STATE'S ENTRY INTO FOREIGN TRADE

FEDERATION OF CHAMBERS WARNS AGAINST HASTY ACTION

ONLY in July last an important section of banking in the private sector was nationalised. And, now after a lapse of about six and a half months, another big sector, namely, life insurance, has been taken over by the Government. It is not known which other economic sector will be the next victim. From the trend of public discussions, it looks as though the choice of Government may this time fall on certain sections of trade. Of course, the indulgence of the State in trading activities is no new thing. For, during the war, the State handled many commodities such as steel, foodgrains, etc., not for reasons of securing revenues for the State, but for those of equitable distribution of commodities in order to minimise the hardships of scarcity in them. The meagre experience gained in this trading made some to think of the State taking to trading as part of its functions. Consequently, in 1950, the State Trading Committee was appointed. This Committee, as readers are aware, did not arrive at any unequivocal conclusion in favour of State Trading. But it said, among other things, that the then existing arrangements for carrying on commercial activities of Government through their Departments had not worked satisfactorily. It wanted, therefore, the establishment of a specialised organisation which might take the import of East African cotton and the export of short-staple cotton and cottage industry products. The Government of India showed its wisdom in not accepting these recommendations.

Another Committee Appointed

But pressure continued from the ranks of the Congress Party now in power for the State to enter into trading activities. The Government, in deference to the wishes of the party, appointed another committee in 1952 to examine the matter further in the context of the conditions then obtaining in international markets and the considerable increase in indigenous production. This Committee, it may be noted, did not support the taking over by a State Trading Corporation of the import of foodgrains, fertilisers, wool and East African cotton and export of coal and short-staple cotton yarn. But it opined that a start may be made by the establishment of a State Trading Corporation to undertake the export of handloom cloth and certain selected small-scale and cottage industry products, not on a monopolistic basis, but side by side with private traders. This was undoubtedly a wise suggestion, in that the producers of these goods have no efficient sales organisation to market their goods on scientific lines. The business community in the country was, however, perturbed over the move, and the various trade associations and business organisations from all over the country submitted representations, pointing out, *inter alia*, that arguments for establishing a State Trading Corporation even for limited purpose were not well-based.

Plan-frame

The matter was, however, left there for some time till an opportunity to moot afresh the proposal for State Trading was provided by the need for finding huge resources for financing the development schemes in the second Plan. The Plan-frame suggested the entry of the State into such activities as banking, insurance, foreign trade or internal trade in certain selected commodities. This suggestion was later supported by a sub-committee of the A.I.C.C. Both these sources expressed themselves in favour of State Trading, as a means of attracting additional revenues to the public sector. This view was, however, refuted by the Finance Minister, who, in the course of a Press Conference early in November last, observed that the Government did not find in State Trading a method to draw away the resources of the private sector. It was only proposed, he said, to make a beginning in the shape of State Trading of an exploratory nature. It would not be so much, he stated, for resources for the Plan but other objectives, including the regulation of trade in particular commodities and with particular countries. Presumably, the Finance Minister was having in mind the question of trade in particular commodities with communist countries. Again, from the trend of observations made by the Union Minister for Commerce and Industry in his speech at the meeting of the Import Advisory Council held in November last, it looked as though the Government had decided to set up a State Trading Corporation, without first defining the purpose of the Corporation. For he said a Corporation would be set up shortly and that details of its functions would be worked out after the Corporation had been set up. This amounted to putting the cart before the horse.

In view of these considerations, it is only in the fitness of things for the Federation of Indian Chambers of Commerce and Industry to submit, as it has done a memorandum to the Government of India giving cogent reasons why the Government should not enter the sphere of trading. If its logic fails to impress the Government, nothing can make the latter to swerve from its pre-determined move. In this memorandum, it assails all the three broad arguments advanced in favour of State Trading. These are: (*a*) augmenting the resources of the State, (*b*) facilitating trade in specific commodities with communist countries, and (*c*) bringing about greater economic equality.

Augmenting Resources of Government

Taking the question of augmenting resources of Government through State Trading, the Federation draws the attention of the Government to the views on this subject of the Taxation Enquiry Commission. The Commission said that it felt that no spectacular result would accrue from State Trading over a short period. It considered that State Trading required personnel with specialised experience of business and gave rise to the question of the adequacy of the governmental machinery at present for the task. It further opined the best time to extend State Trading was when prices were on the upgrade and the present, when prices were declining, was not opportune for the State's wider incursion into this field. The Commission held that immediate scope for increasing non-tax revenue by enlarging State activity in the sphere of foreign trade appeared to be limited for the time being at least.

The Federation further observes that the experience in India and foreign countries shows that such State Trading as has taken place is both wasteful and costly. Bulk buying under the ægis of the State has generally led to a rise in prices in supplying countries, especially in a period of rising market. And no State agency, however well-informed, is in a position to negotiate with a host of foreign suppliers, whereas private traders, with their past experience and continuous contacts, are in a comparatively better position to secure favourable terms. The working of State organisation may not result in profits. On the contrary, it is quite likely that the working of State Trading Organisation may reduce the resources of the State. The State today gets through income and other taxes substantial resources from the profits of private trade and commerce. If a part of these is taken over by the Government organisation, it may well be, adds the Federation, that there may be no profits and, therefore, no augmenting the resources of the State for the second Five-year Plan from this source.

As regards the second argument, namely, that State Trading is needed to facilitate trade with communist countries, the Federation says that it is neither necessary nor desirable to start a State Trading Corporation for dealing exclusively with State Trading Organisations of communist countries. It points out that, from discussions it had with the trade delegations of these countries which came to Delhi in connection with the Indian Industries Fair, it was clear that the communist countries were willing to appoint traders in the private sector as agents and to contact Indian businessmen on commercial terms.

There is also another reason, according to the Federation, why a State Trading Corporation should not be established. Thus, once it is established, it will find it necessary to deal in certain commodities not only with communist countries but also with other countries, with a view either to increasing its turnover to meet overheads or to balancing the losses which may be incurred in dealing with communist countries in the same or similar commodities. It may also be found that a State Trading Corporation established to deal with communist countries may find itself in a position to have compulsorily to import goods from these countries which may not be needed in India or which may be more easily and cheaply imported from other countries. The Federation, therefore, says that, in the circumstances, the Government will be forced either to restrict ordinary commercial imports from other countries or (*a*) to import such commodities on its own account from other countries. This will ultimately disturb the composition of India's foreign trade with no economic benefits.

Lastly, the State Trading Corporation cannot help, according to the Federation, establish greater economic and social equality. For the trade normally works on a very low margin of profit. And the tax mechanism is always there to take a slice of the profits to the Public Exchequer. Moreover, it is competition and not monopoly which is the surest and best means to safeguard the interests of consumers and the general socio-economic objectives. Any incursion of the State in the field of trade, either foreign or internal, will dislocate countless small agencies engaged in the task and throw many people out of employment. This is a prospect, the Federation remarks, which cannot be viewed with equanimity in the context of the more important objective of the Plan to create additional employment opportunities.

On the strength of the logic outlined above, the Committee has urged the Government of India not to take any hasty action in regard to the setting up of a State Trading Corporation.

MR. SHANTI PRASAD JAIN ON SECOND PLAN

In the bid for raising the standard of living of the people in the country, official circles are persuading themselves to believe that the public sector is more competent to deliver the goods than the private sector. It is this opinion which seems to be responsible in a large measure for envisaging the allotment of a dominant role to the public sector in the second Five-year Plan. It also explains the rapidity with which the pace of nationalisation is proceeding ahead. In this flush of enthusiasm on the part of officials, it is likely that the contribution made by the private sector to build up the economy may be overlooked by the country. There is, therefore, a need for reminding the nation, off and on, about the way the private sector too has been helping to build the economy. This need was served well by Mr. Shanti Prasad Jain, President, Employers' Association, Calcutta, when he gave a clear picture of what the private sector had so far done to develop the economy, in the course of his address at the Association's annual meeting held on the 18th inst. According to him, the total value of agricultural production went up from Rs. 3,200 crores in 1950-51 to Rs. 3,800 crores in 1954-55. Industrial production in the same period rose from Rs. 1,130 crores to Rs. 1,480 crores. Thus, the increase in the value of production in the private sector, both in industry and agriculture, was of the order of Rs. 800 crores in 1954-55, taking into consideration only the net value added by manufacture in the case of industry. The national income at Rs. 10,300 crores in 1954-55 was thus higher by Rs. 1,100 crores, as compared with that in 1950-51. The share of the private sector in this increase was, Mr. Jain stated, as much as 75 per cent. This excludes, of course, its contribution in the tertiary sector. Its actual share must have, therefore, been higher still.

These considerations seem to have prompted Mr. Jain to hold the view—with which few could disagree—that the private sector would be able to fulfil and even exceed the ambitious targets laid down in the second Plan, given the necessary encouragement and resources. He is, therefore, quite justified in pleading, as he did at the meeting above, for a re-examination of the problem of finding adequate resources for the private sector. For increasing activity in the public sector had, he averred, resulted in the State appropriating to itself a larger portion of the national savings at the expense of the private sector. In the first Plan period, the percentage of the total national savings available to the private sector was 65, while the public sector had at its disposal 35 per cent. of the total. In the second Plan period, the position is likely to be reversed, as according to the Planning Commission, the public sector is to utilise for itself 62 per cent. of the savings on an average and the private sector the balance of 38 per cent. only.

In this context, Mr. Jain drew attention to another change which had taken place in the conditions governing the role of the private sector. Thus, during the first Plan period, the private industrial sector could fall back on accumulated reserves and unused fresh capital raised in the boom period between 1944 and 1946. But the position in the second Plan period would be different. Out of Rs. 675 crores expected to be invested, nearly Rs. 300 crores would have to be obtained from retained profits, a sum which is double the rate of internal capital formation in the industrial corporate sector in 1951-56, estimated at Rs. 150 crores. These estimates appeared to Mr. Jain to be too optimistic, in view of the high level of taxation and the application of section 23A of the Income-tax Act in its present form. It was, therefore, necessary, Mr. Jain stressed, that there should be a proper allocation of resources and a realistic policy in regard to taxation. He stated that the tax policy should not be such as would affect adversely the initiative and enterprise of the people. He was of the opinion that the increased activities of the private sector and the consequent high level of production would lead to larger tax revenues which will enable the Government to spend large sums on social services in the coming years.

Mr. Jain was in full agreement with the Finance Minister's proposal to resort to deficit financing in larger doses in the early years of the second Plan period, followed by gradual reductions in later years. Deficit financing, according to the Finance Minister, would be of the order of Rs. 400 crores in 1956-57, Rs. 300 crores in 1957-58, Rs. 200 crores in 1958-59 and 1959-60 and Rs. 100 crores in 1960-61. He felt that the momentum gained in the earlier years would prove helpful since the larger purchasing power would enable the absorption of the increased production which, in its turn, would encourage investment and increase economic activity. It was not necessary, he remarked, to limit deficit financing to the level of Rs. 1,200 crores, since, with the increased production, it would be possible to reduce the outlay on foreign imports to a considerable extent and at the same time promote the export trade in a vigorous manner. It is, however, needless to add that expert opinion in this country is sharply divided on this issue.

LICENSING OF INDUSTRIES

The Licensing Committee set up under the Industries (Development and Regulation) Act, 1951, examined 756 applications during 1955 for setting up new industrial undertakings, manufacture of new articles, substantial expansion of existing undertakings, changing the location of factories, etc. The Committee, of which Mr. H. V. R. Iengar, Secretary, Ministry of Commerce and Industry, is Chairman, recommended grant of licences in 563 cases and refusal in 119. In the remaining 74 cases, the Committee either referred the applications back to obtain further particulars or advised the applicants to revise their schemes in the light of suggestions made by it.

Five hundred and sixty-three licences were granted during 1955 for setting up new industrial undertakings, manufacture of new articles or expansion of existing undertakings. Out of 563 cases for grant of licences, 164 related to the establishment of new industrial undertakings and 319 were for substantial expansion of existing undertakings and manufacture of new articles. In 75 cases licences were granted for carrying on the business of existing undertakings and the remaining five applications pertained to transfer of equipment to new sites.

According to the type of industry, out of the 563 licences granted, 124 related to cotton textiles, 57 to iron and steel (i.e., the fabrication and re-rolling work), 41 to art silk fabrics, 30 to automobiles and automobile components, 27 to cement, 26 to heavy chemicals and fertilisers, 26 to sugar, 24 to pharmaceuticals and drugs, 24 to glass and ceramics, 11 to bicycles and the remaining to other industries.

CUSTOMS REVENUE

The gross sea and land customs revenue collected during November 1955 amounted to Rs. 13.79 crores, as compared with Rs. 18.71 crores in the corresponding month of 1954, and Union excise duties aggregated Rs. 11.67 crores, as against Rs. 8.84 crores. These bring the total collections for the eight months, April to November 1955, to Rs. 203.36 crores, as compared with Rs. 174.96 crores in the corresponding period of 1954. Of the total collections, import duties accounted for Rs. 81.08 crores (Rs. 84.51 crores), export duties for Rs. 24.48 crores (Rs. 22.37 crores), land customs and miscellaneous for Rs. 1.17 crores (Rs. 1.99 crores), and Union excise duties for Rs. 96.63 crores (Rs. 66.09 crores).

SMALL INDUSTRIES IN ASSAM

The Governor of Assam has given assent to the Assam Aid to Industries (Small) and Cottage Industry Bill. This piece of legislation is in pursuance of the State Government's anxiety to develop small industries by granting loans which can be issued by the Cottage Industries Department to the extent of Rs. 20,000 and by the State Financial Corporation above that figure. If, however, the Corporation cannot accommodate any particular industrial concern, the Industries Department under this enactment may consider such applications up to the limit of Rs. 50,000. The Department may also grant loans up to Rs. 1,000 only on personal security of the borrower.

Get Extra Protection Against Blowouts and Punctures
at No Extra Cost!

WITH
Firestone
TUBELESS
TYRES

With no tube to pinch or blow-out, this tyre gives protection beyond compare. If a nail should penetrate this tyre, the Safety-liner hugs it and prevents immediate loss of air, enabling you to continue driving. Think what these advantages mean in increased safety, extra protection! Built with Safety-Tensioned Gum-Dipped cords for greater strength and longer mileage, they give you full value for every anna of your tyre money. Yet this tyre, with all its features, costs no more than an ordinary tyre and tube. See your Firestone dealer—insist on Firestone Tubeless!

These tyres are so good that many Automobile Manufacturers are now fitting them as standard safety equipment on new car models.

NEW, SAFETY-TENSIONED, SUPER GUM-DIPPED CORD BODY AND TUBELESS CONSTRUCTION GIVES STRONGER BODY—MORE PROTECTION AGAINST BLOW-OUTS AND PUNCTURES.

"BEST TODAY—STILL BETTER TOMORROW!"

FURTHER FALL IN EARNINGS OF SCINDIA STEAM

FLEET EXPANSION GOING AHEAD

THE decision of the Directors of the Scindia Steam Navigation Company, Ltd. (Agents: Messrs. Narottam Morarjee & Co., Bombay) to repeat the dividend for the year ended 30th June 1955 at 2½ per cent. per annum (As. 8 per share of Rs. 20), to which level it had been reduced last year from 5 per cent. per annum (As. 12 per share of Rs. 15) paid for the year 1952-53, does not mean that the earnings of the Company for the year under review have been maintained at the previous year's level. On the other hand, the earnings have suffered a sharp drop and this is the second year in succession for which there has been a setback. It is, however, comforting to note that the decline in 1954-55 has not been as sharp as that in 1953-54.

The gross profit of the Company, which had shrunk from Rs. 242.29 lakhs for 1952-53 to Rs. 159.35 lakhs for the subsequent year, has further dwindled to Rs. 117.69 lakhs for the year under review. Thus, the fall in profit for 1954-55 is only about half of that noted in the previous year. This decline is mainly due to the further fall in freight and passage money, as well as in "other income," and a sizable rise in the costs of stevedoring, claims, transhipment charges and in the hire of chartered steamers. The net profit amounts to Rs. 22.73 lakhs, as against Rs. 23.45 lakhs for the previous year. This comparatively negligible recession in net profit is accounted for by the lower provisions for Agents' commission and depreciation and the absence of any provision for deferred taxation reserve. Nevertheless, the net profit is hardly sufficient to pay the dividend at As. 8 per share. The Directors have drawn back the entire sum of Rs. 11.75 lakhs standing to the credit of the dividend equalisation reserve created two years ago. They have, however, transferred Rs. 11 lakhs to the development reserve, in accordance with the relevant provision in the Finance Act 1955, under which a development rebate of 25 per cent. in respect of new ships delivered during the year is allowed as a deduction for the purpose of determining the assessable profit.

Results Compared

The accounts of the Company for the year under review are not strictly comparable with those for the previous year, because the previous year's accounts included a part of the working results of the Bombay Steam Navigation Company, Ltd., prior to the formation of two new wholly-owned subsidiaries to take over the business of the B.S.N. Co., Ltd. Nevertheless, the trend of results is unchanged. A broad idea of the Company's progress can be gained from the following table:

(In lakhs of rupees)

	For the year ended 30th June			
	1955	1954	1953	1952
Freight and passage money ..	8,88.22	9,17.87	11,41.74	9,34.07
Other income	25.68	34.92	1,07.81	1,30.88
Expenses	7,96.21	7,93.44	10,07.25	8,23.67
Gross profit ..	1,17.69	1,59.35	2,42.29	2,42.79
Agents' commission ..	10.27	15.08	20.57	17.01
Depreciation	74.70	81.32	93.64	72.68
Deferred taxation reserve ..	..	29.50	60.00	..
Debenture sinking fund ..	10.00	10.00	10.00	10.00
Net profit	22.73	23.45	58.08	1,43.10
Provision for taxation written back	..	..	..	10.55
Transfer from dividend equalisation fund ..	11.75	..	..	..
Loss on sale of shipyard written off	..	..	..	41.02
To fleet replacement account ..	..	..	10.00	..
,, dividend equalisation fund..	..	..	11.75	..
,, development reserve ..	11.00	..	..	..
,, dividend	23.47	23.47*	35.18	22.00
	(2½%)	(2½%)	(5%)	(3½%)
Carry forward	2.74	2.73	2.74	1.63

* On the increased capital of Rs. 9.39 crores, raised by the capitalisation of Rs. 2.35 crores and increasing the paid-up value of the shares from Rs. 15 to Rs. 20 per share.

N.B.—Expenses for 1951-52 include the amount transferred to capital account, namely Rs. 1.52 lakhs.

The decline in freight and passage money during the year under review is partly due to the fall in freight earned, despite the larger cargo carried, and the absence of earnings from passenger service on the Konkan Coast, which had been taken over by the subsidiary B.S.N. Co. (1953) Ltd. during the previous year. The comparative figures of the cargo lifted and freight earned during the past two years are as follows:

		1954-55	1953-54
Cargo	Tons	1,958,638	1,910,998
Freight earned ...	Rs.	8,29,89,606	8,42,82,239

Commenting on the cargo service during the year, the Directors observe:

"Your Directors regret to observe that during the year under review the conditions of cargo working have shown further deterioration, due to continued slow working of port and shore labour and congestion at various ports and also due to serious and unexpected detention of rice loaders at Rangoon caused by heavy rejections of cargo by the inspecting officers. Some of the ships were delayed at U.K. ports and had to be diverted to the Continent, owing to dockers' strike at U.K. ports and the congestion caused thereby. The extra loss of time suffered thereby in comparison with the conditions pevailing in the preceding year is about 380 voyage days."

The fall in "other income" is mainly accounted for by the decline in rent and interest from Rs. 24.74 lakhs to Rs. 17.38 lakhs and in dividends on shares of subsidiary and other companies from Rs. 3.56 lakhs to Rs. 1.60 lakhs. The expenses show a rise of Rs. 2.77 lakhs. Even this increase would have been avoided but for the sharp rise of Rs. 29.44 lakhs in stevedoring, claims, transhipment and sundry steamer charges, and of Rs. 18.26 lakhs in hire of chartered steamers, etc. The increase in expenses under these two heads is explained by the Directors thus:

"During the year, the costs of stevedoring and other cargo working expenses, marine dues, etc., have shown further rise, especially at Calcutta, due to the very marked 'go-slow' of labour, and at Madras, owing to enhancement of wages and introduction of decasualisation of stevedore labour. Further, due to the delays in the delivery of ships by the Visakhapatnam Shipyard, it became necessary to charter more tonnage than in the previous year and to postpone the special surveys of four owned ships to the following year by securing the necessary extensions from the authorities concerned."

Out of the sum of Rs. 10.27 lakhs due to the Agents of the Company as their commission for the year under review—this has also been provided for in the accounts—the Agents have offered to waive Rs. 2.27 lakhs, provided that this sum is exempted by the Government from taxation. If the required exemption is granted by the Central Board of Revenue, to which the Agents have submitted the necessary application, the Directors propose to transfer the same to the development reserve. This will raise the total allocation to this reserve to Rs. 13.27 lakhs.

Financial Position

The following synopsis of the Company's balance-sheet as on 30th June 1955 reflects its financial position:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ..	9,40,19,673	Gross block ..	18,36,63,413
Reserves and surplus ..	6,97,65,764	*Less*—Depreciation ..	4,34,44,300
Deferred taxation reserve ..	1,11,59,000	Net block ..	14,02,19,113
Debentures ..	4,33,26,697	Stores and spares ..	22,36,123
Provision for taxation ..	1,66,199	Investments ..	4,94,79,043
Liabilities ..	5,48,45,038	Debenture Trustees' account ..	2,92,94,028
		Debts, deposits and advances ..	2,84,70,083
		Cash	2,15,99,194
		Debenture issue expenses ..	19,76,687
	Rs. 27,32,74,271		Rs. 27,32,74,271

Though there has been no addition to the fleet replacement account from out of the profits for the past two years, this account was strengthened during the year under review by Rs. 12.54 lakhs being the excess over written down value of ships sold and scrapped during the year. The loan taken from the Government of India during the year amounts to Rs. 204.84 lakhs. Additions to the gross block amount to Rs. 269.24 lakhs, of which fleet accounts for Rs. 260.34 lakhs.

Changes in the Fleet

During the year under review, the Company sold two ships on account of their old age and prohibitive cost of putting them through special survey. For the same reasons, two more ships were sold since the close of the year. One of them has, however, been replaced by a second-hand ship. Four new ships (two German-built and two Visakh-built) were delivered since the close of the previous year. All these four ships are now in commission in the India-U.K.-Continental service. The third ship under construction at the Visakhapatnam shipyard is expected to be delivered next May and the remaining two ships in the second half of 1957.

Referring to the further expansion of the Company's fleet, the Directors observe:

"Your Directors have ordered in Germany further six ships each of 9,500 tons deadweight with a speed of 17 knots. Your Directors are glad to report that these orders were placed at an appropriate time, because the prices of new ships have since risen in all leading shipbuilding countries and even the deliveries are longer. Three of these ships are due for delivery in the second half of 1956 and the other three in the first half of 1957. They have also ordered one ship of about 3,300 d.w. tons for the West Coast trade. She is expected to be delivered in June next. On completion of the present tonnage programme the total loan from the Government, in respect of the eight overseas ships ordered from Germany, will be of the order of Rs. 8½ crores.

"Your Company has been admitted as a full member of the Conferences governing the trades from U.K. and Continental ports to India and Pakistan and *vice versa*. When all the new ships which are now under construction are delivered, we propose to employ 18 ships in the India/U.K.-Continental trade. The fleet in this service will then include fifteen modern ships—six 17-knotters, four 14-knotters and five 12-knotters. The question of further modernisation and expansion of your overseas fleet by additional acquisition of four or five ships will receive your Directors' careful attention."

The Rs. 20 fully paid-up shares of the Company are being currently quoted at Rs. 17-4 *cum-div.* On an *ex-div.* basis, the shares provide a yield of 3 per cent. per annum free of income-tax.

NEW JOINT-STOCK COMPANIES

The predominance of private companies with small capital-base and the concentration of the joint-stock companies in the States of Bombay and West Bengal continue to be the main features of new Indian joint-stock company registrations, according to the report of the Department of Company Law Administration for October 1955.

During the month of October 1955, there was an addition of 110 new companies, with an authorised capital of Rs. 12.87 crores, bringing the total number of new companies registered during the first seven months of the current financial year 1955-56 to 790 and raising the authorised capital to Rs. 80.48 crores. The number of companies registered during the corresponding period of 1954-55 was 649. Of the 110 newly registered companies during October, only 11 were public companies with an authorised capital of Rs. 3.64 crores and 99 private companies with an authorised capital of Rs. 9.23 crores.

The number of public companies registered during the first seven months of the current fiscal year is 106 having a total authorised capital of Rs. 41.57 crores and that of private companies is 684 with a total authorised capital of Rs. 38.92 crores.

Three more large companies having an authorised capital of Rs. 1 crore and more were floated during October 1955. Thus, up to the end of October, during the current fiscal year, 18 such large companies have been registered and of these four have been incorporated with an authorised capital of Rs. 5 crores and more. Four of these large companies are cement companies.

During the seven months ended October 1955, the total paid-up capital raised by the new companies amounted to Rs. 1.07 crores, of which Rs. 24 lakhs were raised in the month of registration of new companies.

A State-wise analysis of company registrations shows that the States of West Bengal, Madras, Bombay, Delhi and Assam together recorded 83 new registrations, i.e., 75 per cent. of the total number, with an authorised capital of Rs. 6.24 crores, i.e., 48 per cent. of the total authorised capital of all new registrations during the month of October 1955. During the seven months ending October 1955, West Bengal recorded the largest number of new registrations, namely, 309 companies with an authorised capital of Rs. 19.60 crores, out of a total of 790 newly registered companies with an authorised capital of Rs. 80.49 crores in all the States. The State of Bombay recorded less than half the number of companies registered in West Bengal, but their authorised capital was higher at Rs. 30.43 crores. The States of West Bengal and Bombay together accounted for 57 per cent. of the total number and 61 per cent. of the total authorised capital of all companies registered during the first seven months of the current fiscal year.

Fifty-four companies with a paid-up capital of Rs. 28 lakhs are reported to have been liquidated, dissolved or otherwise become defunct during the month of October 1955. Of these 54 companies, 24 were public companies having a paid-up capital of Rs. 9 lakhs. According to the reports received up to the end of October 1955, during the first seven months of the current fiscal year the total number of such companies came to 461, of which 158 were public companies and 303 private companies, with paid-up capital of Rs. 2.64 crores and Rs. 2.73 crores, respectively. During the period from April to October 1955 the number of liquidated companies with paid-up capital in a few major States was Bombay 91 (Rs. 2.10 lakhs), Madras 59 (Rs. 22 lakhs), Punjab 39 (Rs. 31 lakhs), U.P. 51 (Rs. 21 lakhs), West Bengal 29 (Rs. 88 lakhs) and Delhi 82 (Rs. 18 lakhs).

Taking the net changes in the paid-up capital of existing companies together with the paid-up capital raised by the newly registered companies during the months of their registration and that lost in liquidations, according to the reports received up to the end of October 1955, it is recorded that during the first half of the current fiscal year, the paid-up capital of joint-stock companies has increased by Rs. 21.30 lakhs. The public Companies accounted for a total increase of Rs. 19.64 lakhs and the private companies Rs. 1.66 lakhs.

Points From The Chair

Credit Control Not Fully Effective

"THE orthodox system is based on the view that a rise in Bank rate will automatically correct an adverse balance of payments because, first, it will attract gold to the United Kingdom and thus strengthen the sterling exchange in the short run, and, secondly, it will tend to restrict business, stimulate savings and discourage the holding of stocks, with the result that prices will fall and the long-term internal equilibrium will be restored. It is a question, to my mind, how far these results can be expected from an increase in Bank rate today. It is, indeed, clear that under present conditions the first aspect applies only to a very limited extent. The United Kingdom is no longer a creditor on international account and any foreign exchange attracted by high Bank rate will be 'hot money,' with forward exchange covered, and its helpful effect will be minimal. As regards the second aspect, it might still apply if Bank rate could be raised to such a point as to create unemployment and cause deflation. But with the Government—and every party—wedded to full employment, and Government indebtedness such a heavy burden on the Budget, it is extremely unlikely that it could be allowed to operate to such an extent. Any increase in Bank rate will be limited and its main effect will be psychological in that it may be a deterrent to business enterprise (and capital development): but it will not be a deterrent to Government departments or nationalised industries and it is not surprising that, when the 'credit squeeze' was announced, practically every Ministry simultaneously proclaimed that its particular projects would not be affected."

D. J. ROBARTS,
National Provincial Bank Ltd.

Credit Squeeze Might Delay Capital Investments

"For a banker to have to curtail facilities to old friends is, of course, disagreeable and it is not surprising that a steadily increasing volume of criticism of the policy has resulted. No responsible critic, I think, denies the vital necessity of reducing the inflationary pressure with all its dangers to the structure of our society. The view has, however, been strongly expressed that the problem is being attacked on too narrow a front. To concentrate on one facet of the economy, while possibly salutary in many ways, is, it is argued, not likely to produce much more than temporary alleviation in the pressure, and that more vigorous concerted action in the fields of Government expenditure and of taxation will be necessary to produce more permanent results. Some doubts have also been voiced as to whether a tightening monetary policy could safely co-exist with the anticipated increase in productivity arising from the capital investment of the past two years. However, that may be, one may perhaps be permitted to wonder whether in an atmosphere of squeeze certain desirable capital investments or projects might not necessarily have to be delayed or even abandoned."

SIR ERIC A. CARPENTER,
Williams Deacon's Bank Ltd.

Outlook for British Cotton Industry

"Our cotton industry has had a further serious difficulty with which to contend in the unrestricted and duty-free entry of cotton goods from India and Hong Kong. The volume of such imports is now large and the advantages enjoyed by these two members of the Commonwealth, by reason of cheap raw material or labour or both, make it possible for them to produce at prices with which the United Kingdom cannot hope to compete. So far our Government has shown no disposition to deal with this problem. For its part the industry has pressed its case with vigour, and perhaps in so doing has created the impression in the country at large that it is far more concerned with stopping these imports than with improving its own competitive power. Actually such an impression does not fairly reflect the facts. Despite all its difficulties the industry has spent many millions on new equipment and modernisation in recent years, and much is still being done in this way. Meanwhile, by ingenuity, whether displayed in manufacture or distribution, the trade is finding increased scope for its enterprise, and in some directions is more than holding its own against mounting competition."

SIR THOMAS D. BARLOW,
District Bank Ltd.

Increased Wages and Increased Productivity

"It cannot be stressed too strongly or too often that the only source from which increased wages can come is increased productivity, which, in plain language, means greater and more efficient production per individual, per operative unit and per hour. No earner, regardless of his income group or his particular activities, is entitled to enjoy an improved standard of living unless he makes an adequate individual contribution to that improvement by doing more or better work either alone or in co-operation with others. There is here no question of any divergence of interests between employers and labour; their interests and those of the whole community are identical and, in the long run, all will rise or fall together."

H. NUTCOMBE HUME,
Charterhouse Investment Trust Ltd.

COMPANY MEETINGS AND DIVIDENDS

CLIVE MILLS CO., LTD. Annual General Meeting, Calcutta, 30th January 1956. Transfer books remain closed from 15th to 30th January 1956, both days inclusive.

BENARES ELECTRIC LIGHT AND POWER CO., LTD. Half-yearly General Meeting, Calcutta, 30th January 1956. Dividend: As. 10 per share. Transfer books remain closed from 24th to 30th January 1956, both days inclusive.

PURTABPORE CO., LTD. Annual General Meeting, Kanpur, U.P., 3rd February 1956. Dividend: As. 12 per share. Transfer books remain closed from 17th January to 3rd February 1956, both days inclusive.

BIRDS INVESTMENTS LTD. Annual General Meeting, Calcutta, 6th February 1956. Transfer books remain closed from 24th January to 6th February 1956, both days inclusive.

CHAMPDANY JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 7th February 1956. Dividend: Rs. 6 per share. Transfer books remain closed from 25th January to 7th February 1956, both days inclusive.

JESSOP & CO., LTD. Annual General Meeting, Calcutta, 13th February 1956. Transfer books will remain closed from 6th to 18th February 1956, both days inclusive.

PORT CANNING AND LAND IMPROVEMENT CO., LTD. Annual General Meeting, Bombay, 14th February 1956. Transfer books will remain closed from 1st to 15th February 1956, both days inclusive.

NASKARPARA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 14th February 1956. Transfer books will remain closed from 7th to 14th February 1956, both days inclusive.

ASSOCIATED STONE INDUSTRIES (KOTAH) LTD. Annual General Meeting, Ramganjmandi, 18th February 1956. Transfer books will remain closed from 11th to 18th February 1956, both days inclusive.

IVAN JONES LTD. Interim dividend of As. 3 per share, for the year ended 30th September, 1953. Transfer books will remain closed from 1st to 15th February 1956, both days inclusive.

DEVASHOLA (NILGIRI) TEA ESTATES CO., LTD. Interim dividend of Re. 1 per share, for the year ended 31st December 1955. Transfer books will remain closed from 30th January to 4th February 1956, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES LTD. Dividend of As. 6-2/5 per share for the year ended 31st October 1955. Transfer books remain closed from 23rd to 30th January 1956, both days inclusive.

BALANOOR TEA AND RUBBER CO., LTD. Interim dividend of Re. 1 per ordinary share, for the year ending 31st March 1956. Transfer books remain closed from 23rd to 27th January 1956, both days inclusive.

DEVON TEA AND PRODUCE CO., LTD. Interim dividend of Re. 1 per ordinary share, for the year ending 31st March 1956. Transfer books remain closed from 23rd to 27th January 1956, both days inclusive.

NELLITHANAM RUBBER AND PRODUCE CO., LTD. Dividend of Re. 1-4 per ordinary share, for the year ended 31st March 1955.

ELLORE ELECTRIC SUPPLY CORPORATION LTD. Interim dividend of As. 6 per share, for the year 1955-56. Transfer books remain closed from 16th to 25th January 1956, both days inclusive.

CENTRAL KURKEND COAL CO., LTD. Dividend of As. 2 per share, for the half-year ended 30th June 1955.

NEW INDIA SUGAR MILLS LTD. Dividend of Rs. 2-8 per share for the year ended 30th June 1955.

BHARAT SUGAR MILLS LTD. Dividend of Re. 1-8 per share, for the year ended 30th June 1955.

UPPER GANGES SUGAR MILLS LTD. Dividend of Rs. 2-8 per share, for the year ended 30th June 1955.

COMPANY REGISTRATIONS

CENTRAL COTTON MILLS LTD. (First Director: Mr. B. C. Bhanderi.) Business: To start cotton, wool and jute spinning and weaving mills, etc. Authorised capital: Rs. 1,50,00,000. Public company. Address: 9, Brabourne Road, Calcutta 1.

BENGAL NAGPUR ENGINEERING CO., LTD. (First Director: Mr. G. Saraogi.) Business: Builders and contractors, iron founders, steel makers, etc. Authorised capital: Rs. 50,00,000. Public company. Address: 4, Lyons Range, Calcutta.

HIND REFRACTORIES LTD. (First Director: Mr. T. C. Basu.) Business: Manufacturers, exporters and importers of firebricks, silica bricks, etc. Authorised capital: Rs. 30,00,000. Public company. Address: 135, Canning Street, Calcutta.

KALA KUNJ LTD. (First Director: Mr. P. K. Badiani.) Business: Cinematograph trade and industry and all its allied trades. Authorised capital: Rs. 5,00,000. Private company. Address: Off Globe Mills Passage, Worli, Bombay.

BEST MINERALS LTD. (First Director: Mr. J. B. Thaker.) Business: Mining of metals, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 192, Dadabhai Naoroji Road, Fort, Bombay.

EASTERN MINING CONTRACTORS LTD. (First Director: Mr. J. B. Thaker.) Business: Mining contractors and dealers in all kinds of minerals. Authorised capital: Rs. 5,00,000. Private company. Address: 192, Dadabhai Naoroji Road, Fort, Bombay.

SOME REFLECTIONS ON SECOND FIVE-YEAR PLAN-FRAME

(*Concluded from page 171*)

the purchase of goods subject to higher rates of excise and sales taxes may increase more than the proportion of increase in income and so on. That is how richer nations pay a higher percentage of income by way of taxes.

All the expansionist effects of deficit financing as described above are based on the assumption that all the money is spent in the country itself. According to the Plan-frame, the imports of capital goods during the Plan period would amount to nearly Rs. 1,600 crores, that is, round about Rs. 300 crores a year. If these imports are paid for by increase in exports or decrease in other imports, they need not interfere with the expansionist trends generated by the deficit financing. But, if these imports result in creating net deficits on trade and services account, it will mean so much less deficit expenditure and consequent loss of the expansionist effects of the Plan deficits to that extent. The effect will be the same even though the trade deficit be financed by liquidating sterling balances. For it will mean handing over equal amount of Indian currency to the Reserve Bank for buying sterling. It is not clear whether the Rs. 400 crores for which credit is taken in the investment budget under the head of external assistance have been included in these Rs. 1,600 crores or not. If they be included, then we are here concerned only with Rs. 1,200 crores and not Rs. 1,600 crores. Lastly, it must be remembered that, if the total foreign trade deficit during the Plan period exceeds the Plan deficit, the economy will be subjected to restrictive influences and whatever the investment and employment in the public sector, employment and income in general may suffer contraction.

Employment Possibilities

With so many imponderables and unknowns, it will be quite unscientific and hazardous to make any quantitative guesses regarding possible increase in employment during this Plan period. It is not clear on what considerations the estimates given in the Plan-frame regarding the increase in employment are based. The Planning Commission in its Frame-work has calculated the increase in employment on the basis of increase in production. Apart from doubts about the accuracy of these estimates, one thing to be remembered here is that the increase in production and employment in the private sector will depend upon the effects of public expenditure on the level of demand.

But even assuming that the Plan-frame estimates regarding possible increase in employment are correct, the estimates given therein regarding the possible increase in national income by 1961 seem to be exaggerated. For instance, the national income is expected to rise from Rs. 108 abja in 1955-56 to Rs. 137 abja in 1960-61. That is, in 1960-61 the national income is expected to be higher than in 1955-56 by nearly Rs. 3,000 crores. This additional income is to be generated by 11 million additional workers. This means an annual average productivity per worker of nearly Rs. 3,000. This is rather too high a figure, especially when more than 50 per cent. of the employment is to be created in agriculture, handicrafts and small-scale enterprises. The productivity in these occupations, as calculated by the National Income Committee for the year 1948-49, was: Agriculture Rs. 500; Small enterprises Rs. 600 and professions and liberal arts Rs. 700. We cannot expect their productivity to rise to four times in 1960-61 (corrected for price changes). Even the productivity for mining and factory establishments was calculated to be Rs. 1,900 by the same Committee for the same year. It can thus be seen that the estimates given in the Plan-frame of expected increase in national income are rather far too exaggerated.

The purpose of writing these lines is not to work out any accurate calculations regarding the various matters involved in the Plan-frame. The underlying idea is just to point out some of the important factors which influence changes in income and employment. The recent developments in economic theory clearly indicate that the economic progress of a country is largely a matter of economic policy. So the more correct the economic policy is the more rapid can be the economic development of the country. What is intended here, therefore, is just to draw attention to certain points which must be taken into consideration while drawing up a plan for economic development but which seem to have been overlooked in the Plan-frame.—*All Rights Reserved.*

U.K.'S EXPORT TRADE MAKES PROGRESS

FURTHER EXPANSION LIKELY DURING CURRENT YEAR

By John Kingsley

UNITED Kingdom trade figures for the year 1955, issued a few days ago, offer some grounds for satisfaction, although not for complacency, in that exports were well above those of 1954. The increase—£2,936 million as compared with £2,674 million—does, in fact, run at about 8½ per cent. (This figure excludes re-exports, which, at £119,000,000, themselves rose by 18 per cent. in 1954). The increase in volume was about 7 per cent., which compares with an increase of 4 per cent. in 1954 over 1953, and prices rose by between one and two per cent. Admittedly, some shipments were delayed from 1954 into the early months of last year in consequence of the dock strike in October 1954. But, even if allowance is made for this special factor, it is obvious that Britain's export trade has made steady progress.

There has been little substantial change over the past year in the composition of this export trade. (As detailed figures are not yet available, the analysis is based on data for 11 months). Engineering goods maintained their share of just under two-fifths of total exports. The share of textiles declined; 1955 was an unsatisfactory year for exports of cotton and synthetic fibre goods, although shipments of woollen and worsted goods and also of miscellaneous textiles—though to a small extent—increased.

It is particularly noteworthy that exports of iron and steel increased by as much as 14 per cent., in spite of increased domestic requirements for these metals for both capital and durable consumer goods. Exports of non-ferrous metals and semi-manufactures were up by one-third, with a notable expansion in sales of copper wire. Among motor vehicles, exports of commercial vehicles rose by no less than 26 per cent.; they were particularly successful in the Commonwealth. Although they did not show as big an increase as in 1954, exports of cars were also higher. British cycle exports were up by one-seventh, exports of aircraft rose by one-quarter, and the chemicals industry recorded a 10 per cent. increase in its oversea sales. It is impossible, within the scope of this article, to give more than a rough outline of the progress; but among smaller groups, the spectacular increase of 80 per cent. in exports of plate glass deserves mention.

Dollar Drive

In the geographical pattern of U.K.'s exports, the success of the dollar export drive is considered to be particularly gratifying. Sales to North America increased by 15 per cent. from 1954 to 1955 (exports to the United States by 23 per cent. and to Canada by 7 per cent.). An even greater rate of increase (20 per cent.) was noted for "other non-sterling" countries (that is, all non-sterling countries outside the dollar area and outside the Organisation for European Economic Co-operation). In particular, exports expanded to the oil countries in the Middle East, to Finland and Yugoslavia, and also to Eastern Europe. Exports to Western Europe were rather disappointing; in spite of the boom on the Continent, exports to the O.E.E.C. area rose by less than 5 per cent. There are, however, signs that an improvement may be forthcoming here.

The sterling area has held its share in Britain's total exports. As this share has been maintained at a high level over the last five years and a number of sterling area countries has been obliged, by balance-of-payments difficulties, to limit their demand for exports, no spectacular increase was to be expected.

Rise in Imports

While the export picture is on the whole satisfactory, the import figures may, at first sight, give rise to some doubt. Total imports rose by 15 per cent. in value, from approximately £3,374 million in 1954 to £3,889 million in 1955. In volume, there was an increase of 12 per cent., and import prices rose by 3 per cent. The main reason for this substantial rise was not excessive consumption, but rather the need of industry for increased supplies to support expanding output. Somewhat higher food imports were another factor; these rose by 8 per cent. Cereal imports rose by 27 per cent. due partly to the running down in Government stocks after decontrol in 1954 and partly to the bad harvest in that year. There was also a marked increase in imports of feedingstuffs.

Among industrial materials, special factors operated in the field of coal and steel. Coal imports multiplied fourfold as a result of a slight decline in domestic output, allied with an increase in manufacturing activity, while steel imports were three-and-a-half times as much. Home output increased by nearly 7 per cent.—in itself a satisfactory performance, but not enough to meet rising home and export requirements. Imports of non-ferrous metals also expanded. Most of these had risen in price, and greater quantities were needed for use in manufacture for export. The other materials which show higher import figures are timber, rubber, pulp, paper, and newsprint. On the other hand, imports of textile fibres declined; cotton stocks were run down and wool prices fell.

Stocks Accumulated

There is no doubt that the industry needed higher imports last year, especially since, in 1954, expansion in production was not matched by a corresponding increase in imports. Although one cannot draw a firm conclusion from the available statistics, there is little doubt that some stocks were accumulated last year. There thus is reasonable hope that, in the coming months, any expansion in imports will be at a slower pace than last year. Coal and steel imports are likely to decline and, perhaps, also the high imports of cereals.

Exports should continue to expand. Although the restrictions introduced in Australia and New Zealand may affect exports to these markets, trade with the sterling area as a whole should continue at a high level. Prospects in Western Europe appear to be good. The measures taken to restrain demand are designed to hold expansion within reasonable limits rather than to reduce activity, and, with the exception, perhaps, of the Scandinavian countries, the measures are, for the most part, rather mild.

There should be further opportunities of increasing exports to the expanding markets of the Middle East; and in the dollar area as well as in the less developed countries, the U.K. has proved last year that it can hold its own.

INSURANCE

(*Concluded from page 176*)

any such document is, however, relevant for the purpose of any business, other than the controlled business, the authorised person is bound to return it to the management, though he might place identification marks on the document or take extracts from it.

Under section 4(1), the Central Government is empowered to appoint a custodian for the purpose of taking over the management of the controlled business of an insurer. The insurer will deliver to the custodian all books of account, registers or other documents in their custody relating to the controlled business. The restrictions, implied in sub-sections (3), (5) and (6) of Section 3, to which a reference has been made above, will not apply to the insurers for whom the custodians have been appointed. But the Central Government may issue such directions to the custodian's powers and duties as it deems desirable in the circumstances of the case. The custodian will exercise all powers which the Controller of Insurance or an administrator, appointed under section 52A of the Insurance Act, may exercise under the Act.

The provisions relating to compensation payable to the companies during the period they are under the management of the Government are defined in sections (6) and (7) which read as under:

"The amount of compensation payable in respect of the vesting in the Central Government of the management of the controlled business of an insurer shall, for every month during which the management thereof remains vested in the Central Government, be a sum which is equivalent to one-twelfth of the annual average of the share of the surplus allocated to shareholders as disclosed in the abstracts prepared in accordance with Part II of the fourth schedule to the Insurance Act in respect of the last two acturial investigations relating to the controlled business as at dates earlier than the first day of January 1956.

"Provided that, if in respect of the controlled business of an insurer no such surplus as is referred to in this sub-section has been allocated to shareholders, either because there are no shareholders or for any other reason, the compensation shall be payable at the rate of Re. 1 per month for every Rs. 2,000 or part thereof of the premium income of the insurer relating to his controlled business during the year 1954.

"7. (1) The amount of compensation payable under section 6 shall in the first instance be payable out of the 7.5 per cent. of the surplus referred to in sub-section (1) of section 49 of the Insurance Act earned by the insurer during the period the management of the controlled business of the insurer vests in the Central Government, and where such compensation or any part thereof cannot be so paid out the Central Government shall make due provision for the payment of such compensation or part thereof as the case may be.

"(2) The compensation payable under section 6 shall be distributed among the persons entitled thereto by the Central Government in such manner as may be prescribed by rules made in this behalf:

"Provided that in the case of an insurer who is a company the Central Government shall have due regard to the wishes of the members expressed by them at any general meeting convened for the purpose."

Reactions

The employees of the insurance offices have generally welcomed the nationalisation of life insurance. The chairmen of the two leading insurance offices—Sir Cowasjee Jehangir, Bart., of the Oriental Government Security Life Assurance Co., Ltd., and Mr. A. D. Shroff of the New India Assurance Co., Ltd.—have both deplored this step. Sir Cowasjee stated that the Ordinance nationalising life insurance was "undemocratic" and there was no reason for doing so, unless the Government feared opposition and criticism. If the step was taken to obtain financial aid for the second Five-year Plan, this might be possible only at the sacrifice of the interests of policyholders and shareholders. Mr. Shroff, in the course of a Press interview, stated that having regard to the fact that the shareholders of an insurance company get only 7½ per cent. of the surplus, insurance business was one business in which profit motive was at its minimum. He added: "The only conclusion to be drawn is that it is obviously a political decision, in that it is contrary to all facts and experience of most of the countries in the West which, after prolonged investigations, decided not to nationalise life assurance." Referring to the Finance Minister's broadcast, he said that it revealed a "tragic sense of unfairness, in that there is not a word of appreciation for the management of those companies which, through enterprise, high standard of integrity and judicious investment of funds, are handing over to the country today institutions of which any fair-minded Indian would be proud."

Mr. Tulsidas Kilachand said that the Government's decision was thoroughly ill-advised as the cost of life insurance was bound to go up because of nationalisation. Mr. Babubhai M. Chinai, President of the Indian Merchants' Chamber, Bombay, stated that nationalised insurance would not be in a position to render the individualised service and to build up a vast organisational set-up so essential for making up the large leeway in the field of life insurance. Mr. B. D. Garware, President of the Maharashtra Chamber of Commerce, Bombay, observed that the Government's decision to nationalise insurance was an "eloquent illustration of an utterly unnecessary extension of the public sector."

Notice

STATE BANK OF INDIA

THE ANNUAL GENERAL MEETING OF THE Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Wednesday the 29th February 1956, at 4.30 p.m. (Standard Time), for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1955 and the Auditors' Report on the Balance Sheet and Accounts.

JOHN MATTHAI,
Chairman.

BOMBAY, 23*rd January* 1956.

MONEY FIRM

(From Our Own Correspondent)

BOMBAY, 25*th January*

The short-term money market continued to feel the shortage of floating funds and the pressure of demand for money. The civil commotion in the city which disrupted work in industries and trade for well-nigh a week did not in any way affect the demand for money. The result was that interest rates remained firm at the previous week's level. Thus, inter-bank call money was bid by all banks at 3 per cent. per annum. House money at call was also placed at 3 per cent. Short-term deposits were offered the self-same rate of 3 per cent. for one to six months.

The firm money conditions are reflected in the results of the Government of India Treasury Bills sales held this week. The amount offered against the usual invitation for Rs. 100 lakhs was only Rs. 121.75 lakhs, having declined from Rs. 142.75 lakhs in the previous week. The average rate of accepted tenders, which had hardened from Rs. 2-8-1 per cent. to Rs. 2-8-3 per cent. per annum in the previous week, rose further to Rs. 2-8-5 per cent. per annum this week. This is the highest rate to be earned on these Bills since the week ended 23rd September 1955.

After four weeks of successive expansion to the tune of Rs. 38.70 crores, notes in circulation have shrunk by Rs. 6.03 crores. Disclosing this, the Reserve Bank of India statement for the week ended 20th January 1956 shows a rise of Rs. 6.11 crores in notes held in the Banking Department, the consequent fractional rise in total notes issued being covered by a similar rise in rupee coin. Foreign securities have declined by Rs. 24.84 crores, while rupee securities have risen by a similar extent. In the Banking Department, there has been a small decline of Rs. 1.81 crores in deposits of the Central Government, while those of other Governments have gone up by Rs. 4.92 crores. Deposits of banks have risen further by Rs. 12.44 crores and those of others by Rs. 5.58 crores. An increase of Rs. 6.14 crores is noted in cash balances and of Rs. 28.59 crores in balances held abroad. Loans and advances to Governments are lower by Rs. 1.76 crores, while there have been no notable changes in other portfolios, except for a sharp fall of Rs. 6.82 crores in Government Treasury Bills purchased and discounted.

A sharp rise of Rs. 17.19 crores in demand deposits of banks and a further increase of over Rs. 11 crores in their advances and bills are the outstanding features disclosed by the consolidated statement of position of Scheduled banks for the week ended 13th January 1956. Time deposits have dropped by Rs. 40 lakhs, while inter-bank borrowings have gone up by Rs. 87 lakhs. Borrowings from the Reserve Bank have declined by Rs. 1.39 crores, while those from the State Bank have risen further by Rs. 1.49 crores. Advances show a rise of Rs. 6.10 crores and inland bills purchased and discounted Rs. 5.65 crores, whereas foreign bills are lower by Rs. 69 lakhs. There has been a fall of Rs. 1.01 crores in investments and of Rs. 91 lakhs in cash and balances with the Reserve Bank. Balances with other banks in current account show a small rise of Rs. 28 lakhs and money at call and short notice Rs. 1.24 crores.

The gilt-edged market ruled dull with the volume of business very much restricted. The stringency in the money market and the outburst of violence in the city were the main factors which kept the interest at a low ebb. Prices were, however, well held on account of some enquiries and the absence of any offerings. 3 per cent. 1957 was unchanged at Rs. 99-9, though there were buyers at Rs. 99-8½. 3 per cent. 1958 had buyers at Rs. 99-7. 3 per cent. 1959-61 attracted some interest at Rs. 98-2½. 3 per cent. 1963-65 and 3 per cent. 1964 were maintained at Rs. 94-10; there were buyers at this level. 3 per cent. 1966-68, however, declined by As. 2 to Rs. 91-14, before gaining to Rs. 91-15. 3 per cent. 1970-75 held the ground at Rs. 87-15. 3 per cent. 1986 Conversion Loan was wanted at Rs. 80-6 3 per cent. 1970-75 was dull at Rs. 87-15. 3½ per cent. 1961 had business at Rs. 99-8. 3½ per cent. 1964 was unchanged at Rs. 98-12 and 3½ per cent. 1965 at Rs. 98-9, but these two securities had buyers half-an-anna lower.

In the foreign exchange section, there was a slight hardening of the rupee in terms of the U.S. dollar in the earlier part of the week, in tune with the strength displayed by sterling, but the gain was wiped out today, following the decline in sterling. Banks' selling rate for ready dollar changed from Rs. 477½ to Rs. 476¾ per $100, but closed today at Rs. 477¼ per $100, and their buying rate moved from Rs. 473 to Rs. 472½ before finishing at Rs. 473 per $100. Sterling gathered further strength early during the week, but, at later stages, lost the gain. Thus, in New York, spot sterling, after moving up from $2.80⅝-2.80⅞ to $2.80⅞-2.81, reacted to $2.80.9/16-2.80.11/16 yesterday. Three months' forward closed at $2.79.7/16-2.79.9/16, after touching $2.79.13/16-2.79.15/16, as against last week's closing of $2.79½-2.79⅝. Transferable sterling closed 1/16c. lower at $2.77⅜-2.77½.

KANPUR HIDES STEADY

(From Our Own Correspondent)

KANPUR, 22*nd January*

During the week under review, the conditions of the local hides and skins markets were in many respects similar to those prevailing in the earlier week. The new arrivals were considerable. The country tanners were big buyers of the lighter variety of the wet salted cow.

The latest available quotations are: Wet salted cow, 1st grade Rs. 320 to Rs. 360, 2nd grade Rs. 290 to Rs. 300 and 3rd grade Rs. 260 per score; wet salted buff, 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat, 1st grade Rs. 225 to Rs. 340 and 2nd grade Rs. 275 per 100 pieces; sheep skins, 1st grade Rs. 225 and 2nd grade Rs. 175 to Rs. 200.

BULLION REACTS AFTER SHARP RISE

(From Our Own Correspondent)

BOMBAY, 25*th January*

The bullion market displayed a two-sided trend during the week under review. After remaining quiet early in the week, there was a sharp rise in prices on Monday this week, but this gain was more than wiped out during the last two days. Over the week gold disclosed a fractional gain due mainly to good demand for gold, while silver suffered moderate losses.

The spurt in prices during mid-week was due to resumption of buying, particularly in gold, inspired by reports that the National Development Council had recommended the levy of an annual capital tax. Hopes that the taxation policy of the Government would encourage hoarding in bullion induced the bulls to enlarge their holdings and the bears to cover their sales. Good demand for gold in the ready section also helped the sentiment to remain buoyant. This recovery was not sustained for long, as the higher levels attracted profit-realising. The weakness of the share markets in Bombay and Calcutta, payment difficulties in Calcutta and reports of large arrivals of unrefined silver affected the sentiment adversely. The continued good demand for gold, however, checked the recession to some extent in the yellow metal.

Fresh business in the *Posh* (January) settlement remains suspended from Monday this week, as per by-laws, but business in this settlement during the rest of the week under review was confined to carrying over of outstanding positions. Business in *Maha* (February) settlement, which began on the 16th inst., continued during the week under review.

Silver for forward delivery (27th January settlement) reacted from Rs. 177-13 to Rs. 176-13 early in the week before rising sharply to Rs. 178-12 on Monday this week. There was, however, a recession to Rs. 176-6 at the close today. Forward silver for the 27th February settlement dropped from Rs. 178-12 to Rs. 177-13, but gathered strength to touch a high of Rs. 179-14. The closing was, however, lower at Rs. 177-12.

Ready silver (.996 Mint) rose up to Rs. 178-11 from the previous week's closing of Rs. 177-7, but gave way to Rs. 176-9.

The floating stocks of silver are placed at 1,200 bars. The daily average offtake was 5 to 10 bars a day.

Forward gold (28th January settlement) eased a little from Rs. 95-13 to Rs. 95-2, but soon hardened to Rs. 96-13 before closing lower at Rs. 96-1. Gold for forward delivery in 25th February settlement advanced from Rs. 96-6 to Rs. 97-7, but wound up today at Rs. 96-3.

Ready gold picked up over the week As. 3 to finish at Rs. 95-14. The highest level touched was, however, Rs. 96-15. The floating stocks of gold are reported to be 45,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake, which was 2,000 tolas early in the week, rose to 5,000 tolas per day later in the week.

In London, there was a further fall in silver prices. Gold also suffered a recession, but soon made good the loss. Spot silver dropped from 78¼d. to 77¾d. and forward silver from 77¾d. to 77⅜d. After an initial rise from 249s. 2¾d. to 249s. 3¼d., gold relapsed to 249s. 1¼d., but regained to close at 249s. 2¾d. In New York, silver was marked down from 90½c. to 90c.

The folowing comparative table shows the trend of the market during the week under review:

	25-1-56	Highest	Lowest	18-1-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint)	95 14	96 15	95 3	95 11

EXPORT TEAS STEADY

(From Our Own Correspondent)

CALCUTTA, 24*th January*

During today's export sale steady conditions were in evidence and prices were maintained. The quotations were: Clean black pekoe Rs. 2 to Rs. 2-1, medium Assam B.P. Re. 1-10 to Re. 1-11, and best C.T.C. Assam B.P. Rs. 2-3 to Rs. 2-4.

Attractive gains were recorded during last week's sale for domestic consumption, dusts on offer amounting to 17,800 chests. Non-withers Dooars, including the poorer sorts, found buyers at the prices annas 1 to 2 higher than last rates, and the commonest teas gained as much as As. 2 to As. 3. In moderate support, medium Assams, commons and the grainy Dooars advanced by 1 to 2 annas. A very near buoyancy prevailed in black leaf teas suitable for Middle East consumption; and prices for these teas gained by several points. C.T.C. Assams with good liquors lined up with the general trend of firmness, and the less attractive teas from this variety also attracted attention following competition. The quotations were: best C.T.C. Assam Rs. 2-4 to Rs. 2-6, medium Assam grainy dust Re. 1-8-6 to Re. 1-9-6, and medium Dooars Re. 1-7-6 to Re. 1-8.

Leaf grades offered amounted to 2,500 chests, prices of which gained by 1 to 2 annas following good demand.

HEDGE CONTRACTS IN COTTON CLOSED OUT

(From Our Own Correspondent)

BOMBAY, 25*th January*

The most outstanding event of the week in the cotton market was the closing out of hedge contracts in I.C.C. February and May with effect from today at Rs. 700 and Rs. 686-8, respectively, that is, the rates at which the contracts stood at the close of business yesterday. This step was in accordance with the directive sent to the Board of the East India Cotton Association (E.I.C.A.) by the Forward Markets Commission under the newly enacted by-law 52AA of the E.I.C.A. which empowers the Commission to take such action. Justifying the action, the Commission said that the continuation of trading in the hedge contracts was "detrimental to the interest of the trade, the public interest and the larger interest of the economy of India."

Meanwhile, the appeal filed by a member of the E.I.C.A. from the decision of Mr. Justice Coyajee dismissing the plea against the E.I.C.A.'s declaration of emergency in the cotton market and its right to call for a squaring up of transactions has ended in a settlement between the parties. During the course of the appeal before the Chief Justice Mr. Chagla and Mr. Justice Dixit, Their Lordships suggested a compromise. As a result of this decision, the parties arrived at terms and took a consent decree. The suit has accordingly been called out. According to the settlement, it was agreed, *inter alia*, that the impugned resolution of the E.I.C.A. Board was valid and that the Board should meet today (25th January) and again consider, under By-law 52(2), whether the ceiling rate of Rs. 700 fixed as per resolution of the 6th inst. should be continued or varied. The Board gave the assurance that, in considering the same, it would apply its own mind and exercise its own judgment. The decisions of the Board are awaited with keen interest. In view of the closing out of hedge contracts at rates prevailing at the close yesterday, some cotton traders expect that the Board of the E.I.C.A. may also fix the clearing rates for outstanding business at these levels.

Trading in cotton futures during the week under review was at a low ebb. In fact, there was no business at all in the first two sessions of the week, as also today. I.C.C. February was throughout nominally quoted at Rs. 700—the ceiling fixed by the E.I.C.A.—although it was unofficially quoted at a slightly higher level. I.C.C. May which stood at Rs. 693 last week-end receded to Rs. 682 on Monday. After recovering to Rs. 688, it closed a shade lower at Rs. 686-8. Over the week, the contract thus lost Rs. 6-8.

The spot section of the cotton market ruled dull during the week under review. Trading was on a restricted scale, as mills were not inclined to enter into fresh commitments at current prices. Some deals were put through in styles such as Kalyan, Wagad, Zoda and Oomra *deshi*. Jarilla and B.P. 52, however, evoked good enquiries from mills. Shippers displayed good interest in Oomra and Bengal *deshi*. Among foreign cottons, East Africans met with buying support and a moderate turnover was reported in new crop Uganda for March-April shipment. Egyptians and Sudans also came in for some business.

The following are the latest available quotations from the Sewri market: Bengal *deshi* Rs. 650; Berar Jarillas Rs. 760; Khandesh Rs. 750; Vijay Rs. 880; Oomra *deshi* Rs. 710; Moglai Rs. 630.

For the third week in succession, the Karachi cotton market exhibited a firm trend. There were renewed buying enquiries from overseas interests, as also from the local cotton mills. Operators, therefore, continued to lend support and cotton prices moved up further. The rise in values was in marked evidence in the futures section. N.T. January delivery rallied Rs. 2-13 to Rs. 80-3 per 82 lbs. March delivery advanced by As. 8 to Rs. 76-15. Spot prices of cotton also registered an increase. The following are the latest available quotations for a few popular varieties of Pakistan cotton:

Sind *deshi* Rs. 68; Punjab *deshi* Rs. 62-8; 4F Punjab R.G. Rs. 73; S.G. Rs. 87-Rs. 80; L.S.S. Punjab R.G. Rs. 78; S.G. Rs. 83; N.T. R.G. Rs. 80-Rs. 81½; S.G. Rs. 84-Rs. 85½; 289F Punjab R.G. Rs. 82-Rs. 83; S.G. Rs. 88-Rs. 89.

The boom conditions which prevailed in the Alexandria cotton futures market last week abated this week. In fact, the market ruled considerably depressed. The speculative interests withdrew their support on fears that the large sales of American surplus cotton at competitive rates in world markets would adversely affect exports of Egyptian cotton. Some traders were actually busy reducing their commitments. Consequently, values of cotton staged a retreat. Karnak March contract dropped 3.63 tallaris to 78.52 tallaris. January contract fell by 2.60 tallaris to 81.50 tallaris. Ashmouni delivery also suffered a setback. February receding from 60.80 tallaris to 58.47 tallaris and April from 61.10 tallaris to 58.92 tallaris. In the spot section, demand from shippers was concentrated only on Giza 30. There was no sign of enlarged overall demand for Karnak and Giza 30, the prices of which ruled very high.

The prices offered for Uganda new crop cotton at the auctions held recently were lower than those paid last month. Auctions will continue to be held on Tuesday and Thursday of every week up to and including 7th February next. Each auction covers about 10,000 bales of cotton. The sales programme after the 7th of next month is not known, but private sources believe that, if demand is maintained, auctions will continue to be held till the end of March 1956. The progress of the cotton crop is considered to be generally good, the estimate of yield being placed at 380,000 bales, including Kenya Nyanza.

Conditions in the Liverpool cotton futures market were irregular during the week under review. While the nearby delivery ruled firm on American

and trade buying, distant positions were neglected and suffered losses following easy advices from New York. Under selling pressure, thanks to reports of setback to cotton prices at Alexandria, the Egyptian Karnak contract tended to look down. The closing quotation yesterday was considerably below parity with Alexandria contract, owing to pressure of local tenderable stocks.

The latest available quotations (in pence per lb.) from the Liverpool cotton futures market are: *Old contract*: March-April 25.30; May-June 23.90; July-August 23.40; *new contract*: May-June 28.20 July-August 26.80; October-November 25.10; December-January 24.60; *Egyptian Karnak cotton*: January-February 41.10; March-April 41.95; May-June 42.20; July-August 42.20.

The undertone of the New York cotton futures market continued to be firm. The firmness was aided by reports that the Senate Agricultural Committee was likely to oppose the proposal permitting sale of cotton (and other surplus goods) at market levels in order to finance soil bank payments. The persistently large cotton entry into the loan and fall in repossessions also imparted strength to the market. Trade and commission buying was, as a result, quite brisk, with values registering an advance. The improvement would have been more marked but for profit-taking which was induced by uncertainties surrounding official policy regarding new crop cotton.

On Friday last, the U.S. Department of Agriculture announced the commercial export sale of 184,797 bales of surplus Government-owned cotton. The sales, which were concluded by its New Orleans Office on the 19th inst., were made at prices ranging from 25.55 to 26.80 cents per lb. middling 15/16". The prices were almost the same as those at which sales were effected last week. With the latest sale of 184,797 bales, the total quantity of surplus cotton so far sold amounts to 326,956 bales, out of the 1 million bales held in stock.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	24-1-56	17-1-56	10-1-56
Spot	35.25	34.80	35.20
March	34.48	34.04	34.12
May	33.83	33.45	33.62
July	32.63	32.18	32.40
October	30.98	30.43	31.07

YARNS STEADY

(From Our Own Correspondent)

BOMBAY, 25*th January*

Business put through in the yarn market was considerably restricted during the week under review, thanks to disturbances following the agitation for retaining Bombay in *Samyukta* Maharashtra. The undertone of the market was, however, generally steady. Rayon yarns for forward delivery registered an improvement in prices on good buying support, while spot rates were fully maintained at last week's levels. Staple fibre yarns also tended to move up, the chief inspiring factor being expectation of enlarged demand from consuming centres in the coming weeks. The traders seemed to feel on second thoughts that the permission given to the cotton mills to employ a larger percentage of their installed capacity for spinning staple fibre yarn—referred to in this report last week—might not in itself bring about an appreciable rise in output, inasmuch as it would depend on the availability of adequate supplies of fibre at a reasonable price. Cotton yarns, too, ruled strong on reports of satisfactory offtake in handloom cloth.

Snia rayon yarn (120 dull cones) for April delivery rallied Rs. 6 to Rs. 811. February delivery advanced by Rs. 5 to Rs. 800. In the spot section, 120 Japan was done at Rs. 4-4-9, 150 Japan at Rs. 3-15 and 120 Italy at Rs. 3-15; all these rates were same as those prevailing at the end of last week. 150 Italy, on the other hand, shed half an anna to Rs. 4 for want of support. National Rayons 150 Bt. cones 1st grade were also neglected, yesterday's closing rate being nine pies lower at Rs. 3-8-9.

Among staple fibre yarns (40×2), Kohinoors evoked excellent enquiries and spurted by As. 3 to Rs. 4-4-6, Centurys hardened by 6 pies to Rs. 4. New Greats were firm at Rs. 4-1.

In the cotton yarn section, 10 counts Podars picked up As. 2 to Rs. 13-2. Elphinstones gained an anna to Rs. 12-8. Moderns were fully maintained at Rs. 13-4. Twenty counts Raghuvamshis rose by an anna to Rs. 16-12. Maduras were steady at Rs. 17-12, as also Hinds at Rs. 16-1. Among 80s, Finlays were unaltered at Rs. 70 and Elphinstones at Rs. 61-8. There was a rise of one anna in the quotation for 40 counts Minaxis which stood at Rs. 25-9. New Greats were quoted at Rs. 24-10. Among 60s, Maduras were fully steady at Rs. 44-8, but Finlays eased by As. 2 to Rs. 59-2. Deals in 30 counts were limited, Sitarams being quoted As. 2 lower at Rs. 18-12.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	25-1-1956	18-1-1956	11-1-1956
Art silk yarn **(per case of 200 lbs.)–**	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia February	800 0	795 0	802 0
" " April	811 0	805 0	808 0
120 Japan (per lb.)	4 4½	4 4½	4 4½
150 Japan (per lb.)	3 15	3 15	3 15
120 Italy (per lb.)	4 1	4 1	4 1
150 Italy (per lb.)	4 0	4 0½	4 0
Staple fibre yarn **(per lb.)—**			
40 × 2 New Great	4 1¼	4 1	4 1
40 × 2 Kohinoor	4 4¼	4 1½	4 3½
40 × 2 City	4 1¼	4 1¼	4 2½

60s Madura	44 8	44 8	44 8
80s Finlay	70 0	70 0	70 0

RESTRICTED TRADING IN OILSEEDS

(From Our Own Correspondent)

BOMBAY, 24*th January*

Excepting for today, there was practically no trading in the oilseeds market during the week under review. This was because of the linguistic riots which took a serious turn, leading to large-scale looting and arson. As a result, although the market was officially opened for the major part of the week, the trading ring was bereft of operators. Although the riots have subsided, they are reluctant to commit themselves in view of the still uncertain political situation. Business done on the market was, therefore, negligible, and there was hardly any significant movement in prices. The undertone was quiet to easy.

Bold ready, in the groundnut section, was unchanged at Rs. 29-4. But February-March delivery declined from Rs. 29-7 to Rs. 29-4 and April-May from Rs. 30-2 to Rs. 29-13. Coromandals were quiet at Rs. 29-6 and Khandesh quality at Rs. 29-8. Groundnut oil ready lacked support at Rs. 15 and March delivery at Rs. 15-4.

Bold ready, in the linseed section, was colourless at Rs. 30 and February-March delivery at Rs. 30-2. April-May delivery, however, gained As. 2 to Rs. 29-4. But small Sutnas eased from Rs. 28-8 to Rs. 28-4. Linseed oil was wanting in enquiry at Rs. 18-2.

In the castorseed section, May delivery opened the week at Rs. 120, as against Rs. 120-4. After improving to Rs. 120-4, it declined gradually to close at Rs. 119-2. On balance, it lost Re. 1-8. F.A.Q. suffered As. 4 to Rs. 22-4. Madras quality too was down by a similar amount at Rs. 23-4. Castoroil B.S.S. eased from Rs. 13-14 to Rs. 13-12, and Commercial quality from Rs. 12-14 to Rs. 12-12.

Among others, *kardi* bold was quiet at Rs. 16-8, while *niger* Madras quality lost As. 2 to Rs. 25.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	24-1-1956	18-1-1956	11-1-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
Khandesh Quality Ready (per cwt.)	29 8	29 8	28 12
February-March	29 4	29 7	28 14
Linseed—			
Bold Ready (per cwt.)	30 0	30 0	30 4
February-March	30 2	30 2	30 0
Castorseeds—

Madras (per cwt.)	23 4	23 8	22 12
Groundnut oil—			
Ex-mill Ready (per quarter)	15 0	15 0	14 12
Castor Oil—			
Commercial (per quarter)	12 12	12 11	12 12
Linseed Oil—			
Ready	18 2	18 2	18 6

SUGAR FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 25*th January*

A spurt of Re. 1 to Rs. 85 (exclusive of sales tax) per 2 cwts. in the quotation for British refined sugar, which had stood unaltered for several weeks, was the only notable feature of trading in the sugar market during the week under review. The firmness in this variety was aided by sustained buying support in the wake of paucity of ready stocks. The prices of indigenous sugar—spot and forward—were all fully maintained at last week's levels. Turnover was limited, thanks to poor arrivals following suspension of unloading operations. The quantity of indigenous sugar that actually arrived during the week was not more than 2,200 bags.

RAW JUTE FIRM

(From Our Own Correspondent)

CALCUTTA, 24*th January*

Prices of jute goods suffered a fall early in the week under review following the nervousness displayed by speculators. Raw jute did move in sympathy with this fall, and such a tendency coupled with the reluctance of mills to encourage the lower rates reversed the trend in jute goods, which, as a result, made good the earlier decline by about the week-end. This week was short of two working days. There was no trading last Saturday on account of the general *hartal* and the market remained closed yesterday on account of Netaji's birthday anniversary. Although the week was thus short, yet there were two notable developments. One was the resumption of work in the clearing house and the prospect of banks and trade returning to normalcy very soon. The other development was the announcement by the Indian Jute Mills Association that mills within its membership, numbering one hundred, would unseal yet another 5 per cent. of the looms as from the week commencing from 20th February next. After this unsealing, only a further 5 per cent. of the looms would remain idle. It will be remembered that, in view of the glut in the export trade, mills had sealed 12.5 per cent. of the looms some years ago. With the complete abolition of the duties on the export of jute goods in 1955 and with the indigenous fibre prices becoming cheaper in comparison to the prices mills in other countries have to pay for their raw material imports, Indian jute goods have been exported in greater and greater quantities in the past six months.

To meet the increase in demand, it had been becoming evident that mills would have to unseal the idle looms. But, presumably to avoid any violent rise in raw jute prices, mills unsealed only 2½ per cent. of the looms as from the 9th January. At that time, it was stated in these columns that mills had evidently decided to proceed cautiously stage by stage as they did, while resuming the full 48 hours working a week from the restricted 42½ hours. Mills have now evidently agreed with traders that a further increase in production is justified. At the same time, traders are confident that it would be only a matter of time before the remaining sealed looms are put to use. During recent months, the industry had transferred a number of looms from hessians to the production of heavy goods in order to arrive at a correct balance to meet the situation caused by lower demand for hessians and greater need for sackings. However, market circles believe that hessian shipments to the United States are bound to rise in the coming months, since the U.S.A. requires plenty of burlap bags to pack the huge surpluses of farm products for the disposal of which that country is committed. Accordingly the trade has noted with jubilation the rising trend of consumption in the U.S.A. which in 1955 amounted to 826 million yards, a rise of 44 million yards over 1954. In December 1955, the consumption figure was as much as 74 million yards representing an increase of 4 million. This information, which was available in mid-week, also contributed to the subsequent recovery in prices of goods.

The unsealing of 7½ per cent. of the looms would increase production by about 7,500 tons a month and would raise consumption of raw jute by about 5 lakh bales a year. As to the prospect of finding this extra jute from within the country, the trade is in no doubt. Of course, more imports of the superior variety from East Bengal would be helpful. However, imports are costly, since despite devaluation the authorities in East Bengal maintain the minimum export prices and the high export duties. In order, therefore, to make production economic and maintain the cheapness of the Indian goods in world markets, mills would have to consume as little of the Pakistani fibre as possible. With the gradual success in improvement in quality of the indigenous fibre, it is to be hoped that imports from East Bengal are kept down at the minimum. But this week's announcement relating to unsealing of further looms caused the price to move up. Thus Indian Northern bottoms were done at Rs. 30 as against Rs. 28-8 earlier in the week, and local Daissee bottoms January-February advanced by Re. 1-8 to Rs. 30-8. At Rs. 30 Assam upper bottoms put on Rs. 2. Mills purchased fair quantities and this too contributed to the higher trend.

Traders in jute goods feel that, unless raw jute prices come down to maintain a fair relation between prices of the fibre and those of jute goods, the attempts of mills to reduce production costs by increasing production would be less effective. The trend of jute goods noticeable during recent weeks to move narrowly has come to stay, and this was repeated during the week under review also. Early in the week, speculators displayed nervousness and started selling heavily. This, naturally, took down ready 40" 10 oz. hessians and B. twills to as low as Rs. 40-3 and Rs. 111 respectively from Rs. 41-4 and Rs. 114. Mills were not perturbed by such a trend, and with an eye on their plan to increase production, began to purchase raw jute in higher quantities. Prices of raw jute as a result moved up. This made jute goods to recover in sympathy. Hessians 40" 10 oz. moved up to Rs. 41 and B. twills to Rs. 114-4 by the week-end. The market reopened today on an easy note and prices were naturally influenced by the prospect of an increase in production, as announced by mills last Friday. This made B. twills decline to Rs. 113-12. It is thought, however, that the declining trend would prove only temporary in view of the firm raw jute market. Latest quotations of raw jute as on date are given below:

	Middles	*Bottoms*

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 23*rd January*

Foodgrain prices suffered a slight fall during the week under review, following the various steps taken by the Union Government to check rise in prices. The Union Food Minister asserted that the exising wheat stocks with the Government, the firm commitments they had already entered for further supplies from aboad and prospects of the new harvest being bright, were more than enough to meet the effective demand for this foodgrain until the next harvest was made. The Government had, as on the 17th inst., nearly 200,000 tons of wheat as reserve and final arrangements for the import of 180,000 tons of wheat from various countries have been completed. The Union Government has released 15,000 tons of wheat in the Punjab which had resulted in bringing down wheat prices substantially in several places. The U.P. Government has also been allowed to release 20,000 tons for sale in its five big cities. Further, in order to relieve the pressure of demand on the Punjab, the P.E.P.S.U. and west U.P. markets, the Government has decided to issue sufficient quantities of wheat from Government godowns in Delhi.

Wheat prices at Hapur are today quoted at Rs. 15-6 per maund for average quality and at Rs. 16-12 for farm quality. The heavy demand from Delhi has now subsided and the week's offtake, mostly under previous contracts to Delhi, aggregated 12 *khaties*, reducing the local stock to 48 *khaties*, which is substantially heavy when compared to last year's stock of 31 *khaties*. Daily arrivals of wheat at 100 maunds are insufficient to meet day-to-day requirements of the locality. Prices of wheat also declined in the Punjab and other markets of the country, following Government efforts.

Easy supply position due to heavy quantity auctions by the Government led to a setback in the prices of rice. Gram prices, which had recorded an improvement of As. 8 per maund early, relapsed towards the week-end in sympathy with wheat prices. Gram was transacted today at Rs. 10 per maund for local quality and at Rs. 10-8 for Punjab quality and stock position ran down during the week to 14 *khaties*, as against 22 *khaties* a year before. Good seasonal demand and paucity of local stocks accounted for the improvement in prices of other coarse grains which on Monday were quoted at: Barley Rs. 10-4, *beghar* Rs. 10-2, maize Rs. 11-2 and *bajra* Rs. 10-8.

Better crop prospects due to timely winter rains and want of outside buying enquiry resulted in a small decline in the prices of peas and *arhar* which were quoted at Rs. 9-6 (for *dara* quality) and at Rs. 13-4 per maund, respectively. Stock of peas was put at 12 *khaties*, as against 27 *khaties* last year, and that of *arhar* at 9 *khaties*, same as last year. Other pulses ruled quiet at almost unchanged prices during the week.

Except *urd magh* which ruled quiet, pulses futures eased in all the sections. The latest prices on Monday were: Peas *jeth* Rs. 7-12, peas white (gram) *jeth* Rs. 8-4-3, *maha* Rs. 10-1, *arhar jeth* Rs. 9-12, and *urd magh* Rs. 15-5.

SUGAR RECOVERS

(From Our Own Correspondent)

HAPUR, 23*rd January*

Sugar prices improved fractionally during the week, in anticipation of good demand. Delhi and the Punjab were the principal buyers, but the quantities actually purchased were small. Booking was restricted to Gujerat side and the undertone remained steady. The latest mill delivery prices of sugar are: Jaswant Rs. 28-11, Simbhauli Rs. 29, Mowana Rs. 29, Daurala Rs. 29-8, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 30, and Rampur Rs. 31-4, retail As. 12-3 per *seer* and *khandsari* Rs. 23 to Rs. 27 per maund.

Ready *gur* eased appreciably during the week, today's quotation standing at Rs. 11-4, as against Rs. 12 per maund last week-end. Arrivals were large, the average being 4,000 maunds daily. The lack of loading facilities to needy areas of Gujerat was the main depressing factor. Some despatches were, however, made to Rajasthan and Punjab sides and local stock has increased to 43,000 maunds. The total arrivals from the beginning of the season are put at 320,000 maunds, as against 408,000 maunds at this time last year.

Gur prices also declined during the week in markets in the South. In Baramati (Poona), *gur* arrivals average 400 cart-loads daily and with good demand from Gujerat side, prices are quoted at Rs. 13 to Rs. 13-8 per maund for yellow quality. In Ankkapalli, arrivals were put at 50,000 *behalas* and prices were quoted at Rs. 10-8 to Rs. 12 *billiticut*. In Kohlapur, there were increased arrivals—at an average of 1,500 cart-loads daily—which met with good demand from Gujerat side.

Future prices at Hapur declined appreciably due to heavy bull liquidations and bear pressure. *Phagan* delivery was quoted today at Rs. 11-15-7, having touched the lowest at Rs. 11-14. The trend of the market is bearish.

WOOL ABROAD STEADY

(I.W.S. News Service)

NEW DELHI, 21*st January*

Wool sales reopened in Australia on the 9th inst. with practically all types of merino and cross-bred wool against the buyer to the extent of at least 1*d*. per lb. (clean) as compared with December close. The strength of the market was maintained in competition with Japan, the Continent and the U.K.

Prices paid at Wanganui in New Zealand, showed on the 13th inst. an average increase of 2*d*. per lb. over the rates prevailing at the closing sale on 19th December.

Business was better at Bradford (U.K.). Values of medium crossbred tops advanced in view of the higher prices being paid for raw wool in New Zealand.

The latest available average quotations for tops and yarns from Bradford (based on average U.K. home-trade rates, with nothing added for freight, insurance, packing, etc., for export) were as follows:

(In pence per lb.)

PEPPER WEAK

(Messrs. Parekh & Co.)

BOMBAY, 25*th January*

Owing to disturbed conditions in the City, no report was issued last week. Malabar black pepper, during the fortnight, showed minor fluctuations, lowest and the highest at Alleppey being Rs. 812½ and Rs. 825, respectively. Garbled at Cochin fluctuated between Rs. 140 and Rs. 142½. Trading at all centres was extremely thin.

In view of the unsettled conditions in the City, local pepper market remained closed almost during the whole of the last week. Consequently, Bombay exporters were not in a mood to send any offer to their New York agents. Nor did they make any fresh purchases at primary centres. Arrivals on the coast markets were mounting. As a result, floating stocks were increasing. Willingness on the part of the weaker section of the growers to liquidate their stock at lower prices proved one more disturbing factor. Bankers at Alleppey and Cochin refused to advance further loan to growers as stocks of loaned pepper with them were already heavy. New York dealers during the fortnight did only selective buying. They bought some parcels of afloats at round about $0.32. Arrivals of new crop were also reported to be on the increase in North Malabar. The growers there were quoting competitive prices to attract business but so far without notable success. If no support from overseas markets would be forthcoming within a week or two, prices would probably decline further. It was believed in some quarters that the present prices might topple down by Rs. 50 to Rs. 100, under nervous selling both by the bankers and the growers, the moment the present resistance level of Rs. 800 was pierced through.

The technical position of the market was getting weaker, under pressure of accumulated stocks and for want of support either from foreign buying or from the local merchants who appeared to be unwilling to buy either for stock-piling or for investment unless prices were stabilised.

In delivery section, business was very narrow. In A.S.T.A. section, there were sellers for Feb-March at $0.31½, while April-May-June were offered without success at $0.32½.

Following are today's nominal quotations: Ready delivery Rs. 110 per Bengal maund; February delivery Rs. 750-60 and March delivery Rs. 760-70 per candy of 5½ cwts.

COW HIDES DEPRESSED

(From Our Own Correspondent)

MADRAS, 23*rd January*

The tanned cow hides market is depressed. U.K. trading has been poor and importers do not seem interested in the offers made by Madras, except on lower grades. Sellers wish to offer all selections combined. Arrivals of kips into the market has been on the usual scale, but clearance was slow. *Mundi* commission agents are anxious to sell the stocks on hand to make way for further arrivals; they seem to have taken lower prices for financial reasons. Prices of lightweight cow hides have declined by an anna to 1½ annas per pound and medium and heavy weights by six pies. As tanners have high-priced raw stocks, the local Association is informally advising the members to restrict their tanned output and regulate the flow of goods to Madras. Unless this is done, tanners are likely to face huge loss eventually.

Prices of tanned cow calf, buff calf and buff hides have remained steady, due to good demand from the U.K. and the U.S. It is reported that several goat skin dressers have turned to use buff calf and cow calf.

In the tanned skins section, overseas buying has been cautious, as importers feel that the market has touched the top. Owing to heavy adulteration in tannages, prices of common sheep skins rule unchanged, despite good call for them. Arrivals of medium goat skins are small and prices have slightly hardened. The results of the London Public Auctions which commence today are awaited with great interest.

ACTIVITY IN METALS RESTRICTED

(From Our Own Correspondent)

CALCUTTA, 24*th January*

Activity was limited in the metal market during the week under review. Buyers were disinclined to enter into commitments other than to meet day-to-day needs, in view of the uncertainty caused by the civil commotion in some States. The dislocation to railway traffic also cautioned buyers, as goods booking to several destinations were restricted, thus hinting at possible delays in the movement of both raw materials and finished goods. Banking difficulties, which are now well on the way to easing, also contributed to the lower volume of business. Prices were, nevertheless, steady, thanks to strong advices from overseas markets. Electrolytic copper wire bars were maintained at Rs. 265 throughout the week, and stocks were limited. Electrolytic ingots were priced at Rs. 260. Here again, the supply position was far from satisfactory. Buyers naturally went in for scrap, the location of which was also difficult. For, in anticipation of an imminent rise in prices, stockists considered it worth the while to wait for business. Electrolytic zinc gave way from Rs. 71-4 to Rs. 69-8 on selling pressure; but strong advices from foreign markets arrested the downtrend and forced a recovery in the local rate to Rs. 71-8. Tin was extremely quiet at Rs. 529 after having earlier declined to Rs. 528 from Rs. 530. In accord with the general trend, virgin lead also declined earlier in the week from Rs. 82 to Rs. 79-8, but closed better at Rs. 83.

GROSSING UP UNDER SECTION 16(2) OF INCOME-TAX ACT

(Concluded from page 168)

be at the rate of As. 2½ in a rupee and not at As. 5 in a rupee—the normal maximum rate of a company—the definite article was used. It was to refer to the class of company—not to the individual rate of company.

Further, the company after the abolition of the two rates has only a single, statutory, flat rate applicable to its total income. Rate is in terms of the total income. This rate does not fluctuate with the quantity of income. If the income is more, the rate is not increased; if the income is less, the rate does not decrease. Now, if this proposition is accepted that with the decrease in the income, the rate of the company is not correspondingly decreased, the rate must be assumed to be the same, even if quantitatively the income falls below zero into a negative quantity. The company has had to pay no tax, not because it had no rate. It has not to pay tax because zero (income) multiplied by As. 4 plus 20 per cent. surcharge is equal to zero. Zero multiplied by a rate, the resultant is zero. Therefore, the '*nil*' tax is not due to '*nil*' rate as the Department seeks to argue, but '*nil*' income. It is, therefore, not correct to say that a company which has no assessable income has "*nil* rate" and hence grossing up cannot be extended to the shareholders of such a company under section 16(2).

Refund

It would be a serious flaw in the Act if it were otherwise. If the company has made an assessable income of one rupee, the Department is prepared to give lakhs of rupees refund, but if the assessable income of the company is *nil*, it will not give any refund at all, although the profits out of which such dividend has been declared may have in fact borne tax at the rate applicable to the company in the past.

If the company under the resolution of the Board, confirmed by the shareholders, instead has agreed to declare a dividend, not out of current book profits, but out of dividend equalisation fund, then it seems that such intention expressed by the company under a resolution must prevail against the world. And, therefore, for purpose of income-tax, it will also be deemed to have been declared out of such past profits and not out of current book profits. In such a case, the argument of the Department that the company has declared a dividend out of profits which have not been subjected to tax will not be correct.

The real difficulty in the way of the Department is that it will be called upon to gross up dividend at the maximum rate of tax and the profits out of which this dividend may have been declared may have borne tax at the lower rate. This difference it could recover under the Finance Act by way of tax on excess dividend, but because of the phrase in the Finance Act that excess is to be measured by deducting from dividend declared a positive total income, the Department has no right to claim an additional income-tax from the company if the company has no assessable income. If this is what prevents the Department from doing justice to the shareholders, nothing could be simpler than saying that on such excess dividend that is, the whole dividend less *nil* income, the Department shall recover an additional tax from the company as a condition precedent to grossing up and if there are legal difficulties, a simple amendment of the Act should accomplish their purpose. But to deny the shareholders a credit of tax deemed to be paid by the company on behalf of the shareholders as stipulated under section 49B is to deny justice. Equity and income-tax may not be on speaking terms, but they must not refuse to nod occasionally, when sheer injustice is being done and the section lends itself, by such interpretation, to such absurdities as no legislature could tolerate with equanimity.

MARKET GOSSIP

(*Concluded from page 155*)

on Tuesday. The meeting had been convened for confirming the Directors' decision to capitalise a sum of Rs. 23.5o lakhs, being part of the undivided profits of the Company standing to the credit of the reserve fund, and issue bonus shares in the ratio of one share for every two shares of Rs. 50 each held by the shareholders.

Moving the resolution for the shareholders' consideration, Sir Joseph Kay, Chairman of the Company, said that the demand for issue of bonus shares had started three years ago. He, however, was not in favour of forwarding it to the Board, until he saw that the future of the Company was promising and that there was the possibility of paying a decent dividend on the increased capital. In 1953, however, he added, a favourable turn occurred in the affairs of sugar industry and the Company. There were enough indications that prospects were favourable and that the capital structure of the Company could be enhanced with confidence. The proposal to issue bonus shares was, therefore, considered by the Board in the following year and an application was made to the Government in November 1954 for permission to issue bonus shares. It was only a year after, that is, in November 1955, that a favourable reply was received from the Government. The Directors then went ahead with the completion of the necessary procedure for implementing their decision. Sir Joseph, in conclusion, said that he was not sure whether or not the Government would introduce a tax on bonus shares.

One of the shareholders, who had all along been insisting on issue of bonus scrip by the Company, said that, as the Government had not made up its mind on the question of taxing bonus shares, he was not sure now whether it would really be worthwhile issuing bonus shares. As the matter was still not clear, he asked as to why the Company should be in a hurry to issue bonus shares. He felt that shareholders would not get anything, if the bonus shares were taxed heavily. He asked the Chairman to take the interest of shareholders into consideration and postpone the issue of bonus shares till March next.

Another shareholder suggested that, as a *via media*, the shareholders could pass the resolution, but the actual issue of shares could be postponed till the budget was introduced. If the budget contained a tax on bonus shares, the shareholders might rescind their original decision and not accept the bonus shares. He quoted the instance of another company in Bombay, which had received sanction from the Government to capitalise a part of its reserves and issue bonus shares, but which had adopted only one part of the resolution, namely, that relating to the increase in the Company's authorised capital, postponing the other part relating to the capitalisation of reserves. Several other shareholders, however, desired that the resolution should be passed and the bonus shares issued now. They were of the view that, as the Government was still undecided and as all the shareholders would not be uniformly affected by the tax in case the Government decided to levy one, the risk was worth taking.

Replying to the debate, Sir Joseph Kay said that he had no idea of what was in the Government's mind regarding taxation of bonus shares. He, however, felt that, even if a tax were levied, it might be at a low rate to begin with and raised gradually as years went on. Waiting for some more time might, therefore, prove a disadvantage. He further pointed out that the shareholders would lose nothing, if they adopted the resolution now and if afterwards the budget contained no tax on bonus. If, however, it did contain the tax, they could not escape it in any case. On the contrary, in case the bonus shares were issued in the next financial year and the tax were raised in the 1957 budget, the shareholders would suffer more. Many shareholders present at the meeting concurred with the Chairman that it was better to run the risk and take the bonus shares now. Accordingly, the resolution was adopted by the meeting, with only one shareholder voting against it.

BANKING

(*Concluded from page 163*)

second consecutive year for which the Bank's profit has recorded a rise, the previous year's profit having gone up by Rs. 5,56,907. The total dividend for the year remains unchanged at 12 per cent. per annum.

The profit for 1955, it may be noted, is the highest seen since 1949. With the surplus of Rs. 2,70,302 brought forward from 1954, the amount available for disposal is Rs. 32,35,546, as against Rs. 30,35,302 a year ago. The *ad-interim* dividend for the half-year ended 30th June 1955, paid at the same rate of 10 per cent. per annum, free of income-tax, as for the corresponding six months of 1954, absorbed Rs. 5,00,000 (same as for 1954). The provision for taxation has been raised from Rs. 8,00,000 to Rs. 9,00,000 and that for bonus to staff from Rs. 7,65,000 to Rs. 8,00,000. The Directors of the Bank propose to pay a final dividend for the half-year ended 31st December 1955 at the rate of 14 per cent. per annum, free of income-tax, as against 10 per cent. per annum paid for the corresponding six months of 1954. In recommending the higher final dividend, the Directors have withheld the bonus of 2 per cent. per annum they had paid for the previous nine years. Accordingly, the total distribution to the shareholders remains unchanged at 12 per cent. per annum for the tenth year in succession. The final dividend requires Rs. 7,00,000, leaving to be carried forward Rs. 3,35,546 to the next year.

State Bank of India

A net profit of Rs. 68,59,400 has been earned by the State Bank of India for the half-year ended 31st December 1955, the first half-year of its working after the nationalisation of the Imperial Bank of India. This compares with Rs. 68,54,843 earned by its predecessor, the Imperial Bank of India, for the corresponding half-year of 1954. The amount transferred from the Imperial Bank of India on 1st July 1955 is Rs. 35,56,100, the corresponding sum brought in by the Imperial Bank being Rs. 33,55,704. The total sum thus available for appropriation is Rs. 1,02,15,600, as against Rs. 1,02,20,546 a year ago. The Directors have declared a dividend of Rs. 8 per share, or 16 per cent. per annum, which the Imperial Bank had been paying for the previous five years. A sum of Rs. 2,78,500 has been transferred to pension funds (as against Rs. 3,01,900 provided by the Imperial Bank) and Rs. 20,00,000 (Rs. 20,00,000) set aside for payment of bonus to staff, leaving the surplus of Rs. 34,37,300 (Rs. 34,18,646) to be carried forward.

Bank of Maharashtra Ltd.

The net profit of the Bank of Maharashtra Ltd. for the year ended 31st December 1955 (subject to audit) amounts to Rs. 3,46,103, thus showing a modest rise from Rs. 3,24,721 earned for 1954. With the surplus of Rs. 35,949 brought in from the previous year (as against Rs. 36,228), the amount available for appropriation is Rs. 3,82,052 (Rs. 3,60,949). The Directors have maintained the provision for taxation at Rs. 1,70,000 and the dividend at 5 per cent. per annum, free of income-tax, absorbing Rs. 80,000, while raising the transfer to the reserve fund from Rs. 75,000 to Rs. 1,00,000. The surplus left to be carried forward is Rs. 32,052 (Rs. 35,949).

CO-OPERATIVE TRAINING

The Central Committee for Co-operative Training constituted jointly by the Reserve Bank and the Government of India met on the 18th inst. under the chairmanship of Mr. V. L. Mehta. Remarkable progress has been achieved during the last two years in organising training centres for imparting theoretical and practical training in co-operation with the different categories of personnel in the Co-operative Departments and institutions throughout India. There is an All-India Co-operative Training Centre for the senior officers at Poona, which trains about 40 candidates every six months. There are five more training centres for intermediate personnel situated at Poona, Madras, Pusa, Meerut and Indore serving the needs of five regions into which the country has been divided for purposes of co-operative training. Each of these training centres trains about 45 candidates in each course lasting for about 11 months and gives facilities for specialised study in subjects like advanced accountancy, banking, land mortgage banking, co-operative marketing and industrial co-operatives, including village industries. Eight training centres are to be established for training the co-operative officers attached to the National Extension Service Blocks for the specific requirements of co-operative work in those areas. Two such training centres have already commenced functioning at Hyderabad and Gopalpur-on-Sea, while four more at Kotah, Tirupathi, Bhavnagar and Dhuri are expected to commence work very shortly. Besides these, 11 States have reorganised their training schools for the subordinate personnel on the lines approved by the Central Committee for Co-operative Training and the remaining States will shortly come under this scheme. Progress is also being made in regard to the arrangements for the training of non-officials such as members and directors of co-operative institutions and prospective members of co-operative societies. The All-India Co-operative Union has drawn up a scheme for six mobile units in four States to be tried on an experimental basis. While this scheme is in progress, the remaining States, through their State co-operative unions, are also expected to formulate their own schemes for the training of non-officials and secretaries with the approval of the Central Committee.

The All-India training centre for senior officers has so far trained 189 senior officers and key personnel of the major co-operative institutions in the country. At the five regional training centres, 376 candidates have either completed their training or are undergoing training. When all the eight Block Level training centres are set up, they will train 700 to 800 candidates a year. Each of the subordinate schools are expected to train 80 to 160 candidates every year. The candidates at all these training centres are given a liberal stipend in addition to certain facilities such as free lodging, travelling allowances, etc.

The expenditure on the senior officers' Course and the five regional training centres is met fully by the Reserve Bank of India; the eight Block Level co-operative officers' training centres are financed entirely by the Government of India, while the State and Central Governments share the expenditure on the subordinate training schools in an agreed proportion.

The Central Committee has estimated that, during the second Five-year Plan period, about 20,000 official and non-official staff in all will have to be given training. It was felt that, while the five regional training centres would be able to meet this need so far as intermediate personnel is concerned, more than one subordinate training centre would be necessary in several of the States. In order to meet the growing demand and to cope with the requirements of specialised activities such as marketing, land mortgage banking, etc., several short-term courses on co-operative marketing, industrial co-operation, co-operative farming, land mortgage banking, warehousing, etc., will have to be organised. One such training course on co-operative marketing will commence at the Co-operative Training College, Poona from 15th February 1956.

The High Authority of the European Coal and Steel Pool has rejected a request by the Ruhr coal producers for an increase of DM.3 (about 5s.) in prices of Ruhr coal to be effective from 15th February. This rise was sought as a compensation for the rise of 9 per cent. in wages granted by the High Authority.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 25th January, 1956.

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2344 BOMBAY, 4TH FEBRUARY 1956 PRICE Rs. 1/8

TASKS AHEAD IN THE FIELD OF INSURANCE

A SUCCESSFUL Canadian underwriter, it is stated, had as his maxim: "Take the hat off to the past, but take the coat off to the future." This is a maxim which is worthy of adoption by the men who now guide Indian insurance. The past, so far as this country's insurance is concerned, was great, even after making due allowance for certain unfortunate lapses and wrongdoings here and there. And now that life insurance has been nationalised, it lies in the hands of the authorities to shape the future in a way that would make insurance more popular than it has been in the past. At any rate, the fact that nationalised insurance can never be half as good as private insurance at its best should not deter the insurance men from exerting themselves to the utmost in order to render a tolerably efficient service. They owe it as a duty to the nation.

The immediate future is, of course, the testing period. Many intricate problems will arise from the need to weld a heterogenous mass of insurers into a single well-knit unit. Foundations must be laid for an insurance organisation which will retain all the flexibility, freedom and initiative, commonly associated with private management. It must be responsive, too, to the changing needs of the people, their growing and varied requirements of insurance and financial assistance. If nationalised insurance fails to gear itself up to meet the demands which will be continually made upon it, public resentment will grow in volume and intensity. And the very people who now support the Government's measure will turn out to be the most vociferous of its critics.

Among the many issues which nationalisation of life insurance has raised, there are three which deserve special notice—the settlement of claims, the future of bonuses and the evolution of a suitable pattern for administration. There is a well-grounded fear that the settlement of claims might be delayed. This fear is derived from public experience in regard to the settlement of pensions and provident funds to Government servants and of bills for goods supplied and services rendered to the Government, payment of claims on Postal Insurance and the railways, and refund of money to income-tax assessees. Each one of these operations, involving the receipt of money from the Government, is a protracted ceremony. The vexatious delays and the interminable red-tape involved in these payments have made the public understandably chary of dealing with the Government departments. Even Government's own employees have complained of the inordinate delay and unnecessary correspondence in the matter of settlement of their T.A. bills.

Whatever the virtue—it never can have any—or need for delay in the settlement of other claims, any avoidable delay in the payment of claims on policies would wreck the future of insurance in this country. Private insurers, particularly the leading members of this group, have established a record in the matter of settlement of claims which nationalised insurance would find it difficult to maintain without special effort. And yet, it is an aspect of insurance administration which the Government-managed corporation or department can ignore only at its peril. It must be remembered that delay in payment of policyholders' claims is a serious evil. For one thing, a dissatisfied policyholder or his heir is likely to become a walking advertisement against insurance. Secondly, unlike an income-tax assessee or one making a claim on other Government departments, a policyholder or his heir generally belongs to the economically weaker sections for which delayed payment may mean suffering and starvation. In view of the importance of prompt payment of claims, the Government will do well to find out the average time taken by the leading insurers for payment of claims (excluding the time taken by them for payment of claims which formed the subject matter of law suits) and take that as a norm to be followed. Special provisions may, of course, be framed in respect of early claims.

The future of bonus rates constitutes an entirely different, an altogether complex and even a very disturbing issue. In India, a bonus, as is well known, is paid to participating policyholders out of the surplus revealed at every valuation, the policyholders sharing 92½ per cent. of the surplus and the shareholders the rest. The elimination of shareholders as a result of nationalisation of insurance is a factor that should benefit the policyholders. But will it be so in actual practice? Much will depend upon the trends in expenses, mortality experience and interest rates which determine the surplus. It remains to be seen whether expenses would be held within a reasonable minimum. The benefit accruing from the disappearance of "sinecure" posts, to which Mr. Deshmukh referred recently, may be greatly offset by slackness in administration, necessitating additional staff and new wage demands from the members of the staff of the less well-established offices. The Government will have to consider whether the rate of agents' commission could be reduced, now that competition has been eliminated. But then, an abrupt downward revision in their emoluments would sap their initiative and enthusiasm.

A far more important issue is that of interest rates. Indeed, it may well turn out to be the crux of the problem. Nothing brings out more clearly the difference between private insurance and nationalised insurance than their divergent attitude towards interest rates. To a private insurer, maximum yield, consistent with safety of capital, is the guiding principle in investment. Normally speaking, he is not concerned whether a particular investment answers some notional requirements of national priority, so long as his capital is safe and the return is good. But, under a system of nationalised insurance, the Government might frequently be tempted to invest the policyholders' money in schemes which are politically expedient but economically unsound. It may be housing schemes for low-income groups today, slum clearance tomorrow and factory for pre-fabricated houses the day after. If such investments run into a loss, the taxpayer will be compelled to bear the burden. The policyholders, too, will regret that their money has not been put to more profitable use. It is to be hoped that the Government will not sacrifice policyholders' interests at the altar of some vaguely-defined scheme of national priority. It may all sound very well for the Government to talk in terms of welfare schemes. But most such schemes are best financed from the taxpayers' money, rather than from the policyholders'. The Government, like all good private insurers in the pre-nationalisation era, should be guided in the choice of investments by the principle of maximum yield, consistent with safety of capital. Any suggestion for making political capital out of policyholders' money, from whatever quarter it may come, must be stoutly resisted.

So much for the long-term trends in bonus rates. For the immediate future, there is need to bear in mind the urgent claim of the policyholders of the good and well-established offices that their interests should not be sacrificed for the benefit of the policyholders of bad and ill-managed companies. The merger of these companies alone will raise many difficult problems. In any final arrangement, it is clearly the duty of the Government to see that the interests of policyholders of the good life offices are adequately safeguarded. Forced into a merger, not of their choice, these policyholders are naturally apprehensive that they would be made the guinea-pigs in this novel socialist experiment. Their policies have always been safe, so that the element of safety, now promised by the Government to all policyholders, carries no special appeal to them. They are more concerned with the bonus rates which they feel must be, in the immediate future, in line with the rates they have received in the recent past and conform, even in the somewhat more distant future, as nearly as possible, to what the good offices might have paid them. Equity demands that these claims of theirs must receive the special attention of the Government, particularly because they constitute the bulk of the policyholders. It will need all the ingenuity of India's actuaries, and much patient and arduous labour, before an equitable solution is found. Any solution that ignores the claims of the policyholders of good companies will, it is needless to add, cause painful disappointment. It is up to the officers of these well-managed companies and their former managements to see to it that the bonus prospects of their policyholders are not seriously impaired through nationalisation. The directors of all the well-managed companies now taken over by the Government must fight for their cause not only of the shareholders but also of the policyholders. They will do well to bear in mind that what is at stake now is many times more than that of the shareholders. They have a moral right to be heard by the Government on this issue. All the policyholders concerned may themselves muster together to protect their interests.

It is unnecessary to point out that a giant organisation of the kind now envisaged in place of all the insurance offices will fail to strike a deep root in the Indian soil. It will, therefore, be advisable to institute a system of zonal divisions and evolve a pattern of some decentralisation of functions. Indeed, much insurance work, as, for example, collection of premia, settlement of staff matters and payment of claims, surrender values and loans could all be decentralised. A central advisory council for the organisation, assisted by a committee of investment experts has also been suggested. But one wonders whether the entire organisation could not be manned by a statutory authority which could function with maximum freedom from political pressure. On such a body, it would obviously be the correct procedure to provide for substantial representation to policyholders through election and not nomination. Further, the administration of such a body should not be left in the hands

of civilians; it should be in the care of insurance executives of proved merit and integrity. Fortunately, the country is well endowed with such talent, most of whom are still young enough to render many years of service and build up an efficient cadre of officers to take care of the future. In fine, every attempt should be made to evolve a free, democratic and flexible organisation. It is only such an organisation that can create confidence among the existing as well as the prospective policyholders.

ENGLISH MUST BE RETAINED

IT is becoming increasingly clear that there is a growing body of opinion—unprejudiced, impartial and enlightened opinion, at that—in favour of continued retention of English as the medium of instruction in the Universities as the medium of communication between one Indian State and another, as the language of administration at the Centre, and as the language for use at the higher judicial levels. It would be unwise to ignore this body of opinion and to take decisions which, however seemingly patriotic, tend to disrupt the unity of the country. It is an admitted fact that the use of English as a common language of communication and administration has helped to sustain the country's unity.

There are two circumstances which make it necessary for us to revert to this issue on which we wrote only two weeks ago. In the first place, the new trend towards the formation of bigger States through merger of contiguous States is a welcome development which promises to put an end to linguistic rivalries. This movement would be weakened, rather than strengthened, by exaggerated emphasis on regional languages or Hindi. If mergers take place, there would be need for a language of administration which would be understood in the merging States. It would be better to retain English in which the administration has so far been carried on, for any change in the language of administration would add to the difficulties of effecting a merger. Secondly, opinion in commercial circles, which, by its very nature, is severely practical, favours the retention of English and opposes any hasty substitution of it by Hindi. Business men realise how the fact that English happens to be the language of commerce and of administration in the States has facilitated inter-State trade, despite the presence of legal and fiscal barriers towards freer country-wide trade. They understand, too, that its hasty abolition would cut up the Indian market into linguistic segments and add to the difficulties of inter-State trade.

An important consideration which must be taken into account in determining the language policy, whether in education or in administration, is that the admittedly difficult task of spreading literacy and of giving greater opportunities for secondary education should not be made further difficult by imposition of more languages than are now taught in the schools. There is insufficient manpower, especially able and trained manpower, to run even the existing schools. To introduce too many changes and introduce them simultaneously would be to add to the complexity of educational problems. Further, the introduction of Hindi in Central administration will make the Centre lose its touch with the South where Hindi is, for all practical purposes, a foreign language. Some of these considerations have been succinctly brought out in a resolution adopted by a conference, in Madras, representative of all shades of public opinion. The resolution said:

> "In view of the unquestioned fact that all the educated citizens of India who are qualified to enter public services today in all the States and territories comprised in the Indian Union have an adequate knowledge of English, and in view of the fact that no other single language enjoys this position, no question of pride or prejudice should prevail against the obviously necessary and just solution of the problem, viz., that English should continue to be the official language of the Union and the language for communication between the Union and the State Governments and between one State Government and another. This conclusion is strengthened by the fact that English must and will continue as a part of the educational curriculum of the country on account of its utility in international intercourse and for the purpose of utilising the growing modern knowledge of the world.
>
> "We are of the view that it will be grossly unjust to make any other language take the place of English, when to a population of about a hundred million, living in a contiguous territory in the South, it would be a language with which for all practical purposes they are totally unacquainted. We do not wish to be misunderstood as standing in the way of the natural progress of any language for the purposes of social and business intercourse throughout India."

If opinion in the South is thus crystallising itself in the demand for retention of English, the approach of the members of the business community to the language question is, understandably enough, one of extreme caution. The Federation of Indian Chambers of Commerce and Industry has rightly insisted that propagation and enrichment of Hindi must precede its adoption as an official language. Thus, it has emphasised that a systematic programme for the development and propagation of Hindi should be launched, so that the next generation, in a period of 25 years or so, may adopt Hindi as the official language. It has further warned that it would be "extremely erroneous unduly to force Hindi on non-Hindi-speaking people." It agrees that, if one language could be acceptable to the whole country, it would be a great unifying force. In this context, it refers to English which it concedes, has "contributed greatly to the sense of national unity, because it became the *lingua franca* of the educated classes." It has also suggested the retention of the study of English, because it is convinced that it would be in the interests of the country to have this important foreign language widely known and used as a medium of expression.

Business men necessarily tend to look upon language, not as an end in itself, but as an instrument of social and economic welfare. This might appear a narrowly utilitarian view of the question. But nobody can pretend that it is not an important aspect of language. The Federation has thus pointed out how it may not be feasible to change over from English to Hindi in certain specific spheres. It has rightly cited insurance, and banking. Insurance, as it points out, is essentially international in character and highly technical and complex in nature. It would not be possible to switch over from English to Hindi, unless a body of laws in Hindi applicable to the insurance business is finalised and Hindi equivalents of all technical terms in English are made available. Similarly, in banking transactions and correspondence also, as the Federation says, technical terms in Hindi with precise meanings have to be evolved. Even if all this is done, what certainty is there that the other parts of the world with which India has commercial intercourse would care to study and familiarise itself with Hindi? The movement throughout the world is to study and use English on an increasing scale. To relegate this language to a backward place would be to give up the vantage position which India holds now and to go against a universal trend.

A similar note of realism has been struck by the Bengal Chamber of Commerce. It thinks that there is reason to fear that India would court isolation from sources of knowledge which are a prerequisite for the rapid establishment of an industrial State, if Hindi were allowed to prejudice the position of English as a secondary language in the country. Since English is the common commercial language of the world, used in international correspondence, it points out, it will be inadvisable to impair the competitive advantage which India's foreign trade enjoys by reason of its business already being conducted in this medium. Even for internal, particularly for inter-State trade, the use of English seems advantageous in view of the uncertainty of whether Hindi can contain a vocabulary sufficiently defined and complete for the purposes of modern commerce.

Trade and industry, as much as scientific and cultural values, thrive best in an atmosphere of freedom. The continued survival of democracy in this country is vital to India's national progress. This is intimately connected with the retention of English. For in that language are enshrined the liberal concepts relating to the rule of law, the value and significance of individual liberty, the independence of the judiciary and the art of running Parliamentary Government. It is quite likely that, in course of time, these concepts will become part of Indian traditions, too. But this would take time. It would be a danger to India's relatively young democratic institutions, if its links with English, which has been the source of inspiration for all liberal movements in the political, social and cultural spheres in this country, were rudely sundered through executive fiat, before the democratic traditions take root and are firmly established.

MR. T. T. KRISHNAMACHARI'S MORAL COURAGE

THE Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari, has enhanced his mental and moral stature by publicly owning that the work done by Mr. Scaife, the Colombo Plan expert who reported on the Indian machine tool industry, deserved appreciation. It may be recalled that, last year, the Union Minister for Defence Organisation, Mr. Mahavir Tyagi, strongly criticised Mr. Scaife's report and did the uncharitable act of attributing motives to him and questioning his sincerity. Mr. Tyagi held that the report, which described the Government-owned machine tool factory at Jalahalli as a "colossal financial failure," would not bear close examination. It was even suggested that the expert had not taken kindly to Indian enterprise because the British manufacturers, with whom he was connected, were rather apprehensive about the Government's venture into this field. Mr. Tyagi further alleged that Mr. Scaife had shown a strong bias against State-owned undertakings.

Mr. Krishnamachari, in the course of his speech at the recent meeting of the Committee for the development of the machine tool industry, said that he had a high opinion of Mr. Scaife's capacity and integrity. He added that Mr. Scaife was not a diplomat and had expressed himself freely. Normally, one would think that this country needed the services of just such men. Obviously, his plain speaking, as Mr. Krishnamachari pointed out, has "offended people in some of the sister ministries." Even so, the Ministers who felt offended should not have castigated the expert as they did and that, too, on the floors of Parliament. They should not also have imputed motives to him. What was required was a painstaking and impartial appraisal of the report—such a course would have convinced public opinion in the country and might have vindicated the Government's stand. Instead, it is unfortunate that Mr. Tyagi and certain other spokesmen for the Government should have utilised their privileged position to attack an expert who, after all, came to this country not of his own accord but at the request of the Government of India through the Colombo Plan authorities.

Mr. Krishnamachari showed rare moral courage for a man of his position when he expressed his regret at what had happened and by taking the public into confidence as to the circumstances in which the report came to be published. He said: "I would like publicly to tender my apologies to Mr. Scaife for having put him in a position of disadvantage largely due to my own fault and the fault of some subordinate officer of my ministry. I should never have allowed publication of a document he intended specially for me and my Committee."

The way in which Mr. Tyagi attacked Mr. Scaife, we are afraid, must have caused great misgivings among the foreign technical experts working in this country and made the Government's task of getting more of such experts a difficult one. Surely, no honest expert would care to come to this country, if he were to fear that his frank criticisms would be misconstrued or be the cause of unwarranted allegations against him. Even if he were to come, he might not give his real impressions or views in case they happened to be of an unpleasant nature to the Government; on the contrary, he might be tempted to flatter the Government. In either case, the country as a whole would be the loser. Thus, by wrongly attacking Mr. Scaife, Mr. Tyagi had rendered a great injustice not merely to this British technician but also to our own country. Mr. Krishnamachari should have, of course, defended Mr. Scaife immediately after Mr. Tyagi's unjust and undignified observations. But it is never too late to make amends. By vindicating Mr. Scaife's stand publicly even at this late stage, he has, in our view, undone, to a considerable extent, the damage inflicted by Mr. Tyagi.

It is, however, to be hoped that Mr. Krishnamachari's statement will be the last word on this unfortunate episode. The Government should now settle down to a dispassionate appraisal of Mr. Scaife's report and remedy the defect in the State-owned sector of the machine tool industry. It will be interesting to note, in this connection, that the criticisms of Mr. Scaife have been borne out to be correct by another set of engineers, namely, the experts belonging to Rolls-Royce, the world-renowned British automobile and aircraft manufacturers. The findings of the latter constitute further proof, if such proof were needed, that Mr. Tyagi was making wild statements.

TECHNICAL POSITION OF SHARE MARKETS STILL UNHEALTHY

STATE WATCH-DOGS FOR BANKS?—DURGAPUR STEEL PROJECT

THURSDAY, 5 P.M.

MARKET GOSSIP

THE week under review will stand out as an important landmark in the history of stock exchanges in India, particularly that of the Bombay Stock Exchange, because it witnessed many of the leading scrips going below the levels prevailing before the 1955 boom commenced. In view of the fact that the peak levels were touched only in the last week of October or early in November 1955, it follows that almost all the gains that were built up over a period of roughly seven months have been lost in less than three months. This is, of course, nothing unusual, but the extent of rise and fall alike has been so steep that the present recession is generally regarded in market circles as one of the worst slumps seen in recent years. The heaviest sufferer among the stock markets in India is the Calcutta market. The mess in which this market finds itself now is terrible. Only a few shares have been in the forward list there. And yet the entire market has been disorganised. Those who have sold in the ready section are not able to get the money, even though they have given delivery of the shares. The plight of those who dealt in the forward section is worse. Those speculators who were bulls are trying to get away lightly. They are said to be refusing to pay in full the amounts due from them.

The present state of the market is due chiefly to excessive speculation. It is regrettable that those who are in charge of stock exchanges did not take suitable measures to keep such speculation within bounds. The Bombay Stock Exchange did introduce a system of margins, though that has proved inadequate. The Calcutta Stock Exchange did not do even that. It is to be hoped that, henceforth at least, the Stock Exchange Boards will be wide-awake and introduce effective checks against unhealthy speculation.

It is arguable that some of the recent actions and statements of Governments, coupled with the linguistic disturbances and bank strike, have precipitated the present crisis. But it cannot be said that all these were totally unexpected. The possibility of these developments was clearly hinted at in these columns. It was also repeatedly pointed out that operators were taking an unduly rosy view of the picture, ignoring the other side of it and that they were discounting an economic situation likely to come into existence some four or five years hence. In any case, it is one of the functions of stock exchange authorities to prevent speculation running riot.

* * * *

The eagerly awaited decision of the Government in regard to the terms of the new issue of the Tata Iron and Steel Co., Ltd., was known late on Tuesday evening. A *P.T.I.* message on that day stated that the new shares were to be issued at a premium of Rs. 30 per share, that is, at 40 per cent., the face value of the T.I.S.Co. ordinary scrip being Rs. 75. Since this message has not been contradicted by either the Company or the Government, it has been taken to be correct. It is regrettable that, in an important matter like this, the Company's authorities did not issue any formal Press note. Consequently, even at the time of writing, there are some doubts whether the Government has attached any further conditions to the new issue.

It cannot be seriously contended that the premium fixed by the Government is high. The financial position of the T.I.S.Co. and its prospects are sound enough to merit even a still higher rate of premium. If the Government had fixed it at no more than Rs. 30, it must be because of the heavy slump that has taken place in equity values in recent weeks. If even a premium of Rs. 30 appears to be high to some, it is to be attributed to the large-scale wishful thinking in which they had indulged all along. The very move to issue the shares at par was contrary to all accepted canons of company finance. It was this move which had given rise to exaggerated optimistic hopes and the orgy of speculative buying. Investors and speculators went on accumulating purchases of these shares, as they thought that they would get a wonderful opportunity of buying a first class scrip at par and, when they found that their calculations did not turn out correct, they were in a hurry to lighten their load at double the pace at which they picked it up. This explains the drop in the value of T.I.S.Co. shares after the Government's decision was known.

Are Tata Ordinaries worth buying at the current price of Rs. 225? This is the question which must be engaging the minds of many at the moment. But it is a question to which it is not possible to give a direct answer, for the answer depends upon a number of factors that cannot be easily assessed. The most important of them is the technical position of the scrip, in particular, and that of the market as a whole. The position in respect of both is said to be still unhealthy. According to knowledgeable circles, the floating stocks of a large variety of scrips are heavy and they must all be absorbed by investment buying before the market can recover. The floating stocks of Indian Irons alone are placed at between 8 lakh to 12 lakh shares and those of Tata Ordinaries at 75,000 to 125,000. Then, there are the heavy losses suffered by the operators on the Calcutta Stock Exchange. Thirdly, it is not certain that the current clearing on the Bombay share market will pass off smoothly. In the last clearing, it will be remembered, one member had to be declared a defaulter.

Another important factor that will determine the immediate future trend of the market is the forthcoming Budget, about which little is known. At the moment, the misgivings are very strong and many are pessimistic. There is, however, a minority which feels that, having given a big shock to the private sector by nationalising life insurance, the Government might not impose such a heavy burden of taxation as is widely feared.

Yet another uncertain factor is the economic policy of the Government. It is now clear that the 1948 Industrial Policy Statement has ceased to hold the field and that a new one is under preparation. Some idea of this may be given at the Amritsar Session of the Congress next week. Meanwhile, those industrialists who approached the Prime Minister for some clarification early this week are said to have returned rather disappointed.

Ultimately, the value of any scrip is determined by its intrinsic merits. It is not easy to measure this factor with any degree of certainty in regard to steel shares, generally, and that of the T.I.S.Co., in particular. The intrinsic merit from the long-term point of view will differ from that of the short-term point of view. It will also vary in accordance with the view which individual investors take. Some, for instance, may be content with a yield of 4 per cent; there may be others who feel that 4.5 per cent. is a reasonable yield; and there may be yet others placing this figure at 5 per cent. It all depends how one looks at the future.

TREND OF SHARES

	Closing 3-2-1955	Highest in 1955	Lowest after the boom	Closing 2-2-1956
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Tata Steel (Ordy.)	234 12	277 4	222 0	225 0
Indian Iron	33 6½	44 7	32 8	33 4½
Bombay Dyeing	476 4	628 12	491 4	498 2
Kohinoor	325 0	372 12	319 0	323 0
Century	373 0	528 0	443 8	449 0
Indu (Ordy.)	11 0	16 8½	11 8	12 1
Simplex	148 0	227 0	176 0	182 0
National Rayon	201 8	258 8	204 8	212 0
Scindia	15 13	19 12½	15 7½	16 1
A.C.C.	174 0	233 8	201 0	208 8
Belapur	313 8	387 0	210 0	218 0xr
Bombay-Burmah (Old) ..	463 2	712 8	505 0	518 12
Tata Chemical	16 15½	20 2	15 5	15 14
Tata Oil	40 12	55 8	40 0	42 0
Indian Copper	3 8½	7 15	6 1	6 7½
Central Bank	52 8	56 0	45 12	46 0
Bank of India	148 4	172 8	150 0	150 8
New India	54 8	64 4	39 12	41 0

N.B.—The highest levels were recorded mostly in the last week of October 1955, while the lowest levels after the boom were witnessed on 1st February 1956, except the last mentioned three scrips in the case of which the lowest levels were seen on 2nd February 1956.

No one, of course, can decide the yield, unless some idea of the future trend of dividend of the T.I.S.Co. is possible. Will the dividend on the increased capital be Rs. 6 per share, or Rs. 7, or Rs. 7-8 or Rs. 8 or Rs. 9? This, in turn, will depend on the manner in which the new capital will be called. Assuming that all the calls will be completed within the Company's financial year 1956-57, that the dividend for 1957-58 onwards will be at one uniform rate on the entire increased capital, that such dividend will be at Rs. 6 per share till the Company is in a position to complete its expansion programme and draw the full financial benefit thereof, and that the last-mentioned factor will begin to operate from 1959-60 onwards, what would be the reasonable market value of Tata Ordinary? The answer will depend, as already stated, on the yield that is considered as reasonable. If it is assumed that a yield of 4.5 per cent. is reasonable, the *ex-right* value of the scrip should be in the neighbourhood of Rs. 130, the *cum-right* value being Rs. 155, as against the ruling market value of Rs. 225. If the yield is placed at 4 per cent., the *ex-right* and the *cum-right* quotations should be Rs. 150 and Rs. 195, respectively. These are the minimum levels, but they need not necessarily be touched or might not stay at these levels over a fairly long period even if they were touched, because considerations of long-term prospects are bound to influence the value of the shares, as they have been doing in the case of Indian Irons. The chances of the dividend being gradually raised to the present level of Rs. 10-8 per share and of capitalisation of reserves after the rehabilitation and expansion programmes are completed will begin to weigh with investors sooner or later, after the present uncertainties are over, and, in expectation of capital appreciation in the long run, they may be prepared to be satisfied with much lower yields than those indicated above. Such considerations, however, will fall within the realms of speculation, diligent though it may be. And all speculation carries with it an element of risk, for there is considerable truth in the adage: "There is many a slip between the cup and the lip."

* * * *

The news about the premium on the issue of new shares by the T.I.S.Co. was quickly followed by the Government's final decision on the retention prices of steel, that is, the prices received by the T.I.S.Co. and the I.I.S.Co. as producers of steel. The Government has fixed a uniform price of Rs. 393 per ton for both the producers for a period of five years, from 1955-56 to 1959-60, subject to suitable periodical adjustments for any variation in manufacturing costs. As compared with the interim price fixed in mid-May 1955, namely, Rs. 385 per ton, the final price shows an increase of Rs. 8 per ton. This announcement has not had any perceptible effect on the trend of the shares of both the companies for two reasons: (1) it had been fully anticipated well in advance, and (2) the benefit of the increase in the form of higher profit will have to be reserved for the future by crediting the extra profit to the development fund account, and cannot be utilised to enhance the existing rates of dividend, except with the express permission of the Government. If past experience is any guidance, such permission is most unlikely to be granted.

* * * *

After recording the lowest levels for the week on Wednesday, most of the equities staged a smart rally on Thursday, due partly to profit-taking by bears in speculative counters and partly to bargain hunting in some of the blue chips. To the latter category belong A.C.C., Kohinoor, Belapur and Bombay-Burmah. Reports from Calcutta that some of the bulls who were refusing to pay the differences due from them have made part-payments and that they have agreed to meet the balance shortly came as a shock to the bears late on Thursday evening and induced them to cover a good part of their sales.

There were also unconfirmed rumours that the custodians of insurance companies, who have already started operating in the Gilt-edged market for investing the life funds, may soon extend selective support to equities also. It is reliably understood that the Finance Ministry is working hard in forming the nucleus of a body for administering the insurance business. In this connection, Mr. H. M. Patel, Secretary to this Ministry, and Mr. Rajagopalan, Controller of Insurance, have been holding discussions in Bombay for the last two days with the assistance of the officials of the Reserve Bank. The intention, it would appear, is to form an *ad-hoc* committee of experts to manage the investment of life funds judiciously, pending finalisation of permanent measures which will take considerable time.

* * * *

In the recovery that took place on Thursday, bank shares were conspicuous by recording a further fall. Almost all these shares were on offer, with buyers reserved. This was due to fears that banking would be nationalised in the near future. According to some, the Government is contemplating introduction of effective controls on the activities of banks pending nationalisation or as an alternative to nationalisation. This step is expected to be taken in the very near future. It is possible that the Government may nominate its own directors on the board of each bank to keep a watch over the latter's activities. It is stated that the Government has come across several instances where "misapplication" of funds by managements of insurance companies has been assisted by certain banks by issuing false investment receipts and other undesirable means.

* * * *

The chances of the British steel offer for putting up a million-ton steel plant at Durgapur winning the acceptance of the Government of India are distinctly bright. The Indian Steelwork Construction Company, which is a consortium of leading British plant manufacturers, has submitted its final proposals to the Government of India and negotiations with the representatives of this Company for closing the deal are expected to commence in a few days. It would appear that the Government is quite satisfied with the technical aspects of the British proposal and that it is prepared to enter into a "package deal" with British manufacturers, as it has done with Russia. The one main difficulty that still remains to be overcome relates to the terms of credit. The cost of the plant is approximately put at £80 million. The Government is credited with the desire for a long-term credit of this order, carrying a low rate of interest. Russia is charging interest at only 2½ per cent. per annum; the credit is for a duration of 12 years, beginning from the first year after the delivery of the plant. It seems that Czechoslovakia also is very keen on putting up a steel plant of identical size on the same terms. But the Indian Government would prefer to accept the British offer, if the terms of credit could be settled satisfactorily.

The difficulty of the British consortium is that it has itself to pay one per cent. above the Bank rate on the credit which it will have to raise in its domestic market. This means 5½ per cent., as the U.K. Bank rate is 4½ per cent. Further, being a private body, it cannot afford to give such long-term credits as the Governments of communist countries are in a position to do. The British Government cannot help the consortium, we are told, by singling out this body for a subsidy, as it would be accused of showing favouritism to a small group of business men. It is further stated that any such favourable treatment by the U.K. Government to the consortium would tantamount to giving a subsidy to India when similar assistance is denied to British borrowers. That is the reading of a section of the British Press. But it is difficult to agree with that view, for, though India would

(*Continued on page 231*).

SENTIMENT IN SHARES WEAKENS FURTHER

PARTIAL RECOVERY AT CLOSE

(From Our Own Correspondents)

BOMBAY, *2nd February*

THE share market remained weak for yet another week. The depression in equities noted in the preceding weeks gathered further momentum. Under the cumulative weight of fresh depressing factors, leading counters collapsed to touch the lowest levels after several months. The losses in equity prices over the week were not so heavy as in the previous week. This was due to a fair-sized recovery today on substantial bear covering and support by bulls at lower levels, which helped equities to recoup part of the earlier losses. Nevertheless, the undertone was jittery.

With only a few days to go for the Amritsar session of the Indian National Congress, the general attention of the market was diverted to the industrial policy of the party-in-power which is likely to be enunciated at the forthcoming Congress session. Fears were entertained that the Government might extend nationalisation to other sectors. These fears gained strength from the reported proposal put forward by the Union Minister for Planning to take over heavy industries, mining and certain other non-ferrous metal industries, as also shipping. The possibility of banks being nationalised in the immediate future was not ruled out. Reports that the Government's loans to the private sector were likely to be converted into equity capital also affected sentiment adversely. In short, despite the assurances of the Union Minister for Commerce and Industry that the private sector would be given every encouragement, market circles entertained the fear that the industrial policy of the Government would swing more towards the left. The report that the Government of India had sanctioned the new issue of Tata Iron and Steel at a premium of Rs. 30 per share, in the face of the opposition by the shareholders, the continuance of the settlement difficulties in the Calcutta share market and Budget uncertainties sapped the enthusiasm of the operators and kept their morale at a low ebb.

In the steel section, the main development of the week was the sanction given by the Government to the T.I.S.Co. to issue the new shares at a premium of Rs. 30 per share. Though the premium was higher than that anticipated by a section of the market, operators derived comfort from reports that permission had been granted without any strings attached to it. Besides, the fixation of the average retention price of steel produced by the T.I.S.Co. and the I.I.S.Co. at the uniform rate of Rs. 393 per ton for a period of five years at a stretch from 1955-56 to 1959-60 was also viewed with a certain amount of satisfaction. On the Stock Exchange, Tata Ordinaries showed signs of steadiness on Monday with a recovery from Rs. 229 to Rs. 231, but collapsed yesterday to a low of Rs. 222. Today, however, there was a sizable recovery to Rs. 225. Indian Irons relapsed from Rs. 34-9½ to Rs. 32-8, before gaining some ground to Rs. 33-4½.

Textile shares suffered losses over a wide front. Bombay Dyeings slumped from Rs. 520-10 to Rs. 491-4 but gathered some strength at the close to Rs. 498-2. Centurys were marked down from Rs. 461 to Rs. 443-8; the closing was, however, better at Rs. 449. Kohinoors slipped from Rs. 325 to Rs. 319, but regained a good part of the loss when they closed at Rs. 323. Central Indias were done Rs. 9-8 lower at Rs. 135-8 and Colabas Rs. 14-8 down at Rs. 60. Finlays closed with a loss of Rs. 11 at Rs. 312. The loss in Gokaks was just a rupee at Rs. 217. Indu Ordinaries managed to gain As. 2 over the week at Rs. 12-1. Khataus moved down by Rs. 5 to Rs. 206-4, and New Citys by Rs. 3-2 to Rs. 161-14, while New Greats were better by a rupee at Rs. 190.

Confidence in bank shares was severely shaken by renewed fears of nationalisation, and losses were very marked. The section was full of sellers with no buyers. Barodas were taken down to a low of Rs. 94, a loss of Rs. 4-12 over the week. Centrals found no support even at Rs. 46, as against Rs. 50 a week ago. Their new shares changed hands Rs. 3-12 lower at Rs. 49. Bank of Indias slumped by Rs. 10-8 to Rs. 150-8. Punjab Nationals shed Rs. 2-8 to Rs. 46 and United Commercials Rs. 2-8 to Rs. 50.

A gain of Rs. 25 to Rs. 3,575 in Orientals was the only feature in the insurance section which was seller-ridden. New Indias, which had found some support towards the close of the previous week, were on offer this week and, in consequence, finished Rs. 2-8 lower at Rs. 41.

The electricity group was easy in consonance with the general trend. Ahmedabad Electrics moved within a very narrow range and closed unchanged at Rs. 104-1. Bombay Suburbans fell by Rs. 2-8 to Rs. 118-2 and Surat Electrics dipped from Rs. 123-12 to Rs. 119-6. Andhra Valleys came down by Rs. 12-8 to Rs. 1,300, Tata Hydros by Rs. 3 to Rs. 132 and Tata Powers by Rs. 20 to Rs. 1,350.

In the miscellaneous section, Associated Cements were hammered down to Rs. 201 after an early improvement from Rs. 210 to Rs. 212-8. At the lower level, good investment support lifted them up to Rs. 208-8. Digvijays retreated from Rs. 169-12 to Rs. 165. Among sugar shares, Belapurs were taken down from Rs. 323 *cum-right* to Rs. 210 *ex-right*, but they recovered at the close to Rs. 218 *ex-right*. Phaltans lost Rs. 3 to Rs. 126 and Walchandnagars Rs. 11-14 to Rs. 226-14. In the engineering and mining group, Alcocks provided a feature with a rise of Rs. 2-8 to Rs. 340. Premier Constructions closed with a loss of Rs. 12 at Rs. 169-8 after being done at a low of Rs. 164.

• • • •

Calcutta Stock Exchange

CALCUTTA, *1st February*

Conditions on the Calcutta Stock Exchange turned from bad to worse this week. As current prices were 15 to 20 per cent. below the recent peaks, many operators seemed to have found themselves in grief. Loss of insurance funds to the market on account of nationalisation of insurance, fear of the possibility of stringent tax measures in the forthcoming Central budget and the weakness of the Bombay share market, contributed to depress the sentiment of operators. Expecting that there would be settlement difficulties, the Committee of the Calcutta Stock Exchange decided, at an emergency meeting held on the 24th January, to fix settlement rates for the clearing shares and called upon the members to carry forward their transactions at these rates at the specified carryover charges. With a view to helping the operators to get over their difficulties smoothly, the settlement rates were fixed slightly higher than the market rates. The settlement rates as compared with the then ruling market rates and the carry forward rates fixed by the Committee were as follows:

Shares	*Settlement prices* Rs. as.	*Market rates* Rs. as.	*Carry forward charges* As. ps.
Indian Irons	36 0	34 12	1 9
National Jute	30 8	29 12	1 6
Burrakur Coal	15 4	14 14	0 9
Textile Machinery ...	20 8	20 0	1 0
Orient Paper	33 8	33 0	1 6
Indian Copper	6 12	6 8	4 6

All outstanding transactions, according to the Committee's decision in clearing shares up to 24th January, had to be cleared on 30th January last and completely settled on 31st January and 1st February. Normal business was expected to be resumed after the completion of these operations.

Uncertainty, however, continued and, pending finalisation of the outstanding settlement position in the forward counters, business was virtually at a standstill. Consequently, at another emergency meeting held on 30th January, the Committee of the Stock Exchange decided that deliveries of shares other than clearing shares should take place on 31st January for transactions done up to 30th December 1955 and on 2nd February for transactions put through till 13th January. Members were informed that clearing shares should not be dealt with on a cash delivery basis and that only squaring-up transactions should take place. But, on the 31st ultimo, the few transactions that were reported done indicated no improvement in the trading conditions. The Committee met again and decided to postpone the delivery of shares other than clearing shares which was scheduled to take place yesterday. In view of the serious situation, panicky conditions, however, continued to prevail. The Stock Exchange Committee, therefore, met once again this morning and decided as follows:

(1) The settlement rates for clearing shares were kept at the levels fixed on the 24th January.

(2) All differences that are due at the above rates should be paid and received, as the case may be, by the members concerned.

(3) All outstanding transactions should, *ipso facto*, be carried over to the next clearing without any charges to be levied either by seller or buyer until the buyer demands delivery at the rates fixed.

(4) Outstanding transactions should be allowed to be closed at the above rates and no new transactions should be allowed to be done until further notice.

Despite these measures, there is a feeling in the market that it is nowhere near the end of its troubles. Operators are keenly watching further developments. Meanwhile, the sentiment remains completely demoralised.

• • • •

Madras Stock Exchange

MADRAS, *1st February*

The easiness witnessed last week on the Madras Stock Exchange gathered further momentum this week. In fact, there was a heavy wave of selling pressure. The sentiment of the market was severely affected by fears of increased taxation in the ensuing budget proposals and there was an inclination to await the outcome of the All-India Congress Committee meeting at Amritsar next week. The easiness was pronounced in planting shares. In tea scrips, this was due to fears regarding the prospects of overproduction of tea leaves, leading to a depression in their prices. The increase in export quota for tea announced today and the fixation of the price of the leaf lower at Rs. 2-14-1 per lb., as against Rs. 3-5-1, for the purpose of determining export duty, did not in any way help to arrest the downward trend in values. Rubber and coffee scrips ruled in sympathy with teas. Miscellaneous scrips proved no exception to the generally easy trend. As a result prices declined all round and disclosed sizable losses over the week.

There were a few dividend announcements this week. Among them, mention may be made of the Pandyan Bank Ltd. which declared a dividend of 7½ per cent. for the year ended 31st December 1955, as against 6¼ per cent. for the previous year. The share was enquired at Rs. 36-12 *cum-div.* The directors of the Ouchterlony Valley Estates Ltd. announced a dividend of 20 per cent. for the year ended 31st October 1955, the same as in the previous year. The scrip was enquired at Rs. 5-4 *cum-div.*, as against Rs. 5-7. The Thirumbadi Rubber Company, Ltd. increased the dividend from 10 per cent. to 12½ per cent. for the year ended 30th September 1955. The scrip changed hands at Rs. 2-3 *cum-div.* The United Nilgiri Tea Estates Company, Ltd., announced an *interim* dividend of 10 per cent. for the year ended 31st March 1956. The total dividend for the previous year was 35 per cent. The share was enquired at Rs. 305 *cum-div.*, as against Rs. 317-8.

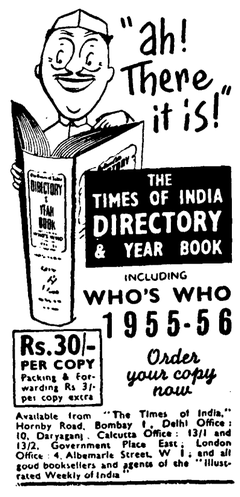
The directors of the Woodland Estates Ltd. have proposed to issue 53,000 shares of Rs. 10 each (all for cash) at par and ranking *pari passu* with the existing ordinary shares but participating in dividends of the Company's profits from 1956-57 and 13,250 6½ per cent. (tax-free) cumulative preference shares of Rs. 10 each at par, redeemable at the option of the Company, ranking for dividend from the date of allotment. These will be offered to the existing ordinary and preference shareholders as on 5th inst. at two new ordinary shares for every ordinary or preference share held and one new preference share for every two ordinary or preference shares now held. The Company is also issuing 1,000-6 per cent. (tax-free) mortgage debentures of Rs. 500 each redeemable at par at any time between 1st January 1963 and 31st December 1965.

In the textile section, Balasubramanias (Rs. 40 paid up) lost Re. 1-8 to Rs. 68-8 and 'B' (Rs. 70 paid up) Rs. 4-8 to Rs. 121. Buckinghams declined from Rs. 172 to Rs. 169 and Bangalore Woollens from Rs. 565 to Rs. 550. Cannanores receded from Rs. 145-8 to Rs. 143 and Coimbatore Pioneers from Rs. 246-4 to Rs. 242-8. Janardanas were lower by Rs. 3 at Rs. 83 and Radhakrishnas by Rs. 4 at Rs. 268. Lakshmi (Rs. 50 paid up) were down by Rs. 4-8 at Rs. 175-8 *cum-div.* and (Rs. 25 paid up) 'A' by Rs. 2-8 at Rs. 87-8.

The planting section also ruled easy. Coonoor Teas, among tea scrips, receded from Rs. 31 to Rs. 30-8 and Coorg Teas from Rs. 10-2 to Rs. 9-10. Haileyburias were lower by As. 12 at Rs 25 and Nilgiri Teas by As. 14 at Rs. 11-10. Nonsuch Teas suffered Rs. 4 to Rs. 32-4 and Highlands As. 12 to Rs. 15-6. Cochin Malabars, among rubbers, eased from Rs. 8-5 to Rs. 7-11 and Malankaras from Rs. 28-2 to Rs. 27-8.

In the miscellaneous section, Aluminium Industries declined from Rs. 21-4 to Rs 20-14, and F.A.C.Ts. from Rs. 7-2 to Rs. 6-11. Mysore Chemicals and Fertilisers disclosed a loss of As. 4 at Rs. 9 and India Steel Rolling Mills As. 2 to Rs 12-10. Andhra Cement 'A' receded by Rs. 2 to Rs. 159 and 'B' by As. 12 to Rs. 15-4.

The profit of the Central Bank of India Ltd. for the year 1955 amounted to Rs. 77,75,970 and not Rs. 71,75,970 as stated in these columns last week.



NEWS IN BRIEF

A DIRECT radio-photo service between India and Japan was inaugurated in Bombay last week.

Uttar Pradesh has the largest number of power alcohol producing units. Out of a total of 19 units in the country, 12 factories are in this State.

Refugee claimants numbering 22,670 in the Punjab (*i*) have been paid a sum of Rs. 5.5 crores as compensation up to the end of December last.

The Government of India has banned the export of *jowar* outside India with effect from 28th January 1956, consequent on the rise in internal prices.

The consumption of ammonium sulphate in India increased from 270,000 tons in 1950 to about 600,000 tons in 1955, Which is very near the first Plan target.

For the first time, India exported about 78,800 tons of motor spirit and 123,000 tons of furnace oil during the second half of 1955. Main importers were Pakistan, Burma, the Philippines, Australia and Ceylon.

The Government of Madras has instructed the Chief Conservator of Forests and the Director of Industries to investigate the possibility of starting a paper mill in Malabar, as suggested by the District Planning Board.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 2-14-1 per lb., as against Rs. 3-1-5 per lb. in force from 1st January 1956. There is no change in the existing rate of duty of As. 6 per lb.

The Union Government has banned, with effect from 31st January 1956, the export of wheat products, such as *attu, maida, sooji* and *rawa*. The decision has been taken in view of the rising trend of wheat prices.

The value of capital assets of the Post and Telegraph Department rose from Rs. 33 crores after the Partition to Rs. 50 crores at the beginning of the first Five-year Plan, It is expected to increase to Rs. 92 crores by the end of the Plan period.

A factory to manufacture electric cables and wires will shortly be established in Madras by a Japanese firm with Indian capital. In this connection, the Managing Director of the Japanese firm paid a visit to Madras early this week to finalise the blue-print.

Soil conservation work is to be undertaken on 4 million acres of land under the second Five-year Plan. Nearly 7 million acres are expected to be surveyed in this connection. About 2.4 million skilled and unskilled workers and about 5,000 administrative, clerical and technical personnel will be required for the work.

With effect from 1st January 1956, all further export of rice has been banned by the Government of India. This step has been taken with a view to arresting the steadily rising trend in rice prices. The imposition of the ban, it is, however, believed, does not affect contracts already entered into by Indian shippers with overseas interests.

The Andhra Legislative Assembly has passed the Andhra Essential Articles Control and Requisitioning (Temporary Powers) Bill, 1956, which seeks to control charcoal and electric energy for a period of one year with effect from 26th January 1956. The clause in the Bill relating to control over agriculture was deleted by an amendment to the Bill.

The Companies Act, 1956, is expected to come into force with effect from 1st April next. The rules framed under the Act and the forms prescribed under it are likely to be published and copies of them made available to the public before the end of February 1956. The Companies Bill, which was passed by the Houses of Parliament last year, received the assent of the President on 18th January 1956. The Act is being published in a *Gazette of India Extraordinary*.

The two Italian experts invited by the Government of India to study and advise on the possibility of starting paper and cellulose industries in India have expressed the view that the Ooty area is admirably suited for locating these industries, in view of the availability of necessary raw materials, such as wattle, blue gum, etc., and other facilities. The Italian experts will submit their report to the Government of India shortly.

Food production in India during 1954-55 amounted to 65.8 million tons, having risen from 50 million tons in 1950-51, and exceeded the target by 4.2 million tons, as a result of the implementation of irrigation and power projects under the first Five-year Plan. By the end of 1954-55, fresh irrigation facilities and increased water-supplies had been provided to over four million acres of virgin and irrigated soil. Imports of foodgrains fell from 4.7 million tons in 1950-51 to 0.77 million tons in 1954-55.

The Government of India has decided to allow additional import of motor tyres and tubes, giant tyres and tubes and cycle tyres only in all sizes on an *ad-hoc* basis through established importers other than the tyre manufacturers. This decision follows the recommendations of the Tariff Commission made in its report on fair prices of rubber tyres and tubes. The additional licences so granted will, however, be subject to the condition that not more than 40 per cent. of the face value thereof can be utilised for the import of bicycle tyres.

On the recommendation of the All-India Handloom Board, the Government of India, has decided to remove the present difference in rebate on the wholesale and retail sale of handloom cloth throughout India. The uniform rate for both wholesale and retail sale of handloom cloth in Bombay State will now be As. 2 per rupee, in place of one anna for wholesale and As. 2 for retail, while, in all other States, the uniform rate will be one-and-a-half annas, in place of one anna for wholesale and one-and-a-half annas for retail. The removal of difference in rebate has been announced by the Bombay Government to take effect from 27th January.

A meeting of some leading industrialists and the Prime Minister was held at the latter's residence in New Delhi on Sunday this week. The discussion centred round the second Five-year Plan and the role of the private sector in implementing the same. The industrialists are stated to have sought clarification of the Government's policy and its attitude towards private enterprise. Among those who participated in the meeting were Mr. G. D. Birla, Mr. H. P. Mody and Mr. Kasturbhai Lalbhai. Mr. Morarji Desai, Chief Minister of Bombay, and Dr. B. C. Roy, Chief Minister of West Bengal, were also present.

The Bombay Government has formulated a ten-year scheme to nationalise goods transport services at a cost of Rs. 30 crores. There are at present over 400 trucks operating on 50 routes in the State and the number of trucks is expected to be increased to 10,000 by the end of 1965. A scheme costing Rs. 9 crores to expand the passenger transport in the State during the next five years is also said to be under consideration of the State Road Transport Corporation. It is likely that the State Government will contribute to this scheme Rs. 4 crores and the railways Rs. 2 crores, while the Corporation's own contribution will be Rs. 3 crores.

From Abroad

The Indonesian Parliament has again put off a decision on the International Tin Agreement.

The British Budget is likely to be presented by the new Chancellor of the Exchequer on 10th April.

Three large German shipyards propose to undertake jointly research and experiments in the atomic propulsion of merchant ships.

The Export-Import Bank has lent $19,625,000 to the Brazilian Government's Santos-Jundiai Railway for the purchase of equipment in the U.S. The railway will get, in addition, credit to the extent of $5,375,000 from American manufacturers.

Spain will purchase 90,000 tons of edible oils from the U.S. at a cost of 62 million pesetas (£560,000) under an agreement signed between the two countries last week. Payment will be made in pesetas. The U.S. will lend 60 per cent. of the price of the oil to Spain for economic development. The loan is repayable in 40 years.

The American Express Company has scheduled a series of tours of southern and northern Europe this year. The nature of the tours is a "package" at moderate rates which includes passage, meals, hotels, transportation abroad and sightseeing tours with English-speaking escorts. Most Western European countries are included in the itineraries.

A Polish trade mission arrived in Pakistan last week, the visit being part of a drive to boost trade with Asian countries. According to the leader of the mission, Poland wanted to sell capital goods, rolling-stock, engineering and mechanical apparatus to Pakistan. Among the commodities it wanted to buy were jute, cotton, and wool.

A delegation of twenty Lancashire cotton dealers, led by Sir Raymond Streat, Chairman of the Cotton Board, will meet the President of the Board of Trade, to present fresh arguments to support the industry's plea for limitation of duty-free foreign cloth imports. The President of the Board of Trade has agreed to receive the deputation.

Malaya will be the first customer among the South-East Asian countries for Indian cycles, although internal demand in India has yet to be met in full. It will import, in the first instance, 35,000 cycles from India. Malaya will also buy an exportable surplus of Indian sewing machines, electrical goods and a wide range of engineering goods.

Exports and imports of both goods and services by the U.S. will reach record highs in 1956, according to the National Foreign Trade Council. The Council estimates that Americans will spend $3,000 million on foreign transportation, travel and miscellaneous services, and that foreign investors will realise $500 million from their investments in the United States.

The tentative allocations of U.S. economic aid funds to Pakistan during the current fiscal year so far amount to $117 million, an increase of $3 million over last year, according to the Director of the U.S. International Co-operation Administration in Karachi. The final allocations would depend on several factors, including agricultural programme at present under discussion with officials of the Pakistan Government.

The Straits-Calcutta Conference has notified that shippers of cargo from Singapore, Port Swettenham and Penang, who during the current year up to 31st December 1956 confine shipments to Calcutta and Chittagong exclusively to the vessels of the six lines participating in the Conference, will be allowed a rebate of 20 per cent. on the net freight of such shipments. The rebate will be paid quarterly.

Imports of grey cotton cloth by the U.K. during 1955 amounted to 268.36 million square yards, as compared with 236.21 million square yards in 1954 and 76.24 million square yards in 1953. The total value of imports during the past year was £15.40 million. India continued to be the largest supplier with 130.55 million square yards, as against 127.76 million square yards in 1954. Japan came second with 63.88 million square yards (51.98 million square yards) and Hong Kong third with 48.76 million square yards (18.12 million square yards).

The Italian Parliament has approved of the Government-sponsored Bill designed to encourage foreign investment in industry. The Bill abolishes all restrictions hitherto imposed on the export of profits from foreign investment in Italy or the export of the capital itself. This freedom is, however, limited to productive investments, which increase the national income, provide more jobs or increase production. Under the Bill, profits from unproductive investments can be exported annually from Italy only up to 8 per cent. of the investments and the original capital can only be withdrawn from Italy two years after its entry.

PERSONAL

MR. Dag Hammarskjeold, Secretary-General of the United Nations Organisation, has arrived in Bangalore to attend the E.C.A.F.E. session.

Dr. P. J. Gregory, till recently Secretary of the Indian Central Oilseeds Committee, has been appointed Secretary of the Indian Central Coconut Committee.

Mr. K. Santhanam, till recently Lieutenant Governor of Vindhya Pradesh, has been appointed Chairman of the Finance Commission to be constituted early in the next financial year.

Mr. Justice Sudhi Ranjan Das of the Supreme Court has been appointed Chief Justice of India with effect from 1st February, *vice* Mr. Bijan Kumar Mukherjea, who has resigned on grounds of ill-health.

Dr. P. S. Lokanathan, Executive Secretary of the E.C.A.F.E., will retire in June this year when his term of office will expire. He is likely to be appointed Director of the Institute of Economic and Industrial Research to be established in India with the aid of the Ford Foundation.

Mr. A. A. Dudley, Deputy Commissioner-General for the United Kingdom in South-East Asia, Singapore, is leading the U.K. delegation to the twelfth session of the United Nations Economic Commission for Asia and the Far East (E.C.A.F.E.), which commenced in Bangalore on 2nd February. Members of the delegation are Mr. Gerald MacMahon, U.K. Senior Trade Commissioner in India; Mr. D. W. S. Hunt, Deputy High Commissioner for the U.K. at Lahore, Mr. A. F. Maddocks, First Secretary, U.K. Embassy, Bangkok; Mr. H. A. N. Brown, and Mr. J. A. Borron, First Secretary (Information) Madras.

Messrs. J. C. Burns (Chairman), Ramnath A. Podar (Dy. Chairman), T. V. Baddeley, Dharamsey Mulraj Khatau, Krishnaraj M. D. Thackersey, Neville N. Wadia, G. D. Somani, M. P. Radhakrishna Ramnarain Ruia, Motilal Tapuriah, S. P. Jain, E. D. Shepperd, Pratap Bhogilal, Arvind N. Mafatlal, Naval H. Tata, Babulal Bubna, F. H. Kemple, R. L. Coghlan, Ramkumar S. Poddar, and E. F. Morrey have been elected to serve on the Committee of the Millowners' Association, Bombay, for 1956. The new Committee will begin to function after the annual general body meeting of the Association in April.

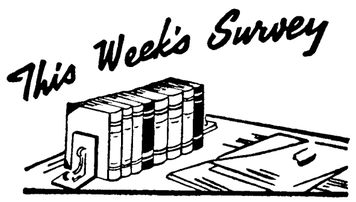
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *7th February*

Wheat Surplus

Representations were recently made to the Government of India that some part of the existing surplus of Indian wheat would find a market in Calcutta, if the railway freights from the Punjab to Calcutta were reduced. The Government of India gave very careful consideration to the representations, but their investigations did not lead them to anticipate that any feasible reduction in freight rates would result in so substantial an increase in the movement of wheat from the Punjab to Calcutta that there would be no net loss to railway revenues. The Government of India have, therefore, arranged with the Punjab Government that the railway administrations concerned will grant from 1st February 1931 until 31st March 1931 a rebate of one-third of the freight on all consignments of wheat booked to Calcutta from all stations in the Punjab. The cost of this rebate will be borne by the Punjab Government, but will be refunded to them should the grant of the rebate be followed by a substantial increase in the tonnage of wheat imported by rail into Calcutta. It may be mentioned here that railway freight in wheat from a large centre like Lyallpore in the Punjab to Calcutta is one rupee and five annas per maund as against five or six annas per maund which is the cost of freight from most Australian ports to Calcutta. And recent tests have proved that Punjab wheats give a greater yield of flour than Australian wheats.



EMPLOYMENT VS. COST

IT is very difficult to give unqualified support to the thesis which Mr. Shanti Narayan, President of the Merchants' Chamber of U.P., put forward when he said, in the course of his speech at the recent annual meeting of the Chamber held at Kanpur, that the human aspects such as employment and consumption-potential must weigh more than cost factor in deciding the pattern of development of industries. Employment is, of course, a vital consideration, but it must be *equally* balanced against the no less significant consideration, namely, the price the consumer is called upon to pay. If any step incurs the great risk of spiralling the prices of goods, especially an essential item like cloth, such a step should be avoided. This aspect was lucidly and forcefully stressed by Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, while replying to the address of Mr. Shanti Narayan. The cost factor, Mr. Krishnamachari declared, was a very important element in regard to consumption in an underdeveloped economy. Unless the consumption propensity tended to become a little more rigid, no person could, he added, manufacture goods for consumption on the basis that there would be a steady demand, because people would in any case consume what was being produced irrespective of certain cyclical changes in their incomes. Substantiating this contention of his, Mr. Krishnamachari observed:

"Particularly in the case of consumer goods, if the price of an important article of consumption is raised by 25 per cent., the demand sometimes drops by 40 per cent. and that would happen in a country where the non-elastic categories of consumer goods are small in number and the elastic category very large. We will have to bear this fact in mind all the time as to how much the consumer will have to pay. It is no use thinking that the consumer will bear any burden that we put on him."

The aforesaid view of Mr. Krishnamachari will be widely endorsed by any dispassionate observer of economic trends in the world. Viewed thus, it is regrettable that, in its anxiety to expand opportunities of employment by developing village and small-scale industries, the Karve Committee has conveniently ignored the basic economic facts. The proposition that price considerations do not matter much may hold good in respect of one or two industries, but the theory is not capable of general application. In his own characteristic way, the Commerce and Industry Minister said: "What is meat to one person is poison to another in a particular context and, as a general proposition, to say that employment potential must determine the issue, not the cost factor, would be giving a large amount of support to the Karve Committee report." Referring, in particular, to the Committee's suggestion for reserving the whole of the expansion in the demand for cloth in the second Plan period for the handloom sector by pegging mill output of cloth, Mr. Krishnamachari observed: "I am against limitation of production, but, unfortunately, other people in the Government differ from me. I feel that the best method of helping the handloom industry will be to have the mill industry heavily loaded, thereby giving a price advantage to the handloom industry."

It is gratifying to note that Mr. Krishnamachari has been more candid than he was some time ago in giving expression to his view on the future development of the cotton textile industry. Certainly, it would be a short-sighted policy to hold back production by the cotton mills, in order to secure benefit to the handloom industry. It is doubtful whether the handlooms will be in a position to meet the whole of the enlarged requirements of cloth in the second Plan period. The Karve Committee itself is doubtful, as witness its remarks that, "if at any stage there are adequate reasons to think that the programme laid down for the handloom industry cannot work to the schedule, the position may be reviewed and alternative arrangements may be made for attaining the required production of cloth."

It is thus evident that even the recommendation of the Karve Committee for pegging mill output of cloth is based on certain assumptions. Surely, the mill sector cannot, as the President of the Merchants' Chamber of U.P. rightly stated, be expanded overnight and immediately on the discovery that the handlooms are not capable of producing what may be expected of them. There is considerable force in the President's statement that there is room for the cotton mill industry to be encouraged, in order to consume more cotton and to produce more cloth than the modest target envisaged by the Karve Committee; it is somewhat anomalous to keep a little over 100 units in the industry in a state of perpetual uneconomic working. "If most of these uneconomic cotton mills were allowed to increase their loomage, as they should be," to quote Mr. Shanti Narayan, "a far better position by way of reduction in costs and prices would ensue."

COAL TO BE RE-GRADED

It would appear that re-grading of coal is in the offing. A Committee has been set up by the Coal Advisory Committee to examine the proposal made by Dr. A. Lahiri, Director, Fuel Research Institute, to revise the present specifications for the grading of coal. The Committee is also stated to have been asked to recommend a scientific basis for the fixation of price of coal on the basis of the various grades, with particular reference to washed coal *vs.* unwashed coal. It is further reported that the Committee will consider a suggestion that the difference in price between the various grades should be Rs. 5, but that the margin of profit for the producer should be limited to Re. 1-8 to Rs. 2 per ton, the balance being credited to the Government for financing projects for the development of the coal industry.

The first step for grading Indian coal, it may be mentioned here, was taken as early as in 1926, when the Indian Coal Grading Board was constituted under the Coal Grading Board Act of 1925 to grade chiefly the various high-grade seams of the country, with a view to maintaining the standard and the quality of coal exported to foreign markets. The Board classified the high-grade seams into several grades. But this classification was criticised on the ground that it was "arbitrary."

Be that as it may, this system of grading was "based chiefly on the pre-war marketing of the seam coals, but with the proviso that the seams for marketing should be sampled and analysed and that the quality of coal should be guaranteed." It was in use until 1944, when the present Coal Commissioner's Department was created and a fresh grading system was introduced. The chief object of this grading system was to fix a schedule of prices for the various grades of coal in Bengal and Bihar coalfields. Although seams of coal in other States are not graded, the price is based on the cost of production and the average quality of coal produced.

It is stated that the Coal Commissioner's grading is not based on sound scientific data and, therefore, needs revision. The demand from selected consumers that grading should indicate the quality of coal in such a way as to enable one to get an idea of the calorific value in addition to ash and moisture content of it has given additional support to the need for revision. This matter has been under the consideration of the Fuel Research Institute, Indian Standard Institute and various other scientific organisations. The Coal Commissioner and his organisation's officers have also given it serious thought. But till now, no workable agreed formula has been arrived at.

Now that India is on the threshold of large-scale industrialisation, the need for re-grading coal and revising prices according to new grades is all the more urgent. For coal in this country is still the principal source of fuel. Almost all the locomotives of the Indian railways are driven on coal. The Indian iron and steel Industry is dependent entirely on coal, not to speak of other industries. It is stated that as much as 75 per cent. of the country's total expenditure on fuel is accounted for by coal only. Nevertheless, heaps of good quality slack coal lying idle at the colliery ends and wasteful mining practices resulting in loss of millions of tons of high-grade coal are a common feature. Moreover, there is indiscriminate utilisation of high-grade coal for purposes where it can be avoided.

What is this state of affairs due to? One important reason is the lack of proper grading of coal and arbitrary fixation of the price of the grades concerned. It is pointed out that, although the reserves of superior grades of coal are limited, there is a heavier drain on it than warranted. For, with a difference of a little over Re. 1 only between the price per ton of selected B coal and that of Grade II and of only As. 6 between the prices of Grades I and II coal, the consumer is more often tempted to go in for superior grades, even though he can do with lower grades. Thus, fuel efficiency in the country is at a low ebb.

The re-grading of coal is after all re-classification from the point of view of economic utilisation of a particular grade. The value of fuel should be based on its calorific value, that is, the quantity of heat stored in one unit. This must be the basis for the fixation of the grades. Other factors that require to be considered for re-grading are the impurities, mineral matter and the moisture content, which lower not only the calorific value of coal but affect adversely its utilisation. The price of superior grades should be so fixed as to prohibit their utilisation for purposes which could be achieved with the use of lower grades.

PLIGHT OF MIDDLE CLASSES

The report on the middle class economic survey conducted by the Gujarat Chamber of Commerce in Ahmedabad City, though it relates only to 1953, is a valuable document. It serves to emphasise the fact that the living conditions of middle class families—middle class here covers persons earning an income varying from Rs. 900 to Rs. 5,200 per annum—are most adversely affected whenever there is an increase in prices. The year 1953, it will be recalled, was one of high price levels in India. The report shows that, out of the 1,000 middle class families from which replies have been taken up at random for tabulation, as much as 40 per cent. (or 402 families) live beyond their means, the extent of their deficit being about 15 per cent. of the aggregate annual expenditure or 17 to 18 per cent. of the annual income. The number of families which nearly make both ends meet is 490. Only 108 families are in a position to save something out of their incomes, the average of the surplus being 11 to 12 per cent.

The average expenditure per family, according to the Ahmedabad enquiry, exceeds the average income in the case of families the incomes of which range from Rs. 900 to Rs. 4,000 per annum. The extent of overreaching the income is higher in the income group between Rs. 900 and Rs. 2,000 (Group A) than in the group between Rs. 2,001 and Rs. 4,000 (Group B). As against an average annual income of Rs. 1,586 and Rs. 2,789, the families in these groups spend Rs. 1,881 and Rs. 2,836 respectively. The deficit thus works out on an average per family to Rs. 294 for group A and Rs. 47 for Group B. It is only in the case of families with annual incomes exceeding Rs. 4,001 but not more than Rs. 5,200 (Group C) that there is a surplus; the surplus comes to Rs. 532, with the average income estimated at Rs. 4,613 and expenditure at Rs. 4,081.

It is no doubt true that this brief account pertains to a very small section of the middle class in India and as such is not fully representative. Nevertheless it may generally be taken as a fair indication of the economic conditions of this class at present. There is urgent need for improving the conditions of the middle class. After all, the middle class has always been a

stabilising force in society. And its contribution to national progress is more significant than what its size would lead one to expect. In the interests of social progress, the position and value of the middle class needs, therefore, to be strengthened.

Be that as it may, the average *per capita* income among the middle class (including earners as well as dependents) is the lowest at Rs. 375 for A group, B and C groups accounting for Rs. 524 and Rs. 756, respectively. The average expenditure per head—this includes the imputed value of agricultural produce of owned land and rental value of owner-occupied premises but excludes payment for insurance premium and contributions to provident fund schemes—works out to Rs. 445 for A group, Rs. 533 for B group and Rs. 669 for C group. An idea of the pattern of expenditure (per adult equivalent) in the three groups can be had from the following figures:

Percentage to the Total Expenditure

	Group A	Group B	Group C	Total
Food	46.55	42.44	38.70	43.01
Clothing	9.98	9.05	9.15	9.34
Health	6.17	5.12	5.36	5.47
Education	3.04	4.74	5.65	4.40
Rent	14.03	15.62	17.05	15.40
Entertainment	2.13	2.22	2.73	2.28
Fuel	6.00	4.92	4.35	5.14
Miscellaneous	12.90	15.88	17.01	14.96
Total ..	100	100	100	100

It will be seen from the table above that the percentage expenditure on food decreases, while that on education and other miscellaneous items increases as we ascend the income scale, such being in conformity with Engel's Law of Family Expenditure. At the same time, the data reveal a typical uniform pattern of living of middle class families irrespective of the income group to which they belong. The percentage expenditure on clothing per adult male equivalent in A and B groups is practically the same. In the C group, this is higher per adult male equivalent, but the percentage is again the same. The expenditure under health also behaves in an identical manner. The only items which change perceptibly—both absolutely and relatively—are the expenditures on miscellaneous items and on education. Another striking feature is the fact that, when middle class families experience an increase in their income, they generally augment their expenditure on education. They will attempt to improve the prospects for their children by providing them with higher education. They also increase their expenditure on rent by moving into better and bigger premises.

An interesting feature revealed by the enquiry is that the *per capita* tax burden on the middle classes amounts to Rs. 9.34, Rs. 19.28 and Rs. 13.29 for A, B and C groups, respectively. Expressed in percentage of the *per capita* expenditure, the burden works out to 2.1, 1.9 and 1.9. This calculation does not, however, give a correct idea of the incidence of taxation, for the list of indirect taxes incorporated in the survey is not exhaustive, nor are all articles subject to sales tax and excise duty included in the list. The study made by the Taxation Enquiry Commission reveals that the tax burden (percentage of the *per capita* annual expenditure) comes to 7.5 for income group Rs. 1,200 to Rs. 1,800, 7.6 for Rs. 1,801 to Rs. 3,600 group and to 11.3 for above Rs. 3,600 group. Out of the tax payments by a middle class person made through his expenditure on several items, the amount of tax paid on the purchase of cloth, according to the Ahmedabad survey, forms the biggest single item, followed by tax on tea and sugar. The total outlay of a person on four or five items, namely, cloth, tea, sugar, tobacco and entertainment, reveals that they account for nearly 80 per cent. of the total tax payments.

TOWARDS SOCIALISM

The main emphasis in the sphere of economic development will, in the next few years, fall on the public sector. This fact has been known for some time past. It received further reiteration in the discussions at the meeting of the National Development Council which took place at New Delhi two weeks ago. Mr. Jawaharlal Nehru, India's Prime Minister, who presided over the meetings, said: "There is much talk of the public sector and the private sector. We have both sectors obviously and we have said repeatedly that the public sector will grow, and must grow." The main consideration, according to him, is that "power, economic power, should not be concentrated in private hands, that vested interests should not grow up in regard to any important matter, strategic matter or socially important matter, that there should be dispersal of economic power. Therefore, there should be avoidance of the development of monopolies of any kind." Proceeding, Mr. Nehru referred to the Industrial Policy Resolution, 1948, and observed that, although it was good, as far as it went, it was somewhat vague in some particulars. In any case, he was not "quite sure that it has been followed closely in the last few years." The question, which had now arisen, was whether, in the light of the country's new objective of "socialistic pattern of society," the Resolution was adequate or not.

This is a very pertinent issue. If the Government feels that the 1948 Industrial Policy Statement is not applicable to conditions today, it should formulate a new statement which would set forth its objectives clearly rather than depart from the old statement from time to time and create uncertainties in the public mind. According to Mr. Nehru, the Government knows what it is aiming at, but it would require a "little careful thinking" to formulate it in the shape of a resolution. It is worthwhile doing it as quickly as possible in view of the fact that a knowledge of the direction in which the country is moving is even more important than the speed of this movement. It will be quite unrealistic to draw up a plan without specifying the basic principles of policy.

The Council, it is stated, was of the view that the correct approach to the problem of filling the gap between the resources and the size of the Plan was not to reduce the size of the Plan or spread the projects over a longer period but for the Centre and the States to prepare the country to accept boldly the responsibility for raising the resources needed for the implementation of the Plan. Steps to raise additional resources, it was emphasised, should be undertaken from the commencement of the Plan itself. It was further pointed out that measures should be devised to reduce evasion in respect of every tax source.

The principle that the disparities in income should be reduced and that a ceiling on income should apply both to the public and private sectors, which had been stressed by the Standing Committee, was endorsed by the Council. The achievement of a socialistic structure of economy, it was felt, was a long-term policy. Long-term policy was, therefore, of great importance. Thus, it was necessary, according to the Council, to think of planning in terms of a 15-year period which may be adjusted from time to time as experience was gained and fuller technical and statistical information became available. In this connection, the Council did well to emphasise that undue rigidity should be avoided. A five-year plan, according to it, should be flexible for several reasons such as uncertainty in internal resources, foreign exchange and supply of equipment or metals, changing conditions both inside and outside the country.

The Council stressed the development on a large scale of co-operatives in agriculture, small industries, rural trade and construction. It felt that agricultural processing industries should be brought into the co-operative sector. As regards land reform policy, it endorsed the suggestions made by the Standing Committee. These suggestions, it may be mentioned here, include provision for experiments in co-operative farming, co-operative village management and co-operative management of lands obtained through the application of ceilings on agricultural holdings. The Committee also felt that it deserved to be considered whether there should be a time limit during which the policy of ceilings on agricultural holdings should be carried out by States.

THE UNITED COMMERCIAL BANK LIMITED

Press Communique

THE profit of the Bank for the year 1955, subject to audit, including the amount brought forward from last year's accounts, is Rs. 37,77,761-2-0. Out of this sum, the Directors have made the following appropriations:

Transfer to reserve fund Rs. 8,50,000 and provision for taxes Rs. 14,00,000, leaving a balance of Rs. 15,27,761-2-0.

Out of the balance, the Directors propose to recommend to the shareholders at the next Annual General Meeting the payment of a dividend at Rs. 2-12-0 per share, free of income-tax, which will absorb Rs. 11,00,000, leaving Rs. 4,27,761-2-0 to be carried forward, subject to payment of bonus to staff.

The securities and investments of the Bank appear in the accounts on 31st December 1955 at or below the market rate ruling on that date.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, *27th January* 1956.

The President of the World Bank, accompanied by two financial experts and the Bank's engineering consultant, has arrived in Cairo for talks with the Egyptian Prime Minister on Western plans to finance partly the construction of the giant Aswan high dam on the Upper Nile. The World Bank has offered, along with the U.S.A. and Britain, to give Egypt financial aid for the project. Britain, the U.S.A. and the World Bank offered to provide Egypt with capital for the project after Russia offered a low interest loan and other East European countries also offered to help. The dam will take about ten years to be completed and is estimated to cost about $1,300 million.

DEVELOPMENT OF MACHINE TOOLS

MR. SCAIFE'S SUGGESTIONS STILL RELEVANT

From A Special Correspondent

DELHI LETTER

NEW DELHI, 31*st January*

EVENTS in the Capital this week were dominated by the customary celebrations in connection with Republic Day. The City turned gay and colourful and remained, for a time, unmindful of the happenings elsewhere. The constant rehersals, parades and pagentry that preceded Republic Day, the spectacular processions and the multi-coloured brilliant illuminations of important public places, particularly the Rashtrapati Bhavan, Secretariat, etc., not to speak of the lavish fireworks display at the Ramlila Grounds on the evening of Republic Day, absorbed the entire attention of the general public. Even the resignation of Mr. C. D. Deshmukh, Finance Minister, which has now fortunately been withdrawn, was received with a certain amount of amusement. His resignation was ill-timed as it unfortunately coincided with the declaration of the Bengal and Bihar Chief Ministers that efforts would be made to merge their two States. This move has unequivocally been welcomed in the Capital and is considered as an act of great statesmanship. It has already begun to exercise some beneficial influences on other States.

Considerable interest is being evinced at present on the talks that are now going on for the formation of a Dakshina Pradesh, by merging Madras, Kerala, Mysore and Andhra into one unit Such a unit, if it materialises, will doubtless inspire other States to emulate, with the result that there will emerge about six or seven big States in the Indian Union. The formation of bigger units of contiguous areas will improve the economic position of all the merged areas, particularly in the matter of utilisation of hydro-electric, irrigation and mineral resources of these areas to the fullest extent possible. For instance, only a few months ago, a section of politicians in Travancore-Cochin was reluctant to agree to the Madras Government constructing dams and reservoirs on the Western Ghats for diverting heavy monsoon waters to irrigate the arid districts of Coimbatore and Ramanathapuram. If the one-unit State takes shape in this part of the Indian Union, there are immense possibilities for the expansion of hydro-electric power and also for the construction of reservoirs, which could irrigate fresh fields in the present Madras State. Such a development will increase the production of rice, sugar and long-staple cotton in these parts.

One of the characteristics of Mr. T. T. Krishnamachari, Minister for Commerce and Industry is his candidness. He is never afraid to tell the truth, even if it may be unpleasant to a number of people. During this week, for instance, he revealed before the newly constituted Machine Tool Committee that the criticisms of Mr. Scaife, British Machine Tool Expert, against the Government-owned two machine tool factories, namely, Ambarnath and Jalahalli, were reiterated by Rolls-Royce engineers. It will be remembered that Mr. Scaife, who came to India early in 1954, submitted a report on the conditions of the machine tool industry in the country and suggested a number of valuable measures to improve this industry. He was particularly critical of the costly set-up of the two State-owned factories and opined that, for the manufacture of specific armament machine tools, there was no better development site than the existing ordnance plants where the essential technical personnel and craftsmen were available. In regard to Jalahalli factory, he was of the view that the manufacture of 8½ inch geared and head lathes from parts made in Switzerland on equipment designed and made in Switzerland would be competing with the private-owned machine tool factories and that ultimately the Government enterprise would, instead of developing the machine tool industry in the country, ruin the private industry completely. He also pointed out that the Government technical consultants had specialised experience only in the restricted field of armament manufacture. Had it been otherwise, they might have advised the Government of India to undertake the manufacture of some other types of machine tools, such as capstan and turret lathes which were outside the scope of private enterprise.

These remarks apart, Mr. Scaife had suggested a number of measures for the general development of engineering industries in the country. Although it is nearly two years since he made these recommendations, the Government, it appears, has not paid any attention to them. The Minister for Commerce and Industry has admitted that Mr. Scaife is a practical man and, as such, his views on this subject must receive the earnest attention of the Government. For instance, Mr. Scaife stated in his report that it was men that mattered more than machines and the main factor of the top level technological direction and supervision had either been ignored or grossly overlooked, for there was, according to him, no evidence of arrangements for the provision of the army of specialists which would be required for such an ambitious undertaking.

Now that the Government of India has been anxious to establish heavy machinery manufacturing industries and to promote its expansion at a rapid rate, it must have a large number of technicians to man these factories. Until now Government has not paid sufficient attention to this problem. It is now reported that the Government is considering the question of deputing a high official team to the U.K. to study the working of some of the technical schools which turn out production engineers in large numbers. Since the growth of the machine building industry could not be properly fostered without the availability of this type of engineers, it has now become imperative for Government to take immediate action in the matter.

Supply of Engineers

In this connection, the suggestions of Mr. Scaife still hold the field. He recommended that there should be an adequate supply of production engineers who must be trained expressly in the art of using modern production equipment in preference to general mechanical engineering science. He said: "Although a high level university education need not necessarily be a disadvantage, a trainee of a matriculation standard may well make a good production engineer." He further remarked that "in all manufacturing countries, there exists a class of engineers who have made engineering production processes their speciality and their art is such that, within limitations of size and weight, they can bring to bear an accumulated wealth of experience which is equally adaptable to the manufacture of any engineering commodity, or for that matter any non-engineering commodity." That this class of specialists does not exist in India and that engineering education at the highest level cannot change the present situation are well known. The science of production engineering has, according to Mr. Scaife, advanced considerably both in the U.S.A. and Germany and, if India is anxious to accelerate the pace of industrial progress, it must adopt some of the techniques prevalent in those countries. He, therefore, suggested the establishment of a number of central institutes which should have a nucleus of new projects with their skeleton plants and organisations. The training of personnel in the design and manufacture of tool equipment would be carried on with the assistance of the personnel and resources of the Central Establishments and when the proper procedure had been established and satisfactory prototypes developed, the skeleton plant and key personnel could be transferred to its ultimate location to carry out its full expansion and the training of its operative labour. The machine tools and accessory could, in his opinion, be drawn, at no cost other than that of transport, from the redundant plant at the Government munition plants, which would otherwise lie dormant waiting for the next war.

India is now on the threshold of industrial development and since it is trying to establish heavy forging and casting industries, it should concentrate on the training of sufficient number of production engineers. Since the education standard prescribed for this type of personnel is only a matriculation standard. Government can recruit easily thousands of intelligent and capable young men. These people can be given sufficient training for a period of three to four years and, from this class will surely spring many first class production engineers who can manage the technical side of the newly proposed heavy machinery industries. It is expected that the newly established Machine Tool Committee will take up this question also and submit suitable recommendations.

FOOD SHORTAGE IN JAPAN

NEW FARMLANDS FOUND

JAPAN, which has long been a nation dependent upon food imports, has found new farmlands within its borders and thus has solved partially the food shortage problem. The development of unused lands, in various parts of this Far Eastern nation is due largely to land reforms instituted by America at the close of World War II, as well as to the use of previously unexploited swamplands and hillside slopes, just now beginning to come into production. The programme has added to the country's productive farmlands an area equal to Shikoku, the fourth largest of the Japanese islands.

This remarkable gain was disclosed recently by Japan's Ministry of Agriculture and Forestry in a report on the United States-sponsored agricultural programme as that programme entered its tenth year. The Ministry has announced that 1,332,500 acres of once undeveloped land have been opened to farmers as one phase of the entire expansion plan. This has increased by about 10 per cent. the total of Japanese land under cultivation. Some of the new lands are not suitable for rice production and are, therefore, being used to grow wheat, other grains and vegetables. This is in line with Japan's effort to diversify its farming and national diet.

It will be recalled that, early in 1955, the Japanese Government asked the International Bank for Reconstruction and Development to send a mission to study the country's possibilities for new agricultural development. This study disclosed that numerous swamplands and peatlands could be reclaimed and that considerable areas of upland could be used for pasturage and new types of cultivated crops. The Mission approved specifically four projects for International Bank financing. These included (1) the irrigation of upland and paddy fields in the Aichi prefecture east of Negoya, (2) reclamation of Hachiro Lake, a large but shallow lagoon adjoining the Sea of Japan on the north-western coast of Honshu, the largest Japanese island, (3) reclamation of peatlands in the Ishikari Valley in central Hokkaido, the most northerly main island and (4) pilot projects to establish methods of large-scale mechanical land reclamation that would open large areas to cultivation in Hokkaido and northern Honshu. Given the support of the International Bank, of which it is a member and to which it has contributed $250,000,000, Japan has pushed energetically toward all these aims. It has also completed other projects suggested or begun under U.S. direction and has used its own accumulated know-how for projects for small farmers.

Production Up

According to the report of the Ministry, the percentage of tenant farmers, which was 46.2 before the war, has now declined to 9.3. As most farmers now have the incentive of occupying and farming their own land, production has risen. The share of landlords, which was 45 per cent. of the national rice harvest before the war, has now shrunk to 3 per cent. Assets in livestock and agricultural implements have greatly increased under the reform programme.

The Japanese Government, which purchased 4,085,000 acres from big absentee landlords, has sold, often on long-term payments, 99 per cent. of this farmland to the farmers who are now operating it. This area transferred from absentee owners was estimated to have been about half of all the cultivated land in Japan at the close of World War II. Achievement of this project, probably the greatest immediate step in increasing Japanese food production, has been declared to be a most conspicuous example of bloodless land revolution. The report discloses also that 122,400 acres of land owned by the Government before the reform acts were passed have been offered to farmers. Former tenants already have taken 90 per cent. of it under purchase programme.

The Ministry leaders admit that the land reform programme has had the undesirable feature of increasing the number of holdings of 1.2 acres or less. The better farmers have, however, tended to buy the smaller neighbouring farms, so that more economically manageable farms are emerging. The most important long-range factors in increasing the nation's agricultural production have been the addition of hill and mountain slopes, previously untilled lands, and large acreages which had been coastal or inland swamps. The sloping lands can be used as grazing lands for livestock and for raising crops new to Japan.

CURE FOR INFLATION

THE SEARCH STILL GOES ON

(From Our Own Correspondent)

LONDON LETTER

LONDON, 22*nd January*

THE prelude to the annual spate of bankers' speeches this year was spoken by the Premier in a much heralded address in the Midlands. As so often happens, a great deal was expected and little eventuated; the dangers of inflation were emphasised, together with the need for economy in all directions, except atomic development for peaceful uses. But, then, came the significant statement that—contrary to what many people advocated—he, Sir Anthony Eden, would never accept the need for unemployment as a means of curing our economic ills. Propaganda? It is hard to say, but most likely the Prime Minister made the point—and will no doubt seek to adhere to it in practice—because he is well aware that pursuit of a policy of deflation to the point of unemployment would be political death for the Government responsible. However, Sir Anthony is no doubt also unconscious of the fact that, in standing out against unemployment, he is making nonsense of the policy of deflation, because he has said that he will not permit this policy to work out its logical results. Will he accept then the need for physical controls? For the time being, he is satisfied to maintain the credit squeeze and to cut down spending as much as possible, confident in the buoyancy of the economy to keep up the level of business activity above the point of unemployment. What is called the policy of blowing the froth off the economy holds the field.

Bankers on Credit Squeeze

But what do the banks say to all this? For them, the policy of the squeeze is most distasteful—they not only lose business in advances but have a trying time with their customers who are resentful of the effect of the policy upon their businesses. Some of the Bank Chairmen, therefore, advocate the policy of cutting down Government expenditure (the political bank-benchers' remedy) as much as possible. What they would *like* to see is less money being spent on the social services, but so far, except for housing subsidies, the Government has not revealed its hand on this count. The bank spokesmen have also dwelt mainly upon the need to cut down capital expenditure by public authorities—which means mainly house building—though the particular virtues of doing this while permitting the erection of large office blocks is likely to escape the man in the street.

The Chairman of the Westminster Bank has opened up a new line—that everyone should make self-denying savings and so solve the problem of national overspending in the most harmless way. He is rightly afraid of where economy in capital spending will lead . . . "we ought to insist," he says, "that the modernisation and re-equipment of our factories and of our agriculture should go on apace, but to insist also that it should be done out of some small immediate self-denial, and not at the expense of our reserves."

He also makes the point that it is not only a question of balancing immediate consumption needs against capital needs. In 1955 "by encroaching on our reserves, we have also used up some of the jam from previous years." But he does not want to save the gold reserves by import restrictions which would induce retaliation. Rather would he see the result of domestic economies having a natural braking effect on imports. Thus, he accepts the squeeze while trusting that self-discipline will cure the nation's troubles. Then, he sadly comments upon the unwisdom of Governments in making it difficult for the most public-spirited to exercise self-discipline: dividend restraint is all right, for instance, till a nationalising Government takes the Stock Exchange quotations (affected, of course, by dividends declared) as the basis for compensation! Well, if both political parties decide to tax distributed profits, is that not also a temptation to directors to get on with distributing dividends before the rate of tax is further increased!

The import of everything said by the bankers in the past few days is, indeed, that they are asking for a policy and not finding one. So the burden comes back to the Government, which, now that Parliament is about to meet, will have to enunciate a policy. The debate is likely to continue with increasing heat.—*All Rights Reserved.*

RESTRICTIVE MONETARY POLICY ALONE INEFFECTIVE TO COMBAT INFLATION

VIEWS OF BRITISH BANK CHAIRMEN

EVER since the beginning of last year, Britain has been passing through one of the critical periods in its post-war history. All the signs of an inflationary boom have been in full evidence, though at present some of them are somewhat dim. Thus, higher prices, ever-increasing demands for more wages, a rise in imports, that is larger than that in exports, and hence adverse balance of trade and fall in the gold and dollar reserves, all these are there. Among the signs of inflation which are tending to be less prominent are the fall in equity values, a slowing down in the pace of expansion in certain sectors of industry and the growing reluctance of employers to countenance higher wage demands.

A feature of inflation in Britain is the reluctance of bankers, Treasury officials and financial commentators to use, at one stage, the word 'inflation' to describe the situation. It looked as though this word was consistently avoided, lest such should have an adverse psychological effect on people outside the U.K. who have considerable holdings in sterling. Also, it might be that they were hoping that the measures that were being initiated by their Government would bring an improvement in the economic situation. But, as the year progressed, it became clear to them that these measures were not yielding the results expected. In any case, it is clear that the critics of the British Government's policy now fully admit the presence of inflation in Britain. This is evident from the observations made by a number of Chairmen of the British big banks in the course of their statements accompanying the reports and accounts for 1955 circulated to their shareholders.

Inflation in Britain

Sir Oliver Franks, Chairman of Lloyds Bank Ltd., describes, in his statement to the shareholders, the inflationary situation in Britain as follows:

"By every test, the position at the beginning of 1955 was an inflationary one. The cost of living had been creeping up again since early in 1954. The upward spiral of wages had never ceased and gained fresh impetus in the months to come. In January, both retail prices and wage rates were 46 per cent. higher than in the middle of 1947, the starting point of the respective indices. By May, the cost of living had advanced only one point further but wage rates, in the meanwhile, had shot up by as much as six points. This bidding up of wages —or lack of resistance to wage demands—was only one reflection of the competition for labour induced by the pressure of spending of all kinds. Other symptoms of the exceptional demand for labour were the large amount of overtime being worked and the rising ratio of vacancies to unemployment. By the middle of the year, there were on the average no more than forty applicants for every hundred jobs on offer—a situation previously seen only on the brink of the 1951 crisis."

The result of the situation was serious. How serious it was will be evident from the following extract of the statement of Sir Eric Carpenter, Chairman of William Deacons Banks Ltd.:

"The year 1955, unlike its predecessor, has been, as far as the economic sphere is concerned, eventful.

"A serious drop in the gold and dollar reserves, which are, of course, the reserves of the whole sterling area, in the last quarter of 1954 was followed by a further, though smaller, fall in the first quarter of 1955, due largely to the increase in our imports greatly exceeding the rise in our exports. In the second quarter the reserves remained stable, helped by a surplus with the E.P.U. area each month. The dock and railway strikes in June were followed by a further serious deterioration in each of the next three months, to which deficits in our settlements with Europe largely contributed. Though the serious drain has been halted, the last three months of the year have brought us little comfort and, after paying the usual instalments at the year-end on the Canadian and United States debts, the reserves were lower by £229,000,000 on the 12 months.

"The movements in the reserves are, however, the effect and not the cause of economic events and policies in the whole of the sterling area. It must be recorded that prosperity abounds not only here but in most other countries. There are many more jobs for workers than workers to fill them, and production has increased, though not at so great a rate as in 1954."

Quite apart from the loss of gold, inflation is dangerous from another point of view also. As has been pointed out by Sir Eric, continuing inflation is a social evil. It produces an arbitrary and haphazard redistribution of purchasing power, favouring those whose bargaining power is strong, while expropriating those whose incomes are fixed in terms of money, whose bargaining power is weak or who observe restraint in the exercise of the bargaining power they possess. It is the great enemy of thrift. It makes for easier profit from borrowed money and defrauds the saver who is the ultimate provider of the borrowed funds. It undermines the whole fabric of long-term contracts on which civilised economic life depends. Consequently, inflation is abhorred and, in fact, the main objective of the British Government's actions during 1955 was to arrest the progress of inflation and bring it under proper control.

Although readers are by now familiar with the measures adopted by the U.K. Government to check inflation, they may be briefly recounted here, for they have been the main theme of the annual statements of almost all British bank chairmen. They seem to be unanimous in their opinion that these measures alone are not adequate to deal with the situation facing the U.K. at present.

In order to curb excess investments, the U.K. Bank rate was raised from 3 per cent. to 3½ per cent. at the end of January 1955. This was, however, soon found to be inadequate, and the rate was again raised at the end of February, this time to 4½ per cent. At the same time, credit was tightened and restrictions on the financial terms of sales on hire-purchase were imposed. It was also announced that sterling would be supported in the free markets. In April 1955 came the budget. Relying on the efficacy of the monetary weapon, the Chancellor sounded an optimistic note and gave some tax relief. But dock and railway strikes in June held up trade and undermined the confidence of people abroad.

Stronger Action Needed

Consequently, it was felt that still stronger action was required. The result was that in July the banks were asked to take action to "bring about a positive and significant reduction in their advances over the next few months." Further, the Chancellor made it more difficult and more costly for local authorities to borrow, placed further restrictions on hire-purchase finance, and told the nationalised industries to reduce capital expenditure. This was followed by a supplementary budget in October, announcing an increase in both profits tax and purchase tax.

It will be observed from the foregoing account that the measures adopted by the Government were confined to the monetary field, supplemented, to a minor extent, by a few measures in the fiscal field. According to Mr. D. J. Robarts of the National Provincial Bank Ltd., these measures "appear to be working in the right direction." For the drain on the U.K. gold and dollar reserves is, he points out in support of his contention, diminishing and the sterling exchange is firmer. But he seems to doubt whether they will be sufficient to place the economy on a solid and impregnable foundation. To Mr. Robarts "credit squeeze" represents "an effort by the authorities to speed up the effects of the orthodox system of credit control through variations in Bank rate." In his opinion, the use of "this exceptional and undesirable" device is an admission that the orthodox system is not, in present-day conditions, fully effective. His remarks in this context are illuminating.

"The orthodox system is based on the view that a rise in Bank rate will automatically correct an adverse balance of payments, because, first, it will attract gold to the United Kingdom and thus strengthen the sterling exchange in the short run, and, secondly, it will tend to restrict business, stimulate savings and discourage the holding of stocks, with the result that prices will fall and the long-term internal equilibrium will be restored.

"It is a question, to my mind, how far these results can be expected from an increase in Bank rate today.

"It is, indeed, clear that under present conditions the first aspect applies only to a very limited extent. The United Kingdom is no longer a creditor on international account and any foreign exchange attracted by high Bank rate will be 'hot money,' with forward exchange covered, and its helpful effect will be minimal. As regards the second aspect, it might still apply if Bank rate could be raised to such a point as to create unemployment and cause deflation. But with the Government—and every party—wedded to full employment, and Government indebtedness such a heavy burden on the Budget, it is extremely unlikely that it could be allowed to operate to such an extent. Any increase in Bank rate will be limited and its main effect will be psychological, in that it may be a deterrent to business enterprise (and capital development): but it will not be a deterrent to Government departments or nationalised industries and it is not surprising that, when the 'credit squeeze' was announced, practically every Ministry simultaneously proclaimed that its particular projects would not be affected."

Government Expenditure

The entire theme of Mr. Robarts' argument is to prove that monetary measures, by themselves, will be of no avail, unless they are accompanied by control over Government expenditure. The figures given by him are striking. Thus, between 1937 and 1955, Government expenditure rose from £844 million to £4,305 million per annum or about five times. But during this period the value of bank advances only doubled, that is, from £994 million to £2,068 million. These figures show how the domestic finances of Britain are overshadowed by Government expenditure the growth of which has far outrun that of bank credit. Another disturbing feature has been the growth of the National Debt which has risen by £1,000 million in the past three financial years. These considerations leave Mr. Robarts in no doubt at all as to the inefficacy of monetary measures, as witness his remarks.

"In view of the figures which I have given, it is obvious that restrictions on bank credit can, at the best, have only a very limited effect on the whole field of national expenditure. Indeed, I would go further and say that arbitrary controls and restrictions of bank credit are merely attempts to cover up the symptoms and cannot cure the disease of inflation. What is needed is to reduce the volume of the demand for credit which is linked up with high Government expenditure and excessive consumption on the part of the public. It is, therefore, misleading, in seeking to deal with the evils of inflation, to place the main emphasis on the need to reduce bank borrowings."

The same views are held by Mr. A. W. Tuke, Chairman of Barclays Bank Ltd. He points out that the expenditure of Central and Local Governments combined is estimated to represent about 40 per cent. of the gross national income of the country. The Government expenditure, he avers, is likely to be spent on the whole less wisely and less efficiently controlled than the expenditure of individuals who spent their hard-earned money with a feeling of real personal responsibility. He, therefore, comes to the conclusion that the monetary measures could not do their work without the active co-operation of the Government. In substantiating this conclusion, Mr. Tuke observes:

"The Chancellor's proposals can also be criticised on the ground that, paltry as they are, they have laid still further burdens on the private sector without any direct contribution from the public sector. Some people argue that, under present conditions, both increases and decreases in taxation are inflationary in their effect. This is, at first sight, a paradox. As a general principle, Government expenditure is inflationary, if it is met out of borrowing, but not, if it is met out of taxation. But it is contended that taxation at its present levels engenders a mood of fatalism in the taxpayer and a disposition, which is aggravated by any further increase, to spend his capital, if he has any, while he lives. It certainly kills both the incentive and the ability to save. Thus the Government are on the horns of a dilemma; if they cover any of their expenditure by borrowing, they certainly cause inflation both in theory and in practice; if they cover it

RECENT SUPREME COURT DECISIONS RELATING TO SALES TAX

PRESENT ACTS NEED THOROUGH OVERHAULING

By V. Rama Shenai, Advocate, Ernakulam

"A DISSENT in the court of last resort is an appeal to the brooding spirit of the law and the intelligence of the future day when a later decision may correct the error into which the dissenting judge believes the court to have been betrayed," so observed Justice Brandeis of the United States Supreme Court. The earlier decisions are at times treated as "mere hypothetical conclusions to be abandoned, whenever found erroneous by the test of experience." The principle of *stare decisis* adhered to without exception by the House of Lords in England has not been considered to be an "inexorable command" by the American Supreme Court, the Judicial Committee of the Privy Council and the Australian High Court, for obvious reasons. Article 141 of our Constitution, while laying down that the law declared by the Supreme Court shall be binding upon all other courts, does not make it binding upon itself. The wisdom of this rule has been illustrated by the recent decision of the Supreme Court in *Bengal Immunity Co., Ltd.* vs. *State of Bihar*, where the Supreme Court by a majority of 4 to 3 overturned its previous majority decision in the *United Motors case*. The reasons urged for overruling the previous ruling are similar to those adopted by the Privy Council recently in the Australian transport case. The dissenting opinions were matched against the majority opinion and, in the light of the evenly balanced views on the scope of Article 286 of the Constitution, the matter was considered, in detail, afresh.

States' Powers

The several interdicts placed on the States' power to levy sales tax by the provisions of the Constitution have been thoroughly investigated and elucidated... Says the learned Acting Chief Justice:

"Broadly speaking, the fetters thus placed on the taxing power of the States are that no law of a State shall impose or authorise the imposition of a tax on the sale or purchase of goods where such sale or purchase takes place (1) outside the State or (2) in the course of export or import or (3) except in so far as Parliament otherwise provides, in the course of inter-State trade or commerce, and lastly (4) that no law made by the legislature of a State imposing or authorising the imposition of a tax on the sale or purchase of any such goods as have been declared by Parliament by law to be essential for the life of the community, shall have effect, unless it has been reserved for the consideration of the President and has received his assent. It should be noted that these are four separate and independent restrictions placed upon the legislative competency of the States to make a law with respect to matters enumerated in entry 54 of list ii."

If I may say so with great respect to the Supreme Court, the Acting Chief Justice of India has, by his impeccable analysis of Article 286 of the Constitution, laid down the law correctly, unhampered by considerations of expediency. While the States might feel embarrassed at the loss of an unexpected source of revenue revealed for the first time by the *United Motors case*, the commercial community will, certainly, feel satisfied with the ruling. But, in this connection, it may not be out of place to mention that the "delivery States" thought of taxing out-of-State dealers in respect of their turnover based on the delivery of goods for consumption and provided a machinery for it, only long after the decision in the *United Motors case*.

In answer to the "harrowing picture of economic collapse" of the States conjured up before the Court, the learned Acting Chief Justice has observed, "there can be no objection to insisting upon all inside dealers getting themselves registered and submitting their returns showing the goods imported and sold by them and bringing their annual turnover to tax. ... Call it a purchase tax *vis-a-vis* the earlier transaction under which the goods were delivered in Bihar for consumption in that State or call it a sales tax *vis-a-vis* the subsequent local sales by the Bihar dealers ... the State will get the full revenue." Mr. Justice Bhagavati has also made similar observations. The potentialities of the metaphor of the stream introduced by Mr. Justice Bose in his dissenting judgment in the *United Motors case* have been explored to a considerable extent in this case, but not completely. The decisions of the Supreme Court of the United States of America commencing from *M. C. Goldrick vs. Berwind-White Coal Company* can be pressed in order to sustain the source envisaged in the above dicta on the ground of "local activity" distinct from inter-State trade. "Its (i.e., that of the tax) only relation to the commerce arises from the fact that immediately preceding transfer of possession to the purchaser within the State, which is the taxable event regardless of the time and place of passing title, the merchandise had been transported in inter-State commerce and could not be projected into the sphere of any other clause of Article 286. It has not the effect of lifting the ban which was imposed by the Article 286 (1) (a) and the explanation thereto, even though the transactions covered by the explanation by and large fell within the category of transactions which took place in the course of inter-State trade and commerce. The moment it was determined that the transactions were outside the State by virtue of the explanation to Article 286 (1) (a), the ban imposed by the Article attached to it and could not be lifted by the President's Order which saved only those inter-State transactions which did not come within the explanation. Therefore, after the coming into force of the Constitution and during the period of the Sales Tax Continuance Order, 1950 was in force in respect of an inter-State sales, the State, in which the goods were actually delivered as a direct result of such sale for the purpose of consumption therein, was alone entitled to tax the transaction. The exporting State in such a case became an outside State and was not entitled to tax it."

In *Mohanlal Hargovindas* vs. *State of Madhya Pradesh*, the Supreme Court has determined the scope of the liability of registered dealers in respect of inter-State transactions. The extravagant claim made by the taxing authorities, to the effect that whatever transactions of sales concluded between a registered dealer in the State and others in the same State were intra-State transactions, irrespective of the fact that they involved movement of goods across the State border and therefore attracted sales tax, was rejected by the Court. It has been held that "all transactions entered into by the registered dealer do not necessarily import a liability to pay tax under the Act ... and that in spite of his being a registered dealer, such liability has to be determined with reference, *inter alia*, to the provisions of Article 286 of the Constitution."

The holdings in these two cases are a direct corollary to the decision in the *Bengal Immunity Co., Ltd.* vs. *State of Bihar*.

In *V.O. Vakkan and Others* vs. *The State of Madras*, the Supreme Court has repelled the obviously untenable contention of the assessees that a non-resident cannot be "a dealer" within the meaning of the Madras General Sales Tax Act. The vicarious liability of an agent of a non-resident dealer has been also emphasised. It has also been made clear that both the non-resident dealer and his resident agent are equally liable.

Anachronisms

These decisions must necessarily give a quietus to certain problems relating to the levy of sales tax which were current till recently and it is to be hoped that both the taxing authorities and the assessees will set themselves to the task of adjusting their mutual claims and liabilities in accordance with these decisions and others rendered by the Supreme Court. Most of the Sales Tax Acts still contain provisions which are not quite compatible with Article 286. It is high time that such anachronisms were removed. A thorough overhauling of the Sales Tax Acts in force in the different States in the light of the relevant decisions rendered by the Supreme Court seems to be desirable in the interests of both the Governments and the assessees. The truth of the remark that "chronic tinkering with the law is fraught with mischief" cannot be exaggerated. The patchwork attempted by the several States by introducing provisions similar to section 22 of the Madras General Sales Tax Act, far from clarifying matters, has only made confusion more confounded. The co-existence of the definition of "sale" in section 2(h) and section 22 of the Madras General Sales Tax Act and similar provisions in the Acts modelled on that Act are a source of despair to

(Continued on page 231)

SERICULTURE INDUSTRY IN INDIA

DEVELOPMENT UNDER SECOND PLAN

THE development of sericulture industry is expected to be accorded a prominent place in the second Five-year Plan. Presiding over a conference of sericulturists held at Santhemarahalli (Mysore) recently, Mr. V. Nanjappa, I.C.S., Textile Commissioner to the Government of India and Chairman of the Central Silk Board, revealed that the Board had drawn up for the second Plan period several schemes with an aggregate outlay of Rs. 4-5 crores for placing the sericulture industry on a stable footing. The schemes included, Mr. Nanjappa said, those which sought to augment the yield of mulberry crop per acre by adoption of improved methods of cultivation and to produce silk at a reduced cost.

The importance attached to the development of sericulture industry thus is only as it should be. Sericulture, as readers are aware, affords "a congenial" subsidiary occupation to many agriculturists, inasmuch as it supports a large number of people directly, not to speak of the provision of employment to thousands of families indirectly in the manufacture of rearing and reeling appliances. Incidentally, it may be noted that the sericulture industry is mainly concentrated in the States of Mysore, Madras, West Bengal, Kashmir and Assam and is organised on a smaller scale in the Punjab(I), Himachal Pradesh, Uttar Pradesh, Bihar and Orissa. The need for improving the conditions in the sericulture sector is imperative, for, otherwise, the implementation of the scheme for the development of the silk industry will receive a distinct setback. That there is no exaggeration whatever in this statement will be evident from the wide gap that exists between the supply of and the demand for raw silk (mulberry and non-mulberry). The production of raw silk is now at an annual rate of a little over 2.83 million lbs., which falls short of the estimated aggregate requirements of about 3.50 million lbs. by 670,000 lbs. This gap will widen still further in the coming years, what with the enlarged demand for silk fabrics arising from rise in population and increase in consumer outlay.

Raising Yield of Mulberry

Since more than 83 per cent.—or 2.35 million lbs.—of the total production of raw silk is accounted for by mulberry silk, it is of the utmost importance that steps should be taken to raise the per-acre yield of this silk. The experiments conducted in the major sericultural States have brought out the fact that the yield of mulberry can be increased by resorting to cultivation of mulberry grafts with improved varieties. Recognising this fact, the Central Silk Board has been giving grants to different States for the preparation and distribution of grafts to sericulturists. The Board has also established basic seed farms for producing pure indigenous silkworm reeds and hill rearing stations for the maintenance of univoltine and bivoltine races of silk-worms. In addition, the Board has given grants for the supply of incubation chambers and refrigerators which form useful adjuncts to seed supply organisations and for the introduction of chakwi rearing centres in some States. The two other important measures taken by the Board include those relating to (1) improvement of silk reeling and (2) establishment of silk conditioning and testing houses.

In the sericulture industry, as in any other industry, research plays a very notable part in improving the quality and reducing the cost of silk. It is gratifying that, in order to conduct research in silk, the Central Silk Board has sanctioned Rs. 8 lakhs for the establishment of a research centre at Channapatna (Mysore State), for which the Government of Mysore will be contributing Rs. 14 lakhs. Disclosing this, Mr. Nanjappa stated that the Board would give all possible assistance for the opening of the centre. Mr. Nanjappa also gave the assurance that, if the State Governments were to submit a proposal for the establishment of a sericulture school for imparting training to the sons of *bona fide* sericulturists, the Board would sympathetically consider it and do the needful. Already, the Board was, he said, granting scholarships to *bona fide* sericulturists and their sons for getting themselves trained in the industry in India and abroad.

The importance of increased facilities for research and training in the sericulture industry cannot be stressed too strongly. The quality of silk produced in India, though it compares favourably with that produced in several other countries, is still not up to the mark. Thus, cocoons in India are said to yield a length of 400 to 500 yards only, as against nearly 1,100 yards in Japan. Again, the quantity of cocoons required to produce one pound of silk is estimated at 16 lbs., as against only 7½ lbs. in Japan. It is not surprising, therefore, that raw silk prices in India should have all along remained very high. To the extent that these prices are reduced, the cost of silk manufactures will be lowered. Viewed from this angle, the plea of sericulturists for exemption from payment of agricultural income-tax on mulberry and removal of sales tax on cocoons deserves to be examined by the Government.

To revert to Mr. Nanjappa's speech at the recent conference of sericulturists. Referring to the filatures side of the silk industry, Mr. Nanjappa expressed the Silk Board's anxiety that all filatures should be revived and kept going. The Central Government and the Board, he stated, 'attached great importance to this industry, because a large number of people was employed and it earned much foreign exchange; the Board had so far granted Rs. 23 lakhs for the development schemes in the Mysore State. In this connection, Mr. Nanjappa assured that the Board would be prepared to spend more money if suitable schemes for the development of the industry were placed by the State Government. In conclusion, Mr. Nanjappa struck a note of confidence that the silk industry had a bright future in India and appealed to the sericulturists to co-operate with the Government in pushing through the several development schemes. While assuring the Board's full support, Mr. Nanjappa called upon the sericulturists to examine the feasibility of developing the industry on a co-operative basis, as had been successfully done in Japan.

FROM GUN-COTTON TO PERLON FIBRE

A RAPID SURVEY OF MODERN INVENTIONS

By Jan Mangath

WHOEVER has had the opportunity of standing before the complicated marvel of a modern synthetic fibre spinning frame, has undoubtedly gained the impression, in particular if he is a layman, that he is witnessing some magic performance in the field of chemical technology; for what is happening here is a most impressive and extraordinary technical process which almost borders on the miraculous. A liquid, pressed through, nozzles, coagulates into fibre, and on emerging is directed towards spools on which the threads are wound. No one would believe that they had previously gone through many phases of baths and chemical transformations—fibres no longer bearing witness to the chemical processes they had undergone. This unexpected sudden change from a liquid to a solid substance, from chemistry to the mechanism of a winding machine, is the most astounding part of this miraculous process created by human ingenuity.

Obernburg is the site of the largest plant of West Germany's synthetic fibre industry. It was set up in the years from 1921 to 1923 and 30 years ago already produced 3,000 kilograms of rayon per day. In the plant's scientific library, the thrilling story of the origin of synthetic fibres can be read, giving the history of a technical invention which has had a truly revolutionising effect in so many spheres of human life and in particular on the textile industry and in the field of fashions.

The Idea Stems from Reaumur

Curiously enough, the inventor of the thermometer, the witty Frenchman René Antoine Ferchauld de Réaumur, was the first to hit on the idea of producing synthetic fibre. In the year 1734 (!), he wrote the following notable sentences: "In the final analysis, silk is nothing but a rubber solution dried in the air. Should it not be possible to produce a silk-like tissue from a rubber and resin solution? At first glance, this idea seems somewhat irrelevant. However, on thinking the matter over, it becomes clear that this idea is a very promising one. It should be possible to obtain fibres from lacquers and varnishes suitable for the manufacture of materials whose gloss and resistance to wear and tear will surely come close to that of silk fabrics . . . " This prophetic mind—during Réaumur's lifetime there were no possibilities of realising his idea—even foresaw the properties this synthetic fibre should have: resistance to water and heat, gloss, and resistance to wear and tear, that is to say, the same properties which are still being required of every synthetic fibre, particularly if it is to be used for textile processing.

One hundred years elapsed since those prophetic words were spoken before the Basle chemist, Friedrich Schoenbein, succeeded in producing a novel substance by combining cotton with a saltpetre-sulphuric acid compound. The result of his experiment was gun-cotton, a highly explosive substance. As a consequence, quite a number of industries were to develop from this invention: the modern explosives industry, the lacquer and film industries, and the rayon industry.

In 1853, which is often regarded as the year in which synthetic fibre was invented, the Lausanne chemist Audemars dissolved bast fibres from mulberry twigs in a nitric acid solution and pressed the matter thus obtained through a steel tip. For the first time, a fibre was obtained from a chemical solution.

It is quite impossible to list in this place the many names of inventors, chemists, technicians, designers, and engineers who, in the hundred years following this invention, contributed to the development leading from nitrate rayon and cuprammonium silk to viscose silk, and from the many semi-synthetic fibres to the 100 per cent. synthetic fibre used for the manufacture of nylon and perlon. In this connection, it should be mentioned that an essential impulse for this development was furnished by the German electrical engineering industry: the carbon filament for incandescent lamps. It is generally accepted that the French Count Hilaire de Charbonnet is the founder of Europe's rayon industry; he was also the first to design a spinning frame in 1880.

(Continued in previous column)

(Concluded from next column)

In 1889, the former incandescent lamp manufacturers, Fremery and Urban, in Germany, were the first to run the risk of producing, exclusively for textile purposes, cuprammonium silk in their small plant at Oberbruch near Aachen. At that time, it was really quite a venture and the men who undertook it were unaware of the fact that they were revolutionising the clothing industry which ultimately ended in the "popularisation of luxury" which to us, modern people has become a matter of course. For centuries, pure silk as a material for clothing had been reserved for the use of the rich and remained unattainable to the masses. Rayon displaced pure silk from its prominent position and won over the masses.

Celanese

In the first German synthetic fibre plant at Oberbruch, the acids and baths from which the synthetic silk yarn was developed, were called the "stoff" (substance). Its outstanding property was its "glanz" (gloss). Material and property together made up the word "glanzstoff" which later was to furnish the —still valid—name of the "Glanzstoffabriken" for the united German synthetic fibre works.

An infinite amount of work, diligence and effort throughout decades has led up to the present high standard of the synthetic fibre technique. Nitrate silk was superseded by cuprammonium silk, and this in turn by viscose silk made from wood-pulp. One hundred per cent. synthetic resin fibre has in recent years gained much ground, leaving all other products of textile chemistry far behind it. In America, nylon, developed from synthetic resin, started on its spectacular way to success, while in Germany it was perlon that took a similar development. The 100 per cent. synthetic resin fibre is in the act of superseding its semi-synthetic predecessors of "celanese," also in Germany which after World War II was able to catch up with international developments in this field.

Today, the celanese plant in Obernburg produces perlon. For the lay visitor, the factory is a fantastic labyrinth of boiler plants, pipes, mixers, drums, and presses. The preliminary chemical stages of the valuable final product are invisible to the eye. What remains as a lasting impression is the miracle of the materialisation of the substance as a visible sign of an extraordinary technical creative achievement.

TEXTILE EXPORTS DECLINE IN 1955

SLIGHT INCREASE IN IMPORTS

From A Special Correspondent

MANCHESTER, 24*th January*

HARD on the heels of the sectional reports published by the Manchester Chamber of Commerce dealing with overseas trade come the actual figures of cotton yarn and cloth shipments from the United Kingdom during 1955. The pattern throughout the year had been so uniformly discouraging that the final accounts came as no surprise to the industry.

MANCHESTER LETTER

Earnings throughout the year from exports of cotton goods aggregated £97,676 666 as compared with £112,050,828 in 1954. Cotton cloth shipments amounted to 554 537,000 square yards against 637,378,000 square yards, the value being £70,613,717, an average of 30.56*d.* per square yard, against £81,944,778 averaging 30.85*d.* per square yard in the previous year.

Yarn exports were 35,572 377 lbs., earning £14,937,579 at an average price of 100.78*d.* per lb., as compared with 40 431,459 lbs. worth £17,325,971, an average of 102.85*d.* per lb.

The following table shows the quarterly figures by volume in recent years:

	1953	1954	1955
CLOTH (in sq. yards)			
1st quarter	173,407,000	176,756,000	165,314,000
2nd quarter	169,694,000	166,249,000	116,106,000
3rd quarter	182,020,000	151,035,000	143,437,000
4th quarter	183,925,000	142,044,000	129,237,000
Total (adjusted to nearest million) ..	710,000,000	637,000,000	555,000,000
YARN (in lbs.)			
1st quarter	9,879,300	11,174,900	10,667,800
2nd quarter	9,942,200	10,164,300	7,510,000
3rd quarter	9,687,300	9,094,600	8,195,200
4th quarter	12,388,400	10,044,700	9,167,800
Total (adjusted to nearest million) ..	42,000,000	40,000,000	36,000,000

Shipments to Australia again topped the list in both the yarn and cloth sections but the setbacks caused by import restrictions imposed during the year showed their mark. The Dominion took 99,760.000 square yards of fabric as against 122,343,000 yards in the previous year. The other main markets were (in square yards with 1954 comparisons); South Africa 55,571,000 (83,389 000). Nigeria 48,076.000 (56 259,000), Gold Coast 44,165,000 (35,489,000), and New Zealand 37,402,000 (37,871,000).

Among some of the smaller markets, slight increases in exports were recorded for the United States and Sierra Leone and an encouraging feature was the improvement in trade with Belgian and French possessions in West Africa.

Chief destinations for Lancashire-made cotton yarn were (with 1954 comparisons): Australia 6,238,117 lbs. (7,241,050), Canada 3.373.346 lbs. (2,765,060), Irish Republic 3,175,195 lbs. (3,181,173), Finland 2,430,635 lbs.. (2,089.309), and India 2 252.246 lbs. (1,839 131). A sharp fall occurred in sales to Western Germany from 3,327,354 to 1,494,993 lbs.

Supplies from Abroad

Conditions in the second half of last year altered to such an extent that the quantity of foreign cloth entering this country did not show the large expansion which was feared in the early months of 1955. Arrivals of grey cloth during the year were 268,359,000 square yards valued at £15 463,935 as compared with 236,213,000 square yards in 1954 worth £13,291,893.

The decline in purchases from India during the later months left the annual total at 130,552,000 square yards as against 127,758,000 square yards in 1954 but there was a sharp rise in shipments from Hong Kong from 18,115 000 to 48,761,000 square yards. Imports from that Colony in 1953 were only 688.000 square yards. The only other main supplier was Japan with 63,879,000 square yards as against 51,982,000 yards in 1954.

Imports of finished cloth last year showed practically no change on the previous 12 months, the comparative figures being 31,227 000 square yards as against 30,954,000 yards. Arrivals of yarn increased from 10,720 971 lbs. to 14,019,883 lbs. The cost of imports of cotton goods of all kinds last year was £23,907,260 as against £21,647.026 in 1954 and only £10,982,653 in 1953.

Mills Closing

Two of Lancashire's biggest spinning mill combines have announced new measures for consolidation, involving the shut-down of two more mills.

Mr. Roger Lee, Chairman of the Lancashire Cotton Corporation, told the annual meeting that the group intended to close the century-old Brunswick Mill, Ancoats, Manchester. "This is an old unit requiring very large capital expenditure to make it competitive," he said.

"This is typical of a movement taking place throughout the industry," Mr. Lee continued. "Many old mills are not structually suitable for re-equipment without heavy expenditure."

The Corporation has recently bought the Durban Mill, Hollinwood, Oldham, and has made an offer for the Eagle Mill, Rochdale, which has been accepted by 81½ per cent. of stockholders. Another mill which is to be closed is the 80-year-old Rumworth Spinning Company at Bolton, a subsidiary of Combined English Mills Ltd. The decision to cease production at this 50,000-spindle mill was disclosed by the Directors following their bid for the Shawclough Mill, Rochdale.

In both cases displaced operatives will be offered employment in other mills controlled by the respective groups.

Foreign Competition

European countries willing to work their mills on a three-shift system are as much a danger to the Lancashire cotton trade as competitors in low-wage countries in the Far East. This warning was given by Mr. Roger M. Lee, Chairman of the Lancashire Cotton Corporation, at the annual meeting in Manchester.

Yarn and cloth imports from Eastern countries had hampered the trade during the past year, he said, but there had been a remarkable change in the last two months. "The position today is that prices of many qualities quoted by low-wage countries are about the same as the price of Lancashire cloth," he continued.

Representations would continue urging the Government to assist the industry by limiting the level of foreign imports, but there was no indication that the Government proposed to take action. "The only course open to us as a firm is to try and combat this competition by raising the efficiency of our mills to the maximum," declared Mr. Lee.

Tax Relief Urged

In the new industrial age which Britain has entered, industry must be given more encouragement to keep abreast of advances, the Directors of the Manchester Chamber of Commerce declared in their annual report.

"It is clear that more incentives must be offered, by way of taxation reliefs, if our total economy is to be materially advanced. We have entered a new industrial age where the speed of adaptability can determine the final issue. The United Kingdom must not be handicapped in what must prove to be a world struggle for advancement and progressiveness," said the report.

Industry was now able to enjoy the fruits of great advances in industrial products, technology and techniques. But new developments, re-equipment and rebuilding cost money.

Referring to the past year in the Lancashire textile industry, the report said it was a matter of much concern that the long-term interests of the industry were being seriously threatened at one and the same time by two adverse influences—a declining export trade and growing imports of duty-free textiles from Commonwealth countries.

The report added: "The contribution which cotton and rayon make to our national well-being needs no emphasis. It is imperative that from all aspects—national as well as industrial—there must be maintained the unit should be well equipped to meet successary to meet these needs. For their part, each unit should be well equipped to meet successfully the forces of competition in a changing world economy."

Views on Shifts

Shift working in Lancashire cotton mills was a talking point of 1955 and in some cases became the subject of action as well. Few people connected with the textile industry in this country would deny that the introduction of two, let alone three, shifts presents considerable difficulties. Yet, in the light of current circumstances, the system provides one way of improving efficiency and thereby competitiveness—so long as various compensating factors are also adopted.

Objections to the principle come largely from those who believe that its social disadvantages outweigh any gains secured by the general community or the economic progress of the

CULTIVATION IN TUNGABHADRA PROJECT AREA

SCOPE FOR INCREASED OUTPUT OF COTTON

THE regions covered by the hydro-electric projects included under the first Five-year Plan and scheduled to be included under the second, are full of potential significance to India's agricultural economy. Till now, their potentiality has been only roughly assessed. It would perhaps be useful to make a detailed investigation of the agricultural and industrial possibilities of these projects and to disseminate such information among the public, so that the people could take a more real interest in these projects and also be induced to exploit the agricultural and industrial opportunities afforded by them to the fullest extent. From this point of view, an analysis of the potentialities of the Rs. 51-crore Tungabhadra Project, made by Mr. S. B. Priyavratha Rao of the Agricultural Research Station, Siruguppa will be read with interest by all cotton men, for the region covered by the project could make a significant addition to India's cotton output.

The project idea, so far as the Tungabhadra is concerned, originated as early as in 1895 in Hyderabad, though detailed investigation was undertaken only in 1905. The credit for this investigation goes to the Madras Government. The science behind the project, it is stated, is very interesting from an academic point of view. The detailed soil survey conducted by the chemists has revealed that the soils in the area contained nearly 80 per cent. black soil, the rest being red soil. Red soil irrigation has never presented difficulties in any place so far, unlike the black soils elsewhere (e.g., Neera-Valley area in Bombay). The analytical results, carried out at Coimbatore, revealed that the black soils of the area were quite irrigable and no harmful results were likely to accrue by way of soil deterioration. To test the soundness of these findings on a field scale and confirm the laboratory results, and to deal with other project problems, a special Agricultural Research Station was established at Siruguppa in the year 1937. Investigations revealed that both the soils and the Tungabhadra water have low salt content. As a result of irrigation no rise in salt content is noted. Thus, it clearly dispelled all doubts regarding the development of alkalinity in the black soils, consequent upon irrigation.

The Tungabhadra, which is a tributary of the Krishna, is one of South India's important rivers. The main feature of the project, which is located near Hospet (Guntakal-Hubli railway), is a masonry dam, 8,000 feet long and 160 ft. high. A 225 mile canal on the right bank is expected to irrigate 2½ lakh acres in composite Madras (now situated in Andhra and Mysore States) and another 127-mile canal on the left commands an area of about five lakh acres.

The chief crops grown in this tract are cotton and millets. These crops are raised entirely under rain-fed conditions at present. The result is that in dry land, the crop yields are low and uncertain. With the advent of irrigation, the crop yields are not only assured but will also increase considerably. A wide range of new crops, it is stated, could also be raised successfully. The pattern of crop production (in the Andhra and Mysore States only) under the existing system of cultivation and that under project conditions is given below:

Crop Pattern

	Area (in 000 acres)	Yield per acre	Total output
Under rain-fed conditions:			
Millets	125	500 lbs.	28,000 tons
Cotton (*desi*)	125	50 lbs.	16,666 bales
Total ..	250	..	..
Under project conditions:			
Paddy	50·5	1 ton (grain)	50,500 tons
Millets	40·0	,,	40,000 ,,
Wheat	20·0	¼ ton	10,000 ,,
Groundnut	48·0	700 lbs. (pods)	15,666 ,,
Cotton (Cambodia) ..	84·0	1 bale	84,000 bales
Sugarcane	7·5	2½ tons (sugar)	18,856 tons
Total ..	250·0	..	..

It will be seen from the table above that the cultivation, under project conditions, would lead to a five-fold increase in output as compared with that under dry cultivation. It will further be seen that the output of cotton in this region would increase from about 15,000 bales to 84,000 bales of 392 lbs. each. It must, however, be remembered that the table, confined as it is only to a limited part of the project region in the Andhra and Mysore States, does not give a complete account of what the Tungabhadra project could mean in terms of agricultural production. So far as cotton is concerned, the author notes that a total of about 3,25,000 acres in Andhra, Mysore and Hyderabad States could be utilised for cultivation of cotton. It may be mentioned here that an area of nearly 5 lakh acres is expected to get the benefit of irrigation under the High-level Canal Scheme, estimated to cost Rs. 15 crores; the scheme is under the consideration of the Andhra Government. When this canal is completed an additional area of two lakh acres is expected to come under cotton cultivation.

The improvement in the output of cotton is not, however, confined to quantitative aspect alone. There is bound to be an improvement in the quality of cotton too. The *deshi* cottons which are commonly raised in the dry lands in this tract come under the trade names Westerns, Northerns and Kumptas. These are all medium-staple varieties; the per-acre yield of these varieties is also low. With the advent of irrigation, long-stapled American uplands which are superior in quality to the indigenous types could be grown successfully. The yields and other characteristics of the upland type found suitable for cultivation in the project area and those of the existing *deshi* types are given in the following table:

Yield and Quality

	Kapas yield per acre (in lbs.)	Lint yield per acre (in lbs.)	Fibre length (in inches)
Under rain-fed conditions:			
Westerns (W. 1) ..	200-250	50-60	0·83
Northerns (N. 1) ..	250-300	50-60	0·87
Jayawant ..	200-300	60-70	0·86
Under project conditions:			
Laxmi	1,000-1,500	350-400	0·94

Attempts were made to explore the possibilities of replacing the existing *deshi* types by a cosmopolitan American type on the analogy of the experience in certain other countries, such as the U.S.S.R. and China. A research scheme launched by the Indian Central Cotton Committee in 1945, has three main objects: (1) to evolve a long-stapled American type suitable for irrigated *rabi* crop and (2) to breed a remunerative American variety for the rain-fed zones (not served by the project) so as to step up the quality and yield of cotton in the tract. The research scheme which is still in progress has already yielded some valuable results. Among the promising varieties, Laxmi and M.A.2, it is stated, have consistently registered encouraging yields for the past five seasons. Since Laxmi is superior to M.A.2 in more than one attribute, the former is being recommended for immediate use in the project area.

Summing up the study of the possibilities of the Tungabhadra region the author points out that this region will henceforth be free from periodical visitations of famine. This would contribute to all-round prosperity of the people and give a great fillip to the region's industrial progress. Since power will be available at low cost and larger supplies of raw materials such as long-stapled cotton and sugarcane will also be available, there are good prospects for developing large-scale industries, notably cotton mills and sugar factories.

ALL-INDIA COTTON ESTIMATE

The all-India third estimate of cotton for the 1955-56 season places the area and production at 17,189,000 acres and 3,286,000 bales (of 392 lbs. each) respectively, an increase of 6.8 per cent. in area and a decline of 9.3 per cent. in output as compared with the estimates for 1954-55. The estimate does not cover the entire area sown to cotton in 1955-56. Past experience shows that the area at the third estimate stage covers 85 per cent. of the area under crop finally reported.

The following table gives the details relating to area and production of cotton in terms of trade descriptions and staple lengths as per the third estimate for the current season and the corresponding estimate for the previous season:

	Area (in 000 acres)		Production (in 000 bales)	
	1955-56	1954-55	1955-56	1954-55
Trade descriptions				
Bengals	811	720	214	275
Americans	2,853	2,614	725	825
Jarilla	2,855	2,560	4·0	547
Verum	292	284	92	92
H. 420	542	417	71	77
Oomras	2,296	2,352	360	414
Hyderabad Gaorani ..	1,158	1,560	91	178
Malvi	1,498	1,197	352	249
Broach-Vijay	1,159	957	252	247
Surti suyog	60	50	147	124
Dholleras	1,685	1,424	356	366
Southerns	1,515	1,482	294	240
Comillas	94	88	19	18
Total ..	17,189	16,093	3,286	3,621
Staple lengths				
Long staple	5,540	5,252	1,086	1,239
Medium staple	5,868	7,111	1,860	1,537
Short staple	5,644	3,750	640	845
Total ..	17,189	16,093	3,286	3,621

The increase in area under cotton in the 1955-56 season, it is stated, has been reported mainly by Madhya Bharat, Bombay, Saurashtra, P.E.P.S.U. and Madhya Pradesh. This is attributed to favourable weather conditions at sowing time and to efforts made under the cotton extension schemes. The high prices of cotton at the time of sowing was also a contributory factor for this increase in acreage.

It is noteworthy that despite the increase in acreage under cultivation, the output of cotton has declined. This, as is well known, is due to the damage caused by floods and unseasonal rains. The decline in production, according to the official estimate, has been mostly shared by Madhya Pradesh, Hyderabad, P.E.P.S.U. and the Punjab. The decline in output in these states was partly offset by increases in production in Madhya Bharat and Saurashtra.

As between the different varieties of cotton, the decrease in production has occurred mostly in Americans, Oomras, Hyderabad Gaorani, Jarilla (including Virnar) and Bengals and an increase in Malvi. As regards staple length, the decrease in production has been recorded in short and long-staples and a slight increase in medium-staple. The information given in this estimate relates generally to the period up to the middle or end of November 1955. Till then, the condition of the crop was reported to be on the whole satisfactory. In parts of Madhya Pradesh the standing crop was, however, adversely affected by the shedding of buds and bolls due to untimely heavy rains. Due to floods and excessive rains in October 1955, the crop was adversely affected in parts of Punjab and P.E.P.S.U. The crop was also damaged to some extent in parts of Madhya Pradesh and Bombay by "aphis," "Powdery Mildew" and other crop diseases.

The official estimate of the cotton crop, as is well known, is always lower than the trade estimates which are invariably nearer the true crop position. For the 1955-56 season, trade estimates place the crop at 45 lakh bales (commercial), as against about 52 lakh bales for the 1954-55 season.

A CASE FOR ECONOMY IN STEEL THROUGH USE OF CONCRETE STRUCTURES

AN IMPORTANT QUESTION THAT MERITS PLANNING COMMISSION'S ATTENTION

By An Engineering Correspondent

IT has needed the discerning eye and the forthright pronouncements of the U.S.S.R. statesman, Mr. Khrushchev, to bring home to the Government and industrialists a fact which has been recognised for some time by a number of our engineers, that substantial savings in steel can be obtained by constructing our structures in concrete. The sharp criticism of Mr. Khrushchev during his visit to the Integral Coach Factory at Madras, when he told the builders of the factory that they were wasting steel in this construction, has aroused considerable interest. He turned down all explanations of economy and time-saving offered for the steel structures, reiterating his firm conviction that, if concrete had been used in place of steel in the structures, 80 per cent. of the steel could have been saved. Mr. Khrushchev was right and it can be shown, without going into an exhaustive analysis of the situation, that substantial savings not only in steel, of which there is such a shortage, but also in capital cost would result from a firm and sustained policy of substituting steel-frame structures by reinforced concrete. Considerably higher savings in the percentage of steel can be effected, if the recently developed technique of prestressed concrete is used to replace steel girders for large span bridges, steel tanks and other industrial structures.

Main Advantages

The age of massive walls is past. Structures are being built in the twentieth century of light frames which support any combination of walls, floors and roof. This method of construction has made skyscrapers possible. At one time, steel frames were considered essential for very tall structures, but now concrete frames have been found not only equally suitable for structures of any size or height but have certain advantages over the steel frames. Some of the chief advantages are lower first cost, reduced maintenance charges, and savings in steel. An example of a reinforced concrete skyscraper is a 34-storey building 507 feet high in Brazil.

It has been established that reinforced concrete structures require only one-third to one-half the tonnage of steel required for steel frames. The percentage varies with the type of structure as follows:

Residential and office buildings ...	50	per cent. that of steel frame
Factory buildings	45	do. do.
Warehouses ...	35	do. do.

Steel frames for buildings and for the majority of structures have to be encased in concrete, masonry or plaster for safety against the risk of fire. The foundations are also costly, as steel columns generally require a heavy and costly grillage of steel encased in concrete.

Saving in Cost

Comparative studies made of a steel-framed structure recently built in India with a reinforced concrete structure designed for identical conditions and loads showed that the concrete structure would have cost 22 per cent. less than the steel-frame structure. This finding is supported by the results of detailed studies of different types of buildings carried out in the U.S., where reinforced concrete structures proved to be between 25 and 30 per cent. cheaper in overall cost than identical steel-frame structures.

Due weightage has also to be given to the comparatively negligible maintenance which a reinforced concrete structure needs over the period of its useful life. A steel structure needs periodical painting, if it is not encased in concrete, and the capitalised cost of such painting further increases substantially the initial cost.

A further advantage in the use of reinforced concrete lies in the possibilities of moulding concrete to any shape or form for enhancing the æsthetic value of the structure. Moreover, concrete frames are also more durable and infinitely more fire-resistant than steel frames.

Arguments have often been advanced, as in the reported discussion between Mr. Khrushchev and the Integral Coach Factory authorities, that a steel frame is more rapidly erected than a concrete frame. Although a certain period is required for the hydration of cement in the concrete, judicious planning of the construction schedule results in the completion of a reinforced concrete structure almost in the same period as a steel-framed structure. Further, the use of precast units on a large scale, as is common in Western countries, would enable concrete structures to be erected even more easily and more rapidly.

Prestressed Concrete

The recently developed technique of prestressed concrete makes it possible, under most conditions, to enhance the advantages inherent in reinforced concrete. The quantity of steel required in prestressed concrete is only about a third of that used in reinforced concrete. The steel consumption is, therefore, 80 to 85 per cent. less than that needed in an equivalent steel structure.

Prestressed concrete is in its early stage of development in our country. Its first reported use was in the construction of two army garages at Meerut. Our railways pioneered its use in structures subjected to dynamic loading by constructing several 60- and 40-feet span girders on the Assam Rail Link. The first road bridge to be built in prestressed concrete was over the Palar, a few miles south of Madras. Since then, the number of prestressed concrete road bridges has gradually increased and over 30 large prestressed concrete bridges have been either completed or in various stages of construction.

Even though the imported high tensile steel wire used at present for prestressed concrete costs two to two and a half times as much as mild steel, prestressed concrete structures can be constructed in many locations at a lower first cost, than either reinforced concrete or steel structures. Outstanding is the case of major bridges in the range of 60 feet to 150 feet spans. Here, despite the natural inertia against innovations, particularly due to lack of experience in new techniques, the first cost by open tenders has often been less for prestressed concrete designs than for reinforced concrete designs and considerably less than for steel girders. An outstanding example is the Sone Bridge at present under construction where the tendered price for prestressed concrete was 37 per cent. less than that for structural steel and 4 per cent. less than for reinforced concrete.

Prestressed concrete has also proved most economical for large size tanks and reservoirs. In Europe and the U.S., it has largely replaced reinforced concrete in the building of such structures. Besides substantial savings in steel, its use results in impressive savings in first cost and in securing a leakproof structure. In building frames, the cost of prestressed concrete is at present higher than reinforced concrete construction but further developments are bound to eliminate this slight handicap.

The recurring cost of maintenance for prestressed concrete structures is even less than that for reinforced concrete structures.

Manufacture of Steel Wire Essential

The adoption, on a large scale, of prestressed concrete, resulting in an impressive saving of 80 per cent. of steel, underlines the pressing need for manufacture in India of high tensile steel wire required for prestressing. Efforts have already been made by technical bodies interested in the development of a technique with inherent economical advantages to impress on the authorities concerned the necessity for early manufacture of steel wire of appropriate quality. It is to be hoped that the Planning Commission will interest itself in this matter and ensure an indigenous supply of the high tensile steel wire to our engineers for constructing prestressed concrete bridges and structures and release 80 per cent. of the tonnage of steel girders and structurals.

Having indicated the percentage savings both in cost and in quantity of steel through the use of concrete, reinforced as well as prestressed, it is necessary to assess the gross quantities of materials involved. Of the 1.4 million tons of steel used in India in 1954, about 20 per cent. or 3 lakh tons consisted of heavy, medium and light structurals for use in buildings, and industrial structures and bridges. At least 50 per cent. of this, that is, 1½ *lakh tons* could have been saved by replacing the steel structures by reinforced or prestressed concrete.

The target for steel production by 1961 is 6 million tons and we may assume that 20 per cent. of this, or 1.2 million tons, would consist of structurals. Replacement of steel by concrete should then result in a saving of about 500,000 to 750,000 tons of steel.

Additional Cement

The steel saved, however, has to be substituted by additional cement for concrete construction and it is natural to ask how much additional cement will be required to be produced to effect this saving in steel. The target of the second Five-year Plan for the production of cement is 10 to 12 million tons. An analysis of typical industrial structures shows that on an average in a building frame, 1-1/3 ton of additional cement for reinforced concrete is required for every ton of net saving in steel. On the other hand, more than two tons of cement may be required for every ton of steel saved by substituting a steel girder bridge by a prestressed concrete structure. It would, therefore, be safe to provide additional cement equal in tonnage to about twice the weight of steel saved. Thus, in 1954 we would have required 3 lakh tons of additional cement in place of a possible saving of 1½ lakh tons of steel. At the end of the second Five-year Plan, we will need one million tons additional cement production, against a possible saving of between 500,000 and 750,000 tons of steel.

An increase in the capacity of cement production from 10 million tons to 11 million tons is not likely to be very difficult to achieve. The fulfilment of this enhanced target would overcome the bottleneck in progress likely to be caused by a shortage of steel during the second Five-year Plan.

The case for economising the consumption of steel in structures in India today therefore stands as follows: Reinforced concrete using mild steel rods can be used immediately to replace structural steel in all buildings and industrial structures and thereby save 500,000 to 750,000 tons of steel. For larger savings in steel, we must adopt, on an increasing scale, the technique of prestressed concrete, especially for major road and railway bridges and large tanks and industrial structures. For this, we need high tensile steel wire and, since high tensile steel wire would replace five times its quantity of structural steel, the Planning Commission, in the interests of national economy, should interest itself in the indigenous production of high tensile steel wire.

If the proposal to build all our structures in concrete is accepted, our target for cement production will need to be increased by about one million tons.

An Idea of Net Advantage

The question may be asked as to how the savings in steel and the additional production of cement will affect the nation's economy as a whole. The answer has been epitomised by Mr. W. W. Russel in a speech delivered on 12th December 1955 at the annual general meeting of the Associated Chambers of Commerce of India, Calcutta. He said that " . . . it seems that India could probably save a substantial percentage of her present steel consumption by an increase of less than 10 per cent. in her planned target of cement production. In terms of 1954 steel consumption, this would mean, I believe, a saving of 1½ lakh tons of steel by an increase of about 3 lakh tons of cement. In 1961, it would mean saving approximately half a million tons of steel by an additional output of only one million tons of cement. The figures I have just given you indicate that the installation of an additional million tons of cement capacity at an approximate cost of Rs. 16 crores, could save half million tons of steel, the capital cost of which would be approximately Rs. 75 crores. In addition, the extra cement would certainly be available during the next five years, well before the equivalent quantity of steel. . . "—*All Rights Reserved.*

SOME PROBLEMS OF SUGAR INDUSTRY

WORLD CONGRESS OF TECHNICIANS OFFERS AN OPPORTUNITY TO RESTATE THEM

THE Central Hall of Parliament House at New Delhi hummed with activity on Wednesday last week when the ninth Congress of the International Society of Sugarcane Technologists (I.S.S.T.) was inaugurated by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture. In this Congress, held in India for the first time, as many as 250 sugar scientists and technologists, including 100 delegates from 24 foreign countries, participated. The main session of the Congress lasted till the 2nd inst. About 150 scientific papers on different aspects of sugar and cane were discussed. Symposia on clarification of juice and on payment of cane price, both of which are important problems of the sugar industry the world over, were also held. The previous sessions of the Society—the Society meets usually every three years—it will be recalled, were held in Hawaii (1924), Cuba (1927), Java (1929), Puerto Rico (1932), Australia (1935), Louisiana (1938), Australia (1950) and British West Indies (1953).

The New Delhi Congress came to be held at a time most momentous for the Indian sugar industry. India, as readers are aware, is engaged on a gigantic programme of economic expansion in which sugar also figures prominently. The production capacity of the sugar industry, for instance, is proposed to be stepped up by over 56 per cent. in the next five years, that is, from 1.6 million tons to 2.5 million tons. The Government of India has already issued licences for the setting up of 39 new factories and expansion of 44 existing units, and more licences are in the process of being issued. Surely, this is a big development programme which, as Mr. A. P. Jain aptly declared, is "a challenge to the intellect and ingenuity of Indian sugar technologists and the resources of the industry." It is, however, not so much for the fulfilment of the aforesaid target as for the imperative necessity for solving a score of most pressing problems confronting the sugar industry that the deliberations of the I.S.S.T. convention and the decisions taken thereat assume special significance. Mr. D. R. Narang, General Chairman of the I.S.S.T.'s ninth Congress, did well, therefore, to devote a considerable part of his presidential address to a study of these problems and solutions for them.

Modernising Sugar Industry

Mr. Narang drew special attention to the need for modernising sugar industry. Evidently, he was prompted by the fact that the layouts of sugar mills have become congested, and that, in several units, the machinery is either ill-balanced or forced to run to its utmost capacity; the all-India average of the daily cane-crushing capacity of a factory works out to not more than 870 tons. The plants in most of the factories are several years old—they were all purchased as far back as 1930 and earlier—and are considerably worn out. The equipment according to Mr. Narang, is generally of the conventional type. It is only in a few factories that modern machinery has been installed. Owing to financial difficulties, several sugar factories have not been able to carry out the modernisation programme to an appreciable extent. It is not surprising, therefore, that the number of man-hours in the production of sugar in India is very large *vis-a-vis* that in other sugar-producing countries. If productivity is to be raised, it is of the utmost importance that attention should be paid to latest improvements in machinery design as well as processing technique. Emphasising this aspect, Mr. Narang gave the following brief account of the latest advances in the realm of sugar technology:

"The Saha-Jain process and the Ghosh process of electrical clarification are promising propositions, and their development is being watched with keen interest.

"The Ion-exchange process is a revolutionising proposition and its development, particularly in the direction of reducing the cost of regeneration of resins, demands the urgent attention of technologists. It is gratifying to note that the Saha-Jain process is at the stage of commercial-scale trial in a sugar factory in India and the Ghosh electrical process and the ion-exchange process are on the programme of pilot-plant and bench-scale trials, respectively, at the Indian Institute of Sugar Technology, Kanpur.

"The crystallisation technique has been greatly perfected by improving circulation in vacuum-pans, preventing variations in temperature, introducing automatic vacuum control and using control instruments, indicating the degree of super-saturation and automatic feeding techniques.

"The separation of crystals from molasses has become far more efficient with the use of automatic high-speed centrifugals, besides giving substantial advantage in labour cost. From the latter point of view, the continuous centrifugals score a definite advantage over the high-speed centrifugals, but the disadvantages due to crystal damage by abrasion are holding up increased adoption of this unique invention.

"Efficiency of steam generation has been effectively increased by the use of mechanical stokers, particularly those employing pneumatic distribution of bagasse. The use of steam has been greatly helped by means of steam-flow indicators."

Cost of Production High

Thanks to these advances, the technical efficiency of sugar mills is fairly high. The all-India average for reduced mill extraction comes to about 93.5-94.0 and reduced boiling-house extraction to 90.5-91.0. The quality of sugar manufactured is also not unsatisfactory, the bulk of production being accounted for by the D28 grade. The progress might, perhaps, have been more notable but for the use of old and worn-out crushing plants and sugarcane of poor sucrose-content at prices which ought really to be paid for cane of much higher sucrose. It is these two factors which have largely been responsible for the high cost of sugar manufacture in India. Stressing this aspect, the Union Food and Agriculture Minister said: "They (sugar technologists) will, I hope, bring down the price of sugar which, unfortunately, remains substantially higher as compared with that of other producing countries." It must, however, be pointed out, in this connection, that there is a wide difference between the cost of manufacturing sugar and the price at which the consumer gets sugar. Practically the whole of this difference is accounted for by taxation. On each pound of sugar costing about As. 7, a consumer pays as much as an anna and a half by way of taxes—Central and State. In other words, taxes account for more than 21 per cent. of the total price of sugar. It will thus be seen that the reduction in the price of sugar depends not merely on the efforts of the sugar industry to improve the manufacturing techniques and on those of technicians and cultivators to increase the yield of sugar per acre but also on the willingness of the Governments to lower the heavy tax burden.

Cane Cultivation

Now to refer to the imperative need for bettering the conditions obtaining in the agricultural sector of the sugar industry. In spite of all the stress laid on intensive development of sugarcane, the progress achieved has not been much. The all-India average recovery per cent. in sugar is only 10, as against 14.33 in Australia, 12.93 in Formosa, 12.33 in Peru, 12.25 in Cuba and 12.23 in Puerto Rico. The average yield of cane per acre is also very low, being about 13-14 tons, which compares unfavourably with 62 tons in Hawaii, 56 tons in Java, 30 tons in Egypt and 28 tons in Formosa. Mr. Jain alluded to the poor quality of cane and observed:

"We are taking adequate steps to increase it. The Sugarcane Breeding Institute (Coimbatore), the Indian Sugarcane Research Institute (Lucknow), the Indian Central Sugarcane Committee and the numerous regional research stations are constantly endeavouring to evolve better varieties and improve upon cultivation practices. The Coimbatore Institute is engaged on a *Saccharum spontaneum* scheme, under which the Institute is collecting various forms of wild *Saccharum spontaneum* from all over the world and is assessing their value as parent stock in the breeding work. I need hardly tell you that it was this Institute which started crossing the wild *Saccharum* with Noble canes, a practice which has contributed so much to the success of Coimbatore canes."

The formulation of better techniques and improved methods of sugarcane cultivation will not by itself solve the problem. For much depends on the way in which these are introduced, especially when a large number of small and unsophisticated peasants is involved. Recognising this difficulty, Mr. Jain stated that the Government was determined to wage a total war to improve the lot of the cane grower. He added: "Apart from the major river valley projects which will irrigate large areas, we are sinking a number of tube wells in the cane-growing areas for increasing irrigation facilities. These efforts have already begun bearing fruit and we expect that the all-India average yield per acre will, during the next five years, increase by 50 per cent." Mr. Jain also revealed that the Government was considering measures to stabilise production and arrange for a fair return to the cane-grower and an equitable distribution of surplus profits between the farmer and the factory. "We would," to quote him again, "like to co-relate the price of cane with its quality, in order to provide an incentive to the farmer to grow better quality cane."

The need for introducing the system of making payments for cane on the basis of quality, instead of on quantity, has been stressed so often in these columns that it is unnecessary to discuss it again. Suffice it to say that, unless the price of cane is linked to quality, there is no hope of the sugar industry getting supplies of cane with rich sucrose content.

SUGAR DEVELOPMENT

The vast and varied problems of sugarcane development have been discussed by experts in the special sugarcane supplement to *Indian Farming*, issued by the Indian Council of Agricultural Research, New Delhi. In the very first article, Dr. T. S. Venkataraman, one of the world's leading sugarcane scientists, assesses the contribution which the Coimbatore Institute has made to the breeding of improved varieties of sugarcane. Another interesting article has been written by Mr. P. P. Chandra, Secretary, Indian Central Sugarcane Committe. In this article, Mr. Chandra claims that sugarcane development in India has been rapid. Nevertheless, he emphasises that the position of sugarcane as a money crop and also as a satisfactory rotational crop in the agricultural economy of the country is of vital importance and requires concerted attention on the part of all concerned. What the Indian Institute of Sugarcane Research (Lucknow) is doing for the sugar industry has been impressively surveyed by its Director, Mr. B. K. Kukerji. The other articles appearing in the supplement are: "Sugarcane industry has a future in the Punjab" by Mr. Harbans Singh, "Quality of cane—what sugar factories want" by Messrs. K. S. G. Doss and N. C. Varma, "Growing cane—the mechanical way" by Mr. D. H. Duyf, "Sugarcane industry is expanding in the South" by Mr. S. V. Parthasarathy, "In Uttar Pradesh, cane research and development has been intensive" by Mr. R. K. Tandon, and "The Sugarcane Institute at Coimbatore" by Mr. N. L. Dutt.

"INDIAN SUGAR—I.S.S.T. NINTH CONGRESS NUMBER"

The Indian Sugar Mills' Association, Calcutta, has brought out, to mark the occasion of the ninth Congress of the International Society of Sugarcane Technologists, a special number of its publication, *Indian Sugar* (Editor: Mr. J. S. Mehta. Price: Rs. 3). The number carries several contributions from persons who have an intimate knowledge of the problems of sugar industry, including those pertaining to cane culture. Particular mention must be made of the article on sugarcane research in India—retrospect and prospect, written by Mr. K. L. Khanna, and potentialities of sugar as raw material in chemicals written by Messrs. K. S. G. Doss and S. Mukherjee. Recent trends in world sugar economy are also reviewed in the number. The utility of the publication is further enhanced by the inclusion of a list of sugar mills in India—existing as well as proposed. The statistical tables relating to sugar and cane production, comparative technological results of sugar mills in India and abroad, taxes imposed on sugar industry, etc., have been revised and brought up-to-date.

SUGAR INDUSTRY IN AUSTRALIA

MANUFACTURE OF BY-PRODUCTS HAS RECEIVED GREAT MOMENTUM

By A Special Correspondent

WITH its roots literally in the soil, the Australian sugar industry has branched out to include the production of goods as various as building materials and organic chemicals. At one end of this unique production line is the cane cutter in the fields, slicing off the stalks at the ground with a heavy knife. At the other end are the electronically controlled chemical plants, producing substances with names as mysterious as deodorised di-2-ethyl hexy phthalate.

The organisation of the Australian sugar industry, the most efficient in the world, is as complex as the processes which make it up. Individual cane-growers, co-operative and company mills, company refineries, Commonwealth and State Governments and the Colonial Sugar Refining Company are all linked in an integrated industry which supports nearly one quarter of a million people within the sugar districts.

The whole story of sugar in Australia is bound up with the Colonial Sugar Refining Company (C.S.R.), which celebrated its centenary in 1955. This company is one of the oldest, largest and most progressive in Australia, with a paid-up capital of more than £A14 million and assets of much greater value. Although its role has been very influential, the C.S.R. does not control or monopolise the industry. For instance, it does not grow sugarcane. The cane is grown by about 9,000 independent farmers, cultivating an average of 50 acres each. Their assets are about £A55 million. In 1954 about 1.3 million tons of raw sugar were produced. This was a record, and approximately double the production in 1934. Thirty-four mills crush the harvested cane of Queensland and New South Wales. Farmers' co-operatives own 14 of them, 13 are owned by various companies, and the rest belong to C.S.R.

Expansion

Since the Second World War about £A12 million has been spent on expanding the milling industry. The expansion of the Victoria Mill near Ingham, Queensland, and the extension of its light railway system alone cost £A3 million. There are six refineries—at Bundaberg, Queensland, and in the State capitals. The Millaquin Sugar Company owns the Bundaberg refinery, and the C.S.R. the rest. There are also several molasses distilleries, which produce power alcohol, industrial spirit or rum.

Sugarcane is the sole crop where the rainfall exceeds 40 inches a year or where irrigation is available as on the Burdekin River in Queensland. Most of it grows within 20 miles of the coast, and 80 per cent. is produced north of Mackay in North Queensland.

The sugar belt is in the great fertile littoral between the ranges of hills and the sea. It begins at Mossman, north of Cairns, and runs across the Queensland-New South Wales border to Murwillumbah and Grafton—1,300 miles of farms, scientifically and intensively cultivated. This fertile strip, the most lush and in many ways the loveliest in Australia, is a region of unique attractiveness. But without sugar there would be few tourists and, indeed, few inhabitants, for sugar has built the cities and towns, and has justified the building of roads, railways and airfields.

Sugar makes the startling contrast between the north-eastern and north-western coasts of Australia. Without it North Queensland could have had no more than a few tiny ports for shipping beef and metals. The development of the industry proceeds steadily, though production is officially curbed from time to time in accordance with the state of the market.

The present home market, with Australia's share of overseas markets under the British Commonwealth and International Sugar Agreements, is not capable of absorbing an unrestricted production of raw sugar in Australia. Its output was, therefore, limited to about 1.17 million tons in 1955. But the efficiency of all branches of the industry is continually increasing. Last year, equipment for unloading and handling raw sugar in bulk from ships was installed at the C.S.R. refinery at Pyrmont, Sydney, at a cost of £A800,000. The Melbourne refinery also receives bulk cargoes of sugar, and conversion to mechanical handling is under way at the Queensland ports of Mackay and Lucinda.

Perhaps, the most interesting and significant development recently has been the use of by-products from the extraction of raw sugar. One of these by-products is cane fibre (bagasse), which is used as fuel in the mill furnaces or as the raw material for the low-density wallboard marketed by the C.S.R. as caneite. Another is the dark, heavy substance known as molasses, the sugar in which cannot be economically extracted. Molasses may be used as stock feed or fertiliser, but a much more important use is its fermentation to make industrial alcohol and methylated spirit. Alcohol is one of the bases of the organic chemicals industry, and on this base has been established the C.S.R. Chemicals, with a capital of £A6 million. This firm has its principal plant in the Sydney suburb of Rhodes. With alcohol derived from molasses, this plant produces various industrial chemicals, including cellulose acetate flake, the raw material of the rayon industry; the acetic acid group; plasticisers; solvents and stearates; the polyol group; sorbitol and mannitol; and ascorbic acid (vitamin C).

More Uses Found

Australia has come a very long way in the sugar industry. At one end of the line, the basic procedure of sugarcane growing and harvesting remain, though constantly improved by scientific research. More uses have been found not only for sugar but for its by-products. The distillation or rum has its modern successor in the production for export of a fine chemical in a six-stage synthesis. The significance of such developments cannot be overestimated, for they mean that, in many ways, Australia is in the forefront of technological development. The field opened up by the use of chemicals, based on sugar-derived alcohols, which include a whole range of plastics, solvents and pharmaceuticals, appears almost unlimited. The use of C.S.R. Chemicals cellulose acetate flake to make acetate rayon yarn is an outstanding example. The horizon is far wider than would have seemed possible even 20 years ago, and it would be rash indeed to try to set limits to the development of this great basic industry.

ACCIDENTS IN COAL MINES

MEASURES FOR PREVENTION

IN the light of the recent reports of courts of enquiry, the Government of India has decided to take legal action against the managements of the Newton Chikli and Amlabad collieries. It has also decided to take suitable action, after necessary investigations, against the supervisory staff of the Department of Mines for lack of supervision.

It will be recalled that the enquiries were conducted by High Court Judges, at the instance of the Government of India, following the disasters that took place at the Newton Chikli Colliery on 10th December 1954 and the Amlabad Colliery on 5th February 1955. The enquiries revealed that negligence on the part of the management and lack of supervision by the members of the supervisory staff of the Department of Mines at the Amlabad Colliery were responsible for the disastrous accidents.

The Government has now decided to set up a tripartite committee to examine safety regulations in the context of prevailing conditions and progress of developments in the mines. It would appear that this Committee will be set up after the State Governments' comments on the draft Code of Coal Mines Regulations have been received by the Union Government. The draft Code, already circulated by the Union Ministry of Labour to State Governments, incorporates most of the recommendations made by the courts of enquiry. Realising, however, that it would take some time for the finalisation of the Code, the Government of India introduced, on 5th November 1955, emergency regulations, called "The Coal Mines (Temporary) Regulations 1955" for effecting speedy remedy of conditions likely to cause danger in the mines.

"Ad-hoc" Relief

Besides this, the Government has granted *ad-hoc* relief of Rs. 100 to each family of the deceased. It has further granted a scholarship of Rs. 5 per month to each of the school-going children for a period of three years and a monthly allowance of Rs. 10 to each of the widows of the deceased for a period of two years. Another relief measure taken was the starting of a temporary craft training centre, for imparting training in Newar making, purrie making, rope making, etc., to the widows and the dependents of the deceased.

The management of collieries has become a serious problem not only in India but even in the technically advanced Western countries, because the colliery manager is taught how to mine and not how to manage. Further, he is expected to do too much unaided. It would appear that the standards of management cannot be raised, unless pure engineering problems are left to be attended to by separate specialists.

The management is responsible not only for production but also for the welfare of labour that contributes to it. This is particularly so in the coal industry, which is still the most hazardous occupation in the world and where 60 per cent. of the cost of production is accounted for by wages of labour. There is no gainsaying the fact that one does not get the best out of the human machine, unless it is assured against all possible risks and made reasonably happy in the task of its performance of duty. To quote the significant words of Sir Hubert Houldsworth, Chairman of the National Coal Board, United Kingdom: "If you are happy and like your job, if you feel you are being properly treated, you will do your job much better than if you have a feeling that you are not being treated properly. The efficient manager will, therefore, try to see to it that his men are so treated that they are reasonably happy in their job."

The promotion of safety measures in coal mines does not depend on the enforcement of legislation and holding the management alone responsible for it. It requires the diligent co-operation of workers as well. For all efforts of the management will be nullified, unless the workers are prepared to play their part wholeheartedly. In order to obtain their co-operation, the labourers must be made aware of the causes of accidents and the disastrous multiplier effects of such accidents. In other words, workers require to be apprised of the hazards of mining in an easily understandable manner.

PAKISTANI RAW JUTE

MINIMUM EXPORT PRICES RAISED

INDIA will have to pay Rs. 13-5-4 more per ton of jute imported after 1st March next from Pakistan, as the latter has raised its export minimum prices for all grades of jute by £1 per ton for all contracts from that date. The increase is applicable to all shipments which will take place on the basis of new freight rates announced recently by the Karmahom Conference Lines. A Press note issued by the Pakistan Jute Board, Dacca, on the 29th ultimo, stated that the enhancement had to be made, in view of the increase in ocean freights by 10 per cent. effective from March 1956, as notified by the Liners' Conference. It further added that the last increase in freight rates by the Conference Lines in February 1955 was absorbed in the minimum export sale prices. The note further said that "the buyers of Pakistani jute will no doubt appreciate that it is the increase in the freight rate within such a short period that had compelled the Board to increase the minimum rates correspondingly."

It will be recalled that the Pakistan Government had fixed the export minimum price at £80 per ton even before the devaluation of the Pakistani rupee. The official rate of exchange of the Pakistani rupee, as a result of the devaluation announced on 31st July 1955, was placed on a par with the Indian rupee, that is, 100 Pakistani rupees became equal to 100 Indian rupees, instead of Rs. 144 before the devaluation. This cut in the exchange rate was expected to be beneficial to buyers of raw jute. This expectation was, however, belied by subsequent events, since the Pakistan Government decided to keep the export prices unchanged at £80 per ton or Rs. 952 (Indian) a ton. This price which has prevailed since then will go up, as a result of the decision stated above, by £1 to £81 per ton or Rs. 965 (Indian) per ton.

The fact that Pakistan has been able to increase the minimum price suggests that it has taken advantage of the present firm conditions of raw jute markets for shifting the burden of the increased freight rates on the importer of raw jute. The firmness of the raw jute market is not due to any lack of raw jute but to transport difficulties, small arrivals and higher prices at mofussil centres. Besides, growers, too, would appear to be having, thanks to high prices, a more affluent position than formerly and they are not so anxious to dispose of their stocks as they used to be. Pakistan seems to entertain the belief that the I.J.M.A.'s recent decision to increase further the number of looms working actively by unsealing 5 per cent. out of the 10 per cent. looms kept idle would result in an increase in the demand for raw jute and that Indian mills also, among others, may buy more raw jute from Pakistan. It remains to be seen how far this belief will prove correct.

It will be appropriate to refer here to the raw jute arrivals at Calcutta of both indigenous and Pakistani jute so far in the current season. The table below gives the respective figures for each of the first six months of the 1955-56 season, as compared with the same period in the previous season:

Imports of Raw Jute into Calcutta

(In 000 bales)

	1954-55		1955-56	
	From India	From Pakistan	From India	From Pakistan
July	2.05	89	1.64	74
August	2.09	47	1.80	88
September	3.04	62	3.02	1.86
October	4.59	1.15	4.39	1.54
November	6.65	1.22	6.80	1.19
December	6.28	1.27	6.29	1.48
Total ..	24.70	5.66	23.94	7.69

It will be seen from the table above that the total imports into Calcutta during January-December 1955-56 were 3.16 million bales as compared with 3.03 million bales in the same period during the preceding season. Of this, arrivals from India amounted to 2.39 million bales as against 2.47 million bales and from Pakistan 769,000 bales as against 560,000 bales. These figures reveal that, while receipts of raw jute from Pakistan rose by 203,000 bales, those from the indigenous sources declined by 76,000 bales. The increased arrivals from Pakistan may be taken as a reflection of increased availability of raw jute in that country. The trade estimates the Pakistani crop this season at 7.2 million bales, which is 53 per cent. more than that for the preceding season. If and when all this crop comes to the market, prices of Pakistani jute are bound to decline. In that event, it is problematic whether the Jute Board will continue to stick to the present level of minimum jute export prices. By reason of the fact that Pakistan now enjoys almost an export monopoly, the Government of that country has been dictating the price for its raw jute. The ultimate effect of this price increase will be to enhance the cost of production of jute goods in the manufacturing countries and thus give scope for competition from substitute package material made of paper and cotton.

NEW YORK BURLAP MARKET

The New York burlap market drifted through December with no definite trend indicated, reports the *Jute Bulletin* of the Indian Central Jute Committee. Supplies were decidedly larger than in the previous month and the two major constructions of burlap, 40" 7½ oz. and 40" 10 oz., were readily available in spot and afloat positions.

Activity, however, slackened due to the seasonal letting-up of demand. Consumers bought only for immediate requirements from spot and afloat burlap. In general, they preferred to work from inventories in an effort to balance the year-end stock position.

A few small lots were offered at prices approximating those for early shipment and were immediately sold. Rates at Norfolk and New Orleans were somewhat lower than for goods stored in, or arriving at, New York.

FRANCE PRODUCES MORE GOODS IN 1955

Following the general expansionist trend of French industrial activities, production of jute manufactures in 1955 is estimated to have gone up 10.5 per cent. over 1954, according to M. de Watteville, Secretary General of the French Jute Industry Association.

Addressing the Associations annual meeting, M. de Watteville placed 1955 output at 100,000 tons of jute yarns, against 92,000 tons in 1954 and 79,000 tons of jute fabrics against 72,000 tons. These figures, he added, included 24,000 tons of jute products exported in 1955 of which 8,000 tons went to foreign countries, against 10,000 tons in 1954. The balance was despatched to French Union markets.

M. de Watteville expected the 1955 deliveries to the home market to reach the peak of 55,000 tons achieved in 1951, as compared with 48,000 tons in 1954 and 40,000 tons in 1953.

(*Concluded from next column*)

tation labour to Mr. Abid Ali, Union Deputy Minister for Labour, when he paid a visit to Mysore a few days back.

The Coffee Act provides that the growers' representatives on the Board should be 12, out of a total membership of 34. Actually, the number of representatives of growers on the Board, the memorandum pointed out, was 20, as a result of which the Board was being "dictated" to by the growers. In the circumstances, it was difficult to get the interests of labour safeguarded and the memorandum, therefore, urged that there should be equal representation for both labour and growers.

The memorandum drew the attention of the Deputy Labour Minister to the absence of any representatives of labour on the Executive Committee of the Board, which was the most important committee. All the four *ex-officio* members of the Committee were coffee growers. The memorandum, therefore, urged that the Government should see that, in nominating or electing other interests such as trade, commerce, etc., the persons concerned really belonged to a particular interest and did not have any connection whatsoever with coffee growing.

It was pointed out by the memorandum that all the coffee grown was sold only through the Coffee Board and so the growers were paid a uniform price for their produce irrespective of the State to which they belonged. The same procedure, it was alleged, was not followed in the matter of payment of wages to the labour in the coffee plantations in different States. The memorandum urged that the wages in the different States of the South should be brought to a uniform level, as was prevailing in North India. In this connection, it was suggested that a high-power committee be appointed to enquire into the disparity of wages prevailing in the different coffee-growing States and to recommend a uniform scale of wages for labour.

TEA PRODUCTION IN CEYLON

The output of tea in Ceylon during 1955 amounted to 380 million lbs. which constitutes a fresh record, exceeding the previous highest of 366.7 million lbs. in 1954. Shipments of Ceylon tea during the past year aggregated 360.8 million lbs., as compared with 359.1 million lbs. in the previous year. It may be noted that shipments of tea from Ceylon up to the end of November were lower than in the corresponding period of 1954, the actual figures being 326.37 million lbs., as against 331.49 million lbs. The increase noted at the end of the year is evidently due to a sharp rise in exports during December. Nevertheless, the gap between production and shipments has widened; this is attributed to the growing internal consumption of better teas, as a result of the operation of the Tea Pest Prevention Act. This Act, which was enforced in July 1954, has restricted the sale and use of refuse tea in Ceylon.

RAW RUBBER IN INDIA

GAP BETWEEN OUTPUT AND CONSUMPTION WIDENING

THE latest statistics of rubber production and consumption in India released by the Rubber Board, show that the output of rubber during December 1955 amounted to 2,787 tons, as compared with 2,680 tons in the previous month and 2,374 tons in December 1954. Consumption by manufacturers during the month under review aggregated 2,721 tons, of which imported rubber accounted for 27 tons. This represents a sharp rise of 884 tons over the previous month and of 375 tons over the corresponding month of 1954. The stocks at the end of the year with estates and dealers, including those sold to manufacturers and in transit, show an increase from 4,452 tons at the end of November 1955 to 4,758 tons. As compared with the position a year ago, the stocks have dwindled by 650 tons. The stocks with manufacturers have fallen to 2,696 tons from 2,936 tons at the end of the previous month and 3,279 tons at the end of 1954.

With the aforesaid production for December, the total output of rubber in 1955 aggregated 22,481 tons, having risen from 21,493 tons in 1954. This increase of 988 tons compares very favourably with that of 357 tons recorded in 1954. Consequent on this increase during the year under review, the pace of expansion, which had slackened considerably during the previous year, has, once again, shown a tendency to improve and enabled the estates to establish a fresh record of output. The aggregate consumption by manufacturers in India has also recorded a sharp rise from 25,487 tons in 1954 to 27,543 tons, thus maintaining the upward trend noted since 1952.

The following table shows the trend of production and consumption and stocks since 1948:

(In tons)

Year	Production	Consumption	Stocks at the end of the year
1948	15,422	19,719	7,708
1949	15,587	19,192	8,363
1950	15,599	17,725	6,281
1951	17,148	22,427	7,779
1952	19,803	21,061	10,351
1953	21,136	22,373	9,221
1954	21,493	25,487	8,687
1955	22,481	27,543	7,454

It is well known that there has always been a shortfall in production of rubber in India, as compared with the country's needs, as will be seen from the gap between production and consumption shown by the above table. The gap which was as low 1,198 tons in 1952 has widened to no less than 5,062 tons in 1955. This is due to the rapid increase in consumption. Thus, during the last three years alone, the consumption has expanded by 6,482 tons, as against a rise of only 2,618 tons in production. The effect of this trend is also reflected in the trend of stocks which have dwindled by 2,897 tons in the course of the last three years. The gap is being met by imports, which amounted during the financial year 1954-55 to 4,690 tons valued at over Rs. 1.03 crores. During the first six months of the current financial year alone such imports have aggregated about 4,460 tons valued at over Rs. 1.40 crores.

The substantial rise in consumption has been due to the expansion in the manufacture of rubber goods of various kinds in India. The scope for consumption of rubber in India has been made wider following the increasing uses found for the same and with the prospect of larger industrial expansion under the second Five-year Plan. The manufacturers of rubber goods expect their requirements of rubber to rise to over 40,000 tons by 1960 and, on the basis of the current trend in output of raw rubber, there is expected to be a shortfall in production to the extent of 15,000 tons. The replantation scheme approved by the Government of India envisages a replacement of 120,000 acres in two stages, the first one covering 70,000 acres in 10 years. Even if the first stage of the scheme were taken up immediately, the production might not exceed 40,000 tons at the end of 10 years, say by 1965, whereas the internal demand, it is anticipated, will cross this figure in the next five years itself.

LABOUR IN COFFEE PLANTATIONS

A plea for equal representation to the growers and labour on the Coffee Board, adequate representation of labour on the various committees of the Board and payment of uniform rates of wages to labour in all States was made in the course of a memorandum submitted on behalf of coffee plan-

ELECTRIC TRANSFORMERS INDUSTRY

CLAIM FOR CONTINUANCE OF PROTECTION

THE Tariff Commission has commenced its enquiry into the claim of the power and distribution transformers industry for the continuance of protection. It will be recalled that, on the recommendations contained in the Commission's report of 1952, the industry was granted protection up to 31st December 1955, by increasing the then existing revenue duty of 5 per cent. *ad valorem* to 10 per cent. *ad valorem*, exclusive of surcharge, and converting it into a protective duty. Subsequently, protection was extended to a further period of one year, that is, up to 31st December 1956. The present enquiry is being undertaken to find out whether continuance of protection is still necessary and if so what should be its quantum and duration.

Opening the enquiry, Mr. K. R. Damle, Chairman of the Commission, reviewed the position of the industry and gave an account of the obstacles facing its future development. An analysis of his address discloses that the industry has so far justified the protection granted to it. At the time of the previous enquiry, there were seven units in all manufacturing power and distribution transformers, their aggregate rated capacity being 370,000 K.V.A. Since then, four more units have come into production. They are: The General Electric Company of India (Mfg.) Ltd., Calcutta; the Kirloskar Electric Company, Ltd., Bangalore; the Hindustan Electric Company, Ltd., Howrah, and Bharat Bijlee Ltd., Udyognagar, Bombay. According to statistics furnished by the manufacturers, the total rated capacity of all the 11 units now in production is 745,000 K.V.A. on single-shift basis. The capacity, as assessed by the Commerce and Industry Ministry Development Wing is, however, lower at 549,000 K.V.A. Besides this, some manufacturers are reported to be engaged at present in expanding their capacities further and have already secured from the Government the necessary permission for the purpose. Upon the successful completion of the plans for expansion, the annual rated capacity of the industry is expected to go up to about 1,200,000 K.V.A. (on single-shift basis) by about the end of 1958.

It is gratifying to note that, commensurate with the increase in the rated capacity, there has been a substantial increase in the output of transformers also since the last enquiry. The total output of three-phase transformers, which was 199,273 K.V.A. in 1952, shot up to 277,344 K.V.A. in 1953 and 380,930 K.V.A. in 1954. During the period of January-June 1954, the output was 246,131 K.V.A. There has, however, been a sharp decline in the production of single-phase transformers from 1954 onwards. Revealing these facts, Mr. Damle went on to say:

"It is noticed that the bulk of production of three-phase, as well as single-phase, transformers still continues to be of ratings up to 1,000 K.V.A. and 11 K.V. on the H.T. side. We, however, understand that some of the units have now taken on hand the manufacture of transformers in the higher rating groups. In view of the fact that a large amount of additional generating capacity would become available during the second Five-year Plan period, it is hoped that there will be an accelerated increase in the production of transformers, particularly in the higher rating ranges."

The demand for transformers is greater than production. At the time of the 1952 enquiry, the total requirements of transformers up to 33 K.V. were estimated at 2,650,000 K.V.A. for the whole of the first Plan period, on the basis that the generating capacity at the end of the Plan period would amount to 1,344,000 kw. and on the ratio of 1:1.97 between the generating capacity and the transformer capacity up to 33 K.V. This estimate did not include the demand for replacement and additional transformer capacity required to utilise the then existing generating capacity. This omission was attributed to two factors. First, there was not sufficient data to frame any reliable estimate of the replacement needs. Secondly, the additional transformer capacity required for fuller utilisation of the then existing generating capacity was not expected to be large, as the generating capacity in most of the major power systems was already being utilised to the maximum extent.

The various estimates of present and future demand received by the Tariff Commission vary, because they are based on different assumptions and methods of calculations. The Indian Electrical Manufacturers' Association has estimated the annual demand at 646,400 K.V.A., while the Development Wing of the Ministry of Commerce and Industry places it at 887,000 K.V.A. The estimate of the Central Water and Power Commission ranges from 700,000 to 900,000 K.V.A. (for distribution transformers only). The Tariff Commission has to arrive at an agreed estimate of the total annual requirements in K.V.A., the number of transformers required and the requirements in each size or the range of sizes as well as voltage ratings.

An important aspect of the industry that is to be considered by the Commission is the quality of the indigenous product. Dealing with this aspect, Mr. Damle remarked:

"It is needless for me to emphasise the importance of this matter, as any industry which secures or claims protection or assistance from the State must satisfy the requirements of proper quality. Protection or assistance to an industry is granted at a certain cost to the consumer and it is his legitimate right to demand certain standards from the producers. In its report of 1952, the Commission had drawn the attention of the industry to certain defects in respect of leakage of oil from the tanks and inferior workmanship and had suggested that the industry should endeavour to remove these defects and must have adequate testing facilities. Many of the consumers have stated that the transformers made by well established manufacturers are generally satisfactory in performance and comply with the required specification and acceptance tests, but there is still scope for improvement in the mechanical construction of certain makes by the substitution of ordinary cork sheets by cork sheets reinforced with cloth insertions or by synthetic material, such as Neo-K-Tex, and in welding of transformer tank to eliminate uneven surfaces through which the oil finds leakage paths and in tappings, connections, etc. The Commission would appreciate if specific aspects of this question are brought out so that it may be possible to have a clear idea as to the progress made by the industry in improving the quality of its products and also to assess the lines on which further improvements are necessary."

Judged from the above account, it would appear that the industry's claim for the continuance of protection is justified. More so, because the present period of a little over 3½ years of protection is too short a period for any industry, let alone an important key industry like the transformer industry, to stabilise itself on sound economic foundations. This industry occupies a very important place in the economy of the country, in view of the large increase that is planned for the production and distribution of electric power. It is well known that the transformers industry provides a vital link between generation and utilisation of electricity.

CONVERSION OF SALT WATER TO FRESH

The United States has completed plans to test an experimental solar distilling device to transform salt water from the ocean into fresh water. The device will operate 24 hours a day and thus permit continuous distillation, according to the U.S. Department of the Interior, which is sponsoring the test. The principal objective of the Department's work is to discover if sun power can be used on *an economical basis to provide* large quantities of fresh water for irrigation purposes.

Continuous night and day operation will be achieved by using the low night temperatures to condense vapour that has been warmed by the sun during the day. The condensing operation will convert the vapour into water. This will, according to the Department, "put the equipment to use around the clock instead of for only six or seven hours a day as with present stills."

Designs for the new still have been prepared by scientists who are working on the Department's $10,000,000 salt-water conversion programme. An experimental unit will be built to provide irrigation water for about one acre.

Meanwhile, the department has awarded the largest development contract of the programme for further research on the so-called Hickman vapour compression still. This type of still, developed by Dr. Kenneth Hickman of the Badger Manufacturing Company, Cambridge, Massachusetts, may reduce the cost of pure water produced from salt water to one-half that of any conversion process now in use. Under the Department's contract, a Hickman still capable of producing 25,000 gallons of fresh water a day from sea water will be ready for operation by July 1956.

Sun powder already can produce fresh water from the ocean at a cost of less than one dollar for each 1,000 gallons and can pump irrigation water over hills or small mountains, scientists reported at the recent World Symposium on Applied Solar Energy held at Phœnix, Arizona. They described a solar still that can produce approximately a gallon of fresh water daily for every 10 square feet of operating surface.

The still that can accomplish this consists mainly of a long trough, with a transparent top shaped like a gable roof. A shallow stream of salt water runs slowly along the bottom of the trough. Sunshine passing through the roof heats the water until some of it vapourises. The vapour, which is virtually pure water, collects on the inside of the roof and eventually trickles down to little gutters along the edges of the trough and is drawn off for storage or use. This still was described by two researchers, Risto Lappalo and John Bjorksten, who developed it while working under a contract with the U.S. Department of the Interior. The still now can convert salt water into fresh water at a cost of 85 cents for each 1,000 gallons, they reported. At that price, it still is too expensive for most irrigation or industrial uses, but is not far from the prices paid in some places by householders.

A sun-powered pump that can lift large quantities of water to considerable height was described at the symposium by Calvin D. McCracken of Englewood, New Jersey. It uses the pressure created by the vapour in a still to push water through a pipe, much as a gas bubble will push liquid through a small tube. This machine, called a Thermopump, can maintain a flow of several hundred gallons a minute and lift the water as high as 1,000 feet.

ATOMIC RESEARCH

Farmers in one American State alone have been able to save up to 100,000 pounds of phosphate fertiliser a year because of new knowledge provided by research conducted with peaceful products of the atom. This statement was made by Dr. Paul B. Pearson, chief of the biology branch of the U.S. Atomic Energy Commission, before a conference on the peaceful uses of atomic energy. In effect, Dr. Pearson said, radioactive atoms or radioisotopes have made plants "transparent," so that researchers can "see" inside them. This enables them to study what each element in a fertiliser does inside a plant, and to discover the most efficient and economical methods of applying these elements.

Radioisotopes are ordinary elements or substances, such as phosphorus, iron or cobalt, which have been made radioactive in an atomic furnace, or nuclear reactor. These atomic products have made possible the so-called tracer technique, which is widely used throughout the world today. The radiation given off by a radioisotope serves as a "tag" which permits it to be followed or traced wherever it goes by means of radiation detection instruments. When radioisotopes are placed in fertilisers, for example, the movements of the fertiliser inside a plant can be exactly followed and studied. The radiations emitted by radioisotopes affect none of the bodily senses, but to sensitive instruments they stand out as plainly as the ears on a stalk of maize, Dr. Pearson said. Thus, by including a few radioactive atoms in the fertilisers given to plants, researchers can follow them wherever they go.

To illustrate the new knowledge that is coming from such atomic research, Dr. Pearson explained that past ideas about how plants take up their "food" have been changed radically. It was long believed that the roots were the chief means of such "feeding." But now, he said, it has been found that foliage is just as important a pathway by which plant nutrients enter plants. He said that it is estimated that the leaf surface of a 12-year-old apple tree may be equal to about one-tenth of an acre in area and can absorb some substances as readily as the roots. Thus, farmers can spread some fertilisers all over the tree's foliage and reduce the amounts of fertiliser needed. Putting the fertiliser into the ground around the tree would be a much less efficient method, would use more fertiliser, and would cost more, Dr. Pearson said.

Even the mysteries of the basic processes of photosynthesis—the mechanism by which plants turn the energy of sunlight into useful food—seem to be slowly yielding to the new atomic research techniques, Dr. Pearson pointed out. Already, many of the steps in the photosynthesis processes have been duplicated in the test tube outside of the plant. North American natural scientists, in papers presented at the Geneva "Atoms for Peace" Conference, reported they have gone a long way toward unravelling this basic problem.

Speculating on developments which, he said, might eventually come, Dr. Pearson said: "It is

NEW PRODUCTS AND PROCESSES

Rust Remover

A NEW powder has been developed for removing corrosion from iron and steel and non-ferrous metals, by the By-Buk Company, Los Angeles, California, U.S.A. The powder is mixed with water and applied to the rusted metal. The powder, it is claimed, removes rust and corrosion in 10 minutes to three hours, depending on the amount. When used as a hot bath, the action may be completed in two seconds to 10 minutes. The cleaned metal surface is said to retain a corrosion-resistant film, which forms a base for any further coating or plating. This preventive film will protect metal for several weeks or months, depending on the atmospheric conditions, according to the company.

Electronic Individual Call-up System

A factory at Vlaardingen (the Netherlands) has designed a system by means of which, from one central point, persons can be called up without this being noticeable by others. The equipment consists of an exchange (comprising a keyboard, a signal transmitter and an amplifier) and a number of pocket size signal receivers. Each person likely to be called up should carry such a signal receiver, which is provided with a buzzer. The receiver of the person called up is the only one to start buzzing, the other persons' receivers remain silent. On account of the non-disturbing character of this equipment, it is eminently suitable for use in, for instance, hospitals, sanatoria, etc.

High-vacuum Milking Machine

A firm in Amsterdam (the Netherlands) has put on the market a patented milking machine, which operates under a high vacuum of maximum 70 cm. (28") Hg. Two connections, one for vacuum and one for ambient air, are fitted to the teat cups, as high as possible and opposite each other. As a result, the air is admitted at the top of the teat cup, so that the air bubble between teat cup and rubber lining moves in a downward direction, in contrast with the situation in the machines used hitherto. The apparatus has wide channels, which ensure undisturbed discharge of the milk and prevent the teats from being wetted with milk and thus tainting the milk. The milking pail, which is of the suspended type and made of stainless steel, is easy to clean. Both the milking pail and the pulsator are provided with a separate vacuum connection so that the pulsator cannot be fouled by milk vapours. It takes two or three minutes to milk a cow with this apparatus. The milking machine can be supplied with a 1½ h.p. electric motor or a 2-h.p. petrol engine.

Corrosion Preventing Coatings

Recent experiments have, it is claimed shown that the application of solid coatings may prove more effective than liquid lubricants in preventing "fretting" corrosion and subsequent seizing up or structural failure, caused when metal parts slide against one another when under load. The results of recent research have shown, for example, that, as was recently pointed out by Mr. R. B. Waterhouse in a lecture to the Institution of Mechanical Engineers, London, the friction between a PTFE (polytetrafluorethylene) surface and a steel surface is extremely low. Because of this, no surface corrosion of the "fretting" type occurs, since the onset of this type of corrosion is greatest where the friction between the moving surfaces is greatest. Indium and coatings of molybdenum sulphide which have been baked on have also proved successful in preventing such corrosion for the same reason. Chromium plating has not, however, Mr. Waterhouse claimed, proved a successful preventive of this type of corrosion, despite the fact that chromium plating is effective in reducing friction. This is thought to be due to the frequent occurrence of cracks in chromium-plated coatings permitting the entry of air and moisture through the coating to the surface of the metal below. Yet, other experiments have, it is claimed, shown that liquid, oily lubricants are also relatively ineffective in preventing such corrosion where the metal surfaces are exposed to slow movements under heavy pressures.

Electronic Computer

Further improvements have been made in the electronic computer system, which automatically undertakes the analysis of chemical compounds, at Toronto University, Canada. The computer, which was developed by L. Pinteric and M. D. Poulie, analyses complex chemical compounds, such as mixtures of proteins, by automatically scanning (inspecting and reading) the stains left on a filter paper by the processed and dyed chemicals. The device then converts the results of its readings into a series of curves which appear on the screen of the cathode ray oscilloscope in a form which indicates their distribution in the chemical mixture being analysed. A further "new" part of the system then takes over and electronically measures the area enclosed by the curve on the oscilloscope the pattern and area of which records the presence of each individual chemical compound in the mixture and the quantity in which it occurs. The computer then evaluates the amount of each individual compound present in the mixture in terms of percentages of the total amount of the mixture present on the area of paper it has inspected. While this device has been developed primarily for medical use and has so far been largely used for the automatic analysis and recording of amounts of each individual protein present in mixtures of proteins, it can equally well be used for evaluating (and for recording the results of) a variety of industrial chemical analyses. Other potential industrial applications include the analysis and control of colour prints, as well as the analysis of samples of other coloured materials having flat surfaces.

LLOYDS BANK LIMITED

MONETARY POLICY ON TRIAL, SAYS SIR OLIVER FRANKS

THE Annual General Meeting of Lloyds Bank Limited will be held on 17th February 1956 in London.

The following are extracts from the statement by the Chairman, The Rt. Hon. Sir Oliver Franks, G.C.M.G., K.C.B., C.B.E., accompanying the report and accounts for the year 1955:

"The profit, at £2 322,439, is £136,367 higher than last year and we propose a dividend of 12 per cent. per annum on the "A" shares, which is the equivalent—allowing for the capital operation carried out a year ago—of the 15 per cent. dividend paid for the year 1954.

Branches in India, Pakistan and Burma

"The business of our Eastern branches has continued to develop satisfactorily. During the year we opened a new branch in Eastern Pakistan at Khulna, a port which is becoming of increasing significance to the jute trade, and have moved into new and more commodious premises in Madras and Chittagong.

"World prices of cotton, jute, tea and rice—the main exporting products of the three countries—have all fallen during the year, but progress has been accelerated in the development of natural resources and industrialisation. This Bank continues to adopt a sympathetic attitude towards proposals for finance connected, directly or indirectly, with the establishment of new industries in the countries of the sub-continent.

"In August, the Pakistan rupee was revalued at 1*s.* 6*d.*, as against 2*s.* 2*d.*, at which it had remained since the devaluation of sterling in 1949, and it is now on a par with the Indian rupee; the operation went through smoothly and there is little doubt that the revaluation should result in an increase in the overseas trade of Pakistan as well as in the trade between that country and India. During the year, both countries have been beset by serious floods and it is not yet possible to estimate the full extent of the damage, though it is feared that cotton and wheat crops may be adversely affected.

"Our staff in the East are responding well to the changing conditions in the sub-continent. We, in this country, fully appreciate the services which the Eastern staff render in the Bank's interests and I take this opportunity of making full acknowledgment of them.

Inflation

"For the majority of our countrymen 1955 must count as a very good year indeed. It is not, unfortunately, the whole story. Very few of us were prevented from sharing in the general well-being by lack of work. Large sections of our people, on the other hand, were again robbed of that opportunity by inflation, which for many years past has taken the place of unemployment as the main evil afflicting our society. Moreover, while the national standard of living was higher than ever before, it was also higher than the nation could afford without imperilling its future. From the financial point of view, the year was, therefore, dominated by the Chancellor's efforts, in which the banks were directly involved, to remedy this situation with the aid of monetary restraints.

"There was a period in which it was felt in certain quarters that we might not find it easy to maintain the present rate of exchange. Fortunately, the recent performance of exports shows that our competitive position has not been seriously impaired. Our failure in recent years to obtain our share of an expanding world market has been due rather to the other concomitants of inflation—such as delays in delivery and lack of incentive to venture upon the risks of export trade—than to excessive prices. If so, the reduction of inflationary pressure which is now in progress ought not only to restrain imports but also to give a fresh impetus to exports. There should be no doubt, therefore, about our ability to avoid a deficit in the balance of payments. But that is not enough. What we need is a positive surplus, considerable in amount.

Lessons for the Future

"Looking back, the important thing is to be as clear as we can about the lessons we can draw as a guide to future policy.

"The first moral is surely the overwhelming importance of adequate exchange reserves. Had our reserves not been so near the danger level, we could have ignored a temporary loss of gold due to a running down of overseas holdings of sterling. The second is that a modest application of the normal restraints, if undertaken early, will often avoid the need for drastic expedients later on.

"The third is the importance of keeping a tight rein upon the volume of bank deposits as one of the main determinants of the flow of spending. In other words, the authorities must keep a tight rein upon the supply of Treasury Bills available to the banking system.

"The true measure of the disinflation brought about since February is the decline of just on 6 per cent. in bank deposits, leaving them no higher than in the middle of 1953. It is this decline in deposits—and, therefore, in the totality of bank assets—which is ultimately of importance, not the movement of the single asset, advances. This is not new doctrine; it is all clearly set out in the Macmillan Report.

"Conditions today are in many respects very different from those in which monetary policy used to operate. It would be premature to suggest that the disinflationary measures have as yet accomplished their purpose. Undoubtedly, one nasty corner has been turned. The heavy gold losses of the third quarter have tapered off sharply, but we have not reached a point when we can be sure of steady progress and secure from all anxiety about the balance of payments; nor can we yet hope to achieve that substantial surplus which is one of our basic aims.

"A solution acceptable to us all, consonant with our developed views about the kind of society we want, is well within our power. The condition is that we have the will to choose and carry out the means which are necessary to the ends we acclaim."

THIRD PARTY MOTOR INSURANCE

MADRAS GOVERNMENT'S MOVE TO TAKE IT OVER

THE Government of Madras, according to Mr. C. Subramaniam, the State's Finance Minister, is "actively considering" the question of taking over third party insurance of motor vehicles. The Madras Government thus wants to follow the model of the Government of Travancore-Cochin, which, it may be mentioned here, already operates this aspect of insurance. In a recent Press interview, Mr. Subramaniam is reported to have said that no final decision had been taken on the proposal. It would appear that the Government of India had been apprised of it. The State Government, it is stated, expects to derive an income of Rs. 1 crore from this source. The insurance premium, the Minister said, could be collected along with the tax on motor vehicles and an organisation could be set up to settle claims and to administer the scheme.

This announcement, coming as it does after the recent nationalisation of life insurance, will cause considerable concern in general insurance circles. It may be recalled that the Union Finance Minister, Mr. C. D. Deshmukh, gave a convincing reason why the Central Government did not propose to take over general insurance. He said: "The consideration which influenced us most is the basic fact that general insurance is part and parcel of the private sector of trade and industry. Errors of omission and commission in the conduct of its business do not directly affect the individual citizen."

General Insurers

When the Central Government itself has decided against taking over general insurance business, it would be a pity if the Madras Government took over one aspect of general insurance, namely, third party motor insurance. Already, some composite insurance offices are placed in a quandary through loss of their life insurance business. It would greatly add to their burden if they lost a part of their motor insurance business too.

Perhaps the State Government has been induced to consider the proposal favourably, because the claims experience under third party insurance in India has been known to be somewhat favourable. But this must be regarded as the reason why the State should not take over third party insurance and thereby add to the difficulties of general insurers. These insurers are not in a position to reduce the rates for comprehensive motor insurance policies, even if third party risk were excluded from the scope of these policies. This is because the claims experience in motor insurance, as a whole, is not favourable enough to warrant a reduction in rates. This means that the motor owner, already overburdened by the high level of taxes on motor vehicles, will have to pay more for the insurance of his vehicle than he does now; he will have to take out a comprehensive motor insurance policy, exclusive of third party risk, at the same rate as he pays now and another third party risk policy from the Government-managed insurance department.

So far as "third party" is concerned, there is the risk that the State-managed departments might delay the payment of claims. Private insurers who have a commercial reputation to maintain generally prefer to settle claims out of court. But the Government is under no such commercial, not to say moral, obligation. Further, the fact that the Government, unlike a private insurer or the injured third party, can fight its legal battles without incurring special expenditure may increase, rather than lessen, unnecessary litigation.

It remains to be seen whether the Central Government will permit the State Government to take over third party insurance on motor vehicles. In this connection, it is interesting to note what Mr. B. Gopala Reddi, Chief Minister of Andhra, had to say on this subject. Answering pressmen who asked him whether Andhra had any proposal like the one being contemplated by the Madras Government, he said that the Centre might not permit the State Governments to do so, though it might allow the States which already carried on such business to continue the existing arrangements. But this observation was based on the consideration that the Centre itself might take over third party insurance of motor vehicles. Mr. Deshmukh, however, has stated that the Central Government will not take over general insurance business. If the Centre made an exception in case of third party insurance, it would be an unfortunate, though partial, contradiction of its stand.

PENSION SCHEME IN BELGIUM

A new scheme of pension benefits, more favourable than was available to the workers under the original scheme, has now been introduced in Belgium by an Act that was passed in May 1955. The scheme provides retirement pensions for all persons who have worked in Belgium under contracts of employment and survivors' pensions for their widows. Retirement pensions become payable at the age of 65 for men and 60 for women. At the option of the claimant, payment of the pension may begin at any time within the five years before he or she attains the pensionable age, the amount being reduced by 5 per cent. for each year by which the payment is advanced. The law provides for lowering the pensionable age without any reduction in the pension rate where the claimant has been engaged in a particularly unhealthy occupation. A retirement pension is, however, not payable if the claimant is receiving sickness, invalidity or unemployment benefit in cash under a social security scheme or under legislation relating to crippled and handicapped persons.

The amount of the pension is based on the career of the insured person and the gross remuneration with which he has been credited for pension accounting purposes. The pension consists of 1/45th (1/40th for women) of the remuneration reckoned for each year of the claimant's career. Where the working career consists of more than 45 years (40 for women), the claimant's 45 or 40 best years are counted. A person who has been regularly employed under a contract for the hiring of labour during the entire period elapsing between 1st January 1955 and the date of his claim for pension is in principle deemed to have a complete career of 45 years (40 for women). However, until the Act has been in effect for 15 years, years of employment prior to 1955 must be added to obtain a total of 15 consecutive years. A worker attaining pensionable age (or being awarded a pension prior to reaching pensionable age) before the scheme came into effect or in the course of the years 1955 to 1959 is deemed to have completed his or her working career if he or she has been regularly employed within the meaning of the Act for 12 of the 15 years preceding the award of the pension.

In the case of a married worker whose wife is no longer gainfully employed other than on casual work and is not in receipt of a retirement pension or of sickness, invalidity or unemployment cash benefit under a social security scheme or under legislation relating to crippled or handicapped persons, 75 per cent. of the remuneration for each year is reckoned in the calculation of the pension; in the case of other workers 60 per cent. of the remuneration for each year is reckoned. Under the 1953 Act the corresponding percentages were 60 and 45 respectively.

An interesting feature of the new scheme is that it provides for adjustments in the pension rates to take account of fluctuations in the cost of living. In calculating the pension, the remuneration reckoned is adjusted by the application of a coefficient to the remuneration of each year. These coefficients are determined by dividing the sum of the monthly retail price indices for the year preceding that in which the pension becomes payable by the sum of the monthly retail price indices for the year concerned. The coefficient for 1955 is applied to the uniform remuneration fixed for the years prior to the introduction of the scheme. Remuneration during the year in which the pension becomes payable is not taken into account. An increase of 5 per cent. in the pension rates will be made if the index of retail prices rises to 440 points and a further increase will be made for every rise in the index of 5 per cent. of the index number at which the previous increase was made. The pension rates will be decreased by 5 per cent. if the index falls below 400 points and a further decrease will be made for every fall of 5 per cent. of the index number at which the previous decrease was made. If the index falls below the figure which occasioned a decrease the pension rates will be restored to the levels which originally corresponded to these indices.

The widow of a worker covered by the scheme may qualify for a survivor's pension. A survivor's pension is payable to a widow only if her deceased husband has been employed for the 12 months preceding his death under a contract for the hiring of labour (including periods counted as periods of employment) or if he was receiving a retirement pension under the Act. To qualify for a survivor's pension the widow must have been married to the deceased worker for at least one year. The pension is payable when the widow attains the age of 45 years; it is also payable to a widow who is younger while she is bringing up a child for whom she is entitled to family allowances or if she is permanently incapacitated by at least 66 per cent. The survivor's pension is equal to 30 per cent. of the highest annual remuneration of the deceased husband.

The scheme is financed by annual State subsidy and contributions by workers and employers. The State subsidy for 1955 is 1,240 million francs. The Act provides that the State subsidy shall be increased by 40 million francs each year until it reaches 2,000 million francs; these amounts are adjusted to take account of fluctuations in the cost of living in the same manner as the pension rates are adjusted. The contributions of the workers and the employers are equal and each class contributes about 8.5 per cent. of wages. The rate may be increased by 0.5 per cent. on the expiry of each five-year period.

"ORIENTAL" TRADITION

The Annual Review Supplement of the *Oriental News*, the house organ of the Oriental Government Security Life Assurance Company, Ltd., makes very interesting reading. The editorial, surveying current developments of interest to insurance, points out that "increasing incomes consequent upon increasing production and unattended by inflationary spending must stimulate increasing savings and the need of the hour is to help the public to utilise these savings to secure adequate protection for their families." This was, however, written before life insurance companies came under the Government's administration. It remains to be seen how far State-owned insurance enterprise will be able to utilise the available opportunities for expanding the business.

This neatly got-up number throws a flood of light on the growth of the "Oriental" Life Office during the last eight decades of its existence. It is an unvarnished tale, supplemented by statistical data and graphical representation of facts relating to the progress of the Company. Mr. D. S. Mehta, the Company's Agency Manager, has emphasised that the "Oriental" tradition does "not only ensure maximum returns to the policyholders but also guarantees complete service in the interests of policyholders." This is no platitudinous claim, for this very number contains many letters of appreciation from policyholders and their heirs for the services rendered by the Company. There is a moving human story of an orphaned girl who had no knowledge of the fact that her late father had insured his life with the Company. The story is told of how the Company's official, after much elaborate and frantic search, traced the girl to a small hotel in an obscure village, and how the girl, with tears of joy in her eyes, received the news of her having become heiress to a modest fortune. This is the story of what private enterprise alone—and, of course, private enterprise at its best—can do. And it is the sort of story which could never be true of administration of insurance under a soulless State enterprise.

We commend this special issue of the *Oriental News* to the attention of insurers in India. It is likely that the good work they have done will be soon forgotten. Perhaps, the managements will do well to tell the tale of their growth and development for the benefit of posterity at least.

The Employees' State Insurance Scheme, which has been extended with effect from 15th January 1955 to Lucknow, Agra and Saharanpur areas in U.P., will cover about 17,000 employees in this region. It may be mentioned here that the Scheme is now in operation in Delhi, Kanpur, seven industrial centres in the Punjab, Greater Bombay, Nagpur, Coimbatore, Madras City and suburbs, four centres in Madhya Bharat, Hyderabad and Secunderabad areas, Calcutta City and Howrah District and seven centres in Andhra. It covers about 10 lakh employees at present. The extension of the Scheme to the three centres in U.P. was inaugurated in Lucknow by the State's Chief Minister, Mr. Sampurnanand, who said that a contented labour force was the best guarantee for both quality and quantity of the goods produced.

NEW PUBLICATIONS

"India's Mineral Wealth." (1955, Third Edition.) By J. Coggin Brown and A. K. Dey. Published by Oxford University Press, Bombay. Price: Rs. 30-0.

MINERALS have been rather neglected in our country in the formulation of plans for economic development. Compared to industry and agriculture, mineral development has not received the attention it deserves, as can be seen from the fact that, in the first Plan, a meagre sum of Rs. 1 crore was allotted for the development and exploration of mineral wealth. Recently, however, the Ministry for Natural Resources has decided to spend another Rs. 3 crores during the remaining Plan period.

The Government is, however, alive to the importance of minerals, particularly since independence. Just before the war there were only 27 officers in the Geological Survey of India; they numbered 150 in 1948 and the staff is still being increased. Five independent circles have now been formed in the country, each with its own survey party; *Indian Minerals* is being published since 1947 and the Mineral Information Bureau, a centre for free advice, is being run by the Department; the mining school at Dhanbad is being expanded, and above all, the second Plan-frame provides for an outlay of Rs. 75 crores on minerals and prospecting.

In view of the importance that mineral development has attained, the appearance of this book, written by Dr. Brown, a former Superintendent, and Dr. Dey, a present Superintending Geologist, of the Geological Survey, must be considered very timely indeed. The first two editions were written by Dr. Brown only; the third edition, the product of joint endeavour, has been so much enlarged and so thoroughly revised that it merits to be treated as a new book itself.

The Records of the Geological Survey of India and many other periodicals provide abundant information about our mineral wealth; but the value of this book lies in the fact that few readers have the opportunity or the time to wade through the voluminous official documents which again are not easily available. Although the title of the book refers only to India, it is in fact a "guide to the occurrences and economics of the useful minerals of India, Pakistan and Burma," as the sub-title puts it.

The job has been done in a thorough manner, typical of experts in the field. Each mineral has been considered individually, with a description of its chief occurrence and a short history of its commercial exploitation. The book begins with coal and it is gratifying to note that in view of its strategic role in the second Plan, 58 pages have been allotted to it, with all the relevant tables and maps and a detailed description of the different classes of coal. Various estimates of the coal reserves have been given and though these are by themselves impressive, placed in the context of the plans for expansion in the iron and steel industry, they look alarmingly small. The burning of 10 million tons of coking coal annually represents particularly a sad state of affairs and it is well to remember the warning of Dr. M. S. Krishnan, Director of the Geological Survey of India, that "unless drastic steps are taken to curtail the consumption of coking coal for non-metallurgical purposes, the Indian steel industry will be reduced to the position of having to seek for metallurgical coal from foreign lands." Planning for steel without planning for coal is of no avail.

Taking another example, the authors have pointed out the necessity of producing and exporting quality mica to retain the foreign market upon which mica is precariously dependent. Though the authors have mentioned the special dependence of Indian mica on the American demand, they have not fully worked out the economic consequences of such dependence. Such consequences were painfully brought home after the Korean boom was over and particularly during the latter half of 1954 when, with a sharp decline in the U.S. demand, mica was hard hit, resulting in the closure of many mines and unemployment of thousands of workers. The question that should be decided is whether India should continue to depend only on foreign market and that, chiefly in one country, and on exports of the raw material only. The reviewer feels that India should not only search and develop other markets and export manufactures of mica such as micanite; it should also explore possibilities of utilising this strategic material at home, now that we have large expansion plans in electricity and electrical engineering. This point was missed even by the Mica Enquiry Committee (1945), probably because the trade was then having a smooth sail.

The book, divided into five parts each containing a classified group of minerals, deals exhaustively with almost every mineral found in India, Burma and Pakistan and is an excellent reference work. Figures of grades, imports and exports, production and reserves are spread over 140 tables. These, together with a dozen maps and several graphs, make it a unique book on the subject. A detailed bibliography at the end and an index of 40 pages further enhance the value of the book.—R.A.J.

The "Eastern Economist" Annual Number, 1955. Editor: E. P. W. da Costa. Published by the Eastern Economist Ltd., 52, Queensway, New Delhi.

The theme chosen for the Annual Number, 1955 of the *Eastern Economist*, Our New Delhi contemporary, is India and the communist world. The recent visit of the Russian leaders to India is not, of course, the only reason why this theme is so topical. There are signs that the East and the West, economically speaking, may be drawn closer together. It is a reassuring political assessment of the cold war that it is "unthinkable that the U.S.S.R. would take a risk of total war under present circumstances." A correct, though not a reassuring, appraisal is that the "free world has lost some ground in Indian public opinion." The number is divided into three parts—Part A entitled "Political Assessment," Part B "An Economic Review" and Part C "Communism and Culture." Appropriately enough, the bulk of the number is taken up by the second part which discusses, among other topics, the relative magnitude of the efforts that are being made in India and China to raise their living standards, world oil economy, and India's trade with the communist world. An impartial study of the relevant factors in India's economic relations with the communist countries leads the authors to the conclusion that, although the contribution which those countries could make to India's progress might appear large, it would be "small in relation to our dependence on the free world. "This is a significant conclusion to which the attention of the enthusiastic admirers of all that is Russian or communist deserves to be drawn. The review makes, on the whole, most interesting reading.

A.-I.M.O. Indian Export Guide—1955. Published by the All-India Manufacturers' Organisation, Bombay.

True to its ambitions, the A.-I.M.O. does not think that its function should be limited only to provide conditions helpful for manufacturing articles. For it is common knowledge that the purpose of manufacture is not fully served, unless the product manufactured is marketed. Accordingly, in order to complete this process, the A.-I.M.O. has published the *Export Guide* mentioned above. The *Guide* has a dual aim, namely, (1) to acquaint foreign buyers with what type of industrial products India can offer them, and (2) to contribute in some measure to the expansion of foreign markets for Indian manufactures. In order to achieve this twin purpose, the Organisation could not have done better than distribute copies—about 5,000 of them—free of charge to selected firms in principal countries which figure prominently in international trade. Copies are also supplied to Indian Embassies, Legations and Consulates in all foreign countries.

The *Guide* is a neatly printed and well-bound volume. It carries in its two hundred and odd pages names and addresses, trade marks, brands of the chief products of reputed and well-established manufacturers in the country. There is, besides, a statistical section giving very helpful information about export trade of India. In the foreword to the *Guide*, Dr. M. Visvesvaraya, Founder-President of the A.-I.M.O., says that the publication is expected to lead "to the promotion of cordial and closer relationships between Indian manufacturers and foreign business men."

"Capital": Annual Review of Commerce and Industry, December 1955. Editor: George Barrell. Published by Capital Ltd., Post Box 14, Calcutta-1. Price: Rs. 5-0.

This annual review number of *Capital*, our Calcutta contemporary, serves a rich and varied fare. Besides the reviews of the performance of certain important industries like tea and jute, the review carries a number of very interesting articles. Prof. C. N. Vakil gives his reflections on the Plan-frame. He discountenances the idea that the country does not require substantial outside assistance in order to fulfil the second Plan. Prof. B. R. Shenoy, discussing the financial aspects, of the second Plan, again warns that "deficit financing is not a modern version of the *Akshaya Patra* of the Hindu fables." Other notable articles include the company law by Mr. Tulsidas Kilachand, the future pattern of industry by Mr. W. H. J. Christie, and the future of industrial enterprise in India by Dr. N. Das. The article on the "Future of Small Life Insurance Offices in India," by Mr. N. T. Raju, offers some interesting suggestions drawn from the history of life insurance in other countries. One wishes that the authorities had considered these aspects of insurance industry before they committed themselves to the policy of nationalisation of insurance.

"Indian Mining Journal" (Indian Coal Industry Symposium Number). Madan Street Calcutta, 13. Editor: H. Ghosal. Price: Rs. 7-8.

This bumper offer includes 45 papers read at the symposium on coal industry held at Calcutta on 8th August 1955 under the auspices of the Geological, Mining and Metallurgical Society of India and the *Indian Mining Journal*. Read together, the papers give a comprehensive view of the economic and technical problems facing the Indian coal industry and suggestions for their solution. Among the papers, mention may be made of "Coal in India" by Mr. A. Lahiri, "Coal Washing and its Problems" by Mr. A. B. Guha, "Carbonisation of Coal" by Mr. S. K. Sircar, "Mining Research" by Mr. J. W. Whitaker, "Fluidised Low Temperature Carbonisation of Indian Coal" by Messrs. K. W. Bochmann and A. Banerjee and "Sulphur in Indian Coals" by Mr. N. N. Chatterjee.

Annual Bulletin of Transport Statistics for Europe (1954). Economic Commission for Europe. United Nations. Price: $1.00 (U.S.).

This bulletin gives the transport statistics for Europe for the year 1954. The general arrangement and contents of the bulletin are the same as those in the earlier issues. There are four chapters dealing with traffic, networks, mobile equipment and utilisation of equipment. These are accompanied by a number of tables and charts containing vital statistics. A notable feature of the bulletin is the brief analysis of traffic fluctuations from month to month given in Chapter I. As in the previous bulletins, information has been derived in the main from material supplied directly by Governments. This has been supplemented in some cases by information contained in publications of an official character.

The I.E.M.A. Directory 1955-56. Published by the Indian Electrical Manufacturers' Association, 35, Stephen House, 4, Dalhousie Square, East, Calcutta, 1.

This Directory chiefly aims at giving information about the electrical products manufactured by the members of the Indian Electrical Manufacturers' Association, which is claimed to represent 80 per cent. of the industry in India. The information ranges from the manufactures of electrical and allied engineering equipment to those producing equipment required for mines, factories, railway and transport undertakings, gas and waterworks. The value of the book is enhanced by the addition of lists of trade representatives of overseas Governments in India and Indian Government trade representatives abroad. The Directory is a useful guide to purchasers of electrical equipment, including Governments in India and abroad.

Principles and Practice of Sales Tax. By D. P. Madan. Published by the Progressive Corporation Ltd., Jehangir Wadia Building, Mahatma Gandhi Road, Bombay. Price: Rs. 15-8.

In many ways, the Bombay Sales Tax Act is a more complicated piece of legislation than the law on this subject in any other State. And yet, no business man can plead ignorance of the law or inability to understand it as an extenuating circumstance. In Mr. D. P. Madan's *Principles and Practice of Sales Tax* which deals with the sales tax law in the Bombay State, readers will find a comprehensive treatise on this subject. Each section has been dealt with exhaustively and important case-law cited to illustrate the general principles of the levy of sales tax. It is bound to appeal to both business men and lawyers.

Save valuable working hours!

FAST NEW Night Air Service

by Luxurious 4-engined

Skymaster

to BOMBAY-CALCUTTA

DELHI-MADRAS via NAGPUR

SAVE precious time and unnecessary expenditure on the way — *fly overnight* by new, luxurious Skymaster service, connecting Bombay, Delhi, Calcutta, Nagpur and Madras. The new service cuts out irritating overnight stops, lands you in time for breakfast — and it is carefully scheduled to connect with 34 *morning flights* from the big airports. So by midday tomorrow, you can reach almost any important town in India!
Wherever you want to go, whichever flight you choose — Skymaster service makes sure you get there in time! And you have complimentary meals, free travel to and from airport, everything. No extras to pay.

Granodising and Necol for Industrial Finishing

I. C. I. have specialised in studying the problems of industrial finishing, and, as a result, are able to offer an increasing number of finishing products to Indian Industry:
'Necol'—a range of paints manufactured in India to suit the requirements of Indian Industry;
'Deoxidine' and 'Granodine'—special chemicals for metal pre-treatment, to ensure lasting protection from rust and corrosion.

'Deoxidine'—removes rust and cleans the surface.
'Granodine'—keeps paint on its metal.
'Necol'—a range of special industrial paints.

COMMONWEALTH'S SHARE IN WORLD'S TRADE

SLIGHT DECLINE IN 1954-55

EUROPE seems to have stolen a march over both the Commonwealth and the U.S. in enlarging its share in world trade during 1954. Thus, Europe accounted for 30 per cent. in value of world exports in the year, as compared with 29 per cent. in 1953 and 1952 and 28 per cent. in 1951, while that of the Commonwealth countries was only 28 per cent. as against 29 per cent. in 1953, and 30 per cent. in 1952 and 1951. Similarly, the share of U.S. exports, which remained stationary at 21 per cent. in 1952 and 1953, declined to 20 per cent. The share of Central and South America, however, remained unchanged at 10 per cent. throughout the four-year period. Asian exports in 1954, however, fared better in that their share of the world total was 7 per cent. as compared with 6 per cent. in 1953.

In the sphere of imports, too, Europe held the field. Its share in the value of world imports rose from 31 per cent. in 1953 to 33 per cent. in 1955. On the contrary, imports of both the Commonwealth and the U.S. were lower at 30 per cent. and 14 per cent. in 1954, as against 31 per cent. and 16 per cent. in 1953, respectively. There was no change in the share of imports of Central and South America and Asia, which stood at 9 per cent. and 8 per cent. respectively, in 1954 and 1953 alike.

The table below shows the shares of different groups of countries in world trade in the four-year period ended 1954:

(Per cent. of value)

	1951	1952	1953	1954
*World exports**	100	100	100	100
Commonwealth	30	30	29	28
U.S.A.	20	21	21	20
Central and S. America†	10	10	10	10
Europe†	28	29	29	30
Asia†	7	6	6	7
*World imports**	100	100	100	100
Commonwealth	33	31	31	30
U.S.A.	15	15	16	14
Central and S. America†	10	10	9	9
Europe†	30	30	31	33
Asia†	7	8	8	8

* Excluding the trade of Albania, Bulgaria, China Mainland, Czechoslovakia, E. Germany, Hungary, North Korea, Poland, Roumania, U.S.S.R.

† Excluding Commonwealth areas.

An analysis of the shares in the values of total exports and imports of the different Commonwealth countries shows that, in most cases, the export totals were greater in 1954 than in 1953, with those of India and Ceylon revealing marked increases. Indian exports rose in value from Rs. 525.80 crores in 1953 to Rs. 578 crores in 1954. Similarly, exports from Ceylon increased from Rs. 148.9 crores to Rs. 171.8 crores. The value of goods shipped from the U.K. was also higher, but only moderately, at £2,673 million, as compared with £2,582 million in 1953. But Canadian shipments declined from $4,117 million to $3,876 million. There was also a fall in the value of exports from Australia from $804 million to $751 million. The value of cargoes despatched from other Commonwealth countries, namely, New Zealand, Union of South Africa, Rhodesia and Nyasaland, and the Colonies showed a sizable increase, while that of Pakistan revealed a slight decline.

Value of Imports

The value of imports into the U.K. during 1954 was slightly higher at £3,379 million, as compared with £3,343 million in the preceding year. Australian imports, too, increased from £A679 million to £A841 million. Imports into India rose from Rs. 580.7 crores to Rs. 636.1 crores. The other Commonwealth countries, the imports of which rose during 1954, were New Zealand, S. Africa, and Rhodesia and Nyasaland. Among the countries in the group which recorded lower imports were Canada, Ceylon and Pakistan. Canada's receipts of merchandise were slightly lower at $4,093 million, as against $4,383 million in 1953. Cargoes purchased by Ceylon similarly came down from Rs. 160.8 crores in 1953 to Rs. 139.7 crores in 1954, and those by Pakistan from Rs. 116.6 crores to Rs. 110.3 crores. Imports of colonial countries in the year under review amounted to £1,267 million as compared with £1,281 million.

Analysing the aforesaid trend of trade, *Commonwealth Trade* 1954-55, a memorandum prepared by the intelligence branch of the Commonwealth Committee, observes:

"Perhaps the most notable change, of major importance because of the magnitude of the trade involved, was the further expansion in the volume of the U.K.'s exports; this represented an increase of one-third as compared with 1948. A similar increase was recorded for exports of primary products from the Colonial Territories where the output of many commodities reached high or even record levels during the year.

"A slight increase in the U.K. left imports well below the figures recorded for 1951-52; on the other hand, there was a very large increase (approximately 25 per cent.) for both Australia and New Zealand, although the totals in each case were below the post-war peak. In South Africa and Rhodesia, only a moderate increase was recorded and the same was true of India, where imports of grain were not much greater than in 1953-54."

Balance of Trade

The trade balances of Commonwealth countries reacted in different ways in accordance with the variations in their import-export trades. A further improvement was noted in the adverse balance of the U.K., as a result of the larger volume of exports. Canada's adverse balance, which in 1953 had been quite substantial, was much reduced in the following year, although, in this case, the governing factor was the reduction in import volume. On the other hand, there was a marked deterioration in the positions of Australia and New Zealand, due to a large expansion in the volume of imports. In South Africa, the limited increase in imports was fully offset by an expansion in exports of merchandise, excluding all gold and gold products. Taking account of the total gold exports, the favourable balance for 1954 was £24 million, as against £7 million in 1953. With record exports of copper and tobacco, there was again a large surplus for Rhodesia and Nyasaland. In India and Ceylon the favourable trend in exports was reflected in the trade balance. For India, the adverse balance, though slightly larger than in 1953-54, was still relatively small as compared with some earlier years, while, in Ceylon, with a rapid improvement in terms of trade, the surplus was at a record figure. The same trend was apparent in colonies, where the adverse balance was relatively low.

The balance of trade position of the different countries of the Commonwealth during the five half-years ended January-June 1955 is given in the table below:

(In millions)

	Jan.-June, 1953	July-Dec., 1953	Jan.-June, 1954	July-Dec., 1954	Jan.-June 1955
U.K. (£)	—383	—272	—275	—330	—454
Canada ($)	—197	— 43	—179	+ 27	—147
Australia (£A.)	+187	+116	+ 18	— 62	— 49
New Zealand (£N.Z.)	+ 66	+ 6	+ 53	— 22	+ 20
Union of S. Africa (£)	— 69	— 55	— 80	— 52	— 69*
Rhodesia and Nyasaland (£)	...	...	+ 8	+ 14	+ 7
India (Rs.)	—505	+ 46	—390	+ 82	—491
Pakistan (P. Rs.)	+281	+ 18	+154	— 69	+189
Ceylon (C. Rs.)	— 61	— 44	+118	+257	+196
Colonies (£)	— 28	+ 89	+ 17	— 53	— 29†

* Including South-West African Territory.
† Unofficial estimates.

Commonwealth Products

The U.K. remained the largest market for Commonwealth products. It took rather more than W. Europe did and appreciably more than the U.S. For the third year in succession, however, imports from the Commonwealth showed no marked increase and the Commonwealth's share of the total at rather less than half was slightly smaller than in 1953. The Colonial Territories also in the aggregate, imported from Commonwealth sources of supply on much the same scale as in 1953, as did the Union of South Africa; in the latter case, however, the Commonwealth share of the market declined slightly. On the other hand, imports into Australia and New Zealand evidenced some recovery, although the Commonwealth secured £100 million of the increase of £200 million in total trade. As against this, the Commonwealth market in India, Pakistan, and Ceylon, taken as a whole, showed a further contraction.

The Commonwealth's share of the North American market declined further during 1954, a year when economic activity was adversely affected by the U.S. recession. Imports into the U.S. from the sterling Commonwealth fell in the aggregate by some $130 million and there was also a decline in imports from Canada, although these amounted to more than in any year before 1953. Canada's imports from the sterling Commonwealth were 50 million dollars less than in 1953. The figures for Canada show that the reduction in imports from sterling countries during the year was virtually confined to the trade with the United Kingdom which, however, accounts for about two-thirds of the total. In the United States market, where the United Kingdom accounts for only a minor part of the Commonwealth total, the picture was, of course, very different; the reduction in imports from the United Kingdom amounted to only 40 million dollars but there was also a reduction of 70 million dollars in the figures for both Canada and the Colonies, while Australia and New Zealand together showed a reduction of 25 million dollars and India the same amount. A considerable recovery was recorded for South Africa.

Although imports into Western Europe expanded in 1954, the total supplied by Commonwealth countries remained at the same figure as in 1953 and the Commonwealth share of the market, therefore, declined. The pattern of exports was, however, far from uniform. Thus, while exports from the United Kingdom to this market showed a further large increase and an even greater increase was recorded for the Colonial Territories, there was a marked reduction for some other countries, especially Australia (for 1954-55) and South Africa. In general, imports into Commonwealth countries from Europe were greater than in the preceding year, and as a result, the trade balance deteriorated sharply in most instances. An exception was in the case of the Colonial Territories where the trade balance was the most favourable recorded for several years.

LIBERALISATION OF IMPORT RESTRICTIONS IN O.E.E.C. COUNTRIES

Owing to the continued efforts made by the Organisation for European Economic Co-operation, good progress has been made in liberalising private trade among the members of this Organisation from all quantitative import restrictions. Thus, as much as 85.6 per cent. of the overall import trade stands freed now from these restrictions, as compared with 83.3 per cent. in December 1954, 76.6 per cent. in December 1953 and 64.7 per cent. and 61.5 per cent. at the end of 1952 and 1951 respectively.

The figure of 85.6 per cent. is the result of efforts of the member-countries at achieving the liberalisation targets set by the Council of the Organisation on 14th January last year. The Council had recommended that member-countries should free, as from 1st July 1955, 10 per cent. of their imports on private account which were not yet the subject of liberalisation measures and, as from 1st October 1955, 90 per cent. of their total imports on private account and 75 per cent. at least in each of the three categories specified in the code of Liberalisation, namely, (a) food and feeding stuff, (b) raw materials, and (c) manufactured goods.

According to a Press release by the O.E.E.C., the member-countries have duly complied with the obligations to free 10 per cent. of their private imports under quota. Some were, however, not able to reach the target either of 90 per cent. or that of 75 per cent. in each of the three sectors and have notified the Organisation their reasons for the failure. These reasons are related to either balance of payments difficulties or reasons of national importance or equity which they feel obliged to invoke. The Council of the O.E.E.C. is now examining, it is stated, these reasons so that it might find means of co-operative action to improve the situation of these countries and enable them to take further measures of liberalisation in the future.

Among the member-countries of the O.E.E.C. which have liberalised more than the overall percentage of 85.6 per cent. of their total private imports are Western Germany (91.3), Benelux (91.1), Greece (95), Ireland (90.2), Italy (99.7), Portugal (93.7), Sweden (92.6) and Switzerland (92.5).

The U.K. is among those which have not yet surpassed the overall percentage, its figure being 84.8 per cent. However, in the categories of food and feeding stuffs, the U.K. has liberalised imports to the extent of 89.8 per cent. In the other two imported categories, namely, raw materials and manufactured goods, the liberalisation has been effected to the extent of 83.6 and 78 per cent. respectively, of the total imports of these goods.

Denmark has liberalised only 78.4 per cent. of the total private imports and France only 77.5 per cent. Iceland, Norway and Turkey are other countries which have a lower percentage of liberalisation.

SUBSTITUTION OF IMPORTS BY INDIGENOUS DRUGS

India is spending every year a considerable amount of foreign exchange on imports of the various types of medicinal drugs. The value of imports of such drugs aggregated Rs. 2.65 crores in 1954-55 and Rs. 2.45 crores in 1952-53. In the first five months ended August 1955, drugs worth Rs. 11.65 lakhs, as against Rs. 20.57 lakhs in the same period last year were imported. It now seems that, by strenuous efforts of research in medical plants, indigenous drugs could be manufactured and substituted for foreign drugs. At a time when conservation of foreign exchange for the purpose of financing the development schemes under the second Five-year Plan is urgent, this move which would result in savings in foreign exchange, should bring some comfort to our planners, for many a drop makes an ocean. It is, however, to be hoped that the cost of drugs made from indigenous sources will not be prohibitive. Drug is an item where the interests of consumers must have precedence over considerations of foreign exchange.

According to a review of work on Indian medicinal plants published by the Indian Council of Medical Research, out of about 11,000 species found in India, more than 2,000 plants possess medicinal properties. As a result of research work on indigenous drugs, it has now become possible to bring into use already a large number of raw drugs which were hitherto being imported by the drug manufacturing industry. There are, it is stated, great possibilities of India becoming self-supporting in the manufacture of drugs. Owing to the remarkable variations in the country's climate, altitude and soil, India is in a position satisfactorily to cultivate a variety of medicinal plants. For instance, there are several drugs which are widely used by the medical profession, but the plants from which these are manufactured do not grow naturally in this country. They, however, thrive when they are cultivated under proper conditions. Such plants include eucalyptus, cinchona and *jalap* which were introduced into India many years ago. Besides, a large number of plants grow in India which, though not exactly the same, have properties and reactions similar to those of imported drugs. If properly utilised, they would form excellent substitutes. Their development will not only reduce dependence on imports but open up possibilities of exports also.

There is also another advantage. And that is, if medicinal plants which grow wild in different parts of the country are utilised for the manufacture of drugs, such drugs may be brought within the reach of millions of people that are in need of medicines of various sorts.

Notice

BURMAH-SHELL REFINERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of the Company's 5¼ per cent. Debentures 1965-69 will be closed for transfers from 16th February 1956 to 29th February 1956, both days inclusive.

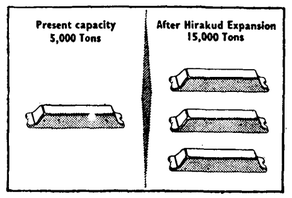
Indian Aluminium Company plans to treble output

Why this expansion?

Aluminium has become an important metal today in many fields—from structural engineering to electrical distribution. Experts estimate that by 1960 demand for Aluminium will have doubled, rising to about 40,000 tons per annum.

Company's rapid expansion

In order to keep pace with expanding demand, Indian Aluminium Company is increasing its capacity for aluminium production. The new smelter which Indian Aluminium Company is installing at Hirakud, Orissa, will triple the Company's production capacity to 15,000 tons by 1958. In implementing this major project, Indian Aluminium Company will be able to draw upon the resources and know-how of its Canadian associates, Aluminium Limited—the world's largest group of aluminium companies.



New Capital Issue

The estimated capital requirements for Indian Aluminium Company's Hirakud project are about Rs. 9 crores. It is proposed to raise a part of these requirements by the issue of new capital in the form of Convertible Notes. These Notes will carry a fixed rate of interest and confer upon the holders of the Notes the right to convert them into Ordinary shares of the Company. The Canadian majority shareholder of the Company, Aluminium Limited, has agreed to take up half of the new issue and the other half will be offered to the other shareholders and the Indian public.

Aluminium is facing a bright future in India today. India's vast bauxite deposits and waterpower resources can support a large Aluminium industry for years to come. Harnessing these natural resources, Indian Aluminium Company's Hirakud project will be an important step towards India's goal of self-sufficiency in Aluminium.

PROCEEDINGS OF THE A.C.C. MEETING

TERMS OF NEW ISSUE STILL PENDING

THE highlight of the speech of Mr. Dharamsey M. Khatau, Chairman of the Associated Cement Companies Ltd., at the annual general meeting of the Company held on Friday last week, was his detailed reference to the progress made in the Company's programme for modernisation and rehabilitation of its older plants and for establishment of new factories and the part which the Company, as the leading cement manufacturer in the country, has to play in the achievement of the target of cement production under the second Five-year Plan. The Company, he said, had planned to increase its capacity to nearly 5.2 million tons by extending some of its factories and by putting up five new factories at various centres. Besides, the Company has also an ambitious plan for manufacturing a wide range of cement machinery adequate for the country's entire requirements as well as other badly needed machinery, such as gears, pumps, mining equipment, etc. This it proposes to do in collaboration with Messrs. Vickers Ltd., England. These plans for expansion of the capacity would naturally entail a very substantial capital expenditure. The necessary finance, Mr. Khatau disclosed, was to be found partly by borrowings from the State Bank of India under a cash-credit arrangement upto a limit of Rs. 4 crores, partly by a fresh issue of capital to the tune of Rs. 6.36 crores and the balance by the Company's own present and prospective internal resources.

Though the Company's expansion programme is in the larger interests of the country generally, and the shareholders, in particular, some of the shareholders present at the meeting expressed concern over the future in the light of the resolution passed at the recent meeting of the National Development Council, in which the cement industry also was listed among those which should be in the public sector. Many of the shareholders criticised the Government's attitude of coercion towards the private sector. Mr. Khatau, in his reply, counselled patience among the shareholders and told them it was extremely difficult to guess what the intentions of the Government were. Even so, the Company, he said, had an undertaking on hand to expand its capacity and the country needed more cement. The Company should not, Mr. Khatau added shirk its responsibility to the country on fears of nationalisation. Its expansion programme involved, no doubt, a risk, but the risk was worth taking as a national duty. He, however, added that the interests of shareholders would be kept in mind.

Terms of the New Issue

The Company's proposal to issue new shares at par, subject to the sanction of the Controller of Capital Issues, was also the subject of comment by almost every shareholder. A few shareholders wanted to know whether the Company had received any directive or suggestion from the Government to issue the shares at a premium. In view of the Government's reported policy that established concerns should issue fresh shares at a premium, the shareholders expressed their wholehearted opposition to the issue at a premium. They said that they would not take the new shares if they were issued at a premium. They even suggested that the Company should give up its expansion plans if the Government insisted on a premium. One of the shareholders quoted the instance of some of the "established" concerns which had recently issued new shares at par. The Company's Board of Directors should not, he said, submit to the coercion by the Government if the latter forced the Company to issue the new shares at a premium. In case the Company were nationalised, he added, the premium so collected would be dead money.

In reply, Mr. Khatau made it clear to the shareholders that the Company had not so far heard anything from the Government about the issue of shares at a premium. This did not mean that the Government was not considering the question of asking the Company to issue the shares at a premium. In fact, Mr. Khatau said, the Company was worried over the delay in getting sanction to its proposal, the application for which had been made on 30th November 1955. It was, however, a matter of conjecture at this stage. He did not, therefore, like to express his views now on the subject. It was a matter that deserved to be studied in detail when the issue actually arose. Mr. Khatau asked the shareholders to realise that, after all, the final decision rested with the Government and it could not be simply ignored. The Company, he added, wanted money for its expansion plans and it would have to approach the Government for many other things.

The resolution to issue 635,928 new shares of Rs. 100 each at par to the existing shareholders in the ratio of one new share for every two shares held, subject to the sanction of the Government, was ultimately passed at the extraordinary general meeting held after the annual general meeting. Though the shareholders' opposition to the issue of the shares at a premium was strong and very vocal, the real test of their sincerity, as one of the shareholders pointed out, would come when the Company came forward again with a proposal to issue the shares at a premium. If the Government were to insist on the Company issuing the shares at a premium, another extraordinary general meeting to get the shareholders' consent will have to be held.

Manufacture of Cement Machinery

Another subject which figured prominently in the Chairman's speech, as well as in the discussions which followed, was the proposal to set up a plant for making a wide range of cement and other machinery in India, in association with Messrs. Vickers Ltd. In reply to the shareholders' queries, Mr. Khatau said that the total working capital of the joint venture would be Rs. 9 crores, of which Rs. 6 crores was likely to be invested jointly by the A.C.C. and Vickers Ltd. in equal proportion. Thus, the A.C.C.'s investment in the joint venture would be Rs. 3 crores. It was rather difficult, the A.C.C. Chairman said, to give an idea of the profit which would accrue from this venture. It would depend on what price the A.C.C. paid for the products bought from the new company. Anyway, he was sure that this venture would prove to be of immense benefit to the A.C.C., as it would enable the latter to have ready on hand manufactured machinery for the expansion plans of the Company's factories. Though he could not give an idea of the profit-earning capacity of this venture, he considered that a return of 6 per cent. on the investment would be adequate.

One or two shareholders expressed the view that the managing agency commission which amounted to Rs. 51.56 lakhs for 1954-55, was somewhat excessive. Though they did not grudge it, they were rather worried that this might become an eye-sore and provoke an attack on the managing agency system. The best course, in their view, would be to place voluntarily a ceiling, say, Rs. 50 lakhs. Replying to these points, Mr. Khatau said that the figure of managing agents' commission looked exaggerated, but it included the commission from the Patiala Cement Co., Ltd., amounting to Rs. 16 lakhs. However, he said that they would give every consideration to the suggestions made by the shareholders. He wanted the shareholders to remember that there are considerable expansion plans ahead and the managing agents had to devote more of their time and energy for the same.

Other Points

The other points of interest that arose from the Chairman's reply to the shareholders' queries were: (1) The present scarcity of cement in the country was real and not artificial. There was large consumption by the Government and the public and the question of importing cement was receiving the urgent attention of the authorities. (2) The Government's control over the cement industry was just nominal, inasmuch as only the allocation of cement was controlled by the Government. The distribution was done by the industry. Price was fixed by the Tariff Commission in accordance with the fluctuations in prices of packing materials. (3) The question of issuing bonus shares along with the issue of new shares was a ticklish one; however, if and when the position justified, the Company would not lag behind in making a bonus issue. (4) Balances in Pakistan amounted to Rs. 1.40 crores. The Company had received Rs. 66 lakhs from Pakistan as part of its accrued profits—Rs. 50 lakhs up to July 1955 and Rs. 16 lakhs thereafter; this covers the profits up to 1954. The Pakistan Government was doing its best to be helpful to the Company. (5) It was extremely difficult for the Company of this size to get the final accounts prepared for issuing half-yearly balance-sheets. The question of publishing quarterly earnings would be considered. (6) The Company's output of cement during 1954-55 amounted to 29 lakh tons. (7) The average cost of production of the new cement works at Sindri was almost equal to that of other factories.

PORT CANNING AND LAND IMPROVEMENT CO., LTD.

The 12 months ended 30th April 1955 constitute the last year of working of the Port Canning and Land Improvement Company, Ltd. (Secretaries, Treasurers and Agents: Messrs. David Sassoon & Co., Ltd., Bombay), and marks the end of the Company's venture in development of land, extending over a period of 83 years, thanks to the West Bengal Estates Acquisition Act, 1953. Under the provisions of this Act, the estates of the Company vested in the State as from 15th April 1955, on which date the State Government took over the Company's lands.

The main interest of the Company's shareholders in the latest Directors' report is to be found in their observations on the compensation payable by the Government to the Company for the lands acquired. The compensation will be determined as per section 23(2) of the Act and the Directors estimate that it may amount to no more than a little over one year's revenue from rentals due to the Company. In the last year of the Company's working, that is, 1954-55, the revenue from this source amounted to only Rs. 6.33 lakhs. The Directors point out that, in fixing the compensation, neither the original investment of the Company in land amounting to Rs. 58 lakhs nor the development cost of about Rs. 24 lakhs has been taken into consideration, let alone the market value of the land which will be more than Rs. 3.75 crores on the basis of the rates at which settlements were made prior to the passing of the Act.

Under the Act, the Company is treated as an individual and as such it suffers in compensation, because the largest slabs of income groups receive the smallest compensation. "Had the lands of the Company been distributed *pro rata* amongst its 2,000 shareholders and the Company treated as a large number of small holders," the Directors add, "the compensation which would be divisible amongst them would have amounted to nearly Rs. 49.33 lakhs, which would have been at least near the Company's purchase price of the land." Even then, the compensation would, it is stated, have been only about one-eighth of the market value.

While the capital of the shareholder will thus be reduced to about one-ninth of the original investment, by virtue of the Act, no part of the Company's liabilities is taken over by the Government nor has any provision been made for meeting them. Besides, the Company has to pay compensation to the employees retrenched, as a result of the Act, although a large number of them has been employed by the Government.

It is quite obvious that when the quantum of compensation amounts to only about a year's revenue from rentals, the Government can easily pay the whole compensation due to the Company from collections of rentals in little over a year. Yet, the Government has not chosen to pay the whole compensation in cash. It will pay only a token sum of 12 per cent. of the compensation in cash at the outset and the balance in non-negotiable bonds of 20 years' maturity carrying interest at the rate of 3 per cent. per annum less tax. These bonds will be redeemable in 20 equal annual instalments. The Directors do not understand why this form of security carrying such a low rate of interest should be issued at a time when State loans are issued as negotiable bonds carrying interest at 4 per cent. less tax with about 10 years' maturity.

The Directors feel that the quantum of compensation and the form in which it is proposed to be paid inflict severe hardship and injustice on the shareholders, especially the large body of small and middle class shareholders. They, however, hope that the Government will still review the whole position and pay adequate compensation to the shareholders, in view of the assurances given in Parliament when the Constitution Fourth Amendment Bill was passed into law, that fair and just compensation will be paid in all cases of acquisition of property.

BALMER LAWRIE & CO., LTD.

The reports which appeared in the Press recently about the change in the ownership of a substantial block of shares in Messrs. Balmer Lawrie & Co., Ltd.—a reference to which was made in *Commerce* also, *vide* issue dated 17th December 1955—would appear to have given rise to the impression that a complete change in the controlling interest in the Company was likely in five years. The correct position about this transaction, according to a communication received from the Company, is as follows:

"It is true that a substantial block of the shares of Balmer Lawrie & Co., Ltd., have been sold by Messrs. Alex Lawrie & Co., Ltd., to the Indo-Burma Petroleum Company, Ltd., and that they represent 25 per cent. of the share capital or a little less than half Alex Lawrie's previous holding. It is, however, incorrect to say that the I.B.P. have been given the option to purchase the balance of Alex Lawrie's holding in five years' time. No such option exists and the only condition of sale is the not unusual one in a transaction of this kind which provides that neither party will sell either the whole or part of their holding in the Company without giving the other the option to purchase."

KUMERGODE ESTATE DOUBLES DIVIDEND

SHARP RISE IN PROFIT

VERY encouraging results are disclosed by the audited accounts of the Kumergode Estates Ltd. (Managing Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Mangalore), for the year ended 31st December 1955. The output of coffee, the main produce of the Company, has recorded a sharp rise from 1,880 cwts. to 3,021 cwts., thus more than making good the slight fall noted in the previous year. Although the crop has been valued on a lower basis than in the previous year, the proceeds and profit show a sizable increase to record levels. The gross profit has gone up from Rs. 87,564 to Rs. 2,26,395, thus maintaining the upward trend noticed since the Company's inception in June 1951. The net profit has swelled from Rs. 69,186 to Rs. 1,62,011. Consequent on this encouraging result, the Directors have not only raised the allocation to reserves from Rs. 50,312 to Rs. 1,30,000 but doubled the dividend to shareholders to 20 per cent. from the maiden distribution of 10 per cent. made last year.

The following comparative table, giving the salient features of the Company's working results for the last four years, provides an idea of the progress made by the Company during these years:

	For the year ended 31st October			
	1955	1954	1953	1952
	Rs.	Rs.	Rs.	Rs.
Proceeds of coffee crop	5,70,218	3,75,002	3,48,554	2,98,523
Proceeds of other crop	2,523	2,402	2,775	7,330
Estate expenditure	3,17,841	2,58,552	2,39,270	2,11,840
Other expenses	30,565	32,057	39,066	38,645
Gross profit	2,26,395	87,564	75,485	56,852
Managing Agents' commission	10,317	8,603	6,199	4,705
Depreciation	20,362	9,775	9,995	8,737
Taxation	33,705			
Net profit	1,62,011	69,186	59,291	42,769
Preliminary expenses written off	..	24,380	..	..
Loss prior to incorporation written off	..	..	36,348	..
To reserves	1,30,000	50,312	..	641
Dividend	40,000 (20%)	20,000 (10%)	..	..
	61,587	69,575	95,081	72,138
Carry forward	3,021	1,880	1,987	1,430
Coffee crop (In cwts.)	2-4-0	2-8-0	2-4-0	2-11-0
Value of coffee per point (Rs.)	93.00	132.75	299.50	580.75
Cardamon crop (in lbs.)				

The improvement in coffee crop harvested is in line with the expectations held by the Directors and much above the original estimates. The crop was originally estimated at 125 tons, but late in the season it was found that it would exceed 150 tons. This is evidently the result of judicious manuring and spraying and other cultural treatments carried out by the Company. Of the proceeds of coffee crop, namely, Rs. 5,70,217, the excess realised from the coffee pool on the previous season's crop over the Directors' valuation accounts for Rs. 50,213. The rise in estate expenditure, the bulk of which represents that on coffee, is in consonance with special efforts made to secure a higher crop.

It will be noted from the above table that the Company's coffee crop has more than doubled itself in the course of the last three years and the gross profit has risen nearly four times. For the first time, the Directors have created a taxation reserve with a sum of Rs. 33,705 to meet the liability on account of the Mysore agricultural income-tax, besides creating a debenture redemption reserve of Rs. 30,000 to facilitate the annual repayment of the debentures. The general reserve, built up last year by the transfer of Rs. 50,000 from the year's profit, has been strengthened this year by the addition of Rs. 1 lakh.

The current season's (1955-56) crop was originally estimated on blossom at 105 tons, but the visiting agent's recent report indicates that this is not likely to be harvested and the estimate has, therefore, been revised to 80 to 90 tons.

The balance-sheet of the Company as on 31st October 1955 shows that the reserves and surplus aggregate Rs. 2.42 lakhs, as against a paid-up capital of Rs. 2 lakhs. The debenture liability, on account of 7½ per cent. first mortgage debentures, has been reduced by Rs. 30,000 to Rs. 2.70 lakhs, consequent on the redemption of the first lot of debentures of a like value on 30th June 1955. The debentures, which were issued on 30th November 1951, are redeemable any time after 1st January 1955 at par at the rate of Rs. 30,000 per year or the entire stocks or any units thereof on giving three months' notice at the option of the Company. The taxation reserve amounts to Rs. 33,705, while the current liabilities aggregate Rs. 1.21 lakhs. The gross block of the value of Rs. 6.32 lakhs stands written down to a book value of Rs. 5.86 lakhs. The current assets, aggregating Rs. 2.81 lakhs, more than adequately cover the current liabilities and provision for taxation.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 6 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 7.1 per cent. per annum.

Points From The Chair

Role of Private Sector

"WHETHER it is a question of raising the general standard of living or of avoiding inflation in the wake of deficit financing of development in the public sector, the *sine qua non* is continually increasing production. Towards this end free enterprise has played its part, and will continue to do so subject to the numerous handicaps imposed upon it even within the limited scope permitted to it. It is admitted that the targets set for the private sector under the first Five-year Plan have generally been fulfilled; and that in some cases, they are even likely to be exceeded—as has already happened in the cotton textile industry. No one need doubt, therefore, that the role allotted to the private sector in the second Five-year Plan will be equally significant. But its achievement will depend to a large extent on the broadbased backing of the public as well as of the Government, on wise planning and sound fiscal and political policies, on full and unstinted co-operation from labour, and on the uninterrupted flow of savings and investment year after year. In all these matters the most effective single factor will be the plans and policies of the Central and State Governments in relation to financial matters, generally, and in regard to taxation and nationalisation in particular."

DHARAMSEY M. KHATAU,
Associated Cement Companies Ltd.

Credit Squeeze—A Necessary Measure

"It has been a most unpleasant policy both for our customers and for ourselves—taking the short view, costly to our customers, who might have used more money with advantage, and costly to ourselves, as advances would have earned us more interest. But in the long run it pays all of us to see this country getting back to a sound position again, and one of the measures necessary to effect this was, and is, the credit squeeze. It should be emphasised that it is but one of the necessary measures. The banks, therefore, all agreed to accept the Government's request that this restraint, and later this squeeze, should be enforced, and indeed our conventional liquidity ratio would soon have forced us to call a halt, if the increasing demand for advances, which has been so marked a feature of recent years, had continued, and if at the same time the Treasury and Bank of England had, as they have done, prevented our deposits from rising. Incidentally the ability of these authorities to diminish the credit base, and thus force us to restrict advances, has been clearly shown; this should kill the hoary old myth that the trading banks can increase the volume of credit at will."

THE RT. HON. LORD ALDENHAM,
Westminster Bank Ltd.

Government Should Reduce Its Expenditure

"The Chancellor's proposals can also be criticised on the ground that, paltry as they are, they have laid still further burden on the private sector without any direct contribution from the public sector. Some people argue that, under present conditions, both increases and decreases in taxation are inflationary in their effect. This is, at first sight, a paradox. As a general principle, Government expenditure is inflationary if it is met out of borrowing, but not if it is met out of taxation. But it is contended that taxation at its present levels engenders a mood of fatalism in the taxpayer and a disposition, which is aggravated by any further increase, to spend his capital, if he has any, while he lives. It certainly kills both the incentive and the ability to save. Thus the Government are on the horns of a dilemma; if they cover any of their expenditure by borrowing, they certainly cause inflation both in theory and in practice; if they cover it by taxation, in theory they avoid inflation, but in practice inflation occurs as a result of their action. One could sympathise with them if it were not that there is a solution lying ready to their hand; to reduce their own expenditure."

ANTHONY WILLIAM TUKE,
Barclays Bank Ltd.

Government's Measures Not Lastingly Efficacious

"The first lesson of experience springs from the great variety of measures taken to overcome our balance of payments difficulties even before those with which we are now immediately concerned. Quite apart from the major adjustment through devaluation in 1949, they include direct import restrictions and stiffening of exchange controls, including limitations on travel allowances; temporary borrowing from the International Monetary Fund; rationing and repeated changes in rates of purchase tax and similar imposts; hire-purchase restrictions, 'qualitative' credit control and cuts in capital expenditure; variations in profits tax and tax allowances on new fixed assets; and, in 1951-52, tighter and dearer money. The conclusion to be drawn from this record is obvious and yet easily forgotten, namely, that no combination of measures so far tried has been lastingly efficacious."

THE RT. HON. LORD HARLECH,
Midland Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

BIRDS INVESTMENTS LTD. Annual General Meeting, Calcutta, 6th February, 1956. Dividend: Re. 1-4 per share. Transfer books remain closed from 24th January to 6th February 1956, both days inclusive.

CHAMPDANY JUTE RAISES DIVIDEND LEVEL

FALL IN PRICES AFFECTS BHOPAL SUGAR

Champdany Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. James Finlay & Co., Ltd., Calcutta) submit the audited accounts of the Company for the six months ended 30th September 1955.

The accounts show, after providing Rs. 5,74,914 (Rs. 1,38,406) for depreciation and meeting from the rehabilitation reserve the capital loss of Rs. 22,005 (Rs. 1,36,859) on discarded machinery, a balance at credit of profit and loss account for the half-year of Rs. 3,87,211 (Rs. 1,72,058), to which falls to be added the balance brought forward from the previous accounts of Rs. 98,277 (Rs. 27,976), making an amount available for distribution of Rs. 4,85,488 (Rs. 2,00,034). The directors recommend payment of a dividend at the rate of 12 (6) per cent. per annum Rs. 3,54,934 (Rs. 1,77,492), leaving a balance to be carried forward of Rs. 1,30,504 (Rs. 22,542).

Accounts.—After taking into account the losses for the two half-years ended 31st March 1954, as computed for income-tax purposes and the "development rebate' on new plant and machinery installed during the year to 31st March 1955, it has not been found necessary to make any provision for taxation on the profits of working for the half-year. The capital loss on old machinery resulting entirely from the rehabilitation programme at the mills, has again been charged against the rehabilitation reserve which was originally raised to meet these losses. It is recorded that the managing agents have voluntarily forgone Rs. 50,000 from the remuneration accruing to them for the half-year under review.

As forecast in the last report to shareholders, the working results for the half-year are not unsatisfactory. The Company, in spite of generally falling prices for jute goods during the half-year under report, was able to secure remunerative prices for its manufactures and this combined with the better working of the mills following the completion of the modernization programmes is largely responsible for the better results.

Since the close of the half-year under report, the relative levels of raw jute prices and those obtaining for jute goods have made simultaneous business at a profit very rarely possible. The two mills are, however, working well and whilst it would be unreasonable in present circumstances to expect a continuation of profits at the present sale, the results for the current half-year are not expected to be unduly disappointing.

In accordance with the provisions of the Indian Jute Mills Association's Working Time Agreement, 12½ per cent. of the looms remained sealed during the six months under review and the unsealed looms worked 48 hours per week. Under present arrangements 2½ per cent. of the looms of member mills of the Indian Jute Mills Association will be unsealed and brought into production again on 9th January 1956.

The Award of a Jute Textile Tribunal which had been adjudicating for several months on certain labour disputes affecting the West Bengal jute mills, was published in September and, in spite of having been referred to the Appellate Tribunal by certain trade unions, became effective on 6th November last. The implementation of this Award will result in a small, but nonetheless embarrassing, increase in the cost of production. With the industry in its present condition it is doubtful if these increases can be readily absorbed in current costs and it seems that ultimately this additional burden—as well as any other imposts which may be applied—will be borne by the raw jute producer, it being impossible in present marketing circumstances to pass such additional charges on to jute goods consumers.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,16,400	Block ...	1,14,95,514
Reserves ...	98,58,404	Stock of jute	29,30,291
Provision for taxation ...	80,821	Stock of manufactured goods	12,09,618
Liabilities ...	29,55,153	Stores ...	9,33,655
Profit and loss account ...	1,30,505	Debts, deposits and advances ...	20,63,622
		Investments	2,05,738
		Cash ...	1,02,835
Rs.	1,89,41,283	Rs.	1,89,41,283

Bhopal Sugar Industries Ltd.

The directors of the above Company (Managing Agents: Messrs. A. H. Ehiwandiwala & Co. (Bombay) Ltd.), submit the audited accounts of the Company for the year ended 30th September 1955.

After providing depreciation Rs. 1,60,680 (Rs. 1,50,622) plus managing agents' commission Rs. 31,021 (Rs. 43,638), there is a net profit of Rs. 2,79,191 (Rs. 3,92,745) subject to taxation. Adding to this a sum of Rs. 38,001 (debit of Rs. 1,81,893) being balance brought forward from last year's profit, there is a total amount of Rs. 3,17,192 (Rs. 2,75,501 after adjustment) which the directors propose to dispose of as under:—

To dividend on preference shares at 5 per cent. free of income-tax, Rs. 62,500 (Rs. 62,500), dividend on ordinary shares at Re 1 (Re. 1) per share free of income-tax Rs. 1,75,000 (Rs. 1,75,000), Rs. 75,000 (*nil*) for taxation reserve and balance to be carried forward to next year Rs. 4,692 (Rs. 38,000).

Although the production during the year was 40,242 bags as compared with 37,504 bags during the previous year, the profits are reduced mainly on account of fall in sugar prices. The plant and machinery are well maintained.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	11,67,157
Reserves ...	9,24,292	Stock-in-trade	12,13,279

Bharat Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Bombay) submitted the audited accounts of the Company, for the year ended 30th June 1955.

The profit and loss account after payment of interest and managing agents' remuneration, providing for depreciation and taxation and taking into account, the credit balance of the previous year, showed a surplus of Rs. 2,56,644 (Rs. 2,69,521). The directors disposed of the amount as under:—

Paid dividend on 5,000 C.R. preference shares of Rs. 100 each at 5 per cent. subject to tax Rs. 18,437 (Rs. 18,437), dividend on 1,50,000 ordinary shares of Rs. 10 each at Re. 1-8 (Re. 1-8) per share free of tax Rs. 2,25,000 (Rs. 2,25,000) and carried forward Rs. 13,206 (Rs. 26,084).

Accounts in brief were as under:

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	4,62,638
Reserves ...	13,90,295	Stock of sugar and molasses	30,05,506
Provision for taxation ...	5,23,402	Stores ...	1,92,486
Liabilities ...	29,65,879	Livestock	5,042

Rs.	68,92,782	Rs.	68,92,782

New India Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th June 1955.

The profit and loss account, after payment of interest and managing agents' remuneration, providing for depreciation and taxation and after transferring Rs. 1,00,000 (*nil*) from renovation and renewals reserve and taking into account the balance of the previous year, showed a surplus of Rs. 2,43,576 (Rs. 3,07,109). The directors disposed of the amount as under:—

Paid dividend on 486 cumulative preference shares of Rs. 100 each at 9 per cent. free of tax Rs. 4,374 (Rs. 4,374), dividend on 10,000 C.R. preference shares of Rs. 100 each at 5½ per cent. subject to tax Rs. 40,563 (Rs. 40,553), dividend on 78,910 ordinary shares of Rs. 10 each at Rs. 2-8 (Rs. 2-8) per share (free of tax) Rs. 1,97,275 (Rs. 1,97,275) and carried forward Rs. 1,364 (Rs. 64,888).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,37,700	Block ...	15,58,779
Debentures ...	1,000	Stock of sugar and molasses	44,83,510

N.B.—Figures within brackets relate to the corresponding period of the previous year.

REGISTRARS OF COMPANIES TO MEET

A conference of Registrars of Companies and officers of Regional Directorates of the Department of Company Law Administration will be held at New Delhi from 7th to 9th February. The conference will be inaugurated by the Finance Minister, Mr C. D. Deshmukh, and it will discuss various matters relating to the duties and functions of Registrars, with special reference to the new Companies Act which is to come into force from 1st April 1956. This is the first conference of Registrars since the administrative machinery under the Companies Act was taken over by the Central Government on 1st January 1955.

Notices

THE ALKALI AND CHEMICAL CORPORATION OF INDIA, LIMITED

NOTICE TO MEMBERS

NOTICE IS HEREBY GIVEN THAT THE Nineteenth Ordinary General Meeting of the Members of The Alkali and Chemical Corporation of India, Ltd., will be held on Wednesday the 7th March 1956, at 3-30 p.m., at the Registered Office, 34, Chowringhee, Calcutta, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1955.

(2) To declare a Dividend on the Ordinary Shares.

(3) To elect Directors.

(4) To appoint Auditors for the current year and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from the 23rd February 1956 to the 7th March 1956, both days inclusive.

By Order of the Board,

IMPERIAL CHEMICAL INDUSTRIES (INDIA) LIMITED,
Secretaries.

CALCUTTA, 19*th January*, 1956.

Note.—If the Dividend as recommended by the Directors is sanctioned at the Meeting, it will be paid on or after the 7th March 1956 to those Shareholders whose names are on the Company's Register on the 22nd February 1956.

To

The Shareholders of The Alkali and Chemical Corporation of India, Limited, and in particular to:—

Mr. J. V. Ade Brito, Mr. W. A. Bell, Mr. G. F. Carter, Her Highness Bada Maharani Deela Kumari Devi, Mrs. M. Duncan, Mrs. H. C. D'Cruz, Mrs. E. M. Fanthome, Mrs J. Guest, Mr. P. H. Guest, Mr. B. R. Goodfellow, Mr. W. A. T. Hollingbery & Mrs. E. M. Hollingberry, Commdg. Genl. Mohun S.S. Jung B.R., and Major Genl. Bijaya S.S. Jung B.R., Genl. Sir Baber S.S. Jung B.R., and Major Genl. Mrigendra S.S. Jung B.R., Mr. A. Y. Kadwa, Mr. F. J. C. Melhuish, Mrs. C. V. Pandit, Mr. A. R. Sahasranam, Mr. D. V. Sassoon, Mrs. E. E. Thompson and Mr. W. B. Joiner, Mr. S. P. Upadhya, Mr. C. R. Witcher, Mr. K. W. Young.

THE SOUTH KARANPURA COAL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-sixth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Friday the 24th February 1956, at 11 a.m., for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Audited Accounts for the half-year ended 31st August 1955.

2. To elect Directors and Auditors for the half-year to 31st August, 1956, in view of the decision of the Board of Directors to hold Annual General Meetings at the end of August instead of at the end of February each year.

The Share Transfer Register of the Company will be closed from the 10th to the 24th February, 1956, both days inclusive.

By Order of the Board,

BIRD & CO., LIMITED,
Managing Agents.

CALCUTTA, 27*th January* 1956.

GILT-EDGED STRONG

(From Our Own Correspondent)

BOMBAY, 1*st February*

Conditions in the short-term money market during the week under review were more difficult than in the previous week. The demand for funds was greater, due to heavy pressure from Calcutta, where borrowers offered higher rates than in Bombay. Demand for credit to finance the movement of crops and to meet the requirements of sugar industry, the production of which is running at a higher rate than this time last year, also tended to strengthen the interest rates. In the interbank section, turnover, however, remained small owing to paucity of lenders. Call money was keenly bid at 3 per cent., while in Calcutta it fetched a better rate, namely, 3¼ per cent. *House money at call* was in demand at 3 per cent. Short-term deposits were taken up at 3 per cent. per annum for all periods from one to six months.

The tenders for 91 days' Government of India Treasury Bills brought an offer of Rs. 172 lakhs, as compared with Rs. 121·75 lakhs last week. The average rate of accepted tenders, which had gone up last week from Rs. 2-8-3 to Rs. 2-8-5 per cent. per annum, has dropped again to Rs. 2-8-3 per cent. per annum.

A small decline of Rs. 3.64 crores in notes in circulation is disclosed by the Reserve Bank's statement for the week ended 27th January 1956. This follows a fall of Rs. 6.03 crores in the previous week. Notes held in the Banking Department have gone up by Rs. 3.85 crores and the resulting rise of Rs. 21 lakhs is covered by a corresponding increase in rupee coin. In the Banking Department, the Central Government's deposits have risen by Rs. 3.72 crores and those of other Governments by Rs. 5.09 crores. Deposits of banks, which had risen by Rs. 15.72 crores in the previous two weeks, have come down by Rs. 2.27 crores and those of others by Rs. 4.31 crores. There has been a decline of Rs. 5.51 crores in balances held abroad. Loans and advances other than those to Governments show an increase of Rs. 1.74 crores. Of these loans and advances, outstanding advances to Scheduled banks against usance bills account for a rise of Rs. 2.45 crores, while total advances have gone up by Rs. 3.71 crores. Government Treasury Bills purchased and discounted have declined further by Rs. 1.97 crores.

The Scheduled banks' statement for the week ended 20th January 1956 disclose a further substantial rise of Rs. 21.36 crores in demand deposits of banks, while time deposits dropped by Rs. 56 lakhs. Borrowings from banks are up by Rs. 12 lakhs, while those from the Reserve Bank and the State Bank are lower by Rs. 91 lakhs and Rs. 12 lakhs, respectively. A decline of Rs. 1.35 crores is noted in advances, while inland and foreign bills purchased and discounted are higher by Rs. 3 crores and Rs. 1.10 crores, respectively. Investments have fallen by Rs. 32 lakhs. Cash and balances with the Reserve Bank have risen by Rs. 11.63 crores, while balances with other banks in current account have declined by Rs. 82 lakhs.

The Gilt-edged market ruled strong during the week under review, after having remained dull for several weeks. This was due to resumption of buying on account of insurance companies by the institutions appointed by the Government. Long and medium dated securities were specially favoured by them. Some of the 4 per cent. State loans also received a good measure of support. Prices, therefore, staged a welcome improvement, the rise being very marked in 3 per cent. 1966-68 and 3 per cent. 1970-75. The undertone at the close was firm. 3 per cent. 1957 put on an anna to Rs. 99-10, as also 3 per cent. 1958. 3 per cent. 1959-61 had buyers at Rs. 98-3, though there was no change in price. 3 per cent. 1963-65 and 3 per cent 1964 were taken up an anna higher each at Rs. 94-11. 3 per cent. 1966-68 advanced by As. 5 to Rs. 92-4 and 3 per cent. 1970-75 by a similar extent to Rs. 88-4. 3 per cent. 1986 Conversion Loan was, however, unchanged at Rs. 80-6. 3½ per cent. 1961 was unchanged at Rs. 99-8, 3½ per cent. 1964 at Rs. 98-12 and 3½ per cent. 1965 at Rs. 98-9. Among State loans, 4 per cent. 1967 Bombay gathered an anna to Rs. 100-11, 4 per cent. 1967 Madras, after receding from Rs. 99-12 to Rs. 99-8, spurted to Rs. 99-10. 4 per cent. 1967 U.P. gained an anna to Rs. 99-9, as also Saurashtra to Rs. 99-12 and Hyderabad to Rs. 99-4.

In the foreign exchange section, the rupee displayed signs of strengthening in terms of the U.S. dollar during the week, but at the close the gain was lost. Banks' selling rate of ready dollar closed today at Rs. 477½ per $100, after being quoted at Rs. 476⅞. The buying rate moved from Rs. 473 to Rs. 472½ before closing at Rs. 473. This was in consonance with a similar trend displayed by sterling. Thus, in New York, spot sterling, after appreciating from $2.80.9/16-2.80.11/16 to $2.80.11/16-2.80.13/16, gave way to $2.80.9/16-2.80.11/16. Forward sterling (three months) also closed unchanged at $2.79 7/16-2.79.9/16, after being quoted at $2.79.9/16-2 79.11/16. Transferable sterling finished 1c. better at $2.77⅛-2.77⅜, the highest level reached being $2.77.13/16-2.77.15/16.

METALS IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 31*st January*

Although holidays intervened, the week under review in the Calcutta metal market was noted for steady conditions. For consumers were eager to cover their requirements. Electrolytic copper was firmly maintained at Rs. 265. Keen demand was in evidence for wire bars for the drawing industry. As usual, copper scrap attracted moderate attention with the fire-refined I.C.C. material changing hands at Rs 240. London advices were mixed, and the forward rate, after jumping by several points, declined to one to two points below the level prior to the rise. A similar rise and fall were in evidence in spot also, but the closing rate was several points above the level prior to the advance. Such an irregular trend in London was attributed to the tight supply position, following keen export demand and stoppage of production in a refinery on labour strike. These factors were cited to speak against chances of a price decline. Tin opened at Rs. 528 in the local market and, despite the fall to Rs. 523, the rate was fully steady. This was so because, even after the decline, the local quotation was several points above the replacement cost. For the fall in Far Eastern quotations was so drastic. Virgin lead was fully steady at Rs. 85, as was electrolytic zinc at Rs. 72-8.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, 1*st February*

The bullion market ruled weak during the week under review. There was a sharp fall in prices. The recession noted towards the close of the previous week gathered momentum this week under the impact of nervous bull unloading and selling by bears. The confidence of operators was severely shaken by rumours that the Government of India might enhance the sales tax on bullion. The liquidation by a Calcutta operator who had heavy commitments in the share market also aided the downward trend. The weakness of the share market in Bombay and settlement difficulties in the Calcutta Stock Exchange were additional bearish factors. There were also rumours that the Government might sell in the open market its stocks of confiscated gold. The cumulative effect of these factors was a retreat in the prices of both metals, despite reports of good offtake in the ready section.

Silver for forward delivery (28th January settlement) gave way from Rs. 176-6 to Rs. 173-13 before the settlement ran out at Rs. 174-11. Forward silver (28th February settlement, slided from Rs. 177-12 to Rs. 175 and, after a recovery today to Rs. 176-2, lost ground to Rs. 175-3.

Ready silver (.996 Mint) moved down from Rs. 176-9 to Rs. 173-13, but gathered some strength towards the close to finish at Rs. 174-3.

The floating stocks of silver are reported to be 1,300 bars. The daily average offtake was 20 bars.

Gold for forward delivery (27th January settlement) moved down from Rs. 95-9 to Rs. 94-9, before the settlement ran out at Rs. 94-10. Business in the next settlement (27th February), which was done at Rs. 96-3 at the close of the previous week, came to be put through at a low of Rs. 95-2 yesterday. There was, however, a recovery to Rs. 95-11 today, but the closing was again lower at Rs. 95-5.

Ready gold slipped from Rs. 95-14 to Rs. 94-12 early in the week. On reports of good offtake, the ready metal strengthened to Rs. 95-11, but there was again a recession to Rs. 95-3 at the close. The floating stocks of gold are estimated at 45,000 tolas. The daily average arrivals were 2,500 tolas, while the offtake was 3,500 tolas on an average.

There was a further drop in silver prices in London during the week, the ready metal declining from 77¾d. to 77d. Gold staged a rise early in the week from 249s. 2¾d. to 249s. 3¾d. but reacted to close yesterday at 249s. 3d. Silver was unchanged in New York at 90c.

The following comparative table shows the trend of the market during the week under review:

	1-2-56	Highest	Lowest	25-1-56

EXPORT TEAS QUIET

(From Our Own Correspondent)

CALCUTTA, 31*st January*

Offerings during yesterday's export sale in tea aggregated 64,800 chests. Demand was lower than usual and trading was quiet. Commonest and common brokens declined by As. ½ to As. 1, as did medium Assam B.O.Ps. There was, however, good support to fannings grades and the lots possessing tips were favourites of buyers. Stylist whole-leaf grades were about steady, as were Darjeelings with flavour. The quotations were: Best C.T.C. Assam B.P Rs. 2-3 to Rs. 2-5, clean black pekoe Rs. 2, medium Assam B.P. Re. 1-10, and plain B.P. Re. 1-7-6.

During today's internal sale, prices were maintained at previous levels. Thus, medium Assam grainy dusts were quoted at Re. 1-8-6 to Re. 1-9-6 and medium Dooars at Re. 1-7-6.

Dusts offered during last week's sale for domestic consumption amounted to 20,200 chests. Demand was moderate and, because of the increase in the quantity offered, prices did not advance but were steady at previous rates. The quotations were: Best liquoring Assam C.T.C. Rs. 2-4 to Rs. 2-6, medium Assam grainy dust Re. 1-8-6 to Re. 1-9-6 and medium Dooars Re. 1-7-6.

Leaf grades aggregated 1,800 chests, as against 2,500 packages in the last sale. Demand was good and prices realised were an anna to As. 2 higher.

DEADLOCK IN COTTON

(From Our Own Correspondent)

BOMBAY, 1*st February*

The deadlock in the cotton futures market which immediately followed the official closing out of hedge contracts in I.C.C. February and May with effect from the 24th inst., has since taken a more serious form. The validity of the Forward Markets Commission's directive to the Board of the East India Cotton Association (E.I.C.A.) to close out the hedge contracts and to amend the by-laws of the Association with retrospective effect has been questioned by some cotton traders in a petition filed at the High Court. The challenge is based on the ground that the Central Government has no power to amend by law 52AA (under which the Forward Markets Commission has acted) or any by-law of the Association so as to make it retrospective in effect and that the Forward Markets Commission has no right to fix any rate for the purpose of closing out any transactions effected prior to 21st January 1956, or to direct that any transactions effected prior to 21st January should be deemed to be closed out. The suit filed by Mr. Balchand Shah against the East India Cotton Association and its Directors resulted in a consent decree being taken by the parties on 24th January. The notification of the Commission was issued the same day fixing the rates for the two settlements prevailing at the time at which the trading in the contracts closed on 24th January. The notification, it is contended, has been issued *mala fide* and is intended to prevent the Board of Directors from reconsidering its previous decision (fixing the ceiling rate at Rs. 700) as provided in the consent decree in the suit filed by Mr. Shah.

Admitting the above petition, Mr. Justice Coyajee has issued a rule returnable on 14th March 1956. Pending this, His Lordship has issued an interim injunction restraining the E.I.C.A. Board from giving effect to the directive of the Forward Markets Commission to close out all outstanding contracts in I.C.C. February and May at Rs. 700 and Rs. 686-8, respectively. Until, therefore, the High Court gives its verdict, which will be only after 14th March next, the E.I.C.A. Board will not be able to fix a settlement date. The verdict of the Court and the manner in which the Board will settle accounts are awaited with considerable interest. Meanwhile, a five-man sub-committee of the E.I.C.A. is considering a proposal to approach the High Court for permission to allow the Board to proceed with the clearing of accounts pertaining to inward payment.

Trading in the spot section of the cotton market was very active. Exportable styles were particularly strong, owing to increased enquiries from overseas interests following the abandonment of the surplus cotton sale programme of the U.S. Government. Japan is credited with the purchase of large quantities of Indian cotton, especially Oomra *deshi* and Bengal. The Continental countries and Hong Kong are also said to have booked orders for Wagad, Oomra *deshi* and Lower Jarillas. There was good mill demand for ready lots of good quality cotton at advancing prices. Vijay, Berar 197/3 and Punjab styles were on special request. In the foreign section, African cottons elicited some support and recorded improvement. There were also stray enquiries for Egyptians and lower quality Sudans.

The following are the latest available quotations from the Sewri market:

Bengal *deshi* Rs. 680; Berar Jarillas Rs. 780; Khandesh Rs. 760; Vijay Rs. 890; Oomra *deshi* Rs. 750; Moglai Rs. 640.

The firm trend of the Karachi cotton market noted in the past three weeks gathered further momentum during the week under review. The bulls continued to be busy extending their commitments, on fears that the spot position of staple cotton which was already tight would become tighter still. There was also considerable short-covering by bears. Thanks to this bull-bear tussle, the prices of cotton continued to march forward N.T. March delivery rallied Rs. 2·2 to Rs. 79·1 per 82 lbs. yesterday. May contract stood as high as Rs. 78·3, as against Rs. 76·10 at which business in this contract opened on 27th January 1956. January delivery was terminated at Rs. 80·7. Reflecting the tight supply position, the spot prices registered a handsome improvement. The following are the latest available quotations (figures in brackets relate to last week's closing rates) for a few popular varieties of Pakistan cotton:

Sind *deshi* Rs. 70 (Rs. 68); Punjab *deshi* Rs. 65 (Rs. 62-8); 4F Punjab R.G. Rs. 74-4 (Rs. 75); L.S.S. Punjab R.G. Rs. 81-4 (Rs. 78); S.G. Rs. 87-4 (Rs. 83); N.T. R.G. Rs. 84-4 (Rs. 80-Rs. 81½); S.G. Rs. 90 (Rs. 84-Rs. 85½); 289F Punjab R.G. Rs. 87-4 (Rs. 82-Rs. 83); S.G. Rs. 95-4 (Rs. 88-Rs. 89).

Under the impetus of enlarged buying support induced by good overseas enquiries, the Alexandria cotton futures market ruled distinctly firm, in contrast to the depressed conditions which prevailed last week. Traders were inclined to take an optimistic view of the outlook for cotton. The optimism was based on expectation of bright prospects for Egyptian cotton exports, following the reported decision of the U.S. Commodity Credit Corporation to abandon the surplus cotton disposal scheme. Consequently, values staged a rally. The latest available quotations (in tallaris per lb.) from the Alexandria cotton futures market, as compared with those a week before, are given below:

	31-1-1956	24-1-1956
Karnak March	80.85	78.52
Karnak May	79.85	78.98*
Ashmouni February	61.70	58.47
Ashmouni April	61.68	58.92

*27th January.

The supply of Sudan cotton is said to be quite comfortable. The first official report of the crop for 1955-56 estimates the yield at 475,876 bales (of 425

lbs. each, as against 441,806 bales in the previous season. A few lots of new crop XG2S and G2S have been examined and it appears that the staple of these cottons is superior to the corresponding grades last year.

Reports from Kampala indicate that there is good demand for Uganda-Kenya cotton. Four auction sales of cotton were held by the Lint Marketing Board during the past fortnight, the quantity put up for each sale being 10,000 bales. The prices at which sales were effected were 6 to 10 cents per lb. higher.

The undertone of the Liverpool cotton futures market was fully steady. The steady trend was due to firm advices from New York and reports of persistent large offtake in yarn and cloth markets for domestic consumption. The old contract evoked trade fixing, while new contract met with commission house and American buying. Cotton values, as a result, tended to look up. The following are the latest available quotations (in pence per lb.) from the Liverpool cotton futures market:

Old Contract: March-April 25.64; May-June 24.35; July-August 23.75. *New Contract*: May-June 29.10; July-August 27.10; October-November 25.55; December-January 25.15. *Egyptian Karnak Cotton*: January-February 42.42; March-April 42.42; May-June 42.67; July-August 42.67.

A firm trend was in evidence in the New York cotton futures market this week too. The firmness was aided by reports of encouraging demand for spot cotton and continued heavy movement of cotton into Government loan; it is expected that the aggregate entry will reach 7.5 million bales. The rumours that the C.C.C. would maintain a minimum selling price of 25.50 cents for Middling 15/16" also attracted buying support for new crop contracts. Consequently, prices registered a rise. The demand in the spot market was sustained. Domestic spinners were fairly active. Enquiries from shippers were quite good even for the running lots of St. Low Middling and higher grades.

It is reported that the C.C.C. has decided to suspend further sale of American surplus cotton at competitive rates in world markets. This decision is said to have followed from the U.S. Government's recommendation for eliminating the proposal from its overall Farm Bill, in view of the difficulty to sell surplus cotton at competitive rates unless there is a downward revision in prices the average of which is about one cent per lb. above the minimum. Incidentally, it may be noted that the Department of Agriculture has already disposed of nearly 50 per cent. of its 1 million bales of surplus cotton with the sale of 130,750 bales last week. Prices for the latest sales ranged from 25.50 cents to nearly 27.00 cents per pound. The Government refused to accept bids under 25.50 cents for Middling 15/16" cotton.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	31-1-56	24-1-56	17-1-56
Spot	35.45	35.25	34.80
March	34.74	34.48	34.04
May	34.15	33.83	33.45
July	33.05	32.63	32.18
October	31.55	30.98	30.43

YARN STEADY

(From Our Own Correspondent)

BOMBAY, 1st *February*

The yarn market was devoid of any notable development during the week under review. Operators did not evince much interest in fresh business, as they preferred to watch the trend of offtake in piecegoods markets—for domestic consumption and export. Transactions put through were, therefore, very much limited, with values recording narrow movements. The undertone of the market was generally steady.

In the rayon yarn section, forward deliveries elicited special buying support and showed a hardening tendency. Snia rayon yarn (120 dull cones) for February delivery advanced by Rs. 10 to Rs. 810. April delivery spurted by Rs. 9 to Rs. 820, the *budla* charges in this delivery being about Rs. 10 per case. Spot rayon yarns, however, were quiet, owing to lack of assuring advices from upcountry markets. 120 Italy eased by half an anna to Rs. 4-0-6. 150 Japan was unaltered at Rs. 3-15. Business in 150 Italy and 120 Japan was done at Rs. 4-0-6 and Rs. 4-5, respectively. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade lost six pies to Rs. 3-14-6 and 150 Bt. cones 1st grade was quiet at Rs. 3-8.

Staple fibre yarns (40×2) evoked good enquiries, but actual turnover was less. Centurys rose by 18 pies to Rs. 4-1-6. New Greats gathered 15 pies to Rs. 4-2-9. Citys were transacted at Rs. 4-3-9.

Trading in cotton yarns was on a cautious note. The deadlock in the cotton futures market was responsible for the reserve attitude on the part of operators. Taking the week as a whole, however, cotton yarn prices generally tended to look up, on buying support induced by expectation that, since several leading mills had sold their production up to the end of April, the first-class mills might not be inclined to lower their prices for the next few weeks. Among 80s, Elphinstones increased by As. 8 to Rs. 62. Finlays were firm at Rs. 70. Deals in 40 counts Minaxis were put through As. 10 higher at Rs. 26-3. Among 30s, Sitarams gathered As. 4 to Rs. 19. Gokaks were done at Rs. 21. Twenty count yarns were fully maintained at last week's levels. Maduras being quoted at Rs. 17-12, Hinds at Rs. 16-1 and Raghuvamshis at Rs. 16-12. Sixty counts Maduras were fully steady at Rs. 44-8, but Finlays shed As. 2 to Rs. 59. Moderns were quiet at Rs. 60. For want of support, ten counts suffered losses. Elphinstones declined by As. 4 to Rs. 12-4 and Podars by As. 2 to Rs. 39. Moderns were unchanged at Rs. 13-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	1-2-1956	25-1-1956	18-1-1956
Art silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Sala February	810 0	800 0	795 0
,, ,, ,, April	820 9	811 0	805 0
120 Japan (per lb.)	4 5	4 4½	4 4½
150 Japan (per lb.)	3 15	3 15	3 15
120 Italy (per lb.)	4 0½	4 1	4 1
150 Italy (per lb.)	4 0½	4 0	4 0½
Staple fibre yarn (per lb.)—			
40×2 New Great	4 2½	4 1½	4 1
40×2 Kohinoor	4 5½	4 4½	4 1½
40×2 City	4 3½	4 1½	4 1½
Cotton yarn (per bundle of 10 lbs.)-

60s Madura	44 8	44 8	44 8
80s Finlay	70 0	70 0	70 0

OILSEEDS DECLINE AT CLOSE

(From Our Own Correspondent)

BOMBAY, 1st *February*

The oilseeds market put on an upward trend almost up to today when mild selling pressure set in. The firmness in the major part of the week was attributed to small arrivals, shortage of groundnut stocks and reported overseas enquiries for linseed oil at £127 per ton. Reports regarding some business done in castoroil with Continental buyers also aided the trend. The mild selling pressure that set in today was, however, due to fears of a possible increase in export duties on edible and non-edible oils. As a result, values of almost all the sections which had moved steadily upward slightly declined, thereby erasing only a minor portion of earlier gains. On balance, the list as a whole registered sizable gains.

In the groundnut section, Bold ready steadily advanced from Rs. 29-4 to Rs. 30-14 on the 31st inst. But today, it receded to Rs. 30-12. On balance, it gained Re. 1-8 over the week. February-March delivery was done at Rs. 31 and April-May at Rs. 31-12, as against Rs. 29-4 and Rs. 29-13, respectively. Coromandals were better by Re. 1-12 at Rs. 31-2. Khandesh quality advanced from Rs. 29-8 to Rs. 31-4 on the 31st inst. Thereafter, it declined by As. 2 to close at Rs. 31-2. Groundnut oil ex-mill gathered As. 14 to Rs. 15-14. March and April deliveries changed hands at Rs. 16-3 and Rs. 16-5, as against Rs. 15-4 and Rs. 15-6, respectively.

Bold ready, in the linseed section, advanced from Rs. 30 to Rs. 31-8 on the 31st inst. Subsequently, it receded by As. 2 to Rs. 31-4. February-March delivery put on As. 12 to Rs. 30-14 and April-May Re. 1-2 to Rs. 30-6. Small Satnas were better by Re. 1 at Rs. 29-4. Linseed oil shot up from Rs. 18-2 to Rs. 19-2, before finishing slightly lower at Rs. 18-12.

In the castorseed section, May futures delivery opened the week at Rs. 118-12, as against Rs. 119-2. It declined on the 27th inst. to Rs. 120-8, the lowest touched in the week. Subsequently, it advanced to as high as Rs. 126, the highest touched in the week, on the 31st inst. Finally, it receded to close at Rs. 120-12. Madras quality was up by Re. 1-2 at Rs. 24-6 and Kanpur by Rs. 6 at Rs. 22-8. Castor-oil B.S.S. was better by As. 6 at Rs. 14-2. Commercial quality was also higher by a similar amount at Rs. 13-2.

Among others, *kardi* Bold improved from Rs. 16-8 to Rs. 17-12 and *niger* Madras from Rs. 25 to Rs. 27-4, on persistent enquiries for *niger* oil from Italy. It is stated that so far Italy has purchased about 750 to 800 tons of *niger* oil.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	1-2-1956	24-1-1956	18-1-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.

SUGAR IRREGULAR

(From Our Own Correspondent)

BOMBAY, 1st *February*

The trend of the sugar market was two-sided during the week under review. The forward section ruled easy, while the spot section exhibited a firm trend. The chief factor which imparted easiness to the forward section was the expectation of a fall in sugar prices following the reported release of 50 per cent. of the production of sugar up to December last for sale in the free market. As a result of this release, the sugar mills in North India who had all along been carrying large stocks, became keen sellers, so much so that the ex-mill quotations fell by As. 6 per maund. In the Bombay-Deccan also, ex-mill rates of sugar tended to recede.

Despite the decline in ex-mill rates thus and large arrivals of indigenous sugar into the market, thanks to improvement in wagon clearance position—the quantity that actually arrived during the week was 12,400 bags, as against 2,200 bags a week before—the spot prices of sugar registered an improvement. This was due to strong buying support induced by good demand from interior centres. Rumours of an increase in excise duty on sugar in the forthcoming budget provided another inducement to dealers to buy ready sugar.

Fagan delivery contract for "C" grade sugar failed to elicit support and suffered a break. It was quoted today at Rs. 91-8 per bag, as against Rs. 92-4 a week before.

In the spot section, A grade indigenous sugar strengthened from Rs. 97-Rs. 99 to Rs. 99-Rs. 100. B grade was firm at Rs. 96-Rs. 97, as against Rs. 94-Rs. 96 last week-end. C grade improved from Rs. 89-Rs. 93 to Rs. 90-Rs. 95 and D grade from Rs. 87½-Rs. 90 to Rs. 89-Rs. 92. British refined sugar was better by As. 4 at Rs. 85-4 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 1st *February*

Malabar black pepper continued to weaken for want of overseas support and under pressure of substantial arrivals at all primary centres. Growers at Alleppey are reported willing sellers at Rs. 775 but without attracting new buyers. Calicut is quoting Rs. 800 nominally. Indian exporters are reported to be shy and refusing to enter into any further commitments unless prices have reached the bottom. There are sellers for garbled at Cochin at prices ranging from Rs. 135 to Rs. 133½, as compared to Rs. 142½ during the last week.

New York is reported to be persisting in its hand-to-mouth buying and small business for afloat at $0.31 is reported done. Fluctuations in the local market, both for the A.S.T.A. and delivery sections, are very narrow as buyers remain completely withdrawn and speculators side-lining.

Pressure of arrivals in Northern Malabar is more pronounced and growers there are anxious sellers at cut-price but without reportable business. Growers in Southern Malabar, being comparatively stronger, are trying to resist further fall, in spite of the increase in the inflow, but here, too, tired feelings are reported slowly creeping in, and if no timely foreign support is coming forth, prices are likely to decline further. New York dealers, as a policy, always do small and selective buying in the declining market.

The notable feature of the week is the reduction in freight to U.S.A. by 25 per cent. on pepper, ginger and turmeric by the Conference Line for meeting competition from the non-Conference which has recently started booking at reduced freight.

In the delivery section, some improvement was noticed under support from bulls but it proved short-lived. February shipment was done at $0.30½, while for April-May-June there are sellers at $0.31½ but few buyers.

Following are today's nominal quotations: Ready delivery Rs. 105 (Rs. 110 a week ago) per Bengal maund, February Rs. 730-40 (Rs. 750-60), and March Rs. 740-50 (Rs. 760-70) per candy of 5¼ cwts.

TEA DUSTS DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 27*th January*

There was almost 500,000 lbs. of dust on offer in sale 'B' which was held on Tuesday, 24th January. The sale opened to a strong general demand for all types. Buyers continued to show interest in milled dusts at slightly dearer rates. Best liquoring dusts were dearer following quality. There was a useful demand for clean grainy black types, and these advanced in price.

London Market.—Sale of 23rd January 1956:—Quality plain colourv fannings and best C.T.C. steady. Others ½*d.* to 1*d.* lower. Weakest feature low medium B.O.Ps.

Sale of 24th January 1956: Thin liquorings irregular. Others generally dearer.

Colombo Market.—Sale of 23rd January 1956: Black leaf fannings lower. Strong demand for grainy dusts broken-mixeds and fannings at firm to dearer rates, particularly for useful quality and fair appearance.

Sale of 24th January 1956: Top quality about steady. Other high-growns declined 10 to 20 cents, coloury mediums firm to dearer, all liquoring fannings active, demand appreciably dearer, low-grown brokens declined five cents, Persian Gulf types much lower.

Calcutta Market: Export.—With exception of Bombay operators, good general demand; all quotation types firm; fannings most descriptions dearer; bright Middle East sorts and C.T.C. were strongest features.

Internal:—20,500 dust. Irregular; fair demand; Middle East strong. Leaf 2,500 fair demand.

Export Quota.—The market has been rather quiet and small business has been done at 24 pies. There are now sellers at this figure.

Forthcoming Auctions.—Dust Sale 'C' will be held on Tuesday, 7th February.

As we go to press, Messrs. Forbes, Ewart and Figgis wire:

Sale 3:—1,000,000 lbs. Strong general demand. Low and low mediums brokens fully firm. Fannings

As. 2 to As. 3 dearer. Brighter liquoring mediums of improved quality As. 3 to As. 4 dearer. Best liquoring high-growns rather irregular and sometime easier. Black leaf Middle East fannings keen enquiry. Whole leaf As. 2 dearer."

TANNED HIDES BEARISH

(From Our Own Correspondent)

MADRAS, 30*th January*

The tanned hides market is in the doldrums. The U.K. buyers refuse to operate at reasonable prices, and E.I. tanners are greatly perturbed at the lack of demand in the U.K. Arrivals of kips have been on the usual scale and clearances slow. Prices have declined by another six pies per lb. this week, due to financial stress, and the market is bearish.

In the January London public sales, prices of goat skins were unchanged to firm on prime tannages and declined from 4*d.* to 8*d.* on adulterated classes. As regards sheep skins, primes and semi-primes advanced by 3*d.* to 6*d.* and others were unchanged to 4*d.* decline on December levels on the first day of the auctions and the sales are proceeding. In the local market, arrivals have been moderate and clearances fair.

HIDES STRONG

(From Our Own Correspondent)

KANPUR, 29*th January*

The hides and skins market ruled strong during the week under review, thanks to encouraging offtake. Demand for upper grade buff and medium grade cow was specially keen. The country tanners went in for the inferior grade of cow. The local tanners were the main purchasers.

The latest available quotations are: Wet salted cow, 1st grade Rs. 360, 2nd grade Rs. 290 to Rs. 310 and 3rd grade Rs. 160 to Rs. 190 per score; wet salted buff, 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat, 1st grade Rs. 325 and 2nd grade Rs. 275 per 100 pieces; sheep, 1st grade Rs. 225 and 2nd grade Rs. 175 to Rs. 200 per 100 pieces.

MINOR LOSSES IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 31*st January*

Following the tendency shown by overseas buyers to delay entering into commitments on expectations of a decline in prices, prices of jute goods gave way. Prices of many varieties of raw jute fell by Re. 1 per maund, as mills, after the heavy purchases of a week ago, had virtually withdrawn from the market. The changes in price-trends were the result of speculation regarding the unsealing of looms, and it would be some time before prices of goods get settled. In this respect, the stock position of goods with mills as at the end of this month, which would soon be available, is awaited with interest. The figures would reveal the actual impact of the increase in production on despatches following the unsealing of 2.5 per cent. of the looms as from the 9th of this month.

There were rumours during this week that Russia would soon be in the market for a huge quantity of sacking goods. Support from Burma was also expected, but it was believed that a portion of the Burmese order had gone to Pakistan. Trade circles were confident that the increase in production would not be reflected in stocks and that the present decline in prices of goods would prove only temporary. They believe that, after a time, overseas buyers would show increased interest in both hessians and sacking goods. For, Indian prices even without the present fall were competitive and overseas buyers are only biding time in the hope that prices would steady at lower levels. Last Tuesday, ready B. twills were quoting Rs. 113-12. Lack of interest forced the rate to fall to Rs. 112-12 on the following day. There were reports that shipping had not been satisfactory during this month. Subsequently, a low of Rs. 111-4 was touched. At this stage, covering business brought in some liveliness, and the rate recovered to Rs. 111-12 by the week-end. Yesterday the recovery was maintained but the quotation did not move beyond Rs. 111-12. Today the rate advanced further to Rs. 112-4, following higher raw jute prices. Forward rates in B. twills were higher than the ready, and this was in line with market expectations of an imminent strengthening in demand in this construction. April-June position was quoting at Rs. 114-8 when the ready goods were at Rs. 113-12. In the middle week fall, the difference was narrowed down to eight annas, but by the week-end it widened to Re. 1-4, as the forward goods were priced at Rs. 113.

The decline in hessian prices was fractional, as it was believed that the stock position in this respect would not reveal any surprise. Hessian shipments from 1st to 20th January amounted to 15,500 tons which represented a fall of 4,500 tons and 1,500 tons, compared to the figures for similar periods in December and November respectively. On the other hand, sacking shipments were only 18,000 tons as against 27,000 and 26,000 tons respectively. Ready 40" 10 oz. hessians opened at Rs. 40-15 and at one time had touched a low of Rs. 40-6. Covering demand arrested the down-trend and a recovery to Rs. 40-9 was soon recorded. Moderate interest was shown in forward goods. With the result, when prices for the ready position fell, the forward goods forged ahead. April-June goods were quoting at Rs. 40-4 when the ready position was at Rs. 40-15. The former soon gained to Rs. 40-10 when the latter actually lost As. 9. By the week-end, April-June goods gained further to Rs. 40-12 and with the recovery in the ready position, the difference between the prices was reduced to As. 3. Yesterday there was not much change in the rates, the ready position being priced at Rs. 40-8, but April-June gave way to Rs. 40-10. These rates were maintained today, with the eight oz. being quoted at Rs. 33-4.

Mills had withdrawn from the raw jute market during this week. And this had the desired effect, viz., arresting the upward trend of a week ago when mills effected considerable purchases. In fact, as stated above, prices gave way by about a point earlier in the week. Prices in the mofussil centres, however, were maintained high in view of the expectation of the sure support of mills. Arrivals in the agencies continued to be small, and Cossipore reported a fall in the daily arrivals of wagons carrying jute. In view of the disparity in prices in the Calcutta market and the agencies, covering business was entirely absent. Yesterday and today there was a hardening tendency in prices here, with the result that not only was the earlier decline made good but latest quotations, as available this evening, were higher than those of a week ago given in brackets:

	Middles Rs.	Bottoms Rs.
Pukistani:

FOODGRAINS QUIET TO EASY

(From Our Own Correspondent)

HAPUR, 30*th January*

Conditions in the foodgrains market were quiet to easy during the week. The Government of India's efforts to check a further rise in wheat prices had the desired effect. Following withdrawal of demand for wheat from Delhi due to sale of Government-owned stocks at that centre, wheat prices recorded a fall of As. 8 to Rs. 14-14 per maund for average quality, while farm quality was transacted at Rs. 15-12. Offtake during the week was mostly for day-to-day requirements of the locality. The daily arrivals—at an average of 75 maunds—were wholly insufficient; they aggregated 4 *khaties* and the local stock is now put at 44 *khaties*, as against 25 khaties at this time last year. The imposition of ban on export of husked rice acounted for further depressed conditions in the prices of rice. The Government continue to sell *Rangooni* rice by auction and the supply position of rice is easy. The latest prices are: *Basmati* Rs. 31, *Rangooni* Rs. 14-4, *Mainpuri sela* Rs. 18-4.

Gram prices also eased fractionally on better crop prospects, today's quotations being Rs. 9-14 for local quality and Rs. 10-6 for Punjabi quality. Stocks aggregated 12 *khaties*. The step taken by the Union Government as a bid to check rise in foodgrain prices by banning export of *jowar* accounted for a fall in the prices of all coarse grains. Barley prices, however, continued to be steady at unchanged levels, due to paucity of stocks. The latest available prices are: Barley Rs. 10-2, *bejhar* Rs. 9-14, maize Rs. 10-12, *bajra* Rs. 10-2 and *jowar* Rs. 10-8.

Easy conditions continued to prevail in the pulses section. Peas *dara* lost As. 10 to Rs. 8-12 per maund and white quality was quoted at Rs. 9-8 per maund. Outside buying enquiry was slack and stock is now put at 11 *khaties*. Arhar prices eased by Re. 1-4 to Rs. 12 for want of support and stock position remained unchanged at 9 *khaties*. Other pulses also eased fractionally to be quoted today at *urd* Rs. 15 to Rs. 16-8, *moong* Rs. 14 and *masoor* Rs. 13-12 per maund.

SUGAR DULL

(From Our Own Correspondent)

HAPUR, 30*th January*

The sugar market ruled dull, thanks to negligible demand. Crushing operations in mills are in full swing and the latest available figures regarding sugar production reveals that the expectations of an increased overall production will prove correct. The depressing *gur* prices will also help increase sugar production. The latest mill delivery prices of sugar are: Jaswant Rs. 28-8, Simbhauli Rs. 28-12, Mowana Rs. 29, Daurala Rs. 29-4, Amroha Rs. 27-12, Bijnore Rs. 27-12, Mansoorpur Rs. 29-8, Rampur Rs. 30-8; retail Rs. 31 per maund. Owing to weakness in sugar, the *khandsari* market also remained inactive, with meagre arrivals and negligible demand. Inferior grade was quoted at Rs. 22 and superior quality at Rs. 26-8 per maund.

Depressed conditions continued to prevail in the ready *gur* market. The price eased further by As. 4 to Rs. 10-14 per maund. Arrivals during the week were moderate and aggregated 25,000 maunds. The total arrivals since the beginning of the season amount to 340,000 maunds, as against 412,000 maunds a year before. The fall in the ready prices of *gur* during the week followed easy loading facilities in the form of *gur* specials to Gujerat, due to a fall in demand at prevailing rates. Gujerat is now meeting its demand from markets in the South where prices are reported to be more competitive.

Future *gur* prices at Hapur also eased, on heavy bull liquidation, influenced by depressed prices in the ready section and increased stocks. *Gur phagun* opened at Rs. 11-15-7½ on Monday last and touched the highest at Rs. 12-0-10½ the same day but declined in successive sessions to finish at Rs. 11-5 today.

Notices

THE BENGAL POTTERIES LIMITED

NOTICE

To

THE SHAREHOLDERS.

Please take notice that a General Meeting of the Company will be held on Saturday the 18th day of February 1956, at 3-30 p.m., at the Registered Office of the Company at No. 45, Tangra Road, Calcutta, to consider and if thought fit to pass the undermentioned Resolution, with or without modification:—

"RESOLVED that the Capital of the Company be increased to Rupees One Crore by creation of 27,03,115 new shares of Rs. 2-8 each ranking for dividends and in all respects *pari passu* with the existing shares in the Company, and that out of the said 27,03,115 new shares, or so much thereof, which the Directors may decide to issue at par, for subscription, with the permission of the Controller of Capital Issues, 1,00,000 shares of the face value of Rs. 2-8 each in the first instance, be issued to Mr. M. G. Bhagat (or his nominee or nominees) of No. 11, Rawdon Street, Calcutta, for consideration, payable in cash and thereafter the balance of the issue remaining after allotting the said 1,00,000 shares to Mr. M. G. Bhagat (or his nominee or nominees) as aforesaid, be offered to the existing members of the Company, as nearly as circumstances admit, in proportion to the existing shares held by each member of the Company as on the date of the issue."

By Order of the Board of Directors,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA 15, 25*th January* 1956.

MADURA MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held in Tuticorin on Monday the 26th March 1956, at 4 p.m. The Share Transfer Books will be closed from 6th to 26th March 1956, both days inclusive. It is recommended that:

1. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names, as the Company will pay any dividend declared only to the person(s) in whose name the share stands on the date of declaration of dividend.
2. Shareholders desiring dividends to be paid to Banks or other Mandatees should register the mandates with the Company before 6th March 1956.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LIMITED,
Managers.

MADURAI, 28*th January* 1956.

MANCHESTER LETTER

(*Concluded from page* 201)

country. Sir Alfred Roberts, Secretary of the Cardroom Workers' Amalgamation, has lately filled in the background against which the issue must be fought in Lancashire. In his view, the system would never be universally adopted due to the absence of sufficient workpeople to operate it.

Figures he quoted indicate that the average age of operatives now employed in spinning mills working shifts is distinctly lower than the average throughout the industry. This could mean, as he suggested, that the older workers had found employment elsewhere, not liking the idea, or that the younger operatives were more prepared to accept these conditions, recognising the need for them.

Sir Alfred estimated that the spinning and weaving industry in Lancashire now provides employment for about 100,000 married women and accused the employers of "asking for a great deal" in suggesting that these operatives should be urged to start shift work. As for treble shifts, only men can be employed on the night shift by law and this would mean training male labour, especially in the spinning branch, thus adding to the cost of the operation.—*All Rights Reserved.*

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=No claim quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. I=Interim Dividend. I=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as shown % per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

M—Managed by the board of directors. † Less income-tax. * Including bonus. (k) Investments.

(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-1p per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (e) For seven months ended 31st March, 1954.

BANKING

(*Concluded from page 198*)

by taxation, in theory they avoid inflation but in practice inflation occurs as a result of their action. One could sympathise with them if it were not that there is a solution lying readily to their hand: to reduce their own expenditure."

Mr. Tuke further adds

COMPANY LAW ADMINISTRATION

THE new Company Law received the assent of the President on 18th January 1956 and was gazetted on the 19th of that month. It has many distinctions to its credit, the most important of them being that it is the longest piece of legislation, with as many as 658 sections and very few schedules, and one of the most complicated was not content to be put on the Indian Statute book. Reports in addition to its distinctions is that the Finance Act of the new year. Accordingly, that he may have the distribution control as the Companies Act, 1956, among non-essential commodity, in order finally adopted by Parliament in point that the date on which it will come into of shortage are is yet to be announced, but the public has already been told by authoritative spokesmen of the Government that it will be enforced from 1st April 1956. Vigorous efforts are being made to stick to this time-table. The draft rules and forms have been prepared and circulated to Registrars of Joint-stock Companies and others for study. The Government's intention is to enforce these rules on the same date as the Act.

Some idea of the method and the manner in which the new Act will be administered was given by Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, and Mr. C. D. Deshmukh, Minister for Finance, in their speeches at the conference of Registrars of Companies and officers of Regional Directorates of the Company Law Administration, held at New Delhi on Tuesday last. The former elucidated the method and the latter the manner of administration. From what Mr. Shah stated, the following picture of administrative machinery emerges:

A department, called the "Department of Company Law Administration," has been created at the Centre as part of the Finance Ministry, with its headquarters in New Delhi. It will have a Secretary and Joint Secretary, both full-time employees. The Secretary will be in charge of overall policy, while the Joint Secretary will look after the administration of the law. Besides the normal staff required for administration, there will be a statistical and research section for processing and analysing data about the working of companies. The Secretariat will be assisted by an Advisory Commission, consisting mostly of non-officials.

The provisions of the Act will be administered all over the country by a number of full-time Registrars of Companies. In anticipation of the requirements under the new Act, a number of them has already been appointed. Each State will have a Registrar, with the necessary, technically qualified, staff. The responsibilities, as also the powers, of these officers will be greater than they are at present. They will have to register new companies, receive returns and scrutinise them carefully before filing them. It will be their duty to ensure that the returns and documents submitted to them are in accordance with the provisions of the law. For this purpose, they will have the services of qualified technical assistants, such as chartered accountants, for instance. Administrative procedures and office routine will be standardised on the basis of experience gained in countries like Britain. A special officer has been deputed to London to study how the Registry of Companies there is functioning and to introduce such of those methods as are calculated to improve the efficiency of the administrative machinery and obviate delays. The offices of Registrars will have to collect and compile the basic data on the working of companies, managing agents, directors, etc., and submit them expeditiously at predetermined intervals to the Central Directorate for analysis and distribution. Another important function of the Registrars is to administer the law in the light of policies laid down by the Government from time to time and are already implied in the Act itself.

In order to co-ordinate, direct and supervise the work of Registrars, four Regional Directorates will be established, with headquarters in Bombay, Calcutta, Madras and Delhi. These offices will constitute a link between the Central Government and the Registrars, as well as between the latter and the respective State Governments in their region. The Regional Directors will be senior officers of the rank of Deputy Secretary and will function as the local representatives of the Central Department. They, too, will be assisted by a chartered accountant and a solicitor, both with specialised knowledge of, and experience in, company practices and company law. The main objects in equipping these *Regional Directors* with such skill are two, namely, to enforce the law effectively against those who deliberately try to evade it and to help those who are not in a position to command the services of experts to understand the complicated provisions of the Act and the rules.

It will be observed from the foregoing account that the Government has designed the machinery for administering the Act on sound lines. Whether the machinery will function smoothly and efficiently is another question. The answer for it hinges on the persons to whom the responsibility is entrusted and the extent of liberty such persons are given by the Central authority for using their initiative and judgment in the discharge of their duties. For the present, it can be stated, from the elaborate machinery that has been evolved, that it is clearly the intention of the Government of India to enforce the Act vigorously and with understanding, a refreshing departure from the past when there was hardly any administration of even the relatively simple and less comprehensive Act that existed.

The objectives of the new Company Law and the spirit in which the Administration should apply it were indicated by Mr. Deshmukh in his inaugural address to the conference referred to at the outset. Briefly stated, the objective is to bring the operations of joint-stock companies which now embrace a very large part of the *economic life of the country in conformity* with the social and economic policies laid down by the Government. Elucidating this point, Mr. Deshmukh said:

"In a country like ours, where we prefer to work on the basis of a comprehensive plan of economic and social development, the problem of economic integration between the so-called private and public sectors becomes, through the processes and mechanics of planning, a major issue of administrative policy. There are various ways in which the State can and does, in practice, secure this much needed integration between the two sectors, and, if I were to attempt a simple re-statement of an essentially complicated problem, I would say that the test of efficient and successful economic administration in any modern State, which believes in democratic methods and techniques, is the manner in which it secures such integration. Both law and administrative policy have their parts to play in this matter, and the Companies Act is one of the most important of these laws, which help in securing this object. This is the basic significance of the Companies Act which I should like all our administrators to grasp, so that they can see the underlying logic of the numerous regulatory provisions in the new Act in its true perspective."

The objective outlined above is a unique feature of the Indian Company Law and as such the administrators of this law have far greater responsibilities than their confreres in other democratic countries. Theirs is a task which no conscientious administrator will envy, for failure would bring discredit to them, even though it may be due to the vagaries of politicians under whom they have to work.

As for the manner and the spirit in which the Act is to be administered, Mr. Deshmukh laid down the following golden rule:

The primary duty of officers is "to secure compliance with the provisions of the new Act and to make it easier for joint-stock companies to do so, by their advice and guidance whenever they may be in a position to offer them." They are not required to go beyond or outside the provisions of the Act. They should take the Act as it has been enacted and interpret its provisions in the light of such instructions as they may receive from time to time from the headquarters of the new Department and then enforce the provisions with understanding and wisdom. They should make it clear to those

who seek their advice that, while they are not the authorised interpreters of the Law, the advice they are able to render is the view of the Law which they themselves would take for administrative purposes till they receive instructions to the contrary or till the Law has been authoritatively interpreted in a different way. In fine, they should deal firmly and vigorously with deliberate violations of the Law, but leniently with inadvertent omissions arising from either lack of knowledge or proper understanding.

In this connection, the Finance Minister did well to remind the officers present at the conference of the assurances he gave to Parliament when the Companies Bill was being debated, so that they may adhere to them while carrying out their day-to-day duties. These assurances, in the words of the Minister himself, run as follows:

> "I am very happy to give the assurances that have been demanded in regard to the administration; first (1) that it should be adequately staffed, (2) that it should be competent, (3) that red-tape should be reduced to a minimum and that, finally, (4) we should have a new concept of positive helpfulness; that is to say, our aim should be not to trip up the unwary but to assist actively those who seem anxious to observe the Law but find themselves somewhat helpless in this welter of legislation which, I am sure, will be further complicated when the rules come up almost inevitably."

Every officer in charge of administering the Company Law should have before him the foregoing quotation prominently displayed, so that he may not fail to live upto the standard of duty demanded of him. These officers should remember that the reputation of the public sector, which is assuming more and more responsibility, lies in their hands. They have now so much power and responsibility that they can easily make or mar the reputation of the Government. India is, perhaps, the only country in the free world where the politicians have unwittingly placed their political fortunes in the safe custody of the bureaucrats. And, what is more, they continue to do so on an increasing scale, in the fond belief that that is the right way of ensuring the abiding faith of voters in them. Time, we have no doubt, will prove the unwisdom of this approach.

ASIAN ECONOMY

ASIA and the Far East, which, with its 2,320 millions accounts for over 50 per cent. of the world population, has a vital role to play in world economy. Its significance has invariably been assessed at less than its real value. It is only as a producer of raw materials, in some of which it probably holds a monopoly, that its importance has come to be recognised. But a far more important consideration, which is slowly gaining recognition in international counsels, is the magnitude of the difference to world economy which could take place as a result of even a small improvement in the living standards of this region. The political aspect of the Asian problem is no less important, for the survival of democratic institutions in this region is intimately connected with economic development. The world owes much to the Economic Commission for Asia and the Far East (E.C.A.F.E.) for the persistence and clarity with which it has presented Asian economic problems, suggested solutions, and provided guidance to the countries of this region.

The E.C.A.F.E. report for 1955, which was released at the time of the annual session of this body held at Bangalore this week, contains, as usual, a mine of information on the region's economy. Agricultural and food production during the year under review was maintained, it is stated, approximately at the level of the previous year which was a post-war record. The 1954-55 cereals production in the region, excluding mainland China, though lower by 1.5 per cent. than in 1953-54, was the second highest on record, while in mainland China it rose by over two per cent. But Asian agricultural economy has still a long way to go before it can catch up even with its pre-war level. Thus, the *per capita* agricultural production in this region (excluding mainland China) in 1954-55 was still 14 per cent. below the pre-war (1934-38) level. The report rightly stresses that the "slow recovery of agriculture might become a serious obstacle to rapid economic development," and, in this connection, welcomes the fact that "the emphasis in many countries continues to be on programmes of development in the agricultural sector."

Turning from agriculture to industry, the report notes that industrial production has increased from five to eight per cent. over 1954 in China, India and Japan. These are the countries where Asian industrial economy is mainly concentrated. In other countries, the foundations for industrial development, it is stated, have been laid. Ideas of national self-sufficiency have led to the growth of cotton textile, rubber, paper, leather, sugar and oil-processing industries. Production of electricity, cement and steel has shown substantial increases during the period. China, India and Japan have plans for further rapid expansion of capital goods industries, heavy metals, engineering and heavy chemicals. Other countries have made a small beginning; caustic soda plants, fertiliser factories and steel works have been set up, or are to be set up, in Ceylon, Pakistan, the Philippines and other countries.

Much attention is being devoted to the development of power resources. It is planned to raise the present total electric power capacity by 50 per cent. during the next few years; excluding Japan, the capacity is expected to be doubled to about 15 million kw. The countries have naturally manifested an intense interest in the possible development of atomic power for industrial purposes. Emphasising the importance of nuclear energy to this region, Mr. Dag Hammarskjoeld, U.N.'s Secretary-General, said that it was "likely to become, in due course, a primary factor in accelerating the economic growth of countries which at present have to bear the heritage of centuries of poverty." He added: "It may, indeed, become possible for these countries to short-circuit some of the stages of development through which the economically advanced countries have had to pass." It is true that much remains to be done for nuclear power to be available at a price that will compare favourably with conventional fuels. But the immense amount of research that is being done in the West may pave the way for cheaper nuclear power. From this point of view, such research, it must be acknowledged, is an indirect measure of assistance by the developed countries to the underdeveloped countries.

The region's trade has benefited from the favourable world conditions which prevailed during the year 1955. World demand for primary products was strong; the prices for these products ruled higher than in recent years. Nevertheless, it is admitted that the export trade of the region, as a whole, has improved much less than the international trade in general. Thus, its share in world exports has declined from 11-12 per cent. in the Korean boom period to 9 per cent. in the first half of 1955. Again, while the value of world exports rose by 6 per cent. between 1951 and the first half of 1955, that of the region's exports declined by 21 per cent. Although the region's foreign trade, set against the background of international trade, does not present a very bright picture, it is noteworthy that most countries found themselves with a larger volume of foreign exchange reserves at the end of June 1955 than at the end of June 1954. Stable monetary conditions prevailed in most countries of the region. The only exceptions were South Korea, China, South Viet Nam, Nepal and Cambodia, where inflationary conditions were noticed as a result of high defence and administrative expenditures.

There is, however, one thing which no statistical comparisons can bring out. It is the intense desire for economic progress which is to be found everywhere in this region. As Mr. Nehru, India's Prime Minister, said in the course of his inaugural address: "A new awakening has come upon the Asian people.... They want to progress and go ahead." It is noteworthy that the E.C.A.F.E. report has not missed this essential feature of Asian ambitions today. It says:

> "But the really significant thing is, perhaps, that Asia seems to have emerged at last from a long period of economic stagnation and is ready for a decisive forward march towards economic development. The turning point apparently was the Korean war boom; after 1952, countries have adjusted themselves to a lower level of export prices and economic conditions have taken a definite upward turn. The improvement in fiscal and monetary controls and public administration, the progress in institutional arrangements for mobilising domestic capital and financing agriculture and industry, the development expenditures which, in some ways, stimulated private investment, the increasing flow of external aid in the form of grants and loans and, above all, the urge to bring about an accelerated rate of development have all helped in the process."

This longing for economic progress is a valuable asset in itself. But, if it is to be converted into a tangible reality, many conditions have obviously to be fulfilled. There are at least two important conditions which it would be absolutely necessary to fulfil. A correct technique of planning, which would take into account the peculiar needs and deficiencies in each region and assign a scale of priorities in development, must be adopted. The second condition is adequacy of technical and financial resources; domestic resources must be supplemented by foreign resources. The E.C.A.F.E., by its study of the problem of economic development, has greatly contributed to the better understanding of the nature and technique of planning for an underdeveloped country. But the more vital question is that of finance. In this connection, the report has drawn attention to two important factors. In the first place, it is not so much population growth in itself that checks levels of living as low rates of savings and investment. Secondly, it frankly admits that it would be impossible for the countries to pay through exports from their current pro- tion for all the imports of capital eq needed for their development progra therefore, emphasises that "the ext adequate external assistance wil determine the trend of progress years."

Mr. Nehru did well to stre final analysis, all progress could through the effort of the nations themselves. the same time, he welcomed the inflow of foreign capital—foreign capital without strings. Mr. Hammarskjoeld also struck the same note. He pointed out that, in the long run, the economic progress of any nation had to be mainly of its own making. But the problem, he said, was also a challenge to the economically advanced countries. From this point of view, he pointed out that the U.N.'s achievements fell far short of the needs of the underdeveloped countries. Nevertheless, some progress, as is well known, is being made. Besides the World Bank, which has already been making available finance for underdeveloped countries, the United Nations will soon set up the International Finance Corporation. The concept of S.U.N.F.E.D. (Special United Nations' Fund for Economic Development), as the Secretary-General said, is also "slowly moving forward."

There was, at the Bangalore session, considerable support for the S.U.N.F.E.D. idea. Indeed, the Indian delegate, Mr. Manubhai Shah, Finance Minister of Saurashtra, pointed out that its establishment should not be postponed any more. It must, however, be admitted that there was insufficient appreciation of the role which private foreign capital could play in Asia's economic development. Now that these countries have won political emancipation, one would expect them to eschew their earlier fears of foreign private capital based on their experience in the pre-independence era. Although these fears were not expressed, the repeated insistence on "foreign capital without strings" suggests that they still govern the attitude of these countries towards foreign private investments. This is deplorable, for these countries, apart from whatever help they could get from specialised U.N. agencies, might have to look to private foreign capital to supplement their own efforts. Such capital should help solve the main problem, which, as the U.N. Secretary-General said, is now "no longer how to advance but how to advance more rapidly." In the context of the admitted paucity of domestic resources in the form of money, technical know-how and trained man-power and the limited range of activities to which the funds of the U.N.'s special agencies would be available, the delegates to the E.C.A.F.E. session would, perhaps, have done well to explore the possibilities of facilitating the flow of such capital. Any common approach of these countries to the problem would, of course, presuppose some agreement on domestic economic policies. These policies, in order to attract capital, would, perhaps, have to be reoriented in the shape of giving a wider scope for private initiative and enterprise, of assurance of facilities for transfer of profits, and of reasonable compensation in the event of nationalisation. Such re-orientation would in no way mean a restriction on the national sovereignty of these countries. It is needless to add that, when economic development in these countries is fairly well established, a stage will be reached at which domestic capital might easily be able to displace foreign investments.

INVESTORS' CONFIDENCE SHAKEN

DIVIDEND OUTLOOK FOR TATA STEEL

SECOND PLAN BRIEFLY OUTLINED

THURSDAY, 5 P.M.

THE debacle on the Stock Exchanges persists and lack of confidence in the future is the main cause for it. The shock given by nationalisation of insurance has not been got over. Advance reports of the contents of the final draft outline of the second Plan (see below) have only served to accentuate it. Apprehensions about the forthcoming Budget being unfavourable to investors are, once again, strong. It is feared that a big effort may be made by Mr. Deshmukh, the Union Finance Minister, to attain the goal of a ceiling on individual incomes by stepping up the direct taxes. It is also feared that, with a view to restraining consumption, indirect taxes on certain consumer goods may be raised appreciably. If the tax on cloth, for instance, is enhanced it may serve the two-fold purpose of releasing more cloth for export and depressing the prices of cotton which, of late, have been ruling very firm. It may be noted here that this time last year the trend of cloth and cotton markets alike was not conducive to such taxation.

MARKET GOSSIP

Reports of shortage of cement may also make the Finance Minister think. It is not improbable that he may be contemplating either tightening of distribution control on cement—a sort of rationing among non-essential consumers—or taxing the commodity, in order to discourage its consumption. The point that we wish to make here is that the signs of shortages that are already visible in certain goods and the possibility of a scarcity emerging in certain others may provide a convenient excuse for the Finance Minister to increase the indirect taxes. Some, if not most, of this increase will have to be borne by producers. It may be noted here further that there is every possibility of a rise in railway fares and freights which, in turn, will tend to reduce the profit-margins of industries. In view of all this, the chances of any notable recovery in equity values before the budgets are out of the way are remote. It is true that over the week, there has been some improvement in the prices of a large number of shares, but this must have been due mainly to short-covering and partly to selective buying by investors on a very small scale.

The latest reports from the Calcutta Stock Exchange are disquieting. The settlement of outstanding business has not yet been put through and the parties from whom differences are due have not honoured their commitments. It is difficult to describe in detail the exact state of affairs in that market; but this much is obvious, that is, the crisis continues. Those operators who have become despondent over the protracted intransigence of bulls are trying to limit their losses by selling Indian Irons in the Bombay market. Hence, the sudden reversal of the smart rally that had taken place in the steel section till yesterday.

Contrary to misgivings on the part of some, the last fortnightly settlement on the Bombay Stock Exchange went through without any mishap. This was due, to a considerable extent, to the fact that the big bull in the Calcutta market honoured his commitments in Bombay, though he has not done so there. It remains to be seen how long he will go on in this manner. If he finally choses to default in Calcutta, he may do likewise in Bombay, too. The position, therefore, is still quite uncertain, what with the further fall that has taken place in equity values since the last settlement day.

Much was made during the week of the reported limited purchase of a few equities by the custodians of some insurance companies. Enquiries made in knowledgeable circles reveal that the Government has so far given no general directive to the custodians to buy equities that are eligible for investment of life funds. The small parcels of Tata Ordinaries, Calicos, and A.C.Cs. said to have been bought early this week would appear to be no more than a replacement of the *bona fide* sale made by a leading insurer when they were standing at peak levels. It was, in short, an isolated transaction and not an indication of the Government's policy. It stands to reason that, with a big new loan by the Centre ahead, the Finance Ministry must be thinking more in terms of conserving the cash receipts of life insurance companies for taking up that loan than of utilising them for supporting equities. In fact, it would not be surprising if, after a while, even the purchases of Gilt-edged securities by the custodians of life funds were to be substantially slowed down.

* * * *

A careful analysis of the Tariff Commission's report on the retention price for steel discloses that the increase awarded in the price falls short of what both the producers—the T.I.S.Co. and the I.I.S.Co.—had asked for, that both will have to raise their capital by a much greater extent than they now wish to, besides seeking further loans from the Government, and that the surplus which will be available for distribution of dividends is smaller than the majority in market circles presume. In the case of T.I.S.Co., this surplus is only Rs. 11.64 crores for the five years beginning from 1955-56, that is, an annual average of Rs. 2.33 crores. As the preference dividends will require Rs. 57 lakhs per year, the amount available for paying ordinary dividend works out to no more than Rs. 1.76 crores. On double the present ordinary capital of Rs. 9,63,75,000 (that is, on 2,570,000 ordinary shares of Rs. 75 each, after the proposed capital expansion is completed) this would be sufficient to pay a modest dividend of just Rs. 6-14 per share. But, as the Company may have to conserve a little more than what the Tariff Commission has presumed, if it is not to get indebted to the Government still further, it may not be able to pay even that dividend but something less. The assumption in this column last week that the dividend on the increased capital may not be more than Rs. 6 per share is thus not very wide of the mark. A return of Rs. 6-8 per share would, perhaps, appear as something more reasonable to many. And this figure is, of course, well within the calculations of Rs. 6-14 per share, as mentioned above. It will be interesting to note here that one of the biggest insurance companies had calculated, of course before nationalisation, that, on the basis of the new shares being issued at par, Tata Ordinaries would be a good long-term investment proposition at Rs. 240 per share. Now that the new issue is to be at a premium of Rs. 30 per share, its estimate of a reasonable price for buying these shares, based on expert calculation, will have to be lowered to Rs. 210 per share, assuming that the increase in the retention price for steel which has now materialised has been in accordance with its expectations.

* * * *

The text of the draft outline of the second Five-year Plan, released just at the time of our going to press, contains few surprises. The broad outline is similar to the pattern which is already known to the public. The total outlay is thus the same as the Rs. 4 800 crores indicated earlier; of this outlay, the States' share is Rs. 2,214 crores. Again, out of the total outlay, a sum of Rs. 1,000 crores will represent current expenditure of a development nature, so that the investment on productive assets will be to the tune of Rs. 3,800 crores. Investment in the private sector is reckoned at Rs. 2,300 crores, so that the total productive investment comes to Rs. 6,100 crores. In the first Five-year Plan, the public and private sectors participated equally in development. In the next Plan, the share of the public sector has been raised to 62 per cent. As a consequence of the implementation of the second Plan, the national income is expected to increase from Rs. 10,800 crores in 1955-56 to about Rs. 13.480 crores in 1960-61—that is, by about 25 per cent. This will result in an increase of about 18 per cent. in *per capita* income (from Rs. 280 in 1955-56 to Rs. 330 in 1960-61), as compared with an increase of 10 per cent. over the first Plan period (from Rs. 255 to Rs. 280).

The total outlay of Rs. 4 800 crores in the public sector is distributed as follows:

Agriculture Rs. 565 crores (12 per cent.); Irrigation Rs. 458 crores (9 per cent.); Power Rs. 440 crores (9 per cent.); Industries and Minerals Rs. 891 crores (19 per cent.); Transport and Communications Rs. 1,384 crores (29 per cent.); Social Services (including housing) Rs. 946 crores (20 per cent.); Miscellaneous Rs. 116 crores (2 per cent.).

How are the resources to be raised? A tentative estimate places the surplus from current revenues at Rs. 800 crores (at existing rates of taxation Rs. 350 crores and additional taxation Rs. 450 crores), borrowings from public Rs. 1,200 crores (market loans Rs. 700 crores and small savings Rs. 500 crores), contribution from railways Rs. 150 crores, provident fund and other deposit heads Rs. 250 crores, external assistance Rs. 800 crores, deficit financing Rs. 1,200 crores, leaving an uncovered gap of Rs. 400 crores. It will thus be seen that the revenue from tax will be increased over the next Five-year period to Rs. 800 crores. This represents additional taxation of Rs. 450 crores. This increase is not regarded as "excessive either in relation to possibilities or of needs." The tax revenue now forms about 7 per cent. of national income; additional taxation of Rs. 450 crores will raise this proportion only marginally. But, if the anticipated income from other sources does not come up to expectations, greater reliance will have to be placed on taxes. Indeed, the Plan declares that the "target for additional taxation indicated here must be regarded as the minima to be attempted." The target for loans from the public has been set at Rs. 700 crores over the next five-year period; the average in the last two years has been some Rs. 100 crores. The loan target, it is stated, is not over-optimistic. But it must be remembered there are large maturities during this period and that State Governments, too, will want to borrow large sums.

A deficit of Rs. 1,100 crores in the foreign exchange resources is envisaged, thanks to the need for importing a wide range of capital goods and machinery for implementing the Plan; such imports will aggregate Rs. 1,350 crores, of which the requirements of the public sector alone will amount to Rs. 950 crores. The estimated deficit could be covered partially by Rs. 200 crores through withdrawal of sterling balances and net inflow of private capital to the tune of Rs. 100 crores. This would leave a gap of Rs. 800 crores. This will have to be covered by external assistance in the shape of loans from the World Bank and other U.N. agencies and credits available for the bigger projects. Nevertheless, it is admitted that the "accent of policy has necessarily to be on maximising export earnings and economising to the utmost in imports." Perhaps, some rigorous import control will become necessary in the future. Thus, a consideration of the financial aspect of the Plan indicates that, for the country as a whole, a period of higher tax levels and wider taxation is ahead. The impact of this on the economy might be intensified by the deficit financing of the magnitude contemplated in the Plan.

The Plan's main emphasis, as stated at the outset, falls on the public sector. Indeed, the philosophy of the Plan is based entirely on increasing the share of this sector. The draft outline says: "The public sector has to expand rapidly and the private sector has to play its part within the framework of the comprehensive plan accepted by the community." It is nevertheless hoped that, in a "growing economy which gets increasingly diversified, there is scope for both the public and the private sectors to expand simultaneously." In view of the fact that the draft outline wants the public sector to grow, some re-statement of the Industrial Policy Resolution of 1948 has been deemed necessary. An attempt is being made to do that. Meanwhile it is felt that the ownership and the right to exploit and develop mineral resources must vest in the State. "In the industrial field proper," says the draft outline, "new units producing basic capital goods and heavy machinery must be under public ownership and management. Even here, there may be scope in particular cases and in certain circumstances for undertakings to be owned and operated jointly by the State and private enterprise. In other industries where Government assists substantially by providing long-term finance, it should preferably offer equity participation rather than loans on fixed interest. Enumeration and classification of industries to be placed in the various categories requires close scrutiny and has to be decided upon in the light of practical requirements of each case. The point to emphasise is that the increasing role of the public sector, and its duty to provide entrepreneurship and management over a wide field must be clearly recognised and action must be initiated to equip it for the efficient discharge of these responsibilities."

Credit, it is recognised, is vital to economic progress. After referring to the recent measures adopted by the Government, such as the nationalisation of the Imperial Bank, encouragement to rural credit and the setting up of industrial finance corporations, the draft outline says:

> "It may be necessary also to develop further institutions which could provide the nucleus for a properly organised new issue market, especially as a diminishing role is being envisaged for the managing agency system. The recent decision to nationalise life insurance has added another potent instrument to the repertory of the public sector for raising savings and for regulating and directing the flow of funds in accordance with the requirements of the Plan."

A great deal of control on the private sector, it is felt, is necessary in the interests of achieving development and of reducing inequality in incomes. Such control may take the form of "fiscal or price incentives, licensing procedures and practices, foreign exchange allocations, sanctions of capital issues, fixation of profit margins or allocations of scarce raw materials." After emphasising the need for enlarging the field of operation by the State and the co-operatives for gathering the surpluses arising out of the trade, it declares: "It is not only regulation within the existing structure that can answer the need of development; the structure itself has to change."

It is noteworthy that the draft outline has clearly endorsed the principle of imposing a ceiling on income. It says that each of the various devices suggested for reducing the inequality of income such as higher taxes, enhanced estate duties, a small annual tax on wealth, taxation of higher incomes on the basis of expenditure rather than of income, etc., has to be examined in the light of its revenue yield, its effect on incentive, its administrative implication and the net contribution it makes to the objective in view, namely, the reduction in inequalities. It adds:

> "The principle of a limit on income disparities and on private accumulation beyond a point is part of accepted thinking on these problems; the best means of applying it in practice have to be worked out. There is general agreement that personal incomes in the highest ranges should bear a reasonable relationship to average *per capita* or per family incomes in the country. The Taxation Enquiry Commission suggested thirty times the prevailing per family incomes as a reasonable 'ceiling' on net personal incomes after tax, and it is necessary to advance towards this objective by stages."

HIND BANK'S RECORD PROFIT

The profit of the Hind Bank Ltd. for the year ended 31st December 1955, subject to audit, amounts to Rs. 10,86,458, representing an increase of Rs. 4,30,861 over that for 1954. This rise in profit is in refreshing contrast to the drop of Rs. 1,35,441 noted in the previous year, and has enabled the Bank to establish a fresh record profit, exceeding the previous highest of Rs. 9,47,813 earned in 1951. After bringing in the surplus of Rs. 1.12,820 from the previous year, the sum available for distribution is Rs. 11,99,278, from which the Directors have transferred to the reserve fund Rs. 2,50,000, as against Rs. 1,50,000 set aside last year. The provision for taxation has been raised from Rs. 2,80.000 to Rs. 4,00,000. Out of the balance, the Directors propose to pay a dividend of Rs. 3 per share of Rs. 50, free of income-tax, thus doubling it from Re. 1-8 per share paid for the previous two years. This will absorb Rs. 3,00.000, as compared with Rs. 1,50,000 last year, leaving a sum of Rs. 2,49.278 to be carried forward, subject to payment of bonus to staff, for which purpose a sum of Rs. 39,000 had been utilised last year.

EQUITIES REACT AFTER SMART RISE

TEXTILE SCRIPS ACTIVE

(From Our Own Correspondents)

BOMBAY, *9th February*

THE share market displayed a better tone during the major part of the week under review. The recovery noted at the close of the previous week was extended this week and sizable gains were recorded over a very wide front on hectic short-covering and small bull support. Towards the close, however, fairly heavy selling pressure emerged and under the lead of steels, shares retreated shedding a substantial part of the earlier gains. The undertone at the close was somewhat easy.

The cheerful sentiment which prevailed in the earlier part of the week was attributed to abatement of selling and heavy short-covering induced by hopes that the settlement difficulties would soon be tided over. These hopes gained strength from the fact that the settling day in Bombay for receiving payment and shares from the Clearing House in respect of the last settlement passed off smoothly. Confidence also revived on reports that custodians of a few insurance companies purchased some lots of equities, particularly Tata Ordinaries and A.C.C. These purchases on behalf of insurance companies, though confined to a limited sphere, gave hopes that the support from these quarters would be extended further in the coming weeks. Prospects of good working results of textile mills and expectations of better dividends induced large-scale support to textile scrips, which, in fact, provided the highlight of trading this week.

The improvement in sentiment was not, however, sustained throughout; for towards the close, the bearish implications of the revised final draft of the Second Plan—the period of which, it was reported, was likely to be extended to six years—the Budget uncertainties and reports that settlement difficulties in Calcutta, which were expected to be cleared off today, were not got over, caused some nervousness. Operators were, therefore, inclined to lighten their commitments. Steel scrips lost the entire gain built up earlier, while textiles disclosed fair-sized gains over the week.

In the steel section, Tata Ordinaries gained ground from Rs. 225 to Rs. 229-8, but retreated to Rs. 225 at the close today. Indian Irons, after an early dip from Rs. 33-4½ to Rs. 32-14½, advanced to Rs. 33-15, but the gain was more than wiped out when the scrips finished today at Rs. 32-14.

Textile shares were in the limelight. Proximity of dividend announcements induced good activity in all leading counters. The announcement of a higher dividend by the New Great Mills in the Brady Group—the dividend was raised from Rs. 7-8 to Rs. 10—strengthened confidence in this section. Bombay Dyeings rallied from Rs.498-2 to Rs. 516-14, before retreating to Rs. 507-8. Despite the fall today, the shares emerged Rs. 9-6 higher over the week. Kohinoors came up from Rs. 323 to Rs. 332, but receded to Rs. 327-8 today. Centurys attracted good attention and moved up from Rs. 449 to Rs. 461-8, before reacting to Rs. 451-4. Central Indias gathered over the week Rs. 3-8 to Rs. 139, Finlays Rs. 8 to Rs. 320 and Gokaks Rs. 7 to Rs. 224. Indu Ordinaries gained As. 3 to Rs. 12-4, Indore Malwas Rs. 5 to Rs. 129-6 and Khataus Rs. 3-12 to Rs. 210. Lakshmis finished Rs. 3-12 higher at Rs. 668-12 and Models Rs. 6-4 better at Rs. 148-12. New Greats put on Rs. 4 to Rs. 194, while New Citys, which have maintained the dividend at Rs. 10, dropped Re. 1-14 to Rs. 160. Shree Niwas were done Rs. 2-8 higher at Rs. 210. Simplex moved up from Rs. 182 to Rs. 189, but drifted lower to Rs. 185-8. Standards rallied smartly from Rs. 381-4 to Rs. 401-14. Svadeshis advanced by Rs. 6-8 to Rs. 209 and Swans added Rs. 7-8 to Rs. 412-8.

Bank shares made a good recovery on abatement of nervous selling. This was attributed to reports that an assurance was given by the Finance Secretary, when he was in Bombay last week, to the representatives of shareholders to the effect that nationalisation of banking was not imminent and that it was not under the consideration of the Government at present. On the Stock Exchange, Central Banks moved up by Rs. 3 to Rs. 49 and their New Shares by Re. 1-12 to Rs. 50-12. Bank of Indias, after drifting lower from Rs. 150-8 to Rs. 147-4, briskly advanced to Rs. 151. Barodas hardened by a rupee to Rs. 95. United Commercials finished better at Rs. 50-8, after receding from Rs. 50 to Rs. 49.

A rise of Rs. 225 to Rs. 3,800 in Orientals was again a feature in the insurance section. New Indias declined further by a rupee to Rs. 40, while Indian Mercantiles recovered by a rupee to Rs. 43. Vulcans changed hands As. 2 lower at Rs. 15-8.

Electricity shares were generally steady with minor gains over the week. Ahmedabad Electrics were marked down from Rs. 104-1 to Rs. 103-7, before being lifted up to Rs. 103-12. Bombay Suburbans added As. 10 to finish at Rs. 120. Surat Electrics were maintained at Rs. 120. Andhra Valleys gained Rs. 2-8 to Rs. 1,302-8. Tata Powers were marked up by Rs. 16-4 to Rs 1,566-4 and Tata Hydros by a rupee to Rs. 133.

The miscellaneous section followed the general pattern of the market, but several scrips scored smart gains over the week, the most conspicuous among which were Alcock Ashdowns which were concerned in hectic buying activity. In the cement group, A.C.C. fared well on good support. The scrips appreciated from Rs. 208-8 *cum-div.* to Rs. 206 *ex-div.*, but closed lower at Rs. 202-4. Digvijays gathered Rs. 3-8 to Rs. 168-8. Sugar shares shaped well, Belapurs gaining Rs. 4 to Rs. 222, Phaltans Rs. 2 to Rs. 128 and Walchandnagars Rs. 8-12 to Rs. 235-10. In the engineering and mining group, Alcocks shot up from Rs. 340 to Rs. 380, before reacting to Rs. 368-12. Premier Constructions put on Re. 1-12 to Rs. 171-4 and Tata Locomotives Rs. 2 to Rs. 141-8. Shivrajpurs were steady at Rs. 101. Indian Coppers gained As. 2¾ to Rs. 6-10 on investment support. B.B. Petrols moved around Rs. 3-13.

In the shipping and transport group, Scindias were done up to Rs. 16-7, but the closing was lower at Rs. 15-12. Great Easterns had business Re. 1-4 lower at Rs. 13-12. Hindustan Motors were a shade better at Rs. 9-2 and Premier Automobiles at Rs. 82-8. Among other miscellaneous industrials, Bombay Burmahs (old) forged ahead from Rs. 518-12 to Rs. 528-12, before receding to Rs. 524-6. National Rayons gained from Rs. 212 to Rs. 220, but receded to Rs. 215-8 at the close. British India Corporations stood As. 1½ better at Rs. 11-12½ and Killick Industries Rs. 3-8 higher at Rs. 168-8. Tata Chemicals rose by As. 3 to Rs. 16-1, Tata Oils As. 4 to Rs. 42-4 and Wimcos Rs. 3-12 to Rs. 187-8.

Calcutta Stock Exchange

CALCUTTA, *8th February*

In the absence of any incentives, the Calcutta Stock Exchange continued to drift during the week under review. There was no trading on Saturday last, but, as the difficulties facing the market relating to settlement prices were believed to be coming to their end without introducing the question of defaults, the reopening on Monday presented a changed appearance. During the sessions of both yesterday and today, conditions were better as recovery from the lowest levels had started. However, buying support was limited to selected counters and the volume of business did not improve by any worthwhile degree. In view of the general dullness, the announcement of new steel retention prices did not change the course of trading. The reported possibility of some shifts in the Government's industrial policy of 1948 to bring it in line with the socialistic structure of society added to the long list of uncertainties.

The advices from the commodity markets, particularly tea and jute goods, were encouraging, but these were not taken notice of. Although prices of jute goods staged a recovery, raw jute prices moved faster, and were, in fact, higher than the rates prior to the recent fall in manufactured goods. After the life insurance ordinance, it is feared in the market that the nationalisation of banks, which is also the professed aim of the Government as had been declared by no less an authoritative person than the Prime Minister, is only a question of time. When this comes about, the process of "tieing" the hand and foot of private enterprise would be complete, and virtually the investment market would be controlled by official edicts.

The question whether the share markets are after all to function as effectively as before is being rightly posed in responsible quarters. Even in a socialistic pattern of society stock exchanges have a useful role to play. For they attract much of the investible funds by providing incentives. However, confidence in the future has been rudely shaken, and the Budget proposals for 1956-57 are awaited with great interest.

Among coals, Equitables lost further to Rs. 32-14 from Rs. 33-14 with East Indians losing ground to Rs. 31-14 from Rs. 32-8. Likewise, Central Indias were lower at Rs. 7-5 and Bengals at Rs. 548.

Elgin Mills in the textiles section were extremely quiet at Rs. 27-3, although, subsequently, the rate recovered to Rs. 27-6. New Victorias were steady at Rs. 2. Jayshrees crossed Rs. 5-14. Kesorams were transacted today at Rs. 17.

Jutes were practically neglected, excepting a few counters. Howrahs staged a small recovery to Rs. 25-4 from Rs. 24-15, but Reliances declined to Rs. 11-15 from Rs. 12-8.

In the engineering section, Indian Standard Wagons met with business at Rs. 161, that is, ten points lower, whereas Jessops, after declining to Rs. 57-8, recovered to Rs. 58-4. Richardson and Cruddas hovered around Rs. 26. Kumardhubis at Rs. 11-2 were a few annas lower.

Among miscellaneous industrials, a strong feature was the spurt in India Steamships from Rs. 8-2 to Rs. 8-9. Rohtas Industries were steady at Rs. 22-8. B.I. Corporations recovered to Rs. 11-15 from Rs. 11-8. Angelo Bros. were fractionally higher at Rs. 24. Martin Burns were unchanged at Rs. 27-4, while Dunlop Rubbers sagged to Rs. 32-10 from Rs. 34-8 previously.

In teas also, the number of transactions was limited. Brooke Bonds changed hands at Rs. 19-12, as against Rs. 20 previously, and Dhelakhats at Rs. 18-4, as against Rs. 18-8.

* * * *

Madras Stock Exchange

MADRAS, *8th February*

The Madras Stock Exchange exhibited a rather mixed trend during the week under review. While textiles came in generally for selling pressure, the planting scrips encountered some encouraging support. The easier trend in the textile section was due to lack of encouraging and overseas enquiries for cloth. The renewed support for tea scrips in the planting section was due particularly to increased export quota for tea. Rubber and coffee scrips were dull. The miscellaneous section too lacked support. Business done on balance was limited and there was a sprinkling of both gains and losses.

There were a few dividend announcements this week also. Among them, mention may be made of the Canara Banking Corporation Ltd., which declared a dividend of 8 per cent. *plus* a bonus of 3 per cent. on ordinary shares, thereby making a total of 11 per cent. for the year ended 31st December 1955, as against 10 per cent. for the previous year. The share was quoted at Rs. 86 *cum-div.* The Aluminium Industries Ltd. announced an interim dividend of 6¼ per cent. on all shares (excluding the recent issue of 150,000 shares which rank for dividend only from 1st December 1955) for the year ending 31st March 1956. The total dividend for the previous year was 12½ per cent. The share was quoted at Rs 20-12 *cum-div.*, as against Rs. 20-14. The Malabar Industrial Company, Ltd., reduced the dividend from 30 per cent. to 20 per cent. (tax-free) for the year ended 28th February 1955. The scrip changed hands at Rs. 25-12 *cum-div.* Madura Mills maintained the dividend of 20 per cent. for the year ended 31st December 1955. The scrip was enquired at Rs. 49-8 *cum-div.* Rallis India Ltd. passed over the dividend for the year ended 31st August 1955 also.

In the textile section, Anglo-French lost Rs. 4 to Rs. 116 and Balasubramanias 'B' Rs. 2 to Rs. 119. Coimbatore Spinnings eased from Rs. 90 to Rs. 82 and Dhanalakshmis from Rs. 356 to Rs. 355. Metturs declined from Rs. 379 to Rs. 372-8 and Premiers from Rs. 177 to Rs. 175. Venkatesas disclosed a loss of Rs. 3-8 at Rs. 139-8 and Vijayalakshmis Rs. 2-5 at Rs. 125-8. Bangalore Woollens, however, put on Rs. 5 to Rs. 555 and Buckinghams Rs. 2 to Rs. 171. Cambodias were higher by As. 3 at Rs. 13. Kaleeswarars rallied Rs. 5 to Rs. 305 and Gnanambikais Rs. 2-8 to Rs. 135. Coimbatore Cottons were quiet at Rs. 346 and so were Krishna Rajendras at Rs. 90.

Blue Mountains, among the tea scrips, in the planting section, gained As. 4 to Rs. 4-12 and Periakaramalais As. 4½ to Rs. 8-0½. Talyar Teas were better by As. 6 at Rs. 12-6 and United Nilgiri Teas by Rs. 5 at Rs. 310 *cum-div.* Chandramalais improved from Rs. 5-6 to Rs. 5-10 and Haileyburias from Rs. 25 to Rs. 25-4. But Coonoor Teas lost As. 8 to Rs. 30 and Coorg Teas As. 2 to Rs. 9-8. Among rubbers, Cochin Malabars improved from Rs. 7-11 to Rs. 8 and Rajagiris from Rs. 21 to Rs. 21-4. Pullangodes were fractionally better at Rs. 4-3½. Malankaras and Teekoys, however, lost As. 4 each to Rs. 27-4 and Rs. 9-8, respectively. Nenmenys were quiet at Rs. 21-8 and Travancore Rubbers at Rs. 23-12. Among Coffees, Consolidated Coffees gathered As. 2 to Rs. 20-10 and Coffee Lands As. 9 to Rs. 17-14. But Kadur Coffees lacked enquiry at Rs. 2-9 and Mysore Coffees at Rs. 1-9.

In the miscellaneous section, Andhra Cement 'A' lost Rs. 2-8 to Rs. 156-8 and Dalmia Cements (Rs. 10 paid up) Re. 1 to Rs. 14. Dalmia Cements, Rs. 2-8 paid up, were down by As. 5 to Rs. 3-8 and India Cements by As. 2 to Rs. 32-4. Mysore Chemicals and Fertilisers were lower by As. 2 at Rs. 8-12 and Mysore Gold by an anna at Rs. 1-14. Rallis were quiet at Rs. 37-12 and Spencers at Rs. 17-12.

THE TRAVANCORE BANK LIMITED

UNDER THE PATRONAGE OF AND LARGELY SUPPORTED BY THE GOVERNMENT OF TRAVANCORE-COCHIN

D. R. VEDAMUTHU,
General Manager.

NEWS IN BRIEF

THE Railway Budget for 1956-57 will be presented to Parliament on 23rd February and the General Budget on 29th February.

About 17 million acres will be irrigated through major and minor irrigation schemes by the end of the first Plan period.

The Government of India has allowed the export of 25 Indian-made cars to Ceylon, with a view to developing an export market.

The production of automobilies in India has increased by over 50 per cent. during 1955, the actual output being 22,528 cars and trucks as against 14,462 in 1954.

The Coffee Board has released 300 tons of coffee, consisting of Plantation 'A' (150 tons), Plantation 'B' (75 tons) and Plantation Triage (75 tons), for export during February 1956.

India will be able to produce about 25 per cent. of its total oil requirements within the next few years, according to the Union Minister for Natural Resources and Scientific Research.

The export of pulses, including gram and gram-flour, outside India has been banned with effect from 6th February, in view of the recent rise in market prices within the country.

The Union Government has sanctioned Rs. 21.08 crores up to December 1955, as loans to various State Governments under the Low Income Group Housing Scheme. Of this amount, however, only Rs. 6.07 crores have been disbursed.

The all-India first estimate of rapeseed and mustard for 1955-56 puts the current year's area at 2,403,000 acres, as against the adjusted first estimate of 2,374,000 acres for 1954-55. This shows an increase of 29,000 acres or about one per cent. in area over last year.

The Government of India proposes to bring forward a Bill in Parliament to remove most of the difficulties of the trade relating to levy of sales tax on inter-State transactions. The Bill will be drawn up on the lines of the recommendations of the Taxation Enquiry Commission.

The Madras Government has appointed a special officer to work out details of the Government's scheme to take over third party insurance in respect of motor vehicles, so that the proposal can be given effect as soon as the Central Government's approval is obtained. The States of Mysore and Travancore-Cochin, which have also similar proposals, have already commenced preliminary work in this connection.

The Government of India has decided to continue to allow for export limited quantities of cotton yarn during the first half of the current year to provide an incentive to mills to pack larger quantities of "free yarn." During 1955, the packings of "free yarn" by both composite and spinning mills were higher than at any time before. Allotments for export will accordingly be made to mills on a revised procedure, based on the mills' packings during 1955.

The Union Government has accepted the recommendation of the Stores Purchase Committee to constitute a non-official advisory council to advise the Government on general purchase policy and procedural matters, as well as on development of industries for Government purchase. In this connection, the Government has called for a conference of representatives of trade and industry and the General Purchase Organisation in New Delhi on 27th and 28th inst.

Consequent on the promulgation of the ordinance validating collections of sales tax by States on inter-State transactions during the period April 1951 to 6th September 1955, the Madras Government will retain a sum of Rs. 42 lakhs, being the collections made by the Government between 1st October 1953 and the date of the Supreme Court judgment in September last holding such levy by States *ultra vires*. Similarly, the Andhra State Government, too, is keeping back a sum of Rs. 45 lakhs.

Another shipment of six U.S.-built broad-gauge steam locomotives for India's railways arrived in Bombay on 6th February. The first four of 100 such locomotives, being supplied to the Indian railways under the U.S. aid programme, were formally presented in Bombay early last month by Mr. John Sherman Cooper, U.S. Ambassador to India, to Mr. O. V. Alagesan, Deputy Minister for Railways. A total of $38,500,000 in American aid has so far been allocated for the rehabilitation of Indian railways.

An advisory commission of five members to help in the implementation of the new Companies Act is to be set up before the end of this month. The Commission, which will have a full-time chairman, will consist of representatives of business interests, labour, shareholders and those connected with company accounts. The setting up of the Commission is one of the several steps now being taken to work effectively the provisions of the new Companies Act which was passed in the last session of Parliament and is expected to come into force from the beginning of April next.

Three new taxation measures for the next financial year were announced by the Bihar State Finance Minister, when he presented the State Budget for 1956-57 on Tuesday this week. The first is a levy of a cess of one anna in the rupee on rent for the specific purpose of financing primary education. The second is a tax of As. 3 per gallon of diesel fuel and the third is the levy of multipoint sales tax at low rates as against the existing higher single-point tax. The Budget estimates show a deficit of Rs. 29.48 crores, income being estimated at Rs. 66.75 crores and expenditure at Rs. 96.23 crores.

The Union Government has appointed an expert committee on tobacco in pursuance of the recommendation of the Taxation Enquiry Commission. The Committee will review departmental procedures now in force for giving effect to the tariff based on capability of unmanufactured tobacco other than flue-cured for use in *biris*, with special reference to the concessions authorised by the Government in June 1951. The Committee will also consider the methods adopted for estimating the produce of tobacco growers for the purpose of accounting and assessment and recommend measures for remedying defects, if any, in the existing methods.

The Indian Tea Planters' Association is reported to have decided not to pay a bonus in respect of 1954 on the scale agreed upon at a recent tripartite meeting in Delhi. The I.T.P.A. had at that time maintained that it was not in a position to implement the agreement in full. The Association has, however, offered to pay a cash bonus of Rs. 60 to each employee in the Dooars gardens and of Rs. 50 to each employee in the Terai gardens without any commitment for 1955 and 1956. The decision, it is stated, has been taken in view of the fact that a large number of the Association's member-gardens are small and uneconomic units and also because of the additional financial burden they will have to undertake under the recently imposed Plantation Labour Act. Moreover, there has of late been a recession in tea prices owing to world overproduction.

* * * *

From Abroad

The U.K. Government is considering how full information about nationalised industries may best be produced.

The Pakistan Petroleum Company has struck oil at Chakwal, in the Punjab. The oil is being tested for quality and quantity.

A newsprint mill is proposed to be set up in East Pakistan. The industry is on the "high priority list" and will meet all the requirements of the country.

Manufacturing industries in the U.K. are expected to increase their capital expenditure in 1956 by 17 per cent., as against the rise in 1955 of 18 per cent. over the preceding year.

The East Bengal Government has introduced full-scale statutory food rationing in Dacca and Narayanganj with effect from 5th February. Statutory rationing has also been introduced in 14 district towns.

A U.S. company has been authorised by the Japanese Transport Ministry to build two 84,000-ton super-tankers at a former Japanese naval shipyard. The tankers, to be built in dry docks, will be the largest in the world.

The wheat production in Australia during 1955-56 is expected to be 188.6 million bushels, an increase of 20 million bushels over the previous year. The average yield per acre is placed at 18.7 bushels, the highest since 1952.

The net earnings of the General Motors Corporation for 1955 exceeded $1,000 million, the highest in the history of the Company. The earning was equal to $4.30 per share, as against $3.03 in 1954, after making adjustments for the split in stocks last September.

Six 3,000-gallon stainless steel-lined milk tankers, the first part of a consignment of 20 being constructed in New Zealand for India under the Colombo Plan, were loaded on a steamer early this week. The tankers can be used either on railway wagons or lorries.

New home construction in the U.S. has set a new annual record for nine consecutive years, according to the U.S. Labour Secretary. He estimates that, during the past 10 years 10,744,600 new dwellings have been constructed in the United States. The mounting number of private homes is, he stated, the tangible expression of the country's prosperity.

The Bethlehem Steel Company, second largest producer of steel in the United States, is planning a new expansion programme that will add three million short tons to its annual steel-making capacity by the end of next year. The $300-million programme will be the largest in the Company's history.

New advertising and circulation records were set during 1955 by U.S. daily newspapers, according to the Editor and Publisher of the *International Year Book*. Circulation increased by more than one million copies, with daily sales at more than 56,000,000. Advertising volume was up to 10.2 per cent. the year 1955 was the best in the history of U.S. newspapers.

Stocks of wheat held by the four main exporting countries, namely, the U.S., Canada, Australia and Argentina, on 1st December last, aggregated, 2,157.4 million bushels or about 8 per cent. more than the quantity (1,997.9 million bushels) held a year before. Exports from these four countries during the period August to November 1955 declined from 244.8 million bushels to 223.9 million bushels.

The Indonesian Parliament has ratified the International Tin Agreement. The Indonesian approval removes the chief remaining hindrance to the coming into force of the World Tin Agreement, because it will provide the requisite number of producer votes for the Agreement to become effective. The required number of ratifications by consumer countries have already been secured. The Italian Senate has also ratified the Agreement, which is to be approved by the House of Representatives.

The Ford Foundation has received the proceeds of what is reported to be the largest single banking equity transaction in American finance—a cheque for $642,600,000. The cheque represented the philanthropic Foundation's share in the recent public sale of Ford Motor Company common stock. The Foundation has spent $875 million on philanthropic projects in the past 20 years. The projects include furthering international understanding, improving education and hospitals and various public affairs activities.

The large U.S. manufacturing firms have been ordered to take steps to allow greater competition in their fields of activity. The U.S. Attorney General has announced that under a Federal Court decree, the International Business Machines Corporation has been ordered to offer for outright sale the business machine which has been available only for rental for the past 25 years. A similar decree orders the American Telephone and Telegraph Company to licence its 8,600 patents at reasonable rates.

The British Chancellor of the Exchequer has rejected the Opposition demand for dividend limitation by an Act of Parliament. He was not in favour of a statutory limitation of dividends, "since it was impracticable to lay down any statutory standard which would equitably treat, in their widely varying circumstances and needs, all the companies concerned." The Chancellor proposes to continue the policy of taking every opportunity to impress on all the partners in industry the urgent need for moderation in their claims.

PERSONAL

MR. M. Gopala Menon, Commissioner for the Government of India in Nairobi, has been appointed Consul-General of India in New York with the rank of Minister.

Mr. Raj Bahadur, Deputy Minister for Communications, and Mr. B. N. Datar, Deputy Home Minister, have been appointed Ministers in the respective Ministries.

Mr. V. K. Krishna Menon, India's representative in the United Nations and a former Indian High Commissioner in London, has been appointed Cabinet Minister without portfolio.

Mr. Lal Ram Sharan Singh, I.C.S., Consul-General of India in New York, has been appointed Ambassador of India to Brazil. He is expected to assume charge of his new assignment in March.

Mr. Shishir Kumar Banerji, I.C.S., Consul-General of India, San Francisco, has been appointed India's Minister to Syria. He is likely to assume charge in May.

Mr. Charles H. Percy, a prominent American business executive—President of Bell and Howell of Chicago— advocate of free trade and supporter of President Eisenhower's low tariff policy, has arrived in India on a business and study tour.

Dr. L. D. Baver has been elected General Chairman of the International Society of Sugarcane Technologists, which will hold its next Congress in 1959 in Hawaii. Dr. St. John P. Chilton has been elected Vice-Chairman and Mr. W. W. G. Moir, General Secretary, Treasurer.

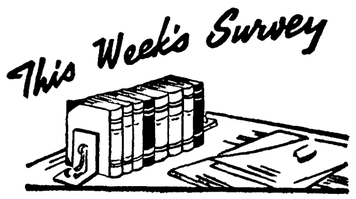
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *14th February*

Cotton Textiles

In view of the dispute in Lancashire between owners and weavers, to which detailed reference is made in our textile section this week, it is instructive to take note of the present state of the cotton textile industry, its growth and the effect thereof on international trade. It should be pointed out that, in one stage of development, a country imports yarns, first for its handloom industry; and as industrialisation proceeds, for its power-looms. In time the yarn-importing country develops its own spinning industry, leaving the exporting country with a surplus of yarn. Rather than contract a well developed industry, the policy is to increase the looms, as both Japan and India have done since the contraction of the China market for yarns. A situation is thus brought about in which equipment is doubled without any change in demand, making it necessary to find new export markets. A further phase, it may be added, has been begun by the expansion of the Chinese mill industry, causing a contraction of that country's demand for cloth as well as yarn, and, when China begins to export a considerable proportion of its output, there will be another dislocation of trade.



INDO-U.S. AIR AGREEMENT

THE Governments of India and the United States have entered into an agreement governing the operation of air services between the two countries. They have also exchanged letters which set forth the procedure for interpreting and implementing the Agreement. Together with the letters of exchange, the Agreement replaces the air transport agreement which expired on 15th January 1955.

It will be recalled that the Government of India served notice of termination of the agreement on 14th January 1954, giving one year's notice as per the terms entered into as far back as 14th November 1946. It proposed the conclusion of a new agreement, as the 1946 Agreement curtailed the scope of Indian airlines in their legitimate spheres of activity. That agreement, it may be noted, was entered into at a time when the Indian airlines were not operating abroad, so that it did not restrict the fifth freedom traffic (that is, traffic destined for or coming from third countries) which the American airlines could take. Since then—with effect from June 1948 to be precise—the Indian airline, namely, Air-India International, has been carrying overseas traffic. Consequently, the unrestricted carriage of fifth freedom traffic made serious inroads into the traffic that legitimately belonged to Air-India International. To the Indian airlines, it must be stressed here, the fifth freedom traffic for foreign airlines constitutes the third and fourth freedom traffic (that is, traffic between countries of the origin of airlines and their destination) on which their economic operation depends.

Under the new agreement, the frequencies of the two American airlines, namely, Pan-American Airways (P.-A.A.) and Transworld Airlines (T.-W.A.), have been fixed at two round trips and they can be increased only by mutual consultation. Thus, the freedom enjoyed by the American airlines to increase their frequencies without the approval of the Government of India has been restricted.

The airlines designated by each of the two Governments will operate air services on two specified routes *via* intermediate points in both directions and make scheduled landings at certain points. The routes which the airlines designated by the Government of India will operate are:

Route One: From India via points of Asia, Africa, Europe, the U.K., Ireland and Canada to New York, and beyond to points on route two or to such points as may be mutually agreed upon at a later date.

Route Two: From India via points in Asia, the Philippines, Japan and Canada to San Francisco or Los Angeles and beyond to points on route one or to such points as may be mutually agreed upon at a later date.

The routes which the airlines designated by the Government of the United States will operate are:

Route One: From the United States via points in Canadia, Ireland, the United Kingdom, Europe and Asia to Delhi-Calcutta and beyond to points in Burma, Thailand and beyond to the United States over the various routes.

Route Two: From the United States via points in Canada, Ireland, the United Kingdom, Europe and Asia to Delhi-Calcutta and beyond to points in Burma, Thailand and beyond to the United States over the various routes.

The Agreement provides that the rates to be charged must be reasonable, due regard being paid to all relevant factors such as the cost of operation, reasonable profit and the rates charged by other services. It lays down further that, "except as otherwise provided in the Agreement, any dispute between the contracting parties relating to the interpretation or application of this agreement, which cannot be settled through mutual consultation, shall be submitted for arbitration to an advisory board or a tribunal of three arbitrators, one to be named by each party and the third to be agreed upon by the two arbitrators so chosen, provided the third arbitrator shall not be a national of either contracting parties."

The new agreement is more or less on the lines concluded with other countries, such as the U.K., the Netherlands and Australia and New Zealand. The only country which has an agreement with India for unrestricted frequency is Japan; India also enjoys reciprocal treatment with that country. At the moment, however, Japan has no international air service and, when Japanese airlines actually begin to operate, there will doubtless be fresh negotiations aimed at an agreement based on those concluded with other countries.

The present agreement represents a compromise between the views of India and the U.S. The U.S. has all along advocated unrestricted facilities to carry fifth freedom traffic. According to an official spokesman of the U.S., competitive freedom of action exists in the U.S. to meet anticipated fluctuations in air traffic. On the other hand, India, which has nationalised its air services, has advocated legitimate consideration for the development of its undeveloped air transport and held that the traffic between any two countries should go to the air services of the respective countries. According to the Agreement, the American airlines can ask for increase in frequency chiefly on the ground of increase in direct traffic. To quote the significant words of the joint *communique* issued on the 3rd inst:

"The Government of India and the Government of the United States recognise that, in many respects, their philosophies differ as to the methods through which to achieve the orderly development of air transportation, but agree that air transportation between the two countries will continue at the rapid growth of the last few years. Accordingly, the two Governments contemplate consultations, in order to insure that the agreement entered into remains adequate, not only to deal with any situation which might arise, but also to provide the necessary viability to insure a permanent foundation upon which their respective air transport systems can prosper."

Following the conclusion of this agreement, it is stated that Air-India International proposes to operate a bi-weekly service between India and the U.S. via the U.K. next year. It has placed orders for three "G" type modern long-range Super-Constellations in the U.S. The first aircraft is expected to be delivered in August this year and the remaining two by April next year. The "G" type Super-Constellations are to be run on the London-New York sector.

SALES TAX ORDINANCE

The Sales Tax Validation ordinance, issued by the Government of India on 30th January 1956, seeks to validate the levy and collection of sales tax made by the State Governments on inter-State trade during the period 1st April 1951 to 6th September 1955. The ordinance is a sequel to the Supreme Court's judgment in the well-known case, *Bengal Immunity Co.* vs. *Government of Bihar*. The Court then reversed its own earlier decision delivered in March 1953. It had earlier held that, when goods were delivered by one State for consumption in another State, as a result of transaction of sale or purchase, the latter State was entitled to levy a tax on the transaction. It had rejected the Government of India's view that even such transactions would qualify for the exemption from sales tax, provided by the Constitution. The Court's decision was the signal for the State Governments to levy and collect sales tax on inter-State transactions. This caused a great deal of hardship to the traders, who had to be conversant with the sales tax laws in all States and also satisfy the authorities in the States with which they had business dealings whenever any enquiries were made by them.

In September 1955, however, the Supreme Court, in the course of its judgment on the *Bengal Immunity Case*, veered round to the Government's view and held that the interpretation of the Constitution on which the earlier decision was based, was "plainly erroneous." As a result of this judgment, the levy and collection of tax by the State Governments on inter-State trade became *ultra vires* the Constitution. Naturally enough, the judgment was received with a sigh of relief by traders. At the same time, it gave rise to an intriguing situation, for the States which had collected sales tax on inter-State transactions found they had collected an illegal revenue, though it was perfectly legal in the light of the Supreme Court's earlier decision. The alternatives before the Government were either to return the tax so collected or to get the collection of the tax validated by an ordinance. Ever since the Supreme Court's judgment was given, it has been known that the Central Government was favourably inclined towards the latter alternative. The Ordinance protects the revenues of the States derived from the levy of sales tax on inter-State trade during the period 1st April 1951 to 6th September 1955. It says:

"Notwithstanding any judgment, decree or order of any court, no law of a State, in so far as it imposes or authorises the imposition of, a tax on the sale or purchase of any goods where such sale or purchase took place in the course of inter-State trade or commerce during the period between the 1st day of April 1951 and the 6th day of September 1955, shall be deemed to be invalid or ever to have been invalid merely by reason of the fact that such sale or purchase took place in the course of inter-State trade or commerce; and all such taxes levied or collected or purporting to have been levied or collected during the aforesaid period shall, notwithstanding any defect in, or invalidity of, the enactment under which the tax was levied or collected, be deemed always to have been validly levied or collected as if this ordinance were in force on the date on which such tax was levied or collected."

Although the ordinance has thus protected the States' revenues, in so far as they have been derived from the levy of sales tax on inter-State trade, it has created an embarrassing situation for many traders. During the pendency of the case before the Supreme Court, some buyers had paid the tax to the sellers on the understanding that the tax would be returned to them if the judgment went against the States. Some sellers had paid the tax to the State Governments without recovering it from the buyers who had agreed to pay it if the judgment went in favour of the State Governments. The Ordinance penalises those buyers who paid the tax, while those who did not pay it might not do so now.

SHORTAGE OF STEEL AND CEMENT

Shortage of steel, cement and timber continues to confound even the optimists. The three-day meeting of the general managers of Indian railways and the officers of the Railway Board held last week at New Delhi expressed serious concern at the shocking hold-ups and bottlenecks that were being caused in many spheres of railway working and development, as a result of deficiency in the supply of steel and cement and, in certain cases, timber. It was disclosed that, in several cases, steel supplies had fallen short by as much as 50 per cent. The position was particularly bad in regard to supply of steel required for track, signal work and the like. It was further aggravated by the fact that private manufacturers of railway supplies had to draw their steel requirements from out of the railway quota. Further, it was stated that, although the indents for cement had already been cut, even the reduced quotas were rarely met in full. The supply position in regard to timber, too, was almost the same.

There is no gainsaying the fact that, if the present supply situation were to persist, the execution of the second Five-year Plan would come to grief. The general managers were quite aware of this. The railways alone have been estimated to require as much as one million tons of steel in the first year of the second Five-year Plan. The cement requirements during 1956-57 are estimated at 450,000 tons.

It is true that large-scale expansion of the capacity of iron and steel industry, as well as cement industry, has been proposed. But the programme will take time to materialise. During the *interim* period, India will have to depend on imports. It would appear that even the decision of the Government of India, taken in November last year, to import one million tons of steel for three years with effect from 1955-56, and the recent decision to import cement in some sizable quantity, may not go a long way to relieve the situation. Consequently, there appears to be an urgent need for adopting a bold import policy to ensure that the second Plan will not founder on the rock of shortages of essential raw materials.

Incidentally, it may be noted that the Conference discussed the problems of large-scale recruitment and training of personnel for the Indian railways in the second Plan period. As difficulty was being experienced in filling up supervisory and other posts due to non-availability of suitable recruits, it was felt that the requirements of the railways should be met, to a large extent, through promotion from lower grades and re-employment of retired persons. A notable suggestion made in this connection was that promising young men in colleges should be drafted into railway service after suitable training. In order to implement this suggestion, the Conference felt that steps should be taken to expand railway training schools and centres which were already functioning and to open new ones as were found necessary.

WORLD SUGAR

The recent meeting of the International Sugar Council (I.S.C.), held at London, was notable for three important decisions. First, the Council agreed not to make any further change in the basic export tonnages of member-countries for 1956. Secondly, it raised the estimate of the world requirements of sugar from the "free" market during 1956 to 4.57 million tons, from 4.52 million tons fixed at its previous meeting in December last. Thirdly, the Council set up a preparatory committee and a technical subcommittee to undertake preliminary work in connection with the forthcoming international sugar conference of all interested countries, including non-signatories as well as members of the Agreement, to be held under the auspices of the United Nations some time in May next.

The decision of the I.S.C. not to make any further change in the export quotas of member-countries for 1956 is understandable. It was only in December last, it will be recalled, that the I.S.C. decided on a 10 per cent. cut in the basic export tonnages and fixed the initial quotas at a total of 3,996,000 metric tons. Since then, the world sugar market has been ruling fully steady. Not only has the downward trend in sugar prices been arrested, but the prices have, in fact, registered a distinct recovery. Raw sugar (spot No. 4 world contract) in the New York market, which had gone down very much below the minimum of 3.25 cents per lb. fixed under the World Sugar Agreement—the actual quotation as on 2nd December 1955 was 3.13 cents—improved by stages to touch 3.28 cents on 19th January, at which level it has since remained steady. This is the highest price since early November 1955, when buying resistance, together with the influence of larger crop reports and the unsettling effect of barter deals, took the sugar price in the world market to a level lower than the Agreement minimum. There have also been several reports of business done in Havana at 3.28 cents and 3.29 cents. Again, Syria is said to have purchased Cuban sugar even at 3.30 cents.

The firmness in world sugar prices must be attributed not so much to the cut in the export tonnages of member-countries of the Agreement as to the emergence of a large potential demand. A number of buying countries is in the world raw sugar market, including Finland, the Netherlands, Sweden, Japan, Canada and the U.K. The Cuban Sugar Stabilisation Institute, for instance, is reported to be daily refusing bids for raw sugar at 3.25 cents. In fact, it is said that the Institute is at present not prepared to sell sugar at below 3.30 cents. What is more,

BOOK NEWS

Company management presents a host of problems to the experienced Executive, Secretary, or Managing Agent, Lawyer and Auditor. The provisions of the new Companies Act of 1955 are far-reaching and without parallel in any statute relating to companies in any part of the world. A reliable guide and a book of reference to the new Act is indispensable.

Within the pages of the book written by an advocate with a vast and wide experience of Company Law and matters one will find a lucid explanation of the statutory changes effected by this Act.

The important changes effected by the Act are explained in detail. The exact scope of the new amended sections and their operation and the extent to which legitimate advantage may be taken of the exemptions granted and exceptions made in respect of several matters are all set out clearly.

Buy a copy of this Book today. It will save you and your office Time and Money. A book of great practical use.

ENSURING UNITY OF INDIA

DR. C. P. RAMASWAMI AYYAR'S SUGGESTION

From A Special Correspondent

NEW DELHI, 7th February

THE busy season in the Capital has already begun. Politicians from all over the country have been passing through Delhi to attend the sixty-first session of the Indian National Congress which is scheduled to meet this week-end at Amritsar. Many of them who happen to be members of Parliament, will return to New Delhi next week, in order to attend the budget session which commences on the 15th inst. The Amritsar session of the Congress is expected to become considerably important, in view of the fact that it is being called upon to take decisions of far-reaching significance to the future of the country. Curiously enough, the scene in Amritsar today fully reflects the dangerous fissiparous tendencies that are pronounced in many parts of the country. The Akali Sikh Party and the Hindu Mahasabha Party are also holding separate meetings at Amritsar this week. The former has been advocating the establishment of a smaller Punjab in order to protect the Sikh culture and religion, while the latter stands for a bigger Punjab.

DELHI LETTER

States Reorganisation

It is generally suggested here that both the Prime Minister and the Home Minister who command considerable respect among the rank and file of the party, will try to impress upon the various local leaders gathered there the necessity of taking a broader view of the problems in order to strengthen the unity of the country. The question of reorganisation of States will therefore receive the earnest attention of these leaders, in the light of the recent deplorable events in Bombay, Orissa, etc. Now, there is greater realisation among responsible leaders of the Congress than before that linguistic States might disrupt the unity of the nation and that something should be done to cement it. In case local leaders fail to rise to the occasion, it is possible that the question of investing greater powers to the proposed Zonal Councils will receive serious consideration. Now that the chances for the formation of a Dakshina Pradesh do not appear to be very bright and that separatist tendencies are becoming assertive, the Congress will have to consider suitable measures for correcting this trend. A *via media* may be found by vesting some overriding powers in the Zonal Councils, particularly in regard to irrigation, hydro-electricity schemes, large-scale industries, exploitation of minerals, etc. The powers of States will have to be limited to the development of regional culture and language, maintenance of law and order, collection of revenue, etc.

An Interesting Suggestion

In this connection, some interesting and thought-provoking suggestions were given by Dr. C. P. Ramaswami Ayyar the other day, in the course of an address delivered by him on the subject of "Fundamental Unity of India." Significantly enough, this meeting was presided over by Mr. K. M. Panikkar, a member of the States Reorganisation Commission. Since Dr. Ramaswami Ayyar is one of the elder statesmen of the country and combines in himself the role of an able administrator, a skilful advocate, an erudite scholar, an educationist, etc., he is undoubtedly best fitted to give his considered views on many of the problems confronting the nation at present. Dr. Ayyar pointed out that there was psychological unity in the country, brought about by the unique contribution of the Sanskrit language. The noble ideas and ideals enshrined in this language were, as it were, assimilated by the different languages in the country and readapted and enriched with considerable vigour by them. The result was, he said, that, throughout the country, the mode of religous thought, devotional prayers, etc., was the same, thus establishing a sort of cultural unity between different parts of the country. This type of unity had been in existence during the last many centuries.

The learned lecturer then took up the question of political and administrative unity. This sort of unity was not prevalent throughout but was felt only in certain periods of history when some great and powerful emperors ruled the country such as Asoka, Akbar, Harsha, etc. Even during the role of these monarchs, the political unity was particularly pronounced only in certain parts of the country. For instance, South India was never under the sway of these illustrious rulers. Even during the days of the British rule, only two-thirds of India were under their direct rule, while the Princely India of 600 and odd States was controlled by them indirectly. After 1920, even the Britishers left many Provinces to administer in their own manner.

Economic Unity

In other words, Dr. Ramaswami Ayyar contended that, even during the British period, there was absence of complete political and economic unity. In this connection, he pointed out that a number of people of different States were brought together in a few coastal towns and hill stations such as Bombay, Calcutta, Madras, Simla, etc. Real political and economic unity could not take place in the absence of easy communication and transport between different States. The speaker, therefore, laid considerable emphasis on the need for fostering economic unity between different parts of the country. He advocated that the Government of India should take a bold and imaginative step to achieve such a purpose and suggested that efforts should be made to link the great Ganges in the north with the Cauvery and the Tambraparni in the South. He was firmly of the view that his idea was not at all utopian and drew the attention of the audience to the fact that the U.S.S.R. had already connected the Volga with the Dneiper and the Don. Dr. Ayyar further observed that a number of hydro-electric stations could be built in the course of this new irrigation-cum-navigation canal. The availability of electric power would in turn foster the growth of a number of large, medium and small industries. Many new townships would spring up along this canal and people from different States would be brought together. This sort of development of economic unity was essential, he asserted, to maintain a close and well-knit unified India in the coming years. Besides, his idea was that each State should be closely linked with neighbouring States in the matter of establishment of new industries. In fine he suggested that there should be interdependence in the economic sphere between different States. In this way, he opined that a greater sense of economic unity could be fostered between the various constituent parts of the country.

Careful Thought Required

Sirdar K. M. Panikkar amplified many of the statements of Dr. Ayyar. He said that great civilisations had been built along river valleys in the past and that rivers had played a conspicuous part in bringing about the unification of a country. He instanced Egypt and China, in this connection. The Great Nile in the former and the Grand Canal in the latter had moulded and fostered the unity of these countries to a considerable extent. He pointed out that, in a number of countries, there were bound to be differences between different regions. Nevertheless, efforts should be made not to let the local sentiments outrun the national sense and unity. Care should be taken, according to him, to ensure that no part or area in the country nursed a grievance that its legitimate desires, aspirations and programmes of development had been neglected by the other powerful States and that it was being dominated by some other parts of the country. The speaker wanted a dynamic Central Government which should carefully watch the different interests or sections of the people. The Planning Commission should not try merely to collect and collate different plans submitted to it, but should be original in its approach, an approach conducive to strengthening the political and economic unity of the country. Coming as they do from two eminent men, it is to be hoped that these suggestions will receive careful attention at the hands of the Congress Party leaders and the Government of India.

COMING EVENTS—THE B.I.F.

GREAT PROGRESS IN ATOMIC POWER

(From Our Own Correspondent)

LONDON, 5th February

THIS year, the forty-year-old British Industries Fair splits into two parts, the organisers having decided that there is no particular merit in showing goods with widely different appeals to buyers all at the same time. The first B.I.F. is to be held at Earls Court in London (one of the traditional homes of the old B.I.F.) from 22nd February to 2nd March, the second part at the great Olympia exhibition hall from 23rd April to 4th May and concurrently at Castle Bromwich, Birmingham —the home of the heavy industry exhibits. Since there are three different exhibitions, why not hold them all at the same time? The answer is seasonality. All the seasonal goods whose sale is greatest in the autumn and up to Christmas time find that an April/May B.I.F. is too late to get in orders and ensure production. So these seasonal trades are to have their fair in February and that will bring into the B.I.F. the British Toy Fair, usually held at Brighton in February.

LONDON LETTER

The promoters of the B.I.F. are not worried by the thought that the visitor to Britain—or, indeed, the home-buyer—coming here to buy clocks or table mats or toys (the February goods are, in addition to toys, fancy and leather goods, jewellery, watches and clocks, silverware and pottery) will be put off by the fact that he cannot at the same time place orders for electronic goods or steam shovels. But it is likely that the spring B.I.F.—at which these goods will be shown—will have the wider appeal, just as it is getting the greatest publicity.

Widely Advertised

It is hoped to make this the busiest B.I.F. ever and the net of advertising has gone all over the Commonwealth and to North and South America and Asia. 120,000 invitation letters went last autumn to these potential overseas customers and more than half that number to buyers at home. Part of the appeal is to the greater comprehensiveness of the exhibits—it has been a growing complaint that the trades were not satisfied with the space at their disposal and looked more and more to their own private fairs for their shop-windows. The Toy Fair was a case in point and it is much to the good that this is coming under the big umbrella. Textiles are another example of formerly divided efforts: now the B.I.F. is to have a special Fair devoted to nothing but textiles, though this is to be held once every two years, beginning in 1957. Perhaps, the new policy is already paying dividends, for the first exhibition—covering 450 exhibitors and 250,000 sq. ft.—was fully booked over three months ago. If only 10 per cent. of the overseas people approached come to the Fairs, these will be a huge success.

Atoms

The second B.I.F., in April, will be opened by the former Chancellor, Mr. Butler, and will feature electrical and electronic equipment, office appliances, scientific and optical instruments and packaging machinery. At Birmingham will be engineering, electrical goods, building and heating and hardware. Main feature at Olympia will be the "Atoms for Britain" exhibit which was at the highly successful international exhibition at Geneva last year. Covering 7,000 sq. ft., it shows Britain's progress in harnessing nuclear power and in using atomic energy in industry, agriculture and medicine. There are rumours that this country is much further advanced in the peaceful uses of atomic power than has so far appeared and that the 10-year programme for major electrical production from atoms will be greatly accelerated. The first atomic power station will start feeding electrical energy into the national system before the end of this year and the present programme is for another 12 over the next 10 years. The only snag appears to be supplies of "heavy water" in which this country is as yet far from self-sufficient and has indeed to contemplate dollar imports!—*All Rights Reserved.*

BUSINESS CONDITIONS IN UNITED STATES

ANOTHER ROLLING READJUSTMENT UNDER WAY

THE January business reports have again been good, except for the downward revision of automobile production schedules. Since the automotive industry is the largest buyer of materials, parts, and supplies in the United States, even a modest curtailment causes some dampening of enthusiasm and takes something away from the force of the business advance. Together with the slippage in housing starts, which continued through December and has now lasted for some months, it signifies a narrowing and slowing of the rise, and possibly the reaching of the crest which so many have been expecting.

In other lines, however, there are few indications of slackening, and some are still gaining. Where a crest seems to be forming, as in steel and certain other industrial materials, it is due generally to limitations of capacity rather than to softening demand. In many industries, manufacturers would be producing more if they could possibly do so. Unfilled orders are heavy, often requiring capacity output for months to come. Incoming business holds at high levels. Machinery and equipment output and non-residential construction are expanding. In the general merchandise trades, reports from the January wholesale markets, which reflect retail conditions and buyers' sentiments, have been uniformly good.

From all indications, the United States will cross the invisible boundary line into a $400-million-a-year economy, measured by the total output of goods and services, some time in the current quarter. There is no particular magic in this figure, except as it emphasises the rapid growth of the past year, the unprecedented height reached, and the way in which many lines must strain at the limits of manpower, materials, and capacity to make this possible. In the past year, the extraordinary total of 3.1 million people have been added to the working force, and output of steel, non-ferrous metals, glass, paper and other materials has been pushed as close to capacity as is economically feasible. At such high levels, further gains are difficult and limited, while cutbacks in lines which have become temporarily overextended are to be expected. This is the situation in automobiles.

The stock market has been vacillating, and some tendency to shorten commitments is reported by purchasing agents. In view of the dangers of duplication of orders and excessive inventory build-up, which could only carry on the boom at the expense of later recession, conservative buying policies should be welcomed. None of these developments provides clear signs that business is at a turning point.

Automobiles and Housing

The spotlight has focused on the automobile and homebuilding industries as primary sources of weakness in 1956. Both industries had remarkably good years in 1955, and both are currently operating considerably below their 1955 highs. Harlow H. Curtice, President of General Motors, has predicted that domestic automobile production (excluding vehicles for export) will total 7.5 million cars and trucks in 1956, a decline of 14 per cent. but still the second best year on record. The industry expects truck production approximately to equal the 1,050,000 turned out for domestic use in 1955; hence, the anticipated decline of roughly 1.2 million units from 1955 to 1956 would appear to be entirely in passenger car output.

The publicity given to cutbacks in auto output has tended to obscure the fact that retail sales of new cars are holding well up to last year's performance, which is no small achievement. In November, December, and the first 20 days of January, dealers sold somewhat more cars than they did a year earlier, when the new 1955 models were arousing so much interest. The key question is how long dealers can maintain this pace.

The greatest part of the adjustment to date, by both auto manufacturers and suppliers, has been accomplished by a shift from overtime operations to a normal work week, which is hardly a depressed condition. Some suppliers, notably steel mills, have continued to operate at record levels, because demand by other customers was so great. What little steel was released by auto companies has been eagerly snapped up. If dealers' new car sales start slipping, further production cutbacks are likely to follow, but to date the reductions in output and pay-rolls have not reached proportions that would fan out far into the rest of the economy; indeed, the release of materials may make it possible for some other industries to increase output. In any case, the restyled 1957 models will provide a stimulus to the market in the latter part of the year.

Home building has been declining for some time with little visible effect on over-all economic growth. The number of new homes started reached a peak seasonally adjusted annual rate of 1,478,000 in December 1954 and declined to 1,187,000 in December 1955. The cumulative effect of tighter mortgage credit, more restrictive terms, resistance to higher prices, and localised saturation of a few markets tended to accelerate the drop in the latter part of 1955.

More recently, there have been indications that the tide is turning. The Home Loan Bank Board arranged in December to make as much as a billion dollars in stand-by credits available to Federal savings and loan associations. In January, the Veterans Association and Federal Housing Administration extended maximum maturities on mortgages guaranteed or insured by them from 25 to 30 years, reversing their action of last July. The Federal National Mortgage Association opened facilities for "warehousing" mortgages. Generally, funds availablt for investment in mortgages appear to be somewhat less tight. It is likely to be spring before it can be seen whether or not these changes are sufficient to halt or reverse the downtrend in housing starts. Meanwhile most experienced observers are reasonably optimistic.

Offsetting Expansion

Whatever the contribution of the automobile and housing industries to economic activity in 1956, it is plain that the expected decline from the 1955 average level is already here to a considerable extent. In any case, it is unlikely that autos and housing will carry the rest of the economy with them on the downturn in the same fashion that they sparked the general upturn in 1954-55. Substantial offsetting elements of strength are present in other durable goods and other types of construction, as well as in the growth of consumer purchases of non-durable goods and services and the prospect for increased Government expenditures.

The strength of these offsets is attested by contract awards for non-residential construction, compiled by F. W. Dodge Corporation, which, in the first three weeks of January, were 39 per cent. greater on a daily average basis than last January, and by new orders for machine tools, which came in twice as fast as shipments went out during the fourth quarter. Another example is the railroad equipment industry, which had on hand unfilled orders for ten times as many freight cars at the start of 1956 as a year earlier. These are typical of the markets for capital goods and the vigour of business investment plans.

DEFICIT FINANCING SINCE INDEPENDENCE

SCOPE FOR FUTURE LIMITED

A WARNING against the complacent tendency to judge the country's capacity to bear deficit financing in the coming years on the basis of its experience in recent years was sounded by Mr. B. R. Shenoy, Director, University School of Social Sciences, Gujarat University, in the course of one of his talks at Madras this week, under the series of Sir William Mayer Endowment Lectures, 1955-56, University of Madras. The reasons for this warning will be found in the following gist of his talk:

Many have been impressed by the fact that large deficit financing since independence had not produced the disaster which theory had threatened. So far from prices soaring, until recently, the problem had been to prevent a price decline in the agricultural sector. Many "practical" men have inferred from this that this "Western" theory in its application to the Indian background has been discredited and have supported the feasibility of deficit financing of economic development. This is largely wishful thinking.

Variations in monetary circulation are the resultant of three forces: the state of the budget, the international payments position, and the public debt and the credit policy of the banking system.

The inflationary impact of the budget deficits since independence have been, in large part, neutralised, first, by deficits in international payments and, secondly, by a reduction in the public debt holdings of the banking system, both of which have had the effect of withdrawing money from circulation. In the early part of this period, owing to the inherited liquidity of war finance and large black market funds with the public, the credit creating activity of commercial banks was moderate.

This situation has been changing rapidly in the recent past. With the comparative price stability of public debt, and the increase in its yield, commercial banks have been, once again, net buyers of Government securities. As against net sales of Government debt in the preceding two years, Government securities holdings of the banking system rose by Rs. 85 crores in 1954-55. As against a decline of about Rs. 51 crores in 1952-53, and a moderate increase in the following year, Scheduled bank credit rose by a record figure of Rs. 66 crores in 1954-55. With the change in the currency reserve position, the international payments deficits of the recent past has of necessity been negligible.

Thus, the moderating influences have been replaced by expansionary forces. During the past two and a half years, the impact of the budget deficit having been reinforced by the public debt and credit policy of the banking system, money supply has expanded by about Rs. 335 crores, the increase during the past one year alone being nearly Rs. 200 crores.

This is beginning to have its price effect. Since May 1955, general prices have been moving up at an annual rate of about 11 per cent. The current stock market price decline has been due to special factors, including fears of enhanced taxation in the next budget and apprehensions of withdrawal of investment support from the nationalised insurance companies. But, prior to the appearance of these factors, share values had been moving up, since April 1955, at an annual rate exceeding 11 per cent. The price of gold in Bombay rose by 5 per cent. in the year ending January 1956.

There is, thus, need for caution against overhasty conclusions that post-independence experience suggests that we may very well continue with deficit financing without undue apprehensions. If this experience confirms anything, it is that monetary and economic fundamentals have applicability in the Indian context as well.

Since independence, the total receipts of the Government averaged Rs. 542 crores per year, and total expenditure Rs. 584 crores, the total deficits for the period aggregating Rs. 335 crores. But budget statements do not tell the whole story of the actual budget deficits. For 1954-55, the budget statements show a nominal surplus of Rs. 12 crores. In actual fact, there was a deficit of about Rs. 208 crores during the year, if we allow for the issue of Rs. 220 crores of Treasury Bills during the year. Treasury Bills are largely taken up by the banking system and they cause at least an equivalent addition to the monetary circulation. Adjustments being made for the net issue or cancellations of Treasury Bills, total deficit financing, since independence, has amounted to about Rs. 505 crores, or an annual average of Rs. 63 crores.

From the standpoint of the monetary impact of deficit financing, the period beginning with 1951-52 divides itself into two parts. During the first two years, money supply declined substantially. The budget for 1951-52, which showed a surplus of Rs. 45 crores, does not provide an adequate explanation as, in the following year, when money supply reached its lowest level, there was a budget deficit of Rs. 65 crores. The contraction in the money supply during these years was due to the record payments deficit of Rs. 161 crores in 1951-52, which reinforced the contractionary effect of the budget surplus, and the decrease, in 1952-53, in the Government security holdings of the banking system and in Scheduled bank credit, which exceeded the budget deficit of the year.

The expansion in the money supply since 1953-54 was due to the change in the public debt and credit policy of the banking system, which, in the context of a neutral effect of the international payments position, accentuated the monetary impact of budget deficits. In 1954-55, to the budget deficit of Rs 208 crores was added the expansionary pressure of about Rs. 150 crores worth of additions to the money supply on account of an increase in the public debt holdings of the banking system and a rise in the credit of Scheduled banks.

The fact that prices continued to fall until the middle of 1955, notwithstanding the expansion in the money supply, was due to certain special factors. These two years experienced heavy increases in agricultural output, chiefly foodgrains. This told heavily on agricultural prices, in particular foodgrain prices, in the case of which the low elasticity of demand, coupled with export restrictions, acted as a double drag on prices. There was also a record increase in industrial output, the index of which rose to 140 in 1954-55.

Beginning with about the middle of 1955, the rate of expansion in the money supply has now outpaced the rate of increase in output, even after allowing for these special factors.

The Board of Directors of the Commonwealth Development Finance Company, Ltd., is releasing its Managing Director, Mr. J. G. Beevor, to work with the International Bank for Reconstruction and Development. Mr. Beevor is to undertake preliminary work on the International Finance Corporation (I.F.C.), the proposed new affiliate of the World Bank. The purpose of the I.F.C. will be to encourage the growth of productive private enterprise, particularly in the less-developed areas of the world.

THE HIND BANK LIMITED

WORKING RESULTS FOR 1955

The profit of the Hind Bank Ltd. for the year 1955, subject to audit, including the amount brought forward (Rs. 1,12,820-6-8) from last year's accounts, is Rs. 11,99,277-15-9. Out of this sum, the Directors have made the following appropriations :—

Transfer to Reserve Fund Rs. 2,50,000, provision for taxes Rs. 4,00,000, leaving a balance of Rs. 5,49,277-15-9.

Out of the balance, the Directors propose to recommend to the Shareholders at the next Annual General Meeting the payment of a Dividend at Rs. 3 per share, free of income-tax, which will absorb Rs. 3,00,000 leaving Rs. 2,49,277-15-9 to be carried forward subject to payment of bonus to staff.

The Securities and Investments of the Bank appear in the accounts on December 31, 1955, at or below the market rate ruling on that date.

BANKERS AND THE SQUEEZE

GOVERNMENT'S BORROWING POLICY CRITICISED

(From Our Own Correspondent)

LONDON, *29th January*

LAST week, your correspondent commented on the initial reactions of the joint-stock bankers, in their traditional January speeches, to the Government's anti-inflationary measures and noted what indications there were of how the Premier was proposing to continue his policy. This week, with the rest of the speeches available, one can analyse more sharply what the City is thinking. And there is no doubt about it—the City is completely at loggerheads with the Treasury and the Government over the whole policy of credit restriction.

Indeed, it is clear that the country is passing through one of those acute phases of policy formation which take the form of real struggle between the contestants. No one could have foreseen six months ago, before the autumn budget, that the battle would be joined in the way it has: The City on one side (and significantly this still includes the Bank of England, in spite of nationalisation—for what other interpretation can one place on the Governor's warning that monetary policy alone will not do) and the Government, on the other.

The Midland and Barclays are at one in criticising Government's reliance on monetary policy and its refusal to make severe cuts in spending and be prepared to face some increase in unemployment. Take this point made by Midland: They had been requested in July to "bring about a positive and significant reduction in advances over the next few months." They noted that personal and professional advances which covered half their accounts amounted to only one-tenth total loans. "Supposing—as is quite unthinkable—that every one of the purely personal borrowers had been forced to repay his debt to the bank, and that no new advances at all of a similar sort had been granted, so drastic an operation would by itself have reduced our total advances by only five per cent. The whole operation could have been nullified . . . by increased needs on the part of a small number of large undertakings." After that, the Chairman roundly declared that the record showed that "monetary management cannot by itself maintain both full employment and the purchasing power of the currency . . . we need to get rid of misconceptions about the meaning of full employment." Nothing could be clearer.

The True Measure

The statement by Lloyds was especially significant since the Chairman, Sir Oliver Franks, has been Permanent Secretary of a department of a State, Chairman of the Organisation for European Economic Co-operation and Ambassador to Washington. His criticism was more balanced and tempered than that of his colleagues, but there was a sharp lesson in economics to the Government in the words: "The true measure of the disinflation brought about since February is the decline in bank advances (6 per cent.) leaving them no higher than in the middle of 1953. It is this decline in deposits—and, therefore, in the totality of bank assets—which is ultimately of importance, *not the movement of the single asset, advances.*" What he is criticising above all is the "rationing" effect of the credit squeeze. Every borrower must be squeezed regardless of his ability to pay and the economic return on the use to which the advance is put. And he objected also to the Government's continued reliance on short-term borrowing in an inflationary situation. If the Government had turned off the Treasury bill tap and converted into gilt-edged long-term, they would have paid more for their money (which is why they did not do it), but they would have effectively reduced the available amount of money on the market—and without the disadvantages, such as the ending of competition between banks, that the present techniques involve. "The sooner the present state of affairs can be ended, the better for all concerned," he concludes.

On the other hand, Sir Oliver Franks does think that the corner has been turned in our international payments. Disinflation has at least secured the gold reserves—the next stage is to move towards the necessary surplus.—*All Rights Reserved.*

PUBLIC ACCOUNTABILITY OF STATE UNDERTAKINGS

COMPANY-FORM OF MANAGEMENT IS WELL WITHIN PARLIAMENTARY CONTROL

By Asok Kumar Chanda

COMPTROLLER AND AUDITOR-GENERAL OF INDIA

[An interesting discourse on the types of management of State undertakings in India and their accountability to Parliament was given by Mr. Asok Kumar Chanda, Comptroller and Auditor-General of India, at the Institute of Chartered Accountants, Madras, last week. After briefly describing the various forms of management adopted by the Government of India for administering State enterprises, Mr. Chanda examined at some length the Controversial question whether company-form of management, under which the entire share capital is owned by the President of the Union and which was described as a "fraud on the Constitution" by his predecessor, Mr. V. Narahari Rao, provided adequate scope for control by Parliament. His conclusion was that it did and he proved it by giving convincing arguments. He indicated the various ways in which Parliament, as well as the Auditor-General, could exercise control over State undertakings established in the form of joint-stock companies. His arguments and conclusions alike imply that he does not share the view of his predecessor on this subject.

In view of the great importance of the subject, we publish on this page Mr. Chanda's talk, in extenso, in the form of a feature article.—ED.]

PARLIAMENTARY control of nationalised industries and State enterprises, has, of recent years, become a controversial issue. There is a growing feeling that public expenditure on these activities of the State should be subject to the same scrutiny and control as is applied in the case of departmental activities. In the U.K., there has been a conflict between the political parties on this issue, based, mainly, on ideological differences. Though the constitution in India, even in regard to Statutory Corporations, is somewhat different from that adopted in the U.K., the impression is gaining ground that the organisation of State undertakings has diluted the control of Parliament. The question has assumed great importance in the Indian context, as the conception of a Welfare State and its inescapable policy of active intervention in industrial development must inevitably expand the field of nationalisation. It is necessary, therefore, to examine against this background of development, the provisions which will secure a measure of parliamentary control, consistent with the requirements of autonomy, so essential for the successful operation of public enterprises.

Industrial Policy

In April 1948 the National Government expressed its determination to promote a rapid rise in the standard of living of the people by exploiting the latent resources of the country, increasing production and offering opportunities to all for employment in the service of the community. For this purpose, it was obvious that careful planning and integrated effort over the whole field of national activity were essential. Accordingly, in its resolution on industrial policy of the 6th April 1948, Government defined its attitude towards future development in the field of industrial expansion. It became evident that the State must play a progressively active role in the development of industries. The State, therefore, reserved to itself the exclusive right to establish new undertakings in industries, such as coal, iron and steel, mineral oils, aircraft manufacture, ship-building and manufacture of telephone, telegraph and wireless apparatus, except where, in the national interest, the State itself found it necessary to secure the co-operation of private enterprise, subject to such control and regulation as the Central Government might consider necessary. A provision was made, however, to allow existing undertakings in these fields to develop for a period of 10 years, during which they would be allowed all facilities for efficient working and reasonable expansion. The rest of the industrial field was normally to remain open to private enterprise, individual as well as co-operative. But the State, it was made clear, would also progressively participate in these enterprises; nor would it hesitate to intervene whenever the progress of an industry in the private sector was found to be unsatisfactory.

Since the formulation of the Policy Resolution, the attitude of Government has become more clearly defined. The State and private enterprise would, thus, fulfil a complementary role in the industrial development of the country. The picturesque phrase "mixed economy" has been coined to express this intention. State intervention is now limited where the scope and magnitude of a project or its basic character places it, either beyond the capacity of private enterprises to undertake, or in a special position where private enterprise should not be allowed to regulate its future development. Accordingly, in recent years, several State undertakings, both in the reserved and the unreserved fields, have been established.

In 1950, the question of the form of management of industrial enterprises undertaken and financed wholly or predominantly by Government, came under active consideration. The Government came to the conclusion that, while certain general principles should be followed, the organisation of management, suitable for each industrial undertaking, must be settled in accordance with its particular requirements. Except ordnance factories and other undertakings of a similar nature, which must be administered directly by the Ministry concerned, it was accepted that departmental management was unsuitable for Government industrial undertakings. The principal defects of departmental management were connected with administrative and financial procedures. The methods of recruitment, scales of pay and conditions of service and discipline of employees, the procedure for obtaining of funds and incurring of expenditure, the system of accounting, the methods of purchase of raw materials and the sale of products, etc., which were devised for the normal activities of Government, were not entirely suitable for the administration of industrial enterprises.

Reliable Standard

Moreover, when Government undertook industrial activities side by side and sometimes in competition with private enterprise, mass production and competitive efficiency became very essential. A reliable standard of comparison had to be established. This could be done only if they were managed on commercial lines, adopted commercial form of accounting and were operated, financed and taxed in the same manner as enterprises in the private sector. The largest measure of financial and administrative economy, commensurate with public accountability, had, therefore, to be conferred on the agencies responsible for these undertakings. The content of autonomy would naturally vary from case to case and certain reservations had to be made for Government's decision.

In accordance with the principles mentioned above, the form of management adopted for State enterprises varies from unit to unit, depending on their peculiar needs and requirements. There are thus the ordnance factories, railway workshops and production units, such as the Chittaranjan Locomotive Works and the Perambur Integral Coach Building Factory under departmental management. Statutory Corporations have been set up for administering multi-purpose River Valley Projects in the Damodar Valley, Indian Airlines and Air-India International. Similarly, Statutory Boards have been formed for dealing with certain industries like tea, coffee, rubber, coal, etc. Joint stock or limited companies have been constituted for the management of State industrial units. The decision regarding company-form of management was taken after a full and careful discussion of the needs and requirements of such units.

Three Categories

The units organised as companies fall again into three well-defined categories—

(a) where the entire investment has been provided by the Government of India;

(b) where the majority investment has been made by the Government of India, but private interests hold a significant, though a minority, interest; and

(c) where Government hold a minority, but significant interest in the shareholding of a company, or where, having granted loans or given guarantees or other fiduciary assistance, Government have acquired the right to nominate directors to the boards of certain private companies.

The measure of control which Parliament exercises is regulated by the form of management adopted. In the case of departmental units, the control of Parliament is absolute, as the annual requirements of the units for all their expenditure are presented to the House in the form of Demands for Grants. To the extent Government have to sanction their annual budget and the requisite funds out of the cess collected have to be voted by Parliament, similar control exists over the Commodity Boards. In the case of Statutory Corporations, the control of Parliament is well defined and certain matters are specifically reserved for its consideration. In the case of company-form of management, control is, however, of necessity, more limited.

In India, the State has set up manufacturing units in industries which are not nationalised. Alongside the State units, there are also private units operating in the same field. It is essential, therefore, that the State units should be organised and operated on business lines, with a comparable degree of elasticity of control and business efficiency as private units in the same field. In the words of Mr. Herbert Morrison, in justification of the corporation-form of management in the U.K., "when we come to a highly commercial enterprise which is very tricky—on which one has to think out a lot of day-to-day problems, to think quickly and chance one's arm, like transport and mining and other industries, with which we have been dealing or with which we may deal—then we have to get a more subtle instrument, more adaptable, more capable of quick movement and less liable to be bound down by tradition and rules. . . . I am certain that, if we run these public corporations—highly commercial, highly industrial, highly economic—on the basis of meticulous accountability to political channels, we are going to ruin the commercial enterprise and the adventurous spirit of these public corporations in their work." These

COTTON SPINDLEAGE IN INDIA EXPANDS

WEAVING CAPACITY, HOWEVER, SUFFERS SETBACK

A FEATURE of development in the cotton mill industry during the cotton year ended August 1955 was that the spinning capacity of the industry registered a marked expansion, while the weaving capacity suffered a distinct setback. The number of new spindles installed in the year was 180,379, which compares favourably with 167,026 a year before, according to the latest annual Mill Statement of the Millowners' Association, Bombay. As at 31st August 1955, there were 12,068,544 spindles, as against 11,888,165 on the corresponding date of 1954. In contrast, the number of looms installed was lower by 416 at 207,347. During 1953-54, it will be recalled, there was an increase on 513 looms The reduction in loomage indicates that the looms must have become worn out and scrapped, without being replaced. The Government's policy of "no expansion in weaving capacity" may have also contributed to this reduction.

The number of mills in existence as at 31st August 1955 was 461, same as that a year before. It is, however, stated that the names of nine mills which were no longer in existence have been deleted and, instead, nine new mills which went into production during the year have been added. The paid-up capital of the mill sector improved by more than Rs. 1.06 crores to Rs. 113.96 crores. The increase, however, is very much less than that (Rs. 3.28 crores) recorded in the previous year. Most of the new mills were spinning units only. This is only to be expected, considering that the development programme for the cotton textile industry in the first Five-year Plan did not envisage establishment of new composite mills. The number of mills registered and/or in course of erection as at the end of August 1955 was higher at 34, as against 22 a year before.

Quantitative Progress

The following table gives the salient features of the quantitative progress of the mill sector in the past three years.

	As on 31st August		
	1955	1954	1953
Total number of mills	461	461	457
No. of mills registered and/or in course of erection	34	22	17
No. of mills idle	27	23	29
Paid-up capital (in crores of Rs.)..	113.96	112.89	109.61
Spindles installed	12,068,544	11,888,165	11,721,139
Spindles working (first shift only)..	10,423,075	10,502,832	10,292,112
Looms installed	207,347	207,763	207,250
Looms working (first shift only)..	186,094	189,648	188,606
Cotton consumption (in bales of 392 lbs.)	4,797,084	4,688,866	4,518,702
Number of hands employed (first shift only)	423,595	435,421	435,138

It will be seen from the above figures that, although the installed spinning capacity of the cotton mills expanded during 1954-55, the capacity actually utilised (first shift only) was less, the average number of spindles working being 10,423,075, as against 10,502,832 in 1953-54. Similarly, the average number of looms working (first shift only) declined from 189,648 to 186,094. The extent of the actual utilisation of installed capacity (in first shift) was smaller as compared with the previous year, being 86.3 per cent. for spindles and 89.7 per cent. for looms, as against 88.4 per cent. and 91.2 per cent. Reflecting this trend and also the increase in the mills remaining idle from 23 to 27, the number of hands employed (first shift only) fell by 11,826 to 423,595. From all this, one should not, however, rush to the conclusion that the manufacturing activity in cotton mills remained greatly subdued during the year under review. The reduction in the average of the capacity worked is evidently the result of the prolonged strike in the mills at Kanpur. Elsewhere in the country, the industry endeavoured to maximise output oy working double shifts and some even worked treble shifts. Proof of this is provided by the rise in the quantity of cotton consumed which, during 1954-55, amounted to 4,797,084 bales (of 392 lbs. each), as against 4,688,866 bales in the previous year. The rise in cotton consumption is fully reflected in an all-time peak in the mill output of cloth—estimated at 5,078 million yards —and of yarn—estimated at 1,628 million lbs.—touched during the calendar year 1955.

The encouraging production performance of cotton mills as noted above was the result of several favourable factors. Particular mention must be made of ready availability of raw cotton at substantially reduced prices. Whatever irksome controls there were on the purchase of cotton by mills were abolished, so that the mills had no difficulty in buying cotton according to their taste and need. The other important favourable factors included consistently good demand for both cloth and yarn, better supply of wagons for transport of cotton from producing areas to mills, improvement in power and fuel supplies, happy labour-management relations in the major sector of industry and absence of interference by Government in production, prices and distribution of cotton textiles.

Spinning Capacity

To revert to the spinning capacity of cotton mills during 1954-55. The expansion in capacity noted earlier was shared by all the States, with the exception of Hyderabad and Pondicherry. In Bombay, for instance, the number of spindles installed was higher by 28,681 at 6,576,665, although the number of mills was lower at 205, as against 211 a year before. In the State of Madras, the number of mills increased from 95, with a total of 2,109,704 spindles, to 99 with 2,220,986 spindles. West Bengal accounted for the addition of one new mill.

The reduction in the number of looms installed occurred solely in the States of Bombay, Bihar and Orissa. In Bombay alone, the reduction was 1,188 looms. All the other States accounted for installation of new looms.

Importance of Bombay

As in the previous years, so also during the year under review, Bombay was the major seat of the cotton mill industry. An idea of how Bombay compares with the other States in the importance of textile industry can be had from the statement given below:

Situation	No. of mills	Spindles installed	Looms installed	Average number of hands employed
Bombay—				
Bombay City and Island	66	3,101,672	65,904	111,097
Ahmedabad	71	2,023,890	41,519	71,951
Saurashtra	9	162,188	3,345	6,605
Rest of Bombay and Kutch	59	1,288,915	24,032	45,214
Total Bombay State ..	205	6,576,665	134,800	234,867
Madras	99	2,220,986	9,355	59,875
West Bengal	41	522,804	10,640	22,077
Uttar Pradesh	29	820,492	13,316	23,421
Madhya Bharat and Bhopal	18	454,196	11,323	21,037
Rajasthan, Ajmer and P.E.P.S.U.	12	175,500	3,397	8,044
Punjab and Delhi	11	230,772	5,053	6,735
Madhya Pradesh	11	373,869	7,350	17,610
Mysore	11	232,844	3,456	11,942
Travancore-Cochin	10	135,696	718	3,761
Hyderabad	7	158,080	3,241	7,360
Bihar and Orissa	4	82,196	1,609	2,829
Pondicherry	3	84,484	2,089	3,437
Grand Total ..	461*	12,068,544	207,347	423,595

* This number does not include 34 mills which have either been registered and/or in course of erection.

The foregoing figures reveal that the share of Bombay in the aggregate spindleage and loomage of the entire cotton mill industry was the largest, being more than 54 per cent. and nearly 64 per cent., respectively, although its share in the number of mills is only 44.4 per cent. It is thus once again evident that the average size of the cotton mills in Bombay is larger than that in other States and that the mills are well-balanced composite units. It is no wonder, therefore, that Bombay accounts for the major portion of the woven goods produced in India.

1955 REVIEW OF COTTON TEXTILES

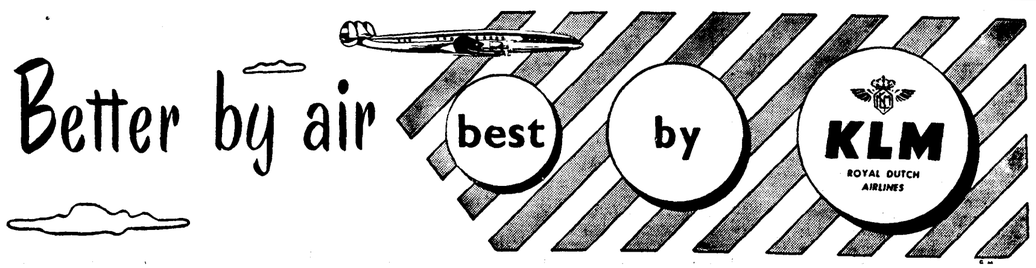
There are two inaccuracies in the review on the trend of cotton textile industry and trade published in our *Annual Number* 1955—*vide* page A175. First, the production of mill cloth during 1954 is given in the table relating to supply position of cloth as 5,111 million yards, which should have been 5,011 million yards. The figure of 5,011 million yards does not tally with the total of break-down estimates for the different varieties of cloth, since the latter were based on incomplete data. Secondly, the estimate of the aggregate shipment of mill cloth from India during 1955 is placed at 865 million yards which represent not actual exports but only the quantity passed for shipment. The correct estimate of the actual exports based on figures for the first eleven months of 1955 comes to 825 million yards. Drawing attention to these inaccuracies, an esteemed correspondent, well versed in textile statistics, observes that the fall in exports during 1955 as compared with 1954 is 73 million yards and not 33 million yards as given in our review. Commenting on the downward trend in cloth shipments, he remarks:

"You might be aware that the decline in the world trade in cotton textiles will register a fall of 10 to 12 per cent. for 1955. If that be the actual position, our performance should be considered the best and India would suffer smaller setbacks in comparison with other main supplying countries. In an earlier issue of your paper, you also mentioned that the world trade in cotton textiles will be smaller by 11 to 12 per cent. In this connection, I also want to mention, in brief, that the trade in cotton textiles as a whole was very good, considering both internal and external trade. If holding of stocks be any indicator, it supports my argument. It has been reported that, as at the end of last year, 1955, the mills' stock averaged only two weeks' production which, in actual quantity, will not be more than 200 million yards (calculated on the basis of production figures given in your review), whereas stocks of 1954 were at the level of 534 million yards, as mentioned in your review. This hypothesis also gets its weight from the fact that the total production in the mill as well as the handloom sector was higher than in 1954. The production of the mill sector is reported in your review as 5,098 million yards, as against 5,011 million yards for 1954. Our export target framed at the Buxton Conference was done on a residual basis rather than by direct methods, that is, on individual market requirements based on the demand trends. On residual basis, export targets were calculated as follows: Estimated production *minus* estimated local consumption equals export targets. On a certain production level, if the local consumption goes high, export is bound to decline. On this basis, it can be proved, to a certain extent, that our exports during 1955 declined, due to the present level of production and the present level of home consumption, apart from other conditions which no doubt played their part."

CLOTH EXPORTS TO BURMA

An official mission from Burma, headed by its Finance Minister U Tin, has been in India for some days now making purchases of cloth for domestic consumption in that country. While the quantity of Indian cloth that will ultimately be bought by this mission will depend on the ability of Indian textile interests to supply the quality cloth of Burma's choice at competitive prices, it is gratifying that the Government of India has given special permission to the trade for export of cloth packed for home consumption to Burma. Meanwhile, the Director of Procurement, War Office, Government of Burma, is interested in procuring large supplies of clothing stores for the use of the Burma defence forces from India and other countries.

Now that Burma is eager to buy large quantities of cotton textiles, Indian shippers must endeavour their best to avail themselves of this opportunity. The importance of Burma as a market for Indian cloth has of late receded considerably, thanks partly to import restrictions and partly to competition from Japan and China. The quantity of Indian mill-made piecegoods bought by Burma during the first nine months of 1955 was a little over 10.13 million yards, as against 33.91 million yards in the corresponding period of 1954.



U.K. TEXTILE INDUSTRY'S CASE AGAINST CLOTH IMPORTS

FRESH REPRESENTATION TO BE MADE

From A Special Correspondent

MANCHESTER, 31*st January*

INTEREST in the foreign cloth controversy has revived following the announcement that a further delegation from the trade is to visit Mr. Thorneycroft to discuss the document submitted to him at the end of last year, giving new facts and figures about Lancashire's case for protection against duty-free imports. The changed circumstances both at home and abroad have created a different atmosphere, yet the majority opinion of textile traders in this country inclines to the view that some curb should be imposed on such arrivals to safeguard local mills.

MANCHESTER LETTER

A change of heart on the part of the Government cannot be regarded as a likely eventuality, but the pressure is being maintained. Meanwhile, the attitude of one section has been clearly stated by Mr. C. H. Fish, Chairman of J. F. and H. Roberts Ltd., the manufacturing and merchanting group, who has pointed out that the remedy is in the hands of the trade.

"If all concerned in production and distribution refused to handle foreign cloth there would be no problem," he said in his annual statement, "and our industry would be safe to continue its progress in modernisation, better amenities and shift working." In a warning to the branches devoted to processing grey cloth, Mr. Fish observed that the foreigner was not being slow in developing his finishing capacity.

In certain departments of the Company, Mr. Fish admitted, a painful loss of turnover had been suffered due to its policy of refusing to handle foreign cloth. "Recently, there have been signs that some users of foreign cloth are having second thoughts on the advisability of pinning their faith to foreign suppliers, but no large-scale movement is as yet apparent," he added.

Further Discussions

The President of the Board of Trade, Mr. Peter Thorneycroft, will meet a deputation from the Cotton Board on 20th February for further discussions on the imports of cheap duty-free cloth from Hongkong and India. The meeting will be at the Board of Trade, and all sections of the cotton industry will be represented on the deputation.

Lancashire's case for protection against these imports, which amounted to about 180 million square yards last year, was rejected by the Government in March, but the Cotton Board's standing conference on oversea trade submitted a fresh case to Mr. Thorneycroft in December and next month's discussions will centre round this.

A forecast that Japan will remain in a very favourable position to compete with Western textile manufacturers is made in a report published by the International Federation of Textile Workers' Associations, following a visit to Japan by Mr. Werner Bock, of Germany, and Mr. John Greenhalgh, Secretary of the organisation.

"Since 1945," the report states, "the Japanese textile industry has been gradually rehabilitating itself, and whilst it has been the policy to carefully avoid a repetition of her former trading practices, this can be no guarantee for the future. Much will depend on the economic position of Japan as a whole."

The delegation interviewed Mr. Abe, President of the Japanese Textile Employers' Association, who told them that as a result of the high rate of interest, high wages and greatly increased freight charges it was not impossible for Japan to dump cheap textiles on the world's markets. In their report, however, the visitors are somewhat sceptical about this claim.

"Taking into account the low wages paid in Japan, plus all the other charges which the Japanese employers have to meet, the delegation can find no basis for the contention of the employers that Japan cannot produce cheap goods," says the report. "Even if the figures of the employers themselves are accepted, that they pay 3,300 yen per worker per month in additional charges, this is still much below one-half of the wages paid to European textile workers."

System of Payment

A feature of the Japanese textile industry, according to the delegation, is the system of payment for each year of service. No firm was discovered which provided extra payment for increased production. "Quality and efficiency of the workers is therefore ignored," comments the report, "and after a period of about five years it becomes more economical for the employer to discharge the worker and replace her with another person, to whom he would be required to pay much less."

Among the recommendations put forward by the mission is that Japanese millowners should pay their workers weekly. "Payment each month tends to create the illusion that the workers have higher wages than they actually have," the report adds. "If wages were paid each week it would make the workers realise how low their wages are."

Describing a "show-mill" visited by the delegation, the report says it included a co-operative store, an "exceptionally fine" clinic, with doctor, dentist and six nurses, an X-ray unit, small operating theatre, school room, recreation room, dining hall, swimming pool, laundry, hairdressers for men and women, and baseball, basketball and tennis facilities.

Conditions in many of the smaller mills, however, did not approach this standard. From information received the delegation considered it would be to the advantage of the Japanese textile industry if the small mills went out of existence. Such a step would cause great hardship for a considerable period among the many thousands of workers employed in the smaller units, but the readjustment of the industry would, the report adds, eventually lead to greater stabilisation and an improvement in the standard of living of those operatives who were absorbed into larger mills.

Fewer Failures

Notwithstanding the keen competition and the many problems confronting Lancashire cotton textile traders last year, there was a further decline in the number of cases of financial difficulties compared with both 1954 and 1953. The total number of bankruptcies, deeds of arrangement, liquidations and receiverships during 1955 was 90 compared with 101 in the previous year and 120 in 1953.

For the first time for four years, there were no bankruptcies or deeds of arrangement notified, but ten receivers were appointed compared with only six in the previous year. These involved four manufacturing firms, one spinning and weaving concern, one finisher, two merchants and two miscellaneous traders.

The number of compulsory company liquidations in 1955 was again six, as in 1954, one spinning firm being involved and five merchants. Creditors' voluntary liquidations affected 14 firms, including one manufacturer, two finishers, seven merchants and four miscellaneous traders. There was a further decline in the number of members' voluntary liquidations from 68 to 60. These forerunners of reconstruction, amalgamation or a decision to give up business comprised seven spinners, eight manufacturers, three spinners and weavers, two doublers, five finishing firms, 33 merchants and two miscellaneous traders.

During the past two years, registrations of new limited companies in the industry have shown a considerable reduction. From as many as 236 in 1953 the number fell to 157 in the following year, while in 1955 only 96 new companies were registered. The nominal capital involved also declined sharply from £1,741,350 to £642,300. Again, the majority of registrations concerned merchants and agents who numbered 69 against 114. Two spinners, 11 manufacturers, two spinners and weavers, three doublers and two finishing firms were also included in the list.

Machines for the World

While exports of finished textile goods made in Lancashire mills languished during the past year there was no corresponding decline in the amount of textile machinery shipped abroad. Overseas buyers, in fact, paid more for British plant than in any year save 1951 and 1952. Total shipments of textile machinery weighed 1,653,616 cwts. valued at £43,295,479. This compared with 1,586,612 cwts. worth £39,454,410 in 1954.

Some indication of the rising threat of competition facing Lancashire producers of textile goods from foreign rivals can be gauged from the extent to which overseas customers are resorting to purchases of fresh plant. India resumed its place as the largest consumer of British textile machinery, taking 306,862 cwts., as against 303,197 cwts in 1954, but there was a fall

SOME COTTON PROBLEMS REVIEWED

VALUE OF RESEARCH TO NATIONAL ECONOMY

THE fundamental importance of research in the cultivation of cotton and of dissemination of research information among the growers was stressed by Dr. Punjabrao Deshmukh, Union Minister for Agriculture, when he inaugurated the seventy-third meeting of the Indian Central Cotton Committee held last week, in Bombay. He also reviewed the increase in cotton output which had been achieved in recent years. He assured the Committee that there would be no lack of finance for tackling the many cotton problems which still remained to be solved.

Reviewing the increase in the output of cotton, Dr. Deshmukh pointed out how the output (official estimate) had risen from 21.88 lakh bales in 1947-48 to 42.98 lakh bales in 1954-55. The trade estimate of the crop for 1954-55, which is always nearer the actual total, places the crop at 54.60 lakh bales. This increase is the more significant for the reason that the output of long- and medium-staple cotton has also increased. As compared with 1947-48, the total production of cotton has increased by 96 per cent., while the production of long- and medium-staple varieties has gone up by 397 per cent. and 68 per cent., respectively. In the field of agricultural production, Dr. Deshmukh said, India had "emerged from the old dismal outlook of slow progress and slower persuasion of the cultivators to take to improved methods."

Cotton Output

The increase in cotton production has, as is well known, been followed by an upward trend in the offtake of Indian cotton by the mills in India; the consumption of foreign cotton has been declining. Referring to this trend, Dr. Deshmukh said that the mill consumption of Indian and foreign cotton during the 1954-55 season aggregated 41.38 lakh bales and 6.31 lakh bales, respectively, as against 28.64 lakh bales and 13.44 lakh bales, respectively in 1947-48. The consumption of Indian cotton by the mills during September 1955 amounted to 3.83 lakh bales, being the highest consumption of such cotton for any month in the past. If this trend continues, the season 1955-56 may well establish a fresh record in the offtake of indigenous cotton by the mills. Dr. Deshmukh calculated that the annual saving to the country, as a result of the increased consumption of 12.7 lakh bales of Indian cotton, would aggregate Rs. 44 crores at internal level of prices and at Rs. 70 crores at world price levels. He added: "As compared with this huge benefit to the national economy, the expenditure incurred by the Committee from its inception, amounting to about Rs. 3 crores, is a fleabite. This illustrates how money spent by this Committee has been worthwhile and the work done in the sphere of better production has been commendable."

Another notable achievement in the sphere of cotton production is the fulfilment of targets of area and production prescribed for the first Five-year Plan one year ahead of the schedule. So far as the next Plan is concerned, the provisional target for cotton production has been fixed at 55.86 lakh bales. The tentative target for the area under cotton in the second Plan has been fixed at 20.3 million acres, as against 18.3 million acres in 1954-55 and about 20 million acres in 1955-56. After emphasising that the bulk of the increase in production contemplated under the second Five-year Plan has to be achieved by adoption of intensive cultivation methods, Dr. Deshmukh proceeded to review the level of per-acre yield of cotton in this country.

Per-acre Yield

From an average of 81 lbs. per acre in 1947-48, the per-acre yield has gone up to 92 lbs. in 1954-55. Nevertheless, the yield is only one-fifth of that in Egypt and one-fourth of that in the U.S. This low per-acre yield in India, as Dr. Deshmukh observed, is to be attributed to the fact that the irrigated area under cotton represents hardly 9 per cent. of the total. With the completion of the irrigation projects, the irrigated area under cotton is bound to go up. Even so, a large part of the cotton area will continue to be rain-fed, so that the yields will generally be dependent on the vagaries of the monsoon. Dr. Deshmukh, therefore, did well to emphasise that special efforts would have to be continued to raise appreciably the yield per acre of cotton in unirrigated areas as well.

In the sphere of the production of adequate supplies of cotton of staple length 1.1/16" and above, which would help replace a large part of the imported varieties, Dr. Deshmukh pointed out that some success had already been achieved. The area under long-staple varieties (1" and above) had increased from 2.9 lakh acres to 4.6 lakh acres in the current season. The promising long-staple varieties include MCU-1 and MCU-2 in the Madras State, 170-C02 and 134-C02-M in the Bombay State and M.A.5 in the Mysore State. In this connection, the Minister referred to the question of further improvement of indigenous varieties before the lower varieties of imported cotton could be effectively replaced. He said that the Committee had received on this subject the benefit of the advice of a botanist of the eminence of Dr. S. C. Harland, Professor of Botany, Manchester University. He added: "The practical application of his recommendations as proposed by the expert subcommittee which has examined his reports should be helpful in reorienting the work on proper lines, in order to achieve speedy results."

Finance

Finally, Dr. Deshmukh referred to the need for adequate financial resources for undertaking the necessary research and development schemes. He said there should be "no difficulty on this score, at any rate, for the next five years." During the next Five-year period, in addition to Rs. 40 to Rs. 50 lakhs which the Committee would be spending from the cotton cess, provision has been made in the second Five-year Plan for grants from the Government of India to the tune of Rs. 50 lakhs for research schemes. The Central Government will also provide Rs. 60 lakhs for financing the Cotton Extension Schemes in the States. Further, a sum of Rs. 10 lakhs for the five-year period has been provided under the Plan for the establishment of five regional research stations for cotton. Provision has also been made for a grant of Rs. 15 lakhs in the second Five-year Plan for the expansion and modernisation of the Committee's Technological Laboratory.

In the course of his presidential address, Mr. M. S. Randhawa, Vice-President, Indian Council of Agricultural Research, stressed the need for regionalisation of cotton research. An important recommendation made by Dr. Harland also relates to the establishment of regional research stations. Mr. Randhawa revealed that the scheme prepared by the expert subcommittee, headed by Dr. B. P. Pal, envisaged the division of the cotton-growing tracts in the country into five regions and the setting up of a research station in each region. He pointed out that, while regionalisation of research would result in increased expenditure in some directions, economies would also be possible by preventing overlapping and duplication of work. Another topic to which he drew the attention of the Committee was decentralisation of ginning. He felt that ginning of cotton was an industry which could lend itself to co-operative working in the villages which were electrified or were likely to be electrified. He felt that, if small roller gins worked by low horse-power motors could be manufactured, a large number of villages could derive benefit from this cottage industry.

Review of Legislation

The Committee generally adopted the recommendations made by the various sectional committees. The Cotton Ginning and Pressing Factories Sub-committee recommended that, in the interests of maintaining the quality and reputation of Indian cotton, a review of the existing legislation in the various States to check malpractices in ginning and pressing factories should be undertaken by the Committee's office, with a view to closing any loopholes in the existing provisions. The Technological Research Sub-committee approved a proposal for holding annually a conference of cotton breeders, ginners, spinners and cotton technologists. The Agricultural Research Sub-committee recommended the undertaking of schemes for production of extra long-staple cotton in Madras and Saurashtra States, for multiplication and distribution of superior long-staple cottons in Saurashtra and for breeding Indo-American cottons in Surat, for breeding long-staple American cotton in Madhya Bharat and for investigating the use of insecticides for control of cotton pests in the Bombay and Punjab States. An important recommendation made by the Committee was to the effect that steps should be taken to collect information regarding the additional area which could be brought under cotton cultivation in the various irrigation-*cum*-hydro-electric projects, with a view to assessing the potentialities for increasing the area under cotton in such tracts. We commend this recommendation to the attention of the Government for, such information, if collected and disseminated, would certainly prove of great value to all cotton interests—growers, traders, ginning factories and spinners.

MINIMUM WAGES IN GINNING FACTORIES

The Government of Bombay has fixed the minimum rates of wages in respect of employment in cotton ginning or cotton pressing manufactories on the recommendations of the Minimum Wages Committee appointed for the purpose. For the purpose of fixation of minimum wages, while the State has been divided into four zones depending upon the condition of the industry in those particular areas, the workers have been divided into four categories: (1) Skilled, (2) semi-skilled, (3) unskilled (light) and, (4) unskilled (heavy). Different scales have been prescribed for different categories of workers in four different zones. The minimum wages for the different categories of workers in the four zones are: for skilled workers Rs. 75, Rs. 68, Rs. 62 and Rs. 56; for semi-skilled workers Rs. 65, Rs. 59, Rs. 54 and Rs. 48; for unskilled (light) workers Rs. 60, Rs. 36-10-0, Rs. 32-6-0 and Rs. 27-8-0; and for unskilled (heavy) Rs. 60, Rs. 49-10-0, Rs. 45-6-0 and Rs. 40-8-0.

Zone I comprises Greater Bombay and zone II, the cities and towns of Ahmedabad, Poona, Sholapur, Surat, Nasik, Ahmednagar, Kolhapur, Baroda, Ulhasnagar, Nadiad, Thana, Kalyan, Jalgaon, Bhusaval, Dhulia, Malegaon, Miraj, Broach, Sangli, Viramgaum, Hubli and Chalisgaon. Zone III comprises 121 cities and towns and zone IV all other rural areas in the State. These minimum rates of wages, which will consist of an all-inclusive rate allowing for a basic rate, the cost of living allowance and the cash value of the concessions, if any, will come into force from 1st July 1956. The minimum rates of wages payable to a child will be 50 per cent. of the minimum rates of wages fixed for an unskilled employee, while those payable to an adolescent, if certified to work as an adult, will be the same as those fixed for an adult and if certified to work as a child, will be the same as those fixed for a child. The minimum rates of wages payable to an apprentice will be 75 per cent. of the minimum rates of wages fixed for an unskilled employee. Apprentices have, however, been exempted from the provisions of the Minimum Wages Act for a period of three years from 1st July 1956.

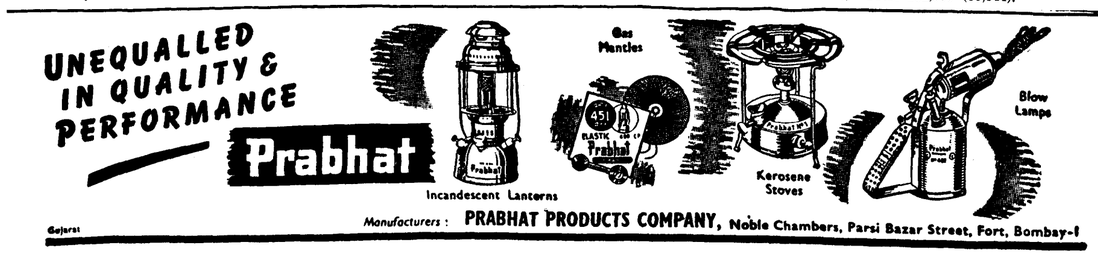
EXPORTS OF COTTON

During the period 1st September 1955 to 14th January 1956, India exported 262,055 bales (of 400 lbs. each) of cotton, as against 60,644 bales in the corresponding period of 1954-55.

The offtake of Indian cotton by different countries during the period under review, the figures within brackets indicating the offtake in the corresponding period of the previous season, was as follows:

(In bales of 400 lbs. each)

Japan 115,222 (33,497); Continent 52,960 (13,120); China 34,651 (1,128); U.K. 30,345 (5,899); Hongkong 24,237 (—); U.S. 2,505 (6,560); others 2,135 (440)—Total 262,055 (60,644).



NEW RETENTION PRICES FOR STEEL

PRINCIPLES OF PRICE FIXATION SUBSTANTIALLY CHANGED

THE Government of India has accepted the recommendation of the Tariff Commission, as briefly stated in our last issue, that the average retention price of steel produced by the Tata Iron and Steel Company, Ltd., and the Indian Iron and Steel Company, Ltd., should be fixed at the uniform rate of Rs. 393 per ton. The revised price will remain in force for a period of five years from 1st April 1955 to 31st March 1960. The Government has also accepted the Commission's recommendation in respect of the revised prices for 1954-55 for the two companies. The prices for this year have been adjusted for variation in manufacturing costs and will be Rs. 343 per ton for the T.I.S.Co. and Rs. 386 per ton for the I.I.S.Co. The companies will have to credit to their respective development funds the difference between (a) the above adjusted retention prices for 1954-55 and the uniform retention price fixed for 1955-56 to 1959-60 and (b) their actual sales

The aforesaid uniform price for the two main producers of steel represents an increase of Rs. 8 per ton over that (Rs. 385 per ton) provisionally fixed by the Government in May last, pending enquiry by the Tariff Commission, and of Rs. 50 per ton in the case of the T.I.S.Co. and Rs. 7 per ton in the case of the I.I.S.Co. over the revised prices for 1954-55 of Rs. 343 and Rs. 386, respectively, recommended by the Commission and accepted by the Government.

The main object of the enquiry by the Tariff Commission was to fix a uniform retention price at a rate which would enable the two major producers to obtain a reasonable proportion of their capital requirements for their current and additional expansion programmes from internal sources and to raise the balance from outside. The Government desired that the prices fixed for the two producers should be uniform on an average and, where necessary and possible, for comparable products. In order that the introduction of a uniform price might not adversely affect the production and expansion programme of the I.I.S.Co., the works costs per ton of which were higher than those of the T.I.S.Co., the Government desired that the uniform price should be fixed on the basis of the costs of production of the I.I.S.Co. The Government also wanted that the principles of price fixation hitherto followed should be revised and that the revised principles should be applied to the industry from 1st April 1955. The Government had already accepted the Commission's earlier recommendation that the colliery block of the steel companies should be treated as an integral part of the steel block and that the steel companies should be allowed to recover their actual cost of raising coal in the price of steel. Thus, the principles followed in the latest enquiry of the Commission were substantially different from those followed in the earlier enquiries.

New Approach

Broadly speaking, until May last, fair retention prices were fixed for each unit separately by taking into account its estimated works costs and overheads for a future period. In calculating the overheads, a return had been allowed at 8 per cent. on the appropriate amount of gross block, depreciation at 6¼ per cent. on the increase in gross block, in addition to normal and special depreciation, interest at 1 per cent. over Bank rate on the estimated working capital, selling expenses at Rs. 2 per ton and a margin for contingencies at Rs. 5 per ton. As the object of the latest enquiry was to fix the retention prices in such a manner as to enable the two producers to obtain a reasonable proportion of their capital requirements from internal sources, the Commission found that the prices fixed on the aforesaid basis hitherto followed would be inadequate for both the companies. The Commission, however, was not in favour of granting a higher return by taking the gross block as the basis of calculation for this purpose. The Government and the producers have recognised the need for reviewing the existing procedure of calculating return on the basis of the gross block in the case of this industry. Accordingly, the Commission considered it advisable to depart from the usual practice and adopted a different approach which, while serving the needs of the present situation, will in no way prejudice the formulation of long-term principles at the end of the new period of price fixation. The Commission's approach is, in its own words, as follows:

"In order that the uniform prices to be fixed may not create difficulties for the I.I.S.Co whose costs of production are higher, we have first examined the I.I.S.Co.'s requirements. We have taken into account the total capital funds required by the I.I.S.Co. and the amount which they may reasonably be expected to raise from outside and have determined on this basis the amount which they should obtain from internal sources. The internal sources consist partly of depreciation and partly of return. We have allowed depreciation at the rate of 6¼ per cent. on the additions to the gross block expected to take place year by year, in addition to normal and special depreciation. By deducting this from the required amount of internal resources, we have arrived at the surplus which the Company should obtain in order to be able to finance the excess of its capital expenditure over the sum total of depreciation and the outside capital funds. We have then estimated the Company's works costs and other current charges likely to be incurred by it and so fixed its retention prices as to enable it to earn the necessary surplus after meeting its works costs, other current charges and the liabilities incurred, or to be incurred, by it on account of the capital funds obtained from outside. The prices so determined will apply to those categories of steel which are produced by both the I.I.S.Co. and Tatas. A similar analysis of requirements and resources has been made for Tatas in order to determine the level of prices which will enable them to finance a reasonable proportion of their capital expenditure from internal sources. The prices for categories solely produced by Tatas have then been determined so as to arrive at the average level of prices considered adequate for them."

I.I.S.Co.'s Suggestion

The I.I.S.Co., however, suggested that the Commission should first determine a fair retention price for it on the basis of the principles hitherto followed and then allow a special element to take account of its expansion needs. The suggestion was not accepted by the Commission on the ground that it involved continued adherence to the old principles of price fixation.

The new uniform retention price has been fixed for a period of five years. Giving its reasons for adopting the five-year period, the Commission says:

"Although Tatas are planning to complete their two-million-ton project in three years, they will not be able to realise their full output earlier than in 1959-60. I.I.S.Co. have still to complete a large part of their 1953 extensions and the task of carrying out 1955 extensions concurrently with the extensions already in hand is bound to involve considerable dislocation in their works. They do not, therefore, expect to realise their full output even in 1959-60. Moreover, Tatas have urged that an assurance of stable prices for a reasonably long period, say five years, will help them considerably to raise the necessary funds from outside sources. If prices were fixed for a period of three years only, of which one year will have elapsed by the time the Companies approach the investment market, the balance of the period may be too short to afford the necessary assurance to investors about the future earnings of the Companies. We consider that there is considerable force in this contention. We have, therefore, adopted a period of five years from 1st April 1955 for the present price fixation."

According to the latest revised programme of expansion of the Indian Iron and Steel Company, Ltd., the Company proposes to increase its rolling capacity to produce, in addition to 140,000 tons of billets, 660,000 tons of finished steel. The Company also proposes to increase its production of ingot steel from 870,000 tons to about 1,000,000 tons. The revised estimate of the Company's capital requirements is Rs. 49.22 crores, of which the 1953 extensions account for Rs. 27.12 crores, 1955 extensions for Rs. 11 crores and subsidiary expenditure for Rs. 4.41 crores. In addition, the provision for replacements, renewals and improvements at 40 per cent. of the estimated allocations to the depreciation fund will require Rs. 3.69 crores and repayments of the World Bank loan and the loan from the Government of India will require Rs. 3 crores. The capital funds already available to the Company under the existing arrangements with the World Bank and the Government of India amount to Rs. 24.57 crores, after taking into account the amount (Rs. 4.54 crores) drawn up to 31st March 1955. The balance to be found is Rs. 24.65 crores. The Company claimed to have no savings available from the past period to finance its capital expenditure.

Opening Balance Not Taken into Account

In any case, the Tariff Commission itself decided not to take into account the surplus, even if there was any, left with either of the Companies on account of their retention prices prior to 1st April 1955, in assessing the resources available to them for future capital expenditure. The following are the reasons given by the Commission for not doing so:

"First, any such procedure would involve application of the new principles of price fixation to a past period. Secondly, it has been an established practice of the Commission not to admit adjustments in future retention prices on account of any losses or gains made by the Companies from the retention prices prevailing in the preceding period of price fixation. Thirdly, the principle of uniform prices implies that, on the common categories, Tatas should receive the full benefit of the difference between their costs and those of the I.I.S.Co. Tatas will not receive such benefit if the I.I.S.Co.'s higher costs are allowed to be partly offset by the surpluses, if any, acquired by them in a period when the principle did not apply. We have claimed an opening liability of Rs. 4 crores opening balance or the opening liability. (Tatas have claimed on opening liability of Rs. 4 crores and we have disallowed that claim.)"

Of the sum of Rs. 24.65 crores to be found by the I.I.S.Co. to meet its requirements, the Commission feels that the Company should raise Rs. 8 crores from outside sources (that is, by way of borrowings or issue of fresh capital) and the scheme of retention prices should be so devised as to enable the Company to obtain the balance of Rs. 16.65 crores from internal sources. In addition to the borrowings mentioned above, the Company expects to raise from the Government a loan of Rs. 70 lakhs and Rs. 2.20 crores in 1956-57 and 1957-58, respectively. The latter sum represents the saving in the cost of the project for remodelling and renovation of the Kulti blast furnace which was originally included in the 1953 programme, but has now been given up. The Company expects that the Government will not reduce on that account the limit of its loan or special advance and will allow this sum to be utilised against the cost of further extension. No decision has been taken by the Government on this point, at least up to the time when the Commission submitted its report, that is, in November 1955. Irrespective of the Government's decision, the Commission feels that the aforesaid amount of Rs. 16.65 crores is reasonable for the Company to obtain from internal sources.

Internal Resources

The internal sources available to the Company consist of depreciation allowances, plant rehabilitation funds and return out of the retention prices. On the basis of the principle enunciated at the outset, the Commission expects that a sum of Rs. 9.23 crores will be available to the Company from depreciation allowances and Rs. 2.60 crores from plant rehabilitation funds. The balance of Rs. 4.82 crores should, therefore, be obtained out of its retention price. The Commission has, accordingly, had to fix the retention price at such a level as would yield a net surplus of Rs. 4.82 crores for its capital expenditure over the five years from 1955-56. For this purpose, the Commission has had to estimate the output and the probable works costs for each of the years. The following are the estimates of output and works costs of the I.I.S.Co.:—

Year	Tons (In thousands)	Works costs (Rs. per ton)*
1955-56	330	260
1956-57	300	273
1957-58	375	252
1958-59	520	245
1959-60	640	242

* Based on the price of spelter at Rs. 1,150 per ton.

On the basis of the above works costs, the other expenses expected to be incurred by the Company and its receipts other than from the sale of steel, the Commission has found that an average retention price of Rs. 393 per ton will enable the Company to earn the necessary surplus of Rs. 4.82 crores over the entire period of five years to 1959-60. The quantity of surplus pig iron available for sale during 1958-59 and 1959-60 is expected to be as high as 260,000 tons and 480,000 tons, respectively. The total surplus likely to accrue to the I.I.S.Co. over the five years, according to the Tariff Commission's estimates, is Rs. 9.62 crores. After providing for reasonable dividends on the existing share capital and the additional share capital to be issued by the Company, the aforesaid surplus will, in the estimate of the Commission, leave a balance of Rs. 4.84 crores for capital expenditure, as against the Company's needs of Rs. 4.82 crores mentioned earlier. The Commission is thus satisfied that an average retention price of Rs. 393 per ton will be adequate to meet the requirements of the Company.

The total capital requirements of the T.I.S.Co. for the five years are estimated at Rs. 102.54 crores, made up as follows:

(In crores of rupees)

Modernisation and expansion programme	13.24
2-million-ton programme	62.35
Ancillary schemes	5.85
Replacements, renewals and improvements	15.00
Capital spares	3.50
Repayment of loans in 1959-60	2.60
Total ...	102.54

Tatas' Requirements

The Company's requirement of Rs. 13.24 crores for the M.E.P. has been arrived at after taking into account the expenditure already incurred on the programme and the resources used for the purpose. The two-million-ton programme was originally estimated to cost Rs. 60 crores, but this estimate has been revised to Rs. 65.85 crores, including Rs. 3.5 crores for capital spares. The original estimate did not include the provision for capital spares. As regards the provision of Rs. 15 crores for replacements, renewals and improvements, the T.I.S.Co. had asked for a provision of Rs. 17.5 crores at the rate of Rs. 3.5 crores per annum, while the actual expenditure incurred on this account during the last two years was Rs. 2.9 crores per year. The Commission has, however, provided for this expenditure at Rs. 3 crores per year. Although the Company's negotiations for loans have not yet been completed, the Commission has considered it necessary to provide, on the basis of information so far available, a sum of Rs. 2.6 crores for repayment of loans which is likely to commence in 1959-60. On the whole, the Commission considers the above estimates of the Company's capital requirements as reasonable. The Company had asked three other items also to be included in its financial requirements, namely, (1) Rs. 1.8 crores for investment in the Indian Tube Company for the tube project, (2) Rs. 4 crores for past liability for surcharge payable to the equalisation fund and (3) Rs. 1.5 crores for the Consulting Engineers' fees. The Commission has, however, disallowed these items.

Out of the above total requirements of Rs. 102.54 crores, the funds already available or expected to be available during the next five years are estimated at Rs. 38.83 crores. Of this sum, special advance from Government accounts for Rs. 5.20 crores (Rs. 10 crores *minus* Rs. 4.80 crores drawn up to 31st March 1955), foreign borrowings for Rs. 30 crores and funded interest on foreign loans for Rs. 3.63 crores. The additional finance required to be found by the Company is Rs. 63.71 crores. The Commission expects the Company to raise Rs. 21.3 crores, that is, about one-third of the amount (the same proportion as in the case of the I.I.S.Co.) from further borrowings or issue of fresh capital. The balance of Rs. 42.4 crores is to be found from its internal resources. The Company proposes to ask the Government for a fresh advance of Rs. 4 crores. The Government has not made any commitment on this point. The Commission has not, however, taken this into account (as in the case of the I.I.S.Co.) in assessing the balance of the Company's capital requirements.

Tatas' Works Costs

The amount that will be available to the T.I.S.Co. from depreciation allowances and plant rehabilitation fund during the next five years is Rs. 29.12 crores (Rs. 24.12 crores from depreciation and Rs. 5 crores from plant rehabilitation fund). As in the case of the I.I.S.Co. the depreciation has been allowed at 6¼ per cent. on the estimated additions to the block, in addition to normal and special depreciation. This leaves a balance of Rs. 13.28 crores or about 13 per cent. of the Company's total capital expenditure (the corresponding proportion in the case of the I.I.S.Co. is about 10 per cent.) to be found out of the retention price. The estimates of output of saleable steel and works costs of the Company, as made by the Commission for determining the level of prices which will yield a surplus of Rs. 13.28 crores, are as follows:

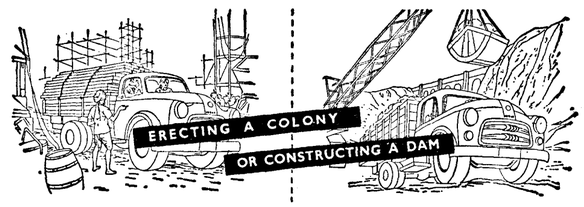
Year	*Output* (In 000's tons)	*Works costs** (Rs. per ton)
1955-56	780	232
1956-57	800	233
1957-58	900	228
1958-59	1,200	222
1959-60	1,500	219

*Based on the price of spelter at Rs. 1,150 per ton.

The average output of the Company for the first three years is estimated at 827,000 tons and that for the entire period of five years at 1,036,000 tons. On the basis of an average retention price of Rs. 393 per ton, the surplus that is likely to accrue for the five years is estimated by the Commission at Rs. 25.74 crores. After providing for reasonable dividends on the existing share capital and the new share capital to be issued by the Company, the surplus left will be a little more than Rs. 14.1 crores, whereas the amount required to bridge the gap between the proposed capital expenditure and the sum total of depreciation and capital funds to be raised from outside is Rs. 13.3 crores. The Commission is satisfied that an average price of Rs. 393 per ton will be adequate for the Company to yield a surplus of Rs. 13.3 crores.

No Higher Price

According to the Commission, the Company is expected to raise Rs. 21.3 crores from outside sources, in addition to foreign borrowings and special advance from the Government. The Company had, however, provided for an additional amount of only Rs. 18.05 crores, that is, Rs. 3.25 crores less the amount estimated by the Commission, to be raised from outside sources. This meant that this difference of Rs. 3.25 crores would have to be found from internal resources. The Commission feels that, if the Company is to be enabled to find this additional fund from internal resources, then the retention price will have to be higher than Rs. 393 per ton for this Company, which is contrary to the principle of uniform retention price. If the increase in retention price is spread over both the common and the non-common categories, the I.I.S.Co. will receive profits in excess of the amount considered reasonable for it. If the increase is confined to the non-common categories, the prices of such categories (many of which are purchased by the railways) will be unduly inflated. Even at the uniform average price of Rs. 393 per ton, the surplus that will be available to the T.I.S.Co. will amount to 13.7 per cent. (as against 13 per cent. estimated by the Commission) of the total capital requirements, the corresponding proportion in the case of the I.I.S.Co. being only 10 per cent. The Commission has, therefore, found it unable to recommend a higher price than Rs. 393 per ton for the T.I.S.Co.

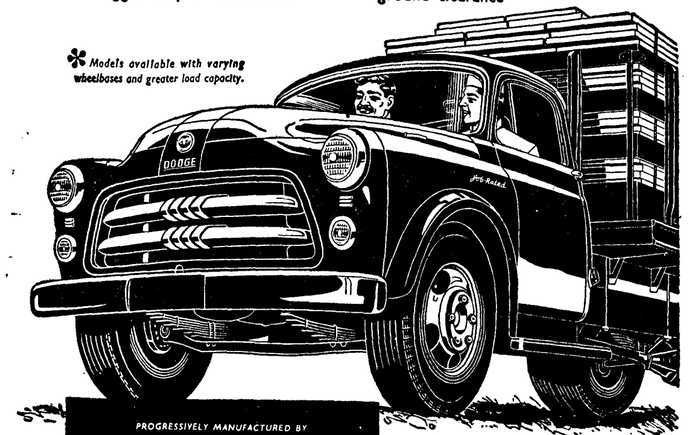


The New DODGE trucks are on the job

Whatever the haulage job, you can be sure that the exceptionally versatile Dodge truck can do it. Latest advancements enable the new Dodge trucks to haul heavy loads under the toughest road conditions with the minimum of maintenance.

★ Rugged deep-channel frames
★ Advanced design, heavy duty transmission
★ Better weight distribution, larger load-carrying
★ Maximum power at practical operating speed
★ Easier handling and better ground clearance

✻ Models available with varying wheelbases and greater load capacity.



PROGRESSIVELY MANUFACTURED BY
THE PREMIER AUTOMOBILES LTD.
AGRA ROAD, KURLA, BOMBAY

Contact your Dodge dealer today and he will show you many more new features and recommend the right Dodge truck for your job.

MECHANISATION OF COLLIERIES

IS IT AN UNMIXED BLESSING?

IT would appear that rapid mechanisation of coal mines the world over has not been an unmixed blessing. In fact, it has created a number of problems, two of which have of late become serious. The first one relates to increased production of dust and the second to ignition of explosive gas. Consequently, the need for more precautions against both ignition of gas and dust production has become urgent. It is gratifying to note that national and international bodies interested in the safety of the miner have been engaging themselves seriously in tackling these problems.

It will be recalled that a committee of experts recently met in Geneva, under the International Labour Organisation (I.L.O.), to study international progress in the prevention and suppression of dust in mining, tunnelling and quarrying. The experts suggested that the I.L.O. should compile separate codes of good practice relating to dust prevention and suppression. They stressed also that the recommendations they made as far back as in 1952 still held good. The most important of them was that rock drilling without any means of dust suppression must be strictly prohibited in hard headings and in headings in coal seams which required ripping. The Annual Report for 1954 of the Safety in Mines Research Establishment, issued by the Ministry of Fuel and Power, United Kingdom, only a few weeks back, points out that salt-crust method of coating roadway surfaces with wet salt is one of the effective methods of trapping dust. Dealing with this topic, the *Iron and Coal Trades Review* (Britain) observes as follows:

"Laboratory tests show that it is not the water within the salt layer which leads to dust binding, so much as the water sprayed on deposited dust during re-wetting. Therefore, wetting the salt layer little and often should cause the binding of relatively rapid depositions of dust. If re-wetting is frequent, the amount of water applied on each occasion must be small, since the rate of drying limits the total amount of water that can be usefully added. The factors affecting the rate of drying of wet salt are mainly the humidity and movement of the air, and the effect of re-crystallisation on the porosity of the salt."

Ignition of Gas

The rapid rate of use of high-speed machinery has, according to a report entitled "Frictional Ignition of Gas by Mining Machines," issued by the United States Bureau of Mines, made it necessary to increase precautions against accumulations of explosive gas at the working face, because friction of metal against rock or of metal against metal can generate heat enough to cause ignition. The report has disclosed that out of seven friction-initiated gas ignitions investigated by the Bureau in the past two years, continuous mining machines were involved in three cases, cutting machines in another three and a coal-drilling machine in the seventh. The report avers that mine explosions caused by frictional heat have been more frequent in the United Kingdom than elsewhere, possibly because of the nature of coal, the mining methods followed and inadequate ventilation.

After stating that the Bureau has been conducting further research on the prevention of gas ignitions by frictional heat, the report remarks that "these ignitions emphasise the importance of coursing more than the normal amount of air to the actual face to dilute and carry away gas when high-speed machinery is used. It has made as many as 23 recommendations designed to prevent ignition, based largely upon the results of world-wide studies of prevention measures. "The most important of these," it is stated, "probably relate to the provision of adequate ventilation at the coalface, the use of enough air and water in cuts, frequent checking for gas in atmosphere, equipping mining machines with special devices to facilitate rapid removal of gas, avoidance of overheating of cutting and other machines and avoidance, as far as possible, of hard rocks during cutting and drilling."

NEW POWER SHOVEL

A coal company at Cadiz, Ohio (Pittsburgh Consolidated), has put into operation a new power shovel so big it can take almost 100 tons at one bite. The shovel, built up to scoop coal, earth and rock in the Company's open-pit mine, weighs 2,500 tons and is 147 feet high. It is said to be the largest piece of mobile machinery ever built in the United States. It moves on eight crawler treads, each eight feet high, 23 feet long and nearly five feet wide. The operator rides to the control room in an automatic elevator housed in the hollow centre pin, six feet in diameter, on which the giant machine revolves. The electro-powered digger costs $2,500,000.

DEVELOPMENTS IN WORLD SUGAR ENGINEERING

MANY IMPROVEMENTS NOTED

THE deliberations of the ninth Congress of the International Society of Sugarcane Technologists (I.S.S.T.), held at New Delhi recently, have served to emphasise, once again, the fact that "science and technology know no national barriers or political boundaries." Since its inception in Honolulu (Hawaii) 31 years ago, the Society has been endeavouring to promote discussions of the technical problems of the sugar industry—both in the field and in the factory—by means of conventions held once in every three years and to foster free and frank interchange of technical information through publications or other means. The New Delhi Congress provided an excellent opportunity for the co-ordination of ideas towards the advancement of science and practice of sugar engineering throughout the world. The Congress brought together delegates from countries representing various aspects of the sugar industry. There were members from universities and technical institutions with valuable contributions to research to their credit, engineers engaged in the direct operation of sugar machinery in the factories with experience of practical operation of the plant and problems involved, and representatives of sugar manufacturers with their knowledge of plant design and construction. Indeed, the exchange of knowledge and collection of information for which the Congress provided a venue must have been of significant value to the Indian sugar industry which now stands on the threshold of a new era of development and expansion.

Of particular importance is the meeting of the Sectional Committee on Sugar Engineering at which Mr. K. S. Arnold, Chairman of the Committee, made a lucid and interesting survey of the progress made in the field of sugar machinery the world over. The survey reveals that, while there has been general improvement in all classes of cane sugar machinery since the previous Congress of the Society held in British West Indies (1953), the most notable advances are undoubtedly in sugarcane crushing mills. With a view to stepping up the rate of crushing, roller surface speed is being raised. The speed achieved on several sugar milling plants now comes to about 30 ft. per minute—on certain new plants, the speeds envisaged are as high as 75 ft. —which is almost double the speed of 30 ft. per minute considered as reasonably fast some years ago. The improvement in roller-surface speed, coupled with the associated increases in crushing rate, has given rise to certain problems, especially cane feeding and juice drainage. In order to assist in the feeding of fast-running mills, the use of feeding devices of various types has been greatly extended, and the fitting of feeder-rollers is becoming standard on new installations.

Regulation of Cane Feed

Another important field in which improvements have been effected and to which Mr. Arnold drew attention relates to regulation of cane feed to the plants. Whereas, formerly, the speed of the cane carrier depended entirely on manual regulation of the cane-carrier engine or electric driving motor, efforts, it is said, are now being made towards developing automatic control. The functioning of cane knives has, in some instances, been incorporated in the control system, in order to ensure that the feed on the carrier is adjusted in relation to the power demand on the knives, thereby preventing overloading and the consequent stalling of the driving motors. The provision of a more uniform cane-feed to the mills and reduction in stoppage due to chokes on carriers and knives contribute much to raising crushing rates.

The progress made in the application of steam turbine to the driving of cane mills is, according to Mr. Arnold, not only noteworthy but also revolutionary. At the time of the eighth Congress, only a few installations existed and the delegates were able to see only one unit operating on a mill during their visits to numerous factories. But, now, turbine drive is gaining in popularity and all the recent large-scale milling plant installations have been provided with this form of drive, which now gives indication of superseding the single-cylinder steam engine. The use of gal/oil bottle type accumulators on the hydraulic pressure systems of cane mills is rapidly extending. Many conversions continue to be made from the conventional weight-loaded accumulator to this more convenient and compact type. It is now being fitted to the majority of new milling plants and gives promise of becoming the accepted standard type.

As regards the cane-crushing rollers, the use of the roller type is becoming popular. It will be interesting to note here that this type is by no means a new development in so far as India is concerned. Two sugar milling plants manufactured by a Calcutta engineering company 25 years ago and installed in factories are fitted throughout with roller bearings. Despite obvious advantages that exist in the use of roller bearings on mill rollers, the general application of this type has been held back, thanks to higher initial cost and certain attendant problems.

Another Notable Development

The tendency among sugar mills in recent years has been to increase the steam pressure employed. Alluding to this tendency, Mr. Arnold observes:

"By assuring a proper steam balance in a cane sugar factory, the bagasse from the mills can provide ample fuel for the total steam requirements without having recourse to high-efficiency boiler plant operating at high pressure and, where this condition exists, there is no justification for installing expensive high-pressure boiler plant. It is now, however, often customary to locate subsidiary industries adjacent to a sugar factory with the object of obtaining from the latter a cheap supply of steam and electric power. The higher thermal efficiency required can only be obtained by generating steam at high pressure, coupled with the employment of bagasse furnaces of high combustion efficiency. New types of bagasse furnace have also been evolved; these are tending to supersede the simpler step-grate and flat-grate types."

Mr. Arnold then referred to the developments in vacuum-pan design for promoting faster boiling by a more rapid circulation of the massecuite. Vacuum pans having circular ribbon-type heating elements, he claimed, were becoming increasingly popular in sugar refineries and some had been employed in beet sugar mills also. But they had not so far been introduced in the cane sugar factories. Similarly, advances were continuing in sugar centrifugals, mainly in the direction of high-speed and automatic operation. The former simple type of machine had, he said, given place to the modern heavy high-speed machine, equipped with numerous electric or hydraulic devices for the control and automatic timing of the operations in the cycle and with electric braking. Although the electric-driven centrifugal was extremely popular, certain factories preferred the water-driven machine which was being manufactured for high-speed running and which had all the facilities of the electric-driven type.

The foregoing survey of Mr. Arnold provides much food for thought to the Indian sugar technologists. In the present context of the imperative need for stepping up output of quality sugar at an economic cost, the role which these technologists and research workers play in evolving improved manufacturing techniques is, indeed, vital. It must be stressed, in this connection, that the mere carrying out of research is not enough. What is urgently required is that the results of research should, as Dr. K. Douwes-Dekker, Chairman of the Sugar Manufacture Section, rightly averred, become available for open discussion. Dr. Douwes-Dekker did well in advising the sugar technologists to adopt an open-door policy in respect of results of scientific research. To quote him: "The tendency for secrecy, sometimes noticeable in some countries, may be justifiable in isolated cases, but, when it becomes a system, further technological progress will be dubious. Many countries have found it more profitable in the long run to practise the open-door policy."

Presiding over the Chemical Analysis and Factory-reporting Section of the I.S.S.T. Congress, Dr. H. W. Kerr welcomed the move of the International Commission for Uniform Methods of Sugar Analysis to apply itself to the question of submitting all basic analytical methods to searching inquiry in order to assess their reliability. He, however, pointed out that it still remained for the sugar industry to devise its own technique of sampling. This aspect of the section's work, Dr. Kerr said, was one on which world agreement could be achieved. But he regretted that the position was not quite so happy so far as the subject of uniformity in factory-reporting was concerned.

By-products

In the course of his opening address to the By-products Section, Mr. J. M. Saha urged that increasing attention should be given to better utilisation of the principal by-products of the sugar industry, namely, bagasse, molasses and press cake, which together accounted for about 40 per cent. of the weight of sugarcane crushed or four times the weight of sugar produced from a certain quantity of cane. Referring to utilisation of bagasse, Mr. Saha stated that quite a large number of sugar factories in India consisted of steam-driven plants, and strict economy in the matter of steam combustion was not usually observed in several factories. Very few factories were left with surplus bagasse after the crushing season was over and much of this was utilised as fuel in the boilers during the off season. The only industrial use that was being made of bagasse at present was for the production of boards at Meerut and Saharanpur. Besides, efforts were being made for the manufacture of newsprint. A large-scale trial conducted recently at Jagadhari in the Punjab revealed that a fairly good quality newsprint could be manufactured by using 70 per cent. bagasse and 30 per cent. wood-pulp.

Reviewing the progress made in research, Mr. Saha gave the following details:

"Investigations have been made on the utilisation of bagasse for the production, among others, of alcohol, insulation and pressed boards, wrapping paper and strawboards and paper pulp. The best method of utilisation of surplus bagasse seems to be in the direction of making newsprint, as almost 70 per cent. of India's requirements of newsprint is at present being imported. A fairly good market also exists for wall-boards and activated carbon. But very small quantities of bagasse are found to be surplus after meeting the fuel requirements of sugar factories to be available to feed a paper factory. It is also not possible to use coal or other fuel as a substitute for bagasse which may be diverted for paper factories, as this involves transport difficulties."

Turning to molasses, Mr. Saha said that almost 60 per cent. of the total molasses produced in India was used by the power alcohol, industrial alcohol and potable spirits distilleries, the balance being utilised for preparing smoking tobacco and other miscellaneous uses. In his considered opinion, the most reasonable utilisation of molasses in this country appeared to be in the direction of making alcohol, largely power-alcohol for using it as motor fuel after mixing with petrol in the proportion of 20:80. The entire production of Indian sugar factories could be easily utilised in this way and the country could, in this manner, substantially reduce its imports of petrol.

In the case of press-mud, Mr. Saha revealed that this was at present sold by the sulphitation factories to cane growers for use as manure, while the carbonation units were using it to fill up ditches in the land or to burn it to produce an inferior quality of lime. According to him, a fair amount of research work has been done on the utilisation of press-mud. The most promising avenues appears to be in the extraction of wax. There are at present only two factories where cane wax is being commercially manufactured from sulphitation press-mud. As regards carbonation mud, some work has been done at the Sri Ram Institute for Industrial Research, Delhi.

ENGINEERING PERSONNEL FOR SECOND PLAN

RECOMMENDATIONS OF EXPERT COMMITTEE

THE Engineering Personnel Committee has submitted its interim report to the Planning Commission. It will be recalled that, in September 1955, the Planning Commission set up this Committee, with Mr. Y. N. Sukthankar as Chairman, to analyse the supply and demand position with regard to engineering personnel and to suggest measures for the setting up of new institutions, if required. The Committee was also asked to suggest steps for better utilisation of the existing personnel. The most notable recommendation of the Committee is that a high power body for taking policy decisions and a supporting executive organisation should be set up both at the Centre and in the States. The Committee has suggested that, besides increasing the capacity of existing engineering colleges and schools by 20 per cent. for graduate training and 25 per cent. for diploma training, a number of new institutions should be set up all over the country. Further, it has favoured the creation of a new category of personnel, namely, "technical assistants," who require a shorter term of training than the diploma holders on specific jobs, with a view to assisting the overseers in their jobs.

The Committee has felt the need for increasing the capacity of the existing educational institutes and establishment of new ones, because it feels that, in addition to the engineering personnel to be trained in the institutions at present proposed under the second Plan, the following additional number will be required:

Graduate Engineers

Civil	970
Mechanical	200
Electrical	190
Tele-communication	190
Metallurgical	40
Mining	100

Diploma Holders

Civil	3,100
Technical	1,700
Electrical	950

These numbers have been worked out on the assumption that the activity in the third Five-year Plan will continue to increase at the same rate as in the second Plan.

New Institutions

In regard to the setting up of new institutions, the Committee has recommended (*a*) three degree colleges and twenty diploma institutions for the Northern Region, comprising Punjab, Uttar Pradesh, Rajasthan, Jammu and Kashmir, P.E.P.S.U., Delhi, Ajmer-Merwara and Himachal Pradesh, (*b*) seven degree colleges and twenty-five diploma institutions for the Eastern Region, comprising Assam, West Bengal, Bihar, Orissa, Manipur and Tripura, (*c*) six degree colleges and 12 diploma institutions for the Western Region, comprising Bombay, Madhya Pradesh, Madhya Bharat, Kutch, Bhopal and Vindhya Pradesh, and (*d*) five diploma institutions for the Southern Region, comprising Madras, Andhra, Mysore, Travancore-Cochin, Hyderabad and Coorg.

It is stated that the Committee has phased the demand for engineering personnel, taking into account the special claims of the present and the proposed iron and steel plants, railways and the like. Nevertheless, the Committee still feels that there would be shortage of experienced personnel in the early years of the Plan. In order to meet this shortage, it has recommended various measures like retaining engineers beyond the age of superannuation and promoting subordinates of merit to higher levels. In order to check the flight of temporary personnel from project to project, the Committee has recommended that the States should follow some common line of action which would involve agreement on (*a*) scales of pay and allowance, (*b*) a common authority for deployment of personnel from project to project, and (*c*) safeguarding the tenure, security and future prospects of temporary engineers. The Committee has suggested the following steps for improving the quality of engineering education:

(1) The salary scales of teachers should be brought on par with Government scales in the executive line.

(2) The departments concerned should spare experienced engineers for teaching institutions.

(3) A refresher training course should be arranged for teachers.

As unemployment among engineers is stated to be mostly due to lack of experience, the Committee has expressed the view that there should be readiness on the part of employers in the public and private sectors to provide facilities for their training on the job. Such training, especially in the lower categories, should be provided on a large scale because of the physical limits to the expansion of institutional training on traditional lines. Finally, in order to obviate delay in recruitment, the Committee has suggested (1) recruitment in college campus, (2) bulk selections every year to cover the needs of different departments, and (3) the establishment of a register of qualified engineering personnel.

Technical Men

One of the factors that retards economic development is the absence of adequate facilities for turning out technical men. It is, therefore, necessary to create facilities for the training of all grades of workers from top to bottom. It is in connection with training for higher management and of scientists, engineers and technicians that the industry is most dependent upon outside institutions. In many countries, the conception of formal training for higher management is relatively new. Yet, its importance can scarcely be exaggerated. Experience has shown that efforts to raise productivity initiated by men in subordinate position are unlikely to succeed, without the understanding, support and encouragement of top management. After all, productivity is, in the ultimate analysis, the cumulative result of initiative, resourcefulness and fertility in ideas among industrial scientists, engineers and technicians.

It is not only in connection with the training of executives, scientists and technicians that the industry needs the co-operation of outside institutions. Apprentices and others undergoing training for skilled occupations are also commonly required to attend courses at technical colleges. And, apart from the facilities provided by educational institutions, there is often the need for practical training facilities which, especially for small firms, can be provided efficiently only through action on the part of the industry as a whole. National employment services should have the closest possible contacts with industry, on the one hand, and with vocational training establishments, on the other. They should also be in a position to collect and analyse such statistical and other data as will make possible reliable surveys of trends in the employment situation on which estimates of future requirements for different kinds of skill can be based.

TECHNICAL AID UNDER COLOMBO PLAN

Under the Technical Co-operation Scheme of the Colombo Plan, the services of two British engineering experts have been made available to India. One of them is Sir Claude Inglis, Director of the Hydraulics Research Station of the Department of Scientific and Industrial Research at Wallingford, Berkshire. He will advise principally on flood control measures. Sir Claude was with the Indian Service of Engineers for many years, and part of his mission is to prepare a report for the Indian Central Water and Power Commission.

The other expert, Mr. John Axten, is a research engineer with the National Research Development Corporation. He will spend six months in India demonstrating a new type of Ricardo steam engine. Four of these engines, which have been developed at the National Development Council's Institute at Dorking, Surrey, are being loaned to India so that tests may be made to assess their suitability under local conditions. As the engines are of new design, the Government of India asked for the services of an expert who would install and demonstrate them and then train Indian technicians in their operation. Later Mr. Axten will go to Ceylon to install and demonstrate another of these new British engines which is on loan to the University of Ceylon.

MACHINE TOOL INDUSTRY

Addressing the ninth annual general meeting of the Indian Machine Tool Manufacturers' Association, held in Bombay last week, Mr. M. B. Jambhekar reviewed the present position of and prospects for the machine tool industry. He stated that, during the six months ended 30th June 1955, the value of output of the industry was about Rs. 33.36 lakhs, which represented an increase of nearly 40 per cent. over the corresponding period of 1955. Besides, new types of machine tools had gone into production and many more new types were in the offing. Elucidating this statement, he stated that the following were some of the new types already in production and in the market:

(1) Geared head lathes from 6½" centre to 12½" centre;

(2) fully geared, directly motorise, pillar drills upto 1¾" capacity, and

(3) fully geared high speed shapers and milling machines.

The following new types of machine tools were under development:

(1) 7"×8½" centres tool room lathes with all necessary attachments;

(2) 1½"×2" capacity radial drills;

(3) 1¾" capacity column drill;

(4) 20"×30" stroke fully geared shaping machines;

(5) 18" stroke hydraulic shaper;

(6) 5" centre 3' bench lathe; and

(7) universal tool and cutter grinder No. 2.

While the progress of the industry as noted above has been encouraging, it falls far short of requirements, a point which Mr. Jambhekar clearly recognised. Addressing the Committee for the Development of Machine Tool Industry on 25th January last, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, also expressed the same opinion. He remarked that the progress was "far too slow in relation to the present and the future requirements."

What is this state of affairs due to? Mr. Jambhekar attributed this to a number of factors, the chief among them being shortage of raw materials, inadequate data about demand and the Government's unhelpful purchase policy. He stressed, in particular, the shortage of graded pig iron and coke, semi-finished parts (such as alloy-steel forged blanks for gears and forgings for spindles), ball bearings and cutting tools. He held that the shortage of semi-finished parts was chiefly due to shortage of manufacturing capacity and avoidable formalities involved in obtaining supplies from the ordnance factories. Since he was of the view that the shortage of ball bearings and cutting tools was due to import restrictions, he suggested actual user-licences for those bearings which were not manufactured in the country and blanket licences to manufacturers for such specialised cutting tools that had to be imported.

Dealing with machine tool requirements of the country, Mr. Jambhekar observed:

"Inadequate data of the country's likely demands for machine tools by types, groups and sizes. Without this very important data, it is very difficult for the machine tool manufacturers to plan their production of newer machine tools and to decide on what new tools and in what ranges these new machine tools should be manufactured. The Government of India, we understand, has taken a census of machine tools installed in more than 800 factories by groups, types and sizes. This information is still not available to us, but, useful as it will be when published, we do feel that even this will not be adequate. The Machine Tool Panel of the Engineering Capacity Survey Committee had, amongst its various recommendations, suggested the maintenance of detailed statistics of machine tools imported, which would enable the industry itself to gather statistics regarding import of machine tools by groups, types and sizes, which would then enable them to find out the trend of types of machine tools required in the country. We do feel that this information is exceedingly important and the Government should take early action to arrange for the implementation of this recommendation."

Characterising the Government's purchase policy as being "discriminatory," he alleged that, in one or two instances, the Government departments had purchased their requirements of machine tool directly from State-owned machine tool factories without inviting tenders through the Director-General of Supplies and Disposals (D.G.S. & D.). Proceeding, he remarked: "Assurance has all along been given to us that there will be no discrimination between the public and the private sectors of industry and it is my painful duty to point out to the Government and stress that, if this practice of direct purchases is

(*Continued on page 269*)

NEW PRODUCTS AND PROCESSES

Mechanical Finishing of Metal Parts

CONTINUOUS research into precision barrelling techniques for the surface finishing of small and medium-sized metal components in bulk is being undertaken by Roto-Finish at its works at Hemel Hempstead, Herts, England. The process involves "tumbling" the components in a revolving rubber-cushioned container or "barrel" together with special processing chips and compounds to provide the necessary abrasive action. It is said to offer an inexpensive method of polishing, removing scale, burrs, sharp corners and marks made by earlier machining operations. Equipment of this type has been used on an increasing scale in the U.K. during the last three years and, according to Roto-Finish, the greater degree of precision now obtainable is likely to extend its use still further. It is claimed that if machines of this type were used more widely in the motor industry, the price of the average sized car could be reduced by £10. Two new projects are now being actively studied at Hemel Hempstead. Between £6,000 and £7,000 has been spent on developing a machine for finishing long components such as 25-feet long light alloy aerospars for the aircraft industry. These components can now be finished in seven hours, as against the 17 hours required to finish them by hand. The second development is of special significance in the field of metal finishing in that a continuous precision barrelling system has been evolved for integrating into a flow production line. Instead of the components being removed from the line to be taken to the finishing shop, as is frequently the case, they will continue through the new machine and emerge from it when the required degree of finish has been obtained. Experiments are still being made and it is probable that the machine will come on the market in a few months time. Standard machines supplied by Roto-Finish are at present being used for a wide range of precision parts including jet turbine blades, aircraft gears and intricate parts for office machinery. The cost of the machines varies with their size and type and ranges from £375 to £900.

High-speed Balance for Preparing Medicines

In response to a request received from a number of pharmaceutical chemists, a factory at De Bilt (the Netherlands) has designed a high-speed balance for preparing medicines. The instrument operates with liquid damping. It gives direct readings up to 100 grammes (3½ oz.) with scale divisions of 1 gramme and (by adding weights) has a total weighing capacity of 5 kg. (11 lbs.). The high-speed balance has two tare bars, one with a capacity of 0 to 50 grammes (1¾ oz.), with very ample scale divisions of 1 gramme, and the other with a capacity of 0 to 500 grammes (17½ oz.), with scale divisions of 50 grammes. An electric signalling device automatically switches on a red lamp as soon as one or both tare weights are out of zero. The user is thus reminded to eliminate the tare weight after finishing a weighing. An extra platform, placed specially high and consisting of a transparent, very easily detachable plexiglass plate, serves for the filling of bottles, graduated glasses, etc. As the dial graduation is at decanting height, the weight can be easily read off. Four levelling screws facilitate setting the balance truly level, which position is read off from a highly sensitive, round spirit level. A plexiglass base plate with spring-mounted side can be supplied with this balance. The time normally required for weighing is reduced by at least half. This high-speed balance has been tested and approved by the Netherlands Weights and Measures Service and the Netherlands Pharmaceutical Public Health Service. The dimensions of the base of the foot are: 42 x 22 cm. (16½ x 8½ ins.).

Heating Cabinet

A factory at Hengelo (the Netherlands) has designed an electric heating cabinet for manufacturing processes whereby each time a given quantity of a substance of constant temperature is required at short intervals. The heating cabinet has 30 drawers, which are heated indirectly by circulating air of constant temperature. The cabinet is suitable for continuous operation, if immediately after a charge has been used, the drawer is refilled with cold material, and the number of drawers in use is brought in line with the working cycle and the heating-up period of the material. The drawers and the interior of the heating cabinet are made of electrolytically oxidized aluminium; the outer jacket consists of bake-enamelled steel plate. The air is heated by metal-clad electric heating elements and circulated by a centrifugal fan. The cabinet is suitable for a temperature of 0-200° C. and is provided with an automatic temperature control, a number of signal lamps, a large pointer thermometer, a switch and an electric safety. The starting capacity of the heating cabinet is 2.8 kw. and the working capacity about 1.4 kw.

New Electrical Materials

A range of new electrical materials in the form of lead oxide based compounds are expected to prove effective substitutes for the currently used barium titanate in the electrical industry. The combining of lead-zirconate compounds with lead-titanate compounds is, for example, said to yield ceramics with particular electrical properties (as, for example, peizo-electrical characteristics) of especially high quality, particularly when they must be used at high temperatures. Compounds based on these materials have both better electro-chemical qualities than the barium titanates currently used and are able to withstand temperatures of up to 340 degrees Centigrade, according to tests recently carried out by the U.S. National Bureau of Standards, without their electrical properties being affected. This is nearly 3½ times the temperature at which barium titanate ceramics maintain their electrical stability. Yet, these compounds are said by the U.S. National Bureau of Standards to have a "voltage coefficient" double that of commercial barium titanate.

Magnetic Amplifiers for Computers

One recent trend in the development of electronic brains (digital computers) is the combined use of magnetic amplifiers and transistor crystal valves where the latter are used to replace conventional thermionic valves. One recently developed example of the use of such magnetic materials, developed by the Sperry Rand Corporation, New York, U.S., however, is of special interest. This is the use of magnetic amplifier units in a desk-side electronic brain designed for office work. This computer, which will be sold for about £5,000, has magnetic units which are not merely used as ancillary parts in a transistor crystal valve computer, but which actually replace the transistors. These magnetic devices, known in this case as *magnetic-ferracters*, are made from ferrous or iron materials, having special magnetic and electrical properties. It is expected that electronic computers of this type, which, it is claimed, are less liable to failures caused by the overloading or bad performance of either conventional valves or transistors will be one the market in the U.S. and perhaps in Britain before the summer of 1957.

Sterilising Drugs

The Upjohn Company, Kalamazoo, Michigan, a United States pharmaceutical manufacturer, is now sterilising some of its products by bombarding them with high-speed electrons. The sterilisation kills any bacteria that might contaminate the drugs. So far as is known, this is the first "routine application of high-speed electrons in the pharmaceutical industry for commercial purposes," according to the Company. The machine that produces electrons for sterilising is a two-million-volt Van de Graaf accelerator. The electrons, travelling at about 175,000 miles per second, kill all living organisms in the drugs in a fraction of a second. They do so without appreciably raising the temperature or affecting the drugs' potency. Pharmaceutical preparations are ordinarily sterilised by the use of heat, by the addition of chemicals or by filtration.

Electronic "Brain" Tests Paint

A British firm of paint manufacturers has introduced a "paint brain"—an electronic viscometer—which, it is claimed, ensures that every gallon of paint leaving the factory is of exactly the light consistency. It can measure with accuracy the amount of flow or drag of a film of wet paint 3/1,000 inch thick. The human factor is eliminated, and the "brushability" of the paint is recorded on a graph. Invented by Mr. Cedric Mell, the Company's chief technical manager, the "paint brain" is probably the most complex and delicate instrument ever used for testing paint. It is believed to be the only one of its kind in the world.

"Miniature Sun" for Film Studio

A British firm has recently spent £10,000 on making a single electric lamp. It is a 20 kw. tungsten-filament lamp designed for a British film studio, which will use it in the production of colour films. The high cost of this "miniature sun" is largely accounted for by the research and development that has gone into evolving it. Its borosilicate bulb, 15 inches in diameter, weighs 10 lbs., and is of uniform thickness to minimise fracture strain. There is enough tungsten in the filament to make 20,000 40-watt lamps. The firm has plans for the manufacture of lamps of 75 kw. power.

Ultra-sound Treatment

Doctors at the University of Illinois in the U.S. are testing the use of ultra-sound—sound waves of such high frequencies that the human ear cannot hear them—to treat diseases of the brain. They have used ultra-sound waves to destroy diseased brain tissue in an area as small as one-twentieth of an inch without affecting surrounding tissue. This precision seems to offer possibilities beyond those of the surgeon's knife for destroying tumors or diseased brain tissue. The ultra-sound used has a wave frequency of 1,000,000 cycles a second, 50 times higher than the highest audible pitch.

New Weed Killer

A little known chemical used in photographic darkrooms, called ammotriazole, has been found to be an effective weed killer. The discovery was made by chemists of the American Chemical Paint Company of Ambler, Pennsylvania. Field tests show that the chemical is capable of destroying weeds, including quackgrass, Canada thistle, poison ivy and some poison oaks. Non-poisonous to humans and animals, aminotriazole kills the weeds by interfering with their chlorophyl supply and starving them to death.

The three-mile long Hirakud Dam will rise to a height

of nearly 200 ft. Estimated to cost Rs. 92 crores, this project will bring

adequate supplies of water to 1·09 million acres of parched farm lands.

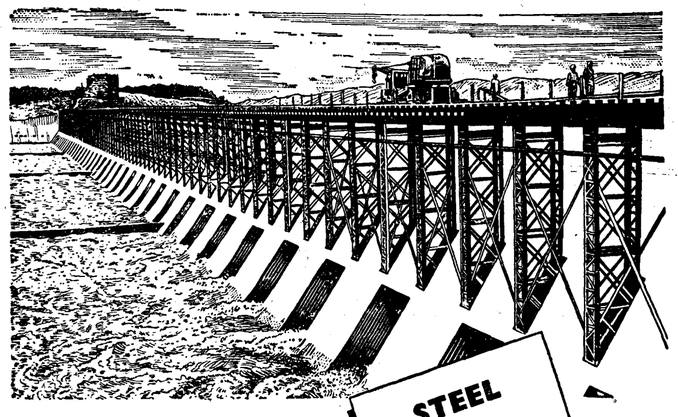
WEALTH FROM THE WASTES

The hydro-electric power plants at

the dam site will have an installed capacity of 123·00 k. w.

with some 400 miles of transmission lines which

will accelerate development in the northern area of the Orissa State.



STEEL FOR PROGRESS

Thousands of tons of steel have been used so far in Hirakud for reinforcing concrete and earthwork, and for super-structures. Here, as in other River Valley Projects, STEEL is of basic importance

GAS TURBINE ENGINES FOR AUTOMOBILES

MANY DIFFICULTIES YET TO BE OVERCOME

ONE day, we may wake up to find that the development of automatic transmissions for motor vehicles, research work on petrol injection systems and the ceaseless controversy about the qualities of air or water-cooled engines, have become things of the past. That will be the day when the first gas turbine car goes into production. For this is what the turbine can mean to motorists: no clutch or gearbox for normal forward driving, no carburation problems, and no cooling system. Furthermore, it starts easily and reaches normal working temperature in a few seconds, whatever the weather, can operate on low grade fuels, uses little lubricating oil, and is easily maintained.

But it has its drawbacks, chiefly the cost of production and its high rate of fuel consumption. The recent announcement by the Austin Motor Company, one of the pioneers in the application of engines of this kind to road vehicles, seems to bring the golden age of gas turbine motoring much closer. For Austins tell us that the development of their secret turbine engine has reached a stage where operating economy even approaching that of diesel engines can be foreseen.

Britain was first off the mark with the gas turbine car which the Rover Company demonstrated in 1950. Since then experimental cars have come from the United States, France and Italy, but in no case has the principle of the Rover power unit been substantially changed.

In the gas turbine engine, a revolving compressor passes incoming air under pressure to a combustion chamber, where it is mixed with fuel. The mixture becomes transformed into hot, expanding gases, which leave the combustion chamber with tremendous force to rotate the turbine wheel. This wheel drives the compressor.

Second Free Turbine

This arrangement is appropriate for aircraft requirements where the compressor and turbine need only operate over a limited speed range. The Rover design, however, introduced a second free-running turbine, driven by the still expanding gases issuing from the compressor turbine. This second free turbine, which is coupled through a reduction gear to the road wheels, provides the variations of speed required of a motor vehicle, and performs the functions of a clutch and gearbox.

The original Rover turbine, developed to give 240 b.h.p., was installed in an open two-seater car, and in 1952 this was officially timed on the Jabbeke highway near Ostend at 151.965 m.p.h. (244.565 k.p.h.). This remains the world speed record for a gas turbine engine car. By June 1954, a scaled down version of this engine, delivering 100 b.h.p., was fitted into the luggage boot of a Rover 75 saloon. Only a streamlined exhaust funnel, moulded vertically into the body of the car at the rear, revealed that it was no ordinary Rover.

By August 1954, Austin, whose experiments with a small gas turbine had been going on for five years, installed a complete 125 h.p. power unit in the normal engine position in an Austin "Sheerline" saloon, and demonstrated it before Sir Leonard Lord, Chairman of the Company. The only alterations found necessary to the car were the extension of the bonnet nose to accommodate the air intake silencer, and the provisions of louvres in the bonnet to allow excess heat to escape.

Less than 12 months later, this car made its first and only public appearance at the Company's Jubilee celebrations, and it was then made known that it had covered several thousand miles (kilometres) in Great Britain without anyone noticing that it was different from an ordinary "Sheerline."

Saving Fuel

In this car, the Austin Company had gone a long way towards solving the problem of excessive fuel consumption by incorporating a highly developed heat exchanger. This device utilises the heat of the exhaust gases to warm up the air from the compressor before it enters the combustion chamber. It has the dual effect of cooling the exhaust gases to a safe temperature before they are allowed to escape into the atmosphere and, most important of all, reducing the amount of fuel required to raise the compressed air to its proper working temperature.

How long, then, will it be before the ordinary motorist can be seen gliding smoothly and silently along in his turbine family car? There are still many difficulties to be overcome before anyone can give an accurate forecast and they are mostly problems of economical production. The gas turbine demands great precision in its construction, with clearances of less than one-thousandth of an inch between parts which are rotating at speeds up to 50,000 r.p.m.

The metals which must be used to withstand temperatures ranging from 1,200° F. to 1,800° F. (640° C. to 970° C.), together with the high speeds, are themselves expensive, and the manufacture of the highly accurate turbine blades is a costly process. For example, the blades of the Rover engine are machined from a solid alloy disc, although Austin has succeeded in producing 90 blades at one operation by casting them by the "lost wax" process. Many other famous names in the British motor industry, in addition to Austin and Rover, are known to be carrying out research behind the scenes. But the search for the ideal material goes on and the gas turbine is a long way from the quantity production stage.

Pronouncements made by the experts at this juncture are a mixture of optimism and caution. Dr. J. H. Weaving, head of Austin's gas turbine research, for instance, warns that, among problems still to be solved, is the production of a cheap heat-exchanger of light construction. When this has been done and in addition improvements achieved in compressor and turbine efficiencies, he foresees fuel economy comparable to that of diesel engines. The Austin Company states that the construction of a power unit suitable for modern production methods and road conditions is now a possibility.

The gas turbine may well be the automobile engine of the future and may one day make the piston engine as outmoded as the horse. And Britain, who led the world with the first practicable gas turbines in aircraft, is working ceaselessly to maintain its lead in the field of turbine-driven motor vehicles.

IMPROVED CAR SAFETY BELT

In Sweden, as in many other countries, an intense discussion is going on about the ways and means of preventing and limiting the ever-increasing injuries from road accidents. One of the most positive practical contributions, apart from what has been laid down in new traffic laws, has been made by the *Räddningskåren* (Swedish Rescue Corps), of Stockholm—a private ambulance and salvage service with over 130,000 subscribers all over Sweden—by introducing a reliable and handy safety belt. The latest type of the belt, as well as previous ones, was designed by the head of *Räddningskåren*, Mr. Raymond Sjöqvist, one of Sweden's best-known motor racing aces, who has been experimenting with safety belts for many years. The latest one, called "Raymonds m/56", is, therefore, the result of long-time studies and practical experience. It consists of one waist belt and two shoulder belts connected with the waist belt. All are tied to a strong bolt of special design fixed in the floor behind the seat. The belt, which can be used in practically all types of cars, is fastened with a simple but safe lock, while unfastening is done by just pulling a ring. Moreover, the size of the belt is easily adjustable.

The belt is made of seamless nylon cord permitting certain elasticity. Every strap is tested to stand the stress of 1,500 kilograms (3,000 lbs.), which, it is claimed, means that the belt is able to withstand the strain exerted even at a dead-stop at ordinary road speed. Although the new belt has been in the market for a very short time, the Swedish Rescue Corps has received numerous reports of lives saved, thanks to this safety device. One of the most remarkable rescues is reported by a Swede travelling in France with his wife in the front passenger seat. At a speed of 100 kilometres (over 60 m.p.h.), he hit a truck parked on a dark road without lights. Normally, it would have meant certain death, but, thanks to their Raymond belts, they escaped with only minor injuries. A unique test, certainly not without risks, was undertaken some weeks ago by one of the reporters of the Stockholm paper *Expressen*, Mr. Gösta Ollén. He was fastened with the Raymond belt in the "death seat", next to the driver, of an old car. The car was pushed over the edge of a 30-metre (100 ft.) deep gravel pit, made several somersaults and landed on the side in the bottom of the pit—and out crawled Mr. Ollén smiling and unhurt, except for some bruises on the legs. It may also be of interest to mention, in this connection, that this type of belt is the only approved of for stock-car competitions in Sweden. The belt, which in Sweden costs about Kr. 40 ($8), is reported to be attracting growing interest abroad also, including the U.S.

INDIAN FIRM TO BUILD BRITISH ENGINES

The Automobile Products of India (A.P.I.) has made an agreement with the firm of Henry Meadows—a subsidiary of Associated British Engineering Ltd.—for the manufacture of British engines under licence in India. The Agreement is the culmination of negotiations begun about 12 months ago, and provides that A.P.I. will sell, service and, ultimately, manufacture the whole range of Henry Meadows products in every type of application—automotive and marine engines, generating sets, and compressors. A three-year period is envisaged before Indian production of the Henry Meadows range of engines is fully under way. Thus, the Agreement provides that, in the initial stages, complete engines will be imported from Britain and the first batch, worth about £1,000,000 is already shipped.

How strong must the foundation be for 43 lakh houses?
In the last few years, large segments of our population have moved into the cities. Here they live in unbelievably congested tenement houses, adding to the cities' already acute housing shortage. We need 43 lakh houses to ease the strain on our cities.
In 1947 our cement production was 1.45 million tons. Today, it is 4.34 million tons—almost three times the 1947 figure. 40,000 people are employed in 26 modern, efficiently run factories.
In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

NATIONALISATION OF LIFE INSURANCE—I

SOME CHARGES AGAINST PRIVATE MANAGEMENTS CONSIDERED

NOW that life insurance has been nationalised and private managements of the companies have disappeared, it would no doubt appear a vain endeavour to examine the arguments which had been urged in favour of nationalisation or against leaving insurance in the hands of private enterprise. Nevertheless, it seems necessary to subject to critical scrutiny at least some of the wild accusations and tendentious statements which have been made from time to time and some of which have appeared in the Congress Party organ, the *Economic Review*. For, if the facts and arguments, as expressed in the *Economic Review*, were correct, it would constitute a slur not so much on insurance as such but on the entire Indian nation. Fortunately, an impartial appraisal reveals that the arguments which have been used to condemn the private sector in insurance will not stand the test of critical examination. It is the more regrettable, therefore, that the editor of the official organ of so important a political party as the Congress should have lent his name to a series of articles which abound in such mischievous misstatements and exaggerations.

"Corrupt" Practices

For sheer vitriolic abuse and querulous and petty allegations against any industry or profession or organisation, the series of articles on insurance which appeared in that journal constitute a record which would perhaps remain unbeaten for a long time to come. Had they appeared in a journal of lesser importance than the organ of the Congress Party, they would have been dismissed as the vain out-pourings of a monomaniac. In his preface to the series, the Editor says that the material for the article has been supplied by a man "who has spent a lifetime in insurance business." Briefly, the thesis in the series is that insurance in India "teems with dishonest and corrupt practices and thereby utterly demoralises the public, the insured, the insurer and the vast number of persons employed in the business as agents and administrative staff." And yet, it is in such a profession that the man who supplied the material for the articles is reported to have spent a "whole lifetime." How this celebrity, who has preferred to remain anonymous, happened to escape morally unscathed from a life-long contact with so ignoble a profession as insurance in India is not stated. The sober truth seems to be that the series were intended to give the insurance dog a bad name before hanging it. In this effort, no vituperative adjective has been deemed unworthy of service. There has been a deliberate attempt to put as much fire into the articles as possible. History alone will show whether the series of articles have, by probably precipitating nationalisation, rendered a national service or a national disservice.

Some of the allegations are so puerile that a teen-age high school debater would easily be able to answer them. Here is a sample:

"In India, insurance agents are not appointed for canvassing insurance business or serving insurance policyholders but mainly for the purpose of passing on illegal rebates or paying illegal remuneration."

This allegation implies that all the agents, having received illegal remuneration, sat cosily in their homes, while the four million policyholders in India who own Rs. 1,059 crores worth of life policies, refusing the mediation of agents, queued up in front of insurance offices to offer their business to corrupt insurers. The argument is an insult to the intelligence of the nation.

"Oriental" Life Office

Some of the allegations are so petty that they engender a sense of exasperation. It has been alleged that the directors receive brokerage and commission for the investment business they put through. The author ignores that investment is generally handled by a committee of experts in each company and that it would require a whole army of fraudulent persons to indulge in such malpractices. Even the factual information mentioned in the articles is not always correct. For instance, the "Oriental," it is alleged, has sustained a large loss in its foreign business. The author says: "The deficiency in the foreign business of our largest life office, the 'Oriental' was so huge that in their last actuarial valuation made in 1951, they had to transfer no less than Rs. 3½ crores to their foreign policyholders' account!" (exclamatory mark author's). The sober truth is that the "Oriental," which had a large business in Pakistan, found, after the Partition of the country, that the business in those areas had to be treated as foreign. The transfer of funds was necessitated by the Partition of the country. The matter is not a fit subject for exclamation.

Leaving aside the purely puerile charges and distortions of truth, the author, when he does deviate into sense, has made a few strong points against private management. None of them, however, is new, and has been answered several times ere now. The points are: (1) the expense ratio of Indian insurers is very high, (2) high dividends are paid, (3) vast investible funds belonging to the public are held by a few industrialists who use them "in devious ways for speculative purposes and for individual gains," (4) insurers have failed to spread the gospel of insurance among the low-income group.

The expense ratio of Indian insurers is no doubt high when compared with British and American insurers. Thus, it is 27.3 per cent., as against 13.0 per cent. for U.K. companies and 21.0 per cent. for American companies. There are, however, other countries where the expense ratio is as high as or higher than that in India. In Japan, for instance, it is as high as 42.9 per cent. In this connection, one has to remember that the average size per policy in India is very low, being about Rs. 2,165 for Indian companies, as against Rs. 8,253 in the U.K. and Rs. 12,017 in the U.S. A correct comparison would be in terms of the cost per policy. It has been computed from an analysis of 20 Indian life offices of different sizes that the cost per policy in India is Rs. 19.9 as against Rs. 29 in the U.K. In any case, national comparisons of expense ratios, without taking into account factors such as the business operations of companies, extent of mechanisation and geographical differences will hardly yield statistically valid results.

High Dividends

The charge of high dividends to shareholders cannot bear scrutiny, considering that the return to shareholders has been statutorily fixed at 7½ per cent. of the surplus. Out of 222 insurance companies, in the year 1953, only 67 companies declared dividends (of which only eight companies declared more than 20 per cent.), while 155 companies could not afford to declare any dividend at all. The author has referred to the dividends paid by eight leading life offices during the years 1951-53. But those are large life offices, established long ago. Further, the payment of the so-called high dividends of these companies involved an expenditure of no more than Rs. 12 lakhs. And if the dividend percentages were worked out on a yield basis, it would be seen that the yield figures were of very modest proportions. Finally, no attempt has been made to evaluate what a long waiting period there was before the companies referred to were brought to the dividend-paying stage, nor any allowance made for the fact that the holding of any individual shareholder is limited by statute to 5 per cent. of the company's paid-up capital. Nevertheless, if the high-dividend charge were true, it would not constitute an argument for nationalisation but for dividend control, or for reducing the shareholders' share or for mutualisation of the offices.

The charge has sometimes been made before that the managements have invested the funds to the detriment of policyholders. No one would, of course, exonerate the managements which have misused the money entrusted to their charge. But such misuse could clearly be exaggerated. Apart from the fact that it could have been prevented through prompt interference by the authorities by such methods as surprise or secret inspection of suspected companies, the total of the funds involved in shady transactions is, on the basis of information so far disclosed by the Government, considerably less than what is reported to have taken place in any single large-sized Government-sponsored project. This is not an extenuating argument. But it does show that it is practically impossible to invent a perfectly knave-proof system.

But the argument against insurers' investments takes some contradictory forms. If they do not divert their funds to joint-stock enterprises, they are accused of not aiding industrial development. If they do, they are held to favour certain chosen enterprises. The fact of the matter is that insurers' investments have been controlled by rigid regulations. It has been suggested that there is a tie-up between certain industrial houses, on the one hand, and the insurance offices and banks, on the other. This allegation has been made on the basis of the fact that there are certain common directors. If insurance offices are not to get their directors from business men and industrialists, how are they to obtain their directors? One might as well complain that the Government is run by politicians, instead of by philosophers, artists and musicians.

Investments

The managements, as is well known, could exercise their discretion only in respect of 15 per cent. of their total investments, the rest had to be invested in approved investments. The charge has been made that they have abused this discretion. In this connection, it must be remembered that, even in respect of unapproved investments, the managements had to observe other regulations; such investments, for instance, could not exceed 2½ per cent. of the controlled fund nor 2½ per cent. of the subscribed share capital of the company invested in. The

SPENCER & CO., LTD.

MR. S. W. EDWARDS' SPEECH AT ANNUAL MEETING

ADDRESSING the ordinary shareholders of Spencer & Co., Ltd., at their Fifty-eighth Ordinary General Meeting which was held on 27th January 1956, at the registered office of the Company at Madras, Mr. S. W. Edwards, Chairman of the Company, said:

"On behalf of the Board of Directors and in my personal capacity, it gives me pleasure in welcoming you here this morning to the fifty-eighth annual general meeting of the Company.

"The accounts for the past year have been in your hands for some weeks and are, I think, as self-explanatory as it is possible to make them.

"In spite of the discontinuance of a major portion of our railway catering activities and the cessation of our lesseeship of the Malabar Hotel, to which I referred when we last met, the turnover for the year discloses a small, but healthy, increase, but what is more commendable is the improvement in the percentage of gross profit.

"This improvement has to a certain extent been negatived by a drop in miscellaneous income and an increase in working expenditure —another partial setback is due to the not insignificant increase in agricultural income-tax.

"By and large, I think, you will agree that results are extremely satisfactory, and could not have been achieved without genuine co-ordination and the strictest supervision in control. On behalf of my Board, I thank all those concerned for their loyal contribution to these results.

Future

"As to the future, the ever vicious circle of mounting costs in almost every commodity and industry in which we are interested would indicate the probability of a reduction in the rate of profit. Fair price and fair profit has been this Company's motto since its inception and, I think, I can claim that that policy has given the Company a fair name throughout this continent and so, to maintain profit at its present level it is necessary to obtain increased turnover.

"I stress this point in the hope that the public, if they want us to continue in retail, will renew and increase their patronage of the many facilities the Company is able to offer.

"To date, in the current year, I am glad to be able to tell you that there is every indication that our turnover will be maintained, if not increased."

The accounts and balance-sheet as at 30th June 1955 were unanimously approved and adopted. A further and final dividend of 10 per cent. free of income-tax on the ordinary shares, as recommended by the Directors, was declared, making in all a total dividend of 15 per cent. free of income-tax for the year.

looking for oil

Have you ever considered what a long, elaborate and costly business it is looking for oil ? Although oil lies thousands of feet underground, the oil prospector may have to take to the air—to photograph the lie of the land and make aeromagnetic surveys. Or he may create artificial earthquakes, in what is called a seismic survey. Then the findings have to be interpreted, in geophysical laboratories, before a test well is bored perhaps to a depth of as much as three miles.

The Assam Oil Company, for many years the pioneer of oil search in India, discovered a fresh source of oil recently at Nahorkatiya in Upper Assam. Crores of rupees have been spent in the search and many more will have to be spent on the development of this discovery.

And all the time, remember, the search for more oil is going on—for further sources of this most elusive mineral are vital for India's industrial development. All the very latest scientific methods and technical equipment, including aero-magnetometers and even helicopters, are being employed. No effort in fact is being spared to reduce India's dependence on oil purchases from abroad.

INSURANCE

(*Concluded from page 256*)

scope for abuse was thus strictly limited. Indeed, although insurers were permitted to keep 15 per cent. of their funds in unapproved investments, they actually held only 2 per cent. of their funds in such investments. Probably, even these investments were made before the new restrictions were introduced. Be that as it may, a relevant question is: if insurers have systematically abused their investment opportunities, how have they been able to declare sizable bonuses from valuation to valuation?

Small Savings

The final charge is that private insurers have not extended the benefits of insurance to wider sections of the population. Here, the two specific charges are: the Government has been able to do comparatively well in garnering small savings, while India's *per capita* insurance is still very low. The author of the articles in the *Economic Review*, referring to the rural and industrial sections of the Indian population, says: "The ability of the State even now to tap this field is evident from the fact that the small savings scheme mobilised Rs. 48.6 crores in 1951-52, Rs. 48.7 crores in 1952-53 and Rs. 43.6 crores in 1953-54, when it had been working for only four years. Life insurance premiums amounted to barely Rs. 40.7 crores in 1951, Rs. 45.2 crores in 1952, and Rs. 47.8 crores in 1953 through the efforts of 170 insurers, Indian and foreign, and their 2½ lakhs of agents." It is conveniently forgotten that the two entities are not strictly comparable. Small savings are in the nature of capital investments, while the savings for life insurance have to come mainly from current income. A person who comes by some money (say, a bonus from his employer) may invest it in small savings scheme but the same person would hesitate to take a life policy, unless he is certain of being able to pay the premiums regularly. In any case, life insurance cannot compete in the matter of interest with small savings scheme which has been specifically evolved in order to encourage the investment habit. Further, it is quite possible that a part of the claims paid by insurers gets invested in small savings; insurers paid Rs. 17.7 crores by way of claims in 1954. It is, however, idle to pretend that the small savings scheme has reached directly the rural or industrial sections of the people. The major share of the amount collected under the small savings scheme, it has been officially admitted, has come from provident fund amounts and from rich people, the contribution by the lower-income groups being strictly limited.

Still Underdeveloped

By and large, the charge is correct that insurance in India is relatively underdeveloped in the sense that both the *per capita* insurance is low as compared with that in Western countries and the premium income forms a small proportion of the total national income. But such a charge holds good of almost every other social and economic sector—the number of motor vehicles, the literate population, the number of hospitals and doctors (taken per 1,000 population) and the length of road per square mile. These statistics serve only to bring out the economic backwardness of this country. Insurance is no exception to the general rule that India is relatively an underdeveloped country. The savings effected through life insurance, as the author of the article in the *Economic Review* points out, constitute about ¼ per cent. of the estimated national income in India, as against 3 per cent. in the U.K. and Australia, and over 6 per cent. in the U.S. and Canada. In evaluating these comparative statistics, one has to remember that increase in insurance could come only through improvement in living standards and educational level.

Life insurers may, however, legitimately claim that, for a country of India's economic backwardness, their record has been quite a creditable one. During the 17 years following 1938, the life business in force has increased from Rs. 298 crores to Rs. 1,058 crores and the premium income from Rs. 15 crores to Rs. 50 crores. Thus, during this period, life business has expanded about three and a half times. This compares favourably with the rate of progress in the more advanced countries. During the same period, the total business in the U.S. increased a little less than three times, in Canada a little more than three times and a little more than twice in the U.K. This is a record of which Indian insurers have reason to feel proud. And it must be remembered, too, that insurance is the only commodity which, thanks to the conservative and far-sighted management of this enterprise, is still available at pre-war prices. Indeed, insurers might have gone on expanding and improving their services at an increasingly faster rate had not the Government smothered their enterprise by its decision to nationalise insurance. The future chronicler will, perhaps, record that what the country desperately needed in the year 1956 was not nationalisation of insurance but insurance against nationalisation.

EXPORT CREDIT GUARANTEE SCHEME

The Government of India, it may be recalled, has appointed a Committee, known as Export Credit Guarantee Committee, to suggest measures for instituting a system of export credit insurance in this country. The object of such insurance schemes, as is well known, is to enable the exporters (1) to sell on competitive credit terms in world markets, (2) to protect their bad debts, (3) to recoup their working capital by claiming for any blocked accounts receivable, and (4) to assist in financing their export sales. The main risks which such schemes cover are: (1) insolvency of foreign buyer, (2) protracted default by the buyer after he has accepted the goods, (3) blockage of funds or transfer difficulties which prevent an exporter from receiving payment, (4) war or revolution in the buyer's country, and (5) any other cause beyond the control of both the exporter and the buyer such as cancellation of import licences or imposition of import restrictions on goods not previously subject to licence.

The Committee has now issued a questionnaire with a view to eliciting information about all the important aspects of export business. Information has thus been sought on: (1) normal terms of shipment—whether f.o.b., c.i.f. or otherwise, (2) marine insurance— whether it is taken out by the exporter or the buyer, and (3) methods of export trade—whether it is on the basis of pre-payments or letters of credit or documents on arrival or credit terms. Exporters have also been asked to state what steps they take to satisfy themselves about the financial position, status and business dealings of their buyers and to obtain payment in case of non-payment by the buyers. They have also been asked to state their experience in the last five years regarding losses accruing because of failure of the buyer to pay the goods as a result of the latter's insolvency or of other reasons. By means of another question, the Committee has asked the exporters to state their experience in regard to losses suffered by them as a result of (1) occurrence of war or civil unrest, (2) imposition of import restrictions and currency restrictions, and (3) additional expenses incurred through interruption or diversion of voyage outside India. They have also been asked to give their experience of disputes arising out of the dissatisfaction of importers with the quality of the goods supplied.

NON-INDIAN INSURERS

The Government's decision to nationalise life insurance affects, as is well known, both Indian and non-Indian companies. So far as Indian companies are concerned, the question of compensation is considered mainly in relation to shareholders. No firm decision is reported to have been taken so far on this issue. As regards foreign insurers operating in India, there is no question of buying over the shares, for the companies are all registered outside India. The acquisition of their business, therefore raises intricate technical issues. It would appear that a deputation representing foreign insurance companies operating in India has already left London and will be in this country even before these lines appear in print. The delegation, it is learnt, will be assisted by Sir Percival Griffiths in an advisory capacity. This deputation, it is reported, would carry with it authority to negotiate on issues connected with compensation for managements and protection of policyholders' interests.

In India, there are three foreign companies transacting life assurance business only and 13 foreign companies which are composite offices. The total life business of these foreign companies, in force at the end of 1954, was Rs. 137 crores. During 1954, their life premium income was Rs. 7.45 crores. The assets of the foreign life or composite companies, as on 31st December 1954, aggregated Rs. 50.86 crores.

RIOT RISKS

General insurers have increased, with effect from 19th January 1956, the strike, riot or civil commotion (S.R.C.C.) rates five times the original rates. This follows the decision taken by the Bombay Regional Committee of the Insurance Association of India. Accordingly, the rate for covering riot risk for a motor car, for instance, has been increased from ¼ per cent. with a minimum of Rs. 30 to 1¼ per cent. with a minimum of Rs. 100. The rate for shops and stores (contents only) has been increased from As. 4½ per cent. to Rs. 1-6¼ per cent. and that for godowns from As. 3 to As. 15. The increased rates are applicable to Greater Bombay, and to the Nasik, Poona, Ahmednagar, Sholapur, North and South Satara, Kolhapur, Belgaum and Dharwar districts.

The Committee has, however, suggested that, at the option of tariff insurers, the old tariff rates may be applied in the case of renewal business. Generally speaking, the insurers are reluctant to cover riot risk in respect of new clients, especially where the property lies in "disturbed area."

LIFE PREMIUM RATES

The rates for life insurance policies and the conditions under which such policies are issued will hereafter be uniform throughout India: the new rates will apply with effect from 20th January 1956. It has been officially announced that these uniform rates will be one rupee less for every Rs. 1,000 of the sum assured for all terms and ages and for all plans of assurance than the rates of the Oriental Government Security Life Assurance Company, Ltd. Where the premium is below Rs. 20 per Rs. 1,000 of the sum assured, the reduction will be 5 per cent. of the premium. Plans for assurance which do not find place in the current prospectus of the Oriental would be discontinued for the present. As regards annuities, the present rates of the Oriental would be adopted. The Press note added that, in respect of business transactions outside India, the present rates of premium will continue to prevail.

An official spokesman is reported to have said in New Delhi that if in a particular company it was found that affairs had been mismanaged and its financial position was not sound, the policyholders of that company would be informed what their policies were worth before nationalisation.

TRADE AND INDUSTRY IN ASIAN REGION

E.C.A.F.E. COMMITTEE ON HOW TO IMPROVE THEM

THE Committee on Trade and Industry of the Economic Co-operation for Asia and the Far East (E.C.A.F.E.), which concluded its eight-day session at Bangalore on 31st January, approved of a number of resolutions to be recommended for the main session of the E.C.A.F.E. which has been in session since the 2nd inst. These resolutions related to the development of mineral wealth, encouragement of small industries, electric power development, including the use of nuclear energy for peaceful uses, promotion of trade, and training of personnel for economic development in the E.C.A.F.E. countries. The formulation of these resolutions were preceded by detailed studies by several sub-committees, as also by the E.C.A.F.E. Secretariat, of the problems in the different fields. The session is being attended by 24 member-countries. The E.C.A.F.E., it may be mentioned here, has become an important forum for Asian countries to meet and establish personal contacts, review existing economic conditions and problems, exchange ideas and experiences, and reach conclusions helpful to them.

The E.C.A.F.E. Committee on Industry and Trade held discussions on the report of the activities of the E.C.A.F.E. Secretariat in the field of mineral resources development. Practically all the delegates recognised the importance of proper exploitation of the mineral resources of the Asian countries. Although some technical objections were raised in the course of discussions, the Committee ultimately adopted a resolution emphasising the urgency of mineral development in the region. The resolution further laid stress on the need for the E.C.A.F.E. to give careful consideration to the recommendations made by the Study Group of the Committee on Mineral Development. It expressed the hope that countries with long experience in the field of mineral development would continue and increase their efforts to make their experience and co-operation available in adequate measure.

Urgent Consideration

The Committee requested the Sub-committee on Mineral Resources Development to review the report of the Study Group of experts which toured Western Europe and Russia and report thereon as early as possible. The member-Governments were requested to give full and urgent consideration to the general observations of the Study Group.

The Executive Secretary, Dr. P. S. Lokanathan, stated that 12 experts on geology from Afghanistan, Burma, Hongkong, India, Indonesia and Japan participated in a study tour of Western Europe and the Soviet Union in August-November 1955. He felt that the knowledge of methods and practices in several European countries would be of considerable value in the planning of the mineral resources development of the countries of the region. He revealed that the preparation of a regional geological map for Asia and the Far East was well under way.

Electric Power

In the field of electric power, although the increase in generating capacity in some E.C.A.F.E. countries has been impressive during the last seven or eight years, the development activity still requires to be accelerated substantially for achieving rapid industrialisation. Shortage of finances and technical personnel is stated to be the major obstacle which the countries were trying to overcome. Since developments in the peaceful uses of atomic energy had attracted considerable interest, the E.C.A.F.E. has given careful thought to this subject. It is stated that plans are in for the installation of atomic reactors for research purposes in India and Japan and that others are expected to follow later on. Although it might take some years for manufacturing the necessary equipment, the countries have been advised to take advantage of training facilities offered by countries such as the U.S. and the U.S.S.R. Arrangements are stated to be in progress for a group of electrical experts to study the manufacturing of power plant and construction of power stations in Europe under the auspices of the U.N. Technical Assistance Administration Programme.

The Committee which reviewed the aforesaid developments endorsed the views of the report of the E.C.A.F.E. Secretariat on Electric Power Development.

Discussing the Secretarial Report on Small-scale Industries the delegates stressed the importance of the development of cottage and small industries in promoting the progress of a country. Several delegates spoke appreciatively on the progress achieved by small scale and cottage industries in India and Japan. Tributes were also paid to the work of the E.C.A.F.E. on small-scale industries. Finally, the Committee passed unanimously a resolution on small-scale industries which advised the member-Governments to make use of the services of the E.C.A.F.E. in this field. The resolution further suggested that the E.C.A.F.E. Secretariat should give high priority to this problem and assist member-Governments by promoting exchange of information and such other means as may be found practicable.

The report stated that the Government should not only provide technical assistance to small and cottage industries but also actively help them in marketing their products. The Government should evolve a system which could minimise the small producers' risks of marketing finance by linking production to sales or preferably undertaking it against definite orders. The report further said that the Government should encourage small industries by giving preference to their products in their purchases. It advised that modernisation of all industries must be pressed forward without, however, affecting employment. Provision of cheap electric power, facilities for training in modern techniques, and the use of modern industrial methods were among the other measures recommended by the report.

The Indian delegate, Mr. Kochar, urged that the Commission should bestow thought on the question of increasing the foreign exchange resources available to the Asian countries. He desired that the E.C.A.F.E. should prevail upon the E.C.O.S.O.C.O. for setting up the Special United Nation Fund for Economic Development.

Trade Promotion

Trade promotion formed the subject matter of a special resolution which the Committee on Trade and Industry adopted on 30th January. The resolution consists of three recommendations. First, the E.C.A.F.E. Secretariat must explore the possibility of establishing a study centre within the region for training trade promotion personnel and for considering the formulation of proposals therefor. Secondly, the needs of land-locked member-States and also members having no access to the sea in the matter of transit trade should be given full recognition by all member-States; adequate facilities must be accorded in terms of international law and practice in this regard. Thirdly, in implementing the work programme for 1956-57, particular attention should be paid (a) to expediting the investigations already being conducted by the Secretariat regarding regulations and procedures and practices concerning the conduct of international trade, with a view to simplifying those that may be hampering development of mutually beneficial trade and to the formulation of practical suggestions for the consideration of member-Governments; (b) to completing the study of techniques for the organisation of trade fairs and exhibitions and proposing for the consideration of member-Governments the measures to be adopted to facilitate the organisation of such fairs and exhibitions in the region; (c) to consideration being given by the Secretariat in the course of the study which is being carried out under the programme relating to ocean freight rates to the possibilities of increasing the availability of shipping facilities; (d) to assisting wherever necessary, the development of commercial arbitration facilities in the region; and (e) to the problem of standards and specifications for consumer goods and capital goods.

The Committee then adopted the report on trained personnel for economic development as drawn by the E.C.A.F.E. Inter-Secretariat Working Party. In this report, the Working Party has put forward several valuable suggestions which were very much appreciated by all the delegates. The most important of these suggestions were: (1) Governments of the region should consider the desirability of developing their manpower information service, taking the assistance of the I.L.O. in this field; (2) they should take into account the desirability of avoiding duplication of effort in developing manpower surveys and continuing employment programmes by utilising, wherever possible, the existing facilities and attaching such programmes to the existing institutions, instead of creating completely new services for the purpose; (3) development of management training facilities in the region; (4) introduction of mobile training units; and (5) introduction and diffusion of better management methods in small-scale industry, to be carried out as part of a more comprehensive programme, for the development of viable small-scale production.

Housing

The Committee also considered the report of the Inter-Secretariat Working Party on housing and building materials. In this report, the Party had expressed concern that, despite all efforts on the part of the Governments, the countries of the region were still faced with the problem of a serious shortage of housing in both urban and rural areas. It clearly warned that, unless steps were taken to accelerate the present rate of reconstruction and construction, the position would deteriorate in the coming years. In its opinion, the Governments had not, perhaps, fully appreciated the fact that, although the construction of houses for the low-income group of the population was clearly not self-financing, the immense indirect benefits, both social and material, more than justified the raising of housing to a high level of priority than hitherto within national development schemes. It recommended, therefore, that socio-economic studies at an expert level should be undertaken by the United Nations, with a view to arriving at a formula for estimating the overall benefits which resulted from the provision of suitable housing to the working man; that pilot projects should be initiated concurrently, with a view to measuring the material benefits which resulted from improved housing and making it possible to collect direct evidence for the socio-economic studies proposed; and that, where possible, existing housing projects under construction might be used as pilot projects for those studies.

The Working Party also recommended that the Committee on Industry and Trade of the Commission should take note of the fact that the Governments of the countries of the E.C.A.F.E. region should give higher priority in their development programmes than heretofore to the provision of housing for the people, particularly housing for the low-income groups, in view of the immense social and material benefits as a result of better housing. The Working Party recommended that a liaison body, to be styled the Regional Housing Centres Advisory Committee, be constituted with a view to developing those centres, and to act generally as a co-ordinating agency for the activities of the two centres.

NEW TIMBER TREATMENT: METHOD DISCOVERED

The secret of a timber that can withstand all forms of fungus rot and termite and insect attack has been discovered by a British firm as the result of three years' intensive research on behalf of the U.K. Ministry of Supply. The present methods of impregnating solid timber have the basic defect that, when such timber is cut or drilled, unprotected surfaces are exposed. The new discovery consists of a plywood in which each separate lamination is completely impregnated before it is bonded together. As each lamination is rarely more than 1/16 in. thick, the impregnation is the maximum possible and all the fibres of the wood are completely saturated with the protective. Plywood manufactured by this new technique can be cut, shaped or machined without the newly exposed surfaces detracting in any way from the general resistance to insects and fungi. A new basic raw material is made available to industry.

The research work, which resulted in this triumph for a British firm, began when the Ministry of Supply asked for plywood that would withstand long immersion in water under any atmospheric condition in the world—the extremes of the Arctic and the tropical jungle. Wood was required for the manufacture of pontoons for the War Office, particularly for Bailey bridges, not only for military purposes but for colonial development and rehabilitation schemes as well. The Ministry of Supply had for many years used plywood which had been impregnated after manufacture whereby only the surfaces and edges became treated. The problem facing the research chemists—apart from impregnating the separate layers of wood out of which plywood is manufactured to give it the tensile strength of steel—was to find a glue which would stick the laminations together without chemical reaction from the solution used to impregnate the wood. It is this secret of a glue, which does not chemically react to the impregnating material, of which copper is a base, that has been discovered. The glue line is indestructible.

Practical tests have been conducted over the past 25 years by Government research stations in India, the U.K., the U.S. and other parts of the world which have demonstrated that the chemicals used for impregnating the new plywood are completely proof against all known termites, wood worms, and destructive fungi. The chemical used for impregnating the plywood laminations is a balanced mixture of copper sulphates and chromates in solution. The new plywood—a basic industrial raw material of great strength and durability—has many potential uses, notably for prefabricated bungalows, for rail and road vehicle bodies for use in tropical countries, and in all forms of packaging.

CENSUS OF CHEMICAL UNITS

The chemical industry in India is scattered all over the country, although the majority of the units is concentrated in Bombay and West Bengal States. Of a total number of 290 chemical units, including those manufacturing drugs and pharmaceuticals, 117 are located in Bombay, 87 in West Bengal, 20 in Madras, 16 in Uttar Pradesh and 14 in Bihar. The remaining 34 units are situated in the Punjab (6), Delhi (11), Saurashtra (5), Andhra (8) and Madhya Pradesh and Rajasthan (4). According to the Census of Manufacturing Industries, 1953, organised by the Directorate of Industrial Statistics, Calcutta, about 90 per cent. or 262 of the total number of units submitted returns for compilation.

The average number of days worked by these factories, employing 20 or more workers and using power, was 291. Productive capital employed by the reporting factories in 1953 amounted to Rs. 60.81 crores. Of this total, Bihar, which had 14 factories, accounted for Rs. 25.36 crores, whereas Bombay and West Bengal with a far larger number of factories accounted for a productive capital of Rs. 18.80 crores and Rs. 8.67 crores, respectively. The share of Madras was Rs. 2.37 crores and of U.P. Rs. 3.33 crores. The proportion of fixed capital and working capital in the total productive capital employed was 3:1. The bulk of the expenditure under fixed capital was on plant and machinery amounting to Rs. 18.03 crores.

The reporting units employed 41,600 men comprising 32,700 workers and 8,900 persons other than workers. The total earnings of these workers amounted to Rs. 6.34 crores, which included money value of other benefits and privileges of the order of Rs. 20 lakhs.

The chemical factories consumed 502,893 tons of coal valued at Rs. 120 lakhs. Electricity consumption amounted to 71,48,000 kw.h. worth Rs. 41.13 lakhs. The consumption of lubricating oils and other type of fuels aggregated 172,600 gallons, costing Rs. 121.7 lakhs. The value of fuels, electricity, etc., consumed by the factories in the year was Rs. 2.90 crores.

The value of total materials consumed was Rs. 26.65 crores and the amount paid to other concerns for work done by them was Rs. 11.83 lakhs.

During the year, 3,076 tons of zinc oxide and 97,439 tons of fertilisers, excluding ammonium sulphate, were produced by the reporting units. Ammonium sulphate produced amounted to 265,687 tons. The quantity of tinctures and galenicals turned out by the factories was 5.6 million lbs. The aggregate value of these chemicals, including that of a few others, amounted to Rs. 48.56 crores. The amount received by these factories for work done for other concerns was Rs. 44.43 lakhs.

The ex-factory value of products and work done for other factories amounted to Rs. 47.62 crores. Value at factory of materials, fuels, etc., consumed and work done for the units by other concerns aggregated Rs. 26.54 crores. The amount earmarked for depreciation amounted to Rs. 2.89 crores. The value added by manufacture was Rs. 18.18 crores. Of this, Bombay units accounted for Rs. 8.26 crores, West Bengal for Rs. 3.63 crores and Bihar for Rs. 3.48 crores.

FACTORY EQUIPMENT EXHIBITION IN U.K.

The 1956 Factory Equipment Exhibition—fourth of the series—will be held from 9th to 14th April at Earls Court, London. The exhibition will occupy 250,000 sq. ft. of floor space, and display the products and services of 240 companies. The theme of the 1956 event is "Productivity", and the British Productivity Council—a voluntary body dedicated to the raising of British industrial production through greater efficiency—is staging a three-day work study conference during the exhibition. The 1955 exhibition, it may be noted, was attended by visitors from 43 oversea countries. Although the majority of the exhibiting firms will be British this year, there will be a number of exhibits from Continental countries.

The 40th Swiss Industries Fair will take place in Basle from 14th to 24th April 1956. This is the leading industrial exhibition in Switzerland where the main export groups such as watchmaking, textiles, textile machinery, general engineering and the electrical industry will offer an excellent display of Swiss industrial production. At the Swiss Industries Fair, the 26th Swiss Watchmaking Fair will also be held at which more than 150 watch manufacturers will be present in support of this most important professional show in the watchmaking industry.

CALCUTTA, 31*st January* 1956.

MADURA MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held in Tuticorin on Monday the 26th March 1956, at 4 p.m. The Share Transfer Books will be closed from 6th to 26th March 1956, both days inclusive. It is recommended that:

1. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names, as the Company will pay any dividend declared only to the person(s) in whose name the share stands on the date of declaration of dividend.
2. Shareholders desiring dividends to be paid to Banks or other Mandatees should register the mandates with the Company before 6th March 1956.
3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LIMITED,
Managers.

MADURAI, 28*th January* 1956.

ROHTAS INDUSTRIES LIMITED

THE DIRECTORS OF THE COMPANY HAVE recommended to the forthcoming General Meeting of the Company payment of the following dividends (free of income-tax) for the year ended 31st October 1955.

Rs. 9 per share on Cumulative Preference Shares.

Rs. 4-4 per share on 'B' Cumulative Preference Shares.

Rs. 1-8 per share (i.e. 15 per cent.) on old Ordinary Shares.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 21st February 1956 to 6th March 1956, both days inclusive.

SAHU JAIN LTD.,
Managing Agents.

CALCUTTA, 28*th January* 1956.

MARKED RISE IN PROFIT OF E.I.D. & S.

CAPITAL STRUCTURE TO BE REORGANISED

THE audited accounts of the East India Distilleries and Sugar Factories Ltd. (Managing Agents and Secretaries: Messrs. Parry & Co., Ltd., Madras) for the year ended 30th September 1955 make encouraging reading. The earnings of the Company, which had suffered a sizable shrinkage in the previous year, have registered a considerable improvement, thanks to a record production of sugar in the past season. Consequent on the good performance, the reserves of the Company have been strengthened considerably and the distribution to shareholders is also proposed to be raised.

The gross profit for the year under review amounts to £359 726, an increase of £85,644 over that (£274,082) for the previous year, in refreshing contrast to the drop of £84,803 in 1953 54. The net profit, which had dwindled from £170,700 to £110,053, has gone up to £187,709. The addition to the general reserve has been stepped up from £25 000 to £75 000, thus restoring it to the allocation made two years ago. In addition, the capital reserve has been allocated £16 500, being the amount of relief in taxation which the Company expects following the grant of development rebate under the Finance Act 1955 in respect of new plant and machinery purchased subsequent to 31st March 1954. Last year, it may be recalled, the capital reserve had been strengthened by a sum of £88,416, being the exceptional credit resulting from the revision of the rates of exchange.

After payment of the 7 per cent. cumulative preference dividend and the fixed non-cumulative dividend of 10 per cent. on 'A' ordinary shares, the distribution on 'B' ordinary shares is being raised. An interim dividend of 5 per cent. on these shares has already been paid. This was on the present 'B' ordinary capital of £300,000. The Directors propose to pay a final dividend of 10 per cent. on a higher capital of £400 000, which will result from the issue of £100,000 of the 'B' ordinary capital to the ordinary shareholders of Messrs. Parry & Co., Ltd., a detailed reference to which will be made later. They also propose to pay on this increased capital a special additional dividend of 5 per cent. For the previous year, the 'B' ordinary shareholders got a dividend of 15 per cent. on the present capital, in addition to a special dividend of 12½ per cent. in connection with the distribution of the shares of Parrys Confectionery Ltd.

Results Compared

The following comparative table will give an idea of the Company's progress during the last two years:

(In £ sterling)

	For the year ended 30th September		
	1955	1954	1953
Sale proceeds	2,383,106	2,137,541	2,844,664

Special on 'B' shares	..	37,500* (12½%)	..
Carry forward	56,499	57,290	59,690

* Paid in connection with the distribution of 300,000 ordinary shares of Rs. 1 each in Parrys Confectionery Ltd.

† Of this, the final dividend of 10 per cent. and the special additional dividend of 5 per cent. are on the proposed increased capital of £400,000 to be raised by the new issue of £100,000 to the shareholders of Parry & Co., Ltd.

The Company's crushing of sugarcane during the season 1954 55 amounted to 368,989 tons yielding 32,272 tons of sugar, as compared with 254,581 tons of cane crushed in the previous season producing 23.475 tons of sugar. The quantities of cane crushed and sugar produced during the season 1954-55 both constitute a record for the Company's factory at Nellikuppam. The record quantity of cane crushed was the result of the extension of the season and the increase in yield from 28.55 tons to 36.33 tons per acre. The recovery of sugar, however, declined from 9.22 per cent. to 8.75 per cent. because of the extension of the season resulting in crushing of cane of low sucrose content. The increase in excise duty from Rs. 75 to Rs. 112-8 per ton with effect from 1st March 1955 did not result in a corresponding rise in price and the incidence of a large part of the increased excise duty had to be borne by the Company and the ryots growing cane who, in consequence of the reduced realisation price for sugar, did not receive any bonus under the S.I.S.M.A. formula.

As regards the other sections of the Company's business, the new distillery for the production of spirit at Nellikuppam went into production in October 1954 and helped the Company to reduce the cost of production, thereby leading to a substantial increase in the profitability of this department. Trading in carbonic acid continued to be difficult during the year under review. However, the turnover and profit in this section were higher, consequent on a reduction in production costs, resulting from modernisation of the plant. The production of acids and heavy chemicals continued to expand and the output of sulphuric acid reached a record level of 12,436 tons, an increase of more than 10 per cent. over the year. Since the close of the year under review, however, the Government of India took steps to exercise control over the selling price of sulphuric acid. The Directors feel that this step will have the effect of reducing the profitability of his product during the current and subsequent years. The reorganisation of the pottery section was continued during the year under review, with emphasis on the production of sanitary ware. It may be noted here that the Company accounts for at least 50 per cent. of the Indian output of this product. The demand for the Company's products continues to expand in line with the improvement in the standard of living of the people.

The following synopsis of the Company's balance-sheet as on 30th September 1955 provides an idea of its financial position.

Liabilities	£	Assets	£
Capital	580,000	Gross block	1,302,585
Reserves and surplus..	931,777	*Less*—Depreciation ..	566,540
Taxation equalisation reserve	120,000	Net Block	736,045
Provision for current taxation	77,024	Stocks	863,329
Liabilities	550,157	Cane crop	17,338
		Investments	52,510
		Debts and advances ..	401,873
		Cash	167,863
	£2 238,958		£2,238,958

The financial position of the Company, as will be evident from the above summary of its balance-sheet, is quite impressive. The reserves and surplus stand considerably in excess of the capital. The current assets cover the current liabilities and provision for taxation nearly two and a half times. The addition to the gross block during the year amounts to £88,270 and the expenditure up to the end of the year on buildings, plant and machinery in course of construction accounts for £11,110. The total capital commitments at the end of the year, for which no provision has been made in the accounts, are estimated to amount to £46,500.

Change in Capital

The capital structure of the Company would undergo considerable change if the proposals of the Directors, circulated to the shareholders along with their report, were adopted. The first proposal is to purchase the entire ordinary share capital of Parry & Co., Ltd., the Managing Agents of the E.I.D. & S. The purchase price will be one fully paid 'B' share of £1 of the E.I.D. & S. for every five ordinary shares of Rs. 2 each of Parry & Co., Ltd. Alternatively, for each ordinary share of Parry & Co., Ltd., a cash payment of Rs. 5-8 will be made, save that in the case of individual holdings in excess of 100,000 ordinary shares, only Rs. 4-8 per share will be paid. The new share capital, which will have to be issued in the event of the acceptance of the first alternative, is not expected to exceed £100.000 and this will rank for the additional dividend declared on the 'B' share capital of the Company for the year ended 30th September 1955. The Directors have already made provision for such a payment from the profit of the year. The offer is subject to the sanction of the Controller of Capital Issues and the permission of the Reserve Bank of India and of the Bank of England so far as the non-resident shareholders of Parry & Co., Ltd., are concerned. If the proposal materialises, the ordinary 'B' capital of the E.I.D. & S. will increase to £400.000. The Directors of the Company observe that they are satisfied that the proposed purchase of Parry's shares at the prices offered will benefit the Company. They believe that the two businesses will be administered with economy and with improved efficiency as one composite unit.

The second proposal is to extinguish the distinction between the two classes of ordinary shares of the Company, by consolidating them into one class of ordinary shares. As a first step towards this, a sum of £20,000 will be capitalised out of the capital reserve and applied to 100 000 'A' shares of 4s. each, created by sub-dividing 20,000 unclassified shares of £1 each. These 100,000 'A' shares of 4s. each will be allotted to the holders of the existing 100,000 'A' shares of 16s. each and these will then be consolidated into 100,000 'A' shares of £1 each. The effect of this will be to restore the sum of 4s. per share written off in 1903. The next step will be to amalgamate two classes of shares, namely, 100,000 'A' ordinary shares of £1 each and 300,000 'B' ordinary shares of £1 each, into a single class of ordinary shares of £1 each. Thus, the two classes of shares will lose the special rights attached to them now and will rank *pari passu* for participation in profits and assets and in all other respects. The reorganisation will take effect from 31st March 1956. The combined class of ordinary dividend will rank for all dividends from the current financial year onwards.

The 'B' ordinary shares (£1 fully paid-up) are being currently quoted at Rs. 30 *cum-div.* (final dividend 15 per cent.). On an *ex-div.* basis, the shares offer a yield of 8 per cent. per annum, free of income-tax.

NASKARPARA JUTE

A small setback in earnings is disclosed by the audited accounts of the Naskarpara Jute Mills Co., Ltd. (Managing Agents: Howrah Trading Co., Ltd., Calcutta) for the six months ended 30th April 1955. The gross profit for the half-year has dropped to Rs. 4.39 lakhs from Rs. 5.80 lakhs, to which level it had jumped up in the previous year from Rs. 2.81 lakhs earned in the six months ended 30th April 1954. It will, however, be noted that the profit for the latest half-year under review compares very favourably with that for the corresponding period of 1954.

The net profit has shrunk from Rs. 1.87 lakhs to Rs. 1.32 lakhs, after having risen from Rs. 0.98 lakh for the half-year ended 30th April 1954. No addition to the reserves has been made, while a sum of Rs. 50,000 had been transferred from the profit of the previous half-year. The dividend has, however, been maintained at As. 10 per share of Rs. 10, or 12½ per cent. per annum, to which level it had been raised in the previous half-year from 10 per cent. per annum paid for the six months ended 30th April 1954 and 6¼ per cent. per annum for the half-year ended 31st October 1953.

The following table compares the salient features of the Company's working results for the past four half-years:

(In lakhs of rupees)

	For the half-year ended			
	30-4-55	31-10-54	30-4-54	31-10-53
Sale proceeds (net)	61.94	68.43	48.91	60.68
Other income	0.78	0.47	0.35	0.34
Stocks	5.00	3.08	4.70	4.43
Expenses	60.25	56.52	46.71	44.45
Gross profit	4.39	5.80	2.81	3.46
Managing Agents' commission..	1.52	1.65	1.33	1.30
Depreciation	0.51	0.78	0.50	..
Taxation	1.04	1.50	..	..
Net profit	1.32	1.37	0.98	2.16
To reserves	..	0.50	..	..
Dividend	1.25 (12½% p.a.)	1.25 (12½% p.a.)	1.00 (10% p.a.)	0.62 (6¼% p.a.)
Carry forward	0.18	0.10	0.04	0.06

It will be noted from the above table that the fortunes of the Company have been fluctuating, a feature which is not unusual with the jute industry in recent years. Throughout the half-year under review, the Company's mills worked, in accordance with the Supplemental Working Time Agreement of the Indian Jute Mills Association, 48 hours per week, with 12½ per cent. of the looms sealed. It was not till 9th January 1956 that this arrangement in respect of sealing of looms was changed, in terms of the resolution passed by the Indian Jute Mills Association which permitted the unsealing of 2½ per cent. of the looms.

The paid-up capital of the Company stands at Rs. 20 lakhs, the whole of which is made up of ordinary shares of Rs. 10 each. Of this capital, a sum of Rs. 8 lakhs represents the new shares issued in August 1952 in the ratio of two new shares for every three old ones, by capitalising a part of the reserves. The reserves and surplus now aggregate Rs. 18.02 lakhs. There is a debenture liability to the extent of Rs. 5.16 lakhs (including accrued interest) on account of 5½ per cent. mortgage bearer debentures issued in April 1947. These debentures, which originally carried interest at 3½ per cent., were due for redemption in March 1954. The date of redemption was, however, extended to 31st March 1959 and the rate of interest was also raised from 3½ per cent. to 5½ per cent. The provision for taxation stands at Rs. 4.41 lakhs and current liabilities at Rs. 34.16 lakhs. The gross block of the value of Rs. 29.01 lakhs stands written down to Rs. 10.80 lakhs. The current assets amount to Rs. 70.95 lakhs, thus providing ample cover to current liabilities and provision for taxation.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 20 cum-div. On an ex-div. basis, the latest dividend gives a yield on the shares of 6.4 per cent. per ann

JESSOP TO RAISE FRESH CAPITAL

EXPANSION PLAN TAKEN UP

THE year ended 31st October 1955 was a notable one in the history of Jessop & Co., Ltd. (Managing Directors: Mr. S. S. H. Sitwell and Mr. C. V Graham), for two reasons. First, it was during that year that the last remaining effective block of shares held in England passed to Indian interests. Secondly, it was a year of substantial progress in the working of the Company. The sales of the Company recorded an increase (*in terms of value*) of Rs. 170 lakhs to establish a fresh record of over Rs. 673 lakhs. The expansion in business brought a commensurate reward in the shape of an encouraging improvement in profit. The gross profit advanced from Rs. 33.06 lakhs to Rs. 53.73 lakhs, thus maintaining the upward trend in earnings for the eighth year in succession. This has enabled the Directors to plough back as much as Rs. 14 lakhs to the reserves, as compared with Rs. 8.75 lakhs made last year, and to recommend a handsome dividend of 30 per cent. on ordinary shares and that too after doubling the provision for taxation from Rs. 10.10 lakhs to Rs. 20.26 lakhs.

The aforesaid dividend for the year under review has been stepped up from 15 per cent. paid for the previous five years and is the highest to be paid by the Company since its inception.

The following comparative table shows the progress of the Company during the past three years:

(In lakhs of rupees)

	For the year ended 31st October			
	1955	1954	1953	1952
Sale proceeds	673.19	503.38	402.44	}

N.A.—Not available.

The Company has been making strident progress for some years past, the progress being quite marked during the last two years, when the sale proceeds had gone up by nearly 70 per cent. The gross profit has risen by over 80 per cent. during the past three years. As much as Rs. 36.75 lakhs has been added to the reserves during the last four years, in keeping with the policy of ploughing back substantial portions of the Company's profits. This policy, as the Chairman of the Company, Mr. H. D. Mundhra, points out in his statement accompanying the Directors' report, "has paid handsomely and has been mainly responsible for the progress so far achieved." Of the sum of Rs. 14 lakhs transferred from the profit for the year under review, Rs. 4.75 lakhs represent the allocation to the special reserve which had received a like amount in the previous year and Rs. 9.25 lakhs to the general reserve, an increase of Rs. 5 lakhs over the amount set aside last year.

The balance-sheet of the Company as on 31st October 1955 shows that the reserves and surplus aggregate Rs. 57.91 lakhs, as against a paid-up capital of Rs. 61 lakhs, of which Rs. 10 lakhs are in 5 per cent. cumulative preference shares of Rs. 100 each, the entire balance being in ordinary shares of Rs. 10 each. The provision for taxation stands at Rs. 21.02 lakhs and current liabilities amount to Rs. 151.64 lakhs. The gross block of the value of Rs. 98.22 lakhs, including an addition of Rs. 9.78 lakhs during the year, has been written down to Rs. 45.58 lakhs. The current assets amount to Rs. 245.99 lakhs, of which stock-in-trade, stores and work-in-progress account for Rs. 105.01 lakhs and book debts (unsecured) for Rs. 106.34 lakhs.

The Company proposes to issue shortly fresh capital to the extent of Rs. 51 lakhs, on the basis of one new share for each old share held. The sanction of the Controller of Capital Issues has been obtained for this issue. It is, however, not stated whether the new issue will be at par or at a premium. The increase in capital is for the purpose of financing the Company's expansion, particularly the proposed manufacture of electric suburban railway coaches, for which a substantial contract has been secured by the Company. The Company is now busy on the work preparatory to erecting a new factory for the manufacture of these coaches on a plot of land adjacent to the Company's works at Dum Dum. The Company has undertaken to manufacture in India road rollers under licence from Messrs. Aveling Barford, who are claimed to be the largest makers of diesel road rollers in the world and with whom Jessop and Company have been associated as agents for many years. This is not an entirely new line of production in which the Company has ventured. For, during 1950 and 1951, it had completed a sub-contract for the part manufacture of 475 ten-ton Aveling Barford diesel road rollers. There are also other schemes of development on hand, the details of which are not yet available. The Chairman assures the shareholders that the Company "will not be found wanting in its contribution to India's growing engineering industry."

The outlook for the Company is thus promising. Reiterating this, Mr. Mundhra says in his statement to the shareholders as follows:

"India's crying need now is industrialisation; in fact, that is the essence of the second Five-year Plan, and industrialisation depends largely on a sound and healthy engineering background. As your Company is one of those in the forefront of the Indian engineering industry, I feel confident that it has an excellent future. I have already indicated plans for increased production which are now in active course of implementation and have told you that there are others still in the more delicate stages of formulation where due discretion must be observed. Such progress can only be beneficial to the Company which includes all of us—shareholders and employees alike."

The Rs. 10 fully paid up shares of the Company are being currently quoted at Rs. 57-10 ex-div., at which rate and on the basis of the latest dividend, the yield works out to 5.2 per cent. per annum, free of income-tax.

A notable feature of the Company's latest report and accounts is the inclusion of the Chairman's explanatory statement on the working of the Company during the year under review, supplemented by additional information in the form of photographs, diagrams and summaries, so that the shareholders may get a full picture of their Company's affairs. These new features are in line with the modern practice of presenting the annual accounts to the shareholders, which the majority of joint-stock companies in India have yet to follow. The chart showing how the Company's income for 1954-55 has been spent reveals that, out of the total income of Rs. 685 lakhs, materials used account for Rs. 468 lakhs or 68.3 per cent., wages for Rs. 109 lakhs (16 per cent.), overheads for Rs. 58 lakhs (8.4 per cent.), taxes for Rs. 20 lakhs (2.9 per cent.) reserve for Rs. 14 lakhs (2.1 per cent.) and dividends for Rs. 16 lakhs (2.3 per cent.). It will be noted that the Government's share in the total income is greater than that of the shareholders and that, next to raw materials and others used, wages take up a sizable share of the income. An idea of the Company's contribution to employment and the benefits the employees derive from its increased activity is also given by the Chairman. The number of men directly employed by the Company is now almost 5,000, an increase of about 50 per cent. during the last five years. The employees have also shared the prosperity of the Company through the annual bonus scheme which is related to the profits. On the basis of the profits of 1953 and 1954, the employees got a bonus equivalent to 3-1/16 and 3½ months' basic pay in 1954 and 1955, respectively.

COMPANY MEETINGS AND DIVIDENDS

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD. Annual General Meeting, Madras, 21st February 1956. Final dividend of 5 per cent. on "A" shares and 15 per cent. on "B" shares. Transfer books will remain closed from 29th February to 13th March 1956, both days inclusive.

SOUTH KARANPURA COAL CO., LTD. Half-yearly General Meeting, Calcutta, 24th February 1956. Transfer books remain closed from 10th to 24th February 1956, both days inclusive.

OUCHTERLONY VALLEY ESTATES (1938) LTD. Annual General Meeting, Coimbatore, 25th February 1956. Dividend: As. 2 per share. Transfer books will remain closed from 15th to 25th February 1956, both days inclusive.

THIRUMBADI RUBBER CO., LTD. Annual General Meeting, Coimbatore, 25th February 1956. Dividend: As. 2 per share. Transfer books will remain closed from 16th to 25th February 1956, both days inclusive.

MALABAR INDUSTRIAL CO., LTD. Annual General Meeting, Skinnerpuram Estate, 25th February 1956. Transfer books remain closed from 10th to 25th February 1956, both days inclusive.

ALKALI AND CHEMICAL CORPORATION OF INDIA LTD. Annual General Meeting, Calcutta, 7th March 1956. Transfer books will remain closed from 23rd February to 7th March 1956, both days inclusive

MADURA MILLS CO., LTD. Annual General Meeting, Tuticorin, 26th March 1956. Dividend: Rs. 3 per share. Transfer books will remain closed from 6th to 26th March 1956, both days inclusive.

AUCKLAND JUTE CO., LTD. Dividend of Rs. 4 per ordinary share, for the half-year ended 30th September 1955.

DALHOUSIE JUTE CO., LTD. Dividend of Re. 1 per ordinary share, for the half-year ended 30th September 1955.

LANSDOWNE JUTE CO., LTD. Dividend of Rs. 2 per ordinary share, for the half-year ended 30th September 1955.

LAWRENCE JUTE CO., LTD. Dividend of Re. 1 per ordinary share, for the half-year ended 30th September 1955.

KINNISON JUTE MILLS CO., LTD. Dividend of Rs. 6 per ordinary share, for the half-year ended 30th September 1955.

NORTHBROOK JUTE CO., LTD. Dividend of As. 12 per ordinary share, for the half-year ended 30th September 1955.

UNION JUTE CO., LTD. Dividend of Rs. 5 per ordinary share, for the half-year ended 30th September 1955.

ROHTAS INDUSTRIES LTD. Dividend of Re. 1-8 per share (i.e., 15 per cent.), on old ordinary shares, free of income-tax, for the year ended 31st October 1955. Transfer books will remain closed from 21st February to 6th March 1956, both days inclusive.

VELLORE ELECTRIC CORPORATION LTD. Interim dividend of As. 8 per ordinary share, free of tax, for the year 1955-56. Transfer books remain closed from 11th to 18th February 1956, both days inclusive.

UNITED NILGIRI TEA ESTATES CO., LTD. Interim dividend of Rs. 10 per ordinary share, for the year ending 31st March 1956. Transfer books will remain closed from 20th to 28th February 1956, both days inclusive.

COMPANY REGISTRATIONS

SANGEET CHITRA LTD. (First Director: Mr. K. K. Kapur.) Business: Cinematograph trade and industry. Authorised capital: Rs. 5,00,000. Private company. Address: Nilam Mansions, Lamington Road, Bombay 4.

HARI RAJ LTD. (Managing Director: Mr. Shiv Raj Singh.) Business: Buyers, sellers, selling agents and distributors of vegetable products. Authorised capital: Rs. 5,00,000. Private company. Address: 166, Dadabhoy Naoroji Road, Fort, Bombay 1.

TEXTILE PAPER AND TIMBER INDUSTRIES LTD. (First Director: Mr. Navnitlal G. Dalal.) Business: Manufacturers, importers, exporters and dealers in textile stores, paper tubes, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Punja Wadi, Sion-Trombay Road, Devnar, Bombay S.D.

BOMIS SOAP FACTORY LTD. (First Director: Mr. Rustom Merwanji Master.) Business: Manufacture, produce, use, buy, sell and deal in all metallurgical and chemical products. Authorised capital: Rs. 5,00,000. Private company. Address: Colah House, 77, Tardeo Road, Bombay 7.

DALAL ENGINEERING CO., LTD. (Mr. Chimanlal Pranjivandas Dalal.) Business: Iron, stainless steel and other metal founders, mechanical, electrical and chemical engineers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Victoria Bunder Road, Colaba, Bombay 5.

HIGHER EXCISE DUTY AND FALL IN PRICE AFFECT CAWNPORE SUGAR

CLIVE MILL RESUMES DIVIDEND

Cawnpore Sugar Works, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Begg, Sutherland & Co., Ltd., Kanpur, U.P.) submit the audited accounts of the Company for the year ended 31st October 1955.

The results for the year, after providing for all charges including provisions for taxation and depreciation, and taking into account profit on realisation of an investment, and having written back earlier provisions no longer required, show a surplus of Rs. 8,07,327 (Rs. 11,36,060) from which has been deducted the amount transferred to contingencies reserve of Rs. 80,000 (*nil*) and to rehabilitation reserve Rs. 4,00,000 (Rs. 5,00,000), leaving a balance of Rs. 3,27,327 (Rs. 3,11,060). After adding the carry forward from the previous year of Rs. 59,696 (Rs. 53,636), there is an available balance of Rs. 3,87,023 (Rs. 3,64,696). This balance, the directors recommend, should be disposed of as follows:—

In payment of a dividend on the preference shares of 8 per cent. per annum, free of income-tax, for the year ended 31st October 1955 Rs. 80,000 (Rs. 80,000), in payment of a dividend on the ordinary shares of As. 12 (As. 12) per share, free of income-tax, for the year ended 31st October 1955 Rs. 2,25,000 (Rs. 2,25,000) and to carry forward Rs. 82,023 (Rs. 59,696).

The quantity of cane crushed by both factories during the season 1954-55 showed a considerable increase over that crushed during the previous season, and in the case of Gauri Factory the cane crushed was the highest ever recorded. Marhowrah Factory crushed 32,62,453 (19,20,390) maunds of cane with a recovery of 10.21 (10.39) per cent. while Gauri Factory crushed 24,14,693 (11,21,882) maunds with a recovery of 10.68 per cent. Marhowrah Factory commenced crushing on 6th December 1954 and finished on 13th May 1955. Gauri Factory commenced crushing on 6th December 1954 and finished on 14th April 1955.

Stocks of sugar remaining unsold on 31st October 1955, have been valued at market rate on that date, but a contingency reserve has been provided to cover the estimated fall in price of sugar remaining to be sold.

On 1st March 1955, the Government of India increased the excise duty by Re. 1-6 per maund. The sugar produced in India during the period was the highest on record at some 16 lakh tons which, together with 6 lakh tons of foreign sugar imported by the Government of India, resulted in a total of 22 lakh tons as against an estimated consumption of some 16 lakh tons. This state of affairs has resulted in a steady and continuous fall in prices which, together with the increase in excise duty, has had its effect on the trading results of the Company for the year under review. The cane price was Re. 1-7 per maund at the factory gate and Re. 1-5 at outstations.

The prospects for season 1955-56 indicate that a good cane crop will be available for the Marhowrah Factory but adverse weather conditions have reduced the quantity of cane available for the Gauri Factory. The directors have recently approved plans to expand the sugar interests of the Company. A separate communication will be sent to shareholders as and when those plans are implemented.

The Company's distilleries worked satisfactorily during the year, and while the Marhowrah Distillery continues to work at a modest profit, Cawnpore Distillery, on account of the higher cost of molasses incurred a further loss for the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	19,12,196

Clive Mills Co., Ltd.

The directors of the above Company (Managing Agents: Shree Krishna Investment Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st March 1955.

The result of the year's working was a profit of Rs 19,51,134 (Rs. 4,55,111). From this was deducted reserve for income-tax and super-tax Rs. 13,70,000 (Rs. 2,90,000) and depreciation Rs. 1,28,495 (Rs. 70,005), leaving a balance of Rs. 4,52,639 (Rs. 95,106). With the credit balance brought forward from last year of Rs. 9,753 (Rs. 18,647), there was a total amount of Rs. 4,62,392 (Rs. 1,13,753). Out of this the directors have paid preference dividend at 7 per cent. Rs. 56,000 (Rs. 56,000), preference dividend at 6 per cent. Rs. 48,000 (Rs. 48,000), paid dividend on ordinary shares at Re. 1-4 (*nil*) per share Rs. 2,00,000 (*nil*) dividend on 80,000 bonus shares at As. 10-3 (*nil*) per share Rs. 51,250 (*nil*) and carried forward to next year Rs. 1,07,142 (Rs. 9,753).

In accordance with the Indian Jute Mills Association's main and supplementary working time agreements the mills worked 42½ hours per week with 12½ per cent. of the looms sealed throughout the year under review.

80,000 bonus shares have been issued as mentioned in the last report.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	11,99,754

Rs.	1,14,84,038	Rs.	1,14,84,038

South Behar Sugar Mills Ltd.

The directors of the above Company (Chairman: Mr. Chandradeva Prakash Sinha) submitted the audited accounts of the Company for the year ended 31st October 1954.

The year's working has resulted in a loss of Rs. 24,454. The cane crushed in the factory during the year under report, was the lowest crushing in the history of the Company. The quantity crushed was 7.28 lakh maunds, which represents a crushing of only about 25 days working at full capacity. As a measure of economy, staff were retrenched and/or laid off and compassionate relief amounting to Rs. 19,899-14-3 had to be paid to retrenched workmen. By this means and because of favourable sugar prices, the loss was not large.

In view of recurrent losses consequent to inadequate supplies of sugarcane, the directors were trying to shift the plant to a new site in Hubli Dist., Bombay State. In this connection, advances for travelling and other accounts had been made and commitments entered into.

The Company was successful in obtaining permission of the Government of India to shift the plant to the Bombay State site, but the State Government of Bihar were anxious to retain the factory at Bihta, and to this end, they have agreed to assist the Company to rehabilitate itself at Bihta. Pursuant to this policy, the Government of Bihar have taken very keen interest in propagating cane growth and have agreed to lend Rs. 19 lakhs to the Company for cane development, mechanised transport and improvements to plant. The Government of Bihar have also agreed to provide 40 tubewells in the vicinity of the factory on a subsidised basis so that half the cost is subsidised by the State and the other half met by the Company. As an outcome of these measures, it is expected that the area under sugarcane will go up and the Company will be assured of adequate supplies in the future. The area under cane has already registered an increase and the quantity of sugarcane offered to the Company during the current season 1955-56 is about twice the average crushing achieved by the factory in the past ten years.

In order to rehabilitate the factory at Bihta, the Government of Bihar have further agreed to refund to the Company cane cess (which amounts at present to three annas per maund of sugarcane) in the years when supply of sugarcane to the factory is below 15 lakhs maunds. This concession is, for the present, granted for a period of three years.

With a view to make the working of the factory profitable, the directors have made improvements to the plant and have changed the process of manufacture of sugar from sulphitation process to the carbonatation process for production of superior quality of sugar. This process is now being worked in the season 1955-56 and the plant is running satisfactorily as and from December 1955 and good prices are being offered for the new production sugar.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

Upper Ganges Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Ltd., Bombay) submitted the audited accounts of the Company for the year ended 30th June 1955.

The profit and loss account, after payment of interest and managing agents' remuneration, providing for depreciation and taxation, transferring Rs. 1,00,000 (Rs. 2,50,000) to general reserve and taking into account the credit balance of the previous year, showed a surplus of Rs. 3,98,244 (Rs. 3,64,031). The directors disposed of the amount as under:—

Paid dividend on 12,000 cumulative preference shares of Rs. 100 each at 5 per cent. free of tax Rs. 60,000 (Rs. 60,000), paid dividend on 15,000 cumulative preference shares of Rs. 100 each at 5 per cent, subject to tax Rs. 55,313 (Rs. 55,313), paid dividend on 80,000 ordinary shares of Rs. 10 each at Rs. 2-8 (Rs. 2-8) per share (free of tax) Rs. 2,00,000 (Rs. 2,00,000) and carried forward Rs. 82,931 (Rs. 48,719).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	38,92,308
Reserves ...	21,91,685	Stock of sugar and molasses	1,12,23,610

		Cash ...	8,07,205
Rs.	1,97,50,875	Rs.	1,97,50,875

Kesar Sugar Works Ltd.

The directors of the above Company (Managing Agents: Messrs. Kilachand Devchand & Co., Bombay) submitted the audited accounts of the Company for the year ended 31st July 1955.

The working of the year showed a profit of Rs. 2,96,363 (Rs. 74,752) after charging the amount of Rs. 23,72,789 (Rs. 12,97,967) for excise duty, Rs. 9,28,925 (Rs. 4,79,792) for cane cess and providing Rs. 3,00,134 (Rs. 3,30,296) for depreciation for the year 1953-54. After adding the balance of Rs. 43,657 (Rs. 29,748) carried forward from last year, the amount available for disposal was Rs. 3,40,020 (Rs. 1,04,500) which the directors disposed of as under:—

Paid dividend at 5½ per cent. on preference shares Rs. 82,500 (Rs. 82,500), less income-tax Rs. 21,656 (Rs. 21,656), Rs. 60,844 (Rs. 60,844), dividend at Rs. 4-8 (*nil*) per share free of income-tax on ordinary shares of Rs. 100 each Rs. 67,500 (*nil*), dividend at Rs. 2-4 (*nil*) per share free of income-tax on ordinary shares of Rs. 50 each Rs. 33,750 (*nil*), provision for taxes Rs. 1,50,000 (*nil*), and carried forward to next year's account Rs. 27,926 (Rs. 43,657).

The factory started operations from 22nd day of November 1954. The quantity of cane crushed was 49,54,265 maunds during 177 days of crushing as compared with 25,58,828 maunds crushed during the previous season. The sugar produced during the year under report was 4,45,372 maunds as against 2,42,381 maunds during the previous season. The recovery was 8.99 per cent. against 9.47 per cent. during the previous year. The reduced recovery was due to inferior quality of cane and also due to allotment of areas having cane of very low recovery. In this connection the factory has made representations to the U.P. and Central Government. But for this the results would have been much better. During the year the excise duty on sugar was increased by 50 per cent. and the burden of increased excise duty has fallen on the industry as the prices of sugar have since actually gone down. Owing to the increased production and the inadequate supply of wagons during the year, the carry-over was very large at the close of the year. The acreage under cane for the current year is reported to be about the same as last year and, on the whole, the condition of the crop looks satisfactory. The production of power alcohol was satisfactory during the year and the manufacturing efficiency has also improved.

The Company's chemical factory has been able to maintain its production and also sales. The Government of India have now withdrawn protection to the sodium thiosulphate, sodium sulphite and sodium bisulphite industry on the recommendation of the Tariff Commission but it seems from the assurances received from the Government that the imports of these chemicals from foreign countries will continue to be restricted. The production of hydroquinone has been resumed while the production of X-ray chemicals has been maintained.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.

GILT-EDGED FIRM

(From Our Own Correspondent)

BOMBAY, 8th *February*

The short-term money market continued to display stringent conditions during the week under review also. There was no sign of even a slight abatement of the demand for funds. The volume of inter-bank business was, however, extremely small, due to paucity of funds. The Reserve Bank of India's decision to put up the discount rate for usance bills of Scheduled banks from 3 per cent. to 3½ per cent. with effect from 1st March 1956 did not have any marked effect on interest rates, except that a few banks offered a fractionally higher rate for short-term deposits. Interest rates on inter-bank dealings were unchanged.

Thus, inter-bank call money was bid at the self-same rate of 3 per cent., as also house money at call. Short-term deposits were in demand at 3 per cent., while a few banks offered 3¼ per cent. per annum for periods from one to six months.

The tenders for 91 days' Government of India Treasury Bills brought an offer of Rs. 168.25 lakhs, as against an invitation for Rs. 100 lakhs, while the sum offered in the previous week was Rs. 172 lakhs. The average rate of accepted tenders, which had declined in the previous week from Rs. 2-8-5 to Rs. 2-8-3 per cent., stood unchanged at Rs. 2-8-3 per cent. per annum.

After two weeks of successive small decline, the notes in circulation have expanded by Rs. 13.29 crores during the week ended 3rd February 1956, according to the Reserve Bank of India statement for that week. The total notes issued, however, is down by Rs. 1.22 crores, as notes held in the Banking Department have gone down by Rs. 14.51 crores. On the assets side, the variation in total notes issued has been offset by a corresponding fall in rupee coin. There has been a fall of Rs. 14.91 crores in foreign securities and a corresponding increase in rupee securities. A decrease of Rs. 1.14 crores is noted in deposits of Central Government and of Rs. 4.07 crores in those of other Governments. Reflecting the keen demand for money, deposits of banks have further fallen by Rs. 2.01 crores. Balances held abroad are up by Rs. 14.36 crores. Loans and advances other than to Governments show an increase of Rs. 5.29 crores, of which outstanding loans to Scheduled banks against usance bills account for Rs. 1.18 crores. The total amount of advances availed of by Scheduled banks against usance bills since 1st January 1956 up to the end of the week under review was Rs. 11.49 crores, as against Rs. 4.39 crores in the corresponding period of 1955. Government Treasury Bills purchased and discounted are lower by Rs. 2.35 crores.

In contrast to the successive rise noted in the previous four weeks, the demand deposits of Scheduled banks have dropped during the week ended 27th January 1956 by Rs. 5.68 crores. Time deposits also have declined by Rs. 1.63 crores. Inter-bank borrowings are lower by Rs. 47 lakhs. Borrowings from the Reserve Bank have gone up by Rs. 1.83 crores and those from the State Bank by Rs. 35 lakhs. Advances disclose a rise of Rs. 11.45 crores and inland bills purchased and discounted Rs. 1.04 crores. Foreign bills purchased and discounted show a decline of Rs. 70 lakhs. Very minor variations are noted in cash balances, balances with other banks in current account and money at call and short notice.

The Gilt-edged market continued to display cheerful conditions for the second week in succession. There was a further rise in prices in most of the counters, particularly medium and long-dated securities. It is reported that a substantial volume of business was put through in these loans on account of life insurance funds. Sustained demand and shrinkage in floating stocks were mainly responsible for the strength of the market. The 4 per cent. 1967 State loans were in favour, but turnover in them was limited, due to absence of sellers.

2½ per cent. 1961 attracted good enquiries and rose, in consequence, by As. 4 to Rs. 93-5. 2½ per cent. 1960 gained As. 2 to Rs. 96-3. 2½ per cent. 1976 was quoted As. 4 higher at Rs. 82-6, following the Reserve Bank's action in putting up its selling rate for this security from Rs. 82-2 to to Rs. 82-6. 3 per cent. 1957 and 3 per cent. 1958 were unchanged at Rs. 99-10 and Rs. 99-8, respectively. 3 per cent. 1959-61 gathered an anna to Rs. 98-4, as also 3 per cent. 1963-65 to Rs. 94-12. 3 per cent. 1964 held its own at Rs. 94-11. 3 per cent. 1966-68, which was in short supply, advanced by an anna to Rs. 92-5 and 3 per cent. 1970-75 by As. 2 to Rs. 88-6. 3 per cent. 1986 Conversion Loan was marked up by As. 3 to Rs. 80-9. 3½ per cent. 1961, 1964 and 1965 were maintained at Rs. 99-8, Rs. 98-12 and Rs. 98-9, respectively. Among State loans, 4 per cent. 1967 loans were in good demand. Bombay 1967 put on As. 2 to Rs. 100-13, West Bengal 1967 an anna to Rs. 100-1 and Madras 1967 appreciated by As. 2 to Rs. 99-12. U.P. loan was up by an anna at Rs. 99-10, as also Madhya Pradesh loan at Rs. 99-9. Mysore 1967 shot up by As. 3 to Rs. 99-9, Saurashtra and Hyderabad by an anna each to Rs. 99-13 and Rs. 99-5, respectively.

In the foreign exchange section, rupee was unchanged in terms of the U.S. dollar at Rs. 477½ per $100 (banks' selling) and Rs. 473 (banks' buying). Sterling moved within narrow range, but the undertone was steady. In New York, spot sterling gained a fraction from $2.80-9/16—2.80-11/16 to $2.80⅜—2.80⅜, while three months' forward sterling moved down from $2.79 7/16—2.79-5/16 to $2.79-5/16—2.79-7/16. Transferable sterling was unchanged on balance at $2.77⅞—2.77⅞.

HIDES LACK SUPPORT

(From Our Own Correspondent)

KANPUR, 5th *February*

The hides and skins market lacked support during the week under review. The new arrivals were considerable. This being the coldest season of the year, the local butcheries supplied a big proportion of the new arrivals. The enquiries from the Madras dealers were few. The main purchasers were the local tanners headed by Cooper Allens.

The latest available quotations are: Wet salted cow, 1st grade Rs. 290 to Rs. 300, 2nd grade Rs. 240 to Rs. 280 and 3rd grade Rs. 160 per score; wet salted buff, 1st grade 2 lbs. and 2nd grade 2 lbs. 20 ozs. per rupee; goat, 1st grade Rs. 300 and 2nd grade Rs. 200 per 100 pieces; and sheep, 1st grade Rs. 225 and 2nd grade Rs. 180 to Rs. 190 per 100 pieces.

BULLION ERRATIC

(From Our Own Correspondent)

BOMBAY, 8th *February*

The bullion market was somewhat indecisive during the week under review. Early in the week, it was depressed on heavy selling by bull operators and bear pressure, due to renewed fears that the Government might exercise control over forward dealings in bullion. There were also apprehensions of heavy taxes on sale of bullion. At the lower levels, however, replacement buying and bear-covering emerged. These were induced by reports of good offtake of gold in the ready section. Accordingly, prices staged a smart recovery. Later, the higher levels themselves attracted profit-taking. A drop in offtake in gold during the last two days was an additional bearish factor. On balance, forward silver disclosed a loss of a few annas, while gold emerged a shade better.

Forward silver (28th February settlement) opened better, moving up from Rs. 175-3 to Rs. 175-11, but made a hasty retreat to a low of Rs. 173-5 on Saturday last. Good offtake in ready silver and the buoyancy of gold lifted the price to Rs. 175-8. The closing was, however, lower at Rs. 174-14.

Ready silver (.996 Mint) slumped from Rs. 174-3 to Rs. 172-9. The loss was more than made good yesterday when the price touched Rs. 174-14. A part of the gain was, however, erased today when the ready metal closed at Rs. 174-2. The floating stocks of silver are reported to be 1,200 oars. The daily average offtake was 35 bars. Consequent on this encouraging offtake, the discount of ready under forward narrowed down from Re. 1 last week to As. 12.

Gold forward (27th February settlement), after an early advance from Rs. 95-5 to Rs. 95-12, reacted to Rs. 94-7 on Saturday. It, however, came up to Rs. 96-3, before finishing at Rs. 95-13.

Ready gold gave way from Rs. 95-3 to Rs. 94-7, but recovered to Rs. 96-6 before retreating to Rs. 95-14 at the close today. It may be noted that, early in the week, ready had been quoting at a discount of As. 2 as compared with the forward price. Today, however, it commanded a premium of one anna over the forward, although two days back the premium stood at As. 3. The floating stocks of gold are placed at 35,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 5,000 to 6,000 tolas, on an average.

In London, silver ruled better, after an early recession, and recovered the loss suffered in the previous week. Spot silver reacted from 77¾d. Forward silver closed at 77¾d., after moving down from 77d. to 76½d. Gold gained from 249s. 3d. to 249s. 4d. The price of silver in New York was stepped up twice during the week from 90c. to 90¼c. and again to 90¼c.

The following comparative table shows the trend of the market during the week under review:

	3-2-56	Highest	Lowest	1-2-56

TEA PRICES ADVANCE

(From Our Own Correspondent)

CALCUTTA, 7th *February*

Offerings during yesterday's export sale aggregated 67,250 chests. Although at the opening there was less demand, steady conditions developed as the auction progressed and more demand was in evidence. Keen attention was paid to bright liquoring teas, prices of which advanced by As. 2 to As. 3. C.T.Cs. were better by an anna to As. 2. Fanning grades also shared in the advance and improved by As. 2 to As. 3. At the opening of the sale commonest and common broken teas were quoting lower by an anna to As. 2, but the loss was soon made good. On the other hand, whole leaf grades received less support and declined by As. 2 to As. 3. The quotations were: best C.T.C. Assam B.P. Rs. 2-5 to Rs. 2-6, clean black pekoe Re. 1-13, medium Assam B.P. Re. 1-9-6 to Re. 1-10, and plain B.P. Re. 1-7.

Export quota right was done lower at 10 to 11 pies.

Steady conditions prevailed during last week's sale for internal consumption. Dusts offered amounted to 20,600 chests. C.T.C. Assams with good liquors rose by an anna to As. 2, but the poorer lots lost by an anna to As. 2. Black leaf teas received strong support as did bright liquoring teas. The rates were: best Assam C.T.C. Rs. 2-4 to Rs. 2-6, medium Assam grainy dust Re. 1-8-6 to Re. 1-9, and medium Dooars Re. 1-7-6.

Leaf grades on offer amounted to 2,200 chests, of which fannings were very strong. For a time green teas also received good support.

FORWARD COTTON AT A STANDSTILL

(From Our Own Correspondent)

BOMBAY, 8th *February*

It looks as though the deadlock in the cotton futures market will soon be ended. As requested by the Board of the East India Cotton Association (E.I.C.A.), the hearing of the suit filed in the High Court by some cotton traders challenging the validity of the Forward Markets Commission's directive to the E.I.C.A. to close out hedge contracts and to amend by-laws has been advanced from 14th March to the 15th of this month. Meanwhile, the E.I.C.A. has decided not to effect interim clearing settlements of February and May contracts until the High Court gives its verdict on the cotton dispute.

The Forward Markets Commission has asked the E.I.C.A. to obtain from members entitled to the use of the Clearing House statements of position in respect of sales and purchases in February and May contracts, including those of their clients, for the period 7th to 24th January. In accordance with this directive, the E.I.C.A. has requested the members to submit to the Clearing House, on or before the 9th inst., statements of the business done by them during the aforesaid period, together with their previous carried forward positions as at the close of business on 23rd December 1955.

While the futures market is at a standstill pending the High Court's verdict, the terms and conditions for the commencement of business in I.C.C. August are understood to have almost been finalised by the E.I.C.A. Sub-committee. The exact decisions of the Sub-committee are not available. From enquiries made in certain circles, it is, however, gathered that no change has been made in the basis and the staple length of the contract. The only change made, it is said, relates to the fixation of clearing rates on the basis of forward market rates. The E.I.C.A. has addressed a communication to the Forward Markets Commission, urging the latter to permit commencement of trading in August contract as early as possible.

Last week's active trading in the spot cotton market abated during the week under review. Operators did not evince much interest in fresh buying, while stockists were inclined to sell. Besides the deadlock in the cotton futures market, there were deterrents like large new crop arrivals from upcountry centres, absence of hedge facilities and the consequent disinclination on the part of banks to finance operations on a large scale. Vijay, Punjab, Bengals, and Jarillas, however, evoked mill interest, but the business actually put through was only moderate. Among exportable styles, Kalyan, Kala, C.P. I and II and 197/3 met with enquiries from overseas purchasers. Old Jarillas, Berar *Deshi*, Bengals and Zodas also elicited support from a few shippers. In the foreign section, activity was subdued, owing to budget uncertainty. African B.P. 52 and Bukhedi came in for only stray business, with their prices ruling easy. Sudans and Egyptians were neglected.

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 680; Berar Jarillas Rs. 780; Khandesh Rs. 760; Vijay Rs. 880; Oomra *Deshi* Rs. 740; Moglai Rs. 635.

For the fourth week in succession, the Karachi cotton market exhibited a firm trend. In fact, conditions akin to a boom prevailed in the market. There was persistent trade demand, inspired by renewed overseas purchases and active mill enquiries. Consequently, cotton prices continued to forge ahead. The improvement would have been more marked but for profit-taking at higher levels, large arrivals from interior and encouraging advices from Liverpool. N.T. March delivery rallied Rs. 6-7 to Rs. 84-10 on Monday, but finished lower at Rs. 82-3 per 82 lbs. yesterday. May contract advanced from Rs. 78-3 to Rs. 82-12 before closing at Rs. 80-5. The upward trend in the prices of ready cotton gathered further momentum. The extent of the improvement in prices in the past week is indicated in the following table which compares yesterday's closing rates (in rupees per 82 lbs.) for a few popular varieties of Pakistan cotton with those a week before:

	7th Feb.	31st Jan.
	Rs. a.	Rs. a.
Sind *Deshi*	71 8	70 0
Punjab *Deshi*	67 0	65 0
4F Punjab R.G.	77 8	74 4
S.G.	84 8	81 4
L.S.S. Punjab R.G.	84 0	81 4
S.G.	91 0	87 4
N.T.R.G.	87 8	84 4
S.G.	94 4	90 0
289F Punjab R.G.	90 8	87 4
S.G.	98 8	95 4

The bullish fervour noted in the Alexandria cotton futures market last week persisted this week too, reflecting the tight supply position. The operators continued to be busy extending their commitments, on fears that the 1955-56 Karnak and Ashmouni crop will be 400,000 cantars lower than the official estimate. They were also induced by continued foreign demand for all qualities of Egyptian cotton, especially Ashmouni and Giza 30. The prices of cotton, as a result, recorded a further handsome rise.

The latest available quotations in tallaries per lb. (figures in brackets relate to last week's closing rates) from the Alexandria cotton futures market are: Karnak: March 82.85 (80.85) and May 81.80 (79.85); Ashmouni: February 63.74 (61.70) and April 63.12 (61.68).

The yield of Uganda cotton crop in the current season is expected to aggregate 372,000 bales, according to private circles. Of this quantity, about

72,000 bales are reported to have already been sold at the auctions up to 20th January. The prices received by the Lint Marketing Board at the later auctions were good. Demand from shorts, particularly for early deliveries, is expected to continue. Notwithstanding a bearish outlook for world cotton prices, Uganda shippers are generally inclined to believe that there will not be an early appreciable fall in the prices of A.R. Uganda styles.

The Liverpool cotton futures market depicted a fully steady trend during the week under review also, thanks to American buying, mill fixing and commission house buying with offerings restricted to hedging at limits. The values, therefore, registered a rise which, however, attracted profit-taking later in the new contract, so that the best levels were not maintained. The Egyptian contracts were firm. The following are the latest available quotations (in pence per lb.) from the Liverpool cotton futures market:

Old contract: March-April 25.30; May-June 24.65; July-August 23.75. *New contract*: May-June 29.80; July-August 28.35; October-November 26.50; December-January 26.20. *Egyptian Karnak contract*: March-April 46.50; May-June 45.95; July-August 45.95.

Cotton futures in New York continued to advance under the impetus of buying support. Contrary to general expectations, the official mid-January parity was fixed lower at 34.84 cents per lb. This no doubt induced some selling which brought about a decline in the prices of May and distant deliveries. The market, however, picked up strength soon, following the Agriculture Department's decision not to permit substitution of free stocks against the present C.C.C. export sales programme. The Department made it clear that the cheap C.C.C. cotton would not enter domestic channels and thereby exert a depressing influence on prices.

The mid-January parity for cotton has been fixed, as already stated, at 34.84 cents per lb. This figure has been worked out by the Bureau of Agricultural Economics on the modernised formula based on price relationships during the last ten years, instead of during the old 1910-14 base. The price support for the new crop will be based on this parity figure.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	7-2-56	31-1-56	24-1-56
Spot	35.80	35.45	35.25
March	35.07	34.74	34.48
May	34.60	34.15	33.83
July	33.65	33.05	32.63
October	31.81	31.55	30.98

YARNS ADVANCE

(From Our Own Correspondent)

BOMBAY, *8th February*

Cheerful conditions prevailed in the yarn market during the week under review. There was much enthusiasm on the part of operators to extend their commitments. This was in evidence in all the three sections of the market—cotton yarn, rayon yarn and staple fibre yarn. Cotton yarns ruled firm, thanks to the Central Government's decision to allot export quota for cotton yarn for the current half-year on the basis of mill packings during 1955, besides allocating a new export quota (amounting to 38,000 bales) to the mills for the last quarter of 1955. In addition, there was the revival of demand from consuming centres within the country. These factors induced excellent buying support for cotton yarns, the prices of which registered an improvement. Rayon yarns also elicited good attention, following enlarged buying orders from the handloom sector which was reported to be busy purchasing yarns on fears of a levy of excise duty on yarns in the next budget. Staple fibre yarns, too, evoked encouraging enquiries, on fears of lower production. This fear was based on the Centre's move to grant import licences for staple fibre only to actual users and not to established importers for importing on their account. There was, therefore, good demand for staple fibre yarns, while stocks were not readily available and mill deliveries were irregular, so that prices showed a hardening tendency.

In the cotton yarn section, 60 counts were in special request. Finlays jumped up by Re. 1-12 to Rs. 60-12. Moderns rallied As. 12 to Rs. 60-12 and Maduras As. 8 to Rs. 45. Forty counts were also well supported. Maduras spurted by Re. 1-10 to Rs. 27-12. Minaxis advanced by Re. 1-9 to Rs. 27-12. Hinds strengthened by Re. 1-4 to Rs. 27. Moderns gathered As. 9 to Rs. 26-12. Deals in 30s were put through at higher levels, Hinds rising by Re. 1-2 to Rs. 22 and Maduras by As. 2 to Rs. 22-10. Among 20s, Hinds increased by As. 9 to Rs. 16-10, Podars by As. 6 to Rs 17, Sassoons by As. 4 to Rs. 16-8 and Edwards by As. 2 to Rs. 16. Among 10s, Gokaks gained an anna to Rs. 13-6. Moderns were firm at Rs. 13-4. The prices of 80 count yarns were throughout maintained at last week-end's levels, Finlays being quoted at Rs. 70 and Elphinstones at Rs. 62.

The Government of India has, as already stated, decided to continue to allow for export limited quantities of cotton yarn during the first half of the current year, with a view to providing an incentive to mills to pack increased quantities of "free yarn." During 1955, the packings of free yarn by both composite and spinning mills, it is said, were higher than at any time before. Allotments for export will accordingly be made to mills on a revised procedure based on the mills' packings during 1955. The procedure for applying for allotments and the licensing procedure have been notified by the Export Trade Control authority at ports.

The spot prices of rayon yarns recorded a handsome improvement, reflecting good demand. 150 Japan firmed up by As. 2-9 to Rs. 4-1-9. 120 Japan put on 18 pies to Rs. 4-6-6. 150 Italy was fully steady at Rs. 40-6. 120 Italy, however, was somewhat quiet at Rs. 47, as against Rs. 4-0-6 a week before. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade hardened by an anna and a half to Rs. 3-9-6. 120 Bt. cones 1st grade was fully steady at Rs. 3-14-6. Snia rayon yarn (120 dull cones) for February delivery was transacted at Rs. 868, as against Rs. 810, and April delivery at Rs. 819, as against Rs. 820.

Among staple fibre yarns (40×2) Centurys evoked enlarged demand and rose by 18 pies to Rs. 4-3. Sitarams and Seksarias gained a like amount to Rs. 4-2-6 and Rs. 4-1-6, respectively. Srirams improved by 15 pies to Rs. 4-2-3. Hinds gathered an anna to Rs. 4-2-3. Sassoons recorded a rise of nine pies to Rs. 4-1-9. Citys were better by three pies at Rs. 4-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	8-2-1956	1-2-1956	25-1-1956
	Rs. a.	Rs. a.	Rs. a.
Art silk yarn (per case of 200 lbs.)—

OILSEEDS DECLINE FURTHER

(From Our Own Correspondent)

BOMBAY, 8th *February*

The easier trend witnessed towards the end of last week in the oilseeds and oils market gathered further momentum during the week under review. Lack of overseas demand for edible oils from overseas countries, reported movement of new castor crop from Hyderabad and considerable arrivals of groundnut contributed to the weakness of the market. In fact, there was a general wave of selling pressure in almost all the sections. Although there was some improvement in the prices of linseed today, on reports of renewed enquiry for the oil from the U.K. and the Continent, it was not such as to cover up the earlier losses. On balance, the values of all sections declined and recorded sizable losses over the week.

The Bombay Oilseeds Exchange has, through a telegram, requested the Government of India to permit free export of linseed oil, at least upto the end of June 1955. According to the present policy, free exports are permitted until further notice. The Exchange has stated that such permission as is given for the export of *kardi* and *niger* seed oils is necessary for negotiating business with foreign buyers. It has also stated that the linseed crop season would be at its height during the months of March, April and May.

Bold F.A.Q. ready in the groundnut section declined from Rs. 30-12 to Rs. 29-8. February-March delivery receded from Rs. 31 to Rs. 29-9 and April-May from Rs. 31-12 to Rs. 30-2. Coromandals were down by Re. 1-14 to Rs. 29-4 and Khandesh quality by Re. 1-4 to Rs. 29-14. Groundnut oil *ex-mill* ready eased from Rs. 15-14 to Rs. 15-4. April and May deliveries were enquired lower at Rs. 15-9 and Rs. 15, as against Rs. 16-3 and Rs. 16-5, respectively.

In the castorseed section, May delivery opened the week at Rs. 121-14, as compared with Rs. 120-12. It fluctuated between 124-2 and Rs. 116-2 before closing at Rs. 117-12. Madras quality suffered Re. 1-6 to Rs. 23 and Kanpur Re. 1-8 to Rs. 21. Castoroil B.S.S. eased from Rs. 14-2 to Rs. 13-12 and commercial quality from Rs. 13-2 to Rs. 12-10.

Bold ready, in the linseed section, declined from Rs. 31-4 at the end of the last week to Rs. 28-6 on the 6th inst. But, today, it advanced by As. 10 to Rs. 29. But, on balance, it lost as much as Rs. 2-4. February-March delivery declined from Rs. 30-14 to Rs. 28 on the 6th inst., though it recovered by As. 4 to close at Rs. 28-4. It lost Rs. 2-10 over the week. April-May delivery declined by Rs. 2-10 to Rs. 27-12. Small Sutnas eased from Rs. 29-4 to Rs. 27-8. Linseed oil disclosed a loss of Re. 1 at Rs. 17-12.

Among others, *kardi* Bold was lower by Re. 1-4 at Rs. 16-8 and Madras quality by As. 4 at Rs. 27.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	8-2-1956	1-2-1956	24-1-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, *8th February*

The sugar market ruled firm during the week under review, thanks to renewed rumours of an increase in excise duty on sugar in the ensuing budget. The comparatively small release of sugar—aggregating about 85,000 bags—issued to all the Bombay-Deccan mills by the Union Food Ministry also imparted strength to the market. The sugar mills were reported to have urged the authorities to issue a further *ad-hoc* release of sugar in order to meet the pressing spot demand. But no reply had been received up to the time of writing. The rise in prices would have been more marked but for larger arrivals of indigenous sugar into the market, being 13,100 bags, as against 12,400 bags in the previous week.

The forward section was in the hands of bulls. Under the impetus of sustained purchases by them, *fagan* delivery contract for C grade sugar swiftly advanced from Rs. 91-12 to Rs. 93-4 per bag.

In the spot section, D grade indigenous sugar spurted by a rupee to Rs. 90-93. B grade was quoted at Rs. 95-98, as against Rs. 96-97, and A grade at Rs. 98 to Rs. 102, as against Rs. 99-100. C grade was fully maintained at Rs. 90-95. British refined sugar was quoted at Rs. 84.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER MOVES UP

(Messrs. Parekh & Co.)

BOMBAY, *8th February*

After the distressed selling by stale bulls of about 50 tons for February shipment at $0.29½ having been absorbed, Malabar black pepper showed some signs of improvement, in sympathy with New York, and owing to sizable buying by exporters who had booked freight in one more Non-conference steamer loading on the 9th inst. Non-conference is reported to be booking freight with further reduction in competition with Conference. If the freight war between Conference and Non-conference is continued, it is possible that Conference lines will also be forced to give larger rebate. After haggling to buy February shipment at $0.29, New York is reported to have bought some quantity at $0.30, with further buyers at a fractionally higher rate.

Alleppey improved from Rs. 750 to Rs. 800 and Cochin from Rs. 762½ to Rs. 812½. Garbled at Cochin were done at Rs. 137½, the lowest being Rs. 130.

Pepper at terminal markets in southern Malabar being cheaper, most of the exporters are covering their requirements from there. Activities in the primary centres of north Malabar are, consequently, smaller. As a result, growers there are unwilling to bring down pepper in large quantity until the demand from overseas broadens.

Inland demand at round about the present rate is reported to be good. Looking to the export during November to January, which is estimated at 4,250 tons, analysts in the market are of the opinion that about 11,250 tons out of the total production of 23,000 tons will be absorbed by export and inland consumption during November to March 1956, leaving 11,750 tons as stock on 1st April 1956. This quantity is considered to be not so heavy for the requirements from April to October 1956. Traders, therefore, expect an improvement in prices after March. However, the future of pepper will depend upon the prospects of the new crop in Sarawak, Lampong and Muntok and on the attitude of New York buyers.

February shipment improved from $0.29 to $0.30¼. March rose from $0.30 to $0.31½ and April-May-June from $0.30½ to $0.32½. Monthly delivery also showed improvement, the highest and the lowest for February delivery being Rs. 750 and Rs. 705, respectively.

Today's nominal quotations are: Ready delivery Rs. 107 per Bengal maund; February Rs. 740-Rs. 750 and March Rs. 745-Rs. 755 per candy of 5½ cwts.

GENERAL DEMAND FOR TEA STRONG

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 3rd *February*

The offerings in Sale No. 3 which was held on Tuesday 31st January, amounted to almost 1,000,000 lbs. Quality continued to show improvement, particularly amongst the high-grown teas, and there were some attractive flavoury teas on offer. The sale opened to a strong general demand. Low-grown brokens remained steady, but similar fannings were As. 2 to As. 3 dearer. Bright liquor-both brokens and fannings grades advanced As. 3 to As. 4. Best liquoring high-grown teas were rather irregular and, although there was an improvement in quality, these types were occasionally easier. There was a keen enquiry for black leaf Middle East type fannings and these descriptions were dearer in price. Buyers showed much more interest in whole leaf grades and these types must be quoted As. 2 dearer. High-grown leaf teas were often up to As. 4 dearer. The following are the quotations:—

	1956	1955
	Rs a. p.	Rs. a. p.
Low-grown Travancore B.O.P.	1 12 0	3 10 0
Medium Travancore B.O.P. ...	2 2 0	3 10 6
Anamallais B.O.P.	2 8 0	3 13 0
The best liquoring Nilgiri B.O.P.	4 3 0	4 8 0
Well made black leaf O.P. ...	2 7 0	3 9 0

London Market—Sale of 30th January 1956.—Market irregular, but unchanged on balance.

Sale of 31st January 1956.—Easier except for very best.

Colombo Market—Sale of 30th January 1956.—Good demand. Lower for dusts, black leaf fannings and stalky kinds. Others very firm, sometimes dearer for useful quality.

Sale of 31st January 1956.—Low-grown brokens declined 10 cents, mediums 10 to 15 cents. High-grown brokens opened weaker, but later strengthened and closed dearer, particularly for improved quality.

Calcutta Market—Export.—Slightly less general demand with prices for most sorts easing half to one anna. Fannings and useful liquoring C.T.C. types strongest feature usually dearer.

Intesnal.—25,900 packages. Fair general demand. Market half to one anna easier for most kinds. Best C.T.C. dearer. Leaf 2,400 packages were irregularly easier.

Export Quota.—A further release of export quota has been announced and it is understood that the total quantity released for 1955-56 is 480 million lbs. The new release will, therefore, be approximately 70 million lbs. The market reacted and fell steeply on receipt of this news; later, however, the market steadied at the lower level and there are now buyers at 16 pies.

Export Duty.—It was announced on 1st February that the price of tea for the month of February has been fixed at Rs. 2-14-1, as against Rs. 3-1-5 for the previous month. The export duty, however, remains unchanged at As. 6.

Forthcoming Auctions.—Sale No. 4 will be held on Tuesday 14th February.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Dust Sale* C.—425,000 lbs. Strong general demand. Prices tending higher."

JUTE GOODS HARDEN

(From Our Own Correspondent)

CALCUTTA, *7th February*

Following more interest shown by foreign buyers, prices of jute goods staged a moderate recovery during the week under review. Raw jute prices also advanced further. There was a Burmese inquiry for a large quantity, and the recent visit of the Burmese purchasing mission led trade circles to believe that Burma's requirements of sacking was large, in view of the need to have more bags to pack the higher output of rice for export. Of more lively interest to the trade, however, was the strong possibility of Russia substantially increasing purchases of Indian jute goods. It will be remembered that, during the visit of the Russian leaders, it was agreed in New Delhi that Russia would supply India one million tons of steel in the three years 1956-58 and also export to this country equipment for the production of oil, mining and other equipment. The terms and prices of all these sales were left to subsequent negotiations, but it was agreed that, in return, the U.S.S.R. would increase substantially its purchases from India of both raw materials and manufactured goods. The rumours that the U.S.S.R. would require more jute goods were thus immediately connected with the above agreement and it was thought that, of the manufactured goods Russia would buy for steel, jute manufactures would amount to 200,000 tons in the three years. From other countries also, inquiries for both hessian and sacking were received. South America, Australia, East Africa, West Africa and China, were the good buyers of sackings, while, in respect of hessian, overseas interest during the week was mainly from the U.K. All things considered, trade circles were confident that the increased production which the mills had planned from this month would be marketed without any difficulty whatsoever.

The speech of Mr. Maqbal Ilahi to the annual meeting of the Pakistani Jute Association, held at Narayanganj on Tuesday last, was read with disappointment in jute circles here. For Mr. Ilahi said that the official estimate of the 1955-56 crop was 5.6 million bales and that, for the next season, the Government would control the jute area so as to give a crop of only 5.5 million bales. With exports of raw jute being very satisfactory, the carry-over to the next season will undoubtedly be insignificant. It is a pity that, despite a significant increase in jute goods, consumption all over the world, Pakistan should not plan for an increase in raw jute output. Mr Ilahi himself told the meeting that, by next year, Pakistan would have expanded its own jute industry in such a way as to consume as much as 1.2 million bales of raw jute. So, by his own admission, Pakistani consumption of raw jute is increasing, and the same is probably true in many countries which have jute mills. Against such a background, we are told that Pakistan is actually planning for a lower jute crop. The conclusion that Pakistan is attempting to realise higher prices by purposely keeping down the crop cannot be resisted. But the policy-makers across the border should at the same time realise that, by doing so, they are sacrificing the long-term interests of the jute industry.

Mr. Ilahi spoke with equal satisfaction when he said that the Pakistani rupee devaluation was well-timed to profit the cultivator. For maintenance of the minimum export prices meant an increase in local prices by 44 per cent. By keeping down the crop, the authorities apparently do not desire any alteration in export prices. Ample evidence that mills in Europe are finding the Pakistani prices uneconomic are not wanting. And because Indian mills consume only a small percentage of jute from East Bengal, they have been able to offer successful competition in world markets and evolve a policy of planned increase in production. Even if Pakistani export prices are revised, no harm can be done to the ability of Indian mills to quote lower, because of lower costs of production and lesser expenditure in transporting the raw material.

The market opened last Tuesday on a steady note, as reports of more Russian interest resulted in keen covering business in both hessian and sacking goods. Ready B. twills improved from Rs. 111-4 to Rs. 112-8 and hessian 40″ 10 oz. ready from Rs. 40-5 to Rs. 40-9. In the meantime, mills showed more interest for raw jute, prices of which rose. This gave further strength to the goods market, and speculative activity revived to take B. twills to Rs. 114-4 and 40″ 10 oz. hessian to Rs. 40-13. Mills sold a fair quantity at higher levels and, despite profit-taking on Thursday last, hessian maintained the gain. Ready B. twills were at the same time pushed to Rs. 114-12. Speculators were again active, as foreign inquiries increased. Business for export was also subsequently done. The uptrend was fully maintained yesterday, with both hessian 40″ 10 oz. and B. twills gaining further fractionally. Forward quotations for both hessian and B. twills were higher than the ready goods. The difference between April-June and ready quotations was narrowed down in respect of hessian as the week progressed, but, as regards B. twills, the difference widened as prices gained.

Mills gave good support to raw jute, as they purchased fair quantities. Sellers were as usual reserved. These factors were sufficient to raise prices for the different constructions by one to two points. From Rs. 29, Indian northern bottoms gained to Rs. 31 and, at Rs. 31-8, local daissee bottoms were higher by Re. 1-8. The latest quotations are given below with those of a week ago in brackets:

	Middles Rs.	Bottoms Rs.
Pakistani:		
Northern ...	35-8 (33-8)	33-8 (30-8)
District ..	36-0 (34-0)	33-0 (31-0)

Daissee *mesta*	31-8 (30-0)	28-8 (27-0)
Bimli f.a.q.	Rs. 29-0 (27-0)	

Pucca bale 1st marks Rs. 193-8 (182-8) per bale.

LINSEED EASY

(Messrs. A Bradley & Co.)

CALCUTTA, 6th *February*

Easier conditions prevailed during the past week, after the firm upward trend of the past few weeks, and prices were marked down appreciably, owing to less keen overseas demand for linseed oil. Local shippers also were somewhat reserved in anticipation of an imposition of export duty on linseed oil.

There is still an acute shortage of ready linseed, owing to poor arrivals from the centres, but new crop forward delivery goods are being offered at lower levels.

In the oil market, little fresh business has been placed, while buyers and sellers alike are pausing at present.

Latest quotations are as follows: February-March Rs. 23 and April-May Rs. 20 per maund.

WHEAT PRICES DECLINE

(From Our Own Correspondent)

HAPUR, 6th *February*

Quiet to easy conditions continued to prevail in the foodgrains market during the week. The Government of India's decision to ban exports of wheat products had a further quietening effect on wheat prices. Some quantity of imported wheat was diverted from Delhi to Hapur and that being of fine quality was sold at Rs. 14-12 per maund. Wheat prices of average quality sagged by As. 8 per maund to Rs. 14-6 and fine quality to Rs. 15-4 per maund. The week's offtake was negligible, mostly to meet local requirements and one *khati* to Meerut. Stock is now put at 41 *khaties* as against 19 *khaties* at this time last year. The State Government has arranged to sell wheat at a price of two seers and 10 chhataks per rupee in U.P.'s Kabal towns and this has accounted for a fall in demand from east U.P. centres.

Rice prices also ruled a shade easy on good supply position and expectations of higher production during the year 1955-56 as reflected by the second all-India estimates which showed an increase of 4.1 per cent. in area and 7.4 per cent. in production over last year at 72,332,000 acres and 23,775,000 tons, respectively. The current prices are: Rangooni Rs. 14-4, mainpori Rs. 17-12, and coarse Rs. 12-14 per maund.

Except barley which was steady at unchanged level, due to scarcity of stocks, other coarse grains eased in line with wheat and were today quoted at: barley Rs. 10-4, bejhar Rs. 9-12, jowar Rs. 10-8, maize Rs. 10-12, bajra Rs. 9 and guwar Rs. 9 per maund.

Following easy advices from Madhya Pradesh and Hyderabad, where new crop arrivals of *arhar* have begun, *arhar* prices here recorded further fall of Re. 1 per maund to Rs. 11 per maund. Stocks are estimated at 7 *khaties*. Peas prices, on the other hand, hardened slightly on reports of fast decreasing stocks due to substantial offtake from Howrah and east U.P. Stocks are estimated at 4 *khaties* only. Peas *dara* is now transacted at Rs. 9 per maund. Other pulse prices also eased fractionally to *urd* Rs. 15-8 to Rs. 16-4, *moong* Rs. 13-6 and masoor Rs. 13-2 per maund.

While *urd magh* future prices declined during the week on heavy bear pressure, other pulses futures ruled quiet at near last week's level and were quoted on Monday at: Peas *jeth* Rs. 7-11; peas white *jeth* Rs. 8-3 and *maha* Rs. 9-10-6; *arhar jeth* Rs. 9-3, *urd magh* Rs. 14-8 and *baisakh* Rs. 14-15.

Standing crops are now reported to be in want of rains in areas where there are no irrigations facilities, while in other areas they are reported to be satisfactory.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 6th *February*

The sugar market remained depressed during the week. The demand was confined to very small lots from Punjab and Delhi. The increased production at 359,162 tons during the first two months of the current season, as against 331,402 tons during the same period last year, accounted for the depressed conditions as the overall production is expected to reach a fresh record figure this season. The Government of India has released quotas for free sale. Mill delivery prices during the week declined by As. 2 to As. 4 per maund and the latest prices as on Monday are:

Jaswant Rs. 28-4, Simbhauli Rs. 28-10, Mowana Rs. 28-12, Daurala Rs. 29, Amroha Rs. 27-8, Bijnore Rs. 27-10, Mansoorpur Rs. 29-4, Rampur Rs. 30-6; retail Rs. 31 per maund. The *khandsari* market ruled dull and demand was practically dormant. Inferior grade was quoted between Rs. 20 and Rs. 23 and superior between Rs. 24 and Rs. 26.

After initial fall to Rs. 10-8 per maund, ready *gur* prices improved to Rs. 10-12 per maund quoted today. Booking was restricted and the demand at the prevailing rates was also reported slack. The week's arrivals amounted to 20,000 maunds and local stock has swelled to 65,000 maunds. The total arrivals since the beginning of the season were put at 360,000 maunds, as against 420,000 maunds by this time last year.

In the forward section, *gur fagan* moved both ways during the week on speculative bouts of buying and selling. Opening at Rs. 11-5 for *fagan* delivery on Monday last week, prices touched the highest of the week at Rs. 11-11-Rs. 10-10½ on Wednesday and then declined to the lowest at Rs. 10-13½. The latest prices today were Rs. 11-1½.

Sowing operations for next crop have begun in some areas.

ENGINEERING

(*Concluded from page 252*)

continued, it will very adversely affect the private sector. Another point I would stress is the question of purchase by D.G.S. & D. Large quantities of machine tools are still being imported directly for the requirements of various State-owned factories, which the indigenous manufacturers are in a position to supply. We have approached the D.G.S. & D. with a request to let us know why foreign machines are imported when indigenous capacity for similar machines is available. In a particular instance, we had requested the D.G.S. & D. to arrange for a meeting between the representatives of the industry and the factory concerned, but up to date, for one reason or another, this meeting has not yet taken place."

LATEST U.K. FURNACES FOR INDIAN TRAINEES' USE

The latest type of British heat-treatment furnaces is being made available for the training of students at Indian technical and rehabilitation centres. A consignment of 26 of these furnaces is now on its way from the British firm of manufacturers. These furnaces, valued at £7,000, have been bought in England by the U.S. Government through the Indian Supply Mission in Washington for the Indian Government.

The furnaces—called electric heat-treatment batch furnaces—have a working space of 15 in. deep by 6 in. high and 12 in. wide, and can operate up to a maximum temperature of 1,000° C.

NEW TITANIUM PLANT

Europe's first full-scale plant for processing titanium with the use of metal rectifiers of special design will soon be put into continuous operation at a Sheffield factory. The power plant is rated to work continuously and the total rectifier capacity is 18,000 amperes at 40 volts. The system, it is claimed, combines high efficiency with a wide range of output characteristics. The control panel is arranged so that each furnace operator has all his controls immediately around him. He is neither distracted in his work by any other operator nor does his use of power interfere with their work.

NEW FEATURES IN LATEST P. & O. FREIGHTERS

Several features new to Peninsular and Oriental Steam Navigation Company (P. & O.) ships are incorporated in the new cargo ships built for the Company. One of these is the 8,000-ton *Salsette*, which has just been launched on the River Clyde, Scotland. Among the new features are bipod masts, folding hatch covers, and glass-fibre (instead of the orthodox steel) lifeboats. The sister ship, *Salmara*, which is expected to be launched on the Clyde in April, has the same new features. Each of the new freighters will carry a complement of 84, but no provision has been made for passenger accommodation. There have been two previous ships named *Salsette* in the P. & O. fleet. The first was a single-screw steamer of only 1,491 tons, built of iron, which entered service in the India trade in 1858 and continued until 1871. The second, specially designed for the Bombay-Aden service, was of 5,842 tons. It continued in service from 1908 till 1917, when it was torpedoed off Portland (Dorsetshire), in the English Channel.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Non final quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

M—Managed by the board of directors ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus. (k) Investments

(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 19

PUBLIC ACCOUNTABILITY OF STATE UNDERTAKINGS

(*Concluded from page 243*)

considerations apply with even greater force in the case of State industrial units in competition with private units in the same field.

There is a continued controversy on the question of public accountability of the State undertakings. It has even been suggested that, by the device of the formation of companies, they were being placed beyond the pale of Parliamentary control. This suggestion, fostered by interested parties, does not bear serious examination. In the first instance, when a new company is to be floated, a demand for grant for the share capital to be invested, is placed before the House, thus affording it an opportunity of discussing the investment and the form in which it is proposed to be made. Subsequently also, it is the convention to place the annual report along with the balance-sheet and profit and loss account on the table of the House, thus, once again, giving the members an opportunity of studying these documents and raising a debate, should they so desire. In addition to the normal audit by the auditors of the company, there is the provision that the Comptroller and Audit

PHILOSOPHY OF THE SECOND PLAN

THE draft outline of the second Five-year Plan is more of a discourse on economic philosophy and less of a down-to-earth plan for raising the country's living standard. It bears the impress of ivory-tower dwellers more than that of the people who are intimately connected with fields and factories. The objectives of the Plan are ambitious. They are, of course, not overambitious when viewed from India's needs, but they certainly are when viewed from its capacity. Not only that; they are rendered less practical by the ideological approach to them. Such an approach has led to a number of internal contradictions in the Plan, thereby weakening a number of links in the chain.

If the experience of the first Plan shows anything, it is that, first, when people are left to themselves, they can achieve far greater results than when they are controlled by the State and, secondly, the performance of the public sector, which took 50 per cent. of the responsibility for development, does not equal that of the private sector. The removal of controls was accompanied by all-round increases in production which, in turn, enabled the planners to raise the size of the Plan without any inflationary impact on the economy. The absence of the drastic type of land reform now advocated has not stood in the way of increased agricultural production, and whatever conflicts there were between landlords and tenants have been liquidated by regulating the terms of tenancy. The increase in industrial production has been much greater in the private sector than in the public sector. Indeed, the public sector has miserably failed in this direction. Whereas the private sector has excelled in fulfilling the targets, the public sector has been lagging far behind. The present shortage of steel, cement and certain types of capital goods is due partly to the failure of the public sector to implement the programme it itself undertook and partly to the dog-in-the-manger policy it followed towards the private sector. The Planning Commission itself clearly admits that the public sector could not utilise the provisions in the Plan for setting up a new iron and steel plant, as well as a heavy electrical plant. It further admits that not all the amounts earmarked for education, medicine, community projects, village and small industries, etc., could be utilised. There has no doubt been a perceptible improvement in irrigation facilities and power generated, both in the public sector, but even here the achievements are not as much as they should or could have been. Imagine, for instance, the tragic delay that has been caused in the implementation of the Tungabhadra project, thanks to the reorganisation of States, or of the power schemes in the Bombay State.

Despite all this past experience, the Plan has earmarked more responsibilities and, consequently, more resources for the public sector. And these responsibilities are in the very spheres where this sector has singularly failed. One of the chief reasons for giving prominence to the public sector is to prevent concentration of economic power. If this approach is not doctrinaire, one does not know what is. It may be argued that, as the State does not have enough experience in setting up industries, some delay is unavoidable in the initial stages and that, as it gathers enough experience, it will do infinitely better than the private sector. Even this argument is not convincing, considering the long period which the State is taking to finalise its deals for putting up iron and steel plants and the continued financial failure of such undertakings as machine tools, locomotives and shipbuilding. But this argument apart, why should the country's economic progress be arrested or delayed, merely because the State feels that certain spheres of production should be reserved for itself, even when the private sector can do that function quite efficiently, expeditiously and at a lower cost to the community?

What is it that the country needs? It needs more food, more cloth, more schools, more houses and more hospitals. These needs are so large that, in the process of meeting them, gainful employment can be found for all its able-bodied citizens, provided the approach is made on practical, modern lines. India's large population provides valuable scope for developing its vast natural resources, without having to find colonial markets outside the country. Unfortunately, its rulers are making the task of development needlessly complicated by bringing in ideological considerations and introducing class conflict, where hardly any existed before. By decrying *entrepreneurs* and by condemning profit motive, they are creating a situation in which private enterprise and initiative will soon be crippled, thereby paving the way for the early establishment of a monolithic State. As a result of this policy, the creation of gainful employment opportunities will be delayed and so also production. Such a delay will only aggravate the unemployment problem and add to the discontentment among the people. The political implications of such a situation are obvious; it will make the country less safe for democracy than what it is now.

If this state of affairs is to be avoided, the Plan must be recast in such a way as to entrust the function of production—this means creation of employment opportunities—to those who are better suited to perform that task. In saying this, it is not suggested that the State should have no part at all; nor is it suggested that the private sector should be completely free from

tural, development will be brought about by the private sector. For it is inconceivable that any worthwhile expansion of industries under the ægis of the private sector can take place without resulting in an increase in the living standards of the common man. This will be borne out by an impartial study of the economic development that has taken place in a free country like the United States. If those who are in charge of the Government are wise and patient, they can certainly ensure, without upsetting the rate of progress, that a substantial part of the expanding cake of national income goes to the common people and that the shares of *entrepreneurs* and capital in it are not excessive.

The Government of India is naturally very keen that the pace of economic development should be rapid and that the national income should be doubled in little over a decade. The attainment of this objective, over which there is no difference of opinion, will by no means be impeded by giving a bigger role to the private sector in industrialisation. It is necessary to emphasise this point, because there is a widespread impression among those who are in power that the public sector alone can bring about such a speedy development. It has already been shown that this impression is belied by experience of State-ownership and State-management of industries so far. On the contrary, the private sector has proved abundantly that it can produce quick results. The prerequisites for rapid development are diligent initiative, ability to procure capital and know-how, freedom for taking quick decisions, and drive to implement a given project. For all these purposes, the private sector is eminently suited, but, wherever it is found wanting, or is unable, for reasons beyond its control, to get things done, the State must step in to strengthen the chain and to keep up the momentum. If a bigger role is allotted to the private sector, it will, perhaps, be easier for the country to get more foreign capital, as well as technical and scientific know-how, provided the Government is prepared to give its backing and blessings to the deals that are negotiated for these purposes by business men.

It is, of course, always possible for the State to secure the services of industrialists and the executives working under them to manage the industries and commercial activities of the public sector. And, since the majority of business men in this country is unwilling to challenge the economic theories and philosophies of the party-in-power in the hustings and is, instead, content to toe, albeit reluctantly, the line taken by the Congress, it is quite likely that the Government will succeed in doing so. Evidence of this is already found in such of those undertakings which have been nationalised, as, for instance, aviation, road transport and the Imperial Bank. More of it may be forthcoming when the central organisation for administering the recently nationalised life insurance business is set up. The private sector has also been giving valuable help to the State for putting up some of the heavy industries such as the proposed three iron and steel plants. While this commendable action of the Indian business community reflects its spirit of patriotism, it will be a pity if it has encouraged the Government to extend the sphere of the public sector in a spirit of complacency. Such assistance, when taken on a large scale, will amount to conferring rights and privileges on persons who have no stake of their own in the enterprises placed under their care. It is needless to add that arrangements of this nature for managing State-owned undertakings will lead to waste and inefficiency, not to mention evils of political nepotism. It will be no substitute for an enlightened private sector.

To sum up, the economic philosophy of the second Plan represents a radical departure to the left from the one that underlined the first Plan. This departure is not conducive to the future of democracy in this country, not only because the new philosophy expounds principles of expropriation of land (the compensation mentioned is only of a farcical nature) and confiscatory taxation of income, as well as savings, but also because it dampens private initiative and enterprise which in turn will slow down economic development, without which poverty—the enemy of democracy—cannot be eradicated. It is very necessary, therefore, to modify this approach on the lines indicated above and in a manner which will engender due regard for sanctity of private property.

PROSPECTS FOR COTTON

IT is becoming increasingly clearer that cotton is the weakest link in the world commodity chain. This is a matter of no small concern not merely to the forty and odd countries which are interested in cotton as producers but to the entire world, for cotton is the major textile fibre. The imbalance in the supply and distribution of cotton, caused by the excess of available supply over effective demand, has been in evidence for some time now. But it was believed that the steps taken by the U.S., the major cotton producer, to curb production and possible increase in demand for cotton would cure the malady that afflicts this king of textile fibres. Apparently, King Cotton is too seriously ill to be cured by simple palliatives, and may, in fact, need some surgical remedy.

World supply of cotton continues to increase year by year, and, for the current season (1955-56), it is placed at 62.1 million bales (of 478 lbs. each), as against 58.8 million bales. In the free world alone, the supply is placed at 51.1 million bales, consisting of an output of 30.8 million bales and carryover stocks of 20.3 million bales, as compared with 48.3 million bales, made up of production of 29.4 million bales and stocks of 18.9 million bales, in the last season. The consumption of cotton in the free world has not caught up with increased production, so that world stocks have continued to mount up. In the last season, free world consumption was placed at 27.6 million bales, as against 26.8 million bales in 1953-54; cotton production in the respective years was 29.4 million bales and 30.3 million bales. Assuming that free world consumption this season will be maintained at the last season's level of 27.6 million bales, stocks at the end of the current season (1st August 1956) would aggregate some 23 million bales, as compared with 20.3 million bales a year earlier. This is by no means a very happy prospect.

Taking the world as a whole (that is, including communist countries), cotton production has expanded from 28.8 million bales in 1948-49 to 40.3 million bales (the estimate for the current season). There are many reasons for this increase in output. As the shortages in food supply, noticeable in early post-war years, were wiped out, it became possible for many countries to divert more land to cotton. The completion of irrigation systems in many countries led to expansion of the land under cotton and also to an increase in the per-acre yield of cotton. The adoption of superior agricultural practices, including mechanisation of agriculture, has also considerably augmented production. But the main reason for expansion in cotton output is undoubtedly the price umbrella which the U.S. indirectly holds for the world's cotton farmers.

The rigid price support which the U.S. has lent to its cotton has been mainly responsible for the increase in supply of cotton in the U.S., even as it has stimulated cotton production elsewhere. For the current season, the supply of cotton in the U.S. has been estimated at 25.6 million bales, consisting of 11.1 million bales of carryover stocks and 14.5 million bales of production, as against 23.3 million bales, 9.7 million bales and 13.6 million bales, respectively, in the last season. Thus, the supply of cotton in the U.S. in the current season is slightly over 50 per cent. of the free world's total supply. The U.S. Department of Agriculture has estimated that domestic consumption this year might aggregate 9.2 million bales. Exports are expected to absorb only 2.4 million bales—one million bales less than in 1954-55. The carryover stocks at the end of the current season are estimated at 14 million bales —about 3 million bales more than at the commencement of this season and one million bales more than the previous record of 1939. Small wonder, then, that the American authorities are at great pains to find some way to relieve the country of the burdensome cotton surplus it is now carrying.

The U.S. price support policy, as already stated, has been the main cause of growing surpluses within that country and increased production elsewhere. The Commodity Credit Corporation, to which the farmer can pledge his cotton at the support price, can sell in the domestic market the cotton not redeemed by the farmer at not less than 105 per cent. of the domestic price *plus* the appropriate carrying charges. Since 1947, this rule has been made applicable to sales to foreign countries also. This explains how the U.S. price support policy has served as an umbrella to cotton farmers the world over. All that the cotton farmer in far-off Turkey or Brazil has to do is to grow as much cotton as possible and sell it on the world market at slightly less than the American support price. Since this support price, determined from the high American living standards, gives a comfortable margin for the growers elsewhere, it has been difficult to arrest the expansion of cotton output in non-American countries. The result is a certain distortion in world trade; the non-American producers continue to capture larger and larger share of the world market, while the U.S. carries year after year increasingly heavier stocks.

So far, the only positive measures which the American authorities have taken, in order to reduce the surplus, are acreage controls and limited exports of cotton at competitive prices. Neither of these measures has been helpful. The farmers have got round the acreage control by bringing only their best land under cotton and by improving the per-acre yield of cotton. The second measure was not, of course, intended to solve the entire cotton problem. It was only a limited offer, commencing from this year, of one million bales—and, only short-stapled varieties, at that—at competitive prices. Since the Government had announced this decision several months before it actually commenced selling its cotton at competitive prices, the other countries took care to dispossess themselves of as much cotton as possible before the U.S. arrived in the market. The C.C.C. has so far sold only about 616,000 bales of cotton under this special export programme.

World producers are naturally nervous that the U.S. might be compelled, sooner or later, to disgorge all its surplus at competitive prices. Their fear is that the U.S. might follow an aggressive export policy. So far, the authorities have not attempted it for two reasons. In the first place, such a policy would depress the prices to an extent that would mean considerable loss to the U.S. Secondly, it would demoralise the world market, hit many underdeveloped countries, and would not, therefore, be consistent with the U.S.'s role as a promoter of world trade. Nevertheless, the U.S. cannot possibly hold on to its stocks indefinitely. Discussing the question from the point of view of the countries outside the U.S., the *N.B.I. Review*, the quarterly journal of the National Bank of India, makes certain notable observations. It says:

"Foreign producers of cotton cannot justly complain, because the U.S. has at length grown tired of holding an umbrella over production in the rest of the world; an adjustment was bound to come. It would seem to be in their interests not to spoil their case at the State Department by objecting to more competition; but they should concentrate, instead, on trying to ensure that the competition is fair and that the U.S. announces a long-term policy as quickly as possible, so that the world trade in raw cotton and cotton goods can get back to normality. In particular, they should urge that the reduction in export prices should be accompanied by a reduction in support prices. The U.S. has a long purse, and it could afford to subsidise cotton exports for years. No foreign producer could compete on those terms. By urging that reductions in home and export prices should keep in step, these countries will also help to ensure that the American adjustment is made in an orderly fashion. What is sauce for the goose is sauce for the gander."

Thus, the long-term outlook for cotton is intimately bound up with the long-term policy which the U.S. pursues. In his message to the Congress, President Eisenhower outlined some proposals designed to solve the problem of agricultural surpluses. He emphasised the need for legislative changes which would permit the C.C.C. to sell to the domestic market at less than 105 per cent. of the support price *plus* carrying charges and to effect sales to countries which are outside the present surplus disposal programmes. He also stressed the need for a flexible parity and for computation of parity prices on the basis of average grade and quality and not on middling ⅞" as at present. But the most important of his proposals was for a somewhat more rigid control of production through the implementation of the "soil bank" scheme, and the replacement of acreage allotments by quantity allotments. It remains to be seen how the American Congress will react to this scheme. If the latest decision of the Senate, referred to elsewhere, is an indication of the likely decision of the Congress, there is not much room for hoping that it would be fully endorsed. In any case, it should be clear that, unless the U.S. solves its surplus problem, the cotton world will continue to be assailed by periodical doubts as to what the American authorities might do, in order to get rid of the huge stocks in that country.

ACUTE STRINGENCY IN MONEY MARKET

BANK CREDIT MAY COST MORE—AN ECONOMIST'S SOLUTION TO STOP GOLD SMUGGLING

THURSDAY, 5 P.M.

THE share markets are slightly steady, with the lists showing fractional gains over a wide range. There has been selective buying by investors on a small scale and a fair measure of bear covering, especially in textile scrips. It is only steel shares that have become friendless. As the settlement muddle in Calcutta has not yet been completely cleared, there is persistent liquidation of Indian Irons, which in turn is having an adverse effect on Tata Steel Ordinaries also. Over the week, both the scrips are lower, the drop in Indian Irons being heavier than in Tata Steels. Technically, the position of the market seems to be still unhealthy. In any case, there is no improvement in the market sentiment. A feeling of uneasiness about the Central budget persists, especially as Mr. Dhebar, the Congress President, indicated, in his speech at the Amritsar session, a number of taxation measures, with a view to reducing the inequalities in income and finding resources for financing the Plan. The detailed reference made by him to this subject suggested that he was almost giving a mandate to the Union Government as to how it should frame its budget for 1956-57, the first year of the second Plan.

MARKET GOSSIP

* * * *

The short-term money market is passing through a period of acute stringency. Very little activity is reported in the inter-bank section, for want of lenders and the rate of 3 per cent. is mostly nominal. The pressure is, however, reflected in the keen competition that is going on for short-term deposits and house money. Apart from the customary trade demand for funds, the substantial withdrawal of call deposits by the custodians of insurance companies for investment in Gilt-edged securities has led to a shrinkage in the liquid resources of banks. This development, as well as the Reserve Bank's advance notice that, with effect from 1st March 1956, it would discount usance bills only at 3½ per cent., instead of at 3 per cent. as at present, besides withdrawing the concession given by it in respect of stamp duties, has forced the banks to offer more for deposits. Last week, some of them stepped up the rate for term deposits by ¼ per cent., while this week they have raised the rate for house money also by ¼ per cent., that is, to 3½ per cent. There are also strong rumours that banks are contemplating to increase the rate of interest on their loans and advances. We will not be surprised if these rumours turn out to be correct, for the banks had a good case for putting up the cost of credit even before the Reserve Bank decided to increase the rate of interest on usance bills. With the Reserve Bank's decision, their case has become stronger.

Bank credit in India is definitely cheap. Speculative forces are already strong and, with a large dose of deficit financing well under way, these forces will gather further momentum, unless all possible measures are taken to keep them under check. One of these is higher interest rates. It will, therefore, be perfectly in order if steps are taken to make bank credit a little costlier. Viewed in this context, the Reserve Bank's decision to withdraw the stamp duty concession on usance bills and to raise the rate of interest thereon by a quarter per cent. to 3¼ per cent. is highly significant. It may be noted here that, with a view to encouraging the development of a usance bill market, the Reserve Bank has been bearing half the cost of stamp duty incurred by banks for converting demand bills into usance bills, in addition to keeping the rate of interest at so low as 3 per cent., that is, at ¼ per cent. below the Bank rate. If account is taken of the loss of the stamp duty concession, the effective rate of interest on usance bills will be nearly 3¾ per cent. from the first of next month. Consequently, the difference between the bill rate and the Bank rate will be virtually be eliminated.

The system of discounting usance bills was introduced in January 1952. It has proved quite useful to the banking system in meeting the credit needs of trade during the busy season. In the initial stages, the facility was made available only to a limited section of the banking system, but it was gradually extended to all the Scheduled banks in possession of a licence granted under Section 22 of the Banking Companies Act. The number of banks eligible for this facility is now 45, as against 27 four years ago. Advances availed of by banks under the scheme have also increased, from Rs. 81 crores in 1952 to Rs. 225 crores in 1955. These figures show the extent to which the usance bills scheme affects the organised money markets. In fact, it will be no exaggeration to say that the rate of interest on these bills is the *de facto* Bank rate. Accordingly, when this rate of interest goes up, it is as good as the Bank rate going up.

* * * *

The fight against inflation in Western Europe and elsewhere in the free world by a resort to the use of the traditional monetary weapons continues. In New Zealand, where the Bank rate is already as high as 7 per cent., the use of credit has been tightened further and increase in rates of interest on deposits has been officially permitted. In Holland, the Bank rate was raised last week and the commercial banks were told to exercise restraint in sanctioning credit. In Britain, the new Chancellor of the Exchequer, Mr. Harold MacMillan, who had asked the bankers to tighten the credit facilities further shortly after he took over the office from Mr. Butler, has just taken the unpleasant step of putting up the Bank rate by a stiff one per cent. to 5½ per cent. Thus, for the third time in just over a year, the Bank rate in Britain has been raised. How often the Bank rate has been altered in that country in recent years will be clear from the following table:

Date of change	*Per cent.*
26th October 1939	2
8th November 1951	2½
12th March 1952	4
17th September 1953	3½
14th May 1954	3
27th January 1955	3½
24th February 1955	4½
16th February 1956	5½

The immediate provocation for raising the Bank rate must have been the renewed weakness of sterling during the past few days and the insistent demand for increase in wages. Despite the slightly favourable gold returns for January last, the sterling-dollar rate, which was so steady around $2.80⅞ in the third week of last month, has now eased to $2.80-7/16. The Labour Party's censure motion tabled in Parliament yesterday, in order to force a showdown on the country's deepening economic crisis, must have also induced the British Conservative Government to reiterate its faith in monetary controls in preference to physical controls, the favourite weapon of the Labour Party for fighting economic imbalance.

* * * *

Although many bullion interests will deplore that the Forward Markets Commission should have undertaken an enquiry into the utility of forward trading in gold and silver, there is no doubt that the case for such trading has been considerably weakened by the fact that there is no major internal source of supply and private imports have been banned. The Commission has, however, invited applications for recognition from commercial bodies trading in bullion. The Commission, it is stated, will consider these applications "without prejudice to any conclusion that it might reach on the desirability of permitting such trading."

An important source of continuous supply of gold to the country (apart from the small output of the Indian gold mines) is smuggled gold. The problem of smuggling has practically defied solution, thanks partly to India's traditional hunger for gold and partly to difference in internal and international price levels. In this connection, some of the points made by Prof. B. R. Shenoy, Director, University School of Social Sciences, Gujarat University, Ahmedabad, in the course of the Sir William Mayer Endowment Lectures which he delivered at Madras, will be read with interest. Mr. Shenoy computed that the quantity of gold imported by India during the 42 years ended 1930-31 amounted to 97.2 million ounces or an annual average of 2.31 million ounces. At current prices, the value of imports would be about Rs. 62 crores per annum. During the 12 years following the devaluation of sterling (and the rupee) in 1931, total exports of gold amounted to Rs. 337 crores, the annual average of the actual quantity exported being 3.6 million ounces. Since 1946-47, gold has again started moving into the country with the help of smugglers. Gold smuggling is the combined result of an improvement in the economic condition of the agricultural population and the phenomenally wide disparity between the internal and the external prices of gold which, in a large measure, reflects an exchange overvaluation of the rupee. There is no direct means of estimating the amount of gold that is being smuggled. On the basis of the gold processed at the refinery of the Bombay Bullion Association, the National Refinery and at the Government mints in Bombay and Calcutta, Mr. Shenoy estimates the amount of smuggled gold at Rs. 34 crores per annum. This estimate also agrees with the common estimate of Rs. 30 to Rs. 40 crores. This represents about 6 per cent. of the estimated national savings.

Government's efforts to prevent smuggling, as Mr. Shenoy said, have proved of no avail. Confiscation of the gold, *plus* imprisonment has not acted as deterrents. In April 1955, the Sea Customs Act was amended to provide that the onus of proof that gold, which the authorities may seize on reasonable suspicion, was not smuggled gold rested on the person owning the gold. But, this made little difference to the availability of gold in the bullion markets; only the detoning of gold was now done, instead of at the refineries, in the fireside privacy of the smugglers. The incentive to smuggle is provided by the phenomenal difference of about Rs. 36 per tola between the internal and the external prices of gold. So long as this difference remains, gold, as Mr. Shenoy pointed out, will continue to be smuggled. The vast sea and land frontiers do not permit a close enough vigilance, even assuming that the customs authorities are all incorruptible.

What then is the way out of the gold tangle? How can smuggling be prevented? Mr. Shenoy suggests that the price differential should be removed through a downward revision of the exchange rate of the rupee to its economic level. He argues that sterling is about the cheapest "economic goods in India today, its price of 1s. 6d. per rupee having remained unchanged since 1927." Most commodities in the meanwhile, have risen by 3½ to over 6 times. Money supply in India, since 1939, has risen by 6¼ times, as against a rise of 3½ times in the U.K. Other reasons mentioned by Mr. Shenoy for concluding that the prevailing exchange rate of the rupee is, probably, acting as a drag on exports, unlike the exchange rate of sterling, and that there exists a strong case for a review of the exchange value of the rupee are:

In recent years, the international payments position on account of goods and services (which is more relevant than the overall current account payments position to discussions relating to exchange rates) has shown substantial surpluses in the U.K. During the four years ending 1954, the goods and services account in India, however, showed a surplus only in 1953. There were deficits of Rs. 14 to Rs. 92 crores in the remaining three years.

The volume of exports of U.K. rose to 132 in 1954, as against 100 in 1948. They were 60 per cent. higher than in 1937. In India, notwithstanding a 40 per cent. increase in industrial production and a 13 per cent. increase in agricultural production, the post-war volume of exports was below the pre-war level. The index of the volume of exports was 94 in 1954, as against 100 in 1948.

Mr. Shenoy's thesis is that a more appropriate exchange valuation would help to eliminate the price differential of gold, and remove the present inducement for smuggling gold. In place of gold, the community may, then, consider importing goods more essential to the economy. Alternatively, the movement of gold might once again conform to the payments requirements of the country, gold flowing in, in times of payments surpluses and flowing out, in times of payments deficits.

Such adjustments, said Mr. Shenoy, would remove the present handicap to exports in many lines and would enable the raising of export duties on commodities in which our export position was strong even under the present exchange rate. As the experience of many countries, notably Canada, had shown, an economically appropriate exchange rate would so stimulate exports and restrict imports as to contribute to a lasting solution of our payments difficulties. It may also improve our terms of trade as had been the case in countries which had adjusted their currencies for overvaluation. With the sellers' market a thing of the past, he averred, there was now no case for currency over-valuation. Finally, Mr. Shenoy pointed out that the issue of over-valuation of the rupee was no less fundamental to a healthy functioning and stable progress of the economy than the issue of inflationary deficit financing. He regretted that the former had received hardly any attention in recent discussions. The currency and exchange policy of the country was last reviewed by a Royal Commission in 1926. In view of the complexity of the problem and its vital significance, Mr. Shenoy felt that it merited competent and early examination by a high-powered commission.

* * * *

On the previous page of this issue is to be found an article which reviews the general outlook for cotton. A notable feature of the world cotton situation, to which reference has been made there, is the large surplus which the U.S. now carries. In this context, it may seem somewhat surprising that the New York Market has ruled firm in recent weeks. Since the beginning of the current calendar year, the March contract has improved from 33.88c. to 35.74c. and May from 33.20c. to 35.10c. This rise reflects certain purely temporary factors such as the improvement in demand for cotton from certain countries and the shortage of "free" supplies in the U.S. Explaining the paradox of rise in cotton prices against the background of the increase in world cotton supply, the *London Financial Times* says:

"There is no simple answer to the paradox. One fact is that actual free supplies of cotton inside the U.S. are relatively short at present. Making allowance for some 13 million bales of Government stocks, there was a free supply of something like 7 million bales of cotton in the U.S. at the start of the year. This year a surprisingly large amount of cotton has been pledged with the Commodity Credit Corporation—close on 1 million bales in the first three weeks of January. As a result, there is an indicated supply of around 6.4 million bales between now and the end of the season in July, during which time American domestic consumption is roughly estimated at 5 million bales. The resultant margin between free supplies and absorption is thus rather less than the normal 2 million bales for carryover at the end of July. Besides this general tightness in the U.S., to which the sale of the 1 million bales overseas may have contributed, there is a particular shortage of the finest cottons. This has also affected the market, which, inside America, is also influenced by the improved activity of the textile industry. The eagerness with which buyers outside America have bought the surplus U.S. cotton remains somewhat surprising but this too probably to some extent follows from higher textile activity especially in the U.K. Another factor, of course, may be the reaction of market sentiment to President Eisenhower's soil bank programme for the reduction of cotton output and the output of other surplus commodities. The present rise in cotton values reflects an amalgam of all these influences. It is a trend which could continue for some time, but it would be wrong to allow it to distract attention from the basic realities of the cotton situation."

Apparently, the "basic realities" of the cotton situation are reflected in the quotations for the distant deliveries. Thus, as against the 35.74c. for the March contract, the quotation for July is 33.82c. while that for October is still lower at 31.97c. In the meantime, it is interesting to note how the American authorities are busy tackling the "basic realities" of the cotton situation. Some decisions of the Senate Agricultural Committee run counter

(*Continued on page 327*)

CORRECTION

In our editorial on Asian Economy last week, the population of Asia and the Far East was inadvertently given as 2,620 millions, instead of 1,450 millions. The figure of 2,620 millions relates to world population.

INDECISIVE TREND IN SHARES

TEXTILES FARE WELL

(From Our Own Correspondents)

BOMBAY, 16*th February*

TRADING on the Stock Exchange during the week under review disclosed an indecisive trend in prices. After an initial depression, equity values staged a smart recovery, but the recovery was not well sustained and leading industrials, under the leadership of steels, moved somewhat erratically. Nevertheless, textile shares were active and, on good support at lower levels, scored smart gains over the week, while steels disclosed losses on balance.

Early in the week, conditions akin to panic prevailed, the selling pressure noted at the close of the previous week gathering further momentum. The nervousness was attributed to fresh fears regarding the financial implications of the second Five-year Plan. Though the Draft Plan did not contain any fresh surprises, as most of the bearish factors contained in the Plan, such as the pursuance of a socialistic pattern of society by the Government, the prospects of heavy taxation to raise additional resources, imposition of a ceiling on incomes, etc., had all been known already and discounted in prices, the market was in jitters and, under pressure of heavy liquidation, values recorded sharp declines on Friday last. Its main anxiety was about additional levies in the ensuing Railway, Central and State Budgets. Fears regarding the settlement crisis in Calcutta which remained unresolved weakened the sentiment of operators. On Monday this week, the market, however, opened on a cheerful note and prices rallied all round. Although the higher levels attracted some profit-taking, there was no appreciable recession in values, in the absence of fresh adverse factors. Towards the close, equities moved in a narrow groove, due to uncertainties regarding the Calcutta settlement impasse and the Central Budget.

In the steel section, Tata Ordinaries slumped from Rs. 225 to Rs. 219-8 on Friday last, but shot up to Rs. 226 in the new account on Monday. Receding again to Rs. 220-4 on Tuesday, they gathered some strength and closed at Rs. 224. Indian Irons ruled weak. After a landslide from Rs. 32-14 to Rs. 31-5, the shares recovered to Rs. 32-8½, but the recovery was not sustained in the face of heavy liquidation and the scrips wound up the week at Rs. 31-13½.

Textile shares received good attention and, in active dealings, leading counters scored smart gains. Bombay Dyeings receded early in the week from Rs. 507-8 to Rs. 493-12, but rallied smartly to touch Rs. 519-6 before closing at Rs. 517-8. Kohinoors moved between Rs. 323 and Rs. 332 and finished at Rs. 331 with a gain of Rs. 3-8. Centurys came up to Rs. 464-8, after an early drop from Rs. 451-4 to Rs. 443, and closed at Rs. 461-8. Central Indias were, however, Rs. 3-8 lower at Rs. 135-8. Finlays registered a gain of Rs. 2 to Rs. 322 and Gokaks Rs. 6 to Rs. 230. Indu Ordinaries were steady around Rs. 12-3. New City Mills dropped Rs. 5 to Rs. 155 and New Greats Re. 1 to Rs. 193. Shree Niwas were prominent and rose by Rs. 3-12 to Rs. 213-12. Simplex advanced from Rs. 185-8 to Rs. 191-8. Standards received good attention and appreciated by Rs. 13-2 to Rs. 415. Svadeshis were up by Re. 1-8 at Rs. 210-8, while Swans shed Rs. 2-8 to Rs. 410.

Selective scrips in the banking section were in good form on sustained support. Barodas, for instance, gathered Rs. 3 to Rs. 98 and Bank of Indias put on Rs. 5 to Rs. 156. Centrals, on the other hand, were marked down by Re. 1-8 to Rs. 47-8 and the New shares were quiet at Rs. 50-8. Punjab Nationals were lower by Rs. 2-8 at Rs. 43-8, United Commercials had business As. 12 lower at Rs. 50.

In the insurance section, Orientals were again in form with a further rise of Rs. 170 to Rs. 3,970. The closing was, however, a shade lower at Rs. 3,900. New Indias fluctuated within a small range and closed unchanged at Rs. 40. Vulcans were put through As. 10 lower at Rs. 14-14.

Among electricity shares, Ahmedabad Electrics moved up from Rs. 103-7 to Rs. 105-10 on optimism regarding dividend, but finished lower at Rs. 104-11. Amalgamated Electrics were unchanged at Rs. 11-9. Bombay Suburbans declined by Rs. 3-12 to Rs. 115-4, while Surat Electrics strengthened by Rs. 3-2 to Rs. 123-2. Tata Hydros were done at Rs. 133 and Tata Powers Re. 1-4 higher at Rs. 1,367-8, while Andhra Valleys shed Rs. 2-8 to Rs. 1,300.

A sharp fall from Rs. 222 to Rs. 212-8 in Belapurs, on fears of a levy of excise duty on sugar, was a feature in the sugar group. Phaltans were dull at Rs. 127-8, while Walchandnagars rallied from Rs. 235-10 to Rs. 243-2, following the stepping up of the dividend from Rs. 16 to Rs. 18 per share. Cement shares were steady, A.C.C. gaining Re. 1-8 to Rs. 203-12 and Digvijays Re. 1 to Rs. 169-8. In the engineering and mining group, Alcocks were again in the limelight with a rise from Rs. 368-12 to Rs. 382-8 before closing at Rs. 371-4. Premier Constructions received good support from interested quarters and rose by Rs. 8-4 to Rs. 179-8. Tata Locomotives were steady at Rs. 141-8. Larsen and Toubros were sought As. 12 higher at Rs. 14-8, following their promotion to the forward list on the Stock Exchange. Mahindra and Mahindra were done at Rs. 12-11. Shivrajpurs gained on balance Re. 1 to Rs. 102. Indian Coppers closed at Rs. 6-2½ *ex-div.*, as against Rs. 6-10 *cum-div.* last week. B.B. Petrols were a shade better at Rs. 3-13¾.

In the shipping and transport section, Scindias moved between Rs. 16 and Rs. 15-7, before closing at Rs. 15-14½. Great Easterns were unchanged at Rs. 13-12, while India Steamships were done lower at Rs. 7-15. Hindustan Motors were marked down from Rs. 9-2 to Rs. 8-14 and Premier Automobiles were steady at Rs. 82. Among other miscellaneous industrials, Bombay Burmahs (old) reacted from Rs. 524-6 to Rs. 508-2 before gathering strength to Rs. 525-10 at the close. National Rayons gained, on balance, Rs. 3 to Rs. 218-8, while B.I.Cs shed As. 10 to Rs. 11-2½. Tata Chemicals put on As. 6 to Rs. 16-7 and Tata Oils As. 8 to Rs. 42-12. Wimcos changed hands Re. 1-14 higher at Rs. 185-10.

Calcutta Stock Exchange

CALCUTTA, 15*th February*

Although there was a small improvement in the number of transactions, conditions on the Calcutta Stock Exchange during the week under review were far from normal. So far, deliveries of non-clearing shares for transactions done up to 30th December have been completed, and the settlement in clearing shares for business done up to 28th December was satisfactorily done. On Monday, the settlement in clearing shares dealt in up to 24th January bristled with difficulty and grave doubts about this settlement had been entertained earlier. A delivery date for transactions done after 13th January remains to be fixed. Transactions in two clearing shares, namely, Texmacos and Orient Papers, were done this week, but the prices fell below the settlement levels. However, the difficulty was of a temporary nature only. This realisation led to the beginning of a revival of confidence, and, indeed, there were a few firm features for a while. News from New Delhi and the Amritsar Congress, however, was not encouraging. The inclination on the part of the Planning Commission to fix a ceiling on net personal incomes was among the powerful unfavourable factors which stood in the way of an expansion of business. It is now feared in the market that the Finance Minister may take the opportunity to increase direct taxes, which would automatically put a ceiling on individual incomes.

In the textile section, Elgin Mills were fractionally lower at Rs. 27-2 and Cawnpores at Rs. 9. Kesorams were today as low as Rs. 15-15, as against Rs. 17-2 previously.

New low levels were touched in the coals section. East Indians at Rs. 31-12 dropped by As. 6. Bengals fell to Rs. 540 from Rs. 548. At Rs. 8-3 Dhemo Mains were lower by more than one point. New Beerbhooms changed hands at Rs. 19-13, as against Rs. 20-14 previously. Standards were weak at Rs. 21-4.

Jute shares were subdued and the discouraging results of a few jute companies for the last half-year published during this week cautioned the buyers in this section. It is feared that, as a result of the existing high prices for raw jute and low prices for jute goods, working results of jute companies for the current accounting period would be unsatisfactory. The number of transactions were very few. Kinnisons were done at Rs. 190, as against Rs. 200 previously and Belvederes at Rs. 181, as against Rs. 183.

In the engineering section, Jessops had earlier recovered to Rs. 60 from Rs. 58-4 but by today they relapsed to Rs. 57-8. Burns fell to Rs. 303 from Rs. 312 and Richardson and Cruddas to Rs. 25-12 from Rs. 27. Kumardhubis, after improving to Rs. 11-12 from Rs. 11-2, closed lower at Rs. 11-1. In Texmacos, business was done at Rs. 20-13.

Excepting for an earlier steadiness, miscellaneous industrials were featureless. Calcutta Electrics, after being done higher at Rs. 14-2, fell to Rs. 13-11 today. Orient Papers attracted interest at Rs. 35-4 only to close lower at Rs. 33-11. Alkali and Chemicals changed hands at Rs. 21-4, as against Rs. 23-10 previously. India Steamships at Rs. 8 were As. 8 lower, with British Burma Petroleums being quiet at Rs. 3-12. Titaghur Papers were dealt with at Rs. 44, as against Rs. 45 earlier and Indian Cables at Rs. 30-1, as against Rs. 30-10. Martin Burns at Rs. 26-2 were lower by one point over the week.

* * * *

Madras Stock Exchange

MADRAS, 15*th February*

Steady conditions prevailed on the Madras Stock Exchange during the week under review. Despite budget uncertainties, operators evinced considerable interest in buying shares of companies under sound management. Textiles were particularly in the limelight, thanks to reports of recovery in the offtake of cloth for domestic consumption and for export. Tea scrips met with renewed buying support, as also rubber and coffee scrips to some extent. Among miscellaneous shares, purchases were selective, attention being concentrated on cement shares. Bank shares, however, proved an exception and tended to move down for want of support.

Two important dividend announcements have been made this week. First, the United Breweries Ltd. has declared an interim dividend of 10 per cent. for the year ending 31st March 1956. The shares of this Company were quoted at Rs. 188-8 *cum-div.*, as against Rs. 188-8 a week before. Secondly, the India Sugars and Refineries Ltd. has recommended a dividend of 14 per cent. on ordinary shares for the year ended 30th September 1955. The dividend compares unfavourably with 17½ per cent. paid last year. Reflecting the disappointment of operators over the reduced dividend, the Company's scrips registered a loss, yesterday's closing rates being Rs. 21-4 *cum-div.*, as against Rs. 21-8.

Textile shares, as already stated, evoked good demand and scored gains. Bangalore Woollens rallied Rs. 12-8 to Rs. 556. Palani Andavars 'A' shares advanced by Rs. 8-8 to Rs. 158-8. Coimbatore Cottons picked up Rs. 6 to Rs. 352 and Kaleeswars Rs. 5 to Rs. 310. Dhanalakshmis hardened by Rs. 3-8 to Rs. 358-8. Janardanas put on a like amount to Rs. 86-8. Metturs strengthened by Rs. 2-8 to Rs. 375. Balasubramanias 'B' shares, Coimbatore Spinnings and Rajalakshmis gathered a rupee each to Rs. 120, Rs. 82 and Rs. 159, respectively. Pankajas rose by As. 8 to Rs. 69.

In the planting section, rubber shares were in request by operators. Rajagiris moved up by As. 4 to Rs. 21-6. Be Bes, Kailas and Teekoys improved by As. 2 each to Rs. 4-4, Rs. 5-3-6 and Rs. 9-10, respectively. Thirumbadis gained an anna to Rs. 2-4 *cum-div.* Pullangodes were higher by half an anna at Rs. 4-3-6. Among tea shares, United Nilgiris spurted by Rs. 5 to Rs. 315 *cum-div.* Highlands rose by As. 8 to Rs. 15-8. Nonsuch Teas advanced by As. 4 to Rs. 32-8. Waterfalls increased by As. 2 to Rs. 5-13. Periakaramalais gathered 18 pies to Rs. 8-2. Among coffee shares, Consolidated Coffees hardened by As. 2 to Rs. 20-12. Mysore Coffees were better by half an anna at Re. 1-9-6. Kadur Coffees were firm at Rs. 2-9.

Bank shares staged a retreat. Bank of Mysores receded from Rs. 263-8 to Rs. 262-8 *cum-div.* Indian Overseas and Punjab Nationals declined by Rs. 2 each to Rs. 128 and Rs. 44, respectively. Indo-Commercial 'C' shares dropped Re. 1-8 to Rs. 25. Travancores lost As. 2 to Rs. 17-2.

Cement shares were the favourites of operators in the miscellaneous section. Andhra Cement 'A's rallied Rs. 3-8 to Rs. 156-8 and 'B' shares rose by As. 6 to Rs. 15-12. Travancore Cements put on As. 2 to Rs. 11-8. India Cements were fully maintained at Rs. 32-4. A rise of Re. 1 was recorded by Mysore Safes which were quoted at Rs. 46. Mysore Tobaccos were better by As. 2 at Rs. 11. The other shares ruled dull, Ranes and Singarenis being quoted both As. 2 lower, the former at Rs. 8-14 and the latter at Rs. 9-4.

CREDIT SQUEEZE IN NEW ZEALAND

Maximum and minimum rates which trading banks in New Zealand were permitted to charge on overdrafts have now been abolished. The average rate will hereafter be 5 per cent. Since 1941, these banks had been adhering to an arrangement whereby they charged between 4 and 5 per cent. with an average of 4¾ per cent. on overdrafts.

The New Zealand Government has also permitted the banks to pay a higher rate of interest on fixed deposits to be announced shortly. The new measures represent a break in the Government's policy which so far had been to operate the credit squeeze without increasing interest rates.

For some time now, it has been clear that monetary control was not sufficient to curb spending to the extent the Government wanted, unless it was extended to interest rates. Trading bank advances had risen by £4.4 million from £173.1 million in January 1955 to £177.5 million last month.

NEWS IN BRIEF

PRODUCTION of finished steel, which was 1,243,467 tons in 1954—a record till then—rose to 1,263,782 tons in 1955.

The Sindri Fertiliser factory, which has been producing ammonium sulphate since 1951, has helped the country to save over Rs. 33 crores by way of foreign exchange.

The *per capita* consumption of electricity will be 25 units at the end of the first Five-year Plan period, as against 14 units in 1952. It is expected to rise to 50 units by 1961.

India has spent Rs. 809 crores on irrigation and power projects since independence. This is four times the amount invested on such projects when the country was under British rule.

A Bill to extend the Control of Shipping Act, 1947, for a further period of two years from April next has been introduced in the Budget session of Parliament.

The Annual General Meeting of members of the Indian Jute Mills' Association for the year 1955 will be held at the Royal Exchange, Calcutta, on Friday, 16th March 1956.

The official Burmese Purchase Mission has placed orders worth about Rs. 2 crores in Calcutta for gunny bags, jute and jute goods. Part of the order for jute and jute goods, worth about Rs. 35 lakhs, has been given to firms with interests in Pakistan.

Import of aluminium scrap of commercial quality having a purity of 99 per cent. and above will be liberally licensed from the soft currency area to all categories of importers during the current half-year. A part of these licences will also be validated for imports from the dollar area.

India will import 42,000 tons of wheat next month. Of this quantity, 20,000 tons will be from the U.S.S.R., 18,000 tons from Australia and 4,000 tons from the U.S.A. With these imports, the aggregate imports during February and March will come to over 71,800 tons.

A coal mine, estimated to yield 50,000 tons of coal per month and considered to be the richest single quarry in India, was opened in Adilabad district, Hyderabad State, early this week. The mine is estimated to have a deposit of 45 million tons of coal.

All the six textile mills in Nagpur, employing about 14,000 workers, were closed down with effect from 11th February, following the continued strike by the workers. The management of the mills announced that the mills would remain closed till such time as a substantial number of workers indicated their willingness to resume normal working "in a disciplined manner."

The Government of India has decided to grant a special rebate of six pies in the rupee on all genuine retail sales of handloom cloth from Weavers' Co-operative Societies, Government Emporia and Consumers' Co-operative Societies. This is in addition to the existing rates of rebate on sales of handloom cloth. The special rebate will be admissible on sales effected during the third All-India Handloom Week from 19th to 25th February 1956.

Deposits of china-clay have been located by the Geological Survey of India near Dumka, the district headquarters of Santal Paraganas, in Bihar State. Large deposits of good quality china and ball clays have also been located in Quilon and Trivandrum districts of Travancore-Cochin. The deposits are estimated to yield 60,000 tons of crude clay in Bihar and 7.5 million tons of refined china-clay in Travancore. On washing, it can be used in the manufacture of pottery and in the paper and textile industries. The prospecting is, in the first instance, confined only within the exposed limits of the deposits and further prospecting was necessary to find out the full extent of the deposits. The total reserves of refined ball clay of good quality in the above districts of Travancore-Cochin are estimated at 10 million tons.

The nine oil mineral experts from Russia, who arrived in India in the last week of November to make recommendations to the Union Government on the development of oil and mineral field, have completed their study visits. They are now in Calcutta writing their report. They are expected to proceed to New Delhi next week when important discussions are scheduled to be held on the schemes of the Ministry of Natural Resources and Scientific Research. The Government policy is to conduct oil and gas prospecting and exploration under State auspices. The Ministry has, meanwhile, set up an Oil and Natural Gas Division with headquarters at Dehra Dun. This Division will be in charge of the operations connected with oil and mineral prospecting. Dr. A. Ghosh, who accompanied Mr. K. D. Malaviya, Minister for Natural Resources and Scientific Research, during his visit to the Soviet Union, will be in charge of the Division.

The Government of India has appointed an expert committee, with Prof. H. G. Champion, Professor of Forestry, Oxford University, as Chairman, to review the working of the Forest Research Institute and Colleges, Dehra Dun. According to its terms of reference, the Commitee will review the progress of research done during the past five years, study the organisation of the Institute and suggest improvements in the quality of research. It will also advise on steps to be taken for ensuring efficiency in the conduct of investigations, establishing liaison with other research institutions and securing quick publication of the results of research. The other members of the Committee are: Prof. M. S. Thacker, Additional Secretary, Ministry of Natural Resources and Scientific Research, Mr. M. D. Chaturvedi, retired Inspector-General of Forests, Dr. B. P. Pal, Director of the Indian Agricultural Research Institute, and Mr. C. R. Ranganathan, Inspector-General of Forests. The Committee is expected to begin its work in the third week of March.

The Government of India has set up the National Small Industries Corporation Ltd., New Delhi, with a view to assisting small-scale industrial units. The Corporation will arrange for execution of certain requirements of the Director-General of Supplies and Disposals through small-scale units registered with it on the recommendations of State Governments. To begin with, over 200 items of stores have been reserved for procurement through the cottage and small-scale sector only. Such small-scale units in Bombay State as are interested in manufacturing and supplying these stores may apply to the Department of Industries for an application form and a copy of the proforma for getting their names registered with the National Small Industries Corporation. The lists of items will be available for inspection in the office of the Director of Industries, Old Customs House Yard, Fort, Bombay 1, and also in the offices of all the Industries Inspectors and the Regional Assistant Directors of Industries throughout the Bombay State.

* * * *

From Abroad

A four-year replanting programme for Ceylon's rubber industry has been drawn up. The programme envisages a replantation of 100,000 acres which will raise the crop by 50 per cent.

Pakistan and the United States of America have signed an agreement, under which the U.S. will give an aid of $8.5 million for the Karanafuli multi-purpose project in East Pakistan.

Life insurance sales in the U.S. during 1955 aggregated $48,800 million, the highest for any year on record, according to the Life Insurance Agency Management Association. These sales represented an increase of $3,300 million over 1954.

The World Bank has agreed to give Egypt a loan of $200 million for the construction of the Aswan High Dam, according to Cairo radio reports. The same source said that discussions between Mr. Eugene Black, the Bank's President, and the Egyptian Government, held in this connection, had ended.

Production and export of Italian motor vehicles reached record levels during 1955. The output of vehicles amounted to 268,756, including 230,833 passenger cars, 24 per cent. more than in 1954. Exports, at 74,645 vehicles, were 69 per cent. higher than in the previous year.

The sales of U.S. manufactures reached a record total of $317,000 million in 1955, which was $36,200 million more than in 1954. Sales of durable goods accounted for $157,900 million, showing a rise of $24,300 million, while those of non-durables went up by $11,800 million to $159,000 million.

The Burmese Embassy in London announced last week that the Government of Burma had fixed the price of rice for the year 1956 of S.M.S. (small mills special, or basic quality) at £36 5*s.* per long ton f.o.b. This represented a reduction of £5¾ per long ton from the 1955 price of £42 per long ton for the same quality of rice.

On the basis of the latest information received, world population as of mid-year 1954 is estimated at 2,655 million by the latest quarterly issue of *Population and Vital Statistics Reports*, published last week by the Statistical Office of the United Nations. Some of the breakdown figures are: Africa, 214 million; Asia 1,451 million; North America, 233 million; and the U.S.S.R., 214.5 million.

An agreement between the Ceylon Government and four American and British oil companies for the setting up of an oil refinery in Colombo is expected to be signed shortly. Negotiations in this connection between Ceylon and Shell, British Petroleum, Standard-Vacuum and Caltex Oil companies have reached the final stage and details are being worked out. The refinery, if finally agreed upon, will have an annual output of about 1.05 million tons.

Production tests carried out by the Kuwait Oil Company (jointly owned by the Gulf Oil Corporation and the British Petroleum Company) on the first well drilled at Randhatain, North Kuwait, have proved the existence of considerable oil accumulation, the actual extent and commercial value of which can only be established by further test drilling. The new well is described as unquestionably a major discovery. A second exploratory well is being drilled now.

The Esso Export Corporation of the U.S. has announced an increase of 7 cents per barrel to $2.46 per barrel f.o.b. in its postal price for crude oil of 36 degrees A.P.I. gravity available at Eastern Mediterranean loading ports, with effect from 9th February. Shell Petroleum Company of U.K. has also increased its prices for bunker oil fuel at sterling-priced ports varying from 2*s.* to 9*s.* 6*d.* per ton. The prices at main U.K. installations have been raised by 5*s.* per ton. The new prices have come into effect from the 8th inst. British Petroleum Trading is yet another company to raise its posted prices for gravity 36.0/36.9 A.P.I. f.o.b. Tripoli and Banias by 10 cents to $2.49 per barrel. The increases are all said to be due to higher freight costs.

The U.S Senate Agriculture Committee has approved of a Farm Bill which provides for rigid price supports, along with President Eisenhower's "soil bank" plan. The Senate's approval thus overrides the President's contention that rigid support would defeat the main object of the "soil bank" plan, under which farmers would be paid to plant less of the surplus crops than their allotments under the control programme. The Committee has deleted a provision to sell surplus cotton for export at competitive world prices and added provisions to benefit dairymen and tobacco growers. It also approved of a provision to exempt surplus sales for export from the present requirement that half of all U.S. Foreign Aid shipments must be made in U.S. ships.

World mine production of tin in concentrates, exclusive of China and the Soviet Union, is estimated by the International Tin Study Group of The Hague at 168,000 tons. This estimate is 0.9 per cent. lower than the actual production in 1954. Malaya's output in 1955, at 61,425 tons, set up a new post-war record and was 0.9 per cent. higher than that in 1954. Output of Belgian Congo rose by 4.8 per cent. to 15,200 tons, of Siam by 11.2 per cent. to 10.875 tons and of Nigeria by 1.7 per cent. to 8,060 tons. Indonesian production declined from 35,861 tons in 1954 to 33,368 tons and that of Bolivia fell by 5 per cent. to 27,400 tons. World consumption in metals (exclusive of China and Soviet Union) during 1955 is estimated to have risen by 7.6 per cent., from 138,500 tons to 149,000 tons. Consumption of tin for the manufacture of tinplate rose from 59,200 tons to 62,700 tons.

PERSONAL

MR. B. P. Aderianwala, an officer of the State Bank of India, has been appointed Manager of the London Office of the Bank.

Mr. S. L. Manshoit, the Netherlands Minister for Agriculture, Fisheries and Food, has arrived in India on a twelve-day visit of this country.

Dr. L. N. Palar, Indonesian Ambassador in India, has left for Singapore, *en route* to Djakarta, on completion of his three-year term in this country.

Dr. R. Sankaran, Deputy Secretary of the Indian Central Cotton Committee, Bombay, has been appointed Secretary of the Indian Central Oilseeds Committee, Hyderabad, under tte Ministry of Food and Agriculture.

Colonel Lyndall F. Urwick, one of Britain's leading consultants on management, has arrived in India to advise the Government of India on the future training of India's industrial managers. Col. Urwick's visit has been arranged under the Colombo Plan Technical Co-operation Scheme.

Prof. T. H. Marshall of the University of London has been appointed Director of the Department of Social Sciences of the United Nations Educational, Scientific and Cultural Organisation, Paris. Mr. Marshall, who will take over his new duties on 1st May, succeeds Mrs. Alva Myrdal, who recently became Swedish Minister to India, Burma and Ceylon.

Mr. R. H. Macnab, a Fellow of the Pharmaceutical Society of Great Britain and head of the Veterinary Department of A. J. White Limited, of London, specialists in British nitrofuran products, will arrive in India on 2nd March. Mr. Macnab has a full programme of meetings with eminent veterinary research scientists to discuss the new methods of treating animal diseases.

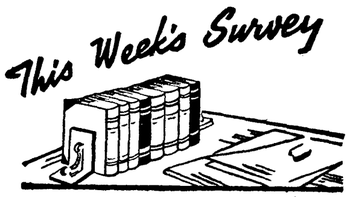
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 21*st February*

The Rupee Ratio

One of the peace terms offered by Mr. Gandhi is that the rupee ratio should be brought down from 1*s.* 6*d.* to 1*s.* 4*d.*, the pre-war level—a level at which it had stood the test of time. There are, of course, two sets of views about this knotty problem—one in favour of the alteration and the other against it. The former is, of course, pre-eminently and predominantly Indian and the latter, more or less, official. Rumour was persistently busy, when the Round Table Conference was in session in London, about the impending alteration of the rupee ratio and it gained so wide a currency that an official denial had to be published both in India and England. With a view to dispel all doubts in the matter, Mr P. Freeman asked in the House of Commons last week whether His Majesty's Government intended to continue to maintain the rupee at 1*s.* 6*d.* Mr. Wedgwood Benn, the Secretary of State for India, replied that the Government regarded the rupee ratio question as settled in 1927, when the Indian Legislature passed the Currency Act, whereby the rupee was rated at 1*s.* 6*d.* The Government, he added, would use all means in their power to maintain this rate in accordance with their statutory obligations.



FROM AVADI TO AMRITSAR

THE Congress has turned left and is moving fast towards socialism. At the Avadi session, last year, the party defined its goal as the "socialistic" pattern of society. This year, it has re-defined its goal as a "socialist" pattern of society. The terminological change, it is stated, is not casual but deliberate. The objective of the Congress, according to Mr. Jagjiwan Ram, Minister for Communications, is now "unmistakably one of dispensing social justice as quickly as possible." It would seem that the Congress has not only chosen the establishment of a socialist State as its goal but is also determined to increase the pace of the country's progress towards this ideal. The Prime Minister, Mr. Nehru, emphasised that it had been decided that the aim of India was to build a "socialist structure of society" and even those who had some doubts about it were seeing that "steps are being taken to bring it about." He felt that only a few people were against this objective but others had begun to believe in it. He, however, stated that the goal would be reached "step by step," and no hard and fast doctrine could be laid down in this respect.

The Congress President, Mr. Dhebar, was more outspoken in his general affirmation of the goal of the Congress. He said that the party felt that the objective of a "co-operative commonwealth" did not express in sufficiently clear terms the nature of the society it intended to evolve. So it decided to give its thoughts a firm foothold and clothe them in a language beyond doubt; the result was the resolution on "socialistic" pattern of society adopted at Avadi. Elucidating the significance of this goal, he said that it implied the "existence of not only a dynamic objective but a dynamic programme." "From a society accustomed to privilege and profits to a society based on the concept of equality of status and opportunities," he said, "is a far cry." But the Government had taken several steps to reduce social and economic disparities. In this connection, he referred to the removal of the princely order, the rationalisation of the tax structure in Parts B and C states, the elimination of the *zamindari*, tenancy reforms, legislation relating to estate duty, nationalisation of the Imperial Bank, the amendment of the Companies Act and nationalisation of insurance. These steps, he assured the party, were only the beginnings of a process of reducing economic disparities.

Mr. Dhebar thought that a wider measure of reducing disparity in incomes and wealth could only be secured by implementation of "deliberate" social and economic policies. He then indicated what the party had in mind in regard to the future of the country's economy. He said:

"So far as rural economy is concerned, we have started on the road to socialism in action by the application of ceilings on land holdings. But, in other sectors of our economic life, we are still in a discussion stage, more or less. Application of ceilings on private incomes is inescapable. There are other measures which are being discussed, namely, graded surcharge on incomes beyond a certain limit, a compulsory deposit of an amount equal to the surcharge on agricultural incomes, enhancement of estate duties and an annual tax on wealth. *We hope to reach some positive decisions on these in the near future*" (italics ours).

The economic policy resolution adopted by the Congress at its Amritsar session, generally reflected the socialist sentiments which were expressed by the Party leaders. After emphasising that the Avadi resolution gave a "new direction" to the programme of planned development of the country, the resolution goes on to point out that the "conversion of the Imperial Bank of India into a public-owned and public-managed State Bank and the recent nationalisation of life insurance are significant steps towards the evolution of a socialist structure." In the interests of rapid industrialisation, special stress is laid on the development of basic industries such as steel, heavy machinery, coal and heavy chemical industries. Likewise, the exploitation of mineral resources has been emphasised. The resolution repeats the language of the Draft Outline when it refers to the public and the private sectors. Thus, the public sector must expand but the private sector also has an important part, though only within the framework of the Plan. The *basic* test for determining the lines of advance should be social gain, and not private profit. Industrial co-operatives should be encouraged in decentralised industry. A socialist structure of society, it is pointed out, necessarily involves equality of opportunity for all and a "progressive equalisation of income." The resolution has generally approved of the "approach, policy and proposals" of the Draft Outline of the second Five-year Plan. By means of another resolution on small savings, the Congress has stressed the vital role of such savings and their investment in Government loans. "Any conspicuous and unnecessary spending," the resolution declares, "is completely out of place and anti-social and must be discouraged."

So much for the economic policy of the Congress party, as it is reflected in the resolution on the subject and in the speeches of its leaders. It is now quite obvious that the party has made it plainer than ever that it is socialism that it seeks. The public sector is to grow and all possible steps will be taken to see that it does. That is clear enough. But it is anybody's guess as to what the party means when it says that the private sector has also to play an important part within the framework of the Plan. This is because all lines of advance are to be determined by a reference to social gain rather than to private profit. And, "social gain" is a vague standard. Perhaps, it would not be wrong to surmise that what the party really means is that the private sector will be allowed to live its life only until the public sector grows powerful enough to supplant it. This is not a prospect which will evoke much enthusiasm in the men who are engaged in the private sector.

The dynamics of the variety of socialism preached by the Congress is not very clear. The emphasis on heavy and capital goods industries is understandable. But how can such industries thrive in the context of a deliberate policy for keeping alive uneconomic industries? Equally difficult to understand is the logic of ceiling on incomes. Obviously, it cannot bring any large revenue to the Government while its disincentive effect on the private sector will be immeasurably great. Further, as has been repeatedly pointed out by the Government's critics, this excessive emphasis on "soak-the-rich" policy will only end in levelling down of incomes, without in any way contributing to the levelling-up process.

To the Congress, the acceptance by its members of the goal of socialism may indicate a political gain in the sense that the party has stolen the thunder of its political opponents. But the gain may be purely temporary. For the other political parties might conceivably move further left from their positions, in order to show how deplorably rightist the Congress is. But the fundamental question is whether the Congress is following socialism, because it considers that it is the only right goal for this country or because there is an insistent demand for it from the party members. If its faith in socialism is based upon the conviction that it is the only goal worth pursuing, it only means that the party is acting from purely doctrinaire considerations. If, on the other hand, the Congress leadership is being compelled by the rank and file of the party to adopt socialism as its goal, it means that the leaders, instead of leading, are being led.

NATIONALISATION

The view that nationalisation is a panacea for all economic ills has no doubt been held by many political groups in this country. The earlier view, supported by no less an authority than the Prime Minister, that the Government's resources are better utilised in starting new enterprises than in taking over the existing ones is apparently receding to the background. Nationalisation of insurance has led to a demand from certain sectors for similar action in respect of banking, shipping and a host of other industries. At the recent Congress session, there was even a demand for nationalising textile mills. Very often, such demands proceed from just mental inaction, a tendency to over-simplify problems and a pious and convenient belief that the State, like some ministering angel, can always set things right. In this context, the views on nationalisation, held by Mr. Hugh Gaitskell, Leader of the Labour Opposition in the U.K., in the course of replies to questions put to him by journalists, will be read with interest. Asked to state his attitude to public ownership and nationalisation, he said:

"It is hard to explain in a few words. First, I look on nationalisation as a means towards more fundamental ideals. I recently suggested that these included social and economic equality, full employment, maximum productivity, industrial democracy, and not as an end in itself. Secondly, I believe that the arguments put forward for nationalising fuel and power, transport, steel, etc., have been abundantly justified by the results. These arguments were for the most part that only nationalisation would give us the best technical framework for maximum productivity while avoiding private monopoly. Thirdly, I recognise that there are criticisms and disappointments, especially in the field of worker-management relations. These, I would like to see investigated. Fourthly, we have to admit that the simple, direct and unique relationship between wholesale nationalisation and the ultimate ideals of socialism which early theorists took for granted cannot be assumed in the new circumstances today. This is an open question on which we need to and shall think afresh, as announced at our Margate Conference. Fifthly, it is wrong to identify nationalisation and public ownership. You could have public ownership, e.g., through public authorities owning land, buildings, and the State extending its holding of industrial securities without necessarily nationalising industries. There are also other forms of public ownership and enterprise which should be considered, such as co-operative production, Government firms within an industry, Government factories, etc."

There are two aspects of Mr. Gaitskell's statement which deserve notice. They are his insistence that nationalisation cannot be conceived in terms of an end in itself and his reference to the fact that socialism, in the modern context, does not necessarily mean wholesale nationalisation.

EQUIPPING INDIAN RAILWAYS

The contract entered into between the Government of India and a U.S. engineering firm, Messrs. Sanderson and Porter, New York, on the 11th inst., for the determination by the latter of the most practical way for equipping India's railways system to cope with its expanding traffic load, is rightly hailed as another instance of the many ways in which the U.S. has been contributing to India's economic development under the Indo-American Technical Co-operation Agreement of January 1952. The Contract, which extends over a period of 20 months, provides for the deputation of an 18-man team of U.S. engineers to study the present and future problems of the Indian railway system. The dollar cost of the study will be borne by the U.S. International Co-operation Administration (I.C.A.). The total cost of the project is estimated at about $520,000 (Rs. 24.9 lakhs), of which the cost to be borne by the U.S. is placed at about $450,000 (Rs. 20.6 lakhs).

The proposed study has great significance to the economic development of India. For, with the growing pace of economic activities in the next five-year period, the pressure on the Indian railway system which is already heavy will increase further. The next Five-year Plan contemplates an expenditure of as much as Rs. 900 crores on the development of railways, a sum which is more than double the amount that would have been actually spent by the end of the first Plan. It is estimated that the actual expenditure on development of railways in the first Plan will be about Rs. 419.2 crores, as against the target of Rs. 400 crores. The studies to be undertaken shortly will assist the Government of India in determining the most practical methods by which the necessary expansion of transportation facilities can be achieved in the most efficient manner.

Perhaps, the chief reason why the Government of India entered into this contract with the U.S. firm is that the Indian railway system is more or less similar to that of the U.S. The Indian railway stretches over vast distances, as does the railway system in the U.S. The U.S. railway system, it may be mentioned here, is the largest network in the world, with 223,000 miles of track, while the Indian is the fourth largest, with a total mileage of 35,000. The problems relating to signalling, tracking and other controls in India may be similar to those of the U.S. railways and American experience may be more useful than that of any other country for solving them. It is noteworthy that the team of experts from the U.S. will be drawn from all branches of railway operation, such as transportation, signalling and mechanical engineering. It is expected to arrive in India at the end of this month. Some of the Indian engineers will be seconded to the American team. This is intended to provide the team with any information it may need in order to arrive at correct decisions.

LABOUR MANAGEMENT

The sixth all-India annual conference of the Indian Institute of Personnel Management, held in Madras early this week, discussed, among others, problems relating to labour management. Inaugurating the Conference, Mr. Sri Prakasa, the Governor of Madras, stated that the basis of labour-management relations was chiefly psychological, inasmuch as it related to the handling of human material. He regarded the human touch "to be far more important than all rules and regulations." He asserted that promotion and maintenance of peaceful industrial relations would not be possible unless all persons who were connected with production were made to feel that they were doing their own.

In the course of his presidential address, Mr. S. C. Joshi, Director of Personnel, Tata Iron and Steel Co., Ltd., urged the need for giving as much importance to personnel management as to any other function of management. Pleading for a professional code of conduct, he stated that those entrusted with personnel management should be equipped with the essential qualities of courtesy, patience, freedom from prejudice and readiness for compromise, when necessary, without sacrificing principles and impartiality. It was his firm conviction that personnel officers should have only advisory powers and not executive powers. He remarked that a personnel officer would be valued and respected by all concerned, only if his advice was impartial, just and correct.

Mr. S. Anantharamakrishnan, Chairman of Simpson & Co., Ltd., Madras, emphasised the need for creating conditions under which the principal interests concerned in industry, namely, capital, labour and consumer, would all be treated fairly, so that industrial peace might be ensured. He suggested the appointment of a wage commission to see that labour was paid fair emoluments for a fair output and also the establishment of a statutory board, on the lines of the Price Adjustment Board of the U.S., to fix the retail prices of goods, after determining the reasonable return to capital and providing adequate wage and safeguards to labour. He was of the considered view that it would be better for industry, in particular, and the country, generally, to allow the representatives of labour to participate in management even now. But he emphasised that the consumer also should be represented on any board with which labour was associated, in order to see that neither capital nor labour enjoyed more than they were entitled to.

Mr. S. Guruswamy, General Secretary of the All-India Railwaymen's Federation, pointed out that there was no single standard for prescribing measures to avoid industrial disputes, because the disputes varied from establishment to establishment. Elucidating this statement, he said that the nature of the establishment determined the mode of dispute and the method of settlement. An industrial dispute, he claimed, did not merely mean a dispute between the employers and the employees, but it also covered disputes between workers and workers and employers and employers. He welcomed the idea of one union for one industry, provided it was based on the principle of industrial democracy. Finally, he expressed the view that it was necessary to have a standing industrial council for every undertaking, with representatives of workers and management on it to consider the day-to-day problems. He, however, stated that all these could only minimise industrial disputes and added that he did not know whether there was any talisman that would completely root out industrial disputes.

Mr. H. Smith, General Manager, Aspinwall & Co. (Travancore) Ltd., expressed the view that negotiation at the factory level was the most valuable in the avoidance of disputes. He said that it should be based on the will to conciliate. He added that it was sometimes believed that conciliation displayed weakness, because conciliation was confused with concession. He did not think that the goodwill of workers could be purchased by concession but that it had to be earned by persistent and determined wish to understand the difficulties of workers and by doing everything possible to remove them. Holding that it was equally important that the manager should not surrender his rights and obligations, Mr. Smith said that there should at all times be a firm insistence on the maintenance of discipline.

Mr. R. P. Billimoria, Management Research Officer, Tata Iron and Steel Co., Ltd., said that management training was not the monopoly of any individual sector. It should be imparted simultaneously at three different levels—the

LIFE INSURANCE

LIFE BLOOD OF NATIONAL PROGRESS

BY THE Life Insurance (Emergency Provisions) Ordinance, 1956, promulgated by the President on 19th January 1956, the Management and Control of Life Insurance business in India, including the foreign business of Indian Insurers and the Indian business of Foreign Insurers vest, with immediate effect, in the Central Government.

This is the first step towards complete Nationalisation of Life Insurance business—a step never before attempted anywhere in the world on such a gigantic scale—and opens a new chapter in the history of Indian Insurance.

How does the new set-up affect YOU?

EXISTING POLICYHOLDERS

If you are insured with any Insurer in India, the terms, conditions, benefits and privileges attaching to your Policies remain exactly as they are and claims will be settled as and when they arise, with absolutely no delay or trouble. What is more, Government Control will ensure prompt and efficient service to which you are entitled as a Policyholder.

Keep your Policies in force. Do not lapse them or make them paid-up. Continue to pay your premiums in the normal manner.

LIFE INSURANCE AGENTS

If you are a Life Insurance Agent your appointment will continue to remain in force.

Armed with the knowledge that the Policies you now sell have the entire backing of Government, go ahead and spread the glorious message of life insurance to as large a section of the public as possible, confident in the belief that thereby you will not only be increasing your income but, at the same time, will also be directly serving the country towards planned economic development.

INSURING PUBLIC

Nationalisation of Life Insurance is primarily aimed at widening and deepening of all possible channels of public savings and is an important step towards mobilising these savings more effectively than heretofore to finance the National Plan.

Every rupee you invest in Life Insurance to-day will not only secure the future financial security of your family but also ensure greater prosperity for more and more people.

The Policies you now effect will have the full backing of the Government and be subject to liberal Policy conditions, uniform throughout India. The rates of premiums will also be uniform as indicated below:

REDUCTION OF PREMIUM

The Premium applicable to Life Insurance contracts completed on and after the 20th January 1956 will be Re. 1 per Rs. 1,000 Sum Assured per annum less than the rates of premium of the ORIENTAL GOVERNMENT SECURITY LIFE ASSURANCE CO., LTD., for all terms and ages and for all schemes of Insurance, provided that where the annual premium is below Rs. 20 per Rs. 1,000 sum assured the reduction will be 5% of the premium. This reduction is not applicable to Single Premium Policies. Only those Schemes of Insurance which appear in the Tables of Rates of the ORIENTAL in force prior to 20th January 1956 will be offered.

NATIONALISATION

offers to you

ABSOLUTE SECURITY — BETTER POLICY CONDITIONS — CHEAPER RATES — DEPENDABLE SERVICE — ECONOMIC MANAGEMENT — FAVOURABLE RETURNS.

So take out a Policy NOW and become eligible to reap the benefits of Nationalised Insurance.

PHYSICAL PLANNING AND FINANCIAL PLANNING—I

BOLDER APPROACH NEEDED

By A Special Correspondent

WHEN the Panel of Economists was constituted early last year, one of the first questions assigned to it for study was the "Implications of Physical Planning." The question was discussed but one finds little mention of this approach to planning either in the voluminous publication, entitled *Papers relating to the Formulation of the Second Five-year Plan* or the *Draft Outline of the Second Plan*. The question remained more or less forgotten till Professor Mahalanobis brought it to the forefront again last month, when, delivering a popular lecture at the Agra session of the Indian Science Congress, he said:

"In spite of the ridicule poured on it, I still maintain that what we require is a type of physical planning and planning in terms of men, material and resources."

Physical planning is often spoken of in contradistinction from financial planning. Some members of the Panel of Economists have given expression to their views on the difference between the two in their recent writings here and there. Dr. A. K. Das Gupta, writing in the *Papers*, says that the distinction between physical and financial planning could be valid "if by financial planning were meant merely a planned adjustment of aggregate money flows, with a view to avoiding inflation or deflation as distinct from a planned allocation of resources. . . . Where, however, the object of planning is to accelerate the pace of economic development through the enlargement of the capital base, emphasis must necessarily be on allocation of resources. In this sense, planning for economic development will inevitably take the character of physical planning. On the other hand, unless you have a totalitarian economy ... allocation of physical resources, even though planned from the Centre, will have a financial counterpart." Dr. R. Balkrishna, another member of the Panel, has the same views. Writing in *Commerce Annual Review Number*, he says: "The controversy between financial and physical planning is needless, as the two are not really contradictory. Physical planning is absolutely essential for giving concreteness to effort. But finance is the mobiliser of physical planning. Neither financial nor physical planning by itself can set things going without an integration between them."

Savings Should Be Camp-follower

But the Press report of Professor Mahalanobis's Agra speech (referred to above) clearly shows that he is not acting on this literal and superficial meaning of "physical planning." He further said: "Planning should be directed to solve the problem of unemployment and vast poverty and provide people with educational and cultural amenities. This requires what may broadly be described as physical planning."

The Press report of Professor Mahalanobis's speech does not give the precise definition of this controversial concept, but an increasing number of people have begun to believe that what we in India require is a sort of planning in which the size of the plan is determined not by the financial resources or the "savings fund" of the community but by the physical resources in terms of men and materials. Availability of investment resources in financial terms is low in India, but in physical terms investment resources are in abundance. Our approach to planning should, therefore, be such that investment of physical resources is not dependent on the "savings fund" but savings themselves should be a sort of camp-follower of investment.

When one reads the employment and income potentials of the second Plan in the *Draft Outline*, one feels—as Professor Mahalanobis does—the urgent necessity of a change in our present approach to planning. The *Draft Outline* puts the employment content of the second Plan at 8 million. This is only a little more than half of the total demand for jobs and job opportunities estimated as follows for the period of the second Plan:

Demand for Employment during Second Plan

(Million persons)

	Urban	*Rural*	*Total*
New entrants to labour force ...	3.8	6.2	10.0
Backlog of unemployed ...	2.5	2.8	5.3
Total ...	6.3	9.0	15.3

These figures, which are admittedly based on inadequate surveys, may well represent a highly incomplete account of the demand for employment. Professor Kesava Iyengar, writing in *Commerce Annual Review Number*, says that "in the recent socio-economic survey of Hyderabad-Secunderabad City, in the age-group between 13 and 70 the number of 'do-nothings' and 'sit-at-homes' comprised 55 per cent. of the total number of persons. Allowing for a liberal margin for domestic work, students, disabled persons, etc., there should still remain a huge quantity of manpower that should be absorbed in any modern plan." Besides the unemployed, the second Plan also leaves a vast mass of under-employment inadequately tackled. This incites one to question the present basis of planning.

From the viewpoint of *per capita* income, too, the same disappointing picture is visible. *Per capita* income, which at 1955 prices is estimated to be Rs. 21 per month, is expected to rise to Rs. 24-8 per month at the end of 1960-61. The lower third of the population has *per capita* income of about Rs. 15 per month, which is expected to go up to Rs. 18 in 1960-61. This means that, at the end of the second Plan, that is, after the lapse of a 10-year long period of planning, the average Indian will be able to take three-fourths and the lower third of the population only one-half of the standard diet, even if they were to spend all their income on food. This cannot satisfy the aspirations of the people. An annual increment of As. 10 in the monthly income of an average person cannot be called progress in the true sense of the word. One is inevitably inclined to think that something is wrong with the present approach to planning.

As everyone knows, ours is among the countries with the lowest *per capita* incomes. It is not the poverty in the absolute sense that is felt so much as the poverty of the Indian people relatively to people in other parts of the world. The income of an average person in India is roughly 1/30th of that of an average American, 1/20th of an average Canadian, 1/18th of an average person in Norway, Sweden, Switzerland and New Zealand, and 1/15th of average in the U.K. and Australia. A 5 per cent. increase in *per capita* income in the U.K., for instance, means an increase of Rs. 200 per annum, but the same rate of increase in India means an addition of only Rs. 12 per annum. It is thus clear that, unless we increase our rate of investment several times higher, the gap between the incomes of people in India and other countries will go on widening. At the rate of investment envisaged in the second Plan, we will become increasingly poor as compared with the people in advanced countries, whose ranks we aspire to enter. We must have a much higher rate of investment, and, if this is not possible under the purely financial planning based on the theory of savings determining the rate of investment, a different approach will have to be found.

What Maurice Dobb Said

Maurice Dobb, in one of his three lectures at Delhi University in 1951, said something very instructive for the purpose of the present discussion. He said:

"According to the traditional view, the available and mobilisable 'saving fund' of the community is the crucial bottleneck which sets a limit to the possible rate of economic development. ... But to speak of development as being limited by the size of the basic saving fund ... only makes sense on the assumption that the margin between production and consumption can only be enlarged by lowering consumption and cannot be enlarged to any appreciable extent by enlarging total production. As soon as we drop this assumption and allow the possibility of an increase in total production, the limit upon development of which we have spoken loses its absolute character, and may even cease to have much meaning as a limiting factor at all. It will be one of the contentions which I shall recommend to your consideration in this lecture that the problem of industrialisation is essentially not a financial one, but a problem of economic organisation." (*Lecture on Industrialisation in Agricultural Countries.*)

Incidentally, Professor Mahalanobis was, perhaps, thinking on similar lines when, in his Agra speech he discounted the austerity appeals and said: "But a country like India could advance only by stimulating consumption and providing goods during the transition by utilisation of available craft."

Maurice Dobb derives his theory from the history of economic development in Russia, the subject on which he is an authority. Russia was by no means better industrialised at the time it entered the planning era than what India is today. Nor did she have a larger savings fund than India has today. Yet it was able to solve its problems far more speedily than is being contemplated in our country. At the time the first Five-year Plan was launched in Russia, the country had inherited a huge problem of unemployment from the N.E.P. period. But, during the third year of the Plan, that is, in 1930, a statement was issued to the effect that unemployment had been liquidated. The quick tempo of economic development had absorbed all the workers who had registered at employment exchanges. In the period that followed, an actual shortage was felt of workers, especially of certain categories, and steps had to be taken to rationalise the use of labour. The total number of wage and salary earners actually doubled over the period. The rate of investment was between 25 and 33 per cent. of the national income. According to official estimates, the increase in national income during the first and the second Five-year Plans was 3.85 fold. (This and the following information has been taken from the *Russian Economic History*, by Alexander Baykov, *Soviet Economic Growth*, edited by Abraham Bergson and Maurice Dobb's book on Russian Economic Development since 1917.)

Physical Approach

This leaping progress in Russia was made possible by what may be called the physical approach to planning, or to be more precise, securing independence from financial limitations. At the end of the first Five-year Plan in Russia, it had begun to be realised that "the financial aspect of the ensuing plans would encounter no difficulty and the finances would be adjusted to the course of the material processes of the country's national economy. Finances were to be moulded to suit the evolution of these processes." Such a marvellous progress in Russia urges us to ask ourselves: Can we not eliminate unemployment by 1960-61? Can we not at least double our national income between 1951 and 1961? Can we not speed up our economic progress, so that the gap between the *per capita* income levels in our country and the advanced countries of the world narrows down?

According to present approach to planning, even the limited targets set out in the *Draft Outline* may not be achieved. The uncertainty about the availability of financial resources for the Plan has been repeatedly emphasised in the Draft and also repeated in the outline. A clear gap of Rs. 400 crores has been left unfilled. Small savings have been assumed at an average of Rs. 100 crores a year. It is assumed that these savings which rose from Rs. 33 crores in 1950-51 to Rs. 54 crores in 1954-55 will rise to more than Rs. 150 crores in 1960-61. Rs. 450 crores are to be realised from additional taxation. This, it is stated, would necessitate taxation of commodities of mass consumption. This amount may be difficult to realise, especially when the additional demand for consumption goods is to be met from the small-scale industry sector, the prices of whose products would tend to be higher than those of factory consumer goods. Imposition of higher taxation may affect receipts from small savings and public loans. In fact, the whole premise of savings of the community rising from 7 per cent. of the national income to 11 per cent. has been considered problematic by eminent economists. If these fears are genuine, employment and income generation during the second Plan period may be even smaller than the envisaged scale, not to speak of our trying to approach the scale of development realised in Russia.

Two Sources

The two sources of finance which made planning in Russia free from the shackles of the savings fund of the community were

(i) Turnover tax; and

(ii) Credit expansion.

The turnover tax is the difference between the cost of production of a commodity and the price it fetches, and it forms an item of revenue for the State's expenditure on society. The actual cost of production of a commodity in the socialised sector was the wages paid to labour at successive stages of production. But their

(Continued on page 317)

AMERICAN LETTER

BANKERS ON ECONOMIC TRENDS

GOLD AND DOLLAR HOLDINGS OF FOREIGN COUNTRIES CONTINUE TO GROW

From Our Special Correspondent

THE strongest impression of this year's bank stockholder meetings in the United States was the confidence of presiding officers in the economic outlook for the year. Naturally, there are variations of opinion, but the consensus at this point is that 1956 may equal last year in productivity and national income. Optimists look for an even higher gross national product than in 1955. If any summary can be made of the on-the-record and off-the-record statements of American bankers at annual meetings last month, it seems they expect the demand for loans to remain high. Public income is still at top levels and so are public expenditures. Since no drastic reduction in the demand for loans is expected, interest rates are expected to remain at present levels and most responsible banking officials anticipate that the credit and fiscal authorities will not relent their pressure on the money market.

There are exceptions to this rule, though. Wherever weaknesses appear, some easing of monetary controls has been in evidence. The U.S. Veterans Administration and the Federal Housing Administration, because of sharply declining demand for mortgage credit, went back to their former terms of thirty years' maturities. Consumer credit—or hire-purchase, as it is called in Britain—is another cause for concern. Nobody seems to know precisely how much credit is required to support the U.S. mass production system without destroying the foundation of savings which make possible the vast public spending.

The publication of a leading U.S. investment company suggests that "the total volume of goods and services produced reached an estimated value of $396,000 million a year in the final quarter of 1955, against a gross national product of $364,500 million for the previous record year of 1953. The gross national product, or the total of production and services, is now almost twice that of the first post-war year and nearly four and a half times the level of 1939. In the last few years, this gain has been achieved without the benefit of paper dollar inflation. Purchasing power has remained relatively stable. Of course, increased use of electronics, mechanical gadgets of all kinds, and thus greater investments for industrial installations to conform with new scientific requirements, have had a lot to do with the boost in outlays for expansion, services and production. Corporate profits, too, are increasing owing to a sympathetic tax legislation and high production. This will continue, no doubt in the ensuing year.

Uncertainties

But there remain a number of uncertainties. Among them are the forthcoming decision of the President of the United States to run or not to run again. If he decides to be a candidate, many people feel, even conservatives, that they would be voting, in fact, for the Vice-President, owing to Mr. Eisenhower's heart attack this summer. This may or may not be fair, but it is a fact and reality. Other uncertainties include the gradual disappearance of the conciliatory spirit of Geneva between the East and the West so that, despite all optimism, nothing seems quite certain at this point.

There has been a slow-down in housing starts and also a reduction in the purchases of automobiles. This has been expected by many for some months, but so far it has not made itself felt in national statistics. Since the automobile and home-building industries have been two of the mainstays of the U.S. economy, their course is being followed closely.

The securities markets have been hesitant and some large investment companies have shortened their holdings of common stocks in favour of bonds and other senior securities. Inventories continue to be built up, but there are no signs of excesses and clear signals are absent that business is at a turning point. In the financial field, commercial loans continue high. Normally, at this time of year, there is a relapse in demand for money by borrowers who are trying to liquidate their commitments undertaken to satisfy holiday purchases by the public.

The real test of the course of the U.S. economy is likely to come in the second quarter of the year. Borrowings to pay taxes will reveal how large commitments are and have been. Meanwhile, prospects of a balanced Budget in the next fiscal year, beginning 1st July next, have soothed the nerves of conservatives who have been complaining about incessant inflation for the past two decades.

In foreign trade quarters, much attention is being paid to a study by the Federal Reserve Bank of New York, just published, which states that the gold and dollar holdings of countries outside of the U.S. are continuing to grow, although somewhat more slowly than in the two previous years. As of the last year-end, such holdings are estimated to have reached $26,600 million, or $1,600 million more than in the previous year. This compares with gains, as reported by the New York Central Bank, of $1,900 million in 1954 and of $2,600 million in 1953. About two-fifths of the estimated rise of such holdings was represented by gold. This is just about the same percentage as in the preceding year. On balance, the U.S. sold only $68 million worth of gold to other countries last year, against $327 million in 1954 and $1,164 million in 1953. The principal buyer last year was France and, in the second half of 1955, Washington was a small net purchaser.

The rapid expansion of U.S. exports which was due largely to the record level of business activity in Western Europe was a striking development in the balance of payments position in 1955. American imports also rose substantially. While no final figures are available, it appears that, for the year as a whole, the rate of import growth may have been as large as that for exports.

Although much remains to be done to restore and maintain monetary stability in many parts of the world, financial quarters here feel, the ability and willingness which many countries have shown in the task, augurs well for the re-establishment of a sustainable balance between demand and available resources. Fuller convertibility of currencies will depend more or less on the efforts of individual countries to put their house in order. Reduction of the remaining obstacles to world trade is also held to be an important point in the advance of international economic stability, as outlined in messages of the President of the U.S. and important American industrial leaders.—*All Rights Reserved.*

The U.S. International Co-operation Administration has announced new authorisations amounting to $765,000 for the purchase of trucks and spare parts for use in India. Procurement of the trucks and spare parts will be carried out through the emergency procurement service of the U.S. General Services Administration. The authorisations carry out a programme agreed upon earlier by the U.S. and Indian Governments.

EXPANSION OF RURAL CREDIT FACILITIES

RESERVE BANK ESTABLISHES LONG-TERM OPERATIONS FUND

THE customary weekly statement of the Reserve Bank of India for the week ended 3rd February 1956 differs from its predecessors in one important respect, in that it carries two new items on the liabilities side of the Banking Department. These are: "National Agricultural Credit (Long-term Operations) Fund" and "National Agricultural Credit (Stabilisation) Fund." The former, which, for the sake of convenience, may be called Long-term Operations Fund, has been credited with Rs. 10 crores, while the latter—Stabilisation Fund, for short—has not yet been provided with any credit. The incorporation of these items in the Banking Department formally signifies the Reserve Bank's direct entry into the sphere of agricultural finance, a function which it was supposed to undertake even at the time of its inception. There are very few central banking institutions in the world the functions of which include provision of credit specifically for financing agricultural operations. The assumption of this responsibility by the Reserve Bank is thus a unique development in the world of central banking and marks the dynamic character of India's economic policy.

The credit for this fund has been provided by the Government, in the same way as was done for creating a reserve fund of Rs. 5 crores when the Bank was first established. Readers will recall that the Bank was first started as a shareholders' institution. While the capital of Rs. 5 crores was subscribed by the public, the Government paid a sum of Rs. 5 crores by way of reserve fund. The question as to how exactly Government found the resources for crediting this Rs. 10-crore fund is easily explained. The Government must have created *ad-hoc* rupee securities to this extent and given it to the Bank. Against these securities, the Bank must have issued notes and strengthened its liquid position. A part of these balances may have already been lent to the institutions and State Governments dispensing agricultural credit. Thus, we find that, in the week under review, other loans and advances had gone up by no less than Rs. 5.29 crores.

The establishment of the aforesaid two funds is, it may be maintained here, in pursuance of the recommendations of the All-India Rural Credit Survey Committee appointed by the Reserve Bank of India. This Committee, which submitted its report in 1954, suggested, as readers are aware, that the Reserve Bank should contribute for a period of five years not less than Rs. 5 crores per annum to the Long-term Operations Fund and not less than Rs. 1 crore per annum to the Stabilisation Fund. It further stated that the position in regard to these contributions should be reviewed at the end of every five years. In addition, there should be, according to it, an initial non-recurring contribution of Rs. 5 crores to the Operations Fund. The operations of these two Funds and the planning and execution (within the Reserve Bank's own sphere) of the programmes and policies governing the Funds are, the Committee stated, the responsibility of the Reserve Bank and its Board and should not be vested in a separate body, statutory or not.

The Government of India accepted these recommendations and amended the Reserve Bank of India Act accordingly last year. The amended Act, known as the Reserve Bank of India (Amendment) Act, 1955, received the assent of the President of India on 8th May 1955. Under section 46A of the Act, the Reserve Bank is required to "establish and maintain a Fund to be known as the National Agricultural Credit (Long-term Operations) Fund." To this Fund is to be credited, according to the provision, (a) an initial sum of Rs. 10 crores by the Bank and (b) such further sums of money as the Bank may contribute every year. The sum to be thus credited during each of the five years commencing from the year beginning July 1955 should not be less than Rs. 5 crores. There is, however, a provision empowering the Central Government to authorise the Bank to increase or reduce the amount of its annual contribution in any year.

The section referred to above, namely, 46A, also lays down the purpose for which the Long-term Operations Fund should be utilised as also the conditions under which it should be put to use. The purpose of the Fund is fourfold:

First, to give loans and advances to State Governments for subscribing, directly or indirectly, to the share capital of co-operative credit societies. The State Governments should repay these loans on the expiry of fixed periods not exceeding 20 years from the date of making such loans.

Secondly, to give loans to State Co-operative banks for agricultural purposes. These are to be medium-term loans repayable on the expiry of specified periods not being less than 15 months and not exceeding five years from the date of making such loans.

Thirdly, to give loans to Central Land Mortgage banks for a period not exceeding 20 years.

Fourthly, to purchase debentures of Central Land Mortgage banks.

Loans and advances made to the Co-operative banks and Land Mortgage banks are subject to guarantee of repayment of both principal and interest by the State Governments concerned.

The proposed increase in the share capital of State co-operative societies is intended to facilitate a considerable increase in the volume of short-term agricultural credit now supplied by the Reserve Bank. This increase will, in part, be related to the increase in the share capital itself. The amount of medium-term loans to be given from the Long-term Operations Fund to State co-operative banks will be determined by the Reserve Bank on the financial position of each of the borrowing institutions.

As already stated, no amount has yet been credited to the National Agricultural Credit (Stabilisation) Fund. It is likely that arrangements will be made to credit a sum of Rs. 1 crore to this Fund, if not this week, in due course before 30th June next. For the Reserve Bank of India is required to establish this Fund before that date under section 46B of the Reserve Bank of India Act, as amended last year. Under this provision, the Bank is required to contribute annually, beginning from the year ended 30th June 1956, a sum of Rs. 1 crore for a period of five years. But, as in the case of the Long-term Operations Fund, the Government has been empowered to authorise the Reserve Bank to reduce or increase the amount of its annual contribution to this Fund also.

The Stabilisation Fund is intended to make loans and advances to State Co-operative banks for periods not less than 15 months and not exceeding five years from the date of the loan, for enabling them to pay any dues, in respect of bills of exchange and promissory notes purchased or rediscounted by the Reserve Bank, which the banks are unable to pay in time owing to drought, famine or other natural calamities. These loans, too, are required to be guaranteed by the State Governments concerned in respect of both principal and interest. In such cases, the short-term loans will be technically treated as repaid to the Reserve Bank's Banking Department, but, in effect, they will be converted into a medium-term loan from the Reserve Bank's National Agricultural Credit Stabilisation Fund. "The Reserve Bank may make this facility," observed the Rural Credit Survey Committee, "conditional on the State Co-operative bank concerned maintaining a similar Agricultural Credit Stabilisation Fund, the same applying to central banks and, where feasible, the larger sized primary societies. The Reserve Bank may also insist that part of the overdue liability should be met from such Stabilisation Funds kept within the co-operative credit structure itself."

CREDIT SQUEEZE IN U.K. AFFECTS MOTOR INDUSTRY

During the six months since Mr. Butler's request last July for a significant reduction in bank loans, the response of U.K. bankers is stated to be encouraging, inasmuch as the banks have been able to cut down loans by about 7 to 8 per cent. The banks have drawn up plans for implementing the second stage of the credit squeeze during the next six months and these plans are reported to have received the approval of the authorities. This approval has been taken to mean that official quarters do not object to the bankers' proposal that they should, from now on, aim at reducing credit lines in a general way without committing themselves to the achievement of a specific target within a specified date.

Meanwhile, the credit squeeze would appear to have handicapped the British motor industry. This industry is demanding from the banks additional overdraft facilities for financing stocks of unsold motor vehicles. The distributors of British cars at home and abroad are well stocked, and, in the face of a decline in the demand for vehicles, cars are piling up at the works. This is pressing hard on the working capital of some car manufacturers, who are, therefore, turning to banks for additional advances to deal with the difficulty. As the cars are mostly for export, the producers see no reason why banks should not grant them credit. The banks, on the other hand, seem to be feeling that, by granting advances to the industry, their efforts to trim advances would prove futile. It seems that they intend seeking official guidance to get over the dilemma.

DUTCH BANK RATE RAISED

For the first time since 7th April 1953 the Dutch Bank rate has been raised from 2½ per cent. to 3 per cent. The action has been necessitated by the continued expansion in bank credit.

A statement issued by the Netherlands Bank stated that, at the beginning of September 1955, the Bank drew the attention of private banks to the desirability of exercising restraint on the extension of credit under the existing boom conditions. Although the extension of credit since then had been slowed down, the latest figures indicated substantial increase in advances. Thus, loans to industry and trade had risen from Fls. 2,199 million to Fls. 2,644 million in 1955. In the same period, loans to public bodies had increased from Fls. 3,117 million to Fls. 3,155 million. Consequently, the Bank was obliged to raise the interest rates along the whole line.

The increase in the Dutch Bank rate is said to mark the Netherlands Bank's dissatisfaction at the development of bank loans and the volume of money in general. A fresh round of wage claims has also caused some concern. Faced with increasing inflationary pressure, the monetary authorities appear to have had recourse to the orthodox measure of making money more expensive.

The Netherlands is the first country to increase its Bank rate during 1956.

U.S. AID TO INDIA'S SECOND PLAN

A proposal to make available to India $225 million, probably in the form of a loan, to aid its second Five-year Plan, is stated to be under the consideration of the U.S. Senate Foreign Relations Committee. Details of the programme are not available but the U.S. Ambassador to India, Mr. Cooper, stated last week at Washington, that the purpose of his visit was to do all in his power towards "the adoption of a substantial programme of economic aid to India that Congress could reasonably approve." He said that India needed assurances that the programme would be sustained over a period of years.

According to Press reports emanating from Washington, the objective of the proposal mentioned above is to enable India to purchase from outside capital goods necessary to build a sound industrial base for development in the first three crucial years of the Plan. The $225 million aid is reported to be in addition to current schemes for U.S. technical assistance and for the provision of surplus farm commodities to India. The programme of aid for India in the current year ending 30th June 1956 provides for $60 million but only a part of this is available in other currencies. But most of the new funds now proposed would be available for being spent in other countries.

At present, the U.S. Congress is able to appropriate only on a yearly basis. President Eisenhower has, however, suggested that he should be given "limited authority" to make long-term foreign aid commitments where this is necessary in such cases as that of India's Five-year Plan. If the Congress accepts this suggestion, it could endorse the $225 million plan in general terms and appropriate $75 million now for the year ending June 1957.

The purpose of the programme is to prevent the deterioration in Indo-U.S. relations in recent months, as also to meet Soviet economic thrusts in Asia and the Middle East. In order to achieve the latter purpose, the U.S. is speeding up its foreign aid, spending about $250 million a month in February, March and April this year, as against $72 million in December last and $142 million in January this year. Thus, of the total $1,700 million approved by Congress for overseas aid this year, the U.S. Administration hopes to spend $1,570 million. Recently two new aid projects, one of $33 million for Thailand and another for $24 million for Yugoslavia, were announced by the U.S. administration.

STERLING AREA'S GOLD AND DOLLAR RESERVES

The sterling Area's gold and dollar reserves rose by $29,000,000 during January 1956 and stood at $2,149 million on the last day of the month. Receipts of defence aid from the United States during the month are estimated at $6,000,000. The sum of $23,000,000 was paid in gold and dollars to the European Payments Union (E.P.U.) in respect of December, and $2,000,000 was paid to the creditors of the Union in bilateral settlements. On the provisional E.P.U. figures for the month, the United Kingdom had a deficit of £4,000,000, which falls to be settled in February as to 75 per cent. in gold and dollars, and as to 25 per cent. by increase of debt to E.P.U.

The reserves, it is noted in London, show a continuation of the change for the better which started in October. Excluding the North American debt payment in December, the movement of reserves over the last four months has been: October, minus $48,000,000; November, minus $14,000,000; December, plus $25,000,000; and January, plus $29,000,000. This is fairly satisfactory, but the surpluses are still small, and with the reserves at their present level it can be regarded as only a small beginning.

LOAN TO BRAZIL

The U.S. Export-Import Bank has decided to grant a loan of $35 million to Brazil. It is intended for a general extension of the biggest steel mills in South America at Volta Redonda, 60 miles west north-west of Rio de Janeiro on the Parahyba River. The loan will increase the annual production at the mill from 650,000 ingot tons to 1 million ingot tons. Two previous loans of $45 million and $25 million were made by the Bank in 1941 and 1950. Mr. Nixon, Vice-President of the U.S., stated recently that the U.S. had contributed $2,000 million to Brazil through loans, investments and development capital in the last 15 years.

UNITED COMMERCIAL BANK LTD.

A rise of Rs. 5,62,632 to Rs. 36,69,036 is disclosed by the profit (subject to audit) of the United Commercial Bank Ltd. for the year ended 31st December 1955. This increase follows the rise of Rs. 8.05 lakhs recorded by the previous year's profit and has enabled the Bank to establish a fresh record, exceeding the previous best of Rs. 36.48 lakhs earned in 1948.

With the surplus of Rs. 1,08,724 brought in from the previous year, the sum available for appropriation is Rs. 37,77,761. Consequent on the encouraging results, the Directors have raised the allocations also, the transfer to the reserve fund having been increased from Rs. 6,50,000 to Rs. 8,50,000, provision for taxation from Rs. 12,50,000 to Rs. 14,00,000 and distribution to the shareholders from Rs. 2-8 per share to Rs. 2-12 per share of Rs. 50 each, which takes up Rs. 1,00,000 more at Rs. 11,00,000. This is the second successive year for which the dividend has been raised, the same having been enhanced from Rs. 2 per share to Rs. 2-8 in 1954. These appropriations leave a surplus of Rs. 4,27,761 to be carried forward, subject to payment of bonus to staff, for which purpose a sum of Rs. 2,50,000 had been utilised last year.

PUNJAB NATIONAL BANK LTD.

A sharp rise of Rs. 14.85 lakhs to Rs. 68.61 lakhs is disclosed by the preliminary results of working of the Punjab National Bank Ltd. for the year ended 31st December, 1955. This increase follows the impressive rise of Rs. 13.90 lakhs noted in 1954 and has enabled the Bank to set up a fresh record in profit. With the surplus of Rs. 4.99 lakhs brought forward from 1954, the profit available for appropriation amounts to Rs. 73.60 lakhs.

The Bank's deposits as at the end of the year under review reached a record total of Rs. 90 crores, an increase of over Rs. 14 crores or 19 per cent. over those at the end of 1954, as against an increase of 8.87 per cent. in the case of other Scheduled banks. With this increase, the Bank has maintained the upward trend in deposits since 1949. During the year the Bank opened 14 offices, bringing the total number of offices to 326.

A group of the World Bank's experts is to visit Austria this month for discussing the possibility of granting another loan for the development of the country's water power stations. It is stated that the Bank is willing to grant a loan of Sch.1,000 million under the "specially favourable conditions" to the Austrian Verbundgesellschaft.

TASK FACING BRITISH ECONOMY

REALISTIC ASSESSMENT BY NEW CHANCELLOR

By Paul Bareau

WHAT are the economic facts which Britain faces as she moves further into the year 1956? They are, as usual, a mixture of good and inspiring developments on the one hand, of less good and cautionary warnings on the other. In assessing this mixture, it is all-important to avoid the all too easy temptation of exaggerating, of focussing on one or other of the extremes. At the present moment, there is, perhaps, an undue tendency to fasten on the darker side of the picture and to evoke and use the word "crisis," which fits all too well into the politician's and journalist's language.

The word "crisis" does less than justice to realism and truth at the present moment. It has just been announced that industrial production in the United Kingdom in 1955 was nearly five per cent. greater than in 1954. Gold losses, which gathered such momentum in the early and middle months of the year, have recently shown a reassuring tendency to disappear. Industrial investment has never been higher, and there is every indication that, in the coming year, it will again break all records.

Employment has remained higher. British goods are still competitive, as witness the fact that exports last year were five per cent. higher than they had been in 1954 and created a record both in respect of values and volume. All this is hardly the context in which to speak of "crisis." And yet it would be idle to pretend that Britain does not face considerable difficulties. Strong and weak points in the economy were recently subjected to a realistic diagnosis by Mr. Harold Macmillan, the new Chancellor of the Exchequer, who was not inclined to understate the difficulties with which he is being called upon to deal.

It would not have helped him, in the psychological aspect of his task, to give undue prominence to the favourable factors in the situation. If he is about to apply the brake to British economy, the mood he wants to create is one of awareness of the difficulties and of the dangers that threaten if these difficulties are not overcome in the reasonably near future.

Mr. Macmillan certainly painted a rosy picture of the state of the consumer. Nearly everyone, he said, is doing very well. Sixteen per cent. more household goods had recently been going into the average home than two years earlier. Eight per cent. more clothing was bought and 5½ per cent. more food in the first 11 months of 1955, and 75 per cent. more new cars were registered, than in the corresponding period of 1954. In its turn, this has encouraged industry to launch out on big new development schemes. All this has meant an improvement in the British way of life, which, said Mr. Macmillan, "is a very fine thing while it lasts—if it lasts."

What did the Chancellor mean by this ominous little reservation? His meaning was made abundantly clear in the figure of speech in which he compared the British economy to the electric circuit in the household. It was a highly appropriate figure of speech, since it was uttered at a time when Britain lay in the grip of a truly Arctic spell, when the pressure put on the available supply of electric current was at times such as to cause momentary breakdowns.

In Britain's "electric circuit," said Mr. Macmillan, power was supplied by the productive efforts of the nation. That power was tapped for various needs of the nation—food and clothing, roads and schools, factories and machines, and a vast defence programme. Every time the nation made some further demand, it was like plugging in another appliance. If the circuit was overloaded, the fuse blew and there was a blackout.

The fuse, said Mr. Macmillan, is confidence in the pound sterling all over the world on which the functioning of the whole economy depends. In 1949, the system was grossly overloaded by the many demands made upon it, the fuse blew, and the pound was devalued. That, said Mr. Macmillan, must not be allowed to happen again, and that was why he would be deciding very soon "which plugs to pull out" so as to reduce the pressure on the somewhat overloaded economy.

The point to bear in mind in this metaphor is that even a small overload can blow the fuse. That is precisely the problem with which Britain is struggling at the moment. The demands on the resources of the nation are, at the moment, excessive—but not by more than, say, three per cent. Between 1953 and 1954, wage rates and output of goods per person in industry went up more or less equally by four to five per cent., but last year, while output per person went up by three per cent. wage rates went up by seven per cent., while dividends reported by industrial companies rose at an even higher rate.

With this additional purchasing power let loose in the economy, in excess of the real increase in output, the inevitable result was to draw in more imports and to encourage consumption at home of all kinds of goods that ought to have been exported. The margin may have been small, but its effect on the balance of payments was substantial, as may be judged by the fact that the reserve of gold and dollars fell by £229,000,000, last year.

That is a state of affairs which cannot continue for long, and it is to the credit of the Government that, in contrast with some of the earlier balance of payments crises, remedial measures have been taken at this stage. Credit restriction has been put into effect, and an attempt is being made to curtail the overall purchasing power of the country.

Additional measures may yet have to be resorted to, and the new Chancellor of the Exchequer hinted at them when he said he would soon have to make up his mind which "plugs to pull out," in order to reduce the load on the domestic electric circuit. The problem is marginal. A relatively unspectacular effort, superimposed on measures already taken, should be sufficient to put the British balance of payments back into some semblance of reasonable equilibrium during the coming year.

COTTON TEXTILES UNDER SECOND PLAN

MILLOWNERS WARN AGAINST TOO MUCH RELIANCE ON HANDLOOMS

THE draft outline of the second Five-year Plan does not give any indication of the size of development envisaged for the cotton textile industry. All that is said therein is that the targets for the output of cloth and yarn in the organised textile industry will be determined in a few months, after a clearer assessment becomes possible of the results of investigations, now in progress, into the technical and economic factors relating to Ambar *Charka*. It has thus left the question open. This itself is a victory to the votaries of Ambar *Charka*, for they have succeeded in inducing the Planning Commission to believe that Ambar *Charka* may provide a useful solution to the problem of unemployment. There is no denying the fact that both the planners and the powers-that-be are now keenly anxious to do all they can to develop the decentralised sector of the cotton industry, irrespective of the consequences on the mill sector, in particular, and on the community, in general. Referring to Ambar *Charka*, the Planning Commission observes: "The use of Ambar *Charka* and the introduction of decentralised spinning on a large-scale will make possible addition to full-time employment on such a substantial scale as to justify the expenditure which may be involved during the period of the second Plan" These words have been echoed by Mr. Gulzarilal Nanda, Union Minister for Planning. Speaking on the Congress Working Committee's resolution on the Government's economic policy and the draft Plan at the A.I.C.C. session at Shahidnagar, Mr. Nanda said:

"Development of village and cottage industries will also help solve the problem of unemployment. There can be no controversy about development in this field. It is argued that consumers would be hard hit, if the cottage and village industries were developed at the cost of the mill industry. This will not be much of a sacrifice, if it is remembered that employment of the Ambar *Charka* and impetus to village industries in other directions will absorb millions of idle hands.

"Those who have held its (Ambar *Charka's*) trial are of the view that it is capable of meeting the demands of the weavers. There should be no doubt about its utility. Licences for 2.1 million spindles have been given and *no further licences will be granted*" (italics ours).

A Moot Point

From the foregoing statement of Mr. Nanda, it is evident that there will be no further expansion in the spinning capacity of the mills and that the rise in weaving capacity will be only negligible. Indeed, there is every possibility of the Government imposing fresh burdens on the mill sector, such as an upward revision in taxes and extension of the reservation of markets for handlooms, in the belief that, thereby employment opportunities can be widened. The desire to create more employment opportunities is certainly understandable, but it is a moot point whether it is worthwhile putting the community to such severe hardship as is implied in this approach, especially as the type of employment to be provided by Ambar *Charka* and handlooms will not be gainful; in fact, such employment belongs to the sweated category, yielding as it does only a pittance. As we have so often pointed out in this journal, the policy of giving an artificial boost to the handlooms and Ambar *Charka* through restrictions on the mill sector is bound to involve a considerable strain on the country's economy, leading to disproportionate sacrifice on the part of the consumer. This aspect has been lucidly explained by the Millowners' Association, Bombay, in the course of a detailed memorandum submitted to the Planning Commission.

A noteworthy feature of the memorandum is that the points made therein have been adequately supported on the basis of statistics made available by official and other reliable and relevant sources. Facts and figures have been given to prove that the magnitude of sacrifice to be made by consumers and taxpayers for supporting the uneconomic means of production will be quite out of proportion to the possible gain in the form of additional employment. Another feature of the memorandum is the attempt to show that much more fruitful small-scale employment can be created in other spheres at a much lower cost to the community.

At the very outset, the Bombay Millowners' Association warns that, if handlooms were to be relied upon to produce 3,200 million yards—this figure represents more than 100 per cent. of the present estimated capacity—the consumer will have to pay a higher price for handloom cloth and the exchequer will suffer a loss of revenue which will also have to be made good by the public by paying enhanced taxes. Out of this sacrifice, the handloom weaver, it points out, will receive only a "very small" portion. The cost of the experiment to the country will thus be entirely out of proportion to what is really required to provide additional employment.

Consumer's Sacrifice

The Millowners' Association estimates the total extra amount which the consumer will have to pay as a result of the implementation of the Kanungo and Karve Committees' recommendations at Rs. 30.84 crores. This estimate has been arrived at by taking into account two considerations. First, the target of 3,200 million yards of handloom cloth fixed by the above Committees is 1,200 million yards more than what is actually required for providing handloom weavers with full-time employment. Secondly, the price of handloom cloth will be very much higher than that of cloth produced in the mills. On an average, the price of handloom fabric works out to Re. 1-3 per yard (including the rebate borne by the Government), as against the average retail price of As. 15 for mill cloth (inclusive of all taxes). How these figures have been arrived at is explained below:

According to the 1953 Census of Manufacturing Industries, the ex-mill price of 4,321 million yards of cloth is Rs. 300.4 crores. This gives an ex-mill price of As. 11 per yard of cloth. The average rate of excise duty works out to 13 pies per yard which makes a total of As. 12.1. Taking the cost of distribution at 15 per cent. and sales tax at 0.5 anna in the rupee, the retail price paid by the consumer works out at As. 14.4 or in round figures As. 15 per yard of mill cloth.

Dr. J. D. Sundaram, in his article entitled "Ambar *Charka*: Tentative Prices of Yarn and Cloth," published in the December 1955 issue of *Khadi-Gramodyog*, the journal of the All-India *Khadi* and Village Industries Board, says: "The study of comparative prices of cloth—Ambar, handloom with all-mill yarn and mill—shows that the retail price of Ambar cloth of 20s in urban centres is likely to be on an average above the prices of mill cloth and As. 2 more than the prices of handloom cloth woven with mill yarn, and Ambar cloth of 16s may show a difference in urban areas of As. 4½ with mill cloth and As. 3-7 with handloom cloth with mill yarn. It must, however, be noted that low count handloom cloth of mill yarn is of very poor quality and texture. The price of Ambar cloth is thus taken as As. 5 to As. 6 above mill cloth and As. 2 above handloom cloth, which means that the difference between handloom cloth and mill cloth is As. 3 to As. 4. Although the similar difference for very coarse counts is not as much, it is pointed out that low count handloom cloth of mill yarn is of very poor quality. Furthermore, in counts higher than 20s, the differential between handloom cloth and mill cloth would be greater than As. 3 to As. 4 which is the differential in the case of cloth of 20s. This shows that, quality for quality, the differential between mill cloth and handloom cloth would actually be more than As. 3 on an average.

In the aforesaid comparison, mill-spun yarn is a common factor. The cost of yarn required to weave 1,200 million yards of cloth will also be more in the case of handlooms than mills, being Rs. 69 crores, as against Rs. 57 crores. The difference of Rs. 12 crores is arrived at as follows:

The 1953 Census of Manufacturing Industries puts the price realised by mills on sale of 359 million lbs. of yarn at Rs. 72.4 crores, giving an average price of Rs. 2 per lb. In the case of cloth of lower counts, a pound of yarn produces something like 4 yards of cloth on an average. The production of 1,200 million yards of cloth would, therefore, require 300 million pounds of yarn, the ex-mill cost of which would be Rs. 60 crores. On an examination of the balance-sheet of a few representative yarn spinning mills, it is observed that the profits of the mills are of the level of 5 per cent. on realisation. The profit element in the ex-mill price of Rs. 60 crores would, therefore, be Rs. 2 crores. As the composite mills would get their own yarn at cost price, the price of yarn to the composite mills can be taken at Rs. 57 crores. As regards handlooms, adding to the ex-mill price of yarn of Rs. 60 crores distribution charges of 15 per cent., the price of yarn to handloom weavers would come to Rs. 69 crores.

The Millowners' Association turns next to labour costs. In the case of mills, only that labour which is employed on the weaving side is taken into account. The calculations made by the Association reveal that the number of workers required for manufacturing 1,200 million yards of cloth in the mills will be 84,000 with an annual wage bill of Rs. 13.08 crores. In the case of handlooms, assuming that one handloom produces six yards of cloth per day and works 300 days in a year, the number of persons required for producing 1,200 million yards of cloth comes to 840,000 taking the employment at 1¼ persons per loom. The wages required to pay them—at Re. 1 per day or Rs. 300 per year—amount to Rs. 25.2 crores. Thus, the community will have to pay Rs. 12.12 crores more by way of wages alone to get the same amount of cloth through handlooms.

Loss to Exchequer

The reliance on handlooms for the additional production of 1,200 million yards will also result in a large loss of revenue to the exchequer, as will be seen from the following statement based on the Millowners' Association's memorandum:

In the case of mills, out of the realisation by sale of cloth a good part goes to the exchequer by way of excise duty, income-tax and sales tax. The excise duty is paid at a higher rate for fine and superfine cloth. But, even assuming that all the additional cloth is manufactured only from indigenous cotton, 1,200 million yards would consist of 1,140 million yards of coarse and medium cloth and 60 million yards of fine cloth. On the existing rates of 9 pies per yard for coarse and medium cloth and 18 pies per yard for fine cloth, the excise duty paid would come to Rs. 5.88 crores. Taking the sales tax at 6 pies per rupee, the amount of Rs. 112.56 crores paid by the consumer for mill cloth includes sales tax amounting to Rs. 3.48 crores. As regards income-tax, according to the returns of the Central Board of Revenue, the cotton textile industry paid during the year 1954-55 a sum of Rs. 10.33 crores. This was on the 1953-54 production of less than 5,000 million yards. The income-tax on 1,200 million yards thus comes to over Rs. 2.52 crores. As against all these, the handloom cloth does not have to pay any excise duty, while sales tax, if any, is a negligible amount. It is needless to add that it pays no income-tax.

The consumer's sacrifice in the form of higher prices for handloom cloth is, as already noted, Rs. 30.84 crores. Of this, the amount utilised for the common good is expected to be not more than Rs. 24 lakhs. According to the Millowners' Association, out of Rs. 112.56 crores that he pays for mill cloth, Rs. 13.08 crores are utilised for giving employment and Rs. 11.88 crores are returned for his benefit to the exchequer. The balance of Rs. 87.60 crores can be accounted for as distribution charges (15 per cent. of Rs. 112.56 crores, that is Rs. 16.88 crores), cost of yarn (Rs. 57.00 crores), stores (Rs. 6.00 crores), power and fuel, overheads, depreciation and profit (Rs. 8.28 crores). In the case of handlooms, out of Rs. 143.40 crores that the common man pays for 1,200 million yards, Rs. 25.20 crores are utilised for providing employment. The balance of Rs. 118.20 crores can be accounted for as cost of yarn (Rs. 60.00 crores mill price+Rs. 9.00 crores middlemen's profits), stores (Rs. 6.00 crores), overheads, depreciation, and middlemen's profits Rs. 43.20 crores. It will thus be seen that, in the case of handlooms, the amount utilised for the common good is Rs. 25.20 crores, being the wages paid to 740,000 workers, while in the case of mills it is Rs. 24.96 crores, being the total of wages and taxes. In other words, the consumer is made to pay for handloom cloth an additional amount of Rs. 30.84 crores, so that only Rs. 24 lakhs thereof may be utilised for the common good! The balance of Rs. 30.60 crores of the additional amount paid by the consumer goes to people other than the handloom weavers in whose name the consumer is asked to pay a higher price for his cloth.

If, instead of handloom cloth, the consumer were to be provided with mill cloth, he would, in the opinion of the Association, be in a position to buy 27 per cent. more cloth with the same outlay. This will help not only to raise his standard of living but also to create more employment in cotton fields, mills and all the channels through which the additional production of cotton and cloth passes, besides increasing receipts to the exchequer. When 1,200 million yards of cloth are produced on handlooms, extra employment is no doubt created for 756,000 workers who receive wages aggregating Rs. 22.68 crores. But the exchequer has to pay out a rebate of Rs. 8.40 crores and lose a revenue of Rs. 11.88 crores which it can earn from mill cloth. The total loss to the exchequer thus comes to Rs. 20.28 crores. If the estimated rise of 27 per cent. in consumption of cloth is also taken into account, the loss will be equal to the wages of Rs. 22.68 crores earned by the additional workers.

Ambar Charka

So much for the handloom industry. The position would be still worse if the Ambar *Charka* were introduced in the place of mill spindles for producing the extra yarn that will be required to manufacture the additional cloth referred to above. The Millowners' Association points out that the protagonists of this *charka* themselves admit that Ambar cloth will be

SHARP FALL IN COTTON IMPORTS

MILLOWNERS REJECT CLAIM FOR HIGHER WAGES

From Our Special Correspondent

MANCHESTER, *7th February*

MANCHESTER LETTER

THROUGHOUT the first six months of the current cotton season the uncertainty over future price trends arising from the accumulation of supplies has persisted. In such circumstances, it is not altogether surprising that the flow of international trade in the raw material has declined to a considerable extent.

The sharp contraction in purchases in the first half of this season on behalf of British merchants and spinners has been most marked. In the past six months, imports have been not much more than half those in the comparable period a year ago when substantial supplies were being obtained from the United States.

The following table shows comparative imports during the first half of the last two seasons and the total supplies secured in the whole of last season:

(In bales)

	1st half 1955-56	*1st half* 1954-55
American	99,409	417,573
Mexican	69,730	67,831
Nicaraguan	7,388	4,632
Brazilian	85,006	164,491
Argentine	1,813	50,379
Peruvian	30,608	27,054
Egyptian	11,308	23,322
Sudan	101,243	84,388
East African	12,726	34,979
Nigerian	67,279	40,955
Congo	13,481	12,079
Turkish	497	653
Syrian	21,015	22,215
Pakistani	21,671	22,623
Indian	42,262	10,548
Russian	41,690	34,445
Others	52,717	40,959
Total ...	679,943	1,059,126

The paralysis which has now so greatly curtailed world trade in raw cotton had already set in in the second half of last season, when imports into this country were only half those arranged during the previous six months. More cotton has certainly been acquired so far this season than in the second half of last but the joint total of little more than 1,200,000 bales is still very small, even when set against the reduced requirements of the mills.

An outstanding development has been the phenomenal decline in the quantity of American cotton bought for use in Lancashire. Admittedly the supplies acquired in the first half of last season were exceptionally large but the reduction to less than 100,000 bales is remarkable, particularly as the imports in the second half of last season were only about 60,000 bales.

Smaller supplies have also been taken from South American countries, with the exception of Peru, and there has been a further drop in the quantities imported of Egypt and East Africa. On the other hand, the Sudan has shown a revival in shipments after suffering a temporary eclipse and more cotton is now coming from India than for some time past, the supplies imported in the first half of this year exceeding the total arrivals in the whole of last season.

America Holds Key

However widely the growers of the world extend their activities, America still holds the key to immediate prospects and the possibility of sudden action which may cause considerable price changes is a constant threat to market stability. The situation is currently made more complicated by the likelihood that free supplies of cotton for the trade may become tighter as the season progresses. Large quantities of the raw material are being transferred by American farmers into the Government loan with the result that supplies on the open market are falling. This factor, above all else, has prompted the recent firmer trend in New York futures and the upward movement in prices which is in direct contrast to many anticipations.

Confronted with such an aggravated statistical situation it is small wonder that trading in the Liverpool market has been lately practically at a standstill. Operators are loth to extend their commitments at such a critical time and business has been reduced to a minimum. Efforts to find a way round the existing difficulties are being made but everything has certainly conspired to detract from the value of the market since its reopening in 1954. Until world conditions take on a greater degree of stability Liverpool faces an uncertain future and a confused present.

Impact of Recession

Short-time working and lack of orders reduced output of cloth by Lancashire weaving operatives last year by more than 295,000,000 yards.

Figures given in Manchester by the Cotton Board illustrated the toll of the recession. Production of cotton and rayon cloth aggregated only 2,479,320,000 yards as compared with 2,774,560,000 yards in 1954. The figures also indicate how serious was the drift of labour from the mills. Some 14,000 workers were lost to the weaving section of the industry during the year, reducing the weaving labour force from 140,690 to 126,630.

The total loss of operatives in the cotton industry was more than 30,000. Over the twelve months, the mill manpower total fell from 286,460 to 256,080. The weaving section had a serious setback in the final month of the year when there was a loss of 1,160 full-time weavers and 40 part-time workers.

Lancashire millowners have rejected outright a claim for a 2s.-in-the-£ pay rise for 256,000 cotton operatives. Union leaders, "bitterly disappointed" that their demands have been rejected, plan to submit the matter to the Minister of Labour, who, they hope, will put their claim before the Industrial Disputes Tribunal.

The employers, who would have had to pay out an extra £10,000,000 a year in wages had they granted the claim, gave no reason for rejecting it. Sir Alfred Roberts, General Secretary of the 50,000-strong Cardroom Workers' Amalgamation, said: "They feel we must be prepared to accept this to allow them to compete in foreign markets. That would mean rice wages if we allowed it." Mr. Lewis Wright, General Secretary of the Northern Counties' Textile Trades Federation, representing 130,000 weavers, said the arguments the employers put forward had nothing at all to do with the wage claim. They had introduced, he said, the problems of tariffs and cloth imports.

Exports of rayon goods in 1955 followed a similar trend to those made from cotton. There was a corresponding decline in cloth shipments, the total for the twelve months being 133,853,000 square yards, valued at £21,089,621. This compared with 175,256,000 square yards, worth £27,887,841 in 1954.

Although exports of rayon and synthetic fibre yarns were a little lower than in 1954, the earnings from these shipments improved from £11,722,089 to £12,450,378. The volume of exports was 30,842,100 lb., against 32,345,200 lb.

As in the case of cotton, Australia maintained its position as the leading importer of British rayon goods, taking 23,518,000 square yards of cloth and 8,156,500 lb. of yarn. In both instances, however, purchases were distinctly below the 1954 levels. A feature was the rise into second place among cloth buyers of Rhodesia and Nyasaland, with 15,479,000 square yards, and India among consumers of yarn, with 4,463,500 lb.

Cut-throat competition will face the world's textile industries unless steps are taken to tackle the recurring problem of lack of balance between supply and demand on a global basis, Mr. Fred Wood, President of the Master Cotton Spinners' Federation, warned in a message to the All-Japan Cotton Spinners' Association. Profit margins, he said, would not be sufficient to cover current depreciation or allow for mill modernisation.

How Others React

"A growing feeling is evident on the part of leading members of almost every branch of the cotton industry that the Government has decided the cotton industry is expendable—at least to a considerable degree. The suspicion is that the cotton industry, because of its international nature, has had the finger put on it as a natural sacrificial offering on the altar of international goodwill."

This statement might well have been made by a number of prominent people in Lancashire during the past year when resentment was running high against the authorities on the question of imported cloth. In point of fact it refers to the American cotton industry and is quoted by a Memphis trade journal. The sentiments expressed are held to be the views of growers as well as spinners and others in the industry.

Textile manufacturers in the United States are now feeling the effects of imports of Japanese cloth on much the same lines as Lancashire did during 1955 and similar arguments are being raised about the need to institute quotas to maintain some sort of curb on the volume of foreign goods entering the country in direct competition with local products. The element of uncertainty is the main factor now handicapping the American mill industry, just as it has done in this country.—*All Rights Reserved.*

PAKISTAN'S RAW JUTE POLICY

PRODUCTION TARGET FOR 1956-57 SET AT 5.5 MILLION BALES

THE annual meetings of two bodies, namely, the Pakistan Jute Association, Narayangunj and the Associated Chambers of Commerce, Karachi, held during the last two weeks, provided an opportunity for a discussion of the problems facing the Pakistan authorities in regard to raw jute. A review of the Press reports on the proceedings of these meetings indicated that there is considerable amount of satisfaction regarding the jute policy of the Pakistan Government. One of the reasons for this satisfaction appears to be the high prices received by the jute cultivator in Pakistan during the last season. This is evident from the speech of Mr. Maqbul Ilahi, President of the Pakistan Jute Association, delivered at the meeting of this body held at Narayangunj on the 30th ultimo. He said: "In anticipation of a large new crop, prices declined from Rs. 25 per maund at the time of the last annual general meeting, to Rs. 18 in the month of July. Most of the jute was marketed, however, at very satisfactory levels averaging about Rs. 24 per maund for bottoms, and it is calculated that, based on the season's sale prices, cultivators had been able in the last season to buy about 2 maunds of rice for every maund of jute sold. This year's trends had been similar as far as local prices are concerned. When there was little jute available in July, prices were at their lowest level, Rs. 17 a maund, but immediately on the news of devaluation, prices shot up to Rs. 21 and by the middle of August, they had stabilised in the region of Rs. 23 per maund. Since that time, due to steady demand of the available jute, we have seen a progressive rise in prices."

It will be seen that a part of this improvement in jute prices is attributed to the devaluation of the Pakistani rupee which, according to Mr. Maqbul, was the most significant event of the preceding year. Devaluation had been well-timed to profit the cultivator, and caused a sharp rise in local prices. The price rises due to devaluation, he remarked, had only been in the local markets. Throughout the period, except for a rise of £2 or £3 per ton in the lower qualities of white jute, export prices had remained unchanged.

Apart from devaluation, there were other factors too which helped maintenance of high prices for raw jute. One was the damage done by floods to the jute crop last year. Commenting on this aspect, Mr. Maqbul observed: "We were note quite aware (last year) of the effect the unprecedented floods would have on the outturn of the crop. As it turned out, the Association's anticipation was correct and the carry-over was a small normal one, thought to be of 300,000 to 500,000 bales. At the meetings of the Jute Advisory Committee, members of this Association represented on that body advised the Government to licence an area estimated to grow a crop of 5.5 million bales for the year 1955-56, and those recommendations, I am pleased to say, were accepted."

Output in 1955-56

Mr. Maqbul is gratified because, according to the Government forecast issued recently, the estimated outturn for 1955-56 is about 5.6 million bales or a million bales more than the target suggested by the Association. Although the trade estimates are far higher than this figure, Mr. Maqbul is of the view that there will not be an embarrassing quantity of jute to be carried over into the next season, namely, 1956-57. According to him, there will be little cause for concern, provided the Government is able to control the sowings sufficiently well to provide for the planned production of 5.5 million bales for the coming season.

A more or less similar view was expressed by Mr. T. W. Cree at the seventh annual conference of the Associated Chambers of Commerce held at Karachi on the 10th inst. He remarked: "Estimates of current crop outturn indicate that there is not likely to be any embarrassing glut, especially as there is reason to believe that the total export for this season will exceed last season's total of 5.1 million bales. Up to the end of December, approximately 2.3 million bales were exported to overseas countries and 100,000 bales to India. Supply may slightly exceed the demand towards the end of this season, and the carry-over may, therefore, be larger than last year. However, this need not occasion any concern, provided the Government maintains an effective crop control next season."

Similarly, Mr. Maqbul also emphasises the need for effective crop control, with a view to maintaining prices at a remunerative level. At the same time, he stressed that there must also be ample jute to supply the world's needs; for too little jute would cause the fibre to become uncompetitive with cotton and paper. These views were endorsed by the Chief Minister of East Bengal, who stated at the Association's meeting that the ultimate objective should be to earn the maximum foreign exchange by selling at such a price as would be remunerative to the growers and at the same time competitive in the world markets. It was time, he added, that, with the Association's co-operation, ways were devised to stabilise jute prices at an economic level without encouraging the use of substitutes.

Target for Next Year

Referring to the target for the coming year, he said that it had been fixed in consultation with the Association and that the Government would pay utmost attention to see that the regulation of jute cultivation was made effective under the new arrangement. "The Government is determined," he asserted, "to ensure fair and economic prices to the growers from the beginning of the season. It is gratifying to note that world consumption of jute has increased, and I am confident that this demand would still go up, as other countries like Turkey, Egypt and Indonesia have completed erection of their jute mills.

During 1954-55, Pakistan's exports of raw jute amounted to 5.1 million bales. The combined exports by both land and sea for 1955-56 will be, according to Mr. Maqbul, 10 per cent. higher than the total for the previous year or 5.6 million bales.

From the foregoing account, certain salient points of considerable interest to the industry and trade in India emerge. First, it is evident that the main objective of the jute policy of the Government of Pakistan is to stabilise jute prices at a level which is both competitive in world markets and remunerative to the jute grower in Pakistan. This is undoubtedly a sound one but from past experience it can be said that in giving effect to it, the Government has not always been guided by the interests of jute consumer abroad. For the schedule of minimum export prices fixed by the Government has handicapped the jute mills abroad, especially in Europe, and this, in turn, has given scope for paper and cotton substitutes to hold their own against gunnies as a packaging material. The cry that Pakistan jute prices are high is still frequently heard from Britain, the Continent and other jute-consuming areas.

Secondly, the fixation of the target for crop at 5.5 million bales for 1956-57 overlooks the growing demand for raw jute in a number of countries which are manufacturing jute fabrics. In India, for instance, thanks to the unsealing of 7½ per cent. of the 12½ per cent. of the looms sealed, mill consumption of jute is expected to go up from about 5.5 million bales to over 6.15 million bales. Again, Pakistan's own requirements are expected to reach, by this time next year, a figure of 1.2 million bales. Besides, new mills are being established at Turkey, Egypt, Indonesia, Burma, etc., and these may add to the total world demand at present estimated to be over 10 million bales. As against this, the estimated total crop of raw jute in India and Pakistan is only 9.73 million bales (official figures for 1955-56). This would push up the raw jute prices, which in turn, would compel India to extend its raw jute policy of "near-self-sufficiency" further, so that the country may become still less dependent on Pakistan than it is now. In its own interest, Pakistan will, therefore, do well to follow a more liberal policy in regard to the cultivation of jute crop. Production of more jute will not only reduce the prices of raw jute but enable the country to earn more foreign exchange which it needs for financing its essential imports.

In this context, it will be pertinent to mention here the Pakistan Government's welcome decision to abolish licensing of raw jute exports. An announcement to this effect was made by the Governor-General at the Associated Chambers' meeting. He said that the Government had decided to abolish in the near future, licensing of raw jute exports to the non-American account area. Exports of jute to the dollar area are already on the O.G.L., so that exports to all parts of the world will become free from irksome restrictions when this decision is implemented.

TEXTILES

(*Concluded from page 292*)

costlier than the mill-spun and hand-woven cloth by as much as As. 4 per yard. If a computation similar to the one above were made for Ambar cloth, the strain on the national economy would be many times that indicated by those figures.

In conclusion, the Millowners' Association states that the employment provided through the medium of handlooms will, even according to the Karve Committee, be only of a transitional character. While it is not opposed to the creation of additional employment, the Association submits that the sacrifice which the common man is called upon to make is out of all proportion to the benefit which is derived in this process. "We contend," to quote it, "that it is not fair to call upon the consumer to pay an additional amount of Rs. 30.84 crores for his cloth, so that only Rs. 24 lakhs thereof should be utilised for the common good."

In the considered opinion of the Association, if cloth is produced by mills, instead of handlooms, the exchequer gains by an amount which is almost equal to the wages earned by the additional weavers employed by the handloom industry. The exchequer can, with greater benefit, utilise this amount to start nation-building activities such as construction of roads and wells in the rural areas and provide employment of a more useful nature at an identical level of earning. The additional production of 1,200 million yards of handloom cloth will provide employment for 840,000 workers on a wage of Rs. 300 per annum. If the suggestion of the Association is accepted, 84,000 new workers can be employed in mills at a wage level 500 per cent. greater than this, and the remaining 756,000 workers can be given employment in nation-building activities at a wage rate equal to that in the handloom industry. Simultaneously, the consumer will pay less for his cloth and would be in a position to increase his consumption of cloth and his standard of living. The nation-building activities will themselves bring a return to the economy and all in all, positive good will result to the national economy.

Price Aspect

There is considerable force in the aforesaid observations of the Millowners' Association. Employment is no doubt an important consideration, but it must be balanced against the no less significant consideration, namely, the price the consumer is called upon to pay. The following quotation from the Karve Committee report itself (*vide* para 33) supports our contention:

"The importance and relevance of this consideration may be illustrated as follows. The objective of providing additional employment may be achieved by creating special opportunities of work for large numbers of people in productive activity carried on in ways which may yield only a very small amount of net income to them. Programmes of creation of such work would then have to be supported by direct or indirect subsidies to yield a minimum level of subsistence income. In effect, this would involve relief of the unemployed through public funds, with only a very small contribution being received from the fruit of their employment. Further, if this involves either bringing in new persons who are not engaged traditionally in those occupations or creating new equipments for the purpose, it would result in the employment of labour in directions where its use is patently uneconomic. In a programme of future development, this would prove a handicap, as, presumably, these resources and personnel will soon have to be withdrawn from these uses. The same reasoning applies to the extent and duration of the protection given to existing employment in means of production which have become completely obsolete or relatively very uneconomic."

The output of handlooms has all along been, and will continue to be, uneconomic. Even more uneconomic will be production of yarn on Ambar *Charka*. The reservation of markets for this output exposes the country to the great risk of spiralling prices in such an essential item as cloth. What is urgently required is, therefore, an upward revision in the production target for mill output of yarn and cloth. Equally imperative is the need for a vigorous rehabilitation and modernisation of plant and equipment in mills. It is to be hoped that all these basic economic needs will receive due attention at the hands of the Planning Commission when it takes up the question of finalising its programme for the development of the cotton textile industry during the second Plan period.

NATIONALISATION OF LIFE INSURANCE—II

EXPERIENCE IN OTHER COUNTRIES

LAST week we attempted in these columns to subject some of the arguments advanced in favour of nationalisation of life insurance to a critical, though necessarily brief, scrutiny. We propose to continue the discussion on this page.

State ownership of insurance is not a peculiar invention of the Government of India for which it can claim international patent rights. This measure has been considered in many countries, and rejected as unworthy of adoption. Indeed, it is a discredited device—discredited after mature deliberation. And in the countries where it has been tried there is unmistakable evidence to show that its actual performance, so far from being a pronounced success, has belied the hopes of its ardent advocates.

In the U.K., State ownership of insurance (partial, of course) was attempted in 1865 through the Postal Insurance Scheme. The Scheme, as is well known, was closed down in 1928. Here, the point which has been overlooked by many observers is that the Scheme had been dead long before it was actually buried. It had ceased to be a force to reckon with even before it was formally closed, thanks to the growth of private insurance. This suggests that, although State-operated insurance may play a notable role in the early years of the history of insurance, it can never compete with private insurance when the latter has developed. Be that as it may, nationalisation of life insurance became a live issue in the U.K., in 1949, when the Labour Party included State ownership of industrial life assurance in its election programme. Naturally, this attempt met with stiff opposition from the life offices. But what is more important, on a poll being taken, it became known that only 3.6 per cent. of the policy-holders favoured nationalisation.

Real Danger

The public became alive to the real danger of nationalisation of insurance when it realised that it may lead to virtual nationalisation of other industrial units also. Since this danger is not perhaps far distant in this country too, now that life insurance has been nationalised, it is well to recall the statement of Sir James Grigg, India's Finance Member before the war, on this aspect of the problem. Sir James said:

"Incidentally, in taking over these funds, the State would acquire substantial holdings in many companies quite unconnected with any existing or proposed nationalisation scheme. In other words, a great number of private businesses and organisations, large and small, concerned with all types of industry, will find that the State has suddenly become a shareholder. This is socialisation with a vengeance. It is true that, at the first take-over, the Government are unlikely to get actual control of more than a few private enterprise undertakings. The industrial offices have never used their investments to secure a preponderant interest in particular concerns; and, even when the individual holdings of these offices are aggregated, it can only rarely happen that the total in any one company will amount to a majority shareholding. But, after the take-over, the Government will do what they like with the insurance funds and there will be nothing to prevent their being used to acquire the dominant vote in the affairs of private businesses and—so to speak—to nationalise them without anybody realising what is happening."

The British public also realised that, whereas in the world of insurance, promise and performance were synonymous, no matter how long a period of time separated the two, this quality was not always obvious in governmental affairs. The Labour Party had to bow down to the general opposition to its programme. The Party has now practically abandoned it, as is clear from the fact that the list of industries whose nationalisation was demanded at last year's Party Conference at Margate, does not contain insurance.

Leftist tradition is particularly strong in France, so that it was hardly surprising that the Government carried through, in 1946, a policy of nationalisation in respect of the larger insurance offices, about 34 in all. Events have proved that this policy has not been a great success. Between 1946 and 1953, the share of the nationalised companies (these were the largest companies in the country) fell from 62 per cent. of the total life business to 58 per cent. And what is particularly noteworthy, lapses in nationalised companies worked out to 13.2 per cent., as against 7.9 per cent. in private companies.

A French social democrat, reviewing the progress of nationalised insurance in the *Socialist Review*, said: "If we disregard the expropriation of the shares and the change in executive control, these innovations show nothing constructive or original. Basically, nothing has changed and no progress has been achieved." Some apologists for the French official policy, however, seem to contend that the result might have been different if the whole sector of insurance had been nationalised. But this is pure speculation, for there would then be no standard by which one could measure the progress of State-owned insurance. Perhaps, a more correct view would be that, if partial nationalisation in France has ended in a partial or relative failure, wholesale nationalisation would have ended in greater failure.

Both in Sweden and Norway, the Governments appointed committees, with a predominantly leftist element, to investigate the subject of nationalisation of insurance. The Swedish Royal Commission, which after three years of most thorough investigation of the problem, submitted its report in 1949, emphasised that provision must be made for securing, democratic influence on insurance. The Commission expressed itself against nationalisation of the entire insurance industry or of only the joint-stock companies. It felt that the positive objectives which nationalisation seeks to attain could be secured by simpler methods such as extended democratisation of insurance. It commended the mutual type of organisation for life business. But, in other branches, such as marine and fire business, it preferred the joint-stock type. It also commended the process of amalgamation of insurance offices which had been taking place in that country. The Norwegian Committee, which examined the problem in 1947, was unanimous in its opinion that nationalisation of the life branch was neither necessary nor desirable. In fact, it paid a high tribute to private life insurance. The majority of the Committee, however, favoured the principle of mutualisation, particularly in the case of large companies.

In Germany, several attempts at nationalising insurance have been made. When the proposal was first mooted after World War I, private insurers succeeded in convincing the Government of the unwisdom of nationalising insurance. During the Hitler regime, a proposal to nationalise fire insurance was made, but it was subsequently dropped. Another attempt at nationalising the industry was made after World War II. As the reconstruction of the economy proceeded at a rapid pace, particularly after the currency reforms of 1948, and the private insurers were again able to convince the Government that nationalisation of the industry would bring no special benefit, the agitation for the proposal died a natural death. In West Germany, between 1948 and 1953, new life business expanded by 87 per cent. In East Germany, which is under the Communist regime, State-owned insurance is reported to have made no such appreciable progress.

Holland

The opinions expressed by two committees appointed in 1917 in Holland to investigate the problem of nationalisation of insurance are noteworthy, though their views were based only on the conditions which prevailed during the post-World War I period. Both the Committees reported against nationalisation of insurance. Their view was: (1) that nationalisation precludes the entire commercial aspect of the business; (2) following elimination of competition, the structure of the premium rates would be affected for the worse, and rates would have to be raised; (3) the very existence of the competition between insurance companies must be considered a guarantee for "a flexible policy of acceptance and loss adjustment" which will be impossible under nationalisation, particularly in view of the inability of State-managed insurance to deviate from "stringent regulations and red-tape."

So much for what are comparatively recent attempts at nationalising insurance. In some countries, however, the attempts at State ownership date back to the late nineteenth and early twentieth centuries. Also, some of these countries are relatively underdeveloped regions or small countries where such attempts have been made out of a sense of insurance nationalism. For instance, in Mexico, the Government, actuated by "insurance nationalism," established an insurance office in 1936. But it handed over, after five or six years, the office to private management. Again, in Costa Rica, a tiny State with a population less than one-third of that of Bombay City the Government established a life office. Marine insurance is, however, still under private management. In Uruguay, a small and underdeveloped country with a life business of less than Rs. 30 crores, the State-owned insurance operates side by side with a private office. A study of insurance in these countries cannot obviously provide any lesson for India.

Other Countries

Among other countries, where State ownership of insurance, albeit partial, has been attempted, mention must be made of Denmark, Switzerland, Italy, Australia and New Zealand. In Denmark, the State entered the field of insurance about the middle of the last century. The State life insurance offices now work in competition, and on equal terms, with private life offices. Nevertheless, the premium income of private offices increased over the 1949-55 period by 21.2 per cent. as against 17.9 per cent. for Government offices. Denmark has apparently adopted the principle that it is only when the State-owned office works in competition with private offices that the public will be enabled to judge the relative efficiency of the two systems. A similar practice is followed in Switzerland in respect of fire insurance. But there is evidence to show that private insurance is more popular than State-owned insurance. A proposal for nationalisation of fire insurance was rejected by two-thirds majority of people when a referendum was held in 1938 in the canton of Valacies.

The Italian Government established in 1912 a State-owned life office, known as the I.N.A., which was originally intended to operate as a monopoly. This office, however, now operates side by side with private offices. It is somewhat difficult to compare the progress of the two sectors, because the Act of 1923 required private companies to cede compulsorily to the I.N.A. a fixed percentage of their business every year. The I.N.A. now controls about half the life insurance business in the country; it controlled more than half in pre-war years. But it does not work in fair competition with private companies. Nevertheless, during the 1950-54 period, the total life business (direct) of the I.N.A. increased from 262 to 449 million lires or by 72 per cent., as against an increase in the total life business of the country of about 90 per cent. from 561 million to 1,054 million lires. That life insurance in Italy has lagged behind the general progress of the economy is evident from the fact that, while bank deposits have increased 62 times the pre-war level, the total life premium income is only 35 times the pre-war level.

The State-owned insurance offices in Australia and New Zealand, however, work in free and fair competition with private offices. In Australia, there are now six State life offices. These offices handle only a small proportion of the total business. In 1953, for instance, private life offices accounted for 98.1 per cent. of the total premium income and the Government offices for only 1.9 per cent. In New Zealand, the Government established a life department as early as 1869 at a time when the country had poor facilities for life assurance. Private companies came into existence only at the end of World War I. A feature of the New Zealand market is that foreign companies (that is, non-New Zealand offices) operate extensively in the New Zealand market. In 1951, the life premium income of such companies aggregated £11.8 mil-

EXPORT OF INDIAN TEA

GOVERNMENT RAISES QUOTA

THE Government of India has announced a quota of 480 million lbs. for export for the year 1955-56. This represents an increase of 15.1 million lbs. over the previous season's quota of 464.9 million lbs. The new ceiling of export quota is equivalent to 69.3 per cent. of the total crop production. This is the final allocation of export quota for the year. It will be recalled that, in April 1955, the Government had announced an interim quota of 50 per cent. Pending the final notification of the export allotment for 1955-56, the Government of India authorised the Tea Board in August last to make a second interim release of export quotas to tea estates equivalent to 10 per cent. of their crop basis, making a total of 60 per cent. of the total crop, which worked out to 412 million lbs.

The final export allotment now announced represents, in terms of the standard export figure under the International Tea Agreement for the quinquennium 1950-55, 138 per cent., that is, 3 per cent. more than the maximum permissible under the Agreement. The Agreement, which expired on 31st March 1955, has, however, not been renewed so far. The prospects for its renewal appear bleak, as Ceylon is reported to be putting forward terms which are quite unacceptable to India. Indeed, there are strong reports in Calcutta that keen competition for markets will soon arise. Thanks to these reports, sellers of tea shares are predominant on the Calcutta Stock Exchange. Tea circles in Calcutta would appear to feel that, in going beyond the limit set under the Tea Agreement, one of the intentions of the Government of India is to inform Ceylon, another important signatory to the Tea Agreement, that it considers the Agreement dead.

The comparative table published on this page shows the export quotas and actual exports of India during the last six years.

Another object of increasing the export allotment for the current year is to bring relief to the Indian tea industry which, according to tea circles, has been facing a near crisis. It is stated that large stocks of tea are lying undisposed in the Calcutta godowns and in the gardens. This large accumulation is causing great concern to trade and industry. It, however, remains to be seen whether any sizable relief will emerge from this action, in view of the none-too-encouraging demand from foreign countries and the rising trend in production.

The following table gives an idea of the trend of shipments of Indian tea to foreign countries so far during the current season:

(In million lbs.)

	1955-56	1954-55
North Indian tea (1st April to 28th January)	241.65 1955	322.56 1954
South Indian tea (January to December)	75.93	78.04

The crop of North Indian tea as at the end of December 1955 amounted to 533.2 million lbs., as compared with 513.6 million lbs. a year before. South Indian tea production for the year ended 31st December 1955 aggregated 129.02 million lbs., a rise of nearly 490,000 lbs. over the year.

AGRICULTURAL INCOME-TAX ON COFFEE

The question whether Rule 10 of the rules framed under the Madras Agricultural Income-tax Act (Act V of 1955) is *ultra vires* the Act is to be decided by the Madras High Court. The issue has arisen from a petition filed by a coffee planter of Wynaad, North Malabar, against the order of the Agricultural Income-tax officer, Kalpatta, Wynaad, whose assessment of the petitioner's income was based on Rule 10 of the above Act.

The facts of the case are that the petitioner delivered to the Coffee Board about 233 cwts. of coffee out of a total yield of 516 cwts. for the year 1st April 1954 to 31st March 1955. The balance of the crop was in the process of preparation for delivery to the Board. He received from the Coffee Board, in respect of the quantity of coffee delivered to the Board, a sum of only Rs. 9,047-14. The petitioner, therefore, contended that his actual income for the year 1954-55 was only Rs. 9,047-14, whereas the Income-tax officer concerned computed the income as Rs. 66,315 and demanded the payment of Rs. 10,318 as tax by the petitioner. The above assessment, it is stated, was based on Rule 10 of the rules framed under the Madras Agricultural Income-tax Act. The petitioner's contention was that his income should be assessed, as per the Act, on the basis of the actual amount received by him from the Board during the year and not on the basis of Rule 10 of the Act.

Under the Coffee Act (Central Act VII of 1942) as amended by the Coffee Market Expansion Amendment Act, 1954, the control of the coffee industry vests in the Central Government. This Act lays down that all the coffee grown is to be delivered to the Coffee Board and no owner of an estate can sell coffee to anyone else. The income derived by a coffee-estate owner during a particular year is, therefore, the price paid to him by the Coffee Board in the course of that year. The Coffee Board makes payment from time to time after deducting from the price of the coffee crop delivered to it under the Act, all expenses, duties, cesses, etc.

The Madras Agricultural Income-tax Act provides for the levy of a tax on agricultural income from plantations in the Madras State. According to Rule 10 of the rules framed under the Act, agricultural income from coffee, for the purpose of assessment, was not the amount received by an estate-owner from the Coffee Board, but the proceeds on the coffee realised by the auction of the crop by the Coffee Board. If that was not ascertainable, the Income-tax officer might calculate the income at the market value of the coffee crop at the time of the assessment, subject to later alterations based on the value fixed by the Coffee Board.

The petitioner preferred an appeal to the Assistant Commissioner of Agricultural Income-tax, Kozhikode, against the order of the Income-tax officer. The Assistant Commissioner, however, ruled that it was not possible for him to decide the appeal except on the basis of Rule 10 of the Act. The petitioner, therefore, sought the relief of the High Court. He submitted that, according to the Madras Agricultural Income-tax Act, the income-tax was leviable, at the rates prescribed, on the amount of money actually received by an estate-owner on his agricultural produce during the accounting year and not as provided under Rule 10. He contended that Rule 10 was *ultra vires* the Act and the order of the Income-tax officer, based on this invalid rule, was illegal. He prayed for the issue of a writ of *mandamus*, directing the Assistant Commissioner for Income-tax to hear and determine the appeal in conformity with the Act, disregarding Rule 10 of the rules framed thereunder.

The presiding Judge admitted the petition and ordered notice. His Lordship also granted interim stay of the collection of the tax assessed and of hearing of the appeal pending before the Assistant Commissioner.

* Provisional up to the end of December, 1955.

PLAN TO RAISE TEA PRODUCTION IN CEYLON

A programme to raise tea production in Ceylon to 452 million lbs. by 1972 has been outlined in a report on a survey of tea plantations under the Census of Agriculture, 1952. It is stated that the output, which is estimated at 360 million lbs. in 1956, will be reduced, in the first instance, to 350.8 million lbs. by 1960, but will be raised steadily thereafter. In order to achieve the aforesaid target of 452 million lbs., a programme of uprooting and replanting 5,750 acres, or one per cent. of the total acreage, annually with high-yielding plants for a period of 10 years will have to be undertaken. The expansion in acreage envisaged in this programme, it may be noted here, is within the limits provided in the International Tea Agreement. This does not, therefore, provide any clue about the intentions of Ceylon in regard to the future of the Agreement.

The cost of replanting is estimated variously at Rs. 4,500 to Rs. 6,000 per acre. This level of replanting costs, the report, however, states, will not stand in the way of planters launching carefully planned programmes of replanting, provided the Government grants a subsidy or some such incentive. The tea industry, in fact, has already submitted a memorandum to the Government asking for a subsidy equivalent to half the cost of replanting 5,000 acres per year for a period of ten years.

The yield of tea in Ceylon is said to be well below that in India or Pakistan, but above that in Indonesia; the actual figures of yield per acre are: Ceylon 398 lbs., India 770 lbs., Pakistan 757 lbs. and Indonesia 424 lbs.

In recent years approximately 6,00,00,000 square feet of Shalimar Tar roofing materials, made in India, from Indian materials by Indian labour, have been used by Public Authorities, Industry and individual house owners, on the roofs of their properties—The demand increases yearly.

Shalimar Tar have built and are now operating the only high speed continuous machine for manufacturing roofing felt in India.

COAL IN SECOND PLAN

TARGET FIXED AT 60 MILLION TONS

THE rate at which development of coal industry takes place and the extent to which coal is used for industrial production constitute one of the principal indicators of a country's economic development. It is in the fitness of things, therefore, that the Planning Commission should have given priority for the development of this industry in the second Five-year Plan. More so, because the emphasis in this Plan is on industrial expansion on a large scale, with great stress being laid on the development of heavy industry.

The Planning Commission has fixed the production target at 60 million tons to be reached at the end of the second Plan. This, according to the Commission, represents an increase of about 23 million tons over the level of output at the end of the first Plan. The Commission has proposed to raise, out of the estimated increase in output, 15 million tons in the public sector and 8 million tons in the private sector. The exact distribution between the two sectors is, however, still stated to be under consideration.

It may be noted, in this connection, that the production of coal increased from 34.3 million tons in 1951 to 36.8 million tons in 1954. The output of coal in 1955 is estimated to have touched a peak of about 38.2 million tons. The bulk of this production was accounted for by the private sector, the public sector's share being only 4.5 million tons.

An important consideration to be borne in mind while drawing up the detailed plan for the production of coal is economic utilisation of rail transport. In order to ensure this, it would be desirable to develop coal mining over a wider area if possible. In the Plan now drawn up, this requirement does not seem to have been fully met, for, by and large, the geographical pattern of coal mining is the same as it is at present, except that Madhya Pradesh has received some attention. The bulk of coal production now comes from West Bengal and Bihar. This position will remain materially unchanged as will be seen from the following table, showing the expected distribution of coal output at the end of the second Plan, as compared with that in 1954-55:

(In million tons)

	Output in 1953-54	Output in 1960-61	Increase
Assam	0.50	0.50	..
West Bengal—			
Darjeeling	0.03	0.03	..
Raniganj	12.22	18.16	5.94
Bihar—			
Jharia	13.19	16.69	3.50
Karanpura	1.44	6.00	4.56
Bokaro	2.38	2.88	0.56
Giridih	0.26	0.26	..
Other small fields in Bihar	0.14	0.14	..
Madhya Pradesh—			
Chindwara and Chanda	2.25	2.25	..
Korba	..	4.0	4.0
Sarni	0.07	0.07	..
Central India Coalfields	2.31	5.31	3.0
Orissa	0.52	0.52	..
Hyderabad—			
Singareni	1.43	2.93	1.5
Rajasthan—			
Bikaner	0.03	0.03	..
Total ..	36.77	59.77	23.0

The target of 60 million tons includes the coking coal needed for iron and steel and other metallurgical industries, as well as essential consumers. The Commission has pegged the output of coking coal at 14 million tons per annum. The current rate of production is a little short of this limit.

As is well known, the country is wasting its best coal by using it in its railways and in certain other industries, which can very well use lower grades of coal without any great disadvantage. The present consumption of coking coal for purely essential purposes is placed at 3.5 million tons only, so that the balance of about 10 million tons is consumed by railways and other industries with a small quantity being exported.

The Planning Commission is of the view that, owing to the expansion in iron and steel industry envisaged in the second Plan, about 9.73 million tons of coking coal will be required by this industry alone. The requirements of other essential consumers are put at 1.68 million tons. Thus the total requirements will be of the order of 11.41 million tons in terms of clean washed coal, or about 16.5 million tons in terms of raw coal.

In the light of these figures and of the need to supply coal of fairly uniform quality to the steel industry, the Commission has come to the conclusion that washing of metallurgical coal has become necessary. It has, therefore, expressed itself in favour of washing, generally, of all coking coal. It has suggested the location of a washery in the Bokaro colliery to meet the requirements of the Rourkela steel plant and, to some extent, of the Bhilai steel plant as well. It has yet to determine the location for putting up additional washing capacity.

COAL STATISTICS

According to the latest available statistics, the raisings of coal in 1955 were 38.2 million tons, as against 36.7 million tons in 1954, an increase of 1.5 million tons. The despatches, too, were higher at 32.8 million tons, as compared with 31.9 million tons, a rise of 0.9 million tons. Coal stocks at pitheads at the end of the year under review were 3.6 million tons, as against 3.5 million tons at the end of the previous year.

The improvement in raisings and despatches was chiefly due to some improvement in domestic demand, as well as in the supply of wagons. It is estimated that wagon loadings during the year under review were of the order of 3,220 per day, as against 3,130 in the previous year.

Exports of coal during the nine months ended September 1955, the latest month for which particulars are now available, were 1.2 million tons, valued at about Rs. 3.63 crores, as compared with 1.4 million tons, valued at Rs. 4.62 crores, during the corresponding period of the previous year. On the basis of declared value in sea- and land-borne statistics, the average price realised during January-September 1955 was about Rs. 31-0-6 per ton, as against Rs. 31-3-9 per ton in the previous year. This means a decline of As. 3-3 per ton over the period under review.

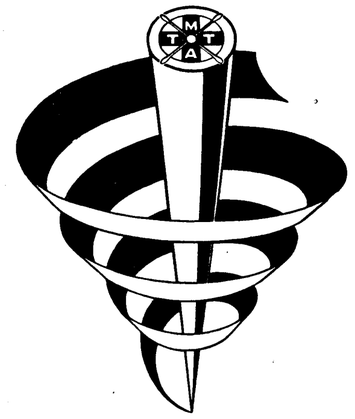
It would appear that the prospects for coal industry in the current year are better. The Government of India has pegged the output of selected A and B grades of coal at 7.70 million tons, as against 7.35 million tons for 1955. The output of grades I and II has been pegged at 4.2 million tons and 3.1 million tons, as against 3.95 million tons and 3.05 million tons, respectively. It is stated that ceilings on output for individual collieries in 1956 will be fixed after taking into consideration the ceilings fixed for 1955 and the actual output. Increased ceilings might be allowed for collieries which have plans for stowing and which propose to carry out coal washing in the current or the next year.

ATOM PLANT TO AID COAL GASIFICATION

Designs for an atomic power unit to produce heat for gasifying coal are being developed by the U.S. Atomic Energy Commission. In such a plant, the nuclear reactor furnace will be used as a direct source of heat and not for the production of electricity. The unit will form the central unit of a plant for gasifying the coal underground, thus avoiding much of the expense involved in conventional forms of mining. This form of coal mining has been particularly highly developed in Russia.

The engineering difficulties which will have to be overcome before the project can be developed to pilot plant scale are, however, great since one of the requirements of the coal gasification process is the heat-producing unit which is capable of producing heat at really high temperatures. Nevertheless, this form of using the power produced by the fission of atomic fuels direct, which both U.S. and U.K. and European scientists and engineers believe will be achieved, is of great industrial importance.

In the first place, direct use of the heat from nuclear reactor furnaces (which may eventually be harnessed to blast furnaces in the steel industry and ore treatment plants, in other metal industries) uses the power produced by the "burning" of the uranium and plutonium atoms in the form in which most of it is produced, namely, the form of heat. Electrical energy can be obtained direct from uranium and plutonium atoms only by the harnessing of the radiation thrown off by the fission products, or ash, which are produced when atomic fuel is burnt. Secondly, far more power is used by industry in the form of heat, than is used in the form of electricity. The harnessing of nuclear reactor furnaces as heat sources will, therefore, greatly expand their importance as sources of industrial power.



WHAT'S NEW IN PRODUCTION METHODS ?

What's the better, faster-working, more economical, more accurate? What's the shape of things to come in production engineering? For all the answers, come to the . . .

INTERNATIONAL MACHINE TOOL EXHIBITION 1956

Olympia · London · England
June 22—July 6 (Sundays excepted)

Here, under one vast roof, for close study and comparison at first-hand, the Machine Tool Trades Association (of Great Britain) will present an extensive show of the most modern machine tools and allied equipment from the world's leading makers — British, European, American.

This show will surpass in information value a whole library of catalogues, a mile of correspondence. You can see the machines themselves at work in actual production. You can discuss with the world's best informed experts your own production problems and plans.

The huge range of exhibits includes machine tools, engineers' small tools, gauges and measuring equipment, testing equipment, presses and power hammers, heat-treatment plant, woodworking machinery.

This will be Europe's outstanding engineering display of 1956. Be there ! Be *sure* to be there ! Note the dates and make your plans *now* !

Organized by The Machine Tool Trades Association (of Great Britain), Victoria House, Southampton Row, London, W.C.1, England.

IMPROVING SUGARCANE CULTIVATION

SCIENTIFIC BREEDING, SOIL SURVEY AND PEST CONTROL ESSENTIAL

THE developments in world sugar engineering, in chemical analysis and factory reporting, and in utilisation of by-products, as indicated by experts at the meetings of some of the sectional committees of the International Society of Sugarcane Technologists (I.S.S.T.), held at New Delhi recently, were reviewed in these columns last week. It will be seen therefrom that technologists and research workers play a vital part in evolving improved manufacturing techniques. But whatever progress is achieved on the manufacturing side—which is only the secondary stage in sugar production—must be accompanied by a similar progress in the primary stage, that is, cultivation of sugarcane. This is precisely what has been lacking in the Indian sugar industry. While much headway has been made in raising the technical efficiency of the industry, conditions in the agricultural sector have not improved to any great extent in the main areas of sugar production, excepting in some parts of the Deccan where cane is being raised by the factories themselves on a plantation scale. Not only is the yield of cane per-acre very low—the all-India average is not more than 14 tons—but the quality of cane grown is also poor, the average recovery percentage being just 10. If, therefore, the production of quality sugar at an economic cost is to be stepped up, it is of the utmost importance that a more vigorous drive for intensifying cane cultivation be launched. Viewed from this angle, the speeches made by the Presidents of the various sectional committees on sugarcane at the recent New Delhi Congress have great value.

Presiding over the Agronomy Section of the Congress, Mr. K. L. Khanna, Director, Sugarcane Research and Development, Bihar, rightly stated that the chief problem of the sugar industry was one of producing high quality raw material at as low a cost as possible. This, he said, meant research on varieties—both breeding and selection—as also in soils, plant functions and agro-biology in relation to land use and cropping power. Mr. Khanna dwelt at length on those various fundamental aspects of varietal, nutritional and cultural work on sugarcane which have an important bearing on the well-being of the sugar industry. He made a plea for co-operative endeavour both in the different specialised branches of science and among workers engaged on similar lines of investigation all over the world, and laid particular emphasis on free exchange of breeding material as well as proven commercial varieties developed in different countries with nearly identical climatic conditions. The two specific suggestions which Mr. Khanna put forward related to development of seed nurseries and effective screening of varieties against disease.

Cane-breeding Operations

The need for cultivating quality cane in as cheap a manner as possible was equally strongly stressed by Dr. T. S. Venkatraman, President of the Cane-breeding Section. The time was now ripe, Dr. Venkatraman declared, not only to work for larger recovery of sugar from cane but also to produce this energy-giving article of food at a cheaper cost, so that it might become available to the richer, middle and poorer classes alike. The task before the sugarcane breeder of the future, he said, was difficult and would require the harnessing of the latest scientific developments to solve the problems connected with cane-breeding. To quote him: "Till now, cane-breeding has been largely a hit-and-miss method and the stations producing useful types have depended almost directly on the number of chances which the breeder is able to work into his programme. There is, therefore, urgent need for introducing greater certainty and methodicity in cane-breeding operations.

Dr. Venkatraman felt that it would be a very desirable thing, if the various regional cane-breeding stations came together and started a sort of super-station where fundamental work pertaining to cane-breeding could be successfully tackled. The world was getting smaller every day with the great inventions in science and it was essential that, in future, cane-breeding was so organised as to serve all the regions from a central super-station.

Cultural Practices

The improvement in the per-acre yield of high sucrose-content sugarcane through breeding and selection is possible only by the adoption of suitable cultural practices, with special reference to the prevailing soil conditions. Dr. B. K. Mukerji, Director of the Central Sugarcane Research Institute, Lucknow, and President of the Soil Section of the I.S.S.C. Congress, did well, therefore, to urge, in the course of his speech, the importance of a thorough and intimate knowledge of the soils "which alone can help planning of cane cultivation on a long-term basis for ensuring high levels of yield and quality without unduly taxing the capacity of the soils." He accordingly suggested the setting up of an international committee of sugarcane soil workers for co-ordinating the data available in the different countries and standardising the methods of cane soil survey and analysis. Dr. Mukerji reviewed the recent advances in cane soil survey and explained the application of tracer elements to assess mineral transformations in cane soils and the influence of sub soil cultivation and manuring on the production of cane. Pointing to the low average yields of cane in India, he revealed that yields ranging between 60 and 80 tons per acre were actually secured by some growers even under the unfavourable climatic conditions of North India. He, therefore, felt that the adverse influence of climatic factors could be counteracted by adoption of suitable cultural practices. Elucidating this aspect, Dr. Mukerji observed:

"As resistance to drought, water-logging and alkalinity are mainly correlated with the root system of cane varieties, the main objective of cane-breeding should be the production of a range of varieties best suited to different soil-climatic regions of a country. In breeding cane varieties, attention must be concentrated on evolving such varieties as show the best response to every pound of fertiliser applied to the soil. . . . The methods of appropriate crop rotation, manuring and irrigation must be relied upon to a much greater extent for securing increased yields, as also the soil differences studied in detail, in planning measures of improvements on rational lines. In categorising cane soils in the tropics and sub-tropics, the diagnostic characteristics may have to be very different from those recognised for soil classification in temperate countries."

Pest Control

Closely allied to the problem of cultural operations is that relating to pest control. Few crops are said to be more liable to attack by pests than sugarcane, on which no less than 1,398 species of insects and mites are known to be feeding. Pests, particularly insects, constitute, as Dr. K. B. Lal, Plant Protection Adviser to the Government of India and President of the Entomology Section, said, a major problem in cane cultivation and, in most cases, the yield at harvest and the quality of cane juice depend largely on the extent of success of control over the pests. According to Dr. Lal, the last decade has seen a gradual replacement of the older methods of mechanical and cultural control by newer methods based on the use of chemical insecticides. This has been helped by the evolution of various organic insecticides, especially those of the chlorinated hydro-carbon group, and by the development of various types of machines for the dispersal of insecticides on the crop. The mere evolution of these insecticides is not enough; they must be readily made available to cane growers at a cost which suits their pockets. After all, the gains achieved as a result of pest control measures should be evaluated, as Dr. Lal pertinently remarked, in terms of the saving in the cost of cultivation and of the extent to which the sugarcane crop can bear expenditure on plant protection measures.

INTERNATIONAL SOCIETY OF SUGARCANE TECHNOLOGISTS

Several important decisions were taken by the International Society of Sugarcane Technologists (I.S.S.T.) at the last plenary session of its ninth congress held on the 2nd inst. The decisions were based on the recommendations made by the various sectional committees. The Society approved of the suggestion—put forward by the Sugar Manufacture Section—that there was need for continuation of efforts for bringing about uniformity in the methods of factory control and reporting data and that the activities of the Special Committee appointed for the purpose be maintained till the factory control system was made up-to-date and international.

The Society authorised its Pathology Section to proceed with the preparation of a monographic treatise on each of the most important cane diseases of the world through the co-operative effort of pathologists having specialised experience with the different diseases. As the Pathology Section had already undertaken and completed the preparation of a list of all the known cane diseases and their world distribution, it decided to publish the list as part of its Congress proceedings. It also accepted the recommendation of the Administrative Committee for the appointment of a standing committee of entomologists to investigate the feasibility of preparing an authoritative monograph on the principal cane pests of the world.

The Society expressed its appreciation to the Government of India and the Sugarcane Breeding Institute (Coimbatore) for their generous collection of cane varieties of breeding importance and to safeguard the collection against disease. It recognised the cane collections of the U.S. Department of Agriculture at Canal Point, Florida, and the Coimbatore Institute as world cane collections. In the course of a resolution, the Society expressed the view that the Indian Government had satisfied the major objective of the cane collection project by authorising expansion of the cane collection maintained at Coimbatore to the status of a world collection, essentially duplicating that kept by the U.S. Agriculture Department.

As the Cane-breeding Group had expressed a desire for a Committee to promote the progress of cane-breeding to focus the attention of cane-breeders throughout the world on important problems, to disseminate information on the breeding behaviour of canes, as also on new breeding procedures, and to encourage co-operative effort, wherever possible, the Society resolved that the present Standing Committee on Varieties be renamed "Standing Committee on Germ Plasm and Breeding" with the addition of such members as might seem desirable.

Sugar production in India during the month of December 1955, was 280.046 tons which brought the total production for the first two months of the current sugar season to 359,162 tons, as against 331,402 tons in the corresponding period of the previous season, according to the Indian Sugar Mills Association. About 132 factories had already started crushing by the end of December, as against a total of 140 factories expected to crush during this season. The offtake of sugar from the factories during the month was 117,498 tons, as against only 53,679 tons in the same period last year. The total offtake during the first two months of the current season was 256,323 tons, as against 90,520 tons a year before. The closing stock with the factories as on 31st December 1955 was 533,236 tons, as against 307,917 tons a year before.

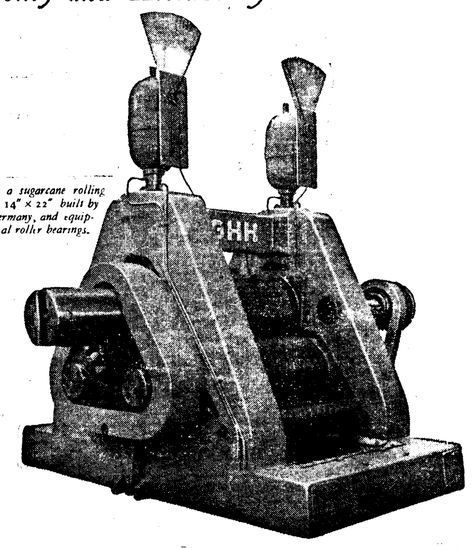
Economy and Reliability



The illustration shows a sugarcane rolling mill of triangular type, 14" × 22" built by Gutehoffnungshutte, Germany, and equipped with SKF spherical roller bearings.

A few years ago the first SKF roller — bearing — equipped crushers and rolling mills of triangular type were installed in the sugarcane industry. The results obtained have been very satisfactory, and several well-known manufacturers are now ready to offer machinery with such bearings.

The chief advantages gained by the use of SKF roller bearings are:

Lower installation costs: no equipment needed for water-cooling and circulating — oil lubrication of the bearings. The aligning device between the top roll and the pressure — regulating apparatus also becomes unnecessary, since the bearings are self-aligning.

Lower maintenance costs: no wear of the journals and bearings, and consequently less repairs. Economy of lubricant and reduced shut-down losses.

Lower running costs: economy of power because of the low friction even at start under full load.

Greater running reliability: no hot running and no interruptions due to bearing troubles.

Apply to SKF for further information!

REORGANISATION OF TRANSPORT ADMINISTRATIONS

HIGH-POWER COMMITTEE TO BE SET UP

THE fifteenth session of the Transport Advisory Council held in New Delhi last week, discussed, among others, matters relating to reorganisation of transport administrations. The most notable outcome of this session was the decision to set up a high-powered *ad hoc* committee, in order to advise the Government on the reorganisation of transport administrations in the various States. The Council proposed that the Committee must be composed of members of Parliament and State Legislatures, representatives of the interests connected with development of road transport and of large-scale transport operators and a few officials with knowledge and experience of motor transport administration. The Committee, according to the Council, should survey the existing arrangements for the administration of road motor transport in the States and make recommendations for a model administrative set up, which, in addition to establishing close liaison with the statutory transport authorities at different levels, will be adequate to undertake the task of studying the traffic requirements of the areas under its administrative charge and plan and foster the development of road services to meet traffic requirements and to make the fullest use of the available road facilities.

The Council considered the suggestion for the abolition of the present levy of octroi so as to facilitate free flow of goods through towns and agreed that the system of issuing transit passes for vehicles on payment of a nominal fee and of providing escort, wherever possible, should be adopted by all States. It was further agreed that the transit fee charged should not be a source of revenue for the municipality and that it should be limited to the maximum of Re. 1 per goods vehicle. It was felt that no transit fee must be collected from passenger vehicles.

Ideal System

It will be recalled that the Committee of the Transport Advisory Council on the levy of octroi had suggested that the ideal system to avoid delay in movement of vehicles in transit would be to have "chord roads" or by-pass roads outside the municipal limit for through traffic. This was, however, considered impracticable, for the reason that, when such roads were created, the municipalities would tend to go beyond their jurisdiction. As an alternative, therefore, it was suggested that the system prevalent in the Punjab, namely, issuing transit passes to vehicles on payment of a nominal fee and providing escort, wherever possible, should be adopted, or the octroi should be collected at the point of entry and immediately refunded at the point of exit. This suggestion, too, was considered impracticable by some, particularly in small towns, as it might involve handling of large amounts of cash by small staff. The Conference of State Transport Commissioners held in August last year, however, suggested the adoption of the Punjab policy of issuing transit permits and held that the fee charged should not be a source of revenue but be limited to a maximum of Rs. 2 per vehicle and that no fee at all should be charged on passenger vehicles.

The Conference discussed also the proposals for legislation relating to national highways, a legislation that falls within the sphere of the Central Government. The proposals considered were three. The first provided for the declaration of the present national highways as statutory highways. The second wanted measures for the prevention and removal of encroachments on national highways. The State representatives, however, desired a two-month period for formulating their views on this proposal. The third related to ribbon development alongside the highways.

The Council considered the desirability of imposing a single-point direct tax in place of several taxes payable to taxing authorities of the States by the operators and felt that the matter should be left to the State Governments to decide. It will be recalled that, at its previous meeting, the Council recommended that the State Governments should, without waiting for action on other parts of the Report of the Taxation Enquiry Commission, agree to single-point taxation and take steps to implement it under the existing legislation itself. While most of the State Governments agreed to this, the Madras, Bombay and U.P. Governments expressed some reservations. These related particularly to the position arising out of difference in rates of taxation between several States. The Government of Bombay suggested that the operators should pay the difference between the higher and the lower rates to the States where higher rates prevailed and obtain permits for plying the vehicles in those States also.

The Council decided that the Union Ministry of Transport should work out a pilot scheme in the matter of conversion of professional type (public carrier) of bullock carts with iron tyres into pneumatic-tyred carts. The State Governments agreed that they would be prepared to contribute a share of the subsidy required for the conversion, provided the balance was met by the Government of India.

Inland Water Transport

It would appear that no decisions were taken on the subject of development of inland water transport which also came up for consideration by the Council. It may be noted here that there are at present 5,500 miles of navigable waters in India, among which the most important ones are the Ganga and the Brahmaputra and their tributaries, the Godavari and the Krishna, the backwaters and canals of Travancore-Cochin, the Buckingham Canal and the Mahanadi canals in Orissa. For the development of waterways in the North and North-Eastern region, the Ganga-Brahmaputra Water Transport Board was set up in 1951. This Board, we are told, has finalised a pilot project for testing the feasibility of operating shallow draft tugs and barges on those sections of the Ganga where conditions for navigation have deteriorated. Orders for the craft have been placed and the project is likely to be launched before the end of this year. The Board has prepared also projects for the improvement of the most important riverine ports, for provision of navigational aids and for the running of regular ferry services in the Assam Valley, in co-ordination with road services. Provision has been made in the second Five-year Plan for widening and deepening the Euckingham Canal and for ultimately connecting it with the Madras harbour, as well as for the improvement of the canal system on the West Coast. For all these schemes, a sum of Rs. 3.4 crores has been allocated in the second Plan. Necessary measures for bringing about complete co-ordination between the railways and the steamer services in the North-Eastern waterways are still under consideration.

Taxation

The Conference was addressed by Mr. Lal Bahadur Shastri, Union Minister for Transport. Mr. Shastri's speech was notable for some candid observations on taxation of motor vehicles. He admitted that the taxes on vehicles were so high as to retard the growth of motor transport and that they were not generally based on any clearly defined principle or accepted policy. He quoted approvingly the views of the Motor Vehicles Taxation Enquiry Committee which had observed that "there can obviously be no fair basis of taxation on the motor vehicle user, if each taxing authority in India is merely concerned with collecting as much revenue as possible from the motor vehicle user" and which had recommended that the Centre should promote legislation laying down the principles on which taxes on motor vehicles should be levied by State Governments and the incidence thereof.

Further, he reminded the Council that the recommendations of this Committee had been considered by the Council earlier and the view that a ceiling should be imposed on taxes of motor vehicles had been expressed by it. Since then the Taxation Enquiry Commission (Dr. Matthai Commission), the report of which was released early last year had also gone into this question. Endorsing the necessity for limiting these taxes, this Commission had suggested that the matter should be resolved at the meeting of the Transport Advisory Council. If, however, no agreement could be reached by discussions at the Council meeting the Commission had suggested the matter might be placed before the inter-State Taxation Council advocated by it. Despite this timely reminder by the Union Transport Minister and his appeal to the Council that it should make up its mind on this important question, it would apear that the Council failed to put forward a solution. Consequently, the Centre should now resort to the next expedient advocated by the Matthai Commission.

Reciprocal Arrangements

Expressing the view that reciprocal arrangements should be entered into between bordering States for the free flow of inter-State traffic, Mr. Shastri observed:

"As the Council are aware, on their own recommendation, the States have been repeatedly advised to enter into reciprocal arrangements for the promotion of inter-State transport, but such arrangements have still to be finalised in many cases. As agreed at the last meeting of the Council, model principles for reciprocal arrangements for the inter-State operation of transport vehicles have been drawn up and circulated for the consideration of the Council. It is hoped that the acceptance by the Council of the model principles will facilitate the finalisation of reciprocal arrangements in the remaining cases and the permissive powers assumed by the Centre in cases where no agreement has been reached will, I hope, in practice prove unnecessary. I might also mention, in this connection, that these provisions will provide a handy statutory machinery for giving effect to any measures for the promotion of inter-State road motor transport that may be decided upon by the zonal councils, which are likely to come into being, as a result of the suggestion made by the Prime Minister some time back."

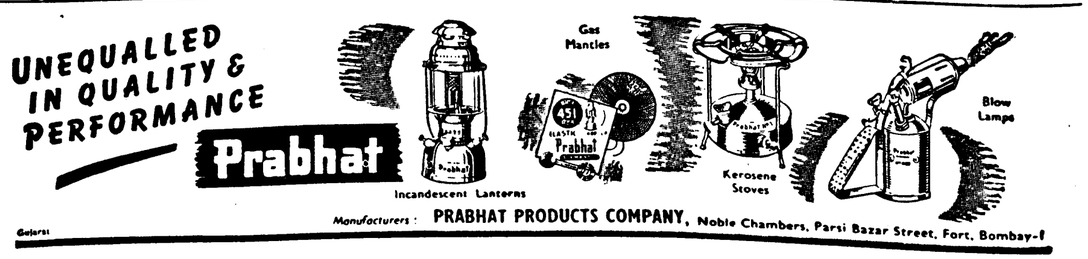
Mr. Shastri then referred to the vital role roads play as an important carrier of goods, and said:

"It is no doubt urgent to provide communications between and among far-off towns and isolated villages and for this purpose roads are the best and perhaps the most economic means. I do feel that we should now build roads, keeping in mind the problem of the developing traffic in the future. There should be wider roads, which might generally be between 18 and 22 ft. wide. Sufficient attention should be given to their proper maintenance also. It is not only the heavy traffic moving on the roads but also the ever-increasing size of power-driven vehicles themselves which seriously comes in the way of faster movement on our narrow roads and I would, therefore, like the Centre and the State Governments to give their earnest consideration to this aspect of the matter, as our plans are fairly big for the second Five-year period."

Dealing with the position of the individual transport operator, Mr. Shastri remarked:

"It is obvious that, with increased road mileage in the country, there should be a corresponding increase in the number of motor vehicles. State Governments, barring a few, are gradually going in for nationalisation of their passenger services, but the position in the case of goods services is wholly different. The individual operator still holds the field there. I do not think that position could or should be disturbed suddenly, as it is in our interest to have a larger number of vehicles plying on the road, so that it might, at least to some extent, ease the transport position of the country.

(*Continued on page 311*)



NEW PRODUCTS AND PROCESSES

Atomic Plane

SLOW but steady progress toward the development of atomic-powered planes is being made in the United States, according to reports made by Government officials and aircraft engineers, Eugene Zuckert, former member of the U.S. Atomic Energy Commission, has predicted that the U.S. will have its first nuclear-powered plane in the air within three years. One of the principal problems in connection with such planes is that the nuclear reactor or atomic furnace in which heat will be generated to produce power must be shielded with heavy protective coverings to prevent the escape of radiation. Improvements in reactors in recent years have been so great, however, that this problem may already be partly overcome. This seems to be evidenced by the fact that the U.S. Atomic Energy Commission recently announced plans for the building of a special laboratory to develop designs for atomic-powered planes. Engineers point out that new materials, as yet unannounced, may be used for shielding the nuclear reactors used in planes. These would replace the customary shield of lead and cement, which weighs from 50 to 100 tons. At the same time, the point is made that an atomic plane's fuel would provide an important saving in weight. One pound of uranium 235 contains heat equal to 1,700,000 pounds of gasoline. This means that an atomic airplane's fuel consumption can be measured in pounds per day instead of thousands of pounds per hour as in a conventional plane.

Protective Coating for Aluminium

While aluminium has good weather-resistant properties, it does, if unprotected, become discoloured and pitted when continuously exposed to the weather for periods of about 12 months. This can be prevented by applying a protective coating to aluminium. One such lacquer coating, which depends for its effectiveness on the use of a butyrate chemical base, which has been developed by Eastman Chemical Products, U.S., is said to dry hard within half a second. This lacquer, which is manufactured by the Egyptian Lacquer Company, U.S., is said to be particularly effective when used for the protection of the skins or outer surfaces of aircraft. Butyrate-based coatings applied to aluminium sheeting of the wings and fuselage of aircraft have been found to remain effective 16 months after their application, during which distances exceeding 120,000 miles have been flown. One advantage of the compound is said to be the fact that even where dents do cause breaks in the coating, the coating does not peel or chip.

Fibre Metals

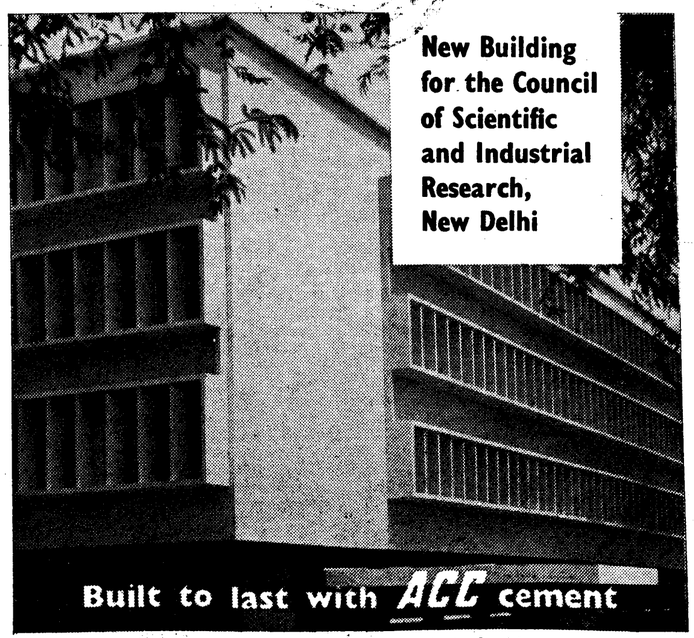
Light porous metal parts are now being made from metal "fibres" by means of a process which has been developed by the Armour Research Foundation, U.S. The process depends on the use of a "felting" process resembling that used in the manufacture of paper. Advantages of the process are said to include the ease with which complex shaped parts can be constructed by the metal fibre process and the fact that parts made by the process are stronger than those made by powder metallurgy techniques. In manufacturing metal fibre parts, the minute fibres of metal are poured on to a screen in the form of a slurry, whereupon the liquid drains away leaving a matt of tightly massed fibres —the felt. This felt is then either pressed, or sintered to yield the tough finished product. Additional strength can be given to a "fibre metal" part by using metal fibres which have been shaped in an irregular form, as for example, by making them barb-shaped, when the barbs on the fibres increase the tenacity with which the individual fibres cling together within the felt.

Insect-proof Plants

New types of chemical insecticides which bring about slight changes in the chemical composition of agricultural plants and other plants of economic importance may be used in the future. Unlike present-day insecticides, which act by killing the insect when it attacks the plant, these insecticides convert the plant into an unsuitable food plant for the insect, while leaving its other qualities, such as those which made it suitable for human consumption, unaffected. The development and use of such chemicals was suggested recently by Professor V. B. Wigglesworth, Quick Professor of Biology, Cambridge University, a leading expert on the physiology of insects, in a lecture to the Royal Society of Arts in London. It should be possible, he declared, to apply some harmless chemical which would affect the chemistry and physiology of a plant as, for example, the potato, in such a manner that the Colorado beetle would grow more slowly if it fed on it and would not be able to breed. Yet, the plant would remain unchanged so far as man was concerned.

New Atomic Reactor

Successful tests have been conducted at the U.K. Atomic Energy Research Establishment at Harwell, Berkshire, with a new type of atomic reactor known as Z.E.U.S. (Zero Energy Uranium System). It is a fast breeder reactor designed to create more fissile material than it consumes, and is of the same type as the one to be used in the experimental power station now being built at Dounreay, in the north of Scotland. According to an Atomic Energy Authority spokesman, the Z.E.U.S. is expected to come into regular use shortly. The reactor is designed to study the problems involved in a large-scale power station.



VOCATIONAL TRAINING IN JAPAN

SALIENT FEATURES DESCRIBED

[The vital role played by vocational training in the industrial development of a country was impressively brought out by the Asian Technical Conference held at Rangoon sometime ago under the auspices of the International Labour Organisation. No other country in Asia has achieved such remarkable progress in the field of vocational training as Japan. An account of the way in which vocational training is organised in Japan will, therefore, be read with much interest. Accordingly, we publish on this page the salient features of vocational training in Japan as contained in the book entitled "Present Situation of Vocational Training in Japan," prepared by the Japanese Ministry of Labour.—ED.]

VOCATIONAL education has been an integral part of Japan's modern school system ever since the "Education System" was promulgated in 1872. This has further been strengthened when the "Vocational Education Promotion Law" was put into force in 1951. The vocational education in junior high schools aims at providing the students with general knowledge and information concerning vocations, skills and domestic and vocational life. While, in senior high schools, they cover such courses as agriculture, industry, commerce, fishing, household, etc. Vocational education in the university system provides for specialised knowledge and technique and general culture deemed necessary for future leaders in various fields. The so-called short-term university courses of two or three years put particular stress on practical and professional education on the foundation made at senior high schools.

Vocational training for employment service in Japan made its start more than 30 years ago. Since 1947, with the coming into force of the Employment Security Law, it has become a part of the work of the employment security administration. At present, there are 287 Public Vocational Training Centres (P.V.T.C.) for the able-bodied and eight for the disabled. Seventeen were especially established under the special account of the Unemployment Insurance to cover various trades. The total number of trainees during the year 1954 was 23,860 in case of P.V.T.C. for able-bodied. Not only is this training given free of charge but the trainees are also paid allowances and provided with dormitories. Almost all the trainees finishing the course receive employment.

Apprenticeship Scheme

The apprenticeship scheme in our country has been operated on the basis of the Labour Standards Law (1947), Apprenticeship Ordinance (1954), Ordinance on Apprenticeship Council (1947) and Ordinance on Apprenticeship Instructor (1951). The purpose of the apprenticeship scheme is to eliminate the evil practices of the old apprentice system and to train versatile workers.

In accordance with the Apprenticeship Ordinance, the Ministry of Labour compiles manuals for apprenticeship instructors, which list the detailed contents of matters to be taught in relation to the instruction and the performance of work classified by jobs. The manuals also provide guidance to the establishments concerned in the planning of the apprentice training. The employer desiring to train apprentices in accordance with the Ordinance must fix their number, method of indoctrination, period of contract, working hours, wage standards, and methods of payments, and he must obtain the permission of the administrative office. The jobs designated for the training now total 124. They are classified into 12 for industrial arts, nine for textiles, 20 for metals, eight for electricity, five for precision instruments, 14 for machinery, 11 for shipbuilding, five for rolling-stock, 19 for chemicals, 12 for construction, three for mining and six others.

Statistics relating to apprenticeship in recent years are as follows:

	No. of authorised establishments	*No. of apprentices*
1952	24,146	50,012
1953	27,505	64,135
1954	28,282	64,981

Qualified instructors of P.V.T.C. are chosen by a selection committee on the basis not only of their knowledge and skill but also of their high character. The prefectural government is responsible for improving the quality of instructors by giving them intensive training. The Ministry supplies prefectural governments with necessary materials and qualified lecturers.

During the period from 1947 to the end of 1954, 102,338 licences were issued and 37,296 persons are now engaged in training, showing a ratio of one instructor to 1.7 apprentices. In order to promote the instructors' knowledge as well as their skill and guidance ability, Labour Standards Office also offers training programmes.

Management and Supervisory Training

Representative types of this kind of training in Japan are the T.W.I. (Training Within Industry), M.T.P. (Management Training Programme) and J.S.T. (Japanese Supervisory Training).

T.W.I. was introduced to Japan in 1949 and, in the following year, an institute for T.W.I. trainers was organised in Tokyo. Training is given according to the three training programmes known as "Job Instruction," "Job Methods" and "Job Relations." Since then, the T.W.I. has become increasingly popular in industrial circles through the technical assistance extended by the Ministry of Labour and the efforts of private enterprises. According to the Labour Ministry, the industrial establishments making use of the T.W.I. programme at the end of 1954 numbered 3,808. And the number of supervisors who received training up to March 1955 was 352,613.

The Management Training Programme was first introduced in 1950 and is under supervision of the Ministry of International Trade and Industry. This training is conducted in conference form outside the workshop as well as training on the job (O.J.T.). The M.T.P. is divided into organisation, training, job methods and job relations. The training lasts 40 hours and is given in 22 sessions. Films and film strips are used and demonstrations are carried out as training aids.

In March 1955, the Japan Productivity Centre was established and, under it, the Japan Industrial Training Association was formally started in July, in correlation with the M.T.P.

Supervisory Training

Japanese Supervisory Training was officially established in April 1951 and the National Personnel Authority is dealing with the programme. This offers supervisory training for those holding positions of deputy section chiefs and unit chiefs in charge of clerical work.

The four-year-old J.S.T. programme was developed rapidly and has been adopted not only by Government agencies and local public bodies but also by private enterprises. The instructors are employees who are recommended by the Ministries or offices concerned as having the proper qualifications as fixed by the Authority, and who have successfully finished the J.S.T. Instructor Training course. The number of training instructors in July 1955 was 616 Government employees, 538 local public body employees and 239 private enterprises employees.

Co-operation with Asian Countries

Co-operation with Asian countries should be promoted not only through vocational training but also through broad activities contributing to economic development. It is especially important, therefore, to establish a framework for effective co-operation in the field of vocational training which, among other things, forms the basis of economic development. Co-operation has hitherto been promoted through the institute on vocational training based on the I.L.O. Expanded Technical Assistance Programme, but, at the same time, it is desired that effective training institutes should be organised much more often in future. Japan is willing to offer opportunities to make available the contents of its vocational training programmes and to organise inspection tours of the vocational training being undertaken by it.

VOCATIONAL GUIDANCE

The importance of evolving a proper basis on which suitable psychological tests could be applied for determining the inherent aptitude of employment seekers to various categories of employment was stressed by Dr. John Matthai, Vice-Chancellor, University of Bombay, in the course of his inaugural address at the fifth annual career conference for University students held at Bombay on Monday this week under this joint auspices of the Vocational Guidance Bureau and the Bombay University. Dr. Matthai called upon the Bureau to take up this work and observed that vocational guidance would assume greater importance and the work before the Bureau would increase manifold during the second Five-year Plan period, what with the greater emphasis now placed on the development of small-scale and cottage industries and the difficulty in collecting reliable and useful data about the avenues of employment in these industries. He felt that, during the second Five-year Plan period, small-scale industries would have a greater employment potential. As these industries were scattered all over the country and conditions and problems of employment varied greatly, the task of collecting statistics about the avenues of employment and their suitability to the needs of the "inherent aptitude" of those who sought employment would, he said, become complex and difficult. Hence there was a need, he added, for greater advance in the methods of approach adopted by the Bureau towards the problem of collecting such data.

SALIENT FEATURES OF THE SECOND FIVE-YEAR PLAN

NATIONAL INCOME TO BE RAISED BY ONE-FOURTH

THE main objectives of the second Five-year Plan are increase in national income, rapid industrialisation (with particular emphasis on basic and heavy industries), expansion of employment opportunities and reduction of inequalities in income and wealth. The achievement of a socialistic pattern of society has been accepted as the objective of economic policy. This means, according to the draft-outline, that the basic criterion for determining the lines of advance is not private profit but social gain. The benefits of economic development, it is further stated, must accrue more and more to the relatively less privileged classes of society, and there should be a progressive reduction of the concentration of incomes, wealth and economic power.

The State, it is emphasised, has to take on heavy responsibilities as the principal agency speaking for and acting on behalf of the community as a whole. The public sector has to expand rapidly and the private sector has to play its part within the framework of the comprehensive plan accepted by the community. Public ownership, partial or complete, and public control or participation in management are specially required, say the planners, in those fields in which technological considerations tend towards a concentration of economic power and wealth. In several fields, it is further stated, private enterprise can, and under present-day conditions, make little headway without assistance and support from the Government, and in these cases, the public or semi-public character of the resources drawn upon has to be recognised. In the rest of the economy, conditions have to be created in which there is fullest scope for private initiative and enterprise either on an individual or on a co-operative basis. In a growing economy, which gets increasingly diversified, there is scope, say the planners, for both the public and private sectors to expand simultaneously.

The Framework

Turning from this statement, which sets out the Government's economic policy, to the actual framework of the Plan, one notes that it contemplates an outlay (by the Central and State Governments) of Rs. 4,800 crores in the public sector, as against Rs. 2,356 crores in the first Five-year Plan. The distribution of this outlay by major heads of development is as follows:

(Rs. in crores)

	First Plan		Second Plan	
	Total provision	Per cent.	Total provision	Per cent.
Agriculture and community development ..	372	16	565	12
Irrigation and flood control ..	395	17	458	9
Power	266	11	440	9
Industries and minerals ..	179	7	891	19
Transport and communications	556	24	1,384	29
Social services, housing and rehabilitation ..	547	23	946	20
Miscellaneous	41	2	116	2
Total ..	2,356	100	4,800	100

These allocations reflect the priorities adopted for the Plan. The main stress in the second Plan is on industrialisation. With industry are associated mining and railway development. Railways have also a large backlog of replacements and renewals to make up. In consequence, industrial and mineral development together with transport and communications claims nearly one-half of the total expenditure in the second Plan as compared to about a third of the total in the first Plan. If power is also taken as a part of industrial development, the outlay for this purpose works out at 57 per cent. In the first Plan, irrigation and schemes directly related to agricultural development accounted for about one-third of the total outlay; the corresponding provision in the second Plan is about one-fifth of the total. The outlay on social services, including housing, and rehabilitation, is about 20 per cent. of the total; this is about the same percentage as was devoted to these heads in the first Plan.

The case for a big advance towards industrialisation hardly needs to be argued in detail. The Indian economy at present depends excessively on agriculture. It has to be diversified, and special stress has to be laid on basic and capital goods industries if more rapid rates of development in the future are to be sustained. The increases in agricultural production and in national income during the first Plan period have prepared the ground for a greater emphasis on industrialisation. The need for a large provision for industries in the second Plan is all the greater for the reason that the expenditure under this head has lagged behind the provisions made in the first Plan. From the data available, it appears that expenditure under large-scale industries, scientific research and minerals over the period of the first Plan will amount to about Rs. 75 crores as against the allocation of Rs. 149 crores. The second Plan allocates Rs. 691 crores to these heads. The provision of Rs. 200 crores for village and small industries is additional to this allocation. The ancillary requirements of industrial development in the form of economic overheads are reflected in the large provision of Rs. 1,384 crores on transport and communications, which includes Rs. 900 crores for railways.

The shortages of food and essential raw materials which presented a serious problem when the first Plan was formulated have now been overcome. Nonetheless, there cannot be any question of a relaxation of efforts to increase agricultural productivity. The population of India is increasing at the rate of 4.5 to 5 million a year. The large programme of investment proposed for the second Plan period will create new incomes, a significant proportion of which will be spent on food. The demand for raw materials will also go up with industrialisation. For many years to come, the raising of agricultural yields will remain an important objective of development.

Of the total developmental outlay of Rs. 4,800 crores, Rs. 2,214 crores is shown in the plans of States. The size of each State plan is given below:

Size of State Plan

(In crores of rupees)

Andhra, 116.2; Assam, 56.4; Bihar, 192.9; Bombay, 264.4; Madhya Pradesh, 123.3; Madras, 170.3; Orissa, 97.3; Punjab, 126.2; Uttar Pradesh, 248.6; West Bengal, 152.5. Total 1,548.1.

Hyderabad, 100.0; Madhya Bharat 66.5; Mysore, 78.0; P.E.P.S.U., 36.1; Rajasthan 96.8; Saurashtra 47.6; Travancore-Cochin, 71.2; Jammu and Kashmir, 33.1. Total 529.3.

Ajmer, 7.8; Bhopal 14.3; Coorg 3.7; Delhi 17.5; Himachal Pradesh, 14.7; Kutch, 7.8; Manipur, 6.2; Tripura, 8.5; Vindhya Pradesh, 24.7. Total 105.2.

Andaman and Nicobar Islands, 5.0; North-East Frontier Agency, 9.5; Pondicherry, 4.7. Total 19.2.

Centre's share of D.V.C. 12.2.

Grand total, 2,214.0.

Investment in Second Plan

Of the aggregate developmental outlay of Rs. 4,800 crores in the public sector, Rs. 1,000 crores represents current expenditure of a developmental nature and Rs. 3,800 crores represents investment, that is, outlay on the building up of productive assets. Investment in the private sector for the period of the second Plan is envisaged roughly at Rs. 2,300 crores. Of this, about Rs. 500 crores is expected to be in organised industries and mining. The information available in regard to plantations, private transport and electricity undertakings does not permit anything more than a guess. An allowance of Rs. 100 crores of investment has been made on this account. Investment in agriculture and village and small industries is largely non-monetised in character. This has been kept outside our present estimates. Monetised investment in this sector may roughly be placed at Rs. 300 crores. Construction (houses, shops, schools, hospitals, etc.) may account for as much as Rs. 1,000 crores of investment over the five-year period. This may be compared with the Taxation Enquiry Commission's estimate of an investment of Rs. 120 crores in urban housing in 1953-54. Finally, in view of the expected increase in the volume of production and economic activity, additional investment in stocks would be called for. This may be taken as Rs. 400 crores.

Taking the public and the private sectors together, investment in the economy over the second Plan period works out at Rs. 6,100 crores—Rs. 3,800 crores in the public sector and Rs. 2,300 crores in the private sector. A total investment of Rs. 3,500 crores was envisaged in the first Plan; of this about a half was in the public sector. For the second Plan, the total investment envisaged is some 75 per cent. larger than in the first Plan, and the ratio of public to private investment works out at 62: 38.

An investment programme of Rs. 6,100 crores implies a big effort on the part of the community. If, as is expected, national income over the next five years increases by about 25 per cent., this programme would mean raising the rate of investment in the economy from the present level of about 7 per cent. of national income to nearly 12 per cent. by the end of the second Plan. Allowing for a measure of external resources being available to supplement domestic savings, the latter will have to rise from the current level of about 6 to 7 per cent. of national income to more than 10 per cent.

Targets of Production

Briefly, the Plan envisages an increase in agricultural output by about 18 per cent. The production of foodgrains is to increase by 10 million tons or 15 per cent. and somewhat larger increases are expected in the case of cotton (34 per cent.), sugar (29 per cent.) and oilseeds (21 per cent.). At the end of the Plan, the consumption of foodgrains will, as a result, increase to 18.3 oz. per adult as compared to 17.2 oz. at present and of sugar to 1.7 oz. (in terms of raw sugar) from 1.4 oz. The population covered by the national extension and community development programmes in the period of the second Plan will increase from 80 to 325 million and the land brought under irrigation will increase by 21 million acres as compared to an increase of 17 million acres in the period of the first Plan. The generation of electric power will be stepped up by installation of additional capacity of 3.4 million kw. to 6.8 million kw. in 1960-61 as against 2.3 million kw. at the beginning of the first Plan.

There will be substantial increases in the domestic production of steel, coal, cement and fertilisers. The output of finished steel is planned to increase from 1.3 million tons in 1955-56 to 4.3 million tons in 1960-61; of coal, from 37 to 60 million tons; of cement, from 4.8 to 10 million tons; of nitrogenous fertilisers in terms of ammonium sulphate from 0.4 to 1.6 million tons; and of phosphatic fertilisers in terms of superphosphates 0.1 to 0.6 million tons. The total output of producer goods in the country is expected to go up by 150 per cent. over the next Plan period. Considerable advance is envisaged in education, health, housing, rehabilitation of displaced persons and other social services.

National Income

The sum total of these developments is reflected in the movement of national income. The national income is expected to increase from Rs. 10,800 crores in 1955-56 to about Rs. 13,480 crores in 1960-61, i.e., by about 25 per cent. This will result in an increase of about 13 per cent. in *per capita* income (from Rs. 280 in 1955-56 to Rs. 330 in 1960-61), as compared with an increase of 10 per cent. over the first Plan period (from Rs. 255 to Rs. 280).

It will be recalled that the first Plan contained an illustrative model of long-term development which envisaged a doubling of national income by 1971-72. The increase in national income over the first Plan period has been about 18 per cent. If the rate of increase in national income in the third and subsequent Plan periods is of the order of 25 per cent. over five years, as in the second Plan, it will be possible to double the national income by 1967-68, that is, four years in advance of the time originally estimated.

Additional employment likely to be generated over the second Plan period in sectors, other than agriculture, is estimated at 8 million. In this estimate only full-time employment has been taken into account. Altogether, in aggregate terms, the Plan offers the hope of a sufficient increase in the demand for labour to match the increase in the labour force amounting to 10 million.

Financial Resources

A tentative estimate of financial resources against the outlay of Rs. 4,800 crores is given below:

(In crores of rupees)

Surplus from current revenues	800
(a) At existing rates of taxation ...	350
(b) Additional taxation	450
Borrowings from the public	1,200
(a) Market loans	700
(b) Small savings	500
Other budgetary sources	400
(a) Railway contribution to the development programme	150
(b) Provident fund and other deposit heads	250
External assistance	800
Deficit financing	1,200
Uncovered gap	400
Total ...	4,800

It will be seen from the above table that about Rs. 350 crores can be made available for the Plan out of current revenues at existing rates. Another Rs. 450 crores has to be raised from fresh taxation. Taking the two items together, the surplus from current revenues works out at one-sixth of the total resources required. The railways are expected to contribute about Rs. 150 crores for financing their development programme. Part of this will come from the increased earnings expected. Part will have to be found through adjustments in rates and freights. The estimate of Rs. 250 crores under provident funds and other debt heads is a projection of the current and expected trends of receipts under these heads.

The targets for market loans and small savings have been raised considerably over the performance in recent years. The average level of net receipts by way of market loans from the public has in the last two years been around Rs. 100 crores. The capital market is more responsive now than it was a few years ago. This improvement may be expected to continue and the target of Rs. 700 crores for the Plan period is probably not over-optimistic. There are, on the other hand, large maturities and the task of raising net loans of the order mentioned represents in terms of gross borrowings quite a large programme, especially in the context of a brisk demand for funds for investment in the private sector.

The collections under small savings have gone up from a level of Rs. 33 crores in 1950-51 to about Rs. 60 crores in the current year. The target for the Plan period is Rs. 100 crores a year on an average. It can be attained, given an intensification of the small savings drive and sufficient follow-up at the district and sub-district levels, reaching down to every family. What is needed is a concerted effort by State Governments and non-official organisations to spread the savings habit to all strata of society. The Plan relies upon market borrowings and small savings for providing as much as 25 per cent. of the resources required. Given the limitations in an underdeveloped economy of taxation as such or by way of profits of public enterprises, the effort to mobilise savings through borrowings from the public has to be correspondingly larger.

Controls Needed

The total of resources mentioned so far amounts to Rs. 2,400 crores. The problem is to find another Rs. 2,400 crores. Some 50 per cent. of this, that is, Rs. 1,200 crores, can at the outside be raised through deficit financing. This, of course, is a draft on domestic savings. The fact that a fairly large proportion—25 per cent.—of the funds needed for the Plan have to be mobilised in this manner reflects the difficulty of increasing the coverage of taxation in the relatively early stages of development. A developing economy requires an increasing money supply, and, upto a point, deficit financing is safe and even necessary. But, beyond a point, deficit financing is inflationary. Reliance on this mode of raising resources to the extent proposed involves considerable risk. This has to be undertaken in the interest of development, but there must be readiness on the part of the community and the public authorities to adopt the necessary safeguards, correctives and controls as the situation may require.

In the nature of things, external resources that may become available to supplement domestic savings cannot be estimated in advance. In the first Plan period, these resources have averaged Rs. 40 crores a year. As compared to this, an average of Rs. 160 crores a year proposed in the scheme of financing presented above represents a large increase, even allowing for the newer form of trade credits for steel plants or other industrial undertakings. But, Rs. 800 crores represents the order of requirements. A Plan which accords high priority to industrial development has necessarily a large foreign exchange component. As will be seen later, the gap in foreign exchange resources over the five-year period works out at Rs. 800 crores, after providing for a reasonable drawing down of the country's foreign exchange reserves and for net private foreign investment. An inflow of external resources of the order of Rs. 800 crores is not beyond the range of practical possibilities in terms of the surpluses available in more developed countries for investment abroad.

There still remains a gap of Rs. 400 crores. This has to come from domestic savings. It is not possible to indicate at this stage how this amount is to be raised. *Prima facie*, the task is exceedingly difficult. The Plan, as stated earlier, a broad framework, and within it concrete programmes for each year will be worked out. There will thus be a continuous review of needs and requirements. Uncertainties as to financial resources, supply of basic materials like steel and of equipment to be imported from abroad are among the factors to be taken into account through annual plans within the five-year framework.

Strain Obvious

The strain on financial resources implied in the Plan is perhaps too obvious to be stressed further. Clearly, the Plan can be implemented fully only with commensurate effort. Not only must domestic resources be raised in the measure indicated above; there must be a readiness to make good, to the extent possible, any shortfall in the availability of external resources. An adequate tax effort is of vital importance in this context. Resources have to be saved for implementing the programme of investment, and taxation is about the most effective and equitable way of securing the required savings. It has its limits, but additional taxation of Rs. 450 crores over the five-year period is by no means excessive either in relation to possibilities or of needs.

Developmental planning with large programmes in the public sector requires that an increasing proportion of the national income comes into the public exchequer by way of revenues. This proportion is low in India—only a little over 7 per cent. Additional taxation of Rs. 450 crores will raise this proportion marginally. It has, therefore, to be regarded as the minimum to be achieved. The reliance on non-tax resources in the Plan is so large that a failure on the taxation programme is likely to jeopardise the entire Plan. Taxation, it may be added, should not be regarded as merely a means of raising revenues. It has a bearing on some of the basic purposes and objectives of the Plan. Additional taxes on factory products may be necessary in order to promote decentralised modes of production. Taxation has also to play a part in reducing inequalities.

The Centre and the States are required to share this additional tax effort equally. The lines along which the States have to raise resources have been settled on the basis of detailed discussions with State Governments. The Centre has already implemented some of the recommendations of the Taxation Enquiry Commission and the necessary further action has to be taken. The States have also to strive to their utmost to raise resources upto the targets accepted more or less along the lines suggested by the Taxation Enquiry Commission. With the large capital commitments both at the Centre and in the States, revenue deficits—which imply borrowing to meet recurrent needs—have to be ruled out. In fact, in a developing economy current revenues should make an appreciable contribution to the financing of projects on capital account.

The initial effort to find resources for large developments in the public sector is naturally beset with difficulties. But, as public enterprises start bringing in surpluses, the resources for further investment become available in increasing degree. For the community, as a whole, the basic decision is as to the quantum of investment to be undertaken. Given this decision, the system has to put forth the surplus needed. The price policy of public enterprises has to be framed with due regard to this aspect of the problem. The socialist pattern of society and the extension of the public sector are not to be regarded merely as ends; they are a part of the means of promoting rapid development. It is only as public enterprises accumulate surpluses for capital formation on an increasing scale that they lay the foundations for a progressive economy.

Foreign Exchange

The balance of payments position of the country has shown considerable improvement over the last two years. In 1954, the payments position on current account was virtually in balance and a small surplus is expected in 1955. This improvement, in spite of the heightened tempo of development in the country, is a measure of the growing strength of the economy over the first Plan period. Nonetheless, the second Five-year Plan, with its substantially larger investment outlay and an accent on the development of basic industries and transport, will necessarily involve a heavy strain on foreign exchange resources.

Estimates of foreign exchange earnings and requirements over a period of five years cannot be made without a large margin of uncertainty. Several of the important Indian exports such as jute goods and manganese are subject to sharp fluctuations in demand. Most of India's exports including tea, jute and cotton textiles have to reckon with increasing competition from other countries. An unfavourable turn in the monsoon is apt to necessitate large imports of foodgrains. Even in regard to imports directly needed for the development programmes in the Plan, availability of key materials such as steel from abroad can by no means be reckoned as certain. What can be indicated at this stage, therefore, is only a tentative assessment of the foreign exchange requirements of the Plan and the problems involved in financing these requirements.

On a preliminary view of requirements and likely earnings, it would appear that the balance of payments on current account would show a total deficit of Rs. 1,100 crores over the next Plan period. This deficit of Rs. 1,100 crores has to be covered by external resources, including net private foreign investment and withdrawal from the accumulated foreign exchange reserves of the country.

Imports of machinery and equipment of the order of Rs. 1,350 crores will be required in view of the large programmes of industrial and transport development. In the public sector alone, the requirements of imported machinery and equipment amount to some Rs. 950 crores. Of this, Rs. 425 crores is on account of transport and communications, Rs. 280 crores for the programmes of industrial development, Rs. 170 crores for irrigation and power projects and the rest for programmes in agriculture and social services. The estimated requirements of Rs. 400 crores of imported machinery and equipment for the private sector relate mainly to programmes of industrial development.

Export Promotion

Every effort has to be made to promote exports in view of the large foreign exchange requirements of the second Five-year Plan. The range of India's exports at present is narrow; but it is desirable to nurture and develop markets for exports such as jute, tea, cotton textiles, ores and oilseeds. In the case of the newer exports of miscellaneous consumer goods and engineering products, earnings from exports are only of a small order at present and sizable increase in export earnings from these commodities in absolute terms cannot be expected in the short run. Nonetheless, it is important that a beginning is made with the diversification of our exports as the industrial base of the economy expands.

The estimated deficit of Rs. 1,100 crores on current account can be financed to the extent of some Rs. 200 crores by a withdrawal from the accumulated sterling balances of the country. If these balances are drawn down to the extent of Rs. 200 crores over the next Plan period, they would fall to approximately Rs. 500 crores at the end of the Plan. Reserves of this order would then correspond to about seven months' imports and should be regarded as essential for enabling the country to tide over temporary balance of payments difficulties.

Credit may also be taken for a net inflow of private capital of about Rs. 100 crores over the next Plan period. During the five and a half years ending December 1953, private foreign investment in the country increased by Rs. 132 crores, but some Rs. 60 to Rs. 70 crores of this represented re-investment of profits earned within the country. The net inflow of private capital during the period thus works out to about Rs. 70 crores. It is reasonable, therefore, to expect a net inflow of private foreign capital of the order of Rs. 100 crores over the Plan period.

External Assistance

The gap of Rs. 800 crores in foreign exchange resources, which remains after taking credit for net private foreign investment and withdrawals from accumulated sterling balances, can only be bridged by external assistance from international agencies and assistance obtained on a Government-to-Government basis. India is receiving external assistance at present from a number of countries and the International Bank. The strength that the Indian economy has acquired over the last few years has added to the capacity of the country to service foreign loans. There are considerable prospects for obtaining trade credits for some of the bigger projects of industrial development.

Programmes abroad for disposal of agricultural surpluses offer an opportunity for a greater flow of assistance. All these factors add up to a reasonable prospect of external assistance being available on a larger scale than in the past. Nonetheless, this is a field where the uncertainties in the estimation of foreign exchange requirements and in the availability of external resources necessitate a periodic and continuous review of needs and possibilities.

IRRIGATION AND POWER IN SECOND FIVE-YEAR PLAN

ECONOMIC AND SOCIAL ASPECTS REVIEWED

By Gulzarilal Nanda

UNION MINISTER FOR IRRIGATION, POWER AND PLANNING

TODAY, as in ancient times, India's history is being made in the valleys and basins of its rivers. Here are rising dams, barrages and weirs —the new temples and places of pilgrimage as our Prime Minister has termed them. We embarked on their construction in the shadow of a war-ravaged economy and the birth pangs of freedom. India was then confronted with the formidable task of staving off nation-wide starvation. Scarcity of food had reached alarming proportion. Under the pressure of vital needs, some giant multi-purpose river valley projects—Bhakra-Nangal, Hirakud, Tungabhadra and D.V.C.—the like of which the country had never undertaken before, and several medium and minor irrigation schemes were started even though at the time much remained to be done in securing adequate data, proper equipment and experienced technical personnel. It was only natural that a host of problems should arise, and we have been grappling with them, in the course of these years with an increasing measure of success.

About 290 million acres out of 809 million acres of India's area were under cultivation in 1951. Nearly 51 million acres were under irrigation, utilising less than 6 per cent. of our water resources. Power generation capacity was 2.3 million kw. including installations in self-generating industries. With these paltry assets, it was obviously impossible to cover the gap in the food and industrial needs of the country. In accelerating the basic development of the country in terms of water and power, a long-term view was essential, to fit into the perspective of the wider objectives of national planning and to create the necessary conditions for the fulfilment of the targets for irrigation and power, over a stretch of years. At that stage the Planning Commission visualised doubling of the area under irrigation and raising the power generation capacity to 7 million kw., i.e., an increase of about 200 per cent. in 15 years. Towards this goal, 229 schemes costing Rs. 708 crores were included in the first Plan. These schemes, it was estimated, would add 22 million acres of irrigated land and 2.3 million kw. of power. As some of the multi-purpose major projects will run into the second Plan, the first Plan benefits will be 7 million acres from big works and 10 million acres from minor schemes, increasing the total irrigated area to 68 million acres. About 1.3 million kw. more of power capacity will be installed by March this year.

Rise in Food Yield

While favourable seasons made their own contribution, it was largely due to these measures that, in 1954-55, when the target for food production was exceeded by about 4 million tons, the nation experienced a sense of relief in respect of its anxieties about our food supply. By this time nearly 4 million acres of virgin and irrigated soil had been either provided fresh canal water facilities or greater supplies through existing irrigation networks. A rise in food harvests from 50 million tons in 1950-51 to 65.8 million tons in 1954-55, resulted in a reduction in imports from 4.7 million tons to 0.77 million tons in 1955.

The change thus brought about had a tremendous significance for the nation in various ways. It gave the people of the country and the administration a new confidence. It cleared the way for a sure advance in industrial development and other directions. The strain on our foreign exchange resources was eased to a considerable extent and more room was thus created for the import of capital goods. The inflationary pressures were thus got rid of. The need for physical controls and rationing of foodstuffs and other essential commodities progressively diminished and the restrictions which had operated over a number of years causing increasing annoyance, were removed, one by one. This was a token of achievement on which a nation could well congratulate itself.

It will be a mistake, however, to make it a ground for complacency about the future. Our population is growing. By the end of 1961, there will be 2.6 crores more mouths to feed. That will require an addition of 4.5 million tons of food at the existing level of consumption, i.e., 17.2 ozs. per day per adult. While this is itself about 1.2 ozs. more than 1949-50, the base year of the first Five-year Plan, it does not provide an adequate standard of nutrition. The intention is that the consumption be raised to 18.2 ozs. by the end of the second Plan. It will involve an increase of about 10 million tons by 1960-61.

We have also envisaged improvements in the standard of living in other directions, such as consumption of sugar, cloth and other commodities based on agriculture raw materials which are also expected to increase considerably. All these new targets call for increased production from land in varying degree. It has been estimated that along with the results which will necessarily be secured by other measures, viz., improved seeds, a larger application of manure and fertiliser, the realisation of these targets will require additional irrigation to the extent of about 21 million acres by 1960-61.

Second Plan Proposals

The second Five-year Plan, which is now on the anvil, may therefore, include some 220 irrigation and power schemes. As a few first Plan projects will spill over into the second Plan, some of whose schemes will enter the third Plan, the expenditure during the coming five years will be of the order of Rs. 790 crores. By 1961, the area irrigated through new major schemes and the first Plan carryover projects will come up to 12 million acres. With 9 million acres covered by minor irrigation, the total irrigated area in the country will be 89 million acres, about 73 per cent. more of the figure at the beginning of the first Plan. The completion of the first and second Plan projects will raise it further to about 107 million acres. Our irrigation programmes aim at securing irrigation facilities for a rising proportion of the cultivable area of the country.

IRRIGATION AND POWER

(Estimates made in Draft Outline of second Five-year Plan)

State	Additional area to be irrigated in Second Plan ('000 acres)	Additional installed generating capacity in Second Plan (kw.)
Andhra	290	140,300
Assam	(a)	21,500
Bihar	1,140	265,000
Bombay	1,000	425,000*
Madhya Pradesh	400	193,000
Madras	140	247,000
Orissa	1,800	546,000
Punjab	1,700	302,000
Uttar Pradesh	1,310	241,500*
West Bengal	1,270	75,000
Hyderabad	610	11,000
Jammu and Kashmir	120	56,000
Madhya Bharat	300	47,600
Mysore	200	(b)
PEPSU	250	72,500
Rajasthan	1,160	50,000
Saurashtra	40	161,000
Travancore-Cochin	140	170
Ajmer	14	5,000
Bhopal	12	(c)
Coorg	8	(b)
Delhi	21	3,100
Himachal Pradesh	20	6,300
Kutch	36	340
Manipur	(a)	400
Tripura	(a)	23,000
Vindhya Pradesh	68	(d)
Pondicherry	6	1,150
N.E.F.A.	(a)	
Total	11,850	3,121,960†

(a) Irrigation to be done by minor works.
(b) Bulk power from Bhakra Nangal.
(c) Bulk power from Mysore.
(d) Bulk power from Madras.
* Includes major plant additions by companies in the electric supply industry.
† Excludes the addition of 0.3 million kw. anticipated in self-generating industries.

Prospects for Expansion

In the case of power, there are no limits to the prospects for expansion. The extent of power generated in the country has become today a key to economic development as well as a kind of measure of economic progress. In a dynamic situation our most optimistic forecasts prove inadequate in relation to the emerging needs and possibilities. It appears that our 15-year target of 7 million kw. will be reached much sooner than was anticipated. It has been estimated that we should have not less than 15 million kw. in 1956.

During the first Plan, the installed capacity has been increased from 2.3 to 3.6 million kw. The second Plan envisages an additional installed capacity of 3.2 million kw. of which 2.9 million kw. will come from the public sector made up of 2.1 million kw. of hydel power and 0.8 million kw. thermal power. In all, 42 hydro and steam power generating schemes will be undertaken during the Plan, of which 23 will be hydro-electric and 19 thermal schemes. Energy generated which stood at 6.6 billion kw.h. before the first Plan is expected to increase to 11 billion kw.h. in 1955-56 and 22 billion kw.h. at the end of the second Plan. Our *per capita* consumption which was 14 units in 1952 will thus have risen to 25 units in 1955-56, and 50 units in 1960-61.

Social Aspects

The growth of power consumption has its social aspects. We are concerned to know how far the supply of power has served as an aid in the conquest of poverty in rural areas and the expansion of employment opportunities. This has to be judged by the number of small towns and rural areas which acquire access to the use of power. By the end of the first Plan, about 95 per cent. of towns with a population of about 20,000 have been electrified.

The aim in the second Plan is to provide electric supply for small towns with a population between 5,000 and 20 000 which are centres for the development of the adjoining rural areas. In this group, there are about 4,000 small towns, of which only 40 per cent. have been electrified so far. During the second Plan 80 to 90 per cent. of these towns are expected to be provided with electricity.

Large-scale electrification of the villages with a population less than 5,000 is a difficult problem. There are over half a million of them spread all over the country. Many of these are far away from the developed power resources. With the planning of the various grid systems covering large areas, power supply will be given to an increasing number of villages which lie in proximity to the grid lines.

During the second Plan, electric supply will reach 7,500 towns and villages in addition to those now served. This is by no means a very satisfactory position, and efforts will have to continue to improve it as quickly as possible.

Floods

There is another aspect of our responsibility in this sphere which has been causing deep concern to the nation. In 1954, unprecedented floods wrought havoc in most of the States fringing the Himalayas, and the nation, moved by harrowing accounts from flood-stricken areas, called for immediate protective measures. It was decided that urgent steps should be taken to give security and protection to the people to the maximum extent as speedily as possible.

A programme was drawn up to be carried out in three stages: immediate, short-term and long-term. Steps have been taken to build up in all parts of the country an organisation capable of effectively handling the programme. River Commissions have been set up for the Ganga and the Brahmaputra and for rivers in North-West and Central India for working out flood control schemes for different river basins. Flood control programmes are co-ordinated by the flood control wing of the Central Water and Power Commission and at the policy level by the Central and local control boards.

The works already carried out, on an emergency basis, have succeeded in providing a measure of protection which has strengthened the hope that the recurring flood menace will be brought under control to a reasonable degree within the next few years.

Finance

I may now give you, in financial terms, an overall view of the performance in this field during the period of the first Five-year Plan. Some of you will perhaps be surprised to know that, since independence, we will have incurred on irrigation and power projects an expenditure of the order of Rs. 809 crores, i.e., about four times the amount invested under the entire British rule.

The amount of Rs. 656 crores was allotted for irrigation and power in the first Plan. In terms of expenditure, the Plan for irrigation and power for the country has been implemented to the extent of 95 per cent. The performance in the State sector has been about 93 per cent. while in the Central sector, it has exceeded 100 per cent. As against Rs. 83 crores in 1951-52, the first year of the first Plan, the expenditure in 1955 56 has been estimated at Rs. 210 crores. —*A.I.R.*

INDUSTRIES IN SECOND PLAN

BIGGER ROLE FOR PUBLIC SECTOR ENVISAGED

THE Draft Outline of the Second Five-year Plan released by the Planning Commission on the 10th inst. sets out only the substance of the industrial development envisaged by the Commission during the next five years. It, therefore does not throw adequate light on the details of the various industrial projects of the Government. These details are expected to be dealt with in "a fuller version of the second Plan" which the Commission proposes to present to the nation, after taking into consideration the reactions of the public to the Draft Outline. To get a detailed picture of the industrial development now envisaged, one has to await the publication of the final Plan.

Rapid industrialisation, with particular emphasis on basic and heavy industries, is one of the four principal objectives of the second Plan, the other three being (i) a sizable increase in national income, (ii) a large expansion of employment opportunities and (iii) reduction of inequalities in income and wealth and a more even distribution of economic power. Says the Plan: "All these objectives require a diversified economic pattern. Low or static standards of living, underemployment and unemployment and to a certain extent, even the gap between the average incomes and the highest incomes are all manifestations of the basic underdevelopment which characterises the economy, depending mainly on agriculture. Rapid industrialisation is thus the core of development."

Accepting thus the importance of industrial development to the economy, the Planning Commission further observes that, if industrialisation is to be rapid enough, the country must aim at developing industries which make machines to make the machines needed for the large number of industries in the field of consumer goods and intermediate products. This is possible only, it declares, if substantial expansion is undertaken in iron and steel, non-ferrous metals, coal, cement, heavy chemicals and other industries of basic importance. These deficiencies which were brought into bold relief by the experience of the first Plan are sought to be corrected in the second Plan by laying down priorities and programmes of industrial development. The most important single weakness which made itself felt hard on the community was the low level of steel production. This is being made good, the Commission says, by the programmes for the expansion of steel production through the establishment of three new plants in the public sector and the expansion of production in the existing units. Although there has been a marked progress in the manufacture of locomotives, electric motors and transformers, and in the manufacture of machinery for textiles, cement, sugar and jute industries, on the whole, development in the capital goods sector has generally lagged behind the needs of the economy. In order to make up the leeway, the Commission proposes to expand industrial capacity according to the following priorities:

(1) Development of iron and steel production, machine building, heavy engineering and heavy chemicals, including nitrogenous fertilisers;

(2) expansion of capacity in respect of other development commodities and producer goods, such as cement, phosphatic fertilisers;

(3) modernisation and re-equipment of "national industries" already in existence, for example, jute, cotton and sugar;

(4) fuller utilisation of the installed capacity in existing industries wherever there are wide gaps between capacity and production; and

(5) expansion of capacity for consumer goods.

In so far as industries falling under (4) and (5) above are concerned, it is emphasised in the Plan, the need for assisting production programmes in village and small industries and the requirements of common production programmes in related fields for large and small units have to be kept fully in view.

Public Sector

The keynote of the development programme is the major role provided for the public sector. "If industrial development is to play its true role in the economic progress of the country, the State should," observes the Planning Commission, "play a greater part in it." The total provision made by the Government under the second Five-year Plan for industrial and mineral development amounts to about Rs. 710 crores. In addition, Rs. 200 crores are allotted for the development of village and small industries.

Among the development programmes proposed to be implemented by the public sector during the second Plan period, the establishment of three steel plants, with a capacity of a million ton ingots each, stand out prominently. In addition, it is planned to produce, at one of these plants, 350,000 tons of pig iron. The plant at Rourkela in Orissa is expected to produce 720,000 tons of flat products of steel, hot and cold rolled. It is being designed to operate the L.D. process and will be equipped for the recovery of by-product chemicals from coke-oven gases and coal tar. The second plant at Bhilai is expected to manufacture 750,000 tons of saleable steel, mainly heavy and medium products. The third plant at Durgapur is to produce 750,000 tons per annum of light and medium sections of steel and billets. Steel production at the Mysore Iron and Steel Works is to be expanded to 100,000 tons. By the end of the second Plan, the plants in the public sector will produce 2 million tons of finished steel.

Heavy Engineering Industries

Next in importance among the industries planned for the public sector are the heavy engineering industries. These include a heavy steel foundry at the Chittaranjan Locomotive Factory for meeting the requirements of railways for heavy castings and the establishment of heavy foundries, forge shops, etc., under the auspices of the National Industrial Development Corporation. A heavy electrical equipment manufacturing project, with a total investment of Rs. 25 crores, is also envisaged. The project may take about seven to eight years for completion. Expansion of activities of the Hindustan Machine Tools Ltd., the Government Electric Factory at Bangalore, the Chittaranjan Locomotive Factory and the Hindustan Shipyard is also envisaged. Provision is also made for the manufacture of 350 railway coaches per annum in the Integral Coach Factory at Perambur.

The Lignite Project at Neivelli in South Arcot district is proposed to be taken up during the second Plan period. Under this project, 3.2 million tons of lignite are to be used for (a) generation of power, (b) production of carbonised briquettes in a carbonation plant of 700,000 tons capacity, and (c) production of 70,000 tons of fixed nitrogen in the form of urea and sulphate nitrate. Besides, two more fertilisers factories are proposed to be set up, one at Nangal and the other at Rourkela. The former will produce 70,000 tons of fixed nitrogen per year and the latter 80,000 tons of the same fertiliser per annum.

Light and Medium Industries

Among light and medium industries, the Plan provides for the expansion of the existing D.D.T. plant, Hindusthan Cables, the National Instruments Factory and the Indian Telephone Industries. A second D.D.T. plant will be established at Travancore-Cochin.

A number of industrial projects have been proposed for inclusion in the plans drawn by State Governments. These include production of foundry coke and by-products of coal carbonisation and thermal power based on waste gases in West Bengal, and electric porcelain insulators and transformers in Mysore. The expansion of the U.P. cement factory, the Bihar Superphosphate Factory and the Paper Mill in Andhra is also envisaged. The Praga Tool Factory in Hyderabad is to be reorganised.

The National Industrial Development Corporation, a State-owned financing agency, has in view, we are told a considerable programme of development during the second Plan. Besides assisting the programme of modernisation of textile and jute industries, the Corporation proposes to take steps towards establishing a new unit in the aluminium industry and manufacture of heavy machinery like earth-moving equipment, high pressure boilers rolls and rolling mill equipment required in ferrous and non-ferrous industries.

Private Sector

The Plan has drawn up programmes for the private sector. The Planning Commission opines that, while the public sector has to expand rapidly, the private sector also has to play an important part within the framework of the Plan. The two sectors are viewed as parts of a single plan to be worked in co-ordination with each other, and not as two independent sectors of the economy. Within the scope indicated for the private sector encouragement is proposed to be given to private initiative and enterprise.

The total investment on industrial programmes in the private sector is expected to be of the order of Rs. 620 crores. This includes new investment of Rs. 470 crores and an outlay of Rs. 150 crores on replacement and modernisation of existing industries. As for resources, about Rs. 100 crores are reckoned on account of foreign private investment, including suppliers' credit. Internal resources of industrial undertakings available for investment are estimated at Rs. 300 crores. New capital issues may, it is surmised, provide Rs. 80 crores and miscellaneous sources such as advances from managing agents, etc., about Rs. 80 crores. Loans from various Finance Corporations may fetch about Rs. 40 crores. About Rs. 20 crores may come from the equalisation fund and as capital or loans by the Central and State Governments.

Industrial programmes in the private sector are also governed by a scheme of priorities. Steel production is expected to go up in this sector from 1.25 million tons to 2.3 million tons, as a result of the completion of expansion programmes, by 1958, of the TISCo. and IISCo. The value of industrial machinery produced in the country is expected to increase five to six times. This includes machinery for cotton textiles, jute, sugar, paper and cement industries and the manufacture of electric motors and electric transformers. There are projects for the manufacture of tea machinery, dairying equipment, road-making machinery and agricultural machinery. In the chemical industry development programmes relate mainly to soda ash, caustic soda, phosphatic fertilisers, industrial explosives, dyestuffs and intermediates. Production will be expanded in a number of consumer goods industries also.

The table on page 308 contains the target of production and capacity in relation to industrial development programmes to be undertaken in the private sector.

The Draft Outline lays emphasis on the development of minerals also, keeping in view the ambitious industrial programme referred to above. In this field, coal gets the highest priority. Its output is expected to be stepped up from 36.8 million tons in 1954 to 60 million tons at the end of the second Plan period. The targets for other minerals are: iron ore 12.5 million tons, manganese ore 2 million tons, limestone 18.5 million tons, gypsum 1.86 million tons and bauxite 175,000 tons. Provision has been made for conducting intensive surveys of the country's mineral resources and for exploration and development of mineral oil deposits.

Small-scale and Cottage Industries

A special feature of the Draft Outline is the importance attached to small-scale and cottage industries. The main objective of the policy in respect of these industries is the need for creating greater opportunities for employment. In this connection, attention may be drawn to the Congress Working Committee's Resolution on Economic Policy passed at the Amritsar session of the Congress. The Resolution says: "While heavy industries and capital intensive undertakings will provide some employment, they cannot adequately meet the urgent needs of the country in this respect. For this purpose, therefore, household, village and small-scale industries have a vital role in affording a large volume of employment as well as in the supply of certain essential consumer goods. The decentralised sector of industry as an integral part of the economic structure must, therefore, be given every help and encouragement to increase its efficiency and perform its tasks effectively."

In its anxiety to achieve the above objective, the Planning Commission seems to have been guided by the recommendations of the Small-scale Industries (Second Five-year Plan) Committee, popularly known as the Karve Committee. In making its proposals, this Committee kept three important aims in view, namely, (a) to avoid as far as possible, during the Plan period, technological unemployment, (b) to provide for as large a measure of increased employment as possible, and (c) to provide the basis for the structure of an essentially decentralised society and for progressive economic development at a fairly rapid rate. The progressive expansion and modernisation of rural industry can be best brought about, the Karve Committee observes, by the spread of small industrial units, along with necessary services, among big villages or small towns located all over the country.

The Planning Commission considers that, for the effective promotion of village and small industries, the network of organisations brought into existence during the past three or four years should be made full use of by the Government. These organisations are the All-India *Khadi* and Village Industries Board, the All-India Handicrafts Board, the All-India Handloom Board, the Small-scale Industries Board, the Coir Board, and the Silk Board. The draft plans which these Boards have drawn up have been examined by the Commission. These plans covered programmes involving an investment of Rs 260 crores. The planners have, however, pruned it down to Rs. 200 crores, as stated already. The allocation of this sum is to conform to the Karve Committee's scheme. The Boards are required strictly to operate in their chosen fields. In the States, self-contained departments are to be entrusted with the problems of village and small industries. These departments should be supported at the district level by a whole-time officer to be in charge of programmes for groups of villages.

Restrictive Policy Upheld

For building up a decentralised sector in modern industry, the three measures now in vogue, namely, demarcation of spheres of production, limitation of capacity of large units and the levy of cess on products of large-scale units have been generally upheld, albeit subject to certain conditions. As regards the first one, the Commission observes that demarcation of spheres of production is a source of material assistance to small units and that this approach should be adopted in appropriate fields, irrespective of whether the large units are in the public sector or in the private sector. As regards the application of the principle of limitation to the capacity of large units the Commission is of the opinion that there is need for review of the position of the industry concerned from time to time in the light of changing economic conditions. It observes that, within the limits set by the need to avoid shortage of goods, on the one hand, and the extent to which, production in small units can be organised effectively to take advantage of a larger market (in any individual case), on the other, the balance of public advantage will determine whether and at what level the capacity of a large-scale industry should be limited. Viewing the position thus, the Commission considers that licensing of industries should be extended to the field of agricultural processing, especially rice mills, oil mills, flour mills. In order to encourage handpounding of rice, it has supported the recommendations of the Karve Committee that the setting up of new sheller-huller or huller mills or single hullers should not be permitted except under certain special conditions. In respect of village oil industry, as the conditions are being investigated by a special committee appointed by the Central Government, the Commission prefers to defer its decision till the findings of that Committee are made available to it. The imposition of a cess or an excise duty in appropriate situations is, the Commission avers, a well recognised fiscal device to assist small units and says that each case has to be considered on its merits. It is, however, opposed to subsidies on production or rebate on sales of products of these units.

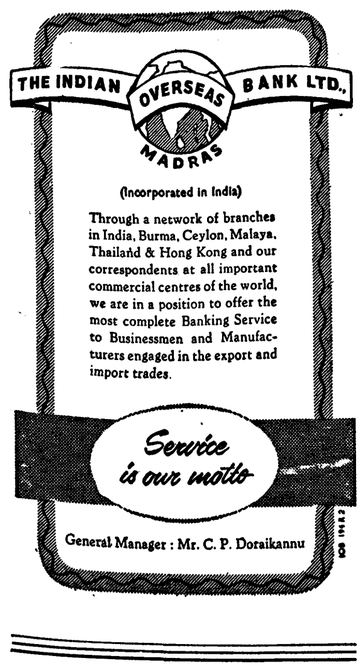
The Commission has laid stress on the necessity for organising supply and marketing co-operatives as also producing co-operatives for the promotion of small and cottage industries. The setting up of co-operatives will, in its opinion, enable small industry to utilise, in increasing measure, financial assistance from the Government and other institutions as also guidance from technical service institutes, training centres and mobile technical services.

INDUSTRIAL TARGETS UNDER SECOND PLAN

Industry	Unit	1955-56 Capacity (estimated)	1955-56 Production (estimated)	1960-61 Capacity	1960-61 Production
1. Iron and steel—					
(a) Finished steel (main producers)	'000 tons	1,300	1,800	4,500	4,300
(b) Pig iron for foundries	,,	380	380	750	750
2. Structural fabrication	,,	242,000	180,000	500,000	500,000
3. Heavy foundry-cum-forge shops—					
(a) Steel foundry	,,	..	..	15,000	15,000
(b) Forging shops (3)	,,	..	..	12,000	12,000
(c) Cast iron foundries	,,	..	..	10,000	10,000
4. Ferro-manganese	,,	28,000	28,000	160,000	160,000
5. Aluminium	,,	7,500	7,500	30,000	25,000
6. Locomotives	Nos.	170	170	300	300
7. Automobiles	,,	35,000	23,000	57,000	57,000
8. Heavy Chemicals—					
(a) Sulphuric acid	'000 tons	268	160	500	450
(b) Soda ash	Tons	90,000	80,000	280,000	250,000
(c) Caustic soda	,,	46,000	35,000	133,000	120,000
9. Fertilisers—					
(a) Nitrogenous (fixed nitrogen)	,,	85,000	70,000	390,000	320,000
(b) Phosphatic, as P_2O_5	,,	35,000	20,000	120,000	120,000
10. Ship-building	G.R.T.	..	50,000 (51-56)	..	90,000 (56-61)
11. Cement	'000 tons	5,100	4,800	12,000	10,000
12. Refractories	Tons	343,800	260,000	1,000,000	800,000
13. Petroleum refining	Mill. tons	3.625	2.5	4.31	3.8
14. Paper and paper board	'000 tons	220	180	450	350
15. Newsprint	Tons	30,000	10,000	60,000	60,000
16. Rayon—					
(a) Rayon filament	Mill. lbs.	28.1	16.1	55.0	55.0
(b) Staple fibre	,,	12.0	12.0	25.0	25.0
(c) Chemical pulp	'000 tons	..	..	30.0	30.0
17. Diesel engines	H.P.	200,000	100,000	216,000	205,000
18. Bicycles	'000 No.	500	500	765	1,000*
19. Electric motors	H.P.	376,700	240,000	600,000	600,000
20. A.C.S.R. conductors	Tons	15,370	9,000	15,370	15,000

This programme is, it is stated, large and comprehensive enough to provide scope for a rapidly expanding public sector and also to utilise fully the resources in personnel, and experience available in the private sector. Its execution according to schedule and with due regard to economy in the use of resources will, the Commission opines, go a long way towards giving the country a strong, well-balanced and rapidly developing industrial structure.

* 250,000 bicycles are expected to be produced in the decentralised sector so that the total production would be 1,250,000.



ASSISTANCE TO TOBACCO CO-OPERATIVES

The Indian Central Tobacco Committee decided at its eighteenth meeting held at Anand on the 11th inst., to offer financial assistance to the extent of 50 per cent. of the recurring expenditure to the tobacco co-operative marketing societies. It recommended to the Central Government that the supply of coal for redrying of tobacco should be given the same priority as for flue-curing. The Committee further decided to shift its Cigar and Cheroot Tobacco Research Station from Vadasandur in Madura District to some suitable site to be located in the Coimbatore District. The Committee has referred the question of creating a statutory monopoly agency in India for tobacco exports to the Tobacco Export Promotion Council for consideration.

Presiding over the meeting of the Committee, Mr. M. S. Randhawa, Additional Secretary, Ministry of Food and Agriculture, announced that the Central Government proposed to give a special grant of Rs. 26.5 lakhs to the Committee for tobacco research under the second Five-year Plan. He revealed that the Government had further agreed to provide warehousing facilities for tobacco under the State Warehousing Corporations scheme to be instituted shortly. Mr. Randhawa advised the tobacco trade to realise before it was too late that the shift in tobacco transactions after the war had changed from quantity to quality. The trade was no longer in the hands of the seller. With the easing of dollar shortage and the rapid strides made by the Rhodesian tobacco growers in quality improvement, the purchaser was looking, he added, for quality.

Reviewing the work of the Tobacco Delegation to Far Eastern countries, Mr. Randhawa said that due to the contacts established by the delegation and the publicity given to Indian tobacco not only the large stocks accumulated for several years were sold off but the supplies went short of demand. The tobacco production in 1954-55 was estimated at 556 million pounds from an area of about 0.86 million acres, as compared to 890 million pounds from 0.91 million acres in the previous year. The exports by sea and air during 1954-55 amounted to 88.8 million pounds valued at Rs. 128.9 million, as against 72.2 million pounds worth Rs. 120.9 million in 1953-54.

Referring to the need for co-ordination of research work, Mr. Randhawa observed that the Indian Council of Agricultural Research had recently taken up the task of co-ordinating the work carried on by the various commodity committees. If the present individual commodity stations were converted into multi-purpose commodity stations, more useful work could be done with less staff. The Indian Central Oilseeds and Cotton Committees had accepted this principle and the research stations would soon be co-ordinated. The Chairman suggested that an expert sub-committee might be appointed to examine all the existing research stations on tobacco and suggest co-ordination with research stations on cotton, oilseeds and millets.

THE INDIA SUGARS AND REFINERIES, LIMITED

MADRAS-17

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Ordinary General Meeting of the Company will be held at the Factory of the Company, at Hospet, on Monday the 12th March 1956, at 4 p.m., to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 30th September 1955.

2. To declare a dividend on Ordinary Shares.

3. To elect two Directors in place of:

(i) Sri M. R. Morarka

(ii) Rukn-ul-Mulk S. Abdul Wajid

who retire and are eligible for re-election.

4. To appoint Auditors for the year 1955-56 and fix their remuneration, and

5. To consider and, if thought fit, to pass the following resolutions as Special Resolutions with or without modifications:—

A. Resolved as a Special Resolution that the Articles of Association of the Company be and are hereby altered in the manner following, that is to say:—

(1) In place of the words 'one per cent.' appearing in Article 6, the words 'three per cent.' shall be and are hereby substituted.

(2) In place of existing Article 12, the following shall be and is hereby substituted:—

The Nominal or Authorised Share Capital of the Company shall be Rupees One Crore (Rs. 1,00,00 000) divided into 20 000 Preference Shares of Rs. 100 each, and 8,00,000 Ordinary Shares of Rs. 10 each. The shares shall be under the control of the Directors who may allot or otherwise dispose of the same to such persons and on such terms and conditions and at such times as the Directors think fit.

(3) In place of existing Article 13, the following shall be and is hereby substituted:—

13. (*a*) The Preference Shares shall confer on the holders such rights as may be specified by the Directors at the time of each issue. In the absence of any such rights being specified by the Directors at the time of the issue, they shall be deemed to have the right to a fixed cumulative preferential dividend at such rate (subject to tax, or tax-free), as may be specified in the terms of issue, on the paid-up amount of the share; and the right in any winding-up, to repayment of the paid-up amount of such shares, or the face value of the shares, as the case may be; and also to all arrears of dividend whether declared or not, up to the commencement of winding-up, in priority to the Ordinary Shares and the dividends thereon; but they shall not have any further right to participate in the profits or in the assets.

(*b*) Notwithstanding anything contained above it is expressly provided that upon any increase of capital the Company is to be at liberty to issue any new shares with any preferential, deferred, qualified or special rights, privileges or conditions attached thereto. It is also expressly provided that any Preference Share may be issued on the terms that it is, or at the option of the Company is, liable to be redeemed.

(*c*) The rights and privileges attached to Preference Shares may be altered or dealt with by an agreement in writing made by some members of the class and ratified by the holders of at least two-thirds of the shares of the class, subject to the provisions of section 66A of the Companies Act.

(4) In place of the existing Article 14, the following shall be substituted:—

The Directors may from time to time increase the Issued Capital of the Company to any sum not exceeding the total amount of Authorised Capital of the Company and may for that purpose issue such new shares as they think fit.

(5) In Article 15, the words 'by special resolution' shall be deleted.

B. Resolved as a Special Resolution that 3,20,000 Ordinary Shares of Rs. 10 each be issued, subject to Central Government sanction, on the following terms:—

(*a*) that the issue will be at a nominal premium of annas 8 per share; and that the full premium of annas 8 per share and Rs. 5 being half the nominal value of each share, will be payable along with the application,

(*b*) that the balance amount of Rs. 5 on each of the said shares shall be called up later either in one lump sum or in such instalments and at such times as the Board of Directors think fit,

(*c*) that these shares will rank for dividend as from the 1st day of July 1956, in proportion to the Capital for the time being paid up thereon,

(*d*) that the shares will in all other respects rank *pari passu* with the existing issued Ordinary Shares of the Company,

(*e*) that these shares will be offered to the persons who are on the 12th day of March 1956 holders of the issued Ordinary Shares of the Company in the proportion of one share for every one, now held by such shareholders,

(*f*) that where a shareholder or his approved nominee does not, within a date to be specified by the Directors, accept the offer, the Directors may deal with such shares in the manner they think fit,

(*g*) that the Company shall be entitled to issue certificates for the shares allotted, within six months after allotment.

You are requested to be present in person or by proxy.

The Share Transfer Books of the Company will be closed from 22nd February to 12th March 1956, both days inclusive.

By Order of the Board,
for THE INDIA SUGAR AGENCIES LTD.,
Managing Agents,
C. HARIPRASAD,
General Manager.

MADRAS, 13*th February* 1956.

The dividend when declared will be made payable on or after 25th April 1956, at the State Bank of India, Madras, and Dividend Warrants will be posted to the Shareholders whose names stand in the Register of Members as on 12th March 1956. Shareholders may kindly intimate to the Company any changes in address immediately.

THE BANK OF INDORE, LIMITED

(*Incorporated in Indore, 1920*)

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Bank, Prince Yeshwant Road, Indore City, on Thursday the 8th March 1956, at 4 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 31st December 1955.

(2) To declare a Dividend.

(3) Rai Bahadur Sir S. M. Bapna, Kt., C.I.E., and Seth Bhanwarlal Sethi retire by rotation but are eligible for re-election.

(4) To elect Auditors for the ensuing year and to fix their remuneration.

Notices

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

AN EXTRAORDINARY GENERAL MEETING of the Shareholders of THE TATA IRON AND STEEL COMPANY, LIMITED, will be held on Monday the 12th March 1956, at 4-30 p.m. (S.T.), at the Registered Office of the Company, Bombay House, 24, Bruce Street, Fort, Bombay, to transact the following business:—

To consider, and if thought fit, to pass the following resolutions as Special Resolutions:—

1. (i) That the Capital of the Company be increased from Rs. 17,38,75,000 divided into 50,000 six per cent. Cumulative Preference shares of Rs. 150 each, 700,000 seven-and-half per cent. Cumulative Second Preference shares of Rs. 100 each and 1,285,000 Ordinary shares of Rs. 75 each to Rs. 27,02,50,000 divided into 50,000 six per cent. Cumulative Preference shares of Rs. 150 each, 700,000 seven-and-half per cent. Cumulative Second Preference shares of Rs. 100 each and 2,570,000 Ordinary shares of Rs. 75 each by the creation of 1,285,000 new Ordinary shares of Rs. 75 each.

(ii) Subject to the conditions prescribed by the consent of the Controller of Capital Issues, the said 1,285,000 new Ordinary shares of Rs. 75 each shall be issued upon the following terms and conditions and subject to the following rights:—

(*a*) Such shares shall be issued and offered in the first instance at a premium of Rs. 30 per share to the holders of the existing Ordinary shares on the Register of Members of the Company on such date as may be fixed by the Directors (with the right to renounce in favour of nominees approved by the Board) in the ratio of one new Ordinary share for one existing Ordinary share held by such holders respectively and such offer be made by notice specifying the number of shares, which each holder of existing Ordinary shares shall be entitled to apply for and take up, wholly or in part, and limiting a time within which the offer if not accepted will be deemed to be declined, with liberty to the Directors from time to time to extend the time for acceptance as aforesaid either generally or in respect of any particular holder or holders.

(*b*) A sum of Rs. 35 per share (made up of Rs. 10 on premium and Rs. 25 on Capital account) shall be payable to the Company on application for such new Ordinary shares as aforesaid and the balance of Rs. 70 per share shall be payable on allotment and/or as and when called up by the Directors from time to time at their discretion.

(*c*) The new Ordinary shares shall not confer on the holders thereof the right to any dividend declared at or prior to the Annual General Meeting to be held in the year 1956, but shall entitle such holders to all dividends declared after such meeting in proportion to the capital for the time being paid-up on such shares, provided that if interest is paid out of capital on such shares for any period in accordance with the provisions of Section 107 of the Indian Companies Act, an amount equal to the gross amount of such interest shall be deducted from the actual (net) dividends so payable and such shares shall for all other purposes rank *pari passu* with the existing Ordinary shares of the Company.

(*d*) The Directors shall be authorised and empowered, with the previous permission of the Controller of Capital Issues, to dispose of and allot any of the said new Ordinary shares not taken up by the holders of the existing Ordinary shares or remaining undisposed of at such price or prices and on such terms as may be approved by the Controller and to such persons, whether shareholders of the Company or not, as the Directors may think fit.

(*e*) The certificates in respect of the new Ordinary shares shall be completed and ready for delivery within nine months after the last allotment thereof.

(*f*) For the purpose of giving effect to this resolution the Directors be and are hereby authorised to prescribe the forms of application and renunciation and other documents in respect of such new Ordinary shares and to give such other directions as they think fit including directions for settling any question or difficulty that may arise in regard to the issue and allotment of the new Ordinary shares.

II. That the Articles of Association of the Company be altered in manner following:

The following Article shall be substituted for Article 4 of the Articles of Association of the Company:

"4. *Amount of Capital.*—The present capital of the Company is Rs. 27,02,50,000 divided into 50,000 six per cent. Cumulative Preference shares of Rs. 150 each, 700,000 seven-and-half per cent. Cumulative Second Preference shares of Rs. 100 each and 2,570,000 Ordinary shares of Rs. 75 each."

By Order of the Directors,
TATA INDUSTRIES LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, 2*nd February* 1956.

Note.—Copies of letters recording the consent of the Controller of Capital Issues to the proposed issue of new Ordinary shares may be inspected by shareholders during office hours at the Registered Office of the Company.

THE UNITED COMMERCIAL BANK LIMITED

NOTICE

CLOSING OF SHARE REGISTER AND TRANSFER BOOKS

NOTICE IS HEREBY GIVEN THAT REGISter of Members and Transfer Books of The United Commercial Bank Limited will be closed from Thursday the 8th March to Wednesday the 28th March 1956, both days inclusive.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, 13*th February* 1956.

REORGANISATION OF TRANSPORT ADMINISTRATIONS

(*Concluded from page* 300)

In fact, in respect of goods vehicles, it has been considered that absorption of about 10,000 to 12,000 trucks per annum during the next few years, in addition to those required for the replacement of average trucks, would be desirable."

It is high time the State Governments took note of these views. They are the carefully considered opinions of a person who belongs to the same Party which is in charge of administration in the States. As the Transport Minister in the Centre, Mr. Shastri knows where the shoe pinches and is in a position to take an impartial view. The State Governments will be weakening his hands if they do not follow his lead in these matters.

Mr. Wenzel's Observations

While on this subject, it will be pertinent to record here some of the important observations made by Mr. A. D. Wenzel, Managing Director of the Firestone Tyre Company, at the fifteenth annual general meeting of the Federation of Motor Transport Associations, Bombay. Mr. Wenzel remarked that the time had definitely come when a separate Ministry should be constituted at the Centre for shipping, inland water transport and road transport. In support of this view, he recalled that the Transport Committee of the Congress Party in Parliament had itself recommended such a step. By making this suggestion, he was not casting any aspersion on the working of the present Ministry for Transport. He only meant that the problems of railways alone were so numerous and pressing that one Ministry would not be able to consider those of other means of transport as well.

Another important point made by him related to the need for strengthening and maintaining the roads in good condition. He pointed out that, if the efficiency of motor transport operations were to be increased, the motor vehicles should be made to carry more weight and that would be possible only if the bridges and culverts were substantially strengthened. In other words, top priority should be given to surveying bridges and culverts and strengthening them. He further stated that, unless road surfaces were greatly improved and well maintained, it would not be possible to reduce operational cost. The logic behind this argument is obvious enough not to require further elucidation to prove its soundness.

INSURANCE

(*Concluded from page* 295)

lion out of the total premium income of £14.4 million. So far as the purely domestic offices (Government as well as private offices) are concerned—the share of both these sections in total business is strictly limited—the Government department transacts more business than the non-Government offices, thanks to the former's age and standing in the domestic insurance sphere. Even so, the share of the Government's life department has declined from 71.3 per cent. of the total life premium income (excluding the very large premium income of foreign offices) in 1949 to 69.3 per cent. in 1953, whereas the share of the private offices has increased from 28.7 per cent. to 30.7 per cent.

This survey reveals two significant features of the working of life insurance in the free world. In the first place, in the countries where the Governments have thought it necessary to enter the life insurance field, they have supplemented, rather than supplanted, private offices. Secondly, even in such countries, private managements have always been able to withstand the competition from State-owned life offices; the former have invariably been more successful than the latter. In the light of all this evidence, the decision of the Government of India to nationalise life insurance is certainly deplorable. Further, it should be clear that, if the Government had chosen to run a life office of its own, the country would have had an opportunity to study the relative merits of the Government-owned and private offices. By nationalising the entire life insurance industry, the Government has denied such opportunity to the country. At the same time, it has taken upon itself the entire responsibility for life insurance which no other Government in the free world has deemed it desirable to take upon itself. It is not always wise for a country to attempt something which other countries have deliberately refrained from doing, even if it gives an appearance of distinction or courage. It remains to be seen whether the Government of India has been wise in its decision on insurance.

(*Concluded*)

EARNINGS OF BRADY GROUP MILLS IMPROVE

NEW GREAT RESTORES CUT IN DIVIDEND

THE statements of accounts of the two cotton textile mills under the management of Messrs. W. H. Brady & Co., Ltd., Bombay, namely, the New Great Eastern Spinning and Weaving Company, Ltd., and the New City of Bombay Manufacturing Company, Ltd., for the year ended 31st December 1955 disclose a welcome improvement in the earnings of both the Companies, thanks to better trading conditions in cloth and yarn. Thus, the gross profit of the New Great Mills has appreciated from Rs. 3.41 lakhs to Rs. 6.32 lakhs and that of the New City Mills from Rs. 4.48 lakhs to Rs. 5.12 lakhs It will be noted that the improvement in profit has not been uniform in both the cases; the rise is sharper in the former than that in the latter. The result is that the New Great has been able to make good the decline in 1954, while the New City's profit is still lower than that for 1953.

The net profit of the New Great has advanced from Rs. 2.95 lakhs to Rs. 4.61 lakhs and that of the New City from Rs. 2.77 lakhs to Rs. 3.26 lakhs. After providing Rs. 1 lakh to the reserve fund which had not received anything last year, and raising the allocation to the employees' pension and gratuity and welfare fund from Rs. 15,000 to Rs. 25,000, the New Great has raised the dividend from 7½ per cent. to 10 per cent. per annum, thus restoring the cut effected in the previous year. The New City also has placed to the reserve fund a sum of Rs. 1 lakh, as against *nil* last year, but has cut the provision for employees' gratuity and welfare fund from Rs. 25,000 to Rs. 10,000. The dividend has, however, been maintained at 10 per cent. per annum, a rate at which the Company had paid dividend for the previous three years, after reducing it from 15 per cent. for 1951.

As already indicated, the higher earnings of the two Companies have been due to better marketing conditions during the year. Referring to these conditions, the Directors observe, in their reports to the shareholders, as follows:

"This year 1955 opened with conditions in the cloth and yarn markets at a low ebb. As the year progressed, however, cloth trading conditions improved, and the latter months of the year have presented a better tone With regard to yarn, improvement has been of a very slow nature and it was only after *Diwali* that yarn selling rates could be represented as reasonable."

During the year under review, a further Industrial Court Award made on behalf of the clerical staff required payment to the clerks of the mills of a sum of Rs. 57,233 in the case of the New Great and of Rs. 51,039 in the case of the New City. These sums represented accumulations of dear food allowance increases from the date the Award was to be brought into force.

The following comparative table gives an idea of the progress of the New Great Mills during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net)	205.59	218.26	221.13	192.40
Transfer from general reserves.	..	6.20	..	..
Expenses	199.50	215.13	217.06	190.26
Liability under L.A.T. Award.	..	6.18	..	..

The Company's sale proceeds of cloth, yarn and waste have declined further, but the fall is more pronounced than that in the previous year. Nevertheless, the profit has risen sharply, on account of the substantial drop in expenses. Of these expenses, cotton, stores, spares, etc., consumed account for Rs. 104.53 lakhs, as against Rs 118.70 lakhs in the previous year, and other manufacturing and establishment expenses for Rs. 94.97 lakhs, as compared with Rs. 96.42 lakhs in 1954.

The latest balance-sheet of the Company shows that its reserves and surplus aggregate Rs. 16.76 lakhs, as against a paid-up capital of Rs. 38 lakhs, made up of 30,000 ordinary shares of Rs. 100 each and 4,000 5½ per cent. cumulative preference shares of Rs. 200 each. Of the aforesaid equity capital, as much as Rs. 15 lakhs represent the capitalisation of reserves. The provision made for tax liability amounts to Rs. 8.50 lakhs. The current liabilities aggregate Rs. 33 lakhs. The additions to the gross block during the year under review were Rs. 3.03 lakhs, bringing the total value of the fixed assets to Rs. 92.86 lakhs. This has been well written down to a book value of Rs 31.43 lakhs. The current assets amount to Rs. 65.80 lakhs, exceeding, the current liabilities and provision for taxation by Rs. 24.30 lakhs.

The progress of the New City Mills in recent years is reflected in the following table:

(In lakhs of rupees)

	For the year ended 31st December

As in the case of the New Great, the New City's sale proceeds and expenses have recorded a fall. The cost of cotton, stores and machinery parts consumed has declined from Rs. 88.96 lakhs to Rs. 85.09 lakhs and other expenses from Rs. 52.16 lakhs to Rs. 50.19 lakhs.

The latest balance-sheet of the Company discloses a satisfactory financial position. The paid-up capital is unchanged at Rs. 24 lakhs, 75 per cent. of which represents the amount capitalised from reserves. The reserve and surplus aggregate Rs. 26.74 lakhs. There is a provision of Rs. 3.80 lakhs for taxation. The current liabilities amount to Rs. 20.21 lakhs. The gross block of the value of Rs. 73.57 lakhs (including an addition of Rs. 2.10 lakhs during the year) stands written down to Rs. 30.53 lakhs. The current assets aggregate Rs. 53.87 lakhs, the excess over current liabilities and provision for taxation being Rs. 25.66 lakhs.

The Rs. 100 fully paid-up shares of the New Great are being currently quoted at Rs. 193 *cum-div.* and those of the New City at Rs. 160 *cum-div.* On an *ex-div.* basis and on that of the latest dividend, New Great provides a yield of 5.5 per cent. and New City 6.6 per cent. per annum, respectively.

BRADY ENGINEERING DOUBLES DIVIDEND

Encouraging progress in the working of the Brady Engineering Company Ltd. (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay), is disclosed by the Directors' report of the Company for the year ended 31st December 1955. The Company's gross profit, which had declined from Rs. 1,69,640 to Rs. 1,10,350 in 1954, has gone upto Rs. 2,25,901 in the year under review. The profit has thus more than doubled itself. The Managing Agents' commission absorbs Rs. 17 134, as against *nil* in the previous year. The provision for depreciation has been stepped up from Rs. 42,359 to Rs. 85,378, while that for taxation has been reduced from Rs. 22,190 to Rs. 5,000. The reserve fund, which had not received anything last year, has been strengthened by the addition of Rs. 40,000. The dividend has been doubled from 2½ per cent. (Re. 1-8 per share of Rs. 60) to 5 per cent per annum, thus restoring the cut made last year from the maiden dividend of 5 per cent. paid for 1953. The surplus left to be carried forward is Rs. 9,402, as against Rs. 6,013 brought in.

The Company had suffered a setback in business in 1954 on account of the "non-co-operative attitude" of labour, resulting in a strike for nearly 2½ months. Thanks, however, to the absence of labour trouble and to the securing of some very good orders for machinery and equipment required in connection with new industrial plants that are being erected in this country, the Company's turnover in 1955 increased substantially, which, in turn, has resulted in a sizable rise in profit as shown above. In order to cope with the increased orders, the Company incurred further capital expenditure, amounting to Rs. 89,617, on plant and machinery.

PROFIT OF O.V. ESTATES SHRINKS

DIVIDEND CUT—FINANCES SOUND

THE cut in dividend from 30 per cent. to 20 per cent. for the year ended 31st October 1955, recommended by the Directors of the Ouchterlony Valley Estates (1938) Ltd. (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode, Malabar), may not come as a surprise to those shareholders who have been in close touch with the trend of tea crop and prices during the past year. In line with the general trend, the production of tea by the Company's estates during the year under review had gone up to establish a fresh record level, but the prices realised suffered a sharp fall. In the case of coffee both output and prices declined. The decline in coffee crop too is not unexpected, for the Chairman had indicated, in his speech at the annual general meeting last year, a lower crop not for the season under review but also for the next one.

The aforesaid factors, along with a rise in cost of production of tea, have affected the Company's earnings adversely. The gross profit, which had gone up in the previous two years from Rs. 3.37 lakhs in 1951-52 to a bumper one of Rs. 18.41 lakhs in 1953-54, has dropped to Rs. 10.68 lakhs. It is, however, comforting to note that, despite this decline of 42 per cent. from the previous year's level, the profit for the year under review represents the third highest in the history of the Company. The net profit has shrunk from Rs. 10.06 lakhs to Rs. 3.60 lakhs, the recession being steeper than that in the gross profit. This is due to the larger proportion of provision for taxation. The net profit is not sufficient even to pay the reduced dividend of 20 per cent. and the Directors have had to fill the gap by drawing the required amount, albeit small, from the previous year's surplus.

The following comparative table presents the salient features of the Company's results for 1954-55 against the background of those for the previous three years:

(In lakhs of rupees)

	For the year ended 31st October			
	1955	1954	1953	1952
Sale proceeds of tea	16.93	15.30	11.42	9.90
Stocks of tea	3.64	5.03	2.61	1.23
Proceeds of coffee crop ..	22.43	27.77	15.54	15.58
Other income	0.46	0.24	0.37	0.49
Estate expenditure	30.44	29.21	25.08	23.07
Other expenses	0.87	0.72	0.69	0.77
Gross profit	10.68	18.41	4.16	3.37
Managing Agents' commission.	0.61	0.73	0.44	0.48
Depreciation	2.07	2.62	1.81	1.41
Taxation	4.40	5.60	..	..
Net profit	3.60	10.06	1.91	1.48
To reserves	..	4.61	0.23	..
,, depreciation on investments.	..	..	0.01	0.06
Dividend	3.89	5.84	1.95	1.95
	(20%)	(30%)	(10%)	(10%)
Carry forward	0.49	0.69	0.08	1.26
Tea crop (in lbs.)	987,979	934,600	828,710	703,692
Cost of production (cents per lb.)	139.63	129.06	126.50	130.69
Average price realised (cents per lb.)	..	..	..	..
Coffee crop (in cwts.)	207.67	231.37	170.19	156.46
	10,707	13,826	8,449	7,084

The tea crop harvested during the year under review rose by 53,379 lbs. to a fresh record level. Notwithstanding this increase, the cost of production staged a further rise to 139.63 cents per lb., while the price realised was less favourable, though much higher than that realised in any one of the years preceding 1953-54. After two years of successive rise, the coffee crop was down during the year under review. It was, however, higher than the Directors' earlier estimate of 10,500 cwts. For the purpose of accounts closing, the entire stock has been valued at Rs. 2-4 per point, as against Rs. 2-8 per point in the previous year. Payment received from the Coffee Board up to 19th January 1956, however, amounted to Re. 1-15 per point.

The rise in estate expenditure is mainly accounted for by tea, which has gone up from Rs. 12.15 lakhs to Rs. 13.79 lakhs, thus maintaining the upward trend since 1949-50. The expenditure on coffee has, on the other hand, declined from Rs. 17.06 lakhs to Rs. 16.64 lakhs.

The financial position of the Company, as seen from its latest balance-sheet, is quite satisfactory. The reserves and surplus aggregate Rs. 24.41 lakhs, as against a paid up capital of Rs. 19.46 lakhs, the whole of which represents equity capital. Of this capital, as much as a sum of Rs. 12.97 lakhs was raised by capitalisation of reserves in two stages, once in March 1948 and again in July 1952. During the year under review, the Directors transferred Rs. 5 lakhs, which had stood to the credit of the debenture-stock redemption reserve, to the general reserve, consequent on the repayment on 30th June 1955 of the entire outstanding balance (Rs. 3.53 lakhs) of the 5½ per cent. (tax-free) debenture-stock (second series) for Rs. 5 lakhs. The reserve for taxation stands at Rs. 8.65 lakhs and the current liabilities aggregate Rs. 6.04 lakhs. The gross block of the value of Rs. 41.20 lakhs has been written down to Rs. 29.15 lakhs. The current assets amount to Rs. 29.41 lakhs, of which cash balances alone amount to Rs. 12.72 lakhs. Though the cash balances show a decline of Rs. 5.92 lakhs over the year, probably due to the repayment of the debentures as stated above, they are large enough to cover a substantial part of the current liabilities and the provision for taxation.

The Rs. 2 fully paid-up shares of the Company are being currently quoted at Rs. 5-7 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 7.9 per cent. per annum.

DETAILS OF T.I.S.CO.'S NEW ISSUE

The long-awaited details of the Tata Iron and Steel Company's proposal to raise fresh capital for financing a part of its expansion plan to increase the steel production to 2 million tons have been announced by the Managing Agents of the Company in a circular to the shareholders. An extraordinary general meeting of the Company will be held on 12th March 1956 to seek their approval of the proposal. The consent of the Controller of Capital Issues has been obtained for the proposed issue.

The proposal to issue fresh capital has been the subject of prolonged discussions between the Company and the Government. The main point around which the discussions centred was the premium which the Company should collect from the shareholders. In fact, the Company desired that the new shares should be issued at par, while the Government insisted on a premium. Finally, the Government gave permission to the Company to issue the shares at a premium of Rs. 30 per share and subject to certain conditions mentioned below.

The Company proposes to raise the authorised capital of the Company from the present level of Rs. 17,38,75,000 (of which the ordinary shares account for Rs 9,63,75,000, made up of 1,285,000 shares of Rs. 75 each) to Rs. 27,02,50,000, by the creation of 1,285,000 new ordinary shares of Rs. 75 each. The present paid-up ordinary capital is Rs. 9,63,75,000, which, after the proposed issue is fully subscribed, will become Rs. 19,27,50,000. The new ordinary shares will be issued at Rs. 105 per share, including a premium of Rs. 30 per share.

The new shares will be issued and offered in the first instance to the existing ordinary shareholders (with the right to renounce in favour of nominees approved by the Board) in the ratio of one new share for every ordinary share held by them. A sum of Rs. 35 per share (made up of Rs. 10 on premium and Rs. 25 on capital account) will be payable on application. The balance of Rs. 70 per share will be payable on allotment and/or as and when called up by the Directors from time to time at their discretion. The new ordinary shares will rank for any dividend declared only after the annual general meeting held in 1956 (that is, for the year 1956-57 and onwards), in proportion to the capital for the time being paid-up on such shares.

In granting permission to issue the new shares, the Controller of Capital Issues has laid the condition that, in case any of the said new ordinary shares are not taken up by the shareholders and their nominees, such shares should be disposed of by the Directors only with the previous permission of the Controller, at such price or prices and on such terms as may be laid down by him. This restriction does not apply to nominees under renunciation forms signed by shareholders, who may, therefore, dispose of their rights to the new shares.

The cost of the Company's expansion programme is estimated at Rs. 60 to Rs. 65 crores. The Company proposes to meet nearly half of this cost from loans obtained from foreign sources and negotiations have already been started abroad for the purpose. The balance of the requisite funds is proposed to be met from the increase in steel retention prices and by a fresh issue of capital mentioned above.

EMPLOYEE-SHAREHOLDERS SWEDISH ENTERPRISES

The employees of the Addo Company, one of Sweden's leading enterprises, have taken up the greater part of a new share issue, amounting to no less than 30 per cent. of the total share capital, which the Company is about to put on the market.

Addo, known throughout the world as one of the foremost European producers of adding machines and other office machinery, has hitherto been exclusively a family business. Its new share offer aims at strengthening still further the spirit of co-operation, for which the firm is justly noted. These shares, which employees can pay for by instalments (a new and attractive form of save-as-you-earn), have proved more popular than even the most sanguine prophets had foreseen, and also aroused such keen outside interest that eager would-be purchasers went to the length of inserting conspicuous advertisements in the daily Press. Of the shares on offer, the majority were reserved for Addo's employees, and this parcel was fully subscribed very shortly after the lists were opened.

JOINT-STOCK COMPANIES IN 1955-56

According to the monthly Blue Book on joint stock companies in India, issued by the Department of Company Law Administration, the number of new registrations in all the States of India, excluding Jammu and Kashmir, during the month of November 1955, amounted to 102 companies with a total authorised capital of Rs. 16.24 crores. Of these new companies, 22 were public and 80 private companies having a total authorised capital of Rs. 12.40 crores and Rs. 3.84 crores, respectively.

The cumulative total of the newly formed companies at the end of November 1955 in the current fiscal year was 892, having a total authorised capital of Rs. 96.73 crores. The number of new registrations exceeded the registrations during the corresponding period of the preceding fiscal year by 144. The progressive total of 892 companies comprises 128 public and 764 private companies.

Of the 102 new companies formed during November 1955, 32 companies having an authorised capital of Rs. 3.51 crores were registered in the State of West Bengal. The States of Madras, Bombay, Delhi and Travancore-Cochin registered 18, 17, 9 and 8 new companies with a total authorised capital of Rs. 1.84 crores, Rs. 1.36 crores, Rs. 1.32 crores and Rs. 9 lakhs, respectively. During the eight months ended November 1955, the States of West Bengal, Bombay and Madras together recorded about 68 per cent. of the total number and 63 per cent. of the total authorised capital of all new registrations during this period.

The reports received from the Registrars in the various States disclosed that 47 companies (i.e., 15 public and 32 private) were liquidated, dissolved, or declared as defunct during the month of November 1955. The total paid-up capital of these companies amounted to Rs. 6 lakhs. The progressive total of the liquidated companies for the period from April to November 1955 came to 540 with a total paid-up capital of Rs. 5.55 crores. Of these liquidated companies, the number of public companies was 181 with a paid-up capital of Rs. 2.69 crores.

A net total increase of Rs. 30.82 crores in the paid-up capital of existing companies was recorded during the eight months ended November 1955. The contribution of the companies registered during the April-November 1955 period in this net total increase was Rs. 1.30 crores. The State of Bombay recorded a net increase of Rs. 20.44 crores and the State of West Bengal a net increase of Rs. 4.43 crores. Thus, the two States of Bombay and West Bengal together accounted for about 81 per cent. of the total net increase during April-November 1955. During the eight months ending November 1955, the total paid-up capital raised by the new companies amounted to Rs. 1.55 crores. The companies registered in the month of November 1955, however, did not raise any paid-up capital.

During April-November 1955, of the 892 newly registered companies only 15 are reported to have managing agents and the rest have been floated under other forms of management. It is also reported that during the above period, 15 managing agency companies have been formed and all of these are private companies.

Points From The Chair

Indian Tube Company to Expand

"I REFERRED last year to our collaboration with the Tata Iron and Steel Company, as a result of which the Indian Tube Company (1953) Limited was formed. The first plant, a continuous weld mill for the production of commercial quality tubes, has recently commenced operation according to plan. We are now engaged in installing, for the Indian Tube Company an electric resistance weld tube plant which will produce high quality tubes for use in the boiler and bicycle industries and for other pressure and non-pressure purposes. We are also installing a mill for cold rolling strip which is essential for the production of precision tubes on the electric resistance weld tube plant and which will also supply strip for bicycle components, electrical parts, box strapping and other similar purposes. These units should be completed early in 1957. At 1st October 1955, we had invested £658,000 in the Indian Tube Company, representing our 40 per cent. interest. Tata and ourselves are now considering a further expansion and have formally applied to the Government of India for permission to erect a seamless tube plant to complete the range of tubes up to about 6" diameter which the Indian company will be able to offer. The seamless tubes are required for high pressure work and for certain other special purposes."

A. G. STEWART,
Stewarts and Lloyds, Ltd.

U.K. Faces Foreign Competition

"In recent years I referred to intensive competition being encountered from other countries, particularly Japan and Germany, and this threat to our very existence is more real today than ever. It has recently been estimated that since 1950 Germany has increased her share of world exports of manufactured goods from 8.3 to 15.2 per cent. and Japan her share from 3.5 to 4.9 per cent., while our own share has dropped from 25.7 to 19.8 per cent. These figures demonstrate the nature of the task confronting us, a task which is not being made any easier by the current demands for higher wages which, if granted and not accompanied by increased productivity must lead to further increases in prices, thus adversely affecting our competitive power overseas. It must be abundantly clear to all that we cannot hope for the necessary increase in our exports if we do not quote to overseas buyers prices and terms of delivery which are fully competitive with those offered by manufacturers in other countries."

DUKE OF BUCCLEUGH AND QUEENSBERRY,
Royal Bank of Scotland.

COMPANY MEETINGS AND DIVIDENDS

GANGES MANUFACTURING CO., LTD. Half-yearly General Meeting, Calcutta, 24th February 1956. Dividend: *Nil.* Transfer books remain closed from 15th to 24th February 1956, both days inclusive.

GOUREPORE CO., LTD. Half-yearly General Meeting, Calcutta, 24th February 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 15th to 24th February 1956, both days inclusive.

NUDDEA MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 24th February 1956. Dividend: As. 8 per share. Transfer books remain closed from 15th to 24th February 1956, both days inclusive.

GANGES ROPE CO., LTD. Half-yearly General Meeting, Calcutta, 24th February 1956. Dividend: Rs. 7-8 per share. Transfer books remain closed from 15th to 24th February 1956, both days inclusive.

ARRAH-SASARAM LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 27th February 1956. Dividend: Rs. 3 per share less income-tax costings. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

CHAPARMUKH-SILGHAT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 27th February 1956. Dividend Re. 1-4 per share. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

HOWRAH-AMTA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 27th February 1956. Dividend: Rs. 3 per share, less income-tax. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

HOWRAH-SHEAKHALLA LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 27th February 1956. Dividend: Rs. 3 per share, less income-tax. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

FUTWAH-ISLAMPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 27th February 1956. Dividend: Re. 1 per share. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY CO., LTD. Half-yearly General Meeting, Calcutta, 27th February 1956. Dividend: Rs. 6 per share, less income-tax. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

RALLIS INDIA LTD. Annual General Meeting, Calcutta, 28th February 1956. Dividend: *Nil.* Transfer books remain closed from 17th to 28th February 1956, both days inclusive.

W. H. BRADY & CO., LTD. Annual General Meeting, Bombay, 5th March 1956. Dividend: Rs. 20 per share. Transfer books remain closed from 17th February to 9th March 1956, both days inclusive.

EMPIRE DYEING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 5th March 1956. Dividend: Rs. 3 per share. Transfer books remain closed from 17th February to 9th March 1956, both days inclusive.

NEW CITY OF BOMBAY MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 5th March 1956. Dividend: Rs. 10 per share, payable on and after 20th March 1956. Transfer books remain closed from 17th February to 9th March 1956, both days inclusive.

NEW GREAT EASTERN SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 5th March 1956. Dividend: Rs. 10 per share, payable on and after 20th March 1956. Transfer books remain closed from 17th February to 9th March 1956, both days inclusive.

BRADY ENGINEERING CO., LTD. Annual General Meeting, Bombay, 5th March 1956. Dividend: Rs. 3 per share, payable on and after 20th March 1956. Transfer books remain closed from 17th February to 9th March 1956, both days inclusive.

G. CLARIDGE & CO., LTD. Annual General Meeting, Bombay, 5th March 1956. Dividend: Rs. 16-8 per share. Transfer books remain closed from 17th February to 9th March 1956, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Tuticorin, 26th March 1956. Dividend: Rs. 3 per share. Transfer books will remain closed from 6th to 26th March 1956, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Interim dividend of 6¼ per cent., i.e., As. 10 per share, on all shares (excluding the recent issue of 1,50,000 shares which rank for dividend only from 1st December 1955), for the year 1955-56. Transfer books will remain closed from 27th February to 12th March 1956, both days inclusive.

COMPANY REGISTRATIONS

INSULATION MATERIALS MANUFACTURING CO., LTD. Business: Dealers in rock wool, glass wool and other insulation materials. Authorised capital: Rs. 20,00,000. Private company. Address: 5, Fairlie Place, Calcutta.

BYCULLA REAL ESTATE AND INVESTMENTS LTD. (First Director: Mr. Maneklal Premchand.) Business: To purchase for investment, land and house and other properties of any tenure, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 63, Apollo Street, Fort, Bombay.

BENGAL LIME AND STONE CO., LTD. (First Director: Mr. A. K. Ray.) Business: Coke manufacturers, lime burners and manufacturers, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 11, Rajani Sen Road, Calcutta-26.

RESULTS OF THREE MACNEILL & BARRY GROUP JUTE COMPANIES

RALLIS INDIA CONTINUES TO SUFFER LOSS

Gourepore Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The profit on revenue account amounts to Rs. 5,17,342 (Rs. 9,36,624). Adding thereto dividends forfeited Rs. 1,694 (Rs. 1,678), share transfer and sub-division fees Rs. 192 (Rs. 192), rebate on foodstuffs charges Rs. 3,361 (Rs. 5,146), provision for doubtful debts no longer required Rs. 1,603 (Rs. 15,361), refund of income-tax for the year ended 31st March 1948 Rs. 42,379 (*nil*) profit on sales of jute mills machinery Rs. 34,500 (Rs. 4,250) and war damage claim on stock Rs. 2,070 (*nil*), there is a total amount of Rs. 6,03,141 (Rs. 9,90,091). After deducting retiral gratuities to workers Rs. 17,703 (Rs. 13,559), dividends previously forfeited now paid Rs. 125 (*nil*), provision for contingencies Rs. 1,09,549 (*nil*), depreciation Rs. 1,50,000 (Rs. 2,66,880), loss on sale of oil mill machinery Rs. 750 (*nil*) and provision for directors' commission on proposed dividends Rs. 12,975 (Rs. 12,975), there is a balance of Rs. 3,12,039 (Rs. 5,64,289). To this is added the amount brought forward of Rs. 1,04,669 (Rs. 1,51,644). And after transferring to reserve for machinery renewals and replacements Rs. 1,00,000 (Rs. 3,00,000), there is available for disposal a sum of Rs. 3,16,708 (Rs. 4,15,927). The directors propose that this sum be dealt with as follows:—

By payment of a dividend on preference shares of Rs. 3 (Rs. 3) per share or 6 per cent. per annum Rs. 79,500 (Rs. 79,500), payment of a dividend on ordinary shares of Rs. 7-8 (Rs. 7-8) per share or 15 per cent. per annum Rs. 1,80,000 (Rs. 1,80,000) and leaving to be carried forward Rs. 57,208 (Rs. 1,56,427).

In accordance with the provisions of the working time agreement of the Indian Jute Mills Association, the mills worked 48 hours per week with 12½ per cent. of their total complement of looms sealed. Labour co-operated fully with management in maintaining a good level of productive efficiency.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	50,50,000	Block ...	47,19,965
Reserves ...	33,38,409	Stock of cloth, bags and jute	25,84,600
Provision for sales tax in dispute ...	2,827	Stores ...	9,88,155
Liabilities ..	77,65,787	Debts, deposits and advances ...	33,67,935
Profit and loss account ...	57,208	Investments	43,95,262
		Cash ...	1,58,314
	Rs. 1,62,14,231		Rs. 1,62,14,231

Ganges Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The profit on revenue account amounts to Rs. 10,930 (Rs. 7,33,300). After adding to this share transfer and sub-division fees Rs. 945 (Rs. 352), unclaimed dividend forfeited Rs. 2,356 (Rs. 2,145), rebate on foodstuffs Rs. 1,560 (Rs. 4,294), provision for doubtful debts no longer required Rs. 1,545 (Rs. 872) and profit on sales of capital assets Rs. 2,000 (*nil*), there is a total sum of Rs. 19,336 (Rs. 7,40,936). And after deducting retiral gratuities to workers Rs. 33,628 (Rs. 19,357) and depreciation Rs. 3,00,000 (Rs. 1,80,958), the debit balance is Rs. 3,14,292 (credit of Rs. 5,40,648). After deducting the amount brought forward of Rs. 1,23,024 (debit of Rs. 3,72,557) and transferring from reserve for machinery renewal and replacement Rs. 3,00,000 (*nil*), there is available for disposal a sum of Rs. 1,08,732 (Rs. 1,68,091). The directors propose that this sum be dealt with as follows:—

By payment of a dividend on preference shares of Rs. 4 (Rs. 4) per share or 8 per cent. per annum Rs. 24,000 (Rs. 24,000) and leaving to be carried forward Rs. 84,732 (Rs. 42,161 after paying dividend at As. 8 per ordinary share, absorbing Rs. 1,20,000).

In accordance with the provisions of the working time agreement of the Indian Jute Mills Association, the mills worked 48 hours per week with 12½ per cent. of their total complement of looms sealed. On 9th January 1956, 2½ per cent. of the Association's total complement of looms was unsealed and a further 5 per cent. will be unsealed with effect from the 20th February 1956.

Profitable working during the period under review was difficult with the raw jute supply position maintaining prices at uneconomical levels in relation to those of finished goods, which during the period fell sharply.

Following on the labour disturbances at the mills in March 1955, when it was found necessary to close the mill for some days, relations between management and labour were slow to return to normal and the mill's efficiency suffered in consequence.

The Government of West Bengal Industrial Tribunal publishing its Award dated 20th September 1955 enhanced mill labour's earnings by approximately 4.5 per cent. This increase became effective from the 6th November 1953. The mills with modernisation still in its early stages, are particularly affected by this further *per capita* increase in wage earnings.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	90,32,100	Block ...	71,03,613
Reserves ...	1,66,021	Stock of cloth, bags and jute ...	30,03,260

Profit and loss account ..	84,732	Debts, deposits and advances ...	29,95,137
		Investments	4,83,215
		Cash ...	41,106
	Rs. 1,49,32,933		Rs. 1,49,32,933

Nuddea Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The loss on revenue account amounted to Rs. 80,628 (profit of Rs. 2,62,447). To this is added retiral gratuities to workers Rs. 4,157 (Rs. 6,950), dividend previously forfeited now paid Rs. 472 (*nil*), provision for contingencies Rs. 1,10,254 (*nil*) and depreciation Rs. 3,50,000 (Rs. 2,00,000). And after deducting dividend forfeited Rs. 2,017 (Rs. 1,363), share transfer and sub-division fees Rs. 554 (Rs. 193), profit on sale of launch Rs. 40,624 (*nil*), profit on sale of cargo boats Rs. 1,52,000 (*nil*), dividends on investments Rs. 15,000 (Rs. 15,000), rebate on foodstuffs charges Rs. 1,941 (Rs. 2,845), provision for doubtful debts no longer required Rs. 7,081 (Rs. 379) and items relating to previous year of Rs. 5,772 (*nil*), there is a debit balance of Rs. 3,20,482 (credit of Rs. 93,454). After deducting the amount brought forward of Rs. 45,550 (Rs. 6,420) and after transferring from general reserve Rs. 4,00,000 (*nil*), there is available for disposal a sum of Rs. 1,25,068 (Rs. 99,874). The directors propose that this sum be dealt with as follows:—

By payment of a dividend on ordinary shares of As. 8 (As. 8) per share or 2 per cent. per annum Rs. 66,795 (Rs. 66,795) and leaving to be carried forward Rs. 58,273 (Rs. 33,079).

In accordance with the provisions of the Working Time Agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of their total complement of looms sealed. Labour co-operated fully with management in maintaining a satisfactory level of productive efficiency.

Profitable working during the period under review was difficult with the raw jute supply position maintaining prices at uneconomical levels in relation to those of finished goods, which during the period fell sharply.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	66,79,500	Block ...	73,31,804
Reserves ...	28,30 793	Stock of cloth, bags and jute ...	26,56,878

		Cash ...	56,751
	Rs. 1,32,54,485		Rs. 1,22,54,485

Rallis India Ltd.

The directors of the above Company (Managing Director and Chairman: Mr. M. P. A. Paspatti, Calcutta) submit the audited accounts of the Company for the year ended 31st August 1955.

Members have already been informed in the interim report of 5th February 1955 and the notice to shareholders of 22nd April 1955 of the circumstances which necessitated the reorganisation and curtailment of the Company's trading activities in the Calcutta area. Although this reorganisation was effected during the year under review substantial losses had been incurred before the reorganisation was completed and the accounts for this period also bear the heavy cost of compensation payable to retrenched staff amounting to no less than Rs. 14,70,456. Although turnover was slightly below the corresponding figure for the previous year, the gross profit made by the Company showed a considerable increase (i.e., Rs. 15,78,652) over the gross profit for the year ended 31st August 1954. The result of the year's working, after providing for all the abovementioned expenses but without charging depreciation was a loss of Rs. 22,02,273 (Rs. 52,44,629). The allocations to profit and loss account for the year are as follows:—

The loss for the year is Rs. 22,02,273 (Rs. 52,44,629) which is reduced by part of reserve for depreciation of investments no longer required Rs. 1,00,000 (Rs. 29,913) and profit on realisation of investments Rs. 161 (*nil*) and balance brought forward from last account of Rs. 42,97,067 (Rs. 17,649) leaving a balance to the debit of profit and loss account to be carried forward to the next account Rs. 63,99,179 (Rs 42,97,067). It is regretted that no dividend can be paid on either the preference or ordinary shares for the year ended 31st August 1955.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,00,00,000	Block ...	1,13,34,982
Reserves ...	7,25,185	Stocks ...	2,48,06,264
Provision for taxation ...	10,70,748	Stores ...	12,16,372
Liabilities ..	2,05,67,973	Debts, deposits and advances ...	1,17,28,578
		Investments	6,04,628
		Cash ...	22,73,903
		Profit and loss account ...	63,99,179
	Rs. 5,83,63,906		Rs. 5,83,63,906

Ganges Rope Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Macneill & Barry Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The profit for the half-year is Rs. 89,746 (Rs. 2,02,846). Adding thereto the surplus on sale of assets Rs. 4,325 (*nil*) and balance brought forward at credit of profit and loss account of Rs. 52,823 (Rs. 48,285), there is a total sum of Rs. 1,47,394 (Rs. 2,51,318). After deducting provision for doubtful debts Rs. 5,000 (*nil*) and provision for taxation Rs. 6,000 (Rs. 50,000), there is available for distribution a sum of Rs. 1,36,394 which, together with the balance brought forward from last year's account of Rs. 5,963 (Rs. 41,548) gives an amount for disposal of Rs. 2,18,224 (Rs. 2,35,963). This sum the directors propose to dispose of as follows:—

Pay a dividend of Rs. 3 (Rs. 4) per share on 60,000 shares of the Company, free of income-tax, Rs. 1,80,000, (Rs. 2,00,000) transfer to general reserve Rs. 20,000 (Rs. 20,000) and to staff gratuity fund Rs. 10,000 (Rs. 10,000), leaving a balance to carry forward to next year's account of Rs. 8,224 (Rs. 10,000).

Production of the plant during the early part of 1955 fell away from capacity, but later months reversed this position and all departments were fully occupied and productions achieved are slightly more in the majority of cases than those of the year 1954.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	4,97,046
Reserves ...	9,01,563	Stock-in-trade	84,773
Provision for taxation ...	3,30,074	Stores and spare gear	1,02,718
Liabilities ...	5,56,943	Debts, deposits and advances ...	4,12,199
Profit and loss account ...	2,18,224	Investments	3,19,153
		Cash ...	14,90,915
	Rs. 29,06,804		Rs. 29,06,804

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Empire Dyeing and Manufacturing Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. W. H. Brady & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The net profit on the year's working after writing off depreciation of Rs. 35,512 (Rs. 39,073) on machinery and plant, etc., setting aside Rs. 1,00,000 (Rs. 1,00,000) for taxation, and charging the managing agents' commission amounting to Rs. 38,971 (Rs. 33,978) is Rs. 2,12,261 (Rs. 1,94,416), which together with the balance brought forward from last year's account of Rs. 5,963 (Rs. 41,548) gives an amount for disposal of Rs. 2,18,224 (Rs. 2,35,963). This sum the directors propose to dispose of as follows:—

Pay a dividend of Rs. 3 (Rs. 4) per share on 60,000 shares of the Company, free of income-tax, Rs. 1,80,000, (Rs. 2,00,000) transfer to general reserve Rs. 20,000 (Rs. 20,000) and to staff gratuity fund Rs. 10,000 (Rs. 10,000), leaving a balance to carry forward to next year's account of Rs. 8,224 (Rs. 10,000).

Production of the plant during the early part of 1955 fell away from capacity, but later months reversed this position and all departments were fully occupied and productions achieved are slightly more in the majority of cases than those of the year 1954.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,00,000	Block ...	4,97,046

	Rs. 29,06,804		Rs. 29,06,804

N.B.—Figures within brackets relate to the corresponding period of the previous year.

CALL MONEY RATE HARDENS

(From Our Own Correspondent)

BOMBAY, *15th February*

Persistent demand for credit to finance the seasonal movement of crops and cloth trade, in the face of growing shortage of funds, kept the short-term money market firm for yet another week. The paucity of funds was so great that even the slightly higher rates offered by a few banks failed to attract sufficient money to ease the position. Inter-bank call money was, however, done at 3 per cent. though the volume of business at this rate was small. In Calcutta, inter-bank call money was keenly bid at 3¼ per cent. House money at call generally fetched 3 per cent., but one or two banks were reported to have offered 3¼ per cent. albeit for amounts over Rs. 5 lakhs.

Short-term deposits were generally bid at 3¼ per cent. for one to three months and at 3 per cent. for four to six months.

The Government of India 91-day Treasury Bill rate remained unchanged at Rs. 2-8-3 per cent. per annum for the third week in succession. The tenders for Rs. 1 crore brought an offer this week of Rs. 1.53 crores, which was Rs. 15.25 lakhs less than in the previous week. The invitation for the next week remains unchanged at Rs. 1 crore.

For the first time in the history of India, the notes in circulation crossed the Rs. 1,400-crore mark during the week ended 10th February 1956. This is disclosed by the Reserve Bank's statement for that week. Notes in circulation, as at the end of the week, at Rs. 1,407.65 crores, shows a rise of Rs. 15.28 crores over the week and of Rs. 165.08 crores as compared with the position a year before. Notes held in the Banking Department have fallen by Rs. 1.14 crores, so that the increase in total notes issued is Rs. 14.14 crores. On the assets side, foreign securities show a rise of Rs. 15 crores and rupee coin a decline of Rs. 82 lakhs. In the Banking Department, there has been no change in National Agricultural Credit (Long-term Operations) Fund, a new item introduced in the statement last week. This fund, created for the first time with an initial credit of Rs. 10 crores, is in pursuance of the recommendations of the All-India Rural Credit Survey Committee accepted by the Government of India last year. There has been an increase of Rs. 7 67 crores in the deposits of the Central Government, while deposits of other Governments and banks have fallen by Rs. 3.40 crores and Rs. 10 22 crores, respectively. On the assets side, balances held abroad have declined by Rs. 10.34 crores. Loans and advances to Governments disclose an increase of Rs. 1.17 crores and other loans and advances Rs. 4.74 crores. Fresh advances to Scheduled banks against usance bills during the week amounted to Rs. 2.29 crores, while outstanding balances on this account show a net rise of only Rs. 53 lakhs.

The Scheduled banks' statement for the week ended 3rd February 1956 reveals a sharp fall of Rs. 13.56 crores in demand deposits of banks. Time deposits, on the other hand, have gone up by Rs. 2.17 crores, as also inter-bank borrowings by Rs. 69 lakhs. Borrowings from the Reserve Bank are up by Rs. 5.42 crores and those from the State Bank by Rs. 2 17 crores. A rise of Rs. 2.87 crores is noted in advances and of Rs. 2.01 crores in inland bills purchased and discounted. Foreign bills are also higher by Rs. 56 lakhs. Investments have declined by Rs. 1.32 crores. Cash and balances with the Reserve Bank have together dwindled by Rs. 1 49 crores.

The Gilt-edged market maintained a steady tone almost during the whole of the week under review. Prices of securities were well maintained over a wide front; in some cases, in fact, there was a further hardening, on account of some demand and scarcity of stocks. Enquiries on behalf of insurance companies were patchy and on a small scale. Today, however, there were some sellers in a few counters and a drop in prices was recorded.

3 per cent. 1957 was maintained at Rs. 99-10, as also 3 per cent. 1958 at Rs. 99-8. 3 per cent. 1959-61 was held at Rs. 98-4. 3 per cent. 1963-65 stood unchanged at Rs. 94-12, while 3 per cent. 1964 was done an anna higher at Rs. 94-12. 3 per cent. 1966-68 held ground at Rs. 92-5, while 3 per cent. 1970-75 rose further by As. 4 to Rs. 88-10. 3 per cent. 1986 Conversion Loan was marked down towards the close by As. 2 to Rs. 80-7. 3½ per cent. 1961 was kept at Rs. 99-8. 3½ per cent. 1964 and 1965, on the other hand, shed an anna each to Rs. 98-11 and Rs. 98-8, respectively. Among State loans, 4 per cent. 1967 Bombay and West Bengal were unchanged at Rs. 100-13 and Rs. 100-1, respectively 4 per cent. 1967 Madras put on an anna to Rs. 99-13. Andhra 1967 also gained an anna to Rs. 99-6 and U.P. 1967 to Rs. 99-11. Bihar 1967 rose by As. 4 to Rs. 99-5 and Hyderabad 1967 by an anna to Rs. 99-6.

The Saurashtra Electricity Board, Rajkot, has come out with a borrowing programme for Rs. 2 crores. The loan, the list for which opened today, is guaranteed by the Saurashtra Government in respect of both principal and interest and issued at par. It is redeemable in 1966 and bears interest at 4½ per cent. per annum. The interest is payable half-yearly at the Board's office at Rajkot. The list will be closed as soon as the loan is fully subscribed and in any case not later than 29th February 1956.

In the foreign exchange section, there was a weakening of the rupee in terms of the U.S. dollar, in sympathy with a similar trend in sterling. Banks' selling rate for ready dollars moved up from Rs. 477½ to Rs. 477⅞ per $100 and their buying rate from Rs. 473 to Rs. 473¼. In New York, spot sterling declined from $2.80⅜-2.80⅝ to $2.80.7/16-2.80 9/16. Forward sterling (three months) dropped from $2.79.5/16-2.79.7/16 to $2.79¼-2.79⅜ and transferable sterling from $2.77⅝-2.77¾ to $2.77⅛-2.77⅜.

GOLD FIRM

(From Our Own Correspondent)

BOMBAY, *15th February*

A sharp rise in gold prices was the main feature of trading in the bullion market during the week under review. Silver, on the other hand, was erratic, though it ended the week with a gain of a few annas.

Gold was very active and presented a firm front on strong bull support and frantic covering by shorts. Buying movement gathered momentum on reports of good offtake in the ready section, particularly from Madras and Calcutta, with the result that the premium of ready over forward prices widened from just an anna at the close of the previous week to As. 8 towards the close of this week. The details of the draft second Five-year Plan proposing a large dose of deficit financing and the tax measures envisaged therein were bullishly interpreted in the market and this in turn resulted in a keen enquiry for the yellow metal.

After an initial decline, following heavy unloading by a bull operator, who had heavy commitments in other markets, silver staged a sizable recovery on revival of bull squeeze. Good offtake in the ready section also assisted the upward trend. The improvement was, however, short-lived and from Monday onwards there was a reaction, in sympathy with weaker advices from Delhi and Calcutta. Large arrivals of unrefined metal also affected the sentiment adversely. Today, however, there was again an attempt to recoup the earlier loss, in tune with the firm trend in gold, but at the close a reaction set in.

Forward gold (27th February settlement) advanced from Rs. 95-13 to Rs. 97-3 on Saturday. After a short-lived mild recession to Rs. 96-9, the yellow metal rallied to touch a high of Rs. 97-15 today before finishing at Rs. 97-7. Business in the next settlement opened on Monday at Rs. 97-2 and rose to Rs. 97-14 today. The closing was done at Rs. 97-6.

Ready gold appreciated from 95-14 to Rs. 98-7 and closed at Rs. 97-15. The floating stocks of gold are reported to be 35,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was higher at 4,000 tolas on an average.

Silver for forward delivery (28th February settlement) moved down on the opening day from Rs. 174-14 to Rs. 173-7, but staged a sharp recovery to Rs. 176-12 on Saturday. After receding to Rs. 174-11 later in the week, it came up today to Rs. 176, only to close lower at Rs. 175-3. The next (March) settlement reacted from Rs. 176-8 to Rs. 175-9, but the loss was made good today, when it touched Rs. 176-12. At the close, however, it dropped to Rs. 175-15.

Ready silver (.996 Mint) closed today with a gain of As. 13 over the week at Rs. 174-15, after registering a high of Rs. 176-4 earlier in the week. The floating stocks of silver are estimated at 1,300 bars. The daily average offtake was 20 bars.

In contrast to the trend in India, silver prices in London and New York rose sharply. Spot silver in London hardened from 77⅞d. to 79½d. and forward from 77⅞d. to 79½d. It will be noted that the slight premium which spot silver had commanded in the earlier week disappeared from Friday onwards and spot and forward prices came to be quoted at par from that date. In New York, silver was marked up from 90¼c. to 91c. London gold price also moved up from 249s. 4d. to 249s. 5½d., thanks to the weakening of sterling in terms of U.S. dollars.

The following comparative table shows the trend of the market during the week under review:

	15-2-56	Highest	Lowest	8-2-56

KIPS WEAK

(From Our Own Correspondent)

MADRAS, 13*th February*

U.K. trading in kips has been negligible, as U.K. importers have not been keen to buy, in view of large stocks with dressers. Though Madras shippers are not keen to offer stocks as per the resolutions of S.I.S.H.M.A., prices in the local market have not recovered due to weak holders of stocks here. Arrivals of cow hides are moderate and offtake by shippers good. There is some demand for buff calf at a penny less than last prices. Prices in the local market are weak in sympathy.

There is good call for lining sheep at unchanged prices from the Continent, but, as demand has outpaced arrivals, prices are hardening in the local market. There has been no change in the goat skins market—ordinary tannages. Continental buyers are trying to buy better tannages of goat skins at 3d. to 6d. less.

SPOT COTTON LISTLESS

(From Our Own Correspondent)

BOMBAY, *15th February*

If nothing goes wrong again, futures trading in cotton, which has remained closed out since 25th January last, will be resumed within a fortnight. The suit filed by some cotton traders challenging the validity of the Forward Markets Commission's directive to the Board of the East India Cotton Association (E.I.C.A.) to close out hedge contracts and to amend by-laws is being heard in the High Court. In the meantime, the E.I.C.A. Board is reported to have submitted to the Forward Markets Commission certain proposals—to be made applicable to the current season's cotton crop only—concerning the amendments of the by-laws governing the Indian Cotton Contract. These are: The basis and grade of the hedge contract must be retained as fine stapling 13/16". The method of fixing tendering differences should be changed, so that these will be fixed on the basis of forward prices, instead of on spot prices, as provided in the existing by-laws. Permission must be given to commence trading in a new May contract in place of the closed one, as well as in August contract.

While the reaction of the Commission to these proposals are awaited with keen interest, the cotton market is, as usual, thick with all sorts of rumours on the eve of the budget. Some apprehend that there might be an upward revision in import duty on cotton, while others expect an increase in excise duty on cloth.

Listless conditions prevailed in the spot cotton market during the major part of the week under review. Enquiries were strictly limited. There was, however, sizable business done in Vijay, the prices of which tended to look up. Khandesh and Berar Jarillas also met with some support. Kalyan, too, evoked stray demand. Among exportable styles, shippers' interest was concentrated on Bengals, Wagad, Oomra *Deshi*, Lower Jarillas and Zoda cotton. Stocks of Wagad and Bengals would appear to be getting reduced. The foreign section ruled quite active, with good mill demand for East African cottons, particularly B.P.52 and Busoga. The rates at which these two varieties were purchased by a prominent group of mills were Rs. 1,540 and Rs. 1,440, respectively. A small quantity of Sudan G6L was also reported to have changed hands at 36.25d. per lb. Egyptians evoked some enquiries yesterday.

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 685; Berar Jarillas Rs. 785; Khandesh Rs. 770; Vijay Rs. 875; Oomra *Deshi* Rs. 750; Moglai Rs. 650.

The persistent buying spree noted in the Karachi cotton market in the past four weeks gathered considerable momentum this week. The buying spree was fanned by two factors. First, turnover in spot market continued to be sizable. Secondly, there was excellent demand from abroad; during the four weeks ended 10th February alone, export business booked amounted to as much as 80,000 bales. Induced by these bullish trends, the operators lent sustained support to the market and cotton prices forged further ahead. N.T. R.G. March delivery rallied Rs. 2-8 to Rs. 84-11 per 82 lbs. May contract advanced by Rs. 2-4 to Rs. 82-5. The spread between the two contracts would, it was expected, widen from Rs. 2-2 to Rs. 3 or even to Rs. 4 in the not distant future, on account of short-covering in the near position.

The spurt in the cotton prices was very much more marked in the spot section. Sind *Deshi* registered an impressive gain of Rs. 5-8 to Rs. 77. Punjab *Deshi* moved up from Rs. 67 to Rs. 72-4. The latest available quotations (in rupees per 82 lbs.) for a few other popular varieties of Pakistan cotton (figures in bracket giving the rates prevailing a week before) are: 4F Punjab Roller 82 (77-8); S.G. 87-12 (84-8); L.S.S. Punjab Roller 86-8 (84); S.G. 92-8 (91); 289F N.T. Roller 89-8 (87-8); S.G. 95-8 (94-4); 289F Punjab Roller 95 (90-8); S.G. 101-8 (98-8).

Buoyant conditions prevailed in the Alexandria cotton futures market during the week under review also. Under the impetus of broader export offtake, particularly in Ashmouni, firm advices from New York and heavy short-covering in Ashmouni February, prices advanced sharply. The advance was further assisted by fears that the final Ashmouni crop might be 10 per cent. below previous expectations. Karnak March contract was on special request 5.70 tallaris higher at 88.55 tallaris per lb. May delivery rose by 4.94 T to 86.74 T. Ashmouni February and May deliveries put on 4.82 T. and 4.46 T. to 68.56 T. and 67.58 T., respectively.

In the spot market, there was a further sharp increase in the price of Ashmouni, grades good and above attracting much attention. Both Karnak and Giza 30 maintained their high levels. The Egyptian Cotton Commission has been selling, by weekly auctions, previous season's stocks of Giza 30. The stocks are being lifted by shippers at high prices. The aggregate quantity of Egyptian cotton exported since the beginning of the season up to the 1st inst. was 417,934 bales (of 730 lbs. each), as against 305,343 bales in the corresponding period of the last season.

Thanks to the firm trend in Egyptian cotton prices, the private holdings of Sudans are commanding continuously rising prices. Reports regarding new crop cotton are very satisfactory. The leading shippers, it is said, have been impressed with the quality and staple length of small samples of S cotton that have arrived in Port Sudan. The Gezira Board has not yet announced the reserve price for the new crop. Traders are, however, somewhat inclined to feel that, should the Board base the prices on those of Egyptian cotton, Sudans would record a sharp rise of 250 to 350 Liverpool points.

At the auctions held upto and including the 7th inst., the Lint Marketing Board sold 120,000

bales of new crop Uganda cotton which fetched steadily good prices. The rise in prices was all round, ranging from 50 to 250 penny points. The largest price increases were obtained for Jinja. Encouraged by these results, the Board recently decided to sell a further quantity of 110,000 bales at auctions to be held every Tuesday and Thursday. The first auction was held on the 9th inst.

Trading in the Liverpool cotton futures market during the week was marked by a notable rise in quotations for Egyptian contracts. New contracts also ruled strong, due to a further widening in the Liverpool Cotton Association's official values for American 1" staples over 15/16" staples. Old contracts were fully steady. The latest available quotations (in pence per lb.) from the Liverpool cotton futures market are given below:

Old contract: March-April 26.00; May-June 24.92; July-August 24.00; new contract May-June 29.95; July-August 28.40; October-November 26.45; December-January 26.05; Egyptian Karnak cotton: March-April 49.15; May-June 48.60; July-August 48.60.

The firm undertone of the New York cotton market continued unabated this week too, reflecting tight supply position, thanks to growing volume of cotton entries into the loan and improved domestic textile sales. The report that the Senate Agricultural Committee had tentatively approved of a farm bill designed to restore rigid 90 per cent. parity price support to basic farm crop and other measures to improve farm prices also imparted considerable strength to the market. Buying support was, therefore, sustained and prices of cotton continued their upward march.

The House Agricultural Sub-committee of the U.S. Congress, it is reported, is now engaged in considering legislation authorising the Commodity Credit Corporation to export at competitive prices such quantities of cotton as would re-establish and maintain for the U.S. its fair share of the world cotton market. This legislation also seems to limit cotton textile imports to 150 per cent. of the 1953-54 average figure. The U.S. Department of Agriculture is, however, understood to be opposed to such mandatory legislation.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	14-2-56	7-2-56	31-1-56
Spot	36.50	35.80	35.45
March	35.75	35.07	34.74
May	35.05	34.60	34.15
July	33.93	33.65	33.65
October	32.20	31.81	31.55

PEPPER IMPROVES

(Messrs. Parekh & Co.)

BOMBAY, 15*th February*

Malabar black pepper, during the week, continued to improve in sympathy with New York, where dealers are reported to have bought some parcels for February shipment at $0.31 and $0.31¼. Alleppey advanced to Rs. 850, the lowest being Rs. 750. Garbled at Cochin were done at Rs. 145, the lowest being Rs. 130. Calicut, after touching the lowest of Rs. 800, has advanced to Rs. 912½ with arrivals declining. Abatement in the pressure of arrivals at this time of the season in the Calicut area is viewed with optimism, as opinion among the trade is veering round the fact that the crop in the area may be less than expected earlier.

As now Indian prices are stabilising at round about the present level, broadening of foreign demand is generally expected, particularly from New York where dealers were reported to be waiting Malabar to reach the bottom before putting in any sizable buying.

March shipment was done up to $0.32½ while April-May-June were traded up to $0.33½.

In the delivery section, prices improved under pressure of short-covering and in sympathy with improved demand in ready.

Following are today's nominal quotations: Ready delivery Rs. 112 (as against Rs. 107 a week ago) per Bengal maund, February Rs. 775-85 (Rs. 740-Rs. 750) and March Rs. 785-95 (Rs. 745-Rs. 755) per candy of 5½ cwts.

MIXED TREND IN YARNS

(From Our Own Correspondent)

BOMBAY, 15*th February*

The yarn market this week presented a mixed trend. Thus, rayon yarn ruled firm, while staple fibre yarns were weak and cotton yarns quietly steady. The firmness in rayon yarns was aided by good demand from consuming centres in the wake of reduced arrivals. The aggregate quantity of rayon yarn imported into Bombay Port during the month of January was not more than 2.65 million lbs., as against 3.55 million lbs. a month before. Staple fibre yarns, however, lacked support, as operators feared that there would be a marked rise in the indigenous production of yarn, following reports regarding the issue of liberal licences for import of staple fibre by the Import Control authorities. Cotton yarns failed to evoke follow-up support, as operators preferred to watch the trend of developments in the raw cotton and piecegoods markets.

Snia rayon yarn (120 dull cones) for April delivery met with buying support and moved up by Rs. 5 to Rs. 824. February delivery hardened by Rs. 3 to Rs. 811. In the spot section, 120 Japan spurted by As. 2 to Rs. 4-8-6. 120 Italy gained an anna to Rs. 4-10. 159 Italy was fully maintained at Rs. 4-0-6. 150 Japan, on the other hand, was a shade easy at Rs. 4-13. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade was throughout steady at Rs. 3-9-6, but 120 Bt. cones 1st grade lost half an anna to Rs. 3-14.

Staple fibre yarns were subjected to considerable selling pressure. New Citys were particularly weak, their quotation sliding down by As. 2-6 to Rs. 4-1-6. Kohinoors dropped As. 2 to Rs. 4-2-3. New Greats receded by 18 pies to Rs. 4-1. Centurys lost a like amount to Rs. 4-1-6.

In the cotton yarn section, 10 counts Elphinstones shed an anna to Rs. 12-7, but Podars rose by an anna to Rs. 13. Moderns were unchanged at Rs. 13-4. Deals in 20s were put through at lower rates, Hinds declining by As. 2 to Rs. 16-8 and Maduras by an anna to Rs. 17-12. Among 30s, Hinds suffered a decrease of As. 2 to Rs. 21-14. Maduras were quiet at Rs. 22-10. Forty count yarns staged a retreat. Centurys climbed down by As. 12 to Rs. 26-12. Minaxis receded by As. 8 to Rs. 27. Sixty count yarns, however, were firm, Maduras rising by As. 8 to Rs. 45-8 and Moderns by As. 4 to Rs. 61. Business in Finlays and Elphinstones, among 80s, was done at Rs. 70 and Rs. 62, respectively, being the same as last week.

The imports—in lbs.—of different kinds of yarn into Bombay Port during January 1956 (figures in brackets relating to previous month's imports) were: Rayon yarn 2,649,713 (3,552,469): staple fibre yarn 14,164 (41,152); staple fibre 1,022,670 (2,057,521); cotton yarn 52,654 (31,577).

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	15-2-1956	8-2-1956	1-2-1956
	Rs. a.	Rs. a.	Rs. a.
Art silk yarn (per case of 200 lbs.)—			
120 Dull Cone Sala February	811 0	808 0	810 0
" April	824 0	819 0	820 0
120 Japan (per lb.)	4 8½	4 6½	4 5
150 Japan (per lb.)	4 14	4 12	3 15

80s Finlay	70 0	70 0	70 0

OILSEEDS GAIN

(From Our Own Correspondent)

BOMBAY, 15*th February*

Prices in the oil and oilseeds market experienced a two-sided movement during the week under review. The groundnut section put on an upward trend in the first few sessions of the week on short covering at the low levels touched at the end of the previous week, induced by limited arrivals of the seed and oil. The subsequent sessions, however, a weak trend set in on renewed reports of a possible increase in the duty on export of groundnut oil. As a result, only a portion of the earlier gains was erased. The castorseed section ruled easy in sympathy with the groundnut section. The linseed section too disclosed a similar trend almost upto the end of the week, when recovery set in on reports of sizable business done in linseed oil with the U.K. at £130 c.i.f. On balance, however, the losses being relatively small, almost all the sections recorded modest gains over the week.

In the groundnut section, Bold ready was enquired early in the week at Rs. 30, as against Rs. 29-8 at the end of the previous week. It advanced gradually to Rs. 30-8 on the 11th inst., but, subsequently, declined by stages to close at Rs. 30-2. February-March delivery changed hands at Rs. 30-2, as against Rs. 29-9, and April-May delivery at Rs. 30-12, as compared with Rs. 30-2. Coromandals disclosed a gain of Re. 1-6 at Rs. 30-10. Khandesh quality improved from Rs. 29-14 to Rs. 30-10 over the week. Groundnut oil ready gathered As. 5 to Rs. 15-9. On the Continent, groundnut oil was enquired at £123 per ton c.i.f. as against £120 a few days back.

Bold ready, in the linseed section, opened the week quiet at Rs. 29. After improving to Rs. 29-14 on the 11th inst., it declined gradually to Rs. 29-12 on the 14th inst. On support at this level, it advanced by As. 4 to close at Rs. 30. February-March delivery changed hands at Rs. 30, as against Rs. 28-4 and April-May delivery at Rs. 29-12, as compared with Rs. 27-12. Small Sutnas gathered Re. 1 to Rs. 28-8. Linseed oil was quoted at Rs. 18-10, as against Rs. 17-12.

May futures delivery, in the castorseed section, changed hands early in the week at Rs. 118-2, as against Rs. 117-12. Fluctuating between Rs. 120-14 and Rs. 116-14, the rate closed finally at Rs. 119-12. Madras quality (ready delivery) put on As. 4 to Rs. 23-4 and Kanpur As. 8 to Rs. 21-8. Castoroil B.S.S. was enquired at Rs. 13-14, as against Rs. 13-12, and Commercial quality at Rs. 13, as compared with Rs. 12-10.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	15-2-1956	8-2-1956	1-2-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR ADVANCES

(From Our Own Correspondent)

BOMBAY, 15*th February*

The firm trend noted in the sugar market last week continued unabated during the week under review. There were renewed rumours of an upward revision in excise duty on sugar. Even the reported issue of an *ad hoc* release of sugar produced by the mills in the Bombay-Deccan region for sale in free market failed to have any effect. The bull operators lent sustained support to the market and sugar prices, as a consequence, moved up further.

In the spot market, C grade indigenous sugar advanced from Rs. 90-Rs. 95 to Rs. 96-Rs. 98 per bag. A grade rose by Re. 1-Rs. 2 to Rs. 99-Rs. 104. B grade was done at Rs. 95-Rs. 99, as against Rs. 95-Rs. 98, and D grade at Rs. 89-Rs. 94, as against Rs. 90-Rs. 93. British refined sugar was throughout firm at Rs. 84 per 2 cwts. Demand for this sugar from traders and consumers was reported to have broadened considerably of late.

Early in the week, *Fagan* delivery contract for C grade sugar receded from Rs. 93-4 to Rs. 92-14 on rumours regarding the *ad hoc* release. But, later, the contract recovered to Rs. 93-2 on sustained buying by bulls.

Considering the overall satisfactory supply position of indigenous sugar and the prospects of a further rise in production during the current season, sugar traders are somewhat inclined to believe that the spot prices of sugar have reached the saturation point. In their opinion, if the expected upward revision of excise duty does not materialise, sugar prices will collapse to at least the same level which prevailed prior to the hectic rise in recent weeks.

N.B.—The rates for Indian sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

DUST TEAS SOLD WELL

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 10*th February*

A little over 425,000 lbs. were on offer in dust sale "C" which was held on Tuesday 7th February. The sale opened to a strong general demand for all types. Milled dusts and low medium types continued to receive support. Medium dusts sold well at dearer rates and a small quantity of high-grown types advanced by an anna to As. 2. There was a useful demand for clean black Middle East descriptions.

London Market—Sale of 6th February 1956.—Except for best coloury, market irregular and 1d. to 3d. easier.

Sale of 7th February 1956.—Except for best, market declined 3d. to 5d. Medium fannings weakest.

Colombo Market—Sale of 6th February 1956.—Good demand. Black grainy dusts dearer. Off grade fannings and broken mixed firm to dearer. Inferior dusts lower.

Sale of 7th February 1956.—Low-grown brokens 10 cents lower. Medium and high-grown brokens firm to dearer, following quality. Persian Gulf types weaker.

Calcutta Market—Export.—Market opened one anna to As. 2 easier, strengthening later and closed half to one anna easier for commons. Whole leaf As. 2 to As. 3 easier. Good liquoring teas strong and often As. 2 to As. 3 dearer.

Internal.—21,000 dust. Opened strongly, eased towards the close. Clean good liquoring and C.T.Cs. firm. Commonest slightly easier. Leaf 3,500. Fair demand half anna to As. 1½ easier.

Export Quota.—The market has been rather quiet and there are now sellers at 9 pies with no declared buyers.

Forthcoming Auctions.—Dust sale "D" will be held on the 21st February.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Sale* 4.—1,175,000 lbs. Strong general demand. Low mediums fully firm. Good mediums irregular, but often As. 2 to As. 4 dearer. Best liquoring about steady. Whole leaf grades less demand."

JUTE GOODS DECLINE

(From Our Own Correspondent)

CALCUTTA, 14*th February*

Although moderate interest was shown in jute goods, and exporters accepted a fair quantity, prices declined, following the publication of figures relating to jute goods stocks with mills as at the end of January. With the unsealing of 2.5 per cent. of the looms as from 10th January and with January being usually a dull month for export of jute goods, and increase in stocks had been anticipated by the trade. However, the actual rise was more than earlier expectations. The total stocks of all constructions was higher by as much as 14,900 tons at 78,400 tons. Sackings at 45,300 tons accounted for the lion's share of the rise, by 10,900 tons. Hessians were higher by 2,100 tons and miscellaneous constructions by 1,900 tons. These spectacular increases in month-end stocks chilled sentiment in the market, which was reflected by quotations falling to low levels. As expected, shipping during January was also unsatisfactory, and figures relating to the same made buyers cautious. Shipments including coastal shipments, of hessians and sacking goods aggregated 53,000 tons, as against 76,000 and 64,000 tons in December and November respectively. During the present month, production would further increase as an additional 5 per cent. of the looms would be unsealed as from 20th February. This was also a reason why buyers were prepared to go slow in covering their requirements. However, Australia, Russia and Burma are showing very good interest in sacking goods, and before long shipments to these countries are expected to show moderate increases. Already, with the visit of the Burmese trade mission to Calcutta, orders for jute goods worth more than Rs. 1 crore have been placed on Calcutta for shipment to Burma in the coming few months. In the near future, the United States is expected to show more interest in hessians. All these factors have made trade circles entertain the hope that the increase in production of jute goods would not affect the prices of goods, and that fluctuations, if any, would prove only temporary. For, Calcutta quotations are much lower than those for jute goods on the Continent.

The lack of proper hedging facilities for raw jute and jute goods is the main cause why the illegal *fatka* has shown signs of revival even after Government's strong measure to wipe it out. Admitted that the *fatka*, as it operates, is harming the two commodities, and fluctuations in the *fatka* have, more often than not, brought instability to prices. The Government long ago accepted the trade demand to set up a futures market which would be on lines similar to those of the East India Cotton Association in Bombay. The matter is now in the hands of the Forward Markets Commission, but it is now years since the *fatka* was banned, and raw jute and jute goods go without hedging facilities. The sooner the Commission finalises a constitution for a futures market and submits it to the Government for acceptance, the better.

The raw jute market was extremely steady, despite the increase in stocks of jute goods. For, stockists were certain that mills, with the programme to step up production were bound to lift raw jute sooner or later. And sure to this belief, mills bought a fair quantity of the fibre during this week. Even the possibility of a shortage in raw jute, before the new crop begins reaching mills, is strongly hinted. Strong conditions continued to prevail in the agencies, and in Cossipore, arrivals registered a moderate increase, although a fair portion of them was inferior jute. For this reason, the large arrivals did not affect prices noticeably; all the same prices were lower by about As. 8 for most constructions, the latest quotations of which, ruling in Calcutta, are given below, as compared with those of a week ago (in brackets):—

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
Northern	35-8 (35-8)	32-8 (33-8)
District	36-0 (36-0)	33-0 (33-0)
Indian:		
Northern	33-8 (34-0)	30-8 (31-0)
Assam Upper ...	33-8 (34-0)	30-8 (31-0)
Assam Lower ...	33-8 (34-0)	30-8 (31-0)
Daissee	34-0 (34-8)	31-0 (31-0)
Murshidabad ...	32-0 (33-0)	29-0 (30-0)
Western	32-0 (33-0)	29-0 (30-0)
Jungli	31-8 (33-0)	28-8 (29-0)
Orissa	34-0 (35-0)	31-0 (32-0)
Uttar Pradesh ...	31-8 (32-0)	28-8 (28-8)
Daissee Mesta ...	31-0 (31-8)	28-0 (28-8)
Bimli f.a.q.	Rs. 28-8	(29-0)
Pucca bale 1st marks ...	Rs. 190-0	(193-8)

Earlier in the week, B. twills recovered to Rs. 115-4 from Rs. 114-4 following *fatka* revival. However, on Thursday there was a drop in the rate to Rs. 114-12, as the big increase in stocks of sacking goods was announced. After this, even the news of the placing of the Burmese order did not change the declining trend, with the result that the rate touched Rs. 114-4 by the week-end and yesterday as low as Rs. 113-10. Forward rates were higher than ready quotations. A similar trend was in evidence in hessians, the 40" 10 oz. of which, after moving to Rs. 41-2 from Rs. 40-12, gave way to Rs. 40-12 by the week-end. Yesterday, in accord with the general dullness, the rate gave way to Rs. 40-10 with the 8 oz. quoting lower at Rs. 33-4.

HEAVY WITHDRAWALS IN TEA EXPORT SALE

(From Our Own Correspondent)

CALCUTTA, 14*th February*

Prices during yesterday's export sale eased noticeably. Demand was less and there were heavy withdrawals. Offerings amounted to 61,000 chests. Although fannings were in good demand, prices eased by ½ to 1 anna in consonance with the general trend. Black fannings, the offered quantity of which was small, on the other hand, were fractionally better. Medium Assam B.O.Ps. lost by 1 to 1½ annas, medium brokens by 1 anna, and commonest and common brokens by an anna to As. 2. Among C.T.C. Assams, the best teas were in good form, but the plainer liquoring teas joining the general trend gave way by an anna to As. 1½. Among Darjeelings, the flavoury lots received support, but here again the plain liquorings suffered a decline. The whole leaf grades were irregularly supported. The quotations were: best C.T.C. Assam B.P. Rs. 2-5 to Rs. 2-6, clean black pekoe Re. 1-11 to Re. 1-12, medium Assam B.P. Re. 1-8-6 to Re. 1-9, and plain B.P. Re. 1-5-6 to Re. 1-6.

From 11 pies last week, export quota right lost to 8 pies with buyers supporting 7 pies only. However, there was steadiness at the lower rate.

Demand was fair during last week's sale for domestic consumption, but conditions were mixed. Dusts offered aggregated 24,800 chests. Good support was given to black clean leaf teas possessing bright colours while prices of plainer fannings with thin liquors eased by half to 1 anna. Among C.T.C. teas, the best liquorings were well supported but the poorer teas gave way by half to 1 anna. Although black leaf teas suitable for Middle East consumption were in good demand, prices were lower. The quotations were: best Assam C.T.C. Rs. 2-4 to Rs. 2-6, medium Assam grainy dust Re. 1-8-6, and medium Dooars Re. 1-7.

Leaf teas offered aggregated 3,300 chests. Demand was lower and prices eased by an anna to As. 1½.

FOODGRAINS QUIET TO STEADY

(From Our Own Correspondent)

HAPUR, 13*th February*

The foodgrains market ruled quiet to steady during the major part of the week. Prices recorded some gains in the week-end on fresh buying enquiry of wheat from Bihar. The Government of India is liberally selling wheat from its godowns in different deficit centres and, in order to strengthen the stock position further, imports from abroad have been expedited. During the month of March, wheat imports into India will amount to 42,000 tons. With these imports, the total wheat imported during February and March will come to over 71,000 tons.

Wheat prices, which had touched the lowest level at Rs. 14-2 per maund for average quality and at Rs. 13-9 for *khati*, recovered towards the week-end to Rs. 14-8 and Rs. 14, respectively. The week's offtake aggregated 8 *khaties*, leaving the stock position at 33 *khaties*, as against 17 *khaties* at this time last year. Rice prices ruled quietly steady, the current prices being *basmati* Rs. 24 to Rs. 31-8, *rangooni* Rs. 14-8 and coarse Rs. 13 per maund.

Gram prices ruled quiet, in the absence of fresh driving force. Stock position was unchanged at 12 *khaties*. Falling seasonal demand accounted for a some decline in the prices of maize and barley, while those of other coarse grains were unchanged. The current prices were: Gram Rs. 9-12 to Rs. 10-2, barley Rs. 10-2, *bejhar* Rs. 9-12, maize Rs. 10-6, *bajra* Rs. 8-10, jowar Rs. 10-12 and *guwar* Rs. 8-8 per maund.

Arhar prices continued to drift lower, on week advices from Madhya Pradesh where arrivals of new crop were in full swing and some quantity of *arhar* was being brought into U.P. from that centre. *Arhar* ready was quoted at Rs. 10-8 per maund, as against Rs. 11 last week-end. Stocks are put at 5 *khaties* only. Peas, however, tended to harden, thanks to fast decreasing stock due to some outside buying enquiry. It was transacted at Rs. 8-12 per maund for *dara* quality and at Rs. 9-8 for white quality. Other pulses ruled quiet, prices remaining unchanged. The standing crop of *arhar* and peas are now suffering for want of rains.

While *urd* futures further declined during the week, other pulses futures ruled quietly steady. The latest prices as on Monday were: Peas *jeth* Rs. 7-12, peas white *jeth* Rs. 8-4-3, *maha* Rs. 9-10, *arhar jeth* Rs. 9-1-6, *urd magh* Rs. 14-3 and *baisakh* Rs. 14-11-6.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, 13*th February*

Prices of indigenous sugar recorded an improvement during the week, under the impetus of persistent rumours of an increase in excise duty on sugar. Some demand was also visible for new quality sugar, the quota of which was released last week. The prices of old quality sugar, however, eased by As. 4 per maund. Crushing operations are in full swing and, due to depressed conditions in ready *gur* prices, it is expected that the production of sugar will increase and may surpass last year's record level.

The latest mill delivery prices of sugar are: Jaswant Rs. 28-8, Simbhauli Rs. 28-12, Mowana Rs. 29, Daurala Rs. 29, Amroha Rs. 28-4, Bijnore Rs. 28-6, Mansoorpur Rs. 29-8 to Rs. 30, Rampur Rs. 32-4; retail Rs. 31 per maund. *Khandsari* prices, however, ruled quiet, current rates being Rs. 22 to Rs. 26-8 per maund, according to quality.

Restricted loading facilities were responsible for an early fall in the ready *gur* price to Rs. 10 per maund. The price recovered towards the week-end to Rs. 10-12. The recovery was due to the reported decision of the State Government to extend its price support policy to *gur* prices also, if prices tend to fall below Rs. 10-4 per maund. Arrivals during the week were moderate, being estimated at 16,000 maunds and the stock locally was 75,000 maunds. There was a small offtake in sugar during the week by the Punjab and Rajasthan interests.

Gur futures moved both ways during the week on heavy bouts of speculative selling and buying. Opening at Rs. 11-1-3, *phagun* delivery, declined to the lowest at Rs. 10-4 and, after recovering to Rs. 11-6, was quoted today at Rs. 10-15. *Baisakh* delivery was quoted at Rs. 11-13-3.

HIDES QUIET

(From Our Own Correspondent)

KANPUR, 12*th February*

The hides and skins market ruled rather quiet during the week under review. There were no violent fluctuations. The new arrivals were, however, reported absorbed easily. Cooper Allens were specially interested in the upper grades of cow and buff. The Madras dealers were lukewarm. The main purchasers were the local tanners.

The latest available quotations are: Wet salted cow 1st grade Rs. 360 to Rs. 400, 2nd grade Rs. 300 to Rs. 320, and 3rd grade Rs. 140 to Rs. 250 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 1 lb. 14 ozs. to 2 lbs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 225 per 100 pieces; and sheep 1st grade Rs. 325 and 2nd grade Rs. 180 to Rs. 190 per 100 pieces.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 13*th February*

Firmer conditions have been maintained in the linseed market during the week after a weaker opening. Prices have registered a further advance. Firm conditions rule upcountry and despatches have been very scarce. Despite good enquiries from crushers for all positions, turnover has been small. Prices in the oil section have improved, following a slight rise in foreign markets. Trading, however, has been rather small, owing to the uncertainty regarding export duty on linseed oil.

Latest available quotations are February-March Rs. 23-8 and April-May Rs. 20-12 per maund.

PHYSICAL PLANNING AND FINANCIAL PLANNING—I

(*Concluded from page* 288)

"social cost" must include not only the actual cost but also the expenditure incurred by the State on capital construction (which is for the future benefit of society) and on various social and cultural activities of the State. If the number of people employed in the production of means of production and in various services including health and education, grew faster than the number of people employed to produce consumer goods, then the margin between the immediate cost of the community and their social cost must be greater. In other words, the turnover tax must be greater. The turnover tax is just like our sales tax. But the difference is that, while sales tax is half anna or one anna in a rupee, the turnover tax could be so high as sometimes to raise the retail price of an article several times higher than the cost of production and distribution. This turnover tax gave a high degree of flexibility to financial resources and made planning free from the limitations of finance.

Bank Credit

The other major source of finance in Russia was bank credit. The State Bank gave short-term credit to projects, enterprises and institutions according to approved plans for each of them. For long-term credit, there were four specialised banks. The Industrial Bank was entrusted with the task of financing the construction of industrial enterprises. The agricultural Bank financed capital investment in State and collective farms. The Commercial Bank met the long-term credit needs of State and co-operative trading organisations. The Central Municipal Bank financed housing, cultural and welfare construction like schools, hospitals and clubs. In this way, projects and enterprises planned on the basis of availability of physical resources were automatically financed either from the State budget (predominantly from the proceeds of the turnover tax) or from bank credit.

Can we adopt these measures in order to make possible a physical approach to planning? The relative merits of the two measures used in Russia may be examined. Both have the inflationary effect, but the inflation caused by the turnover tax affects essential commodities more or less equally with the non-essential commodities. If only small sums are to be raised from the turnover tax, it can be levied on non-essential and luxury goods. But when huge amounts are to be collected, this tax has to be imposed on articles of mass consumption. Credit expansion also leads to inflation but that inflation can be made to spare essential commodities through controls. As against this, credit expansion has the disadvantage over the turnover tax, in that the inflation created by the latter is controlled inflation. Turnover tax had another principal advantage in the completely socialised economy of Russia: it served as a useful means of keeping control over the accounts and efficiency of individual enterprises. But, in a democratic country, where the bulk of the production comes from scattered unorganised producers, there is the difficulty of its levy and the possibility of widespread evasions, apart from the popular resentment it may create for its incidence on essential commodities.

If in India, the rate of savings is not to determine but is to be determined by the rate of investment, both the instruments of turnover tax (or some variant of it) and bank credit will have to be used, the latter to a much larger extent than the former. Much has been said in this country against the risks involved in large-scale credit expansion (including deficit finance, which is nothing but Government borrowings from the Reserve Bank). Those who counsel a strictly limited use of it lose sight of the meagre scale of economic development that is possible without it. As already stated, even if the second Plan is fulfilled 100 per cent. and the entire investment programme of Rs. 6,100 crores, including Rs. 1,200 crores of deficit finance is put through, it will result in an increment of 10 annas in the average monthly earnings of the people. Fortunately, the example of Russia is before us; otherwise, those suggesting a much higher rate of investment based on the availability of physical resources, would have been considered cranks.

(*To be continued*)

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y—Accounts published yearly. H—Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal notations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—*If a company has different classes of shares*—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up Share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

BRITAIN STRIKES AT INFLATION

AT last, the British Chancellor of the Exchequer, Mr. Harold Macmillan, has struck a heavy blow against inflation which has been dogging his country for several months now. He has made his line of attack clear in what amounts to an emergency budget. Like a bulldog, he has tenaciously stuck to his party's policy of not invoking physical controls to kill inflation and to correct the imbalance on trade account. On the contrary, he has shown that he fully believes in his predecessor's faith in the efficacy of monetary and fiscal measures for curing his country of economic malaise. Not all the criticisms of the Opposition have convinced him of the necessity to change his approach. In fact, he has received the overwhelming support of Parliament which has affirmed its confidence in Sir Anthony Eden's Government by casting 325 votes in favour to 258 votes against.

The move to kill inflation is a combined operation by the Bank of England and the Government. The former entered the scene first (on the 16th inst.) and bumped up the Bank rate by 1 per cent. to 5½ per cent., a level which Britain has not known for a quarter century, since the Great Depression crisis of 1931. But how different are today's circumstances of Britain! In the classical phrase, there is today too much prosperity—that is, too much employment, too high incomes and too much consumption—as distinct from too much depression 25 years before. It may sound as a strange feature of economics that a high Bank rate comes as a handy solution for great depressions and great booms alike. But there is at least one similarity in the two extreme situations in Britain's affairs. And that is the necessity to ensure the stability

payment for such semi-luxuries as radio, washing machines, refrigerators and motor cars has been raised from 33⅓ per cent. to 50 per cent. Similar restrictions have been made applicable to a comprehensive range of capital goods, too. These goods were often bought on credit. The industrial consumers, therefore, have been subjected to two handicaps, namely, drastic restrictions on bank loans and reduction in the facility of hire-purchase finance.

Besides the foregoing, industrial investments are being cut in other ways. The special tax allowances of the palmy days of 1954—which, in effect, gave investors in capital equipment a tax rebate—are abolished and the old-fashioned percentage depreciation allowances for tax restored. The credit squeeze is, moreover, intensified by the banks continuing their unbending attitude towards advances and by the Capital Issues Committee—which has to approve public issues—taking a critical attitude towards such issues. This means, in effect, that new issues will be deemed unnecessary until the borrower can prove otherwise.

One of the common criticisms to be heard from British commentators was that there could be little hope of bringing inflation under control, if the public sector went on spending on development of nationalised industries and on other programmes. This criticism seems to have gone home, for the nationalised industries are to postpone their investments by £50 million by reassessing priorities and rephasing their programmes. Besides, a cut of £20 million is to be made in other capital expenditures of the British Government. There will also be a severe restraint on the capital expenditure of local authorities. On this step, our London Correspondent has the following comment to make:

"It is absurd for the Chancellor to plead that he is not reducing investment but merely postponing it. Investment is always a current affair and, if essential investment is not made when it is essential but postponed to a later date, then investment is being effectively reduced. Atomic energy is not affected, but electrical and gas development are being cut by £19 million in 1956, railways by £22 million, coal development (but not direct production) by £5 million, airways by £2¼ million. Fewer tears need be shed over the investment cuts imposed on radio and television, but the great power and transport industries can ill-afford the economies now proposed; it must be remembered that their programmes had already been pruned before the new cuts. Local authorities will be restrained in their borrowing, meaning less housing and school and public buildings, while it is expected that factory building will be reduced through a combination of the other hazards put in the way of new investment. All this, of course, is before the budget in six weeks' time. That will be the opportunity for the tax weapons to be used and the present measures indicate clearly that they will be used freely."

Taken as a whole, all the measures detailed above can hardly fail to be effective, It is, however, a moot question whether Britain has been wise in refusing to use discriminatory controls for no other reason than doctrinaire considerations. May be, it will have to pay a high price in terms of lagging industrial power and inability to render timely help to the underdeveloped countries of the Commonwealth such as India, Pakistan, Ceylon, Malaya and Rhodesia, in their efforts to improve their economies. In any case, it is not the way that great countries like America and Russia are choosing. The question can hardly be avoided: In this world of mixed economy, can an industrial power like Britain afford to pursue such out-of-date, purely orthodox economic policies and practise rigorous economy in investment and, if so, for how long?

NATIONALISATION OF INSURANCE—WHY NOT RECONSIDER IT?

THE Government of India continues to speak with two voices on nationalisation of insurance. The President, Dr. Rajendra Prasad, like Mr. U. N. Dhebar, the Congress President, referred to nationalisation of insurance in his opening speech in Parliament and stated that it would prove to be a "step towards the socialist ideal we have before us." The statement of objects of the Bill to replace the Ordinance nationalising insurance by an Act harps, on the other hand, upon the financial and moral lapses of the insurance companies in an attempt to justify the nationalisation policy. Some clarification is obviously needed, if the Government's policy has to carry conviction to wider sections of the people.

There is no necessary connection between nationalisation of insurance and progress towards socialist society. Such nationalisation could, in fact, come at a later stage of socialist progress, rather than at the beginning—that is, even assuming that socialism is the most desirable and practicable ideal and that nationalisation of insurance is part of the means for achieving that ideal. It is well to remember that the Socialist Government in the U.K. did not think that nationalisation of insurance was a measure vitally essential for transition to a socialist society. If, on the other hand, nationalisation of insurance is deemed necessary in the interests of the progress of this industry, it is equally wrong. For, in a State committed to socialist philosophy, the incentive for a citizen to save for his future can never be so strong as under a system of free enterprise and individual initiative. The Welfare State is, in fact, inimical to individual saving. Why should the individual save for his future when the State is ready to assure him and his progeny the basic needs of life? In a socialist set-up, the future of insurance is, therefore, dark, rather than bright. The powers-that-be are doing a distinct disservice to insurance by frequently referring to nationalisation of this industry as a socialist measure.

As regards the charge against insurers of misapplication of funds, the Government has not taken the public into confidence over the magnitude of the funds and the names of the companies and the persons involved. Now that the Government has appointed custodians to all the insurance companies, it must be in possession of all the data relating to the state of financial affairs in this industry. It is to be hoped that the Government will lay before Parliament all the data in its possession, so that the public can judge whether the malady needed so drastic a remedy as nationalisation and whether the nature and the magnitude of commissions and omissions attributed to insurers in the private sector compare favourably or unfavourably with similar drawbacks from which the public sector, too, is not free. Incidentally, such information should be able to reveal whether the misapplication of funds could not have been prevented through prompt application of the law.

If an impartial examination reveals that the black sheep are few and could be separated from the white, the Government should, in our opinion, retrace its step, to some extent, by denationalising at least the really good companies and allowing them to function, subject to suitable controls. The Government and the private sector could then operate in the field of insurance. There would be some scope at least for competition and a choice for the public. The Government, too, would be free from the charge of creating a State monopoly which is repugnant to those who believe in a free, democratic society. This would also provide an opportunity to the Government to prove the *bona fides* of its oft-repeated statement that it is not in favour of doctrinaire policies and that its whole object in nationalising insurance is to cleanse the Augean stables.

The existence of State-sponsored and private insurance will, as just mentioned, lead to a fair amount of healthy competition, a variety of policy conditions and greater service to policyholders. So far, nationalisation of life insurance has meant only standardisation of policies. The only constructive result has been a certain reduction in premium rates. The Government has ordered a 5 per cent. reduction in the premium rates over the rates quoted by the Oriental. As compared with the rates quoted by some companies, however, this reduction implies no gain at all. For, according to the Indian Chamber of Commerce, Calcutta, out of 101 companies, the premium rates charged for a twenty-year endowment policy for age group 30 was less than the Oriental's rate in the case of no less than 78 companies; in many cases, the difference in the premium between the companies' rate and the Oriental's rate was more than one rupee and in several cases, as much as Rs. 2 per Rs. 1,000 sum assured.

Be that as it may, the fact remains that, if the Government had not stifled competition in insurance, such a reduction in premium rates would have taken place ere now. When private insurers held the field, the Government always interfered with any scheme that was designed to lower premium rates. This was done on the ground that small insurers would be affected adversely by aggressive competition. Some of the restrictions which were placed on premiums of policies of certain leading life offices were contrary to the spirit of private enterprise and opposed to the interests of policyholders. Apparently, what was then considered not sauce for the goose (private insurers) is now believed to be more than sauce for the gander (nationalised insurance organisation). Indeed, by keeping competition under excessive check, the Government was actually encouraging the growth of mushroom and uneconomic insurers. As all students of economics know, a free, competitive enterprise has its own corrective for eliminating undesirable and uneconomic elements. But, in this country, this force was repressed by the Government through the introduction of controls. At the same time, the Government failed properly to use its powers for control against the misbehaving elements in the insurance world. Accordingly, it was also responsible for the continued existence of Augean stables. All this may be past, but Parliament must remember them when the relevant Bills come up for its consideration.

If it is felt that only nationalised insurance can deliver the goods, it must, however, be acknowledged that the Government could not have made a more satisfactory arrangement than the one it has now evolved. A corporation, which will enjoy a wide measure of autonomy in its day-to-day affairs, is the best organisation for running insurance. And it is all to the good that nationalised insurance will not be operated as a departmental affair. The Government has not, however, abdicated all authority, for it retains powers to issue directions on policy matters. It is to be hoped that the Bill will not be assailed on the ground that Parliament will not have adequate control over the affairs of the Corporation. It will always be open to Parliament to scrutinise, in a general way, the working of the Corporation. But, in the interests of the future of insurance, both the Government and Parliament will do well to see that the Corporation is free from political influence or vexatious interference. The success of this Corporation will, of course, depend on the choice of personnel for this 15-member body as well as for the three-member Executive Committee which will be in charge of the general superintendence and direction of affairs of the Corporation. The Directors, as well as the members of the Executive Committee, should be men with technical knowledge, of proved experience and merit. Many will, however, regret the absence of any elected element in the organisation. Surely, the Government could have provided for elected representatives of policyholders on the Corporation. That would be quite in keeping with the spirit of co-operation which the Government has been advocating for other economic functions.

The principles of compensation have, on the whole, been generally regarded as fair. It is true that any formula for compensation will treat both the good and the bad companies alike. In this process, the really good offices cannot expect to get all that is justly due to them. For instance, the Oriental, on the basis of the formula, is expected to get as compensation about Rs. 4,150 per share, as against about Rs. 8,800 per share proposed (on the basis of expert actuarial calculation) under the abortive mutualisation scheme to which the Finance Ministry itself had given its informal consent. Compensation to foreign offices may conceivably raise certain intricate technical issues. All disputes arising from nationalisation will be referred to a three-member tribunal, of which one will be a person who is or has been a judge of a High Court or of the Supreme Court. In all matters concerning foreign insurers, the Government as well as the tribunal will, perhaps, be well advised to take a broad and liberal view and thereby avoid giving any impression of either discrimination or partial expropriation.

The problems of integration of all the insurance companies under a single organisation will prove to be complex and formidable. The Bill for setting up the Corporation empowers it to reduce the amounts of insurance under contracts in the case of certain companies, if such reduction is found necessary in the light of the financial condition of these offices. Nationalisation of insurance will thus prove to be of no avail to the policyholders of such companies. The integration of the policies of the different companies and of their staff will thus lead to complicated actuarial and administrative problems. It is not clear how long and how painful will be this process. Meanwhile, there is a danger of life insurance business itself receiving a serious setback for want of adequate attention and sales service. From this point of view alone, if not on other considerations, the Government would do well to give some second thoughts to its nationalisation policy.

COST OF BANK CREDIT GRADUALLY RISING

CONVERSION LOAN—BANK RATE—T.I.S.CO'S EXAMPLE—RAILWAY BUDGET

THURSDAY, 5 P.M.

MARKET GOSSIP

MONEY and Gilt-edged markets were the talk of the City this week. The rise in the British Bank rate on Thursday last led to a lot of speculation about the future of the Indian Bank rate. The withdrawal of the Reserve Bank from the Gilt-edged market at this juncture only served to strengthen the speculative fervour. But much of this guesswork was unwarranted, for, even if there was a case for increasing the Indian Bank rate, political considerations alone would have prevented the authorities from making a move this week or in the very near future. Had they raised the Bank rate yesterday, their critics would have dubbed them as camp followers of the British Government. The same criticism might be made, if they were to raise the Bank rate even after a few weeks hence. Further, several days ago, the Reserve Bank had announced its decision to raise the *de facto* Bank rate (that is, the usance bill rate) from 3 to very nearly 3½ per cent. from 1st March 1956. It is beyond our ken to say whether the Reserve Bank had taken this decision in anticipation of the Bank of England's action last week. But the fact remains that, from next Thursday onwards, the commercial banks' principal discounting rate will be up by about ½ per cent., as against the rise of 1 per cent. in the British Bank rate. Accordingly, where is the need for a further rise?

The *de jure* Bank rate in India is, of course, 3½ per cent; that is the rate at which the Reserve Bank lends money to member banks against Government securities. Ever since the introduction of the usance bill scheme, there has been a gradual decline in the practice of banks borrowing from the Reserve Bank against these securities. In fact, the Reserve Bank itself has been discouraging it. As the cost of borrowing against usance bills is ½ per cent. less than that against Government securities, most banks have preferred to use the bill system. Now that this attraction will be removed after a week, it remains to be seen whether the popularity of the usance bills will tend to wane. Borrowing against these bills does require some effort, in that a bank has to induce its customer obtaining an overdraft to draw a three months' bill instead of a demand promissory note. If the banks again begin to show a pronounced preference to make use of Government securities for obtaining credit from the Reserve Bank, then it may be necessary to raise the *de jure* Bank rate, or to reduce the *de facto* Bank rate to 3 per cent. The latter is unlikely, if at that time the level of interest rates the world over happens to be on the high side, as it is at present.

Another factor likely to necessitate an increase in Bank rate is the extent to which the high interest rates in London throw the burden of financing India's foreign trade on the Indian money markets. It is not easy to assess the magnitude of this burden, for it is not known what it was like when the British bank rate was 4½ per cent. It is only the Reserve Bank that can give an idea of it. If, however, the Exchange banks make much larger calls on the Reserve Bank than they have been doing all along, it may be necessary to raise both the usance bill rate and the Bank rate.

All available indications go to show that for two reasons Exchange banks cannot help leaning on the Reserve Bank more heavily than they have been doing hitherto. First, they cannot draw on the resources of their head offices, for the cost of money in London is prohibitively high. Secondly, in spite of higher interest rates they are alleged to be paying in order to attract deposits, their resources in India have not expanded, at any rate not on the same scale as those of Indian banks. With more and more money going to the interior, Exchange banks, with their limited number of branches, cannot garner deposits at the same pace and to the same extent as the Indian banks can do with their large network of branches throughout the country. It is stated that, out of Rs. 225 crores advanced by the Reserve Bank against usance bills in 1955, a substantial part was on account of Exchange banks. This could be true for reasons just mentioned.

From what has been stated above, one should not jump to the conclusion that the Exchange banks are the cause of the pressure towards higher interest rates. Any such conclusion will be absurd. It is not the Exchange banks that link India with foreign money markets like London. It is not they who transmit the effects of higher interest rates abroad. It is India's trade with foreign countries that provides the link and the channel through which the impact of developments in the rest of the world is felt. The greater the size of India's foreign trade, the stronger will be the impact. It is, therefore, wrong to think that, if the Exchange banks were removed from the scene, conditions would be different. The place of Exchange banks would be taken by Indian banks, for there could be no vacuum, and the latter would be obliged to do the very same thing which the Exchange banks are doing.

In a planned economy like India, where trade and industry are regulated, the considerations mentioned above may not be weighty enough to warrant a rise in the Bank rate. (In any case, the maintenance of the Bank rate does not pose a big problem as that of maintaining the exchange rate against an adverse balance of trade). But, in actual practice, Indian economy is not a completely planned and regimented economy yet, though it seems to be heading fast in that direction. There is still a large measure of free trading and speculators are able to enjoy sufficient freedom for carrying on their activities. Despite all restrictions on private initiative and enterprise, the inherent tendency among Indian business men to overtrade is still very strong and active. There is, indeed, the risk of this tendency gathering momentum if the profit margin goes down. Lower rates of interest and easy availability of bank credit are the main factors that sustain such speculation and overtrading.

Advocacy of higher interest rates and other restraints on credit creation will, however, sound illogical at a time when heavy deficit financing is contemplated and when the whole country is expected to invest large sums on expansion of existing industries and development of new ones. But, at the same time, precisely because of the large deficit financing that is expected, it will be necessary to keep speculation, etc., that distort the economy, under effective control. The task before the monetary authorities, therefore, will be to reconcile, in a judicious manner, the conflicting considerations just mentioned. The problem, however, does not appear to be of a pressing nature at present, though it may make itself felt at a later date.

Meanwhile, the stringency in the money market is more acute than last week. There has, of course, been no change in the interest rates for short-term deposits and house money, but inter-bank call money has gone up by a fraction, that is, by ½ per cent., to 3½ per cent. today. Some of the Exchange banks have raised their rates of interest on commercial loans and overdrafts by ¼ to ½ per cent. This is quite understandable for causes already mentioned. A couple of the big Indian banks initiated a move for raising the loans and advances rate by ¼ to ½ per cent. through a general understanding among all the Indian banks. The first reaction to this move has been unfavourable. The State Bank of India is very reluctant either to give or follow the lead. Since past experience of gentleman's agreement of the type proposed has not been satisfactory, a few other Indian banks also are chary of supporting the move. This hesitation is not understandable, because the demand for credit is so large and resources are not by any means inexhaustible that the fear of unhealthy competition is not wholly justified.

• • • •

The Gilt-edged market has made history this week, because, for the first time since 1946, when the 3½ per cent. undated loan yielded place to the present 3 per cent. 1986 Conversion loan, it touched as low a level as Rs. 79. Even when there was a debacle in November-December 1951, following the increase in the Bank rate from 3 to 3½ per cent., the lowest level touched was only Rs. 80. The sudden retreat of this loan during the week was due to the realisation that the Reserve Bank has suspended its floor of Rs. 80 for this security. When the market offered the loan to the Reserve Bank at this rate soon after the Bank rate in England was enhanced, the Bank politely declined it. And since it has not come out to support the market even at lower levels, the dealers are inclined to feel that a major shift in the monetary authority's policy is in the offing. There are, therefore, no buyers and the fall of a rupee in the quotation for this security has taken place without much of a turnover.

Ever since the closing weeks of 1951, the 3 per cent. Conversion loan has been standing at a level totally out of parity with the yields on the dated loans. For instance, whereas 3 per cent. 1970-75—a loan repayable 11 to 16 years ahead of the first date of option for repayment of the 3 per cent. Conversion loan—has been giving a yield of 4.03 to 3.82 per cent. (according to the redemption year as the case may be), the yield on the Conversion loan has been no more than 3.75 per cent. If anything, it should have been a little above 3.82 per cent. at least, which is the later redemption yield on 3 per cent. 1970-75. This anomaly was due to the Reserve Bank fixing the floor for this loan—considered to be the barometer of the market, only, of course, when it suits the convenience of speculators—at the artificially high level of Rs. 80. If this loan is to find its real level, then it must be allowed to float down at least until it touches Rs. 75, when the yield on it will be 4 per cent., if not Rs. 72 or Rs. 73.

Perhaps, the present intention of the Reserve Bank in withdrawing the floor of Rs. 80 is to let the loan fit in with the yield pattern of the rest of the Gilt-edged market. No one is likely to suffer very much as a result of allowing this loan to go down to its intrinsic level now. The banks do not have this loan in their portfolio. The insurance companies may be having a small lot and a depreciation in value suffered by them will not have any adverse effect on either policyholders or shareholders of these companies, now that they have been nationalised. The Reserve Bank must be holding the major portion of this issue, but a loss to it is only a book entry or will be borne ultimately by the tax-payer. Anyway, who cares for him nowadays?

But the most intriguing question is this: Why has the Bank chosen the present time to take off the floor for the Conversion loan? Why did it not wait for some more time? Or why did it not do so earlier? Two answers are possible to this question. One, this may be a preliminary action for unloading a part of the big holding of this loan in its portfolio. It is obvious that no one will buy big parcels of this loan when its yield is lower than what can be had even on the longest-dated loan. And, second, it may be a move to clear the deck for the next borrowing programme. There have been vague hints for some time past that the Finance Minister is thinking of a very long-dated loan at suitable rate of interest, the year of repayment mentioned being A.D. 2000. The hints have been so vague, indeed, that market circles have been inclined to treat them as a joke. But, in the light of this latest development, can it be said that such an issue is not even within the pale of possibility?

• • • •

It is not our practice to go eavesdropping. Even so, we have heard—rather read—with great interest the gently persuasive talk which Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Ltd., has given his workers. It is a stimulating address. With singular clarity and in a very intimate way, the Chairman has explained the intricacies of the Company's finances to them. It is a story worth telling and Mr. Tata has put it across very ably, indeed, in the form of an illustrated folder. We heartily commend this approach for getting the co-operation of workers to the attention of other employers. It is a satisfactory method of explaining the different roles of the State, the consumer, the management and the workers in a productive enterprise and serves as an effective reply to exaggerated accounts of the managements' or the shareholders' share of the total cake.

The story is all about what the Company does with the immense amount of money it gets through the sale of steel. Does it all go to swell the purses of the idle shareholders? Or, does it vanish into the management's private coffers? These questions are often posed by a certain class of political thinkers who expect to get answers to their questions only in the affirmative. But facts are always against them. Indeed that is the only reason why they will not look facts in the face. The T.I.S.Co.'s facts, in particular, should be an eye-opener to them, provided, of course, they are not wilfully blind.

Large figures do generally dazzle and confuse many men who, in their school days, found

LISTLESS CONDITIONS IN SHARE MARKET

TEXTILES FIRM

(From Our Own Correspondents)

BOMBAY, 23rd *February*

WITH hardly a week to go for the Central Budget to be presented in Parliament, the Stock Exchange passed, this week, through the usual pre-Budget listlessness. With minor fluctuations in prices and with volume of business at a low ebb, trading on the Exchange, with the exception of textiles, lacked strength. Though there was a general feeling that most of the bearish factors which the Budget was expected to contain had already been discounted in prices, operators and investors were in no mood to extend their commitments till the Budget proposals were actually out. The fears about an increase in Bank rate also chilled the enthusiasm of the operators. The Reserve Bank's announcement last evening showed no variation in the Bank rate; however, there was no improvement in business today. The undertone was, nevertheless, steady throughout the week in the absence of any fresh adverse influence. The sentiment was kept intact by the strength of textile shares which were in the forefront, in the otherwise featureless market, as also by reports that the settlement difficulties were got over in Calcutta. Encouraging advices from the cloth market and expectations of higher profits and better dividends induced some interest in textiles and sizable gains were recorded in leading counters. Still, there was no hectic activity in this section.

Steel shares were cheerful early in the week and smart rises in prices were recorded. Profit-taking at higher levels erased the gains, but revival of support arrested the recession. Tata Ordinaries hardened from Rs. 224 to Rs. 228-8 early in the week and after moving between that level and Rs. 224-12, the scrips closed today at Rs. 226. Indian Irons advanced from Rs. 31-13½ to Rs. 32-15½, but declined to Rs. 32-3 before finishing at Rs. 32-6½.

As stated above, textiles were in the limelight, prominent among them being Bombay Dyeings, Centurys, Kohinoors and Standards. Bombay Dyeings shot up from Rs. 517-8 to Rs. 530 on influential buying and optimism regarding higher dividend. Profit-taking, however, brought them down to Rs. 524-6 at the close. Centurys came up from Rs. 461-8 to Rs. 484-8, but wound up at Rs. 480. Kohinoors staged a rise of Rs. 4-8 over the week to Rs. 335-8, though the highest level touched was Rs. 338-12. Central Indias were unchanged at Rs. 135-8, while Finlays gathered Re. 1-8 to Rs. 323-8. Gokaks were steady at Rs. 230-8. Indu Ordinaries put on As. 3½ to Rs. 12-6½. Indore Malwas rose by Rs. 14-6 to Rs. 144-6, Khataus by Rs. 6-4 to Rs. 212-8, New Greats by Rs. 7 to Rs. 200 (the highest level touched being Rs. 210) and New Kaiser-i-Hinds by Rs. 2-8 to Rs. 111-4. Shree Niwas were a fraction lower at Rs. 212-8, while Simplex moved narrowly and closed at Rs. 191-12. Standards appreciated by Rs. 9-6 to Rs. 424-6. Svadeshis showed no change at Rs. 210-8. Tata Mills were featureless at Rs. 51-4, while Vishnus moved up by Rs. 3-2 to Rs. 181-4.

Bank shares were dull with business very much restricted. Bank of Indias were, however, prominent with a drop of Rs. 4 to Rs. 152, despite the general expectations of a bonus issue by the Bank to commemorate its Golden Jubilee this year. Barodas were maintained at Rs. 98 and Centrals at Rs. 47-8. Centrals (New) were a fraction better at Rs. 51. Punjab Nationals shed As. 8 to Rs. 43 and United Commercials were done As. 8 lower at Rs. 49-8.

Insurance shares were lifeless. The terms of compensation provided in the Life Insurance Nationalisation Bill had no notable effect on the shares either way. Orientals were marked up by Rs. 60 to Rs. 3,900, even though the compensation would, according to general expectations, be about Rs. 4,200. New Indias were quiet at Rs. 39-12. Other shares were unchanged.

Electricity shares were quiet for want of support. Ahmedabad Electrics dropped Re. 1-14 to Rs. 102-13. Bombay Suburbans held ground at Rs. 116-4, while Surat Electrics were a shade better at Rs. 123-12. Andhra Valleys declined by Rs. 13-12 to Rs. 1,286-4, Tata Hydros by Rs. 2 to Rs. 131 and Tata Powers by Rs. 15 to Rs. 1,352-8. Poona Electrics changed hands Rs. 12-8 lower at Rs. 137-8.

The miscellaneous section ruled in sympathy with the general trend. Among sugar shares, Belapurs came up from Rs. 212-8 to Rs. 215-14 before closing at Rs. 213. Phaltans were dull at Rs. 127-4 and Walchandnagars shaded off from Rs. 243-2 to Rs. 241-4, despite the higher dividend of 18 per cent. declared for the year ended 30th September 1955, as against 16 per cent. for the previous year. In the cement group, A.C.C.s reacted to Rs. 198-4, after an early advance from Rs. 203-12 to Rs. 205, following reports that the premium on the new issue was likely to be Rs. 25 per share. Digvijays on the other hand, gained Rs. 2 to Rs. 171-8. In the engineering and mining group, Alcocks receded by Rs. 11-4 to Rs. 260, despite the report that the Company proposes to build a workshop at Bhavnagar at a cost of Rs. 40 lakhs. Premier Constructions moved down by Rs. 4-8 to Rs. 175, although the dividend has been raised from Rs. 7 to Rs. 8-8. Larsen and Toubro were done Re. 1-4 higher at Rs. 15-12. Tata Locomotives dropped Rs. 2 to Rs. 139-8. Shivrajpurs looked up by a rupee to Rs. 103 and Indian Coppers were done As. 3½ higher at Rs. 6-6. B.B. Petrols were dull at Rs. 3-13½.

In the shipping and transport group, shipping shares responded to optimism about increase in freight rates. Scindias advanced by As. 6½ to Rs. 16-5 and Great Easterns by Re. 1-1 to Rs. 14-13. India Steamships were steady at Rs. 8-1. Hindustan Motors were featureless at Rs. 8-15 and Premier Automobiles at Rs. 83. Among other miscellaneous industrials, Bombay Burmans came up from Rs. 325-10 to Rs. 536-4 before shading off to Rs. 529-6.

* * * *

Calcutta Stock Exchange

CALCUTTA, 22nd *February*

Trading on the Calcutta Stock Exchange remained more or less dull and poor throughout the week. On Friday and Monday, there was some activity, thanks to the decision taken by the Stock Exchange on the 17th inst., but later the market relapsed and became listless once again under the influence of a number of bearish factors. On Friday last, the Stock Exchange authorities decided that shares of Orient Paper, National Jute, Texmaco and Indian Copper in the clearing list could be dealt in freely. It permitted only squaring-up transactions at market rates in Indian Irons and Burrakur Coal. As it decided to end current clearing on the 20th inst., dealers were asked to carry over business in Indian Irons at Rs. 33-8 and Burrakur Coal at Rs. 14, with their carry-over rates being fixed at As. 2 and As. 1, respectively. New business, including cash transactions in these shares, was allowed only with the previous permission of the Stock Exchange. Accordingly, the settlement passed off on the 20th inst. without any difficulty, with the principal operator agreeing to settle his accounts in Indian Irons at Rs. 36, a rate originally fixed by the authorities.

Following this development, a slightly more confident undertone was in evidence but this had no effect on prices, which, in the absence of sustained support, were confined to very narrow movements. Fears of a rise in the Bank rate, the central budget uncertainties and the West Bengal Finance Minister's hint at covering the budget deficit for 1956-57 through additional taxation, all these combined to scare away buyers. The additional taxation contemplated by the State Finance Minister was the entry tax on tea, extension of sales tax to more commodities, irrigation rates, etc. The undertone remained hesitant.

Among coals, Burrakurs had earlier changed hands today at Rs. 14 but weakened to Rs. 13-10. Bengals were quoted lower at Rs. 539. But New Beerbhoons picked up to quote fractionally higher at Rs. 19-15. On the other hand, Pench Valleys were lower at Rs. 22-8 and Amalgamateds at Rs. 23-5.

A feature in the textile section was the recovery today in Elgin Mills to Rs. 27-7 from Rs. 27-3 last Friday, and Kesorams were enquired at Rs. 15-14, which was one anna lower than the previous rate. New Victorias were done at Rs. 2-1 and Cawnpores at Rs. 9-2, both these rates being higher by one to two annas.

A widening of interest was the feature in the jute section, but transactions took place at lower rates, which were the principal attraction. Howrahs gradually lost to close at Rs. 24-12 from Rs. 25-7 previously. Nationals declined to Rs. 27-10 from Rs. 29-10.

Selected counters in the engineering section were in the forefront with Jessop & Cos. recovering from Rs. 57 a week ago, to Rs. 60-6 today, and Richardson & Cruddas to Rs. 26-11 from Rs. 25-11. At Rs. 11-8 Kumardhubis recovered by As. 7 but Burn & Cos., at Rs. 300, were lower by three points on balance, after having risen to Rs. 306 in midweek.

The volume of transactions in the tea section improved, as the removal of export restrictions on unsold North Indian tea provided a favourable background. Tezpores were earlier steady at Rs. 22 but today abruptly fell to Rs. 21-6.

Mixed interest was shown to miscellaneous industrials. Thus, while Metal Corporations improved to Rs. 11 from Rs. 10-8 and India Pulps to Rs. 23-4 from Rs. 22-14, Calcutta Electrics receded to Rs. 13-7 from Rs. 13-12 and Alkali & Chemicals to Rs. 21 from Rs. 21-4. At Rs. 26-15 Martin Burns put on a better appearance as did B.I. Corporations at Rs. 11-8.

* * * *

Madras Stock Exchange

MADRAS, 22nd *February*

The Madras Stock Exchange came in for restricted activity during the week under review. Textiles fared relatively better. Select scrips in the plantation section met with some support, while the miscellaneous section ruled easy. Budget uncertainties and the fears in certain circles of a possible increase in Bank rate were responsible for the subdued tone in the market. As a result, business done in the market was limited and prices moved both ways within narrow levels, with the result that closing quotations, on balance, revealed a sprinkling of both gains and losses.

There have been a few more dividend announcements this week also. The Coimbatore Cotton Mills Ltd. have maintained the dividend of 25 per cent. for the year ended 31st December 1955. The shares are being transacted at Rs. 356 *cum-div.*, as against Rs. 352. The Bank of Mysore Ltd. have declared a final dividend of 8 per cent., thereby making a total of 16 per cent. for the year ended 31st December 1955, being the same as in the previous year. The scrip is quiet at Rs. 262-8 *cum-div.* The Ahtimattam Rubber Co., Ltd. has also maintained its dividend of 3½ per cent. for the year ended 28th February 1955. The share is quoted at Rs. 1-5 *cum-div.*

The Bangalore Woollen, Cotton and Silk Mills Co., Ltd., has decided to hold an extraordinary general meeting on 17th March to increase the authorised capital of the Company from Rs. 46,50,000 to Rs. 1,50,00,000 comprising 1,44,000 ordinary shares of Rs. 100 each and 6,000 (6 per cent.) cumulative preference shares of Rs. 100 each and to capitalise a sum of Rs. 81,00,000 out of reserve, as also to allot and distribute 81,000 new ordinary shares as bonus to holders as on 17th March 1956 in the proportion of two such new ordinary shares for every one of the issued ordinary share. The new ordinary shares will rank for dividend and in all other respects *pari passu* with the existing issued ordinary shares and shall not participate in any dividend declared in respect of the year ended 31st March 1955.

The India Sugars and Refineries Ltd. has proposed to increase the authorised capital from Rs. 60 lakhs to Rs. 1 crore, by the creation of 10,000 (7½ per cent.) cumulative preference shares of Rs. 100 each and 3,00,000 ordinary shares of Rs. 10 each. As many as 3,20,000 ordinary shares of Rs. 10 each are proposed to be issued to holders as on the 12th March 1956 at a premium of As. 8 per share, the full premium of As. 8 per share and Rs. 5 being payable along with the application and the balance amount of Rs. 5 on each of the said shares shall be called up later. These shares will rank for dividend as and from 1st July 1956 and rank *pari passu* with the existing issued ordinary shares. Consequently the dividend paid this year registered an increase—and not a decrease as stated in these columns last week—over last year's payment and represents nearly 27.5 per cent. tax-free on the cash invested in the Company as ordinary capital.

In the textile section, Buckinghams put on Rs. 2 to Rs. 172. Coimbatore Pioneers were better by As. 8 at Rs. 241-8. Kaleeswarars gathered Rs. 2-8 to Rs. 312-8 and Krishna Rajendras Re. 1 to Rs. 91. Metture improved from Rs. 375 to Rs. 377-8 and Ranga Vilas from Rs. 72 to Rs. 77. Rajalakshmis disclosed a gain of Rs. 2 at Rs. 161 and Loyals Re. 1-4 at Rs. 39. Vasantas shot up from Rs. 257-8 to Rs. 264-12. Vijayakumars rose from Rs. 106 to Rs. 107-8.

Blue Mountains, among teas, in the planting section, rallied an anna to Rs. 4-12, Nonsuch Tea As. 8 to Rs. 33 and Talyar Tea As. 5 to Rs. 12-10. Haileyburias improved from Rs. 25-4 to Rs. 25-6. Chandramalais, however, lost an anna to Rs. 5-10 and Waterfalls As. 2 to Rs. 3-11. Be Bes, among rubbers, gained As. 2 to Rs. 4-6 and Kallas As. 2½ to Rs. 5-6.

In the miscellaneous section, Aluminium Industries disclosed a loss of As. 6 at Rs. 20-6 *cum-div.* Andhra Cement 'A' were down by Re. 1-8 at Rs. 155 and 'B' by As. 2 at Rs. 15-10.

NEWS IN BRIEF

OVER 45,600 goods wagons are expected to be produced by the end of the first Five-year Plan, as against the target of 30,000 wagons.

The fourth session of the Railway Sub-Committee of the E.C.A.F.E. Inland Transport Committee will be held at New Delhi from 26th to 31st March next.

Owing to paucity of funds, there is no likelihood of setting up a large synthetic oil plant in the country. This was disclosed by Mr. K. C. Reddy in the Lok Sabha on Tuesday last.

An unofficial trade delegation from Yugoslavia is expected to arrive in India sometime in April to explore the prospects of expanding the trade between the two countries.

A team of experts from the Bristol Aircraft Factory will arrive in Delhi from the U.K. this month to discuss with the Union Government the terms for the manufacture of jet engines in India.

The Government of India has constituted a National Building Council, with Sardar Swaran Singh, Union Minister for Works, Housing and Supply as the President, to guide and direct the activities of the National Building Organisation.

If the negotiations now going on with the Indian Steel Works Construction Co., Ltd. (a consortium of British steel interests) are successful, the supply of machinery to the proposed steel plant at Durgapur will be entirely from British sources.

Burma has purchased Rs. 274 lakhs worth of certain essential goods from manufacturers in India for immediate export. The articles for which orders have been placed are jute bags and twine (Rs. 199 lakhs), textiles (Rs. 45 lakhs), dry prawns (Rs. 24 lakhs) and tyres and tubes (Rs. 6 lakhs).

The Government of India proposes to import about 5 million tons of steel during the years 1956 to 1958. The imports, according to Mr. T. T. Krishnamachari, would be arranged from whichever countries that would be able to supply at favourable prices and deliver early.

The common field pea—a popular Indian cereal—can be used as a contraceptive, according to Dr. S. N. Sanyal of the Calcutta Bacteriological Institute. Trials on 727 women have shown that the oral use of capsules prepared from field pea results in a significant reduction in the pregnancy rate. The capsules can be made available at As. 2 each. The Government of India has decided to put this method on trial and has sanctioned Rs. 1,20,000 for further experiments.

An average of 3.6 million people travelled by rail daily in India during 1955, according to preliminary official estimates. In other words, roughly one per cent. of India's total population sat in the trains every day, all through the year. Fifteen years earlier, that is, in 1940-41, the railways in undivided India carried an average of 1.57 million passengers daily, or approximately 0.4 per cent. of the population, according to the 1941 census. During 1954-55, for which complete figures are now available, the people of India undertook nearly 1,260 million train journeys, travelling a total of 38,850 million miles.

Sea passage fares and freight rates on the India-Africa route will be increased by about 10 per cent. from 27th March next, as a result of a steady rise in the operational cost of ships. Similar increases, excepting on cotton and soda-ash shipments, will also apply in the Africa-West Coast service with the sailing of the British India liner *Amra* from Dar-es-Salaam on 28th March and also subsequent departures. An increase of about 10 per cent. in the current tariff rates on all commodities will become effective for cargo loaded on the *State of Bombay*, sailing on 27th March, and also subsequent departures. From the same date, all passage fares for all classes of accommodation will be similarly increased.

In a joint reply to the questionnaire issued by the Committee on Amalgamation of Small Collieries, the Indian Mining Association and the Indian Mining Federation have warned against any large-scale change in the structure of collieries. Favouring voluntary amalgamation, they have expressed the view that the ideal shape of a colliery should be rectangular and, in general, the aim should be to evolve colliery units of 100 acres each, although there may be cases where smaller units may be found equally efficient. They have suggested the constitution of a statutory body, consisting of a retired High Court Judge with practical experience of company law and three assessors, to carry out amalgamation of small collieries. They have also urged that the Chief Inspector of Mines should be given powers to investigate cases of amalgamation and report to the statutory body.

The Government of India has obtained the services of two foreign experts for its heavy light-house development programme. Mr. C. H. Bejrock, a Swedish engineer, has been appointed for two years to assist in the construction of a new light-house at Laushington in the Gulf of Kutch. This lighthouse, it is claimed, will be unique in this part of the world both in technical design and construction. It will be built on a seabed site, about 50 ft. deep where monsoon seas and cyclones are frequent. Mr. Dominique Navarre, a French engineer, has arrived under the U.N. Technical Assistance Programme to assist the Indian Lighthouse Department in the installation of new electric and other equipment. Primarily meant to aid the country's coastal navigation, the lighthouse programme is expected to cost about Rs. 7.24 crores. The Union Lighthouse Department has so far constructed 25 new light-houses and improved 10 existing ones. Improvements recommended for adoption in the second Plan relate to buoyage system and radio communications between lighthouses and ships.

The total gross sea and land customs revenue collected in India during December 1955 amounted to Rs. 15.66 crores, as compared with Rs. 16.36 crores in the corresponding month of the previous year. Of the total customs revenue collections, import duties accounted for Rs. 11.95 crores, as against Rs. 11.41 crores, export duties for Rs. 3.38 crores, as against Rs. 4.70 crores, and land customs and miscellaneous for Rs. 33 lakhs, as against Rs. 25 lakhs. The total gross collection of Union excise duties amounted to Rs. 1,308 lakhs, as compared with Rs. 928 lakhs. During the nine months April to December 1955, the grand total of gross customs and Union excise revenue realised was Rs. 232.38 crores, as compared with Rs. 201.83 crores in the corresponding period of the preceding year. Of this amount, import duties accounted for Rs. 93.03 crores, as against Rs. 95.92 crores, export duties for Rs. 28.11 crores, as against Rs. 27.55 crores, land customs and miscellaneous for Rs. 149 lakhs, as against Rs. 22.24 crores, and Union excise duties for Rs. 109.75 crores, as against Rs. 76.12 crores.

From Abroad

The Commonwealth countries have spent $550 million under the Colombo Plan since 1951.

The Government of Pakistan has arranged to secure 200,000 tons of rice from the U.S., in order to tide over the current rice shortage in East Bengal.

The British Government, subject to the approval of Parliament, is making available to the Kenya Government a grant of £4,000,000 with a further interest-free loan of £2,000,000 for the period 1956-57.

The next meeting of the International Federation of Cotton and Allied Textile Industries will be held at Munich, Germany, from 3rd to 10th June 1956. Further meetings of the Federation will be held in Egypt in November 1956, in conjunction with the formal opening of the new spinning test mill at Alexandria.

An assurance that he would take into account everyone's view on the question of removing State control on jute imports was given recently by Mr. Peter Thorneycroft, President of the Board of Trade, in the British House of Commons. He said that it had not yet been possible to find appropriate measures, conducive with efficiency, to safeguard the British jute manufacturing industry without this particular form of control.

The West German Government has proposed to spend £160 million on a four-year naval construction programme, under which German yards will be asked to construct 153 vessels, including destroyers, mine sweepers, high-speed petrol boats and small submarines. No orders for foreign yards are contemplated. The Budget and Defence Committees of the Lower House of the Federal Parliament have now approved an initial appropriation of £28 million.

Bakers in the United States are showing increased interest in commercially frozen bread, according to the U.S. Department of Agriculture. The baking industry's interest results from superior keeping qualities of frozen bread, fewer losses from unsold loaves and elimination of costly night-baking. Bread, it is claimed, can be kept at top quality for a week if stored at 10°F (minus 18°C) but 0°F is needed for long storage. Bread keeps best when frozen as soon as it leaves the oven.

World production of peanuts in 1955 is estimated at a record 12,100,000 tons, which represents an increase of 5 per cent., as compared with the production in the previous two years. The most significant increase occurred in the United States, where production was higher by about 70 per cent. Harvests in Africa, particularly French West Africa and British West Africa, were also expected to be considerably larger than in the preceding year. Production in India was down slightly and in Argentina was 16 per cent. below the production of 1954.

The U.S. International Co-operation Administration (I.C.A.) has announced that an additional $20 million will be made available to Iran to assist that country's economy. Iran will use the new funds to purchase commodities, including industrial machinery and parts. These will be sold for local currency and the proceeds will be used by Iran for general governmental expenditures. The I.C.A. had previously approved a $10-million grant for the purchase of commodities by Iran, a $10-million loan, and a grant of $8 million for technical co-operation.

More than 250 exhibitors will be participating in the Mechanical Handling Exhibition, which will be held at Earls Court, London, from 9th to 19th May 1956. Occupying 400,000 sq. ft., it will, it is claimed, be the largest display of labour-aiding equipment the world has ever seen. In addition to its many thousands of exhibits, there will be a convention of speakers on labour-aiding equipment drawn from many countries and free display of films on the subject. This exhibition will, it is stated, be of the greatest possible importance to everyone concerned with production. Through the media of working models, diagrams, photographs, films and cutaways themselves, visitors will be able to see the latest labour-aiding devices in their own industry—whatever type of business they may be connected with.

A nuclear reactor, the first in the United Kingdom to be privately owned, designed and built, is to be erected at the laboratories of Associated Electrical Industries at Aldermaston, Berkshire, by the A.E.I.-John Thompson nuclear energy group. The reactor, which will be called "Merlin," is of the water-moderated "swimming pool" type and will have a maximum power rating of five megawatts. It will use uranium fuel supplied by the U.K. Atomic Energy Authority. The firm has already selected and cleared the site for "Merlin," and it is hoped that the reactor will be in operation by the end of 1957. "Merlin" will be used for research purposes and as the prototype for the research reactors which the group hopes to sell in considerable numbers.

An average 4 per cent. increase in wages and salaries in 1956 is the result of this year's co-ordinated wage negotiations on the Swedish labour market, the first of their kind ever to be held in that country. The negotiations led to a preliminary agreement on the 4th inst., which has since been approved by the parties concerned, the Employers Confederation, the Trade Union Confederation and the Central Organisation of Salaried Employees. While the agreement stipulates a 4 per cent. increase in salaries, the rise in hourly wages and piece-time pay for trade union workers will be 3.7 per cent. This rise, however, must not be lower than 16 *ore* per hour. This clause is expected to raise the overall increase for trade union workers to about 4 per cent. Furthermore, the agreement is flexible enough to permit an eventual shift of the "wage-pot" total, so as to make possible a higher compensation to those in the lower wage brackets at the expense of those in the higher.

During January 1956, the European Office of the Technical Assistance Administration, which has its headquarters at the Palais des Nations, Geneva, was visited by 13 experts who had come either to receive instructions before proceeding on assignments entrusted to them by the Administration or to submit reports on assignments which they had just completed. These experts included three from the United Kingdom and one each from Denmark, the Netherlands, France, Switzerland, Canada and Sweden. Experts will be going to Turkey, Ethiopia, Indonesia, India, Malaya, Iran, Lebanon and Yugoslavia. The projects on which they are to assist cover a very wide field and include advice on road transport, improvement in fruit packaging and conservation methods, courses in telecommunications, town-planning studies, light-house equipment, use of modern dyes in cotton mills, welding and telephone cables, operation of power-mill output, and assistance in the prevention of crime.

PERSONAL

MR. Nagendra Singh, I.C.S., until recently Joint Secretary, Union Ministry of Defence, has taken charge as Director-General of Shipping. Mr. Singh has succeeded Mr. B. R. Patel, I.C.S., who is at present Vice-Chairman and General Manager of Air-India International.

Mr. Prem Krishen, Joint Secretary, Ministry of External Affairs, Government of India, has been appointed Indian Commissioner (with the rank of Minister) in British East Africa, Nairobi, with jurisdiction extending to the Federation of Rhodesia and Nyasaland.

Mr. Shantilal K. Somaiya, Mr. Indraji T. Parekh and Mr. Lachhmandas P. Dabrai have been elected President, Vice-President and Honorary Secretary, respectively, of the *Shakkar Vyapari Mandal Ltd.*, Bombay, for the current year.

Mr. Donald A. Gardner, an American dredging specialist, is arriving in India shortly to assist the Governments of India and Bombay in solving dredging problems now hampering the fishing industry of Bombay State. Mr. Gardner has been sent to India by the U.S. International Co-operation Administration in Washington, which is represented in India by the U.S. Technical Co-operation Mission. During his three-month stay in India, he will survey the ports involved, estimate the amount of dredging required for passage of vessels, and draw up designs and specifications for the type of dredger needed for operation along the Bombay coast.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 28th *February*

Tea Last Year

We almost invariably look forward with pleasant—sometimes with unpleasant—anticipations for the appearance of Messrs. Brooke Bond and Company's annual review of the tea industry. Although their report for 1930, a copy of which reached us by the last mail, is not altogether reassuring as regards the outlook, yet it is replete with interesting and instructive details relating to the occurrences of the past season. The year 1930 provided little cause for congratulation, but, certainly, cause for thankfulness that tea, of all the great agricultural industries, suffered least during the great slump. This is not due to favourable trade conditions but solely to the fact that the growers are efficiently organised and had the business acumen to agree to a scheme of restriction of crops. Had there been no restriction, it is difficult to imagine the condition of the world's tea markets today, but it is certain that many estates would be going out of cultivation and ruined.

FINANCIAL CONTROL

IN the sphere of governmental expenditure, the task of evolving a form of financial procedure that will make for speedy execution of projects, without sacrificing the importance of adequate control on expenditure, continues to attract attention as well as baffle administrators. The analysis of this problem, which Mr. A. K. Chanda, Comptroller and Auditor-General of India, presented in the course of his address on the occasion of the laying of the foundation-stone of the office of the Accountant-General at New Delhi, throws some new light. The adoption of his suggestions, which of course might be varied in the light of actual experience in implementing them, may yet show a way out of the financial woods in which many good Government-sponsored projects get lost at present. And even when they do not actually get lost, there is often an enormous delay in taking a decision and wide variation between actuals and estimates of expenditure.

Mr. Chanda feels that a modification of the budgetary procedure will partially rectify the position. In essence, his suggestion is that, while departmental estimates should continue to be prepared and consolidated after financial scrutiny and accepted, as at present, such a statement should be treated as a budget plan—a segment of the overall plan. A small provision for each new scheme, he says, could be made at the first instance; as and when the schemes mature, supplementary demands should be placed before Parliament, if in session; otherwise allotment of funds should be made out of the Contingency Fund. Mr. Chanda recognises that a possible objection to his suggestion is that it would not enable the Finance Minister to get a "reasonably accurate picture of expenditure in the financial year." But he argues that such criticism would be valid only if the annual budgets were to be regarded in isolation. He observes that, since the Five-year Plan itself provides a comprehensive picture of the expenditure during the entire Plan period, the expenditure scheme in any particular year loses much of its original significance.

Such a modification in budgetary procedure, as Mr. Chanda points out, will reflect more accurately the actual requirements of finance but will not, by itself, ensure that the estimates are better or more accurately compiled. He puts his finger on the right spot when he declares that the "inability of an administrative ministry to spend up to the budgetary demands is not attributable merely to an imperfection but also to a tendency which has become ingrained in our administrative practice to inflate the demands for grants." Some of the spending ministries are obviously acting on two inherently wrong assumptions. In the first place, they seem to think that he serves the country best who aims at spending the most. This leads to the drawing up of grandiose schemes and impressive blueprints. Secondly, in a bargaining spirit, they ask for more than they can spend in the belief that, in the nearly certain event of a cut by the Finance Ministry, there would still be enough money to spend. These two practices should be deprecated, if the Finance Ministry's task has to be lightened or rendered less unpleasant.

In the context of the growing functions of the Government, what should be the right relationship between the Finance Ministry and the spending ministries? Mr. Chanda suggested that it would, perhaps, expedite matters if, at the stage of obtaining the Finance Ministry's approval, a spending Ministry was not asked to give complete details of the scheme but required to give sufficient details to enable the Finance Ministry to view the scheme as a whole and its ultimate cost. He added: "Once the scheme has been included in the budget estimates, after such scrutiny as Finance considers adequate, it should be left to the administrative Ministry to sanction further details, both of staff and expenditure, subject to the ceilings and within the specified provisions by major categories included in the sanctioned scheme." He agreed that overall financial control should vest in the Finance Ministry, but thought that "detailed scrutiny of proposals at expert level should vest in the administrative Ministry by installing 'balancing personnel' within the Ministry."

Mr. Chanda does not believe that the mere installation of external financial advisers in each ministry would serve any real purpose. These advisers cannot be expected to be familiar with the peculiar difficulties which arise in the execution of schemes, so that their advice "tends to become unreal and detached." He has rightly emphasised the need for the development of a system of internal financial advice and for the growth of financial consciousness at all levels. An essential corollary to this scheme is a process of delegation to executive officers at all levels of authority appropriate to their status and responsibilities. Clearly, such decentralisation of authority is necessary in the interests of wider diffusion of financial responsibility and financial consciousness. Only, this process has to be continuously watched, in order to ensure that financial control is not abdicated in favour of those least able to exercise it.

The importance of the role which the office of the Accountant-General has to play in the context of the widening of the public sector was emphasised by the Vice-President, Mr. S. Radhakrishnan, who laid the foundation-stone for the new building. He pointed out that India's financial resources were limited and they should be made to go a long way. He added: "In these circumstances, the public must have the confidence that they are getting an adequate return for the amounts spent, that there are no leakages or wastages on account of incompetence or dishonesty. If the people feel unhappy about the way in which moneys are spent, discontent will spread and undermine the stability of the Government itself." Accordingly, he rightly exhorted the staff to perform their duties diligently, and not to be diverted from their path of duty by thoughts of the "political effects" of their observations on the financial affairs of the Government.

WAREHOUSING AND GRADING OF COMMODITIES

The construction of a network of warehouses and godowns in the country has been long overdue. Although the importance of warehouses to an agricultural economy as that of India was stressed as far back as in the beginning of this century, no concrete steps were taken to establish warehouses. Warehouses and godowns in almost all important rural centres will bring with them innumerable advantages. They will help proper storage of well graded commodities, prevent wastage due to insects and moisture, facilitate provision of rural credit, assist handling and marketing of commodities in bulk and enable Governments to conduct market operations with a view to stabilising prices of agricultural commodities. It was, therefore, in the fitness of things that the All-India Rural Credit Survey Committee attached high priority to warehouse construction as an integral part of its scheme for establishing institutional system of rural credit in India. The Union Government, which has approved of this scheme, has already taken a decision to set up an All-India Warehousing Corporation and a series of State Warehousing Corporations. This information was revealed by the Minister for Food and Agriculture, Mr. A. P. Jain, in his inaugural address at the meeting of the Agricultural and Food Products Division Council of the Indian Standards Institution held at New Delhi on the 18th inst. This Division Council of the I.S.I. is the fifth of its kind, the other Division Councils already set up being those for chemicals, engineering, textiles and building. These Councils act as the authority on all standardisation matters falling within their respective scopes and, in the international sphere, they speak collectively on behalf of the country on these matters.

Drawing the attention of the Agricultural Division Council to the Ministry's Plan for the construction of warehouses and godowns, Mr. Jain observed that the Ministry would set up no less than 1,700 warehouses and godowns, in the principal *mandis* and markets of the country. At the primary level, it was proposed to construct 5,000 new godowns and acquire or hire another 7,000 structures for use as godowns for storing different types of agricultural commodities. These godowns would be owned by large-sized credit co-operatives which would cater to the needs of five villages in irrigated areas. In all, they would cover, during the second Plan period, about a third of India's villages.

As warehouses facilitate proper grading of commodities, Mr. Jain emphasised the need for compulsory regulation, according to specified grades and standards, of commodities, especially those meant for export. In view of complaints from abroad that commodities despatched from India are usually mixed with foreign matter, the Minister's emphasis must be considered as quite appropriate. Standardisation and grading will help raise India's ability to compete in foreign markets. Mr. Jain further pointed out that there was also a great need for standardisation in basic raw materials for industries. Some sort of quality grading was, of course, being exercised by industries themselves, while making purchases of raw materials. But, with the exception of sugarcane, there were always found numerous middlemen intervening between the primary producer and the industrial consumer. The result was that the grower was deprived of the incentive to improve quality. Mr. Jain, therefore, called upon the Council to use its skill and resources to find out some simple and inexpensive scheme for getting grading done at the primary stage.

The Union Minister stated that the State Governments would be requested to develop regulated markets in their States on a scientific and practical basis, so that there might not be an haphazard growth of warehouses and godowns.

The Council reviewed the work of formulation of standards for agricultural and food products so far carried out. It set up a sectional committee to frame standards for tobacco products such as cigarettes, *bidis*, cigars, smoking mixtures and pipe tobacco. A Dairy Industrial Committee was also set up to deal with the standardisation of dairy products (excluding *ghee* and butter) and containers, machinery and equipment used in dairies.

LABOUR PROBLEMS

The Planning Commission's Panel on Labour which met on the 20th inst. at New Delhi discussed the draft report on labour intended to be included in the final version of the second Five-year Plan. The draft report, based on the recommendations of the sub-committees of the Panel, deals with several aspects of labour policy, including trade union movement, wage policy and labour participation in management. The labour policy and programmes proposed to be included in the second Plan are expected to help create industrial democracy, which is claimed to be the prerequisite to the establishment of socialist society for the future. It will be recalled that the Labour Panel had appointed three sub-committees to go into the problems relating to labour policy and programmes.

Addressing the Panel, Mr. Gulzarilal Nanda, Union Minister for Planning, stressed the necessity for maintaining industrial peace in the country, with a view to stepping up production. Declaring that labour policies had to be "drawn up not in isolation but in the context of the Plan as a whole," he stated that the policy had to be so formulated as to ensure industrial peace in the country. Elucidating this statement, he remarked: "Our economy has to be dynamic and we cannot afford to lose any aspect of our resources including that of manpower. This could be achieved through industrial peace."

Mr. Nanda emphasised the need for discipline in the ranks of labour. He expressed the view that this could be achieved only by giving sufficient opportunities both to labour and employers for mutual consultation. He hoped that the joint consultative board, which was examining the whole question, would arrive soon at some practical solutions. He disclosed that the experience of wage boards in certain States, where they were established, had been quite encouraging and that the Planning Commission had recommended that representatives of employers and workers should be represented on the wage boards, so that agreed solutions could be easily evolved.

Suitable alterations in labour policy require to be made, according to the authors of the draft report on labour, because "a socialist society is built up not solely on monetary incentives, but on ideas of service to society and the willingness on the part of the latter to recognise such service." It is in this context, that it is held necessary that the worker should be made to feel that "he is building up in his own humble way a progressive State."

It would appear that the topic which attracted considerable attention related to participation of labour in management. The draft report on labour claimed that, for the successful implementation of the Plan, increased association of labour with management was necessary. Such a measure, it stated, would help (1) in promoting increased productivity for the general benefit of the enterprise, the employees and the community, (2) in giving employees a better understanding of their role and importance in the working of industry, (3) in the process of production and (4) in satisfying the urge for self-expression, thus leading to industrial peace, better relations and industrial co-operation. This is sought to be done by providing councils of management consisting of the representatives of management, technicians and workers. It should be the responsibility of management to supply full information to such councils and the latter should be entitled to discuss all matters, *other than financial*, pertaining to the establishment. Some of the labour representatives demanded that the councils should have the right to discuss even financial matters relating to an employer. This was, however, strongly opposed by the representatives of employers. Mr. Nanda, too, supported the stand taken by the Planning Commission on this point. He is said to have countered the labour leaders' demand by pointing out that even the rights of shareholders to ask for information from the management on financial matters were greatly restricted. As a compromise, it was finally agreed that the councils should be provided with such financial information as was relevant for settling disputes relating to wages, bonus, etc. The councils, the Panel felt, should recommend steps for the better working of the establishment. Matters which fall within the purview of collective bargaining should, however, be excluded from the scope of discussion in these councils.

The second important subject that was discussed related to the evolution of a wage policy. It was disclosed that the "major difficulty experienced in the fuller implementation of the fair wage principle was the drag experienced by marginal units in determining the wage structure." The draft report on labour remarked: "While the financial position of average units in a centre requires to be made the basis of wage and price fixation, if progress towards fair wage is to be accelerated, the conflicting considerations of closure of marginal units and its effect on unemployment also become pertinent in the context of Planning. This means that steps require to be taken to improve the working of marginal units." The Panel is stated to have felt that one way of making such units more viable is their amalgamation into larger units, voluntarily if possible, compulsorily if need be, consistent with the need for a decentralised economy.

It is, indeed, gratifying to note that the Panel recognised that improvement in wages could result mainly from increased productivity. The Panel, however, felt that increase in productivity did not necessarily involve installation of new machinery or more exertion on the part of labour. The view was expressed that steps like better lay-out of plants, improvement in working conditions and training of workers could ensure an increase in output without any corresponding increase in the strain on the workers. Another step in this direction, it was felt, would be the introduction of payment-by-results in areas where it is at present not applicable. This should be done subject to adequate safeguards for workers, the main guarantees being a guaranteed minimum (fall back) wage and protection against fatigue and undue speed-up. The Panel, however, conceded that earnings beyond the guaranteed minimum wage should necessarily be related to result. It was further felt that arrangements for the extension of the system of payment-by-results should be made only after prior consultation with workers.

The next important subject that attracted much notice was the promotion of a strong trade union movement, which, it was claimed, was necessary both to safeguard the interests of labour and to help in advancing the targets of production. The Panel urged the need for a reduction in the number of outsiders as office-bearers of trade union organisations and, in order to fill the gap in the executive personnel of the trade union organisation by this reduction, it suggested training of workers in trade union philosophy and methods. Other measures considered necessary for building up strong trade unions were the grant of recognition to trade unions as representative unions under certain conditions and the improvement of the finances of the trade unions from their internal resources. It was pertinently felt that a strong trade union movement could not be built up solely on the basis of legislation. After all, legislation could only help in developing the setting which would give scope to efforts for improvement coming from within the movement itself. Unity in the trade union movement could facilitate the achievement of this objective. In this connection, an important point that was emphasised at the Panel meeting was that trade unions with different affiliations could come together on the basis of a common programme, covering methods, objectives and procedure.

RAILWAYS IN 1954-55

The Annual Report of the Ministry of Railways for the year 1954-55, just published, makes encouraging reading. It discloses that more goods and more passengers were carried during the fourth year of the first Five-year Plan than in any previous year. It also refers to the several directions in which the railways touched new peaks of performance. The result was an increase in net revenue and, therefore, in the net surplus.

The net revenue of the railways was Rs. 44.06 crores during the year under review, as against Rs. 36.92 crores during 1953-54, an increase of Rs. 7.14 crores. The contribution to general revenues was slightly higher at Rs. 34.96 crores, as compared with Rs. 34.36 crores. The net surplus for the year, the whole of which was allocated to development fund, amounted to Rs. 9.10 crores, as against Rs. 2.56 crores in 1953-54.

The gross traffic receipts of the Government railways during the year amounted to Rs. 286.78 crores, an increase of Rs. 12.49 crores over the 1953-54 receipts. Passenger earnings aggregated Rs. 102.62 crores and goods earnings Rs. 158.69 crores, the balance of receipts amounting to Rs. 25.47 crores, being contributed by parcels, luggage and other miscellaneous sources of revenue. The corresponding figures for the previous year were Rs. 100 crores, Rs. 147.18 crores and Rs. 27.11 crores, respectively. The ordinary working expenses during 1954-55 amounted to Rs. 205.87 crores, that is, Rs. 4.40 crores more than during the previous year. The appropriation to the depreciation fund absorbed Rs. 30.37 crores, including Rs. 37 lakhs chargeable to capital, being the depreciation on the capital assets of the Chittaranjan Locomotive Works; the corresponding figures for the previous year were Rs. 30.36 crores and Rs. 36 lakhs. The operating ratio, however, declined from 85.06 per cent. in 1953-54 to 81.77 per cent. in the following year.

A significant feature of the year under review was that the goods traffic handled by the railways was the highest level ever touched. Thus, the traffic handled was 107 million tons, as against 99.4 million tons, and 32,136 million ton-miles, as compared with 29 493 million ton-miles. Even during the pre-war years in undivided India, or at the height of the war, these figures were not exceeded. Passenger traffic too showed a similar upward trend, the number of originating passengers being 1,259 million, as against 1 220 million. Passenger miles increased from 37,549 million to 38,649 million. The upward trend in freight tons, freight ton-miles, train miles and freight earnings of the previous year continued during the year under review, too. It will be recalled that past records since 1947-48 were broken in 1953-54 in all these directions.

The capital outlay as on 31st March 1954 amounted to Rs. 910.91 crores on all Indian railways (including lines under construction), as against Rs. 878.46 crores in the previous year. Of this, Rs. 901.58 crores represented the capital-at-charge of the Indian Government railways. The balance of Rs. 9.33 crores was the capital raised by companies and district boards.

The total route mileage of all railways in India at the end of the year was 34,705, of which 34,152 miles were under Government management. The balance of 553 miles represented the mileage of minor railways under the management of non-Government agencies. A length of 324.39 miles was opened during the year under review, of which 97.17 miles represented new lines and 227.22 miles restoration of lines dismantled during the war. At the end of the year, 488.33 miles of lines were still under construction.

AMERICAN LETTER

WILL EISENHOWER RUN AGAIN FOR PRESIDENCY?

ALL IS WELL WITH BUSINESS WORLD

From Our Special Correspondent

NEW YORK, 16*th February*

PRESIDENT Eisenhower's health still predominates the sentiment in the United States, politically and economically. The recent report by a group of physicians that the General's recovery from his heart attack (on 24th September last) has been almost complete, sent stock prices surging upward.

The announcement is still awaited eagerly whether or not the President will be a candidate for a second term in White House. It is somewhat enigmatic why the health and life of one single person should have such extraordinary impact upon the thinking of some 130 million people in the United States.

It can be understood only, perhaps, in the difference of final and crucial decisions made by the Chief Executive of the United States under the Administrations of Franklin Delano Roosevelt and Harry S. Truman.

The popularity of Mr. Eisenhower is as strong as ever and, if an election were to be held tomorrow and he were a candidate, there is no question in this correspondent's mind that he would win over anyone whom the Democrats might choose as a running mate, owing to his record and personality.

This does not mean that a victory of the Democratic Party under whatever conditions in the next Presidential elections next November might be a depressing factor. Indeed, the opposite may be true. It is a question of degree and of basic philosophy.

Under the Eisenhower Administration, remarkable progress has been made in fiscal matters. A balanced Federal Budget is in sight and no American armed forces are engaged in active combat since the truce in Korea, except volunteers. The Republican Administration aims to uphold this record and better it, if it should come to power again at the next elections.

There has also been an increase in social security and trade unions certainly have not suffered under the Republican regime, despite the charges that it is a "big business" Administration which favours the large corporations over the individual taxpayer. This charge can hardly be maintained. In the social sphere, too, its record has been commendable. The U.S. Supreme Court, for example, issued its famous edict which would end the separation of whites and non-whites gradually and eventually.

The furore which was created by this decision can be understood in India, perhaps, better than in other parts of the world, because of the variety of racial and basically different population groups.

No Need To Fear Democrats

There is no reason abroad to fear the results of a possible Democratic victory this November either. The Democrats have been mild inflationists for the past 20 years when they were in power and were responsible for a considerable increase in the general standard of living here and abroad. So, wherever the pendulum may swing, the guiding motives, nationally and internationally, on the part of the United States, seem well assured to remain where they are now domestically and for the people in all parts of the Western world abroad.

Business in the U.S. is still running at a very satisfactory level. Retail sales have been extraordinarily satisfactory, owing to high personal incomes.

As always in a competitive society and in all phases of human relations, the outlook is not, even. Some describe it as "cloudy," because of cutbacks in certain industries. There have been larger than usual layoffs in the automobile industry and related industries making auto hardware and stampings.

There were also overall drops noted in lumber, food processing, textiles, leather, apparel and petroleum. The suspicion has arisen, therefore, that a production slowdown is in the offing.

Statistically, this cannot be supported since the number of employed was larger in January than a year ago and the number of jobless was smaller, despite the increasing population and thus the growing number of employables and wage earners.

One of the chief industries to watch will be building and construction. There was a slight decrease in this field in January for the fourth consecutive month. Residential building has been dropping for the past six months, fractionally. While commercial building also dipped, industrial building continues to gain because of the huge expansion plans which are being planned in so many fields. Washington estimates for construction in January were at the rate of $41,500 million annually, against the actual 1955 outlay of $42,300 million in this area. The estimate for the whole of 1956 is $44,000 million, but the experts think this may prove a bit too optimistic.

No Contraction

Almost anything can be proven by statistics. Banking statistics, for example, which are issued weekly by the central bank do not show any contraction whatever. In fact, the seasonal drop in loans by business from banks which usually begins early in January, is considerably less this year than in 1955. The Federal Reserve system has kept somewhat aloof. It has reduced the restrictions under which money may be borrowed on real estate because of the lower construction volume, but it has done little in other fields. More definite signals will be required before the central bank will be compelled to act.

In the meantime, the national economic health of the U.S. cannot be disputed. Loan repayments, another important factor in the American economy, by both business and individuals remain at high levels. In fact, they have improved over last year. In many lines, the demand for money is stronger now than a year ago.

Despite all pessimistic forecasts early in 1955, last year produced a record volume of income. In December 1955, personal income alone was running at an annual rate of $315,000 million. This was $22,000 million higher than the figure for December 1954. Substantially higher dividend payments were chiefly responsible. Corporations were able to retain more profits owing to a more favourable tax treatment and many passed on part of their earnings in distributions to stockholders. Because of year-end book-keeping adjustments, December dividends are always the largest for the year and January inevitably shows a decline, against the preceding month. So far all is well in spite of the pessimists.—*All Rights Reserved.*

The U.S. consumption of burlap in January 1956 declined slightly to 72 million yards, as compared with 74 million yards in the previous month. Despite this decline, the U.S. consumption figures are considered satisfactory, bearing in mind that the beginning of the year is generally the slack time in the U.S. The U.S. burlap consumption in January last year was only 62 million yards and, in the corresponding month of 1954, it was 63 million yards. Burlap stocks in the U.S. declined from 247 million yards at the end of December 1955 to 243 million yards at the end of last month. While spot stocks improved from 129 million yards to 136 million yards at the end of January, afloat stocks fell sharply by 11 million yards to 107 million yards, reflecting poor shipments of burlap from Calcutta last month.

A new and effective method of controlling maize borers will become available to maize growers in the United States next summer. The new method —using D.D.T. in granular form—was developed through tests conducted jointly by Iowa State College and the U.S. Department of Agriculture.

(Concluded from next column)

haps higher taxes on *distributed* profits and higher taxation to leave the consumer with less to spend. So in the midst of prosperity we are to be in depression—more employment, more activity than ever before and less and less money left in the public's pocket. Not an easy medicine for a Conservative Chancellor to administer, but it seems to be the sort of prescription towards which his diagnosis is leading.—*All Rights Reserved.*

LONDON LETTER

MORE HOUSES BUILT IN U.K.

INCREASED INVESTMENT IN INDUSTRY

From Our Own Correspondent

LONDON, 11*th February*

THERE is a body in this country, representing employers and trade unions and of which the Chancellor of the Exchequer is Chairman, which was formed in 1940 as a vehicle of high-level consultation on industrial and economic matters. It is called the National Production Advisory Council and its quarterly meeting recently was the occasion chosen by the new Chancellor of the Exchequer to voice his first thoughts on the inflation situation. It seemed a little trite for the Chancellor to announce that after a good deal of thought—implicit in his exposition—he had arrived at the conclusion that there was too much inflation and that this must be stopped. And also for him to say that the inflation was due to too much spending. Of course the Trade Union side of the table couldn't help thinking that the Chancellor was the same man who rose to popularity on the success of his scheme for 300,000 new houses a year. It was his political opponents who denounced the scheme as economic trickery—of course, one could have 300,000 new houses if one went without a great many other items of capital investment; though it never occurred to them that the third way out would be chosen—to have both the houses and the rest of the investment and then by excess competition for scarce resources to inflict inflation upon the economy.

But Mr. Macmillan was even better than his word: in 1954, with adequate subsidy nearly 350,000 houses were built and even last year when the spur was taken away 317,000 were completed. The total of those built by local authorities has been steadily dropping and this year will perhaps be under 200,000, but the private sector has been growing so that, in spite of the credit squeeze, the total for 1956 is not likely to be far short of that for 1955. Mr. Macmillan was too successful and now as Chancellor he finds that the demand for materials and labour which he pressed so hard has been a main contributory to our difficulty of "trying to do too much." Thus retail prices rose 6 per cent. last year against 4 per cent. the year before, the value of imports rose "by three times as much as exports," while the gold and dollar reserves dropped by one-quarter. Mr. Macmillan was a prime mover in the aim to "set the people free" and "build all the houses they want"—so his was a difficult role when he found himself trying to explain how a brake must be put on the economy.

Press Comments

Best comments came from *The Times* which called the Chancellor's diagnosis "standard" and from the *Financial Times* which called his proposals "disappointing." He found a new simile for the economy—"an overloaded circuit ... and soon I shall have to decide which plug to pull out." But he had not yet decided—except that somehow the stream of purchasing power from Government, industry, wage and salary earners had to be slowed down. As for the banks, the Chancellor simply saw them as the instruments of the spending surge—but approved of the credit squeeze. Was this a straw in the wind? Does it mean that while the Chancellor thinks that the credit squeeze is necessary in present circumstances he can no longer rely just on monetary controls? Further evidence to support this view lies in Mr. Macmillan's known dislike of any policy that might increase unemployment.

The Board of Trade have just published figures to show that, in 1955, manufacturing industry invested 18 per cent. more, in *real* terms, than the rate for the previous five years: a further rise of 17 per cent. is forecast for this year. This means that the inflationary pressure from industry will be as heavy in the future as it was in the past and the Chancellor gave no hint that he thought the investment boom should be checked. We are left then with the possibility of savings in Government spending (the remaining subsidies?) and soaking the consumer. The last thought is the one that has been left behind in most City minds after the speech. The next Budget will be tough—per-

(Continued in previous column)

TAXATION FOR FINANCING SECOND FIVE-YEAR PLAN

PROPOSED BURDEN WILL BE TOO HEAVY

By P. C. Jain
READER IN ECONOMICS, UNIVERSITY OF ALLAHABAD

ACCORDING to the draft outline of the second Five-year Plan, the revenue surplus of the Central and State Governments for financing the developmental outlay over a period of five years would amount to Rs. 350 crores, at the existing rates of taxation. In order to find Rs. 800 crores from this source it would be necessary to increase the direct and indirect taxation so as to create an additional revenue surplus of Rs. 450 crores. The vital question is: Can the Indian economy stand the strain which the additional taxation would involve? The Taxation Enquiry Commission came to the conclusion that, at present, the total tax revenue of the Government was only 7 per cent. of the national income, that along with non-tax revenue it amounted to only 8½ per cent. of the national income and that there was still considerable scope for an increase in the total tax revenue of the Government. On this basis, the draft outline of the Plan points out that (*a*) the "additional taxation of Rs. 450 crores will raise this proportion only *marginally*" (italics mine); (*b*) that this increase in revenue surplus "has, therefore, to be regarded as the minimum to be achieved"; and (*c*) that "The reliance on non-tax resources in the Plan is so large that a failure of the taxation programme is likely to jeopardise the entire Plan."

The Planning Commission has further pointed out that, as against an increase of 18 per cent. in India's national income in the first Five-year Plan, the proposed outlay in the second Plan would increase the national income by nearly 25 per cent. The national savings would increase from 6 to 9-10 per cent. of the national income, thus making it possible for the Government to increase its tax revenue from 7 to 9-10 per cent. of the national income. This idea rests on the concept of taxable capacity. It means that the people's taxable capacity will increase as their income increases. But, in considering the taxable capacity, we have to consider not only the level of national income but also the minimum nutritional and other requirements of the people and the distribution of the national income. The taxable capacity of a people will be high when their minimum requirements are relatively small as compared with the level of the national income and when such income is more equitably distributed.

Taxable Capacity

In the highly developed Western countries, the *per capita* income is higher than the minimum requirements of the people and a vast majority of people have an income in excess of the average *per capita* income. It is on this basis that the maximum taxable capacity of a fully developed economy has been estimated at 25 per cent. of the national income. It is also on this basis that in the highly developed Western countries the Government revenues form a much higher proportion of the national income than in India without producing adverse effects. In India, however, in spite of the increase in the national income from Rs. 9,110 crores in 1950-51 to Rs. 10,800 crores in 1955-56 and the proposed increase to Rs. 13,480 crores in 1960-61 (all at 1952-53 prices), the *per capita* income will increase only from Rs. 255 in 1950-51 and Rs. 280 in 1955-56 to Rs. 330 in 1960-61. Again, a vast majority of people in India have a smaller income than the average *per capita* income, while only a small proportion of the population has an income in excess of the *per capita* income. The former have no taxable capacity at all, as even the *per capita* income is not enough to meet people's minimum requirements and, what is more, their income is less than the *per capita* income. It is only the latter class of people who have a taxable capacity, but their number is so small that, even if their entire income is confiscated by the State, it would not bring the proportion of Government's tax revenues to the national income anywhere near the level of Western countries.

India and the West

The difference in conditions in India and the Western countries renders a comparison wrong and unscientific. As things are, the proportion which the Government revenues in India bears to the national income is high enough and, unless the national income rises sufficiently to make the *per capita* income relatively greater than the minimum requirements of the people, there can be no justification for increasing the Government's tax revenue beyond a narrow limit.

Another important consideration is that the taxable capacity is intimately connected with the price level. If along with an increase in the *per capita* income, there is a simultaneous increase in the price level, there is no reason to expect an increase in people's taxable capacity. With deficit financing to the tune of Rs. 1,200 crores, an expansion in bank credit and other inflationary features of the second Plan, a very considerable increase in the price level is inevitable in India, as a result of the second Plan. If the Planning Commission had taken this fact into account, it would not have considered the increase in taxation to create a revenue surplus of Rs. 450 crores as only "marginal" and as the "minimum to be achieved." It must be mentioned here that, with a rise in the price level, not only will the taxable capacity of the people go down but there will also be an increase in Government's expenditure outside the Plan. This means that, with every increase in Government's expenditure, the level of taxation also will have to be increased to produce an additional revenue surplus of Rs. 450 crores.

For a vast majority of people in India, there is no margin between their income and their minimum requirements and even for those whose income exceeds their minimum requirements, the margin, except in the higher income groups, is small. Along with this we should consider the fact that the tax revenue of the Government has already been increased by nearly Rs. 100 crores in the course of the first Plan as shown below:

Government's Total Tax Revenue
(In crores of rupees)

	1951-52 (*Actuals*)	1955-56 (B.E.)
The Central Government ...	368.00*	415.91
Part A States	219.32	260.31
Part B States	61.73	70.67
Part C States	6.05†	7.56
Total	655.10	754.45

*An average for five years from 1948-49 to 1952-53. This gives a more correct idea.
†The figures relate to 1952-53.

There is no doubt that the Government's revenues would increase as the national income increases, because people who pay income-tax and other direct taxes will have a larger income and more persons would become liable to pay the income-tax as their incomes rise above the minimum exemption limit and because the output of goods paying all kinds of indirect taxes will also increase. But, since taxation has already been increased to the extent of Rs. 100 crores during the past five years, there is not much scope for increasing the tax revenue in the same proportion as the rise in the national income.

Inflation May Be Strengthened

There is no reason at all why in an underdeveloped country like India one should place such a heavy reliance on additional taxation to finance the development expenditure. For a highly developed country, additional taxation to finance public works or developmental expenditure, if there is still scope for it, would be justified, but not so in the case of an underdeveloped country. Economic development secured with the help of borrowed or created money would be as effective as that secured with the help of additional taxation. It might be mentioned here that additional taxation has been supported on the ground that it is necessary to counteract the inflationary forces which deficit financing is bound to create. Under certain conditions, such an argument would be sound, but, in the peculiar conditions prevailing in India, further taxation is likely to add to the inflationary forces by increasing the costs of production of industry. In the course of the first Five-year Plan, it may be noted, the price level remained high, in spite of a decline in prices towards the end of the Plan period, because of high taxation which has kept the costs of production high and has prevented the prices from falling, except to the extent to which world forces induced a fall in Indian prices of certain goods. We, therefore, come to the conclusion that, although heavy taxation may help increase the finances for developmental expenditure, its total effect may be to reduce investment and output by reducing people's *real* purchasing power and by discouraging private initiative and enterprise. If our logic is correct, the Planning Commission's idea that "a failure on the taxation programme is likely to jeopardise the entire Plan" is wrong.

It is not suggested here that the Government should not make any efforts whatsoever to increase the tax revenue or that the tax revenue would not automatically increase to some extent as the national income increases. Our objection is to the Planning Commission's assumption that Rs. 450 crores of additional revenue surplus is the "minimum to be achieved" and its attempt to create a scare that, if we are not able to raise this amount of additional revenue surplus, the second Plan would be jeopardised. Nothing of the kind will happen even if the additional revenue surplus of the Government is much less, as it would no doubt be. The only thing necessary in that case would be to cut down the Plan to a more reasonable level. The Planning Commission is trying to run so fast with the economic development of the country that it is bound to do the country's economy a positive harm. The solution is to cut down the total developmental outlay in the second Plan to, let us say, half its present level. Slower progress is more stable and better from many points of view.

Tax on Total Wealth

Before we consider some practical ways of increasing the Government's tax revenue, let us consider two most fantastic suggestions which have been made. The first one is a "small" tax on total wealth. Such a tax if levied would do much damage. In India, public and private enterprises have to exist side by side for a considerable time in the future, as public enterprise is not in a position to manage the work by itself. If a tax is levied on total wealth, the people would lose interest in accumulating savings on which the working of private enterprise so vitally depends. Why should anyone work hard and stint himself if the results of his labour are to be taken away by the Government by means of a "small" tax on total wealth. In highly developed countries, where people have too much wealth and where they cannot help saving whether they like it or not, if such a country exists anywhere in the world, a tax on total wealth can be successful. Secondly, it would need so much account-keeping both by the individual taxpayers and by the Income-tax Department that it would violate the principle of economy. Finally, it would give an inducement to people to try and find out ways and means of evading taxation. A tax which deliberately demoralises the people is not worth having even if it yields a huge revenue. Those who think in terms of this tax are taking a narrow view of their responsibility and are at the same time crediting human nature with idealistic qualities which unfortunately it lacks.

DEVELOPMENT OF LAND MORTGAGE BANKING

SOME IMPEDIMENTS TO PROGRESS

THOSE States where land mortgage banking has yet to develop surely stand to benefit much from the experience gained by the Madras State in dispensing long-term credit for the development of lands through a network of land mortgage banks. In this form of credit, Madras has not only been the pioneer, but also occupies the pride of place. The Madras Central Mortgage Bank, together with the primary banks, is playing a significant role. There are at present 73 land mortgage banks in the State, with a membership of 92,717 and a paid-up share capital of Rs. 27.5 lakhs. The working capital of the banks as on 30th June 1955 was Rs. 337.61 lakhs. The Central Land Mortgage Bank has, on its rolls, besides the 73 banks mentioned above, 331 individuals. Its working capital as on 30th June 1955 was Rs. 486.38 lakhs. It raised its funds by floating debentures with the guarantee of the State Government. The total of such debenture issues was Rs. 429.29 lakhs.

Many factors have been responsible for the success of land mortgage banking in Madras These were, in fact, highlighted by Mr. M. Bhaktavatsalam, Minister for Agriculture, Madras, while inaugurating in the city last week, the Twenty-sixth Conference of Land Mortgage Banks in the State. The secret of success of these banks in the State lay, according to him, in keeping the short-term credit structure separate from, and independent of, the long-term credit structure. Another important factor was the ceaseless efforts of a line of successive boards of management of the Central Land Mortgage Bank. These managements were also able to take the best advantage of the assistance extended to the system by the State Governments and the Reserve Bank of India. In fact, the present stature of the Bank not a little due to the assistance of the latter agencies.

From the proceedings of the Conference, it is clear that the Land Mortgage Bank is on the threshold of a new era of development. A voluntary programme for the development of land mortgage banking drawn up by the Government of Madras for inclusion in the second Plan has as its object the issue of long-term loans for an amount of Rs. 380 lakhs through the banks and through 25 more to be opened during the Plan period. The primary society proposed to be helped with subsidy in the cost of additional supervisors to be employed by them. It is also proposed to be maintained in the departmental staff for land mortgage banks, so that intensive development may be possible. Provision has been made for the appointment of an agricultural officer and an agricultural engineer as also P.W.D. supervisors. The officers are intended to advise the prospective borrowers regarding the line of land improvement measures they could adopt and to help the land mortgage banks in the valuation of lands. They are required to help the banks in the work of collateral security for loans from the banks. These provisions are sure to further land development in the State, but there are other impediments to its progress. A reference to these was made by Mr. N. S. Ramalingam, President of the Central Land Mortgage Bank, who presided over the Conference.

High rates of interest charged by the Bank, namely, 6¼ per cent., is considered to be a serious handicap to the progress of land mortgage banking. The Reserve Bank is stated to be of the opinion that at least 40 per cent. of the loans should be issued during the Plan period for productive purposes; but, according to Mr. Ramalingam, this practice is only possible, if the rate of interest is kept at as low as 3 per cent. He suggested that the Government might subsidise the difference between the lending rate to the borrower, namely, 6½ per cent., and the concessional rate. While the Madras Agricultural Relief Act provided for a moneylender to lend to an agriculturist at a rate not more than 5½ per cent., it was regrettable, Mr. Ramalingam said, that a quasi-Governmental institution like theirs should lend at a higher rate. A further complication was created by the duplication of work such as the need to reckon with the issue of loans under the Land Improvement Loans Act and *Takkavi* loans. He suggested that the duplication could be avoided, if the Government were to entrust the work to land mortgage banks.

The points raised by Mr. Ramalingam were dealt with by Mr. Bhaktavatsalam in his address. He stated that, though in recent years there had been an increasing awareness on the part of banks of the need to orientate their loan policy by granting more loans for productive purposes, not much has been done in this direction in actual practice. He stressed that the aim should be to give loans for land development instead of for discharge of prior debts. The All-India Rural Credit Survey Committee had laid emphasis on this objective and it was necessary for land mortgage banks to align themselves with such a policy. He, therefore, preferred to call land mortgage banks as "land development banks." Since this question is closely connected with the rate of interest, the Minister also referred to it. He said that the rate might be high, but, in the present context, it could not perhaps be avoided as the lending rate was linked with the debenture rate, which, in turn, was dictated by the conditions of the money market.

It may be mentioned here that co-operative institutions all over India are complaining against the high rates of interest they have to charge on their loans. But those who complain thus overlook the fact that, in the existing circumstances, lower rates of interest would also impede the progress of credit expansion. For they would diminish the volume of interest income which in turn cause a shrinkage in the volume of owned capital of co-operative institutions which alone, being free from interest obligations, would help reduce the rate of interest over a period of years. Again, the reduction in income will prevent the societies from employing highly paid trained staff to conduct their affairs. It is with a view to enabling the societies to have a large volume of owned capital that the All-India Rural Credit Survey Committee recommended State participation in the share capital of these societies.

Further, the borrower could be enabled to carry the burden of high interest rate, if he is helped to bring about an improvement in his earning power through the adoption of modern methods of agriculture. The ultimate aim of co-operative institutions should be to stabilise, as far as practicable, interest rates at an optimum level which would be advantageous to both the lending institutions and the borrower.

The recent cyclone in the State had devastated vast areas of Tanjore, Trichy, Ramanathapuram and Madurai. It had upset the economy of agriculturists, and there had been defaults and in some cases loans had to be foreclosed. This question figured in the discussions of the Conference. It was suggested that a revolving fund should be constituted to meet this as well as similar situations that might arise in future. Alluding to this question, the Minister averred that the question of constituting a revolving fund was examined previously and dropped. But, in the light of the experience gained as a result of the drought and the cyclone, the Bank might examine the matter again and formulate suitable proposals for consideration by the Government. It may be pointed out, in this context, that the All-India Rural Credit Survey Committee had recommended the institution of a similar fund by the Reserve Bank of India. Under the amended Reserve Bank of India Act, the Bank is required to establish a National Agricultural Credit (Stabilisation) Fund by crediting it with a sum of Rs. 1 crore, a reference to which was made in detail in these columns last week. The Committee recommended that the Reserve Bank should insist on the co-operative institutions maintaining such funds within their structure. Consequently, the land mortgage banks have no option but to establish the funds, if they propose to take advantage of the Stabilisation Fund established by the Reserve Bank of India.

TRADE WITH *Japan* THROUGH

BANK OF TOKYO LTD.

(FORMER YOKOHAMA SPECIE BANK)

The only foreign exchange bank in Japan licensed under the Foreign Exchange Bank Law, offering complete banking service through its branches all over Japan and overseas, and well equipped to give full and accurate business information.

SOME ASPECTS OF CANADIAN CO-OPERATIVE SYSTEM

The report of the Indian Mission which visited Canada towards the close of 1953 to study important aspects of the Co-operative Movement in Canada has just been released for publication. The Mission visited more than 80 co-operative institutions of national, inter-provincial, provincial and regional importance in Canada as also certain colleges and centres connected with Co-operation. The observations of the Mission and its recommendations contained in the report should prove to be of considerable benefit to India which has come to regard the Movement as the right type of agency to improve the economic conditions of the masses in rural areas. The Mission was headed by Mr. M. R. Bhide, then Joint Secretary in the Union Ministry of Food and Agriculture; its other members were Mr. D. A. Shah, then Principal of the Co-operative Training College, Poona; Mr. R. P. Bhardwaj, Registrar of Co-operative Societies, U.P., and Mr. Shyam Bharosay, Registrar of Co-operative Societies, Bhopal.

Although the report of the Mission is three years old, some of the recommendations contained in it are worth consideration. The Mission has, no doubt, done well to strike a cautious note in the preface that though conditions in Canada are different from those in India, the Indian Co-operative Movement could derive considerable benefit by adopting certain important features of the Canadian system, with some suitable modifications.

For long, there has been a controversy in India whether a co-operative society should be organised on the basis of limited liability or unlimited liability. The Mission's findings in Canada supports neither of the two exclusively. It says that the agricultural credit society in India should be larger in size and that there should be option to choose between limited and unlimited liability. The next point stressed by the Mission is that local deposits should be encouraged and that efforts should be made in States where co-operation has developed well to support mutual aid fund for agricultural credit societies. Under this scheme, a certain percentage of profits of every credit union is paid into a fund to be used to help such credit unions as get into financial difficulty. Encouragement of local deposits as suggested by the Mission is undoubtedly a very sound principle and its application in practice is bound to strengthen the structure of Co-operation in India. The Commission further suggests that membership should cover all residents of the area and not merely agriculturists owning land.

There are also some aspects for consideration in the Mission's remarks on marketing and purchasing societies. It says that the system of revolving credit—built out of patronage dividend withheld for a specific period—should be introduced in marketing consumer and industrial co-operatives. Again, it advocates the appointment of full-time paid presidents, vice-presidents or directors of big societies and federations. And it is in favour of introducing the system of preference shares in marketing and producers' societies for raising capital, especially funds needed for long-term purposes. Although under existing conditions it might not be possible for co-operative institutions to issue preference share capital, the proposal may be kept in view for introduction after the Movement acquires considerable strength and stands on its own feet. The Mission's suggestion that marketing contracts binding a marketing society and its members for specific periods regarding the delivery of produce should be tried. Its suggestion that joint co-operative undertakings for the production of their requirements or for processing their produce is worthy of adoption, as it would facilitate bulk handling and bulk marketing for the benefit of members of these societies.

The Mission seems to have been greatly impressed with the importance attached to training of employees of co-operative institutions in Canada. Happily this aspect has found emphasis in the report of the All-India Rural Credit Survey Committee also and arrangements are in progress to provide for enlarged facilities for training superior as well as subordinate staff of co-operative institutions. It has also done well in insisting on greater collaboration between Government departments, universities, co-operatives, and farmers' organisations. It feels that there is scope for the publication of more journals and bulletins on Co-operation.

BANK OF INDIA'S EXCELLENT RESULTS

RECORD PROFIT—ADVANCES AT A PEAK—SHARP RISE IN DEPOSITS

THE year 1956 constitutes an important landmark in the history of the Bank of India Ltd. (General Manager: Mr. D. R. Thom, Bombay), in that the Bank celebrates, during the year, its golden jubilee. It is a happy augury that this occasion is being heralded by the Bank's excellent results for the year ended 31st December 1955. The profit for the past year has touched a record level of Rs. 84.91 lakhs, exceeding the previous highest of Rs. 79.55 lakhs reached in 1951. It also represents an increase of Rs. 7.90 lakhs over that (Rs. 77.01 lakhs) for 1954, thus maintaining the upward trend for the second year in succession.

Consequent on this encouraging progress in working, the Directors propose to step up the dividend to 16 per cent. per annum after having maintained it at 14 per cent. for nine years in succession from 1946 onwards. During this period, it must be mentioned here, the paid-up capital of the Bank had been raised twice, once in May 1948 and again in April 1951, from Rs. 1.50 crores to Rs. 2.50 crores.

The other notable features of the Bank's working during 1955 are: (1) Deposits have expanded by Rs. 7.17 crores to Rs. 67.55 crores, the highest since 1947 when they had touched a peak of Rs. 68.63 crores; (2) advances have gone up by Rs. 6.34 crores to Rs. 46.09 crores, a record in the history of the Bank, exceeding the previous highest of Rs. 42.43 crores touched in 1951; and (3) liquid assets have been strengthened further. The expansion in deposits and advances of the Bank is in line with the general trend of the consolidated position of Scheduled banks. However, the ratio of advances to deposits in the case of the Bank is much higher, at 68.2 per cent., than the average of 62 per cent. for all Scheduled banks at the end of the year.

An idea of the Bank's progress during the past three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned ..	2,18.41	1,89.08	1,75.76	1,75.99

Cash	14.3	15.8	15.4	18.7

* Arrived at after taking into account the securities pledged against borrowings from other banks to the extent of such borrowings.

It will be noted that the upward trend in the Bank's gross income has been maintained for the second year in succession. The pace of increase in income during 1955 has been much higher than that during 1954 and this rise has been well shared by interest and income, as well as by commission and exchange earned. On the expenditure side, the rise in interest paid by Rs. 17.62 lakhs is evidently due to the increase in fixed deposits, referred to below, and possibly to the larger borrowings from the Reserve Bank against usance bills. There is, however, no indication as to how far the Bank had utilised the facility of discounting usance bills, during the year. Of the rise of Rs. 19.91 lakhs in other expenses, salaries and allowances and provident fund account for Rs. 12.93 lakhs and rent, taxes, insurance, etc., for Rs. 5.07 lakhs.

An impressive feature of the Bank's balance-sheet as at the close of the year under review is the rise of Rs. 7.17 crores in deposits, thus maintaining the upward trend for the second year in succession. The deposits at the end of the year fell short of the record levels touched in 1947 by only Rs. 1.08 crores.

Of the advances as at the end of the year, loans, cash credits and overdrafts account for Rs. 37.49 crores, as against Rs. 33.31 crores, and bills discounted and purchased for Rs. 8.60 crores, an increase of Rs. 2.17 crores over the year. It may be noted that the Bank's business outside India has further expanded during the year, particularly its bills business. Thus, loans, cash credits and overdrafts granted outside India have risen by Rs. 1.05 crores and bills purchased and discounted payable outside India have gone up by Rs. 1.25 crores. A similar trend is noted in the Bank's bills for collection, of which those payable outside India amount to Rs. 74.79 crores, having expanded from Rs. 59.49 crores as at the end of 1954. The increase in acceptances, endorsements and other obligations is very striking, being as much as Rs. 4.21 crores. Of the investments (which are shown at below market value), those in Government and other trustee securities amount to Rs. 19.14 crores, as against Rs. 18.81 crores a year ago. The increase in cash balances is solely due to the rise in balances with other banks on current account outside India from Rs. 92 lakhs to Rs. 1.85 crores, while those in India have declined from Rs. 17 lakhs to Rs. 12 lakhs and cash on hand and balances with the Reserve Bank of India and the State Bank of India have dwindled from Rs. 8.43 crores to Rs. 7.73 crores. The relatively small increases in investments and cash balances, as compared with the increase in deposits, account for the drop in their ratios to deposits to the lowest levels in the past four years and reflect the intensive utilisation of funds for financing trade.

(*Concluded from next column*)

have experienced an increase in their working costs.

As will be noted from the above table, while there has been an increase of Rs. 7.45 lakhs in the gross income over the past three years, the rise in outgo by way of interest paid and expenses is as much as Rs. 7.19 lakhs, so that the profit has advanced by only Rs. 0.20 lakh over this period.

The Bank's reserves stand at the impressive level of Rs. 27 lakhs, which, however, do not include the contingency fund to which the Bank has been adding every year a sizable sum. The expansionist trend in deposits has been maintained during the year under review also. At Rs. 6.73 crores, the deposits constitute a record for the Bank and exceed the previous year's level by Rs. 68 lakhs. A breakdown of this item shows that fixed deposits have risen by Rs. 31 lakhs to Rs. 4.15 crores, savings bank deposits by Rs. 11 lakhs to Rs. 72 lakhs and current and contingency accounts by Rs. 26 lakhs to Rs. 1.86 crores. Loans, cash credits and overdrafts disclose a rise from Rs. 3.37 crores to Rs. 3.43 crores and bills purchased and discounted from Rs. 28 lakhs to Rs. 32 lakhs.

BANK OF INDORE KEEPS UP PROGRESS

DIVIDEND INCREASED

IN consonance with the general trend of bank results for the past year, the profit of the Bank of Indore Ltd. (Manager: Mr. N. D. Joshi, Indore City) for the year ended 31st December 1955 has gone up, though the extent of rise is not marked as in the case of many other banks. The Bank's profit, which had risen from Rs. 4.87 lakhs to Rs. 5.02 lakhs for 1954, has further moved up to Rs. 5.07 lakhs for the year under review. This is the highest level to be witnessed in the history of the Bank so far As usual, a sizable part of the profit has been utilised to strengthen the reserves. The reserve fund and the contingency fund have received Rs. 1 lakh each, as they did in the previous year. The allocation to the gratuity fund has been raised from Rs. 15,000 to Rs. 25,000. The payment of bonus to staff takes up Rs. 0.71 lakh, as against Rs. 1.01 lakhs in the preceding year.

The distribution to shareholders has been raised to 14 per cent. per annum from 12 per cent. paid consistently for the previous ten years. It will be recalled that, in 1945, the distribution to shareholders was raised from 9 per cent. to 12 per cent. including a bonus of 2 per cent. and that too on a capital raised by the issue of new shares. It was in 1952 that the dividend and the bonus parts of the distribution were consolidated. The enhanced dividend for 1955 is the highest paid by the Bank so far.

The Bank's progress in recent years is clearly brought out in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Gross income	30.49	28.12	24.47	23.04
Interest and discount	27.11	25.16	22.02	20.73

Investments	2,65.29	2,04.78	1,81.79	1,81.70
Cash	75.48	79.56	61.60	58.31
Balance-sheet total ..	7,66.19	6,82.63	6,17.91	5,61.79
Ratio to deposits of—	%	%	%	%
Advances	55.8	60.3	65.3	61.0
Investments	39.4	33.8	33.3	36.7
Cash	11.2	13.1	9.5	11.8

* Including provision for taxes on income.

The upward trend in gross earnings has been maintained during the year under review also, as witness the further rise of Rs. 2.37 lakhs in gross income, though the extent of increase is slightly lower than that in the previous year. The rise in income has, however, been very nearly wiped out by the increase of Rs. 1.13 lakhs in interest paid and of Rs. 1.19 lakhs in expenses. This is not a peculiar feature of the working of this Bank alone. Almost all banks

(*Continued in previous column*)

PLACING HANDLOOMS ON FIRM FOOTING

CONVERSION TO POWERLOOMS INEVITABLE

THE All-India Handloom Board has, once again, focussed public attention on the problem of the handloom industry by organising the third Handloom Week—from the 19th to 25th inst. As in the previous year, the Week has been celebrated with vigorous publicity and propaganda, urging the importance of handlooms to the national economy and placing this premier cottage industry on a sound and stable footing. The various programmes followed during the Week covered public meetings addressed by Ministers, co-operators and other prominent men, processions of weavers, illumination of sales emporia and depots, exhibition of films, broadcast speeches, and competitions in weaving, designs, etc. With a view to boosting sales of handloom cloth during the Week, the Government of India announced a special rebate of an additional half anna per rupee on all retail sales of handloom cloth effected by co-operative bodies.

To these customary measures for reminding the public of the existence of handlooms and of the need for supporting them, there has been a significant addition this year. The Reserve Bank has informed the Government that it has given its approval to the proposal for financing the production and marketing by handloom co-operative societies at 2 per cent. interest, as against the Bank rate of 3½ per cent. Rules and procedure relating to this matter are now under examination by the Reserve Bank in consultation with the Centre. Incidentally, it may be noted that the total provision made in the second Five-year Plan for the development of handloom industry is Rs. 66.5 crores. Of this amount, the sum of Rs. 63 crores is for cotton weaving handlooms, Rs. 2 crores for wool weaving and Rs. 1.5 crores for silk weaving.

Progress Made

On an occasion such as the celebration of Handloom Week, it is but appropriate to take stock of the progress made with the implementation of the series of schemes for the development of handloom industry. During the 30 months ended December 1955, about Rs. 6 crores (out of the Rs. 11 crores sanctioned by the Government of India) were spent on improving the lot of the weavers, according to Mr. A. S. E. Iyer, Secretary, All-India Handloom Board. So far, the Centre has placed at the disposal of the States Rs. 55 lakhs for opening sales depots. Rs. 2.5 lakhs for the setting up of 19 inter-State depots and Rs. 13 lakhs for 36 mobile vans. It has also sanctioned a sum of Rs. 25 lakhs for erecting 296 dye-houses of different sizes for the dyeing of yarn in fast colours, Rs. 7.5 lakhs for establishing 45 pattern-making factories, and Rs. 19 lakhs for installing 14 finishing plants. Two other important steps taken recently relate to formation of industrial co-operatives and provision of housing for weavers. The Government has also helped the weavers to improve their techniques of production by inducing conversion of the low productivity throw-shuttle looms into fly-shuttle looms the productivity of which is relatively higher. It is trying to provide groups of handloom weavers with warping frames. Take-up motion attachments like dobbies, jacquards, etc., too, are being provided for the looms, which would enable production to be increased by at least two yards per day. In order to encourage people who are not traditional weavers to take to handloom industry, they have also plans to set up industrial co-operatives. Some success, according to Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, had been achieved in this direction in Malabar.

With a view to boosting sales of handloom cloth for domestic consumption, the Government gives rebates on sales. In order to stimulate exports to foreign markets, a scheme of external marketing of handloom cloth has been put into operation by the Board in the last two years. The scheme, Mr. Iyer claims, has achieved "reasonable success" and the marketing officers posted in West Asian and South-East Asian countries have endeavoured to popularise Indian handloom fabrics in these regions. The Board has already participated in several exhibitions. At the Indian Industries Fair held at New Delhi during November-December 1955, the Handloom Board took part in a big way. Sizable quantities of handloom fabrics have been despatched to the International Trade Fair at Leipzig and similar quantities are being sent to the Industries Fair that is being organised by the Government of India in the Gold Coast in West Africa. It is proposed to organise a special exhibition of handloom fabrics alone at Venice some time this year.

The extent to which all these measures have succeeded in improving the conditions in the handloom sector was indicated by Mr. T. T. Krishnamachari when he inaugurated the Handloom Week at New Delhi. Mr. Krishnamachari's review reveals that handloom production has gone up, the quantity actually produced during 1955 being 1,450 million yards, as against 850 million yards in 1951. The rise in production has been accompanied by an increase in offtake; during the third quarter of 1955, the sales of handloom cloth in the four apex co-operative societies in Madras, Andhra, Hyderabad and Uttar Pradesh aggregated 29.3 million yards, which compare very favourably with 13.3 million yards a year before. The earnings of weavers, it is said, have gone up, over the last three years, by 15 to 30 per cent., the highest being in Salem (Madras). Alluding to this, Mr. Iyer observes: "There is a progressive diminution in the number of idle looms in the country. Many of the weavers who had left their household to seek employment outside are slowly reported to be returning to this old profession. This modest achievement within a short period of nearly 30 months at a cost of about Rs. 2 per loom per month in the co-operative sector is something over which one cannot feel dissatisfied."

Output Uneconomic

Notable though the progress in the field of handloom industry has been, the fact cannot be disputed that the output of the sector continues to be uneconomic. If, in spite of this, improvement in production and offtake has been registered, it is because of the artificial props given by the powers-that-be at a heavy cost to the taxpayer. Particular mention must be made of the severe restrictions on the manufacture of *dhotis, saris* and a few other popular varieties of cloth by the mills. As though this is not enough, the Government has practically reserved for handlooms all expansion in the demand for cloth by placing a ceiling on the weaving capacity of mills. Mention may also be made of the heavy taxation to which mill cloth has been subjected, whereas the handloom products are actually given substantial tax concessions in the form of rebates and subsidy in the form of low interest-bearing loans, not to mention outright grants. All these artificial props are being given to handloom weavers even at a time when the total quantity of cloth produced in the country is not adequate to assure a *per capita* supply of 16 yards—a very modest target indeed—after excluding exports.

Notwithstanding all this, the finances of the handloom sector are still in a deplorable state. As we had mentioned on an earlier occasion, several co-operative societies are reported to have not paid back the loans which they took years ago. Indeed, in many cases, the authorities are said to have written off the loans. What is worse, even the response of weavers to the offer of financial assistance has not been encouraging. Out of the total outlay of Rs. 11 crores sanctioned for the development of handloom industry since July 1953, not more than 55 per cent. has actually been spent. The progress in the direction of encouraging the formation of handlooms in the co-operative fold has also not been quite encouraging. The number of looms in the co-operative fold has in the past three years risen from 700,000 to 970,000, which is not more than a mere third of the total estimate loomage in existence. What better indication than these is wanted to prove that the problem of organisation is enormous and beyond the capacity of the present administration?

A Candid Admission

The foregoing account clearly emphasises the view that the solution to the ills of the handloom industry lies not in palliatives but in the removal of defects in the very structure of the handloom industry which is outmoded. This point was clearly recognised by Mr. T. T. Krishnamachari in his speech at New Delhi on the 19th inst. He frankly admitted that the reservation of markets for certain varieties of cloth "did not help the weavers at all." He was firmly of the opinion that, in a big country like India, where the producers and consumers were not near each other, such reservations would not help. He realised that, "in view of the limited restrictions on mill *dhotis*, the prices of such *dhotis* were far above their cost of production." Realising that this type of negative approach did not benefit the handloom industry, the Government was, Mr. Krishnamachari said, taking action in the direction of strengthening the organisation for marketing and supply of raw materials and for improving the techniques of production.

The Right Solution

Thus, so long as the industry is labour-intensive in character, its production is bound to be uneconomic. Surely, there is no hope for handlooms, unless they are converted into powerlooms and at least four or five such powerlooms are operated by one weaver. Mr. Krishnamachari did well, therefore, to stress this aspect. He thought that, in the next 10 or 15 years, all existing handlooms would be converted into powerlooms. Characterising that this conversion was inevitable, Mr. Krishnamachari said:

"... the weaver will desire to earn more than Rs. 60 or Rs. 70 he is now getting. But he can be enabled to earn say Rs. 200, only if they provided the weaver with power. There are at present about 1,550,000 looms. On this basis, there are four million weavers and, in terms of families, 20 million people depend on the looms. Inevitably, they (weavers) would want to earn more in the future. I am not one of those who believe in keeping them on their present earnings of Rs. 50 or Rs. 60 a month. But, if their earnings have to be increased, it can only be through the conversion of handlooms into powerlooms. This is inevitable. But we have to take care that the changeover is gradual, that the looms are decentralised, and the handloom weaver remains independent and not indebted to some master weaver or the person supplying yarn to him but continue to be a self-employed person.

"This is an inevitable development in a socialist society. A socialist society cannot be wedded to the old-world production methods. I am concerned only with the individual behind the loom, and not with the philosophy of the loom as such. If we want that rich men should disappear gradually and there should be an equitable distribution of wealth, we must also take steps to raise the infessors or philosophers might say, in the next 15 or 20 years, most of the handlooms would switch over to power. All that we would have to see is that the period of time is spread over and that the changeover is not accompanied by social problems. But, if we do not allow the changeover and thus prevent the weavers from earning more, there will be a rebellion. I have no doubt about it."

comes of the people at the bottom. Whatever pro-

This warning of Mr. Krishnamachari is, indeed, not only timely but also quite realistic. But the point is whether he will be able to give effect to his convictions based on practical experience, what with the pull exercised by the other protagonists of no-change in the structure of handloom industry, such as Mr. Gulzarilal Nanda, Union Minister for Planning, Mr. V. L. Mehta, Chairman of the All-India *Khadi* and Village Industries Board, and Shriman Narayan Agarwal, one of the General Secretaries of the A.I.C.C. Whether or not he succeeds in carrying these good-intentioned philosophers with him, there is no doubt that, unless the cottage industries are reorganised on modern lines and their productivity per worker is raised at least four-fold, there is no future for them. Any attempt to force such old industries on the people by statutory compulsions will only have a boomerang effect on the very people or the party that tries to do so. This will, of course, take some time. And, perhaps, those who advocate this philosophy may not live to experience it. But it is sure to happen one of these days, if the authorities are foolish enough to persist for long in following that approach to the problem of unemployment. A wise Administration, however, will not wait for the inevitable to happen. It will, on the contrary, take time by the forelock by straightaway trying to facilitate a smooth changeover of cottage industries from the old to the modern lines.

SPINNERS' MINIMUM PRICE SCHEME HELD UNFAIR

INCREASE IN WORLD SPINDLEAGE

From A Special Correspondent

MANCHESTER, 14*th February*

MANCHESTER LETTER

AN outspoken call to employers and workers in the Lancashire cotton textile industry to face up to the challenge of competition was made by Mr. H. E. Pardoe in his presidential address to the annual meeting of the Manchester Chamber of Commerce. He criticised the minimum price schemes operated by employers in some sections of the industry and urged a change of attitude on the part of operatives towards the introduction of new ideas.

Mr. Pardoe said it was not surprising that the confidence of the workers had been largely undermined in view of the continuous chorus of gloom which the industry's spokesmen had chanted with monotony during the past eighteen months. Customers, too, had had their confidence in Lancashire badly shaken by the repeated reminders that Lancashire's competitors could sell so much cheaper.

Criticising what he termed the high profits made by the spinning industry on a small turnover with the help of a minimum price scheme, he said it was certain the industry had lost many of the 30,000 operatives who had left it during the past year because of this unfair and short-sighted policy. He welcomed the action the Government was taking against price schemes in industry.

Call to Workers

Turning to the part the workers could play in making the industry more efficient, Mr. Pardoe suggested that in their own interests they should spur on employers to modernise the mills. They could do this by welcoming all new arrangements which were reasonable and fair.

Mr. Pardoe suggested that as an experiment Sir Alfred Roberts, a prominent trade union leader, should be appointed to a high executive position at the Cotton Board to concentrate on the job of creating a new attitude of mind on the part of workers towards the adoption of new methods and techniques.

He did not believe that wages were too high but rather that production was too low, thus making the unit cost of production too high. Mr. Pardoe added: "I think nothing of a welfare state where so many mothers of young babies go out to work, even if father only works a five-day week and can stay in bed on Saturday mornings. When compared with the great advances in science and technology during the last 50 years the average standard of life in the country has not risen to the level it could have done."

The new President of the Chamber, which is the second largest in the country, is Mr. Frank Rostron. His election breaks a long tradition in which the President of the Chamber has been identified with the textile industry or allied trades. Mr. Rostron is the Export Sales Manager of Ferranti Ltd., Electrical and General Engineers, Hollinwood, near Oldham.

Wage Claim

The application for a 2*s.* in the £ wage increase for the 256,000 workers in the Lancashire cotton industry was rejected outright by millowners when joint talks were resumed in Manchester. The discussions lasted an hour. Afterwards cotton union leaders announced their intention of referring the matter to the Minister of Labour as a dispute.

They see little prospect of the employers departing from their refusal to entertain the claim even if the Minister attempts conciliation, and envisage its eventual submission to the Industrial Disputes Tribunal.

Trade Union officials are bitterly disappointed and not a little angry at the rejection of their claim, which was based mainly on the increased cost of living. The millowners made no public announcement about their reasons for turning down the application. Union spokesmen said arguments had been advanced by the employers which had no bearing at all on the wage claim. These included, it was said, the impact on the industry of cloth imports, tariffs and dual price systems in overseas countries.

Sir Alfred Roberts, General Secretary of the Cardroom Workers' Amalgamation, one of the three main cotton unions, commented: "They feel they are now trying to hold the inflationary spiral. We must be prepared to accept this to allow them to compete in foreign markets. That would mean rice wages if we were to allow it."

Mr. William Roberts, President of the United Textile Factory Workers' Association, claimed the employers had admitted the unions had a good case for an increase. Of the rejection of the claim, he said: "This has become the pattern in the industry—they turn down our demands and let us refer the application to arbitration."

The last wage increase for workers in the Lancashire cotton industry became effective from October 1954, when the Industrial Disputes Tribunal awarded a six per cent. advance after the millowners had refused to make any offer in response to a demand for a 10 per cent. increase.

Arbitration on Claim?

Within 48 hours of the demand being rejected outright by the employers, leaders of the nine cotton spinning and weaving trade unions informed the Ministry of Labour that a wages dispute exists in the industry.

The unions, which had claimed an extra 10 per cent. for more than 250,000 operatives, sent the communication to Mr. James Johnstone, the Ministry's Chief Industrial Relations Officer in the region. A spokesman of this department said in Manchester that if the dispute could not be resolved by local conciliation it would be referred to the Minister of Labour with a view to its submission to the Industrial Disputes Tribunal.

Spindles at Work

Although world spindleage continues to rise, the increase in spinning capacity is centred almost entirely on mills in Asia and the Far East. Latest figures released by the International Cotton Federation show that the number of spindles in the world at the end of July last was 129,838,000, an increase of 516,000 compared with two years previously.

But whereas spinning capacity in Europe in the twelve months to July fell by over 1,500,000 spindles, Asiatic mills added more than 2,200,000 spindles to their existing plant. In addition a further 700,000 spindles were in the course of erection.

In Britain spindleage maintained its downward trend, with rings continuing to usurp mules. Over the year, the number of mule spindles in this country fell by nearly 1,500,000, but there was a slight rise of about 80,000 in the quantity of ring spinning machinery. A sharp revival occurred in the number of spindles engaged in spinning rayon staple fibre from 1,822,000 to 2,630,000.

It is now becoming rather monotonous to repeat the figures for working hours, showing how far behind Lancashire is, in keeping machinery in operation, compared with every other country. The latest returns indicate a further setback as spindles in our local industry only worked an average of 1,677 hours, as against 1,834 hours in the comparable period a year ago.

Machinery in British mills is now used for considerably less than one-third the time employed by their main rivals. Only in several European countries are spindles in operation for below 3,000 hours in the twelve months under review, while at the other end of the scale machinery in Hong Kong is working at an average of 7,470 hours. Indian and American mills are working at almost the same rate, running for nearly 5,500 hours in each case.

In the year to the end of July last the world used more cotton than ever before, mill consumption being 35,707,000 bales, an increase of some 60,000 bales on the previous season, which was itself a record. Due to the rise in spindleage, however, consumption per 1,000 spindles declined from 275.23 bales to 275.01 bales.

Most of the rise in the use of cotton came from the continued transfer of allegiance among spinners to what were at one time called "outside growths." These miscellaneous supplies amounted to 17,152,000 bales consumed by the world's mills last season, as compared with between 8,000,000 and 9,000,000 bales just before the war.—*All Rights Reserved.*

The Organisation for European Economic Co-operation (O.E.E.C.) forecast increasing uneasiness in the European textile trade mainly due to uncertainty about the U.S. raw cotton policy and growing competition from Asia. The Textiles Committee of the 17-member body reported "a clear declaration by the American Government stating the long-term policy that it intends to follow is essential to re-establish confidence and improve the present condition in the affected industries." Competition of Asian textiles, which has caused big cuts in European textiles exports, particularly of cottons, was beginning to be felt on the internal markets of member countries.

SCINDIA STEAM NAVIGATION COMPANY, LTD.

MR. DHARAMSEY M. KHATAU'S SPEECH AT ANNUAL MEETING

INCREASED PARTICIPATION OF INDIAN LINES IN OVERSEAS TRADE ENVISAGED

THE urgent need for granting early relief to Indian shipping lines by way of an interim increase of 15 per cent. in current freight rates on coal and general cargo on the coastal trade, pending the recommendations of the Rail-Sea Co-ordination Committee, was stressed by Mr. Dharamsey M. Khatau, Chairman of the Scindia Steam Navigation Company, Ltd., in the course of his address to the shareholders of the Company at their Thirty-sixth Ordinary General Meeting held at Bombay on 22nd February 1956. Mr. Khatau also indicated that the ambition of Indian lines is to get an equal share in the carriage of foreign trade of this country.

The following are extracts from Mr. Khatau's speech:

"GENTLEMEN,

"I assume that, as usual, you will permit me to take as read the Directors' report and the audited accounts for the year ended 30th June 1955, which have been in your hands for some time now.

"It is regrettable that the results this year have been less satisfactory than in the previous year. There are four main causes for this. The Dockers' strike in the U.K. and the congestion at the U.K. and Indian ports and the 'go-slow' of port and stevedoring labour caused a delay of 380 voyage days. The loading of rice at Rangoon was about 400 tons per day, as against the anticipated 800 tons per day on which the freight rates were based. This caused considerable loss. The cost of stevedoring has risen to the extent of about 15 per cent. over the previous year. The cost of marine dues, claims etc. have also gone up. The cost of coal increased by about As. 10 per ton. The necessity of chartering vessels to fulfil commitments for rice liftings from Burma was unprofitable. This would not have been necessary if the construction of ships at the Visakhapatnam Shipyard had proceeded according to programme.

"In view of the unsatisfactory results, the Managing Agents have agreed to accept Rs. 8 lakhs only and waive the balance of Rs. 2,26,951 provided that the amount so waived is exempted from income-tax in their hands. Our thanks are due to the Managing Agents for this gesture.

"Our reserves and surplus now amount to Rs. 6.51 crores, as against Rs. 6.27 crores last year. Our specific reserves have increased from Rs. 5.29 crores to Rs. 5.94 crores at the end of the year.

"As we are in need of finance for further modernisation of our tonnage, we have requested the Government to release Rs. 2.47 crores invested in the shares of Hindustan Shipyard Ltd. and Eastern Shipping Corporation Ltd.

Coastal Freights

"The tonnage plying on the coast today is hardly sufficient to carry all available cargoes. Though coastal trade has been reserved for national shipping and loans are available from Government for the acquisition of additional ships, these measures have achieved little success in promoting the development of coastal shipping. During the five years from 1950 to 1955 coastal tonnage has increased only by about 22 per cent. from about 200,000 tons gross to 244,000 tons gross. I do not wish, on this occasion, to take you into the several factors, beyond the control of shipowners, that have been responsible for this position. Suffice it to say that, due to the prevailing unsatisfactory conditions all round, about 20 per cent. more tonnage is now required to carry the same volume of traffic. This has artificially aggravated the shortage of tonnage on the coast.

"There is, therefore, no doubt that expansion of coastal shipping is necessary in order not only to cope with the increasing demand but also to relieve its pressure on the railways in the larger interests of the country's economy. But expansion means building new ships or buying second-hand ships at the very high prices prevailing today. A standard coastal ship which used to cost about Rs. 44 lakhs in 1950 would now cost about Rs. 80 lakhs. Taking all these factors into consideration, it is impossible for any company to acquire additional tonnage at today's prices when there is hardly any prospect of operating costs diminishing, unless the rates of freight are raised to an economic level.

"It was with full realisation of this serious position that, in April 1955, the Coastal Conference decided to make a modest increase of 10 per cent. in freight rates on general cargo with effect from 1st June and to request the Government for a similar increase in coal rates with effect from shipments for May 1955. Prior to that, many of the Overseas Conferences had already increased their rates by 10 per cent., in order to cover the increased costs of operation. Due to some unfortunate developments—into the details of which I do not wish to take you—the proposed increase in coastal rates could not be brought into effect. In the meantime, it was suggested by the Government that the freight rate structure on the coast should be maintained without any increase until the findings of the Rail-Sea Co-ordination Committee were available. On further representations by the Conference, the Government have allowed a meagre increase of 5 per cent. in the rates on coal and general cargoes with effect from 15th October last, pending the recommendations of the Committee.

Return-on-capital Basis

"In the opinion of the Coastal Conference the rates of freight should be fixed at a level at which it will be possible for the companies not only to meet fully the costs of operation and at least normal depreciation but also to make a reasonable provision for rehabilitation of fleet and earn a fair return on capital employed. The operating costs show an average increase of about 2½ per cent. every year. Therefore, if the rates that may be fixed as a result of the present enquiry are to remain in force during at least the next three to four years, an allowance of 5 per cent. should be made on the current level of operating costs. The existing coastal fleets include a number of ships which were acquired at low cost and which, being now very old, will require replacement at no distant date. A provision for rehabilitation of fleet out of earnings is, therefore, a necessity. This should be equal at least to the normal depreciation on the cost of ships, though it will by no means be adequate, considering that it will be liable to taxation. As regards return on capital, it is understood that the Tariff Commission allows 10 per cent. on gross block value. This is intended to cover interest on loans or debentures, managing agents' remuneration, income-tax, profit-sharing bonus, dividend to shareholders and allocation to reserves. There is no reason why a similar return should not be granted in the case of the shipping industry while fixing the rates of freight.

"It has been estimated that, on the above basis, the shortfall of earnings over operating expenses, etc., comes to 28 per cent. of the earnings, as against the increase of only 5 per cent. made last October. In the case of a newly built ship, the shortfall on the above basis, but without providing for rehabilitation, comes to over 50 per cent. While I am not suggesting that the rates should be enhanced to this extent, I do hope and trust that the Government will recognise the necessity to provide reasonable incentive to the shipping companies for expansion of their tonnage to the extent required in order to cope with the country's requirements of coastal transport. Unless the question is dealt with from this point of view, a serious transport bottleneck may develop during the second Five-year Plan period.

"Pending the submission of the report by the Committee and its consideration by Government, some further interim relief is urgently necessary. The Conference has, therefore, urged that, as an interim measure, the current rates of freight on coal and general cargo be increased at least by 15 per cent. with effect from 1st March 1956. We trust that the urgency of this question will be taken into consideration and early relief granted by Government.

"Gentlemen, I informed you last year that we would be compelled to stop this service altogether, unless we could secure adequate assistance from the Government to enable us to cover our losses caused by considerable decline in cargo and passenger traffic. The attention of the Government was drawn to the seriousness of the position long in advance. Though the Government were willing to grant the necessary loan for acquisition of a new passenger vessel, the complete cessation of rice imports and the decline in trade between the two countries led us to the conclusion that the employment of a new ship, which would cost Rs. 1½ crores or more, would be an uneconomic proposition. For this reason and also in view of Government's policy not to grant any direct financial assistance, we had no alternative but to discontinue this service in July 1955 after giving sufficient notice to all concerned. There was, however, a pressing demand from the travelling public for resumption of this service and, as desired by the Government, we restarted it last August with the m.v. *Sonavati* by withdrawing her for the purpose from her normal service on the West Coast. While she is rather small and was not built for such a passenger service, no other more suitable ship was available. The Government were fully advised of the type and condition of this vessel. It is, therefore, unfortunate that it should have been stated in the Lok Sabha last September that the service 'was suddenly stopped' and that 'a sort of rickety ship had been put on the voyage.'

"At the moment the m.v. *Sonavati* is undergoing her special survey and is expected to be again in commission towards the end of next month. It is intended to revert her to the West Coast as soon as other arrangements are made by the Government to maintain this passenger-*cum*-cargo service.

India-U.K.-Continent Trade

"We have now secured full membership of the Conferences governing the trades from the U.K. and Continental ports to India and Pakistan and *vice versa*. We have also been admitted as member of the Conference which governs the trade between Western Italy and Pakistan and Ceylon. Some of the foreign lines also have secured increased rights and have expanded their tonnage.

"I informed you last year that we have not been admitted to membership of the Conferences governing the trade from the U.K. and Continental ports to Aden and Colombo and *vice versa*. This unsatisfactory position, I regret to say, still continues. I cannot emphasise too strongly that Indian Lines have a legitimate claim for participation in these way-port trades. We are still pursuing this matter and shall make every effort to secure our rights.

"The combined liftings of the two Indian Lines—Messrs. India Steamship and ourselves—of the exports from India to the U.K. and Continental countries amount barely to 15 per cent. of our total exports to these countries. As soon as the new ships on order are delivered we intend to employ 18 ships in these trades. Even so, in the entire overseas trade of this country, the participation of Indian Lines comes barely to 5 per cent. We have, therefore, still to go a long way towards the target of attaining a 50 per cent. share in the carriage of our overseas trade. But we are going to expand and I wish to emphasise that it is the ambition of the Indian Lines to participate equally in the carriage of the foreign trade of this country.

Tonnage Programme

"The question of building new ships for the coast is very difficult. I have already informed you about the very unsatisfactory state of affairs on the coast at present. Needless to repeat that no shipowner can think of building new ships for the coast unless the existing conditions show material improvement.

"As already stated by me, we are now full members of the India-U.K.-Continent Conferences and are at liberty to employ in this trade such volume of tonnage as we consider reasonable. We propose to employ 18 modern ships in this service. But on delivery of all the ships now on order we shall have only 15 modern ships —six 17-knotters, four 14-knotters and five 12-knotters. The four 14-knotters are already in commission. Two 12-knotters delivered by the Visakhapatnam Shipbuilding Yard are also in commission; the third ship is expected to be delivered next May and the remaining two in the second half of 1957. Six 17-knotters have been ordered with Messrs. Lubeck's Shipbuilding Yard in Western Germany. The first three of them were ordered in March 1955, and three more ships were ordered in August last after I had discussions with shipbuilders in the U.K. and on the Continent and after visiting the Lubeck Yard. We have placed these orders at an agreed base price subject to the usual 'rise and fall' clause, but with a ceiling. Since then the prices of new ships have risen and deliveries are longer. Further, the shipyards in the U.K. and on the Continent, being now fully booked with orders for cargo and tanker tonnage, are reluctant to accept orders at a base price subject to a ceiling, with the result that shipowners' liability under the 'rise and fall' clause will be unlimited. There is no knowing as to what the final price of the ship would be when she is delivered. Your Company, therefore, has done well in placing these orders at an appropriate time and on satisfactory terms.

"In order to have a fleet of 18 fast ships we shall need three new ships; besides, one or two more ships will be required by way of substitutes when other ships are under special survey. It means ordering four or five ships similar to the new *Jal-Azad* and *Jal-Jawahar* which are already in commission. As you know, we are committed to borrow from the Government about Rs. 8½ crores in respect of the ships already ordered in Germany. Purchase of additional four or five ships will involve further borrowing from the Government, which will be of the order of about Rs. 5 crores. Though the prospects in the India-U.K.-Continent trade are likely to continue to be promising in view of our country's increased requirements under the second Five-year Plan, owing to the large sum of money involved, your Directors are giving serious consideration to this question and will reach a decision after examining it from every angle.

B.S.N. (1953) Ltd.

"The operations of this subsidiary during the year have resulted in a loss of Rs. 4.25 lakhs. This is due to heavy cost of repairs and surveys, owing to old age of its vessels; these costs for the ensuing year are likely to be still heavier. Another factor responsible for the loss is the complete suspension of the Company's passenger service between Bombay and Panjim (Goa). It is difficult at the moment to surmise as to when it would be possible to resume this service.

"Four of the six vessels operated by this Company are more than 20 years old and will need to be replaced during the next three to four years. The cost of replacement of four ships is estimated at about Rs. 3 crores and, even if orders were placed now, it would take not less than 24 months to obtain deliveries. Before we can decide to make such a heavy commitment we would like to make sure that we would be able to earn an adequate return on capital after meeting costs of operation and providing for at least normal depreciation. This is not possible at the present level of fares. In these circumstances, we requested the Government as early as last August for an increase of 33-1/3 per cent. in the existing passenger fares. The Government have now referred our proposals to a Shipping Rates Advisory Board consisting of Shri N. S. Lokur, Chairman, Railway Rates Tribunal.

"You will agree with me that the Company cannot go on incurring losses year after year and, unless adequate increase in passenger fares is allowed, we may have to consider seriously, the question of closing down these services. I hope and trust that the authorities will consider this question seriously, keeping in mind the importance of maintaining these services which provide the only convenient link between the Konkan ports and Bombay for 12 lakhs of passengers.

Prospects for the Current Year

"I would now like to acquaint you with the prospects for the current year as they appear to me. On the expenditure side, costs of operation under various heads show no signs of decrease. Actually there is bound to be increased expenditure under certain items; for example, we shall have to spend considerably more on ship repairs in view of a larger number of ships having to be put through special surveys during 1955-56. Some of these ships are older and will, therefore, require heavier repairs. Stevedoring costs are already high and will increase further, on account of the introduction of piece-rate system of payment to labour. As regards fuel oil, there was an increase of 5s. in the prices with effect from March 1955, and a further increase of 7s. 6d. from 1st January of the current year; from the 15th of next month the prices will further increase by about 3s. On the other hand, as I have already stated, two German-built and two Visakh-built ships were delivered to us during 1955. Three of them will have been in commission practically for the whole of the current year and one for nearly six months. The increase of 10 per cent. in freight rates from February 1955 together with comparatively brisk movement of cargoes from the U.K. and Continental ports to India will show its full effect in the current year. The further increase of 10 per cent. in rates which will be effective from next month will be only partly reflected in the current year. A distinct improvement in our freight earnings in the India-U.K.-Continent service may, therefore, be expected. On the Coast, so far as working conditions at ports are concerned, one may hope that the corner will be turned as a result of the introduction of the piece-rate system of payment. The rate of freight on salt from Saurashtra to Calcutta has been fixed at Rs. 31-4 per ton for the year 1956, which is Rs. 3-2 more than the previous rate. The rates on coal and general cargoes were increased by 5 per cent. last October. Any further increase, that it may be possible to secure in coastal rates, will not be fully reflected in the current year. Having regard to the position I have indicated, it appears to me that on the whole the working during the current year should be reasonably satisfactory compared with the year under review."

TAXATION FOR FINANCING SECOND FIVE-YEAR PLAN

(*Concluded from page 337*)

Another equally fantastic suggestion is that the income-tax should either be replaced or supplemented by an expenditure tax in such a way that the rate of taxation on an annual expenditure of over Rs. 10,000 increases to a cent per cent level. By such a tax the richest people would not be much distressed and the poorer ones will not be touched. It is the middle class, which is the backbone of the nation, that will suffer the greatest hardship. In the absence of allowances based on the number of persons in a family, their health, education and other requirements, such a tax can prove highly inequitable. What is more important, in the context of rising prices which are bound to result from inflationary forces generated by deficit financing, an expenditure tax would lead to a double hardship. If prices rise, the assessee will not only have to find a larger amount of money to be able to get the goods and services to which he is accustomed but, in addition, he will have to pay a higher tax, as his money expenditure would rise by reason of the higher prices. Such a tax presupposes that people's standard of living is flexible, which it is not. The expenditure tax would cause excessive hardship to the middle class in the conditions prevailing in our country. Its psychological effects alone make it a bad tax, apart from the other adverse effects it is bound to produce.

Although it is not advisable to increase taxation to an unbearably high level to be able to finance developmental expenditure, it is nonetheless necessary to finance a part of the developmental expenditure out of taxation. As has already been pointed out, the tax revenue of the Government would automatically increase to some extent with an increase in the national income. Apart from this, it should be possible to increase Government's net tax revenue by anything from Rs. 15 to 20 crores per annum, if effective measures are taken to prevent tax evasion. Such measures would not create any additional strain—in any case not much—on the economy and would produce much valuable revenue. The staff of the Income-tax Department will have to be increased and properly trained to detect tax evasion but the additional cost would be worth the trouble. It has always remained a mystery to me as to why the Government has been unable to take effective steps to prevent tax evasion, although it has been a public scandal for a long time.

Excises

It is also possible to increase certain existing Central excise duties and to levy new excise duties on certain goods such as bicycles, sewing machines, electrical goods not yet subject to such duty. In the field of State taxation, the Taxation Enquiry Commission has made detailed recommendations and some of the taxes can be levied without causing too much hardship. In the case of income-tax and estate duty, there might be a scope for upgrading the rates on certain slabs and of changing the exemption limits to produce a small amount of additional revenue. But such adjustments can by no stretch of imagination produce an additional tax revenue of an order to give an additional revenue surplus of Rs. 450 crores. If the Central and the State Governments obtain an additional tax revenue (not necessarily an additional revenue surplus) of Rs. 100 to Rs. 150 crores over a period of five years, they would be lucky.

In economic planning, it is necessary to take an overall picture not only so far as the total outlay and the output targets are concerned but also with regard to the rate of progress and the overall effects which any policy might have. In India, we have already taken many vital steps —the abolition of *zamindari*, the elimination of the princely order, expansion of State enterprise, nationalisation of life insurance and the Imperial Bank of India—in the direction of a "socialist structure of society." We should now allow people to get accustomed to them and to let their effects be stabilised before taking further steps in this direction. An essential feature of a socialist economy is gradualness, that is, evolution and not revolution. If the Government ignores this vital principle and takes haphazard and unco-ordinated action to hasten the achievement of socialism without caring for the interim maladjustments and hardships, the result might be disastrous.—*All Rights Reserved.*

LINKING CANE PRICE TO QUALITY—I

EXPERIENCE OF OTHER COUNTRIES

IT is now widely realised that, unless the cultivation of quality sugarcane is intensified, the prospects of India producing sugar at an economic cost are very bleak. The issue is of special significance in the present context when the sugar industry has entered a new era of expansion and development. If the development programme for the sugar industry envisaged in the second Five-year Plan—the programme sets the target of installed capacity at 2.5 million tons, which represents as much as 56 per cent. of the present capacity—it is of the utmost importance that an all-out drive should be made to step up the per-acre yield of high sucrose-content sugarcane. After all, the quality of cane delivered to the factory plays, as Mr. Colin W. Waddell stressed, in effect, in his paper read at the symposium on payment of cane prices on quality basis, organised in connection with the ninth Congress of the International Society of Sugarcane Technology (I.S.S.T.) held at New Delhi recently, such an important part in its value and the efficiency of technical processes involved, that measures designed to improve sugarcane will have far-reaching effects on the fortunes of the cultivator and the sugar industry. Whether sugarcane is supplied from large estates or small independent farms, there is, according to Mr. Colin Waddell, a growing tendency in most countries to find suitable incentives to raise cane quality. Since these incentives involve the technical problems of weighing, sampling and analysis, as well as administrative problems of costs, sugar prices and the system adopted for division of proceeds between grower and miller, they require a considerable amount of skilled work and supervision.

The problem of giving incentives to agriculturists to intensify cane cultivation has not received adequate attention in India. It is true that the Governments—Central and State—have been giving various forms of assistance to agriculturists to intensify cane cultivation. But the progress actually achieved has been none too encouraging, thanks to the continued adoption of the defective system of linking the price of sugarcane to weight, ignoring completely the quality aspect, and the policy of fixing *minimum* price for cane delivered to the sugar mills. Naturally, the cultivator is interested in yield of cane per acre only and devotes little attention to its quality. India is, perhaps, the only country other than Cuba which has been adopting this system. In all the other sugar-producing countries, the payment for cane is based not only on the weight of the cane but also on the percentage of sugar contained in it. The sugarcane grower is thus made conscious of both the vital aspects, namely, sugar-content and yield.

Cane Payments in Other Countries

The Government of India is considering the possibility of introducing a system for the payment of cane price based on sucrose content. It has already before it the report of the expert committee. Before considering the question of formulating a system of payments for sugarcane on the basis of quality, it is necessary to examine the systems prevalent in the other sugar-producing countries. It is, of course, true that the most important difficulty that has to be solved in India does not exist in most of the foreign countries, namely, that of paying individually a very large number of suppliers for the cane that makes up the crush of a single day. Nevertheless, the experience of other countries would, as Messrs. R. R. Panje and K. V. Gopala Aiyar said in their note read at the I.S.S.T. symposium, be useful and it would be possible to adopt the procedures to suit the conditions in our country.

In Java, the sugar factories enter into agreements with large plantations for the supply of cane. The price of cane is based on the polarisation of the first expressed juice, with a correction factor for each variety determined mainly on the basis of its fibre-content. The cane grower is entitled to half the profits that accrue from the sale of sugar, but he is also liable to half the losses.

Mauritius has adopted a different system for making payments for cane. The special feature of the system is the cane test, which is somewhat similar to the mill tests conducted by cane research stations in India. The cane supplied for testing is assumed to be representative of the bulk supply made by the grower, and the extractable sugar from this test sample is determined through a series of estimations, ranging from brix of crusher juice to bagasse-pol, fibre in cane and bagasse, and purities of mixed juice and last mill juice. The grower gets the value of two-thirds of the sugar computed to have been made from his cane on the basis of figures. This system is somewhat unique in that attention is paid not to the sampling of the raw material but to the estimation of sugar recovery.

The method of determining the share of the cane grower differs from place to place in Louisiana. The cane is first sampled from the wagons as they arrive and then the sample is crushed in a laboratory mill. Certain apparently arbitrary, but presumably well-based, corrections are applied to the laboratory-mill figures. Payment is based on pol by laboratory analysis only; no account is taken of the other factors which affect the recovery of sugar. The schedule for payment has a standard sucrose value —called 100 per cent. standard cane—which increases by one unit for every 0.1 per cent. sucrose difference in favour of the sample. The grower is paid approximately at the rate of one dollar per ton of cane (standard) for every cent in the prevailing price per pound of sugar. If, for example, the sugar recovery percentage is about 10, this computation in effect means that the cane grower gets 50 per cent. of the value of the extra sugar made on account of the better juice quality. The factory thus derives a part of the benefit from improvement in juice quality.

System Not Reliable for India

The three principal features of the system in vogue in Louisiana which is somewhat complex and variable are: (1) Unusual simplicity of the sampling system for cane, (2) laboratory-mill analysis being the basis of payment, and (3) variability in the grower's share of the profits. Whether, all the complexities and schedules notwithstanding, the payments are based on a correct estimate of the cane quality and whether the sliding scales are equitable, can be decided only with a more intimate knowledge of the conditions affecting the sugar industry in Louisiana. Under the conditions existing in India, the laboratory-mill analysis of 3-4 stalks of cane is not considered to be a very reliable system of sampling.

Cuba is the only other country which, like India, has a system under which the price of cane is linked to weight and no account is taken of its juice quality. This is so because cane is grown and supplied to factories by small peasants and farmers. Naturally, the quality of cane supplied is poor. The grower does not concern himself with the sugar-content of his cane. In fact, it is said that, with the effect of quotas on sugar production, the system then actually acts as a direct stimulus to the production of cane with low juice quality.

In Puerto Rico, the colonos are not as small growers as in Cuba. It is, therefore, possible for the factories to estimate the juice quality of the individual lots of cane supplied by them. Here, again, simple sucrose per cent. juice value is adopted to represent sucrose recovered, a rough and ready index which is quite suitable where too much variation in cane does not exist. The cane supplier apparently shares in the profits from the sale of sugar.

In South Africa, the basis for determining the quality of cane is the sucrose per cent. of the crusher juice which is multiplied by the Java ratio in order to get the sucrose per cent. cane. This is again multiplied by an efficiency factor to arrive at the sugar recovery. The value of cane is fixed by the division of the price at mill value of 96° sugar in the proportion of 64.3 per cent. to cane and 35.7 per cent. to sugar.

Queensland System

Computations for sugarcane payment in the Philippines are said to involve so many determinations and uses of formulæ that their description will not serve any useful purpose in so far as India is concerned. Of special interest, however, is the system in vogue in Queensland (Australia). The formula adopted for assessing sugar recovery is called the C.C.S. formula which, in a slightly modified form, is the counter-

AMALGAMATION OF SMALL COLLIERIES

TERMS OF REFERENCE OF MEHTA COMMITTEE ENLARGED

PRESS reports from Jharia disclose that the terms of reference of the Committee on Amalgamation of Small Collieries, appointed by the Commerce and Industry Ministry in November last, with Mr. Balvantray G. Mehta as Chairman, to examine the position of small collieries in Jharia and Raniganj and to make proposals for their amalgamation, have been enlarged by the inclusion for investigation of the position of all collieries in Bihar and West Bengal. Accordingly, the Committee will undertake a survey of the present position of collieries in West Bengal and Bihar with a view to their amalgamation into economic units. In making the investigations, the Committee will give due consideration to the area of holdings, the current output and the capacity of the collieries, the geological and geographical and other relevant features, the need for efficient and economic production and the conservation and preparation of coal by such processes as washing, etc. On the basis of such a survey, the Committee will recommend to the Government the principles, procedures and methods in general and the time schedule and legislation, if any, to be adopted for carrying out the scheme of amalgamation.

It will be appropriate to refer, in this connection, to the conflicting views on amalgamation of the small colliery owners and the workers employed in the mines. The small colliery owners of Jharia and Raniganj have opposed the proposal for the amalgamation of small collieries. They have, through a memorandum to the Committee on Amalgamation of Small Collieries, mentioned above, represented that the present time is inopportune for the amalgamation of small collieries and have, therefore, urged that it should be postponed for the next 10 years at least. They have refuted the charge that small collieries are uneconomical "by reason of their smallness," if not for any other. They have contended that the small collieries are more efficiently managed than the bigger ones. They have refuted also the contention that blocking of coal in barriers is the peculiarity of small collieries alone and held that coal blocked in barriers between contiguous areas of small collieries is insignificant, as compared with coal blocked in "panel barriers." The small colliery owners have further held that coal blocked in barriers between contiguous areas of small mines could more often be recovered than that blocked in panel barriers. They have opposed amalgamation also on the ground that the actual working of two contiguous mines might differ in so many essential aspects that make them incapable of being amalgamated. Elucidating this statement, they have observed:

"The difference may be in the grades and seams of coal being worked, in their depths of present operations, in shapes and sizes, in gradients and inclinations, in the galleries driven in the two mines, which may not be on the same lines and in the same surfaces, in the size and height of standing pillars and, generally, in the condition of the two contiguous mines. One of the mines may be approaching exhaustion of the particular seam being at the last stage depillaring and full of goafs and water, while the other may be at the first stage of development of the seam or may be working in an entirely different seam, may be well-planned, based on scientific working, prosperous with much less cost of production, etc., and the amalgamation of the two may mean the dragging of the latter mine to the uneconomic level of the other instead of the former mine being brought to the economic level of the other. The two mines may be working at such different depths that amalgamation may have no meaning and sense—may be a physical impossibility. The geological, geographical and other features may be so different as to exclude the possibility of amalgamation. The lease terms under which the two contiguous mines are being held may be entirely different, one on fixed rents and the other on commission basis, so that their amalgamation is not legally permissible. The owner of the one mine may be a limited company and that of the other an individual, an undivided family, a corporation, a trust property, etc., which will stand in the way of amalgamation. One mine may be partially on fire and amalgamation may bring the fire extended to the other mine and even to a whole set of mines in the neighbourhood. Instances of such difficulties, incompatibilities, incongruities may be multiplied to warn against amalgamation of mines simply because they are contiguous to one another."

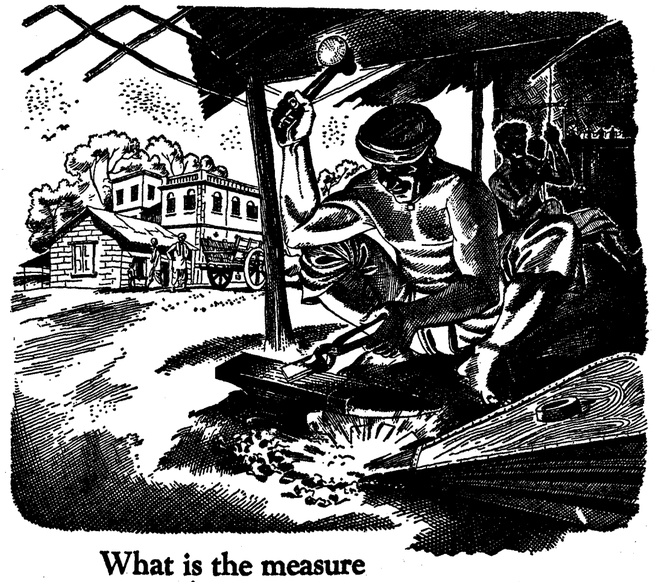
While mineowners have thus expressed themselves against amalgamation of small collieries, the Indian National Mineworkers' Federation, Dhanbad, in its replies to the questionnaire issued by the Committee on Amalgamation, has, on the contrary, welcomed the proposal for amalgamation of small collieries as a step towards nationalisation, which, it has claimed, is "the only permanent solution for solving the problems confronting the coal industry." It has held that amalgamation will help adopt sound mining practices and improve the position of coal transport, inasmuch as it will lessen the burden on the lines, as well as pilot capacity, and improve the turnover of wagons. Briefly stated, the overall advantages of amalgamation are claimed to be as follows:

(1) Enlarged output at low cost;
(2) easier haulage and pumping;
(3) recovery of coal blocked in barriers or unsuitable positions;
(4) reduction in office establishment costs;
(5) utilisation of existing machinery to its full capacity;
(6) better planning and higher output;
(7) better supervision and utilisation of technical manpower;
(8) better organisation of workers and the development of a strong trade union movement; and
(9) better amenities to workers.

As regards the agency for amalgamation, the Federation has suggested that either a statutory expert body be set up or the proposed Coal Commission be vested with powers to amalgamate. It has not felt that there will be any appreciable reduction in the labour strength as a result of amalgamation; on the other hand, there will, it has stated, be new avenues for employment. The Federation has suggested also uniformity in the rates of royalty.

The plea for the amalgamation of small collieries is an old one and received considerable prominence in the course of investigations by the Indian Coalfields Committee 1946, which, among others, strongly recommended amalgamation of small collieries. Even the Working Party for Coal Industry 1951, expressed similar views. It is true, they all admit, that some small collieries have been working economically and efficiently but they have held that such collieries are only exceptions. To quote the Indian Coalfields Committee: "The uneconomic nature of an undertaking should be judged from the broad angle of national interests. From that aspect, small mines, with exceptions, tend to be uneconomic and harmful." The Working Party has expressed the view that "coal extraction suffers in irregularly shaped mines and limited resources of capital prevent correct developments, planning and mechanisation. The danger of small leaseholds is that the colliery proprietor tends to work coal at shallow depths, so that coal remains unexploited at greater depth."

It would appear that there is a strong case for amalgamation. This could be done by bringing the lessors and lessees of neighbouring *mauzas* or leased areas to agree to certain terms. The Indian Coalfields Committee has expressed "that, for the future, fragmentation should be avoided by control over leases and sub-leases." It has observed: "The evils of the past can be remedied by the Government insisting on amalgamation and adjustment of boundaries." It is true that there are some sections which are opposed to compulsory amalgamation. But it would be wrong to oppose amalgamation even when that is the only way of securing economic sizes for coal mines. As the Working Party has emphasised, legislation should be carried through to "amalgamate such small colliery units, which, according to the opinion of the Government, are necessary in the country's interest."



What is the measure of an Industry's importance?

If a bicycle, a sewing machine, or even a hurricane lantern were shown along with a steel ingot to the man-in-the-street, he would not take a second look at the ingot. Yet, in machines, factories and buildings...in the making of the hundred things we use every day...Steel is indispensable.

Started less than fifty years ago, India's Steel Industry is to-day a vital factor in the nation's economy. It produces nearly 1.75 million ingot tons of steel at a cost that no country can equal, of which Tata steel accounts for over one million tons. Tatas plan to produce 2 million ingot tons early in the second Five-Year Plan period.

Private enterprise serves the Nation

THE TATA IRON AND STEEL COMPANY LIMITED

FALL IN OUTPUT OF JUTE GOODS

STOCKS, HOWEVER, RISE

THE output of jute goods by mills reporting to the Indian Jute Mills Association, during January 1956, amounted to 88,900 tons, as compared with 97,300 tons in December and 90,500 tons in November 1955. The decline of 8,400 tons during the month under review is contrary to earlier expectations, for the unsealing on the 10th of that month of 2½ per cent. of the jute looms which had remained sealed for a long time was expected to result in the output for the month exceeding that of December 1955. Now that actual production in January has turned out to be lower than the production in the preceding two months, it is clear that the mills, for some reason or other, were not able to utilise their capacity to the full extent. High prices of raw jute, scarcity of quality jute thanks to transport bottlenecks, and fewer orders for jute goods from overseas might have been the causes for the fall in production.

The table given below shows the output of the three principal varieties of goods during each of the three months ended January 1956, as well as during the corresponding month of last year:

Jute Goods Production

(In tons)

	January, 1956	December, 1955	November, 1955	January, 1955
Hessian ..	30,300	34,000	34,600	32,500
Sacking ..	52,600	56,600	49,900	48,500
Others ..	6,000	6,700	6,000	2,900
Total ..	88,900	97,300	90,500	83,900

It will be seen from the table above that the fall in output was shared by all the three types of goods. Thus the manufacture of hessians declined from 34,000 tons in December 1955 to 30,000 tons in January this year. Similarly the output of sackings went down from 56,000 tons to 52,600 tons and that of other varieties from 6,700 tons to 6,000 tons. Thus, while hessians accounted for 34.1 per cent. of the total, the share of sackings was as much as 59.2 per cent. The corresponding percentages six months previously, that is, in August 1955, were 40.8 and 53.6. In other words, the output of sackings during the six-month period increased, while that of hessians declined considerably. The increase in sackings evidently reflects the growing demand for these from Burma, East Africa, Russia, Australia, etc.

Raw Jute Consumption

The consumption of raw jute by the reporting mills during January 1956, based on the output of jute goods for the month, may be placed at 518,620 bales, as against 486,620 bales in January 1955.

With the months' production, the total output of jute goods during the first seven months of the season 1955-56 amounted to 608,345 tons, as compared with 579,442 tons in the same period of the preceding season. The consumption of raw jute by mills during the seven-month period this season must have aggregated 3.53 million bales, as against 3.36 million bales.

Stocks

The upward trend in the accumulation of jute goods stocks with mills which started in November 1955 persisted further during January 1956. From 62,300 tons, the lowest for several years, at the end of October 1955, stocks rose to 63,000 tons by the end of November, and since then they have risen steadily. They stood at 63,500 tons in December 1955 and rose further to 78,000 tons in January last. This rise in stocks, despite a fall in the output of jute goods in that month, clearly suggests that the volume of despatches during the month under review must have shrunk.

Viewed against this background, the last month's decision of the I.J.M.A. to increase the loomage under active working by unsealing a further 5 per cent. of the looms sealed sounds rather strange. It will be recalled that, at that time, no official explanation for this decision (which took effect from the 20th inst.) was given. The only surmise that appeals to common sense is that the Association must have been forced by the Government of India to take that decision. And why did the Government do so is, again, a question of surmise. The Government was probably aware that sooner or later big orders for jute goods would be forthcoming and that the industry should be prepared to meet them. Following a number of trade deals which it has been putting through with the Communist countries, the Government may be in a position to foresee the likely requirements of these markets. Significantly enough, for some days past, there have been strong rumours of impending heavy purchases of jute goods by Russia. There have also been a steady flow of orders from China.

More Sackings

The table below shows the stocks at the closing of each of the three months ended January 1956, as compared with those at the close of the same month last year:

Jute Goods Stocks

(In tons)

	As on 31st Jan., 1956	As on 31st Dec., 1955	As on 30th Nov., 1955	As on 31st Jan., 1955
Hessian ..	25,600	23,500	27,900	24,000
Sacking ..	45,300	34,400	30,800	51,200
Others ..	7,500	5,600	4,300	1,200
Total ..	78,400	63,500	63,000	76,400

A glance at the table above discloses that stocks of sackings increased sharply by 10,900 tons to 45,300 tons. The rise in hessians, having been of the order of only 2,100 tons to 25,600 tons, was smaller. Other manufactures increased by 1,900 tons. If there is no improvement in the offtake of goods during this and the coming months, stocks are likely to go up further, as from the 20th inst. a further 5 per cent. of the unsealed looms has gone into action. This step will raise mills' production to about 100,000 tons in a full working month and that at a time when Pakistan's output of jute goods also is growing.

CONTROL ON MUSHROOM JUTE MILLS

The Government of India has promulgated an order announcing its decision to control manufacture of jute goods in India. The order, which came into force with effect from the 15th inst., provides that no person other than the owner of a jute mill, registered or licensed under the Industries (Development and Regulation) Act of 1951, will be allowed to manufacture jute textiles, either wholly or partly, from jute in any factory with the aid of power, unless he has obtained a licence for that purpose from the Jute Controller. The order further enjoins that any person who was manufacturing jute textiles immediately before the commencement of the order in any factory which was not registered or licensed under the Industries (Development and Regulation) Act is required, under the provisions of the order, to apply within three months of the date of issue of the order, to the Jute Controller for a licence.

Accordingly, the Government of India has appointed Mr. A. P. Mathur, Joint Chief Controller of Imports and Exports, Calcutta, as Jute Controller for the purpose of the above order. He is vested with powers either to refuse or cancel a licence, and all appeals against his orders will lie with the Central Government, the decision of which will be final.

The circumstances which prompted the Government to issue the order make interesting reading. It is motivated purely by the desire to enable the jute industry in India to meet the growing competition from both Pakistan and Continental mills. Recently a number of persons seems to have started several mushroom jute mills, taking advantage of the growing demand for jute goods from abroad. It is stated that these persons had been setting up small establishments for producing jute goods by acquiring plant and machinery discarded by bigger jute mills, as a result of their modernisation programmes. With capital shown in their records at less than Rs. 1 lakh and with workers employed being less than 50, they had been circumventing the Industries (Development and Regulation) Act. These small units had no regard for the quality of products they manufactured and the substandard goods produced by them invariably tended to harm the interests of the genuine industry and trade. Besides, at a time when the industry was getting back to its normal working of 48 hours a week, with the sealed looms being gradually unsealed, the output of these mushroom establishments was considered to be a source of serious danger, threatening the reputation of the industry abroad. As much as 2½ per cent. of the 12½ per cent. of the looms was unsealed on 10th January last, and a further 5 per cent. was unsealed on the 20th inst. The industry at present is working with only 5 per cent. of its looms sealed. It is expected that with more demand for Indian goods even these looms could be brought into production. This would, of course, not be possible, if the Government did not intervene and put an end to the growing evil.

TEA FOR FOREIGN AUCTIONS

GOVERNMENT REMOVES CEILING

THE Government of India has decided, according to a news agency report from Calcutta, to withdraw the ceiling on the amount of tea that can be consigned from North India for auctions in foreign centres during the current season. It may be recalled that, for the current season, the Government of India had fixed in July last a limit of 140 million lbs. on the quantity of tea which might be consigned from North India to London for auctions in that centre. In the case of South India, the Government did not consider it necessary to fix a specific ceiling during the current season, because it was satisfied that actual consignments were not likely to exceed the previous level of 23 million lbs.—a quantity well below 25 per cent. of the South Indian crop.

The aforesaid decision followed the Government's acceptance of the recommendation of the Ghoshal Committee on Tea Auctions that there should be a progressive reduction in the quantity of tea consigned to auctions, with a view to making Calcutta the principal marketing centre for Indian tea. The idea behind this objective was to ensure for India the full benefit of marketing service and the invisible incomes that go with it, instead of allowing them to go to Britain as has been the case for decades. The Government, however, modified the recommendation of the Committee in respect of the actual ceiling. The Committee had recommended that the quantity of consignments to London should not exceed 30 per cent. of the crop in the current season and 25 per cent. of the crop in 1956-57. It had also recommended that the position should be reviewed thereafter to see if the quantity could be further reduced to 20 per cent. The Government, on the other hand, did not think it necessary or desirable to fix the ceiling in terms of the percentage of the crop. Having regard to the size of the current season's crop, the steady internal demand and trend of trade, it fixed the limit for foreign auction for the 1955-56 season at 140 million lbs. of North Indian tea. This quantity is equivalent to 26.4 per cent. of the North Indian crop amounting to 533.2 million lbs. up to the end of December last.

What Of The Future?

The latest decision to abolish the aforesaid ceiling within eight months of its fixation has come as a surprise and follows the increase in the export quota for the current season from 469 million lbs. to 480 million lbs. announced only two weeks back. This change in the Government's policy within so short a period proves that the Government must have been convinced that its policy of restricting the quantity to be sold by auction in foreign auctions has failed, however laudable the idea of enlarging auctions in India may be. It is significant that the Government has not revised the limit in a downward direction but has completely abolished it. Does this mean that the Government has abandoned its goal for ever or for only this season? The absence of any indication about the future policy reflects the complicated nature of the problem. It is also proof of the fact that it is not easy to plan successfully a country's foreign trade which is always susceptible to a number of unpredictable factors. Such a task will be practically impossible for a country like India which has no effective arrangements for storing and financing its surplus production. In the light of what has happened, it is clear that the judgment of both the Committee and the Government has been belied by events.

Be that as it may, the abolition of the limit is due to the piling up of unsold tea stocks in Calcutta since last autumn, consequent on the increase in production, and the falling prices of tea. In November and December last, there was a slump in tea prices, partly because of the increase of 10 million lbs. in the November crop and of 4 million lbs. in the December crop of North Indian tea and partly on account of the credit stringency in the U.K. which resulted in buyers confining their attention to spot supplies in London. What is more, much of this increased crop represented low quality teas. Though there has been an increase in prices since December, it is confined only to good liquoring teas, as buyers in export sales have been discriminatory in absorbing good grades. In fact, the supply of good grade teas has been short as compared with the demand. The quantity of stalky teas and inferior grades offered in auctions has been so heavy that it has been difficult to sell them. At last week's export auctions in Calcutta, as much as 12,000 packages, out of a total of 60,000 packages offered, had to be withdrawn, as the price offered was very uneconomic to producers. Last year, the end of January witnessed the closing of export sales in the Calcutta market, whereas this year export sales are still being prolonged, with 25 per cent. of the teas remaining to be disposed of. It is expected that the current season will easily extend up to the end of May. The weight of this crop and of those to come in the next few months will have considerable influence on the trend of prices in the rest of the season, though it is being hoped in trade circles that the recent decision of the producers' association to destroy all tea waste and residue teas of doubtful quality will have a salutary effect on the prices to be realised for the balance of the current season's crop.

Near Outlook

In the context of the aforesaid conditions, namely, the heavier crop of low quality teas and discriminatory buying by foreign countries, particularly by the U.K., the largest customer for Indian tea, it is doubtful whether the present decision of the Government to remove the ceiling on export for foreign auctions will be of any avail. Market circles in London seem to be of the view that the relaxation has come too late to have any stabilising influence on prices. It would have proved so, they say, if the relaxation had been made in November when the London market prices were substantially above Calcutta. Since then prices in London also have declined. Market circles in Calcutta, however, anticipate that the U.K. would emerge a keen buyer of Indian teas in the next few months, although they are not unaware that Ceylon is a keen competitor with India in London. Their expectations are based on the present statistical position in London. The latest figures of U.K. stocks (including teas afloat) as at the end of January shows that stocks have declined from 160.7 million lbs. to 133.7 million lbs. According to a recent survey, the *per capita* consumption in the U.K. for 1955 was 9.3 lbs. On this basis the annual requirements of the country are estimated at 475 million lbs. The imports by the U.K. during April to December 1955 aggregated 325 million lbs. and the balance of its requirements will have to be met during the next three or four months. It is, therefore, expected that the U.K. will remain active in the Calcutta market for the rest of the season. Further, market circles in Calcutta expect the other foreign countries also to maintain their purchases during the next few months, despite the fact that some of these markets have been lost to Ceylon.

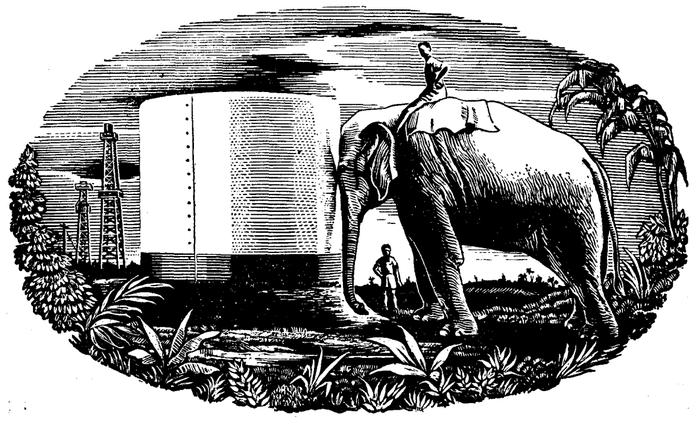
The aforesaid calculations of the expected purchases from the U.K. during the next few months were made, it may be noted, before the announcement of the sharp rise in the British Bank rate. Though the British Chancellor of the Exchequer has stated that there will be no restrictions on imports, it is doubtful whether imports of tea will be maintained at the same level as before. Consequent on the increase in Bank rate, the financing of stocks by traders will become very costly and importers are, therefore, likely to live on a hand-to-mouth basis. With the subsidy on milk and bread substantially cut and with the possibility of an increase in the number of unemployed, consumption of tea in Britain is likely to go down. In view of this, the Government of India's removal of ceiling on consignment of tea for foreign auctions is not likely to be of any practical value.

* * * *

Reports appearing in the daily Press subsequent to the preparation of the aforesaid account say that the Government's decision freely to allow the export of unsold tea for London auctions is up to 31st May 1956, only. This implies that the relevant policy for the next season will be decided later on.

TEA ASSOCIATION OF INDIA

With a view to promoting and protecting the common interests of indigenous tea planters and to foster the trade, commerce and industry connected with tea, an all-India association called the Tea Association of India has been formed in Calcutta. For some time past there has been a growing feeling among the indigenous sections of tea planters that there should be only one strong national association of Indian tea planters, and towards that end there have been informal discussions among representatives of the Indian tea industry. The Tea Association of India is the result of these discussions. The Association is an all-India body and its activities extend to the whole of India. Besides fostering the interests of the tea industry generally, the Association will provide also facilities for obtaining materials by the tea industry, facilities for representing the case of members of the Association before tribunals and other public bodies, and facilities for research. Membership of the Association has been thrown open to all tea estates and tea gardens.



It's a BIG job....
running an oilfield

Many special kinds of skill are required to keep India supplied with oil, from the study of fossils to the operation of complicated plant in refineries—and not excluding the care of elephants.

Consider the complexity of the Assam Oil Company's operations at Digboi, in north-east India. Here, at India's first and hitherto only oilfield, nearly a thousand wells have been drilled into the earth's rocks—a total of over 300 miles of hole. More than 600 of these wells still yield oil regularly, modern production techniques ensuring that the maximum amount of crude is recovered from the field. Science and engineering skills guide every phase of the company's work, nowhere less than in Digboi refinery which in a single day supplies the Indian market with over 250,000 gallons of high-quality petroleum products. In all branches of this full-scale industry the Assam Oil Company employs nearly 9,000 persons, while many hundreds more are engaged in serving the consumer.

Yes, the day-to-day running of the oil industry is a big job. To keep it running the Assam Oil Company has to spend crores of rupees just in "looking ahead". For no oilfield lasts for ever, and in order that India's vital flow of oil may be supplied to an increasing extent from India's own resources, the company is constantly exploring for new sources of petroleum.

MANUFACTURE OF ELECTRICAL EQUIPMENT

SHORTAGE OF RAW MATERIALS HOLDS UP PROGRESS

THE problems relating to the development of electrical manufacturing industry figured prominently in the presidential address of Mr. A. R. Driessen at the eighth annual general meeting of the Indian Electrical Manufacturers Association held in Bombay on the 18th inst. He held that shortage of pig iron and steel, as well as aluminium, and the Government's import policy regarding electric motors and transformers were chiefly responsible for retarding the growth of this essential industry. He regretted that neither the Association nor the representatives of the electrical steel sheets industry were represented on the Development Councils for Electrical Industries set up early last year.

That there is shortage of pig iron and steel is common knowledge. The very fact that the Centre has decided to import steel at the rate of one million tons per annum for three years with effect from 1955-56 is a clear indication of this. But even if these imports were to materialise, the scarcity of steel would continue. Consequently, Mr. Driessen advocated imports of steel in still larger quantities. While this suggestion may be readily endorsed and even the Government may agree with it, the question is whether more steel could be had from foreign countries. There is a shortage of steel in almost all exporting countries; prices are high and delivery dates distant for whatever steel that is available. Mr. Driessen would have made a more useful contribution in his speech had he indicated the source from which more steel could be procured at reasonable prices.

Aluminium is the most important non-ferrous metal largely used in the various consumer industries, such as transport, utensils, cables and conductors, extrusions and foil. The versatile properties of this metal, such as lightness, malleability and ductility, have been chiefly responsible for its increasing use. As Mr. Driessen put it, even aluminium, whether in the form of ingot, bar or rods, is "almost unobtainable in foreign markets." In view of world-wide shortage of the metal, the Aluminium Union of Canada is supplying aluminium only to manufacturers of overhead conductors. The only indigenous company able to produce electrolytic aluminium ingots or bars is the Indian Aluminium Company. But this Company is not yet in production. The proposed expansion at Hirakud of a 10-ton smelter, in the opinion of Mr. Driessen, is barely enough, since the total production would only be approximately 18,000 tons of ingot per annum. As against this, he expects the approximate consumption of electrolytic aluminium by the electrical conductor industry to touch 20,000 tons by the end of 1958. Besides, consumption of aluminium is expanding in other directions also. His solution for meeting this growing consumption is as follows:

The Government, in common with Governments of other countries, should purchase and import this metal for distribution to the electrical conductor and utensil and packing industries, always bearing in mind that two different qualities of aluminium are needed by these industries;

alternatively, with the rich bauxite deposits in this country, the Government should plan larger indigenous production.

Mr. Driessen considered the Government's decision to relax restrictions on the import of motors from 3 to 10 h.p. in the first half of 1956 as being unwarranted and detrimental to the development of the indigenous industry. For, in his view, the indigenous industry is capable of meeting the country's requirements upto 100 h.p.; besides, the manufacture of motors up to 500 h.p. is also within the competence of the industry. Discussing the possible causes for the present decision, Mr. Driessen observes:

"Perhaps a case has been made out by a section of the consuming industries that indigenous electric motors are in short supply. That, let me point out, is the apparent position, because of lack of planning by the indentors in respect of their motor requirements. It has been observed that, while much planning is done by certain industries to increase productivity by investing in new machinery, little thought is given to the procurement of prime movers and electric motors. So it happens that modern fast machinery is installed and the motors, without which the most modern piece of machinery is apt to become something extremely useless, are not placed on order until the machinery is in position and ready to start. When in these instances, and they are quite numerous, the indigenous manufacturer quotes a delivery from three to five months, there is an immediate outcry for imports. A motor offered from Europe with a delivery of 8 to 10 weeks, which is normal, cannot arrive in this country within four months; in other words, no earlier than the indigenous manufacturer can deliver anyhow. May I prevail upon Government, therefore, to scrutinise more closely requests for import licences not only for motors but for all foreign manufactured goods that are submitted on the plea that the delivery quoted by the indigenous manufacturer is too long. May I prevail upon Government to answer such requests by insisting on better forward planning, so that an equitable even machine loading is assured for those whose business it is to keep the wheels of industry turning."

The President of the I.E.M.A. is of the view that the apparent shortage of transformers is also due to the failure of indentors to plan in advance. In the interests of the development of the indigenous industry on healthy lines, he advises the indentors to plan their requirements at least one year ahead.

It would appear that there are several anomalies in the duties on import of aluminium bars and rods as well as parts for the manufacture of motors and transformers. Dealing with this issue, the President observed:

"...the adjustment of the import duties on aluminium bars and rods, which took place on 1st September 1954, stipulated that aluminium bars and rods thus imported may only be used for the manufacture of A.C.S.R. This unfortunately does not take into account the fact that the item all-aluminium conductors under 72(e) of the I.T.C. allows finished foreign all-aluminium conductors to be imported into this country at the rate of duty of 5½ per cent. It will be apparent that, as long as foreign all-aluminium conductors can be imported at the rate of duty of 5½ per cent., the indigenous manufacturer of overhead conductors cannot compete since he is obliged to pay a duty of 31½ per cent., if the metal is imported for this purpose. May I, therefore, once again plead that this matter should be investigated with all speed and that the import of foreign all-aluminium conductors of 5½ per cent. duty should be stopped and aluminium imported under the existing import duties be available for the manufacture of all-aluminium conductors also.

"A similar discrepancy exists in the import duty on parts for the manufacture of motors and transformers. These parts are subject to a duty of 25 to 30 per cent., while duty on an imported complete product is much less. May I once again plead that this matter be investigated and that the import duty be adjusted on a basis where the indigenous manufacturers can compete on at least equal terms with the foreign product."

The electrical equipment industry is still in its infancy. The 100 per cent. increase in electricity generated in this country during the past eight years and the prospects for expansion in the next Five-year Plan period underline the need for speedy development of industries which manufacture electrical equipment of all kinds. It is to be hoped that the Government will enquire into the grievances of the industry and render all possible aid for its healthy growth.

WORLD ZINC PRODUCTION AND CONSUMPTION

1955 was another record year for production of slab zinc. World production rose by 11 per cent. to 2,643,000 long tons, according to the British Bureau of Non-Ferrous Metal Statistics. This included an estimated production of 385,000 tons in the U.S.S.R., Poland and other Soviet-controlled territories; production in the rest of the world aggregated 2,258,000 tons, as compared with 2,047,000 tons in 1954.

The year was one of increased output for all countries, except Belgium and Australia. Over one-third of the total was produced in the U.S.A., where, after falling substantially in the previous year, output rose 12 per cent. to 920,000 tons. Approximately half of this was produced from imported ores. In Canada, where output had followed the same trend, there was a 36,000-ton increase. A summary of production in the main countries is as follows:

(In thousands of long tons)

	1953	1954	1955
U.S.A.	865	775	920
Canada	221	194	230
Belgium	190	210	207
Germany	148	167	177
Japan	76	100	111
France	77	107	108
Australia	90	105	101
Soviet Sphere (estimate) ...	323	377	385
Other countries	338	389	404
World Total	2,328	2,424	2,643

The aforesaid figures cover the total production of primary and secondary electrolytic and distilled zinc in the form of slabs, ingots and other shapes, and represent the amount of marketable metal available to consumers.

Indications are that world consumption of slab zinc increased by nearly 300,000 tons in 1955 and was roughly equal to production at approximately 2,600,000 tons. In recent years, world consumption has been considerably lower than production, though some part of the surplus has been drawn off into stockpiles.

The 1955 increase was largely due to recovery in the U.S.A., where consumption rose by 160,000 tons to approximately 960,000 tons. Consumption was higher in the United Kingdom, France, Germany and other large consuming countries, though the increases were not so great as in 1954.

ARTIFICIAL RAIN-MAKING

FINDINGS OF EXPERTS

THE subject of artificially induced rain or snow is an absorbing one. In this connection, the latest report of the World Meteorological Organisation on rain-making by artificial means will be read with much interest by scientists and laymen alike. It will be recalled that, early in 1954, a preliminary report on rain-making in arid and semi-arid regions was released by this organisation and a working group of experts was established with a view to making a complete review of the developments on this subject. The present report contains the conclusions reached by these experts. Although the report has not received the official endorsement of the Organisation, it has been published, in view of the topical nature of the subject.

The report discloses that suitable seeding agents may influence the behaviour of some clouds and the readiness with which precipitation forms within them. It reveals that laboratory work has already led to the discovery of agents, which can be used to affect very large volumes of cloud air at moderate expense. It further states that there exists the possibility of at least temporarily or locally reducing or preventing precipitation from certain clouds and thereby preventing hail- and thunder-storms in certain circumstances. Attention is also drawn to the fact that the appraisal of the economic value of artificially provoking or modifying precipitation over any particular region must take into consideration the likely effects on neighbouring regions.

The report deals specifically with small- and large-scale experiments on rain-making in various parts of the world. Dealing with small-scale experiments, the report states that, on many occasions, the introduction of ice crystals into suitable clouds had led to precipitation which would not otherwise have occurred. Other kinds of seeding have also had some encouraging trials. Consequently, the report observes that "it is appropriate to spend a great effort to develop the ability to exert an occasional influence into an economically valuable degree of control."

Dealing with large-scale experiments, the authors of the report point out that the purpose of most of the programmes had been to produce results and not information and that they had been, therefore, inadequate to serve as tests of effectiveness. This premature emphasis on practical results, they say, has been to a great extent the reason why, even after almost a decade of intense cloud-seeding activity, one cannot say whether or not the results have been positive.

The report emphasises also that the best operational techniques are unlikely to be invented until improved knowledge and understanding have been gained of the physical successes involved. The report concludes with a summary of the present situation as given by the group of experts who investigated this problem. The substance of this summary is as follows:

(1) On a number of occasions seeding from aircraft has beyond reasonable doubt led to a modification of clouds and a release of precipitation. The theoretical explanation of the processes involved is not yet complete.

(2) In the absence of sufficient theoretical knowledge and past records, it is not yet possible to predict the result of large-scale seeding operations in any particular place, especially if they are carried out from the ground. Nevertheless, there is some justification for supposing that, where certain special kinds of cloud frequently occur, skilfully conducted seeding operations might result in a local net increase in precipitation of economic benefit. It is emphasised that this supposition can be justified only in respect of certain simple clouds and cannot yet be extended to include places where other more complex cloud systems are predominant and provide most of the natural precipitation.

(3) In the opinion of experts, a net increase of precipitation has not been demonstrated beyond reasonable doubt in any seeding operations yet described in the scientific literature. It seems that, at least, most of the claims made in other publications and newspapers have not had adequate foundation.

(4) At least, several years of fundamental investigations and of meticulously planned and analysed seeding experiments will be needed before a reliable assessment of the economic potential of seeding operations can be made.

NEW PRODUCTS AND PROCESSES

New Method of Taking Footprints

AN orthopedic concern at Enschede (the Netherlands) has devised a new method of taking footprints, to replace the cumbersome and not too clean conventional method of making plaster casts. According to the new method, a slab of a specially compounded wax product, reinforced by a thin tissue, is softened in water of about 55° C. and laid round the foot, thus forming a true imprint of it, which hardens in about one minute.

Thorium Alloys

The possibility of using thorium as an atomic fuel has led to a number of investigations into methods of improving the structural strength of titanium metal. One series of newly developed high-strength thorium alloys which have been developed by the Battelle Memorial Institute, U.S., are based on the addition of carbon to the thorium. Experiments have, it is claimed, shown that the addition of carbon as an alloying material leads to a marked increase in strength. The alloys can be heat-treated to high-strength levels either by a precipitation hardening process or by means of cold working. The investigations are said to have shown that the greatest degree of strengthening can be achieved by cold working followed by an ageing treatment.

Toughening Metal Surfaces

A number of processes for electrically hardening the surface layers of steel and other metals are now in industrial operation in Russia. Such processes depend on the fact that when an electrical discharge is produced in the air between an electrode made either of especially hard metal, or of graphite, and a steel article, the surface layers of the steel component being treated are toughened. This toughening of the surface of the metal increases the wear resistance of the part concerned. Although it does not give the metal sufficient protection against corrosion for it to be used commercially, it is stated that it greatly improves the resistance of the surface of the metal to etching. The cost of the Russian plants used for this purpose is estimated from 1,000 roubles to 3,000 roubles.

Spirit Cleansing for Raw Wool

A revolutionary method of removing grease from wool was demonstrated at a recent meeting of the International Wool Textile Research Conference at Geelong, Victoria. This method, developed by the Wool Textile Research Laboratory of the Commonwealth Scientific and Industrial Research Organisation, cleanses raw wool with white spirit instead of scouring it with soap solutions. Industrial trials show that the fibres of wool treated by this process are only slightly tangled. Much tangling occurs, on the other hand, in normal scouring and causes trouble to the manufacturers of worsteds. Spirit cleansing yields a higher proportion of tops and the yarn produced from them is of better colour and feel.

Inexpensive Plastic Greenhouse

An inexpensive new plastic greenhouse has been developed by the University of California at its Los Angeles campus, one of the University's two largest sub-divisions. Flowers grown in the experimental plastic greenhouse have been of as good quality as those grown in regular glass greenhouses. Designed by two staff members of the University's department of floriculture and ornamental horticulture, the structure utilises polyethyline plastic. It is heated by thermostatically controlled gas heaters. Evaporative systems, similar to home air-conditioning units used generally in the United States, reduce day-time temperatures in hot weather. The plastic is rolled over a wooden framework and lasts six to nine months, which is about the time it is needed during the year. It may be replaced by cheese-cloth during the summer.

Broadcasting Device for Human Heart

Radio broadcasts direct from the human heart have been made possible by a new device developed at the U.S. Naval Medical Research Centre at Bethesda, Maryland. At distances as great as a quarter mile, these broadcasts reveal what is happening to the heart while a person is at work, playing golf, just walking around, or lying down in bed. The new device is called a broadcasting electrocardiograph. The conventional electrocardiograph is the standard tool of all heart specialists. Electrodes are strapped on the patient—generally on an arm and a leg—and electrical impulses produced by heart beats are picked up and recorded. From the intensity and regularity of these impulses, much can be learned about the heart's condition. There is one major drawback to the standard electrocardiograph. It can be used only when the patient is at rest, usually lying down. Thus, all that it can record is the condition of the heart when no strain is placed upon it. It is impossible to obtain a comparative reading of the heart's actions during various degrees and kinds of bodily exercise. With the new broadcasting device, heart beat changes under almost any conditions of exertion can be determined. It consists of the electrodes and amplifier of the conventional electrocardiograph, a radio transmitter and batteries, all of which are worn by the patient. In addition, there is a radio receiver, amplifier, speaker and recorder, which are located in the doctor's laboratory. The precision of this receiver is such that it picks up faint signals of a certain wavelength clearly in spite of any disturbing elements in the laboratory, such as electrical equipment, fluorescent lights and surrounding walls. The messages received from the patient's heart can be heard through a high fidelity speaker or can be written down on paper by a moving pen recorder.

Potash from Sea-water

Large quantities of potash may be made from sea-water in Norway, if the projected plans for the establishment of a plant for this purpose are fulfilled. Potash is present in sea-water in commercially significant quantities. About 4,068,250 tons of potash salt in the form of potassium sulphate occur, on the average, in every cubic mile of sea-water. A number of processes have been developed for the recovery of this salt in Britain and in other countries. The majority of these processes depend on chemical precipitation to drive off the large quantities of unwanted water in which potassium sulphate and other mineral salts which are present in the sea-water are dissolved. During this precipitation process, the salt compounds in the sea-water are reduced to a crystalline form. The potassium sulphate is subsequently separated from magnesium chloride, magnesium sulphate, magnesium bromide, sodium chloride (ordinary salt) and other mineral salts which are present in significant quantities in the sea, by a series of further chemical processes. Other processes having commercial potentialities, however, have been developed now besides these precipitation and chemical separation processes, which are already used in both the U.K. and the U.S. for the extraction of both magnesium and bromine from sea-water. One such method depends, for example, on the use of large ion-exchange columns, which will separate the large volumes of unwanted water present in the sea-water from the potentially valuable mineral salts. Further, the ion-exchange columns separate one from another, not only the five mineral salts, which occur in quantities of more than 1 million tons per cubic mile of sea-water, but also a number of other potentially industrially valuable elements, such as fluorine and rubidium. The sea contains considerable quantities of gold. Recent research, however, has confirmed the experience of early experiments and indicates that the chances of obtaining the gold, which is present in sea-water in quantities of the order of 23 tons per cubic mile of sea-water, are unlikely to prove a commercial proposition so long as gold can be mined from the ground. This gold is carried in the form of minute particles in the bodies of microscopic animals which live in the sea and is reputed to be particularly abundant in parts of the North Atlantic.

Lisasorb—Absorbent for Carbon Dioxide

When it is desired to penetrate into atmospheres which are not respirable either on the score of oxygen shortage or of the presence of poisonous or harmful gases, it becomes necessary to employ self-contained breathing apparatus in which oxygen is available or is generated and in which the carbon dioxide produced in breathing is absorbed. For the absorption of such carbon dioxide, it is necessary to use suitable carbon dioxide absorbent. The absorbent used for the purpose should have the following characteristics:

(1) rapid and efficient carbon dioxide absorption capacity;

(2) low resistance to the flow of the air and gases;

(3) the temperature rise produced should not be excessive;

(4) should be resistant to disintegration or agglomeration; and

(5) absence of excessive alkali or other material in the absorbent which may affect rubber and other delicate parts of the breathing equipment.

An absorbent (*Lisasorb*) suitable for use in respiratory protective devices and possessing the requisite properties, has been developed at the Fuel Research Institute, Jealgora. Practical performance tests of *Lisasorb* prepared by the Institute, undertaken by the Mines Rescue Stations, Jharia, have established that its performance is satisfactory and comparable to standard products of imported origin. This will be clear from the following data:

	Lisasorb (by wt.) (in percentage)	*A standard absorbent of imported origin (by wt.) (in percentage)*
(i) Total CO_2 absorption capacity	35.01	30.05
(ii) Total CO_2 absorption capacity after 2 hours wearing test in the training gallery	27.6	22.2
(iii) Total CO_2 absorption capacity after 4 hours use	27.1	22.1

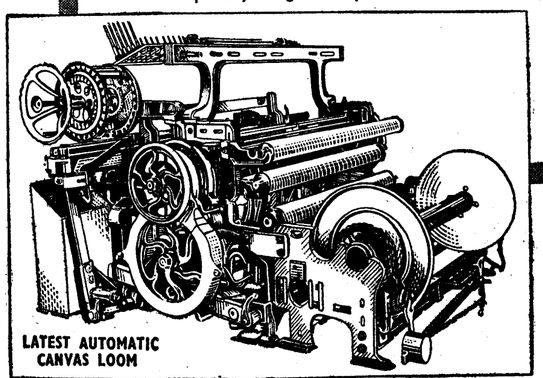
The total demand of such carbon dioxide absorbents being imported at present is not known accurately. The annual requirement of such products are several lakh pounds and the requirement of the mines' rescue stations of the Government of India and the mines are in the neighbourhood of over 200,000 pounds per annum. In addition to mines' rescue stations and coal mines, other mines such as Kolar Goldfields use such absorbents. Further, the product is extensively used by fire brigades and is also important for defence services. In fact, the material is required in factories, mines, industries and in any circumstances where one is to penetrate into irrespirable atmospheres with self-contained breathing apparatus where the carbon dioxide produced in breathing has to be absorbed.

The process of manufacture of *Lisasorb* is covered by Indian Patent No. 53607 and consists essentially of fixing soda lime on a kieselguhr—alumina base under defined and controlled conditions. The main raw materials required are good quality burnt lime, caustic soda and kieselguhr, all of which are easily available. The equipment needed for manufacture is simple and can be easily fabricated or procured. Parties desirous of undertaking the commercial development of the process are invited to correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi, 1.

A Wide Range of Latest Textile Weaving, Dye House, Preparatory, Finishing & Testing Machinery

Automatic, Under-pick And Over-pick Looms suitable for Cotton, Silk, Rayon, Wool, Canvas & Blanket in both Loose & Fast Reed.

Specially designed Drop Box Looms, Dobbies, Jacquards



LATEST AUTOMATIC CANVAS LOOM

AUXILIARY MOTIONS ETC.

- Twill and Drill Motions
- Roller Top Motion
- Lacey Top Motion
- Selvedge Motion
- Positive Let - off Motion
- Warp Stop Motion

Drop Boxes 2x1 & 4x1

Chute Loader for conversion of Plain Over-pick looms to Automatic. Conversion of Looms to bigger Reed Space. Manufacture of spare parts of all types of looms. Machine cut gears a speciality

Our Other Products:

- Tensionless Semi Automatic Dyeing Jiggers
- Tensionless Vertical Sizing Creels
- Colour Mixing & Starch Cooking Machine
- Padding Mangle
- Wash Testing Machine
- Steam Ager
- Stamping Machines
- Texcooler
- Bobbins and shuttles
- Picking sticks

INSURANCE FIRMS TO BE MERGED IN A NEW CORPORATION

BILL INTRODUCED IN LOK SABHA

THE Government has been criticised on the ground that if it had consulted the interests concerned before it took the decision to nationalise life insurance, the transition of this industry from the private to the public sector might have been effected in a comparatively smooth manner. Obviously, the Government does not feel the need for any such consultation even now. It has not taken the industry into confidence in framing the provisions relating to the future structure of insurance organisation, nor has it done so in the matter of compensation payable to the companies taken over by it. In framing the two Bills—one providing for the establishment of a statutory life insurance corporation and the other for converting into an Act the recent ordinance relating to nationalisation of insurance—introduced in the Lok Sabha on 17th February 1956, the Government could have consulted the interests at least in regard to the former Bill.

In the statement of objects attached to the Bill replacing the ordinance, the Government has returned to its favourite theme of maligning the insurers. It points out that it was necessary to issue the ordinance in order to save the interests of the policyholders from damage till legislation for nationalisation was passed and put into effect. It says:

"The Government has during the last few months been studying the problems facing the insurance industry in its role as an effective instrument of mobilising peoples' savings and putting them to use in a constructive manner. As a result of such study the present management of the industry has been found wanting in several respects. By the amendment of the Insurance Act, which was effected in 1950, the Government took powers to appoint administrators to manage companies where the interests of the policyholders were in grave jeopardy. In the short period that has elapsed since then, a number of companies had to be put under administrators as investigation into their affairs revealed gross mismanagement—even embezzlement—very often resulting in insolvency. It has been observed that with a few exceptions, the Indian life insurers are virtually controlled by individuals who are prone to utilise the funds of these companies to subsidise or prop up their investments in other ventures to the detriment of the industry and the policyholder who is its backbone. Tightening up the provisions of the Insurance Act is no remedy since it is only of a negative character. The Government has, therefore, decided to nationalise the life insurance business."

This language is somewhat different from the one used by Mr. U. N. Dhebar, President of the Congress, when he referred to nationalisation of insurance in the course of his presidential address at the recent Amritsar session of this body. He said that this measure was one of the steps undertaken by the Government in order to reduce social and economic disparities. The Economic Policy Resolution, adopted by the Congress, emphasised that the "conversion of the Imperial Bank into a public-owned and public-managed State Bank and the recent nationalisation of life insurance are significant steps towards the evolution of a socialist structure." A similar note was struck by Mr. Shriman Narayan, General Secretary of the All-India Congress Committee, in the course of his introduction to the book on insurance, published by the Committee. He said: "Nationalisation of insurance is to be welcomed, because it is an important step in the direction of establishing the pre-eminence of the public sector in the economy of India." He added: "There is need for an extended public sector to provide for large planned development, to prevent emergence of inequalities and to discourage greater concentration of economic power."

From this it should be clear that the main reason for the decision to nationalise life insurance was political. It is, perhaps, unnecessary for the Government to trot out the so-called moral lapses on the part of a few insurers as the reason for nationalisation of insurance. Indeed, an impartial study of the trends in Congress opinion shows that it would have persuaded the Government to nationalise life insurance even if the industry had been more ably managed than it was. It is not inconceivable that the Government's reason would then have been that life insurance was too good, too ably conducted, to be left in the private sector.

The Bill for nationalisation of life insurance provides that all such business in the country will be transacted through a Life Insurance Corporation whose share capital will be provided entirely by the Central Government. The statement of objects says that the Government has nationalised life insurance in order to "ensure absolute security to the policyholder in the matter of his life insurance protection, to spread insurance much more widely and in particular to the rural areas, and as a further step in the direction of more effective mobilisation of public savings." Into the proposed Corporation will be integrated all the "insurance companies now engaged in life business, as also the organisations functioning under the control of State Governments and conducting such business for the benefit of the public." The Bill will not, however, apply to the Post Office Life Assurance Fund as well as any schemes in existence in which the payment of money is assured by the Government on account of certain compulsory deductions made by Government from the salaries of its employees.

A New Corporation

The Corporation will be established on a date to be announced by the Government with an original capital of Rs. 5 crores, which will be provided by the Central Government. It will have the exclusive right of carrying on life insurance business in India and will also transact such business in foreign countries. Payment of sums assured for the policies issued by insurance companies, the liabilities of which have vested in the Corporation under the Bill, will be guaranteed by the Central Government.

The Corporation will consist of not more than 15 members. Before appointing a person as a member, the Central Government will satisfy itself that the person to be appointed has no such financial or other interest as is likely to affect prejudicially the exercise of his functions as a member. It is provided that a member who is directly or indirectly interested in a contract made or proposed to be made by the Corporation should not take part in any deliberations or discussions of the Corporation with respect to that contract.

The Central Government is empowered to issue from time to time directions to the Corporation on matters of policy involving public interest. The general superintendence and direction of the affairs of the Corporation will, however, be entrusted to an executive committee which may have a managing director as a whole-time officer. Zonal offices of the Corporation will be established at Bombay, Calcutta, Delhi and Madras and subject to the previous approval of the Central Government, the Corporation may establish such other zonal offices as it may think fit.

The duty of the Corporation, as already stated, will be to carry on life insurance business whether in or outside India. Its other functions include capital redemption business, annuity certain business or re-insurance business in so far as such re-insurance business appertains to life insurance business.

From the appointed day, every whole-time employee of an insurance company whose business has been transferred to and vested in the Corporation shall become an employee of the Corporation on the same terms and conditions as he enjoyed before transfer. The Central Government, however, retains the right, for the purpose of rationalisation, to reduce pay scales or alter the terms of service of the employees.

Settlement of Disputes

For settlement of disputes arising in the process of nationalisation, the Act provides for the constitution of a tribunal consisting of three members appointed by the Central Government, one of whom shall be a person who is, or has been, a Judge of a High Court or Supreme Court. The tribunal will take action on the cases referred to it by the Corporation where the insurance companies whose business has been transferred to the Corporation had acted prejudicially within two years before 19th January 1956. These include transactions completed 'without consideration' or for inadequate consideration' or for 'excessive consideration.' The tribunal will also have to decide on disputes concerning compensation to be paid to the insurance companies.

The principles governing compensation have been defined in the Bill as follows:

"The compensation to be given by it to the Corporation to an insurance company which has allocated to shareholders any share of the surplus as disclosed in the abstracts prepared in accordance with Part II of the fourth schedule to the Insurance Act in respect of the last actuarial investigation relating to its controlled business as at a date earlier than the first day of January 1955 shall be computed in accordance with the provisions contained in Para I or Para II whichever is more advantageous to the insurer.

"Para I: Twenty times the annual average of the share of the surplus allocated to shareholders as disclosed in the abstracts aforesaid in respect of the last two actuarial investigations as at dates earlier than the first day of January 1955.

"Para II: Ten times the annual average of the share of the surplus allocated to shareholders as disclosed in the abstracts aforesaid in respect of the last two actuarial investigations as at dates earlier than the first day of January 1955, *plus* the paid-up capital or assets equivalent thereto or, in the case of a composite insurer, that part of the paid-up capital or assets equivalent thereto which has or have been transferred to and vested in the Corporation under this Act less the amount, if any, of expenses or losses or both capitalised by the Insurer for the purposes of form A in the schedule to the Insurance Act.

"For the purpose of paragraphs 1 and 2 where an insurer has allocated to shareholders more than 5 per cent. of any such surplus as is referred to therein, the insurer shall be deemed to have allocated only 5 per cent. of the surplus, and where an insurer has allocated to shareholders less than 3 per cent. of any such surplus, the insurer shall be deemed to have allocated 3 per cent. of the surplus.

"To other insurance companies which are not covered by the conditions stated above, compensation will be paid taking into consideration the assets and the liabilities of the companies as they stood on 19th January 1956. For an insurance company which has no share capital or has no share capital on which dividends or bonuses are payable or an insurance company which is an uncorporated body of individuals, compensation shall be in the form of an addition at the rate of rupee one per thousand in respect of the sum assured (excluding bonuses) under each 'with-profit' policy."

It is clear from the foregoing account that the Government has finally decided in favour of a single life insurance Corporation for the entire country. Private interests had, however, suggested the retention of the existing structure of company-organisation under the ownership, direction and control by the Government. Thus, the Committee of the Federation of Indian Chambers of Commerce and Industry had urged the Government to preserve the flexible structure of Indian insurance following its decision to nationalise life insurance in the country. If the purpose of nationalisation was to acquire control

ANNUAL REPORT

To be submitted to the Shareholders at the Fiftieth Annual Ordinary General Meeting to be held at the Registered Office of the Bank, Mahatma Gandhi Road, Fort, Bombay, on Thursday, the 8th March, 1956, at 4 o'clock in the afternoon.

Directors' Report for the year ended 31st December, 1955.

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1955. The Auditors' Report is also annexed.

	Rs.	a.	p.
The transactions for the past year, including the balance brought forward from the previous year, Rs. 9,10,851-5-5, have resulted in a profit of	94,01,630	3	5
An interim dividend was paid for the half-year ended 30th June, 1955, at the rate of 8 per cent. free of Income-tax on the Paid-up Capital of Rs. 2,50,00,000, which absorbed	15,00,000	0	0
Provision made for Income-tax and Super-tax for the year	25,00,000	0	0
Bonus to Staff	12,75,000	0	0
The Directors now propose :—			
To pay a final dividend for the half-year ended 31st December, 1955, at the rate of 10 per cent. free of Income-tax, making 18 per cent. for the year, on the Paid-up Capital of Rs. 2,50,00,000, which will absorb	25,00,000	0	0
To place to the Bank's Landed Property Account	3,00,000	0	0
To carry forward to the next account	13,26,630	3	5
Total .. Rs.	94,01,630	3	5

The Bank's business continued to function satisfactorily.

The Official Bank Rate remained stationary at 3½ per cent.

Branches were opened during the year in India at Delhi and Bangalore and abroad at Dar-es-Salaam (Tanganyika).

In accordance with Article 92, read with Regulation 78 of Table "A" of the Indian Companies Act, Mr. Ambalal Sarabhai, Mr. Dinshaw K. Daji and Mr. Ramniwas Ramnarain retire from the Board by rotation, but are eligible and offer themselves for re-election.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWASJEE JEHANGIR, *Chairman.*
Directors.— AMBALAL SARABHAI, JOSEPH KAY, DINSHA K. DAJI, RAMNIWAS RAMNARAIN, BHAGVANDAS C. MEHTA, K. M. D. THACKERSEY, A. D. SHROFF, MADANMOHAN MANGALDAS.

H. T. COULTAS, *Chief Accountant.*
D. R. THOM, *General Manager.*

BOMBAY, 2nd *February*, 1956.

N.B.—The Dividend, when sanctioned, will be payable on and from Saturday, the 24th March, 1956, to Shareholders whose names are on the Register on 9th March, 1956.

Dividend Warrants will be posted to Shareholders at their Registered Addresses. Early intimation should be given to the Bank of any change of address.

BALANCE SHEET AS AT 31st DECEMBER, 1955.

(Continued on next page)

PHYSICAL PLANNING AND FINANCIAL PLANNING—II

DEFICIT FINANCING—AGRICULTURAL PRODUCTION

By A Special Correspondent

THE secret of physical planning lies in credit expansion. Prof. Shenoy is, perhaps, the most vehement critic of credit expansion and deficit finance. What are his arguments? He says the money income of the community represents the creation of real resources like goods, machines and services; and the expenditure of the community represents the consumption of real resources. The savings of the community represent the unspent real resources. It is only the unspent real resources that can be invested, and savings of the community are merely the financial counterpart of the unspent real resources. Therefore, investment cannot exceed savings. Creation of new money cannot create real resources; it will not accelerate the process of development, but will only result in inflation. If Prof. Shenoy's attention is drawn to the existence of a vast mass of unemployed people (which is the *raison d'etre* for a physical approach to planning), he would say that labour alone cannot produce goods; they must have machines and raw materials to act upon.

If Prof. Shenoy is assured that Government and the private enterprise will create new money and spend it only if all the factors of production including labour, equipment and raw materials are available, it should calm down his opposition. In other words, so long as new money is spent not on doles but on projects and enterprises, there should be no objection to its creation. The other logical conclusion that follows from Prof. Shenoy's arguments is that, so long as there are unemployed people in this country, the labour part of the investment expenditure can be met from new money (i.e., bank credit), since he says that new money can be created only to the extent that unspent real resources have not been invested. Thus, if the argument of "real resources" put forward by Prof. Shenoy in several of his recent writings on the subject of deficit finance is carried to its logical conclusion, it will go against his thesis and not support it.

Then, it might be said that there would be a time interval between investment and output and inflationary conditions would appear during this interval. This is a very common and simple—and the only weighty—argument against credit expansion. But those who are inspired by the rapid rate of progress in Russia and realise the risks and dangers involved in the slow rate of progress contempated in the *Draft Outline* would not leave the matter at that. They would ask: Why is inflation considered bad and undesirable? The obvious answers are: (i) the poor are adversely affected by it; and (ii) inflation hampers production and defeats its own purpose. These points deserve closer examination.

Pattern of Expenditure

The pattern of consumer expenditure in the country given below indicates the overwhelming importance of foodgrains and other agricultural commodities in the consumer expenditure.

Percentage of total expenditure

	Rural areas	*Urban areas*	*All-India*
Food articles	64.1	51.5	61.3
Clothing	8.1	8.8	8.2
Fuel and light	5.5	5.6	5.5
Tobacco	1.9	2.0	2.0
Services	5.3	6.9	5.6
Ceremonials	5.8	4.8	5.6
Miscellaneous	9.3	20.5	11.8
Total ..	100.0	100.0	100.0

Nearly four-fifths of the consumer expenditure is directly on agricultural commodities and cloth. In the case of poorer sections, the weight of these commodities must be still greater. Expenditure on services and ceremonials must also be dependent on the prices of foodgrains, cloth, fuel, tobacco, etc. Thus, if we are able to rapidly increase the production of agricultural commodities, as well as cloth, and prevent a rise in their prices, no amount of inflation can affect their standard of living. And since the stepped-up planned expenditure would be disbursed largely among the poorer sections of the community, a plan of heavy investment would not affect but greatly benefit the poorer sections—given a reasonable stability of prices of agricultural commodities and cloth.

How Inflation Can Be Checked

An isolated rise in the prices of individual commodities is not the thing that matters. But when bottlenecks in certain vital commodities lead to general inflation, and price inflation and wage inflation chase each other, the deleterious effects of inflation get at work. Of crucial importance in this regard are the prices of food and cloth. Never in history has there been an inflation unaccompanied by a rise in the prices of food and cloth, and, where prices of these two groups of commodities have been held in check, inflation has been successfully averted. We need not go far. The gradual reduction of inflationary pressures in our economy since the second half of 1953 has been due to a more comfortable supply and price position of food articles and the raw material for cloth.

Thus, our ability to embark upon physical planning and expand total investment through larger use of bank credit depends upon our ability to achieve speedy expansion of the output of agricultural commodities and cloth. Maurice Dobb, speaking of economies with surplus labour power, says:

"If there is any factor to be singled out as the fundamental limiting factor upon the pace of development, then I suggest that it is this 'marketable surplus' of agriculture . . . . In terms of this marketable surplus as a determining bottleneck, something resembling the traditional savings fund theory could be reconstructed."

What are the possibilities of increasing the output of agricultural products? The targets of additional production laid down in the *Draft Outline* do not reflect that this is all that is physically possible during the period of the second Plan. These targets have been framed with reference to the additional demand for agricultural products likely to be created as a result of a 25 per cent. increase in the national income. Then, the financial needs for bringing about the necessary output to meet additional

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of India Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the authenticated returns from Branches, and report that :—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit ;
(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;
(e) such Profit and Loss Account shows a true balance of profit for the year ;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and
(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

A. F. FERGUSON & CO., *Chartered Accountants.*
S. B. BILLIMORIA & CO., *Chartered Accountants.*

Statement pursuant to Section 132-A of the Indian Companies Act of 1913 as amended by Act XXII of 1936.

The Profit and Loss Account of the Bank of India Limited for the year ended 31st December, 1955, does not include any profit or loss of its subsidiary, the Bank of India (U.K.) Nominees Limited (a Nominee Company operating in the United Kingdom), as no profit was made and no loss was sustained by that subsidiary. All expenses incurred were borne and paid by the Bank.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED

Balance Sheet, 31st December, 1955.

Capital Authorised and Fully Paid-up— *100 Ordinary Shares of £1 each*	£100	Cash at Bankers	£100
	£100		£100

Signed on behalf of the Board,
J. DONALDSON,
S. H. BRADFORD, } *Directors.*

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance Sheet which is in agreement with the books of account. In our opinion such Balance Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1955, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

demand have been worked out. If financial allocations to the agricultural sector are increased, larger additions to output would be made possible during the 1956-61 period and this can form the basis of a much expanded programme of overall investment in the national economy.

Agriculture Deserves Higher Allocation

Investment programme in the public sector on the development of land resources comes under the following three heads:

	First Five-Year Plan		Second Five-Year Plan	
	Amount of investment	Percentage of total investment	Amount of investment	Percentage of total investment
	(In crores of rupees)		(In crores of rupees)	
Agriculture	252	12	362	8
Community projects and N.E.S.	90	4	200	4
Irrigation and flood control	395	17	458	9
Total ..	737	33	1,023	21

Not the entire amount under these heads is to be spent on the development of land resources. The share of agriculture, etc., in the total investment in the second Plan has been reduced to a little more than half the share in the first Plan. If the investment in the private sector is also included, the share of expenditure on agricultural development would be still smaller. There is absolutely no warrant for such reduction, when it is borne in mind that larger and quicker development of agriculture will enable us to enlarge the size of the second Plan without any fear of harmful inflation. The truth is that so long as there is superfluity of labour, the development of agriculture holds the key to the pace of economic development, and smaller percentage allocations are entirely unjustified. The argument that for making possible a substantial shift of population away from agriculture and for raising the living standards of the cultivating classes, it is necessary that the secondary and tertiary sectors should develop at a faster rate than agriculture is not valid. Large allocations to agriculture do not militate against these aims in a situation where one crore of additional investment in agriculture makes possible several times larger investment in the non-agricultural sector. Also agriculture, animal husbandry, forestry and fisheries which have been allocated about 10 per cent. of the investment funds in the second Plan are expected to account for about 32 per cent. of the increase in national income during this period. From this criterion also, agriculture deserves higher allocations.

Higher production in agriculture comes from six major types of schemes, namely, (a) major irrigation, (b) minor irrigation, (c) land reclamation, (d) fertilisers and manures, (e) improved seeds and (f) improved methods of cultivation. Among these, some are quick-maturing schemes; others like irrigation and fertilisers may not have much impact on additional production in the first year of the Plan. Until these late-maturing projects begin to show results, we can intensify our effort on quick-maturing type of schemes, so that, soon after the larger programme of total investment based on the physical approach to planning goes into operation, we have the correspondingly larger output of agricultural commodities.

Cloth

About cloth, which is next in importance to food as an article of mass consumption not much need be said. Far from there being any anxiety about our ability to increase production, Government is taking steps to curb the expansion of production in the mill sector. On the one hand, they do not increase the size of investment for fear of inflation; on the other hand, they do not allow the expansion of goods which are a remedy for inflation. Expansion of mill-made cloth can take place immediately without much foreign exchange being involved. Hardly 40 per cent. of the installed loom manufacturing capacity and 50 per cent. of the ring spinning frames manufacturing capacity in the country is being utilised at present.

If we provide for a 50 per cent. increase in the amount of investment on land resources envisaged in the *Draft Outline*, would not the resultant higher and quicker output of agricultural products permit a proportionate increase in the overall investment programme without any fear of what may be called general inflation. It is no indulging in mere reverie. Can anyone give a convincing picture of the harmful effects of inflation that might result from increasing the development expenditure from Rs. 7,100 crores to Rs. 10,000 crores, assuming a commensurately larger increase in agricultural production? All that has so far been said against credit expansion is vague and unconvincing.

Some Assumptions Examined

As representative of the arguments against large-scale credit expansion may be examined the following points in the light of the assumption of larger additions to the output of agricultural commodities and cloth:

(1) It may be argued that credit expansion and deficit finance will start an inflationary trend, which, if unchecked, could be highly regressive. This argument holds no water. Credit expansion accompanied by larger increase in the marketable surplus of agricultural commodities will not impair the real value of money incomes and will lead to a rapidly rising standard of living of the masses on whose employment new money will be spent.

(2) Credit expansion may lead to changes in relative prices which may obstruct the working of the Plan. One does not understand how it can be so. If the prices of essential articles are held stable through larger agricultural output, the higher money incomes will lead to greater demands for commodities other than food and cloth. There is a growing belief that the production of commodities other than food and cloth is not rapidly expanding merely because the demand for these articles is poor. The existence of excess capacity in factories producing articles such as automobiles, bicycles, electric fans, leather goods and many others is symptomatic of the lack of demand. If this is so, then credit expansion and deficit financing will not distort prices, but will bring a healthy change in the price structure which is essential for turning the present lopsided pattern of production into a more balanced one.

(3) It has been stated that the crucial question is the time-lag between overall investment in the economy and the additional output of agricultural commodities. Prof. Shenoy, for instance, says that much disturbance may occur during the period, and "it would be incorrect to suppose that inflation would be liquidated when the compensatory increase in output becomes available." He has only echoed the views of the I.M.F. Mission to India whose report was published in the form of a booklet, *Economic Development with Stability*. The Mission said: "Suppose that, after an interval of two years, the effect of new investment is to increase agricultural production annually by an amount equivalent to the additional investment financed by bank credit. Even under such circumstances, the maintenance of the same level of investment would generate inflation." The argument is that subsequent increase in output will be accompanied by its own financial counterpart. As the Mission put it, "the increase in output accrues as income to some part of the economy, except as it results in additional tax revenue or is set aside as reserves for depreciation."

All this seems to be a difference of words. The actual position is that agricultural production is seasonal. It has been noticed that increased crop arrivals in the market during the busy season following a higher output, leads to a slump in the prices of the commodity, unless the higher output is *preceded* by a larger money flow and larger demand for these commodities. Some interval between credit expansion and increased agricultural output is essential for preserving stability and preventing a commodity slump. In advanced countries, new production, both in the agricultural and industrial spheres, is, in a large measure, financed by banks. But, in India, agricultural production has been making progress with only negligible bank credit, that is, new money. Thus, while in advanced countries, in the normal course of production, new money is created before new production takes place, in India this is not so. In such circumstances, there is nothing to fear if there is some time-lag between credit expansion in the economy as a whole and agricultural output. An interval of one year or a little more will make for stability and not inflation. If this consideration is kept in mind, the size of the Plan can be enlarged even with the present programme of agricultural development. And, if the tempo of agricultural development is stepped up from what is envisaged in the second Plan, a development expenditure of Rs. 10,000 crores will not entail any serious situation.

(4) It is argued that a higher rate of investment made possible through credit expansion would create balance of payments difficulties. Further, a higher rate of development is not possible, because the foreign exchange component of a higher investment programme would not be forthcoming, and, unless we have the wherewithal to buy machinery and equipment from abroad for the use of our surplus labour, it is no use thinking in terms of physical planning and doing away with the financial limitations.

Foreign Exchange

In several ways however, the higher investment programme based on larger marketable surplus of agricultural commodities will find its own foreign exchange resources. First, the *Draft Outline* provides for an import of 6 lakh tons of foodgrains and one lakh tons of sugar annually during 1956-61. As a result of higher marketable surplus of agricultural commodities and the ensuing standards of consumption considerably above the subsistence level, these imports can be eliminated bringing a saving of

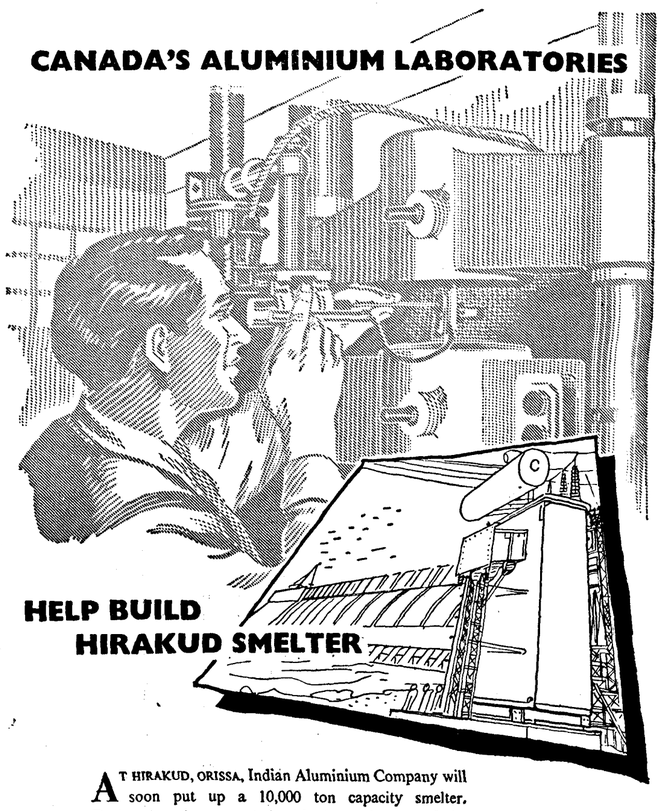
CANADA'S ALUMINIUM LABORATORIES



AT HIRAKUD, ORISSA, Indian Aluminium Company will soon put up a 10,000 ton capacity smelter. Designed and constructed with the assistance of the Company's Canadian associates, this smelter will triple current production capacity. The know-how and world-wide experience of the Canadian consultants, who spend over Rs. 2 crores annually on aluminium research and development, will thus serve one of India's vital industries.

This aluminium smelter will be India's biggest and will call for a large capital investment to be financed partially by a proposed issue of new capital by the Company.

THE BANK OF INDORE, LIMITED

(INCORPORATED IN INDORE, 1920)

REPORT OF THE DIRECTORS TO BE SUBMITTED TO THE SHAREHOLDERS AT THE THIRTY-SIXTH ORDINARY GENERAL MEETING

GENTLEMEN,

Your Directors have the pleasure to lay before you the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1955, duly audited by Messrs. A. F. Ferguson & Co., Chartered Accountants.

	Rs.	a.	p.
The Net Profit for the year including the sum of Rs. 64,703-1-2 brought forward, amounts to	5,71,830	12	2
An ad-interim Dividend was paid for the half-year ended 30th June, 1955, at the rate of 14 per cent. per annum on 61,215 shares absorbing	1,07,126	4	0
Amount transferred to Reserve Fund (bringing that Fund upto Rs. 27,00,000)	1,00,000	0	0
Amount transferred to Contingency Fund	1,00,000	0	0
Bonus paid to the Bank's Staff	71,442	4	0
	3,78,568	8	0
Your Directors now recommend :—			
To pay a Final Dividend at the rate of 14 per cent. per annum on 61,215 Shares for the half-year ended 31st December, 1955, amounting to	1,07,126	4	0
To transfer to Gratuity Fund	25,000	0	0
To donate to the Indian Red Cross Society, Madhya Bharat Branch	500	0	0
To carry forward to the next account	60,636	0	2
Rs.	5,71,830	12	2

Nawabzada Masood Quli Khan being out of station has not signed the Balance Sheet.

The Directors hope that you will find the progress of the Bank satisfactory.

By Order of the Board of Directors,

N. D. JOSHI,
Manager.

THE BANK OF INDORE, LTD.,

(Continued in next page)

foreign exchange resources to the extent of Rs. 200 crores over and above the estimates of the *Draft Outline*. For similar reasons, savings may be possible by way of reduced imports of long-staple cotton, increased exports of short-staple cotton, less dependence on Pakistani jute, greater exports of groundnut and other oils, tea, pepper, etc. Since increased agricultural output will come partly through higher yields per acre, farmers will be able to afford price reductions on export items. This will increase our competitive power in world markets. Another Rs. 50 crores may be saved or earned on these items.

Secondly, the Planning Commission is thinking of drawing down sterling balances to the extent of Rs. 200 crores only during the second Plan period. The rest, it is thought, is essential for keeping as monetary reserves. Such a high currency reserve as about Rs. 500 crores in the form of foreign exchange is considered necessary, because of the uncertainties of our agriculture and because increased national income is likely to be associated with larger fluctuations in foreign exchange receipts and payments. But the higher agricultural output envisaged here will make us secure against any food emergency. Our people would be above the subsistence line of food consumption, and as such even in bad agricultural years, we can do without food imports. We can, therefore, do with much smaller amount of foreign exchange resources. Even after reserving foreign exchange equal to three or four times the range of fluctuations in our holdings in recent years, we can afford to draw down our sterling balances to the extent of Rs. 500 crores, leaving a balance of roughly Rs. 200 crores. It may be noted that this figure will relate to the final year of the second Plan; for the remaining years, the balance would be much higher. There would also be the facilities afforded by the I.M.F. As we have already paid the bulk of our borrowings from the Fund, it is possible for us to rely on short-term borrowings (up to five years) to the extent of Rs. 40 crores. Moreover, if the undervalued gold holdings of the Reserve Bank are revalued at current prices or at U.S. prices, its value will rise to about three times what it is in the books of the Reserve Bank. In this way, another Rs. 80 crores or so of foreign exchange can be found after meeting the requirement of a minimum holding of Rs. 40 crores worth of gold by the Reserve Bank.

It may also be pointed out that the greater part of the foreign exchange component of the investment programme of the second Plan is on transport and communications and basic and heavy industries. Investment over and above the currently envisaged figure of Rs. 6,100 crores need not follow the same pattern. In this connection, the views of Dr. S. R. Sen (who, incidentally, seems to be an optimist in otherwise a Panel of Pessimists), are very much relevant. He writes in the "Papers":

"In addition to a basic investment programme of Rs. 6,000 crores, or any other figure that may be agreed upon, we should have a supplementary programme .... Heavy industries should have relatively greater preponderance in the basic plan .... The supplementary plan should, on the other hand, have a preponderance of early maturing production schemes and schemes of economic and social overheads."

If this is accepted, the foreign exchange component of the investment programme over and above the target envisaged at present will be of much smaller proportion, which can be met from resources that would be rendered available as discussed above. We cannot be meticulous about appropriate pattern of production when such a pattern means reduction in the scale of development. We can expand those sectors of production which it is possible to do —as Prof. Mahalanobis said—with the available craft.

What we are concerned with is total credit expansion and not merely the deficit financing part of it. But, while in advanced countries, commercial bank credit plays a greater role, in India, the currency expansion is more important in the total supply of money, as would be clear from the following table:

Country (1)	Notes in circulation (2)	Demand deposits (3)	Ratio of (3) to (2)
U.S.A.	27,100	98,300	3.6
U.K.	1,570	3,890	2.5
Canada	1,419	3,792	2.7
Australia	340	1,241	3.7
Japan	505	798	1.6
India	1,210	6,000	0.5

Figures are in national currencies as on June, 1954.

It would perhaps be better if instead of borrowing from the Reserve Bank and financing State enterprises with that money, Government, or the State enterprises directly, borrow from the State Bank of India, the State Bank being permitted to rediscount these credit instruments at the Reserve Bank of India to the extent of an appropriate proportion of the amount of the credit. In this way, increase in money supply would, to a much smaller extent, be in the form of currency and would, therefore, not exert much inflationary pressure. This way of credit expansion would also not gain that publicity as deficit financing would. In so far as inflation is caused not so much by the expansion of money supply as by the news of it, borrowings of State enterprises from the State Bank would be a better device than borrowings from the Reserve Bank.

Physical Resources

All the above analysis shows that it is possible for us, within the non-totalitarian concepts of government, to make a physical approach to planning in which the scale of investment would be determined not by the current financial savings of the society but by the availability of the physical resources in men and materials. By this approach, it is possible considerably to step up the rate of income and employment expansion from what is envisaged in the draft second Plan. We may not be able to achieve Russia's rate of development, but the difference should not be between, what the poet compared. an aeroplane and a slow-moving cart. Some of the practical implications of the physical planning, in the sense in which the term has been discussed above, will be as follows:

(i) The State Governments proposed their development programmes totalling Rs. 5,741 crores. Their Plans were revised down to Rs. 2,344 crores and further revised to Rs. 2,214 crores. In so far as these State Plans were scaled down for reasons of financial resources, the cut would have to be reconsidered. Some of the schemes in the State Plans which involve excessive draft on scarce materials like steel and cement can be scrutinised. but the States should be encouraged to make alternative proposals in lieu of the cuts made on this ground.

(ii) The conflict between the private sector and the public sector for claims on the limited "savings fund" of the community would cease. If the private sector progresses speedily, it would not be at the cost of the public sector.

(iii) The conflict between the small-scale and large-scale sector would also vanish, because the two sectors would be producing not for a limited market but to satisfy the demand which may well be in excess of the capacity of both.

(iv) The conflict between the heavy and light industries would also disappear. The present conflict arises because allocations for the industrial sector are, in large measure, being devoted to the basic and heavy industries, and light industries are being starved. In the expanded programme, over and above the one now envisaged, heavy industry would find it difficult to take up a sizable share, because of the shortage of foreign exchange for importing the machinery needed for it. Most of the allocations would inevitably go to light industry. Thus both the heavy and light industries would be satisfied.

(v) The Government will have to give extra special attention to agriculture, because speedier and larger expansion of production in that sector forms the very basis of the idea of physical planning.

(vi) Arrangements will have to be made for the grant of long-, medium- and short-term bank credit on approved schemes, whether in the private or the public sector, the Reserve Bank making available rediscounting facilities to the lending banks as under the Bill Market Scheme.

(Concluded)

THE BANK OF INDORE, LIMITED—*Continued*

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1955.

EXPENDITURE	Rs.	a.	p.
1. Interest paid on Deposits, Borrowings, etc.	12,77,661	9	10
2. Salaries and Allowances and Provident Fund (Salary and Allowance to the Manager Rs. 26,000-0-0, excluding Bonus Rs. 5,400-0-0)	6,65,741	15	1
3. Directors' Fees and Allowances	2,320	0	0
4. Rent, Taxes, Insurance, Lighting, etc. (including provision for taxes on income)	4,07,641	11	0
5. Law Charges	1,128	8	0
6. Postage, Telegrams and Telephones	39,591	7	9
7. Auditors' Fees	12,500	0	0
8. Depreciation on and Repairs to the Banking Company's Property	31,628	14	9
9. Stationery, Printing, Advertisement, etc.	66,684	1	6
10. Loss from Sale of or Dealing with Non-Banking Assets	Nil		
11. Other Expenditure	36,829	9	9
12. Balance of Profit	5,07,127	11	0
Total .. Rs.	30,48,855	8	8

INCOME (Less Provision made during the year for bad and doubtful debts and other usual or necessary provisions)	Rs.	a.	p.
1. Interest and Discount	27,11,283	2	6
2. Commission, Exchange and Brokerage	3,02,006	8	5
3. Rents	2,565	0	0
4. Net Profit on Sale of Investments, Gold and Silver, Land, Premises and other Assets (not credited to Reserves or any particular Fund or Account)	Nil		
5. Net Profit on Revaluation of Investments, Gold and Silver, Land, Premises and other Assets (not credited to Reserves or any particular Fund or Account)	Nil		
6. Income from Non-Banking Assets, and Profit from Sale of or Dealing with such Assets	5	0	0
7. Other Receipts	32,995	13	9
Total .. Rs.	30,48,855	8	8

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Bank of Indore, Ltd., as at 31st December, 1955, and also the foregoing Profit and Loss Account for the year ended upon that date, in which are incorporated the audited returns of the Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from the Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank; and

(g) in our opinion, books of account have been kept by the Bank as required by Section 120 of the Indian Companies Act, 1913.

NEW PUBLICATIONS

F.A.O. Yearbook of Fishery Statistics, 1952-53. Published by the U.N. Food and Agriculture Organisation, Rome. Parts I and II. Price: $3 each.

INDIA increased its fish exports from 21,861 metric tons in 1938, valued at Rs. 73,11,000, to 30,998 metric tons in 1953, valued Rs. 4,44,03,000, according to the *F.A.O. Yearbook of Fishery Statistics*, 1952-53 (Volume IV, Part 2, International Trade), which has just been published in Rome by the Food and Agriculture Organisation of the United Nations. During the same period imports of fish fell from 10,007 to 4,101 tons although the value rose from Rs. 19,50,000 to Rs. 59,41,000. The big increase in exports was due to the sale of more dried, salted or smoked fish. This export rose from 17,088 metric tons, worth Rs. 69,29,000 to 28,257 metric tons, valued at Rs. 4,30,35,000. India's best customers for this export were Ceylon, which took more than 17,000 metric tons, Burma, which took 6,371 metric tons, and Singapore, which took 2,476 metric tons.

The following list, extracted from the *Yearbook*, shows the trend of imports and export trade in fish in Asia. Out of the 21 countries listed, 13 showed increased imports and seven exports. Aden, Hong Kong and Syria increased both imports and exports in the period under review:

(In metric tons)

Country	Imports		Exports	
	1938	1953	1938	1953
Aden	1,765	4,498	1,264	7,082
Brunei	106	270	..	..
Burma	12,343	5,596	1,539	177
Ceylon	31,482	38,353	668	26
Taiwan	58,153	19,843	9,175	137
Cyprus	368	1,361	..	..
Hong Kong	7,370	31,829	7,145	9,311
India	10,007	4,101	21,861	30,998
Indonesia	72,703	38,355	9,092	12,987
Iran	384*	167	1,102*	4,333
Israel	5,735†	24,975	..	..
Japan	11,302	14,880	236,592	149,949
Lebanon	978	1,476	568	16
Malaya and Singapore.	69,513	61,406	58,866	44,138
North Borneo ..	186‡	620	2,291	1,120
Pakistan	..	..	19,532‡	28,483
Philippines	16,847	31,212	875	762
Sarawak	1,472	12,302	417	233
Thailand	17,083	3,117	27,793	18,387
Syria	316§	713	54§	391
Turkey	169	216	14,791	4,782

* 1949-50. † 1939. ‡ 1949. § 1950.

The increased imports of more than half the countries listed were made up chiefly of fresh fish, which gained ground in a number of countries. There was also a noticeable increase in imports of fresh, frozen, dried or salted crustaceans and mollusces and in fishmeal and fertilisers. While imports of dried, salted or smoked fish, and fish in airtight containers declined in some instances, this loss was more than offset by bigger sales in other countries on the list.

The *Yearbook* (Part 2, International Trade) is divided into nine sections. The first three contain the summarised tables, one for each continental group of countries, based on the detailed data given country by country in the last six sections. The summarised tables permit easy international comparisons in terms of broad groups of fishery commodities, while reference to the country tables provides details of the composition of the commodity groups and the countries of origin and destination. Quantities are given in metric tons and, in the first three sections, the values in United States dollars. National currencies are used in each of the national tables.

In view of requests for greater international comparability, the commodity groups have been adjusted to conform to the classification used in the Standard International Trade Classification, recommended by the Economic and Social Council to be used by the countries in rearranging their details on imports and exports. Part I (Production and Craft) containing statistics of catch and landings, utilisation, production of preserved and processed commodities and fishing craft, was published earlier this year.

Handbook of Vital Statistics Methods. Published by the Statistical Office of the United Nations, New York. Price : $2.50.

This *Handbook* gives a lucid and interesting account of the actual practices, procedures and methods of the operations of a vital statistics system adopted in the different countries of the world, with tabular analyses giving international comparisons. The practices and procedures discussed pertain primarily to those in use in connection with records and statistics of live birth, death, stillbirth, marriage and divorce. The aspects relating to adoptions, recognitions, legitimations, annulments or legal separations are, however, excluded, except by inference. For all practical purposes, the date of reference is 1st January 1950.
