LABOUR POLICY

THE country stands on the threshold of a new era of industrial expansion. The Draft Outline of the second Five-year Plan, to which finishing touches are being given, is expressly designed to take the country much further in its industrial march. It should be obvious that the progress contemplated in the Plan cannot possibly be achieved without the active co-operation of labour. If a labour policy was at any time essential, it was never more so than today. The country cannot afford to have industrial unrest. It is, therefore, gratifying to know that both employers and employees have, by and large, begun to evince a keener and more constructive attitude towards their common problems. The Draft Outline of the Plan was paying a just tribute when it said that the "employers have shown increasing awareness of the need for improved working conditions, and labour as a whole has been prepared to play its part in increasing national production." The spirit in which the employers have accepted the concept of a management council (representing both employers and employees) augurs well for the future of the country. Employees, too, are beginning to be more realistic in the statement as well as the formulation of their demands. Some, if not all, of the resolutions passed and the speeches made at the recent conference of the Indian National Trade Union Congress (I.N.T.U.C.), held at Surat, deserve to be acclaimed for the constructive attitude they display. If the Government could only encourage these trends and succeed in holding the scales even between employers and employees, there is no doubt that it should be possible to implement the Plan without serious difficulty; the Plan will not flounder—at least, not on the rock of industrial unrest.

It would, however, be great folly to overlook the differences between employers and employees or to underestimate the gravity of some of the outstanding issues in the sphere of industrial relations. One such is the wages issue. The wage, though a vital connecting link between the employers and the employees, continues to be an issue on which there are honest differences of opinion. Actually, the wages question is not a single issue. It resolves itself into a number of complex issues. Should the Government lay down fair wages for workers? What in essence is the concept of a fair wage? Should a wage board function for the whole country? On what principles will such a wage board function? Is it desirable to have the whole or part of the dearness allowance merged with the basic wage? These questions are more easily posed than answered.

To take the fair wages question first. The I.N.T.U.C. has passed a resolution stating that the State should no longer neglect the right of the workers to a progressively rising standard of life with the living wage as a final goal. It demands that immediate steps should be taken to establish minimum wages in the agricultural sector, in the small-scale industries and a fair wage in all major industries at the present level of prices. Labour's contention is that the increase in wages has not kept pace with the increase in production and national wealth. It looks as though the I.N.T.U.C. has dropped its earlier charge that the real wages have not moved up at all. Such a charge used to be made before. The Union Labour Minister, Mr. Khandubhai Desai, one of the prominent leaders of the I.N.T.U.C. till recently, admitted in Parliament that the real wages in this country have increased by 20 per cent. in the last five years. Indeed, it will not also be correct to contend that real wages have not increased in proportion to industrial production. A study, made by the Government's Labour Ministry, shows that, during the period 1943-54, the index of real earnings advanced geometrically at an average rate of 3.9 per cent. per annum, whereas a corresponding rise in the index of productivity was of the order of 2.7 per cent. only.

It should thus be clear that the rate of increase in the real earnings of the workers has outstripped the rate of increase in industrial production. We do not, however, suggest that there is no scope for increase in real wages at all. Only, labour should bear in mind three important considerations while voicing its demand for higher wages. First, it would be impractical to lay down wage levels from purely theoretical considerations. Secondly, all increase in real wages must be ultimately related not only to increase in productivity of the industries concerned but also to the general standard of national income. Thirdly, any substantial increase in wages at a time when inflationary pressures are manifesting themselves and when the country is on the eve of large doses of deficit financing will only aggravate the inflation which in turn will reduce the real wages. It is in the light of these three considerations that the demand for an increase in wages now being put forward by workers has to be judged.

The workers have supported and the employers have not opposed the constitution of a wage board. But it should be obvious that such a board cannot function in a vacuum. It must be guided by certain general principles. If the Government has already evolved a set of principles by which such a wage board would be guided, it has not yet taken the public into confidence. The wage board cannot possibly lay down an omnibus level of wages for the whole country. It has to take into account regional differences in living costs, each industry's ability to pay a given level of wages and the divergent financial status of the units composing any given industry. It is a moot point whether a wage board can possibly take into account all these factors, particularly because not only are these factors unknown at present, but they are subject to fluctuations from time to time. It may be worth recording here that no workable solution has yet been found for the problem of the wages of bank employees. This problem is simple when it is compared with that of industrial employees. And yet, the Government has been unable to find a satisfactory solution. Is there any reason to think that a wage board, however ably manned it may be, will be able to settle the innumerable questions involved in the more complicated problem of evolving a nationwide wage structure? From this point of view, it seems wise to allow a wage board—if it is constituted at all—to examine the question of wages, in the first instance, rather than to ask it to prepare a neat and ready-made solution for the entire problem. In any case, it is well to recognise that wage levels should be determined by the joint effort of employers and employees rather than imposed from above.

The demand has been put forward from time to time that the dearness allowance should be merged with wages. This demand stems from the consideration that there is no prospect of any fall in price levels such as would justify a reduction in dearness allowance. Further, dearness allowance forms the major proportion of the total wage packet of each worker. In some cases, it is considerably more than the basic wage itself. It is absurd now to treat dearness allowance as some additional income. These considerations should induce the employers to adopt a helpful attitude towards this demand. Even labour concedes that a part of dearness allowance can be reserved for periodical adjustments based upon changes in the cost of living index. The employers, too, recognise that, except in so far as fringe benefits are concerned where they are not statutorily compulsory, the partial merger of dearness allowance with wages will not impose any special burden on them. It is, therefore, surprising that they should have made no serious attempts at meeting this demand of workers. There are, of course, certain difficulties in effecting the merger. There is, for instance, the problem of adjustments for the workers who are paid piece-rates. There is also the fear that the wage differentials arising from the different categories of workers, such as skilled and non-skilled, might get distorted through the merger. But these difficulties are not insurmountable once the employers concede the case and ask for the co-operation of the workers' organisations in evolving a satisfactory formula. There is much psychological gain to employers in making a voluntary offer to workers to treat a larger part of their pay packet as basic pay.

It is not clear why the employers do not make such a gesture. The fact is that the majority of employers in this country are conservative to a fault. They do not seem to be quick in reading the writing on the wall. At any rate, they have given the impression that they cannot take any initiative on their own. In this, they are less than fair to their employees, to the country—and, we may add, to themselves. The Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, noted for his unconventional approach to problems, struck a realistic note when he asked the employers to change their attitude. Speaking at the annual session of the All-India Organisation of Industrial Employers at New Delhi last week, he asked why the employers did not have the foresight to attend the I.N.T.U.C. Conference at Surat as fraternal delegates. This was a novel, and a very wise, suggestion. If it were adopted, the employers would, as the Minister emphasised, "come in contact with the mind of labour and break through the psychological wall that separates the employers from those who worked for them." The interests of no two sections are closer than those of employers and employees. Is it not surprising, therefore, that they should behave as though

the only thing they loved most was to avoid each other's company? Should the employers continue to hurl their ponderous, long-winded statements at employees from the ivory tower of their board rooms and the employees resent the appearance in their midst of the very persons with whose prosperity their own is inextricably bound? If the absence of employers' delegates at Surat was due to lack of invitation, we would urge the I.N.T.U.C. to rectify the mistake in future. The workers ought to welcome the employers to all the open sessions of their conferences and so should the employers the representatives of workers.

Whether the employers and employees meet at open sessions or not, their representatives will soon face each other in the management councils. The move to set up these councils has been generally welcomed in this country. Urging the establishment of these councils in every factory, a resolution adopted by the I.N.T.U.C. stated that they could be of "considerable value." At the same time, it pertinently warned that participation by workers in these councils "cannot be real and effective, unless it is founded on respect for mutual rights and responsibilities and proper steps are taken to educate the workers and equip them for the responsibility they will have to share." It is to be hoped that both employers and the labour unions will together undertake this task of educating the workers, so that the management council becomes neither a pleasant club room nor an unpleasant boxing ring but a place where serious issues are discussed by men who know their job and value their mutual interests. Incidentally, these councils could gain in realism, if an attempt were made, at least by the larger industrial employers, to make the workers shareholders in the enterprises concerned.

There is yet another reason why management councils should be welcomed. Perhaps, when they start functioning, healthy conventions will grow up and there will be opportunities for discussing many matters of common interest. This might pave the way for voluntary negotiations. The law on industrial relations, as it now stands, has been rightly criticised on the ground that it does not facilitate such negotiations. Management councils could correct this drawback. Meanwhile, every effort should be made to oil the legal machinery of industrial relations, so that it functions smoothly and efficiently. Both employers and employees have held that it is slow-moving and cumbrous. Mr. M. L. Malaviya, moving the resolution on industrial relations at the Surat Conference, said that the present machinery was so dilatory that disputes started in 1948 had not yet been settled, with the result that workers who had been asked by the I.N.T.U.C. not to go on strike were dissatisfied. Here is an excellent instance of a good law being so badly implemented that its very purpose is defeated. Mr. Malaviya complained that the Government machinery, because it was so slow-moving, compelled workers to strike. He rightly insisted that every dispute should be settled within two or three months. At least, this ought to be the ideal. In labour matters, much more than even in ordinary civil or criminal cases, justice delayed is justice denied. The Government will do well to see that proper arrangements are made to settle cases as expeditiously as possible.

There is one sphere in which the I.N.T.U.C. has apparently allowed itself to be swayed by sentiment rather than reason. It indulged in some gratuitous advice to the Government on small-scale industries. A resolution adopted at the Conference urged the Government "to act promptly and boldly and give due protection to, and all necessary financial and other assistance for, the full development of khadi and other village and small-scale industries." Mr. Vasavada said: "Millowners have been crying 'wolf' for months now, but the shortage of cloth is not being seen. It is all just a move to get more spindles and looms sanctioned." This is a meaningless charge. If it is true that there is no shortage of cloth or no such shortage is genuinely apprehended, why should millowners be willing to risk their money in setting up more spindles and looms? It is wrong for a labour leader to attribute motives to management. The consumer might well argue that he is held to ransom by the labour leaders who want to follow a "closed shop" policy by preventing the expansion of the organised industrial sector, so that their followers may be assured of higher wages and bumper bonuses. In fine, he might construe this demand of labour leaders as a clever move to retain their hold over the workers with ease and comfort. The organised labour should welcome, not oppose, the extension of large-scale industries.

WOMEN AND ECONOMICS

EVERY age wants to give itself a new name, reserving the appellation "golden age" to describe some earlier era. Modern age prefers to call itself an egalitarian age. This is said to be true not merely in a political or economic sense but in the more meaningful social sense. This is also an age of equality of the sexes. Women have fought a long battle for equality with men, though innocent men have always regarded it as a clear case of a war of unprovoked aggression. While women, the feminists and the suffragettes have all carried their relentless warfare into men's ranks, the men have been content to pay their homage to the fairer sex. The men, unspeakably dull as they are, have never been able to understand the feminist movement. Their attitude is: "We men will never accord equality to women. But we fully acknowledge their superiority." Women somehow have consistently refused to be flattered by this subtle surrender.

Burke, who never forgave the French their Revolution and their unchivalrous conduct towards their Queen, bemoaned the extinction of the chivalrous sentiment. In a mood of retrospective dejection, he said: "The age of chivalry is gone. That of sophisters, economists and calculators has succeeded." Who knows what he might have said were he alive today? For one thing, though the age of economists has succeeded, their ranks have been invaded by women. In some fields of economics, the women-economists—alas! their number is increasing—have rendered yeoman service. Secondly, the economists themselves are beginning to see that the chief weakness of their science is the insufficient recognition of the role of women in society. Hitherto, economists had pretended that a market was a place where men met as buyers or sellers. The fact is that women are now both buyers and sellers. And this makes a great difference to turnover. The entry of women into a market may be taken as the strongest bull point. Economic science has not yet taken this factor fully into account. And a sexless economic theory, it is accordingly contended, is a senseless one.

Thirdly, women, leaving the men to engage themselves in the fight for their hearth and home, are invading the men's professions. Salesmanship is now the woman's coveted privilege. Teaching and nursing, of course, the women regard as their own. Government and commercial offices are being increasingly manned by women. This country has even the proud privilege of counting a woman as one of its ambassadors. Sometimes, women, true to their claim to have the last word in all verbal controversy, become speakers of legislatures, causing confusion among legislators as to what appropriate variation of the usual mode of address, namely, "Mr. Speaker," would best suit the dignity of the chair.

The United Nations' report on world demographic trends shows that, though men continue to constitute the bulk of the labour force in every country, the proportion of economically active women is not inconsiderable. The proportion is about 59 out of 100 for men and 22 out of 100 for women. The report then goes on to say that, "in these statistics, women engaged solely in their own housework and the upbringing of children generally are not considered as economically active." Clearly, the U.N. authorities are asking for trouble. For no self-respecting woman will swallow the bitter insinuation that "housework and upbringing of children" are not economically productive work.

Although women have not altogether abandoned the home to the tender mercies of mere men, they have insisted that, whenever they choose to work outside—this, they generally do prior to their marriage—they must be given the same wage as men. Indeed, a prominent item on the agenda for the U.N. Commission on the Status of Women, which met recently at Geneva, was "Equal Pay for Equal Work." A resolution adopted by the Commission looked forward to the report by the International Labour Organisation (I.L.O.) of progress made by the various countries in the establishment of the principle of equal remuneration for work of equal value by various methods, including collective bargaining agreements. It invited the Secretary-General to obtain from the non-governmental organisations in consultative status additional information concerning practical methods for the implementation of equal pay, with particular reference to procedures found useful for implementation of equal pay in collective bargaining agreements, such as by encouraging greater participation by women in unions. It further invited the Secretary-General to prepare, in consultation with the I.L.O., a draft of a pamphlet concerning the various methods used for the implementation of the principle of equal pay, as well as current progress in this field, for consideration by the Commission, if possible, at its eleventh session.

The Commission, it may be mentioned here, was a fully representative body. Among other countries, Australia, Belgium, Russia, China, France, the U.K., the U.S. and Pakistan were represented by their accredited delegates. Oddly enough, India did not find a place on the Commission. Presumably, this is because women in this country have taken equality with men so much for granted that they do not feel the need for a fight at an international gathering. And they are right. After all, the Indian Constitution —Articles 15(1) and 16(1)—has acknowledged the principle of equality. In its Directive Principles of State Policy, the Constitution clearly states that "the State shall direct its policy towards securing that there is equal pay for equal work for both men and women." And the last vestige of the medieval past, the absence of the right to property under the Hindu law of succession, is now sought to be removed. The Lok Sabha has agreed to the Government's motion for consideration of the Hindu Succession Bill which places men and women on par in matters of inheritance of property. When this Bill—whatever its consequences to the agricultural economy of the country—is placed on the statute book, women will have won a significant victory. It is not known whether their next fight will be for equal (life insurance) premium for equal ages. This may well turn out to be the first problem which the feminists will pose before the authorities of nationalised insurance. Actuarial *pundits* will, of course, be able to produce an impressive array of mortality data to justify the differential premia. But that will only provoke the suspicious fair sex to retort that they have a right to expect special consideration, in view of the risks they run for the sake of men and the society as a whole.

To revert to the work of the Geneva Commission. It was in favour of making a comprehensive study of the whole problem of the preparation of women for various occupations. It invited the Secretary-General to prepare lists and descriptions of principal professional and technical fields of training and opportunities "which are or are not available to women at present." The Commission decided to examine together the part-time work for women and employment conditions of older women workers. The representative of the I.L.O., who introduced a report on these questions, announced that her organisation proposed to start work in 1957 on an enquiry into these matters. She also stated that, at the first European Regional Conference of the I.L.O. held in 1955, a resolution had been adopted suggesting that the minimum pensionable age for women should be five years lower than that fixed for men. Several representatives, it is stated, expressed their concern over this resolution, the "provisions of which, in their view, constituted a discrimination against women and might mar their chances of advancement to senior posts."

Other resolutions adopted by the Commission included those on cottage industries, vocational and technical training and economic rights of women. It requested the I.L.O. to give special attention to methods "found useful in the sound organisation of handicrafts and cottage industries, and to avoid the abuses of industrial homework." The I.L.O. was also asked to prepare a report on the activities in various countries for improving employment conditions of women with family responsibilities and for removal of economic discrimination against women.

A feature of the session, we are told, was that all the resolutions were adopted unanimously. All the officers were also elected by unanimous vote. Now, who said women do not know how to vote? A cordial atmosphere, it is stated, prevailed at this gathering of representative women. Thus the Chairman—this, of course, had to be a woman—was able to say that such unanimity as had been seen at the session was "perhaps unique in the history of the United Nations and undoubtedly set an example by showing how women from all parts of the world had been able to work together." The Soviet Union representative repeated her invitation to the Commission to visit the Soviet Union and assured them that her delegation, in common with all Soviet women, would be glad to welcome their guests to Moscow. Who knows, it may yet be given to the women to resolve the cold war?

INDIAN IRONS STRONGLY FANCIED

RESERVE BANK'S POWERS TO BE STREAMLINED

THURSDAY, 5 P.M.

THE share markets are in a cheerful mood. The feeling of hesitancy noted a few days ago has yielded place to robust optimism. A few big operators, who were sitting on the fence for some weeks, have entered the market as bulls. Their appearance on the scene has unnerved the bears and the week saw short-covering on a substantial scale. Vigorous bull buying of selected counters and bear covering have pushed up equity values, in general, and broadened the turnover. The favourite scrips in Bombay during the past one week were Tata Steels, Indian Irons, Bombay Dyeings, A.C.C. and Bombay Burmahs. Among these, Indian Irons were the real cynosure. Quite a few lakhs of this scrip are said to have been bought. The result is that it has shot up from Rs. 34-9 early in the week to Rs. 37-5 yesterday, the closing rate at Rs. 36-12 being a little low. The peak established this week compares with the low of Rs. 31 on the Budget day and the highest level of Rs. 44-7 (on 28-11-55) witnessed during the boom of last year. As compared with this scrip, the performance of Tata Steels was relatively modest. It went up to Rs. 253-12 before finishing at Rs. 249-8, a gain of Rs. 5-12 over the week. The peak seen by it in the last boom was Rs. 277-4, the lowest level to which it tumbled soon after the budget being Rs. 218-8. The comparison with the lowest levels shows the extent to which these two market leaders have regained their ground, while that with the highest levels of last year will give an idea of the scope for further rise. Quite a few of the operators are now sanguine about the possibility of these scrips reaching the peak levels of 1955 in the coming weeks. It will be interesting to see whether this optimism will be justified by events.

MARKET GOSSIP

The remarkable rise in Indian Irons this week is attributed mainly to its technical position. It would seem that those who were landed with large parcels of this scrip, following the last debacle in the Calcutta share market, have practically sold out their holdings and that these shares have gone into strong hands. As a result, the technical position of this market leader has greatly improved. Knowledgeable operators who know the profit position of the Company were only waiting, it seems, for this development. When they saw that the opportunity for which they were waiting had arrived, they started buying. It is possible that two other developments also must have encouraged them to do so. One is the realisation that neither T.I.S.Co. nor I.I.S.Co. will be nationalised in the foreseeable future; the revised industrial policy statement is the basis for this conviction. The other is the report that the much talked of new issue of I.I.S.Co. will be at a premium of Re. 1-8 only and not Rs. 2-8 as was believed at one time.

Although the fear of nationalisation of iron and steel industry has waned, the improvement in Tata Steels has been less spectacular. One reason for this is that it had recovered fairly quickly in the previous weeks. Another reason is that there has been some selling by institutional investors, evidently with a view to making room for taking up the Company's new issue. The floating stock of this scrip is therefore likely to expand, but the whole market is aware of this position. The fact that, despite this possibility, the value of Tata Steels has been well maintained is considered as a healthy indication.

Textile shares have recorded sizable gains on all the stock exchanges, following sustained buying enquiries. This is not surprising, because of encouraging advices about cotton mill profits for the current year. It is said that cloth prices have gone up sufficiently high to offset the entire increase in the price of cotton. Reliable reports from cloth markets in Ahmedabad and Bombay indicate that, in the first week of this month alone, mills' selling prices were up by 10 to 15 per cent., if not more. It is further stated that several mills have sold forward up to the end of September and that more and more mills are contemplating to work a third shift. Another bullish factor is the growing belief that, sooner or later, the Government is bound to allow expansion of loomage. Since the small units in South India, with their unbalanced equipment, have an unanswerable case for some priority in this respect, it is very likely that they will be the first to get permission to expand their looms.

Among the other industrial scrips that have received the attention of buyers, chemicals, plantations and rayons stand out prominently. A rosy view of the outlook for these industries is the main reason. Bright expectations of a sizable capital profit and not considerations of yield are the main motivation here. During the past ten days, many have turned their eyes towards Madras in search of tea, coffee and rubber shares.

* * * *

The Bill further to amend the Reserve Bank of India Act of 1934, introduced in Parliament just at the time of our going to press last week, seeks to streamline the powers of the Reserve Bank, so that the Bank may be in a better position to discharge its functions as the monetary and central banking authority. It is a reform necessitated primarily by the requirements of the second Plan. As readers are aware, a large part of the resources for financing the Plan is to be found by the creation of credit by the Reserve Bank, otherwise known as deficit financing. It has been estimated that at least Rs. 1,200 crores will have to be found in this way. This poses two problems to the Bank. First, the capacity to issue currency should not be limited by the present rigid Note Issue Reserve requirements. Secondly, a very substantial part of the money thus created will find its way to the banking sector. Deposits of commercial banks will expand quite sizably, thereby enhancing their capacity to create credit in the form of loans, advances and overdrafts, as well as bills purchased and discounted. It is the duty of the Reserve Bank to see that banks use their resources wisely and in a manner that will not add to the inflationary forces generated by deficit financing. The main object of the Bill is to provide the Bank with enough powers to tackle these two problems.

The first problem is sought to be met by lowering the Note Issue Reserve requirements. According to Section 33, sub-section 2 of the Act, not less than 40 per cent. of the total liabilities of the Issue Department should be in gold coin, gold bullion or sterling securities and that gold coin and gold bullion should not at any time be less than Rs. 40 crores. Thus, the minimum level of currency reserve is specified in terms of a ratio related to the total note issue. This will prove to be a rigid requirement when the note issue expands on a scale envisaged in the second Plan, especially as a large part of the existing sterling balances will be required to meet the deficit on trade account. It is estimated in the Plan that there will be a foreign exchange deficit of Rs. 1,100 crores during the five-year period. The section under reference is being amended to remove the rigidity by providing for the statutory minimum reserve of gold and foreign securities in absolute terms.

The foreign securities, according to the proposed amendment, can be in any currency and not necessarily in sterling. The minimum amount of such securities at any time should be Rs. 400 crores, but, on special occasions, it can be lowered to Rs. 300 crores. The share of gold and gold coins in the currency reserves is to be raised to Rs. 119 crores from the present figure of Rs. 40.01 crores. This is to be done merely by revaluing the existing gold holdings. These holdings are at present valued at 8.47512 grains of fine gold per rupee, the old parity that existed before the 1931 devaluation. They are now proposed to be valued at 2.88 grains of fine gold per rupee, that is, at the International Monetary Fund's value for gold, namely, $35 per fine ounce. The consent of the I.M.F. has been obtained for this revaluation.

An important point that requires to be noted here is that the revalued gold is not to be added to foreign securities for working out the currency reserve; it will stand separately as the irreducible minimum. Further, the need for adding it to foreign securities does not arise, as the reserve required is not linked to the total notes issued. There are two advantages in revaluing gold. One, revaluation imparts to the Bank's gold holdings a size that will look respectable in relation to the total note issue. It must be borne in mind that revaluation is not overvaluation. The sum of Rs. 115 crores is not a pie more than what can be had by selling it to the U.S. at its buying price of $35 per ounce. There is thus nothing fictitious about the revised value of the Bank's gold holdings. The rate chosen is one which all the members of the I.M.F. have already adopted for valuing their gold holdings. Herein comes the second advantage of revaluation. It makes the gold reserves of the Bank comparable with those of other central banking institutions in the world.

As regards the minimum reserve in foreign securities, the amending Bill gives discretion to the Bank, to be exercised in consultation with the Government, to reduce it to Rs. 300 crores. In other words, if it comes to a pinch, the foreign balances can be drawn down up to a bare minimum of Rs. 300 crores. In no independent country is there any fixed or fluctuating statutory requirement that a part of the currency reserve should be in foreign currency. Nevertheless, if India has chosen to subject itself to such a condition, it is because it does not wish to have a sudden break with the past, lest it should affect the confidence of people, domestic and foreign alike, in the rupee. What sustains the confidence of people in a currency is, of course, the balance of payments position and the existence of sufficient reserve in gold and foreign currency which will come in quite handy for supporting the exchange value of that currency whenever there is a marked and continuous deterioration in the balance of payments. The size of reserve that is required for this purpose will depend upon the size of the import trade of the country concerned. India's average annual imports are now of the order of Rs. 650 to Rs. 700 crores. As the implementation of the second Plan progresses, imports will rise. The average for the five-year period of this Plan may be placed at Rs. 850 to Rs. 900 crores. At least 50 per cent. of this total should be in gold and foreign securities, in order to retain the confidence of people in the rupee. On this basis, India must strive to maintain a gold and foreign currency reserve of at least Rs. 450 to Rs. 500 crores. And as gold will account for Rs. 115 crores, it will be better if foreign securities are not allowed to fall below Rs. 375 crores. As a matter of precaution, the Reserve Bank and the Government of India must see to it that these securities are maintained at a much higher level.

The next important change that is sought to be made is vesting in the Reserve Bank powers to vary the reserve requirements of Scheduled banks within the range of 5 to 20 per cent. in respect of demand liabilities and 2 to 8 per cent. in respect of time liabilities. At present, the banks are required to deposit with the Reserve Bank only 5 per cent. of demand liabilities and 2 per cent. of time liabilities. Under the proposed powers, the Bank can raise these up to 20 per cent. and 8 per cent., respectively. This is a power which most of the central banks in the world possess, with a view to regulating banks' capacity to create credit. The Reserve Bank has, of course already powers to restrict the lending capacity of any bank by giving direct instructions. But the use of these powers will amount to imposition of physical controls in the monetary sphere. The exercising of these powers may provide scope for heart-burning among the member-banks concerned and for corruption. Such powers should be used only in special cases and emergencies. The use of the weapon now proposed will, however, be easy for the central banking authority and greatly minimise the scope for complaints by member-banks. Further, a control of this nature, it is needless to add, will be more in keeping with the democratic ways of life which the country has preferred to follow. Indeed, the Reserve Bank ought to have been vested with this power long before.

It is noteworthy that, while introducing this reform in the central banking system, care has been taken to qualify it in a manner that will enable the Reserve Bank to use the new power with discretion. Thus, within the limits referred to above, the Reserve Bank can prescribe ratios in such a way as to immobilise the maximum amount of deposits necessary without at the same time adversely affecting such banks as have not participated in the rise in deposits. This is a welcome refinement, because the banking system in India consists of units of varying size and strength. If one uniform reserve ratio were to be imposed on all banks, it would either cause severe hardship to small- and medium-sized banks or will fail to serve the purpose for which it is introduced, in case it is determined with due regard to the position of these banks. It is gratifying to find that provision is made for payment of interest to Scheduled banks, at the discretion of the Reserve Bank, on the additional reserves maintained by them.

* * * *

With surprising rapidity, London has emerged as an important trading centre in gold. One would have thought that this centre, in which trading was resumed only in 1954 after a lapse of nearly 16 years, would require considerable time before getting into stride. But it is believed that the total turnover in the London gold market in 1955—the first full year of freedom for the market—was very nearly equal to the 1938 level. And London now claims to be well ahead of other trading centres for gold. This is the more creditable, because there are still restrictions in the use of foreign exchange for the purchase of gold in the U.K. In fact, the London gold market is really a dollar-market, in that the only sterling the authorities will allow for the purchase of gold is the sterling acquired through the sale of dollars.

How has London been able to make so rapid a progress as a gold market? To this question, the columnist "Lombard," writing in the London *Financial Times*, provides a very satisfactory answer. He says that the progress is partly due to the fact that the U.K. bullion houses took care to see that the "know-how" they had acquired during decades of gold trading was preserved during the 15-year shutdown between 1939 and 1954. But even they, it is stated, could not have done so well, if the Bank of England had not carried out in such competent fashion its task of disposing of South Africa's gold production. It would appear that the Bank so skilfully performed this task that, in 1955, the dollar price of gold moved within a narrow range of 12 cents—between $34.95 and $35.07. Stable prices for dollar gold in London automatically mean relatively stable dollar prices for gold in other centres. This meant that the only other factor which could influence the flow of gold through London was the trading margin. Since London was thus able to work with a relatively fine margin *vis-a-vis* other centres, it was easily able to attract a substantial portion of gold to its market.

* * * *

While managements are slowly, and, of course, with difficulty, settling down to the task of conforming to the numerous provisions of the new Companies Act, there is at least one section which has no hesitation in welcoming the Act. The investors, as a class, have much reason to think well of the Act, for they see in it greater security and possibility of better return on their investments. Small wonder then, that Mr. H. Subramaniam, the outgoing President of the Madras Stock Exchange, averred, in the course of his recent address at the annual meeting of the body, that the stock exchanges had "special reason to welcome this enactment as being of special interest to the investor." He expressed the hope that the managerial class, the investors, and the stock exchange community would give their unstinted co-operation to the Government in the "sensible enforcement of this Act." He added: "All public limited companies have now got to conform to a large number of provisions and, with a small effort, it should be very easy for companies who are now on the official list, to conform to the minimum requirements of the stock exchange in the matter of closure of transfer books, expediting sub-division and transfer of shares, and announcement of dividends immediately they are recommended. This co-operation would go a long way towards stimulating activity and ensuring fair-play on the stock market."

Mr. Subramaniam was, however, less enthusiastic about the provision of the Stock Exchange Bill. He deplored that the Bill sought to place copious and extensive powers in the hands of the Government to regulate and control stock exchange activity. He admitted that oral assurances had been given that these provisions would not be normally invoked. But he, like all other stock exchange men, was not convinced that these assurances mitigated in any way the rigour of the contemplated laws. "It is difficult," he said, "to take comfort from these oral assurances from official

(*Continued on page 943*)

BUOYANCY IN SHARES KEPT UP

INDIAN IRONS IN LIMELIGHT

(From Our Own Correspondents)

BOMBAY, 10*th May*

NOTWITHSTANDING the all-round profit-taking towards the close, which brought down equity values sizably from the week's best levels, the undertone of the share market remained firm and buoyant. Over the week, prices over a wide front showed marked gains. There was renewed buying by bulls, accompanied by heavy short-covering, induced by encouraging advices from Calcutta and Ahmedabad. The operators' enthusiasm reflected their confidence in the outlook for industries under the second Five-year Plan which received the approval of the National Development Council last week. They would also appear to have taken a bullish view of the proposed amendments to the Reserve Bank of India Act for changing the reserve ratio in the Issue Department with a view to facilitating deficit financing in the second Plan period.

In the steel section, Tata Ordinaries received active support and rallied from Rs. 243-12 to Rs. 253-12, which level attracted some heavy profit-taking. This resulted in the shares being marked down to Rs. 249-8 at the close. Indian Irons were in the limelight on a bout of keen buying and shot up from Rs. 34-9½ to Rs. 37-3, the highest level touched since 19th January last. On profit-taking, the shares reacted mildly to Rs. 36-11½ at the close today.

Textile shares displayed considerable buoyancy under the leadership of Bombay Dyeings, which advanced from Rs. 620-10 to Rs. 663-12, before winding up at Rs. 651-4. Centurys shaped well, rising from Rs. 528-8 to Rs. 554. At the close, however, the shares slipped back to Rs. 544-8. Kohinoors shot up from Rs. 358 to Rs. 373 before finishing lower at Rs. 366-4. Central Indias were Re. 1 lower on balance at Rs. 138. Finlays gathered Rs. 11 to Rs. 340, Gokaks Rs. 2-8 and Indu Ordinaries As. 9½ to Rs. 13-4. Lakshmi Cottons moved up by Rs. 20 to Rs. 705 and Minervas by Rs. 2-4 to Rs. 91. New Citys gained Rs. 4-6 to Rs. 166-14, while New Greats were dull at Rs. 232. New Kaiser-I-Hinds picked up Rs. 5-5 to Rs. 120, Osmonshahi, which has declared a dividend of Rs. 3-8 per share of Rs. 100 each for the year ended 30th September 1955, as against *nil* for the previous year, Rs. 7-8 to Rs. 85 and Podars Rs 8-12 to Rs. 183-12. Shree Niwas were done higher at Rs. 213-12 *ex-div.*, as against Rs. 221-4 *cum-div.* Simplex put on Rs. 2-8 to Rs. 216 and Standards Rs. 12-8 to Rs. 430. Svadeshis rose by Rs. 6 to Rs. 228, Tata Mills by Re. 1 to Rs. 54 and Vishnu Cottons by Rs. 6-4 to Rs. 192-8. Despite the announcement of a dividend of Rs. 2-8 per share for the year ended 30th September 1955, as against *nil* for 1953-54, Azam Jahis were dull at Rs. 96.

Bank shares attracted fresh interest from investors on account of their low levels which give good yields. Barodas gathered Rs. 5 to Rs. 98. Central Banks picked up Rs. 3 to Rs. 53 and their new shares Rs. 4 to Rs. 55. Bank of Indias gained ground from Rs. 155-4 to Rs. 158 and Union Banks improved by As. 4 to Rs. 6-12. United Commercials were, however, a fraction lower at Rs. 50-12.

In the insurance section, New Indias attracted good attention and advanced by Rs. 2-4 to Rs. 42-8. Vulcans had some business As. 6 lower at Rs. 14-8. Other counters were neglected and hardly any business was put through in them.

Electricity shares were generally easy, in the absence of enquiries. Ahmedabad Electrics were marked down from Rs. 100-10 to Rs. 98-7. Bombay Suburbans were, however, unchanged at Rs. 115. Surat Electrics moved up by Rs. 3-12 to Rs. 123-12. Tata Hydros were quiet at Rs. 125-8 *ex-div.* Andhra Valleys declined from Rs. 1,245 *cum-div.* to Rs. 1,202-8 *ex-div.* (div. Rs. 30) and Tata Powers from Rs. 1,342-8 *cum-div.* to Rs. 1,300 *ex-div.* (div. Rs. 30).

The miscellaneous section ruled firm in consonance with the general buoyancy of the market. Cement and engineering shares were particularly in demand, inspired by the good outlook for these industries. Among cements, Associated Cements shot up from Rs. 213-4 to Rs. 224, but the announcement of the terms of the rights issue brought them down to Rs. 219 at the close. Digvijays gained as much as Rs. 8-8 to Rs. 196. The Company has also announced the issue of right shares (both ordinary and preference) of the value of Rs. 85 lakhs at par. In the sugar group, Belapurs came up from Rs. 229-4 to Rs. 236, but closed lower at Rs. 231. Bhopals were better by a rupee at Rs. 14, Phaltans by Rs. 2-8 at Rs. 146 and Walchandnagars by Rs. 5 at Rs. 251-4. In the engineering and mining group of shares, Alcocks rallied from Rs. 340 to Rs. 357. Larsen and Toubros gained As. 7 to Rs. 16. Premier Constructions appreciated from Rs. 172-12 to Rs. 177-4. Tata Locomotives were lifted up by Rs. 2 to Rs. 154. Mahindra and Mahindras were done As. 2 higher at Rs. 14-14. Shivrajpurs had transactions at Rs. 99 *ex-div.*, as against Rs. 106 *cum-div.* last week. Indian Coppers dropped As. 2 to Rs. 6-7, while B.B. Petrols were a shade better at Rs. 4-3¾.

Among shipping and transport shares, Scindias had a large turnover and picked up from Rs. 17-12 to Rs. 18-11, but the closing was a shade lower at Rs. 18-5. Great Easterns recorded a gain of As. 6 at Rs. 17-14. Hindustan Motors moved up further from Rs. 9-11 to Rs. 9-15. Premier Automobiles gained Re. 1 to Rs. 91. In the miscellaneous industrial group, Bombay Burmahs gathered strength from Rs. 641-4 to Rs. 657-8, but slipped back to Rs. 645 at the close. British India Corporations changed hands As. 3 higher at Rs. 11-3. National Rayons closed Re. 1-12 lower at Rs. 244. Polsons were a feature with a rise of Rs. 5-10 to Rs. 178-12. Tata Chemicals gained As. 5½ to Rs. 18-5 and Tata Oils As. 4 to Rs. 48. Wimcos were steady at Rs. 201-14.

Calcutta Stock Exchange

CALCUTTA, 8*th May*

Although the volume of business put through on the Calcutta Stock Exchange during the week under review continued to be lower, prices registered some gains. Lower levels attracted buying support, and the broadness of the Government's industrial policy continued to have an encouraging effect on sentiment. However, no spectacular rise in prices occurred, in view of the Planning Commission's proposal to raise taxes, which, in the Commission's view, besides meeting the gap between resources and expenditure for the Plan, would also reduce inflation. In the event of increase in taxes, purchasing power would be affected, and this in turn would mean reduced demand in relation to higher production. Such a prospect would affect the progress of industries, and market circles were therefore pondering the repeated threats from New Delhi to increase taxes. The report that New Delhi has decided to form a company for the production and distribution of coal in the public sector had some good effect in trading since Monday, although sentiment in coal shares did not improve, in view of the restricted scope for expansion of the private collieries in the second Plan. The sizable decline in raw jute prices and the steadying trend in prices of jute goods, albeit at lower levels, were noted with satisfaction, and, although business that passed through remained low, yet gains were recorded in jutes both yesterday and today.

Among coals, Burrakurs, after recovering from Rs. 13-13 to Rs. 14-12, sagged today to Rs. 14-7. At Rs. 7-1, Central Indias put on As. 3. Standards changed hands at Rs. 25-5, as against Rs. 25 previously, while South Karanpuras fell by As. 13 to Rs. 9-9. Moderate support was accorded to Samlas which rose from Rs. 12-15 to Rs. 15. At Rs. 7, Western Bengals were higher by As. 3.

Better support was given to the speculative counters in the jute section. From Rs. 23-5, Nationals recovered to Rs. 25-8 today. At Rs. 23-9, Howrahs were better by As. 3. Nuddeas hardened from Rs. 39 to Rs. 40. Moderate interest was shown in Ganges which recovered from Rs. 66-8 to Rs. 69. At Rs. 153-8, Champadanies added Rs. 3-8 and, at Rs. 165, Kinnisons recovered by Rs. 4.

Mining shares were fully steady. Burma Mines were quoted as high as Rs. 4-7, Indian Coppers changing hands at the steady rate of Rs. 6-11. Gaining further strength, Karanpura Developments rose from 26 to Rs. 26-12. The light-weights also received attention. Tavoy Tins advanced from As. 12 to Re. 1. Consolidated Tins scored a gain of As. 6 to Rs. 3.

Engineering scrips recorded moderate recovery. Indian Irons opened at Rs. 34-11 and by Friday touched Rs. 35-3. Yesterday, there was an impressive recovery to Rs. 36, with today's rate gaining further to Rs. 36-5. At Rs. 24-7, Texmacos were higher by one point on balance. On the other hand, Jessop & Cos. eased from Rs. 35-4 to Rs. 34-13, with Indian Standard Wagons meeting with business at Rs. 180, as against Rs. 181 previously.

Tea shares were in good form and the improvement in tea auctions was followed by rises in selective counters. Pakistani gardens were shown more attention, as hope of improved working results was entertained. Baghmaris were supported to push the rate from Rs. 28-8 to Rs. 29-6. From Rs. 337, Gungarams recovered to Rs. 353, with Hantaparas quoting Rs. 343, as against Rs. 329-8 a week before. Brooke Bonds hardened by As. 12 to Rs. 24-14. Lackatoorahs had buyers at the higher rate of Rs. 33-14.

Among miscellaneous industrials, Orient Papers rose impressively from Rs. 34-15 to Rs. 36-8. India Steamships had buyers at Rs. 8-13, as against Rs. 8-10 a week before. Electric Construction Equipments were fully steady at Rs. 13-4. B.I. Corporations advanced by As. 5 to Rs. 11-6. At Rs. 22-15, Rohtas Industries put on As. 8.

Cement shares were in the limelight, following improved prospects of the cement industry. Asok Cements were a strong feature and advanced by As. 13 to Rs. 11-1. Sone Valleys were done As. 11 higher at Rs. 11-1.

* * * *

Madras Stock Exchange

MADRAS, 9*th May*

The Madras Stock Exchange witnessed a firm trend during the week under review. This was attributed to a number of factors, the chief among them being the general inflationary psychology and the reported spurt of demand for cloth from important consuming centres. The new industrial policy, which has been welcomed by prominent business men, also served as a stimulus to the sentiment of the operators. Although prospects of intensified programme of State trading in certain commodities caused some concern, it did not adversely affect the bullish sentiment in the market.

There were a few dividend announcements this week also. Thus, Palani Andavar Mill Ltd. maintained the dividend of 24 per cent. (tax-free) for the year ended 31st December 1955. Palani Andavar 'A' was quoted today at Rs. 155 *ex-div.* and 'B' at Rs. 226 *ex-div.*, as against Rs. 167 and Rs. 244 last week-end. The West Coast Electric Supply Corporation Ltd. announced an *interim* dividend of 5 per cent. for the half-year ended 30th September 1955. The total dividend for the year ended 31st March 1955 was 10 per cent. The share was enquired at Rs. 13-12 *cum-div.*, as against Rs. 13-10. The Travancore Rubber and Tea Co., Ltd., announced a final dividend of 7½ per cent., thereby making a total of 30 per cent. for the year ended 31st December 1955, the same as in the previous year. The share changed hands at Rs. 25-8 *ex-div.* today, as against Rs. 28 *cum-div.* last week-end.

In the textile section, Bangalore Woollens advanced from Rs. 560 to Rs. 570 and Buckinghams from Rs. 191 to Rs. 202. Cambodias were higher by As. 10 at Rs. 13-13 *ex-div.* Coimbatore Pioneers hardened by Rs. 15 to Rs. 295 *cum-div.* and Coimbatore Spinnings by Rs. 8 to Rs. 98-8. Dhanalakshmis gained Rs. 10 to Rs. 360 and Premiers Rs. 6-8 to Rs. 200. Metturs improved from Rs. 427 to Rs. 457-8. Radhakrishnas (Rs. 100 paid-up) were better by Rs. 5-8 at Rs. 300 and 'B' (Rs. 50 paid-up) by Rs. 5 at Rs. 150. Lakshmis (Rs. 50 paid-up) were up by Rs. 7 at Rs. 200 and 'A' (Rs. 25 paid-up) by Rs. 3 at Rs. 98.

Chandramalais, in the tea section, among plantings, disclosed a gain of As. 3 at Rs. 7 and Coonoor Teas As. 6 at Rs. 29-4 *cum-div.* Devasholas advanced from Rs. 28-8 to Rs. 28-12 and Haileyburias from Rs. 28 to Rs. 28-12. Highlands were better by As. 10 at Rs. 19-2 and Nilgiri Teas by As 6 at Rs. 14-6. United Nilgiris changed hands higher at Rs. 367-8 *cum-right*, as against Rs. 365 *cum-right*, and Talyar Teas at Rs. 14-6, as compared with Rs. 13-13.

In the rubber section, Be Bes were up by As. 2 at Rs. 5 and Cochin Malabars by As. 4 at Rs. 9-5. Kailas advanced by As. 2 to Rs. 6 and Malankaras by As. 4 to Rs. 33-4. Nenmenys changed hands at Rs. 26-4, as against Rs. 25-8 and Teekoys at Rs. 11-2, as compared with Rs. 10-12.

Among coffees, Coffee Lands were higher by Re. 1 at Rs. 24-4 and Consolidated Coffees by As. 10 at Rs. 19-14. Puthutotams were up by As. 1½ at Rs. 4-12. Mysore Coffees were fractionally better at Rs. 2-4½, while Kadur Coffees were quiet at Rs. 2-9.

Aluminium Industries, in the miscellaneous section, gained As. 4 to Rs. 20-2 and General Papers Re. 1 to Rs. 9-8. India Steel Rolling Mills put on As. 4 to Rs. 15-12 and Mettur Chemicals As. 3 to Rs. 9-10. Spencers gathered As. 4 to Rs. 17-4. Andhra Cements 'A' (Rs. 100 paid-up) was better by Rs. 5 at Rs. 167-8 and 'B' (Rs. 10 paid-up) by As. 8 at Rs. 16-12. India Cements were higher by As. 10 at Rs. 36-4.

COMPANY INTELLIGENCE

Associated Cement

The Associated Cement Companies Ltd. has announced the terms of the new issue of capital, for which the sanction of the Controller of Capital Issues has been obtained. The Company has decided to issue 635,928 ordinary shares of Rs. 100 each at a premium of Rs. 20 per share, in the proportion of one new share for every two held. The Directors propose to call up Rs. 50 per share on application along with a premium of Rs. 10 per share, making Rs. 60 per share. The balance of Rs. 60 per share, inclusive of the premium of Rs. 10, will be called up either in one lump sum or in such instalments and at such times as the Board may think fit. The Controller of Capital Issues has imposed the condition that, if any of the shareholders do not accept the additional shares offered to them in proportion to their holdings, the previous consent of the Government will have to be obtained to the allotment of shares on such terms as it may specify. This restriction does not apply to nominees under renunciation forms signed by shareholders who may, therefore, dispose of their rights to the new shares. The new shares will rank for dividend from 1st November 1956 in proportion to the capital for the time being paid up.

Digvijay Cement

The Directors of the Digvijay Cement Co., Ltd., have decided to increase the issue capital of the Company from Rs. 1.30 crores (made up of 90,000 ordinary shares of Rs. 100 each and 40,000 5 per cent. cumulative preference shares of Rs. 100 each) to Rs. 2.15 crores. This is proposed to be done by issuing 45,000 new ordinary shares of Rs. 100 each in the proportion of one new share for every two ordinary shares held and 40,000 new 5 per cent. cumulative preference shares of Rs. 100 each in the proportion of one new share for each preference share held. The Directors propose to offer the new shares at par, but the new issue and the terms thereof are subject to the sanction of the Controller of Capital Issues. The issue of fresh capital is for the purpose of financing a part of the second extension programme which is designed to double the rated capacity to 430,000 tons per annum.

Hindustan Motors

The Directors of Hindustan Motors have decided to issue 500,000 6 per cent. tax-free cumulative redeemable preference shares of Rs. 100 each. The new shares will, in the first instance, be offered to those shareholders who are registered in the books of the Company on 25th May 1956.

NEWS IN BRIEF

FOLLOWING the imposition of excise duty by the Union Government on diesel oil, the Madras Government has dropped its proposal to raise the sales tax on the commodity from As. 1½ to As. 4 per rupee.

The two-day agricultural seminar, under the auspices of the Mysore Agricultural and Experimental Union, will commence in Bangalore on 12th May 1956 and will be inaugurated by the Union Minister for Agriculture, Dr. Punjabrao Deshmukh.

The Government of India has authorised a further increase of 5 per cent. in coastal freight rates over those which prevailed prior to 15th October 1955 on general cargoes. The increase in freight rates has retrospective effect from 1st April 1956.

The negotiations between the Government of India and the Assam Oil Company in respect of exploiting oil in Assam is stated to have reached a deadlock. The discussions centred round the formation of a rupee company to exploit oil in a new 500 square miles area in Assam.

Three new agreements have been signed between India and the U.S. seeking to provide financial aid from the U.S. to the extent of $736,682 for assisting India's development projects. The aid will be used for assistance to Air-India International, for storage of foodgrains in India and for expansion and rehabilitation of Indian railways.

A considerable portion of the exportable tea crop could not be exported during the year 1955-56 due to certain difficulties. In order to facilitate the export of such teas, the Government has decided to extend till 30th June 1956 the period of validity of special export licences issued during 1956 under the Tea Act.

The Government of India has deputed a two-man team to some West Asian and African countries to make an "on-the-spot" study of market possibilities of Indian *bidies* and *bidi tobacco* in those countries. The delegation consists of Dr. Patel, Secretary, Indian Central Tobacco Committee, and Mr. Manibhai, a *bidi* merchant of Saugor.

The U.P. Legislative Assembly passed the U.P. Sales Tax (Amendment) Bill which seeks to empower the State Government to grant exemptions of sales tax to industries producing "articles of national importance." The provisions of the Bill are designed, according to the State Finance Minister, to attract new industries in the State and to give them encouragement.

The Government of India has raised the duty on the import of silver bullion, silver sheets and plates which have undergone no process of manufacture subsequent to rolling and "silver coin, not otherwise specified" from As. 4.1/5 to As. 8.2/5 per ounce. With a view to facilitating Indo-Tibetan trade, the Government of India has also decided to license freely the import from Tibet of any silver coin which is current in the Tibet region of China.

Licences to 28 industrial concerns in Bombay State were issued during the last quarter of 1955. Of these, six firms were already in existence. Out of the 22 other licences, 7 were for setting up new industrial units, 10 for effecting substantial expansion of the existing units and five for manufacture of new articles by the existing firms. This expansion of industrial units envisages capital investment to the tune of Rs. 6.4 crores and employment to nearly 2,000.

A large-scale programme for the eradication of rinderpest from India will be undertaken under the second Five-year Plan at a total cost of Rs. 2,82,34,000, of which the share of the Central Government will be Rs. 1,57,84,000. Of all the contagious diseases that affect Indian livestock, rinderpest is the most dreadful, causing an annual mortality of about 4 lakh animals. Moreover, the survivors are rendered less efficient for work and milk production. From this disease alone, the loss to the nation is estimated at about Rs. 30 crores per annum.

The Government of India is stated to have under consideration a proposal to produce on a mass scale 16-spindle charkhas in Government-run ordnance factories in the country. The Union Minister for Production has called for a few sample sets of the charkha from the designer—a textile engineer of Coimbatore—so that he can examine them more carefully before planning the mass production of the model. It is stated that each spindle of the charkha can produce six ounces of yarn in an eight-hour shift and a person can earn about Rs. 3-12 per eight hours with the aid of this charkha.

There was a widespread shortage of skilled tradesmen, such as overseers, stenographers, fast typists, draughtsmen, compounders, midwives, nurses and trained teachers, all over the country during March 1956, according to the review of the working of Employment Exchanges in India. The shortage of qualified engineers, experienced doctors, accountants, surveyors and health visitors was also reported to be fairly widespread. Dearth of boiler attendants, electricians, machinists, turners, tractor drivers, road roller drivers, physical training instructors and police constables was experienced by a number of Exchanges. There was a dearth of crane drivers at Sambalpur, Asansol and Howrah, X-ray technicians at Dhanbad, Meerut, Allahabad and Gorakhpur and tele-communication mechanics at Jamshedpur and Amritsar. Difficulty was experienced in finding craft instructors at Jorhat, Vijayawada and Meerut; electroplator at Delhi and Ferozepur and sanitary inspectors at Udaipur, Ambala and Darjeeling. Shortage was also experienced in respect of tracers at Poona, Anantapur and Vellore, wiremen at Jorhat, Bhavnagar, Gwalior and Ambala and welders at Patna, Ahmedabad and Surat. The supply position in regard to plumbers at Dhanbad and Vijayawada, excavating machine operators at Gwalior and Nagpur, store-keepers at Poona, Rourkela and Barrackpore and agricultural assistants at Saifabad and Lucknow, was also reported to be unsatisfactory.

* * * *

From Abroad

The world spent $12,000 *million* last year on advertising, according to International World Advertising Agency. The U.S. contributed two-thirds of that amount and the U.K. one-twelfth.

Fixed capital expenditure in the U.K. manufacturing industry in 1955 was 27 per cent. higher than in the previous year. There was a strong and continuous upward trend in capital expenditure throughout the year.

The Broken Hill Proprietary has announced increases in Australian steel prices by an average of £A3 per ton, which is equal to an all-round rise of 8 per cent. In spite of this increase, it is stated that the price of Australian steel will still be £A20 to £A25 per ton below the landed cost of equivalent imported steel.

The World Bank has announced two loans aggregating $19.35 million for the improvement of Burma's transport system. These are the first Bank loans to Burma and the funds will be used mainly for the reconstruction of installation of properties destroyed during World War II. One loan of $14 million has been made to the Commissioner for the Port of Rangoon and is guaranteed by the State Government. The second loan of $5.35 million is made to the Government itself.

Hosiery manufacturers in the United States have begun cutting the price of unbranded fully fashioned nylon stockings by 10 cents to 12 cents a dozen. These lower prices reflect the reductions by Du Pont in nylon prices, including the 15 denier type which goes into hosiery. It will be recalled that, in March, the price was reduced from $6 to $5 per pound. At present, retailers are tending to increase their own profit margin rather than pass on savings in the factory price of hosiery to customers, but lower retail prices are expected to follow.

The University of Wisconsin and the U.S. Department of Agriculture grain breeding scientists have developed a new spring wheat variety, named Russell, which is expected to improve yields in areas with climates and soil conditions resembling those of the U.S. North Central State of Wisconsin. The improved yield is expected to result from Russell's high resistance to loose smut, powdery mildew, Hessian fly and similar grain diseases and its moderate resistance to most prevalent stem rust strains.

As a result of recommendations by an advisory committee of private dealers in the tobacco industry, specialists in the U.S. Department of Agriculture have begun intensified research on tobacco with the aim of producing types especially fitted to certain areas and climates, including varieties bred for quality and multiple resistance to major tobacco diseases. Researchers will also seek the interrelationships between cultural practices and the chemical and physical properties of the tobacco plant.

The year 1955 was generally good for British wool textile exporters, with tops shipments reaching a new record level of more than 76,000,000 lbs. Exports of all types of cloth were 9 per cent. above that in 1954 and of yarn by nearly 4 per cent. The record gain in tops exports is chiefly attributable to increased sales in three markets, namely, China, Canada, and Finland. India again took over 10,000,000 lbs. of tops, and the total exports to the four markets mentioned accounted for over half the U.K.'s sale of tops overseas.

A sharp debate took place on the issue of no-par-value shares in the United Kingdom House of Commons last week. In the course of the debate, Mr. Derek Walker-Smith, Parliamentary Secretary to the Board of Trade, disclosed that the Government welcomed the basic recommendation of the Gedge Committee's Majority Report of January 1954 to allow—but not compel—companies to issue ordinary shares but not preference shares on a no-par-value system. He said that the Government was willing to accept this principle on the basis of a no-time-commitment.

The United Kingdom Iron and Steel Board has increased the maximum prices of iron and steel products by an average of 5 per cent., with effect from the 7th inst. It is stated that the increase had, in the main, been necessitated by the higher cost of imported materials and home arising scrap. Despite this increase, the domestic price of steel is still, on average, about 10 per cent. cheaper than that of most other steel producing countries. The higher steel prices are expected to add about £34 million to the steel industry's gross income. It may be noted in this connection that French steel prices have also been increased by an average of 3 per cent.

Work has begun on a £2-million project for the manufacture of carbon black from petroleum fractions at Geelong, Victoria, in Australia, next to the Shell refinery. It will be Australia's first petrochemical unit and the only carbon black plant operating in the Southern Hemisphere. Designed to produce 16,000 tons per annum, the plant will be built and owned jointly by United Carbon Company of Charleston, West Virginia, U.S., and Shell. When in operation, it will provide the major types of furnace blacks required by the Australian rubber industry. It will also leave some surplus for export. It may be noted that carbon black is the principal reinforcing agent for rubber tyres and other rubber products, imparting to rubber the qualities of toughness and resistance.

PERSONAL

MR. Tushar Kanti Ghosh, Editor, *Amrita Bazar Patrika*, has been elected Chairman of the Board of Directors of the Press Trust of India.

Mr. N. Subramaniam, I.C.S., Director of Settlements, Madras, has been appointed Joint Secretary, Union Ministry of Commerce and Industry.

Mr. Basil Smallpeice, Deputy Chief Executive of the British Overseas Airways Corporation, has been appointed Managing Director of the Corporation, the new title for the post of Chief Executive.

Mr. Ali Yawar Jung, India's Ambassador to Egypt, has been elected Chairman of the sixteen-nation *ad hoc* committee on the special U.N. Fund for Economic Development.

Mr. S. R. Vasavada, prominent labour leader of Ahmedabad, has been elected President of the Indian National Trade Union Congress for next year. Mr. K. P. Tripathi has been re-elected General Secretary of the Congress.

Mr. J. A. Taraporevala, till recently Director of Technical Education, Bombay State, has been appointed Chief Scientific Officer (Engineering), Department of Atomic Energy. He will be in charge of the construction of the atomic reactor at Trombay.

Mr. A. Rajagopalan has been re-elected President of the new committee of the Engineering Association of India. Mr. R. M. Agrawal has been elected Vice-President, while the members of the committee are: Messrs. L. P. Misra, D. C. Driver, D. N. Jalan, B. K. Rohatgi, A. K. Bhattacharyya, P. R. Bagri, I. C. Gupta, R. L. Rajgarhia, T. R. Gupta, S. N. Rungta, K. L. Chowdhury and Ghanshyam Das Binani.

Mr. K. Venkataraman of Messrs. Venkataraman & Co., stock and share brokers, Madras, has been elected President of the Madras Stock Exchange Association for the year 1956-57. Mr. H. C. Kothari of Messrs. Kothari & Sons has been elected Vice-President, Mr. V. Rangachari of Messrs. Maconochie & Co., Honorary Treasurer, and Mr. V. Natarajan of Messrs. Dalal & Co., and Mr. C. S. Natarajan of Messrs. Raj & Co., Joint Honorary Secretaries of the Association.

Dr. John Matthai, Mr. C. D. Deshmukh, Mr. T. T. Krishnamachari, Mr. V. T. Krishnamachari, Mr. Asoka Mehta, Mr. J. R. D. Tata, Mr. J. F. Sinclair and Mr. N. R. Pillai will constitute the governing body of the Council of Economic and Industrial Research established for undertaking such research as may be assigned to it on behalf of the Government, industrial and business concerns and others in respect of problems having a bearing on industrial economics. The Council will also undertake basic research. Dr. P. S. Lokanathan, Executive Secretary of the E.C.A.F.E., has been appointed Director of the Council.

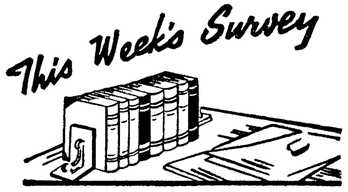
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 9*th May*

Prospects of Tea Industry

So far as future prospects of the tea industry are concerned, there is little to be said that can be described as definitely more favourable. It is true that the outturn to date from Northern India, owing to hail damage as well as lack of rain in certain districts, is well below the corresponding figure for last year. It is as yet, however, only the beginning of the season and the big producing months, which really count, have still to come. A more favourable factor appears to lie in the decision on the part of the Tea Cess Committee definitely to tackle the problem of increasing the consumption of tea in India by the establishment of their own (at any rate in the first instance) packing factory. India, it is confidently predicted, will be able eventually to consume all the tea that she can produce and the opinion has been held for a long time past that the Committee's primary activities should be concentrated on bringing about a further increase in the present rate of consumption in India, which already exceeds 50 million lbs. annually, rather than expend their energies and enormous sums of money in America, which has been a coffee-drinking country since time immemorial and where a cup of coffee can still be obtained cheaper than a cup of tea. In justification of the Tea Cess Committee, it should be added here that, during last year's worldwide depression, shipments of tea into America from Northern India increased by as much as 1½ million lbs. The London stock figures for March at approximately 242 million lbs. show a gratifying reduction of 6¼ million lbs., while deliveries increased by 15½ million lbs., as compared with the corresponding period in 1930.



SALES TAX ON INTER-STATE TRADE

THE Government has decided to clear the constitutional jungle which has grown around the tax on inter-State sales by transferring this item from the State to the Union List. Fiscal opinion has favoured this move and judicial opinion has recognised how impossible was the position of trade and industry under the original practice of permitting the States to collect tax on sales in the course of inter-State trade. The business community has time and again drawn the attention of the authorities to the serious inconvenience caused by the subjection of inter-State trade to sales tax legislation of the State Governments. But it was the Supreme Court's judgment in the *Bengal Immunity Co., Ltd.* vs. *The State of Bihar* which demonstrated the need for lifting the whole levy on inter-State trade from the purview of the State Governments, for the Court, reversing its own earlier decision, held that such a levy was *ultra vires* the Constitution.

In the course of its painstaking analysis of the entire problem of inter-State trade in the context of sales tax legislation, the Taxation Enquiry Commission stated the issue in a nutshell when it averred that the "States cannot do without the sales tax and, in terms of two or more States, the sales tax cannot do without the Union." The Commission, in the light of this conclusion, suggested amendments to the Constitution which would place beyond any shadow of legal or constitutional doubt the right of the Union Government to levy a tax on inter-State sales and distribute the revenue among the States. The Constitution (Tenth Amendment) Bill, introduced in the Lok Sabha last week, has been prepared in accordance with the Commission's recommendations.

Briefly, the Bill adds a new entry, namely, 92A, to the Union List, placing taxes on inter-State sales and purchases within the exclusive legislative and executive power of the Union and to make the entry 54 in the State List, namely, tax on sale or purchase of goods other than newspapers, subject to the provisions of the new entry, 92A. The new levy, the tax on inter-State sales, is being added to the list of subjects specified in Clause (1) of Article 269. This has the effect of empowering the Union Government to collect sales tax on inter-State trade and to distribute the revenue among the States; a similar procedure is now adopted for Estate Duty. A further provision is proposed in Article 269 expressly empowering Parliament to formulate, by law, principles for determining as to when a sale or purchase of goods takes place in the course of inter-State trade or commerce.

Further, the explanation to Clause (1) of Article 286, which has given rise to a great deal of legal controversy and practical difficulty, is sought to be omitted. It may be mentioned here that this explanation seeks to define what constitutes a trade outside a State. Clause (2) of the Article will also be omitted. Instead, it is proposed to insert a provision whereby Parliament will have powers to formulate principles for determining when a sale or purchase of goods takes place (*a*) outside a State, or (*b*) in the course of import of goods into the territory of India, or (*c*) in the course of export of the goods out of the territory of India.

It is noteworthy that the Bill seeks to replace Clause (3) of Article 286 by a new one. At present, the Clause (3) lays down that "no law made by the Legislature of a State imposing or authorising the imposition of a tax on the sale or purchase of any such goods as have been declared by Parliament by law to be essential for the life of the community shall have effect, unless it has been reserved for the consideration of the President and has received his assent." It may be recalled that it was in pursuance of this clause that Parliament passed an Act in 1952, declaring a number of goods like foodstuffs of various kinds, cloth, raw cotton, cattle feeds, iron and steel and coal to be essential to the life of the community. Since this declaration could not affect the pre-existing State laws imposing sales tax on these goods, the result was a wide disparity from State to State not only in the range of exempted goods but also in the rates applicable to them.

Presumably, the Government is now convinced that the law on the subject of essential articles should be more comprehensive. Under the clause which will replace Clause (3) of Article 286, Parliament will have the power to declare by law the goods which are of special importance to inter-State trade or commerce and also to specify the restrictions and conditions to which any State law (whether made before or after the Parliamentary law) will be subject to the system of levy, rates and other aspects of the tax on the sale or purchase of those goods.

At first sight, this might seem to be a limitation on the fiscal powers of States. But such limitation is obviously in the larger interests of the community and the States themselves. When the Commission recommended such a change, it had in mind not only essential articles in the sense of foodstuffs but also raw materials for industry. There is an urgent need for taking the levy of tax on inter-State movement of raw materials from the purview of the States. This has been neatly expressed in the statement of objects of the Bill which, reflecting the sentiment expressed by the Taxation Enquiry Commission, says:

> "Where, for instance, raw material produced in a State is important from the point of view of the consumer or the industry of another State, certain restrictions have to be placed on the taxing power of the State Government, as, otherwise, it can effect an increase in the cost of the manufactured article, whether such manufacture takes place in the State, which produces the raw material, or in another State, which imports the material from that State. In either case, to the extent that the finished goods are consumed in a State other than the one which taxes the raw material, the increase in cost on account of the tax is a matter of direct concern to the consumer of another State. Such cases of inter-State sales should appropriately be brought under the full control of the Union."

It is to be hoped that the sales tax on essential industrial raw materials will be increasingly brought within the purview of the Central Government, for that will ensure that a State which produces a particular raw material will not hold the rest of the country to ransom. The clause now proposed invests the Union Government with sufficient powers to see that the States do not use the sales tax device to hinder the free movement of raw materials.

CEILING ON INCOMES

There was a brief and inconclusive but interesting debate over the issue of ceiling on personal incomes in the Rajya Sabha last week, thanks to a non-official resolution urging fixation of such a ceiling, moved by Mr. B. K. Mukerjee, a Congress member. The resolution said that the Government should take necessary steps, by legislation or otherwise, to fix a ceiling on individual incomes at Rs. 25,000 a year and, as a first step towards the fixation of such ceiling, determine the "maximum emolument to be drawn by any civil servant under the Central Government at a sum not exceeding Rs. 1,800 a month."

In support of his plea for ceiling on incomes, Mr. Mukerjee put forward two arguments. First, the country has accepted a socialist pattern of society as the objective and it is necessary that the privileged classes in the country must fall in line with the aspirations of the people. Secondly, the second Five-year Plan is an ambitious one, requiring, for its successful implementation, the wholehearted co-operation of the people which will be forthcoming only if steps are taken to reduce inequalities of wealth and disparities in incomes; when the *per capita* income is only Rs. 200, the country cannot have a personal income of more than Rs. 25,000 per annum. These arguments were supported by several members —Congress and non-Congress. Some even wanted a more drastic reform. Mr. N. G. Ranga, for instance, considered that the ceiling proposed in the resolution was "too high" and would create "a new class of aristocracy and exploiters." He also suggested—this suggestion was endorsed by a few others—that a "reasonable" ceiling should be fixed simultaneously for all professions, including agriculturists, civil servants and industrialists.

The contents of the resolution and the views expressed on them bring out very vividly the lack of realism on the part of those members of Parliament who want fixation of ceiling on personal incomes. May be, whenever proposals of this nature are suggested, the members are prompted more by considerations of evoking praise and favour from the electorate, the vast majority of which are illiterate, than by the country's larger interest. In trying to please the electorate through such suggestions, the legislators are certainly doing a great disservice, inasmuch as they overlook the very fundamentals of economics. It is no doubt true that the *per capita* income of the country is deplorably low, being Rs. 265 and not Rs. 200 as quoted by Mr. Mukerjee. But the income cannot, by any stretch of imagination, be raised overnight by fixing ceiling on incomes. Certainly, this is a negative approach. The proper and positive approach should be to raise the income of the lower group. One would have appreciated it if Mr. Mukerjee had suggested to the Government to take steps to fix a floor below which the income of a person should not go. This aspect was lucidly stressed by Mr. P. D. Himatsingka, a Congress member of West Bengal. As Mr. Himatsingka very rightly pointed out, "an attempt should be made to raise the *per capita* income of every one who is not getting a sufficient sum; it will not do to reduce the income of persons who are getting it on account of their merit and ability and the service they render. Surely, fixation of a ceiling on personal incomes, irrespective of these considerations, would tantamount to taking off the premium on merit and ability which is so vital for the material progress of a community. What incentive will be there for people to show their worth, if there is no assurance that they will be adequately rewarded for their endeavour? Would we be right, if, instead of taking steps to raise the income of persons, we were to do away with the disparity by reducing the income of those who are getting more? It may not be inappropriate to recall here the conditions that existed in countries like Indonesia and Burma after their independence. These countries did not have a proper civil service. India is fortunate in that it has a civil service which is really efficient." Mr. Himatsingka did well to emphasise this aspect so very forcefully. As he very pertinently remarked, it would be a wrong step to suggest that the disparity in incomes should be done away with by reducing the salaries of civil servants.

Looked at from the point of view of mobilising the resources for economic development also, the plea for fixing a ceiling on incomes cannot be justified. The following extracts from the speech of Mr. Himatsingka will bear out the importance of this statement:

> "If we produce more articles, more money will be there. The rivers in our country were devastating the country so long. Now, they are being harnessed and they will help in more and more production of wealth. It is a truism to say that India is a rich country inhabited by poor people. This is because the resources that are available in the country have not been properly utilised so far. The mineral wealth is lying hidden under the soil. India is a country where 70 per cent. of the people are cultivators. But compare the production with that of countries like Japan. If we follow the improved methods and if improved ideas are accepted here, the income of the peasant will increase a number of times."

There is considerable force in the observations. There are enough resources and enough facilities in the country which, if properly utilised, will, as Mr. Himatsingka rightly said, certainly help increase the income of the country. The Government will do well to take note of these observations in examining the problem of reducing the disparity in incomes. As we pointed out only two weeks ago—*vide* page 798 of *Commerce* dated 28th April 1956—in adopting whatever measures it may deem necessary to take in this direction, the Government should not blindly yield to the essentially emotional demand for an omnibus ceiling on incomes.

HUMAN PROBLEMS IN INDUSTRY

The Duke of Edinburgh's Study Conference on Human Problems of Industrial Communities within the Commonwealth and the Empire, which will be held at Oxford from 9th to 27th July, will be an experiment on lines never before attempted in the Commonwealth. It will bring together some 300 people in the manager-employer and trade union operative roles of industry from a wide cross-section of races, industries and occupations. There will be 90 members from the U.K., 138 from other countries in the Commonwealth—of which 25 will be from India —and 52 from the Colonial territories. Twenty-nine countries and territories will be represented.

A feature of the Conference is that the members are invited as individuals and not as delegates, so that they may contribute to the common purpose of the discussions in terms of their own personal experience. As the Conference is independent in character, no Government is represented officially. There has, however, been much consultation with Governments and other organisations interested in industrial welfare in making arrangements for the invitation of members.

The members, chosen principally from among people between 25 and 45 years of age, will conduct a practical study of the human aspects of industrialisation and, in particular, those factors which make for satisfaction, efficiency and understanding both inside industrial organisations and in the everyday relations between industry and the community around it.

There is no gainsaying the fact that a proper adjustment of human resources of industry is the foremost concern of management. For to be productive and satisfied, an individual must be able to do and want to do the work which is assigned to him. The "square peg in a round hole" should be avoided in industry, both for the sake of the industry and the man concerned. The worker may lack the aptitude to learn the operation he must perform. He may be uninterested in the particular work to which he is assigned. He may dislike his associates or be unacceptable to them. He may chafe under a routine that does not fully use his skill. Whatever the factors that contribute to his inefficiency, both he and the employer suffer. Consequently, the human relations problem is the most important of industrial problems and it entails the introduction of a number of techniques of personnel management influencing day-to-day direct relations at the enterprise with the aim of enlisting the support of the workers for organisational measures benefiting workers themselves as well as the enterprise.

The Oxford Conference is essentially an experiment in common effort within the Commonwealth. It is true that many of the problems which it will study have been considered before, but much of the significance of this conference lies in its membership. The members will gather there not for academic study but as men and women of many races and nations who are facing practical responsibilities in industry and are prepared to exchange ideas freely and frankly on the tasks and opportunities ahead of them. It is noteworthy that Mrs. Durgabai Deshmukh, Chairman of the Central Social Welfare Board of India, will contribute a paper on "New Dimensions of Woman's Life in India." Mr. M. D. Madon, Deputy Director of Education and Social Services, Tata Iron and Steel Company, Ltd., will speak on human relations in the Tata Steel Works at Jamshedpur.

It may be interesting to note here that a reference to this conference was made by Mr. G. D. Somani in his speech at the twenty-third annual session of the All-India Organisation of Industrial Employers held at New Delhi on the 4th inst. He said:

> "Industrialisation involves not merely a break with the agricultural subsistence economy but also shifts and changes affecting political and social structures. New concepts and relationships arise in the life of an individual as are evidenced from the weakening of traditional authority of the head of the family, the new position of women, greater emphasis on leisure, preference for city life, reorientation of attitudes and even change in beliefs. I am glad that H.R.H. the Duke of Edinburgh has organised a Study Conference in Oxford in July this year which will concern itself with the human problems of industrial communities as such, that is, with the human aspects of industrialisation, and in particular those factors which make for satisfaction, efficiency and understanding, both inside industrial organisations and in the everyday relations between industry and the community around it."

RICE TRADE

The two weeks' conference of rice experts from India, Burma, Japan, Thailand, France, the United Kingdom and the United States, which concluded at Rome on the 3rd inst., expressed itself against any effort to freeze rice trade and rice prices at present levels. The Conference is preparatory to the forthcoming first meeting of the new inter-Governmental rice study group to be held in East Asia; the venue and the date have not been settled yet. It urged that stabilisation measures should aim not only at ironing out temporary fluctuations, but also at easy adjustment to long-term changes in the conditions of supply and demand. It will be recalled that freezing of rice trade and prices had been suggested as a possible means of reducing instability in marketing rice, the basic food of millions of Asians.

The Conference agreed that the broad objective of the countries interested in rice trade should be "a continuous and balanced expansion in the volume of rice production, consumption and trade." It pertinently felt that fuller

A young man with 90 years' experience

How Standard-Vacuum's technical sales staff help make industry more efficient and productive

LUBRICANTS are a vital need for every factory, power plant and machine shop. But it is not enough just to buy the best lubricants. Expert advice on lubrication is also needed.

Trained Standard-Vacuum specialists render complete lubrication service, by studying each problem, no matter how large or small, and finally recommending the correct GARGOYLE Industrial Lubricant. The customer gets the benefit of 90 years' experience, gained in solving lubrication problems throughout the world.

Standard-Vacuum's Lubrication Service helps to keep machinery running at peak efficiency, and eliminates costly breakdowns — thus increasing the productivity of Indian industry.

FOOD PRODUCTION TARGET RAISED

NATIONAL DEVELOPMENT COUNCIL SCRUTINISES DRAFT SECOND PLAN

From A Special Correspondent

NEW DELHI, *8th May*

ALTHOUGH formal approval has yet to be accorded by Parliament to the second Five-year Plan, it may now be taken for granted that there will not be any drastic changes either in the approach to the Plan or in the quantum of the proposed expenditure. Parliament will appoint two separate committees to study the various aspects of the Plan and may make some suggestions to the Planning Commission. Knowing, the views of Parliament, as we do, it can be stated that its suggestions, if any, will not be for curtailment of the outlay on the Plan; on the contrary, it will emphasise the importance of defence industries and the need for speeding up the execution of industrial programmes.

DELHI LETTER

The deliberations of the National Development Council have left certain impressions on the onlookers not only as to how the planners and the chief participants at the meeting viewed the whole problem but also as to how they should play their cards to achieve success. Since any pruning of the Plan would result in the abandonment of some of their pet schemes, they were reluctant to agree on the question of bringing down the target expenditure below the Rs. 4,800-crore level. There was realisation that, in a country like India, agriculture should continue to receive the utmost attention, particularly food production. Even the Prime Minister, who inaugurated the meeting, pointed out that, although the Plan had primarily aimed at the building up of heavy industries, machine tools, etc., production of foodgrains should be maintained at well above the target through intensive cultivation. He thought that Community Projects and the National Extension Service Organisations could play a creditable part in achieving higher food production.

It is refreshing to note that the planners were agreed that increased production of food and raw materials would be helpful not only in saving valuable foreign exchange but also in keeping under check the inflationary spiral likely to be generated as a result of large-scale deficit financing. The Vice-Chairman of the Planning Commission was of the view that the country could step up the production of foodgrains from about 18 per cent. as proposed in the Plan to about 40 per cent. from the present level, if only the people would make some special efforts. A proposal was also reported to have been considered to the effect that the quantum of foodgrains to be imported should be increased from about three million tons to six million tons and that the greater part of these imports should be in the first two years of the Plan. It is doubtful whether the planners had considered the full implications of this proposal. For instance, it is now well known that, during the first half of the Plan, the Government has to make large-scale allocations of foreign exchange for imports of steel, machinery, industrial raw materials, including cement, etc., for the orderly execution of the various projects. All these will make serious dents into the foreign exchange resources of the country and it is, therefore, necessary that the Government should not import more foodgrains than is absolutely necessary. The latest reports from the Punjab and elsewhere suggest that this year the *rabi* wheat crop will set up another record in view of the fact that the area sown under wheat is higher by about two million acres. This means that the outturn of wheat for 1955-56 will be very near nine million tons, as compared with 8.5 million tons in the preceding season. The recent rise in the price of foodgrains must not, therefore, have been due to underproduction but mainly to the operation of speculative forces.

Further, the National Development Council did not take cognisance of the possible adverse effects likely to be caused to the foreign trade of the country as a result of the reduced flow of some commercial crops such as oilseeds, raw cotton, vegetable oils, etc. It will be remembered that, a few weeks ago, the Government had stopped exports of fine rice and pulses so as to bring down the prices. Similarly, limitations have been imposed on exports of vegetable oils such as groundnut oil, etc., while the export duty on linseed oil has been increased. Although Government has been anxious to promote the export trade of the country, it could, in its present stage of economy, do it only through the increased production of commercial crops. The National Development Council should, therefore, have given equal importance to increasing the production of commercial crops, particularly those which are capable of earning more foreign exchange. It is possible that, at the forthcoming Export Advisory Council meeting, the Commerce and Industry Minister will emphasise this aspect of the problem.

Although the National Development Council paid particular attention to the augmentation of the rail transport in the country, it appears to have overlooked another aspect of the country's economy. One visible effect of the rapidly expanding economy of the country is that the targets laid down for different industries are becoming rapidly obsolete. In other words, consumer and industrial demand is increasing on a scale rather disproportionately to the growth of production. For instance, production of cement in the country a year ago was more or less equal to demand at about 4.5 million tons, whereas, within one year, the demand has more than doubled itself. As a result, the Government which was content to fix the target for cement at 10 million tons for the second Plan, has had to think in terms of a bigger target; it is now felt that the target should be about 16 million tons. Similarly, the target for steel also is likely to be raised from about 6 million ingot tons to about 7 million ingot tons. Perhaps even this level might be revised in an upward direction after a year or two. The target for bicycles, which was fixed at 1.25 million, has now been increased to 1.6 million. In the matter of cloth also, no rigidity in regard to production should be imposed on the industry. It is, therefore, necessary for Government and the planners to adopt a flexible policy in regard to production of several consumer goods.

During the discussions at the National Development Council meeting, the problem of regional development of industries came to the forefront. All the representatives from the South, particularly the Chief Ministers of Mysore and Hyderabad, the Finance Minister of Madras and the Development Minister of Andhra, drew the attention of the Planning Commission to the fact that the interests of the South had been neglected in respect of industrialisation and made a forceful plea that heavy industries should be started in this area. In case it was found that a particular heavy industry could not be located in a specified State for want of some important raw material, it was suggested that there should at least be a balanced development of the various zones and that financial allocations for purposes of development should be made on a zonal basis. In view of the unanimity of the opinion on this question from members of the Southern States, the Planning Commission must think afresh and aim at bringing about a balanced regional development. It may be noted here that the latest Industrial Policy Statement of the Government has also emphatically stated that "only by securing a balanced and co-ordinated development of the industrial and the agricultural economy in each region, can the entire country attain higher standards of living."

These apart, there was full recognition that efforts should be made to keep down the adverse effects of deficit financing to the bare minimum. The National Development Council is now agreed that no gap should be left on the resources side of the Plan and that the present gap of Rs. 400 crores should be made good by increased taxation. All the Chief Ministers of States are reported to have agreed to raise additional taxes to the extent of Rs. 50 crores per year and some levies such as sales tax, surcharges on land revenue, agricultural income-tax, betterment levy, irrigation cess, electricity duty, etc., are expected to be imposed or enhanced, as the case may be, in order to close the gap. Meanwhile, a proper survey of the taxable capacity of different States is expected to be undertaken and the target for each State will be fixed.

TARIFF COMMISSION'S WORK

MORE ATTENTION TO BE DEVOTED TO RESEARCH

THE Tariff Commission, in the course of its normal work, comes in contact with the vital sector of Indian economy, namely, the industrial sector. And it is not as if the Commission is concerned only with the case of the weaker industries which demand protection. For its price enquiries have enabled the Commission to deal with some of the Indian industries the costs of production of which compare very favourably with those of their foreign counterparts. Further, its investigations into the case for protection of an industry often enable the Commission to acquire valuable knowledge of allied questions such as the supply of raw materials and freight problems. For these reasons, the report of the activities of the Commission deserves to be read with attention.

The latest report of the Commission—that for 1954-55, is the third of its kind. Besides containing an account of the enquiries it held and the Government resolutions on its recommendations, the report carries an interesting review of the progress of protected industries covering production, sales, stocks and wholesale prices. This review is too brief and factual to be of any worthwhile use. It is to be hoped that, in future at least, this section of the report will be further expanded in scope. After all, the Commission owes it both to itself and to the consumers (at whose expense all protection is given) to keep the progress of protected industries under proper scrutiny, to pull up the industries which shout till protection is given and are inclined to take things easy after that purpose has been achieved. The public is, therefore, entitled to know from time to time as to what progress is being made by the protected industries and it looks to the Commission for knowledge in this direction, because, as an independent body, the Commission is expected to tell the truth without fear or favour.

During the year under review, the Commission held 21 enquiries and submitted no less than 29 reports. The reports submitted covered the cases for continuance of protection for industries producing hurricane lanterns, bicycles, sheet glass, electric brass lamp-holders, cocoa powder and chocolate, antimony, cotton and hair belting, textile machinery, zip fasteners, sewing machines, stearic and oleic acid, pickers, oil pressure lamps, machine screws, soda ash, grinding wheels, calcium chloride, artificial silk, titanium dioxide, electric motors and hydroquinone. The industries which claimed protection during the year under review included those producing caustic soda and bleaching powder, dyestuffs, automobile leaf spring, automobile hand tyre inflators, engineers' steel files and diesel fuel injection equipment. The Commission also submitted a report on the revision of retention prices of tinplate.

In describing its findings on the progress of protected industries the Commission has divided its wards into four groups: metallurgical industries, engineering industries, chemical and allied industries and other industries. Production in metallurgical industries in 1954, it is stated, generally recorded an increase as compared with the previous year. Thus, the production of aluminium ingots, refined copper aluminium circles, protected steels (other than high speed and stainless steels), aluminium sheets and antimony moved up, while there was a decline in production of high speed steel and stainless steel. During the first quarter of 1955, there was improvement in production in respect of aluminium circles, sheets and ingots, antimony, and stainless steel. Among engineering industries, the industries which recorded an increase in output in 1954 included motor vehicle batteries, ring frames, hurricane lanterns, zip fasteners, oil pressure lamps, sewing machines, electric motors, bicycles, electric brass lamp-holders, grinding wheels, wood screws and machine screws. There was a decline in production in spindles, looms, spinning rings, tin rollers and cotton baling hoops. Improvement in production took place in nearly all these industries in the first quarter of 1955, the exceptions being spinning rings, spindles and machine screws.

Most of the chemical industries recorded a sizable increase in production both in 1954 and in the first quarter of 1955. Such industries included sodium bichromate, potassium bichromate,

SECOND PLAN LACKS BALANCE

MR. K. C. NEOGY'S VIEWS

[In a note of dissent on the draft of the second Plan, which will shortly be presented to Parliament, Mr. K. C. Neogy, Member of the Planning Commission, who is in charge of industries, observes that the calculation of the financial resources for the public sector at Rs. 4,800 crores seems to be characterised by wishful thinking rather than reasonable expectations. He has also drawn attention to lack of personnel and inadequate provision for internal transport and shipping. Although his views were made known to the members of the National Development Council when they met at New Delhi last week, they failed to evoke any realistic reassessment of the Plan, with the Council deciding that the size of the Plan at Rs. 4,800 crores required no downward revision. We have also heard it said even by some of the Union Ministers who have also been critical of the Plan that Mr. Neogy is unduly pessimistic. This remark is rather surprising, for they have themselves criticised the Plan more or less on the same grounds.

In order to enable readers to judge for themselves, we publish below the text of Mr. Neogy's note. In our opinion, there is not even an iota of exaggeration in Mr. Neogy's assessment of the deficiencies in the Plan. If the public is not to be misled, the Government must reduce the size of the Plan, rearrange the priorities, cut down the provision for some of the social projects and give more scope for private enterprise—ED.]

THE calculation of the financial resources for the public sector of the Plan at Rs. 4,800 crores seems to be characterised by wishful thinking, rather than reasonable expectations. Even then, there is an uncovered gap; and large as the gap is, it may well prove to be an underestimate. There are indications that the revenue surplus may prove disappointing. The assumed foreign aid figure is a measure of our need but that does not make it easily attainable. It will, perhaps, be idle to expect State Governments as a whole to fulfil their targets of additional taxation. Tax efforts even at the Centre will have to recognise its limitations at some point.

If the Plan is seriously attempted to be maintained at its present size and the visible domestic resources cannot be stretched to provide more than half the outlay in the public sector, deficit financing of the order of Rs. 1,200 crores may no longer be the upper limit, as urged by the experts, but the inevitable minimum. Once inflationary conditions supervene as a concomitant of this order of deficit financing, all monetary calculations of the Plan expenditure will be upset, cost of projects will be increased and Plan fulfilment reduced in real terms. And in that process, those to be hardest hit would be people in the fixed income groups who number over five million and include Government servants at all levels, teachers and other non-Government employees. These classes would thus be called upon to bear the brunt of capital formation through deficit financing after they have patiently borne the war-time and post-war decline in their standards of life.

Inflation, progressively heavy taxation and rigid controls that appear to be inevitable may well set in motion forces of reaction and demoralisation at different levels of society. And, if demoralisation overtakes the people, in general, it will, in all conscience, be too dear a price to pay for economic progress, even if real progress be possible under such conditions.

Undoubted Uncertainties

Apart from financial imponderables, there are undoubted uncertainties in the physical and organisational spheres which should not be minimised. The problem of finding managerial personnel for all the projects is no small one; and, until much more is done for technical training, a shortage of skilled personnel may limit practical achievement. The answer to all these uncertainties is sought to be found in the idea of detailed annual plans which will be drawn up in the light of practical experience and are expected to meet the requirements of the situation as it unfolds itself year after year. But the annual plans are not likely to add up to the five-year picture as given in the Plan. Their sum total will be smaller, because to finance the entire Plan and fulfil its physical targets in the five-year period is beyond our capacity; and it will also be different because the individual projects and programmes constituting the Five-year Plan are not equally elastic and cannot all be reduced in the same proportion. The ultimate picture that is, therefore, likely to emerge after the operation of the five annual plans may turn out to be materially different in dimensions and content from the Five-year Plan that is now being put forward.

The question that arises in these circumstances is whether a less ambitious Five-year Plan should not have been drawn up, such as would be capable of fulfilment in practice and to which the country could pledge itself as a clear and definite programme that woud be not merely desirable but also possible to achieve. Such a realistic Plan would still be open to some degree of annual adjustment found to be necessary and possible, and be capable of being improved upon by the utilisation of any favourable turn of events from year to year.

In an economy like ours, there is a good deal of leeway to be made in every sphere of national activity, and many are the matters that directly or indirectly touch the life of the individual and call for suitable ameliorative action as an unavoidable obligation of an enlightened State. As a matter of abstract reasoning, sufficient progress deserves to be made at the same time on all fronts; but the inexorable logic of circumstances unfortunately sets a limit to any such all-embracing effort. Relative priorities should, therefore, be fixed in a planned programme of development, so that the programme for any five-year period allows for discrimination between one project and another for the purpose of determining the degrees of attention to be paid to them, in that period of time. Such a policy would, in due course, work out a satisfactory result in all the desired directions.

Too Many Proposals

It is often urged that the nature and size of the Plan have been influenced largely by the pressing need of creating employment on a large scale. Such an argument seems to imply that the desired volume of employment can be created by the simple process of enumerating targets, whether or not such targets are attainable in financial and physical terms. In our attempt, however, to cover as wide a field as possible all at once on theoretical grounds of desirability, we have, in my view, failed to recognise the necessary priorities and packed the Plan with too many proposals that make it spectacular but are in excess of our financial and physical capacity. In an attempt to reconcile ever-increasing financial demands for various projects with an overall total of Rs. 4,800 crores, the cost of some of them at least appears to have been underestimated. In reality, the Plan as put forward requires financial resources substantially in excess of the figure of Rs. 4,800 crores.

Vague assurances of a somewhat uniform character have been given to the Ministries that suitable upward revisions would be made in the financial allocations in the course of the operation of the Plan. Thus, the authorities concerned will be kept on tenterhooks of expectation of improved financial provision as a result of the annual revisions of the Plan. Having regard, however, to the overall shortage of funds, such an assurance, given impartially to different Ministries at the same time, can only lead to ultimate disappointment and confusion, apart from throwing doubts upon the proposals and targets themselves.

Allocations to Railways Poor

It is not surprising that a Plan of this character lacks balance; and this defect is best illustrated by the want of correlation between production and transport; and nowhere is that imbalance more glaring than in the case of the obligation of the railways to carry the traffic resulting from industrial and other targets of development. It is being demonstrated today how the failure correctly to assess and adequately to provide for railway requirements in the first Plan period has, in spite of the best efforts of the railways, resulted in continued restrictions on the movement of important commodities. It is apprehended that the contemplated development under the second Five-year Plan also may prove seriously unmatched by the transport capacity of the railways. A shortage of railway capacity will surely react unfavourably upon the supply of raw materials of industry and other basic commodities, as also upon the movement of export articles and distribution of foodstuffs and consumer goods, on the regular supply of which the country can rely for the purpose of countering the forces of inflation.

In this view of the matter, all the traffic generated, which may belong to any of the above categories, should be capable of prompt movement. The large foreign exchange content and heavy steel requirements of the railway programme are sometimes pointed out as its inherent difficulties. But, even if these uncertainties are a valid argument against a proper railway plan, the effect that inadequacy of transport would produce on the rest of the Plan is self-evident. Indeed, no production should be undertaken, unless it can be transported; or, in other words, the extent of available transport facilities should set the limit to production.

Shipping

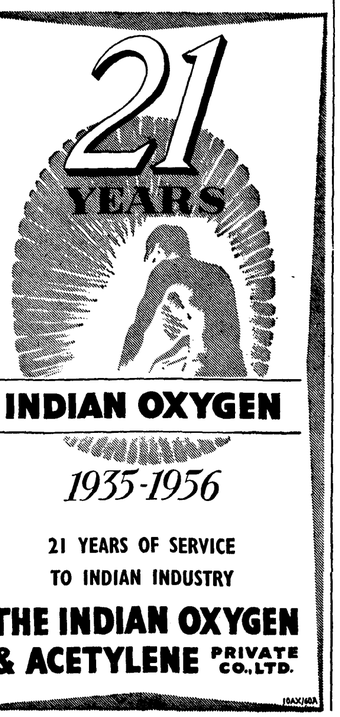
Another form of transport which has not secured adequate attention, due principally to lack of finance, is shipping, whose importance to the Indian economy is difficult to exaggerate. Coastal shipping, which has been reserved to the Indian Flag, should be capable of relieving the railways of their burden as much as possible. But overseas shipping is, in a sense, even more important, particularly from the point of view of earning foreign exchange. Unless an adequate provision is made for expansion of overseas shipping, every day that passes makes it difficult for us to occupy our rightful position in this trade, because of the steady expansion that is taking place in the shipping of different other countries. Apart from this factor, one should not ignore that merchant marine forms the second line of defence in any maritime country—an aspect which India could ill afford to overlook.

An Irony

It is an irony, however, that expert advisers are still advocating a further reduction in the allocation for transport, mainly on the strength of abstract formulæ borrowed from other lands.

In my humble judgment, basic schemes of overriding importance should have been carefully selected and given top priority in the second Plan, and the rest, arranged in a descending order of lower priorities, to be taken up for implementation as and when possible in the five-year period. Thus, the second Plan should have been primarily treated as marking a momentous transition to a fuller and more comprehensive plan in the third quinquennium, for which the foundations would have been well and truly laid in the second Plan period.

The Plan as it stands is, however, open to the criticism that, as a five-year programme, it lacks definiteness, is unrealistic and overambitious, and its massive superstructure has been raised on precarious foundations.



BOMBAY STATE FINANCIAL CORPORATION

ANOTHER YEAR OF USEFUL ACTIVITY

THE third Annual Report of the Directors of the Bombay State Financial Corporation (Managing Director: Mr. R. S. Bhatt, Bombay) for the year ended 31st March 1956 discloses that the Corporation had another year of successful operations, despite a distinct fall in the number of applicants seeking financial accommodation. The working of the Corporation during the year resulted in a profit of Rs. 3.55 lakhs, as compared with Rs. 2.40 lakhs earned in 1954-55. After making a provision of Rs. 1.50 lakhs for taxation (as against Rs. 1.06 lakhs) and setting aside Rs. 20,000 (Rs. 12,500) for statutory reserve fund, Rs. 20,000 (*nil*) for reserve for bad and doubtful debts and Rs. 4,500 (Rs. 3,500) for reserve for investments, there was a balance of Rs. 1.61 lakhs (Rs. 1.07 lakhs) for distribution as dividend. As this amount was inadequate to pay the guaranteed dividend of 3½ per cent. on the Corporation's shares, the Bombay Government was requested to give a subvention of Rs. 1.89 lakhs to make up the balance, as against Rs. 2.43 lakhs sought in the previous year for the same purpose.

The Corporation's request to the Central Government, made through the State Government, to exempt it from payment of income-tax and super-tax for a minimum period of five years, so that it could during this period consolidate its position by enlarging the volume of its business and increasing its income to meet its statutory liabilities, was not granted. The Corporation will, therefore, have to "adjust itself to this circumstance and endeavour to balance its income to meet its liabilities as early as possible."

The Corporation continued its policy of extending financial accommodation to industrial concerns for the execution of sound schemes of development and expansion, having regard to the programme of industrial development recommended by the Planning Commission and the industrial policy of the Government of Bombay. It, however, had to confine its activity to entertaining applications from industrial concerns requiring loans over Rs. 75,000 only (but up to Rs. 10 lakhs), following the amendment of the State Aid to Industries Rules. Consequently, applications from small-scale industries for loans up to Rs. 75,000 (and in exceptional cases up to Rs. 1 lakh) are being entertained by the Director of Industries. This mainly accounts for the decline in the number of applications received by the Corporation from 199 to 122. Even among the applications received by it, a good number was for loans of Rs. 75,000 or less and these have had to be transferred by the Corporation to the Department of Industries.

Out of the 122 applications for a total loan of Rs. 271.92 lakhs received by the Corporation during the year under review (as against 199 applications for Rs. 290.93 lakhs in 1954-55), 45 were for fresh accommodation, 11 were for additional loans from concerns which had already received financial assistance and 66 were brought forward from the previous year. Of these, 99 applications were considered by the Corporation and 39 were sanctioned loans for an aggregate sum of Rs. 79.86 lakhs, as against 31 for Rs. 68.37 lakhs in the previous year. Eleven applications for Rs. 26.32 lakhs were rejected and 49, involving a sum of Rs. 54.42 lakhs, were otherwise disposed of and 23 applications for Rs. 77.31 lakhs were pending at the close of the year.

As in the previous year the largest number of applications came from the general engineering industries, textile industries, electricity supply undertakings, metal industries and miscellaneous group of industries, though the actual number so received showed a marked fall. Out of the 39 applications which were sanctioned loans, 5 were in respect of new industrial units, of which one was a general engineering concern, 2 were small textile units and 2 other miscellaneous undertakings. Of the remaining 34 applicants, 23 required financial assistance for expansion of existing capacity or development of new lines of manufacture and eleven sought additional loans to increase productive capacity or to acquire capital assets as a result of the revision of their schemes of expansion.

Out of the 70 applications for which loans have been sanctioned since the commencement of the Corporation's operations, 23 applications for Rs. 16.35 lakhs pertained to small-scale industries and 47 for Rs. 131.88 lakhs were for medium-scale concerns. It may be noted, in this connection, that a small-scale concern is defined as a unit having capital or capital assets up to the value of Rs. 5 lakhs and a medium-scale concern as a unit having share capital or fixed assets of the value up to Rs. 20 lakhs.

The rate of interest charged by the Corporation remained unchanged at 6 per cent. per annum, which, as the Directors rightly observe, was in conformity with the general level of interest rates in the country. There was no change in the other terms of loans and advances either. It would, however, appear that the terms and conditions on which the Corporation extends financial accommodation are considered to be stringent by some and the rate of interest to be high. Replying to this view, Mr. Purushottam Kanji, Chairman of the Corporation, in his speech at the annual meeting held this week, drew pointed attention to the tendency for the general level of interest rates in the country to rise. Another reason why the Corporation is unable to reduce the rate of interest is, as Mr. Kanji mentioned, the obligation to pay a minimum guaranteed dividend of 3½ per cent. to its shareholders free of income-tax. "If the Corporation raised its own resources at a cheaper rate," Mr. Kanji added, "it would be in a position to formulate a more flexible policy in charging the interest rates on its loans and advances."

In pursuance of the decision of the Board of Directors of the Corporation to appoint advisory committees in chemical, engineering and textile industries, panels of experts have been constituted and a number of highly qualified technical men of long standing and experience have been appointed by the Board to serve on the respective panels. In the absence of a properly organised technical consultation service in this country, this system is the best that can be had, and it is heartening to hear from Mr. Kanji that it has hitherto shown promise of working well. It is noteworthy that the Corporation takes special care to consult an expert who is acceptable to the borrowing concern also.

The Corporation, it is reassuring to hear, has been keeping a close watch over the progress of the industries which have received financial assistance. Besides, it has been assisting its borrowers in removing, if possible, the difficulties they experience in their working. These services, we are told, are being rendered after getting information on the following points from the industries concerned:

(1) The means of production, including the availability of raw materials, power, labour, machinery and technical personnel;

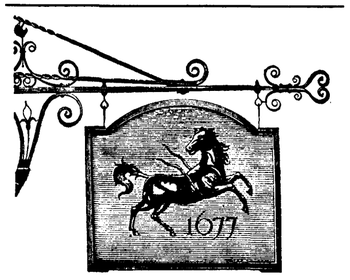
(2) the problem of marketability of their products;

(3) the availability of finance from sources other than the Corporation; and

(4) the general condition of their respective industry, with particular reference to the borrowing unit during the current year, as compared with the conditions in the previous year.

The aforesaid services are highly valuable, in that they will ensure the fulfilment of the main purpose for which the Corporation is established, namely, promotion and establishment of sound small- and medium-sized industries as part of the larger drive for raising the living standards in the country. It is gratifying to note that, on the whole, the units have co-operated with the Corporation by furnishing it with the necessary particulars.

An important political development which will upset the working of the Corporation for some time is the proposed reorganisation of States. Under the States Reorganisation Bill, the Corporation will be deemed to be constituted, under the State Financial Corporations Act, 1951, as the Financial Corporation for the State of Maharashtra. Following the reorganisation of States, some of the territories, wherein the industries which have taken loan from the Corporation lie, will fall within the jurisdiction of other States. This will involve some adjustments of outstanding commitments and recoveries of loans sanctioned to industrial concerns in these areas. The Corporation has already taken steps to bring this matter to the notice of the Government While expressing the hope that the Government will take the appropriate action, the Chairman has given the assurance that the Corporation will continue its endeavours in the same spirit of service to the State and its industries as hitherto. That is only as it should be.



A good Sign for Exporters and Importers

Lloyds Bank offers a full overseas service through the vast network of over 1700 branches in the United Kingdom and Agents throughout the World.

WORLD GOLD PRODUCTION

Over 27.15 million ounces of gold came off the world mines (excluding the U.S.S.R.) during 1955, according to the estimates prepared by the Union Corporation which are published in the latest annual bullion review of Messrs. Samuel Montagu of the U.K. This quantity is higher by 1.57 million ounces, as compared with the output of 25.58 million ounces in 1954. The major portion of the rise is accounted for by South Africa which alone produced 1.4 million ounces more gold than in the previous year. Canada also reported a fairly large rise in gold output. In most other gold-producing countries, the output during the year under review was about the same as in 1954 and was actually lower in some cases. The gold output figures for 1955 and 1954 for individual countries are set out beow:

(In thousands of fine ounces)

	1955	1954
South Africa	14,591	13,237
Canada	4,545	4,366
U.S.A.	1,891	1,859
Australia	1,055	1,118
Gold Coast	687	787
Southern Rhodesia	525	536
Philippines	415*	416
Mexico	380*	396
Colombia	381	377
Congo	375	365
Japan	289	300
India	212	241
Brazil	145	153
Chile	125*	125
Peru	145*	147
New Guinea	75*	86
Fiji	70*	72
Tanganyika	70*	74
Sweden	70*	70*
New Zealand	40*	42
Elsewhere	1,064*	1,083*
World total excluding U.S.S.R.	27,150*	25,850*
British Commonwealth	21,930*	20,623
British Commonwealth percentage	80.8	79.8
South Africa percentage	53.7	51.2

* Provisional figure.

The exact quantity of gold now being produced in Soviet Russia is not known. Available indications are that the output is far in excess of the pre-war level of about 5 million ounces per annum, the estimates ranging from 8 to 15 million ounces. Alluding to these estimates, Messrs. Samuel Montagu observe: "... the lower figure must be considered a minimum, the actual level probably being in excess of 10 million ounces." If this conclusion is correct, the gold reserves of the U.S.S.R. may now be in the region of the 200 million fine ounces, as suggested by some Press reports. With gold at $35 per ounce, the Russian stock will be equal to about $7,000 million—the largest gold reserve in the world after that of the U.S.

STERLING AREA GOLD AND DOLLAR RESERVES

The improvement in gold and dollar reserves of the Sterling Area noted during the first three months of the current calendar year continued during April also, although the extent of improvement was not so marked as that in the preceding two months. These reserves stood at $2,328 million at the end of April—the highest level since September 1955—as against $2,277 million, $2,210 million and $2.149 million in the previous three months, respectively. The net addition to the reserves during the month was thus $51 million, as against $67 million in March, $61 million in February and $29 million in January, bringing the total addition since the beginning of the year to $208 million. The total reserves of $2,345 million at the end of April, however, fall short of the monthly average of $2,680 million for the second quarter of 1955 by $335 million.

Out of the rise of $51 million in reserves during April, "other" gold and dollar movements account for $47 million. The balance of $4 million is the share of defence aid received from the U.S., bringing the total for the four months to $21 million. A payment of $2 million was made to the creditors of the European Payments Union (E.P.U.) in bilateral settlements. There was a surplus of $14 million with the E.P.U. which will be settled in the current month by the receipt of 75 per cent. in gold and dollars, the remaining portion being settled through the reduction of debt to the Union.

The quantum of increase in gold and dollar reserves during April was, as already stated, less than in the previous two months. No undue significance is attached in official quarters to this tendency, which is explained thus: "The 'bunching' of receipts often leads to entry in one month's accounts to the detriment of the succeeding month. This happened during March, when offshore purchase payments were received at the end of the month and were entered as March receipts." Commenting on the reserve position, the *Financial Times* observes: "The April reserves figures do confirm and continue the favourable trend. Confidence in sterling is far stronger now than in the early summer of 1955. That should provide a safeguard against the difficult season that is nearly coming upon us. A dangerous third quarter can only really shake confidence when it is already sickly. These April results should, therefore, provide a measure of reassurance for the short term." Nevertheless, the *Financial Times* observes that the need to build up much larger reserves is an overriding one. For it says: "It is right to adopt a greedy, grudging attitude towards the gold and dollar reserves. They are so pitifully small as compared with the trade they finance that every extra million dollars is an important contribution to the margin of safety. At present, about half the trade of the world is conducted in sterling, which is backed by only one-twentieth of the world's monetary reserves. That is necessarily a position of weakness and danger."

BANK OF MADURA LTD.

Encouraging results are disclosed by the audited accounts of the Bank of Madura Ltd. (Secretary: Mr. P. S. Viswanathan, Madurai) for the year ended 31st December 1955. The Bank's profit shows a rise from Rs. 1,13,319 to a record level of Rs. 1,61,810, exceeding the previous highest of Rs. 1,16,864 earned in 1949. As in the previous year, the Directors have transferred to the reserve fund a sum of Rs. 1,00,000, while the provision for investment reserve has been reduced from Rs. 12,500 to Rs. 10,000. The Directors have declared a dividend of 4½ per cent., thus restoring the Bank's shares to the dividend list after a break of four years.

It will be recalled that the Bank had paid a dividend of 3 per cent. for five successive years from 1946 to 1950, before going off the dividend list. Since then (that is, in 1953), there has been an increase in the paid-up capital of the Bank from Rs. 7.50 lakhs to Rs. 11.25 lakhs brought about by calling up Rs. 25 per share. Thus, the distribution to shareholders has been resumed not only at a higher level but also on an increased capital. The dividend absorbs Rs. 50,625, leaving a surplus of Rs. 2,665 to be carried forward.

The Bank's reserves as at the close of the year stand at Rs. 3,73,719, as against a paid-up capital of Rs. 11,25,000. Deposits have grown from Rs. 226.31 lakhs to Rs. 255.91 lakhs. Advances (including bills purchased and discounted) show a decline from Rs. 129.33 lakhs to Rs. 119.93 lakhs, mainly due to a fall in loans, cash credits and overdrafts from Rs. 122.50 lakhs to Rs. 109.92 lakhs. Liquid assets of the Bank stand strengthened, investments (at cost) having been raised from Rs. 84.67 lakhs to Rs. 103.42 lakhs and cash balances from Rs. 25.03 lakhs to Rs. 46.21 lakhs.

WORLD BANK LOANS

Since its lending operations began in 1947, the World Bank has granted 141 loans, together amounting to $2,483.5 million, the number of recipient countries being 41. This information is given in the latest financial statement of the Bank, that covering the nine months ended 31st March 1956. During this period, the Bank had a net income of $21.2 million which is $2.6 million more than what was earned in the corresponding period of the previous year. The net income has been placed in the Bank's supplemental reserve against losses on loans; the reserve now stands at $142.7 million.

The financial statement contains a specific reference to the shift in emphasis in the World Bank's lending activities. The two important purposes for which loans are currently being given are: (1) General economic development around the world, and (2) economic progress of the newly-developed areas. Initially, it will be recalled, World Bank loans were being concentrated on rehabilitation and reconstruction of the economy of European countries.

(*Concluded from third column*)

recent years between 0.16 and 0.22, while, in other countries, it has been much higher. In the U.S., for instance, it has ranged in recent years between 0.43 and 0.50; in the U.K. between 0.40 and 0.50; in Australia between 0.43 and 0.47. In those countries, this high proportion has not led to "debauchery" of currency. Lenin raised the slogan "Debauch the currency of capitalism" long ago. We are not a capitalist country. Techniques of checking inflation are much more developed today then they were during the time of Lenin. Today, no follower of Lenin will attach any value to his slogan; much less shall I.

DEMOCRATIC VS. COMMUNIST PLANNING

LARGE-SCALE CREDIT EXPANSION NEED NOT NECESSARILY MEAN INFLATION

By A Special Correspondent

I HAVE seen the article on Democratic *vs.* Communist Planning written by "Subodh" in *Commerce* dated 17th March 1956 in criticism of my article on Physical and Financial Planning. "Subodh" has raised many points and it may not be possible to take up all of them in a short space. I shall, therefore, explain only the central point of my article in the light of "Subodh's" criticism.

"Subodh" says that price inflation is all-pervasive and cannot be made to move in compartments, while my argument was that, if large-scale credit expansion is accompanied by adequate increase in output of food and cloth, the prices of these two articles, which account for the bulk of the consumer expenditure, can be kept at a reasonably stable level. "Subodh's" stand may be interpreted to mean that inflation, in whatever sector it starts first, will sweep the entire economy; I am of the view that this need not be so.

The phenomenon of disparate, or even opposite movement of prices in the different major sectors is too well known to us. But there is dispute on the point whether such a phenomenon must be short-lived or it can continue for a number of years. There are, of course, economists like Professor Alvin Hansen, who would say that agriculture is the 'football' of business. According to this view, any inflationary tendency in the industrial sector would soon bring agriculture in its fold. In my view, however, this theory is valid for conditions in industrially advanced countries and need not hold good for India. During the last inflation in India, we heard important economists saying: "Check the rise in prices of food and it will have moderating influence on the prices of everything." But we never heard people saying: "Hold the prices of refrigerators; or else, they will cause a rise in food prices."

The Underlying Theory

What is the underlying theory? In an industrially advanced country, England in the following example, not more than 7 per cent. of the population is engaged in agriculture. Any inflation in the industrial sector will raise the demand of 93 per cent. of the population for agricultural products, and this demand has to be met by the productive effort of a small fraction of the people. In view of this, it generally happens in an industrially advanced country that, when its economy is passing through an inflationary phase, agricultural products are short of the demand. Inflation in the industrial sector, therefore, carries the agricultural sector also with it.

Moreover, in advanced countries, many items of costs in agriculture are the products of industry. As the prices of industrial goods rise, the cost of production in agriculture also rises. Farmers in these countries, being price and cost conscious, ought to have higher prices to match their higher costs. If the market does not offer higher prices, they restrict output, as a result of which market prices for their products go up. Thus, both from the demand side and from the cost of production side, inflation must engulf agriculture. Agriculture is truly a football of business.

But, in India, the situation is entirely different. So far as the cost of production side is concerned, most of the items of farm costs, being the product of the farm itself, rise in industrial prices does not, in any material sense, lead to a higher cost of production in agriculture. If at all it does, it is not transmitted to the prices of farm products, simply for the reason that the farmer has not yet begun to think in terms of equalisation of marginal costs and marginal returns.

On the side of demand, in our country, about 70 per cent. of the population is engaged in agriculture. Any inflation in the industrial sector will raise the demand for food of 30 per cent. of the population which has to be met by the production capacity of 70 per cent. of the population. Inflation in the industrial sector need not necessarily be followed by shortage of agricultural products, as it does in advanced countries. Production can expand adequately to meet the additional demand of 30 per cent. of the population.

While, therefore, inflation in other countries may spread like a contagious disease to all sectors, it may not be the case in India. In India, agriculture is not the football of business; on the other hand, it would, in a large measure, be true to say that business is the football of agriculture. If we are able to expand the output of agriculture and cloth to an adequate extent—and this was the basic condition of my article—general inflation which "Subodh" is thinking of can be warded off.

Price and production data for the past decade and a half are vitiated by so many factors that it is futile to use it for testing any theory. There were price controls; in foodgrains, we were large importers and the internal prices were affected by the cost of imports. It seems idle to try to analyse the production-price-monetary circulation nexus on the basis of data for the period when free market economy did not operate. Moreover, there are considerations of leads and lags. At best, we can use the data for the year 1954 onwards. And a study of this data would show that output is a far more important factor in determining the level of agricultural prices than credit expansion and money supply. We have had the experience of, say, 10 per cent. increase in production resulting in 40 per cent. fall in prices of commodities in the agricultural sector.

Higher Structure of Development

If "Subodh" has a look at some of the N.S.S. data about incomes and expenditures on foodgrains of different households, he would, perhaps, agree that, even on the base of the currently envisaged 10 million tons of increase in output of foodgrains, we can build up a higher structure of economic development than would be made possible by an investment of Rs. 6,100 crores contemplated in the Draft Outline. I pleaded in my article for larger allocations to agriculture. If this is done, we can, under normal conditions, raise the annual amount of deficit financing progressively upwards from this year's figure of Rs. 350 crores.

"Subodh" has stated that underdeveloped economies are more susceptible to inflation than advanced economies. This pessimism seems to be unjustified. Our dependence on foreign countries for producer goods, no doubt, limits our ability to produce speedily to the desired extent in many lines. On account of this factor, the inflationary effects of credit expansion may appear to come early. But we should not overlook the other and more important side of the picture. We can produce a bulk of the essential and non-essential requirements with techniques and crafts available within the country. Given this condition, the more a country is away from the level of full employment, the less are the chances of credit expansion leading to price inflation. From this consideration, the possibility of inflation in underdeveloped economies are much less than in advanced economies.

There is a strong view that the deficiency of money supply in rural areas in India is a serious deterrent to the expansion of output of handicraft products. Consumption habits and tastes in rural India are still confined largely to products of small and cottage industries. Given the demand, expansion of output in these industries is only a matter of days and months. The only major obstacle seems to be the existence of a large non-monetised sector which stands in the way of proper development of market so essential for larger production. It is well known that the larger the area of barter economy, the slower is the expansion of production capacity. This non-monetised sector can be abolished only by the injection of more money in rural areas through various known methods. In urban areas, money supply may be enough, and any large dose of new money may create inflation in individual sub-sectors; but, in rural areas, its deficiency is a great hindrance to the expansion of output and employment. Output in the rural sector can expand right in the footsteps of new money supply. If the Government concentrates its developmental activity in rural areas during the second Five-year Plan, the chances of inflationary pressures will be greatly diminished.

In view of these considerations, a large-scale credit expansion may not be expected to "debauch" our currency. The ratio of money supply to national income in India has ranged in

(*Continued in first column*)

UTILISATION OF COTTON MILLS' CAPACITY

MORE UNITS WORK THREE SHIFTS

A NOTABLE feature of developments in the mill sector of the Indian cotton textile industry during 1955, was the intensive utilisation of capacity, induced by the rising domestic demand for cotton manufactures and the refusal of the Government to permit any addition to the existing loomage. An indication of this is provided by the marked rise in the number of mills working three shifts which, in that year, was 194, as against 174 in 1954 and 158 in 1953. Naturally, there was a fall in the number of mills working two shifts, the figure for 1955 being 161, as against 173 and 186 in the preceding two years, respectively. Similarly, the number of mills which worked one shift was also lower at 24, as compared with 27 a year before and 31 two years before. The number of mills which remained closed, however, rose, from 17 in 1953 and 25 in 1954 to 26 in 1955. The total number of mills in these three years was 392, 399 and 405, respectively.

Employment also expanded during the year under review. The total number of workers on the rolls of mills was greater at 855,726, as against 797,483 in 1954 and 801,853 in 1953. The exact increase over the year was 58,243 persons. But the increase in the average daily number of workers employed was comparatively less, being only 16,875; during 1955, about 758,044 workers were employed daily (average), as against 741,169 and 743,984 in the previous two years.

Employment in Different Shifts

The following table gives the average daily number of workers employed in the different shifts in the past three years:

	1955	1954	1953
1st shift ...	419,236	416,227	421,888
2nd shift ...	262,226	258,851	258,372
3rd shift ...	76,582	66,091	63,724
Total ...	758,044	741,169	743,984

An idea of the employment position in cotton mills in the various States at the end of 1955, as compared with that a year before, can be had from the following statement.

States	No. of workers on rolls		Average daily number of workers employed	
	December, 1955	December, 1954	December, 1955	December, 1954
Bombay	492,091	433,733	436,895	413,011
Madras	109,413	103,510	95,194	93,048
Uttar Pradesh ..	56,653	53,594	49,994	50,518
Madhya Bharat ..	48,408	43,433	40,896	38,868
W. Bengal	41,817	38,291	39,701	36,851

N.A.=Not available.

The foregoing table shows that the rise in the number of workers on the rolls experienced during 1955 was shared by all the States, except Rajasthan, Ajmer and Bihar. The average daily employment of workers was also higher, barring in the aforesaid three States, as also Uttar Pradesh, Hyderabad, Orissa and the Punjab. The decline in the latter group of States was mainly the result of strikes.

While the basic wages earned by the cotton mill workers during 1955 were the same as those earned in the previous year, the dearness allowance received was lower in all the States, as will be seen from the table below which gives the basic minimum wages and dearness allowance in the cotton mill industry for a standard month of 26 working days in the past two years:

	Minimum basic wages during 1954 and 1955	Dearness allowance (average)	
		1955	1954
	Rs. a. p.	Rs. a. p.	Rs. a. p.
Bombay	30 0 0	64 12 11	65 6 11
Ahmedabad	28 0 0	54 11 4	68 14 6
Sholapur	26 0 0	40 15 9	52 6 6
Baroda	26 0 0	49 5 9	62 0 3
Indore	26 0 0	42 13 6	51 8 3
Nagpur	26 0 0	40 2 10	41 3 11
Madras	26 0 0	41 7 3	45 2 3
Kanpur	30 0 0	43 5 5	50 10 2
W. engal	20 2 5	30 0 0	30 0 0

The reduction in dearness allowance received by cotton mill workers in 1955 must be attributed to the downward trend in the prices of commodities, especially of foodgrains, which brought much relief in the urban cost of living. The all-India average general index of wholesale prices (base: August 1939=100) during 1955 stood at 355.1—it had gone down even to 340.0 early in June—as against 386.7 in 1954, or a fall of over 8 per cent. The fall in prices was in marked evidence in the case of foodgrains—the principal constituent in the worker's family budget—the average for the year being 304.5, as against 358.3 for 1954, representing a drop of 15 per cent. Following the decline in commodity prices, the all-India consumer price index number (base: 1949=100) for working class moved down, the average for the year being 96, as against 101 for 1954.

Man-days Lost

During the year under review, there were 235 disputes in the mill industry, with 187,518 workers involved, as against 122 disputes involving 121,845 workers in the previous year. The number of man-days lost was, as a consequence, more, being as many as 2,170,316, as against 424,733. It must, however, be mentioned that the appreciable rise in the man-days lost during 1955 was due largely to the Kanpur textile workers' strike in the months of May and June. Barring this strike, there was no other labour strike of any sizable magnitude.

Absenteeism—that is, percentage of man-shifts lost to man-shifts scheduled to work—in the cotton mill industry was comparatively less during 1955. This was especially so in Bombay and Madras where absenteeism was only 8.2 and 6.6, as against 10.8 and 9.1, respectively, in 1954. It was also lower in Ahmedabad, being 6.8, as against 8.7. Sholapur, Madura, Coimbatore and Kanpur, however, reported a setback. Thus, the absenteeism in these centres was greater at 18.0, 12.2, 9.9 and 12.8, the corresponding figures for 1954 being 17.4, 11.0, 8.8 and 12.4.

The average production of cotton yarn per worker during 1955 recorded an improvement; it amounted to 2,144 lbs., as against 2,111 lbs. in 1954. The per-worker output of cloth was, however, less, being 6,720 yards, as against 6,745 yards.

WORLD WOOL PRODUCTION

Free world's raw wool output in the current (1955-56) season is expected to aggregate about 4,037 million lbs. (greasy basis), according to the Commonwealth Economic Committee. The estimated output compares favourably with 3,865 million lbs. in 1954-55, or a rise of 4 per cent. The anticipated improvement in raw wool production is attributed mainly to larger clips in Australia and New Zealand. The rise in wool output will be more marked, if the production in the non-free world is also taken into account. Thus, the total world output of raw wool in 1955-56 is estimated at 4,840 million lbs., which represents an increase of 5 per cent. over the previous season's output of 4,609 million lbs. The estimates for the Soviet Union supplied by the United Nations Economic Commission for Europe show a marked expansion in raw wool output of this country.

On a clean basis, the world production of wool is expected to reach 2,750 million lbs. in the current season, as against 2,680 million lbs. in 1954-55. The bulk of the rise is accounted for by merino wool, the output of which will be higher by 6½ per cent. Crossbred and other types of wool are expected to register smaller rises.

Details of the British Wool Marketing Board's arrangements for the 1956 U.K. wool clip have been announced. The Board's schedule of price to producers for the new season is based on an overall average price of 52*d.* per lb., that is, a little over 2*d.* less than last season. The U.K. Government has guaranteed a figure of 56¼*d.* a pound, inclusive of marketing costs, for the 1956 clip. This represents 2*d.* per pound less than the guarantee for last year's clip. In addition, £53,000 (or 0.18*d.* a pound) is available for distribution within the 1956 clip prices as an award from the latest Special Price Review. The Board maintains that the recent increases in Bank rate and discount rates are adding very considerably to the cost of financing the U.K. wool clip —valued at over £15 million per annum—and it points out that the full impact of these increased costs will not be passed on to the producer but that the Board will continue to seek economies. The Board also announces that it has decided to continue the 3*d.* per pound premium on wools of hill breeds. Until this year, there has been a direction or request from the Government that the premium should be paid, but it has been agreed between both parties that, in future, this matter should be left to the discretion of the Board.

TEXTILE EXPORTS FROM JAPAN

The Textile Export Council of Japan has set the export targets for cotton piecegoods and yarn to be reached in 1956 at $242 million and $22 million as against $240 million and $20 million, respectively, for 1955. The Council has not, however, disclosed the actual quantity of cloth and yarn that will be exported during the year; it has given only the assumed average prices for the textiles. The prices come to 20.50 cents per square yard for cloth and 80.03 cents per lb. for yarn, the corresponding figures for 1955 being 20.10 cents and 90.08 cents. On this basis, the total shipments of cloth from Japan during the current year may be estimated at 1,180 million square yards which are lower than those for 1955 by 10 million yards. The slight setback to cloth exports is due partly to restrictions on exports to the U.S., Canada and Europe and partly to the shift in emphasis to goods of higher quality laid by Japanese cotton textile industry. Similarly, exports of cotton yarn will work out to nearly 27.5 million lbs., as against 22.8 million lbs. shipped in 1955. The cotton yarn export target is placed higher, because shipments of low quality yarn are expected to increase as a result of deals with South-East Asian countries.

TEXTILE MILLS IN PONDICHERRY

The details of assistance given to the textile mills in Pondicherry after the *de facto* transfer of Pondicherry to the Indian Union, were given by Mr. T. T. Krishnamachari in the Lok Sabha the other day. According to him, Indian cotton is made available to the mills at a cheaper rate than Pakistan cotton which they used to obtain before *de facto* transfer. The difference in rate was about As. 12 per lb. The cloth produced and exported by the Pondicherry textile mills is exempted at present from payment of export duty which they used to pay previous to the merger, at 4 per cent. on the exported cloth to their overseas markets. Imports of machinery, spare parts, dyestuffs, chemicals required for the rehabilitation of these mills are exempt from customs duty at present. Export of cotton yarn produced by the Pondicherry mills is allowed without any quantitative restrictions. The Ministry of Works, Housing and Supply has placed orders on the Pondicherry mills for fabrics required by the Government departments, in relaxation of the tender specifications. No restrictions have been enforced on the production by the mills of *dhotis* till September 1956 for the present There are three cotton textile mills working in Pondicherry.

MAN-MADE FIBRES IN U.K.

Production of man-made fibres in Britain touched an all-time record of 45.4 million lbs. during the month of March 1956, surpassing the previous record—touched in January 1956—by 2.0 million lbs. This performance compares favourably with 42.6 million lbs. in February 1956 and 42.2 million lbs. in March 1955. The record established is not only for the total output but also for the production of filament and staple fibre considered separately. Staple fibre output—23.6 million lbs.—during March shows an increase of nearly 9 per cent. on the record figure of 21.7 million lbs. in January and compares with 21.1 million lbs. in February and 21.6 million lbs. in March last year. Although some of the increase is presumably attributable to a rise in the output of non-cellulose staple fibres, it is understood that there was a substantial expansion in viscose staple output. The quantity of continuous filament yarn (singles) produced in the month under review was higher at 21.8 million lbs., as against 21.1 million lbs. a month before, 21.7 million lbs. two months before and 20.6 million lbs. a year before.

Sixty-five more spinning mills with a spindle capacity of 700,000 are to be erected in South India according to Mr. Nityanand Kanungo. Licences under the Industries (Development and Regulation) Act have already been issued for the setting up of these new units. Three of the proposed 65 spinning mills are proposed to be set up in Mysore State. These three mills will employ about 1,500 workers, including unskilled labour.

TEXTILE EXPORT TRADE IN THE DOLDRUMS

IMPORTS STILL RISING

From A Special Correspondent

MANCHESTER, 1st *May*

EXPORT trade in cotton goods in Lancashire continues to be in the doldrums. Scarcely a welcome feature can be discerned in the monthly Board of Trade returns, which have presented a dismal picture for some considerable time past. There were hopes a few years ago that overseas trade had become stabilised at an annual figure of around 800 million square yards, but subsequent declines have been disappointing, and there is no evidence as yet of any halt in the downward course of shipments.

MANCHESTER LETTER

In March, the value of export trade was, in fact, slightly higher than for several months, at £7,958,756, but the volume of cloth business continued at the low level of 40 million square yards. The one redeeming feature was an increase in yarn shipments to over 3,800,000 lbs.

Exports

Total exports for the first quarter of the year were 120,190,000 square yards of cloth valued at £17,607,909, and 9,969,893 lbs. of yarn worth £4,065,424. These figures compare with 165,314,000 square yards of cloth exported last year at a value of £20,850,216 and 10,667,797 lbs. or yarn worth £4,593,079.

Quarterly Comparisons

The following table shows recent quarterly comparisons:

(Cloth in square yards, yarn in pounds)

	Exports		Imports
	Cloth	Yarn	Cloth
1954			
1st quarter	176,756,000	11,174,900	50,010,000
2nd ,, ...	160,240,000	10,164,300	55,960,000
3rd ,, ...	151,035,000	9,094,800	72,840,000
4th ,, ...	142,644,000	10,044,700	88,540,000
1955			
1st quarter	165,314,000	10,667,800	99,341,000
2nd ,, ...	116,106,000	7,510,000	71,600,000
3rd ,, ...	143,437,000	8,195,200	70,294,000
4th ,, ...	129,247,000	9,167,800	58,351,000
1956			
1st quarter	120,194,000	9,969,900	74,892,000

Whereas yarn exports have not varied to any considerable extent since the beginning of 1954, shipments of cloth have generally shown a steady decline, with the exception of the first three months of last year. The sharp fall in exports in the second quarter of 1955 was largely attributable to the rail and dock stoppages which were then encountered.

Although the larger British Commonwealth markets continue to be the standby of Lancashire exporters, their purchases have lately been severely reduced. Import restrictions have brought Australia's takings this year to below 18,000,000 square yards in the first quarter, as against nearly 30,000,000 square yards last year. Trade with South Africa has been fairly well maintained at 14,755,000 square yards, as against 15,878,000 yards. Shipments to British West Africa have declined sharply, exports to the Gold Coast being less than 6,000,000 square yards, as against nearly 13,000,000 yards a year ago. Nigeria has taken only 7,561,000 yards, as against 17,831,000 yards.

One of the few areas where sales of Lancashire cotton goods have recently shown an improvement has been the Indian sub-continent. Shipments to India in the first quarter aggregated 3,033,000 square yards, as against a mere 817,000 yards last year, while a similar quantity of 3,013,000 square yards has been exported to Pakistan, as against only 596,000 yards. This gain, small as it is compared with the past trade with these outlets, is a welcome sequel to the lifting of restrictions against British fabrics which were at one time imposed by India.

While exports have been falling, the tendency for imports of cloth from foreign countries has been to rise. In the past quarter, arrivals have been the highest for any recent comparable period, except for the last quarter of 1954 and the first three months of last year. Traders in the Manchester market have lately hinted that merchants have been ordering supplies in larger quantities from abroad and that the full impact of these purchases has not yet been portrayed in the Board of Trade returns.

In March, arrivals of grey cloth increased further to 24,304,000 square yards, as compared with 28,686,000 yards in the same month last year. For the quarter, total arrivals were 64,494,000 square yards, as against 89,806,000 yards to the end of March 1955. These imports cost £3,668,279, as against a little over £5,000,000 last year.

The major sources of foreign cloth arrivals continued to be India and Hong Kong. These duty-free imports are running at little below the level of a year ago, the quantity of Indian cloth being 35,177,000 square yards, as against 43,677,000 yards. Hong Kong has so far sent 12,340,000 square yards, as against 13,127,000 yards. The chief decline in foreign cloth purchases has been in Japanese goods which have not yet reached 10,000,000 square yards, as compared with over 27,000,000 yards in the first quarter last year.

Enter the "Outside Growths"

Another new phase in the evolution of the Liverpool futures market will begin in mid-July, if proposals which have been drawn up establishing an American type contract are approved at a special meeting of the Liverpool Cotton Association this week. This long-awaited plan is a compromise between the outside growths contract desired by many spinners and the system now in force affecting the American staple. Under the new arrangement, not only United States cotton but also alternative supplies grown in Mexico, Nigeria, Syria and East Africa will be tenderable against the American type contract. The broadening of the basis of the contract should offer wider hedging facilities for users, in general, and will be welcomed by the spinning trade.

This development was foreshadowed long before the American Government decided to offer its surplus cotton supplies at world competitive rates, thus depriving the New York market of its proper function of reflecting the price of United States cotton. In view of this move, however, the introduction of a more representative contract in Liverpool became even more essential.

While spinners in Lancashire are still keen to use cotton grown in the United States, both for its quality and for the continuity of supply offered, they are often tempted to turn to alternative sources in these days of keen competition when price is a vital factor.

There are, however, some significant omissions in the list of those cottons tenderable against the proposed new contract. Russian-grown varieties, for instance, are not included, nor are those from the Central and South American countries which have lately been supplying fair quantities of the raw material to Lancashire. Imports of Soviet cotton so far this season amount to 52,793 bales, as compared with 89,790 bales in the whole of last season.

Trading in the new Liverpool contract is at first to run concurrently with the existing American contract. Within six months of its introduction, members will have the chance to decide whether to retain both or to rely solely on the more broadly based system.

Foreign Cloth Ban

In spite of falling profits and difficult trading conditions, some Lancashire firms are sticking to their principles and refusing to buy foreign cloth for disposal in the home market. Mr. William Pickles, once a 4*s.*-a-week mill office boy in Nelson, who now controls his own £1,000,000 textile manufacturing and merchant business, declared: "We do not agree with the practice of importing foreign cloth and all our goods are wholly spun, woven and finished in this country." He was speaking for the Board of William Pickles & Co., of which he is Chairman. "General confidence in the industry has been undermined," he continued, "due to uncertainty as to the future trend of raw cotton prices and increasing competition from India and Hong Kong in lower priced cloths and from the Continent in the higher qualities."

Executive Training Need

The need for technological training in the textile industry has never been greater than at present, according to Mr. William T. Winterbottom, President of the Textile Institute. He told the annual meeting that it was sometimes suggested that, since some sections of the textile industry were contracting, the demand for trained technologists must decline. He said: "I disagree most strongly with this view. The whole basis of the industry is changing and a certain degree of contraction in some sections is an inevitable part of the process. The industry of tomorrow will not consist merely of a contracted hard core of what it is today. The firm which will survive are those which are most determined to keep abreast of technological developments, not necessarily those which are in the strongest financial position."—*All Rights Reserved.*

ESTIMATING COST OF PRODUCTION OF COTTON

RESULTS OF PILOT STUDY MADE IN AKOLA

COTTON has the distinction of being the only commodity for which both ceiling and floor prices have been fixed. It has been under Government control for a longer period than any other agricultural commodity. And in recent years, there has been much controversy over the level of controlled prices. Critics have urged the Government to revise the limits upwards in view of the fact that they are below world parity. Be that as it may, the fact remains that a satisfactory price policy should take into account production costs in agriculture. It should also be flexible, in that changes in controlled prices should promptly follow changes in production costs.

From this point of view, the report entitled *Estimation of the Cost of Production of Crops**, published by the Indian Central Cotton Committee, will be read with interest. A brief reference to the findings of this study has already appeared in these columns. But the full report, which has now been received, is of such obvious importance to future enquiries into the prices of agricultural commodities and makes many general observations of great value to such enquiries that a further reference to the report is not out of place here. We commend the report to the attention of agricultural authorities in the States, as also to the students of agricultural economics.

Farm costing or the study of the economics of farming, as the report says, is a relatively new subject in this country, though it has made considerable progress in the U.S. and Europe. Government farms, however, maintain some data on production costs. Also, some data have occasionally been collected by revenue authorities for purposes of revenue settlement. But, on the whole, research in this sphere is strictly limited. The report, however, makes an appreciative reference to the investigations by the Punjab Board of Economic Enquiry in 1923 and those made a little later in Bombay and to the work of the Gokhale Institute of Economics and Politics at Poona. During the years 1933-34 to 1935-36, an extensive enquiry was sponsored jointly by the Indian (then Imperial) Council of Agricultural Research and Indian Central Cotton Committee with a view to arriving at production costs of sugarcane and cotton.

Need for Information

The whole question has assumed a relatively greater importance in recent years in view of the fact that the country has taken to economic planning seriously and has been controlling the economic life of the people as a whole. In a regulated economy of this type, the Government should have reliable information on the subject of production costs; without such data, it will be impossible to have a realistic discussion of the prices of agricultural commodities. Such knowledge would also enable farmers to allocate their resources more efficiently among the different crops and also assist a more rational planning of crop production.

The genesis of the present enquiry into production costs for cotton was the need for expansion of the acreage under this commodity which became urgent after the Partition of the country. In 1949, the Indian Central Cotton Committee decided that data relating to cotton and its rotation crops should be collected. The design of the whole project, it may be mentioned here, was scrutinised by a body of eminent economists and statisticians in India—Mr. W. R. Natu, Dr. V. G. Panse, Dr. V. K. R. V. Rao and Dr. P. V. Sukhatme.

Emphasising the importance of representativeness of the data in any investigation into production costs in agriculture, the report says:

"Representativeness is essential in order that the results should be applicable to the entire tract or to the whole range of conditions to which they are intended to refer. The margin of error of a numerical estimate is an index of the precision with which it is determined. To be useful in practice, the numerical estimates must have a sufficiently narrow margin of error. To ensure these characteristics, namely, representativeness and precision, the estimate must be based on measurements made on an adequately large sample of units selected randomly out of the totality of units in the population, in the present case, out of all the holdings or fields growing the crop in the tract for which the results are required. These considerations need to be stressed, as in many economic enquiries their importance does not seem to be fully realised and reliability of the results is frequently sacrificed to paying too much attention to detail in studying a small number of deliberately chosen cases. Elaborate socio-economic studies of a single or of a few so-called typical villages that are often carried out illustrate this point. Interesting as these studies are, it may be asked, can the results be applied with confidence to the entire tract to which these villages belong? Are the numerical estimates accurate enough for practical use so that any quantities calculated from them do not suffer from an unduly large margin of error? For many economic enquiries answers to these questions would be negative and this detracts much from the value of these projects."

Another important factor which the report stresses is the inappropriateness of the so-called "survey" method to Indian conditions. This method has been employed in the U.S. and Europe. But, in India, this method cannot be applied, since the Indian farmer is incapable of filling in the questionnaires mailed to him. Even if an investigator visits him periodically with a questionnaire, the farmer would not be able to supply him reliable information on many matters, partly because of ignorance of quantitative data connected with the farming operations and partly because of subtle resistance to giving away factual information to an outsider owing to various fears and suspicions. This is not to say that the farmer refuses to provide information or expresses any resentment at being questioned. On the contrary, he generally gives replies, that appear plausible, to all kinds of questions that might be put to him and the unsuspecting investigator, unless he is familiar with the local conditions and has a critical knowledge about the field of enquiry, would go away satisfied at having secured full information much of which may in reality be of poor reliability and would lead to highly biased results. Results of even relatively simple enquiries following this approach such as those on the acreage and production of crop have given untenable results.

It is a common experience of research workers in the field of agricultural statistics that the farmer generally does not even know the precise area of the land that he holds or cultivates. Considering that an enquiry into the cost of production of crops is far more complex and extends over a long duration and considering also that the sample of farmers selected randomly in order to be representative would necessarily include mostly illiterate and conservative or backward farmers, it is essential that the data should be collected by investigators through direct observation without much burden of providing information falling upon the farmer. It will thus be the method of cost accounting and the investigator himself must maintain the day-to-day accounts. This requires that the investigator should be in continuous contact with the farmer and his operations and must inspire confidence. He can do so only if he stays in the village, is familiar with the local conditions and knows local agricultural practices well.

The Enquiry

To turn to the enquiry itself. It was conducted in Akola District (Madhya Pradesh) in 1952-53. The enquiry was undertaken with a view to estimating the human and bullock labour and the materials required for the production of cotton and its rotation crops, *jowar* and groundnut. An important aim of the enquiry was to obtain data for providing technical guidance in planning large-scale enquiries into the cost of production of crops. Akola District, it is stated, was chosen for the enquiry because it is an important cotton-growing area not only in Madhya Pradesh but in the black soil tract of Peninsular India as well. The six *tehsils* of the district were treated as strata and five villages were selected randomly from each. In each selected village two types of sample units, namely, an operational holding and an individual field growing a particular crop, were selected for observation in order to compare their suitability and efficiency.

The voluminous data resulting from the enquiry were analysed in order to estimate for the sample of holdings and fields separately the different items of the cost of cultivation for each crop. These included the amount of man, woman and bullock labour required per acre, its distribution among pre-sowing cultivation, sowing, post-sowing cultivation and weeding and harvesting and processing, and the money equivalents of these quantities. The quantities of seed and manure used per acre and their money equivalents were also estimated. Besides land revenue, lease rent for fields that were taken on lease and the expenditure on implements used for cultivation were estimated from the sample of holdings only. The cost of bullock labour was also based on this sample. Crop-cutting on a random sampling basis was done in both samples in order to estimate the yield of each crop.

The various physical quantities estimated and their money values are given in considerable detail in the report. Broadly speaking, it was observed that more man labour was required for *jowar* than cotton while, for woman labour, the reverse was true. Groundnut was intermediate although the pattern of distribution of labour for this crop followed cotton more closely. The amount of bullock labour required was almost the same for all the three crops. It was also observed that 60 per cent. of man labour and 85 to 90 per cent. of woman labour was hired while bullock labour was mostly owned, less than 10 per cent. being hired. Manuring was not common and of the area under cotton, which is manured more frequently than the other two crops, only 25 per cent. received any manure, mostly farmyard manure. Both for cotton and *jowar*, seed and manure form only a small part of the cost of cultivation, but for groundnut seed forms an appreciable component of the cost. Information on lease rent showed that this was an extremely variable item, part of this variation being due to the fact that in many cases lease was taken on a crop-share basis and the money equivalent of the rent depended upon yield.

Cost Summarised

The information on the cost of production for the three crops is summarised below:

(*Cost of Production*: *Rs. per acre*)

Sub-division of cost	Cotton	Jowar	Groundnut
Human and bullock labour ...	37.14	35.99	38.60
Seeds, manure, implements, land revenue	9.72	4.96	17.75
Lease rent	4.77	9.16	16.56
Total ...	51.63	50.11	72.91

It will be seen from the table above that the cost of production per acre is nearly the same for cotton and *jowar* and almost one-and-a-half times as much for groundnut. Further, the total outlay on labour is the same for all three crops. The enquiry, however, brings out the fact that the distribution of different types of labour among different categories of operations shows considerable diversity. It would thus appear that less labour is employed on the cultivation and weeding of *jowar* than on cotton. But *jowar* requires much more labour for harvesting and threshing. Groundnut is said to be intermediate in the spread of labour over the different operations but it follows the pattern for cotton more closely. The second element of cost, namely, seed, manure, implements and land revenue, accounts for as much as Rs. 17.75 for groundnut, Rs. 9.72 for cotton and Rs. 4.96 for *jowar*. The difference in the cost of this element is said to be due to seed which accounts for the larger costs for groundnut. Lease rent, as the table shows, is the highest for groundnut, followed by *jowar* and cotton.

In planning future enquiries of this kind, it will be necessary to take account of what the report has to say by way of certain general observations. Thus, the report has emphasised the need for personal contact between the investigators and the farmers. This alone would ensure the collection of reliable information. Further, an important point to be borne in mind in planning cost of production enquiries, it is stated, is that there is a seasonal fluctuation not only in the yield of crops but even in the physical quantities in relation to crop production such as labour. For example, the amount of weeding and inter-culture will depend on the nature of the season including the amount of distribution of rainfall, while the labour required for harvesting and processing the produce per acre is obviously related to yield. These considerations lead to the conclusion that for determining the elements of the cost of production of a crop characteristic of a tract, it would be desirable to repeat the enquiry in the tract for, say, three seasons.

An enquiry into the cost of production of cotton and rotation crops for three years in a tract with a sample of 30 villages each year will cost, on the present indications, about Rs. 2·25 lakhs. This rather heavy estimate of cost is the consequence of the long period required for field work based on a full-time staff of field workers and supervisors. It should be noted that keeping the same sample of holdings under observation throughout the period of three years is not only not necessary but should be avoided and a fresh sample of villages and holdings should be drawn each year. This will have the advantage of spreading information over a larger number of holdings and also eliminating the risk of a bias likely to result from keeping the same holdings under continuous observations over an unduly long period.

Again, the report stresses the necessity of making the statistical staff associated with the enquiry available right from the commencement of the field work. This staff, it is emphasised, will thus get an opportunity at an early stage to become acquainted with the field procedures and the resulting primary data. What is far more important, they will be able to scrutinise the returns as they come in and arrange for whatever discrepancies or deficiencies that are noticed to be made good to the extent possible by timely action on the part of the field workers.

Finally, the consistency of the results obtained for different crops and the agreement observed between independent samples in the present pilot enquiry lead the authorities to the conclusion that reliable data relating to physical components of the cost of production of specified crops and their money equivalents can be secured. They, therefore, recommend with confidence the extension of such enquiries on a large scale on the general pattern indicated in the present enquiry. There is no doubt that a large amount of information of practical, economic and scientific significance can be derived from these enquiries.

More and more enquiries into production costs are likely to be planned in future, not only in cotton but in other crops. From this point of view, the lessons derived from experience in conducting the present enquiry—the most comprehensive and exhaustive of its kind undertaken in this country—to which a reference has been made above, are of more than academic interest.

COTTONSEED INDUSTRY IN U.S.

In the United States, cottonseed—once considered complete waste—is today the source of products which are more useful to man than the fibre of cotton itself. As far back as 2,000 years ago, India and China were extracting oil from cottonseed for lighting and medicinal purposes. But it was not until 1794, after the American Eli Whitney invented the cotton gin which mechanically separated the seed from the cotton, that thought was given to developing machinery for cottonseed processing. In the early 1800's a few mills were started in the United States for extracting oil from cottonseed, but the machinery and processes proved unsatisfactory. Even as late as 1875, the main use for cottonseed was for planting and only about five per cent. was crushed for oil.

Progress came slowly, but by 1910 80 per cent. of America's cottonseed was crushed for oil. There still remained the problem of developing a machine for separating the hulls and the linters from the seed. Gradually, machines were invented and today cottonseed is a crop that has opened up many new industries.

Today, with all its many uses, no part of the seed from cotton is wasted in the United States. Cottonseed yields American farmers a cash income of more than $300 million annually. Though India accounts for nearly 15 per cent. of the world production of cottonseed, it is almost entirely used as cattle food. It is estimated that less than 10 per cent. is being used to produce oil. And a negligible amount is being exploited to utilise such valuable by-products as the linters for use in the rayon and other industries.

Four types of products are derived from cottonseed, namely, linters, hulls, oil, and meal. The linters are the fuzzy fibres left around the seed after the cotton has been ginned. These fibres are almost pure cellulose and are now used for stuffing mattresses and upholstery, lacquers, films, and plastics. The hulls, which cover the seed, are excellent as a livestock feed and especially as roughage needed by dairy cows. Experiments have been made in the use of the hulls for industrial products and it has been found that ground hulls filled with a resin binder can be moulded into radio cabinets, table-tops, airplane panels, and industrial gears. The oil that is pressed from the meat of the cottonseed is valuable as a food for human beings. It is a superior oil for shortening, (vegetable cooking fat), margarine (substitute for butter), cooking oil, and salad oil. The meal, a fine powdered substance, is valuable as a feed for livestock and as a fertiliser. It is rich in proteins—the muscle-building materials found especially in meats, eggs, cheese, and milk. As a fertiliser it is excellent for tobacco and nursery crops.

U.S. SYNTHETIC RUBBER TO BE EXPANDED

THREAT TO NATURAL RUBBER

THE two important developments in the U.S., which took place last week, are of vital concern to natural rubber producers. They were the report of President Eisenhower on the future of U.S. synthetic rubber industry and the U.S. Attorney-General's report on the price of synthetic rubber. Both the reports indicate a large and growing field for the synthetic product. Nevertheless, neither of the reports had any adverse influence on the price of natural rubber. For, in London, spot rubber remained steady around 26*d.* per lb., because of the speculative interest influenced by further reports of buying from Russia, Poland and Czechoslovakia. Trade circles in London are prepared to discount any immediate effects of the U.S. President's speech about the growth of U.S. synthetic rubber industry.

To refer to Mr. Eisenhower's report first. In a report to the U.S. Congress submitted exactly one year after the transfer of Government-owned synthetic rubber facilities to private ownership, President Eisenhower indicated that the U.S. synthetic rubber industry was bound to continue its rapid growth in the immediate future. He added that new synthetic capacity could be created in one-third of the time it took to bring rubber trees to maturity and that rising demands for new rubber would make themselves felt before natural rubber output could be expanded. Referring to the progress made by the private synthetic rubber plants, President Eisenhower said that the private plants were now operating intensely and had effected marked increases in capacity. Synthetic rubber had become a highly viable private industry; facilities were being expanded and technical advances and progress towards the development of new rubbers were being made. He added that private industry could be counted on to move from laboratory synthesis to commercial production of polyisoprene rubber—a product that closely corresponds to natural rubber in chemical composition and molecular structure. Private plants were already being constructed on private initiative.

Use of Natural Rubber.

For the present, a part of the rubber requirements of the U.S., President Eisenhower said, could be met only by natural rubber. Nevertheless, the use of natural rubber in the U.S. had become of secondary magnitude, as compared with its use abroad. He said that if the world supply of natural rubber in the years to come was not large enough to meet the requirements of both the U.S. and foreign countries, the use of synthetic rubber abroad was also likely to increase and this would be met either through larger exports from the abundant American supply or through the establishment of synthetic plants abroad. The U.S. President, however, held out a ray of hope to natural rubber producers by stressing that greatly improved production techniques should make it possible in the long run for natural rubber to share in the ever-growing demand for rubber.

The total U.S. requirements of new rubber were estimated by the President to reach 1.70 million tons per annum by 1960. The capacity of synthetic plants in the U.S. as at the close of 1955 was more than 1.25 million tons and planned expansions would, according to Mr. Eisenhower, boost it up to about 1.70 million tons by 1st January 1958. In other words, the estimated total U.S. requirements of new rubber in 1960 would be met by the synthetic plants alone two years ahead.

Attorney General's Report

The U.S. Attorney-General's report was the first of the ten annual reports ordered by the Congress, giving the Attorney-General's opinion every year on competition in the U.S. synthetic rubber industry. The Attorney-General found that the synthetic rubber industry had a tendency "towards price flexibility." He was unable to say specifically that the industry was now operating in a manner which would free it from any possible future charges of monopoly in violation of American anti-Trust Laws. In other words, the operating experience of the industry under private enterprise had been inadequate to provide a basis for drawing a conclusion whether or not free and unfettered competition had been established in the industry. He, however, indicated that there were many factors favourable to the development and growth of competition.

President Eisenhower's report caused some concern among the Malayan rubber producers who felt that it was a serious threat to the natural product. They realised that rubber must be produced cheaply in Malaya and unless its price was brought down to compete with the synthetic, it would be priced out of the world market. The users of rubber would always prefer natural rubber if it could be obtained at competitive prices. This would be possible if all connected with the industry—Government, shareholders and labour—accepted some sacrifices during the period of adjustment. Producers feel that the Government can make a significant contribution by reducing the present high rates of taxation on rubber.

TRENDS IN INDIAN SUGAR ECONOMY

PROSPECTS OF HIGHER OUTPUT IN CURRENT SEASON QUITE GOOD

COMMENTING on the annual reports of the Union Food and Agriculture Ministry, we observed two years ago—*vide* page 732 of *Commerce* dated 17th April 1954—that the reports did not contain any exhaustive review of the progress registered on the sugar front as a result of the policies and programmes implemented by the Ministry. It is, therefore, gratifying that the latest report, namely, that for 1955, has made a welcome departure. The report not only gives a fairly detailed account of the developments in the sugar economy during the season 1954-55 but also assesses the outlook for the current season, that is, 1955-56.

The Food and Agriculture Ministry prefaces its review of the trends in sugar industry with a brief reference to the sugar policy. As in the previous two seasons, during 1954-55 also, there was no control on prices, movement and distribution of sugar. The Government decided, as a general policy, to retain as reserve stock 25 per cent. of the production in factories. It was, however, found unnecessary to requisition stocks from the mills and the entire production was released for sale in the free market. The minimum price for sugarcane crushed in the mills was fixed at Re. 1-7 per maund for gate delivery and Re. 1-5 for deliveries at rail centres.

It is against the background of this policy that the Ministry reviews the trend of sugar production and consumption during 1954-55. The output of sugar in the season touched an all-time record of 1.59 million tons, as against 1.00 million tons in the previous season, representing a rise of as much as 59 per cent. The remarkable expansion in output is attributed to the availability of plentiful supplies of cane to the factories, thanks to the low price of *gur* and the improvement in cane output. The rise in sugar output was, however, not accompanied by a similar increase in consumption; on the contrary, consumption actually declined from 1,810,000 tons to 1,716,000 tons, due to enlarged *gur* supplies at relatively low prices.

Imports of Sugar

On the basis of an expected production of only 1.2 to 1.3 million tons in the season, the Government first decided—in November 1954—to import up to 700,000 tons of sugar (including 100,000 tons in the form of raw sugar) to meet consumption requirements during 1955. An import of 417,000 tons was arranged in 1954 itself as a part of the overall quantity of 1,082,000 tons contracted for in that year. Later, however, when the actual production was reported to be much higher than the earlier estimates, further purchases from abroad were stopped. Against the contracts already placed, 427,000 tons were received up to the end of October 1955.

Owing to the increase in domestic production, there was a steep fall in the offtake of imported sugar at the ports, leading to accumulation of large stocks of such sugar. As adequate storage accommodation was not available at the ports, sugar had to be moved to inland consuming centres such as Ahmednagar, Amraoti, Indore, Jabalpur, Jaipur, Jamshedpur, Nagpur, Ratlam and Ujjain for storage and disposal. The imported sugar was sold on ex-docks/ex-godown basis at prices fixed by the Government. In view of the general fall in the price of indigenous sugar, the sale price of E. German sugar was reduced from Rs. 30-8 to Rs. 29-8 per maund. The price of imported sugar in Calcutta was further reduced by As. 8 from 15th October 1955. With the improvement in supply position, the earlier system of delivery on f.o.r. destination basis was discontinued from February 1955.

Sugar Balance-sheet

The sugar balance-sheet for the 1954-55 season is compared below with that for the season 1953-54:

(In thousand tons)

	1954-55	1953-54
Opening stocks with factories and Government as on 1st November	102	196
Production during the season	1,590	1,001
Imports	514	690
Quantity refined from raw sugar	63	26
Total available supply ..	2,269	1,913
Closing stocks with factories and Government as on 31st October	553	102
Total offtake during the season ..	1,716	1,811

It will be seen from the above figures that the closing stocks of sugar with the factories and the Government, as at the close of the 1954-55 season, were considerably higher than those a year before.

Expansion

The Food and Agriculture Ministry then goes on to indicate the progress made in the expansion of sugar industry during 1955. In that year, 29 applications for the establishment of new sugar mills and 22 applications for the substantial expansion of the existing units were received by the Government. Licences were granted for the setting up of 16 new units and for raising the capacity of 13 existing factories. Of the new units licensed, 13 were co-operative mills. The additional capacity licensed since the coming into force of the Industries (Development and Regulation) Act, 1951, aggregates 668,000 tons, of which 400,000 tons are on account of the establishment of new sugar factories. Of the additional capacity so far licensed, 109,000 tons are expected to materialise in the current season.

The question of rehabilitating the idle and unsuitably located sugar factories is being examined by an Expert Committee of the Development Council for Sugar Industry. During 1954-55, two sugar factories were shifted to comparatively better sites. Half the cost of shifting is proposed to be borne by the Central Government in the form of remission of excise duty on additional production at the new sites.

On the recommendations of the Development Council, the Government of India sent a delegation to Australia and Indonesia to study the measures taken in these countries to develop the sugar industry and to see how far similar measures could be undertaken in solving the problems of the sugar industry in India. The delegation completed its study in about a month's time and returned in July 1955. The recommendations of the delegation are under the consideration of the Government.

Profit-sharing in Sugar Industry

The year under review was notable for the appointment of an Expert Committee to re-examine the question of profit-sharing in sugar industries between the mills and the cane growers. It will be recalled that, during the season 1953-54, the Central Government evolved a formula for linking the price of cane with that of sugar realised by factories, which was adopted on a voluntary basis. Under the formula, the cane growers in various regions were expected to receive an extra price over and above the minimum price statutorily fixed. In the actual implementation of the formula, however, it was found that no extra price was due from as many as 95 factories. The number of factories from which such a price was due was only 39, the total amount being Rs. 85.49 lakhs; Rs. 73.33 lakhs had been paid to the growers by the end of December 1955. While the principle of the price-linking formula was accepted by all concerned the representatives of cane growers complained that the percentage share of the sugar price given to them was much too low. The millowners, however, felt that the allowance made in the formula for depreciation and replacement was too little and did not take full account of the present cost of machinery and spare parts. In view of the sharp divergence of opinion thus, the Government appointed, as already stated, an Expert Committee to re-examine the issue. The report of the Committee is awaited.

During 1955, the working of six factories in Uttar Pradesh was inspected under section 15 of the Industries Act. The management of five units was taken over by the Centre and, in the case of the sixth factory, certain directives were issued to the management. Supervisory control was maintained on a factory in Bihar. All the aforesaid seven mills had been subjected to supervisory Central control during 1954 under the Essential Supplies (Temporary Powers) Act, with a view to ensuring that the factories would work in 1954-55 and that there was no loss of production of sugar.

The Government also exercised quality control of sugar and inspection of sugar mills during 1955. The number of units inspected by technical officers was 86, the objective being prevention of unauthorised expansions. About 1,094 samples of sugar were drawn by sugar inspectors in order to check the grade standards. Of these, 107 samples were found to have been incorrectly graded.

"Gur" and "Khandsari"

With regard to the *gur* and *khandsari* sectors, however, the Ministry does not give any details. All that it says is that no control was exercised on prices or distribution of *gur* and *khandsari* during 1954-55 and that the same policy is being continued in 1955-56. Export of *gur* has been freely allowed since January 1955. A quantity of over 22,000 tons was exported up to August 1955. The policy of free licensing of *gur* for export is being continued in the current season too. The Central Government has decided to give grants to State Governments, if they so desire, in order to enable them to make support purchases in the event of *gur* prices falling to uneconomic levels. From July 1955, however, *gur* prices have shown an improvement.

The Ministry has given a brief review of sugarcane development during the year. The cane development schemes started in 1948-49 were in operation during 1955 in the factory zones of Uttar Pradesh, Bihar, Bombay, Madras, Andhra, Punjab, Mysore, Travancore-Cochin and West Bengal. The special campaign for intensive manuring of cane crop, which was launched in the middle of 1954 and which had yielded striking results, was repeated in 1955 to cover a total area of one million acres. The Ministry claims a perceptible improvement in sugarcane cultivation practices during 1954-55. As a result, while the area under cane was higher by 13 per cent., the aggregate yield rose by 25 per cent. In other words, the per-acre yield of cane was substantially higher. The quantity of cane actually harvested during the season was 55 million tons, as against 44 million tons in the previous season. This figure, however, falls short of the output of 56 million tons in the base year of the Plan and the target of 63 million tons by 1 million tons and 8 million tons, respectively.

Outlook for 1955-56

Assessing the outlook for the current (1955-56) season, the Food and Agriculture Ministry feels that the chances of higher sugar output are quite good. This view is fully justified, considering the distinctly upward trend in sugar production that has been maintained since the beginning of the season. The total quantity of sugar actually produced in the season up to 22nd April 1956 is estimated at 1,595,000 tons, which compares very favourably with 1,446 000 tons in the same period last season. According to the Ministry, the preliminary estimates of the sugarcane crop reveal a further increase of 6 per cent. in area and of 5 per cent. in production. In view of the carryover of 553,000 tons of sugar (indigenous and imported) from the previous season and the bright prospects of production in the current season, the Government has decided not to purchase any more sugar from abroad. To quote the Ministry: "The present supply position of sugar is quite satisfactory and the market prices have, since the beginning of the current season (November 1955), generally shown an easy trend."

ASSAM TO HAVE ITS FIRST SUGAR MILL

The latest reports from Shillong aver that Assam's first sugar factory will go into production during the 1957-58 crushing season. The factory will be a co-operative venture sponsored under an agreement between the Assam Co-operative Sugar Mills and Skodas (India) Ltd. The daily cane crushing capacity of the proposed factory is estimated at 1,000 tons and the total cost of the scheme, excluding the agricultural part, is expected to be of the order of Rs. 90 lakhs. A special feature of this new venture is that Skodas (a Czechoslovakian enterprise) are making available substantial credit facilities on concessional terms for repayment. It is, however, not known whether and, if so, to what extent, the State Government and the Centre will contribute to the share capital of the factory. It is also not known whether the Industrial Finance Corporation of India will be granting any loans. In the case of other States, it may be noted, the Central and State Governments have provided the bulk of capital and the I.F.C. has given loans amounting to Rs. 40 lakhs for each factory.

The Andhra Government has posted a Special Deputy Registrar to take steps to start, as a medium-scale industry, a sugar factory at Hindupur on a co-operative basis under the second Five-year Plan. Hindupur and its neighbouring taluqs are **sugarcane producing areas.** With a view to securing better price for their cane, the cultivators, it is said, have formed themselves into a co-operative marketing society and requested the State Government to start a sugar factory. The Anantapur District Planning Committee has also submitted a scheme to start the factory with Rs. 35,00,000 as share capital, subscribed equally by the producers and the Government and Rs. 35,00,000 as loans from the Union Government.

MECHANISATION OF COLLIERIES

AN ACCOUNT OF LATEST MACHINES USED IN U.K.

REPORTS from London indicate that the U.K. National Coal Board's £1,000-million programme for the reconstruction of coal industry in that country during the next 10 years will include a fairly wide extension of proved techniques of mechanisation of the collieries. It is not yet clear as to how much such extensions will cost, but the cost of this year's development is estimated at £10 million. Now that India has also embarked upon a vast plan for increased production of coal, a reference to the types of mining equipments used in the U.K. collieries will be of immense value to Indian colliery interests.

It would appear that some progress has been made in the use and manufacture of open-cast mining equipment in the U.K. to replace its present dependence on the U.S., where 35 per cent. of all coal is won by open-cast methods. From next year onwards, the U.K. section of Ruston-Bucyrus will be manufacturing large electrically-operated draglines with shovels for open-cast use. Arrangements are being made for the production in the U.K. of a new rotary air drill for prospecting purposes.

In deep mining, the drive to extend power-loading at the coal face is proceeding ahead of schedule. The rise in coal-face output per man-shift so far this year is attributed entirely to the extension of power-loading. In February last, the proportion of coal power-loaded was 12.1 per cent., as compared with 8.2 per cent. in February 1955. The biggest advances have been in the North-western Division, where 21.6 per cent. of output is power-loaded. Next come the East Midlands with 18.7 per cent.; in fact, in Edwinstowe area of the East Midlands, nearly 50 cent. of output is power-loaded.

At the end of last year, 640 power loading machines were in use. It is planned to introduce a further 700 this year. The most effective cutter to prove itself in pit conditions is the Meco-Moore cutter-loader. This machine produced 9.2 million tons of the total longwall power-loaded output last year and has an output of roughly 6.35 tons per manshift. The Meco-More cutter is an extension of the ordinary longwall cutter. It employs picks carried on a chain to attack the coal, but has two jibs—one at the roof and the second at floor level—as well as a third vertical jib, which shears the coal from the back of the cut and assists it to fall on to the face of the conveyor. The cost of this power-loader is between £7,000 and £8,000.

Another important power-loader is the Anderton shearer. At the end of December 1955, there were 83 machines. This is expected to rise to 280 at the end of 1956. Last year, it produced about 3.3 million tons of power-loaded output. Its output per man-shift is 5.65 tons. The National Coal Board's Central Engineering Establishment is working on a new model, which will be able to take a wider cut of the coal.

While the Meco-Moore does excellent work on longwall faces, it is not said to be suitable for thin seams or steep gradients. On the other hand, the Anderton shearer is considered to be one of the best propositions, because it is less selective than other machines in the conditions in which it can be operated. It has already been introduced in a 3 ft. seam, the thinnest in which it has so far worked. It is hoped that, ultimately, it will be possible to introduce this power-loader into a 2 ft.-6 in. seam, which is below the average thickness for the country.

There is yet another power loader which came into use recently and that is A.B. Trepanner. There are now four such power-loaders in use and they are reported to have met with appreciable success. The output of this kind of power-loader per man-shift was below 12 tons at the end of last year. Its cost is approximately £7,000.

Mention may be made in passing of the mechanised support system also. Already, much use is being made of adjustable props, which are hydraulic and, in 1955, they were 10 per cent. of the total. Certainly, a fully mechanised system would go a long way towards increasing production further and plans are already well ahead. Messrs. Dowty Equipment Ltd. is the biggest manufacturer of the hydraulic pit props. It is expected to supply 300,000 of these props to the Coal Board in 1956. This firm has also a self-advancing roof system on trial in the East Midlands Division.

COTTON YARNS

OF ALL DESCRIPTIONS

FOR HANDLOOM, POWERLOOM AND HOSIERY FACTORIES

MADURA MILLS COMPANY LIMITED

Phone: 250 (5 Lines) — MADURAI — Telegrams: 'Harvey'

SOUTH INDIA

MILLS AT MADURAI, TUTICORIN AND AMBASAMUDRAM

5,00,000 Spindles Counts up to 80's

We Supply:

WARP YARNS, COMBED YARNS, HOSIERY YARNS, CONE, CHEESE AND HANK YARNS, SINGLE AND FOLDED

SPECIALITIES

Yarns for the Manufacture of ROPES — HEALDS — CANVAS — TAPE

BELTING DUCK — TYRE CORD FABRIC — SEWING THREAD

MULTI-PLY AND CORD YARNS

MANAGERS: A. & F. HARVEY LIMITED

PANDYAN BUILDING, MADURAI, SOUTH INDIA

The New FARGO trucks

give maximum performance

However rugged the road conditions, and however heavy the loads, the new Fargo trucks are built to withstand them. Several new improvements impart to these trucks a new dependability and quality of excellent performance.

★ Large, heavy-duty transmission
★ Sturdy clutch with positive engaging action
★ Powerful, "equal-pressure" hydraulic brakes
★ Slightly increased wheel-base lengths
★ Maximum power at practical operating speed

✻ Models available with varying wheelbases and greater load capacity.

PROGRESSIVELY MANUFACTURED BY

THE PREMIER AUTOMOBILES LTD.

AGRA ROAD, KURLA

Call at your local Fargo dealer. Ask him to show you many other features to help you choose the right Fargo truck for your needs.

Messrs. Bombay Garage Limited, Meher Building, Chowpatty, Bombay.

INDIAN TEA STATISTICS

PRODUCTION UP—EXPORTS DECLINE

A SHARP fall of nearly 87 million lbs. in exports of Indian tea, despite an expansion in production by over 20 million lbs. during 1955, has resulted in a decline of Rs. 19.57 crores in the tea industry's contribution in foreign exchange and of Rs. 2.50 crores in taxes (by way of customs and Central excise duty) during the financial year 1955-56. These and other interesting bits of information are disclosed by *Tea Statistics* 1955, the second issue of the annual publication brought out by the Statistics Branch of the Tea Board of India. A study of the information contained in this book clearly brings out the fluctuating character of the tea industry's fortunes.

In 1954 also, the Indian tea industry had raised its production by nearly 30 million lbs., but exports had fallen by 50.70 million lbs., though the foreign exchange earnings went up by over Rs. 27 crores, as also the taxes to the Government by Rs. 9.3 crores. Thus, despite the increase in production by 50 million lbs. during the past two years, the industry has not been able to increase its exports; on the other hand, the exports have shrunk in volume by about 138 million lbs. The foreign exchange earnings, however, have gone up by Rs. 7.59 crores and so also the contribution to Government revenue by Rs. 6.81 crores.

The area under tea cultivation as on 31st March 1955 is provisionally placed at 789,471.06 acres, as against 789,441.67 acres a year before. In other words, there has been a slight rise of about 30 acres. This small extension in area compares with that of 2,063.40 acres in 1953-54 and of 1,794.03 acres in 1952-53. This clearly shows that the pace of extension of the area under tea has slackened considerably. It may be noted, in this context, that the area under tea in India has extended by only 9,472.64 acres during the past five years.

The output of tea during 1955 is estimated at 664.55 million lbs., as compared with 644.37 million lbs. in the previous year and 614.60 million lbs. in 1953. Though the increase in production during 1955 is less than that in 1954, the output per acre has recorded a rise from 816 lbs. to 842 lbs. A State-wise distribution of the area and output discloses that Assam still possesses the largest area under tea, with 385,716.30 acres producing 367,26.26 million lbs., as against 386,096.94 acres in the previous year when the output aggregated 343.65 million lbs. As in the previous year, West Bengal occupies the second place with 196,403.29 acres producing 157.96 million lbs., as against 19,603.64 acres with an output of 161.98 million lbs. The area under tea in Madras and Coorg has, on the other hand, risen further from 85,867.92 acres to 86,408.65 crores, raising the output from 67.83 million lbs. to 69.27 million lbs. The area under tea cultivation in Travancore-Cochin also has widened from 83,514.11 acres to 83,821.07 acres, while production stands reduced from 58.52 million lbs. to 57.09 million lbs. It will be interesting to note that, although Madras and Coorg together occupies the third place among the tea-growing States in India in respect of both area under cultivation of tea and quantity of tea produced, it has the largest number of tea estates, with 2,901 gardens, as against 2,872 in the previous year. Travancore-Cochin comes next with 1,146 gardens, as compared with 1,136 in 1953-54. The Punjab, which produces just over 2 million lbs. of tea, has 1,125 gardens (as against 1,135 in the previous year); these are in Kangra hills. Assam, which accounts for more than 50 per cent. of total tea production, has 784 (788) gardens and West Bengal 297 (296).

The statistics relating to Indian tea sold at the three auction centres, namely, Calcutta, Cochin and London, show that the quantities at the two Indian centres have increased, while the quantity at London has declined. This is only in consonance with the Government policy of encouraging auctions in India. The quantity of tea sold in Calcutta shows a rise from 274.93 million lbs. in 1954-55 to 297.71 million lbs. in 1955-56. Of this quantity, that sold for export accounts for 219.66 million lbs., having risen sharply from 166.09 million lbs., and is probably a record, exceeding the previous highest of 217.62 million lbs. sold in 1952-53. The quantity sold for internal consumption has, on the other hand, declined from 108.85 million lbs. to 78.05 million lbs. The quantity of tea sold in Cochin during 1955 has risen from 29.24 million lbs. to 34.54 million lbs., of which that sold for export accounts for 24.92 million lbs. and sales for consumption in India for 9.61 million lbs., as compared with 22.14 million lbs. and 7.10 million lbs., respectively, in 1954. Sales of Indian tea in London have declined from 189.22 million lbs. to 188.92 million lbs. This fall is mainly accounted for by the North Indian tea, which has fallen from 164.66 million lbs. to 158.03 million lbs., while the South Indian tea has gone up from 24.56 million lbs. to 30.89 million lbs.

The quantity of Indian tea exported during 1955 amounted to 363.09 million lbs., as against 449.95 million lbs. in 1954 and 500.65 million lbs. in 1953. As in previous years, the U.K. was the main customer for Indian tea, having imported 249.27 million lbs. during the year under review, although this represented a substantial decline from that of 326.49 million lbs. imported during 1954 and of 354.92 million lbs. in 1953. The U.S. was the second largest importer with 24.06 million lbs., as against 32.49 million lbs. in 1954. The Irish Republic imported 17.97 million lbs., as compared with 22.09 million lbs. in the previous year. Among the countries which imported larger quantities of Indian tea during 1955, Egypt is prominent. Exports to this country which had dwindled from 18.14 million lbs. in 1953 to 6.96 million lbs. in 1954, show a sharp rise to 13.27 million lbs. in 1955. Russia's contribution to India's tea exports was *nil*. After taking 2.8 million lbs. in 1952, it had not bought a single pound of tea till the close of last year.

The quantity of tea consumed in India during 1954-55 has been provisionally estimated at 168.81 million lbs. which, on the basis of the 1955 population of 371.96 million, works out to a *per capita* consumption of 0.45 lb. which represents a decline from 0.50 lb. in 1953-54, when the total consumption amounted to 182.19 million lbs. for a population of 367.55 million.

The statistics relating to labour employed in the tea industry are not up to date, the latest year for which figures are available being 1953 and even these are provisional. In 1953, the daily average number of persons employed in the industry was 1,054,102, as compared with 1,054,295 in 1952 and 1,017,989 in 1951. A State-wise analysis of the figures for 1953 shows that Assam accounted for 554,715, West Bengal for 291,315, Madras for 96,079 and Travancore-Cochin for 82,964.

(Concluded from next column)

the next crop will be sizably larger and that prices of raw jute are likely to move down, thereby enabling the mills to manufacture goods at relatively lower costs. One source, for instance, observes: "Everything points to lower terms. The new crop has so far been sown and grown under very favourable conditions. There is a likely increase in acreage by as much as 20 per cent. in some quarters and the crop is likely to be earlier than normal."

W. GERMAN JUTE PRODUCTION AND EXPORTS

Jute goods production in West Germany got off to a good start for the new year, with the January output placed at 8,500 tons of yarns and 6,500 tons of woven fabrics, as against 8,100 tons and 6,200 tons in December 1955, according to the *Jute Bulletin* of the Indian Central Jute Committee. The members of the Manufacturers' Association imported about 12,400 tons of raw jute during January, as compared with 6,500 tons a month before. West German exports of jute goods to the U.S. during the first 11 months of 1955 showed a sharp drop to about 1,137 tons from 2,140 tons in 1954 and 7,873 tons in 1953.

In order to protect the grain bag industry in Southern Rhodesia from cheaper Indian and Pakistani imports, a Government-appointed Committee has recommended a subsidy of 8½*d.* per bag to the local product, over and above a protective tariff on imported hessian. The Committee has reported in favour of giving the proposed subsidy for a period of two years. The bag industry in Southern Rhodesia has an installed capacity for producing 3.36 million sacks, as against an annual requirement of 6 million sacks.

Internal manufacture will satisfy about 18 per cent. of Indonesia's jute bag requirements, which are estimated at 9 million for the current year. There is already a jute mill in production at Delanggu, Suracarta, giving an annual output of 900,000 bags. Another, estimated to produce 2.5 million bags a year when in full operation, has been officially opened in Sourabaya. It may be possible to obtain an output of 750,000 bags from the new factory this year.

U.S. CONSUMPTION OF BURLAP

RAW JUTE SUPPLIES IMPROVE

REPORTS emanating from New York indicate that consumption of burlap in the U.S. during March 1956 was 3 million yards better than that in the preceding month, having risen from 68 million yards to 71 million yards. It was, however, the same as in March 1955 and one million yards less than that in January 1956. The total consumption during the first three months of 1956 amounted to 211 million yards or an increase of 13 million yards over that in the corresponding period of last year. The table below gives the comparative figures for each of the three months ended March 1956 and 1955:

(In million yards)

Month	1956	1955
January	72	62
February	68	65
March	71	71
Total	211	198

Despite the increase in consumption of burlap, there has been an increase in stocks held in the U.S. In fact, the trend has been steadily upward since January this year, when stocks of burlap stood at 243 million yards. In the following month, they rose to 245 million yards and then shot up by 8 million yards to 253 million yards in March. The table below gives a comparative picture of stock position in the first three months of 1956 as also of 1955:

(In million yards)

Month	1956	1955
January	243	245
February	245	256
March	253	254
Total	247	251

While there has been a progressive rise in month-end stocks since January last, an average fall of 4 million yards of burlap is noted as compared with the position in the previous year. This is regarded as a favourable sign, in that it is said to suggest that, sooner or later, the U.S. will enter the market to replenish its stocks. This raises an issue of immediate concern, namely, whether India would be able to supply in full the burlap requirements of the U.S. An answer to this depends on the capacity of Indian mills to produce the goods that the U.S. needs at competitive prices. With the abolition of export duties on jute goods last year, the industry's competitive ability has undoubtedly improved. A considerable percentage of jute mills has undergone modernisation and this should enable at least these mills to offer stiff competition in the U.S. markets, provided supplies of raw jute are readily available to them. Even in this respect, their position this season appears to be relatively better than in the last. For, according to the latest figures, imports of raw jute into Calcutta and mill stations during July-March 1955-56 were about 530,000 bales more than those in the corresponding period last year, as is evident from the table below:

(In million bales)

	July-March		
	1955-56	1954-55	1953-54
Pakistan	1.28	0.95	1.20
India	3.94	3.74	3.03
Total	5.22	4.69	4.23

It will be seen from the table above that receipts of raw jute into Calcutta and mill stations from both India and Pakistan have shown an improvement. In distinct contrast to the experience in the nine months ended March 1955, when imports of raw jute from Pakistan had declined from 1.20 million bales to 950,000 bales, there has been a recovery in them to 1.28 million bales in the same period of 1955-56. Arrivals of Indian raw jute also rose from 3.03 million bales to 3.94 million bales. In the result, the total receipts from both sources during the nine months of 1955-56 amounted to 5.22 million bales, as compared with 4.69 million bales and 4.23 million bales in the corresponding periods of the two preceding seasons respectively.

In the coming season, too, the improvement in supplies of raw jute is expected to continue. It is reported that the jute areas both in Pakistan and India have had heavy rainfall. Weather conditions are stated to be beneficial for the standing crop. It is, therefore, estimated that

ENGINEERING INDUSTRIES IN INDIA

SHORTAGE OF RAW MATERIALS HAMPERS PROGRESS

IT is needless to emphasise that the basis of industrial expansion rests chiefly on the development of heavy and light engineering industries. This explains why high priority is given to the development of these industries in the second Plan. Presiding over the thirteenth annual general meeting of the Engineering Association of India, held last week at Calcutta, Mr. A. Rajagopalan highlighted the problems facing the development of these industries in the context of the new Industrial Policy Statement. Sardar Swaran Singh, Union Minister for Works, Housing and Supply, who inaugurated the session, attempted to allay the fears regarding the new Policy Statement.

It is true that Mr. Rajagopalan welcomed the Industrial Policy Statement, which recognised that the Government would generally allow the undertakings in the private sector to develop with as much freedom as possible consistent with the targets and objectively of the national plan. But he felt that the area reserved for public enterprise in strategic industries was too vast, inasmuch as it included such industries as heavy castings and forgings, heavy plant and machinery, and heavy electrical plant. Besides, Schedule B to the Policy Statement included such industries as aluminium and other non-ferrous metals, machine tools, ferro-alloys and tool steel. Proceeding, he remarked:

"It is difficult to understand why Government have thought it necessary to include some of these items in Schedule B. We had requested Government to develop the tool steel industry in the Ordnance factories. One may legitimately ask why, during these last eight or nine years, Government have not been able to develop this important industry, although they had diverted part of the capacity of these factories to industrial fields which offered keen competition to the private sector. The last war had clearly demonstrated that, given necessary guidance and help, private enterprise can deliver the goods. In an underdeveloped country like India, where even minimum standards of social services are not provided, the role of a Welfare State is clear beyond doubt. We trust that Government would try to give all possible opportunity to private enterprise to develop whether it is in the reserved or in the unreserved list. One of the underlying principles for allocation of industries among private and public sectors should be their economic and efficient operation. Nationalisation merely on ideological grounds will not be conducive to national welfare. We trust that Government would actually be able to maintain an atmosphere of freedom which alone is conducive to the proper development of industries, for, as Mr. J. R. D. Tata put it, while addressing the last annual meeting of the Tata Iron and Steel Company, the voluntary enterprise of our people, individually and in groups, has a great part to play in ensuring the success of the plans on which the country has embarked. Government should avoid giving the impression that mixed economy is only a half-way house in the direction of full-fledged socialism. If Government would free private enterprise from its handicaps and uncertainties, allow it the necessary scope for initiative and provide suitable incentives, they would have a welcome surprise by way of the remarkable results achieved and the quickness with which they are achieved."

Touching upon this point, Sardar Swaran Singh observed that, although the Government's intention was to enlarge the public sector by concentrating on the production of basic capital goods and of heavy machinery, it had no intention of preventing the private sector from entering a very large field of the engineering industries. He argued that the policy of the Government did provide for the necessary atmosphere of freedom conducive to the proper development of industries both in the private and public sectors.

The chief objective of the second Five-year Plan is to ensure a more rapid growth of the national economy by large-scale expansion of industries, particularly basic industries, such as iron and steel and capital goods industries. In so far as the engineering industries are concerned, the following targets have been set for achievement by 1960-61:

		Production per annum
Iron and steel—		
(a) Finished steel	(Tons)	4,500,000
(b) Foundry pig iron	(„)	750,000
Structural fabrication	(„)	500,000
Steel foundry	(„)	15,000
Forging shops	(„)	12,000
Cast iron foundries	(„)	10,000
Aluminium	(„)	30,000
Locomotives	(Nos.)	300
Automobiles	(„)	57,000
Refractories	(Tons)	1,000,000
Diesle engines	(h.p.)	216,000
Bicycles	(Nos.)	765,000
Electric motors	(h.p.)	600,000
A.C.S.R. conductors	(Tons)	15,370

Commenting on the aforesaid targets, Mr. Rajagopalan regretted that some of the basic industries such as bolts, nuts and rivets had not been included. He pointed out that the Plan for railway development was likely to receive a setback if fastening materials like bolts, nuts and screws were not available in time and in adequate quantities.

One of the chief obstacles to the development of engineering industries is shortage of raw materials, such as pig iron and steel. It is true that the Government has planned to step up steel and pig iron production. But, until these efforts yield fruit, it is necessary to make arrangements for importing these raw materials. The Government has already planned to secure 3 million tons of steel in the three years commencing 1956-57 and this is gratifying enough. But so far as pig iron is concerned, Mr. Rajagopalan is of the view that it would not be possible to import it in any appreciable quantity and that the shortage of pig iron required by the foundries would continue right up to the end of 1958. Consequently, he felt it necessary for the Government to conserve all the available supplies of pig iron and cast iron scrap. The Government has already under control the pig iron and broken ingot mould arisings at Tatas. But he wanted all sources of cast iron scrap arisings to be controlled and equitably distributed to the foundries.

Another metal in short supply is aluminium. The approximate consumption of electrolytic aluminium is 20,000 tons. The use of aluminium for utensils and packing is also increasing. As such, Mr. Rajagopalan urged the Government to import as much aluminium as possible till domestic production was stepped up to the required level.

Alluding to the subject of raw materials, Sardar Swaran Singh hoped that, with the import of adequate quantities of steel, the engineering industries would be able to maintain their maximum output and fulfil the prospective demand in the second Plan period. He also assured the gathering that the Government would be prepared to consider private imports of basic raw materials, at present in short supply, if such imports were essential to maintain the industries output and if the terms of such imports were not in conflict with the foreign exchange policy of the Government of India.

The stores purchase policy of the Government of India also figured in the speech of Mr. Rajagopalan. Welcoming the Government's acceptance of many of the recommendations of the Stores Purchase Enquiry Committee, particularly the formation of a non-official advisory council, Mr. Rajagopalan urged pooling of Government orders to enable contracts to be placed for economic quantities. He pertinently added: "Conclusion of rate contracts covering the capacity of the industry over long periods will help stabilise production and prices, besides giving the industry added strength and confidence. Care should be taken to see that the placing of long-term contracts does not lead either to monopolistic conditions or overloading of a few firms with orders at the cost of others." In view of the current credit limitations, he urged the Government to make progress payments in long-term contracts as they did in the case of orders placed abroad. Mr. Rajagopalan further suggested that the Government should gear the central purchase organisation on the lines of the Directorate-General of Munitions Production, created during the war. Only thus, he felt, could all efforts be made to book the entire industrial capacity.

The Works, Housing and Supply Minister made a reference to this suggestion and averred that, if the targets laid for the engineering industries were to be achieved, the expansion of existing capacity of small industries, such as bolts, nuts and rivets, could not be avoided. The Central Purchase Organisation was considering steps to be taken to ensure that the indigenous capacity for such industries was suitably expanded to meet not only the present requirements but also those for the future based on the expansion of large-scale industry. He disclosed that, for this purpose, it was considering ways and means of booking the existing capacity fully over a long-term period and placing trial orders on newcomers in order to encourage them to take up the manufacture of such stores.

'FLAGS OF CONVENIENCE'

NEW HEADACHE TO TRADITIONAL MARITIME NATIONS

PROBLEMS relating to registration of ships under "flags of convenience" figured prominently at a meeting of the International Chamber of Shipping recently held at London. Admitting the fact that ships flying flags of convenience had begun to threaten world sea trade, the Chamber decided to prepare an objective survey of the implications of the post-war growth of flags of convenience fleets. It was pointed out that the flags of convenience countries, namely, Panama, Honduras, Liberia and Costa Rica, had registered a tenfold expansion of tonnage under their flags. Thus, the total strength of these countries was at present about 9 million tons, as against a mere 800,000 tons in 1946. Significantly, Liberia, a small Negro Republic in West Africa, with a coastline of 350 miles, has over 4.5 million tons of shipping, a tonnage big enough to qualify itself as a leading maritime nation in the world.

The increase, which is described as the "most startling phenomenon in international shipping," is attributed, among others, to two factors, namely, the avoidance of taxation and savings in operation costs. In Liberia and Panama, for instance, there is neither profits tax nor income-tax. Under Liberian registry, the annual tax amounts to $1.20 per ton. A ship of 10,000 tons will thus have to pay a yearly tax which is equivalent to a little over £4,000 only. In Panama, initial registration fee amounts to $1.20 per net registered ton and taxation is no more than 10 cents per ton a year. In this case, however, the annual service fees paid to the Panamian Government during the operation of the ships come to a higher figure than the year's taxation and are above the comparable fees of the traditional maritime nations.

Bermuda, which has yet to achieve equal fame as a refuge for shipowners from heavy taxation, has also offered similar facilities. Ships registered under this country's flag also pay neither income-tax nor profits tax. The only liability is a fixed annual tax of £200 and a stamp tax on capital issued in the first year of the incorporation of the ship. There are, however, some small variations from the general rule of exemption from tax for profits exceeding a certain amount. But even this constitutes very little burden on shipping companies.

It would appear that the British shipping companies are of the view that, unless taxation of shipping in the U.K. (which, it is claimed, is at a level that prohibits replacement of ships out of profits) is reduced sizably, they might be compelled to register their ships under flags of convenience, perhaps in the Commonwealth, rather than see that they are driven out of business. Bermuda, as pointed out earlier, offers flags of convenience facilities in the Commonwealth. It is, however, stated that the U.K. Finance Act of 1951, which forbids the transfer of control of a company abroad, without the prior permission from the Treasury, is an obstacle to such a transfer.

There is no doubt that the situation as described above has introduced an "element of farce in world sea transport." It is even forecast that the chances of such countries as Liberia and Costa Rica being used as pocket boroughs of the leading maritime nations to influence international shipping policies cannot be ruled out altogether. It is feared that, in times of slump, the untaxed fleets might have a deleterious effect upon the fleets of traditional maritime countries, such as the U.K., which are finding "fleet replacement even in a period of buoyant world trade so difficult a problem."

An announcement made by the Chamber after the meeting admitted that it was difficult to control registration of ships under flags of convenience through international action. It is further stated that, if international action is decided upon, its implementation will be difficult. It would, therefore, appear that the removal of the threat of flags of convenience fleets to the traditional maritime nations is far remote.

The production of crude oil in the Middle East aggregated just over 43,000,000 metric tons during the first quarter of 1956. This represents an increase of 13 per cent. over that for the same period of last year. The three largest producers were again Kuwait, with 14,300,000 tons, Saudi Arabia with 12,400,000, and Iraq 8,600,000. The largest increase, however, was achieved by Iran with 5,500,000 tons, which represents an increase of 70 per cent. above the first quarter of 1955, and nearly 20 per cent. over the final quarter of last year.

NEW PRODUCTS AND PROCESSES

Mobile Data Recording System

A DATA recording and analysis system intended for use in mobile vehicles such as aircraft, lorries, cars, military tanks, or other confined spaces, has been developed by Mervyn Instruments, St. Johns, Woking, Surrey, the U.K. The system, which has an eight-channel recording unit, will record the outputs of all types of conventional mechanical and electrical "transducers" (units which measure the mechanical effects of small physical movements). Magnetic tape is employed as the medium upon which the information is recorded, instead of the mirror galvanometer and photosensitive recording paper systems which have been more commonly used, but the results of the recordings are also presented simultaneously on paper. The system is said to have an exceptionally wide frequency response, and to yield records which are in a form entirely suitable for automatic analysis. It is claimed that the records can be interpreted entirely automatically by an unskilled operator. The system is designed so that errors in the recording system can be compensated for and corrected by playing back the records. A calibrator unit by means of which the recorder may be set up for any predetermined sensitivity is incorporated and the working capacity of the system as a whole may be doubled merely by adding a second recorder—a comparatively cheap and simple unit

Synthetic Quartz Crystals

The General Electric Company in the U.K. has developed a process by means of which crystals of synthetic quartz can be made using British raw materials instead of materials imported from Brazil. Crystals of this type called "piezoelectric crystals" because of their special electrical properties, are normally made by "growing" the synthetic crystal from Brazilian rock crystal. They are used in the manufacture of electrical oscillators and some other electrical devices. In the G.E.C. process, the Brazilian rock crystal is replaced by other raw materials such as flint and quartzites, which are available in the U.K. Methods have been developed for removing any traces of unwanted materials which may be contained in the raw materials and whose presence might affect the performance of the finished product. Crystals produced by the new process are said to be of excellent quality and to be suitable for most types of oscillator uses.

Electronic Data Processing

An electronic data processing system which has been specially designed for standardised day-to-day operation in organisations handling large amounts of routine information which requires analysing, has been developed by the Radio Corporation of America. Work on the system, which is to be used by the U.S. Army, has been in progress since 1950. The design of the unit has, it is claimed, been "streamlined" so as to reduce the amount of paper work still required, as well as the work involved in handling the data processing system itself, to a minimum. As is the case in other electronic computer and data processing systems, the new Radio Corporation of America system, which is called "Bizmac," can handle in a matter of minutes large quantities of information, which would normally take several weeks, or even months, to collate and analyse using traditional office machinery.

Snails Combat Snails

In tests made on the Pacific Coast of the United States, scientists of the University of California are using natural predators to try to control snail damage in citrus orchards. They are importing specimens of a small predatory snail, native to India, to prey on common garden snails and giant African snails which recently were discovered infesting the U.S. West Coast. The Indian snail is generally less than an inch long. It attaches itself to garden and African snails and gradually consumes them. The common garden snail has become a problem in California citrus orchards. The Giant African Snail eats almost anything, including rubber, and apparently gained its foothold in the U.S. when salvaged rubber-tyred military equipment was brought back from across the Pacific.

Gas Turbine Engine for Helicopters

The General Electric Company in the United States has developed a special small gas turbine engine which will soon be tested in helicopters. In gas turbine engines, gases created by combustion are used to spin a turbine. The turbine then turns a shaft that transmits power to the helicopter's rotors. The small size and light weight of the new engine should make it easier to install and less expensive to operate and maintain than a comparable piston engine. It is also expected to provide a more comfortable ride for helicopter passengers and crew because it will vibrate less and therefore be quieter than a piston engine.

New Pulping Process for Straw

American farmers will have a new market for their surplus grain straw as a result of a new pulping process, which uses the straw as the basic ingredient for box board and corrugated board and paper. The new process has been developed by the U.S. Department of Agriculture's research scientists. Plants for use of straw to make pulp and produce the strawboard products are expected to be established in U.S. areas where surplus straw is available in quantity.

BUILDING AN ATOMIC POWER STATION

ENGINEERING ACHIEVEMENTS AT BRITAIN'S FIRST NUCLEAR GENERATING PLANT

By W. Andrews

BRITAIN'S first step in the generation of power on a commercial scale from nuclear reaction is taking place at Calder Hall in Cumberland on England's north-west coast. Two stations, A and B, which are more or less identical, are being built and the first is expected to be supplying electricity to the National Grid by the end of this year. Station A, which is nearing completion, comprises two reactor buildings, about 130 feet (40 metres) high, with between them an orthodox steam power plant housing turbo-electric generators and the usual ancillaries.

In operation, carbon dioxide gas at a pressure of 100 pounds per square inch (7.03 kilograms per square centimetre) will be circulated, in a closed cycle by centrifugal fans, through a graphite-moderated uranium pile. The heat extracted will be used by means of heat exchangers to raise steam at about 200 pounds per square inch (14.06 kilograms per square centimetre) with a degree of superheat depending on the estimated maximum temperature of the hot gas, 430 degrees centigrade.

Rated At 50 Megawatts

In the power station section are installed four orthodox turbo generators each rated at 23 megawatts. The nominal rating of the whole plant is 50 megawatts as some of the power raised will be used in the plant itself and some exported to the nearby plutonium separation plant at Windscale, which will also treat the Calder Hall uranium after extraction from the pile. The only novel feature in this section is the provision of a "dump" condenser capable of handling the full steam load from the piles in emergency.

In the initial civil engineering work on the site, the main feature was the exceptional strength of the concrete foundation rafts required to support the heavy weight of the reactors. The real test of engineering skill was in the design, construction and execution of the atomic piles and their accessories in the reactor buildings and of the eight heat exchangers, four to each pile. Inside each reactor building is first encountered the biological shield of concrete, several feet thick, which is octagonal in shape for easy control of shrinkage. Special cement and high grade aggregate of a hard local stone were used while ultra careful control of the density of the mix to a standard of 156 pounds per cubic foot (2.4 kilograms per cubic decimetre) was exercised. Alternate sides of the octagon were poured first and the remaining walls after the first four had set. Inside this shield a six-inch (15 centimetres) space allows cooling air to be circulated to prevent overheating of the concrete.

The next part of the reactor building is a thermal shield, forming a complete lining of six-inch thick steel plates laid edge-wise, and inside this is the pressure vessel which holds the uranium graphite pile. In shape, the vessel is a cylinder built up of welded mild steel plate, two inches (five centimetres) thick, and it is about 60 feet (18 metres) long and 40 feet (12 metres) in diameter with dish-shaped end domes. Its size made welding on the site essential and the working requirements called for absolute soundness of the welds and complete permanence of the final dimensions. All butt welds were subjected to a rigid X-ray inspection and even small fillet welds were examined by crack detection methods. After welding had been completed a pneumatic pressure test and a vacuum test of 0.1 of an atmosphere were applied.

Prepared In Five Sections

The pressure vessel was first prepared in five sections, made from the shaped plates, on the ground near the reactor building. These sections were the bottom dome, two central ring-shaped parts, a "diagrid" or lattice structure which carries the weight of the graphite core and the upper dome. A 100-ton crane made it possible to assemble these sections inside the reactor thermal shield and they were then finally welded together, with the stringent testing procedure already described.

Permanence of dimensions was assured by a stress-relieving heat treatment carried out at a temperature of 550 degrees centigrade and maintained for eight hours. This temperature over the whole of the vessel was attained by radiant heat from resistors placed inside the vessel, involving an electrical load of 1,500 kilowatts.

Support for the pressure vessel inside the thermal shield is provided by a circular ring, part of the internal "diagrid" structure, which rests on brackets passing through the walls of the vessel. These components in turn rest on ten inverted A-shaped frames secured to the foundations inside the thermal shield. The bearing faces of the supporting legs are given a definite radius to allow for radial expansion of the whole assembly.

Inside the pressure vessel is the atomic pile itself, consisting of the uranium charge tubes and control rods and the graphite packing of specially shaped blocks, the whole weighing about 1,000 tons. The necessary perforations in the upper dome of the vessel to accommodate the various tubes and the fitting of the accessories had to be executed to an accuracy of 0.001 inch (0.025 millimetre), thus introducing precision engineering on a scale seldom, if ever, previously contemplated in heavy plant of this type.

Unexampled Accuracy

After extracting the heat from the atomic pile, the hot carbon dioxide is discharged into four heat exchangers each contained in a vertical shell 18 feet (5.4 metres) diameter and 70 feet (21 metres) high, made of steel plate. Of welded construction, stress relieved by heat treatment, it contains separate low and high pressure steam systems, each with its economiser, evaporator and superheater sections made up of two-inch (five centimetres) overall diameter tubing carrying the water and steam. The outside surfaces of each heat exchanger section are increased by the addition of welded-on studs of aerofoil section of which the numbers used amount to many millions.

It will be clear that the real engineering achievements of Calder Hall lie in the successful application of unexampled accuracy of construction of heavy plant in all its stages, but there has been a second factor to complicate the procedure. Because of the nature of the atomic pile, it has been essential to insure that the closed circuit in which the carbon dioxide gas circulates shall be absolutely free of alien dust, scale, metal fragments or any other loose matter which could contaminate the pile material and reduce efficiency.

In the placing of the graphite blocks in the pile, extreme precautions had to be taken. A special room adjacent to the access zone was sealed off with an airlock and all staff concerned in subsequent handling of the blocks were required to change all clothing down to the skin and put on specially laundered garments. This process was repeated every time one of the workers entered the access zone, however short the period.

Scrupulous Care

Similarly, the heat exchanger elements were all individually shot-blasted overall and scrupulous care was taken to ensure perfect cleanliness, while, immediately they were passed for use, they were loaded into steel transit cases for transfer to the heat exchanger. At the top of each heat exchanger, a temporary "clean room" was provided to guard against accidental fouling of the elements even for the few minutes they would be exposed outside the cases during installation.

Experience has already shown that there is every reason to expect Calder Hall A plant to meet its designed performance and the B plant, construction of which is proceeding alongside, will probably be a duplicate in most respects, although increased knowledge may mean that details here and there will differ.

In conception and execution, the practical engineers have been called on to alter radically their approach to a large project, rather than follow any new procedure, and the success attained so far augurs well for the solution of the problems of providing adequate power in the future with which the world is faced.—*Exclusive to* Commerce.

COMPENSATION FOR LIFE COMPANIES HELD INADEQUATE

ASSOCIATION'S ANALYSIS OF PROVISIONS

LAST week, we indicated that the provisions relating to compensation for life insurers, incorporated in the Insurance Corporation Bill as amended by the Select Committee, though they were an improvement on the original Bill, still fell short of what would be needed to provide for just compensation. The compensation payable to insurers under the new formula, according to a calculation made by the Indian Insurance Companies' Association, would be only 42 per cent. of what the shareholders could reasonably expect to receive on a correct appraisal of the value of their holdings.

The Association, in the course of a Press note on the subject of compensation, agrees with the principle underlying the Government formula, that the shareholders should receive a capitalised sum on the basis of the future dividend-earning capacity of the insurers. Only, it expresses its dissatisfaction over the way this principle is sought to be implemented by the formula. The most scientific basis for calculation of the earning capacity of life business for the purpose of compensation, the Association says, would be to make an actuarial valuation as on 31st December 1955. The dividend-earning capacity of the company would then be determined by (1) the business in force on 31st December 1955, which in life insurance is the source of earning power, (ii) the surplus earning capacity of the business in force on 31st December 1955, and (iii) the percentage of the surplus to which the shareholders of the unit are entitled in terms of their arrangements with policyholders. The Government, of course, has not adopted the method of actuarial examination, presumably because it regards the method as cumbersome. The Association would, however, have no objection to any alternative method, provided it secured fair compensation. Its contention is that the formula does not secure that.

The adjustments made under the formula are said to affect the actual compensation receivable by the shareholders in several ways. Thus, the amended Bill provides for compensation on the average business in force for the six-year period 1950-55. In consequence, as against a business in force of about Rs. 1,020 crores on 31st December 1955, only a business of Rs. 800 crores enters the compensation calculations. In other words, companies are "compensated not on current basis but on the basis of business in force of 1952 or earlier." This reduces the actual compensation by 21.8 per cent.

Valuations

Again, the Government has ignored the consideration that the surplus earning capacity should be determined, not by any arbitrary system of averaging, but by taking into account the position as on the date of acquisition. In this connection, the Association points out that insurance operations generally result in increasing quantum of surplus at successive valuations. This is so, because the "increasing new business secured by companies year by year more than replaces the wastage caused by deaths, maturity, surrenders and lapses; the contribution from excess interest, mortality and miscellaneous sources also advance in amount." The Association has cited instances to illustrate how, in the case of several companies, in the last valuation surpluses have increased from the levels at which they stood at the preceding valuation. In the case of one company, it increased from Rs. 357.89 lakhs to Rs. 623.32 lakhs, in the case of another from Rs. 16.18 lakhs to Rs. 32.87 lakhs, and, in the case of a small company, chosen for illustration, the surplus improved from Rs. 0.10 lakh to Rs. 0.94 lakh. By introducing the concept of the average, the Government's compensation formula takes into account "not more than 80 per cent. of the earning capacity on the basis of the last valuation alone." The surplus earning capacity of the companies, as on 31st December 1955, which alone is the capacity that is relevant for purposes of compensation, would be higher than that of the last actual valuation. Even if this factor were ignored, the "averaging reduces further the compensation unjustifiably to 62.6 per cent."

Finally, the Association has calculated that, in the case of 43 companies, by reducing the percentage of valuation surplus normally allotted to shareholders from 7½ per cent. to 5 per cent., the amount of compensation is further reduced to 41.7 per cent. Referring to the allocation of only 5 per cent. of the surplus to shareholders, as against the statutory limit of 7½ per cent., the Association says:

"It has been urged by the Finance Minister that enlightened insurers allocated 5 per cent. or less to shareholders. It would be pertinent to point out that the 1949 Insurance Act Amendment Bill provided for a maximum of 10 per cent. which was what companies have been customarily allocating till that time. The select committee after examining the question reduced the maximum to 7½ per cent. and this was adopted by Parliament, wherein it was commented that this was hurting the shareholders unduly. After the passage of the Act, most companies have allocated 7½ per cent. Special considerations have prevailed in the case of companies that have allocated less. Some of them have specific provision in their prospectuses or in the articles of association which debars them from allocating at a rate higher than 5 per cent. Some have made a practice of allocating less than what is usual in the market, and this is a position from which they cannot withdraw without breaking faith with their policyholders. The companies concerned are of long standing, and their quantum of surplus and business have grown to sizable proportions.

"All over the world, a 10 per cent. allocation is regarded as normal and fair. Even the largest British insurance company, 'Prudential,' declared 8.1 per cent. in 1955 as against 8.8 per cent. in 1954. Its Chairman, Sir George Barstow, aptly indicated the current trend when he said, the 'Prudential' did not visualise a reduction in the earnings of shareholders, but only emphasised the need for regulating the quantum of profits allocated to shareholders when the size of the portfolio gets abnormally large."

The Association is right in contending that the statutory limit of 7½ per cent. itself is not a very high one. It may be worth recalling, in this connection, that the report of Mr. Sushil Sen, on which the Insurance Act of 1938 was based, did not provide for any limitation on the appropriation of life insurance profits. It was then customary for offices to allocate 10 per cent. to shareholders. The Post-war Insurance Sub-Committee, 1947, suggested a limit of 10 per cent. as the limit for the shareholders' share of the surplus. The draft Insurance Bill in 1949 provided for a maximum of 10 per cent. It was the Select Committee which reduced it to 7½ per cent. In any case, the point is that, till 1950, the 10 per cent. level was not regarded as excessive. It is not clear what has happened in the last five years to justify the view that even the 7½ per cent. level, allowed by the law since 1950, should be reduced to 5 per cent.

Surplus

As regards allocation of surpluses between shareholders and policyholders in other countries, practices vary from country to country. In the U.K., the 10 per cent. level is not regarded as excessive. As the Association points out, the Prudential, which is the largest life office in the Commonwealth, allocates about 8 per cent. of the surplus to shareholders. In Canada, where the law is very strict, there is a slab system of allocation of surplus. If the mean participating fund is less than Rs. 122.5 crores, the shareholders may be allocated 10 per cent. of the surplus. All Indian life offices would fall within this limit, inasmuch as the largest Indian life office, the "Oriental," had a life insurance fund of Rs. 77.91 crores as on 31st December 1954. Thus, judged even by the stringent standards of the Canadian Law, Indian life offices would be justified in distributing as high as 10 per cent. of the surplus to shareholders. From this point of view, the 7½ per cent. limit, set by the law, itself erred on the low side. Further, in India, as the Association points out, "7½ per cent. is really a small allocation, because the size of the portfolio of most companies is small and the amount received by their shareholders annually is meagre." And, now, even this statutory limit is sought to be reduced to 5 per cent.

There is yet another consideration which must induce the Government to view the insurers' case for compensation in a more liberal manner. Under the Bill now framed, the Government itself is providing for policyholders only 95 per cent. of the surplus. In other words, it sets a certain value on the services it renders. And it sets it at 5 per cent. of the surplus, "despite all economies of large-scale trading, the advantage of operating as a monopoly and an ambitious goal of fourfold increase in business." The Association says that "if it is fair for the Government to provide for taking 5 per cent. in future on the total portfolio of business, including the cases where policyholders received more than 95 per cent. of the surplus, there are no convincing reasons to compensate the shareholders on any lower basis than their current expectations of future earnings."

Savings

After reiterating that the formula reduces the compensation to 41.7 per cent. of what shareholders might reasonably expect to receive on a proper appraisal of the value of their interest, the Association says:

"This serious reduction in due compensation is not the only fault of the formula. It also fails to deal uniformly with all companies. It does not provide for equity and fairness in compensation between different units by ignoring their rate of growth of the business and efficiency of organisation.

"The main reason for which the Government is acquiring life insurance business is to augment the total volume of savings required for implementing the second Five-year Plan. The State is taking over a ready-made country-wide organisation of branches, agencies and personnel, and proposes to pursue more or less identical methods of business. In fixing the compensation, Parliament is now the sole arbiter against whose decision there is no remedy under the Constitution. The legislature is expected to approach the problem of regulating the respective rights of policyholders and shareholders in the business now being taken over in a judicial capacity. The compensation is not coming out of public revenue, but from the existing portfolio of contracts which will be transferred to the Corporation.

"The requirement of fairness is all the more necessary when it is realised that managing agencies have ceased to exist in insurance business since 1940 and the shareholders are mainly from fixed income group. They can ill afford to lose any part of the real value of their investments. It is hoped that, as the representative of the people's will, parliament will respect the shareholders' rights. In the long run, only a society where property rights, individual or collective, are honoured can prosper."

Besides the quantum of compensation, there are also certain other important issues on which the Government will do well to take an early and helpful decision. Thus, the Government should be prepared to allow interest on compensation. It is likely that its payment will be delayed even after the passage of the Bill. There is no reason why the Government should not agree to pay a small interest on this compensation amount. Secondly, the Government must clarify the position of the compensation from the point of view of income-tax. Obviously, compensation amount is not income. So it should not be subject to income-tax. But it would be better for the Government to announce its decision on this question, so that there may be no unnecessary litigation over this issue.

MECHANISATION OF AGRICULTURE
IS IT SUITABLE TO INDIA?

By Daya

THE development of an underdeveloped economy is almost another name for the process of industrialisation in the minds of most people. And as an underdeveloped economy is primarily agricultural in character, the mechanisation of agriculture is considered to be the clearest sign of such a development. Steel mills, on the one end, and tractors, on the other, symbolise for the economist, the politician and the educated layman the "economic development" which is dreamt of by everybody.

The communist and the non-communist, the expert and the laity seem to be agreed on their common enthusiasm for the tractor. It is perhaps only the antiquated Gandhians who have some doubts about it, but when have they understood the complicated processes of economic development which only the experts can comprehend? And is it not a fact that countries with large exportable agricultural surpluses have also the most mechanised agriculture?

Tractor, however, is merely a symbol of mechanised agriculture. It includes other things such as threshers, mowers, reapers, binders and what are called the combine-harvesters. The main function of all these, it should be remembered, is to replace human and animal labour and not to increase the productivity of land. In countries where land is plenty in relation to the people, more land can be brought under cultivation and the total productivity can, thus, be increased. The soil and topography of the land must also be of such a nature as to allow the large-scale use of such implements. Generally, the farms should be large in area and level in their topography to allow the successful use of tractors and combine-harvesters on them.

The United States had all these conditions —abundant land, scarce labour, large and level farms—combined with a rapid development of steel and oil industries in the first decades of the twentieth century. It was in that country, therefore, that large-scale mechanisation of agriculture first started as a natural response in about the twenties of this century. From about 25,000 tractors in 1915, the figure rose to 246,000 in 1920 and to 920,000 in 1930. Since then, the number of tractors in the United States has gone on rising, till in 1950, it was 3,825,000.

Russia's Experience

The Soviet Union, where there was no labour shortage and not much production of oil or steel, felt compelled to mechanise its agriculture from the very beginning. It built its first tractor plant in 1923 and imported a large number of tractors from the U.S.A. till 1932 when, with American technical assistance, it ouilt three new tractor plants in Stalingrad, Kharkov and Cheliabinsk. It should be remembered that, till 1929, Russia's steel production was only about 5 million tons and the production of petroleum about 85 million barrels. Since then, with the phenomenal rise in steel production, the production of tractors and combine-harvesters has been continuously rising, though interrupted during the war.

The mechanisation of agriculture was demanded by no immanent factors in the agricultural situation in the Soviet Union. It was demanded more by ideological factors rather than by the necessities inherent in the situation. The aspiration to overtake and surpass the U.S.A. has been a continuous motivation of the Soviet economy from the very beginning. And thus, if the U.S. agriculture was mechanised, so should be the Soviet's, whether there was any internal necessity or not. The love of mechanisation for mechanisation's sake is, however, deeper ingrained in the valuational ethos of the planner, particularly of the communist variety, than the envious aspiration would seem to indicate. The deepest, however, seems to be the fact that the "economic development" in an underdeveloped economy being essentially an *imitation* of that which had naturally happened in the countries of the West, it comes naturally to be thought that, if we start at the other end with heavy industrialisation and mechanisation of agriculture, we would achieve the same production and consumption levels as are enjoyed by those countries.

Such an imitative impulse in the face of the most heavy odds can, however, be persisted in only because the process of economic development is being undertaken under State auspices. The private *entrepreneur* cannot, for long, persist in an economically harmful enterprise. He has to meet competition from other *entrepreneurs* and has neither the coercive capacity of the State nor the resources of the public exchequer. It was because of this reason that tractors did not make much headway in the European countries before World War II. The investment and operating costs were high, while the size of European farms was small and the topography unsuitable for their use. The most industrialised countries like the U.K., France, Belgium, Germany and Czechoslovakia had only 55,000, 30,000, 5,000, 60,000 and 6,000 tractors respectively in 1939. These figures should be compared with 1,447,000 of the U.S.A. and 483,500 of the U.S.S.R. for the same year. It is only after the war, and in some countries during the war, that a spectacular increase in the use of tractors has taken place.

The use of so many tractors has not meant any increase in the productivity of land. The U.S.A., for example, had an annual yield of 25.6 bushels per acre in corn, 12.3 in wheat and 26.5 in oats during the period 1866-75. In the period 1926-35, when it had a large amount of tractors (1,048,000 in 1935, to be exact), its per-acre yields were 23.9, 13.8 and 27.7, respectively. It is only after 1940 that the per-acre yields have risen all round in the United States and this was mainly due to a greater use of better seeds, better fertilisers and modern agricultural technology rather than more mechanisation in general. The Soviet Union's per-acre yields are no better. In fact, they are even worse than the United States'. They are just about 10 bushels of wheat per acre for 1930-34 and 10.5 bushels for 1935-39. These figures should be compared with the productivity figures for such completely non-mechanised countries as India, China, Iran, Bulgaria or Poland. During the period 1935-39 their wheat-yield per acre was 10.7, 14.9, 17.2, 22.8 and 18.0 bushels, respectively. Even the productivity per man on farms in the U.S.S.R., with the second largest numbers of tractors in the world, is about four and a half times less than that in the U.S.A.

Prerequisites to Mechanisation

Mechanisation of agriculture is, thus, indicated only for those countries where the land is abundant and there is a shortage of labour, i.e., where the land-man ratio is very high. If there is plenty of land to colonise, or if the land per farmer is very high, or if there is an acute shortage of labour for industrial undertakings, then there can be some meaning in mechanising the agriculture of a country. But there is a large amount of disguised unemployment in the agricultural sector, little new land to bring under the plough, and the land per farmer pitifully small, there can hardly be any meaning in introducing mechanisation. If, in spite of such conditions, mechanisation is sought to be introduced, it can only be because of confused ideas about its results or due to a love of mechanisation for its own sake or both.

Further, it is always possible for the State-planners to forget that tractors and combine-harvesters represent costs rather than income in relation to agricultural production as, in the computation of total national income, they count as income rather than costs. The production, maintenance and repair costs, however, are real costs and should be counted as such. A farmer would never treat them otherwise and, in fact, could not do so even if he liked. The alternative would be sheer bankruptcy and he would be quick to realise it, even if he had made such a sophisticated mistake. The State, on the other hand, can afford to ignore such a perspective and continue to believe that tractors are a sign of "economic development," whether they are needed or not. And, unfortunately, it will be able to find a sufficient number of economists to sustain her in that belief. The costs of steel, petroleum and the engineering and repairing skills is prohibitive and uneconomical in an underdeveloped country with little surplus land and large number of people. These scarce resources should, therefore, be used for more profitable purposes than the mechanisation of agriculture in these countries.

Unfortunately, most of the underdeveloped countries, particularly those of Asia, are in such a situation. Their population is large and the amount of arable land per farmer is little. Further, the rate of population growth is generally very high in these countries. With the introduction of maternity clinics, child-welfare centres and general health measures, it is expected to go still higher, at least, in the immediate future. The prospect of economic betterment would perhaps affect in the same direction in the short run. Thus, it is not the labour-displacing devices that are required for welfare development in these countries, but devices that increase productivity with a better and more extensive and intensive use of labour that is already abundant. It is a well-known common place of economic thinking these days that, under conditions of disguised unemployment, the surplus labour can, at least theoretically, be taken off the agricultural sector and used for developmental projects. As Prof. Nurske has argued, the disguised unemployment is, in fact, a disguised saving which is not recognised as such. But, if this is true and we have already a large amount of surplus labour whose proportion is expected to increase with the increase in population, there is no necessity of creating a further surplus through the mechanisation of agriculture at such huge costs.

A disguised advantage of mechanised agriculture is that it releases land for food-crops which is used as feed-crops for the upkeep of draft animals. The disguised disadvantage, however, is that the amount of available manure on farms considerably decreases and makes the application of commercial plant food more necessary than before. It should be remembered, in this connection, that "as far as can be ascertained from prolonged observation, the effect of farmyard manure is more even and lasting, while the reaction of the soil to commercial fertilisers is very strong at first but gradually falls off."* Further, the cattle population remains no more an integral part of agriculture and the farmer becomes much more dependent on the industrial sector than he has ever been before. The psycho-socio-cultural changes that are bound to occur with the mechanisation of agriculture should also be weighed in this connection.

Capital Cost Heavy

On the whole, it seems that mechanisation of agriculture is not indicated, except in some marginal cases, for the underdeveloped countries of Asia and Africa. The heavy capital costs that it involves are prohibitive in the extreme and the same amount of investment can, in most cases, be more profitably made elsewhere. The raising of productivity per acre, rather than per man-hour, should be the aim in these countries where the land-man ratio is low. As Mr. Swarup observes in his book, *Communism and Peasantry*: "A farmer's income is a function of several factors. The chief of them are: (1) the productivity of land; (2) the amount of land at his disposal; and (3) the cost of production." The amount of land per farmer can hardly be significantly increased in these countries. Therefore, the only two remaining ways to increase the income of the farmer, who constitutes the major segment of the population in these countries, are to increase the productivity of land on the one hand and to lower the costs of production, on the other. Or, at least, an increase in the costs of production must be proportionately less than the increase in productivity of the land. This is elementary economics and would never be violated if the ownership is invested in the individual farmer. But, under conditions of State ownership and collectivised agriculture, such a violation could easily take place under the confused ideology which equates "mechanisation" with "economic development" in general. In fact such a violation has already taken place in the Soviet Union, where, after 38 years of continuous attempt at economic betterment, a Prime Minister has ostensively to resign because of insufficient production in the agricultural sector. If this example is not heeded, the same mistake may be repeated elsewhere, for the ideological confusions are certainly not confined to communist countries alone.

MINERVA MILLS LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday the 15th day of June 1956, at 4-30 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December 1955.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. N. D. Sirur who retires under Article 100 of the Articles of Association of the Company but who is eligible for reappointment.

   And to consider, and if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:

   Special Resolution:

   "RESOLVED that in view of the provisions of Section 261 of the Companies Act, 1956, Mr. N. D. Sirur, an Associate of N. Sirur & Co. Private Ltd., the Managing Agents of the Company, who retires under Article 100 of the Articles of Association of the Company, be and he is hereby reappointed a Director of the Company as required by the provisions of the said Section."
4. To appoint a Director in place of Mr. Pratapsinh Mathuradas who retires under Article 100 of the Articles of Association of the Company but who is eligible for reappointment.
5. To appoint a Director in place of Mr. B. D. Kulkarni who retires under Article 100 of the Articles of Association of the Company but who is eligible for reappointment.

   And to consider, and if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:

   Special Resolution:

   "RESOLVED in view of the provisions of Section 261 of the Companies Act, 1956, that Mr. B. D. Kulkarni, an Officer of The Modern Mills Ltd., which Company is under the management of the Managing Agents, Messrs. N Sirur & Co. Private Ltd., who are also the Managing Agents of this Company, who retires under Article 100 of the Company's Articles of Association, be and he is hereby reappointed a Director of the Company."
6. To appoint a Director in place of Mr. Pingle Venkat Rama Reddy who retires by rotation but who is eligible for reappointment.

   And to consider, and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:

   Ordinary Resolution:

   "RESOLVED that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Mr. Pingle Venkat Rama Reddy who has attained the age of 73 years and who retires by rotation under Article 109 of the Articles of Association and that he be and is hereby reappointed a Director of the Company."
7. To appoint a Director in place of Mr. Maneklal Premchand who retires by rotation but who is eligible for reappointment.

   And to consider, and if thought fit, to pass the following resolution, of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

   Ordinary Resolution:

   "RESOLVED that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to Mr. Maneklal Premchand who has attained the age of 67 years and who retires by rotation under Article 109 of the Articles of Association and that he be and is hereby reappointed a Director of the Company."
8. To consider, and if thought fit, to pass the following Ordinary Resolution:

   Ordinary Resolution:

   "RESOLVED that the consent of the Company under the provisions of Section 293 (1) (d) of the Companies Act, 1956, be and it is hereby accorded to the Board of Directors of the Company borrowing monies for the purposes of the Company even if such borrowings (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) together with the monies already borrowed by the Company exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."
9. To consider, and if thought fit, to pass the following Ordinary Resolution:

   Ordinary Resolution:

   "RESOLVED that the Registers, Minute Books and documents of the Company required to be maintained and disclosed under the provisions of the Companies Act, 1956, and particularly under Sections 49, 118, 143, 144, 150, 151, 152, 157, 163, 193, 196, 301 to 304, 307, 356 to 360, 362 and 372 of the said Act, be kept open to inspection by the persons entitled thereto under the aforesaid provisions, to the extent, in the manner and on payment of the fees, if any, specified in the aforesaid Sections, at the Registered Office of the Company on any working day between the hours of 12 noon to 1 p.m. and 3 p.m. to 4-30 p.m. (S.T.) except on Saturdays and between 11-30 a.m. to 1-30 p.m. (S.T.) on Saturdays, Provided However that the Register required to be maintained under Section 307 of the Act shall be open to the inspection of any member or holder of debentures of the Company (if any) as aforesaid during the period prescribed by clause (a) of sub-section (5) of Section 307 of the said Act."
10. To appoint Auditors for the current year and to fix their remuneration.

An explanatory statement concerning Resolutions Nos. 3, 5, 6, 7, 8 and 9 is being posted to the shareholders.

The Transfer Books of the Company will be closed from the 15th day of May 1956 to the 9th day of June 1956, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

By Order of the Board,
N. SIRUR & CO., PRIVATE LTD.,
Managing Agents.
V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, *27th April* 1956.

N.B.—The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Friday the 22nd June 1956, to those shareholders whose names stand on the Register of Members on the 15th May 1956 and who have paid all dues to the Company whether in respect of the calls on their shares, interest thereon or otherwise. The Dividend Warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

This Notice is more particularly addressed to:—

(1) Mr. Jose Floriano Jervis Mecario Pinto, (2) Mr. Victor Rodrigues, (3) Mr. Albert Crowther Lister (Decd.) by Executors, Mr. Norman Lister and George Lister, (4) Mr. Alcina Pacheco Figuerido, (5) Mr. Domingos Rogue De Souza and (6) Mrs. Rosie Martin.

THE INDO-BURMA PETROLEUM COMPANY, LIMITED

(Originally incorporated in Burma)
(Registered in India under Ordinance No. LIV of 1942)

NOTICE IS HEREBY GIVEN THAT THE Forty-eighth Ordinary General Meeting of Members of the Company will be held at the Registered Office of the Company at Clive Buildings, Netaji Subhas Road, Calcutta, on Tuesday the 29th May 1956, at 12 noon, to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of Messrs. M. I. KeekeeBhai and H. J. Silverston, Directors, who retire by rotation, but are eligible for re-election and offer themselves accordingly.

(4) To pass a Special Resolution for the re-election of Mr. J. N. C. Killick who is an employee of the Managing Agents and who retires by rotation and is otherwise eligible for re-election. (See Special Resolution and Special Notice below.)

(5) To appoint Auditors for the year ending 31st December 1956, and to fix their remuneration.

Notice is further given that the Ordinary Share Transfer Books of the Company will be closed from the 14th May 1956 to 28th May 1956, both days inclusive.

AS A SPECIAL RESOLUTION

That Mr. J. N. C. Killick who is an employee of Messrs. Steel Brothers and Company, Limited, the Managing Agents, be and is hereby re-elected a Director of the Company.

Special Notice

The above Special Resolution is in accordance with Section 261(1) (*f*) of the Companies Act, 1956, since Mr. J. N. C. Killick is an employee of the Managing Agents, and it will be necessary for the Shareholders to pass a Special Resolution if they decide to re-elect Mr. Killick a Director.

By Order of the Board,
STEEL BROTHERS & COMPANY,
LIMITED,
Managing Agents.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, *30th April* 1956.

N.B.—A member entitled to attend and vote at the above-mentioned Meeting may appoint a Proxy who need not be a member to attend and, on a poll, to vote on his behalf.

THE SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Ninety-seventh Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Wednesday the 30th May 1956, at 10-40 a.m., for the purpose of receiving the Report of the Directors, passing the Audited Accounts for the half-year ended 31st December 1955, declaring the Dividend recommended by the Directors, electing Directors and Auditors, and for transacting any other ordinary business of the Company.

The Share Register of the Company will be closed from the 10th to the 30th May 1956, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents.

CALCUTTA, *26th April* 1956.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Partners in Progress

ONE OF the most important developments in Indian industry is the new aluminium smelter going up at Hirakud, Orissa. Designed and constructed by the Canadian consultants of Indian Aluminium Company, this 10,000 ton smelter will embody the latest advances and techniques developed in their world-wide research activities. Canadian money, too, will share the costs of this project, to finance a part of which Indian Aluminium Company proposes to issue new capital. The Hirakud smelter will be yet another milestone in the history of this Canadian-Indian partnership of progress.

MORE CONTROL ON CEMENT ENVISAGED

CONSUMERS WILL HAVE TO PAY HIGHER PRICE

THE demand for information on the position of cement was so strong in the Lok Sabha that the Speaker set apart 30 minutes for a discussion on the subject, despite the preoccupation of the House with more important business. The discussion took place last week, with several members participating in it. Mr. T. T. Krishnamachari, Minister for Commerce and Industry, replied to the queries put by the members. The information provided by him covered wide ground and gave an idea of the Government's mind on this important basic industry. The sum and substance of his observations was that the industry should be prepared for more controls, especially on distribution and prices. He envisaged the possibility of a pooling arrangement, whereby the imported cement and the domestically manufactured cement would be sold at a uniform price, a system similar to the one now being followed in the case of iron and steel. He further thought that it might be necessary to arrange for imports of cement through the State Trading Corporation now being actively formed. This Corporation is expected to handle imports of several articles, including steel, from the communist and the free world.

As the subject is of considerable importance, it is better to record the reported version of the Minister's remarks in the Lok Sabha. "Very soon," said Mr. T. T. Krishnamachari, "we shall be able to announce an arrangement by which the State Trading Organisation will take over the import and distribution of cement." Proceeding, he said: "We have now decided to exercise a large measure of control over distribution, because we have to tide over a period of two years, certainly, and, perhaps, even more, when stricter control over movements will have to be maintained and, perhaps, some imports will have to be made." Giving an indication of the functions of the State Trading Corporation in relation to cement, the Minister said: "The State Trading Corporation that we are setting up would take over control over distribution in the same way as is being done in the case of iron and steel. Imports will be channelled through this organisation and distribution will be arranged in such a manner that it will be reasonably efficient, but, at the same time, we will have a fair amount of control over it, without spending much money on it."

What It Means

From the foregoing quotations, it is clear (*a*) that imports of cement are certain and will continue for at least two years, if not more, (*b*) that these imports will be done not by the private sector but by the State Trading Corporation, (*c*) that the imported cement will be pooled with Indian cement and that both cements will be sold at one price, and (*d*) that the said Corporation would also distribute the imported cement within the country without spending much money on it. The position in regard to (*d*) is not quite clear. What is the extent of internal distribution that will be done by the Corporation? Will it distribute the imported cement up to the consumer stage or up to the pool, or wholesale dealers' stage? More information is necessary to know what exactly is in Government's mind. But, as the Government does not want to spend much money on this job, it is reasonable to infer that it will only import the cement and hand over the distribution of such cement to the existing trade channels, subject to its overall direction and supervision.

If this is all that is contemplated, we do not think the cement interests will raise any serious objection to the Government's move. Other sections of the mercantile community, however, may object, but the Government's reply to it will probably be that, since import of cement is a new trade, the livelihood of existing importers is not deprived and as such it can have no serious grievance against the State. The Government may further argue that, since the high-cost imported cement has to be subsidised by the low-cost indigenous cement, the import charges must be kept at as low a level as possible. Imports on State account through the State Trading Corporation will serve this object better than imports through private trade channels, inasmuch as the latter will have to be given commission and other charges amounting to a sizable amount. In other words, it can be conceivably argued that, if imports are done on no-profit basis through the State Trading Corporation, the quantum of subsidy to such cement will be less and the price of indigenous cement need not be raised heavily to achieve a uniform price. The force of this argument is strong, but it is subject to the assumption that the State Corporation can import cement more efficiently than private importers. The assumption is a big one.

Whatever may be the justification for conferring a monopoly of cement imports on the State Trading Corporation, there can be none whatever for allowing that Corporation to intrude into internal trade in cement. There is already a well-established machinery for distribution of cement. The cement marketing wing of the Associated Cement Companies has done pioneering work in this direction and has developed the market for cement through scientific research, propaganda, and efficient distribution. It was in charge of distributing the entire cement produced in the country during the war and early post-war years. It will be a waste of time and resources if this established organisation is ignored and a new one is formed for undertaking distribution. The A.C.C. is well known for its co-operative attitude and is already working under Government control and direction. Even Mr. T. T. Krishnamachari admitted in Lok Sabha that there was no difficulty in making the A.C.C. toe the Government line.

Demand Jumps Up

The necessity for importing large quantities of a simple basic raw material such as cement, for the production of which the country is well equipped by Nature, has arisen because the the demand has outstripped the supply. From 580,000 tons per month in the third quarter of 1955, the demand rose, according to Mr. T. T. Krishnamachari, to 830,000 tons per month in the first quarter of 1956 and is running at the rate of 910,000 tons per month in the current quarter. In other words, the rate of consumption has gone up from 6.96 million tons per annum six months ago to 10.92 million tons per annum now. Commenting on this phenomenal increase in demand, the Minister said: "So the demand has occurred with such rapidity that it is almost impossible to take note of it and provide against it. After all, it takes about 18 months to two years even to expand a cement factory, let alone establish a new one, and, in this connection, I would like to tell the House that, in August 1954, when I mentioned that our target for steel production should be six million tons and that our target for cement production should be in the region of ten million tons, many people thought that I was being extremely rash. But, today, we are thinking in terms of a target of 16 million tons of cement and I say that our target of 10 million tons will not be adequate at the end of the plan period. The point is that, in an expanding economy, however wise you might attempt to be and however bold you might be, the demand overtakes any provision we make."

The Minister then gave an account of what is being done to increase production in the country. He disclosed that the Government had already licensed a number of new units and substantial expansion in the existing ones. As a result, the aggregate capacity of the industry is expected to reach 12.1 million tons. This, however, does not necessarily mean that annual production will be at this rate when all the expansion plans are fulfilled, for the actual production might be a little below the capacity. From the present level of 5 million tons per annum, production is likely to touch, according to the Minister's estimate, 7.5 million tons in the first quarter of 1957 and within about nine or ten months thereafter 9 million tons. Proceeding, he remarked:

"That is the best that we could possibly do in the present circumstances. Members ask whether the Planning Commission has decided to raise the target to 16 million tons. Discussions are going on. It is not that the Planning Commission is averse to the target. The real trouble is whether we will be able to carry the cement that is made and also the raw materials that are necessary to those factories."

With the demand thus far exceeding the supply, some tightening of the existing control over distribution is inevitable. The Government may find it necessary to appoint a full time controller for cement, as has been done for steel, and give him a bigger outfit than the existing one, in order to discharge his responsibility efficiently. While thus there is a case for widening the control, it is to be hoped that this will be done in such a way as not to produce a restraining effect on expansion in production.

It is in this context that Mr. Krishnamachari's remarks on prices of cement acquire special significance. He observed that the price of cement would be decided according to the nature of supply and added by way of elucidation:

"We are thinking in terms of one equalised price. To the extent it is possible for us to reduce the price from time to time in relation or in proportion to the supplies available, the Government will certainly do it, but so long as we do not have the supplies, one of the ways by which we can inhibit the demand is to raise the prices. And I think that is a technique that will be increasingly followed by the Government in regard to those articles which are in short supply, because we do not want an inflationary spiral."

The aforesaid observation means that the method now being followed for fixing the price of steel will be applied to cement also. There will accordingly be a retention price and a selling price for cement. The factories will get the former price, while the consumers will pay the latter. Naturally, the retention price will be appreciably below the consumer's price. The difference between the two will go to the pool to be utilised for subsidising foreign cement.

The need for all this will not have arisen had the Government followed a liberal policy in fixing the price for cement. It will be recalled that the Government fixed too low a price for cement and thereby reduced the incentive to manufacturers for expanding their productive capacity. It disregarded even the modest recommendations of the Tariff Commission. This policy was also responsible for retarding the growth of new enterprises in this industry. A liberal price for cement would have attracted new *entrepreneurs* into this field, made it easy for them to raise capital, reduced the dependence on the old well-established manufacturers alone for raising production and, above all, enabled the supply to catch up with the demand. The main reasons for the parsimonious policy followed by the Government in fixing the cement prices were ideological considerations and lack of *timely* foresight. The profit-motive was considered as something derogatory and unworthy of being adopted as a device for securing expansion in production. The result is that the country is today compelled to import cement, although Nature has richly endowed it with all the raw materials necessary for producing cement. Valuable foreign exchange, which could be utilised for importing other goods and services that cannot be easily had in the country and on the availability of which depends the success of the second Plan, has to be utilised for cement. This is what happens when a Government exercises too much control, tries to interfere unduly with the operation of economic forces and discounts the value of profit-motive.

Supply of Limestone

A brief reference may now be made to the other points that emerged from the discussion. Mr. Bansal, a Congress member, asked whether the Government had looked at the problem of cement supply from a regional point of view, so as to ensure supplies quickly and also to minimise railway movement and cross-movement. Answering this question in the affirmative, Mr. Krishnamachari said: "We are examining this matter further to see how best we can make it more efficient. But regionalisation is not always possible, because the availability of limestone and coal does not coincide everywhere with the demand in that region." Dealing with availability of limestone, he informed the House that he had asked the Minister for Natural Resources and Scientific Research to get a correct assessment of the total availability of limestone in the country and to keep on exploring new areas and that the latter had promised to take this matter in hand.

Another Congress member, Mr. A. V. Thomas, asked whether Travancore-Cochin would have more than one factory now in existence. This question, said Mr. Krishnamachari, was difficult to answer, considering the fact that "the existing Travancore-Cochin factory is the highest cost unit that we have, and they (the factory) complain even now that the price allowed to them is not adequate, though they have a certain amount of advantage in regard to freight. The factory may, perhaps, expand, but, even then, it would have certain economic disadvantages loaded against its further development."

Replying to the remark of a Communist member, Mr. V. P. Nayar, that to leave the

UPWARD TREND IN EARNINGS OF TRAVANCORE RAYONS KEPT UP

DIVIDEND RAISED—OUTLOOK PROMISING

THE year ended 31st December 1955 constitutes a record one in all respects for the Travancore Rayons Ltd. (Managing Agents: Messrs. Emcete and Sons [Travancore] Ltd., Rayonpuram, Travancore-Cochin State). The production of yarn and cellulose film, in terms of weight, rose by 931,000 lbs. to a record of 5,769,000 lbs. Sales increased by over 15 per cent., that is, by Rs. 25 lakhs to Rs. 186.69 lakhs, thus well absorbing the larger production. Expenses also went up by about Rs. 23 lakhs to a new high of Rs. 126.96 lakhs. The gross profit improved by Rs. 6.96 lakhs to a record level of Rs. 54.64 lakhs. The net profit, at Rs. 25.40 lakhs, is the highest earned so far and represents an increase of Rs. 3.09 lakhs over the year.

In consonance with the above-noted progress in the working of the Company, the Directors have stepped up the dividend on ordinary shares for the second year in succession to 7½ per cent. from the maiden distribution of 5 per cent. for 1953 and 6¼ per cent. for 1954. The aforesaid increase in dividend on ordinary shares has been made after setting aside a larger sum of Rs. 14 lakhs to the deferred taxation reserve, as against Rs. 12.75 lakhs provided last year, in view of the heavy tax liability likely to arise in future.

The following comparative table presents the salient features of the Company's working results for the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	186.69	161.65	152.97	87.92
Closing stocks	25.76	31.00	40.71	56.15
Expenses	126.96	104.32	97.23	96.42
Gross profit	54.64	47.68	40.38	17.47
Managing Agents' commission	2.16	1.77	1.51	0.66
Provision for depreciation	27.08	23.59	23.31	12.45
Net profit	25.40	22.31	15.56	4.35
To deferred taxation reserve	14.00	12.75	..	..
Dividends—				
5% preference (tax free)	2.50	2.50	12.50*	0.94†

%	(7½%)	(6¼%)	(5%)	..
Carry forward	2.04	1.23	0.41	2.34

* For the five years 1949 to 1953.
† For the three years 1946 to 1948.

An encouraging feature of the Company's working during the past four years, as will be seen from the above table, is that, while sale proceeds have gone up by Rs. 98.77 lakhs, expenses have risen by only Rs. 30.54 lakhs, so that the ratio of gross profit to sales has moved up from 19.9 per cent. to 29.3 per cent. The encouraging results of the year are due to the increase in production noted above, following the successful completion of the expansion plans during the year, with the erection of (1) six Butterworth spinning machines of aggregate rated capacity of 1.8 tons of rayon yarn per day, (2) a second transparent cellulose film plant of a rated capacity of 3 tons of film per day; (3) a moisture-proof plant, capable of producing 2 tons of heat-sealing moisture-proof film per day, and (4) printing and bag-making machines to print designs and running matter on the film and to make bags out of the same. With the completion of the expansion programme, the Company's daily output rose by about 1.8 tons of rayon yarn and about 3 tons of trayophane (transparent cellulose film). The production for the year under review does not, however, reflect the full effect of the aforesaid expansion, which will be felt in the current year. The good demand which the Company's production attracted enabled the increased production to be well absorbed. The import policy of the Government was also helpful to the Company, in that it continued to take due account of the indigenous interests, although in respect of transparent cellulose film, the Government was obliged to allow some import to meet the pressing demand.

The balance-sheet as on 31st December 1955 shows that the Company has yet to build up its reserves. As against a paid-up capital of Rs. 150 lakhs, it has no reserves at all, except for a sum of Rs. 30 lakhs accumulated on deferred taxation reserve account. The current liabilities aggregate Rs. 142.19 lakhs, of which loans (secured and unsecured) from the State Government and banks account for Rs. 91.97 lakhs; a year before this item stood at Rs. 96.17 lakhs. The reduction in outstanding loans is mainly due to the repayment of the debenture loan to the State Government to the tune of Rs. 5 lakhs. The gross block shows a phenomenal increase of Rs. 105.48 lakhs during the year, of which plant and machinery alone account for Rs. 101.34 lakhs, bringing the total fixed capital expenditure up to the end of the year to Rs. 380.56 lakhs. This stands written down to a book value of Rs. 253.39 lakhs. The current assets aggregate Rs. 71.58 lakhs.

The outlook for the Company is promising. The Directors' report point out that the demand for the Company's products is constantly increasing. The tempo of economic expansion in the country is steadily helping the Company to enlarge its market. It is the firm intention and eager desire of the Directors to fulfil amply the targets allotted to this industry under the second Five-year Plan. The Directors have in view the stepping up of the rayon production by another 1.8 tons and that of cellulose film by another 4 tons per day by 1957-58.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 15-12 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 5 per cent. per annum.

INDIAN WOOD PRODUCTS' RECORD PROFIT

The decision of the Directors of the Indian Wood Products Company, Ltd. (Managing Agents: Messrs. Gillanders Arbuthnot & Co., Ltd., Calcutta), to raise the dividend on the Company's shares for the year ended 30th September 1955 from 27½ per cent. to 30 per cent., by stepping up the final distribution from 17½ per cent. to 20 per cent., is fully in consonance with the impressive performance of the Company during the year under review. The gross profit has gone up from Rs. 16.18 lakhs to Rs. 20.24 lakhs, a rise of more than 25 per cent. over the year. This increase in profit follows a fractional improvement of Rs. 0.23 lakh noted in the previous year.

The profit for the year under review, it may incidentally be noted, is a record one in the history of the Company—which is 36 years old, having been established in 1919—and exceeds the previous highest of Rs. 18.35 lakhs earned in 1951-52. After providing for Managing Agents' commission, depreciation and taxation, the net profit amounts to Rs. 9.97 lakhs—also a record—as against Rs. 7.66 lakhs for the previous year. A sum of Rs. 3 lakhs has been added to the general reserve, which had received Rs. 2 lakhs in the previous year. This is the second year in succession for which the dividend is being stepped up after the increase in capital by the capitalisation of Rs. 5 lakhs from the reserves in March 1953, as will be seen from the following comparative table which presents the salient features of the Company's working results for the last four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1955	1954	1953	1952
Sale proceeds	41.81	37.41	34.01	34.94
Cost of manufacturing	20.39	20.07	17.82	17.01
Other expenses	1.39	1.29	1.32	1.28
Gross profit	20.24	16.18	15.95	16.35
Managing Agents' commission	2.13	1.82	1.68	1.74
Provision for—				
Depreciation	0.83	0.86	1.04	1.12
Taxation	7.31	5.84	5.58	6.27
Net profit	9.97	7.66	7.65	9.22
To reserves	3.00	2.00	2.72	3.00
Dividend	6.00	5.50	5.00	5.25
%	(30%)	(27½%)	(25%)	(30%)†
Carry forward	2.77	1.80	1.63	1.70

† Final dividend of 15 per cent. on the increased capital of Rs. 20 lakhs raised by the capitalisation of Rs. 5 lakhs in March, 1953.

The profit for the year under review would have been higher but for the high cost of timber on account of the higher royalty charged by the U.P. Government. The Directors expect the effects of this higher royalty on the production costs to be more keenly felt from the current year onwards. It will be noted from the table above that the surplus brought forward for the current year is higher; this additional sum is to meet the dividend tax levied in the last Union Budget which will cost the Company Rs. 85,000 on the dividend for the year under review.

The balance-sheet of the Company as on 30th September 1955 discloses an excellent financial position. The paid-up capital of Rs. 20 lakhs, of which a sum of Rs. 8 lakhs represents that raised by the capitalisation of reserves, is supplemented by reserves and surplus amounting to Rs. 23.92 lakhs. The provision for taxation stands at Rs. 4.88 lakhs. The current liabilities amount to Rs. 11.38 lakhs. The gross block of the value of Rs. 19 lakhs stands well written down to Rs. 4.65 lakhs. The current assets amount to Rs. 55.53 lakhs, of which cash balances alone account for Rs. 10.03 lakhs providing substantial cover for current liabilities and provision for taxation.

The Rs. 10 fully-paid up shares of the Company are being currently quoted at Rs. 39-12 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 8 per cent. per annum, free of income-tax.

NATIONAL RAYON'S PROFIT MAINTAINED

DIVIDEND, HOWEVER, STEPPED UP

THE shareholders of the National Rayon Corporation Ltd. (Managing Agents: Messrs. Chinai & Co. (Private) Ltd., Bombay), may have every reason to be thankful to the Directors of the Company for the increase in dividend on ordinary shares of the Company from 10 per cent. to 12 per cent. declared for the year ended 31st December 1955. This is the second increase in succession, the distribution for the previous year having been stepped up from the maiden dividend of 9 per cent. paid for 1953. The proposal to pay a higher dividend for 1955 is, however, not in consonance with the Company's working results for the year under review and is, in fact, contrary to their own declared policy, announced only a year ago, to maintain the distribution at 10 per cent. for a few years to come.

At the last annual general meeting of the Company, the Chairman had declared that, in the interest of both the shareholders and the Company, it was desirable to maintain the dividend at one rate and alter it only when a higher rate was justified and the Company's profit permitted. The Chairman had also justified this policy on the ground that the Company had to conserve its resources to finance a part of its large expansion programme. Some of the shareholders present at the annual meeting, however, contended that it was not necessary for the Chairman to make such a categorical statement in respect of dividend and wanted that portion of the speech to be deleted. Their request was not conceded by the Chairman and we also commended the Directors' wise policy on the ground that a certain amount of self-restraint in respect of dividend in the initial years of the Company would be in the long-term interests of shareholders themselves.

The Directors' decision to go back on their policy in less than a year may have been justified if at least the profit had recorded a sharp rise; but it had not done so. The gross profit for the year under review amounts to Rs. 115.26 lakhs, as compared with Rs. 115.78 lakhs for 1954, to which level it had risen from Rs. 93.17 lakhs earned in 1953. The net profit (after providing for Managing Agents' commission and depreciation) has actually declined to Rs. 58.29 lakhs after three years of successive improvement from Rs. 21.01 lakhs earned in 1951 to Rs. 63.70 lakhs in 1954. A good part of the profit has no doubt been conserved, as will be shown below, but the Company commenced building up its reserve fund only last year and has to strengthen it further. It is surprising that the Directors' report for the year under review does not contain any explanation for the change in their policy

The Company has no tax liability in respect of the year under review also. No provision has, therefore, been made for taxation. On the other hand, the deferred taxation reserve has been strengthened by the addition of Rs. 5 lakhs. The general reserve, which was created last year with an allocation of Rs. 15 lakhs, has received a further sum of Rs. 10 lakhs. A debenture redemption fund has been created by allocating Rs. 10 lakhs from the year's profit. A sum of Rs. 4.16 lakhs has also been utilised out of the profit to write off the debenture issue expenses.

The following comparative table shows the progress of the Company's working during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	342.50	296.37	285.13	211.21
Stocks of finished yarn and stock-in-process	16.08	10.92	15.85	59.60

%	(12%)	(10%)	(9%)	..
Carry forward	5.12	5.72	5.01	0.39

† For four years 1949 to 1952.

It will be noted from the above table that the increase in sale proceeds, has been more than offset by the rise in cost of raw materials, stores, etc., consumed and in other expenses. Of the rise in expenses, salaries, wages and allowance alone account for Rs. 17.90 lakhs and electricity charges for Rs. 4.10 lakhs. The increase in the former is due to the employment of additional workers, necessitated by the expansion in plant, and the rise in salaries to new scales of wages as per award of the Labour Appellate Tribunal with retrospective effect. The increase in electric charges is accounted for by the purchase of power from the power pool at much higher rates for operating the expanded plants.

The balance-sheet as on 31st December 1955 shows that the reserves and surplus aggregate Rs. 93.53 lakhs (as against a paid-up capital of

Points From The Chair

Mill Cloth Production

"I WOULD only like to clarify that those of us expressing the industry's point of view are not at all opposed to the development of handlooms and Ambar Charka on sound and scientific lines. I am quite in favour of giving utmost facilities and help within practical and feasible limits to enable the handloom weavers to stabilise and consolidate their position and at the same time the mill sector should also be allowed to expand in a normal way so that the position of cloth supply both for internal and external markets may continue to remain satisfactory. It should be appreciated that so far as our own narrow interest is concerned our interest will be served better by the present policy of freezing mill production rather than the policy that we advocate of increasing production and competition in the mill sector. I welcome in this connection the assurances recently given by the Prime Minister that Government will not take any risk in the matter and that nothing will be finally decided without a thorough and proper examination of all the different aspects of this complicated question."

G. D. SOMANI,
Shree Niwas Cotton Mills Ltd.

Economics of Aluminium Production

"The electric power required in very substantial quantities for the production of aluminium may be obtained from several sources. Most of the new aluminium capacity in the United States has been or is being based on coal or gas or lignite as the source of power. These thermal plants are being built at the source of fuel and in close proximity to large markets for primary aluminium. Plants so located permit savings to be made in the outward transportation of the product and are further buttressed by the protection given the domestic United States market. Leaving aside tariff protection, the true economics of such developments will no doubt be influenced by the longer range availability and price of the fuel sources as well as the demand for energy in such industrialised areas by those willing to pay higher power prices than aluminium producers. It is difficult to predict what impact these and other forces will have on the true cost and availability of such power over a period of time. Under present conditions, however, the development of these production sites based on thermal power offers vigorous competition to those like ourselves who sell aluminium in the United States."

NATHANAEL V. DAVIS,
Aluminium Ltd.

State Finance Corporation

"With regard to terms and conditions on which the Corporation extends financial accommodation, the opinion has sometimes been expressed that a few of these are stringent and that particularly the rate of interest at 6 per cent., may be regarded as on the high side for a corporation which has been established for the specific purpose of giving financial assistance to small- and medium-scale industries. In this connection, may I point out that the rate of interest has to be viewed in the total context including the general level of interest rates in the country? Moreover, as you are aware, there has been a tendency for interest rates to rise. Apart from these considerations, an important reason why the Corporation is unable at present to reduce the rate of interest is that it has to pay a minimum guaranteed dividend of 3½ per cent. to its shareholders free of income-tax. If the Corporation raised its own resources at a cheaper rate it would be in a position to formulate a more flexible policy in charging the interest rates on its loans and advances."

PURSHOTTAM KANJI,
Bombay State Financial Corporation.

(Concluded from previous page)

Rs. 333.75 lakhs), of which general reserve accounts for only Rs. 25 lakhs, deferred taxation reserve for Rs. 50 lakhs and debenture redemption reserve for Rs. 10 lakhs. During the year under review, the Company raised debenture capital to the extent of Rs. 150 lakhs, secured by 5½ per cent. mortgage debentures (1965-70), the outstandings on account of which along with accrued interest, amount to Rs. 154.63 lakhs. Out of the proceeds of the debenture issue, the Company has repaid its outstanding loan of Rs. 40 lakhs, taken from the Industrial Finance Corporation of India, as also the loans from banks. The current liabilities aggregate Rs. 48.35 lakhs. There has been an addition of Rs. 120.25 lakhs to the gross block during the year, bringing the total value to Rs. 684.71 lakhs. This stands written down to a book value of Rs. 479.71 lakhs. The current assets aggregate Rs. 178.28 lakhs.

The third stage of expansion of the Company's rayon plant taken in hand last year, as well as the putting up of the caustic soda chlorine plant, are progressing according to schedule. The bringing into operation of these plants, however, has to be co-ordinated with the availability of additional electric power required for operating these plants.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 247-8 *cum-div.* On an *ex-div.* basis, the yield works out to 5.1 per cent. per annum.

DUNLOP RUBBER COMPANY

The Dunlop Rubber Company, Ltd., London, has earned a net profit of £2,857,531 for the year ended 31st December 1955, which represents a slight decline from that of £2,902,972 earned in 1954. The transfer to the general reserve has been cut from £1,000,000 to £850,000. The preference dividends absorb £451,447, as against £364,506. The ordinary dividend has been maintained at 14 per cent. per annum, including an interim distribution of 4 per cent. made in December 1955. The surplus left to be carried forward is £1,498,490, as against £1,494,523 brought in from 1954.

COMPANY MEETINGS AND DIVIDENDS

Notices

THE TRAVANCORE RUBBER AND TEA COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Twelfth Annual General Meeting of the Company will be held on Monday the 4th June 1956, at the Registered Office of the Company at Pathirappally, at 11.30 a.m., to transact the following business:—

1. To receive and adopt the Audited Accounts and Balance Sheet for the year ended 31st December 1955 and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors.

   Note.—Sri V. O. Markos, one of the Directors who is to retire and is eligible for re-election, will complete 65 years of age at his next birthday in June 1956 and a resolution that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him is necessary. Special Notice of the following resolution for exempting him from the age limit, as required by Section 281, is hereby given:—

   "Resolved that Sri V. O. Markos, who will be aged 65 years next birthday, be and is hereby re-elected as a Director, and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

   A copy of the explanatory statement under Section 173 of the Companies Act, 1956, is available for inspection of the Shareholders at the Registered Office of the Company during office hours of the Company on all working days till the date of the above meeting.
4. To appoint Auditors.

The Transfer Books and Register of Members of the Company will remain closed from 18th May 1956 to 5th June 1956 (both days inclusive).

Any Shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
THE TRAVANCORE RUBBER & TEA CO., LTD.,
Per Pro ASPINWALL & Co. (TRAVANCORE) (PRIVATE) LTD.,
V. C. THOMAS,
Managing Agents.

PATHIRAPPALLY, 3rd *May* 1956.

THE WEST COAST ELECTRIC SUPPLY CORPORATION LIMITED

Registered Office:

INTERIM DIVIDEND

NOTICE IS HEREBY GIVEN THAT THE Directors have declared:

(*a*) An interim dividend at 5 per cent. free of Income-tax on the Ordinary Shares for the half-year ended 30th September 1955.

(*b*) Half-yearly dividend on Preference Shares at 2½ per cent. less tax.

The Share Transfer Books of the Company will be closed from 16th to 22nd May 1956 both days inclusive.

The Dividend Warrants will be posted on or after 28th May 1956 to those shareholders whose names stand on the Register of Members as on 16th May 1956.

By Order of the Board,

FOR CHANDRIE & Co., (PRIVATE) LTD.,

M. SUBRAMANIAM,
Chief Accountant,
Managing Agents.

MADRAS, 2nd *May* 1956.

COONOOR TEA REDUCES DIVIDEND

SHARP FALL IN PROFIT OF RAJALAKSHMI MILLS

Coonoor Tea Estates Co., Ltd.

THE directors of the above Company (Secretaries: Messrs. Matheson, Bosanquet & Co., Private Ltd., Belmont, Coonoor) submit the audited accounts of the Company for the year ended 30th September, 1955.

The profit for the year after providing for depreciation, taxation, etc., was Rs. 90,358 (Rs. 2,00,295) to which is to be added the balance brought forward from last year of Rs. 77,214 (Rs. 58,355), making a total of Rs. 1,67,572 (Rs. 2,58,651). After deducting preference dividend of 6 per cent. Rs. 9,000 (Rs. 9,000) and ordinary interim dividend of 10 (10) per cent. Rs. 24,986 (Rs. 24,986) there is a balance of Rs. 1,33,586 (Rs. 2,24,665). The directors now recommend the following further appropriations:

A final ordinary dividend of 15 (25) per cent. free of income-tax absorbing Rs. 37,479 (Rs. 62,465) and transfer to general reserve Rs. 95,000 (Rs. 60,000). On approval of the above appropriations, the balance of Rs. 1,107 (Rs. 77,304 after paying a bonus of 10 per cent. absorbing Rs. 24,896) is to be carried forward. The dividend, as stated in the circular dated 1st November 1955, will be paid only to holders of the old shares bearing distinctive Nos. 1 to 24,986.

Tea crop	1955	*Estimate*	1954
	lbs.	lbs.	lbs.
Coonoor	2,70,403	2,40,000	2,61,052
Adar	50,898	50,000	
Bought leaf ...	1,01,076	1,70,000	
Total ...	4,22,377		

The cost of production was 163.07 (108.39) cts., the increase being attributable mainly to the value of export quota purchased, fall in tea prices and purchase of bought leaf. The crop was sold at a net average of 210.01 cts., compared with 231.08 cts. per lb., obtained in previous season.

Estimates 1955-56:—A crop of 3,70,000 lbs. is estimated. Cost of production is estimated at 146.04 cts. including 21.58 cts. for manuring. The estimate for capital expenditure covers the following:—Factory extension Rs. 55,000, labour quarters Rs. 21,600, packing materials stores Rs. 3,000, staff quarters Rs. 5,000 and Fermenting tables Rs. 1,200.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	3,99,860	Block ...	10,97,473

		Investments	52,500
		Cash ...	20,008
Rs.	14,71,420	Rs.	14,71,420

Rajalakshmi Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. B. Rangaswamy Naidu and Sons, Uppilipalayam) submitted the audited accounts of the Company for the year ended 31st December, 1955.

After deducting all working expenses and interest and providing Rs. 8,30,905 (Rs. 1,20,511) for depreciation, the year's working has resulted in a net profit of Rs. 2,40,870 (Rs. 8,56,915). With Rs. 12,337 being the balance profit carried forward from last year, there is a balance of Rs. 2,53,207 (Rs. 8,56,337). The directors have paid out of this Rs. 4,126 (Rs. 1,000) as donation leaving a balance of Rs. 2,49,081 (Rs. 8,55,337). Adding to this a sum of Rs. 2,00,000 (*nil*) appropriated from the dividend equalisation reserve, there is a sum of Rs. 4,49,081 (Rs. 8,55,337) to the credit of profit and loss account. The directors recommend to dispose of the same as follows:—

To provision of taxes Rs. 1,25,000 (Rs. 3,80,000), to pay a tax free dividend of 6½ per cent. on preference shares Rs. 13,000 (Rs. 13,000), to pay a tax free dividend of 20 (20) per cent. on the ordinary shares Rs. 3,00,000 (Rs. 3,00,000) and to carry forward to next year Rs. 11,081 (Rs. 12,337 after placing Rs. 1,50,000 to machinery replacement reserve).

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	17,00,000	Block ...	22,79,861
Reserves ...	32,00,009	Stock-in-trade	13,33,169
Provision for taxation ...	7,07,009	Stores ...	2,17,221
Liabilities ...	7,08,413	Debts, deposits and advances ...	15,26,212
Profit and loss account ...	2,49,081	Investments ...	11,09,167
		Cash ...	98,873
Rs.	65,64,503	Rs.	65,64,503

Bombay Dyeing and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Nowrosjee Wadia and Sons (Private) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December, 1955.

The profit for the year, after making a provision of Rs. 29,50,000 (Rs. 18,50,000) for taxes amounts to Rs. 25,30,350 (Rs. 18,60,332). Adding thereto the balance brought forward from the accounts of the previous year of Rs. 52,579 (Rs. 2,00,000) the total comes to Rs. 25,82,929 (Rs. 20,60,419). From this is deducted the amount paid on 29th September 1955 as *ad-interim* dividend at the rate of Rs. 7-8 (Rs. 7-8) per share, free of income-tax, Rs. 7,52,940 (Rs. 7,52,940) leaving a surplus of Rs. 18,29,989 (Rs. 13,07,479). From this sum the directors recommend payment of a final dividend at the rate of Rs. 12-8 (Rs. 12-8) plus a bonus of Rs. 5 (*nil*) per share, free of income-tax absorbing Rs. 17,56,860 (Rs. 12,54,900) leaving the balance of Rs. 73,129 (Rs. 52,579) to be carried forward. The directors trust that the results of the year's working will be considered satisfactory.

During the early part of the year, prices of cotton remained steady, but declined somewhat on expectations of a bumper crop of more than 50,00,000 bales. Later, the announcement by Government of a reduction in the export duty on certain varieties of cotton gave a fillip to the market. Due to unseasonal rains and floods in August and October, the cotton crop suffered some damage with the result that prices of staple varieties hardened, and at the close of the year the cotton market displayed a firm tendency with prices ruling much higher than at the end of the previous year.

Control on the production of certain varieties of yarn and cloth continued during the year. In March 1955, the Textile Commissioner placed a restriction on the production of printed cloth by mills, and fixed quarterly quotas on the basis of peak production of past years. Conditions in the cloth market were dull in the early part of the year, but later demand revived and the offtake was well maintained.

Under the Finance Act of 1955, the Government of India changed the basis for collection of excise duty from linear yard to square yard, and the duty was fixed at 9 pies per square yard for coarse and medium cloth, and 18 pies per square yard for fine cloth, inclusive of the handloom cess.

Free licensing of export of cloth continued during the year, but the total quantity of textiles exported from India during 1955 amounted to approximately 815.5 million yards, as against 898 million yards in 1954. The Company, however, maintained its export business in various overseas markets, although in certain countries, such as Australia, import restrictions were tightened progressively. During the first half of the year prices of yarn in the local market declined slightly, but later due to increased demand prices improved.

In January 1955, the Government of India decided to permit exports of yarn on a limited scale. The quota allowed to each mill for export was gradually increased from 40 per cent. to 66⅔ per cent. of the mills' actual deliveries in the local market over 120 per cent. during each quarter. In accordance with this relaxation, the Company was able to entertain some export business for yarn at fairly good prices.

In the last report, reference was made to the orders placed for the new warp ring spinning frames for the Spring Mills, and the Barber Colman high speed automatic spoolers and warpers for the Spring and Textile Mills. This new machinery valued at Rs. 59,53,097 was received and installed, and is working satisfactorily at both the Mills.

The directors are very glad indeed to report that after prolonged negotiations with the Government of India, the Company was granted an import licence for the installation of 1,206 automatic looms for the Spring Mills. The shipment of the new looms will commence from the middle of the current year, and deliveries will be completed by the end of 1957. These looms will be of the most modern type and of the highest quality obtainable, and will replace 1,742 existing obsolete power looms. Simultaneous with the installation of these looms, a second shift will be started at the Spring Mills, and it is hoped that by the end of 1957 the output will be doubled in this Mill. This programme alone will give fresh employment to approximately another 1,500 employees.

In consonance with the policy of keeping the mill machinery up-to-date, new Sizing Machines have been ordered to replace entirely the existing equipment at the Spring Mills. As the present Bleach and Dye House cannot meet the demand on the Company for finished goods, and as the existing Works have become very congested and out of date, it has been decided to construct a new Bleach Works at the Textile Mills, to which some of the existing machinery will be transferred, and a most modern bleaching range capable of an output of 2,40,000 yards per day of two shift working will be installed along with new dyeing and finishing equipment. This plant will double our present output of finished goods, and sufficient space has been left to increase the variety of finished goods at a later stage. The construction of the building has begun, and orders for machinery for the first stage have already been placed. It is anticipated that the new Bleach Works will go into production during the first half of 1957.

The directors are glad to report that National Peroxide Ltd., about which a reference was made in the last report, commenced manufacturing operations on 15th February, 1956. The quality of hydrogen peroxide manufactured by this Company is fully upto standard of the imported British product.

In order to give a clearer picture to the shareholders, the directors have decided to keep the depreciation figures as actually allowed by the income-tax authorities. The excess over this amounting to Rs. 40,17,040, plus Rs. 10,35,701 development rebate credited in 1954, have, therefore, been transferred from the machinery deterioration and building deterioration funds and credited to the rehabilitation and development account. This explains the reason why in the profit and loss account we have shown Rs. 26,86,590 for depreciation, and yet there is a reduction in deterioration funds shown in the balance-sheet, as compared with the 1954 accounts. The figures are:—

	Machinery deterioration	Building deterioration	Motor vehicles
	Rs.	Rs.	Rs.
Depreciation as on 31st December 1954 ...	2,60,79,732	92,62,803	79,153
Less—Adjustment for sale of old machinery	18,819	...	7,236
	2,60,60,913	92,62,803	71,917
Less—Development rebate transferred	10,35,701	...	...
	2,50,25,212	92,62,803	71,917
Add—Depreciation for 1955 ...	25,15,803	1,63,388	7,399
	2,75,41,015	94,26,191	79,316
Less—Transferred to Rehabilitation and Development Account	17,86,423	22,21,510	9,107
Balance	2,57,54,592	72,04,681	70,209

Accounts in brief were as under:—

Raipur Manufacturing Co., Ltd.

The directors of the above Company (Agents: Messrs. Lalbhai Dalpatbhai and Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December, 1955.

The profit for the year after providing Rs. 4,75,000 (Rs. 5,67,000) for depreciation amounted to Rs. 14,65,051 (Rs. 9,42,005) to which was added the last year's balance of Rs. 37,245 (Rs. 32,522), making a total of Rs. 15,02,296 (Rs. 9,74,527). From this was deducted the *ad-interim* dividend of Rs. 7-8 (Rs. 7-8) for the first half of the year 1955 Rs. 93,750 (Rs. 93,750), provision for taxation Rs. 6,65,015 (Rs. 4,25,000), appropriations as per resolution of board of directors dated 5th October, 1955:—Transferred to "Capital Redemption Reserve Fund" on 1st January 1956, against redemption of 5,000 4½ per cent. "A" class redeemable cumulative preference shares of Rs. 100 each Rs. 3,50,000 (Rs. 50,000 to reserve fund) and transferred to preference shares dividend account on 1st January 1956, for payment of dividend (after deducting income-tax) accrued on the above said shares for the year ending 31st December, 1955) Rs. 16,594 (Rs. 1,00,000 to contingency fund) leaving an available balance of Rs. 3,76,938 (Rs. 3,05,777). The directors recommend the payment of dividends as follows:—

To income-tax free dividend of Rs. 17-8 (Rs. 17-8) plus Rs. 10 (*nil*) as bonus per share on 12,500 ordinary shares for the second half of the yeas ended 31st December 1955, Rs. 3,43,750 (Rs. 2,18,753), to dividend on 5,000 4½ per cent. cumulative preference shares for the year ended 31st December 1955, less income-tax Rs. 16,594 (Rs. 16,594) and to dividend on 5,000 4½ per cent. "B" class redeemable cumulative preference shares for the year ended 31st December, 1955 less income-tax Rs. 16,594 (Rs. 16,594).

During the year under report the prices of cotton were high, but the bill for wages was reduced to some extent. From the second quarter of the year, the demand for cloth improved and the improvement continued till the end of the year. The directors trust that the result of the working of the mills will be considered satisfactory.

The Mills have complete Dyeing and Bleaching Plants.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	27,50,000	Block ...	86,29,439
Reserves ...	1,11,10,876	Stock-in-trade	39,46,929

Parasea Collieries, Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Deepchand Kishenlall, Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December 1954.

The Company's profit for the half-year ending 31st December 1954, after providing Rs. 28,872 (Rs. 46,154) for depreciation and Rs. 60,000 (Rs. 33,800) for income-tax is Rs. 48,075 (Rs. 26,900). After adding the balance brought forward from last account of Rs. 7,443 (Rs. 5,618), the total available amount for disposal is Rs. 55,518 (Rs. 1,52,518 with Rs. 1,20,000 transferred from the

general reserve fund). The directors propose payment of dividend to the shareholders of 3,000 preference shares at the rate of 5½ per cent. per annum taxable for the half-year ending 31st December 1954. This would absorb a sum of Rs. 16,225 (Rs. 32,450 for 1953). The directors also propose payment of dividend to the holders of 83,400 ordinary shares at the rate of As. 6 (As. 2) only per share free of income-tax for the half-year ending 31st December 1954, which will amount to Rs. 31,275 (Rs. 10,425) only leaving a balance of Rs. 8,018 (Rs. 3,020) to be carried forward.

Output and Despatches

	For the Half-year ending Dec. 1954. in Tons	For the Half-year ending June 1954. in Tons	For the Half-year ending Dec. 1953. in Tons
Raisings	45,843	46,615	35,987
Despatches	46,080	37,515	37,139
Stock after boiler consumption ...	3,117	7,335	1,676

During the half-year under review the output has been almost maintained as compared with the previous half-year and have considerably increased in comparison with the corresponding last half-year and the despatches have also improved immensely due to which the stock position became much easier. The electrification of the Colliery has already been started and we expect that by July 1956. The Company will be able to start electric power to facilitate the pumping work in the monsoon.

The directors inform that they have also submitted to the Government of India a scheme for developing Kenda Seam by sinking 2 pits for increasing the production in the next Five-year Plan by 20-25,000 tons per month by the end of 1961, and if the sanction is accorded to us the work will be taken in hand.

The relation with labour is not very cordial at present. The Colliery workers were on strike for 1 month and 10 days during January-February 1956 and the working has been resumed since the middle of February. The matter has been referred to the Industrial Tribunal at Dhanbad for their decision by the Government of India. However, the results for the next half-year are satisfactory.

Accounts in brief were as under:—

Walchandnagar Industries Ltd.

The directors of the above Company (Agents: The Premier Construction Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th September 1955.

During the year under report the Company made a profit of Rs. 27,94,589 (Rs. 25,46,913) after providing Rs. 12,50,000 (Rs. 12,00,000) for depreciation and Rs. 15,00,000 (Rs. 13,00,000) for taxation so that this together with the sum of Rs. 1,79,083 (Rs. 1,72,670) the balance brought forward from the last year's accounts amounted to Rs. 29,73,672 (Rs. 27,19,583). This amount was available for disposal and the directors have made the following appropriations:

For dividend on preference shares at Rs. 7 per share (free of income-tax) Rs. 24,500 (Rs. 24,500), for dividend on ordinary shares at Rs. 18 (Rs. 16) per share (free of income-tax) Rs. 18,18,000 (Rs. 16,16,000), for debenture redemption fund Rs. 5,00,000 (Rs. 4,00,000), for reserve fund Rs. 5,00,000 (Rs. 5,00,000) and for carrying forward Rs. 1,31,172 (Rs. 1,79,083).

The Sugar Factory commenced crushing of sugarcane on 4th November 1954 and the same was stopped on 14th April 1955. Sugarcane crushed during the season was 1,79,930 (1,69,691) tons while sugar manufactured was 2,22,787 (2,01,894) bags with a recovery of 12.51 (12.045) per cent. The Distillery produced 3,77,757 (4,70,528) gallons of rectified spirit during the year under report.

This Company ceases to be the subsidiary company of the Premier Construction Co., Ltd. during the year under report. The Shares of the Company have been listed on forward list by the Stock Exchange, Bombay, since January last year.

The directors inform, that the Company will manufacture machinery especially sugar factory machinery in collaboration with Messrs. Skoda of Czechoslovakia and a licence for this purpose under Industries (Development and Regulation) Act, 1951 has been received from the Government of India. A further licence for substantial expansion of this unit is awaited from the Government.

The directors also inform, that the hydrogenation plant has been re-modelled and has started production of dehydrogenated groundnut oil and the quality of this has been found satisfactory. The Company had placed an order for a solvent extraction plant to improve the working of the Oil Mill by de-oiling the residual oil from the oil cakes as a result of which not only the residual oil is extracted, which otherwise would have been wasted; but also the oil cakes, when de-oiled, have got better manurial value. A major portion of the machinery for solvent extraction has been received and is under erection.

Due to keen competition and Government restriction the Company is experiencing difficulty in the disposal of distillery products and also in realising remunerative rates.

Accounts in brief were as under:—

Braithwaite & Co. (India) Ltd.

The directors of the above Company (Secretary: Mr. Y. S. Tayal, Calcutta) submitted the audited accounts of the Company for the year ended 31st December 1955.

After making provision to the extent of Rs. 13,00,000 (Rs. 9,00,000) to meet the Company's liability in respect of income-tax and super-tax, and after providing for depreciation and other sundry charges, the profit for the year amounted to Rs. 15,32,716 which compares with the profit of last year of Rs. 10,94,084. This profit together with the amount of Rs. 2,09,750 (Rs. 1,52,392) brought forward from last year's accounts, leaves a sum of Rs. 17,62,466 (Rs. 12,46,476).

Section 23-A of the Indian Income Tax Act as amended by the Finance Act, 1955 obliges the Company to distribute an additional dividend for the year ended 31st December 1954. The directors therefore recommend payment of an additional dividend at the rate of six annas per share.

An application is being made under sub-Section 3 of Section 23-A for exempting the Company from the provisions of Section 23-A. Pending decision on this application the directors recommend that a dividend at the rate of Re. 1-12 (Re. 1-2) per share be declared for the year ended 31st December 1955. Dividends as recommended will absorb Rs. 12,02,705 (Rs. 6,36,726), leaving a balance of Rs. 5,59,761 (Rs. 2,09,750 after transferring Rs. 4,00,000 to general reserve) for carry forward.

For a long time the value at which the block account was shown in the balance sheet was totally unrealistic in relation to current values. The directors therefore considered it advisable to invite the well known United Kingdom firm, Messrs. Edwards, Son, Bigwood and Mathews, Chartered Surveyors and Valuers to revalue the block account. The new valuation figures have been incorporated in the balance sheet and the surplus has been transferred to capital reserve. It will be appreciated that in subsequent years there will be a somewhat increased charge for depreciation. The Company's order book is in a healthy condition and in the opinion of directors, prospects remain good.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	29,61,853	Block ...	46,77,805
Reserves ...	65,42,742	Stock of materials and stores	6,89,842

		Investments	19,41,906
		Cash ...	22,76,230
Rs.	1,79,77,526	Rs.	1,79,77,526

Binod Mills Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: Messrs. Binodiram Balchand, Ujjain, Indore) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit of Rs. 24,93,620 (Rs. 6,55,491) (which includes Rs. 2,02,566 (Rs. 38,790) as profits from subsidiary concerns) after deducting agents' remuneration and commission on sales amounting to Rs. 6,69,134 (Rs. 3,51,910) and to which adding a sum of Rs. 1,47,409 (Rs. 1,40,110) brought forward from last year's account, the total profit available for disposal comes to Rs. 26,41,029 (Rs. 7,95,600). From this amount depreciation on fixed assets and provision for taxation on profits is to be made. The directors have pleasure in reporting that the results for the year under report have been quite satisfactory. Even the profits of the subsidiary concerns have shown improvement during the year and these are Rs. 2,02,566 as compared to last year's which were Rs. 38,790.

The directors report, that as a result of an agreement with the I.N.T.U.C. the Company will be required to pay a bonus equal to 15 days' minimum wage irrespective of profits, subject to a maximum of three months wages depending on the adequacy of profits. Accordingly, the directors have paid Rs. 2,41,000 for the year 1953 and 1954 during the year and have provided Rs. 1,25,000 for the year 1955.

Due to further increase in the excise duty on cloth by 6 pies per sq. yard on all varieties of cloth excluding *dhotis* and *saris* of coarse counts, the mills will be adversely affected. This increase works upto 7-9 per cent. in coarse and medium cloth as compared to 2-3 per cent. in fine and superfine cloth. The burden of this duty will naturally affect the mills.

During the year under report, Rs. 5,75,951 (Rs. 5,54,593) were paid under the following heads: Leave with wages Rs. 1,53,102 (Rs. 1,28,106), contribution towards provident fund Rs. 2,81,617 (Rs. 2,97,973), employees' state insurance Rs. 62,525 (Rs. 39,151), provident fund administration charges Rs. 4,698 (Rs. 5,611) and octroi duty Rs. 74,009 (Rs. 83,750). The excise duty and sales-tax paid to the Government during the year have been:—Excise duty Rs. 23,02,060 (Rs. 19,83,754) and sales tax Rs. 39,609 (Rs. 76,394).

As reported last year, the Labour Department appeal before Labour Appellate Tribunal, Bombay regarding payment of Cotton Mills D.A. to Silk and Art Silk Mills is not yet decided. The Sales-tax Appeal Judge vide his order dated 10-2-1956 has allowed our appeal regarding sales tax excess assessment for Rs. 33,203 which will be refunded to us in due course.

The directors report that 20 looms have been added to the Binod Silk and Art Silk Mills. Permission for further addition of 18 looms has not yet been received from the Government. Efforts are being made to get the same. Further 2,248 spindles were added to the Deepchand Mills from the machinery which was scrapped from it for producing reeling yarn for local and export markets.

The Mills were experiencing great difficulties for obtaining power supplies as its own power generating units have gone very old. The Company has contracted for 1,100 kw. power supply from the Indore Tharmal Unit with the Madhya Bharat Government. But it is to be seen when the Company shall get the power. However it is hoped that it will greatly ease the present overloaded power plant and also provide a little power for probable additions in machinery.

The directors have placed orders for new machinery costing about Rs. 10 lakhs, out of which machinery worth Rs. 65,000 has actually arrived and the rest is expected to arrive till the end of the year.

The directors recommend that the net profits of Rs. 26,41,029 (Rs. 7,95,600) be disposed off as under:—

Dividend proposed to be paid for the year ended 31st December 1955 at Rs. 10 (Rs. 6) per share on 60,000 shares Rs. 6,00,000 (Rs. 3,60,000), special dividend tax at As. 8 (*nil*) per share on 60,000 shares Rs. 30,000 (*nil*). Total depreciation amounting to Rs. 9,88,000 (Rs. 1,73,139), reserve fund Rs. 2,02,099 (Rs. 49,860), reserve for bad and doubtful debts Rs. 40,000 (Rs. 25,000), reserve for taxation Rs. 6,00,000 (Rs. 40,192) and to carry forward Rs. 1,80,930 (Rs. 1,47,409).

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	60,00,000	Block ...	88,68,154
Reserves ...	32,92,311	Stock-in-trade ...	53,10,010
Provision for taxation ...	2,55,838	Stores and spares, etc.	16,10,272
Liabilities ...	77,98,021	Other assets	20,418
Profit and loss account ...	26,41,029	Debts, deposits and advances ...	28,19,299
		Investments	8,43,518
		Cash ...	5,15,528
Rs.	1,99,87,199	Rs.	1,99,87,199

Ravalgaon Sugar Farm Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th September 1955.

During the year, the Company made a profit of Rs. 6,51,181 (Rs. 70,899) after providing Rs. 5,70,000 (Rs. 4,50,000) towards depreciation and Rs. 1,05,000 (*nil*) towards taxation. After paying the interim dividend at 4 (nil) per cent. absorbing Rs. 80,000 (*nil*), the balance available for disposal was Rs. 6,32,612 (Rs. 1,71,432) including the sum of Rs. 61,432 (Rs. 1,00,533) brought forward from the last balance sheet. The directors have made the following appropriations:—

For dividend on preference shares at 5½ per cent. (less income-tax) Rs. 1,10,000 (Rs. 1,10,000), for final dividend on ordinary shares at 14 (*nil*) per cent. (free of income-tax) making a total of 18 (*nil*) per cent. for the year Rs. 2,80,000 (*nil*), for dividend on deferred shares at 7 (*nil*) per cent. (less income-tax) Rs. 28,000 (*nil*), debenture redemption fund Rs. 1,50,000 (*nil*), and for carrying forward Rs. 64,612 (Rs. 61,432).

The Factory commenced crushing on 3rd December 1954 and the same was stopped on 10th May 1955. Sugarcane crushed during the season was 1,02,763 (69,710) tons while sugar manufactured was 1,15,768 (77,460) bags with a recovery of 10.9 (10.77) per cent.

During the year under report the confectionery plant at Ravalgaon produced about 451 (368) tons of confectionery and about 9,775 (10,500) maunds of sugar-candy. The Factory continued to produce wax from cane mud. About 10,890 (7,425) lbs. of wax was produced during the year.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	44,00,000	Block ...	89,12,138
Debentures	20,00,000	Stock-in-trade ...	27,51,944

		Cash ...	1,60,475
Rs.	1,78,88,314	Rs.	1,78,88,314

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Indian Investments Abroad

INDIAN capital invested in industries in Burma is of the order of Rs. 2.5 crores and in Nepal Rs. 15.2 crores approximately. Estimates for Pakistan and Ceylon are not available. There are no special restrictions imposed on Indian undertakings in Burma, Nepal, and Ceylon. Subject to existing law as applicable to foreigners, Indians are free to undertake business in these countries. As regards Pakistan, there appear to be no restrictions on investment of Indian capital, but the operation of such undertakings is subject to certain restrictions. Permission is rarely granted to remittance of profits from West Pakistan to India. Indian employees in Indian undertakings there cannot remit money to their dependents without prior permission from the State Bank of Pakistan. The amount of such remittances allowed varies from 10 to 15 per cent. of the total emoluments of the individual concerned. Whenever an Indian national in these undertakings is replaced, he is required to be replaced by a Pakistani national.

—*Jawaharlal Nehru*

State Bank of India

Since nationalisation, the State Bank of India has opened 21 new branches. While the target for the next five years is not less than 400 new branches, it will not be possible to set year-wise targets, in view of certain initial organisation and administrative difficulties, particularly accommodation. The first phase of expansion will result in branches being opened in all district towns and subdivisional headquarters. In the next phase, we will go to rural areas. It is not possible to say whether the new branches will be run at a loss and, if so, we cannot estimate the extent of the loss. But provision already exists in the integration fund to meet such losses. The criteria of priority in selecting district towns and sub-divisional headquarters are mainly population, treasury turnover and existence of other banking facilities in the area.

—*A. C. Guha*

Tax Commission's Suggestions

The Government of India has not accepted some of the recommendations of the Taxation Enquiry Commission. These relate to continuation of rebate of one anna on the undistributed income of companies, continuation of the initial depreciation allowance for five years and taxation of bonus shares. The recommendations of the Commission which have been accepted by Government with or without modification are taxation of perquisites in kind paid to employees, taxation of cash entertainment allowances, development rebate, time limit to reopen assessments removed in cases where the income evaded is Rs. 1 lakh and more, and excise duty on certain articles. The present ratio of gap between the highest paid and the lowest paid is 31 to 1. Now the post of a secretary to the Government of India not held by an I.C.S. man carries a salary of only Rs. 3,000 per month. The Secretary to the Education Ministry gets only Rs. 3,000. So far as the I.C.S. men are concerned, unless we change the guarantee that has been given under the Constitution, it becomes difficult. The matter also is under consideration.

—*M. C. Shah*

Manufacture of Carbon Black

A small factory has already been set up for producing carbon black, but its output is very small as compared with the country's requirements, which are increasing. The quality of the product needs further improvement. Carbon black has, therefore, been included in the programme of the National Industrial Development Corporation and manufacture is envisaged to be based on creosote oil as one of the raw materials. Supplies of creosote oil in the required quantities may be expected only with the commencement of distillation of coal tar from the new iron and steel plants and, therefore, actual manufacture of carbon black on a large scale is likely to take some time.

* * * *

Handloom Cloth

The total amount of subsidy given on the sale of handloom cloth from 1st to 15th November 1955 was Rs. 16.03,027-6-9 and the total yardage of cloth sold was 14,124,259 yards.

* * * *

Rubber Cultivation

The area under rubber, as registered with the Rubber Board, was 176,647 acres as on 31st December 1954 and 215,726 acres as on 31st December 1955.

* * * *

Coffee Cultivation

A scheme for increasing coffee cultivation in India is under consideration. Under the scheme, it is estimated that 23,700 acres may be brought under new coffee cultivation during the five-year period 1956-61. The area under coffee cultivation in India during the crop year 1954-55 was 252,686 acres.

* * * *

National Small Industries Corporation

The total amount of Government orders secured for small units by the National Small Industries Corporation during 1953-56 was Rs. 4,68,595. The deliveries against the contract are to commence from May 1956. In order to help the marketing of products of small-scale industries, the Corporation has put on the road three mobile sales vans to sell about 300 consumer goods from the Delhi area. In addition, a wholesale depot has been set up at Agra for marketing footwear produced by small-scale units at Agra. Steps have also been taken to open another wholesale depot at Aligarh for marketing Aligarh locks and Khurja potteries. Further, with a view to providing small industrial units, having limited financial resources, with facilities for acquiring machines and equipment on easy terms, the Corporation has launched a scheme for the supply of such machines on a hire-purchase basis.

* * * *

Handloom Board

The work done by the All-India Handloom Board has been directed towards stabilising the handloom industry and increasing the earnings of the handloom weavers. The Board has had a measure of success in its endeavours towards this end. No special effort as such has been made to increase the number of handlooms. It is possible that the present position of the industry has provided employment incidentally to large numbers of people. No evaluation of such incidental additional employment opportunities has been undertaken.

* * * *

Rubber Factory

The Travancore-Cochin Government has proposed to expand and modernise the Travancore Rubber Works for the manufacture of cycle tyres and tubes. The matter is under consideration.

—*T. T. Krishnamachari*

Exhibition in Gold Coast

The Government of India has decided to arrange shortly a wholly Indian exhibition in the Gold Coast and the exhibition will be moved to one more place, namely, Lagos in Nigeria. The object of the exhibition is to promote export trade by means of visual commercial publicity for exportable manufactured goods, particularly cotton and silk textiles, handicrafts and products of small-scale industries.

* * * *

Trade Marks Enquiry Committee

The report of the Trade Marks Enquiry Committee is still under examination.

—*D. P. Karmarkar*

Technical Institutes

The Ford Foundation has given financial assistance for the purchase of equipment for the small industries service institutes, as also for recruiting foreign technicians and consultants to be attached to the institutes for specific assignments. No assistance has been received from the Government of West Germany for the institutes. It is proposed to have at least one Institute with branch units in each State by the end of the second Five-year Plan. In addition, there will be many industrial extension centres in different parts of the country.

* * * *

Steel for Railways

The Railway demand for iron and steel in 1956-57 is one million tons. This is made up of 840,000 tons of steel and 160,000 tons of pig iron. Besides this, the outstandings from the allocations made during the previous years are about 300,000 tons. It is proposed to meet 300,000 tons out of the demand for steel from indigenous production and the rest from imports.

—*Nityanand Kanungo*

Electric Cables Factory

An application under the Industries (Development and Regulation) Act, 1951, has been received from an Indian firm to set up a factory in Madras for the manufacture of insulated wires and cables in collaboration with a German firm. This is under examination.

Water Dues From Pakistan

Pakistan has recently indicated its willingness to pay up the undisputed arrears of payments under the Canal Water Agreement of 1948. The amounts involved are: Disputed Rs. 70.22 lakhs and undisputed Rs. 47.02 lakhs. The Pakistan Government has paid up all undisputed arrears up to June last year and recently told the Government of India that it had instructed the West Pakistan Government to pay up the subsequent undisputed arrears too.

—*Jaisukhlal Hathi*

Milk Drying Plant at Anand

A milk drying plant to dry buffalo milk was set up in India last year under the auspices of the United Nations International Children Emergency Fund. But, it is not the first of its kind in the world. The plant costs Rs. 40 lakhs and its annual production capacity is 1,000 tons. The plant went into production on 31st October 1955.

—*A. P. Jain*

Soil Testing Laboratories

The Government of India is setting up 24 soil testing laboratories throughout India at an estimated cost of Rs. 24 lakhs. The scheme is under the Technical Co-operation Mission project on soil fertility and fertiliser use. One of the laboratories will be located at Kanpur.

—*Dr. Punjabrao Deshmukh*

Export of Edible Oils

The Bombay Government has suggested recently to the Union Government the imposition of restrictions on the export of edible oils. The Government of India has already stopped further exports of groundnut and sesamum oil and has levied an import duty of Rs. 250 per ton on linseed oil, while the export duty on castor oil has been raised from Rs. 125 to Rs. 175 per ton. Similarly, niger and kardi oils have also been subjected to an export duty of Rs. 200 per ton.

—*M. V. Krishnappa*

Power Project on the Tapi

It is proposed to develop a major hydro-electric power site on the Tapi River at Ukai and to build transmission and distribution lines from Ukai to Ahmednagar via Manmad in the second Five-year Plan. It is also proposed to extend the transmission lines from Igatpuri to Nasik and from Koyena to Ahmednagar via Karad.

—*Satyanarayana Sinha*

COMMERCE AND INDUSTRY

(*Concluded from page 924*)

cement industry "to the caprice of the private sector" was "not merely regrettable but lamentable and unpardonable," Mr. Krishnamachari said that there was nothing to prevent the Government from starting cement factories during the next five years or even thereafter, but added that "it is not one of the industries where we are now giving high priority for Government to interfere in."

The same member also asked whether it was a fact that the Government had planned to open 16 more factories in the next five years, out of which they were allocating four or five factories to the Associated Cement Companies (A.C.C.). In reply, the Commerce and Industry Minister said that the share of the A.C.C. in cement production would undoubtedly increase. It was a public company over which the Government had a fair amount of control. "If the Government did not want any expansion," he added, "prices can be lowered. We are allowing a certain amount of elbow-room in the price structure, in order to allow them to expand. When it is a public company, like the A.C.C., I do not think there is much difficulty in Government exercising control."

Referring to complaints that cement was too dear, Mr. Krishnamachari said:

"So long as we are not able to produce cement which is coterminous with the demand or in excess of the demand, I am afraid the price mechanism is one of the things by which we inhibit the demand and we are not prepared to drop it, merely because of sentimental considerations."

The one conclusion that emerges from the Minister's remarks on prices is that the cost of cement to consumers will soon go up. The increase will probably be much more than what they would have had to pay in the past, in order to encourage a rapid expansion in indigenous production of cement. If only Mr. Krishnamachari had shown four years ago a fraction of the realism, enthusiasm and solicitude which he is now displaying to bring about an increase in the output of cement, the country as a whole would have been in a far happier position than it is today.

MONEY RATES UNCHANGED

(*From Our Own Correspondent*)

BOMBAY, *9th May*

The short-term money market continued to display stringent conditions during the week under review. There was again a shortage of funds, while the pressure on banks for credit persisted. The banks, therefore, had to seek accommodation from the Reserve Bank of India and the State Bank once again.

Inter-bank call money was keenly bid at 3¼ per cent. House money at call also fetched the same rate. Short-term deposits for one to six months were in demand at 3¼ to 3½ per cent.

After two weeks of successive recession, notes in circulation show an expansion of Rs. 13.50 crores during the week ended 4th May 1956. The Reserve Bank's statement for the week discloses that notes held in the Banking Department have, on the other hand, dropped by Rs. 15.17 crores and the consequent fall of Rs. 1.67 crores in total notes issued is covered by a corresponding shrinkage in rupee coin. In the Banking Department, a decline of Rs. 2.75 crores is seen in deposits of the Central Government and of Rs. 8.89 crores in other Governments' deposits. Deposits of banks also show a fall of Rs. 1.44 crores and those of others Rs. 3.07 crores. Balances held abroad are lower by Rs. 4.15 crores. Loans and advances other than to Governments are up by Rs. 7.17 crores, of which advances to Scheduled banks against usance bills account for Rs. 5.13 crores. Fresh advances to banks against these bills amount to Rs. 14.06 crores. Government Treasury Bills purchased and discounted have declined by Rs. 2.21 crores.

A fall of Rs. 2.48 crores in demand deposits and of Rs. 48 lakhs in time deposits is disclosed by the consolidated statement of position of the Scheduled banks for the week ended 27th April 1956. Borrowings from the Reserve Bank account for an increase of Rs. 5.10 crores and those from the State Bank of India for Rs. 38 lakhs. The downward trend in advances noted in the previous three weeks has been reversed with a rise of Rs. 3.77 crores during the week. Inland bills purchased and discounted are also higher by Rs. 1.85 crores, while foreign bills have declined by Rs. 50 lakhs. Investments have dropped by Rs. 49 lakhs and cash balances have shrunk by Rs. 2.41 crores, while balances with other banks and money at call and short notice have risen by Rs. 48 lakhs and Rs. 94 lakhs, respectively.

The Gilt-edged market ruled steady during the week under review, with some of the securities registering further gain in values. The paucity of floating stocks was the main sustaining factor. The volume of business also was very much restricted for the same reason.

3 per cent. 1957 had buyers at Rs. 99-13, while 3 per cent. 1958 continued to attract sellers at Rs. 99-11. 3 per cent. 1959-61 gained an anna to Rs. 98-3, but towards the close there were buyers only at Rs. 98-2½. 3 per cent. 1963-65 was maintained at Rs. 95-1. 3 per cent. 1964 moved up by an anna to Rs. 94-15, at which level there were sellers. 3 per cent. 1966-68 was in demand and gained As. 2 to Rs. 93-2 and 3 per cent. 1970-75 an anna higher at Rs. 90. 3 per cent. 1986 Conversion Loan gathered As. 5 to Rs. 77-6. 3½ per cent. 1961 had buyers at Rs. 99-9½, while 3½ per cent. 1964 was on offer at Rs. 98-11½ and 3½ per cent. 1965 at Rs. 98-9½. Among State loans, 4 per cent. 1967 Bombay was a shade quiet at Rs. 100-11, while 4 per cent. 1967 West Bengal held ground at Rs. 100. 4 per cent. 1967 Madras gained an anna to Rs. 93-13.

In the foreign exchange section, the rupee ruled steady in terms of the U.S. dollar. Banks' selling rate of ready dollar declined from Rs. 477½ to Rs. 476¾ per $100 and their buying rate from Rs. 473 to Rs. 472¾ per $100. This is in consonance with a similar trend displayed by sterling. In New York, spot sterling rose from $2.80⅜—2.80⅝ to $2.80⅞—2.81 and three months' forward from $2.79—2.79⅛ to $2.79¼—2.79⅜. Transferable sterling was, however, unchanged on balance at $2.78-9/20—2.78 11/20.

HIDES STRONG

(*From Our Own Correspondent*)

KANPUR, *6th May*

During the week under review, the hides and skins market ruled strong. Fresh arrivals of goods were not as considerable as those in the previous week, while demand for high grade buff was keen. The Madras dealers were interested mainly in lighter cow and goat. From the local butcheries supplies were comparatively less, on account of the advent of the worst summer.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 200 and 3rd grade Rs. 100 per score; wet salted buff 1st grade 2 lb. 2 ozs. and 2nd grade 2 lb. 3 ozs. per rupee; goat 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep 1st grade Rs. 300 and 2nd grade Rs. 225 to Rs. 250 per 100 pieces.

LINSEED ADVANCES

(*Messrs. A. Bradley & Co.*)

CALCUTTA, *7th May*

Linseed prices registered a notable advance and trading was on a somewhat increased scale, with buyers showing keen interest. Scarcity of ready goods was the main feature, and crushers were keen to secure all available stocks. Market conditions upcountry remained equally firm. The entry into the market of a few large shippers, now loading linseed oil in tank vessels, caused a sharp rise in the oil section, with buyers over and sellers demanding increased prices.

The latest available quotations are: Ready Rs. 23 and May-June Rs. 23 per maund.

SILVER SLUMPS

(*From Our Own Correspondent*)

BOMBAY, *9th May*

A slump in silver to the tune of Rs. 7 per 100 tolas in the forward section and of Rs. 4 in the ready was the highlight of trading in the bullion market during the week under review. The recession in silver was a sequel to the Government of India's decision to license freely the import of any silver coin which is current in the Tibet region of China. There was no adverse factor to affect the sentiment in gold, but in sympathy with the white metal, it also sought slightly lower levels.

For the first time after many years, the Government of India has accepted the principle of allowing import of silver coins from a foreign country in a barter trade with that country. This is evident from its decision to license freely the import of silver coins from Tibet. Before the Government's decision was announced on Thursday last, silver coins equivalent to about 1,900 bars had come from Tibet. Another 1,200 bars are said to be on their way to Calcutta. After the aforesaid announcement, the authorities are stated to have issued licences to importers in Bombay for bringing in Tibetan coins to the tune of 2,500 bars and applications for import of coins equivalent to 8,000 to 9,000 bars are stated to be pending.

The Government has simultaneously raised the import duty on silver from As. 4.1/5 to As. 8.2/5 per ounce. The import duty works out to Rs. 18-12 per 100 tolas. It is, however, difficult to estimate the exact cost of the imported silver, as there are no organised markets in silver in Tibet and prices are subject to negotiations between the buyer and the seller. However, on a rough estimate, the cost of these silver coins is expected to range from Rs. 165 to Rs. 180 per 100 tolas inclusive of import duty. The exact price will also depend on the fineness of the coin.

Following the announcement of the Government's decision to permit free imports, forward silver (26th May settlement) came in for heavy selling pressure and the price retreated from Rs. 182-8 to Rs. 176-10 on Saturday. After a modest recovery to Rs. 177-15 yesterday on support at lower levels induced by good offtake in the ready section, there was again a slump to Rs. 175-8 at the close of today on reports that fresh licences for import of 2,500 bars had been issued.

Ready silver (.996 Mint) moved down from Rs. 183-2 to Rs. 179-2. It will be noted that the premium of ready over the forward has widened from As. 10 at the close of the previous week to Rs. 4 this week. This is due to the good offtake in the ready section, the decline in floating stocks and the general disinclination to part with the holdings. The floating stocks are reported to be 600 bars. The daily average offtake was 25 to 30 bars.

In sympathy with silver, forward gold (25th May settlement) moved down from Rs. 105-4 to Rs. 103-9 and after gaining ground to Rs. 104-14, closed a fraction lower at Rs. 104-4.

Ready gold displayed cheerfulness early in the week, moving up from Rs. 106-1 to Rs. 107-4, but soon receded to Rs. 105-1. After recovering again to Rs. 106-14, the ready metal finished at Rs. 106-2. The floating stocks of gold are placed at 20,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 6,000 tolas on an average.

In London, silver was unchanged at 78¾d. for spot and at 79⅜d. for forward. Gold declined from 249s. 3d. to 249s. 1d. In New York, silver held ground at 90¾c.

The following comparative table shows the trend of the market during the week under review:

	9-5-56	Highest	Lowest	2-5-56

HIDES ARRIVALS MODERATE

(*From Our Own Correspondent*)

MADRAS, *7th May*

Trading in kips with the U.K. has been on a small scale, as dressers are reported to have sufficient stocks and importers have not been keen to follow Madras prices. There has been a gap of 1d. between Madras and U.K. prices which has prevented steady trading. Further, U.K. importers have been offering ½d. lower than their earlier purchases, whenever shippers try to repeat their last sale.

Arrivals of cow hides were moderate and clearances slow. Prices were a shade weak, due to poor shipment business. Buff hides market was steady, while buff calf and cow calf ruled lifeless for f.a.q. types.

In the tanned skins section, arrivals were on moderate scale and clearance limited, due to the proximity of the May London auctions.

Shipments during April were: To the U.K.: 2,055 bales tanned cow hides, 268 tanned cow calf, 22 tanned buff hides, 410 tanned buff calf, 853 tanned goat skins, 362 tanned sheep skins and 1 bale D/S. goat. To the Continent: 407 bales tanned goat skins, 88 tanned sheep skins. To the U.S.A. ports: 1 bale tanned cow hides, 5 tanned cow calf, 167 tanned buff hides, 74 tanned buff calf and 119 bales tanned goat skins. To Japan: 15 bales tanned goat and 320 tanned sheep skins.

SPOT COTTON FIRM

(*From Our Own Correspondent*)

BOMBAY, *9th May*

The attention of all cotton interests is now focussed on the deliberations of the ten-man Committee—the Cotton Contract Committee—appointed by the East India Cotton Association (E.I.C.A.) Board to examine the proposals of the Forward Markets Commission made in connection with the resumption of futures trading in cotton. The Committee has already invited the opinions of members on the eleven letters carrying the proposals addressed by the Commission to the E.I.C.A. As there is reported to be considerable divergence of opinion expressed, it remains to be seen how far and to what extent the Committee will succeed in reconciling the opinions and prepare the ground for resuming futures trading in cotton. The Committee itself, it is understood, is strongly divided over the Commission's proposals. Taking, however, the Commission, on one side, and the E.I.C.A. members generally, on the other, it would appear that there are at least six questions on which the views are at variance. These relate to (1) number of contracts, (2) delivery months, (3) tendering differentials, (4) survey system, (5) panel system and (6) nature of delivery contracts—transferable or non-transferable. The general opinion of the cotton traders over these questions may be summed up as follows:

There should be reasonable hedge facilities to all varieties of Indian cotton which necessarily mean that there should be two contracts, one covering better varieties and the other covering medium and lower varieties.

The present delivery months—February, May and August—are not quite conducive to proper functioning of the market, for, very often, there is hardly adequate supply of cotton of tenderable varieties during a given delivery period. These months should, therefore, be changed, a fair trial being given to March-April and June-July.

Replacement of the present By-law 55 by a provision for fixing tendering differences on the basis of varietal differences, as suggested by the Commission, will bring about an artificial price disparity which will call for radical measures; the trade cannot be expected to keep constant watch over this issue throughout the duration of the season to which such differentials will apply.

There is no need for the reintroduction of the old open survey system. If, however, this proposal were to be insisted upon by the Commission, the system should be the one that prevailed prior to the appointment of sworn surveyors, the selection of members for the various survey panels being so made as to give representation to all the different parties of the trade.

The panel system goes ill with democracy and should be completely done away with. There must be equal franchise for all members who should elect the total number of directors exercising their votes. The delivery contracts, entered into with the mills according to the trade, are not actually transferred but they are definite sales. Again, delivery contracts made between traders are in the nature of buying and selling daily, and the clearing in such cases should be on the monthly basis and not on a weekly basis as the Commission is reported to have suggested. Moreover, it cannot be gainsaid that delivery contracts which are being traded upon between dealers act as hedges against purchases and sales of spot cotton. They also serve as good insurance againt future requirements of the trade. There have been occasions when prices of delivery contracts have been cheaper than those of cotton sold in the interior. In such circumstances, it is always sound business for a dealer to buy delivery contracts for specific deliveries and quantities rather than buying in the interior.

It is in the light of these views that the Cotton Contract Committee may be expected to finalise its decisions. Meanwhile, the chairman of the Forward Markets Commission is believed to be keen on resuming futures trading in cotton, if the Committee completes its work as early as possible.

The spot cotton market continued to exhibit buoyant conditions during the week under review. Domestic varieties met with renewed buying support from spinners. Fairly large transactions at higher prices were put through in Surti, Moglai, Vijay, Laxmi, Jarilla and Jayadhar. Some quantities actually changed hands at the ceilings fixed by the Government. 320F variety also evoked good attention. Among exportable styles, Zoda cotton was on special request. Yellow Pickings, C.P. I, C.P. II and C.P. *Deshi* elicited sporadic enquiries. In the foreign section, mill interest continued to be concentrated on American cotton. Several mills purchased good lots of California 1.5/32" at substantially higher prices; in some transactions yesterday, this cotton fetched Rs. 1,470 per bale, as against Rs. 1,405 a week before. Africans and Sudans were also in demand, though the volume of purchases actually made was not considerable. The latest available quotations for a few varieties are: B.P. 52 Rs. 1,701, Jinja Rs. 1,440 and Sudan DG6S Rs. 1,650.

The following table gives the latest available quotations from the Sewri market, as compared with those a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	9-5-56	2-5-56	25-4-56
Bengal *Deshi*	665	660	685
Berar Jarillas	800	795	790
Khandesh	810	800	790
Vijay	960	960	955
Oomra *Deshi*	700	700	690
Moglai	700	700	690

The boom in cotton prices noted at Karachi last week gathered considerable momentum during the week under review. There was persistent cornering of stocks by speculative parties. This resulted in a further depletion of the floating stocks in the market and that when buying enquiries from local mills and foreign interests were

sustained. The prices of cotton, as a consequence, forged ahead. N.T. R.G. *May* delivery rallied Rs. 6-11 to Rs. 89-6 per 82 lbs. July delivery spurted by Rs. 6-9 to Rs. 85-11. The improvement in forward cotton prices thus followed the distinctly firm trend in spot cotton. The latest available ready quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, as compared with those a week before, are given below:

	8-5-56	1-5-56
Sind *Deshi*	101	100
Punjab *Deshi*	98	94½
4F Roller	88½	81½
S.G.	93½	86
Punjab Roller	94	87
S.G.	99	92
289F N.T. Roller	95½	88
S.G.	101	94½

The trend of the Alexandria cotton futures market was somewhat irregular this week. Thus, nearby deliveries lacked support, thanks to buyers' resistance to the recent phenomenal rise in spot premiums, while distant contracts evoked sustained buying interest. The Egyptian Cotton Commission, it is reported, is prepared to sell its stocks of cotton by auction against sterling or dollar reimbursement. The reserve prices for Ashmouni have already been announced. It is generally expected that the cotton will fetch far higher prices than the reserves. On the basis of these prices, the c.i.f. Bombay quotation for good to fully good cotton comes to 45.50*d.* per lb. Commenting on the Egyptian Cotton Commission's reported decision, a leading firm of cotton trade in Bombay observes: "Indian buyers cannot presumably obtain the stocks to be auctioned by the Commission, because of the stipulation that reimbursement should be 100 per cent. in sterling or dollars. It will be recalled that the Indo-Egyptian trade agreement specifies that payment should be 60 per cent. in sterling and 40 per cent. in rupees."

The Lint Marketing Board has already sold as much as 308,000 bales out of the 335,000 bales of Uganda cotton. Of the balance of 27,000 bales, half will be auctioned this month and the remainder later on. The prices of new crop AR Uganda have advanced appreciably, due to restricted offers.

For the second week in succession, the Liverpool cotton futures market presented firm conditions. There were sizable mill fixations in near month, while new July-August met with buying on prospects of continued small sales of cotton by the U.S. Commodity Credit Corporation. The Sudan contract was strong, with bidding on increased Sudan Board's reserve prices. The Egyptian contract was also strong, although turnover was limited.

The latest available quotations—in pence per lb.—from the Liverpool cotton futures market are: *Old contract*: May-June 26.00 and July-August 25.35. *New contract*: May-June 30.23, July-August 27.80, October-November 26.00, December-January 25.60, March-April 25.20 and May-June 25.15. *Egyptian Karnak cotton*: May-June 57.75, July-August 57.55 and November-December 57.55. *Sudan cotton contract*: July-August 52.05, September-October 51.50 and November-December 51.50.

An easy note was in evidence in the New York cotton market during the week under review. This was due to lack of interest among traders to enlarge their commitments, in view of the continued absence of information regarding prices accepted by the C.C.C. from the first bids, under the new export sales programme received on 24th April 1956. There was scattered liquidation and hedge selling which led to a fall in the prices of cotton.

Some details of the U.S. extended cotton export sales programme are now made available. Thus, stocks of cotton held by the C.C.C. will be periodically offered for export sales on a competitive bid basis. This cotton cannot be exported until after the beginning of the cotton marketing year as from 1st August 1956. Cotton purchased under the programme will be eligible for delivery against all sales, including those made under barter contracts, credit sales, etc. Cotton exported, including any identical bales in the shipment, must equal the gross weight of the cotton purchased from the C.C.C. and must be of grades within the universal standards for American upland cotton. It must have a staple length of 13/16" or longer, and must have been produced in the continental United States. The cotton must be exported from 31st July 1956 and not later than 12 months following the date when the warehouse receipts covering the cotton purchased from the C.C.C. are made available to the purchaser or the cotton is delivered to the purchaser.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	8-5-56	1-5-56	24-4-56
Spot	36.55	36.65	36.70
May	35.98	35.95	35.80
July	33.85	33.89	33.06
October	32.38	32.28	32.29
December	32.55	32.38	32.42

RAYON YARNS RECEDE FURTHER

(From Our Own Correspondent)

BOMBAY, 9*th May*

The reaction that set in in the rayon yarn market last week was carried a stage further during the week under review. The sentiment of operators was adversely affected by reports that stocks of yarn all over the country were quite comfortable, excepting stray odd deniers and qualities. These reports led the operators to feel that the demand from consuming centres might not broaden, at any rate in the next few days. There was, therefore, some selling, and rayon yarn prices continued their downward march. The staple fibre yarn section ruled distinctly irregular. Thus, while foreign yarns were subjected to heavy selling pressure and suffered a severe setback, indigenous yarns were in request by dealers, thanks to enlarged enquiries from consuming centres where offtake of staple fibre cloth was said to be encouraging. Barring finer counts, cotton yarns met with renewed support, induced by firm advices from cotton and piecegoods markets.

Snia rayon yarn (120 dull cones) for August delivery receded by Rs. 3 to Rs. 799. June delivery lost Rs. 2 to Rs. 804. In the spot section, 150 Italy dropped As. 2-6 to Rs. 3-11. 120 Italy declined by an anna and a half to Rs. 3-12. 120 Japan eased by an anna to Rs. 3-12-6. 150 Japan, however, evoked some enquiries and gained an anna to Rs. 3-4. Indigenous yarns were quiet. National Rayons 150 Bt. cones 1st grade being quoted at Rs. 3-8-6 and 120 Bt. cones 1st grade at Rs. 3-11-3.

There was, as already stated, a sharp recession in the prices of foreign staple fibre yarns (80 x 2). Paramounts were the worst sufferers, their quotation climbing down by As. 7 to Rs. 6-7. S'Sellos retreated by As. 5 to Rs. 6-10. Fujis fell by As. 3½ to Rs. 6-12-6 and H'Races by As. 3 to Rs. 6-11, but indigenous yarns (40 x 2) registered an improvement in prices on good buying support. Citys were particularly favoured; they hardened by 21 pies to Rs. 3-7-6. New Greats gathered an anna to Rs. 3-6-6. Kohinoors rose by a like amount to Rs. 3-7-9. Centurys were better by nine pies at Rs. 3-6-3.

In the cotton yarn section, forty counts provided the brightest spot. Minaxis rallied As. 14 to Rs. 29-4. Vasantas picked up As. 12 to Rs. 28-12. Laxmis strengthened by As. 8 to Rs. 29-8 and Moderns by As. 4 to Rs. 28-12. Thirty counts also elicited the support of traders. Sarojas jumped by As. 12 to Rs. 23-12. Indus spurted by As. 8 to Rs. 23-8. Kanpurs finished As. 4 higher at Rs. 22. Among 20s, Hinds rose by As. 5 to Rs. 17-12 and Edwards by As. 2 to Rs. 17-2, but Moderns and Gokaks receded by As. 4 each to Rs. 18 and Rs. 17-12, respectively. Among 10s, Moderns were fully maintained at Rs. 14, as also Gokaks at Rs. 14 and Elphinstones at Rs. 13-6. Sitarams, however, lacked support and gave way from Rs. 13-8 to Rs. 13-6. Podars were neglected at Rs. 13-7. Cotton yarns of sixty counts were being freely offered, but there were no buyers. Consequently, prices suffered a break. Raghuvanshis moved down by Re. 1-4 to Rs. 58-12. Colabas and Finlays dropped As. 12 each to Rs. 56-8 and Rs. 62, respectively. Barodas fell by As. 8 to Rs. 53-4. Among 80s, G'Mores suffered a loss of As. 12 to Rs. 74-4, while Moderns were unaltered at Rs. 68 and Seksarias at Rs. 54.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	9-5-1956	2-5-1956	25-4-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)–

MIXED TREND IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, 9*th May*

The oilseeds section witnessed a mixed trend during the week under review. The upward trend noticed towards the end of last week in the groundnut and castorseed sections persisted almost till today, when slight decline set in. The upward trend in the groundnut section was due to enquiries from local crushers and good Madras and Calcutta advices. The castorseeds section also was steady partly in sympathy with groundnut and partly due to expectation of overseas enquiries for castor oil. The decline that set in today was attributed to profit-taking by some longs. But the decline in either case was very small, with the result that the prices of both the groundnut and castorseed sections, on balance, turned out today to be higher than at the end of last week. After ruling dull in the first few sessions of the week on lack of enquiries, the linseed section firmed up thereafter, on reports of business done in linseed oil with overseas countries to the tune of 800 tons. Even in the case of linseed, there was some decline in prices today. This was a natural reaction after a rather sharp rise. As in the case of the other two sections, the decline in the case of linseed too was negligible. Consequently, prices recorded sizable gains, on balance, over the week.

In the groundnut section, Bold ready (F.A.Q.) advanced from Rs. 35 to Rs. 35-8 on the 8th inst. Today, it receded by As. 2 to Rs. 35-6. After improving from Rs. 35-8 to Rs. 35-12, June-July delivery declined to close at Rs. 35-11. Khandesh quality improved from Rs. 35 to Rs. 36-4 on the 8th inst., before finishing lower at Rs. 36. Groundnut oil ready put on As. 9 to Rs. 19. June delivery was better by As. 2 at Rs. 19-2.

Bold delivery, in the linseed section, ruled dull at Rs. 32-12 in the 1rst two sessions of the week. Subsequently, it shot up to Rs. 34-2. At this level profit-taking set in and the price declined by As. 4 to Rs. 33-14. But over the week, it gained Re. 1-4. June-July delivery ruled quiet early in the week at about Rs. 32-6. Thereafter, it advanced to Rs. 34-4 only to decline to Rs. 33-14. Small sutnas followed a similar pattern and finished at Rs. 32, as against Rs. 30-10. After advancing from Rs. 19-9 to Rs. 20-8, linseed oil closed lower by an anna at Rs. 20-7.

May (futures) delivery in the castorseed section opened the week at Rs. 140-12, as against Rs. 141-2. It fluctuated between Rs. 146 and Rs. 139-6, before closing at Rs. 142-4. September delivery changed hands at Rs. 149-10, as against Rs. 148-4, the highest and the lowest touched being Rs. 153-4 and Rs. 146-10. In the ready section, Madras quality put on As. 14 to Rs. 29. Castor oil, Commercial quality, gained As. 5 to Rs. 16-1.

Among others, *niger* Madras quality hardened by As. 8 to Rs. 29 and *kardi* Bold by As. 6 to Rs. 20-12.

The following table shows the prices of oilseeds and oils yesterday, as compared with those at the end of the previous two weeks.

	9-5-1956	2-5-1956	24-4-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 9*th May*

A distinctly firm trend prevailed in the sugar market during the week under review, in contrast with the easy conditions noted last week. The firmness was principally aided by the issue of slim release orders to Bombay-Deccan sugar mills. The quantity of sugar involved was not more than 40,000 bags, or just 40 per cent. of the total output up to 21st April 1956. As a result of the small release thus, the ex-mill quotations of Bombay-Deccan sugar recorded a rise of Rs. 2-8 per bag. This, coupled with renewed demand from the Malabar Coast, induced good buying support for sugar, the prices of which moved up.

The improvement in sugar prices would have been more marked but for three important factors. First, it was reported that a substantial quantity of British refined sugar had been disposed of by the Regional Directorate (Food) to local parties. Secondly, there were indications that the entire stocks of imported sugar stored on Government account in Bombay would be disposed of before the month was out. Thirdly, arrivals of indigenous sugar into the market during the week were poor, being only 7,000 bags, as against 19,500 bags in the previous week.

In the spot section, small grain indigenous sugar advanced by a rupee to Rs. 89 per bag. Medium and large grains rose by a like amount to Rs. 90-Rs. 92 and Rs. 93-Rs. 98, respectively. British refined sugar was firm at Rs. 84 per bag of 2 cwts.

In the forward section, *Vaisakh* delivery contract for 'C' grade sugar spurted by As. 10 to Rs. 90-8, but was quoted slightly lower at Rs. 90-6 today.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

BLACK PEPPER RECEDES

(Messrs. Parekh & Co.)

BOMBAY, 9*th May*

Last week's attempt at a manœuvring having proved abortive, Malabar black pepper opened the week with a softer note, in sympathy with New York where grinders were reported to have withdrawn after making some purchases at advanced prices, under pressure of competitive selling by Djakarta and Sarawak. Spot in New York, after touching $0.30, came down to $0.28. Sarawak and Djakarta marked down their prices from Str.$78 to Str.$74 and from Rupias 525 to Rupias 470, respectively. Alleppey came down from Rs. 775 to Rs. 725, while garbled at Cochin also receded to Rs. 125. It was really a clever strategy on the part of the bulls to time their manipulations in the month of Ramzan when most of the Mahomedan growers in Tellicherry area were not in a mood to transact business and, if exporters wanted to buy, they had to buy from Alleppey areas only.

Arrivals of New Sarawak are reported increasing at Singapore. As a consequence, holders there are nervous. They are anxious to sell, but both dealers and grinders in the U.S.A. and Europe showed little interest. Foreign dealers are waiting still lower prices. If at all they bought, it was only for a small quantity and that too either for spot or for nearby.

The Conference Line is reported to have made 60 per cent. reduction in the freight to fight the Non-Conference. This has made Malabar somewhat competitive in New York but U.S.A. dealers and grinders, in general, wanted to await developments and, therefore, no sizable business was possible. After the announcement of reduction in the freight, growers attempted to raise their prices, but, without support from overseas, they had to reduce the price from Rs. 750 to Rs. 725. Even at this price, there are no significant enquiries.

In the last week's upheaval, a London operator was a prominent buyer and was reported to have purchased a fair quantity for early May and whole

(*Continued on page* 943)

ECONOMIC TRENDS IN U.S.

FURTHER WAGE ADVANCES LIKELY

DESCRIBING the latest economic trends in the U.S., the April issue of the *Monthly Letter* of the First National City Bank of New York observes as follows:

"The drop in the bond markets and the increases in Federal Reserve Bank discount rates have made April an eventful month in business. A heavy demand for money is in itself a sign of high activity and expansive trends, and general business reports reflect the same conditions. However, the effect of money market tightening and the purpose of Federal Reserve policy is to put a little more pressure on the brakes. It is not surprising that the month's developments have led to fresh analysis and reappraisal of the outlook.

"In the early weeks of this year, expectations were voiced in some quarters that the next developments in the money markets and in Federal Reserve policy would be towards ease. It was argued that overall demand was no longer rising, that the trend of production and trade indexes was at best only sideways, and that, with productive capacity increasing, inflationary dangers were subsiding. As events have shown, these arguments did not take account of all the elements in the economic situation, and they were never persuasive to the Federal Reserve officials, who followed a policy of sustained credit restraint and watchful waiting. Nevertheless, these expectations induced complacence as to the position of the bond and money markets, despite the immense capital expenditures scheduled by corporations and local government bodies, and they appear to have influenced deferment of borrowing to some extent.

"The error in the estimates of money requirements was exposed by the heavy demand for loans when corporate income-tax payments became due. Exceeding expectations, this demand in the week ended 21st March increased the business loans of the New York City banks alone by $436 million. The significant revelation was that the borrowing corporations needed their cash for the huge programmes of plant and equipment expenditures to which they were committed. The ensuing drop in the bond markets supplied further evidence that the demand to finance capital projects was running ahead of the supply of savings.

Industrial Prices

"At the same time, the persistent rise in industrial prices has continued, and further wage advances are in the making. Total construction contracts awards in March and the first three weeks of April (as compiled by F. W. Dodge) set new highs for this time of year and residential awards rose to all-time records, indicating that the home building decline has flattened out and probably turned upward. The business news thus has presented a picture of an investment and construction boom financed by excessive borrowing and contributing to a wage-price spiral. The discount rate advances served as a warning that brick and mortar investments should be financed by long-term capital, rather than by bank loans.

"Business indexes for April, when the final figures are in, are expected to continue close to earlier months' levels. The industrial production index of the Federal Reserve Board (1947-49=100) has held between 142 (March) and 144 (December) since last September. Total retail sales, seasonally adjusted, in March recovered 2 per cent. above the February low, but were 1 per cent. less than the September peak. Non-agricultural employment rose a little less and unemployment declined a little less than usual in March, while average hours worked in factories dropped a little to the lowest figure since January 1955. The gross national product during the first quarter reached an annual rate of $399 billion, but this was only $1.7 billion above the rate in the fourth quarter of 1955, and the gain reflected higher prices more than physical expansion.

"Looking at the overall figures alone, it would be difficult to find the source of inflationary pressures. Indeed, the fact that a drop of nearly one-third in passenger car production and contraction in some other lines has been absorbed without significant decline in aggregate output and employment is gratifying. However, the overall stability conceals divergencies of movement.

"The production index ceased to rise for two reasons. On the one hand, demand for automobiles, farm implements, synthetic fibres and some other consumer products declined, and output was curtailed accordingly. On the other hand, industries which have a greater demand than they can supply, such as steel and many of the non-ferrous metals and machinery and equipment items, cannot increase output much, because they are against the ceiling of capacity. Lack of steel, copper and aluminium imposes limits on durable goods output and heavy construction. Other materials, including cement, paper and nickel, are in short supply, despite peak output. Skilled workers are becoming increasingly hard to find. For all these reasons, production cannot rise proportionately with demand —bottlenecks and soft spots exist together.

"The key item in the changes in business activity between the fourth quarter of 1955 and the first quarter of 1956 was an increase of $1½ billion, annual rate, in business investment in new construction and equipment. Probably, this rate is higher now. Business plant and equipment expenditures are scheduled to total $35 billion this year, exceeding 1955, which was itself an all-time record, by 22 per cent. Heavier Government spending for public works, defence, and other projects is generally anticipated.

"The impact of the demand for construction and equipment falls heavily on the bottlenecks, where supplies cannot be proportionately increased and puts corresponding pressure on prices. At the same time, the effect of cost increases, including higher wages, goes around the circle. In an atmosphere of full order books, rising prices, and difficulties in getting and keeping skilled workers, union leaders will make all they can of the opportunity to demand large wage increases, and some employers may not be inclined to resist very strongly. In the steel industry, formal negotiations to replace the union contract expiring on 30th June have not yet begun. Yet so strong is the belief that there will be a sizable wage increase, followed by a commensurate price boost, that a scramble to accumulate steel, so far as limited supplies permit, has been under way for some time.

Wage Patterns

"Wage patterns this spring are being boosted by law (minimum wages up one-third), by previous contracts (auto workers will get 6 to 8½ cents more per hour on 1st June) and by collective bargaining. Whatever the method, these raises have a double-barrelled effect on prices through increasing both costs and purchasing power. It is also worth remembering that the rising volume of spending for plant and equipment, public works, and the like generates a rising flow of consumer income without contributing currently to the supply of consumer goods.

"The Bureau of Labour Statistics' comprehensive price index for industrial goods has risen steadily since last June, at the average rate of about 0.5 per cent. a month. This advance, equivalent to 6 per cent. a year, demonstrates the inflationary pressures. The overall wholesale price index, including farm products, has risen during the same period at a rate of about 3½ per cent., per annum. The consumer price index (cost of living) rose 0.1 per cent. in March. The Bureau of Labour Statistics, in publishing the figure, said that a seasonal rise in food prices could be expected from now through the summer, and that it would cause some rise in the cost of living index.

"Excessive borrowing, pressure at bottlenecks, rising wages and prices are all evidence that people are trying to get more out of the economic organisation than it can presently produce. This is the general situation, despite the soft spots, and it is the essence of the inflationary trend.

"Walter W. McAllister, Chairman of the Federal Home Loan Bank Board, put the problem in a speech in New York on 23rd April. In contrast to Federal Housing Administrator Cole's objective of building 1,300,000 more housing units this year, Mr. McAllister suggested 1,100,000 or 1,200,000 as a more practical goal: 'If we tried to sustain in excess of 1.2 million units, with the balance of the economy continuing at its present level of production, we simply would not be able to do it. We would not have the labour or materials and we certainly would not have the funds.'

The Outlook

"In reappraising the business outlook, most people will ask two questions. First, what is the importance of the well-advertised 'soft spots'? They are unlikely to disappear soon. Well over 800,000 new 1956-model passenger cars are in dealers' stocks and must be worked off before the introduction of new models in the early fall. Current passenger car production rates are roughly in line with domestic sales; before inventories can be reduced substantially, sales must be boosted or production cut. Inventory reduction is also necessary in agricultural machinery and to a less marked extent in some other lines. Even the booming steel industry faces a possibility of lower demand in the third quarter because of inventory liquidation. Roger M. Blough, Chairman of U.S. Steel stated in late April: 'A number of purchasers of steel are borrowing for the purpose of building up inventories. We believe that inventories are being built up at a rapid rate at this time. There are exceptions like plates, structurals, and pipe, which are in short supply. But all other products are being accumulated in inventory—sheets, strip, rods, bars and tin plate products.'

"Inventory liquidation in these lines may offset accumulation elsewhere during the summer months and, to that extent, the pressure of demand may be lightened. Business inventories (non-farm) rose during the fourth quarter of 1955 at the rate of $5.1 billion annually, and during the first quarter this year at the rate of $4 billion. On the whole, however, stocks are no greater in relation to sales than a year ago.

"The second question is whether tighter money will reduce investment and construction expenditures below previous expectations. Inventory liquidation is unlikely to go far or to have a major depressing effect as long as capital expenditures are maintained.

"There is little reason to doubt the firmness of business expansion and modernisation plans. They are parts of long-term programmes for cost-cutting, introduction of new products, and supplying growing markets. The extent to which commitments have already been made is evident from heavy unfilled orders for machine and other tools, dies, and specialised capital goods of all kinds, including shipping and railway freight cars. For the remainder of 1956 at least the prospects of any material slackening in the heavy goods industries are small indeed. They promise to be exempt from the 'rolling readjustment' that is affecting some sections of the economy, and the direct and indirect employment that they give will provide strong support for consumer income and expenditures.

"With tax-exempt bond yields rising, there are already intimations that the increased cost of borrowing may be causing some deferment of municipal and other local government projects. Also, business men who come forward with new programmes for capital expenditures are having to pay a little more for the money and, in some cases, may be unable to find the funds. It does not necessarily follow, however, that this will result in curtailment of present prospects in the capital goods industries, which are based on firm orders and firm plans.

"Of course, a holding of the line is precisely what is wanted. Eventually, the far-ranging spending plans of business, Government, and consumers will have to come into line with the ability of the economy to produce the desired materials and finished goods. Through tightening the credit supply, the authorities are causing lenders and borrowers alike to make a careful reappraisal of capital expenditure plans, inventory accumulation and other programmes. To the extent that greater selectivity in the use of credit brings about the deferment or cancellation of marginal spending plans, the pressure on the supply and prices of materials will be reduced. If curtailment seems to go too far, flexible money policy will, of course, take that into account at the time. For the present, it clearly is based not on expectations, forecasts or fears but on the facts as they now appear.

"The President's annual *Economic Report*, released on 24th January, discussed the lesson of 1955 and had some things to say that are equally relevant to at least the early months of 1956: 'Success in preventing depression depends, in large part, upon a willingness to avoid the excesses that can so easily develop during prosperity and upon skill in doing this. Governmental measures of monetary and fiscal restraint are not as readily accepted as are measures of economic stimulation. The manufacturer who sees an opportunity to expand his activities by borrowing cannot always understand why his bank is so short of funds that he must put up with a smaller loan than he requested. Nor can the home-builder or merchant or consumer. Nor, for that matter, can the banker. To each participant in the economic process a shortage of credit may appear as a restriction on his own opportunities. But the basic shortage under conditions of high prosperity is on the side of physical resources, not on the side of money or credit. If credit on easy terms were available to everyone at a time when the economy is already working close to capacity, the consequence would be a scramble for limited resources and a cumulative bidding up of prices. If taxes were simultaneously reduced, this inflationary process would only be speeded up. A Government that sought to prolong prosperity by such devices would be taking a road that all too often has ended in disaster.'"

Notices

THE ASSOCIATED CEMENT COMPANIES, LTD.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, Cement House, 121, Queen's Road, Fort, Bombay, at 4 p.m. on Friday the 8th day of June 1956, for the purpose of passing the Resolutions specified in the Notice dated 30th April 1956 which has already been forwarded to the Shareholders.

By Order of the Board,
For THE ASSOCIATED CEMENT COS., LTD.,
CEMENT AGENCIES (PRIVATE) LTD.,
Managing Agents,
N. DANDEKER,
Managing Director.

BOMBAY, 9*th May* 1956.

THE NEW INDIA ASSURANCE COMPANY, LIMITED

BOMBAY

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 27th May to 25th June 1956, both days inclusive.

By Order of the Board,
B. K. SHAH,
Managing Director.

BOMBAY, 8*th May* 1956.

THE BENGAL FLOUR MILLS CO. LTD.

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Ordinary General Meeting of the Company a dividend at 15 per cent. per annum for the half-year ended 31st December 1955.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 7*th May* 1956.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2359 BOMBAY, 19TH MAY 1956 PRICE Rs. 1/8

NO CHANGE IN SECOND PLAN

THERE is little that is new in the final version of the second Plan. It is substantially the same as the draft outline of the Plan published three months ago. The final report is, of course, very much bulkier than the draft outline, but that is due chiefly to the inclusion of details of the various schemes and of the revised Industrial Policy Statement. The size of the report may be in keeping with the massive investment and effort envisaged by the planners. It does not, however, contain any fresh arguments to carry conviction to those who felt that the Plan was over-ambitious and unbalanced. The thoughts of these critics had been ably brought out by Mr. K. C. Neogy, one of the members of the Planning Commission, in a separate note circulated to members of the National Development Council. They had also been recognised, in a way, by another member of the Commission, namely, Mr. C. D. Deshmukh. The latter even went to the extent of saying that the period of the Plan might have to be extended, if it were to bear even a semblance of reality. A member of the Union Cabinet, Mr. T. T. Krishnamachari, had questioned the practicability of establishing an efficient socialist economy, in which the State would own practically all the principal means of production, consistent with the ideals of democracy. The final Plan that has now emerged has not been influenced, to any material extent, by these observations. As a true democrat, Mr. Nehru, the chief architect of the Plan, has, however, taken note of these criticisms by seeing to it that appropriate qualifications are made in the report. He has appreciated, in particular, the cogent arguments put forward by Mr. Neogy. This is evident from the special reference made to his views in the concluding paragraph of the report, as well as from the admission that the considerations raised by him are important and should be constantly kept in view in carrying out the Plan. This candid recognition by the chief of the Planning Commission and his other colleagues is commendable, reflecting as it does the spirit of tolerance that still animates the policies and actions of the leadership at the helm of India's affairs. It has averted a crisis in the Planning Commission and ensured for the nation the services of an able, experienced and level-headed administrator. There is no doubt that the Commission would have become poorer had Mr. Neogy been allowed to resign his post.

Thanks to Mr. Neogy, the language of the report has been modified in some parts. It is less assertive than it was in the draft outline. But mere verbal changes do not alter the unrealistically ambitious character of the Plan. It is thus obvious that the Plan is a vast collection of the Government's intentions, desires and wants, all good and sincere of course. Only, they are unrelated to available physical and financial resources. The Planning Commission asserts that, given the effort and the sacrifice, the objectives of the Plan and the targets mentioned are well within the country's capacity. This is a very bold claim, for the qualification is not easy of fulfilment. The sacrifice that is necessary for implementing a plan of this size is beyond the capacity of its people. To aim high may be a good thing, but to attempt to do too much in too short a time is to be foolhardy. Such an attempt will compel adoption of measures that may undermine the freedom of the individual, besides leading to waste and extravagance. In his recent book, *The Theory of Economic Growth*, Prof. Arthur Lewis remarks: "The rate of economic growth can be too high for the health of the society.... Societies are not necessarily wise to choose to speed up their rate of growth above its current level; if they do, they will enjoy substantial benefits, but they may also incur substantial costs, in social, or in spiritual terms." This remark is aptly applicable to India's second Plan.

It is, of course, heartening to hear Mr. Nehru reiterate that India must proceed to industrialise itself rapidly, while maintaining and retaining, at the same time, the democratic structure of its constitution and its society. On more than one occasion, he has asserted that this can be done. While we admire his self-confidence, we have our own doubts, especially because of the large emphasis on (*a*) State-ownership of almost all the major industries, (*b*) State monopoly of certain services, as, for example, insurance, (*c*) State-trading in certain commodities and with certain countries, (*d*) co-operative farming of a type indistinguishable from collective farming in Communist States, and (*e*) heavy taxation that may retard individual initiative and enterprise. We are not alone in hesitating to share Mr. Nehru's robust optimism. Many distinguished persons in the society also do so. Dr. John Matthai, who needs no introduction to our readers, is one of them, as will be seen from the full text of his illuminating address at the Bombay Rotary Club published on page 959 of this issue. Another is Mr. T. T. Krishnamachari who knows how Government machinery works—he once sarcastically but appropriately described himself as the jailor of the private sector, the current coin for free enterprise. Only about a month ago, he frankly said in Parliament: "It is quite possible to build up a socialist economy which is efficient, but it is not quite so easily possible to build up an economy which is also democratic at the same time." In the same speech, he admitted that, despite all the study and search that has been made, "there is no synthesis in our economic philosophy." Does this not show that the Government has no clear conception of its economic policies and their implications to democratic ways of life?

The Plan suffers from many important defects. In the first place, the capital cost of the targets, in terms of finance, is underestimated. If all the targets are to be implemented, it will require more money than is indicated. Secondly, the resources required even on the basis of the estimates given in the Plan are unlikely to be forthcoming in full. When it is doubtful whether even the sum of Rs. 450 crores originally provided in the Plan could be raised by way of additional taxation, the planners have naively assumed that the gap of Rs. 400 crores could be filled in by fresh taxes. Similarly, the sum of Rs. 800 crores to be obtained by way of foreign capital, in addition to Rs. 100 crores to be received by the private sector from the same source, is based on the country's need rather than on any reasonable estimate of its availability, having regard to India's foreign policy and the series of restrictions that have been imposed on free enterprise.

Thirdly, the industrial targets are unrelated to transport capacity. It is the view of experts that the financial provision made for expansion of railways, shipping and road transport is inadequate. Even if finance is made available, we wonder whether it will be possible for the country to get from abroad, or make domestically, the necessary equipment in time. The transport shortage is already being felt. In a couple of months, arrival of steel in Bombay port alone would be about 2,000 tons per day, while transport facilities available here can lift no more than 800 tons per day. The planners are alive to the transport bottleneck, but have not provided any effective solution. It has, of course, been decided to set up a standing committee, in order to bring about co-ordination of the activities of the Ministries for Industry, Minerals and Transport, to make the best use of the funds allocated to these three portfolios and to prescribe priorities. The Member of the Planning Commission concerned with these subjects is expected to be the chairman of this committee. The membership will consist of the Secretaries of the different Ministries concerned and the Chairman of the Railway Board. But all that this Committee can do is to make the best use of the available transport capacity. It cannot make good the shortage. The effective remedy for this lies in expanding the capacity. Since the public sector has too many things to do, why not allow the private sector to expand road transport and shipping by offering to it the necessary freedom and incentives? The Plan is silent on this important question even when the magnitude of the problem is crystal clear.

Fourthly, the shortage of personnel, administrative and technical

he is wrong, because there is a difference between availing oneself of all such excessive capacity as exists and planning deliberately for additional capacity to meet the contingent inflation at a time when all available capital resources have to be pressed into use."

The necessity for stepping up the targets for production of food, cloth, etc., was, however, conceded only when Mr. Neogy came out with his appraisal of the defects in the Plan to the public. Another factor that opened the eyes of the planners was the sharp rise in prices of commodities, especially foodgrains, a development to which the Press gave proper publicity. But what is the outcome? The Plan merely admits that the targets for agricultural production should be raised and that increased output of cloth and other consumer goods will act as a valuable safeguard against inflation. No provision has, however, been made for the additional funds that will be required for hitting the higher targets. Nor has any decision been taken about allowing the cotton mill sector to expand its weaving as well as spinning capacity. Even if a decision were taken today, it would take at least 18 months for additions to capacity to be fully effective. Is it realistic then to delay a decision on this vital issue any longer? The growing demand for mill cloth, it may be noted here, is already telling on exports of cloth, thereby depriving the country of valuable foreign exchange.

To revert to agricultural production. In reply to Mr. Neogy's critical note, Mr. V. T. Krishnamachari, Deputy Chairman of the Planning Commission, stated that, if agricultural production could be stepped up by 40 per cent., the threat of inflation could be faced with confidence. An increase of 40 per cent. is more than twice as much as that mentioned in the draft Plan. Can such an increase be achieved without a proportionate increase in investment on agriculture? The Food and Agriculture Ministry seems to be of the opinion that an additional capital outlay of at least Rs. 100 crores would be needed. It is a moot point whether, even if this amount is found, agricultural production can be stepped up by 40 per cent. For one thing, State Governments, under whose jurisdiction agriculture falls, are unlikely to rise to the occasion, what with the general elections and the reorganisation of States. For another, the dubious land reforms and absence of adequate credit, as well as storage facilities, may be found to be serious obstacles. It is highly significant, in this connection, that, at the recent conference of the State Development Commissioners at Naini Tal, the consensus of opinion was that nothing beyond a 25 per cent. increase would be feasible. In order, however, to provide for any shortfall in the supply of foodgrains, agricultural raw materials and consumer goods, the Plan stresses the need for more imports and the building up of buffer stocks. A sound proposition, indeed. But where is the additional foreign exchange that will be required for this?

Finally, the Plan asserts that, since the basic objective is a socialist structure, the main criterion for determining the lines of economic advance must not be private profit but social gain. This is an ideal approach on paper, but, if serious attempts were made to follow it in actual practice, it would end in a failure and hold up the progress of the Plan. Even in Soviet Russia, where there is an authoritarian regime, it did not succeed and the State had to resort to the incentive of profit-motive, in order to secure efficiency and increased production. The experience of the Government of India, too, has not been different. This is evident from the fact that, quite recently, even the Commerce and Industry Minister found it necessary to emphasise, in one of his speeches, that it would be necessary for the Government to provide adequate incentives, if it were to build up an efficient managerial cadre. He pointed out that his Ministry was finding it difficult to get the right type of personnel for the salaries which it was allowed to offer and that it would not only be false economy but false socialism to reduce the attractiveness of public service by paying low salaries. What a difference between this voice of realism and that of the planners!

INSURANCE CORPORATION BILL

THE Insurance Corporation Bill, in the form in which it has emerged from the Select Committee, is a more balanced document than it was before, in that the Committee has incorporated several new features, such as a somewhat better basis for compensation, provision for compensation to chief agents and for the absorption of a part of their staff, and definition of the functions of some of the chief officers of the Corporation. In its amplified form, it incorporates the assurance given by the Government spokesmen that insurance staff will have ample protection and that investments will be under expert scrutiny. There is also a provision for enabling Indian insurers to transact life business abroad.

The Bill, however, is defective not so much from the point of view of what it affirms as from that of what it fails to affirm. And since these omissions are serious, they may well affect adversely the future of insurance in this country. Thus, there is no provision for the representation of policyholders in the management of the Corporation. Nationalisation is thus in distressing contrast not only with mutualisation under which policyholders controlled their destinies but even with private insurance under which there was statutory provision for some elected representatives of policyholders. Presumably, the Government feels that no such representation is called for, since it will itself represent the interests of policyholders. But there are three reasons why such a view is incorrect. In the first place, the Government can never know how the policyholders feel about the services rendered by the Corporation, unless there are special representatives to voice their grievances. Secondly, if the Government feels that it can represent the policyholder better than they can represent themselves, there is no sense in running nationalised insurance as a corporation. Thirdly, it is somewhat incongruous that, whereas the Bill provides for the setting up of employees and agents relations committees to look after the welfare of the Corporation's staff and field workers, there is to be no representation for the policyholders for whose interests the Corporation was ostensibly brought into being.

There is no statutory obligation on the part of the Corporation to manage its affairs in a way that is beneficial to policyholders. We say this because the Corporation has been enjoined to exercise its powers so as to secure that "life insurance business is developed to the best advantage of the community." And, under the cover of the vague phrase, "to the best advantage of the community", it will be possible to commit any financial sin that is detrimental to policyholders' interests. After all, who will determine what is to the "best advantage of the community." It is the Government. Since the political complexion of the Government will change from time to time, the ideas of what constitutes the "best advantage of the community" are bound to suffer changes. In the long run, the Government may well come to sacrifice policyholders' interests at the altar of the imaginary interests of the community.

Indeed, the whole approach is too doctrinaire to be realistic. It ignores the vital fact that the content of insurance is basically individualistic. A policyholder saves for his future and for the future of his kith and kin. The most powerful argument in favour of life insurance is that either a man pays for insurance during his lifetime or his family pays for it in terms of privation and misery after his death; in either case, somebody pays for it. The appeal for insurance is thus directed towards the individual prospect. Any advantage that the community derives from the individual's savings is incidental to insurance. Clearly, it is wrong to emphasise this subsidiary "community" aspect of insurance and ignore altogether the normal, realistic aspect of the individual's prosperity.

It will, perhaps, be contended that the Government has already assured the policyholders the safety of their policies and that nationalisation of insurance was, in fact, undertaken for the benefit of policyholders. Now this "safety" factor applies only to the face value of the policies. It does not cover the bonus part. In any case, nationalisation of insurance cannot appeal to the imagination of people through a mere emphasis on "safety" aspect of policies. For, as it has been pointed out several times ere now, the face value of the policies by and large had never been in jeopardy. The Government is not giving anything that the vast majority of policyholders did not already possess. If the Government's contention is that nationalisation was undertaken for the benefit of the policyholders themselves, why should it then fight shy of declaring its intentions? Why should it not lay down that the Corporation should so manage its affairs as to secure the best advantage of the policyholders? In fine, the role assigned to the Corporation should primarily be that of trustees of policyholders. If the Act cast such a responsibility on the Corporation, it would give greater confidence to policyholders, for no future Government will normally wish to change it for fear of incurring their wrath.

No one can really take a correct view of insurance who ignores that it is a long-term contract. The Government must so frame the law that no loophole is left for its successors to mismanage insurance. It is true that the law can be changed. But then, a change will at least evoke opposition, if it is manifestly unfair. A serious loophole is that there is nothing in the Bill to compel the authorities to invest the funds wisely or to run the Corporation efficiently. The provision relating to investment is vague. All that has been laid down is that an investment committee, consisting of the members of the Corporation and a few experts, will advise the Corporation on investment matters. There is no guarantee that the Corporation will accept this advice. Be that as it may, the sections of the Insurance Act, which defined the scope of the investment field for private insurers, will not be binding on the Corporation. This omission has two aspects to it. In the first place, there is no guarantee that the Corporation, in its investment policy, will follow the prudent maxim of sound private insurers—"maximum yield, consistent with security of investment." If it does not follow this maxim, the bonus to policyholders will be adversely affected. It is true that no investment committee, consisting of experts, will ignore the maxim which guides the investments by insurers all the world over. But then, it is open to some future Government to ignore the advice tendered or to adopt the simpler expedient of constituting a committee that will tender the advice it wants. If the maxim were specifically mentioned, it might well prevent misapplication of funds to enterprises of doubtful economic value or their misdirection for political purposes. There is also no guarantee that the private sector will get any part of the funds it needs from the Corporation. It is true that the Union Finance Minister, Mr. C. D. Deshmukh, has given the assurance that it is not the intention of the Government to reduce the proportion of funds the insurers normally invest in the private sector. But then, Mr. Deshmukh will not always be there to implement it. And his successors may not feel bound by this verbal assurance.

Not only is the Corporation free from the investment restrictions by which private insurers were bound but it is also free from restrictions on expense ratio. Since one of the arguments used in favour of nationalisation of insurance was that the expense ratio of private insurers in India was very high, it is to be expected that the Government will take utmost care to ensure that the charge does not return to it like a boomerang. Normally, one would expect the Corporation, now that it has a monopoly of life insurance in the country, to work with an expense ratio that is considerably less than what prevailed in pre-nationalisation days. But, in the absence of specific restrictions, the Corporation will have no special obligation to cut its expenses. On the other hand, it may well be induced to go on a spending spree to rural areas in the hope of capturing some non-existent business. A reasonable statutory restriction on expenses will go a long way towards ensuring that the authorities do not make a merry bonfire of policyholders' money.

The position of Indian insurers in foreign countries where they are working has been rendered particularly difficult. If any person wishes to start or to continue his overseas business, he has been asked to apply to the Government for a certificate. In practice, it may be found difficult to take advantage of this provision. For one thing, it looks extraordinary that the Government, having made serious charges against the insurers of this country, should be willing to grant them permission to operate abroad. If they cannot be any good to this country, they can obviously be no good to other countries either. Secondly, there are bound to be reprisals from overseas countries. If India does not allow foreign life insurers to work here, why should foreign countries permit Indian life insurers to work there? Thirdly, the few Indian insurers, who have secured good overseas portfolio, could do so, because they had a large and expanding home business. Now that they are deprived of their domestic life business, they will find it difficult to compete successfully with other insurers in the foreign markets. In fine, India is faced with the prospect of losing all its foreign life business sooner or later. In 1954, such business brought the Indian insurers a premium income of Rs. 1.04 crores, as against Rs. 95 lakhs in the previous year. There were signs that overseas business would prove an expanding source of invisible income to India. This hope has been dashed to the ground through nationalisation and that, at a time when the country needs more and more of such invisible incomes.

PLANNING COMMISSION DISCOURAGES IDEA OF CEILING ON INCOMES

NOVEL TAXES, HOWEVER, SUPPORTED—EQUITIES FIRM—COFFEE CROP BIG

THURSDAY, 5 P.M.

MARKET GOSSIP

A SUBJECT that never fails to arouse interest in this country or to make platform orators spring to their feet is the ceiling on incomes. It is surprising how often this subject is mentioned, what animated discussion it gives rise to. From all these, one would think that what people desire most is not a rise in average incomes, nor an increase in average wealth but only some level beyond which a few cannot earn more. A great Indian leader, who has had unusual opportunities to observe other nations, once said that, if India's national character could be described in one word, it would be "jealousy." May be, this is an overstatement of a national trait. But it is worth investigating why people in India, more than in any other country, attach so much importance to ceilings on income. Here is a rich field for investigation by expert psychologists. One may contrast the position in India with that in the U.S. It is said that a worker in that country never envies the man with a car but only wants to improve his position, so as to own one himself and that a man with an ordinary car does not envy the man with a Cadillac but only wants to increase his income so as to become the proud owner of a Cadillac. In India, the most widely accepted economic theory is that, if the car owners were all deprived of their vehicles, a great benefit will have been conferred on pedestrians!

This theory finds its ardent supporters among all political parties. Small wonder, then, that the recent debate on ceiling on incomes in the Lok Sabha evoked some eloquent speeches. Not content with the lucid exposition of the problem by the Union Finance Minister, Mr. C. D. Deshmukh, who advocated, in the course of the budget debate, a cautious though sympathetic approach to the issue of ceilings, the members of Parliament decided to have a debate on the subject. It drew general support all round—and, of course, from the communist members who derive their inspiration from a country where the disparities in income are believed to be the widest. No constructive comment was made, no workable solution presented. But everybody agreed that there must be ceilings on income.

The whole subject has necessarily to be viewed against the background of inequalities in wealth and reward. No one need contend that excessive inequalities are necessary for incentive or that they should not be corrected. They deserve to be corrected, but more by raising the lower levels than by lowering the higher levels. This is the simple and correct approach. At one time, the Planning Commission was rather vague on this subject. If anything it was inclined to view the demand for a ceiling on income as something that deserved consideration. In the final version of the Plan, however, the authors have stated their stand more clearly. Rejecting the idea of a direct ceiling on incomes on the ground of impracticability, they observe:

"It must be stressed that reduction in inequalities in income and wealth can follow only from the totality of measures and institutional changes undertaken as part of the Plan. The pattern of investment proposed in the Plan, the direction to economic activity given by State action, the impact of fiscal devices used for mobilising the resources needed for the Plan, the expansion of social services, and the institutional changes in the sphere of land ownership and management, the functioning of joint-stock companies and the managing agency system and the growth of the co-operative sector under State sponsorship, all these determine the points at which new incomes will be generated and the manner of their distribution. It is the essence of a planned approach that all these measures should be harmonised and brought to a focus in a manner that would ensure an enlargement of incomes and opportunities at the lower end and a reduction of wealth and privilege at the upper end."

The Planning Commission's analysis of the problem is obviously of great interest to the classes which participate in the working of the investment market. The Commission recognises that fiscal measures have an important part to play in reducing inequalities of income and wealth and that far-reaching changes in the tax system will be required, if the more well-to-do classes of society are to make a larger contribution to resources for development.

What measures does the Commission suggest? No ready-made solution has, of course, been offered. But it is noteworthy that it suggests certain lines of approach which cannot but be disturbing. At the same time, it is gratifying to note that the Commission is fully alive to the complexity of the problem and admits, that some of the measures designed to reduce inequalities are apt to react adversely on incentives.

The most important single factor responsible for inequalities of income and wealth, according to the Commission, is the ownership of property. Inequalities in income also arise from inequalities in capacity to work, and certain other social and psychological causes. These deserve to be corrected through expansion of educational and other facilities. At the same time, the Commission asserts that the "case for taxation based specifically on wealth or property needs to be carefully examined." Then it adds—the addition is rather disquieting to investors—the remark: "The fact that income from wealth is taxed when it accrues does not rebut the case for a separate moderate tax on wealth. There are problems of valuation here, and there are large possibilities of avoidance or evasion through non-reporting of transfers and the like. But given the objective of reducing inequalities of income and wealth and of raising the resources needed for development from classes which have incomes or wealth far above the average, these administrative problems have to be faced."

The Commission then goes on to point out that the yield from estate duty has so far been negligible. It feels that the estate duty will have to be supplemented by gift taxes, if the object in view is not to be frustrated. Gift taxes, it is stated, can yield "considerable revenues without impairing incentives and they are an important part of the machinery of taxation based on wealth and taxation." It adds:

"The foregoing observations are not meant to indicate that any or all of the measures mentioned can be adopted immediately. But they do suggest that further work on the incidence of these taxes, their effect on incentives and their administrative implications should be undertaken. In the nature of things some of these measures are apt to yield their full benefits only over a period of time, but there should be no hesitation in initiating changes in the desired direction if, on an examination of the case, the changes suggested promise to assist in the realisation of the objective in view."

The two-fold aspect of the problem of reducing inequalities of incomes—the reduction of higher levels and the upgrading of lower levels—is emphasised by the Commission. So far as the subject of ceiling on incomes is concerned, the Commission would like to "stress the substance rather than the form of the proposal." It recognises that a "ceiling cannot be imposed merely by legislation." It says:

"A ceiling on incomes has little significance unless it also involves a ceiling on property. Incomes from property or from business are difficult to regulate, except in so far as they come under the normal system of personal taxation. Any attempt to apply a ceiling—which means a 100 per cent. tax on incomes in all forms above a certain level—effective as from a specific date or to apply it in any rigid or mechanical way is likely to create difficulties. It is reasonable that those in receipt of large incomes should make a larger contribution to the public exchequer. This principle is well recognised and, in recent years, the marginal rates of taxation on incomes in the higher brackets have been stepped up. While inequalities have to be corrected through fiscal and other devices, the emphasis should be no less on positive measures which promote a more even distribution of incomes."

The way to lesser inequalities in incomes, according to the Commission, lies through progressive adaptation of the tax system, so as to impose heavier taxes on higher incomes, through institutional changes which place an increasing proportion of the community's surpluses directly in the hands of public authorities. In this context, promotion of co-operative farms of production, elimination of functionless rent-receivers, substitution of private usurious credit by institutional credit, control of private monopoly and enlargement of the public sector in strategic lines of production and trade, it is stated, are of far-reaching significance. Two observations, made by the Commission, deserve attention. In the first place, the Commission declares that a ceiling on incomes is the "end-product" of a process; it cannot be a "beginning." Secondly, it stresses that, in this approach to the problem, a floor for incomes, or a guarantee of certain minimum national standard of the essentials of civilised life is "no less important than a ceiling at top levels."

So far as they go, these are very sensible observations. One may or may not grant the case for deliberate, positive and speedy measures designed to reduce inequality in incomes. But even those who advocate those measures will have to recognise the wisdom of the Commission's approach that a ceiling on incomes must be the end-product of a long process and that it is meaningless without a floor for incomes. The Commission's analysis deserves to be read by those who clamour for an immediate ceiling on incomes. Assuming that there is no alternative to socialism, this analysis is certainly realistic. Only, it is not clear why the Commission could not bring to bear the same sense of realism over the question of ceilings on landholdings.

* * * *

The Commission has made a reference to a tax on expenditure as a means of getting from the well-to-do a larger contribution to the resources for development without losing in the process the incentive to work harder or to save more. Since expenditure tax is a new fiscal weapon for this country, its remarks on it will be read with interest. It says:

"It has recently been suggested that the substitution of expenditure for income as the basis for personal taxation, coupled with measures to tax wealth, can bring about this result. The idea of an expenditure tax has been discussed by economists on several occasions in the past. There is a growing body of expert opinion in favour of an expenditure tax. There are, however, administrative problems which have to be resolved before a change of this character can be made. It may be that an experimental approach on a limited scale may have to be adopted initially. Experience in more advanced countries seems to indicate that progressive income taxes on the scales that are now prevalent are in reality not so effective, firstly because the incomes by way of capital gains escape such taxation, and secondly, because there is a great deal of evasion in various ways. A tax based on expenditure may encourage saving, and, in theory at any rate, it is a more effective instrument than an income-tax for moderating inflationary or deflationary tendencies."

The planners have made a reference to the scheme of taxation in the chapter relating to finance for the Plan. Here, they have made some significant observations sufficient to suggest that they are counting on these new forms of taxes for securing additional revenue. They have in mind a tax on capital gains also. This is to be imposed by widening the concept of income. Fiscal monopolies and State trading in select lines are also mentioned as profitable devices for strengthening the revenues of the public sector.

* * * *

Despite the foregoing features of the final Plan, its publication has had no adverse effect on the Stock Exchanges. On the contrary, the trend of the markets has been steady to firm. The fact that neither the size of the Plan has been reduced, nor its period extended, has strengthened the view that deficit financing will be of a larger order than the Rs. 1,200 crores mentioned in the Plan and that, as a hedge against inflation, equities will gain in value further. Indian Irons were strongly backed and moved forward almost by a rupee in today's trading. This scrip has now become a hot favourite among speculators, being bought and sold in lakhs. The Calcutta Stock Exchange introduced a special clearing in this scrip last week and also stepped up the margin, but this has failed to restrain the bulls. There is a feeling in a section of the market that the small denomination of this scrip—its face value is only Rs. 10 per share—is very conducive to large-scale speculation in it. Accordingly, it is suggested that its face value should be raised to Rs. 100 by consolidating 10 shares into one share.

So strong is the bullish fervour now that heavy selling of Indian Irons and Indian Coppers by a Calcutta operator, who held a long position in the last crisis on the Calcutta Stock Exchange and settled his difference in Indian Irons only at Rs. 36-8, has failed to have any material effect on the market. This is attributed, to some extent, to the diversion of speculators' interest from cotton and other commodities to stock exchanges. It is significant that the Reserve Bank's circular to banks today directing them to restrict advances against stocks of paddy and rice and to raise the margin against advances on other commodities by 10 per cent. has also been ignored by the share market, even though at one time in the past the very possibility of such a move had brought equities tumbling down.

The abolition of export duty of 6¼ per cent. on coarse cloth, coupled with reported purchases of Kohinoors by custodians of insurance, has imparted additional strength to textile shares. The possibility of the Government reintroducing in the near future controls on prices and distribution of cloth has been ruled out by market circles, as both labour and the Congress Party are opposed to such detailed controls. Labour opposition is evidently due to the fear that profits would go down, thereby adversely affecting their bonus and prospects of securing higher wages. The Congress Party's opposition is due to fear of unpopularity with the masses and of increase in corruption. It is noteworthy that the Planning Commission, too, is not in favour of using such controls, except in the last resort. After stating that physical controls, including rationing and allocations, can be used to prevent consumption from increasing beyond a particular point and for economising scarce materials or scarce productive resources, the Commission adds: "But experience of the past suggests that physical controls, especially on essential and staple consumer goods, are not a device that can be relied upon to function effectively or equitably for any length of time."

* * * *

Indian coffee has earned the unenviable distinction of being the only agricultural commodity which, despite being in exportable surplus, is subjected to strict control in respect of both marketing and price. Strangely enough, the marketing policy of the Government in recent years proved disadvantageous to the growers. Large quantities of coffee were allowed to deteriorate to the benefit of none and to the detriment of the country as a whole. In 1953-54, for instance, Indian coffee production reached the then record quantity of 29,410 tons, while internal consumption amounted to 21,000 tons only. It is true that as much as 9,400 tons of coffee were allowed to be exported out of that crop, but the delay in giving permission resulted in the country missing the market and getting a good price. Further, the country lost the opportunity of exporting a larger quantity and what was worse, a substantial quantity of arabica cherry was allowed to deteriorate and had to be sold 20 per cent. below the basic price, after having, in addition, incurred heavy warehousing charges, not to speak of the cost of financing the stocks. The experience in 1955 was that the crop was relatively smaller at 25,100 tons, but a large quantity of arabica cherry could not be moved and some had to be sold at a loss.

Planters complain that these experiences of the past two years have brought home no lesson to the Government. With a substantially larger crop in 1955-56, the Government and the Coffee Board are confronted with the most delicate problem of avoiding the previous mistake. Last June, the Coffee Board estimated the current year's crop at 26,800 tons. The crop to date has already exceeded the

EQUITIES RULE STEADY

TEXTILES WELL SUPPORTED

(From Our Own Correspondents)

BOMBAY, *17th May*

THE share market maintained a steady tone during the week under review. Equities in general were less buoyant and active than in the previous two weeks. The trend was somewhat irregular, but, over the week, equities managed to emerge better. Nevertheless, barring a few selected counters, particularly in the textile section which attracted good attention, the gains were not very pronounced. Apparently, operators were more cautious in following the sharp rise in the preceding two weeks and preferred to book their profits at the higher levels. The two main factors which served to help the market maintain its steady tone were the abolition of the export duty on coarse cloth and the persistent hectic speculative buying in Indian Irons. The absence of any depressing influence was also a helpful factor.

In the steel section, the cynosure of activity was again provided by Indian Irons which ruled firm. On reports that the Company would shortly issue fresh capital, the shares advanced early in the week from Rs. 36-11½ to Rs. 37-2. After receding to Rs. 36-6 on Tuesday, due to profit-taking, they shot up again to Rs. 37-11½ at the close today. With the rise of Re. 1 this week, the gain in these shares over the last week is Rs. 3-2½. Tata Ordinaries moved up from Rs. 249-8 yesterday. Today, again, the shares rebounded to Rs. 251-12 at the close. The Company has issued a circular to the shareholders making a call of Rs. 35 per share (made up of Rs. 25 on capital account and Rs. 10 on premium) being the first instalment payable in respect of the new issue of shares at Rs. 75 per share at a premium of Rs. 30 per share. The payment is to be made on or before 2nd July 1956. The balance of Rs. 70 per share (including the premium of Rs. 20) is payable as and when called up. No announcement has, however, been made so far by the Stock Exchange authorities of the date on which the present *cum*-right shares will be quoted *ex*-right. The Stock Exchange is stated to have not received official intimation from the Company regarding the details of the new issue. It is, however, presumed that the change-over will take place immediately after the settlement on 1st June, or at any rate after the one on 15th June. Meanwhile, unofficial transaction in renunciation letter is reported to have been done today at Rs. 57.

Textiles were again buoyant, consequent on the abolition of export duty on coarse cloth and reports of buying in select counters by custodians of insurance companies. Bombay Dyeings were rather erratic. Advancing from Rs. 651-14 to Rs. 663-12, they slipped back on Tuesday to a low of Rs. 649-6. Subsequently, however, they recovered to Rs. 660-10 at the close today. Large-scale buying in Kohinoors pushed them up from Rs. 366-4 to Rs. 383-12. Centurys came up to Rs. 550 at one time from the previous week's closing of Rs. 544-8. After dropping to Rs. 538, they regained to Rs. 547-8. Central Indias gathered Rs. 4-8 to Rs. 142-8, while Finlays and Gokaks were unchanged on balance at Rs. 340 and Rs. 232, respectively. Indu Ordinaries were brisk and rose by As. 5½ to Rs. 12-9½. New Citys gained Rs. 6-14 to Rs. 173-12 and New Greats Rs. 9 to Rs. 241. Shree Niwas Cottons were steady at Rs. 213-2, while Simplex picked up Rs. 8 to Rs. 224. Standards Rs. 8-2 to Rs. 438-2 and Svadeshis Rs. 6 to Rs. 234. Investment support to Tata Mills lifted them up by Re. 1 to Rs. 55.

Activity in bank shares was somewhat restricted. Punjab Nationals were, however, prominent with a rise of Rs. 6-8 to Rs. 52-8. Centrals were, on the other hand, marked down by Rs. 2-4 to Rs. 50-12 and their New shares by Re. 1 to Rs. 54. All other counters showed no change over the week.

Insurance shares were featureless and very little business was reported. New Indias had some business As. 8 higher at Rs. 43. British India Generals changed hands at the self-same rate of Rs. 13-6. No transactions were reported in other counters.

Further ground was lost in the electricity section, on fears about nationalisation. Ahmedabad Electrics were depressed from Rs. 98-7 to Rs. 96-14. Bombay Suburbans lost As. 15 to Rs. 114-1. Surat Electrics declined from Rs. 123-12 to Rs. 121-14 and Tata Hydros from Rs. 125-8 to Rs. 123-8. Tata Powers moved down from Rs. 1,300 to Rs. 1,277-8 before gaining to Rs. 1,295. Andhra Valleys receded from Rs. 1,202-8 to Rs. 1,187-8, but recovered to Rs. 1,195.

Barring cement and sugar shares, the miscellaneous section was on the whole featureless. In the cement group, Digvijays were in good form consequent on the Chairman's appraisal of the promising outlook for the Company. The shares were done at Rs. 193-8 *ex-div.*, as against Rs. 196 *cum-div.* (div. Rs. 8-8). Associated Cements advanced from Rs. 219 to Rs. 223, but closed lower at Rs. 220. Among sugar shares Belapurs were done Rs. 2 higher at Rs. 233 and Phaltans Rs. 6 better at Rs. 152. Walchandnagars were, however, marked down by Rs. 2-8 to Rs. 248-12. In the engineering and mining group, Alcocks receded by Rs. 7-8 to Rs. 350. Premier Constructions were a shade quiet at Rs. 176-8 and Tata Locos at Rs. 153-8. Larsen and Toubros were steady at Rs. 16-1. The Company has maintained the dividend at 10 per cent. for the year ended 31st March 1956. Shivrajpurs held their ground at Rs. 99. Indian Coppers firmed up from Rs. 6-7 to Rs. 7-2½, following the news that the Company had won its case against the Bihar State Government in respect of the renewal of mining lease and that the Government's claim against the Company for Rs. 48.78 lakhs as compensation for breach of terms of lease by the Company had been disallowed. The closing was, however, a shade lower at Rs. 6-15½.

In the shipping and transport group, Scindias moved within a narrow range and closed an anna higher at Rs. 18-6. Great Easterns were lower by As. 2 to Rs. 17-12. Hindustan Motors were dull at Rs. 9-13 and Premier Automobiles shed Re. 1 to Rs. 90. In the miscellaneous group Bombay Burmahs tumbled down from Rs. 645 to Rs. 622-8, on fears about the quantum of final dividend, but gained ground to Rs. 638-2 at the close. British India Generals were steady at Rs. 11-4. National Rayons gained Re. 1-12 to Rs. 245-12. Tata Chemicals were held at Rs. 18-5, while Tata Oils were a shade better at Rs. 48-8.

* * * *

Calcutta Stock Exchange

CALCUTTA, *16th May*

The Calcutta Stock Exchange put on a rather dull appearance during the week under review. As there were no fresh incentives, operators did not evince much interest in business. Even the publication of the final report on the second Plan failed to have any effect on the market, which was only to be expected, considering that the contents were practically similar to those of the Draft Outline. Reflecting the hesitant mood of market circles, the volume of transactions put through on the Exchange was greatly restricted, with equity values moving narrowly. Some scrips met with investment support and tended to move up, while the speculative ones lost ground on fresh offering.

Buying enquiry in the jute section was selective. Standards moved up by Rs. 2 to Rs. 102. Presidencies were strong at Rs. 5-14, as against Rs. 5-6 a week before. Reliances rose by As. 5 to Rs. 10-4. Nationals were a shade better at Rs. 24-9. Budge Budges were firm at Rs. 137. Agarparas, however, eased by As. 5 to Rs. 12-2 for want of support. New Centrals lost As. 2 to Rs. 16-12.

Tea shares also elicited selective support. Batelis hardened by Re. 1-8 to Rs. 24-8. Huldibaris and Puttinbarees recorded an improvement of As. 8 each to Rs. 37-4 and Rs. 57, respectively. Hattikhiras were an anna higher at Rs. 22-5. But Brooke Bonds slipped by As. 6 to Rs. 24-4.

Coal shares lacked interest and prices drifted generally lower. Katras Jheriahs fell by Rs. 6-6 to Rs. 50. Pench Valleys dropped As. 12 to Rs. 22-4. Burrakurs gave way from As. 14-3 to Rs. 14. Western Bengals were unaltered at Rs. 7. Deals in Central Indias were put through today at Rs. 7-5; these shares were quoted at Rs. 7-3 last week-end.

Trading in engineering shares was irregular. Indian Irons declined by As. 5 to Rs. 36-11, in the absence of sustained support. Indian Standard Wagons eased by As. 8 to Rs. 180-8. Textile Machineries decreased by As. 6 to Rs. 2-12. Jessops lost As. 3 to Rs. 34-14. Burn & Cos., however, received good attention of operators who took the shares higher up to Rs. 364, as against Rs. 354 at the close of last week. National Irons were also favoured well, the quotation rising by As. 13 to Rs. 7-15. Marshalls were better by As. 3 at Rs. 6-9.

Among mining shares, Indian Coppers encountered some support on rumours of bonus issue and strengthened by As. 7 to Rs. 7. Metal Corporations gathered As. 6 to Rs. 10-10. Consolidated Tins, however, were subjected to some selling and gave way from Rs. 2-14 to Rs. 2-12. Burma Mines were also somewhat neglected at Rs. 4-3, as against Rs. 4-5.

In the miscellaneous section, Indo-Burma Petroleums were keenly sought and rallied Rs. 2-12 to Rs. 41-4. Aluminium Corporations were also a bright spot, their price firming up by Re. 1-4 to Rs. 10. Balmer Lawries put on As. 12 to Rs. 168-12 and Indian Cables As. 7 to Rs. 31-6. Jardine Hendersons failed to evoke support and moved down by As. 8 to Rs. 100. Shaw Wallaces receded by As. 6 to Rs. 15 and Imperial Tobaccos by As. 5 to Rs. 14-7. Rhotas decreased by As. 4 to Rs. 22-9. B.B. Petrols declined by As. 3 to Rs. 4-3. B.I.C's. lost As. 2 to Rs. 11-5. National Carbons were quiet at Rs. 26-8. India Steamships were unchanged at Rs. 8-11.

* * * *

Madras Stock Exchange

MADRAS, *15th May*

Conditions on the Madras Stock Exchange were quite cheerful this week too. Operators continued to take an optimistic view of the outlook for industries in the private sector. The final version of the second Plan presented to Parliament today did not, it was felt, contain anything new other than what was incorporated in the Draft Outline. The large degree of deficit financing envisaged in the Plan and the considerable stress laid on industrialisation were interpreted bullishly. Buying by bulls was, therefore, sustained, while bears were interested in covering their positions. Consequently, turnover broadened and equity values continued their upward march. The undertone of the market was fully steady.

There were three important company announcements during the week under review. First, the Guntur Power and Light Co., Ltd., has been taken over by the Andhra Government with effect from 1st May 1956. Secondly, the Indian Bank Ltd. has stated that a call of Rs. 5 per share on the 20,000 shares of Rs. 90 paid-up and a call of Rs. 5 per share on the 28,000 shares of Rs. 65 paid-up have been made payable after the 31st inst. and on or before 29th June next. Thirdly, an extraordinary general meeting of the Emerald Valley Estates Ltd. will be held on 7th June 1956 to accept the offer for the sale of the Emerald Valley Estate for Rs. 6.55 lakhs. Besides these general announcements, the following were the dividend announcements made during the week:

Company	Dividend per cent. for the year ended December	
	1955	1954
Pankaja Mills	4	*Nil*
Radhakrishna Mills	20	16
Andhra Cements	10	10
Mysore Chemical Manufacturers*	20	12½
Vijayakumar Mills	10	7½
Palani Andavar Mills ...	24	24
Travancore Rubber and tea	7½ (f)†	15

* For the year ended March
f=Final
† Making a total of 12½ per cent.

Textile shares evoked good buying support, thanks to prospects of enlarged cloth exports following the abolition of the 6¼ per cent. *ad valorem* export duty on coarse cloth, and reports of continued high domestic offtake. Rajapalayams rallied Rs. 11-4 to Rs. 301-4 *cum-div.* Ashers and Dhanalakshmis advanced by Rs. 5 each to Rs. 165 and Rs. 385, respectively. Balasubramania 'B' rose by Rs. 4-8 to Rs. 142, Metturs by Rs. 3-12 to Rs. 461-4, Lakshmis by Rs. 3-8 to Rs. 203-12 and Cannanores by Rs. 3 to Rs. 168. Premiers were higher by Rs. 2-8 at Rs. .202-8. Vijayamohinis gained a similar amount to Rs. 96. Pankajas hardened by Rs. 2 to Rs. 80. Alagappas put on a rupee to Rs. 10.

In the planting section, coffee shares were in special request on rumours that a further quantity of coffee might be released for export. Amalgamated Coffees strengthened by As. 12 to Rs. 10-4. Mysore Coffees improved by As. 8½ to Rs. 2-13. Kadur Coffees gathered an anna to Rs. 2-10. Consolidateds were fully maintained at Rs. 19-14. Tea shares had buyers at higher rates, on expectations of the end tea sales of the season experiencing good enquiry from the U.K. United Nilgiris picked up Rs. 9-8 to Rs. 377. Coonoor Teas registered a gain of Rs. 2 to Rs. 31-4 *cum-div.* Coorg Teas added As. 10 to Rs. 11-12. Devasholas and Haileyburias were better by As. 8 each, the former at Rs. 29-4 and the latter at Rs. 29-4. Nonsuch Teas gathered As. 4 to Rs. 37-12 *cum-div.* Peermades increased by a like sum to Rs. 38 *cum-div.*

A feature of trading in the miscellaneous section was the firmness in cement and sugar company shares. Dalmia Cements spurted by As. 9 to Rs. 15-8. Travancore Cements advanced by As. 6 to Rs. 12-6. India Cements were firm at Rs. 36-4. Among sugar shares, E.I.Ds. rose by As. 4 to each to Rs. 10 and Rs. 13-10, respectively. Among other miscellaneous industrials, Textools were taken up by Rs. 4 at Rs. 166. Binnys scored a rise of Re. 1-8 to Rs. 173-8. Aluminium Industries gathered As. 2 to Rs. 20-4.

AIR CONDITIONING CORPORATION (PRIVATE) LIMITED

It is understood that Messrs. Gillanders Arbuthnot and Company Limited, have relinquished the Managing Agency of the Air Conditioning Corporation (Private) Ltd. From the 1st April 1956, the Corporation is a wholly owned subsidiary of the Orient Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers) and is being run as a director-controlled company. It is also learned that Mr. J. C. Kapur will continue as a Director of the Corporation.

The Corporation was founded in the year 1930 and has since played a pioneering role in the development of the refrigeration and air-conditioning business in India. It is learned that, in view of the recent reorganisation, and large financial backing, the Corporation proposes to considerably expand its engineering, contracting and manufacturing activities. The manufacturing programme includes, room air conditioners, railway air-conditioning equipment, industrial blower fans, and other items of heavier refrigeration and air-conditioning equipment. To implement these plans, the Corporation is entering into manufacturing agreement with their principals, The York Corporation, U.S.A.; Messrs. Buffalo Forge Company, U.S.A.; as also the Safety Car Heating and Lighting Company, U.S.A.

COMPANY LAW FOR LAYMEN

The Company Law Administration, Ministry of Finance, has published a *Layman's Guide to the Indian Company Law* which presents the main provisions of the new Company Law in simple language. The publication is in pursuance of a promise given by the Finance Minister in Parliament in September 1955 that the Government would bring out a guide to the new Company Law and would try to ensure that the common man has "Company Law without tears."

The *Guide*, while closely following the text of the Companies Act, 1956, does not confine itself to a mere paraphrase of the sections of the Act, but explains the basic facts relating to companies and the working of the Company Law. In order to assist the general reader references to the relevant sections of the Act have been given throughout the book. An attempt has also been made to explain the procedure that will have to be followed in order to comply with the requirements of the new Law. The interpretations of specific provisions of the Act are based on the spirit underlying the new Law and the intention of its authors.

NEWS IN BRIEF

THE Government of India has abolished the import duty at 19-17/32 per cent. *ad valorem* on pig iron with effect from the 10th inst.

The Government of India has abolished, with effect from the 14th inst., the existing export duty of 6¼ per cent. *ad valorem* on coarse cloth.

The Government of India is reported to have decided to establish a currency paper manufacturing mill at Hosanabad in Madhya Pradesh. The proposed mill is expected to meet the requirements of not only India but also of other neighbouring countries where there is a large demand for it.

The Union Government has under active consideration the setting up of a farmers' bank for the entire country. Disclosing this in Kakinada last week-end, Dr. Punjabrao Deshmukh felt confident that, even if Rs. 2 were collected from each agriculturist in the country, the bank would have a share capital amounting to crores of rupees.

The Government of India proposes to set up a single centralised organisation under the Ministry of Railways, with headquarters in Calcutta, to co-ordinate rail transport for all imports of steel, cement and machinery expected during the second Five-year Plan period. Individual railway administrations are said to have been requested to set up special cells to deal expeditiously with the movement of all heavy consignments which may be received from abroad in future.

The proposed Rs. 25-crore heavy electrical equipment factory to be set up in Bhopal will start production in 1960, according to the Union Minister for Production. Much of the preliminary work in connection with the establishment of the factory has been completed and a detailed project report will be submitted by the technical consultants to the Government of India in November this year and the Government's decision will be announced in December.

A Bill to amend the Indian Income-tax Act will be introduced in the current session of Parliament. The Bill will contain only one clause and is in the nature of an emergency piece of legislation which could not be foreseen earlier. It is intended to meet the situation arising out of a recent Supreme Court judgment in a Bihar case. The amendment, if passed, will save the Exchequer revenue of the order of Rs. 1 crore and prevent the dislocation of income-tax administration.

Negotiations between Yugoslavia and India are stated to have reached an advanced stage on the purchase of ships of the 10,000-ton class. A Yugoslavian shipyard expert is expected to come to India soon to give detailed specifications of ships which India desires to purchase. Some of the specifications, it is understood, have already been supplied to the Union Government. The Yugoslav shipyards have proposed to reserve a part of their production capacity to build ships for India depending on the size of the Indian orders.

The Government of India has decided to allow the import of acetate yarns of 120 and 150 deniers against actual user licences during the January-June 1956 period to the extent of 5 per cent. of the face value of the licence for art silk yarn. Accordingly, it is notified that the licences granted to actual users for art silk yarn during January-June period will be valid for import of acetate yarn of 120 and 150 deniers in bright and dull finishes up to 5 per cent. of the face value of the licence. The total value of imports of these two deniers should not exceed 5 per cent. of the face value of the licence.

The Government of India has decided to extend free licensing of all varieties of cotton piecegoods (mill-made and powerloom) and cotton manufactures, including cotton waste blankets other than the restricted varieties, to all permissible destinations for shipment up to the end of December 1956. Licences for exports of cotton piecegoods and cotton manufactures, including cotton waste blankets, already issued to the trade will be extended up to a maximum period of one year from the date of issue or till the end of December 1956, whichever is earlier.

A factory for manufacturing precision cutting and turning tools and tool holders will shortly be set up by a private firm at Bangarapet, Kolar District, 44 miles from Bangalore, in collaboration with the Ifanger precision tool manufacturers of Switzerland. The factory, to be known as "Hind Small Tools", will have an authorised capital of Rs. 50 lakhs and an issued capital of Rs. 25 lakhs. The agreement entered into by the firm with the Swiss concern provides for the setting up of the factory on the model of the Ifanger factory, and training of Indian personnel in Switzerland, besides providing the technical know-how of manufacture.

India has now an exportable surplus of over 10 million maunds of salt every year. The production of salt in 1955 was 81.1 million maunds and the area under salt cultivation increased to 80,216 acres from 77,830 acres in 1954. A production of 83.7 million maunds of salt was envisaged in 1955-56 under the first Five-year Plan, but the target was surpassed in 1953 itself when India produced 86.1 million maunds of salt. There was, however, a decline in production in 1955, which was mainly accountable to the vagaries of the weather. The salt industry in India is largely dependent on solar energy and other natural factors. The consumption of salt in India during 1955 was 72.8 million maunds, as against 71.8 million maunds in 1954. The target for the industry in the second Plan has been fixed at 100 million maunds.

Improvement in the supply of milk to towns and cities through the formation of 36 co-operative milk unions is one of the dairy development projects to be undertaken during the second Five-year Plan. Large dairies will also be established in Calcutta, Bombay, Madras and Delhi, while some existing dairies will be expanded to handle larger quantities of milk. The establishment of milk boards will further accelerate dairy development. The second line of dairy development between 1956 and 1961 aims at increasing facilities for conversion of milk into milk products in areas from where milk cannot be easily transported to the market for sale. It is proposed to establish 12 rural creameries and seven milk products factories in such areas. The capital outlay on these projects is estimated at Rs. 21 crores.

From Abroad

Having doubled its coffee production and exports since the war, Ethiopia is now selling around $30 million worth of coffee to the United States annually, reports *Foreign Agriculture*, a U.S. Department of Agriculture publication.

Steel, a weekly magazine of Cleveland, U.S., predicts in its current issue a record production of 122 million tons of steel this year, exceeding the 1955 U.S. level by 5 million tons. The industrial publication says that steel mills will operate at an average of 99.8 per cent. of capacity during the first half-year to produce 64 million tons. The last six months, *Steel* says, should see a production of 58 million tons at 90 per cent. of capacity.

The World Meteorological Organisation, completing a nearly two-year-long study, has found no reason to conclude that nuclear explosions, which had taken place, have had any large-scale effect on weather. This finding was reached by the executive committee in its session which ended two weeks back on the basis of data gathered by the secretariat. The data consisted of replies received to enquiries asking Governments to report on the results of investigations they had made.

The market value of goods and services produced by the United States in the first quarter of 1956 was estimated at an annual rate of $398,500 million. This compares with $375,500 million in the first quarter of 1955. For the entire year 1955 the market value of goods produced was $387,200 million. Reporting this, the Commerce Department says that personal income—salary and wage payments and income from other sources—rose by 82,000 million to an annual rate of $313,600 million.

Japanese shipbuilders propose to launch a total of 1.56 million gross tons of shipping at the Japanese shipyards during the current year. New orders from overseas are said to be pouring in, the majority of which are for large tankers. Most of the shipyards have orders to keep them busy for at least two years. On 30th April last, the shipyards had orders for about 3 million gross tons on their books, of which about 2.6 million gross tons were for export.

A special study of the effect of Japanese textile imports on the U.S. textile industry has been urged by Mr. H. C. McClellan, Assistant Secretary of Commerce for International Affairs. The proposed study group is to recommend steps to help domestic industry, yet preserve the U.S. foreign trade programme. The textile industry has been complaining of increased import competition, particularly from Japan. One of the remedies under consideration is a plan to subsidise exporting mills for the difference between the cost of domestic price-support cotton and the world cotton price.

With nearly 64 million persons gainfully at work, employment in the U.S. during April was higher than in any comparable period in the country's history. A joint statement last week by the Commerce and Labour Departments said that 63,900,000 were employed last month, as compared with 61,685,000 in April 1955. Total unemployment in April was estimated at 2,564,000, a drop of nearly 400,000 from the same month last year.

Plans have just been announced in London for the erection of a new £25 million oil refinery in the U.K. It will have an initial capacity of 5 million tons of crude oil a year. The refinery will probably be built near Southampton. Work on this new project is expected to begin towards the end of this year, and the refinery may come into operation some 18 months later. The new refinery will be built by the Trinidad Oil Company and a subsidiary, the Regent Oil Company. Regent Oil imports refined products from the Middle East and from Trinidad Oil's refinery in the West Indies.

The United States Steel Corporation, the nation's largest steel producer, plans to spend at least $2,250 million in the next five years for expansion and modernisation. U.S. steel's needs involve a minimum outlay of $150 million a year for the next 10 years to increase capacity by one million tons each year and an average expenditure of $350 million a year for replacement of worn-out and obsolete facilities during the next five years. No estimate has been made of replacement costs beyond the five-year period. "Despite the rapid expansion of our steelmaking capacity in recent years," the Corporation's Chairman says, "we still cannot meet all the demands of our customers. Since this same condition prevails throughout the industry, there are presently and prospectively painful shortages of certain steel products."

PERSONAL

MR. M. Bhaktavatsalam, Minister for Agriculture and Labour, Government of Madras, will lead the Indian delegation to the forthcoming session of the International Labour Organisation at Geneva next month.

Mr. Henry Ford has resigned from the chairmanship of the Ford Foundation, but he will continue to be a member of the Board of Directors. He is being succeeded by Mr. Rowan Gaither, President of the Foundation.

Mr. N. G. Maitra, M.Sc., Technical Director of Sulekha Works Ltd., has been nominated by the Stationery and Office Equipment Association of India, Calcutta, as their principal representative on the Inks Section Committee (C.D.C. 13) of the Indian Standards Institution, Delhi.

Mr. M. G. Vohra, General Manager, Hind Cycles Ltd., Bombay, and Mr. B. P. Kapadia of Messrs. Hindustan Construction Co., Ltd., Bombay, have been elected Chairman and Vice-Chairman, respectively, of the Engineering Association of India, Bombay Region, for the year 1956-57.

Mr. J. E. Robinson, Chief Engineer of one of the largest British makers of Diesel engines and gearboxes—Henry Meadows Ltd., of Wolverhampton, Staffordshire—is now making a tour of Egypt, India, and Pakistan. His mission is to advise on technical matters associated with the manufacture and operation of his firm's equipment overseas. While in India, Mr. Robinson will visit Automobile Products of India Ltd., an organisation which recently placed an order for Meadows Diesel engines to the value of £1 million.

Dr. C. Nanjundayya, Director of the Indian Central Cotton Committee's Technological Laboratories, has been elected as the Chairman of the Bombay Section of the Textile Institute, Manchester, Dr. C. E. Salkeld of Messrs. Imperial Chemical Industries (India) Private Ltd. as the Honorary Secretary and Mr. J. G. Parikh of the Silk and Art Silk Mills Research Association as the Honorary Joint Secretary for the year 1956-57. The other members of the Committee are: Dr. G. M. Nabar, Prof. R. K. Modi, and Messrs. N. V. Ullal, J. J. Master, and R. M. Khatau.

Mr. S. W. Zaman of the Indian Consulate in Geneva is representing the Government of India on the Indian delegation to the fifth session of the I.L.O's Building, Civil Engineering and Public Works Committee, now being held (from 14th to 26th May) at Geneva. The other members of the delegation are: Mr. B. P. Kapadia, General Manager, Hindustan Construction Co., Ltd., Bombay, and Mr. B. V. Apte, Chief Engineer, McKenzies Ltd., Bombay, representing employers, and Mr. K. G. Srivastava, Organising Secretary, All-India Defence Employees' Federation, Delhi, and Mr. Ramkrishna Vasisht, Nangal Bhakra Mazdoor Sangh, representing workers.

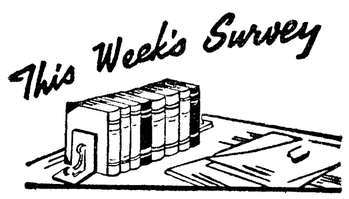
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *16th May*

Tata Iron and Steel

In view of the rumours about the present working and financial position of the Tata Iron and Steel Company which have recently arisen, the Board of Directors of the Company consider that it is due to the shareholders and the investing public that the following statement should be published. Sir Padamji Ginwala has made a careful personal study, extending over two months, of the works operations, costs, sales and general management of the Company, and has presented to the board a full and frank report on his findings. This report is now under discussion by the board with Sir Padamji. The report is confidential, but it may be stated for general information that Sir Padamji reports that, having in view all the circumstances of the period since 1927, the Company has made satisfactory progress. He points to several directions in which further economies must be achieved and in which improvements in the plant and in the conduct of the Company's business should be made. The shareholders are, however, assured that the report contains no revelations of an alarming nature and nothing which justifies nervousness about the stability of the Company. With the help of the additional price received for rails, the Company's year just closed promises to be slightly better than the preceding year. The output of finished steel was the highest on record and the costs for the last half of 1930-31 were lower than those for any preceding year. The Company has done everything possible to counterbalance the serious drop in prices of steel, the restriction in the demand for steel in the areas which the Company can most favourable supply and the further falling off in the orders for rails. The results for the year must be regarded as satisfactory by all who realise the full weight of these factors. With regard to the rumour which is prevalent that the board is considering some scheme for the reorganisation of the Company's capital, the directors wish to announce that no such scheme is under consideration or in contemplation.



INTER-STATE SALES TAX

BEFORE these lines appear in print, the Joint Select Committee of Parliament will have reported on the Constitution (Tenth Amendment) Bill, which seeks to give effect to the Taxation Enquiry Commission's recommendations regarding the amendment of the Constitution for purposes of centralisation of inter-State sales tax. The Bill was referred to the Committee on the 9th inst. As the provisions of the Bill have been analysed in detail in our last week's issue, it is unnecessary to refer to them again. Briefly, the Bill seeks to empower the Central Government to take over the inter-State sales tax and to decide on the commodities that should be exempted from payment of such a tax.

Since the objects underlying the Bill are quite welcome, it was not surprising that the motion for referring the Bill to a Joint Select Committee was easily adopted. As against the six hours allotted for the motion, the debate was over in four hours. It must not, of course, be concluded that the members of Parliament did not take much interest in the Bill. In fact, there was a fairly lively debate over it.

During the debate, some members voiced their opposition to the Bill. Dr. A. Krishnaswami, an independent member from Madras, did not find any justification for Parliament to make a law for determining inter-State sales tax by including it in the Union List. He went even to the extent of saying that, by taking power to determine the scope and extent of inter-State sales tax, Parliament was poaching on the preserves of the States and undermining their financial stability. Expressing opinions more or less similar, Mr. G. L. Bansal (Congress—Punjab) feared that the Bill would open the floodgates for the Centre to levy tax on inter-State transactions. In support of this view, he said: "The present position is that a definite limitation has been placed on Parliament passing legislation to levy inter-State sales tax. This can be done only in exceptional and rare cases. Now, by amending the Constitution, the Government of India are taking power to make a wholesale application of sales tax on inter-State transactions. I would have understood the point, if the Government of India has specified certain commodities on which levy of inter-State sales tax is considered necessary. But it is taking blanket powers to impose such a tax on any and every commodity."

All taxes are irksome and inter-State sales tax particularly vexatious. It would no doubt be preferable to abolish inter-State sales tax altogether. But the question is whether, in the context of the Plan for economic development, it is practicable to ignore this source of revenue. Further, if there is no tax at all on inter-State trade, there will be a big loophole that will facilitate large-scale evasion of State sales tax. It is, however, true that the tax on inter-State trade should not be levied indiscriminately. If the need for imposition of sales tax on inter-State trade is recognised, then the case for its centralisation is certainly very strong. The present subjection of inter-State sales to tax legislation of the State Governments has caused much hardship and inconvenience to the industrial and business communities. For the Acts passed by the States are complicated and the dealers are required to maintain various forms of accounts. If this unsatisfactory position is to be rectified, it is imperative that there should be a unified central law for the administration of sales tax. As Mr. C. C. Shah (Congress—Saurashtra) rightly stated, the Bill is a first step towards introducing some order in the chaotic conditions that prevailed in the States as a result of sales tax legislation.

The Bill no doubt limits, to some extent, the fiscal powers of States, but such limitation is, as we pointed out last week, in the larger interests of the community and the States themselves. That there is no exaggeration whatever in this statement will be evident from the reply of Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, to the debate. Declaring categorically that the Centre would not take a single pie from the inter-State sales tax, Mr. Shah observed: "The Bill is intended for the benefit of the States. We have to see that the States get enough finances and we have to explore all avenues of getting resources. We know that sales tax is a very good instrument for bringing resources to the States. The States get more than Rs. 60 crores from sales tax and, when we discuss the second Five-year Plan, we will find that an additional amount of Rs. 112 crores are to be raised from sales tax to finance the second Five-year Plan so far as the States are concerned. . . . For getting all those resources, the States should have some powers and some flexible methods of taxation."

To revert to the debate. One of the notable suggestions made during the debate related to the imposition of additional excise duties on certain commodities, instead of sales tax, the proceeds being distributed among the States. This is certainly a constructive suggestion and it is gratifying to note that Mr. Shah gave the assurance that it would be duly considered by the Government. Incidentally, he informed the House that the question of levying an additional excise duty on cloth and doing away with sales tax on it was being considered. Another notable suggestion put forward was that the Centre should look into the administration of sales tax by the States, with a view to doing something to alleviate the difficulties experienced by the people who paid sales tax. Since the administration of sales tax is a State subject, Mr. Shah said that the Centre could not interfere. He, however, stated that, "in consultation with the Chief Ministers of the States concerned, we have already appointed committees of officials to go into these matters and to report on all these points, and then (after they have reported) we will have to see what can be done. But that can only be done after consultation with the State Governments and after obtaining the full concurrence of State Governments. After all, the administration of intra-State sales tax is within the jurisdiction of the States and whatever we can do, we can do only by persuasion."

The Revenue and Civil Expenditure Minister touched on the difficulties and disparities created by the Essential Goods Act, 1952. His analysis reveals that those States which had been levying taxes on certain articles mentioned in the Act are allowed to levy them, whereas other States which had not levied them are not allowed to do so, or, if they are allowed, there are certain restrictions. This matter, the Minister said, could be discussed when the new Bill was introduced in the House. Indicating that the Essential Goods Act would be repealed, the Minister recalled that the Taxation Enquiry Commission had suggested six items to be included under the purview of sales tax and said: "After consulting the States, we will have every right to add to these articles." No one will question the "right" of the Government to increase the number of items that should be subjected to sales tax. But one would surely regret if the Government were to brush aside the recommendations of such an important body as the Taxation Enquiry Commission.

DEMOCRACY AND ECONOMIC POLICY

Chambers of commerce and trade organisations in this country have a more important role to play than in some of the other economically advanced democratic countries. This is because the public is generally ill-informed on economic problems. In India, where the illiterates form 82 per cent. of the total population and among the illiterates only a small percentage is highly educated, it is hardly to be expected that people will take a lively interest in the discussion of complex economic issues. In the past, the commercial community had special representation in legislative bodies, so that it could always command a hearing. There is no such special representation now. At the same time, there is universal franchise. This increases the responsibility of the trade and industrial organisations. For whether they get a hearing or not will now depend on the clarity of their representations to the Government and the wider publicity they give to their point of view.

By and large, business and industrial bodies are becoming increasingly alive to the need for publicising their activities. But there is still a great deal to be done. If one comes to think of the immense facilities for publicity available to the relatively smaller public sector one will no doubt be struck by the paucity of such facilities for the much larger private sector. The public sector has giant publicity and information departments in the Centre and the States, working all over the country, a large films division and an extensive broadcasting system. Nothing like these facilities are available to the private sector. Small wonder, then, that the electorate continues to believe that the only good things that are being done in this country are those that came from the benign Government. This belief is being further sedulously fostered by certain men in high positions who seldom miss an opportunity to blame the private sector for all the country's economic ills.

Among the organisations which have made some attempt at correcting this disturbing trend in Indian affairs, mention must be made of the Indian Chamber of Commerce, Calcutta. During the last 30 years of its existence, it has striven hard to form as well as represent commercial opinion in that important industrial city. Appropriately enough, the inauguration, last week, of the 14-storey India Exchange building, constructed by the Chamber, was regarded as an event of considerable significance in Calcutta. The growth and expansion of the Chamber, as Mr. B. M. Birla pointed out on the occasion, is a "testimony to the contribution that Indian enterprise has made to the economic progress of this country."

Mr. Birla made, in the course of his speech, one observation which deserves particular notice. His theme was the danger to democracy through the expansion of Governmental powers. He said:

"The private sector is often criticised on various grounds and it is even contended by some that it is no longer necessary in the new set-up of the country. It is not claimed that private enterprise has reached a stage of perfection. Yet it cannot also be denied that no other system has yet been found which has proved to be more efficient. Even countries with a totalitarian background are gradually encouraging individual initiative through incentives. And in a democracy the freedom to the individual to apply his initiative forms the pivot round which the entire economic activity of the nation operates. But, of late, there has been a growing tendency on the part of the Government to assume more and more powers in regard to economic activity, both by direct ventures in industrial fields and also by regulation of other industrial activity. This cannot but lead to concentration of all initiative and power in the hands of the Government and its bureaucratic machinery. Under such conditions, there will be the danger of the State gradually becoming authoritarian and monolithic in character. With such direction and overall control exercised by the Government, the people will tend to become more and more dependent on Government action and be influenced by patronage. Concentration of power in the hands of a few may give rise to temptations and lead to the breakdown of democracy."

The danger to which Mr. Birla has called attention is a real one, though it is insufficiently appreciated even in the highest political quarters. The country has just emerged into political freedom and it has hardly had time enough to adjust itself to the new conditions. This is evident from the several reverses the Government has suffered in the Supreme Court. Too often, laws are made which are contrary to the letter and the spirit of the Indian Constitution. And it takes long, patient and costly legal effort to bring the defects to the surface. No sooner is the battle for individual freedom won than it is lost through the Government-sponsored amendment of the Constitution. The liberal features of the Constitution are being steadily abbreviated. And it is disturbing to think that this trend, if anything, is likely to gather further momentum through the contemplated expansion of the public sector and the pursuit of vague and ill-defined egalitarian ideals.

The Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, who inaugurated the building, was, however, inclined to underrate the danger to democracy through the might of the State. Briefly, he argued that democracy implied freedom as well as discipline and that, in any case, the wisdom of the Government's economic policies would be decided by the ballot box. In theory, this is the correct position. But, being a politician himself, Mr. Krishnamachari cannot be unaware of the fact that, in India, the electorate is largely uneducated and ill-informed, guided by personalities rather than by the comparative merits of different policies. In the U.K., people might adore Mr. Churchill and yet turn his party out of office. To people in this country, such an attitude would seem strange, and even insincere. In India, the votes cast for the Congress cannot be interpreted as an indication of the people's faith in socialism. They are only a tribute to some of its great leaders and the result of the organisational efficiency of that party. What really ought to matter is what the educated, well-informed few genuinely feel about the Government's economic policies. This section is being gradually alienated from the current of Governmental action, for it feels that the policies, besides being economically unsound, are subversive of democracy. It is a great pity that the Government, obsessed as it is with a sense of the righteousness of its own position, is unwilling to listen to the voice of this minority.

TRAINING TECHNICIANS

The emphasis laid on industrial development in the second Five-year Plan is so great that utmost urgency attaches to the problem of tackling shortage of trained personnel, especially geologists and mining engineers. The country needs, according to the Committee for Higher Technical Education, as many as 300 geologists and mining engineers every year, while, at present, there are only 800 geologists. If, therefore, steps are not taken to train up an "army" of technicians, a time-lag is bound to occur in the execution of the Plan. This aspect was ably stressed by Mr. K. D. Malaviya, Union Minister for Natural Resources, when he addressed the Conference of the representatives of institutions and organisations dealing with mines and minerals held at New Delhi on Friday last week. It was imperative, Mr. Malaviya declared, that a team of scientists, mining engineers, geologists, petroleum geologists and oil drillers who could assist the Government in its task of exploring and developing the mineral wealth of India was trained up within the shortest possible time. In this connection, he observed:

"We are in haste and cannot wait for foreign help indefinitely . . . The young scientists being trained at the technical institutions should be associated with the big projects of the Government and made to share the responsibilities. The Government may consult the foreign consultants, but the only way to train up our young men quickly is to entrust them with responsibility. . . . I am only waiting eagerly for the day when universities and other technical institutions in India will so modify themselves that we get a more effective cadre to deal with our problems."

These remarks of Mr. Malaviya are indicative of the Government's anxiety to foster technical education in the country. It is now for the technical institutions and organisations to address themselves to the task of training up an adequate number of geologists and mining engineers. How vast is this task will be evident from the large programme in the second Plan which envisages not only development of the oil resources of India but also regulation and exploration of other minerals. The New Delhi conference did well, therefore, to recommend (1) immediate increase—from 55 to 110—in the rate of admissions at the Indian School of Mines and Applied Geology, Dhanbad, and (2) introduction of courses in petroleum geology and applied geophysics from July 1957. The latter recommendation is particularly important in view of the big programme for prospecting oil. The conference did well also to suggest that the question should be examined in detail whether admission could be provided for students who had passed the higher secondary school examination, instead of the intermediate standard as at present.

Further, the conference felt that facilities would be required for practical training at about 100 mines. It asked the Principal of the Indian School of Mines and Applied Geology to prepare a list of such mines and forward it to the mine-owners, requesting the latter to provide suitable accommodation to the trainees. If, however, the mineowners were unable to provide such facilities, the Government should, it was pointed out, consider taking suitable steps.

INDIAN COPPER CORPORATION

An important judgment involving the rights of a lessee under a mining lease and the application of certain mining rules to the lessee was delivered by Mr. Tulsi Prasad Mukherjee, First Sub-Judge, Patna, in the *Indian Copper Corporation* vs. *Bihar State Government*. The Corporation had been granted a lease for kyanite mining in the State of Kharswan (merged with Bihar in 1948) by its then Ruler in 1926 with an option to the lessee to renew it after 30 years for another period of 30 years. When the Corporation sought renewal of the lease in May 1954, the State Government alleged certain breaches of the covenant of the lease and demanded compensation. The Government also raised the applicability of the Mineral Concession Rules, 1949, to the lessee. It argued that no renewal could be granted, as the Corporation did not possess a certificate of approval. The Corporation rebutted the charges. The counter-title suits filed by the parties against each other were valued at Rs. 1 crore each.

The Judge decreed the suit in favour of the Corporation and dismissed the title suit filed by

AMERICAN LETTER

PROSPERITY STILL REIGNS

CREDIT SQUEEZE BEING KEPT UP

From Our Special Correspondent

NEW YORK, 11*th May*

PROSPERITY still reigns in the United States and shows no signs of diminishing. In other words, no material changes are expected in the near future in the areas of production, employment and national income. This view is shared by private and Government sources alike.

Because of prosperity, the credit policy of the U.S. Treasury and of the Federal Reserve banks is not only important, but it has become a focal point of discussion. I have just attended a number of conferences, including one at Washington, among important Government officials.

One lasting impression of the on-the-record and off-the-record discussions is that those who guide official economic policy in the U.S. are still more concerned with inflation rather than deflation. At this point, it is a tight-rope performance of administration since, because of increasing competition and relaxation of Government control, business performance is uneven.

There are firms which prosper, while others in the same classification fall behind. Credit policies, generally, aimed at, say, over-expansion in one line and accomplishing this end, unfortunately hurt others which need encouragement rather than containment. This applies particularly to manipulations with the interest rate structure either by private banks and finance companies and/or the 12 central banks.

The resignation of Allan Sproul, President of the Federal Reserve Bank of New York, created quite a stir, because the New York central bank handles practically all foreign business of the Reserve system and Mr. Sproul has been responsible for much of the credited policy decisions which have been made.

He has been a central banker for 36 years and it had been suspected from time to time that he was not in full agreement with the policies laid down in Washington. The Chairman of the Federal Reserve Board dispelled that notion by outlining policies similar to those upheld by Mr. Sproul, and the latter's resignation appears to be based on health rather than policy.

Despite the fear in some finance quarters and among retailers that tighter money is apt to hurt business, the Federal Reserve has now declared that all meritorious credit needs will be met, even though credit restraint has been applied for what is not considered in the national interest. The programme parallels rather closely that of Britain in that respect.

In other words, the Federal Reserve system in the U.S. seems to roll with the punches of an increasingly competitive economy. For the business and financial communities here and abroad, including India, it means that preconceived notions of interest rate levels which were held for many years past, are now unrealistic.

A case in point is the differential in the discount rate. Two of the 12 central banks now charge 3 per cent., while the other ten are at 2½ per cent. The difference is regarded as not particularly salutary since it promotes shifts of funds from one district to another, but it is symptomatic of the policy of flexibility now being exercised.

Eventually, all Federal Reserve banks may go to 2¾ per cent. or they may all embrace the 3 per cent. rate, all depending on economic developments. It is still considerably less than the rates charged in Britain, France, West Germany and other major central banks in the free world.

Nevertheless, the upward trend in interest is having a gradual effect on domestic and overseas business by making it more expensive to do business. The prime reason for the boost which is continuing is that the demand for credit remains quite high, in fact, commercial and industrial loans since the first of the year, are a multiple of what they were in 1955. Loans supplied by New York banks which are channelled through correspondent banks throughout the country, have risen $474 million since the first of the year, against an increase of only $71 million in the same period last year.

This is the prime reason, coupled with a few other statistical indications, for the official attitude that inflation must be stemmed. Organised banking has responded in the same vein by warning its fraternity of over-extension of credit to individuals, businesses and industry.

The major economic fields where reductions were expected, with few exceptions, have responded in the opposite direction. To be sure, automobile production is off somewhat, but this has not led to any decline in consumer hire-purchase credit or to any drop in steel output.

In fact, the demand for steel is such that all companies have a considerable backlog of orders, owing to industrial plant expansion, highway and bridge constructions as well as State and municipal orders for new schools, hospitals and other civic structures to satisfy the requirements of a growing population.

In the political field, most indicators spell relative stability, too. President Eisenhower's health seems fully restored, although he, obviously, is no longer a youngster in the vigorous thirties or forties. The most astute observers expect him to be re-elected this fall regardless of who is going to be the Democratic Presidential candidate.

Apprehension over the foreign situation has also subsided somewhat. The cordial atmosphere at the meetings of Soviet and British leaders has increased hopes that the East and the West may be able to live side by side peacefully, even though clashes between Israel and the Arabs continue, despite United Nations' intervention and the French still have problems in North Africa.

Therefore, confidence is still the predominant note which can be reported at this time from the United States and it applies to all sections of the country.—*All Rights Reserved.*

SECOND FIVE-YEAR PLAN FINALISED

GOVERNMENT DEPARTMENTS GET BUSY WITH IMPLEMENTATION OF PROJECTS

From A Special Correspondent

NEW DELHI, 15*th May*

DELHI LETTER

WITH the signing of the revised document of the second Five-year Plan yesterday by the Prime Minister in his capacity as the Chairman of the Planning Commission, followed by the other members of that body, including Mr. K. C. Neogy, who was recently finding himself difficult to agree with the views of the majority of the members of the Commission, an important phase in respect of the second Plan may be said to be complete. The Report has also been presented to Parliament today and the last week of this month has been allotted for a detailed discussion of the Plan. Parliament has already set up four separate committees for making a thorough study of the entire Plan from different angles, which will make suitable suggestions, if necessary, towards the improvement of the Plan.

Meanwhile, a number of constructive measures are being taken by the Government, with a view to implementing the second Plan in an orderly way. Among the Ministries which are concerned with nation-building and development schemes, the Commerce and Industry Ministry occupies an important place. This Ministry is paying particular attention to the promotion of heavy industries and the new Minister, Mr. Shah, is being entrusted with this task. Most of these industries have already been taken in hand for study by the National Industrial Development Corporation. There are more than a dozen committees functioning at present, which are entrusted with the task of examining, from all angles, the project reports regarding a number of heavy industries that are proposed to be set up in the country during the next one or two years.

The Development Wing of this Ministry is being steadily expanded, with a view to providing the necessary technical advice to the private sector of industries on problems of expansion, rehabilitation, etc. For the last few years, it has been successfully donning the mantle of a selfless guide, friend and philosopher to the private sector. A comprehensive Foreign Trade Board is also expected to come into being shortly, which will be asked to handle all export promotion problems.

Simultaneous with these developments, this Ministry has been paying keen attention to the development of an organisation for encouraging the growth of small-scale industries. Now that Rs. 200 crores have been allocated under the second Plan for this purpose, it is recognised that there should be a compact and able organisation to distribute the allotted funds in such a way as to bring about maximum development in this sphere. During the last two or three years, the general complaint of the Government spokesmen was that, although substantial funds had been allocated towards the promotion of cottage and small-scale industries, the absorbable capacity of these industries was greatly limited. The promoters of small-scale industries are becoming fully conscious of this criticism and hence they are bestowing particular attention on the creation of an organisation which would be capable of directing the development in such a manner as to confer maximum benefit to the country.

The Ministry of Natural Resources and Scientific Development is also becoming greatly active these days. During the first Plan period, this Ministry concentrated its attention on the building up of various research laboratories, with a view to providing greater opportunities for intensifying scientific research. Now that work in this connection has become more or less stabilised, the officials of the Ministry are devoting greater attention to the problem of investigating the exact places where mineral oils could be found in this country. This Ministry is preparing schemes for training a team of scientists, mining engineers, geologists, petroleum geologists, oil drillers, etc., who could assist Government in the task of exploring and developing the mineral wealth of the country. Intensive recruitment of capable and first class young men is expected in the coming months. The new recruits will be given sufficient training in this new field. Similarly, plans are being finalised for the exploitation of diamond reserves at Panna at a cost of Rs. 3 crores. A firm decision is also being taken towards the expansion of the Oil and Natural Gas Commission to explore and refine the country's mineral oil resources either directly or in co-operation with the private sector.

The Agricultural Ministry is taking special steps to increase production through a number of directions. Its ambition is to exceed the targets laid down in respect of various commodities as early as practicable. It has schemes to send select personnel to a number of countries to get themselves trained in animal husbandry such as cattle breeding, dairy work, etc., soil conservation, plant protection, and the like. Soviet Russia and China are being included among the countries that are to be visited by these people. The Agriculture Ministry, it may be mentioned, has been allocated a sum of Rs. 350 crores for development purposes. Out of the above, a sum of Rs. 165 crores are earmarked for the development of agriculture, Rs. 120 crores for horticulture, animal husbandry, forests, soil conservation, etc., and Rs. 65 crores on co-operation, fisheries, etc. In case of necessity, another Rs. 100 crores are expected to be provided some time during the Plan period, for stepping up the production of such crops as are needed to strengthen the economy of the country. At the same time, the Ministry and the Planning Commission have been considering the question as to how far the enthusiasm of the rural folk could be harnessed through the Community Project and the National Extension Area officers for purposes of increasing food production.

The Agriculture Ministry is also greatly interested in maintaining a satisfactory price level in the country, so that the rural area could have sufficient purchasing power to support and sustain a growing industrial economy. The Agricultural Produce (Development and Warehousing) Corporations Bill which was passed by Parliament this week may be taken as an indication of the solicitude which this Ministry is showing towards the cultivators. The Bill proposes to establish a development fund with a capital of Rs. 15 crores. The Government's ambition is to set up 10,000 co-operatives, covering five to ten villages each during the second Plan period. It is also proposed to construct one hundred warehouses, with a capacity of between 10,000 and 20,000 tons, at important centres to facilitate the marketing and processing of agricultural produce on co-operative principles. The success of this measure, when it is implemented, will largely depend on the administrative personnel chosen for this purpose. There should be considerable initiative among the rural folk to make the principle of co-operation a success. It is, therefore, suggested that this measure should first be put into operation in such community project areas where considerable success has already been attained. In the absence of trained personnel, it is not also possible to introduce co-operative marketing in one-third of the country within the next five years.

With a view to strengthening the organisational structure of the Government for manning the various big industries in the public sector, the proposal to set up a new industrial cadre is expected to take concrete shape in the coming months. Already a number of Ministries are interested in this subject; they are the Ministries of Production, Commerce and Industry, particularly the National Industrial Development Corporation, Iron and Steel, Communications, Defence, etc.

The Railway Ministry is also setting up a central organisation to co-ordinate rail transport for all imports of steel, machinery, cement, etc., that are likely to flow into the country in the coming months. This central organisation is expected to co-ordinate and arrange easy transport facilities to consuming centres without creating any bottleneck. It is also likely that encouragement will be given to consumers in the port areas to absorb as much of the imported products as possible so as to avoid large-scale transport movement.

Generally speaking, all the Ministries of the Government of India that are vitally concerned with development and expansion, are getting busy and girding their loins to implement the second Plan. The impact of their efforts on the economy will be felt in the coming months.

AGE OF AUTOMATION

IMPLICATIONS TO LABOUR

From Our Own Correspondent

LONDON, 11*th May*

THE great strike of 12,000 men at the works of the Standard Motor Company have a much more than local significance: for Britain at least they are a convenient point to mark the start of the age of automation. Not that automation is new to this country, but this is the first time that it has been applied on this scale and in such a way as to elevate to political level the social problems involved. The strike is about to end at the moment, while management and unions discuss how best to handle the matter, but that it was necessary at all is a criticism of our industrial relations. Automation is the next stage to automatic machinery—it mechanises the processes of transferring work from one job to the next and, indeed, its equipment is often referred to as "transfer machinery." The great Renault works in Paris, regarded even by Americans as the most up-to-date in the world, were transferred to automation some time ago and the remarks of the General Manager of these State-owned works on the Standard strike have been widely quoted. It was his boast that Renault lost not a day's work when switching over to transfer machinery and that every man displaced by automation was immediately required elsewhere in the organisation not least because of the expansion of output (France has an insatiable domestic demand for cars) which the modernisation made possible.

LONDON LETTER

One must contrast that situation with the Standard works proposal to lay off 30 per cent. of their manpower temporarily while making the changeover and their Managing Director's declaration that he was not seeing £4 million of the Company's money spent on automation and then employ the same number of men. That was the sort of remark calculated to rouse Luddism in the employees and the Amalgamated Engineering Union and the Confederation of Shipbuilding and Engineering Unions (the master union organisation) knew well enough that, if Standards got their way, it would be a precedent for other automation exercises and, indeed, for the laying off of men right through the motor industry which is lugubriating in a temporary (it is hoped) doldrums. The Standard employees had to begin the strike on their own however, until their unions realised the seriousness of the implications and till in turn Ministers were drawn in.

Co-operation Needed

It has been suggested that the unions are opposed to automation and that British industry will never reap the benefits of the latest technical advances. This is not true—in spite of some remarks by the A.E.U. that no men should lose their jobs at all through automation. Every firm cannot hope to equal the Renault achievement of absorbing all their displaced labour but neither, on the other hand, can employers approach this new industrial revolution on the same lines as a century ago. Automation as a significant feature in production is only going to be applied on a very large-scale—where the problems posed will be the greatest. But it will also be easiest for the unions and the employees (with the good offices of the Ministry of Labour if necessary and always with their active interest) to get together and ensure the least possible hardship to the men concerned without serious loss of efficiency. The importance of this issue to the men can be appreciated by the fact that automation applied to some engineering processes can cut down the labour wanted to one-quarter. Such a gain will not, of course, apply to a factory as a whole and the first problem is the redistribution of labour within the factory without laying-off during a "reorganisation."

Stripped of the nonsense that has been talked about this matter, the problem reduces itself to the proposition that this new and vital industrial revolution, which the U.K., among other countries, is entering, should be conducted with co-operation between workers and management. If this is done it will be a peaceful revolution—but strife will benefit no one and that is the only alternative. Fortunately, the warning has been sounded in time.—*All Rights Reserved.*

AMERICAN ECONOMIC SYSTEM—I

TO CALL IT "PEOPLE'S CAPITALISM" WOULD BE MORE APPROPRIATE

By A Special Correspondent

THE last decade has seen so much economic revolution in the United States—in production, in productivity of workers, and in higher living standards for the masses of the American people—that many people are asking such questions as these:

What makes the U.S. economy work? What are the basic characteristics of the American economic system? What are the secrets of its productivity? How does it affect the everyday life of Americans? What changes are taking place? Where is it heading?

Although a label is not too important in itself, it has become increasingly evident that a new term is needed to describe properly the unique and fruitful economic system that now exists in the United States.

For example, if the question is asked, "What kind of economic system does the United States have?," you will probably get general agreement, both in the United States and abroad, that the United States has a capitalist economy. The American economy is capitalistic, of course, but unadorned use of such a traditional and emotion-charged tag as "capitalism" for the present-day American economy has become inadequate to the point of confusion.

To many the word "capitalism"—for a variety of reasons—is held in disfavour. Some associate it with all of Karl Marx's dire predictions about capitalism. In newly developing countries, in particular, it may be associated with colonialism. And many people throughout the world regard capitalism as a system that benefits the few—the capitalists.

Now, the American economic system is based mainly on private investments, private initiative, privately-owned business enterprises. But it is not a system that benefits the few at the expense of the many. Its success depends on the very opposite—its success is based on its dynamic ability to improve continually the standard of living of all the American people.

And so this American economic system—as many students and visitors to the United States will tell you—does not coincide with old-fashioned ideas of capitalism. The fact that one person gets more out of the system does not mean that someone else must get less.

Capitalists Alone Do Not Rule

The notion that capitalists alone—or any other economic group or interest—rule the United States is false. Economic forces alone are not predominant. In addition to its economic system, the United States has a democratic system of government—with elected officials and law-making bodies. And these, of course, have the authority to control and regulate the country's business enterprises when the nation's interests and the general welfare of the people require such action.

This democratic Government has often served both to regulate private business activities and to foster constructive growth. Today, the great influence of modern democratic government in the United States is being used more than ever to stabilise the American economy against undue fluctuations and to foster economic growth.

Another old-fashioned idea about capitalism that does not apply to the United States is the notion that it inspires colonialism. American investments abroad have not led to the acquisition of a colonial empire. Instead, such possessions as the Philippines have been given their complete independence.

Moreover, nations occupied in wartime, such as Germany and Japan, have been assisted by the United States in achieving both self-government and economic independence. And other countries around the world have received substantial help from the United States for the same purpose.

But, perhaps, the most significant way in which the American economic system differs from old-fashioned ideas about capitalism is this: the American economic system has been fabulously successful in benefiting not the few but the many.

Host of Facts

A host of facts proves this conclusively. For instance, as President Eisenhower noted in his State of the Union Message this year: "The national income is more widely and fairly distributed than ever before."

Today, slightly more than three-fourths of the total national income is labour income—that is, wages, salaries, social security benefits and related payments. One-eighth of the total national income goes to proprietors, including farm proprietors and self-employed business and professional people. Only one-eighth goes to investors as dividends, interest and rents.

In other words, the lion's share of America's productive capacity adds year by year to the economic well-being of the nation's workers.

Progress in this direction over the last half century has been tremendous. Allowing for price changes, the average American worker today can buy more than three times as much in goods and services as he could in 1900.

Today, more than 57 per cent. of all American families are home-owners. More than 70 per cent. of all American families own automobiles. Virtually every home has electricity.

Some 115 million Americans—70 per cent. of the population—have life insurance policies, valued at more than $73,000 million. Nearly 8 million own stock in corporate enterprises. More than 45 million have bought Government savings bonds, valued at more than $50,000 million. Nearly 21 million have deposited more than $28,000 million in mutual savings banks. Americans have another $46,000 million deposited in commercial banks and another $32,000 million deposited with savings and loan associations. The total of these savings was $234,820 million at the end of 1955, or about $1,412 for every man, woman, or child in the nation.

Singly and collectively, through private savings, pension and retirement plant sponsored and partially financed by the Government and by many private business firms, and through unemployment insurance and severance pay and guaranteed annual wage agreements between management and labour, the vast majority of Americans are constantly increasing their financial security.

Dynamic Development

The American economy has thus shown dynamic development that easily confounds Communists who gloomily forecast the destruction of capitalism in America as the result of internal crises. Such crises have not arrived. Nor are they in prospect.

It is the difficulty of explaining why this is so, of presenting the present-day American economic system, that has prompted students of the American economic scene to seek a more accurate and more descriptive term for the American economy than just the word "capitalism."

With this in mind, a number of business men and economists—notably members of the Advertising Council and its Chairman, Stuart Peabody of the Borden Company—have suggested the phrase "People's Capitalism." Their suggestion has met with wide favour among members of the Eisenhower Administration and leading American newspapers and business periodicals.

As proponents of the term "People's Capitalism" point out, capitalism in the United States is so widely invested in (directly or indirectly) by so many people, with the benefits in goods and wages shared by so many people, that it is truly People's Capitalism.

U.S. STOCK MARKET

The U.S. stock market, except in a few unusual cases, drops sharply when war threatens, according to a survey made by the New York Stock Exchange. Results of the survey, reported by the *New York Times*, indicate that "the U.S. stock market is growing more stable with fewer violent swings; that prices drop more sharply than they rise."

In the May issue of *The Exchange*, a magazine published by the Stock Exchange, the results of the four-month study are summarised. Statisticians who made the survey listed 222 occasions since 1934 on which the stock market gained or lost more than two per cent. in a single day. Then they attempted to pair each of the 222 market movements with news developments that caused it. According to *The Exchange*, 176 market movements were tied to news events. The *New York Times* in a separate analysis of the 222 occasions found 171 caused by news events.

In further classifying market movements based on war and the fear of war, the exchange listed 58 daily changes of two per cent. or more—51 of them changes downward. The *Times* in its separate analysis found 68 occasions of two per cent. daily changes tied to war fear. Of these in 50 cases the market went downward at the threat of war and in nine cases went upward on the promise of peace. In the other nine cases advances were usually based on announced military expenditures. "They merely reflected awareness that inflation might follow more arms spending," the *Times* said. "Even so," the *Times* pointed out, "the score was 59 to nine for peace."

DECIMAL CURRENCY TO BE EFFECTIVE FROM APRIL NEXT

TIME LIMIT FOR EXIT OF EXISTING COINS INADEQUATE

NEARLY a year from now, on 1st April 1957 to be precise, India will join the group of more than 50 countries in the world which have the decimal system of coinage in vogue. For, on that day, the new decimal currency will be introduced throughout the country, under the Indian Coinage (Amendment) Act, 1955, the enabling measure for introducing the decimal coinage that was passed by Parliament in August last. This does not mean that, from that date, the existing coins will go into oblivion. This will neither be possible nor desirable. The Government has, therefore, declared that these coins will continue to be legal tender for about three years after the introduction of the new coins, that is, up to 31st March 1960.

The period of notice of nearly a year for the introduction of the new coins may seem inadequate, in view of the considerable time that may be taken for the vast majority of the rural people to become familiar with the new system. But this need not cause any great difficulty, as the Government has allowed both the systems of currency to be in circulation for a period of three years, so that people can more easily become familiar with the new system through the means of daily exchange of coins. The Government feels that the people will have got accustomed to the use of the new coins during this period, when sufficient quantities of new coins will also have been put into circulation. It also says that there is no need for anyone to get panicky about the status of the existing coins when the new coins are put into circulation.

While we, of course, agree that there is no cause whatever for people to get alarmed at the introduction of new coins, there is good reason to feel that the period of three years, after which all the existing currency will cease to be legal tender, is not adequate for a vast country like India with over 82 per cent. of its population being illiterate and a similar percentage living in rural areas. It must also be borne in mind that there are 380,000 villages with a population of less than 500 and about 105,000 villages with a population ranging between 500 and 1,000. Most of these villages are not linked with the urban areas by modern means of communication and it will, therefore, take a pretty long time for the new coins to percolate into these areas in sufficient numbers, unless the Government makes special arrangements. Further, the present system has been in force for over 100 years. It cannot be effectively ended all over this vast sub-continent in just three years. It will be pertinent to recall, in this connection, that a period of two years was not found sufficient to withdraw even the limited volume of *hali* currency in the Hyderabad State, although the Indian currency has been in circulation side by side for several years. It has, therefore, been found necessary to extend the time limit by another year and one is not sure whether a further extension will not be found necessary, the forthcoming reorganisation of the State notwithstanding. Again, although the old 11/12ths fine silver coins ceased to be legal tender nearly a decade and a half ago, they are still in circulation in several parts of the country and if people had not been inconvenienced by this development, it is because the value of the silver content of the coin continued to be higher than that of the face value. Similarly, the four-anna nickel coin is still in vogue, even in the capital of India, not to mention the rural and urban areas in North India, even though its issue was discontinued by the currency authorities years ago and its total issue before cessation was negligible as compared with the total coins minted and in circulation. These instances are given just to show that the period of three years for abolishing the existing coinage is not sufficient and that a much longer period —at least five to seven years—will be required for the new coins to reach every nook and corner of India.

Another point that we wish to make in this context is that, at least the existing rupee coins and the eight-anna and four-anna pieces can be kept as legal tender for a longer period, since their value in the equivalent of the lowest denomination, namely, *naya paisa*, can be easily expressed and recognised. It will be a waste of national resources to withdraw these coins from circulation in so short a period as three years and reissue them as coins of 25 cents, 50 cents, and single rupees of 100 cents. No harm will be done to anyone by letting these coins be in circulation for, say, a decade and leaving them to return to the Reserve Bank in the usual course. This will minimise the risk of losses to innocent people in rural areas who can be easily duped by anti-social elements. In the Press note issued by the authorities on this subject, it is, of course, stated at one place that "the existing quarter rupee, half rupee and single rupee will continue to be common to both the existing and new coinage systems." But this does not necessarily mean that they will be legal tender for ever. In fact, it is clearly stated in an earlier para of this note that the existing coins will be legal tender for a period of only three years. If this proviso is not applicable to these coins, then that should be made very clear.

As from 1st April 1957, the rupee coin will be divided into 100 equal units and the unit coin will be designated *naya paisa*. Thus, 100 *naye paise* will make one rupee, the value of which will remain the same as at present. Under section 6 of the Indian Coinage Act, 1906, the Government has also given the details regarding the denominations, dimensions, designs and metal composition of the new series of coins. The new coins will have the following denominations:

1 *naya paisa*, 2 *naye paise*, 5 *naye paise*, 10 *naye paise*, 25 *naye paise*, 50 *naye paise* and 100 *naye paise*.

In the above composition of units of the new coins, the present two-anna, one-anna, half-anna and one-pice coins will not have exact equivalents with the new coins, but their places will be taken by 10 *naye paise*, 5 *naye paise*, 2 *naye paise* and 1 *naya paisa*. The existing quarter-rupee, half-rupee and single-rupee coins will continue to be common to both the existing and new coinage systems. Thus, 25 *naye paise* will be equivalent to As. 4; 50 *naye paise* to As. 8 and 100 *naye paise* to Re. 1.

In order to enable the public to understand rightly the relationship of each new coin to the rupee it has been decided to indicate on the coins themselves the number of such coins required to make one rupee. Thus, the coin representing 1 *naya paisa* will have a legend embodied on it to the effect that it is one-hundredth of a rupee. Similarly, 2, 5, 10, 25 and 50 *naye paise* units will indicate that they represent 1/50th, 1/20th, 1/10th, 1/4th and one-half parts, respectively, of the rupee.

The *obverse* sides of all the new coins will have the design of the Lion Capital of the Asoka Pillar with the terms "Bharat" in Hindi and 'India" in English inscribed on them. The *reverse* sides of all the new coins will indicate the year in which the coins are produced and their value in *naye paise* specified in international numerals.

The specification of the value of new coins in international numerals is a welcome feature, not only because these numerals have been recognised in the Constitution but they will be helpful to foreigners who visit the country.

The metallic composition of the new coins will be as under:

The 100-*naye paise*, 50-*naye paise*, and 25-*naye paise* will be of pure nickel, while 10, 5, and 2-*naye paise* coins will be cupro-nickel alloy (75 per cent. copper and 25 per cent. nickel). The one-*naya paisa* coin will be of bronze. It will thus be noted that there will be no pure copper coins in the new system, as is the case in the present one, where the pice has been copper throughout. The elimination of pure copper is quite understandable, in view of the world-wide shortage of this non-ferrous metal and the consequent increase in its value. In other words, just as the high value of silver led to its fall as a coinage metal, so also the jump in the price of copper during the war and post-war years has greatly diminished the value of this metal for coinage purposes.

It is gratifying to hear that the Government will also circulate extensively conversion tables setting forth the rounded equivalent of the existing coinage, to be tendered for specified sums, expressed in *naye paise*. The table will be used in cases where a transaction involving the actual tender of coins is involved, while, in other cases, where conversion is necessary, as, for example, in the computation of total value at a given rate, the exact equivalents will be worked out at the rate of 192 *pies* per 100 *naye paise*.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND LB 3062

WORLD BANK LOAN TO NORWAY

The World Bank has granted a loan of $25 million to Norway for hydro-electric power development. The loan will help to finance the Tokke power project which will add 400,000 kilowatts of generating capacity to the electricity network which serves south eastern Norway, including the city of Oslo. This area now consumes 55 per cent. of all the power produced in Norway. The total cost of the project is estimated at the equivalent of $70 million. The Bank's loan will provide $25 million and the remainder will be provided by the Norwegian Government, partly from appropriations from general revenue and partly by the sale of bonds to countries, municipalities, power companies and industrial users of power in southern Norway.

This is the third Bank loan to Norway. Loans of $25 million each were made in 1954 and 1955, respectively, to help pay for capital equipment required for the development of the Norwegian economy. The latest loan is for a term of 20 years and bears interest of 4¾ per cent., including the 1 per cent. statutory commission charged by the Bank. Amortisation will begin in August 1961.

FORTNIGHTLY REPORTS FROM BANKS

Replying to a question, Mr. A. C. Guha, Minister for Revenue and Defence expenditure, said in Lok Sabha the other day that the Reserve Bank of India had asked the Scheduled banks and two important non-scheduled banks to submit fortnightly reports on their advances against commodities, bullion, shares and debentures. The circular sent by the Reserve Bank, the Minister added, was in substitution of an earlier one issued in March 1950, which required the banks to forward to the Reserve Bank a monthly statement of advances made against specified commodities and bullion. According to him, the information was now required to be sent fortnightly and in greater detail, so as to enable the Reserve Bank to bring under closer observation the extent to which accommodation was granted by banks for financing trade in essential commodities, bullion and equities and to take appropriate steps to check any tendency for undue speculation.

The World Bank granted last week a loan of $2.6 million to Haiti to help the country's three-year highway improvement programme. The Royal Bank of Canada is participating in the loan, without the World Bank's guarantee, to the extent of $413,000. This is the first time that a Canadian bank is participating in a World Bank loan. This is the first loan made by the World Bank to Haiti. It is for a term of 10 years and bears interest at the rate of 4½ per cent., including the statutory commission of 1 per cent. Amortisation will begin on 1st July 1959.

RESERVE BANK AMENDMENT BILL

INDIA TAKEN NEARER TO FINANCIAL AUTOCRACY

By B. T. Thakur

IF the Local Boards of the Reserve Bank of India are abolished, as is sought to be done through the amending legislation, India would move a step nearer financial autocracy. Whatever vestige there is of consulting local interests in the formulation of monetary policy, that will now be completely removed. Democracy thrives through discussion and conferences, and through wider representation of varied interests, geographical and economic. Autocracy believes in concentration of power and in the sole right of individual or caucus to make decisions.

The amending Bill proposes three main changes: (i) abolition of Local Boards, (ii) power to the Reserve Bank to raise reserve requirements of banks and (iii) lowering of foreign currency assets in the currency reserves.

Taking the first item, namely, abolition of Local Boards, it is certainly a most retrograde step. A vast country like India, with varying levels of economic development in different States, should have a more broad-based currency and credit system. The ideal thing to do would be to have four or five Regional Central Banks, integrated and co-ordinated through a powerful Monetary Board, so that economic interests of States do not suffer, as is the case in the United States of America. Lack of intelligent and reasonable attitude on the part of such a Regional Bank is safeguarded by vesting wide supervisory powers in the Central Authority. But the Regional Banks will serve as a check on exercise of arbitrary powers by the Monetary Board.

Like unitary government, a single Central Banking institution may be suited to small countries like England, Belgium, or Holland. Large countries like India, with huge populations, particularly when they are economically backward, need federal type of institutions both in government and for management of money, modelled on the American system. Instead of changing in the right direction, we seem to be going the opposite way.

In notes on clauses in the Bill, it is explained that, with nationalisation of the Reserve Bank, the need to retain Local Boards has disappeared, because they attended to share transfer work. But why should the functions of the Local Boards have been restricted only to the transaction of this formal business? There is nothing in the Reserve Bank Act to utilise them only for such a purpose. And, if it was actually so, that was against the will of the framers of the original and the nationalising Acts; and was a misreading of the purpose and functions of these Boards. The main function of a Local Board, or regional committees, is to keep the central authority fully informed of local facts, conditions and requirements, so that there should be correct basis for the formulation of monetary policy. If the authorities in charge of the Reserve Bank had not vested these Boards with bigger and better tasks, the fault is not of the Boards but of their appointers, who want to work independently of local advice. Today, the need for such consultations is greater than ever.

Already West Bengal and several other States are complaining against concentration of financial power in Bombay. The dismissal of the Local Boards as being unnecessary would further aggravate the suspicion and fear of neglect of local interests. If any change is to be made that should be for wider and closer statutory consultation with agricultural, commercial, industrial and financial interests of different States. The question of Regional Reserve Banks and superimposed Monetary Board now assumes great importance and urgency.

Reserve Requirements

The next item in the Bill is to arm the Reserve Bank to raise reserve requirements of banks and to freeze deposits under certain contingencies, should the Reserve Bank think that to be necessary in the discharge of its Central Banking functions. The object of this provision is to stop banks from encouraging inflation through their credit operations. Are banks doing so? Has not the Reserve Bank got already ample powers to stop banks from pursuing such a course? In existing conditions in the country, when there is no proper integration between the organised banking system and the free bazar market, can the Reserve Bank succeed in the purpose which it may intend to achieve through the use of such powers?

In spite of great expansion in created money, the banking system suffers from scarcity of funds. This is not due to their over-lending but because requirements for credit of expanding industries are growing; and banks are not getting adequate share of new currency arising out of deficit financing.

Between the last Friday in 1954 and 20th April 1956, currency in circulation has expanded from Rs. 1,200 crores to Rs. 1,510 crores that is, by about 25 per cent. But Scheduled bank deposits during the same period have increased from Rs. 932 crores to Rs. 1,066 crores, that is, by less than 13 per cent. At the end of 1954, deposits formed about 77 per cent. of currency in circulation. But, on 20th April, this percentage was less than 71. But the most noticeable thing is that the increase in deposits during this period was only Rs. 134 crores which constitute about 43 per cent. of Rs. 310 crores, the increase in currency in circulation. In other words, much smaller amount of newly created money comes into the banking system and this depresses the relationship between currency in circulation and bank deposits. If we take the figures of 22nd April 1955 and 20th April 1956, we find that currency in circulation and deposits of Scheduled banks have increased during this period by Rs. 194 and Rs. 109 crores, respectively. This also confirms the conclusion that resources of banks are expanding at a much lower rate than increase in currency.

Credit To Banks

Whenever there is danger of inflationary credit being engendered by banks, the first step to be taken by the Reserve Bank should be to curtail its own credit to banks. This can be done through restrictions on discounting facilities and by refusing to lend even against Government paper. But the Reserve Bank has obviously not felt the need for limiting these credit facilities to banks. Actually, it has increased its advances to banks. The amount of money borrowed by Scheduled banks from the Reserve Bank and the State Bank, collectively has gone up, between 22nd April 1955 and 20th April 1956, from Rs. 31 crores to Rs. 59 crores. Lendings of banks during the same period have increased from Rs. 624 crores to Rs. 753 crores, that is, by Rs. 129 crores. If the Reserve Bank felt that advances of banks are not justified by increased production and increased trade, it should not have been so free in its lending policy to banks. But the truth seems to be that increased advances by banks are fully justified and in the interests of national economy. The fault is that increasing amounts of new currency are going to classes and areas which are outside the banking system, but the pressure of credit due to increased tempo of industry and trade falls on banks.

Under the Banking Companies Act (Section 21), the Reserve Bank has ample authority to control advances by banking companies, to curb their inflationary credit. Section 21 reads as follows:

"*Power of Reserve Bank to control advances by banking companies.*—(1) Where the Reserve Bank is satisfied that it is necessary or expedient in the public interest so to do, it may determine the policy in relation to advances to be followed by banking companies generally or by any banking company in particular, and when the policy has been so determined, all banking companies or the banking company concerned, as the case may be, shall be bound to follow the policy as so determined.

"(2) Without prejudice to the generality of the power vested in the Reserve Bank under sub-section (1), the Reserve Bank may give directions to banking companies, either generally or to any banking company or group of banking companies in particular as to the purposes for which advances may or may not be made, the margins to be maintained in respect of secured advances and the rates of interest to be charged on advances, and each banking company shall be bound to comply with any directions as so given."

These are very extensive powers which the Bank can use to stop inflation of credit. Over and above these special provisions, the Bank has also traditional means to curb credit through Bank rate and open market operations.

It is only when all these powers fail that a need would arise to immobilise, partly or wholly, increase in deposits of banks to curtail their capacity to lend. Change in the reserve requirements of banks from the point of inflation through their credit operations is, therefore, not necessary, at least at this stage.

If the law in regard to ratio of reserves to deposits is to be changed, why should it be only upward and not downward? In times of contracting currency and economic depression, why should not banks be encouraged to help revival of business and industry by increasing their capacity to lend through reduction in reserve ratios. The purpose of reserves is not to provide for liquidity but to regulate credit. Under the Banking Companies Act there are ample provisions to compel banks to keep enough liquid assets to insure their existence and solvency.

No Urgency

There being no urgency to change these provisions relating to reserve ratios, it would be more appropriate to study India's monetary problems in the context of our economic plans through monetary and banking experts. Before the Central Banking institution can function properly, it is essential that there should be better integration of India's money market. Unless this is encouraged, any harshness by the Reserve Bank would mean that money would bypass the banking sector and go to the free bazar market.

Concentration of authority in a single institution or individual, even though guided and supervised by nominated Central Board and the financial *pundits* of the Central Government without adequate checks and safeguards, not only can be tyrannical but also may lead to economic disasters.

But what about the banks themselves? Should they not insist on the right of representation in the councils and consultations of the Central Banking authority which has such vast powers over them? In the Federal System of the United States of America, banks have representation on the Boards of the Federal Reserve

TRENDS IN CARPET WOOL

SUPPLIES FALL—DEMAND RISES—PRICES FIRM

AN article which appeared in *World Wool Digest* last year drew attention to three features which distinguished the carpet wool situation in the post-war period: the reduction in available supplies of the classical Asiatic carpet wools, the rising demand in the principal carpet manufacturing countries, and the consequent diversion of apparel wools, mainly Argentine and New Zealand crossbreds, for use in carpet manufacture. These three features have remained dominant in the carpet wool market during 1955. This is well illustrated by the United States import figures which provide an indication of the end-use of some of the wools as those without Merino or English blood (i.e., the traditional carpet wools) are admitted free of import duty, as are other wools of qualities 40's (American) and below if used in the manufacture of carpets and a few other specified goods. Last year's total duty-free wool imports of 134 million lbs. clean included 61 million lbs. of wools with Merino or English blood, of which 73 per cent. came from Argentina and 17 per cent. from New Zealand. In both of these countries, however, most of the clip is finer than 40's, and thus the supply of wools eligible under existing legislation for duty-free import into the United States is insufficient for the present rate of consumption. Amending legislation to enable the American carpet industry to obtain tax-free wools finer than 40's is now before Congress.

For the United Kingdom, figures are available showing the types of wool used in woollen carpet yarns. These show that, in 1955, Indian and similar wools represented only 18.6 million lbs. of a total consumption of 57.8 million lbs., while some 68 per cent. of the total consisted of British, Dominion and South American wools. Although the clips of these countries include some recognised carpet types, much of the wool used in British carpet yarns last year was clearly of apparel quality, 16.8 million lbs. that is, 29 per cent., having been 46's and finer.

The continued reliance on crossbred types reflected both the restricted supply of unimproved wools and the buoyancy of the demand for carpet wools. 1955 was a year of great activity in the carpet industries of the main manufacturing countries. In the United States, woollen and blended carpet output rose by 9 per cent. from 55.3 to 60.5 million sq. yds., and consumption of wool in carpet yarns rose still more sharply from 114.5 to 132.7 million lbs., an increase of 16 per cent. In the United Kingdom, deliveries of carpets during the twelve months ended November were 45.2 million sq. yds., only slightly below the previous year's record of 46.1 million sq. yds., and wool consumption in woollen carpet yarns was actually slightly higher at 57.8 million lbs., as compared with 57.0 million lbs. It appears probable, from its export figures, that the Belgian carpet industry also enjoyed a very good year in 1955, though the high usage of cotton in Belgian carpets makes it difficult to relate this to wool requirements. French carpet output also showed an increase, from 3.7 to 4.3 million sq. yds.

To satisfy this increased demand there was only a limited available supply of the traditional carpet wools. Though world production of non-apparel wools is currently estimated at some 960 million lbs. greasy, the quantity available for the carpet trade is only a small fraction of that figure, for some of these fibres lack suitable characteristics for use in either carpets or apparel, and more than a quarter of the total represents the production of Communist countries not entering into world trade, while, in many Middle East and North African territories, the bulk of the clip is absorbed by local handicrafts. Two former exporters, Spain and Turkey, have now diverted most of their production to their own wool textile industries, and the raw materials of the Western carpet industries during 1955 appear to have been principally crossbreds and low wools from Argentina, East India wools, United Kingdom hill wools, New Zealand crossbreds, and a variety of clips from the Middle East and North Africa.

Certain Argentine types, such as the well-known 5/6's (36/40's) and the Criolla wools have always been staples of the carpet trade, but, in recent years, almost all of the cruza gruesa class (46's and below) would appear to have made their way into carpet manufacture or certain industrial uses. Production of cruza gruesa wools in 1954-55 amounted to 106 million lbs., some 10 million lbs. less than in the previous season, almost all of which was available for export. From the beginning of the season, the carpet wool sold more rapidly than other Argentine qualities, and by June stocks were almost exhausted. High world prices for carpet wool and predominantly American purchases meant that the Argentine exchange rate hindered sales less than it did for other wools. Furthermore, exports as a whole were assisted by the suspension of the export sales tax in February and the extension to non-dollar sales of a more favourable exchange rate in May. A further stimulus to exports was provided by the devaluation of the peso in September, and during the last quarter of 1955 it was reported that the new season's clip, in which cruza gruesa wools again amounted to 106 million lbs., was selling far more rapidly.

"East India" or "India and Pakistan" wools comprise not only the growths of India and Pakistan, but also those wools normally exported through these countries from Persia, Afghanistan and Tibet. In India itself, production is mostly of carpet quality and is estimated at 72 million lbs., of which exports have accounted for rather more than half in recent years, the balance being consumed in handicrafts and local industry. It is the policy of the Indian Government to foster wool textile manufacture; exports of wool are consequently restricted, in order to conserve supplies for the local industry. Quotas are allotted to established exporters in proportion to their trade in a given base period. The announcement at the beginning of 1955 that the April-September quota would be 40 per cent. of the base quantity drew protests from traders, and the quota was later increased by a quarter. For the October-March period a quota of 45 per cent. was fixed, and additional provision was made for newcomers to the trade. Exports of home-grown wool from India during the first ten months of 1955 amounted to 20 million lbs. of washed wool (equivalent to roughly 30 million lbs. greasy), some 4 million lbs. less than in the corresponding period of the previous year.

Wool production in Pakistan is estimated at 30 million lbs., nearly all of which is exported, local consumption being still fairly small. Exports during the first ten months of 1955 totalled 23 million lbs., of washed wool, 6 million lbs. more than in the corresponding period of the previous year. No difficulty has been experienced in selling Pakistan wools abroad, and the devaluation of the Pakistan rupee in July was far more a safeguard for infant industries than a measure to assist exports of primary produce. Estimates of production in Afghanistan are very vague, though it is generally considered that the greater part of the Afghan clip is accounted for by exports, which are in the region of 13 million lbs. and go mainly to Russia. Exports via Pakistan are relatively small, and amounted to only 3 million lbs. in the 1954-55 season. The total production in Tibet also is not known accurately, but the exports through India are normally in the region of 8 million lbs. The re-establishment of Chinese sovereignty over Tibet caused some anxiety to the wool merchants, who feared that Tibetan wool would be diverted to China, but supplies have been received as usual in India during the year, though trade sources say that the amount available has been reduced by heavy winter sheep losses.

About a third of the United Kingdom wool production consists of carpets types, and these have shared in the general expansion of British wool-growing during recent seasons. Production of these types during 1954-55 is estimated at 35 million lbs. and the 1955-56 figure is probably similar. The most important of these wools is the Blackface, which is used for mattress filling as well as for carpets, and which accounts for about half the total, the remainder coming from other hill breeds such as Welsh, Swaledale and Herdwick. There is also a substantial production of Lincoln and other lustre wools which are similar to the Argentine carpet types, but the British fleeces normally go into speciality uses. The United Kingdom is an important consumer of carpet wools and competes keenly with foreign buyers for the available British supplies, but its trade statistics do not permit the proportion exported to be identified.

The carpet trade has always used some New Zealand wools, especially the cheaper woollen types such as locks and crutchings, but there are no clearly distinguished carpet types, hardly any of the wool being as coarse as 40's. But, although the New Zealand clip consists almost entirely of apparel wools, it can readily be used in carpet manufacture as coarse crossbreds predominate, over half being of qualities 50's or lower. Production of these qualities rose to 240 million lbs. in the 1954-55 season, and, though they were used mainly for apparel, this afforded substantial relief from the shortage of traditional carpet wools.

Prices of carpet wools during 1955 reflected both the continuing shortage of traditional carpet types and the movements in values of those apparel wools which are to some extent substitutes. There was a steady upward movement during the first half of 1955, and though prices declined between July and September under the influences of lower apparel wool values, the markets were very steady during the last quarter, and December prices were generally higher than those ruling at the beginning of the year. Prices of Argentine carpet wools in the Boston market, however, rose more sharply after June in consequence of the virtual exhaustion of stocks in Argentina and declined at the end of September with the opening of the new Argentine wool season and the devaluation of the peso.

Prices of New Zealand wools are more influenced by the demand for apparel uses, but the influence of the shortage of carpet wools is reflected in the apparel wool market by the narrowing of the differential between merino and crossbred prices. This is attributable to a number of causes one of which is the increased use of coarse crossbreds in carpet manufacture.

Carpet Wool Prices During 1955

An Indian textiles expert, Dr. P. C. Mehta, who recently completed a study-tour in which he observed recent advances in the chemical finishing of cotton textiles and other aspects of textile research in the United States, believes much of what he has learned can be applied to Indian industry. Dr. Mehta, who is assistant director in charge of the chemistry division of the Ahmedabad Textile Research Association, spent five months in the United States. During the first portion of his stay, he travelled 6,000 miles, visited 20 cotton mills, six laboratories, and seven textile schools or institutes. He pointed out in an interview that the main emphasis in these visits was on recent advances in chemical finishing of cotton textiles, but it also covered other important aspects of textile research—work on cotton fibres, mechanical processing, research administration, personnel rating and selection, and cost accounting of research activities. As a leader in a research organisation, Dr. Mehta said he was confident of the value of all these observations and his opportunities to apply them in India.

Of particular value in research, he said, was the standardising of instruments and testing methods for evaluation of treated fabrics which he found in the United States and which he said can be applied to Indian industry immediately.

Some of the other ideas, he said, must await changes in the industry itself. "It can be easily seen that all of these will be of paramount importance to our industry when it switches more and more to application of resins for finishing. Imparting improved and durable elastic properties to cotton without deteriorating its tensile properties is a major problem for the cotton textile industry in the United States and elsewhere and any contribution in that direction will help not only the textile industry in India but the world over."

Present diversity of production in Indian mills, he said, makes it uneconomic to adopt high-speed techniques in the immediate future, but he believes this will change in time, particularly when India has adequate consumer-preference studies available.

EFFECT OF U.S. COTTON DISPOSAL PLANS ON LIVERPOOL MARKET

EXPORTS OF TEXTILE MACHINERY MOVE UP

From A Special Correspondent

MANCHESTER LETTER

MANCHESTER, 8*th May*

ACCORDING to the first messages to come through from America, the new export sales programme sponsored by the United States Government to dispose of its surplus cotton stocks "got off to a slow start." The acceptance of bids aggregating little more than 10,000 bales when set against available supplies of around 13,000,000 bales certainly looks like a drop in the ocean, but it started a set of events which is sure to have an important effect, not only upon raw cotton trading but on the turnover of finished textile goods throughout the world.

The major factor, to which cotton traders had been anxiously looking, was the price at which these initial supplies of surplus cotton were sold. This was 27.90 cents per lb., on the basis of middling 15/16 inch cotton. Beyond that fact and the news that fortnightly bids are in future to be made, the trade remains in the dark as to further developments.

It is, for instance, not certain whether a large number of offers were made for the first supplies of cotton and were not accepted for one reason or another. There is also the possibility that the Commodity Credit Corporation will adjust its ideas of price as time goes on, particularly if the quantity of cotton moved under the programme falls behind the schedules which the Administration hopes to achieve.

Although some of the uncertainty surrounding the whole manœuvre has now been removed, many doubts still remain as to the future trend of values. In Liverpool, the first price news caused a sharp advance in quotations, the opinion being widely held that recent declines had been overdone. These gains, however, were not maintained and uncertainty crept into the market once more, as New York was unresponsive to the upward movement.

Higher Level of Values

Meanwhile, the tight statistical position of Egyptian cotton has been reflected by sharp advances in quotations in Alexandria. Prices have moved on to new high levels which have been reflected in spot quotations for these qualities in Liverpool. Not only has the Egyptian crop proved smaller than was originally forecast but free supplies are relatively meagre and the unsettled political situation in the Middle East has been a further disconcerting factor.

From the local viewpoint, while uncertainty over the future trend of prices of all growths still persists, the recent upward movement in values has caused a revival in demand. Anticipating an increase in quotations to take account of the recent wage advance, numerous buyers with short interests covered their requirements and the later upward movement in raw material rates forced out more demand.

Subsequent resistance to the higher prices now ruling did not come as any surprise, but the orders placed have provided some relief to hard-pressed sections of the industry where business had been on very narrow lines for some months past. The outlook requires more clarification before any real expansion in turnover can be expected but any improvement in conditions at the moment is certainly welcome.

Production Trends

A feature of trading in the first three months of the year has been the pronounced steadiness in yarn production, which has shown very little variation except in those weeks where holidays have intervened. Towards the end of 1955 there were hopes that recruitment in the spinning section would continue its upward trend, so raising output, but these encouraging ideas have not been fulfilled and it has been a struggle in recent weeks to keep production from falling.

When compared with the corresponding figures a year ago the only promising aspect is that no further ground appears to have been lost, despite the fall in manpower which has lately occurred.

The following table shows the relative positions as regards production and recruitment so far this year and last:

(In 000 lbs.)

Week ended	Yarn production		Recruitment	
	1956	1955	1956	1955
7th January	15,890	17,840	+ 70	— 7
14th "	17,440	19,460	+174	— 20
21st "	17,720	19,440	+ 31	+ 30
28th "	17,700	19,660	+ 10	— 60
4th February	17,650	19,740	+ 44	—208
11th "	17,670	19,660	+ 55	—280
18th "	17,490	19,420	—101	—137
25th "	17,320	18,900	— 12	—270
3rd March	17,270	19,120	— 98	—212
10th "	17,450	19,200	—157	—375
17th "	17,400	19,080	—272	—413
24th "	17,640	19,010	—193	—520
31st "	14,000	19,050	—441	—479
7th April	13,060	14,810	+ 54	—543
14th "	17,590	13,490	—236	—332
21st "	17,510	18,520	—338	—548

In the 16 weeks under review production of all types of yarn was 25 million lbs. lower than 12 months ago, although the gap has narrowed noticeably since early March. The steady drain of manpower losses was then beginning to tell upon the spinning trade a year ago and this trend persisted throughout the summer months. In view of the approaching holiday season it would be unwise to expect any expansion in output from the mills during the next few months but if the position can be held until the autumn there may then be the chance of regaining a little ground.

The recruitment of full-time workers in the spinning section this year has been disappointing. After initial gains lasting for six weeks, when the labour force went up by nearly 400, there have been recurrent losses so that the position by the third week of April was that the number of full-time spinning operatives had declined by 1,410 since the beginning of the year. Against this must be set a gain of 400 part-timers, but even they have shown a tendency to drift from the trade over the past month.

An important factor has been the gradual expansion of output of spun rayon and mixture yarns which, in the second week of April, exceeded 3 million lbs. for the first time since December, 1954. This level of output is substantially higher than during many periods in post-war trading, although in 1953 a peak level of 3.5 million lbs. was recorded.

This upward trend in the spun rayon trade coincides with new high output figures achieved in filament yarns and staple fibres. In March, total production reached 45 million lbs. and in the first quarter of the year a new record of 131.4 million lbs. was set up.

More Machinery Exports

For many years past British makers of textile machinery have never slackened in their sales of plant to overseas countries. While a certain quantity may be purchased as replacement there remains a large proportion of new spindles, looms and ancillary equipment which is being set up to provide indigenous industries with their own supplies and the means to compete with Lancashire.

The volume of shipments of textile plant from this country in the first quarter of 1956, at 467,048 cwts., was higher than in the corresponding periods for the past two years. The value of these goods at £12,632,665 was the highest ever recorded in an opening quarter, exceeding the previous peak of £12,500,000 in 1952.

The only section where exports of plant have fallen so far this year compared with last is in spinning machinery. Much larger shipments of machines for preparatory processes have occurred and the expansion in sales of plant for making synthetic fibres has been significant. From only 726 cwts. shipped in the first quarter of 1954, the total this year is over 9,000 cwts. More looms and weaving machinery have been exported, amounting to 89,782 cwts. against 66,354 cwts. last year. In the finishing branch shipments have been 34,283 cwts. against 22,991 cwts.

A remarkable contrast in purchases by the neighbouring countries of India and Pakistan is apparent this year. Exports to India have risen from 72,058 cwts. to 115,572 cwts. but Pakistan has taken only 14,396 cwts. against 81,995 cwts. Second biggest user is the Soviet Union with 42,099 cwts.. against 61,096 cwts. a year ago.

In the American sphere of influence the Philippine Republic has increased its purchases of British plant from 7,827 cwts. to 11,789 cwts. and the United States has taken 16,128 cwts. against 13,350 cwts.—more than twice as much as in 1954. Exports to Mexico have also risen—from 6,522 cwts. to 17,204 cwts.

Union Views

The attitude of the trade unions in the cotton industry towards Lancashire's problems and the methods which should be adopted to overcome them is something of an enigma. The representatives of the operatives have, of course, their conflicting elements just as employers and management do not always see eye to eye on particular points at issue.

Mr. William Roberts, President of the United Textile Factory Workers' Association, has proved in the past that he can be both realistic and responsible in his approach to the many controversial matters now confronting the trade. But at the annual conference of the Association such views can be nullified by the adoption of opposing resolutions by the rank and file of delegates.

It is, for example, difficult to reconcile the programme he put forward as a policy for the future of the industry with the attitude of those who later were adamant in supporting proposals for longer holidays for cotton workers without any reduction in earnings. Some of the more cynically-minded in the trade have been heard to say that longer holidays can be expected shortly in any case from the state of current order books but that pay packets will suffer at the same time.

If his colleagues can be induced to support the contention of Mr. Roberts on shift work the possibility of important developments in this field cannot be ruled out. In his plan, he said: "The question of shift work and hours of employment should be more vigorously pursued in order to overcome the difficulties associated with it. This is fundamental if we are to become competitive."

The delegates were quickly reminded of the changes that have taken place in the industry since they last met a year ago—the closing down of 79 firms, the loss of 29,000 workers, and a sharp reduction in the number of looms and spindles producing cloth and yarn. And the annual report reinforced them with the export story. Lancashire's overseas trade in cotton goods has fallen from just over 900 million square yards in 1951 to 540 million last year. A gloomy picture, said Mr. Roberts, with everyone looking for a glimmer of light.

Not surprisingly, in view of the industry's repeated calls for Government action in the matter, delegates were soon hearing about the steps taken to secure a limit to the large-scale imports of cheap cotton cloth from India and Hong Kong. Mr. Roberts said it was quite clear that these imports would continue to grow. But it would be wrong to abandon all hope of action being taken, and every opportunity should be used to have further talks with the Government.

And that word "hope" was the keynote of the rest of the speech—a speech acknowledged as constructive and responsible. So far it had been a story of gloom, but now the conference received a challenge. "Let's face the issue courageously," it was told. Government action to curb the cloth imports would undoubtedly help but it would not solve all the industry's difficulties.—*All Rights Reserved.*

FORWARD TRADING IN COTTON

NEW LIGHT THROWN ON ITS SUSPENSION

NOT CONVINCING ENOUGH

THE East India Cotton Association is settling down to its allotted task of examining the proposals contained in the bunch of letters (*vide Commerce* dated 28th April) received from the Forward Markets Commission. The Board is now engaged in considering the suggestions from the members of the Association who had been invited to express their opinion on the Commission's proposals. It has accepted with regret the resignation of Mr. Purshotamdas Thakurdas, President of the Association, and Mr. Chimanlal B. Parikh, Vice-President. Efforts, it is stated, are being made to fill these posts. It will, of course, be some time before forward trading in cotton can be resumed.

The controversy between the Association and the Commission has lasted for a considerable period now, though it came to a head only in the middle of April last, with the resignation of the chief office-bearers of the Association. We have, in our earlier issues, referred to the stand which Mr. Purshotamdas Thakurdas took on the question of the intervention of the Commission with the functioning of the market. His chief grievance, as readers are aware, is that the Commission interfered arbitrarily with the working of the cotton market. He has stated that he "carried on well with the Commission" until he was told "overnight" to set the ceiling for cotton at Rs. 700 in December 1955. It is now pointed out, on behalf of the Commission, that Mr. Purshotamdas has had differences with the Commission right from the date when the Forward Contracts (Regulation) Act was applied to cotton. As early as in August 1954, he had taken up, we are told, a "defiant" attitude over the Commission's proposal for adopting a system of margins. It would appear that Mr. Purshotamdas has treated with "open hostility" all proposals that were made by the Commission from time to time, though the Commission had always made it clear that its proposals were to be regarded only as a basis for discussion.

No "Overnight" Directive

Further, the Commission, it is stated, holds the view that the ceiling of Rs. 700 fixed for cotton in December 1955 was not an "overnight" directive. The Association itself had apprehensions as early as in October 1955 about a squeeze in the February 1956 contract. In November 1955, the Commerce and Industry Minister told the Export Advisory Council that the Government would not release any further export quotas for cotton till cotton prices stabilised themselves at lower levels. The Commission took up, on 30th November 1955, with Mr. Purshotamdas, the matter of option business as a factor in pushing up prices and advised him to examine the books of persons suspected of engaging in such business. Though he promised to consider the matter, he took no action. On 16th December 1955, Mr. Purshotamdas himself expressed his concern to the Board over the rising trend of prices and attributed it to option business. On 17th December, the Commission enquired what action he proposed to take so as to prevent the situation from getting out of hand. Again, on 21st December, the Commission drew the attention of the President to the heavy speculation activities in the market. The Chairman of the Commission advised him to close the market immediately but the President replied he did not think it necessary to take any of the measures suggested. The Commission felt that the time had come for more specific measures. Thus, the directive fixing the ceiling at Rs. 700, it is stated, was only the culmination of a long series of requests and suggestions.

It is alleged that Mr. Purshotamdas placed the Commission's letter of the 22nd December before the Board without giving any account to the Board of the previous discussion or correspondence that had passed between him and the Commission. It was, therefore, natural that the Board should have failed to realise the gravity of the situation and passed a resolution declaring that there was no emergency and that it was not necessary to take any action. When the facts of the situation came to be known to the trade, however, the Board, at its meeting held on the 6th January, passed a resolution declaring an emergency and fixing a maximum price of Rs. 700, which resolution was reaffirmed on 8th February by another resolution.

The concern of the Commission over the rising prices was, we are told, due to two reasons: (1) the persistent attempts being made to squeeze the February 1956 contract as shown by the concentration of more than 50 per cent. of the open purchases in the hands of a small group of persons, and (2) the repercussions of the rising trend of futures prices on prices in the ready market. The February 1956 contract was introduced on a revised basis in the expectation of a larger supply of cotton. In actual fact, however, the crop estimates showed that the supply would be only about 46 lakh bales instead of 52 lakh bales which it was expected to be. The overall supply position, however, was not unsatisfactory, since the previous year's stocks were 24 lakh bales, and, after allowing for mill consumption at 45 lakh bales and exports at 5 lakh bales, there would still have been left a carry-over of 20 lakh bales at the end of the year. This could not be considered an unsatisfactory position, in view of the fact that the stocks were only 17½ lakh bales at the end of 1953-54.

The increase of prices amounting to 21 per cent. between September 1955, and December 1955, could not, therefore, be fully explained, in the opinion of the Commission, by the reduction in supply. The more important factors were the late arrivals of the crop in the market and the deterioration in its quality which would make them non-tenderable against the February contract and liable to rejection. As a result, attempts began to be made to squeeze the contract by large-scale purchases in the belief that, when the time for delivery came, the sellers would have to buy back their sales at prices dictated to them because of their inability to fulfil their commitments. The situation was further aggravated by option business on a large scale. Consequently, the price of the contract, which was Rs. 687-6 on 2nd December and remained below Rs. 700 up to 4th December, rose rapidly thereafter until it reached Rs. 747 on 22nd December.

Spot Prices

The rise in the contract price, it is pointed out, had its inevitable effect on the prices in the ready market. The price of ready Jarilla 13/16" which is the basic variety of the contract had risen to Rs. 807 per candy by the 22nd December, when it was only Rs. 33 below the ceiling price fixed under the Cotton Control Order. The Commission felt that, if the situation had been allowed to continue for a few more days, the ceiling would have been pierced. The raw cotton prices were already at higher levels than the price of cotton textiles or food articles or other commodities. Under the circumstances, it was felt that some action had to be taken. The alternatives open were three: (1) to close the February 1956 contract, because it had become unworkable and start a new contract; (2) to allow the February 1956 contract to function under a maximum price as provided in the emergency by-laws of the Association; and (3) to close the futures market for the season. The Commission wished to adopt a course of action which would cause the least dislocation to trade. It was felt that it might be preferable to continue the contract even under a maximum price rather than close it out or close the market entirely. This, however, required the use of the emergency by-laws of the Association. Later, when it found that the market could not function properly, the February 1956 contract and the succeeding contract were closed out.

Why Rs. 700?

As regards the fixation of ceiling at Rs. 700, this level, it is stated, was decided upon because that was about the price which might have obtained if the Association had acted in time when the Commission had drawn its attention to the developing situation. The subsequent rise, it is stated on behalf of the Commission, was mainly due to the activity of a few dealers to squeeze the contract, excessive option business and the negative attiude of the Association. The closing price of Rs. 737 for the contract on 23rd December 1955, when trading was suspended, could not therefore, be adopted as a basis. In this connection, it is contended by the Commission that it is misleading to compare the figure of Rs. 700 with the ceiling of Rs. 840 fixed under the Cotton Control Order for ready cotton.

There is usually some difference between the forward price and ready price and it is necessary to take earlier action with regard to the forward price if the ceilings for ready cotton are not to be pierced. When a normal relationship does not exist between the two prices and the futures market is under pressure due to special circumstances, it becomes necessary, says the Forward Markets Commission, to fix an even lower ceiling for the futures price so that the prices do not run away in the ready market. It is for this reason that provision has been made for a ceiling within a ceiling by the Association itself in its emergency by-laws. The maximum price of Rs. 700, besides, was suggested by the Commission not for the season as a whole but only for the February 1956 and May 1956 contracts and that too as an emergency measure.

The foregoing analysis of the circumstances in which the Commission was compelled to take action in relation to the forward trading in cotton does certainly constitute a valid explanation for its intervention. But it does not wholly extenuate the Commission in relation to the charge that the ceiling of Rs. 700 was an arbitrary one. To say that the ceiling was fixed at this level, because that was the price which prevailed at the time the Commission made its proposals known to the President of the E.I.C.A., is tantamount to punishing the entire trade for the fault of one man, even assuming that the man was at fault. Further, it means that the Commission's proposals are really in the nature of directives and that, if they are not implemented immediately they are made, the trade must be prepared to suffer all the consequences of delay. If that is the position, the trade should be clearly told of it.

Speculation

Yet another argument that has been advanced in favour of cutting off a contract at a level that prevailed sometime prior to the actual date of suspension of the contract is that the rise in prices during the intervening period was due to speculation, option business and inactivity of the Association. This explanation too is unconvincing. In the first place, it is at all times difficult to draw the line between pure hedging operations and speculative trading. Secondly, it is difficult to say when speculation ceases to be normal. Thirdly, speculation is part of the apparatus of futures trading, so that the two cannot be dissociated from each other. In any case, it is no consolation to a trader who is compelled to bear unforeseen losses as a result of ceilings being fixed on a historical basis to be told that the rise in prices was due to speculation. There is no economic justice in such a procedure.

The problem of unbridled speculation is not new to this country nor to the outside world. It does take place all over the world. But the authorities introduce before hand suitable hedges to curb them. If it appeared to the Commission that the rise in prices was taking place at too rapid a rate, then it could have suggested the fixation of a maximum range for variations in prices per day or per week, as was done in Alexandria. Indeed, the Forward Markets Commission should have had the foresight to introduce such safeguards even while stipulating the conditions under which hedge trading was allowed. It is the Commission which is to be blamed for this lack of foresight and none else. It will be pertinent to mention here that, when the details of the type of hedge contract to be allowed for the 1955-56 season were under discussion a year ago, it was pointed out by some of the experienced cotton merchants that, with a view to avoiding unhealthy speculation and pressures of the type experienced during this season, there must be at least two hedge contracts, instead of the present "omnibus" contract. Why did not the Forward Markets Commission listen to this sincere advice? What reason had it to reject it? The trouble with this Commission is that it consists of persons who know little of the practical aspects of futures trading. That is probably the chief reason why Mr. Purshotamdas did not think it worthwhile meeting the Commission as often as the latter wanted him to. It is common sense that mere vesting of powers in a body cannot command respect for it from everybody. It must also have the necessary knowledge and personality.

The Commission and its spokesmen continue to argue as if the trend of prices in the forward market was unreal at the time the Commission decided to impose a ceiling for the hedge contract. The price trend was in line with that of the spot market. If anything, the hedge contract was standing at a level far below that of

THE CASE FOR NATIONALISATION*

THERE IS NONE FOR ITS ADOPTION ON A LARGE SCALE

By Dr. John Matthai

CHAIRMAN, STATE BANK OF INDIA, AND VICE-CHANCELLOR, BOMBAY UNIVERSITY

THE point I wish to make is that there is no case for a general application of the principle of nationalisation and that private, or as I prefer to call it, free enterprise, should be the rule, State enterprise being confined to cases where there is proved necessity for it. In such cases, the decision should be based not on *a priori* considerations applicable to industries generally or to categories of industries but to particular industries on the merits of each. The Government's statement of industrial policy relies on both State and free enterprise for industrial development, but it places greater stress on State enterprise. I agree that there are conditions in which State enterprise is required for developing industries in India but, I would reverse the order of emphasis and make free enterprise the normal practice, and, if an industry is to be nationalised, the case for it should be established beyond doubt.

The recent statement of Government's industrial policy in its preamble puts forward two grounds for nationalisation, one is the acceptance of a socialist pattern of society and the other the need for speedy and planned development.

The impression that nationalisation is an essential element in socialism is not supported either by socialist thinking or by socialist practice. As regards the latter, the British Socialist Party, having experimented with nationalisation while in office for five years, is now reacting against it. The feeling is growing that none of the objectives of a socialist society are necessarily served by nationalisation. On the other hand, it is felt that regulatory and fiscal legislation by a Parliament which represents the whole community, can achieve this better.

Karl Marx

As regards socialist thinking, if Karl Marx is to be accepted as the father of theoretical socialism, there is no doubt that he gave the central place in his thinking to the socialisation of the means of production. At the time he wrote, partly through increase in population and partly through the substitution of machinery for manual labour, there was an excessive supply of labour and the employer, by his ownership of plant and machinery, held an unfair advantage in bargaining with labour, which reduced wages to subsistence level. Again, in most countries in Europe then, Government was despotic; such franchise as there was, was based on property rights. Karl Marx assumed, therefore, that the State was identified with the propertied classes and could not be depended on to judge fairly between capital and labour. Karl Marx could not anticipate the vast progress of political democracy since his days and that a time would come when government would be based on adult franchise. That has now happened in many countries and legislative measures for controlling industries and safeguarding the rights of labour have been adopted by them. The need for socialising the means of production as an instrument of social justice in the sense of a fair distribution of rewards, the removal of gross disparities of income and the provision of satisfactory conditions of work no longer exists in democratically governed countries, since all these objects can more conveniently be secured by appropriate legislation. It is significant that, in Russia, at the time of the Bolshevik revolution, there was no democratic government worth the name and it was because of this that the thesis propounded by Karl Marx came to be universally put into practice. In India, with a Parliament based on adult franchise and having sovereign powers, nationalisation as a necessary agency of socialism has little place.

Lord Keynes

Lord Keynes, in his book *The General Theory* regarded government participation in industry as a means of relieving economic depression like the one in 1929 by providing a spur to the revival of economic activity. His thinking in effect amounted to a scientific vindication of President Roosevelt's New Deal. It is worth observing that, although the policy of New Deal led to a revival of economic activity, the suspicion it caused in the minds of business men generally that it was an indication of Government's intention to take a progressively larger share in business made capital shy and delayed investment. The New Deal experiment of Government participation in industry provides, therefore, both a lesson and a warning. The lesson is that there are circumstances in which nationalisation will serve a useful purpose. The warning is that it will do so subject to limitations which must not be overlooked. The general view that Keynes held is stated in his book in the following words—"it is not the ownership of the instruments of production which it is important for the State to assume. If the State is able to determine the aggregate amount of resources devoted to augmenting the instruments and the basic reward to those who own them, it will have accomplished all that is necessary."

The definition of the State's essential part as the determination of the aggregate amount of capital resources to be devoted to development and the basic reward to those who own them means that the primary business of the State is to provide the framework within which resources are allocated and rewards are determined. In other words, the State's business is to lay down a general plan and all economic activities whether by State or by free enterprise must conform to the plan.

Five-year Plan

India has just come to the end of the period covered by the first Five-year Plan and is about to enter on the second Five-year Plan. The first Five-year Plan, in my judgment, was not a plan but would be more accurately described as a programme of piecemeal development. With the exception, perhaps, of the Community Projects, every project included in the first Five-year Plan had been designed and partially erected before the National Government came into power.

Two changes occurred since then. In consequence of the improvement in the food supply and stabilisation of food prices, due to the American wheat loan, to successive good monsoons and to the progress of irrigation, it became safer to supplement available resources by deficit finance. Secondly, the latter part of the first five-year period was marked in most countries by a revival of economic activity unprecedented since the cessation of war. Partly aided by the Plan, India shared in this revival and was able to fulfil most of the moderate targets laid down in the first Plan.

While it is a matter for gratification that the first Plan has generally proved a success, it is unrealistic to feel complacent on that ground about the prospects of the second Five-year Plan. The second Five-year Plan, unlike the first, is a real Plan—a comprehensive overall plan—which seeks to co-ordinate and integrate the different segments of the economy; it is not, like the first, a patchwork of isolated projects. Its scope is much wider and the finance it requires is correspondingly larger. It is obvious that the necessary finance cannot be provided wholly by taxation and borrowing and therefore must be supplemented by a large measure of deficit finance. Deficit finance entails serious risks. But, apart from this, there are other difficult problems to face. For a Plan so comprehensive and calling for inter-adjustment at so many points, the statistical data available are grossly inadequate and have had to be almost entirely improvised. In the circumstances, it must be expected that maladjustments will come to light at various points in the course of its implementation. Some of the maladjustments which will require to be resolved are those between employment and output of consumer goods, heavy and light industries, large-scale and small-scale industries, State enterprise and free enterprise, production, on the one hand, and transport and social services, on the other, and the effect of inflation and high prices on people of fixed and variable incomes.

Second Plan Too Big

I draw attention to these aspects of the second Five-year Plan, because it is not sufficiently realised that the task involved in directing and focussing economic development in the country to the policy requirements of the Plan would be so enormous that direct participation in the ownership and management of industries, in addition to it, will place a large and, in my opinion, unnecessary burden on the administrative and financial resources of Government. I am not suggesting that the Plan will not work. With sufficient concentration of effort and with a reasonable measure of luck, I expect it will. But it means that Government's resources in both finance and personnel should be carefully conserved and not dispersed.

Industrial Policy

This brings me to the second general consideration in the industrial policy statement which has influenced Government's approach to nationalisation, namely, the need for speedy development of industries. The question that arises here is whether Government's organisational and administrative resources are capable of meeting the demand for speedy development through nationalisation. My view is that they are not and my reasons for this view can be briefly stated.

First, for its population and area, India, I believe, is one of the most under-administered countries in the world, even for the normal purposes of government. Secondly, if the Government of India have done well so far as a government, as they undoubtedly have, as compared, for instance, with neighbouring Asian countries which have newly achieved independence, it is largely because, unlike them, we were able to take over from the previous Government a first-class going concern. The administrative momentum of the old Government is still active. Although in recent years this momentum has perceptibly declined at almost every level of administration, the decline has been offset by the dynamic leadership provided by the present Government. But it is unrealistic to think that the natural term of those who form the present leadership can last much longer.

Civil Service

Thirdly, taking the principal instrument of administration, namely, the permanent civil service, making the fullest allowance for the high order of intellectual ability and of personal integrity which by and large prevail in the service, it is common experience in most countries that civil servants "are too slow in their decisions; too much governed by precedent; too legalistic; too fearful of change and experiment ever to provide the elasticity, flexibility, initiative and the willingness to take risks, make mistakes and lose money, which are called for in successful industrial enterprise." In this context, it is worthwhile to take note of the changes which have occurred in India in recent years in the character and quality of civil servants. The old practice of rotating civil servants working at the top level between the Central and State Governments has now practically ceased. There is consequently among those who man the services at the Centre a serious lack of personal contact with problems on the spot and an increasing tendency to deal with them in a routine, mechanical way. The diminution in real terms of the remuneration paid to civil servants and of the prospects open to them have resulted in a noticeable tendency to look for satisfaction in work not so much to the work itself as to the exercise of bureaucratic authority. With the emergence of polttical chiefs, civil servants are getting into the habit, while advising Ministers, of anticipating the opinion of Ministers and adopting it as their own rather than stressing their own independent judgment. I agree also with the Prime Minister that the rules of procedure in Government departments which answered the requirements of a foreign bureaucratic Government are out of keeping with those of a national democratic Government.

Planning Commission

Lastly, I want to say a word about the Planning Commission. Frankly, I have never been happy about the institution of the Planning Commission and the place assigned to it in the structure of Government. A Planning Commission logically is or ought to be a body of experts sub-ordinate to the Cabinet. But, through adventitious circumstances into which I do not wish to enter, the Planning Commission has become a body of amateurs with whom, for all practical purposes, final decision rests in matters of economic development. The result is that the Cabinet Ministers concerned with economic affairs have lost much of their initiative and sense of responsibility. This is unfortunate, because, if it is decided to nationalise industries, it is the initiative and sense of responsibility of the Ministers concerned which must tell.

SUGARCANE CESS IN UTTAR PRADESH

MOVE TO RAISE THE LIMIT

ONE of the important official Bills now on the anvil of the Uttar Pradesh Legislature is the U.P. Sugarcane Cess Bill. The first reading of the Bill was passed by the Assembly on the 1st inst. and by the Council on the 8th inst. The Bill seeks to amend and consolidate the law relating to the imposition of cess on cane intended for consumption or use in, and sale to, a sugar factory. The present law, it will be recalled, is contained in section 20 of the U.P. Sugarcane (Regulation of Supply and Purchase) Act, 1953; before that, this provision existed in section 29 of the Sugar Factories Control Act, 1938. The validity of this provision was challenged before the High Court sometime ago and some injunction orders were issued, as a result of which cess amounting to over Rs. 2 crores could not be realised at that time. It is with a view to removing the doubts about the validity of the law that the U.P. Government has come forward with a separate enactment. Moving the Bill for consideration in the Legislative Assembly, Mr. Phool Singh, the State's Deputy Minister for Planning, said: "The cess has now continued to be levied for over 17 years and it is considered expedient that the law relating to its imposition should, with such modifications as have been found necessary, be consolidated in a separate enactment and doubts about the validity removed."

The Bill authorises the State Government to levy, by a notification in the official *Gazette*, a cess not exceeding As. 4 per maund on the entry of sugarcane into the premises of a sugar factory. The Government may also remit, in whole or in part, such cess in respect of cane used in a factory for any limited purpose specified in the notification. The cess shall be payable by the factory owner. The Bill also empowers the State Government to charge cess from the mills which, though they are situated beyond the borders of Uttar Pradesh—as for example, mills in the Punjab and Delhi—purchase sugar from the cane growers of the State. The Bill contains two notable provisions applicable in case of defaults. First, if any factory owner defaults in the payment of cess due from him, the officer empowered to collect the cess may direct that, in addition to the amount of arrears and an interest on the amount at the rate of 6 per cent. per annum, a sum not exceeding 10 per cent. of the total shall be recovered from the owner by way of penalty. Secondly, if any owner defaults in the payment of the cess imposed on him or violates any provision of the rules made under this measure, he shall be liable to imprisonment up to six months or to a fine not exceeding Rs. 5,000 or both. And, in the case of continuing contravention, the offender shall be liable to a further fine not exceeding Rs. 1,000 for each day during which the contravention continues.

Cess Should be Reduced

When the aforesaid Bill was moved for consideration in both the houses of the U.P. Legislature, there was a lively debate over the imposition of sugarcane cess. Some members bitterly protested against the continuance of the levy, which, in their opinion, was not justified, since it tantamounted to taxing raw material. There is some force in this contention. As the former Tariff Board clearly declared as far back as in 1950, the levy of a tax on a raw material is, as a rule, wrong in principle and it is particularly objectionable when imposed on the raw material of an industry which had been nursed by the consumers all over the country for a period of 18 years and for which they had made a heavy sacrifice during all these years. Since, however, this cess has become a part of the structure of State taxation, the U.P. Government, as also the Governments of other States, will surely not give up this source of revenue. All that one can urge is that the rate of cess on cane, which is very high, amounting to as much as 15 per cent. of the cost of cane, should be reduced. Nowhere in the world is sugarcane subjected to such a heavy burden of taxation. One can also urge that the State Government should spend the major part of the proceeds of the cess on intensive cane development work, so as to bring about a rapid reduction in the cost of cane.

Tax Commission's Views

Viewed thus, the fixation of a higher limit to the rate of cess at As. 4 per maund, as against As. 3 at present, is certainly regrettable. Incidentally, attention may be drawn to the following observations of the Taxation Enquiry Commission on the subject of sugarcane cess:

"By way of comment on this tax, we would only sound a note of warning against any extension of a practice by which small 'local areas'—in this case the premises of factories—are set up by definition and State Governments start taxing the goods which enter therein. It seems to us clear that Entry No. 52 of the State List—'taxes on the entry of goods into a local area for consumption, use or sale therein'—was not intended to be made use of by the State Governments as an authority for taxing the raw materials of industries by defining the premises of an industrial concern as a 'local area.' We believe that the term 'local area' has been used therein to denote the area of a local authority. It was in this sense that the relevant power was utilised until the sugarcane cess came to be levied. Any extension of the use of this entry by State Governments for the purpose of taxing agricultural or mineral products or raw material would, for many reasons, be undesirable. We recommend that the State Governments should not hereafter utilise Entry 52 of the State List for imposition of their own taxes, but should reserve it in the usual manner for local authorities like municipalities, village *panchayats*, etc."

It will be observed from the above quotation that the U.P. Government's move to raise the limit of the rate of cess to As. 4 per maund runs counter to the views of the Commission. It will be worthwhile to refer, in this connection, to the point of order raised against the Bill by an opposition member in the U.P. Assembly. The objection was as follows: "Although the Bill is silent on the subject, it is based, we presume, on Item 52 on the State Legislative list of our Constitution. Item 52 permits the taxation of goods which enter, are sold or manufactured in a local area. Or the taxation powers conferred by the Item can be exercised only by the local authority concerned. As the Taxation Enquiry Commission has pointed out, no State Government are empowered under the Constitution to levy a cess on sugarcane."

This objection was, however, overruled by the Speaker. Any taxation power conferred under the State list was, the Speaker held, exercisable by a State, and not by any local authority, unless, of course, such power was delegated to the authority in question by the State. As for the views of the Taxation Enquiry Commission, he held that its opinion did not have the force of a judicial pronouncement. And in the absence of an interpretation to the contrary by the Supreme Court, he went on to say, the House must go by the interpretation of an item as it stood.

Utilisation of Cess

Be that as it may, considering the imperative need for lowering the heavy cost structure of the sugar industry, the cost of sugarcane should be reduced. Again, inasmuch as a cess is a levy imposed on a particular commodity for a specific purpose, it will be improper on the part of the U.P. Government to continue to transfer the cess to the general revenues. This aspect was stressed by Mr. Genda Singh, Opposition Leader in the U.P. Assembly. He said: "It is a moot question whether cess should be imposed upon an industrial raw material. According to experts, it should not be levied. Though the Government has been realising cess money for the last 17 years, the proceeds are not being utilised for increasing the production or improving the quality of sugarcane. Instead, the money is transferred to the general fund which is highly improper." Mr. Genda Singh called upon the Government to devote the cess collections for improving conditions in the cane-growing areas. In this connection, he said: "Under the second Plan, the Centre has allotted more sugar factories to the South which produces better varieties of sugarcane. If the cess proceeds of Rs. 5.5 crores annually were utilised for the improvement of the sugarcane-growing areas, the yield and percentage recovery would increase and the State could press its claim for opening more factories here."

While Mr. Genda Singh is perfectly right in insisting on utilising the cess on cane development, his plea for the State securing licences for the establishment of more sugar factories cannot be justified. For, as it is, there is a heavy concentration of sugar mills in Uttar Pradesh and it will not be in the larger interests of the country, if more mills are set up in that State, instead of being dispersed to other parts of India where there are facilities to grow more cane. What is more, the sub-tropical climate of the State is not so suitable for cane development as the tropical conditions of South India.

CANE PRICES IN BIHAR

During question time in the Lok Sabha on Thursday last week, several members from Bihar protested against the reduction of As. 3 per maund in the price of sugarcane in Bihar. Replying, Mr. Ajit Prasad Jain, Minister for Food and Agriculture, said that the general policy of the Government was to link the price of sugarcane to recovery. This power of reducing the price was delegated to the State Governments which would take whatever steps were necessary in the interests of the grower. Dr. Ramasubagh Singh asked: Why are the mills in South and North Bihar allowed to start crushing very late—as late as December or January —when they should normally have started crushing as early as November? Now because it is late and the cane is still standing, the Government says that the price of cane must be reduced. To this question, Mr. Jain replied: The Government have no powers to lay down when the mills should begin crushing. Some members repeatedly urged that this late crushing of cane and the reduction in the price paid to the grower was done with a view to putting more money into the pockets of the millowners. In view of the keen interest shown in the subject, the Speaker of the Lok Sabha, Mr. Anantasayanam Iyengar, agreed to allow a half-hour debate later.

A sum of Rs. 10,27,082-2-4 is still outstanding to the cane growers out of the collection of Rs. 1,82,35,386-11-3 on account of a two-anna savings cut per maund of cane supplied by them during the year 1948-49 to all the sugar factories in the State, besides one mill in the Punjab and three Bihar sugar factories. This information was given by the Uttar Pradesh Industries Minister in the U.P. Legislative Assembly last week. According to the Minister, the cane growers have deposited Rs. 90,20,248-2 into the *Zamindari* Abolition Fund for getting *bhumidhari* rights and had been paid Rs. 81,98,056-0-9 in cash. The *kisans* have not come to take back their dues and the balance of over Rs. 10 lakhs is thus still lying in the U.P. Co-operative Bank in which the entire amount of the cut has been deposited.

The Iraq Development Board has awarded Deutsche Bergwerke und Huttenbaugesellschaft of West Germany a contract for erecting a sugar factory at Mosul. The capital outlay of the factory is of £2,047,000. The plant will have a capacity of 35,000 tons annually. It is scheduled to start production in November 1957.

FIRE — MARINE — ACCIDENT

PUBLIC COLLIERIES

COMPANY FORM OF MANAGEMENT PROPOSED

REPORTS from New Delhi disclose that, out of the additional production of 23 million tons of coal envisaged in the second Plan, the Government of India has decided to raise 12 million tons, as against the earlier proposal of 15 million tons in the public sector. It is estimated that, as much as Rs. 60 crores will be required for this purpose, as against the previous estimate of Rs. 45 crores for 15 million tons. It is further reported that the share of the private sector in the additional output will be raised by about 2 million tons, that is, from 8 million tons to 10 million tons.

The Government has also decided, it is said, to adopt the joint-stock company system for administering all State-owned collieries, both old and new. It is further stated that a limited company will be formed for this purpose and the administration of all collieries will be vested in the company. In view of the vast expansion of coal envisaged in the second Plan and subsequent Plans, it is considered that the adoption of company form of management for State collieries will assist in the efficient and prompt transaction of business. According to Mr. Satish Chandra, Deputy Production Minister, the Government is taking the necessary action, including the finalisation of the memorandum and articles of association for the proposed company.

Freight Pool

Another notable development in the offing is the constitution of a freight pool for coal. It would appear that the Ministry of Production is studying a proposal for this purpose, in consultation with the Ministries of Railways and Commerce. It will be recalled that the Railway Freights Inquiry Committee has asked in its questionnaire whether it would be desirable to create a freight pool for coal, iron and steel, kerosene, petrol, cement, chemical manufactures and salt. The report is yet to be submitted to the Government.

It is stated that the proposal to create a freight pool has been prompted with a view to providing incentive for the industrial development, on an orderly basis, of the North-Western, Western and Southern regions of the country, which are comparatively far away from the Bengal-Bihar coalfields. The Federation of Indian Chambers of Commerce and Industry is, however, opposed to the move. In its memorandum to the Government, it observes:

"It is doubtful if the freight pool would remove the advantage of location enjoyed by an industry which has been established near the source of raw materials. The freight pool would violate one of the accepted tenets of railway rates policy, namely, that it is not the function of the railways to equalise the geographical advantages which are naturally enjoyed by certain industries. Further, even though it may be found necessary to subsidise long-distance traffic in essential commodities, those who move their raw materials over short distances should not be penalised and called upon to bear the cost of subsidy."

The Government has also proposed to carry out intensive surveys of the country's coal along with other mineral resources. In established industries such as coal, production has to come mainly from virgin areas, so that detailed prospecting of selected coalfields is an essential part of production programme. The Geological Survey of India and the Indian Bureau of Mines are proposed to be expanded considerably to cope with increased activities. Detailed investigations followed by drilling of Korba, South Karanpura, Raniganj, Chirimuri, Ramgarh, Jhilimili and North Karanpura will be undertaken in connection with coal production in the public sector and of the coalfields of Kota, Singareni, Umaria, Sohagpur, Kanhan and Pench Valleys, Hyderabad, Talchar, Godavari Valley and Assam for purposes of qualitative and quantitative assessment.

A meeting of the Utkal Mining and Industrial Association, Calcutta, passed a resolution, opposing the Government's reported move for State trading and mineral exploitation in Orissa. It urged the Government for immediate reconsideration of the decision in the interest of trade and commerce. Foreign and Indian firms having mining operations in Orissa attended the meeting, and Mr. S. C. Bose presided.

The Coal Mines Provident Fund Scheme, introduced in May, 1947, has a membership of about 3.2 lakh colliery workers. The total fund under the Scheme up to February, 1956, was about Rs. 5.5 crores.

STOCKS OF JUTE GOODS MOUNT UP

INCREASE IN LOOM CAPACITY NOT BEING ABSORBED

JUTE shares in Calcutta had some disquieting news from the Indian Jute Mills Association, with the announcement of a further substantial increase in stocks of jute goods. The stocks at the end of April 1956 amounted to 107,300 tons, representing a rise of 12,300 tons over those at the close of the previous month, thus maintaining the upward trend noted since October 1955. An increase in stocks was, in fact, anticipated, but it was never expected that it would be so large. For, as compared with the rise in stocks as at the end of March, namely, 5,200 tons, the increase in April is rather disquietingly larger. Further, the narrowing trend in the pace of monthly expansion in stocks noted in the previous two months has been reversed. What is more, with the aforesaid enlargement, the stocks at the close of last month have been brought to the highest level since September 1953, when they stood at 118,373 tons.

Another striking feature of the stocks as at the close of April 1956 is that they are 3,900 tons more than those at the end of the corresponding month of 1955, while those at the end of March disclosed no change over the year. It is true that usually the month of April witnesses accumulation of stocks to their peak level, but, at 107,300 tons, they are equivalent to about five weeks' production, while stocks amounting to three weeks' production are normally considered to be comfortable. This shows that the full effect of the unsealing of 7½ per cent. of the looms in February this year, which adds about 5,500 tons a month to the output, was more felt in April than in March, without any corresponding relief by way of an increase in despatches. One of the causes for this state of affairs is to be found in the recent strike in the dock which brought work to a standstill in the closing week of April.

The following comparative table shows the stocks of jute goods at the close of each of the last three months, as also those at the end of April 1955:

Jute Goods Stock

(In tons)

	As on			
	30-4-1956	31-3-1956	29-2-1956	30-4-1955
Hessian	35,900	30,300	28,200	39,000
Sacking	62,700	55,200	52,200	62,900
Others	8,700	9,500	9,000	1,500
Total ..	107,300	95,000	89,400	103,400

It will be noted that the rise in total stocks has been shared by both hessian and sacking, these accounting for 5,600 tons and 7,500 tons, respectively. It will also be noted that the expansion in either of these two classes of goods is very much more marked, particularly in the case of sackings, than that in the previous month. With the aforesaid rise, the stocks of hessians at the end of April this year have been brought to the highest since August 1955 and those of sackings to a record since April 1955.

It is significant that the increase in stocks at the end of April has occurred, notwithstanding a fall in production of jute goods during the month. The total output for April was 93,900 tons, a decline of 5,400 tons as compared with the previous month. With this decline, the upward trend in production noted during the previous two months has been reversed. As compared with April 1955, the output during the month under review is higher by 8,209 tons, but this is due to the fact that a year ago 12½ per cent. of the looms had remained sealed, while in April this year only 5 per cent. were kept idle. The fall in output is attributed partly to the fact that working during the month was interrupted by a number of holidays and that the month was shorter by a day.

The following comparative table shows the trend of production of the three principal varieties of jute goods during the past three months, as well as in April 1955:

Jute Goods Production

(In tons)

	April, 1956	March, 1956	February, 1956	April, 1955
Hessian	32,900	34,800	32,000	32,780
Sacking	55,000	57,800	54,700	49,335
Others	6,000	6,700	6,100	3,576
Total ..	93,900	99,300	92,800	85,691

The fall in output has been shared by all the varieties as will be seen from the above table. With the aforesaid output in April, the total quantity of goods manufactured by jute mills during the first ten months of the jute season, 1955-56 comes to 894,345 tons, as compared with 835,833 tons in the previous season.

The figures of despatches of jute goods during the month of April this year are not yet available, but the foregoing figures of stocks indicate that the upward trend in despatches experienced during the previous two months must have received a setback. It may be recalled that despatches had risen sizably from 72,900 tons in January this year to 80,000 tons in February and further to 92,800 tons in March. In this connection, reference may be made to a country-wise analysis of clearances of gunny bags and hessian and sacking cloth from Calcutta during the first three months of 1956 by Messrs. M. L. Seal & Co., Calcutta.

The aggregate number of bags shipped during the first quarter of this year amounted to 104.57 million, which represents a fall from 115.15 million sent out during the corresponding period of 1955, but compares very favourably with 87.02 million in the first quarter of 1954. Of these, Egypt and Levantine account for the largest quantity amounting to 12.27 million pieces, as compared with 18.44 million and 5.57 million in the corresponding periods of 1955 and 1954, respectively. Australia comes next with 11.74 million bags, as against 16.95 million taken up in the first quarter of 1955 and 11.01 million in the corresponding period of 1954. Among the other foreign consumers, Straits Settlements figure prominently with an offtake of 9.75 million bags, the shipments in the corresponding periods of 1955 and 1954 were 14.07 million and 5.48 million, respectively. East Africa took up 8.19 million bags (as against 7.90 million and 4.01 million). Shipments to South American countries have steadily risen from 5.67 million bags in the first three months of 1954 to 7.24 million bags in the corresponding period of 1955 and further to 8.64 million bags in that of 1956, while those to the European continent have declined from 17.33 million bags to 8.20 million and further to 5.11 million and those to the United Kingdom from 7.42 million to 6.57 million and further to 4.79 million.

Shipments of hessian cloth from Calcutta have maintained a downward trend from 351.49 million yards in the first quarter of 1954 to 341.27 million yards in the corresponding quarter of 1955 and still further to 325.46 million yards in the same period of 1956. Shipments of sacking cloth, however, show a slightly different trend. They have fallen to 5.51 million yards in the period under review from 8.01 million yards during the same period of 1955, to which level they had risen from 6.91 million yards in the first quarter of 1954.

The following table shows the trend of shipments of hessian and sacking to the main consuming centres during the first three months of the last three years:

(In million yards)

	Hessian			Sacking		
	In the first quarter of			In the first quarter of		
	1956	1955	1954	1956	1955	1954
U.K.	41.68	66.53	64.17	1.21	0.87	1.21
Continent	3.70	2.35	0.09	0.97	0.12	0.52
U.S.A.	183.80	198.16	176.52	1.24	2.09	0.68
Canada	33.61	32.81	24.47	0.06	0.05	..
S. America ..	29.18	8.40	50.06	0.21	0.18	0.93
Australia	11.44	9.64	0.46	0.73	0.57	0.59
New Zealand ..	2.06	2.05	1.86	..	..	..
Egypt and Levantine	5.58	4.07	3.05	0.71	3.42	0.98
Bombay	5.02	5.63	0.61	..	..	..
Madras	2.62	2.60	2.28	..	0.25	0.18

It will be noted that shipments to the U.S., the main consuming country of Indian gunny cloth, have considerably declined during the three months ended March 1956, although they are still well above those in the corresponding period of 1954. Shipments of hessian to the U.K. also show a drastic fall and they also lag very much behind those in the first quarter of 1954.

OUTLOOK FOR RUBBER

VAST SCOPE FOR INCREASED CONSUMPTION LARGE

THE draft second Five-year Plan does not give details of the target for rubber goods manufacturing industry, nor of the steps to be taken to expand the rubber production to meet the additional requirements of the industry which are expected to expand considerably during the Plan period. It is, however, clear that the indigenous output of natural rubber, which even now falls very much short of consumption, has to be expanded considerably or the requirements of rubber goods manufacturers have to be met otherwise, either by larger imports or production of synthetic rubber.

An idea of the additional requirements of the rubber goods manufacturing industry during the second Plan period can be had from the targets fixed for production of automobiles and bicycles. The output of automobiles is proposed to be raised from 23,000 units in 1955-56 to 57,000, an increase of 34,000 units or 147 per cent. The production of bicycles is to be doubled from 500,000 to 1,000,000. It is needless to add that the success of the whole second Five-year Plan depends on the provision of adequate transport facilities for the movement of goods. It is public knowledge now that railways alone will not be able to meet the growing transport requirements. The automobile industry will, therefore, be called upon to share the responsibility of providing transport facilities. The establishment of industries and improvement of economic condition in semi-urban, as well as rural, areas, will stimulate the demand for bicycles, the common man's popular vehicle. In addition to the automobile and cycle industries, which will call for more rubber tyres, tubes and other rubber accessories, there are other fields which will make an increased use of rubber. The vast industrial expansion, for instance, will increase the demand for conveyor and transmission belting, industrial vee belts, hoses, rubber insulated cables, etc. Under the Plan, the output of electric cables, for instance, is proposed to be raised from 9,000 tons to 15,000 tons. The anticipated increase in national income by 25 per cent. and *per capita* income by 18 per cent. will raise the general standard of life for the people and there will, therefore, be greater demand for rubber footwear.

Although the draft Plan does not provide an idea of the target for production of rubber goods, from the discussions which the representatives of the rubber manufacturing industry had with the Planning Commission in August 1955, it is gathered that the Commission was convinced that there was a case for building up additional capacity for the production of automobile tyres and tubes to 1.44 million each by 1960-61, as against the consumption of 834,000 tyres and 749,000 tubes in 1954, and a production of 9.7 million cycle tyres and 10.4 million tubes by 1960, as against the consumption in 1954 of 5.4 million and 5.6 million, respectively. It was also felt desirable to increase the capacity of footwear manufacture to 58 million pairs on a single-shift basis, in order to achieve a target of 50 million pairs of footwear by 1960.

With the aforesaid possibilities for expansion of rubber goods production, the problem of raw materials supplies, particularly rubber, has assumed great urgency and is naturally engaging the attention of the manufacturers and the Government alike. Indigenous production of natural rubber in 1955 amounted to 22,481 tons, an increase of 988 tons over the year, while consumption aggregated 27,543 tons, the highest ever recorded and 2,000 tons more than in 1954. The total deficit was 4,948 tons, which was made good to a large extent by the import of 3,839 tons. During the first three months of the current year, the output of raw rubber amounted to 4,338 tons, while the consumption aggregated 7,228 tons. The estimated deficit for the whole year will be more than 8,000 tons. The Planning Commission has estimated the raw rubber requirements of the country to reach 40,000 tons by 1960. The Rubber Board has already drawn up plans to replant 70,000 acres of rubber in India, but increased production is not expected to become available earlier than 1963 and the full benefit of the replanting scheme is not likely to be got for another ten years thereafter.

The problem is, therefore, one of finding a solution during the intervening period. The Government of India is alive to the situation and is exploring the possibility of setting up a synthetic rubber plant. The manufacture of synthetic rubber will, no doubt, be welcomed by the

Oil from abroad costs valuable foreign exchange. Oil from inside India saves it. And we must have ever-increasing quantities to cope with the expansion of industry and agriculture.

Scientists and engineers are keeping Assam's oil industry working at full pressure to produce as much oil as possible from our own oilfields. Additional wells are constantly being drilled, yet even in an established area they are not always productive; in spite of modern knowledge and equipment, successful drilling still remains something of a gamble.

But no effort is spared to find oil and turn it into the fuel, lubricants and by-products which are so vital to the progress and prosperity of India.

ATOMIC RESEARCH IN BRITAIN

FUTURE HOLDS MOST EXCITING POSSIBILITIES

By K. E. B. Jay

FOR some years to come, Britain's Atomic Energy Research Establishment at Harwell, England, will be occupied mainly with the use of atomic energy for generating industrial power. Britain's demand for power is rising steadily year by year, but at the same time her indigenous coal, which has hitherto been her main source of power, is becoming so much harder to mine that it is unlikely that production of this traditional fuel can be increased sufficiently to supply the needs of the power industry.

The country thus has an immediate interest in nuclear fuel as an alternative. Early in 1955, the Government announced its plan to spend some £300,000,000 during the next ten years on nuclear-powered generating stations. By 1965, these stations would provide an installed generating capacity of 1,500-2,000 M.W., an amount which would otherwise require some 5,000,000 tons of coal. Definite plans have not been drawn up beyond 1965 but it is hoped that, by 1975, 40 per cent. of Britain's total power will be generated from nuclear fuel, with a saving of 40,000,000 tons of coal a year.

In Three Stages

The British programme is divided into three stages, of which the first two are to be completed between 1955 and 1965. In stage I, gas-cooled graphite-moderated reactors will be used, because these can burn natural uranium fuel. The reactors will be improved versions of those now being built at Calder Hall, in Northern England, designed primarily as power producers; they will, therefore, have a higher power output. It is expected that, as experience is gained in designing and operating this type of reactor, it will be possible to increase the output of the stations, in successive designs, from 100 M.W. to 200 M.W.

The main disadvantage of the gas-cooled reactor is that the amount of heat which can be extracted is low. For stage II of the programme, therefore, liquid-cooled reactors will probably be used. The most suitable type has yet to be decided upon. These reactors would require enriched fuel and could use for that purpose the plutonium produced in stage I reactors, in conjunction with natural uranium.

One possibility is the so-called pressurised-water reactor, in which ordinary water is used under pressure as moderator and also as coolant. A second possibility is a graphite-moderated reactor cooled by liquid sodium. Both these types are being studied.

Liquid Sodium

Liquid sodium is an efficient coolant and does not require the high pressures inevitable in water-cooled systems; much higher operating temperatures would be possible and hence greater efficiency in the steam cycle. There are, however, several difficulties; sodium becomes radioactive under pile irradiation; it is difficult to handle and burns in oxygen; it may enter the pores of graphite (and so increase neutron absorption), unless the graphite blocks are sheathed in zirconium. Nevertheless, the sodium-graphite reactor is a promising type. The Establishment has studied the general technique of handling liquid sodium and has developed components—heat exchanger, pumps, valves and so on—to work with it.

Stage III of the United Kingdom's nuclear power programme looks forward beyond the next ten years to so-called breeding reactors, which produce in the course of operation more secondary nuclear fuel than they consume of the primary fuel. With these, it should be possible ultimately to increase fuel utilisation to the point at which a ton of uranium will do the work of a million tons of coal. A prototype fast-fission power-breeder is being built at Dounreay, Scotland. The physics of fast-fission reactors have been studied at Harwell in the plutonium-fuelled Zephyr pile and recently another zero-energy fast reactor has begun operation. This reactor, which is called Zeus for zero-energy uranium system, is fuelled with highly-enriched uranium-235; it was built to obtain the detailed nuclear physics information needed for the Dounreay reactor.

Studies at the Establishment of the nuclear properties of uranium-233 and thorium suggest that it should be possible to make a breeder reactor operating in the thermal energy range by using the uranium-233/thorium fuel cycle. In particular, an aqueous homogeneous system of this sort seems very promising.

Primary Role

The role of the United Kingdom Atomic Energy Authority in the programme just outlined is to do fundamental research and to built prototype reactors; operation of nuclear power stations to generate electricity on a commercial basis will be the responsibility of the electricity authorities and new stations based on the Authority's prototypes will be built for these authorities by private industry.

Within the Atomic Energy Authority, the Establishment's primary role is to do long-term research and to act as a source of ideas for reactors and processes, while the Industrial Group does engineering design and construction of prototype reactors and power stations. It is the policy of the Establishment to build its fundamental research on as broad a basis as possible, for only thus can the unforeseeable demands of future technologies be met. Thus, we find work being done on cosmic rays, fission products, the chemistry of heavy elements (from polonium upwards), the effects of electron bombardment on ionic crystals, neutron diffraction as an aid to studying crystal structures, electrode reactions at metal surfaces, and many other topics.

There is also a large body of research whose results are important to fundamental science and to technical advance alike; examples include studies of surface chemistry and ion exchangers, measurements of nuclear cross-sections (which are made for all kinds of reactions in a great number of nuclides over a wide range of energies), studies of corrosion in metals and the mechanism by which it is caused, study of the deposition of aerosols and so on.

Finally, there is the work on reactors and their components, and on the other processes essential to a nuclear power industry—uranium extraction, fuel element treatment, gaseous diffusion, effluent treatment, and the like; though primarily technological, this research also yields its quota of fundamental data.

Teaching Industry

In addition to its research and design functions, the Authority, and the Establishment especially, has the important duty of teaching industry about nuclear power. Industry as a whole has had little opportunity to study the new technology, although a few firms have been able to get some experience through contracts for the Calder Hall station. Only the Authority has comprehensive knowledge of the subject and it is consequently required to disseminate scientific and technical information and train staff from the industrial firms and consulting engineers.

This is being done in various ways. A collaboration scheme with the Central Electricity Authority and industry has been organised and substantial numbers of engineers are engaged in it; in particular, four teams have been formed, each under the leadership of a major manufacturer of heavy electrical plant, to develop improved versions of the gas-cooled reactor and to consider other types.

At Harwell, a Reactor School was opened in 1954 in which engineers and scientists from industry and the Central Electricity Authority are given a three-month course on the principles of nuclear engineering and reactor design, with experimental work involving the use of Bepo. With the relaxation of security restrictions on reactor data, especially since the conference on the peaceful uses of atomic energy held in Geneva in the autumn of 1955, it has become possible to broaden the basis of admission and to open the school to students from all parts of the Commonwealth and from overseas countries.

Fruitful Line of Research

Reverting to the research programme, another problem, and a fruitful line of research, arises from the very large quantities of radioactive fission products that will be produced by a nuclear power industry. Hitherto, these have been looked upon as a nuisance, since they have to be stored for long periods of time, but it now seems that the radiation from them will find important uses. Large sources of thousands, or even millions, of curies would be required and could be made from caesium-137 or strontium-90 separated from the fission-product wastes from a chemical treatment plant.

The wastes remaining after this separation would contain only the shorter-lived fission products and could be concentrated and stored until the activity decayed to a low level; they could then be discharged to the sea or fixed on solid materials and buried. It has been estimated that the cost of storage will be small and will largely be offset by revenue from the sale of the separated isotopes. Another source of gamma radiation might be fuel elements immediately after removal from a reactor, during the so-called cooling period, that is the period during which their radioactivity is allowed to decay or "cool" to a level convenient for handling in the chemical separation.

Several applications of radiation have been studied in Britain and the U.S.A. Thus, it seems certain that pharmaceuticals and some medical supplies, for example, surgical sutures and hospital blankets, could safely be sterilised by exposure to radiation. It has also been shown that food can be sterilised in a similar manner, though it has yet to be demonstrated unequivocally that the process is safe. A difficulty with complete sterilisation is that it produces changes in the flavour of food. Surface sterilisation of foodstuffs —a kind of pasteurisation—is possible without changes in flavour and enables refrigerated foods to be kept for several times as long as would otherwise be possible.

Controlling Insect Pests

Very promising experiments have been made using radiation to control insect pests. Workers at Harwell and at the Forest Products Research Laboratory of Britain's Department of Scientific and Industrial Research, have shown that the life of beetles infesting wood can be shortened, and their ability to lay fertile eggs prevented, by doses of gamma radiation much smaller than those needed to kill the insects or their larvæ. By these means it may be possible to preserve historic timber or furniture. In the United States, screw-worm was eradicated in some large-scale experiments by liberating large numbers of males made infertile by irradiation. The parasitic disease trichinosis, transmitted by larvæ in pork, has been controlled by irradiating hog carcases; the female insect is sterilised and the disease cycle broken.

Another field for the large-scale exploitation of radiation effects is the chemical industry. Chain reactions offer the best hope of economical utilisation. Polymerisation reactions and the modification of polymers have been studied at Harwell and the principles underlying the effects have been elucidated; some of the modifications may have great technical value.

The initiation of chemical reactions by radiation is also promising; for example, gamma radiation may be used to promote vulcanisation in rubber, with the advantages over established methods that the process can be stopped at will and that the product has improved properties at high temperatures. These applications of radiation, and many others so far unexamined, open up the most exciting possibilities for the future. Some observers think that they may lead to technical and industrial developments as important economically as the development of nuclear power itself, but before these possibilities can be evaluated, the processes must be studied over a wide field. A technological irradiation group has been set up at Harwell to do this; it will use as radiation sources large cobalt-60 and caesium-137 units and "cooling" fuel elements. The Establishment is also working on the fundamental chemistry of the effects produced by all types of radiation.

The technological irradiation group will also study methods for irradiating plants to produce new mutants. Natural mutations are caused by radiation from radio-potassium contained in the soil and it has been shown that the natural mutation rate can be greatly increased by growing plants in a gamma-radiation flux. The group will make available more mutants for plant breeders and will develop prototype irradiation equipment for plant-breeding establishments.

In thinking of the future, it is, perhaps, inevitable that one should concentrate on research for power reactors and their allied plant and processes, to the neglect of the great, if less spectacular, programme of fundamental research in all branches of physical science and in engineering. It must suffice to remind the reader that these latter researches are being pursued with the same vigour as the work for nuclear power, in an atmosphere of enthusiasm and intellectual freedom.—*Exclusive to "Commerce."*

NEW PRODUCTS AND PROCESSES

Rapid Radar Switching System

A DISPLAY system which enables the tuning of the radar aerials from transmitting to receiving and *vice versa* to be carried out by a semi-skilled operator in about one minute, instead of the normal period of up to one hour's work by a skilled operator, has been developed at the laboratories of the General Electric Company, London. The equipment, developed by the G.E.C. Research Laboratories on behalf of the Admiralty, is now being used by Claude-General Neon lights, a subsidiary company of the G.E.C., in the production and testing of broad-band T.R. cells. The essential feature of the device is that the "bandpass" characteristics which enable this quick tuning to be undertaken are displayed automatically on a cathode ray tube screen and can be observed by the operator. An oscillator is mechanically tuned over about a 12 per cent. band of frequencies once every second, at a stabilised output. The reflected wave from the test object is then "identified" and, after detection, is then amplified to provide the vertical deflection displayed on the cathode ray tube screen, while the sweep of this "wave" is synchronised to a tuning unit.

Reversible Battery

A "Reversible" battery which is said to have a capacity of about 200 watt hours per pound weight of the battery, as against about 13 watts per hour capacity per pound weight of battery for a conventional lead battery, has, it is claimed, been developed in South Africa. The battery which is said to require no acid nor alkali, and to have a virtually indefinite life, is said to be based on the use of airtight "salt cells" and semi-permeable membranes. It is claimed that the battery is not only extremely light in weight, but that the system used can be adapted for the manufacture of both small "torch size" batteries and very large batteries capable of storing electricity from electric power stations in "off peak" periods. Provisional patents for the battery have, it is understood, been taken out by the inventor Mr. O. L. Krohl, of Port Elizabeth.

Measuring Minute Quantities of Moisture

It is often necessary in modern industry to measure the amount of moisture present in materials where only very small quantities of moisture are present. The presence of extremely small quantities of moisture in plastics, paper and packaging materials of other kinds, or in foodstuffs may, for example, be an important factor in either their further processing, their behaviour when in use, or their storage. An improved system for measuring accurately amounts of water in such materials when the moisture is present in quantities down to 0.000001 gram has been developed by Edwards High Vacuum, United Kingdom.

The operation of the apparatus depends on the use of a refrigerated ice trap in which the water vapour from the specimen is condensed in the form of ice while the sample of the material being examined is being vacuum pumped. This ice is then isolated from both the specimen, and from the vacuum pump, and the container holding the ice is withdrawn. The ice then re-evaporates and in so doing causes the pressure in the system to rise. The volume of this rise in pressure is directly related to the amount of water produced when the ice evaporates. As a result the change in the volume of the pressure in the apparatus can be measured by a pressure recording device and converted directly into grams of water present in the sample.

"Logarithmic" Herbicide Sprayer

An experimental spraying machine which applies herbicides and insecticides at gradually decreasing concentrations with mathematical precision has been designed by a British crop-protection firm. They call it the logarithmic sprayer. The sprayer's main tank contains only water, which must pass through a subsidiary tank containing concentrated solution before passing out through the nozzles. It is also possible to vary the rate at which concentration of the spray decreases. This means that comparison of the effects of solutions varying gradually from highly concentrated to very dilute can be made over plots of varying length. When the sprayer is used, a continuous graph of the effect of the chemical is produced in the plot itself. The line beyond which the crop is normal and the line this side of which weeds have been controlled are the margins within which—subject, of course, to weather, stage of growth, and the like—concentration of the chemical is assumed to be effective.

Pine Oil from Indian Turpentine

A new process for the production of synthetic pine oil has been developed at the Indian Agricultural Research Institute, New Delhi. Pine oil—a product of wood rosin and turpentine industry—is used in India as a wetting agent for textiles and as an ingredient of laundry detergents. It is also used as a solvent and thinner for protective coatings, as a degressing agent in leather manufacture, as a softener for rubber and as a constituent of disinfectants and in pharmaceuticals. India's requirements of pine oil—approximately 600 tons per annum—are met almost entirely from imports, mainly from hard currency areas. The synthetic substitute of pine oil is obtained now in India by reacting turpentine oil with a mixture of water and is of an inferior quality. The new process, developed at the Indian Agricultural Research Institute, produces pine oil as good in quality as the natural pine oil; some of its properties are even better than the natural product. The process is covered by the Indian Patent No. 48429 and is of particular interest to rosin and turpentine industry and to chemical manufacturers.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY

STEADY PROGRESS IN A YEAR OF INFLATION

AT the One Hundred and Sixteenth Annual General Meeting of the Peninsular and Oriental Steam Navigation Company held on 9th May 1956 in London, Sir William Crawford Currie, G.B.E., Managing Director, presided, and said during the course of his speech, that:

"The result of the operations of the Group for 1955 had been a profit after taxation of £5.6 million, which was some £350,000 larger than for 1954. It must be added, however, that investment allowances had relieved taxation to the extent of over £800,000 and had the investment allowance not operated, the profits would have been some £300,000 less than they were last year.

"Every year since 1949 the dividend had been increased, and since, at 8 per cent. it still represented only some 1.3 per cent. tax-free on the capital employed in the business, they could hardly be reproached on national grounds if it were to be increased again this year." But, as he recalled "they had not made a larger profit this year than last, except by reason of the investment allowance. It had been right to make a transfer to reserve account, the more so now that depreciation was charged strictly on a 20-year life on first cost, which is not in itself sufficient to provide for replacement. Indeed, the retentions as a whole are comparable with what all prudent companies find desirable."

Turning to current conditions as a guide to dividend considerations, Sir William Currie said that costs continued to rise at the rate of 6 per cent. to 7 per cent. per annum—a rise which was extremely difficult to match in revenue. Tramp earnings continued to be remarkably good, and they were indeed fortunate in having a substantial tonnage of tramp shipping in the Group. Those of the Liner Companies operating in the East had some reason to expect better conditions generally than they had met in the past few years. The Australian trade, however—like the trade of the U.K. itself—was what at sea, they would call tender. It was lacking stability, and could fall off seriously under the impact of economic stress. Indeed so much of the Company's business was affected by the current economic stringency, that it would be very unwise not to expect a few jolts in the months ahead. Since the close of the Group's accounts, there had been two increases in the price of oil and an increase had recently been negotiated in the basic rate of wages of their sea-going staffs, which together in a full year for the P. & O. Company alone, quite apart from the rest of the Group, would increase the outgoings by £425,000. The loss to the Group resulting from the recent prolonged strike in Australia was estimated to be over £300,000. In these circumstances, the Directors regretted that they could not justify proposing an increased dividend this year. They hoped this decision would be accepted, as it had been made, as a mark of caution and certainly not as a sign of pessimism.

The phrase "flags of convenience" was much heard in shipping circles today. The flags in question were those of Liberia and Panama, and certain other countries which had no maritime reality, but which offered to shipowners virtual freedom from national taxation and national controls of any kind. When the next slump in shipping occurred, shipping companies, who bore in full their respective national responsibilities, would find it had to compete on price with those who could always undercut them by the whole cost of taxation, social services, and the like. This cloud was no longer the size of a man's hand. Flags of convenience now ranked third to the U.K. and the U.S. amongst tanker ownership in the world, and were becoming increasingly important in the dry cargo trade as well.

Nevertheless, this had become such a very serious matter for all British shipowners and shipowners of other established maritime nations that it could no longer be regarded lightly. The British shipping industry and the Government were already giving close attention to the matter, and the P. & O. Board would watch the position carefully.

During the past year six members of the P. & O. Board, including Sir William Currie, himself had visited one or more of the Company's trading areas and had, of course, included voyages on the Company's ships and visits to agents and their staffs. One General Manager visited Australia, New Zealand, and Ceylon. Another visited West Pakistan, East Pakistan, India and Ceylon and one of the senior members of the West End Passenger Office visited Japan, China, the Straits and India.

These visits, exacting though they were to the individuals concerned, were essential in a big organisation in keeping them in touch with their clients, with local atmospheres and with the thoughts and views of their people on the spot. From the angle of those who bear the heat and burden of the day, he was sure such visits did real good. In a changing Eastern world the pattern of life changed with it and the difficulties which confronted the Company's people abroad did not lessen as the months went by. The Chairman was glad to be able to report to stockholders that the interests of the Company were in good hands. In the various agencies they were encouraging the employment and promotion of the nationals of the country.

In the course of his tour of Hong Kong, Straits, India, Pakistan and Ceylon, the Chairman visited 22 of the Group's vessels and found all the commanders and officers and ship's people in good heart and very welcoming and the ships well cared for.

On behalf of the stockholders, as well as on behalf of the Board and himself, he expressed grateful thanks to all P. & O. people at sea, to all the Company's agents and to all P. & O. people ashore, for what they had done to keep the flag flying. The P. & O. Company's motto had been well chosen—*Quis nos separabit.*

CHANGES EFFECTED IN LIFE CORPORATION BILL

SELECT COMMITTEE'S REPORT

SEVERAL notable changes have been made by the Select Committee to which the Insurance Corporation Bill was referred by Parliament. To one of these changes, namely, the alteration in compensation provisions in the Bill, we made a reference in the last two issues. But there are also a few other changes to which the attention of our readers needs to be invited. These include the provisions relating to foreign business, repatriation of assets of foreign insurers in India, composite insurers, employees of insurance companies and organisational matters.

The Life Insurance Corporation, as is well known, will have the exclusive monopoly of life business in this country. The Select Committee has made one exception. It has provided that the Central Government may permit any person to carry on life insurance business in India, in respect of the "lives of persons ordinarily resident outside India" subject to such restrictions and conditions as the Government may choose to impose on that person.

Foreign insurers working in India have contended that not all their assets in India were built out of the business transacted in this country and that they should be permitted to transfer that portion of their assets that does not relate to their business in this country. The Select Committee provides for consideration of this demand. Thus, section 35 states that any insurer incorporated outside India may, before the appointed day, make an application to the Central Government stating that, among the assets appertaining to the controlled business of the insurer, there are assets which should not be transferred to the Corporation. The Government will then determine the value of the assets of the insurer as on 31st December, 1955 and deduct therefrom the total amount of the liabilities of the insurer appertaining to his controlled business on that date. Any surplus assets will not be transferred to the Corporation.

In the original Bill, no special provision had been made for the composite insurance offices under the control of the Administrators. The Select Committee has now provided that the Administrators should, "as soon as may be practicable after the commencement of this Act," take steps to transfer the assets and liabilities appertaining to the controlled business of the insurer to the Corporation and vest the management of the affairs of the insurer in respect of any other kind of business, in the person entitled thereto.

The penal provisions under the Bill have been tightened further. Thus, the penalty for withholding property or assets from the Corporation has been increased from six months' imprisonment and/or Rs. 1,000 fine to one year's imprisonment and/or Rs. 1,000 fine. The original Bill provided that "where an insurer, whose controlled business has been transferred to and vested in the Corporation under the Act, at any time within two years before 19th January 1956" had entered into certain transactions without consideration or excessive consideration the Corporation would have the right to seek relief by referring the matter to the Tribunal. This period has now been increased to five years. Also, it has been provided that not only the Corporation but "any other person interested" may apply for relief to the Tribunal. The transactions which would be covered by this clause include those in which an insurer has (1) made any payment to any person without consideration, (2) sold or disposed of any property of the insurer without consideration or for an inadequate consideration, (3) acquired any property or rights for an excessive consideration, (4) entered into or carried out any agreement so as to require an excessive consideration, to be paid or given by the insurer, (5) entered into any other transaction of such an onerous nature as to cause a loss to, or impose a liability on, the insurer exceeding any benefit accruing to the insurer or (if a composite insurer) transferred any property from his life department to his general department without consideration or for inadequate consideration.

The Select Committee has provided not only for compensation to chief agents but also for the absorption of some of their staff. The compensation payable to chief agents will consist of 75 per cent. of the overriding commission specified in the contract relating to chief agency with the insurer on the renewal premiums received by the Corporation during a period of ten years from the appointed day in respect of the business procured by the chief agent before the appointed day; such compensation, after it is determined, will be paid annually over the ten-year period. The compensation payable to a special agent will consist of one-eighth of his annual earnings during the period 1st January 1952 to 31st December 1955 in the form of overriding commission in respect of business procured by him through insurance agents. Every whole-time salaried employee of a chief agent will be absorbed by the Corporation, provided (1) he was employed by the chief agent wholly or mainly in connection with the controlled business of the insurer, (2) his salary did not exceed Rs. 500 per month, (3) he had been employed under the chief agent for a continuous period of not less than three years immediately before the appointed day.

A notable feature of the Select Committee's amendment is that it defines the scope of the application of the Insurance Act, 1950, to the Corporation. Thus, it lays down what sections of the Act will apply to the Corporation. The sections which will apply to the Corporation are:

Section 2 (definitions under the Act); section 2B (appointment of controller); section 3 (registration of insurance companies); section 18 (furnishing of reports to controller); section 26 (alteration in statement supplied to the controller under section 3); section 33 (controller's powers of investigation into affairs of an insurer); section 38 (assignment and transfer of policies); section 39 (nomination by policyholders); section 41 (prohibition of rebates); section 45 (policy not to be called in question after two years); section 46 (application of the law in force in the States to policies issued in the States); section 47A (controller's powers to settle claims on policies not exceeding Rs. 2,000); section 50 (notice of options available to the assured in the lapsing of a policy); section 51 (supply of copies of proposals and medical reports to the policyholder); section 52 (prohibition of business on dividing principle); section 110A (delegation of powers and duties of controller); section 110B (signature of documents); section 110C (controller's powers to call for information); section 119 (inspection and supply of copies of documents); section 122 (application of transfer of Property Act to assignment and transfer of policies) and section 123 (repeal of Provident Insurance Societies Act and the previous Insurance Act).

The Central Government is empowered to apply the following sections of the Insurance Act, subject to such conditions and modifications as it may deem necessary:

Section 2D (the Act to apply to insurers so long as there are unsatisfied liabilities); section 10 (maintenance of separate accounts for each class of business); section 11 (preparation of accounts and balance-sheet); section 13 (triennial actuarial valuation of business); section 14 (maintenance of register of policies and register of claims); section 15 (submission of audited account); section 20 (custody and inspection of documents); section 21 (controller's powers to call for information); section 22 (controller's powers to order revaluation); section 23 (evidence of document); section 25 (submission of returns in statutory forms); sections 35 to 37 (amalgamation and transfer of insurance business); section 40 and 40A (prohibition of payment of reward for procuring business and limitation of expenditure on commission); section 43 (register of insurance agents); section 44 (prohibition of cessation of payment of commission); sections 102 to 106 (penalties for contravening different sections of the Act); sections 107 to 110 (institution of proceedings against an insurer); section 111 (service of notices on an insurer); section 113 (acquisition of surrender values by a policy); section 114 (power of Central Government to make rules) and section 116A (Central Government to publish summary of returns of insurers).

A significant omission is that sections 27 and 27A which hitherto governed the investment activities of the insurance companies will no longer govern the Corporation. In other words, the Corporation's investment policy will not be guided by any statutory obligations or restrictions. The Select Committee has, however, provided for the constitution of an investment committee for the purpose of "advising" the Corporation in matters relating to the investment of its funds. Thus the investment committee will consist of not more than seven members "of whom not less than three shall be members of the Corporation and the remaining members shall be persons (whether members of the Corporation or not) who have special knowledge and experience in financial matters, particularly matters relating to investment of funds.

The Corporation, it is further provided, may entrust the general superintendence and direction of its affairs and business to an executive committee, consisting of not more than five of its members; the executive committee "may exercise all powers and do all such acts and things as may be delegated to it by the Corporation." In matters of policy, the Corporation will be guided by the directions of the Government; the Select Committee has expressly provided that such directions should be in writing.

The Corporation, the Select Committee has further provided, may appoint one or more persons to be the managing director or directors of the corporation. Every managing director will be a whole-time officer of the Corporation and will exercise "such powers and perform such duties as may be entrusted or delegated to him by the executive committee or the Corporation." The Corporation may entrust the superintendence and direction of the affairs of a zonal office to a zonal manager. The original Bill provided for four zonal offices, Bombay, Calcutta, Delhi and Madras; the Select Committee has provided for an additional zonal office to be located in Kanpur.

At each zonal office, the Corporation will constitute an employees and agents' relations committee consisting of such number of persons as it thinks fit and every such committee will consist of the representative of the Corporation, the employees and agents. The number of representatives of the employees and agents on the committee will not, however, be less than the number of representatives of the Corporation. This committee will advise the zonal manager on matters which "relate to the welfare of the agents and the employees of the Corporation or which are likely to promote and secure amity and good relations between them and the Corporation." In other words, this provision is intended to facilitate participation of employees in management, albeit with limited function of safeguarding their employment and service conditions.

The provident and superannuation funds established by the insurers will vest in the Corporation which is empowered to constitute one or more trusts "having object as similar to the objects of the existing trusts as in the circumstances may be practicable." In cases where all the employees of an insurer do not become the employees of the Corporation, the moneys and other assets of the trust established by the insurer will be apportioned between the trustees of the fund and the Corporation in the prescribed manner; in the event of any dispute regarding such apportionment, the decision of the Central Government will be final.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION LTD.

THE RT. HON. VISCOUNT KNOLLYS' STATEMENT

MOVE TO UNDERWRITE ATOMIC RISK

THE prospect of the Employers' Liability Assurance Corporation Ltd. underwriting a new and important type of risk, namely, atomic risk, in common with other companies, is indicated by the Rt. Hon. Viscount Knollys, G.C.M.G., M.B.E., D.F.C., Chairman of the Corporation, in his statement to the shareholders accompanying the Directors' report and statement of accounts of the Corporation for the year ended 31st December 1955. He observes that there are bound to be problems in arranging these insurances in different countries, but the companies, he adds, will take all steps to see how they can be solved.

The following is the full text of Viscount Knollys' statement:

"This year the figures are again, for clarity, separated from my statement and appear by themselves under the heading of 'Record of the Year'. I can accordingly limit myself to calling your attention to the main facts and features of our year's trading and to our future prospects.

"The premiums of our group for 1955. at £32,073,826, showed an increase of £2,753,200, and the combined trading profit before tax was £1,807,294, compared with £2,312,049 in 1954. This reduction was more than accounted for by the less favourable underwriting experience. One feature of our profit and loss account is the heavy charge for taxation. This is mainly the effect of a variance between our method of calculating the necessary addition to our provision for unexpired risks on long-term business and that which we have to accept for the purpose of computing our liability to tax.

Fire and Accident

"As many of you are aware, the results of our United States branch have, as a rule, a paramount influence on the total and the difference between our profit in 1954 and that in 1955 was attributable to this branch, since it was that most of our exceptional profit was earned in 1954. For 1955, in the broadest analysis, there was a profit in the United States on the accident classes in total, but a loss on the fire account.

"It is, in fact, solely due to the experience on our United States fire business, including that of our subsidiary company, the Halifax of Massachusetts, that (as you may see from the revenue accounts) the Corporation's total fire account shows only a slender profit and the consolidated fire account shows a loss. This result must, however, be considered in conjunction with the increase in fire premiums. The total has grown—I am talking of the consolidated figures—from £2,590,511 in 1953 to £3,193,872 in 1954 and £3,997,802 in 1955. Our policy has been, and still is, to expand our fire business where and when we can in order to achieve a better proportion between our fire and accident accounts, and it is in the United States that we have a specially favourable opportunity for doing so now. At the rate at which we have recently been adding to our fire business there, the increasing provision required for unexpired risks, which is at present as high as 75 per cent. of the past year's premiums, has created a charge against earnings year by year sufficient in itself to bring about a book loss on the account. I should, I think, make it quite clear now that we intend to continue to expand as vigorously as sound underwriting permits, for properly selected fire business is a reliable source of profit in the long run. Accordingly, this process of increasing the provision will have to go on, with its inevitable effect on the results of our United States fire account for the time being.

"Motor business, of which nearly all our branches and agencies write more than they do of any other class, was good in the United States and in many other overseas territories, but rather disappointing in Canada and Australia. Our home motor account was again unprofitable. Some of our rates here were, as you will recall, increased last December, and so we have started 1956 with better prospects. I should, however, remind you, in connection with the rate increases, that the number of accidents, for all the measures taken for their prevention, has never yet failed to grow roughly in proportion to the number of cars using the roads. As this is so, and as the cost of the claims which we have had to meet has, under an inflationary economy, steadily risen, motor rates have long been due to go up like other prices. In fact, only by controlling expenses, though these also have been subject to inflationary pressure, have we been able to put off the inevitable increase so long.

"Turning to workmen's compensation, I have to report a loss on this class in the United States following a particularly good experience in 1954. It is there that we now obtain most of our premiums in this class of business, seeing that, as I told you last year, in many other territories we are, because of State action, no longer able to write it. The deterioration should be only temporary, for we have a well-selected and well-managed portfolio of business, and I believe that, given adequate rates of premium, we shall show a profit on it in future years as we have in the past.

Miscellaneous Classes

"Miscellaneous classes have again, as so often before, done quite well for us, and I do not think that there is anything of note for me to tell you about the experience of any of them last year. To sum up, the accident account has shown a fair profit on most lines in most territories, in spite of a poor workmen's compensation year.

"I should like to take the opportunity here to pay my tribute to our home branches, which, but for the small loss on the motor account discussed above, have had a particularly satisfactory year. They have produced a good profit and also a further good rate of expansion of business.

"Now let me call your attention to a development in prospect. There is a new and important type of risk which we, in common with other companies, expect to be called upon to underwrite. This is the cover required in connection with what I may call atomic risks of all types. In particular, the public liability insurance required for those nuclear reactors, for which private enterprise is responsible, is likely to test to the full the capacity of the available markets. As you can imagine there are bound to be problems in arranging these insurances in different countries but, whatever they are, the companies will take all steps to see how they can be solved.

Life, Marine and Aviation

"The first two of these classes are in the hands of our associated offices, the Clerical, Medical and General Life Assurance Society and the Merchants Marine Insurance Company, Ltd., while a good part of our interest in aviation insurance consists of our holding of shares in the Aviation and General Insurance Company, Ltd.

"The Clerical, Medical and General's investment policy is quite distinct from that of the Corporation, since it relates to life assurance funds, involving long-term contracts. By investment of an appreciable part of those funds in carefully-selected equities, the Society has secured a satisfactory increase in the yield. Further, a conservative valuation of its assets in the balance-sheet leaves the Society with a substantial margin of market values over balance-sheet values, as a protection against any further depreciation.

Society's Quinquennial Valuation

"The Society has recently announced the result of its quinquennial valuation as at 31st December 1955. The liabilities were valued, as usual, on an exceptionally stringent basis, and a record surplus of £2,612,000 was shown. The Society is to be congratulated on this fine achievement. The divisible surplus is £2,390,000, of which one-tenth comes to the Corporation, as owners of all the shares. This will be brought into our accounts over the next five years. The unappropriated surplus of £222,000 has been carried forward in the Fund.

"The Budget proposals dealing with present arrangements for self-employed persons and changes in the taxation of annuities would remove certain long-standing anomalies, which is all to the good. It will, however, be many years before any benefit can accrue to the Corporation from the increased annuity business that the Society is likely to write as a result of these welcome reforms.

"For the Merchants Marine I am glad to report a further growth in business, both in the marine and in the fire, accident and general accounts. The increase in marine premiums was due entirely to the further development of overseas business, which has always been profitable. The Company has had to bear in mind the continued uncertainty of the market and the consequent need to keep its marine fund strong. This fund now amounts to £654,219, or 148 per cent. of premium income, and should be adequate to meet all calls upon it.

"Conditions in the aviation market have been affected for some time by growing competition, which is now intense enough to make successful underwriting much more difficult than it was in the days of a less crowded market. The Aviation and General, however, again produced an underwriting profit last year.

Investments

"The amount by which the market value of the Corporation's investments at the end of last year exceeded their book values was even higher than the similar appreciation at the end of 1954, which had so far been the record. This was in spite of some depreciation in value of our Government securities, but fortunately our United States and Canadian Government bonds, which amount to nearly 90 per cent. of the total, suffered a much smaller fall than that in British Government stocks.

"There has been no change in the general make-up of our portfolio of investments during 1955, nor during the early months of 1956, except that we have steadily increased our holdings of long-term high grade debentures in the United States.

"What is perhaps of some special interest at present is our policy with regard to ordinary stocks. Though our holdings of these are a comparatively small part of our total investments, there is a large appreciation on them, and particularly on those in the United States and Canada. Some prophets in this country and elsewhere foresee a slump in North America in or before this autumn, and a slump there would have repercussions in this country and over much of the world. It would be impossible for me to discuss here the arguments for and against this forecast. It is my view, however, that the fundamental robustness of both Canada and the United States, and the degree of knowledge and skill used in the management of their national economies, make it reasonable to anticipate that, if there is a recession, it will not be of disastrous proportions.

"It is not in any case our policy to buy and sell ordinary stocks for quick profits. Those that we own at present have been chosen as 'growth stocks' to be kept for a period of years and are accordingly the stocks of well-managed businesses in the leading industries of the countries concerned. The lists are kept constantly under review by ourselves and by our various committees, and, with whatever improvements it may from time to time be decided to make, these investments afford us the means of participating in the growing prosperity which countries with expanding economies have been enjoying and are likely to continue to enjoy.

"As an example of the rate of the development that has taken place since the war, may I give you a few figures which illustrate the degree of progress made by Canada and the United States. They are in the form of the approximate percentage increases of 1955 over 1946:

	Canada. Per cent.	*U.S.A.* Per cent.
Population	27	17
Gross national product ...	121	85
Imports	146	134
Exports	88	59
Industrial production index	55	54

"It appears to me that most of the conditions that have brought about this expansion still exist and may be expected to produce results similar, if not quite as striking, over the next decade.

General

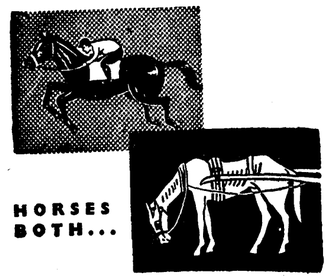
"It is a pleasure for me to be able to tell you that the Hon. Brooke Claxton, D.C.M., Q.C., LL.D., who was Minister of National Health and Welfare in the Canadian Government in 1944 and Minister of National Defence from 1946 to 1954, was appointed a Local Advisory Director of the Corporation in Canada on 1st January of this year. Mr. Claxton is Vice-President-General Manager of the Metropolitan Life Insurance Company of New York, and is in charge of that Company's Canadian business. He is also a Director of the Montreal Trust Company, and his wide experience of legal, financial and public affairs will be very valuable indeed to our Canada branch. There have been no appointments besides this to our various committees abroad since my last statement.

"I have during the past twelve months made two journeys abroad. The latest of them, in March this year, took me to Australia, where you find a prosperous and developing country suffering from problems of inflation and balance of payments deficits similar to our own—and trying to correct them by somewhat the same methods. I am pleased to say that our business there is growing with the impressive growth of the country itself. I returned by way of the U.S.A., where I took the opportunity of discussing our Branch's affairs with Mr. E. A. Larner, our United States General Manager and Attorney. Not long before that I had visited Southern Rhodesia and South Africa, and I was particularly glad to see the satisfactory progress made by our recently formed branch in the Federation of Rhodesia and Nyasaland, where such interesting and promising developments have been taking place.

General Manager's Visits

"Mr. Keysell, our General Manager, was in the United States and Canada last autumn, and Mr. Crocker, our Assistant General Manager, visited our Australia Branch in February this year. Other officials have paid visits during the year to the Middle East and Southern Asia, and you may be interested to know that, as a result of one of them, we are now represented by an agency in the Sheikhdom of Kuwait.

"In conclusion, I would like to express our appreciation of the good service of all our officials, managers, staff and agents, who have been looking after our affairs so well under the guidance of Mr. Keysell. I know how much they put into solving the problems with which they are confronted, and how varied and often difficult these problems are. Let me, as I am sure I may, wish them on your behalf their fair share of good fortune in this and future years."



...But quality puts one above the other. Hair darkeners there are many, but quality puts *Loma* above the others.

Loma

THE UNIVERSALLY ACCLAIMED NATURAL HAIR DARKENER

Sole Agents: M. M. KHAMBHATWALA, AHMEDABAD
Agents: G. NAROTAM & CO., BOMBAY 2

Trustworthy

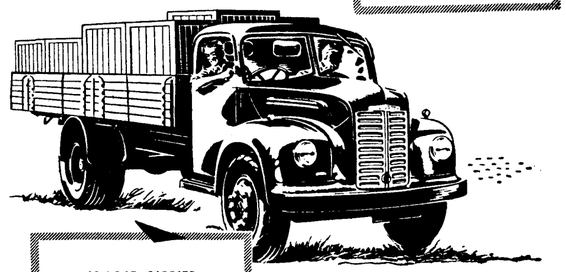
FARGO

DIESELS

TWO STURDY MODELS: 165" wheelbase truck chassis, 5-ton load capacity, designed for goods transport. 190" wheelbase bus chassis, with full forward control, for passenger transport.

AS PASSENGER BUS

In full forward control, the engine is brought right in front, providing larger passenger space, greater driver vision. Economical to run. Ideal weight distribution.



AS LOAD CARRIER

With Fargo truck, you carry more load at lower fuel cost as compared to a petrol truck. Its sturdy frame is built for longer life and more efficient hauling on all kinds of roads.

WORKING OF LOCAL BODIES

HOW THE SYSTEM FUNCTIONS IN BRITAIN

By Rt. Hon'ble Malcolm Macdonald

[A public forum on "The working of local bodies" was organised by the Delhi Municipal Committee recently. It was inaugurated by the Rt. Hon'ble Malcolm Macdonald, High Commissioner for the U.K. in India. Reproduced on this page is his address on the occasion. In this simple address, he effectively shows how the local bodies in Britain function and what contribution they make for the preservation of democracy. It deserves to be read by all those who believe in this way of life.—ED.]

YOU are interested in the problems of local government. As good democrats, you could not be concerned with a more vital matter. No *national* democracy can be sound, unless it is supported by *local* democracy. At least, that is our opinion in Britain. I cannot say whether our experience in that most mature democracy in the West applies in all respects to India, the greatest democracy in the East. But I expect there are certain parallels. However, I should perhaps emphasise that the views which I am going to express flow from our experiences in Britain. It is not for me, but for you, to judge whether they are relevant to your problems in India.

Let me tell you why we attach such tremendous importance to the existence of thousands of popular local authorities in Britain. As I have suggested, national self-government would be incomplete, it would be crippled, without local self-government. It is not enough for a free people to go to the polls and elect a national parliament; they must also go to the polls and elect innumerable local councils. It is true that the supreme legislature makes all the nation's laws, and that those laws determine all the most important, broad conditions of life for the population. But the national laws have to be administered in countless localities throughout the country. The practical conduct of policy in many vital matters is left entirely to the local authorities. So the manner in which the law on them is interpreted depends largely on the character of the local authorities.

Functions

Let me mention some of the important matters on which administration in Britain is left wholly or largely to the local government bodies. They include:

The building of the houses in which most of the people live.

The upkeep of roads, which enable the population to travel and communicate together.

The provision of drainage, sewerage, street cleansing, refuse collection, water-supplies and similar services, which make life clean and comfortable.

The management of police forces, fire brigades and other organisations, which make life orderly and safe.

The running of maternity and child welfare units, clinics, hospitals and other medical services, which make life healthy.

The building and management of schools and training centres, which make life intellectually enlightened.

The organisation of playing fields, public parks, libraries, museums and art galleries, which make life enjoyable and inspiring.

Those are a few of the many vital matters for the administration of which the local authorities in Britain are responsible. If petty autocrats ruled in the localities, they might misinterpret or maladminister the national policies designed by the people's representatives in the central Parliament. Quite unintentionally, local officials might commit that error. Government officials are usually admirably able administrators, but occasionally, in Britain at least, they do not possess the bounteous understanding and sympathy required to adapt national laws to varying local circumstances. With the best will in the world, bureaucrats can make mistakes. If the local inhabitants had no redress against such maladministration by local officials, then an undemocratic situation would arise. The most effective insurance against that is to have popularly elected councils in every area, so that the experience and opinions of the ordinary citizens themselves influence local policy, and administration everywhere is responsive to their will. That is why our supreme Parliament in Britain is supplemented by thousands of subordinate elected local councils. Let me indicate the extent of the system. In England and Wales there are:

1 city corporation.
61 county councils.
28 metropolitan borough councils.
83 county borough councils.
309 non-county borough councils.
571 urban district councils.
476 rural district councils.
7,000 parish councils.
4,100 parish meetings.

In Scotland and Northern Ireland there are additional thousands of their counterparts arranged on a slightly different pattern. Some of these bodies are much larger and busier than the national parliaments in many sovereign States. For example, the London County Council has 150 members, its committees meet every week-day during about three-quarters of the year, and its budget amounts to more than one hundred million pounds. It receives officially all sorts of foreign dignitaries, giving, for instance, Marshal Bulganin and Mr. Khrushchev a vociferous welcome the other evening. Its colleague in the administration of London—the ancient, traditional and wealthy Corporation of the City of London—is famous for its ceremonial and liberality. A few weeks hence, it will pay its highest honours to Mr. Nehru when it confers upon him the coveted Freedom of the City of London.

Status

All these local bodies are, of course, subordinate to Parliament, and exercise their functions within statutes laid down by Parliament. But in their own wide spheres they are autonomous. There are many good reasons why this system of local self-government has been developed in our island to the utmost possible extent. As I have already shown, local administration is the part of government which touches most closely the everyday life of the people. The provision of such elementary needs as decent houses, pure water-supplies, proper sanitation, adequate roads and many other services to safeguard and promote the public well-being depend largely on the local authorities doing their jobs well. If they neglect their duty, the population immediately suffers. So if one believes in democracy at all—in the principle that the people should have a large say in the management of their own affairs—then it is at least as important that they should have control over these smaller, very practical matters which affect, for good or ill, their daily lives as that they should exert an influence on the Government's grander and remoter policies in national and international affairs.

From the constant, active concern of millions of ordinary, humble citizens with these local affairs spring other advantages. For example, their participation in the management of small village or town affairs trains them to understand better the significance of larger county and city affairs, and then of the largest national and international affairs. It is rather analogous to the case of childern who start in the bottom class of a school and learn there the simpler lessons which enable them afterwards to pass through a succession of higher classes, until the best of them graduate to colleges and universities. Practical experience in local politics is the best of all educations for taking a hand in national politics. I think it is true to say that the shrewd wisdom which the 34,000,000 British voters generally display in their dealings with national problems has been learnt by generations of coping through local elections to local councils with local problems.

Contribution to Democracy

That aspect of the situation produces another excellent result. It is not only the ordinary electors who learn to become shrewd judges on public questions from playing their parts in local elections. The men and women who get elected to local bodies learn even more. In their frequent council and committee meetings, they gradually acquire a professional knowledge of public affairs. They become steadily better trained, more practised leaders. The councils are, so to speak, the schools and colleges in which they learn the art of government. Afterwards, many of them stand successfully for membership of the more important central Parliament. Local government is, in fact, an invaluable training ground for national statesmen. Many of our finest leaders in Britain in modern times—famous Prime Ministers and Secretaries of State and other Ministers—began their public careers as comparatively obscure village or town councillors. Lord Attlee, for instance, the Prime Minister who has played such a fruitful part in recent Indian as well as British history, served his apprenticeship as a member of the Stepney Borough Council in the East End of London.

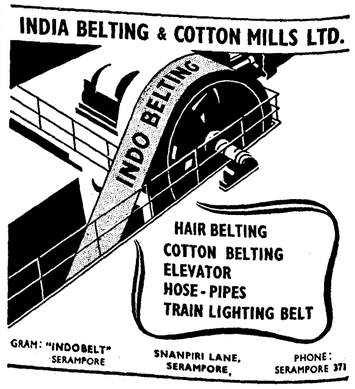
Struggle of Politics

The struggle of politics is usually one in which only the fittest survive. It is right that the men who are to bear the highest responsibilities of leadership should have to pass that test, that they should be compelled to prove themselves in the rough-and-tumble of that contest. In the process, their qualities are developing, are being strengthened and matured—like steel being tempered in fire. For many of them immersion in the conflicts of local politics is an essential part of the process.

A great democracy needs many leaders—leaders in regional affairs and in national affairs, leaders of various parties, leaders in all kinds of government activities. A few men are born leaders, but most leaders have to be made. So, in the national scheme of things, there must be provision for the competent training of hundreds of leaders. In democratic Britain, a nation-wide system of local self-government is one of the principal means of giving them their education.

So that system plays a large part in teaching both the electors and the elected, the followers and the leaders their democratic duties. It is a very ancient system in Britain. The beginnings of local self-government in England can be traced back to Saxon times. Many of the bodies then governing independently were the direct ancestors of our present-day local government councils. The system lies at the very root of British democracy. From those local roots has grown a mighty tree of liberal government which has survived many political storms and will continue to protect the liberties of the British nation in fair weather and foul.

So, long live local government in Britain and in India!



OBJECTIVES OF THE SECOND PLAN

MR. G. D. SOMANI'S ANALYSIS

[In the course of his presidential address at the annual session of the All-India Organisation of Industrial Employers, held on 4th May 1956, at New Delhi, Mr. G. D. Somani made some notable observations on the objectives of the second Five-year Plan. It is to be hoped that the relevant extract from Mr. Somani's address, given below, will be read with interest.—ED.]

THE successful implementation of the second Plan revolves round certain physical and psychological factors. No doubt the objectives of the Plan themselves, namely, increase in national income, rapid industrialisation, expansion of employment, and reduction in inequalities of income and wealth are unexceptionable. There is bound to be difference of opinion in regard to the assessment of our resources, physical and financial, and the means and techniques to be employed for mobilising these resources. This assessment is based as much on experience as on economic *mores*. The Federation of Indian Chambers of Commerce and Industry has recently submitted a memorandum on the Draft Outline of the second Plan with which I am in full agreement. Here are some salient points: in the first Plan investment in the public and private sectors was distributed roughly in the proportion of 50 : 50, while in the second Plan the proportion is 62 : 38. Relatively and absolutely the expenditure to be incurred by the public sector during the second Plan will be greater than during the first. While the proposed volume of investment by the public sector will be much larger, it will remain at the same level in the private sector as was actually attained during the first Plan. I am not against stepping up expenditure in the public sector, but there are on the resources plane a few imbalances—transport, foreign exchange, technical personnel, paucity of funds for the private sector, and inadequate flow of consumer goods which may upset the successful execution of the Plan. Each of these has to be set right and I have no doubt that it is possible to do so. Equally important, if not more important, is the psychological front. It is here that the atmosphere is clouded.

In certain influential quarters private enterprise has become an epithet of reproach. Indeed, this is unfortunate. I appreciate the need for developing the country rapidly in order to realise what was called a year ago "the socialistic pattern of society" and now "the socialist pattern" or "the socialist structure." But the essence of the new society, by whatever name it is called, I submit, is to improve the general standard of living of the people. If that be so, would it not be better if the matter of expansion of the public sector is viewed not as an end but as a means? It is necessary first to see as to whether the end in view, namely, an improvement in the standard of living of the people and widening the horizon of opportunity, cannot be secured through tried and proved means, by fashioning and moulding these means to suit our particular requirements and the general social objective. I wish the new Industrial Policy was formulated in this context. I, for one, would admit that in a country, like India, at the present time the State has a purposive role to play in economic affairs, but this role should not be equated or identified with the expansion of the public sector only. It should be much more purposive in the sense that, within the framework of social objective, constructive individual effort is helped and an atmosphere is created for the flow of new talent.

The controversy between the public and private sectors as to which is superior is like the controversy as to whether man or woman is superior. What John Ruskin said apropos of the 'battle of sexes' is true of the controversy over sectors. He said: "We are foolish, and without excuse foolish, in speaking of the 'superiority' of one sex to the other, as if they could be compared in similar things. Each has what the other has not: each completes the other and is completed by the other: they are in nothing alike and the happiness and perfection of both depends on each asking and receiving from the other what the other only can give." Much of the talk that one hears today about and against the private sector is hardly helpful. In no country in the world today there prevails the system of unfettered individual enterprise. The much discredited capitalism cannot be defined, even as socialism cannot be. In a technical sense, capitalism means the use of the so-called 'roundabout' or 'time-using' methods of production. Thus production beyond the most primitive type is capitalist wherever it obtains in any part of the world with any political system. The fact of the matter is that today every national economy is a mixed economy in varying proportions.

The view that "economy is best served if Government does nothing" has come to be countered by the theory that the "economy is best served if Government does everything." This indeed is a swing of the pendulum and it is a dangerous theory in a nascent democracy like ours. There is a probability of the State spreading its activities even when its intervention in the economic field is limited to basic industries. The Government proposes to arrange to supply to the steel plants in the public sector principal raw materials such as iron ore, coal, limestone and dolomite from Government sources. The mines will be designed and worked by the Government. It is proposed to set up at each of the steel works facilities for the distillation of the by-products to obtain chemicals for a number of industries, such as dyestuffs, paints, medicines, antiseptics, etc. Another offshoot of the steel plants, I understand, will be the setting up of central workshops with adequate capacity for forging, casting, gear cutting, etc. Now all this may be explained in terms of economics of vertical integration. The process does not stop here but may well extend to trading. The point is that, for one reason or another, the State will either deliberately extend its activities or willy-nilly be forced to do so, the result being the same—the denial of opportunities to individuals and the creation of a Leviathan no less formidable because imbued with social purpose. If the Leviathan errs, as it well may, who will correct it? If the salt lose its flavour, wherewith shall it be salted?

The solution lies not in the two extreme alternatives of the State doing nothing or everything but in the endless possible variations of the mixtures of private and public sectors, in governmental assistance and encouragement on the one hand and governmental regulation and control on the other. I submit, that economic philosophy has to be evolved as much in the market place as in Parliament and universities. Academic speculations must be integrated with the practical reflections of business men and *vice versa*. It will be seen that the final purpose of business activity is not, as is generally supposed to be, the accumulation of wealth for its own sake as distinct from its social functions. The motive for enterprise within a given social setting has to be investigated and surprising results will be got. Proponents of time-honoured economic concepts either praise or condemn the working of private enterprise by examining it in terms of economic laws only, like supply and demand, theory of diminishing returns, ideas of money measured self-interest—in short, in terms of factors that are not only strictly economic but also quantitatively calculable. The larger the corporation or the company, the more active it is in matters far removed from profit-making. An inductive study of the growth and behaviour of some 50 large corporations in America, selected for pre-eminence in the various fields, a study carried on over four years, has thrown up some interesting facts. General Motors now make charitable grants of $4.5 million to higher education. Westinghouse Electric makes atomic reactors for the Government at nominal profit. These instances can be multiplied and also drawn from our own country. I have, however, referred to America because of the common notion that in that land of private enterprise there are only possessors and pursuers of wealth for private gain.

The economic philosophy which has to be evolved must not be based on erroneous conceptions and preconceived ideas. Those engaged in industry and trade are of the people and with the people. Their activity if it is not marked with extraordinary self-denial is also not motivated by unmitigated selfishness. The business man in India is no better or worse than any other citizen pursuing a different vocation. May we direct our energies to the formulation and implementation of a coherent economic philosophy matching the urgency of the country's needs instead of in mutual recrimination and bickering? It is in this perspective that I would urge upon all those who are associated with public affairs to formulate their views.

The company law of no other country, to my knowledge, contains so many restrictions and checks in regard to various matters pertaining to company formation and management. I may particularly refer to the new concept of associate and the definitions of the terms 'associate' and 'relative.' Their ramifications and potentialities for creating difficulties and hardships for individuals and companies have not been adequately realised. This is not conducive to the development of small and medium-sized enterprises.

The growth of existing industries and business and the establishment of new ones are becoming difficult for lack of funds, among other things. The high rates of taxation do not leave enough funds in the hands of the individual, and the company profits, whether distributed or not, are also coming to be taxed. Inter-company investments are prohibited. With the nationalisation of insurance, the private sector has lost an important source of funds. The only major sources of finance left for the private sector are the Industrial Finance Corporation, the State Corporations and similar authorities. I feel that if the private sector is to perform the task assigned to it in the second Plan, Government must give immediate consideration to the vital question of permitting it to have adequate funds and further providing it with funds on easy terms. In no case should inadequacy of funds in the hands of the private sector be made an argument for extension of the public sector. It will be a curious situation if the very hurdles created by legislation are advanced as reasons for extension of the public sector, I should like to reiterate that the Government must give urgent consideration to the whole matter of removing impediments to the growth of business of all sizes, big, medium and small. Both on political and economic grounds, I attach great importance to the spread of business and to the provision of opportunities for new entrants coming into it.

It will be appreciated that the steel produced has to be consumed by fabricating industries and eventually by the individual consumer in some form or the other. Therefore, it is essential to ensure along with the enlargement of capacity of the iron and steel industry an expansion of the fabricating capacity and of purchasing power in the hands of the people. A prerequisite of economic development is giving the people improved tools to work with. Economically, there is not too obscure a meaning in the ancient saying that to him that has shall be given and from him who has not shall be taken away even what he has. It means that only if we augment our capital equipment and constantly improve upon its design and performance, would it be possible to accumulate further wealth for the community as a whole.

EMPLOYERS' LIABILITY ASSURANCE CORPN.

BUSINESS EXPANDS

THE results of the Employers' Liability Assurance Corporation Ltd. (General Manager: Mr. C. E. Keysell, M.B.E., London) for the year ended 31st December 1955 discloses that the past year shows a mixed trend. There has been an expansion in the fire, accident and general businesses, while the underwriting profit has suffered a sharp recession, consequent on the substantial rise in claims. The expansion in business referred to is indicated in the rise in premium income (less reinsurances), the fire premiums recording a marked rise from £2.80 million to £3.30 million, an increase of about 18 per cent. over the year, and the accident and general premium rising from £23.22 million to a record level of £24.59 million. Thus, the premium incomes from both the departments have maintained their upward trend noted in the previous several years. The underwriting profit in fire business, which had dwindled from £119,266 to £1,778 in the previous year, has improved to £25,763 in 1955; such profit in the accident and general business has, on the other hand, dropped from £1,579,230 to £937,267.

The setback in the underwriting profit of the accident and general business has brought down the Corporation's aggregate profit for 1955 from £1,581,008 to £963,030, which is, however, slightly better than that of £915,828 earned in 1953. This is supplemented by the Corporation's share of £55,223 (as against £55,815 in 1954) in the life profit of the Clerical, Medical and General Life Assurance Society, an associate office of the Corporation, and the interest earned on investments amounting to £1,120,248, as against £1,004,003 in the previous year. After providing more—£378,516, as against £351,466—for staff pensions and expenses not charged to other accounts, the trading profit available is £1,759,985, which represents a fall of £529,375 from the previous year's record level of £2,289,360. Out of the above profit, the Directors have set aside £1,142,923 (as compared with £1,246,620 in the previous year) for U.K. taxation, leaving a net profit of £617,062, which shows a drop of £425,678 over the year. This decline in profit has, to a large extent, been made good by the larger surplus of £1,167,095 (as compared with £882,422) brought in from 1954, so that the distributable profit amounting to £1,784,157, as compared with £1,925,162 for 1954, is only slightly lower. The Directors have not set aside anything to the general reserve, which had received £324,317 last year. The allocation to the contingencies account has been maintained at £150,000. The interim dividend paid in November 1955 at 1s. 6d. per share (less tax) had taken up £86,250 and the final one to be paid at 3s. 6d. per share (less tax), making 5s. per share (less tax) for the year—same as for 1954—requires £201,250, leaving to be carried forward £1,346,657.

The following comparative table shows the progress in the Corporation's underwriting results during the past three years:

(In 000 £'s sterling)

	For the year ended 31st December			
	1955	1954	1953	1952
FIRE				
Provision for unexpired risks at the beginning of the year ..	1,677	1,395	1,150	969
Premiums (less reinsurances) ..	3,299	2,802	2,443	2,105
Claims paid and outstanding ..	1,348	1,207	1,027	861
Commission paid	716	629	501	455
Expenses	743	611	529	441
Provision for unexpired risks at the end of the year	2,058	1,677	1,395	1,150
Profit	26	2	119	120
ACCIDENT AND GENERAL				
Provision for unexpired risks at the beginning of the year ..	8,390	8,085	7,601	7,027
Premiums (less reinsurances) ..	24,588	23,219	22,403	20,872
Claims paid and outstanding ..	13,994	12,788	13,131	12,523
Commission paid	4,637	4,388	4,139	3,912
Expenses	3,483	3,435	3,252	2,990
Provision for unexpired risks at the end of the year	9,238	8,390	8,085	7,601
Profit	937	1,579	797	283

As in previous years, the results of the Corporation's branch in the U.S. have had a paramount influence on the total and the Chairman, the Rt. Hon. Viscount Knollys, says, in his statement (the full text of which appears elsewhere in this issue) that "the difference between our profit in 1954 and that in 1955 was attributable to this branch, since it was there that most of our exceptional profit was earned in 1954." He adds: "For 1955, in the broadest analysis, there was a profit in the United States on the accident classes in total, but a loss on the fire account." The Corporation's policy has been, and still is, to expand its fire business where and when it can, in order to achieve a better proportion between its fire and accident accounts. The Corporation has found that it is in the U.S. that it has a specially favourable opportunity for doing so now.

FLEXIBLE APPROACH TO ECONOMIC PROBLEMS COMMENDED

SOME REACTIONS TO NEW INDUSTRIAL POLICY

NOW that the Government has announced its industrial policy, people are bound to make frequent references to it in the next few years, in order to support, justify or oppose Government's economic measures. In all such discussions, there may well develop a tendency to look upon the statement as a rigid formula—as a dogma from which it would be sacrilege to depart. This, of course, would be a wrong attitude. The Federation of Indian Chambers of Commerce and Industry, in the course of its statement on the Industrial Policy Resolution of the Government of India, has, therefore, done well to emphasise that the Government must have a "flexible" policy, especially in its approach to the operation of the public and private sectors.

The emphasis on "flexible" approach is certainly well placed. But the danger is that it could be interpreted in a way that is favourable to the public rather than the private sector. Indeed, the Federation has precisely this fear. For it says that, though some flexibility is envisaged in the Resolution, it would appear, in the general context, that it is intended primarily to operate in favour of the public sector, in that the State may enter any industry or trade it chooses. It points out that not only is private enterprise expected to play only a supplementary role in industries listed in schedule 'B' but, even in the category of industries where the development will be undertaken ordinarily through the initiative and enterprise of the private sector, it will be open to the State to start any industry. Thus, it should be clear that no field is safe from Government encroachment. Surely, this is not calculated to inspire confidence in the private sector. From this point of view, the Federation has rightly suggested that the Government would have done well to emphasise more specifically the point that the State would facilitate and encourage the development of industries in the private sector.

Socialism and Democracy

The nicer adjustments, to the need for which the Federation has called attention, would certainly make the Government's industrial policy more acceptable to the private sector. But the point is whether the Federation has accepted the Government's contention that in order to achieve socialism, it is necessary for the State to own and operate industries, that is, for the public sector to expand in the sphere of industry. This is a fundamental issue. The fact is that there is no organisation in the country which is now prepared to question this goal, although there are many people who feel that the extension of the public sector beyond reasonable limits will mean the undermining of democracy in this country. It is time the Federation and other organisations, which are interested as much in economic development as in the preservation of democratic values, examined the concept of socialism, as defined by the Government and the Congress Party, in relation to economic development and individual freedom. This is, of course, a much larger question than industrial policy. But it deserves to be faced and answered unequivocally, so that the country may know that the socialist and democratic concepts are not identical, that there is always some incompatibility between the two. Any failure to make the position clear will mean that the private sector is unsure of the basis of its existence, that its only anxiety is to secure small mercies from a justifiably unwilling Government.

It is true that even without going into this larger question, there is much that can be done, within the limitations imposed by the policy statement, in order to stimulate industrial development. This would imply that the Government keeps economic development clearly in view and does not allow itself to be swayed by preconceived notions of the superiority of one sector over another. This point was forcefully brought out by Mr. N. Kanoria, President of the Indian Chamber of Commerce, Calcutta. Speaking at the recent annual meeting of the Chamber, Mr. Kanoria held that, inasmuch as the financial resources available for the implementation of the schemes of economic development were limited, these resources should be utilised in such a manner that "best result are achieved with minimum expenditure." He added:

"Efficient and economic production should be the guiding principle in deciding as to who should be entrusted with our plans for future development; and no other extraneous considerations should be allowed to influence the decision on this vital issue. . . . It is often suggested that the State should take over the control, ownership and management of this or that existing undertaking now under private management. Such a policy, if implemented, cannot help the achievement of the basic objective of increasing the national wealth and thereby raising the standard of living of the people and of creating fresh opportunities of employment which Government have in view nor will it create additional resources for the future economic development of the country. It will merely result in diversion of the existing resources from one sector of the economy to the other sector. In other words, it will only mean a transfer of ownership of the existing assets without creating fresh ones. At the same time, it will also mean that the talents of the *entrepreneurs* and the rich and varied experience that they have gained during all these years in regard to industrialisation of the country will remain unutilised, while another set of people without any experience and knowledge of industries will have to start afresh and undergo the same process of trial and error which their predecessors had gone through in the past. In a country like India, where business and industrial talent is by no means abundant, it will indeed be unfortunate if the experience and knowledge of our *entrepreneurs* is allowed to go to waste."

Heavy Industries

The Federation is obviously right in welcoming the emphasis on heavy industries. There is no doubt that it is only on such a basis that it is possible to erect an imposing industrial edifice. It is also noteworthy that the Government has now veered round to the view that small-scale and cottage industries should not be encouraged merely for the sake of encouraging them. The policy statement has stressed that, while the Government will continue to assist this class of industries, the "aim of the State policy will be to ensure that the decentralised sector acquires sufficient vitality to be self-supporting and its development is integrated with that of large-scale industry." This is a new and welcome slant in Government's policy. A further welcome feature of the statement is that the Government has *recognised* that "it is essential that the technique of production should be constantly improved and modernised, the pace of transformation being regulated so as to avoid, as far as possible, technological unemployment." This is a significant change in industrial policy, for it denotes that the Government will give up the position some of its spokesmen used to take, namely, that modernisation should not involve any unemployment whatever.

To revert to the Federation's views on industrial policy. Appropriately enough, it advocates the adoption of pragmatic standards to judge the wisdom of the policy. Thus, it avers that the real test is whether the policy stimulates the expansion of the old, and the establishment of new industrial units. It says:

"The success of the economic policy of the Government must be reflected in the number of new enterprises that spring up all over the country. A bigger spread of the industrial sector and of the investing and *entrepreneurial* class is absolutely necessary. Allied to this is the question of organisation which requires serious consideration. The success of enterprises, in any sector, depends on organisation. The point is of central importance. The companies in the hands of private enterprise must be permitted to run in such a way as to produce good results for the community. The Committee would recommend that, in Governmental enterprises, people from private business with the talent, know-how and experience pertaining to the particular kind of business should be associated."

Indeed, that is the real test. In the ultimate analysis, the policy will be judged by the results it produces. The last policy statement, the 1948 statement, was by no means a great success, if it is judged from this standard. In this connection, we may refer to Mr. A. D. Shroff's experience as the Chairman of the Capital Issues Committee for some time. Mr. Shroff, speaking at a recent meeting of the Nilgiris Rotary Club at Ootacamund, said that, though the capital issues used to run into several crores of rupees, it was found upon examination that "not even 25 per cent. of the ventures for which permission was given came into existence." He said that this was due to the fear engendered in the minds of the investing public by the Government's industrial policy. Since then, no new industrial venture of any great magnitude had been embarked upon in India. Subsequently, the Union Government, he said, brought in new legislation, called the Industrial Control Act, which had resulted in the partial disappearance of private enterprise from the country, because of the difficult conditions which had to be satisfied before licences for floating companies were issued and the cumbersome and expensive procedure involved therein. As a result of these stringent conditions small and medium industries were frustrated after wasting thousands of rupees in their efforts to obtain licences.

Compensation

Mr. Shroff said that another development which caused grave concern among prospective industrialists was the amendment to the Constitution regarding the acquisition of private property by the Government. As a result of this amendment, the principles of compensation, as is well known, do not constitute a question which can be raised in a court of law. Mr. Shroff gave one instance of the way in which the Government used its bargaining powers to beat down the owners of an industry taken over by it. He said that the compensation which was paid to private airline companies acquired by the Government was just short of expropriation. It would appear that the Tata Airlines had bought Dakotas at a cost of Rs. 3,20,000 each while the Government paid them compensation at the rate of Rs. 90,000 each. When the Company protested against this arbitrary treatment and the low compensation, Mr. Deshmukh, the Finance Minister, said that it was a transaction between buyer and seller, and as Government happened to be the only buyer, the Company would have to accept the highest offer which the buyer had made. This sort of logic, Mr. Shroff said, really caused a great deal of dissatisfaction among industrialists who had done some service in the economic development of the country.

Characterising the latest industrial policy statement as positively unfair, Mr. Shroff took serious objection to the State's encroachment into the sphere of trade also by establishing a State-trading Corporation. Proceeding, he said that it was true that Parliament had accepted the policy of socialisation and that all future policies relating to the economic development of the country would be implemented on these lines. Those who were adversely affected by these policies had become mute and helpless, as they felt that no useful purpose would be served by further protests against these policies. But it did not imply that these policies had received the implicit consent of the people, who had no means of knowing that they were detrimental to the ultimate interests of the country. They had been told that the extension of the public sector was due to the inability of the private sector to fulfil its obligations towards the industrial development of the country by producing the basic and essential goods. This, according to Mr. Shroff, was a false allegation against the private sector. If the private sector, he said, had no initiative to start new enterprises, it was due not only to the industrial policy announced in 1948, but also to the fact that in recent years the fiscal policy had been so devised that the private sector had been "straight-jacketed" into a position which had left them no alternative but to keep quiet.

Specially written for India

The Essence of Management

by Mary Cushing Niles

The first management book written expressly for India provides a comprehensive interpretation of the best Western management thinking and practice for evaluation and use in India's industrial expansion. Mrs. Niles weaves together the threads of efficiency, democracy, and human relations, uniting scientific management ideas with new findings from social science research.

Rising managers already in responsible positions are the first audience for this stimulating book. *Top managers, teachers of management, students of management* and *capable persons already at work* will benefit from careful study of this book and Mrs. Niles's use of much literature hitherto available only in journals and in reports of management conferences.

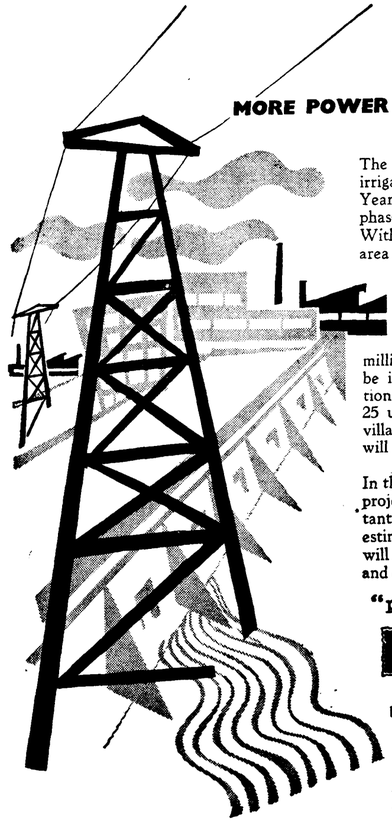
MORE POWER TO OUR VILLAGES



The achievements in power and irrigation under the First Five Year Plan are actually the first phase of a long-term expansion. Within 15 years our total irrigated area will be doubled, production of electricity will increase from 2.3 million KW to 15 million KW !

During the Second Plan 21 million acres of fallow land will be irrigated, per capita consumption of electricity will rise from 25 units to 50. Over 80% of all villages of over 5,000 population will be electrified.

In these vast power and irrigation projects paper will play an important part. Wherever plans and estimates have to be made, paper will supply the means of record and communication.

INDO-BURMA PETROLEUM'S PROFIT SLIGHTLY BETTER

FINANCIAL POSITION SOUND

THE proposed final dividend of Rs. 2 per share, or 20 per cent., on the ordinary capital of the Indo-Burma Petroleum Company, Ltd. (Managing Agents: Messrs. Steel Brothers & Co., Ltd., Calcutta), for the year ended 31st December 1955, will bring the total dividend for the year to 30 per cent., the same as that paid for 1954, to which level it had been raised in three successive years from 10 per cent. paid for 1951. With the cash bonus of 10 per cent. paid in September 1955 out of the reserves, however, the total distribution for the year comes to 40 per cent., that is, four times that paid for 1951.

The increase in distribution for 1955 is, however, much more than warranted by the rise in the earnings of the Company for the year, the gross profit having gone up by only Rs. 4.36 lakhs to Rs. 60.61 lakhs. It is probably due to the fact that the Company falls within the purview of Section 23A of the Indian Income-tax Act.

The increase in gross profit noted above has not fully made good the decline noted in the previous year from Rs. 61.68 lakhs to Rs. 56.25 lakhs. Nevertheless, the profit for 1955 is the second highest earned since 1949. The net profit, at Rs. 24.14 lakhs, shows no notable increase from that (Rs. 24.10 lakhs) for 1954. The Directors have written back a sum of Rs. 5.62 lakhs, being the excess provision made in previous years, now no longer required. They have further supplemented the net profit by transferring Rs. 10 lakhs from the general reserve (the sum utilised to pay cash bonus in September last), Rs. 6.95 lakhs from provision for taxation (which they consider to be in excess of anticipated tax liabilities for earlier years, in respect of which assessments have not yet been finalised) and Rs. 5.98 lakhs from Pakistan Exchange reserve. They have also utilised a sum of Rs. 6.94 lakhs to write off the loss on account of Pakistan exchange and Rs. 1.02 lakhs towards adjustment in respect of previous years. The distribution on ordinary shares absorbs Rs. 40 lakhs, which represents 66⅔ per cent. of the gross profit earned for the year.

The progress of the Company during the past three years can be clearly judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds and commission earned	661.57	664.49	638.52	607.05
Other income	27.93	10.48	10.38	19.90
Expenses	628.89	618.73	587.23	571.00
Gross profit	60.61	56.25	61.68	49.47
Managing Agents' remuneration	2.75	2.57	2.92	3.36
Depreciation	4.82	5.58	4.86	4.35
Taxation	28.90	24.00	44.00	27.16
Net profit	24.14	24.10	9.90	14.60
Adjustments relating to previous years written back	5.62	13.02	13.67	6.66
Other income	..	..	..	8.01
Transfer from reserves and provisions	22.93	..	..	..
To adjustment relating to previous years	1.02	..	..	..
„ reserves	2.00	..	4.08	9.50
„ Pakistan exchange loss written off	6.94	..	..	..
„ bonus to staff	..	..	..	0.25
Dividends—				
7 per cent. preference	2.58	2.58	2.58	2.58
Ordinary	40.00 (D. 30% +B. 10%)	30.00 (D. 30%)	20.00 (D. 20%)	15.00 (D. 15%)
Carry forward	0.77	0.64	0.93	4.03

It will be noted that sale proceeds and commission have recorded a small decline, but this has been more than made good by the rise of Rs. 17.45 lakhs in other income, of which interest and income from investments account for Rs. 14 lakhs. On the expenditure side, cost and value of products handled account for a rise of Rs. 6.48 lakhs and wages and salaries for Rs. 5.46 lakhs.

The authorised and paid-up capital of the Company is unchanged at Rs. 150 lakhs, made up of 1,000,000 ordinary shares of Rs. 10 each and 50,000 7 per cent. taxable cumulative preference shares of Rs. 100 each. It may, however, be noted that the ordinary capital was originally made up of 250,000 shares of Rs. 40 each, but each of these shares was sub-divided in September last into four shares of Rs. 10 each. Reserves and surplus aggregate Rs. 142.89 lakhs. The provision for taxation stands at Rs. 27.77 lakhs and current liabilities amount to Rs. 155.21 lakhs. The gross block of the value of Rs. 68.47 lakhs, including an addition of Rs. 14.30 lakhs during the year, has been written down to a book value of Rs. 22.43 lakhs. Trade investments aggregate Rs. 76.20 lakhs and current assets Rs. 377.23 lakhs. Of these current assets, investments in Government securities at cost (less depreciation reserve) account for Rs. 124.49 lakhs and cash balance for Rs. 139.01 lakhs. Thus, the liquid assets alone cover the current liabilities and provision for taxation by a large margin.

The Directors report that, during 1955, the opportunity arose of acquiring a substantial interest in Messrs. Balmer Lawrie & Co., Ltd. "Negotiations for the acquisition which began during the year," they add, "have since been satisfactorily concluded with the purchase of 20,000 equity shares." The Company's suit against the Union Government of Burma in respect of the claim for war damage has made little progress during the year.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 43 *cum-div.* (final dividend: Rs. 2 per share). On an *ex-div.* basis, the yield on the shares works out to 9.8 per cent. per annum.

BOMBAY DYEING AND MANUFACTURING

Excellent results are disclosed by the audited accounts of the Bombay Dyeing and Manufacturing Company, Ltd. (Agents: Messrs. Nowrosjee Wadia and Sons, Ltd., Bombay) for the year ended 31st December 1955, which are fully in consonance with the general performance of cotton mills during the past year. The gross profit, which had gone down a little from Rs. 82.43 lakhs to Rs. 74.04 lakhs in 1954 has jumped up to a high of Rs. 116.70 lakhs, the highest level to be seen since 1945. The net profit has gone up from Rs. 33.17 lakhs to Rs. 48.02 lakhs, the increase being very much less marked than that in gross profit, due to larger provisions for Agents' remuneration, depreciation and taxation. Another cause for the relatively smaller rise in net profit is that the previous year's net profit has been "adjusted" by the reduction in the provision for depreciation originally provided for 1954 consequent on the grant of development rebate.

Out of the net profit of Rs. 48.02 lakhs, which incidentally is the highest since 1951, the Directors have transferred a sum of Rs. 14.88 lakhs to the rehabilitation and development fund, being the development rebate admissible under the Indian Income-tax Act, the corresponding allocation of the previous year being Rs. 10.36 lakhs. No addition to any other reserves has been made as in the previous year. The distribution to shareholders has been raised from 8 per cent. to 10 per cent. by paying a cash bonus of 2 per cent. Last year, it will be recalled, the distribution was reduced from 9 per cent., made up of a dividend of 8 per cent. and a bonus of one per cent., to 8 per cent. by cutting off the bonus part. This reduction has now been more than made good not by raising the dividend part, but by restoring the bonus payment at a higher level. It will be noted in this connection that, if the cash bonus paid for 1953 and 1955 is excluded, the dividend has been maintained for the fifth year in succession on the present capital after it had been doubled in December 1950 by the capitalisation of reserves. Thus, whenever the Company's profit warrants a higher distribution, the Directors have been doing so by adding a cash bonus to the dividend and not by varying the dividend itself. This conservative dividend policy, in fact, figured prominently at the recent annual general meeting of the Company, when some of the shareholders suggested the merger of the cash bonus of Rs. 5 per share declared for the year under review with the dividend. Admitting that the management had been following a conservative policy in the matter of dividend, the Chairman, Mr. Neville Wadia, said that if the cash bonus was merged with the dividend, the Company would be expected to maintain the same. But this might not be possible, because there would be more allocations to reserves in view of initial depreciation on new machinery and other provisions relating to development rebate.

The aforesaid policy of the Company would also appear to be justified in the context of the fluctuating fortunes of the Company, as will be seen from the following comparative table, which presents the salient features of the Company's working during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	723.34	726.42	664.61	670.39

„ dividend	25.10 (D. 8% +B.2%)	20.08 (D. 8%)	22.50 (D. 8% +B.1%)	20.08 (D. 8%)
Carry forward	0.73	0.52	2.00	1.81

* Not actual but only approximate.

A notable feature of the year's working is the substantial fall in expenses. This is mainly accounted for by the cost of raw materials, stores, etc., purchased, which show a decline of Rs. 113.29 lakhs. Wages and salaries are up by Rs. 9.82 lakhs.

The Company's capital at Rs. 250.98 lakhs is supplemented by reserves and surplus aggregating Rs. 300.46 lakhs, of which general reserve accounts for Rs. 50.01 lakhs, rehabilitation and development reserve for Rs. 163.37 lakhs and other reserves for Rs. 86.07 lakhs. The rehabilitation and development reserve has been considerably strengthened over the year by Rs. 65.41 lakhs, thanks to the development rebate of Rs. 14.88 lakhs for 1955 and of Rs. 10.36 lakhs in respect of 1954 and the excess of depreciation provision made so far over that actually allowed by the income-tax authorities, amounting to Rs. 40.17 lakhs, transferred from the depreciation fund. The provision for taxation amounts to Rs. 29.94 lakhs. The current liabilities aggregate Rs. 168.54 lakhs There has been an addition of Rs. 69.16 lakhs to the gross block during the year, bringing the value of block account to Rs. 493.20 lakhs, as against which the depreciation fund built up amounts to Rs. 330.57 lakhs. The depreciation fund represents a decline of Rs. 23.90 lakhs over the year, even after the provision of Rs. 26.87 lakhs from the year's profit, on account of the transfer to the rehabilitation and development fund, as stated above. The current assets amount to Rs. 587.01 lakhs, of which cash balances alone, aggregating Rs. 289.93 lakhs, exceed the current liabilities and provision for taxation by as much as Rs. 91.45 lakhs.

A descriptive account of the progress made in the Company's modernisation and expansion programme so far and the further proposals on hand is given in the Directors' report, extracts from which were published in our last issue.

The large reserves of the Company would appear to have caught the attention of the shareholders, some of whom suggested, at their recent annual meeting, the capitalisation of a part of them. Mr. Neville Wadia did not favour the proposal, in view of the heavy taxation on bonus issue. He added that, on the basis of one bonus share for every existing share, the taxation on the bonus issue would amount to about Rs. 31 lakhs. Instead of paying such a huge sum to the Government, he preferred to keep the sum and utilise the same for expansion and modernisation.

The Rs. 250 fully paid-up shares of the Company are being currently quoted at Rs. 661-14 *ex-div.*, at which rate and on the basis of the distribution for 1955, the yield works out to 3.8 per cent. per annum, free of income-tax. This low yield reflects the popularity of the shares on the Stock Exchange and the investors' confidence in the future for the Company.

SHREE NIWAS COTTON MILLS

A rise of Rs. 9.85 lakhs to Rs. 40.68 lakhs in gross profit is disclosed by the audited accounts of the Shree Niwas Cotton Mills Ltd. (Managing Agents: The Marwar Textile (Agency) Ltd., Bombay) for the year ended 31st December 1955. This increase is in refreshing contrast to the small setback of Rs. 1.94 lakhs suffered in the previous year and brings the year's profit to the highest level in the past four years, even after providing as much as Rs. 11.40 lakhs towards payment of bonus to workers for 1955 in terms of the agreement between the Millowners' Association, Bombay, and the Rashtriya Mill Mazdoor Sangh. The net profit, at Rs. 16.19 lakhs, is higher by only Rs. 2.38 lakhs, consequent on the slight increase in Managing Agents' remuneration from Rs. 3.19 lakhs to Rs. 4.25 lakhs and the doubling of the provision for taxation from Rs. 7 lakhs to Rs. 14 lakhs.

No allocation to the reserves has been made, while a sum of Rs. 2 lakhs had been set aside in each of the previous two years. One possible explanation for this is that the Company has had to make, out of the above profit, an additional provision of Rs. 4.22 lakhs and Rs. 2.28 lakhs for the years 1953 and 1954, respectively, towards payment of bonus to workers. The dividend on ordinary shares has been cut from 14 per cent. to 12 per cent., but it is on the increased capital of Rs. 80 lakhs raised during the year by the capitalisation of Rs. 20 lakhs from the reserve fund, so that it represents a distribution of 16 per cent. on the old capital.

The following comparative table gives an idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	404.41	369.16	338.12	362.81
Stocks	92.37	106.90	123.56	119.04
Other income	3.94	6.58	2.12	0.49
Expenses*	367.67	343.91	307.47	340.07

Ordinary	9.60	8.40	8.40	7.50
	(12%)	(14%)	(14%)	(12½%)
Carry forward	1.47	1.54	2.70	3.44

* Only approximate.

As will be seen from the above table, there has been a sharp rise of Rs. 23.76 lakhs in expenses, mainly due to the increase of Rs. 17.35 lakhs in the cost of cotton purchased and of Rs. 9.77 lakhs in wages and salaries.

The Company's programme of modernisation and replacement of plant and machinery is being taken up vigorously within the resources available to the Company. An idea of the programme gone through so far and on hand was given by the Chairman of the Company, Mr. G. D. Somani, M.P., in his address to the shareholders at the annual general meeting held last week. The relevant extract from his speech on the subject is given below:

"Orders for 37 ring frames were placed during the period under review, out of which 11 frames were for replacement purposes which have already been erected and are working. The remaining 26 frames totalling 10,204 spindles for which your mills had secured permission for extension are under erection and these additional spindles are expected to be put into commission by June this year. The addition of these spindles will increase our spinning capacity from 66,836 spindles to 77,120 spindles. Further orders are under negotiation for replacement of 18 ring frames and further addition of one preparation of combers to divert the mills on more fine and superfine counts.

"Your Company started working third shift in the weaving department early in April last year and by the close of the year the number of looms worked were 800. It is expected that with the addition of new spindleage, which I have referred to above, the Company will be able to work the balance 840 looms in third shift which means complete working of third-shift of the whole mills. An organdie plant, a new six-colour printing plant and some other machineries in the processing department of the mills were also added during the year. You will thus please realise that your Directors are fully alive to the needs of keeping your mills adequately modernised and equipped to enable it to produce best possible varieties at the lowest possible cost."

The Company's paid-up capital of Rs. 84.80 lakhs, of which 4 per cent. tax-free preference shares account for Rs. 4.80 lakhs and ordinary shares for Rs. 80 lakhs, is supplemented by reserves and surplus aggregating Rs. 49.17 lakhs. The provision for taxation stands at Rs. 14.57 lakhs. The current liabilities aggregate Rs. 78.07 lakhs. There has been an addition of Rs. 8.48 lakhs to the gross block bringing the total value to Rs. 95.16 lakhs. This has been written down to a book value of Rs. 39.88 lakhs. The current assets amount to Rs. 187.24 lakhs, and exceed the current liabilities and provision for taxation by a margin of Rs. 94.60 lakhs.

As regards the outlook for the current year, the Chairman told the shareholders that it was a little too early to express any definite views, but the steep rise in cotton prices, he added, might, to a certain extent, adversely affect the working results.

The Rs. 100 fully paid-up shares are being currently quoted at Rs. 215 *ex-div.*, at which rate and on the basis of the dividend for 1955, the yield works out to 5.6 per cent. per annum, free of income-tax.

Nationalised Transport In U.K.

"I HAVE had a good deal to say about the difficulties under which old-established private transport, represented by British shipping, has to operate. I suggest that when considering them, we should do well to cast our minds to the state of nationalised transport, represented by the railways and the road system of this country. Primarily because those who run them have been dependent on governmental control of their capital requirements, our railways, and for the same reason our roads, have fallen far behind the country's needs. They are now quite inadequate to the purposes they ought to fulfil because they have been starved of capital expenditure during a decade in which private industry has made quite extraordinary efforts to produce the money to re-equip and modernise itself."

SIR WILLIAM CURRIE,
P. & O. Steam Navigation Co.

Price of Aluminum Ingot

"The price of aluminium ingot, which in this country is governed by the North American price, remained at £156 a ton throughout 1954, was increased to £163 a ton on 1st January 1955, and to £171 a ton on 1st July 1955. At the beginning of the current year the price was again increased to £179 a ton, and further to £189 a ton on 1st April. Whilst the total increase in the price of ingot metal has been substantial, it is of interest to note that it has not been out of line with increases in the prices of other non-ferrous metals. These price changes of course necessitated adjustments in the prices of semi-fabricated products. In general, the price of aluminium ruling in this market has been competitive with that of other countries, and world demand for the metal has continued to be buoyant."

LORD PORTAL OF HUNGERFORD,
British Aluminium Co., Ltd.

Hope for Natural Rubber

"There is, of course, an economic limit to the rate at which replacement of plantations can take place, and, eager as we may be to get rid of the remaining promiscuous stock, nearly another decade may pass before that is accomplished. Such a long drawnout procedure may be trying to one's patience, but in its inevitable gradualness it does ensure a stability that would otherwise be lacking if the supplies of natural rubber could be so rapidly increased as to distort the relationship of supply to demand. It is true that man's inventiveness may in this instance outstrip the slow processes of nature and that synthetic supplies are capable of a more rapid increase, but there are other reasons operating to put a check on the rate of expansion. Moreover, impressive as may be the technical achievements in the realm of synthetics there is a continuing need for natural rubber in all its unique qualities, and at competitive prices an ever-expanding demand. Our past history with its story, so briefly told, of difficulties surmounted, of serious setback and marked recovery, of change, adaptability and development, together with our record of present achievement should combine to give solid reason for a confident hope for the future."

SIR JOHN HAY,
Malacca Rubber Plantations Ltd.

World Tanker Position

"The rate of increase of world tanker tonnage slackened last year as compared with 1953 and 1954, but demand to move oil was somewhat greater than had been anticipated. Accordingly, the world tanker position, which had been in surplus for some time, came into close balance during the autumn of 1955. As a natural consequence, short term tanker freights sharply increased and a large majority of the ships laid up are being brought back into service. This general trend of world supply and demand of ocean-going tanker tonnage has been recognised by shipowners, and it is therefore not surprising that 9 million deadweight tons of new ships were ordered during 1955; further orders are still being announced, and the world order book now stands at some 16 million deadweight tons for delivery by 1960; while tanker building programmes of such magnitude may result in a surplus position from time to time, these figures nonetheless emphasise the healthy view that the shipping industry has taken about the long-term growth in world oil demand."

LORD GODBER,
"Shell" Transport and Trading Co., Ltd.

Savings—Keynote of U.K.'s Need

"The recent White Paper on the economic implications of full employment rightly lays emphasis on the need for restraint by all parties in making claims for larger money incomes if we are to maintain our competitive power in the export markets of the world. This is obviously important as far as it goes, but restraint in the use of spending power is as important as the acquisition of it and this applies equally to the Government as to businesses and individuals. Saving is the keynote of our present need. As the annual Economic Survey so clearly shows, investment in stock building and construction work has outstripped the volume of saving. This reflects itself in the adverse balance of payments which can be corrected only by a reduction of imports or an increase in exports or a mixture of both."

GEOFFREY KITCHEN,
Pearl Assurance Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

BHARAT LINE LTD. Annual General Meeting, Bhavnagar, 21st May 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 24th April to 23rd May 1956, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 22nd May 1956. Dividend: Rs. 2 per share (final). Transfer books remain closed from 14th to 22nd May 1956, both days inclusive.

PEERMADE TEA CO., LTD. Annual General Meeting, Pathirappally, 24th May 1956. Dividend: Rs. 2-4 per share (final). Transfer books remain closed from 11th to 27th May 1956, both days inclusive.

INDUSTRIAL GASES LTD. Annual General Meeting, Calcutta, 24th May 1956. Transfer books remain closed from 16th to 24th May 1956, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 29th May 1956. Dividend: Rs. 2 per share (final). Transfer books remain closed from 14th to 28th May 1956, both days inclusive.

GODFREY PHILLIPS, INDIA, LTD. Annual General Meeting, Bombay, 30th May 1956. Dividend: Rs. 2 per share. Transfer books will remain closed from 24th to 30th May 1956, both days inclusive.

CHURULIA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 30th May 1956. Dividend: 6 pies per share. Transfer books remain closed from 10th to 30th May, 1956, both days inclusive.

EASTERN INVESTMENTS LTD. Annual General Meeting, Calcutta, 30th May 1956. Dividend: Rs. 9 per share. Transfer books remain closed from 16th to 30th May 1956, both days inclusive.

SENDRA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 30th May 1956. Dividend: As. 2 per share (2½ per cent. per annum). Transfer books remain closed from 10th to 30th May 1956, both days inclusive.

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 4th June 1956. Transfer books remain closed from 18th May to 4th June 1956, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Pathirappally, 4th June 1956. Dividend: As. 12 per share (final). Transfer books remain closed from 18th May to 5th June 1956, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 15th June 1956. Dividend: Rs. 6 per share. Transfer books remain closed from 15th May to 9th June 1956, both days inclusive.

WEST COAST ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of As. 8 per share, for the half-year ended 30th September 1955. Transfer books remain closed from 16th to 22nd May 1956, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Dividend of Re. 1-8 per share for the half-year ended 31st December 1955.

PALANI ANDAVAR MILL LTD. Dividend of Rs. 12 per 'A' ordinary share and Rs. 18 per 'B' ordinary share, for the year ended 31st December 1955.

COWCOODY ESTATES LTD. Interim dividend of As. 8 per ordinary share, for the year ending 30th June 1956. Transfer books remain closed from 15th to 21st May 1956, both days inclusive.

LARSEN AND TOUBRO LTD. Dividend of Re. 1 per ordinary share for the year ended 31st March 1956, payable on 27th June 1956. Transfer books will remain closed from 26th May to 20th June 1956, both days inclusive.

DEVKARAN NANJEE INVESTMENT CO., LTD. Dividend of As. 13 per share for the year ended 31st March 1956, payable on 27th June 1956. Transfer books will remain closed from 12th to 26th June 1956, both days inclusive.

COMPANY REGISTRATIONS

EAST ANGLIA PLASTICS (INDIA) LTD. (First Director: Mr. B. Dasgupta.) Business: Manufacturers and dealers in plastic moulding powders and compounds, etc. Authorised capital: Rs. 1,00,00,000. Public company. Address: 6A, Surendra Nath Banerjee Road, Calcutta-13.

M. BHATTACHARYYA & CO., PRIVATE LTD. (First Director: Mr. H. C. Bhattacharyya.) Business: Homœopathic chemists and pharmacists, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 73, Netaji Subhas Road, Calcutta-1.

RESULTS OF TWO HEILGERS GROUP COAL COMPANIES

TROPICAL PLANTATIONS CUT DIVIDEND

Churulia Coal Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

In conformity with the provisions of the Companies Act, 1956, there will be no half-yearly audited accounts in future. The directors shall however cause to be drawn up unaudited half-yearly draft accounts. It is the intention of the directors to declare interim dividends when in their opinion the state of the Company's affairs warrant this action. From now on therefore the Company's accounts will be closed and audited as at the 31st December each year and the first annual closing will be for the 12-month period ending 31st December 1956.

Karanpura Mining Syndicate.—During the half-year ended 31st December 1955, 75,768 (66,571) tons of coal were raised and 75,993 (65,780) tons were despatched. The secretaries report that raisings from the Syndicate's Quarries could have been larger but for the fact that transport was in short supply.

The profit and loss account after including Rs. 12,201 (Rs. 25,618) brought forward from last half-year shows an available balance of Rs. 6,817 (Rs. 18,342) which the directors propose to dispose of as follows:—

In paying a dividend of 6 (6) pies per share without any deduction for income-tax paid by the Company Rs. 4,688 (Rs. 4,688) and in carrying forward Rs. 2,129 (Rs. 13,654).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Investments	7,30,051
Reserves ...	1,43,676	Debts and advances	23,594
Liabilities ...	10,325	Cash ...	2,485
Profit and loss account ...	2,129		
Rs.	7,56,130	Rs.	7,56,130

Sendra Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

In conformity with the provisions of the Companies Act, 1956, there will be no half-yearly audited accounts in future. The directors shall however cause to be drawn up unaudited half-yearly draft accounts. It is the intention of the directors to declare interim dividends when in their opinion the state of the Company's affairs warrant this action. From now on, therefore, the Company's accounts will be closed and audited as at the 31st December each year and the first annual closing will be for the 12-month period ending 31st December 1956.

Colliery.—The directors regret to have to report that the deed of sale has still to be completed although the buyers have paid the sums promised on completion of documents and the first of the five annual instalments towards the purchase price. It is hoped to finalise this matter shortly.

The profit and loss account, after providing Rs. 1,517 (Rs. 15,008) for taxation, transferring Rs. 15,000 (*nil*) from general reserve, and including the sum of Rs. 6,601 (debit Rs. 1,22,722) brought forward from last half-year, shows an available balance of Rs. 17,503 (Rs. 48,443), which the directors propose to dispose of as follows:—

In paying a dividend on the ordinary shares at the rate of 2½ (2½) per cent. per annum without any deduction for income-tax paid by the Company Rs. 10,000 (Rs. 10,000) and in carrying forward Rs. 7,503 (Rs. 38,443).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	23,624
Reserves ...	5,31,289	Investments	6,22,497
Provision for taxation ...	15,000	Debts and advances ...	9,58,800
Liabilities ...	2,61,389	Cash ...	10,260
Profit and loss account ...	7,503		
Rs.	16,15,181	Rs.	16,15,181

Tropical Plantations, Ltd.

The directors of the above Company (Managing Director: Mr. P. T. Thomas, Kottayam) submit the audited accounts of the Company for the year ended 31st December 1955.

Crops and Prices—Tea.—The tea crop harvested during the year amounts to 4,26,829 (3,77,683) lbs. (858 (796) lbs. per acre). The production cost is 120.893 (107.085) cents (Re. 1-3-4.115 p.) per lb. and the average price realised is 163.970 (237.284) cents (Re. 1-10-2.820 p.) per lb.

Rubber.—The acreage statement shows that 65 acres of old mature rubber area has been replanted, which has caused considerable reduction in the total output of rubber. Besides this, the continuous strikes and particularly the "go-slow" policy of the labour throughout the season ended in serious shortfall in crop. The total crop harvested during the year is 6,83,385 (7,44,938) lbs. (390 (425) lbs. per acre) and the production cost is 72.638 (60.413) cents (Re. 0-11-7.465 p.) per lb. The average price realised is 141.086 (126.093) cents (Re. 1-6-6.886 pies) per lb.

After providing Rs. 1,07,147 (Rs. 3,14,021) for taxation and after charging depreciation, bonus to staff and remuneration to managing director, the net profit for the year amounts to Rs. 3,45,650 (Rs. 4,90,238). This, together with Rs. 2,276 (Rs. 2,038) brought forward from the previous year aggregates to Rs. 3,47,927 (Rs. 4,92,276). The directors recommend payment of a dividend of 16 (20) per cent. (Rs. 4 (Rs. 5) per share)—free of income-tax and agricultural-tax—absorbing Rs. 3,20,000 (Rs. 4,00,000) and to carry forward the balance of Rs. 27,927 (Rs. 2,276 after Rs. 90,000 to general reserve) 1956 accounts.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	21,24,802
Provision for income-tax	1,72,769	Stock-in-trade	2,29,337
Liabilities ...	2,52,696	Stores and spare parts	92,715
Profit and loss account ...	3,47,927	Nurseries ...	7,689
		Advances and pre-paid expenses ...	39,870
		Cash ...	2,78,779
Rs.	27,73,392	Rs.	27,73,392

Godfrey Phillips, India, Ltd.

The directors of the above Company (Chairman: Mr. D. S. Baron, C.I.E., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The Company made a net profit after provision for taxation, depreciation and all other charges of Rs. 9,51,201 (Rs. 3,85,189). To which is added the balance brought forward from last year of Rs. 13,30,075 (Rs. 15,43,326). After deducting short provision for bonus for the year 1954 of Rs. 72,631 (Rs. 35,013) and difference in dearness allowance, etc., in respect of previous years Rs. 57,877 (*nil*) there is a balance of Rs. 11,99,567 (Rs. 15,08,313). Including provision for taxation no longer required of Rs. 46,731 (Rs. 25,261) there is a total of Rs. 21,97,499 (Rs. 19,18,763). The directors have decided to transfer to reserve for gratuities Rs. 79,000 (Rs. 67,000). Leaving a balance of Rs. 21,18,499 (Rs. 18,51,763). The directors propose to dispose of this sum as follows:—

Pay a dividend on the preference shares at 5½ per cent. per annum subject to tax absorbing Rs. 1,21,688 (Rs. 1,21,688), dividend on the ordinary shares at 20 (10) per cent. per annum absorbing Rs. 8,00,000 (Rs. 4,00,000) and leaving a balance to be carried forward to next year of Rs. 11,96,811 (Rs. 13,30,075).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Goodwill ...	62,587
Reserves ...	7,81,000	Block ...	31,08,746
Provision for taxation ...	10,60,265	Stock-in-hand	78,92,364
Liabilities ...	46,13,252	Stock-in-transit ...	19,072
Profit and loss account ...	11,96,811	Debts and advances ...	34,70,175
		Cash ...	98,384
Rs.	1,46,51,328	Rs.	1,46,51,328

Eastern Investments, Ltd.

The directors of the above Company (Secretaries: Messrs. Bird & Co. (Private) Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit and loss account, after paying an interim dividend on the cumulative preference shares at the rate of 2½ per cent. per annum less tax, amounting to Rs. 46,094 (Rs. 46,094) and after providing Rs. 7,36,882 (*nil*) in respect of taxation, including super tax on dividends in excess of 6 per cent. of the paid-up capital, shows a credit balance of Rs. 8,13,572 (Rs. 8,20,742 after transferring Rs. 75,000 to general reserve) including the sum of Rs. 3,13,308 (Rs. 3,11,873) brought forward from last year. The directors propose to dispose of this amount as follows:

In paying a final dividend of 2½ per cent. per annum, as already declared by the directors and paid on 28th March 1956, making the total dividend at 5 per cent. for the year, on the 25,000 issued preference shares less income-tax at 48 pies per rupee plus 5 per cent. surcharge on income-tax Rs. 46,094 (Rs. 46,094). In paying a dividend of 9 (9) per cent. per annum on the 51,260 issued ordinary shares, without any deduction for income-tax paid by the Company Rs. 4,61,340 (Rs. 4,61,340) and in carrying forward Rs. 3,06,138 (Rs. 3,13,308).

Investments.—The Company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange, with the exception of certain shares costing Rs. 1,29,553 (Rs. 1,04,553) for which no quotations are available. The total of the market value of the investments for which quotations are available, together with unquoted investments as valued by the directors, exceeds the book value at 31st December 1955, by Rs. 75,26,031 (Rs. 64,02,628).

General reserve.—Rs. 16,459 (Rs. 1,69,819) have been added to this account representing net profit made on sales of investments during the year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	76,26,000	Investments	1,42,48,284
Reserves ...	54,12,212	Cash ...	5,81,239
Provision for taxation ...	9,28,115		
Liabilities ...	5,57,058		
Profit and loss account ...	3,06,138		
Rs.	1,48,29,523	Rs.	1,48,29,523

Shri Ambica Mills Ltd.

The directors of the above Company (Managing Agents: Harivallabhdas Kalidas & Co., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December 1955.

After providing a sum of Rs. 18,50,000 (Rs. 17,80,000) for depreciation and a sum of Rs. 29,00,000 (Rs. 18,00,000) for estimated taxation the working of the year showed a profit of Rs. 33,41,721 (Rs. 20,68,996). To this amount was added the balance of profit from the previous year Rs. 2,52,570 (Rs. 42,133) making a total of Rs. 35,94,291 (Rs. 21,11,129). Out of this sum, the directors have carried to dividend equalisation fund Rs. 3,00,000 (*nil*), to gratuity fund Rs. 1,50,000 (Rs. 50,000), to machinery renewal fund Rs. 4,00,000 (*nil*) and to investment reserve fund Rs. 8,00,000 (Rs. 13,139), leaving a balance of Rs. 19,44,291 (Rs. 14,67,830) after placing Rs. 5,80,160 to reserve fund). From this amount the directors paid dividend on 5,600 first cumulative preference shares of Rs. 100 each at Rs. 5 (Rs. 5) per share free of income-tax for the year ended 31st December 1955 Rs. 28,000 (Rs. 28,000), dividend on 7,000 second cumulative preference shares of Rs. 100 each at Rs. 4 (Rs. 4) per share free of income-tax for the year ended 31st December 1955 Rs. 28,000 (Rs. 28,000), dividend on 57,963 ordinary shares of Rs. 50 each at Rs. 25 (Rs. 20) plus Rs. 2 (*nil*) as bonus per share free of income-tax for the year ended 31st December 1955 Rs. 15,65,001 (Rs. 11,59,260) and carried forward Rs. 3,23,290 (Rs. 2,52,570).

The directors state that they have not yet been able to carry out the proposals of capitalisation of a part of undivided profits standing to the credit of the reserve fund and the issue of bonus shares as also the consolidation of two ordinary shares of Rs. 50 each into one of Rs. 100 each, as per resolutions of the extraordinary general meeting of the Company held on 3rd October 1954, since the necessary consent of the Central Government has not yet been received in that behalf.

With regard to the Lal Mills, the directors state that since filing of a petition on behalf of the Company and the Order of the Honourable the District Court at Ahmedabad, appointed Shri Balkrishna Harivallabhdas as a Provisional Liquidator, working of the said Mills has continued. No appreciable progress has, however, been yet made in the direction of passing final orders in the matter which is pending before the Court.

During the year under report, a continuous peroxide bleaching plant has been installed at No. 1 Mill in the place of ordinary kier process for dealing with the combined production of the three mills. Besides, at No. 3 Mill necessary replacement of old spinning preparatory machinery and the conversion of the existing ring spinning machinery to the high draft system is being carried out.

There are 94,116 spindles and 1,733 looms in the mills.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Shorrock Spinning & Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Mafatlal Chandulal & Co. (Ahmedabad) Ltd., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December 1955.

The Company has made during the year, the profit of Rs. 19,65,631 (Rs. 15,21,214). To this was added last year's carry forward of Rs. 6,434 (Rs. 22,720) making a total of Rs. 19,72,065 (Rs. 15,43,934). Out of this amount, the directors have placed to depreciation fund Rs. 6,50,000 (Rs. 6,50,000), to development rebate fund Rs. 1,43,973 (*nil*) and to provision for taxation Rs. 5,75,000 (Rs. 4,00,000) leaving a balance of Rs. 6,03,092 (Rs. 4,93,934). From this the directors have paid a dividend at Rs. 25 (Rs. 20 plus Rs. 5 Golden Jubilee Bonus) per share, free of income-tax, on 19,500 ordinary shares absorbing Rs. 4,87,500 (Rs. 4,87,500), placed to dividend equalisation fund Rs. 1,00,000 (*nil*) and carried forward Rs. 15,592 (Rs. 6,434).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,52,500	Block ...	89,10,148
Reserves ...	59,87,290	Stock-in-trade	25,09,143

New Shorrock Spinning & Manufacturing Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: Messrs. Mafatlal Chandulal & Co., Ltd., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December 1955.

The Company has made during the year, the profit of Rs. 32,57,169 (Rs. 28,34,770) to which was added last year's carry forward of Rs. 6,387 (Rs. 38,617) making a total of Rs. 32,63,556 (Rs. 28,73,387). Out of this amount the directors have placed to depreciation fund Rs. 7,00,000 (Rs. 8,25,000), to development rebate fund Rs. 4,27,335 (*nil*) and to provision for taxation Rs. 10,25,000 (Rs. 9,50,000) leaving a balance of Rs. 11,11,221 (Rs. 10,98,387). The directors have paid a dividend at Rs. 35 (Rs. 35) per share, free of income-tax, on 31,200 ordinary shares absorbing Rs. 10,92,000 (Rs. 10,92,000) and carried forward to next year's account Rs. 19,221 (Rs. 6,387).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,00,000	Block ...	1,32,09,232
Reserves ...	72,52,436	Stock-in-trade	39,85,868

Rs.	2,67,38,590	Rs.	2,67,38,590

Pakistan Oilfields Ltd.

The directors of the above Company (Secretaries: Messrs. Steel Brothers & Co., Ltd., Morgah, Rawalpindi, West Pakistan) submit the audited accounts of the Company for the year ended 31st December 1955.

Expenditure incurred during the period amounted to Rs. 2,16,240 which amount has been carried forward, at the debit of profit and loss account, to 1956.

The year 1955 closed with a cash balance of Rs. 1,25,207. This, however, was sufficient only to meet the Government fees on the various licences which the Company holds, which fell due early in 1956, and it was consequently necessary for the Board to make the final call of Rs. 2 per share on 16th February 1956. The funds thus obtained will be sufficient to provide for normal expenditure through the current year and to leave a balance of rather less than Rs. 1 lakh available for carrying forward to 1957.

Karsal.—The test to which reference was made in the Chairman's statement last year, has been carried out successfully to a depth of 11,928 feet after encountering at 11,678 feet the limestones which are the source rock of the oil found in the neighbouring Attock Oil Company lease of Balkassar. Production from the well to date has been small and amounts to 2,000 B/s only. All efforts to improve production by acidisation have so far proved in vain and it may be necessary to carry the well deeper in the hope that oil in economic quantities may be encountered at a lower depth. *Bains.*—No further work has been done on this area since the last report.

Adhi.—The directors have entered into an agreement with Pakistan Petroleum Limited to test this area and the adjoining P. P. L. Chak Naban area on a fifty-fifty basis which means that the cost of successful testing and any oil production so obtained will be shared equally between the two Companies. Preparations for drilling this test well have started.

Khaur/Dhulian Extension.—Government granted the Company a prospecting licence over an area of 32.79 square miles surrounding the existing Attock Oil Company leases at Khaur and Dhulian. There was considerable delay in starting the test due to trouble in obtaining acquisition of the necessary land. This trouble has now been successfully overcome and the rigging up of the test well is approaching finality.

Jhatla.—Preparations for drilling a test well on this area which is situated roughly 24 miles South West of Balkassar are well advanced. *Teri and Kohat.*—Preliminary work is also in train to drill a geological bore hole in this area near Shahardarra village, Kohat District.

Licences.—1. *Exploration Licences.*—The Company has surrendered its licence over 2,083 square miles near Mankera, Districts Mianwali and Muzaffargarh, West Pakistan, on the advice of its Geological advisers who have decided, as the result of closer examination, that the area does not hold out promising prospects.

2. *Prospecting Licences.*—Since the directors last report the Company has secured the licence over 22.62 sq. miles at Kallar Kahar, District Jhelum, West Pakistan, which they then referred to as pending. The directors' application for a licence over 8.3 square miles at Mahesian, District Jhelum, West Pakistan, which they referred to in the same report, is still pending. The directors have submitted an application for a prospecting licence over a further area at Dhab-Kalan comprising 8.8 sq. miles, in Jhelum, West Pakistan.

The contingent liability for the cost of the work done at outfields up to the date of the closure of the accounts amounted to Rs. 82,27,480 (Rs. 1,14,92,882).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,036	Preliminary expenses ...	43,072
Liabilities ...	6,888	Advances ...	265
		Cash ...	1,25,207
		Profit and loss account ...	6,38,380
Rs.	8,06,924	Rs.	8,06,924

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Manufacture of Handloom Implements

THE Government of India are considering a scheme for the setting up of factories for the manufacture of handloom implements.

* * * *

Mill Cloth Production

Indian mills produced 3,744 million yards of medium cloth and 606 million yards of coarse cloth during 1955-56. From these, 483 million yards of *saris* (medium) and 2 million yards of *saris* (coarse) were produced. The figures for *dhotis* were 364 million yards (medium) and 11 million yards (coarse).

* * * *

Excise Duty on "Dhotis"

The amount collected during 1955-56 (upto February 1956) under the *Dhoti* (Additional Excise Duty) Act, 1953, was Rs. 2,88,000. The collections have been credited to general revenues.

* * * *

Coir Board

The Government of India has sanctioned a loan of Rs. 19,67,500 and a grant of Rs. 24,569 to the Government of Travancore-Cochin during 1955-56 for promoting co-operative organisations among producers of husks, coir fibre and yarn.

* * * *

Spinning Mills

The Government has given permission to set up a new cotton mill in Tirupati with 12,000 spindles. Licences have been granted to Travancore-Cochin for two mills (22,600 spindles); Mysore three mills (34,000 spindles); Madras 55 mills (606,944 spindles) and Andhra five mills (90,560 spindles).

* * * *

Total Value of Exports

The total value of exports during 1955 was Rs. 603.77 crores. At the end of 1954, about 75 per cent. of the export trade was free from control.

* * * *

Industrial Co-operative Match Factory

A sum of Rs. 3,62,447 has been sanctioned for the Industrial Co-operative Match Factory at Hyderabad.

* * * *

Cloth Exports to Pakistan

The total quantity of cloth exported to Pakistan in 1955-56 was 5,485,256 yards.

—*T. T. Krishnamachari*

Machinery for Textile Industry

A number of items of machinery required by the textile industry is already being manufactured in the country, such as ring frames, carding engines, fly frames and draw frames, looms, twisting machine, and dyeing, printing, finishing and bleaching machinery. Except for fly frames and draw frames and some of the dyeing, bleaching, printing and finishing machinery, the indigenous industry has either become almost self-sufficient or is likely to be self-sufficient in the near future. The quality of the manufacture is also comparable to that of the foreign make.

—*M. M. Shah*

Match Industry

It is estimated that about 24,500 workers are employed in the match industry. Of these, nearly 8,500 are employed in the fully mechanised sector and about 16,000 in the cottage sector. The existing rate of duty does partially serve to help the cottage match industry.

* * * *

All-India Handloom Board

An order for compulsory registration of all handlooms is being issued.

* * * *

Chenopodium Oil

The quantity of chenopodium oil imported during 1955 was 2,877 lbs. The Government intends to develop cultivation of plant from which the oil is obtained. Experiments to develop suitable methods of cultivation are in progress in the Forest Research Institute and in the Drug Research Laboratory, Jammu.

* * * *

Small Industries Institute

No foreign experts are employed at the Small Industries Service Institute, New Delhi. During 1955-56, an expenditure of approximately Rs. 3.5 lakhs was incurred on the Institute.

* * * *

Motor Car Production

There are at present three firms engaged in the production of motor cars—one in Bombay, one in Madras, and the third in West Bengal. The firms claim a total capacity of 33,000 cars per annum. The reason for closing down the operations of certain firms is that they have no intention to manufacture cars in this country.

* * * *

Manufacture of Automobile Products

Besides Tata-Mercedez-Benz diesel trucks and Standard Ten cars, production of gudgeon pins and buaflex steel piston rings, electric horns and shock absorbers has also commenced during the last two years. The Government has not given any financial aid or grant to the industry.

* * * *

Production of Motor Cycles

Production of motor cycles, spark plugs and automobile radiators has already commenced in India. Motor cycles are being produced from May 1955 and spark plugs from September 1953. Manufacture of radiators is reported to have commenced about four years ago. The annual installed capacity of single shift of motor cycles, spark plugs and radiators industry is given as 5,000, 6,85,000 and 40,000, respectively.

—*Nityanand Kanungo*

State Trading Corporation

The State Trading Corporation is expected to be registered next week. The Corporation will have a share capital of Rs. 1 crore, divided into 100,000 shares.

—*D. P. Karmarkar*

Indo-Polish Shipping Agreement

There is a proposal to enter into an agreement with Poland for direct shipping service between India and Poland. The agreement is likely to be signed shortly.

* * * *

Shipping

The number of ships added to the Indian mercantile shipping during 1955-56 was eight ships aggregating 18,925 g.r.t.

* * * *

Ropeway in Assam

A scheme for the construction of a ropeway between Shella Bazar and Amingagon was received from the Government of Assam sometime ago, but, on examination, it was found that the scheme required some modification. The scheme has, therefore, been returned to the Assam Government. No revised scheme has yet been received.

* * * *

Wagons for Coal

Every endeavour has been made by the railways to step up the supply of wagons for coal loading. The target fixed by the Bengal-Bihar coalfields for coal loading is 3,250 wagons daily. Last month, the daily loading was 3,431 wagons, which was well above the target. The Government received a joint telegram recently from the Indian Mining Association, the Indian Mining Federation and the Indian Colliery Owners' Association requesting that the supply of coal-loading wagons be stepped up immediately. The present demand for wagons may be slightly more than what is being supplied at present. The demand is being adjusted by the Coal Commissioner and we are fairly able to meet it.

* * * *

Coastal Shipping

It is very difficult to gauge the effect the increase in the coastal shipping freight rate has on the transport of the commodities concerned. But, so far as the Government are aware, there is no adverse effect on the transport of the commodities concerned.

—*O. V. Alagesan*

Estimate of Wheat Crop

The final estimate of wheat crop for 1955-56 is expected to be available only by the end of May 1956. However, according to present indications, this year's wheat crop is expected to be more than the average of the last three years. It may be necessary to import some wheat both for current consumption and for building up of reserve stocks. The Government proposes to continue to sell wheat freely from Central sales depots in important consuming centres like Bombay, Calcutta, Delhi, etc., at Rs. 14 per maund. This will reduce the demand of these consuming centres from Internal markets and will help stabilise prices in these markets also at reasonable levels.

—*M. V. Krishnappa*

Aid to "Panchayats"

The Planning Commission is recommending to the State Governments to consider making grants to village *panchayats* to enable them to play their part in the programmes of rural reconstruction and development. The proportion of grants may be 15 to 20 per cent. of the land revenue, with an additional grant extending upto about 15 per cent. of the land revenue on condition that the *panchayat* raises an equal additional amount by taxation or voluntary contribution.

* * * *

Sharavathi Project in Mysore

The first stage of the Sharavathi hydro-electric project in Mysore has been tentatively included in the second Five-year Plan and as high a priority as possible will be accorded to this scheme. The first stage of the Project is estimated to cost Rs. 22.97 crores.

—*S. N. Mishra*

Auditing of State Bank Accounts

The Comptroller and Auditor-General has drawn the attention of the Government to the absence of any provision in law for auditing the accounts of the State Bank of India by him. After consideration of the matter, the Government has come to the conclusion that the provisions in the existing law required no change. Auditors are appointed for the State Bank by the Reserve Bank with the approval of the former. While piloting the State Bank Bill, certain amendments had been brought forward suggesting that the Auditor and Comptroller-General should be given certain authority. But it was decided that, as the State Bank was the biggest commercial bank, it should not be within the control of the Auditor-General, but that an independent auditor should be appointed by the Reserve Bank in consultation with the Government of India. It has been provided that the audit reports will be placed on the table of the House which will be in a position to discuss the report, if it so chooses.

—*M. C. Shah*

THE CASE FOR NATIONALISATION

(*Concluded from page 959*)

It must be noted also that, at the time of launching the new Plan, some disturbing factors have come into play which will add to the difficulties of carrying it out. First is the dislocation, not merely administrative but psychological, caused by the reorganisation of the States. Next is the deterioration of our relations with certain neighbouring countries which is bound to increase the expenditure on defence. Lastly, a fresh inflationary trend has begun to appear in most countries of the world and its reaction upon India may have consequences which it is difficult to forecast.

I have dwelt at this length on the Plan in order to enforce the point that the Government of India have their job in the near future fully cut out for them in seeing that economic development conforms to the general policy laid down in the Plan, without going further and undertaking direct participation in specific industries.

Autonomous Corporations

It may be objected that these considerations apply only to departmental management of nationalised industries, but that, if management is entrusted to public corporations, the responsibility of Government would be lessened. In practice, it will be found that the responsibilities that fall to Government in the case of a public corporation would not be any less. The funds held by public corporations are borrowed from Government, or invested or guaranteed by Government. Whatever the degree of autonomy vested in a corporation, the responsibilities inherent in the management of public funds would oblige Government to keep a close watch on its operations, including the not very helpful intervention of the Audit Department. Besides, it is the usual practice in public corporations for Government to have the right of issuing directives on matters of general policy affecting the public interest. Where the line is to be drawn between day-to-day working and public interest is a moot point in every country which has adopted the device of public corporations. In a country which has achieved sovereignty for the first time, the tendency generally is for Government to place too wide an interpretation on public interest and issue directives on matters which, strictly speaking, affect only day-to-day working. This situation arises also with regard to interpellations in Parliament. A convention has grown up in the British House of Commons that interpellations regarding public corporations, like directives, should apply only to matters of policy. But, at the present stage of public corporations in India, an unjustifiable measure of latitude appears to be allowed. The wide interpretation placed on public interest leads Ministers to assume a degree of responsibility for the working of public corporations which constitutes an abuse of the right to issue directives and to answer questions in Parliament. In certain matters with which I happen to be personally acquainted, replies by Ministers have been not merely unwarranted but almost invariably factually inaccurate.

Cautious Approach Needed

I, therefore, come to the conclusion that it is in the Government's interest at the present stage to proceed slowly and with caution in the matter of nationalisation. If the experiments in nationalisation meet with disappointing results, the reaction on the pattern of society that Government are trying to build will be serious. I suggest, therefore:—

(1) that nationalisation should be strictly limited in scope,

(2) that it should be applied selectively not in regard to categories of industries but to specific industries.

(3) that the approach to it should be empirical, and

(4) that, as far as possible, it should be decentralised.

There has recently been a tendency on the part of Government spokesmen to pronounce in favour of State enterprise, generally on the ground that concerns run by free enterprise have been guilty of serious lapses and irregularities. Free enterprise has been at work in India for nearly a century and it is easy in view of the long period and the wide range it covers to find material for allegations as compared with State enterprise. But this is a poor way of judging so important an issue. To one who for some time as Minister of Railways was in charge of the largest public enterprise in India and who at another time as a business man was in charge of the largest free enterprise in India, namely, the Tata Iron and Steel Company, comparisons of this kind carry little conviction.

I do not for a moment deny that, in a developing country, there is a case for public ownership and management of certain industries. As an illustration, I would mention transport—railway, road and air. Transport is fundamental to economic development and there is no form of business in which there is greater need for coordination. Similarly, there are industries, the products of which are required solely for defence purposes and for which a *prima facie* case for nationalisation exists. On the other hand, as an illustration of a business for which no such case exists, I would mention insurance. I have read every statement made by those in authority justifying the nationalisation of life insurance and I must confess I am as unconvinced as ever. Another case is the nationalisation of the Kolar Gold mines. The Kolar Gold fields are not a new enterprise; gold is a speculative commodity; the use of currently produced gold as a means of strengthening exchange reserves is diminishing; India's contribution to world production is negligible; the low levels at which gold is now extracted in the mines in question makes it expensive. It is difficult to imagine a case less suitable for nationalisation.

Two things are important where an industry is sought to be nationalised. First, it must be established that in the national interest there is a good case for it. Secondly, the public, as well as the interests concerned, should know definitely what are the grounds on which the final decision is taken. The policy of Government would on this basis be one of discriminating nationalisation. The tests by which the discrimination is exercised should be clearly laid down and the necessary enquiry should be made not by Government but by an independent body with requisite knowledge and experience whose judgment would command confidence.

I regard with growing concern the loose talk of nationalisation going on in high places today. I do so not merely because the country needs all the free enterprise now available for its development but because I see no justification, either practical or ideological, for the decline resulting from Government policy in freedom of enterprise, which in reality is one of the greatest freedoms in a democratic community.

COMMERCE AND INDUSTRY

(*Concluded from page 972*)

The competence of the Government to establish and run industries efficiently was questioned by Mr. Shroff. So far as he had heard and known, he said, the public sector had not succeeded anywhere in the world, except perhaps, in Soviet Russia. The reason for this was that, once the State took up an industrial venture, it became an impersonal affair. In support of this view, he gave an interesting instance. Although every modern industrialist knew that one of the vital things necessary for an industrial enterprise was an efficient costing system, the Telephone Industries at Bangalore did not have one and a system was still being devised at New Delhi.

Be that as it may, a statement of industrial policy, however liberal or free from doctrinaire bias it may be, cannot by itself stimulate industrial expansion. Such expansion can come only through the adoption of liberal fiscal policies, and realistic labour laws, encouragement to initiative and enterprise, and creation of confidence in the public that the Government will pay just compensation in the event of nationalisation.

CENTRAL STATISTICAL ORGANISATION

Having been established in May 1951 as an "attached" office of the Cabinet Secretariat, the Central Statistical Organisation has been meeting the growing needs for proper co-ordination of the statistical activities in the different Ministries of the Government of India and in the State Government and effecting improvements in the statistics collected.

The report of the Organisation for the year 1954-55 states that a "planning cell" was set up during the year. There was considerable increase in work relating to co-ordination of State statistical activities, especially in the context of Planning. In view of the need for a large number of qualified statistical personnel, the Organisation initiated a brief (about 7 weeks') "In-service" training course for senior statisticians in 1954. This course, it is stated, is now an annual feature. Besides, the Organisation, in co-operation with the Indian Statistical Institute, organised a nine months' course for junior statistical officers.

In March 1955, the Organisation published the second issue of the White Paper, giving the final estimates of national income for 1952-53 and provisional estimate for 1953-54. A working paper on "capital formation" during the years 1948-49 to 1953-54 was prepared for the information of the Planning Commission.

INDO-SWEDISH TRADE AGREEMENT

Letters were exchanged at New Delhi on the 9th inst., between the representatives of the Governments of India and Sweden, extending for the year 1956 the validity of the schedules attached to the Indo-Swedish trade arrangement signed in May 1955. The arrangement provides that the schedules of imports and exports attached to it would be revised every year. Some of the important commodities of export from India to Sweden during 1956 are cotton textiles, silk and rayon fabrics, jute goods, raw wool and woollen manufactures, coir and coir products, cotton waste, leather goods including footwear, myrobalan and extracts, sports goods, castor oil, linseed oil, mustard oil, hydrogenated oil, spices, tea, coffee, tobacco, shellac, manganese ore and magnesite, kyanite, chrome and iron ores, paraffin wax, linoleum, bristles, cottage industry products, cashew kernels and coal. Some of the important commodities for import into India from Sweden during 1956 are foodstuffs of various kinds, building materials such as cement and ceramic floor and wall tiles, various kinds of chemicals and pharmaceuticals, forestry products such as boxboards, chemical and mechanical pulp, newsprint, wrapping paper, book printing and writing paper, cardboard, wallboard, etc., textiles such as rayon wool and silk; iron and steel including ferro-alloys and stainless steel; metal manufactures and semi-manufactures such as cycle chains, hand tools, builders' hardware, horse-shoe nails, cutlery, etc.; various machinery and industrial equipment—diesel engines, metal and woodworking machinery, ball and roller bearings, match-making machinery, printing machinery, etc.—electrical equipment—generators, transformers, telephone and telegraph equipment—domestic machinery and equipment; means of transport—railway rolling stock and locomotives.

COTTON

(*Concluded from page 958*)

spot cotton. It is true that the rate for the futures should be a little below that for the spot, but not at so low a level as Rs. 140 below the ceiling for the spot, as is contended by the Commission. It may be mentioned here that there is already a provision for such a difference, according to which transactions in hedge contract would automatically have come to a close when the contract touched Rs. 815. Surely, the heavens would not have fallen had the Commission waited for this level to be reached. In any case, what has the Commission achieved by acting as it did? Has it been able to prevent the spot prices from going up? Indeed, the spot prices have continued to be firm since the date of the suspension of forward trading. Almost every variety has touched the ceiling. There have even been reports that consumers of cotton have had to pay prices above the ceilings for certain varieties. Thus, the suspension of trading has not benefited the consumers either. In fine, in fixing an arbitrary ceiling for the hedge contract, the Commission has been actuated more by academic considerations than by realistic awareness of conditions in the cotton world.

Again, much has been made by the Commission of the allegation that option business was being done on a large scale. Options are illegal in India. Yet no one has been able to stop them, without completely closing the futures market. If futures trading is to be allowed, one cannot help winking at such business. That is what is happening in all other parts of the world where options are not recognised in law. The only difference between India and the other countries is that, whereas we glibly talk of eradicating the evil, the others do not indulge in such idle talk. Occasionally, when it is found that the evil is rampant, the authorities can conduct police raids and seize the books of members, and adopt similar measures which help bring down the volume of option business for some time. Why did not the Forward Markets Commission order such a police raid in December last? Surely, it has powers to do so. Was it afraid of incurring the unpopularity of the large mass of dealers who participate in options?

Further, the explanations quoted above do not face some of the larger issues. Is it right that a contract should be cut off during its pendency at a level below the ceiling fixed for it? What happens then to the sanctity of contracts? This is a fundamental question. So long as it remains unanswered, forward trading cannot function efficiently. If the impression gets abroad that a contract may be cut off at any time, at any level, before it reaches the ceiling, it will destroy the confidence of operators which forms the basis for forward trading.

STRINGENCY IN MONEY PERSISTS

(*From Our Own Correspondent*)

BOMBAY, 16*th May*

Activity in the short-term money market was very much restricted during the week under review. This was not due to any slackening of the demand for money, but on account of the scarcity of floating funds. With the seasonal demand for bank credit still on the high side, banks had frequently to call on the Reserve Bank for increased accommodation, as witness the sharp rise of Rs. 17.25 crores in Scheduled banks' borrowings against usance bills during the week ended 11th May 1956.

In the inter-bank call money section, the rate stood unchanged at 3½ per cent. House money continued to fetch 3½ per cent. Short-term deposits were offered at 3½ per cent. for one to three months and 3¼ per cent. for longer periods.

A rise of Rs. 7.37 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 11th May 1956. This increase follows the expansion of Rs. 13.50 crores noted in the previous week. There has also been a rise of Rs. 1.60 crores in notes held in the Banking Department, so that the aggregate increase in total notes issued is Rs. 8.97 crores. On the assets side, rupee securities have gone up by Rs. 10 crores, while rupee coin is lower by Rs. 1.02 crores. In the Banking Department, there has been an increase of Rs. 9.53 crores in deposits of the Central Government and a fall of Rs. 11.44 crores in those of other Governments. On the assets side, balances held abroad are lower by Rs. 3.51 crores. Loans and advances to Governments show only a fractional rise, while that in other loans and advances is of the order of Rs. 11.19 crores. The increase in the latter is mainly accounted for by the rise of Rs. 9.43 crores in advances to Scheduled banks against usance bills. Fresh advances against usance bills during the week amount to Rs. 17.25 crores, as compared with Rs. 14.06 crores in the previous week. This is probably the largest amount advanced to banks against usance bills in any one week. Investments show a drop of Rs. 10.12 crores.

The Scheduled Bank's statement for the week ended 4th May 1956 discloses a further fall of Rs. 7.99 crores in demand deposits. Time deposits have, on the other hand, risen by Rs. 2.41 crores, borrowings from the Reserve Bank by Rs. 6.78 crores and those from the State Bank by Rs. 1.36 crores. Advances have gone up by Rs. 6.36 crores and inland bills purchased and discounted by Rs. 68 lakhs. Foreign bills have, however, fallen by Rs. 1.63 crores. Cash balances show a negligible decline and balances with other banks and money at call a shrinkage of Rs. 73 lakhs and Rs. 77 lakhs, respectively.

The Gilt-edged market displayed a very steady tone, the sentiment having been helped by good enquiries from institutional investors for long-dated securities and persistent scarcity by stocks.

3 per cent. 1957 was unchanged at Rs. 99-13, the rate at which the Reserve Bank was a buyer. 3 per cent. 1958 was on offer at Rs. 99-11. 3 per cent. 1959-61 was marked down by an anna to Rs. 98-2. 3 per cent. 1963-65 picked up an anna to Rs. 95-2. 3 per cent. 1964 also was in demand and gained an anna to Rs. 95. 3 per cent. 1966-68 moved up by As. 2 to Rs. 93-4, at which level there were sellers. 3 per cent. 1970-75 had buyers at Rs. 90, but there was no change in price. 3 per cent. 1986 Conversion Loan hardened by an anna to Rs. 77-7 and there were buyers even at Rs. 77-7½. 3½ per cent. 1961 was enquired for an anna higher at Rs. 99-10, while 3½ per cent. 1964 was an anna lower at Rs. 98-11. 3½ per cent. 1965 was unchanged at Rs. 98-10, the rate at which the Reserve Bank was a seller. Among State loans, 4 per cent. 1967 issues were in good demand. Bombay 1967 gained an anna to Rs. 100-12, while West Bengal was unchanged at Rs. 100, Madras at Rs. 99-13 and U.P. at Rs. 99-11. Madhya Pradesh 1967 was marked up by an anna to Rs. 99-8. Bihar by As. 2 to Rs. 99-7, Mysore by As. 3 to Rs. 99-9, Saurashtra by an anna to Rs. 99-11 and Hyderabad by As. 3 to Rs. 99-9.

In the foreign exchange section, rupee maintained, its ground in terms of the U.S. dollar, the banks' selling rate of ready dollar remaining unchanged at Rs. 476¾ per $100 and their selling rate at Rs. 472¾ per $100. The sterling was, on the other hand, a little erratic. In New York, spot sterling moved down from $2.80.7/8-2.81 to $2.80.11/16-2.80.13/16, before regaining to $2.80.13/16-2.80.15/16. Three months' forward gained a fraction on balance from $2.79½-2.79.3/8 to $2.79.5/16-2.79.7/16 and transferable sterling from $2.78.9/20-2.78.11/20 to $2.78.3/5-2.78.7/10.

ARRIVALS OF TEA INCREASING

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 10*th May*

There have been no sales in Cochin this week, sale No. 11 having been postponed until 15th May. Dust sale "J" will be held on Thursday, 17th May. It is understood that rain has fallen in almost all districts and arrivals are now increasing.

London Market—Sale of 7th May 1956.—Competition less active and buying more reflective. Thin liquoring and plain teas penny easier.

Sale of 8th May 1956.—2*d.* to 4*d.* easier, except for few selected lines.

Colombo Market—Sale of 7th May 1956.—Good demand, particularly useful liquoring. Fannings firm. Rates slightly lower for poorer dusts and stalky broken mixeds.

Sale of 8th May 1956.—Considerably less demand. Market weakened progressively and prices continued to decline. High-grownes 50 cents to Re. 1 lower. Mediums 50 to 60 cents lower. Low-grown 35 cents lower. Quality much worse. Substantial withdrawals.

Calcutta Market—Export.—Good general demand with any teas with neat leaf or pretensions to quality selling at dearer rates. Most cleaner sorts fully firm and stalky commonests slightly dearer. Others, including whole leaf, occasionally half to one anna easier.

Internal.—21,000 dust. Quite good general demand, half to one anna easier. Black leaf and best C.T.C. firm to dearer. Leaf 5,700 chests. Fairly good demand, generally half to one anna dearer.

Export Quota.—Following a Government announcement of the extension of the validity of special licence to 30th June the market has been active. There are now sellers at 9 pies and business has been done at this figure. 1956-57 export quota is quoted at 33 pies and business has been done.

Forthcoming Auctions.—Sale 11 will be held on 15th May, sale 12 on 22nd May and dust sale "J" on Thursday, 17th May.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Sale* 11.—300,000 lbs. Less demand for everything, except all fannings which are fully firm to dearer. Others irregularly As. 2 easier. Many withdrawals."

MARGIN IN SILVER

(*From Our Own Correspondent*)

BOMBAY, 16*th May*

A sharp recession in silver and a marking down in price of gold today were the only notable features of trading in bullion during the week under review. During the earlier sessions of the week both silver and gold were dull, though the undertone was fairly steady. The trend was somewhat irregular within a narrow range.

The decline in silver today, which was attributed to heavy unloading induced by the reported arrival of Tibetan coins equivalent to 150 bars, brought the forward price for May settlement down to a low of Rs. 172-8, the lowest level for the current year so far. Also, it brought the closing price (Rs. 173-1) down by Rs. 2-7 over the week and by Rs. 9-7 over the past two weeks. As the closing price of silver for the May settlement was more than Rs. 7 below the official starting rate of Rs. 180-4 for the current settlement, a margin of Rs. 500 per bar was enforced against the sellers on all their outstanding sales as per by-law 33-C (1) (b).

The recession in gold was due to the decline in offtake in the ready position.

Silver for forward delivery (26th May settlement) advanced early in the week from Rs. 175-8 to Rs. 177-5, on rumours that the export of silver from Tibet might be restricted by the Tibetan Government. Absence of any confirmation of these rumours and the decline in demand in the ready position brought the forward price down to Rs. 105-14 on Monday. After recovering again to Rs. 176-13 yesterday, it declined to Rs. 172-8 today, before closing at Rs. 173-1.

The business in the June settlement commenced on Wednesday last, the official starting rate for silver being Rs. 172-10. After moving down to Rs. 171-15, there was a recovery to Rs. 172-11 yesterday, but it again receded to Rs. 170-1 at the close.

Ready silver (.996 Mint) gathered strength from Rs. 179-8 to Rs. 181-14, but slipped back to Rs. 177-1 at the close. The floating stocks of silver are reported to be 600 bars. The daily average offtake was 20 bars.

Forward gold (25th May settlement) shaded off from Rs. 104-4 to Rs. 103-9 before coming up to Rs. 104-11 yesterday. Today, however, it dipped again to Rs. 102-12 and closed at Rs. 103-3. Forward gold (June settlement) gave way from Rs. 102-14 to Rs. 101-14.

Ready gold was marked down from Rs. 106-2 to Rs. 104-4, but the closing was a shade better at Rs. 104-11. The floating stocks of gold are reported to be 20,000 tolas. The daily average arrivals were 3,000 tolas and the offtake was also of the same order.

In London, silver prices were marked up a little, spot metal gaining from 78¾*d.* to 79*d.* and forward from 78¾*d.* to 78¾*d.* Gold also advanced from 249*s.* ¼*d.* to 249*s.* 2½*d.* In New York silver was unchanged at 90¾*c.*

The following comparative table shows the trend of the market during the week under review:

	16-5-56	Highest	Lowest	9-5-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

COTTON RALLIES FURTHER

(*From Our Own Correspondent*)

BOMBAY, 16*th May*

If nothing goes wrong again, forward trading in cotton will be resumed by 15th June next. The Cotton Contract Committee is reported to have practically completed the examination of the proposals made by the Forward Markets Commission in the light of the views of the East India Cotton Association members. The Committee, it is understood, is generally inclined to accept the amendments to the by-laws of the E.I.C.A., as suggested by the Commission with a view to checking any tendency to speculate in the cotton market. On the issue of contracts, however, the Committee would appear to be divided in its opinions. At the meeting of the Committee held on Monday this week, some members favoured the running of two contracts simultaneously, while others opposed it and advocated only one contract. In view of the divergence of opinion thus, the meeting terminated without any decisions being taken. The two sections have been asked by the authorities to present their cases after discussion among themselves to the Secretary of the E.I.C.A. by the 26th inst. The views of the two sections will be circulated to all members of the Committee and final decision will be reached by the Committee thereafter.

The efforts of the E.I.C.A. members at presuading Mr. Purshotamdas Thakurdas and Mr. Chimanlal B. Parikh to withdraw their resignations from the office of President and Vice-President, respectively, have failed. Since the two persons expressed their inability to continue in office, the Board of the E.I.C.A. has accepted the resignation. The Board will be electing a new President and Vice-President at its meeting to be held on Friday.

The firm tone noted in the spot cotton market for some weeks now gathered considerable momentum this week. In fact, conditions akin to a boom are in evidence at present. Besides the continued excellent domestic offtake in piecegoods and shortage of indigenous popular styles, the abolition of the 6¼ per cent. *ad valorem* export duty on coarse cloth has whipped up the enthusiasm of mills to enlarge their commitments. Transactions put through are quite large and cotton prices have recorded further gains. Even the Central Government's decision to permit, with immediate effect, issue of licences for import of American cotton of staple length 1.1/16" and above has gone completely unnoticed. Indeed, the exportable short-staple and short-medium staple varieties have pierced the ceilings—the unofficial premium commanded by a few varieties is said to be Rs. 15 per candy of 784 lbs. —while long-staple varieties such as Vijay, Surti, Jayadhar and Lakshmi are bumping against the ceilings.

The following table gives the latest quotations for a few popular styles of cotton from the Sewri market, as compared with the rates prevailing a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	16-5-56	9-5-56	2-5-56
Bengal *Deshi*	660	665	660
Berar Jarillas	800	800	795
Khandesh	810	810	800
Vijay	965	960	960
Oomra *Deshi*	710	700	700
Moglai	720	700	700

The Central Government has, as already stated, decided to permit, with immediate effect, issue of licences for import of American cotton of staple length 1.1/16" and above. The licences, which will be valid for shipment up to 31st December next, will be issued by the Joint Chief Controller of imports as in the past, that is, against prior sale to mills or on importers' account or to mills for direct import, on production of evidence of purchase from overseas suppliers. Two factors have been responsible for the decision. First, there is the scarcity of desirable quality domestic cottons. Secondly, the demand for fine and superfine fabrics has continued to be active.

Thanks to the aforesaid decision, mill demand for American cotton has somewhat slackened, since the mills are not in a hurry to cover their requirements immediately. Egyptians were dull because of the high prices demanded. East African cotton, however, is evoking sustained interest and, consequently, prices have gone up further. B.P. 52, for instance, was quoted yesterday at Rs. 1,800, as against Rs. 1,700 a week before. Jinja was also done higher at Rs. 1,500, as against Rs. 1,440. Some deals were put through in Gezirah Sudans for May through July shipment. Among exportable styles, Zoda cotton and yellow pickings continued to meet with buying support. There was also some foreign interest in lower Jarillas, *deshi* varieties and Wagad.

The Karachi cotton market ruled strong this week too, although the spurt in prices was not so marked as in the previous week. The speculative interests lent renewed support, with a view to enlarging their holdings on expectations of still higher prices in the coming weeks. N.T.R.G. May delivery advanced from Rs. 89-6 to Rs. 93 before opening lower at Rs. 91 per 82 lbs. yesterday. July delivery put on Rs. 3-6 to Rs. 89-1 early on the 14th inst., it, however, opened easy at Rs. 87-8 yesterday. The latest available ready quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, as compared with those a week and a fortnight before, are given below:

	15-5-56	8-5-56	1-5-56
Sind *Deshi*	104	101	100
Punjab *Deshi*	99	98	94½
4F Roller	90	88½	81½
S.G.	94	93½	86
Punjab Roller	95½	94	87
S.G.	100	99	92
289F N.T. Roller	96	95½	88
S.G.	102½	101	94½

The Alexandria cotton futures market exhibited buoyant conditions till the close on Monday, but developed easiness yesterday. The buoyancy during

the major part of the week thus was due to firm advices from the spot market where premiums were ruling at the highest levels for the season. Cotton futures prices, as a result, registered a sharp rise. The upward trend was, however, halted yesterday when, on account of shrinkage in overseas demand, prices suffered a break. Nevertheless, the closing rates were very much higher than those at the end of last week. The following are the latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market, the highest touched in the week and the closing rates a week before:

	15-3-56	14-3-56	8-3-56
Karnak:			
May	116.50	121.75	103.30
July	112.75	115.50	107.00
November	109.30	112.75	103.75
Ashmouni:			
June	88.45	90.75	87.55
October	80.15	84.45	80.80

Following reports of soaring values of comparable Egyptians and active demand, Sudan cottons continued to record new highs every day. On Tuesday last week, the Gezira Board announced new reserves which were far higher than the previous reserves and close to the prices received at the last auction. At the auction on the same day, the Board got prices which were very much higher than even those of the new reserves. XG4S, G4S, XG5S, G5S and G2L were sold about 3d. per lb. above their reserve prices and XG6S and G6S a penny above.

Last two weeks' firmness of the Liverpool cotton futures persisted during the week under review, thanks to highly encouraging advices from the Egyptian and Sudan markets. Mill fixations in the near position of the old contract were sustained. New crop positions had the support of mixed American and local trading operations. Outside growths were lifted up by commission houses. The latest available quotations—in pence per lb.—from the Liverpool cotton futures market are given below:

Old contract: May-June 26.45 and July-August 26.00. *New contract*: May-June 30.65, July-August 29.00, October-November 26.65, December-January 26-10, March-April 25.50 and May-June 25.45; *Egyptian Karnak cotton*: May-June 59.25, July-August 59.05 and November-December 59.05. *Sudan cotton contract*: July-August 57.75, September-October 57.25 and November-December 57.25.

The New York cotton market depicted a fully steady trend during the week under review, in distinct contrast with the easy conditions prevailing in the previous week. The steadiness was aided by good trade demand, commission house buying and short-covering which uncovered some stop-loss orders. Firm advices from foreign markets and higher prices paid for some of the C.C.C. export cotton also acted as favourable factors. Cotton prices, as a consequence, moved up. The improvement would have been more marked but for reports that the Agriculture Department was under pressure from Congressional quarters to lower its minimum prices for export cotton. The Crop Reporting Board of the Department has come out with its final estimate of the U.S. cotton crop in the current season, which places the total yield at 14,721,000 bales, as against 14,663,000 bales forecast in the preliminary final report issued in December last. The yield per acre is put at 417 lbs., as against 341 lbs. in the previous season. It is believed that the C.C.C. sold on the 2nd inst. about 10,487 bales of cotton, for minimum price for Mid. 15/16" gross weights at Memphis, Tennessee being 27.63 cents per lb.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	15-5-56	8-5-56	1-5-56
Spot	36.70	36.55	36.65
July	34.46	33.85	33.89
October	32.77	32.38	32.28
December	32.84	32.55	32.38

* * * *

World cotton supplies this year are estimated by the International Cotton Advisory Committee to exceed 51 million bales, a post-war record, representing an increase of 2.7 million bales since 1955. Free world production is at present estimated at 30.6 million bales and is expected to reach an all-time high, mainly due to the record yields in the U.S., despite a significant cut in acreage under cultivation. Cotton consumption in the free world is likely to be at the 1954-55 record level of 27.6 million bales. The carry-over as on 1st August 1956 will be about 23 million bales.

COTTON YARNS ADVANCE

(From Our Own Correspondent)

BOMBAY, 16*th May*

For the third week in succession, the forward section of the rayon yarn market presented an easy trend. The sentiment of traders was somewhat adversely affected by renewed reports of heavy accumulations of stocks in consuming centres. Also, there have been heavy arrivals of imported yarn in recent weeks. During April, for instance, over 3.85 million lbs. of yarn were imported into Bombay, as against about 3.48 million lbs. in the previous month. The Central Government's recent decision to permit users to import 150 and 120 deniers acetate yarn to the extent of 5 per cent. of their licences also acted as a damper. Some selling was, therefore, in evidence and forward rayon yarn prices staged a retreat. Spot rayon yarns, however, were firm. Cotton yarns registered a rise in prices, thanks to persistent enquiries induced by firm advices from the cotton and piecegoods markets. In the staple fibre yarn section, indigenous yarns met with renewed buying support, while foreign yarns were subjected to further selling pressure.

Snia rayon yarn (120 dull cones) for June and August deliveries dropped Rs. 5 each to Rs. 799 and Rs. 794, respectively. In the spot section, 150 Italy was in special request, its quotation rising by As. 2-6 to Rs. 3-13-6. 120 Italy gained half an anna to Rs. 3-12-6. 120 Japan were higher by a like amount to Rs. 3-13. 150 Japan was fully maintained at Rs. 4-4. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade put on three pies to Rs. 3-11-6. 150 Bt. cones 1st grade was firm at Rs. 3-8-6.

In the staple fibre yarn section 40 x 2 Centurys evoked very good attention of operators and climbed up by As. 2-6 to Rs. 38-9. Kohinoors spurted by As. 2-3 to Rs. 3-10. New Greats strengthened by As. 2 to Rs. 3-8-6. Citys were firm at Rs. 3-7-6. Among foreign yarns (80 x 2), S'Sellos were subjected to heavy selling pressure and fell by As. 4 to Rs. 6-6. H'Races receded by As. 3 to Rs. 6-8. Fujis lost half an anna to Rs. 6-12. Some transactions were put through in staple fibre yarn (40 x 2) for June delivery at Rs. 684. Business in this delivery, it will be recalled, has been at a standstill since 5th July 1955.

In the cotton yarn section, ten counts Modern advanced by As. 4 to Rs. 14-4. Podars gathered As. 3 to Rs. 13-10. Elphinstones were fully maintained at Rs. 13-6. Among 20s, Hinds firmed up by As. 8 to Rs. 18-4. Moderns and Podars rose by As. 6 each to Rs. 18-6 and Rs. 17-14, respectively. Edwards were higher by As. 2 at Rs. 17-4. Deals in 30 counts Sarojas were put through As. 2 higher at Rs. 23-14. Among 40s, Minaxis picked up As. 10 to Rs. 29-14. Moderns and Vasantas both put on As. 8 to Rs. 29-4. Sixty counts received good support, Finlays advancing by Rs. 2-4 to Rs. 64-12, Moderns by Rs. 2 to Rs. 64 and Raghuvamshis by Re. 1-4 to Rs. 60. Among 80s, Moderns hardened by As. 12 to Rs. 68-12. Mahendras changed hands today at Rs. 70-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	16-5-1956	9-5-1956	2-5-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)–			
120 Dull Cone Snia June ..	799 0	804 0	808 0
August ..	794 0	799 0	802 0
120 Japan (per lb.)	3 13	3 12½	3 13½
150 Japan (per lb.)	4 4	4 4	4 3
120 Italy (per lb.)	3 12½	3 12	3 13½

80s Modern	68 12	68 0	68 0

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 16*th May*

Firm conditions prevailed in the oilseeds market during the week under review. The chief impetus was provided by highly encouraging reports from upcountry centres which induced operators to extend their commitments. The castorseeds section ruled particularly buoyant on good offtake of castor oil by overseas interests, prospects of fresh business and tight supply position. Japan was the principal buyer of Indian oil. Australia was also interested in purchasing some quantity. Enquiries from the U.K. and the U.S., too, were in evidence. Induced by all these reports, crushers were busy buying castorseeds, the prices of which registered a sharp advance to touch new high levels. In sympathy with castorseeds and following bullish advices from terminal markets in the wake of good demand from oil-crushers and *vanaspati* manufacturers, groundnuts were also favoured at higher prices. The linseed section ruled steady, despite the recent heavy imposition of export duty on linseed oil. For shippers continued to be in the market with purchases of linseed oil for export against prior commitments. Prices, however, did not show any marked hardening tendency, as arrivals from North India centres and Hyderabad were quite large. In keeping with the general trend of the market, *kardi* and *niger* seeds tended to look up.

The castorseeds section, as already stated, ruled buoyant. There was a buying spree in castorseeds May delivery, while offerings were comparatively small. The tenders issued on Saturday aggregated not more than 500 candies, bringing the total upto that date to 8,400 candies. The contract touched a new high of Rs. 153-12 today, that is, Rs. 11-8 higher than the rate at which it closed last week. It was, of course, a shade easier at Rs. 153-10 at the finish. Over the week, September delivery rallied Rs. 9-12 to Rs. 158-14; at one time today, it was still higher at Rs. 159-6. Spot prices of castorseeds also moved up. Madras quality spurted by a rupee to Rs. 29-10. Kanpur gained As. 14 to Rs. 28-6. Castor oil B.S.S. rose by As. 13 to Rs. 17-15. Commercial was better by As. 11 at Rs. 16-12.

In the groundnut section, June-July contract increased by As. 11 to Rs. 36-6. August-September contract was done today at Rs. 37-3, as against Rs. 36-8 at which business in this contract commenced on Friday. Bold ready F.A.Q. and Coromandal spurted by a rupee each to Rs. 36-6 and Rs. 37, respectively. Khandesh gained a like amount to Rs. 37. Groundnut oil July delivery climbed up by As. 11 to Rs. 20 and June by As. 10 to Rs. 19-12. Ex-mill put on As. 10 to Rs. 19-10.

Linseed June-July delivery was throughout fully maintained at Rs. 33-14. Bold ready registered a rise of As. 6 to Rs. 34-6. Indore was higher by As. 8 at Rs. 34-8. Kanpur gained As. 2 to Rs. 32-8. Linseed oil ready was firm at Rs. 20-7, same as last week.

Among other oilseeds, *kardi* bold ready improved by As. 4 to Rs. 21 before easing to Rs. 20-12. *Niger* seed Madras quality fluctuated between Rs. 28-14 and Rs. 29-2 but finished at Rs. 29.

The following table shows the prices of oilseeds and oils yesterday, as compared with those at the end of the previous two weeks.

	16-5-1956	9-5-1956	2-5-1956

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 16*th May*

The sugar market ruled firm during the week under review also, notwithstanding bearish advices from the North. The chief factor which imparted firmness was the substantial demand for sugar from the Malabar Coast. Arrivals of indigenous sugar were also small, being only 7,200 bags, as against 7,200 bags a week before and 19,500 bags a fortnight before. The low arrivals were the result of the issue of slim release orders to the mills in the Bombay-Deccan and South India. The reports that the Regional Directorate (Food), Bombay, had tentatively agreed to accept offers for the purchase of the entire stocks of British refined sugar lying in Bombay also influenced the sentiment of operators favourably. Buying support was, therefore, sustained and sugar prices continued their upward march.

In the spot section, medium grain indigenous sugar rose by a rupee to Rs. 90-Rs. 93 per bag. Small grain gained As. 8 to Rs. 89-8. Large grain was fully maintained at Rs. 93-Rs. 98, same as last week. British refined sugar improved from Rs. 84 to Rs. 84-8 per bag of 2 cwts.

Vaisakh delivery contract for 'C' grade sugar increased from Rs. 90-2 to Rs. 90-6, but was quoted lower at Rs. 90-4 today.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

BLACK PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, 16*th May*

Malabar black pepper continued to rule easy during the week, owing to paucity of demand from both foreign and inland. Trading remained thin. What little business was done was for short covering. Alleppey came down to Rs. 719½, Tellicherry to Rs. 800 and garbled at Cochin to Rs. 123½.

Reports of broadening of new arrivals in Sarawak is responsible for the present feeling of despondency among Indian growers and exporters, who are reported to be holding reasonably large high-priced stock. Lack of short sales in the market is likely to make the market jittery, if the present resistance level of Rs. 700 is pierced through. This is most likely because New York dealers do not like to buy in a dropping market; they only buy when market stabilises at a certain level.

May shipment was done at $0.26. June and July-August-September changed hands at $0.26½ and $0.26⅞, respectively.

The possibility of enlarged arrivals of tenderable pepper from Malabar Coast made bull interest more cautious in adding to their commitment further. May delivery was done at as low as Rs. 685.

Today's nominal quotations are: Ready Rs. 100 per Bengal maund; May Rs. 685-Rs. 695 and June Rs. 700-Rs. 705 per candy of 5¼ cwts.

KIPS EASY

(From Our Own Correspondent)

MADRAS, 14*th May*

The E.I. tanned hides and skins market was lethargic, due to the *Ramzan* holidays and to the progress of the London tanned skins public auctions in the U.K. Shipment business was at a low ebb and buying was selective. Arrivals were moderate and clearance slow. Prices declined by an anna per lb. on cow hides, by As. 2 on calf skins, by half an anna on buff hides and by an anna on tanned skins.

Indications from the U.K. kip importers were at an anna lower than Madras levels, as buyers were trying to buy only at further declines.

In the London tanned skins public sales which commenced on the 7th inst., prices of prime goat skins were 6*d.* dearer than March levels, mediums unchanged and common sorts 6*d.* lower. In fact, the actual sales show greater loss to the consignors, as the lower selections met with severe reductions in prices. Out of 710,000 goat skins offered for sale, nearly a third remained unsold which is not a satisfactory feature. If the E.I. tanners were to reduce their output, it would be of help to all concerned, as there has been overproduction in this section.

HIDES STEADY

(From Our Own Correspondent)

KANPUR, 13*th May*

During the week under review, the conditions of the hides and skins market were more or less stable. Owing to some transport difficulties, new arrivals were not as considerable as those in the previous week. The main transactions were fathered by the local tanners. The Madras dealers were in for lighter variety of cow, as well as for goat and sheep.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 200 and 3rd grade Rs. 100 to Rs. 105 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep 1st grade Rs. 250 and 2nd grade Rs. 220 per 100 pieces.

FOODGRAINS STEADY TO FIRM

(From Our Own Correspondent)

HAPUR, 14*th May*

Foodgrain prices were steady to firm during the week. The Government of India is reported to be keeping close watch on the price trend and is confident that the situation will not go out of control. Mr. A. P. Jain, Union Minister for Food and Agriculture, informed the Lok Sabha that India's wheat crop this year was expected to be bigger than the average for the last three years, but still it might be necessary to import wheat for consumption and for building up reserves. In order to reduce the demand in the internal markets, the Government proposes to continue selling wheat freely from Central sales depots in important consumption centres like Bombay, Calcutta and Delhi.

Wheat prices here and in Punjab centres recorded gains during the week. At Hapur, it was now quoted at Rs. 13-2 per maund for average quality and at Rs. 14-8 for farm quality. Arrivals during the week averaged 2,000 maunds daily and stock position increased to 15 *khaties*. Outside buying enquiry was from Gujerat and east U.P. Prices at this time last year averaged Rs. 10 per maund for average quality and stock was 5 *khaties*. Rice prices continued to be steady, recording minor gains and were now quoted at: *Basmati* Rs. 25 to Rs. 33, *rangooni* Rs. 16-14 and coarse quality Rs. 15 per maund.

Firm Punjab advices and poor local arrivals—at an average of 50 maunds—accounted for sharp gains in the prices of gram which is now quoted at Rs. 10-4 per maund for local quality and at Rs. 10-12 for Punjab quality. Some imports were made from the Punjab and stock was put at 2 *khaties*. Barley and *bejhar* recorded a rise of As. 8 each to Rs. 9-8 and Rs. 9-4 per maund, respectively. Arrivals were still far from heavy. *Jowar* prices were steady on good offtake for seed purpose and prices of other grains were also firm.

The improvement in pulse prices was more pronounced and peas *dara* green was now quoted at Rs. 10-2 and white quality at Rs. 12-12 per maund. Arrivals were at an average of 1,500 maunds and stock was put at 15 *khaties*. Peas *dara* last year was quoted at Rs. 5-6. Demand from consuming centres of Madras still continued and east U.P. is a new buyer this year. Heavy quantity of *arhar* is reaching here by road and stock has swelled to 46 *khaties*, but prices have recorded gains to Rs. 10-13 per maund. Other pulses also recorded steady trend during the week.

Pulses futures recorded sharp gains during the week on vigorous bull support from east U.P. and latest quotations on Monday were: Peas *jeth* Rs. 10-0-0, peas white *jeth* Rs. 10-7, *arhar jeth* Rs. 10-14 and *urd baisakh* Rs. 17-5.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 14*th May*

The sugar market continued to rule dull and depressed during the week under review. The supply position was easy, while outside buying enquiry was very slack. The latest Government releases were not lifted. Available figures indicate that the indigenous sugar production in the country will touch new heights. Up to 30th April, the total production amounted to 1,649,804 tons, as against 1,484,856 tons in the corresponding period last year and stocks with the factories on this date aggregated 1,257,671 tons, as against 1,061,867 tons a year before. Out of the 142 factories in the country, 99 were still crushing as on that date. The mill delivery prices of sugar ran down further during the week, the latest prices as on *Monday* being *Jaswant* Rs. 27-14, Simbhauli Rs. 28, Mowana Rs. 28, Daurala Rs. 29, Amroha Rs. 27-8, Bijnore Rs. 27-8, Mansoorpur Rs. 28 to Rs. 29, Rampur Rs. 30-8; retail Rs. 30 and *khandsari* Rs. 22 to Rs. 26-8 per maund.

Better outside buying enquiry and improved loading facilities with a fall in daily arrivals to 150 maunds accounted for slightly better conditions in ready *gur* market. *Gur* was quoted at Rs. 10-8 per maund. There was small offtake during the week to Gujerat and stock position was put at 100,000 maunds.

Future *gur baisakh* delivery prices eased on delivery pressure, while *fagun* delivery prices moved both ways on speculative bouts of selling and buying. The latest prices are: *Baisakh* Rs. 9-7 and *fagun* Rs. 9-8.

PLANTING

(Concluded from page 962)

rubber goods manufacturers, as synthetic is found essential in the manufacture of an increasing number of products, as it possesses certain valuable properties which make its use in place of natural rubber advantageous. Rubber growers in India are, however, opposed to the scheme on the ground that it will affect their interests. They feel that a better, cheaper and more practical method would be to get all the requirements from the plantation industry itself, by giving all possible facilities for stepping up production. It may, however, be noted that, in a growing economy, the country will find considerable use for natural rubber and there need be no fear that the synthetic rubber production will replace the natural rubber. Even in America, where synthetic rubber production has made vast strides, immense use is being found for both synthetic and natural rubber.

The Ceylon Government has decided to remove all restrictions on the export of medium-grown teas to London for auction at Mincing Lane. The removal of restrictions will, however, be operative only till the end of June. The decision has been taken with a view to overcoming the effect of accumulation that might take place as a result of possible cancellation of some Colombo auctions during the *Buddha Jayanti* holidays. Under the Government regulated scheme, direct shipments of tea to London auctions are restricted to 65 million lbs. of high and medium-grown teas in equal proportions. There is no export restriction on low-grown tea.

BANKING

(Concluded from page 955)

Banks and through them on the open market operation committee of the Federal Reserve Board. Unless authority is to degenerate into a totalitarian power, the banks must be given statutory representation at least in an advisory capacity, in the formulation of monetary or credit policies by the Reserve Bank of India.

Exchange Reserves

The last important change relates to gold and foreign currency assets in the Issue Department. It is true that, under conditions of exchange control, what real reserves, as distinct from Government's own I.O.Us. or debased metallic coins or one-rupee paper notes, are at the back of notes issued is not of much theoretical importance. There being no free convertibility, people have no right to demand gold or foreign money against domestic currency. But from the psychological point of view, adequate gold and foreign currency assets are vital for the international respect of a monetary unit and avoidance of black markets.

It should not be surprising, if at the end of the second Five-year Plan, the volume of our currency stands at a figure of the order of Rs. 3,000 crores. Deposits of banks—commercial, co-operative and Post-Office—should then be not less than Rs. 2,000 crores—in fact they may be much more if the banking habit grows and banking expands. The total money supply could be of the order of Rs. 4,500 crores or more. The combined value of minimum gold and external assets in the currency reserves, even ignoring the possibility of their reduction under emergency, may be only Rs. 550 crores. This would be about 18 per cent. of currency and 12 per cent. of money supply. These are, indeed, very low figures and are likely to endanger external position of the rupee. A study of the gold and foreign currency reserves of other good banks of issue will confirm that this danger is real and not imaginary. There is no need to make such a drastic change at this stage. We can wait and watch. If an emergency does arise, there is always the President who can be requested to issue an ordinance. Why anticipate trouble now?

Rushing Too Fast

In India, we have been rushing too fast and often unnecessarily. To cover mistakes and errors, the officials want more and more power until there is complete economic totalitarianism. Loss of economic freedom is but a first step towards the loss of personal freedom or of democratic liberty.

Those who are independent and unbiased thinkers with no axe to grind marvel at the levity with which legislation on important questions is introduced in this country or the arguments which are advanced to justify such legislation. I refer to para (2) of the Statement of Objects and Reasons which contain the words:

"The opportunity to amend the Act is also being utilised to carry out certain further amendments of minor importance."

Local Boards are dismissed as being of minor importance. Instead of revitalising them, it would mean less headache to do away with them!

But what about fundamental changes crying so loudly to be rectified? For example, section 17, sub-section 13 of the Reserve Bank of India Act which permits the Reserve Bank in this tenth year of our freedom to open "an account with" or to make "an agency agreement with," and to act "as agent or correspondent of a bank incorporated in any country outside India"—but not with a bank registered in India. To discriminate against the banks of the country is a blot on the statutes of India; and the sooner it is removed the easier would it be for Indian banks to raise their heads in the international money markets. This wanton disparagement of the country's banks should have been removed on the first day of our independence. Do the Government and the Reserve Bank think this to be of no consequence to the national dignity of the country, or of its people or of its institutions, that it should not be rated even as a minor change to be made when the Reserve Bank Act comes up for revision?

The Reserve Bank of India is a terribly overloaded Central Banking Institution, not only responsible for correct monetary policy but also for many other functions not directly connected with such a purpose. When examining the Central Banking machinery most suited to this country, the question of creating separate agencies for licensing and examining banks should also be considered.

With the existing machinery to regulate credit not being fully employed, nor there being any urgency for added powers to the Reserve Bank, it would be safer for the legislators to insist on a comprehensive review of Indian monetary problems and to examine whether the federal type of central banking system will not be better suited to the country.

Among inventions to the credit of man's genius, money is the most wayward and unpredictable social tool in its behaviour. It has, therefore, perforce to be managed and wide powers are necessary for its manager. But, at the same time, the society has to insure that money remains a faithful and honest servant and its managers act wisely and judicially. Money should not cheat the savers through inflation, nor give windfalls to anyone through deflation. In order to have an adequate machinery to achieve such a purpose, a preliminary expert enquiry is a MUST.

SURVEY

(Concluded from page 951)

the State of Bihar. He held that the charge of breach of terms and conditions of the lessee levelled by the State Government was not substantiated. On the question of grant of certificate of approval, he held that the discretion conferred on the State Government under the Mineral Concession Rules was not an untrammelled discretion and the State Government could not refuse a certificate to a person who possessed the prescribed qualifications. A significant point made out in the judgment was that the object of the Mines and Minerals Act and the Mineral Concession Rules was development of mines and conservation of minerals. The Judge said: "The object is defeated if leases are granted for short term and that is why there is provision in the Mineral Concession Rules for compulsory renewal." He further pointed out that to use the Rules to negate the Corporation's right of renewal would be to defeat the very purpose of the Rules. Accordingly, he held that the Rules were no bar to renewal of the lease granted to the Corporation in 1926.

Notice

MADHAVLAL AND COMPANY (PRIVATE) LIMITED

MR. VIRENDRA MADHAVLAL BHATT, AS Managing Director of Messrs. Madhavlal & Co. (Private) Limited, was closely associated with the management of the concern in Bombay and Calcutta, along with the late Mrs. Shantagavri M. Bhatt, who was also a Managing Director and Chairman of the Company. Mr. Virendra Madhavlal Bhatt visited Yugoslavia and other countries in Europe last September and took the opportunity to renew old business connections and establish new ones for further expansion of their business. On the death of Mrs. Shantagavri M. Bhatt, Mr. Virendra Madhavlal Bhatt, in addition to being a Managing Director, has been appointed Chairman of the Board of Directors of the Company. The old experienced staff has been continued and the business of the Company is being conducted as heretofore, both in Bombay and at Mercantile Bank Building, 9, Lall Bazar Street, Calcutta.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. F=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up or share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

VOL. XCII. No. 2360 BOMBAY, 26TH MAY 1956 PRICE Rs. 1/8

AUDIT FOR LIFE INSURANCE

FOR long India has been groping in the dark about the form of administration to be followed in the case of State-owned commercial undertakings. Though it is yet to come to any definite conclusions on this subject and the form of management so far adopted for State enterprises varies from unit to unit, depending on their peculiar needs and requirements, it has come to be generally regarded that the joint-stock company system is preferable to other forms. The main reason for choosing this form is that it would provide for the largest measure of financial and administrative autonomy, without at the same time giving unlimited freedom from Parliamentary control. The basic idea in investing the State-owned industrial, commercial and financial undertakings with substantial autonomy is to enable them to work on business-like lines and produce satisfactory profits. Closely linked with this problem of form of management is that of public accountability of State undertakings. There are a few facets to this latter problem. And one of them is the manner of ensuring accountability to Parliament. Must all the corporations in the public sector be audited by the Comptroller and Auditor-General of India or should there be some exceptions to this rule?

Of late, the Government seems to be of the opinion that there is need for keeping some of its undertakings out of the purview of the Auditor-General. Thus, when the Imperial Bank was nationalised, it made no provision for the affairs of the State Bank of India to be scrutinised by him. Somehow, the absence of this provision went unnoticed at that time, as also for several months thereafter. It was only recently that the attention of Parliament was drawn to this lacuna—deliberately created by the Government—in the State Bank of India Act. But a section of the House was more alert when the Life Insurance Corporation Bill came up for consideration. Failure on the part of the Government to provide for auditing of the Corporation by the Auditor-General received the attention of some of the members both at the Select Committee stage and on the floor of the House when the Bill as amended by the Committee came up for discussion. It would seem that the Auditor-General himself has been responsible, in a way, for opening the eyes of Parliament to the drawback in the Bill. His alertness is, indeed, quite commendable, whatever the Finance Minister may have to say about the appropriateness or otherwise of the method followed by him for drawing the attention of Members of Parliament.

Opinion is sharply divided on the question of entrusting to the Auditor-General the responsibility for auditing the Life Insurance Corporation. When this question was put to the vote of the Lok Sabha, 24 members were for empowering the Auditor-General, while 128 were against. From this verdict, it may be contended that the vast majority is not in favour of allotting the task to the Auditor-General. But it is noteworthy that, in a House of 499 members, only 152, or less than a third, participated in voting on this question. Be that as it may, the grounds on which the Finance Minister, Mr. C. D. Deshmukh, opposed the association of the Auditor-General with the Corporation are not quite convincing. And in rejecting the reasoned plea of some of the members—these included a few from the Congress Party also—the House has displayed a regrettably poor sense of appreciation of the magnitude of the responsibility it is entrusting to the Executive without providing a proper check for ensuring efficiency and economy. It must be borne in mind, in this connection, that the Life Insurance Corporation is not subject to most of the regulations made applicable to private insurers. It has complete monopoly in the field of life insurance. There will, therefore, be no comparable criteria for measuring its efficiency. There is to be no separate representation to policyholders on the Board of Directors of the Corporation. Nor is there to be any limit on its expenses. No norms have been laid down for investing its funds. As it is to be brought into being by a separate Statute, the Corporation is not bound by the provisions of the Company Law, in which there is a separate chapter for State-owned companies. The Corporation will take over from free enterprise assets aggregating about Rs. 380 crores, with an annual premium income of about Rs. 50 crores. These resources will naturally grow in the coming years. It sounds strange to be told that, when such a large volume of public money is involved, the Comptroller and Auditor-General, who holds, under the Constitution, the status of an independent watch-dog and is answerable to no political party but only to the President, should have no control over it. To deny him that authority is to reduce further the democratic content of the Constitution already watered down by curtailing the rights of the judiciary in certain important directions.

It has been alleged in certain knowledgeable circles that nationalisation of life insurance has been carried out with the primary object of strengthening the hold of the party-in-power over the country. A vast army of volunteers, it has been pointed out, can be sustained through this Corporation in the guise of insurance salesmen, an army that will be useful for doing propaganda and ensuring a large flow of favourable votes at the time of elections to Parliament and State Legislatures. Whether this allegation is true or not, the extent of freedom that is given to the Corporation in the matter of expenses and investment, and the complete monopoly conferred on it are significant. The spirited, yet unconvincing, refusal of the Government to accommodate the demand for allowing the Auditor-General to check up the working of the Corporation is even more significant. Surely, it stands to reason that, if life insurance is not to be the plaything of politicians, the least the Government should have done is to concede this demand. By doing so, the Government will, it is needless to add, be providing for effective audit of the Corporation by an independent agency. And there can be no better independent agency than the Auditor-General who owes no allegiance to any political party or leader.

One of the main reasons for the Government's refusal to allow the Auditor-General to conduct the audit of the Corporation is that it will not be conducive to the efficient working of the Corporation. Elucidating this point, Mr. Deshmukh said:

"The Government have devoted very careful attention to this subject and, let me at once make it clear that they are ever willing, in fact, anxious, to associate the Comptroller and Auditor-General, to the maximum extent possible or advisable, with the financial working of State undertakings. Accordingly, the Comptroller and Auditor-General has been entrusted with the audit of accounts of authorities who function more or less under Government conditions—for instance, the Damodar Valley Corporation, the Industrial Finance Corporation or the Airlines Corporation—and also of Government-sponsored companies with whose transactions the staff of the Comptroller and Auditor-General are likely to be familiar. But, where important commercial considerations are involved, like the State Bank or the Insurance Corporation, since Government officers lack experience of the work in such enterprises, Government would not like the success of these recently nationalised ventures to be jeopardised by some violent change in the system. Such institutions cannot be run without the exercise of a large measure of discretion by the higher executives, and any system which makes it possible for audit to raise objections to the exercise of such discretion is bound to paralyse their working. Undertakings like the Insurance Corporation are basically different from Government's ordinary business and, until we have had some experience of their working, it seems to us to be best to maintain the *status quo*."

The foregoing defence of Mr. Deshmukh is, to say the least, very amusing. Are not airlines corporations commercial undertakings? In what way do they differ from life insurance, in so far as commercial considerations are concerned? Do they not need dash and enterprise for their successful working, in the same way as life insurance does? In our opinion, running a commercial air service is a more complicated business than selling life insurance with uniform rates under a State monopoly. The managements in charge of air services, for instance, have to keep abreast of technological inventions in the field of aircraft and their operation and have to face keen competition in overseas routes and with other modes of transport within the country. It can do this function effectively only if it is free from irksome audit restrictions. We have not heard any complaints that the progress of air services is being hampered by their financial accountability to Parliament through the Auditor-General. If civil aviation, requiring more drive and initiative than life insurance, can function without any friction, despite the audit carried out by the Auditor-General, we fail to see how the working of the Insurance Corporation will suffer, if it is subjected to his audit control. To give another instance. It is stated that the newly established State Trading Corporation is going to be under the control of the Auditor-General. As a commercial undertaking, it will require all the characteristics of a trading concern in the private sector. It will any day be a more complicated business than selling life insurance in a closed market. And yet the Commerce and Industry Minister has not fought shy of the Auditor-General, as the Finance Minister is doing for the Life Insurance Corporation.

Mr. Deshmukh complains that the Auditor-General has not the requisite type of experienced officers to conduct the audit of such commercial undertakings as the State Bank or Life Insurance Corporation. This is no argument at all for denying the Auditor-General his inherent right. If the latter has no men, it is the responsibility of the Government to see that he i

provided with more men. What steps has it taken to remove this bottleneck? That apart, if Mr. Deshmukh can find expert auditors to do the work for him, so can the Auditor-General. With as many as 149 insurance companies taken over by the Government, there should be a number of qualified auditors available for employment by the Auditor-General. The point is that Mr. Deshmukh would not concede to the Auditor-General his right to nominate auditors of his choice.

Mr. Deshmukh's insistence that his Ministry should have the dual role of administering and auditing life insurance, albeit through an autonomous (*sic*) corporation, is tantamount to the untenable request that the judge and the prosecutor shall be one. He was perfectly right when he described the Members of Parliament as the *real* shareholders of the Life Insurance Corporation. But he conveniently refrained from saying that the Finance Ministry was the Managing Agent of the Corporation. If the Managing Agent were to have the right to appoint the auditors, would the latter care to point out the glaring defects, if any, in the working of the business, especially when the Managing Agent has under his control the majority of voting rights? Further, the vast majority of the "real shareholders" of the Corporation is an ignorant lot. If, therefore, their interests are to be effectively safeguarded, the auditors of the Corporation should owe allegiance not to the Ministry in charge of the Corporation but to the Auditor-General, who is independent of the Administration, and will, in turn, submit his report to Parliament.

Even the contention of Mr. Deshmukh that the Auditor-General has no constitutional right to insist upon auditing all State-owned corporations is a nebulous one. As the Auditor-General rightly argues, all undertakings that derive their capital from the Consolidated Fund of India—the Life Insurance Corporation is one of them—are subject to his audit jurisdiction. If, however, there is a doubt on this point, the democratic solution is not for the Administration to ride roughshod with the backing of its vast numerical majority in the House but to refer it to the Supreme Court for a ruling.

The argument that, in Britain, the example of which India is said to be following in these matters, the State-owned industries are not audited by the Auditor-General and so India, too, can do what Britain does is also not convincing. It is beside the point, for Britain has not nationalised life insurance and thereby placed the individual savings directly at the mercy of political parties. Even the Labour Party gave up the idea of nationalising life insurance when it was in power. Further, democracy in Britain, where there is no illiteracy and where there are firmly established traditions, is more real than in India, where it is still a tender plant and 83 per cent. of its electorate is illiterate. It is a simple rule in logic that, to be fair, one must compare the like with the like. But, even in Britain, as Mr. Deshmukh himself admitted, there is no finality yet in these matters. Only a few days ago, the British Prime Minister yielded to the pressure from Tory back-benchers and agreed to appoint a select committee to go into the question of accountability of State undertakings to Parliament. It may be recalled that, at one time, the British Parliament had refused this demand.

As an alternative to the demand for associating the Auditor-General with the Life Insurance Corporation, Mr. Deshmukh has suggested that the House could entrust the responsibility to a special committee chosen from amongst its members which could, with the assistance of special officers, do "achievement audit." This is a ruse to placate the vanity of the Members of Parliament. It is common knowledge that most of the members of Parliament are laymen, with little knowledge of auditing. If a committee formed from among them is asked to do the specialist's job of auditing an insurance corporation, it will be no different from the blind leading the blind. A committee consisting of politicians, even if chosen to secure some representation for the different parties, will not be the right machinery which will not mistake the trees for the wood and which can sift carefully the chaff from the grain. For this purpose, independent expert enquiries at intervals of every five or six years should supplement the regular work of the Auditor-General. That, in our opinion, would be the right way of having "achievement audit." In any case, it would be clearly wrong to condemn the Auditor-General as a person who is so wooden as not to realise his responsibilities in a socialist State, undertaking industrial, commercial and financial activities. If the three speeches delivered by the present Auditor-General, Mr. A. K. Chanda, early this year—two at Madras and one at Bangalore—are any indication of his understanding of Governments' new functions, he can surely be regarded as an Auditor-General worthy of any progressive, modern socialist State. Read against the background of these three speeches, some of the observations of Mr. Deshmukh on the Auditor-General are unduly harsh and unwarranted.

CEILING ON INCOMES

BY his wise intervention in the debate in the Rajya Sabha on ceiling on incomes, Mr. Nehru has once again demonstrated his ability to lift a subject from emotional morass and acrimonious controversy to a higher plane of reason. Last time, he intervened, with similar effect, in the debate on Ambar Charka. His wholesome approach to this pet theme of a class of propagandists in this country brought a sense of realism into the debate. No less effective on the course of the debate was Mr. Nehru's exposition of the problem of ceiling on incomes. He summed up the entire problem when he insisted that socialism did not mean a "dead level of poverty," that one could not give effect to a proposal for ceiling on incomes and all that one could gain from talking about it was to satisfy oneself psychologically.

Mr. Nehru's statement, refreshingly clear and comprehensive as it was, should go a long way towards making the advocates of a ceiling on incomes see the problem in its correct perspective. Having started its career from an innocuous reference in the Taxation Enquiry Commission's report, the subject has gathered around itself the vehement emotional attachment of its suporters. In the last few months, it has been apparent that some people think that a ceiling could be straightaway imposed on incomes. Indeed, there were people who felt disappointed that it did not figure in the budget proposals. And yet, when one comes to think of it, it seems surprising that anybody could think of it as a practical proposition at all either now or at some future date. The Taxation Enquiry Commission had referred to it in a most guarded manner with a number of qualifications. But what led to public discussion and speculation about the prospect for a ceiling on incomes was the Commission's statement that "there should be a ceiling on net personal incomes after tax which, generally speaking, should not exceed approximately 30 times the prevailing average per family income in the country." People tore this statement from its context and averred that the Commission had set its stamp of approval on ceiling on incomes. The fact is that the Commission was for too realistic to commit itself to so rash a statement. For the Commission, after stating its view on ceiling on incomes, hastened to add: "We do not suggest that this is capable of immediate implementation, but we think that it is important to strive by stages for its implementation over a period of time. The accomplishment of this objective cannot merely be the result of tax changes, but must be related to an integrated approach along several directions." In all the subsequent controversy, this important qualification which the Commission attached to its general statement on ceiling was gradually lost sight of.

Early this year, Dr. John Matthai, the Chairman of the Commission, clarified this issue (*vide Commerce* dated 21st January 1956) by pointing out that the essence of the Commission's formula was that the upper limit to income should be related to the average income and that, in any case, it was not a rigid formula, since "equality in the context of a socialistic pattern of society must be dynamic as well as realistic." Finally, the Union Finance Minister, Mr. C. D. Deshmukh, declared, in the course of the debate on the Finance Bill, that ceiling on incomes implied ceiling on property and that a limit on incomes through ceiling on property was not a "feasible proposition, since it would involve payment of compensation."

Neither the essentially cautious character of the Commission's approach nor the clarification of the issue by both its Chairman and the Union Finance Minister has deterred people from persisting in their advocacy of the cause of ceiling on incomes. In both Houses of Parliament, resolutions were moved favouring the imposition of ceiling and these evoked a wide measure of support. But the practical issues were completely overlooked by those who supported the resolution. In general, their attitude was: "We want a ceiling on incomes. And we want it here and now."

In their anxiety to get the Government to impose ceiling on incomes, the sponsors of the resolution had overlooked two important factors. In the first place, they overlooked the very source—the Commission's report—from which they originally derived their inspiration. Not only did they ignore the important qualifications which governed the Commission's approach to the problem, but they varied even the formula which the Commission had suggested. Dr. Matthai calculated that, "at the present estimated *per capita* income, on the assumption that an average family consists of five persons, the Taxation Enquiry Commission's formula will mean a ceiling of approximately Rs. 3,500 per mensem." The sponsors of the resolution in the Rajya Sabha would not even concede this. They demanded a ceiling at Rs. 25,000 a year (or about Rs. 2,100 per month) and the determination of the maximum emolument of a civil servant at a sum not exceeding Rs. 1,800 per month. Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, quoted some interesting statistics. He said that, out of 15,96,466 Government servants as on 30th June 1954, only 89 persons got over Rs. 3,000 per month. He pointed out that the ratio between the lowest and the highest pay-scales in Government services had gradually come down and that it was now no more than 1:32. Apparently, the advocates of a ceiling on civil servants' income were not satisfied with this ratio.

The second factor which the sponsors overlooked was that there had occurred a change in the Government's thinking on the subject. They might have guessed it from the way in which the Finance Minister dealt with the question of ceiling on incomes. Also, if they had read the report of the Planning Commission, they would have noted that the Commission regarded a ceiling on incomes as the end-product of a process, rather than a beginning, and a floor for incomes, or a guarantee of certain minimum natural standard of the essentials of civilised life as being "no less important than a ceiling at top levels." In other words, the Commission, after an elaborate examination of the problems, had reached the very sensible conclusion that a "ceiling cannot be imposed merely by legislation."

Mr. Nehru's statement is an excellent synopsis of all the instructive discussion that has taken place so far on the subject of ceiling on incomes. He emphasised that, for underdeveloped countries like India, the most important thing was to increase production. He agreed that disparities should be reduced. Referring to the demand for a cut in salaries of civil servants, he said that it was an "extraordinary proposition to ask to begin a lopping off of the heads and cutting of salaries of the services." He knew that some services were highly paid, but by far the majority were not paid heavily at all. He condemned—very rightly—vulgar display of wealth but added that to think that ceilings on income could be brought about by legislation was "wishful thinking." By way of reply to those who had urged a ceiling on incomes in the name of socialism, he said:

> "Socialism is not something which can be defined as a dead level of poverty. I do not think socialism can be equated with poverty. You may call it a dead level of poor people in the country. That is not an ideal to be aimed at. Socialism only becomes socialism when there is something worthwhile to socialise, when the productive apparatus is functioning, so that it produces wealth which does not concentrate in the hands of a few. Therefore, it becomes quite essential for a country like ours where the level of living is low to produce more wealth and to see that that wealth is properly distributed. The most important thing is production of wealth. Everything else is secondary or tertiary."

Explaining the concept of socialism, Mr. Nehru deplored that the word was used to justify all kinds of suggestions, as if "socialism means cutting off of the head of everybody who is above a certain height." Realistically enough, he affirmed that the question of reducing disparities in incomes could be looked at from two points of view—raising the income of the people at the bottom and reducing the income or the standard of living of a few people at the top. He agreed that both processes had to continue, but said that the major process was raising the income of the people at the lower end of the income scale. These are wise words. It is to be hoped that their main purport will not be lost upon those who, in the name of socialism, clamour day in and day out for a ceiling on incomes. Mr. Nehru's statement ought to be an eye-opener to these men.

RUSSIAN GOLD FOR INDIA UNLIKELY

EQUITIES IN SHORT SUPPLY—TIP TO STATE TRADING CORPORATION

THURSDAY, 5 P.M.

MARKET GOSSIP

BARRING a marked fall in the price of bullion, the week has been uneventful for the city markets. The drop in bullion is a sequel to the earlier push by the bulls. The sizable imports of silver coin from Tibet towards the tag end of the traditional busy season had not been expected by the bulls; they, in fact, proved to be the proverbial last straw on the camel's back. Though sizable, these imports have by no means been heavy; yet they have been sufficient to prick the bubble. Silver prices are now standing at levels which are not attractive enough for ordering further imports of coins from Tibet. This shows that the pace of consumption of silver in India has gone down appreciably, not a surprising feature, considering the growing use of stainless steel for purposes of presentation and domestic wares. Another important factor for the reversal of the trend is the stringency of credit. The decline in gold prices has been relatively less spectacular as compared with silver. It is due partly to the drop in white metal and partly to profit-taking by bulls, in view of the possibility of a slow down in offtake in the near future. It must, however, be mentioned that the bulls have not yet completely given up their hopes and that the technical position of the market is still in their favour, as witness the high budli rates paid by the bears for both the metals.

The arrival of silver coins from Tibet, now a part of Communist China, has given rise to speculation in certain quarters that gold from Russia may be offered for sale in India. This is most unlikely. If Tibet has been allowed to export silver coins to India, it is because that country needs some goods from India and has probably no other means of paying for it. Before Tibet became a colony of China, it used to export almost all its wool through India. This provided it with sufficient foreign exchange for buying goods from India. But ever since it came under Chinese suzerainty, the bulk of its wool clip has been going to China. India's trade position with Russia and its satellites is different. Very soon, India will have an adverse trade balance with them, owing to import of steel, armaments, steel plant, oil drilling equipment and other machinery. Indeed, it would be a problem for India to find the means of paying for these imports. Russia's purchases of Indian goods and commodities are slow and halting, despite its loud promises. The balance of payments position with Russia would become even more difficult, if India were to allow that country to sell gold also. The apprehension of Russian gold coming to India is thus unwarranted. Even if Russia is keen on selling gold in the Indian markets, the Government of India, which is quite alive to the foreign exchange requirements of the second Plan, will not simply allow it. Further, the Russians themselves will be the last people on earth to reduce their gold reserves unnecessarily.

* * * *

The share markets are listless, but the trend is firm. A prominent bull operator booked a part of his profit in steel and textile shares; this, however, has had no sustained effect either on values, or on sentiment. Over the week, prices of equities reveal only minor variations. The leading speculative counters are still in the grip of bulls. Despite the strident rise since the last Central budget and the consequent fall in equity yields, the floating supply of good scrips is believed to have narrowed down. This means two things. One, investors are not parting with their holdings in the hope of still better prices in future. Two, as not many new companies are coming up and as some of the existing well-established companies are being directly allowed to expand their activities in new lines of production, those who have accumulated some savings and want to invest them have to go in for only the limited supply of shares of existing companies.

In spite of the enormous demand for cement, steel, coal, chemicals and heavy engineering products, there have not been any new companies worth the name with an issue to the public. Even in consumer goods industries, the position is not different. No new cotton mills have been started for several years now, although the demand for cloth and yarn is at a record level. Only one new paper company has been started in recent years, even though the prospects for paper and pulp industry are extremely bright. The same is the case with soap, matches, vegetable oils, and such light engineering industries as bicycles, sewing machines and electrical goods. Shipping is another field where no new talent is forthcoming. May be, here and there, a few small concerns have been started. But, in most cases, they are either family concerns, or private limited companies or public limited companies with a small number of shareholders. In an expanding economy like that of India, there should have been at least dozens of new companies of a fairly large scale. But the economic policy of the Government is such that the growth of large new companies is being arrested. The new company and tax laws, coupled with the Government's policy of expanding the public sector and the co-operatives, are primarily responsible for this regrettable state of affairs. We are told *ad nauseam* that it is the avowed policy of the Government to prevent concentration of economic power in a few hands. But what is happening in actual practice is more and more concentration in the hands of bureaucracy and a limited number of *entrepreneurs*, who have already enough on their hands.

There is no indication yet that this trend will change in the near future. It is now 15 months since the I.C.I.C. was formed, in order to encourage the growth of new industries in the private sector. But only two new companies—one a paper mill and another a chemical factory—have been floated under its auspices so far. A fairly big issue relating to a new sugar company, already in nominal existence, has been hanging fire for a long time. It has not materialised so far, because of some handicap or other arising from the Government's economic policy. At the time the Corporation was floated, it was expected a good number of companies with foreign capital participation would come into being fairly quickly. Not a fraction of this expectation has been realised so far. The fault is not that of the Corporation but that of the Government. When conditions in the country are such that domestic capital and *entrepreneurial* talents are not forthcoming, it is too much to expect that these two prerequisites for production will flow from foreign countries.

With the floating stocks of good investment scrips shrinking, even the custodians of life insurance are reported to be buying equities of the existing A class companies on a yield basis of 4½ to 5½ per cent. At one time, there were even strong rumours that they would be buying Indian Irons, the yield on which is well below 3 per cent. It is not known whether there is any substance in them. But what else can the custodians do, except to buy the industrial scrips at the ruling prices, if they are to maintain the return on their investments and show a good profit?

Another factor that is keeping up the buoyancy of equities, despite all the tax imposts in the last budget and the likelihood of further imposts in the coming years, is the prospect of heavy inflation. The impact of this inflation on equities may be quite strong, if the number of new flotations with reasonable prospects, does not increase.

* * * *

While the Government's economic policy is not conducive to the growth of new companies or the flow of foreign private capital, the authorities have shown enough evidence of their anxiety to help the existing industries in the private sector. The export duty on coarse cloth was abolished about a fortnight ago, with a view to meeting the growing competition in overseas markets. Similarly, the import duty on pig iron was abolished, in order to help the domestic foundry industry which has been suffering from a shortage of this essential raw material. At the Export Advisory Council last week-end, the Minister for Commerce and Industry admitted the necessity for sustaining the financial strength of the jute industry and for toning up the health of the tea and coffee gardens. Ever since this avowal of his, there have been reports of the Government fixing a floor price for jute manufactures, the object here being to ensure a margin of profit for jute mills. It is not clear what exactly this report means. If, however, the idea is to give a sort of subsidy to the jute industry, it is quite understandable. After all, by levying heavy export duties, the Government did not allow the industry to take full advantage of the boom in jute goods market and build up strong reserves for the rainy day. Further, by prolonging these duties at relatively high levels even after the trend of the world jute markets had changed, the Government encouraged the growth of competitors in other parts of the world, especially in Pakistan. Very recently, the Government compelled the jute mills to increase their production. This action has strengthened the bullish fervour in the raw jute markets and brought down the profit margin of mills to unremunerative levels. The Government is thus morally bound to go to the rescue of this premier export industry. Above all, India needs foreign exchange very badly and it would not be a bad idea to pay a price in rupees to domestic manufacturers in order to earn foreign currency. One way of subsidising the jute mills will be for the authorities to buy jute goods under certain conditions and at specified minimum prices that will give a decent profit to the mills and resell them for export when there is demand, even if such re-sale means a loss.

* * * *

It is now being increasingly realised that the foreign exchange budget may well turn out to be the weakest link in the chain of the second Five-year Plan. The most urgent task that faces the Government is to strengthen that link. And it is obviously a task which calls for expert attention and prompt action on the export front. The recent meeting of the Export Advisory Council has done much to spotlight this problem. Textiles, jute and tea are the tripod on which India's export trade stands. Each leg of this tripod has its own weakness. It is the duty of the Government to see that these staple lines of export do not languish for want of care and assistance and that the other lines of trade are simultaneously developed.

Export trade, however, is a singularly difficult sector of a country's economy to handle. This is so, because it cannot always be controlled, even through appropriate measures in the domestic sphere, for, much depends on the state of the overseas markets and the relative position of the rivals over there. The emergence of Japan as a leading exporting country has already affected adversely India's position as a textile exporter. Indeed, reports from Tokyo suggest that Japan is making a fresh bid to capture a somewhat larger proportion of South-East Asian markets than it has been able to secure so far. With Government backing, Japanese industrialists, according to the Tokyo correspondent of the *Financial Times*, are planning an independent all-Japan policy of trade expansion in South-East Asian markets. It is stated that the powerful Japanese Federation of Economic Organisations—Keidanren—and the Asiatic Society—Ajia Kyokai—are the driving force behind the new campaign. A joint committee of both bodies envisages a central organisation like Japan's pre-war South-East Asian Development Corporation, which opened the way for the "notorious" Greater South-East Asian Co-prosperity plan. The proposed body, it is further stated, will be financed by Government investment, private funds, and loans from the Export-Import Bank of Japan. Funds, equipment and technical aid will be made available for the development of South-East Asian areas in return for access to raw materials, but the Japanese naturally expect that they will also get their foot in the door for subsequent exports.

It is believed that Japan has received specific requests for assistance from various countries—from South Viet Nam for establishment or shipyards and aircraft overhaul facilities, from Pakistan for sugar-refining, cement and machine-manufacturing plant, from Cambodia for railway and port development, from Siam for development of fisheries, refrigerator plant and from Burma for a triangular arrangement under which W. Germany will construct and Japan will maintain steel manufacturing plants. It is true that, in few of these lines, is India a rival to Japan. The significance of this move to India is, however, indirect, in that, if Japan comes to dominate the economy of the South-East region to a greater extent than now, it might conceivably reduce still further India's chances of securing a larger entry into these markets.

This development, which is still in the early stages, has a certain obvious lesson. It shows that export weather is not always fine weather and that it can change frequently in a world where nearly all countries have set for themselves the maxim "Export or perish." A new feature of world trade, as the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, pointed out, in the course of his address to the Export Advisory Council, is a "pronounced inclination on the part of underdeveloped countries to give up multilateral trade for bilateral agreement—partly by barter agreement and partly by single country licences in order to sell their own surplus agricultural commodities." Perhaps, this "inclination" which, according to the Minister, promises to reverse the trend established in Bretton Woods and Havana, is not confined to underdeveloped countries alone. Even industrially advanced countries are increasingly resorting to bilateral trade agreements. They find that such agreements are necessary, in view of the fact that Communist countries are expanding their trade with the non-Communist world. So far as underdeveloped countries are concerned, this trend reflects the failure of the free world to provide a solution for the problem of surplus produce. The economically advanced countries, as Mr. Krishnamachari said, cannot blame the underdeveloped countries, because it is the farm policy of the U.S. that makes it difficult for them to cultivate the Havana spirit.

In this context, there is certainly some justification for India's State Trading Corporation. It will obviously take some time before the Corporation gets into stride. Meanwhile, many people are rightly anxious that it should supplement, not supplant normal export efforts in this country. But the fear is that it might do so. Some members expressed such a fear at the meeting of the Export Advisory Council. In his opening speech, Mr. Krishnamachari made a brief reference to the Corporation but refused to define its functions. He said:

"I have been asked from time to time to define the orbit of the operations of this Corporation. If I were to do this, I shall defeat the main purpose for which this organisation was brought into being. Its main purpose is to stimulate trade, primarily export trade, and incidentally import trade, and in this task it has to fill many gaps in our foreign trade structure. I cannot, therefore, agree to limit its activities to any set of gaps now known until I know what the entire gamut of the gaps happens to be."

Although the Government has not defined the scope of the State Trading Corporation, it is reasonable to expect that, in the first instance, the Corporation may conceivably take to trading with Communist countries which also have similar State trading organisations. In this connection, it seems necessary to sound a note of caution. The authorities will do well to incorporate a special clause in the sale contracts they enter into with the U.S.S.R. and China and other East European countries. The Corporation should take an undertaking from the buyers that the particular purchases made by them should be used for their internal consumption only and should not be reshipped to any other country or countries. This is because, there will always be a possibility—if not immediate, at least remote—that these goods may be reshipped to the U.S., the U.K., and Holland and/or to any other country for earning dollars or transferable sterling to the detriment of India. It will be better if the Government, after studying the requirements of each buying country, fixes a quota for each of them for all of India's exportable commodities. Nothing more should be sold. For instance, anything beyond 2,000 tons of Malabar black pepper which are estimated to be more than its annual requirements should not be sold to the U.S.S.R. In this connection, it may be recalled that, some time in 1928, Cuba sold to the U.S.S.R. more than 200,000 tons of Cuban sugar on credit or deferred payment terms. After buying this sugar, the U.S.S.R. sold equivalent quantity of golden syrup made out of that sugar to the U.K. for cash.

RESTRAINED ACTIVITY IN SHARES

VALUES MOVE NARROWLY

(From Our Own Correspondents)

BOMBAY, *24th May*

THE week's review of the Stock Exchange covers only four sessions. For, besides the usual fortnightly closing on Saturday last for settlement, the Exchange remained officially closed today on account of *Buddha Jayanti*. During this short week, activity was restricted, and fluctuations were narrow. A few counters, however, attracted wider attention and recorded sizable gains over the week. The undertone remained steady, in the absence of any adverse influences. Encouraging advices from Calcutta also aided sentiment. Indian Irons, which were concerned in large-scale buying activity by a leading Calcutta operator during the previous two weeks, were hesitant, although they managed to score some fractional gain. Except for a few selected scrips, textile shares in general found very little enthusiastic support, thanks to growing anxiety about exports of cotton piecegoods.

The Bombay Stock Exchange authorities announced this week that trading in *ex*-right shares of the Tata Iron and Steel Ordinaries would commence on 4th June. Official trading in letters of renunciation began on Monday this week. The Stock Exchange also announced the procedure for carrying forward on 1st June and for quotations thereafter. It is stipulated that for the purpose of settlement on 8th June, there will be one contract for five *cum*-right shares, while for the 22nd June settlement two contracts will have to be made, one for five *ex*-right shares at the *ex*-right price and the other for five new ordinary shares through letters of renunciation. Of these two contracts for the 22nd June settlement, the *ex*-right contract will be a forward one, while the second one will be a cash transaction. The Stock Exchange will also announce on 1st June the rates for the *ex*-right shares and letters of renunciation.

Section-wise, steel shares were erratic. After an early advance from Rs. 251-12 to Rs. 256-12, Tata Ordinaries quickly dropped to Rs. 249-8 on Tuesday, following the aforesaid announcement regarding procedure for *budla* on 1st June, on fears that there would be heavy unloading in *cum*-right shares in the forthcoming settlement. At the close, however, there was a mild recovery to Rs. 251-12. Business in Tata Steel rights was done at Rs. 58-8. Indian Irons were marked down from Rs. 37-11½ to Rs. 37-3, but gathered strength, on higher advices from Calcutta, to Rs. 38 at the close.

The concern expressed by the Union Minister for Commerce and Industry over the declining trend in textile exports induced caution in textile shares. Bombay Dyeings were irregular. After a spurt from Rs. 660-10 to Rs. 671-4 early in the week, the shares receded to Rs. 655-10 on Tuesday. This recession was partly regained when they closed yesterday at Rs. 662-8. Centurys rose from Rs. 547-8 to Rs. 557 on large speculative support. Kohinoors reacted from Rs. 383-12 to Rs. 374-8 before recouping to Rs. 376. Central Indias were featureless at Rs. 142 and Finlays at Rs. 340. Gokaks were up by a rupee to Rs. 233. *Indu Ordinaries* shaped well with a rise of As. 6½ to Rs. 14, on rumours about higher dividend. Brady group mills again attracted good attention, New Citys advancing by Rs. 3-2 to Rs. 176-14 and New Greats by Rs. 9 to Rs. 250. Ruia group shares also were in the limelight, Bradburys gaining Rs. 5 to Rs. 205, Dawns Rs. 5 to Rs. 125 and Phœnix Rs. 8-12 to Rs. 140. Podars were lower by Re. 1-4 at Rs. 183-12 and Shree Niwas by Re. 1-14 at Rs. 211-4. Simplex lost Rs. 2 to Rs. 222. Standards rose by Rs. 3-12 to Rs. 441-14, while Svadeshis shed Rs. 3-8 to Rs. 230-8 and Tatas Rs. 2 to Rs. 53.

A rise of Rs. 2 to Rs. 160 in Bank of Indias was the only notable feature in the banking section. Central Banks were better by As. 8 at Rs. 51-4, while their new shares were marked down by Rs. 2 to Rs. 52-8. Barodas were unchanged at Rs. 98, while United Commercials were done As. 12 lower at Rs. 50 and Unions As. 2 down at Rs. 6-10.

Insurance shares were dull and very few transactions were reported. New Indias changed hands at the previous week's rate of Rs. 43, while Indian Mercantiles were taken up Re. 1 higher at Rs. 42.

In the electricity section, Tata Hydro and Power shares were in demand. Tata Hydros fetched Rs. 3-8 more at Rs. 127 and Tata Powers were done Rs. 11-4 higher at Rs. 1,306-4. Tata Powers new gained Rs. 10 to Rs. 1,260. Andhra Valleys were maintained at Rs. 1,193 while their new shares had business Rs. 67-8 lower at Rs. 1,155. Ahmedabad Electrics disclosed no change at Rs. 96-14, as also Bombay Suburbans at Rs. 114-1, while Surat Electrics dropped Re. 1-9 to Rs. 120-10.

In the miscellaneous section, cement shares were dull. A.C.Cs receded from Rs. 220 to Rs. 217, but revived to Rs. 219 at the close. Digvijays were quiet at Rs. 193. In the sugar group, Belapurs moved up from Rs. 233 to Rs. 236, but dropped at the close to Rs. 234. Phaltans declined by Re. 1-8 to Rs. 150-8, while Walchandnagars rose by Re. 1-4 to Rs. 250. Engineering and mining shares received some support. Alcocks moved up by Rs. 2-8 to Rs. 352-8. Premier Constructions firmed up from Rs. 176-8 to Rs. 180 and Tata Locos from Rs. 153-8 to Rs. 155. Larsen and Toubros gathered As. 3 to Rs. 16-4. Shivrajpurs put on Rs. 2 to Rs. 101. Indian Coppers were a shade better at Rs. 7, on expectations of higher dividend, though the market was a bit disappointed over the terms of the Company's new issue, because they fell below expectations. B.B. Petrols were quiet at Rs. 4-2½.

In the shipping and transport group, Scindias came up from Rs. 18-6 to Rs. 18-11 before closing at Rs. 18-9½. India Steamships gained As. 2½ to Rs. 8-12½. Great Easterns were, however, unchanged at Rs. 17-12. Hindustan Motors were marked down a little to Rs. 9-12. Premier Automobiles were quiet at Rs. 89-8. Among other miscellaneous industrials, Bombay Burmahs attracted heavy selling pressure and were pushed down from Rs. 638-2 to Rs. 625-10, but, on bear covering and support at lower levels, gained to Rs. 633-12. B.I.Cs were done As. 2 lower at Rs. 11-2. National Rayons were featureless, but steady at Rs. 246. Tata Chemicals were steady at Rs. 18-6. Tata Oils gained As. 8 to Rs. 49, while Wimcos were held at Rs. 189-6.

* * * *

Calcutta Stock Exchange

CALCUTTA, *22nd May*

With a slight increase in the volume of business, the Calcutta Stock Exchange displayed better conditions during the week under review. Speculative counters drew considerable interest following support by a powerful bull operator to Indian Irons and Indian Coppers. Real investment buying was insignificant, the more so yesterday and today. Speculative enthusiasm for Indian Irons was fanned by rumours of an impending rights issue. The unlikelihood of nationalisation of the existing private units in industries continued to be the main factor for purchases by bulls. The Finance Minister's reluctance to reduce life insurance compensation at the higher level as recommended by a section of M.Ps., the Prime Minister's forthright rejection of the demand for fixing a ceiling on incomes and his terming this proposal as improper and impractical, and substantial increase in notes in circulation suggesting greater industrial and trade activity were noted with satisfaction and were fully exploited by bulls.

The much-awaited bonus issue for Indian Copper Corporation was announced during this week. The terms of the issue fell below the expectations of the market. For, it had been thought earlier that the ratio would be one for one, and the price had shot up on this expectation. Subsequently, however, prices gave way as the ratio was thought to be three for five. The actual issue when it came about turned out to be 1:2. However, the decline in the rate was only fractional as operators pinned their hope on the announcement of an encouraging dividend in a few weeks' time.

Sectionwise, among coals Bengals were earlier steady at Rs. 531. From Rs. 14 Burrakurs rose to Rs. 14-13 by today, while Equitables sagged from Rs. 32-6 to Rs. 30-1. Raneegunges were dealt with at Rs. 11-7, as against Rs. 11-14 previously.

There was a definite broadening of sentiment in textile shares, following the improved outlook for mills. However, prices did not depict any noticeable change towards higher level. Kesorams, at Rs. 17-15, and Bengal-Nagpurs, at Rs. 8-9, were higher by As. 2 each.

Among minings, for reasons already stated, Indian Coppers sagged earlier from Rs. 7 to Rs. 6-13. Today, however, a recovery set in to push the rate up to Rs. 6-15. Metal Corporations were favoured by buyers and were pushed from Rs. 10-10 to Rs. 11. On profit-taking, Burma Mines were a few annas lower at Rs. 3-13.

Jutes recorded an increase on support at lower levels. Barnagores picked Rs. 3 to Rs. 143, and Anglo-Indias after recovering from Rs. 178 to Rs. 180 sagged to Rs. 176 today. Opening at Rs. 24-14, Nationals gained to Rs. 25-8. On Monday the rate fell back to Rs. 24-14, before recovering to Rs. 25-2. On moderate buying support, Kinnisons recovered to Rs. 168-8 from Rs. 164. On balance, Howrahs gained As. 5 to Rs. 23-3.

Engineering scrips received good speculative support. Indian Irons, after opening at Rs. 37-10, soon gained to Rs. 37-12 and maintained the higher level on Friday and Monday. Today, however, they gave way to Rs. 37-6. After rising from Rs. 34-14 to Rs. 35-2 Jessops reacted to Rs. 34-11, but today the rate went up to Rs. 35-3. Braithwaites were unchanged at Rs. 27-14, while Indian Galvanizings were lower at Rs. 24-12.

Cement shares invited support. Ashokas hardened from Rs. 11-2 to Rs. 12-4. Sone Valleys were pushed up from Rs. 8-8 to Rs. 8-12. Assam Bengals rallied from Rs. 6-9 to Rs. 7-1.

Teas recorded a lower volume of business. Even so, there were selected features. These included the advance from Rs. 19-12 to Rs. 23-4 in New Samanbaghs. Tezpores recovered from Rs. 24-7 to Rs. 26, and Brooke Bonds from Rs. 24-2 to Rs. 24-4.

Among miscellaneous industrials, India Steamships recorded a steady rise from Rs. 8-11 early in the week to reach Rs. 9 today. National Carbons were in good demand and, at Rs. 27-7, registered a fractional rise. Indian Cables were another favourite counter and hardened from Rs. 31-4 to Rs. 32-8. At Rs. 22-14, Rohtas Industries were better by As. 6. Darbhanga Sugars advanced from Rs. 22-12 to Rs. 22-15.

* * * *

Madras Stock Exchange

MADRAS, *22nd May*

For the third week in succession, the Madras Stock Exchange exhibited a firm tone. The renewed firmness was aided by expectation of the current signs of inflation gathering considerable momentum in the coming months. The expectation was based on the view that the dose of deficit financing would be larger than what is envisaged in the second Five-year Plan. The operators would appear to feel that, as a hedge against inflation, equities would gain in value further. They, therefore, were inclined to extend their commitments, and the sellers being reserved, quotations for most of the scrips continued their upward march.

The textile section ruled particularly buoyant on hopes of a substantial rise in export business in cloth, following the abolition of export duty on coarse counts cloth. Venkatesas provided the brightest spot; they forged ahead by Rs. 15-8 to Rs. 197 *cum-div.* Ashers and Metturs were also keenly sought, their values advancing by Rs. 11-4 each to Rs. 176-4 and Rs. 472-8, respectively. Coimbatore Spinnings firmed up by Rs. 9 to Rs. 107. Janardhanas rallied Rs. 7 to Rs. 117. Bangalore Woollens, Coimbatore Cottons and Vijayakumars spurted by Rs. 5 each to Rs. 575, Rs. 345 and Rs. 135 *cum-div.*, respectively. Radhakrishnas improved by Rs. 3-8 to Rs. 303-8 *cum-div.*, Gnanambikais by Rs. 3 to Rs. 150, Lakshmi 'A's by Rs. 2 to Rs. 102, Premiers by Re. 1-8 t.. Rs. 204 and Coimbatore Pioneers by Re. 1-4 to Rs. 302-8 *cum-div.* Pankajas were done at Rs. 81 *cum-div.*, as against Rs. 80 last week. The Directors of the Pankaja Mills Ltd. have declared a dividend of 4 per cent. on ordinary shares for the year 1955; in the last three years, it will be recalled, no dividend was paid.

Coffee shares in the planting section met with sustained buying support, induced by renewed expectation of a further export quota. Coffee Lands rallied As. 9 to Rs. 24-3. Kadur Coffees picked up As. 5 to Rs. 2-15. Consolidateds strengthened by As. 4 to Rs. 20-2. Mysores were better by half an anna at Rs. 2-13-6.

Enquiries for tea shares broadened further and there were more additions to prices. United Nilgiris climbed up by Rs. 9 to Rs. 386. Mlamallays scored an impressive gain of Rs. 3-12 to Rs. 75. Peermades advanced by a rupee to Rs. 39 *cum-div.* Coonoor Teas recorded a rise of Re. 1-2 to Rs. 32-8 *cum-div.* Coorg Teas and Nilgiri Teas gathered As. 4 each to Rs. 12 and Rs. 14-8, respectively. Nonsuch Teas were transacted at Rs. 37-2 *ex-div.*, as against Rs. 37-12 *cum-div.*

Rubber shares had also good buyers. Nenmenys increased by Re. 1-4 to Rs. 25. Rajagiris put on As. 6 to Rs. 26-2. Cochin Malabars improved by As. 2-6 to Rs. 9-5-6 and Teekoys by As. 2 to Rs. 14-7. Kailas were better by 18 pies at Rs. 6.

Among miscellaneous industrials, Textools elicited very good attention of some operators who lifted up the quotation by Rs. 7 to Rs. 173. Madras Safes were also bid higher by Rs. 4 at Rs. 50. Travancore Cements rose by As. 8 to Rs. 12-14 and Dalmia Cements by As. 4 to Rs 15-12. Business in Mysore Coffee Curings was put through As. 8 higher at Rs. 12-4. Indian Aluminiums gathered As. 6 to Rs. 21-10. Indian Steel Rollings, Rallis and Singarenis put on As. 4 each to Rs. 15-12, Rs. 34-12 and Rs. 10-8, respectively. Travancore Rayons had buyers at Rs. 15-9 *ex-div.*, as against Rs. 15-6 a week before.

NATIONAL BANK OF INDIA
LIMITED
Incorporated in the United Kingdom (Established 1863)
The Liability of Members is Limited
BANKERS TO THE GOVERNMENT IN KENYA, UGANDA, ZANZIBAR AND ADEN

Subscribed Capital £4,562,500
Paid-up Capital £2,851,563

NEWS IN BRIEF

THE Rockefeller Foundation has announced a grant of $163,280 to aid the field study of population dynamics in India.

A successful experiment in artificial rain-making was conducted in Ootacamund last week by a team led by the Chief Engineer (Irrigation) to the Government of Madras. Three hours after a mixture of calcium and sodium chloride was vapourised through a huge funnel, a fairly heavy shower came down.

The Government of India has decided to join the new International Wheat Agreement for a period of three years commencing from August 1956. India's quota under the agreement will be 200,000 metric tons, as against 1,000,000 metric tons under the existing agreement which will expire in July next.

During the first year of its production, the Integral Coach Factory at Perambur is expected to turn out twice as many passenger coaches as it was originally scheduled to do. As the full target production of 350 coaches is now expected to be reached earlier than originally proposed, global tenders for additional machinery have been invited.

The Indian Central Oilseeds Committee has approved of a five-year scheme for breeding and agronomy of oilseed crops—gingelly and groundnut—in the Andhra State. Under the scheme, the recurring expenditure will be shared by the Committee and the State Government in the ratio of 75:25 and the entire non-recurring expenditure will be borne by the State Government.

The U.P. Vidhan Sabha has passed the U.P. Sales Tax (Amendment) Bill replacing the Ordinance promulgated on 21st March last. The State Government has announced its decision to exempt 12 commodities from the purview of the Bill, bringing the total number excluded to 19. The commodities that are exempted include oilcakes, cottonseed, foodgrains, green fodder and all manure, except chemical fertilisers.

A pilot sample survey on pepper conducted last year in the ten main pepper-growing taluks of Travancore-Cochin State disclosed that the average yield per bearing standard was 4.5 lbs. of green pepper or 1.5 lb. of black pepper. The total number of pepper standards in the ten taluks was estimated at 21.68 million and the yield at 8,500 tons of black pepper. Sixty per cent. of the standards were bearing ones.

The Mysore Government has constituted a committee to suggest measures for the implementation of the scheme of labour participation in the management of Government industries, in accordance with the decision arrived at at the tripartite conference convened by the Government on 10th May. The Committee will examine the question of constituting managing councils to each of the ten Government-owned industries, their personnel and powers to be vested in them and make recommendations thereon.

A seven-member Indian goodwill mission, under the leadership of Mr. H. V. R. Iengar, Secretary to the Union Ministry of Commerce and Industry, left for Sweden early this week. The delegation will visit various industrial units in Sweden, Finland and Denmark to study the industrial techniques of these countries and find out how far these could be used in India for the implementation of the second Five-year Plan. The tour has been sponsored by the Swedish Export Association in cooperation with the Government of India.

The Standing Metric Committee of the Government of India has fixed 1st January 1958 for the introduction of the metric system of weights and measures in certain sectors. The revised draft Standards of Weights and Measures Bill, 1956, was approved by the Committee with minor verbal amendments. Differing from the earlier one in two main respects, the revised draft is wider in scope, inasmuch as the earlier draft covered only standards of weight, length, area, volume and capacity, while the revised draft covers also mass, time, temperature, electric current and luminous intensity. The revised draft lays down a maximum period of 10 years within which the Act is to come into force throughout the country.

* * * *

From Abroad

The area under wheat in Canada will be cut during the current year by 1.2 million acres to 19.60 million acres, the lowest since 1943 and 5.8 per cent. less than that of 1955.

Australia is reported to be considering changing her present British style coinage currency to the decimal system. Australia is said to have been greatly influenced by India's decision to introduce decimal coinage in April next.

The Ceylon Government has abolished the sliding scale export duty on rubber and has introduced in its place a fixed duty of 32 cents per lb. on rubber sheet, crepe and latex and of 15 cents per lb. on scrap rubber and scrap crepe, with effect from 17th May 1956.

More than 200 million coins were struck for 16 countries by Britain's Royal Mint last year. Altogether, the Mint struck 505,586,029 coins for circulation at home and abroad. This output, which is roughly the same as that for 1954, represents an average of over 10 million coins every working week. Coinage for the United Kingdom comprised nearly 60 per cent. of total production.

The U.S. Department of Agriculture has asked the Congress for another $2,000 million to support farm prices, thus raising the total agricultural borrowings of the Commodity Credit Corporation—the buyer and seller of Government-owned farm surpluses—under the farm price support programme to $14,000 million. The Department of Agriculture, has also indicated that it may approach the Congress again for still more money by next spring.

Shipbuilding contracts received by Japan from abroad during the year ended March 1956 amounted to a record total of 150 vessels of 2,234,000 gross tons valued at $540 million. The backlog of orders, including domestic orders, is now estimated at 3.5 to 3.6 million gross tons. At a generous potential estimate of 1 million gross tons per annum, the Japanese shipyards will work at full capacity for more than three years.

World petroleum output during 1955 amounted to 786.3 million tons, as compared with 704 million tons in 1954, of which the U.S. accounted for 360.1 million tons, as against 336.1 million tons in the previous year. Consumption throughout the world aggregated 786 million tons, a rise of 80 million tons over the previous year. The U.S. was the largest consumer accounting for 406 million tons, as against 374 million tons in 1954. The total proved and published oil reserves at the end of the year amounted to 26,055 million tons, the corresponding figure for 1954 being 21,710 million tons.

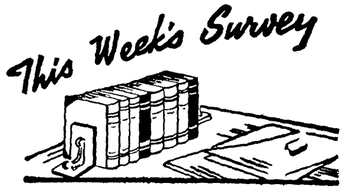
PERSONAL

MR. Adolfo Scilingo has been appointed Ambassador Extraordinary and Plenipotentiary of Argentina to India.

Mr. Madanmohan R. Ruia, President of the Cotton Buyers' Association, has been elected Chairman of the East India Cotton Association, *vice* Mr. Purshotamdas Thakurdas who resigned recently.

Mr. K. C. Bhandari, Principal, Development Officers' Training Centre, Ranchi, has been selected by the United Nations Technical Assistance Board for appointment as Community Development Expert to Indonesia.

Mr. K. P. Goenka has been elected President of the Indian Chamber of Commerce, Calcutta, for the year 1956. Mr. S. Gupta has been elected Senior Vice-President and Mr. B. P. Singh Roy, Vice-President. The other members of the Committee are: Mr. S. T. Sadasivan, Mr. L. N. Birla, Mr. Kanai Lall Jatia, Mr. D. N. Jalan, Mr. M. L. Shah, Lala Karam Chand Thapar, Mr. K. M. Naik, Mr. S. P. Jain, Mr. R. L. Nopany, Mr. A. K. Bhattacharya, Mr. Narsing Das Bangur, Mr. M. C. Parekh, Mr. A. Rajagopalan and Mr. Sisir Kumar Dass. Mr. B. M. Birla, Mr. N. L. Kanoria, Mr. C. L. Bajoria and Mr. L. C. Kanoi were also co-opted as members of the Committee.



INSURANCE CORPORATION

THOSE who were looking forward to further changes in the Life Insurance Corporation Bill will feel disappointed that the Government is determined not to go beyond the alterations made by the Select Committee in the original Bill. Several important issues relating to compensation, representation of policyholders, investment of insurance funds and expenses of running the Corporation were raised by the members during the debate on the Bill in the Lok Sabha. The Government spokesmen were not inclined to make any concession, nor to accept any suggestion. The result is that the Bill is likely to be placed on the statute book practically in the form in which it emerged from the Select Committee.

On the vital question of compensation to shareholders, both insurers and some members of the Select Committee had raised certain fundamental issues. These related to the appropriateness of fixing the shareholders' share of the bonus at a maximum of 5 per cent. as against the statutory limit of 7½ per cent. and of the system of averaging the business in the last two valuation periods, instead of taking into account only the latest valuation. The Union Finance Minister, Mr. C. D. Deshmukh, confined his remarks on this subject to a mere re-statement of the relevant provisions of the Bill and did not examine the issues raised by insurers in their memorandum or by the minutes of dissent appended to the Select Committee report. In vain did Mr. Tulsidas Kilachand plead the cause of 50,000 shareholders. Protesting against what he termed the "expropriation mentality" of the authorities, he emphasised that, "in the long run, only a society in which property rights of the individuals or groups are honoured can prosper." But this plea fell on deaf ears. Mr. Deshmukh, however, clarified one important point. He announced that compensation would not be liable to income-tax in the hands of the insurance companies as it would be a capital receipt; nor would it be liable to income-tax in the hands of shareholders.

The Corporation will be free from the statutory restrictions on expenses which had been imposed upon private insurers. Mr. Deshmukh's defence of this freedom was somewhat unconvincing. He said that the Corporation should certainly be able to keep its renewal expense ratio at a much lower figure than the 15 per cent. within which the bigger companies were able to operate. Even the 15 per cent. limit was, he said, on the high side. Remarking that the absence of a statutory limit would not encourage the Corporation to be extravagant, since, in any such event, there will be a spate of questions in Parliament, he observed:

"In fact, I would have promised an immediate reduction in the expense ratio but for one difficulty. The Corporation will not really need the large number of employees it would be inheriting from the various insurance companies. By retrenching the superfluous staff, the Corporation could bring down the expense ratio straightaway without the least loss of efficiency. But, I am aware how anxious members are that nationalisation should not result in unemployment and it was for this reason that I had given a categorical assurance that there would be no retrenchment. The best solution is to expand the business and thus find real work for all. We are confident that we shall be able to do so in due course. But, till the business is increased, the reduction in the expense ratio cannot be obviously as rapid as we would wish. While we shall be denied the benefit of integration for the time being, we shall have inevitably to incur additional expenditure made inevitable by the reorganisation of the offices which is attended by the movement of offices from one building to another, from one place, town, district and State to another place, town, district and State."

The passage is revealing for more than one reason. It shows how the Government is increasingly expecting Parliament and the country to rely on its word than to commit itself to a written law. Mr. Tulsidas Kilachand rightly asked why the Government should fight "shy" of applying the expenses provisions of the Insurance Act to the Corporation, if it is certain of being able to work within the limits. Perhaps the Government is not so sure. Further, it is interesting to note that the Government feels that it is only through retrenchment of surplus staff that it can bring down the expense ratio. In pre-nationalisation days, any such argument by private insurers would have been frowned upon by the Government. Finally, the Government recognises that till the business is increased the "reduction in the expense ratio cannot be obviously as rapid as we would wish." This indeed is the correct position. Only, it makes nonsense of the original position which the Government took in relation to private insurers.

When insurance was in the private sector, the Government used to criticise it on the ground that its expense ratio was very high *vis-a-vis* insurance in the U.K. and the U.S. It would not then listen to the insurers' plea that expense ratio could not be brought down overnight and that it would, in fact, go up in a period of expansion and then come down when the business expanded. It is precisely on this argument that the Government is now relying to defend the Corporation's expenses. But this shows that private insurers were right after all, though their voice of reason was drowned in the political din.

Mr. Deshmukh defended the non-inclusion in the Bill of the investment provisions of the Insurance Act by insisting that they were "needless," inasmuch as investments were to be made under the guidance of a high-powered investment committee and the Government had the right to give directions to the Corporation. He added: "It is, therefore, inconceivable that any wrong policy could be followed by the Corporation." In other words, Mr. Deshmukh would not like to lay down specifically that the Corporation should hold the policyholders' money in trust. It is true he gives the assurance that no "wrong" policy would be followed. But what is "wrong" from the point of view of policyholders may appear politically right to certain sections of opinion. When such a conflict arises, it should be clear that party opinion will carry the day. That is the fear of policyholders. This fear is not unfounded. One member averred that he was "rather unhappy that the Government have made a definite promise that the same proportion of life funds would continue to be invested in the private sector as before." He insisted that they should have relative priorities in the interests of national development and "it may very well be that the private sector will get much less funds than what it did get under the earlier dispensation." The policyholders will naturally feel apprehensive that, under the cover of "national development," the Corporation may be compelled to throw overboard the maxims of prudent investment. It is for this reason that the Government would have done well to incorporate in the Bill the specific clauses in the Insurance Act (with minor modifications, if necessary) relating to investment.

The most unconvincing part of Mr. Deshmukh's speech was where he defended the absence of representation for policyholders. It is significant that from all sections of opinion in the House, this point was pressed. Dr. A. Krishnaswamy, an Independent Member, declared that such absence constituted a "retrograde step." Mr. Asoka Mehta, the Praja Socialist Party member, pleading for adequate representation to policyholders in the Corporation, said that he was "surprised to find that the Select Committee and the Finance Minister had not enlightened us on this important point." The argument in favour of policyholders' representation on the Corporation is particularly strong in view of the fact that there is no specific directive to the Corporation that it must manage its affairs in the interests of policyholders.

Mr. Deshmukh opposed the suggestion for representation of policyholders on two grounds. He said that those who put forward this suggestion did not realise the expense and other difficulties it would involve. He said: "Today, we have five million policyholders. We hope that, in the not-too-distant future, we shall be dealing with 50 million policyholders and I for one cannot see how we can arrange for the election of three or four representatives to represent the interests of 50 million policyholders." He added: "Our experience of election of policyholders' directors for the last 15 years is such that we fear that it would easily be that these elections are a farce and perhaps, serve no useful purpose."

It is not clear what insuperable practical difficulties stand in the way of providing for election of policyholders' representatives. If private insurers could arrange for such election, the Corporation too should be able to do it. If the election of policyholders' representatives to the main board of the Corporation is difficult, it should be possible to arrange for such election at the zonal level and to provide for election from among these representatives to the Central Board. Mr. Tulsidas Kilachand rightly asked why, if a company like the Oriental which was controlling about 20 per cent. of the life business, could arrange for election of policyholders' representatives, the Corporation should find it difficult to hold such an election. At the zonal level, the number of policyholders could not be very unwieldy. In this connection, one might dismiss as rhetorical exaggeration the suggestion that the total number of policyholders will swell to 50 million in the near future. It is true that the election of policyholders' directors in the pre-nationalisation days was not properly conducted. But, in course of time, the institution would have come into its own. In any case, it would be incorrect to contend that such elections were a farce. This tantamounts to condemning democracy itself. If policyholders, who have a vital stake in the Corporation, cannot exercise their franchise well, is there any reason to think that they can do so in a general election where they have to consider abstract political and economic issues?

COASTAL FREIGHT RATES

The note of warning struck by Mr. C. R. Srinivasan, at the annual meeting of the Bharat Line Ltd., held the other day, against the danger that bids fair to dislocate the developing economy of the country on account of the inadequate attention paid to the problem of transport in the framework of planning, has come none too soon. Even with the limited objectives achieved under the first Five-year Plan, transport has failed to cope with the demand, with the result that production and distribution programmes of industrial units have been seriously upset. The problem will assume enormous proportions during the second Five-year Plan with its great emphasis on industrial development.

The congestion on railways has become so unmanageable that efforts are being made to discourage traffic. As a result, there has been a large-scale diversion of coal traffic to coastal shipping. This would normally be welcomed by shipping companies, inasmuch as it would improve their earnings and stimulate enterprise. But, at present, they do not seem to be very enthusiastic about it, because, for more than one reason, the coastal trade has become unremunerative to shipping companies. As Mr. Srinivasan put it, the reasons for this sad state of affairs are: (1) the costs of shipping companies are rising; (2) there are unavoidable delays at the ports, and (3) the freight rates offered are found so uneconomic that shipping companies have little incentive to commission more ships to cope with the coastal traffic.

The case made out by Mr. Srinivasan for a further upward revision of the freight rates for coastal trade at an early date needs the sympathetic attention of the authorities. The Government no doubt granted in October last an increase of 5 per cent. in freight rates, but this was inadequate and done after repeated representations made several months before. This was the first increase to be made after an interval of five years. During this period, it may be noted, other trades with which India is intimately connected had the benefit of increased freight rates ranging from 21 per cent. to 45 per cent. The Government of India was not unaware of this position, but it did not seem to be anxious to review it, apparently under the pretext that the Rail-Sea Co-ordination Committee was going into the matter and that it should await the Committee's report before taking a decision. The Government, however, had assured the industry that, if the report of the Committee was not received by March 1956, it would take up the matter again and examine whether any further rise could justifiably be made. The Committee's report not having been received so far, the Government recently granted an interim increase of 5 per cent. with effect from 1st April.

The defect about this increase is that it is piecemeal treatment. For, in the first instance, it is applicable only to general cargoes and not to coal. Secondly, the freight rates on coal will remain unchanged till the Rail-Sea Co-ordination Committee submits its report and, even if any increase is recommended by the Committee, it will not have retrospective effect from 1st April unlike that on railway coal. "This piecemeal treatment," to quote Mr. Srinivasan, "takes no cognisance of loss in earnings already suffered by the shipowning community, nor does it take into account the changed circumstances of the case which have been duly represented to the Government and which call for higher increase in the freight structure, nor even is the present increase in any way commensurate with the increase effected by foreign shipping on foreign trade routes with some of which the Government themselves are associated."

Mr. Srinivasan's fear that, unless a further substantial relief was forthcoming without loss of time, there was little prospect of improvement in coastal traffic, seems to be quite justified. The railways did not hesitate to increase the fares and freight when they wanted, in order to find a surplus for development. Even now it is being urged by experts in transport economics that there should be a further rise in fares and freights. And, what is more, the Prime Minister himself endorsed this stand a few days ago. Surely, what is sauce for the goose should be sauce for the gander, too. Unless, therefore, the shiping companies are enabled to make both ends meet by way of an increase in freight rates, the chances of their being in a position to avail themselves of the credit facilities offered by the State are rather dim.

NATIONAL INCOME OF INDIA

The high tempo of activity in the agricultural sector witnessed during the first three years of the first Plan abated somewhat in the fourth year, that is, 1954-55. Reflective of this trend is the sharp fall in the rate of real improvement in national income for that year. The net output at 1948-49 prices rose during 1954-55 by only Rs. 130 crores, which compares unfavourably with increases of Rs. 380 crores, Rs. 360 crores and Rs. 250 crores in the three preceding years, respectively. Revealing this information, the third issue of the annual paper just released by the Central Statistical Organisation places the aggregate national income of India (at 1948-49 prices) for 1954-55 at Rs. 10,170 crores, as against Rs. 10,040 crores for 1953-54, Rs. 9,460 crores for 1952-53 and Rs. 9,100 crores for 1951-52. The national income estimate of Rs. 10,170 crores for 1954-55, it may be noted, represents an increase of Rs. 170 crores as compared with Rs. 10,000 crores anticipated in the first Five-year Plan.

The fall in the rate of expansion in national income during the year under review is to be attributed almost entirely to the drop in agricultural output. Thanks to this fall and to the increase of as much as 5 million to 378 million in population, the *per capita* income for 1954-55 does not show any change; it is estimated at Rs. 269, same as that for the previous year. Expressed at current prices, the *per capita* income is actually lower at Rs. 262.1, as against Rs. 281.0 a year before, the total national income being Rs. 9,910 crores, as against Rs. 10,490 crores. This fall is due to a decline in both output and prices of agricultural commodities. Taking the seven-year period ended 1954-55 as a whole, the real *per capita* income was, however, higher by 9 per cent. The salient features of the estimates of national income are indicated below:

Year	At 1948-49 prices		At current prices	
	Net output (Rs. crores)	*Per capita* net output (Rs.)	Net output (Rs. crores)	*Per capita* net output (Rs.)
1948-49	8,650	246.9	8,650	246.9
1949-50	8,820	248.6	9,010	253.9
1950-51	8,850	240.3	9,530	265.2
1951-52	9,100	250.1	9,970	274.0
1952-53	9,460	256.6	9,820	266.4
1953-54	10,040	269.0	10,490	281.0
1954-55*	10,170	269.0	9,910	262.1

* Preliminary.

There was, as already stated, no rise in agricultural production during 1954-55. In fact, the figures at current prices indicate a considerable shift against agricultural and other primary production. This shift is attributed mainly to the disproportionately large fall in the prices of agricultural commodities and partly to a relatively steeper rise of incomes in the secondary and tertiary sectors. Even when expressed at 1948-49 prices, the selective share of agriculture exhibits a small fall, while all the other sectors mark some rise.

It is customary for countries like the U.K. to revise the estimates of their national income for the past years when fresh data become available for those years. In the Indian estimates also, certain revisions have been incorporated in the figures for the earlier years, particularly in the industrial sector and some consequential changes in other sectors. Naturally, the revisions have affected the estimates for 1951-52 and 1952-53, a few of which are now a little different from those given in the earlier release. The changes, however, are said to be not substantial.

HINDUSTAN MOTORS Ltd.

NOTICE TO SHAREHOLDERS

Issue of 5 lakhs cumulative preference shares *with shareholders' right to convert* them into ordinary shares

SHAREHOLDERS are hereby informed, in continuation of the previous notice dated 7th May, 1956 that the Directors of the Company, in view of the expanding activities of the Company and to meet the increased demand for vehicles anticipated in the next Five-Year Plan as also to ensure manufacture of a larger number of parts and components of vehicles of various types and to make the factory increasingly self-sufficient as well as to diversify manufacturing activities of the Company, have decided to raise the capital of the company by issue of five lakh cumulative convertible redeemable preference shares of Rs. 100/- each forming part of the unissued capital of the Company **with right to convert them into ordinary shares** on the following terms and conditions :

(a) That the preference shares shall be issued for cash at par.

(b) That the preference shares shall carry fixed cumulative preferential dividend @ 6% per annum, free of income tax payable on the capital for the time being paid thereon from the date of allotment and such preference shares in winding up shall rank both as regards capital and dividend (up to the commencement of winding up whether declared or not) in priority to the ordinary shares and shall not confer on the holders thereof the right to any further participation in profits or assets and shall not confer on the holders thereof the right to vote either in person or by proxy or by attorney at any general meeting, except as provided in Section 87 of the Companies Act 1956.

(c) That the holder of any of the said preference shares may by notice in writing left, together with the certificate for the shares therein referred to, at the company's registered office not earlier than 1st July, 1961 and not later than 30th June 1966 if the same remain unredeemed at that time, elect to convert the preference shares, specified in the said notice into ordinary shares, whereupon such shares shall become ordinary shares, and shall rank in all respects pari passu with the ordinary shares of the company and shall cease to have any preference or priority as above mentioned, and a new certificate shall be issued to the holder thereof free of charge.

(d) That the preference shares shall be redeemable at par at any time after 30th June 1963 at the option of the company by giving three calendar months' notice.

(e) That the preference shareholders will be entitled, in priority to and before any dividend is distributed on ordinary shares, to payment of the arrear dividend (whether declared or not) if any, which may have accrued in respect of all financial years ending before the date on which a shareholder elects to convert the preference shares into ordinary shares.

The shareholders of the Company whose names shall appear on the Shareholders' Register of the Company on the **25th May, 1956** will be entitled to one such preference share for every ten ordinary shares held by them ignoring fractions, if any. The shareholders may also apply for additional shares which will be allotted to them, if available, at the discretion of the Directors. The amount payable on application has been fixed at Rs. 25/- per share as application money which must be paid along with the application. Rs. 25/- per share shall be payable on allotment, and remaining Rs. 50/- per share shall be payable by one or more calls as may be made by the Directors by giving three calendar months' notice for each call.

Necessary circular along with applications for right shares (in terms of Section 81 of the Companies Act 1956) and additional shares and also forms of renunciation will be sent to the shareholders on or about **the 25th May, 1956.** If, for any reason, any shareholder is not in receipt of the circular and the said forms, etc. he should apply to or contact the Company and secure the requisite forms and copy of the circular.

Necessary consent of the Central Government has been obtained to the aforesaid issue.

PROSPECTS FOR EXPORT TRADE

T. T. K. MORE OPTIMISTIC THAN PLANNERS

From A Special Correspondent

NEW DELHI, *22nd May*

THE proceedings of the meetings of the Import and the Export Advisory Councils this week, coming as they did in the wake of the publication of the Report on the second Plan, provided a valuable opportunity for a further elucidation of the Governments' trade policy. They also helped focus the public attention on the inherent conflicts and indecisions of various Government departments, which not only hamper the country's economic progress but also jeopardise its economy to some extent.

DELHI LETTER

In a speech notable for both robust optimism about the inherent and growing strength of the Indian economy and characteristic frankness, Mr. Krishnamachari, the Union Minister for Commerce and Industry, pointed out the best way along which the Indian economy should be taken in order to have a smooth sailing during the coming years. He emphasised the need for paying greater attention to the export trade as a primary factor in the maintenance of our developmental economy. He did not appear to agree with the tentative figures worked out by the Planning Commission regarding the possible export earnings. His considered view was that the annual average from the export earnings envisaged by the Planning Commission at Rs. 592 crores was unduly low. Only a few weeks ago, Mr. Krishnamachari, it will be recalled, spoke to the effect that the export trade of India would continue to maintain an upward trend during the second Plan and that the extent of increase would be as much as 40 per cent. before the end of the second Plan period. In the last year of the first Plan, India's export earnings stood at very near the Rs. 600-crore mark, the precise figure being Rs. 598 crores, and exceeded the average contemplated annual estimate of Rs. 592 crores for the second Plan. One cannot be certain that India's export trade could show an impressive rise of 40 per cent. during the next five years, as was visualised by the Minister, but it may be taken for granted that, when a country's economy is developing, its export trade also will be moving up to a considerable extent.

Now that the Plan is being assailed by many thinking men as unrealistic, especially on account of the large gap in the external balance of payments position, Mr. Krishnamachari's view that the country would be able to export more and earn more exchange resources, will provide considerable encouragement to the planners. It may be mentioned here that, leaving the Korean war boom, the value of exports recorded a rise of about 33 per cent. in the last year of the first Plan as compared with the pre-Korean average of Rs. 450 crores. It is, therefore, possible that India's export trade might show a sizable increase during the second Plan period, reducing the gap in the external balance of payments position.

Mr. Krishnamachari's optimism that India would be able to earn more exchange will prove true only if the Government is able to adopt a realistic economic policy in regard to internal production. The Minister was hopeful that the trade treaties that India had been entering into with a number of countries, if implemented to the fullest extent should lead to a substantial increase in our export trade. The increased trade brought about by this method would, according to the Minister, help in raising the level of the tempo of activity in the country which itself would create certain economic forces favourable for the implementation of the Plan. Two things are considered essential to bring about this desideratum; one is to increase the level of internal production in the type of articles that go into the export trade and the other is to have a reasonable degree of price flexibility.

The Minister did some loud thinking regarding the export of cotton textiles. Since the export of cotton textiles has been fetching between Rs. 60 and Rs. 85 crores per annum in recent years, he considered the preservation of this export trade as a must item. There is at present formidable competition from Japan and also as a result of barter agreements and the operation of single country licences. India's exports of cotton textiles to Burma, Thailand, etc., for instance, have been showing a downward trend in recent years, since these countries have entered into barter agreements with Japan for the disposal of their surplus rice against a number of consumer articles including cloth. Again, imports under U.S. economic aid and the single country licences issued in discharge of treaty obligations, have been offering some practical difficulties to Indian cloth in some markets. For instance, under the tripartite agreement on cotton exports from America, Pakistan is expected to receive substantial supplies of cotton textiles from countries like the U.K., Japan, France and Italy, thus displacing sellers like India.

Another hurdle against the augmentation of India's trade in textiles has been the supply of sub-standard goods to foreign countries. It is well known that almost all the Government of India Trade Commissioners have been unanimous in drawing the attention of Government and the export trade interests to this fact. In order to remedy this state of affairs, Mr. Krishnamachari hinted that he would be taking steps to bring about standardisation in textile production both for internal consumption and external trade.

It is noteworthy that Mr. Krishnamachari did not want the Government to become a victim of antediluvian thinking in regard to textile production. In the interests of export trade and the expanding economy of the country, it is extremely urgent that Government should revise its policy in regard to cloth production along realistic lines. Now that some West German textile technicians are reported to have pronounced their expert opinion on the Ambar Charka, the Government should not resort to its large-scale introduction through a policy of heavy subsidy. On the contrary, it should take speedier action on the question of rehabilitation and extension of the textile machinery in the cotton mills of the country. At the same time it should also encourage the erection of many spinning mills in the country for increasing the yarn supplies to the handloom industry.

Analysing the broad trend of exports of the major commodities of the country, Mr. Krishnamachari pointed out that the problem concerning the jute mills industry was now the imperative need to step up the production of raw jute further, so as to reduce India's dependence on East Pakistan to the minimum. He was conscious of the fact that the Indian jute industry had begun to meet keen competition from Pakistan in many foreign countries. He promised to take vigorous measures to safeguard and promote India's export trade in regard to tea, tobacco, mica, shellac, etc. He did not agree to limit the activities of the State Trading Corporation, established last week to provide a stimulus to the export trade and to fill some of the gaps in the import trade.

During the discussions at the Export Advisory Council Meeting, it was urged that the Government should maintain a sort of continuity in regard to the export of certain goods, as, for instance, vegetable oils. It was suggested that the Government should allocate a certain quota from the production for purposes of export and that it should spread the allocation throughout the year in the interests of the export trade. It was also brought to the notice of the Government that exporters experienced considerable difficulty in getting refund of the excise duty paid on vegetable oils exported. Another suggestion made related to the appointment of a special committee which should look after the export of manganese ore and remove the bottlenecks of transport concerning this trade. These suggestions are besides the point, since the Export Advisory Council and the Trade Promotion Councils have already been looking after the interests of the export trade, while the transport problems are generally being considered from all angles by the local transport advisory bodies.

(Concluded from next column)

that the investment capital is there. But the Report pins too much hope that all these things will be looked after by "co-operation" and goodwill and so forth and the Government is clearly not minded to interfere. One is left with the uneasy impression that many of the problems which the Report envisages will after all not be serious, because, in Britain, the obstacles to automation will be too great for other than slow progress. The U.K. looks like being left behind in this new industrial revolution. It is a serious and disquieting thought.

MORE ABOUT AUTOMATION

AN OFFICIAL REPORT

From Our Own Correspondent

LONDON, *18th May*

THE publication of this week of "Automation" —a report by the Department of Scientific and Industrial Research—is intended to put in perspective the probable impact of this new industrial revolution on industry and on the social economy. Technically, it is an important and objective document but its fault lies—and it is a fault inherent in a document prepared by a Civil Servant without political guidance—in the way it skates over the main problems, which an industrial revolution throws up to the small firm and to the unadaptable worker.

LONDON LETTER

Automation means three technical developments—the use of transfer machines (the principle application to date) to move work from one set of processes to the next and to maintain the flow of production unchecked; the use of remote control techniques to measure changes in processes in, particularly, the chemical and petroleum industries and to provide the necessary correctives; and the use of electronic computers which started as machines to do complicated sums at great speed but which, with their capacity to "store" information fed into them, can not only make, for example, the wage calculations in a great factory, but actually control processes, for example, prepare the pay packets. No doubt the automatic factory of the future, controlled by an electronic computer, will, a decision having been put into it, turn out the finished article packed for despatch at one end along with the credits to suppliers for material and new orders for stock!

But, just as the development of machine tools downgraded operational labour while upgrading the fitter and the machine-tool maker, so the new processes will mean not only more skilled equipment makers, more maintenance men, more design engineers but also more scientists and more technologists. Automation is simply an advanced stage of mechanisation and its problems are an intensification of the problems with which mechanisation has already made us familiar. Thus, the Board of Trade have pointed out that, if British factories were fully "automated," there would be treble the demand for electric power of today. The demand for labour would be transferred to other fields, from operational processes to machine-making and power-making processes, from routine and semi-skilled labour jobs to more skilled and individualistic jobs. What the report does not stress adequately is that this country is in danger of falling down on just this aspect of automation—the U.K.'s shortage of present and prospective technicians.

It is also too easily assumed that the capital resources will be there for the new investment in automation. Of course, they are there—in terms of money, especially for the big firms—but where are they in terms of real investment resources? Output in this country is not rising at a high enough rate (per head in industry it is put at 3 per cent. per annum) to release the labour needed for the new revolution. Two hundred years ago, the industrial revolution in Britain was made possible by the great farming enclosures which dispossessed the small-holders and drove them into the towns to become the servants of the machine age. Nothing comparable can be envisaged today and the Report is at pains to indicate that these new advances should be made without "the social and economic dislocation that marred the early history of the Industrial Revolution." Indeed, the Report—with both eyes on the Standard Motor strike—says that the transition to automation will be easier, if there is full employment. But the transition will be very slow, unless there are capital resources in real (not money) terms and, unless labour is prepared for mobility both in terms of persons and skills. There it is right that the fullest co-operation between unions and employers should be looked for—but enterprise will be necessary on the part of both capital and labour and it is a sad fact of our present age that enterprise is at a discount in both fields.

One answer would be for the State to take the risks—to underwrite the capital to be found, to ensure employment to the elderly displaced worker (the worst victim of all such changes) and to direct the employment of resources, so

PEOPLE'S CAPITALISM IN U.S.—II

ACCENT ON COMPETITION—CONSUMER THE KING

By A Special Correspondent

WHAT makes the U.S. economy work? What are its motivating forces? Where is it heading?

Competition is the driving force of the American economy. Business men continually vie with each other to produce better and cheaper goods and services that will coax people to buy.

Year after year, American companies large and small engage in a constant race to offer newer, constantly improving, more saleable goods. The list of such goods is long and varied.

Each year, for instance, brings new model automobiles—bigger, faster, safer, easier riding, more colourful than those of the previous year. Or there are television sets with bigger screens and sharper pictures at lower prices. Or farm implements that perform more agricultural tasks more quickly and cheaply. Or clothing made of fabrics that wear longer, look better, and need less pressing.

Every visitor to the United States has noted the emphasis on the new and different. And many observers see the direct link between the economic force of competition and the continual search for improved products to please the consumer.

Consumer Is The King

Competition makes the consumer king. Every phase of business points to the consumer—the research laboratory seeking new products, the elaborate testing and consumer sampling procedures followed before new products are put on the market, the assembly line turning them out rapidly and cheaply, the distribution system making them easily available.

If one business enterprise does not find a way to fulfil a consumer's wants, another will. The consumer always has a choice of where he may spend his dollar. And because of this, the many business enterprises that make up American industry are in a constant quest for increased efficiency, for better design, so as to produce the most tempting goods at prices low enough to attract wide sales. The unrelenting search for ways to manufacture cheaper colour television sets is a typical example.

Competition's contribution as an economic spur toward greater productivity is widely recognised throughout the world. Even Karl Marx, while bitterly attacking capitalism, noted the creative effects of competition.

But today Communists—and sometimes non-Communists—criticise the competitive aspects of capitalism on two distinctly different, and contradictory, grounds. They argue, as Lenin did, that capitalism develops tendencies toward monopoly that abolish competition or restrict its area of operation. Or they contend that competitive capitalism is subject to violent fluctuations, that it results in a system in which labour is driven to the wall and—as Marx put it—"the rich become richer and the poor poorer."

Neither of these charges is valid when applied to today's American economic system. Despite constantly repeated charges by Communists about "monopolists" in U.S. life, competition thrives—and is on the increase. Despite the eager anticipation of Communists of another American depression, the United States today shows remarkable signs of economic stability. Today, the United States is making far greater progress toward raising the living standards of all of its people than the U.S.S.R. and the other Communist countries are doing.

Classless Society

And today the benefits of the American system of People's Capitalism are spread so widely that a classless society is far more apparent in the United States than in the Soviet Union.

The reasons why the United States escaped a trend toward monopoly are partly historic. When the trusts threatened to become too powerful, Congress passed laws against them. The first important one was the Sherman Anti-Trust Law of 1890; the Clayton Act of 1914 followed. The U.S. laws prohibit companies from fixing prices and production and marketing quotas and from conspiring to keep or force other concerns out of the market.

These laws work—not always perfectly and not to everyone's satisfaction—but always to a point that maintains fair competition. The record of anti-trust and unfair business practices decisions is long. Some of the earliest court rulings broke up oil and steel trusts at the turn of the century.

In addition, Congress keeps a watchful eye on the present-day trend toward corporation and bank mergers. So does the Executive Branch of the Government through the Justice Department, the Federal Trade Commission and other agencies.

President Eisenhower, in his recent Economic Report, made recommendations to strengthen the anti-trust laws and their enforcement. The President stated flatly: "Strict enforcement of the anti-trust laws is our primary weapon for thwarting any impairment of competition."

Of course, the proof of the effectiveness of this competitive system is in the competition itself. One only needs to shop in American stores to see the many ways business men compete with one another to win the favour of the consumer.

Americans have debated and studied a trend toward mergers, a tendency toward bigness in the industrial and banking fields. Congress has held hearings on the subject. There are some who think the Government should prevent further development in this direction, possibly by setting some ceiling on size. There are others who do not think so.

Competition Among Giants

But the important point for the moment is a very obvious one: The automobile industry, which is comprised of three large companies and two smaller ones, all of them large corporations, is in the midst of very real, vigorous and healthy competition. Year after year, these giant companies vie with each other for the favour of the car-buying public. And the reason the three larger companies enjoy the larger sales is simply this: They have met the tastes and pocketbooks of the consuming public better than their rivals have done.

What of the second charge against capitalism —that it is subject to violent fluctuations?

Many people abroad fear the abstraction known as the business cycle. They believe that, when the American economy sneezes, the rest of the free countries of the world may suffer a bad cold, or worse. And some even believe Communist horror stories about the effects of a business downturn on American workers.

But the actual facts show that the American economic system has a good deal more stability and social justice than its critics, friendly and unfriendly, give it credit for.

In the first place, large and strong labour unions have taken a respected and accepted place in the economy. The unions block the possibility of paying the American worker less and less for his labour, as Marx predicted.

In the second place, the productivity increases resulting from improved manufacturing and marketing methods have been shared by management with the workers in the form of higher wages and shorter working hours.

Thus, instead of the American worker being paid less and less for his labour, the reverse has actually occurred. The average worker in steel mills, for instance, has become a man of some means, earning more than $5,000 a year, and his basic work week of 40 hours compares with 60 hours at the turn of the century. Under the law, workers receive 50 per cent. higher hourly pay for each hour they work in excess of 40 hours a week.

The American steel worker is admittedly higher paid than industrial workers in most industries. However, industrial workers in general have made great gains in purchasing power in recent years. "Purchasing power" is computed by adjusting earnings to price changes of consumer goods and services.

According to estimates made by the C.I.O. (Congress of Industrial Organisations), which recently merged with the American Federation of Labour, the purchasing power of the average hourly earnings of factory workers increased 23.5 per cent. between 1947 and the first half of 1955.

A third factor that accounts for more stability and social justice in the modern capitalistic system in the United States is that some of the real risks of economic freedom are as clearly recognised by Americans and their Government as they are by other peoples and their Governments.

And so the United States, in common with other democratic nations, has established old-age pensions, unemployment insurance and a dozen other "shock-absorbers" that both guard the welfare of the average citizen and help maintain purchasing power of consumers when business activity slows down. The Government, through these and other methods, plays an influential role in maintaining the stability of the American economy, which will be discussed later.

But, although Government helps assure stability, the American economic system is fundamentally based on private ownership and is motivated by competition.

"Against the record of all other economic systems devised through the ages," said President Eisenhower in his State of the Union Message, "this competitive system has proved the most creative user of human skills in the development of physical resources, and the richest rewarder of human effort."

A FRENCH DISCOVERY: THE SPECTRO-READER

The requirements of metallurgy are such that analyses have to be more and more swift and precise. Consequently, spectrology is slowly replacing the traditional chemical analysis. The problem of *instantaneous analysis*, which was studied by Mr. Orsay with the help of Professor Lallemand, was solved by the mass-production of a device called "spectro-reader" by Mr. Mathieu, Director of the Cameca Company. This device is formed by a Jobin and Yvon spectrograph, the normal framework of which can be replaced by a "reading head" which contains two electron multiplicators, the second of these multiplicators intensifies the rays necessary for the analysis, and amplifies the signals so that they may be recorded. By comparing with samples carefully analysed beforehand, the quantitative analysis can be made in three or four minutes.

RURAL CREDIT AND WAREHOUSING OF AGRICULTURAL PRODUCE

PARLIAMENT PASSES LEGISLATION

THE Agricultural Produce (Development and Warehousing) Corporations Bill, which was passed by the Lok Sabha on the 11th inst. and the Rajya Sabha on the 21st inst., seeks to fulfil a long-felt need of the agricultural sector, namely, provision of institutional credit to agriculturists for financing crops at reasonable rates of interest, thereby replacing, as far as possible, the high cost credit provided by the traditional moneylender in rural areas. The need has become all the greater, because land is fast ceasing to be a negotiable asset, thanks to land reform policies. The Bill gives effect to the recommendations of the Rural Credit Survey Committee relating to the development and warehousing of agricultural produce on co-operative principles. It will be recalled that, after a very careful survey of the Co-operative Movement in India, the Committee had come to the conclusion that the Movement had failed to tackle the problem of agricultural development in an integrated manner. The failure was attributed to the following four defects:

First, the Co-operative Movement was confined only to giving credit facilities and did not take into account the question of marketing agricultural produce.

Secondly, the Movement did not deal with warehousing and storage.

Thirdly, it was confined mostly to the big farmers and only to a limited part of the country.

Fourthly, the Government had not taken the interest it should have to develop the Movement, the activities of the Government being confined mainly to registration and supervision of co-operative societies.

In view of these defects and with a view to giving a fresh lease of life to the Co-operative Movement, so that the latter could play a more prominent part in the task of expanding the agricultural economy, the Committee recommended, as one of the three main parts of its integrated scheme of rural credit, development and warehousing of agricultural produce. The recommendation was accepted by the Government which decided to bring forward legislation providing for the promotion, by State Governments, of the development, on a co-operative basis, of certain economic activities essential to the rural produce such as marketing and processing, and the parallel promotion, by all-India and State organisations, of the development of storage and warehousing of agricultural commodities, together with the distribution of goods and implements of importance to the cultivator as producer and consumer. The Bill was accordingly introduced in Parliament on 28th February 1956 which, as stated at the outset, has since been passed by both Houses.

Warehousing Board

The Bill provides for the constitution of a Central National Co-operative Development and Warehousing Board, which will be a policy-making and financing body. The functions of the Board will generally be to plan and promote programmes for the production, processing, marketing, storage, warehousing, and export and import of agricultural produce through co-operative societies. In particular, the Board may (*a*) advance loans or grant subsidies to State Governments for financing co-operative societies; (*b*) provide funds to a State Government or a Warehousing Corporation for financing co-operative societies for the purchase of agricultural produce on behalf of the Central Government; (*c*) subscribe to the share capital of the Central Warehousing Corporation or advance loans or grant subsidies to that Corporation or any State Warehousing Corporation, and (*d*) plan and promote programmes through co-operative societies for the supply of seeds, manures, fertilisers, agricultural implements and other articles for the development of agricultural produce.

The Board will be financed by the Central Government which will pay a non-recurring grant of Rs. 5 crores and a recurring grant in each year of Rs. 5 crores for five years. The Board is to maintain two funds, namely, the National Co-operative Development Fund (known as the Development Fund) and the National Warehousing Development Fund (the Warehousing Fund). The non-recurring grant will be credited to the latter fund, while the recurring grant will be divided between the two Funds. The Development Fund shall be applied for advancing loans and granting subsidies to State Governments on such terms and conditions as the Board may deem fit for the purpose of enabling State Governments to subscribe to the share capital of co-operative societies or for otherwise financing co-operative societies. The Warehousing Fund shall be applied (*a*) for subscribing to the share capital of the Central Warehousing Corporation; (*b*) for advancing loans to State Governments on such terms and conditions as the Board may deem fit for the purpose of enabling them to subscribe to the share capital of State Warehousing Corporations, and (*c*) for advancing loans and granting subsidies to a Warehousing Corporation or to a State Government for the purpose of promoting the warehousing and storage of agricultural produce.

The Bill also provides for the setting up of a Central Warehousing Corporation which will be entrusted with the task of implementing the warehousing programme laid down by the Board. The main functions of the Corporation are (*a*) to acquire and build godowns and warehouses at such suitable places in India as it thinks fit; (*b*) to run warehouses for the storage of agricultural produce, seeds, manures and fertilisers offered by individuals, co-operative societies and other institutions; (*c*) to arrange facilities for the transport of agricultural produce to and from warehouses; (*d*) to subscribe to the share capital of a State Warehousing Corporation; (*e*) to act as agent of the Board or of the Government for the purposes of the purchase, sale, storage and distribution of agricultural produce, seeds, manures and fertilisers; and (*f*) to carry out such other functions as may be prescribed.

The authorised capital of the Corporation is Rs. 20 crores, of which Rs. 10 crores will be issued in the first instance as will be indicated presently. The shares will be in units of Rs. 1,000 each. A part of the capital will be subscribed for by the National Co-operative Development and Warehousing Board (N.C.D. and W. Board), and the rest by the State Bank of India, Scheduled banks, co-operative societies, etc. The exact quantum of subscription to the share capital by the different classes of institutional investors is as follows:

	(Rs. crores)
The N.C.D. and W. Board	4.00
State Bank of India	1.00
Scheduled banks	1.25
Co-operative societies	0.25
Insurance, investment trusts and other financial institutions	3.00
Recognised associations and joint-stock companies dealing in agricultural produce	0.50
Total ...	10.00

The shares of the Corporation will be guaranteed by the Government as to the repayment of the principal and the payment of a minimum annual dividend to be determined by the Central Government at the time of the issue of shares. The management of the Corporation will vest in a Board of Directors which will be assisted by an Executive Committee and a Managing Director. The Executive Committee will consist of the Chairman and Vice-Chairman of the Board of Directors, the Managing Director, and two other Directors chosen by the Corporation in the prescribed manner.

State Corporations

The Bill empowers all the State Governments also to establish, within the States, State Warehousing Corporations on the lines of the Central Corporation. These Corporations will (*a*) acquire and build godowns and warehouses at such places within the State as it may, in consultation with the Central Warehousing Corporation, determine; (*b*) run warehouses in the State for the storage of agricultural produce, seeds, manures and fertilisers; (*c*) subscribe to the share capital of co-operative societies engaged in the storage or warehousing of agricultural produce; (*d*) arrange facilities for the transport of agricultural produce to and from warehouses; (*e*) act as an agent of the Central Warehousing Corporation or of the Government for the purposes of the purchase, sale, storage and distribution, of agricultural produce, seeds, manures and fertilisers; and (*f*) carry out such other functions as may be prescribed. The authorised capital of each State Corporation shall not exceed Rs. 2 crores. The capital will be subscribed for equally by the State Government and the Central Corporation. If any dispute regarding the functions were to arise between the Central Corporation and a State Corporation, such would be referred to the Central Board the decision of which will be final. As in the case of the Central Warehousing Corporation, the management of the State Warehousing Corporations also will be in the hands of a Board of Directors, assisted by a full-time Managing Director and an Executive Committee.

Provision is made in the Bill for financial control and auditing of accounts of the various statutory bodies set up under the Bill. The Board and all the Warehousing Corporations—Central and State—are required to submit an annual statement of their programmes and activities, as well as the financial estimates in respect thereof, to the appropriate authority. The funds of a Warehousing Corporation are to be invested only in Government securities. The accounts of the Development and Warehousing Board are to be audited by the Comptroller and Auditor-General of India, while those of Warehousing Corporations by qualified auditors appointed by the appropriate Government, one of whom being selected in consultation with the Comptroller and Auditor-General. A copy of every audit report will be laid before both Houses of Parliament of the Legislature of the State, as the case may be.

Prerequisites for Success

It will be seen from the foregoing account that the establishment of warehousing and marketing arrangements for agricultural produce is intended to facilitate provision of credit to rural areas. The mechanism envisaged in the Bill is so comprehensive that it can be implemented successfully only if there are the necessary organisational effort and efficiency. Indeed, there are the two prerequisites for providing the agricultural business with a credit base which should, as was rightly pointed out by a member of Parliament, "go far towards making farming a way of living, instead of the mere way of life that it now is." Much also depends on the way in which the different authorities connected with the implementation of the series of measures will co-operate with one another. Thus, the Central Food and Agriculture Ministry will undertake the formulation of the scheme envisaged in the Bill and advance finance through the Development and Warehousing Boards, while the responsibilities for carrying out the scheme and developing rural credit fall on the State Governments and the Reserve Bank, respectively. Unless all the three authorities co-ordinate their work fully, the whole scheme will, as Mr. Ajit Prasad Jain said in the Rajya Sabha the other day, be in danger of collapsing. Even more essential will be the co-operation of the non-officials, what with the considerable number of village warehouses owned by co-operative credit societies which will, through the co-operative marketing societies serving groups of villages, be linked to the State Warehousing Corporations and ultimately to the Central Warehousing Corporation.

How vast is this problem will be evident from the details of the development of co-operatives furnished by the Union Food and Agriculture Minister in Parliament. During the second Plan period, it is proposed to set up a little more than 10,000 large-sized credit and marketing co-operative societies, each covering five to ten villages. These societies, together with the existing successful ones, are expected to cover, by 1960, nearly one-third of the whole country. The aggregate amount of credit—short, medium and long—to be granted by these societies is estimated at Rs. 225 crores, which represents about 30 per cent. of the total credit annually needed by all the peasants. It is also proposed to set up, during the next five years, co-operative marketing societies in 1,400 *mandis*, each society having a godown with a capacity ranging from 300 to 1,000 tons. The number of such godowns is placed at 1,500. Further, the Central Warehousing Corporation will build warehouses in about 100 places of all-India importance, each with a storage capacity ranging from 10,000 to 20,000 tons. The State Corporations will set up 200 warehouses at places of State importance. Normally, the capacity of these warehouses, will vary between 1,000 and 10,000 tons.

Considering the importance of linking rural credit to warehousing and marketing, it is not surprising that the Bill evoked keen interest among the members of both Houses of Parliament. In fact, the time limit of 10 hours fixed for the Bill in the Lok Sabha had to be exceeded and even then the guillotine had to be applied to the majority of the clauses in the Bill. The Bill was welcomed by most of the members and several suggestions were put forward. Among them, three are notable. First, commodities like tobacco, coconut and sugar should be included under the definition of agriculture produce. Mr. Jain, however, opposed this suggestion on the ground that such would violate Entry 33 of the Current List in the Constitution. Secondly, the capital of the Warehousing Corporation should be raised to Rs. 50 crores. Mr. Jain pointed out that this could not be done, because even the Industrial Finance Corporation had only Rs. 5 crores as capital but was able to borrow more. Thirdly, compulsion should be introduced in the organisation of co-operative societies for farmers. Rejecting this suggestion, Mr. Jain said:

"Co-operation depends on volition. It essentially means development of one's own self. Hitherto, we have understood co-operation to be a voluntary movement and it was for this reason that, when the Government wanted to come in a little too much, there was objection from the side of the non-official co-operators. Even China which has got a different type of set-up boasts in saying that the Co-operative Movement there is voluntary. If we introduce some sort of compulsion, I think, instead of developing the Movement, there may be a general apathy against the Movement."

During the debate, some members asked as to why the Bill had not provided for the formation of an Advisory Council as recommended by the Rural Credit Survey Committee to tender advice on co-operative matters to the Food Ministry, the Reserve Bank and the Central Development and Warehousing Board. Replying to this query, Mr. Jain said that the Government had decided to constitute the Council but provision had not been made in the Bill, because the Council will function in relation not only with the Food and Agriculture Ministry and the Board to be set up under the Bill but also with the Reserve Bank.

MITSUI BANK LTD.

The 1st July 1956 will mark an important landmark in the history of the Mitsui Bank Ltd. (Head Office: Tokyo Japan); for, on that day, the Bank, one of the leading financial institutions of Japan, will complete full 80 years of its extensive and useful service to the country. The birth of the Bank, in fact, dates back to the seventeenth century, having been organised in 1683 as an exchange house. It was, however, only in 1876 that it was reorganised and it commenced banking business on a modernised basis as the pioneer private banking institution in Japan. Since then, many structural changes have been made in the Bank, the most important of which was the amalgamation in 1944 of the Jugo Bank, an institution nearly as old as the Mitsui Bank, having been formed in 1877.

During these 80 years, the Bank underwent many vicissitudes, but was able to overcome them successfully and expand its business year after year. Through its strenuous efforts in the fields of domestic financing, the promotion of foreign trade as well as the induction of foreign capital, the Bank contributed much to the development of Japan's national industry and came to enjoy its present prosperity.

The present authorised capital of the Bank is 8,000 million yen, having been raised in recent years, from 3,800 million yen to 4,000 million yen in 1953 and, again, to the present level in 1955. The paid-up capital is 2,000 million yen. During the half-year ended 30th September 1955, the latest period for which the Bank's accounts are available, the Bank earned a net profit of 703.01 million yen, as compared with 688.53 million yen in the previous half-year and 650.26 million yen in the corresponding six months of 1954. The Bank's deposits as on 30th September 1955 amounted to 163.41 billion yen, having risen from 131.24 billion yen a year before. Loans (inclusive of import bills settlement loans) and bills discounted together accounted for 135.30 billion yen, as compared with 137.02 billion yen at the end of September 1954. Investments in securities were strengthened from 16.40 billion yen to 19.89 billion yen and cash balances from 31.11 billion yen to 37.17 billion yen. Following the expansion in its resources and the strengthening of its liquidity, the Bank's borrowings from the Bank of Japan were reduced considerably from 33.40 billion yen to 8.01 billion yen.

The Bank has got three branches abroad, one in London, another in Bangkok and the third in Bombay, and one representative office in New York. The Bombay branch, which had been closed at the outbreak of the last war, was reopened in May 1955. During the short period of its working since inception to 31st December 1955, it suffered a loss of Rs. 2.70 lakhs, mainly due to heavy expenses and a loss of Rs. 1.67 lakhs suffered on revaluation of investments. The loss was covered mostly by debiting its London office.

As on 31st December 1955, the Bank's deposits amounted to Rs. 11.61 lakhs, while advances aggregated Rs. 32.47 lakhs, investments in Government and other trustee securities Rs. 19.34 lakhs and cash balances and money at call Rs. 10.30 lakhs. Acceptances, endorsements, etc., amounted to Rs. 30.67 lakhs.

In addition to the normal functions of a modern foreign exchange bank, the Bank is furnishing credit and other information about importers and exporters in India and Japan, with a view to assisting the promotion of trade between the two countries.

ASSAM STATE FINANCIAL CORPORATION

The working of the Assam State Financial Corporation (Managing Director: Mr. K. Varnasy, Shillong) during the year ended 31st March 1956 has resulted in a profit of Rs. 2,73,103, as compared with Rs. 38,545 for the five months of the previous year (arrived at after writing off the value of assets destroyed in the fire in March 1955). The Directors have set aside Rs. 1,08,000 (including the shortfall in the provision made last year) for taxation, as against Rs. 15,000 provided a year ago, and have transferred to Rs. 14,500 to the reserve fund, as compared with Rs. 5,000. As the balance available, namely, Rs. 1,50,603, for distribution is insufficient to meet the guaranteed dividend of 3½ per cent., the State Government has been requested to give a subvention of Rs. 1,98,709 to make up the total amount of Rs. 3,49,312 required to pay the above dividend. The State Government will, however, get back a substantial part of this subvention in the form of dividend on its own holdings in the share capital of the Corporation.

The amounts of outstanding loans and advances as at the end of the year under review is Rs. 26.42 lakhs. The Corporation received during the year 60 applications for loans aggregating Rs. 119.63 lakhs, of which sanction was accorded to 26 applications for Rs. 53.95 lakhs. Sixteen applications, involving a total of Rs. 17.52 lakhs, were rejected, while 18 were kept pending. Unlike in the previous year, when the State's tea industry received the maximum amount of financial accommodation from the Corporation, the electric supply companies were the recipients of the largest amount of advances during the year under review. Out of the nine applications for Rs. 34.95 lakhs received from such concerns, six were sanctioned Rs. 21.85 lakhs, but only five of them availed of Rs. 16.10 lakhs, as at the close of the year under review. Manufacturers of black tea, who applied for loans aggregating Rs. 27.12 lakhs, and were sanctioned Rs. 12.45 lakhs, availed of only Rs. 6.65 lakhs up to the end of the year. In the previous year, most of the electric companies did not pursue their applications to the Corporation for loans, because of the long-term loans granted by the State Government on more advantageous terms. Following, however, the State Government's direction in June 1955 that urban electric companies should approach the Corporation for financial accommodation, the companies turned to the latter for advances. As regards the tea gardens, most of the amount advanced is for block capital and some for working capital where it was not forthcoming from commercial banks or other sources.

The Corporation decided during the year to charge uniform rates of interest, namely, 6½ per cent. for all loans of Rs. 1 lakh and over and 7½ per cent. in the case of loans below Rs. 1 lakh, with a rebate of ½ per cent. for prompt payment of interest and annual instalments. The maximum and minimum effective rates are, therefore, 7 per cent. and 6 per cent., respectively.

HYDERABAD STATE FINANCIAL CORPORATION

The Directors' report of the Hyderabad State Financial Corporation for the year ended 31st March 1956—the second year of its working—indicates that the purpose for which the Corporation was originally formed is not being fully served, due to factors over which the Corporation itself has no control. The volume of fresh business handled by the Corporation during the year—the number of applications for loans received and sanctioned, as well as the amount of loans sought for and granted—has considerably dwindled and this is due not to lack of initiative or enterprise on the part of the Corporation's management, but to certain anomalies in the Central Government's policies to which the Directors of the Corporation have drawn attention in their report. Consequently, the working of the Corporation has not proved to be very remunerative.

The Corporation has earned a profit of Rs. 2.86 lakhs (subject to provision for taxation), as against Rs. 1.91 lakhs in 1954-55. The provision for taxation has been raised from Rs. 54,800 to Rs. 78,000 and the allocation to the reserve fund has been doubled from Rs. 15,000 to Rs. 30,000. These appropriations leave a balance of Rs. 1.78 lakhs. As the dividend of 3½ per cent. per annum guaranteed by the State Government requires Rs. 3.30 lakhs, the Corporation has sought a subvention of Rs. 1.72 lakhs from the State Government to make up the guaranteed dividend. Last year, a subvention of Rs. 2 lakhs was obtained from the Government for a similar purpose.

The Corporation received 23 applications for loans aggregating Rs. 31.10 lakhs, as against 38 applications for Rs. 95.15 lakhs in the previous year. The loans sought for by nine applicants for Rs. 4.58 lakhs were sanctioned, as against 20 applicants for Rs. 38.56 lakhs in 1954-55. The number of applications pending consideration at the end of the year was 11, the amount involved being Rs. 39.10 lakhs, as against a similar number for Rs. 22.32 lakhs at the close of the previous year. As in the previous year, the largest number of applications from any single industry was from oilseeds crushing concerns, which numbering six sought an aggregate loan of Rs. 15.25 lakhs (as compared with nine concerns for Rs. 35.8 lakhs in 1954-55).

Out of the total amount sanctioned during the past two years, namely, Rs. 43.14 lakhs, only a sum of Rs. 26.14 lakhs was disbursed up to the end of the year under review. The causes for the delay in the disbursement of loans are non-maturity of commitments for which loans were sought, non-arrival of machinery for which orders had been placed, the practice of making payments only after the expenditure is incurred, etc. The Corporation had agreed to subscribe for Rs. 10 lakhs of 7 per cent. first mortgage debentures of a cotton mill, of which debentures of the value of Rs. 7 lakhs were taken up last year. The balance of Rs. 3 lakhs was taken up this year.

Setting out the causes for the decline in business, the Directors observe in their report:

"The establishment of the Small-scale Industries Board for the financial assistance of cottage and small-scale industries envisaged by the Central

(*Continued on page* 1039)

SCOPE FOR MULTIPLE-SHIFT WORKING IN COTTON MILLS

MINISTERS' VIEWS EXAMINED

By A Textile Correspondent

IN their memoranda, submitted separately to the Planning Commission last December, Mr. Gulzarilal Nanda, and Mr. T. T. Krishnamachari, both Union Ministers, have expressed their views on the possibility of attaining higher cloth and yarn output by putting the cotton mills in the country on multiple-shift working. The views of the Ministers are of great importance in determining the production targets for the cotton textile industry in the second Five-year Plan and, therefore, call for careful consideration, especially in the context of the mill industry's demand for a higher production target and for a corresponding increase in its plant and machinery.

Relying on the estimates made by the Karve Committee, Mr. Nanda places the *additional* cloth requirements, including export demand, at the end of the second Five-year Plan period, at 1,400-1,700 million yards. He contends that this requirement could be attained by an intensification of the existing system of shift working. Mr. Nanda has developed his case for a more intensified system of shift working, along the following lines:

(*a*) The spindle working position in India as on 1st January 1955 was:

	Million spindles
Number installed	11.96
,, working 1st shift	10.13
,, working 2nd shift	9.46
,, working 3rd shift	3.59

(*b*) *First shift.*—After allowing for closure of mills with an aggregate of 436,360 spindles, and making an allowance of 2½ per cent. for repairs, cleaning and oiling, and a further 2½ per cent. for absenteeism, Mr. Nanda contends that 10.944 million spindles should be made to work on the first shift, which would, by itself, bring an increase of 0.81 million spindles over the present figure of 10.13 million.

(*c*) *Second shift.*—Mr. Nanda sees no insuperable difficulty in working 10.94 million spindles also in the second shift, which would bring in an addition of 10.94 million *minus* 9.46 million, or 1.48 million spindles in the second shift.

(*d*) *Third shift.*—Referring to the third shift, Mr. Nanda's point is that, even after providing for mills with old machinery, it would be possible to put an additional 3.68 million spindles on the third shift, though he does not say how he has arrived at this figure.

(*e*) The additional spindleage which can thus be pressed into service and the additional production which can be obtained, work out as under:

Shift	Additional spindles (in million)	Additional production	
		Yarn (in mil. lbs.)	Cloth (in mil. yds.)
First	0.81	76.5	344
Second	1.48	139.0	625
Third	3.68	253.0	1,139
Total ..	5.97	468.5	2,108

[*Note*:—The conversion from spindleage into yarn production, and from yarn production to cloth production, has been made on the following assumptions:

Yarn — On an average of 20s per shift of 8 hours .. 5 ozs. per spindle.

Cloth — One lb. of yarn .. .. 4¼ yards of cloth]

This additional production, he points out, is very much in excess of the optimum figure of additional requirement of cloth visualised by the Karve Committee.

(*f*) Licences for new spindles of the order of 2.15 million are still outstanding, and allowing for an effective working 95 per cent. the new spindleage on double shift, Mr. Nanda claims additional production to the extent of 408 million lbs. of yarn, equivalent to 1,836 million yards of cloth.

(*g*) The idle spindle capacity and the licences already issued would permit the production of more than double the total quantity of cloth required during the Second Plan period.

Mr. Nanda's suggestion, therefore, is that there should be no further expansion of the industry, and he urges, in addition, the cancellation of all licences granted for expansion which have not so far been cashed by the mills.

Mr. Krishnamachari's Memorandum

Mr. Krishnamachari, on the other hand, places the additional demand for cloth, both for internal and export purposes, at 2,500 million yards. He discounts the chances of the industry being able to increase the spindleage in the first two shifts, but concedes the possibility of increasing spindleage on the third shift by 20 per cent., which might yield 50 million lbs. of yarn equivalent to 230 million yards of cloth. In his opinion this, however, is not capable of being achieved due to factors like natural inclinations of the workers and the management, etc. Of the new spindles licensed, he concedes that 1.7 million spindles might go into production in the Plan period, and produce yarn equivalent to 1,060 million yards of cloth. The details of Mr. Krishnamachari's working are as under:

(*a*) *First shift.*—There is no room for any increase in the number of spindles working in the first shift. According to Mr. Krishnamachari, the number of spindles idle in the country on 1st January 1955 due to various reasons was as follows:

	Million
Gross spindleage in mills closed and which are not likely to restart	0.44
Spindles kept idle on account of repairs, cleaning, oiling—5 per cent.	0.60
Spindles idle due to absenteeism	0.30
Spindles in a dilapidated condition in the mills which are already running	0.50
Total ..	1.84

If the total figure were subtracted from the number of spindles installed (11.96 million *minus* 1.84 million), the result, namely, 10.12 million, is substantially the same as the number of spindles at present working in the first shift.

(*b*) *Second shift.*—The difference between the spindleage working in the first and second shifts now is 0.67 million spindles, and at 4 ozs. per spindle per day, 0.67 million spindles might theoretically give 55 million lbs. of yarn, equivalent to 224 million yards of cloth; but this increase has to be ruled out as a possibility in the same way as any increase in the first shift.

(*c*) *Third shift.*—Mr. Gulzarilal Nanda's assumptions in regard to fuller working of third shift are not practicable. In industrialised areas, employees resist third shift; nor are the employers anxious to put in another shift. In non-industrialised areas, the employee resistance to third shift is even more pronounced. There might, however, be the possibility of increasing the complement in the third shift by about 20 per cent. for a time, which might give us 50 million lbs. equivalent to 230 million yards of cloth, but it requires effort, and if the natural inclinations of the parties are allowed to operate, it might not be achieved at all.

(*d*) Coming to new spindle capacity for which licences have been issued, Mr. Krishnamachari thinks that, even if all the licences materialise, which would not, the period of time in which they would be installed, would be spread over a number of years, and in any event, any increase in production arising from the operation of new spindle capacity may come in perhaps at the end of the third, or even in the fourth, year of the Plan period. Assuming, however, that about 1.7 million newly licensed spindles would come into existence, then that may yield, after allowing for 12½ per cent. for repairs, overhauls, power cuts, etc., yarn capable of producing an additional 1,060 million yards.

The present availability of cloth for domestic consumption is 5,850 million yards, and it is likely to go upto 8,000 million yards in the second Plan period at 20 yards per head for a population of 400 millions. Additional production for domestic consumption will, therefore, be of the order of 2,150 million yards. Exports will go up from 900 million yards (850 million yards of mill-made cloth and 50 million yards of handloom cloth) to 1,250 million yards (1,175 million yards of mill-made cloth and 75 million yards of handloom cloth) and this would call for an additional production of 350 million yards. The total additional production, which should be achieved by the end of the second Plan, would, therefore, be 2,500 million yards, but the spindles which have now been issued are capable of giving only 1,060 million yards, while nothing more can be expected from the existing spindleage. Mr. Krishnamachari, therefore, urges that expansion in both the spinning and weaving centres must be provided for to enable the country to meet the deficit.

These, in brief, are the views of the Ministers on the feasibility of securing higher output by means of multiple-shift working. The points that call for consideration are:

(*a*) Estimate of additional requirements of cloth at the end of the second Five-year Plan period;

(*b*) Whether, and if so to what extent, additional spindles can be worked in the first, second and third shifts; and

(*c*) Estimate of production per spindle.

Estimate of Additional Cloth Requirements

(*a*) The Millowners' Associations of Bombay and Ahmedabad, in their joint memorandum submitted to the Planning Commission in August 1955, have stated that the *per capita* consumption of cloth at the end of the second Five-year Plan would be 22 yards. On this basis, cloth requirements can be assessed as under:

	Million
According to the decennial census of 1951, India's population was	357
With an increase of 4 millions per annum, the population in 1960-61 would be	400
At 22 yards per head, total clothing requirements .. .. (yards)	8,800
Export target at the end of the second Five-Year Plan .. .. (yards)	1,200
Total .. (yards)	10,000

Against the above requirements, present output is—

(In million yards)

Mill-made piecegoods	5,000
Handlooms	1,500
Powerlooms	200
Total ..	6,700
Therefore, additional requirement (10,000–6,700) =	3,300

This conclusion has been arrived at on the following hypothesis:

(*a*) *per capita* consumption on the basis previously estimated by the two Associations;

(*b*) population figures and increases therein accepted according to usual estimates;

(*c*) export target figures as fixed by the Planning Commission in the recent Draft Outline; and

(*d*) handloom production as indicated in the Textile Commissioner's Statistical Bulletins according to which 1955 production is 1,480 million yards.

(*b*) Mr. Gulzarilal Nanda has relied on the Karve Committee's estimates in paragraph 76 of their report. The Karve Committee state that there might be a 20 or 25 per cent. increase in the *per capita* consumption of cloth, and so the total cloth requirements would vary between 8,150 million yards minimum and 8,450 million yards maximum, in the year 1960-61.

This does not appear to be correct, as shown below:

Per capita consumption in the year 1954 was.. (yards)		15.00
20 per cent. increase would give .. ..(,,)		18.00
25 per cent. increase would give .. ..(,,)		18.75
Population in the year 1960-61, with a 4 million increase every year over the basic census year of 1951 (357 million) would be	(millions)	400
Total internal demand for cloth—		
Minimum at 18.0 yds.	(mil. yds.)	7,200
Maximum at 18.75 yds. .. .. (,, ,,)		7,500
Added to this, export target fixed by Government, namely, 1,200 million yards—		
Total:		
Minimum	(mil. yds.)	8,400
Maximum .. .. .. (,, ,,)		8,700
As against the Karve Committee's		
Minimum	(mil. yds.)	8,150
Maximum .. .. .. (,, ,,)		8,450
Therefore, additional production required—		
Minimum .. .. 8,400 minus 6,500 = 1,900 mil. yds.		
Maximum .. .. 8,700 minus 6,500 = 2,200 mil. yds.		

against the Associations' figure of 3,300 million yards.

The Karve Committee's estimates suffer from the following drawbacks:

(i) Under-estimation of *per capita* consumption in so far as it ignores growth of population.

(ii) Under-estimation of export target. (As against 1,200 million yards, the Karve Committee has taken only 1,000 million yards.)

Mr. Krishnamachari's Estimates

(*c*) Regarding Mr. Krishnamachari's estimates, the Minister had estimated requirements on the basis of a population of 400 million at 20 yards per head, yielding a total internal consumption of 8,000 million yards. He has added the export target of 1,250 million yards, and deducting present production of 6,750 million yards, the additional production required at the end of the second Plan period is equal to 2,500 million yards, against the Associations' estimate of 3,300 million yards.

(*d*) We have, therefore, three figures before us:

(i) The Associations' estimate, which gives a total additional requirement of 3,300 million yards, that is, at 22 yards per head.

(ii) Mr. Gulzarilal Nanda's estimates, based on the Karve Committee's report which we have shown as untenable, but which gives an additional requirement of 1,900 million yards minimum and 2,200 million yards maximum.

(iii) Mr. Krishnamachari's estimate, on the basis of a population of 400 million, at 20 yards per head *plus* the export target, amounting to 9,250 million yards, which gives a total additional requirement of 2,500 million yards.

Of the two Ministerial estimates of cloth requirements, we may have no hesitation in accepting the one coming from the Commerce and Industry Minister, since it is nearer to the industry's figures. Further, the Karve Committee's estimates of cloth requirements suffer from certain drawbacks which have already been listed.

Productive Potential

Mr. Nanda assumes that 10.94 million spindles will work in the first shift. This is not likely to be achieved. He has deducted from the total installed capacity, (*a*) spindleage of mills closed; (*b*) 2½ per cent. for oiling, cleaning, etc., (c) 2½ per cent. for absenteeism; and has assumed that all the remaining spindles must work. This is not within the scope of practical economics. The monthly mill-opperational statistics (C.S.T.), issued by the Textile Commissioner, show that, while there was a certain amount of variation from month to month in 1955, the average spindleage worked in the first shift, taking the year as a whole, was 85 per cent. of the installed capacity, which shows the need for a 15 per cent. allowance for outage to offset such factors as oiling, overhauling, repairs, absenteeism and closure, but without making any provision for the fact that about half a million spindles working at present are in a very dilapidated condition. This has been recognised by Mr. Nanda himself. That Mr. Nanda's claim is an exaggerated one is amply borne out by the fact that, even when it would have been profitable to put all the productive machinery into commission, no substantial increase in working spindleage and loomage was noticed. In these circumstances, the possibility of an increase in spindleage in the first shift is ruled out.

Coming now to the second and third shifts, some of the most dominating factors which severely limit the quantum of machinery which can be pressed into service in these two shifts, quite apart from such things as overhauling, oiling, repairing, etc., are:

(1) supply of labour and the availability of housing and other amenities to deal with the influx of working class population following an increase in shift working;

(2) labour's unwillingness to work an additional shift;

(3) availability of requisite quantities of cotton, coal or power;

(4) adequacy of the preparatory machines in the blow room, cards, frames, etc., and in the weaving preparatory departments, winding, warping, drawing-in, etc.; and

(5) condition of machinery generally.

It is very difficult to say precisely how each of the above factors operates and to what extent idle spindleage in the second and the third shift is due to the operation of each of the above factors. Nevertheless, an objective study of the working of mills in the City of Bombay and elsewhere shows that, in a very large number of cases, inactivity in the second and third shifts is due to bottlenecks in the preparatory departments, and this is very pronounced in the third shift.

Estimate of Production per Spindle per Day

Mr. Nanda's estimates are based on an assumed figure of 5 ozs. per spindle per day of eight hours, on an average of 20s count. The Textile Commissioner's statistics of yarn production, when analysed, yield an average production figure of 4.2 ozs. per spindle; yet, it would be wrong to assume for the purpose of planning that the present spindleage, 20 per cent. of which is already admitted to be in a very dilapidated condition, would yield in the next five years production at the rate of an average 4.2 ozs. per spindle per day. In this view of the case, the more modest figure assumed by the Commerce and Industry Minister may be accepted.

Machinery Needed to Meet Additional Demand

Basing our estimates on the position taken up by the industry in the matter of the *per capita* consumption of cloth, the additional requirement of cloth per annum would be 3,300 million yards. With the meagre information available regarding the development of the handloom industry, it is not possible to make any exact estimate regarding the extent to which that industry would contribute to this increased demand, but, assuming that 1,000 million yards of the additional demand came from the handloom industry, then, immediate licences would have to be granted for purposes of expansion to the cotton mill industry on the following scale:

(*a*)	Additional quantity of cloth required in the Plan period .. .. .. (mil. yds.)	3,300
(*b*)	*Less*: Contribution by the handloom industry .. .. (mil. yds.)	1,000
(*c*)	Balance .. .. (,, ,,)	2,300
(*d*)	Taking the production of an automatic loom at 25,000 yards per year, the number of automatic looms required to produce the abovementioned quantity would be	92,000
(*e*)	The quantity of yarn required to produce the additional quantity of cloth, on the basis of 4¼ yards = 1 lb. of yarn.. .. (million lbs.)	510
(*f*)	With an effective working of 87½ per cent. to cover outages for oiling, repairs, etc., the total number of spindles required on the basis of double-shift working on a 300-day basis, to produce the above quantity of yarn .. .. .. (mil. spindles)	4.0
(*g*)	Already licensed by Government.. (,, ,,)	2.1
(*h*)	Spindles now required to be licensed .. ..(,, ,,)	1.9
(*i*)	The quantity of yarn required to produce 1,000 million yards by the handloom industry on the basis as at (*e*) above .. (mil. lbs.)	222
(*j*)	The total number of spindles required to produce 222 million lbs. of yarn on the basis at (*f*) above .. ..(mil. spindles)	1.7
(*k*)	Total spindles required to be licensed, i.e., (*h*) *plus* (*j*) .. .. ..(mil. spindles)	3.6

(*Note.*—The above calculations are based on an average count of 20s, but, if the industry goes finer, then the spindleage requires a corresponding upward adjustment.)

The above figures are not intended to be very exact, but they give a rough indication of the size of the problem of expansion in the industry in relation to the second Five-year Plan. The need for cloth is there, and it is too much to expect that the handloom industry would be able to step into the gap effectively either in the Five-year Plan or at any time in future. Next to food, clothing constitutes an important element of our civilised existence, and it will be dangerous to neglect the organised industry and depend on the traditional cottage industry to supply the growing needs of the country when we know that the handloom industry is subject to various influences which affect its working.

WOOL MARKETS IN FIRST QUARTER OF 1956

Although official figures of world wool consumption during the first quarter of 1956 will not be available for some time, reports from the principal manufacturing countries indicate that activity followed very much the pattern of the preceding three months, when consumption was up to a good level. This finds an element of confirmation in the continued healthy rate of wool disposal in Commonwealth markets and in the generally well maintained basis of values, according to the I.W.S. trade correspondent at Bradford. Disposals in Australia were disturbed by the dock strike in February. This led to a limited rearrangement of the selling programme for the remainder of the season, but, since selling was resumed, an extremely active level of demand was in evidence. Wool moved briskly from the market, while every effort was made to overtake shipment arrears.

A feature of the quarter under review in the Australian market was a sustained call for wool on the part of Japan, which frequently led the buying and dominated the market on good style wools. The substantial character of Japanese buying lent colour to reported plans of a further extension in wool textile production in that country. Australian shipment figures for the seven months of the season up to the end of January show that Japan, as the third largest buyer in the Commonwealth, took 327,000 bales. The United Kingdom held its traditional first place with 594,000 bales and France was second with 419,000 bales. The other chief buyers in the order of importance were Belgium, Italy, the German Federal Republic and the U.S.A. Disposals in South Africa and New Zealand were on a large scale and, in each of these markets, the selling season was entering its final stages. Most of the full length wool in South Africa had been disposed of and shorter wools were to preponderate in the offerings for the remainder of the season. In New Zealand, the sustained world vogue for crossbred wools of all types led to ready clearance at all the sales. In all Commonwealth markets, the wool price trend over the three months was very steady. There was a slight setback to prices of both merinos and crossbreds early in March, and it was relatively more pronounced in the latter, but New Zealand prices showed a recovery in the last two sales before Easter and clean costs—when selling was suspended for the Easter recess—were 2d. to 3d. per lb. above those ruling at the beginning of the season last October. Merino prices also became firmer in the few days before Easter.

A NEW CHAPTER IN CANADIAN-INDIAN CO-OPERATION

THIRTEEN years ago, when Indian Aluminium Company's smelter at Alupuram produced aluminium for the first time in India, this versatile metal was being used mainly in the manufacture of cooking utensils. Today, aluminium has become important in a variety of industrial applications, and to meet the rapidly increasing demand, the Company is installing a new 10,000 ton smelter at Hirakud, Orissa.

Here, as at Alupuram, the Company's Canadian associates will help not only with their technical know-how and world-wide experience, but they will also share the costs of the project, to finance a part of which the Company proposes to issue fresh capital.

REDUCED EARNINGS OF COTTON MILL COMPANIES

CLOTH OUTPUT MOVES DOWN

From A Special Correspondent

MANCHESTER, 15*th May*

MANCHESTER LETTER

JUDGING from the latest financial returns, the experience of most cotton companies in Lancashire this year is certainly going to make discouraging reading for the investor. The incidence of severely contracted trading with short-time running at intervals and a dearth of demand is now having its inevitable effect upon the earning capacity of the industry. Some firms managed to recoup part of their fall in profits after the 1952 recession by judicious tax adjustments but the current returns show a definite trend towards very much lower profits—and in some instances none at all.

A startling example of adverse trading conditions has been portrayed by Crosses and Heatons Ltd., the Bolton fine spinning group, whose net profit of over £230,000 last year has been turned into a loss of £29,000. The dividend has been reduced from 10 per cent. to 7½ per cent. But as if to prove that such conditions were equally to be found in the coarser section of the trade, the Royton Textile Corporation group has also incurred a small net loss of £2,690, compared with a profit of £32,061 a year ago. In this case, the dividend is reduced from 12½ per cent. to 10 per cent.

Nor is this unfortunate experience solely the prerogative of the spinning section, for William Pickles & Co., which not only manufactures cloth but has an extensive merchanting organisation, has lately announced a net loss of some £22,000 against a profit of more than £35,000. No dividend is recommended in this instance against 12½ per cent. The spinning and weaving concern of Slack Mills has also suffered a net loss of about £4,000 against a profit of £35,000, but is maintaining its dividend.

Although more than a dozen other textile companies which have announced their results during the past month have avoided actual losses, the majority have recorded lower profits —and in some cases a sharp reduction has been shown. They cover all sections of the industry —from spinners of yarns made from synthetic fibres like the Mutual Mills, whose profit has fallen from £103,000 to £66,000, to weaving firms such as Robert Pickles where the reduction has been from over £31,000 to £18,000. Most of these companies have continued to pay an unchanged dividend although in several cases allocations to reserves have been curtailed.

Lower Interim Payments

Some idea of future results can also be gauged from the policy of directors in declaring interim dividends. The Joshua Hoyle group has lately cut its interim from 5 per cent. to 4 per cent. and several spinning mill companies have taken similar precautionary action. Reduced interim payments have been announced by the Belgrave Mills, the Dove Spinning Company and Coldhurst Mill.

All these indications underline the struggle which is now going on to maintain production at a remunerative level. Yet in isolated cases the situation is not entirely discouraging. The Eclipse Mill has reported a slight improvement in earnings, at about £20,000 against £17,500. The Ellenroad Mill, although profit is some £22,000 lower at around £40,000, is paying an increased dividend of 25 per cent. against 22½ per cent.

One of the most interesting reports has lately come from the directors of Bannisters of Trawden all of whose mills are employed on shift work. It is dangerous to draw conclusions from an individual example, but it cannot be denied that this group has improved its net profit during the past year from £40,000 to over £55,000. Most of its weaving capacity is run on three shifts and other machinery in the finishing and processing section is operating on double shifts.

Downward Drift

Sufficient details have been given at one time or another to emphasise the decline in mill output and manpower in Lancashire but still the depressing facts and figures come in. The latest statistics issued by the Cotton Board show that for the first quarter of this year cloth production was almost exactly 100 million yards lower than in the corresponding period of 1955.

With the single exception of February last year weekly average production of cloth was below the corresponding total 12 months previously throughout the past 15 months. In many cases the reduction was substantial and the gap shows no sign of being narrowed. Again it should be emphasised that, particularly in recent months, the quantity of rayon and mixture cloth produced has compared reasonably well with the 1955 figures.

The most significant feature of this particular development is that the fall in output can be attributed almost entirely to the drop in cotton cloth production. The quantity of rayon and mixture fabric turned out by the mills showed very little change from last year's total. This is in line with the better results obtained in spun rayon production in the spinning branch of the industry. Some idea of the uphill battle which has been fought over the past 12 months, in ever-worsening circumstances, can be observed in the following table, showing a comparison of cloth output in weekly averages and the drift of labour from the mills during the same period.

	Cloth production		Manpower	
	Weekly average (In 000 linear yards)		In spinning, doubling and weaving	
	1955	1954	1955	1954
January	53,690	54,040	280,490	289,960
February	55,030	55,480	284,320	290,600
March	54,520	56,440	279,970	290,040
April	48,320	53,510	275,740	290,020
May	53,220	57,480	271,670	289,790
June	46,860	53,960	267,350	288,580
July	39,040	54,870	262,920	287,680
August	44,090	53,360	260,560	288,410
September	44,480	53,770	258,950	287,240
October	49,300	58,170	257,810	287,570
November	48,690	57,020	257,660	287,690
December	43,350	50,170	256,080	286,460
	1956	1955	1956	1955
January	47,370	53,690	256,580	286,490
February	46,930	55,030	255,020	284,320
March	46,340	54,520	253,280	279,970

Anglo-Persian Trade

British textile machinery can capture Persian orders for spinning and weaving machinery —provided they offer easier terms of payment, said Senator Nikpour, leader of a five-man delegation from the Teheran Chamber of Commerce during a visit to the Manchester Chamber.

Under his country's seven-year development plan the importation of more textile machinery was envisaged so that Persia could produce its own cotton goods.

Lancashire had two great rivals in the supply of cotton goods to Persia, said Senator Nikpour. They were Japan and Russia, both of whom offered better credit facilities and cheaper goods. Persian merchants who wanted to order cotton goods in Lancashire had to pay a 70 per cent. deposit on the order in the bank.

New Machines Wanted

The absence of revolutionary new machines for the textile industry was criticised by Mr. William Leach, President of the Textile Officials' Association, in his address to the annual conference which opened at Southport this week.

Describing the textile machinery manufacturers as "oblivious," he said there had been no revolutionary changes in design in the textile industry to match the contrast between the first aircraft and now the jet engine, or the first motor car and its present-day successor.

"We must realise that this is an age of speed and movement and we cannot afford to stand still. Our own skills and techniques can only change when epoch-making discoveries are introduced," said Mr. Leach.

Speaking of juvenile recruitment to the Lancashire textile industry, Mr. Leach said juvenile employment officers had "nothing in their windows to sell to potential entrants." No information was available on the subject of how youths might eventually become part of higher management and no scale of salaries indicating what level of earnings could be expected after receiving practical and technical training. "This is an indictment of the trade and little progress will be made until we leave the Victorian policy of 'wait and see' behind," said Mr. Leach.—*All Rights Reserved.*

WORLD COTTON SURPLUS

AN UNDERDEVELOPED COUNTRY'S VIEW OF DISPOSAL PROBLEM

WORLD cotton supply has grown from year to year, thereby creating a problem for the producers. For the current (1955-56) season, the output of this commodity has been estimated by the U.S. Department of Agriculture at 39.3 million bales, against 39.1 million bales in the 1954-55 season. The estimate for the 1955-56 season is about one million bales below the prediction made by the Department in January last. It said that the cut was "due principally to unfavourable weather and insect damage in Egypt, India and the Soviet Union." The increase in world output had taken place in the face of a large reduction in the U.S. acreage under cotton. Over the past five years, it noted, the U.S. acreage had been steadily reduced from 26.9 million acres to 17.4 million acres. While the U.S. had been reducing its cotton acreage, most other foreign countries had "sharply increased the area planted to cotton." In this connection, it cited the fact that the foreign free world countries increased their land under cotton from 39.6 million acres in 1953-54 to 45.6 million acres in 1955-56. The Communist countries, though they did not increase the land under cotton, have more than doubled the cotton production since World War II.

The world supply of cotton, on the basis of the latest estimate of the U.S. Department of Agriculture, would amount to 61.1 million bales, made up of 39.3 million bales of cotton output and 21.8 million bales of carryover cotton. If consumption were to aggregate no more than last year's level of 36 million bales, the carryover at the end of the current season would be about 25 million bales, as against 21.8 million bales on 31st July 1955 and 20.2 million bales on 31st July 1954.

Against the background of the large surplus of cotton in the world and the absence of any immediate prospect of any reduction in these stocks, the deliberations of the International Cotton Advisory Committee which met this month in Washington, acquire a special significance. At this session were represented the representatives of 79 countries and 10 international organisations. Addressing the opening session, the U.S. Assistant Secretary for Agriculture, Mr. Marvin L. McLain, said that the "U.S. feels that this organisation has an important function to perform, and believes firmly in the need for international co-operation to solve our mutual cotton problems through discussion."

Although the details of the discussions which took place at the session have not been available, it is reported that the Committee has found that the cotton surplus problem is difficult to solve. The Committee, it is stated, could offer no solution to the problem of mounting world cotton surpluses. This failure to find a solution will naturally cause apprehensions in the minds of cotton men the world over, because they feel that the U.S. which has a large proportion of the free world's total cotton supply and which is faced with a particularly acute surplus problem, may be compelled to sell its cotton at very low prices. The fear is that any such policy would disrupt world markets. It is true that the U.S. authorities have consistently given the assurance that such a policy will not be followed. Nevertheless, in many countries, there is a feeling that the U.S. may be compelled to resort to it to an increasing extent. The U.S., as is well known, has already announced that it will sell, with effect from 1st August next, its surplus cotton at competitive prices.

It has, however, been stated on behalf of the U.S. that that country has a right to make every effort to recover its traditional position in the world cotton market and that, in the long run, the U.S. policy of selling cotton at the prices it will fetch will contribute to the improvement of the position of cotton in relation to artificial fibres. Commenting on these two objectives of the U.S. cotton sales policy, the Mexican journal, the *Comercio Exterior*, says:

"Though numerous considerations might be formulated with respect to the first objective, suffice it to say that, although the right of a nation to recover her markets is undeniable, it should be kept in mind that the increase in total United States' exports has been far greater than the drop in her cotton sales. Furthermore, it should be understood that the international community cannot recognise as legitimate an effort aimed at the recovery of markets based on encouraging exports by subsidies and artificial measures, which besides upsetting the market, harms the interests of other nations, and compromises their development as well as world economic stability. As to the idea that the decrease in prices fostered by United States' policy can reinforce the competitive position of the cotton industry with respect to the artificial fibres industry, it is so unrealistic as to recall Alice's discoveries in Wonderland. Such a thing could be true only if the United States alone were in a position to guarantee an adequate and stable supply to the entire world's textile industries on long terms, after having ruined cotton producers of all other countries and become the only producer in the market."

The effect of the U.S. cotton policy of selling for export at below domestic prices, the journal fears, would be to force prices below costs "even in those countries naturally and economically best equipped for cotton production." It adds: "Obviously, if this should happen, besides the frictions it would provoke, it would create a radical disorganisation of the cotton industry with consequent reductions in supply, increased prices and be even more favourable to departure from cotton consumption to the consumption of artificial fibres than has occurred up to now." Referring to the impact of such an export policy on the economy of underdeveloped cotton-producing countries, the journal says:

"Nations such as Mexico, apart from being traditional cotton producers, have found its cultivation a basis for increasing their agricultural development, for providing remunerative employment to a growing population, for utilisation of formerly unused arid land, and for a more solid foundation for industrial development. The interests of these nations are entitled to consideration and respect. Not only is the fate of one or several isolated countries at stake at this moment, but also something which affects practically the whole world."

In conclusion, the journal rightly holds that the root of the problem of cotton surpluses in the U.S. lies in its extraordinary economic development, rapid agricultural progress resulting in increased per-acre yields and the system of fixing domestic guarantee prices. The last factor, as is well known, has been a particularly important one in causing the emergence of surpluses. From this point of view, it would seem a great pity that the U.S. has not found it possible to abandon the policy of rigid price support for agricultural produce.

COTTON IN COIMBATORE

Coimbatore District in South India is known all over India as a region which grows some of the finest varieties of Indian cotton. Some light is thrown on the cultivation and marketing of cotton in this district by the report of the Coimbatore Market Committee, Tirupur (Chairman: Mr. E. R. Kandaswamy Gounder) for the year 1955. The Report points out that the production of cotton in this district during the year under review was 115,000 bales, consisting of 65,000 bales of Cambodia, 20,000 bales of Madras Uganda and 30,000 bales of Karunganni.

The total ginnings in this district amounted to 77,850 cds., comprising 10,000 cds. of Madras Uganda, 48,455 cds. of Cambodia and 19,395 cds. of Karunganni. During 1954, the total ginnings came to 65,196 cds., consisting of 43,805 cds. of Cambodia, 18,547 cds. of Karunganni and 2,844 cds. of Madras Uganda. The total pressings during 1955 amounted to 76,199 bales as against 43,617 bales in 1954. The consumption of cotton by the textile mills in Coimbatore District was about 3,00,000 bales, consisting of 1,10,000 bales of Cambodia and Karunganni, 1,55,000 bales of other Indian cotton and about 35,000 bales of cotton of foreign origin. About 69,000 bales of cotton were exported to places outside this district such as Madura, Tirunelvelli, Malabar, North Arcot, Travancore-Cochin, Andhra, Orissa, Ahmedabad and Bombay.

The Committee has continued to publish useful marketing information. Its publications include weekly reports regarding arrivals, despatches and stocks of cotton in the Tirupur market, weekly statement of prices of cotton and *kapas* and monthly review of cotton market. These reports are being made available to the authorities of the Central Government and the Government of Madras. A notable feature of the work of the Committee during the year was the propaganda campaign it undertook among producers and consumers in the cause of regulated market for agricultural commodities. It would, however, appear that "for want of frequent contacts, this did not achieve any success worth reporting." Now that the financial position of the Committee has improved, the authorities propose to carry on vigorous propaganda in this direction.

ALL-TIME RECORD OUTPUT OF SUGAR

FIRST OFFICIAL FORECAST PLACES ESTIMATE AT 1.70 MILLION TONS

THE current sugar season—that is, 1955-56—will go down as a landmark in the history of the Indian sugar industry, for it is expected to witness an all-time record output of sugar, the latest estimate of aggregate production being 1.70 million tons. The estimate compares very favourably with the previous peak of 1.59 million tons produced in 1954-55, a rise of nearly 7 per cent. over the season. The improvement in sugar production would have been more marked but for the distinct decline in the quality of sugarcane supplied to the mills. Indicative of this setback is the fall in the recovery percentage of sugar, the all-India average for the season under review being 9.87, as against 9.93 a year before.

The substantial rise in sugar production during 1955-56 has been rendered possible by the availability of plentiful supplies of sugarcane; the estimate of the total quantity of cane crushed is placed at 17.1 million tons, as against 16.0 million tons in 1954-55. The large supplies of cane thus must be attributed to two most favourable factors. First, the sugarcane crop has registered an improvement, the aggregate yield during 1955-56, according to the second official estimate, being 50.79 million tons, as against the adjusted second estimate of 48.58 million tons for 1954-55. Secondly, the prices of *gur* have continued to be low, the average for the year being not more than Rs. 10—Rs. 11 per maund, same as in the previous season, as against Rs. 20—Rs. 22 during 1953-54. Consequently, the cultivators preferred to sell a large part of their cane crop to the sugar mills, instead of converting it into *gur* themselves or selling it to professional *gur* producers.

Cane Crushed and Sugar Produced

The rise in sugar production during 1955-56 is shared principally by the State of Bihar which is expected to produce 91,000 tons more sugar than in 1954-55. Hyderabad and Madhya Bharat also account for an increase in output, the extent of the increase being 16,000 tons each. Bombay, too, accounts for higher output, the rise being 15,000 tons. The State of Uttar Pradesh, however, has suffered a drop of about 33,000 tons in sugar output. Similarly, the production is somewhat less in Andhra, Madras, Mysore and P.E.P.S.U.

The following table gives estimates of the total quantity of cane crushed and sugar produced by the sugar mills in the different States during 1955-56, as compared with those for the previous season:

(In thousand tons)

	Cane crushed		Sugar produced	
	1955-56*	1954-55	1955-56*	1954-55
Uttar Pradesh ..	9,024	9,347	870	903
Bihar	3,176	2,201	316	225
Bombay	1,623	1,486	189	174
Hyderabad	625	425	63	47
Andhra	592	676	56	65
Madras	554	611	51	57
Mysore	470	500	47	49
Madhya Bharat ..	299	111	27	11
Punjab	220	217	21	20
Rajasthan	136	117	13	11
West Bengal	96	86	10	9
P.E.P.S.U. ..	92	104	8	9
Travancore-Cochin ..	90	56	8	6
Bhopal	63	45	6	4
Orissa	28	30	2	3
All-India	17,084	16,012	1,687	1,592

* Estimated.

Out of the 160 sugar mills in existence, 137 units are reported to have worked during the season, as against 136 in the previous season. All those factories which were in operation in 1954-55 continued to work, the increase of one being due to the addition of the Gaya Factory in Bihar. The number of factories that actually worked during 1955-56 was 67 in U.P., 28 in Bihar, 14 in Bombay, 8 in Andhra, 4 in Madhya Bharat, 3 each in Madras, Hyderabad and "others", 2 each in Mysore and Rajasthan, and 1 each in the Punjab, P.E.P.S.U., W. Bengal, Orissa, Travancore-Cochin and Bhopal.

For the country as a whole, the duration of the crushing season is expected to be longer during 1955-56 than in 1954-55, the all-India average being 133 days, as against 129 days. The rise in the average duration of the crushing season is said to be particularly marked in the States of Madhya Bharat and Bihar, the estimate of the average number of days for both the States being placed at 127, which compares very favourably with 49 days and 94 days, respectively, for 1954-55. The number of crushing days has also increased in Andhra from 141 to 148 and in the rest of India from 120 to 157. In U.P. and Mysore, however, the duration of the current crushing season is expected to be shorter, as compared with the actual duration in 1954-55. The number of sugar mills which worked for more than 120 days is put at 95, as against 79. The table given below shows the frequency distribution of mills with regard to the number of working days during 1955-56, as compared with 1954-55:

Number of working days	U.P.	Bihar	Other States	Total for 1955-56	1954-55
200 and over ..	3	1	5	9	9
190-199	..	..	1	1	2
180-189	4	..	2	6	6
170-179	6	1	1	8	6
160-169	8	2	5	15	7
150-159	6	2	4	11	7
140-149	3	5	8	16	13
130-139	7	5	3	15	16
120-129	8	3	7	18	14
110-119	2	1	2	5	9
100-109	5	1	4	10	12
80-99	9	6	1	16	23
60-79	5	..	..	5	9
59 and below ..	5	1	..	6	4
Total ..	67	28	42	137	136
Average duration of season—					
1955-56 ..	126	127	148	133	..
1954-55 ..	139	94	130	129	..

The data relating to the frequency distribution of sugar mills according to the dates of commencement of crushing reveal that, on the whole, crushing operations began earlier than last year. By 7th December 1955 about 108 factories had commenced crushing, as against 97 units actually in production on the same date in 1954. By the end of 1955, nearly 132 of the 137 working factories had started producing sugar. The crushing operations are reported to have continued in the case of a number of factories even in the current month, although the majority of them—88 units—have nearly closed down. An idea of the close of mills' cane crushing operations in the past two seasons can be had from the following figures:

	1955-56	1954-55
15th February	4	3
16-29th ,, ...	8	3
1-7th March	4	2
8-15th ,, ...	4	6
16-22nd ,, ...	4	9
23-31st ,, ...	9	10
1- 7th April	3	11
8-15th ,, ...	19	13
16-22nd ,, ...	9	16
23-30th ,, ...	24	10
1- 7th May	7	8
8-15th ,, ...	14	11
16-22nd ,, ...	8	6
23-31st ,, ...	12	11
After 31st May	8	17
Total ..	137	136

It will be interesting to note here that Mysore accounts every year for the largest number of working days, the average for the season under review being 219, which was, of course, lower than 240 days in the previous season. Next in order come Madras with 211 working days (figure for 1954-55 being 219 days) and the Punjab with 200 days (203 days). The average number of working days with figures in brackets relating to the 1954-55 season for other States is: Uttar Pradesh 126 (139); Bihar 127 (94); Bombay 138 (139); Andhra 148 (141); West Bengal 143 (134); Orissa 100 (105); Hyderabad 171 (126); P.E.P.S.U. 118 (131); Madhya Bharat 127 (49); Rajasthan 129 (116); Travancore-Cochin 138 (96) and Bhopal 86 (85).

SUGAR IN MYSORE

The Mysore Sugar Company has urged the Union Food Ministry to issue to the Company an immediate release order for selling sugar in the free market. The plea is a sequel to the sudden appearance of scarcity in sugar and the consequent spurt in prices in some parts of the State. Disclosing this, Mr. S. Muninanjappa, Chairman of the Company, claimed at Bangalore the other day that the Company had ample stocks of sugar and could dump the market with enough supply to bring down prices. Mr. Muninanjappa declared that the spurt in sugar prices was wholly unwarranted, inasmuch as the supplies of sugar made available for consumption in the State during the first six months of the current season were in no way less than those in the corresponding period last season. During the month of April alone, as much as 22,720 bags of sugar had been despatched for consumption in the State, as against only 3,440 bags a year before. Incidentally, he stated that the Mandya factory produced 35,000 tons of sugar annually, of which 50 per cent. was sold within the State, the balance being sent outside.

Proceeding, the Chairman alluded to the special sales tax on sugar—at the rate of one anna in the rupee—over and above the normal rate of nine pies imposed by the Government of Madras, and said: "The disparity in the rates of sales tax in the two neighbouring States offers attraction for the transfer of stocks to Madras. How far such movement of stocks from the local market (Bangalore) took place last month is a matter for investigation and gives some clue to the present situation."

NEW SUGAR MILLS IN MADRAS

The three co-operative sugar mills proposed to be established in Madras State are expected to commence crushing during the 1957-58 sugar season. These factories will be located in the districts of Chingleput, North Arcot and Coimbatore. The production capacity of each factory comes to about 800—1,000 tons and capital outlay is estimated at Rs. 90 lakhs, of which Rs. 15—Rs. 20 lakhs are collected from individuals, farmers and co-operative societies, the rest being contributed by the Central and State Governments, as well as by the Industrial Finance Corporation of India. On the basis of a per-acre yield of 25 to 30 tons, each of the proposed factories will require the growing of cane in 4,000 acres which will ensure sufficient supply for crushing for a continuous period of 120 to 150 days during the season.

A technical expert from the Indian Institute of Sugar Technology, Kanpur, recently visited Madras, in order to give advice to the promoters of the aforesaid ventures on the type of machinery that would be required for the factories and on the location of the factories. A meeting of the representatives of the proposed factories and of the foreign firms which manufacture the machinery is likely to be held next month to decide on the types of plants to be imported according to specifications.

"INDIAN SUGAR" ANNUAL NUMBER

Another useful and interesting Annual of *Indian Sugar* has been published by the Indian Sugar Mills' Association, Calcutta (Editor: J. S. Mehta. Price: Rs. 3). Besides giving a resume of the proceedings of the Association's recent yearly general meeting, the *Annual* contains several interesting articles on the wide and varied aspects of the sugar industry—in India and abroad. These cover not merely the manufacture of white sugar, but also the cultivation of sugarcane. There are three interesting articles on sugar technology. The utility of the publication has been enhanced by the inclusion of statistical data relating to production, despatches, and stocks of sugar, production of *gur* and molasses, technological results of sugar factories, trend of cane cultivation, *per capita* consumption of sugar in India and other countries, and estimates of world sugar output. Also incorporated in the *Annual* are two statements—one showing the total revenue realised by the Government from sugar factories in India and the other indicating the value of sugar produced, amount of money paid for cane by mills, and the sum dispersed as salary, wages, etc., to workers.

OUTLOOK FOR TEA IN NEXT SEASON

PRODUCERS OF BEST QUALITY TEAS CAN EXPECT A REWARDING YEAR

TEA auctions in Calcutta for the season 1955-56 are practically over, the sale that took place early this week being of a clearing nature only. In fact, the season's sales were expected to close early in May but they had to be unavoidably extended on account of the weak state of the market during most part of April when withdrawals were rather heavy. There were nearly 130,000 chests of leaf tea remaining for sale at the beginning of May. Two sales of about 53,000 chests each have since been held for export, as also two sales of an average of 6,000 chests each for internal consumption. The results of the current week's sales, meant for the purpose of clearing the balance of the closing season's stocks, are not available at the time of writing. It will be recalled that last year, the auctions for export closed in the first week of April and those for internal consumption in the middle of May.

The new season's opening sales is expected to be held on 11th June. There will, therefore, be an interval of only two weeks between the two seasons, unless the new season's opening sale is advanced by a week, as is expected by some. Meanwhile, a supplementary sale of 4,256 packages was held on 9th May in the new season's Darjeeling teas.

The last two sales of the old season's tea for export witnessed a fairly good general demand, the bright liquoring teas, in particular, being a strong feature. No quotations were, however, given, as most of the offerings consisted of end-of-season types and very few teas were truly representative. The sales for internal consumption also experienced a fair general demand. The black leaf teas suitable for the Middle East and the very best autumnal C.T.C. Assams were firm and dearer. The other varieties ruled irregularly quiet.

The following comparative table shows the trend of prices in recent weeks:

	14-5-1956	7-5-1956	30-4-1956	2-4-1956
Export sale	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p
Clean B.P.	N.Q.	N.Q.	N.Q.	2 2 0
Plain B.P.	N.Q.	N.Q.	1 8 0 to 1 9 0	1 9 0 to 1 10 0
Medium Assam B.P....	N.Q.	N.Q.	1 10 0	1 11 0
Best C.T.C. Assam B.P.	N.Q.	N.Q.	N.Q.	N.Q.
	15-5-1956	8-5-1956	1-5-1956	3-4-1956
Internal consumption	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p
Medium Dooars dust..	1 8 0	1 8 0 to 1 9 0	1 8 0 to 1 9 0	1 11 0 to 1 12 0
Medium Assam grainy dust	1 9 0	1 9 0 to 1 10 0	1 9 6 to 1 10 6	1 12 0 to 1 14 0
Best Assam C.T.C. dust	2 12 0 to 2 14 0	2 12 0 to 2 14 0	2 12 0 to 2 14 0	2 14 0 to 3 0 0

Advices from London indicate that there is still a good demand for good quality teas. The general trend of prices, however, shows a slight recession. Plain B.P. is being nominally quoted at 38¾*d.* per lb., a fall of 1¼*d.* from the previous week's price. The small recession in prices at London need not be viewed with any concern. It would appear to be only a corrective reaction to the sustained upward trend noted for some weeks past. Plain B.P., for instance, had risen from a low of 35*d.* per lb. in February to 60.24*d.* two weeks back. The demand for the U.K. even at the close of the season is taken as an indication of the fear that supplies from India to the U.K. may fall below their requirements, due to the vastly increased internal consumption. Further, the statistical position of tea in London does not warrant any further decline. The stocks in London and warehouse deliveries as on 27th April last amounted to 150.6 million lbs., as compared with 186.3 million lbs. a year ago. With such a heavy fall of stocks in the U.K. and the good demand from that country, the season 1955-56, therefore, closes on a promising note.

The prospects for the new season are considered brighter than at this time last year. Much will, however, depend on the size of the North Indian crop. Another uncertain factor is the non-renewal of the International Tea Agreement among the growing countries for the regulation of production and exports. Discussing the outlook for the next season in the light of several counteracting influences, Messrs. W. S. Crosswell & Co., Ltd., one of the leading tea brokers, observe thus:

"While the market for tea is an expanding one, indiscriminate extension of tea areas by individual countries could rapidly lead to disaster for the majority. It is in this context that we find the ever-increasing cost of production of Indian tea very disturbing. Recent wage and bonus awards, combined with a multitude of taxes, are, in our opinion, slowly pricing the plainer varieties of Indian tea out of the world markets. Low cost tea, notably from Africa, is steadily gaining on the Indian product in the London market and, while an alternative outlet exists in India, valuable foreign exchange is being lost. Another depressing aspect of the present cost structure is the increasing difficulty being experienced by many producers in finding the money, after meeting their other liabilities for replanting and development programmes often essential for progress and future prosperity. It is against this background of increasing competition from other producing countries, often on a lower cost basis, that the question of quality assumes special importance.

"Quantity at the expense of quality is often profitable as a short-term policy, but in the present circumstances, we consider it both dangerous and not in the general interest. If Indian tea is to maintain and develop its position in the world's markets, its product must be able to stand comparison in quality and appearance with similar varieties from any other quarter. In conclusion, we think it fair to anticipate a satisfactory season for growers, provided world production remains within reasonable bounds and costs are not forced up still further. We expect a particularly rewarding year for producers of the best quality teas; and to those who, by their geographical position, cannot aspire to come into this category we recommend the maintenance of a standard of plucking which will ensure a good appearance."

If the supplementary sale of the new season's crop from Darjeeling is any indication, the emphasis should be on producing better quality teas. For the sale disclosed that the demand for quality teas was good and a few flavoury invoices realised prices well above valuations. Stylish leaf grades and fannings were the strongest feature and sold generally above valuations, but the more ordinary descriptions met with less demand and were disposed of at prices irregularly below brokers' valuations.

(*Concluded from next column*)

5.4 million bales. Further, the jute produced during the last few years was of poor quality and, consequently, fetched lower prices. The emphasis has, therefore, to be shifted from quantity to quality and it is gratifying to find that the second Five-year Plan avers that new jute cultivation should be undertaken only in areas suitable for growing high quality jute. The additional jute to be produced in the Second Plan period is only 1 million bales over the output in 1955-56. This is a very modest target, in that it is actually 400,000 bales below the target fixed in the first Plan and 2.2 million bales short of the jute industry's total requirements placed at 7.2 million bales. Apparently, the Planners have realised that India cannot attain self-sufficiency in jute in the foreseeable future. It must however, be added that, elsewhere in the report on the Plan, the authors have stated that the target fixed for agricultural production is in the nature of first estimates arrived at on the basis of production potential expected to be added as a result of various development programmes and these targets may be revised subsequently after a detailed study of crop pattern, land and water resources and the related development programmes. In view of this, it is likely that the target for raw jute output may be raised after this study is over.

Be that as it may, the programme for cultivation of jute during the next five years is explained in the blue book on the second Plan as follows:

"The requirements of the industry for raw jute may be placed at 7.2 million bales if all the mills were to work to full capacity. In addition, about 150,000 bales may be treated as extra-factory consumption. It is, therefore, proposed to provide 5 million bales from internal production and to import the balance. It should be possible to produce the additional quantity of 1 million bales of jute largely through intensive cultivation measures with the ultimate objective of achieving an average yield of 3 bales per acre of good quality jute. The measures proposed in the second Plan include the continuation on an expanded basis of the existing jute extension schemes, setting up of seed farms, supply of improved seeds, distribution of seed drills, construction of retting tanks, etc. The organisation of an extension service for demonstration of improved cultural practices is an important item in the jute development programme."

In order to improve the quality of jute under the second Plan, it is proposed to develop and strengthen the jute technological laboratory in Calcutta, which functions under the Indian Central Jute Committee.

INDIAN JUTE INDUSTRY

EXPORT ADVISORY COUNCIL DISCUSSES PROBLEM

THE meeting of the Export Advisory Council held early this week provided another occasion for bringing to the forefront the jute industry's problem of low return. The speech of the Union Minister for Commerce and Industry to the members of the Council indicates that the Government is quite conscious of the central problem facing the industry, namely, the narrowing gap between the cost of production and the prices realised for the manufactured goods, consequent on the disproportionately high price of raw material.

As an important foreign exchange earner for the country, the industry has made substantial progress in recent years, its production having gone up from 835,200 tons in 1950 to 1,027,200 tons in 1955. Its exports for the ten months ended 31st January 1956 amounted to 743,616 tons, as compared with 650,370 tons in the year 1950-51. Internal consumption of jute goods has also been on the up-grade. It would, however, be wrong to have a rosy view of the industry's position. For, as Mr. D. P. Goenka reiterated at the Export Advisory Council meeting, the main trouble with the mills is the heavy losses on their production just now, because the prices of manufactured goods have gone out of line with those of the raw materials. There is, therefore, hardly any margin left between the two. Mr. Goenka, therefore, wanted the Government to help the industry get out of the "embarrassing" situation. Another direction in which the industry needs help is the ready availability of raw materials at economic prices.

Mr. T. T. Krishnamachari also referred to the progress made by the industry towards raising the foreign exchange earnings of the country. Attempts were being made, he said, for modernising the jute machinery and these attempts were gathering momentum, but the trouble had risen from a new quarter. "The increase in manufacture," to quote him, "has not been offset by an increase in the production of raw materials, though increased attention is being given to stepping up the yield per acre and to improve the quality of raw jute." He added: "The gap between the prices of raw jute and the price of the finished article is getting shortened (against the seller of the latter) and certainly would result in losses to uneconomic mills."

The problem of supplying raw jute at economic prices will assume an even greater proportion in the coming years, as the second Plan provides a bigger target of 1.10 million tons for jute goods to be hit in 1960-61 as against the estimated production of 1.04 million tons in 1955-56. The target for the export of jute goods, fixed at 900,000 tons, is by no means high. It is well within the capacity of the industry and was nearly reached in the last year of the first Plan itself. Indeed, the industry's export performance could even be higher, provided it is enabled to keep down the price of jute manufactures and earn a decent margin of profit. A perceptible improvement in the financial position of the industry is a prerequisite for bringing down the price of jute manufactures, because, without funds, the industry cannot effectively and quickly modernise its equipment and, without modernisation, the productivity cannot be raised and, unless productivity is pushed up, prices of jute goods cannot be brought down to any appreciable extent. It may be noted here that, apart from the cost of modernisation amounting to several crores of rupees, the Plan envisages a fixed capital investment of Rs. 1.5 crores during the period 1956-61, on the establishment of a new unit in Assam. The industry has already invested Rs. 15 crores on replacements and modernisation during the first Plan period.

Raw jute production in India has, no doubt, expanded substantially from 1.7 million bales in 1947-48 to about 4 million bales in 1955-56. Under the first Five-year Plan, the target of additional production of raw jute was fixed at 2.1 million bales over that of 3.3 million bales in the base year 1950-51. In 1951-52, the output rose to the peak level of 4.7 million bales, followed by a progressive decline to 2.9 million bales in 1954-55. There has, however, been a sharp improvement to 4 million bales (estimated) towards the end of the Plan, that is, in 1955-56. But this was well below the target of

MANUFACTURE OF EQUIPMENT FOR RAILWAYS

AUTHORITIES URGED TO ENLIST SUPPORT OF PRIVATE SECTOR

IN the course of his speech, presenting the Railway budget, the Minister for Railways, Mr. Lal Bahadur Shastri, affirmed that the Government attached the "greatest" importance to making the country self-sufficient in respect of rolling stock and other equipment used by the Railways. As a measure of the progress that had been made in this direction, he cited some interesting statistics. He showed how last year the output of locomotives improved to 145, coaches to 970 and wagons to 10,689 from 63 locomotives, 791 coaches and 6,388 wagons only two years earlier. Further, the proportion of stores of Indian manufactures purchased by the Indian Railways to the total value of stores purchases made also rose within the same period from 70 per cent. to 78 per cent.

These are no doubt encouraging figures. But the demand on the services of the Railways is bound to increase in the next few years, so that the authorities have necessarily to augment considerably the equipment the Railways possess. This raises many complex issues of enlarging the capacity of the Railways for the manufacture of equipment, including the formidable problem of importing large quantities of iron and steel. These issues, it is gratifying to note, have been dealt with in a very comprehensive manner by the nine-member Railway Equipment Committee (Chairman: Mr. G. B. Katak) which was appointed in 1955 to locate idle capacity for the manufacture of railway equipment and to suggest ways and means of expanding the existing plants and/or of setting up new industries in India for meeting existing and future requirements of railway equipment. The Committee, in the course of its report, has recommended that the development of additional capacity for the manufacture of Railway equipment should be based on the original second Five-year Plan for Railways of Rs. 1,480 crores and not on the revised Plan of Rs. 1,125 crores. A notable feature of the Committee's recommendation is that it has advocated a closer association of the private sector in the matter of manufacturing equipment for the Railways.

The Committee points out that the expenditure on Railway equipment and stores during the second Five-year Plan would be substantially higher than Rs. 100 crores per year which had been the average during the past few years. Although it feels that "near self-sufficiency" in regard to Railway requirements would be reached by 1960, if the actual requirements do not exceed the present estimates based on the financial provision made in the second Plan, it apprehends that the increasing demand on the Railways as the second Five-year Plan progresses would appreciably enhance the requirements of Railway equipment in the latter part of the Plan. "If imports are to be avoided at that stage," it adds, "a somewhat bold policy for developing indigenous manufacturing capacity, even in excess of the present estimates, should be followed from now onwards." Dealing with the requirements of locomotives during the second Plan period, the Committee recommends the immediate establishent of a diesel and electric locomotive plant to help in reducing imports to some extent during the Plan period, and to lead the Railways to self-sufficiency in the third Plan period.

The Committee has also made a number of specific recommendations in regard to other major items of railway equipment like underframes of coaches, signalling equipment, permanent way materials, train lighting equipment, traction equipment, steel castings, wheels and axles, etc. In this connection, it would perhaps be interesting to cite the figures, recently furnished by the Estimates Committee of Parliament, of the average authorised rolling stock on Indian railways as on 31st March 1951 (actual), on 31st March 1956 (estimated) and on 31st March 1961 (anticipated, on the basis of the second Five-year Plan for the Railways):

	Locomotives	Coaches	Wagons (Four-wheelers)
31-3-1951	7,016	20,351	2,04,805
31-3-1956	8,795	22,771	2,71,774
31-3-1961	10,460	27,872	3,83,148

Assuming that the Railways do have all the rolling stock as estimated, the number of locomotives, coaches and wagons per route mile on the Railways would be 0.31, 0.82 and 11.3 respectively, as compared with 0.98, 2.98 and 58.37 in the U.K. From this comparison of the Indian and British figures, the Estimates Committee concluded that the "anticipated rolling stock on Indian railways as on 31st March 1961 cannot be regarded as excessive and that there will still be considerable scope left for adding to their strength to meet the increasing requirements of traffic."

It is against this background that one must view the Railway Equipment Committee's plea for undertaking the manufacture of equipment on a larger scale than what would be possible under the reduced second Five-year Plan for the Railways. It is not, however, clear from the Press version of the Report whether the Committee has examined the question of expansion of repair facilities in workshops. The Estimates Committee, on its part, made some interesting general observations on this question. The Committee emphasised that when "additional rolling stock is put in circulation on a railway system, provision of additional facilities to attend to their repairs and periodical overhaul becomes necessary." It recalled that the existing railway workshops were planned many years ago for repairs of rolling stock then owned. Since then, new rolling stock has been added but the country has lost considerable workshop capacity due to the Partition. Obviously, there is much leeway to be made up in respect of repair and servicing facilities.

The Railways, as is well known, are large consumers of steel. The expansion of their equipment would naturally depend upon ample supplies of iron and steel being made available to manufacturers. The Estimates Committee has quoted numerous instances where the progress of works on the Railways has been held up for want of steel. And what is more, this remark is true of every zone. According to an estimate quoted by the Committee, the Railways would require about 4.8 million tons of steel and pig iron during the years 1956-57 to 1960-61. Large quantities of steel are needed for such vital purposes as construction, rails and fish plates, steel sleeper bars, and wheels, tyres and axles. Realising the importance of steel and the insufficiency of supplies within the country, the Equipment Committee has recommended that substantial imports of steel and pig iron should be accepted as "inescapable" and that suitable arrangements should be made for obtaining adequate and regular supplies from abroad after making an assessment of the short-fall expected during the next five years. Further, the Committee has suggested that adequate quantities of controlled raw materials should be stocked as "dumps" at suitable places in the country from which these could be issued to manufacturers. This measure, it is stated, would ensure timely release of materials in short supply. It also recommends the introduction and the establishment of at least one centre in every State to be declared a "port" for the purpose of uniform price for steel, pig iron, coal and coke.

It may be mentioned here that the Government has already taken steps to get some three million tons of steel during the three-year period commencing from 1st April 1956. A large part of these imports is earmarked for the Railways. In fact, a special team of officials, drawn mostly from the Railways, is at present touring the Continent to arrange for imports of the types of steel needed by the Railways. In order to ease the shortage of "pig," through imports, the Government has abolished the import duty on pig iron.

The Committee has made, as stated at the outset, several notable and realistic suggestions for enlisting the support of the private sector in the manufacture of Railway equipment. If prospective manufacturers, it points out, are to be attracted to invest capital in new ventures, they must be assured, for a reasonable period, of utilisation of the major portion of the capacity developed. It also advocates the implementation of the suggestions for the development of indigenous industry made by the Stores Purchase Committee, namely, price preference in favour of indigenous products, special preference to small-scale producers and establishment of permanent exhibitions. With a view to safeguarding against the possibility of capacity offered by newcomers not materialising fully, licences for new capacity should be issued in excess of the present assessed requirements. This will also cater for any increase in requirements at a later stage. As regards goods wagons, it would appear the Committee received a large number of proposals from private manufacturers who exhibited "much enthusiasm." The Committee feels that complete self-sufficiency in regard to wagons is ensured, provided "educational" orders are placed by the Railways liberally.

Finally, in order to enable the private sector to co-operate more effectively with the Railways, the Committee has recommended the setting up of Central and Regional advisory committees of Railway equipment which, it thinks, will be of "great help." Surely, these committees, if they are manned by right men, could serve as effective links between the Railways and the private sector and ensure speedy execution of the former's requirements.

WORLD STEEL PRODUCTION

More steel was produced in 1955 than in any previous year, according to the report of the British Iron and Steel Federation for 1955. The total world output of crude steel was about 265 million tons, or some 20 per cent. higher than in 1954. Comparative figures for the main steel producing areas are shown in the following table:

(Million tons)

	1953	1954	1955 (est.)
U.K.	17.61	18.52	19.79
U.S.A.	99.65	78.85	104.46
E.C.S.C.	38.93	43.06	51.73
Overseas Commonwealth	8.26	8.02	9.40
U.S.S.R. and E. Europe	49.66	53.10	58.72
Other countries ...	16.55	17.87	21.04
	230.66	219.42	265.14

As compared with 1954, by far the largest increase in production (25.61 million tons) occurred in the U.S. The countries of the European Coal and Steel Community raised their production by about 8½ million tons, of which slightly less than half was accounted for by Western Germany. The U.K. output rose by over 1½ million tons and there was a similar increase in the rest of the Commonwealth.

In the U.S., according to the Report, more ground was gained than had been lost during the recession of 1954, when output was somewhat reduced; in 1955 output was almost 5 per cent. higher than in 1953, the best previous year. On the continent, the recovery from the slack period of 1953 continued unabated throughout 1955, supported by a very active demand both at home and abroad. "There is no sign, either in America or in Europe, of a reduction in plans for new capital investment", says the report, and it adds: "Indeed, there is a general feeling on the Continent that the rate of expenditure in the steel industry in the recent past

NEW PRODUCTS AND PROCESSES

Machine for Biscuits, Cake, etc.

AN engineering works (Bakkerijmachinefabriek K. G. Z. Nieuwe Gracht 193 Utrecht (Holland) (the Netherlands)) supplies a new machine for spouting, cutting, drawing and moulding biscuits, cake, pastry, etc. The machine is equipped with a pump, which works horizontally and which, at each stroke, can spout a quantity of dough varying from only 2 grammes (30 grains) to 500 grammes (17½ oz.) to within 1 gramme (15 grains). The machine is designed in such a way that the dough cannot possibly drip after being spouted. The machine has three rollers; it works with or without the pump, in combination with or without using the rolling pins, so that every type of dough, from the stiffest to the most fluid, can be worked. The machine is normally supplied for baking plates of 40½ x 81 cm. (16" x 32"), 45½ x 81 cm. (18" x 32") or 66 x 66 cm. (26" x 26"). It is driven by a 2 h.p. electric motor; the speed can be adjusted to the product to be worked. The capacity is three to seven plates per minute. Despite the many possibilities of this machine, the designers have succeeded in keeping the construction simple.

Moisture-repellent Storehouses

Numerous materials, products, instruments or apparatus are attacked or damaged by the action of moisture. In many cases, however, it is not necessary or even possible to keep dry the entire room in which these articles are stored or used, and it is sufficient to keep part of it dry. This constitutes a considerable economy in drying apparatus. To this end, therefore, a storehouse is needed which is adapted to the space occupied by the moisture-sensitive articles. Such storehouses are manufactured by a concern (Droogtechniek en Luchtbehandeling, Post Box 6047, Nieuwe, Mathenesserstraat 39, Rotterdam) (the Netherlands), in an airtight and water vapour-tight design. They are composed of standardised building elements, so that they can be built up *to measure*. Moreover, they can be extended in a very simple manner if the drying space should afterwards prove to be insufficient. The use of relatively light building elements enables the storehouse to be assembled without a special foundation on any level floor. The structure is such that the storehouse can be easily disassembled and, consequently, can be readily moved. In combination with the semi-automatic or automatic air dryers made by the same concern, the relative humidity of the air in the storehouse can be fully controlled.

New Tread Design for Tyres

An Australian inventor (Wastl Mariner, Innsbruck, Colingasse 5) has designed a new tread for tyres which guarantees an increased protection against skidding on curves and on inclined road surfaces. The tread has two symmetrical rows of skid protecting elongated studs starting at the edges and ending in the middle of the tread. The studs are arranged in an inclined position with respect to the middle axis of the tread. They are wedge-shaped with the broader side towards the outer edge. The inclined arrangement guarantees an even distribution of the load on the tyre and eliminates vibrations. Tests have proved that an angle of 90 to 135° is most advantageous for the stud arrangement. In the space between the stud rows a further row of angle-shaped studs may be foreseen, the angle sides being nearly perpendicular to the inner part of the wedge-shaped studs. The ends of the sides fit in the gaps between the inner ends of the symmetrical stud rows.

Space Saving for Garages

A new type of tilting door for garages, etc., has been developed by an Austrian firm (Stahlbau Viktor Otte & Co., Vienna 14). Unlike the customary type of tilting doors, this new door requires no guide rollers on the upper door frame. Consequently no steel parts protrude into the garage when the door is closed. Another feature of the door is that the panels of the door are made of sheet metal in the shape of flat pyramids. Apart from the very low weight of these panels, they strengthen the surface of the door and give it a high degree of resistance against wind pressure and shocks. When the door is tilted open, it comes to lie horizontally immediately under the ceiling and, therefore, in no way obstructs the entry and exit or movement of the cars. The opening and closing mechanism is fully automatic and can be controlled either by a photo-electric cell or a contract threshold. In case of garages where servicing of cars is carried out, these doors can be delivered as special doors with glass or light-weight corrugated plexiglass panels which are practically unbreakable. Moreover, these doors guarantee a high degree of heat insulation. These tilting doors are also suited for large warehouses, depots, etc.

Rubber Plane

The Goodyear Aircraft Corporation in the United States has designed and built a small inflatable rubber airplane, which has flown successfully. When it is to be flown it is pumped full of air, like a balloon. When it is not inflated it can be rolled up and stowed in the trunk of an automobile. The single wing of the plane is made of two strips of a rubber-coated nylon fabric, joined on the inside by thousands of strong threads. When air is pumped in, the expansion at each point is governed by the length of the thread at that point. The taut threads maintain the desired wing shape. The airplane's tail and pilot seat are of similar construction. The pressure needed to inflate the plane is less than that needed for automobile tyres. Power is provided by a 40-horsepower engine mounted on a tubular metal support behind the wing. The only other metal parts are those that connect the wheels and the pilot's seat to the fuselage.

A CEILING TODAY COULD BE A SHOWER TOMORROW:

Look to your roof now—don't suffer from the monsoon.

Don't let a situation like this develop. Act now and you will ensure leakproof roofs by specifying Shalimar Tarfelt.

Shalimar Tarfelt is made in India from Indian materials to suit Indian conditions. You can't buy better roof protection.

Save your roof and you save your ceiling
Save your ceiling—and you save money!

ROLE OF PRIVATE ENTERPRISE IN EXPORT CREDIT INSURANCE

A BRITISH INSURER'S VIEWS

THREE weeks ago, we referred in these columns to the views of the Federation of Indian Chambers of Commerce and Industry on the question of implementing a scheme for export credit insurance. The Federation, as we indicated then, is of the view that the Government should first consult private insurers in order to ascertain whether they are willing to implement a scheme and that, in the event of their refusal, it should proceed to set up on its own a corporation for export credit insurance. Obviously, there are some advantages in private enterprise undertaking to operate this form of insurance whether with the co-operation of the Government or independently. In this connection, the views expressed by Mr. Stanley E. Phillips, Deputy General Manager of the Trade Indemnity Company, Ltd., in the course of his address on "The Insurance of Credit by Private Enterprise" at a meeting of the U.K.'s Institute of Export, are bound to be read with interest in this country.

In the U.K., export credit insurance is operated both by private enterprise and the Government. While on behalf of the Government, the scheme is operated by the Export Credit Guarantee Department (E.C.G.D.), the leading institution in the sphere of private enterprise engaged in credit insurance is the Trade Indemnity Company, Ltd. It is noteworthy that both the Company and the Department started their activities in the same year, namely, 1918. Both the organisations limited their cover at that time to loss arising from the commercial insolvency of an overseas buyer. In course of time, it became apparent that there was need for covering other risks such as the risk of non-payment through non-availability of exchange, cancellation of licences and the risk of war. The E.C.G.D. extended its cover against these additional risks in particularised countries because the political risks and some of the economic risks were beyond the capacity of private enterprise to assume. Explaining the effect of this development, Mr. Phillips said: "Unfortunately for private enterprise, the Department's policies were issued on a whole turnover basis and, therefore, there could be no selection on the part of an exporter as to what he could insure in one quarter and what in another. If he needed the protection of economic or political cover in one country, then he could only obtain it by including his trading with all other countries in his cover. The result of all this was practically no progress in the export field by the Trade Indemnity and its attentions were perforce directed to the insurance of credits in the home trade. This state of affairs has largely persisted in the years that have followed the Second World War, although there has been a substantial increase in the amount of export credits that are insured by the Trade Indemnity."

Mr. Phillips next dealt with the organisation of credit insurance in some of the West European countries. In Germany and Holland, the two leading companies in this field act as agents for their respective Governments in the underwriting of export credits and reinsuring with the Government the political element of their risks. In France, a joint-stock company was formed for the purpose of insuring export credit. But this company is owned jointly by the Government and private enterprise. It is enabled by its constitution to place the political risk element with the Government. In Belgium, private enterprise and the appropriate Government Department are complementary, the one confining its interest to the insurance of the commercial risks and the other to the political risks of the same business. Mr. Phillips regretted that, in his own country, the "resources and technique of private enterprise have not been officially used in the development and expansion of export credit guarantees." He, however, explained that this did not imply any criticism of the operations of the E.C.G.D. He added: "There is no doubt that exports have been immensely helped by the Department's operations and many an exporter has cause to be thankful for its existence."

The Government has certainly a place, and a very important place, in the operation of export credit insurance. This is because there are risks which private enterprise cannot cover. As Mr. Phillips said: "It seems to me that a risk undertaken by an exporter on behalf of the nation, such risk being outside his assessment and control, is one that the nation should assume. By this I mean, of course, the exchange transfer and political risks." He pointed out, in this connection, that the one risk which private insurance cannot cover is national default by an overseas country on economic and political grounds. Such a contingency, he said, could only be "controlled and dealt with at State Bank or Governmental level."

Private enterprise, on its part, can cover commercial risk of insolvency and default. In this sphere, private enterprise, according to Mr. Phillips, can offer several facilities. In the first place, it can cover up to 85 per cent. against loss from the insolvency or protracted default of a buyer. Secondly, it can provide a degree of flexibility which will permit the insurance of either an applicant's whole turnover—which is obviously preferable—or the insurance of one or more markets or even the insurance of one or more buyers. Thirdly, it can provide an information service on overseas buyers which is built up from association with similar companies and correspondents who are domiciled in the countries of the overseas buyers. Such an information service would be sustained by frequent visits of its own officials to many of the countries where its insured interests lie. Fourthly, it could, through the security of its policies, help solve the insured exporters' credit problems. This could be arranged either by way of general assignment in favour of a bank or finance house or, in approved cases, an undertaking to pay the assignee—on the insolvency of a buyer—the amount of loss in respect of particular bills irrespective of whether the loss is admissible against the policy.

Finally, Mr. Phillips affirmed that private enterprise tries to fit the policy to the needs of an insured. It tries to follow trade and to adapt its cover to varying export conditions. At the same time, he emphasised that private enterprise is opposed to the encouragement of "hazardous overtrading" and it will not support "uneconomic" credit. Clearly, it is only by following these cautious maxims that private enterprise can play a vital role in credit insurance.

GENERAL INSURANCE

A plea for nationalising general insurance has been made by the All-India Insurance Employees' Association in the course of a memorandum submitted by the Association to the Select Committee on the Life Insurance Corporation Bill. This was revealed by the Vice-President of the Association, Mr. Ajit Chakravarty, at a Press Conference in Calcutta. He said that, if general insurance was not nationalised, it would lead to the closure of many companies closely linked with and subsidised by life insurance companies and thus result in retrenchment and unemployment. He thought that the total assets of general insurance companies and annual profits which amounted to Rs. 62 crores and Rs. 4 crores respectively could be doubled "if illegal rebating is stopped."

Criticising the provisions of the Life Insurance Corporation Bill relating to employees, Mr. Chakravarty said that the Bill excluded a section of employees presently employed as part-time and daily-rate staff from employment under the Corporation. It further provided for rationalisation and reduction of pay scales, emoluments and other benefits and deprived workers of compensation which they were otherwise entitled to under the Industrial Disputes Act in the event of their being retrenched or if they opted to quit service due to curtailment of benefits.

He said the Bill empowered the Corporation to revise the existing terms of service but lacked any provision for workers to appeal against the decisions of the Corporation to a tribunal or other machinery. The Bill also failed to provide for workers' representation on the Corporation Board and for machinery to settle disputes between the management and the employees. The Association demanded the holding of a bipartite conference of representatives of the Association and the Corporation to go into pay scales and service conditions and to form a joint committee at all levels to deal with staff matters, recognition of trade unions and collective bargaining.

(Concluded from next column)

in action. Approximately, 69 per cent. of the life insurance in force in U.S. companies in 1954 was participating. In other words, 69 per cent. of all U.S. life insurance policyholders shared, through dividends, in the surplus earnings accruing from investments by U.S. life insurance companies in American private industry.

INVESTMENT OF LIFE FUNDS IN U.S.

POLICYHOLDERS PARTICIPATE IN INDUSTRIAL PROGRESS

IN the U.S., industry and business are depending more and more on the assets of life insurance companies for investment capital. In post-war America, life insurance funds have proved the most fecund source of fuel supply for stoking the fires of the expanding U.S. economy. This has been made possible by a relaxation of the strict governmental regulations which formerly limited the investment field of U.S. life offices. As a result, money invested by millions of individual Americans as financial protection for their families, or for their own old age, has unexpectedly made the policyholders partners in the country's industrial growth—and in the profits accruing therefrom.

The insurance premiums of these millions of small policyholders are utilised for such socially beneficial projects as housing developments for low-income and medium-income workers; loans to State, county and municipal governments for civic improvements, such as schools and roads; loans to public utility corporations operating telephone systems and electric power plants; and to railroad companies for the improvement of the country's railway system. The Metropolitan Life Insurance Company was the pioneer in the field of housing developments. Today, more than 150,000 Americans live in housing projects built and managed by insurance companies. Located for the most part in large cities, some of these insurance housing developments were built on the sites of substandard dwellings, the tenants of which eventually moved into the new developments' clean, modern apartment units.

Life insurance funds financed the New Jersey Turnpike's 118 miles of super-highway (divided highway, with no intersections or cross roads), the southern gateway to New York City. New Jersey State officials had long considered this project, but feared political repercussions because of the heavy taxes it would entail. When insurance companies were approached, it was their first experience with such an investment. But they were equal to the occasion. The insurance companies agreed to advance the required $220 million, not as a lump sum, but under a "borrow-as-you-build" plan. This plan saved the Turnpike Authority $12½ million in commissions and interest charges.

Traditionally, life insurance funds have gone into such "risk-free" investments as Government bonds, railroad and utility bonds, industrial and real-estate mortgages, etc. But since the relaxation of the strict Government regulations which limited the field of investment of life insurance funds, life offices have invested literally billions of dollars in thousands of private businesses operating under the U.S. private-enterprise system of economy.

One insurance company, the Equitable Life Assurance Society, discovered that several American railroads were badly in need of freight cars but did not have the cash to have them built. The Society went to the builder and ordered 19,000 freight cars. On delivery, the insurance company turned the freight cars over to the railroads that needed them so badly, under a 15-year rental contract.

Insurance companies in the U.S. are also making direct investments in American business and industry by a scheme known as "the purchase lease-back." The insurance company buys the business firm's property, or property needed by the firm, then immediately rents it to the firm under a long-term agreement. This device makes available to the business firm a lump sum of money needed for improvements, new stock, or to liquidate its indebtedness. At the same time, the insurance company is assured of a sound investment. Such nationally known firms as the giant department stores, Sears, Roebuck & Co. and Montgomery-Ward, as well as many other types of enterprise, have taken advantage of this plan. As a consequence, U.S. insurance companies own nearly a billion dollars in industrial and commercial property.

At first glance it might seem that a new, giant monopoly is in the process of entrenching itself in the American economy. But a closer scrutiny discloses that investments by life insurance companies in U.S. private enterprise really constitutes a phase of people's capitalism

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1956

An encyclopædic work of reference for Businessmen and Investors

(*More comprehensive than others*)

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is proof positive of its superiority over any other publications of a similar nature.

The information given about each company relates to its date of registration, nature of business carried on, managing agents and their remuneration, Directors and their share qualification, details of capital and shares, capital history, share registration fee, name of Auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to Reserves, net profit, amount carried forward, dividends, highest and lowest prices, etc., for ten periods.

CONTENTS:—A Review of 1955; Statistics of Second Plan; Investment of Trust Money; Approved Investments; Attestation of Lady's Signature; Income-tax and Stamp Duty; Estate Duty Act and Rates; List of Liquidated Companies (1939-55); Preference Dividends in Arrears; Rights of Preference Shareholders; Stock Exchange Committee; Stock Exchange Members; Stock Exchange Holidays; Stock Exchange Rules; Central and State Government Loans; Municipal and Port Trust Loans; Banks and Railways; Tea Companies—Rupee and Sterling; Malayan Rubber Companies; Cotton Mills; Coal Companies; Jute Mill Companies; Mining and Engineering Companies; Sugar and Electric Companies; Insurance Companies; Interest Table; Exchange Calculator.

ANNUAL MEETING OF THE BHARAT LINE LIMITED

MR. C. R. SRINIVASAN'S PLEA FOR INDUSTRIAL PEACE

INCREASE IN FREIGHT RATES INADEQUATE

ADDRESSING the shareholders of The Bharat Line Ltd. at their Tenth Ordinary General Meeting held at Bhavnagar on 21st May 1956, Mr. C. R. Srinivasan, Chairman of the Company, said that it was not enough if the Government merely restated its industrial policy in clear terms. It must also create and maintain conditions under which industries, howsoever placed, could thrive and give their best. The prerequisite for this, he added, was a period of industrial peace. Dealing with shipping problems in particular, Mr. Srinivasan feared that, unless further substantial relief by way of higher freight rates was forthcoming without delay, there was little prospect of improvement in coastal traffic.

The following is the full text of Mr. Srinivasan's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you all to the tenth ordinary general meeting of the Company. The Directors' report and the audited balance-sheet and profit and loss account have been in your hands for some time now. I trust I have your permission to take them as read.

"You will notice in the agenda for the meeting there are several items included which have not hitherto found a place there. The Companies' Act I of 1956, came into force in April last and under the provisions of the new Act, much that was assumed in the past, now requires formal affirmation by shareholders after due notice. The intention obviously is to associate shareholders more intimately in the affairs of the Company. The need to do so arises not merely because there have been instances where their interests have been neglected for lack of sufficient and suitable safeguards; it arises also in the context of our expanding economy which depends in part on joint-stock enterprise wisely directed and watchfully supervised for the service of the country's interests. It may be that some of these provisions of watch and ward impose needless and vexatious burdens on the freedom of enterprise, but so long as they are administered with understanding and sympathy, those who are moved and motivated by an identity of interest between the Company and the country should find little difficulty in adjusting themselves to the new conditions and, if an informed and instructed body of shareholders emerge in consequence, it is all to the good and none may gainsay its value and importance. Incidentally, it may help the private sector to recover its proper place in public economy.

A Balanced Economy Needed

"The economy that we recovered from the foreign administration was one of shreds and patches and its reconditioning called for care and caution, especially with the limited mobile resources at our disposal. The First Five-year Plan was drawn up with emphasis on the agricultural sector and by all accounts a very good job of work has been done in the first Plan period. The second Five-year Plan commences with the current official year and, though its contours are yet to be defined with precision, it is common knowledge that this time the accent is on the industrial sector. The need to create a balanced economy with a view to widening the range of employment and raising the standard of living is now increasingly recognised and means and methods to this end are now vigorously canvassed in all informed circles. Considering the size of the Plan frame and the prospect of recourse to deficit financing to service substantial parts of it, it is obvious that the success of this adventure turns largely on the measure of willing and wholehearted co-operation forthcoming from the community; in particular, wisdom lies in enthusing the private sector to engage in the task ahead, without doubts or misgivings.

"It is not so much the socialistic pattern of society to which our course is set that alarms the business community; they are realists and can appreciate the impact of new forces in a changing world. Everywhere these forces are at work; only in India additional momentum has been imparted, because these forces had been dammed for decades past; but our political propagandists, in their anxiety to show that they are in the vanguard of the new movement, have unfortunately laid more stress on the break with the past than the build for the future. The business community is naturally exercised over recent developments and a restatement of the Government policy in the context of the socialist pattern was clearly indicated. This has now been clearly enunciated by the Prime Minister in Parliament and should serve to enlighten concerned interests where they stand in the new economy. Industrial programme and progress will be attempted and achieved on a three-tier basis. There will be at the base a public sector comprehending industries which, for reasons of security and scale of investments, can best be run on Government ownership and control; in the middle, there will be a composite sector where private enterprise is intended to supplement Government efforts; at the top there will be a private sector where private enterprise will have full play though subject to regulation in public interest. Rightly understood, interpreted and administered, few will be disposed to quarrel with this distribution of responsibilities in a country's economy, if the international forces unleashed in the twentieth century are properly appraised and assessed. It cannot, however be denied that what is being attempted is a controlled economy with facets of freedom.

Industrial Peace Needed

"It is not enough, however, if the Government restates its policy in clear terms. It must also create and maintain conditions under which industry, howsoever placed, can thrive and give of its best. The primary requisite in this direction is a period of industrial peace. In my address last year I have dealt at length with the problems posed by labour and, by way of illustration, cited facts and figures to establish that neither in their own interest nor in the interests of the country could the way they had reacted to the needs of the situation be justified. The Government is not unaware of what is happening; but the machinery of the Government moves so slowly that oftentimes it serves but to illustrate the juristic maxim that justice delayed is justice denied. I am sorry that so far as our experience goes the position has, if anything, aggravated and the infection has begun to spread to higher ranks also. Not merely is the weapon of strike indulged in on the smallest provocation as the recent dockyard strike in Calcutta illustrates, but the 'go-slow' virus seems to have lodged itself deeply in the body politic. The output is steadily falling and the turnover per man-hour has declined in every industry. Apart from standard wages, incentive bonuses have been offered by way of additional inducement, but it is early days yet to assess how far this will stop the rot. In marginal industries working under competitive conditions the strain on enterprise is beginning to sap all enthusiasm for expansion. That this should happen when the country is being called upon to co-operate with a large-scale expansion in the industrial sector is a tragedy too deep for tears. I hope those who are framing the Plan will turn their attention to this festering sore in the system and see their targets are not defeated by it.

Inadequate Attention to Transport

"In a rapidly developing economy where progress on many fronts is contemplated there is one danger that farsighted men should guard against well in advance. I raise this note of warning because I am afraid in the framework of planning sufficient attention has not been paid to the multifaced problem of transport. As it is, with the limited objectives we have achieved under the first Five-year Plan, transport has already become difficult, seriously upsetting production and distribution programmes of industrial units. Traffic on the railways has become so congested that it is seriously suggested that propaganda should now be taken on hand for discouragement and not encouragement of traffic. There has also been large-scale diversion of coal traffic to coastal shipping; but with rising costs, on the one hand, and avoidable delays at the ports, on the other, the rates offered are so uneconomic that shipping companies find little enthusiasm in a situation that should normally stimulate enterprise. The turnover of every shipping company engaged in the coastal trade has registered a fall and the margin of profit is fast coming to vanishing point. More ships should be commissioned to cope with the coastal traffic, but frankly the incentive is not there.

Freight Rates

"Nearly a year back, shipping interests applied for raising the freight rates, but after repeated representations a token 5 per cent. increase was allowed in October last year. During the interval the costs of replacement, services and materials have kept on rising, with the result that the original increase, which the Indian shipowners considered a year back as barely sufficient to meet their liabilities, is out of date today, and suitable representations have been made to the Government in the matter. Whereas the coastal trade saw the last increase as far back as in 1951, the other trades with which India is intimately connected have seen increases ranging from 21 per cent. to 45 per cent. during the same period. Examples are not uncommon where the Conferences concerned have increased their freight rates by 21 per cent. within the last twelve months. The coastal trade has meanwhile been compelled to suffer heavy losses. The Government of India would appear to be cognisant of this position because, at the meeting of the Consultative Committee of Shipowners held in Bombay in November last, the Hon'ble Minister for Transport stated:

"'One of the matters which have of late agitated the Indian shipowners is the question of suitable increase in the coastal freight rates. The shipowners had proposed to put up the coastal freights by 10 per cent., but the Government have found it possible to agree to an increase of 5 per cent. only. I know this has not been generally appreciated, but Government are committed to review the matter after the Rail-Sea Co-ordination Committee has submitted its report. If that report is not received by March 1956, Government would take up the matter again on their own with a view to examining whether any further modification in the freight rates could be justifiably made.'

"The Rail-Sea Co-ordination Committee have not been able to bring out their report so far. In the meantime, the second interim increase, which was contemplated by the Hon'ble Minister for Transport to be effective soon after 1st March, materialised only some time during the current month. Even this increase is to the extent of 5 per cent. only on general cargoes effective 1st April last. The freight rates on railway coal will be revised with retrospective effect from 1st April this year only after the Government receives the recommendations of the Rail-Sea Co-ordination Committee. On the other hand, the freight rates on coal moving on private account or for bunkers will continue at the present level till the Government takes decision on the recommendations of the Rail-Sea Co-ordination Committee and will have no retrospective effect as on railway coal. This piecemeal treatment takes no cognisance of loss in earnings already suffered by the shipowning community, nor does it take into account the changed circumstances of the case which have been duly represented to the Government and which call for higher increases in the freight structure, nor even is the present increase in any way commensurate with the increase effected by foreign shipping on foreign trade routes with some of which the Government themselves are associated.

Further Substantial Relief Needed

"Unless, therefore, further substantial relief is forthcoming without loss of time, I am afraid, there is little prospect of improvement in coastal traffic. A modest target is fixed under the second Five-year Plan for the expansion of shipping, raising the total tonnage to less than a million tons in 1961, and shipping companies have been asked to frame programmes of expansion during the second planning period. I wonder, however, if in the conditions that prevail today the response will be adequate. The Government is no doubt anxious to help with credit facilities; but unless the prospects of making both ends meet are visibly improved, few will come forward to take advantage of the

T. KONDO,
Manager.

We have audited the foregoing Balance Sheet of the Bombay Branch of the Mitsui Bank Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account for the period from 28th May to 31st December, 1955, and report that:—

(a) we have obtained all the information and explanations which we have required;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branch's affairs according to the best of our information and the explanations given to us and as shown by the books of the Branch; and

(d) in our opinion, Books of Account have been kept by the Branch as required by Section 130 of the Indian Companies Act, 1913.

A. F. FERGUSON & CO.,
Chartered Accountants.

BOMBAY, 28th March, 1956.

PROBLEMS ARISING FROM MYSORE STATE REORGANISATION

AN ECONOMIC APPRAISAL

By An Economist In Mysore

[The areas that are being merged with Mysore State, in accordance with the Government of India's scheme for reorganisation of States, are less advanced than the State absorbing them. This raises a series of economic and social problems, the magnitude of which is indicated in the article appearing on this page. The object in publishing this article is not to create any opposition to the merger and the formation of a bigger Karnataka, which is a fait accompli already, but to give an indication of the problems that are likely to arise in other parts of the country where reorganisation of States is on similar lines. Accordingly, the article is of interest not merely to Kannadigas but also to a wider section of the public.—ED.]

THIS note analyses the economic and financial consequences of the merger of the Mysore area in the proposed Karnatak State. The analysis will be in three stages: (1) The extent and direction of existing development and the economic burden thereof; (2) the present financial position and structure; and (3) the financial repercussions of the merger under these conditions. For purposes of broad analysis, the Karnatak areas in Hyderabad (Gulberga and Raichur), Bombay (four districts) and Madras (S. Kanara) will, as a whole, be compared with the Mysore State.

The S.R.C. Report, in one context, states that Karnatak areas outside Mysore are regarded as undeveloped and are likely to have a financial deficit, but a little further down, it observes that "the assumption which has sometimes been made that the Karnatak areas outside Mysore are particularly backward areas seems to us to be quite unwarranted." As the issue of backwardness or otherwise has a very important bearing on the financial position, it may be tested in terms of the data presented by the Fact-Finding Committee (will be referred to below as the Seshadri Report), which appears to be the only official, non-opinionated factual document.

Tests of Backwardness

The tests of backwardness will have to be made in the context of State subjects, namely, communications, industry and social services. Among the means of communication, railways being a Union concern, the extent and development of roads only matter for the present analysis:

Road Mileage per 100 square miles

Hyderabad—		
Gulberga	7.3	
Raichur	10.3	
Bombay—		
Belgaum	22.3	
Bijapur	14.6	
Dharwar	21.7	22.5
N. Kanara	30.9	
Madras—		
S. Kanara	26.2	
Coorg	26.3	
Mysore	36.7	

The relative backwardness of road communications is obvious. In Hyderabad, several of the taluk headquarters are not even connected with one another, so that, if one has to travel from one taluk centre to another, one has to come back to the district headquarters. There does not appear to be even a district road from Raichur to Gulberga. "To reach the Mysore standard in respect of road facilities," concludes the Seshadri Report, "5,069 miles of roads will have to be added to the road mileage in the Kannada areas of Hyderabad and 3,245 miles in the Kannada area in Bombay." On a conservative estimate, the approximate cost of these constructions would be over Rs. 13 crores as follows:

		Rs.
Hyderabad		760 lakhs
Bombay		486 ,,
Madras		60 ,,
	Total	Rs. 1,306 lakhs

This amount excludes the costs of repairing and relaying existing roads and of any improvement over the Mysore standard.

Social Services

Let us now turn to the social services, namely, education, medical relief and public health. The available educational facilities are as under:

	In terms of area served (square miles)		In terms of population served	
	One high school	One primary school	One high school	One primary school
			Lakhs	
Hyderabad—				
Gulberga	571.4	724 6	7.5 1.45	1,314
Raichur	383	9		
Bombay—		3.0		930
Belgaum		4.0		306
Bijapur	159	3.4	3.2 3.2	1,014
Dharwar		5.5		993
N. Kanara				
Madras—	59	3.2	0.25	1,338
S. Kanara	136	2.49	0.45	902
Mysore				

Thus, the number of institutions, especially in Hyderabad, will have to be doubled to approximate to the Mysore level and the extra cost in this region alone would exceed Rs. 100 lakhs.

Backwardness is more pronounced in medical and health services and so are the consequent financial implications.

	Area served by one hospital	Population served
Hyderabad—		
Gulberga	419 } 431	85,232 } 87,759
Raichur	477	82,284
Bombay—		
Belgaum	} 255	62,000
Bijapur		
Dharwar		
N. Kanara		
Madras—S. Kanara	88	47,270
Mysore	64	19,000

To reach Mysore standards, facilities in Hyderabad will have to be expanded fourfold, in Bombay threefold and in Madras twofold. The cost of constructing additional district hospitals and rural dispensaries is estimated at Rs. 44 lakhs with an annual expenditure of Rs. 20 lakhs more. In the Bombay region, the additional constructional cost would be at least half a crore for 260 institutions (It is not clear how the Seshadri Committee puts the number of new hospitals at 80 and the cost thereof at Rs. 16 lakhs where there is a threefold expansion needed to reach the Mysore standard of one hospital for 19,000 people).

Extra cost on hospitals, etc.

		Rs.
Hyderabad		44 lakhs
Bombay		56 ,,
N. Kanara		10 ,,
	Total	Rs. 110 lakhs

Thus, the extra expenditure on educational and health services to level up with the Mysore standards would be at least Rs. 2½ crores. And yet the S.R.C. Report observes: "The extra cost, if any, of uniform standards of expenditure on the social services cannot, therefore, in our opinion be very great."

Underdevelopment in the non-Mysore areas in other fields is no less marked. For instance, veterinary services are as below:—

Square miles served by one institution

Hyderabad area	43,570
Bombay area	44,246
Mysore area	28,207

THE
SOUTH INDIA INSURANCE
COMPANY, LIMITED
(Incorporated in India)
(Established 1934)

Transacts
Fire, Marine, Accident and Miscellaneous Insurance Business

Authorised Capital Rs. 1,00,00,000
Subscribed Capital ,, 50,00,000
Paid-up Capital ,, 10,00,000

Head Office:
New India Assurance Building
Mahatma Gandhi Road
Fort, BOMBAY

About industries, the Fact-Finding Committee concludes: "Compared to the development of cottage and small-scale industries in Mysore State, the results so far achieved in this area leave much to be desired."

The Financial Position

The present financial position of non-Mysore Karnatak is as under (Seshadri Report):

(Figures in lakhs of Rs.)

	1950-51	1951-52	1952-53
Hyderabad area—			
Revenue	272	291	265
Expenditure	163	162	166
Surplus (+) or Deficit (—)	+109	+129	+100
Bombay area—			
Revenue	533	527	549
Expenditure	692	684	764
Surplus (+) or Deficit (—)	—158	—157	—214
Madras (S. Kanara)—			
Revenue	131	} Not available	
Expenditure	139		
Surplus (+) or Deficit (—)	—8		
Overall position	—57	—28	—114

The overall deficit would really be very much larger, as the surplus in Hyderabad would soon become a deficit. For the main source of revenue in Gulberga and Raichur is excise accounting for Rs. 129 lakhs in 1950-51, that is, a little over one-third of the total receipts. With the inevitable adoption of prohibition, this important source would disappear, increasing the overall deficit to a little over Rs. 2 crores. It is doubtful if the multi-point sales tax, now yielding about 7 per cent. of the revenue, would yield appreciably larger income, even if the Taxation Enquiry Commission's suggestion of levying simultaneously a universal single point tax and a selective law multi-point levy is adopted. The only other important source is land revenue, now accounting for about 17 per cent. of the receipts. Hyderabad Karnatak is a dry, arid region at present and, until substantial irrigational and agricultural improvements are effected, there is little possibility of increasing the land revenue. It may be pointed out that the K.P.C.C., while adverting to land revenue charges as a likely source of additional receipt in Bombay, is silent about Hyderabad. The scope for neutralising the loss on the excise side is, therefore, extremely limited.

On the other hand, there would necessarily be an increase in expenditure consequent on stepping up the present low outlay on social services and developmental activities so as to reach the Mysore standards. As pointed out earlier, this may be of the order of Rs. 1 to Rs. 1½ crores, raising the overall deficit to about Rs. 3 to Rs. 4 crores.

Let us look at the position from another angle. The overall *per capita* expenditure in 1952-53 was:

	Rs.
Hyderabad	6.00
Bombay	14.05
Mysore	19.86

This indicates that, if the Mysore level of expenditure is to be attained, nearly 270 per cent. more in Hyderabad and 50 per cent. more in Bombay will have to be spent. This may mean an additional outlay of about Rs. 3 crores per year in Bombay and Rs. 4½ crores in the Hyderabad area, in all Rs. 7½ crores along with the shortfall of Rs. 2 to Rs. 2½ crores on the revenue side. The compelling conclusion, therefore, is that, if there is integration in the near future, a sum of Rs. 9 to Rs. 10 crores on the revenue expenditure side alone will have to be found.

The Ways Out

Overlooking for the moment the problem of *improving* the standards in Mysore, let us make a realistic assessment of the alternative means of meeting the foregoing situation. There are three possible ways out. The first way relates to the *slowing down and even neglecting to raise the non-Mysore areas* to the higher level. But, if there is integration, this approach is both unfair and almost impossible, especially since the legislature would have a very strong representation from those areas. The second way is *getting the extra grants from the Union.* Thus, the K.P.C.C. memorandum remarks that, "in the initial stages, the new state would be justified in expecting some substantial help from the Centre by way of cost of integration." The S.R.C. also holds that, during the transitional period, it is necessary to provide help to the newly constituted units and that revenue gap grants-in-aid be given. "It is doubtful," continues the Commission, "whether it is possible or desirable for the Centre to undertake a blanket commitment on these lines," namely, assuming the residual responsibility for supporting the revenue budgets of the States until such time as other arrangements can be made. As the nature and extent of such aid is uncertain pending a comprehensive review, the Commission recommends the grant of long-term loans. This solution is thus, indefinite.

The third alternative is *raising larger revenue from current sources or levying more taxation.* The scope in this direction also appears limited. As noted earlier, the revenue structure in Hyderabad is rudimentary offering little scope for expansion. With regard to Bombay, the K.P.C.C. suggests the following new sources:

(1) *Converting the single-point sales tax into a multi-point one.*—This may not yield very much more than at present, even if a selective low multi-point tax is coupled with a universal single-point one, as suggested by the Taxation Enquiry Commission.

(2) *Surcharge on land revenue* whose incidence is low in North Karnatak. In neither of these cases has the K.P.C.C. even surmised the extent of the increase, because of the difficulty of assessing the yield.

(3) *Changes in land tenure* resulting in an addition of Rs. 33 lakhs. It is doubtful if the share of Karnatak would be of the order of one-third of the estimated increase in the whole of the Bombay State.

(4) *Revision of land revenue settlement* expected to yield Rs. 35 lakhs. This, again, is counting the chickens before they are hatched, as the revision of the settlement in the *ryotwari* tracts is a prolonged process. Thus, whatever the theoretical utility of these sources, they cannot be counted upon for practical purposes in the near future.

There are, however, a few *distant possibilities* of large revenue. First, the successful completion and working of the multi-purpose projects—Tungabhadra, Upper Krishna, Bhima, Ghataprabha and Malaprabha—would increase the revenue potential. Secondly, Karnataka's resources are said to be considerable. When they are fully exploited, larger public income may be realised. But these are very long-term possibilities, and much cannot be expected for one or two decades or even generations.

Can Mysore Do It?

Thus, we come to the last solution, that, *in the interests of the larger whole, Mysore will have to step into the breach.* Can Mysore do it? If so, at what cost?

Mysore revenue is about Rs. 22 crores with a *per capita* incidence of Rs. 23, as compared with Rs. 12.7 in Bombay Karnatak and Rs. 15 in the Hyderabad region. Already, a higher proportion of the people's income is thus being raised for public purposes. If, therefore, the responsibility of improving the rest of Karnatak is to be shouldered by Mysore, there are only two ways out. First, tax the Mysore citizen more, so as to cover up the whole or part of the anticipated deficit. Every crore of rupees to be raised would add about one rupee per head or 5 per cent., more to the incidence on the people. Assuming that a part, say, 50 per cent., of the shortfall, can be raised in other areas or through Union grants-in-aid, the balance of Rs. 4 to Rs. 5 crores would increase Mysore's burden by 20 to 25 per cent. Are the resources of the people able to bear this addition? Referring to the continued deficits in the Mysore budget, the Chief Minister observed that, in 1954, eight specific taxation measures were proposed but only two were approved by the legislature. "Thus, against a crore of rupees of additional revenue anticipated by the several taxation measures proposed last year, it has been posible to realise only a sum of Rs. 25 lakhs.... We should think of some immediate measures whereby the wide gap between revenue and expenditure can be reduced to the extent possible." If Mysore is finding it hard to raise this bit of revenue for her own immediate needs, it should become much harder to raise a larger sum for the benefit of an erstwhile neighbour.

The second way out is for Mysore to spare the amount from her own current revenues, that is, to spend annually not Rs. 22 crores but Rs. 17 or Rs. 18 crores directing the balance to the backward areas. What would be the effect of this? With an expenditure of about Rs. 23 *per capita*, Mysore is in the vanguard of social and economic progress in India. She has been running continued deficits.. "The gap between revenue and expenditure in the last few years," observed the Chief Minister, "is progressively on the increase. ... The rising tempo of expenditure in the Development Department with the decline in the incomings from certain principal heads of revenue would tend to widen further the gap." The lack of finances has already cut short her stride, for example, in educational and medical facilities and in economic development. If, under these conditions, Mysore has to support other areas, not only will her present rate of progress be slowed down but also substantial cuts will have to be effected in the existing social services and developmental projects. It would become extremely difficult to keep to the objective so spiritedly put forward by the Chief Minister: "In the position of a State like Mysore, there could be no going back on the progressive policies and programmes followed so far and we could only go forward."

Administrative Difficulties

There is also another consequence of the merger to be taken note of, namely, the inevitable administrative difficulties relating to the services. The scales of pay in Mysore are, by and large, low—often unfairly low—at the starting stage, in the incremental rate and with regard to the maximum. The overall difference is roughly of the order of 25 per cent. and is particularly marked in the lower cadres. There is also considerable difference in the dearness allowances. Merger of Mysore in the Karnatak State necessarily compels integration of services, which becomes complicated when salaries differ in different areas.

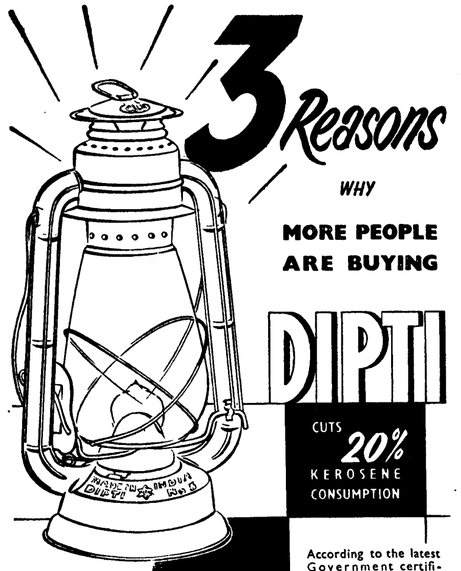
Apart from the fact that, merger or not, salaries will have to be upgraded in the interests of fair play and efficiency, the merger precipitates the issue. Scaling down of other salaries to the Mysore level is impracticable and so scaling up of Mysore salaries becomes inevitable. The present expenditure on salaries and allowances is: Gazetted Rs. 66.46 lakhs, non-gazetted Rs. 444.05 lakhs and allowances Rs. 299.19 lakhs, making a total of Rs. 809.7 lakhs. A 25 per cent. overall increase would add about Rs. 2 crores, raising the item to a little over Rs. 10 crores. In other words, either the aggregate expenditure will go up to Rs. 25 crores, necessitating an increase in taxation or borrowing, or, if Mysore has to support the backward areas, its net effective expenditure on social and developmental schemes would be further cut down by Rs. 2 crores, that is, to Rs. 15-Rs. 16 crores.

The remark of the S.R.C. Report that the deficit and the cost of revising Mysore scales of pay could be set off against appreciable savings in overhead cost is, indeed, surprising. For the formation of a new State would, if anything, add to these charges. The observation of the Seshadri Committee is undoubtedly sounder in this respect. They say: "The necessity will arise inevitably to expand the establishments of the Heads of Departments and of the Secretariat. The number of Secretaries may have to be doubled and the strength of the Judges of the High Court will have to be substantially increased."

Thus, if the large revenue gap is not made good by the Centre, the issue of merging Mysore in the Karnatak State resolves itself to this: (1) retardation of social welfare and developmental projects in Mysore for at least the next decade or two; or *alternately* (2) an increased tax burden on the Mysore taxpayer of approximately 20 per cent.

Some economic advantages, however, have been claimed in the S.R.C. Report as arising from *one* State, as, for example, that a United Karnataka would solve the problem of the development of Malnad. It is held that the formulation and implementation of economic development plans in a co-ordinated manner have been impeded by the area being under four Governments, and that under one State co-ordinated planning for these areas would be easier. It is also claimed that the unification will facilitate the rapid development of the areas under the multi-purpose projects. "Northern Karnataka," concludes the Report, "is on the eve of large-scale and rapid economic development.... The increased production of food ... will meet the needs of Mysore.... It is not therefore, only Karnataka which may hope to benefit from the unification....

There may be some force in these arguments but it is impossible to check effectively their accuracy. For, they are largely matters of opinion and are results which *may accrue* only in the distant future.



FOREIGN TRADE UNDER SECOND PLAN

EXPORTS SHOULD BE BOOSTED IN ORDER TO MINIMISE BALANCE OF PAYMENTS DEFICIT

AN outstanding point that emerges from the speeches of Mr. T. T. Krishnamachari and Mr. D. P. Karmarkar at the meetings of the Export and Import Advisory Councils early this week, is that the accent of trade policy during the second Plan period will be on maximisation of exports and utmost economy in imports. This is only as it should be, considering the heavy strain on foreign exchange resources that will be imposed by the substantial stepping up of aggregate investment envisaged in the Plan. The estimated gap in balance of payments is very wide; the total deficit on current account works out to as much as Rs. 1,120 crores, even after allowing for a surplus of Rs. 255 crores on invisibles. Mr. Krishnamachari fears that this deficit will be still bigger, for he says:

"The development of the economy at the rate which the Plan envisages would need a tempo of activity which cannot be adequately met by the utilisation of resources that we have in the country *plus* what we have estimated would be imported by way of capital equipment, raw materials, foodgrains and consumer goods. It is, therefore, quite on the cards that the import schedule in the Plan would have to be increased perceptibly, with the result that the balance on current account at the end of the Plan might show formally a bigger deficit balance than Rs. 1,120 crores, even if there is no material increase in imports."

Expression of Hope

It is thus evident that the balance of payments gap will be quite considerable, both absolutely and in relation to the funds that have so far been forthcoming. Since balance of payments is particularly sensitive to inflationary pressures and since the nation cannot produce dollars or sterling whenever it wants in the same way as it can create rupees, it is of the utmost importance that all possible avenues are explored for securing the required inflow of resources. The Planning Commission has no doubt fully recognised this aspect, but has failed to indicate exactly how the gap could be covered. As Mr. Krishnamachari rightly pointed out, the Plan has not made a completely watertight provision for meeting this gap; it has left uncovered roughly Rs. 800 crores, that is, after taking into account the sum of Rs. 300 crores which can be found from the existing sterling resources. The Plan, of course, has suggested several means by which the gap could be covered—as, for example, withdrawal from foreign exchange reserves, flotation of public issues in foreign money markets, bankers' credits and export credits. World Bank loans, private foreign investment, etc.—but these represent, to quote Mr. Krishnamachari, "more an expression of hope than anything based on the realities of the situation."

Viewed thus, the problem, indeed, needs "a very careful study" of both the size of imports that will have to be made and the size of the deficit that will result at the end of the Plan period. Mr. Krishnamachari did well to draw particular attention to this problem and urged that "earnest attempts" would have to be made primarily to meet the possible increase in the deficit on current account and also to reduce perceptibly the size of the deficit itself.

No Easy Task

That there is no exaggeration whatever in these remarks will be evident from the fact that the country does not have limitless foreign exchange resources; nor has it any large surpluses of commodities and manufactured goods to be exported against imports of plant and machinery, food and raw materials. It will not, therefore, be an easy task to find the wherewithal even for the essential imports. This aspect was impressively brought out by Mr. Karmarkar in his address at the import Advisory Council meeting. He said: "It will be necessary for us to take every possible device to effect savings on items which are not directly related to our development plants.... We will have to continue the process of judicious pruning of imports of items which can be economically produced in the country. This will be a continuous process and we hope that, as the Plan proceeds, we will be devoting a larger and larger proportion of our foreign exchange to the import of machinery, equipment and industrial raw materials." In this connection, Mr. Karmarkar cited the following trade statistics:

The value of our imports has risen from Rs. 618 crores in 1954 to Rs. 647 crores in 1955. The value of plant and machinery imported during 1955 exceeded the 1954 figure by Rs. 23 crores. There has been a more significant expansion in the import of metals, the value of which has gone up from Rs. 51 crores in 1954 to Rs. 75 crores in 1955; and yet the balance of trade has not been too unfavourable. In fact, we closed 1955 with an unfavourable balance of only Rs. 41.27 crores, as against the corresponding figure of Rs. 54.88 crores for the previous year. Similarly, the balance of payments position has not been unsatisfactory. At the end of March 1956, our sterling balances stood at Rs. 748 crores, as against Rs. 732 crores at the end of March 1955.

Proceeding, Mr. Karmarkar revealed that the increased tempo of industrialisation envisaged in the second Plan was already beginning to have an effect on the country's import trade. During the first three months of the current calendar year, imports were running at a level considerably higher than those in the corresponding periods of the previous two years. In that period, the balance of trade was unfavourable to India to the extent of Rs. 45 crores. The rate of licensing for capital goods had increased sharply and it was estimated that the expenditure on imports of machinery and metals in the remaining nine months would exceed the figure for the whole of 1955 by over Rs. 60 crores. It is for these considerations, Mr. Karmarkar declared that the Government found it difficult to give favourable consideration to the suggestions for liberalising imports in certain sectors. He, however, felt—this is, indeed, gratifying—that it might be necessary to provide for increased imports of some non-industrial items to meet the expected increases in consumer demand. Incidentally, he claimed that the Government had perfected its machinery to bring about planned shifts in imports from non-essential to essential items.

Augmenting Exports

While the adoption of a rational import policy will help reduce the trade deficit on current account, the need for augmenting the export trade assumes greater importance. It is unfortunate that this aspect has not received adequate emphasis in the Plan. "The Plan," to quote Mr. Krishnamachari, "is not very helpful, because it has posed some problems and postponed the solution. One good thing that the Plan does is that it gives a complete picture of our hopes and aspirations, and of our needs and the direction in which we have to proceed to fulfil them. Such gaps as we find when the full picture is presented have got to be filled and it is from this point of view that I am emphasising the need for greater attention of our export trade as a primary factor in the maintenance of our development economy." Mr. Krishnamachari expressed his concern over the "declining trend" in textile exports, a trend that appears to be gathering momentum. But the blame for this must be squarely laid on the Government. Mr. Krishnamachari was candid enough to admit this. He said: "It is my view that, if any blame is to be apportioned for the present export trend in textiles, that blame must be laid on the shoulders of Government. I am prepared to accept the responsibility for it. It is, perhaps, true to some extent that we cannot reconcile our export ambitions with the restrictive production policy in regard to textiles. Though that policy is primarily directed towards home consumption, it is not always easy to separate the relative interest of home consumption and export trade."

It is undoubtedly a good thing to be frank and to own the mistake. But what is the value of such confessions as the one made by the Commerce and Industry Minister, if no vigorous steps are taken to correct the past mistakes? The stage for candid admissions is over. The time has come for proof that the Government has learned from its mistakes. We have yet no evidence that it is forthcoming or will be forthcoming in the near future.

Price Flexibility

It is common knowledge that the progress of export trade depends very largely on conditions obtaining elsewhere in the world. If, therefore, the country is to launch forth any scheme of active export promotion, what would be most necessary is, as Mr. Krishnamachari very aptly put it, not merely augmentation of internal production in the type of articles that go into the export trade but, along with it, a reasonable degree of price flexibility. There are various factors contributing towards the maintenance of such price flexibility or otherwise. The first need would be, according to Mr. Krishnamachari, to raise the output of exportable items, for it is only by augmenting supplies that prices can be brought down. With this view, we agree. Secondly, domestic fiscal policy, according to him, has a big say in regard to making supplies available for export, as "any fiscal policy which tends to inhibit internal consumption will certainly release a larger quantum of goods for export at a price which will be the ruling price in the internal market less the fiscal burden on that type of goods." This is true only to some extent. For, if the article concerned is one of the basic consumption goods—cloth is surely one of them—the policy of inflating domestic prices with a view to compelling manufacturers to look for export markets will have adverse effects on the economy in other ways. Besides causing serious hardship to consumers, and, consequently, discontentment among the public, it would result in higher cost of living and thereby add to the cost of development. Thus, the second solution of Mr. T. T. Krishnamachari is not a sound one. The best thing to do in such cases would be to expand production to a level which would leave sufficient balance for exports after meeting all reasonable domestic demand. Discussing the ways and means of achieving a rapid increase in exports, Mr. Krishnamachari said: "It is clear they are not easy. A lot of work has to be done before making any progress in this direction. No planned economy can ever be successful, unless it has attached to it controls and restraints." He, of course, took care to add that, "in a plan within a democratic structure, you can plan neither for rigorous controls nor for long-term restraints. So again, it is a problem of striking the golden mean."

State Trading Corporation

As was only to be expected, the State Trading Corporation, set up by the Government of India recently, figured prominently in the discussions at the meetings of both the Import and the Export Advisory Councils. Several members of the Import Advisory Council expressed apprehensions regarding the disquieting effect of the Corporation's activities on the trading community. Allaying these fears, Mr. Karmarkar made the following remarks:

"The object of the State Trading Corporation is not to encroach upon the normally recognised trade channels. As to the question of what would happen 10 or 15 years hence, wise speculators do not take into consideration such long periods. It is no use getting scared with something which need not scare. The country has opted for the socialist system ultimately, but the resources, the personnel and organisation will take an amount of time which, it looks, need hardly raise fear among the members. I am sure business men in the country have sufficient horse sense to know that there is nothing to be terrified about it ultimately. During the next five years, the production potential will increase and it may well be that the percentage increase in private trade will be more than what the State Trading Corporation may get."

Mr. Krishnamachari was even more vague in his references to this subject. All that he stated was that private enterprise should show a degree of tolerance to the Corporation. He refused to define the orbit of its activities, because it would defeat its purpose. The Corporation, he said, had been formed to stimulate trade, primarily export trade and, incidentally, import trade. He could not agree to limit its activities until he knew "the entire gamut of gap in our foreign trade structure."

STATE TRADING CORPORATION

The Central Government-sponsored State Trading Corporation was registered under the Companies Act 1956 at New Delhi on Friday the 18th inst. under the name "The State Trading Corporation of India (Private) Ltd. The authorised capital of the Corporation is Rs. 1 crore, divided into 100,000 shares of Rs. 100 each. The initial subscribed capital is Rs. 5 lakhs, the whole of it being contributed by the Government of India. The objects of the Corporation, as set out in its Memorandum of Association, are:

"To organise and effect exports from and imports into India of all such goods and commodities as the Company may, from time to time, determine, and the purchase, sale and transport of, and general trade in, such goods and commodities in India or anywhere else in the world, and to do all such other things as are incidental or conducive to the attainment of the these objects."

The affairs of the Corporation will be handled by a Board of Directors which has already been appointed by the Government, Mr. K. B. Lall, I.C.S., and Mr. Satish Chandra, I.C.S., Joint Secretaries, Ministry of Commerce and Industry, are the Chairman and Managing Director, respectively, of the Board. The other members are Messrs. V. Narayanan, Joint Secretary, Ministry of Finance, Nagendra Singh, I.C.S., Director-General of Shipping, V. N. Rajan, I.C.S., Director-General of Supplies and Disposals and H. D. Singh, Director, Railway Board.

STEEL FORGINGS INDUSTRY

The Government of India has brought the industrial undertakings pertaining to the steel forgings industry within the scope of the registration and licensing provisions of the Industries (Development and Regulation) Act. 1951. All industrial undertakings engaged in the production of steel forgings which employ or propose to employ 50 or more workers with the aid of power or 100 or more workers without the aid of power fall within the purview of these provisions. The undertakings which existed on 7th May 1956, or for the establishment of which effective steps had been taken before that date, should now get themselves registered under section 10 of the Act. The Government has prescribed a period of eight months with effect from 12th May 1956 within which the undertakings should be registered. Owners of such undertakings are advised to send in their applications for registration within five months from the above date. Applications should be made in quintuplicate to the Ministry of Commerce and Industry in form 'A' and 'B' according as the industrial undertaking existed on 7th May 1956 or for the establishment of which effective steps had been taken before that date, as the case may be.

The owners of all industrial undertakings pertaining to the steel forgings industry which have come into existence after 7th May 1956 either as new undertakings and any person wishing to establish a new industrial undertaking or to effect a substantial expansion of an existing undertaking, for the purpose of producing steel forgings, or proposing to produce steel forgings as a 'new article' in an existing undertaking, should obtain a licence from the Central Government under section 11, 13(1)(D), and 11A, as the case may be.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000

SURAT ELECTRICITY'S RESULTS GOOD

PROFIT AND SALES AT RECORD LEVELS

THE working of the Surat Electricity Company, Ltd. (Agents: Messrs. Killick Industries Ltd., Bombay), during the year ended 31st December 1955, has produced excellent results. Sales of energy have registered a rise of 19.9 per cent. over the year to a record level of 33.87 million kw.h. and the gross profit has established a fresh record of Rs.13.29 lakhs, beating the previous highest of Rs. 11.06 lakhs earned only in the previous year. With the increase of Rs. 2.23 lakhs in 1955, the Company's profit has advanced in the past two years by Rs. 4.92 lakhs. The net profit, which had gone up from Rs. 3.79 lakhs to Rs. 5.43 lakhs in the previous year, has further risen to Rs. 7.66 lakhs in the year under review, thus doubling itself in the course of two years.

Out of the above net profit, the Directors have utilised a sum of Rs. 2.381 for writing off the new share capital issue expenses, for which purpose they had utilised Rs. 1,751 last year. The statutory contingencies reserve has been provided with Rs. 56,974, as against Rs. 25,670 set aside a year ago, the dividend equalisation reserve Rs. 1.40 lakhs (as against Rs. 60,000) and employees' retiring gratuities reserve Rs. 80,640 (as compared with Rs. 61,900). The Directors have also decided to take Rs. 42,786 each to the tariffs and dividends control reserve and consumers' benefit reserve. The dividend on ordinary shares has been maintained at 7 per cent. per annum, made up of an interim distribution of 2½ per cent. and a final one of 4½ per cent. It must, however, be noted that the interim dividend for the year under review was on the old capital, while the final one is on the increased capital (raised in August 1955 by the *isue of new shares*) proportionate to the amount called up.

The following comparative table will provide an idea of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds of energy ..	54.37	46.66	40.01	31.72
Other income ..	2.74	2.58	2.52	2.54
Cost of energy purchased ..	25.47	21.76	17.96	1.68
Other expenses	18.35	16.42	16.20	23.83
Gross profit	13.29	11.06	8.37	8.74
Agents' remuneration ..	1.23	1.15	1.00	1.03
Depreciation	3.37	2.78	2.38	2.14
Taxation	1.03	1.71	1.20	1.32
Net profit	7.66	5.43	3.79	4.25
New share capital issue expenses	0.02	0.02	0.02	0.01
To reserves	3.63	1.47	0.23	1.54
Dividends—				
6½ per cent. preference ..	0.32	0.32	0.32	0.32
Ordinary	3.66	3.59	3.27	2.35
	(7%)	(7%)	(7%)	(7%)
Carry forward	0.05	0.03	0.01	0.05

The upward trend in earnings from sale of energy noted in the previous years has been maintained, consequent on the increase in sale of energy. The quantity of energy sold during the year amounted to 33.87 million kw.h., as compared with 28.25 million kw.h. in 1954, 23.62 million kw.h. in 1953 and 16.65 million kw.h. in 1952. Thus, sales of energy has more than doubled in the course of three years. During the year under review, 1,541 new consumers were connected to the Company's mains bringing the total number to 24.372. From 1st July 1955, the Company made a downward revision of its basic rates for H.T. and L.T. power and for residential supplies. A minimum charge of Re. 1-8 per month in respect of lights and fans was reintroduced from 1st October 1955. Further, an *ad hoc* rebate of 6 pies in the rupee on the basis of total monthly bills (excluding coal surcharge) for the billing period January to June 1955 was allowed and credited in the December bills of those consumers qualifying for it. The continuity of supply to the Company from the Bombay Electricity Board's thermal station was satisfactory. The Company's maximum demand on the Board was 9,000 kw., as against 4,900 kw. in 1954, and it purchased 31.47 million kw.h., an increase of 5.76 million kw.h. over the year. The maximum load on the Company's system as a whole was 9,000 kw., as compared with 7,600 kw. in the previous year.

The Company's issued capital was increased during the year from Rs. 56.25 lakhs to Rs. 75 lakhs, by the issue of 18,750 ordinary shares of Rs. 100 each. Of the 18,750 new shares of Rs. 100 each, 17,765 shares of Rs. 25 each were called and paid-up, raising the paid-up capital from Rs. 56.24 lakhs to Rs. 60.69 lakhs. Since the close of the year, the first call of Rs. 25 per share was made on the new issue, making the new shares Rs. 50 paid-up. The reserves and surplus aggregate Rs. 17.63 lakhs. The provision for taxation stands at Rs. 2.76 lakhs and current liabilities aggregate Rs. 25.72 lakhs. The gross block of the value of Rs. 113.95 lakhs has been written down to Rs. 81.01 lakhs. Capital work-in-progress and intangible assets account for Rs. 0.42 lakh. The current assets amount to Rs. 29.47 lakhs, thus providing adequate cover for the current liabilities and provision for taxation.

The Rs. 100 fully paid-up ordinary shares are being currently quoted at Rs. 122-3 *cum-div.* (final dividend: Rs. 4-8). On an *ex-div.* basis, the dividend for 1955 gives a yield of just 5 per cent. per annum, free of income-tax.

ALUMINIUM LTD.

The general prosperity of world aluminium industry during 1955, when production, sales and profits all *reached record levels*, was duly shared by Aluminium Ltd. (President: Mr. Nathanael V. Davis, Montreal, Canada) and its subsidiaries in Canada and abroad. The Directors' report and accounts of the Company for the year ended 31st December 1955 show that the production of primary and semi-fabricated products was maintained at a very high level and the consolidated earnings were well above those of any previous year.

The Company's production of primary aluminium during 1955 reached a record level of 607,700 short tons, an increase of 8 per cent. over the output (560,900 tons) in 1954. All available ingot and semi-fabricated products were *readily sold*, consequent on the strong demand throughout the year for aluminium products in all the markets served by the Company. This is duly reflected in the rise in sales and operating revenues from $327.65 *million in 1954 to $412.15 million. Cost of sales* and operating expenses also went up from $190.89 million to $245.64 million. The net income, after providing for depreciation, current and future income-taxes and dividends on preferred shares of subsidiaries, *amounted to $48.19 million*, as compared with $34.97 million for the previous year. The dividend was raised to $2.15 per share from $2.00 per share paid for the previous three years.

The Company's expansion programme announced last year, if completed in 1959 as at present planned, will increase the effective capacity of the Company in Canada to 912,000 tons of aluminium per annum, as compared with 650,000 tons at the end of 1955.

ANDHRA CEMENT'S PROFIT IMPROVES

DIVIDEND, HOWEVER, UNCHANGED

A rise of Rs. 2.75 lakhs to Rs. 21.08 lakhs in gross profit is disclosed by the statement of *accounts of the Andhra Cement Company, Ltd.* (*Managing Agents: The Andhra Engineering* Co. (Private) Ltd., Madras), for the year ended 31st December 1955. Though this improvement in profit has not made good the recession of Rs. 3.56 *lakhs suffered during 1954*—the profit for 1955 is still lower than the record of Rs. 21.89 lakhs earned in 1953—it has helped the Company resume the upward trend in its profit. The net profit, at Rs. 7.80 lakhs, is, however, only slightly better than that of Rs. 7.66 lakhs for 1954, on account of the larger provisions for depreciation and taxation.

No allocation to the general reserve has been made as in the previous year. In fact, the general reserve, which needs to be strengthened considerably, has not received anything for the last four years. The last occasion on which the general reserve received anything was *in 1951*, when the Directors transferred to it a sum of Rs. 2.15 lakhs from the sinking fund after the redemption of mortgage debentures. The Directors have, however, allocated a sum of Rs. 2.43 lakhs to the rehabilitation and expansion fund under the Government's directive *that a sum of* Rs. 2 per ton of cement sold (out of the statutory price fixed) should be set aside for rehabilitation and *development purposes only.*

The distribution to shareholders has been kept unchanged at 10 per cent., made up of a dividend of 7½ per cent. and a bonus of 2½ per cent., a rate which had been paid for the previous two years, after having been stepped up from a dividend of 7½ per cent. for 1951 and 1952.

The Company's progress during the past three years can be judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	94.33	93.23	94.01	71.50
Stocks	6.55	6.84	7.40	14.62
Expenses*	73.75	76.39	79.27	59.27
Gross profit	21.08	18.33	21.89	18.31

Ordinary	5.12	5.12	5.12	3.83
	(D. 7½% +B. 2½%)	(D. 7½% +B. 2½%)	(D. 7½% +B. 2½%)	(D. 7½%)
Carry forward	0.20	0.27	0.03	0.20

* Approximate only.

The Directors report that production and *despatches* of cement during the year under review were maintained at the same rate as in the previous year. There was, however, a considerable increase in power tariffs, *increase in cost* of raw materials and labour charges. *The in*crease in power tariffs is duly reflected in the rise in cost of power and fuel consumed from Rs. 16.38 lakhs to Rs. 17.64 *lakhs*. The cost of raw materials purchased has gone up from Rs. 17.08 lakhs to *Rs. 17.64 lakhs and wages and* bonus from Rs. 7.10 lakhs to Rs. 7.75 lakhs.

The Company's paid-up capital is unchanged at Rs. 53.77 lakhs, and this is supplemented by reserves and surplus aggregating Rs. 13.26 lakhs, of which general reserve *accounts for only Rs. 5.43 lakhs* and rehabilitation and development reserve for Rs. 4.63 lakhs. The provision for taxation stands at Rs. 12.80 lakhs and current liabilities aggregate Rs. 28.91 lakhs. The *addition to the* gross block made during the year, in pursuance of the scheme of expansion, amounts to Rs. 3.13 lakhs, bringing the total value of the block account *to Rs. 83.24* lakhs. The present book value of the block is Rs. 39.06 lakhs. The current assets aggregate Rs. 69.69 lakhs, exceeding the current liabilities and provision for taxation by a margin of Rs. 27.98 *lakhs*.

Last year, the Directors of the Company decided to expand the capacity of the factory from 300 to 500 tons a day, with a view to making the Company's own contribution towards meeting the shortage of cement in the country, as well as making its cost of production cheaper. In pursuance of this programme of expansion, the Directors have placed orders for machinery with a leading firm in West Germany and made arrangements for the execution of the civil works at the factory. The Directors hope to complete the expansion work before the end of the current year.

Points From The Chair

No Incentive to Shipping

"IN a rapidly *developing economy* where progress *on many fronts* is contemplated there is one danger that farsighted men should guard against well in advance. I raise this note of warning because I am *afraid in the framework of planning* sufficient *attention has not been* paid to the multifaced problem of transport. As it is, with the limited objectives we have achieved under the first Five-year Plan, transport has already become difficult, seriously upsetting *production* and distribution programmes of industrial units. Traffic on the railways has become so congested that it is seriously suggested that propaganda should now be taken in hand for *discouragement* and not encouragement of *traffic*. There has also been large-*scale diversion* of coal traffic to coastal shipping; but with rising costs on the one hand and avoidable delays at the ports on the other the rates offered are so uneconomic that shipping companies find little enthusiasm in a situation that should *normally* stimulate enterprise. The turnover of *every shipping company engaged in the coastal* trade has registered a fall and the margin of profit is fast coming to vanishing point. More ships should be commissioned to cope with the coastal traffic, but frankly the incentive is not there."

C. R. SRINIVASAN,

Bharat Line Ltd.

Fight Against Inflation

"Our most imperative need in the fight against inflation is for our nation so to live and spend that it adds greatly to its reserves *out of yearly* surpluses on its *balance of payments* and *maintains* them against the possible needs of the future when times may be adverse. If we go on as we have been doing, we shall without question fail to hold back inflation and soon *come to disaster. For us*, as a *nation, it is vital that income*, whether wages or other income, should not increase faster than production. As a nation we must face *some im*mediate self-denial to remedy the position and to improve our savings. *Those who saw* at firsthand the full effects of rapid inflation, such as was experienced in Germany after the First World War, know that however painful *the corrective measures* may prove to be, they are infinitely to be preferred to the consequences *of rampant inflation. It is* essential that each one of us shall appreciate that, unless we all play our part in helping to put right our present *disorders, we shall all suffer the* consequences. There will be no escape for any of us. The step each of us can take in varying degrees can be stated quite simply. They are to increase our production—that is, to work harder and as efficiently as possible, and to exercise all the *influence we can* in the direction of curtailing for the *time being all non-essential expenditure whether* public or private—that is, as a nation to save more."

LORD BRAND,

North British and Mercantile Insurance Co., Ltd.

Production and Saving in U.K.

"The official statistics show that in the first nine *months of 1955* United Kingdom exports and manufactures were about 7 per cent. higher in value than a year previously. The corresponding increases for the U.S.A., Western Germany and Japan were about 9, 18 and 27 per cent., respectively. An increasing volume of exports is clearly necessary to meet our *vital needs* and maintain the value of our currency in world markets. To succeed in the export market we require quality of product, promptness of delivery, good aftersales service and, above all, prices *that buyers* are willing and able to pay. British industry will require a vastly increasing and not a diminishing investment in plant and machinery and power facilities if it is not to lag even further behind its main competitors, the U.S.A., Western Germany and Japan. There is also a need for a higher degree of utilisation of our existing plant and a lessening of restrictive practices. A more efficient use of our existing plant would have an immediately beneficial effect and I regard this as one of the major tasks now confronting management and their advisers. Wealth cannot be created by book entry or the bases upon which financial accounts are prepared. The only way out of our present difficulties is by hard work and saving—hard work to increase production, saving to build up resources for capital investment and future betterment."

W. S. CARRINGTON,

Institute of Chartered Accountants.

Insurance Against Atomic Risks

"Now let me call your attention to a development in prospect. There is a new and important type of risk which we, in common with other companies, expect to be called upon to underwrite. This is the cover required in connection with what I may call atomic risks of all types. In particular, the public liability insurance required for those nuclear reactors for which private enterprise is responsible is likely to test to the full the capacity of the available *markets*. As you can imagine, there are bound to be problems in arranging these insurances in different countries but, whatever they are, the companies will take all steps to see how they can be solved."

LORD KNOLLYS,

Employers' Liability Assurance Corporation Ltd.

COMPANY MEETINGS AND DIVIDENDS

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 29th *May* 1956. *Dividend*: Rs. 2 per share (final). Transfer books *remain* closed from 14th to 28th May 1956, both days inclusive.

POWER SHORTAGE AFFECTS DIGVIJAY CEMENT

POLSON MAINTAINS DIVIDEND

Shree Digvijay Cement Co., Ltd.

THE directors of the above Company (Managing Agents: Shree Laxmi Agents Ltd., Sikka, Saurashtra) submitted the audited accounts of the Company for the year ended 31st December, 1955.

The year's working results show, after meeting all expenses of operation and management and after setting aside Rs. 18,00,000 (Rs. 18,00,000) for depreciation, a profit of Rs. 25,55,767 (Rs. 23,71,008). To this has been added the balance brought forward from last year's account of Rs. 2,77,143 (Rs. 1,62,701), making a total of Rs. 28,32,910 (Rs. 25,33,709). Out of this the directors propose to appropriate to reserve fund Rs. 4,50,000 (Rs. 12,50,000) and to contingency reserve Rs. 11,50,000 (Rs. 3,00,000). This leaves a balance of Rs. 12,32,910 (Rs. 9,83,709) which the directors recommend to dispose of as under:—

To payment of a dividend on 39,900 (39,760) 5 per cent. cumulative preference shares at Rs. 5 (Rs. 5) per share (free of income-tax) Rs. 1,99,500 (Rs. 1,98,800) and to payment of a dividend on 38,810 (59,737) ordinary shares at Rs. 8-8 (Rs. 8-8) per share Rs. 7,54,885 (Rs. 5,07,765), leaving a balance of Rs. 2,78,525 (Rs. 2,77,144) to be carried forward.

The Company has had to face during the period under review power shortage which was aggravated by certain breakdown in both the turbines. The trouble in the power supply still continues. The Nawanagar Electric Supply Co., Ltd., assisted by the Saurashtra Electricity Board, has however, taken steps to expand the Sikka Power House and it is hoped that the difficulty for power will be overcome in due course.

The production of clinker and cement was 2,12,876 (2,11,015) and 2,26,432 (2,36,268) tons respectively during the year and the directors hope that the results shown under the circumstances will be regarded as fully satisfactory.

The directors are pleased to report that good progress has been made on the second extension and a major portion of the machinery has already been received at site. It is hoped that this second extension plant will go into operation sometime in the later half of this year, by which time the rated capacity of this factory would be 4,30,000 tons per annum.

The labour situation in the year on the whole has been satisfactory. The senior executives, and the members of staff in general have had to work under strain and the directors take this opportunity of placing on record their high appreciation of the excellent results turned under difficult circumstances.

The directors purchased 47,000 ordinary shares of Rs. 100 each and 8,000 preference shares of Rs. 100 each in The West Coast Paper Mills Ltd., during the year under report and further acquired 4,950 ordinary shares during the current year. Now The West Coast Paper Mills Ltd., has become the subsidiary of the Company. This is a new paper project with very good prospects and the directors are confident that the association of the Company with this project would prove beneficial.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	1,28,80,125	Block ...	2,04,20,192
Reserves ...	28,50,000	Extensions works-in-progress	33,68,689

Polson Ltd.

The directors of the above Company (Managing Agents: Messrs. Polson (Agencies) Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1955.

The net profits after providing for managing agents' commission and depreciation amounted to Rs. 11,10,290 (Rs. 10,11,048) which with the sum brought forward from the preceding year's accounts of Rs. 25,124 (Rs. 18,566) made a total of Rs. 11,35,414 (Rs. 10,29,614). From this sum the directors have placed to reserve for taxation Rs. 5,00,000 (Rs. 4,80,000) and to reserve fund Rs. 3,00,000 (Rs. 2,00,000) leaving a balance available for distribution of Rs. 3,35,414 (Rs. 3,29,614). Out of this amount the directors paid a dividend of Rs. 6 (subject to deduction of income-tax) per share on the preference shares Rs. 88,500 (Rs. 88,500) and a dividend of Rs. 10 (Rs. 10) per share free of income-tax on the ordinary shares Rs. 2,16,000 (Rs. 2,16,000) and carried forward Rs. 30,914 (Rs. 25,124).

The sales during the year improved to Rs. 97,38,656 from Rs. 96,54,246 of the previous year.

The machineries at the Company's factories at Bombay, Anand and Dinapore have been kept in good repair and their efficiency have been continuously maintained.

The Polson Model Dairy at Patna is nearing completion and is expected to go into production during the current year. The work would have been completed earlier had it not been for the fact that throughout the construction work, there has been a great shortage of cement which still continues notwithstanding best efforts.

Accounts in brief were as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	41,60,000	Block ...	40,00,144

Rs.	97,24,003	Rs.	97,24,003

Sitalpore Sugar Works Ltd.

The directors of the above Company (Managing Directors: Mr. R. N. Datta and Mr. D. P. Ghosh, Calcutta) submit the audited accounts of the Company for the year ended 30th June 1955.

The result for the period shows a trading loss of Rs. 72,491 (Rs. 1,54,224) to which is added depreciation for the year of Rs. 67,025 (Rs. 60,644) making a total debit balance of Rs. 1,39,515 (debit of Rs. 2,09,087 after deducting Rs. 5,781 which represents tax-free interest realised from investment).

The directors once again regret to have to report the loss as shown above incurred during the year under review. Inspite of great economy and improvements in the working of the Factory the directors could not present a good account for the financial year. This is partly due to enhanced burden of Sugar excise duty from Rs. 2-12 to Rs. 4-2 per maund of sugar and general fall in prices of sugar resulting from heavy imports of sugar on Government account.

Production by the factories in the country together with Government imports totalled more than 22 lakh tons against estimated consumption of about 18 lakh tons leaving a carryover exceeding four lakh tons. This resulted in further deterioration in selling prices of sugar in the current year.

Although supply of cane improved during the year to certain extent in comparison to previous year but the cane available for crushing was only 11,14,900 maunds which is much below the normal requirement of the factory. The factory worked for 61 days and closed with a recovery of 9.70 per cent. as against 43 days' working and a recovery of 9.53 per cent. recorded in the previous year. Cost of production was substantially reduced but unfortunately the effect could not be felt due to reasons stated above. It is expected that the supply of cane may exceed the normal requirement of your factory during the season 1955-56 and a good production may be achieved.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	9,99,950	Block ...	14,54,274

New Commercial Mills Co., Ltd.

The directors of the above Company (Agents: Messrs. Tricumlal Bhogilal & Co., Ltd., Ahmedabad) submitted the audited accounts of the Company for the year ended 31st December. 1955.

During the year the Company has made a profit of Rs. 21,17,518 (Rs. 10,97,352). After adding the balance from the previous year of Rs. 242 (Rs. 6,391) there is a total of Rs. 21,17,760 (Rs. 11,03,742). This amount the directors recommend for appropriation as under:—

To payment of dividend at Rs. 4 per share (free of income-tax) on 5,250 redeemable cumulative preference shares for the year ended 31st December, 1955 Rs. 21,000 (Rs. 21,000), to payment of dividend at Rs. 80 (Rs. 70) per share (free of income-tax) on 6,300 ordinary shares for the year ended 31st December, 1955 Rs. 5,04,000 (Rs. 4,20,000), to provision for taxation Rs. 5,25,000 (*nil*), to depreciation fund Rs. 9,75,000 (Rs. 7,00,000), to dividend equalisation fund Rs. 75,000 (*nil*), to bad debts reserve fund Rs. 5,000 (*nil*) and to charity account Rs. 10,000 (Rs. 7,500) leaving a balance to be carried forward to the next year's account of Rs. 2,760 (Rs. 1,96,242).

During the year under report, the Sanforizing Plant has been successfully put to commission in December but it was rather late than expected. The directors hope to derive benefits of the plant this year.

Notice

THE TROPICAL PLANTATIONS LIMITED

KOTTAYAM

NOTICE IS HEREBY GIVEN THAT THE Thirty-second Annual General Meeting of the Shareholders of The Tropical Plantations, Ltd., Kottayam, will be held at the Registered Office of the Company, Chief Anchal Office Road, Kottayam, on Thursday the 31st May 1956, at 4 p.m., to transact the following business:—

1. To consider the Balance-sheet and Profit and Loss Account for the year ended 31st December 1955, and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect Directors in the place of the two Directors retiring by rotation.

   Note.—Sri Lazar Paul Attokaren who retires and is eligible for re-election is aged 65 years, last birthday, and a resolution, that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him, is necessary. Special notice of the following resolution for exempting him from the age limit as required by Section 281 of the Companies Act 1956 is hereby given:—

   "Resolved that Sri Lazar Paul Attokaren who is aged 65 years last birthday, be and is hereby re-elected as a Director and that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

   Explanatory Statement, under Section 173 of the Companies Act 1956, regarding this matter is annexed with this Notice.
4. To appoint Auditors for the current year and to fix their remuneration.

By virtue of Sections 9 and 87 of the Companies Act 1956, every member of this Company shall *hereafter* be entitled to *Notice of and Admission to* all General Meetings and every member shall on a poll have *one vote for every share* held by him and shall be entitled to appoint another person (whether a member or not) as his proxy to attend and vote instead of himself; but a proxy so appointed *shall not have any right to speak* at the meeting and *shall not be entitled to vote except on a poll.* The instrument of proxy should be received by the Company at least 48 hours before the time fixed for the meeting. (*Vide* Section 176 of the Companies Act.)

By Order of the Board,
C. T. JOHN,
Secretary.

KOTTAYAM, 27*th April* 1956.

The Register of Members of the Company will be closed from 25th to 31st May 1956 (both days inclusive).

Note.—The Dividend when declared will be made payable on 29th June 1956, by Dividend Warrants which will be posted to the Registered addresses of the shareholders whose names stand in the Company's Register on 31st May 1956.

Explanatory Statement annexed to the Notice of the Thirty-second Annual General Meeting of The Tropical Plantations, Ltd., Kottayam.

TO THE SHAREHOLDERS OF
THE TROPICAL PLANTATIONS, LTD.

Dear Sir/Madam,

The Indian Companies Act 1956 has come into force on 1st April 1956.

Sections 280 to 282 of the Act provide, *inter alia*, that no person who has attained the age of 65 years shall be appointed a Director unless his appointment is approved by a resolution passed by the Company in General Meeting and specifically declaring that the age limit shall not apply to him/her and also that special notice shall be given of such resolution.

Sri Lazar Paul Attokaren, one of the Directors who is due to retire at the next Annual General Meeting and who is otherwise eligible for re-election, has given notice to the Company that he has already attained the age of 65 years, last birthday. Accordingly, for his re-election, a resolution, as aforesaid is necessary

Electricity bills are a problem, and not only to the recipient. It is not surprising, therefore, that Electricity Supply Companies turn to mechanisation in their Billing Departments, in order that their bills may be promptly and accurately despatched. Mechanisation, of course, means Hollerith, and the Electricity Undertaking in Bombay despatches 170,000 bills per month prepared in this way. In Calcutta the figure is 190,000, in Madras 42,000 and in Kanpur 40,000. May we talk Hollerith with you?

QUESTION HOUR IN PARLIAMENT

Atomic Reactor

THE swimming pool type atomic reactor, now being built in Bombay, will begin functioning in six weeks or two months from now. The bigger Indo-Canadian reactor will take another two years to be built. In addition to these, India will be having a number of other reactors India's atomic energy programme is aimed at the peaceful use of atomic energy. Radio-active isotopes which are being used increasingly in industry, medicine and agriculture in India are at present being imported from abroad. They will be produced in India as soon as the Indian atomic reactors are ready. As regards power generation, the economic aspects of setting up atomic power stations in India are at present under study by the atomic Energy Department. India is in close collaboration with foreign countries in the field of atomic research and the necessary personnel for its programme has been sent from time to time to foreign countries for training. As soon as the new reactor is ready, it will make isotopes and the quantity will go on increasing; so will our needs. Obviously, if we have to give them to all our hospitals and for all our agricultural operations, we shall want an enormous quantity.

* * * *

Ilmenite and Monazite

A field party of the Department of Atomic Energy is engaged on the estimation of reserves of ilmenite and monazite on the beaches of Andhra. The party is working under the supervision of the Geology Department of the Andhra University. The interim reports from the field party about the reserves of ilmenite and monazite in the sands of Andhra beaches are fairly encouraging. Final reports have not yet come. If the reports are good, action will be taken. For the moment, we have quite enough of this material on the Travancore beaches.

—*Jawaharlal Nehru*

Bhilai Steel Works

A contract has been concluded between the Government of India and the Ministry of Iron and Steel of the U.S.S.R. for the supply of 60,000 tons of structural steel for the Bhilai iron and steel works. The first consignment is expected to arrive in India this year and the entire supply completed by the middle of June 1959.

* * * *

Cement Consumption

The quantity of cement consumed in the country during 1955-56 was 4.5 million tons. During 1955, imports were nearly 400 tons.

* * * *

Coir Industry

The Coir Board has submitted to the Planning Commission a scheme for the development of the coir industry for inclusion in the second Five-year Plan. The total outlay of the scheme is Rs. 2.26 crores. The Planning Commission have, however, tentatively allocated a sum of Rs. 1 crore only, excluding the expenditure for working capital. The specific schemes to be implemented and the pattern of financial assistance to be given by the Central Government are under consideration.

* * * *

Import Policy

It is not possible to make a general statement about liberalisation of import policy, since the Government has liberalised its import policy in regard to machinery and industrial raw materials over several half-years. Quota restrictions have been removed or relaxed in the case of several commodities when import duties on these articles have been raised.

* * * *

Brass Sheet Factories

There are 10 factories manufacturing brass sheets in India and about 10,220 tons of brass sheets were manufactured by them during 1955-56. Five factories are located in Bombay and one each in Bihar, West Bengal, Rajasthan, Madras and Punjab. Their total rolling capacity for brass sheets and circles and copper sheets and circles is estimated at 40,500 tons per year. Large-scale manufacturers are mainly equipped for the manufacture of brass sheets of commercial quality, the demand for which has gone down, while industrial types of sheets are yet to be developed in the country. There is still competition between the large-scale and small-scale manufacturers of brass sheets, as the costs of production of the latter who use brass scrap as raw material are cheaper. The approximate production of brass in 1955-56 in the ordnance factories is about 6,000 tons. Brass sheets are not produced in the ordnance factories.

* * * *

Import and Export of Publications

The total value of books, magazines and periodicals imported into India during 1955 was Rs. 105.9 lakhs. The corresponding value of exports for the same year is Rs. 68.22 lakhs.

—*T. T. Krishnamachari*

Central Research Institute for Coir

Schemes submitted by the Coir Board for a Central research Institute and a branch Research Institute have been approved by the Government. The expenditure as originally estimated by the Coir Board is Rs. 20.28 lakhs during the second Five-year Plan period. The estimate is, however, under revision.

—*M. M. Shah*

"Bidi" Tobacco

A delegation consisting of the Secretary of the Indian Central Tobacco Committee and a *bidi* trader of Madhya Pradesh left on 8th May 1956 for Egypt, Gold Coast, Nigeria, Sudan, British East Africa and Aden to explore foreign markets for promoting the sale of *bidi*-tobacco.

* * * *

Export of Fish

The recommendation of the Export Promotion Committee to do away with the restricted quota and licence for the export of fish from India has been accepted.

* * * *

Mica Exports

An export promotion Council for mica will be set up shortly. Government Commercial officers are continually making studies of the important markets for developing exports of mica and the commodity is included in all trade agreements that have been concluded.

* * * *

Markets for Indian Tobacco

Steps are being taken to strengthen and explore markets for Indian tobacco in the East European countries. A tobacco officer has been appointed in Antwerp for promoting sales of Indian tobacco in European countries, including East European countries. Tobacco has been included as one of the items available for export from India in the latest trade agreements concluded with the U.S.S.R., Czechoslovakia, Poland, Austria, and Hungary. Samples of Indian tobacco were exhibited at the International Fair at Leipzig in which India participated recently. Tobacco samples of grades 1 to 4, LBY and LBY 2, desired by the Ministry of Foreign Trade, Czechoslovakia, have been sent for examination. In order to enable certain countries, including those in East Europe, which experience payment difficulties to import tobacco from India, facilities have been given for import into India of certain commodities from these countries so as to finance the exports of certain low grades of tobacco from India from the proceeds of these imports into India. This concession has been withdrawn as stocks of these types of tobacco have now been liquidated.

* * * *

Coffee Auctions

There is a proposal to hold open auctions for the export of Indian coffee as a trial measure for one year to start with. Open bids are expected to fetch higher prices than at present. Indian exports of coffee have to be limited in view of the large internal demand for coffee. When we grow more coffee, it will be time to think in terms of greater exports.

—*D. P. Karmarkar*

Coal Production

The Government of India has decided that, out of the additional production of 22 million tons of coal per year to be achieved by 1960-61, the public sector will raise 12 million tons and the private sector 10 million tons.

—*K. C. Reddy*

Ambar Charka

It will be premature to assess the employment potential of the Ambar Charka programme until the technical tests currently being held are completed. The Khadi Board has, however, estimated that the programme will provide employment to nearly 5 million spinners and carders, besides, a large number of weavers, carpenters and blacksmiths.

—*S. N. Misra*

Credit Market

Credit conditions in the commercial and industrial centres of India have become difficult. The emergence of seasonal stringency is a normal phenomenon of the Indian money market. This is attributable to the seasonal character of the demand for credit for the purpose of financing the movement of crops, from upcountry centres. This year, the degree of the stringency experience has been somewhat more pronounced than in the previous busy season. With the broadening of economic activity owing to the rise in industrial and agricultural production under the impetus of the first Five-year Plan, there has been a tendency for credit demands in successive busy seasons to become more pronounced and the return of funds to the banking system in the sebsequent slack season to be attenuated. Thus, as a result of the all-round increase in production and consumption and the increasing price level, the volume of demand for credit has been continually on the increase during the last few years.

* * * *

World Bank Loans

The International Bank mission now visiting the country has already had discussions with various Ministries of the Government and the Planning Commission. It will also meet industrialists and business men. It is true that various such missions which visited the country in the past have declared India to be a good risk and have stated that India's capacity to service foreign debts has increased as a result of the first Five-year Plan. The Finance Minister has said in his budget speech that he expects the Bank to play a more significant part in financing the foreign capital requirements of the second Plan. A significant increase in the amount of loans to India from the Bank is expected.

—*B. R. Bhagat*

Road Development

The Government of India have under consideration a proposal to draw up phased five-year programmes for road development to be financed from State allocations. The Government have been trying to impress upon the State Governments the desirability of early utilisation of funds in the interest of rapid road development in the country. The estimated unspent balance for 28 States, including Andaman and Nicobar Islands as on 1st April 1956 is Rs. 895.30 lakhs. The amount spent for the development of roads in the Andaman islands during 1955-56 is estimated at Rs. 8,79,200.

* * * *

T.E.L.CO. Locomotives

The question of fixing the price of locomotives manufactured by the T.E.L.Co. has been referred to the Tariff Commission. The agreement between the Railway Ministry and the T.E.L.Co. provides "certain standards" by which the price of locomotives manufactured by T.E.L.Co. could be fixed. But, we have not been able to accept the price quoted by the T.E.L.Co. for the locomotives and hence the reference to the Tariff Commission, an impartial tribunal. Meanwhile, provisional payments are made to T.E.L.Co. for the locomotives delivered.

—*O. V. Alagesan*

Foodgrains Prices

The prices of *jowar* have increased considerably in Bombay State and in some areas have gone up by 300 to 400 per cent. over last year's prices. The Government is arranging to sell wheat at Rs. 14 per maund and rice at Rs. 16 per maund in the affected areas. If a State Government wants to sell it at a lower rate in scarcity areas, 50 per cent. of the loss will be borne by the Central Government.

* * * *

Soil-Testing Laboratories

The Government of India are setting up a number of soil-testing laboratories throughout the country. No charges for testing will be collected from cultivators for the duration of the scheme. One of the centres would be located at Kanpur in Uttar Pradesh. The project is financed by Rs. 28,75,000 allotted by the Central Government and 1,85,000 dollars worth of equipment given by the United States Government under the T.C.M. project. The main feature of the scheme, which is likely to be implemented soon, will be to collect soil samples from farmers fields, to analyse them in the laboratories and then to make practical recommendations regarding requirement of fertilisers for increasing the crop yields.

* * * *

Village-level Workers

About 6,465 village-level workers were trained during 1955-56 at a cost of Rs. 14,05,179. Approximately 5,580 workers are proposed to be trained in the current year.

—*Dr. Punjabrao Deshmukh*

Search for Oil

The Soviet oil experts who came to India in the last week of November 1955 have recommended that, 'during the coming five years, it will be best to concentrate attention in two States—Punjab and Rajasthan (Jaisalmer Area) which are the most studied and where the prospects are encouraging. Simultaneously, it is essential to carry out geological and geophysical investigations as well as deep test drilling in the Ganga Valley and West Bengal, geological and geophysical survey and core drilling in Cambay area, geological and geophysical investigations on the Madras Coast. The latter four regions will constitute a reserve for extending the exploration during following years and could compensate the first two regions in the case of possible failures. They have also recommended geophysical and geological survey for oil and gas in the Punjab, Jaisalmer, Cambay, West Bengal, Uttar Pradesh and Madras, with a view to preparing these areas for exploration by drilling. They have advised: (1) to prepare by seismic survey 16 areas and by core drilling 13 areas for deep tests. To cover by gravity and magnetic survey 176,000 sq. miles by geological mapping—11,400 sq. miles; (2) to investigate by deep drilling oil and gas potentialities of five areas in the Punjab (Jawalamukhi, Balh, Nana, Dharamsala and Januari), as well as the areas in Jaisalmer regions; (3) to carry out deep test drilling in the Ganga Valley in order to ascertain its oil prospects, in the West Bengal (the areas which are not under licence) and in the Plains of Punjab close to the course of the Beas River; (4) to organise research work for oil geology in order to lay the scientific foundation for oil and gas prospecting in India; (5) to organise 14 gravity, 10 seismic and 14 geological parties and 5 parties for core drilling and 5 parties for deep test drilling; (6) to complete 34 deep test wells and start drilling six more wells with total footage of 464,500 feet; (7) to complete 145 wells—by core drilling with the total footage of 500,000 feet; and (8) to shoot 17,240 miles of seismic profiles. The recommendations in the interim report, which have been examined and discussed, have been mostly adopted by the Director, Oil and Natural Gas Directorate and the Government, and it is intended to work on these lines subject to such modifications as Government may find necessary.

—*K. D. Malaviya*

GILT-EDGED DULL

(From Our Own Correspondent)

BOMBAY, *23rd May*

The week under review witnessed no marked change in the stringency in the short-term money market. There was, however, some influx of funds from other centres, but these were easily absorbed on account of the sustained demand for bank credit from industries and had, therefore, no effect on interest rates.

Inter-bank call money continued to be bid at 3½ per cent. House money was in demand at 3½ per cent. Short-term deposits were offered 3½ per cent. for one to three months and 3¼ per cent. for longer periods.

After two weeks of successive expansion to the tune of Rs. 20.87 crores in the aggregate, notes in circulation have declined by Rs. 9.61 crores during the week ended 18th May 1956. The notes held in the Reserve Bank's Banking Department, however, shows a rise of Rs. 9.72 crores. The fractional increase in total notes issued is covered by a corresponding rise in rupee coin. In the Banking Department, deposits of the Central Government are up by Rs. 2.46 crores, those of other Governments by Rs. 49 lakhs and of banks by Rs. 1.37 crores. On the assets side, balances held abroad show a decline of Rs. 1.08 crores. Loans and advances other than to Governments have dropped by Rs. 5.91 crores, being accounted for mainly by the repayment of outstanding borrowings by Scheduled banks against usance bills to the extent of Rs. 5.97 crores. Fresh advances to banks against these bills during the week amount to Rs. 5.04 crores. Investments have been strengthened by Rs. 1.31 crores.

The downward trend in demand deposits of Scheduled banks noted for some weeks past has been maintained during the week ended 11th May 1956 also, with a further drop of Rs. 6.03 crores. Time deposits of banks have, on the other hand, gone up again by Rs. 2.42 crores. Inter-bank borrowings are higher by only Rs. 36 lakhs. Borrowings from the Reserve Bank show a marked rise of Rs. 10.78 crores, while those from the State Bank of India are practically unchanged. An increase of Rs. 5.70 crores is noted in advances and of Rs. 32 lakhs in bills purchased and discounted. Cash balances are lower by Rs. 1.46 crores, while money at call and short notice is up by Rs. 61 lakhs.

The Gilt-edged market was colourless during the week under review. Enquiries were selective and restricted and the volume of business was low. The undertone was, however, kept steady.

3 per cent. 1957 was unchanged at Rs. 99-13, while 3 per cent. 1958, which was on offer, shed an anna to Rs. 99-10. 3 per cent. 1959-61 was maintained at Rs. 98-2, as also 3 per cent. 1963-65 at Rs. 95-2 and 3 per cent. 1964 at Rs. 95. 3 per cent. 1966-68 was bid at Rs. 93-4 and 3 per cent. 1970-75 at Rs. 90. 3 per cent. 1986 Conversion Loan was neglected at Rs. 77-7, while 3½ per cent. 1961 was done an anna better at Rs. 99-11. 3½ per cent. 1964 held ground at Rs. 98-11 and 3¾ per cent. 1965 at Rs. 98-10. Small business was done in a few 4 per cent. 1967 State loans. Bombay 1967 changed hands at the unchanged rate of Rs. 100-12 and Madras loan was done at Rs. 99-13. Bihar was better by an anna at Rs. 99-8 and Mysore and Hyderabad also gained an anna each to Rs. 99-10.

In the foreign exchange section, there was no change in the rupee. U.S. dollar exchange rates, the banks' selling rate of ready dollar standing at Rs. 476¾ per $100 and their buying rate at Rs. 472¾ per $100. Sterling, however, moved irregularly and closed a shade easy. In New York, spot sterling was down on balance from $2.80.13/16-2.80.15/16 to $2.80½-2.80¾. Three months' forward declined from $2.79.5/16-2.79.7/16 to $2.79¼-2.79⅜ and transferable sterling from $2.78.3/5-2.78.7/10 to $2.78.7/20-2.78.9/20.

CLEARANCE IN KIPS SLOW

(From Our Own Correspondent)

MADRAS, *21st May*

Arrivals of kips were on a moderate scale and clearances slow. U.K. buying was small and selective. Prices of cow hides declined by six pies per lb. and calf skins by an anna. There were a few enquiries for top marks and top grades in hides, but business did not materialise, as prices offered were low. There was some demand for superior marks buff calf seconds and run selection, but sellers had thirds as excesses on hand and did not wish to part with run unless combined with thirds. Trading on the whole was poor and was not expected to revive this week also due to the Whitsuntide holidays in the U.K.

In the tanned skins public sales, prices of sheep skins declined by 3d. to 12d. as compared with March levels, and disposal of goods was not easy. Common tannages suffered most. In the local market, clearance was small and badly adulterated lining sheep declined to Rs. 4-4 per lb.

HIDES EASY

(From Our Own Correspondent)

KANPUR, *20th May*

During the week under review, the hides and skins market ruled slightly easy. Fresh arrivals were quite considerable. The main purchasers were the local tanners headed by Messrs. Cooper Allens. The country tanners and the Madras dealers were both lukewarm.

The latest available quotations are: Wet salted cow, 1st grade Rs. 280, 2nd grade Rs. 200 and 3rd grade Rs. 130 per score; wet salted buff, 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat, 1st grade Rs. 250 and 2nd grade Rs. 200 per 100 pieces; sheep, 1st grade Rs. 225 and 2nd grade Rs. 250 per 100 pieces.

SLUMP IN BULLION

(From Our Own Correspondent)

BOMBAY, *23rd May*

The downward trend in bullion witnessed during the previous two weeks gathered momentum during the week under review. The speculators who had seized the opportunity provided by the Government's permission to import silver coins from Tibet to hammer down the market in silver, seemed to be in no mood to cover their sales, notwithstanding the heavy carry-forward charges payable by them. The dwindling demand in the ready section also affected sentiment. Gold also lost substantial ground on nervous sales induced by poor offtake in the ready section and rumours about arrivals of yellow metal from other centres. The *budli* rates were as high as Rs. 5-8 in silver and Rs. 2-4 in gold, both against sellers.

The automatic margin enforced against sellers in forward silver (May settlement) on Wednesday last week (the closing price for that settlement on that day having been more than Rs. 7 below the starting rate of Rs. 180-4 for that settlement) became inoperative the next day as the closing price had risen above Rs. 173-4. It was, however, again enforced on Monday this week and is still operative. As per by-law 33d(1) (b), a margin of Rs. 500 per bar of silver was also enforced today against buyers as the closing rate for the current settlement was lower than the official starting rate and also quoted higher than the next settlement by more than Rs. 5. In other words, the bulls also had to pay a margin today, because the *budli* rate was in their favour by over Rs. 5. Sellers in gold also had to pay a margin of Rs. 7 per tola yesterday on all their outstanding sales in the current settlement, as the closing rate yesterday for that settlement was more than Rs. 5 below the starting rate. Besides, a special clearing in silver for the June settlement was introduced on Monday last, as the closing rate was Rs. 5 below the last clearing rate.

Forward silver (26th May settlement) slumped from Rs. 173-1 to Rs. 171-4 on Monday. After recovering to Rs. 174-10 today, it wound up at Rs. 173-4. Silver for forward delivery in June settlement declined from Rs. 170-1 to Rs. 166-8 before finishing at Rs. 167-12.

Ready silver (.996 Mint), after an early advance from Rs. 177-1 to Rs. 178-13, receded to a low of Rs. 173-7, before closing at Rs. 174-12.

The floating stocks of silver are estimated at 500 bars. The daily average offtake was 15 bars.

Forward gold (25th May settlement) slumped from Rs. 103-3 to Rs. 100-1 and the rate for the June settlement fell from Rs. 101-14 to Rs. 97-15, before closing better at Rs. 98-7.

Ready gold suffered a drop of Rs. 4-8 to Rs. 100-3. The floating stocks of gold are placed at 15,000 tolas. The daily average arrivals and offtake were estimated at 3,000 tolas.

In London, silver suffered a slight recession, spot metal moving down from 79*d.* to 78⅞*d.* and forward from 78⅞*d.* to 78⅛*d.* Gold also lost ground from 249*s.* 2¼*d.* to 249*s.* ¾*d.*, before recouping to 249*s.* 2*d.* In New York, silver was unchanged at 90⅜*d.*

The following comparative table shows the trend of market during the week under review:

	23-5-56	Highest	Lowest	16-5-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

LINSEED SUPPLIES POOR

(Messrs. A Bradley and Co.)

CALCUTTA, *21st May*

Trading in the linseed market was on a much reduced scale during the week under review. Values, however, did not decline owing chiefly to insufficient supplies of seeds. Arrivals were somewhat below normal for this period and availability of goods was much below the present absorption capacity of local crushers. It was felt that the high price of mustard oil was responsible for the withholding of linseed stocks in upcountry centres for the purpose of adulteration. Linseed oil was inactive. Weak overseas advices and lack of parity ruled out any prospects of fresh business. The reluctance of some exporters to ship against former contracts made before the announcement of export duty was causing grave concern overseas. Local enquiries for oil were spasmodic and prices have registered a small decline.

The latest available quotations for both Ready and May-June is Rs. 22-11 per maund.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, *23rd May*

The hopes of forward trading in cotton being resumed by 15th June next have brightened. The Board of the East India Cotton Association has elected Mr. Madanmohan Ruia as its new President, in place of Mr. Purshotamdas Thakurdas who resigned. With his intimate knowledge of the cotton trade and the confidence of the Forward Markets Commission which he is reported to enjoy, Mr. Ruia should be able to succeed in ending the deadlock in cotton that has been persisting since 23rd December 1955. The two sections which are divided in their opinions over the issue of contracts—one favouring the running of two contracts simultaneously and the other advocating only one contract —will be submitting their respective viewpoints to the Cotton Contract Committee which is expected to submit its report on these views, as also on the several proposals for amending the by-laws of the E.I.C.A., to the Commission by the end of the month. Indications are that the Committee will accept, with certain modifications, most of the Commission's proposals for changing the structure of forward trading in cotton. It is on the basis of the report of the Cotton Contract Committee and in consultation with the Union Minister for Commerce and Industry who is expected in the city on 2nd June that the Forward Markets Commission will decide on the resumption of futures trading in cotton.

While the aforesaid developments are being watched with considerable interest in cotton circles, speculation is once again rife as to whether the authorities are contemplating some fresh measures to check the continued boom in spot cotton prices. Among the measures, reintroduction of the quota system for allocating the available domestic cotton to the mills is anticipated by a section of the trade. This is based on fears that the firm trend of the spot cotton market will continue unabated with more varieties piercing the ceilings fixed by the Government. The fears would appear to be quite justified. For the abolition of the 6¼ per cent. *ad valorem* export duty on coarse cloth has lifted up the prices of textiles, thereby inducing the mills to augment their stocks of raw cotton. Further, the Government has decided not to impose any ban on exports of Zoda cotton and yellow pickings; a categorical declaration to this effect was made by Mr. T. T. Krishnamachari at the Export Advisory Council meeting on Sunday last. The overseas cotton markets, particularly the Egyptian and the Sudan markets, continue to rule buoyant. The currently ruling prices of cotton in these markets are considered too high to permit any large imports into India. Nor are there chances of any early arrivals of American cotton which are expected only after September.

The spot cotton market, as already stated, continues to present boom conditions. Under the impetus of sustained mill demand and good export enquiries, cotton prices have registered further improvement. The number of varieties piercing the official ceilings has gone up and more styles are bumping against the ceilings.

The following table gives the latest quotations for a few popular styles of cotton from the Sewri market, as compared with the rates prevailing a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	23-5-56	16-5-56	9-5-56
Bengal *Deshi*	640	660	665
Berar Jarillas	810	800	800
Khandesh	820	810	810
Vijay	980	965	960
Oomra *Deshi*	710	710	700
Moglai	725	720	700

In contrast with the distinctly firm trend in domestic cotton, foreign cottons are ruling quiet, thanks to the reported decision of the U.S. Commodity Credit Corporation to lower the minimum acceptable price by one cent. per lb. East Africans have lacked follow-up support, as a result of the recent marked rise in prices. B.P. 52 was done yesterday at Rs. 1,725, as against Rs. 1,800 last week-end. Jinja was quiet at Rs. 1,490, as against Rs. 1,500 a week before.

A distinctly bearish tone was depicted by the Karachi cotton market during the week under review, in contrast with the firm trend noticed in the past few weeks. The undue rise in prices led to consumers' resistance which was reflected in slackness in overseas enquiries for Pakistan cotton. Consequently, traders who had hoarded stocks in anticipation of still higher prices began liquidating their holdings and prices of cotton suffered a break. The recession was particularly in marked evidence in the ready section. The latest available quotations —in rupees per 82 lbs.—from the Karachi cotton market, as compared with those a week and a fortnight before, are given below:

	22-5-56	15-56	8-5-56
N.T.R.G. May	90⅜	91	89⅜
N.T.R.G. July	86⅞	85⅞	85-11/16

Punjab *Deshi*	94	99	98
4F Roller	86½	90	88½
S.G.	91½	94	93½
Punjab Roller	91½	95½	94
S.G.	95½	100	99
289F N.T. Roller ...	92	96	95½
S.G.	96	102½	101

The Alexandria cotton futures market ruled strong during the week under review on firm advices from the spot market where premiums continued to hover round the highest levels for the season. Leading shippers are reported to have stopped quoting firm prices; if at all any offers are made, such are only subject to execution at the last known futures rate. The latest available quotation—in tallaries per lb.—from the Alexandria cotton futures market, as compared with those pre-

vailing a week and a fortnight before, are given below:

Karnak:

	22-5-56	15-5-56	14-5-56
May	123.90	116.50	121.75
July	118.75	112.75	115.50
November	115.30	109.30	112.75
Ashmouni:			
June	87.75	88.45	90.75
October	83.65	80.15	84.45

The confined rise in cotton prices, it is reported, has perturbed the authorities in Egypt who are now determined to check the upward trend by declaring a forced liquidation of outstanding positions in old futures with compensation. Meanwhile, a scheme has been worked out, according to which cotton will be sold by auction, provided settlement is effected either in dollars or in sterling exclusively. This scheme will run parallel to the system already in existence whereby the Egyptian Cotton Commission is selling its stock on the basis of the premiums established each Thursday by the Bourse Commission and to which are added the closing prices of the futures market. The basic prices for medium staples will be based on the settling prices of the third issue of April dockets, to which will be added or subtracted the difference fixed for the delivery of the various grades and for long staples on the settling price of the first issue of the May dockets, to which will be added or subtracted the differences fixed for the delivery of the various grades. These prices will be valid until the next issue of dockets when the prices for settlement and grade differences will be fixed as a basis for new sales. In disposing of its cotton in this manner, the basic sale price of the Government will be less than the prices in the actual market, the difference being represented by the premium of Karnak (good to fully good) for long staples of about (13 tallaris) and by the premium of good Ashmouni for medium staples (about 8 tallaris). The settlement of the cotton sold must be effected at the latest within three months of sale.

The firm trend noted in the Liverpool cotton futures market in the past three weeks abated this week. In fact, the market ruled distinctly easy. The easiness was due to the reported decision of the C.C.C. to reduce the minimum acceptable price by one cent per lb. There was a fair quantity of American selling which brought about a fall in prices. Egyptian and Sudan contracts failed to elicit support and staged a retreat. The following are the latest available quotations—in pence per lb.—from the Liverpool cotton futures market:

Old contract: May-June 26.35 and July-August 26.00. *New contract*: May-June 30.40, July-August 28.20, October-November 26.00, December-January 25.50, March-April 25.00 and May-June 24.85. *Egyptian Karnak cotton*: May-June 58.25; July-August 58.05; November-December 58.05. *Sudan cotton contract*: July-August 50.00, September-October 49.40; November-December 49.40.

The New York cotton market presented quiet conditions. Dealings were slow, being generally confined to routine operations. There was sizable commission house selling induced by new Farm Bill uncertainties and reports of possible export subsidy to cotton textile manufacturing industry. Nearby July position was subjected to selling, which was brought about by slowness of loan repossessions, indicating that mills were inclined to let their stocks drop in anticipation of buying cheaper new crop cotton. Old crop cotton came in for increased liquidation, with uncovering of stop-loss orders. The U.S. Agriculture Department has set the support rate for 1956 crop Middling 1" cotton at 32½ cents a pound, 3-2/5 cents higher than the loan rate for Middling 7/8" cotton.

The Commodity Credit Corporation sold 223,554 bales on the 11th inst. under the new cotton export sales programme for shipments in August and later. The prices accepted ranged from 27.50 cents to 29.23 cents for basis Middling 15/16" cotton gross weights average location. The minimum price of 27.50 cents accepted by the C.C.C. is 110 cent points more than the minimum under the previous export sales programme covering one million bales of 15/16" and shorter cotton. It would seem that, in order to keep clear of any charges of dumping from other cotton exporting countries, the U.S. Department of Agriculture has set a high price level. However, private organisations are still pleading for acceptance of lower rates. They have emphasised that comparable Mexican and Brazilian growths are cheaper in price and that a further cut in prices is essential to ensure a rapid movement of U.S. surplus cotton into export channels. The mid-April parity price was announced as 35.22 cents, which represents an advance of 25 points from that of March. The final loan rate will be determined on the basis of the mid-July parity price, if it is higher. If the present upward trend continues into July, the loan rate of 28.85 cents for Middling at average location already set will, it is felt, be increased proportionately.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	22-5-56	15-5-56	8-5-56
Spot	36.56	36.70	36.55
July	34.20	34.46	33.85
October	32.74	32.77	32.38
December	32.87	32.84	32.55

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 23rd *May*

Dull conditions prevailed in the yarn market during the week under review. Turnover was considerably restricted, with fluctuations in prices confined to a narrow range. Despite rumours of an upward revision in prices by overseas suppliers, rayon yarns lacked support, as traders preferred to await enlarged offtake in rayon piecegoods. Although there was good demand for staple fibre yarn, prices did not register any marked rise, owing to sizable sales by mills yesterday. Cotton yarns were somewhat favoured at higher prices, the buyers' interest being induced by the continued firm trend of raw cotton prices and expectation of broadening of enquiries from consuming centres in the coming weeks.

In the rayon yarn section, Snia yarn (120 dull cones) for June delivery declined by Rs. 2 to Rs. 797. August delivery lost a rupee to Rs. 793. Ready 150 Italy decreased by half an anna to Rs. 3-13. 150 Japan was quiet at Rs. 4-4, as also 120 Italy at Rs. 3-12-6. 120 Japan was done at Rs. 3-13-3, as against Rs. 3-13 last week-end. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade dropped an anna to Rs. 3-10-6. 150 Bt. cones 1st grade receded by nine pies to Rs. 3-7-9.

Staple fibre yarn (40×2) for June delivery improved by Rs. 2 to Rs. 686. Spot (40×2) City met with special buying support and rallied As. 2 to Rs. 3-9-6. Centurys were fully maintained at Rs. 3-8-9. New Greats and Kohinoors eased by three pies each to Rs. 3-8-3 and Rs. 3-9-9, respectively. Among imported yarns (80×2) Paramounts advanced by As. 6 to Rs. 6-13. H' Races put on As. 4 to Rs. 6-12. Fujis and K' Suns were both higher by As. 3, the former at Rs. 6-15 and the latter at Rs. 7-4.

In the cotton yarn section, sixty and eighty counts provided the brightest spot. Sixty counts Raghuvamshis increased by Re. 1-4 to Rs. 61-4. Moderns hardened by Re. 1 to Rs. 65 and Apollos by As. 12 to Rs. 48-8. Among 80s, Mahendras were specially favoured, their quotation spurting by Rs. 2-12 to Rs. 73. Moderns gathered As. 12 to Rs. 69-8. Deals in 20s were put through at higher levels, Gokaks rising by As. 12 to Rs. 18, Elphinstones by As. 4 to Rs. 17-6 and Edwards by As. 2 to Rs. 17-6. Among 10s, Podars strengthened by As. 4 to Rs. 13-14 and Moderns were firm at Rs. 14-4, while Elphinstones shed As. 2 to Rs. 13-4. Among 40s, Moderns improved by As. 2 to Rs. 29-6, but Minaxis lost As. 2 to Rs. 29-12. Business in 30 counts Sarojas were done at Rs. 23-14, same as last week.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	23-5-1956	16-5-1956	9-5-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.

OILSEEDS RETREAT

(From Our Own Correspondent)

BOMBAY, 23rd *May*

Last week's firmness of the oilseeds market abated during the week under review. In fact, the market put on an easy appearance. Fears of tightening of credit facilities following the Reserve Bank's directive to banks to raise the margin against advances on commodities by 10 per cent. affected the sentiment of operators adversely. The ban on exports of mustard oil and rape-seed oil also acted as a damper. The groundnut section was particularly depressed, thanks to pressure of sales by Saurashtra and Madras interests in the wake of slackness in demand. The castorseeds section ruled easy, notwithstanding strong statistical position. For arrivals of seeds from Hyderabad side were somewhat large. This factor, together with reports of lack of enlarged enquiries for castor oil from the U.S. and the U.K., induced some selling and prices tended to move down. Deals put through in the linseed section were limited, with values drifting lower, since operators preferred to await settlement of the issue relating to outstanding export business in linseed oil. Similarly, trading in *kardi* seed and *niger* seed was restricted and prices suffered a fall, in sympathy with the general tend of the market.

In the groundnut section, August-September contract dropped Re. 1-3 to Rs. 36. June-July receded by Re. 1-2 to Rs. 35-4. Coromandel ready fell by Re. 1-12 to Rs. 35-4. Bold F.A.Q. and Khandesh quality were lower both by Re. 1-10 at Rs. 34-12 and Rs. 35-6, respectively. Groundnut oil ex-mill eased by As. 5 to Rs. 18-11. Railway receipt lost As. 3 to Rs. 18-11. July contract decreased by a like amount to Rs. 19-5. May slipped by As. 2 to Rs. 18-12.

Castorseeds September delivery opened the week at Rs. 157-12 and, after moving up to Rs. 161 on the 19th inst., closed lower at Rs. 157-4, as compared with the last week's closing rate of Rs. 158-14. May delivery opened at Rs. 153. It advanced to Rs. 155-4, but reacted to Rs. 152-2 at the close. Over the week, ready Kanpur fell by Rs. 2-4 to Rs. 28-8. Madras quality declined by As. 12 to Rs. 30. F.A.Q., however, was better by As. 4 at Rs. 30.

Linseed bold ready dropped As. 10 to Rs. 33-12. Indore quality lost a similar amount to Rs. 33-14. Small Sutna eased by As. 4 to Rs. 32. June-July climbed down by As. 14 to Rs. 33. April-May receded by As. 10 to Rs. 33-12. Linseed oil ready was subjected to heavy selling and dropped As. 13 to Rs. 19-10.

Among other oilseeds, *kardi* bold ready suffered a loss of As. 12 to Rs. 20 for want of support. April-May was today done lower at Rs. 20-2, as against Rs. 21 a week before. *Niger* seed ready F.A.Q. receded by As. 8 to Rs. 28-8. Ready Madras was quiet at Rs. 29.

The following table shows the prices of oilseeds and oils today as compared with those at the end of the previous two weeks.

	23-5-1956	16-5-1956	9-5-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 23rd *May*

Despite sustained demand for sugar from the Malabar coast, the sugar market exhibited an easy trend. Traders did not show much interest in extending their commitments, thanks to reports of a fall in ex-mill quotations of North Indian sugar. Buying enquiries for ex-mill sugar in Bombay-Deccan were also reported to have slackened a bit. Another unhelpful factor was the rise in arrivals of indigenous sugar into the market, being 10,500 bags, as against 7,200 bags in the previous week. Consequently, sugar prices tended to look down.

In the foreign section, *Vaisakh* delivery contract for 'C' grade sugar receded by As. 9 to Rs. 89-13 per bag; this contract is expected to be squared up at Rs. 89-12 on the 25th inst. Business in a new forward specific contract for *Shravan* delivery was commenced at Rs. 90-4 during the week. The contract declined to Rs. 90 before being quoted today at Rs. 90-1. The tone of the forward section is uncertain, in view of the differences of opinion among trade circles as to the actual production of sugar in the season which is estimated at 1.75 million tons by some and at 1.85 million tons by others.

In the spot section, medium grain indigenous sugar lost As. 8 to Rs. 90—Rs. 92½. Small grain was quiet at Rs. 89-8 and large grain at Rs. 93—Rs. 98. British refined sugar eased by As. 2 to Rs. 84-6 per bag of 2 cwts. This decline is attributed to the continued acceptance of tenders and the delay in the acceptance of offers submitted for purchase to the Regional Directorate (Food), Bombay.

N.B.—The rate for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, 23rd *May*

Despite continuous marking down of prices for Sarawak black pepper (new crop) at Singapore, Malabar black pepper during the week remained quietly steady with business thin and fluctuations narrow. The present comparative steadiness for Malabar black appears to be due to the growing belief among a section of the trade that in view of smaller export from India during April and May, New York dealers may come in the market during June for covering their requirements for autumn. However, if New York dealers decide to sit back and refuse to buy sizable quantity of Malabar, paying the present high premium of nearly 5 cents over the prices offered for Sarawak black, it is feared the Indian market will be facing a serious situation as overseas demand is the main stay of the commodity.

Singapore came down from Str. $73 to $68 thanks to increased arrivals and poor demand both from U.S.A. and the Continent. Alleppey moved narrowly, the highest and the lowest being Rs. 743½ and Rs. 712½ respectively. Garbled at Cochin hovered around Rs. 127½. In A.S.T.A. section, May shipment, June and July-August-September after touching $26, $26 and $27½ improved to $27½, $28 and $28½ respectively, but fresh business remained very much restricted as buyers refuse to pay higher price while sellers hesitate to sell short at lower prices. In the delivery section, the market was quietly steady without fluctuations.

The present market is in a stalemate and unless there is some unexpected development it is more likely to move lower, if not now, at least when competition from Sarawak and Lampong increases.

Following are today's nominal quotations: Ready delivery Rs. 101 per Bengal maund; and June delivery Rs. 732½-737½ per candy of 5¼ cwts.

SELECTIVE BUYING IN TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 18th *May*

Offerings in sale No. 11, which was held on Tuesday, 15th May, amounted to 1,300,000 lbs. Quality continued to show a slight seasonal decline, particularly amongst the high-grown teas. The sale opened to much less demand for all types with the exception of fannings grades. All brokens were irregularly As. 2 easier and buying was selective. High-grown brokens were cheaper to buy, although prices were firm on valuations which reflected the decline in quality. Fannings, and in particular Middle East types, met with keen competition and must be quoted dearer. There was an easier tendency for whole leaf grades and these declined by As. 2 to As. 3. Withdrawals were fairly heavy. The following are the quotations:

	1956 Rs. a. p.
Plain B.P.	... 1 11 0 (nominal)
Low Medium B.O.P.	... 1 15 0
Medium B.O.P.	... 2 1 0
Good B.O.P.	... 2 10 0 to 2 12 0
Well-made black leaf O.P. ...	... 2 5 6

Dust Sale "J".—550,000 lbs. of dust were on offer in dust sale "J" which was held on Thursday, 17th May. Although prices were irregularly one to two annas easier, there was a much improved demand and the majority of offerings were sold. There was, however, keen enquiry for black, grainy Middle East type dusts which must be quoted dearer. Best liquoring dusts sold well although below valuations.

London Market—Sale of 14th May 1956.—To-day's market 1*d.* to 3*d.* lower, except for best.

Sale of 15th May 1956.—Quality and coloury teas firm. Others irregularly easier.

Colombo Market—Sale of 14th May 1956.—Good demand. Best liquoring dusts firm. All other kinds about 20 cents lower.

Sale of 15th May 1956.—Much better demand maintained throughout, although quality again worse. Best Dimbula Dickoya B.O.P's frequently up 30 to 50 cents, bright liquoring Uvas up 10 to 20 cents mediums and low-growns up 10 cents.

Calcutta Market—Export.—5,200 packages. Good general demand at rates irregularly half to one anna easier. Commonest stalky tea for price fully firm. Unrepresentative selection.

Internal.—22,000 dust. Fair general demand. Black leaf strongest feature several annas dearer. C.T.C. good liquoring mediums steady. Other types one to two annas easier. 7,000 internal leaf. Fair demand at one to two annas below valuation.

Export Quota.—Although small business was transacted at 10 pies early in the week, for special licence, there are now limited enquiries at 9 pies. 1956-57 export quota remains firm at 36 pies.

Forthcoming Auctions.—Sale No. 12 will be held on 22nd May.

The average price realised in the sale held on 15th May 1956 amounted to Rs. 2-5-1 per lb., as compared with Re. 1-14-11 in the corresponding sale of 1955. The average price for the period 1st January to 15th May 1956 was Rs. 2-3-9, as against Rs. 2-15-10 per lb. for the corresponding period last year. The average price realised in dust sale "J" of 17th May 1956 was Re. 1-12-0 per lb., as against Re. 1-12-2 a year ago and the average for the period 1st January to 17th January was Re. 1-11-2. The price for the corresponding period of 1955 was Rs. 2-6-2.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 12.—725,000 lbs. Strong demand for all fannings which are dearer. Others regular and easier, particularly B.O.Ps."

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 21st *May*

Steady conditions continued to prevail in the foodgrains market during the week under review. The Government of India, it was reported, was anxious about the firmness in foodgrain prices even at the peak of the season. Besides selling wheat freely in important consumption centres, the Government was contemplating to begin selling wheat in the five big towns of U.P. State and also in some other deficit areas of the country. Wheat *dara* was now transacted at Rs. 13-2 and farm quality at Rs. 14-12, having touched the highest at Rs. 13-6 and Rs. 15 per maund, respectively, during the mid-session. Daily arrivals were at an average of 2,500 maunds and the local stock swelled to 30 *khaties*, as the entire arrivals were mostly absorbed by stockists. With stock put at 25 *khaties* wheat *dara* was quoted at Rs. 9-12 per maund last year. Rice prices also recorded fractional gains during the week and, considering the abnormal rise in the prices of paddy and rice in some parts of the country, the Reserve Bank has issued directives to Scheduled banks to refrain from excessive lending against commodities. The latest prices of rice are: *Basmati* Rs. 25 to Rs. 33, *Rangooni* Rs. 17 and coarse Rs. 15-8 per maund.

Fresh arrivals from Punjab which resulted in stock position improving to 12 *khaties*, as against 2 last week-end, accounted for a slight fall in gram prices to Rs. 10-8 per maund for local quality and to Rs. 10-14 for Punjab quality, as against the highest levels touched during mid-session, namely, Rs. 10-12 and Rs. 11, respectively. Barley and *bejhar* prices also recorded fractional gains, as daily arrivals were still poor. The prevailing prices were Rs. 9-8 and Rs. 9-6 per maund, respectively.

Pulses also recorded quietly steady trend during the week and peas *dara* green was transacted at Rs. 10-4 and white quality at Rs. 12-8 per maund. Arrivals averaged 1,500 maunds daily and stock position improved to 22 *khaties*. Outside buying enquiry continued to be fairly good. Heavy quantity of *arhar* was still reaching Hapur even from Punjab, east U.P. and other centres and stock position swelled to 67 *khaties*, but, even then, prices recorded fractional gains during the week to be quoted at Rs. 11-2 per maund.

Pulses futures continued to record firm trend, on vigorous bull support from east U.P. The latest quotations as on Monday were at the best level of the week being quoted at peas *jeth* Rs. 10-6-1½, peas white *jeth* Rs. 10-10, *arhar jeth* Rs. 11-4-6 and *urd baisakh* Rs. 17-6.

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 22nd *May*

Prices of both jute goods and raw jute gave way during the week under review. Jute goods were affected on nervous liquidation by bulls. This had naturally a repercussion on raw jute. The news about the crisis in the American automobile industry and its consequent decision to reduce production substantially was noted with grave concern. This industry consumes burlap in large quantities, and in view of the above circumstance would require only lesser hessian. This bleak prospect affected sentiment. The report that burlap consumption in the United States during April was only 69 million yards, as against 71 million yards in March and that stocks at the end of April were 2 million yards higher, at 255 million yards, the highest since May 1955, injected nervousness among speculators. Bulls had pinned their hopes on the possibility of the month of May recording higher shipments. In fact, shippers were very active for some time. However, this expectation has so far been belied. For, the quantities of hessian and sacking shipped between 1st and 15th May were only 18,500 tons and 10,800 tons, respectively, as against 20,100 tons and 24,400 tons in the corresponding period during the last month.

During the week, figures relating to output for the month of April were also available. These were lower at 93,900 tons, as against 99,300 tons in March. Considering the March-end stocks, the availability during April, therefore, amounted to 188,900 tons. Stocks at the end of April were as much as 107,300 tons so that demand during the month was 12,300 tons lower than the production for that month. Such an analysis paled into insignificance in the context of firmer raw jute, following reports of a further rise in river levels both in East Bengal and Assam districts which led to jute goods keeping a firmer ground early in the week. On Tuesday last, ready 40" 10 oz. hessian

(*Continued on page* 1039)

ANNUAL MEETING OF THE BHARAT LINE LIMITED

(*Concluded from page* 1016)

credit facilities offered. Earlier experience is not calculated to enthuse enterprise either. Shareholders are aware that we were induced to enter the Persian Gulf trade with promise of Government co-operation and assistance. Though two years have passed, a lot of spadework had been done, and quite a sizable trade had been built up, at a considerable sacrifice. We still await concrete proposals as to the manner and measure of help that the Government intends to extend to stabilise this new line of traffic. Another matter, which is likely to affect the financial side of the Company's operations, is the recent strike of the Company's floating staff officers, the arbitration award in respect of which imposes considerable additional financial burden on the Company. It seems that the time has come when, as in the case of the ships' crews, the emoluments of the officer staff should also be standardised: and it will be in the interests of the shipowners that they seek immediate appointment of a commission to examine the subject from all angles and evolve fair standards of emoluments for the officer staff linked with the country's cost of living index. I am afraid that unless a Ministry of Shipping is separately organised to study and service the interests concerned, the shipping industry will not develop as much as it should, if the expanding needs of the situation are to be adequately met. At the request of the Government we have diverted two of our ships to the Russian service, but it will be possible to assess its potentialities only after an initial proving period. All that I am concerned to stress in this context is that there is no lack of enterprise, provided fair conditions and fruitful co-operation are assured.

"The report of the Directors gives a comprehensive picture of the year's work and, though earnings have fallen and the margin of profit reduced, we have been able to maintain the dividend at the previous level. I do not propose to make any detailed comments. My thanks are due to my colleagues on the Board and the management for the cordial co-operation they have extended and I bear testimony also to the good work of the staff, both ashore and afloat. With these words, I now formally move that the Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1955, already duly sent to the shareholders, be and are hereby adopted."

BOMBAY BURMAH TRADING CORPORATION

The Directors of the Bombay Burmah Trading Corporation Ltd. have decided to appoint Messrs. Wallace & Co., at present Secretaries, Treasurers and Managers of the Company, as Secretaries and Treasurers of the Company on a reduced remuneration of 7½ per cent. of the annual net profit of the Company, with effect from 1st June 1956, subject to the approval of the Government of India. The Directors have secured the approval of Messrs. Wallace & Co. to the above change. In order to secure the continued efficient management of the Company, the Directors have further decided, also subject to the approval of the Government, to appoint a full-time Managing Director to conduct the day-to-day affairs of the Company, at a remuneration to be fixed by the Directors.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. F=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

M—Managed by the board of directors. † Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (b) Investments.
(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (g) For seven months ended 31st March 1954
† New Central Jute Mills—Dividend for 1955 is on shares of Rs. 10 each. The Albion and Lothian jute companies have been amalgamated with New Central Jute Co., with effect from 1st December 1954.

MARKET REPORTS

(*Concluded from page 1029*)

was thus at Rs. 37-14 and ready B. twills at Rs. 106-8. Heavy goods were in good demand and although hessian was not wanted, a firmer trend was maintained mainly in sympathy with sacking. On Wednesday bears sold fair quantities in the *Fatka* to push down ready B. twills to Rs. 104-8 from Rs. 106-8. Forward quotation also lost Rs. 2. In sympathy with

A PLAN FOR EXPENDITURE

THE large volume of Governmental expenditure, contemplated in the second Five-year Plan, has again brought to the fore the question of evolving an appropriate pattern for financial budgeting and scrutiny. It became evident during the period of the first Plan that the pre-independence forms of budgetary control, however appropriate they might have been for the low level of Governmental activity of those times, were grossly inadequate for the rising tempo of State expenditure. Two years ago, the Estimates Committee subjected the problem to a detailed scrutiny and made a number of recommendations designed to ensure that the schemes framed by administrative ministries were more expeditiously dealt with by the Finance Ministry. It is not known whether any decision has been taken on these recommendations. Meanwhile, Mr. A. K. Chanda, the Comptroller and Auditor-General, who combines in himself both financial realism and an imaginative grasp of the national importance of speedy execution of projects, has consistently applied his mind to the problem of budgetary control and financial scrutiny. In the Audit Report (Civil) for 1955, he has appended a note which clarifies and elaborates the ideas which he has expressed from time to time.

Briefly, the entire problem is one of ensuring that, while the rigour of financial scrutiny of schemes and projects is not softened down to a mere formality or a farce, such scrutiny does not also become a nagging and fault-finding inquisition. This indeed is the essence of the problem. Busy administrative ministries are often justly impatient that the best of their schemes are held up by the Finance Ministry. But it cannot be denied that the Finance Ministry's scrutiny has often saved the taxpayer crores of rupees. There is, however, one grievance of the administrative ministries which, though genuine, is not so vocal. It is that the Finance Ministry is indulgent in its attitude towards the ministries which have "a pull" and is unduly harsh towards certain cinderellas among the other ministries. The first budgetary reform that must take place is in the Finance Ministry itself. If it must be strict at all, let it be strict impartially.

This does not, however, solve the entire problem. The question, as was stated at the outset, is one of evolving a pattern of control which fully takes into account the expanding character of Governmental activity and the need for ensuring that the country gets full value for the money spent. Under old budgetary rules, all new schemes should be prepared in detail and included in the annual budget at the time of its presentation. But the difficulty is that new schemes may not all be ready at one time, though many are likely to be ready at different times of the year. Any hasty or ill-conceived budgeting will result either in over-spending—the excess has then to be covered by *ex post facto* sanction—or in under-spending which means a certain immobilisation of resources which could have been applied to better advantage in some other project.

Mr. Chanda's solution to the problem consists essentially in modifying the budgetary procedure itself, so that only the broad details of a scheme will come up for scrutiny and approval by Parliament. He suggests that a small provision for each new scheme may be made to obtain Parliamentary approval. He further suggests that, as and when a new scheme matures sufficiently and estimates are prepared in sufficient detail, a supplementary vote should be obtained from Parliament, if in session; otherwise, allotment of funds should be made out of the contingency fund sufficient to cover the immediate expenditure on the project, until a supplementary grant for the full amount can be obtained from Parliament. In support of this suggestion, he says: "This arrangement will, on the one hand, introduce more realism in budgeting, and, on the other, provide a mechanism by which Parliament and Government will be enabled to keep a watch on the performance of the ministries responsible for the projects." He realises that a possible objection to this method would be that it would not enable the Finance Ministry to get a reasonably accurate picture of expenditure in a financial year and would thus make it difficult for him to formulate or adjust his taxation proposals. But this criticism, he rightly holds, will be valid only if the annual budgets are regarded in isolation. In the context of the Plan, which provides for expenditure budget over the entire Plan period, the "expenditure scheme in any particular year loses much of its significance."

In defence of his proposal, Mr. Chanda further observes that it "would expedite matters if, at the stage of obtaining the Finance Ministry's approval, an administrative ministry is not required to provide complete details of the scheme, but furnish sufficient details to enable the Finance Ministry to take a view of the scheme as a whole and its cost." Once the Finance Ministry has sanctioned the scheme on this basis—that is on the basis of the total cost of a scheme and its breakdown by categories of expenditure such as staff and allowances, works outlay and contingencies—it should be for the administrative minist

up of a corps of officers who could fill both administrative and financial posts with equal facility."

There is no doubt that, if Mr. Chanda's scheme could be implemented, the execution of projects and schemes in the public sector would be expedited. But there are two obvious defects in his scheme. In the first place, the Finance Ministry, by reason of long experience and ingrained habits of mind, is able to assess properly the worth of a scheme or its estimated expenditure. Would it not be a national loss if it were allowed to bring all its knowledge and experience to bear only on the broad details of a scheme? Secondly, are the administrative ministries competent to exercise the financial control which would devolve upon them? The question is not whether it is or is not appropriate to decentralise financial control and responsibility. The real question is whether the persons to whom such control and responsibility are to be delegated will be capable of exercising these new powers. If there were no slackening of control after devolution, it would be a distinct gain. Otherwise, the experiment in decentralisation might conceivably make matters worse than they are now.

In the light of these considerations, Mr. Chanda's other suggestions acquire a new significance. One suggestion relates to the installation of Finance officers at appropriate levels in the administrative ministries. He also suggests that each ministry should be provided with competent and technical advice so that there may be a "reasonable and accurate assessment of spending capacity." He wants the Planning Commission, which also has its own complement of technical staff, to be more actively associated with the preparation of schemes and projects. Under this scheme of things, he says estimates will be more realistic and there would be greater speed in execution of schemes.

Clearly, Mr. Chanda's scheme must be regarded as an integrated whole. Decentralisation of financial scrutiny, though an essential element of the scheme, is only one aspect of it. If it is implemented, the Government should also see that the other safeguards which he has suggested in the shape of installation of officers and simultaneous examination of projects by the Finance Ministry and the Planning Commission are also put into effect. Without these safeguards, financial control will be rendered dangerously weak through decentralisation. Finally, it should be obvious that the success of the reform will be determined by the sense of financial responsibility which the men in the administrative ministries are able to acquire, in addition to their normal duties and functions. Since such acquisition is necessarily a slow process, the reform also will have to be implemented with caution. There is, however, no gainsaying the fact that the reform itself is in the right direction.

WAGES FOR COAL MINERS

FEW coal miners will have any reason to regret the two-year period that has elapsed between the reference of their wages dispute to the All-India Industrial Tribunal and the announcement of the Tribunal's award last week-end. They will receive under the award a substantial increase in their emoluments. Although the award comes into operation from the date of its announcement (26th May 1956) and not with retrospective effect, as the representatives of labour had demanded, there is no doubt that it makes the miner's job so much more attractive than before. From this point of view, the award was certainly worth waiting for. The Tribunal, on its part, has the satisfaction that it has done what it considers "to be just for the industry as well as the employees." It is now for the workers to respond to the Tribunal's call for a "period of industrial peace in this industry when we can expect the target of 60 million tons, envisaged under the second Five-year Plan, to be reached without difficulty."

Coal mining is not just one simple operation, so that the Tribunal, in fixing wages, has had to take into account the different categories of workers. Accordingly, it has divided the workers into nine categories for which the basic wages have been fixed at As. 15, Re. 1-0, Re. 1-1, Re. 1-2, Re. 1-3, Re. 1-4, Re. 1-12, Rs. 2-2 and Rs. 2 10 all per day. The minimum wage for each worker will consist of the basic wage, dearness allowance and statutory bonus. Dearness allowance is calculated at 150 per cent. up to a wage of Rs. 30 per month, 100 per cent. for wages between Rs. 31 and Rs. 50, 66⅔ per cent. for wages between Rs. 51 and Rs. 100, and 40 per cent. for wages between Rs. 101 and Rs. 300. The statutory bonus is calculated at the rate of one-third of the basic wage. On this basis, it will be seen that the minimum wage for the lowest category of workers will work out to Rs. 2-10-6 per day, being the total of the basic wage (As. 15), dearness allowance at 150 per cent. of the basic wage (Re. 1-6-6) and statutory bonus at the rate of one-third of the basic wage (As. 5); for a month of 26 days, it will work out to Rs. 69-1-0. The minimum wages for other categories will work out to Rs. 2-13-4, Rs. 3-0-2, Rs. 3-3-0, Rs. 3-5-0, Rs. 3-6-4, Rs. 4-1-4, Rs. 4-12-1 and Rs. 5-6-9 per day or to Rs. 73-10-8, Rs. 78-4-4, Rs. 82-14-0, Rs. 86-2-0, Rs. 88-4-8, Rs. 106-2-8, Rs. 123-10-2, and Rs. 140-15-6 for a month of 26 days. These wages are for surface workers only. Those who work underground are entitled to an additional 12½ per cent. of the basic wages. The Tribunal has held that the wages for women workers should be calculated on the basis of 2.25 consumption units. This would mean that a woman worker would get 75 per cent. of what a male worker gets. It has stated that this recommendation does not imply the denial of the right to equal wage. What has been done, according to it, is to assess the requirement of the woman worker on a different basis from that of a male worker.

The Tribunal has thus laid down the all-India minimum for market collieries. Both the basic wages and the total emoluments have been raised. The daily-rated unskilled worker in Talcher, for instance, will get the same emolument as his counterpart in the market colliery in Bengal, Bihar, Hyderabad or any other State. This applies also to other time-rated workers in the higher categories. The Tribunal says: "There is now no question of different awards, resulting in different rates of wages, at least so far as the time-rated workers are concerned. We have categorised the workers and have directed the application of one scheme of categorisation in all the States." Further, the Tribunal has brought the piece-rated and time-rated workers in State collieries in line with those in the market collieries. From all this, it will be clear that the Tribunal is fully entitled to the claim that it has "introduced standardisation in wages."

There is one important aspect of the award to which attention deserves to be drawn. It is the essentially sound approach of the Tribunal to its task. Many a tribunal has failed to carry conviction with the interests concerned, because it has frequently been obsessed with the facts of the case and been unable to view them in the larger perspective. A similar charge cannot be made against the collieries Tribunal. In its comments on the wages question, in general, and the wages in the coal industry, in particular, the Tribunal has shown commendable awareness of the national importance of an equitable settlement of wage disputes. Thus, the Tribunal has done well to emphasise that a mere money increase in wages will avail the workers nothing, unless it is accompanied by the availability of goods that can be purchased with the money earned. Increase in wages unaccompanied by a larger supply of goods, it points out, will "simply put prices up and cannot afford any relief to workmen." This is an unexceptionable statement, though there are still many sections of labour which believe only in a larger pay packet, irrespective of what it will buy. So far as wages in the coal industry are concerned, the Tribunal, though it feels that labour has lived on a low wage for a long time and may have deserved better, is rightly unwilling to overlook the fact that "any sudden increase in wages may give a shock to the industry which it may not be able to stand." This is the reason why it has had to reject the higher demands made by the unions.

A notable feature of the award is that the Tribunal has left a certain area for settlement by the parties to the dispute. Thus, it has directed that the wages of the monthly-rated workmen, not specifically covered by the award, should be fixed by the management in the light of what it has given for analogous jobs. We commend this feature to the attention of all industrial tribunals. Surely, if it is not practicable under the law as it now stands to settle all questions by mutual negotiations, every tribunal could at least arrange to leave some questions in respect of each award for voluntary negotiations and settlement. This would encourage the parties to get together for settlement and pave the way for that mutual appreciation of problems which forms the basis for enduring industrial peace. Gradually, the area to be covered by voluntary negotiations could be enlarged to the advantage of both employers and workers. In taking the decision to leave some matters for amicable settlement to the employers and the workers themselves, the Tribunal has generously recognised that the "employers have realised what is expected of them and have shown indications that they are prepared to move with the times." It is to be hoped that the colliery owners, on their part, will prove worthy of the trust the Tribunal has reposed in them.

Bound up with the implementation of the award is the question of coal prices. In giving the award, the Tribunal says that it has taken into consideration the fact that coal is a basic industry essential for industrial progress, and that any large-scale increase in the cost of coal or any upsetting in the structure of the industry would not be in the interests of the country. This is a vital consideration. Apparently, it is in spite of this consideration that the Tribunal has been compelled to grant an increase in wages. This increase will naturally have its repercussions on the cost structure of the coal industry. It will, of course, be some time before the precise effect of the increase in wages on the industry's cost structure can be assessed. Present indications, however, are that it will not be inconsiderable, in view of the fact that wages constitute some 60 per cent. of the costs in the coal industry and the Tribunal's recommendations imply a 40 per cent. increase in minimum wages. Production costs, according to one estimate, may go up by 20 per cent. or Rs. 3 per ton.

Clearly, the next question to which the Government has to address itself is the revision of prices for coal now under its strict control. It is to be hoped that the Government will take a realistic and early decision on this question. Indeed, it should have announced its decision on this question simultaneously with the announcement of the award. We are, however, told that the Government has appointed a special committee to go into the question. The committee should lose no time in arriving at its conclusions and submitting its report, so that the Government could take an early decision on the basis of its findings. It is needless to add that, since the award has already come into force, any delay would mean a substantial financial loss to the industry. In order to avoid such loss, the Government could at least permit an interim increase in prices, pending the findings of the committee.

In taking its decision on prices of coal, the Government will do well to take into account at least four factors. In the first place, while it is true that an increase in coal prices will have its repercussions on cost of production of other industries, it must at the same time be recognised that no single industry should be penalised in order to subsidise other industries. The fact that the coal industry is a basic industry should not be used as an argument for denying it a fair and equitable return. Rather, it is an additional argument for giving the industry sufficient incentive in order to increase its production. Secondly, coal is a wasting asset. This means that the source of income is bound to dry up in due course, unless the owners are allowed to open up new collieries to replace the exhausted ones. Under the revised industrial policy, the scope for such expansion for colliery owners in the private sector is very limited, so that a day will come when the private sector may gradually cease to exist in the coal industry. Essentially, this means that the return on the investment in the industry should include a certain element to represent the return of capital itself.

Thirdly, excepting for some minor changes here and there, coal prices have not been raised since 1947; on the contrary, they were subjected to a cut of 10 per cent. in 1949. Production costs have mounted since then and the industry's repeated appeals to the Government to look into this matter and render justice have been of no avail; the authorities simply turned a deaf ear to them. It is on top of this state of affairs that a new burden in the shape of an increase in wages has been imposed on the industry. Fourthly, the second Five-year Plan, though it assigns a smaller role to the private sector in the coal industry than to the public sector, envisages a not inconsiderable increase in production by privately-owned coal mines. Thus, the Plan envisages an increase in the output of coal in the private sector from 33.50 million tons to 43.50 million tons. Obviously, in the absence of attractive incentives, the private sector will find it difficult even to maintain its existing level of production, let alone increase it. It is, of course, now well understood that State acquisition of existing coal mines is not contemplated. Assurances to this effect have been given by the authorities. But these assurances can have a recognisable meaning only if the Government follows them up by positive assistance in the shape of a constructive decision on coal prices and taxation of colliery profits.

MR. NEHRU'S STATEMENTS ON ECONOMIC POLICY ANALYSED

MONEY MARKET—NEW LOAN—SQUALL ABROAD?

THURSDAY, 5 P.M.

MARKET GOSSIP

MR. Jawaharlal Nehru is the keyman of India. This is, of course, an obvious fact known even to a schoolboy. And yet if it is repeated here, it is done with a purpose. Sometimes obvious things fail to hit the eye and require to be stressed. The share market in Bombay did not seem to remember this obvious fact during the past few days. Equities were inclined to be easy, because some of the operators feared that, at the All-India Congress Committee (A.-I.C.C.) meeting due to be held in this city during the week-end, the private sector might be subjected to a fresh attack by the Congress politicians and that great stress might be laid on the need for additional taxation. Another reason was the apprehension that the supporters of the *Samyuktha* Maharashtra Movement might intensify their campaign by staging some spectacular demonstrations before the A.-I.C.C. meeting, demonstrations which might lead to disturbances in the City. Whether the last mentioned fear is justified or not is beyond our ken. There are, however, signs that it may not materialise, because there is a lively realisation among the supporters of the Movement that to anger Mr. Nehru again by creating fresh disturbances would be to reduce to nothing whatever chances there are now for Maharashtra getting Bombay City.

As for the other fear, it looks as though the private sector will not be mauled any more by the Congress Party, at any rate not until the next General Elections are over. The A.-I.C.C. is, of course, scheduled to debate upon the second Plan and it is quite likely that some back-benchers and leftist elements will make a few disagreeable remarks on the private sector and harp upon the need for reducing economic disparities by raising the taxes applied to the upper middle class and the tall poppies. But whatever they say will be of no consequence. It is what Mr. Nehru says that will matter. And, of late, Mr. Nehru's attitude towards the private sector has undergone a change for the better. In fact, his whole approach to economic problems is more sensible and realistic than it was sometime ago. There is enough evidence of this change in his recent speeches. The share market, however, does not seem to have fully realised this new development. Had it done so, it would not have entertained misgivings about the outcome of the forthcoming A.-I.C.C. meeting.

The speech made by Mr. Nehru while initiating the debate on the second Five-year Plan in the Lok Sabha on 23rd May 1956 contains his latest elucidation of the Government's economic policy. This was a great speech, running into about 12,000 words. One should read the full text of his speech, if one were to understand his mind on problems of economic development. The speech consists of several themes and is, therefore, somewhat disjointed. There are also several passages in it reflecting the obsolete nature of some of Mr. Nehru's economic theories or his ignorance of the free enterprise economies in the world. It will, indeed, do the nation considerable good, if Mr. Nehru can relax for a while and devote some time to a serious study of the modern economic history, especially of the post-war era, of free countries like the U.S., the U.K., France, West Germany and the Scandinavian countries. If he does, he will realise to his pleasant surprise that there is as much economic planning in these free enterprise countries as there is in India, if not more. He will also realise that the type of economic planning that is being followed there is of a superior variety than the one in India and, what is more, that it does not conflict with democratic values to the extent it does in this country.

* * * *

Notwithstanding these and other defects, the speech is notable for a large measure of clear thinking. This is particularly so on socialist pattern of society, ceiling on incomes, unemployment and private sector. Mr. Nehru was unwilling to define precisely the meaning of socialism in this context, apparently because he wanted to avoid any doctrinaire thinking. But giving a broad idea of what he meant by socialist pattern of life, he observed:

"Surely, we mean a society in which there is social cohesion, without classes, equality of opportunities and the possibilities for everyone to live a good life. Obviously, this cannot be attained, unless we produce the wherewithal to have these standards and lead that good life. So, we have to lay great stress on equality, on the removal of disparities, and it has to be remembered always that socialism is not the spreading out of poverty. The essential thing is that there must be wealth and production."

Thus, wealth and production are important and it is the primary duty of Mr. Nehru's lieutenants to give priority to the achievement of this goal. Their actions should be so designed as to provide "equality of opportunities" and a suitable climate "for everyone to live a good life." They should not try to sidetrack the main issues by making wrong interpretations or acting against the spirit of Mr. Nehru's conception of socialism.

The views of Mr. Nehru on ceiling on incomes were analysed in this journal only last week. Nevertheless, what he said on this subject in his address to Parliament on the Plan bears reproduction. He remarked:

"There is a good deal of talk about ceilings, and it is a talk with which naturally one tends to agree, because you want to remove disparities. But one has always to remember that the primary function of a growing society is to produce more wealth; otherwise, it will not grow, and you will have nothing to distribute. If, in the process of your fixation of ceilings or in any other process or methods of producing some kind of equality which is so necessary and at which we are aiming, you stop this process of growth and wealth accumulation, then you fail in your objective. Therefore, whether it is in industry or in agriculture, the one and the primary test is whether, in your process, you are going in for raising the wealth of the country, for increasing the production of the country or not. If not, you become stagnant in that field or your progress is much more limited, that is to say, that, in order to reach equality, as I hope you will some time or other, an automatic ceiling with everybody having equal opportunities is not the road to it. It is not by some artificial fixation but by a hundred paths that you can gradually bring that about. Certainly, the result will be the same, but an artificial attempt at it may prevent it from reaching it and meanwhile reduce the rate of your progress and your growth."

Here again, it will be noted, the Prime Minister's stress is on production and on gradual reduction in disparities and not on a direct ceiling on incomes.

* * * *

Equally forthright was Mr. Nehru when he spoke on unemployment, as will be seen from the following quotation:

"It (unemployment) is a terrific problem, a human problem, which we cannot ignore whatever else we may do. Yet, in looking at it, it has to be remembered that merely giving some kind of occupation to a large number of persons does not ultimately increase employment or lessen unemployment. We delude ourselves, if we think so. An Hon'ble Member of this House made a remark one day, not in the House, I believe, but outside, and said something like this: How would it be, to give employment to a large number of people, if the railways were abolished? Probably there will be some kind of hand-carts, many people will be pushing the hand-carts and some no doubt will be sitting in them! That is a completely wrong approach to this problem. Employment comes by newer and more effective means of wealth production, and you canot get that. The whole experience and history of the past 200 years shows that the growth of technological methods has led to greater and more profitable employment. It is true that you cannot merely think of technological growth, as just for the moment it leads to human misery. That is a different matter; you provide for that. Do not imagine that by *minus* technological progress, we are going to deal with the problem of unemployment. You cannot. Every country which boasts of full employment today is a country which is technologically advanced. Every country which is not technologically advanced has unemployment or underemployment. Therefore, if India is to advance, India must advance in science and technology, and India must use the latest techniques, always keeping in view, no doubt, that, in doing so, the intervening period, which always occurs, must not cause unhappiness or misery. We have to provide for that even at the cost of progress, because that is no progress, which brings suffering and misery in its train. But the fact is that our poverty is due to our backwardness in science and technology and, by the measures that we remedy that backwardness, we create not only wealth but also employment."

The advocates of Ambar Charkha and village *ghanis*, that is, the *Sarvodayists* who dominate the All-India Khadi and Village Industries Board, should carefully read the observations of Mr. Nehru and cease wasting their time, as well as the taxpayers' money, on their pet schemes of dubious economic value. They would be spending their energy and time more profitably, if they devoted their attention to better economic means of employment for the unemployed and underemployed. There are surely many avenues for this purpose, as the present Commerce and Industry Minister will show them.

Now that the country's leader has given a clear verdict on an issue needlessly made controversial by the politicians, it is to be hoped that the policy of taxing the technologically advanced industrial sector for subsidising the traditional but completely out-of-date cottage industries will be suitably revised and followed with circumspection. Several modern factory industries have been hit hard by the present policy, without any tangible gain to productive employment.

* * * *

The observations of the Prime Minister on the place of the private sector in the economic set-up of India were more encouraging than any that he had made earlier. Thus, he observed:

"While I am for the public sector growing, I do not understand, or, at any rate, I do not appreciate, the condemnation of the private sector. The whole philosophy behind this Plan is to take advantage of every possible way of growth and not by doing something which fits in some doctrinaire theory and imagine we have grown because we have satisfied some text-book maxim of a hundred years ago. We talk about nationalisation as if nationalisation were some kind of a magic remedy to every ill. *I believe that the means of production will be owned by the nation: I believe that, ultimately, all the principal means of production will be owned by the nation.* (Italics ours—ED.) But I just do not see why I should do something today which fixes my progress, my increasing production, simply to satisfy some theoretical urge. I have no doubt that, at the present stage in India, the private sector has a very important task to fulfil, provided always that it works within the confines laid down, provided always that it does not lead to the creation of monopolies and the other evils that the accumulation of wealth gives rise to. I think we have enough power in our laws, in our rules, etc., to keep the private sector in check.

"We are not afraid of nationalising anything. The House knows that, even during the last few months, we have taken some big steps. Only just a little while ago, the House was dealing with the Bill concerning insurance. These are all big, mighty steps that we have taken and we are not afraid of taking them, but we do not propose to take any such step merely to nationalise, unless we think it is profitable to the nation. On the other hand, we will much rather build up national industries, new ones, rather than pay compensation to all and sometimes rather decrepit industries, in order to take charge of them. Why should we, in this growing age, in the changing technology and changing techniques, take possession of any old technique? I must rather have the latest technique and have new factories or new plants and not an old plant, unless that old plant happens to serve some strategic purpose, which is a different matter; and, in that case, I do it, because I want to hold the strategic points in our economy. Therefore, I should like the House to appreciate that the philosophy behind this report is that the public sector and the private sector are made to co-operate within the terms and limitations of this Plan. While the public sector obviously will grow—and even now it has grown both absolutely and relatively—the private sector is not something unimportant; it will play an important role and no doubt gradually; *ultimately, it will fade away.*" (Italics ours.—ED.).

It will be noted from the foregoing extract that Mr. Nehru is not anxious to interfere with the activities of the private sector, so long as it behaves well and does not stand as an impediment to economic progress and, what is more, to the attainment of the socialist goal. In other words, much depends upon the behaviour of the private sector itself. If it works vigorously, keeps its employees happy and contented, pays the taxes regularly, ceases from indulging in anti-social activities and voluntarily enforces a moral code on all its members through its own associations, its future is assured. But there is a snag here. The private sector can function only if it is given a certain amount of freedom and if there are private savings. At the moment, both the criteria do not obtain to the extent necessary. Indeed, savings are so limited and the restrictions so many that the growth of the private sector, instead of being horizontal, is vertical. If this trend is not rectified in good time by appropriate changes in all the economic policies of the Government, there will be monopolies or near monopolies in the private sector, which in turn will provide a convenient excuse for future Governments to take it over.

* * * *

Despite Mr. Nehru's assertion to the contrary, there is dogmatism in his statement on private enterprise and nationalisation quoted above. This cannot be denied, for, almost in the same breath, he declares that, "ultimately, the private sector will fade away," and adds: "*The public sector will control and should control all the strategic points in our economy.*" As Dr. Matthai remarked in his speech at the Rotary Club in Bombay a fortnight before, it is unnecessary for a State to own and control such a large number of industries and services as is envisaged by the Industrial Policy Statement in order to achieve a socialist society.

Then again, his innate love for the public sector will be obvious, if one carefully examines his reasons for not reducing, for the present, the importance of private sector further. These are three, namely, (1) further extension of nationalisation might hold up the progress of the Plan; (2) it would involve payment of compensation at a time when the State has other heavy commitments; and (3) there is no point in taking over old factories. If these explanations mean anything, it is that he does not want to nationalise more things now or in the near future, because it does not suit him to do so. It is noteworthy that, in all his discussions on this subject, Mr. Nehru has not viewed the question of nationalisation from the larger and more important angle, namely, its implications to democratic ways of life. He is such a great democrat both at heart and in action that he is probably unable to comprehend any danger to the freedom of individuals when free enterprise ceases to exist or exists only in name. But history is full of grim instances of what happens when the State becomes the sole employer or the principal employer.

From a practical point of view, one need not, however, let one's peace of mind be unduly disturbed by the long-range implications of Mr. Nehru's foregoing statements. In this fast changing world, what is more important is the near future, by which we mean a period of, say, 5 to 10 years. It is obvious that, during this period, the Government is unlikely to nationalise any of the existing industries. On the contrary, it is prepared to permit the private sector to expand in certain directions. It is also possible that, during this interval, Mr. Nehru may become even less dogmatic and,

(Continued on page 1083).

EQUITIES LISTLESS

TATA OILS, HOWEVER, RALLY

(From Our Own Correspondents)

BOMBAY, 31*st May*

THE Stock Exchange was listless during the week under review. Barring a modest revival today, equity values were on a downward trend, albeit on a small scale. Parliament having been adjourned, the operators' attention was diverted to the A.-I.C.C. session which commences in Bombay on 2nd June. They preferred to be cautious, in anticipation of some important pronouncements by the Congress leaders on the economic and industrial policies of the party-in-power. Some, however, were of the view that the industrial policy of the Government having been made clear already and the Prime Minister's speech initiating the debate on the second Five-year Plan having given a fair indication of the Government's views about the implementation of the Plan, there was no other topic on which any pronouncements could be expected. Nevertheless, they were not in a mood to go long; this was probably due to the fact that the Plan is to be discussed at the A.-I.C.C. session and a draft resolution on it has been prepared by the Congress Working Committee. Fears about agitation over the future of Bombay City during the A.-I.C.C. session also induced caution.

In the steel section, Tata Ordinaries reacted from Rs. 251-12 to Rs. 247-8, but revival of support on the eve of the shares being listed *ex*-right lifted them to Rs. 250-8 at the close. Indian Irons were irregularly lower. After having staged a quick rise of nearly Rs. 3-8 in the previous three weeks, the shares lacked support and languished from Rs. 38 to Rs. 37-6.

Leading counters in the textile section ruled quiet, on profit-taking at higher levels. Bombay Dyeings opened on a promising note at Rs. 66$\frac{8}{4}$, as against the previous week's closing of Rs. 662-8, but relapsed to Rs. 642-8 on Monday this week. After a revival to Rs. 652-8 today, they closed at Rs. 650. Centurys moved in a narrow groove and closed Re. 1-4 lower at Rs. 555-12. Kohinoors fluctuated between Rs. 377 and Rs. 367 before finishing at Rs. 374. Central Indias dropped by Rs. 2-8 to Rs. 139-8, while Ahmedabad Advances gained Rs. 5-10 to Rs. 190. Finlays were, however, down by Rs. 2 at Rs. 338 and Gokaks by Rs. 2-8 at Rs. 230-8. Indu Ordinaries shed As. 9$\frac{1}{2}$ to Rs. 13-6$\frac{1}{2}$. The Company has declared a final dividend of As. 5 per share of Rs. 10, bringing the total dividend for the year ended 31st December 1955 to As. 15 per share, as against *nil* for 1954 and As. 10 for 1953. Indore Malwas moved down by Re. 1-4 to Rs. 142-8, while Khataus gathered Re. 1-14 to Rs. 240. New Citys gained Re. 1-4 to Rs. 178-2, while New Greats were maintained at Rs. 250. Morarjee Goculdas changed hands Rs. 2-8 lower at Rs. 242-8. Ruia Group shares were again fancied, Bradburys gaining Rs. 16-4 to Rs. 221-4, Dawns Rs. 7-8 to Rs. 132-8 and Phœnix Re. 1-4 to Rs. 141-4. Shree Niwas Cottons shed Rs. 2-8 to Rs. 208-12, Simplex Re. 1-8 to Rs. 220-8 and Svadeshis Re. 1 to Rs. 229-8. Standards were dull at Rs. 441-4. Tata Mills were steady at Rs. 53-4, while Vishnus declined by Rs. 2-8 to Rs. 188-12.

Bank shares presented a mixed pattern. Barodas receded by Re. 1-8 to Rs. 96-8, while Bank of Indias were done Re. 1 higher at Rs. 161. Central Banks were marked up by As. 8 to Rs. 51-12. Punjab Nationals were lower by Re. 1-4 at Rs. 51-4, while United Commercials picked up Re. 1 to Rs. 51.

Insurance shares ruled steady, but the volume of business done was small. New Indias attracted some attention and gained As. 12 to Rs. 42-12. Indian Mercantiles were taken up As. 8 higher at Rs. 42-8. British India Generals were a shade better at Rs. 13-8.

Some interest was in evidence in electricity shares on reassuring reports about the Governments nationalisation policy. Ahmedabad Electrics gathered As. 5 to Rs. 97-3 Bombay Suburbans were well held at Rs. 114-1, while Surat Electrics were a shade lower at Rs. 120. Tata Hydros were in favour and rallied from Rs. 127 to Rs. 131-8. Tata Powers gathered Rs. 5 to Rs. 1,311-4 and Andhra Valleys shot up by Rs. 27-8 to Rs 1,222-8.

Select scrips in the miscellaneous section were active on good support and scored handsome gains, in the face of general dullness, Bombay Burmahs, Tata Locos and Tata Oils being prominent in this group. Sugar shares ruled quiet, Belapurs losing Rs. 3 to Rs. 231. Phaltans were a shade lower at Rs. 150. Walchandnagars shed Rs. 2-8 to Rs. 247-8 and Bhopals As. 6 to Rs. 13-10. Cement shares fared no better, Associated Cements giving way from Rs. 219 to Rs. 217 and Digvijays from Rs. 193 to Rs. 189-8. In the engineering and mining group, Tata Locos shaded off earlier in the week from Rs. 155 to Rs. 152-12, but spurted to Rs. 157-8 today, on reports that the Tariff Commission has been asked by the Government of India to expedite its enquiry on fair prices for the Company's locomotives and boilers. Alcocks were held at Rs. 352-8. Larsen and Toubros gained As. 3 to Rs. 16-7, while Premier Constructions slipped back by Rs. 3 to Rs. 177. Shivrajpurs were unchanged on balance at Rs. 101. Indian Coppers moved down by As. 5$\frac{1}{2}$ to Rs. 6-10$\frac{1}{2}$. B.B. Petrols were also quiet at Rs. 4-0$\frac{3}{4}$.

Among shipping and transport shares, Scindias were featureless and shed As. 5$\frac{1}{2}$ to Rs. 18-4. India Steamships, on the other hand, attracted good attention on higher advices from Calcutta and hardened from Rs. 8-12$\frac{1}{2}$ to Rs. 9-5. Hindustan Motors were done at Rs. 9-4 *ex*-right, as against Rs. 9-12 *cum*-right last week. Premier Automobiles gathered strength from Rs. 89-8 to Rs. 92-8. Among other miscellaneous industrials Bombay Burmahs, after moving down from Rs. 633-12 to Rs. 622-8, rallied to Rs. 648-12 on expectations that the dividend would be maintained. B.I.Cs were maintained at Rs. 11-2, while National Rayons shed Re. 1 to Rs. 245. Tata Oils staged a spurt from Rs. 49 to Rs. 52-8 on reports that the Company would show record results for the year ended 31st March 1956 and the dividend would be stepped up substantially. Tata Chemicals were lower by As. 3$\frac{1}{2}$ at Rs. 18-2$\frac{1}{2}$, while Wimcos held ground at Rs. 189-6.

Calcutta Stock Exchange

CALCUTTA, 29*th May*

There was a note of steadiness in trading on the Calcutta Stock Exchange during the week under review. Generally, the Finance Minister's forthright rejection of the leftist advice in Parliament to take recourse to compulsory loans from foreign firms as well as from Indian industrialists was the factor which gave confidence to speculators. And this week was, again, a period in which speculators, rather than genuine investors, accounted for the major part of the business volume. The Government's acceptance of the resolution—moved in the Lok Sabha—to pursue the spirit of progressive reduction in inequality did not as such affect the sentiment of operators, as, even without such a declaration, operators and investors had been aware of the Government's objective. For Mr. Deshmukh made it clear that there was no room for raising indirect taxation, but that the Government would take recourse to more and more direct taxation. Coals were entirely neglected, following the publication of the Tribunal award which raises the wages bill of employers. Serious doubts as to whether the few collieries which had been making some profit would continue to do so were entertained. Jutes were, however, shown more attention, in view of the anxiety felt in New Delhi over the disparity between the prices of goods and the fibre. Tea shares were subdued, despite Mr. Krishnamachari's indication—given in Parliament—of the possibility of reducing the export duty on tea should the reduction made by Ceylon adversely affect India's export.

Textiles continued to receive more support, and a larger number of scrips came to business. The Government's indication that something would be done to arrest the decline in cloth exports provided the encouragement. From Rs. 6-8, Jayshrees were taken to Rs. 6-14, while Kesorams, after rising to Rs. 18-6 from Rs. 18-2, were pulled down to Rs. 18-3. Benares were held steady at Re. 1-10 and, on moderate support, Dunbars came to business at Rs. 308, as against Rs. 302 previously. Elgin Mills rallied from Rs. 27-6 to Rs. 27-10.

Coals were driven to lower levels for the reason already stated. Burrakurs sagged from Rs. 14-6 to Rs. 13-12 and New Beerbhooms from Rs. 20 to Rs. 19-6. Western Bengals, although unchanged at Rs. 6-15, were quiet.

Jutes gained strength, as the lower levels attracted buying. New Delhi's considerate attitude to the need of the mills to realise higher prices for jute goods also encouraged the bulls. Nationals advanced from Rs. 25-4 to Rs. 25-13, with Howrahs receiving attention at Rs. 23-15, more or less the previous rate. In strong support, Anglo-Indias rose from Rs. 176 to Rs. 186, but receded today to Rs. 182. At Rs. 73-8, Ganges were Rs. 2-8 higher on balance. After being pushed back to Rs. 16-8 from Rs. 16-12, New Centrals recorded an impressive recovery to Rs. 17-4.

Mining shares were done at previous levels. Indian Coppers were shown attention at rates varying between Rs. 7 and Rs. 6-12. Karanpura Developments recovered from Rs. 26-3 to Rs. 26-6 and Burma Mines were steady at Rs. 3-15.

More support was accorded to cement shares. Assam Bengals gained As. 7 to Rs. 7-9. Ashoks rose by As. 5 to Rs. 12-2. Sone Valley at Rs. 9 were better by As. 3.

In the engineering section, Indian Irons received considerable speculative attention and, at one time, touched Rs. 38-1, as against the opening of Rs. 37-12 on Wednesday last. Subsequently, however, the rate receded to Rs. 37-9 on profit-taking. From Rs. 25-6, Texmacos had risen to Rs. 25-12 before giving way to Rs. 25-1. After opening at Rs. 26-12 a zigzag movement was in evidence in Richardson and Cruddas which, however, rose to close higher on balance at Rs. 27-9. At Rs. 28-4, Braithwaite & Cos. were a few annas higher. Burn & Cos. were as high as Rs. 376 today, as against Rs. 364 a week ago.

Tea shares were featureless, reflecting the dull conditions during auctions. Among sugars, a star feature was provided by the advance of Re. 1-6 to Rs. 14 in Sree Krishna Gyanodayas on sustained interest. Ramnugger Canes scored a gain of As. 13 to Rs. 24-14. Dharbangas were fully steady at Rs. 23. The cause for this increased interest in sugars was the official declaration that India had now reached self-sufficiency in sugar, that no more imports were necessary, and that the possibility of some exports would be considered.

Among shippings, India Steamships improved to Rs. 9-11, after opening at Rs. 9. India General Navigations were also higher at Rs. 113-8. Among papers, Orients spurted by Rs. 2-12 to Rs. 40. India Pulps put on As. 7 to Rs. 25-11.

Moderate activity was also recorded in the miscellaneous section. Electric Constructions were taken up As. 9 higher at Rs. 14-9. Indian Cables at Rs. 36-10 recorded an impressive gain of about four points, although the rate today was lower at Rs. 35-14. At Rs. 27-6, National Carbons disclosed no change. Niccos were taken at Rs. 23-6, as against Rs. 22-15. Calcutta Electric Supply rose fractionally to Rs. 13-13. Angelo Bros., however, eased by As. 6 to Rs. 21-6.

* * * *

Madras Stock Exchange

MADRAS, 29*th May*

The Madras Stock Exchange displayed firm conditions this week too, with the exception of rubber company shares which lacked support. There was keen buying in equities, induced by renewed prospect of heavy inflation in the coming years. The general view of operators was that the impact of inflation on shares, especially of the well-known enterprises, would be strong. For the chances of any large-scale new flotations with reasonable prospects were not considered to be very bright. The operators were also inclined to be optimistic about the yield from investment in shares in the context of deficit financing. The shares that were offered on the Exchange, therefore, met with good absorption and values moved further upward.

The week under review was notable for a number of dividend announcements which are given below:

Company	*Dividend per cent. for the year ended December*	
	1955	1954
Anglo-French Mills	*Nil*	5
Sri Venkatesa Mills	27$\frac{1}{2}$	27$\frac{1}{2}$
Coimbatore Pioneer Mills	20	20
Peermade Tea Co.	‡22$\frac{1}{2}$(f)	55
Tropical Plantations	16	20
Andhra Cement Co.	10	10
Dalmia Cement Co.	12$\frac{1}{2}$	10
Ashok Leyland Ltd.	*Nil*	5
Spencer and Co.*	5(i)	15

*Year ended 30th June 1956.
i=Interim. f=Final.
†Making a total of 35 per cent.

Textile mill shares attracted considerable attention of operators. Metturs provided the brightest spot and jumped up by Rs. 27-8 to Rs. 300 on expectation that the dividend—to be announced shortly—would be higher than what was paid in the previous year, namely, 35 per cent. Palani Andavar 'A's rallied Rs. 12 to Rs. 167. Cannanores, Dhanalakshmis, Palmalai Rangas and Vasantas advanced by Rs. 5 each to Rs. 174, Rs. 370, Rs. 90 and Rs. 285, respectively. Ashers spurted by Rs. 2-12 to Rs. 180. Venkatesas hardened by Rs. 3 to Rs. 200 *cum-div.* Radhakrishnas gathered Re. 1-8 to Rs. 305 *cum-div.*, Loyals Re. 1-4 to Rs. 51-4 and Janardhanas Re. 1 to Rs. 118. Bangalore Woollens, however, receded by Rs. 5 to Rs. 570 for lack of follow-up support. Buckinghams were also somewhat neglected at Rs. 197, as against Rs. 201.

In the planting section, coffee shares continued to be favoured well on reports that the release of a further quantity of coffee for export would be announced shortly. Amalgamateds strengthened by As. 4 to Rs. 20-6. A similar sum was added to Consolidated Coffees which were done at Rs. 10-10. Coffee Lands picked up As. 3 to Rs. 24-6.

Business was put through in tea shares generally at higher levels. Mlamallays rose by a rupee to Rs. 76. Devons and Nonsuch Teas gathered As. 4 each to Rs. 24-2 and Rs. 37-6, respectively. Periakaramalais were fully maintained at the last week's level of Rs. 9-5. As a result of the conversion of the shares of the United Nilgiri Tea Company from Rs. 100 paid to Rs. 10 paid, the entire list of Madras Plantation shares now has a par value of Rs. 25 and below. After conversion, the quotation for the shares stood at Rs. 24-8 which improved at the close to Rs. 25-8.

In contrast to coffee and tea shares, rubber shares came in for selling, despite reports of a distinctly upward trend in production up to the end of April last. Malankaras slipped by a rupee to Rs. 33. Rajagiris dropped As. 10 to Rs. 25-8. Midlands moved down by As. 8 to Rs. 22-6. Nenmenys lost As. 4 to Rs. 24-12. Be Bes eased by As. 2 to Rs. 4-15. Pullangodes were lower by 18 pies at Rs. 4-14.

In the miscellaneous section, Binnys evoked considerable enquiries and forged ahead by Rs. 4 to Rs. 177-8. Rallis were keenly sought; their quotation firmed up by Rs. 2-4 to Rs. 37. Ranes hardened by As. 4 to Rs. 10-8. Mysore Chemical Manufacturings put on a like amount to Rs. 24-8 *cum-div.* Aluminium Industries and India Cements were done each As. 2 higher, the former at Rs. 20-8 and the latter at Rs. 36-2. Travancore Rayons were firm at Rs. 15-9.

NEWS IN BRIEF

THE Centre has decided to license freely for export of Indian khaki and olive green cotton cloth and hosiery cuttings to all permissible destinations, other than the Portuguese possessions in India.

An American firm has submitted to the Government of India a proposal to set up a factory for the manufacture of carbon black in India. The proposed factory is expected to result in a saving in foreign exchange of Rs. 1 crore per annum.

The Government of India will follow rigidly the present policy of controlling the quality of salt produced in the country. The question of enforcing quality control over the salt produced by persons holding less than 10 acres is also under the Government's consideration.

The Constitution (Sixth Amendment) Bill, which seeks to transfer inter-State sales tax to the Union List and empowers Parliament to place restrictions on sales tax by State Governments on goods of special importance to inter-State trade, has been passed by the Lok Sabha.

A conference of representatives of the State Governments will be held in New Delhi on 17th June next to discuss the structure of co-ordinating organisation for the implementation of the schemes pertaining to small-scale, village and cottage industries.

The Rajpramukh of Hyderabad has advanced an aggregate sum of Rs. 15.11 crores to the State Government, besides investing about Rs. 3 crores in development loans. These loans bear interest ranging from 1$\frac{1}{4}$ to 2$\frac{3}{4}$ per cent. per annum, payable in 15 to 25 years. The public debt of the State as at the beginning of the current financial year is estimated at Rs. 70 crores.

A factory with a daily capacity of five tons is to be installed in Mysore shortly for the manufacture of multi-purpose food. The food will be available at as low a price as As. 1$\frac{1}{4}$ per 2 ozs. It is composed of a mixture of specially processed low fat groundnut flour and roasted Bengal gram flour fortified with calcium salts, vitamins A and D, thiamine and riboflavin.

The foreign debt of the Government of India increased by about Rs. 91 crores between 31st March 1951 and 31st March 1956. The public debt of the Government of India and the Part 'A' States increased from Rs. 1,497 crores on 31st March 1951 to Rs. 1,688 crores on 31st March 1956. The exact figures of the public debt of the Part 'B' States on 31st March 1951 were not readily available, but on 31st March 1956 they stood at Rs. 81 crores.

The Marketing Committee of the Coffee Board has decided that the Board's future policy should be to limit gradually the import of chicory into India to the extent of the actual quantity that would be re-exported from India in the form of French coffee, and that, in the meanwhile, imports of chicory be recommended to only established and *bona fide* concerns using chicory for mixing with coffee. The Committee has, accordingly, recommended that a total quantity of 1,000 tons of chicory may be allowed to be imported into India during the year 1956.

A tripartite conference on coal mining will be held at Dhanbad in the first week of July, after a lapse of about five years. The Conference, in which the representatives of the Union and the State Governments, employers and labour will participate, will discuss various aspects of coal mining, besides questions like water-supply amendment to the Mines Act 1952, amendment to the Coal Mines Bonus Scheme, revised code of draft regulations under the Mines Act 1952 debarring employment of female labour in open cast mines, abolition of contract labour for construction of pithead baths, and findings of the court of enquiry into the causes and circumstances of the colliery explosion in Amlabad.

The Government of India have under consideration the question of setting up a company to take over the management of the coal mines in Korba and Sirimili-Bisrampur regions. All the mines in these regions will be managed by a company proposed to be set up for the purpose. No new coal mines will be managed by private contractors. One of the recommendations made is that company management is better than Government management. In fact, there is a proposal to form a company to take over the management of not only these mines but also the existing Government-managed collieries. All future recruitment to collieries will be made through employment exchanges as far as possible.

The Planning Commission proposes to hold discussions with some of the State Governments in the near future, in order to have a clear appreciation of the position regarding the financing of the outlay on the State plans in the current year. The State Budgets for 1956-57 provide for the first year's outlay on the plans of State Governments. The Budgets as presented to State Legislatures show very big deficits. The Planning Commission has already made a detailed analysis, particularly of State Budgets which show big gaps in resources. In a letter addressed to the Chief Ministers of States, Mr. V. T. Krishnamachari, the Deputy Chairman, has suggested that Plan outlays in 1956-57 for individual States be kept within the estimates agreed to between the Planning Commission and the respective State Governments. The course for the State Governments to adopt is, he says, to bring the Plan outlay within the ceiling, reduce the committed expenditure to the agreed level and drop the non-Plan development expenditure.

In reply to a question by a member in the Lok Sabha this week as to what measures the Government had taken to stabilise the prices of tea, Mr. D. P. Karmarkar, Minister for Commerce, said that the ability of one country to bring about a stabilisation of tea prices in the foreign markets was limited. The price at which tea could be sold depended on a number of factors—actual or anticipated relationship between supply and demand, stocks lying in the producing and consuming countries, conditions of money market in the purchasing countries, etc. Another member asked whether the Government was aware of the reduction of export duty by the Ceylon Government and what effect it would have on prices of Indian tea in the London market. In reply, Mr. Krishnamachari, Minister for Commerce and Industry, said that, if reduction was going to affect us adversely, the member might depend on it that the Government of India also would reduce the duties.

* * * *

From Abroad

Japan's six leading car manufacturers are expected to invest in plant expansion and modernisation 7,500 million yen during 1956, an increase of 30 per cent. over the investment in 1955.

The U.S. Budget for the fiscal year ending 30th June 1956 is expected to show a surplus of $1,800 million, as compared with $230 million anticipated in the January Budget. This surplus will make a most welcome reduction in the country's huge national debt.

The world's first atomic power station to supply electricity on a large scale from nuclear sources started working in Cumberland, U.K., last week. Physics measurements and instrument checks are now taking place and the plant will be gradually commissioned. The formal opening of the station will be performed by the Queen in October this year.

Australia has sought a new comprehensive trade agreement with the U.K. Government in place of the Ottawa Agreement on trade preferences. The proposed agreement, while preserving the principle of preference between Australia and the U.K., is expected to open the way for a growing volume of trade not only between the two countries but also between both the countries and the rest of the world.

The new U.S. Farm Bill, which replaces the one vetoed by the President in April last, has received the President's signature, the Bill having been passed by the Senate and the House of Representatives. It does not contain any of the provisions objected to by the President, particularly the one relating to high rigid price supports. It, however, includes the "Soil Bank" scheme favoured by him. The $1,200 million "Soil Bank" scheme is intended to pay farmers for taking surplus lands out of production and is designed to overcome the problem of growing surpluses.

A great event of this year would be the opening of the first transatlantic telephone cable service, according to Britain's Postmaster General, Dr. Charles Hill. It is a tripartite venture of the British Post Office, the Canadian Overseas Telecommunications Corporation, and the Bell Telephone Company of the U.S. The total cost is estimated at about £15,000,000. At every 40 miles across the Atlantic, the cable will be studded with amplifiers or repeaters. Such is the confidence of modern electronic science that the 300 valves between Newfoundland and Scotland will, it is said, be relied on to work without mishap for 20 years.

A merchant bank, sponsored by a group of bankers and finance houses, has been established in Salisbury to carry on business in the Federation of Rhodesia and Nyasaland. The new institution will be known as the Merchant Bank of Central Africa and, it is expected, will open for business early in 1957. The new bank is sponsored by N. M. Rothschild and Sons and Philip Hill, Higginson and Co., both of London, in conjunction with Rhodesian Selection Trust, Dillon Read and Co., New York, de Rothschild Freres, Paris, Banque Lambert, Brussels, Messina (Transvaal) Development Company, Messina, and Leben Investment (Rhodesia) (Private), Bulawaya.

A warning that supplies of newsprint might run out unless substitute raw materials were found for their manufacture was given by a Director of a Paris newspaper at the Congress of International Newspaper Publishers Association held in Berlin last week. He said that some Scandinavian countries, known as the leading producers of newsprint, were already importing newsprint. Meanwhile, France, Belgium, Switzerland and Japan were experimenting in new raw materials and the U.S. had successfully used wood-pulp produced from trees grown in the southern regions, which were ready to fell in 15 years, instead of the usual 50 years. But this, he added, was not possible in Europe.

An agreement has been signed between the Government of Pakistan and the Shell Company of Pakistan Ltd., under which an operating company, "Pakistan Shell Oil Company Ltd." will be formed to carry out an extensive search for oil over an area of some 10,000 square miles in West Pakistan and an area of similar size in East Pakistan. The Petroleum Development of Pakistan Limited, a company to be owned wholly by Pakistan private capital, will hold 25 per cent. of the shares in the new company, the remaining 75 per cent. of the shares being held by Shell. The agreement provides that, in the event of oil being produced in commercial quantities, profits will be shared equally with the Government of Pakistan.

PERSONAL

MR. Nguyen Co Thach has been appointed Consul-General for North Viet Nam in India.

Mr. Balvantrai Mehta, M.P., has been appointed Chairman of the Parliamentary Estimates Committee for 1956-57.

Mr. C. R. Srinivasan, Chairman, East India Distilleries and Sugar Factories Ltd. and the Bharat Line Ltd., left for the U.K. this week.

Mr. V. B. Gandhi, M.P., has been appointed Chairman of the Parliamentary Committee on Public Accounts for 1956-57.

Dr. S. Radhakrishnan, Vice-President of India, left for London on Tuesday this week on a goodwill mission to Europe and Africa for two months.

Mr. Malcolm Macdonald, High Commissioner for the U.K., has returned from the U.K. after consultations with the British Government.

Mr. G. P. Nair has been elected Chairman and Mr. V. N. Sardesai, Honorary Secretary, of the Indian Chemical Manufacturers' Association, Bombay State Branch, for 1956-57.

Mr. T. N. S. Raghavan, I.C.S., has been appointed State Transport Commissioner, Madras. He is authorised to exercise and discharge, in lieu of the State Transport Authority, the powers and functions under the Indian Motor Vehicles Act.

Mr. Paul de Kronacker of Belgium has been elected Chairman of the U.N. International Sugar Conference. Mr. Amadeo Lopez Castro of Cuba and Mr. M. Gopala Menon of India have been elected first and second Vice-Chairman, respectively.

Mr. C. P. Philipose, Overseas Officer of the Cotton Textiles Export Promotion Council, left for Mombasa on Sunday this week. He will be in charge of the Council's Office to be opened in British East Africa with headquarters at Mombasa. His sphere of activities will include Kenya, Tanganyika, Uganda, Zanzibar, the Federation of Rhodesia and Nyasaland, and Madagascar.

Mr. P. M. Nayak, I.C.S., Chairman of the Coal Board, has been appointed Chairman of the newly constituted Advisory Committee on stowing in coal mines. The other members of the Committee are Messrs. S. S. Garewal, Chief Inspector of Mines in India, Dhanbad, A. N. Lahiri, Director, Fuel Research Institute, W. H. S. Michelmore, Bird and Company, R. P. Sossen, Bengal Coal Company, Limited, Amritlal Chanchani, Rasiklal Worah and M. L. Shome, Chief Mining Engineer, Coal Board (Secretary).

Mr. P. H. Kutar, Technical Director of the Tata Iron and Steel Co., Ltd., flew to West Germany this week for technical consultations with West German manufacturers who are to supply Rs. 10 crores worth of equipment for the Steel Company's two million ton project scheduled for completion by mid-1958. Mr. Kutar was accompanied by Mr. Paul Mueller, the Company's Chief Engineer, and Mr. S. Dasgupta, Master Roll Turner. Representatives of the consulting engineers on this project, Kaiser Engineers, will also join these discussions at Dusseldorf.

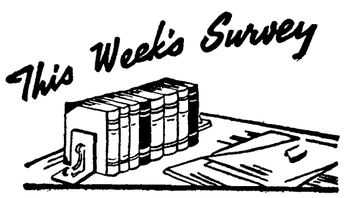
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 30*th May*

Silver Sales

So far as India is concerned, no one expected that the announcement in the Indian budget of an increase in the silver import duty to six annas per ounce would have any marked immediate effect upon the price of metal in the London market. Sir George Schuster's budget speech last year, in which he gave, in considerable detail, his views on the silver question, showed that it was virtually certain that he would counter the subsequent price fall by an increase this year. In India, it was originally thought that the duty would be doubled and prices were revised on this basis, but, on the eve of the presentation of the budget in the Legislative Assembly, opinion favoured the two-anna increase, which was, in fact, imposed. Thus, this year, unlike last, the change was fully discounted in the present Budget prices, so that the market was spared the sharp drop which followed the budget statement a year ago. Opinion as to the long-period effects is now divided, but, in well-informed bullion circles in London, it is not expected that Indian demand will be curtailed. At the same time, London brokers are disposed to criticise Sir George's attitude to Government sales of silver. It is contended that, even though, as Sir George emphasised, these sales are small in comparison with India's imports, they have had a considerable effect upon the world silver market, largely through their influence upon trade conditions in China. It is felt that, if conditions in China improve—and Government sales of silver delay that improvement—silver will recover, since, at present, an important source of the weakness of silver lies in its use as a medium for covering operations against depreciation or loss on assets and other interests in that country.



AUDIT REPORT

BOTH the country and Parliament have now become so much used to hearing stories of Governmental extravagance and infructuous expenditure that they fail to be moved even by shocking revelations of waste and incompetence in the Audit Reports. Surely, this is by no means a very satisfactory state of affairs. For it denotes that people, in a mood of helpless dejection, are getting reconciled to a very unsatisfactory state of affairs which they feel they can neither mend nor end. And nobody seems to be worried that such a mood ill serves the cause of a Plan in which the share of the public sector is going to account for no less than Rs. 4,800 crores out of a total investment (estimated) of Rs. 7,200 crores. Apparently, the Government spokesmen and their supporters are now too busy exposing the evils in the private sector to find time for any introspection. That there is need for such introspection is, however, clear from the Audit Report (Civil) for 1955 which has brought to light a few more striking instances of financial irregularity in Governmental expenditure.

The cases cited by the Report cover both extravagance and nugatory expenditure. Typical of the first is the case of a lease of certain premises by a High Commission in 1950 by payment of a premium of £4,000 and annual rental of £1,150. When Government sanction to this agreement was applied for, no mention was made that the premises would need extensive repairs and re-decoration. But a sum of £6,000 had to be spent on repairs. More than two-fifths of the building leased remained unutilised from the date of acquisition to 14th July 1955. Again, it occurred to an Indian embassy abroad that it could effect considerable economy in the publication of catalogues and trade brochures, if it possessed a *printing machine*. Without assessing its requirements and possible savings, it bought in 1950 two such machines for £992. Experience taught the buyers that neither of the machines could be put to economic use; both the machines were sold in 1954 for £240.

The Report has drawn attention to many instances of infructuous expenditure. A residential building was taken on lease by a High Commissioner in 1950 for 15 years at an annual rental of Rs. 9,800. The premises have remained vacant as they require considerable repairs. The expenditure on the premises upto 31st March 1956 amounts to Rs. 68,133 and there is a recurring liability at the rate of Rs. 9,800 per annum for the next 10½ years in addition to repairs, rates, taxes, insurance, etc., and a further liability for substantial expenditure at the end of the lease for returning the building in a reasonable state of repair. And, what is more, the terms of the lease do not permit sub-letting. A particularly reprehensible instance of wasteful expenditure is the purchase of an unseaworthy second-hand motor vessel which, even after repairs, has not been found useful; the expenditure on purchase and repairs amounted to Rs. 2.26 lakhs.

A notable instance of financial irregularity is that an officer was sanctioned three advances (making a total of Rs. 24,500) for the purchase of motor cars within a period of four years. The cars, it is stated, were "sold each time without the prior approval of the Government, which regularised these transactions of *ex-post-facto* sanctions." There seems to be more in this transaction than appears at first sight. The advance was drawn in sterling by the officer's wife when the officer was stationed in India. The officer purchased the car in his wife's name but left it with a relative to whom it was subsequently transferred. An amount of Rs. 1,540 drawn in excess of the actual cost of the car was not refunded to the Government. The car was not used for a single day in the discharge of his official duties. At the time the officer drew the third advance for the purchase of a car, he had been allowed the use of an official car.

Normally, one associates a high code of conduct with Government departments. The instances which the Report has cited show how serious are some of the lapses among public servants. While introducing currency reforms a foreign Government permitted the embassies situated in that country to convert the official balance of the preceding day at a favourable rate of exchange as against the legal rate. The amounts converted by the Indian embassy included a fairly large sum of money belonging to private individuals including India-based officers and staff. A silver fruit set of 12 pieces was purchased by an Indian embassy for the Ambassador's use. After some time the set showed some signs of deterioration. An exchange of correspondence between the embassy and the previous Minister followed, the Minister stating that the "Government set was inadvertently brought away instead of his own set of 11 pieces." The Minister's set was returned to him after he had returned the Government set. The Audit Report has also mentioned cases of an authorised use of Government cash such as withdrawal of money for personal use and of drawal of advances without sanction.

These are only a few of the instances of financial irregularity cited in the Report. Some of the irregularities mentioned above must have involved contravention of the Foreign Exchange Control Order. It would be interesting to know as to what the Reserve Bank has to say on them. Did its Exchange Control Department take any action against the persons involved or merely wink at their actions? Surely, the Government must tighten its hold on its own expenditure and also inculcate in its employees a higher sense of financial rectitude if its appeal for a larger revenue from the public is to evoke any cheerful response.

DIVIDING GAINS OF PRODUCTIVITY

Those who think that an increase in wages is the only way to improve the lot of labour in India will do well to ponder the statement of the U.S. National Association of Manufacturers that unwarranted wage increases has the danger of perpetuating evils of inflation. In a study, entitled "A New Force for Inflation," just published, the Association points out that the labour union "monopoly power" is the underlying cause of a new inflation threat facing the U.S., the U.K. and Western Europe. The problem, it says, is how to maintain economic growth and full employment and, at the same time, avoid further additions to the money supply beyond the normal requirements of economic expansion. The question is of utmost significance as much to the western world as to India which has embarked on a policy of large-scale deficit financing, with a view to meeting a large part of the second Five-year Plan's outlay. It is in this context that emphasis should be laid on the need for self-restraint among labourers "in making wage demands and among employers in fixing profit margin and prices, so that total money income would not rise faster than output."

The Association has attacked unwarranted wage increases, exceeding labour's reasonable share in the gains of productivity, which, it says, are forced on the industry year after year by union power. Drawing attention to the fact that the reservoir of excess money which permits these gains by labour and the resultant increases in prices has now been absorbed, it urges—and rightly so—that gains in productivity should be divided in three ways—to labour for higher efficiency, to investors for more effective tools and machines provided by their savings, and to consumers through price reductions.

Introducing the study, Dr. Ralph Robey, Economic Adviser to the Association, observes that the U.S., the U.K. and Western Europe stand at the economic cross-road: whether to take the road leading to continuous inflation or to go straight ahead on the super-highway of orderly growth. "They (the countries) must" to quote him, "choose the right road and the only way to do so is to share the benefits of economic growth fairly by means of lower prices to consumers, better wages to labour and increased returns to investors." There is, of course, nothing new or novel in this observation; it is only a reiteration of what has been stressed ere now by many economists. Nevertheless, there is a certain sense of urgency in Dr. Ralph Robey's observation, because the whole world is threatened by inflation and the continuous fall in the purchasing power of money. It needed reiteration also because, as he has rightly remarked, the obvious and correct course advocated by him will be "unavailable as long as trade unions are permitted by law to exercise monopoly powers."

TECHNICAL EDUCATION

Mr. Jehangir Ghandy, Chairman of the Eastern Regional Committee of the All-India Council of Technical Education, struck a correct note of realism when he averred, in the course of his address at a meeting of the Committee held at Calcutta last week-end, that "we must go all out to strengthen the existing technical institutions and develop new ones; there is no room for complacency, no time to be lost." For one of the most essential prerequisites for the success of the second Five-year Plan is provision of adequate technical personnel who are needed in rapidly increasing numbers in each sector of development. It is true that commendable progress was made in the field of technical education during the first Plan period. But, considering the large demand for technical personnel that will arise in the coming years, a substantial expansion of technical education is imperative. As the Planning Commission has rightly observed, the requirements of engineering and technological personnel will be on a scale exceeding the capacity of existing institutions. This, indeed, is the main problem in the development of technical education in the second Plan.

The progress made in expanding technical education under the first Plan was, as already stated, notable. The following statement summarises the position of technical education at the beginning and end of the first Plan.

	1949-50			1955-56		
	No. of institutions	Intake	Outturn	No. of institutions	Intake	Outturn
Post-graduate courses and research facilities in engineering and technology	8	136	91	18	270	190
Degree on equivalent courses	53	4,120	2,200	60	6,050	3,700
Diploma courses	81	5,900	2,480	108	8,700	3,900

It will be seen from the above figures that admissions to institutions and outturn of graduates and diploma holders show a 50 per cent. rise over the period 1949-50 to 1955-56. Besides, 30 national research fellowships were instituted during the period. Further, in recognition of the importance of management studies, courses in industrial engineering and business management were started at a number of centres. A decision was also taken to set up an Administrative Staff College at Hyderabad on the same pattern as the Staff College at Henley-on-Thames in the U.K.

While the increasing attention given to planning for technical manpower is thus commendable, the fact remains that, generally, it will be beyond the capacity of the majority of existing institutions to admit a much larger number of students for training than they do at present and maintain, at the same time, proper standards. The Planning Commission has no doubt recognised this aspect, but, it is regrettable that it has reduced the original allocation of Rs. 80 crores for technical education to Rs. 48 crores, including provision for completing schemes initiated in the first Plan. During the second Plan period, it is proposed to set up three higher technological institutes—on the pattern of the Kharagpur College—in the West, North and South. When fully developed, each of the four institutes will provide for a total student-body of 1,200 for undergraduate courses and 600 for post-graduate courses and research. It is also proposed to start a number of engineering colleges and polytechnics, while special provision has been made for the establishment of junior technical schools for boys of the age group 14-17. There is also a programme for extension of the facilities for instruction and training available at the Indian School of Mines at Dhanbad.

To revert to Mr. Jehangir Ghandy's speech. Discussing the special problems of the Eastern region, Mr. Jehangir pointed out that there were as yet only 10 technical institutions of degree standard in the area, as compared with 20 in the South, 14 in the West and 11 in the North. Since 80 per cent. of the country's heavy engineering capacity was located in the Eastern area, its demand for technical personnel was the heaviest, whereas training facilities were deficient. Referring to the work done by the Committee in securing practical training facilities, he said that 250 graduates and 28 diploma holders had been placed in some 50 firms. "Our aim," to quote Mr. Jehangir, "is to provide every graduate with training facilities before he starts life as a professional engineer."

At the end of the meeting, the Eastern Regional Committee approved of schemes for the opening of two engineering colleges—one in

(*Continued on page 1073*)

REGULATION OF STOCK EXCHANGES

SALIENT FEATURES OF THE BILL AS AMENDED BY SELECT COMMITTEE

THE problem of regulating stock exchanges has been before the Government, in one form or another, for the last ten years. Stock exchanges play an important part in the economic life of a free enterprise country, acting as a means for channelling the savings of people into various industrial and other investments. Their working closely affects not only the persons operating on the stock exchanges, but also the large number of savers, individual and institutional, who invest their funds in securities, and the institutions (including the Government) whose securities are, or are likely to be, listed on the stock exchanges. Their regulation is an integral part of the Government's policy of bringing under its supervision or control the institutions affecting the nation's economy.

Though a stock exchange is meant to cater to the needs of genuine investors, a major part of the activity on a stock exchange is made up of speculation. However, speculation is essential to the efficient functioning of a stock exchange: by their offers to buy and sell; a scrip, speculators lend liquidity to the market for such scrip; by their willingness to buy and sell at any time, they maintain the continuity of the market; by the extensiveness of their dealings, they make price movements smooth, and minimise the differential between buying and selling prices.

Speculation, however, is a double-edged weapon, and when it gets out of control, it may not only scare away genuine investors; it may, by impeding the channel of finance, adversely affect the rest of the economy. "The essence of the regulation of stock exchanges," to quote an authority, "is the control of speculation in stock exchanges, and the crux of the control of speculation is its confinement to the right sphere, the right persons and the right type and volume of operations."

Securities Contracts (Regulation) Bill, 1954

Under the constitution, stock exchanges and futures markets are a subject of central legislation. Trading in commodities is already regulated by the Forward Contracts (Regulation) Act, 1952. Legislation to control trading in securities was considered by the Gorwala Committee in the middle of 1951. The Committee also gave, along with its report, a draft of a Bill for regulating stock exchanges. Based mostly on the Report of and the Bill proposed by the Committee, the Government introduced in the Lok Sabha on 24th December 1954, the Securities Contracts (Regulation) Bill, 1954. The Bill was referred to a Joint Select Committee of both Houses of Parliament on 28th November 1955. The Joint Committee reported on the Bill on the 29th February 1956. The Bill, as passed by the Joint Committee, is likely to come up before Parliament during this session.

The Bill is a short one, containing 31 clauses. Its provisions may be considered under four heads: control of dealings in securities; recognition of stock exchanges; Government control and internal autonomy of stock exchanges; and miscellaneous.

Dealings in Securities

For the purposes of regulation, the Bill provides for two kinds of distinctions: (1) between spot delivery contracts and other contracts, and (2) between notified areas in which stock exchanges are granted recognition, those in which dealers in securities are licensed, and other areas.

A spot delivery contract is defined as one which provides for its performance by delivery and payment within two days, including the day of contract but excluding the period taken for despatch of securities and remittance of money through the post if the parties to the contract do not reside in the same town or locality (clause 2(i)). All other contracts would be forward contracts though this term is not expressly defined in the Bill. It may be interesting to note here that the Forward Contracts (Regulation) Act, 1952, allows for a period of 11 days for delivery and payment, of a spot contract. The longer time limit given under this Act is probably due to the bulky nature of the commodities covered by it, which would require rail transport (section 2(i)); this Act also specifically defines a forward contract (section 2(c)).

In addition to the scheme of having notified areas under recognised associations and other areas, the Bill, as proposed by the Government and approved by the Select Committee, provides for licensing of dealers in areas where there are no recognised stock exchanges. Hence, there will, in future, be three kinds of areas: (1) areas in which dealings in securities will be controlled by associations recognised by the Government (clause 13); (2) areas in which licensed dealers will be allowed to carry on dealings in securities (clause 17); and (3) other areas.

With this background, the scheme envisaged by the Government to control dealings in securities is as follows: (1) Spot delivery contracts will not be subject to any regulation in any of the areas (clause 18, but see below). (2) In a notified area in which the Government has granted recognition to a stock exchange, all forward contracts which are not made between or through members of a recognised stock exchange will be illegal (clause 13). (3) The Government may notify areas other than those which have recognised stock exchanges; in such a case, licensed dealers alone can carry on the business of dealing in securities in such area (clause 17). This applies only to forward contracts (clause 18(i)), and clause 17 specifically exempts dealings in securities even in such areas between or through a member of a recognised stock exchange; that is, such a member will not need a licence to carry on forward dealings in such areas. (4) Finally, the Government may even regulate spot dealings in securities in any area, by imposing licensing requirements for all spot dealings in all or certain specified securities in such area (clause 18 (2)). The words used in this clause are "the provisions of section 17 shall also apply," and, as clause 17 exempts members of recognised stock exchanges from its operation, it appears that the licensing requirements under clause 18(2) for spot dealings will not apply to members of recognised stock exchanges. As clauses 17 and 18 stand now, the position is, however, not absolutely clear.

Looking at the matter from another point of view, the position is as follows:

A member of a recognised stock exchange can enter into forward contracts in the area for which the stock exchange of which he is a member is recognised and also other areas in which there are no recognised stock exchanges (including areas to which licensing provisions for forward contracts apply). A licensed dealer can enter into forward contracts only in areas for which he is licensed. Any other person can enter into a forward contract only in areas in which there are no recognised stock exchanges and to which the licensing provisions do not apply. As regards spot delivery contracts, these can be entered into freely by all persons, the Government may, however, make them subject to licensing, in which case members of recognised stock exchanges alone will be allowed to carry on spot dealings, and any other person would need a licence to do so.

The provisions relating to licensing do not appear in the Forward Contracts (Regulation) Act, 1952, and the Gorwala Committee had pronounced against incorporating such provisions in the Bill. "Control would be difficult and there is no point in allowing a privileged position when proper responsibility cannot be enforced." The suggestion of the stock exchanges (Bombay, Calcutta and Madras) that such licensed dealers should be subject to the overall control of recognised stock exchanges in neighbouring areas was not accepted by the Select Committee.

Recognition of Stock Exchanges

The Government may recognise stock exchanges in different parts of the country. Such recognition may be subject to conditions which may relate to the qualifications for membership of stock exchanges, the mode of entering into and enforcement of contracts between members, representation of the Central Government by not more than three nominees on the stock exchanges, and the maintenance and, where required by the Central Government, audit of accounts of members (clause 4).

The Central Government have power to call for periodical returns from a recognised stock exchange, to call for information from a recognised stock exchange or its members, and to direct enquiries to be made in the affairs of a stock exchange or its members (clause 6); to make rules or direct rules to be made (clause 8); to make or amend by-laws (clause 10); to prohibit contracts in certain securities (clause 16); to compel listing of securities (clause 21); to supersede the governing body of a stock exchange (clause 11); to suspend business for a period of seven days at a time (clause 12); and, finally, to withdraw recognition of a stock exchange (clause 5).

A recognised stock exchange may, subject to the previous approval of the Central Government, make by-laws for the regulation and control of contracts, in particular, providing for the opening and closing of markets, the maintenance of a clearing house and publication by it of specified particulars, the regulation or prohibition of blank transfers and of *budlas* or carry-over facilities, the regulation of *taravani* business, the listing of securities and the regulation of dealings by members for their own account (clause (9)). A contract in contravention of by-laws is void as regards the rights of any member of the stock exchange who has entered into such contract, and of any other person who has knowingly participated in the transaction (clause 14).

Miscellaneous

A recognised stock exchange is required to furnish the Central Government with a copy of its annual report, containing particulars as may be specified (clause 7). A member of a recognised stock exchange cannot act as a principal in relation to any person other than a member, unless he has disclosed to such person the fact of his so acting (clause 15). Options in securities shall be illegal from the date the Bill comes into force (clause 20). A transferee on blank will not be entitled to dividend, unless he lodges the security with the company for registration within 15 days of the date on which the dividend becomes due (clause 27).

Conclusion

Two changes introduced by the Select Committee in the Bill deserve to be commented upon. The Committee have removed the penal aspects of the provisions regarding a holder on blank, which would have deprived him also of his rights to bonus shares and other rights, besides his dividend rights. Regulation of blank transfers has been left to the discretion of stock exchanges, as proposed by the Gorwala Committee, though a majority of the Select Committee "feel that the currency of blank transfers should be limited by by-laws to a period not exceeding six months." Recently, Prof. Kaldor, in his proposals for an annual tax on wealth, is reported to have suggested the prohibition of blank transfers. Secondly, the Select Committee has added a provision in the Bill to provide for publication by the clearing house "as soon as may be after each periodical settlement" of certain specified particulars. The particulars specified relate to the number of each category of security carried over from one settlement to another or squared up during a settlement or actually delivered at each clearing, and the amount paid as difference in respect of each category of security. The making of such by-laws is not compulsory on a stock exchange, but the implications of the publication of such data would appear to be dangerous, because, by ripping open the market position, control of the market by powerful financial interests would be rendered easier; in fine, such publication will endanger the stability of the market.

The Bill vests vast powers in the hands of the Government for regulating stock exchanges. The provision in the Gorwala draft for the setting up of a Stock Exchanges Commission was deleted in the Bill presented by the Government—a decision which must be deemed to be proper in view of the controversy recently generated by the excessive actions of the Forward Markets Commission. The representation of Government nominees on the governing bodies of recognised stock exchanges should give the Government the necessary contact with the day-to-day happenings to enable its interference to be informed, if not wise. The Government has been vested with powers to bring about reasonable uniformity in the by-laws and practices of different stock exchanges. It is, however, necessary that the powers be used with restraint and after consultation with the governing bodies of the stock exchanges.

DEBATE ON SECOND PLAN INCOMPLETE

GOVERNMENT OPTIMISTIC OF SUCCESS IN DEVELOPING THE ECONOMY

From A Special Correspondent

NEW DELHI, 29*th May*

THE Budget Session of Parliament is coming to an end today. Members of Parliament are already busy preparing to leave the Capital as early as practicable for hill stations or for their home towns as the case may be. Their anxiety to avoid Delhi's proverbial heat and dust-storms for the last few weeks was fully reflected in the dull character of the proceedings of Parliament ever since the weather in the Capital took a turn for the worse. They were, therefore, happy when the discussion on the second Plan was postponed. Similarly, the postponement of the States Reorganisation Bill to July was also welcomed by them, since they were desirous of taking up such controversial issues in a better and cooler atmosphere.

DELHI LETTER

Despite the apparent slackness of many members in the work of Parliament, the volume of business put through during the latest session must be considered more than satisfactory. In view of the gradual and increasing participation of Government in the country's economic life, the demands of grants for various Ministries have grown considerably. Every Ministry has been asking for not only larger allocations but has also been complaining that it is not being allowed to expand its development expenditure further. In recent months, the staff expansion in Government has become more a rule rather than an exception. At this rate, it is likely that the number of Ministers with and without Cabinet rank will easily exceed 50 within the next few years. It is also possible that, after the next elections, there will be separate Ministries for Iron and Steel, Heavy Machinery, Electricity, Small-scale Industries, Mineral Oils, etc. The Bureaucracy will thus become stronger than ever before.

The Indian economy is in a transition stage. Reflecting this, the pattern of thinking, too, has been changing from time to time. In recent weeks, some changes were discernible in the views held by the high dignitaries of Government on the second Plan. Until a few months ago, great emphasis was laid on the development of heavy machinery industries, including iron and steel, but, when Parliament began to debate on the second Plan, the Prime Minister was found laying equal emphasis on the need for an increase in foodgrains production. It will be recalled that, in the first week of this month, when the National Development Council discussed the second Plan Report, Mr. K. C. Neogy's note attached to the general agenda of that meeting came in for a good deal of attention. A section of the members who attended the meeting would appear to have become convinced of the arguments of Mr. Neogy against the inherent dangers of inflation consequent on the proposed heavy deficit financing under the Plan. Since then, it is now being thought that this heavy dose of deficit financing could be counteracted by stepping up agricultural production in the country.

When the Prime Minister opened the debate on the Second Planning Report in Parliament, he pointed out that planning was an exciting subject, that the country was becoming plan-minded and that India's success in this sphere would have considerable beneficial repercussions on its neighbouring countries. He also stressed that planning must be flexible and that the physical targets laid down must be considered as somewhat moderate and could be revised from time to time according to circumstances. He told them that he would present annual plans which should be implemented during the year under reference and that, if the absorbable capacity of the country were to show a definite improvement in the coming years, the size of the Plan could be expanded.

The Prime Minister was anxious that the country should have a higher target for foodgrains and suggested that it should try to achieve an increase of 35 to 40 per cent. in the production of foodgrains. This will mean that the production of cereals and pulses, the target for which is set at about 75 million tons in 1960-61, as against 65 million tons at the end of the first Plan, will have to be increased to about 90 million tons. This is certainly a very high figure and even a 50 per cent. achievement will confer considerable benefit to Government and the country. If the country is able to attain this level of production in foodgrains, it will also mean that it could reach a much higher target for raw cotton, raw jute and oilseeds. While the first two could help Government conserve the foreign exchange resources, the third item will enable it to augment such resources to a considerable extent. In effect, they will all be able to narrow the possible gap in the exchange requirements of the second Plan. It may be noted that the trend in regard to exports of vegetable oils has become very unsteady in recent years and one of the reasons for considerable imbalance in our trade with most west European countries is our inability to maintain a steady flow of supply from the country. If increased production of oilseeds could be achieved, India's vegetable oils will find a ready market in Germany, France, Belgium, etc., and could pay, to a large extent, for the imports of machinery, iron and steel, etc.

The Finance Minister, Mr. C. D. Deshmukh who also participated in the three-day debate, was more optimistic about the implementation of the Plan according to the programme than the Prime Minister himself. He also harped on the possibilities of exporting foodgrains during the second Plan period and stated that, in case India were to export about two million tons of foodgrains per annum, it could earn foreign exchange resources to the extent of Rs. 400 crores during the Plan period. Mr. Deshmukh claimed that the planners were too modest about our anticipated agricultural production and remarked that the dynamic impulse given by the first Plan to the country would be able to stand in good stead during the coming years.

A seeming contradiction would appear to exist between the Government's actions and pronouncements. While Government spokesmen have been loudly talking about the prospects of India being able to export foodgrains during the second Plan period, an agreement has just been reached with Burma for the import of about two million tons of rice, spread over a period of five years, at a price varying between £32 and £34 per ton during the first three years. But there is no real contradiction. This arrangement is a sort of a precautionary measure against the possibilities of inflation during the second Plan period. It may also be the result of Government's desire to maintain close commercial and economic relations with its neighbouring country by buying rice and selling its own manufactured goods in return.

Anyway, a vigorous and sustained action appears to be necessary for stepping up foodgrain production to levels beyond the target originally contemplated by the Planning Commission. It is only then that the Government would be able to export sizable quantities of foodgrains, particularly fine rice, and pulses. It is reported that the whole question is now being re-examined by the Planning Commission under the lead of Mr. V. T. Krishnamachari. The Vice-Chairman of the Planning Commission is stated to be studying the lines of action necessary to increase the foodgrains in the country. He is sounding the various State Governments on this question.

These apart, efforts are being made to secure a larger quantum of loans from the World Bank and other sources. A top ranking officer of the Finance Ministry will shortly be proceeding to Europe, in order to study the question of obtaining some loans from a few willing European countries. It may be that, barring Switzerland, the economy of European countries will not permit large-scale loans to India. However, even moderate sums from these countries will go a long way towards helping India in implementing its development programmes. Further, in view of the high level of Government revenue and expenditure obtaining in these countries, it cannot be impossible for them to come to the help of India by granting loans or by arranging easy payment for the purchase of machinery and other industrial raw materials from them.

(Concluded from next column)

Other political footballs are East-West trade and the gradual break-up of the remaining British and French empires. The dualism of philosophy and reality remains to be resolved. The U.S., ever since its existence, has been a haven for the persecuted all over the world. Its inhabitants, emotionally, reject bondage of peoples in any form, including colonialism.

Yet, for vital economic and political reasons, allegiance with the Western empires has been accepted as a practical matter. Reality, on the one hand, and philosophy and emotionalism, on the other, have been at odds on many occasions and they are now. While there is no reason for anyone to deny the Arabs their pursuit of happiness, there is also Israel, striving for new existence; there is North Africa and the French; also there is the mute question of the balance of power, the protection of the U.S. bases abroad, and so on. To be sure, these bases are defensive, rather than offensive, because constitutionally, the U.S. cannot start a war, but it wants to be prepared in case of an attack and, with the advance in air-speed, 3,000 miles mean little.

The American public is not quite certain, at this point, what the condemnation of Stalin and the greater amity, displayed by top Soviet leaders, will mean in the long run. All that can be said at the moment is that the lessening of tension has been welcomed. Greater East-West exchanges of ideas and trade have already materialised and they are expected to be increased, assuming that the present policies in the Kremlin persist. There are doubts on this point in the U.S. However, these developments, too, have added to the atmosphere of confidence which is prevailing here at this time.—*All Rights Reserved.*

AMERICAN LETTER

ELECTION PROSPECTS

MR. EISENHOWER'S POSITION STRONG.

From Our Special Correspondent

NEW YORK, 25*th May*

THE political situation in the United States has changed very much in favour of President Eisenhower. In the first place, another widely publicised medical examination of the Chief Executive shows that his health is fully restored and his heart is acting normal again. Thus, the President has resumed his normal schedule. Secondly, there have been several masterful appointments to key administrative posts in the Government by the White House. They were based on ability rather than on party affiliation. In the process, deserving Democrats, in addition to Republicans, were named as well.

The top leadership of the Democratic Party is still a house divided. Ex-Governor Adlai Stevenson, who is the titular head of the Democratic Party and has tossed his hat in the ring for nomination as President, has two active competitors for that post.

They are Senator Estes Kefauver and Governor Averell Harriman of New York. Neither of them has particularly brilliant records. For that matter, Mr. Stevenson has none at all, but by sheer appearance and bearing, he seems to be several notches ahead of his opponents, even though Mr. Harriman did hold several important posts in the regime of Franklin Delano Roosevelt.

My guess at this point is that Mr. Stevenson will get the Democratic nomination for President at the forthcoming convention of the Party. If there are no material changes in the picture between now and election time in November, the Eisenhower-Nixon ticket looks a lot stronger than any combination that can be conjured up by the Democrats.

This is particularly true, because of the real absence of issues. The present Administration may end the fiscal year with a cash surplus of $2,000 million on 30th June, according to official projections, and with a bookkeeping surplus of $4,000 million, taking into consideration the various Government trust funds.

Nobody can really complain about such showing. Skilful monetary management has brought it about. Out of political expediency, the campaign cry of the Democrats is that there should be a reduction of taxes. Although a slight tax reduction is envisaged, the present Administration maintains that, in times of prosperity, such as the present one, a substantial part of the surplus should be devoted to reduction of debt which is huge rather than to cut taxes.

Other areas which may come under attack, include the following:

Purchases of automobiles have been lagging. The used car lots are overflowing with vehicles and the market for new autos has fallen off as well. This has led to cuts in production on the factory level. It has resulted in a reduction in the income of workers engaged in that and related industries and it has also produced a fractional rise in unemployment.

Although this is by no means serious, these facts cannot be denied and they will show up, in due course, in national statistics. The opposition will blame the tight money policies of the Administration for this development, particularly the recent boost in the discount rate by the central banks from 2½ to 2¾ per cent. in ten districts and to 3 per cent. in two districts.

Any intellectually honest person must accept that, in a competitive human society with all its frailties, there will always be up and down cycles, to a certain degree. Moreover, figures for retail trade as a whole, which, in a way portray the confidence or lack of public trust in the future, so far this year, have been running 3 to 4 per cent. above last year's level and the price structure and the cost of living have remained fairly stable during that period.

Wages and fringe benefits have been going up and so are pension plans and new ones are being established with every renewal of mangement-labour contracts. Savings in all categories are still going up as well in terms of savings accounts, building associations, insurance companies, Government savings bonds, investment companies and so on, although the rates of increase, as compared with 1955, are slightly lower.

All this means that, in addition to Federal social security, a tremendous backlog of savings by the public exists which also includes house ownership. This has created a psychological air of confidence throughout the country which in turn has helped all lines of endeavour and business.

Another area which may come under attack in this year's political campaign is farm policy. A compromise has been reached now which seems to satisfy most people. The fact remains that farm prices are lower than they were four years ago and that farm income is smaller and that no satisfactory solution has been found yet to the problem of the vast surpluses which glut the world markets, while millions of people in Asia are still on a below parity diet.

(Continued in previous column)

PEOPLE'S CAPITALISM IN U.S.—III

ROLE OF GOVERNMENT

By A Special Correspondent

WHERE does the U.S. Government fit into the American economic system? This system is admired in many parts of the world, but it also creates some anxiety. It is admired for its productive capacity, for furnishing the economic resources which help support the security of the free world and help to bring a better life to free peoples everywhere. But it also is a source of anxiety, because some people overseas believe it is unstable. These people think that economic fluctuations of considerable severity are an inevitable part of capitalism and that the U.S. faith in the stability of its economy is mistaken. Often, too, they fear that any American recession or depression will seriously affect them, directly or indirectly.

Are their fears justified? Is instability an inevitable part of the American economic system? Is another great American business depression just over the horizon? The simple answer to all these questions is "No." Some fluctuations—in prices, production and the like—will take place in any economy that relies on free markets and the free choice of millions of individuals. But today the American economy is protected by a number of important safety devices.

Most business experts agree with President Eisenhower and his Council of Economic Advisers that the United States now has the tools to prevent depressions—to compensate for unexpected economic swings and to encourage high levels of production and employment. Not only does the United States have these tools, but they have been used for the last 10 years to good advantage.

The depression of the 1930's had a great impact on American thinking, just as it affected the thinking of other peoples in other countries. The depression inspired unprecedented action by the U.S. Government both in regulating and encouraging business. World War II also resulted in new Government activities relating to the nation's economic affairs. And the war stimulated a national resolve to combat an old problem, the business cycle, when hostilities ceased.

These war-time discussions of this problem led to the passage of the Employment Act of 1946. This measure had more than a year of vigorous debate in Congress before it was passed. The Act is important for its purpose, for the machinery it created and for a new concept, rather than for any new powers it gave the Government. The Act's purpose is to foster "free competitive enterprise," while promoting "maximum employment, production, and purchasing power."

The machinery it established consisted of a Council of Economic Advisers serving the President and a Joint Committee on the Economic Report in Congress. It called upon the President, with the assistance of his Council of Economic Advisers, to issue an annual report on the state of the American economy.

Thus, the essence of the Act is that it created two advisory groups—one for the Executive Branch and the other for the Legislative Branch—to check the nation's economic pulse regularly and systematically. The reason why this procedure is important is the fact that the Government has—through other legislation—many ways of influencing the economy.

Some of the Government's tools for maintaining stability include credit controls administered by the Federal Reserve Board, which regulates the country's central banking system. They include the Government's power to raise or lower its own expenditures or to change tax rates, both strategic factors in the economy. The Government also has the ability to raise or lower price supports for agricultural commodities and to initiate and carry out public works construction when private employment declines. Such actions could be used as "shock-absorbers" if the economic activity should drop unduly. There are also the so-called "built-in-stabilisers," as economists call them, which tend to balance the economy automatically.

Government unemployment insurance, for instance, produces this kind of stabilising effect automatically. When private business activity declines and workers are laid off, they receive payments from the unemployment insurance fund. Thus, they continue to have purchasing power for their necessities, and their lay-off does not lead to an immediate and sharp curtailment of consumption, reacting in one part of the economy after another.

The minimum wage law is another shock absorber. It prevents a rise in unemployment leading to wage cuts by protecting 24 million workers from having their wages cut below the legal minimum of $1 an hour. The law also insures fairer competition by discouraging labour exploitation and increases purchasing power of the labour force.

The Government's task in keeping the economy balanced is a difficult one in times of business booms, too. Many experts think the key problem is that of restraining inflation. This means putting on the brakes when prices are rising, when too much money and too many jobs are chasing too few goods and too few workers. It means preventing the conditions of overspeculation and inflation that make a profound deflationary movement—a depression—possible. Throughout 1955 and early 1956, the U.S. Government fiscal policy applied just this kind of restraint amid rapidly rising business activity.

Taken together, all these things have contributed to the remarkable stability which the U.S. economy has shown over the last decade. There have been fluctuations—and two recessions, one in 1949 and another in 1953. But unemployment at its highest—in 1949—did not exceed five and one-half per cent. of the total labour force.

Meanwhile, there has been an impressive record of steady growth over the last ten years. Employment has risen from 55 million to almost 65 million at the present time. The nation's total output of goods and services has come close to $400,000 million. Allowing for price changes, this is an increase of 36 per cent. over the national production a decade ago. And this steady rise has been accompanied by a wider and more equitable sharing of the fruits of this production, a subject which will be discussed later.

The history of the Employment Act over the past 10 years, then, has encouraged Americans in their confidence that depressions are not inevitable. No one suggests that the Act will act automatically, or that it will work in every conceivable set of circumstances. No one suggests that it has solved all of America's economic problems. But, what has been accomplished is worthy of note. The last ten years have shown that democratic Government, acting prudently on the basis of accurate economic information, can counteract the swings and fluctuations of a free economy based principally on private enterprise. In the words of President Eisenhower's Economic Report, this testifies to "our increasing maturity as a nation in dealing with the problem of economic instability." And it demonstrates that the American system of People's Capitalism is something far, far different from the picture of capitalism in America in the minds of many people overseas.

U.S. ECONOMY

Dr. Arthur Burns, Chairman of the President's Council of Economic Advisers believes that the nation can maintain a high-level economy and at the same time avert inflation. Addressing the National Federation of Financial Analysts' Societies last week, Dr. Burns said: "Surely, many of the forces that have recently kept the over-all level of consumer prices stable can be counted on to operate in the years ahead." According to him, as a result of policies pursued by private industry and the Government during the past four or five years, the value of the dollar has been "approximately steady." This fact "should make us hesitate about describing our times as an age of inflation." Consumer markets, Dr. Burns said, are likely to remain intensely competitive.

Dr. Burns forecast keen competition for the consumer's dollar in the years ahead, "with productivity rising, industrial capacity expanding, the abundance and variety of consumer articles increasing, and our international trade growing." He said: "It cannot be justly argued from the evidence so far available that a high-level economy is necessarily biased in an inflationary direction. It is a disservice both to truth and to social opportunity to describe our times as an age of inflation. We are living in an age that can be either one of inflation or general price stability, depending upon the courage and wisdom that private citizens and Government officials bring to their responsibilities." In his opinion, four factors accounted for the "rough stability" of the overall level of consumer and wholesale prices in recent years, namely, rising productivity and expansion of industrial facilities; increasing business competition; restraint in advancing prices; and Government's monetary and fiscal policies.

REFLECTIONS OF A RETIRED BANKER

MR. THAKUR'S REPLY TO HIS CRITICS

IT will be recalled that, in a series of two articles entitled "Bureaucracy and Banks," published in our issues dated 28th April and 5th May 1956, Mr. B. T. Thakur commented on some of the economic policies of the Government with particular reference to banking. Mr. Thakur has the distinction of having built up, within a short period, a modern giant banking institution from scratch. It is needless to mention the name of the institution as it is well known, but for the benefit of those who may not be aware of it, we may say that it is the United Commercial Bank. Several banks were established during the war years, but none has attained the heights of the UCo. Bank, as it is popularly known. Against heavy odds, Mr. Thakur succeeded in establishing world-wide connections for the UCo. Bank and in earning a large volume of foreign exchange business. This business acumen of Mr. Thakur was backed by a distinguished academic record. Mr. Thakur is thus not only a practical banker but a distinguished economist, with special knowledge of banking and monetary problems. He had his initial monetary training in the mid-twenties under such master minds as Dr. Visering of the Netherlands Bank, Dr. Schacht of Deutsche Bank, and other eminent bankers. He was also a member of the Shroff Committee which went into the question of credit needs of the private sector two years ago. He will shortly be publishing a book entitled "Money, Its Nature and Management."

It was because of his creditable achievements and unique contribution to the banking world that we had requested Mr. Thakur to give his reflections on the current economic trends, with particular reference to banking. And he was, of course, kind enough to respond. Only a retired banker with such fund of experience and knowledge is eminently suited to speak frankly, without fear or favour, because no working banker can afford to take the risk of displeasing the Reserve Bank by giving publicity to his candid opinions on its policies and actions. After all, the fact remains that the Reserve Bank has enormous powers and the last word on any question confronting the banks rests with it.

Criticisms Answered

The reflections of Mr. Thakur were criticised by a contemporary of ours, the *Economic Weekly*. Answering the most important of these criticisms in the course of a letter to us, Mr. Thakur observes as follows:

"I have received today from a friend a cutting from an issue dated the 12th May of the *Economic Weekly*, which presumably deals with my recent writings in your esteemed paper, on 'Bureaucracy and Banks,' though the paper does not refer to them. I do not know who the writer is, whether the article is inspired or if it forms a part of that paper's editorial comments. But whatever be the position, its author has either tried to hide from his readers the original writings so as to befog the issue, or, in his haste to champion somebody's cause, he has forgotten to refer to them. The writing in the *Weekly* is under the caption, 'Reflections on Reflections.'

"I thank its writer for referring to me as 'so eminent a banker.' But a person should not be called eminent, without conceding to him capacity to know, understand, and analyse facts of his daily business, nor should he be accused of lack of sense of responsibility. Eminence and such derogatory adjectives do not go together.

"I also agree with him when he says that my 'retirement has perhaps not come too soon.' In these days of official control, it is only those who are free from bondage of office that can breathe freely, think freely and write freely.

"No serious attempt has been made by the writer to deal with the facts revealed in my writings. For obvious reasons, I had to withhold names of banks and bankers.

"I must ignore oblique references to me, to my mode of writing or my writings being called 'personal outpourings.' After all, when one exposes doings of a bureaucracy, having tremendous power and patronage, there would be several who would come forward to champion its cause, either to repay past favours done or in the hope of creating new patrons. An unbiased reader of the original and of the comments in question can see for himself to what extent facts revealed by me, or my observations, have been squarely met, or answered, or whether the purpose of the comments is to side-track the issues.

(Continued on page 1073)

DECIMAL SYSTEM OF COINAGE

AN INTERESTING SUGGESTION BY RAJAJI

THE decimal system of coinage will, as readers are aware, come into force on 1st April 1957. The necessary legislative measure had been enacted by the Union Government as early as in September 1955 by an amendment to the Indian Coinage Act, 1906. When the Bill to introduce the decimal system was passed, there was no serious opposition to the system either in the House or outside. Only, some members wanted the Bill to be circulated for eliciting public opinion. The Government met this criticism by saying that, as the subject had been under discussion for a long time, there was no need for consulting public opinion again.

The general welcome accorded to the new system of currency is due to the fact that decimalisation has been acclaimed all over the world as the simplest form of coinage, making calculations easy and quick. In the modern complicated systems of trade and commerce, easy conversion of money is most essential and the decimal system answers this need very well.

Though the official Bill to introduce decimal coinage owed its immediate origin to a non-official resolution passed by the Lok Sabha in April 1955, demanding early introduction of the decimal currency and metric system of weights and measures, it was not the first time that the Bill was introduced in the legislature. In fact, a peep into the history of Indian coinage reveals that the first major step in this direction was taken as far back as 1867 when, after a very thorough examination of the subject, the then Government of India came to the conclusion that the decimal system would have to be adopted in gradual stages. An Act was also passed in 1871. but, for a variety of reasons, it remained a dead letter thereafter.

In 1946 again, a Bill was introduced in the Central Legislative Assembly for the purpose, but, owing to the political changes that were in the offing, the Bill could not be pursued. It, therefore, lapsed. Several learned bodies and institutions, which were then consulted, had favoured the decimal system, the Indian Science Congress and the Indian Standards Institution being prominent among those who welcomed it. In more recent years, the volume of public opinion in favour of the system grew considerably, leading to the enactment of the enabling measure last year.

By introducing decimal coinage, India will be carrying out a reform in currency which has already been adopted in 105 out of about 140 coin-issuing countries of the world. According to the *Encyclopædia Britannica*, the United States was the first country to introduce the decimal system (between 1786 and 1792) with the dollar as the unit. France soon followed (between 1799 and 1803) and its system was extended to the countries of the Latin Union (1865). Then followed Germany (1873), the Scandinavian States (1875), Austria, Hungary (1870 developed in 1892) and Russia (1839 and 1897) as the adherents to the decimal system. The Latin American countries and Japan (in 1871) also adopted this system. If India had introduced the decimal coinage in 1871 when the Act was first passed, it would have been one of the earliest to adopt it. The most notable exception is the U.K. Even in that country, the advantage of decimal coinage seems to be widely recognised, but the overwhelming practical difficulties, mainly on account of the widespread use of automatic counting machines, stand in the way of its adoption. The experience of the U.K. has hastened the adoption of the system in India as early as possible, particularly as this country is now on the threshold of a new spurt in industrial activity which will involve the use of many thousands of calculating machines during the next 10 or 15 years. Even now there are in use in India calculating machines or coin-operated slot machines, but their number is relatively small and may not cause any great inconvenience or loss if the new system is adopted without any further delay, as will be the case if it is postponed.

The present time is opportune for the adoption of the demical system from another point of view. Decimal system, in order to be fully effective, must be linked up with the introduction of the metric system of weights and measures. As the Government of India has already taken a decision regarding the latter reform which will be spread over a period of 15 years, the decimal coinage will be the precursor of the bigger reform of standardising weights and measures in which there is multiplicity and variety all over the country.

A notable feature of the Indian decimal coinage is that, while it will be on a decimal basis, it will not follow the orthodox rigidity of having denominations only in multiples and sub-multiples of ten. Thus, in a perfect system, where the standard unit is one, the higher coins will be 10, 100, 1,000, etc., and the lower units will be 0.1, 0.01, 0.001, etc., and there will be no breaks or interpolations. In India, the *Naya Paisa* will be the unit with its multiples of 10 and 100, but there will also be other multiples of 2, 5, 25 and 50. India is, however, not the only country which has broken away from the orthodox rigidity. France, Germany and the U.S. also have such irregularities.

The change-over from the present system to decimal coinage will no doubt cause some inconvenience and it will take a number of years before all the coins of the present system, particularly those of the smaller denominations, are completely withdrawn. Some feel that it will not at all be possible to do so from the rural areas. But there is no doubt that the difficulties during the intervening period will be more felt by the people in villages who deal in coins of smaller denominations in their daily transactions than in rupees and notes of higher denominations. It is this consideration which prompted Mr. C. Rajagopalachari, ex-Governor-General of India, to submit an alternative scheme of currency reform. Rajaji's proposal was, however, rejected by the Finance Minister on the grounds that it was too late to think of a change and that it would place too great a burden on the Government and other high-level officers.

The main difference between the Rajaji scheme and that of the Government is that, while the Government's decimal system retains the present rupee and makes a change only in the lower denominations of coins, Rajaji's proposal seeks to bring a change only in the rupee and to retain all the other existing coins of the small denominations.

The main feature of Rajaji's proposal is to keep the *paisa*, that is, ¼ anna, at its present value and make the rupee equivalent to 100 of such *paisas*, instead of 64 *paisas* as at present. This will mean that the new rupee will be worth Re. 1-9 of the present currency, that is to say, the *naya* rupee will be equal to **As. 25. This,** Rajaji says, will work into the decimal system smoothly. Four *paisas* will make an anna; As. 25 will make a rupee; 100 *paisas* will, as stated above, be a *naya* rupee, 50 *paisas* half a rupee and 25 *paisas* quarter of a rupee. Under this arrangement, the half-rupee, the quarter-rupee, the two-anna piece, the anna and the *paisa* will all remain unchanged in value. It is only the rupee that will have appreciated and become equivalent to As. 25, instead of As. 16.

CORRESPONDENTS ALL OVER THE WORLD

The change in the rupee proposed by Rajaji will mean a change in foreign exchange equivalent also. Thus, instead of 1*s.* 6*d.* as at present, the *naya* rupee will be equivalent to 1*s.* 10½*d.*, as it will cover the value of Re. 1-9 in the present currency.

Rajaji is of the view that it will be easier to create the *naya* rupee and work it alongside the old rupee notes and coins until the latter got worked out and withdrawn. It will, in his opinion, be a quicker process smoothly to withdraw the old rupee notes and coins than for the old *paisas* to disappear from currency.

It is, of course, true that, under this proposal, an employee getting Rs. 1,000 now will be getting only 640 *naya* rupees and that he may feel that he has been hit hardly. This will, however, be only an illusory feeling, because each new rupee will get the value in the market and in the banks of As. 25, instead of As. 16.

Contending that his proposal is intended to reduce the difficulties of the poor, Rajaji says:

"My plea, however, is that it would be better to reduce the difficulties in favour of the poorer folk who deal with less than one rupee in their daily transactions, even if it should mean some trouble to those at higher levels. The tables of conversion which the Government may provide could be very easily handled and utilised by the people in the offices; not so by the peasantry in the country-side who deal in fractions of the rupee in their weekly markets and in the bazars. It is common knowledge that in such situations the poorer people will be at the mercy of exploiters.

"The smaller coins will not easily disappear from currency. They will continue to be going round for a long time alongside of the new coins. Value in terms of the new money for all the things of traditional rural production cannot be easily calculated and converted even by the learned. Far less can it be expected that poor and illiterate folk will be able to refer to tables and protect themselves. Every fraction will be worked against them and to their disadvantage."

He adds that the rupee, the anna and the pie, with their tables of 16 and 12, are much more of a handy medium of exchange when we deal with values below one rupee and where purchase transactions require exact division leaving no fractions in monetary value. He says in conclusion that "it is not as if there were nothing to be said in favour of the time-honoured table of Indian money."

The concluding sentence clearly shows that he is, perhaps, not able to get over his nostalgia for the existing system. Or it may be that he wants to have the best of both the systems. What have the experts on this subject to say on Rajaji's novel proposal?

PUNJAB FINANCIAL CORPORATION

A substantial improvement in turnover and earnings is disclosed by the Directors' report and audited accounts of the Punjab Financial Corporation for the year ended 31st March 1956. The number of applications received for financial accommodation shows a rise from 45 to 56 and the amount of loan sought from Rs. 39.12 lakhs to Rs. 70.17 lakhs. Of these, 33 applications for Rs. 39.57 lakhs were sanctioned loans, as against 26 applications for Rs. 20.77 lakhs in 1954-55. The actual amount disbursed during the year has risen from Rs. 15.20 lakhs to Rs. 19.33 lakhs. The profit also shows an increase from Rs. 2.39 lakhs to Rs. 3.07 lakhs.

Out of the aforesaid profit, the Directors have set aside a sum of Rs. 1.30 lakhs for taxation, as against Rs. 90,000 provided last year, and have raised the allocation to the reserve fund from Rs. 10,000 to Rs. 20,000. The balance available for distribution is Rs. 1.57 lakhs, which, however, falls short by Rs. 1.43 lakhs of the amount required to pay the guaranteed dividend of 3 per cent. on the Corporation's paid-up capital of Rs. 1 crore. This short-fall is to be met by a subvention from the State Government. The subvention paid by the Government last year for this purpose was Rs. 1.61 lakhs, that is, Rs. 18,000 more than this year. This shows that the Corporation's reliance on the State Government for paying the guaranteed dividend has been reduced, thanks to the encouraging working results.

The total number of applications for loans received by the Corporation since its inception up to the end of the year under review amounts to 195 for an aggregate sum of Rs. 232.43 lakhs, of which 79 applications for Rs. 88.86 lakhs were sanctioned and 65 for Rs. 42.62 lakhs were rejected. The total loan commitments, however, stand reduced at Rs. 70.14 lakhs, on account of the fact that some of the applicant concerns did not at all avail themselves of the loans sanctioned to them, while some borrowers availed of less than the loans sanctioned. In some cases, the amounts disbursed had to be reduced below the amounts sanctioned on account of insufficiency of the security margin in favour of the Corporation. The total disbursements made so far amount to Rs. 43.37 lakhs, of which textile manufacturing and processing industry accounts for Rs. 9.66 lakhs, cold storage and ice manufacturers for Rs. 5.95 lakhs, hosiery industry for Rs. 5.55 lakhs, woollen yarn manufacturers for Rs. 3.97 lakhs and wood and machine screws industry for Rs. 3.20 lakhs.

RESULTS OF TESTS ON AMBAR CHARKHA NOT QUITE ENCOURAGING

WEAVERS' PREFERENCE IS FOR MILL YARN

PRESS reports from New Delhi aver that the Government of India will take a "considerable" time in arriving at a decision on the use of Ambar Charkha. For the Committee appointed by the Government to examine the technical and economic feasibility of large-scale introduction of Ambar Charkha has still not completed its work. The Committee, it will be recalled, was scheduled to complete its work by the end of last month. The delay is attributed to the fact that the Committee has not yet received, from the All-India *Khadi* and Village Industries Board, the report of the results of the experiments now being made on Ambar Charkha in various centres. Also, the Committee would appear to have been confronted with a question for which it has not been able to find an answer. The question is: If it is decided to establish a very large number of Ambar Charkhas, who will use the yarn produced?

This is, indeed, a very pertinent question. The reports available to us indicate that the handloom weavers are reluctant to touch the hand-spun yarn and prefer only mill yarn. This is only to be expected, considering that the quality of Ambar yarn does not compare favourably with that of yarn produced in mills on scientific lines and under the supervision of experts. A recent test of Ambar yarn in Bombay revealed that, even when produced from mill rovings, the strength of the yarn was only 50 per cent. of mill-made yarn of identical counts made of identical cotton. Then, there is the question of price. Ambar yarn will be definitely costlier than mill-made yarn. According to one estimate, the difference would be as much as 80 to 90 per cent. The high cost of Ambar yarn thus is due to the economic inefficiency of Ambar Charkha *vis-a-vis* the power-operated spindle. In order to produce a given quantity of yarn, the Ambar Charkha is estimated to require, on an average, at least 56 times the number of man-hours taken by an ordinary power-spindle. It is not surprising, therefore, that the wage cost of the Ambar Charkha is substantially heavy, being Re. 1-14 per lb. of yarn, as against As. 2¼ of a mill known for its high wages and excellent technical performance.

In view of the high price and poor quality of Ambar yarn, the wage-earning potentialities of the weavers who use it cannot at all be expected to be encouraging. It is gathered from the weavers of Sankaranainarkoil in Madras State, who were selected for experimental tests, that an expert weaver can calculate on getting only As. 7 with one pound of Ambar yarn, while he can earn a rupee with mill yarn.

Other Vital Considerations

The question of quality and cost apart, there are other vital considerations to be taken into account. One is whether Ambar Charkha can be relied upon to meet the entire increase in the yarn requirements of handlooms in the coming years. Some experts of cotton textile industry are of the view that Ambar Charkha cannot produce yarns above 25s economically, since the cost differential between mill and Ambar yarn widens increasingly with higher counts. This aspect has been stressed by Mr. R. K. Hazari in his article on the Economics of Ambar Charkha contributed to *Commerce* dated 14th April 1956 (*vide* page 708). Mr. Hazari observes:

"The *Khadi* Board's production programme is limited, for the present, to the count range 16s to 20s or an average of 18s. It appears to have slipped the Board's memory that *dhotis* and *saris*, the demand for which may be legitimately expected to keep on rising, cannot be made from counts less than 25s. With mill production of yarn frozen at the present level, and assuming hosiery and other production to increase rapidly, the handlooms would be unable to produce enough *dhotis* and *saris* to satisfy the increase in demand during the second Plan period. As a matter of fact, the Board's programme has nothing whatever to say about correlating the production and marketing patterns of handlooms with Ambar yarn production. The counts proposed to be produced on this Charkha can actually be utilised only for the production of fabrics like bedsheets and covers, towels, Madras handkerchiefs, etc., which occupy only about one-half of the handlooms at present."

It will be evident from the above extract that any undue reliance on Ambar Charkha will only be to ignore the vast diversity of production patterns and, consequently, yarn requirements, of the handloom industry—a diversity even greater than that found in the mill industry. Mention may be made, in this connection, of the fact that handloom weavers prefer mill yarn to hand-spun yarn, because of the ease with which designs can be worked out. Drawing attention to this aspect, the New Delhi Correspondent of the *Hindu* says that, if the Government wants to augment the quantity of hand-spun yarn as a patriotic gesture through encouragement to Ambar Charkha, it will do well first to attract a large number of newcomers and train them as weavers. "Weaving in India," to quote from his report, "is generally a traditional family occupation. At the same time, it would be necessary to secure a market for the handloom cloth so laboriously produced and this would, in turn, demand the limitation of production not only of mill cloth but also of handloom cloth. The basic issue posed for solution is whether this drive to encourage the production of hand-spun yarn is intended as an act of loyalty to the Congress or to provide additional employment. If the object is to provide more employment, it (the Congress) must examine whether there are not other and more economical ways of creating new jobs."

Price Aspect

Employment is, of course, an important consideration, but it must be matched against the no less important consideration, namely, the price the consumer is called upon to pay for his requirements of cloth. This price would, as noted already, be very high, if the country were made to depend on Ambar Charkha for its growing needs of clothing. Surely, such a course would defeat the very object of economic planning, namely, to raise the living standards of the common man. The price aspect assumes special significance in the present context when, with the implementation of the series of development schemes under the second Five-year Plan, the incomes of the people will tend to move up, thereby raising the demand for such an essential item of consumption as cloth. If, therefore, adequate quantity of cloth is not produced, a situation is bound to arise when there will be a virtual cloth famine in the country with spiralling prices.

In the light of the foregoing analysis, it is not surprising that there is great divergence of opinion among the members of the Ambar Charkha Committee. The representatives of the Central Commerce and Industry Ministry, the Finance Ministry and the All-India Handloom Board are reported to have differed materially from the members associated with the Planning Commission, the Production Ministry and the *Sarva Seva Sangh*. These representatives feel that the available data are not sufficient to justify the conclusion of the majority on the technical potentialities of the Ambar Charkha. The conclusion of the majority is that, with between 76 and 90 days' training, an average adult can produce about six hanks of yarn within eight hours, while one member places the average output at 5.6 hanks and another at five hanks; the capacity of operators will grow to eight hanks or more, as their familiarity with the machine increases. There is also difference of opinion among the members on the fatigue factor involved in operating it. The majority holds the view that the Ambar Charkha is primarily meant to give spare-time employment to agricultural workers and they will normally get rest or diversion between the hours of spinning. Others, however, feel that more research is required on the subject.

The Ambar Charkha Committee is reported to have arrived at a few general conclusions of a tentative nature. First, Ambar Charkha workers should be paid according to piecework, the rate proposed being nearly six pice per hank, although it is stressed that the rate should be reviewed from time to time so as to ensure a living wage for the worker. Secondly, the *Khadi* Board's recommendation that the subsidy available to ordinary *khadi*—As. 4 per rupee at the point of sale—should be extended to Ambar Charkha *khadi* may be favoured, though some members feel that this scale will be inadequate. It is believed that Ambar Charkha *khadi* will be 40 per cent. cheaper than ordinary *khadi*. Thirdly, the Ambar Charkha yarn should be available in the first instance to about 67,000 *khadi* weavers in the country. Supplies should then be canalised to handloom weavers who give an undertaking that they will not mix mill yarn for the Ambar Charkha yarn for the production of cloth. Later, the handloom weavers who are in co-operatives should be catered for. Fourthly, two men should be engaged on every Ambar Charkha set—one for carding and roving and the other for spinning. Thus, about 150,000 operators should be trained this year. Fifthly, the production of Ambar Charkha should be decentralised. Carpenters should be subsequently used to service the machine and to help in fashioning agricultural implements like ploughs. The programme should be worked through the Community Projects and National Extension Service administration wherever possible. In conclusion, the Ambar Charkha Committee is believed to have decided to recommend a cut in the original size of the Ambar Charkha programme.

HIGHER PAY FOR BOMBAY MILL TECHNICAL STAFF

The Millowners' Association (Bombay) and the *Rashtriya* Mill *Mazdoor Sangh* must be congratulated on their successful efforts to come to a mutual agreement in the matter of pay scales, dearness allowance, gratuity, etc., for the technical and supervisory staff employed in the cotton mills in Bombay City. The agreement—signed on 16th May 1956—provides for a 5 per cent. rise in dearness allowance and benefits of higher pay scales, with effect from 1st May 1955. The agreement has been placed before the Industrial Court, which is adjudicating the dispute, for acceptance.

Under the agreement, the existing technical and supervisory staff, including assistant engineers, is classified into five categories—assistant masters, departmental assistants, assistants who are technical and engineering graduates, foremen and assistant foremen, and apprentices. The pay scales of these categories are given below:

Category	*Scale of pay*
	Rs.
Assistant masters ...	320—the Association may fix a suitable grade for them.
Foremen	215-15-260-20-340
Assistant foremen ...	170-15-260
Graduate assistants ...	175-15-260-20-300-25-350
Other assistants	120-10-170-11-260-20-320 (Diploma holders and graduates other than technical graduates to be started on Rs. 140).
Apprentices (stipends) ...	65-65-65-75-75 (5 years) 90-100-110 (3 years) 125-140 (2 years)

For the application of the new grades, the pay that an employee would have drawn in the appropriate scale as on 1st May 1955 under the recommendations of the Association dated 25th August 1948 will be taken as the basis. Those employees who have reached the maximum of the ordinary grade will be given one additional increment in the new scale, if they have been getting the maximum salary in the ordinary grade for a period of three years or more. All other employees will be put in the new scales after proper stepping up but without any additional increments. When an employee who has reached the maximum of a grade is promoted to a higher grade, he will be given one increment in that higher grade.

The rates of dearness allowance payable to all categories of employees (including apprentices), sub-

BOOK NEWS

COMPANY management presents a host of problems. The present provisions of the New Companies Act of 1956 are far-reaching and without any parallel in any statute relating to the Companies in any part of the world.

For a reliable guide and book of reference, a new Act is indispensable. The Guide to the Indian Companies Act, written by an Advocate with vast experience of Company law and matters, gives a lucid explanation of the statutory changes effected by this new Act. The exact scope of the new amended sections and their operations are all set out clearly. Buy a copy of the Guide today. It will save you and your Office time and money.

IMPORTS OF CLOTH INTO U.K.

LABOUR UNION PROPOSES DIRECT TALKS BETWEEN BRITAIN AND INDIA

From A Special Correspondent

MANCHESTER, *23rd May*

MANCHESTER LETTER

THE question of imports of Indian and Hong Kong cloth into the United Kingdom, which continues to be a major talking-point in the Lancashire cotton industry, has brought a new suggestion aimed at ending the present fears and uncertainties about the future. It comes from a trade union source—the 80,000-strong Amalgamated Weavers' Association, the largest of the cotton trade unions—and in essence proposes direct industry-to-industry talks between the cotton leaders of India and Britain.

In its Annual Report, the Weavers' Association deals with the problem at some length and suggests that it would be in India's own interests if it were encouraged to develop a wide range of industries to enable it to "compete with the whole world and not only with Lancashire." On the proposal for joint talks, the report says: "It is known that some of the Indian textile leaders would be prepared to talk things over. How many or how few they may be is not known. It could at least be tried and without doubt we should learn something."

Surveying the future outlook for the mills of Lancashire, the trade union comments: "Employers and operatives alike are in a dilemma of uncertainty. Clearly, if the Government's present policy continues, the industry is wide open and vulnerable. At present India and Hong Kong are sending here mainly cheaper quality goods, but already better quality goods are appearing."

The Indian Government's Textile Enquiry Committee had suggested that automatic looms replace traditional looms at the rate of 5,000 a year for the next 20 years and efforts should be made to export more quality goods. "It is clear then that whilst a safe and certain market exists India will continue to develop her textile industry. Who can blame her?"

Referring to the official viewpoint in Britain that to impose import restrictions on the Indian cloth might result in retaliatory action against exports of British engineering and other capital goods, the report says it is interesting to note that whilst Germany has by agreement fixed an annual import quota of cotton piecegoods to a limit of £300,000 sterling it had not prevented that country from securing substantial engineering contracts from India. The report continues:

"It is senseless to throw our industry to the wolves in the hope of saving others. The way India is developing she will, in due course, produce a whole range of engineering products cheaper than we can. She is now erecting her own iron and steel plants and already is preparing to manufacture her own automatic looms to meet her 20 years' programme. She will, in the not-far-distant future, manufacture her own motor cars. Modern techniques with cheap labour can beat any Western nation and some day will have to be faced. India should not be encouraged to kill Lancashire's cotton industry and make her own economy top-heavy in the process."

Shuttleless Loom

Widespread interest is being shown in Lancashire textile quarters in an experiment which is to be tried out by a branch of the big English Sewing Cotton Company with two shuttleless looms produced in Switzerland. The idea of shuttleless looms has been discussed in the industry for many years, the chief point being whether the very heavy capital cost would be warranted by the increased production. So far as is known, this is the first occasion that the idea has been subjected to practical experiment in Lancashire and interest at this particular time is stimulated by the constant reminders that the industry must cut its costs and be more competitive.

The two looms have cost £3,000 each and weigh three tons. It is claimed that they can run at 200 picks a minute, weaving any width of cloth up to 120 inches. What is not clear at the moment is whether the looms are capable of producing fancy as well as plain cloths at this rate of output. Here we come up against a fundamental problem—whether Lancashire's future lies in concentration on fabrics of high quality and outstanding design, produced in short runs for quick delivery, or in long runs of cheaper cloths in which she would have to meet the full force of competition from the textile industries of India, Hong Kong, Japan and other Far East countries. There is, however, another school of thought. According to this, no matter what type of machinery is used and regardless of manufacturing techniques, Lancashire cannot hope to survive in the latter field of production if only because of its much higher labour costs. On the other hand, a spokesman of the company now installing the shuttleless looms expressed the hope that they would enable Lancashire to fight increased competition from overseas.

So far, the trade unions, while keenly interested in the outcome of the experiment, are not particularly worried about the possible impact on labour. If redundancy should occur it is felt that displaced workers would quickly be absorbed elsewhere.

Trade Unions

The rapid increase in imports of Indian and Hong Kong cloth into the United Kingdom, and the problems this has created within the Lancashire cotton industry, is one of the reasons why the cotton unions' first policy declaration for 10 years—work on which was started three years ago—is to be "substantially redrafted." The 30,000-word document, "Plan for Cotton," has not so far been made public, but is known to contain a number of far-reaching proposals in the direction of the "socialisation" of the industry.

After a special meeting of the Legislative Council of the United Textile Factory Workers' Association in Manchester, the author of the document, Mr. Harold Wilson, a Socialist Member of Parliament, and a former President of the Board of Trade, spoke of "big changes" which had taken place in the Lancashire industry during the past three years. For example, there had been the large-scale cloth imports. The trade union attitude towards this found no mention in the original policy document because the problem had not at that time attained its present proportions. A guide, perhaps, to trade union thinking on the subject is the proposal made by Mr. Wilson some time ago that a Government-sponsored buying agency should be set up to control Commonwealth cloth imports into the United Kingdom.

Commonwealth Conference

Leaders of 600 manufacturing firms in Lancashire and the North-West of England have expressed concern at the impact of overseas competition on the key industries in the region. They are particularly anxious about cloth imports from the Far East.

After discussing the problem, the Manchester branch of the National Union of Manufacturers has sent a resolution to the Government urging that the Commonwealth Prime Ministers attending the London conference in June should be accompanied by their Ministers of Trade or Commerce to discuss every aspect of Commonwealth trade, particularly the Ottawa Agreements. It is under these agreements that cotton cloth is entering the United Kingdom duty-free. The resolution asks that the June conference should decide whether, after 24 years, the Ottawa Agreements are now in need of revision to take account of modern trade trends.—*All Rights Reserved.*

The first of a series of special displays at the recently opened Design Centre in London is the "Design in Cotton" exhibition, to be opened on 4th June, by Mr. Derek Walker-Smith, Parliamentary Secretary to the Board of Trade. Assembled by the Cotton Board's Colour, Design and Style Centre, Manchester, the exhibition is mounted in collaboration with the Council of Industrial Design. Its aim is to show the best at present available in cotton dress and furnishing fabrics and cotton laces.

In accordance with the Council of Industrial Design's policy for the main exhibition at the Design Centre, most of the fabrics will be available in shops, but there will be a number of brand-new designs likely to be of particular interest to oversea buyers. Examples of blends and mixtures of cotton with other fibres will also be included.

The Foreign Trade Department of Brazil has announced that the sale of raw cotton for export has been suspended pending an examination of the situation of the domestic textile mills and foreign exchange revenue from such exports.

Two reasons are given for this decision, first that too much cotton has been exported in recent weeks to countries whose currencies are of "only relative interest to our international balance of trade" and secondly, heavy rains in the State of Sao Paulo have so reduced the size of the present crop that it is feared that the internal market demand is endangered. The department added that after re-examination of both situations it would re-authorise sales to certain markets.

U.S. cotton consumption in April was higher at 721,577 bales as compared with 659,188 bales in the corresponding month of the previous year, according to authoritative sources. Total consumption during the nine months ended April, 1956, was also higher at 7,071,573 bales as against 6,722,182 bales in the corresponding period of last year. Despite the high rate of consumption, cotton stocks in the country rose to 16,266,864 bales at the end of April this year from 13,035,063 bales at the end of April last year.

MR. M. R. RUIA ON POLICY OF EAST INDIA COTTON ASSOCIATION

FULL CO-OPERATION OFFERED TO GOVERNMENT

MR. Madanmohan R. Ruia, the newly elected President of the East India Cotton Association, enters upon his duties at a critical juncture in the history of the cotton trade in this country. While all would naturally wish him success in his new position, it would be wrong to under-estimate the difficulties that face him in adjusting the Association's trading practices to the new set-up created by the presence of that all-powerful body, the Forward Markets Commission. If success is not to become just some euphemism for surrender, it will certainly call for the highest qualities of business statesmanship.

On his election to his high office, Mr. Ruia has done well to explain what, in his opinion, should be the East India Cotton Association's policy; in this, he says he has the concurrence of all the members of the Board of Directors of the Association. Defining the role of a trade association in relation to the Government, Mr. Ruia says:

"By reason of the policies of far-reaching importance in the realm of trade and commerce announced by the Government of India and in the context of the proclamation of the nation's new economic pattern, it is clear that no trade association, if it wishes to function effectively in the changed circumstances, can afford to challenge the policies of the authorities in power. In other words, it will not be possible for any association to fulfil even its primary obligations to the trade, unless and until the Government in power fully approves and supports its actions. On behalf of the Association, I would like to take this opportunity to offer my fullest co-operation to the Government, while, at the same time, seeking their support in the fulfilment of the important tasks that lie ahead of us. I hope that, prior to formulating their future policies, Government will take this Association into confidence and ascertain its views. Given this understanding and co-operation on both sides, I see no reason why we should not achieve results which would be satisfactory to both sides."

First Task

Proceeding, Mr. Ruia observes that the first task before them is to work for the resumption of forward trading in cotton as early as possible. He adds:

"I can assure the trade that, in so far as the E.I.C.A. is concerned, we are working earnestly towards formulating a hedge contract which would not only provide the necessary protection alike to the trade and to the growers but also help rehabilitate the persons who have been thrown out of employment as a result of the continued closure of the forward market, since the past five months. Suggestions as to whether there should be one contract or two are also receiving our earnest consideration. All these are going to be soon finalised. Meanwhile, I must mention here that the Hon'ble the Union Minister for Commerce and Industry, as well as the Forward Markets Commission, who, incidentally, are fully seized of this problem, have assured us of their utmost support in evolving a suitable contract. In view of this helpful assurance, I am quite confident that we shall be able to start forward trading at a very early date."

Appeal to Press

In a special appeal to the Press, asking for its co-operation, Mr. Ruia says:

"It is unnecessary for me to add that the Press can play a vitally helpful role in bringing about such a consummation speedily. I would accordingly seek the goodwill and understanding of all sections of the Press not only in helping us to solve the problems that are presently confronting the cotton trade but also in properly educating the public about the precise nature of these problems. In this connection, I have particularly to appeal to my Press friends to desist from publishing anything which does not correctly reflect the views of the Association on matters pertaining to the cotton trade. I assure all Press people that they can always ask and get from me any information or assistance that they may need in this connection."

It will thus be seen that Mr. Ruia has offered his "fullest co-operation" to the Government. All that he desires in exchange for this attitude is that the Government should, in its turn, take the "Association into its confidence and ascertain its views." Beyond emphasising that, "given understanding and co-operation on both sides," there is no reason why satisfactory results should not be achieved, he has given no indication of how he seeks to resolve the basic conflicts which drove his illustrious predecessor from office. The Press, on its part, will certainly respond to his call for "goodwill and understanding." But it cannot obviously bind itself to not "publishing anything which does not correctly reflect the views of the Association." It should not, of course, attribute to the Association the views the latter does not hold. Apart from this consideration, the Press, in a democratic country, can owe no allegiance to a trade association, or the Government. Its fundamental duty is to support freedom and what it considers to be right and to favour only such restrictions on freedom as are, in fact, necessary in the very cause of freedom.

The Association has resolutely addressed itself to the task of considering the issues raised by the Forward Markets Commission in the bunch of 11 letters it wrote to the Association on 10th April. These letters, as we indicated in our issue dated 28th April 1956, deal with such matters as the formulation of a new hedge contract, margin system in trading, delivery contracts, election of President. It would appear that the Association, which had invited the opinion of its members on the Commisson's proposals, is now engaged in sifting and analysing the views and comments offered by the traders.

Hedge Contract

An important question which the Commission has raised relates to hedge contract. The Commission had suggested that the E.I.C.A. should formulate proposals of a kind that would ensure that hedging facilities are offered to all varieties of cotton grown in the country. In particular, the Commission sought the Association's advice on whether there should be one contract or two contracts in the light of the need for providing hedging facilities for different varieties and whether the present system of fixation of differences should be replaced by a provision for the fixation of varietal differentials on the basis of their intrinsic merit before the commencement of each season. Several suggestions are stated to have been received by the Association on this question. Some members have suggested two contracts: (1) Jarilla ⅜" with a tolerance of 1/32" and (2) Vijay 13/16" with a tolerance of 1/32". They have further suggested that the qualities tenderable against the first contract should be Jarilla, Buri, 320F, Kalagin and Wagad, while Vijay and all other qualities should be tenderable against the second contract. Another suggestion is to have one contract for cotton of stapling 11/16" to 25/32", and another for cotton stapling 13/16" and above, the qualities tenderable against the former being Dhollera, Wagad, Kalagin, Mathia and Jarilla. Yet another suggestion is to have three contracts: (1) Khandesh 13/16", including Punjab, the delivery months being February, March, April and May; (2) Vijay 13/16," including Surti and Navsari, the delivery months being April, May, June and July, and (3) Westerns, including Jayadhar and Gaorani, the delivery months being June, July and August.

Tendering Differences

Some members, it is stated, are against the suggestion for fixing tendering differences at the commencement of the season. These differences, according to some members, should be fixed in October-November. Another suggestion is that the Commission should fix them before permission for trading in new crop is given and that the differences once fixed should not be varied during a given season.

Although a section of the trade does not favour a ceiling within a ceiling, there are some who are inclined to allow the Commission the freedom to fix maximum and minimum prices before the commencement of each season, provided the latter does not change the prices so fixed during a season. Another section would favour the Commission fixing such prices, provided the right to declare an emergency is vested in the Association, the representatives of which should support such declaration by a three-fourths majority. There is yet another suggestion: it is that the maximum and the minimum prices should stand automatically removed on 20th day of delivery month. On that day, the buyer in the case of maximum prices should pay 50 per cent. of his outstanding purchases and a seller, in the case of minimum prices, should pay 50 per cent. of the value of cotton of his outstanding sales. The margin system recommended by the Commission, it is felt, would create great hardship. Some members have, however, expressed their agreement with the Commission's suggestion. Others give a qualified support, stating that the free limit should be 5,000 bales (as against 2,500 bales suggested by the Commission) and that the business done on behalf of clients should be excluded from the purview of this restriction.

Other Issues

The other matters on which opinions have been expressed by members include delivery contracts, survey system and election of office-bearers. One suggestion is that delivery contracts with mills alone should be non-transferable. The present system for the survey of cotton, it is stated, is good and as such need not be changed. Another suggestion is in favour of setting up of a representative advisory committee for purposes of deciding appeals. As regards election of office-bearers, some members are in agreement with the suggestions made by the Commission. A few members favour the abolition of the panel system and its substitution by a system which accords equal franchise to all. So far as the limitation on the term of office of the President is concerned, some members are inclined to agree with the Commission's recommendation. Some others, however, regard such restriction unnecessary, if a chairman were elected at a general body meeting.

IMPORTS OF COTTON

During the period 1st September 1955 to 28th April 1956, the total quantity of cotton licensed for import into India aggregated 595,147 bales of 400 lbs. each. Actual arrivals during 1st September 1955 to 21st April 1956 were, however, lower at 390,694 bales. The following table gives the quantity licensed and actual arrivals during the periods referred to:

(In bales of 400 lbs. each)

Variety	Quantity licensed from 1st Sept., 1955 to 28th April, 1956	*Actual arrivals from 1st Sept., 1955 to 21st April, 1956
Sterling Area Cotton—		
East Africans	271,662	92,661
Egyptians	206,742	194,262
Sudans	95,304	86,359
Peru and others	12,740	6,543
	586,448	379,825
Dollar Area Cotton—		
U.S.A.—		
Under Aid 1,125		
Freely 7,574		
	8,699	10,869
Total ..	595,147	390,694

* Arrivals include quantity licensed in the previous season.

MADRAS 17

Beg to announce that their new issue of 3,20,000 shares of Rs. 10/- each has been oversubscribed and the lists were closed today.

The Management thank all shareholders for their splendid response and co-operation and are endeavouring to post allotment letters and refund cheques before the 31st May 1956.

25th May 1956.

C. HARIPRASAD,
General Manager/Managing Agents.

COAL IN SECOND FIVE-YEAR PLAN

PUBLIC SECTOR TO ACCOUNT FOR BULK OF EXPANSION

COAL is a basic industry. It serves as fuel to a variety of industries and also as a raw material to a number of key industries such as iron and steel, cement, chemicals and petroleum. Any country that wants to develop industrially must, therefore, give a high priority to coal. In India's first Five-year Plan, the importance attached to coal was not much. Apart from laying down a programme for conservation of metallurgical coal, scientific classification of what is produced, research and resurveying of certain areas, no specific targets or schemes for increased production were prescribed. Production, however, did go up from 34.30 million tons in 1951 to 38.22 million tons in 1955, but this increase was stimulated and sustained by a general expansion in the demand for coal generated obviously by the large developmental expenditure incurred under the first Plan.

In refreshing contrast to the secondary importance thus given in the first Plan, coal has received great attention in the second Plan. That is only as it should be, in view of the vast expansion contemplated in the industrial sector. Not only is the expansion envisaged in industries and transport where coal acts as a fuel large, but there is also going to be a tremendous increase in industries where coal is a basic raw material. The production of iron and steel, for instance, is to be trebled. So is that of cement. A number of industries based on carbonisation of coal is also scheduled to be established. In order to meet all these needs, the target for coal industry has been fixed by the planners at 60 million tons, to be hit by the end of March 1961. This represents an increase of 22 million tons over the production level attained in 1955, or 23 million tons over the 1954 level. As the Plan admits, special efforts will be required to raise this quantity. Some additional production can be obtained from the existing workings, but the order of increase is such as to make necessary the opening up of a number of new areas.

Share of the two Sectors

The bulk of the coal now produced comes from the private sector and only a small quantity from the public sector. In 1955, for instance, the private sector produced approximately 33.70 million tons and the public sector 4.50 million tons. The draft outline of the second Plan had estimated the increase in production to be achieved by 1961 at 23 million tons, on the basis of the 1954 achievement of 37 million tons. It was proposed by the Government that, of this 23 million tons of additional production, as much as 15 million tons should be met by expanding the public sector, leaving the balance of 8 million tons to be covered by the public sector. It was pointed out by the spokesmen of the coal industry in the private sector, as well as by a section of the Press, that the share allotted to the public sector was beyond its capacity and that it would be prudent to leave the bulk of expansion to the private sector. For a long time, the authorities could not make up their mind. Later on, however, they yielded a little and agreed to raise the share of the private sector to some extent, though there were conflicting reports about the exact share of the respective sectors. The second Plan report says that it has been tentatively decided that the private sector should produce 10 million tons out of the 22 million tons of additional coal required, leaving 12 million tons to be met by the public sector.

For reasons recounted in some of our previous issues, it is doubtful whether the public sector can nearly quadruple its production in the next 4 years and 10 months. It is a pity that, despite all the debate that has taken place on this subject for over a year now, the authorities should have stuck to their unrealistic stand. Their only reason for doing so is ideological, namely, in a socialist structure of society, all the basic industries should be State-owned, and, when this is not possible immediately, the State should reach this goal progressively. In actual practice, this ideology will mean a much greater increase in the cost of coal to consumers than would be necessary if the whole task were entrusted to the private sector.

It is now the declared policy of the Government that all new undertakings in coal should be in the public sector. Accordingly, expansion of production by the establishment of new collieries will be undertaken wholly in the public sector and the additional production by the private sector will have to be raised from its "existing workings and immediately contiguous areas." Of the additional production in the public sector, two million tons will come from existing workings—1.5 million tons from Singareni and 500,000 tons from Bokaro; four million tons are to be obtained by developing the Korba coalfields. The areas from which the remaining six million tons are to be obtained have been "broadly decided," according to the Plan, "but particulars including specific allocations for each area are being determined."

Capital Investment

The total capital investment required for raising 12 million tons of additional coal in the public sector alone is roughly estimated at Rs. 60 crores, of which cost of housing represents Rs. 12 crores. For the present, the Plan contains a provision of Rs. 40 crores only. This incomplete financial provision, as well as the assertion in the Plan that the allocation of additional production between the two sectors is only tentative, suggests that later, as the Plan period advances, the private sector may be given a bigger share. This possibility will be strengthened if the private sector manages to render a better performance than the public sector in the coming two or three years. If, for instance, the private sector hits its target in advance, say, by March 1959, its case for better treatment will have won considerable strength and moral support. It is, therefore, to be hoped that colliery-owners will not get disheartened, but, instead, go ahead by hook or by crook, with measures for stepping up their production. They will do well to note that, in a democracy, one has the opportunity to prove one's case by performance and persuasion. It is, of course, true that colliery-owners will be helpless, unless the State assists them by creating the necessary climate for achieving higher production. For coal is a strictly controlled commodity and not a ton of it can be produced or moved without the previous sanction of the Government. But it is to be hoped that the Government will do everything possible to enable colliery-owners to carry out the task allotted to them.

Viewed from this angle, the Government's decision to bifurcate the functions of the Coal Controller is welcome. The Coal Controller will henceforth have nothing to do with production of coal in the public sector. He will mind only the administration of the Coal Control Order, regarding distribution, price, etc., and supervision of production in the private sector. Coal in the public sector will be looked after by a Coal Production and Development Commissioner.

Shortages of transport and technical personnel will prove to be formidable bottlenecks. These must be broken if the Plan for coal is to be implemented successfully. The following extract from the Plan report will show how the authorities propose to deal with them:

"For the training of the technical personnel that will be required in connection with the expansion of production of coal, four training centres are to be established as a first step at Kargali, Giridih, Talcher and Kurasia for the training of intermediate and lower technical staff required for the industry such as supervisors, overseers, electrical and mechanical subordinates, etc. More training centres will be opened during the period of the Plan to meet the increasing requirements of technical staff.

"Transport of coal places a heavy strain on the railways, because, while coal is needed all over the country, production is at present concentrated in the States of West Bengal and Bihar. The railways have tried to rationalise coal movements, but, in the context of the very large increase in demand, a measure of rationalisation of production is also called for. The coal production programme has been drawn up so as to develop collieries in different States."

Coal Washeries Committee. A number of suggestions was made by this Committee. Basing itself on these suggestions, the Government has taken the following decisions:

(1) Generally, all metallurgical coal down to grade II should be washed;

(2) to meet the requirements of washed coal of all existing and projected steel plants, private collieries may be given the choice to set up washeries. If the required quantities do not become available from washeries set up by private collieries, Government will themselves set up washeries to meet the full requirements; and

(3) the average cost of washing should be made good to the collieries, through either revision of prices or a negotiated price for washed coal or by means of a suitable subsidy as may be determined at the appropriate stage.

It may be noted, in this connection, that there are already three washeries in the private sector at Jamadoba, West Bokaro and Lodna collieries, respectively, which supply washed coal to the Tata Iron and Steel Company and the Indian Iron and Steel Company. It has already been decided to set up a coal washing plant at Bokaro-Kargali, with a capacity for washing 2.2 million tons of coal per annum. The washed coal from this washery will be supplied to the Rourkela and Bhilai steel plants. Orders have already been placed with a Japanese firm for the manufacture and installation of this washing plant. Another washery is proposed to be set up at Durgapur. Proposals for further washeries for meeting the requirements of the steel plants are under consideration. A provision of Rs. 6 crores has been made in the Plan for setting up coal washeries.

There is a reference to soft coke also in the Plan. Consumption of soft coke, mostly for domestic purposes, is 1.6 million tons at present. It had been hoped at one time that it would be as much as 2.1 million tons by March this year, as against 1.1 million tons in 1950, but limitations of transport has restricted the use of this coal. It is estimated that, by 1961, about 3.5 million tons of coal will be required for conversion into soft coke for meeting the needs of Z class consumers. At present, most of the soft coke is produced from low grade metallurgical coal in the Jharia coalfield. Recent research has proved that this grade of coal could be beneficiated for metallurgical purposes. By converting this coal into soft coke, the country is thus wasting some precious coal the reserves of which are not inexhaustible. But the Plan says that this cannot be helped for some time to come. The only way it can be avoided is to establish large-scale units of modern type for low temperature carbonisation of non-coking coal.

SUGARCANE CRUSHING SEASON IN U.P. TO BE EXTENDED

GOVERNMENT'S DIRECTIVE TO MILLS

A DISTRESSING feature of the sugar industry in Uttar Pradesh has all along been the none-too-happy relation between the sugar mills and the cane growers. This is due to the unhealthy influence of politicians with vested interests over the cane growers, the vast majority of whom are poor and illiterate. A recent instance of this nature is the highly unjustified and unnecessary hue and cry raised on the floor of the State Legislature over the so-called miserable lot of the cane growers in the current season. A large part of the sugarcane crop in many parts of the State is reported to be lying uncrushed, resulting in undue hardship to the cultivators; in the Terai and Rohilkand areas alone, the uncrushed quantity of cane is estimated at 10 million maunds. Indeed, the situation is characterised as being "serious." Availing themselves of this opportunity, some members of the State Legislature once again sought to bring pressure on the Government to impose further restrictions on the sugar mills, in order to assist the cane growers. The pressure exercised by the opposition was so much that there was a fairly prolonged debate on this subject in the State Legislature on 15th and 19th May 1956.

During the debate held on 15th May, the sugar policy of the U.P. Government was severely criticised by several members, who threw the blame for the heavy accumulations of cane stocks lying uncrushed entirely on the Government. Even the detailed and convincing statement made by Mr. C. B. Gupta, the State's Planning and Industries Minister, failed to satisfy the members. Mr. Gupta stated that, in the crushing season, all the sugar mills not only in the Terai and Rohilkand area but in the entire central and western parts of the State were required to crush surplus quantities of cane in the interests of the cane growers. It was, therefore, incorrect to say that the authorities had not taken adequate steps for the crushing of surplus cane. The U.P. Government, he declared, was doing all it could to persuade the sugar mills to make the cane-crushing season the longest, so that the largest quantity of sugarcane could be crushed before the season was out. Proceeding, Mr. Gupta said:

"The cane position in the areas of the different mills was reviewed periodically and necessary orders are issued from time to time, with a view to making the full use of all the available capacity in the mills. . . . The 1954-55 crushing season was a peak one in the history of the industry when the factories recorded the highest crush. Even in that season, many factories (about 19) closed during May. . . . All these factories will, it is hoped, definitely continue crushing operations throughout May in the current season and a very large number of them will continue crushing operations till late in June. The continuance of crushing operations till late in June clearly establishes how keenly and promptly the authorities concerned have been making adjustments in the distribution of cane to the factories from time to time, with a view to ensuring the crushing of the maximum possible quantity of sugarcane."

Blame Lies on Cane Growers

It will be seen from the above quotation that the U.P Government has made efforts to stretch the crushing season. If, in spite of these efforts, cane supplies have accumulated in some parts, the blame for it must lie partly on the cane growers themselves. Despite the Government's warning, the cultivators have not been discriminate in growing sugarcane. In fact, they are reported to have increased the acreage under cane out of all proportion to the capacity of sugar mills. That there is no exaggeration in this remark will be evident from the following extract from the Planning and Industries Minister's statement:

"After the shifting of the Panniji Sugar Factory from Gokulnagar, the problem of the disposal of cane of Naini Tal district has undoubtedly become difficult and the cane growers have to face difficulties in the disposal of their cane year after year. In spite of all this, they have been increasing their area under sugarcane. Prior to the last sowing season, the cane growers of this area had been warned, but, from the reports available, it appears that they have further increased the area under sugarcane. As in the previous season, all possible efforts are being made in the current crushing season as well to get the maximum cane of this area crushed by the factories. Keeping in view the position of surplus cane in this area, *taqavi* loans for *kolhus* and crushers were also advanced to the cane growers during the current crushing season and they were told from time to time that they should take steps for the disposal of their surplus cane which was not likely to be crushed by the factories."

Another factor responsible for the surplus cane position is the weakness of the *gur* market. Owing to the low prices of *gur*, the cane growers have, according to Mr. Gupta, not even disposed of that quantity of sugarcane which they normally used to divert to the making of *gur*, with the result that the pressure on the factories has increased. In these circumstances, it will not be fair, as Mr. Gupta pointed out, to expect the sugar factories having only a limited crushing capacity to consume the entire excess cane produced by the growers.

Start of Crushing Operations

The aforesaid statement of Mr. Gupta failed, as already stated, to satisfy the opposition members of the U.P. State Assembly who insisted upon having an adjournment debate on the subject. Accordingly, a debate was held on 19th May also. It was marked by emotional morass, with the opposition hurling a series of accusations at the authorities. It was pointed out, for instance, that there was no co-ordination between the Centre and the State Government in respect of sugar policy. This criticism was based on the ground that the State Government's plea to the Centre for giving permission for the early start of crushing operations by mills was turned down by the Centre. Perhaps, the Centre thought—and rightly so—that, since an early start of the season would mean crushing of unripe cane with lower sugar per cent., there would be loss of sugar production. Also, the Centre was prompted by considerations of the need for avoiding any possibility of an undue fall in sugar prices, in view of the heavy stocks—as much as 550,000 tons—lying unsold with the mills at the end of the last season.

Several members trenchantly criticised also the U.P. Government's latest decision to revise the policy governing the price of cane payable by factories. According to this revision, the factories are obliged to pay for the cane purchased during the months of May and June the minimum price of Re. 1-7 per maund only when the percentage of sugar in cane is 9.6. Opposing this revision, a prominent independent member of the Assembly observed:

"The cane growers have a number of grievances against both millowners and Government. The Cane Commission has ordered that the price of the sugarcane supplied by growers should be noted on *parchis* supplied to *them*. It has been found that as many as 38 mills have not observed this rule. Prices are fixed on the basis of the recovery percentage which is manipulated by millowners. The Government has no machinery to verify whether the figures supplied by the millowners are correct. If the recovery percentage is more than the average, the growers are not given bonus, as was done in 1951 when the price was Re. 1-10, as against Re. 1-7 today. Often, the millowners pass the too inferior grades of sugar as molasses to show lower percentage of recovery and thus to deprive the growers of just prices."

How far and to what extent these remarks are true, it is difficult to say. This much, however, can be said and that is the U.P. Government is perfectly justified in linking the cane price to recovery, especially as the cane that arrives after the normal crushing season is poor in sugar content. What is more, such a policy would induce the mills to crush more sugarcane. If, on the contrary, the factories are obliged to pay for the cane irrespective of recovery they may not care to extend their crushing operations, for the use of cane with less sucrose content but subject to the same minimum price of Re. 1-7 per maund will raise the cost of sugar production further.

Interim Price for Cane

It is a pity that the latter aspect was not adequately stressed either by Mr. C. B. Gupta or by his deputy, Mr. Phool Singh, in the course of their replies to the debate. All that Mr. Gupta said was this: "The sugarcane price, which is Re. 1-7 (per maund) for the normal crushing season, has been reduced in anticipation of the fall in the percentage recovery during the months of May and June." Incidentally, he revealed that the State Government would shortly issue an order to the sugar factories to pay one rupee for each maund of cane supplied by growers after 7th May. The balance, if any, would be paid later, when the schedules computed on the basis of recovery percentage by the Director of the Sugarcane Research Institute were published, as was done last year. He also revealed that the Government was persuading the factories to extend the crushing season.

An important suggestion which was put forward by some members in the course of the debate related to price support to *gur*. One of the members said that, if the suggestion had been implemented, the present situation of heavy cane stocks would have been averted. Replying to this, Mr. Phool Singh stated that the Government did not pursue the price support policy, because the price of *gur* was invariably well above Rs. 10 per maund, the support price followed in the preceding season. Mr. Phool Singh announced, in this connection, that his Government was considering a proposal to open small sugar mills from next year. From the Press version of the Minister's statement, it is, however, not known whether the proposal relates to the establishment of new small sugar manufacturing units or to the existing units which have been closed down on account of uneconomic working.

SUGAR PRODUCTION AND STOCKS

The aggregate sugar production in India during the month of April 1956 amounted to 250,723 tons, according to the Indian Sugar Mills Association. This quantity compares favourably with the 194,900 tons produced in the corresponding month last year. The total output for the first six months of the current season is estimated at 1,655,998 tons, as against 1,485,000 tons a year before.

The offtake of sugar during April 1956 amounted to 125,000 tons, as against 119,000 tons in April 1955. The total offtake for the six months was 806,000 tons, which represents an increase of as much as 341,000 tons as compared with that for the same period in 1954-55.

The closing stocks of indigenous sugar as on 30th April 1956 aggregated 1,257,000 tons, as against 1,062,000 tons a year before.

SERVICE IN INDUSTRY
By N. BARWELL and S. S. KAR

This is the Second Volume of the monumental work on the Law of *Service in India* and, as the title indicates, deals exhaustively with all the industrial legislation in this country with particular reference to service. It contains:

1. The Factories Act
2. The Factories (Amendment) Act, 1954
3. The Workmen's Compensation Act
4. The Workmen's Compensation Rules
5. The Mines Act
6. The Dock Labourers Act
7. The Dock Labourers Regulations
8. The Plantations Labour Act
9. The Dock Workers (Regulation of Employment) Act
10. The Employment of Children Act
11. The Apprentices Act
12. The Employees' Provident Fund Act
13. The Employees' State Insurance Act
14. The Employees' State Insurance (Central) Rules
15. The Employees' State Insurance (General) Regulations
16. The Mines Maternity Benefit Act
17. The Payment of Wages Act
18. The Minimum Wages Act
19. The Trade Unions Act
20. The Industrial Disputes Act
21. The Industrial Disputes (Central) Rules
22. The Industrial Tribunal (Central Procedure) Rules
23. The Industrial Disputes (Appellate Tribunal) Act
24. The Industrial Disputes (Appellate Tribunal) Rules
25. The Industrial Disputes (Appellate Tribunal) Rules Regulating Practice and Procedure

With exhaustive commentaries and up-to-date case law

Invaluable for practising lawyers, students of law, trade unions and employers and employees in commercial organisations, factories, mines, plantations and docks.
Initial bulk stock received from binders nearly exhausted and further bulk quantities expected shortly.

Demy 8vo 995 pages Rs. 37-8

LABOUR UNION MOVEMENT IN JAPAN

PROGRESS SINCE END OF WAR REVIEWED

ONE of the major reforms enacted in the post-war years to bring about Japan's democratisation was in the field of labour. Soon after the end of the war—in 1946—various pre-war and war-time regulations were scrapped and new labour union laws were brought into force. At the present time, organised workers number more than six million and they belong to 32,000 unions. The General Council of Trade Unions of Japan (Sohyo) claims a membership of three million while the Japan Trade Union Congress (Zenro) boasts 620,000 members. Two million workers belong to the so-called neutral unions.

On the basis of the views clarified by the S.C.A.P. in November 1945 regarding the formation and encouragement of trade unions in Japan, as well as the protection of workers, the Japanese Government established a committee composed of 34 management and labour representatives to deliberate the enactment of laws relating to labour services. After carefully studying the findings of the Committee, the Government drafted a labour union law and put it into effect from March 1946. With the aim of preventing labour disputes and settling them most efficiently when they arise, the Government also drafted a law for the adjustment of labour relations. It came into effect from October 1946. With the enactment and promulgation of these two laws, the workers were guaranteed the right of association and collective bargaining and were protected by legislation for the prevention and solution of labour disputes. The recommendations of G.H.Q. and the Far East Commission also helped spur on the spectacular development of the labour movement.

Post-war Movement

Japan's labour unions were entirely disorganised following the war. But, by the end of 1946, they organised more than 4,920,000 workers. The number exceeded six million at the end of 1947, reached 6,670,000 in 1948. This meant that about 54 per cent. of the total number of workers in this country had been organised into unions.

The spectacular development of Japan's labour unions, on the other hand, led to a sharp increase in labour disputes as a result of the poor post-war economic conditions. The activities of unions at that time tended to go to the extreme. Acts such as so-called "production controls," etc., occurred throughout the country. The climax of this trend was the so-called "February 1st strike" by the Government Workers' Union, with the National Railways workers at the forefront. It ended in failure. It was at this point when the general strike failed that criticisms were raised against the extreme actions of labour movements. These protests first took the form of a democratisation movement within the unions themselves. In the autumn of 1947, an Anti-Communist Federation of Railway Workers was formed, while, in February the following year, a Federation for Democratisation was established within the Congress of Industrial Unions of Japan (Sanbetsu). This trend gained strength in all major unions throughout the nation. In view of the trend of Government workers' unions—led by the Communications Workers' Union—being engaged in disputes, the Government enacted, in December 1948, the law relating to labour in public enterprises and partially restricted Government workers the right to strike.

Revision of Labour Laws

From the standpoint that economic reconstruction of the country and democratisation of the labour movement must go hand in hand, an overall revision of the labour union law was carried out. With some changes made in the two laws mentioned previously, the new law was promulgated in June. The revision sought to advance the establishment and maintenance of labour relations on a democratic and rational basis and clearly to delineate illegal labour practices.

Recovering from the blows of the war, the managements finally began to stiffen their attitude. From the summer of 1950 through autumn of that year, a so-called "red" purge was carried out in vital industries, beginning with the newspapers and communications industries. In August, moveover, the once powerful Government Workers' Union was dissolved by the order of the G.H.Q. Together with these measures to correct the undemocratic elements, intense labour education was carried out for the purpose of vigorously democratising trade unions and also for fostering their healthy growth. In July 1950, democratic unions combined to form General Council of Trade Unions of Japan (Sohyo).

Second Revision of Labour Laws

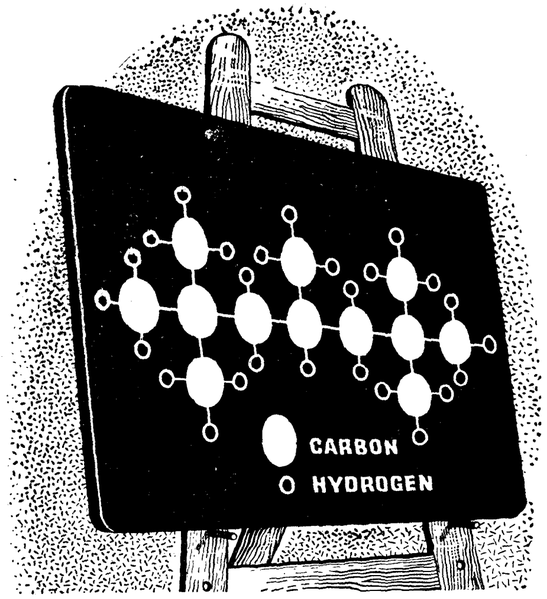
Although the previous revision of the labour laws for the establishment of rational and democratic labour-management relations had great significance, voices were again raised around 1950 in G.H.Q. and in other quarters for another revision. The question was argued in various quarters. Since the weight of the opinion was that the time was too early for an overall revision, the question was temporarily shelved.

In May 1951, however, the so-called "General Ridgway Declaration" was issued. In accordance with this, a Government Ordinance Consultative Committee was established in the Cabinet and a report was made on basic policies regarding a revision of the labour laws. Thus, the question was again taken up. On the basis of the Committee's report, partial revisions were carried out in the three labour laws (trade union law, labour adjustment law and public workers law). They were one phase in the revisions of various occupation-instituted laws as a result of the coming into force of the Peace Treaty. The new laws were promulgated in July of that year.

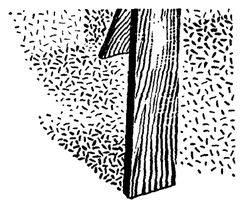
Labour Unions At Present

The labour movement in Japan, which registered unusual progress in the immediate post-war years, receded temporarily in 1949, but began to develop again from 1950, with the gradual expansion of the national economy and the organisation of Sohyo. During this period Sohyo's original democratic character changed and gradually shifted to the left. Unions were critical and dissatisfied with Sohyo's growing political struggles. They seceded and organised the Zenro (Japan Trade Union Congress).

At present, labour unions are divided into two principal groups: the three million-member Sohyo (two million belong to the Government Workers' Union) and the 620,000-member Zenro. Neutral unions have a total membership of over two million. According to statistics compiled in June 1955, there are 32,000 unions in Japan with a total membership of 6,184,561. The estimated ratio of organisation is 39.5 per cent.



AN EDUCATION IN Oil



This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

ASSAM OIL COMPANY does it all

RESTORING SOLVENCY OF JUTE INDUSTRY

NEED FOR FRESH THINKING

READERS will recall that a brief reference was made last week in our Market Gossip columns to the rumour that the Government of India was considering the question of fixing a "floor" price for jute manufactures, with a view to helping the jute mills. At the time we wrote on the subject, the rumour had evoked in our mind the idea that the Government might, by fixing a minimum price, offer to purchase jute goods whenever the price thereof went below the "floor" price and build up buffer stocks, so that it could, in lean days as at present, ensure a decent margin of profit to the mills, and sell the goods when the demand for them expanded. Subsequent reports, however, indicate that the proposal which the Government is believed to be considering is quite different from that referred to in our last issue.

According to these reports, the Government may fix a minimum export price for jute goods. It may, however, be noted that the proposal has not yet been seriously taken up for consideration by the Government. Anyway, if at all the Government has any idea of considering this proposal, it will be well advised not to take such a step, as it is unworkable and will do more harm than good to the industry which the Government is anxious to help. In the first instance, India no longer enjoys a virtual monopoly in the supply of jute goods to the world market. Secondly, jute manufactures do not command a sellers' market. As was pointed out by us last week in another context, export weather is not always fine and it can change frequently in a world where almost all countries have set for themselves the motto "export or perish." This is equally true of the export trade in jute goods where competition in world markets is increasing.

The fixation of a minimum export price for jute goods would amount to dictating prices to foreign buyers. This is sure to be resented by them. Such a step will, therefore, react on the country's foreign trade at a time when increasing attention is necessary and is being given to improving its foreign exchange resources. The recent unsuccessful attempt on the part of the Government of India in compelling foreign buyers of tea to buy more of their requirements at Calcutta rather than at London should serve as a pointer to the Government that, just as it is anxious to preserve the confidence of foreign investors in India, it should not play with the foreign buyers of Indian goods, lest it should undermine their confidence.

The present plight of jute mills is due to lack of profits. Even in the case of the few units that are able to show a surplus, the margin of profit is unremunerative. This development is due to (1) accumulation of stocks brought about by an increase in production and a fall in demand from overseas, and (2) the high level of raw jute prices. The increase in raw jute prices is due to larger demand engendered by the unsealing, under Government directive in January-February last, of 7½ per cent. of the looms kept idle. Readers will recall that expansion in working looms was ordered in quick succession, first by 2½ per cent. early in January and then by 5 per cent. in February. The effective solution for stock accumulation and higher raw jute prices lies in stimulating the demand for jute goods and in increasing the supply of raw jute. But these results cannot be achieved overnight.

The alternative would be to curtail production of jute goods, which in turn would automatically lead to a drop in the demand for jute and thereby to lower prices for the raw material. But, as the Government seems to believe that there must be plentiful supply of jute goods to meet the possible increase in the demand for them and to maintain prices at reasonable levels, this alternative will not appeal to it. A mere fixation of minimum prices is, however, no solution at all. It will assist nobody. On the contrary, it will lead to undesirable consequences. If the current prices for jute goods are unremunerative to producers, as they seem to be, then the minimum prices will necessarily have to be higher. But the outcome of such a step is not difficult to imagine. It may mean outpricing Indian jute goods in the world markets. It will make it easy for Pakistan and other foreign jute manufacturers to compete successfully with India. Another consequence of this move will be an increase in raw jute prices, which in turn will raise the mills' cost of manufacture. It may be argued that, by fixing a ceiling on raw jute prices, the increase in mills' cost could be averted. Such a step, however, may hamper production of raw jute and even the modest target of 1 million tons for additional output during the second Five-year Plan period may not be reached.

These aspects of the problem are so simple and obvious that it will be most surprising if the Commerce and Industry Ministry, headed by such a shrewd business man and practical student of economics as Mr. T. T. Krishnamachari, is thinking of merely fixing a minimum price for jute goods. It is true that this minister has occasionally tried to stop economic tides in the fashion of King Canute. Nevertheless, it is hard to believe that he will be that foolish in regard to jute goods, the major markets for which lie outside the country and, therefore, beyond his control.

An effective way in which the Government can ensure the financial solvency of the jute industry is, as was indicated by us last week, to guarantee a minimum price for jute goods or to give them an export bonus in cash. This will no doubt amount to subsidising the jute industry, but, as a short-term expedient, there cannot be any serious objection to it. In times of boom, the Government had mulcted the industry of crores and crores of rupees. It will be only in the fitness of things if a part of this amount is expended on the industry for sustaining its strength during the current period of lean days. It would, however, be infinitely better if any scheme for this purpose were related to another designed to reorganise and rejuvenate the industry, so that its benefits may last longer. The Government and the industry will be well advised to consider a plan similar to the one adopted by the late Sir Stafford Cripps for strengthening Lancashire cotton mills. Some special incentives may be offered to those jute mills which are prepared to merge themselves with one another into strong units for the purpose of reducing excess capacity, modernising their machinery and working double shift. There is need for fresh thinking, in order to restore the competitive capacity of Indian jute industry. And the sooner it is done the better.

(*Concluded from next column*)

original target of only 39,000 acres fixed for the first three years. The total area expected to be covered by the 1956 replanting permits is about 28,000 acres. Even after making allowance for the abandonment of the replanting scheme by a few planters, it is estimated that about 24,000 acres will actually be replanted on 1956 permits, bringing the total area so replanted in the first four years of the subsidy scheme to nearly 77,000 acres, as against the original target of 52,000 acres for the period.

BONUS FOR TEA LABOUR

An agreement has been signed recently between the representatives of the I.N.T.U.C. Union of Tea Planters in South India and the United Planters' Association of South India in respect of bonus payable for the years 1952-53 and 1954. It covers about 100,000 workers employed in tea plantations throughout the Madras State. The management of tea plantations had already paid bonus voluntarily for the three years 1952, 1953 and 1954 at 6¼ per cent., 8¼ per cent. and 10 per cent., respectively, of the total earned wages of workers during these years. The workers, however, did not agree to accept it as final bonus and received it only as interim bonus. The dispute for additional bonus for the years 1952 and 1953 was referred to a Special Tribunal and the issue is still pending before it. Meanwhile, the bonus for 1954 and 1955 had become due and the delay in final settlement of the dispute caused restlessness among the workers.

After protracted negotiations and through the good offices of the State Government, an agreement was reached recently in respect of the years 1952, 1953 and 1954. Under this agreement, the managements of plantations have to pay a total bonus of about 33 per cent. of the total annual wages for the three years. This means that they will have to pay an additional bonus of 8¼ per cent. of the total earned annual wages for the three years. It has, however, been agreed that the additional 8¼ per cent. should be on the 1954 earned wages. A notable feature of the agreement is that all the tea plantations have agreed to pay this additional bonus of 8¼ per cent. regardless of profits or losses.

The payment of the additional bonus is expected to be made before 1st July 1956. In the case of estates with mixed crops, they will be treated as tea plantations for the purpose of bonus payments, if 25 per cent. or more of the acreage is under tea.

RUBBER OUTPUT HIGHER

CEYLON'S REPLANTING SCHEME GOES AHEAD

THE output of natural rubber in India during the month of April 1956 amounted to 1,826 tons, which compares favourably with that of 1,279 tons in the previous month. It, however, falls short of that (2,277 tons) in the corresponding month of 1955. The improvement over the previous month means that production has maintained the upward trend for the second month in succession, after the sharp fall from 2,083 tons in January to 976 tons in February.

This trend of production during the first four months of the current year is not unusual; it is in consonance with the trend noted in previous years, as will be borne out by the table below. It will, however, be noted that the improvement in output during the past two months has not been large enough to make good the decline in February. It may also be noted that the April output is the lowest in the last five years.

The following table shows the trend of production during the first four months of the last five years:

(In tons)

	1952	1953	1954	1955	1956
January	1,651	1,992	1,898	1,709	2,083
February	325	390	406	435	976
March	1,127	1,031	1,220	1,329	1,279
April	1,073	2,045	1,967	2,277	1,826

The aggregate output during the first four months of the current year is 6,164 tons, as compared with 5,741 tons in the corresponding period of 1955; it is probably the highest so far recorded for this period.

Consumption of rubber by manufacturers during the month under review aggregated 2,402 tons, as against 2,341 tons in March 1956 and 2,140 tons in April 1955. The increase in consumption in April this year has reversed the downward trend in monthly consumption noted in the previous three months.

The total consumption for the first four months of the year amounts to 9,630 tons, as against 8,911 tons in the corresponding period of 1955, thus maintaining the upward trend for the fourth year in succession. It may be noted incidentally that consumption during this period of the year is nearly 50 per cent. higher, as compared with that four years before.

The foregoing figures of output and consumption for April 1956 show that the shortfall in production of raw rubber during the month was 576 tons, as against 1,062 tons in the previous month. Imports of rubber by manufacturers during the month aggregated 788 tons, as compared with 340 tons in March.

The stocks with estates, dealers and manufacturers as at the close of the month amounted to 5,276 tons, a rise of 202 tons over the month. They, however, represent a decline of 713 tons from those held at the end of April 1955, thus maintaining the downward trend for the third year in succession, having fallen from a high of 9,321 tons at the close of April 1953.

As pointed out before in these columns, the estimated deficit in requirements of rubber for the current year as a whole is estimated at 8,000 tons. India has, therefore, to rely on imports for some years to come, albeit on a declining scale, till full benefit of the replanting schemes drawn up by the Rubber Board, but yet to be implemented, materialises, provided the consumption does not go beyond expectations in the meantime. The cost of such imports may, however, not be heavy, because there is no indication of the possibility of any large rise in world prices of natural rubber, although the scope for increased consumption thereof is large. For, besides the growing tendency to produce more and more synthetic rubber in consuming countries, natural rubber growers are going ahead with their replanting schemes.

Advices from Ceylon point out that it is at present replanting its worn-out rubber area at the rate of well over 20,000 acres per annum. The latest annual report of the Ceylon Rubber Controller on the rubber replanting subsidy scheme released last week claims that the rate of rubber replanting in Ceylon, measured as a percentage of the Island's total rubber area, is the highest among the rubber producing countries in the world. The total area replanted up to March 1956 on the 1953-54-1955 replanting permits under the subsidy scheme was 45,171 acres. When the replanting of the balance of area authorised on 1955 permits is completed, the total area replanted under the scheme during the first three years of its operation will amount to about 52,700 acres, as compared with the

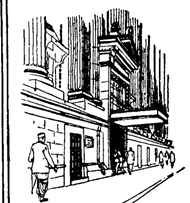
STATE BANK OF INDIA
Successors to the Imperial Bank
Bank with the State Bank
OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.
You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.
The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be — can be made to run more smoothly with the help the Bank can offer.
Why not talk things over with your nearest bank agent, or write for information?


The State Bank's local head office at Bombay, one of more than four hundred offices waiting to serve you throughout India
STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

South America
Established in South America for over 54 years, we offer a complete and informed banking service in this important trading area. Branches in 19 of the principal Central and South American cities. Ask your banker. Enquiries invited. Correspondents the world over.

ATOMIC RESEARCH IN BRITAIN—III

ISOTOPE PRODUCTION

By K. E. B. Jay

RADIOISOTOPES are well known as one of the most useful by-products, so far, of atomic energy work; their value in research, medicine and industry is beyond question. From its earliest days, Britain's Atomic Energy Research Establishment has concerned itself with these materials. Shortly after Gleep—the first pile to be built at Harwell—began operation, it was used to make small quantities, in spite of its low neutron flux, and equipment for isotope irradiations was built into Bepo, Harwell's second pile, from the start. Nor have the requirements of isotope production been forgotten in the new high-flux reactor Dido, which will be capable of making some isotopes, for example, cobalt-60, with considerably higher specific activity than heretofore.

The British production of radioisotopes is now very large. In the year ended 31st December 1955. 20,772 shipments of radioisotopes were made. Of these, nearly 30 per cent. were exported to some 40 different countries; Britain is in fact the largest exporter of radioisotopes in the world.

New Processes

Production of radioisotopes is the responsibility of the Isotope Division at Harwell. For some years, this Division also undertook chemical processing, but, recently, this work was divided between the Division and the Radiochemical Centre, an outstation of the Establishment situated at Amersham, in Buckinghamshire. The Isotope Division at Harwell is now responsible for irradiations in Harwell reactors and for all isotopes that require little or no processing; where the material requires more elaborate treatment, this is done at Amersham.

The Radiochemical Centre was set up originally to process and distribute natural radioactive materials, such as radium and radon, principally for medical purposes, but now the the Centre is concerned more with pile-produced isotopes. New and efficient routine processes have been established for extracting isotopes such as phosphorus-32, carbon-14, and iodine-131, for which there is a large demand.

Carbon-14 is extracted from aluminium nitride irradiated for long periods in the plutonium-producing piles at Windscale, in Northern England. This tracer, the most important of all for biological research, is incorporated in a wide range of complicated organic compounds. The Centre has developed several methods for preparing these compounds; most are made by chemical synthesis but for some, biological methods are preferred. For example, sugars and starches are obtained from carbon dioxide by photosynthesis in the green leaves of tobacco and canna plants, grown in an atmosphere of the radioactive gas. Amino acids, labelled with carbon-14, have been prepared by growing the micro-organism *Chlorella vulgaris* on a medium containing radioactive carbon dioxide and then extracting the acids from the uniformly-labelled vegetable protein so obtained. Altogether some 130 organic compounds labelled with carbon-14 are available from stock.

Industrial Radiography

The Isotope Division at Harwell has developed a number radioisotope sources for radiographical purposes, both industrial and medical. For industrial radiography of thick steel sections, the three isotopes cobalt-60, iridium-192, and caesium-137 provide gamma rays with a suitable range of penetrating powers. For thinner sections, or for sections of light alloys, the much softer gamma rays from thulium-170 have been found satisfactory.

In medical radiography the radioisotope most used so far is cobalt-60, which is replacing radium in teletherapy sources. Cobalt-60 sources with activities up to 400 curies have been made, by irradiation in the Windscale piles, for medical purposes and an 800 curie source is in use at Harwell for studying the chemical effects of radiation.

Small caesium-137 radiographic sources have also been made by pile irradiation, but this isotope is now being extracted from the fission-product waste solutions obtained in plutonium separation at Windscale. For some time separations on a scale of tens of curies have been made at Amersham, and recently the Windscale laboratory separated a caesium source of 1,000 curies, which is to be installed in a British hospital. It is expected that many similar kilocurie sources will be made in the future.

Application to Process Control

The application of radioisotopes to process control in industry, as well as to industrial research, has been given particular attention by the Isotope Division. An industrial advisory service was set up in 1948 to advise enquirers from industry on the use of radioisotopes to solve their individual problems and, in some circumstances, to perform experiments for the enquirer, either in his own works or in the laboratory at Harwell.

This service has proved very popular. It receives 600-800 different enquiries a year, roughly a quarter of which involve some experimental work or at least a visit to the enquirer's factory; this work leads to about 50 new applications of radioisotopes a year.

Applications of radioisotopes to factory operation include the well-established thickness-measuring gauges, in which the absorption of beta or gamma rays is used to indicate the thickness of a continuously-moving belt of material. The thickness of a thin coating of paint or metal on a base material may be measured by beta-ray back-scattering gauges; accurate control of the process is possible, leading to considerable savings in costs. The back-scattering of high-energy gamma rays is used to measure thickness when only one side of the material is accessible; an elegant instrument of this type has been designed primarily to measure the wall thickness of steel pipes in situ, in an oil refinery. Another useful, if perhaps obvious, application to process control is the so-called package monitor; in this, a gamma-ray beam is used to detect failures to fill opaque packages—match-boxes, bottles of pills, and so on—coming off a production line.

Testing Beer Filters

Dispersal of electrostatic charge by means of beta-emitters, such as strontium-90, incorporated sandwich-wise in robust metal holders, has been valuable in paper-making and many other industries. A method for testing the filters used in making beer has been developed which is much more rapid than older bacterial methods; fine carbon granules coated with gold-198 are passed through the filter and the filtrate tested for radioactivity.

Radioisotopes also provide an excellent means for testing industrial mixing process; by using a short-lived isotope and taking advantage of high sensitivity to increase dilution to a maximum, the method can be made completely safe.

The last two applications use the radioactive tracer principle. This is also valuable for detecting leaks, for example, in water mains or in gas-filled electric cables. Water mains are tested by means of sodium-24 in salt solution, pumped through lengths of the main; Geiger counters, placed in holes at intervals along the length of the main, enable leaks to be found quickly and accurately. This method has been elaborated, so that it can be applied to many miles of pipeline and to both oil and water mains. Sodium-24 and tritium have been used for tracing the movement of water through large volumes of soil.

A Tracer Experiment

A tracer experiment on a strikingly large-scale was done in the Thames estuary, to find out how the mud and silt were deposited by tidal movements. Glass, ground into particles of the right size and containing activated scandium, was used as the tracer material. This method has been developed for tracing the movement of undersea sandbanks; it is probably the only one by which such movements can be traced.

The application of radioisotopes to medicine, both for therapy and research, is the province of Britain's Medical Research Council and the hospitals rather than of the Establishment. However, both the Isotope Division and the Radiochemical Centre collaborate closely with individual workers in the field, developing isotopes in special forms and preparing compounds labelled as required.

Hitherto, practically all radioisotopes have been made by pile irradiation, a method which enables a very wide range of active materials to be prepared. Now, however, useful isotopes are beginning to be extracted from waste fission product solution. As far as can be seen at present, it is likely that only caesium-137 (already mentioned) and strontium-90 will be economically worth separating individually, but these will be available as very intense sources, of thousands of curies activity. Moreover, bulk solutions containing mixed fission products could probably be used as intense radiation sources for industrial purposes. These developments may be very important.

Stable Isotopes

Before leaving the subject of isotopes, we must make a brief reference to the production and sale of stable isotopes. The demand for these is much smaller than that for radioisotopes, but they are indispensable in certain researches. The Establishment has a large electro-magnetic separator with which enriched isotopes of some 40 of the polyisotopic elements below uranium have been separated and are usually available from stock. In general, the amount of each element separated lies between one and ten grams, the weight of each enriched isotope being roughly proportional to its abundance.

The isotopes may be supplied deposited on metal foils for use as targets in bombardment experiments. A new electro-magnetic machine has just been completed with which it will be possible to separate the transuranic elements and heavy radioactive nuclides generally. The Establishment also possesses fractional-distillation and thermal-diffusion columns for separating a few other stable isotopes in rather larger quantities; carbon-13, oxygen-18, and helium-3 are examples of these.—*Exclusive to Commerce.*

PAKISTAN AIRWAYS

Mr. M. A. Ispahani, Chairman, Pakistan International Airlines Corporation, before his departure for London, announced in Karachi that the P.I.A.C. Board has approved the purchase of three Vickers Viscounts turbo-prop airliners with an option on another two aircraft. The projected purchase of the modern Viscount airliners is the second new aircraft commitment made by the P.I.A.C. recently under a fleet modernisation and expansion programme authorised by the P.I.A.C. Board of Directors. The first commitment was for the purchase of two Convairs in order to augment and improve internal services immediately. One Convair has been purchased already and negotiations for the other will be finalised soon. Mr. Ispahani is visiting London in connection with the purchase of Viscounts. Mr. K. J. Bhore, Director General of Civil Aviation, Government of Pakistan, who is also leaving for London, will act as technical adviser. Delivery of the Viscounts is scheduled for 1958.

The decision of the P.I.A.C. Board of Directors, according to Mr. Zafarul Ahsan, General Manager, P.I.A., is in line with the policy of world airlines to modernise their fleets. The use of Viscounts will multiply the benefits of air transportation for commerce and the travelling public. By taking this step now, he added, they should be able to bring to travellers the tremendous advantages of faster speeds, silent almost vibrationless flight and a far greater frequency of schedules.

PUSH-THE-BUTTON VOTING

The French National Assembly may soon be voting by button-pushing, if a project of one of its members is adopted, and signs appear favourable. The French Parliament would be following the parliaments of Sweden, Finland and a number of States of the Union in America. The great advantage would be in time-saving, for results would be known immediately and all the long vote-counting cut out. This would save many days a year. The proposal is to have four buttons, one for a vote in favour, one for a vote against, one for voluntary abstention, and one for non-participation.

NEW PRODUCTS AND PROCESSES

Armchairs of Compressed Polyester Resin

A STEEL tube office and household furniture factory [Gispen's Fabriek voor Metaalbewerking N.V. Stationssingel 25 Culemborg (Holland)], has now put on the market an armchair consisting of a lacquered and bake-enamelled steel frame (of 15 m.m.=0.6 in. diameter bar iron) and a seat and back formed by a tub, pressed in one piece under high pressure, of polyester resin reinforced with glass fibre. This material is strong and proof against temperature fluctuations and atmospheric influences. The frames of these armchairs have a light-grey colour, while the tub can be supplied in dark grey, red and off-white. The tub is attached to the frame by means of six rubber tips; the legs are fitted with a flat steel disc held in a grey plastic cap.

Double-walled Nickel Teapot

A metalware factory (N. V. Koninklijke Metaalwarenfabrieken, v/h J. N. Daalderop and Zonen, Tiel (Holland)), produces a double-walled teapot of modern design, specially made to keep the tea thoroughly hot without the use of a spirit stove, tea cosy or tea basket. The insulating space between the double walls causes the tea to keep its temperature during the meal or at teatime. The capacity of this teapot is about 10 cups and it can be filled up again in the usual manner. No stand is needed, as the bottom of the teapot does not become hot.

Better Bulbs

"The greatest single improvement in incandescent light bulb performance in 42 years" was recently announced by the General Electric Company in the United States. Developments now being placed in effect will cause increases in light output ranging from 6 per cent. for household bulbs to 15 per cent., for higher wattage bulbs used in industrial and commercial lighting. No more electricity is required to achieve this improvement. The increased light output is obtained, the Company says, by improving the tungsten filament; positioning the filament lengthwise, or axially, in the bulb; and substituting for the first time double-coiled filaments for singly-coiled ones in 300-watt and larger lamps.

Electronic Eye Sorts Lemons

Electronic eyes are now sorting lemons into five colour categories at the Oxnard, California, plant of the Somis Lemon Association. Six machines equipped with electronic eyes sort and classify 1,128,000 lemons a day. Before lemons could be sorted by machine rather than by manual labour, many technical problems had to be solved. There was the matter of colour alone—five degrees of colour ranging from dark green to bright yellow. The fruit also can be easily bruised and damaged by mechanical equipment. Researchers also had to devise a method of total exposure to the electronic eye for each lemon, so that the most minute discolouration could be detected. The equipment now in use is the result of several years of laboratory research and field experiments. It was made by the Electric Sorting Machine Company of Grand Rapids, Michigan, which also makes sorters for beans, peas, seeds, coffee, peanuts, and plastic materials.

Antidote for Machine Vibration

A simple electronic device which can isolate vibrating machines or reduce their vibration has been built by the Radio Corporation of America. The new device is an electronic means of turning vibration against itself through a detecting and amplifying system which responds instantaneously to each motion of a vibrating machine, either by creating an opposite force or by absorbing the motion. The vibration reducer is a small box-like unit. Several of these units are placed beneath a machine to isolate it from the floor. The device can be used either to reduce the vibration of the machine itself, or simply to prevent the vibration from being transmitted to the floor. Since the system is electronic, the entire process is carried out almost instantaneously, permitting the reducer to counteract or absorb vibrations at speed of thousands of times per minute.

Pellets for Cattle Feed

Cattle of the future may get an entire bale of hay in the form of a shovelful of pellets, Mr. H. D. Bruhn, Professor of Agricultural Engineering at the University of Wisconsin in the United States, predicts. Tests at the University show that most cattle feeds can be made into small pellets. This is done by subjecting hay, corn or alfalfa to tremendous pressures in a pelleting machine. Pressures as high as 20,000 pounds per square inch have been used in one such machine. A practical pressure appears to be from 4,000 to 6,000 pounds per square inch. Pelleted hay or grain, the Wisconsin scientist reports, can reduce labour, the need for maintaining high-quality feed, and cut the cost of storage space, feed-handling equipment and transportation.

Insecticidal Clear Varnish

A paint factory (Vernis-en Verffabriek v/h H., Amsterdam (Holland)), turns out a clear varnish incorporating an insecticide. This varnish can be painted over all existing coats of paints without changing either the colour or the quantity of the base. Six hours after the application of the varnish, the insecticide comes to the surface in a fine crystalline form, perceptible only with the aid of a strong magnifying glass. All sorts of insects which come into contact with the varnish are paralysed within a few seconds and die soon after. The varnish is harmless to warm-blooded creatures. The varnish can be used in the shipping trade, in workshops and storage rooms, which attract many insects and in breeding and hiding places of insects. The insecticide remains active for one-and-a-half to two years, even when the coat of varnish is repeatedly washed with soap suds.

THE BRITISH PETROLEUM COMPANY, LTD.

MR. B. R. JACKSON ON THE TASK AHEAD

THE Forty-seventh Annual General Meeting of the British Petroleum Company, Limited, will be held on 7th June 1956 at Britannic House, Finsbury Circus, London, England.

The following is an extract from the circulated statement of the Chairman, Mr. B. R. Jackson:

"During 1955 substantial progress was made in all aspects of the B.P. group's operations. Our total sales increased by 15 per cent., crude oil production by 25 per cent., and refining throughput by 23 per cent., while exploration and marketing operations were further diversified and extended. The Company thus played a full part in meeting the free world's expanding demand for petroleum, which increased by 11 per cent. in 1955, continuing the post-war trend which has resulted in a doubling of world consumption of oil products in the last ten years.

Consumption Expected to Increase

"The roots of this strong demand lie not only in the growth of industrial activity and improving standards of living; they also, in the Eastern Hemisphere, lie in the more limited capacity for increasing output of the other major sources of energy, especially coal. There is every indication that this combination of factors will maintain the post-war rate of expansion in world petroleum consumption until nuclear power becomes available to supplement world energy resources on a substantial scale. Thus, in the next ten years the world petroleum industry may well be again called upon to double its present output. The rate of expansion can be expected to continue, as now, to be greater in the Eastern Hemisphere, where this Company mainly operates; and the Middle East oil-producing territories, in which we have so substantial a position, are expected to contribute an increasingly large proportion of the world's requirements.

"The discovery, production, refining, transportation and distribution to the consumer of the oil supplies needed to meet such a future demand can only be achieved by large-scale capital expenditure on the facilities necessary for each of these operations. The oil industry generally, and the B.P. group as one of its major components, will have to provide for the greater part of this expenditure from its own resources. If the industry is to maintain its record of meeting all consumers' needs, the performance of the task which lies ahead of it will require both adequate economic price levels and the continued ploughing back of a high proportion of earnings to finance future growth.

The Accounts

"The consolidated trading profit and other income for 1955 before providing for depreciation and overseas taxation was £139,817,943, as compared with a corresponding figure of £118,228,792 for 1954.

"Depreciation totalled £22,143,401, as compared with £30,406,091 for 1954. The reduction of £8,262,690 is mainly under the heading of fixed assets on which expenditure in 1955 was considerably lower than in 1954. The reduced capital expenditure marks the virtual completion of the recent heavy programme of refinery expansion and tanker construction, but as indicated by the figures totalling £97,200,000 mentioned in the accounts, capital expenditure is certain to be heavy if the Company is to keep pace with the frequently changing improvements and expansion of the oil industry.

"The 1955 figure of overseas taxation of £62,691,602 compares with £42,879,851 for 1954, the increase in the main being due to our larger offtake of oil from the countries concerned. Provision for United Kingdom taxation, after double taxation relief, amounts to £8,697,875.

"The amount available for reserves and dividends is £46,189,539, as compared with £17,043,404 for 1954. In view of anticipated requirements for future capital expenditure, your Directors have placed £28,500,000 to the general revenue reserve and have recommended a final dividend, on the ordinary stock, of two shillings per £1 stock unit, free of income-tax, making a total for the year of three shillings per £1 stock unit, free of income-tax. The total now standing to the credit of general revenue reserve is £75,000,000.

"The total capital expenditure of the Group during 1955 was approximately £43,000,000.

Production

"Our total crude oil production in 1955 was 46,000,000 tons, over 9,000,000 tons more than in 1954, the increase being mainly due to larger production in Iran and Kuwait.

Refining

"Our total refinery throughput in 1955 was 29,500,000 tons, 5,500,000 tons more than in 1954. This increase was mainly due to 1955 being the first complete operating year of Aden refinery, and the first operating year of Kwinana refinery in Western Australia, commissioned in February 1955; also to our share of processing at Abadan during its first complete year's operation under the consortium agreement of October 1954.

"In Great Britain, the total throughput of our Kent, Llandarcy, and Grangemouth refineries decreased by some 2,000,000 tons to 8,500,000 tons; this being due to the major increases in offtake from Aden, Kwinana and Abadan replacing the uneconomically routed products which had, during the last four years, to be drawn from the United Kingdom refineries to assist in the supply of our Eastern markets."

The statement then referred to the refinery operations in France, Germany, Belgium, Italy, Aden, Kuwait, Australia and Iran.

Sea Transport

"The British Tanker Company's fleet now consists of 144 ships totalling 2,018,000 deadweight tons, and we have also about 2½ million tons of tanker shipping on charter. There are now 41 ships totalling 1,225,500 deadweight tons under construction or on order for the British Tanker Company. The estimated cost of this building programme exceeds £80 million.

Distribution and Sales

"The B.P. group's sales of crude oil and refined products in 1955 attained the record level of 48 million tons, an increase of more than 6 million tons or 15 per cent. over the 1954 total.

"The sales expansion reported last year in India, Pakistan, the Middle East, South and East Africa and neighbouring markets, has continued.

"The international coverage of B.P. Aviation Service and our sales of aviation fuels are steadily expanding.

"The B.P. International Oil Bunkering Service, now in its thirty-sixth year of operation, is established at more than 160 ports on world shipping trade routes.

"Sales of our lubricants have increased very satisfactorily. B.P. Energol brands have been introduced successfully in the following new areas: Portugal, Spanish Morocco, Tangier, Gibraltar, British and French West Africa, Iceland and Madeira. Our new motor oil, B.P. Energol Visco-Static, has established itself in a foremost position as a multigrade oil in the United Kingdom, on the Continent and in Australia. Good progress also continues to be made in the international marine oil market."

INSURANCE PROBLEMS OF PEOPLE IN LOW-INCOME GROUPS

RESULTS OF SURVEY CONDUCTED IN HYDERABAD

NOW that life insurance has been nationalised, it becomes the responsibility of the Government to ensure that its message is carried to wider sections of India's population. In this country, where the *per capita* insurance is no more than Rs. 30, there is certainly scope for extending the benefits of life insurance. But this is a task that calls for expert knowledge and efficient organisation. In this context, the Institute of Economics, Hyderabad (Director: Prof. S. Kesava Iyengar), deserves to be congratulated on the exhaustive survey it has conducted into the insurance problems of the low-income groups in Hyderabad-Secunderabad City. The Survey brings out the inadequacy of life insurance in these groups, and also analyses the reasons as to why insurance has not been popular. The Survey can be said to have a country-wide significance, inasmuch as conditions elsewhere in India are not likely to be very different from those in the Hyderabad-Secunderabad area. Appropriately enough, Mr. Mehdi Nawaz Jung, Minister for Rural Reconstruction and Medical Public Health Services, Hyderabad Government, in his brief introduction to the Report of this inquiry, has commended the Report "for careful study by the public as well as Government Departments interested in the augmentation of social welfare."

At the outset, it may be useful to set out the scope and the results of this inquiry. Briefly, they are:

(1) The inquiry, which was confined to income groups up to Rs. 500 per month, covered 4,302 samples out of 19,439 employees in shops and establishments as per the record of the Labour Department; thus, the Survey covered about 22.13 per cent. of the employees.

(2) Out of the 4,302 samples covered by the Survey, only 407 are insured and have 482 policies —all endowment policies.

(3) The face value of 482 insurance policies is Rs. 12.51 lakhs with a cash value of Rs. 1.71 lakhs. Advances against policies account for Rs. 7,231. If all the 4,302 samples had been insured at the proportions obtaining in this inquiry, the face value of policies would have been Rs. 132.24 lakhs.

(4) The Survey reveals that, as the household increases in inmates, the *per capita* protection declines—from Rs. 3,116.67 (single-member household) to Rs. 321.62 (9-12 size group).

(5) Only 64 out of 407 insured samples have insurance protection beyond the age of 40.

(6) The total monthly premium is Rs. 5,477 or 8.46 per cent. of the income and the total annual premiums work out to 5.25 per cent. of the face value of the policies.

(7) There are 89 samples with lapsed policies, the face value being Rs. 1.58 lakhs. These included 16 cases where the policies are capable of renewal but have not been renewed due to inability to pay arrears of premiums.

To turn now to some of the details of the data collected by the investigators. Only 407 out of 4,302 samples, as already stated, have life insurance policies, the total face value being Rs. 12.51 lakhs. The distribution of insurance among the different income-groups is given below:

Income range	No. of samples	No. of insured samples	No. of policies	Percentage of (2) to (1)
Rs.				
1-54	1,927	12	12	0.62
55-100	1,700	127	130	7.47
101-150	357	97	103	27.17
151-200	144	68	75	47.22
201-250	71	38	47	50.70
251-300	37	23	42	62.16
301-500	66	44	73	66.66
Total ..	4,302	407	482	9.46

Among the 407 insured samples, there are in all 482 policies—all of them endowment policies. The contract period ranges from 10 years to 35 years, the most popular being 20-25 years. The smallest policy is for Rs. 500 and the largest for Rs. 25,000. The Survey reveals that there has been no instances of female life insurance. Further, in all insured cases, insurance agents "took the initiative, approached the parties and took out policies." Even in the case of the people employed in insurance offices, the initiative, it is stated, did not come from the insured. This observation serves to lend weight to the maxim that insurance is invariably sold and not bought.

An interesting feature of the Survey is the attempt made by the investigators to know from the persons interviewed the reasons for non-insurance. Since the listing of all reasons would make the overall picture vague, only the predominant reason was recorded in each case. The predominant reasons are:

Number of Cases

Ignorance of life insurance 578; no saving margin 520; literature in unknown language 349; laborious process in payment of premiums 321; too young by age 317; inability of insurance agents to explain 291; fear of lapse 245; laborious process in securing loans 229; no necessity: no dependents 213; laborious process in settlement of claims 136; fear of medical examination 119; laborious process in taking out policies 118; objection of wives 113; no credit facilities for prompt payment of premiums 112; disbelief in long-term contracts 87; fear of liquidation of the insurance company 74; medically unfit 34; religious objection 27, and more reliable avenues of investment 12—Total 3,895.

If there is to be further progress in life insurance, something must be done to remove the obstacles in the way of taking out policies. There is, of course, one important reason, namely, absence of "saving margin" and this cannot be set right immediately. But there are other causes which deserve notice. Thus, ignorance of life insurance could be eradicated through more publicity. Similarly, the "laborious process in securing loans" could be set right through appropriate administrative action.

The total monthly premium which is paid by the 407 insured samples in the Survey is Rs. 5,477 while their total income is Rs. 64,967 per month. Thus, the percentage of premium to total income works out to 8.46, the range of variations being 6.81 in the income group Rs. 101-15 and 10.81 in the income group Rs. 251.30. The Report points out that 10 per cent. of income is considered as generally commensurate in the income ranges included in this inquiry, and so far as insured samples are concerned, the extent of protection may be considered as not unsatisfactory (the overall percentage being 8.46 in this inquiry). But it should be remembered here once again that 3,895 samples have no life insurance, and the percentage of insurance premiums is zero. Among the different income ranges, the percentage of premium to income stands as follows:

Income ranges Rs.	*Percentage of insurance premium to income*
1-54	9.17
55-100	7.04
101-150	6.81
151-200	7.76
201-250	8.31
251-300	10.81
301-500	10.31
Overall	8.46

The percentage is high in the lowest income group and in the Rs. 251-500 group. It generally descends as the income range rises between Rs. 55 and Rs. 150. The Report adds: "No particular relation between insurance premiums and incomes is discernible: it should be remembered that life insurance is only one avenue among several others for saving."

The average face value of insurance protection varies from income group to income group. In the income range Rs. 1-54 the average face value is Rs. 1,166, in the Rs. 55-100 range it is Rs. 1,438, in the Rs. 101-150 range Rs. 2,433, in the Rs. 151-200 range Rs. 3,182, in the Rs. 201-250 range Rs. 4,669, in the Rs. 251-300 range Rs. 7,348 and in the Rs. 301-500 range Rs. 6,026; the overall average is Rs. 3,074. Thus, as the income range rises, insurance protection also rises, except in the Rs. 301-500 group. The Survey explains this exception by pointing out that provident fund contributions are particularly heavy in this group. The *per capita* insurance figures for the different income-groups are given below:

Income range	*Per capita* protection per insured household	*Per capita* protection per inmate of all sample households
Rs.	Rs.	Rs.
1-54	341.46	2.78
55-100	370.39	27.51
101-150	530.23	131.30
151-200	630.78	264.82
201-250	1,012.65	414.21
251-300	1,352.00	884.21
301-500	978.41	535.85
Overall	664.09	81.86

Lapses constitute one of the most intractable of India's insurance problems. The inquiry reveals that it found 89 samples with lapsed policies, the face value of such policies being Rs. 1.58 lakhs. Growing consumption expenditure, it is stated, is by far the most important cause of lapses. This reason accounted for 68 cases of lapsed samples. The other causes were: downgrading of employment (6 cases); liquidation of insurance company (3 cases); quarrel with the agent (1 case); other causes (5 cases). Analysing the causes still further, one finds that growing consumption expenditure accounts for all lapses in the Rs. 1-54 income group and for 28 out of 44 lapsed samples in the Rs. 55-100 income group. In the Rs. 101-150 income group, this cause was responsible for eight cases of lapsed policies, in the Rs. 151-200 income group for 12 lapses, in the Rs. 201-250 income group for four lapses, in the Rs. 251-300 income group for six lapses and in the Rs. 301-500 income group for four lapses. Commenting on the occurrence of this cause even in the upper income ranges, the Report points out that it is due to the shrinkage in the saving margin in all income groups Rs. 1-500, thanks to the fall in the purchasing power of money and the rise in the respective standards of life or in the size of the family. This observation deserves to be underlined for the reason that any further fall in the purchasing power of money through inflation during the period of the next Five-year Plan may conceivably aggravate the problem of lapses.

INSURANCE BILL

Several important points were made by the Union Finance Minister, Mr. C. D. Deshmukh, in the course of the debate on the Insurance Corporation Bill in the Lok Sabha which passed the Bill last week. To some of these points, reference has already been made in this journal. Among others, mention deserves to be made of his views on organisation of the Corporation, compensation and general insurance.

So far as organisational matters are concerned, Mr. Deshmukh said that the Government proposed to have: (1) Northern zone, with headquarters at Delhi, covering the areas of the Punjab, Rajasthan, Himachal Pradesh and Jammu and Kashmir; (2) Central zone, with headquarters at Kanpur, covering Uttar Pradesh and the proposed new Madhya Pradesh; (3) Eastern zone, with headquarters at Calcutta, covering Bengal, Assam, Bihar, Orissa, Manipur, Tripura and Andaman Islands; (4) Southern zone, with headquarters at Madras, covering Andhra, Madras, Kerala and Mysore, and (5) Western zone, with headquarters at Bombay, covering Bombay, the new States of Maharashtra and Gujarat. He revealed that the Government's intention was to avoid over-centralisation. He said: "Only matters like investment and other big policy matters will be dealt with at the Centre. Most of the other matters will be delegated to the zones. There will be further delegation to the division offices and it is our intention that they should more or less function as head offices of the Corporation with a wide measure of autonomy."

In the course of the debate, some members complained that compensation was not only over-generous but "unconscionably over-generous." Replying to these critics, Mr. Deshmukh said: "When we give compensation, we try to give compensation. I deprecate this tendency first of thinking in terms of compensation and then trying to work out ways of reducing it. On the whole, we are trying to give compensation and not trying to practice a fraud on the law."

Mr. Tulsidas Khilachand, through a series of amendments, urged that the insurers should be paid compensation with interest at 3½ per cent. from the date on which life insurance was nationalised. He suggested 31st December 1956 as the target date for the payment of compensation. Mr. Deshmukh said he could not accept this proposal. He added: "We are ourselves most anxious that the compensation should be settled and paid as quickly as possible. We, therefore, do not anticipate any delay." He estimated the total compensation likely to be paid to companies at Rs. 450 lakhs. He was quite convinced that the compensation that was being offered was fair and reasonable to the insurers and not unfair to the community. The House accepted an amendment moved by the Finance Member, providing for additional compensation to displaced insurers.

The Finance Minister reiterated his earlier stand that no useful purpose would be served by nationalisation of general insurance. He, however, added: "In this country, we are aware, as in life insurance, there are malpractices in general insurance also. If we find there is no improvement in that respect, we shall be forced to re-examine this question but only in that context." He said that the Government decided not to nationalise general insurance, because that was part and parcel of the private sector of trade and industry and functioned on a year-to-year basis. The commissions and omissions in the conduct of the business did not directly affect individual citizens. Again, that kind of policyholders did not stand in need of protection. On the contrary, life insurance business, he said, concerned individuals whose life savings might be affected by acts of folly on the part of those who were in control of that business. Moreover, accumulation of vast funds in private hands carried with it the danger that the funds might not be used in the interest of the community. Further, the total funds available in general insurance was less than Rs. 50 crores. From the point of view of the second Plan, nationalisation of general insurance, Mr. Deshmukh pointed out, was not going to offer any significant assistance.

PRINTING FIRM IN LONDON HAVE FOR SALE

The following machinery and will send full details on request:

ONE fully Automatic Victoria Front Printing Machine.
ONE M. A. N. Fully Automatic Printing Machine.
ONE Linotype, 3 Magazines, etc.
ONE Intertype, 3 Magazines, etc.

All the above machinery is in very good condition and can be inspected at our premises.

Electricity bills are a problem, and not only to the recipient. It is not surprising, therefore, that Electricity Supply Companies turn to mechanisation in their Billing Departments, in order that their bills may be promptly and accurately despatched. Mechanisation, of course, means Hollerith, and the Electricity Undertaking in Bombay despatches 170,000 bills per month prepared in this way. In Calcutta the figure is 190,000, in Madras 42,000 and in Kanpur 40,000. May we talk Hollerith with you?

GENEVA CONFERENCE OF G.A.T.T. ENDS

FURTHER TARIFF CUTS AFFECTING WORLD TRADE WORTH $2,500 MILLION

THE protocol of acceptance for new tariff reductions, signed by the representatives of 22 member-countries of the General Agreement on Tariffs and Trade—G.A.T.T.—at Geneva on Wednesday last week, marks another important step forward towards the establishment of a free and multilateral system of world trade. The protocol covers a wide range of tariff concessions in the form of lower or bound tariffs; they benefit over $2,500 million of international trade in value; the new tariff schedules, it is said, will be announced on the 7th inst., after the technical work of preparation has been completed. With these schedules, the whole Agreement will cover more than three-quarters of world trade for which tariffs are now bound and subject to international supervision.

The negotiations at Geneva constituted the fourth multilateral attempt under the G.A.T.T. to reduce tariff barriers. The previous rounds of negotiations, it will be recalled, were held at Geneva in 1947, at Annecey in 1949 and at Torquay in 1950-51. These rounds were considered to have "well nigh exhausted the possibilities of product-by-product tariff bargains between high and low tariff countries." In October last, the contracting parties to the G.A.T.T. exchanged the lists of products on which they were interested to receive tariff concessions from their principal suppliers. Owing to the wide range of differences in levels between existing tariffs, the rule was duly recognised that the binding of low tariffs was, in principle, equivalent to the reduction of high tariffs.

The Main Purpose

The main purpose of the latest round of negotiations was to take advantage of the new powers conferred on the U.S. President to cut tariffs by the renewed Reciprocal Trade Agreements Act. Under this Act, the President may reduce any rate of duty in excess of 50 per cent. *ad valorem* to that level. He can also reduce the other rates up to 5 per cent. of their January 1955 level in each of the next three years, the first one being negotiable before 1st July 1956. The American delegation to the recent Geneva talks was, however, empowered to negotiate the three slices at the same time under the proviso that they would be implemented over three years.

The results achieved at the Geneva Conference, some claim, markedly exceed expectations. It is, for instance, pointed out that, in addition to the U.S., other countries, including Germany and Italy, had substantial concessions up their sleeves. These eventually gave substance to some 60 bilateral agreements concluded among 22 countries. From the world trade policy angle, the participation of the U.S., of course, was of great interest. For whatever the actual concessions granted by the American delegation, the main problem as seen by the other contracting parties was to have the U.S. acting on a low barrier trade policy.

Speaking at the closing session of the Conference, Mr. Dana Wilgress, Chairman of the G.A.T.T., claimed that, as a result of the Conference, the mass of tariff concessions, already embodied in the General Agreement, had been significantly extended by the addition of concessions affecting trade to the value of over $2,500 million. Mr. Wilgress no doubt admitted that the extent of the reduction of individual rates of duty had been limited for a variety of reasons, with some gratifying exceptions, most of the concessions tended to vary between a cut of 15 per cent., on the one hand, and the binding of existing rates, on the other. Nevertheless, he declared that, as this Conference followed extensive negotiations which had taken place since 1947, "we can certainly feel greatly encouraged at the further progress we have made at the Conference in the vast effort to scale down tariff rates throughout the world."

A Warning

Expressing opinions more or less similar, Mr. C. W. Sanders, Adviser on Commercial Policy to the U.K. Board of Trade, said that, as measured by the area of trade covered, the latest tariff reductions constituted a useful addition to what had been done at the G.A.T.T. conferences to reduce and stabilise tariffs on a mutually advantageous basis. He, however, sounded a note of warning to the so-called "no tariff" countries on the Continent that Britain's participation in any original mechanism of tariff cuts would be difficult to secure. Mr. Sanders was prompted to utter this warning by the pressure of the Continental "no tariff" countries for another round of tariff reduction as revealed in the closing speeches of their delegation. The most outspoken on behalf of these countries was Baron C. A. Bentinck, the Netherlands representative, who frankly expressed disappointment and urged that new steps should be taken for "a meaningful reduction of the disparity of European tariffs."

Quota Barriers

Whatever may be the comments made on the outcome of the Geneva Conference of the G.A.T.T., the Conference has at least provided an opportunity for further tariff negotiations on a world-wide basis, including the U.S. Even so the fact remains that the work of reducing tariffs would, as Mr. Dana Wilgress rightly pointed out, be of doubtful value, if the G.A.T.T. could not eliminate the quota barriers "that are even more restrictive than tariffs and much easier to apply." Indeed, there is no exaggeration whatever in the statement of Mr. Wilgress that "we must all of us feel a certain sense of anxiety that the ratification of the Organisation for Trade Co-operation (O.T.C.), the Governing body of the G.A.T.T., still remains uncertain." After all, there are few fields of international activity where there is more need for co-operation than in that of international trade.

India dropped out of the Geneva tariff negotiations, since it did not have any concessions either to be offered or to be received. Similarly, Greece and Nicaragua did not participate in the negotiations.

INDO-BURMESE TRADE

The discussions relating to Indo-Burmese trade, held at New Delhi recently between the Indian delegation led by Mr. Ajit Prasad Jain and the Burmese delegation led by Mr. U. M. A. Rashid, Burma's Minister of Trade, Development and Labour, have ended in success. It has been agreed between the two countries to conclude a fresh trade agreement designed to step up the volume of trade between them "to as high a level as practicable." The broad outlines of the proposed agreement have been discussed and the two Governments have expressed their willingness to accord all possible facilities to promote exports to and imports from the other country.

In the past year, there was a sharp setback in Burma's exports to India. The aggregate value of exports from that country to India during 1955 was thus only Rs. 22.71 crores, as against Rs. 44.16 crores in 1954, while the value of its imports from India was lower at Rs. 13.29 crores, as against Rs. 16.41 crores. In other words, the favourable balance of trade which Burma enjoyed with India has narrowed down, from Rs. 27.75 crores in 1954 to Rs. 9.42 crores in 1955.

Pending the conclusion of the proposed trade agreement, the Government of India has agreed to the purchase of 2.0 million tons of rice from Burma over a period of five years commencing from 1st June 1956. This arrangement, it is agreed, will provide the necessary means to enable Burma to obtain a larger proportion of its requirements from India. On its part, the Burmese Government has undertaken to provide adequate facilities for the trade between the two countries "to be developed to the highest practicable level." The price of Burmese rice is fixed at £34 per ton for 1956, at £33 for 1957 and at £32 for 1958. The price for the remaining two years—1959 and 1960—will be fixed by mutual agreement.

METRIC SYSTEM OF WEIGHTS AND MEASURES

At the meeting held at New Delhi last week, the Standing Metric Committee of the Government of India approved of the revised draft covering the standards of weights and measures. The revised draft is much wider in scope than the one prepared earlier, inasmuch as it covers, in addition to standards of weight, length, area, volume, and capacity as covered by the earlier one, also standards of mass, time, temperature, electric current and luminous intensity. The revised draft lays down a maximum period of ten years within which the metric system of weights and measures should be adopted throughout the country. The date for the introduction of the metric system of weights and measures in certain sectors has been tentatively fixed as 1st January 1958.

The Committee urged the Government to expedite the introduction in Parliament of the Bill giving effect to the implementation of the revised draft. It further urged that, after the adoption of the Bill, a conference of the representatives of State Governments should be convened for consultations on steps to be taken for the early adoption of the new system. Meanwhile, steps should be taken, according to the Committee, for the manufacture of an initial quantity of standard weights and measures in ordnance factories for being supplied to the interests concerned. The Indian Standards Institution is expected to produce the designs of new weights and measures by October next. The Committee decided to accept *in toto* the international nomenclature for the metric system. This decision was a sequel to the majority view of the sub-Committee which had gone into the question earlier. It felt, at the same time, that a sample survey should be undertaken in order to assess the prospective demand for weights and measures.

The Committee also took four other decisions. First, immediate consultations should be held with the Union Education Ministry over the revision of educational curricula, with a view to giving greater importance to the metric system of measurements. Secondly, as a preliminary to the ultimate publication of official statistics in metric units, a beginning could be made by showing aggregate and summary data in the old and new systems. Thirdly, the form of organisation needed to promote the adoption of the metric system in the private sector should be taken up for discussion at the forthcoming meeting of the Central Advisory Committee for Industries. An advisory and consultative cell is proposed to be set up under the Standing Metric Committee to advise private establishments on the adoption of the metric system. Fourthly, a quarterly metric journal, as well as *ad hoc* bulletins, should be published in order to make the knowledge of the new system universally available.

During the discussions, it was revealed that action was being taken with regard to the earlier recommendation of the Committee that the Government of India should join the International Bureau of Weights and Measures.

PLASTIC INDUSTRY IN INDIA

Plastic goods valued at Rs. 14.6 lakhs were exported from India during 1954-55. Revealing this during question hour in the Lok Sabha the other day, Mr. M. M. Shah, Minister for Industrial Development, gave the details of the steps taken for the development of the plastic industry. According to him, all the raw materials required by the industry, as well as machines, are allowed to be imported freely. Phenel formaldehyde, which is one of the essential raw materials for the industry, has been given tariff protection and the duties levied on the chemical raw materials used in its manufacture are permitted to be refunded to those who have the minimum production of 200 tons. Finished plastic goods, for which there is sufficient capacity in the country, are not generally permitted to be imported. The Government has obtained the services of foreign experts under the U.N.T.A.A. Programme for imparting to the industry knowledge about the latest developments in the processing of goods, as well as designing tools. Encouragement is given to the Indian *entrepreneurs* to collaborate with foreign manufacturers of plastics raw materials to set up plants for their production within the country.

The Plastic Sectional Committee of the Indian Standards Institution is engaged in drawing up standards for plastics raw materials and various finished plastic goods, particularly those meant for export. The Plastic Research Committee of the Council of Scientific and Industrial Research sponsor investigations which have a direct bearing on the industry's development. In order to step up exports, an Export Promotion Council for the industry has been set up. A rebate on import duty on some of the major raw materials used in the manufacture of exported plastic goods is granted and additional licences for such imported raw materials are issued under the scheme of export promotion. Plastic goods industry has been enjoying tariff protection since 1950.

The services of the United Nations expert are useful in the designing and construction of moulds of various plastic articles. The expert has offered advice to four manufacturers, some of whom have been able to design and construct the moulds themselves. The mouldings so obtained are quite comparable with those obtained from imported moulds. With the assistance of the expert, a blue-print is prepared for setting up a central tool room for manufacturing moulds for the plastic industry. Details of these are given to the All-India Plastic Manufacturers' Association, in order to examine the possibility of setting up a central tool room with the assistance of the Industry.

FORWARD TRADING IN CASTORSEED

The Government of India has brought under its regulation forward contracts in castorseed in the whole country, except the State of Hyderabad for the time being. A notification to this effect was issued on Wednesday last week by the Government under section 15 of the Forward Contracts (Regulation) Act, 1952. Accordingly, forward contracts, barring non-transferable specific delivery contracts, entered into on or before 23rd May 1956, shall be deemed as closed at the rate prevailing at the time the forward markets in the commodity closed on that day. Hitherto, it may be noted, section 15 of the Act was applied to castorseed only in Greater Bombay. Consequently, while forward contracts in castorseed could be entered into in Greater Bombay only under the auspices of a recognised association, in other areas, the same could be freely entered into under the auspices of any association. The application of section 15 to the other parts of the country is a prelude to confine futures trading in castorseed only to recognised associations in certain closer centres. Accordingly, the Commission may soon be expected to take the necessary measures for licensing the trading bodies in the towns chosen by it.

CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1956

An encyclopædic work of reference for Businessmen and Investors

(*More comprehensive than others*)

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is proof positive of its superiority over any other publications of a similar nature.

The information given about each company relates to its date of registration, nature of business carried on, managing agents and their remuneration, Directors and their share qualification, details of capital and shares, capital history, share registration fee, name of Auditors, period to which accounts close, date of meetings, summary balance sheet, and progress statement containing provisions for taxation, depreciation, allocation to Reserves, net profit, amount carried forward, dividends, highest and lowest prices, etc., for ten periods.

CONTENTS:—A Review of 1955; Statistics of Second Plan; Investment of Trust Money; Approved Investments; Attestation of Lady's Signature; Income-tax and Stamp Duty; Estate Duty Act and Rates; List of Liquidated Companies (1939-55); Preference Dividends in Arrears; Rights of Preference Shareholders; Stock Exchange Committee; Stock Exchange Members; Stock Exchange Holidays; Stock Exchange Rules; Central and State Government Loans; Municipal and Port Trust Loans; Banks and Railways; Tea Companies—Rupee and Sterling; Malayan Rubber Companies; Cotton Mills; Coal Companies; Jute Mill Companies; Mining and Engineering Companies; Sugar and Electric Companies; Insurance Companies; Interest Table; Exchange Calculator.

Price **Rs. 12/8.** Postage **Rs. 1/13** extra.

COMPENSATION TO MYSORE GOLD MINING COMPANIES

BREAK-UP VALUE OF ASSETS

THE talks between the Mysore Government and the representatives of the Kolar Gold Mining Companies on the quantum of compensation to be paid to the gold mining companies in the event of their nationalisation have almost broken down, according to reports appearing in a section of the daily Press. It is further stated that the matter would now be referred to the State Legislature. The possibility of the Central Government's intervention in the matter is, however, not ruled out. It will be recalled, in this connection, that, in the course of the talks held in New Delhi between the representatives of the Mysore Government, the Government of India and the Gold Mining Companies, in April last, on the question of nationalisation, the Government of India, while giving its approval to the principle of nationalisation, impressed upon the State Government the need for ensuring adequate and just compensation. The Government of India was also keen that, when the question of quantum of compensation to be paid was considered, the State Government should bear in mind that the latter was dealing with a foreign company and that nothing should be done which would impair the confidence of foreign investors in India. Further, the Union Government wanted the issue to be settled as early as possible. It is, therefore, obvious that, unless and until a compromise is reached between the Mysore Government and the companies on the quantum of compensation, there will be no nationalisation of the gold mines.

It may, however, be noted that the State Government has committed itself to paying "fair compensation" to the Companies. The main point of contention between the Mysore Government and the Companies is "what is fair compensation." The Government's estimate of fair compensation is the market value of the Companies' shares before the idea of nationalisation was raised, while the Companies demand the total value of assets *less* liabilities, *plus* the compensation for loss of earning power due to premature termination of leases. On the basis of the market value of the shares, as specified by the State Government, the compensation works out to Rs. 60 lakhs, while the Companies' claim runs to a figure between Rs. 6 crores and Rs. 8 crores. The Companies have submitted that the compensation should be based on an impartial valuation by experts. The Government does not seem to be willing to agree to this suggestion. If an agreement is not reached between the Companies and the Government by resuming negotiations and if it is left to the State Legislature to decide the issue, then the Companies cannot expect to get anything more than that offered by the Government. But it is a moot point whether the Government of India would give its approval to the State Legislature's resolution, for the very fact that it asked the parties to the dispute to discuss the issue again implies that the State Government's offer is not fair even in its opinion. It would, therefore, be in the mutual interests of both the parties to refer the issue to an impartial body of experts, with the distinct understanding that the Government would abide by the decision of the expert body.

The market value of shares of a joint-stock company cannot always be taken as the measure of intrinsic worth of the company concerned. It may be highly inflated or deflated on account of speculative activity and other causes, such as a change in economic weather. In the case of the Kolar Gold Mining Companies, when the State Government's intention to nationalise the mines was announced by the Chief Minister on 18th June 1955, the shares had already been depressed, following the bogey of nationalisation raised as far back as in 1949 when negotiations were conducted for the new leases. The shares were also affected by the imposition of a heavy royalty and the steep fall in gold prices from the peak of 1950. It may be recalled that, under the new agreement which the Companies entered into with the Mysore Government in 1949, the Companies had to pay, in addition to the 5 per cent. royalty on sales of gold and the additional royalty payable under the leases, a substantial share of the net surplus, known as "contribution," in consideration of the Government's removing the gold duty. At that time, on the basis of the then prevailing price of gold, it was expected that the Government would receive between Rs. 25 lakhs and Rs. 30 lakhs per annum by way of "contribution" from the four mining companies then operating. Although the Companies have not been paying any contribution or additional royalty to the Government since 1952, as the net surplus has suffered a substantial shrinkage due to various factors, the aforesaid causes had a depressing effect on the Companies' shares. To take this depressed value as the basis would be quite unfair. In this context, an interesting analysis of the break-up values of the Companies' shares, recently made by the *Investors' Chronicle*, London, will be read with interest by the Indian shareholders of the Companies. The following table prepared by this journal shows the break-up values of the three existing Companies, namely, the Nundydroog, the Champion Reef and the Mysore Gold (K.G.F.) on the basis of their balance-sheets as on 31st December 1954:

—	Nundydroog	Champion Reef	Mysore Gold K.G.F.
Capital	£283,000 (10s. per share)	£325,000 (10s. per share)	Rs. 81,33,400 (Rs. 5 per share)
Price	7s. 6d.	5s. 6d.	3s.
Net U.K. liquid assets*	4s. 6d.	3s. 6d.	..
Net cost of K.G.F. Co.	3s.	2s.	3s.
Net liquid assets of K.G.F. Co.†	7s. 6d.	12s. 3d.	3s. 6d.
Fixed assets of K.G.F. Co.	13s. 6d.	14s. 3d.	8s.
Total net balance-sheet value of K.G.F. Co.	21s.	26s. 6d.	11s. 6d.
Tax and other possible liabilities of K.G.F. Co.	3s.	10s.	1s. 9d.
Capital expenditure during 1954	3s.	3s.	6d.

* After allowing 10 per cent. depreciation on the value of gilt edged holdings in December, 1954.
† After deducting reserve for retirement pay, silicosis, compensation, etc.

The foregoing analysis was prepared from the point of view of investors in the U.K. holding shares of the mines. So far as Indian investors in the rupee companies of the Kolar Gold Field Companies are concerned, the main point of interest is the net balance-sheet value of the three companies, which, as will be seen from the table, are: 21s. per share for Nundydroog, 26s. 6d. per share for Champion Reef and 11s. 6d. for Mysore Gold. The rupee equivalents of these are: Rs. 14, Rs. 17-10-8 and Rs. 7-10-8, respectively. As against these, the 10s. paid-up shares of the Nundydroog are being quoted on the Madras Stock Exchange at Rs. 6-9, the 10s. paid-up shares of the Champion Reef at Rs. 4-7 and the Rs. 5 paid-up shares of the Mysore Gold (K.G.F.) at Rs. 2-6. If the Mysore Government finally agrees to the principle of paying compensation at the net value of the assets, then there is considerable scope for capital appreciation of these shares.

SUCCESSFUL YEAR FOR I.C.I.'s INDIAN ASSOCIATES

The value and volume of sales of Imperial Chemical Industries for 1955 were both new records, according to the annual report of the Company, to be submitted at the annual general meeting in London on 14th June 1956. The value of the whole I.C.I. group's consolidated sales in 1955 was £411 million, as compared with £352.1 million in the previous year. The Company's expenditure on its construction programme during the year amounted to £33 million, bringing the total outlay on new fixed assets since the end of the war to £223 million. It also spent about £9.5 million last year on research and development. Referring to the latter expenditure, the report points out that experience shows that chemical processes hardly ever reach such a stage of perfection that further research cannot give rise to improvement. As an example, the report says that, although ammonia has been one of the Company's major products for nearly 30 years, a good deal of research and development work is still in progress to discover more efficient catalysts and to find methods of producing hydrogen—one of the materials for the production of ammonia—more economically from fuel-oil than is now possible from coke.

Referring to the activities of the Company's Indian associated companies, the I.C.I. report says that steps are being taken to ensure that the I.C.I. misses no suitable opportunity of taking part in those sections of the chemical industry which are open to private enterprise under the Government of India's industrialisation plans. The Alkali and Chemical Corporation of India Ltd.—an associate of I.C.I.—had another successful year, the report notes, and there were particularly satisfactory increases in the production and sales of paints and "Gammexane" formulations. The plants making these products are now being extended to cater for the growing demand. The report also says that, after protracted negotiations with the Government of Bihar, the Indian Explosives Ltd.—a subsidiary of I.C.I. formed to

(*Continued on page* 1069)

MINERVA RAISES DIVIDEND

EARNINGS SHOW IMPROVEMENT

ENCOURAGING results are disclosed by the audited accounts of the Minerva Mills Ltd. (Managing Agents: Messrs. N. Sirur & Co., Ltd., Bombay) for the year ended 31st December 1955. The Company has earned a gross profit of Rs. 5.78 lakhs, in refreshing contrast to the loss of Rs. 1.55 lakhs suffered in the previous year, thanks to the more satisfactory trading conditions during the year. The improvement in results has, however, not been large enough fully to offset the recession in earnings noted in 1954. Thus, the profit for 1955 falls short, albeit slightly, of that (Rs. 6.39 lakhs) for 1953. This is due to (*a*) an increase in wages and (*b*) poor demand and low prices for yarn, particularly in the latter half of the year, and which improved only with the turn of the year.

The net profit, at Rs. 2.08 lakhs, compares well with the loss of Rs. 3.96 lakhs, after setting aside Rs. 59,472 (as against *nil* for 1954) for managing agents' commission and raising the provision for depreciation from Rs. 2.41 lakhs to Rs. 3.21 lakhs. No provision for taxation has been made as in the previous year. A small sum of Rs. 13,768 has been added to the reserve fund which had not received anything in the previous five years. The dividend has been stepped up by one per cent. to 6 per cent., but with this increase the distribution has not been restored to that of 1953, when the shareholders had received 7 per cent., made up of a dividend of 6 per cent. and a cash bonus of one per cent.

The following comparative table shows the progress of the Company during the past three years:

(In lakhs of rupees)

—	For the year ended 31st December.			
	1955	1954	1953	1952
Sale proceeds	132.30	127.76	145.24	131.47
Stocks of cloth and yarn	32.07	32.00	24.74	30.17
Cotton, stores, etc., consumed	81.36	87.30	85.65	99.96
Wages and other expenses*	40.44	50.03	42.56	39.56
Gross profit (+) or loss (—)	+5.78	—1.55	+6.39	+0.85
Managing Agents' commission	0.59	..	0.66	0.09
Depreciation	3.21	2.41	3.54	1.08
Taxation	..	..	0.26	0.18
Net profit (+) or loss (—)	+2.08	—3.96	+1.93	—0.50
To provision for bad and doubtful debts	..	0.04	..	..
To reserves	0.14	..	..	..
Transfer from reserves and provisions written back	..	..	..	2.02
Dividend	1.77 (D. 6%)	5.45 1.48 (D. 5%)	2.07 (D. 6% +B.1%)	1.48 (D. 5%)
Carry forward	0.17	0.09	0.12	0.26

It will be observed that the increase of Rs. 4.54 lakhs in sale proceeds for the year under review has been accompanied by a fall of Rs. 5.94 lakhs in cost of cotton, stores, etc., consumed and of Rs. 3.39 lakhs in wages and other expenses. The decline in wages and other expenses is mainly accounted for by the saving of Rs. 8.25 lakhs in dearness allowance. Salaries and wages, on the other hand, show a rise of Rs. 4.20 lakhs, consequent on an adjustment in wages of workers. The Directors observe that the long-pending disputes between the workers and the management of the Mills were settled during the year under review by an agreement which was passed as a consent award by the Industrial Tribunal in March 1955. In terms of the Award, workloads in the Mills have been standardised more or less on the basis of the Bombay Standardisation Scheme and wages have been adjusted accordingly, involving an increase in wage cost. The main item of the increase is the minimum wage which has been fixed at Rs. 27 for 26 working days, as against the pre-Award wage of As. 10 per day. Labour conditions, according to the Directors, were unsettled until the Award was given and it took the operatives further six months to get used to the new workloads on the basis of normal efficiencies. The full benefit of the standardisation was, therefore, not derived by the Company during the year under review, and is expected to accrue only in 1956.

The Company's reserves and surplus as on 31st December 1955 amount to Rs. 19.78 lakhs, as against a paid-up capital of Rs. 29.81 lakhs. The current liabilities aggregate Rs. 73.65 lakhs and provision for taxation Rs. 0.79 lakh. The gross block of the value of Rs. 89.75 lakhs, including an addition of Rs. 5.67 lakhs during the year, has been written down to Rs. 39.80 lakhs. The current assets amount to Rs. 84.24 lakhs, having been reduced from Rs. 110.72 lakhs a year ago; the reduction is mainly accounted for by the fall in stocks of cotton from Rs. 29.26 lakhs to Rs. 13.25 lakhs.

The Rs. 100 fully paid up shares of the Company are being currently quoted at Rs. 90-8 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 7.1 per cent. per annum.

Points From The Chair

Liberal Policy for Industrial Finance

"THE history of industrial finance has shown that there are special risks attending long-term loans of this kind not met with in transactions entered into by commercial banks. If, in the circumstances, a credit institution of the type of your Corporation seeks to look for cent per cent security, its utility is to that extent reduced, in that very few industrial concerns would then qualify for loans from the Corporation. On the other hand, it is necessary for the successful working of any credit institution to strengthen its position and increase its reputation by steering clear of bad debts. The objective of your Corporation, under the able guidance of the Chairman and the several Directors of the Board, has been to strike a balance between these opposite considerations. In my humble opinion, the time has come when a bolder and more liberal policy in the matter of financial assistance to industries requires to be formulated."

S. K. GANGOPADHYAY,
Saurashtra Financial Corporation

Industrial Policy of India

"A few days ago the Indian Prime Minister made a statement on his Government's revised Industrial Policy. The place for private enterprise in future will be as an agency for planned national development in the context of the country's expanding economy. 'Mineral oils' are included in the category of industries of which all 'new units' will be set up only by the State, 'save where their establishment in the private sector has already been approved.' At first sight, so far as 'mineral oils' are concerned, this statement of revised policy does not differ appreciably from the policy announced in 1948. Both draw a distinction between 'new units' and 'existing undertakings' and we are at present engaged in conversations to clarify the future scope for our operations in India. In the meantime stockholders may have read in the Press that on the advice of a team of Russian experts, after a three-months' general mineral survey of India, the Government have decided to enter the field of oil exploration with a programme to spend about £20 million over the next few years."

SIR KENNETH B. HARPER,
Burmah Oil Company Ltd.

Capital Expenditure in British Industries

"So much has been written and said on this subject of exports lately that I will restrict myself to making one further comment, which is that your Directors view with grave disquiet the recent statements by Government favouring, from the short-term aspect, the slowing down, and indeed almost discouragement, of capital expenditure by industry. We fully appreciate the necessity of curtailing consumption in this country, but surely the last type of expenditure to be curtailed is that which will make a substantial and essential contribution to two of our most vital and closely related problems, namely, the achievement of a real increase in productivity and the capture of a far greater share of world markets. We, in industry, can and must do a lot for ourselves, but in the electrical industry, with its constant development of new and improved techniques, we must be fearless in our capital expenditure, if we are going to hold at bay and beat our substantial and numerous overseas competitors."

WILLIAM H. MCFADZEAN,
British Insulated Callender's Cables Ltd.

Merit—The Only Test of Suitability

"At the outset let me say that the only test which we apply to determine a man's suitability to enter our managerial ranks is that of merit. There is no question of demanding a particular social or educational background. An increasing proportion of prospective managers have had a university education, but my forecast is that in future, as today, many Unilever managers will be men who came in at one of the lowest levels, who came up the hard way and whose qualities of leadership were developed after they had joined the business. We try to see that in our business there is always a ladder by which a man with the right qualities can climb to the next stage. If we succeed in this, there will always be found at every level of our management men whose only university has been what William Lever used to call the University of Hard Knocks."

LORD HEYWORTH,
Unilever Limited

U.K. Government Manufactures Paint

"You may not know that the British Government are also paint manufacturers. Is there any necessity for our Government to continue to make paint which, after all, must only have been a wartime expedient? Recent tests have shown that the Government paint is no better than the paint manufactured by civil firms, who did so well for the Government before and during the war. I would suggest that the Government cease manufacturing paint, which cannot pay them as we have so few ships in commission and so many are being cocooned. Besides, who knows at what cost if all charges incurred in the process are added to the cost."

J. W. ADAMSON,
British Paints (Holdings) Ltd.

COMPANY MEETINGS AND DIVIDENDS

BHARTIA ELECTRIC STEEL CO., LTD. Annual General Meeting, Calcutta, 4th June 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 18th May to 4th June 1956, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Pathirappally, 4th June 1956. Dividend: As. 12 per share (final). Transfer books remain closed from 18th May to 5th June 1956, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 11th June 1956. Dividend: Rs. 4-8 per share (final) payable on and after 19th June 1956. Transfer books remain closed from 28th May to 11th June 1956, both days inclusive.

NATIONAL RAYON CORPORATION LTD. The 9th Annual General Meeting, of the above company will be held in Bombay, on 14th June 1956. The meeting was to be held on 24th May 1956, as per previous notice but the date has now been changed to 14th June 1956, as mentioned above.

ASSAM SILLIMANITE LTD. Annual General Meeting, Gauhati, 14th June 1956. Transfer books remain closed from 31st May to 14th June 1956, both days inclusive.

PERIYAR AND PAREEKANNI RUBBERS LTD. Annual General Meeting, 14th June 1956. Transfer books will remain closed from 7th to 14th June 1956, both days inclusive.

MINERVA MILLS LTD. Annual General Meeting, Bombay, 15th June 1956. Dividend: Rs. 6 per share. Transfer books remain closed from 15th May to 9th June 1956, both days inclusive.

ANDHRA CEMENT CONSTRUCTION CO. (PRIVATE) LTD. Annual General Meeting, Vijayawada, 15th June 1956. Dividend: Rs. 3 per share, payable on and after 15th June 1956. Transfer books remain closed from 1st to 15th June 1956, both days inclusive.

BENGAL FLOUR MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 15th June 1956. Dividend: As. 12 per share. Transfer books will remain closed from 4th to 15th June 1956, both days inclusive.

ANDHRA CEMENT CO., LTD. Annual General Meeting, Madras, 16th June 1956. Dividend Rs. 10 per 'A' ordinary share (includes bonus of Rs. 2-8) and Re. 1 per 'B' ordinary share (includes bonus of As. 4 per share), payable on and after 16th June 1956. Transfer books remain closed from 2nd to 16th June 1956, both days inclusive.

KAMANI ENGINEERING CORPORATION LTD. Annual General Meeting, Bombay, 19th June 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 19th June 1956, both days inclusive.

LARSEN AND TOUBRO LTD. Annual General Meeting, Bombay, 20th June 1956. Dividend: Re. 1 per ordinary share, payable on or after 27th June 1956. Transfer books remain closed from 26th May to 20th June 1956, both days inclusive.

ASHOK LEYLAND LTD. Annual General Meeting, Ennore, Madras, 21st June 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 21st June 1956, both days inclusive.

DEVKARAN NANJEE INVESTMENT CO., LTD. Annual General Meeting, Bombay, 26th June 1956. Dividend: As. 13 per share, free of income-tax. Transfer books will remain closed from 12th to 26th June 1956, both days inclusive.

RANEEGUNGE COAL ASSOCIATION LTD., Half-yearly General Meeting, Calcutta, 27th June 1956. Transfer books will remain closed from 14th to 27th June 1955, both days inclusive.

WALFORD TRANSPORT LTD. Annual General Meeting, Calcutta, 29th June 1956. Transfer books will remain closed from 16th to 29th June 1956, both days inclusive.

CALCUTTA ELECTRIC SUPPLY CORPORATION LTD. Final dividend of £3 per cent, net (tax applicable at 8s. 6d. in the £) for the year ended 31st December 1955, payable on 2nd July 1956.

AZAMJAHI MILLS LTD. Dividend of Rs. 3-8 per share, for the year ended 30th September 1955, payable on 17th July 1956. Transfer books will remain closed from 8th to 30th June 1956, both days inclusive.

OSMANSHAHI MILLS LTD. Dividend of Rs. 2-8 per share, for the year ended 30th September 1955, payable on 17th July 1956. Transfer books will remain closed from 8th to 30th June 1956 both days inclusive.

BANGALORE PRINTING AND PUBLISHING CO., LTD. Dividend of Rs. 10 per ordinary share, for the year ended 31st December 1955. Transfer books remain closed from 25th May to 9th June 1956, both days inclusive.

MYSORE CHEMICAL MANUFACTURERS LTD. Dividend of Rs. 2 per ordinary share for the year ended 31st March 1956. Transfer books will remain closed from 10th to 23rd June 1956, both days inclusive.

Notices

THE NEW INDIA ASSURANCE COMPANY, LIMITED

NOTICE TO THE SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE THIRTY-SEVENTH ANNUAL GENERAL MEETING of the Shareholders of the Company will be held at the Registered Office of the Company, New India Assurance Building, Mahatma Gandhi Road, Fort, Bombay, on Wednesday the 27th June 1956, at 4-30 p.m. (S.T.).

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1955,
2. To declare a Dividend,
3. To elect two Directors in place of Mr. B. C. Mehta and Mr. J. D. Choksi who retire by rotation but are eligible for re-election and offer themselves accordingly.
4. To elect a Director in place of Mr. Dinsha K. Daji who retires by rotation and to consider if thought fit to pass the following ordinary resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   "Resolved that Mr. Dinsha K. Daji who has completed the age of 82 years and who retires by rotation be and is hereby re-elected a Director of the Company and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."
5. To elect Mr. B. K. Shah, who was appointed an additional Director of the Company on 29th September 1955, as a Director of the Company,
6. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company are closed from the 27th day of May 1956 to the 25th day of June 1956 (both days inclusive).

A member entitled to attend and vote at the General Meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself. The proxy need not be a member of the Company.

By Order of the Board,
B. K. SHAH,
Managing Director.

BOMBAY, 23*rd May*, 1956.

N.B.—The Dividend when sanctioned at the General Meeting will be payable to those shareholders whose names stand registered on the Company's Registers on the 26th May 1956. It will be payable at the Central Bank of India Limited, Bombay, for six months on and after the 2nd July 1956, and thereafter at the Registered Office of the Company.

CHANGE OF ADDRESS should be notified without delay.

EXPLANATORY STATEMENT

Mr. B. K. Shah was appointed an Additional Director on 29th September 1955 by the Board of Directors of the Company. Section 260 of the Companies Act, 1956, provides that an additional Director shall hold office only upto the date of the next Annual General Meeting of the Company. As such, Mr. Shah holds office as a Director only upto the date of the 37th Annual General Meeting of the Company. Mr. A. D. Shroff has given written notice signifying his intention to propose Mr. Shah as a candidate for the office of Director. Mr. Shah has also given to the Company his consent in writing required to be filed with the Registrar of Companies.

BALMER LAWRIE AND COMPANY LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 10 per cent. for the year ended 31st December 1955.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
O. T. JENKINS,
Director.

21, NETAJI SUBHAS ROAD,
CALCUTTA, 23*rd May*, 1956.

TRAVANCORE RUBBER AND TEA COMPANY EARNS LOWER PROFIT

ASHOK LEYLAND PASSES OVER DIVIDEND

Travancore Rubber & Tea Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Aspinwall & Co. (Travancore) (Private) Ltd., Pathirapally) submit the audited accounts of the Company for the year ended 31st December 1955.

The balance of Rs. 14,44,415 (Rs. 15,94,191) in profit and loss account, carried to appropriation account, bears income-taxes amounting to Rs. 5,37,773 (Rs. 6,04,008) and depreciation Rs. 1,06,986 (Rs. 98,977), leaving a carry forward to the balance sheet of Rs. 8,01,263 (Rs. 8,92,756). The 1955 profit and loss account has the benefit of a sum of Rs. 57,847 formerly reserved for anticipated sales tax liability. Subsequent sales tax decisions have disclosed non-liability.

Rubber.—The rubber crop shows a slight improvement on 1954 figures. With consumption in India in excess of production, no crop disposal difficulties were experienced. Two increases in the control prices of rubber took place in the year under review, one of Rs. 12 per 100 lbs. in February and one of Rs. 5-12 in September. The latter effected compensation for an increase in excise duty introduced in August. Against these benefits, estate expenditure increased by 6.78 cts. per lb., principally accounted for by increased excise duty (2.45 cts.), increased payments to and improved amenities for labour (1.11 cts.), and increased cultivation and disease protection.

The rubber crop for the year amounted to 10,35,280 (10,03,214) lbs. The estate expenditure was 70.88 cts. per lb. as against 64.10 cts. per lb. in 1954. The all-in cost was 110.95 (98.55) cts. per lb. The average sale price realised was 144.64 cts. per lb. as compared with 129.40 cts. per lb. in 1954. It is conservatively estimated that a crop of 10,25,000 lbs. of rubber will be collected during 1956.

Tea.—The crop slightly exceeded the previous year's harvesting. The first two months of 1955 shared in the late 1954 boom, but prices began to slide rapidly by March, and the year's average sale price ended up at 204.06 cents as against 241.23 cents in 1954. The reduction of all-in cost from 195.26 cents in 1954 to 178.77 cents in 1955 is mainly accounted for by smaller purchase of export quota, and less taxation through reduced profit. The tea crop amounted to 11,65,729 (11,53,752) lbs. and the average sale price realised was 204.06 (241.23) cts. per lb. The estate expenditure was 178.77 (195.26) cents per lb. For 1956 a crop of 12,25,000 lbs. of tea is estimated at an estate expenditure of 132.17 cents per lb. Both groups have maintained, if not improved, their standard of manufacture, and are currently turning out a well made black leaf tea which commends itself well to buyers.

After deducting preference dividends, and the ordinary interim dividend of 5 (5) per cent. paid during the year, the total available for distribution is Rs. 8,29,189 (Rs. 8,96,425) and the Board recommend disposal as below. The transfer to replanting reserve represents that part of prices realised which, in price fixation by Government, is reserved for rehabilitation. In making their dividend recommendation the Board have taken into account the probability that negotiations now taking place will result in an increased liability for bonus to labour in respect of the years 1953 and 1954.

By payment of a final dividend on the paid up ordinary capital of 7½ (10) per cent. Rs. 3,07,500 (Rs 4,10,000), transfer to non-executive staff retirement fund Rs. 30,000 (Rs. 40,000), transfer to rubber replanting reserve Rs. 70,606 (Rs. 67,500) and transfer to dividend equalisation fund Rs. 50,000 (Rs. 50,000), leaving to be carried forward Rs. 3,71,083 (Rs. 3,28,925).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	57,00,000	Block ...	68,14,119
Reserves ...	13,10,193	Stock-in-trade	6,26,451
Provision for taxation ...	6,75,439	Stores, spare parts and loose tools	1,92,627
Liabilities ...	6,13,044	Other assets	40,459
Profit and loss account ...	8,29,189	Debts, deposits and advances ...	1,57,447
		Investments	3,06,839
		Cash ...	4,89,923
Rs.	91,27,865	Rs.	91,27,865

Ashok Leyland Ltd.

The directors of the above Company (Chairman: Sir A. Ramaswami Mudaliar, Ennore, Madras) submit the audited accounts of the Company for the year ended 31st December 1955.

During the year under review, the sale of Leyland chassis has increased satisfactorily and the total sales for 1955 were more than double those for 1954. The Company's turnover amounted to Rs. 1,49,93,712, as compared to the previous year's figure of Rs. 97,37,495.

But for certain circumstances to which reference is made later, the trading profit would have increased in proportion to the improved sales turnover. But, on account of abnormal expenditure exceeding Rs. 6 lakhs, the net profit after making provision for depreciation at the permissible rate on fixed assets, amounted to Rs. 1,79,519 (Rs. 4,03,411). This amount, together with Rs. 1,970 (Rs. 5,613) brought forward from last year, amounts to Rs. 1,81,489 (Rs. 4,09,024). The directors propose the following appropriation of this amount:—

To provision for taxation Rs. 1,19,525 (Rs. 1,34,224) leaving a balance to be carried forward to next year's account of Rs. 61,965 (Rs. 1,970 after paying a dividend of 5 per cent. on "A" and "B" class shares absorbing Rs. 2,72,830).

Abnormal expenditure during the year, to which reference has been made, was on account of the following factors: Expenses on the manufacturing programme, which ought to have been incurred in 1954, being added to 1955 expenditure, due to unavoidable delay in implementation. Payment of Rs. 2½ lakhs compensation to the managing agents and reduction in book value of Austin spares by Rs. 3½ lakhs, due to an actual reduction in the realisable value, owing to a reduction in import duties.

The sales of Leyland vehicles have been satisfactory and it is anticipated the improvement will continue. In this connection, it is particularly pleasing to note that in the last three months of 1955 a good start was made in effecting sales of Leyland "Comet" chassis to private operators and including a large proportion of goods chassis.

Implementation of the manufacturing programme commenced in the latter part of the year. Planning for the first four phases of production was completed and orders were placed for the supply of machine tools and other factory equipment to a value exceeding Rs. 20 lakhs.

Liability in respect of Madras Sales Tax has been a cause of continuous anxiety. The Sales Tax Authorities have demanded a sum of Rs. 8,79,492 for the years 1951-52, 1952-53, 1953-54 and 1954-55. It is hoped that appeals in the High Court will obviate the Company's liability for this amount.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	54,56,800	Block ...	18,42,500
Reserves ...	1,50,000	Stock-in-trade	92,84,218
Provision for taxation ...	85,000	Stores ...	2,12,927
Liabilities ...	71,35,899	Debts, deposits and advances ...	14,95,119
Profit and loss account ...	61,965	Investments	500
		Cash ...	54,400
Rs.	1,28,89,664	Rs.	1,28,89,664

Vaikundam (Travancore) Rubber Co., Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Harrisons and Crosfield Ltd., Quilon, T.C. State) submitted the audited accounts of the Company for the year ended 31st December 1955.

Crops, Costs and Prices.—The crop amounted to 475,600 (464,500) lbs., the cost of production was 52.78 (48.62) cts. per pound and the average price was 142.41 (129.65) cts. per pound.

The visiting agent visited the estate in May and November and reported it to be in satisfactory order. The total capital expenditure for the year was Rs. 74,334 (Rs. 35,482). Estimates for 1956 provide for a crop of 460,000 lbs. to cost 58.13 cents per lb. Capital expenditure on scrap battery, minor buildings and furniture is estimated at Rs. 1,27,080.

After providing for all taxation, and depreciation the net profit amounted to Rs. 2,76,562 (Rs. 2,32,031) to which was added the amount brought forward from 1954 of Rs. 21,363 (Rs. 30,763), making a total of Rs. 2,97,925 (Rs. 2,62,794). Out of this amount the directors paid a dividend of 25 (22½) per cent. free of Travancore-Cochin Agricultural Income-tax Rs 1,57,145 (Rs 1,41,431), transferred to general reserve Rs 1,00,000 (Rs. 1,00,000) and carried forward the balance of Rs. 40,780 (Rs. 21,363).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,28,580	Block ...	8,35,360
Reserves ...	5,40,670	Stock-in-trade	1,55,828
Provision for taxation ...	1,62,543	Stores and spare parts	6,560
Liabilities ...	1,87,232	Advances ...	14,354
Profit and loss account ...	40,780	Cash ...	5,47,703
Rs.	15,59,805	Rs.	15,59,805

Peermade Tea Co., Ltd.

The directors of the above Company (Secretaries: Messrs. Aspinwall & Co. (Travancore) (Private) Ltd., Pathirapally, T.C. State) submitted the audited accounts of the Company for the year ended 31st December 1955.

The net profit for the year amounted to Rs. 4,87,543 as compared with a profit of Rs. 12,34,897 in 1954, the reasons for the decline being manifest in the figures relating to estate expenditure, crop, and average sale price. The usual provisions for depreciation on buildings and machinery have been made. Provision for taxation covers the proposed new taxation on dividends in excess of 6 per cent. in respect of dividend payments made during the year under review.

Crop.—Crop harvested was 1,55,000 lbs. odd less than estimate and 84,000 lbs. odd less than 1954 crop. Weather conditions were not entirely favourable, but the shortfall must in the main be attributed to the attitude of labour in the months of maximum crop potential. Not only was harvesting below that potential, but maintenance of the normal standard of manufacture was rendered impossible. In the result both the Company's and labour's earnings suffered. Estate expenditure shows little change from the 1954 figures, but a smaller crop has meant an increase in the "per lb." figure.

The tea crop for the year amounted to 18,54,907 (19,39,534) lbs. The estate expenditure was 128.06 (121.37) cents per pound. The average sale price realised was 185.03 (236.36) cents per pound. The fall in average sale price compared with 1954 is in accordance with the market for the year, which generally showed an excess of supply over demand position. For 1956 the Manager has estimated for a crop of 19,00,000 lbs. at an estate expenditure of 117.83 cents per lb.

The total amount available for disposal was Rs. 6,19,963 (Rs. 13,13,920), which the directors disposed of as follows:—

By payment of a second and final dividend on paid up ordinary capital of 22½ (40) per cent. Rs. 3,82,500 (Rs. 6,80,000), by transfer to non-executive staff retirement fund Rs. 20,000 (Rs. 50,000) and carried forward Rs. 2,17,463 (Rs. 3,53,920 after transferring Rs. 2,30,000 to dividend equalisation fund). The total dividend paid for the year 1955 is Rs. 3-8 per share as against Rs. 5-8 per share paid in 1954.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,50,000	Block ...	18,49,923
Reserves ...	9,93,033	Stock-in-trade	4,30,534
Reserve for taxation ...	4,93,453	Stores, spare parts and foodgrains	3,37,391
Liabilities ...	7,57,600	Nursery ...	3,656
Profit and loss account ...	6,19,963	Debts, deposits and advances ...	3,41,877
		Investments	13,91,749
		Cash ...	3,58,919
Rs.	47,14,049	Rs.	47,14,049

Belsund Sugar Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bangur Brothers Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th September 1955.

The result for the year, after providing for depreciation showed a profit of Rs. 3,36,484 (Rs. 1,38,925) from which was deducted for taxations Rs. 1,39,502 (Rs. 10,255), leaving a balance of Rs. 1,96,982 (Rs. 1,28,670). After adding the carry forward from the previous year of Rs. 49,906 (Rs. 1,66,138), there was an available balance of Rs. 2,46,888 (Rs. 2,94,808). This balance, the directors disposed off in payment of dividend at As. 12 (As. 12) per share free of income-tax for the year ended 30th September 1955 Rs. 1,94,903 (Rs. 1,94,903) and carried forward to the next account Rs. 51,985 (Rs. 49,906 after transferring Rs. 50,000 to reserves).

The factory commenced crushing on the 30th December 1954 and finished on the 17th April 1955 with a total crush of 19,84,371 mds. of cane as compared to 13,06,997 mds. of cane in the previous year. The quality of cane available was normal and the recovery was 10.72 per cent. compared to 10.73 per cent. in the previous year.

The minimum cane price was Re. 1-7 per maund at the factory and Re. 1-5 per maund at outstations. Cane cess was levied at As. 3 and Cane Co-operative Society's commission was 9 pies per maund of cane. The Government of India did not exercise any statutory control on the price or distribution of sugar for the year under review though 25 per cent. of the total sugar production if needed, was reserved for Government requisition at fair ex-factory prices. The Central Excise Duty was increased from Rs. 3-12 to Rs. 5-10 per cwt. of sugar with effect from 1st March 1955. This enhancement coupled with the increased home production and huge imports by the Government of India contributed to considerable depression in the sugar market and as a result thereof the sugar prices went down to a large extent.

Season 1955-56.—The cane supply during the year is expected to be the largest one since the inception of the Company, despite sufficient quantity of cane being diverted to other sugar factories. As regular supply of more than 30 lakhs maunds of cane is anticipated each year the extension of the crushing capacity of the plant has become necessary and steps in this direction are being taken up by the Company.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,49,050	Block ...	8,94,088

Notices

ORIENT PAPER MILLS LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the above-named Company will be held on Friday the 29th June 1956, at 3 p.m., at 8, Royal Exchange Place, Calcutta, to consider and, if thought fit, to pass, with or without modification, the following resolutions:

AS ORDINARY RESOLUTIONS

1. RESOLVED that Messrs. Birla Brothers Private Limited, the managing agents of the company and/or their associates be and are hereby authorised to retain any commission or other remuneration earned or to be earned by such agent or associate as the managing agent, secretaries and treasurers, manager, agent or selling or buying agent of any firm, body corporate or other concern including insurance companies, in respect of the goods, power, freight, repairs or other services, for the sale, purchase, supply or rendering of which a contract has been, or is to be entered into by such firm, body or concern, including insurance companies with the company, provided the prices or amounts charged to, or received by the company are at rates which are not less favourable to the company than the market rates or which are otherwise reasonable.

2. RESOLVED that consent of the company be and is hereby given to the borrowings by the Board of Directors from time to time of all monies deemed by it to be requisite or proper, for the carrying on of the business of the company notwithstanding that the monies to be borrowed together with the monies already borrowed by the company (apart from temporary loans obtained from the company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the company and its free reserves, that is to say, reserves not set apart for any specific purposes.

3. RESOLVED that consent of the company be and is hereby given to the Board of Directors to contribute and/or subscribe to any national, political, charitable, benevolent, public or general and other funds not directly relating to the business of the company or the welfare of its employees, from time to time, such amounts as may be considered proper by it notwithstanding that such amounts in any financial year will exceed Rs. 25,000 or 5 per cent. of the company's average net profits, as determined in accordance with the provisions of the Companies Act, 1956, during the three financial years immediately preceding, whichever is greater.

AS SPECIAL RESOLUTIONS

4. RESOLVED that for a period of five years from the 1st April 1956, payment of commission upto one per cent. as may, from time to time, be decided by the directors, on the net profits of the company in respect of each financial year, as determined in accordance with and subject to the provisions of the Companies Act, 1956, be and is hereby sanctioned to all the directors of the company including its managing directors and the directors in its whole-time employment and that the same be distributed amongst such directors and in such manner as may, from time to time, be thought fit by them.

5. RESOLVED that the Articles of Association of the company be amended as under:

(a) The word "two" appearing after the word "exceeding" and before the words "per cent." in Article No. 117 of the Articles of Association of the company be substituted by the word "one."

6. RESOLVED that consent of the company be and is hereby accorded to Shri B. L. Nemani, A.C.A., a Chartered Accountant, who is a relative of Shri A. L. Goenka, a director of the company, to hold an office or place of profit under the company and/or under any of its subsidiary companies

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, ROYAL EXCHANGE PLACE,
CALCUTTA, *28th May*, 1956.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and that a proxy need not be a member.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

(Incorporated in England)

NOTICE IS HEREBY GIVEN THAT THE Preference Shares Transfer Books will be closed from the 18th to 30th June 1956 (both days inclusive), for the preparation of Dividend Warrants in respect of the Interim Dividend of 2½ per cent., less Income-tax payable on the 30th June 1956, on account of the profits for the year ending 31st December 1956.

By Order of the Board,
A. C. T. BLEASE,
Agent.

CALCUTTA-1, *23rd May*, 1956.

DALMIA CEMENT (BHARAT) LIMITED

DALMIAPURAM

NOTICE

IS HEREBY GIVEN THAT THE FOURTH ORDINARY ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT THE REGISTERED OFFICE OF THE COMPANY AT DALMIAPURAM (DIST. TIRUCHIRAPALLI) ON FRIDAY the 20th July 1956, at 12 Noon, to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1955.
2. To declare Dividend.
3. To elect Director in place of the retiring Director, Shri M. Satyanarayana, who retires by rotation and is eligible for re-election.
4. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., the retiring Auditors, are eligible for re-appointment.
5. Any other business that under the Articles of Association of the Company may be transacted at an Ordinary Annual General Meeting.

The Share Transfer Books of the Company will remain closed from THURSDAY the 21st June 1956 to FRIDAY the 20th July 1956, both days inclusive.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LIMITED,
For HARI BROTHERS PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

Dated 22nd May 1956.

Note.—The Dividend if declared will be payable on or after 10th August 1956 to the Registered shareholders as on 20th July 1956.

COMPANY AFFAIRS

(*Concluded from page* 1066)

manufacture explosives—has obtained possession of its factory site and has begun building operations.

The Atic Industries Ltd.—a joint dyestuffs manufacturing company established with Atul Products Ltd.—has made considerable progress with its first plant, which is expected to be producing jade greens during the present year. A proposal to increase the scope of Atic Industries by the manufacture of an extended range of vat dyestuffs and their intermediates is at present awaiting the approval of the Government of India.

The polythene film plant of Imperial Chemical Industries (India) Private Ltd. had a most successful year in the manufacture of film from imported polythene granules, and it is considered that the market prospects for polythene in this and other forms are sufficiently promising to justify the erection of a substantial plant to make polythene from Indian industrial alcohol. Proposals to this end have been approved by the Indian Government, and the erection of a plant is shortly to begin in the factory at Rishra of the Alkali and Chemical Corporation of India Ltd.

The report says that a principal interest of I.C.I. remains the import of chemicals from overseas and their sale throughout India. It is remarked in the report that the traditional pattern of trade is changing with the increasing manufacture in India of heavy chemicals, especially fertilisers and alkalies, and with growing Government control of purchase and distribution which has recently included soda ash. Nevertheless, the report says, I.C.I. trade in other products has so developed that both the value of the Company's exports to India and the sales of I.C.I. (India) have been maintained.

Referring to activities in Pakistan, the report says that shortage of foreign exchange caused the Government to restrict imports, but I.C.I. (Pakistan) Ltd. had been able to maintain its sales turnover. The Khewra Soda Company, in which I.C.I. has an interest, again had a successful year and further increased its production of soda ash over the record figure established in 1954. Plans for extending the plant have been made, says the I.C.I. report, and the Khewra Soda Company has rupee funds available for this purpose, but the firm is awaiting permission from the Pakistan Government for the necessary foreign exchange to pay for the importation of new plant.

United Nations

STATISTICAL YEARBOOK 1955

The latest issue is a comprehensive collection of authoritative statistics on more than 250 countries and territories which contains 183 tables, most of which cover a 20-year period, some brought up to mid-1955. Among the subjects covered are the following:

Population, industrial and agricultural production, mining, manufacturing, construction, consumption, transport, internal and external trade, balance of payments, wages and prices, national income, finance, social matters, education. 644 pages.

QUESTION HOUR IN PARLIAMENT

Foreign Investments

THERE was an increase of Rs. 112.12 crores between 1948 and 1953 in the total foreign investments in the 420 branches of firms and companies operating in India and 565 companies in India owned by foreigners. The Reserve Bank is presently conducting a census of foreign investments, but the data would be available, after being collated, only in another two years' time. The direct investment of the U.K. as on 31st December 1953 in India was Rs. 78.4 crores and the value of shares of companies Rs. 39.17 crores. Similar figures for American investment were Rs. 10.2 crores and Rs. 1.82 crores, respectively.

—*M. C. Shah*

I.C.I.C.

The Chairman of the Industrial Credit and Investment Corporation of India Limited has brought to the notice of the Government the fact that, as a result of nationalisation of life insurance, the shares of the insurance companies held in the investment portfolio of the Corporation will pass into Government hands, thereby affecting the wholly private character of the Corporation. The Government, in their reply, have stated that, although the extent of Government ownership of such shares is not yet known, they will assure the Corporation that they have no intention of taking advantage of this incidental result of the nationalisation of life insurance companies to interfere in the day-to-day work of the Corporation.

Newsprint Production

India produces at present 500 tons of newsprint per month. Precise information is not available, but the quantity of newsprint consumed by the newspapers in the country is estimated at 60,000 tons per annum. The quantity of newsprint imported in 1954-55 and 1955-56 was 78,791 tons and 78,853 tons, respectively.

Indian Textiles for Viet Nam

The Government of India have been informed that South Viet Nam is prepared to import cotton textiles from India also, as from any other country. The export duty on coarse cloth has been removed and there is now no duty on any variety of cloth. The Government of South Viet Nam has also, at India's request agreed to grant this country, on reciprocal basis, the most-favoured-nation treatment in the matter of tariffs on products originating from and imported into Viet Nam. There is demand in South Viet Nam for sheeting, shirting, longcloth, drill and cotton waste blankets.

Cigarette Paper

About 2,448.5 tons of cigarette paper valued at about Rs. 117 lakhs were produced in India during 1955-56.

* * * *

Dyestuffs Factory in India

The Government are aware that certain experts from an Italian firm have recently visited India in connection with the establishment of a dyestuffs industry in the country. The report of the experts is awaited.

* * * *

Central Control Over Drug Manufacture

The manufacture of drugs is already subject to Central control by virtue of the Industries (Development and Regulation) Act, 1951. The centralisation of the administration of the Drugs Standard Control, which is at present within the jurisdiction of State Governments, is under consideration.

* * * *

Iron Smelting

Mostly iron smelting is done only by large-scale factories. It is not economical to smelt iron ore on a cottage-industry basis. Low grade iron ores are not generally being used by large-scale iron and steel industries.

* * * *

Import and Export of Betelnuts

No import or export licence is required for the movement of betelnuts from one State to another in the Indian Union. The States that import betelnuts from other States in India are Assam, Bihar, Bombay, Madhya Pradesh, Orissa, Punjab, Uttar Pradesh, Hyderabad, Jammu and Kashmir, Mysore, P.E.P.S.U., Rajasthan, Saurashtra, Travancore-Cochin, Andamans, Ajmer, Bhopal, Coorg, Delhi, Kutch, Manipur, Tripura, Vindhya Pradesh and Pondicherry. Those which export betelnuts to other States in India are Bombay, Madras, West Bengal, Mysore, Travancore-Cochin and Coorg.

Indian Expert Teams to Russia

Two Indian expert teams visited Russia during the last three years to study the various industries in that country. Reports have been submitted by the teams. The purpose of the visit is generally to study the working of industries in Russia and not with a view to installing particular industries in India.

Dyeing and Tanning Material

By the end of the third Five-year Plan, the Government hope to be able to manufacture considerable quantities of various types of dyestuffs required by the leather industry. As regards tanning substances, the main items of which are wattle bark and its extract, efforts are being made to plant wattle trees in certain parts of the country. It is anticipated that the country may become nearly self-sufficient in regard to wattle bark by 1974.

* * * *

Printing Machinery

The Government are now exploring the possibilities of the manufacture of printing machinery in India. About 39 platen and flat-bed types of printing presses were produced in India in 1955. A survey is in progress to have an accurate assessment of demands of the types of printing machinery which can be economically produced in the country.

* * * *

Japanese Steel

While no Government-to-Government talks are going on with Japan for the import of steel, a private Indian firm is conducting negotiations for the import of 100,000 tons of steel this year from Japan. At present, India is importing some 50,000 tons of steel every year from Japan. No Japanese steel delegation is visiting India.

Automobile Industry

Mr. A. J. Romer, a Director of the Associated Commercial Vehicles of the United Kingdom, has been invited by the Government of India to advise them with regard to the development of the automobile industry of India. Mr. Romer arrived on 19th April 1956, and it is understood that he would visit the principal manufacturing centres of automobiles in India.

Import of Buttons

There has been an increase in imports of buttons since 1953-54, notwithstanding a heavy increase in duty in 1953 to 66-2/3 per cent. *ad valorem* in the case of buttons other than plastic, and in the case of plastic buttons to an alternative duty of As. 12 per gross. Quotas were reduced during July-December 1955 and the quota of metal buttons was further reduced in January-June 1956.

Diesel Engines

It has been decided in principal that a factory to manufacture diesel propelling machinery required for Indian-built ships will be set up in the public sector. The Indian shipping companies are being consulted, with a view to ascertaining their requirements of diesel engines. While it is too early to say where the proposed factory will be set up, I hope it will be located at Vizagapatam.

—*K. C. Reddy*

Tea Cargo

The percentage of tea cargo carried by Indian shipping companies from Calcutta to the U.K. in 1954 and 1955 was 17.13 and 22.55, respectively. The cargo is ordinarily shipped through private commercial channels. It is, however, understood that the Indian shipping companies would be satisfied, if they were given a 25 per cent. share and, as a result of voluntary co-operation between the interests concerned, this share is likely to be made available to them.

Motor Transport Policy

The Ministry of Transport is examining whether it is possible to enunciate the Government's transport policy through a resolution or whether it should be incorporated in some existing legislation. The whole question of future set-up for State Transport undertakings is under active consideration of the Ministry of Transport and the Planning Commission. The question of encouraging the use of lorries in rural areas has to be considered in the context of its effect on the bullock carts upon which the rural economy is based. As far as the development of motor transport in urban areas is concerned, a scheme worked out by the Ministry of Transport for formation of co-operatives for running motor transport is under consideration of the Planning Commission which has agreed to a pilot scheme being worked in selected areas. The question of constitution of the Transport Advisory Council has been deferred till the implementation of the recommendations of the S.R.C.

Rural Credit Survey

The technical experts in the Department of Research and Statistics of the Reserve Bank of India are preparing a plan for recurring investigation, research and check up of the credit situation in the rural areas.

—*Dr. Punjabrao Deshmukh*

D.V.C. Estimates

The estimates of the Damodar Valley Corporation were last revised in January 1956 and amounted to Rs. 102.79 crores. The revision registered an increase of Rs. 13.79 crores over the estimate of Rs. 89 crores of October 1953. The main reasons for the increase are (i) extension of the D.V.C. transmission system to Calcutta, Gaya, Patna, and Dalmianagar; (ii) increase in the cost of land; (iii) increase in the cost of rehabilitation; (iv) provision of additional buildings; (v) rise in prices of tools and plants; (vi) change in design of the Panchet Hill project; (vii) increase in the cost of establishment; and (viii) increase in cost on account of spares.

By Order of the Board,
AGARWAL & CO.,
Agents.

BOMBAY, 23*rd May* 1956.

GILT-EDGED IMPROVES

(*From Our Own Correspondent*)

BOMBAY, 30*th May*

Demand for bank credit showed no sign of relaxation during the week under review also, with the result that the stringency in the short-term money market remained as keen as in the preceding weeks. There was, of course, some influx of funds, but it had no effect on the market, as the demand was good. There was, therefore, no variation in interest rates.

Inter-bank call money was bid at the self-same rate of 3½ per cent. and house money at call was also offered 3½ per cent. Short-term deposits fetched 3½ per cent. for one to three months and 3½ per cent. for longer periods.

There has been a further shrinkage of Rs. 10.15 crores in notes in circulation during the week ended 25th May 1956, bringing the aggregate fall during the past two weeks to Rs. 19.76 crores. Notes held in the Banking Department of the Reserve Bank show a rise of only Rs. 48 lakhs, so that the decline in total notes issued is Rs. 9.67 crores. This is covered by a drop of Rs. 9.94 crores in rupee securities and a rise of Rs. 27 lakhs in rupee coin. A marked fall of Rs. 11.15 crores is noted in deposits of the Central Government and a rise of Rs. 1.96 crores in those of other Governments. Balances held abroad are lower by Rs. 4.76 crores Loans and advances to Governments have declined by only Rs. 64 lakhs. Other loans and advances have fallen by Rs. 3.64 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.89 crores. Fresh advances to banks against these bills during the week under review amount to Rs. 7.28 crores.

In contrast to the decline of Rs. 6.03 crores in demand deposits of Scheduled banks in the previous week, a rise of Rs. 6.18 crores in these deposits is disclosed by the Scheduled banks' statement for the week ended 18th May 1956. Time deposits are also up by Rs. 1.44 crores. Borrowings from the Reserve Bank stand reduced by Rs. 5.87 crores, thanks to the repayment of borrowings against usance bills to the tune of Rs. 5.97 crores. A fall of Rs. 2.31 crores is noted in advances, while bills purchased and discounted have risen by Rs. 1.20 crores. Investments are lower by Rs. 1.65 crores, while cash balances have risen by Rs. 2.17 crores.

The Gilt-edged market was a bit cheerful during the week under review, with an appreciation in values, thanks to the good demand for medium and long-dated issues. A fair volume of business was also reported done. Enquiries in market circles reveal that it is too early to indicate the terms of the forthcoming Central Government loan.
