 43d. per lb. Inevitably these price fluctuations have a very material bearing on our costs, and we had no alternative but to raise our selling prices during the year. These price increases were insufficient to meet the additional costs which occurred during the year. Apart from this cost aspect, however, the violent fluctuations in the price of our main raw material created an abnormal or hesitant demand which caused difficulties in maintaining an even flow of production and in turn employment.

"Although the quantities of synthetic rubber used in 1955 were small, the proportion is increasing, since we are now able to purchase and import it. The increasing introduction of synthetic rubber involves tyre manufacturers in adjustments of processing machinery, and this, you will understand, means some disturbance of production.

"For the reasons I have just described our profit margins were lower in 1955 and the net profit before taxation represented 1s. 1d. per £ sterling of sales, or 5.3 per cent., compared with 1s. 3d. or 6.2 per cent. in the previous year. In considering our profits, particularly in the United Kingdom, you should bear in mind that a relatively high proportion of our tyre sales is made as original equipment sales to the motor, motor cycle, cycle and aviation industries. The prices at which we sell original equipment products are lower than the prices in the replacement sales market, whereas the cost of making the tyre, whether for a new vehicle or in replacement of a worn-out tyre, is the same.

"This point should also be borne in mind in connection with the recent Monopolies Commission Report, in which it was confirmed—contrary to belief in certain quarters—that profit margins in the tyre industry are not excessive. In fact, considering the capital and equipment involved in the production of tyres, and the effect on costs of fluctuations in the price of natural rubber, I repeat what I have said previously, that profit margins are, if anything, too low.

Diversified Range of Products

"I would now like to refer to two aspects of the Company's policy which concern growth. For some thirty years now our consistent policy has been to broaden the basis of our trading, first, by diversification as regards products and, secondly, by broadening the spread of our interests geographically.

"This policy of diversifying the range of products manufactured is being pursued. In the majority of these products natural rubber features as a raw material and, accordingly, because prices did not follow the rising trend of raw material costs, the profit margins on these products have been lower than in the preceding year. However, there are other instances where raw material prices have not had such a serious effect and these types of products are being still further developed with a view to reducing the possibility of lower margins. A great many synthetic rubber and plastics materials are now used and we have also a wide and diversified range of products which we manufacture for the use of other industries or as component parts.

"The second aspect of our policy, namely, geographical spread, is with other industries at once a cause and a reflection of the inevitable growth and development in overseas territories, not only in the so-called young countries, but also in the old-established industrial countries where road transport and motoring are encouraged.

Overseas Activities

"Our overseas activities during 1955 were highly successful. You will already have noted from the Report that exports from the United Kingdom, which are very considerable, and the trading of our Companies and branches overseas, contributed over two-thirds of the profits of the Group. The maximum assistance is given to these overseas Companies in terms of research, development, personnel, and in the commercial and administrative fields. I am sure, you will appreciate that this is not only a benefit from the Dunlop point of view but it is also in the national interest. From the financial point of view we draw from these Companies, in the form of royalties and dividends, a reasonable return.

"You will no doubt have noted that the proportion of their profits retained by subsidiaries, and this particularly refers to overseas subsidiaries, was again a substantial figure at over £1½ million. In this way these Companies become more self-supporting and self-reliant for their future expansion and development.

"I might just add at this point that we have not only considerably extended our tyre exports from the United Kingdom during the year but we have also increased our proportion of the total exports of the industry. This, I suggest, is a very satisfactory position in view of the increasing competitive conditions operating in overseas markets."

The report and accounts were adopted.

FUTURE OF FIELD WORKERS

THEIR IMPORTANCE UNDER NATIONALISED SET-UP

IT is now widely recognised that, even under its nationalised set-up, life insurance will require the services of able agents. Indeed, without their active co-operation, it would be impossible to spread the insurance habit to wider sections of India's population. Nationalisation of insurance has thus not made the agents superfluous. On the contrary, it calls for an intelligent field force which will carry the gospel of insurance to the areas—particularly the rural and semi-urban areas—which were hitherto inaccessible to insurance.

Indeed, insurance agents, as Mr. S. Chatterjee, President of the All-India Insurance Field Workers' Association, stated at the recent annual meeting of the Association, held at Calcutta, are the "cornerstones of insurance edifice." Mr. Chatterjee said that, after nationalisation of insurance, there was "identity of interests" among agents all over the country. He added: "Insurance is sold and never bought. Agents must carry the message of insurance to every Indian household." He pointed out that there could be much saving in expenses of running insurance as a result of nationalisation. He thought that the funds, so released, could be utilised in fixing the minimum rate of commission to agents, at least, at 55 per cent. of first year's premium and 7½ per cent. of premium as renewal commission. He said that the terms and conditions of service should be made attractive enough even for the "best products of our universities." He also stressed that the profession should ultimately be manned by wholetime workers. Other points Mr. Chatterjee made out in his speech were: (1) Training centres should be set up to impart training to agents; (2) provision should be made for representatives of agents on the committees the Government may set up in the course of its administration of nationalised insurance; (3) a wide variety of policies should be made available to the public, so that there will be room for "intelligent agents to bring into play their ability to mould a policy to the peculiar and particular needs of their prospects."

Finally, Mr. Chatterjee averred that the "need of the hour is hundreds of thousands of well-trained dynamic agents, operating in every nook and corner of this vast sub-continent." He suggested that the persons who might be thrown out of jobs as a result of nationalisation, could be readily absorbed as insurance agents.

Although the Government spokesmen have not committed themselves on the question of retention of the services of all the agents, it is generally believed that all encouragement will be given to live-wire insurance salesmen. Only, the Government is understandably opposed to the continuation of the system of dummy agents or of the services of men who have not so far given any evidence of even average ability and persuasiveness in selling insurance. Among the agents, there are persons who work on a salary-*cum*-commission basis. Their future under the nationalised set-up is somewhat obscure, for they do not come under the class of regular employees of insurance companies whose services have been continued. Some of these officials are apprehensive about their future. There is no doubt that their cases cannot all be dealt with by any rule-of-thumb method. Some of them are exceedingly able men, some only moderately able, and some just of the average type. There must, of course, be a few men of less than average ability. It is necessary to ensure that, in any scheme of reorganisation of the agency force, the men who have rendered or have shown promise of rendering efficient service should be not only retained but given sufficient encouragement. But there seems to be a lurking fear in the minds of these men that their future is not quite so safe.

Thus, the Executive Committee of the All-India Federation of Life Insurance Officers' Association says that, at its meeting held recently at New Delhi, it "has very carefully reviewed the whole position from the point of view of field workers and is constrained to find that in spite of the best efforts of all concerned in general and the Federation, in particular, the element of uncertainty in the mind of every field worker, instead of reducing, is gradually increasing." The Committee has stressed that, in view of the fact the "field and development personnel have played and have still to play a very important role in the building up of this industry, the Federation is of the very strong opinion that the interests of the field and development personnel should be fully safeguarded." The resolutions adopted by the Committee, *inter alia*, say:

(1) "That, while rationalising the remunerations of the field and development personnel, the total emoluments, earned by a worker, step by step, through a number of years of hard labour, should not be reduced; and while fixing up their salaries, the Corporation should take cognisance of all the benefits derived by an employee, before nationalisation, as they formed part of his remunerations."

(2) "That, in the event of termination of services of any employee for his non-acceptance of the revised remuneration as a result of rationalisation, he should be paid a minimum of three months' notice salary, at the rate of last salary drawn, besides cash payment for all leave due to him along with a compensation at the rate of 15 days' salary for every completed year of his service in the industry, in addition to his earned gratuity, provident fund, etc., accumulated as at the time of taking over the controlled life business by the Corporation."

(3) "That all the accrued benefits like provident fund, gratuity, leave benefits, pension, bonuses, etc., should be credited to the account of the respective employee by the Corporation at the time of taking over, and the employees should have the option to encash their accrued leave benefits at any time after the formation of the Corporation."

(4) "That priority should be given to the personnel working in an area of a particular zone for different posts meant for that zone. It is, therefore, suggested in the interest of the industry that field and development personnel should not be ordinarily dislocated. If, however, it is found imperative in a few cases, sufficient time, say, not less than three years, be allowed to the person concerned, so as to enable him to properly establish himself in the new surroundings and justify his appointment. In this context, it may not be out of place to mention that the insurance business has its own peculiarities, inasmuch as it is dependent upon many factors like language, customs, influence and personal contacts of a person in his particular area of work."

These demands—at least the spirit and essence of them—deserve the consideration of the Government. In any scheme of rationalisation, there is a need to distinguish between the chaff and the grain among the field workers. And, if it is necessary to terminate the services of any experienced field worker, it should be done after giving him an opportunity to explain his position and give a better account of himself.

ATOMIC RADIATION

Last week, we discussed in these columns the significance of atomic developments to insurance. So far as life insurance is concerned, present evidence indicates that atomic accident rate is very small, so that work in the atomic plants is now regarded as a fairly safe occupation. Nevertheless, the importance of radiological safety cannot be overemphasised. Thus, the U.S. National Academy of Sciences, which has completed a year-long study of the effects of atomic radiation on man, has stressed that such radiation from any source—bombs, nuclear reactors, X-rays or natural environment—is "often harmful" to life. It has particularly stressed that any amount of radiation, however small, is potentially hazardous from the genetic or hereditary standpoint.

The Academy points out that when a world-wide atomic industry becomes fully developed, its radio-active waste products may "represent more radiation than would be released in an atomic war." Referring to the hazard from the dropping of atomic bombs, it says that "radiation from fall-out inevitably contaminates man's food supply." It adds: "At present, the contamination is negligible. But the maximum tolerance level is not known. There is not nearly enough information about the long-term biological effects on man or animals from eating radiation-contaminated food. Research in this area is urgently needed." The major recommendations made by the Academy include: (1) Further improvement in techniques for monitoring world-wide fall-out, (2) establishment of a national agency to "control and keep records of all dumping of radio-active material in the ocean, (3) establishment by an international body of safe standards for the marine and air disposal of radio-active materials as soon as possible, based on current knowledge, (4) sealing of buildings that house atomic reactors located near populated areas against the release of radio-active materials in the event of accident—this to be done "until advances in reactor technology substantially reduce potential hazards" and (5) reduction of the medical use of X-rays as much as is consistent with medical necessity.

FREE INSURANCE

An interesting development in the sphere of accident insurance has been reported from the U.S. It would appear that both the American Motors Corporation and Studebaker-Packard Corporation offer free cover for accidental death to the buyers of their new cars. The American Motors policy is for $25,000 for one year and provides coverage for the purchaser or spouse in the event of death of either or both while driving or riding in the car. The full amount would be paid on the death of both and half the amount on the death of one partner. Studebaker-Packard's offer is designed to cover the original registered owner of each new 1956 Studebaker against accidental death while driving and arising out of an accident involving his Studebaker. The insurance is for $20,000.

There is a section of opinion in insurance circles which has protested against this offer of free insurance cover. The manufacturers, on their part, stress in their advertisements that they are offering the coverage as evidence of their faith in the safety construction features of their new models.

The legal position of this episode is not yet clear. According to the *Review*, Commissioner Navarre of Michigan has stated that the free insurance plan is perfectly legal in Michigan and in many other States. It would, however, appear that the authorities in North Carolina hold that free accident policies are illegal in that State since the law in that State requires that insurance business should only be put through a licensed agent. The New York Insurance Department, it is stated, has also ruled the give-away policy illegal. But this ruling has been disputed by the interests concerned. Meanwhile, a Bill has been introduced in Rhode Island to prohibit free insurance as an inducement to purchase merchandise or real estate.

DIFFERENCE BETWEEN ITALY AND U.K. SETTLED

The difference which arose between the United Kingdom and Italy following the latter country's adoption of new measures concerning insurance operations, it is stated, has now been settled on the basis of recommendations made to the two parties by the Council of the O.E.E.C.

On 11th April 1955, the Italian Parliament passed a new law relating to insurance which appreciably modified the existing legislation, particularly as regards the provisions relating to the deposits and reserves required from national and foreign insurance companies operating in Italy. The United Kingdom authorities, considering that these measures were more rigorous than required for the safeguarding of the policyholders and might seriously prejudice the operations of British insurance companies in Italy, referred the matter to the O.E.E.C. some months ago.

This question was submitted to the examination of the Committee for Invisible Transactions, composed of high-level officials, which was recently set up by the Council to further the liberalisation of services and transfers. On the basis of the analysis and proposals made by this Committee, the O.E.E.C. Council considered that, subject to the introduction of certain relaxations in respect of foreign insurance companies in Italy, the obligations imposed by the new Italian legislation did not go beyond what was justified for the protection of the assured and conformed with the spirit of the insurance section of the Code. The Council recommended that the Italian Government should endeavour to introduce the relaxations to the relevant provisions and regulations in their application to these companies. The Council made detailed recommendations on this matter, and on 23rd March 1956 invited the Governments of the United Kingdom and Italy to seek a settlement and to report to the Organisation on the results of their negotiations by 30th April.

The two Governments have now informed the O.E.E.C. that they have succeeded, within the arranged period and on the basis of the Council's Recommendation, in reaching agreement.

FEATURES OF FINANCE ACT, 1956—II

DOUBLE TAXATION CLEVERLY DOVETAILED INTO THE SYSTEM

By R. K. Dalal, B.Com., F.S.A.A., F.C.A.

IN the first article, the substantial changes that have been effected in the taxation rates applicable to registered firms and companies were considered. In this article, I propose to deal with other important features introduced in the Income-tax Act itself.

The definition of 'dividend' under section 2(6A) has been amended, so that accumulated profits on distribution (whether capitalised or not) would be treated as dividend in the event of liquidation of a company.

This amendment counteracts the decision of the Bombay High Court in the matter of *Haridas Achratlal* (1955 (27) I.T.R. 684). Before the amendment, the operation of section 2(6A) was restricted to only accumulated profits which arose during the six previous years of the company preceding the date of liquidation. But now, by this amendment, the accumulated profits of *any past year* are brought within the net. The insertion of the phrase "whether capitalised or not"—which was conspicuous by its absence in this clause of the section—has the result of making liable to tax distribution on liquidation out of capitalised profits, for example a distribution made in respect of bonus shares or a distribution out of profits capitalised by converting partly paid shares into fully paid shares.

The scheme of treating capitalised profits as part of the reserve under amended section 23A in 1955 having been accepted in the last year's Finance Act, this is merely an improvement on the existing section, or as the Government would say, 'plugging' an obvious loophole for evasion of tax.

But there is one aspect which does not seem to have been noticed and it is this. Under the Finance Act, 1956, bonus shares will be subjected to tax at 2 annas in a rupee of the face value or the bonus, making partly paid shares fully paid. When such a company goes into liquidation, this additional tax which is levied will not be given credit for, with the result that such profits will be taxed twice—once in the hands of the company and again when they are distributed. The Government has cleverly avoided this issue by tacking on this tax to super-tax and not to income-tax. If it was the latter, the question of credit would naturally follow. But, as it is super-tax, the company pays its own super-tax—never on behalf of the shareholders. And thus they can wriggle out of an odd situation. Surely, the Government cannot camouflage double taxation of the profits by merely calling the impost a super-tax. Similar argument may be advanced in relation to super-tax on excess dividend. That too being now called super-tax, the question of double taxation is cleverly side-tracked.

Excess Remuneration

Coming next to the amendment to section 10, dealing with computation of income under the head business or profession, the following features are noteworthy: The amendment provides for disallowance of excess remuneration or value of amenities or benefits provided by a company to its directors or shareholders substantially interested in the company, if, in the opinion of the Income-tax Officer, any such allowance is deemed excessive or unreasonable, having regard to the legitimate business needs and the benefit derived by or accruing therefrom. Such amounts disallowed will nonetheless be taxed in the hands of the recipient. A person is said to have substantial interest, if he is concerned with the management of business, being the beneficial owner of ordinary shares carrying 20 per cent. voting power.

Initial depreciation will not now be available for new buildings erected and new plant and machinery installed after 1st April 1956. The result of this is that items such as buildings, motor cars, office equipments and other depreciable assets owned by persons assessed under the head 'profession' will not be entitled to initial allowance. This does not, however, disturb the development rebate. It will continue to be given on such of those assets as are eligible for that rebate.

Turning to section 16 dealing with the computation of 'total income,' the amended section reads:

"When the sum out of which dividend has been paid, credited or distributed or deemed to have been paid, credited or distributed includes—

(i) the profits and gains of the company not included in its total income,

(ii) any income on which income-tax is not payable, or,

(iii) any amount attributable to any allowance made in computing the profits and gains of the company,

the increase to be made under section 16(2) will be calculated only upon such portion of the dividend as the said sum after deduction of the inclusion enumerated above bears to the whole of that sum."

In short, dividends paid out of sources which have not borne any tax in the hands of the company will not be eligible for grossing up.

The three categories mentioned cover: (1) agricultural income, which is not to be included in the total income; (2) income of pioneering industries where tax is not payable to the extent of 6 per cent. on the capital employed, and (3) any allowances, for example, development rebate, etc. Such profits, if they are distributed, although they form part of dividend, are not entitled to grossing up on such parts.

The next important feature relates to section 23A companies in which public are not substantially interested. This has been amended in two respects:

(a) The amendment raises the flat rate of super-tax payable by investment companies on their undistributed profits from As. 4 to As. 8, if their distribution of dividend falls short of the prescribed minimum; the existing rate of As. 4 for other companies is, however, retained.

(b) It is a clarificatory amendment, securing inclusion of accumulated profits not transferred to reserves for determining the applicability of the proviso to section 23A. In Century Mills' case, it was held that reserves did not include the balance of profit and loss account carried forward, with the result that, in determining under section 23A whether reserves were equal to capital, profit and loss account balance would have to be ignored. The amendment secures that such balances shall also be deemed to be reserves for purpose of section 23A.

Reopening of Accounts

The most important change effected is the change introduced in section 34 dealing with escaped income. The Finance Act, 1956, has made substantial changes in this section. These are:

(1) The limit of eight years existing in section 34 (1)(a) is dropped. No assessment for the years earlier than 1940-41 will, however, be reopened, except as indicated under (3) below.

(2) There will be no limit for completion of assessment or reassessment made under section 34 (1)(a). Previously, such assessment had to be completed before the expiry of one year from the date of service of the notice, even if such period exceeds the period of eight years or four years, as the case may be.

SIXTYONE YEARS STRONG IN SERVICE

R. L. Tuli - Officiating General Manager

(3) Opening or reopening of the assessment of cases more than eight years at the close of the assessment year will continue to be subject to—

(a) the sanction of the Central Board of Revenue;

(b) the amount of income that has evaded tax must not be less than Rs. 1,00,000.

The Central Board of Revenue will continue to have power of settlement in respect of war years. It will have no power to make such settlements in respect of other years.

The New Finance Act, 1956, also empowers the Income-tax authorities to enter buildings, search the premises, seize any documents, take notes or make inventory which may be relevant or useful for any proceedings under the Act. Such power shall be exercised with the previous approval of the Commissioner of Income-tax. The Income-tax Officer shall not impound any books of account or other documents without recording his reasons for so doing and retain custody of such books and documents exceeding 15 days without obtaining the approval of the Commissioner of Income-tax.

Section 35, which deals with rectification of mistakes, has been considerably enlarged. *Inter alia,*

(1) This amended section enables the amount of income-tax deemed to have been paid by the shareholder in respect of dividend under section 49B or section 18(5) on the presumption that the full tax assessed on the company would be paid by it to be reduced in the event of any portion of the tax not being paid by the company within three years from the date the dividend was declared and consequential recovery to be made from the shareholder.

(2) It authorises recovery of rebate of income-tax allowed in respect of profits retained by a company in any year, if such profits are subsequently distributed as dividend.

Other Amendments

Among the other amendments of a miscellaneous character might be mentioned the following:

(1) Deduction of expenses incurred by a salaried employee on the maintenance of a conveyance of his own used for the purpose of his employment. At present, no such tax relief is available to salaried employee.

(2) Grant of unilateral relief in India for income charged to agricultural income-tax in Pakistan. At present, such income is liable to tax in India and Pakistan and the assessee is unable to get any relief from Double Income-tax Avoidance agreement, as it does not extend to income classified as agricultural in either country.

(3) Exemption of foreign technicians employed in Government undertaking. In the Finance Act, 1955, exemption for a limited period of remuneration received by a foreign technician employed in business was given. But, as the law stood, a foreign technician who stayed in India for 365 days or more lost the benefit of the exemption for the second financial year, while one whose stay was for less than 365 days got it. The new provision affords now relief as below:

(a) granting exemption to foreign technicians employed by Government and local authorities or statutory corporations;

(b) granting exemption for the remuneration for one full year from the date of technician's arrival in India in case where the technician stays in India for more than 365 days.

This amendment is given a retrospective operative effect from 1st April 1955 instead of 1st April 1956.

(4) Continuation of the exemption of profits from tax for new industrial undertakings. At present they are exempted for a period of five years from the commencement of manufacture or production, if they satisfy certain conditions. The exemption is limited in each of the five years to profits not exceeding 6 per cent. of the capital employed in the undertaking. It is extended by the Finance Act, 1956, to another period of five years.

(5) Section 8 relating to interest on securities has been amended so as to secure a deduction of reasonable sums expended by an assessee, including a bank, in the realisation of interest on securities.

This completes an outline of the main and salient features of the Finance Act, 1956. Days were when the tax was only a fraction of the income. Now the income has become a mere fraction of the tax. With the rising tempo of fresh taxation, one may not, perhaps, be surprised to find one day that the income—the whole of it—has faded into some tax or other.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Elphinstone Spinning and Weaving Mills Co., Ltd., as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Company for the year ended upon that date, from both of which annas and pies have been eliminated.

The Balance Sheet and Profit and Loss Account have been drawn up in accordance with the Indian Companies Act, 1913, and therefore do not give the information required by the Companies Act, 1956, in the manner so required.

Subject to the foregoing, we report as follows:—

(1) In our opinion and to the best of our information and according to the explanations given to us, the foregoing Accounts give a true and fair view (a) in the case of the Balance Sheet of the state of the affairs of the Company as at 31st December, 1955, and (b) in the case of the Profit and Loss Account of the profits of the Company for the year ended on that date;

(2) we have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of auditing the Accounts in the form in which they have been prepared;

(3) in our opinion, proper Books of Account as required by the law in force as at the date of the Balance Sheet have been kept by the Company so far as appears from our examination of the books;

(4) the Balance Sheet and Profit and Loss Account are in agreement with the Books of Account.

S. B. BILLIMORIA & CO.,
Chartered Accountants.

BOMBAY, 7th June, 1956.

The above Balance Sheet to the best of our belief contains a true account of the Capital and Liabilities and of the Property and Assets of the Company.

Secretary.

BOMBAY, 6th June, 1956.

CONDITIONS FOR THE WORKING OF A FREE ECONOMY

GENERAL WELFARE OF PEOPLE IS AN IMPORTANT CONSIDERATION

By Dr. Per Jacobsson

[India is, perhaps, one of the few countries in the free world where the virtues of a free economy are not readily recognised in influential quarters. Much of this is due to confused thinking by the leaders themselves and the tendency among the rank and file to accept the observations and pronouncements of their leaders without adequate reflection. Experience in other parts of the world has shown that a vigorous free enterprise is an essential prerequisite to the survival of democracy, as well as to rapid and yet sound economic progress. There does not seem to be adequate appreciation of this condition in this country. The article on this page, reproduced from the Quarterly Review, *with the courtesy of the Skandinaviska Banken, Stockholm, is, therefore, a timely contribution to reinforcing India's gradually waning faith in free economy. In this article, the author, Dr. Per Jacobsson, a reputed Swedish economist, describes the conditions necessary for the efficient working of a free economy and convincingly dispels some of the general misconceptions about this system. Our object in publishing this article is to strengthen the hands of those who are generally inclined to support the system of free economy but have of late begun to vacillate, under the pressure of continuous attack against it, and to enable the open-minded critics of the private sector to reflect on what the Swedish economist has stated on the merits of that system.—ED.]*

BY a "free economy" is meant a *market economy*, i.e., an economy in which prices are determined by supply and demand in relatively untrammelled markets and in which price movements, through their influence on profits, are the principal factor promoting and balancing production. In the alternative kind of economy, which may be called either centrally-managed or authoritarian, prices and production are determined by decisions of the authorities; and, although these decisions are not necessarily arbitrary but may conform to certain established principles, the authorities do not consider themselves strictly bound by the need to consider the prevailing conditions of supply and demand. Indeed, one of the difficulties connected with East-West trade has been precisely that *internal* prices in the Eastern countries are essentially different from those applied to their foreign trade.

No economy, however, adheres to one single method of determining prices and production. As far as the Eastern countries are concerned, relatively free markets seem to be tolerated for certain foodstuffs, old clothes, etc., while, in the Western countries, on the other hand, there are certain sets of prices which are fixed by Government agencies or which are for some other reason not subject to ordinary market conditions. But care must be taken to see that such measures of intervention as may be adopted in a free economy conform to the basic rules resulting from the interplay of supply and demand in the markets, for otherwise the workings of the market mechanism can be most adversely affected and the consequences may be felt for a long time. How intractable the disturbance can be, may be gathered from the results of the policy of price support for agricultural products in the United States, where there are large accumulations of stocks, which, in their turn, have created problems most embarrassing to the authorities and also the farmers themselves. While a free economy is, in principle, based on the right to own private property and to pass it on to one's heirs, this right is, as experience shows, compatible with a fair amount of public ownership and the levying of death duties, provided, however, that enterprises in the hands of public authorities are managed with due attention to ordinary market conditions and that death duties are not so heavy that they seriously impair the public's willingness and capacity to save or to pass on their savings to their heirs.

Enough Scope for Control

This is not the place to go into the question why the Western countries prefer a free economy to the alternative system of centralised direction. May it suffice to recall that, with the aid of modern techniques, the public authorities nowadays may exert a degree of effective power far beyond what their predecessors in earlier times would ever have dreamt of. If, under such conditions, both political and economic power were to be vested in the same set of persons, there would not be much room left for individual action and judgment. In a market economy, the economic decisions are largely decentralised, being subject to the discipline of the market, and this seems vastly preferable to the kind of discipline which has to be backed ultimately by the police and the armed forces. A market economy is by its very nature conducive to a high degree of variety and thus offers greater scope for continuous progress sustained by a persistent flow of innovations. A system of free enterprise liberates forces which, together with the desire to work and to provide for one's dependants, constitute powerful factors ensuring economic growth and rising standards of living.

Political Framework

Turning now to the particular conditions requisite for the working of a free economy, it must be mentioned, *in the first place*, that *the general political framework must be in a relatively good order.* While there is a great deal to be said for the advantages of change—though not too frequent change—in the personnel of Governments, enabling various groups to participate at different times in the administration of the nation's affairs, there ought at any rate to be a certain stability in the main principles applied to economic and monetary matters. As far as monetary problems are concerned, it may be just as well to recall what in our days are the guarantees of the future value of a currency, now that currencies consist mainly of notes and demand deposits, i.e., means of credit of various kinds. Even when, as in the United States, the currency is linked to gold, experience shows that, without any change in the official gold price, the creation of credit can lead to very appreciable increases in the level of wholesale prices and the cost of living and thus to corresponding alterations in the real purchasing power of the means of payments. The fact has to be faced that the value of a currency ultimately depends on the determination of the authorities to limit adequately the creation of new money. The question is, therefore, to what extent one can rely on the sense of responsibility of the authorities, not only at the moment but in years to come, since many contracts—insurances, pension arrangements, etc.—cover a period of 20 years or more.

Fortunately, it is possible to state that, over the last year or two, a much greater unanimity has been revealed with regard to the principles of monetary policy which should be applied in the various countries; flexible credit policies have been adopted almost everywhere.* And it has been interesting to note that—probably quite deliberately—questions of monetary policy have been kept out of the campaigns in recent elections in both Great Britain and the United States.

Monetary policy has been mentioned as just one example. It is, of course, desirable that a fair degree of unanimity should also be reached in regard to other aspects of economic policy, for otherwise there is always a danger that abrupt and perhaps fundamental changes will be introduced whenever there is a change of Government. In view of the tendency nowadays in many countries to elect "middle-of-the-road" representatives whether formally of the Left or of the Right, it would seem that there may soon be a relatively stable political basis capable of ensuring relatively steady economic growth in the countries of the Western world.

Sufficient Entrepreneurs

A second condition for the proper working of a free economy is the existence of *sufficient entrepreneurs.*

At the time of the great inventions which gave rise to the Industrial Revolution at the end of the eighteenth and the beginning of the nineteenth century, it was generally members of a new middle class, often of a rather puritanical bent, who started and developed the firms which manufactured and sold the newly-created articles and machines. Much has been written about the connection between Calvinism and capitalism and in more than one way this connection is a strange one: whereas quite clearly the New Testament considers riches as a source of spiritual danger, it would seem that the majority of the new *entrepreneurs* on both sides of the Atlantic has regarded advancement in business as a sign of the Lord's special approval. In any case, the puritan virtues—love of work, orderliness, frugality and diligence—did in fact help to bring forth the necessary capital and to ensure success in whatever enterprise was undertaken.

Today, there is a new class of *entrepreneurs* —the highly trained managers—and whatever their faults, they do not seem to lack energy.

It is an important factor in the economic history of the modern world that the populations of the underdeveloped countries do not for the most part include any large group corresponding to the middle class which was the mainstay of industrial development in the West. Instead of relying on private enterprise, the Governments of these countries, anxious to promote rapid industrialisation, set up nationalised industries run by State officials, and fearing that the supply of voluntary savings will not be adequate, they look for ways and means of extracting "forced savings" from the public. The end of these experiments is not yet in sight. Undoubtedly a new class of technicians and of managers of various grades is being formed, and it may be that with the aid of this class there may one day be evolved a system more akin to that existing in the Western countries.

Effective Market System

A *third condition*—and perhaps the most important one—for the working of a free economy is that prices should be allowed to be determined in relatively unrestricted markets, which means that there must be an *effectively functioning market system.*

The Western world had its fill of controls and rationing during the war, and, when the shortages began to disappear, the majority of the direct controls were taken off. Professor Erik Lundberg, in his monumental study of business-trend policy from pre-1914 times up to the present, comes to the conclusion that direct controls over prices and production are a very clumsy means of intervention and that they are definitely inferior to the "invisible hand," i.e., the influence of price changes in the markets, by which, as Adam Smith pointed out, production is directed in a free economy.† Professor Lundberg was a member of the State Price Control Board in Sweden during the war and was afterwards head of the Swedish Institute of Economic Research, so that his judgment can be said to be based not only on theoretical analysis but also on direct personal experience of how the methods employed actually worked in practice.

Principles are put to the test when difficulties occur; and it was in the period of intense boom, which began in the autumn of 1954 that the authorities in the various countries had to decide whether to seek to restore equilibrium by means of general measures of a fiscal and monetary nature or whether they would reimpose direct controls in the field of foreign trade—controls which would involve, in particular, a curtailment of imports. As we now know, interference with foreign trade has in fact been avoided, and in this connection the attitude adopted by Great Britain is for several reasons of outstanding importance. If the British authorities had ceased to rely on methods of monetary and fiscal policy, the conclusion would have been widely drawn that these methods are to be regarded as ineffective under modern conditions and must be replaced by direct controls imposed by the State. What is done in Great Britain is much more important in these respects than, for instance, the policies followed in the United States—for the simple reason that the United States is so large and possesses such ample monetary reserves that it need never worry about the emergence of a deficit in its balance of payments and it might even welcome a deficit, since the reappearance of a deficit would help to put an end to the "dollar shortage"—whereas other countries in the Western world, almost without exception, have to be very careful about what happens to their balances of payments.

*In this connection the increases in the official discount rates and other financial measures taken in the Scandinavian countries when they were experiencing balance-of-payments difficulties in 1954-55 have attracted much attention, since the Labour Parties are the dominant in the Governments of all these countries.

†See *Konjunkturer och Ekonomisk Politik* by Erik Lundberg, Stockholm, 1953

It may, however, be asked whether prices are any longer a reliable guide. For it can be argued that, in the modern world, price rings and cartels and other forms of restraint on trade nowadays exert such a strong influence that it is an illusion to think that the majority of prices are still determined on free markets. But, in actual fact, when one examines the price changes which have occurred in recent years, one finds that competition still plays a very considerable role: the importance of "services" has increased and the rendering thereof is still a matter for free competition; moreover, substitutions are taking place to an increasing extent, especially as new products appear on the market, with the result that the consumer's choice is being widened. And investment is continuing at a high rate —which will lead to increased production of ready-made articles, thus tending to prevent the artificial shortages that are the essence of monopolies.

The liberalisation of trade works in the same direction. Furthermore, the authorities in one country after another are taking steps to get rid of practices in restraint of trade—and in not a few instances they are being helped in this by the *entrepreneurs* themselves. It is, indeed, essential that business people should realise that it is not right for them to turn to the Government for help each time they meet with difficulties in their own particular branch.

Governments' Duty

Governments, too, need to examine their own record, for not infrequently it is as a result of their intervention that the price system is deranged. Mention has already been made of the "supporting" of agricultural prices; another example is to be found in the field of housing. The artificial holding-down of rents is having some dangerous consequences, one of these being that many houses are no longer being kept properly, the resultant capital loss being quite considerable in the case of a fair number of countries. Legislation regarding rent restriction is, however, being gradually eased; and even agricultural prices are being made more flexible, so that developments can be said to be generally tending in the direction of freer marketing.

But, if this is the case, how can people be given some assurance that, in spite of competition, prices will not rise sharply—or perhaps fall so abruptly that production becomes unremunerative and unemployment ensues? The public, it may be argued, will surely not be willing to allow itself to be exposed without any protection to the risks of a *laissez-faire* policy. The answer is that it will not be asked to do so, for there have been evolved certain guarantees and the existence of these guarantees is a further condition for the proper working of a free economic system.

Monetary and Fiscal Policies

Thus, the *fourth condition* in our list is that *sensible monetary and fiscal policies should be pursued.* As the famous English economist Walter Bagehot pointed out nearly a hundred years ago, "money does not manage itself." A very important step was taken in March 1951 in Washington when, with the agreement of the U.S. Treasury, the Federal Reserve Banks were once more given freedom to conduct a flexible credit policy. It seems now to be generally admitted that the monetary authorities in the United States have made good use of this freedom, since the prompt measures which they have taken in the various phases of the business cycle have made an essential contribution to the relatively smooth progress of the American economy in recent years. When monetary policy is being considered, attention is often concentrated primarily on changes in interest rates; these changes are certainly of great importance, but a number of other measures also need to be applied—and such other action has in fact been taken as is shown, *inter alia*, by the reports of the President of the United States and of the Federal Reserve System, in which much interesting information is given about the various aspects of the policies pursued.

The return of flexible credit policies has helped to restore to central banks a greater freedom of action. The general public is getting tired of continuous price rises and is beginning to understand that there must be some safeguard against excessive credit granting not only to the private business world but also to Government agencies. The note-issuing institution needs to be as independent of Government policies as possible; and it is of interest, in this connection, to recall that the statutes of some central banks do not allow members of the Government or of Parliament to be appointed to their Boards. In the case of Sweden, there is no such similar restriction, but demands have recently been made that the persons appointed to the Board of the Sveriges Riksbank should not be members of Parliament.

Monetary policy is coming into its own again, but to be effective it must be supplemented by appropriate action in the public sector, which now constitutes such a large part of most economies. For this reason the increase in the British bank rate from 4½ to 5½ per cent. introduced on 16th February 1956 was accompanied by measures designed to curtail spending in the public sector.‡

It would be going too far to claim that the ideal methods of monetary and fiscal policy have already been worked out, but much experience has been gathered and people are now more ready to learn what the proper methods should be. It must not be expected, of course, that the steps that have to be taken in execution of the monetary and fiscal policies will be altogether painless, but they should, on the other hand, make it possible to avoid any such widespread suffering as that caused by many of the depressions of the past.

General Welfare

This leads us on to the *fifth condition*, namely, that *arrangements must be made to safeguard general welfare*, without which no economic system can be truly acceptable to the public at large.

It is of interest, in this connection, to make a comparison with some of the main principles of biology. We have learnt that the factors which influence the evolution of the species include not only the struggle for life, as stressed by Darwin, but also mutual aid (within the family and the herd and even as evidenced by the protection afforded to each other by the trees in a forest, to mention only a few examples) and these two factors must further be supplemented by the existence of conditions which allow of the occurrence of variations (or "mutations" as they are called), without which there would be no new developments. If we translate these findings into economic terms, we may say that what is required for progress is, in the first place, competition (both in the individual markets and elsewhere); secondly, the Welfare State, extending help especially to the economically weak; and, thirdly, a general state of affairs which ensures that innovations are not suppressed but, on the contrary, actively encouraged. Sometimes, these different requirements clash with one another and then some kind of compromise has to be found. In this connection, it is only possible to indicate here one general problem. The crux of the problem before us is that, although the Welfare State has undoubtedly come to stay, it needs to be managed in such a way as to make it compatible with the proper working of the price system and with sound finances.

Firm Foundations

In addition to the five conditions mentioned above, there is reason to include a *sixth*, namely, that continuous efforts must be made to ensure that the *general foundations of the economy are firmly established.* Law and order must reign and it must in particular be possible to rely upon the fairness of the courts; taxes must be properly distributed and tax laws fairly administered; trades and professions must be allowed to have their own organisations, but these must be run in a highly responsible fashion and not used for restrictive purposes; proper education must be provided; the banking system must be sufficiently solid and great attention must be paid in particular to the system whereby savings are transmitted to those whose business it is to employ them. The list could easily be added to. One of the essential guiding principles to be observed in all this is that, in free economies, the spirit of private enterprise must not be unduly hampered but must be given sufficient scope for dynamic action. Recent experience provides encouraging evidence of what can be achieved; one cannot but be struck by the extent to which the economic life of various countries has been able to adjust itself to the vicissitudes of the war and of the post-war years. But the continuance of general prosperity cannot be taken for granted. This, fortunately, is widely realised, and the latest Economic Report of the President of the United States includes a list of objectives, consisting of practical steps which need to be taken to strengthen the foundations of future prosperity. One of these objectives is stated thus: "The incentives to work, to save, to invest and to venture must be protected and enhanced."

Critics Answered

It is often useful to examine *what the critics of a system have to say about it.* The capitalistic system, as embodied in the free economies, has been much criticised and its greatest antagonists have pointed to what they call its "two fundamental weaknesses":

(1) In the first place, it is said that the system will lead to war, because the capitalistic countries are bound to fight one another, as they have done in the past, for the possession of markets, especially in colonial areas.

(2) Secondly, it is contended that the system will continue to be exposed to devastating depressions with widespread unemployment.

The wars will lead to inflation and the depressions will cause general discontent, under the impact of which the capitalistic system is expected to be destroyed from within.

There is no doubt that the critics enormously exaggerate the importance of colonies as markets, but otherwise it cannot be claimed that the criticism has been wholly unjustified in the past. For have there not been within the last 50 years the two world wars and the great depression of the 1930's? Are there really grounds for hoping that more sensible policies will be pursued during the next 50 years?

As far as the danger of war is concerned, account has to be taken not only of the deterrent effect of the atomic bomb but also of the existence of the Atlantic Community, which, through its various organisations, should be able to ensure that the Western countries do not again go to war with each other. Perhaps war will have to be recognised as an outmoded way of settling conflicts not only between the capitalistic countries but between *all* the countries on this earth.

As for the danger of another bad depression, it would seem possible to state, with a fair amount of confidence, that considerable progress has been made in this field, especially in the last quarter of a century. Not only is there now more insight into the workings of the economy and a greater sense of responsibility on the part of the authorities and also among the organisations representing particular interests, but in many countries the economic and financial foundations have been strengthened by built-in stabilisers and in other ways. No doubt fresh problems will arise demanding new solutions. Mistakes will be made and difficult situations will have to be faced. But, with the greater resources now available to many of the free economies, there is no reason to expect that the countries in question will fail in their task or that they will be rendered unable to extend a helping hand to the less favoured regions of the world.

‡In the years since the Second World War, the effective demand both for goods and for funds has been so strong that there has been no difficulty in finding investment opportunities for all available savings. The particular difficulty which Keynes had in mind—namely, that current savings would not be fully invested—has therefore not arisen, and Keynes' recommendations, as expressed in his *General Theory* (published 1936), had thus better be forgotten for the time being. But this does not mean that these difficulties may not reappear one day. Lack of adequate monetary demand is a contingency which cannot altogether be disregarded; if it were to recur on a dangerously large scale a situation similar to that for which Keynes's remedies were prescribed would be created and certain exceptional measures would then be called for; it is only to be hoped that, in this event, the injection of fresh purchasing power would be made in such a way as to help to maintain the balance between costs and prices, thus enabling remunerative production to continue.

Notices

THE EMPIRE JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighty-seventh Ordinary General Meeting of the Shareholders of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 16th July 1956, at 3-0 p.m., for the following purposes:—

(1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.

(2) To declare Dividends.

(3) To appoint a Director in place of Mr. R. G. Edwards who retires by rotation, but who is eligible for reappointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. R. G. Edwards, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, who retires by rotation be and is hereby reappointed a Director of the Company."

(4) To appoint a Director in place of Mr. C. L. Bajoria who resigned in May 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

(5) To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1) (*d*) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

(6) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June 1956 to 16th July 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th June* 1956.

Note.—Payments of the proposed dividends, if declared, will be made on or after 6th August 1956, only to those members whose names are registered in the Books of the Company on the 16th July 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. R. G. Edwards is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to reappoint him as a Director of the Company.

2. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

3. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1) (*d*) of the Companies Act, 1956.

THE KELVIN JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-seventh Ordinary General Meeting of the Shareholders of THE KELVIN JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 16th July 1956, at 4-0 p.m., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.
2. To declare Dividends.
3. To appoint a Director in place of Mr. Ramsundar Kanoria who retires by rotation, but who is eligible for re-appointment.
4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution.

"That with effect from the commencement of the Companies Act, 1956 and in compliance with the provisions of Section 314 thereof, Messrs. Luchhminarain Kanoria & Co., a firm in which Mr. Ramsundar Kanoria, a Director of the Company, is a Partner, be and are hereby permitted to hold an office or place of profit under the Company, namely, as Guarantee Brokers."

6. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1) (*d*) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

7. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June 1956 to 16th July 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th June* 1956.

Note.—Payment of the proposed dividends, if declared, will be made on or after 6th August 1956, only to those members whose names are registered in the Books of the Company on the 16th July 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

2. By virtue of an agreement dated 25th June 1936, Messrs. Luchhminarain Kanoria & Co., a firm in which Mr. Ramsundar Kanoria, a Director of the Company, is a Partner, were appointed as Guarantee Brokers to the Company in respect of Gunny Sales. Although a resolution was passed by the Company at the 59th Ordinary General Meeting held on 8th March 1937, consenting to Messrs. Luchhminarain Kanoria & Co. holding an office of profit under the Company, it is considered desirable to regularise this appointment under Section 314 of the Companies Act, 1956. The resolution under item No. 5 of the Notice provides for this. A copy of the aforesaid agreement is available for inspection at the Registered Office of this Company during business hours.

3. The resolution under item No. 6 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1) (*d*) of the Companies Act, 1956.

CHITAVALSAH JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-ninth Ordinary General Meeting of the Shareholders of CHITAVALSAH JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 16th July 1956, at 3-45 p.m., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.
2. To declare Dividends.
3. To appoint a Director in place of Rai Bahadur Nityananda Singh Roy, J.P., who retires by rotation, but who is eligible for re-appointment.
4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293 (1) (d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

6. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June 1956, to 16th July 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th June* 1956.

Note.—Payment of the proposed dividends, if declared, will be made on or after 6th August 1956, only to those members whose names are registered in the Books of the Company on the 16th July 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

2. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1) (*d*) of the Companies Act, 1956.

WAVERLEY JUTE MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Seventy-seventh Ordinary General Meeting of the Shareholders of WAVERLEY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 16th July 1956, at 3-30 p.m., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.
2. To declare Dividends.
3. To appoint a Director in place of Mr. D. P. Goenka who retires by rotation, but who is eligible for reappointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. D. P. Goenka, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, who retires by rotation, be and is hereby reappointed a Director of the Company."

4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1) (*d*) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

6. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June 1956 to 16th July 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 12*th June* 1956.

Note.—Payment of the proposed dividends, if declared, will be made on or after 13th August 1956, only to those members whose names are registered in the Books of the Company on the 16th July 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. D. P. Goenka is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to re-appoint him as a Director of the Company.

2. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

3. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up Capital of the Company and its free reserves pursuant to section 293 (1) (*d*) of the Companies Act, 1956.

THE ALEXANDRA JUTE MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and First Ordinary General Meeting of the Shareholders of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday the 16th July 1956, at 3-15 p.m., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December 1955.
2. To declare Dividends.
3. To appoint a Director in place of Mr. A. N. Sil who retires by rotation, but who is eligible for reappointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. A. N. Sil, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company, who retires by rotation be and is hereby reappointed a Director of the Company."

4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria, an Associate of McLeod & Co., Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1) (*d*) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

6. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June 1956 to 16th July 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents

3, NETAJI SUBHAS ROAD,

WORLD MARINE RESOURCES SURVEY

KEY TO FUTURE OF FISHERIES

From A Special Correspondent

IN a suite of offices in a big, white building fronting the Viale delle Terme di Caracalla, Rome, the headquarters of the Food and Agriculture Organisation (F.A.O.), marine biologists of many nations are engaged on the complex work of collecting, sorting, analysing, codifying and recording, by decimal classification, facts and information about the oceans, seas, rivers and inland waters of the world.

These men are engaged on a task which will take many years to complete—a survey of the living aquatic resources of the world. It is a task which relates to the activities of the member-Governments of the 72 nations of F.A.O., and of marine biologists, and of fishery scientists studying the world's fisheries, as well as fishermen themselves. Ultimately, this resources survey, of which F.A.O. acts as a clearing house and stimulator, not an originator, may determine the future welfare of fisheries throughout the world.

"Fisheries are still in a primitive state as compared with, say, farming," said Dr. G. L. Kesteven, Chief of the Biology Branch of Fisheries Division, F.A.O., who is in charge of the Organisation's work on the survey. "The ultimate aim in fisheries is to conduct the industry with the same efficiency and certainty which now exists in agriculture, although, of course, we can never hope to 'farm,' as it were, all the oceans and seas. But we need to practise fish husbandry to the fullest extent within the limits possible. We need to manage, control and breed fish as a farmer manages, controls and breeds animals, so that we can cultivate fish, whether at sea or in fresh water, for the benefit of mankind, that is to say, breed them for our purpose, pasture them as we do animals, and harvest them for food or commercial purposes as we do sheep or cattle.

"At the present time, we are a great distance from such a goal," he continued, "although Governments have made the first tentative steps in that direction through the introduction of fishery controls such as closed seasons for catching certain fish and regulations concerning the size of nets to be used, and have, as in the case of whales, restricted the quantities that may be caught in one season."

Complicated Problem

The problem of management, control and development of fisheries is complicated by a number of factors. First, no individual or nation has property rights over the oceans and seas or the life in them. Even the extent of ownership of territorial waters is in dispute. Second, about 75 per cent. of the earth's surface is covered by water and knowledge of the life and resources of this vast area is limited. Third, the knowledge that does exist of well-known and exploited sea fisheries is inadequate for rational management on a national or international scale.

"According to statistical information available, only about 10 per cent. of animal protein food consumed by man comes from the waters of the world," said Dr. Kesteven. "Our present knowledge of resources indicates that we could gather much more food from this source and also use much greater quantities of sea products for commercial purposes. For example, Dr. Woodward, of the United Kingdom, estimates that there are 10 million tons of brown seaweed available around Scotland and one million tons could be harvested each year to produce 70,000 to 110,000 tons of carbohydrates. He has also estimated that there are 60 million tons of such weed growing on the coasts of Norway, France, the British Isles, Canada and the Falkland Islands. This is only one example of aquatic flora which could be used by man and, as always when one talks about marine life, the figures run into astronomical dimensions."

At the End of the Food Chain

Fish and aquatic mammals are at the end of the food chain in the sea but there are intermediate stages in this chain which might be of commercial value. Zooplankton is an example. This minute growth is a basic food for many creatures in the sea. Whales, for example, consume millions of tons of it. Man can use zooplankton and in Asian countries great quantities are used in the manufacture of pastes and other fishery products. Attempts have been made by Governments of Western countries to use zooplankton industrially but with little success so far.

"I mention these in passing to indicate that any survey of marine resources is concerned with much more than fish," explained Dr. Kesteven, "although, naturally, mankind is more directly interested in the food he can get for immediate consumption, that is to say, fish. We have gathered much knowledge about the available commercial fish, but, before we can reach a point of conducting fish husbandry, we need to know a tremendous lot more. What we do know has led to some conservation measures being taken as, for instance, in the North Sea where it has been recognised that unrestrained, over-fishing might lead to gross depletion of stocks. Fishery biologists believe that, through international agreement at Government level and through other control and conservation activities, the yield of fisheries can be maintained at a determined level, but we need full knowledge of all the factors involved before we can attain such results. Another practical result from a world survey of marine resources would be the discovery of the nature and the extent of stocks in relatively unexploited grounds, of new grounds, and, perhaps, the commercial uses for trash fish or species which are not now considered to be of any value."

New Resources

The discovery in recent times of new resources of fish and crustacea indicates that the oceans contain much unknown wealth. It is estimated, for example, that only 10 per cent. of known plaice grounds are being fished, and it is quite possible that there are also many unknown flat fish grounds. In South African waters, a huge pilchard fishing industry has grown up within the past 10 years or so. In the case of crustacea, in the past 50 years new resources have been found and exploited off the east coast of America, the east coast of Australia, the Mexican Gulf and even in the Mediterranean. Again, only this year an F.A.O. master fisherman discovered a new shrimp ground, 140 miles in extent, ranging along the West coast of India.

"These are only a few instances of finding and exploiting new resources," said Dr. Kesteven. "They tend to support the theory held by some that there are no deserts in the sea and perhaps a survey of aquatic resources may ultimately prove this to be well founded. However that may be, the steadily increasing catch of fish in the world is a pointer to the potential possibilities. At present, the total catch of fish, crustaceans and molluses amounts to about 27 million metric tons, according to the *F.A.O. Yearbook of Fishery Statistics*. This is about 5 million metric tons more than was caught in, say, 1938, and marine biologists believe that the total might well be raised to some 50 million metric tons annually in the course of the next 20 years or so.

But, in order to increase production, we must have comprehensive knowledge of the resources, and the object of the survey is to provide us with that knowledge.

"I should stress," he continued, "that F.A.O.'s part in this survey is that of a clearing house of information. We do not carry out research and surveys ourselves, except through the agency of technical assistance projects, but we are attempting to collate all available information and to disseminate that information to Governments and international fishery agencies and to other interested fishery organisations, firms and persons."

Continuous Research

In connection with this work, F.A.O. is collaborating with the *Bibliographia Oceanographica*, with member-Governments of F.A.O. and with international fishery organisations. "We attempt to read, appraise, and extract all information in current literature relative to the survey of aquatic resources," explained Dr. Kesteven. "In doing so, we read some 2,500 books and contributions in periodicals a year from which we extract information which we record by a punched card system. In a year we probably deal with some three or four thousand cards. The editors of *Bibliographia Oceanographica* are engaged on a similar work and produce a great number of reference cards, which they exchange with us."

One of the by-products of F.A.O.'s work will be a world atlas of fishing maps. These maps will contain in simple and easy-to-see form all the immediately important information relative to world fisheries. The atlas will be issued next year. Meanwhile, the information which Dr. Kesteven and his assistants are continually extracting is being brought to the attention of Governments and fishery organisations.

"It is important to realise," said Dr. Kesteven in conclusion, "that the work we are doing on this survey of marine resources is only one contribution to the development of world fisheries. There are a great number of other activities involved, such as technical developments in fishing, exploitation of known stocks, and increasing the productivity of the fisheries in underdeveloped countries through mechanisation and the introduction of modern catching techniques. There are also a multitude of financial, marketing, social and economic considerations, all of which can, and often do, affect any national or international development of fisheries. Our principal task is basic, that of gaining knowledge and understanding of the marine resources, and, when we have that knowledge, it will have a practical effect on all policy, plans and work concerned with the development of world fisheries."

RECENT TRENDS IN WORLD TRADE

SHARE OF NON-INDUSTRIAL COUNTRIES DECLINES

IN the analysis of world trade trends last week only broad outlines were given owing to considerations of space. In this article, it is, however, proposed to deal with these trends in greater detail, in order to enable one to get a clear and full picture of world trade in 1955, as drawn by the G.A.T.T. Secretariat in its fourth annual report on *International Trade*. The report runs into three parts. Part I deals with the recent developments in the structure and pattern of international trade. Part II examines development of commercial policy and Part III sets out the principal activities of the Contracting Parties to the G.A.T.T.

The year 1955 will stand out prominently for establishing new records in both value and volume of world exports. In the first half of the year, the *value* of world exports amounted to over $80,000 million and, in the second half, it rose by a further $5,700 million, thus reaching a total which was 13 per cent. higher than that in 1951.

The increase in the *volume* of world exports was even more impressive, for the simple reason that export prices as a whole, though rising slowly since the latter half of 1954, were nevertheless appreciably lower than in 1951. In the second half of 1955, the volume of world exports attained a level which exceeded that of 1951 by more than one-fifth, 21 per cent. to be precise.

Apart from an increase in volume, there was also a notable acceleration in the speed of growth of world trade. Thus, during 1953, the volume of world exports rose by 4.3 per cent. In 1954 it rose by 6.4 per cent. and it was as high as 8.6 per cent. in 1955. This expansion in trade fully reflected the growth of the world's industrial production. In 1955, world output stood nearly 10 per cent. higher than in 1954 and, over the five-year period ended 1955, it rose by 31-32 per cent.

The G.A.T.T. report highlights three major developments in international trade during 1955. The first is that the increase in the value of international trade was mainly accounted for by trade among industrial countries. Thus, out of a total increase of $7,300 million, the share of these countries was as much as $4,100 million and rose from 37 per cent. of the world trade in 1954 to 38.7 per cent. in 1955.

The trade between the industrial and non-industrial countries, on the other hand, continued to decline. This share, which had been 55 per cent. in 1937, became 53 per cent. in 1950 and dropped to 50.7 per cent. in 1955. This decline is of significance to the underdeveloped countries of the world, as it means that, if the development of manufacturing industries is neglected by these countries, they are likely to face further shrinkage in their share of world trade. The causes for this decline, which took place despite a substantial improvement in the terms of trade between primary products and manufactured goods in favour of non-industrial countries are worth noting.

First, the decline is attributed to an increase in the production of substitutes for natural raw materials and fuels in the industrial countries themselves, thereby becoming less dependent on the non-industrial countries for their supplies. These articles included rayon, man-made fibres, aluminium, synthetic rubber, plastic materials and synthetic detergents.

Secondly, while the production of these substitute raw materials started as a result of war-time scarcities, the rise in the relative price of natural raw materials did certainly contribute to the further increase in their output. The report says that, if the production of these substitutes is considered as a whole, the rate of growth since 1950 has been twice as rapid as that of industrial production. It is estimated that, if these substitutes had not existed, the import requirements of industrial areas would have risen 40 per cent. higher than the actual imports in 1955. The report warns: "If, as may be expected, the production of manufactured substitutes continues to grow at the expense of the natural products at the same rate as in recent years, the advantages reaped by the non-industrial areas from improved terms of trade may vanish rapidly and the export proceeds of these areas may diminish in absolute terms."

The third factor which contributed to the fall in exports of non-industrial areas to industrial areas is the relative decline of textile industries as compared with other manufacturing industries in industrial areas. Production of textiles in industrial countries in 1955 was 129 per cent. of that in 1938, whereas that of other manufacturing industries reached 259 per cent. of 1938. A point worth mentioning is that this loss in importance of textile manufactures was responsible for a substantial reduction in the demand for imports of raw materials, because, textile industries absorb a comparatively high input of raw materials per unit of output. The G.A.T.T. Secretariat estimates that, if the production of textiles in industrial areas had risen since 1938 at the same rate as textile production in the world as a whole, the textile industries in industrial areas would, in 1955, have imported about $500 million more of natural textile fibres from non-industrial countries.

The second major development in world trade in 1955 was the marked recovery of North American exports which accounted for a large share of the increase in the export trade of industrial countries. The disposal of agricultural surplus commodities played a larger part in the increase of U.S. exports. Shipments of this category amounted to $1,000 million in 1955, as compared with about $340 million in 1954. About two-thirds went to industrial areas as against three-quarters in 1954. A point to be borne in mind, in this connection is that the disposal of surplus commodities does not call for actual payment in dollars, but in national currencies, or, in the event of barter contracts, for payment in strategic commodities. Hence, the world's adverse trade balance *vis-a-vis* North America, which in 1954 and 1955 was nearly the same—$2,140 million and $2,150 million, respectively—actually corresponded to a smaller dollar deficit on merchandise account—$1,820 million in 1954 and $1,120 million in 1955.

The substantial improvement in the world's dollar position on merchandise account is not only due to the fact that North American exports did not always call for payment in dollars but also to the fact that that country increased its imports by an amount even slightly larger than the increase in its total exports. In fact, such imports were $1,110 million larger than in 1954. This increase considerably exceeded the fall which had occurred in 1954, as a result of American recession.

In the supply of capital goods, North America is stated to have lost some of its advantages over other exporters, as West European countries were rapidly overcoming their competitive disadvantage as supplier of these goods. The liberalisation of imports from dollar sources by Western European countries helped them purchase raw materials from North America at economic prices. Consequently, the dollar gap on merchandise account of the rest of the world was not so serious as trade returns may indicate. The combined value of total imports by the eleven West European countries during the three quarters of 1955 rose by $3,600 million over that in the same period of 1954. Nearly one-third of this increase ($1,130 million) was due to imports from North America. In 1955, the total imports of these eleven West European countries from the latter source were 38 per cent, higher than in 1954, while imports of all other countries, including imports from Western Europe, showed a rise of only 12 per cent. Western Europe's imports from North America were confined mostly to metals and fuels.

The third major development in international trade was the intensification of competition among industrial countries and their endeavour to lower costs of production. In 1955, many industrial countries—in order to meet more severe competition in world markets through lowering their costs of production—relied more heavily on imports from the most economic source of supply and to that end adopted more liberal import policies. A number of these countries either suspended or temporarily reduced import duties on raw materials and capital goods. The extent of the measures taken recently in these countries shows that intensification of competition among industrial suppliers on world markets has led to a growing realisation of the adverse effects of protection on costs of production.

Commodity Composition

There was a notable change in the commodity composition of international trade in the first half of 1955. Manufactures, which in the earlier period had accounted for 46-47 per cent. of the total value of exports, increased to 49 per cent., while the share of primary products correspondingly fell from 53-54 per cent. to 51 per cent. The trade in manfactures in the first half of 1955 was 12 per cent. higher than that in the same period of 1954, while trade in primary products rose by about 5 per cent.

Referring to supply position of commodities, the report says that there were large stocks in food products, cereals, sugar and coffee. The stock position was, however, normal in respect of rice, cocoa, tea, butter, tobacco, raw wool and certain oils and fats, while stocks of metals, solid fuels, rubber and olive oil were definitely short. The production of aluminium rose by 9 per cent. in 1955, while consumption was at least 30 per cent. higher both in Western Europe and the U.S. Demand for iron ore and scrap in Western Europe rose faster than the supply in the area itself, thereby necessitating larger imports. The output of crude steel in the U.S., the European Coal Community, the U.K. and Japan aggregated 188 million tons, 37 million tons, more than in 1954. But this sharp increase was not large enough to cope with an even stronger rise in the demand for it.

International trade in manufactured goods, represented by exports of these products from North America, Western Europe and Japan, in 1954 amounted to $31,000 million, about $2,000 million more than in 1952 or 1953. The first six months of 1955 brought an even stronger increase, exports rising to an annual rate of $33,900 million, thus recording a rise of about 9 per cent. over the first half of 1954. Among manufactures, trade in textiles experienced marketing difficulties, consumption of textile goods in Western Europe and the U.S. did not follow the rapid rise in income in these areas. Production of textiles showed a slowing down in 1955 in Western Europe. In India, the increase was slight, whereas, in Japan, there was a 5 per cent. decline from the 1954 volume, the output having been adjusted to a lower export level.

Exports of passenger cars rose by 30 per cent. Exports of cars by North America was only 3 per cent. of production, while it was 44 per cent. in West Germany and 42 per cent. in the U.K.

The value of capital goods exported from the industrial areas to all destinations rose from $10,800 million to $11,600 million. The largest increase occurred in export of Continental Western Europe which accentuated its lead over North America, the European sterling area and Japan. The increase in the exports of capital goods was chiefly accounted for by machinery.

The reappearance of Germany and Japan in world markets as main exporting countries was a significant development in world trade during 1955. The share of Germany and Japan in total export trade of the main industrial exporting nations was 15½ per cent. This improvement took place at the expense of North America, U.K., France and Italy. This reappearance of Germany and Japan in world markets has, however, not yet restored to them their pre-war importance as major exporting nations.

The G.A.T.T. report has drawn pointed attention to the growing importance of the U.S.S.R., Eastern Europe and China in world trade. The value of trade between all these countries, on the one hand, and the Western world, on the other, was, of course, not higher than that of Australia's or Sweden's trade in 1955. But there was a significant increase both in the exports from and imports into the U.S.S.R. and Eastern Europe, and their trade position *vis-a-vis* the rest of the world improved considerably. Excepting with Japan, and the overseas sterling area, the U.S.S.R. and Eastern Europe had a trade surplus with all major trading groups. China (mainland) had a substantial export surplus.

The report observes that the countries in Eastern Europe may have a competitive advantage in the supply of capital goods over the major Western industrial countries as a result of more advanced technical integration in the form of exchange of designs, etc., within the area. Secondly, the conclusion of bilateral trade agreements with the non-industrial countries and the readiness to accept payment for their deliveries in kind over a number of years have also facilitated the expansion of trade of the communist bloc with these countries.

U.K.'s EXPORTS IN MAY

Britain set up an all-time record for exports in May, according to provisional figures just issued in London by the Board of Trade. The total value of exports in the first five months of this year was 6½ per cent. higher than in the corresponding period of 1955.

The value of exports in May was £283,800,000, imports £329,100,000, and re-exports £13,500,000.

The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.) was £31,900,000. The monthly average of January-May, at £51,100,000, was £14,500,000 less than in the corresponding period of 1955.

The export figures for May include the value of the liner *Empress of Britain*, recently delivered to Canada, and also some silver bullion repayments to the U.S.A. British exports to North America in May were valued at £47,100,000—over £13,000,000 more than in April. Even excluding the value of the *Empress of Britain* and the silver bullion repayments, exports to North America in May were the highest so far recorded. In the five months January-May, exports were over 32 per cent. more than in the same period of 1955.

Exports to the U.S.A. amounted to £24,000,000 in May. In the first five months of the year, they were nearly 33 per cent. higher than in the corresponding period of 1955. Exports to Canada amounted to £23,000,000 in May. In the first five months of the year, they were over 32 per cent. more than in the same period of 1955.

LEIPZIG AUTUMN FAIR

The Leipzig Autumn Fair is scheduled to take place from 2nd to 9th September 1956. This Fair is also expected to be as successful as the Spring Fair which opened on 26th February and closed on 8th March 1956. At the latter Fair, 9,863 exhibitors from 40 countries displayed their products. The exhibits occupied 33 Fair buildings and halls and 21 pavilions on an area of 2,917,000 square feet. As many as 505,000 visitors from 68 countries were present at the Fair.

Government delegations came from the U.S.S.R., China, Finland, Egypt, Sudan, India and Burma. Official representatives of the Commerce and Trade Ministries of numerous other Arab and Asiatic countries as well as many West European and American States were also present at the Fair.

The Fair demonstrated once again, it is stated, the importance of Leipzig as a centre of international trade and as the principal centre of trade between the two world markets. A relaxed atmosphere characterised the Fair.

The foreign trade of the German Democratic Republic developed very favourably during the Fair. The total turnover of the foreign trade organisations of the Republic amounted to 3,511 million roubles, of which exports accounted for 2,915 million roubles and imports 596 million roubles.

METTUR INDUSTRIES' BUMPER PROFIT

RECORD DIVIDEND—IMPRESSIVE FINANCIAL POSITION

THE steady rise in value of the shares of the Mettur Industries Ltd. (Managing Agents: Messrs. W. A. Beardsell & Co. (Private) Ltd., Madras), from Rs. 375 in the middle of February this year to Rs. 530 at the end of last week, has been justified by the excellent results of the Company for the year ended 31st March 1956. The dividend has been stepped up from 35 per cent. to 42.5 per cent. The gross profit has jumped up from Rs. 45.64 lakhs to Rs. 60.75 lakhs. With this increase, the profit has recorded an upward trend for the third year in succession and has more than doubled itself (from Rs. 29.69 lakhs in 1953) in the course of the past three years. What is more, it is the highest earned by the Company since 1948-49.

The net profit also has risen from Rs. 26 lakhs in 1954-55 to Rs. 31.68 lakhs, even after raising the provision for taxation from Rs. 13.50 lakhs to Rs. 21.77 lakhs, and constitutes a fresh record in the 20-year history of the Company. After setting aside a sum of Rs. 7.15 lakhs for payment of bonus to staff, the sum available for distribution (including the surplus of Rs. 1.43 lakhs brought in from the previous year) is Rs. 25.96 lakhs. As the Company comes under the purview of Section 23A of the Income-tax Act, it is obliged, as in the previous year, to distribute as dividend the whole of the assessable income. Accordingly, the Directors have declared a dividend of 42.5 per cent. free of income-tax (absorbing Rs. 25.50 lakhs), as compared with 35 per cent. for the previous year, to which level the distribution had been raised from 22.5 per cent. (made up of a dividend of 12.5 per cent. and a bonus of 10 per cent.) for 1953-54 and 12.5 per cent. for 1952-53. The dividend for the year under review is the highest to be paid so far.

The following comparative table presents the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st March			
	1956	1955	1954	1953
Sale proceeds	156.19	153.99	132.93	123.76
Closing stocks	1.87	1.80	1.55	0.97
Cotton consumed	50.98	63.92	54.16	54.50
Other expenses	47.28	47.00	44.39	40.40
Gross profit	60.75	45.64	37.26	29.69
Managing Agents' commission	5.42	4.22	3.92	2.97

Refund of E.P.T. (net) ..	..	..	6.35	..
To reserves	..	..	6.50	7.00
,, bonus	7.15	4.07	9.57*	..
,, dividend	25.50 (D. 42½%)	21.00 (D. 35%)	13.50 (D. 12½% + B. 10%)	7.50 (D. 12½%)
Carry forward	0.46	1.43	0.50	0.77

* Includes Rs. 2.53 lakhs being compensation paid for involuntary unemployment due to power cut in 1952-53.

For the second year in succession, the mill worked without any interruption by power cuts. The demand for the Company's cloth continued to be keen, which is reflected in the small rise in sale proceeds. The improvement in profit is, however, largely due to the substantial saving of Rs. 12.94 lakhs in cost of cotton consumed.

The balance-sheet of the Company as on 31st March 1956 discloses a sound financial position. Of the paid-up capital of Rs. 60 lakhs, as much as Rs. 30 lakhs was raised by the capitalisation of a part of the reserves in February 1951 and the balance by cash. Even after the capitalisation of such a large sum and, despite the fact that no addition has been made out of the profits for the last two years, the reserves and surplus aggregate Rs. 69.46 lakhs. Of these, general reserve accounts for Rs. 38 lakhs, raw materials fluctuation reserve for Rs. 10 lakhs, fixed assets replacement reserve for Rs. 11 lakhs, and dividend equalisation reserve for Rs. 10 lakhs. The provision for taxation, after making advance payments to the tune of Rs. 14.81 lakhs, stands at Rs. 7.35 lakhs. The current liabilities amount to Rs. 45.74 lakhs, of which the proposed dividend for the year under review alone accounts for Rs. 25.50 lakhs. There have been no notable additions to the gross block during the year, which, at Rs. 63.80 lakhs, has been well written down to a book value of Rs. 20.50 lakhs. The current assets amount to Rs. 162.05 lakhs and are equal to more than three times the current liabilities and the provision for taxation. Of the current assets, stores, spares, etc., account for Rs. 13.19 lakhs, stock-in-trade for Rs. 22.55 lakhs, deposits and advances for Rs. 6.39 lakhs, investments for Rs. 71.51 lakhs and cash balances for Rs. 47.79 lakhs. Thus, the liquid assets alone more than amply cover the current liabilities, as well as the provision for taxation.

The Company produces yarns of 32s and 36s and above for the manufacture of its own bleached mulls and longcloths which enjoy a wide reputation.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 530 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 8.7 per cent. per annum, free of income-tax.

CAUVERY SUGARS AND CHEMICALS LTD.

As was briefly indicated in our last issue (*vide* page 1131), the Cauvery Sugars and Chemicals Ltd. will approach the capital market next week for subscription to a fresh issue of capital. The Company proposes to offer 20,000 6 per cent. (free of income-tax) cumulative preference shares of Rs. 100 each at par and 29,000 ordinary shares of Rs. 100 each at par. A sum of Rs. 25 per share is payable on application. No sum is payable on allotment, but a call of Rs. 25 per share will be payable on 16th August 1956. The balance of Rs. 50 in respect of each preference and ordinary share will be payable in two calls, with an interval of not less than two months between them. The whole of the issue has been underwritten by the Industrial Credit and Investment Corporation of India Ltd. and others.

The history of the Company dates back to 1948, when it was formed with an authorised capital of Rs. 30 lakhs for the purpose of cultivation of sugarcane and manufacture of sugar. A site was purchased in Namakkal taluq of Salem District. Later on, it was found that irrigation facilities were inadequate and the site was, therefore, found unsuitable for the purpose. The site has since been disposed of without loss. As little progress was made in bringing the Company into a state of successful operation, the Directors approached Messrs. Parry & Co., Ltd., a firm which has been associated for many years with highly successful sugar undertakings in South India, for assistance and guidance. As a result, the Board has been reconstituted and a scheme has been formulated, which the new Board considers has reasonable prospect of success and justifies the present approach to the public. A notable feature of this scheme is the appointment of (1) Messrs. Parry & Co., Ltd., as Secretaries to the Company (which will have no managing agency) and the East India Distilleries and Sugar Factories Ltd. as Technical Advisers.

A new factory site has been chosen at Pettavaytalai in Tiruchirapalli District, where, in the adjacent cane cultivation area, the high level canal affords irrigation for an adequate acreage during 11 to 11½ months of the year. The factory will initially be equipped to crush 800 to 850 tons of cane per day and capable of producing 15,000 tons of sugar in a normal year. The other advantages of the site are the availability of sufficient labour, adequate power supply and good transport facilities. The Directors expect the factory to go into full production by the end of 1958.

The Company is assured of not only a regular supply of cane but cane of adequate quality. The land adjacent to the factory site is recognised to be one of the most suitable lands in India for sugarcane cultivation. In order to ensure a regular and adequate supply of cane, the Company, in addition to owning 504.03 acres of land, has entered into lease agreements in respect of a further 1,229.51 acres. The lands so leased have been subleased to Kulittalai Cane Farms Ltd., which Company will grow cane for supply to the factory under the supervision of this Company. The Directors expect an annual crush of 150,000 tons of cane during an aggregate working period of 200 days, once the factory is in full production, with a recovery of sugar at the rate of not less than 10 per cent. On the basis of the aforesaid production programme, and on the basis of conditions at present ruling in the sugar industry, the Directors expect, after the first full year of production, to earn a net profit of Rs. 10 lakhs, after providing for all charges, including depreciation and additional payments to be made to cultivators, in accordance with the formula adopted by the South Indian Sugar Mills Association, and after making full provision for taxation.

The Company is, for all practical purposes, a new venture and, as such, it will enjoy exemption from income-tax on profits up to 6 per cent. on the capital employed for the first five years, in addition to the special benefits regarding development rebate and depreciation. It has been estimated that these various provisions make it unlikely that the Company will be liable for income-tax for the first three years after the commencement of production.

The Directors expect the profit for the year ending 30th November 1959, the first full year of production, to be sufficient to pay preference dividend, including arrears thereof, and a start to be made with a modest dividend on the ordinary capital. They are further of the opinion that subsequent to that year, after making necessary transfers to reserves, it will be possible to pay an ordinary dividend of at least 10 per cent. per annum, subject to the consent of the I.F.C. of India, from which the Company is taking a loan. On the basis of an annual profit of Rs. 10 lakhs, the preference dividend will be covered more than eight times.

In addition to the present issue of Rs. 49 lakhs, the Company has arranged for a loan of Rs. 35 lakhs from the Industrial Finance Corporation of India for financing the establishment of the factory. The loan is repayable in 14 equal instalments of Rs. 2.50 lakhs commencing on 31st December 1958 and will carry interest at the rate of 6½ per cent. per annum, subject to a rebate of ¼ per cent. for prompt payment of principal and interest.

As the year ending 30th November 1959 will be the first year of production, investors will have to wait for another three to four years before getting any return. However, considering the bright outlook for the industry and the association of Messrs. Parry & Co., Ltd., with the Company, the present issue offers a good long-term investment. A point worthy of note by investors in the preference issue is that the dividend is tax-free and in any year when the profit is not liable to tax and preference dividend is distributed, an additional payment will be made so as to ensure that the net amount in the shareholders' hands shall be 6 per cent, as if the Company had been liable to tax. Investors in ordinary shares will also do well to note that, as per terms of the loan agreement with the I.F.C. of India, the Company cannot pay a dividend of more than 6 per cent. on ordinary shares, so long as the loan remains outstanding, without the previous permission of the Corporation. There are, however, instances where the I.F.C. has readily given such permission as, for instance, the National Rayon Corporation.

HIND CYCLES' BUMPER PROFIT

A record gross profit of Rs. 20.03 lakhs has been earned by Hind Cycles Ltd. (Managing Agents: Messrs. Birla Brothers, Bombay) during the year ended 31st December 1955. This represents an increase of Rs. 5.40 lakhs over that for 1954 and of Rs. 7.41 lakhs over that for 1953. The net profit, at Rs. 6.02 lakhs, also compares favourably with Rs. 4.41 lakhs for the previous year and Rs. 3.33 lakhs for 1953. Following the sizable improvement in earnings for the second year in succession, the Directors have maintained the dividend at 10 per cent. on the higher capital of Rs. 30.18 lakhs, raised by the fresh issue of capital during the year. It will be recalled that, for 1954, the Directors had raised the dividend to 10 per cent. from 8 per cent. for the preceding two years, all on the old capital of Rs. 12.43 lakhs.

The output of bicycles during the year reached a fresh record level of 147,176, as compared with 130,232 in 1954, representing an increase of 13 per cent. over the year. The production of chains, which was commenced in 1954, aggregated 144,310 in the year under review. This expansion in production is duly reflected in the sharp rise in sale proceeds and expenses, as will be seen from the following comparative table giving the salient features of the results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (gross)	195.32	181.78	165.55	125.07

To debenture sinking fund ..	..	0.50	0.50	0.50
,, reserves	2.50	2.00	1.50	1.67
Dividends—				
Preference	0.49	0.49	0.49	0.49
Ordinary	3.02 (10%)	1.24 (10%)	0.99 (8%)	0.99 (8%)
Carry forward	0.39	0.37	0.19	0.34

Of the rise of Rs. 12.38 lakhs in expenses, commission on sales accounts for Rs. 1.46 lakhs, stores and raw materials consumed for Rs. 4.51 lakhs, sales and manufacturing expenses for Rs. 2.38 lakhs and salaries and wages for Rs. 3.85 lakhs. No addition to the debenture sinking fund has been made, while the allocation to the reserves has been raised by Rs. 50,000 by increasing the transfer to the general reserve from Rs. 1 lakh to Rs. 1.50 lakhs. The addition to the dividend equalisation fund has been maintained at Rs. 1 lakh.

During the year under review, the Company raised fresh capital to finance its expansion programme. It issued 18,642 ordinary shares of Rs. 100 each, of which 17,751 shares of Rs. 100 each were subscribed, raising the paid-up capital from Rs. 24.91 lakhs to Rs. 42.66 lakhs, of which ordinary shares account for Rs. 30.18 lakhs and preference shares for Rs. 12.48 lakhs. The paid-up capital is supplemented by reserves and surplus aggregating Rs. 14.07 lakhs. Out of its debenture liability, the Company paid off debentures of the value of Rs. 3 lakhs, the balance remaining to be discharged, along with the accrued interest thereon, is only Rs. 1.03 lakhs. There is a provision of Rs. 8.56 lakhs for taxation, while current liabilities aggregate Rs. 56.21 lakhs. In consonance with the programme of expansion, additions were made to the gross block during the year, the exact cost thereof being Rs. 13.14 lakhs, bringing the total value of the block account to Rs. 86.39 lakhs. As against this the provision for depreciation amounts to Rs. 59.25 lakhs. The current assets, amounting to Rs. 96.11 lakhs, exceed the current liabilities and provision for taxation by Rs. 31.34 lakhs.

The directors have decided to increase further the capacity of the factory to 200,000 bicycles per annum and have, accordingly, placed orders for additional plant and machinery of the value of Rs. 11 lakhs. The construction of additional floor on the north and east of the factory has been completed and the plating plant and other machines, which have been received, are now being erected. If the delivery of the remaining machines is not delayed, the directors expect to put into operation all the additional plant by the last quarter of this year.

ELPHINSTONE SPG. AND WVG. MILLS

The improvement in the offtake of cloth and the higher prices fetched during 1955 have resulted in a sharp rise in the earnings of the Elphinstone Spinning and Weaving Mills Company, Ltd., for the year ended 31st December 1955. The gross profit, for instance, has gone up from Rs. 6.30 lakhs earned in 1954 to Rs. 15.73 lakhs, at which level it constitutes a record for the past four years. The profit is substantially higher even after making a provision of Rs. 6 lakhs for payment of bonus to workers for the years 1953, 1954 and 1955 in terms of the bonus agreement covering a period of five years from 1953 to 1957 concluded between the workers' union and the Millowners' Association.

After raising the provision for depreciation from Rs. 1.75 lakhs to Rs. 5 lakhs and that for taxation from Rs. 0.85 lakh to Rs. 5 lakhs, the net profit shows a rise of Rs. 2.03 lakhs to Rs. 5.73 lakhs. For the sixth year in succession, no allocation to the reserves has been made. The dividend has, however, been stepped up to 10 per cent. from 6 per cent., to which level it had been restored a year ago after a break of a year, that is, 1953. With the aforesaid increase, the dividend stands on a par with the level for 1949, but the latest one is on the increased capital of Rs. 30 lakhs, raised by the capitalisation of Rs. 5 lakhs from the reserves and the issue of one share for every five shares in 1951.

The following comparative table gives an idea of the Company's progress since 1952:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	180.41	177.81	155.45	182.09

*only approximate.

The latest balance-sheet shows that the reserves and surplus aggregate Rs. 12.62 lakhs, as against a paid-up capital of Rs. 55 lakhs. The provision for taxation stands at Rs. 13.02 lakhs and current liabilities aggregate Rs. 51.74 lakhs. The gross block of the value of Rs. 109.79 lakhs stands written down to Rs. 29.04 lakhs. The current assets amount to Rs. 103.34 lakhs and exceed the current liabilities and provision for taxation by Rs. 38.58 lakhs.

The Rs. 50 fully paid-up shares of the Company are being currently quoted at Rs. 62 *cum-div.* (final div. Rs. 2-8). On an *ex-div.* basis, the yield on the shares works out to 8.4 per cent. per annum, free of income-tax.

STEEL TUBE PLANT AT JAMSHEDPUR

The Government of India has sanctioned the expansion of the steel tube plant at Jamshedpur, a joint Indo-British venture, according to news agency reports from New Delhi. The expansion relates to the installation of a third plant to manufacture seamless tubes for high pressure work. The project will involve an outlay of Rs. 3 crores.

The tube plant, jointly sponsored by the Tata Iron and Steel Company and Stewarts and Lloyds at a cost of Rs. 3 crores was formally inaugurated in March this year. It has an annual capacity of 90,000 tons of tubes for conveyance of gas, air and water. The second plant, now under construction for the manufacture of locomotives and other boiler tubes, envisages an investment of Rs. 2 crores.

Points From The Chair

Automation in Industry

"WITH full employment, it is self-evident that any broad advance in standards of living must depend upon a reduction in human effort relative to the results achieved. In general, this can only come by applying new methods, of which electronic equipment and servo-mechanisms are recent examples. I stress again, therefore, that automation is not new, but merely the continuing extension of a process which has for long been a normal feature of our operations. In our industry we certainly do not regard these changes as revolutionary, nor do we think they are likely to cause unemployment or other major difficulties. The steady growth of employment which has taken place in the Company confirms this view. For the country as a whole, I would go further. Employment will only be maintained, if British industry keeps abreast of the world in technical efficiency. This means not only the extension of automation but continued heavy capital expenditure."

SIR ALEXANDER PLECK,
Imperial Chemical Industries Ltd.

Research in Rubber Production

"Our new synthetic pilot plant at Castle Bromwich will come into production very shortly and is primarily intended for developing new forms of synthetic rubber and similar materials. In the same way a considerable section of these facilities is devoted to research on new synthetic fibres developed by the textile and chemical industries and their adaptation for our products. In the development of new materials and processes, either for our existing products or entirely new ones, we now have a well-organised developed and design section. There is a constant flow of new ideas and processes from this section which find their way into our factories and into the new products we are able to offer to our customers. I would specifically like to mention that we have developed a new method of construction for tyres which may in future be regarded as revolutionary. Put simply, this consists of winding a cord round a drum in a series of geodetic loops. Patent protection for this new process is being taken out, but it will be some time yet before it can be fully developed and applied. This new construction may, if successful, introduce entirely new methods of manufacture for a wide range of tyres in the future."

LORD BAILLIEU,
Dunlop Rubber Co., Ltd.

Outlook for Natural Rubber

"Past experience has shown that, at the present level of price, the marginal producer tends to fall out and unless, therefore, there is a reversal of the present trend, natural rubber production is likely to be stabilised at about 1,800,000 tons per annum. There is another and important aspect to the fall in price. It has now about reached the level at which it can be regarded as competitive with synthetic. Although it would be optimistic to expect an immediate transfer of use from the synthetic to natural, it is reasonable to suppose that there will be a check to the extended use of the former which might otherwise occur and that world need for natural rubber should be sufficient to absorb the supplies that are likely to be forthcoming at the present price. The expansion and multiplication of synthetic manufacturing facilities points to a total productive capacity in excess of probable requirements for some time to come even after allowing for a continuance of U.S.A. use of synthetic at a rate of 60 per cent. as opposed to only 40 per cent. for natural."

SIR JOHN HAY,
United Sua Betong Rubber Estates, Ltd.

Reinsurance Corporation

"Another milestone in the history of insurance in this country is the formation of an Indian Reinsurance Corporation which it is expected will shortly commence operation; there is no doubt that, properly managed, as I have every reason to believe it will be, such an institution will perform a useful function in our domestic affairs and there is no reason why in the course of time it should not broaden its activities to embrace the larger markets of the world. What of the future? I firmly believe that if we continue to apply all our energies and resources to the proper fulfilment of our functions as a necessary adjunct to the industrial and economic progress of the country we cannot but grow and prosper with it."

KARAM CHAND THAPAR,
Indian Trade and General Insurance Co., Ltd.

Economic Position of New Zealand

"It would be true to say that the general position in New Zealand is one of prosperity, yet still inflationary, with overfull employment a strong demand for goods and services, and a lack of personal savings. There are signs, however, that the financial measure taken over the past 12 months are beginning to have some effect in damping down inflationary trends and conditions are tending slowly to assume a more healthy form. It is clear, however, that present financial policies will have to be continued for some time, if relative stability is not only to be achieved but is also to be maintained."

ARTHUR H. ENSOR,
National Bank of New Zealand Ltd.

COMPANY MEETINGS AND DIVIDENDS

ASSAM SAW MILLS AND TIMBER CO., LTD. Annual General Meeting, Calcutta, 28th June 1956. Dividend: *Nil.* Transfer books remain closed from 15th to 28th June 1956, both days inclusive.

INDIAN GALVANIZING REPORTS BETTER RESULTS

INDIA UNITED MILL RESUMES DIVIDEND

Indian Galvanizing Co. (1926) Ltd.

THE directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit for the year, after deducting items relating to previous years and providing for depreciation and taxation was Rs. 4,79,903 (Rs. 1,69,361) to which is added the balance brought forward from 1954 of Rs. 22,770 (Rs. 18,139), making a total of Rs. 5,02,673 (Rs. 1,87,501). Out of this amount the directors have set aside Rs. 75,000 (*nil*) for general reserve. This leaves a balance of Rs. 4,27,673 (Rs. 1,87,501) available for distribution, which the directors recommend be dealt with as follows:—

To dividend on preference shares at the rate of 6 per cent. (subject to deduction of Indian income-tax) Rs. 16,947 (Rs. 16,947), to dividend on ordinary shares at 10 (4) per cent. free of income-tax Rs. 3,69,459 (Rs 1,47,784) and balance to be carried forward Rs. 41,267 (Rs. 22,770).

The much improved results are attributable to the increased production of the drum and metal window shops of the Calcutta works. The rehabilitation of the drum shop was completed towards the end of the year and the drums from the new plant are in every way superior to those previously produced.

Although the production of steel windows and doors showed a considerable increase, this was below the level necessary to meet the volume of orders obtained during the latter half of the year.

The Bombay drum plant continued to work satisfactorily, but at times production was restricted due to the difficulties experienced in procuring sufficient drum sheets.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,77,040	Block ...	23,07,100
Reserves ...	7,65,000	Stock ...	32,51,409

	Rs. 1,07,38,829		Rs. 1,07,38,829

India United Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. Agarwal & Co., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit of Rs. 27,05,612 (loss of Rs. 51,18,700) after providing for all working expenses and managing agents' commission, but subject to taxation, depreciation and bonus to workers. Provision has been made, as under, for depreciation and bonus to workers; but no provision has been made for taxation as the directors are advised that the existing provision in this behalf is sufficient in view of the past losses and arrears of depreciation allowable by the department. The directors propose the following appropriations therefrom:—

Profit as per profit and loss account is Rs. 37,05,612 (loss of Rs. 51,18,700 after adjusting previous loss). From this is deducted provision for bonus to workers in respect of the four years ending December 1955, including Rs. 6,38,000 for the year 1955, worked out on the basis of the Millowners' Associations' formula Rs. 25,00,000 (*nil*) and provision for depreciation on fixed assets Rs. 32,00,000 (*nil*), leaving a balance of Rs. 30,05,612 (debit of Rs. 51,18,700). The directors have paid interim dividends at As. 10 (*nil*) per share on ordinary shares absorbing Rs. 12,50,000 (*nil*) and at one anna (*nil*) per share on deferred shares absorbing Rs. 3,12,500 (*nil*). From the balance amount of Rs. 14,43,112 they recommend final dividends at As. 5 (nil) per share on ordinary shares absorbing Rs. 6,25,000 (nil) and at As. 2 (*nil*) per share on deferred shares absorbing Rs. 6,25,000 (*nil*) leaving a balance to be carried forward to next year of Rs. 1,93,112 (loss of Rs. 51,18,700).

The directors trust that the results of the year's working will be considered satisfactory. Conditions in the cloth market were dull in the early period of the year but later there was an improvement in demand and the offtake was well maintained.

It was informed in the last report that steps were being taken to obtain the final approval and sanction of the Central Government to the change in the constitution of the managing agents firm and the directors are glad to inform that this has been obtained. The supplemental agreement between the Company and the newly constituted partners, the draft of which was approved at the extraordinary general meeting of the Company convened and held on 31st October 1935, has not yet been executed. It is however expected to be executed shortly and before the general meeting is held the Award in respect of the differences between the partners of Messrs. Agarwal & Co. should be published.

Income-tax assessments upto the accounting year ending 1950 are completed and appeals against the assessments for 1948, 1949 and 1950 are pending.

During the year Messrs. Bhagwatiprasad Jagadambaprasad Ltd., the selling agents for cloth manufactured by the Company, have resigned their post with effect from 20th April 1955 and all sales of cloth are since made directly by the Company.

An agreement has been recently reached by the Millowners' Association, Bombay, with the Rashtriya Mill Mazdoor Sangh in regard to the payment of bonus to the mill employees for the years 1952 to 1957 to which the Company has agreed to conform. The amount of bonus to workers in respect of four years ending December 1955 worked on the basis of the Millowners' Association Agreement comes to about Rs. 25,00,000 which the directors, as stated above, propose to appropriate from the profit of the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,50,00,000	Block ...	4,68,15,552
Reserves ...	62,50,399	Stock-in-trade ...	2,55,11,255

Assam Saw Mills & Timber Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird and Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th September 1955.

After providing Rs. 1,78,488 (Rs. 2,00,997) for depreciation and crediting Rs. 12,000 (Rs. 12,000) being allowance forgone by managing agents, the profit and loss account shows a loss of Rs. 97,045 (Rs. 3,20,289) which increases the debit balance brought forward from the previous year to Rs. 5,14,537 (Rs. 4,17,492) and this amount the directors recommend should be carried forward.

General report.—The directors regret to report that although the Tea trade continued to prosper during 1954-55, indigenous manufacturing capacity continued to be greatly in excess of demand with the result that selling prices were forced down to an uneconomical level and this factor combined with the definite limitation on output and consequent increased costs caused by inadequate all weather communications with the Works, led to a further loss for the year under review.

The insecure communications have been the subject of continued reference to the Assam Government and North East Frontier Agency Administration who have expressed their intention to assist in providing proper road communication to which end surveys of probable alignments have already been taken in hand.

Although there is now every likelihood of adequate communications with the Mill being provided, some time must elapse before suitable roads can be constructed and it is likely that any profit can be realised from the current year's operations.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Hooghly Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1955.

The holding of the Annual General Meeting has been delayed as the Company was restrained by an order of the Calcutta High Court from holding the Meeting in consequence of a suit instituted by Mr. Radheshyam Bajoria and others against the Company's directors. The injunction was however withdrawn by the Court on the 23rd April 1956 and the meeting has now been convened after taking the necessary permission from the Registrar of the Companies.

In accordance with the Indian Jute Mills Association's main and supplementary working time agreements the mill worked 42½ hours per week up to 10th July 1954, 45 hours per week up to 16th October 1954, and 48 hours per week during the remaining part of the year, with 12½ per cent. looms sealed throughout the year.

During the last quarter of the period under review, a threatened shortage of raw jute caused prices to reach uneconomic levels.

Jute in stock and process has been taken into account at rates corresponding with forward sales of manufactured goods, and manufactured goods have been taken into account at contract or market rates.

The result of the year's working is a profit of Rs. 5,74,972 (Rs. 3,31,522) to which is added rebate on foodstuffs Rs. 2,843 (Rs. 4,243) and depreciation overprovided in previous years in respect of assets sold, now written back Rs. '52,500 (*nil*) making a total of Rs. 6,30,315 (Rs. 1,68,832 after deducting income-tax and depreciation). After deducting reserve for income-tax and super-tax Rs. 1,51,388 (Rs. 24,033) depreciation Rs. 1,00,000 (Rs. 1,00,000) provision against contingent loss on forward jute purchases Rs. 39,030 (*nil*) and unclaimed dividend previously forfeited, paid during the year Rs. 150 (*nil*) there is a balance of Rs. 3,39,747 (Rs. 1,68,832). With the credit balance brought forward from previous year of Rs. 32,401 (Rs. 65,169) there is a total available sum of Rs. 3,72,148 (Rs. 2,34,001). The directors recommend that this should be dealt with as follows:—

In payment of the interim-dividend on preference shares at the rate of 10 (10) per cent. per annum for the year ended 31st March 1955 (without any deduction in respect of income-tax payable by the Company) Rs. 1,17,600 (Rs. 1,17,600), in payment of the interim-dividend on ordinary shares at the rate of 12½ (first and final 5 per cent.) per annum for the year ended 31st March 1955 (without any deduction in respect of income-tax payable by the Company) Rs. 2,10,000 (Rs. 84,000) and in carrying forward to next year Rs. 44,548 (Rs. 32,401). The directors do not recommend payment of any further dividend for the year ended 31st March 1955.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,56,000	Block ...	19,70,290
Reserves ...	18,91,656	Stock ...	29,93,729

Liabilities ...	24,28,833	Debts, deposits and advances ...	16,82,136
Profit and loss account ...	3,72,148	Investments	81,023
		Cash ...	14,546
	Rs. 77,66,088		Rs. 77,66,088

Twyford Tea Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Parkins (Private) Ltd., Kottayam, Travancore-Cochin] submit the audited accounts of the Company for the year ended 31st December 1955.

The result of the year's working after providing for depreciation on buildings, factory and machinery amounting to Rs. 32,104 (Rs. 16,693) and after making provision for payment of income-tax and Travancore-Cochin Agricultural income-tax amounting to Rs. 1,04,748 (*nil*) is a net profit of Rs. 1,52,764 (Rs. 9,66,246) to which must be added the balance of Rs. 48,592 (Rs. 7,341) brought forward from the previous year's account making a total of Rs. 2,01,356 (Rs. 9,73,587). Out of this an interim dividend of 10 (10) per cent. amounting to Rs. 90,000 (Rs. 90,000) was paid and the balance now available is Rs. 1,11,356 (Rs. 8,83,587). The directors recommend the payment of a final dividend of 10 (15) per cent. making a total of 20 (25) per cent. for the year 1955 absorbing Rs. 90,000 (Rs. 1,35,000), leaving a balance of Rs. 21,356 (Rs. 48,592 after transferring Rs. 3,65,000 to taxation reserve, Rs. 2,59,994 to general reserve and carried forward to next year's account.

Crop and Price.—9,70,321 (9,05,478) lbs. tea was produced during the year under report against an estimate of 9,25,000 (8,50,000) lbs. The cost of production was 166.72 cents against 152.80 cents per lb. in 1954. The increase was mainly due to heavy expenses on pest control and payment to labour under various heads. The net average sale price realised per lb. was 200.83 cents against 276.76 cents in 1954.

The stock of tea remaining unsold as at 31st December 1955 was 2,80,202 (3,11,153) lbs. out of which 2,72,574 (1,57,522) lbs. have since been sold leaving a balance of 7,628 (1,53,631) lbs. which have been valued at 4 (2) shillings per lb.

Estimates:—The estimate for the year ending 31st December 1956 is 10,00,000 (9,25,000) lbs. tea to be produced at a cost of 166.90 (192.81) cents.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	19,57,857

	Rs. 32,67,800		Rs. 32,67,800

Kalapahari Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 29th February 1956.

After providing Rs. 15,528 (Rs. 28,633) for depreciation and bringing in excess liabilities provision of Rs. 69,393 (*nil*), the accounts for the half-year show a profit of Rs. 1,38,130 (debit of Rs. 1,83,611). After deducting this from the debit balance brought forward from the previous half-year and transferring Rs. 63,105 (*nil*) to capital reserve, there is a balance of Rs. 2,21,237 (Rs. 1,82,611) to the debit of the profit and loss account to be carried forward.

Raisings during the half-year were 22,440 (19,030) tons compared with 1,660 tons during the previous half-year and despatches were 22,767 (16,869) tons as against 1,752 tons. Since the end of the period under review the output of grade I coal from the Ghusick 'A' Seam at Damra has shown a further increase.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,50,000	Block ...	6,31,199
Reserves* ...	3,45,579	Stores ...	22,077
Provision for taxation and cesses ...	1,944	Debts, deposits and advances ...	2,89,274
Liabilities ...	2,46,434	Cash ...	1,407
	Rs. 9,43,957		Rs. 9,43,957

*Reserves have been shown after deducting the debit balance of Rs. 2,21,237 in the profit and loss account.

Raneegunge Coal Association Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Private Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

Coal raisings, despatches and stocks

	Half-year ended 30-9-54 Tons	*Half-year ended* 31-3-55 Tons	*Half-year ended* 30-9-55 Tons
Raisings ...	1,72,761	1,71,520	1,62,989
Despatches ...	1,70,086	1,58,269	1,88,821
Stocks ...	39,956	53,207	27,375

Raisings over the half-year decreased as compared with the previous half-year. The overall target fixed by the Coal Board will however be reached by the end of the year and raisings for the months of October, November and December 1955 will therefore be higher than usual. Despatches increased considerably as a result of which pithead stocks decreased by 25,832 tons.

Coke manufacture: The Company manufactured during the half-year under review 3,361 (2,662) tons of hard coke. 3,223 (3,640) tons were despatched and 303 (238) tons remained in stock.

Development and prospects: The development and workings of the Company's collieries have proceeded as planned by the management. Kustore South pits have been completely dewatered and have finally been entered. Arrangements for working from these pits are now in progress and it is hoped to shortly raise coal from these pits. This will give the Company far greater scope to increase production of coking coal so as to meet Government's increased requirements over the second Five-year Plan.

The Company's profit for the half-year ended 30th September 1955 after inclusion of Rs. 33,013 (Rs. 72,001) brought forward is Rs. 2,16,827 (Rs. 3,07,197). And after making provision for taxation Rs. 60,000 (Rs. 1,00,000) there remains a balance of Rs. 1,56,827 (Rs. 2,07,197). From this balance the directors have placed to machinery replacement and development reserve Rs. 50,000 (Rs. 1,00,000) and recommend the payment of 66th dividend at As. 6 (As. 4) per share absorbing Rs. 89,981 (Rs. 59,988) leaving a balance to be carried forward Rs. 16,846 (Rs. 47,209).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,99,500	Block ...	37,59,038
Reserves ...	19,17,105	Stock of coal	3,84,244

Liabilities ...	19,36,504	Debts and advances ...	18,11,351
Profit and loss account ...	16,846	Investments	8,158
		Cash ...	31,040
	Rs. 65,74,955		Rs. 65,74,955

Punjab Minerals Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. Bird & Co. (Private) Ltd., Calcutta] submit the audited accounts of the Company for the year ended 30th September 1955.

Some orders have been received from the Cement Works for gypsum resulting in a small profit amounting to Rs. 2,835 (debit of Rs. 80,145) during the year under review. After setting off this profit against debit balance of profit and loss account brought forward from the previous year, the profit and loss account shows a debit balance of Rs. 77,310 (Rs. 80,145) which is being carried forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,000	Block ...	2,23,096
Provision for doubtful debts ...	200	Preliminary expenses ...	8,615
Liabilities ...	14,670	Debts, deposits and advances ...	3,485
		Investments ...	87
		Cash ...	2,277
		Profit and loss account ...	77,310
	Rs. 3,14,870		Rs. 3,14,870

National Iron & Steel Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Nursing & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1955.

The net profit for the year amounts to Rs. 5,89,495 (Rs. 70,644) after providing Rs. 4,31,831 (Rs. 3,78,366) for depreciation. This sum together with the profit of Rs. 59,200 (Rs. 1,95,571) on account of adjustment for 1954 and the balance of Rs. 1,37,985 (Rs. 1,770) brought forward from the previous year aggregate to Rs. 7,86,680 (Rs. 2,67,985).

Publication of this account was delayed because the Company's old income-tax matters were on the final stages of settlement and the directors thought it proper to get them settled. The position of the I. T. matters as they stand at present is discussed below:—

According to the Auditors' report it would be seen that the contingent liability on account of income-tax and other taxes is Rs. 22,89,041 but according to the terms of settlement concluded with the I. T. Department the net tax liability upto 31st March 1955 would come to Rs. 11,26,389 only including the tax for the year 1955, but the Income Tax Department has not confirmed the settlement as yet in writing and hence the auditors had to make the remark. Cotingent liability on account of income-tax would now remain at Rs. 3,71,080 only. The directors propose to make the following adjustments in the taxation reserve account:

Balance in taxation reserve account: in taxation reserve Rs. 8,09,661 less income-tax advance Rs. 7,01,146 leaving a balance of Rs. 1,08,515 to transfer from general reserve account Rs. 5,10,000 (nil) and to transfer from profit and loss account Rs. 5,07,874 (*nil*) making a total of Rs. 11,26,389. This would leave Rs. 4,90,630 in the general reserve account on account of premium on shares and Rs. 2,78,806 (Rs. 2,67,985) in the profit and loss account. The directors recommend that a dividend of As. 4 (*nil*) per share free of income-tax be paid in respect of the year ended 31st March 1955. This would absorb Rs. 1,24,900 (*nil*) and the balance Rs. 1,53,906 (Rs. 1,37,985 after transferring Rs. 1,30,000 to taxation reserve) is to be carried over to the next year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	49,96,000	Block ...	36,93,212
Reserves ...	10,00,630	Stock-in-trade	19,54,212
Debentures ...	6,00,000	Stores, coal, raw materials, etc.	13,38,208
Provision for taxation ...	8,09,661	Goods-in-transit ...	26,515
Liabilities ...	33,41,429	Debts, deposits and advances ...	39,67,541
Profit and loss account ...	7,86,681	Investments	3,01,500
		Cash ...	2,53,213
	Rs. 1,15,34,401		Rs. 1,15,34,401

Travancore Rubbers, Ltd.

The directors of the above Company (Managing Director: Mr. Eapen Thomas, Kottayam) submitted the audited accounts of the Company for the year ended 31st December 1955.

Crop and prices.—The total output of rubber for the year was 5,79,270 lbs. (i.e., 506 lbs. per acre) against 5,42,791 lbs. harvested in the previous year, and the cost of production was 61.57 (68.23) cts. (i.e., As. 9-10.21) per pound. The average price realised was 141.16 (127.91) cts. (Re. 1-6-7) per pound. It is to be stated that although the management had planned to spray the whole rubber area as in previous years, only a portion could be sprayed as a result of labour troubles.

The result of the year's working showed a net profit of Rs. 2,35,001 (Rs. 1,51,573) after providing Rs. 1,48,300 (Rs. 1,04,800) towards taxation and after charging the usual depreciation, a bonus of three months' basic salary to the staff and, subject to the approval of the Central Government, a bonus equivalent to three months' salary to the managing director. This, together with Rs. 3,744 (Rs. 2,171) brought forward from the previous year aggregates to Rs. 2,38,745 (Rs. 1,53,744). The directors disposed of this amount as follows:—

To reserve for contingencies Rs. 10,000 (Rs. 5,000), to reserve for capital expenditure Rs. 45,000 (Rs. 25,000), to pay a dividend of 30 (20) per cent. Rs. 1,80,000 (Rs. 1,20,000) and to carry forward to next year's account Rs. 3,745 (Rs. 3,744).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	6,55,962
Reserves ...	17,491	Stock-in-trade	2,09,361
Provision for taxation ...	1,50,827	Stores and spare parts	38,201
Liabilities ...	83,654	Debts, deposits and advances ...	19,349
Profit and loss account ...	2,38,745	Cash ...	1,67,844
	Rs. 10,90,717		Rs. 10,90,717

N.B.—Figures within brackets relate to the corresponding period of the previous year.

(Concluded from next column)

"Both labour and staff have worked satisfactorily at the factory and at the head office of the Company and the relations between the management and labour have continued to be cordial."

THE GANGA SUGAR CORPORATION LTD.

FRESH CAPITAL TO BE RAISED

PRESENTING the annual report and audited accounts of the Ganga Sugar Corporation Ltd. for the year ended 31st March 1956, the Directors of the Company observe:

"LADIES AND GENTLEMEN,

"We have the honour to present to you the annual accounts and profit and loss statement for the year ended 31st March 1956. For certain important reasons an interim balance-sheet was presented to you together with the profit and loss account for the half-year ended 30th September 1955. The present statement includes and incorporates the results of the first six months of the season for which a separate report was presented to the shareholders. So these accounts should be taken as consolidated accounts for the whole year ended 31st March 1956.

"The shareholders will be glad to note that the operations of the year under report have been successful. We succeeded in crushing 5,578,088 maunds of sugarcane, as against 3,943,788 maunds in the previous year.

"The recovery for the year has also been .4 per cent. higher than in the previous year. The factory worked for 213 days during the season as against 147 days in the previous year. The performance of the plant was quite satisfactory, but market conditions were not so favourable; otherwise, the financial results for the year would have been much better. However, in all the circumstances of the case, we have decided to recommend distribution of dividend to the shareholders at the same rate as last year.

"In the last year's report the Directors had informed the shareholders that suitable additions would be made to the plant to increase its capacity because permission from the Government of India had been received to increase the capacity of the factory to 1,600 tons. Order for the machinery was placed in England and with Continental firms and delivery times of the additional machinery were so fixed that we might be able to use it during the 1956-57 season. All efforts are being made to install this machinery when received so that even if it does not work for the whole of the next season it may be tried well under service conditions during a part of the 1956-57 season. As the cane supply is estimated now (and with future development) to exceed the requirements of a 1,600 tons plant, we have submitted a further application to the Government of India for licensing the factory for crushing of 2,500 tons of cane per day. This application is receiving consideration of the Government and we hope it will be sanctioned. By running our present plant and the additional machinery we hope to achieve the capacity of 2,500 tons with very few further additions.

"The order for the additional machinery has put a great strain on our financial resources. We have been granted permission by the Controller of Capital Issues to increase our capital by issue of bonus shares for Rs. 10 lakhs and right shares for a similar amount at par to increase our capital resources. We are also arranging for a debenture loan of Rs. 30 lakhs which we hope to secure in due time and have in view other proposals to arrange the necessary finances. These measures will enable us to complete the project satisfactorily. The additions to the plant and buildings and their erection will cost the Company about Rs. 70 to 75 lakhs.

"After providing Rs. 2,75,000 for bonus to labour and staff and writing off Rs. 95,174-1-0 towards depreciation and including Rs. 22,813-15-2 carried forward from last year's accounts, the profit comes to Rs. 24,96,579-9-3 which is allocated as follows:

	Rs.	a.	p.
Towards general reserve ... (This includes Rs. 5 lakhs written towards general reserve in September 1955 accounts)	6,00,000	0	0
Towards reserves for taxation ... (inclusive of Rs. 1,82,960-2-0 provided in September 1955 accounts)	10,35,000	0	0
Towards tax-free dividend at 20 per cent.	6,96,598	0	0
Towards charity	85,000	0	0
Carried forward	77,981	9	2

(Continued in previous column)

Notices

(*Concluded from page 1205*)

EXPLANATORY STATEMENTS

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. A. N. Sil is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to reappoint him as a Director of the Company.

2. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

3. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1) (*d*) of the Companies Act, 1956.

NATIONAL MACHINERY MANUFACTURERS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Eighth Annual General Meeting of NATIONAL MACHINERY MANUFACTURERS LTD., will be held at Sir Vithaldas Chambers, 16, Apollo Street, Fort, Bombay, on Wednesday, 11th July 1956, at 5 p.m. (S.T.), to transact the following business:

1. To receive and adopt the Directors' Report and Audited Profit and Loss Account and Balance Sheet for the year ended 31st December 1955.
2. To elect Directors in place of Mr. Krishnaraj M. D. Thackersey, Mr. Kasturbhai Lalbhai and Mr. D. M. Khatau who retire by rotation and who, being eligible, offer themselves for re-election.
3. To elect a Director in place of Mr. Arvind N. Mafatlal who retires under Article 134 of the Articles of Association and who, being eligible, offers himself for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider and, if thought fit, to pass the following resolution:—

   "Resolved that the appointment of Indian Textile Engineers Private Ltd., as the Sole Selling Agents of the Company for the sale of the Company's products as from the 1st January 1955 upto 31st December 1956, upon the terms and conditions recorded in the agreement dated 9th day of May 1956 between the Company of the one part and the said Sole Selling Agents of the other part, and which agreement is placed before this Meeting be and the same is hereby approved."

6. To consider and, if thought fit, to pass the following resolution:—

   "Resolved that the registers and documents required to be kept and disclosed by the Company under Sections 49, 118, 136, 143, 144, 150, 151, 152, 163, 193, 196, 301, 302, 303 and 307 of the Companies Act, 1956, be kept open for inspection by the persons entitled thereto at the Registered Office of the Company on all working days between the hours of 11 a.m. and 1-30 p.m. (S.T.) provided, however, that the register required to be maintained under section 307 of the Act shall be open to the inspection of any member or holder of debentures of the Company (if any) at the place and time aforesaid during the period prescribed by clause (*a*) of sub-section (5) of the said section."

The Share Transfer Books of the Company will be closed from 27th June 1956 to 11th July 1956, both days inclusive.

Any member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and proxy need not be a member.

By Order of the Board,
D. V. SHIVESHWARKAR,
Secretary.

EXPLANATORY STATEMENT

To THE SHAREHOLDERS,

NATIONAL MACHINERY MANUFACTURERS LIMITED.

The Resolution for approval of the appointment of Indian Textile Engineers Private Ltd. as the Sole Selling Agents of the Company is required to be passed in view of Section 294 of the Companies Act, 1956. Actually, their appointment was made prior to the coming into force of the Act, with effect from 1st January 1955. However, since the terms of their appointment were subsequently embodied and recorded in the Agreement which was executed by the Company on 9th May 1956, the Directors have thought it advisable to place the agreement before the Company in General Meeting for its approval.

Indian Textile Engineers Private Ltd. have been the Sole Selling Agents in respect of the Company's products ever since the Company started manufacturing its products and they have as such acted efficiently and satisfactorily. The Agreement is open for inspection by the members at any time at the Registered Office of the Company on all working days between 11 a.m. and 1-30 p.m. (S.T.). The commission payable to the Sole Selling Agents on the Company's products is as under:—

(*a*) Commission on sale of complete machines and Casablanca Equipment—
   (*a*) 10 per cent. on the first Rs. 8,00,000 on unpacked ex-Works selling price.
   7½ per cent. on the next Rs. 8,00,000 on unpacked ex-Works selling price.
   3 per cent. on the balance, on unpacked ex-Works selling price.
(*b*) Commission on sales of Spares—
   (*b*) 7½ per cent. of the invoiced value.

Mr. J. C. Morton, the General Manager of the Company, is the Managing Director of Indian Textile Engineers Private Ltd., in the capital whereof certain shares are held by Textile Machinery Makers Ltd., of Oldham, England, three of whose nominees are, at present, Directors of the Company, viz., Sir Vithal N. Chandavarkar, Mr. E. D. Sheppard and Mr. J. C. Burns. Messrs. Textile Machinery Makers Ltd. hold certain shares in the capital of your Company.

As to the Resolution for maintaining and disclosing certain registers and documents, under the relevant sections of the Act, you are entitled to impose reasonable restrictions on the hours of giving inspection thereof. The hours mentioned in the Resolution are reasonable and convenient from the administrative point of view.

By Order of the Board,
D. V. SHIVESHWARKAR,
Secretary.

Dated, 13th June 1956.

INDIAN COPPER CORPORATION LIMITED

(*Incorporated in England*)

COMPANY NOTICE

DIVIDEND NO. 29 (FINAL)

NOTICE IS HEREBY GIVEN THAT AT THE Thirty-second Ordinary General Meeting to be held at the Royal Exchange Hall, Royal Exchange, Calcutta, on Wednesday the 12th September 1956, at 11-30 a.m., the Directors will recommend payment of a Final Dividend (No. 29) for the year ended 31st December 1955, of 10 per cent. and Bonus of 25 per cent. (8.4 pence, i.e., 7 annas 5.6 pies per unit of stock) free of Income-tax payable by the Company in respect of the existing Issued Capital of £914,200. Subject to confirmation of members, the dividend will be paid on the 28th September 1956 to all members registered in the books of the Company at the close of business on the 23rd July 1956.

The Registers of Members will be closed from the 24th July to the 6th August 1956, both days inclusive.

The nett profit for the year ended 31st December 1955 was £416,758 (against £263,987 for previous year), after providing £175,000 for Depreciation (£100,000 last year), £683,046 for Taxation (against £264,396), £200,000 for General Reserve (against £150,000) and £ *Nil* on other accounts (against £120,000). With £111,715 brought in from 1954, there is an available balance of £528,473 (against £340,265). After providing £411,390 for Interim Dividend (No. 28 of 10 per cent. already paid on 10th February 1956) and for proposed Final Dividend of 10 per cent. and Bonus of 25 per cent., free of Income-tax payable by the Company (Dividend No. 27 of 15 per cent. and Bonus of 10 per cent. free of tax last year—£228,550) the balance carried forward is £117,083 (against £111,715 brought in from the previous year).

It is also intended to propose the necessary resolutions to effect capitalisation of the Reserves at the aforesaid Annual General Meeting to be held on the 12th September 1956 and after the resolutions have been approved by the stockholders, to close the Registers of Members from the 3rd to 14th November 1956 for the purpose of allotment of Bonus shares on the 14th November 1956.

By Order of the Board,
G. A. CARVER,
Secretary.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 14*th June* 1956.

BOMBAY, 15*th June* 1956.

ACTIVITY IN MONEY BROADENS

(*From Our Own Correspondent*)

BOMBAY, 20*th June*

The short-term money market was a little more active during the week under review and the volume of business showed some expansion, thanks to the further influx of funds and the persistent demand for bank credit. As the demand for funds outstripped supply, interest rates showed no signs of coming down.

Inter-bank call money was keenly bid at 3½ per cent. and house money at call was offered the self-same rate of 3½ per cent. Short-term deposit rates were well held at 3½ per cent. for one to three months and at 3¼ to 3⅜ per cent. for four to six months.

A sharp drop of Rs. 10.50 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 15th June 1956. This decline is in contrast to the rise of Rs. 12.98 crores noted in the previous week. Notes held in the Banking Department are higher by Rs. 11.29 crores, as compared with the fall of Rs. 13.98 crores in the previous week. In the Banking Department, deposits of the Central Government have risen by Rs. 3.33 crores, as also those of other Governments by Rs. 34 lakhs. Balances of banks, too, have gone up by Rs. 1 crore. There has been a decline of Rs. 4.54 crores in balances held abroad and of Rs. 1.55 crores in loans and advances other than to Governments. The fall in the latter is mainly due to the reduction of Rs. 1.48 crores in outstanding advances to Scheduled banks against usance bills; this follows the decline of Rs. 2.67 crores in the preceding week. There have, however, been fresh advances to the tune of Rs. 9.50 crores to Scheduled banks against usance bills during the week; in the preceding week, too, these advances aggregated Rs. 11.21 crores.

For the second week in succession, there has been a decline in demand deposits of banks. The latest statement of Scheduled banks for the week ended 8th June 1956 shows a fall of Rs. 3.57 crores in these deposits, while time deposits have gone up further by Rs. 3.28 crores. Inter-bank borrowings have also risen by Rs. 1.04 crores, while borrowings from the Reserve Bank have been reduced by Rs. 5.33 crores, of which those against usance bills account for Rs. 2.67 crores. A decline of Rs. 2.28 crores is noted in advances and a rise of Rs. 3.15 crores in bills purchased and discounted. Cash balances show minor variations, but money at call and short notice shows a rise of Rs. 1.15 crores.

The Gilt-edged market presented dull conditions. Enquiries from institutional investors were conspicuous by their absence; evidently these investors are conserving their funds for supporting the forthcoming Central loan. The volume of business was very much restricted. 3 per cent. 1957 and 1958 were stagnant at Rs. 99-13 and Rs. 99-10. 3 per cent. 1959-61 attracted sellers and was marked down by an anna to Rs. 98-1. 3 per cent. 1963-65, after declining from Rs. 95-2 to Rs. 95-1 regained to Rs. 95-2. 3 per cent. 1964 held ground at Rs. 95. 3 per cent. 1966-68 shed an anna to Rs. 93-4, while 3 per cent. 1970-75 gathered an anna to Rs. 90-7 owing to scarcity of stocks. 3 per cent. 1986 Conversion Loan dipped from Rs. 77-9 to Rs. 77-5. 3½ per cent. 1961 was unchanged at Rs. 99-11. 3½ per cent. 1964 had business at the self-same rate of Rs 98-12, while 3½ per cent. 1965 changed hands an anna better at Rs. 98-13.

In the foreign exchange section the rupee displayed some further strength in terms of the U.S. dollar. Banks' selling rate for ready dollars declined from Rs. 477½ to Rs. 477¼ per $100 and their buying rate from Rs. 473¼ to Rs. 473 per $100. Sterling, on the other hand, was a little erratic. In New York, spot sterling was unchanged on balance at $2.80.7/16—2.80.9/16, after going down to $2.80.3/8—2.80¼. Forward sterling (three months) was, however, a shade lower at $2.78¾—2.78⅞, as compared with $2.78½—2.79. Transferable sterling was marked down from 277.60—277.70 cents to 277.50—277.60 cents.

SUGAR FIRM AGAIN

(*From Our Own Correspondent*)

BOMBAY, 20*th June*

The bullish fervour reported last week in the sugar market continued unabated during the week under review, as the expectation of an *ad hoc* release did not materialise. There was no break in the demand from the adjoining areas as also from Bombay-Deccan and Malabar Coast. The position was further strengthened, as all the ex-mill sugar in Bombay-Deccan and in the South had been sold out and the trade demand had to be diverted to the North. The latter factor led to an improvement of about As. 6 per maund in ex-mill quotations of the northern mills.

Arrivals of indigenous sugar during the week under review amounted to 14,000 bags, as against 4,800 bags in the previous week.

As for the rates, in the spot section, small grain was quoted at Rs. 91, medium grain at Rs. 92 to Rs. 94 and large grain at Rs. 95 to Rs. 102, all per bag. British refined is fully steady at Rs. 89-8 per bag. The Regional Directorate (Food) Bombay, it is reported, will be issuing delivery orders for British refined sugar in the course of a day or two and it is anticipated that the price for this variety may drop after this sugar reaches the market.

In the forward section, *Shravan* delivery contract for "C" grade sugar receded from Rs. 91-12 to Rs. 91-4 and is fully steady to-day at Rs. 91-12.

The undertone of the spot and forward sections alike is distinctly firm at the time of writing.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

SHARP RISE IN SILVER

(*From Our Own Correspondent*)

BOMBAY, 20*th June*

A striking feature of trading in the bullion market during the week under review was the marked recovery of silver in the latter half of the week after a dip earlier. On balance, therefore, the white metal showed a gain of Rs. 2-4 in the ready section and of Rs. 2-10 in the forward. Gold, on the other hand, was listless, the undertone being quiet.

The decline in silver during the earlier part of the week was mainly due to speculative selling on rumours that more silver coins from Tibet would be coming into the market before the current settlement was over. However, absence of any indication in confirmation of these rumours, the good offtake in the ready section and the approach of settlement forced the bears to cover their earlier sales, pushing the price well above the week's lowest level.

Sentiment in gold was adversely affected by the decline in offtake.

Forward silver (26th June settlement) reacted from Rs. 169-7 to Rs. 168-4, before bear covering lifted it up to Rs. 172-15 today. The closing was, however, a shade lower at Rs. 172-1. The next settlement (25th July) gave way from Rs. 168-13 to Rs. 167-14, but recovered to close at Rs. 171-11, the carry forward charges against sellers declining from As. 11 to As. 6.

Ready silver (.996 Mint) advanced from Rs. 170-3 to Rs. 172-7, after an earlier recession to Rs. 168-14. The floating stocks of silver are estimated at 600 bars. The daily average offtake was 20 to 25 bars.

Gold for forward delivery (25th June settlement) moved a little erratically between Rs. 102 and Rs. 100-10, before closing at Rs. 100-12, as against the previous week's closing of Rs. 101-11. Forward gold for the next settlement (24th July) was marked down from Rs. 100-4 to Rs. 99-11, the highest and the lowest quotations being Rs. 100-12 and Rs. 99-6, respectively.

Ready gold fell from Rs. 103-7 to Rs. 101-7. The floating stocks of gold are reported to be 15,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was 1,500 tolas on an average.

In London, silver prices suffered a sizable decline to touch the lowest levels since the first week of February this year. Spot silver was marked down from 78.¼*d.* to 78¼*d.* and forward from 78⅜*d.* to 77¾*d.* Gold moved irregularly, but, on balance, showed a decline from 249*s.* 6*d.* to 249*s.* 5¼*d.* In New York, the price of silver was marked down by ¼*c.* to 90¼*c.*, after having maintained it at 90¾*c.* since 18th April last.

The following comparative table shows the trend of market during the week under review:—

	20-6-56	Highest	Lowest	13-6-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	101 7	103 7	101 5	103 7
Forward*	100 12	102 0	100 10	101 11
Sovereign	67 0	—	—	67 0
SILVER				
Ready (.996 fine Mint) ..	172 7	173 5	168 14	170 3

† 26th June, settlement.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

METALS MARKED UP

(*From Our Own Correspondent*)

CALCUTTA, 19*th June*

Conditions were notably better in the metal market during the week under review, following higher advices from overseas markets, particularly from the London Metal Exchange. Most of India's metal requirements are met by imports, internal production being insignificant in comparison to consumption which is on the increase, in view of the greater impetus to industrial development under the Second Plan. Imports of metals cost the country considerable sums in foreign exchange, and the Indian metal market has necessarily to reflect market conditions abroad. It was against this background that industry and trade circles read the speech of the Union Natural Resources Minister, Mr. K. D. Malaviya, to the 4th Mineral Advisory Board meeting in Bangalore last week. For, the Minister declared that Government proposed to concentrate attention in order to raise internal output of non-ferrous metals.

During the week tin opened at Rs. 490 and gained to quote higher at Rs. 494, which was, however, Rs. 11 below the replacement cost. The recovery was due to the higher trend in Singapore, attributed to reports of American intention to purchase tin concentrates from Indonesia and Bolivia. In London, the spot rate spurted by £10 and three months forward by £9, following reports of renewal of Bolivian tin contract with the U.S.A. Barring a mid-week temporary jump to Rs. 228, electrolytic copper remained at Rs. 225 for most part of the week. From Rs. 67, electrolytic zinc recovered to Rs. 68. Stocks were limited and as a result the ready metal commanded a premium. However, fresh arrivals were being cleared from the docks, and with these it was expected that the ready metal would lose the premium. Although demand for lead was insignificant, the price gained from Rs. 78-8, to Rs. 86-8 following higher advices from London.

FORWARD TRADING IN COTTON RESUMED

(*From Our Own Correspondent*)

BOMBAY, 20*th June*

From the point of view of the cotton market, the week under review has, on the whole, been an eventful one. Two outstanding developments of the week were the resumption of forward trading with effect from 18th inst. and the Government's announcement of its new textile policy. So far as the latter is concerned, it is of significance to the cotton market, in that it accords, albeit a belated and only a half-hearted, recognition to the consideration that mills have to play a vital role in meeting the anticipated increase in demand for cloth. An increase in mill consumption of cotton, as distinguished from consumption by any other sector of textile production, must be a source of satisfaction to raw cotton interests. For, it is only the mills which can pay better prices for cotton. The new policy envisages an increase in cloth output by 1,700 million yards to 8,400 million yards before 1960. The additional production is to be shared by handlooms (700 million yards), power-looms (200 million yards), Ambar charka (300 million yards) and mills (350 million yards); the balance of 150 million yards will be reserved for subsequent allotment.

The much-awaited permission by the Forward Markets Commission for the resumption of forward trading in cotton was given on 16th inst. In announcing its permission, the Commission referred to its own proposals for the amendment of the by-laws of the East India Cotton Association and the fact that the amendments which had been made by the Board of the Association, had been published in the *Gazette of India Extraordinary* dated 14th June 1956. It added: "The principal features of the amendments are as follows: Firstly, there will be two hedge contracts, viz., one with Jarilla 25/32" Fine as its basis and the other with Vijay 27/32" Fine as its basis, instead of the present single hedge contract with Jarilla 13/16" Fine as its basis. It is believed that this will provide a better hedge and offer protection to a larger quantity of cotton. Secondly, the delivery months for the contracts have been advanced, so as to ensure larger supplies of tenderable cotton during the delivery periods. Thirdly, the margin system has been tightened up and a provision for special clearing has been introduced. Fourthly, the provisions regarding the reporting of information by members have been made more comprehensive."

The East India Cotton Association, while announcing that trading would commence on 18th June, cautioned its members, in a circular, against "accumulation of large speculative interests in the contracts." The circular added: "The Board will keep a close watch on the working of the two hedge contracts so that such changes as may be found necessary from the experience of working of the contracts will be made before permitting trading in the subsequent delivery months."

Inaugurating the resumption of forward trading, on 18th instant, Mr. Morarji Desai, Chief Minister of Bombay, emphasised the role of hedge trading in commodities but deprecated unhealthy speculation. He said that the element of speculation could never be abolished completely from trade but he advised traders to carry on business in a manner that would enhance the prestige of the business community and the Association. He added that the trade should make it a point to solve the problems by friendly negotiations with Government and both the parties should refrain from staging a trial of strength. Mr. Madanmohan Ruia, the President of the Association, welcoming the Chief Minister, expressed his gratification at the resumption of trading and thanked the Commission for its help in expediting the start of business. On the Chief Minister's polite refusal to put through the maiden deal, Mr. Ruia signalled the resumption of futures trading by buying 100 bales of Jarilla March 1957 contract at Rs. 681-4 from Mr. Ramdas Kilachand.

Forward trading commenced on 18th inst. in respect of both the contracts—Contract I and Contract II. The basis of the contract I, it may be mentioned here is Fine M.G. Jarilla A of staple 25/32", tenderable up to two classes 'on' and one class 'off' for grade and upto 2/32" 'on' and 1/32" 'off' for staple, except that in the case of M.G. Jarilla (B), M.G. Dholleras and M.G. Rajasthan-American with basic staple of ¾", there will be no 'off' values for 1/32" staple.

The following varieties are tenderable against this contract:

(1) M.G. Jarilla (A) 25/32" staple, tenderable varieties being Jarilla, Virnar (197/3), Verum, M.P. Cambodia M.B. Cambodia, M.B. Upland, Malvi, Bhoj, H. 420—tenderable upto 27/32"; (2) M.G. Jarilla (B) ¾" staple (without tolerance), M.G. Jarilla ¾" staple (without tolerance), M.G. Rajasthan-American ¾" staple (without tolerance)—tenderable upto 13/16"; (3) M.G. Kalyan 25/32" staple—tenderable upto 27/32" and (4) M.G. Western 25/32" staple—tenderable upto 27/32".

The basis of the contract II is Fine M.G. Vijay staple 27/32" tenderable upto two classes 'on' and one class 'off' for grade and upto 2/32" 'on' and 1/32" 'off' staple. The tenderable varieties against this contract are:

(1) M.G. Vijay 27/32" staple, tenderable varieties being Vijay, Nandurbar, Surti, Talod Surti and Dehgam 1027—tenderable up to 29/32"; (2) M.G. Ankleshwar 27/32" staple, tenderable varieties being Ankleshwar, Rajpipla Jhagadia, Netrang, Navapur—tenderable up to 29/32"; (3) M.G. Surti 7/8" staple, tenderable varieties being Surti, Suyog and 2087—tenderable upto 15/16"; (4) roller ginned and Saw-ginned Punjab/American: L.S.S. 27/32" staple—tenderable upto 29/32" 320F 27/32" staple—tenderable up to 29/32", 216F 7/8" staple—tenderable up to 15/16"; (5) M.G. Jayadhar (A) 7/8" staple—tenderable up to 15/16"; (6) M.G. Jayadhar (B)

27/32" staple—tenderable up to 29/32"; (7) M.G. Laxmi (A) 29/32" staple—tenderable varieties being Laxmi and M.A. 5—tenderable up to 31/32"; (8) M.G. Laxmi (B) 7/8" staple—tenderable up to 15/16"; (9) M.G. Gaorani 6 and 12 27/32" staple—tenderable up to 29/32"; (10) M.G. Buri and Parbhani Americans 7/8" staple—tenderable up to 15/16"; (11) *M.G. Cambodia* 29/32" staple, tenderable varieties being Cambodia, Avanashi, Cambodia Co2 including Co2 grown in Surat, Cambodia Co3, Cambodia 4462, and Cambodia Co4 (including Co4 B/40 Cambodia Uganda 1, MU1 and MU2) otherwise known as Rajapalayam and also Cambodia Co4, 170 Co2 and 134 Co2M—tenderable up to 31/32"; and (12) M.G. Karunganni 27/32" staple—tenderable up to 29/32".

The Jarilla contract (March 1957) opened on 18th inst. at Rs. 681-4 but soon declined to touch a low of Rs. 660. On the following day, it improved to Rs. 669½ but again receded today to touch a low of Rs. 654 which was also the closing rate. The Vijay contract (April 1957) opened at Rs. 830 and moved up to Rs. 844 on the following day but receded to Rs. 818 today, though it was somewhat better at Rs. 820 towards the close of the session. The gap between the two contracts stands at Rs. 166.

No clear trend will probably emerge until the crop picture is known. So far, the course of the monsoon is stated to be favourable. But it is too early to judge, the most unpredictable factor in India being the monsoon.

The following is the trend of prices of the two contracts during the week under review:

	Opening	*High*	*Low*	*Closing*
Jarilla contract ...	Rs. 681¼	681¼	654	654
Vijay contract ...	Rs. 830	845	810	820

The spot market remained somewhat subdued, thanks to the resumption of forward trading. Buyers evinced some interest in Laxmi. Jayadhar, Vijay and Surti varieties. The following are the latest available prices from the Sewri market:

Bengal *Deshi* Rs. 625; Berar Jarillas Rs. 780; Khandesh Rs. 790; Vijay Rs. 960; Oomra *Deshi* Rs. 680; Moglai Rs. 690.

The Karachi cotton market remained weak on reports of poor export demand. Both N.T.R.G. July and N.T.R.G. January were fractionally lower at Rs. 82-4 and Rs. 77-8, respectively. There are, however, reports that the Soviet trade delegation which is touring Pakistan has offered to buy 2,000 tons of medium-staple cotton from that country. It remains to be seen whether this deal will be successfully completed. The latest available quotations from the Karachi market are:

Sind *Deshi* Rs. 101; Punjab *Deshi* Rs. 96; 4F Punjab R.G. Rs. 84; S.G. Rs. 86; L.S.S. Punjab R.G. Rs. 86¾; S.G. Rs. 90¾; 289F Punjab R.G. Rs. 92; S.G. Rs. 100.

Further weakness has been reported from the Alexandria cotton market which, however, remained closed during the major part of the week under review. Two new regulations governing the futures market have been introduced. Under one of them, in certain circumstances, Associate members will be obliged to provide margins. The other regulation provides for reduction of the current limit of an open market position of 15,000 cantars per holder but it is learnt present holders of 15,000 cantars will not be obliged to reduce them forthwith. These rules are expected to limit price movements in the futures market. In spite of a slight decline in spot premiums, demand continued to be small.

The latest available quotations (in talaries per lb.) from the market are: Karnak—July 11.50; November 106.75; January 103.25; Ashmouni —June 80.10; October 75.20.

The weakness in the Alexandria cotton market was reflected in the downward trend of the Egyptian contract in the Liverpool market. The new contract also declined, thanks to persisting uncertainties about U.S. cotton policy. The Sudan contract, however, showed some improvement. The following are the latest available quotations (in pence per lb.) from the Liverpool market:

New contract: July-August 28.45; October-November 25.25; December-January 24.40; March-April 23.80; May-June 23.45. *Egyptian Karnak cotton:* July-August 57.80; November-December 57.80; January-February 57.80. *Sudan cotton:* July-August 49.35; September-October 47.85; November-December 47.65.

Exports of cotton from the U.S. in April 1956 continued an upward trend which began in the previous month. Shipments in April aggregated 379,000 bales as compared with 249,000 bales in April 1955 and 310,000 bales in March, 1956. But exports for the eight-month period August-April 1955-56 are still below those of the same period in 1954-55; the former aggregated 1.57 million bales as compared with 2.99 million bales in the corresponding period of last season. The increased movement noticed in March and April, this year, is attributed to the special million-bale export sale of cotton 15/16" and shorter staple in January and February.

Although the ready section of the New York cotton market continues to be firm, the forward rates have again shown a sagging tendency. The supply position in the ready market is believed to be tight so that large weekly re-possessions from the loan have been made to meet the demand. It is, however, believed that the prices will fall as soon as the domestic mill demand for the current season has been fully met.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	19-6-56	12-6-56	5-6-56
Spot	36.90	36.75	36.55
July	34.48	34.49	34.80
October	32.37	32.51	32.57
December	32.45	32.61	32.67

YARNS EASY

(From Our Own Correspondent)

BOMBAY, 20th *June*

No marked changes in the conditions witnessed in the yarn market last week were discernible this week. The trend continued to be weak owing to a number of bearish influences. The slackness associated with the monsoon, absence of demand for yarns from the consuming centres, consumer resistance at the present high rates, reluctance of operators to enter a declining market and the tendency to await the new import policy in respect of yarns—all these were cumulatively responsible for a general decline in prices in all kinds of yarns. Even fine-count cotton yarns, which were in demand last week, could not but succumb to this influence.

In the staple fibre yarn section, June delivery contract for 40 x 2 variety evinced some speculative attention and improved from Rs. 657 to Rs. 667. But July contract more or less remained quiet at Rs. 651. In the spot section, foreign yarns (80 x 2) were subjected to selling pressure. Suicos dropped As. 4 to Rs. 7-4, and Paramounts a like amount to Rs. 6-2. K'Suns slipped from Rs. 6-14 to Rs. 6-10 and H'Races from Rs. 6-8 to Rs. 6-4. S'Sellos retreated from Rs. 6-8 to Rs. 6-4. Among indigenous yarns (40 x 2) New Greats and New Citys shed an anna each to Rs. 3-6 and Rs. 3-6-9 respectively. Kohinoors were a quarter anna lower at Rs. 3-7-9. A similar loss was seen in Centurys at Rs. 3-7.

The downward trend was also witnessed in rayon yarns. Snia rayon yarn, 120 dull cones, for June delivery fell by 19 points to Rs. 778. August delivery drifted Rs. 6 lower to Rs. 786. Spot 120 Japan declined by six pies to Rs. 3-11-6. 150 Japan was, however, better at Rs. 4-4 as against Rs. 4-3-6. 120 Italy was dull at Rs. 3-12-6. But 150 Italy was steady at Rs. 3-14-3.

The cotton yarn section ruled generally quiet on lack of demand from handloom weavers. Business in 19 counts was stated to be poor, with quotations showing a tendency to decline. Podars were an anna lower at Rs. 13-13, while Moderns evoked little interest at Rs. 14-14. Twenty counts Hinds were unchanged at Rs. 18-2 but Moderns were As. 2 lower at Rs. 18-2. Among 60 counts, Kadri were done at Rs. 46-14 as against Rs. 47-8. Moderns were quoted at Rs. 62 and Raghu Rs. 58-0, as compared with Rs. 62 and Rs. 58-8 respectively a week ago. Among 80 count yarns, Moderns lost a rupee to Rs. 69 and Finlays Rs. 2 to Rs. 76. Mahendras were, however, unchanged at Rs. 72-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	20-6-1956	13-6-1956	6-6-1956
	Rs. a. p.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)–			
120 Dull Cone Sata June ..	778 0 0	797 0	802 0

GROUNDNUT FUTURES BEGUN

(From Our Own Correspondent)

BOMBAY, 20th *June*

The outstanding development of the week—nay, of the year—in the oilseeds market was the opening of futures trading in groundnut on the 18th inst., after a lapse of nearly 13 years. It may be mentioned here that hedge trading in groundnuts was suspended in May 1943 under the Defence of India Rules and continued to remain under suspension after the war under the Essential Supplies Temporary Powers Act, 1946, till January 1955, and subsequently under the Forward Contracts (Regulation) Act, 1952. For most part of this period, trading in non-transferable specific delivery was, however, permitted.

Futures trading, now started under the auspices of the Bombay Oilseeds Exchange, is confined to February (1957) Contract, with Bombay bold quality being the basic variety. The unit of trading will be 100 candies. There will be in all three delivery contracts in a year, the months being February, May and August. According to the modified by-laws approved by the Forward Markets Commission, the margin system will be applied to all the oilseeds for which trading is permitted. Trading up to 7,500 candies in each kind of oilseeds, as well as all oilseeds taken together, will be free from margin. Graded rates will apply to quantities in excess of this free limit. The trading in different oilseeds will be permitted to be offset against one another.

On the basis of the by-laws mentioned above, futures trading in groundnut was resumed on Monday the 18th inst. It was inaugurated by Mr. Morarji Desai, Chief Minister of Bombay. During the three sessions ended today, the February delivery developed a certain amount of weakness after exhibiting a somewhat firm tone in the initial stages. Lack of encouraging upcountry advices and satisfactory progress of monsoon, coupled with the weakness of castorseeds, induced selling. The contract opened at Rs. 131-4 and, after improving to Rs. 137-4, reacted to Rs. 134-2 for reasons just mentioned. In the non-futures section, Bold F.A.Q. was, however, steady at Rs. 33, as against Rs. 32-4 early in the week. But June-July shed As. 6 to close at Rs. 31-6 and August-September As. 8 to finish the week at Rs. 32-2. Coromandals were slightly better at Rs. 34-2. On some special buying, groundnut oil ex-mill advanced from Rs. 17-6 to Rs. 17-12. Railway receipts improved by As. 4 to Rs. 17-10.

Owing to weaker advices from the U.S. markets where castor oil showed a tendency to decline from 14.75 cents to 14.25 cents per lb., castorseeds September delivery developed weakness and lost as much as Rs. 11-2 per candy over the week, to close at Rs. 127-2 as against Rs. 138-4. Castorseeds F.A.Q. ready lost as much as Rs. 2-8 to Rs. 24. Madras variety receded from Rs. 26-8 to Rs. 25-8. Castor oil B.S.S. was, however, As. 2 better at Rs. 16-2 and Commercials at Rs. 15-2.

Linseed also moved in sympathy with the other two sections and reported fractional losses on balance. Bold ready shed as much as As. 12 to quote at Rs. 28-12. June-July delivery retreated from Rs. 29-2 to Rs. 28-12, and August-September from Rs. 29-4 to Rs. 28-6. Linseeds oil was, however, slightly better at Rs. 17-2.

Among others, *kardi* seeds, ready, were a shade easy at Rs. 17-8, as against Rs. 18. August-September was quoted As. 8 lower at Rs. 18-2. *Niger* seeds, F.A.Q. were, however, better by a rupee to Rs. 28.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	20-6-1956	13-6-1956	6-6-1956

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 20th *June*

During the week under review, Malabar black pepper continued to rule easy under pressure of liquidation by stale bulls and in sympathy with Singapore which after rapid rise to Str. $77 relapsed to Str. $71, immediately on withdrawal of European buying and short covering. Singapore report indicates that from January to May, about 7,000 tons, including 5,000 tons of new crop have already been exported from Sarawak thus leaving an exportable balance of about 10,000 tons, if the crop reaches the figure of 15,000 tons and about 7,000 tons in case it turns out to be 12 000 tons, as officially estimated. On the face of the above figures and in view of the smaller stocks, both in the U.S.A. and Europe, the statistical position of Sarawak cannot be called unsatisfactory.

As for the statistical position of Malabar, the following figures will be worth noting:—

		Tons
Carryover from the crop of 1954-55 ...		1,000
Estimated production for 1955-56 ...		24,000
Total ...		25,000
Less:		
Quantity exported by the end of May		9,100
Quantity despatched from producing areas to Bombay and Calcutta by steamers and to interior by rail		7,000
Total ...		16,100
Balance available for export and inland consumption		8,900
Estimated requirements for consumption up to 30th October 1956 ...		3,000
Total quantity available for export ...		5,900

New crop of Lampong and Muntok are estimated to be about 6,000 and 5,000 tons respectively.

Looking to these figures, future of pepper in general does not warrant such diffident feelings in the commodity as at present. However, following are some of the factors which are working against the market:

1. Lack of outside and speculative interest in view of the heavy losses sustained by the trade owing to continuous declining prices during the last three years.
2. Lack of short position.
3. Hand-to-mouth purchases by American and European buyers.
4. Weak holding capacity of Sarawak.
5. Bearish trend in other commodities.
6. Practice of sending unsold consignments to U.S.A. and Europe.

Alleppey after reaching Rs. 762-8, came down to Rs. 737-8, and garbled at Cochin from Rs. 732 to Rs. 726-4. Calicut also came down from Rs. 8[illegible] to Rs. 775.

In the A.S.T.A. section, June, after touching $0.30, was traded up to $0.28½, while July-August-September, from $0.29½ to $0.28.

The spot market is weak in view of liquidation by tired longs and accumulation of stocks by the local market which is estimated to be about 7,000 bags.

Following are today's nominal quotations:—Ready Rs. 100 (as against Rs. 100 a week ago) per Bengal maund. June Rs. 690-95 (Rs. 700-705) and July Rs. 697½-702½ (Rs. 705-715) per candy of 5¼ cwts.

RAW JUTE QUIET

(From Our Own Correspondent)

CALCUTTA, 19th *June*

Prices of jute goods moved within narrow limits during the week under review, while raw jute prices were noted for a fractional decline. Trade that passed in jute goods was nothing unusual, as both mills and buyers were reluctant to operate until a clear idea was available as to the steps New Delhi proposed to take in order to prevent the glut in the market. Opinions have been exchanged between the Indian Jute Mills Association and the Government of India on the latter's proposal to fix minimum prices for jute goods. The trade was also anxious that some early steps must be taken. Mills are divided on the measures considered advisable. Some favour the fixation of minimum prices while others consider that if minimum prices are enforced that would force foreign buyers to use more substitutes. So the latter group of mills clearly see the need to curtail production by cutting short working hours. That would be a practical way to see stocks go down. Some reports have suggested that mills should close down for a certain period, and resume working, without any cut in working hours, after stocks had gone down.

The market has now reached a stage of uncertainty, and if some announcement is not made in New Delhi, it is feared that stocks at the end of this month would show a further marked increase. During the week, details of production during the month of May were announced. The output of all constructions was 101,700 tons, representing an increase of 7,800 tons. Sackings at 59,600 tons recorded an increase of 4,600 tons, while hessians rose to 35,800 tons from 32,900 tons and miscellaneous constructions to 6,300 tons from 6,000 tons. With the April-end stocks, the total availability of goods during the month of May was 209,600 tons, from which if the May-end stocks of 119,100 tons were deducted, the net demand during May was of the order of 90,500 tons only. The market could again return to a healthy state, if only stocks dropped lower than the monthly production. There is keen activity in the market, if stocks represent production of about three weeks or so. As such, the need for measures by which stocks would decline becomes urgent. It is realised that the Government cannot suggest a solution overnight. Apparently, New Delhi and the Indian Jute Mills Association are considering all aspects in their minutest details with a view to arriving at a solution which should prove the best in the circumstances.

During the week under review, activity in jute goods remained restricted for reasons already mentioned. Buyers seemed to pause for time in view of the present uncertainty. Ready B. twills declined on Wednesday to Rs. 105-2 from Rs. 105-6 and hessians 40" 10 oz. to Rs. 38-1 from Rs. 38-2. At these levels, demand was in evidence, although in the absence of any definite indication regarding the methods by which the jute mills could work on a profitable basis, covering demand was insignificant. On Friday, ready B. twills recovered to Rs. 105-10 and hessians 40" 10 oz. to Rs. 38-3. Over the week-end, the rate for B. twills was maintained at Rs. 105-10, but that for hessians improved further to Rs. 38-5. However, yesterday's prices were fractionally lower, with hessians 40" 10 oz. at Rs. 38-4 and B. twills at Rs. 105-8.

Prices of raw jute declined by As. 8 for almost all constructions, as reports of good condition of plants were being received both from Indian and Pakistani districts. Another factor for the easier price-trend was the apparent necessity for mills to reduce production. Sellers of the new crop were few and far between for fear of losses. What little business took place in the new crop with mills was on the basis of Rs. 25 per maund basis northern bottoms August-September delivery. Reports from Assam indicate commencement of cutting in lowland areas. In fact, Calcutta buyers have already had the opportunity of seeing samples of new crop daissee white jute. Latest quotations of the old crop are given below:

	Middles Rs. a.	*Bottoms* Rs. a.
Pakistani:		
Northern	32 0	29 0
District	32 8	29 8
Indian:		
Northern	29 8	26 8

Birnli f.a.q.	25 0	

LESS DEMAND FOR TEA

(Messrs. Forbes, Ewart & Figgis (Private) Ltd.)

COCHIN, 15th *June*

Approximately 1,200,000 lbs. were on offer in Sale 15 which was held on 12th June. Quality showed a further decline and there were a number of rush teas on offer of very mixed and stalky appearance. The sale opened to much less demand and, for the first time in many weeks, buyers showed little interest in plain liquoring fannings. Low medium and medium teas were generally As. 2 to As. 3 easier and withdrawals were heavy. There was a slightly easier tendency for good medium types and best liquoring sold at around valuations. Best liquoring fannings were well supported. Low grown whole leaf teas were slightly easier but there was a strong demand for high grown leaf teas. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 8 0 Nominal
Low medium B.O.P. ...	1 10 0
Medium B.O.P.	1 11 6
Good B.O.P. ... Rs. 2 2 0 to	2 4 0
Well made black leaf O.P. ...	2 2 0

London Market:—Sale of 11th June 1956:—Good general demand. Irregular. No quotable change.

Sale of 12th June 1956:—Best liquorings firm to dearer. Thin liquoring and stalky kinds tended easier.

Colombo Market:—Sale of 11th June 1956:—Dusts irregularly lower. Others strong demand generally dearer, particularly useful liquoring sorts.

Sale of 12th June 1956:—Poorest liquoring sorts and lowgrowns ten to fifteen cents lower. Others strong general demand generally dearer rates, particularly improved quality Uvas. Persian Gulf types substantially lower.

Calcutta Market—Export.—24,800 chests. Good demand for any teas with first flush quality which often sold above valuation. Otherwise interest almost non-existent and withdrawals very heavy. Whole leaf grades and Darjeelings fairly well supported.

Internal:—21,400 dust. Met good general demand at a full As. 1 dearer. C.T.Cs. easier, but residue types As. 2 to As. 3 dearer. Black leaf dusts considerably dearer. 400 internal leaf. Fairly good demand at irregular rates.

Dust Sale 'L':—There was approximately 625,000 lbs. on offer in Dust Sale L which was held on Thursday, 14th June. Although there was a useful demand, prices were irregularly As. 2 lower for all types. Milled dusts were fairly well supported and high grown descriptions sold well.

Export Quota:—The market has eased for special licence, as the validity draws to a close. There are now sellers over at 5 pies. New seasons quota is quoted at 30-33 pies.

Forthcoming Auctions:—Sale No. 16 will be held on 19th June and Dust Sale M on the 28th of June.

As we go to press, Messrs. Forbes, Ewart & Figgis (Private) Ltd. wire:

"*Sale* 16:—1,500,000 lbs. Low and low mediums neglected, particularly stalky types, and withdrawals heavy. Useful demand for teas of good appearance and liquor at As. 1 to As. 2 lower. Whole leaf stronger."

HIDES RULE WEAK

(From Our Own Correspondent)

MADRAS, 18th *June*

Madras tanned hides and calf market has shown no change for the better, and prices have ruled weak, U.K. buying has been at a low ebb and patchy, because the leather dressers are reported to be pursuing a hand-to-mouth policy. Stock holders at Madras have accepted lower prices for financial reasons, and tanners have been losing money on their stocks in hand.

Arrivals of kips have been on the usual scale and offtake by shippers has been good. There was selective demand for top marks and higher selections in which supplies have been limited. Tanned cow calf market remained lifeless, while buff calf was active due to fair clearance on U.S.A. account. There was no change in the buff hides section.

Demand for prime class sheep and goat skins and middle class sheep was good and prices ruled firmer in consequence. As regards market quality types, shippers were offering low prices due to excess adulteration in them.

TEA PRICES RULE STEADY

(From Our Own Correspondent)

CALCUTTA, 19th *June*

Tea prices during yesterday's export auction, as well as last week's internal sale, tended steadier. Enquiries from Russia continued to be received and these were for new season's Darjeelings and leaf grades. The London report that Russia's need to purchase as much as 20 to 30 million lbs. from Calcutta sales during this season would stem the decline in prices lately in evidence in Mincing Lane's auctions was noted. Similarly, the reports of better demand during the auctions held in Chittagong last Wednesday and in Colombo last Tuesday contributed to the steadier trend locally. In last week's auctions in London, both Ceylon and South Indian teas advanced.

Reports are current that the International Tea Agreement now under revision would place no limitation on extensions and replacements. The producing countries could not even comply with the replacements and extensions provided for in the old agreement, due to replanting proving costly. The new agreement, it is stated, would raise export quota of India to 560 million lbs. (an increase of 89.9 million lbs.) of Pakistan to 47.5 million lbs. (as against 47.2 million lbs.), and of Ceylon's to 400 million lbs. (an increase of 60,4 million lbs.). On the other hand, Indonesia's share would be reduced from 234.3 million lbs. to 175.0 million lbs. These changes would mean a net increase in the total export quota by 91.3 million lbs. to 1,182.6 million lbs.

Reports from tea gardens in North India indicate that during this season producers would pay more attention to producing quality teas rather than making more tea of inferior varieties. As a result, overall production would be lower with an improvement in quality.

During yesterday's auction, new season's teas offered amounted to 19,600 packages and old season's teas 626 chests. There was good support for the tippy teas on offer, and C.T.C. teas which were green, had buyers at above valuations. Buyers paid keen attention for flavoury Darjeelings, bright liquoring Dooars and Assams. The last-mentioned two varieties were better in quality. Withdrawals in respect of plain and medium brokens and whole leaf grades were heavy; demand having been poor. Prices of these declined by an anna to As. 2. However, the most stylish kinds were about steady. Plain B.Ps were nominally quoted at Re. 1-9.

Dusts offered during last week's internal sale aggregated 21,500 packages of old season's teas. Demand was good, and prices advanced, although irregularly. Clean common and medium teas met with good support, and prices advanced by an anna and, on occasions, even more than that. Keen competition was in evidence in residue teas which were a good feature with a rise of As. 2 to As. 3. Buyers paid more attention to black leafy exportable teas which provided the strongest feature of the sale. A very few lots of good C.T.Cs. sold well, but other C.T.Cs. eased. The rates were: best medium C.T.C. Rs. 2-6, medium Assam grainy dust Re. 1-7, and medium Dooars Re. 1-6-6.

Leaf grades on offer amounted to 327 chests. Demand was fair and prices were fully firm to dearer.

KANPUR HIDES DECLINE

(From Our Own Correspondent)

KANPUR, 17th *June*

During the week under review the prices of the main items of the local hides and skins market displayed a downward trend. Fresh supplies were, however, considerable and were promptly disposed of. The main purchasers were the local tanners and the Madras dealers. The disposal of goats and skins was particularly brisk. The latest quotations are as follows:—

Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 175 and 3rd grade Rs. 120 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 175 and 2nd grade Rs. 150 per 100 pieces; sheep skins 1st grade Rs. 170 and 2nd grade Rs. 150 per 100 pieces.

LINSEED DULL

(Messrs. A. Bradley & Co.)

CALCUTTA, 18th *June*

Activity has been limited during the week and conditions have been generally dull. Only the shortage of ready seeds has prevented a sharp decline in prices; the undertone has been quiet and values have lost further ground. Sellers have been more in evidence for forward delivery, but crushers are showing little interest with an unfavourable outturn. The oil market is stagnant; with a poor local demand and declining overseas prices, sellers have been discounting the market to secure sporadic enquiries received from local consumers.

Latest quotations are as follows: Ready Rs. 21-8 and June-July Rs. 21-4 per maund.

SUGAR ACTIVE

(From Our Own Correspondent)

HAPUR, 18th *June*

The sugar market ruled active during the week under review. Demand was reported from almost all parts of the country, chiefly from Gujerat, Saurashtra and Punjab. South Indian markets also showed keen interest, but want of loading facilities to these markets hampered despatches. Mill delivery prices hardened during the week. Factories in west U.P. were asked to extend crushing due to ample supply of cane. But the quality of such cane deteriorated and its sugar content has declined.

The latest mill delivery prices on Monday were:—Jaswant Rs. 28-8, Simbhauli Rs. 28-7, Mowana Rs. 28-5, Daurala Rs. 29-8, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 28-8 to Rs. 29-8, Rampur Rs. 30-8; retail Rs. 30-4; *khandsari* Rs. 23 to Rs. 27. The *khandsari* market continued depressed due to lack of demand.

Better loading facilities and firm trend in the futures section accounted for a gain of As. 6 per maund in ready *gur* prices to Rs. 10-11 per maund on Monday. Local arrivals during the week were fairly good due to better prices and about 5,000 maunds were put in the market. Offtake, mostly to Gujerat, aggregated 23 wagons during the week and local stocks have gone down to 65,000 maunds as today.

The standing cane crop for the next season is progressing satisfactorily, but is reported to be badly in need of rains.

In the futures section, *gur* appreciated during the week, the closing on Saturday being Rs. 9-8-3 for *Fagun* delivery, as against the week's opening level on Monday last week at Rs. 9-4-3. Today, the market remained closed.

FOODGRAINS QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, 18th *June*

Quiet to steady conditions prevailed in the foodgrain prices during last week. Wheat of average quality continued to be transacted at Rs. 14 per maund and farm quality at Rs. 15-4. Arrivals averaged 2,000 maunds daily. While farm quality was requested from outside destinations including Madras, average quality was lifted by stockists, with the result that the local stocks have gone up to 81 *khaties*, as against 70 last week-end. Heavy

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2365 BOMBAY, 30TH JUNE 1956 PRICE Rs. 1/8

LESSONS OF RECENT TEA SLUMPS

ONE of the amazing facts about tea industry is that none seems to care to learn a lesson from the vast changes that occur in its career from season to season. It was hardly four years ago that this industry faced a crisis of the greatest magnitude. Due to a variety of circumstances, the demand for tea slumped and the price fell sharply, to touch a level at which no garden could hope to make a profit. Huge losses were suffered by gardens, as they had to sell teas at prices much below the cost of production. After a good deal of suffering had been inflicted, the tide turned slowly and the industry began to pass through a boom, perhaps unparalleled in its history. This boom lasted for a short period and soon the tide began to turn once again and brought the industry very near a crisis. Then, in early 1956, the industry started to recover, much in the manner that it did in early 1953, and things began to look normal again. All these changes have occurred within so short a period that many lessons could have been learned from them, but, curiously enough, no one seems to have taken the trouble of learning anything.

Who are the people who should profit from the past? During the discussion on the Tea Bill in Parliament three years ago, the Government spokesmen made much of the fact that it is not only employers and labour who are concerned with the tea industry, but the Government and the consumer as well. On that reasoning, provision was made for strong representation on the Tea Board not only for employers (producers) and labour, but also for the Central and State Governments and consumers of tea. So one can rightly say that all these four parties have a duty to learn the lessons of the recent history of tea. It would help all the parties—or partners—if they would but look at their respective roles in a friendly and co-operative spirit.

Before doing so, however, one must pause to bear in mind some of the basic facts concerning the industry, particularly in relation to recent developments. India is the largest producer of tea in the world, and next in order come Ceylon, Indonesia, Pakistan and East Africa. The trend of world production is such that bigger and bigger crops are to be expected from every one of the main producers. While this is so, the level of consumption also is rising in all the countries where tea is drunk, chiefly the United Kingdom, the U.S.A., Canada, the Irish Republic, Egypt and West Asia, not to mention the producing countries also. Nevertheless, available statistics show that the rate of world production is actually a little ahead of the rate of world consumption and that, in 1955, there was, in fact, a somewhat large unabsorbed production. Assuming that the normal incentives to production exist in all the producing countries, one should expect, an increasing level of production over consumption in the world, at least for some years to come. This conclusion, it may be stated here, has been reached only after taking into account the increase in consumption which could be expected as a result of the vigorous propaganda conducted by the producing countries for spreading the tea habit and of the rising level of incomes all over the world. The important point to remember is that there is not likely to be any shortage of supplies for a good many years ahead, unless, of course, Dame Nature happens to be unfavourable to tea growing or transport.

In passing it is well to remember that a steady increase in the world consumption of tea can only be expected so long as tea continues to be one of the cheapest beverages in the world. Once the price rises, tea will necessarily yield its position to many other competitive beverages which flood the markets of the world. At the same time, tea drinkers the world over are becoming so quality-minded that it is necessary to ensure that the supply is of good quality. In fact, the preference today is for quality teas at reasonable prices.

The second point to be borne in mind is the extent of the Governments' interest in tea industry. In India—the world's largest tea-producing country—tea is the second largest foreign exchange earner. In Ceylon—the second largest tea-producing country—tea provides the Government with two-thirds of its foreign exchange needs. In Pakistan and Indonesia also, tea greatly helps the country's foreign exchange earning capacity. In addition to foreign exchange, tea contributes very largely to the revenues of these countries, particularly of India, by means of export and excise duties, income-tax and a host of other levies.

The third important point is that, in India and Ceylon at least, the future of tea is inextricably linked with the fortunes of export markets. While internal consumption is no doubt rising, the rate of increase can never, in the next 10 or 15 years, rise to such an extent that the export markets could be ignored completely. The necessity for these countries to ensure that export markets are regularly supplied with tea of competitive quality and price is, therefore, self-evident.

Now let us consider the lessons which the producer should learn from the recent past. Some of the blame for the slump of 1952 and 1955 should be placed at the door of the producer, because of his lack of attention to quality. It is true that this lack of attention was, to some extent, forced upon him by other circumstances such as adverse weather, but, nevertheless, his indifference was admitted to by one of the reasons for the slump. In a strongly competitive market such as the one that exists at present, quality teas hold their position well and their future is assured. In order to produce quality tea, the grower should constantly keep his garden in a healthy condition, by suitable and adequate manuring, by eradicating pests and diseases, and by taking full advantage of the results of scientific research. He should also pay careful attention to proper methods of packing tea, for appearance makes a big difference in the selection of teas in the export markets.

The lesson that labour should draw may be easily stated. A slump, in its true and naked form, can frighten anyone, and most of all the labour. The slump of 1952 caused a number of estates in North-East India to close down, throwing a large number of workers out of employment. Labour must, therefore, realise that its duties towards the management are no less important than its rights, and that its primary duty is to co-operate with the management in producing teas of good quality. It is true that, tea being an agricultural crop, its quality is influenced to a considerable extent by Nature. The latter can alter the climate in such a way as to cause heavy flushes of leaf, thereby making it extremely difficult for even the best run gardens to keep pace with them. But there is no gainsaying the fact that producing quality tea depends to an even greater extent on the willing co-operation of labour also. Coarse plucking, go-slow tactics and strikes such as we have witnessed in recent months inevitably mean loss of crop and loss of revenue for all, the management, the labour and the Government. Besides wages and other amenities, plantation workers, it may be noted here, are in receipt of generous bonuses which are linked to their earnings. If gardens are compelled to shut down due to workers' indiscipline, earnings will be reduced and so also the quantum of bonus to workers. Some of the recent troubles in tea gardens were generated by rivalry between different unions working in the same area, and some of these unions were organised by leaders having no stake in the industry and whose only objective was political gain. It is up to workers themselves, who are reasonably well-paid and well looked after, to think and decide whether they should be the tools of political agitators.

Employers in plantation industry have already voluntarily provided many amenities for labour at considerable expense, and what has not been so provided is now required to be provided by suitable legislation. The workers have, therefore, no reason to complain against managements about these matters and, where they do, it is the result of misleading propaganda by some of the union leaders. Something must be done to prevent workers from falling a victim to such vicious propaganda. One of the ways in which the influence of outside elements over labour can be eliminated is to establish closer direct relations between management and workers.

Of all the parties mentioned, the Government seems to be the most negligent in learning a lesson from the tea industry's recent difficulties. One of the well-known reasons for the slump of 1952 was the Central Government's reluctance to respond to the tea industry's appeal for relief from some of the burdens imposed by it. In particular, the reluctance to adjust the export duty so as to improve the competitive strength of Indian tea in export markets must be considered very unfortunate. When the export duty on tea was imposed for the first time, the then Finance Minister, Mr. Liaquat Ali Khan, had made it quite clear that he would not hesitate to withdraw the duty, if it was found to injure the export trade. That promise was not only not kept but, year after year, the duty has gone up until it has reached the present high level. The scales now in force authorise a minimum levy of As. 4 a pound, however low the price of tea may be. The Government should recall that, in 1952, a number of gardens was selling tea at no more than Re 1-8 per lb., which did not cover their actual cost of production. A similar situation arose in some gardens in 1955 also, but little relief was given. Luckily, the unfavourable position did not last long. Exports began to pick up and a smart rise in the offtake for domestic consumption saved the situation.

Following the heavy recession in tea prices in 1955, the Government, of course, effected, as part of the 1956-57 budget proposals, a cut of As. 2 in the rate of export duty for the price slab between Rs. 3-4 and Rs. 4 per lb., but this

brought no relief to the industry, as the ruling price was well below the slab to which the reduced scale of duty is applicable. Further, the present system of fixing the "world price" of tea for determining the export duty leaves much to be desired. The "world price," it may be noted, is determined on the basis of London auction average prices only and the industry's repeated plea for taking into account Calcutta and Cochin sale averages also has so far failed to evoke any response. The defect in the present system arises from the fact that London prices are invariably well above the prices obtained in India. In the U.K., the buyer shows a distinct preference to buy "spot teas," instead of buying at producing countries. By fixing the duty in relation to the prevailing high London prices, India seems to be running a grave risk of forcing the buyer to seek cheaper teas from other sources. The question that Government should consider is whether it is not prepared to lose some revenue by reducing the duty, instead of losing a valuable market altogether by sticking to its present policy.

Apart from export duty, the Central Government has forced many other burdens on the industry such as legislation to secure labour welfare at considerable expense, increased wages to workers, etc., and much of this has occurred since 1952. The State Governments, too, in their turn, have started levies of their own such as agricultural income-tax, carriage tax and octroi duty. The extension of Provident Fund schemes to workers is also expected. While no one can take exception to the provision of these and other amenities to workers considered essential in a Welfare State, it is necessary to have a sense of priority. It may be asked whether the Government is wise in rushing to place on the industry new burdens without caring much for its capacity to bear them. It is significant that these measures are usually thought of when the industry is in a seemingly prosperous state, as, for instance, during 1954, but actually brought into effect when the tide has turned against the industry. The moment the industry enters a spell of prosperity, the Government, like anybody else, appears to forget the long spells of adversity through which the industry has passed in the past.

The slump of 1955 has shown how unwise and dangerous it is for the Government to attempt to interfere with the established channels of marketing. In that year, Indian tea exports were 86 million lbs. below the exports during 1954. Much of this quantity represented reduction in exports to the United Kingdom, the largest consumer of tea in the world. One of the reasons for this reduction was the compulsory fixation by Government of a ceiling on the quantity of tea that could be consigned to London for auctions. The removal of the ceiling in February 1956 has, of course, helped increase exports. But now there is a proposal to extend State Trading to tea. No one seems to know its precise implications, but, if it involves any element of interference with the normal trade channels, it cannot but cause deep concern in the industry.

It is high time the Government took note of all the facts mentioned above and did two things. First, there should be no further demand by it on the industry in any shape or form, until the industry has been able to absorb the effects of the burdens so far placed on it. The cost of production has now reached a point not far away from the uneconomic danger zone for a beverage, such as tea, the popularity of which has always depended upon its cheapness to the consumer. It is needless to add that, while prices of tea are highly elastic, costs are inelastic. Secondly, the Government should refrain from making any announcements, which, for the time being at least, would act as a deferrent or a disincentive to investment in tea industry. This is an important consideration, having regard to the fact that large sums of money have to be invested for replacement of old bushes and bringing new areas under tea.

Lastly comes the fourth party, the consumer. It is good, indeed, that the consumer has been recognised as one interested in the affairs of the industry. For it is not the Government, nor the producer nor even the labour that stands to suffer most by the changing fortunes of the industry. It is the consumer who has to take the ultimate burden of the errors of omission and commission committed by the other three parties. It is in his interest to see that the price of tea is not unduly inflated by the unreasonable demands of the other parties.

LIFE INSURANCE—IN RETROSPECT

A DEPLORABLE effect of nationalisation of an industry is that the men who are most competent to speak in defence of the industry are often constrained to observe a scrupulous silence on the merits of the measure and compelled to spend all their time and energy on obtaining the most advantageous terms of compensation. The chief aim then becomes what best one could make of a bad bargain. The fundamental issues such as whether nationalisation was the right step are never raised for fear that the battle for compensation might be lost. The spirit of inquiry thus gets stifled. There is a fatalistic tendency to accept the *fait accompli*, to resign to the inevitable. This happened in the case of nationalisation of civil aviation in India. This has nearly happened in life insurance. It augurs ill for the future of democracy in this country that the men who are competent to speak on these subjects refrain from expressing their views. It is truly said that, in a democracy, "they are slaves who dare not be in the right with two or three."

Fortunately, however, a few lone voices are still sometimes raised in protest against nationalisation of life insurance. Dr. B. C. Roy, W. Bengal's Chief Minister, went on record as saying that he frankly did not like the measure. More recently, Dr. John Matthai, who, though not a full-fledged politician, cannot be accused of partisan views, declared that he had read all the arguments in favour of nationalisation of insurance but remained unconvinced. This week, two men connected with the industry—Mr. B. M. Setalvad and Mr. A. D. Shroff—returned to the same theme. Addressing the annual meeting of the Insurance Association of India General Insurance Council, Mr. Setalvad said that, if the interest of the policyholder was all that the Government was seeking to protect through nationalisation of insurance, there were ample safeguards in the Insurance Act and an adequate machinery in the shape of the Department of Insurance; if necessary, the Government could have armed itself with additional powers. If, on the other hand, the Government's intention was to harness insurance funds to the Plan effort, the Government could have adopted the simple expedient of legislating for the investment of entire life funds (except loans to policyholders) in Government securities.

No apology is, of course, needed when the chairman of a leading insurance office, like the New India, decides to go over the painfully trodden track of nationalisation of life insurance and restate the position of private insurers. From a narrow angle, it would, as stated at the outset, appear superfluous, since no purpose is gained by opposing an established fact. But the whole controversy must be looked at from the broader national angle. It is not a mere question of State acquisition of an isolated industry. For it appeared several times during the course of the Parliamentary debate on this subject that the disappearance of the entire private sector was certain, and, what was more, that it was imminent. Allegations, founded as well as unfounded, were made. And, despite the heroic efforts of two or three members of Parliament, the case of private insurance did not receive the hearing it deserved. Lest this case should go entirely by default, it was, perhaps, in the national interest that Mr. Shroff decided to plead it.

Mr. Shroff listed the grounds on which nationalisation of life insurance has been sought to be justified. Briefly, these are: (1) Insurance is basic to the economy and should be run by the State; (2) nationalisation of insurance will help augment the resources of the State for implementing the Plan; (3) management expenditure could be reduced through nationalisation; (4) there are malpractices and cut-throat competition in insurance; (5) there is an unhealthy concentration of economic and financial power in a few hands. Mr. Shroff then proceeded to examine these arguments in a thoroughgoing manner, and his examination would leave no one in any doubt about the essentially irrational nature of these arguments. Referring to the first argument, he admitted that insurance was basic to the economy. Only, he rightly contended that this did not necessarily mean that insurance was best run by the State. In a number of countries, like the U.K., Germany, Sweden and Norway, as he said, very thorough investigations have led to the conclusion that it is neither desirable nor practicable to nationalise life insurance. Mr. Shroff might as well have added that if insurance was basic to the economy, more basic to the economy were food and cloth and yet nobody except communists had suggested that farming and textile industry should be run as State enterprises.

The argument about insurance as a source of funds for the State Exchequer has been demolished often enough. Indeed, even the Government spokesmen have admitted that nationalisation of life insurance cannot bring any large revenue to the State. Instead of nationalising the industry, the Government could have taken steps to re-vitalise the industry, so that it could expand and divert a larger flow of funds to the public sector. In this connection, Mr. Shroff suggested that the Government could have set annual targets to each individual insurer, established rigid control in order to bring about competitive standards, set up co-operative training institutions, and instituted machinery for joint publicity campaigns. Surely, if these measures had been adopted, it would not have been difficult, as he said, to reach the target of a new life business of Rs. 1,000 crores in a few years' time.

On management expenses, Mr. Shroff averred that the industry itself was not unaware of the fact that they were on the high side. But what the insurers were aware of and the Government ignored was that insurance in India is still in the early stages of development; the average sum assured per policy in advanced countries is generally about 3 to 3½ times that in India, and life insurance in India is more akin to industrial life assurance in advanced countries. If allowance were made for these factors, he said, it would be realised that the "differential in the procuration and management costs of the life assurance companies in India *vis-a-vis* of those in the more advanced countries was not too disproportionate." The fact is that the Government itself now realises that management expenses cannot be brought down overnight.

Alluding to the argument about malpractices in insurance, Mr. Shroff recalled that the position in the U.S. in the early years of this century was very bad and that it was only after it was "ruthlessly regulated and controlled" that the industry became the most dynamic institution of its kind in the world. He complained that the Government did not take even the elementary precaution of ensuring the physical safety of securities which could have been arranged through insistence on every insurer keeping the investments in a safe custody account with a recognised bank. Further, he rightly contended that most of the troubles in India arose because the "enforcement of insurance law was most ineffective, unimaginative, tardy and loose." No law was, in fact so grossly under-administered, as the Insurance Law.

Finally, much play has been made of the fact that private insurance means concentration of economic power in a few hands. Apparently, this refers to the investment of funds. But there were laws regulating such investments, so that the freedom was not an entirely unfettered one. Apart from this consideration, is there no concentration of economic power in a few hands under the Corporation set-up? There will soon be, as Mr. Shroff pointed out, a "greater concentration of power in the hands of a much smaller number than could be the case under well-regulated and well-controlled life assurance business, run by joint-stock and mutual companies." Above all, it must be remembered that, while the possibility of mischief arising from any concentration of power in private hands could be prevented through appropriate State action, much unmitigated evil could flow from nationalisation of an industry which, in essence, means concentration of economic power in hands which also wield political power.

All this defence is, of course, like a pathetically convincing posthumous plea of innocence left behind by a convict sent to the gallows. But its only justification lies in the consideration that it is never too late to expose a case of miscarriage of justice. In insurance, there was such miscarriage. Without in any way belittling the importance of making nationalised insurance a success, we would urge the Government to appreciate the moral of this measure. It is that a great deal of harm can be caused by condemning an industry to nationalisation without giving it an adequate hearing. Indeed, such hearing and consultation would be conducive to the very success of nationalisation. As it is, though life insurance has been nationalised, many vital questions still remain unsettled. Neither the future of the field force nor the regionalisation of policies, nor the integration of companies, not even the elementary question of the location of the head office of the Corporation has been settled, yet

BULLS IN EQUITIES DISHEARTENED

Killicks To Expand—Further Thought On Automatic Looms—Mr. Shroff's Plea

THURSDAY, 5 P.M.

THERE has been an unexpected collapse of equities after the close of the market today. For the past few days, the share market has been gradually moving down in an irregular fashion, the closing rates today being about the lowest for the week. But the break in values in kerb trading has taken many by surprise. At the time of writing, Indian Irons have gone down to Rs. 35-13, Tata Ordinaries to Rs. 197, and Bombay Dyeings to Rs. 630, from the official closing rates of Rs. 36-9, Rs. 199-12 and Rs. 645-10, respectively. Over the week, the latest kerb rates reveal a loss of Rs. 2 in Indian Irons, Rs. 7-4 in Tata Ordinaries and Rs. 23-12 in Bombay Dyeings. No convincing explanation is available for this sudden drop in prices. It is possible that the tired bulls may have decided to "get out" of the market and the bears are taking full advantage of this defection in the bull ranks. Another reason may be that, with the fortnightly settlement falling due tomorrow and with conditions quite in their favour, the bears decided to create panic, so that the account may end to their credit. As usual on such occasions, all sorts of rumours have been set afloat. One of them is that a rise in the British Bank rate is imminent and, if this were to happen, interest rates in India, too, would go up. Another rumour is that a leading operator, who has been a bull in Steels, Irons and Dyeings in recent weeks, has been liquidating his position, as he intends to go abroad on a long holiday in a week's time. A third rumour has it that this operator has suddenly withdrawn from the market, having scented that a group of prominent speculators in Calcutta has planned a concerted attempt at squeezing him in Indian Irons by selling short heavily. His exit from the scene, it is further stated, has demoralised the weaker bulls, especially as they know that the chief of their ranks will not be in station for several weeks.

MARKET GOSSIP

It is not easy to ascertain the veracity of these rumours, but the fact remains that there has been no change in the British Bank rate today. It may also be added that there is very strong opposition in Britain to any further increase in Bank rate. The hard money school is on the defensive and the Government itself has begun to resort to physical controls, as we shall show presently.

Whether there is any truth or not in the aforesaid rumours, it is obvious that the speculative position built up in recent months is getting adjusted. At some stage or other, the bulls must take their profit or cut their loss, if any. And, when they do so, their opposite numbers are bound to exploit the situation. This is a regular feature of trading in all futures markets; the stock exchange is no exception to it. Once this squaring up activity is over, equities will stabilise in the neighbourhood of their intrinsic value. The present fall in values may, therefore, prove to be a passing phase.

* * * *

There has been no change in the assumptions on which equities rose after the 1956-57 budget. Nor have there been any new developments to neutralise the earlier ones, regarded as favourable to the private sector. It is obvious that the Government is as anxious as it was a few weeks ago to help the private sector within the confines of its socialist policy. Many leading business houses are extremely busy with their projects for expanding their existing industrial undertakings and for starting new ones. The private sector is very keen on playing its part in the execution of the second Plan, despite the serious limitations imposed on it by the Government's economic policy. It fully realises that to harp upon difficulties all the time and to remain idle is to invite early extinction and pave the way for a monolithic State.

Some instances of what the leading business houses are doing to further industrialisation were given in these columns three weeks ago. The latest instance comes from the Killick Industries Ltd., another leading business house of Bombay, always on the look out for avenues of expansion. It will be recalled that this house started manufacture of engineers' steel files only last year in the congenial surroundings of Chandivli Hills near Powai lake. This project has been faring better than was hoped by the promoters. Being thus encouraged by the success of its debut in the field of light engineering products, the Company is said to have firm plans to add several new lines of manufacture which may result in a full-fledged industrial estate coming into existence in Chandivli area. We learn that the Government has just sanctioned a plant to make nuts and bolts, as well as fish bolts and dogspikes, which are badly needed by the Indian railways. The Company has other plans, too, in mind. Refractories, rayon and paper are only a few of the other heavier projects which are under consideration. The refractory project, we are told, has gone beyond the blut-print stage.

* * * *

A significant development has taken place in the fight against inflation in West European countries. Hitherto, they were not willing to resort to physical controls, in the belief that fiscal and monetary measures will suffice to restore economic equilibrium. But now they are beginning to have second thoughts. Although these traditional measures have had some effect, the results have been slow and not entirely satisfactory. Inflation is still rife, affecting the external values of currencies such as the pound sterling and the French franc. There is, of course, no pressure yet on the D.Mark, but West Germany, too, is not free from the malady of inflation. The realisation that any further increase in interest rates might lead to fresh problems of a different nature is growing in strength. One of these problems is export of capital goods to underdeveloped countries like India. The monopoly of the West in these goods has been successfully broken by Russia and Eastern Europe. These countries are now in a position to supply plant and machinery, as well as technical know-how at competitive rates on liberal long-term credits carrying low rates of interest. The growing competition from the communist world has already begun to tell on Western Europe, as is evident from the reported speech of Sir Anthony Eden to the Commonwealth Prime Ministers' Conference now in session in London. In view of this, it is most unlikely that Britain will raise the Bank rate any further.

This inference is strengthened by Britain's move to freeze prices in an attempt to break the vicious spiral of wages and prices. The first step in this direction has already been taken. The National Coal Board has decided not to raise the pithead coal prices during the next 12 months, "unless something quite unexpected or exceptional happens." This decision was taken shortly after an increase in coal prices a few days ago. The Central Electricity Authority also has decided not to raise the tariffs, in spite of the increase in coal prices. The private sector, which has commended these decisions, is expected to follow suit. The most important question that remains to be answered is whether workers, too, will fall in line and abandon their demands for increases in their wages. Available indications of their attitude are not optimistic. That probably is the reason why the pound sterling is weak again. This week, it has dropped nearly half a cent in terms of U.S. dollars and come to be quoted under the parity rate of $2.80. Since the Conservative Government is opposed to devaluation of the £ as a matter of policy, there is no cause for the fear that it would resort to that solution. It would rather prefer to face a showdown with labour, in case the latter refuses to toe the line and insists upon protecting its bloated standard of living. Meanwhile, if the external pressure on sterling were to persist, what else could the Government do but extend the physical controls to other spheres of economic activity as well? It may, for instance, reintroduce restrictions on imports, a step which it has all along been valiantly trying to avoid.

While Britain has thus made a small beginning in the use of physical controls, France is resorting to it on a large scale. Even though its Bank rate at 3 per cent. is the lowest in Western Europe and can easily stand a rise, it is not using this weapon. Nor has it taken any material steps to restrict credit facilities. But it has given priority to freezing of price levels and profit margins, besides increasing the taxes.

* * * *

Further thought on the Government's new cotton textile policy confirms our earlier impression that it is a hotch-potch business and that the programme for installing 14,600 automatic looms may need some revision if the mill industry is to implement it successfully, as well as expeditiously. The Minister for Industries, Mr. Nityananda Kanungo, has now met the millowners at Bombay, Ahmedabad, Saurashtra and Calcutta, and ascertained their views. Mr. T. T. Krishnamachari will soon have a chat with the South Indian millowners. The Ministers will then pool their impressions and announce the details of the scheme. Two important points that emerge from the Government's new policy and will have to be satisfactorily dealt with may be stated as follows:

(1) The Government's intention seems to be that, out of the proposed 14,600 automatic looms, 12,500 should be allotted to mills on the basis of their actual performance in the field of cloth exports. The balance of 2,100 looms is to be distributed among mills which are not eligible on this basis but have other merits. Obviously, the Government will use its discretion here.

This proposal means that a mill wanting to install automatic looms will have to strive not only to maintain its present level of exports but also to export the cloth that will be produced on the automatic looms. In other words, this mill will have to modernise its existing equipment and take such other steps as are necessary to improve the quality of cloth produced on the ordinary looms. A large amount of capital expenditure will thus have to be undertaken in the near future. It remains to be seen how many mills are ready to avail themselves of this offer.

The chances of an adequate and prompt response from the industry to the Government's plan for the introduction of automatic looms will be better if the string (referred to above) attached to it is removed. Moreover, since no one could predict what would be the state of affairs in the world trade in cotton textiles, there is no practical value in this string. If conditions are favourable for export, almost every mill will automatically try to ship as much cloth as possible, to foreign markets. If conditions are not favourable, no amount of coercion by the Government is going to help.

(2) It seems that Government will allow imports of automatic looms only on the condition that, for every four foreign looms, a mill should buy one Indian-made loom. There is only one factory—Texmaco (Gwalior) Ltd.—in India that can make automatic looms. While no millowner is opposed in principle to the necessity for utilising indigenous capacity, there are some who feel that, in actual practice, this restriction of 4:1 will raise several difficulties. It is pointed out, for instance, that it will not be quite economical to have two different types of automatic looms. For they will have to maintain different sets of spares and parts. They feel that some other way should be found for ensuring full utilisation of the automatic looms made in India. One suggestion made is that those mills which are prepared to go in for Texmaco looms should be exempted from the proposed penal excise levy, if the cloth made thereon is used for domestic consumption.

* * * *

Seldom does Mr. K. R. P. Shroff, President of the Bombay Stock Exchange, disappoint his listeners. At the annual meeting of the Exchange, held this week, he made a speech which, like all other speeches he has made before, was both a clear and analytical survey and a stimulating review of current economic trends. The economic picture he painted was bright. But he also warned that it could easily turn dark, if the Government followed unrealistic policies. He was frankly alarmed by the "spate of loose talk and threats of expropriation." He hoped that the country would follow the late Lord Keynes' advice that "the important thing for the Government is not to do things which individuals are doing already, and to do them a little better or a little worse, but to do those things which are not done at all." These are wise words. Will the Government ever adopt this advice as its motto? The question is not whether it should but whether it will.

Why does Mr. Shroff consider the economic picture bright? Briefly, he attributed it to "steady agricultural output, expanding industrial production, a comfortable balance of payments position and a stable price level." These conditions are reflected in the accounts of joint-stock companies which reported better working results, well-filled order books, larger profits and increased dividends. He added: "The chain reaction of these forces stretched to the stock market in an unbroken run, and, touched off by the dynamic impulse of an ample money supply, equity prices blazed into a boom."

India, Mr. Shroff said in effect, was well set on the road to economic prosperity. "The stock market," he averred, "has its base in an economy which is fundamentally sound and a part of the rise in prices witnessed during the year represents the growth that normally takes place in an expanding system, planned for rapid development." He derived encouragement from the fact that "capital formation has visibly improved, the productive capacity has been enlarged and economic and financial stability has been maintained." And it is at this stage that Mr. Shroff felt it necessary to utter a warning. The picture, bright as it is, could be easily spoilt through "the pursuit of ideological will-o'-the-wisps." He pointed out that an outlay of Rs. 2,400 crores in the private sector and Government borrowing of Rs. 700 crores, contemplated in the second Plan, implied a big draft on the nation's financial resources. He added:

"In order to evoke the maximum possible investment support, it is necessary that those who save and invest should be assured of a measure of certainty, security and stability. Unfortunately, investors are being demoralised and investment confidence is being ruined by the spate of loose talk and the threats of expropriation in one form or another which have been emanating in an apparently endless stream from persons holding responsible positions and from those who are known to influence the mind of the authorities. These shock tactics have unsettled the stock markets time and again and sapped their inherent vitality. It does not have to be stressed that the policies pursued by Government in relation to financial matters, more particularly in regard to taxation and nationalisation, will be the most important single factor on which will depend the fulfilment of the Plan. Without broadbased public and investment support and healthy stock exchanges, the uninterrupted flow of corporate and individual savings and investment, so vital for development, cannot be maintained. The constant war of nerves must therefore cease if grievous damage to the capital market is to be avoided and investors are to play the important part assigned to them in the second Five-year Plan."

Mr. Shroff emphasised that "wealth must be increased before it is taxed and to invert the sequence is to set in motion a cycle of contraction in which consumption, production, employment and wealth diminish in turn." He subjected some of the Government's fiscal and other measures to a critical scrutiny. He felt that the taxation on income had already reached "expropriatory levels." He said that it was difficult to visualise what repercussions the denudation of capital, implied in the proposed annual tax on wealth, will ultimately have on the private sector. He declared:

"If resources are to be mobilised anyhow for meeting the requirements of the State sector and the private sector is to be treated as a residuary legatee, the question is whether private enterprise will be able to fulfil the target investment of Rs. 2,400 crores that has been allotted to it under the second Five-year Plan. The feeling cannot be escaped that the expansion of the State sector is being attempted irrespective of the cost in the pursuit of ideological considerations which bear little relation to facts or experience and that tax policy is being distorted into an instrument of power politics instead of being employed as one of economic development."

In the course of his speech, Mr. Shroff referred to a few specific issues such as the tax on bonus shares and the Government's insistence, in certain cases, on the issue of new shares only at a premium. He rightly pointed out that the tax on bonus issues against the unanimous recommendation of

(Continued on next page)

REACTION IN SHARES

INDIAN IRONS DESERTED

(From Our Own Correspondents)

BOMBAY, 28*th June*

THE week under review witnessed a reactionary trend on the Stock Exchange and equities failed to maintain the cheerful conditions noted in the previous week. Though there were no adverse factors to affect the sentiment of operators, they were not inclined to follow the rise noted last week. On the other hand, there was widespread liquidation under the leadership of steel shares. The news that the Tata Iron and Steel Company, Ltd. had finalised the terms of the loan agreement with the World Bank for financing its Rs. 75-crore expansion programme and that a formal agreement would be signed in a few days did not bring cheer to the market, so also the report that the output of T.I.S.C.O. for 1955-56 was the highest for any year in the post-war period. Under the terms of the agreement, the World Bank will give a loan of $75 million, or over Rs. 35 crores, to the Company, carrying interest at 4¾ per cent. per annum. The loan is repayable in eleven equal instalments, the first one falling due in 1959-60 on the expiry of three years after the signing of the agreement.

In the steel section, Tata Ordinaries retreated from Rs. 204-4 to Rs. 202 early in the week. After a recovery to Rs. 204-8, they gave way again to Rs. 199-12, thus nearly wiping out the entire gain made in the previous week. The Rights were Re. 1-4 lower at Rs. 64. Indian Irons dropped from Rs. 37-14 to Rs. 37-3½ before regaining to Rs. 37-12. The improvement proved short-lived, as the shares slipped back to Rs. 36-9, the lowest level since 15th May last.

Leading counters in the textile section succumbed to selling pressure, but losses over the week were moderate. Bombay Dyeings declined early in the week from Rs. 654-6 to Rs. 646-14. After a sudden spurt to Rs. 655, they receded to Rs. 641-14. Centurys fell to Rs. 567, after an early advance from Rs. 569 to Rs. 575-8. Kohinoors also displayed a firm tone for some time, moving up from Rs. 373-8 to Rs. 379, but towards the close they were marked down to Rs. 371-8. Central Indias, however, gathered over the week Rs. 3-8 to Rs. 156. Finlays were maintained on balance at Rs. 340, while Gokaks shed Re. 1-8 to Rs. 233-8. Indu Ordinaries showed no change at Rs. 13-12. Morarjees gained Rs. 5 to Rs. 251-4, while New Greats were held at Rs. 254. Sholapoors receded from Rs. 1,925 to Rs. 1,750. Shree Niwas changed hands Rs. 3-2 lower at Rs. 213-12. Simplex were fairly steady at Rs. 218-4, following the publication of the Directors' report for the year ended 31st March 1956. The report not only showed excellent results for the past year but also disclosed that the new machinery had been installed and that permission had been obtained for the installation of an additional 15,000 spindles. Standards gathered Rs. 2 to Rs. 442, but Svadeshis were lower by Rs. 2 at Rs. 251. Swans declined by Rs. 3-12, while Tata Mills were held at Rs. 57. Coorla Spinnings came into the limelight with a rise of Rs. 13-2 to Rs. 178-2.

In the banking section, a rise of Rs. 2-8 to Rs. 160-12 in the quotation for Bank of Indias was the main feature. Punjab Nationals reacted from Rs. 59 to Rs. 57-4. Barodas were steady at Rs. 97-8, while Centrals fell by Re. 1 to Rs. 51 and their New shares by As. 8 to Rs. 52-8. United Commercials were a shade quiet at Rs. 51-8, while Unions were slightly better at Rs. 6-11½.

Selective enquiries were in evidence in the insurance section. New Indias, after declining from Rs. 46-12 to Rs. 45-12, recouped to Rs. 46-8. Indian Mercantiles were again up by Re. 1 to Rs. 44. Universals advanced sharply by Rs. 4 to Rs. 11. Vulcans were bid As. 12 higher at Rs. 15.

Electricity shares attracted selling pressure and prices gave way further on lack of support. Ahmedabad Electrics eased by As. 5 to Rs. 96-4. Bombay Suburbans were done As. 15 lower at Rs. 111-14. Surat Electrics reacted sharply from Rs. 121-4 to Rs. 118-12. Tata Hydros were quiet at Rs. 128-8. Tata Powers receded by Rs. 2-8 to Rs. 1,270 and Andhra Valleys by Rs. 17-8 to Rs. 1,180.

The miscellaneous section followed the general pattern of the market. In the sugar section, Belapurs shed Rs. 2-8 to Rs. 235-8, while Bhopals were bid Re. 1 higher at Rs. 15-4. Phaltans were dull at Rs. 155-8 and Walchandnagars at Rs. 255. Among cements, A.C.C. dipped from Rs. 195 to Rs. 189-12, before closing at Rs. 191. Digvijays were, however, better on balance by Re. 1 at Rs. 194. In the engineering and mining group, Alcocks declined by Rs. 7-8 to Rs. 347-8. Tata Locomotives were pushed down from Rs. 150 to Rs. 145-8. Premier Constructions gained Re. 1 to Rs. 191-8 on interested buying. Larsen and Toubros were done at Rs. 15-6 *ex-div.*, as against Rs. 16-5 *cum-div.* last week. Shivrajpurs fell sharply by Rs. 11-8 to Rs. 96-8, on reports that the Company's proposal to issue bonus shares had been shelved in view of the heavy bonus tax involved. B.B. Petrols were a shade quiet at Rs. 4-5. Indian Coppers were marked down by As. 4 to Rs. 7-2.

Shipping shares were steady. Scindias moved within a narrow range and closed an anna higher at Rs. 18-13. Great Easterns spurted from Rs. 18-2 to Rs. 19-4. India Steamships were, however, quiet at Rs. 9-2. In the transport group, Premier Automobiles were unchanged at Rs. 93, while Hindustan Motors shaded off from Rs. 10-4 to Rs. 9-12. Among miscellaneous industrials, Bombay-Burmahs were erratic, moving between Rs. 657-8 and Rs. 643-2, before closing Rs. 7-2 lower at Rs. 645-10. B.I.Cs were quiet at Rs. 10-13. Killick Industries gained Re. 1-8 to Rs. 161-8. National Rayons were fractionally higher at Rs. 232-12. Tata Chemicals shed As. 3 to Rs. 13-13, while Dhrangadhras were again a firm feature with a further rise of Re. 1 to Rs. 128. Tata Oils were marked up by As. 8 to Rs. 56-8 and Wimcos by Re. 1-4 to Rs. 186-4.

* * * *

Calcutta Stock Exchange

CALCUTTA, 27*th June*

The Calcutta Stock Exchange ruled distinctly easy during the week under review, in contrast with the lively note presented last week. Besides absence of fresh incentives, persistent uncertainty about coal prices was interpreted bearishly. The re-sealing of 2½ per cent. looms also acted as a damper. Operators were, therefore, extremely reluctant to extend their commitments. Some of them were even trying to unload their holdings. Consequently, equity values tended to move downwards.

Jute shares were depressed, thanks to selling pressure. Orients slumped by Rs. 23-8 to Rs. 135-8. Northbrooks dropped Re. 1-6 to Rs. 22-10. Nationals fell by a rupee to Rs. 23-14. Howrahs receded by As. 14 to Rs. 22-8. New Centrals declined by As. 7 to Rs. 17-8. Hastings, however, met with special enquiries and rallied Rs. 10 to Rs. 124.

Coal shares were also neglected. Among the former, South Karanpuras declined by As. 3 to Rs. 9-12. Talcahrs and Western Bengals lost As. 2 each to Rs. 3-5 and Rs. 7-2, respectively. New Bansdeopurs were quiet at Rs. 10.

Among cotton shares, Bowreahs shed Rs. 3 to Rs. 165. Kesorams eased by Re. 1-1 to Rs. 18-15. New Victorias were dull at Rs. 2-11.

Sellers dominated the trading in the engineering section and pushed down the prices of most of the scrips. Britannia new shares climbed down by Rs. 2-11 to Rs. 16-4. Textile Machinerys dropped Re. 1-7 to Rs. 23-2. Jessop & Cos. slipped by Re. 1-1 to Rs. 34-7. Indian Irons gave way from Rs. 38-2 to Rs. 37-3. Braithwaites shed As. 8 to Rs. 28 and Kumardhubis As. 3 to Rs. 10-7.

Mining shares lacked support. Karanpura Developments and Orissa Minerals receded by As. 8 each, the former to Rs. 24-12 and the latter to Rs. 27-5. Indian Coppers eased by As. 4 to Rs. 7-3. Burma Mines were unchanged at Rs. 4-1.

In the miscellaneous section, Indian Cables declined by As. 8 to Rs. 34-2. National Carbons suffered a similar loss to Rs. 26-12. At Rs. 10-13, British India Corporations were lower by Rs. 7. Indo-Burmas eased by As. 4 to Rs. 41-4. B.B. Petrols and India Steamships decreased by As. 3 each to Rs. 4-4 and Rs. 9-2, respectively. Calcutta Electrics shed an anna to Rs. 13-7.

Tea shares proved an exception to the general trend and were firm. The firmness was aided by the entry of Russia in the Indian tea market and upward trend in prices. Buying support ensued and quotations moved up. Gungarams spurted by Rs. 7 to Rs. 237. Tezpores strengthened by Rs. 2-12 to Rs. 28-8 and Rangamatees by Rs. 2-8 to Rs. 103-8. Dauracheras hardened by Rs. 2 to Rs. 13. Hattikhiras picked up Re. 1-12 to Rs. 23. New Samanbags Re. 1-8 to Rs. 25 and Hantaparas Re. 1 to Rs. 241. Ranicherras gathered As. 11 to Rs. 23-9. Methonis were higher by As. 5 at Rs. 26-4. Baghmaris rose by As. 4 to Rs. 29-10.

Madras Stock Exchange

MADRAS, 26*th June*

The general appearance of the Madras Stock Exchange was cheerful during the week under review. Buying enquiries were somewhat encouraging, reflecting the operators' note of optimism with regard to the outlook for industries. Textile shares continued to meet with good demand, on expectation of better corporate results, following the expansion of cloth production now allowed by the Government. Electric company shares were also favoured well. The planting section witnessed selective buying support. The undertone of the market was steady.

The dividend announcements made during the week under review are given below:

Company	*Year ended*	*Dividend* Per cent.
Manar Estates	31-3-1956	15 (15)
Pullangode Rubber ...	31-3-1956	15 (17½)
Mercara Rubbers	30-6-1956	7½i (15)
Gnanambikai Mills ...	31-12-1955	12 (10)
Travancore Cements ...	31-12-1955	14½* (6½)
Krishnarajendra Mills ...	31-3-1956	9f** (10)
Lakshmi Mills	31-3-1956	15f† (25)

Figures in brackets represent the total dividends paid last year.

i—Interim, f—final. *—Making a total of 6½ per cent. **—Making a total of 14 per cent. †—Making a total of 25 per cent.

There was, as already stated, good demand for textile shares. Coimbatore Pioneers rallied Rs. 7 to Rs. 307. Radhakrishnas advanced by Rs. 5 to Rs. 305, Buckinghams by Rs. 4 to Rs. 202 and Cannanores by Rs. 3 to Rs. 187 *cum-div.* Coimbatore Cottons strengthened by Rs. 2-8 to Rs. 370. Metturs hardened by a like amount to Rs. 535 *cum-div.* Radhakrishna 'B's and Rajapalayams registered a rise of Rs. 2 each to Rs. 152 and Rs. 155, respectively. Pankajas were higher by Re. 1-8 to Rs 84-8. Anglo-Frenchs gained a rupee to Rs. 100. Rajalakshmis were better at Rs. 174, as against Rs. 173. Ranga Vilas gathered As. 8 to Rs. 105-8, Jawahars As. 6 to Rs. 12 and Adonis As. 4 to Rs. 12-12.

In the planting section, rubber shares put on a cheerful note. Vaikundams strengthened by As. 10 to Rs. 29-4. Rajagiris picked up As. 4 to Rs. 25. Kailas improved by As. 3-6 to Rs. 6-4-6. Teekoys put on As 2 to Rs. 11-10. Cochin Malabars were firm at Rs. 9-7, Malankaras at Rs. 32-8, Midlands at Rs. 22 and Travancore Rubbers at Rs. 13-10. Tea shares were, however, neglected. Coonoor Teas and Devasholas both receded by a rupee to Rs. 28. Haileyburias declined by As. 4 to Rs. 28 *cum-div.* Highlands lost a similar sum to Rs. 19 *cum-div.* Talayar Teas eased by an anna to Rs. 13-8. Coffee shares also failed to evoke adequate support, despite good export prospects. Consolidated Coffees declined by As. 3 to Rs. 20-11 and Coffee Lands by As. 2 to Rs. 24-1. Blue Mountains were lower by an anna at Rs. 5-13-6. Amalgamated Coffees, however, received special support and climbed up by As. 12 to Rs. 12-4.

Among miscellaneous industrials, Textools provided the brightest spot, with their quotations advancing by Rs. 3-8 to Rs. 182-8. Binnys increased by a rupee to Rs. 187. Andhra Scientifics strengthened by As. 5 to Rs. 16-6 *ex-div.* and Andhra Cement 'B's by As. 5 to Rs. 16-6. Nundydroogs moved up by As. 4 to Rs. 7-2 and Champion Reefs by As. 2 to Rs. 4-9. Mysore Papers were done As. 4 higher at Rs. 17-14. But Rallis fell by Rs. 2 to Rs. 45-8 for want of support.

Among electricity shares, Mangalores were wanted As. 6 higher at Rs. 14-10. Kumbakonams gathered As. 4 to Rs. 12-12 *cum-div.* South Madras rose by a like amount to Rs. 12-9.

Sugar shares were distinctly easy. Indias receded by As. 6 to Rs. 17-8. Jeypores and Kirlampudis declined by As. 4 each to Rs. 17-12 and Rs. 27-0, respectively. E.I.D.s lost As. 2 to Rs. 29-6. Deccans eased by an anna to Rs. 10-9.

MARKET GOSSIP

(Concluded from previous page)

the contrary of the Taxation Enquiry Commission and the amendment of Section 2(6A) of the Income-tax Act, whereunder reserves, whether capitalised or not, are deemed to be dividend and taxed as such in the aggregate when returned to the shareholders on the liquidation of the company were "instances of deliberate taxation of capital in the corporate sector in callous disregard of the baneful effects they are bound to have on companies and shareholders who save and invest."

Referring to the Government's insistence, as in the case of the T.I.S.Co. and the A.C.C., on issue of new shares at a premium, he said:

"Once permission to raise a certain amount of capital is granted, it should not matter whether the new issue is made at a premium or at par. So far as the shareholders are concerned, since the issue is offered to them *pro rata*, their stake in the equity of the Company is in no way affected. Nor are there any adverse repercussions from the general point of view. The argument that an issue at par would seriously disable new companies from obtaining their capital requirements is mistaken and misconceived. Whether an existing company should be allowed to raise fresh capital or not is a question of policy to be decided in the larger context of national economic development. If new enterprises deserve a higher priority and investment funds are in short supply, consent to existing companies should not be given at all. But, once consent is given, it is a necessary assumption that a certain amount of capital would be diverted to such issues and it is futile to argue that an offer at par would make them more attractive. Is it suggested that new issues of capital by existing companies should not succeed? If not, since the reduction in the quantum of funds available for investment is the same, whether the issue is at a premium or at par, the difficulties in the way of new companies obtaining their capital requirements are not diminished if existing companies are compelled to offer their new shares at a premium; nor are the difficulties increased, if the offers are allowed to be made at par. On the other hand, shareholders of joint-stock companies are badly in need of protection against the current ideological bias, the imposition of predatory taxes and arbitrary labour awards, the unfair charges of profiteering levelled at them and the expropriatory terms of compensation offered when their concerns are nationalised. In view of these developments, it is more than ever necessary that the customary camouflage of reserves in share premium and other accounts should be done away with and the paid-up capital of companies brought in line with their actual block. This is the only way to ensure that the size and magnitude of the investors' real stake in the business is seen at a glance from the balance-sheets and the profits earned by companies and the dividends distributed by them sensibly related to the shareholders' total capital. The insistence of the Capital Issues Control on existing companies issuing shares at a premium is, therefore, difficult to understand and no justification has been forthcoming for what can only be regarded as unwise and unnecessary interference."

There is nothing new in the foregoing observations of Mr. Shroff. They have been advanced with no effect by the Shareholders Association, of which he himself is the Chairman. That is not surprising, because his reasons are not sufficiently convincing. He has not stated, for instance, as to why, in the past, the very companies referred to by him issued new shares at a premium and why similar companies elsewhere in the world, the U.K. for instance, even now issue such shares at a premium. In any case, the fact that the new issues of the T.I.S.Co. and the A.C.C. are being avidly taken up by investors, despite the premia payable on them, as witness the keen demand for the "Rights" of the T.I.S.Co. and the spurt in the *ex*-Right quotations for steels and cements, does not bear out the contentions of the learned President of the Stock Exchange.

NEWS IN BRIEF

THE Government of India issued 310 licences for the expansion of existing industries in India during 1955-56, as against 226 in 1954-55.

The State-owned penicillin factory at Pimpri produced 1.13 million mega units during May 1956 —the highest figure since the factory went into production in August 1955.

India and Thailand have signed an air traffic agreement, which seeks to formalise the existing arrangement under which air traffic has been flowing between the two countries for some time now.

The Government of India will release rice worth Rs. 40 crores from its stocks during the next four or five months, with a view to keeping the price of this foodgrain at a reasonable level.

Talks between the Union Minister for Planning and the Minister for Industries, Pakistan, will be held in New Delhi at the end of July to settle procedural details regarding exchange of information on the position of floods in the two countries and measures to control them.

The Government of India has reduced the issue price of Burma rice from Rs. 18 to Rs. 16 per maund (net) in Bombay City, with effect from 21st June 1956. The revised price does not, of course, apply to cases where payments have already been made on or before 20th June 1956 and deals concluded.

In partial exchange for steel, Russia will take Indian tea. Russia has already entered the tea market in India with an initial deal of about 2 million lbs. to be put through by Indian traders in the Calcutta auctions. It is expected that a further 15 to 20 million lbs. will be purchased later.

The Union Ministry of Railways is considering the question of setting up a workshop for manufacturing railway coaches near Barauni, in Monghyr district. The power requirements of the workshop will be met from the Barauni thermal station. A survey of the area for selecting a suitable site will be undertaken shortly by a team of railway experts.

The Government of India has decided to set up a new service cadre of about 200 officers to run the growing number of industrial undertaking owned or managed by the State. In this connection, a scheme has been drawn up which provides for setting up a pool of senior officers, and recruitment will be similar to the special recruitment to the I.A.S. now proceeding.

The Government of West Bengal has undertaken a programme of intensive cultivation of jute, with a view to increasing its annual production by 8.28 lakh bales during the second Five-year Plan period. The annual yield of the crop during the first Plan period was 14.96 lakh bales. The present acreage under jute cultivation will not be increased, but the additional yield is expected to be achieved through improved methods of farming.

The West Bengal Government has finally decided to undertake legislation enabling it to acquire and develop land in slum areas for constructing buildings to provide displaced people with accommodation at a rent within their means. The project is estimated to cost Rs. 60 to Rs. 70 crores. The Central Government has agreed to advance 50 per cent. of the estimated expenditure as loan and 25 per cent. as subsidy. The remaining 25 per cent. will be subsidised by the State Government.

The Law Commission has taken up the task of the revision of the Land Acquisition Act and other Central Acts dealing with the acquisition and requisitioning of immovable property for public purposes. The Commission will make recommendations as to the lines on which these Acts should be amended, revised, consolidated or otherwise brought up-to-date. The Commission has invited individuals and organisations interested in the subject to send their views to the Under-Secretary, Law Commission (Statute Revision Section) by 31st August this year.

The Government of India has set up a new shipping corporation, called the Western Shipping Corporation (Private) Ltd., with an authorised capital of Rs. 10 crores and a paid-up capital of Rs. 5 crores. This Corporation, which was registered in Bombay on the 22nd inst., is a wholly Government-owned Corporation and will operate ships in certain Western runs. Mr. Nagendra Singh, Director-General of Shipping, will be the Chairman and Managing Director of the Corporation, in addition to his present duties.

The Government of India has made adequate provision to meet the transport needs of steel plants, according to the Union Minister for Transport. The arrangements include extension of berthing facilities at Calcutta, estimated to cost Rs. 13 crores, and speedier movement of heavy machinery for use in steel plants. The Government has also taken steps to speed up movement of coal to South India through Vijayawada and measures for doubling the line between Vijayawada and Madras. Besides, construction of certain new routes and cross stations has also been undertaken.

By a notification published in the *Gazette of India (Extraordinary)* on 26th June 1956 the Life Insurance Corporation Act will come into force on 1st July 1956. The effect of this will be to enable the Government and companies concerned to take certain preliminary action without waiting for the Corporation itself to come into being. In terms of section 2 of the Act, the Corporation will be established only on the "Appointed Day" which will be notified separately later. It is hoped to be able to establish the Corporation some time in August or in September.

The Government of India has decided to introduce State trading in cement and fix a uniform selling price for it with effect from 1st July 1956. With effect from that date, producers of cement will have to sell production and stocks as on that date to the State Trading Corporation of India (Private) Ltd. The producers will be paid the fair prices on an f.o.r. ex-works basis; the fair prices will be the prices which have already been determined by Government in respect of various producers. The uniform price at which the Corporation will sell cement will be Rs. 102-8 per ton.

An official Indian delegation led by Mr. S. Bhoothalingam, Secretary, Ministry of Iron and Steel, left for Europe on the 24th inst. to settle contracts for steel plants. The delegation will first visit Germany to finalise contracts to be entered into with a number of German firms which have offered to supply the various sections of the steel plant and rolling mills in the Rourkela Project. It will then leave for London to settle the details of the agreement with the British Steel Consortium for the construction of the third plant at Durgapur. It will also visit some of the European countries to conduct negotiations with leading firms to secure technical collaboration and specialised equipment for the manufacture of refractories and special steels.

The Tata Iron and Steel Company's Rs. 75-crore project to expand the capacity of its steel plant to two million tons of steel per year, will receive the help of American engineers, over 400 of whom have already arrived in Jamshedpur. The construction of the project is progressing satisfactorily and the expanded plant would start production from June 1958. Out of the total cost of Rs. 75 crores, Rs. 35 to Rs. 40 crores will be spent to procure equipment from abroad, for which world tenders have been invited. Equipment and machinery worth Rs. 17 to Rs. 20 crores have been purchased so far, mainly from West Germany and the U.S. The orders are being distributed among a number of countries, including Britain.

The Government of India has fixed the packing charges of cement for the quarter commencing from 1st July 1956, at Rs. 13-3 per ton. The price has been fixed in accordance with the announcement made on 27th March 1954, that packing charges for cement would be fixed every quarter on the basis of the average of the maximum and minimum market price for packing material during each week of the immediately preceding nine months *plus* Re. 1-4 per ton to cover incidental charges. On this basis, packing charges for the current quarter were fixed at Rs. 13-4 per ton. These charges are applicable to cement packed in new bags only. As for cement packed in old bags, the charges will be a matter for settlement between the buyer and the seller subject to the maximum indicated above.

The two-day conference of State Ministers for Co-operation, convened by the Union Government, will be held at Mussoorie on 1st July. The Conference will discuss matters pertaining to the setting up of State Warehousing Corporations and the selection of the centre for the Central Warehousing Corporation. The Conference will also discuss policy questions arising out of the implementation of the programme for co-operative development during the second Five-year Plan period. The programme for organising more than 10,000 large-sized credit societies by 1960-61, training of officials and non-officials for the Movement, organisation of co-operative marketing of agricultural produce and its linking up with credit—these are some of the other subjects which will be discussed at the Conference.

The Government of India has completed arrangements for importing nearly all the steel required during the current year from a large number of countries including Germany, the U.K., Belgium, France, Italy, Japan, China, the Soviet Union, Poland and Czechoslovakia. While the estimated indigenous production for 1956-57 is 1.2 million tons, the demand is expected to be 3 million tons. The Government of India has arranged to import, on a subsidy basis, about 1.8 million tons of steel, of which about 700,000 tons are expected on private account. Having thus provided for the current year, the Government is planning imports of steel for the next two or three years. A part of the requirements for the next two years has already been arranged and an official mission is now on tour in European countries for exploring additional sources of steel.

* * * *

From Abroad

An agreement has been reached among shipping lines operating between Malaya and Japan on a new rubber freight rate, thus ending the eighteen-month-old freight war. The shipping lines have unanimously agreed to stop offering low freight rates and rebates.

The U.S. Senate has approved of a Bill authorising the construction of an atom-powered merchant ship at an estimated cost of $37 million. The Bill, which has already been approved by the House of Representatives, will now be considered by a Joint House-Senate Committee.

Britain supplied stores worth about £11.5 million to the Government of India during the year ended 31st March 1956. The purchases, made through the India Store Department of the Indian High Commission, constituted a record so far and were higher than those from any other country in Europe during the year.

World production of automobiles hit a new high of 12,961,000 in 1955, according to the June issue of the United Nations monthly *Bulletin of Statistics*. Of these, passenger cars accounted for 10,782,300 and commercial vehicles for 2,179,400. The previous record year was 1950, when 10,128,000 automobiles were produced.

Exports of tea from Ceylon during the year ended 31st March 1956, amounted to 359.09 million lbs. as compared with 352.52 million lbs. in the previous year, despite a poor offtake by the U.K., Australia and New Zealand. This expansion was due to increased offtake by other countries, particularly Iran and Iraq, Africa and the U.S.A.

With effect from the 21st inst., export of raw jute from Pakistan has been freed from controls. The Central Government has granted general permission with effect from that date, until further orders, to any person or firm resident in or having a place of business in Pakistan and registered under the East Bengal Jute Dealers' Registration Act, 1949, to export raw jute to all countries in the world.

The use of commercial fertilisers has more than doubled since 1938, according to the U.N. Food and Agriculture Organisation (F.A.O.). In its latest yearbook, the F.A.O. says that world use (excluding U.S.S.R.) of nitrogenous fertilisers rose from 2.4 million tons in 1938 to 5.8 million tons in the year ended July 1955. Use of phosphoric acid and potash fertilisers also showed a considerable increase during the period.

West Germany topped the list of seventeen member-countries of the O.E.E.C. as the biggest steel producer in 1955 with an output of 21.3 million tons, as compared with 17.4 million tons in 1954. The U.K. produced 20.1 million tons, as against 18.8 million tons, and France (including the Saar) 15.8 million tons. The total output of the member-countries rose from 66.9 million tons in 1954 to 77.4 million tons, an increase of 15.7 per cent.

The Japanese shipping industry is stepping up efforts to rebuild its merchant fleet to the pre-war size. The Government is aiming at increasing the merchant fleet from the present tonnage of 3.2 million to 4.5 million gross tons in the next five years. In addition, the shipping companies propose to start construction of 40 ocean-going ships by the end of March 1957 and 40 more in the following twelve months.

Following the recommendations of a group of world recognised authorities on inland fisheries, the Food and Agriculture Organisation, Rome, will organise an international meeting of inland fisheries workers at Helsinki, Finland, from 24th to 26th July this year. The meeting will review the state and importance of inland fisheries in relation to world food economy. It will also make a critical examination of fisheries science as applied to inland fisheries and discuss the outstanding problems.

An exhibition of fishing equipment is being organised by the Government of Turkey to coincide with the Fourth Meeting of the F.A.O. sponsored by the General Fisheries Council for the Mediterranean, which will take place at Istanbul, Turkey, from 17th to 22nd September 1956. The exhibition of fishery equipment will take place from 15th to 22nd September 1956. The Turkish Foreign Trade Department will authorise the duty-free temporary import of equipment for display at the exhibition. Sales of equipment by exhibitors may be made within the limits of trade agreements between Turkey and the country of origin concerned.

A contract has been signed between the Government of Pakistan, on the one side, and the International Co-operation Administration and the International Engineering Company of San Francisco, on the other, providing for construction designs and operational plans for a $68-million dam to be built in East Pakistan. The I.C.A. has sanctioned $12.7 million for the project. The Pakistan Government has spent the equivalent of more than $10 million for equipment, excavation of the dam site and other preparations for construction and will also provide a further local currency equivalent to $20 million. An additional sum of $25 million in foreign exchange is required to complete this project.

PERSONAL

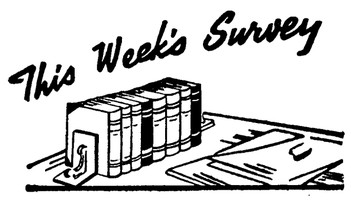
MR. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Ltd., returned from Zurich on the 26th inst.

Mr. Dharma Vira, I.C.S, formerly Indian Ambassador to Czechoslovakia, has been appointed Special Secretary to the Union Ministry of Rehabilitation.

Dr. S. R. Sen, Economic and Statistical Adviser, Union Ministry of Food and Agriculture, has been elected Chairman of the Committee on Commodity Problems of the F.A.O. of the United Nations.

Mr. J. D. Choksi, Vice-Chairman of the Tata Iron and Steel Company, Ltd., returned to Bombay on the 24th inst. after a two-month stay in the U.S. where he finalised the terms of the Company's loan agreement with the World Bank.

Messrs. N. K. Roy, S. R. Kalyanaraman and N. C. Deb, at present Directors in the Railway Board, Mr. K. Ramachandran, Chief Mechanical Engineer, Eastern Railway, and Mr. S. L. Viswanathan, Chief Engineer, Northern Railway, have been appointed Additional Members of the Railway Board.



AN URBAN SURVEY

IN recent years, there has been an impressive growth in urban population. Apart from the natural increase in population, there has also been a steady influx of people to the urban areas. The war created new opportunities for employment. Those who came to towns from their village homes preferred to stay in their new surroundings even after the earlier opportunities which first induced them to make the journey to the towns, ceased to be attractive. But the new spendthrift habits, acquired during the war-time conditions of illusory affluence, die hard. All this has created a new proletariat in the towns, hungry for houses, dissatisfied with their incomes and eager for jobs. Perhaps, the need to study this pattern is as urgent as that of the rural. But, while village life has recently been studied by various bodies, the urban living standards have not received the same attention. From this point of view, the socio-economic survey of the Hyderabad-Secunderabad area, conducted by the Indian Institute of Economics, is of special interest.

The Survey studied the living pattern of 32,173 persons in 4,899 households. The *per capita* income worked out to Rs. 22-8 per month, excluding pensions and unearned incomes of the sample studied. The number of employed persons was 8,070, daily workers constituting 12.8 per cent., salaried workers 52.1 per cent. and independent workers 35.1 per cent. The average monthly earnings of daily workers was Rs. 27.8, of salaried workers Rs. 95.7 and proprietory workers Rs. 107.2. In the employable age-group, the unemployed constituted 4.3 per cent. This is not perhaps a high figure in Indian conditions, especially considering that the duration of unemployment varied from only 9 to 12 months. It is, however, likely that the unemployed are a drag on the people who can ill afford to support them. The position is also bad from another point of view. Since 1948, there has been continuous retrenchment in several Government departments. The Survey found that "among big businesses, there is not much additional employment during the last five years." This is a sad commentary on the Government's commercial and industrial policy which makes it difficult for big business to expand sufficiently. If it could do that, it would help relieve unemployment in urban areas. No wonder the Survey finds that the "employment exchange touches but a fringe of the population." The exchange can hardly be expected to create jobs.

With earnings at such low levels and living costs continuing to rise, it is scarcely surprising that many households are in debt. The number of indebted persons was 2,759, the average liability being Rs. 2,187. The lenders in order of importance were: moneylenders (42.0 per cent.); commercial banks (20.9 per cent.); Government (17.3 per cent.); others—friends and relatives (16.7 per cent.), and co-operative societies (3.1 per cent.). In the urban as in rural, areas, moneylenders constitute the major source of finance and co-operatives the least important. It is some consolation that not all liabilities were unproductive, the proportion of productive liabilities being 60 per cent. of the total. The number of asset holders was 5,587, the average assets per asset holder being Rs. 10,083. But, if 47 "big cases" were excluded, the average asset would be no more than Rs. 5,988. It is not clear whether these assets represent unencumbered property.

Being an urban area, the Hyderabad-Secunderabad region shows a high literacy ratio. Among men, it was 75.4 per cent. and among women 46.7 per cent. It is, however, disturbing to be told that there are 1,013 households which have children of school-going age but do not send them to school. If schools have no attraction for the people, cinemas have. Among the households surveyed, 1,732 households go to cinemas, the average expenditure on this form of entertainment being Rs. 5.6 per month. Again, persons in 2,286 households frequent tea shops, the average expenditure per household being Rs. 6.8 per month. Thus, these two items absorb Rs. 12.4 per month. This is obviously a high figure, considering that the average income is still low. The Survey points out that the "expenditure on cinema shows and tea shops is disproportionately high and is at the expense of elementary needs of healthy food, clothing and shelter." Perhaps, this could be remedied only when the problem is tackled on both the economic and social fronts, through an increase in income and expansion of free and healthy cultural and recreational facilities.

PROTEST AGAINST TRADE UNION TYRANNY

A notable development in the U.K. is the formation of the "People's League" to fight what this organisation calls the trade union tyranny. This new body, which is rapidly acquiring a larger measure of support, owes its birth to certain disturbing trends in that country's labour movement. So long as the trade unions fought for their legitimate political and economic rights, the liberty-loving British were prepared not only to tolerate but even support the movement. Apparently, it is now felt that the trade unions have exceeded the well recognised democratic limits and are a danger to democracy and personal freedom. It is to this trend in political thought that the People's League owes its origin.

Some of the recent disturbing signs of the growing *malaise* in Britain's labour movement deserve notice. Without realising that the Press was the backbone of democracy, the press workers went on a totally unjustified strike. Again, in a certain factory, loyal workers were victimised by the trade union. In another factory, the union found fault with the workers who chose to work hard and improve their incomes. But what caused most exasperation to public opinion was the behaviour of trade unions in the Smithfield meat market. A certain butcher, Mr. Durrant by name, thought that he had the right to collect from Smithfield in his own van the meat he bought there. But he was told that, unless he employed the 'regular workers, the "bummarees," there would be no meat for him. Incensed by this affront to what he rightly considered his right, Mr. Durrant went to the court. The judge upheld his right. But the workers made it impossible for him to enjoy his right, for they threatened the wholesalers that, if they supplied meat to Mr. Durrant, they would go on strike. So the judgment was of no avail to Mr. Durrant.

These and other incidents of a similar nature have now served to awaken among the British a new spirit of inquiry. They are now asking whether the eight-million strong trade unions should hold the rest of the community (42 million) to ransom. They have now begun to feel that the trade unions are becoming a law unto themselves, a State within a State. They also realise that incessant wage demands, which the employers concede in order to avoid a strike, hit the consumers hard, bring down the value of money and damage the national economy. It is out of this heart-searching that the People's League has been born.

The objects of the League are:

(1) To organise public support for a policy which will afford protection and help for all citizens whose standard of life or freedom is threatened by the growing abuse of power by trades unions, or by administrative tribunals against whose decision there is no right of appeal to an independent judicial authority; (2) to uphold the liberty of the Press by sponsoring a printing undertaking free from trade union dictatorship; (3) to seek by all constitutional means to reform the law as it affects trades unions, in order that they cannot act as a State within a State or put themselves above the law; (4) to subject all expenditure of public money to rigorous and continuous scrutiny and to campaign for the progressive reduction of rates and taxes and the elimination of bureaucratic waste; and(5) to combine in protecting its members from any infringement of their traditional liberties from whatever source it may come.

In the near future, the League proposes to press Parliament to bring in legislation which will make the closed shop illegal, prevent unions from raising a political levy and outlaw strikes unless more than 50 per cent. of the membership of a union vote in favour of a strike in a secret ballot held by an independent returning officer and make the registration of trade unions compulsory. It will also call for law that will make it obligatory for every registered trade union to hold an election of officers, executive officials and members of the controlling committee at least once every five years. The election should be by individual vote in a secret ballot under the supervision of the Registrar-General. If less than 50 per cent. of the members cast votes, or no election be held, the union is to be struck off the register and disbanded and its funds made subject to the order of the Court. It will also press for legislation which will make payments made by members to unions for superannuation purposes to be returnable in full by law, if a member resigns, or is expelled from his union. Finally, it will demand that the present laws relating to trades unions be brought into line with the laws governing other associations of people. This means amending the Trades Disputes Act of 1906 so that unions will be liable for the torts of themselves and their servants.

The League, in a communication addressed to trade unions, has emphasised that it is in no sense anti-trade union. Only, it is opposed to the "growing tyranny and now anti-social tendencies of the union." It is opposed to restrictive practices "which are slowing down the tempo of production, which shield the lazy and idle and which are one of the main causes of inflation." It asks why a trade union should not be made responsible in law for losses incurred by other parties through the union's action, if "that action involves breach of contract in exactly the same way that business concerns, all other kinds of associations and individuals are." Finally, it argues that the trade union movement, "born to fight for the undoubted rights of the workers and to combat the economic power of the financiers and industrialists, is itself fast becoming an oppressor and is forcing those who suffer from its now selfish creed to combine for their own protection."

The moral of the People's League movement is obvious. If labour unions fail to carry the public with them and use their power in a way that is destructive of public interest they are bound to meet with opposition. In this country, too, the public is dissatisfied with some of the activities of the labour unions and even with some of the laws relating to unions. Thus, many people ask why they, as consumers, should not protest when the trade unions strike on some political or linguistic issue or when the strike is the result of conflict between two unions affiliated to different political parties. Again, the unions continue to demand higher wages regardless of the scale of wages of non-industrial workers. Although the Indian public is not so vocal as the British, the unions will do well to realise that they should win public sympathy or they would lose their battle.

WEST GERMAN ECONOMY

West Germany continues to be in the grip of a boom. Evidence of this is provided by the fresh measures to check the trade boom announced by Dr. Erhard, Minister of Economic Affairs, in a report submitted to the Lower House this week. The measures include tax incentives for stockpiling of imported commodities, tax incentives for small savings, hire purchase restrictions and curtailment of steps to boost exports. It will be recalled that, in October last, the W. German Government had launched a comprehensive scheme to check further expansion in industrial investment and to reduce price levels. The scheme, however, did not succeed fully in achieving the objective and, as such, the German Central Bank Council raised the Bank rate by a full 1 per cent. to 5½ per cent. with effect from 18th May 1956. Even this upward revision in Bank rate would appear to have not proved adequate to curb undue expansion in credit. The Government has, therefore, been compelled to take, as already stated, certain new measures to prevent the trade boom from gathering momentum.

One of the proposals put forward by Dr. Erhard relates to the grant of write-off allowances to importers, with a view to enabling them to build up stocks. The Bank Deutscher Lander has been requested to co-operate in implementing this proposal. The applications for export risk credits will, in future, be closely scrutinised and the Government "would have to refer foreign countries seeking export credits to the private German capital market." There are three other important proposals. First, the duration of hire-purchase contracts will be limited, minimum down payments enforced, and cash prices and hire-purchase terms clearly marked. Secondly, small savings will be encouraged, first, by tax incentives for savings blocked for a period of three years (up to 5 per cent. of income will be deductible, if 10 per cent. of income is saved) and, secondly, by issuing share certificates of State-owned enterprises through investment trust companies. Thirdly, the budgetary appropriations of the

AMERICAN LETTER

PRESIDENTIAL ELECTION PROSPECTS

LITTLE CHANGE IN OVERALL ECONOMIC PICTURE

From Our Special Correspondent

NEW YORK, 15*th June*

PRESIDENT Eisenhower's sudden illness and subsequent operation has produced new uncertainties, even though his recuperation has been rapid and most satisfactory.

Bearing in mind the sudden death in office of the late President Franklin Delano Roosevelt, doubts have arisen in many people's minds whether the Chief Executive of the United States could physically stand a second term of four years, beginning in January 1957.

The decision whether he will be available for a second term rests with the President himself. His last widely publicised indisposition may have decreased his chances of winning voters, but there is no question in my mind that, if he decides to run, he will be re-elected.

If Mr. Eisenhower retires possible Republican candidates to replace him are ex-Governor Harold E. Stassen of Minnesota, now Special Assistant to the President, Chief Supreme Court Justice Earl Warren and Senator Knowland of California.

Mr. Stassen, after retiring as Director of the Mutual Assistance Programme, has been mostly concerned with foreign affairs and has been engaged as a trouble shooter. He had long talks with the Russian leaders when they visited London. He is the best known of likely successors. He was President of the University of Pennsylvania at one time and has great diplomatic ability.

Mr. Warren as Supreme Court Justice and ex-Governor of California has a lifetime job. He is a possibility, enjoys an admirable reputation, but is not too well known nationally and internationally.

Senator Knowland, also of California, has assumed considerable stature owing to his legislative activities. While he is Republican, he has disagreed with the Eisenhower policies on many occasions and, thus, has become a controversial figure.

On balance, therefore, if Mr. Eisenhower is not a candidate, the Republican ticket may well be headed by Mr. Stassen with Richard Nixon as Vice-President, a post he holds at the present time.

On the Democratic side, Senator Estes Kefauver has been left behind in the primaries and the principal contestants for the Presidential nomination are now Adlai Stevenson, former Governor of Illinois, and Averell Harriman, Governor of New York. At this point, Mr. Stevenson is way ahead of Mr. Harriman.

While stock prices broke sharply upon the announcement of President Eisenhower's illness, they have recovered since and there is little change in the overall economic picture of the United States.

Despite a slowdown in automobile production which has been one of the sustaining factors of the U.S. economy for years, steel production and the demand for bank loans continue at high levels. Much of the high demand for steel by fabricators and consumers was prompted, however, by the fear of a prolonged steel strike. Present labour-management contracts in that industry expire on 30th June and negotiations have proved fruitless, so far. Talks continue, though, between trade union representatives and the managements of the major producers.

Another interesting development is that 25 countries, with prospective capital subscriptions of $64,565,000, have now completed legislative action to join the International Finance Corporation, the proposed new affiliate of the International Bank for Reconstruction and Development.

The new company would invest in productive undertakings, in association with private investors without Government guarantees. In general, it would seek to stimulate and help create conditions which would promote the flow of private investments. The Corporation would come into existence when 30 countries have joined.

The five countries which have completed action on the project so far are El Salvador, Jordan, Norway, Pakistan and Sweden. Twenty-seven other nations have expressed their intention to join and several of these have completed the necessary action to do so. Their adherence in the Corporation is expected in the near future.

This development may be supported to a degree by the easier money rates which have been in evidence in the U.S. in the last few weeks. Dealers in bankers' acceptances have reduced their rates and the Federal Reserve Banks have furnished reserves to the commercial banks to take care of the loan demand to a greater extent than before, although official quarters still deny that there has been a change of policy.

The U.S. farm picture is better than it has been for some time. Prices have risen for the second consecutive month, not appreciably, but fractionally.

The prospects for retail trade in the second half of 1956 are generally regarded as excellent. Present estimates are that the 1955 volume of sales will be exceeded this year by somewhere between 3 and 5 per cent. This may be explained, in part, by the steady increase in personal income which is now running at an annual rate of about $318,000 million.

There is still some apprehension and fear of inflation, because of the rise in inventories and personal and business credit. Projected against the steady rise in population and in the demand for goods and services, it, however, seems to be disappearing more and more.

Foreign trade figures are also encouraging. Exports were about $4,200 million in the first quarter, up 12 per cent. from the first three months of 1955 and imports totalled approximately $3,200 million in that period, a rise of 18 per cent. These figures may be compared with the present Administration's request for foreign aid of $4,900 million. The latter figure has been pared somewhat in the meantime, but, eventually, appropriations will probably run somewhere between $4,000 and $4,500 million.

The demand for reductions was occasioned by the visit of Marshal Tito of Yugoslavia to Moscow and the cordial reception he received there, against the background of previous substantial aid from the United States.

"PEOPLE'S CAPITALISM"—WHAT MAKES IT WORK

Currently appearing in leading American periodicals is a public service advertisement on the nature of the U.S. economy prepared by General Electric, one of the outstanding industrial corporations in the United States.

The advertisement is titled "People's Capitalism—What Makes It Work for You." It points out that the "American brand of capitalism is distinctive and unusually successful," because "all the people share in its responsibilities and benefits."

The Company sees eight distinguishing characteristics of this "People's Capitalism"—characteristics that have been the subject of considerable comment in recent years by American economists and business men, including Philip D. Reed, General Electric's Board Chairman, and Ralph J. Cordiner, its President. In fact, Mr. Cordiner had occasion to expound at length on this theme only recently in the course of a series of lectures he delivered at Columbia University, in New York.

The advertisement observes that "we in America believe" in:

1. Opportunities for each individual to develop himself to his maximum potential.

2. High volume, and prices within the reach of all.

3. High wages, high productivity and high purchasing power occurring together. "They spell dynamic growth and progress."

4. Innovation and scrapping the obsolete. "By reinvesting earnings in research and in production facilities, American business is creating more jobs, better products and high living standards for everyone."

5. Consumer credit: Development and use of instalment sales techniques, to a degree unparalleled elsewhere, has helped develop new industries and enhance economic activity. Not specially stated, but definitely implied, is the boost given demand by consumer ability to buy and use goods while paying for them out of current earnings over a period of time.

6. Leisure for people through a comparatively short and highly productive work-week. This has led, in turn, to "great new industries which provide means for entertainment, for cultural pursuits, for sports of all kinds."

7. Broad share ownership of American business: "Millions of American families now participate directly in the risks and rewards of businesses as share owners, and almost everyone indirectly owns shares through insurance policies, savings banks, pension plans, mutual funds, trust accounts or other investments" that find their way into corporate securities.

8. Competition—"the spark plug" of the American economy, which keeps business "endlessly, urgently searching and researching for new and better products, more efficient methods of production and improved marketing techniques."

PRICE SQUEEZE

RETURN TO PHYSICAL CONTROLS

From Our Own Correspondent

LONDON, 23*rd June*

LONDON LETTER

THE Government have for some time tried to get the Trade Unions to agree to keep down their wage demands so long as the inflation "crisis" continues. But the unions are in no position to press such a matter with their members; many of them are already actively committed to a policy of seeking wage increases and the whole social and political background at the moment is in favour of more rather than less insistence on keeping up with prices.

The Government's next approach has been to industry, where they have, indeed, been anticipated by the employers who have taken the line that they will resist wage increases. But excellent as this may be as a policy, the employers know that it can only be pursued in a context of relatively stable prices; hence the Government has turned its attention to the general question of holding prices stable. If that can be done, they and the employers have a powerful reply to insistence on wage increases and the vicious circle may be broken. It is odd that a Conservative Government should be driven to break the cycle at precisely the point which their socialist opponents would also have chosen.

It is even more odd that the opponents of physical controls should have had to take their first step by virtually imposing controls on price levels in the nationalised industries. First, pressure was brought on the Central Electricity Authority last week, and Electricity Boards throughout the country have been told that even though they incur deficits they are to stabilise prices until next March. Electricity has now been followed by coal, where the Coal Board has decided to peg pit-head prices till next June, even though this may mean running at a substantial deficit.

The employers have welcomed these decisions to stabilise fuel prices and, with this lead, there is a greater chance that manufacturers generally will seriously try to hold their prices even at the expense of profits.

But this policy can only be successful if wages are also held, and the lead to be given by the nationalised industries in this matter will be as important as their lead in prices. The Government have already been told by the private employers that they look for the first show of firmness in the nationalised industries and next week the Government will be meeting the chairman of the nationalised industries to see whether a common front on wages can be established.

The problem is highly complicated, since the conditions on which the unions may be prepared to call off their concerted pressure for higher wages may not be acceptable to the employers. There is an equally grave danger that the nationalised industries may affect their price stabilisation policy at the expense of reserves for future development. If this is done it will mean, (*a*) that costs are still being allowed to rise, thus halving the efficacy of the price stabilisation move, and (*b*) that either the future efficiency of the industry is impaired or that the capital for development will be found out of inflationary borrowing, thus completely neutralising the effect of price stability. The answer comes back to the necessity for any price stabilisation policy to be accompanied by a cost stabilisation policy. We have seen the credit squeeze, now the price squeeze and the third move against inflation—provided the second is effective—will surely have to be a wage squeeze.—*All Rights Reserved.*

ESTABLISHMENT OF HEAVY MACHINERY INDUSTRY TO BE EXPEDITED

BRITISH AND RUSSIAN TEAMS TO VISIT INDIA

From A Special Correspondent

NEW DELHI, 26*th June*

IN the course of an interview to the Press at Madras the other day, Mr. C. D. Deshmukh, Union Finance Minister, is reported to have observed that the success of the second Plan would depend largely on the intensity of the implementation of the various development projects during the first two years. In other words, he was desirous that progress towards the targets for various industries should not only be kept up but also be speeded up, so that the initial success could generate confidence and fresh enthusiasm to maintain the tempo of progress in subsequent years. Although Mr. Deshmukh is not likely to remain at the helm of affairs, his ideas in regard to the second Plan are shared by many Ministers who happen to be in charge of various expansion projects in the country.

DELHI LETTER

In this task Mr. T. T. Krishnamachari, Minister for Commerce and Industry, has an important part to play by virtue of his being in charge of two leading Ministries which deal mostly with development subjects. Since the establishment of heavy machinery manufacturing industries is being considered extremely necessary and urgent, efforts are being made to accelerate the process of their early set up. It is well known that, by the middle of 1958 or thereabouts, steel production in the country will double itself from the present level. It is, therefore, considered necessary that, by that time, the indigenous engineering industry should be capable of utilising the steel produced in the country. While replying to the demands of grants for the Iron and Steel Ministry in April last, Mr. T. T. Krishnamachari stated that the progress of steel projects in Bhilai and Durgapur was more than satisfactory and that, in November next, he would be asking Parliament for heavy grants for meeting the increased commitments for these projects. Hence, it can be taken for granted that there will be a substantial increase in steel production before the end of 1958.

Foreign Help

It is now stated that a number of countries have been coming forward to help India in the establishment of heavy machinery manufacturing industries. An industrial mission, sponsored by the British Federation of Industries under the Colombo Plan, is shortly expected to visit India, in order to advise the Government in the matter. In case, the Federation follows the precedents recently established in the matter, it may come to an understanding with the Government of India in regard to capital, technical know-how, patent rights, etc.

Russia, too, will shortly be sending a technical mission of four persons for purposes of assisting India in the establishment of heavy machinery manufacturing industries. The arrival of this technical mission is the outcome of the talks held by the Soviet Vice-Premier, Mr. Mikoyan, when he visited India in March last, with Mr. T. T. Krishnamachari, Minister for Commerce and Industry. The latter appears to be anxious to have one or two factories established in this country on the model of the Soviet Ural Plant which is stated to be capable of manufacturing different items of machinery for different industries. As has been the case with the steel industry, for which India was able to secure the help of three or four different countries such as W. Germany, Russia, Britain and the U.S., it is possible that it may be able to get the help of three or more countries for setting up a machinery manufacturing industry also. There are reports that Japan too is interested in offering India technical aid, etc., for this purpose. It may be mentioned here that, towards the end of July, the Machine Tool Industry Committee will submit its report on the question of reorganising this industry on a more stable basis. That will give the Government of India an idea of the extent to which help from foreign countries will be necessary for expanding this vital industry.

During recent months, one particular development has been somewhat pronounced in the sphere of industries. In certain types of heavy industries, where some of the leading industrial nations of the West have been showing a sort of hesitancy in the matter of sharing their secrets or technical know-how with India, Soviet Russia and the East European nations have readily come forward to help the country. The dyestuffs, drugs, optical glass and raw film manufacturing industries are some of the industries that fall under this category.

At the meeting of the Industries Advisory Council held in the Capital this week, the question of establishing heavy machinery industries cropped up. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, stated that a broad plan was being evolved to enable the country to produce two-thirds of its machinery requirements in a period of 10 years. At present, the Government is vigorously planning to bring about the early establishment of heavy-foundry-cum-forge shops. The task has been assigned to the National Industrial Development Corporation. The target for the steel foundry is placed at 15,000 tons capacity and that for forging shops and cast iron foundries at 12,000 tons and 10,000 tons, respectively. In all these cases, the capacity of the factory is likely to be kept flexible so as to allow further expansion as and when necessary.

Consumer Goods

In regard to development of consumer goods industries in the private sector, the Government's idea is that the private sector should try to undertake the responsibility of augmenting production even at short notice, so that the country could effectively arrest any inflationary tendencies that may develop later on. Even now, the Licensing Committee, established under the Industries Regulation Act, has been following a fairly liberal policy in the case of these industries. The targets laid down in the second Plan need not be taken as irrevocable and rigid, for expansions are being allowed wherever there is scope, so that there is a reasonable reserve capacity which could be utilised whenever there is need for doing so. At the latest meeting of the Industries Advisory Council, the Minister stated that he would be willing to increase the targets for consumer industries in case there was a good demand for their products. In fact, the Minister said that he would not like to wait for a period of six months or a year to review the whole position for purposes of Government according sanction for their expansion, but would take action once he was convinced that the country's economy needed an expansion in the production of particular types of consumer goods. He emphasised the need for producing quality goods at competitive prices by the indigenous industries.

The tenor of Mr. Krishnamachari's speech at the meeting of the Council showed his confidence in the country's ability to report impressive results in the industrial sphere in the form of establishment of new strategic industries and increased production by the existing industries. There is, therefore, every reason to hope that, in the coming months, the economic tempo will gather further momentum.

(Concluded from next column)

same time, that the future of his own and his workers' children should be cared for.

An economy demands not only a balanced national budget, but also the correct relationship between exports and imports; but also an output of manufactured goods sufficient to ensure the maintenance and advancement of productivity; and a sufficient supply of consumer goods, so that the money in circulation through employment can be offset by the availability of consumer goods. If industry is reduced to complete dependence on State directives, not only does this minimise the vital competition between producers, as already mentioned, but the production of consumer goods is also regulated entirely by State considerations without regard for the claims of the workers. This fact has been proved repeatedly.

GERMAN ECONOMIC POLICY TODAY

DANGERS OF STATE OWNERSHIP AND CONTROLS

By Dr. H. C. Franz Blucher

German Vice-Chancellor and Federal Minister for Economic Co-operation

AN important point in considering the economic policy and economic systems of other countries is whether or not the countries chosen for comparison are to the same extent dependent upon foreign trade as Germany is today. A country which, thanks to its geographical position, its natural resources, population density and standard of living, can remain completely independent economically of relations with other countries, it is also independent in the matter of fixing costs. In determining its standard of living, it need only have regard to the fact that this standard shall not remove the urge for efficiency and progress. It is impossible in the long run to dispose of unequal competition by the artificial reduction of the prices of export goods. This tends to reduce the craving for efficiency on the part of the exporter, who trusts to his Government subsidies; it leads to fraudulent dealings at the cost of the subsidising Government, that is, at the cost of the community, and, above all, is conducive to a general rise in costs, since export subsidies can only be financed in one way, by raising the costs of goods for home consumption. This would be an endless spiral.

If industry is nationalised, or managed by planned economy in the hands of the State, or institutions entirely dependent on the State, the illusion is created that a complete control over economy has been attained. This belief, and the resulting commitment to some rigid national system, leads inevitably to complete loss of freedom. Wherever the State controls all fields of activity, including that of industry, directly or indirectly, it is inevitable that the employee should lose his independence in the struggle to determine conditions of work and living. It is true that a levelling-up of the standard of living conditions for all might be achieved, but the rights, which to us seem the most valuable gift of democracy, namely, the rights of freedom to organise, will only remain on paper. In effect, the State is in complete control and can refuse to tolerate any opposition to the terms of pay and work which it has laid down. In a socialised economy, of an economy conducted on State-planning principles, the trade unions lose their mission and effectiveness.

In spite of this it would be wrong to ignore the attraction of the slogans concerning the control of industry. What have we to offer as a counter-attraction, particularly in view of the coming struggles? Is it not possible for all parties inside a factory or business to live peaceably together, if all are fully informed as to the conditions essential to the life of the business, its requirements, difficulties, aims and results? Respect for the liberty of the individual, who is entitled to know the meaning of the work he does, should be evident in the form which this co-existence, this frank enlightenment takes. The Federal German Law on Industrial Relations concerning co-determination of the workers in a factory or business, should be used by employers as an instrument of progress.

If the individual feels himself esteemed in this way, he will respond, and will gain confidence and trust in what we have to say to him, namely, that only so long as the factory in which he works remains independent can such mutual discussions remain possible. He will then understand that the development which he has observed in his own factory has been the product of creative energy on the part of the owner, which could never emerge in a centrally controlled economic system. He will see that private property in a business, and the necessity of preserving and increasing this property, forces the owner and those working with him to develop ever greater efficiency, so as to cope successfully with competition. He will understand that the pronouncements about the values of competition are not merely fads of economic theorists, but that competition does indeed lead to an improvement in those articles which he, the worker, himself requires, or to a reduction in the prices of goods essential to him. He will also discover that the owner of a private enterprise is actuated by the desire that the worker should earn as much as possible at his job, and, at the

(Continued in previous column)

FLOW OF U.S. INVESTMENTS ABROAD

DIFFERENCES BETWEEN U.S. AND FOREIGN CAPITALISM INHIBIT IT

By G. Keith Funston

PRESIDENT, NEW YORK STOCK EXCHANGE

THE people of the world have seen a vision of a better life—and there are several things about that vision that are inescapable. The first is that it is spreading to every corner of the globe. The second is that, in the free world, venture capital is really the stuff the vision is made of. The years ahead are going to take unprecedented amounts of capital for heavy fixed investments. We have tried at the New York Stock Exchange to estimate the scope of what is likely to be required throughout the rest of the free world for the next five years. We find, for example, that more than $90,000 million of new capital will be needed to maintain the recent growth in *per capita* output. Unaided, the people of the world are simply not equipped to supply that amount of investment money. But, with American help, there is the prospect that a goodly amount of it can be raised. And our national self-interest—our need for raw materials and for new world markets—demands that we undertake the job to a greater extent than we have ever attempted. If we do—and there is tangible evidence that such a move is under way—we can hopefully expect to see in the next 25 years a boom in underdeveloped countries such as the world has never known.

Does the enterprising, equity (stock-share) minded U.S. investor fit into this picture? I am absolutely convinced that, over the long term, he does. Experienced investors have already shown they are alert to the opportunities overseas. Not since the 1920's have we witnessed so great a willingness to export our capital—first by investing in U.S. companies with overseas operations, and, second, by investing directly in foreign securities.

Paced by American firms doing foreign business, our private investments abroad in the years between 1946 and 1954 almost doubled to $26,500 million. And, in 1954, those investments earned a record $2,500 million. Moreover, to meet the needs of a people willing to venture foreign investments, U.S. bankers and securities brokers have stepped up their foreign activities. Despite the present willingness of many of our people to risk their money overseas, one cautionary note must be sounded—particularly where direct foreign investments are concerned. I believe that at present—and for reasons I will outline—a sharp line must be drawn between the experienced investor and the man who is new to ownership of stocks and shares.

Mass Investments

At the New York Stock Exchange, we are deeply committed to the concept of broadening ownership. We are also convinced that capitalism's greatest moments are still to come, and that they will be ushered in an era of "mass investments." We look to millions of middle-income Americans to invest some of their money in our great businesses, and to share the rewards and risks of ownership in an expanding economy. Ten years ago, the prospect of "mass investments" was a dream. Today, we see it happening, and it places a special responsibility on the Stock Exchange's organisation in their efforts to broaden the ownership base. That responsibility poses a peculiar problem for us in the field of foreign investments.

We are certainly aware of the great opportunities abroad. And we are also convinced that, as we strengthen capitalism here, we must be interested in strengthening it elsewhere—particularly where the potential is greatest. But we must recognise, too, the unhappy fact that there is a yawning gap between opportunity and fulfilment—between what the investment climate actually is and what we would like it to be.

The realities that plague overseas private investments throw a shadow over the prospect of profits. And candour dictates that the average U.S. investor—with whom we are most concerned, and who has an enormous investment potential—be advised that, at present, foreign investment fields are loaded with danger.

The U.S. investor who looks abroad often runs into a bewildering array of legal uncertainties and complexities, unless he chooses to invest in an American firm with overseas operations. If he is able and willing to surmount the obstacles, he faces an equally perplexing problem: the fact that most foreign companies bear almost no resemblance to their American counterparts, when it comes to full disclosure of financial data, the seeking of a widespread corporate vote in company affairs, and other sound, equitable stockholder relations policies.

The investor in American companies has increasingly been fed a diet of understandable statistics, periodic progress reports, and open accounting methods. As an overseas investor, he frequently finds himself a poorly-informed relation of the stockholder family—if he is informed at all. He has a healthy and natural reluctance against being weaned from his U.S. diet. And he naturally hesitates to risk his money without having the basic data necessary for his investment decision.

Nationalisation

Let us take a look at each of these problems a little closely.

First, there are the legal and regulatory uncertainties. American dollars are subject to multiple exchange rates that are complicated enough to confuse anyone but a mathematician. Discriminatory tax laws are designed, it often seems, to choke off the very flow of venture capital foreign countries most need. If the American investor decides his opportunities warrant pressing ahead anyway, he is likely to run up against laws limiting the amount of profits he can withdraw, and regulations governing the amount of capital he can transfer. And, finally, in certain countries he is all to frequently apt to meet with the most painful and unjust penalty of all—outright expropriation.

In an era, when many sovereign nations are just beginning to feel the first nationalistic effects of independence, the expropriation problem is by no means a dead or dying issue. For example, a United Nations committee, preparing a draft for the International Covenant on Human Rights, included a paragraph which said: "The right of people to self-determination shall include permanent sovereignty over their natural wealth and resources. In no case may a people be deprived of its own means of subsistence on the grounds of other rights that may be claimed by other States."

While national self-determination is a policy, we Americans recognise and respect, the language of the proposed draft—in what it specifically omitted mentioning—contained an implied endorsement by the U.N. General Assembly of the right of expropriation without compensation. Here then was a new barrier to Americans willing to export their capital.

The General Assembly is scheduled to consider this matter in detail later this year. We hope—and we shall continue to urge—that the United Nations recognise that, while a country may decide its best interests lie along the nationalisation route, investors must be assured of prompt, adequate and effective compensation. Otherwise, foreign countries will limit drastically their chances of getting American private capital.

Encouraging Signs

Fortunately, without expecting the millennium in removing existing obstacles, or denying that our own Government imposes some rather massive investment barriers through the capital gains tax and the double tax on dividends, there are good indications that progress is being made overseas. The McGraw-Hill Publishing Co.'s Economic Department reports that some 35 countries have passed or proposed laws to encourage U.S. private investments. New techniques are being developed to simplify exchange rates and speed the two-way flow of funds. Foreign Governments are reappraising their tax laws and offering new incentives to U.S. corporations. These are welcome developments and should be encouraged. They are a true barometer of the investment climate abroad. As the climate improves, it is logical to expect improvement in a second major obstacle I mentioned earlier—the area of "full disclosure."

There is more to this barrier, however, than the simple unwillingness to bare corporate secrets. Capitalism throughout the world has many faces—and not all of them are familiar to Americans. In the last two years, I have had the opportunity to visit some 10 foreign countries. To the U.S. business man there is nothing stranger than the insight such visits provide into the differences between our own and foreign brands of capitalism. "Enterprise" may go under the same generic name, but often the similarities are slight. It is a fact, not criticism, to say that, filled with our own success, we do not fully understand the pressures still operating on the business man abroad. And it is a fact, not criticism, to say that the foreign business man still does not grasp what has happened in the United States since the turn of the century.

The foreign business man does not understand, for example, an economic system that is fiercely competitive, that fights for markets instead of sharing them, that reports earnings and sales instead of concealing them, and most important, that woos stockholders instead of running from them. The sight of one of our American stockholder meetings, attended by hundreds or thousands of stock-share owners—an event we witness in the United States year after year—would fill many foreign business men with consternation. A programme such as the New York Stock Exchange is conducting to broaden stock-share ownership is, to most foreign business executives, as alien and distant as Mars.

I do not believe that, in the United States, we are especially determined to export our particular brand of capitalism. But, if it happens of its own accord, it is all to the good. It is noteworthy that more and more foreign business men are taking a long look at the full disclosure principles that have become basic to American companies whose stock and bonds are sold to the public. If these full disclosure principles are adopted overseas, it will constitute a major breakthrough in the field of international investment. New horizons for U.S. business enterprise will burst open, and will help satisfy, on a sound basis, the American appetite for foreign investments that has been whetted by the free world's prosperity. There are, of course, implications to American capital moving overseas that are broader than purely economic matters. The United States was built with the aid of foreign money. This pattern has been reversed.

Will Assist Nations

For Americans to increase the movement of their capital abroad will assist nations overseas to achieve a higher living standard, and will help them decide the kind of capitalism they are going to have. There is probably no more important decision for the free world to make. For, if other countries move toward the American concept of enterprise—and toward the idea we are developing for a broader, man-in-the-street kind of stock-share ownership—we shall have developed the strongest and most effective non-military weapon against communism.

There are signs, in fact, that foreign companies—particularly those of an international character—are moving closer to our full disclosure standards. The New York Stock Exchange is actively encouraging this process and the logical step that springs from it: the increased listing on our Exchange of foreign securities. Today, our "foreign roster" includes 300 stocks and bonds of foreign Governments and corporations. This makes the New York Stock Exchange the nation's leading market place for foreign securities.

Admittedly much will have to be done in the way of slow, patient education before more foreign firms understand and accept our standards. But I believe, by way of summary, that, in the free world, we are united behind a common economic goal—however difficult it may be to achieve. That goal calls for removing barriers impeding the flow of capital, and we shall achieve it simply because the United States needs raw materials, the free world needs U.S. capital, and the opportunities for both our friends and ourselves are fabulous. I believe, finally, we must look toward the day when foreign Governments will remove frustrating exchange regulations, permit free convertibility of funds, recognise the sanctity of private property, repeal discriminatory tax laws, and offer U.S. corporations greater incentives to develop foreign properties. History, I think, is on our side. It was Ralph Waldo Emerson, the American essayist, poet, and philosopher, who said:

"We rail at trade, but the historian of the world will see that it (trade) was the principle of liberty, that it settled America, and destroyed feudalism and made peace. . . . and kept peace . . ."

PROGRESS OF CO-OPERATIVE MOVEMENT

WEAKNESSES CALL FOR VIGOROUS ACTION

THE year 1954-55 witnessed all-round progress in the development of co-operation in India Thus, the number of all societies rose from 198,598 in 1953-54 to 219,298 in the year under review. During this period, membership of these societies increased from 15.18 million to 16.02 million and their aggregate working capital from Rs. 351.79 crores to Rs. 390.52 crores. According to the *Statistical Statements Relating to the Co-operative Movement of India for the Year* 1954-55, just published by the Agricultural Credit Department of the Reserve Bank of India, the Co-operative Movement is estimated to have covered 80.1 million or 21 per cent. of the population, as compared with 75.9 million or 20.2 per cent. in 1953-54. Another revealing feature of the Movement was that State Co-operative banks were functioning in all Part 'A' States, in all Part 'B' States and in six Part 'C' States in the year. Two new institutions were set up in Jammu and Kashmir and Bhopal in pursuance of the programme for the development of co-operative credit formulated by the respective State Governments in consultation with the Reserve Bank of India.

While quantitatively the Co-operative Movement has thus made notable progress, the same cannot be said regarding the quality of the Movement. The observations of Dr. J. C. Ryan, Chief Officer, Agricultural Credit Department, Reserve Bank of India, are worth noting in this context. In the course of a prefatory note to the publication mentioned above, he says: "A study of the statistics in the publication indicates that the Co-operative Movement which has completed five decades of its existence in this country is not evenly developed. While it has made considerable progress in some of the Part A States, it is inadequately developed in others and practically undeveloped in some of the Part C States. The mobilisation of local resources or the banking and credit services rendered by the co-operative sector are extremely uneven as between the different parts of the country."

Some Defects

The statistics reveal also other defects. Agricultural credit societies continue to hold a dominant position, while development of other types of societies lags behind. Even among the agricultural credit societies, the regional distribution is uneven, the bulk of them being concentrated in Part A States. The membership per society is so small that the vast majority of the societies are uneconomic units. To quote Dr. Ryan again: "Although agricultural societies, as a whole, continued to be predominant and registered appreciable progress, yet, in several States, their existence was nominal. The low membership of societies, their small area of operations, poor owned resources and deposits leading to excessive dependence for funds upon central financing agencies (which themselves are, in many States, weak and uneconomic) are some of the weaknesses which characterise agricultural credit societies and thus emphasise the need for immediate remedial action." It is with a view to remedying these defects that the All-India Rural Credit Survey Committee has recommended a scheme of integrated credit which, in effect, envisages reorganisation and strengthening of the credit structure with larger units covering wide but compact areas, adequate turnover, paid management, State partnership and linking credit with marketing. A programme of development on these lines has been drawn for the next five years and it remains to be seen how far it would succeed in eliminating the defects.

Agricultural Credit

To return to a review of the trends. Agricultural credit societies which constitute the base of the Co-operative Movement, showed marked progress during 1954-55. The number of these societies increased from 126,954 to 143,320, and constituted 78.8 per cent. of the total number of agricultural societies. Their membership rose from 5.85 million to 6.57 million and their working capital from Rs. 54.41 crores to Rs. 62.93 crores. Loans advanced by the societies were higher at Rs. 35.48 crores, as against Rs. 26.48 crores in 1953-54. The increase in the number of societies was mainly shared by U.P., Madhya Pradesh and Bombay.

An analysis of the working capital of agricultural credit societies reveals that owned funds, which stood at Rs. 23.96 crores in 1954-55, represented 38.1 per cent. of the total working capital. Deposits were larger at Rs. 5.44 crores, as against Rs. 4.61 crores in the previous year, but they formed only 8.6 per cent. of the working capital, as against 8.5 per cent. This calls for more vigorous measures for inculcating habits of thrift and savings in rural areas. Another point to be noted is that the working capital of the primary agricultural credit societies in Bombay, Madras, U.P., Andhra and Punjab alone accounted for as much as 53 per cent. of the total working capital of such societies in the country. This reflects the lack of uniform development of co-operation throughout the country, as already mentioned. Borrowings from Central financing agencies and Government amounted to Rs. 33.52 crores and constituted 53.3 per cent. of the working capital. This increased dependence on outside help is also a weakness which should be gradually reduced, if co-operation is to stand on a stable footing.

Non-Agricultural Credit

Non-agricultural credit societies also recorded steady progress during the period under review. Their number and membership increased from 8,389 and 2.73 million to 9,348 and 2.85 million respectively. The working capital of these societies improved by Rs. 8.33 crores to Rs. 78.32 crores. Here, again, as many as 55.2 per cent. of the societies were concentrated in the States of Bombay, Madras and the Punjab. The working capital of non-agricultural societies amounted to Rs. 78.32 crores. Unlike in the case of agricultural credit societies, well over half, 62.4 per cent. to be precise, of these funds was accounted for by deposits. The loans given by the societies amounted to Rs. 62.12 crores, as against Rs. 60.52 crores. Outstandings stood at Rs. 54.98 crores, of which Rs. 5.60 crores were overdue.

The activities of the State non-credit societies also expanded considerably during the year under review. Their number rose from 42 to 60, and their business turnover from Rs. 5.74 crores to Rs. 7.6 crores. The central non-credit societies numbered 2,599 and had a membership of 1.81 million. They sold goods worth Rs. 50.45 crores, as compared with Rs. 36.51 crores.

The number of primary agricultural non-credit societies stood at 30,197 at the end of 1954-55. They accounted for a membership of 2.49 million and a working capital of Rs. 20.72 crores. Their sales, however, registered a decline from Rs. 33.74 crores to Rs. 27.04 crores. The position of non-agricultural non-credit societies, however, did not show any improvement. As many as 24,666 societies had a membership of 3.15 million, as against 21,137 societies with 3.17 million in 1953-54. Their sales decreased from Rs. 45.0 crores to Rs. 31.65 crores.

Apex Banks

As stated already, there were 24 co-operative apex banks. Their owned funds (share capital and reserves) together stood at Rs. 6.54 crores, as against Rs. 5.61 crores. Their working capital rose from Rs. 40.84 crores to Rs. 47.63 crores. The owned funds thus amounted to 13.7 per cent. of the working capital. Deposits showed a moderate rise and constituted 60.8 per cent. of the working capital. Of the total deposits of Rs. 28.95 crores, only Rs. 13.91 crores were from co-operative institutions, the balance being from individuals and other sources. There was also an increase in the loans from Government from Rs. 1.05 crores to Rs. 3.41 crores. A substantial share capital of these apex banks was accounted for by State participation such being of the order of Rs. 126.04 lakhs out of Rs. 323 lakhs. The total advances made to banks and societies rose slightly from Rs. 42.57 crores to Rs. 42.78 crores. Overdues rose from Rs. 2.76 crores to Rs. 3.91 crores. The investments of these banks amounted to Rs. 14.38 crores, of which Rs. 13.52 crores (or 94 per cent.) were in Government securities.

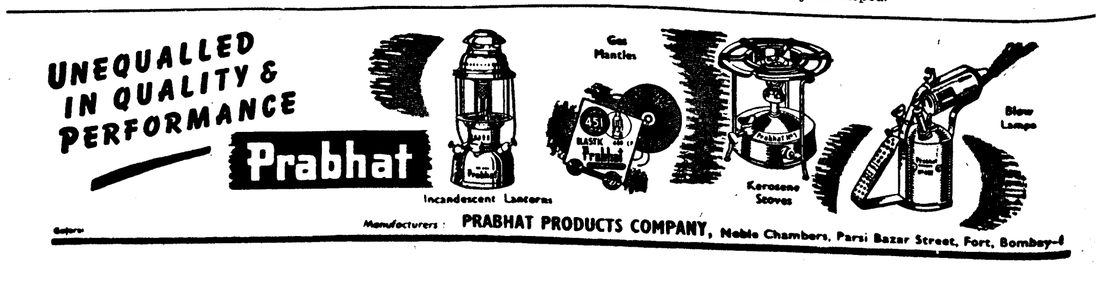
Owing to the rationalisation of central banks pursued in certain States, the number of these banks declined from 499 to 485. Their membership, however, rose from 248,000 to 272,000. The paid-up share capital and reserves stood at Rs. 13.05 crores, as against Rs. 11.80 crores. Their working capital aggregated Rs. 73.69 crores, an increase of Rs. 7.58 crores over the year. In the case of these banks also, owned capital accounted for 17.7 per cent. of the working capital. Deposits, at Rs. 46.37 crores, represented 62.9 per cent., and borrowings at Rs. 14.26 crores, 19.4 per cent. of the working capital. Loans advanced by these banks improved from Rs. 64.70 crores to Rs. 69.17 crores. Repayments to central banks at Rs. 65.07 crores fell short of fresh loans advanced amounting to Rs. 69.17 crores. Investments of these banks aggregated Rs. 19.88 crores, of which 61.4 per cent. were in Government securities.

Land Mortgage Banks

An analysis of the capital structure of central banks reveals that a large number of them are in a weak position. The average share capital per central bank was as low as Rs. 2 lakhs in States other than Madras, Andhra and Bombay, where it was Rs. 6.05 lakhs, Rs. 5.21 lakhs and Rs. 4.38 lakhs, respectively. Again, in seven States, the average share capital per bank was less than Rs 50,000. Similarly, only in four States, namely, Madras, Bombay, Andhra and Travancore-Cochin, did the average working capital per central bank conform to the standards of minimum working capital suggested by the Standing Advisory Committee, namely, Rs. 20 to Rs. 25 lakhs. Further, in many States there is an excessive number of central co-operative banks and banking unions. Consequently, the number of societies affiliated to each central bank is often too small to admit adequate business turnover. This underlines the need for an amalgamation of some of these banks.

In the sphere of long-term credit, no marked progress was visible in the development of land mortgage banks. Their number remained unchanged at 9 during 1954-55, the States covered being Andhra, Bombay, Madras, Orissa, Hyderabad, Mysore, Saurashtra, Travancore-Cochin and Ajmer. In Orissa, Saurashtra and T.C. States, no primary land mortgage banks existed. The loans advanced by these banks rose from Rs. 1.92 crores to Rs. 2.43 crores. These institutions depended on the issue of Government guaranteed debentures for their resources. Debentures of the value of Rs. 12.71 crores were in circulation in 1954-55. Of this, 63 per cent. were issued in Andhra and Madras States alone.

There were 292 primary land mortgage banks during 1954-55 as against 291 in the previous year. Loans advanced by them amounted to Rs. 1.45 crores, as against Rs. 1.40 crores. The rates of interest charged ranged between 5½ per cent and 9.3/8 per cent. In Bombay and Mysore, however, for certain purposes, the rates charged were 3½ per cent. and 4½ per cent. respectively. Here, too, as in the field of short-term credit institutions, the Movement is unevenly developed.



FIRST DECADE UNDER EMPLOYMENT ACT IN AMERICA

ECONOMIC PROGRESS PHENOMENAL

By Arthur F. Burns

CHAIRMAN, COUNCIL OF ECONOMIC ADVISERS TO THE U.S. PRESIDENT

WHEN I was a student at Bayonne High School, economic issues were actively discussed by my classmates. We took public affairs seriously and had no inhibitions about criticising the policies or actions of Government. Few of us, however, saw a need for any expansion of governmental responsibilities in the economic realm. Ours was a land and time of opportunity. Jobs were plentiful. Anyone who had a taste for work could look forward confidently to improvement in his economic condition. Once he accumulated a little capital, he could start a business of his own or acquire a share in some going enterprise. The environment in which we lived was responsive to new methods, new products, new ideas, even new faces. We had watched our city grow through the initiative and efforts of individuals seeking to better themselves and their families. The road to success that we saw ahead was the road that our fathers had travelled. We had little sympathy or patience with the reformers whose theories we examined and debated.

The thinking of my classmates was typical, I believe, of the thinking of Americans, both young and old, around 1920. As a people, we saw little need for governmental intervention in economic matters. We recognised that there was ample room for economic improvement, but we felt that progress was promoted best through the enterprise of individuals. We knew, of course, that poverty existed in the midst of plenty, but we were inclined to regard the poor as the chief cause of their own poverty. We knew that unemployment and business failures at times increased sharply and we deplored such developments. Yet we believed that economic fluctuations performed a useful function and that it would be unwise to tamper with their course. We reasoned that economic adversity stimulated people to practise thrift and industry, that it served to weed out inefficient workmen and enterprise, and that economic progress was thereby furthered. As long as these views prevailed, the occasional pleas of reformers for governmental measures to moderate economic fluctuations were largely ignored or resisted.

Antidote to Marxism

The catastrophic depression of the 1930's forced most of us, however, to re-examine our economic ideas, and so too did inflation during the 1940's and the spread of communism after World War II. From hard experience, we have learned that self-reliant workers as well as the shiftless lose their jobs when business activity falls off appreciably, and that at such times well-managed enterprises often follow the inefficient into bankruptcy. We have learned that inflation can wipe out people's savings in bank accounts, Government bonds, and life insurance policies just as decisively as can prolonged unemployment. We have also glimpsed the fact that our widely shared prosperity is a powerful weapon in the ideological struggle that of late has been stirring men's minds in distant lands, and that the continuation of prosperity is our best answer to the Marxist prophecy of economic crisis and collapse of the Free World.

The momentous events of the past quarter century have not shaken our faith in the power of free enterprise to bring about economic improvement. On the contrary, we continue to resent any unnecessary intrusion of Government into private economic affairs, just as our fathers did. We continue to regard initiative, industry, dependability, versatility, thrift, and self-reliance as conditions of progress for the individual. We have come to recognise, however, that the success of the individual depends not only on himself, but also on the condition of the nation's economy and on the integrity of the dollar. We now recognise that, in a troubled international world, both federal taxes and expenditures must remain heavy, and that, in these circumstances, governmental activities necessarily have a significant impact on the private economy. We entertain no illusions about the infallibility of Government officials. Nor do we believe that it lies within the power of Government to guarantee prosperity. We have learned, however, that the Government can help to moderate the swings of the business cycle, and we have resolved that it do so within the framework of free enterprise on which our nation's strength is founded.

Origin of the Employment Act

Ten years have elapsed since the Congress, with an overwhelming vote of the membership of both our great political parties, declared that it is the continuing responsibility of the Federal Government to promote maximum employment, production, and purchasing power under conditions of free and competitive enterprise. The Employment Act, which embodies this basic declaration of policy, was the outcome of prolonged discussion within the nation and the halls of Congress. As World War II drew to a close, grave fears were expressed by many that the demobilisation of our armed forces, together with sharp cutbacks in the production of military goods, would lead to mass unemployment such as had characterised the 1930's. This view was not shared by all students of economic affairs. There was, nevertheless, a broad consensus that storms of business depression must not again be left to themselves, that the Federal Government should assume responsibility for fostering a more stable rate of economic growth than had ruled in the past and that the Government could best promote this objective by proceeding systematically instead of trusting to improvisations under conditions of emergency.

With these thoughts in mind, the members of Congress hammered out the Employment Act of 1946. This Act required that the President submit to the Congress every January, or more frequently if he deemed it necessary, an Economic Report on the state of our economy, on its emerging needs, on the contribution of existing governmental programmes to the nation's economic strength, and on policies for promoting maximum employment, production, and purchasing power. The Act established a Council of Economic Advisers to assist the President in following and handling continuously this range of problems. At the legislative end, a Joint Economic Committee, composed of members from both the House and Senate, was established to appraise the President's economic programme and the great issues surrounding it.

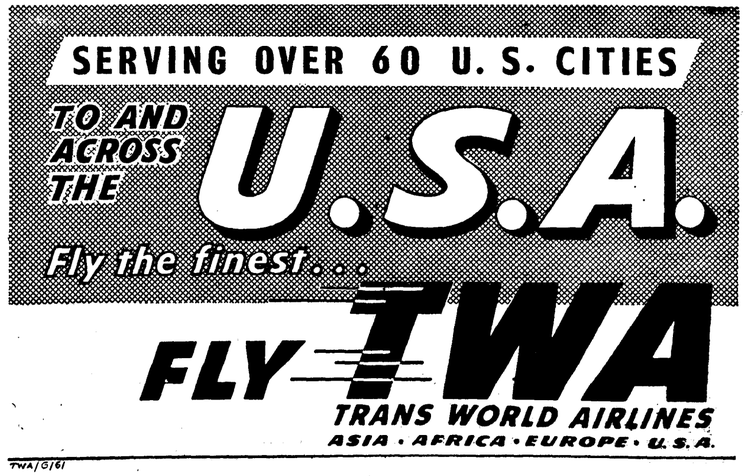
The Employment Act had a stormy history before it became law and it was only natural that opinions concerning the new law at first differed widely. Some people felt that the Act would prove ineffective, because it failed to specify how the economy should be bolstered in the event of deterioration in economic conditions. Others felt that, although the Act was inarticulate on method, it gave a clear mandate to Government officials for pursuing a full-employment policy and that, in their eagerness to do so, they would heap one mistake on another and end by intensifying the fluctuations they sought to prevent or to moderate. Still others felt that sizable unemployment would indeed be avoided under the new Act, but only at the cost of progressive price inflation or of steadily increasing governmental intervention in economic affairs.

These and similar criticisms subsided as experience under the Employment Act accumulated. Today, there is broad agreement that our economy is stronger than a decade ago, that the scope of free enterprise is larger, that the Employment Act has established serviceable procedures for promoting stable prosperity, that it has crystallised the nation's continuing interest in this problem, and that the flexibility of approach encouraged by the Act has proved to be one of its most constructive features. In view of the upward sweep of prices between 1946 and 1951, the question continues to be debated whether the Act tends to encourage inflationary policies. However, the cost of living has been substantially stable since 1952, and this has strengthened the hope that we may be able to conduct our economic affairs so that we have both general prosperity and a reasonably stable dollar.

Learning from the Past

Our ability to maintain a stable prosperity has not yet been fully tested. But we have made some progress in economic understanding, and we are learning to profit from the mistakes of the past. During the hard times of the 1930's the Government took numerous steps to relieve depression, first under the Hoover Administration, later, and on a bolder scale, under the Roosevelt Administration. The efforts at recovery were, however, nullified to a considerable degree by new and higher taxes. The Revenue Acts from 1932 to 1936 reduced tax exemptions for married couples and single persons, raised the maximum rate of the personal income-tax from 25 to 79 per cent, raised the estate tax rate from a maximum of 20 to 70 per cent., imposed a new gifts tax with a maximum rate of 52 per cent., levied numerous new excises, increased the tax on capital gains and on corporate profits, and imposed a new tax on undistributed profits. These onerous taxes reduced the spending power of both individuals and businesses. Worse still, by coming in quick succession and creating uncertainty about the objectives of governmetal policy, they weakened the incentives of business men and consumers to undertake capital expenditures. Innovation, private enterprise, and private investment languished.

The lesson of this experience is that, unless people have confidence in their own economic future and that of their country, prosperity will not flourish. When the present Administration came into power, it put this lesson into practice by moving swiftly to generate a mood of favourable expectations. Price and wage controls were removed and free markets were broadly restored. Steps were taken to discontinue activities, such as the manufacture of rubber, which private enterprise could handle as well or better than the Government. A broad programme of reducing public expenditures was initiated, with a view to releasing resources for the expansion of private enterprise. The Excess Profits Tax on corporations was discontinued, the personal income tax was lowered, and a broad programme of tax reform, involving both individuals and business firms, was proposed to the Congress. At the same time, the need for enlarging public facilities, especially highways,



was stressed. These policies, which were either announced or put into effect during the first year of this Administration, dispelled the lingering fears of economic stagnation that had been carried over from the 1930's. They broadened the horizons of business men, investors, and consumers, and stimulated millions of people to seize or create new economic opportunities.

But, if we have learned the importance of confidence as an economic factor, we have also not overlooked the teaching of history that the confidence which generates prosperity may become excessive and excite ill-considered investments, an imprudent use of credit, and speculation in inventories, securities, or real estate. We have come to recognise that such developments must be restrained if serious economic trouble is to be avoided.

Thus, toward the end of 1954, it became clear that a vigorous economic recovery was under way, that full employment might be reached in a matter of months, that some signs of overemphasis on speculation were already at hand, and that the swelling tide of demand might soon send prices soaring. In these circumstances, the proper course of governmental policy was to apply restraints that would be powerful enough to prevent inflation, yet not so effective as to choke off prosperity. Throughout the past year, therefore, banks were put under pressure to restrict their lending. The restraints were applied gradually but persistently and fearlessly. They included not only general controls over the extension of credit, but also specific controls over stock market credit and mortgage credit. At the same time, the clamour to reduce taxes was successfully resisted, and the Government's housekeeping operations—particularly the stockpiling programme—were so managed as to relieve the pressures of an expanding economy. There can be little doubt that our recent success in maintaining prosperity, with the price level fully stable in consumer markets and advancing only moderately in wholesale markets, is largely attributable to these policies.

A third lesson of experience is that it is not enough to prevent an inflationary boom, if what we seek is the avoidance of depression. Business recessions have many causes apart from inflation. Once a recession gets a good start, whatever the original cause or causes may be, it tends to spread rapidly from one activity to another. In the early stages of recession, when the confidence of business men and consumers is still apt to be high, mild measures can prove effective. On the other hand, if governmental action is withheld until a recession has gathered momentum, strong and costly remedies may become necessary. In keeping with this principle, our monetary authorities shifted quickly from a policy of credit restraint to a policy of credit ease when the first signs of an impending recession began to appear around the middle of 1953. Later, in September 1953, although unemployment was still very low, the Government announced that sizable tax cuts for individuals and corporations would become effective at the end of the year, so that people would have more money to spend or invest. These bold and early actions broke the force of this recession.

Still another lesson we have learned from experience is that, even with the best of precautions, Government officials may misjudge the economic situation or delay taking corrective actions. For these very reasons, it is desirable to strengthen devices like unemployment compensation which, besides meeting other tests of general welfare, serve to counteract automatically either recessionary or inflationary tendencies. One of the memorable achievements of the Roosevelt Administration was the introduction of a Federal-State system of unemployment insurance, which injects increasing sums of money into the income stream when unemployment is rising and removes increasing sums from the income stream when unemployment is declining. The result is that fluctuations in the flow of income from production are to some degree offset without the need of debate or decision.

We have also learned from experience that, if a maximum of benefits is to be derived from efforts to moderate the business cycle, the economic policies of our far-flung Government must be integrated, so that they become mutually reinforcing. Effective integration requires leadership, good economic intelligence, close communication among high officers of the Government, and orderly administration. For example, the policy of preventing inflation without impeding economic growth, on which so much emphasis was placed last year and to which I have already referred, involved actions not only by the Federal Reserve Board, but also by the Treasury, the Comptroller of the Currency, the Federal Deposit Insurance Corporation, the Office of Defence Mobilisation, the Federal Housing Administration, the Veterans Administration, the Housing and Home Finance Agency, the Federal Home Loan Bank Board, and others. Each had a part to play in a general and concerted policy. *It would not do for one Government department or agency to stimulate inflation while another was fighting it.*

Several steps have been taken in the past three years to improve the practical administration of economic policies. The Council of Economic Advisers was reorganised and its relation to the President made more effective. An Advisory Board on Economic Growth and Stability now brings together once a week top representatives of the leading departments and agencies concerned with economic matters. The statistical services of the Government have been strengthened. The Cabinet is playing a larger role than in the past in policy decisions, and a secretariat has been established for recording and following up the decisions reached at its meetings.

As I look back over recent years, I therefore see progress being made in numerous directions toward carrying out the purposes of the Employment Act. Nor is progress confined to governmental practices. Business men have found that it is to their advantage to budget capital expenditures at a fairly even pace, rather than vary them in response to minor fluctuations in sales. They have found that it is better to increase advertising expenditures when sales fall off than to reduce them. Most important of all, they have learned that, under conditions of modern technology, it is perilous to neglect research and development work. *A generation ago, when a group of business men got together, they were apt to compare their recent profit experience. Today's business men are as likely to compare their capital and research budgets. They look forward rather than backward. They expect the economy to grow and want to be in a position to participate adequately in the expanding markets of the future.*

The rush of progress surrounds life all around us. Currently, the physical output of goods and services is 11 per cent. larger than in 1952, and 40 per cent. larger than in 1946. Civilian employment is five per cent. above that of 1952, and 17 per cent. above 1946. The number of families in the middle and high income brackets is growing rapidly. Last year, 56 out of every 100 families had equivalent real incomes. We live better than we did ten years ago. With the exception of farmers, whose incomes in recent years have suffered on account of technological developments and unrealistically rigid price supports, our increasing prosperity is being shared widely. The ownership of a good home and automobile has become the rule rather than the exception of American life. Consumer capital—that is, dwellings, automobiles, refrigerators, and other durables—now substantially exceeds in value the plant and equipment of all our industrial and business establishments.

The workshops of America are humming with the energy of a free and progressive people. The spirit of enterprise has never been stronger. Public enlightenment is increasing. We are learning that the creative forces of free and competitive enterprise, on which earlier generations dwelt justly yet somewhat too exclusively, can derive new impetus from the humanitarian impulses released by our own times. Governmental policies are encouraging individual initiative, innovation, and investment, and yet are ever mindful of the needs of the individual for protection against the hazards of unemployment, inflation, old age, illness, and blighted neighbourhoods. It is in the recent articulation and balance of these policies that a large part of our renewed economic strength lies. There are grounds for confidence that this balance will be continued and that, although there may be pauses in the advance of prosperity, our economic progress will be maintained and extended.—*Exclusive to "Commerce."*

REPRESENTING LEADING

FRENCH *MANUFACTURERS*

ALSTHOM NEYRPIC C.G.E. (Compagnie Générale d' Électricité)

The picture shows a radial type sector gate under manufacture. This is one of the 3 identical spill-way gates measuring 33' x 26' supplied by NEYRPIC for the La Valette Dam, France.

In 1897, NEYRPIC designed their first gate—a stoney gate measuring 46' x 10', without counter weights and to be hand operated by means of a sprocket chain hoisting mechanism, for the La Praz Power Plant, France. Since that day, gaining valuable experience over the years, NEYRPIC have supplied many a gate of various types for all purposes. To-day they are undoubtedly one of the largest manufacturers of gates in Europe having supplied their gates all over the world.

COTTON IN COMMONWEALTH ECONOMY

EXPORTS OF RAINWEAR GOODS MOVE UP

By A Special Correspondent

MANCHESTER, 19*th June*

MANCHESTER LETTER

AN assurance that Lancashire cotton mills need no longer fear droughts, floods or a catastrophic pest attack in one Empire territory as production in other Commonwealth areas could make up for any such loss, was given by Lord Derby, speaking as President at the annual meeting of the Empire Cotton Growing Association.

He commented on the big increase in the amount of Empire cotton imported into the United Kingdom in the past few years. Commonwealth crops 30 years ago were almost negligible, he said, and, even in 1938, supplies reaching this country were still under 10 per cent. of total consumption. In the present season, however, over one-quarter of the cotton used in Britain had come from the Sudan and Nigeria alone.

In addition, in areas where cotton production had increased, the growers had more cash to buy British goods. British East and West Africa now absorbed 21 per cent. of Lancashire's exports of cotton cloth against only 7 per cent. before the war.

The Corporation, Lord Derby said, had been founded mainly to lessen the degree of dependence of Lancashire mills on cotton supplies from any one source. Whereas 35 years ago 70 per cent. of the cotton used in Lancashire came from the United States, the quantity taken in the 1954-55 season was only 28 per cent. of total imports and was less than the supplies received from the Sudan, East Africa and Nigeria.

Financial Aid

It was announced that financial aid for cotton growing in the Commonwealth would in future come mainly from the Colonial Governments rather than from Lancashire sources. Mr. James Littlewood, Chairman of the Council, said substantially increased contributions amounting to £95,000 a year had been guaranteed by the Governments of Uganda, Kenya, Tanganyika, Nyasaland and Nigeria. This rate of contribution would continue for five years starting from April next.

The Corporation had been notified that the Cotton Board, which had been providing a grant of £32,000 a year for research work sponsored by the organisation, had decided to discontinue this contribution. The decision was based on the many other calls on its funds and the changed conditions in the Colonies where cotton growing was prospering. The Board had agreed to provide a reduced grant of £15,000 during the current year and negotiations were proceeding on a revised application for £10,000 a year submitted by the Corporation for the next four years.

Mr. Littlewood urged the Board to reconsider its decision on this point, as otherwise the Colonies would feel that the cotton industry in Lancashire had abandoned its interest completely. The amount involved, he said, was not an unnecessary expense to the industry but was a valuable investment which would bring increased dividends in the years to come.

One of the instigators of the discussions which originated at last year's Cotton Board Conference at Harrogate into the size and structure of the cotton industry in Lancashire was Mr. J. F. Simpson, Chairman of the Cotton and Rayon Merchants' Association. His paper presented a clear-cut version of current circumstances and suggested certain ways in which the apparent redundancy could be tackled. It provided the basis on which subsequent talks took place between leaders of the industry.

Compact Industry

No formal proposals sprang from the discussions which ensued and it became clear that the various sections held divergent views on this highly controversial topic. Those who were anxious for a definite scheme of organised contraction were held back by a spirit of inaction among other sectional interests, who believed that natural economic forces would eventually result in a smaller and more compact industry.

In his final speech as Chairman of the Merchants' Association last week, Mr. Simpson returned to the subject and reiterated his views. "The adoption of the law of healthy bankruptcy as being the best method of achieving a more streamlined industry is much more likely to bring hardship in its train than would a more regularised form of procedure," he said.

The fact that many firms in the producing sections are public companies leads to wider publicity for their changes of structure and amalgamations. Mr. Simpson, without giving details, indicated that a similar movement has been taking place among the merchanting community. "During the past year many merchants have left the trade," he said, "some having given up business altogether and some having been absorbed by others. The trade is being gradually concentrated among those firms who are determined and efficient enough to overcome the changing conditions and the increasing fierceness of competition."

Mr. Cyril Lord, the campaigning Lancashire textile manufacturer, broke into a Press Conference in Manchester, describing himself as a reporter for a national daily newspaper and figured in a sharp clash with Mr. A. R. W. Low, Minister of State at the Board of Trade. The Minister had been discussing export problems with representatives of all types of industry in the area.

When questions were invited the versatile Mr. Lord, who has recently been carrying out a single-handed propaganda campaign for Government action to help Lancashire, was ready with a running series of questions which he read from a sheaf of papers. Repeatedly Mr. Low appealed for an opportunity to finish his replies and the exchange rapidly became confused.

The main argument of Mr. Lord appeared to be that the Government was still content to allow the entry into this country, duty-free, of cotton cloth from the Commonwealth. He wanted to know whether the Government wanted a textile industry ("Please answer yes or no"), what steps it proposed to take "to make sure the textile industry is here in five years," and why Britain was "the only country in the world" allowing these duty-free imports. Mr. Low said the answer to whether the Government wanted a Lancashire textile industry was "yes," and as far as the duty-free imports were concerned, Mr. Lord knew the answer perfectly well. It was because of Britain's arrangements with the Commonwealth and our Colonial policy.

Before Mr. Lord had warmed to his cross-examination there had been a placid few moments during which Mr. Low described his discussions in Manchester as the most successful he had had in the City since he became a Minister and the most valuable since he had started visiting different parts of the country to discuss the export situation.

Rainwear Exports

Exports of British-made rainwear have been stepped up despite import restrictions in many overseas markets, according to Mr. H. Weinberg, Chairman of the British Rainwear Manufacturers' Federation. In 12 months 794,670 rainwear garments, worth £1,936,275, were shipped abroad as compared with 626,856 garments, valued at £1,664,576, in the previous 12 months, he said in his report, presented to the annual meeting of the Federation in Manchester. He added: "Not content to rest on past laurels, firms have moved with the times, keeping abreast of and leading in the field of fashion and the introduction of new fabrics and proofings. "They have gone out overseas to sell and the figures achieved are a tribute to their pioneer spirit and tenacity."

Mr. Weinberg said the general picture of overseas prospects last year was a gloomy one with local production preventing all but a trickle of rainwear exports to these markets. The same applied to most European countries. But big efforts were made to expand exports to the dollar markets.

The British Government's readiness to allow a reduction in import duties on rayon woven fabrics has been criticised by Mr. R. W. Pennington, Chairman of the Rayon Weaving Association. Rayon was probably the most dumped commodity in world trade, he told the annual meeting of the Association. "Why then," he asked, "if tariff concessions are called for from the United Kingdom does the Government start slicing off a chunk of duty on goods that are notoriously dumped, especially at a time when dumping is getting worse and we have no other measures to deal with it?"

Mr. Pennington said the move for reductions in duties on rayon woven fabrics came from the industry's European competitors. "These are the very people who have boosted their exports by tax concessions, yarn rebates and other forms of artificial aid. If the Government really wants to reinforce its exhortations over the past years to abandon these practices, has it ever considered applying a little pressure by telling these countries that no reductions in U.K. tariffs on goods affected by these practices could be considered until they have been abandoned?"—*All Rights Reserved.*

RECOMMENDATIONS OF AMBAR CHARKHA COMMITTEE

SALIENT FEATURES OUTLINED

THE Government of India's acceptance of the recommendations made by the Ambar Charkha Committee—called the Khera Committee—referred to in our Survey columns last week, was officially announced on the 19th inst. The announcement is in the form of a Press note which merely lists the suggestions of the Committee, numbering 43. The Press note does not contain any reference to the divergent views reported to have been expressed by the representatives of the Central Commerce and Industry Ministry, the Finance Ministry and the All-India Handloom Board. This omission from the Press summary is a serious one and gives rise to the misleading impression that there was unanimity among the members of the Committee over the potentialities of Ambar Charkha, though, in fact, that was not the case. The aforesaid representatives, we are told, have differed materially from the members associated with the Planning Commission, the Production Ministry and the *Sarva Seva Sangh*. A substantial summary of the viewpoints of these members of the Committee would have enabled the public to form its dispassionate views about Ambar Charkha after knowing the pros and cons of the programme. The omission is all the more regrettable, considering that the time taken between the publication of the summary and that of the full text of the report is invariably long.

The general view of the Committee, the Government's Press note says, is that Ambar yarn "is fairly even and strong and suitable for weaving on handlooms." It is not known whether this conclusion has been based on adequate data relating to the economic and technological aspects of the charkha. The dissenting members on the Committee are, however, said to be of the opinion that the available data are not sufficient to justify the conclusion of the majority on the technical potentialities of the charkha. There is also said to be some difference of opinion among the members on the fatigue factor involved in operating it. The dissenting members, it is stated, feel that more research is required on the subject.

Decentralisation

Be that as it may, the Ambar Charkha project recommended by the Khera Committee is based on the system of decentralisation. Thus, it is recommended that the Ambar scheme should be progressively decentralised, with the Government or the Khadi Board limiting its functions to the distribution of financial assistance, technical and organisational advice, research, and co-ordination. The scheme should be integrated with the Community Project areas and National Extension Service wherever such projects are sufficiently established. It must be implemented through co-operatives. Incidentally, the Committee has suggested the setting up of (1) a special section or a Directorate, strongly staffed by persons qualified and experienced in the technical aspects, economics, statistics and administration of large-scale organisation of village industries, including Community Projects and co-operatives to watch continuously and closely the progress of the scheme for the first two years; (2) a Textile Research Centre, with regional centres to be formed in due course, mainly devoted to decentralised spinning and weaving; and (3) finishing and stocking centres for Ambar cloth which will be needed as production expands.

In the opinion of the Committee, Ambar Charkha should be manufactured on a fully decentralised basis, village carpenters from the Ambar areas being trained and supplied only with the essential precision parts from a central agency. Subject to organisational problems being solved in a practical manner, Ambar yarn produced for weaving will, except for the training to be imparted, be *spun* only in the spinners' homes and not at spinning centres. Special stress is laid on the need for bringing into the scheme to weave Ambar yarn the existing handlooms, instead of setting up new handlooms specially for the Ambar yarn. In this connection, the Committee observes: "Members of weavers' families should be trained and supplied with Ambar Charkhas in preference to others. At least 75 per cent. of the new spinners must be from weavers' families until nearly all such families are provided with at least one charkha set. ... As part of the first phase of the programme, the traditional charkha should be progressively replaced by the Ambar Charkha. Next would come the looms now using mill yarn in the neighbourhood of existing spinners of khadi yarn."

The Khera Committee has urged the implementation of the Ambar project as far as possible in areas where cotton is locally available and where handloom weaving is intensively practised and where there is greater need for providing employment. "The Ambar Project," to quote the report, "should be incorporated with the progressive realisation of regional self-sufficiency and provide for the increase in the consumption of Ambar cloth in local areas. This will contribute to the realisation of the goal of doing away with the subsidy in the production of Ambar cloth. The scheme should be so organised as to ensure that the yarn produced does not accumulate for want of weaving."

Subsidy

With regard to subsidy, the Committee has recommended a single-point subsidy at the cloth stage of a minimum of As. 4 in the rupee, exclusive of the cost of training, subsidised cost of Ambar units, interest on working capital advanced to co-operatives, etc. The subsidy should be given at retail sales point on 75 per cent. of the cloth produced and at the production stage on the remaining 25 per cent. (produced for self-sufficiency). It, however, emphasises that special effort should be made in the first instance to bring down the need for subsidy to As. 2, the ultimate objective being the attainment of a point where a subsidy will no longer be necessary in decentralised spinning and weaving.

The Committee wants the progress of the Ambar Charkha project to be reviewed annually, the future prospects being examined with special attention to technical improvements, quality of the product, productivity, workers' earning, subsidy element, etc. The following are the specific suggestions put forward by the Committee:

The experimental steps of the scheme should continue for some time longer; experiments should be on an increasing scale, in keeping with our other recommendations.

Both intensive and extensive efforts should be made for improvements in the design of the Ambar Charkha, both in the spinning units and in the Belni. A design competition for the spinning unit, to conform, *inter alia*, with Gandhiji's specifications, should be organised by the Government.

Much more experiment and testing should be done on productivity of yarn on the Ambar Charkha, to see if it can be more than six hanks a day, after three months of training and practice. Experiments should be conducted to reduce wastage in spinning to the minimum and possibilities of re-using or otherwise utilising the wastage should be explored.

Special attention should be given to training of both spinners and instructors. Training should be regular, systematic and sufficient. Six weeks of training, followed by six weeks' practice, is considered to be the minimum. The training scheme should keep pace with the plan for production. At the end of the three months' training, every spinner should have an Ambar Charkha set in his home for immediate use, without break. Training should culminate in a test and certificate of proficiency. The full cost of training should be met by the Government.

Disposal of Cloth

With regard to the disposal of Ambar cloth, the Khera Committee points out that the Government should purchase, to the maximum extent possible, Ambar cloth to meet its requirements. According to the Committee, the market in Ambar cloth should be carefully watched and tested, under Government supervision, in regard to the price at which Ambar cloth can find a ready market. Apart from emporia in the larger capitals of the country, there should be a network of sales depots in districts and rural areas. Sample rooms may be opened under the marketing organisation in important cities and samples of items, along with information about rates and ready stocks at different production centres, may be kept in the sample rooms, in order to secure orders and to do wholesale business.

The Committee is of the view that the concept of "certification" by the Khadi Board should gradually give place to that of a normally decentralised village industry. Ambar cloth should ultimately take a natural and not a special place among the various kinds of cloth to be bought and sold.

Other Recommendations

The Khera Committee has made six other important recommendations. These are:

First, the cost of training, depreciation and maintenance element in the cost of the Ambar Charkha set itself and the indirect subsidy given by the Government by way of loans free of interest should not be included in the built-up cost of Ambar yarn.

Secondly, the distribution of Ambar Charkha sets should be subsidised to some extent. In the first instance, the set is to be charged to full cost to the spinner to whom it is supplied, the cost being payable in easy instalments over five years, free of interest. It should be open to the appropriate agency authorised by the Government, when approximately half the cost has been recovered, to decide, in the case of particular persons or a class of persons, as to whether part of the remaining half of the cost should be treated as subsidy. One of the main criteria in deciding upon the subsidy should be the use made of the Charkha. In order to be eligible for the subsidy, the user of the Charkha must be able to demonstrate that the Charkha has been gainfully used to approximately 75 per cent. of the rated capacity.

Thirdly, working capital should be provided, free of interest, at 60 per cent. of the annual production of Ambar cloth, that is, Rs. 500 per Ambar Charkha set, with a six-monthly assessment of the requirements. The assessment should be made at least three clear months before the period for which the requirements are assessed. The working capital must be free of interest, for the manufacture and supply of Ambar Charkhas, at the rate of about 50 per cent. of the cost of the Charkha sets to be made and supplied in any one year, that is, an amount equal to six months' production.

Fourthly, the daily wages earned at spinning should be kept under constant watch and studied by the Government. A flat piece rate of 1¼ annas a hank for all counts for the present, would be reasonable, based on spinning counts, from 16's to 32's.

Fifthly, growing of cotton staples suitable for the Ambar Charkha (¾" to 1") should be encouraged in all villages as part of a drive for self-sufficiency in the C.P.A. and agricultural programmes.

Sixthly, generally speaking, yarn produced with the Ambar Charkha should be made up to 24 counts, since this Charkha is best suited for the manufacture of yarn up to this count. There should be adequate arrangements for quality control of yarn spun in bulk. Charkhas should be adequately tested for quality and performance before being used for production.

The foregoing details of the Ambar Charkha scheme as evolved by the Committee reveal that, while assigning to the Ambar Charkha the role of the big provider of additional employment, the Committee has taken as the basis of operation complete decentralisation. Whatever may be the merits of this approach, it is highly doubtful whether, in actual practice, the programme will be implemented on a decentralised basis. If the present position were to continue, as it well might, the Ambar Charkha would remain a highly centralised industry from the time cotton is distributed to spinners to the time of the disposal of cloth. From the point of view of sentiment also, doubts are expressed whether Congress men would wear Ambar cloth rather than cloth woven from traditional charkha yarn. For the Ambar Charkha is regarded by some as a mechanised equipment in relation to the traditional charkha. Apart from these issues, there is the vital consideration whether reliance can be placed on Ambar Charkha to produce, during the second Five-year Plan period, enough yarn required for manufacturing the 300 million yards of cloth envisaged as the share of this sector in the estimated total additional cloth requirements of 1,700 million yards. Yet another question unanswered is: Who will weave the Ambar yarn into cloth? The handloom weavers, it is common knowledge, have always been reluctant to use the hand-spun yarn in preference to mill yarn. This reluctance will be all the greater in the case of Ambar yarn, since most of those who are expected to operate the Ambar Charkha will be new-comers to the profession without any tradition.

U.S. TEXTILE INDUSTRY

An appeal to the U.S. Government to take positive action for controlling the "ever increasing" imports of textiles from Japan and other low-wage countries was vigorously put forward by Mr. F. E. Grief, President of the American Cotton Manufacturers Institute, in the course of his address at the annual conference of the Southern Textile Association held at Blowing Rock (North Carolina) on Friday last week. The closing of mills and cutting back of production, Mr. Grief declared, were examples of direct damage of uncontrolled imports to the American textile industry. Urging the settlement of import question, Mr. Grief said: "Confidence is needed that today's investment in money and hard work for the future will bring a fair return.... The productivity advantage of American mills has virtually disappeared with the equipment of Japanese and other Asian factories with western type machinery operated by workers receiving oriental wages, about ten times lower than American wages and using cotton purchased on the world market at prices substantially lower than American mills have to pay."

NEW INDIA ASSURANCE COMPANY LIMITED

MR. A. D. SHROFF'S SPEECH AT ANNUAL GENERAL MEETING

IMPORTANCE OF SAFEGUARDING DEMOCRATIC WAY OF LIFE IN ECONOMIC SPHERE

ADDRESSING the shareholders at the Annual General Meeting of the New India Assurance Company, Ltd., on 27th June 1956, after the notice convening the meeting and Auditors' report were read, the Chairman, Mr. A. D. Shroff, observed that though forces of peace were considerably strengthened last year, somehow, "the Geneva Spirit lingers no longer; and we co-exist in a stalemate!"

In the economic field, this period was "highlighted by a continued quest for prosperity," which resulted in considerable increases in world production, employment and incomes. The stresses and strains which followed the economic expansion were dealt with by the flexible use of monetary weapons. Some countries, however, particularly the U.K., and some primary producing countries, failed to benefit significantly from the general ebullience. He pointed out that in spite of the tremendous hardships and problems faced by countries in Asia, and a moderate rate of progress achieved, Asia was seized with a dynamic urge to make up for the accumulated neglects of the past.

Turning to the Indian economic scene, Mr. Shroff observed that "the search for a socialist millennium, in official quarters, led to economic thinking which often appeared to lack clarity and vision." He acknowledged that there was some gratifying economic progress in the country; but in his opinion, the progress was hardly commensurate with the efforts made and our needs of today. He attributed the uneven progress in individual industries to the haphazard planning, and some of the success to the more favourable factors like favourable monsoons, etc. His conclusion was that if Government had devoted more attention and given high priority to the maximum utilisation of existing enterprises, and had actively helped the evolution of optimum units in them, the policy would have definitely paid rich dividends.

Human Values

Referring to the second Plan, Mr. Shroff stated that some important questions like credit-induced inflation and the possibility of achieving the physical targets have to be satisfactorily resolved. However, the most important question, in his opinion, was that of "preserving and safeguarding the fundamental human values" and the democratic way of life in the economic sphere. He made a constructive suggestion that the Government must develop techniques of effectively regulating and controlling both the public and private sectors so that both of them could be harnessed to yield optimum results, and further, that sufficiently armed with effective machinery of regulation and control, Government must jettison all the doctrinaire and unrealistic approaches in their policies which are likely to handicap the effective mobilisation of national resources and effort. With such a control, it would not be necessary for Government to be obsessed with the ideas of transferring much of the economic activity to the public sector and squeeze the private sector out of existence. He further appealed to Government that in view of the all-embracing nature of the second Plan, whose different facets are closely interwoven, it is most important that Government should, as far as possible, undertake calculated risks, even at some cost.

In this connection, he referred to the Government policy to relegate the existing well-organised consumer goods industries to the background and not to avail of the optimum production which these industries are capable of obtaining at the minimum cost and effort, just because the Government wanted to encourage the "nascent" cottage industries to increase employment opportunities. He entirely agreed that all efforts should be made to promote cottage industries and increase employment opportunities. However, he felt that proper timing and dovetailing of the production programmes of the organised and cottage sectors of the industry are most essential.

Suggesting that the State Trading Corporation is "a most serious encroachment on free and private enterprise," Mr. Shroff pointed out that Government could render a more positive and effective service by providing better transport and warehousing facilities, etc.

Nationalisation

Mr. Shroff dealt with the argument justifying nationalisation of life assurance. He said that although insurance is basic to the economy and a form of social service, it is not necessarily best run by the State. It is the experience in the democratic part of the world that joint-stock and mutual companies effectively regulated and controlled are the best instruments for conducting this business. In his opinion, the well integrated joint-stock and mutual companies which had a creditable record during the recent years could have been harnessed to achieve a far better performance than what a monopolistic corporation aspires to do; albeit, it was most important for Government to regulate, rationalise and control the whole industry.

Mr. Shroff referred to the alleged malpractices in the industry. In his opinion, the business must be run on the highest standards of management. Statutory control and regulation of the Indian life assurance business had been for the past few years much on the same lines as in the U.S.A. Most of the troubles in the industry arose because the enforcement of the insurance law was most unimaginative, tardy and loose. He related how physical security of investment could have been most easily ensured. He also referred to the case of a company, the knowledge of whose mismanagement was known to Government for a number of years.

In his opinion, the Department concerned hopelessly failed in establishing regulations and controls of the most elementary kind.

Economic Power

Referring to the concentration of economic power, Mr. Shroff pointed out that, concentration of power would be far greater in the case of a monopolistic corporation than in the case of a number of units operating independently.

In conclusion, Mr. Shroff felt that the best interests of this country cannot be served by Government in taking such a momentous step fraught with so many pitfalls and uncalculated risks, without taking the industry into their confidence and consulting it to the fullest extent possible.

Commenting on the formula for determining compensation, Mr. Shroff said that the formula was so framed as to arrive at a compensation which was nearer to expropriation than what could be deemed fair compensation.

Results of Working

Reviewing the results of New India's operations during 1955, Mr. Shroff observed that the total premium income of the General Department was a little short of Rs. 5 crores. The underwriting profit, inclusive of interest, was Rs. 43.9 lakhs as against Rs. 34.1 lakhs in 1954. There was considerable improvement in the working of all the departments and the funds at the end of the year stood at Rs. 6 crores 89 lakhs as against Rs. 6 crores 39 lakhs at the beginning of the year.

Concluding, Mr. Shroff hoped that the shareholders have welcomed the decision of the

SUGAR INDUSTRY UNDER SECOND PLAN

CAPACITY OF EXISTING UNITS SHOULD BE RE-ASSESSED

ONCE again, the Indian Sugar Mills Association (I.S.M.A.) has expressed misgivings about the Government's policy relating to expansion of sugar industry. In a memorandum addressed to the Union Minister for Food and Agriculture, the Association observes that it is "anxious" over the licensing of more sugar manufacturing units for which there is apparently no need. It has strongly urged the Government to re-assess the overall potential by taking into account the actual performance of the industry, instead of merely depending on theoretical considerations adopted in the past under entirely different circumstances. The memorandum is in pursuance of the resolution, adopted at the last annual meeting of the Association held at New Delhi, urging that "due care should be exercised in sanctioning new units, so that no indiscriminate expansion is effected."

The misgivings of the Association about the Government's sugar policy are based on several grounds. In fixing the target for the sugar industry under the second Five-year Plan (installed capacity: 2.50 million tons; actual output: 2.25 million tons), the Planning Commission has taken as the basis a very conservative figure of the current rate of output. The estimated production of sugar for the 1955-56 season is placed at 1.67 million tons, whereas the latest anticipation of output is over 1.85 million tons. Naturally, the gap between output and actual requirements at the end of the second Plan period on the basis of the existing rate of production is put by the Commission at 580,000 tons, which is 180,000 tons more than the correct figure of 400,000 tons. In view of this, as also of the increase in the installed capacity of several existing units and the production of new mills already planned, it will not be unreasonable to expect that the target of sugar production envisaged in the Plan might be outstripped considerably.

Sugarcane Cultivation

The aforesaid aspect has been lucidly brought out by the Association. According to it, 1.85 million tons should be taken to represent the actual rate of output which the industry is capable of achieving. Besides, it is necessary carefully to assess the future possibilities of production by the existing units during the second Plan period. Such an assessment can be appropriately made by evaluating the effects of both positive and negative factors which have a bearing on sugar production. The most important factor relates to the improvement—quantitative and qualitative—in sugarcane cultivation. With higher yields of sugarcane, the factories will be able to extend their crushing period further. Substantial expansion will be undertaken by the factories to cope with the increased supply of sugarcane. Already, several units have obtained permission to expand their crushing capacity—the size of as many as 45 existing units is now being augmented—and, with a further improvement in cane supplies, other factories also are expected to go in for similar expansion.

The Association refers next to the tendency among the sugar mills to reduce the period of stoppages for general cleaning of plants. As against cleaning after every ten days, as was the case previously, the mills, it is said, have now taken to cleaning after 20 to 25 days, or even after a month. This has been rendered possible by the addition of a few more evaporators and boiler sets for achieving higher efficiency. With improved mechanical efficiency, less stoppages for cleaning, etc., the overall working efficiency of the sugar factories is expected to increase considerably, leading to a further addition to the actual working capacity of factories. All these factors will, in the opinion of the Association, result in an addition to sugar production by 200,000 tons at the end of the Plan period. An additional quantity of 50,000 tons is also expected to result from the utilisation of the present idle capacity of mills which will be in production by 1960-61. The aggregate additional sugar output expected from the existing units will thus work out to 2.1 million tons. This quantity, together with the 585,000 tons produced by the new sugar units already licensed with a working season of 150 days, will bring the total production of sugar by all the existing and newly licensed factories to 2,685,000 tons or 2,700,000 tons, as against the estimated requirements of 2.25 million tons.

While discussing the aforesaid factors, the Association no doubt admits that there are some natural factors such as failure of monsoon and floods which may adversely affect sugarcane production. Although the chances of such failures will be rendered considerably less by the sinking of a large number of tube-wells and adoption of flood control measures, an allowance of 200,000 tons may be made for this purpose. Even then, it would be possible, the Association points out, to stabilise the production of sugar at the end of the Plan at the 2.50-million ton level which is higher than the target figure of 2.25 million tons. In view of all these considerations, the Association urges the Government to re-assess the capacity of the existing sugar factories before taking any steps for licensing new units. Another ground on which the Association, it would appear, wants the Government to re-examine the issue relates to finance. The second Plan has left the question of availability of funds rather vague. All that it has done is only to estimate the fixed capital investment needed (1) for implementing the development programme for the sugar industry at Rs. 50 crores and (2) for developing items of machinery envisaged under the National Industrial Development Corporation at Rs. 2 crores. The Plan has given no indication of the sources from which the industry could find these large sums.

INDIA AND WORLD SUGAR AGREEMENT

The United Nations World Sugar Conference at New York concluded its session on Wednesday last week, contrary to earlier anticipations that it would last at least for six to seven weeks. Since the Conference was held in secret, no details are available about the deliberations and the decision taken thereat. From the scattered reports appearing in the Press, it is gathered that there was a virtual deadlock on the two important questions of reallocations of export quotas and revision of sugar prices. It is, however, stated that the Indian delegation was satisfied with the trend of discussions. Summing up his impressions, the New York correspondent of the *Hindu* observes:

"India is not at present a signatory to the Sugar Agreement, which came into force in 1954 and will expire in 1959, but it now seems to be interested in participating in it. India has been a sugar importer, but, under the second Five-year Plan, production is going to be stepped up and India expects to become an exporter by 1958. It, therefore, stands to benefit by signing the Agreement and is already understood to have asked, for the first time, for an export quota.

"When the present Conference began, Cuba, the world's biggest producer and exporter of sugar, in order to retain its predominant position in the world market, tried to get the provisions in the existing Agreement restricting the production of the commodity in the participating countries made even more stringent. India, with its big plans for expansion, naturally could not accept this and Mr. Gopala Menon, India's Consul-General here, who led the Indian delegation, carried on a vigorous fight against the Cuban move to tighten the restrictive provisions. He told the Conference that, in trying to protect the sugar giants, they should not try to stifle 'the fast-growing children.' India's position was supported by Britain, Russia, Australia, Poland, Czechoslovakia and Mexico.

"Finally, it is understood that there was a large measure of agreement that the restrictive provisions, instead of being further tightened, should, on the other hand, be whittled down in actual operation. This has pleased India, Indonesia, and other prospective exporters. The trend of discussions showed that the Conference was anxious to meet India's objections.

"The International Conference will resume its discussions in October in Geneva where the path is expected to be cleared for India to participate in the Sugar Agreement."

SUGAR PRODUCTION AND STOCKS

Sugar production in India during the month of May 1956 was 132,958 tons, bringing the total production during the seven months of the current season to 1,788,956 tons, as against 1,569,000 tins in the corresponding period last season according to the Indian Sugar Mills Association.

The offtake of sugar from factories during the month of May was about 148,000 tons, as against 126,000 tons a year before. The total offtake of indigenous sugar during the seven months was about 953,000 tons, as against 591,000 tons a year before.

The closing stock of indigenous sugar as on 31st May 1956 was 1,241,000 tons, as against 1,020,000 tons on the same date last season.

The Government of India has arranged for a regular movement of sugar by special trains from factories in Northern India to destinations in the South where there is at present a keen demand for sugar. It is proposed to maintain an adequate stock of sugar at important centres for distribution in Southern India, including Madras, Trichinopoly, Madura, Coimbatore, Cochin and Bangalore.

CASE FOR AN INCREASE IN COAL PRICES

GOVERNMENT SHOULD DECIDE ITS POLICY EARLY

THE coal industry has, of late, been much in the news, thanks to the Award of the All-India Industrial Tribunal (Colliery Disputes) recommending an increase in wages of colliery workers. The circumstances leading to the Award are too familiar to readers to need any fresh reference. The industry is not opposed to giving labour higher wages as recommended by the Tribunal, as far as can be judged from the pronouncements of the spokesmen of the industry. This is further borne out by the fact that the industry has shown so far no inclination to appeal against the Award. All that the industry is worried about are the financial implications of the Award and their impact on the working of the mines, particularly the uneconomic units. Colliery owners have, therefore, appealed to the Government for a compensatory increase in coal prices and an interim rise until such time as the final decision on coal prices is taken.

The coal industry's case for an upward revision of prices has not come to the fore only now. It has been a longstanding complaint of the industry that the mounting cost of production threatens to make—in many cases, it has already made—the working of mines uneconomic and that a suitable increase in coal prices should be allowed to compensate the rise in costs. It was in deference to this plea that the Price Revision Committee was set up last year. The Award of the Industrial Tribunal has only strengthened the grounds for an early revision of prices. In a public statement issued by the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association, the colliery owners have submitted that if coal prices are not increased, many collieries will be forced to close down.

The cost of implementation of the Award has been estimated by a representative cross-section of the industry at not less than Rs. 4 per ton. On this basis, the total additional cost to the coal industry will be Rs. 15 crores per annum. According to another estimate, the general increase in wages granted by the Tribunal works out to about 40 per cent. of current wage levels and this will add Rs. 9 crores to the industry's annual wage bill of just over Rs. 20 crores. This will mean an increase in cost of production of about Rs. 2 per ton for all grades of coal raised. Thus, the estimates of the additional burden vary widely. The two Associations and the Federation admit that, in the time available, it is impossible to arrive at a completely accurate assessment of the cost of implementation. This is true because the Award will affect individual producers differently. However, the colliery owners point out that, as it is, the margin between cost of raising coal and selling price is so small that, if the coal industry is to continue in operation as a healthy industry, it is essential that full compensation be granted. They have also submitted that, until the effect of the Award can be assessed from actual working costs over a period of, say, six months, an immediate and reasonable price increase should be given as an interim relief.

Another aspect of the question to be considered is the impact of the price increase on the coal-consuming industries. The colliery owners have, in this connection, quoted the statistics prepared by the Ministry of Commerce and Industry to show that the effect of an increase of Rs. 4 per ton in the price of coal on the major manufacturing industries will be less than 0.5 per cent. of the gross ex-factory value of their products. They have also drawn attention to the fact that bodies representing coal-consuming interests have supported the coal industry's case for an increase in price. The colliery owners, therefore, consider that it is most unfortunate that the Government has not seen fit to announce any increase in coal prices prior to the date of implementation of the Award, when such a step was justified.

In the circumstances, which obtain at present, two alternative courses are open to the industry. First, it can implement the Award and thus commit itself to bearing the entire additional liability for an unknown period; but many units will not have the financial resources to meet this commitment and will have no alternative but to close down. Secondly, it can appeal against the Award and apply for a stay

RECORD COFFEE CROP IN 1955-56

FURTHER EXPORT QUOTA ALLOWED

THE year 1955-56 has proved to be a bumper one for Indian coffee, with an estimated output of 33,410 tons (as approved by the Indian Coffee Board), the highest in the history of the industry. This represents an increase of 8,310 tons over the previous year's crop of 25,100 tons, to which level it had declined from 29,410 tons in 1953-54. Thus, the increase in crop during 1955-56 has not only made good the fall in output during the previous season but has enabled the industry to exceed its previous season but has enabled the industry to exceed its previous best crop reaped in 1953-54.

The aforesaid crop for 1955-56 is made up of 21,970 tons of arabica and 11,440 tons of robusta. The receipts into the pool so far aggregate 33,172 tons and it is expected that some more will be received by the pool.

Though it was generally expected that the 1955-56 crop would be higher than that of the previous year, the latest revised estimates show that they have far exceeded the earlier estimates. Thus, at the opening of the year, the crop was expected to amount to about 27,000 tons. In February this year, the Marketing Committee of the Coffee Board revised it to 28,795 tons and later in April to 30,000 tons.

The prospects for 1956-57 seem to be equally optimistic from all accounts, as far as one can see now. The very rough preliminary estimate places the crop at about 33,000 tons. Disclosing this, at the annual meeting of the Coffee Board held last week, Mr. K. Srinivasan, Chairman of the Board, said that the seasonal conditions have been fairly satisfactory, although in certain areas the rains were premature or delayed. He added: "We seem to be getting into a period now, where a crop of over 30,000 tons would be normal." This does not mean that the annual coffee production in India will be stagnant round about this level. In fact, the scope for increasing the output is vast and the Coffee Board, as readers are well aware, has planned to raise the output to 68,000 tons by the end of 1970. The plan has been forwarded to the Government of India and orders thereon are awaited. The Board has for some time past under consideration plans to improve its financial position and warehousing facilities to handle the increasing production. Mr. Srinivasan said there would be very little difficulty in finding the loan part of the finances for it. The non-recurring charges, as well as the establishment charges for the administration of the plan would, however, have to be met by the Board.

Low Proportion of Cherry

One notable feature of the production in 1955-56, to which Mr. Srinivasan drew pointed attention, is the low proportion (perhaps, the lowest so far) of cherry coffee to plantation coffee produced. The total receipt of cherry coffee into the pool as on 31st May 1956, he added, was 5,030 tons, which represented only about 23 per cent. of the total arabica coffee delivered into the pool. Mr. Srinivasan expected that this feature would be maintained in future years also.

The Marketing Committee of the Board had originally decided, with the sanction of the Government to release 4,100 tons (made up of 2,850 tons plantation, 650 tons arabica cherry and 600 tons robusta) out of the 1955-56 crop for export. Of these, all but 250 tons of arabica cherry, which have been kept for monsooning, have been sold. The prices fetched during the months of March and April were fairly high, but later on there was a slight decline. The Marketing Committee has now decided to release for export a further quantity of 3,700 tons (3,000 tons plantation, 100 tons cherry and 600 tons robusta), as against the growers' request for an additional release of 6,000 tons. Of the quantity sold for export, so far 500 tons have been done through the State Trading Corporation to the U.S.S.R. This coffee was shipped a few days ago.

The offtake in the internal market since January 1956 has ranged from 1,700 to 1,900 tons per month, or an average of about 1,825 tons per month. The range of prices at the pool sales during the year under review was:

Variety	*Price per cwt.*
Plantation A	Rs. 191-2 to Rs. 235-15
Arabica cherry flats ...	Rs. 140-11 to Rs. 194-5
Robusta cherry flats ...	Rs. 140 to Rs. 178

"With a more than usually good crop, fairly good prices for export coffee and judicious releases for the export and the internal markets," the Coffee Board Chairman said, "it is hoped the internal prices would remain stabilised during the rest of the year and also give a reasonable return for the producers." Meanwhile, the Board has recommended to the Government that the minimum pool release prices based on Rs. 2-2 per point be continued for a further period of six months from 1st October 1956. The final payment on 1954-55 crop will be made on the same basis as that adopted for 1953-54, subject to the award of four points as bonus to robusta. It has also been decided to continue the existing price differential scale for a period of three years from the season 1955-56 and that the P.D.S. shall not be taken up for revision at intervals of less than three years.

Mr. Srinivasan disclosed that the plan for increasing coffee consumption in the home market had been finalised by the Propaganda Committee. The main features of the plans are: (1) to have a propaganda unit in each of the State capitals, (2) to shift gradually the emphasis of propaganda from South to North India and (3) to have only coffee buffets and depots in South India as far as possible. With this policy in view, some of the coffee houses in South India will be converted into depots for sale of coffee powder or buffets and some coffee houses will be opened in North India. In addition, the propaganda Committee is also considering proposals for a publicity campaign for "Drink-More-Coffee."

RUBBER STATISTICS

The output of rubber in India during May 1956 amounted to 1,983 tons, as against 1,826 tons in the previous month (2,085 tons in May 1955), thus maintaining the upward trend for the third month in succession. The aggregate output for the first five months of the year is 8,147 tons, as compared with 7,826 tons in the corresponding period of 1955. Consumption by manufacturers, however, declined from 2,402 tons in April to 2,168 tons, the lowest since November 1955. In May 1955, consumption amounted to 2,175 tons. The total consumption in the first five months of 1956 amounted to 11,798 tons, as against 11,086 tons in the corresponding period last year. Imports during the month under review amounted to 623 tons, having declined from 788 tons in April. Stocks at the end of the month amounted to 5,714 tons, as against 5,276 tons at the end of the previous month, and are the highest since the close of February last.

The Government of India has decided to grant loans for construction of houses for plantation workers. It has informed the West Bengal Government that it is willing to provide financial aid to those planters who want to build houses for their workers. The money sanctioned by it will be distributed through the State Government.

The Government of India proposes to depute two officers of the Coffee Board to explore the possibility of coffee cultivation in the Andaman and Nicobar Islands.

(Concluded from next column)

ready created a lot of resentment in the European markets and further restrictions through the contemplated Jute Corporation will only spell permanent danger to Pakistan's raw jute. It is only to be hoped that the authorities concerned in Pakistan will examine this issue threadbare before reaching a final decision.

In his speech mentioned at the outset, the Chief Minister of East Pakistan referred to a number of problems confronting the jute industry and outlined the measures already adopted by the Government. These included the annual regulation of the jute crop, establishment of the Central Jute Committee, efforts to collect reliable statistics about the production and expenses of cultivation, initiation of research into the problems of jute agriculture, industry and marketing, education of the growers regarding assessment of crop, etc. The Minister also referred to the establishment of the Jute Department of the Government and hoped that the trade and the public would find the Department as a useful medium for bringing their grievances to the notice of the Government and having them redressed. Finally, he appealed to the jute mill industry in East Pakistan to help the Government solve the problem of ensuring fair prices for the growers by assisting in the disposal of jute purchased by the Government directly or through some Government-sponsored agency during the present or any subsequent season.

JUTE CORPORATION FOR PAKISTAN

AGENCY FOR CONTROLLING EXPORTS

PAKISTAN seems to be seriously contemplating a further tightening of controls on export of raw jute and jute goods. Speaking at the inaugural meeting of the recently constituted Jute Advisory Committee held at Dacca on the 22nd inst., the Chief Minister of East Pakistan, Mr. Abu Hussain Sarkar, recommended to the Committee's consideration the question of establishing a jute corporation, first suggested by the Pakistan Central Jute Committee some time ago. This Corporation will have, according to the Minister, as its main aim the effective control of all foreign sales of jute and jute goods. "The Corporation will," he said, "act also as a clearing house whose operations will be aimed at eradicating existing malpractices in the jute export trade, supervision of the quality of jute consignments offered for export, introduction of more Pakistanis in the trade, reduction of speculation to a minimum and encouragement of co-operatives and other Governmental agencies with a view to stabilising jute prices to the benefit of the growers."

The Jute Corporation will consist of representatives of the Provincial and Central Governments, as well as of the trade. Mr. Sarkar regretted that, although Pakistan had been established nine years ago, Pakistanis were not yet getting a fair share in the Provinces' jute export trade. As a result, the bulk of profits earned by foreign elements was, he remarked, repatriated from the country, thereby prejudicially affecting the strength of the national economy.

For quite a number of weeks now, the jute trade in Pakistan as well as outside was labouring under the apprehensions that the Pakistan Government would shortly set up a State trading organisation for handling exports of raw jute. These apprehensions may be said to have been laid at rest, for the time being, at least, since the proposed Corporation's intensions are not to participate directly in the export trade. There is nothing in the remarks of the Minister mentioned above to suggest that the Corporation will directly participate in the trade, thereby eliminating private traders. On the other hand, the Corporation will serve as a clearing house, the operations of which would aim at eradicating malpractices in the jute export trade. In other words, all orders for the purchase of raw jute and jute goods and all offers fulfilling these orders should be put through the Corporation. By this means, the Government perhaps hopes to eliminate malpractices such as under-quoting, under-grading and under-invoicing, which were responsible for the cancellation of licences of a number of European and Indian trading houses registered in Pakistan a year and a half ago.

Unnecessary Interference

The desire to eliminate malpractices as noted above is no doubt a sound one, but it is rather difficult to understand how the proposed Corporation could eliminate them when the whole Governmental machinery, backed by State forces maintained at the border, has failed to bring any appreciable improvement. The establishment of the Corporation would result in causing unnecessary interference with the normal export trade which is purely guided by the laws of demand and supply of raw jute. The best way the Government can help achieve its twin policy of safeguarding the position of jute in international markets and of ensuring a fair return to the grower lies in encouraging the cultivation of raw jute on scientific lines so that the per-acre yield which has remained constant at about three bales per acre for several decades is doubled. This will not only make the foreign consumer of jute to obtain his jute supplies at cheap rates but will enable the jute grower to have a good return for his crop. Instead, if the Government continues to set up agencies such as the proposed Jute Corporation, in order to stabilise jute prices by artificial means, the future of the jute trade is sure to be jeopardised. Jute occupies an important place in the economy of Pakistan. Every year, about six to seven million bales of raw jute are produced and the bulk of it, of the order of about 4.5 to 5.5 million bales, is exported. The foreign exchange earnings from raw jute exports of Pakistan are estimated at Rs. 80 crores. To interfere with the trade of such dimensions is only to drive the overseas buyer to take to substitute packaging materials. The fixation of minimum export prices has al-

GEARING RAILWAYS TO MEET TRANSPORT NEEDS

IMPORTANCE OF OPERATIONAL EFFICIENCY

AT the meeting of the Central Advisory Council of Industries, held last week in New Delhi, the Union Minister for Railways, Mr. Lal Bahadur Shastri, deplored that, while the targets for agricultural and industrial production in the second Five-year Plan were being steadily stepped up, the allotment made to the railways had been curtailed, and warned that the railways, if they had to work within the allotment made to them, would not be able to meet the traffic needs under the new Plan. This is a point of view which we, along with the general public and the various trade and industrial organisations, have consistently supported. After all, transport is a vital link in the chain of economic progress so that, if the link were to weaken, the whole chain would be exposed to the danger of a serious breakdown.

Clearly, all effort should be made to see that the railways get the finance they need. But the railways, on their part, owe a responsibility to the taxpayer as well as the users of transport to make the best use of the money allotted to them. Some definite and welcome steps have been taken in this direction. Thus, we are told that the authorities are already cutting out from their Plan some of the less essential building projects. This is as it should be. For, there is no gainsaying the fact that between engines and wagons, on the one hand, and relatively inessential brick and mortar, on the other, the former deserve to have a higher priority. From the point of view of the public, grandiose buildings can wait. But it cannot wait very long for locomotives, wagons and carriages.

This is one aspect of wise economy in expenditure. But there is another aspect which requires equally urgent attention. It is improvement in operational efficiency. If the authorities can avoid unnecessary usage of coal, or can make a locomotive move a little further than it does or a wagon carry a little more than it hauls and move round faster, they will have effected a significant improvement in the ability of the railways to meet the traffic needs and also saved money that could be put to better advantage. This is an aspect of economy in railway administration which has to be kept constantly under review. Although efforts are no doubt being made to step up operational efficiency, there is obviously room for further improvement. This conclusion emerges very clearly from a recent report of the Estimates Committee entitled "Statistical Studies of Certain Railway Problems."

The Committee has calculated that, in 1953-54 and 1954-55, the railways consumed 15 lakh tons and 14 lakh tons more coal, respectively, than they would have consumed if the efficiency of coal consumption had been maintained at the level of "best performance" in the preceding years. This means that, in 1953-54, the railways spent—on the basis of Rs. 32 per ton—Rs. 4.8 crores more than they need have spent, the corresponding figure for 1954-55 being Rs. 4.6 crores on the basis of Rs. 33 per ton. It must be remembered that the railways are the single largest consumers of coal; their coal bill for 1954-55 was Rs. 38 crores. There are, of course, some factors in the excess cost of coal consumption over which the railways have no control such as the quality of coal or coal price. Further, there are factors which could be controlled only through the adoption of long-term measures. But it is known that there are also factors which could be immediately controlled by certain measures. These factors are said to account for about 6 per cent. of the excess coal consumption. In two or three years, the railways, through the adoption of measures designed to improve the economic utilisation of coal, could make considerable savings in their coal bill.

There is also scope for more economic utilisation of wagon stock and locomotives. The Committee has made a series of calculations in respect of utilisation of wagons and locomotives on both broad-gauge and metre-gauge railways. It has found that had efficiency been maintained in 1953-54 and 1954-55 at the best performance of the previous years, the traffic moved in those years could have been moved with 13,120 and 7,670 wagons less. As the capital cost per B.G. wagon is about Rs. 14,000, capital assets of the value of about Rs. 18 crores and Rs. 10½ crores may be considered to have been unutilised. At 4 per cent. interest this would correspond to about Rs. 72 lakhs and Rs. 42 lakhs additional revenue expenditure in 1953-54 and 1954-55 respectively.

The earning capacity of a B.G. wagon is about Rs. 20 per day. Accordingly, the extent to which earnings could have been increased by more efficient working could be placed at about Rs. 9½ crores during 1953-54 and Rs. 5¼ crores during 1954-55 on the B.G.

Similar calculations have led the Committee to the conclusion that, on the metre-gauge, a total of 5,500 wagons may be "treated as not utilised during 1953-54 and 1954-55." Since the cost of a metre-gauge wagon is Rs. 10,000 per year, this means a wastage of capital assets of the value of Rs. 5½ crores in the years 1953-54 and 1954-55 or in terms of 4 per cent. interest, it means a loss of Rs. 22 lakhs. Thus, on the B.G. and M.G. systems, the additional expenditure due to interest on capital not being utilised to the best possible advantage has been placed at Rs. 94 lakhs and Rs. 64 lakhs during 1953-54 and 1954-55 respectively. Further, the earning capacity of a M.G. wagon is about Rs. 13 per day. Accordingly, the extent to which earnings could have been increased by more efficient working could be placed at about Rs. 2.6 crores in each of the years 1953-54 and 1954-55.

In the utilisation of B.G. locomotives, there has been, according to the Committee, a 12 per cent. loss in efficiency. This means that during 1953-54 and 1954-55, 650 more engines have been kept on line than what were required for the movements actually effected. Taking the average cost of a B.G. locomotive at about Rs. 5 lakhs, this would represent capital assets of the value of Rs. 32½ crores. At 4 per cent. interest, it would mean an annual loss of about Rs. 1.3 crores to the railways. In the metre-gauge, there has been a 20 per cent. fall in the efficient utilisation of the locomotives. For the years 1953-54 and 1954-55, this, in turn, meant respectively the use of 700 and 640 M.G. locomotives more than what were necessary. The capital cost of an M.G. engine is about Rs. 3 lakhs, so that the wastage is placed at Rs. 21 crores and Rs. 19 crores in 1953-54 and 1954-55; at 4 per cent. interest, this would represent a loss of revenue to the tune of Rs. 84 lakhs and Rs. 76 lakhs in these two years.

Perhaps, the Committee itself would not claim great sanctity for those figures nor place all the blame for lack of efficient utilisation at the doors of the railway administration. But these calculations indicate a healthy and commendable way of looking at the Railway problems. They serve to bring out the national waste implied in the non-utilisation of the optimum capacity of wagons and locomotives. And, in so far as such non-utilisation could be avoided, it is the duty of the authorities to prevent it through proper and effective use of the available equipment.

AIR-INDIA INTERNATIONAL

A nation's aircraft, engaged in international air service, is more than a means of transport. It is a flying ambassador of the country of origin. From this point of view, it is of the utmost national importance that the Government-owned Air-India International Corporation (Chairman: Mr. J. R. D. Tata) should not only maintain but improve upon the traditions built by its illustrious predecessor in pre-nationalisation days. It is, therefore, gratifying to note that the Corporation has been gradually improving and extending its services. And its financial results too, judging from the lavishly produced and illustrated latest report and accounts of the Corporation for the year ended 31st March 1955 (subject to audit by the Comptroller and Auditor General of India) are encouraging. Incidentally, one may wonder whether some austerity could not have been practised in the production of the report of this nationalised undertaking without, of course, sacrificing any of its essential features. Be that as it may, during the year 1954-55, the first complete year of its operations, the Corporation made an operating profit of Rs. 33.65 lakhs after providing Rs. 41 lakhs for depreciation on its assets and Rs. 13.75 lakhs for obsolescence of spares and stores.

It must, however, be noted that, in accordance with the terms of the Government loan, no interest has been provided for the Rs. 6.9 crores capital provided by the Government. The terms, it may be mentioned here, provide that no interest will be charged on capital for a period of five years commencing 1st August 1953; the position is to be reviewed at the end of the period. After deducing Rs. 8.54 lakhs as interest on bonds issued to Air-India International Ltd. and providing Rs. 10.8 lakhs for deferred taxation, the balance available for appropriation is Rs. 14.3 lakhs. The Directors have decided to transfer Rs. 3.57 lakhs to insurance fund, Rs. 10.5 lakhs to reserve fund, leaving Rs. 23,000 to be carried forward.

An analysis of the Corporation's profit and loss account shows that the total revenue of Rs. 4.83 crores was made up of earnings from passengers Rs. 3.29 crores (68.09 per cent.) earnings from mails Rs. 85.77 lakhs (17.73 per cent); cargo and excess baggage Rs. 45.49 lakhs (9.41 per cent.), charters Rs. 6.79 lakhs (1.40 per cent.) and other revenues Rs. 16.28 lakhs (3.37 per cent.). Operating expenses absorbed 28 per cent., salaries of employees 22.7 per cent., traffic and passenger service 13.36 per cent., depreciation 12.17 per cent., engineering 9.35 per cent., agency commission 6.23 per cent., insurance 4.87 per cent. and administration 3.33 per cent.

The balance-sheet total of Rs. 12.83 crores includes on the assets side: fixed assets Rs. 7.23 crores; development expenditure Rs. 9.15 lakhs, spares and stores in stock Rs. 2.1 crores; debts and advances Rs. 1.85 crores and cash and investments Rs. 1.13 crores. On the liabilities side, there is a sum of Rs. 2.77 crores being the compensation due to Air-India International Ltd. and the capital of Rs. 6.9 crores advanced by the Government. There is a provision for depreciation and obsolescence to the tune of Rs. 87.6 lakhs. The reserves and funds include general reserve Rs. 15 lakhs, insurance Rs. 10 lakhs and provision for deferred taxation Rs. 16.05 lakhs.

The capacity ton-miles flown aggregated 23,684,000 and the passenger miles flown 115,696,000. The revenue per capacity-ton-mile worked out to Rs. 2-0-8, thereby showing a surplus over the cost per capacity-ton-mile of Rs. 1-15-9.

The loss of the *Kashmir Princess* has reduced the number of the Corporation's constellation fleet to three and that of its total fleet to eight. The Corporation is replacing its Constellations by Super Constellations. It already has or will soon have six Super Constellations and three Constellations. The authorities recognise that, since it takes two years or more to obtain delivery of new aircraft and to train the necessary flying and ground personnel, "plans for future expansion as well as for the replacement of equipment with a view to keeping abreast of progress in the industry must be prepared well ahead." As it is, the Corporation's route to the U.K. with stops on the Continent continues to be the mainstay of its activities.

The most important development in the Corporation's activities during the year under review was the inauguration of the Far Eastern Services. Commenting on this development, the Directors observe:

"The extension of the Corporation's services to Tokyo is an important landmark in the history of its growing operations as it enabled us to provide direct communication between shores of the Atlantic in Europe and of the Pacific in Japan, a flying distance of over 10,000 miles." Now that the main programme of expansion has been put through, the Directors have rightly decided that the immediate task is one of consolidation and improvement in efficiency and economy.

REDUCING COST OF FLYING

Trans World Airlines' research staff have won another round in the battle to reduce the cost of flying. Meteorologists and navigation experts have perfected "Pressure Pattern" flying to the point of saving up to 12,000 gallons of gasoline per week in trans-Atlantic service alone. In simple language, the scheme for the northern hemisphere is to plot a plane's course to the left of a high pressure area and to the right of a low pressure area. The theoretical result is a constant tail wind for the airplane and tremendous saving in fuel cost.

A new range of light commercial vehicles, including a closed-in van, an open truck and a miniature bus, has been announced by the two firms (Austins and Morris) that constitute the British Motor Corporation. The bus, called Minibus or Omnicoach by its respective makers, can carry nine or 12 people including the driver. All models are powered with a 4-cylinder 1,489 c.c. o.h.v. engine developing 42 b.h.p. at 4,000 r.p.m. The vehicles have an all-steel integral chassis and body with a deep girder-like section framing carried in an unbroken line round the vehicle, giving great strength to the structure.

NEW PRODUCTS AND PROCESSES

Electronic Engraving Machine

PRINTING blocks can be automatically produced with a Swiss-made electronic engraving machine which was recently demonstrated for the first time in the U.K. Known as the Elgrama electronic engraver and made by Elgrama A.G. of Zurich, it is claimed to be one of the most advanced machines of its kind. It will process half-tone, line and colour blocks and gives a choice of 13 screens varying from 50 to 200 lines per inch. Selection is made by a lever control. Blocks up to 11.8 inches by 16.53 inches can be made and zinc or copper can be used for half-tone or colour plates. At the demonstration in London, a Press photograph was taken, processed, mounted ready for use and proofs obtained in just over an hour. Gordon and Gotch (75-79, Farringdon Street, London, E.C. 4) are the sole U.K. agents for the new machine.

Making Metal Stronger

A new record for the strength of metals has been established by metallurgists of the General Electric Company, the company claims. G.E. reports that in the laboratory technologists have produced minute iron crystals with tensile strengths as high as 1.9 million lbs. per square inch. According to Dr. J. Herbert Hollomon, Manager of the Metallurgy and Ceramics Research Department of the Company in San Francisco, such crystals are 150 times stronger than standard iron crystals, and four times the strength of the strongest steel wire. The crystals produced are thinner than a human hair, and are less than an inch long. So far, they have only been produced as laboratory specimens, too small to be of practical use. But Dr. Hollomon believes that it may be possible to make larger perfect crystals that will be of commercial significance. For some time now metallurgists have been working on methods to raise the strength of basic metals. In theory, metals as found in nature are said to be between 10 and 1,000 weaker than they should be. The maximum strength of iron crystals is considered to be 2-3 million lbs. per square inch of tensile strength. In theory, if such strength potentials could be achieved it would be possible to build girders no thicker than wire, and to make a motor-car body that would be immune to bumps from other vehicles.

Irradiated Food

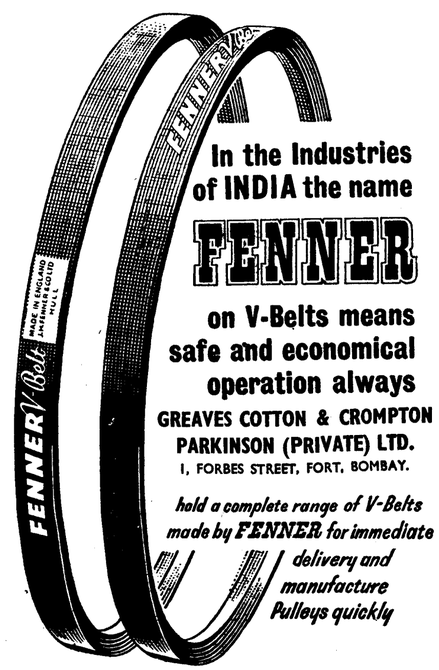
Irradiated food may appear in American kitchens within four to six years, according to views expressed at the recent conference of Government and State food and drug experts in New York City. Such food will have been subjected to mild doses of irradiation to extend the refrigerated storage period. Just how soon such a process becomes general may depend on the results of research to be carried out at a pilot plant which the U.S. Army and the Atomic Energy Commission are jointly building. This will be ready to operate by 1958, when it will be able to handle about 1,000 tons of food a month. Meanwhile, the Quartermaster Corps has been conducting research involving human volunteers. These experiments have indicated that some foods give better results from irradiation than others. Among those which yield good results, in terms of retaining flavour and texture, are beef liver, carrots, chicken, pork, shrimp, oysters, ham and sweet potatoes.

Improving Whiteness in Plastics

An optical whitening agent claimed to combine excellent solubility in hydrocarbon, ketonic and other organic solvents with unusual stability to both light and heat has recently been evolved. The use of optical whitening agents for giving extra whiteness to textiles, paper and certain types of plastics is basically similar to that of the traditional "blueing" of offwhites—that is to increase the apparent whiteness of the object by counteracting the inherent yellow appearance. The new whitening agent, known as Tinopal P.C.R.P., is claimed to mark a definite advance in products of this type for the plastics industry. It dissolves in plasticisers used in the manufacture of cellulose acetate and P.V.C. plastics as well as in unplasticised materials like polythene and polystyrene and can be incorporated directly during the compounding process. It remains stable up to temperatures of 550 degrees Fahrenheit. The manufacturers, The Geigy Company (Rhodes, Middleton, Manchester) state that only very small amounts of Tinopal P.C.R.P. are needed to offset the slight yellowness of the base plastic, whether it is white pigmented or in the clear transparent form. Added brilliance is also given to plastics lightly tinted for pastel blues and pinks, or for the corresponding crystal shades.

Revolutionary Turbine-Power Auto

An automobile which may revolutionise the industry is being exhaustively tested in the United States. The car—a 1956 Plymouth—is powered by a revolutionary gas-turbine engine that does not need a radiator, cooling system, carburettor, distributor or transmission. Outwardly, the gas-turbine car looks like any other new Plymouth automobile. But under its hood it is radically different. The turbine engine is 200 pounds lighter in weight than the average piston-type engine. It has less vibration, requires very little oil for lubrication, and has 80 per cent. fewer parts. The engine can use a wide variety of fuels, including kerosene and ordinary fuel oil. Only one spark plug is used in the engine, and it is used only for starting. A jet of burning, expanding gases is directed against the blades of a turbine wheel which delivers power to the wheels of the car.



ROLE OF EXPORT CREDIT INSURANCE

MORE SUGGESTIONS FOR EVOLVING A PRACTICABLE SCHEME

IT is an encouraging sign that more and more trade organisations are becoming aware of the importance of export promotion to the country's economy and are showing a greater readiness to appreciate the value of an export credit guarantee scheme in assisting the growth of export trade. The Federation of Indian Chambers of Commerce and Industry has already welcomed and made some suggestions for the institution of export credit guarantee scheme in the course of its reply to the questionnaire issued by the Committee which is engaged in drawing up a scheme for this purpose. Many other trade organisations also have broadly welcomed the scheme. Among these bodies, mention must be made of the Indian Merchants' Chamber, Bombay, which, in addition to supporting the scheme, has also made several concrete suggestions for making it a practicable one.

The Chamber, in a memorandum submitted to the Export Credit Guarantee Committee, has recognised that the scheme is conceived as an instrument for promoting India's export trade. In this connection, it recalls that the composition of India's foreign trade has been changing and the country, a traditional exporter of primary commodities, is gradually increasing its exports of manufactured and processed goods. With the progressive realisation of the schemes of industrial development, contemplated under the Plan, India will naturally be able to offer more and more varieties of manufactured goods for export. The export credit guarantee scheme will prove to be of considerable assistance in promoting exports by providing exporters' guarantee against possible losses from circumstances which are beyond their control and which are not ordinarily accepted as insurable risk by the insurance organisations. The process of encouraging export of machinery and durable consumer goods, it is pointed out, will be assisted if the exporter is immune from the anxiety of any serious risk of loss and at the same time is enabled to obtain the requisite finance from the banks with greater ease and facility.

Risks to be Covered

The scheme, according to the Chamber, should cover risks arising from the insolvency of the foreign buyer, failure of the buyer to pay for delivered goods within the stipulated period, exchange restrictions or shortage of exchanges in the buyers' country, occurrence of war between the importing and exporting countries or of war, hostilities, rebellion, revolution, etc., in the buyers' country and any other cause leading to a loss to the exporter which is beyond his control. It is, however, emphasised that the authorities, before they issue cover against any such risk in respect of an export consignment, should ascertain the credentials and financial standing of the overseas buyers concerned. The process of ascertaining the credit-worthiness of foreign buyers in different countries should be systematic and on a continuous basis. It should not, of course, involve any delay and inconvenience to exporters here. The Chamber suggests that, in the case of failure of a foreign buyer to pay for the goods he imports, the period of waiting for the Indian exporter should be six months, not twelve months as is now being suggested. In other words, the exporter should be free to lodge his claim for payment with the authorities if the foreign importer does not pay for the goods within six months.

In the first instance, the scheme should cover, according to the Chamber, only a few classes of commodities and not all commodities exported out of India. Such a course, it feels, is particularly desirable, in view of the fact that the export credit guarantee administration would be confronted with a heavy task if the scheme were to include within its ambit all export commodities. This suggestion, however, envisages a prior selection of commodities for purposes of inclusion within the scheme. The choice of these commodities should be made in the light of such considerations as the changing character of India's export trade, and after consultation with organised associations representing the trade interests in the commodities to be brought within the purview of the scheme.

Once a commodity is selected for inclusion under the scheme, it should be compulsory for all exporters of that commodity to insure the exports with the export credit organisation. Such a provision, it is held, would, on the one hand, assist the objective of wider coverage and on the other remove the possibility of any invidious distinction between one exporter and another which would arise as a result of increased cost of goods through payment of premiums. In this connection, it says that there seems to be an intention on the part of the authorities to give the export credit organisation powers to refuse guarantee to any particular consignment. While the Chamber would agree to give the organisation such an enabling provision, it suggests that the "factors and circumstances which will be the criteria for refusing a particular risk should be made specific and defined clearly, and notified for the information and guidance of exporters." Just as the Corporation would, in certain circumstances, be entitled to refuse to cover the risk in respect of particular exports, so also the exporter concerned should have freedom not to avail himself of the facility of cover for particular exports, provided he is able to justify that position by submitting a reasonable case. In asking for such an exemption, the Chamber has in view the exporting firms which might have associated firms in the country of import. Since there is no risk involved in such cases, the occasion for cover will not arise.

Foreign Buyers

It is not necessary, according to the Chamber, to provide cover for the risks that would be faced by foreign buyers arising out of some default on the part of Indian exporters. In the first place, such a provision is not to be found in any of the export credit guarantee schemes which prevail in other countries. Secondly, although the Chamber appreciates the anxiety underlying the suggestion for extending the cover to importers, it feels that, "in any effort to secure advantage for Indian export products by warding off risks which are hypothetical of the above nature, we should not give the impression to our overseas buyers that non-fulfilment of export contracts in all their essential details is a normal feature which has prompted the authorities over here to take cognisance thereof and, besides other measures, to include in the export credit guarantee scheme a provision for extending cover to the foreign buyer against risks of non-fulfilment of export contracts or obligations by Indian sellers." Thirdly, the Government is already taking several steps, in order to ensure that there is no default on the part of Indian exporters. These steps include enforcement of standards and setting up of export promotion councils entrusted with the task of evolving methods and techniques of inspection prior to exports. When the full impact of these measures comes to be felt in course of time, the chances of defective quality or non-conformity of standards to contract specifications would be minimised.

The Chamber is also not in favour of the suggestion that the organisation established for administering the same should be permitted to undertake to guarantee internal credit granted for home trade purposes. It is of the definite view that such a provision should not be made in the scheme, as it should be maintained and worked for the achievement of the main object for which it has been conceived, namely, to free exporters from the fear of loss arising out of export commitments due to risks beyond their control and which are not ordinarily insurable with the insurance organisations. The mechanism of the internal trade, it is stated, is so varied and complicated that it is difficult to expect the organisation to make suitable provision for the guarantee of the type contemplated.

Administration

As regards the administration of the scheme, the Chamber has stressed the need for some form of collaboration and close co-operation between the administration constituted for the purpose of the scheme and the various export promotion councils wherever they exist or the trade associations representing the respective items included within the scope of the scheme. It is necessary to ensure that goods exported are of proper standard and quality and in conformity with the specifications laid down in the relevant contracts. For this purpose, surveys of the quality and contents of goods exported are arranged and certificates issued by competent authorities on the basis of such surveys, which serve as material evidence of the goods exported being according to requirement of the contract. The export credit guarantee administration, through necessary arrangements with such bodies or associations, should encourage the practice of obtaining pre-shipment certificates, by getting the export promotion councils wherever they exist or the trade associations concerned to provide the necessary facilities in this behalf.

Finally, the Chamber has emphasised that the scheme should be worked on commercial principles of insurance, the different classes of exporters paying premiums at different rates on the basis of the varying export risks. The object of the scheme should, however, be to obtain a premium income just sufficient to cover the administrative expenses. In other words, the scheme should be worked on a "no-profit-no-loss" basis.

The answers given during the committee stage of the U.K. Finance Bill, according to the correspondent of the London *Financial Times*, indicate that certain amendments are likely to be adopted in connection with the Budget proposals for affording income-tax relief in respect of premiums paid for the provision of retirement pensions for self-employed persons. The changes, it is stated, are logical in themselves and go some way to overcome some of the disadvantages in the scheme originally outlined. Apparently amendments will be introduced on report to enable income from part-time work to qualify for premium relief. This would mean that the man in pensionable employment who undertakes also non-pensionable work in order to augment his income would be allowed to devote up to 10 per cent. of such additional earnings to provide additional pension, and to obtain relief of tax accordingly. It remains to be seen how far the revised proposals will go in this respect.

Another point raised concerned the guaranteeing of annuity payments for a fixed term of years. The original intention was to allow the annuity to be guaranteed for five years, so that, should the annuitant die 12 months after retirement, his dependants would receive the benefit of the annuity for a further four years. The amendment suggested was that annuities could be guaranteed for a period up to 10 years, and this amendment was accepted. One of the disadvantages of a deferred annuity contract—namely, that the premature death of the annuitant can mean that very little return is obtained in some instances for the premium outlay which has been expended, is overcome by the guarantee that the annuity will be paid for a fixed minimum period.

The amendment which evoked most controversy was that which will permit persons born prior to 1916 to obtain relief on more than 10 per cent. of their income in any year. According to year of birth, between 10 per cent. and 15 per cent. of income can attract relief under the revised proposals in such circumstances.

This concession obviously is designed to give to older persons affected by the Budget proposals the opportunity of building up adequate retirement pension. The principle involved is one which is commonly accepted in pension business generally. When a scheme is set up for any group of employees or persons, the older lives included in the scheme cannot be given retirement benefits on the full scale unless considerable sums are provided at inception for this purpose. "Past service" pension is acquired in such cases either by the payment of additional premium to the insurance company, and such additional premium usually is paid by the employers, or by setting aside capital funds for this special purpose.

The fact that older self-employed persons will have to make provision for retirement over a shorter period would seem to justify the revision now proposed. The Financial Secretary to the Treasury made clear in committee that the cost of altering the limit to 15 per cent. for all ages would be prohibitive. The intention clearly is to introduce the "past service" feature into the new scheme, by encouraging older persons to make extra allocations for retirement provision.

AN OUTSTANDING BOOK !

PLANNING FOR AN EXPANDING ECONOMY

Accumulation, Employment and Technical Progress in Underdeveloped Countries.

By Prof. C. N. VAKIL and P. R. BRAHMANAND

A challenging and thought-provoking book on various aspects of the Second Plan. Here is a different approach advocated to evolve a system suited to the genius and requirements of underdeveloped countries. A book of enduring interest and fruitful guidance bound to influence economic thought and policy.

ALL INDIA CO-OPERATIVE FIRE AND GENERAL INSURANCE SOCIETY, LIMITED

BONUS TO POLICYHOLDERS RAISED

THE Seventh Annual General Meeting of the All India Co-operative Fire and General Insurance Society, Ltd., was held on the 25th June 1956, under the chairmanship of Mr. K. C. Desai, B.A., LL.B.

In the course of his presidential address, Mr. Desai referred to the nationalisation of life insurance business in India and emphasised the need for excluding co-operative insurance societies from the purview of nationalisation, even at this late stage, because of the fact that the Union Government has always been trying to encourage the co-operative form of enterprise.

Five-year Plan

While referring to the second Five-year Plan he wished that with the hearty co-operation of the general public, the Plan would progress as per schedule.

He referred to the recent legislation on co-operative marketing and warehousing of the Union Government and stressed the need for the agricultural societies taking advantage of the scheme and also advocated the need for co-operative institutions getting all their requirements from sister co-operative societies only, wherever available.

Rate of Bonus

Mr. Desai stated that the progress made by the Society during the year was highly satisfactory, resulting in the rate of bonus to general insurance policyholders being raised from 7.81 per cent. to 10 per cent. (which comes to Rs. 100 for every Rs. 1,000 premium income) and the rate of dividend to shareholders from 4 per cent. to 5 per cent. The total reserves amounted to 65 per cent. of the premium income, which is another highly notable feature. He was glad of the fact that the Society was able to procure reciprocity of business from foreign offices as well, in view of the goodwill created in those markets.

He paid a tribute to the honorary services rendered by Mr. G. H. Thakore as Honorary Managing Director of the Society since its inception.

The audited accounts for the year 1955 were adopted.

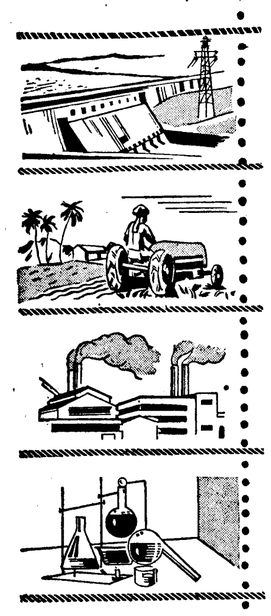
D. R. THOM, *General Manager.*

Under National Planning crores of rupees are being spent to improve agriculture, build and expand industries and promote social welfare. As a result, you have a wider scope to increase your income and lead a better standard of life.



Preserve the joys of better living

As a thoughtful man, you too would like to have a plan to make sure that you, your wife and your children always maintain the improved standard of living.

Life Insurance alone can provide a plan for ensuring comfort in old age, funds for the education, marriage and start in life of your children and sufficient resources if the family has to carry on without you.

In fact, any arrangement you consider essential to preserve the joys of today's better living for you and your family can be made through life insurance.

And the cost? Small, easy instalments of premium out of your current income.

Ask your agent today to draw up a plan for you.

Out of the present issue of one lakh shares of Rs. 100 each, 50,000 shares have already been subscribed by the equity (Ordinary) shareholders, their nominees and other persons. The remaining 50,000 shares are now being offered to the public for subscription at par. These shares carry 5½ per cent. (Income-tax free) Cumulative Preferential Dividend and shall be redeemed at par on 31st March 1967, out of the profits of the Company and/or out of the proceeds of a fresh issue of capital made for the purpose of redemption. These shares shall rank for dividend and return of capital next after the existing Preference Shares but in priority to the Ordinary Shares.

The subscription for the present issue shall be payable as follows :—

Rs. 25 per share on application.
Rs. 25 per share on allotment.
Rs. 50 per share after 31st March 1957 on one month's notice from the Company.

Applications must be for a minimum of five shares or a multiple of five.

Applications for shares may be presented at the Company's Registered Office or at the Head or Branch Offices of the Company's Bankers where application forms for shares and copies of the Prospectus will be available.

The Directors shall have the discretion to refuse to allot any shares or to allot less than the number applied to any person or persons without assigning any reason for the same.

The Preference Shares offered for subscription are approved investments within the meaning of Section 27A of the Insurance Act, 1938.

REGISTERED OFFICE

8, ROYAL EXCHANGE PLACE, CALCUTTA.

QUALIFICATIONS AND REMUNERATION OF DIRECTORS

Under the Articles of Association of the Company as amended by the shareholders at the Extraordinary General Meeting held on the 6th June 1956, each Director is to hold 200 Ordinary Shares on which all calls shall have been paid and each Director will receive by way of remuneration a sum of Rs. 200 for each meeting of the Board attended by him, provided, however, until the sanction of the Central Government is received the aggregate of such payment to each Director in any financial year will not exceed Rs. 1,200.

PARTICULARS ABOUT THE MANAGING AGENTS

The Managing Agents is a Private Limited Company with a subscribed and paid-up capital of Rs. 50,00,120.

Under Article 101 of the Articles of Association, the Managing Agents were entitled to a commission on the basis of gross sale proceeds of manufactured products of the Company and purchases of cotton and certain guaranteeing commission. The said basis became inapplicable from 1-4-1956 under the provisions of the Companies Act, 1956.

The term of office of the present Managing Agents will expire on the 15th January 1957. An application is intended to be made to the Central Government for a fresh agreement renewing the appointment of the Managing Agents for another term of ten years and to fix their remuneration @ 10 per cent. of the net profits on the basis of the provisions of the Companies Act, 1956.

RIGHTS ATTACHED TO DIFFERENT CLASSES OF SHARES

According to the provisions of Section 87 of the Companies Act, 1956, every member of the Company holding any equity (Ordinary) Share capital has a right to vote, in respect of such capital, on every resolution placed before the Company and his voting right on a poll shall be in proportion to his share of the paid-up equity (Ordinary) capital of the Company.

Every member of the Company holding any Preference Share capital has, in respect of such capital, a right to vote only on resolutions placed before the Company which directly affect the rights attached to his Preference Shares.

The Preference Share capital carry preferential right to the fixed amount of dividend but does not carry any right to any further participation in profits.

In case of winding-up of the Company, the rights of the shareholders as regards dividend and return of capital shall, subject to the provisions of the Companies Act, 1956, be governed by Article 127 of the Articles of Association of the Company which provides as follows:

"If the Company shall be wound-up the assets available for distribution among the members of the Company shall be applied in the first instance in payment of the cumulative dividend or dividends on the Preference Shares which may be unpaid or in arrear at the commencement of the winding-up and thereafter the balance, if any, of the assets available for distribution as aforesaid shall be distributed in manner following, as to one-quarter thereof among the holders of Preference Shares in proportion to the capital paid-up thereon at the commencement of the winding-up and as to three-quarters thereof among the holders of Ordinary Shares in proportion to the capital paid-up thereon at the commencement of the winding-up."

RESTRICTIONS ON MEMBERS' RIGHTS

So long as any money is due from a member of the Company in respect of any shares held by him, he shall not be entitled to vote at any meeting of the Company in respect of such shares.

The Directors may, without assigning any reason, decline to register any transfer of shares not fully paid-up or upon which the Company has a lien.

OBJECTS AND BUSINESS OF THE COMPANY

The main objects are, *inter alia*, the following:—

"To carry on all or any of the following businesses, namely, cotton spinners and doublers, flax, hemp and jute spinners, linen and cloth manufacturers, flax, hemp, jute and wool merchants, wool combers, worsted spinners, woollen spinners, yarn merchants, worsted stuff manufacturers, bleachers and dyers and makers of vitriol, bleaching and dyeing materials."

"To purchase, comb, prepare, skin, dye and deal in cotton, flax, hemp, jute, wool, silk and any fibrous substances."

The Company has been carrying on business since about the last 36 years. The Company suffered loss upto the year 1930 as a result of which the values of the assets of the Company were written off as on 24th January 1931, as per Reduction Scheme, and the value of the Ordinary Shares was reduced to Rs. 2-8-0 per share from Rs. 10 per share. Since then the Company has made steady progress. Consequently in 1943, the Company capitalised a sum of Rs. 5,00,000 from its reserves and issued fully paid-up bonus shares of Rs. 2-8-0 each on the basis of one such bonus share to every holder of three Ordinary Shares of Rs. 2-8-0 each. Further, the face value of the Ordinary Shares was raised from Rs. 2-8-0 per share to Rs. 20 per share by the capitalisation of the profits of the Company from time to time on four different dates between 1948 to 1954 amounting in all to Rs. 1,40,00,000. In 1955, the entire 8,00,000 Ordinary Shares of Rs. 20 each were sub-divided into 16,00,000 Ordinary Shares of Rs. 10 each. The present market quotation for these shares is about Rs. 19-8 per share.

The assets of the Company consisting of land, buildings and machinery, etc., were revalued in the year 1950 and a surplus of Rs. 1,45,87,000 lies to the credit of capital reserve account of the Company as on 31st March 1956.

PURPOSE OF PRESENT ISSUE

The Company has so far been engaging itself in the manufacture of cotton yarn and cloth and hosiery goods. After carefully studying all the pros and cons of the matter, the Company has now decided to extend its activities and with that end in view it is proposed to install a plant for the manufacture of Continuous Filament Viscose Rayon Yarn. There is a good demand for rayon cloth and it is expected that the rayon yarn, which will be manufactured by the Company, shall fetch a good return to the Company. A licence necessary for the establishment of a 10-ton plant for the manufacture of the said goods has been obtained from the Government of India. It is, however, proposed to install for the present a plant of 6/7 tons capacity only. The cost of the installations of the said 6/7 tons plant is estimated to be about Rs. 3,70,00,000 as per particulars below:—

		About Rs.
(i)	Land, buildings, roads and other constructions	80,00,000
(ii)	Machinery and equipment	2,50,00,000
(iii)	Working capital	40,00,000
	Total	About Rs. 3,70,00,000

Out of the above sum the Company proposes to meet about Rs. 2,70,00,000 for the purchase of land, machinery and equipments and certain construction work from its existing resources, bank loan, deferred payments, etc. The balance amount is proposed to be met by the present issue of shares.

In the opinion of the Directors, the minimum amount which must be raised by the issue of these shares is Rs. 60,00,000 inclusive of the 50,000 shares which have already been subscribed and allotted which sum together with the said sum of Rs. 2,70,00,000 will cover all the expenses except working capital.

It may be stated here that a portion of land required for the purpose aforesaid has already been acquired at Mouza Raghunathpur (where the said Rayon Plant is proposed to be located) in the District of Hooghly near Calcutta. Negotiations for the rest of the required land as well as for the purchase of the plant and machinery from various parties, are in progress.

Copies of the Balance Sheets and Profit and Loss Accounts on which the report of the Auditors is based and Memorandum and Articles of Association of the Company may be inspected at the Registered Office of the Company during office hours until the subscription list closes.

The Directors may, at their discretion, pay brokerage and/or commission at a rate not exceeding 2 per cent. of the face value of the shares in respect of shares already allotted or to be allotted by them.

The financial position of the Company will appear from the Auditors' Report set out below:—

AUDITORS' REPORT

MESSRS. BIRLA BROTHERS PRIVATE LTD.
Managing Agents,
KESORAM COTTON MILLS LTD,
Calcutta.

Dear Sirs,

We have examined the books and accounts of (a) Kesoram Cotton Mills Ltd., as kept in Calcutta and Gwalior in which are incorporated the certified returns from the Mills and retail shops for the five years ended 31st March 1956, and (b) Bharat Kala Bhandar Limited, a wholly owned subsidiary of Kesoram Cotton Mills Ltd., which is audited by Messrs. Singhi & Co., Chartered Accountants, Calcutta, for the five years ended 31st March 1956, and report that subject to the completion of the audit for the year ended 31st March 1956, of both the Companies the profits are as set out below. The audits of the Company and its subsidiary for the year to 31st March 1956, have not yet been completed. These profits have been arrived at after charging all expenses of working and management, including provision for normal depreciation on the basis allowable for Taxation and after making such adjustments as are, in our opinion, appropriate.

ENGINEERING GOODS INDUSTRY

MEASURES NEEDED TO PROMOTE EXPORTS

By Dr. R. M. Agarwal

WHILE addressing the Export Advisory Council on 27th November 1955, the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, remarked that export trade had changed from one of control to one of promotion. Export promotion had got to be active and dynamic. But in saying that, he was not unaware of the multitude of impediments that lay in the way of augmenting our export promotion policies in the enunciation of which no thought is bestowed on the relation of internal industrial policy to export possibilities. It is also not possible to have one industrial policy for the manufacture of goods that go into exports and another for those that go into internal consumption. Moreover, a wise policy-maker builds up an export trade on the basis of internal consumption; otherwise the economy which is entirely dependent on exports becomes unstable. That is why Mr. Krishnamachari emphasised that, in the course of the precise formulation of the Five-year Plan, we would have to frame a plan for foreign trade—for an integration of the policy for export with the policy for industrialisation.

With the above background, the Government has already set up Export Promotion Councils for cotton textiles, silk and art silks and rayon textiles, plastic goods, engineering goods, cashew nuts, and pepper. Similar Councils for tobacco, mica, shellac, and leather manufactures are likely to be set up shortly. The main functions of these Councils are:

(a) undertaking market studies, (b) sending out trade missions, (c) appointing representatives, agents, or correspondents in foreign markets to report prices, market preferences, etc., (d) conducting propaganda, (e) collecting statistics and other informations, (f) propagating information useful to the grower, manufacturer, and trader in a commodity, (g) laying down standards of quality and packing in respects of goods intended for export and maintaining liaison with anybody undertaking this work, (h) setting up an organisation, or maintaining liaison with an organisation which may be set up, for the inspection of the goods intended for export, (i) deputing the officers of the Council to witness the survey of goods exported or intended for export, and (j) acting as arbitrators or nominating arbitrators or valuers in the settlement of disputes and differences, etc.

Since these Councils have been established only recently, it is too early to pronounce judgment on their success or failure. It would, however, not be out of context to mention here a few handicaps facing our export trade which, if removed, would make the working of these Councils expeditious, more efficient, and fruitful. I would like to lay greater stress on the Engineering Export Promotion Council because engineering industries are among those few industries which form a sound edifice for a stable export trade.

Before we discuss the broad impediments facing this line of export trade, we must consider the following points:

(1) Main consuming centres, (2) current economic trends in those areas, (3) specific requirements of those areas, and (4) competition.

Any programme of export promotion must essentially follow a survey of the main markets for the products of that industry. As regards engineering industries, our main markets are the Middle East, South-East Asia and Far East, and South-East Africa. We are exporting a number of consumer goods like buckets, hurricane lanterns, electric fans, cutlery, steel trunks, furniture and fittings, electrical appliances, musical instruments, sewing machines, surgical instruments, cycles, tubes and tyres, etc., to these countries. Recently, a good deal of exports have also been made to South America but as the countries in that Continent are so near to the United States, it is very doubtful if we will be able to retain that market for long. Anyway, the re-emergence of East European markets offer an opportunity for the development of mutually beneficial trade. However, has far as possible, we should try to concentrate more on our neighbouring and intra-regional markets.

Coming to the recent economic trends in these markets, we have to take note of two factors. First, almost all these areas are either undeveloped or underdeveloped, like India. Consequently, they all have one programme or another to rejuvenate their economic life. Moreover, most of these countries had been subject to foreign domination for a pretty long time and have attained freedom only recently. Since political domination leads to economic exploitation they have had bitter experiences, like India. Naturally, they are afraid of foreign trades. That is one of the reasons why most of the countries in these areas have either restricted imports or made it a policy to issue at least a part of import licences to their own citizens only. It is quite true that only a few of these countries possess the adventure and resourcefulness of India to develop industries but in canalising imports in certain specific directions they could at least provide a fillip to their trade and commerce. Therefore, if we want to develop our trade connections with these countries, we must of necessity work in close co-operation with the commercial interests in those countries.

Barter System

Secondly, with the emergence of the so-called Iron Curtain countries and greater emphasis on intra-regional trade, our activities with these countries are likely to gain prominence. Since the basis of trade under a totalitarian economy is different from an individualistic economy, trade with these countries has got to be more or less on the basis of barter. Barter involves a third agency which can hardly be anyone else but the Government. The Government is already contemplating to set up State Trading Corporations for such purposes. But the past experiences of these Corporations are not very happy and we should not rely too much on them.

There is yet another point equally important and peculiar to our domestic economy. We are already coming to the end of the first Five-year Plan and are on the threshold of the second Five-year Plan. Naturally, most of our engineering industries are booked for a long time as regards production and deliveries. Consequently, if, as we must, export to other countries, we must be prepared to put our own economy to some sort of strain. Since the foreign trade of a country forms the nucleus of its foreign exchange earnings, we should not spare any opportunity to promote our exports even if such were to mean a little hardship to our people.

As regards the specific requirements of our potential markets, we must conduct widespread market as well as marketing research and procurement of business contracts. This is very important because unless and until we know the requirements of the people of those areas it would be very difficult for us to sell our goods. Moreover, our engineering industries will have to adapt their manufacturing programmes to the specific requirements of those areas. We should also explore the possibilities of substituting our products for those used now.

Last but not the least, is the competition in those markets. Whereas a few monopolies (such as jute and tea) enjoyed by us in the past have disappeared, the re-emergence of West Germany and Japan in the markets of the world has upset the trade of a good number of countries and increased their balance of payments difficulties. These developments are, of course, inevitable as no one could object to any country wanting to expand its foreign trade. But the competition is not always equal. We must, however, be ready to face them. For this, we would always have to keep an eye over the quality of our goods. If the quality and the price of our products stand at par with the quality and price of similar products from other countries, there is no reason why we should not be able to face competition in those countries.

Supply of Steel

As regards the handicaps which engineering industries face today, one cannot do better than refer to the presidential speech of Mr. D. N. Jalan, at the inauguration ceremony of the Engineering Export Promotion Council on 10th October 1955. The first handicap is inadequate supply of steel to these industries at reasonable prices. The Government would be well advised to give preference to the import of steel required for engineering industries. Since imported steel is costlier than domestic steel, Government should provide ample facilities for claiming drawback of import duty on imported materials used in goods manufactured for export. The Government has recently revised the Sea Customs Act and framed rules in respect of 15 items to enable the export trade to take full advantage of drawback of import duty. But the Government could also provide subsidies and bounties wherever possible in order to facilitate larger exports.

Secondly, inadequate shipping space and increased freight rates are a source of constant headache to our export trade. This not only leads to widespread discrimination against our products but, in certain cases, particularly for East African ports, even non-availability of shipping space. It would, of course, take time for

CENTRAL ADVISORY COUNCIL OF INDUSTRIES MEETS

LABOUR DEMANDS INCREASE IN WAGES

WHEN the provision for the constitution of Development Councils was made in the Industries (Development and Regulation) Act, 1951, the Government itself was not quite sure how far these Councils would be able to help industries. When the Bill containing this provision was under discussion in Parliament, the Government spokesmen stated that the idea of establishing the Development Councils for industries was adopted from the British experience and that it was worthwhile making an experiment with these Councils in India. The experience gained since then by the working of a number of Councils would appear to be very encouraging. An indication to this effect was provided by the deliberations of the Central Advisory Council of Industries which met at New Delhi on the 20th inst., Mr. T. T. Krishnamachari, Minister for Commerce and Industry, presiding. A review of the working of these Councils was one of the ten items which came up for discussion at this meeting. Dr. Vikram A. Sarabhai, Mr. Lakshmipat Singhania and Mr. S. R. Vasavada were among those who held that the Development Councils were doing useful work. They urged that separate Councils should be set up for non-ferrous metals, vanaspati, confectionery and cotton textiles industries. These Councils have already been established, it may be noted, for (*a*) cycles, (*b*) heavy chemicals (acids and fertilisers), (*c*) heavy chemicals, (alkalis), (*d*) sugar, (*e*) internal combustion engines and power-driven pumps, (*f*) art silk textiles, (*g*) woollen textiles, (*h*) pharmaceuticals and drugs, (*i*) light electrical industries and (*j*) heavy electrical industries.

Co-ordination

Mr. K. C. Mahindra stated that, while these bodies were charged with tasks of co-ordinating production programmes and of evolving forms for achieving efficiency, the annual reports on their working did not disclose that these two purposes were being adequately fulfilled. Mr. Lala Shri Ram said, if they wanted these Councils to help and develop industries, they should have adequate finance at their disposal and have the services of experts on the industries concerned. Mr. T. T. Krishnamachari averred that the experiment of Development Councils was a success. He commended particularly the work done by the Council for Pharmaceuticals. It was the Government's idea to see that these Councils functioned as 'policy-makers in respect of industries dealt with by them subject to the Government's approval. He hoped that the Government would be able to make more use of these Councils in their scheme of industrialisation. These observations of the Minister augur well for the future of these Development Councils. Given expert technicians, adequate finance and freedom to work out their own schemes, there is no reason why these Councils should not play an increasing role in the development of industries in the country.

Licensing of Industries

The Commerce and Industry Minister, whose speech at the Central Advisory Council was dealt with in this journal last week, gave a brief account of the work done by the Licensing Committee since the Council's meeting in July 1955. During this period, the Government issued 450 licences on the recommendations of the Licensing Committee. The details regarding these licences were examined by a sub-committee of the Council and its report was also considered at the meeting. Replying to the points raised on this report, the Minister said that the question of expansion of cycle industry was being examined and that the Government wanted to fix some kind of target and apportion it between the small-scale and established industries. As regards the textile industry, he said that the Government had decided on bulk expansion of textile production. People who had got licences to start mills should fulfil their commitments or else the spindles alotted to them would be distributed to others.

The Council then discussed industrial development and targets fixed under the second Five-year Plan as also the working of the National Industrial Development Corporation. The discussion on the Five-year Plan revealed that labour was pressing for an increase in wages. Mr. S. R. Vasavada, workers' representative on the Council, regretted that, though production had increased as a result of the first Five-year Plan, workers remained exactly where they were in 1951. If a fair deal had to be given for workers so as to give them an incentive, was it not proper, he asked, that some share in the increased wealth was equitably distributed? He suggested that the Government should immediately set up a machinery which would satisfy the claims of workers for a share in the increased wealth. This contention of Mr. Vasavada should be examined carefully and met effectively. For it simply overlooks the findings of studies in wage bills of a number of industries. These studies have revealed that the wage bills of most industries have risen steadily during the past several years, while there has not been an increase in the man-hour output commensurate with the increase in wages. They have also shown that, in a number of industries, surplus labour which is not contributing to the wealth of the nation is being maintained, because workers are opposing schemes of rationalisation. For instance, Mr. Vasavada himself urged at the meeting that the Government should see to it that the question of installation of automatic looms as envisaged in the new textile policy should not be mixed up with rationalisation. It would be a hard blow, he added, to the handloom industry, if automatic looms were going to make an inroad into the home markets. Evidently this intransigent attitude of labour prevents it from seeing the writing on the wall, that its own prosperity is linked with the progress of rationalisation in industry and that, by its opposition to rationalisation, it is arresting its own prosperity.

Distribution of Increased Wealth

The Minister, in his reply, said that the equitable distribution of the increased wealth referred to by Mr. Vasavada was a matter which the Government faced with one mind. He observed that the Plan must bring something to people lower down and the benefits derived from the Plan must be conserved for national development or diverted towards the improvement of the standard of living of the workers. "We have not made up our mind," he added, "as to how much should go to national development and how much to workers." The Labour Minister, according to Mr. Krishnamachari, had some proposals in mind to be placed before the workers and the industrialists which would enable them to implement the targets under the Plan and make workers feel that, in working for the nation, they were also benefiting themselves. It was a matter, the Minister added, to which the Cabinet attached the greatest importance. This is a non-committal reply which, unfortunately, may be interpreted by labour in its favour. Since the Minister has not questioned the correctness of the ground on which Mr. Vasavada presented his case for higher wages, the workers may be emboldened to think that their demand is just and should be pressed vigorously. Once this mood is allowed to persist, it will be extremely difficult to correct it afterwards. The Government must, therefore, make up its mind on this issue soon and guide the workers on right lines.

In the course of discussions, stress was laid by some members on the need for increasing the production targets of a number of essential commodities in the country. Although the consensus of opinion was in favour of an upward revision of the target, some members were conscious of the limitations of such a proposal. Mr. R. Lakshmipat Singhania, for instance, said that transport would prove a serious bottleneck in the implementation of the second Plan. Unless serious consideration was given to this problem, many industries would be affected. He pressed for an increase in the target for road transport also—a sector in which the backlog has been very large, thanks to continued indifference on the part of State Governments to problems of road transport. Another difficulty was high freight charges. Mr. P. A. Narielwala complained that the freight charged by Indian shipowners was very high and suggested that the Government should ask the Tariff Commission to enquire into the Indian shipping industry and determine what fares and freights should be charged by them.

Vehicles vs. Wagons

Mr. Neogy's remarks, in this context, are worth noting. He pointed out that, as a result of a recent study, it was found that the capital cost requirements for providing vehicles for moving one million tons of goods would be Rs. 11.6 crores, whereas for enabling the railways to provide wagon capacity sufficient to carry the one million tons only a sum of Rs. 4 crores was needed. In other words, according to this study, to spend on railways would be more economical than on vehicles. This seems to be a surprising conclusion, contrary to earlier understanding of the subject. It is necessary to check up this conclusion, before taking any action on that basis.

One of the members wanted to know how far the private sector would be allowed to participate in the National Industries Development Corporation. Mr. Krishnamachari stated that the Corporation had more or less become a Government machinery for the purpose of filling up the gap in the industrial structure but there was no philosophic objection to the participation of private enterprise. The dominant voice would, however, be that of Government. It is not known why this question was at all raised, because the answer was already obvious. Further, the Commerce and Industry Ministry had made it clear earlier that the Corporation would help the private sector also whenever the latter put forward a workable and desirable proposition.

POSITION OF WHEAT AND RICE

The index number of wholesale prices for food articles for the week ended 9th June 1956 discloses, as compared with that for the previous week, a further rise of 0.8 per cent. to 356.3 (Base August 1939: 100). As compared with the level in the corresponding week of last year it shows an increase of as much as 25.3 per cent. The continued rise evidently underlines the fact that the measures taken by the Government to stem the rising tide of prices have not been quite effective. It will be recalled that, with a view to bringing down prices in urban areas, exports of foodgrains have been banned, wheat is being sold from central sales depots at Rs. 14 per maund and substantial quantities of rice from central stocks have been released at reduced rates. Besides, arrangements have been made to import foodgrains from abroad. Despite these measures, prices generally have continued to show a rising tendency. Reports of flood damages and failure of timely rains in certain areas as, for instance, in Mysore, would appear to have induced stockists to indulge in large purchases in the hope of getting better prices later. The Government of U.P., in its anxiety to check the rising trend of prices, is reported to have asked the Centre to allow it to ban exports of foodgrains outside the State. It is, however, not understandable how such a step would work well in the larger interests of the country, since it would only aggravate the position in other parts and would ultimately force the whole country to adopt food controls and rationing. The bitter experience of these controls is still so green in the minds of the public that neither the administrator nor the consumer would welcome it again.

The chief remedy for bringing under control the speculative and hoarding tendencies lies in building up buffer stocks by the Central Government through imports and releasing them in areas threatened with higher prices, besides initiating measures to encourage more production of foodgrains. It is gratifying to note that this policy is being actively pursued by the Centre. Bulk consignments of wheat have started, for instance, arriving in the country from the U.S. and Australia in pursuance of the Government's programme of importing one million tons of wheat for building up a national reserve. A bulk consignment of 9,525 tons of American wheat arrived last week. It is stated that an aggregate quantity of 400,000 tons would arrive in the City during this year, the balance of the imports being scheduled to arrive at Calcutta in regular instalments every month. Extensive arrangements have been made in Bombay for the storage and distribution of imported wheat. Besides the storage depot at Wadala with a capacity of 50,000 tons and the General Motors depot with 80,000 tons of storage capacity, the Government has taken in hand at Borivli the construction of a storage building capable of holding 150,000 tons. The wheat is being supplied to anybody in quantities ranging from one to 20 tons per day, the issue price being Rs. 14 per maund. With a view to providing stimulus to the former, the Government has also raised its issue price from Rs. 13 to Rs. 14 per maund.

In addition to importing wheat, the Government has taken steps to encourage cultivation of wheat. This is reflected in the estimated increase in the area sown to wheat, though the yield has been slightly lower owing to adverse weather conditions. The all-India final estimate of wheat puts the current year's (1955-56) area and production at 29.22 million acres and 8.34 million tons respectively, as against the partially revised estimate of 27.56 million acres and 8.77 million tons. The estimates for the current year thus show an increase of 1.71 million acres or 6.2 per cent., but a fall of 4.9 per cent. in the output. As compared with the average for the preceding five years, the area and production during 1955-56, however, show an increase of 16.3 per cent. and 14.4 per cent. respectively. The current year's output of wheat equals the target of 8.3 million tons fixed for 1955-56 under the first Five-year Plan. The target to be reached by 1960-61 has been fixed at between 10.5 million and 11.5 million tons.

Similarly, prices of rice also have shown a tendency to firmness. With a view to arresting the rising trend, the Government of India banned exports of rice in January this year. Besides, the Government expects to import four to five lakh tons of quality rice from Burma out of its 1956 crop this year. And shipments of rice are expected to arrive in India shortly. The Centre has assured the State Governments that it would meet their requirements of rice, if they opened fair price shops. It has also reduced the issue price of Burma rice from Rs. 18 to Rs. 16 per maund in Bombay City in order to stabilise the price of rice at a lower level. Since in certain areas of the Madras State prices of rice have gone up, the Centre proposes to move sufficient supplies from its reserve stocks of 65,000 tons kept in its godowns in the State to urban centres like Madras, Madura, Calicut, Coimbatore and Tuticorin. Through these measures, it hopes to keep under check any increase in rice prices. The Government may not experience any difficulty in doing so. For one thing, the rice supply position in the world is expected to be comfortable for another two or three years and India can make purchases from abroad easily to meet any emergencies. Secondly, the current crop (1955-56) is estimated to reveal an increase of 3.8 per cent. over that of 1954-55, the output having risen from 24.5 million tons to 25.47 million tons. The areas sown to rice in 1955-56 was also higher at 76.25 million acres, as against 75.95 million in the preceding season, or a rise of 0.4 per cent. Thus, the production of rice is just sufficient to meet the current consumption requirements of the country. And the imports which the Government proposes to have this year for building up stocks of the order of a million tons of rice should see the country through any emergency.

LOWER BAISAKHI LAC CROP

The yield of the *Baisakhi* lac crop in India for the current year is expected to be lower than that in the previous two years, says a report issued by the Indian Lac Cess Committee, Ranchi.

According to the revised reports, the yield is put at 6,72,000 maunds, as against the preliminary estimates of 7,51,000 maunds, issued in March last, and the final estimates of 8,13,000 maunds for 1955. The normal yield based on the average production of 10 years preceding 1955 is 7,10,000 maunds.

THE ALEMBIC CHEMICAL WORKS COMPANY, LIMITED

BARODA

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Annual General Meeting of the Shareholders of the Alembic Chemical Works Company, Limited, will be held at the Office of the Company at Baroda on Thursday the 26th July 1956, at 3 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955.
2. To declare Dividends.
3. To appoint Auditors for the current year and to fix their remuneration.
4. To pass the following resolution with or without modifications as a Special Resolution:

   "Resolved that Mr. Nanubhai B. Amin, an associate of the Managing Agents of the Company, who retires by rotation, be and is hereby re-elected a Director of the Company."

   Note.—Mr. Nanubhai B. Amin is an associate of the Managing Agents of the Company and as such under Section 261 of the Companies Act, 1956, it is necessary to pass a Special Resolution for re-electing him.

5. To pass the following resolution with or without modifications as a Special Resolution:

   "Resolved that Mr. Dinubhai B. Amin, an associate of the Managing Agents of the Company, who retires by rotation, be and is hereby re-elected a Director of the Company."

   Note.—Mr. Dinubhai B. Amin is an associate of the Managing Agents of the Company and as such to comply with the requirements of Section 261 of the Companies Act, 1956, it is necessary to have a Special Resolution for his re-election.

6. To pass the following resolutions with or without modifications as Special Resolutions:

   (1) Resolved that Dr. Indubhai B. Amin, an associate of the Managing Agents of the Company, be and is hereby appointed a Director of the Company.

   (2) Resolved that consent of the Company be and is hereby given to (1) Dr. Anubhai H. Amin, (2) Mr. Natubhai R. Amin, and (3) Dr. Dayanand P. Patel, employees of the Company, (4) Mrs. Dhirajben R. Amin, employee of the Alembic Glass Industries Ltd. (a subsidiary of the Company), (5) Mr. Nanubhai B. Amin, (6) Mr. Dinubhai B. Amin, (7) Mr. Balasaheb P. Patel and (8) Mr. Chandrakant R. Amin, employees of the Jyoti Ltd. (a subsidiary of the Company), who are related to Dr. Indubhai B. Amin, a Director of the Company, continuing as employees of the respective Companies.

   Note.—Dr. Indubhai B. Amin is an associate of the Managing Agents of the Company and to comply with the requirements of Section 261 of the Companies Act, 1956, it is necessary to have a Special Resolution for his appointment. Similarly under Section 314 Special Resolution is to be passed for allowing his relatives to continue in the employment of the Company.

   Notice of their intention to propose Dr. Indubhai B. Amin as a Director at the annual general meeting has been received from two shareholders.

Note.—Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

The Transfer Books of the Company will remain closed from Friday the 6th July 1956 to Thursday the 26th July 1956 both days inclusive.

By Order of the Board of Directors,

For BHAILAL AMIN & SONS (PRIVATE) LIMITED,
Managing Agents,
RAMAN B. AMIN,
Director.

18*th June* 1956.

Note.—The dividends when sanctioned will be made payable at the Office of the Company at Baroda, on or after the 28th July 1956, to those shareholders whose names stand on the Register of the Company on the 26th July 1956 and to whom the Dividend Warrants will be posted.

Shareholders are requested to notify, at once, any change of address.

SRI KRISHNARAJENDRA MILLS LIMITED

MYSORE

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Ordinary General Meeting of the shareholders of Sri Krishnarajendra Mills, Ltd., will be held at the Registered Office of the Company, Bangalore Road, Mysore, on Saturday the 14th July 1956, at 3 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts of the Company for the year ended 31st March 1956.
2. To declare a dividend.
3. To elect Directors:—

   (i) Lokasevaniratha Dharmaprakasa Sri V. R. Chikkachannanjappa Setty, one of the Directors, who is to retire by rotation and is eligible for re-election, will be Eighty years of age at his next birthday on 9th November 1956, and a Resolution that the age limit prescribed in Section 280 of the Companies Act of 1956 shall not apply to him is necessary.

   Special notice of the following resolution for exempting him from the age limit as required by Section 281 is hereby given:—

   "RESOLVED that Lokasevaniratha Dharmaprakasa Sri V. R. Chikkachannanjappa Setty who will be Eighty years at next birthday on 9th November 1956, be and is hereby re-elected as a Director and that the age limit prescribed under Section 280 of the Companies Act shall not apply to him."

   Explanatory statement under Section 173 of the Companies Act 1956, regarding this matter has been posted to shareholders along with the notices.

   (ii) To appoint a Director in place of Sri S. N. Gundu Rao who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

   (iii) To appoint a Director in place of Sri M. H. Mariyanna who retires under Article 115 of the Articles of Association of the Company and being eligible offers himself for re-election.

4. To appoint Auditors for the current year and fix their remuneration.
5. To consider and if thought fit to pass the following resolutions with or without modifications as Ordinary Resolutions:—

   (i) "RESOLVED that the appointment of Messrs. B. Venkata Rao S. Sajjan Rao as Sole Selling Agents of the Company for yarn manufactured by the Company on terms of the agreement subsisting between the Company and the firm dated 12-10-1953 be and is hereby approved *vis-a-vis* sub-section 3 of Section 294 and sub-section 3 of Section 204 of the Companies Act (I) of 1956 and shall hold good for a period of five years from 1-4-1956."

   (ii) "RESOLVED that the appointment of Messrs. S. Sajjan Rao S. M. Ramakrishna Rao & Co., as Sole Selling Agents of the Company for cloth and hosiery manufactured by the Company on terms of the agreement subsisting between the Company and the firm dated 12-10-1953 be and is hereby approved *vis-a-vis* sub-section 3 of Section 294 and sub-section 3 of Section 204 of the Companies Act (I) of 1956 and shall hold good for a period of five years from 1-4-1956."

6. To consider and if thought fit to pass the following resolution with or without modifications as Ordinary Resolution:—

   "RESOLVED that the appointment of the following individuals and firms and Companies as Sole Selling Agents for the products of the Company as mentioned against their names, for periods noted against their names and on such terms and conditions as may be mutually agreed upon between them and the Company, be and is hereby approved:—

SHAW WALLACE AND COMPANY LIMITED

DIVIDEND ON PREFERENCE SHARES

THE DIRECTORS HAVE DECLARED AN Interim Dividend of 3 per cent., less Income-tax, on the Company's Preference Shares in respect of the year 1956, payable to Members whose names appear in the Preference Share Register on the 16th July 1956. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 9th to the 16th July 1956, both days inclusive.

By Order of the Board,

C. A. CUNLIFFE,
Director

4, BANKSHALL STREET,
CALCUTTA, 20*th June* 1956.

THE MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the Registered Office of the Company at Mafatlal House, Back Bay Reclamation, Bombay, on Monday the 16th day of July 1956, at 5.0 p.m., when the following Resolutions will be proposed thereat as Special Resolutions for passing with or without modifications:

Special Resolutions

1. RESOLVED that Messrs. Navinchandra Purshottamdas & Co., Ltd., be and they are hereby re-appointed Managing Agents of the Company for the term of 10 years at the remuneration and on the other terms and conditions mentioned in the draft Agreement of Managing Agency between the Company and them, which draft is produced at this Meeting and is initialled for identification by the Chairman. The said re-appointment is conditional upon the sanction of the Central Government thereto being received by the Company. The said re-appointment as such Managing Agents of the Company shall commence and take effect from the expiry of their present appointment, i.e., on the 15th January 1957, if such sanction is received before that date, i.e., 15th January 1957, but in case sanction is received later than that date it shall commence on the date on which the sanction is received. The Board of Directors are hereby authorised to agree to such modifications in the said Agreement of Managing Agency as may be mutually agreed upon between them and the Managing Agents and as the Central Government may require. Upon the receipt of such sanction of the Central Government the Board do execute the said Agreement and affix the seal of the Company thereto and carry the same into effect.
2. That the Articles of Association of the Company as contained in the draft Articles initialled by the Chairman and produced at this Meeting are hereby approved and adopted as the Articles of Association of the Company to the exclusion of all Articles now existing and applicable to the Company, except that such of the Articles as may require approval of the Central Government shall take effect subject to and conditional upon the grant of such approval.
3. The Company hereby approves the contract proposed to be entered into with The Surat Cotton Spinning and Weaving Mills Private Ltd. (which Company is about to merge with Maharanee Shri Mhalsabai Cotton Mills Company Private Ltd.) for boring tube-wells in the mill premises of this Company at Navsari, the material terms of which contract are as under:

   1. That the work will be undertaken by The Surat Cotton Spinning and Weaving Mills Private Ltd., for boring 7 Tube-wells at approximate total cost not exceeding Rs. 75,000/- for the 7 Tube-wells.
   2. That the pipes and other materials will be supplied at site by the Company.
   3. That the work will be completed by them as early as possible.

   The offer made by The Surat Cotton Spinning and Weaving Mills Private Ltd., produced at this Meeting and initialled by the Chairman is approved and it is RESOLVED that the said offer be accepted and the Directors are hereby authorised to carry the same into effect.

By Order of the Board of Directors,

For NAVINCHANDRA PURSHOTTAMDAS & CO. LTD.,

ARVIND N. MAFATLAL,
Director,
Managing Agents.

N.B.—1. *Proxy*: A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself, and that a proxy need not be a member of the Company.

2. The New Draft of Articles of Association of the Company is open for inspection at the Registered Office of the Company between 11 a.m. and 1 p.m. on any working day.

MAFATLAL HOUSE,
BACK BAY RECLAMATION,
BOMBAY 1, 4*th June* 1956.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

(*Incorporated in India*)

NOTICE IS HEREBY GIVEN THAT THE Thirteenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Tuesday the 17th July 1956, at the Registered Office of the Company at Fort Cochin, to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st March 1956 and the reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

   Note.—(i) As Mr. R. M. Saywell, one of the retiring Directors, has already completed 67 years of age, a resolution that the age limit prescribed under Section 280 of the Indian Companies Act, 1956, shall not apply to him is now necessary. Special notice of the following resolution exempting him from the age limit, as required by Section 281, is hereby given:

   "Resolved that Mr. R. M. Saywell, who has completed 67 years of age, be and is hereby re-elected a Director, and that the age limit prescribed under Section 280 of the Indian Companies Act 1956 shall not apply to him."

   (ii) As Mr. J. K. Hopkins, the other retiring Director, is an employee of the Managing Agents, Messrs. Aspinwall & Co. (Private) Ltd., a Special Resolution of the Company is necessary for his re-election. Special notice of the following Special Resolution for his re-election, as required by Section 261, is hereby given:

   "Resolved that Mr. J. K. Hopkins, an employee of Messrs. Aspinwall & Co. (Private) Ltd., the Managing Agents of this Company, he and is hereby re-elected as a Director of this Company."

   A copy of the explanatory statement under Section 173 of the Companies Act, 1956, is available for inspection of the Shareholders at the Registered Office of the Company during office hours of the Company on all working days till the date of the above meeting.

4. To appoint Auditors.

The transfer books and Register of Members of the Company will remain closed from 4th July 1956 to 19th July 1956 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board.

THE BANK OF INDIA LIMITED

BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Bank of India Limited will be closed from Friday the 13th July 1956 to Saturday the 28th July 1956 (both days inclusive).

Dividend will be payable on and after Saturday the 4th August 1956.

T. R. LALWANI,
Acting General Manager.

BOMBAY, 26*th June* 1956.

A detailed scheme to meet the increased requirements of technical personnel for the large production target for coal in the public sector during the second Five-year Plan has been prepared and is now being considered by the Ministry of Production. A number of new State collieries will have to be opened and already action is being taken for starting the first State colliery under the second Plan at Korba in Madhya Pradesh. It is felt that the development of new State collieries, however, cannot progress adequately without building up in advance a corps of trained technical staff. The demand for technical personnel is expected to go up steadily as more and more new collieries are opened. At present, the facilities at the existing State collieries are not substantial enough to enable the training of any category of personnel in number adequate to man the new collieries. Under the scheme four training centres are being opened immediately at four State collieries, namely, Kargali, Giridih (both in Bihar), Talcher (in Orissa), and Kurasia (in Madhya Pradesh).

Advertisements in FAIR catalogue and Bulgarian Press accepted. Write for rates and terms to "EXPORT ADVERTISING SERVICE," Sayajigani, BARODA

DALMIA CEMENT'S PROFIT HIGHER

DIVIDEND RAISED—EXPANSION SANCTIONED

A FURTHER rise of Rs. 3.34 lakhs to Rs. 68.24 lakhs in gross profit is disclosed by the audited accounts of the Dalmia Cement (Bharat) Ltd. (Managing Agents: Messrs. Hari Brothers Ltd., Dalmiapuram, South India), for the year ended 31st December 1955. This increase follows the sharp rise of Rs. 24.14 lakhs recorded in the previous year and brings the profit to a fresh record level since the reorganisation of the Company at the end of 1951. The net profit, too, has staged a rise to Rs. 30.57 lakhs from Rs. 24.86 lakhs, to which level it had gone up from Rs. 12.96 lakhs earned in 1953.

Consequent on the encouraging results, the Directors have increased the allocation to the reserves from Rs. 10 lakhs to Rs. 15 lakhs, by adding Rs. 5 lakhs to the dividend equalisation fund, which had not received anything in the previous year. The transfer to the general reserve has been maintained at Rs. 10 lakhs. The dividend on ordinary shares has been stepped up to 12½ per cent. from 10 per cent. per annum for the previous two years. The dividend on preference shares has also been raised from 6 per cent. to 7 per cent. It may be noted, in this connection, that the Company's preference shares are entitled to a fixed tax-free cumulative dividend at 6 per cent. per annum and are also entitled to participate in dividend at 7 per cent. in the event of a dividend of over 10 per cent. being declared on the ordinary shares, at 7½ per cent. in case of a dividend of 20 per cent. or above being paid on ordinary shares and also an additional dividend of ½ per cent., subject to a maximum of 9 per cent., for every 10 per cent. increase in the ordinary dividend. The distribution on deferred shares has also been raised from 10 per cent. (paid for 1953 and 1954) to 12½ per cent., the same as that paid on ordinary shares, in terms of the rights attached to these shares. The deferred shares, it may be mentioned in passing, are not entitled to participate in profit, unless a dividend of 10 per cent. is paid on ordinary shares. If, however, the ordinary dividend is raised over 10 per cent., both ordinary and deferred shares are entitled to the same rate of dividend up to 17½ per cent. and, of any surplus profit available for distribution, one half will be distributed to ordinary shareholders and the other half to deferred shareholders.

The Directors have given the option to the ordinary and deferred shareholders to receive up to 75 per cent. of the dividend for 1955, in lieu of cash, in specie in the form of fully paid ordinary shares of Orissa Cement Ltd. of Rs. 10 each at par. The shares held in Orissa Cement Ltd. have already been mostly distributed to the shareholders of the Dalmia Cement (Bharat) Ltd. by giving such option in the previous two years, as a result of which the Orissa Cement Ltd. is no longer a subsidiary of the Dalmia Cement. However, the Company still holds 77,454 ordinary shares of Rs. 10 each which it proposes to distribute at par to its own shareholders in lieu of dividend.

The following comparative table, giving the salient features of the Company's working results for the past four years, provides an idea of its progress:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net)	195.34	207.20	148.78	181.46
Stocks	12.77	10.42	21.01	10.33
Expenses	192.21	133.13	119.73	140.81
Gross profit	68.24	64.90	40.76	40.01
Managing Agents' commission..	6.29	5.43	2.82	2.37
Depreciation	5.38	10.61	12.48	11.31
Taxation	26.00	24.00	12.50	12.50
Net profit	30.57	24.86	12.96	13.33
To reserves	15.00	10.00	..	4.00
Dividends—				
Preference	4.12 (7%)	3.53 (6%)	3.53 (6%)	3.53 (6%)
Ordinary	10.81 (12½%)	8.65 (10%)	8.65 (10%)	5.41 (6¼%)
Deferred	0.62 (12½%)	0.50 (10%)	0.50 (10%)	..
Carried forward	2.88	2.37	0.63	0.40

Production of cement during the year under review was satisfactory. There has, however, been a power cut this summer throughout the Madras State. Such will not affect the Company's production, so long as the cut does not exceed 25 per cent., because the deficiency will be made up by working the diesel generating sets installed in 1954.

The latest balance-sheet of the Company shows no notable change in the paid-up capital, which stands at Rs. 150.25 lakhs. The capital structure has, however, been revised, as per special resolution passed by the shareholders in October 1954 and approved by the Madras High Court in September 1955, in terms of which the partly paid shares have been made fully paid-up at their respective paid-up values. As against the aforesaid paid-up capital, the reserves and surplus aggregate Rs. 62.90 lakhs. The provision for taxation stands at Rs. 75 lakhs. The current liabilities aggregate Rs. 110.81 lakhs. The gross block of the value of Rs. 96.10 lakhs stands written down to Rs. 61.40 lakhs. The current assets amount to Rs. 341.81 lakhs, of which investments in its subsidiary, Dalmia Cement Ltd., account for Rs. 164.98 lakhs.

The Company's expansion programme at Dalmiapuram has been sanctioned by the Government of India. Negotiations are proceeding with suppliers of machinery and orders are expected to be placed shortly.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 17-10 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 7.6 per cent. per annum.

KESORAM COTTON'S NEW ISSUE

One of the biggest capital issues of more recent times is the offer of 100,000 5½ per cent. (tax-free) cumulative redeemable second preference shares of Rs. 100 each by the Kesoram Cotton Mills Ltd. (Managing Agents: Messrs. Birla Bros. Ltd., Calcutta), the subscription list for which was opened on the 18th inst. and is being kept open till 21st July next. Out of the above issue, 50,000 shares have already been taken up by the existing ordinary shareholders of the Company, their nominees and others. The remaining 50,000 shares are now being offered to the public at par. A sum of Rs. 25 per share is payable on application, Rs. 25 per share on allotment and the balance of Rs. 50 per share after 31st March 1957. The shares are redeemable at par on 31st March 1967 out of the earnings of the Company or by a fresh issue of capital.

The object of the present issue is to finance the setting up of a plant to manufacture continuous filament viscose rayon yarn. The Company is at present engaged in the manufacture of cotton yarn and cloth and hosiery goods. It has, however, been decided to extend the Company's activities to manufacture rayon yarn. The Directors feel convinced that this activity will fetch a good return to the Company, in view of the growing demand for rayon cloth. It may not be out of place to recall here that the target fixed under the second Five-year Plan for the manufacture of viscose filament and acetate filament rayon yarn in 1960-61 is an annual capacity of 68 million lbs. and an output of the same quantity, as against the estimated annual requirements of 80 million lbs. The annual capacity as on 31st March 1956 was 22 million lbs., while the production during 1955-56 was 15 million lbs.

The Company has obtained a licence for setting up a 10-ton plant for the manufacture of continuous filament viscose rayon yarn. It is, however, proposed to install for the present a plant of 6-7 tons capacity only. The cost of the 6-7 ton plant is estimated at about Rs. 3.70 crores, of which land, buildings, roads, etc., will account for Rs. 80 lakhs, machinery and equipment for Rs. 2.50 crores and working capital for Rs. 40 lakhs. Out of the above sum, the Company proposes to meet about Rs. 2.70 crores for the purchase of land, machinery and equipment and certain construction work from its existing resources, bank loan, deferred payments, etc. The balance is proposed to be met by the present issue. The Directors feel that the minimum amount that must be raised by the present issue is Rs. 60 lakhs, including the sum of Rs. 50 lakhs that has already been taken up, which, with the aforesaid sum of Rs. 2.70 crores, will cover all the expenses, except working capital.

The Company earned a gross profit of Rs. 98.68 lakhs for the year ended 31st March 1956, as compared with Rs. 63.32 lakhs for the previous year and Rs. 58.85 lakhs for 1953-54. The net profit (after providing for the managing agency remuneration, depreciation and taxation) amounts to Rs. 43.81 lakhs, as against Rs. 25.70 lakhs for 1954-55 and Rs. 24.44 lakhs for 1953-54. The ordinary dividend for the latest year has not yet been declared, but for the previous four years the Company had maintained it at Re. 1-12 per share. It must, however, be stated that the dividends for 1951-52 and 1952-53 were on a paid-up value of Rs. 15 per share and those for the subsequent two years were on a share of Rs. 20, consequent on the increase in the paid-up value by the capitalisation of Rs. 40 lakhs in March 1954. Subsequently, the Rs. 20 paid-up shares were sub-divided into shares of Rs. 10 each.

The present paid-up capital of the Company amounts to Rs. 1.80 lakhs, made up of 20,000 7 per cent. cumulative preference shares of Rs. 100 each and 1,600,000 ordinary shares of Rs. 10 each. Of the ordinary capital, as much as Rs. 145 lakhs were raised through capitalisation of reserves on five different occasions between 1943 and 1954. The Company's reserves and profit and loss account balance (which is yet to be allocated) as on 31st March 1956 aggregate Rs. 254.37 lakhs, of which capital reserve alone accounts for Rs. 145.87 lakhs. This reserve was created by a revaluation of the assets in 1950.

PENCH VALLEY COAL MAINTAINS DIVIDEND

DEVELOPMENT SCHEME TAKEN UP

THE results of working of the Pench Valley Coal Company, Ltd. (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta), during the half-year ended 30th September 1955 are more encouraging than those for the previous two half-years. Both raisings and despatches of coal had gone up sizably. Earnings show a welcome rise, after two half-years of successive decline. The gross profit, which had dropped from Rs. 8.59 lakhs for the seven months ended 31st March 1954 to Rs. 5.99 lakhs in the half-year ended 31st March 1955, has advanced to Rs. 6.43 lakhs. The net profit is, however, a shade lower at Rs. 2.13 lakhs, as compared with Rs. 2.14 lakhs for the previous half-year and Rs. 2.16 lakhs for the corresponding six months of 1954. This is due to higher provision for taxation.

The Directors have transferred a sum of Rs. 1 lakh to the development reserve, which had received Rs. 75,000 in the previous half-year. The general reserve, which had been provided with Rs. 25,000 six months ago, however, has not been strengthened further. The dividend is proposed to be maintained at 15 per cent. per annum.

The progress of the Company's working during the past three half-years can be seen from the following comparative table:

—	For the six months ended			For the 7 months ended
	30-9-55	31-3-55	30-9-54	31-3-54
	Rs.	Rs.	Rs.	Rs.
Sale proceeds	34,63,401	31,72,134	32,38,001	38,68,900
Stocks of coal	70,441	1,16,865	1,09,487	59,483
Colliery expenses	10,69,790	10,11,625	10,89,569	10,54,725
Other expenses	17,29,952	16,01,941	16,09,624	19,61,985
Gross profit	6,43,476	5,99,292	6,10,168	9,59,445
Managing Agents' commission.	97,222	90,849	94,232	1,25,754
Depreciation	1,27,804	1,42,054	1,49,167	2,03,180
Taxation	2,05,185	1,62,403	1,50,756	2,18,306
Net profit	2,13,265	2,13,956	2,16,013	3,12,225
Provision for liability no longer required	..	22,180	..	..
To reserves	1,00,000	1,00,000	1,00,000	1,75,000
Dividend	1,18125 (15% p.a.)	1,18,125 (15% p.a.)	1,18,125 (15% p.a.)	1,37,813 (15% p.a.)
Carry forward	33,343	38,203	20,102	22,304
Raisings .. .. .. (tons)	222,222	207,654	215,388	251,508
Despatches .. .. .. (tons)	225,767	207,432	211,473	252,289

As will be seen from the above table, the output and despatches for the half-year under review are the highest since the six months ended 31st March 1954. The Directors report that the entire output had been despatched and the stocks at the end of the half-year were normal. This is reflected in the rise in sale proceeds and the decline in value of stocks. There was a notable rise in expenses, of which salaries and wages alone accounted for Rs. 1.14 lakhs.

The Company's financial position, as seen from the balance-sheet as on 30th September 1955, is quite impressive. The paid-up capital is unchanged at Rs. 15.75 lakhs and is supplemented by reserves and surplus aggregating Rs. 16.33 lakhs, of which general reserve accounts for Rs. 9 lakhs and development reserve for Rs. 7 lakhs. There is a provision of Rs. 2.40 lakhs for taxation and current liabilities aggregate Rs. 17.05 lakhs. The gross block of the value of Rs. 47.70 lakhs stands written down to Rs. 12.40 lakhs. The current assets amount to Rs. 39.13 lakhs and exceed the current liabilities and provision for taxation by over 100 per cent.

The Company incurred a capital expenditure of Rs. 1.35 lakhs on development, machinery and buildings. The management has taken in hand an extensive development scheme, with a view to replacing some of the old collieries nearing exhaustion, in order to enable the Company to maintain production, as also to increase the same as far as consistent with the facilities provided by the railways by way of sidings and wagon supply.

A recent development of utmost importance to the coal industry is the award of the All-India Industrial Tribunal (Colliery Disputes). Referring to the award, the Directors of the Company observe in their latest report as follows:

"The Coal Tribunal Award has been published on 26th May 1956, but the details are only just available and the impact on cost is being examined. The Coal Prices Revision Committee, set up by the Government of India, has not yet completed its work and it may be some time before the revised selling prices are announced. This being so, unless an *ad-hoc* increase in the selling prices be given to the industry during the interim period, for which the industry is pressing, grave difficulties will result."

The Rs. 10 fully paid-up shares, are being currently quoted at Rs. 23-8 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 6.6 per cent. per annum.

Points From The Chair

Prospects for Metal-can Production

"NATIONAL investment during the second Plan will create an expanding level of demand and the supply of goods to satisfy this will be a condition both of the success of the investment programme and of continued political stability. To this end your Company and its customers have a major contribution to make; the processed food industry, in particular, is strategically placed. It is to receive active encouragement in the second Plan and the allocation for horticulture has been increased from Rs. 1 crore to Rs. 9 crores. These measures are to be welcomed as the addition of processed fruits and vegetables to the national diet will make for important improvements in public health and preventive hygiene. The development of this industry involves co-operation between large- and small-scale industry since the safe preservation of food requires precision-made cans that only high-speed equipment—equipment inseparable from large-scale industry—can produce, while at the other end horticulture is a part of intensive small-scale agriculture. This pattern of co-operation is already established between the canners, the horticulturists and ourselves.

"There are, however, some ominous signs: the increases in railway and programme of taxation, ocean freights and the rise in food prices are implied threats to purchasing power. Transport and the shortage of steel and cement are capable of braking the country's economic growth. We have made a good start in the current financial year, but there is no room for complacency. We are planning in a spirit of optimism tempered with caution."

H. CHISWELL JONES,
Metal Box Company of India Ltd.

Equalisation of Cement Prices

"The Government have recently decided to introduce a scheme of State Trading in cement as a temporary measure for the purpose of equalising the price of imported and indigenous cement. The scheme has been generally agreed to, as the objectives of the Government, namely, to make up the cement deficit by imports until internal production is stepped up, to equate the price of imported and indigenous cement and to continue the rationalised movement and distribution of cement, are conceived in the public interest. The scheme envisages the fixation of cement price on an *ex*-works basis, while the present price for cement was fixed on the recommendations of the Tariff Board on an *f.o.r.* destination basis. Your Board made representations to the Government that the fixation of price on an *ex*-works basis would adversely affect the economy of your Company and that adequate compensatory relief should be granted to the Company in fixing the *f.o.r. ex*-works price. The matter is under the Government's active consideration."

V. RAMAKRISHNA,
Andhra Cement Co., Ltd.

Import of Rayon Yarn

"The policy regarding the import of rayon yarn adopted by the Government appears to have suffered a slight shift towards liberalisation for some time past. Whereas it was expected that, with the increased indigenous production, Government would take steps to reduce imports from abroad, the actual figures of imports disclosed by the official figures for the nine months ended December 1955 reveal an import of as much as 38 million lbs. of rayon yarn into this country. At this rate, the total imports for the financial year ended March 1956 are likely to be about 51 million lbs. which, together with the actual production of the indigenous industry, would make available to the country a much larger quantity of rayon yarn than the estimated annual requirements of the country of about 45 million lbs. The unhealthy competition by foreign manufacturers referred to in my last speech that they sell the two popular deniers of 150 and 120 at the same rates in this market, maintaining much higher rates for their domestic sales, continues. Our Government, I am sure, will bear this in mind while formulating the import policy for the next period."

KASTURBHAI LALBHAI,
National Rayon Corporation Ltd.

National Machinery Manufacturers

"The factory set up by National Machinery Manufacturers Ltd., at Thana, Bombay, in which concern the Company holds a considerable interest, has made progress, and production of ring spinning frames has already reached 20 per month; production of carding machines will begin this year. There is clear evidence in the order book from India that the goodwill which has been created for the Company by its participation in manufacture in India is considerable."

K. H. PRESTON,
Platt Brothers & Company (Holdings) Ltd.

Matching Credit to Purpose

"The growing importance of matching the type of credit to the purpose for which it is required has been emphasised in the past. While landowners and owner-occupiers may be tempted to borrow short for long or medium-term purposes when short-term rates happen to be cheaper, past experience has shown the disadvantages to borrowers of so doing. Today this is abundantly clear. 'Bridging transactions', as they are known in banking circles, may, of course, be properly of that nature and be entered into by both borrower and lender as such. But this is not always the case, and then the bridge may fail to connect with the other side. In such event, the borrower is usually the sufferer. We do not compete in our long-term lending with short-term lenders."

EVELYN J. BUNBURY,
Agricultural Mortgage Corporation Ltd.

COMPANY MEETINGS AND DIVIDENDS

AMALGAMATED COALFIELDS LTD. Half-yearly General Meeting, Calcutta, 6th July 1956. Dividend: As. 12 per share.

HIGHLAND PRODUCE CO., LTD. Annual General Meeting, Alleppey, Travancore-Cochin, 7th July 1956. Dividend: Rs. 2 per share (includes interim dividend of As. 10 per share). Transfer books will remain closed from 1st to 7th July 1956, both days inclusive.

TWYFORD TEA CO., LTD. Annual General Meeting, Kottayam, Travancore-Cochin, 9th July 1956. Dividend: Rs. 2 per share. Transfer books will remain closed from 3rd to 12th July 1956, both days inclusive.

ARRAH-SASARAM LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 10th July 1956. Dividend: Rs. 3 per share, less income-tax. Transfer books will remain closed from 1st to 10th July 1956, both days inclusive.

CHAPARMUKH-SILGHAT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 10th July 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 1st to 10th July 1956, both days inclusive.

FUTWAH-ISLAMPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 10th July 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 1st to 10th July 1956, both days inclusive.

SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 10th July 1956. Dividend: Rs. 3 per share, less income-tax. Transfer books will remain closed from 1st to 10th July 1956, both days inclusive.

ELPHINSTONE SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay, 10th July 1956. Dividend: Rs. 5 per share (includes Rs. 2-8 interim dividend). Transfer books will remain closed from 24th June to 10th July 1956, both days inclusive.

BOMBAY GAS CO., LTD. Annual General Meeting, Bombay, 11th July 1956. Transfer books will remain closed from 4th to 11th July 1956, both days inclusive.

NATIONAL MACHINERY MANUFACTURERS LTD. Annual General Meeting, Bombay, 11th July 1956. Transfer books remain closed from 27th June to 11th July 1956, both days inclusive.

SHAW WALLACE & CO., LTD. Annual General Meeting, Calcutta, 11th July 1956. Transfer books will remain closed from 30th June to 11th July 1956, both days inclusive.

BRITISH INDIA ELECTRIC CONSTRUCTION CO., LTD. Half-yearly General Meeting, Calcutta, 12th July 1956. Dividend: *Nil*. Transfer books will remain closed from 5th to 12th July 1956, both days inclusive.

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Mysore, 14th July 1956. Dividend: Rs. 7 per share (includes interim dividend of Rs. 2-8 per share). Transfer books will remain closed from 2nd to 15th July 1956, both days inclusive.

ALEXANDRA JUTE MILLS LTD. Half-yearly General Meeting, Calcutta, 16th July 1956. Dividend: Rs. 5 per share. Transfer books will remain closed from 25th June to 16th July 1956, both days inclusive.

CHITAVALSAH JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 16th July 1956. Dividend: As. 10 per share. Transfer books will remain closed from 25th June to 16th July 1956, both days inclusive.

EMPIRE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 16th July 1956. Dividend: As. 8 per share. Transfer books will remain closed from 25th June to 16th July 1956, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 16th July 1956. Dividend: 1 anna per share. Transfer books will remain closed from 25th June to 16th July 1956, both days inclusive.

NELLIMARLA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 24th July 1956. Transfer books will remain closed from 3rd to 24th July 1956, both days inclusive.

SIMPLEX MILLS CO., LTD. Annual General Meeting, Bombay, 25th July 1956. Dividend: Rs. 12 per share, payable on 27th July 1956. Transfer books remain closed from 22nd June to 6th July 1956, both days inclusive.

ALEMBIC CHEMICAL WORKS CO., LTD. Annual General Meeting, Baroda, 26th July 1956. Dividend: Rs. 8 per ordinary share. Transfer books will remain closed from 6th to 26th July 1956, both days inclusive.

PALANPUR VEGETABLE PRODUCTS LTD. Annual General Meeting, Bombay, 31st July 1956. Transfer books will remain closed from 17th to 31st July 1956, both days inclusive.

SRI BALASUBRAMANIA MILLS LTD. Dividend of Rs. 6 per ordinary share and Rs. 10-8 per 'B' ordinary share, for the year ended 31st December 1955.

EMERALD VALLEY ESTATES LTD. Final dividend of As. 5 per ordinary share, for the year ended 31st December 1955. Transfer books will remain closed from 16th to 31st July 1956 both days inclusive.

ENGINEERING GOODS INDUSTRY

(*Concluded from page 1254*)

our ships to compete with those of other advanced countries. But the Government could expedite the process by providing technical and financial help. However, the Government has appointed an officer on special duty to go into the question of shipping freight and out of 35 cases of disparities brought before his notice he has succeeded in 16 cases to bring about a revision in their rates.

Long-term Credit

Thirdly, the non-availability of long-term credit as provided by the Export-Import Bank of the United States is another point which needs consideration. The Government could help a great deal by forming a semi-Government Corporation on the lines of the Export-Import Bank as also the Re-insurance Corporation. The Government has only recently appointed an expert committee to consider the scope of an export credit guarantee scheme in order to stimulate exports. The scheme is intended to provide a guarantee to the exporter against losses resulting from circumstances which are beyond his control and which are not ordinarily accepted as insurable risks by insurance companies such as insolvency of the foreign buyer, unforeseen changes in regulations relating to foreign exchange, occurrence of war and incurring of extra delivery charges.

Finally, ignorance about Indian products. This could be overcome by propaganda through sending frequent trade missions to these countries, providing all sorts of commercial information and arranging trade discussions with the representatives of those countries, participating in trade fairs and exhibitions and establishing showrooms in foreign countries, publishing directory of exportable commodities and distributing them free of charge, attending to trade enquiries and supplying information about creditworthiness of parties, translating commercial and technical texts for the benefit of the people and maintaining commercial libraries and museums. This work could be largely handled by our embassies abroad if they are equipped with persons trained in trade and commerce.

The second Five-year Plan, which envisages an expenditure of Rs. 4,800 crores in the public sector and Rs. 2,300 crores in the private sector, implies a reliance on foreign exchange. It is estimated that there will be a shortage of the order of Rs. 1,100 crores in the country's foreign exchange requirements. This could be obtained only through increased exports. Here, engineering industries with a wide range of products have to play an important role as they possess the essential raw materials and technical know-how. The volume of exports which increased from a few lakhs of rupees before 1947 to about Rs. 12 crores in 1953-54 must provide the backbone of future trade and commerce of the country.

COAL

(*Concluded from page 1244*)

order. "As labour have already waited with great patience for 26 months for the deliberations of the Tribunal to be completed," to quote the colliery owners' statement, "it can be foreseen that any delay in the implementation of the Award may well result in labour unrest and possibly widespread strikes." The effect of the latter on industry in general and the economy of the country as a whole, particularly in the initial stages, the statement adds, will be cataclysmic. In the interests of the nation and of maintaining the good relationship with labour, which has been built up over a period of years, the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association have recommended to their members that they should implement the Award. It is a fine gesture on the part of colliery owners not to appeal against the Award and to have shown an eagerness to implement the Award, in spite of serious financial consequences of such a step on the industry. But will the Government fully appreciate that higher wages cannot be paid without a compensatory price increase? Any further delay in the Government's decision, it is needless to add, will cripple the industry. The least the Government should do, as was pointed out by us in our issue dated 2nd June 1956, to give an interim increase in prices.

PROFIT OF BRIDGE AND ROOF BETTER

AMALGAMATED COAL RAISES DIVIDEND

Bridge & Roof Co. (India), Ltd.

THE directors of the above Company (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

The profit for the half-year, after providing for debenture interest, depreciation and taxation, was Rs. 3,25,556 (Rs. 1,87,448) to which is added the balance brought forward of Rs. 1,15,742 (Rs. 1,09,624), making a total of Rs. 4,41,297 (Rs. 2,97,072). Out of this amount the directors have set aside Rs. 2,00,000 (Rs. 1,00,000) to general reserve. This leaves a balance of Rs. 2,41,297 (Rs. 1,97,072), at the credit of profit and loss account, which the directors recommend be dealt with as follows:

To dividend at the rate of 15 (15) per cent. per annum, absorbing Rs. 90,000 (Rs. 90,000) and to carry forward Rs. 1,51,297 (Rs. 1,07,072).

As the financial year of the Company covered by the accounts ended before the Companies Act, 1956 came into force the form in which the balance sheet and profit and loss account have been prepared differs from the form prescribed by that Act.

As the figures indicate the Company had a very successful half-year. Demand for structural and civil engineering products may be expected to continue during the second Five-year Plan.

In view of the need to add to the Company's plant and finance stocks and work in progress the directors have recommended a substantial allocation to reserve in preference to any increase in the dividend.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	10,97,300
Debentures	2,05,000	Capital expenditure on machinery under construction	3,277
Reserves ...	17,55,000	Stock of materials and stores ...	13,45,320
Provision for taxation ...	3,49,831	Work-in-progress ...	18,93,736
Liabilities ...	39,99,862	Goods-in-transit ...	54,616
Profit and loss account ...	1,51,297	Debts, deposits and advances ...	30,35,447
		Investments	93,092
		Cash ...	1,38,202
Rs.	76,60,990	Rs.	76,60,990

Amalgamated Coalfields, Ltd.

The directors of the above Company (Managing Agents: Messrs. Shaw Wallace & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The Company's profit for the half-year, after the inclusion of a credit of Rs. 29,786 (*nil*) relating to previous periods and Rs. 38,026 (Rs. 21,441) brought forward, is Rs. 7,51,205 (Rs. 4,67,469). After providing for taxation Rs. 2,83,002 (Rs. 1,93,558), there remains Rs. 4,68,203 (Rs. 2,73,911). Out of this amount the directors have placed to machinery replacement and development reserve Rs. 2,50,000 (Rs. 1,25,000) and recommend the payment of a dividend at the rate of 15 (10) per cent. per annum without any deduction for income-tax paid by the Company, absorbing Rs. 1,91,250 (Rs. 1,27,500) leaving to be carried forward Rs. 26,953 (Rs. 21,411).

Capital expenditure incurred during the half-year on development, machinery and buildings amounted to Rs. 3,00,396 (Rs. 3,74,006), the corresponding figure of the previous half-year being Rs. 1,73,837.

Extensive development has been taken in hand to replace some of the old collieries nearing exhaustion to enable this Company to maintain production and also to increase the same as far as consistent with the facilities provided by the railways by way of sidings and wagon supply. To finance this, a sum of Rs. 2,50,000 has been placed to the reserve.

Output and despatches of steam and other grades of coal for the last three half-years are as follows:—

Half-year ended	*Raisings* Tons	*Despatches* Tons
30th September 1955	4,15,791	4,36,024
31st March 1955	3,98,230	3,90,920
30th September 1954	4,01,400	3,77,585

During the half-year, the accumulated stock of dust and slack coal has been cleared and stocks are normal. In addition to the normal offtake, a large quantity was despatched to Khaparkheda Power House on the narrow gauge whose requirement has increased and cannot be met in full from the output of narrow gauge collieries. No great change in this position is anticipated provided the railways maintain an adequate supply of wagons.

The Coal Tribunal Award has been published on the 26th May 1956, but the details are only just available and the impact on cost is being examined. The Coal Prices Revision Committee, set up by the Government of India, has not yet completed its work and it may be some time before the revised selling prices are announced. This being so, unless an *ad hoc* increase in the selling prices be given to the industry during the interim period for which the industry is pressing, grave difficulties will result.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,50,000	Block ...	26,35,000
Reserves ...	24,50,000	Capital expenditure in suspense	8,478
Provision for taxation ...	6,41,000	Stock of coal	1,38,788
Liabilities ...	28,36,698	Stores ...	15,20,812
Profit and loss account ...	26,953	Debts, deposits and advances ...	35,41,003
		Investments	1,12,500
		Cash ...	5,48,070
Rs.	85,04,651	Rs.	85,04,651

Highland Produce Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. A. V. Thomas & Co., Ltd., Alleppey, Travancore-Cochin) submit the audited accounts of the Company for the year ended 31st December 1955.

Tea crop.—The tea crop secured during the year amounted to 10,18,000 (10,13,270) pounds, of which Pasuparai Estate accounted for 4,20,000 (4,16,270) pounds and Carady Goody Estate 5,98,000 (5,97,000) pounds. Thus the crop harvested during the year was quite satisfactory and was 93,000 lbs. more than the estimate and 4,730 lbs. above the total crop secured last year.

Cost of production.—The f.o.b. cost for the year was Re. 1-2-5 against an estimate of Re. 1-2-0 per lb. and the all-in cost was Re. 1-10-7 per lb. as against last year's figure of Re. 1-12-4. The net average price realised was Re. 1-13-11 as against Rs. 2-3-8 for 1954. The decrease in price realisation was due to a general drop in the tea market.

Cardamom.—The quantity of cardamom harvested during the year amounted to 15,100 lbs. as against 10,700 lbs. in previous year.

The net profit for the year amounted to Rs. 3,70,623 (Rs. 6,64,629) after providing for depreciation on buildings, machinery, etc. and after reserving a sum of Rs. 2,40,000 (Rs. 4,75,000) for taxation. This profit, together with Rs. 53,920 (Rs. 57,291) being previous year's carry forward, makes a total of Rs. 4,24,543 (Rs. 7,21,920). Out of this, a sum of Rs. 18,000 (Rs. 18,000) towards preference dividend for the year and Rs. 1,12,500 (Rs. 1,12,500) towards 6¼ per cent. interim dividend for 1955 amounting in all to Rs. 1,30,500 (Rs. 1,30,500) have already been paid, leaving a balance of Rs. 2,94,043 (Rs. 5,91,420) available for distribution which the directors recommend be disposed of as under:—

Payment of 13⅔ (18⅓) per cent. final dividend on ordinary shares (making 20 (25) per cent. for the year) Rs. 2,47,500 (Rs. 3,37,500) and carry forward Rs. 46,543 (Rs. 53,920 after transferring Rs. 1,00,000 to dividend equalisation fund, Rs. 50,000 to general reserve and Rs. 50,000 to employees welfare fund).

Crop Estimate 1956.—A tea crop of 9,25,000 lbs. and 10,000 lbs. of cardamom is estimated for the year 1956.

General.—As anticipated in the last year's report, the tea prices had dropped appreciably in 1955 and this accounts for the fall in profit in comparison with the previous year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	20,85,832
Reserves ...	9,30,543	Stock-in-trade	2,44,510
Provision for taxation ...	2,78,229	Stores and spares ...	1,24,257
Liabilities ...	3,84,434	Motor vehicles	14,700
Profit and loss account ...	2,94,043	Nurseries ...	40,917
		Other assets	900
		Debts, deposits and advances ...	1,84,674
		Investments	2,61,050
		Cash ...	10,30,409
Rs.	39,87,249	Rs.	39,87,249

Coimbatore Pioneer Mills Co., Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. T. R. Narayanaswamy Naidu & Co., Coimbatore) submitted the audited accounts of the Company for the year ended 31st December 1955.

After meeting all expenses and providing a sum of Rs. 3,70,517 (Rs. 4,19,976) towards depreciation, the year's trading has resulted in a net profit of Rs. 13,22,903 (Rs. 10,97,153). Adding to this, the previous year's carry forward balance of profit amounting to Rs. 14,053 (Rs. 3,400) the total amount available for distribution is Rs. 13,36,956 (Rs. 11,00,553) which the directors recommend for appropriation as under:—

To transfer to machinery renewal fund Rs. 3,50,000 (*nil*), to transfer to contingency reserve Rs. 1,70,000 (Rs. 30,000), to transfer to reserve for bad and doubtful debts Rs. 55,000 (*nil*), to provide for income-tax and super-tax Rs. 3,41,133 (Rs. 6,50,000), to pay a tax free dividend of 6½ per cent. on cumulative preference shares Rs. 6,500 (Rs. 6,500), to pay a tax free dividend of 20 (20) per cent. on ordinary shares Rs. 4,00,000 (Rs. 4,00,000) and to carry forward to next year Rs. 14,323 (Rs. 14,053).

The mill have worked in multiple shifts for 308 days during the year under review with an installed capacity of 23,738 spindles. A further 3,488 spindles have been added, which will commence working shortly. The directors report that the profits earned by the Company have been satisfactory.

The construction of the "B" mill at Perianaickenpalayam with a complement of 12,000 spindles is nearing completion. A major portion of the machinery has already arrived and is in the course of erection and the mill is expected to go into production by June 1956. When the "B" mills also goes into production, the total installed capacity of the mills will be raised to 39,226 spindles. A further expansion application for allotment of 20,000 spindles for the "B" mills has also been made and sanction is awaited.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	12,33,509
Reserves ...	19,95,000	Buildings under construction and materials, etc.	69,211
Provision for taxation ...	7,50,000	"B" mill construction	11,76,769
Liabilities ...	16,92,171	Stock-in-trade	14,06,636
Profit and loss account ...	14,323	Stores and spare parts	1,44,727
		Debts, deposits and advances ...	11,88,827
		Investments	12,72,660
		Cash ...	59,153
Rs.	65,51,494	Rs.	65,51,494

Howrah-Amta Light Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

Gross earnings.—The gross earnings for the half-year were Rs. 14,43,481 (Rs. 14,70,508) which is Rs. 27,027 less than the earnings of the corresponding period ended 30th September 1954. There are increases of Rs. 21,104 and Rs. 4,935 under coaching and miscellaneous and decreases of Rs. 53,010 and Rs. 56 under goods and telegraph.

Working expenses.—The working expenses for the half-year were Rs. 12,62,630 (Rs. 11,84,411) plus Rs. 62,500 (Rs. 62,500) set aside to renewal reserve making a total of Rs. 13,25,130 (Rs. 12,46,911) which is Rs. 78,219 more than the figure for the corresponding period ended 30th September 1954.

Net earnings.—The net earnings for the half-year were Rs. 1,18,351 (Rs. 2,23,597) which is Rs. 1,05,246 less than the figure for the corresponding period ended 30th September 1954.

The balance available for distribution is net profit for the half-year Rs. 78,247 (Rs. 92,350) and balance brought forward Rs. 72,161 (Rs. 34,959), making a total of Rs. 1,50,408 (Rs. 1,27,309). After deducting the preference dividend paid during the half-year 30th June 1955 of Rs. 25,000 (Rs. 25,000), leaving a balance of Rs. 1,25,408 (Rs. 1,02,309). The directors recommend that the available balance be disposed of as follows:—

Payment of a dividend for the half-year at the rate of 6 (6) per cent. per annum less income-tax Rs. 33,399 (Rs. 35,399) and balance to be carried forward Rs. 90,009 (Rs. 66,910).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	26,00,000	Block ...	50,82,188
Debentures	7,00,000	Stores ...	9,46,817
Reserves ...	17,87,954	Work-in-progress ...	1,08,405
Provision for taxation ...	64,818	Debts, deposits and advances ...	4,63,982
Liabilities ...	13,98,668	Investments	43,978
Net revenue	1,25,408	Cash and other balances	31,478
Rs.	66,76,848	Rs.	66,76,848

Chaparmukh-Silghat Railway Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

Earnings.—Gross earnings during the half-year were Rs. 1,40,175. During the corresponding period in 1954 they were Rs. 1,14,907. The increase was Rs. 25,268. The working expenses are as usual 50 per cent. of the gross earnings. The net receipts were therefore Rs. 62,834 against Rs. 50,079 in 1954 exclusive of interest on loans. The balance available for distribution is net profit for the half-year Rs. 34,749 (Rs. 30,375) and balance brought forward Rs. 7,100 (Rs. 8,402), making a total of Rs. 41,849 (Rs. 38,777). The directors recommend that the available balance be disposed of as follows:—

Payment of a dividend for the half-year of Re. 1 (Re. 1-4) per share without deduction of tax Rs. 31,000 (Rs. 38,750) and balance to be carried forward Rs. 10,849 (Rs. 27).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	31,00,000	Block ...	35,48
Reserves ...	29,296	Book debts	64
Provision for taxation ...	89,648	Cash ...	18
Liabilities ...	3,62,421		
Net revenue account ...	41,849		
Rs.	36,23,214	Rs.	36,23

N.B.—Figures within brackets relate to corresponding period of the previous year.

MONEY TIGHT

(From Our Own Correspondent)

BOMBAY, 27*th June*

With the approach of the half-yearly closing of bank accounts, the demand for money increased, while there was a shrinkage in the lendable resources. Consequently, the stringency was acuter than last week, though there was no perceptible increase in short-term interest rates.

While the pace of enquiry for bank credit from trade and industry showed no signs of slowing down, the pressure on the available supply of funds increased, as banks also required additional cash for window-dressing purposes. There was some improvement in the seasonal influx of money, but that was inadequate to offset the expansion in the demand.

Inter-bank call money was still bid at 3½ per cent., though some deals were reported to have been done at 3 per cent. after clearing hours. House money at call fetched the self-same 3½ per cent. and short-term deposits 3½ per cent. for one to three months and 3¼ to 3⅜ per cent. for four to six months.

A sharp decline of Rs. 17.45 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 22nd June 1956. With this, the aggregate shrinkage for the past two weeks comes to Rs. 27.95 crores. There has been a further rise of Rs. 8.94 crores in notes held in the Banking Department, so that the decline in total notes issued is of the order of Rs. 8.51 crores. This rise is covered on the assets side by a fall of Rs. 10 crores in foreign securities and a rise of Rs. 1.49 crores in rupee securities. In the Banking Department, deposits of the Central Government have gone up by Rs. 6.78 crores and those of other Governments by Rs. 2.73 crores. Deposits of banks are also up by Rs. 70 lakhs. On the assets side, balances held abroad show an increase of Rs. 3.71 crores. Loans and advances other than to Governments have declined by Rs. 1.74 crores. Advances to Scheduled banks against usance bills during the week amount to Rs. 10.82 crores, but repayments have been of the order of Rs. 10.34 crores, so that the outstanding advances show a rise of only Rs. 48 lakhs.

The Scheduled banks' statement for the week ended 15th June 1956 discloses a fall of Rs. 1.21 crores in demand deposits and a rise of Rs. 2.61 crores in time deposits. Borrowings from the Reserve Bank stand reduced by Rs. 2.05 crores, of which borrowings against usance bills account for Rs. 1.48 crores. Borrowings from the State Bank are also lower by Rs. 49 lakhs. Advances have gone down by Rs. 43 lakhs and bills purchased and discounted by Rs. 4.58 crores.

The Gilt-edged market continued to display listless conditions. Buying enquiries were small and restricted to a few counters. The volume of business was also very much restricted. The undertone was, however, steady. 3 per cent. 1957 and 1958 were unchanged at Rs. 99-13 and Rs. 99-10, respectively. 3 per cent. 1959-61 gained an anna to Rs. 98-2. 3 per cent. 1963-65 held ground at Rs. 95-2 and 3 per cent. 1964 at Rs. 95. 3 per cent. 1966-68 showed no change at Rs. 93-4, while 3 per cent. 1970-75 was marked down by an anna to Rs. 90-6. 3 per cent. 1986 Conversion Loan declined further by an anna to Rs. 77-4. 3½ per cent. 1961 fell by As. 2 to Rs. 99-9, while 3½ per cent. 1964 was maintained at Rs. 98-12. 3½ per cent. 1965 was in demand and rose by As. 2 to Rs. 98-15. State loans were stagnant.

In the foreign exchange section, rupee showed a weakness in terms of the U.S. dollar, in consonance with a similar trend displayed by sterling. Banks' selling rate of ready dollars rose from Rs. 477½ to Rs. 478½ per $100 and their buying rate from Rs. 473 to Rs. 474¼ per $100. In New York, spot sterling was marked down from $2.80.7/16-2.80.9/16 to $2.79.13/16-2.79.15/16, three months' forward from $2.78½-2.78⅝ to $2.78.5/16-2.78.7/16 and transferable sterling from 277.50-277.60 cents to 277.30-277.40 cents.

LINSEED SUPPLIES SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, 25*th June*

Scarcity of supplies was the main feature of the linseed market during the week. This was due to the apparent firmness in seeds prices, which was maintained throughout the week. Offers from upcountry for forward delivery were meagre, while movement of goods, already limited, was expected to be further slowed down by heavy rains in upcountry areas. Local crushers were in a quandary, with seeds prices firmly held and oil values declining, leaving no margin of profit on a greatly reduced turnover.

In the oil section, conditions were no better. Consumers were buying from hand to mouth. Overseas markets were lifeless, with little prospect of an early revival.

The latest available quotations are: Ready Rs. 21-10 and June-July Rs. 21-6 per maund.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 24*th June*

During the week under review, the hides and skins market ruled steady. Fresh arrivals of cow were slightly less. The main purchasers were the local tanners. The Madras dealers were lukewarm.

The latest available quotations are: Wet salted cow, 1st grade Rs. 260, 2nd grade 200 to Rs. 240 and 3rd grade Rs. 120 per score; wet salted buffalo 1st grade 2 lbs. 2 ozs. and 2nd grade 2 lbs. 4 ozs. per piece; goat 1st grade Rs. 215 and 2nd grade Rs. 150 per 100 pieces; sheep 1st grade Rs. 160 and 2nd grade Rs. 140 per 100 pieces.

GOLD MOVES UP

(From Our Own Correspondent)

BOMBAY, 27*th June*

In the bullion market, silver displayed an irregular trend during the week under review, while gold presented a steady front, with a moderate recovery in prices.

In the earlier half of the week, silver showed a reactionary trend, in distinct contrast to the sharp rise noted in the previous week. This was the result of selling pressure induced by rumours of fresh arrivals of Tibetan coins and influx of large unrefined silver. Subsequently, however, the white metal gathered strength on bear covering and reports of an increase in offtake in the ready section.

Gold edged forward on encouraging demand and covering purchases by those who had sold in the previous week.

Silver forward (26th June settlement) reacted from Rs. 172-1 to Rs. 169-11, before the settlement ran out. The July settlement was marked down from Rs. 171-11 to Rs. 169-10 early in the week, but slowly recovered to touch Rs. 172 today. The closing was done at Rs. 171-14.

Ready silver (.996 Mint), after declining from Rs. 172-7 to Rs. 169-15, gained strength and finished at Rs. 172-2.

The floating stocks of silver are estimated at 600 bars. The daily average offtake was 10 to 15 bars.

Gold for forward delivery (25th June settlement) moved up from Rs. 100-12 to Rs. 101-14 before the settlement ran out. The next settlement advanced from Rs. 99-11 to Rs. 100-13 and closed at Rs. 100-11.

Ready gold appreciated from Rs. 101-7 to Rs. 102-13, but closed a shade lower at Rs. 102-9.

The floating stocks of gold are placed at 15,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was higher at 4,000 tolas.

In London, both silver and gold shot up during the week. Spot silver moved up from 78½d. to 78¾d. and forward from 77¾d. to 78½d. Gold rose from 249s. 5½d. to 249s. 9¾d. In New York, silver was unchanged at 90½c.

The following comparative table shows the trend of market during the week under review:

	27-6-56	Highest	Lowest	20-6-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

RAW WOOL FIRM

(From Our Own Correspondent)

NEW DELHI, 21*st June*

During the past fortnight, the Indian wool markets were fully firm during the fortnight under review, thanks to continued purchases by Russia. Stocks were reported to be getting thinner in the Bombay market. The quotations for wool prevailing at Delhi yesterday are given below:

	Rs. a. p.	
Superior white ...	3 5 6	(per lb f.o.r. Bombay)
Medium white ...	3 4 0	„ „ „
Yellow	2 10 0	„ „ „
Black and grey ...	90 0 0 to	
	105 0 0	(per maund raw)
Light grey ...	130 0 0	„ „ „
Camel hair ...	80 0 0	„ „ „

Bradford, U.K. (15-6-56): With the Australian wool marketing season now entering its final stages, the usual late-season spent in wool-buying activity is showing itself. All the principal importing countries are competing actively for this week's offerings, which represent one of the few remaining opportunities of acquiring good style wool. The dearer prices paid for wool are forcing higher quotations in the Bradford top market and most merino qualities are quoted at least 3d. per lb. above the previous week's levels, with fine crossbred qualities about 1d. dearer.

London (14-6-56): In the London futures market, business was done today at 117½d. for October, 112¾d. for December and 108¾d. for May 1957 delivery. On the final day of the wool sales on 8th April, there was good all-round competition and any differences as compared with the opening were against the buyer. The greatest change during the series was the improvement in the demand for slipes which took place in the second week. Better types of New Zealand slipes were up to 5 per cent. above the opening; values for Cape wools advanced 5 per cent. as compared with the last close in April.

Melbourne (11-6-56): Prices were fully firm on previous week's basis. The main buyers were Japan and the Continental countries.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 27*th June*

The cotton futures market witnessed rapid fluctuations during the week under review. It began the week on a distinctly bearish note but staged a recovery on Friday. The initial weakness of the market was due to speculation indulged in by a section of traders on three considerations. These were: (1) reports of good rains in cotton-growing regions, (2) a feeling that regulations of forward trading were too stringent to allow bulls to manœuvre, and (3) apprehensions that the Central Government was determined to hold cotton prices in check. These factors induced large-scale liquidation which led to a drop in cotton futures. The drop was so sharp—Rs. 23-8 in one day—as to encounter fresh bull support on Friday. This, together with bear covering, imparted considerable strength to the market and cotton futures registered an impressive recovery. The recovery gathered further momentum subsequently, particularly today, thanks to the Central Government's decision not to entertain applications for import of any variety of cotton from the dollar area. The undertone of the market is steady at the time of writing.

The Jarilla contract (March 1957) opened the week lower at Rs. 653-8, as against Rs. 654. The contract was hammered down to Rs. 642-8 on the following day. The marked fall in the quotation thus should have normally brought about a special clearing, but it could not be enforced, owing to technical difficulties. The Board of the East India Cotton Association (E.I.C.A.), however, declared a special clearing on the 22nd inst. at Rs. 646 for the Jarilla contract and at Rs. 812 for Vijay contract. Thereafter, the Jarilla contract gradually moved up to Rs. 663 on Monday, but again relapsed to Rs. 651 before closing higher at Rs. 661. The net gain over the week was Rs. 7. Vijay contract (April 1957) opened Rs. 2 lower at Rs. 818 on Thursday and receded to Rs. 803 on the same day. After advancing to Rs. 827 on Monday, it declined to Rs. 818 on the 25th inst. but finished higher at Rs. 822. The net gain over the week was Rs. 2.

The following is the trend of prices of the two contracts during the week under review:

(In rupees per candy of 784 lbs.)

	27-6-56	*Highest*	*Lowest*	20-6-56
Jarilla contract ...	661	663	642½	654
Vijay contract ...	822	827	803	820

It is reported that the E.I.C.A. Board has set up a sub-committee to go into the question of option dealings in the cotton futures market and to recommend ways to check such business. This decision was taken by the Board at its meeting held on Friday. The Board also decided to withhold permission for trading in delivery contracts in the new crop until the announcement of ceilings and floors. Further, it invited suggestions from members over their representation in the panel system of election to the Board.

A spurt in the prices of East Africans was the feature of trading in the spot cotton market during the week. The spurt followed the buying support induced by the suspension of imports of U.S. cotton. Sizable lots of B.P. 52 changed hands substantially higher at Rs. 1,640 (ready) yesterday, as against Rs. 1,550 (September-October) on the 21st inst. Similarly, Busoga was done higher at Rs. 1,515, Budama at Rs. 1,500, Jinja at Rs. 1,385 and Mwanza at Rs. 1,300. The domestic section ruled generally steady, thanks to limited stocks and sound statistical position. The following are the latest available prices from the Sewri market:

Bengal *Deshi* Rs. 625; Berar Jarillas Rs. 760; Khandesh Rs. 770; Vijay Rs. 960; Oomra *Deshi* Rs. 680; Moglai Rs. 680.

The week under review is notable for the announcement of two important decisions by the Government of India. First, no applications will be entertained for the import of any variety of cotton from America or other dollar area country or from soft currency area countries, excepting Egyptian Karnak and Menoufi cotton. The licensing procedure for the import of the latter varieties of cotton stapling 1-1/16" and above would be the same as that obtained during the last licensing period. Secondly, the present floor and ceiling prices of cotton will remain unchanged for the season 1956-57. In conformity with this policy, the price schedule, with such amendments as may be considered necessary, will be issued in due course.

Conditions in the Karachi cotton market continued to be depressed during the week under review. Overseas enquiries for Pakistan cotton and local mill demand were very slack. Operators were busy reducing their commitments. Even reports of the possibility of Russia buying large quantities of cotton under the proposed Pakistan-Russia trade agreement failed to have any effect on the market. Consequently, prices of cotton moved down further. N.T.R.G. July delivery dropped Re. 1-9 to Rs. 80-9. January delivery fell by a rupee to Rs. 76-9. The spot section also presented a weak note, with the exception of *Deshi* varieties which recorded an improvement in prices on good buying support. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, the figures in brackets giving the last week-end rates:

Sind *Deshi* 103 (101); Punjab *Deshi* 97-8 (96); 4F Roller 82-14 (84); S.G. 84-14 (86); 289F N.T. Roller 85-2 (85-12); S.G. 87-8 (89-12); 289F Punjab Roller 90-14 (92); S.G. 98-6 (100).

The Alexandria cotton futures market ruled quiet during the week under review also. There was no important fresh export business. The new regulations governing the futures market, it was feared, would restrict price movements considerably. Buying enthusiasm was, therefore, negligible, and, sellers being predominant, cotton prices continued to drift lower. The following are the closing rates—in tallaris per lb.—prevailing in the Alexandria cotton futures market yesterday:

Karnak: July 105.05, November 101.20 and January 97.20; Ashmouni: June 74.75, August 74.75 and October 72.70.

A distinctly easier trend was noticeable in the Liverpool cotton futures market during the week under review. Besides bearish advices from Alexandria, apprehensions of a setback in the world cotton prices adversely affected the sentiment of traders. The apprehensions were based on the large sale of 1,567,278 bales of U.S. surplus cotton at sharply reduced prices announced by the Commodity Credit Corporation on the 16th inst. There was a fair volume of hedging and commission house selling which resulted in a fall in cotton prices. The fall would have been more marked but for local mill buying against fixations. The Egyptian contracts were dull and Sudan position came in for limited activity.

The latest available quotations—in pence per lb.—from the Liverpool cotton market are: *Old contract*: July-August 25.50. *New contract*: July-August 28.35, October-November 25.15, December-January 24.47, March-April 25.87 and May-June 23.35. *Egyptian Karnak cotton*: July-August, November-December and January-February 57.80. *Sudan cotton*: July-August 49.00, September-October 48.25 and November-December 48.05.

A firm trend was in evidence in the New York cotton futures market this week, in contrast to the sagging tendency witnessed last week. The firmness was aided by commission house short-covering, some Liverpool buying in old July and trade buying in new crops. The cotton prices, as a result, registered an improvement. The spot market, however, ruled easy for want of follow-up support.

The U.S. Commodity Credit Corporation sold on the 16th inst. 1,567,278 bales of cotton to those who had made offers for the Corporation's stocks on the 12th inst., bringing the total sales thus far to 1,830,000 bales. The minimum price accepted for basis Mid. 15/16" was in line with the legislative direction contained in the new Farm Bill, namely, 25 cents per lb. for gross weights average location. This price is 2⅛ cents below the minimum accepted in the previous sales under the new export sales programme and works out to 26.40c. per lb. shipside gross weights, which was the minimum price accepted in the special export programme covering one million bales of 15/16" and shorter cotton, completed sometime ago. With this sale all Gulf Port stocks of white grades 1.1/16" and shorter are reported to have been sold out. Also all stocks of Strict Middling 15/16" and shorter, Middling and better 1.3/16" and longer and Middling 15/16" and shorter wherever located have almost been eliminated. Substantially all quantities of Mississippi Valley S.M. 31/32" and 1.1/16" and white grades of California Arizona in the Pacific Coast, too, have been eliminated. There may be minor additions of the above qualities when the C.C.C. completes cataloguing the 1954 stocks, but major increase can, it is said, be expected only when the unredeemed cotton in the 1955 loan is absorbed in the C.C.C. stocks. The present view is that this is unlikely to occur before January this year.

The U.S. Department of Agriculture has granted cotton farmers a five-month extension on price support loans in an effort to encourage repayments. The farmers may pay off loans on the 1955 crop cotton until 31st December, instead of the 31st July deadline.

The following are the latest available quotations from New York, as compared with those a week and a fortnight before:

	(In cents per lb.)		
	26-6-56	19-6-56	12-6-56
Spot	36.80	36.90	36.75
July	34.60	34.48	34.49
October	32.73	32.37	32.51
December	32.67	32.45	32.61

PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 27*th June*

Malabar black pepper, during the week, ruled quiet with narrow fluctuations in sympathy with New York where Sarawak is reported to have sold fairly good quantity at prices ranging from $0.25 to $0.23½, when India was not willing to sell below $0.30. Continuous lack of foreign demand is unnerving growers but they are trying to resist any fall in the prices below Rs. 700 in the hope of business during the coming month.

Alleppey hovered round about Rs. 725 throughout the week, while garbled at Cochin was quoted at about Rs. 126 per cwt. Revision or fear of revision in the freight rate from India to the U.S.A. almost every month also proved a bar to free business. In view of minor fluctuations old-established export houses are sidelining, while new entrants in the field are doing fairly good business, as they sell first and buy afterwards, taking view of the market and they have been successful so far. Though the underlying conditions of the world's pepper market seem to be healthy, the prices may not show major improvement, until seasonal pressure of Sarawak is ended. For want of sufficient memberships the prospect of successful functioning of the hedging market at Cochin, though approved by the Government, are receding. Unless Bombay is approved as a centre for a hedging ring, no forward trading in pepper on a notable scale in India appears to be possible for more than one reason.

In the A.S.T.A. section, June changed hands from $0.29 to $0.28 while July-Aug.-Sept. from $0.28⅞ to $0.27½.

In the delivery section prices failed to maintain as at every upswing scale bulls continued to liquidate.

Following are today's nominal quotations:

Ready delivery Rs. 98 (as against Rs. 100 a week ago) per Bengal maund. July Rs. 677½-682½ (Rs. 700) per candy of 5¼ cwts.

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 27*th June*

Dull conditions prevailed in the yarn market during the week under review. Offtake by merchants was very low, thanks to reports of political disturbances in Punjab markets—the principal consumers—and of heavy floods in Bihar, Orissa and other centres. Operators also preferred to await details of import policy for the ensuing half-year. Transactions put through in all the varieties of yarns were limited and values moved narrowly, the general trend being downwards.

Rayon yarns ruled easy on slackness in demand from consuming centres, due to unsatisfactory trend of rayon fabrics markets in the wake of heavy arrivals from abroad. Consequently, prices suffered a decline, which would have been more marked but for rumours of a cut in imports of 150 and 120 bright denier yarns during July-December period. Snia rayon yarns (120 dull cones) June delivery dropped Rs. 10 to Rs. 768. August delivery declined by Rs. 2 to Rs. 784. The spread between the two contracts widened from Rs. 8 last week-end to Rs. 16 today, as a result of switch-over of purchases from near position to distant delivery. In the spot section, 150 Japan fell by As. 2-3 to Rs. 4-1-9. 120 Italy shed half an anna to Rs. 3-12. 120 Japan and 150 Italy were, however, better, their prices rising by three pies each to Rs. 3-11-9, and Rs. 3-14-6, respectively. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade were quiet at Rs. 3-7-6 and 120 Bt. cones 1st grade at Rs. 3-10-3.

In the staple fibre yarn section, 40×2 June delivery improved by Rs. 2 to Rs. 669. July position put on Rs. 3 to Rs. 655. Spot New Greats increased by nine pies to Rs. 3-6-9. Kohinoors rose by a like amount to Rs 3-8-6. Citys were better by three pies at Rs. 3-7. Centurys were unchanged at Rs. 3-7. Among imported yarns, Paramounts met with special buying support and strengthened by As. 4 to Rs. 6-6. K'Suns hardened by As. 2 to Rs. 6-12. Fujis gathered an anna to Rs. 6-6. H'Races and S'Sellos were both fully maintained at Rs. 6-4.

After presenting an easy trend in the earlier sessions, the cotton yarn market picked up strength today. The initial easiness was the result of sharp break in raw cotton prices. Weak holders were trying to unload their stocks and prices moved down. The declining trend was however, halted today, following emergence of demand from consuming centres. Over the week, eighty count cotton yarns suffered losses. Finlays receded by a rupee to Rs. 75. Mahendras lost As. 4 to Rs. 72-4. Among 60s, Raghuvamshis shed As. 8 to Rs. 57-8 Kamlas decreased by a similar sum to Rs. 59. Deals in 40s were, however, put through at higher levels, Minaxis rising by As. 9 to Rs. 28-12 and Moderns by As. 8 to Rs. 28-6. Among 20s, Moderns gained As. 2 to Rs. 18-4, while Hinds were unaltered at Rs. 18-2. Business was reported in 10 counts Moderns As. 3 lower at Rs. 14-1. Podars were done at Rs. 13-14, as against Rs. 13-13 last week-end.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	27-6-1956	20-6-1956	13-6-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.

CASTORSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 27*th June*

Active conditions were witnessed on the Oilseeds Exchange during the week under review. The Government's decision to continue free licensing of exports of castor oil till the end of December and of linseed oil till the close of October had a tonic effect on the market as a whole. Reports that deals for shipments of 6,000 tons of castor oil to the U.S. during July-September period had already been put through and that a further deal to the extent of about 4,000 tons was under negotiations with the U.S. buyers buoyed up the sentiment of operators. In the result, castorseeds September delivery registered a strident advance. Even groundnuts, which were hesitant early in the week on reports regarding good rains in producing areas, picked up strength later in the week and made good the earlier losses. The linseed section also presented a steady tone. The announcement regarding free export of linseed oil, however, had no marked bullish effect on prices since shippers had already covered their sales, abroad in anticipation of the announcement.

Castorseeds September contract presented a firm tone throughout the week. Opening at Rs. 128-12, the contract steadily moved forward to Rs. 142-12 touched today. At the higher level, there was profit-taking and the contract wound up the week at Rs. 142, registering a gain of Rs. 13-4 over the week. In the spot section, F.A.Q. gained Rs. 3-2 to close at Rs. 27-14. Madras quality advanced from Rs. 26-4 to Rs. 27-14, and Kanpur quality from Rs. 25-6 to Rs. 26-8. Castor oil B.S.S. improved by As. 14 to Rs. 15-14. Commercial variety rose from Rs. 14 to Rs. 14-11.

Groundnut February contract moved irregularly on bouts of selling and buying in the first few sessions of the week. Subsequently, a better tone came to prevail in sympathy with the firm trend in castorseed. The contract opened the week at Rs. 135 and, after moving between Rs. 133-6 and Rs. 136, finished at Rs. 135-8, revealing a gain of only As. 8 over the week. In the ready section, F.A.Q. improved from Rs. 32-14 to Rs. 33-12. June-July delivery put on Rs. 2-3 to Rs. 33-8. Khandesh rose by a rupee to Rs. 35. Groundnut oil ex-mill was dealt in at Rs. 18-4, as against Rs. 17-6, and railway receipts at Rs. 18-1 as against Rs. 17-7.

The linseed section was steady. Bold ready was done at Rs. 28-12, as against Rs. 28-4. June-July improved from Rs. 28-2 to Rs. 28-12. Satna quality was done at Rs. 28-8, as against Rs. 26-6. Linseed oil was, however, a shade lower at Rs. 15-8, as against Rs. 15-12.

Among other seeds *kardi* seeds had deals done at Rs. 19, as against Rs. 18-8. *Niger* seeds were As. 12 better at Rs. 29-4.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	27-6-1956	20-6-1956	13-6-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
February 1957	135 8	134 2	..

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 27*th June*

The sugar market ruled bearish during the week under review. The sentiment of operators was adversely affected by a marked fall of Rs. 3 per bag in the ex-mill quotations for Bombay-Deccan sugar. This fall followed the release for free sale of 7½ per cent. of sugar production to the Bombay mills and the Central Government's move to arrange immediate despatch of sugar from Uttar Pradesh to the important distributing centres in South India. These factors induced selling and prices of sugar suffered a break. The decline would have been more appreciable but for the reduction in arrivals of indigenous sugar into the market, being 10,400 bags, as against 14,000 bags in the previous week.

A further quantity of 150,000 tons of sugar has been released by the Government of India for sale in free market. This brings the total release so far made for free sale out of the 1955-56 production to 968,000 tons.

In the spot section, large grain indigenous sugar receded by Rs. 2 to Rs. 95-Rs. 100 per bag. Medium grain lost a rupee to Rs. 91-Rs. 94. Small grain was lower by As. 8 at Rs. 90-8. British refined sugar shed As. 4 to Rs. 89-4, despite paucity of stocks of "sound" sugar and reluctance of stock holders to part with the few bags they held at lower prices.

In the forward section, *Shravan* delivery contract for 'C' grade sugar declined from Rs. 91-12 to Rs. 91-2. Today, however, it was quoted a shade better at Rs. 91-4.

(N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax).

BEST LIQUORING TEAS SCARCE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 21*st June*

Offerings in sale No. 16 which was held on Tuesday, 19th June, amounted to 1,300,000 lbs. There was a large quantity of teas on offer of stalky leaf appearance with poor liquors and quality generally showed a further decline. Low grown and low medium teas, both brokens and fannings, were generally neglected. In particular, buyers were uninterested in the more stalky types and withdrawals were heavy. There was a useful demand for any teas of good appearance or cup quality and these sold at an irregular decline of an anna to As. 2. Best liquoring teas were scarce, but a few invoices realised good prices. There was a stronger demand for all whole leaf grades.

The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 6 6
Low Medium B.O.P. ...	1 8 6
Medium B.O.P.	(Nominal) 1 10 0
Good B.O.P.	Rs. 2-2-0 to 2 4 0
Well-made black leaf O.P.	2 2 0

London Market: *Sale of 18th June 1956*:—Better liquoring and good apperance unchanged. Slightly easier tendency for others.

Sale of 19th June 1956:—Dearer tendency.

Colombo Market: *Sale of 18th June 1956*: Better qualities dearer, particularly dusts and fannings stalk and plain sorts easier.

Sale of 19th June 1956:—Demand quieter. Prices substantially lower, often by 50 cents a pound. Selected improved Uvas occasionally dearer.

Calcutta Market: *Export*:—19,600 chests. Slightly better demand for teas with quality. Plain liquoring Dooars again neglected and withdrawals heavy. C.T.Cs. well supported, usually sold above valuation.

Internal:—21,200 dust. Good general demand at rates fully firm to one anna dearer. Middle East types strongest feature. C.T.Cs. firm. Residue teas an anna to As. 2 dearer. 836 internal leaf. Good demand at irregular rates.

Export Quota:—There are now sellers over at 2 pies for special licence with no further news of an extension. 1956-57 export quota has eased to 30 pies.

Forthcoming Auctions:—Sale No. 17 will be held on Tuesday, 26th June.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 17:—1,250,000 lbs. Rather better demand for low and low medium with prices irregularly As. 2 lower. Good enquiry for better liquoring and whole leaf. Middle East types strong and dearer."

JUTE LOOMS RESEALED PARTIALLY

(From Our Own Correspondent)

CALCUTTA, 26*th June*

Real buying of jute goods was restricted during the week under review, and even the rumours which predicted that Government would agree to mills sealing 2½ per cent. of the looms did not make buyers active. In the meantime, prices of jute goods were quoted at such low levels as to make mills withdraw from making offers. It would appear that New Delhi is now more or less in agreement with the industry that fixation of minimum prices would not decrease stocks with mills, but that an effective solution would be a reduction in production. The trade expected an announcement by the I.J.M.A. in this regard at any time. That explains why mills were reserved this week. For, after measures to restrict production, it is felt that prices should naturally take an upward turn. A reduction in production will, it is thought, result in a better relationship between prices of raw jute and the goods. This week's rumours of sealing of looms as those of last week's regarding fixation of a minimum price did not make foreign buyers active. For, they continued to watch the situation, and were hoping that prices would come down further. No doubt, small business for meeting commitments of shippers was put through. The trade, however, believed that during this month shipping would prove to be unsatisfactory, and that a further increase in stocks at the end of the month would be the result.

As expected, the Indian Jute Mills' Association announced yesterday, its decision to reseal, with effect from 16th July next, 2½ per cent. of the looms of the member-mills, thus increasing the proportion of sealed looms to 7½ per cent. of the total complement. The Association said that the resealing of the looms has been prompted by the need to adjust the industry's output to the current world demand for jute goods and to prevent a threatened glut of jute manufactures.

The problem of making mills work again on a profitable basis, however, continues to occupy the attention of all those interested in the future of the industry. In fact, exports of jute goods have risen and the industry continues to be a foreign exchange earner of considerable importance to the country. An effective way by which mills can revert to economic operation, market circles feel, is by reducing the prices of raw jute. The fact that mills are dependent on imports from East Pakistan where raw jute is highly priced is a circumstance for maintaining raw jute prices in India at a high level. In this respect, Indian cultivators are free from blame, since whenever Pakistani and Indian prices reach parity mills tend to neglect Indian offers. However, such a factor does no longer hold good, since the present level of prices for goods is such as to make even the Indian raw jute costly at current rates. During recent months, it has not been surprising that arrivals of jute from East Pakistan have fallen. In May they were only 47,315 bales as compared to 102,245 bales in May of last year. If mills are again to work on an economic basis, there is a strong case for India to do away with imports from East Pakistan by growing more jute within the country and making the same available to mills at lower prices. It is in this background that the West Bengal Government's decision to increase the jute yield by as much as 851,000 bales by 1960-61 by intensive cultivation such as wider distribution of fertilisers, double-cropping, line-sowing and plant-protection measures has been received in the market with satisfaction. The yield in 1955-56 was 1,958,000 bales from 780,000 acres. The area will be increased in places wherever possible, but it is expected that the total area would not exceed 876,000 acres which was sown in 1951-52.

During the week, there were reports which suggested imminent American interest in hessians. For this reason, ready hessians 40" 10 oz. opened steady at Rs. 38-2. However, buying support was not following and the rate soon declined to Rs. 38. Speculators were selling heavily. The rate recovered to Rs. 38-1 by Friday on some covering demand, but by the week-end again sagged to Rs. 38. There was no change in the rate in yesterday's trading. Ready B. twills opened steady at Rs. 105-8 on rumours that Government would seal mills reducing production. However, the rate fell to Rs. 104-14, as it was believed that instructions would register a further increase. At the lower level, business for export and covering business soon followed to the rate up to Rs. 105-2. With the upward trend mills showed a keen desire to sell and, in fact, traded some quantity. This naturally dampened sentiment and by the week-end the rate closed lower at Rs. 104-10. The rate was lower yesterday at Rs. 103-8.

Despite the prospect of a reduction in production of jute goods, raw jute was steady and most varieties gained by As 8. The rise was consequent on lower arrivals which were attributed not to any shortage but to the inability of the railways to satisfy all indents for wagons. The shortage of wagons was attributed to the diversion of transport facilities for carrying food and other essential supplies to the cyclone-affected areas. In the interior, plenty of the old crop is still available, and there is no cause to suggest that there would be any shortage before the new crop begins reaching the mills. During the week, mills showed interest in new crop, and although sellers were reserved, business was done on the basis of Rs. 25-8 per maund basis northern bottoms. Floods have caused some damage to crops in Goalpara and Nowgong in Assam. Due to the rise in river levels and damage to roads movement is affected. This fact together with the shortage of wagons has been the cause for this week's rise in prices both in Calcutta and in Cossipore. Latest quotations for the different constructions are given below:

	Middles Rs. a.	*Bottoms* Rs. a.
Pakistani:		
Northern	32 8	29 8
District	33 0	30 0
Indian:		
Northern	30 8	27 8
Assam Upper	30 8	27 8
Assam Lower	30 8	27 8
Murshidabad	30 0	27 0
Daisee	31 0	28 0
Western	30 0	27 0
Jungli	29 8	26 8
Orissa	31 0	28 0
Uttar Pradesh	29 8	26 8
Daissee mesta	29 0	27 0
Bimli f.a.q.	Rs.	26 0

TEA PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 26*th June*

Strong support was in evidence at the export tea auctions held here yesterday. Prices registered further attractive gains. Heavy rains in Assam and the consequent damage to roads will, it is feared, be reflected in lower arrivals from gardens until the bridges swept away by floods are replaced and affected roads are again made passable to motor traffic. So far, tea gardens in Assam have not been affected, but in Nowgong and Goalpara floods have caused damage to jute- and paddy-growing areas.

Buyers on behalf of Russia continued to take a keen interest in the best teas on offer, and that was one of the causes why prices moved up. Buying is also reported done on behalf of certain other East European countries, such as Poland, Czechoslovakia and Hungary. If the trend in recent auctions is any guide, it can be said that buyers are inclined to pay greater attention to quality teas, prices of which have gained. On the other hand, the poorer teas are wanted at lower rates only. This trend is also a feature of recent auctions in London. All these indicate the need for gardens to improve quality.

Yesterday's offerings aggregated 24,330 packages. Tippy teas sold well, and the price for good liquoring medium Assams advanced. However, by far the strongest feature of the sale was provided by the few best liquoring C.T.Cs. which rose by Re. 1 over brokers' valuations. Stylish leaf grades improved by As. 2, and prices for the ordinary leaf grades were maintained. There were heavy withdrawals in plain and low medium kinds, prices of wich gave way by an anna to As. 2 owing to poor demand. Darjeelings were shown sparse attention. Quotations, which were nominal, in view of the small quantity of representative teas on offer, were: best C.T.C. Assam B.P. Rs. 3 to Rs. 3-8, medium Assam B.P. Re. 1-14 to Rs. 2, clean black pekoe Re. 1-13 to Re. 1-15, and plain B.P. Re. 1-7 to Re. 1-8.

During last week's internal sale, offerings amounting to 21,141 packages were end-of-season teas. Demand was good and generally prices were maintained and/or gained by an anna to As. 2. C.T.C. teas realised fractionally higher prices, with poorer residue teas being sold an anna to As. 2 higher on strong demand. However, the strongest feature of the sale was provided by black teas suitable for export to the Middle East. The quotations were: best C.T.C. Assam Rs. 2-6 (nominal), medium Assam grainy dust Re. 1-7-6, and medium Dooars Re. 1-6-6.

Leaf grades on offer amounted to 861 packages, of which 323 chests were new season's teas and the balance old season's. Fair demand at irregular rates was reported.

TRADING IN KIPS ACTIVE

(From Our Own Correspondent)

MADRAS, 25*th June*

Arrivals of E.I. tanned hides and calves were on a moderate scale and shippers were active. U.K. buying was limited, as the prices offered were low. U.K. curriers did not desire that prices should decline on account of weak holding, but be held firm and confidence infused in the strength of prices at origin, in order to enable them to carry on purchases on an even keel. It was reported that several tanneries in South India were working to a third of their capacity and stocks would be arriving in the market on a smaller scale. If this were to happen, it would be a welcome feature. Demand for lower grade kips for inland trade revived partially. Inquiries from the U.K. for cow calf and buff calf (market qualities) were negligible, though the U.S. importers were buying buff calf slowly but steadily at unchanged levels. Arrivals of buff hides were small and prices declined to Re. 1-7 per lb. which was an anna dearer for the U.K. market, but acceptable for the U.S. exporters of trimmed buffaloes.

In the tanned skins section, shipment business was poor, due to report of availability of large stocks in the July London Public Sales which commenced on the 2nd inst. 900,000 tanned goat skins and 525,000 sheep skins. The quantity of goat was enormous and disclosed that there was heavy overproduction in this section.

FOODGRAINS MOVE UP

(From Our Own Correspondent)

HAPUR, 25*th June*

Barring barley, the prices of which recorded an advance during the week, all foodgrains suffered a modest decline. Rainfall reports from some parts of the State, increasing stock position of gram in the Punjab and sales at reduced prices of rice in Bombay were the main depressing factors. Wheat was quoted at Hapur at Rs. 13-12 per maund for average quality and at Rs. 15-2 for farm quality. Demand for farm quality wheat during the week was from Bihar and some markets in the South, while average quality was all lifted by stockists, with the result that the stocks of wheat improved to 83 *khaties*, as against 112 *khaties* a year before when average quality wheat was quoted at Rs. 10 per maund. The final estimate of wheat production in the country for 1955-56 puts the area at 29,225,000 acres and production at 8,348,000 tons, which is 6 per cent. less as compared with last year.

Rice prices also eased slightly during the week, in line with the fall in prices in South Indian markets. The latest available prices are: *Rangooni* Rs. 17-12, *manipuri* Rs. 18-12 and *basmati* Rs. 23 to Rs. 31 per maund. Barley prices improved, due to poor arrivals and meagre stock position. *Bejhar* prices were a shade easy and *jowar* prices declined following fresh arrivals from outside and slackness in demand for seed purposes. Large quantities of gram are still arriving from the Punjab and stock position has gone up to 50 *khaties*, as against 30 *khaties* last week-end. The latest prices are: *Barley* Rs. 10-8, *bejhar* Rs. 10, *jowar* Rs. 16-8, gram: Local Rs. 10-10 and punjabi Rs. 11 per maund.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 25*th June*

The sugar markets continued to rule steady on good buying enquiry from all sides. In order to meet the demands of markets in the South, the Government of India has arranged to send sugar specials from North India to markets in the South next week. Crushing operations in factories in West U.P.—mainly Meerut and Muzaffarnagar districts—are still being continued under Government orders; they will be carried up to the end of the month. The total production of indigenous sugar in the country will beat all previous records and will be very near 1.9 million tons.

The latest mill delivery prices of sugar are: Jaswant Rs. 28-8, Simbhault Rs. 28-8; Mcwana Rs. 28-6; Daurala Rs. 29-8; Amroha Rs. 28; Bijnore Rs. 28; Mansoorpur Rs. 28-8 to Rs. 29-8; Rampur Rs. 30-12; retail Rs. 30-4.

The *khandsari* sugar market was dull and depressed thanks to poor offtake and heavy stocks. The latest available prices range between Rs. 23 and Rs. 27 per maund, according to quality.

Ready *gur* prices improved towards the week-end on heavy offtake to consuming areas of Gujerat and East U.P. and were today quoted at Rs. 10-12 per maund. Daily arrivals were at an average of 200 maunds and local stock dwindled to 50,000 maunds.

Future *gur* prices ruled both ways during the week on speculative bouts. The latest quotations as on Monday was Rs. 9-5-6 for *fagun* delivery. The standing sugarcane crop is now very much in want of rains in West U.P., although reports of good rains have been received from East U.P.

WORLD BANK'S LENDING RATES

The International Bank for Reconstruction and Development (World Bank) also, like the central banks of different countries, is keeping a close watch on indiscriminate lending by member-countries through export credits, and imposing restraints wherever necessary. It has also raised the rates of interest on its loans by as much as one half per cent., reflecting the recent tightening of rates in the international money market.

Since last September, the Bank has been regularly receiving confidential quarterly reports from 14 principal industrial nations on the extent of their export credits. Although these reports have, it is stated, so far disclosed no strong trend, they were invaluable in drawing attention to the dangers of granting credits without regard to the overall indebtedness of the borrowers. *It is understood that the reports showed that a few countries had made excessive borrowings. In such instances, restraints were applied by the Bank and borrowings were reduced after the Bank drew the borrower's attention to the situation.*

The Bank has also raised the rate of interest on loans up to 15 years to 4½ per cent. Loans of a longer duration now command a rate of 5 per cent. Previously the lending schedule provided for a rate of 4½ per cent. up to and including five years, 4¾ per cent. from six to 10 years, and 4¾ per cent. for periods over 11 years. No loans have, however, so far been concluded at the higher interest rates.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. F=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years
