(vi) Debts due by Companies or Firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of Private Companies, as Members	Nil	
(vii) Maximum total amount of advances, including temporary advances made at any time during the year to Directors or Managers or Officers of the Banking Company or any of them either severally or jointly with any other persons	5,599 10 10	
(viii) Maximum total amount of advances, including temporary advances granted during the year to the Companies or Firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of Private Companies, as Members	Nil	
(ix) Due from Banking Companies	8,096 9 0	
6. **Bills Receivable Being Bills for Collection** as per contra— (i) Payable in India	59,68,975 12 7	
(ii) Payable outside India	71,41,394 7 10	
7. **Constituents' Liabilities for Acceptances, Endorsements and Other Obligations** per contra		1,31,10,370 4 5
8. **Premises, Less Depreciation**		2,03,52,206 2 0
9. **Furniture and Fixtures, Less Depreciation**		Nil
10. **Other Assets**— Stamps, Sundry Deposits, Prepaid Expenses and Charges Recoverable	54,120 12 5	Nil
Adjusting Account	1,86,728 5 1	
		2,40,849 1 6
11. **Non-Banking Assets Acquired in Satisfaction of Claims**		Nil
Total .. Rs.		9,99,43,890 12 3

PROFIT AND LOSS ACCOUNT OF THE INDIAN BRANCHES FOR THE YEAR ENDED 31st DECEMBER, 1955

EXPENDITURE	Rs. a. p.
1. Interest paid on Deposits, Borrowings, etc.	5,84,234 9 3
2. Salaries and Allowances and Provident Fund (including Salary and Allowances of Principal Officer Rs. 71,862)	10,89,916 1 2
3. Directors' and Local Committee Members' Fees and Allowances	Nil
4. Rent, Taxes, Insurance, Lighting, etc.	1,39,186 12 10
5. Law Charges	16,096 13 5
6. Postage, Telegrams and Stamps	48,336 8 2
7. Auditors' Fees	1,825 0 0
8. Depreciation on and Repairs to Banking Company's Property	Nil
9. Stationery, Printing, Advertisement, etc.	58,265 7 9
10. Loss from Sale of or Dealing with Non-Banking Assets	Nil
11. Other Expenditure including Proportion of London Office Administration Charges	4,46,429 13 5
12. Balance of Profit (subject to Auditors' Fees)	9,62,827 15 5
Total .. Rs.	33,47,119 1 5

INCOME (Less Provision made during the year for Bad and Doubtful Debts and other usual or necessary provisions)	Rs. a. p.
1. Interest and Discount	20,35,794 0 6
2. Commission, Exchange and Brokerage	13,11,325 0 11
3. Rents	Nil
4. Net Profit on Sale of Investments, Gold and Silver, Land, Premises and other Assets (not credited to Reserves or any particular Fund or Account)	Nil
5. Net Profit on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any particular Fund or Account)	Nil
6. Income from Non-Banking Assets, and Profit from Sale or Dealing with such Assets	Nil
7. Other Receipts	Nil
Total .. Rs.	33,47,119 1 5

We have audited the foregoing Balance Sheet of the Indian Branches of The British Bank of the Middle East, as at 31st December, 1955, and also the foregoing Profit and Loss Account for the year ended on that date, in which are incorporated the authenticated returns of the Calcutta Branch and report that :—

(a) We have obtained all the information and explanations which we have required ;

(b) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ;

(c) such Balance Sheet exhibits a true and correct view of the state of the Branches' affairs according to the best of our information and the explanations given to us and as shown by the books of the Branches ; and

(d) in our opinion, books of account have been kept by the Branches as required by Section 130 of the Indian Companies Act, 1913.

T. M. TAGG,
Manager.

BOMBAY, 20th March, 1956.

Chartered Accountants.

PROGRESS TOWARDS SIX-MILLION-TON STEEL TARGET

WORK OF CENTRE'S NEW MINISTRY

IN a world that is perhaps destined to suffer from shortage of steel in the foreseeable future, the efforts that are being made by India to increase the production of steel have rightly attracted world-wide attention. Ever since the Government announced a six-million-ton target for steel production for this country, and set about, with an iron determination, to explore the means for reaching that target, the country has followed the fortunes of the steel plans with considerable interest. In its search for technical know-how and technological and financial collaboration, the Government has sought help both from the democratic West and communist Russia. A direct offshoot of the Government's efforts at increased steel production is the formation of a separate ministry, called Ministry of Iron and Steel. It is, therefore, the youngest ministry, but, as its latest Annual Report covering the period since its birth, on 28th May 1955 to 31st March 1956, shows, one of the most vigorous of the ministries.

The target of six million tons in terms of ingot (which are equal to 4.5 million tons of finished steel) to be reached in 1960, when it was first announced, certainly took the country by surprise, for it meant more than a fourfold expansion from the current level of about 1.43 million tons. But, as the Report points out, whatever the immediate reaction to the target was, "today, if there is any doubt left, it is only whether this target is enough or whether events may not outdate it sooner than one imagines." The target implies an expansion of the production in the private sector from 1.43 million tons to 3.0 million tons in terms of ingot—the output of the Tata Iron and Steel Works to go up from 0.9 million tons to 2.0 million tons, that of Indian Iron and Steel Works from 0.5 million tons to 0.9 million tons and of Mysore Iron and Steel Works from 0.03 million tons to 0.1 million tons—while the target of production at each of the three Government-owned steel plants, the Rourkela Plant, the Bhilai Plant and the Durgapur Plant, is one million tons each. The work of the Ministry which is assisted on its technical side by a reputed firm of consulting engineers, the International Construction Company of London, is to implement the three steel projects in the public sector and also to manage the foundry at Nahan taken over by the Government of India from the Sirmur Durbar.

Rourkela Plant

The management of the steel works at Rourkela, a joint-Indo-German enterprise, is under a company, Hindusthan Steel Ltd., with an authorised capital of Rs. 100 crores and an initial issued and paid-up capital of Rs. 5 lakhs; the share capital of the Company is to be subscribed by the Government and the German combine, Krupp-Demag, in the proportion of four to one. The Government has so far advanced Rs. 6½ crores to the Company. Considerable progress has been made with the planning and construction of the steel works at Rourkela. The site has been got ready and the township is under construction. Exploration for the main raw materials, viz., iron ore, limestone, dolomite and manganese, has also been undertaken with the assistance of the Indian Bureau of Mines. Iron ore deposits, etc., of suitable quality and quantity have been proved in the Taldih range close to Rourkela, and at present a scheme for mining iron ore is being worked out. An agreement has been entered into with Messrs. J. W. Woomer and Associates, Pittsburgh, mining consultants. Drilling for limestone is going on in the Hathibari area near Birmitrapur. At the same time, action has been taken for prospecting of deposits in Bilaspur District (Madhya Pradesh). Dolomite is also being tested for suitability as to lining of the converters to be used for the L-D process.

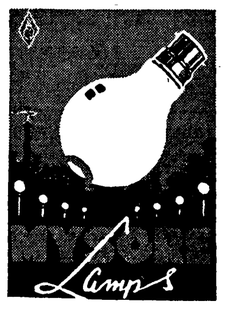
Tenders have been received for two main sections of the plant, the coke oven and the blast furnaces. The main sections of the Rourkela plant will be: (1) a colliery plant with a capacity of about 1.6 million tons of coal "throughput" per annum; (2) a blast furnace consisting of three furnaces to start with (to be increased to four furnaces later on) with noted output of 1,000 tons per furnace per day; (3) a steel melting shop employing mainly the oxygen blowing process (L-D process); (4) a large rolling mill plant of modern design for hot and cold rolling, including a broad strip mill for strips upto 1.525 mm. in width.

The plant will manufacture 720,000 tons of flat products from one million tons of ingot steel per annum. The manufacturing programme comprises heavy plate for shipbuilding, locomotive construction, boiler making, track building, etc., and light plate and strip, hot and cold rolled, tinned and galvanised. An outstanding feature of the Rourkela plant will be the adoption of Linz-Donawitz (L-D) oxygen blowing process which was developed in Austria in recent years and is employed in about eight steel works in the world, four of them being on the North American Continent. This process is expected to have the advantages of lower capital and operating costs, higher rate of production and saving in space and auxiliary equipment. It will also yield nitrogen as a by-product which would be used for the manufacture of fertilisers. Out of the one million tons of ingots to be produced at the Rourkela plant annually, 750,000 tons will be manufactured by the L.-D. process and the balance by the open-hearth process. It is proposed to set up a fertiliser plant at this place to produce 80,000 tons of nitrogen in the shape of fertilisers.

Bhilai Project

The Bhilai steel project, which, as is well-known, is a joint Indo-Russian enterprise, has been entrusted to a project division in the Ministry, with a general manager at the head of the division; he is assisted by a Soviet chief engineer on technical matters. It will be an integrated iron and steel works, with an initial capacity of one million tons of ingot to be rolled into 750,000 tons of finished products. The plant will be designed to produce rails, heavy structurals, sleeper bars, crossing sleepers, merchant bars and billets; provision will be made for raising the eventual capacity to 1 million tons of rolled products, besides 300,000 tons of foundry pig iron for sale. Detailed topographical survey of the plant site and the area required for the township has been completed. The Tandula canal which passes through the selected site of the works is being diverted over a length of about 2½ miles. Acquisition of land is in progress; so far 3,425 acres of land have been acquired out of 14,000 acres to be acquired. Electric power required for the plant will be supplied by the Madhya Pradesh Electricity Board and for this purpose, the Board is setting up a 90,000 kw. thermal station at Korba.

Certain sections of the steel works, two coke oven batteries, two last furnaces, two open hearth furnaces and the blowing mill are expected to go into operation in 1958 and the steel works, as a whole, by December 1959. It may be mentioned here that a contract for the supply of equipment for the steel works to be erected at Bhilai with Russian assistance was signed early this month. The first consignment of the equipment, according to a press note issued by the Ministry of Iron and Steel, is expected to arrive in India towards the end of June this year and the entire supply completed by the middle of 1959. The equipment, costing approximately Rs. 55 crores, will be supplied on credit repayable in 12 equal annual instalments. Credit will be raised on each consignment in accordance with a general average price agreed upon and interest will be payable at 2½ per cent. per annum from the date from which credit is raised.



Manufactured by

THE MYSORE LAMP WORKS, LTD.

Malleswaram . Bangalore, 3

Tel: "MYSORELAMP" Phone No. 2026

Durgapur Plant

The Durgapur steel project, a product of Indo-British technical collaboration, is being executed under an agreement reached between the Government and a British consortium of steel manufacturers, the Indian Steel Works Construction Ltd. The construction of the plant is expected to be entrusted to a company, though the responsibility of the Government in this behalf will be exercised by a general manager. The agreement between the Government and the consortium, described as a "package deal," is so conceived as to facilitate the speedy execution of the project. The consortium will supply the plant, machinery and equipment and a considerable part of steel structures, refractories and other materials required for the plant and will also carry out the entire work of erection and civil engineering at the site. Final tenders are expected to be completed by 30th June, and construction work is to be commenced shortly afterwards.

The total expenditure on the plant, according to reports from London, will be £80 million; actual sterling expenditure will be about £50 million. The sterling portion of the contract will be financed upto £25.5 million from India's sterling balances, £15 million by a British Government loan and by a credit of £11½ million arranged by Lazard Brothers in conjunction with Lloyds Bank, Barclays Bank, Martins Bank, the District Bank and Glyn Mills. Both the sterling loan and the credits will be used for making payment to suppliers during the latter half of the second Five-year Plan. The rate of interest for the credits will be 1 per cent. above the prevailing Bank rate in the U.K., while that for the U.K. Government loan will be the same as that at which that Government borrows in the home market, plus a small element to cover administration charges.

Coal and Iron Ore

The three steel plants, it has been computed, will together require 5.2 million tons of colliery coal and 6 million tons of iron ore per annum. Since the conservation of metallurgical coal, the reserves of which are very limited, is a matter of national importance, the Ministry is taking steps to wash the non-metallurgical coal before use so as to reduce the ash content and blend it with the coking coal. A Government washery is being established at Kargali to wash the coals to be raised by the Government in that area. About 1.6 million tons of washed coal from Kargali will be used in the steel works at Rourkela and Bhilai. To augment these supplies, coal from Jharia will also be required. The Ministry is exploring means of washing coals from Jharia.

The steel works at Durgapur, it is stated, will be so designed that the coals in that area which would otherwise be unsuitable for metallurgical purposes would be used after suitable blending. The works will use Jharia coal which will be washed at the site of the steel works and blended with coal from Barakar which by itself cannot be used for steel making. The steel works at Bhilai will make the best use of metallurgical coal from the Korba coalfields in Madhya Pradesh. In the carbonisation of coal, which will be carried out at each of the steel works for the production of coke, a number of valuable by-products like coal tar, ammonia liquor and benzol will be released. It is proposed to set up at each of these works facilities for the distillation of these by-products and thereby obtain valuable chemicals which form the basis of a number of industries—dyestuffs, paints, varnishes and pharmaceuticals. At Rourkela, as already stated, a fertiliser plant will be set up to utilise the nitrogen released by the adoption of the L-D process.

As regards the iron ore supplies, the Rourkela and Bhilai plants are so located that they will be in the vicinity of iron ore deposits. Durgapur has to obtain its supplies of iron ore from either the existing mines or from mines to be developed in extension of the existing ones in Gua, which

NEW PRODUCTS AND PROCESSES

Detecting Laminations in Metal Sheets

AN electrical method for detecting the presence of laminations in metal sheets has been developed by the British Iron and Steel Research Association. The system depends on the fact that the flow of an electric current through a metal sheet is distorted when laminations are present. This distortion takes the form of a marked increase in the difference in the electrical potential which occurs between electrical contacts placed on either side of the sheet. When no laminations are present, the measurable potential difference between two sets of electrical contacts applied to the metal sheet is slight; but when, on the other hand, laminations are present at the point where one of the two sets of contacts is placed, then a considerable difference in the electrical potential will be recorded. In the system developed by the British Iron and Steel Research Association, which will be shown at the Physical Society Exhibition in May, the two sets of electrical contacts are mounted on a device resembling a pair of tongs. Since this device can be moved about over every part of the metal sheet which is being inspected for laminations, it enables a particularly searching examination of the sheet to be made. The differences in electrical potential, which record the presence, or absence, of laminations, are shown on a meter mounted on the tong-like unit.

High-density 'Alkathene'

I.C.I. will soon have available in development quantities a high-density, stiff 'Alkathene' which can be sterilised. It is made by a modification of the high-pressure process. To be known as 'Alkathene' HD, the new polythene can be processed in the same way as normal low-density or flexible 'Alkathene.'

The terms "high-density" or "stiff," as opposed to "low-density" or "flexible," describe the two products qualitatively in terms of select properties, but there are many other differences between them, one of the most important being their softening points. Articles injection-moulded or extruded from 'Alkathene' HD can be heated without distortion for 15 minutes at 110° C., whereas similar articles of flexible 'Alkathene' collapse after the same treatment.

During 1956, one to two hundred tons of 'Alkathene' HD will be available, mainly for trial purposes at home and overseas. It is intended to establish commercial manufacture on a progressively increasing scale, although it may not be possible to meet all demands for some time, particularly in face of the constantly increasing demands for the conventional product.

The availability of this new 'Alkathene' and the possibility of blending it with the current material will open new fields of application.

The properties of 'Alkathene' HD suggest that it will be particularly suitable for mouldings. Advantages for this and other applications are:

Mouldings.—Can be sterilised at temperatures of 110° C. without distortion. Possible raw material saving through reduction in wall thickness. Improved stiffness and finish.

Pipe.—Higher working pressures and greater heat resistance.

Cable.—Thinner insulation and tougher sheath —higher service temperatures.

Film.—Less permeable to water vapour and gases; more resistant to oils and fats.

At present, however, 'Alkathene' HD Films have a tendency to be shock-brittle.

Safety Belts for Autos

Increasing interest in protective equipment is being shown by automobile drivers in the United States and a new device, the safety belt, appears to be in demand for 1956 cars. For maximum efficiency in the use of safety belts, the Society of Automotive Engineers has prescribed certain standards: The webbing of the belt should be not less than 1-7/8 inches thick. The minimum strength of a belt for a single occupant should be equal to the resistance capacity of 2,250 pounds. A belt for two people should be double that strength. There should be sufficient transverse stiffness in the webbing to prevent excessive curling under heavy loads. Mildew weakens webbing considerably. The webbing should, therefore, be treated for mildew resistance. It should not stretch more than 25 per cent. under load pressure. Adjustment adapters should be placed about half-way between the buckle and the end fittings and, if a cam type of buckle is used, at least 10 inches of the free end of the belt should extend beyond the buckle when it is locked. Metal parts should be smooth, as sharp edges could cut the belt in two under sudden, heavy strain. Mounting hardware that is exposed to the weather—such as floorbolts and washers—should be resistant to corrosion by fog and salt ocean spray.

AUTOMOBILE PRODUCTS OF INDIA LTD.

CHAIRMAN, MR. M. A. CHIDAMBARAM'S SPEECH AT ANNUAL GENERAL MEETING

THE Sixth Annual General Meeting of the Automobile Products of India Ltd. was held in Bombay on 7th April 1956. Addressing the shareholders of the Company on the occasion, Mr. M. A. Chidambaram, Chairman, referred to the vigorous efforts of the management to seek fresh avenues of production and its success in geting under way new and fruitful schemes. He disclosed that the Company would be issuing fresh capital later in the year to finance its expansion plans and appealed to shareholders to subscribe to this issue.

The following is the full text of Mr. Chidambaram's speech:

"It gives me great pleasure to welcome you all to the sixth annual general meeting of shareholders of the Company. The report and balance-sheet for the year ended 31st July 1955 have been in your hands for some time and, with your permission, I shall take them as read.

"During the year under review your Company earned a net profit of Rs. 4,17,979-5. After deducting the previous year's loss of Rs. 2,98,738-2-9, a sum of Rs. 1,19,241-2-3 has been carried forward as profit in the current year. While depreciation has been provided in full for the financial year which ended on 31st July 1955, the depreciation for the previous financial year, which could not be provided for, still remains unabsorbed, but we hope that this will be fully eliminated in the current year. I regret that the balance of profit will not permit payment of dividends this year to the ordinary as well as to the preference shareholders. It is worthy of note that your technical consultants, Technical Services Limited, have generously agreed to forgo their managing agency commission amounting to Rs. 41,797 on the net profits earned.

"If the previous year was a year of great reverses to the Company, the year under review has been one of subdued hopes, as during this period the management have pursued vigorously other avenues of manufacture and have spared no efforts in setting under way new and fruitful schemes.

"I shall now give you a resume of the various activities in which your Company is engaged.

Brake Lining Plant

"The Government of India granted, towards the end of September 1954, a licence to manufacture brake linings in collaboration with Messrs. Firestone Tyre and Rubber Company of Akron. Selling arrangements have been concluded with the Firestone Tyre and Rubber Company of India for the sole distribution of brake linings manufactured by your Company. It is quite likely that in addition to meeting home demands, we shall be able to export brake linings to neighbouring countries. The plant, which was ordered in April 1955, was received at the end of October 1955 and is now in the course of erection. Trial operations are scheduled to commence by the end of April. The demand for brake linings must necessarily continue to grow, in keeping with the increasing volume of vehicles in the country, particularly that of commercial vehicles and as such I expect this plant to contribute substantially to the revenues of the Company.

Lambretta

"In association with Messrs. Innocenti S. G., Milan, the Company has undertaken the phased manufacture of the well-known Italian Lambretta motor scooters and three-wheelers. The first shipment was received towards the end of August last year and regular assembly in recognisable volume commenced at the beginning of November. The marketing and distribution of the Lambretta motor scooter has been supported by a well-planned advertising and sales promotion programme. This will continue to assist in exploiting the immense market potential that exists for a vehicle which has been acclaimed as the most economic form of transport for the common man. The demand has so far been very encouraging and, in fact, has been beyond our conservative expectations. If this is maintained, we anticipate a substantial turnover during the present year itself, paving the way for successful phased manufacture. Our associates, Messrs. Innocenti S. G., have given us the fullest co-operation and they very recently sent out to India one of their engineers to help us along in our programme.

"There is a growing volume of demand for diesel engines for road transport of both goods and passenger vehicles. This demand has emanated from the primary manufacturers of trucks in the country as well as for the conversion of existing vehicles on the road and vehicles released from time to time as surplus and obsolescent from the disposal side of Government. It was this knowledge which prompted your Company to make an application to the Ministry of Commerce and Industry, Government of India, for a licence to manufacture progressively a road vehicular type diesel engine. The Ministry were pleased to grant this licence; negotiations have been finalised and entered into with Messrs. Henry Meadows Limited, U.K., for the phased manufacture of their well-known Meadows Diesel Engines. We anticipate a continual increasing demand for this type of engine and, as bulk deliveries are expected to commence within the next six months, we shall be able to satisfy the need for engines of this class.

Borg and Beck Clutches and Lockheed Brake Systems

"My earlier statement that the last year was devoted to prospecting of fruitful schemes is borne out by the fourth licence which has been granted to your Company for the manufacture of Borg and Beck clutches and Lockheed brake systems, both as original equipment for vehicles manufactured in the country and for the replacement market. These licensed devices are practically universal and are fitted on over 90 per cent. of the vehicles in the world today. Agreements have been finalised with Automotive Products Company, Limited, U.K., who are the licensors, and necessary technical data and know-how are now being received.

Loan from I.F.C.

"In order to implement the various expansion schemes which I have outlined, particularly in order to finance the brake linings plant, your Company has been sanctioned a loan of Rs. 12½ lakhs by the Industrial Finance Corporation of India, New Delhi. We have since asked that this loan be reduced to Rs. 9 lakhs. A second application for an additional Rs. 25 lakhs has also been made to the same Corporation for the purpose of machinery required for our other programmes. While the Corporation is prepared to grant advances for fixed capital, it is against its policy to provide working capital. This is something which has to be given serious consideration. All these schemes which are now in the process of implementation will give us an annual turnover of over Rs. 3 crores when normal production is attained and it will, therefore, be very necessary for your Company to augment its liquid resources by another Rs. 25 lakhs to meet these needs for working funds.

Difficulties Overcome

"Your Company has, to a very large extent, withstood and overcome the difficulties it encountered in earlier years and I am happy to say it has been able to live up to expectations held out in your Chairman's speech last year. The years ahead of us will be years of strenuous effort and toil and a great deal of finance will be needed to implement successfully all the schemes which have been initiated. I can assure you, however, that such efforts will not have been in vain; they will have served to bring your Company to the forefront of manufacturers of essential components for the growing automobile industry, and will help to establish it as a flourishing and important unit in the industry—a position which your Company has always aspired to attain. Later in the year, I shall be issuing an appeal to the shareholders to subscribe to increased capital that will be required and I sincerely hope that your response will be generous.

"I would like to take this opportunity of tendering our grateful thanks to the Ministry of Commerce and Industry, Government of India, whose help, co-operation and advice have been invaluable and but for which the Company would not have been able to embark on the schemes it has undertaken.

"Our thanks are also due to Mr. P. Matthen, our General Manager, his executives, and all

(*Continued in first column*)

(*Concluded from third column*)

members of the staff and factory workers for the wholehearted efforts that they have put in to reorganise the affairs of the Company.

"In conclusion, all I can do is to reiterate the fact that this Company will, in the years to come, resume its position as a leading manufacturer of essential components for the automobile industry and will be able to produce steady and reasonable profits which will enable us to resume payment of dividends, at a very early date, to all shareholders."

MOVE TO SET UP A REINSURANCE CORPORATION FOR INDIA

JOINT VENTURE OF GENERAL INSURERS

FROM time to time, the opinion has been expressed in this country that there is urgent need to establish a corporation to cater to the reinsurance needs of general insurance offices. It is true that Indian insurers derive considerable benefit through their association with insurers in foreign countries who make available reinsurance facilities to this country. This, however, constitutes some drain on foreign exchange, for the insurance that is ceded to foreign companies is more than what Indian insurers receive in return. Apart from this consideration, the significance of which to overall national economy may be easily exaggerated, there is a great deal to be said in favour of providing adequate reinsurance facilities within the country itself, so that there may not be a too exclusive dependence on foreign insurers for such facilities.

The question which has engaged the consideration of both the Government and private insurers is whether such a corporation should be owned entirely by the State, or partly by the State and partly by private insurers or wholly owned by private insurers. It would now appear that the Government is willing to permit private insurers to organise the reinsurance corporation entirely on their own. Another important question was whether foreign insurers working in India should be allowed to participate in the share capital of the reinsurance corporation. It is understood that private insurers generally welcome such participation and that foreign insurers will participate in the corporation to the extent of 20 per cent. of its share capital. It is along these lines that general insurers are working towards the setting up of the reinsurance corporation.

A move is afoot to see that such a corporation, to be known as Reinsurance Corporation of India, is set up by the middle of this year. It is to be registered as a company under the Indian Companies Act, the object being to make it become an important adjunct to the local insurance market and to the international reinsurance market. For this purpose, the Corporation, it is stated, will be organised and run as an independent entity, not dominated by one or a few shareholders. Its head office will be located in Bombay. It will be managed under the guidance of a Board of Directors, comprising persons competent to direct the affairs of the Corporation in a manner that will inspire confidence both at home and abroad.

Capital Structure

The provisional suggestions are that the authorised capital of the Corporation should be Rs. 10 crores, divided into one lakh shares of Rs. 1,000 each and the paid-up capital Rs. 2½ crores in 25,000 shares of Rs. 1,000 each. It is proposed to collect Rs. 1 crore immediately, Rs. 1 crore in instalments and to reserve Rs. 50 lakhs for allotment to new members. The minimum share holding that an insurer can have is placed at Rs. 20,000 and the maximum at 15 per cent. of the issued share capital of the Corporation; in the case of an insurance company with subsidiaries, its holding of the Corporation's share capital can go up to 25 per cent. An amount equivalent to 12½ per cent. of the face value of the share will be payable on application, followed by an equal amount on allotment. A further 25 per cent. will be payable by 31st December 1957 or by such other later date as may be decided by the Directors, in two instalments of 12½ per cent. each, with an interval of not less than six months between each call. To avoid the possibility of domination of the Corporation by one or a few shareholders, each member will undertake to restrict his voting rights. For the first 200 shares, there will be full voting rights, for the next 200 shares 60 per cent. voting rights and for over 400 shares 40 per cent. voting rights. A convention will be established whereby a company and its subsidiaries will be regarded as one group and the maximum voting exercisable by either a member or a group will not exceed 12½ per cent. of the total exercisable voting right.

The Corporation's function will be to carry on in India and elsewhere the business of reinsurance and counter-insurance of every kind, whether by accepting or ceding or retroceding by way of "quote," "surplus" or "excess of loss" or on facultative basis in relation to all kinds of business conventionally classified as fire, marine, motor and miscellaneous insurance. Each member-company will be required to cede to the Corporation premium equivalent to 10 per cent. of its premium income of each of the three departments, namely, fire, marine and miscellaneous departments. The Corporation will retrocede to the member-companies 50 per cent. of the Indian premium received by it in the first year and such percentage as may be fixed by the Corporation in future years.

Premium Income

It has been computed that the local market will provide the Corporation with an annual premium income of about Rs. 2 crores. It is expected that the corporation will be able to build up, over a period, an annual turnover of about Rs. 3 crores, yielding a profit of Rs. 22½—30 lakhs. The Corporation will also earn Rs. 6 to 7 lakhs by way of interest on capital and reserves. During the early years, it may show an accounting loss because the reserves for unexpired risks and other reserves have to be built up. It is felt, however, that the ultimate prospects are very bright.

There is some difference of opinion over the size of the Corporation's capital and the scope of its activities. There is one section of opinion which feels that the Corporation need not have as large a capital as now proposed and that the amount of premium income to be ceded by each company need not also be as large as 10 per cent. This section, which seems to be largely confined to Calcutta, holds that it would be better to begin with a Rs. 1-crore (rather than a Rs. 2½-crore) Corporation and to fix the amount of premium income to be ceded to it by member-companies at 5 per cent., instead of at 10 per cent. The sponsors of the Corporation will have to carry conviction with all sections of opinion in order to ensure that the institution commands as large a measure of support as possible. Those who favour the proposed structure, however, point out that there are certain obvious advantages in starting a corporation with a large capital and in fixing a high proportion for the premium income to be ceded to the Corporation. It will, according to them, enable the institution to have a good start, inspire confidence in the neighbouring markets and lay the foundations for an enduring and expanding reinsurance market in the country.

DEPARTMENT OF INSURANCE

The work of the Department of Insurance, which is part of the Union Ministry of Finance, generally relates to the administration of the Insurance Act. The Controller of Insurance is also responsible for the preliminary work and for tendering appropriate advice, in connection with the discharge of duties imposed by the Act on the Government. He also acts as actuarial and insurance adviser to the Government.

An important function of the Department is to sanction schemes of capital reconstruction put forward by insurance companies. No fresh schemes, according to the Report of the Finance Ministry for 1955-56, were submitted by insurance offices during the period under review. Of the four schemes which were under consideration at the beginning of the year, one has since been sanctioned and another has been dropped as the life insurance business of the insurer concerned has been transferred to another insurer. The other two schemes are under consideration. The Controller sanctioned five schemes of business from insurers and from provident societies. In two cases of provident societies, the transfer schemes were rejected. The Department has under consideration 10 cases of transfer (six from insurers and four from provident societies).

In the light of the recent allegation made by the Union Finance Minister, Mr. C. D. Deshmukh, that the Department had to deal with over a thousand complaints by policyholders relating to the settlement of claims, it is interesting to note from the Report that only 61 cases of disputes relating to settlement of claims on life insurance policies (assuring a sum not exceeding Rs. 2,000 each) were referred to the Controller for decision. In 27 cases, either the applications were subsequently withdrawn or the proceedings were dropped. The Controller decided nine cases—all in favour of the claimants. The remaining 21 applications were under investigation.

The Central Government has powers to appoint administrators to administer the affairs of insurance companies which, in its opinion, are mismanaged. During the year under review, the Government appointed, with effect from 26th September 1955, an administrator for the Bharat Insurance Company, Ltd. There were seven insurance companies under the management of Administrators. All the Administrators act under the control and direction of the Controller of Insurance.

Consolidation of investments and curtailment of expenses were actively pursued. An inspection of the assets of the big insurers by auditors nominated by the Controller of Insurance was carried out with the consent of the insurers and the reports furnished by the auditors are still under consideration. The staff insurance schemes in vogue gave rise to serious malpractices and, therefore, the Executive Committee of the Life Insurance Council discontinued those schemes with effect from the 1st July 1955. The Committee also recommended a uniform policy to be followed by all life insurers in the matter of paid-up policy.

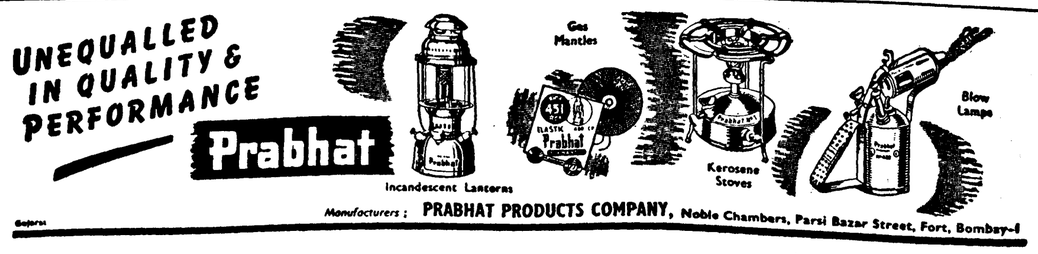
As a first step towards introducing certain reforms in the accounting system of insurers and in consultation with the Institute of Chartered Accountants, the Executive Committee of the General Insurance Council has, it is stated, evolved a standard form for agents' accounts for adoption by insurers. The Committee is considering the question of establishing a Reinsurance Corporation in India. The Tariff Committee has reduced the fire premium rates by 10 per cent. on the average. It is also stated to be considering setting up of a Statistical Organisation to regulate the premium rates in general insurance business. The number of licences to insurance agents during the last financial year is anticipated to be about 95,250 and the number of certificates to principal agents, chief agents and special agents about 7,000.

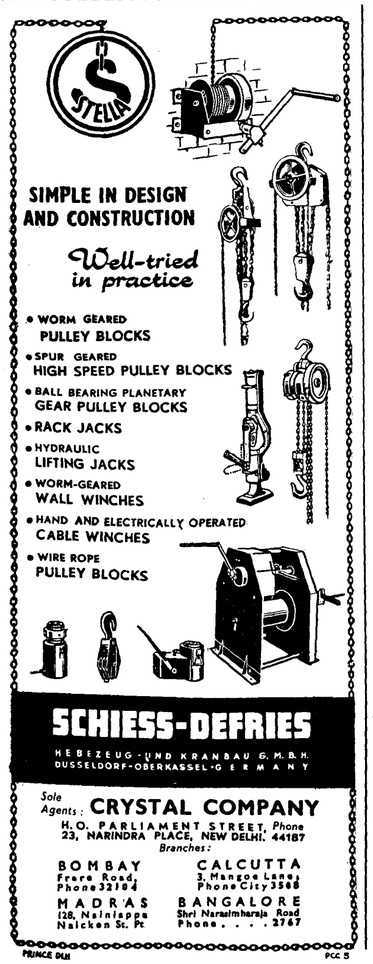
Aviation Insurance

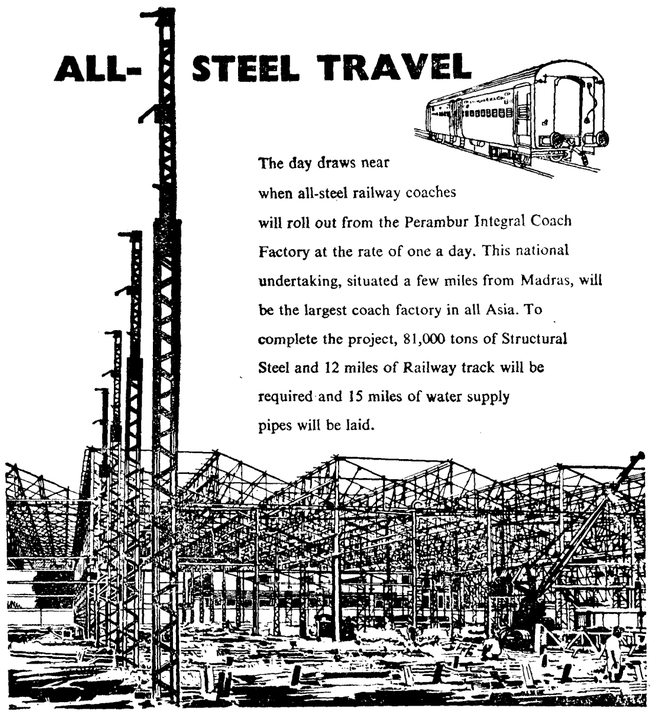
The Department continues to render technical advice to the Ministry of Rehabilitation on the legal and procedural aspects of the work arising from Section 18 of the Displaced Persons (Debts Adjustment) Act, 1951, relating to claims against insurance companies. The Department also acts as the liaison between the Indian Insurance Companies Association Pool, Bombay, and the Government, local bodies, municipalities, etc., for the purpose of taking up general insurance business under whose control it was formed. With the nationalisation of the aviation industry in the country, the 'Pool,' which was catering to the needs of Government in other fields, commenced, at the instance of this Department, transacting aviation insurance business, with a view to providing the necessary services in this sphere also. The valuation of the Pakistan portion of the business of the Post Office Life Insurance Fund, as on 14th August 1947, was completed. The valuation of the Fund, as on 31st March 1952, was also completed and the valuation results were announced.

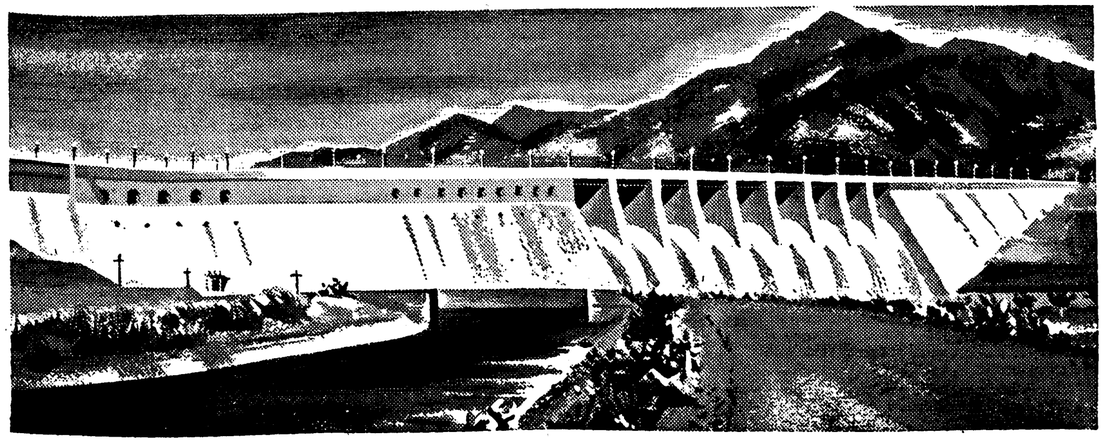
The matters which are engaging the attention of the Department include (a) evolution of a suitable formula for an equitable assessment of taxation of profits of non-resident insurers on reinsurance transactions, (b) examination of annual drain arising out of reinsurance transactions abroad of insurance companies carrying on general insurance business in India, and (c) investigation of mortality of Central Government pensioners, with a view to bringing the existing table of commutation values of pension up to date.

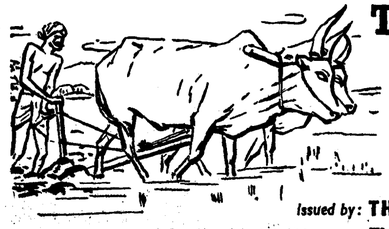
There is a brief reference in the Report to nationalisation of insurance under the section "Internal Finance Division." It says that "after a detailed study of the implications of nationalisation and the possible alternatives to it, the Government came to the conclusion that it was imperative to nationalise insurance business straightaway." It also refers to the recent measures, such as the issue of the Life Insurance (Emergency Provisions) Ordinance, 1956, and to the appointment of custodians for taking over all life insurance business.











The Malampuzha Dam (Malabar District)

Built to last with ACC cement

OVER 64,000 tons of ACC cement were used in the construction of the Malampuzha Dam (Malabar District). Cement means better living for everyone; and the ACC is making more and more quality cement.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

PROSPEROUS TRADING CONDITIONS LEAD TO ENCOURAGING RESULTS

MR. BLAKER ON PREREQUISITES FOR ATTRACTING FOREIGN CAPITAL TO ASIAN COUNTRIES

THE Ordinary Annual General Meeting of the Hongkong and Shanghai Banking Corporation was held in Hong Kong on 16th March 1956. In the course of his customary statement to the shareholders Mr. C. Blaker, M.C., E.D., Chairman of the Corporation, said that the economic development in the Asian countries had made progress and that they were moving along paths of their own choosing. He felt that foreign merchants and bankers must adapt themselves to these changing conditions. On the question of new foreign investment, Mr. Blaker is of the view that stable conditions and prospects of an adequate reward will do much more than any number of exhortations. "This is a question each country must decide for itself," he remarked, "and the response will surely depend on the decisions made."

Inaugurating the proceedings of the meeting, Mr. Blaker said:

"LADIES AND GENTLEMEN,

"The hour for which this meeting was called having now passed, I will call upon the Chief Manager to read the notice convening the meeting."

The notice convening the meeting having been read by the Chief Manager, Mr. Michael W. Turner, and the Auditors' report by a representative of the Auditors, the Chairman continued:

"LADIES AND GENTLEMEN,

"As you will see from the accounts before you, the profit for the year amounted to $20,580,320 which is some $1¼ millions higher than the corresponding figure for the previous year. In accordance with our usual practice, this profit has been arrived at after making transfers to our inner reserves, out of which reserves full provision has been made for the diminution in the market value of our investments and for all known doubtful debts and contingencies.

"It is proposed that this year a sum of $4 millions should be written off Bank premises and, after allowing for this transfer and the interim dividend of £2 per share, the Directors recommend the payment of a final dividend of £3 per share, leaving a balance of just over $10½ millions to be carried forward to next year.

"Although the proposed dividend for the year remains unchanged at £5 per share, it is, of course payable on the capital as increased by last year's bonus issue and is equivalent to £6 5s. per share on the old capital.

Reserves Unchanged

"Turning to the balance-sheet, it will be observed that the reserve fund remains unchanged at $128 millions, your Directors having transferred from inner reserves an amount of $5 millions to replace the amount of the reserve fund which was capitalised during the year.

"Hong Kong currency notes in circulation remain unchanged, but current, deposit and other accounts have decreased by just over $115 millions. The trend of our ordinary deposits has, in fact, been upwards, but the withdrawal of certain substantial sums, which had been left with us on a short-term basis, resulted in this overall reduction.

"Acceptances on behalf of customers show a decline of some $36 millions which may be attributed to an alteration in the methods of financing adopted by certain large customers during the year.

"Your Directors have this year decided to state the extent of the Bank's liability in respect of confirmed credits, guarantees and endorsements by way of a note on the balance-sheet and you will observe that this total amounts to some $611 millions. It will, of course, be understood that the Bank has recourse for a like amount on its customers.

"The assets side of the balance-sheet discloses some fairly substantial alterations as compared with last year's figures. Advances and trade bills have increased by $240 millions and $66 millions, respectively. These increases are mainly due to the higher prices which have ruled throughout the year for certain of the primary commodities produced in the areas in which we are interested, but they also reflect the growing demand for larger advances from bankers to finance current and capital commitments arising from the growing industrial development in South-East Asia.

"Investments show an increase of some $9 millions being cost of additional investments acquired. Investments in and amounts due by subsidiary companies are higher by $17 millions which represents our interests in the Hongkong and Shanghai Banking Corporation of California.

"As a result of the increases in advances, trade bills and the other items referred to above and to the net decrease in our deposits, the total of cash, call money, and Treasury Bills has fallen by some $439 millions. Although this has resulted in a drop in the ratio of the Bank's liquid assets to its total liabilities, this ratio still amounts to over 47 per cent., which your Directors consider may be regarded as a satisfactory degree of liquidity.

Results Satisfactory

"Shareholders will be aware that the continued expansion of world trade and the rise in the price of certain primary commodities, noticeably rubber and tin, contributed to more prosperous trading conditions generally in the territories in which we operate. On the whole, your Directors are very satisfied with the results of the year.

"The printed statement which is in your hands deals with the political and economic situation in the Eastern countries where we have offices. This follows the pattern of previous years, but shareholders will notice that considerably less space has been devoted to China than has been the case in the past. This is, unfortunately, a reflection of the restriction of our activities in that country, although I hope that circumstances will make it possible for us to continue to trade with China if no longer in China.

"Hong Kong, on the whole, had a prosperous year as, in spite of the drop in our traditional entrepot trade with China, business activity generally continued to expand. This has been very noticeable in our office here where the number of current and savings bank accounts has steadily increased. We have now reached the point where these two departments have grown larger than is desirable for administrative purposes or for giving as efficient a service to the public as we should like. Your Directors, therefore, decided to open a new office in King's Road —the North Point Agency—which started business on Monday. This new office will, we hope, lighten the load and we are considering other means of relieving pressure.

"In the printed statement details are given of the opening of our new subsidiary in San Francisco. This subsidiary will be able to give a full range of domestic and foreign banking services and will, I hope, prove popular with our many old friends and will make many new ones. It has always been disappointing to us that the services we were permitted to offer in San Francisco were so limited and I am glad that this complaint can no longer be made.

Chief Manager's Tour

"Our Chief Manager, Mr. Michael Turner, continued the tour commenced in 1954 and visited our branches at Calcutta, Bombay, Colombo and Rangoon. He also spent some time in London and was able when he was there to see our offices in Hamburg and Paris. This completed his itinerary and he has now visited all our offices. In all but a few cases he was accompanied by Mrs. Turner. Shareholders will, I think, agree that the extensive tour which the speed of modern times enabled him to make—the first Chief Manager to do so—has been of considerable benefit to the Bank. This not only enabled Mr. Turner to make contact with Government officials and our business friends in all these countries but to see for himself how each office was conducted and that the welfare of the staff was being looked after. Once again he was able to give a favourable report on the staff of all nationalities in the countries which he visited. I am glad to say that Mr. Turner, in spite of the very busy year which he had, was able to take a short holiday in the United Kingdom.

"The sudden death of Mr. G. H. Stacey, who held the appointment of Deputy Chief Manager, was a severe loss to us all and the numerous letters we received from business associates of many nationalities gave evidence of the respect in which he was held.

"I should like to take this opportunity of thanking all our staff, particularly the Branch Managers, for their loyalty and hard work during the year.

"There were several changes in the Board of Directors during the year, but as these are shown in the report which is in your hands, I will make no further comment on them.

"There were, however, various changes in London which I should like to mention. Mr. S. A. Gray, who has been Senior London Manager since 1948, resigned at the end of the year and was succeeded by Mr. S. W. P. Perry-Aldworth, who also took his place on the London Committee. Mr. W. J. Keswick resigned from the Committee on being appointed a Director of the Bank of England, on which we congratulate him, although we are sorry to lose the benefit of his experience. The Keswick family has had a close connection with the Bank over several generations and I hope that it will not be long before we have another Keswick on the London Committee. Sir John Nicoll, who needs no introduction to this audience, joined the Committee towards the end of the year and I am sure his experience in Colonial affairs will be of great assistance to our London management.

"Ladies and gentlemen, the report and statement of accounts having been in your hands for the required period, I will now formally propose their adoption as presented.

"After the proposal has been seconded I shall be pleased to answer to the best of my ability any questions which shareholders may wish to ask."

The resolution having been seconded, the report and accounts were adopted.

Chairman's Statement

The following is the Chairman's statement circulated at the meeting:

"In my statement last year I was able to record that an improvement in the cold war had been noticeable. I am now able to say that this trend continued during the summer of 1955 when the climate in international relations became distinctly milder with the meeting of the heads of Governments and the feeling that a new spirit had been generated—the spirit of Geneva. Unfortunately, the meeting of the Foreign Ministers in the autumn, with the deadlock over Germany, brought a lowering of the temperature which recent events in the Middle East have done nothing to improve.

"Looking at the year as a whole, however, there seems to be ground for hope that the danger of war has been lessened, both as a result of the various discussions that have taken place and the growing feeling that the power of modern weapons has produced a form of stalemate. In the Far East, there has been a period of quiet—as Mr. Macmillan put it in a speech in Parliament in December—'A sort of *de facto* stabilisation had been secured in the Far East at the expense of varying degrees of partition.' Thus, although there remain a number of difficult international questions on which agreement has not been reached, these have not developed to such an extent as to give rise to any fresh disturbances.

"Agreement was reached on the introduction of sixteen new members to the United Nations in December, thus ending a deadlock which had existed for many years. We particularly welcome the membership of Ceylon, whose influence in world affairs continued to increase, and the two new States of Cambodia and Laos. It is, however, most regrettable that Japan was not elected at the same time and I hope that during the next session some settlement will enable this important country to be represented.

"Amongst the many conferences that were held during the year, the one at Bandung last April of Asian and African powers was of particular significance to this area. As has frequently been the case recently, it was not the decisions reached which gave this conference its importance, but the fact that twenty-nine nations, many of whose sovereignty is of comparatively recent date and with different political forms of

Government, were able to discuss their common problems in a spirit of compromise. To quote from a leading British weekly periodical, 'Nothing new was created; but the emancipation of the greater part of Southern Asia was solemnly placed on record, and the lines along which this vast area of the world hopes to advance were made a little clearer.'

"In the economic sphere, considerable industrial expansion continued and in many of the more highly developed countries there were indications that the economy was becoming overstrained. A growing industrial demand for materials and labour, coupled with a high level of employment, resulted in active or threatened domestic inflation which, in some countries, was having an adverse effect on the balance of payments.

"The measures taken to combat these dangers varied from country to country, but the main emphasis was on monetary rather than on physical controls, on dearer money rather than on restriction of imports. This was an important development, but under present conditions, with high taxation, the cost of borrowing is no longer the restraining influence it once was and the great increase in the public sector made supplementary action by Governments necessary. Thus, raising the Bank rate was found to have only a limited effect and it may well be that the role of monetary policy in the economy of today has not yet been finally determined.

Britain

"In the United Kingdom, the pressure of consumer and investment demand brought a continuing rise in prices with a high level of imports which had an adverse effect on the balance of payments. The Bank rate was increased to 4½ per cent. in February 1955, but this did not reduce the expansion of credit quickly enough and, in July, the Chancellor exhorted the banks to make 'a positive and significant reduction in their advances.' A supplementary budget followed in October and last month a further increase was made in the Bank rate with measures to restrict capital investment and to reduce certain food subsidies. It is too early yet to gauge how effective these steps will be or whether more will be required.

"A review of conditions in the United Kingdom is outside the scope of these annual statements, but the importance to the Bank and to the countries which it serves of the standing of sterling needs no elaboration and I hope, therefore, that the efforts being made to protect the internal value of the pound will be successful. The high Bank rate has resulted in a considerable drop in the value of Gilt-edged securities, but you will notice that we have continued as in previous years to show these in our balance-sheet at under market value.

"In the Asian countries in which most of our branches are situated progress continued to be made in the carrying out of the various development plans, but in many cases second thoughts had to be given to the targets and the speed at which they could be reached. The restricting factors here were, however, mainly lack of capital and shortage of trained technicians. These continued to limit the improvement in agriculture and industrial development which expanding populations make so necessary. Although dearer money was resorted to and had a limited effect in urban economies, such as Hong Kong's, it was not in these countries the real answer to the problem. This was not to restrict demand in an over-expanded economy, but to improve the productive resources quickly enough to provide work for the growing population and at the same time to increase the supply of food and consumer goods to meet the requirements arising as a result of industrialisation.

Aid for Underdeveloped Countries

"The Colombo Plan has been referred to from this chair on numerous occasions and the importance of it has been stressed not only because of the continuing need for economic assistance in South-East Asia but also for the reason that this Plan has generally found favour with the countries in the area. The report by the Council for Technical Co-operation in South and South-East Asia for 1954-55 shows that continued progress has been made in providing assistance in training technicians and supplying experts to aid development schemes. It was encouraging to see that while much of the assistance came from outside the area considerable progress was made in mutual aid. The report lays particular stress on the need for 'a steady and ever-increasing supply of skilled administrators and technicians' who should be given 'full opportunities to use their newly acquired skill at home.' It recommends that 'counterparts or understudies should be assigned to the expert on continuing projects so as to ensure continuity' and that new projects are 'allotted the right priority.' The shortage of trained personnel is probably the most serious limiting factor in the plans of these countries for greater industrialisation and the recommendations in this report deserve serious consideration. The meeting of the Consultative Committee was held in Singapore in October and made the welcome decision that the Colombo Plan would be extended from July 1957 to 30th June 1961, and that the future of the Plan would be considered in 1959. Considerable increases in aid were promised and, although certain of the members felt that larger amounts of external capital were required, the meeting appeared generally satisfied with the progress made. In addition to the Colombo Plan, assistance continues to be granted by the U.S. International Co-operation Administration, various United Nations agencies and the International Bank for Reconstruction and Development. A new corporation, an affiliate of the International Bank, the 'International Finance Corporation,' to which I referred last year, is in process of formation. This organisation will have power to invest in productive private enterprises without the necessity of a Government guarantee, which is a prerequisite of all International Bank loans. The total capital proposed is U.S. $100 millions, but the Corporation cannot be brought into existence until at least thirty countries, with subscriptions amounting to U.S. $75 millions, have given their formal acceptance. Several countries have already taken this step including the United States and the United Kingdom, and it seems likely that there will be no difficulties in the establishment of this new organisation, which should be of considerable benefit to underdeveloped areas.

China

"Shareholders of the Bank who knew China in the days prior to the establishment of the Government of the People's Republic of China must surely find it difficult to adapt their minds to the real meaning of the official Chinese policy on present-day rural, industrial and sociological matters in that country. There are many pessimists just as there are many optimists in regard to the future of China, but lack of information, other than official pronouncements, leaves many with a feeling of uncertainty. Even here in Hong Kong, close as we are to the Chinese scene, we find it hard to keep pace with and to evaluate the day-to-day economic and industrial changes and developments which are so rapidly being evolved. Nor do we know, neither can we judge, how the Chinese people as a whole—and particularly the agricultural population—are reacting to the kaleidoscopic events which have affected their lives and livelihood so closely in the last few years.

"Collectivisation is certainly proceeding with ruthless vigour: at the same time almost the whole range of agricultural production is being directed and controlled from above in a way which has had no previous parallel in Asia. This line of policy is, of course, tied up with the current Five-year Plan and with industrialisation. The whole picture reveals remarkable speed of development. There is special concentration on heavy industries with extensive Russian help. Railway and road communications are being opened up at an astonishing pace, even if allowances are made for some work of a rough and temporary nature.

"The key point in the economic policy of China has been summarised as follows: to build a socialist society, which cannot be raised on the foundations of a small-peasant economy: its foundations must be based on large-scale industry and large-scale collective farming.

"Such being the fixed policy of the Chinese Government, if British merchants are to retain a share in the China trade and take advantage of the situation, it is important that British policy should be re-examined in collaboration with other friendly Governments. No action of the kind we have in mind can can, however, be taken until there is a considerable reduction of the items on the embargo list. The question of the embargo has raised so much controversy in recent years that it has not been easy to discuss it objectively and there are still no signs of any narrowing of the gap between the two points of view. Although we have done our best to carry out not only the letter but the spirit of this embargo, we make no secret of the fact that, like almost all British merchants and bankers interested in the China trade, we will welcome the day it is abolished, but as total abolition cannot be quickly brought about, linked as it is with numerous other problems, we are contenting ourselves for the time being with advocating the reduction of the Chinese embargo list to make it similar to the Russian list. This would seem to be the logical solution as it is idle to suppose that China is not able to obtain goods shipped from the West to Russia. Instances have, in fact, occurred where China has exported to Hong Kong goods which are not permitted to be sent into China under the embargo. We had hoped that at the recent talks in Washington some form of agreement of this nature would have been reached, but it appears that all that was decided was that a review of the control of trade with China would be made.

"Both Hong Kong and Malaya have suffered greatly as a result of this embargo and there is the danger, particularly for Hong Kong and to a lesser degree for Malaya, that, if no substantial relaxation comes soon, the trade lost may never be regained. China is already leaning heavily on supplies from Eastern European countries and this trend is likely to increase so long as the emphasis on all arrangements for exchange of goods with China is on bilateral agreements. With the overall control of the economy which the Chinese Government now exercises, bilateral and barter agreements may be difficult to avoid, but under freer conditions the advantage of dealing with Hong Kong merchants, experienced as they are in supplying the China market, would no doubt be appreciated. The Sino-British Trade Committee have recently been informed by the Chinese Government that they see no object in any further visits until there is a considerable relaxation of the embargo. This may be so as far as large parties are concerned, but I am sure that a great deal of good would result if it were made easier for individual merchants to visit China to discuss their own particular business problems.

"Negotiations regarding the winding-up of our affairs in China have made considerable progress during the year and we have been able to reach a settlement of our local currency position, but there have been no further developments in respect of our foreign currency liabilities. This settlement has not been made without cost to the Bank, but under the circumstances no other course was open to us. Mr. Yoxall, our Manager in Shanghai, who bore the brunt of the negotiations, finally obtained permission to leave and has now retired.

Hong Kong

"Hong Kong has not featured much in world news during the last year, but this lack of publicity has not meant that progress has not been made but only that it has been steady rather than spectacular. We were pleased to welcome the Secretary of State for the Colonies, Mr. Lennox-Boyd, who, in his short visit, managed to see a very large part of the Colony. The squatter resettlement programme, which has been made necessary by the large influx of refugees, has always seemed to us to be one of the post-war developments, of which we can be most proud and it was encouraging to find this distinguished observer describing it as 'one of the most stupendous achievements I have ever seen.' On the day of his departure he announced that the term of office of His Excellency The Governor, Sir Alexander Grantham, had been extended until 1957. This was extremely welcome news as Sir Alexander has a very special place in our affections and we are grateful to him for agreeing to defer his well-earned retirement.

"The necessity for an improvement to the airport, to bring it up to modern international standards, has been mentioned many times from this chair and I am glad that this year I am able to report that the contract for the new runway was awarded in August and that considerable progress has already been made. Nature bestowed on Hong Kong geographical features which facilitated the construction of a harbour, but she has not been as kind over the airport and this will be a costly project. Another large engineering work is nearing completion—the Tai Lam Chung water-supply scheme—which will substantially increase our water storage facilities. The consumption of water, however, even under the strict rationing to which we are subjected, continues to rise—as it must do with a growing population and increasing industrial development—and it seems obvious that some site for another reservoir will require to be found without undue delay. The recent remarks of the Governor on investigations on Lantao Island show that the Government has this matter very much in mind. I mentioned above the squatter resettlement scheme, but this is only part of the immense housing problem with which Hong Kong is faced. A visitor arriving here after an absence of some years and seeing all the extensive building that has taken place might be tempted to think that the housing problem was being adequately taken care of, but this is unfortunately only partly true. Many of the poorer

members of the community are very badly housed and to supply them with better living accommodation at a reasonable cost is a most urgent social need. In view of the importance of this problem, the appointment last month by His Excellency The Governor of a committee with wide terms of reference to investigate the Colony's housing problem in all its aspects was most welcome.

"The development of local industries, which has been such an important feature of recent years, continued and 372 new factories were registered during the year, while the production of electricity increased by 15 per cent. Energetic efforts were made to develop new markets and there are welcome signs that the importance of maintaining uniform standards of quality is being more readily understood. The formation of the Hong Kong Exporters' Association, with a committee composed of many of our leading merchant houses, should greatly assist the marketing of the products of our industries. An invisible export is provided by the large numbers of tourists, both service and civilian, who visit Hong Kong each year. It has been proposed that a Hong Kong Tourist Association should be formed to develop our tourist trade and a working committee of representatives of the interests concerned was appointed in August to look into the question.

Trade of Hong Kong

"Hong Kong's trade in 1955 increased by 7 per cent. in value, while volume showed a rise of 14 per cent. It is encouraging that the rise has been steady over the last few months of the year and that exports of Hong Kong products continue to increase. Exports to the United Kingdom increased by H.K.$89 millions. This will not cause any surprise to shareholders, who will no doubt have seen many references to this subject in the Press, but imports from that country also rose by H.K.$72 millions which is given considerably less publicity. Even now our exports to the United Kingdom are still only 57 per cent. of our imports from there. Trade with China in total was about the same as in 1954, but the drop of just over H.K.$200 millions in exports was offset by a rise in imports of a similar amount. This decrease in exports was caused by a considerable reduction in each of the three largest groups of commodities—namely, dyestuffs, fertilisers and pharmaceuticals—which we have recently been shipping to China. Trade with other East Asian countries showed an overall increase and it was encouraging to see the steady rise in exports to Indonesia, Indo-China and Thailand in the closing months of the year.

"Business on the Stock Exchange continued to be very active and the volume for the first six months of the year was greater than that for the same period in 1954. In July, the turnover was more than double the figure for June and there were signs that these almost boom conditions were having a disturbing effect on the economy, which, if not checked, might result in more serious developments. The rise in short-term money rates in so many countries was also beginning to be felt in Hong Kong and, after consultation with the Government, we and the other note-issuing banks raised our interest rates in August. This we followed in November by a reduction in the percentage of market value which we would normally advance against shares. These measures were aimed at curbing further expansion of credit for speculation and have in our opinion resulted in a healthier position in the market. The price of land continued its upward movement and some very valuable properties changed hands. There were, however, signs towards the end of the year of a slackening of demand and it may be that the peak has been reached for the time being.

Finances of Hong Kong

"The Financial Secretary, Mr. A. G. Clarke, in his speech in the Legislative Council at the end of last month, when he presented the Budget, was able to show that the Colony's finances are in a very healthy state. A surplus of over H.K.$16 millions was expected for the current year which was brought about by both higher revenue and lower expenditure than was estimated. Salaries and profits tax showed a fall, but this was more than made up by rises under other headings, a large part of which was due to the active conditions in the property market and building trades. For the financial year 1956-57 a deficit of H.K.$43½ millions is estimated, but this includes expenditure of H.K.$30 millions for the Tai Lam Chung scheme and H.K.$32 millions for the airport. Both these items are public works of a capital nature which are essential to the future of the Colony and for this reason the size of the deficit should not give cause for alarm.

"At the conclusion of his address Mr. Clarke took stock of the Colony's financial position ten years after the re-establishment of civil government. This showed that, in spite of the heavy programme of rehabilitation, the cost of housing the large number of refugees and general post-war development, Hong Kong has built up a reserve of a year's revenue with a public debt of less than two months' income. When it is remembered that the Colony started with no surplus funds after the war this happy state of affairs, I think, reflects great credit on Mr. Clarke and his predecessor as well as on the industrious people of Hong Kong whose energy and adaptability have made it possible.

Japan

"Japan's population is likely to pass the ninety-million-mark during 1956 and any analysis of economic and political developments in the country cannot ignore the steadily increasing pressure which a rising population makes on available resources. Economically, 1955 was a good year and the visible adverse trade balance was reduced by U.S.$300 millions, while foreign exchange receipts, which include invisibles, exceeded payments by nearly U.S.$500 millions. This improvement has been achieved in the face of a gradual, but nevertheless steady, decrease in the foreign currency obtained from the U.S. Forces. The deflationary policy which we mentioned last year continued during 1955 and commercial banks' borrowings from the Bank of Japan reached the lowest level since 1946; but, helped by a lively export demand, no serious restriction in business activity was apparent, although unemployment figures gave cause for concern. Good crops of rice and cereals contributed to the improved balance of payments position. The draft budget, which is at present before the Budget Committee in the Diet, shows little change from last year and, although the note issue rose by 8 per cent., this is considered to be a reasonable reflection of the general expansion in production, including the bumper rice crop. The Anglo-Japanese Sterling Payments Agreement of January 1954 was extended until 30th September 1956 with Japan agreeing to remove certain restrictions on imports from the sterling area. This agreement will be reviewed again this year. During the year Japan became a full member of G.A.T.T., but her satisfaction was tempered by the fact that a number of nations invoked Article 35 against her.

"Three agreements have been made with the United States Government covering the sale to Japan of agricultural produce against payment in yen, while part of the yen proceeds is available as a long-term loan for capital development. Considerable assistance is also being given by the United States Government in providing technical training and the International Bank for Reconstruction and Development has recently agreed to grant a loan of U.S.$8 millions for the modernisation of heavy industry. All these arrangements should greatly benefit Japan's productive resources.

"Unfortunately, labour relations have not been too happy and there are ominous signs of further troubles on a nation-wide scale. All our Japan offices were involved in a strike which lasted for seven weeks, but in spite of the difficulties encountered I am glad to say that we managed for the most part to meet the requirements of our constituents.

"As a result of the merger of the two wings of the Socialist Party, on the one hand, and the Liberal and the Democrats, on the other, a two-party system has been created. Provided each party can continue to maintain a reasonable degree of unity this development should strengthen the parliamentary system. Between the two parties themselves considerable differences exist over both foreign policy and defence. Mr. Hatoyama, the Prime Minister, in December made it clear that his Government—composed of the Liberal-Democratic Party—intend to revise the Constitution, reform the administration and revise the system of taxation. This programme is generally regarded as designed to enable Japan to rebuild her armed forces. Mr. Shigemitsu, the Foreign Minister, at the same time gave a review of foreign policy, but was unable to report much progress in the Japanese-Soviet negotiations taking place in London which had foundered on the two issues of repatriation of Japanese prisoners and the settlement of territorial questions. He promised to strive for a speedy solution of the outstanding reparations agreements and to promote 'a positive expansion of our trade with all countries.' The Socialists, on the other hand, are opposed to rebuilding the armed forces and to the Government's policy with regard to China.

"On the whole, Japan has recently made much progress, but the rising population makes a continuing expansion of the export trade essential which is likely in the long run to influence political decisions.

Indonesia

"The political situation in Indonesia is extremely complex and it is often difficult for foreign merchants and bankers, occupied as they are with their day-to-day tasks, to follow the trend of events. The rivalry of political and military leaders has been a deciding factor in the composition and policies of recent Governments and the elections have on that account been repeatedly postponed. It is, therefore, a matter of considerable importance that these elections were finally held towards the end of the year and that polling day passed off without major incident. Provisional results show that no one of the four major parties obtained sufficient seats to form a government on its own and some form of coalition seems probable. The Government, which has been in office since August, under the leadership of Mr. Burhanuddin Harahap, appears to have tackled the many problems which faced it with vigour and, aided by the rise in the price of rubber, it has greatly improved the economic position of the country. We have more than once quoted from the Bank Indonesia Report, as this always gives an objective view of conditions in the country, and in the Report for 1954-55 published last year the Governor gave warning of the dangers of the continuing increase in the supply of money and went on to show the necessity of weakening the effect of inflation 'which should primarily be brought about by reducing the cash deficit of the Government.' The need for such action is made apparent from a study of the current advance to the Government by the Bank Indonesia. This rose from Rupiahs 1,433 millions at the end of 1953 to Rupiahs 4,477 millions at the end of 1954 and Rupiahs 5,959 millions in June 1955. During the second half of the year a generally tighter money policy was adopted and an overhaul of the systems of import and export control was carried out. These measures have resulted in a drop in the advance to the Government to Rupiahs 4,074 millions at the end of 1955. Gold and foreign exchange reserves have increased and the estimate for the 1956 budget shows a deficit of Rupiahs 1,000 millions—a considerable reduction. The improvement in the free market rates for gold and foreign currencies shows that there is increased confidence in the economy.

"Relations with Holland have, unfortunately, deteriorated in recent years and discussions over a number of outstanding matters were held recently at Geneva. Although at one time there seemed to be hope of some form of agreement being reached, the conference ended in failure and Indonesia subsequently abrogated the Netherlands-Indonesian Union and the financial and economic agreements entered into in 1949.

The Philippines

"Our office in Manila was opened on 11th November 1875 and the eightieth anniversary was duly celebrated at a reception of friends of many nationalities.

"During 1955, President Magsaysay considerably strengthened his position by his sweeping victories in the Senate and the local elections and he continued his drive to improve conditions for 'the common man.' Unfortunately, however, all has not been well on the economic front and the administrative difficulties I mentioned last year still hold up progress. Foreign currency reserves declined from a figure of U.S.$273 millions to U.S.$213 millions. Although the prices of copra and some other exports tended to be lower, the main cause of this drop in reserves was the increase in imports—chiefly capital goods and raw materials—which has so far only been slightly counterbalanced by restrictions on the import of less essential goods.

"The revision of the Bell Trade Act was approved by both the Philippines and United States Congresses. This comprehensive treaty will materially and increasingly affect trading relations between the two countries. From the beginning of this year free trade has ended and customs duties will be applied by each country on imports from the other on a gradually increasing scale, but whereas the Philippine duty on United States goods starts at 25 per cent. of the standard rate, the U.S. duty on Philippine goods will intially be only at 5 per cent. The Philippine Government has been given power to change the value of the Peso without reference to the United States Government, and has also undertaken to abolish the exchange tax on remittances, but this tax has been replaced by a special import tax which will be gradually reduced. Alterations have been made in the rate at which import quotas will be applied by the United States, and each country is permitted reasonable quantitative import restrictions to protect domestic industries. The immediate effect on Philippine exports is likely to be small, but on a long-term view it will be necessary to explore ways and means of reducing production costs if the traditional markets in the United States are to be retained.

"On the whole, this is a favourable agreement to the Philippines as their market in the U.S.A. for their exports is still available on advantageous terms and the revenue from customs duties is likely to increase. On the other hand, there is the danger that there will be a rise in the cost of living which will make a reduction in export prices more difficult. Meanwhile, it is encouraging to learn that the President has instructed the Monetary Board of the Central Bank to tighten up import controls to prevent a further drop in the foreign currency reserves.

Thailand

"Reports from Bangkok indicate that there has been a considerable improvement in both the political and economic fields since my statement was issued last year. For this a great deal of the credit is due to the Prime Minister, Field-Marshal Pibul Songgram, who, on his return from a successful overseas tour, introduced measures aimed at stamping out corruption in the administration and permitting freedom of speech both at public meetings and in the Press. It is too early to judge how permanent these reforms will be, as personalities play a large part in politics in Thailand, and already there are signs of restriction in public discussion, but the immediate outlook is encouraging. So also is the economic position, as exports were well maintained and, in particular, the tonnage of rice exported was greater than in 1954 although prices were lower. During the year, all the regulations which necessitated surrender of part of the foreign exchange proceeds of exports at the official rate were withdrawn, but rates of duty were raised to compensate. *Import licence requirements* were abolished in September for the majority of goods and customs duties were raised at the same time which should have a beneficial effect on the revenue.

"Exchange rates during the first half of the year showed wide fluctuations, but in July a Stabilisation Fund was set up which is operated by the Bank of Thailand. This Fund seems to have been successfully managed and since its formation the market has been much more stable. Ordinary expenditure in the budget was balanced by revenue, but appropriations for improving transport and irrigation resulted in an overall deficit which will be financed by loans and from treasury balances.

"The above are a few of the many developments that have taken place in Thailand in 1955, and while last year I opened this paragraph with a reference to 'cautious pessimism' I think it would be reasonable to close it this year with the words 'cautious optimism.'

Vietnam

"The partition of Indo-China left behind many political and economic problems to be solved by the State of Vietnam. Amongst these was the settlement of the many refugees who poured in from the north, and the challenge to the authority of the Government by several warring factions, each with control over private armies. Economically, there was the task of rehabilitation after the ravages of war and the building up of a viable economy—deprived as the State is of the industries and rich coalfields of the north. In these circumstances, progress must inevitably be slow, but a great deal has already been achieved with the help of substantial aid from the United States of America and the Government has considerably strengthened its internal position by successful military action. At a plebiscite in October Mr. Ngo Dinh Diem was elected Head of State, in place of Emperor Bao Dai, and he has been recognised as such by the French and other Governments. The loosening of the ties with France has resulted in a gradual switch of trade from the franc area and the economic and financial agreement with France was allowed to lapse at the end of 1955. Elections have recently been held to a Constituent Assembly for the purpose of considering the new Constitution, but the problem of the joint elections with the north, which were part of the Geneva agreement to decide the future Government of the whole country, remains.

Cambodia

"Our office in Phnom-penh got off to a satisfactory start and will, I think, prove to have been worth while. The port itself is, however, far from satisfactory due to the shallowness of the river, but the scheme for the deep water port of Kompong Som is being pushed forward. Prince Sihanouk, the Prime Minister, had a sweeping success in the elections in September and the political situation appears stable.

Singapore and Malaya

"Singapore is our largest office in the East after Hong Kong and in the Federation of Malaya we have a greater number of offices than in any other territory. The recent constitutional developments are, therefore, of great interest to the Bank and, although it is always difficult to assess the importance of contemporary events, until the passing of time enables a more detached view to be taken, it appears probable that 1955 will be considered a most significant year. Elections were held in both territories and a great part of the responsibility for the day-to-day government passed to the ministers whose parties held majorities in the newly elected legislatures. As the months moved on, however, it became clear that the desire for a more rapid transfer to these ministers of such powers as had been reserved was becoming more insistent and that to a considerable extent this desire would be satisfied. Shareholders have no doubt been following the course of events in these territories, as this has had a great deal of publicity in the British Press, and they will, therefore, be aware of the way matters have developed. I sincerely hope so as it is not possible here to do more than touch on one or two of the more important items.

Political Developments

"Arrangements were made during the summer for delegations from both territories to visit London during 1956 to discuss future political developments and the visit of Tengku Abdul Rahman and his ministers took place in January. At this meeting it was decided that every effort would be made for the Federation to have full self-government and independence within the Commonwealth by August 1957 and a Constitutional Commission would be appointed immediately to draw up a constitution. Britain would continue until that date to be responsible for foreign affairs and external defence, but there would be changes in the administration of internal defence arrangements and the Chief Minister has recently taken over the portfolio of Internal Defence and Security. Responsibility for all financial matters, at present discharged by the Financial Secretary, would be transferred at once to an elected minister and Colonel H. S. Lee has taken over this portfolio. The Federation recognised 'the important part which overseas capital must continue to play in the economic and social development of Malaya' and that 'membership of the Sterling Area was to the common advantage of the Federation and the other members.' The talks with the Singapore Government will take place in April, but Mr. Marshall, the Chief Minister, with two of his colleagues, visited the United Kingdom in December when the agenda was agreed.

"The discussions in London set the course for constitutional developments in these countries and I should like to wish them every success in the days that lie ahead; and to hope that their approach to the many difficult problems, both political and economic with which they are likely to be faced will be of advantage to them both and to the Commonwealth as a whole. One of the most important of these problems will be the relationship between the two territories, as a measure of agreement on many matters of policy will be to their mutual benefit.

Good Year for Malaya

"Economically, both have had a good year due to the rise in the prices of rubber and tin. The price of rubber was fairly steady during the first half of the year, but there was a considerable rise during August and September and the average for the year increased by over one shilling per pound. Exports from Malaya were 994,000 tons, compared with 915,000 tons in the year before. The challenge by the synthetic industry, however, is always present and it is encouraging that a scheme to foster replanting, both for estates and small-holders, was finally put into operation. This scheme has been drawn up after consideration of the recommendations of the Mudie Report and the Rubber Producers' Council and is in the nature of a compromise aimed at assisting replanting where it is most needed.

"The price of tin rose slowly during the major part of the year, but there was a jump in December due to a shortage of stocks for spot delivery. Indonesia's recent decision to ratify the International Tin Agreement will enable the International Tin Council to be inaugurated, but the building up of the buffer pool may take some time so long as prices remain at present levels. Tin production in Malaya was a post-war record, while exports were 71,150 tons, compared with 70,333 tons in 1954. Production of iron ore has been increasing in recent years and the total for 1955 was 1,466,184 tons, as compared with 1,212,780 tons in 1954.

"The Malayan trade figures show a favourable balance of M.$335 millions with imports at M.$3,821 millions and exports at M.$4,156 millions.

"The budgets of both territories showed few changes in taxation, but this was mainly due to the fact that the Federation Government, having been in office for only a few months, decided to introduce a 'standstill' budget for the time being and Singapore decided not to act on their own. From a study of the speeches, however, it would seem that some increases cannot be long delayed. Due to the rise in the price of rubber, the Federation expected to turn an estimated deficit of M.$148 millions into a surplus of M.$42 millions. For the forthcoming year estimated expenditure shows an increase of M.$86 millions, including a grant of M.$23 millions to the rubber industry for replanting, leaving a deficit of M.$50 millions. Singapore estimated a surplus of M.$2 millions for 1955 with a deficit of M.$15 millions for 1956.

World Bank Report

"The report of the International Bank Mission, which visited Malaya early in 1954, was published in September 1955 and gave a comprehensive survey of economic conditions in the Federation and Singapore and made numerous recommendations for increasing the territories' productive resources. This useful report is, I understand, being studied by the two Governments and no doubt action on some of its recommendations will be taken shortly.

"Although considerable successes have been achieved in the eight-year-old war against the terrorists, incidents continue to occur at frequent intervals and the terrorist organisation is still a very active force. In the hope of hastening the end of the fighting the Federation Government declared an amnesty in September offering freedom from prosecution to those who surrendered, but the response to this offer was disappointing. Arrangements were, however, made for a meeting between the two Chief Ministers and the Communist leader, Chin Peng, which was held at the end of December. This meeting proved a failure and the amnesty terms were withdrawn on the 8th February and in broadcasts to the people of Malaya, Tengku Abdul Rahman has made it clear that action will continue against the terrorists until they surrender. Disappointing as it is that no tangible results have been achieved as a result of the amnesty, it has been clearly shown that the intention of the terrorists is to overthrow the elected Government of the Federation and this has strengthened the Government's hand. Tengku Abdul Rahman has been resolute in his approach to this problem and Mr. Marshall showed considerable political courage in his successful effort to place certain of the emergency regulations on the statute book.

"I should like to pay tribute to the Commonwealth Forces who have served in Malaya since the Emergency began. To their courage and devotion to duty the progress so far made is due. Never knowing where or when the enemy would strike, their task has not been an enviable one and many have lost their lives.

"In Singapore, there have been considerable labour disputes and unrest resulting in a wave of strikes which has had a disturbing effect on the economy. According to statistics issued by the Labour Department, nearly 950,000 man-days were lost during the year. The danger of labour disputes to a free port, dependent to such a large extent on its entrepot trade, is so evident that the finding of an early solution to this problem would appear to be one of the most urgent questions which faces the Singapore Government.

"Before I leave Malaya I would like to mention the new airport at Paya Lebar in Singapore which was opened by Mr. Lennox-Boyd in August. This is one of the largest in the East and will maintain Singapore's position as an important junction on the international air routes.

North Borneo

"In North Borneo also the increased price for rubber resulted in a marked improvement in the trade figures and revenue. Whereas in 1954 imports and exports were almost in balance at around M.$75 millions, in 1955 exports increased to M.$105 millions with imports at M.$87 millions. Revenue exceeded the estimate by M.$3 millions. In his address in the budget debate the Governor,

whom we congratulate on the well-deserved honour conferred on him at the New Year, informed the Legislative Council that he proposed to widen the composition of that body by nominating eight unofficial members from a panel recommended by certain recognised public bodies and organisations. While this step involves no amendment of the Constitution of the Colony,' it should result in a more representative expression of opinion being heard in the Council. The labour situation, to which reference has been made on many occasions in these annual reviews, remains difficult, but I am glad to see that the agreement with the Government of The Philippine Republic, which I mentioned last year, was signed in August, although no immediate results can yet be reported.

"The formation of the North Borneo Credit Corporation with an advance from the Government of M.$1 million to provide loans for development and building should give stimulus to new projects, but the need for technicians at all levels, to which I referred above, applies with particular force in Borneo and is a long-term problem with no easy solution.

"The facilities at Labuan airport are proving to be inadequate by international standards and considerable work on reconstruction has been put in hand. It was subsequently found that the proposed improvements would not be sufficient to accommodate the larger types of modern aircraft and an expert from the Ministry of Transport and Civil Aviation has recently visited the airport to advise the Government on what is required. The question of the restoration to Labuan of its pre-war status as a free port has been in the news again and the Governor has promised to re-examine it.

"Once again, I have to record a most satisfactory budgetary position in Brunei State where the estimated revenue exceeds expenditure by M.$71 millions.

India

"India has made no secret of the fact that she is moving towards 'a socialistic pattern of society' and this goal has been generally accepted by the public. Until recently the movement in this direction has been gradual under the first Five-year Plan, but the pace is likely to be increased with the introduction of the second Five-year Plan, a much more ambitious programme. Evidence of this can already be seen in the revision of Article 31 of the Constitution, to which reference was made last year, the Companies Act 1956, with its restriction on the activities of managing agents, and the recent decision to nationalise life insurance. Foreign merchants are not alone in their fears of the cumulative effect on the private sector that the increasing power of the State will have.

"The first Five-year Plan, with its emphasis on rural planning and communications, with the consolidation of existing rather than the construction of new industries, did not impose a great strain on the economy. Helped by three favourable monsoons agricultural production increased satisfactorily and the economy has been able to take in its stride the budgetary deficits, while prices have remained stable. While final details of the second Five-year Plan are not yet available, considerable emphasis is being laid on the expansion of heavy industry, and the total outlay in the public sector is expected to be in the nature of £3,600 millions, nearly double the figure for the first Plan. A considerable part of the finance will be obtained again by deficit budgeting, even though a rise in taxation is expected. Whether the targets for this immense undertaking are likely to be achieved is a question on which I, from this distance, do not feel qualified to express an opinion. The President of the Associated Chambers of Commerce in India, however, in his annual address in Calcutta in December, after some very cogent remarks on the necessity of the fullest co-operation between the public and the private sectors and the danger of unhealthy competition between the two sectors, suggested that they were attainable provided 'the necessary transport—particularly the rail transport—is made available.' India so far has made considerable progress—much greater than I think was expected—and at this stage we can look forward with some confidence.

"The report of the States Reorganisation Commission was published in October and many of the recommendations proved generally acceptable. The proposal made regarding Bombay, however, raised considerable objections and the announcement of the decision of the Government to administer Bombay from the Centre had unhappy results. Further difficulties may be encountered before a final settlement is reached.

"The role of foreign capital in present-day India is difficult to forecast. A survey published recently by the Reserve Bank of India showed that nearly 83 per cent. of all foreign investments in India at the end of 1953 came from the United Kingdom, and during the period 1948-53 the percentage of the United Kingdom's share of new business investment was not much less. These figures show to what extent British capital is involved. While speeches of individual ministers promise fair treatment to foreign capital, they have recently made it clear that India is not likely to change her internal policies to attract foreign investment. It seems probable that in the future the role of foreign private investment in India will be smaller than in the past and that the emphasis on foreign investment as a whole is more likely to be on a Government-to-Government basis. The large sums required are probably beyond the means of all but the largest concerns, but there is, I am sure, a marginal role in which private capital can play its part if given its chance.

"The introduction of a decimal coinage is promised on 1st April 1957 with the rupee being divided into one hundred *naya paisa*. This will result in the disappearance of the anna. Another break with the past was the nationalisation of the Imperial Bank of India. This Bank was formed in 1921 as the result of the amalgamation of the three Presidency Banks and before the setting up of the Reserve Bank of India it acted as the Government banker.

"Space precludes mention of a number of other important developments in India, but I should like to touch briefly on the visit of the Russian leaders, Marshal Bulganin and Mr. Khrushchev, with their attacks made, in both India and Burma, on the West and the United Kingdom, in particular. There seems no doubt that this visit was a considerable personal success for the Russians, but their comments on the United Kingdom must have been embarrassing to their hosts. On the economic side, this visit may very likely result in increased trade between Russia and India, with greater competition for British firms, but the effect of such biased speeches on informed opinion in India should not, I think, be overrated and it may be that the Russians overplayed their hand.

Burma

"From India we now turn to Burma whose connection with her large neighbour has always been very close. Both countries have adopted a policy of neutrality and the Prime Minister, U Nu, paid a number of visits to countries on both sides of the Iron Curtain. Burma too is endeavouring to raise the standards of living of the country by means of a planned development scheme; but, unfortunately, the fears I expressed last year, that she might be trying to do too much too quickly, have only been too well founded as the difficulty experienced in disposing of her rice has resulted in a steady fall in the foreign currency reserves.

"In March, a severe cut was made in the import programme which had the inevitable effect of reducing customs revenue and making the balancing of the budget more difficult. As a result, it was found necessary to prune rigorously the estimates for capital expenditure. A loan has been promised by India and other forms of aid are being sought. Barter deals have been arranged with several countries and while these should result in the disposal of a part of the export surplus there remains the danger, inherent in such transactions, that Burma may have difficulty in obtaining the goods she requires. Yet, in view of the prevailing buyers' market for rice, it is understandable that such transactions should be found attractive to Burma. Meanwhile, efforts are being made to improve the quality of the paddy and production of other agricultural commodities, such as vegetable oils, cotton and jute, are being increased, which it is hoped will result in a saving of foreign exchange. Fears are expressed that the increase in the number of barter deals, coupled with the Reparations Agreement between Burma and Japan, may have a serious effect on Commonwealth trade. It is, however, encouraging that a Hong Kong firm last year obtained a contract for the construction of barges against strong foreign competition.

"Burma also had a visit from the Russian leaders which was followed shortly after by the visit of Sir Hubert Rance—the last Governor of Burma—accompanied by Lady Rance. The spontaneous welcome Sir Hubert and Lady Rance received during their stay was evidence that old friendships had not been forgotten.

Ceylon

"The improvement in Ceylon's balance of payments, which took place in 1954, continued with increasing momentum in 1955 and resulted in a trade surplus of Rs. 479 millions, against Rs. 412 millions for 1954.

"Tea prices, which at the beginning of the year were Rs. 3.29 per pound, fell considerably in the early months, reaching a monthly average of Rs. 1.34 for May, but rallied to Rs. 2.15 by December. The average for the year was Rs. 2.24, against Rs. 2.56 for 1954.

"The increase in the price of rubber not only benefited the general balance of payments, but enabled a higher return to be obtained from 1st June for the rubber shipped to China, which was originally arranged as a barter deal against rice. Due to the drop in Ceylon's purchases of Chinese rice, China's debt to Ceylon under this arrangement is considerable and so far no decision seems to have been taken as to the method by which this will be settled.

"Ceylon, like many other countries, has drawn up a new development programme, for a period of six years, but this only covers Government expenditure and 'does not constitute an overall plan for the economy as a whole.' The programme provides for an expenditure of Rs. 2,500 millions over the period with the main emphasis on agriculture and public utilities. The targets set out are comparatively modest and it is hoped to be able to finance them out of the annual budget, but the authors of the plan appreciate that the prosperity of the country is dependent to such a large extent on the prices obtained from tea, rubber and copra that they have allowed for an adjustment in the targets, if it is found that a continuing deficit in the budget shows that they were too high.

"Legislation was passed during the year for the formation of the Development Finance Corporation of Ceylon to assist private industrial and agricultural enterprises and 'to encourage and promote the participation of private capital, both internal and external, in such enterprises.'

"Last month, Parliament was dissolved and elections will be held in April. The United National Party, who form the present Government, wish to obtain a mandate from the people to re-

The Subsidiary

"On the 15th August a subsidiary of the Bank, The Hongkong and Shanghai Banking Corporation of California, was open in San Francisco. The Bank, since its foundation in 1865, has had a very long connection with San Francisco as, in that year, we appointed the Bank of California as our Agent. Ten years later in November 1875 our own office was opened. From that time this office has contributed greatly to the business of our Far Eastern offices with the West Coast of America, but it has not been permitted to carry on domestic banking in the State of California. The new subsidiary, however, is able to offer a full range of domestic banking services maintaining current and savings accounts, receiving money on deposit and granting approved loans, as well as providing the facilities for financing foreign trade which has been our main function in the past.

"In January of this year a move was made into handsome new premises which have a modern layout and are quite up to the standard of our main offices elsewhere. I am told that they compare favourably with other banks in San Francisco and the move will give greater scope for the extension of business which we hope to see.

"Once again I come to the end of our annual survey of the Eastern scene in which I have tried to give a brief review of political and economic conditions and to pick out a few of the more important events of the year. Shareholders will, I think, agree that this has been a satisfactory year: political differences have not been too acute and economic development has made progress. The countries in Asia are moving along paths of their own choosing and foreign merchants and bankers must adapt themselves to these changing conditions. This we are trying to do: as indeed we should, as indeed we must. But what of new foreign investment? That is another question altogether. Many other avenues are open and the most attractive will be chosen. Much lip service is paid by certain countries to the desire to attract foreign capital, but stable conditions and prospects of an adequate reward will do much more than any number of exhortations. This is a question each country must decide for itself and the response will surely depend on the decisions made.

"In conclusion, I feel I cannot do better than quote an extract from a speech made at a Conference on Financing the Economic Development of Underdeveloped Countries organised by the United Nations Association in London recently. 'If . . . the underdeveloped areas, generally, are to attract private capital, they have to create conditions in which it appears to people who are trustees for other people's money that this is the best investment in the world which is open to them at the moment. This means to say that conditions have to be such that the risk of loss of income or loss of capital is at a minimum, and secondly, that the yield is likely to be sufficient to offset any such danger as remains.' "

ENGINEERING

(*Concluded from page 716*)

are the most accessible deposits from that centre.

Some idea of the very large technical personnel who will be needed for the steel projects is given in the report. It is estimated that about 15,000 technicians (below the foreman category) will be needed, while another 2,100 supervisory staff (from foreman and upwards) will be required for all the three steel works. The Report recognises that the task of locating such a large number of qualified technicians in India is in itself a "stupendous one"; it has been made all the more difficult by the fact that engineers with similar qualifications are also needed not only in the private sector of the iron and steel industry but also in other heavy engineering and transport industries. One way to solve this problem is to recruit engineering graduates with little or no experience and to have them suitably trained. In order to co-ordinate the demands of the three steel plants for qualified personnel of all grades, the recruitment has been centralised, and carried out in consultation with the Union Public Service Commission. The bulk of the officers above the foreman category will have to be trained abroad. Steps are being taken to secure training facilities for them in steel works in foreign countries. About 50 engineers who will be attached to the Rourkela plant are being trained, in accordance with an agreement, in the works of the German combine. A provision for similar training exists in the Indo-Russian steel agreement. For training of skilled workers below the foreman category, efforts are being made to develop training facilities within the country. A technical committee has been set up to survey and assess the existing training facilities in the country and to recommend suitable steps for organising training of the right kind and quality.

Nahan Foundry

The management of the Nahan foundry, established 80 years ago by the Maharaja of Sirmur and taken over by the Government of India in 1952, is another responsibility of the Ministry of Iron and Steel. The foundry is being managed by a private limited company, formed in October 1952. It manufactures agricultural implements, including sugarcane crushers. It would, however, appear that the foundry has been unable to maintain the margin of profit which it used to earn before it was taken over by the Government. This is attributed to keen competition from private manufacturers of cane crushers and loss of the market in Pakistan. It actually suffered a loss of Rs. 95,000 during 1954-55. The continuous labour unrest during the period was the main reason for the loss. The measures that are needed to restore industrial peace in this unit are under the Government's consideration.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(THE LIABILITY OF MEMBERS IS LIMITED TO THE EXTENT AND IN MANNER PRESCRIBED IN CHAPTER 70 OF THE LAWS OF HONG KONG)

EAST EUROPE'S ECONOMY

ALL-ROUND IMPROVEMENT

ECONOMICALLY, the calendar year 1955 proved to be "very good" for the East European countries. This is the verdict of the Secretariat of the U.N. Economic Commission for Europe (E.C.E.), Geneva, in its latest publication, the *Economic Survey of Europe in* 1955. In this lucid and comprehensive publication, the E.C.E. Secretariat gives an account not only of economic developments in Eastern Europe and the Soviet Union in 1955 but also of the plans for 1956 and of the prospects for the coming quinquennium. The review is well supported by quantitative information relating to industrial and agricultural production, consumption and foreign trade. It also gives the planned outlook for 1960 of the Soviet economy.

Industrial output in Eastern Europe during 1955, except in E. Germany, was, faster than the pace envisaged in the plans for the year and the rate of increase witnessed during 1954. The extent of the improvement in production varied from 13-14 per cent. in Albania and Rumania to 9 per cent. in East Germany. The satisfactory all-round performance on the industrial front is attributed to the Governments' success in widening the energy bottleneck. E. Europe's total output of crude steel in 1955 was higher by 1.1 million tons. The continued rapid expansion of the steel industry in Poland was particularly striking; steel production in this country, which a few years ago was just a third of that produced in Czechoslovakia, was almost equal to the latter's output. Crop harvests were also generally good all over E. Europe during 1955. The grain crop was everywhere better than in the last few years; indeed, barring Czechoslovakia and E. Germany, it was better than in any of the post-war years and was above the average for the five years 1934-38 for the first time since the war in Hungary, Poland and Rumania.

Production

The rise in industrial and agricultural production during 1955 was accompanied by an increase, albeit at a slower rate than in the previous year, in personal consumption. This was reflected in an expansion in the volume of retail trade in all East European countries, but the composition differed considerably from country to country. In Poland, Rumania and Bulgaria, food sales increased faster than sales of manufactures, while, in Czechoslovakia and E. Germany, increase in sales of durable goods was more important, and there was a shortage of meats and fats. Generally, the increase in retail sales of manufactured goods continued to be faster in the countryside than in towns. The greatest change in 1955 was the changed nature of consumer demand, itself a reflection of the improvement in standards of living achieved since 1953. In all the countries of E. Europe, stocks of outmoded or low-quality textiles piled up and special sales at low prices were needed to clear them. On the other hand, supplies of durable consumer goods produced by the engineering industries were, in general, below actual demand, in spite of the considerable increase in their production. Housing construction also continued to lag far behind needs.

Trade with West

The fragmentary data available for a few E. European countries suggest that their trade with the West continued to grow in importance, both absolutely and relatively, during the year under review. Poland's trade in the Eastern world markets, it is stated, even seemed to have declined about 8 per cent. in 1955, while its trade with countries outside the region rose by about one-third. E. Germany increased its trade with Western countries by one-half, while its trade with the Eastern world market remained at the 1954 level. Rumania's trade with the West increased equally fast, its trade with Eastern countries, meanwhile, increasing by only a few per cent. E. Europe's trade with the West may, it is said, continue to grow in relative importance in the coming year. Nevertheless, the E.C.E. Secretariat has little reason to suppose that the expansion of trade with the Eastern world market itself is coming to a halt. In this connection, it observes:

"It is possible that this trade had begun to approach the limits set by the earlier national production plans drawn up without adequately weighing the possibilities of intra-eastern trade. But the new (1956-60) long-term plans, which have been the subject of intensive inter-governmental discussion with a view to co-ordination, may be expected to increase the scope for exchanges in the eastern world markets."

Soviet Union

The E.C.E. Secretariat's review of economic developments in the Soviet Union during 1955 shows that the gross output of industry registered an advance of 12 per cent. as compared with 1954. It is significant that the major part of the increase, about two-thirds to be precise, was due to rise in productivity, the expansion in the labour force being responsible only for the remaining one-third rise in output. Although this trend was similar to that noticed in the past few years, it differed in two important respects from the immediate past. First, for the first time since 1950, the proportionate rise was greater in the producer goods sector than in the consumer goods sector. Secondly, the rise in real wages lagged much behind that in productivity. In 1955, it was defence goods rather than capital goods which were planned to absorb an unusual portion of the rise in industrial output. State expenditure on defence and on fixed investment were both planned to increase by 12 per cent. In the event, the volume of investment increased by only 6 per cent. less fast than in 1954. It is not known what effect the cut of 640,000 in the size of the armed forces may have had on actual defence expenditure for the year. The 1955 grain harvest in the Soviet Union as a whole was 22 per cent. greater than that of 1954, although the yield for particular areas varied greatly on account of weather. Additions of virgin soil to the sown area in 1955 represented a 13 per cent. increase on 1954 in the grain area and brought one-third of the increment in the grain crop; an increase of nearly one-sixth in the yields on the old areas brought the other two-thirds.

Use of Steel

The Soviet Union's present five-year plan fixes production target for crude steel to be attained by 1960 at 68 million tons. This represents an absolute rise of 23 million tons over the achievement under the five-year plan which ended in 1955. The estimated output of 68 million tons will still fall short of the U.S. output of 106 million tons in 1955. It is interesting to note that the composition of steel consumption in the Soviet Union is very different from that in W. Europe or the U.S. A rough calculation suggests that about 40 per cent. of the U.S. output in 1955 was used in the manufacture of consumer goods and in housing, leaving 60 to 65 million tons for use in making capital goods and defence goods. Judging by the production programmes for durable consumer goods and the housing programme for the next five years, the Soviet Union will be using only about 8 million tons of crude steel for these purposes, so that the balance of 60 million tons will be available for investment and defence.

(*Concluded from next column*)

world in every sphere. For example, whereas the first edition stated that the U.S.S.R. possessed the "most mechanised agriculture in the world," the second merely says that it has a "highly mechanised" agriculture. Similarly, a claim that the U.S.S.R. "occupies first place in the world" from the point of view of industrial technique, is omitted from the second edition.

As a corollary, the need to learn from the West is openly acknowledged. The second edition states: "An important factor for technical progress is the thorough exploration of the achievements in science and technique of foreign countries. In a number of cases, equipment produced in our enterprises lags behind the best examples produced abroad."

This emphasis on technical progress is a reflection of the Soviet need to raise labour productivity, which in turn reflects the manpower shortage caused by the lower birth-rate during the war. To achieve the target of an overall increase in industrial output of 65 per cent., the Soviet Union hopes to raise labour productivity by 50 per cent. and thus to rely only to a limited extent on the recruitment of new labour. This heavy dependence on higher productivity may well cause serious difficulties. For such an increase will be hard to obtain, even with extended mechanisation and the heavier pressure which will undoubtedly be brought to bear on the workers.—*Exclusive* to Commerce.

SOVIET ECONOMIC PLANNING

SIGNIFICANT CHANGES INDICATED

By Edward Carran

SIGNIFICANT changes in Soviet economic strategy are reflected in the revised version of the Soviet standard *Textbook of Political Economy*, issued earlier this year. This book, originally published in August 1954, is an up-to-date codification of the accepted teachings of Soviet economic theory and history, and an authoritative guide to Soviet economic policy. Comparison of the two editions is very illuminating.

One interesting point is the current renewal of emphasis on heavy industry and the relegation to the background of the production of consumer goods. Whereas the second edition states that the idea of creating a powerful, heavy industry was a "fundamental" part of the Leninist plan for building socialism in the U.S.S.R., the first edition merely said that this concept was "contained" in the plan. Again, a promise in the first edition of a "steep rise" in the production of consumer goods "in a short time" has been replaced in the second by a reminder that the expansion of heavy industry has "first priority."

It is unlikely, however, that this shift of emphasis indicates any substantial change in Soviet policy during the past year. The Government has always appreciated the importance of expanding heavy industry and has given it top priority in each of the Five-year Plans. The apparent bias in favour of the consumer hinted at in the first edition was taken after Stalin's death, during the premiership of Malenkov. The wording of the passage in the second edition reflects the change in Soviet leadership.

It was doubtless hoped that a slight increase in consumer goods could be achieved without any decrease in capital goods. In the words of the first edition, "the success achieved in heavy industry . . . has made it possible to accelerate the rate of development of industries producing consumer goods." In practice, however, this was soon found to be impossible—the economy was too tight. Directly the party leaders felt strong enough to ignore popular feeling, they returned the consumer once more to the back of the queue.

Sixth Five-year Plan

The recently published sixth Five-year Plan also suggests that the consumer has little to hope for. Whereas capital goods are to be increased by 70 per cent., consumer goods are to be increased by only 60 per cent. Even if the latter target is reached—and consumer goods plans are almost invariably under-fulfilled—it is difficult to see how the workers will be able to buy the additional products, since real wages are to be raised by only 30 per cent.

In any case, most of the increased consumer goods production will benefit only the higher ranks. The biggest percentage increases are to be found in the semi-luxury items. Taking 1955 output as equal to 100, the production of washing machines is to rise to 610 by 1960, that of household refrigerators to 420, that of sewing machines to 235, and that of motor cycles to 162.

As the production of these articles is now limited, the large increases contemplated will not have much effect. The output of washing machines, for example, will total only 528,000 units a year by 1960, and that of refrigerators 635,000 units. Obviously, in a country with a population of 210 million, production on this scale is to the advantage solely of the privileged. Again, whereas the output of silk fabrics is to be doubled, the production of cotton fabrics is to be increased by only 23 per cent.

Meat products are to be increased to 178 by 1960 (1955=100) and butter and other milk products to 186. Whether or not these targets are reached will depend on the success of the agricultural programme, in particular on M. Khrushchev's "virgin land" project, and here the signs are not very encouraging.

Housing space is to be doubled, but since much of the building will have to be carried out in the new settlement areas, the net gain in individual living space is likely to be considerably less than would appear at first sight.

An interesting innovation in the new edition of the *Textbook* is the tacit admission that the Soviet Union is not—as has frequently been claimed in the past—ahead of the rest of the

EXPANDING INDUSTRIES IN PUBLIC SECTOR

PRODUCTION MINISTER UNFOLDS SCHEMES

THE debate in the Lok Sabha on the Production Ministry's demand for grants last week has served to elicit from the spokesmen of the Ministry the Government's programme for expansion of industries during the second Plan period. Problems relating to coal, shipping, fertilisers, salt, and management of Government undertakings received prominent attention and the replies to the debate by the Minister for Production, Mr. K. C. Reddy, and the Deputy Minister for Production, Mr. Satish Chandra, shed some light on the policy of the Government in dealing with them. Some members urged the setting up of a cadre to manage State undertakings, while others pressed for a more bold policy for coal, giving the private sector a larger share in raising additional output. A few others emphasised the need for giving full encouragement to small and cottage industries even at the expense of the large-scale units. A strong plea for allocating more money for setting up another shipyard was also made by a few members.

Intervening in the debate, the Production Minister stated that the second Five-year Plan envisaged expansion of almost all the State industrial undertakings. As the nation progressed and entered into the third and fourth Plans, it was possible, he said, that not one single Ministry, but some half a dozen Ministries would be created to deal with State undertakings. For, unlike in the first Plan, the country would be concentrating on industrial expansion in the second and the subsequent Plans, as it was the declared policy of the Government to make the public sector play a pivotal role in future.

Alluding to expansion of individual industries in the public sector, Mr. Reddy announced that the fourth steel plant for which "we are planning from now would be set up at Bokaro in Bihar." This plant would be, it may be mentioned, in addition to the three plants, one each at Rourkela, Bhilai and Durgapur. Mr. Reddy revealed that the heavy electrical equipment project would be set up at Bhopal, as the Government had taken this decision after very careful consideration (*vide* page 660 of *Commerce* dated 7th April). One of the factors that influenced it in favour of Bhopal was, according to him, the need to give preference to backward areas in the drive for industrialisation of India. He revealed further that the Government was hopeful of establishing an optical glass factory, reference to which was made in these columns two weeks ago. The Minister revealed that the Government did not succeed in getting assistance for this purpose from the U.K. and West Germany on satisfactory terms. It was, therefore, approaching Japan and some of the East European countries to secure the know-how for setting up the strategic optical glass plant in the National Instruments Factory, Calcutta, now under the management of the Production Ministry.

Fertiliser Industry

The Minister, as well as the Deputy Minister, made references to the question of expanding the fertiliser industry. The former said that, in addition to the three new fertiliser factories already planned, one at Rourkela, another at Nangal, and the third at Neiveli, the Government might think of setting up more factories in other places, as there was a possibility of the production target for fertilisers being revised upward in the second Plan period. If that happened, the claims of Rajasthan, Vijayawada, Itarsi and other places would certainly be kept in mind.

It will be appropriate to recall here the Ministry's present plans for expansion of the fertiliser industry. The Ministry envisages that the entire increased demand for chemical fertilisers, using nitrogen, at the end of the second Plan period could be met by a 60 per cent. expansion of the Sindri factory and by the setting up of three fertiliser factories at places mentioned above. The Sindri expansion scheme is expected to yield 70 tons of urea and 400 tons of ammonium sulphate nitrate per day. This scheme, already under execution, is estimated to cost over Rs. 10 crores and is expected to be completed by about the end of 1957. The entire quantity of 10 million cubic feet of gas from the coke oven plant of Sindri will be utilised to make fertilisers. An Italian firm, Messrs. Montecatini of Milan, has been entrusted with the work of erecting the plant.

The Nangal Fertiliser factory is estimated to cost Rs. 22 crores. It will produce 200,000 tons of ammonium nitrate and about 7.5 tons of heavy water per year. The main raw material to be used in this factory will be the hydel power from the Bhakra Project, its requirements being 160,000 kw. The factory is likely to go into production by 1959-60. A company, known as Nangal Fertilisers and Chemicals Ltd., has been formed to execute the project.

The other two factories, those to be set up at Rourkela and at Neiveli as part of the lignite project, will produce 80,000 and 70,000 tons of nitrogen per year, respectively. The Rourkela plant will produce 442,000 tons of Nitro-limestone, while the Neiveli factory will produce 40,000 tons of urea and 200,000 tons of ammonium sulphate nitrate per year. The Rourkela plant will use the gases released in the steel plant during the manufacture of steel by the L.D. process. Referring to the Neiveli project, Mr. Satish Chandra stated that investigations had shown that water could be pumped out to enable the mining of lignite. If the project went through, a multiple purpose corporation might be set up for generating electricity, manufacturing lignite by-products and nitrogen fertilisers.

Coal Industry

A plea for nationalisation of the coal industry put forward by a certain member of the Lok Sabha prompted Mr. Reddy to explain the latest view of the Government on this subject. The Minister's remarks in this context were more or less similar to those expressed by the Finance Minister some time ago regarding the possibilities of a revision of allocation of shares in the additional production of coal during the second Five-year Plan period. Mr. Reddy is reported to have "virtually ruled out nationalisation of the coal industry for some years to come." Although the Government's clear objective was the earliest possible nationalisation of basic industries, it preferred to utilise, he stated, available resources in opening up new collieries rather than in acquiring obsolete units. He assured members that every effort would be made to reach the coal target of 60 million tons per annum, representing an increase of 22 million tons over the present rate of production. Of this increase, it had been decided that the public sector would raise 8 million tons and the private sector 7 million tons. The position regarding the balance of 7 million tons, Mr. Reddy said, would be announced in a fortnight's time. It may be mentioned here that there are some conflicting views amongst Cabinet Ministers themselves on the policy of reallocation of additional output. Mr. Gulzarilal Nanda some time back denied a previous statement by the Finance Minister in Parliament that the question of reallocation of shares was under the consideration of Government. This denial has now been set aside by the Production Minister who has assured the Government's final decision on this subject in two weeks' time. Such contradictory statements from Cabinet Minister's from time to time would certainly shake the confidence of the public in Ministerial policies and, therefore, should be avoided at all costs.

As regards the management of State organisations, Mr. Reddy revealed that an American expert, Mr. Braithwaite, who had submitted a valuable report to the Government on the working of State undertakings, had favoured the formation of multi-purpose corporations to be in charge of some of the industrial undertakings in the public sector. His own view was that the joint stock company pattern which the Government had chosen for the various undertakings was good and had worked well. He disparaged those who had criticised the management of these concerns by I.C.S. men. While he was prepared to concede that all of them might not be good, he said that there were good and able men among them.

Another Shipyard Likely

An indication that the Government may spend more money on building another shipyard was given during the debate in the Lok Sabha. Some members had suggested that a sum of Rs. 6 crores required for the purpose might be found from the defence allocation. Alluding to this subject, the Deputy Minister said that it might be possible to take some concrete steps for establishing a second shipyard in the country by the middle of the second Plan period. He disclosed that the Government had decided to make a beginning in the direction by training the required technical personnel at the existing Visakhapatnam shipyard. The scheme was expected to be put through this year. In this connection, the Deputy Minister informed the House that it was also proposed to have an industrial management cadre for the undertakings in charge of the Production Ministry alone. This was proposed to be followed with the establishment of an industrial technical cadre. The need for such a service has been felt for a long time and it is high time energetic steps were taken to fulfil it. The greatest handicap of the public sector is the absence of key men to shoulder the responsibility of running commercial undertakings. Nevertheless, the Government has been rapidly expanding its commitments in the sphere of industry, transport, banking, insurance and trade. It is just like putting the cart before the horse. The result is that many schemes undertaken by the public sector have not been attended with the success that is due to them.

DEVELOPMENT OF COTTAGE INDUSTRIES IN BOMBAY

The Government of Bombay has been making a commendable effort at giving a fillip to cottage and small-scale industries in the State. The programme for encouraging the industries is undoubtedly an enlightened one, as it seeks to meet every need of these industries. Thus, stress is laid on offering training to artisans in the use of improved tools and equipment. With a view to eliminating crude methods of finish and improving the designs of handicrafts, the Government has a scheme for imparting training to artisans in the J.J. School of Arts, Bombay. About 142 artisans have had training under this scheme. In order to provide employment to the labour pool in villages as well as to absorb artisans trained at the various training schools, the Department maintains certain village industries training-*cum*-production centres.

The Government's appreciation of the importance of research to cottage industries is indicated by the establishment of four research institutions at Poona dealing with research in workshop methods, dyeing and printing sample production. There are also research centres to work in the fields of woollen, pottery, sericulture and hand-made paper industries.

Financial assistance is also provided to these industries from grants from the Centre as well as from those from the State Government. The outstanding developments in the sphere of financial assistance to artisans and their co-operatives during 1954-55 included the increase in the limit upto which loans could be granted for working capital to industrial co-operative societies from Rs. 5,000 to Rs. 15,000, the formulation of rules under which the loans could be sanctioned, the establishment of a Loan Advisory Committee, the liberalisation of terms and conditions on which loans for working capital could be granted and the decision to establish industrial co-operative banks in those areas where conditions are favourable. It judicious use is made of the various forms of assistance, adequate progress in the realm of cottage and small-scale industries is bound to follow.

Attention is being paid to marketing of products of cottage and small-scale industries. With the building up of weavers' co-operative societies the District Industrial Co-operative Associations and

prospecting for oil

Crude oil is not found everywhere in the world. Here and there it may occur in rocks that were once at the bottom of ancient seas and lagoons. But finding an old sea-bed is no guarantee that oil will be discovered there; *that* can be decided only by drilling a test well.

In some areas, likely clues to buried rock conditions may be found on the surface of the earth, but where surface features are absent as in the Assam Valley, the search for oil possibilities is aided by geophysical surveys.

Three different methods of geophysical surveying for oil are being employed by the Assam Oil Company to "feel" for suitable rock conditions under the Brahmaputra's thick blanket of Alluvium.

By aeromagnetic, gravity and seismic surveys, scientists can form a picture of the type, depth and attitude of buried rock layers.

But none of these can point to oil—even if it is there. The scientists, after studying the results, can only say—there *may* be oil there. The only absolute way of finding out is to drill a test well. Frequently the answer then is—no oil. The prospector must try again elsewhere . . . and so the search goes on, in the hope that India's petroleum requirements may be supplied to an ever increasing extent from her own resources.

DISAPPOINTING RESULTS OF JARDINE HENDERSON JUTE GROUP

HOWRAH CUTS DIVIDEND—RELIANCE AND BALLY PASS OVER

DISAPPOINTING results are disclosed by the audited accounts of the three jute companies under the management of Messrs. Jardine Henderson Ltd., Calcutta, namely, the Howrah Mills Company, Ltd., the Reliance Jute Mills Company, Ltd., and the Bally Jute Company, Ltd., for the half-year ended 30th September 1955. These results reflect the extremely difficult trading conditions which prevailed during the six months under review. The beneficial effects of the increase in working hours from 45 to 48 per week, effected in October 1954 and maintained at that rate during the half-year under review, have been offset by unforeseen circumstances, which affected the productive efficiency of the mills. On top of this, there was a fall in prices of manufactured goods.

A study of the Companies' individual performances during the past three half-years, presented in the table published at the foot of this page, will provide an idea of the extent to which their earnings have declined. The Howrah Mills have suffered a loss of Rs. 0.78 lakh, as against a gross profit of Rs. 11.49 lakhs earned in the previous half-year and of Rs. 14.76 lakhs in the corresponding six months of 1954. The net loss is higher at Rs. 5.22 lakhs on account of the provision for depreciation, as against a net profit of Rs. 6.43 lakhs and Rs. 7.34 lakhs for the previous two half-years just mentioned. The Reliance Jute, too, has sustained a loss of Rs. 3.88 lakhs and a net loss of Rs. 4.72 lakhs, in distressing contrast to the modest gross profits earned in the previous two half-years. The Bally Jute has earned a meagre gross profit of Rs. 0.14 lakh, as against a substantial profit of Rs. 3.84 lakhs, to which level it had risen in the previous half-year from Rs. 0.71 lakh for the six months ended 30th September 1954.

Notwithstanding the loss, the Directors of the Howrah have declared a dividend of As. 4 per share, or 5 per cent. per annum, but this represents a drastic cut from 12½ per cent. per annum paid for the previous four half-years successively. In fact, this is the lowest dividend paid by the Company since the half-year ended 30th September 1949. Even this very modest dividend has been possible only by dipping into the reserves built up in the past. In all, a sum of Rs. 8 lakhs has been withdrawn from the reserves—Rs. 2 lakhs from the dividend equalisation reserve, a like sum from the jute stock reserve and Rs. 4 lakhs from the general reserve out of which a sum of Rs. 1.03 lakhs has been set aside for sales tax contingencies, to meet the liability on account of Bengal sales tax on sales to the Government of India during the period 1st June 1946 to 31st March 1949, following the recent Supreme Court judgment.

The net loss of Rs. 4.72 lakhs suffered by the Reliance Jute has not been covered, because there are practically no reserves, except the debenture redemption reserve and provision for contingencies. On the other hand, the loss has been increased to Rs. 5.10 lakhs by the provision of Rs. 0.84 lakh to sales tax contingencies and doubtful debts. Consequently, even the preference dividend for the half-year under review has had to be held in arrears, let alone restoring the ordinary shares to the dividend list. This is the fourth half-year in succession for which the dividend on the Company's ordinary shares has had to be skipped over. It will be noted here that, during the last 14 half-years, the ordinary shares have received a return for only two half-years, namely, those ended March and September 1953.

The Directors of the Bally Jute have drawn a sum of Rs. 2 lakhs from the general reserve and, after wiping out the deficit, have set aside Rs. 0.41 lakh for sales tax contingencies and Rs. 0.20 lakh for other contingencies before paying the preference dividend. The ordinary dividend, which had been restored only last half-year after a break of three half-years, has had to be passed over again.

The main causes cumulatively responsible for the setback in the results were: (1) the extreme shortage of suitable raw material during the months of July, August and September caused by the serious floods in Assam and East Pakistan; (2) the uneconomic use of the available supplies of raw jute; (3) the inferior quality of even the limited supplies available, and (4) the decline in prices of all grades of finished goods to the lowest levels for the year.

The latest balance-sheet of the Howrah Mills Company shows that the reserves and surplus stand at Rs. 51.40 lakhs, as against a paid-up capital of Rs. 91.87 lakhs. There is a debenture liability of Rs. 30.61 lakhs on account of the 5½ per cent. 1965-70 debentures issued early in the half-year under review. The provision for taxation stands at Rs. 2.95 lakhs. The current liabilities aggregate Rs. 36.94 lakhs. The gross block of the value of Rs. 182.27 lakhs has been written down to a book value of Rs. 74.96 lakhs, besides which capital expenditure in progress aggregates Rs. 31.46 lakhs. The current assets amount to Rs. 107.40 lakhs, thus providing a large coverage to the current liabilities and provision for taxation.

The reserves of the Reliance Jute as on 30th September 1955 aggregate Rs. 4.53 lakhs only, as against a paid-up capital of Rs. 69.50 lakhs. The debenture liability amounts to Rs. 25.47 lakhs. The provision for taxation, at Rs. 0.15 lakh and the current liabilities, at Rs. 32.76 lakhs are covered by current assets amounting to Rs. 62.66 lakhs. The gross block of the value of Rs. 124.06 lakhs stands written down to Rs. 64.68 lakhs.

The Bally Jute has reserves and surplus amounting to Rs. 24.84 lakhs, against a paid-up capital of Rs. 40 lakhs. The gross block, at Rs. 96.73 lakhs, has been written down to Rs. 31.58 lakhs. The current assets amounting to Rs. 48.02 lakhs exceed the current liabilities and provision for taxation aggregating Rs. 14.75 lakhs by a large margin.

from the half-year ended 31st March 1951 to the half-year ended 30th September 1953, before withholding the bonus part of the distribution for the succeeding two half-years. The cash bonus was restored again for the six months ended 31st March 1955.

The half-year under review was a normal period of working from the point of view of labour conditions and was the second in succession when there was no strike or lockout. Deliveries of raw materials and coal were also said to be satisfactory on the whole. Production was, however, slightly less than that of the previous half-year, due to the "lighter average substances of orders made."

The following comparative table brings out the progress of the Company during the past three half-years:

(In lakhs of rupees)

	For the half-year ended			
	30-9-55	31-3-55	30-9-54	31-3-54

Carry forward	0.96	0.39	3.59	0.74

It will be observed that, despite the fall in output, the sale proceeds are higher by over Rs. 52 lakhs. This is evidently due to the revision of prices of paper, following the imposition of excise duty on paper with effect from 1st March 1955. The lower production is reflected in the decline of Rs. 3.73 lakhs in manufacturing expenses. Other expenses have gone up by Rs. 35.95 lakhs, of which excise duty alone accounts for Rs. 30.89 lakhs. Out of the net profit of Rs. 28.04 lakhs, as against Rs. 33.57 lakhs for the previous half-year, the Directors have ploughed back Rs. 15.75 lakhs or over 56 per cent. to the reserves. Such a generous allocation to the reserves is not an exclusive feature of this half-year alone. In fact, the Company has been adopting this policy whenever profit permits it to do so and this has not only stood it well in adverse periods but enabled it to undertake extensive renovation programmes and venture on new projects. Of the aforesaid sum ploughed back, a sum of Rs. 1 lakh has been transferred to the general reserve (as against Rs. 6.25 lakhs set aside in the previous half-year), Rs. 1 lakh (Rs. 0.90 lakh) to the reserve for taxation contingencies, Rs. 2.75 lakhs (Rs. 3.40 lakhs) to the reserve for development rebate, Rs. 1 lakh (Rs. 3.50 lakhs) to the dividend equalisation fund, and Rs. 10 lakhs (Rs. 10 lakhs) to provision for the new mill project in Orissa.

The latest balance-sheet discloses an impressive financial position. The paid-up capital of Rs. 142.92 lakhs is supplemented by reserves and surplus aggregating Rs. 323.72 lakhs, thanks to the conservation of profits, as referred to above. The current liabilities aggregate Rs. 120.30 lakhs and provision for taxation stands at Rs. 20.51 lakhs. The current liabilities and provision for taxation are covered by a large margin of current assets aggregating Rs. 332.77 lakhs. The gross block of the value of Rs. 580.42 lakhs, including an addition of Rs. 41.31 lakhs during the half-year under review, has been written down to a book value of Rs. 259.10 lakhs. Work in progress amounts to Rs. 15.78 lakhs.

The Company's renovation programme made good progress during the half-year. The installation of the Tomlinson soda recovery unit was completed and commissioned during the half-year. However, a number of teething troubles, as was only to be expected with plant of such complexity, had to be met, but these were overcome as they arose. Since the close of the half-year, the operation of the plant is said to have improved and is expected to improve still further after certain contemplated adjustments have been carried out. The Directors, however, report that the position in respect of deliveries of raw materials and coal has deteriorated on account of restricted wagon supplies at loading points.

As regards the new paper mill to be erected by the Company in Orissa, negotiations still continue with the Government of Orissa for the acquisition of the necessary land for the project. Meanwhile, all is in readiness to begin work at the site on the mill buildings and railway siding as soon as the Company gets possession of the land. The draft lease for the bamboo areas, which will provide the raw material for the new mill, is expected to receive the early approval of the Government of Orissa.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 45-8 *cum-div.* On an *ex-div.* basis, the yield on the shares works out to 4.5 per cent. per annum, free of income-tax.

TITAGHUR PAPER REPEATS DIVIDEND

A drop of Rs. 4.78 lakhs to Rs. 56.81 lakhs in gross profit is disclosed by the audited accounts of the Titaghur Paper Mills Co., Ltd. (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta), for the six months ended 30th September 1955. This recession—albeit very modest—is in distinct contrast to the successive improvement noted in the previous two half-years, during which period the Company's earnings had vastly improved from a deficit of Rs. 3.19 lakhs for the half-year ended 31st March 1954 to Rs. 61.59 lakhs in the corresponding six months of 1955. Nevertheless, the Directors have been able to make sizable additions to the reserves and to maintain the distribution to shareholders.

The return to ordinary shareholders is being repeated at Re. 1 per share, or 20 per cent. per annum paid for the previous half-year, and is made up of a dividend of As. 12 and a bonus of As. 4 per share. It will be recalled that the Company had maintained this distribution consistently

P.A.A. DECLARES DIVIDEND

At a meeting held recently, the Directors of Pan American World Airways declared a dividend of 20 cents per share payable on 10th March 1956, to stockholders on record at the close of business on 17th February 1956. This is the forty-fifth dividend paid by Pan American. Four dividends of 20 cents a share each were paid in 1955. Dividend payments have been made each year since 1941.

PROFIT OF VICTORIA MILL HIGHER

DISTRIBUTION ON ORDINARY SHARES RAISED

THE textile industry in India found 1955 to be a prosperous year. There was a substantial increase in the output of cloth and yarn to record levels. The higher production was accompanied by better domestic demand and steady exports, notwithstanding the rising tempo of competition abroad. Prices of cloth ruled steady for export, but advanced sizably in the internal markets. Most of the cotton mills were, therefore, able to report higher earnings. The audited accounts of the Victoria Mills Ltd., Bombay (Secretaries, Treasurers and Agents: Messrs. Mangaldas Mehta & Co., Ltd., Bombay) for the year ended 31st December 1955 disclose that the Company fully participated in the general prosperity of the industry. The gross sales of cloth rose from Rs. 1.96 crores to Rs. 2.02 crores and the gross profit from Rs. 16.45 lakhs to Rs. 19.13 lakhs.

The aforesaid rise in gross profit is in refreshing contrast to the decline of Rs. 1.79 lakhs noted in the previous year and has brought the year's profit to the highest level since 1951, when it had stood at a high of Rs. 26.17 lakhs. The net profit is, however, lower at Rs. 1.56 lakhs, as compared with Rs. 2.54 lakhs for 1954 and Rs. 6.51 lakhs for 1953. This is on account of the larger provisions for depreciation and taxation. The allocation for depreciation has been raised by Rs. 2.50 lakhs to Rs. 8.50 lakhs and that for taxation by Rs. 1 lakh to Rs. 3 lakhs. Nevertheless, the distribution to the ordinary shareholders has been stepped up to 20 per cent. from 15 per cent. paid for the previous four years in succession. It is, however, made up of a dividend of 15 per cent. and a bonus of 5 per cent., so that the dividend part is still unchanged.

Results Compared

The following table clearly brings out the progress in the Company's working during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952

Carry forward	0.57	2.63	2.91	0.22

It will be observed that the net sale proceeds of cloth, yarn and waste show a decline, though the gross sales of cloth alone have, as already pointed out, risen from Rs. 1.96 crores to Rs. 2.02 crores. On the expenditure side, the cost of cotton consumed show a sizable fall of Rs. 14.37 lakhs, thus maintaining the downward trend noted in the previous years, while the other expenses have kept up the upward trend with a further rise of Rs. 2.74 lakhs. The Directors state that they have provided in the accounts of the year under review for the payment of bonus to the workers and staff for 1955 in accordance with the agreement which the Millowners' Association, Bombay, has recently entered into with the Rashtriya Mill Mazdoor Sangh on the question of bonus to employees for the years 1953 to 1957 and which the Company has agreed to adopt. It will also be noted from the above table that the net profit for 1955 does not cover even half the dividend, but the sizable sum brought in from the previous year has come in handy for paying the higher dividend.

The Company's balance-sheet as on 31st December 1955 discloses a satisfactory financial position. The reserves and surplus aggregate Rs. 30.15 lakhs, as against a paid-up capital of Rs. 24 lakhs. The provision for taxation stands at Rs. 18.54 lakhs and current liabilities aggregate Rs. 32.39 lakhs. There has been an addition of Rs. 6.46 lakhs to the gross block during the year, bringing the total value up to the end of the year to Rs. 67.56 lakhs, as against which the depreciation fund amounts to Rs. 46.04 lakhs. The current assets aggregate Rs. 83.56 lakhs which cover the current liabilities and provision for taxation by a margin of Rs. 32.63 lakhs.

Points From The Chair

Rural Banking

"FOR a predominantly agricultural country like India, where 75 per cent. of its population live in villages, an adequate system of providing rural credit is an essential prerequisite for development. The nationalisation of the Imperial Bank of India was a move in this direction to open offices upto the taluk level to provide adequate credit in conjunction with the proposals for the establishment of rural co-operative banks and the integration of State-associated banks. In spite of this proposed expansion, it is felt that a very large field would still be left for the enterprising private banks for expanding their activities into the rural areas not covered by the State enterprise, so as to serve the needs of the private sector and revitalise rural economy. Keeping the structure of future economic development in view, we are keen to spread our Bank's activities to the rural parts to be of good service to the people."

S. R. Y. SIVARAMA PRASAD BAHADUR,
Andhra Bank Ltd.

Egyptian Economy

"The Egyptian economy is now in the midst of a transition period. We are entering a time of increased investment activity which should lead ultimately to considerable increases in productivity to face an ever-increasing population and to secure a higher standard of living for the people. Inevitably, however, such investments take time to yield results. Plans that took some years to prepare are coming gradually from the blueprint into the execution stage. It is the stage where the results in the form of additional production are not yet seen, but where expenditure on the plans is heavy. Bridges and roads have to be built, the carrying capacity of railroad lines expanded, pipelines for the transport of oil laid, and many other improvements undertaken. Parallel to these governmental activities there has been a steady growth in production by private industry in oil derivatives, mining, textiles, sugar, fertilisers, iron and steel, copper, cement, soap, paper and motion pictures."

DR. AHMED ZAKI SAAD,
National Bank of Egypt

Outlook for Tea

"A question that is of vital interest to producers at the moment is whether the consumption of tea in India is, or is not, expanding. There have been increases in production both in India and Ceylon, whilst Africa, from year to year, tends to become a larger producer. Any setback in consumption might lead to a buyers' market, and the position is not at the moment as favourable as in recent years. However, tea is still the cheapest and best drink in the world at the present price."

G. H. MASEFIELD,
Travancore Tea Estates Co., Ltd.

Risk of Serious Inflation

"As things are, the Plan must involve enormous burden being placed upon the community; even so, through the over-emphasis it places on household goods industries, acute shortages of essential articles of consumption might come about, involving a risk of serious inflation which it would be difficult to control. The Budget proposals for the year have to be viewed in the light of the needs of the Plan for additional resources by way of taxation. Between the Centre and the States, the figure laid down is Rs. 450 crores and, as if that was not sufficiently drastic, the Finance Minister has hinted at the possibility of raising another Rs. 200 crores to finance the heavy defence programme which the situation on our borders is deemed to have rendered necessary. In the face of all this, detailed criticism of particular aspects of the Budget proposals, however, valid and relevant, is not likely to receive much attention, but it is necessary to state all the same that the process of disincentives has been carried several steps further, and the future can only be viewed with serious misgivings. There is, however, a ray of hope, and that is to be found in the assurance that has been given that our planners contemplate periodic reviews of the situation, with a view to making such adjustments as are found necessary and, if that happens, we should see a more realistic approach to the problems of our underdeveloped economy."

H. P. MODY,
Central Bank of India Ltd.

Restriction on Mill Cloth Production

"I might add that the estimated consumption of 18 yards *per capita* may well prove to be inadequate, in view of the plans which are in train for India's further agricultural and industrial development, and the reasonable expectation that the per *capita* income will materially improve. I earnestly hope, and I am sure that you will join me in this, that the Government will soon revise its present policy of limiting the production of the mill industry and so guard against a shortage of cloth and its consequent inflationary results and probable counter-measures in the form of controls which, as past experience has shown, are costly and generally vexatious. Whatever may be the true potentialities of the handloom industry and the powerlooms, including partial substitution of the latter for handlooms, I do think that the Government would be well advised to examine the possibilities of considerably increasing the present production of mill cloth. In my view, the increase which is desirable cannot be achieved substantially by the introduction of a third shift. Our own experience during the last war definitely showed that in all processes, but particularly weaving, the third shift is severe on machinery, discomforting to labour and harmful to quality. The need for a change of policy is urgent not only because signs of a cloth shortage are already apparent but also because, as time goes on, the difficulty of planning and executing any expansion promptly is bound to increase."

R. E. CASTELL,
Buckingham and Carnatic Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

PORT SHIPPING CO., LTD. Half-yearly General Meeting, Calcutta, 18th April 1956. Dividend: As. 12 per share. Transfer books remain closed from 9th to 18th April, 1956, both days inclusive.

PARASEA COLLIERIES LTD. Half-yearly General Meeting, Calcutta, 19th April 1956. Dividend: As. 6 per share. Transfer books remain closed from 12th to 19th April 1956, both days inclusive.

ASOKA MILLS LTD. Annual General Meeting, Ahmedabad, 21st April 1956. Dividend: Rs. 30 per share. Transfer books remain closed from 13th April to 8th May 1956, both days inclusive.

VISHNU COTTON MILLS LTD. Annual General Meeting, Bombay, 25th April 1956. Dividend: Rs. 8 per share (includes interim dividend of Rs. 2-8 per share). Transfer books remain closed from 11th to 25th April 1956, both days inclusive.

DUNLOP RUBBER CO. (INDIA) LTD. Annual General Meeting, Calcutta, 25th April 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 9th to 28th April 1956, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 26th April 1956. Dividend: Rs. 42-8 per share (includes interim dividend of Rs. 12-8 per share). Transfer books remain closed from 12th to 26th April 1956, both days inclusive.

MODERN MILLS LTD. Annual General Meeting, Bombay, 27th April 1956. Dividend: Rs. 8 per share (includes bonus of Rs. 3 per share). Transfer books remain closed from 2nd to 21st April 1956, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 14th May 1956. Transfer books will remain closed from 5th to 14th May 1956, both days inclusive.

COMPANY REGISTRATIONS

HIND ELECTRONICS PRIVATE LTD. (First Director: Mr. M. L. Bhatter.) Business: General merchants, importers, exporters and order suppliers. Authorised capital: Rs. 5,00,000. Private company. Address: 38, Netaji Subhas Road, Calcutta.

HINDUSTHAN REFRACTORIES AND CERAMICS LTD. (First Director: Mr. M. C. Roy.) Business: Dealers in all kinds of refractory and ceramic product goods. Authorised capital: Rs. 5,00,000. Private company. Address: 20, Netaji Subhas Road, Calcutta.

CALCUTTA DOCKING AND ENGINEERING CO., LTD. (First Director: Mr. P. L. Chaudhury.) Business: To undertake all repairs of marine and general engineering works. Authorised capital: Rs. 5,00,000. Public company. Address: 12, Government Place East Calcutta.

G. C. BANERJI & CO. PRIVATE LTD. (First Director: Mr S. C. Mukherjee.) Business: Wholesale and retail dealers in all kinds of iron and steel and their products. Authorised capital: Rs. 5,00,000. Private company. Address: 74A, Nalini Sett Road, Calcutta-7.

SHARP RISE IN PROFITS OF VISHNU AND LAKHSHMI COTTON MILLS

PREMIER CONSTRUCTION RAISES DIVIDEND

Vishnu Cotton Mill Ltd.

THE directors of the above Company (Secretaries, Treasurers and Agents: The Bombay Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit for the year of Rs. 15,35,692 (loss of Rs. 1,26,341) to which must be added the balance brought forward from last year Rs. 22,250 (Rs. 1,868) giving a total of Rs. 15,57,941 (debit of Rs. 1,24,473). The directors have transferred to depreciation Rs. 7,56,193 (nil), depreciation, renewal and extension fund Rs. 3,00,000 (nil), gratuity fund Rs. 32,000 (nil), general reserve Rs. 2,86,000 (nil), debenture redemption reserve Rs. 1,33,747 (nil), and debenture issue expense Rs. 25,000 (nil), leaving a balance of Rs. 22,995 (credit of Rs. 22,120 after transfer from reserve fund and adjustment). The directors have transferred from dividend fund a sum of Rs. 3,37,000 (Rs. 2,69,000) making a total of Rs. 3,59,995 (Rs. 2,31,120). After deducting the interim dividend paid in November 1955 of Rs. 2-8 (nil) per ordinary share absorbing Rs. 80,000 (nil) there is a balance of Rs. 2,79,995 (Rs. 2,31,120). Out of this balance the directors recommend a dividend of Rs. 35 (Rs. 35) per share less income-tax on 3,133 preference shares, and a final dividend of Rs. 5-8 (Rs. 4) per share on 32,000 ordinary shares (making Rs. 8 (Rs. 4) per share for the year) free of income-tax, absorbing Rs. 2,56,270 (Rs. 2,08,870) and propose to carry forward the balance of Rs. 23,124 (Rs. 22,250).

A sum of Rs. 8,076 being refund of customs duty charged in excess on imported machinery has been reduced from the block, and Rs. 48,365 being surplus on the sale of old machinery has been transferred to depreciation, renewal and extension fund. The sum transferred to depreciation, renewal and extension fund of Rs. 3,00,000 represents Rs. 3,60,734 arrears of initial depreciation and development rebate, less Rs. 60,734 initial depreciation previously set aside on plant and machinery now totally written off for income-tax purposes. The figure for depreciation includes the sum of Rs. 60,734 mentioned above, and is reduced by the sum of Rs. 2,86,000 over-provided in 1954, which sum is now transferred to general reserve. Initial depreciation has now been fully provided for, but development rebate has not been provided for in full.

The sum set aside for debenture redemption is the proportionate amount required, together with compound interest, to redeem the debenture issue by the latest date for repayment. Forfeited dividends amounting to Rs. 2,417 net have been added to reserve fund.

Trading Conditions: Trading conditions were more satisfactory than in the previous year, particularly in the internal market, although competition in export markets continued to be keen. The improved off-take throughout the year is reflected in the reduction of stocks of cloth at the end of the period, as compared with the opening balance.

During the year, the erection of two water tube boilers to take the place of the old Lancashire boilers was completed, and a considerable reduction in coal consumption has since been effected. Additions to buildings during the year amounted to Rs. 1,55,830 and to machinery Rs. 27,67,988.

The profits, fixed charges and retrenchment or lay-off wages of the Company have been insured for the sum of Rs. 1,16,00,000 for a period of two years. Buildings and machinery were insured against fire and riot and civil commotion for Rs. 2,95,59,100 on the basis of reinstatement value. Stocks of cotton, cloth, yarn and stores at Sholapur and elsewhere are fully insured under declaration policies.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	47,66,500	Block	59,56,889
Reserves	34,42,971	Machinery and buildings under erection	65,558
Provision for taxation	19,400	Stock-in-trade	61,22,127
Liabilities	85,47,140	Stores, etc.	15,87,737
Profit and loss account	2,79,995	Other assets	2,84,796
		Debts and advances	23,66,853
		Investments	6,62,167
		Cash	9,879
Rs.	1,70,56,006	Rs.	1,70,56,006

Lakhshmi Cotton Manufacturing Co., Ltd.

The directors of the above Company (Secretaries, Treasurers and Agents: The Bombay Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit for the year of Rs. 21,79,447 (Rs. 13,58,668) to which must be added balance brought forward from last year of Rs. 19,080 (Rs. 52,367) making a total of Rs. 21,98,527 (Rs. 14,11,035). After deducting the interim dividend paid in November 1955 of Rs. 12-8 (Rs. 7-8) per ordinary share, absorbing Rs. 1,60,000 (Rs. 96,000) there is a balance of Rs. 20,38,527 (Rs. 13,15,035). The directors have transferred to depreciation Rs. 7,81,640 (Rs. 7,91,003), reserve for taxation Rs. 7,05,000 (Rs. 2,90,000), gratuity fund Rs. 33,000 (Rs. 18,000) and to engine and machinery fund Rs. 61,143 (nil) leaving a final balance of Rs. 4,57,744 (Rs. 4,14,080). Out of this balance the directors recommend a dividend of Rs. 12-8 (Rs. 12-8) per share less income-tax on 6,400 preference shares, and a final dividend of Rs. 30 (Rs. 26-4) per share on 12,800 ordinary shares (making Rs. 42-8 (Rs. 33-12) per share for the year) free of income-tax absorbing Rs. 4,43,600 (Rs. 3,95,000) and to propose carry forward the balance of Rs. 14,744 (Rs. 19,080).

A sum of Rs. 16,309 being refund of customs duty charged in excess on imported machinery has been reduced from the block, and Rs. 14,341 being surplus on the sale of old machinery has been transferred to engine and machinery fund. The further sum of Rs. 61,143 transferred to engine and machinery fund represents initial depreciation and development rebate for 1955 and arrears of the same not provided for in full in 1953 and 1954, totalling Rs. 2,68,232, less Rs. 2,07,089 initial depreciation previously set aside on plant and machinery which has now for income-tax purposes been totally written off. The figure for depreciation also includes the latter sum. Forfeited dividends amounting to Rs. 4,182-0-6 have been added to reserve fund.

Trading Conditions: Trading conditions were more satisfactory than in the previous year, particularly in the internal market, although competition in export markets continued to be keen. The improved offtake throughout the year is reflected in the reduction of stocks of cloth at the end of the period, as compared with the opening balance.

The policy of diversifying the productive capacity of the Mill was pursued by the installation of a printing plant (completed since the end of the period) and by enlarging the capacity of the bleach house with the installation of additional modern machinery. Additions to building during the year cost Rs. 74,862 and to machinery Rs. 6,10,828. A plot of land, measuring 1 acre and 7 gunthas, was purchased in Sholapur at a cost of Rs. 42,830, for the accommodation of staff.

The profits, fixed charges and retrenchment or lay-off wages of the Company have been insured for the sum of Rs. 1,08,50,000 for a period of two years. Buildings and machinery were insured against fire and riot and civil commotion for Rs. 3,05,33,900, on the basis of reinstatement value. Stocks of cotton, cloth, yarn and stores at Sholapur and elsewhere are fully insured under declaration policies.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	48,00,000	Block	35,78,446
Reserves	63,30,185	Buildings and machinery under erection	10,86,763

Liabilities	36,53,282	Stores, etc.	13,15,055
Profit and loss account	4,57,744	Other assets	2,17,059
		Debts and advances	27,77,111
		Investments	7,73,175
		Cash	2,14,282
Rs.	1,64,36,666	Rs.	1,64,36,666

Premier Construction Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Walchand & Co., Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1955.

During the year under report, the Company made a profit of Rs. 12,69,817 (Rs. 11,90,224). To this was added the sum of Rs. 83,570 (Rs. 1,27,701) (Rs. 1,39,820 being the balance brought forward from the last year's accounts less Rs. 56,250 proposed to be paid as additional dividend for the year ending 31st December 1954) making a total of Rs. 13,53,387 (Rs. 13,17,925) which the directors appropriated as under:—

For dividends on 6¼ per cent. cumulative preference shares at Rs. 6-4 per share (less income-tax) Rs. 62,500 (Rs. 62,500), on 6¼ per cent. cumulative second preference shares at Rs. 6-4 per share (less income-tax) Rs. 93,750 (Rs. 93,750), on 4½ per cent. cumulative third preference shares at As. 7 pies 2.4 per share (less income-tax) Rs. 2,53,125 (Rs. 2,53,125), on ordinary shares at Rs. 6-8 (Rs. 7-0) per share (free of income-tax) Rs. 6,37,500 (Rs. 5,25,000), on promoters shares at Rs. 2-6-11.4 (Rs. 2-1-8.34) per share (free of income-tax) Rs. 85,204 (Rs. 73,708), for reserve fund Rs. 1,27,702 (Rs. 1,20,022) and for carrying forward Rs. 93,606 (Rs. 1,39,820 after placing to dividend equalisation fund a sum of Rs. 50,000).

The directors are advised that the Company will be attracted by section 23A of the Indian Income-tax Act. In view of the above and to be consistent with the articles of association of the Company the directors propose to appropriate an amount of Rs. 56,250 from the last year's carry forward for additional dividend on ordinary shares for the year ended 31st December 1954 at As. 12 per share.

Messrs. Walchandnagar Industries Ltd. ceased to be the Company's subsidiary during the year.

During the year under report the directors reviewed the position of reserves that was shown under various heads in the balance-sheet so far and have now regrouped the same.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,05,06,250	Block	74,367
Reserves	1,23,69,677	Works-in-progress	82,406
Provision for depreciation	31,200	Stores on hand	16,962
Provision for taxation	13,62,223	Debts, deposits and advances	51,50,695
Liabilities	25,31,548	Investments	2,27,39,006
Profit and loss account	14,09,637	Cash	1,47,109
Rs.	2,82,10,535	Rs.	2,82,10,535

Modern Mills, Ltd.

The directors of the above Company (Managing Agents: Messrs. N. Sirur & Co. (Private) Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st October 1955.

The result of the Company's operations during the year shows a profit of Rs. 12,53,899 (Rs. 6,36,790) after providing a sum of Rs. 4,66,006 for bonus payable to the staff and workers for the three years 1953, 1954 and 1955 in accordance with the agreement arrived at between the Rashtriya Mill Mazdoor Sangh and the Millowners' Association, Bombay, and approved by the board of directors of the Company. This profit of Rs. 12,53,899 together with Rs. 16,412 (Rs. 12,177) brought forward from the previous year's account makes a total of Rs. 12,70,311 (Rs. 8,28,967 after transferring Rs. 150 from reserve fund). From this sum, the directors have allocated to:—

Depreciation on buildings Rs. 62,771 (Rs. 65,000), depreciation on machinery Rs. 4,55,820 (Rs. 5,26,250), reserve for taxation Rs. 35,962 (nil), machinery rehabilitation reserve fund Rs. 3,00,000 (nil) and to reserve fund Rs. 30,000 (nil) leaving a balance of Rs. 3,85,758 (Rs. 2,37,717) to be disposed of as under:—

Dividend of Rs. 5 (Rs. 5) and a bonus of Rs. 3 (nil) per share, making a total of Rs. 8 (Rs. 5) per share on 44,261 ordinary shares of Rs. 50 each for the year ended 31st October, 1955 Rs. 3,54,088 (Rs. 2,21,305) and to carry to next year's account Rs. 31,670 (Rs. 16,412).

Conditions during the year under report were satisfactory in the cloth trade, but the demand and prices realised for yarn during the latter half of the year were poor and improved only after the turn of the year. During the year, the Company paid Rs. 36,750 being the second and third instalments of entrance fee of Rs. 73,500 to the Bombay Textile Research Association. The fourth and final instalment of Rs. 18,375 was paid in December 1955.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	22,13,050	Block	58,75,233
Debentures	12,00,000	Stock-in-trade	73,43,861
Reserves	41,06,720	Stores, spare parts and loose tools	8,98,749
Provision for taxation	96,621	Debts, deposits and advances	5,44,362
Liabilities	68,03,356	Investments	1,24,788
Profit and loss account	3,85,758	Cash	18,512
Rs.	1,48,05,505	Rs.	1,48,05,505

New Beerbhoom Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts for the half-year ended 31st October 1955.

After providing Rs. 1,58,000 (Rs. 1,46,531) for depreciation and Rs. 1,46,000 (Rs. 30,000) for taxation and cesses and after transferring Rs. 60,000 (Rs. 1,28,500) to development reserve, there remains a balance at the credit of profit and loss account of Rs. 1,90,195 (Rs. 1,29,624) from which the directors recommend payment of a dividend of 7 per cent. per annum on 20,000 preference shares for the half-year ended 31st October 1955 Rs. 7,000 and a dividend of As. 3 (As. 6) per share on 1,77,623 ordinary shares Rs. 33,312 (Rs. 66,609), leaving to be carried forward Rs. 94,383 (Rs. 56,015).

Raisings for the half-year ended October 1955, totalled 2,32,011 tons as compared with 2,47,076 tons in the previous half-year and 2,23,942 tons in the half-year ended October 1954. Despatches, which included purchased coal, totalled 2,50,908 tons as compared with 2,30,691 tons in the previous half-year and 2,56,752 tons in the half-year ended October 1954.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	19,76,230	Block	31,15,787
Reserves	20,01,763	Stock of coal	99,626
Provision for taxation and cesses	3,33,034	Stores	6,76,962
Liabilities	22,48,390	Debts, deposits and advances	26,37,888
Profit and loss account	94,383	Investments	4,447
		Cash	3,74,090
Rs.	69,08,800	Rs.	69,08,800

Auckland Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 2,96,360 (Rs. 1,48,523) for depreciation and Rs. 35,622 (nil) for taxation, the profit and loss account shows a profit of Rs. 2,16,748 (Rs. 1,65,703) to which is to be added the amount brought forward from previous half-year of Rs. 14,285 (Rs. 3,219) and transfer from general reserve Rs. 61,808 (nil) making a total of Rs. 2,92,841 (Rs. 1,68,924). After transferring to provision for contingencies Rs. 61,808 (nil) there is an available balance of Rs. 2,31,033 (Rs. 1,68,924). The directors propose to dispose of this as follows:—

In paying a dividend on the preference shares at the rate of 5½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 27,500 (Rs. 27,500), in paying a dividend on the redeemable preference shares at the rate of 4½ per cent. per annum, without any deduction for income-tax paid by the Company Rs. 33,750 (Rs. 33,750), in paying a dividend on the ordinary shares of Rs. 4 (Rs. 2-8) per share, without any deduction for income-tax paid by the Company Rs. 1,60,000 (Rs. 1,00,000) and in carrying forward Rs. 9,783 (Rs. 7,674).

Stocks of jute have been valued at market rates and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly and 12¼ per cent. of the total looms remained sealed.

The further six sliver spinning frames together with ancillary machinery for the completion of the modernisation of the Hessian Weft Section of the mill arrived on site in November 1955 and have now been erected.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	65,00,000	Block	84,50,246
Debentures	15,00,000	Capital expenditure in-progress	26,235
Reserves	42,94,285	Stock-in trade	12,01,140
Provision for taxation	2,86,126	Stores and spare gear	7,32,659
Liabilities	8,22,594	Oil and coal	18,558
Profit and loss account	9,783	Debts, deposits and advances	15,82,033
		Investments	1,69,779
		Cash	12,32,138
Rs.	1,34,12,788	Rs.	1,34,12,788

Northbrook Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd. Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 95,000 (Rs. 1,76,455) for taxation, Rs. 22,000 (Rs. 47,000) for reserve for taxation contingencies, Rs. 60,000 (nil) for development rebate reserve and Rs. 1,76,694 (Rs. 1,55,108) for depreciation, the profit and loss account shows a profit of Rs. 2,23,952 (Rs. 2,61,309) to which is to be added the amount brought forward from previous half-year of Rs. 65,116 (Rs. 33,023) making a total of Rs. 2,89,068 (Rs. 2,94,332). From this amount is transferred to general reserve Rs. 50,000 (Rs. 50,000) and Rs. 25,000 (Rs. 33,556) to jute stock reserve, leaving an available balance of Rs. 2,14,068 (Rs. 2,10,776). The directors propose to dispose of this as follows:—

In paying a dividend on the preference shares at the rate of 5½ per cent. per annum without any deduction for income-tax paid by the Company Rs. 41,250 (Rs. 41,250), in paying a dividend on the ordinary shares of As. 12 (As. 12) per share, without any deduction for income-tax paid by the Company Rs. 1,25,956 (Rs. 1,25,956) and in carrying forward Rs. 46,862 (Rs. 43,570).

Stocks of jute have been valued at market rates and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association the mill worked 48 hours weekly and 12½ per cent. of the total looms remained sealed.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	31,79,880	Block	68,57,203

Union Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 70,000 (Rs. 1,18,000) for reserve for taxation contingencies, Rs. 5,000 (nil) for development rebate reserve and Rs. 2,50,758 (Rs. 2,98,698) for depreciation, the profit and loss account shows a profit of Rs. 3,04,189 (Rs. 4,17,894) to which is to be added the amount brought forward from previous half-year of Rs. 6,219 (Rs. 5,396) and amount transferred from general reserve of Rs. 1,21,421 (nil) making a total of Rs. 4,31,829 (Rs. 4,23,290). This amount is reduced by provision for contingencies Rs. 1,21,421 (nil) transfer to general reserve Rs. 75,000 (Rs. 2,00,000) and transfer to jute stock reserve Rs. 20,000 (Rs. 12,885) leaving an available balance of Rs. 2,15,408 (Rs. 2,10,405). The directors propose to dispose of this as follows:—

In paying a dividend on the preference shares at the rate of 7 per cent. per annum, without any deduction for income-tax paid by the Company Rs. 21,000 (Rs. 21,000), in paying a dividend on the ordinary shares of Rs. 5 (Rs. 5) per share, without any deduction for income-tax paid by the Company Rs. 1,79,890 (Rs. 1,79,890) and in carrying forward Rs. 14,518 (Rs. 9,515).

Stocks of jute have been valued at market rates and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association the mills worked 48 hours weekly and 12½ per cent. of the total looms remained sealed.

It is satisfactory to report a marked improvement in working conditions at the South Mill, where labour is now working better than for some time past.

It has been decided to transfer a further 76 hessian looms of 46½ ins. reed space from the South Mill to the North Mill. To cater for these additional looms six sliver spinning frames have been ordered together with ancillary machinery and this equipment is expected to be on site early in 1956.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital	41,93,600	Block	1,13,68,492
Debentures	12,00,000	Capital expenditure in-progress	15,083
Reserves	88,14,228	Stock-in-trade	17,02,589
Provision for taxation	64,481	Stores and spare gear	11,92,126
Liabilities	23,18,072	Oil and coal	76,557
Profit and loss account	14,518	Debts and advances	20,31,014

Naihati Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 2,61,185 (Rs. 1,71,817) for depreciation and Rs. 1,60,179 (nil) for taxation, the profit and loss account shows a loss of Rs. 1,20,910 (profit of Rs. 1,74,323) to which is to be added the loss brought forward from previous half-year Rs. 4,25,342 (Rs. 8,82,391) and transfer to provision for contingencies Rs. 33,365 (nil) making a total loss of Rs. 5,79,617 (Rs. 7,08,068). This loss is to be reduced by transfer from reserve for taxation contingencies Rs. 1,52,000 (nil), transfer from jute stock reserve Rs. 75,000 (nil) and transfer from general reserve Rs. 33,365 (nil), leaving a net loss of Rs. 3,19,252 (Rs. 7,08,068) to be carried forward.

Stocks of jute have been valued at market rates and manufactured goods at contract or market rates.

In accordance with the working time agreement of the Indian Jute Mills' Association the mill worked 48 hours weekly and 12½ per cent. of the total looms remained sealed.

It has not been possible to keep the fine spinning unit wholly employed throughout the period, but the directors have reasonable hopes of enlarging this business in the near future.

With the removal of all export duties by the Government of India with effect from 1st August 1955 Indian Mills were put in a stronger position to meet competition from other countries.

Accounts in brief were as under:—

Kinnison Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. F. W. Heilgers & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 1,72,000 (Rs. 2,27,885) for taxation, Rs. 37,000 (Rs. 82,000) for reserve for taxation contingencies, Rs. 9,000 (nil) for development rebate reserve and Rs. 2,23,690 (Rs. 2,51,300) for depreciation, the profit and loss account showed a profit of Rs. 2,95,566 (Rs. 4,14,670). To this was added the amount brought forward from previous half-year of Rs. 32,590 (Rs. 32,459), transfer from provision for taxation Rs. 1,25,000 (nil) and transfer from general reserve Rs. 1,30,784 (nil), making a total of Rs. 5,83,940 (Rs. 4,47,129). After transferring to jute stock reserve Rs. 10,000 (Rs. 25,000), transferring to provision for contingencies Rs. 1,30,784 (nil) and transferring to general reserve Rs. 50,000 (Rs. 1,00,000), there was an available balance of Rs. 3,93,156 (Rs. 3,22,129). The directors have paid a dividend on the preference shares at the rate of 7 (7) per cent. per annum, without any deduction for income-tax paid by the Company, absorbing Rs. 52,500 (Rs. 52,500) and a dividend on the ordinary shares of Rs. 6 (Rs. 5) per share, without any deduction for income-tax paid by the Company, absorbing Rs. 2,87,946 (Rs. 2,39,955) and carried forward Rs. 52,710 (Rs. 29,674).

In preparation for the arrival of sliver spinning machinery in January-May 1956, double shift working was introduced in the Company's No. 1 Mill as from 5th December 1955.

Accounts in brief were as under:—

Union Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Williamson Magor & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1955.

The half-year's working has resulted in a loss of Rs. 37,987 (profit of Rs. 6,862) after providing for depreciation and commissions. After transferring the above loss, making sundry adjustments etc, the profit and loss account shows a balance at credit of Rs. 53,180 (Rs. 1,13,661). From this has to be deducted the dividend of As. 4 (As. 12) per share for the half-year ended 31st December 1954, Rs. 8,750 (Rs. 26,250) and directors' commission thereon Rs. 263 (Rs. 1,050), leaving a balance Rs. 44,167 (Rs. 68,861 after paying a dividend of As. 8 per share absorbing Rs. 17,500) which the directors recommend should be carried forward. In view of the loss sustained during the half-year no provision for taxation is considered necessary.

The following are the comparative statistics of raisings and despatches—

	January-June 1955	*January-June 1954*
	Tons	Tons
Raisings	32,891	42,779

Trichinopoly Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Mooljee Ramjee & Sons, Ramjeenagar) submit the audited accounts of the Company for the year ended 31st December 1955.

The net profit after providing for all expenses and writing of Rs. 92,151 (Rs. 47,677) as depreciation on fixed assets, amounted to Rs. 1,73,179 (Rs. 4,14,192). Donations amounting to Rs. 4,113 have been paid therefrom. Along with Rs. 8,321 (Rs. 4,009) carried forward from last year, there is a sum of Rs. 1,77,388 (Rs. 4,18,202) to the credit of the profit and loss account, which the directors recommend to dispose of as follows:

To provide for taxation Rs. 50,000 (Rs. 1,84,000), to pay a tax-free dividend of 9 (9) per cent. to shareholders Rs. 1,25,880 (Rs. 1,25,880) and to carry forward to next year Rs. 1,508 (Rs. 8,321 after placing to rehabilitation a sum of Rs. 1,00,000).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	13,98,670	Block	6,01,845
Reserves	8,78,332	Stock-in-trade	8,33,720
Provision for taxation	2,25,231	Stores, spare parts, etc.	1,89,373
Liabilities	1,22,150	Other assets	250
Profit and loss account	1,77,388	Debts, deposits and advances	7,26,270
		Investments	1,02,907
		Cash	3,47,406
Rs.	28,01,771	Rs.	28,01,771

N.B.—Figures within brackets relate to the corresponding period of the previous year.

Notices

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN THAT THE 30th Ordinary General Meeting of the Company will be held at the Registered Office of the Company, "Dunlop House," 57B, Free School Street, Calcutta, on the 25th day of April 1956, at 12-15 p.m., for the following purposes:—

(1) To consider, approve and adopt the Directors' Report and Statements of Account.

(2) To declare Preference and Ordinary Dividends.

(3) To elect Directors.

(4) To elect Auditors and to fix their remuneration.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 9th April 1956 to 28th April 1956, both days inclusive.

By Order,
P. B. SEN GUPTA,
Secretary.

DUNLOP HOUSE,
57B, FREE SCHOOL STREET,
CALCUTTA, 29*th March* 1956.

N.B.—As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register them prior to 9th April 1956.

In terms of Article 4 of the Company's Articles of Association, no Preference Shareholder as such is entitled to attend the Meeting. A Debenture Stockholder as such is also not entitled to attend the Meeting.

THE MODERN MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-second Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Friday the 27th day of April 1956, at 3-45 p.m. (S.T.), to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October 1955.
2. To declare a Dividend and Bonus.
3. To appoint Directors in place of those who retire by rotation but who are eligible for re-appointment.
4. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 2nd day of April 1956 to the 21st day of April 1956, both days inclusive.

Any member entitled to attend and vote at the meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.

Detailed Notice setting forth all the items of business to be transacted at the above Meeting has already been published in the Press and has also been posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.

BOMBAY, 14*th March* 1956.

N.B.—The dividend and bonus, when declared, will be made payable at the Registered Office of the Company on and after Wednesday the 9th May 1956, between 12 noon and 3 p.m. on week days, other than Saturdays, and between 12 noon and 1-30 p.m. on Saturdays, to Shareholders whose names stand on the Register of Members on the 2nd April 1956.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 39th Ordinary General Meeting of Shareholders of the above Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Friday, 27th April 1956, at 11.00 a.m., for the following purposes:—

1. To receive and consider the Directors' Report and the Accounts for the year ended 31st December 1955.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. To transact any other competent business.

The Share Transfer Books of the Company will be closed from the 17th to 27th April 1956, both days inclusive.

By Order of the Board,
H. S. CHALLIS,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, 29*th March* 1956.

Note.—A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

THE MILLOWNERS' ASSOCIATION BOMBAY

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING of the MEMBERS of the MILLOWNERS' ASSOCIATION, BOMBAY, will be held in the rooms of the Association (Second Floor, Elphinstone Building, Veer Nariman Road, Fort), at 11-00 a.m. (S.T.) on Tuesday the 24th April 1956, to transact the following business:

(1) To receive and adopt the Committee's Report and Statement of Accounts for the year 1955;

(2) To appoint Auditors of the Association's Accounts for the current year and to fix their remuneration;

AND any other business that may be brought forward.

By Order of the Committee,
N. S. V. AIYER,
Secretary.

BOMBAY, 14*th April* 1956.

THE MILLOWNERS' ASSOCIATION BOMBAY

NOTICE IS HEREBY GIVEN THAT A SPECIAL GENERAL MEETING of the MEMBERS of the MILLOWNERS' ASSOCIATION, BOMBAY, will be held in the rooms of the Association (Second Floor, Elphinstone Building, Veer Nariman Road, Fort, Bombay), on Tuesday the 24th of April 1956, immediately after the Annual General Meeting which has been fixed for the same day, to consider and sanction the amendment of the Association's Rules and Regulations, already circulated to members.

By Order of the Committee,
N. S. V. AIYER,
Secretary.

BOMBAY, 14*th April* 1956.

CALCUTTA JUTE MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, "Stephen House" Fourth Floor, No. 4 Dalhousie Square East, Calcutta, at 3 p.m. on Monday the 30th April 1956, for the purpose of receiving and passing the Report of the Directors and the Managing Agents for the half-year ended 30th June 1955, declaring a dividend on Preference shares and transacting such other business as may be brought forward.

The Transfer Register will be closed from 20th to 30th April 1956, both days inclusive, and it is notified that Dividend Warrants will be issued and posted to the registered shareholders only on application. Persons holding shares under blank transfer are advised to effect registration of scrip to their names as soon as possible but not later than 20th April 1956.

By Order of the Board,
DAYARAM & SONS,
Managing Agents.

"STEPHEN HOUSE," FOURTH FLOOR,
4, DALHOUSIE SQUARE EAST,
CALCUTTA, 29*th March* 1956.

THE BELSUND SUGAR COMPANY LIMITED

NOTICE

THE ANNUAL ORDINARY GENERAL MEETING of Shareholders will be held at the Registered Office of the Company, 14, Netaji Subhas Road, Calcutta-1, on Monday the 30th April 1956 at 3 p.m., for the purpose of receiving the Directors' and Auditors' Report for the year ended 30th September 1955, passing the Accounts, declaring Dividend, electing Directors and Auditors in place of those retiring and transacting any other business that may be brought forward.

Notice is hereby given that the Share Transfer Books of the Company will be closed from 16th April to 30th April 1956, both days inclusive.

The Dividend Warrants will be sent to Registered Shareholders.

By Order of the Board,
BANGUR BROTHERS LTD.,
Managing Agents.

14, NETAJI SUBHAS ROAD,
CALCUTTA, 28*th March* 1956.

N.B.—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

NEW CENTRAL JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the shareholders of the Company will be held on Monday the 14th May 1956, at 4-30 p.m. at the Company's Registered office, 11 Clive Row, Calcutta, to receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended December 1955, to declare final dividends, to elect a Director in place of the retiring one and to appoint Auditors for the current year and fix their remuneration.

The Share Transfer Books of the Company will be closed from 5th May 1956 to 14th May 1956, both days inclusive.

By Order of the Board,
SAHU JAIN LTD.,
Managing Agents.

CALCUTTA, 29*th March* 1956.

N.B.—A member entitled to attend and vote at the General Meeting is entitled to appoint another person as his proxy to attend and vote instead of himself and the proxy need not be a member.

QUESTION HOUR IN PARLIAMENT

No Inflation

IF one takes a long-term view, there is practically no inflation yet in the country. While there has been an increase of about 11 per cent. in prices during the first Five-year Plan period, the national income has gone up by 18 per cent. It is a fact that notes in circulation have increased by Rs. 61.4 crores between 20th January and 9th March this year. But this does not constitute a clear indication of inflationary tendencies. The Government is watching the situation and has all weapons ready in its armoury to deal with inflation when it becomes necessary.

* * * *

Borrowings By Governments

Total borrowings by the Union and State Governments during 1956-57 are expected to be Rs. 100 crores and Rs. 50 crores, respectively. The exact amount can, however, be known only when the Governments decide to raise the loans.

—*B. R. Bhagat*

World Bank Loan for Koyna

The World Bank has signified its willingness to consider granting a loan to the Koyna hydro-electric project. A consolidated project report on Koyna is being sent to the Bank which will proceed further in the matter.

* * * *

New Companies

During 1955, out of 1,403 applications for registration of new companies, 1,390 were accepted. Seven applications had been rejected, while six were still pending. The largest number of applications—551—came from West Bengal.

* * * *

Indian Telephone Industries

The Mysore Government's request for the return of its share capital in the Indian Telephone Industries and Hindustan Aircraft has been turned down by the Centre. It has not been possible to accede to the Mysore Government's request either for the return of its capital or for its conversion into preferential shares carrying five per cent. dividend. This decision has been communicated to the Mysore Government.

—*M. C. Shah*

Reserve Bank Branch

The proposal to open a Reserve Bank of India branch at Patna has been abandoned. After the formation of the State Bank of India, the position has changed, because the purpose for which the Reserve Bank was to have been opened would be served by the State Bank. Henceforth, Reserve Bank branches will be opened only for three specific purposes—Issue Department, Department for Banking Operations or for Agricultural Credit. The premises acquired in Patna for housing the Reserve Bank will, however, be retained for use by the Note Cancellation Department.

* * * *

Opium Exports

India exported during 1955 about 195.5 tons of opium which fetched a revenue of Rs. 1.28 crores.

—*A. G. Guha*

Tea Prices

The fall in prices of tea last season was due first to overproduction in the country and, secondly, to the insistence of Government that larger quantities should be auctioned in India, instead of being sent on consignment to the United Kingdom. Indian exports of tea during April 1955 to January 1956 aggregated 254,256,820 lbs. from Northern India and 60,423,973 lbs. from Southern India.

—*T. T. Krishnamachari*

Foreign Demand for Tea

The demand for Indian tea abroad is satisfactory. I am not aware that the demand for Indian tea in Australia and New Zealand is affected adversely by the delay (of three months) in shipments reaching those countries. India, along with other tea-producing countries like Ceylon, does make efforts to propagate consumption of tea generally in the world. Apart from this, there is no propaganda being done to popularise Indian tea as such in world markets.

* * * *

Tea Garden Workers

A sum of over Rs. 2 lakhs was disbursed from the Tea Board funds during 1954-55 for the welfare of tea garden workers. This amount was utilised for providing recreational, educational and vocational training centres for tea garden workers and medical facilities for them not contemplated under the Plantation Labour Act.

—*D. P. Karmarkar*

Production of Pencils

Out of about 600,000 gross pencils which India requires every year, about 300,000 gross are produced in the country at present. To encourage the development of this industry, pencil imports have been restricted and a duty of As. 2 per pencil has been imposed on imported pencils, with a view to confining imports to superior quality pencils. The Government is also arranging to get the services of a foreign technician to assist the manufacture of pencil slips.

* * * *

Aluminium Industry

The aluminium factory, to be set up at Hirakud, will have an annual capacity of producing 10,000 tons of aluminium. The factory is expected to go into production by the middle of 1957. The company is a joint Indian and Canadian enterprise. Aluminium may henceforth be an industry in the public sector, but I do not know yet. In any case, I do not think it will affect the functioning of the existing units.

* * * *

Fountain Pens

The Government has already approved of schemes for the manufacture of quality fountain pens. Pens of the quality of "Parker 51" and "Sheafers" are being manufactured in India.

—*Nityanand Kanungo*

Hand-pounded Rice

Development plans are initiated to provide additional employment in rural areas by increasing the production of hand-pounded rice. Financial assistance is sanctioned to give a subsidy for introducing improved pounding implements on the basis of 50 per cent. of the cost and for a production subsidy to co-operative societies and recognised institutions at the rate of six annas per maund of paddy processed by hand-pounding methods. Stipends are given for the training of workers and loans are sanctioned for stocking paddy and for manufacturing implements. Money is also sanctioned for research and experiments. The production of hand-pounded rice in 1954-55 was 18.24 million tons, as against 20.76 million tons in 1953-54.

* * * *

Silk Industry

The Mysore Government is considering the question of taking over the management of the Mysore Spun Silk Mills Ltd. at Channapatna. I cannot state whether the Government is considering the nationalisation of the spun silk industry. This is too large a question to be answered at this stage. The Channapatna Mills is the only unit in the country which utilises silk waste produced in the country. Although it has a capacity of 800,000 lbs., it is utilising at present only about 350,000 lbs. The surplus quantity of silk waste produced not only in Mysore but in other parts of the country is being exported at present.

—*K. C. Reddy*

Mineral Oil Resources

The opinion of Indian geologists about the existence of mineral oil in certain areas in the country have been confirmed by Russian experts. During the current year, exploration of oil by means of geological and geophysical surveys are being carried out in Jaisalmer, Cambay and East Punjab areas. It is also proposed to carry on geophysical surveys in the Ganga valley. Exploratory drilling also is expected to be started at a few selected places.

* * * *

Oil in Cauvery Delta

The Government knows something about the possibilities of striking oil in certain tracts of the Cauvery delta and some areas in the south-eastern portion of the country. More data has got to be collected in order to include these areas for exploration in our programme.

* * * *

Artificial Rain

Two Indian scientists are now in Australia carrying on research on artificial rain making. As soon as they return, further experiments will be undertaken in the country.

Copper Mines

The Government of India is considering the question of developing copper mines in the country. Some foreign experts who visited India recently have made certain recommendations regarding the development of copper mines and the Government is considering the question of implementing those recommendations. The Indian Copper Corporation is at present producing about 7,000 tons of copper in Singhbhum district in Bihar.

—*K. D. Malaviya*

Steamer Service to Laccadive Islands

The Central Government has initiated action with a view to opening a direct steamer service between the mainland and the Laccadive Islands. This action has taken the form of persuading shipping companies to run a steamer service to the Laccadives. No definite date can be given for the service to begin, but it was expected some time ago that it could be started earliest by September this year.

—*B. N. Datar*

"Vanaspati" Industry

The installed capacity of *vanaspati* industry is not proposed to be increased during the second Five-year Plan. One of the manufacturers with four factories accounts for 18.4 per cent. of the total installed capacity in the country and manufactured during 1953-54 and 1954-55 nearly 26.5 per cent. of the total production in the country. The proposals for the colouring of *vanaspati* to prevent adulteration cannot be proceeded with, as no suitable colouring material can be found.

* * * *

Steel for Railways

The railways require one million tons of steel during the current year. The railways are now experimenting with cement concrete sleepers, in place of steel and cast-iron ones.

* * * *

River and Canal Navigation

A provision of Rs. 340.22 lakhs for inland water transport development has been proposed for inclusion in the second Five-year Plan. This provision covers expenditure envisaged on seven schemes. River control and conservancy measures in the Ganga-Brahmaputra region, including dredging, snag clearance and provision of aids to navigation are expected to cost Rs. 92.4 lakhs. For the development of inland port facilities in the Ganga-Brahmaputra region, a sum of Rs. 49.57 lakhs has been proposed. Besides Rs. 20 lakhs as contribution to the Ganga-Brahmaputra Water Transport Board, a sum of Rs. 8.25 lakhs is meant for river surveys in the Ganga-Brahmaputra region and Rs. 12 lakhs for the purchase of equipment for the Assam Ferry Project and the Assam Feeder Rivers Project. Included in the proposals are two schemes for South India—the development of the Buckingham Canal and its linking with Madras harbour (Rs. 115 lakhs) and the development of the West Coast Canals (Rs. 43 lakhs).

—*O. V. Alagesan*

Major Industrial Projects

The Planning Commission has decided that the major industrial projects in the public sector requiring large capital and much technical know-how should be undertaken by the Centre and not by the State Governments.

—*Jaisukhlal Hathi*

EFFORTS AT SPEEDING UP INDUSTRIAL PROGRESS

CHEMICALS AND HEAVY INDUSTRIES RECEIVE GREAT ATTENTION

From A Special Correspondent

NEW DELHI, 10th *April*

DELHI LETTER

THAT the industrial structure of India is being strengthened and diversified in a number of directions with passing of each year, as a result of the gradual and successful implementation of the various schemes, is fully borne out by the latest Annual Report of the Ministry of Commerce and Industry for the fiscal year 1955-56, presented to Parliament this week. Several indices are given to show that the pace of industrialisation is being accelerated. There has been a sharp rise in the imports of machinery from Rs. 84 crores in 1954 to Rs. 108 crores in 1955. Another indication is the rise in the imports of iron and steel, the value of which improved from about Rs. 27 crores in 1954 to Rs. 50 crores in 1955. Imports of steel up to the end of October 1955 amounted to 6.79 lakh tons, as against 3.87 lakh tons and 2.48 lakh tons for the whole of 1954 and 1953, respectively. Efforts are being made by Government to obtain more steel from abroad simultaneously with measures for increasing the domestic production as quickly as possible. As a result, the engineering industries in the country have been able to report an impressive progress since 1954.

The cotton textile industry established a record production at 5,087 million yards in 1955. The Annual Report discreetly avoids the controversial question of rehabilitation, modernisation and expansion of this industry, pending results of the final investigation of the potentialities of the *Ambar Charkha*. The Government's survey work, which covers both the technical and the business-*cum*-management aspects, is not yet complete. The examination of the rate of replacement requirements of machinery in order to formulate the development plans of the textile machinery industry is also not over; it is stated that data has so far been gathered in regard to 75 mills only.

Jute Industry

Since no controversial questions are involved in regard to the jute mill industry, the Report has furnished more information on the subject. It observes that the modernisation of jute mills is a matter of some urgency and that progress is being made steadily in this direction. About 44 mills out of a total of 85, it is stated, have been modernised already or are in the process of modernisation. Since the beginning of 1954, licences for the import of modern preparing and spinning machinery of the value of Rs. 8 crores approximately have been issued to jute mills. Arrangements for the manufacture of jute mill machinery in the country have also been made and three firms have been licensed for the purpose. In order to assist jute mills in modernising their machinery, the Government of India has decided to grant them loans through the National Industrial Development Corporation.

During 1955-56, the Ministry undertook a systematic assessment of the need for expansion in existing industries as well as the potentialities of developing the production of items for which the country was still dependent on imports. A number of Committees were set up to examine the possibilities and lines of future development of items like earthmoving equipment, machine tools, aluminium, power alcohol, etc. Negotiations were conducted with many foreign firms in regard to terms of collaboration in respect of a number of industries. Further, intensive studies were made to consider the lines of future development. These included gear cutting, wood-pulp, carbon black, printing machinery, refractories and compressors. For the development of more important industries for which sufficient capital was not forthcoming from private resources, the Government began giving financial assistance to the promoters of the schemes by granting loans on special terms or by participating in equity capital. The industries to which assistance was given included the manufacture of explosives for civilian purposes, intermediates for certain types of dyestuffs, textile machinery, steel production, etc.

In 1955, the position of the automobile industry was considerably strengthened with the formulation of several programmes for the manufacture of important ancillaries. Among these mention may be made of the production of wheels and rims, clutches and brakes, shock absorbers, oil seals, gaskets and ignition coils. The Government is also endeavouring to establish indigenous capacity for the remaining important ancillaries, such as carburettors, starter motors and dynamos, steering and dashboard instruments. The manufacture of vehicular diesel engines by a Madras firm showed progress according to schedule and, in a period of about 18 months, this firm expects to produce the entire engine less proprietary items. A firm in Bombay has been granted a licence under the Industries Act for the manufacture of another brand of vehicular diesel engines. This firm is expected to complete the manufacture of the engine in a period of three years. With a view to assisting the growth of motor cycles and scooters industry, Government reduced the customs duty on these vehicles when imported in c.k.d. packs for assembly and progressive manufacture.

Heavy Machinery

Particular attention was paid to the development of heavy machinery industry during the year under report. The textile machinery industry made notable strides, especially in the production of carding engines, looms and ring frames. In regard to jute textile machinery industry, it is being hoped, that, in a few years' time, the jute industry will cease to be dependent on imports. Steps were also taken to set up sugar, cement and printing machinery industries—a firm in Coimbatore having already brought out a proto-type rotary printing press. The manufacture of the complete range of paper mill and mining machinery, earthmoving equipment and water tube boilers also received the attention of the Government. In the tools industry section, hand-saw blades were manufactured for the first time during the year. Production of machine tools increased from 1,500 in 1954 to 2,800 during the year under reference. Proposals for the manufacture of capstan and turret lathes were approved by the Government.

In regard to diesel engines and pumps industry, the Commerce and Industry Ministry afforded considerable encouragement for developing capacity for the manufacture of special types of pumps, e.g., acid pumps, submersible pumps, etc., and for high horse-power diesel engines for use in railway traction, power generation, marine propulsion, etc. A programme for the manufacture of high horse-power diesel engines is stated to be under examination of Government. In the electrical engineering industries section, production of aluminium conductors, rubber and plastic insulated cables, switchgear, etc., were started during the year.

As the target for steel production has been revised to six million tons, to be attained by the end of the second Five-year Plan, the target capacity for ferro-manganese was also stepped up from 100,000 to 160,000 tons per annum. Seven new programmes were approved for the production of ferro-manganese and the installation of further capacity was being considered. Eleven new units were allowed to set up fresh capacity for steel castings and one unit was permitted to effect substantial expansion. Efforts to obtain project reports were made in regard to structural fabrication and foundry-cum-forges industry. Among other products manufactured in the country on a commercial scale for the first time, mention may be made of alternators, cycle dynamo lighting sets, complete typewriters, self doffing jute sliver, spinning frames, tea dryers, clinker cooler and clinker breakers, delivery valves and pump elements for fuel injection equipment, vertical multi-cylinder diesel engines, certain sizes of drilling machines, all geared head bench lathes and hypodermic needles, etc.

In the chemical section, penicillin, ammonium chloride and bismuth salts were manufac-

(*Continued on page* 752)

BALANCE OF PAYMENTS

U.K. ALONE RESPONSIBLE FOR DETERIORATION

From Our Own Correspondent

LONDON, 31*st March*

LONDON LETTER

IN their Annual Survey just published the Government are spelling out just what were the factors that put the balance of payments wrong last year. First of all, what is the significance of the "unbalance"? In 1953, there was a favourable balance of £177 million, in 1954 one of £205 million (although the second half of that year only accounted for £31 million and the deterioration had in fact begun) and in 1955 the unfavourable balance was £103 million—split in turn between a favourable balance of £15 million for the first half-year and an unfavourable one of £118 million in the second half-year. Thus, the deterioration has been accelerating and has not been confined to the trade balance. The fall in reserves has been even greater, the total dropping by nearly £230 million over the past year.

This last figure is, of course, compounded of the U.K. position and that between the sterling area and the rest of the world. The latter position has been maintained relatively favourably as the following table shows:

Balance of Overseas Sterling Area with Non-sterling Countries

(In million £'s)

	1954	1955
1st half year	+135	+108
2nd half year	+ 29	+ 29

We are thus driven back to the hard fact that it was the inflationary position in the U.K. and in the U.K. alone that caused the drain on the reserves. Indeed, the U.K. had a current account deficit with the dollar and other non-sterling world of over £300 million, on top of which there was a diminution of the sterling balances of over £90 million. Other capital transactions and the favourable trading balance of the overseas sterling area helped to reduce the impact of these deficits to the £230 million which actually flowed out in gold and dollars.

Searching the U.K.'s own accounts to see what went wrong in 1955, one is struck by the following differences between the position in 1954 and in 1955:

U.K. Trading Balance

(In million £'s)

	1954	1955	Difference
Exports and re-exports ..	2,817	3,061	+244
Imports f.o.b.	3,009	3,413	+404
Trading deficit : visibles ..	—192	—352	—160
Government expenditure ..	—174	—181	— 7
Other invisibles	+521	+386	—135
Defence aid	+ 50	+ 44	— 6
Total ..	+205	—103	—308

So in brief, there was a 5 per cent. deterioration in the ordinary visible trade balance, the flow of imports and exports, but something like a 25 per cent. deterioration in the invisibles. For this a heavy drop in net shipping and miscellaneous commercial income was responsible. But invisibles are always chancey items and the authorities are right in concentrating on a reduction in imports and an expansion in exports as the way out of present embarrassments; after all, net income would not have slumped, if imports had not expanded so heavily. Similarly, the fall in net commercial income was partly due to much heavier expenditure on Middle Eastern oil and this sort of expense must be met by higher export earnings.

It would not be at all surprising to find that the Government's short-term measures had resulted in putting the ordinary trade balance right, while the pressure on the reserves due to the weakening of confidence in sterling in February 1955 and again in July of that year has worked itself out and, indeed, has not been much in evidence in the past six months ever since the Istanbul meeting of the I.M.F., though a dribble of gold outwards has continued. The real problem—the drastic reversal of the underlying trends of weak exports and strong imports—continues and the Government's views on the long-term measures to tackle this will be dealt with in a succeeding letter.—*All Rights Reserved.*

MONEY RATES DECLINE

(*From Our Own Correspondent*)

BOMBAY, 11*th April*

The short-term money market experienced a slight break in the acute stringency noted during the past few weeks, following the inflow of some funds. There was no indication of the source of this inflow, unless it be the disbursement of compensation by the Government to displaced persons from Pakistan during the past two weeks. Be that as it may, this week the banks were not such keen borrowers at higher rates as they were last week.

There was actually a fractional fall in interest rates. Interbank call money was offered no more than 3¼ per cent., as against 3⅜ per cent. last week. Some transactions were reported to have been done even at 3 per cent. House money at call also fetched no better than 3¼ per cent. Short-term deposit rates declined from 3½ per cent. to 3¼ per cent.

There was no sale of Government of India 91-day Treasury Bills this week. The Reserve Bank has not invited tenders for next week either.

A further sharp rise of Rs. 40.05 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 6th April 1956. Notes held in the Banking Department are also up by Rs. 3.01 crores, so that the aggregate expansion in total notes issued is of the order of Rs.43.06 crores. This is covered on the assets side by an increase of Rs. 30 crores in foreign securities, of Rs. 9.94 crores in rupee securities and of Rs. 3.12 crores in rupee coin. In the Banking Department, there has been a fall of Rs. 10.24 crores in the deposits of the Central Government and of Rs. 26.34 crores in those of other Governments. Deposits of banks show no notable change. Balances held abroad have declined by Rs. 27.62 crores, evidently because of the transfer made to the Issue Department. Loans and advances to Governments have risen by Rs. 1.15 crores, while other loans and advances have dropped by Rs. 15.12 crores, of which advances to Scheduled banks against usance bills account for Rs. 1.99 crores. There have, however, been fresh borrowings by banks during the week to the tune of Rs. 4.83 crores against these bills.

The Scheduled banks' statement for the week ended 30th March 1956 reveals that the upward trend in deposits of banks has been maintained with a fresh rise of Rs. 9.75 crores in demand deposits during the week and of Rs.1.26 crores in time deposits. Inter-bank borrowings are also higher by Rs. 1.17 crores, while those from the Reserve Bank have declined by Rs. 1.85 crores. Borrowings from the State Bank of India disclose a rise of only Rs. 89 lakhs. On the assets side, advances have risen by Rs. 10.54 crores and bills purchased and discounted by Rs. 53 lakhs. Investments have fallen by Rs. 2.06 crores. A rise of Rs. 3.64 crores is noted in cash and balances with the Reserve Bank and of Rs. 2.18 crores in money at call and short notice.

The Gilt-edged market was featureless during the week under review, and the undertone was quietly steady. The volume of business remained small. 3 per cent. 1957 attracted buyers a shade higher at Rs. 99-12 and 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61, 3 per cent. 1963-65 and 3 per cent. 1964 were neglected, but they held their ground at Rs. 98-1, Rs. 94-13 and Rs. 94-11, respectively. 3 per cent. 1966-68 was in demand at Rs. 92-10½, while 3 per cent. 1970-75 was asked for a fraction lower at Rs. 89-11½. 3 per cent. 1986 Conversion Loan was dull at Rs. 76-11. 3½ per cent. 1961 was quiet at Rs. 99-7. 3¼ per cent. 1964 was in request an anna higher at Rs. 98-11½ due to proximity of voucher. 3½ per cent. 1965 was unchanged at Rs. 98-9, at which the Reserve Bank appeared as a seller. State loans were featureless, but there were buyers at quoted rates. 4 per cent. 1967 Bombay was marked down by an anna to Rs. 100-6, as also U.P. loan to Rs. 99-6. 4 per cent. 1967 M.P. shed an anna to Rs. 99-7. 4 per cent. 1967 West Bengal and Madras were unchanged at Rs. 100 and Rs. 99-6, respectively.

In the foreign exchange section, the rupee displayed a hardening tendency in terms of the U.S. dollar, in consonance with the strength of sterling abroad. The banks' selling rate for ready dollars declined from Rs. 477½ to Rs. 476¾ per $100 and their buying rate from Rs. 473 to Rs. 472¾ per $100. In New York, spot sterling hardened from $2.80.9/16-2.80.11/16 to $2.80¾-2.80⅞ and three months' forward from $2.78⅝-2.78⅞ to $2.78¾-2.78⅞. Transferable sterling advanced from $2.77.15/16-2.78.1/16 to $2.78.15/16-2.78.7/16.

EXPORT BUSINESS IN KIPS MEAGRE

(*From Our Own Correspondent*)

MADRAS, 9*th April*

Owing to Easter holidays in the U.K., shipment business in kips has been meagre. U.K. buying is likely to be resumed during the middle of the month. Sellers have been holding for higher prices and tanners are operating in the raw centres at prices higher than those ruling early in March. Shippers are moderately active in the local market and are paying increased prices. Demand for lower grade kips for local trade is good and prices paid are one to As. 2 above U.K. parity. Buff hides and calf and cow calf market rules quiet.

There has been good clearance in ordinary quality sheep skins in the local market at unchanged levels. Prices of tanned goat skins remain steady and tanners of top marks are in a well sold position and are not willing to accept shipment business at low prices.

Shipments during the month of March were: 3,298 bales tanned cow hides, 378 cow calf, 26 buffs, 548 buff calf, 1,256 goat, 563 sheep and 12 dryssalted goat skins to the U.K. ports; 3 bales cow calf, 473 goat and 160 sheep to Continental ports; 10 cow calf, 80 buffs, 200 buff calf and 104 goat to the U.S.A.; 107 bales tanned sheep to Japanese ports.

BULLION RECOVERS AFTER EARLIER RECESSION

(*From Our Own Correspondent*)

BOMBAY, 11*th April*

A two-sided movement in prices was witnessed in the bullion market during the week under review. Both silver and gold suffered a sharp recession in the earlier half of the week, the downward movement noted in the previous week having gathered momentum. In the latter part of the week, however, both the metals gathered considerable strength. Notwithstanding this recovery, silver was fractionally lower on balance, while gold displayed a gain of a few annas.

The earlier retreat in bullion prices was attributed to nervous unloading by bulls on apprehensions of the possibility of a credit squeeze, as a measure of checking speculation and inflation. Indications of further large influx of Tibetan coins, the lower offtake in ready gold and weaker advices from the share market were additional depressing factors. The opportunity was seized by bears to hammer the market down. Later, the absence of any arrivals of silver coins from Tibet since Monday this week and a broadening of the offtake in gold brought about a recovery during the last three days.

Silver forward (26th April settlement) fell headlong from Rs. 181-7 to Rs. 177-14 early in the week, but crept up gradually to Rs. 180-14 today before winding up at Rs. 180-10.

Ready silver (.996 Mint) was marked down from Rs. 180-15 to Rs. 177-6. In the subsequent recovery, it gained to touch Rs. 180-6 at the close today.

The floating stocks of silver are placed at 900 bars. The daily average offtake was 25 bars.

Forward gold (25th April settlement) reacted early in the week from Rs. 105-5 to Rs. 103-5. The loss was, however, more than made good in the later half of the week, when gold came up to Rs. 106-4 today before closing at Rs. 105-14.

Ready gold finished the week at Rs. 106, registering a gain of As. 11 over the week, after having dipped to a low of Rs. 103-3. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 4,500 tolas, while the offtake was about 4,000 tolas on an average.

In London, both silver and gold prices were marked down. Spot silver declined from 79*d.* to 78⅞*d.* and forward from 79*d.* to 78⅞*d.* Gold reacted from 249*s.* 5¼*d.* to 249*s.* 2*d.*, reflecting the strength of sterling. In New York, the price of silver was put up from 90½*c.* to 91*c.*

The following comparative table shows the trend of the market during the week under review:

	11-4-56	Highest	Lowest	4-4-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	106 0	106 6	103 3	105 5
Forward*	105 14	106 4	103 5	105 5
Sovereign	66 4	66 4	65 12	66 4

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

LINSEED IMPROVES

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 9*th April*

Following better demand from crushers, particularly for ready goods, linseed prices improved during the week, daily turnover being quite substantial. Although arrivals of seeds were maintained at the fairly high average of the past few weeks, offtake increased and sellers were disinclined to enter into commitments for forward delivery. The disparity between the price of ready and forward seeds, as a consequence, disappeared. The oil section was on the whole featureless, with hardly any fresh business reported.

Overseas markets appear to be a shade easier and it is reported that some re-purchases have been made in London by Indian shippers. Even so, in view of the heavy shipments booked for the months of April-June, local prices are not expected to weaken, despite the pressure of new crop arrivals. Local sellers are very reserved.

The latest available quotations are: Ready Rs. 22-6 and April-May Rs. 22-4 per maund.

HIDES ARRIVALS SMALL

(*From Our Own Correspondent*)

KANPUR, 8*th April*

During the week under review, the conditions of the hides and skins market were more or less similar to those prevailing last week. Fresh arrivals were comparatively less. The main purchasers were the local tanners. Madras dealers were in for lighter cow and goat.

The latest available quotations are: Wet salted cow, 1st grade Rs. 300, 2nd grade Rs. 250 and 3rd grade Rs. 100 to Rs. 200 per score; wet salted buff, 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat, 1st grade Rs. 275 and 2nd grade Rs. 225 per 100 pieces; sheep, 1st grade Rs. 300 and 2nd grade Rs. 250 per 100 pieces.

IMPORT OF COTTON

(*From Our Own Correspondent*)

BOMBAY, 11*th April*

The persistent buying spree witnessed in the cotton market for a fairly long time now has been checked, at any rate for the time being, thanks to prompt Government action. Just yesterday, the Government announced its decision to permit import, with immediate effect, of cottons stapling ⅞" to 1.1/16" up to a ceiling of 40,000 bales from both dollar and non-dollar areas. Licences would be issued in favour of mills and importers on a first-come-first-served basis; they would be valid up to 30th June next. It is, however, doubtful if this decision would be sufficient to arrest the rising tendency in cotton prices. For the total quantity that will be licensed is meagre, being only 40,000 bales. What is more, the chances of importing American cotton with a staple length of even below 1 1/16" are slender, since the current ruling prices abroad of this growth are very much more than those for the comparable growths of Indian cotton. Even supposing that the entire quantity of foreign cotton now licensed is imported, the effect on the market may not be much, what with the firm trend of piecegoods markets. Cotton circles are therefore, inclined to expect announcement of some fresh official measures, such as ban on resale of cotton purchased by mills and allocations of available Indian cotton to mills on the basis of a quota system.

While the Government has still not made up its mind as to the steps that should be taken to put an end to speculative activity in the cotton market on a permanent footing, it is reported to have decided not to grant permission for the resumption of futures trading in I.C.C. August 1956. The Government is, however, considering the proposal for permitting futures trading in 1956-57 cotton crops by the end of June next. The permission, it is said, will be subject to the condition that the Board of the East India Cotton Association will adopt certain changes effected in the terms of the forward contract by the Forward Markets Commission. The changes are said to relate to sworn surveyors, delivery months, election of directors and maintenance of business accounts by traders.

Trading in the spot cotton market was a dull affair during the week under review also. As mills were somewhat hesitant in their purchases on hopes of a further fall in prices, cotton values continued to be generally easy. Vijay proved an exception and scored a smart gain, due to good buying support from mills. Moglais and Khandesh were also well favoured at higher prices. Among exportable styles, Zoda, Wagad and Kalagins came in for business. In the import section, Africans elicited sustained attention of operators and prices were well maintained. Business was put through in Busoga at Rs. 1,465-Rs. 1,470 and in B.P. 52 at Rs. 1,570-Rs. 1,580.

The following table gives the latest available quotations from the Sewri market, as compared with those a week before:

(In rupees per candy of 784 lbs.)

	11-4-1956	4-4-1956
Bengal *Deshi*	700	710
Berar Jarillas	770	775
Khandesh	775	765
Vijay	950	920
Oomra *Deshi*	700	700
Moglai	685	675

The firm trend noted in the Karachi cotton market last week gathered considerable momentum during the week under review. Heavy demand for Pakistan cotton from Communist China was the factor which provided the chief impetus. This, together with the reported decision of the Government of India to allow import of cotton stapling ⅞" to 1.1/16", let loose a buying spree in the market which took prices to dizzy heights. N.T.R.G. May staged an impressive rise of Rs. 5-13 to Rs. 83 per 82 lbs. July delivery jumped up by Rs. 5-1 to Rs. 80-4. The spot prices of cotton also recorded a handsome improvement. Punjab *Deshi* rallied Rs. 2 to Rs. 75. Sind *Deshi* advanced by Re. 1-8 to Rs. 78-8. The latest available spot prices —in rupees per 82 lbs.—of a few other popular varieties of Pakistan cotton are: 4F Roller 80-1; S.G. 85-12; Punjab Roller 86-4; S.G. 91-4; 289F NT. Roller 87-8; S.G. 98-8; 289F Punjab Roller 94-4; and S.G. 100-12.

Thanks to persistent demand for both Karnak and Ashmouni from East European countries and China in the wake of tightening supply position, the Alexandria cotton futures market continued to exhibit buoyant conditions, with prices forging further ahead. Egyptian cotton worth £E10 million will be purchased by China under a Sino-Egyptian trade agreement concluded at Cairo the other day. Futures trading in new crop Egyptian cotton has already been inaugurated. The earliest positions for long-staple and medium-staple are November and October, respectively. The Government of Egypt has decided to continue the present support prices for cotton for the next season's crop. The support prices in tallaris per lb. are 69 for Karnak good to fully good, 64 for Menoufi good to fully good, 59 for Giza 30 good and 55 for Ashmouni good. There has been an appreciable advance in the spot premiums for the popular varieties of Karnak, Ashmouni and Giza 30, reflecting scarcity of stocks. Exports of Egyptian cotton have been large, the total shipments in the current season up to 28th March being 576,943 bales (of 730 lbs. each), as against 437,051 bales in the corresponding period last season.

The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market (figures in brackets giving last week-end rates) are: Karnak: May 91.44 (89.05); July 89.05 (87.45) and November 86.55 (85.90); Ashmouni: April 73.00 (70.80); June 72.65 (70.45) and October 67.65 (66.70).

Another auction in new crop Uganda was held on the 5th inst. Offerings aggregated 10,400 bales *which consisted mainly of Busoga and Jinja.* Demand was reported to be quite good. Indian interests would appear to have made some purchase. The total quantity of Uganda cotton auctioned till the end of March was about 275,000 bales, of which India alone is reported to have bought nearly 200,000 bales. A recent report avers that the weekly auctions covering about 10,000 bales each, are *expected to be continued till the entire crop is sold.*

The Sudan Gezira Board held two auctions this week, one on the 4th inst. and the other on the 7th inst. The quantity offered for sale at the first auction included 2,400 bales of XG5L and 3,000 bales of G5L, and that offered at the second auction consisted of 1,500 bales each of G4S, XG5S and XG5L and G5L. The latest estimate of the Gezira Board places the yield of S grades cotton at 125,000 bales (425 lbs. each) and L grades at 170,000 bales.

There was no notable development in the Liverpool cotton futures market. Owing to Easter holidays and absence of any constructive move on the part of the U.S. Government to restore confidence in cotton prices, transactions put through were greatly restricted, with values moving narrowly. In the forward shipment section, Sudan cotton was the only variety which evoked buying orders. The undertone of the market was steady, as small trade covering orders absorbed the light hedge selling which was centred mainly on the new contract. The following are the latest available quotations—in pence per lb.—from the Liverpool cotton futures market:

Old contract: May-June 25.30; July-August 24.40; *New contract*: May-June 30.20; July-August 27.25; October-November 25.60; December-January 25-35; March-April 25.20. *Egyptian Karnak cotton*: May-June 48-70; July-August 48.35; November-December 48.85. *Sudan contract*: July-August 45.00; September-October 44.95; November-December 44.95.

The New York cotton market depicted a firm tone this week. Trade demands were fairly good, on expectation that mill enquiries for spot cotton would broaden after the uncertainties regarding U.S. cotton policy were cleared up. Near crop *positions were strong, as scattered trade buying* centring mainly on July position induced short-covering by earlier sellers and found offerings limited.

The U.S. Government has still not announced details of its new cotton export policy. This delay is attributed by cotton traders to the claims for export subsidies on cotton textiles and cotton waste. U.S. cotton exports have dropped by about 65 per cent. this season. In February last, it will be recalled, Mr. Ezra Benson, Secretary of Agriculture, announced that the Government-owned surplus cotton would be offered for export on a competitive bid basis, in order to regain the country's share of the world cotton trade. Mr. Bonson's offer was designed to make U.S. cotton—bought by the Government at prices above world levels—competitive with lower-priced foreign cotton. American textile manufacturers and handlers of cotton wastes then asked for comparable aid in selling their products in world markets. Trade sources now say that the State Department is opposing the use of subsidies for textiles and cotton waste, contending that such subsidies will be a violation of international trade policies, to which the U.S.A. is committed.

In the meantime, there are rumours in the U.S. that the support price for the next season may be fixed by the Agriculture Secretary himself through the exercise of his discretionary powers. According to a recent report, the Congress legislation on farm affairs may be vetoed by the Administration. The Senate has, it is understood, completed discussion on the Farm Bill. Among the amendments approved by the Senate is one increasing 'set-aside' of cotton from 7½ to 9 million bales, as against 3 to 4 million bales permitted by the present law. If such a high 'set-aside' becomes law, then the loan for next season and later will be 90 per cent. of parity, since 'set-aside' is not considered as part of supply in calculations for settling price support. There has been considerable opposition from leading cotton exchanges and other trade associations to sales of C.C.C. stock on a competitive bid basis as contemplated in the new export sales programme. Since substitution of such cotton with cotton privately owned will be permitted, the cheap cotton will, it is feared, depress futures prices to an uncertain extent. Trade circles generally appear to prefer a subsidy for export, for, according to them, that would not endanger the stability of the futures market and disrupt it as a safe medium for hedging activity.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	10-4-56	3-4-56	26-3-56
Spot	36.90	36.80	36.80
May	35.70	35.63	35.59
July	33.68	33.60	33.37
October	32.59	32.06	32.20
December	32.66	32.15	32.28

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *11th April*

The yarn market presented a distinctly easy trend this week too. Staple fibre yarns were particularly subjected to heavy selling, thanks to constant pressure of sales at lower prices by South Indian mills. Some of these mills were reported to have secured licences for importing large quantities of raw staple fibre from Continental producers at reduced prices. Coming, as they did, in the wake of slackening demand from important consuming centres such as Amritsar, Ludhiana, Surat and Bhagalpur, these sales induced the local stockists of staple fibre yarn to lighten their commitments. Consequently, prices moved further downwards. Similarly, rayon yarns staged a relapse, on fears that the authorities might concede the rayon mills' request for utilisation of import quotas for bright *acetate yarn*, the stocks of which had been depleted of late. Reports of very restricted offtake by weaving mills also acted as a damper. Conditions in the cotton yarn section were dull. For operators evinced little interest in fresh business, as dealers and consumers were making only hand-to-mouth purchases. Nor was export business encouraging, since Indian cotton yarns, it was said, were meeting competition in the traditional markets from Italy, Pakistan and other countries.

Staple fibre yarns were, as already stated, subjected to considerable selling pressure and staged a recession. 40 x 2 counts were the worst sufferer. *New Greats slumped* by As. 4-9 to Rs. 3-6. Citys fell by As. 4-3 to Rs. 3-6-6. Centurys dropped As. 4 to Rs. 3-6 and Kohinoors As. 3-3 to Rs. 3-7. Among imported yarns (80 x 2), Fujis and K'Suns declined by As. 3 each to Rs. 7-8 and Rs. 7-11-6, respectively. Suicos eased by As. 2 to Rs. 8. S'Sellos shed an anna to Rs. 7-7.

Snia rayon yarn (120 dull cones) for June delivery climbed down by Rs. 9 to Rs. 805. April delivery was unaltered at Rs. 818. Deals in indigenous spot yarns were put through at reduced rates. National Rayons 120 Bt. cones 1st grade receded by As. 2-6 to Rs. 3-11-6. 150 Bt. cones 1st grade declined by an anna and a half to Rs. 3-9-3. Among foreign yarns, 120 Italy eased by an anna to Rs. 3-13. 150 Italy shed six *pies* to Rs. 3-12. 120 Japan and 150 Japan were both quiet at Rs. 4-1-6.

Twenty count cotton yarns failed to encounter support and suffered a setback. Dawns receded by As. 3 to Rs. 16-11. Hinds and Moderns lost As. 2 each to Rs. 16-8 and Rs. 16-14, respectively. Edwards were dull at *Rs. 16-4.* Among 10s, Podars shed an anna to Rs. 12-14. Elphinstones were unchanged at Rs. 12-6. Moderns, however, evoked some special buying support and rose by As. 2 to Rs. 13-4. Turnover in 30 counts was limited, Moderns being quoted at Rs. 22-12 and Kanpurs at Rs. 21. Among 40s, Minervas slipped by As. 4 to Rs. 26-12. Centurys were unchanged at Rs. 27 and Shardas at Rs. 26-8. But Maduras were favoured As. 2 higher at Rs. 27-12. Among 60s, Raguvamshis receded by As. 4 to Rs. 58-4, while Finlays strengthened by As. 3 to Rs. 61-8 and Moderns by As. 4 to Rs. 61-4. Among 80s, Moderns gave way from Rs. 66-8 to Rs. 66. Finlays, on the other hand, advanced by As. 8 to Rs. 73-8. Elphinstones were steady at Rs. 62-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	11-4-1956	4-4-1956	28-3-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)–			
120 Dull Cone Snia April	818 0	818 0	821 0
June	805 0	814 0	820 0
120 Japan (per lb.)	4 1¼	4 1¼	4 5¼
150 Japan (per lb.)	4 1¾	4 1¾	4 7
120 Italy (per lb.)	3 13	3 14	3 14
150 Italy (per lb.)	3 12	3 12¼	3 13¾
Staple fibre yarn (per lb.)			
40 x 2 New Greats	3 6	3 10½	3 12¾
40 x 2 Century	3 6	3 10	3 12
40 x 2 City	3 6¾	3 10¾	3 13
Cotton yarn (per bundle of 10 lbs.)–			
10s Podar	12 14	12 15	13 0
20s Hind	16 8	16 10	16 8
30s Madura	22 12	22 12	23 0
40s Minaxi	27 12	27 10	27 12
60s Modern	61 8	61 0	61 8
80s Finlay	73 8	73 0	72 8

CASTORSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *11th April*

The oilseeds market resumed the week on a steady note. Delay in the announcement of the Government's export policy in respect of oils and oilseeds, better advices from other produce markets and hopes of a further expansion in currency induced considerable short-covering. Reports that the U.S. continued to show interest in castoroil even at slightly higher rates provided a fresh incentive to bulls. Consequently, prices crept up slowly in the first two sessions under the leadership of castorseeds.

This improvement, however, proved a short-lived affair in the subsequent session. The Reserve Bank of India's directive to banks to furnish fortnightly returns on their advances against commodities created uneasiness in the market, as it did in all other produce markets even in upcountry centres. Expectations of more delivery orders in groundnuts in the maturing April-May delivery, and reports of an increase in linseed arrivals also weakened the sentiment. On top of these came today the announcement of the Central Government's decision to impose, with immediate effect, an export duty of Rs. 250 per ton on linseed oil and of Rs. 200 per ton on nigerseed oil and kardiseed oil and to raise that on castor oil from 125 to Rs. 175 per ton. This announcement had a chilling effect on both the groundnut and linseed sections which registered losses under pressure of unloading by stockists. The castorseeds section, however, remained unaffected by the increase in export duty. If anything, it ruled firm, due to reports of business in castor oil with the U.S. at rates ranging *from 15.10 cents to 15.20* cents per lb. On renewed buying, May delivery forged ahead to touch a new peak of Rs. 142-8 though it closed a shade lower at Rs. 141. It is stated that the total commitment entered into with the U.S. during the last two weeks are over 3,500 tons of oil.

In the groundnut section, bold F.A.Q. rose from Rs. 34-8 to Rs. 34-12, but, subsequently, declined to close at Rs. 33-12. April-May delivery lost a rupee to Rs. 33-10 and June-July As. 14 to Rs. 34-8. Groundnut oil ex-mill was quoted today at Rs. 18-8, as against Rs. 19 last week. Railway receipt was lower at Rs. 18-4, as against Rs. 18-15.

The castorseeds section continued to remain active throughout the week on U.S. support for castoroil as stated above. May delivery improved from Rs. 134 to Rs. 139-2 and, after a mild dip to Rs. 137-2, it recovered to Rs. 142-8 though at the close it stood slightly lower at Rs. 141. In the spot section, F.A.Q. had transactions at Rs. 27-4, as against Rs. 26-4 last week. Madras quality rallied from Rs. 27 to Rs. 28-4. Castor oil, B.S.S., met with support up to Rs. 16-14, as against Rs. 16.

On reports of continued arrivals linseed presented a subdued tone. Linseed bold met with selling pressure and drifted down to Rs. 32-8, as against Rs. 34-10. April-May were dealt in at Rs. 32-4, as compared with Rs. 33-2. Small Sutna lost Rs. 3-6 to Rs. 30-4.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, *11th April*

Distinctly easy conditions prevailed in the sugar market during the week under review, thanks to the substantial release orders issued by the Union Food Ministry to the Deccan mills. The total quantity of sugar involved in these orders is estimated at 28,000 tons, which represents 50 per cent. of the production up to 15th March. Following this large release of sugar for sale in free market, the ex-mill quotations for sugar came down by about Rs. 2-8 per bag. This fall induced selling in the market and price levels moved down. The decline would have been greater but for poor arrivals on account of wagon shortage; the quantity of indigenous sugar that actually arrived in the market during the week amounted to 9,000 bags only, as against 14,300 bags a week before.

In the spot section, large grain sugar receded from Rs. 95-Rs. 100 to Rs. 93-Rs. 99 per bag. Medium grain lost a rupee to Rs. 89-Rs. 91. Small grain was quiet at Rs. 88. British refined sugar was unaltered at Rs. 83-14 per bag of 2 cwts.

"C" grade sugar for *Vaisakh* delivery dropped As. 10 to Rs. 90; it was, however, slightly better at Rs. 90-2 today.

N.B.—The rates for Indian sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER DECLINES AT CLOSE

(Messrs. Parekh & Co.)

BOMBAY, *11th April*

Malabar black pepper started the week in promising style, Alleppey having raised their price to Rs. 830 and Cochin to Rs. 144 for garbled and Calicut to Rs. 875. The advance in the prices was rather rapid and was more or less engineered by interested parties. America, having refused to follow the advance, initial rise in the prices was erased on stale bull unloading. Erstwhile buyers became sellers and came out to sell *May shipment* at $0.29 and June at $0.29½, the highest being $0.32 and $0.32½ respectively. There being no notable short sales, prices came down at every small sales. Lower advices from Sarawak also proved a disturbing factor. Alleppey is reported down to Rs. 775 without buyers. Garbled at Cochin is nominally quoted at *Rs. 130.*

Bulls among the merchants and growers in the primary centres are trying to resist the fall and are holding over the stock in the hope that Russia may come out to buy further, as the Government is understood to have been trying to find ways and means for enlarging the export to U.S.S.R. and other East European countries and in view of the recent shipping agreement between Russia and India. The State Trading Corporation is reported to be under formation for trading with these countries on Government-to-Government basis. New York, after buying a small quantity for shipment during early April at $0.30, is now reported indicating at $0.29.

Unless concentrated buying from New York is forthcoming within a week or two, it is feared growers may become tired long and may come out to press sales. In view of the present rising tendency in other commodities, some measures for tightening the credit facilities are reported to be under serious consideration by the Indian Government. The possibilities of restriction on the advancement of loans on pepper along with other commodities are not ruled out even though the present prices of pepper cannot be said to be inflated.

Inland demand of pepper is reported to be good. But without support by sizable export demand, the present prices are not not likely to maintain themselves as the volume of our production is more than our internal consumption. In the delivery section, April delivery, after touching Rs. 815, came down to Rs. 740.

Following are today's nominal quotations: Ready delivery Rs. 107 (as against Rs. 108 a week ago) per Bengal maund. April Rs. 740-50 (Rs. 785-805) and May Rs. 755-65 (*Rs.* 810-20) per candy of 5¼ cwts.

TEA DUSTS DEARER

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, *5th April*

325,000 lbs. were on offer in dust sale "G" which was held on Tuesday, 3rd April. The sale opened to a strong general demand for all types. Buyers paid particular attention to clean black Middle East types and these were appreciably dearer, sometimes by as much as As. 4 per lb. Low medium and milled types advanced irregularly by As. 2. Medium sorts can be quoted steady. Best liquoring dusts were well supported and must be quoted dearer.

London Market.—No sale this week.

Colombo Market.—No sale this week.

Caliutta Market.—Export.—Good demand Slightly less general prices for common and low *medium, occasionally half to one* anna lower. Mediums about steady. Good teas strongly competed for, particularly fannings and whole leaf grades.

Internal.—22,300 dust. Fair general demand one anna to As. 2 easier all types. Dooars strongest. Less demand exportable types. 3,600 internal leaf. Fair demand. Irregular rates, generally easier.

Export Quota.—There has been a little more activity and business in special licence has been done at 5 pies. The last date for the conversion of 1955-56 quota into special licence is 13th April 1956.

Forthcoming Auctions.—Dust Sale 'H' will be held on Tuesday, 17th April.

As we go to press, Messrs. Forbes, Ewart and Figgis, Ltd. wire:

"*Sale* 8.—1,150,000 lbs. Good general demand. Low medium one anna to As. 2 dearer. Medium about steady, occasionally easier. Good medium and best liquoring irregular, *following quality.* All fannings grades very strong and dearer. Whole leaf improved demand."

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *10th April*

Although business in the metal market was restricted to immediate requirements during the week under review, prices of base metals were firm. The poor volume of business was due partly to the need for Bengali operators to lessen commitments and advances in view of year-closing on Friday next.

The important news of this week was the announcement—in Parliament yesterday—of the Government's intention to nationalise an unworked copper mine in Rajasthan. It was indicated that this step of the Government would substantially increase production of copper. During the second Plan period, considerable increase in copper consumption is anticipated, and only a small portion of the country's requirements is met from indigenous production. Considerable foreign exchange is spent on imports of copper and copper products. Market circles, therefore, considered it only the natural anxiety of the Government to exploit the unworked mine. The fact that copper prices are often high is bound to increase the demand for aluminium cables and wires and, in this view, it is significant that, according to a report, a certain electric company in the United States is already contemplating to replace old copper transmission lines with aluminium lines. For the coming years, a huge increase in aluminium production has also been planned in India. Work in regard to the establishment of one smelter in Hirakud is under progress, while the setting up of another in Salem is seriously being considered in New Delhi. There is only one extrusion press producing aluminium cables and wires and this is situated at Alwaye. Increasing production of these also is considered possible. If copper prices continue to remain prohibitive, in India also aluminium will receive more attention as a substitute to copper.

Electrolytic copper was throughout maintained at Rs. 295. Consumers were interested only in small quantities of wire bars in the knowledge that huge shipments were anticipated. Tin opened at Rs. 508 and recovered to Rs. 511. The higher level was Rs. 4 below the replacement cost. Earlier in the week, the price of electrolytic zinc fell to Rs. 71-4, as stocks were plentiful. However, the steady trend in London soon forced a recovery to Rs. 72. There was moderate activity in lead, and fresh arrivals were absorbed without difficulty. The price was firm at Rs. 86.

JUTE GOODS STEADY

(From Our Own Correspondent)

CALCUTTA, *10th April*

Although prices fluctuated within narrow limits, somewhat steadier conditions were in evidence in the jute goods market during the week under review. There was a good amount of genuine buying, especially of forward goods, at lower levels. However, speculative elements were active, and indulged in intermittent profit-taking which prevented prices moving up noticeably. All the same, from the low levels, some advance was recorded. During the week under review, figures relating to stocks of goods held by mills as at the end of March were available, and the increase in stocks was only 5,000 tons. This was another factor for the slight recovery in prices. Prices of raw jute also gave way by As. 8 per maund, but were far higher than those justified by the lower prices for jute goods. A study of the figures of gunny shipments during the better part of March reveals that buyers were exteremely cautious. Sacking shipped from 1st to 25th March amounted to 23,933 tons as against 27,860 tons in the corresponding period in February, while hessian shipments at 22,448 tons were higher by 2,380 tons.

Ready 40" 10 oz, hessians opened last Tuesday at Rs. 38 and B. twills at Rs. 106-14. On some covering demand, the prices recovered to Rs. 38-6 and Rs. 108 respectively by Wednesday. Buyers paid most attention to forward goods, and July-September hessians regained to Rs. 38-12 from Rs. 38-8 and B. twills to Rs. 107-8 from Rs. 107. On Thursday again, there was moderate covering business and prices showed a tendency to move up, but when mills turned as interested sellers, a reaction set in to take down ready 40" 10 oz. to Rs. 38-4 and B. twills to Rs. 107-14. A firm trend was, however, maintained in the forward positions and the July-September B. twills at Rs. 107-12 was better by As. 4 for the day, but hessians 40" 10 oz. of the same forward position fell to Rs. 38-10 from Rs. 38-12. On Friday conditions were interesting, although prices failed to move up. Genuine buying support was forthcoming at lower levels and, in fact, business was transacted for a moderate quantity. Prices would have gained, but this was not so in view of the reaction, following speculative activity. Prices were subjected to fluctuations either way, and while ready 40" 10 oz. hessians closed better at Rs. 38-7, B. twills at *Rs.* 107-6 lost As. 8. Similarly, forward hessians gained by a few annas, while the contrary trend was recorded in B. twills. It was on Saturday last that the figures relating to stocks for the month of March were available, and these caused a recovery in prices. Ready B. twills gained to Rs. 107-14 from Rs. 107-6 and 40" 10 oz. hessians to Rs. 38-6 from Rs. 38-7. Forward positions in both constructions were also better. During yesterday, prices were steady at lower levels, ready B. twills quoting at *Rs. 108 and 40" 10 oz. hessians at Rs. 38-8 and the* 8 oz. hessians at Rs. 32-6.

There was only little activity in raw jute and, as a result, prices gave way by As. 8 for most constructions. Latest quotations are given below:

TEA PRICES RECEDE

(From Our Own Correspondent)

CALCUTTA, *10th April*

There was a recession in prices of teas during yesterday's export auctions. Demand was less and withdrawals were heavy. Such a trend was in distinct contrast to the successive gains in recent weeks, and was probably due to the fact that prices had reached high levels. Offerings aggregated 60,300 packages. Prices for the poorest fannings moved down, while the black teas enjoyed good support and often realised higher prices. Plain end medium brokens gave way by an anna. Whole leaf grades with style were about firm, but the poorer varieties and the stylish B.P.s declined by As. 2. Darjeelings, as well as all bright liquoring autumnals were steady. The quotations were: Clean black pekoe Rs. 2-2, medium Assam B.P. Re. 1-10, plain B.P. Re. 1-8-6, and best C.T.C. Assam B.P. not quotable.

Export quota rights changed hands at 3¼ pies per lb.

There was good demand during last week's sales for domestic consumption, but support was forthcoming at lower rates only. Dusts offered amounted to 21,700 packages. The opening of the sale was itself marked by prices one anna lower than previously, and prices were further marked down by As. 2 by the time the sale was in full session. Teas *suitable for Middle East* consumption reflected fully the general trend, while non-wither Dooars were the strongest feature with a firm trend in prices. The quotations were: best Assam C.T.C. Rs. 2-14 to Rs. 3, medium Assam grainy dust Re. 1-12 to Re. 1-14, and medium Dooars Re. 1-11 to Re. 1-12.

Leaf grades on offer aggregated 2,600 packages. The market was perceptibly easy, despite the presence of fair demand.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *9th April*

As a protest against the announcement of imposition of sales tax on foodgrains, pulses, salt and other essential commodities by the Government of Uttar Pradesh, the ready grain, *gur*, pulses and other markets suspended business on Monday. The markets remained closed for the whole week and resumed business only today, following the assurance by the State Minister that the Government had no idea to stick without reason to the terms of the decision, but the only aim of the Government was to find funds for the development schemes under the second Five-year Plan. The Local Chamber advised the traders to resume normal working, in order to create a calm atmosphere so that their suggestions may be considered by the Government.

Wheat prices resumed quiet at Rs. 14 per maund for average quality and demand was concentrated only for local requirements. Harvesting of new crop is in full swing and new crop arrivals will begin very shortly. Coarse grains prices ruled unchanged, as the trade had not yet fully realised the implication of new tax measures. Arrivals from villages were very small, as the producers did not get information about the resumption of normal working of the markets. Pulses ruled quiet at almost last week's levels.

SUGAR DULL

(From Our Own Correspondent)

HAPUR, *9th April*

The sugar markets continued to rule dull and depressed, thanks to easy supply position and slack outside buying enquiry. Factories in this part of the State are still getting sufficient cane to work with maximum capacity, while in east U.P., some of the factories have to close down for non-availability of cane.

The Union Agriculture Minister has stated that the production of indigenous sugar this year may touch the record figure at 1.7 million tons. Total production of indigenous sugar up to 7th March aggregated 1,148,828 tons, as against 1,063,183 tons in the corresponding period last year. Despite heavy offtake and despatches at 609,259 tons, as against the corresponding low figure of 267,298 tons last year, the closing stocks with the factories as on 7th March was 951,550 tons, as against 837,454 tons a year before.

Mill delivery prices eased slightly during the week, the latest prices as on Monday being: Jaswant Rs. 28-9, Simbhauli Rs. 28-7, Mowana Rs. 28-12, Daurala Rs. 29-6, Amroha Rs. 28, Rajnore Rs. 28, Mansoorpur Rs. 29-8, Rampur Rs. 31, retail Rs. 30-4 and *khandsari* Rs. 22 to Rs. 26-8 per maund.

Ready *gur* markets have remained closed since Monday as a protest against the imposition of sales tax by the State Government. Arrivals from villages were not lifted and despatches to outside destinations were also very small. The stock is put at about 120,000 maunds. Ready *gur* market resumed today at Rs. 11 per maund and arrivals were very small.

Notice

AIR-INDIA INTERNATIONAL LIMITED

(In Voluntary Liquidation)

CIRCULAR

To

THE SHAREHOLDERS OF

AIR-INDIA INTERNATIONAL LIMITED

(In Voluntary Liquidation)

THE Liquidators, being now in a position to make a *second* distribution of the Company's assets, have decided to pay a further Rs. 12 per share during May 1956. To enable this to be carried out without delay, shareholders are requested to send in their Share Certificates for endorsing payment of the second distribution. Only after this is done, will distribution warrants for the second payment be issued to the shareholders.

Shareholders who have not yet forwarded to the Company the Share Certificates in respect of their holding are requested to do so as early as possible. Delay in doing so will result in delay in payment of the amount payable on distribution.

The Transfer Books of the Company will be closed from Thursday the 10th May 1956 to Thursday the 31st May 1956, both days inclusive.

AIR-INDIA INTERNATIONAL LIMITED,

(In Voluntary Liquidation),

By Order of the Liquidators,

K. C. BAKHLE,

A Liquidator.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years.

THE INDORE MALWA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 49th Ordinary General Meeting of Shareholders of the Indore Malwa United Mills Ltd. will be held at the Registered Office of the Company, at 139, Medows Street, Fort, Bombay, on Friday the 4th May 1956, at 4 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955.
2. To declare a Dividend.
3. To confirm the contributions as set forth in the Directors' Report.
4. To confirm the appointments of Shri Kudilal Govindram Seksaria and Shri Chandansinha Sagatmal Bharaktiya, as Directors of the Company.
5. To elect Directors in place those retiring by rotation:—
   (a) Shri R. C. Jall retires by rotation under Article 89 of the Articles of Association of the Company. In addition he has attained the age of 71 years. Notice has been received by the Company that it is proposed to move a resolution to the effect he be re-appointed a Director of the Company and that the age limit shall not apply to him. Shri R. C. Jall has also signified his willingness to stand for re-election. The following resolution will therefore be proposed as an Ordinary Resolution:—

   "RESOLVED that Shri R. C. Jall, who was born on 14-11-1884 and has attained the age of 71 years, be and he is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Companies Act 1956 shall not apply to him."

   (b) In place of Shri Piarelal Sheoparshad Seksaria, who retires this year by rotation under Article 89 of the Articles of Association of the Company, but is eligible for re-election.
6. To appoint Auditors for the current year, i.e., for the year 1956 and to fix their remuneration.

The Share Transfer Books of the Company will remain closed from Monday, the 16th April 1956 to Saturday, the 5th May 1956, both days inclusive.

By Order of the Board,
K. L. SEKSARIA,
Chairman.

Dated 14th March 1956.

N.B.—(1) The Dividend, when sanctioned, will be made payable on and after the 14th May 1956 to those shareholders whose names stand on the Register of the Company on the 16th April 1956 at the Registered Office of the Company, Seksaria Chambers, 139, Medows Street, Fort, Bombay 1, upon presentation of Dividend Warrants which will be posted to each shareholder to his last given address.

(2) A member of the Company entitled to attend and vote at the said meeting is entitled to appoint any other person (whether a member or not) as his proxy to attend the above meeting and vote instead of himself.

THE INDORE MALWA UNITED MILLS, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Indore Malwa United Mills, Ltd. will be held at the Registered Office of the Company, at 139, Medows Street, Fort, Bombay, on Friday the 4th May 1956 at 4-30 p.m., or immediately after the proceedings of the 49th Ordinary General Meeting are over, whichever time is later, for the purpose of considering and, if thought fit, passing, with or without modification, the following Resolutions as ORDINARY RESOLUTIONS:—

1. "RESOLVED that consent of the Company be and it is hereby accorded to the Board of Directors borrowing moneys in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose and such borrowing shall be exclusive of temporary loans obtained by the Company from the Company's bankers in the Ordinary course of business."
2. "RESOLVED that the Company gives its approval to the appointment of Messrs. Madhya-Bharat Textile Agents, Indore, as the Sole Selling Agents of the Company for the sale of all the piecegoods and yarn manufactured by the Company made by an agreement between the Company and the said Messrs. Madhya-Bharat Textile Agents, Indore, dated 25th June 1955."

By Order of the Board,
K. L. SEKSARIA,
Chairman.

Dated 31st March 1956.

Explanatory statement as required by Section 173 of the Companies Act, 1956.

With respect to Item No. 1. The borrowings of the Company exclusive of Cash Credit loans obtained by the Company from the Company's Bankers in the ordinary course of business would not ordinarily exceed the aggregate of the paid-up capital of the Company and its free reserves within the meaning of Section 293(d) of the Companies Act, 1956. The Cash Credit loans obtained from the Company's Bankers in the ordinary course of business are, in the opinion of the Directors, temporary loans. If, however, a contrary view is taken of such Cash Credit loans, the amount borrowed by the Company would exceed the aggregate of the paid-up capital of the Company and its free reserves. In these circumstances your Directors have been advised that for the sake of caution, the consent of the General Meeting should be obtained as required by Section 293 of the Companies Act, 1956.

With respect to Item No. 2. Section 294 of the Companies Act, 1956, requires the appointment of Sole Selling Agents to be approved by the Company in General Meeting. Messrs. Madhya-Bharat Textile Agents, Indore, have been appointed the Sole Selling Agents of the Company for sale of all the piecegoods and yarn manufactured by the Company by an Agreement dated 25th June 1955 for a period of ten years ending 30th June 1965, on the terms and conditions mentioned in the said Agreement, which is open for inspection at the Registered Office of the Company during office hours. By Special Resolutions passed at the Extraordinary General Meeting of the Company held on the 31st March 1956, the Company has accorded its consent to the said Messrs. Madhya-Bharat Textile Agents, Indore, holding office of profit under the Company. It is proposed that the Company give its approval to the appointment of the said Messrs. Madhya-Bharat Textile Agents, Indore, as the Sole Selling Agents of the Company.

N.B.—A member of the Company entitled to attend and vote at the said Meeting is entitled to appoint any other person (whether a member or not) as his proxy to attend the above Meeting and vote instead of himself.

MACKINNON, MACKENZIE AND COMPANY, PRIVATE LIMITED

NOTICE

IT HAS BEEN DECIDED THAT MACKINNON, Mackenzie & Co. Private Ltd., will in future confine its activities to shipping. That Company's Head Office in Calcutta has, therefore, with effect from 31st March 1956, resigned its Managing Agencies of the India Jute Co., Ltd., the Megna Mills Co., Ltd., the Salonah Tea Co., Ltd., and other Agencies unconnected with shipping, while the Bombay Branch has similarly resigned its Managing Agency of Mazagon Dock Ltd. The Company will, however, continue its connection with the Peninsular and Oriental Steam Navigation Co., and other Shipping Companies as Managing or Port Agents.

The intention is that Mazagon Dock Ltd., the India Jute Co., Ltd., and the Megna Mills Co., Ltd., will, as from 1st April 1956, be Director-controlled, while the Salonah Tea Co., Ltd., which is a Sterling Company, will be transferred to the Agency of Messrs. Macneill and Barry Ltd.

DELHI LETTER

(*Concluded from page 738*)

tured for the first time and steps were taken for the production, in the very near future, of vat dyes, naphthols and bases, hydrogen peroxide and stabilised bleaching powder. Production of soda ash increased from 48,293 tons in 1954 to 77,272 tons in 1955, representing more than 85 per cent. utilisation of present installed capacity. Three new licences for the production of soda ash were issued during the year and expansion of one of the existing plants was approved. With the implementation of these schemes, the installed capacity would rise to 283,000 tons a year. In regard to caustic soda, five schemes with a total capacity of 52,670 tons were licensed during the year, taking up the total installed capacity to 108,580 tons a year. A vigorous drive was made to find outlets for the by-product chlorine. One of the steps taken was to insist on approved plans for the utilisation or disposal of by-product chlorine before the issue of new licences for the manufacture of electrolytic caustic soda. Increased production of hexachlorobenzene and the proposed production of ethylene dichloride, etc., will greatly help in the profitable utilisation of chlorine and thus bring down the price of caustic soda as well. The plastic emulsion paints for building and aircraft finishes are also now being produced. A plant for the production of ultramarine blue, with a capacity of 1,200 tons per annum, has been installed and is expected to commence production early this year. A scheme licensed for the manufacture of sulpha drugs has made substantial progress. Other projects for the production of sulpha drugs, synthetic hormones, etc., are also under development. Keen interest was taken in the production of vitamine and certain synthetic drugs and schemes for their manufacture were under consideration.

With a view to stepping up the production of cement in the coming years due to the steady increase in the internal demand for the product, 11 new schemes and 12 expansion programmes were sanctioned during the year. Licences granted account for an aggregate of 11 million tons. Efforts were made to increase the production of refractories. In regard to the glass industry, plans were under consideration for developing the production of plate glass, optical glass, roofing tiles, coloured sheet glass, quality cut class and glass insulators. A scheme for the manufacture of polystyrene to the extent of six million lbs. per annum was approved by Government. There were also proposals for the manufacture of polythene moulding powder. Production of plastic gramophone records from high impact polystyrene was established, including the manufacture of long-playing records. In the field of rubber manufactures, schemes for the production of some new items, such as woven belting, rubber cots and aprons, surgical gloves and prophylactics, were sanctioned.

PLAN OR ELECTION MANIFESTO?

THOSE who had scrutinised the Draft Outline of the second Plan in the light of India's capacity used to wonder whether it was really a plan for economic development of the country or merely an election manifesto. Out of respect for the Government, especially for the Prime Minister who heads the Planning Commission also, most of these critics were less vocal than they ought to have been and refrained from calling a spade a spade. Mr. C. D. Deshmukh, who plays the dual role of Finance Minister and a member of the Planning Commission, has now made their task a little easier by frankly admitting the existence of serious defects in the Plan. Addressing the Planning Forum of Universities and Colleges last week-end, the Finance Minister confessed in public that the investments contemplated in the Plan were beyond the capacity of the country and that it might be necessary to extend the period of five years; he, however, did not say by how many years.

Two issues arise from this voluntary confession. First, the defects are such that they were quite apparent even when the draft was finalised. Why did Mr. Deshmukh, as an active member of the Planning Commission, agree to the publication of such a defective plan for consideration by the public? It might be contended that it was, after all, a draft outline subject to revision at the time of drawing up the final Plan. But this is no argument at all, for even a draft should be free from defects in regard to basic assumptions. Further, the Draft had been preceded by a series of discussions over a memorandum embodying the proposals contained in it. Almost every one of the defects owned by Mr. Deshmukh on Sunday last was clearly pointed out when the memorandum and the four sets of papers that preceded it were scrutinised. But these criticisms were ignored and the draft memorandum emerged as the Draft Outline with hardly any material change. Is it not a criminal waste of time, energy and resources to publish a plan for public discussion knowing full well that it suffered from serious drawbacks? Is such a waste in consonance with the era of planning in which we are supposed to be living?

The second issue is this: Why has Mr. Deshmukh chosen the present moment to acknowledge the weaknesses in the Plan? He could have used either his budget speech or the reply to the budget debate for this purpose. Our suspicion is that he must have been motivated by a desire to steal a march over one of his colleagues in the Planning Commission who was feeling very unhappy all the time over the several unrealistic assumptions in the Plan and might have decided, as a last resort, to take the public into his confidence. Observers from the green room know full well that the Planning Commission was by no means unanimous on the Draft Outline and that the final Plan would either contain minutes of dissent or undergo some fundamental changes. Again, it is common knowledge that some of the members of the Cabinet do not see eye to eye with the Planning Commission on several aspects of the Draft Outline. This is crystal clear from the speeches of some of the Ministers in Parliament during the past few days. While some of them want more nationalisation and larger allocations for cottage and hand industries, a few others have taken the opposite stand. In deliberately focussing the attention of the public on the financial and administrative weaknesses in the Plan, another object of Mr. Deshmukh might have been to resist the increasing pressure of ideologists and sentimentalists who dominate Parliament as well as the Cabinet. Whatever might have been the motives, it must be conceded that Mr. Deshmukh's public admission of the defects in the Plan has to be welcomed in the spirit of "better late than never." It is, of course, true that he has not yet openly recognised all the defects. Nevertheless, it is to be hoped that even his partial admission will lead to harmony and realism in the Planning Commission and that the final edition of the Plan will be better than the Draft Outline.

The main weakness of the Plan relates to its resources aspect. Having estimated the outlay at Rs. 4,800 crores, the Commission started searching for the sources of finance. It could envisage only Rs. 2,400 crores as the maximum that could be raised with a degree of certainty—Rs. 800 crores by way of taxation, Rs. 1,200 crores by way of borrowings and small savings, Rs. 150 crores by way of railways' contribution, and Rs. 250 crores by way of provident fund and other deposits. In the opinion of some competent observers, these estimates, especially the one relating to taxation, have erred on the liberal side. This remark is by no means unwarranted. The failure on the part of the majority of State Governments to raise additional taxation in the 1956-57 budget, covering the first year of the second Plan, supports it. There is no prospect of additional taxation being collected by the States in their next (that is, 1957-58) budget either. With reorganisation of States and the General Elections due to take place on the eve of the preparations for the 1957-58 budget, no State Government will be in the proper frame of mind to pay keen attention to these serious economic matters. In any case, it is almost fairly certain that, at least in the first one and a half years of the second Five-year Plan, the States will raise little or no additional taxes. This leaves them only three to three and a half years for raising their quota of taxes. Will it be practicable for State Governments to raise Rs. 250 to Rs. 300 crores of new taxes within this period? If past experience is any guide, there is no room for the answer to be in the affirmative.

While thus the quantum of resources which Mr. Deshmukh still believes is "within sight" is itself doubtful to a considerable extent, the assumptions relating to the balance of Rs. 2,400 crores are most untenable. This point is now readily admitted by Mr. Deshmukh. Of this balance, half is to be had, according to the Plan, by way of deficit financing, a third by way of foreign assistance and the remainder, that is, 16⅔ per cent. or Rs. 400 crores, is left uncovered. Whether the country can afford to digest deficit financing of the order of Rs. 1,200 crores is a question on which the economic *pundits* have debated a lot without anyone being the wiser for it. Even Mr. Deshmukh, known for his high ability to understand the most intricate problems, is candid enough to own that the more advice he gets from experts on this subject the more confused he becomes. While it is, of course, not possible to be dogmatic about the size of deficit financing the country can bear, it is at least necessary to take suitable steps to strengthen the capacity of the country to carry that burden. Provision for speedy expansion in the production of certain essential consumer goods like cloth, of food and raw materials, and of such basic materials as cement and steel is one of these steps. Another would be expansion in transport facilities. The Plan is weak in all these respects, in that the stress on them is not sufficiently strong. In spite of the fact that the planners' attention has been repeatedly drawn to this weakness, there is no indication yet of any welcome change in their approach.

The assumptions regarding foreign assistance are the most nebulous. Yet, it was felt by a section of public opinion that the Planning Commission had perhaps some concrete basis, un-

known to the public, for taking the figure of Rs. 400 crores, as against Rs. 400 crores assumed in the earlier drafts. Now, Mr. Deshmukh tells us frankly that "we are really entitled to take only about Rs. 400 crores as probable foreign assistance," and that the figure of Rs. 800 crores is to be regarded "as somewhat exaggerated optimism." This shifting of ground is significant. It means that, in the light of the current world political situation and India's foreign policy, it is not realistic to expect Rs. 800 crores by way of foreign assistance. While Mr. Deshmukh thus warns us not to be optimistic about foreign assistance, he says that India can rely on U.S. commodity surpluses for fighting the inflation that may be generated by deficit financing. These surpluses are to be had, it must be noted here, not against cash payments but against deferred payments and at special prices appreciably below the ruling world market prices. In other words, the American commodity surpluses are to be obtained in the form of assistance and not as a straight commercial deal. It is hard to reconcile this optimistic presumption of Mr. Deshmukh with his earlier pessimistic advice not to expect more than Rs. 400 crores by way of foreign help.

In fine, the position in regard to resources is that, out of the Rs. 4,800 crores required, only Rs. 2,400 crores is within sight, foreign help is unlikely to fetch more than Rs. 400 crores and the gap of Rs. 2,000 crores is to be filled in by deficit financing and any other means that can be found. Of the Rs. 2,400 crores, the States' contribution by way of new taxes amounting to Rs. 250 to Rs. 300 crores is very doubtful. If it is assumed that they will not be able to raise more than Rs. 100 crores, the gap will widen to Rs. 2,150 crores to Rs. 2,200 crores. Further, if the assumption that the country can safely resort to deficit financing to the tune of Rs. 1,200 crores is accepted, one does not know from where the country will find the balance of Rs. 950 to Rs. 1,000 crores. In thus assessing the position, be it noted, no allowance is made for any possible rise in price levels and the consequent inflation of costs. But the fact remains that, since the assessment of the cost of attaining the physical targets laid down in the Plan, there has already been a sizable advance in prices both in India and abroad and that deficit financing of the order envisaged will lead to a further rise in domestic price levels. Then, we have proceeded on the assumption that the cost of attaining the targets has been correctly made even at the then prevailing prices. There are, however, reasons to feel that this assumption is false to some extent. It is stated, for instance, that the sum of Rs. 40 crores provided for raising coal in the public sector by 15 million tons is a gross underestimate and that at least twice this amount will be required if the Government is serious of hitting the target. Moreover, besides the sum of Rs. 4,800 crores meant for the public sector, the Plan assumes an investment of Rs. 2,300 crores in the private sector. But not much light is thrown on the manner and the method in which the private sector will find resources of this order. Besides, just as there are underestimates of the cost of physical targets in the public sector, there are underestimates of the investments required for achieving the targets in the private sector, too.

On top of all this comes the disclosure of Mr. Deshmukh that the size of the Plan will have to be expanded by Rs. 400 crores. His reasons for this are: (*a*) the cost of defence has had to be raised, in view of the latest trends in the international political situation and the bellicose attitude of Pakistan towards India; (*b*) the subsidy to Ambar Charka, estimated at Rs. 80 crores, is a new item not provided for in the earlier estimates; and (*c*) there is a possibility of the private sector in the coal industry not being able to fulfil the target, in which event more money would be required by the public sector to carry that load. There are very good reasons to feel that even this addition of Rs. 400 crores will be insufficient, because it does not take into account the funds that will be required to nationalise some of the industries on which the Government's heart seems to be set. The additional defence expenditure, too, may turn out to be more than Rs. 300 crores which Mr. Deshmukh seems to have taken. Even granting that the latest additions will not exceed Rs. 400 crores, there will be an uncovered gap of Rs. 1,400 crores in the Plan for the public sector alone, excluding deficit financing of the order of Rs. 1,200 crores. And yet the public is seriously asked to believe that the planners have produced a realistic second Plan. In any other advanced country, where the public is not so ignorant as in India, such a plan will be dubbed as a political stunt.

Enough has been said in the foregoing paras to show that, from the point of view of financial resources alone, the size of the second Plan is beyond the means of this country. But it is much more so from the point of view of real resources and administrative capacity. It is our intention to deal with this aspect of the Plan in a subsequent article.

WORLD RICE POSITION

THE recent spurt in rice prices in this country has been the cause for some concern in several quarters. The Central Government, although it does not view the situation with alarm, has had to be alive to the risk of a steep rise in living costs over wide regions through an increase in the price of this staple foodgrain. Industrial establishments where dearness allowance for the workers is related to cost of living index will have to foot a larger wage bill in the event of an upward trend in that index. Fixed income groups will, of course, be hit the hardest from any increase in cereal prices. Inflation will be harder to check, and the next Plan more difficult to execute, if cereal prices cannot be held at reasonable levels. Minor or seasonal fluctuations need not, of course be taken seriously. But the point is that it is necessary and should be possible, though difficult, to distinguish in the rice or wheat situation the purely temporary factors from the relatively permanent.

Wisely, the Union Government has refused to be stampeded into action on the agricultural price front. But it has promised that the whole position will be kept under closest scrutiny and that it will not hesitate to step in in the event of runaway prices. Thus, the Union Food and Agriculture Minister, Mr. A. P. Jain, announced, last week, that the Government intended to build up reserve stocks of wheat and rice to the tune of one million tons each. These stocks, as he said, would help meet any contingency.

Experience has shown that, between the two cereals, wheat and rice, it is rice that always poses a somewhat more intractable problem than wheat. The Government will, therefore, have to speed up its efforts at building up rice stocks, for the rice-eating section of the population in this country, like its counterpart in many other parts of the world, has shown less marked ability to withstand economic shocks and, at the same time, more marked disinclination to give up rice in favour of any other cereal. Be that as it may, the Government's efforts at stock-piling rice will obviously depend for their success on the availability of rice in world markets. Currently, the Government is said to be pursuing its negotiations with Burma for the purchase of rice from that country. The outcome will probably be known in the near future. Meanwhile, it is interesting to note that the U.N. Food and Agriculture Organisation has decided to convene a conference to devise means for stabilising international trade in rice and is holding this week, at Rome, a preliminary meeting of the representatives of the countries concerned.

A look at world rice trends which have been succinctly brought out in the report dealing with rice issued by the F.A.O. in its "Commodity" series, reveals that, after a continuous and marked expansion over three years, world rice production suffered a setback in 1954-55. World (excluding U.S.S.R. and China) output in 1954-55 aggregated 116.1 million metric tons of paddy, as compared with 122.0 million tons in 1953-54 and the pre-war (1934-38) average of 100.9 million tons. The fall in production between 1953-54 and 1954-55 was evenly divided between the major importing and exporting countries. In the major exporting countries, production fell from 43.8 million tons to 40.8 million tons. The 1954-55 production of paddy (in million metric tons) in some of the major exporting countries, with the 1953-54 figures in brackets, is as follows:

Pakistan 12.8 (13.9); Burma 5.8 (5.6); Cambodia and Viet Nam 3.3 (3.9); Thailand 5.7 (8.2); Brazil 3.5 (3.4); Formosa 2.2 (2.0); Madagascar 1.0 (1.0); U.S. 2.9 (2.4); Egypt 1.1 (0.6) and Italy 0.8 (0.9).

Production in the net importing countries fell from 65.5 million tons to 62.3 million tons. Production figures for 1954-55 for the leading importing countries, with figures in brackets for 1953-54, are:

India 3.7 (4.2); Indonesia 11.7 (10.9); Japan 11.4 (10.3); Ceylon 0.6 (0.6) and Malaya 0.7 (0.6).

It is somewhat difficult to assess the outlook for rice in the immediate future. This is because preliminary figures are not always a reliable index of actual production. Acreage figures are not also a very reliable guide, for the per-acre yields are increasing in many countries. On the demand side, the outlook is considerably influenced by the relative attractiveness of other foodstuffs. The supply of these foodstuffs has been very comfortable. In these circumstances, the F.A.O. report finds it difficult to foresee any "very definite trend." Nevertheless, it points out that "import demand for rice is likely to be maintained during 1956 and will perhaps expand slightly." The exportable supplies available from the 1955-56 crop, it is stated, will "probably be amply sufficient to meet this demand, without having recourse to the stocks carried over." Price movements will, of course, be influenced by the policies pursued by the countries which have large agricultural surpluses to dispose of.

Discussing what it calls the "future outlook" for rice—that is, the outlook beyond the immediate future—the report draws attention to certain important trends. The risk of crop failure which, however, is much less in rice than in certain other crops, is being further reduced through irrigation and flood control projects in several countries. In some countries, there have been reductions in acreage under rice. But these reductions affect only a small part of the world production. In several other countries, however, price support is being extended to rice. In any case, incentives for rice production are more attractive than for other crops. A consideration of all these factors leads the authors of the report to this conclusion: "There would thus seem to be no threat of any world-wide rice scarcity over the next two or three years. The problem may rather be one of finding buyers for the rice grown primarily for export markets."

One significant imponderable factor in the assessment of the rice situation is the possibility of an increase in the *per capita* consumption of this cereal. Not only is the total consumption of rice expanding at the rate of a million tons (in terms of paddy) a year, thanks to the increase in the rice-eating population, but there is also the possibility that the *per capita* consumption itself may go up. This is because the rice-eating population lives largely in the underdeveloped regions of the world. As their living standards rise, the initial slabs of the increase in income are mostly absorbed by increased consumption of food. It is, of course, not easy to compute the optimum consumption of rice, in order to estimate the level to which the consumption could rise as a result of increase in the income of the people or of the lowering of rice prices. But some idea of the scope for increased consumption of rice can be obtained by comparing consumption in Malaya with that in other less rich regions of Asia. Thus, in Malaya, the *per capita* consumption of rice is about 180 kg., as compared with the average of 100 kg. in the Far East. This indicates that rice consumption could increase significantly through an upward shift in real incomes or a reduction in rice prices. Such increased *per capita* consumption could, of course, make a great deal of difference to the statistical position of rice.

This consideration has a particular relevance to Indian conditions. In this country, there is an ever-present possibility of increased consumption of rice, as a result of the continuous increase in the rice-eating population and a rise in their income, and also of certain sections of people in rice-growing areas changing over from other (socially less respectable, though more nutritive) cereals to rice. Mr. Jain assessed the situation correctly when he said that if, during the second Plan, more money were pumped into this country where a number of people spent a major portion of their income on foodstuffs, "self-sufficiency in food might convert itself into insufficiency." This danger is particularly true of rice. And it could be averted only by building up buffer stocks, on the one hand, and by not relaxing the efforts at increased production of rice, on the other.

The world rice supply position, unless there is a significant upward shift in *per capita* consumption, could be regarded as comfortable. This increases the difficulty of arriving at an international trade agreement in rice, for which purpose the F.A.O. is to convene a conference. Further, rice, since it is marketed in different grades with wide differentials, does not lend itself to international arrangement of the kind which was worked out for wheat. And it must be remembered that, even for wheat, the renewal of the agreement has posed several, hitherto unsolved, problems. It now remains to be seen whether the efforts at reaching international agreement will be more successful in the case of rice than they have so far been for wheat.

MARKETS LISTLESS AND IRREGULAR

DEVELOPMENTS IN U.S. FARM POLICY SURVEYED

WEDNESDAY, 5 P.M

THE week drawing to a close has been a listless one for all the markets. The trend has been irregularly downward in some and irregularly upward in others. Shares, for instance, come under the former group and commodities, as well as cloth, under the latter. Bullion has been uncertain. But in none of the markets has the trend been decisive. Bulls are on the defensive, especially in shares and bullion. Bears, however, are timid, being unwilling to take advantage of the bulls' hesitation to incur further commitments and their eagerness to book profit. They have apparently been scared by the chartists' prediction that the primary trend still points to a rise. It is a mystery as to how the chartists come to such categorical conclusions even during the days of socialism; nevertheless, there is a steady increase in the number of their votaries. It is very amusing to find that even those who are supposed to be level-headed brokers have been charmed by the chartists.

MARKET GOSSIP

Among the popular scrips, steel shares have been witnessing sizable liquidation during the last two days, with a clear drop of Rs. 5 in T.I.S.Co. from the peak level touched on Saturday and of As. 14 in I.I.S.Co. There have been modest falls in textiles and miscellaneous counters also. Whether this is only a pre-settlement liquidation or the beginning of a downward trend remains to be seen. The bulls, however, seem to be tired, with their nerves weakened by some of the statements made by Mr. Deshmukh in Parliament and outside during the past few days. During the last week-end, he clearly stated that the Centre would have to raise additional taxation of at least Rs. 50 crores per annum during the five-year period of the second Plan. He followed this warning to the country by stating in Parliament that it would be necessary to take further steps for reducing economic inequalities. After referring to the fiscal measures recently taken to narrow down disparities of income, he remarked: "I have no doubt that, in future budgets, there will always be an element which will be specifically directed towards similar reduction of these disparities." This means that those sections of the community which have been the backbone of the share markets will be further hit in the coming years.

* * * *

The Government has not given up the idea of levying a tax on total wealth and/or on expenditure, besides the various taxes suggested by the Taxation Enquiry Commission, as witness the following remarks of Mr. Deshmukh:

"I would like to say this: Members assume too readily that many of the suggestions which are thrown out by either the Taxation Enquiry Commission or by some other experts have been rejected once and for all by the Finance Ministry. We are considering here the question of raising resources during the next five years. Many suggestions have to be carefully considered, their administrative implications have to be explored and then plans laid in accordance with the requirements of revenue for a given year. Therefore, I am not prepared to accept this conclusion that, because this year's budget proposals do not contain, shall we say, a tax on wealth or a tax on expenditure, it is solid proof that for the next five years, it is not the intention of Government to impose any of these taxes. At this moment, I am not in a position to say whether the Government will impose them or not. All I can say is that we have taken due note of the suggestions, many of them are under examination, the implementation of some of them will be more closely related with the way in which our economy develops and the way in which we feel that additional incomes are going to particular sections of the community and then we shall be prepared to introduce taxes which will be appropriate for that particular situation."

It will thus be seen that more direct taxes are in store for the rich and middle classes alike and these will be levied not merely because the Government will need money but also for achieving certain ideological ends.

The masses, are not going to be left out either, for the need for additional revenue is so great that the burden of indirect taxation, too, will go up. More excise and customs duties, not to mention sales-tax, will be levied by enhancing the rates of existing duties and broadening the list of commodities by the addition of new ones. Those who think that equities must rise in value because of the large dose of inflation envisaged in the Plan will do well to make suitable allowance for these possibilities in the fiscal sphere, as well as for the possibility of physical controls in the near future. It may be noted, in this connection, that the Index number of wholesale prices is already well above the top limit regarded as reasonable by Mr. Deshmukh. He said in Parliament this week that he considered the index number of wholesale prices ranging from 380 to 390 as the sort of level "which we should try to maintain." The current level of this number (as at the end of March 1956) is about 393, that is, three points above the peak considered reasonable. Accordingly, if price levels tend to go up further and if Mr. Deshmukh means what he says, the Government is bound to take further measures for bringing down the price levels.

* * * *

In the light of what has been stated so far, it is not surprising that the minor concessions made by Mr. Deshmukh in the corporation taxes proposed in the budget for 1956-57 have failed to bring any cheer to the share markets. Briefly, the concessions shown by him are as follows:

"(i) Share premia which are, in fact, receipts of capital from the shareholders themselves will be included in the capital base with reference to which excess dividend is computed for the purpose of calculating extra corporation tax; (ii) further, if bonus shares are issued out of share premia, they will not be taken into consideration for the purpose of calculating the extra corporation tax leviable on the occasion of the issue of bonus shares; and (iii) in the case of companies whose profits consist of taxable as well as non-taxable income, the provisions relating to the extra corporation tax will be applied after taking into consideration only such proportion of the dividends, bonus issued and capital employed as the taxable income of the Company bears to its total profits including non-taxable income."

Strictly speaking, the foregoing changes do not constitute a concession but only a rectification of a part—only a small part—of the injustice inherent in the tax on dividend and bonus shares. The last one will be of some value to plantation companies (including sugar companies having their own plantations), as a part of their revenues consists of agricultural income. Incidentally, the plantation companies in South India and Assam are already paying a tax on their agricultural incomes to their respective State Governments.

Two other changes in the taxation proposals contained in the budget were also announced by Mr. Deshmukh. One related to the tax on registered firms and their partners and the other to the excise duty on cottonseed oil. The first one, in the words of Mr. Deshmukh, is as follows:

"My original proposal in the Bill was that all registered firms, with total incomes of more than Rs. 40,000, should pay income-tax at graduated rates on the whole of their total income. In order, however, to give some relief to partners of firms whose share in the income of the firm is small, I propose to exempt from tax the first slab of Rs. 40,000 of the total income of the registered firms.

"The next change I propose is with regard to super-tax payable by a partner of a registered firm on his share of income from the firm other than business income. I propose that, in the case of such incomes, super-tax shall not be payable by a partner on an amount equal to the tax attributable to such incomes paid by the registered firm. This would give relief, among others, to partners of professional firms like those of accountants, lawyers, etc."

SECOND PLAN

Our readers' attention is invited to the observations of Mr. T. T. Krishnamachari on the second Five-year Plan published on page 796.—ED.

The excise duty on cottonseed oil has been halved, from six pies per lb. to three pies per lb. This is a well-deserved relief, as Mr. Deshmukh himself recognised. He gave the following pertinent explanation for cutting the duty:

"Due to various handicaps peculiar to cottonseed, less than 10 per cent. of it is being utilised for crushing at present and it has been recognised that measures should be devised for its greater utilisation both for the production of oils and recovery of the valuable by-product called linters for use in the rayon and other industries. Also, a larger crushing of cottonseed in mills would help to divert crushing of other seeds such as groundnut to village *ghanies*. I have, therefore, decided that, as a measure of encouragement to the crushing of cottonseed, the duty on cottonseed oil should be halved, that is to say, brought down to three pies per lb. Immediate effect is being given to this decision by executive notification."

If Mr. Deshmukh thinks that, by showing such minor concessions here and there, he can claim to be a very reasonable-minded Finance Minister, always keeping an open mind on controversial issues, he is very much mistaken. The commercial community as a whole and students of economics belonging to the liberal school of thought will not be deceived by such gestures and change their views about the confiscatory character of direct taxes introduced in the latest budget.

* * * *

The money market is still in the midst of seasonal demand for funds, though the stringency is somewhat less keen than a fortnight ago. Banks are avid borrowers, ready to pay 3½ per cent. for inter-bank call and house money. The slight break in the stringency is due more to an increase in the supply of money than to any significant fall in the demand. During the fortnight ended 13th April 1956, the banks seem to have repaid to the Reserve Bank nearly Rs. 17 crores of the advances taken by them. Scheduled banks' loans outstanding against usance bills have declined by Rs. 75 lakhs and are no more than Rs. 28.95 crores out of the total of Rs. 46.56 crores due to the Reserve Bank. In spite of the heavy demand for credit during the current busy season, the total amount of advances availed of by Scheduled banks against usance bills from 1st January 1956 upto 13th April 1956 was only Rs. 56.30 crores, as against Rs. 60.64 crores in the same period of the previous year. Indicative of the large influx of money into the market is the large expansion of notes in circulation. During the first two weeks of April, these notes shot up by Rs. 49.33 crores, of which Rs. 40 crores took place, as readers are already aware, in the first week. If the expansion that took place in the last week of March is also added, the rise during the past three weeks aggregates no less than Rs. 62.19 crores. A good part of this inflation seems to have already found its way into the banking system. Deposits of Scheduled banks, for instance, expanded by no less than Rs. 28.27 crores in the two weeks ended 6th April, 1956. Be that as it may, notes in circulation have crossed the Rs. 1,500-crore mark by a perceptible margin to stand at Rs. 1,516 crores, as on 13th April 1956. This level compares with Rs. 1,362 crores at the commencement of the year, Rs. 1,325 crores on 15th April 1955, Rs. 1,306 crores at the commencement of the current busy season and Rs. 1,162 crores at the beginning of the previous busy season.

* * * *

In the U.S., the expected has happened. President Eisenhower has vetoed the Democrat-sponsored Farm Bill which, while retaining the soil bank scheme he recommended for Congressional action, provided for rigid support at 90 per cent. parity level for agricultural produce, as against the flexible price support system he advocated. The veto settles the fate of the Bill. For the Democrats cannot muster the necessary two-thirds majority to override the veto. In taking this decision to veto the Bill, the President has acted against the advice of his own Party leaders based on fears of unpopularity among the farmers and the consequent risk of losing the forthcoming elections. The application of veto means that the President has failed to carry the country with him in his farm programme which was designed to prevent the accumulation of burdensome surpluses of agricultural produce. Meanwhile, the fate of the farm surpluses hangs in the balance. The problem continues to be as intractable as ever.

The essence of the President's farm programme lay in the soil bank scheme, its two aspects being the acreage reserve programme and the conservation reserve programme. Briefly, under the acreage reserve programme, the farmers would be encouraged to take land out of cultivation and paid for doing so. The payment would be made in certificates redeemable by the Commodity Credit Corporation either in cash or in commodities at specified rates. Under the conservation reserve programme, the farmers who co-operated with the Government in setting aside land needing conservation measures, would receive annual payments for the contracted period. Although the Bill, which the President has vetoed, carried this soil bank proposal, it stuck to the rigid price supports against which the President had protested. In a veto message to the Congress, the President has asked it to frame a new overall Farm Bill. At the same time, he has added that the Administration would take immediate action to improve farm income. Among the steps the President would soon be taking are: (1) An increase in the support price of milk and butterfat; (2) the establishment of new support levels on the five basic crops—wheat, maize, cotton, rice and peanuts, and (3) use of Administration funds to strengthen the prices of perishable farm commodities.

In his nation-wide broadcast, defending his veto, the President urged the Congress to enact swiftly a new payment-in-advance soil bank programme which could give participating farmers an extra 500 million dollars this crop year. He proposed two additional measures. In the first place, he said he would shortly ask the Congress for larger authorisation to continue the "successful movement of farm surpluses into constructive uses overseas." This, he said, would further bolster the domestic market. Secondly, he called on Congress to pass "promptly" the farm credit legislation he had already recommended. It remains to be seen whether the President's suggestions will be carried out by Congress. Clearly, they embody a more realistic solution of the farm problem than the politically convenient expedient of rigid price support.

The multi-billion dollar commodity surpluses which the U.S. carries today is a matter of utmost concern to the free world. If these surpluses were disgorged on the world markets—fortunately the U.S. has consistently adhered to the view that this should not be done—it would mean a virtual collapse of the world markets. Record supplies of foodgrains, principally wheat, rice and rye, have accumulated in the U.S. Total wheat supplies for the marketing year which began last July are estimated at a record 1,941 million bushels, as against 1,876 million bushels in 1954-55, despite the fact that production has declined from about 970 million bushels to 916 million bushels. Allowing for a domestic consumption of 625 million bushels and probable exports of 274 million bushels, the carryover on 1st July 1956 will aggregate about 1,040 million bushels, slightly above that at the beginning of the current season. The supply of rough rice in the year beginning 1st August 1955 is estimated at 83.6 million cwt. while domestic consumption is placed at 27.9 million cwt. only. Exports, however, are uncertain.

Rye supplies for 1955-56 aggregate about 48.8 million bushels. This includes carryover stocks on 1st July 1955 of 16.2 million bushels, 1955 production of 29.2 million bushels and imports of 3.4 million bushels. This supply compares with the 42.7 million bushels last year and would be the largest supply since 1944-45 when it amounted to 57.7 million bushels. Rye consumption may be about 31 million bushels in 1955-56 as compared with 26.5 million bushels the previous year. The carryover on 1st July this year may be about 18 million bushels which compares with 16.2 million bushels on 1st July 1955.

The maize supply for 1955-56 is estimated at 4,210 million bushels, 158 million bushels above the previous record of 1949-50 and 279 million bushe

NARROW MOVEMENTS IN EQUITIES

UNDERTONE QUIETLY STEADY

(From Our Own Correspondents)

BOMBAY, *18th April*

ACTIVITY in the share market during the week under review disclosed a marked shrinkage and equity values moved irregularly within a narrow range. The undertone remained quietly steady. Speculative operators were in no mood to extend their commitments either way, in view of the uncertainty created by a number of conflicting factors.

The Press forecast of the draft resolution on the new industrial policy of the Government indicated that the basic outlook for industries was encouraging and that the Government's attitude towards industries would be favourable. There were also reports that the Government was likely to relax the restriction on mill cloth production, in order to avert the threatened cloth shortage in the country. The changes announced by the Finance Minister in the Budget proposals, giving some relief in corporation tax, provided another helpful factor.

The operators were, however, unwilling to build up a long position on the basis of the above favourable factors. For they were obsessed by a few bearish influences. In the first place, the Finance Minister's elucidation of the difficulties ahead in carrying out the second Plan, the possibility of an increase in the outlay on the Plan, and his hint at the possibility of fresh taxation to the tune of Rs. 50 crores per annum in the coming years affected adversely the market's sentiment. Secondly, Mr. Deshmukh's reference to the prospects of raising money from various "surpluses" of moneylenders, property owners, etc., was taken as an indication, in prospect, of ceiling on income. Thirdly, there were also fears that the tightening of the U.S. foreign aid policy in respect of nations which received help from Soviet Russia might affect India. Lastly, unhelpful advices from Calcutta and settlement considerations also sapped the enthusiasm of operators.

In the steel section, Tata Ordinaries advanced early in the week from Rs. 246-12 to Rs. 251-12, thus maintaining the upward trend noted towards the close of the previous week. The improvement proved to be short-lived and the shares slipped back to Rs. 246-4 at the close today. After an early rise from Rs. 35-6 to Rs. 36, Indian Irons reacted to Rs. 34-13 and closed at Rs. 34-14¼.

An indecisive trend was noted in textiles in the absence of any confirmation of the rumours that the restriction on mill cloth production would be relaxed. Barring a few selected counters, equities in this section disclosed moderate losses over the week. Bombay Dyeings rallied from Rs. 647-8 to Rs. 659-6, before receding to Rs. 643-12. Today, however, there was a spurt to Rs. 653-2, but profit-taking brought them down to Rs. 647-8. Centurys moved up from Rs. 535 to Rs. 546, but receded to close at Rs. 527 ex-div. (final div. Rs. 14). Kohinoors finished with a loss of Rs. 3-12 at Rs. 353-8, after touching Rs. 360-12. Ahmedabad Advances put on Rs. 6-4 to Rs. 173-12, while central Indias lost Rs. 9-8 to Rs. 130. Finlays were lower by Re. 1 at Rs. 351, Gokaks by Re. 1-8 at Rs. 230-8. Indu Ordinaries by As. 7 at Rs. 12-7 and Indore Malwas by Rs. 3-2 at Rs. 147-8. Khataus gained a fraction to Rs. 243-2, while Shree Niwas was unchanged at Rs. 222-8. Simplex moved down by Rs. 2 to Rs. 209.

Bank shares were generally quiet and business was restricted. Bank of Indias, however, evoked enquiries and rose by Re. 1-12 to Rs. 152-12 in the belief that the Bank would be benefited by the latest tax relief announced by the Finance Minister on bonus shares, if the Bank's proposal to capitalise Rs. 50 lakhs out of its reserves (which include a share premium to the tune of Rs. 2 crores) is sanctioned. Barodas were done Re. 1-8 lower at Rs. 92. Centrals were quiet at Rs. 47 and their new shares at Rs. 48-12. Punjab Nationals were maintained at Rs. 48. United Commercials dropped Re. 1 to Rs. 49-8.

Electricity shares followed a downward trend, though the losses were not very marked. Ahmedabad Electrics were, however, done As. 10 higher at Rs. 102-3. Bombay Suburbans shed As. 5 to Rs. 115-5 and Surat Electrics Re. 1-4 to Rs. 120.

The miscellaneous section followed the general trend. Sugar shares were dull. Belapurs moved narrowly and finished with a loss of Re. 1-8 at Rs. 225. Phaltans shed Re. 1 to Rs. 144-8 and Walchandnagars Rs. 3-2 to Rs. 244-6. In the cement group, A.C.C. were lifted from Rs. 215-12 to Rs. 218-4 early in the week, but the reactionary trend which followed brought them down to Rs. 214-12 at the close. Digvijays put on Re. 1 to Rs. 185. The engineering and mining group shaped no better. Alcocks drifted down by Rs. 5 to Rs. 350, Tata Locomotives by Rs. 4 to Rs. 153-8 and Premier Constructions by Re. 1 to Rs. 185. Shivrajpurs showed no change at Rs. 106-8, while Indian Coppers lost ground from Rs. 6-9 to Rs. 6-3½. B.B. Petrols lost As. 2 to Rs. 4-2.

Shipping shares were steady. Scindias advanced from Rs. 17-9½ to Rs. 18-5, before closing at Rs. 17-13½. Great Easterns were done As. 2 higher at Rs. 17-8. Among transport shares, Hindustan Motors dropped from Rs. 9-14 to Rs. 9-6 and Premier Automobiles from Rs. 92 to Rs. 90. In the miscellaneous group, Bombay Burmahs moved between Rs. 654-10 and Rs. 622-8 before closing unchanged at Rs. 627-8. British India Corporations were pushed back from Rs. 10-14 to Rs. 10-5. National Rayons were down by Rs. 4-4 to Rs. 236-12, reflecting the market's dissatisfaction with the increase in dividend from Rs. 10 to Rs. 12. Tata Chemicals were featureless at Rs. 17-12.

Calcutta Stock Exchange

CALCUTTA, *17th April*

After being somewhat active in the initial days of the week, the Calcutta Stock Exchange closed on a subdued note. The slight improvement in the state of the money market, the feeling that the Bank rate might not be raised and a marked expansion in note issue were responsible for the promising start. But the forward movement could not be sustained for long, as the sentiment of the market underwent a change towards the close. Advices from Bombay were unfavourable. The Finance Minister's hint, in New Delhi, at the prospect of fresh taxation to the extent of Rs. 50 crores a year in the second Plan period acted as a bearish influence. Operators were generally disinclined to enter into fresh commitments, while profit-taking on settlement considerations pushed down values. The closing quotations were generally a shade lower than those a week before. The tea section, however, provided a bright spot on improved prospects for the current year.

Unfavourable corporate news was responsible for considerable selling in jute shares. Agarpara declined by As. 7 to Rs. 11-10. Barnagores were a bit steady at Rs. 132, but Birlas receded from Rs. 16-15 to Rs. 16-12 and Howrahs from Rs. 22-7 to Rs. 22-4. New Centrals suffered a loss of Re. 1 to Rs. 13-13.

Coal shares also were easy. Burrakur had sellers at Rs. 14-2, as against Rs. 14-5. East Indias changed hands As. 4 lower at Rs. 32-12. Equitables moved up from Rs. 29-7 to Rs. 30-6, but finished lower at Rs. 30-2. West Bengals were on offer at Rs. 6-13 as against Rs. 7.

Among engineering shares, Indian Irons fluctuated within a narrow range and ended the week at Rs. 35-1, as against Rs. 35 a week ago. Britannia Engineering were a shade better at Rs. 18-4, as against Rs. 18-1.

In the miscellaneous section, Burma Mines were done at Rs. 3-2 as against Rs. 3-3. Indian Coppers lost two annas to close at Rs. 6-6. Dunlop Rubbers were unaltered at Rs. 31-4. Imperial Tobaccos had deals at rates varying from Rs. 14-12 to Rs. 14-14.

Tea shares attracted some attention at advancing rates. Baghmaris improved from Rs. 28-10 to Rs. 28-14, and Brahmapootras from Rs. 9-6 to Rs. 9-8. Brooke Bonds were, however, lower at Rs. 24-12, as against Rs. 25-2. Hantaparas were in special request and as a result rose from Rs. 319 to Rs. 336. Hasimaras, too, had buyers at Rs. 41, as against Rs. 40.

Madras Stock Exchange

MADRAS, *17th April*

The generally easy trend noted on the Madras Stock Exchange last week proved short-lived, since there was a distinct improvement in the sentiment of the market during the week under review. Operators were somewhat inclined to take an optimistic view of the outlook for industries. The optimism was based chiefly on renewed signs of inflation in the country, as indicated by a steep rise of Rs. 40 crores in notes in circulation last week and persistent firmness in commodity markets. A feature of trading on the Exchange was the active support extended to rubber company shares on yield considerations. Tea shares were strong, thanks to encouraging reports of good offtake at higher prices from tea markets. In sympathy with and on considerations of better working results in the current year, coffee shares were also favoured. Buying enquiries for textiles were sustained, on reports of continued excellent offtake of cloth for domestic consumption. Sugar shares, too, were sought at higher prices.

The prices of textile mill shares registered a handsome improvement. Palani Andavar 'A's rallied Rs. 7 to Rs. 167. Cannanores jumped up by Rs. 6 to Rs. 168. Buckinghams spurted by Rs. 4-8 to Rs. 185. Janardhanas rose by Re. 1-12 to Rs. 109-12. Rayalaseemas, Balasubramanias and Metturs were better by a rupee each at Rs. 136, Rs. 80 and Rs. 407, respectively.

In the planting section, rubber shares provided the brightest spot. Travancore Rubbers rallied Re. 1-4 to Rs. 27-12. Nenmenys increased by As. 12 to Rs. 23-10. Cochin Malabars gained an anna to Rs. 8-12. Among tea shares, Nonsuch Teas advanced by As. 4 to Rs. 36-12.

In the miscellaneous group, Rallis were specially favoured, their quotation moving up by As. 10 to Rs. 34. F.A.C.Ts. put on As. 2-6 to Rs. 7-2-6. Aluminium Industries registered a rise of As. 2 to Rs. 19-10. Mysore Tobaccos were higher by 18 pies at Rs. 12-13. Spencers were fully maintained at Rs. 17-5, as also Andhra Cement 'A's at Rs. 158 and Singarenis at Rs. 9-8.

WEEK'S STOCK EXCHANGE TREND

NEWS IN BRIEF

THE two-day annual session of the Indian National Trade Union Congress will be inaugurated in Surat by the Union Home Minister, Pandit Govind Bhallabh Pant, on 6th May 1956.

The Government of India intends setting up a high-power autonomous board to take charge of the entire work in regard to the population and family planning programme, according to Dr. J. C. Ghosh, Member of the Planning Commission.

A new intermediary port will be opened shortly on the east coast of India at Paradip, about 50 miles east of Cuttack. The port at Paradip is designed to help the exploitation of the mineral wealth of the coastal districts of Orissa.

A finance corporation for providing assistance to handloom weavers is likely to be formed soon in Andhra. A special officer will be appointed by the State Government for the formation of the Corporation.

The Government of India has authorised the Tea Board to make an interim release of export quotas for the year 1956-57 to tea estates to the extent of 40 per cent. of their crop basis, pending the final notification of the Indian export allotment of tea for the year.

The Government of India has fixed a uniform stamp duty on transfer deeds of shares at the rate of As. 12 per Rs. 100 all over India from 1st April 1956. The uniform duty replaces different rates of duty in various States of the Indian Union, like Re. 1-2 in Bombay, Re. 1-8 in Madras, As. 15 in Kanpur, As. 12 in Calcutta and As. 8 in Travancore-Cochin.

The all-India final estimate of *ragi* for 1955-56 puts the current year's area and production of the crop at 5,627,000 acres and 1,844,000 tons, as against the partially revised estimate of 5,711,000 acres and 1,646,000 tons, respectively, for 1954-55. This shows a decrease of 84,000 acres or 1.5 per cent. in area and an increase of 198,000 tons or 12.0 per cent. in production as compared with last year.

A mica mine in Nellore district (Andhra), abandoned a few years ago as uneconomical, is stated to have now turned out to be a good source of uranium. Since September last year, the Sankara mica mine near Saidapur in Gudur taluka is reported to have yielded ore containing 16 per cent. uranium at the rate of a ton a month. The Nellore ore is considered a rich source of uranium.

The all-India final estimate of rice for 1955-56 puts the current year's area and production of the crop at 76,253,000 acres and 25,474,000 tons, as against the partially revised estimate of 75,949,000 acres and 24,531,000 tons, respectively, for 1954-55. This shows an increase of 304,000 acres, or 0.4 per cent. in area and 943,000 tons or 3.8 per cent. in production during the current year.

The Andhra Government will shortly appoint an enquiry committee consisting of officials and non-officials to enquire into the growing of tobacco in the State. The Committee will also be asked to assess the existing marketing facilities now available to the growers and recommend measures for the expansion of such facilities wherever necessary in the tobacco-growing areas in the State to enable growers to get a fair deal for their produce.

The output of coal in collieries in India increased from 3,206 558 tons in January 1956, to 3,357,546 tons in February 1956, according to official statistics released by the Chief Inspector of Mines in India. Despatches of coal amounted to 2,697,020 tons in February 1956, as against 2,794,074 tons in the preceding month. Coal stocks at pitheads amounted to 3,812,570 tons at the close of the month.

The all-India final estimate of *bajra* for 1955-56 puts the current year's area and production at 27,025 000 acres and 3,400,000 tons, as against the partially revised estimates of 27,983,000 acres and 3,421,000 tons, respectively, for 1954-55. This shows a decrease of 958,000 acres or 3.4 per cent. in area and 21,000 tons or 0.6 per cent. in production over 1954-55.

The total number of unemployed in India registered at the Employment Exchanges during February 1956 was 724,448. The figure represented an increase of more than 7,000 over that for the previous month. The number of vacancies notified by the private sector during the period was 7,652 —largest since May 1953. Of the vacancies notified by the public sector, 18,354 were by the Central and State Government Departments. The placements effected during the period were 15,465, as against 14,753 during January 1956.

The Government of India has had under active consideration the development of manufacture of X-ray equipment in the country and a panel was recently constituted to advise Government on this question. The panel has decided that schemes for the manufacture of X-ray equipment in the country should be invited from firms interested in the manufacture of X-ray equipment. Proposals from interested firms for the manufacture of X-ray equipment are, therefore, invited giving full details of the programme of manufacture together with terms of foreign collaboration, if any.

In pursuance of the agreement concerning the establishment of a regular shipping service between India and the U.S.S.R., meetings were held at Bombay last week under the chairmanship of Mr. Nagendra Singh, Director General of Shipping, in which the members of the U.S.S.R. shipping delegation and the Indian shipowners participating in the Indo-Soviet service took part. Ancillary problems relating to the operation of the new service were discussed in detail and a schedule of sailings for the next three months was also drawn up. It is likely that the first Indian vessel to be put on this service will be berthed by about the middle of May 1956.

An offer to sell 50,000 to 60,000 tons of steel to India during the current year on a Governmental basis has been made by Czechoslovakia. The details of the offer were discussed recently between the Acting Trade Commissioner for Czechoslovakia in New Delhi and the Iron and Steel Controller of the Government of India. Last year, India purchased 12,000 tons of steel from Czechoslovakia through a private channel. The Government of India signed an agreement last week with Poland for the import of iron and steel products from Poland to the extent of 300,000 tons during the next three years. The agreement provides for the sale of 50,000 tons of such products by the end of this year.

• • • •

From Abroad

The population of Sweden as on 31st December 1955 amounted to 7,219,112 persons, an increase of 55,448 over the year.

The British rubber manufacturers have warned the natural rubber producers in Malaya that synthetic rubber output would be stepped up in the U.K., unless Malayan producers show greater goodwill and unless the price of natural rubber is reduced.

The Canberra Central Bank, Australia, has reduced the interest payable on trading banks' special accounts from ¾ per cent. to ½ per cent. with effect from 1st April 1956. The cut has been made in order to offset increased profits arising from higher overdraft rates. This temporary measure has been approved by the Government.

Russia and China have concluded an agreement under which the former will help the completion by 1960 of the second Trans-Asian railway across China's Far West. The undertaking will be of immense consequence to the development of a joint Sino-Soviet industrial belt stretching from the Urals to the Yellow Sea.

A delegation from the Rhodesia Tobacco Marketing Board arrived in London last week for talks with the Tobacco Advisory Committee of the British Board of Trade. The discussions centred round the price crisis which led to the closing of the Salisbury tobacco auctions on Monday last week after only four weeks of the current season's sales.

Two missions from the World Bank arrived in Pakistan last week, one to discuss with Government officials, banks and business men a proposal for the establishment of a privately-owned industrial credit bank in Pakistan and the other to review Pakistan's present economic situation and plans for future development. The latter mission will remain in Pakistan for about two months.

The Japanese Government has decided to decline an informal offer made by the United States for triangular trade involving Japanese purchases of American surplus farm products with local currency. The proposal, made through the American Embassy in Tokyo, was to employ yen proceeds from the sales of farm products as credits for South-East Asian and Middle East countries receiving mutual security aid to buy Japanese goods.

The Government of Australia has decided to raise its subsidy on the cost of merchant ships built in Australia for coastal trade from the present level of 25 per cent. to 33⅓ per cent. This is in accordance with the recommendations of the Tariff Board, which had reported that the present maximum subsidy was insufficient to enable the Australian shipbuilding industry to compete with overseas builders.

World consumption of natural rubber in February this year amounted to 160,000 tons, as against 162,500 tons in the previous month, according to the International Rubber Study Group. The output in February aggregated 132,500 tons, a shortfall of 27,500 tons as compared with consumption. Stocks at the end of the month amounted to 837,500 tons, a decline of 50,000 tons since 1st January. World production of synthetic rubber in February amounted to 100,000 tons, as against a consumption of 95,000 tons. Stocks have risen by 12,500 tons during the first two months of the year to 200,000 tons.

Steel production in the United Kingdom in March—at the rate of 425,800 tons a week—was the highest in any month, the previous best being 417,800 tons a week in February. Announcing this, the Iron and Steel Board says that production of steel in the first quarter of this year amounted to 5,413,000 tons, as compared with 5,074,000 tons and 4,694,000 tons in the first quarter of 1955 and 1954, respectively. If the estimate of steel production this year (21,300,000 tons) is fulfilled, production in the current year should exceed that of 1955 by 1,500,000 tons, or by about 7½ per cent.

Savings banks in Australia have raised their interest rate on deposits by ½ per cent. to a maximum of 2½ per cent. The new rate is payable on deposits up to £1,000, instead of £500 as hitherto.

PERSONAL

MR. W. A. W. Clark, Deputy High Commissioner-designate for the U.K. in New Delhi, arrived in New Delhi last week-end.

Mr. N. K. Jalan has been elected Chairman of the Calcutta Jute Fabric Shippers Association for 1956-57.

Mr. B. N. Nanda, Counsellor-Charge d'Affaires, Legation of India, Manila, has been appointed Consul-General of India in San Francisco with the rank of Counsellor.

Mr. A. J. Romer, Director of the Associated Commercial Vehicles Group of Companies, U.K., has accepted the invitation of the Government of India to assist it in its enquiry into the progress of the automobile industry in India and to give advice for further development.

Nawab Ali Yaver Jung, India's Ambassador to Egypt, will represent India at the meeting of the *ad hoc* Committee of the Special U.N. Fund for Economic Development to be held in New York next month. Nawab Ali Yaver Jung will be assisted by Mr. G. R. Kamath, Executive Director for India of the International Bank for Reconstruction and Development.

Mr. P. H. Sykes of the Bengal Paper Mills Co., Ltd., has been elected Chairman of the Indian Paper Makers Association for the year 1956-57. The other members of the Committee are: Mr. J. F. Brierley (India Paper Pulp Co., Ltd.), Vice-Chairman, Mr. D. S. Brikbeck (Tribeni Tissues Ltd.), Mr. C. J. E. Keene (Titaghur Paper Mills Co., Ltd.) and Mr. V. Mehta (Shree Gopal Paper Mills Ltd.).

Mr. K. J. Cleetus, Sales Manager of the Tata Iron and Steel Co., Ltd., has been elected Chairman, and Mr. J. M. Sweet (I.G.N. & R.), Deputy Chairman of the Committee of the Indian Engineering Association for 1956. The other members of the Committee are: Mr. K. Chatterton (Martin Burn), Mr. J. R. Galloway (National Carbon), Mr. B. F. Goodchild (Saxby & Farmer), Mr. E. S. Greenwood (Indian Aluminium), Mr. H. Chiswell Jones (Metal Box), Mr. J. E. Reid (G.E.C.) and Mr. J. A. Steven (Kumardhubi Engineering).

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

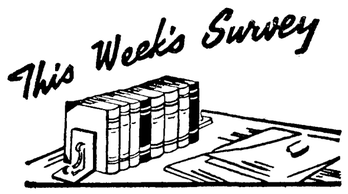
CALCUTTA, *18th April*

Bombay and Lancashire

While the proposed scheme for the merger of *thirty-five cotton mills of Bombay City* has been definitely abandoned, *Lancashire is busy maturing a* scheme for the reorganisation of its *cotton industry*. The Bombay scheme has failed on financial ground; owing, firstly, to the Government of India's refusal to forgo entirely the 3½ per cent. stamp duty which would have meant a saving of Rs. 30 lakhs and, secondly, to the inability of the Merger Committee to arrange with the Imperial Bank of India a loan of Rs. 10 crores to finance the merger. The Government of India agreed to forgo half the stamp duty but not the whole of it. The authors of the scheme urged the latter course, quoting as a precedent the action of the British Government in connection with the Lancashire Cotton Corporation which has just issued £2,000,000 six-year six per cent. first mortgage debentures. The latest Lancashire scheme involves proposals for adjusting the surplus production capacity of the industry to its present and prospective needs. If this plan meets with approval, then the promoters comprising every section of the industry, including operatives, will seek statutory authority from the British Government to make it applicable to all firms in the spinning, weaving and finishing sections of the industry. This *is certainly a good plan*; but betokens anxiety as to the future of Lancashire's trade in India. While the President of the British Board of Trade maintains that the provisional settlement in India has made conditions in the Lancashire cotton industry definitely brighter, the accuracy of this assertion is stoutly disputed by Mr. John Grey, Chairman of the British Cotton Spinners' and Manufacturers' Association, who asserts that the position is worse than it was a month ago.

On deposits in excess of £1,000 and up to £1,500, the new rate will be 1½ per cent. On deposits of friendly societies 2½ per cent. will be paid up to £2,000 and 1½ per cent. on those in excess of £2,000. The Commonwealth Bank has increased the interest rate on housing loans by one-half per cent. to 5 per cent. and the State Savings Bank has increased the lending rate for housing from 4½ per cent. to 5½ per cent. Its maximum loan for new buildings is £2,500 and for houses already built £2,000.

The nineteenth Congress of the Permanent International Association of Navigation Congresses will be held in London in July 1957. The eight-day Congress, which will be attended by about 800 representatives of ports and waterways from 50 countries, will be the first to be held in Britain since 1923. The Congress will include discussions on measures to improve handling of cargo between ship and quay or inland transport, on berthage for the big new tanker fleets which are coming into service, and on methods for prevention or reduction of oil pollution in harbour waters. The Duke of Edinburgh will be the patron of the Congress and Viscount Waverley, Chairman of the Port of London Authority, will be the President.



IRON AND STEEL MINISTRY

LAST week's debate in the Lok Sabha on the demand for grants to the Ministry of Iron and Steel showed how *unanimous* is the support of Parliament for the Government's ambitious steel programme. There was some criticism of lack of information. Some doubt was also expressed over the financial arrangements now made for carrying through the steel programme. But all sections warmly welcomed the Steel Ministry's efforts. This massive support is certainly a good augury for the future of the Ministry.

In his additional role as the Minister for Iron and Steel, the Commerce and Industry Minister, Mr. T. T. Krishnamachari—he once said that he had had to undertake the new job for his temerity in suggesting the need for expansion of steel output—outlined the immensity of the task that faced the new ministry. In one sense, it is the biggest task that not only this Government but any Government ever undertook. What is now contemplated is not merely a rapid expansion of the existing units in the steel industry but the setting up of three large steel units. The question of erection of three steel plants almost at the same time, all of them beginning work about the same time and all of them expecting to go into production at very nearly the same time, as Mr. Krishnamachari said, is "something which is staggering when one contemplates the immensity of the task." He quoted Sir Cyril Jones, leader of the British Steel Mission to this country, who, in paying a tribute to the India of today, said that he found no reason for complaining of delay in the Government which had undertaken with the help of half a minister, one secretary, one deputy secretary and two under-secretaries, the seemingly fantastic task of establishing three steel plants. This is an achievement of which any ministry could be proud.

The Government has been thinking in terms of a large-scale expansion in steel production. Mr. Krishnamachari, on his part, visualised that the demand for steel would go up 15 million tons of finished steel or 18 million tons of ingot by the end of the third Five-year Plan. He revealed that he was taking up the question of trying to fix a target for ten years so that his ministry could plan more freely. This is a wise suggestion, considering that steel production cannot be achieved in a day and it is not only desirable but necessary to look well ahead.

He next gave some interesting details about the three steel plants. The plants, as is well known, are being planned to produce one million tons of ingot steel each. But, when the plants are carried to their "logical strength," they would together be able to produce about 7½ million tons. The Rourkela plant as well as the Durgapur plant will each have three batteries of 78 coke ovens each, while the Bhilai plant will have three batteries of 65 coke ovens each. The Bhilai and Durgapur plants can each augment its normal one-million ton output by 300,000 tons by adding a few coke oven batteries and two more open hearth furnaces, while the Rourkela plant can produce an additional 250,000 tons.

A significant change has taken place in the Government's attitude towards calling for tenders for the supply of steel plant. In the case of the German plant for Rourkela, it decided in favour of the tender system. It would appear that the Government found that there were only a few tenders and no great difference in the prices quoted either. This has induced the Government to shift its policy in favour of the package deal, the system first adopted in the case of the Russian project. Yet another consideration which has weighed with the Government in taking this decision is that if it takes tenders for different parts of the plant from different parties and one or two of the tenderers failed, it would hold up the progress of the work. It is small consolation for Government that it would even then have a claim on the defaulting tenderers, for the work would be held up anyway. The Government has therefore decided in favour of "package deal" for the British plant due to go up at Durgapur.

Some interesting discussion centred round the question of the rate of interest to be charged by the British Government on its loan to India for the Durgapur steel project. Under the agreement, the rate will be one per cent. above the Bank rate that may prevail in the U.K. at the time the loan is given. Replying to the criticism that the loan was unnecessary in view of the fact that the country had large sterling balances to draw upon, Mr. Krishnamachari pointed out that the second Five-year Plan indicated a foreign exchange gap of Rs. 1,000 crores and that, by 1959, the sterling balances would have been drawn down considerably. As regards the method employed for fixing the rate of interest, he said that it was an equitable one and added: "As we expect, if the Bank rate goes down, it is an advantage. If it does not go down, we will not probably take the entire amount."

The Government has appointed, at a cost of Rs. 9 lakhs a year, a well-known British firm, the International Construction Co., Ltd., as its technical consultants for examining the steel projects. There was some criticism that, since it was a British firm, it might not be interested in India's industrial progress. The Minister was asked whether the British firm had any connection with the steel consortium with which India was dealing. These criticisms indicate that there are men in this country who suffer from political prejudices. Whatever might have been the basis for them in the past, it is best that they are shed now. The Minister stoutly defended the appointment of the firm as consultants. Declaring that the firm had more than justified its choice, he observed: "I think what I am paying to the consultants is nothing as compared with the services they have already rendered us." The firm, he further revealed, had saved the Government a "great deal of money" through its expert advice. He also affirmed that there was no connection whatever between this firm and the British steel consortium with which the Government was dealing.

In the course of the debate, an interesting point about the execution of the Government's steel policy was raised. It was asked whether it was not advisable for the Government to exercise a unified control over the iron and steel industry. Presumably, what was suggested was that it was somewhat anomalous that the Commerce and Industry Ministry was in charge of the steel industry in the private sector while the Iron and Steel Ministry was intended to manage the Government-owned steel plants. Mr. Krishnamachari, however, felt that no conflict was likely to arise before the Government-sponsored units went into production. He thought that the present position could continue till 1959 when it could be reviewed. Although the existence of Government-owned and private-owned units in the same industry could give rise to some difficult issues, it should be possible, given the necessary goodwill and co-operation, for both the sectors to make their effective contribution to India's national economy.

PAPER IN THE SECOND PLAN

Paper producers in India seem to be complacent with the progress of their industry. It is true that there has been, as was pointed out by Mr. V. Mehta, Chairman of the Indian Paper Makers Association, Calcutta, at the last annual meeting of this body, an increase in the installed capacity as well as in the output of paper in India during the first Plan period. As against the rated capacity of 136,000 tons and output of 114,000 tons in 1950-51, the target fixed in the first Plan were 211,000 tons of installed capacity and 200,000 tons of production. From production reports at the disposal of the above Association, it would appear that these targets have been "nearly achieved." Almost the entire increase in installed capacity or production is due to completion or partial completion of the expansion schemes of the units that were existing at the beginning of the Plan. In other words, very little new capital was raised for bringing into being the increase noted above, as the policy of the industry was to plough back the earnings into expansion schemes. Although it is premature to assess the effects of the new tax proposals relating to undistributed profits and bonus shares on this policy, Mr. Mehta was glad "to record with satisfaction that the paper industry played very well the part assigned to it during the first Five-year Plan and hopes to repeat its performance with credit during the second Five-year Plan."

Few will doubt the ability of the industry to achieve the targets laid down in the second Plan, namely, 450,000 tons for installed capacity and 350,000 tons for production. But this ability requires to be assisted by the creation of suitable climate for raising finance and conditions for obtaining raw material. It is stated that the existing licences already cover 350,000 tons and the gap of one lakh tons remains to be licensed during the next Plan period. Out of the existing licences, 45,000 tons are covered by new projects and the balance by the existing plants and their expansion schemes. Mr. Mehta was confident that, if industrialisation in the country proceeded, according to the Plan, and if growth of literacy gathered momentum, the demand for paper was bound to rise and the industry would make every attempt to catch up with it. He is certainly justified in entertaining these expectations for they are based on sound assumptions. But, while it is always a healthy habit to take an optimistic view of the future, the industry should not overlook two fundamental factors. One is the need for safeguarding the interests of consumers. The paper industry must take all possible steps to keep its cost of production at as low a level as possible. The other is the avoidance of temptation to ask for a closed market, even of a partial nature. Imports of paper into India have been on the increase costing the country a fair-sized amount of foreign exchange every year. India spent on paper imports Rs. 12.6 crores in 1953, Rs. 13.6 crores in 1954 and Rs. 15.23 crores in 1955. This upward trend in imports of paper will have to be reversed by a rapid expansion of indigenous production. In the circumstances, Mr. Mehta's demand that "the existing units have a fully justifiable right to make sure that no new projects are planned at the cost of their present production and reasonable aspirations of future expansion" is misplaced and liable to be misunderstood by the critics of the private sector.

In the context of the need for stepping up paper production some of the suggestions of Mr. Mehta for removing the handicaps facing the industry, however, merit every consideration. Transport bottlenecks are stated to be the most disturbing among the handicaps. He said that the trouble had been of a chronic nature in so far as the paper industry was concerned. He recalled with a certain amount of disappointment the statement made by the Railway Minister in his budget speech that railway transport would not be able to cope with expanding trade and output except in steel and to some extent in cement and coal. This would deter those engaged in the industry from putting up additional plant to cover the targets set by the Planning Commission. He wanted the Government to pay serious attention to the question of providing adequate transport facilities for all industries, including paper.

WELFARE OF WEAVERS

Once again, Mr. T. T. Krishnamachari has emphasised the utmost urgency of converting the handlooms into powerlooms. Addressing the tenth convention of the All-India Handloom Weavers' Congress at New Delhi on Sunday this week, Mr. Krishnamachari categorically declared that the only effective solution to the ills of the handloom industry lay in conversion. "I want," he said, "a handloom weavers' family to earn at least Rs. 3,000 a year. But this will not be possible, if the weavers are condemned to work with their hands for ever."

Viewed in the context of the vast potential demand for cotton textiles in the years to come, there is imperative need for taking all possible steps to ensure adequate supplies of such an essential item of consumption as cloth at an economic price. Apart from the serious doubts as to the capacity of the handloom sector (as it exists today) to meet the recommended entire additional demand for 1,700 million yards of cloth at the end of the second Plan period, the country would surely be running the risk of an appreciable rise in the price of cloth in the Plan period, if the present outmoded structure of the handloom industry were allowed to continue. While Mr. Krishnamachari fully recognises this aspect, he is, it is unfortunate, not prepared to take effective measures to bring about conversion of handlooms into powerlooms, as witness the following remarks of his:

"If handloom weavers want powerlooms, we will give them. We will make it easy for them to get the powerlooms and sell the products, but, if they do not want to have powerlooms, nobody will compel them. The Government's aim is that every man must be free to do what he wants to make a comfortable living. I am prepared to give machines to the village blacksmith and carpenter to better his production. If they do not want machines, they need not have them. But, then, they cannot complain that somebody else does better, because he has accepted the machine."

One fails to understand the logic behind these observations of Mr. Krishnamachari. When he (and his other colleagues in the Cabinet) can lay down strict directions for observance by large-scale industries, why should he not issue similar directions for encouraging substitution of handlooms by powerlooms? Evidently, political considerations have weighed with him. Mr. Krishnamachari does not want a single handloom weaver to be thrown out of employment by the introduction of powerlooms. Employment is no doubt a vital consideration, but equally vital is the consideration of cost the consumer is ultimately asked to pay. Any policy which makes the consumer pay a higher price merely for the sake of keeping the handloom weavers at work, would defeat the very objective of economic planning, namely, improvement in the lot of the common man.

Mr. Krishnamachari has, however, done well to turn down the suggestion, put forward by Mr. N. G. Ranga, President of the Weavers' Congress, for constituting a statutory Handloom Board. There is already one all-India organisation, the All-India Handloom Board, and a multiplication of organisations will certainly not, as Mr. Krishnamachari rightly said, help us. The existing Board is using the State organisations for carrying out the schemes and the setting up of a statutory Board will not be able to fill up the gap that still exists.

In the course of his address, Mr. Krishnamachari reviewed the work done by the Government in rehabilitating the handloom industry. There are, according to him, nearly 1,000,000 looms under co-operative societies. The Government has so far allotted about Rs. 10.5 crores for expenditure on handlooms largely through co-operative societies, of which 55 per cent. has been spent. It would appear that, as a result of the measures taken by the Government in the past three years, the production by handlooms has increased by 50 to 60 per cent. This claim seems to be somewhat exaggerated, but the fact is that there has been a substantial increase in production of handloom goods and all these are selling well. While there may be a few pockets where handloom cloth is still accumulating, by and large, today, the unsold stocks of handloom cloth are small.

U.P. SALES TAX

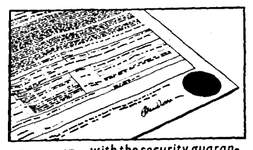
It is, indeed, deplorable that the mercantile community of Uttar Pradesh should have taken recourse to widespread *hartals* and demonstrations for registering its protest against the State Government's Sales Tax Ordinance. "The *hartals*," to quote a report from Kanpur, "have provided a welcome opportunity to the blackmarketeers to pile up profits out of the hardships of the people, as well as of the genuine dealers. They thrive on such occasions and revive a chain of immoral practices which hurt the society." *Hartals* and demonstrations may have a certain place in the scheme of things for expressing dissatisfaction over any official measures which subject the community at large to severe privation But they should not be lightly resorted to. Indeed, in a democratic society, *hartals* can hardly be justified. It is a pity that the U.P. merchants should have given much cause for public indignation against them. The closure of shops have hit the community hard, for the poor and the middle classes have not been able to buy even their bare necessities. The Chief Minister of Uttar Pradesh has done well, therefore, to warn the agitators that pressure tactics which aim at starving the people and bringing the Government to its knees will not at all be tolerated. We earnestly hope that the leaders of the mercantile community would intervene and urge the misguided retail merchants to withdraw the *hartal*.

While condemning the U.P. traders for allowing their agitation to take this form, we must point out that the State Government is not justified in issuing an ordinance for the purpose of introducing its new tax measures. For ordinances should be promulgated only in periods of emergency. One wonders whether the Government could not have announced the tax measures in the normal way, that is, while introducing the budget, instead of resorting to the use of an emergency weapon. It may be mentioned here that the budget for 1956-57 was presented only a month or so before the promulgation of the Ordinance. Surely, the taxes now sought to be imposed on the public could have been incorporated in this budget. Apart from this objection, some of the tax proposals contained in the Ordinance constitute a very onerous burden. The multi-point tax of six pies in the rupee on foodgrains, including cereals and pulses and *atta*, *maida* and *suji*, for instance, is particularly objectionable, inasmuch as the incidence of the tax is bound to be very heavy. Similarly, the sales tax on *khandsari* sugar, fertilisers, washing soap, and yarns of all kinds other than hand-spun yarn will hit the consumer hard. With regard to the sales tax on coal, cotton, hides and skins, iron and steel, jute, and oilseeds, however, the incidence is limited by the condition imposed by the Central Government that the rate of tax on these six items should not exceed the limit suggested by the Taxation Enquiry Commission and that the tax should be levied only at one point.

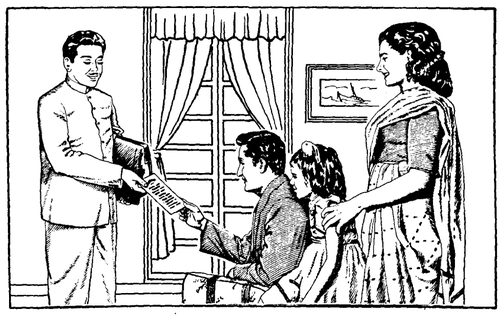
As a sequel to the series of representations made by different sections of the public, the U.P. Government is reported to have decided to make sales tax on foodgrains single-point and to abolish the tax on salt and vegetable oils. Meanwhile, the validity of the Sales Tax Ordinance has been challenged in the Lucknow bench of the Allahabad High Court.

A Life Insurance Policy—

SIGNED *to guarantee protection for your family*



SEALED *with the security guaranteed by the Government*



DELIVERED *with a full guarantee of service*

—IS AN OUTSTANDING INVESTMENT THAT ENSURES PROTECTION FOR YOUR FAMILY, PROSPERITY FOR THE NATION

You pay for this investment in small, easy instalments of premium out of your current earnings. The premiums paid by you are invested for developing nation-building activities which ensure national prosperity and result in higher incomes and a better standard of living. And because you are insured, you can look forward confidently to leading an independent and comfortable life during your old age and have the satisfaction, at the same time, of having made ample provision for the needs of your family, should death unfortunately come early.

There is a Policy to meet your varied needs at rates of premium that are lower than before. There will be no further reduction of Premium rates, so take out a Policy now and ensure adequate protection for you and your family and prosperity for the Nation.

AMERICAN LETTER

INTEREST RATES IN U.S. HARDEN

ENQUIRY INTO INSTALMENT CREDIT

From Our Special Correspondent

NEW YORK, *12th April*

THE United States Government and its agencies have followed the example of the United Kingdom in taking further anti-inflationary measures. The Federal Reserve banks have increased their discount rates. The majority of the central banks have boosted the rate from 2½ to 2¾ per cent. while two regional banks went to 3 per cent.

Financial opinion here is that, before long, all of the central banks will be on a 3 per cent. basis. A decision of this type is both psychological and real. The psychological aspect is that it puts the country on notice that the Government is still quite concerned about inflation.

The rise in the discount rate is the fifth since the beginning of 1955. The decision to do so was based on a number of factors. Where a decline in various major sectors of the economy had been expected this year, an expansion has taken place.

Price increases have followed wage increases and a revival of the wage-price spiral of former years is envisaged. The authorities are trying to prevent it and maintain the purchasing power of the dollar.

Banks Put Up Rates

Steel production has been far greater than expected and so has been the overloading of the capital markets with securities. Accumulation of inventories in many lines has been another cause for concern. Following this move, the lending rate of commercial banks to prime risk borrowers was also raised from 3½ per cent. to 3¾ per cent. A chain reaction is expected.

One of the repercussions to the rise in yields will be a decline of all fixed-interest rate securities, now outstanding, in terms of dollar prices. Financing will be more costly and thus new projects may not be started as previously expected.

The only question which remains to be answered is how far this rise in interest rates in the U.S. can go without adverse effects. Those who defend the new move point to the fact that, in the fight against inflation, the British bank rate has been increased recently to 5½ per cent.

Inflation

Inflation, in many respects, is synonymous with symptoms of prosperity and, thus, highly popular. A general feeling of optimism prevails, therefore, about the immediate future and, in a way, for all of 1956. But there are many real factors that enter into this picture.

In the field of instalment credits, for example, loan totals in banks and finance companies are high, but delinquencies are at a very low figure and losses are below average, as was brought out at a recent conference of the American Bankers Association.

The very height of this debt has been the object of much soul-searching, speculation and alarm, but, unless these figures are related to total savings, to the steady increase in this area, to delinquencies and to other factors, these discussions are strictly academic. Studies are now under way by the Federal Reserve Board to this end at the behest of the President's Council of Economic Advisors. The findings will no doubt prove salutary for the economy as a whole and provide a guide for lenders and borrowers alike.

This sanguine approach to future business is also confirmed by record dividend payments in January. If managements did not feel confident about the future, a greater amount of earnings would have been retained. The prospects of a nearly balanced Federal Budget and, possibly, lower taxes are also factors in financial, business and industrial decisions of directors.

Another inflationary aspect in the U.S. economy is that proposed outlays for plant and equipment far exceed the amounts anticipated, in part prompted by technological reasons. But this spending is superimposed upon large construction projects by cities and States involving new roads, sewer systems, airports, hospitals, schools and so on.

The building and construction industry is running at about the same level as last year, although there has been a decline in new housing starts. This, however, is balanced by activity generated in modernisation of old structures.

Farm prices, too, have increased somewhat and it looks as though the long period of decline has come to an end and that a gradual solution will be found for the disposal of the huge surpluses of commodities which have accumulated. A number of international agreements recently concluded are the basis for this assumption.

The bond market is a bit of a problem child. Yields are at their highest since 1953. In the new issue corporate bond market, utility issues were being offered to investors at the highest yields in two and a half years, ranging at the top between 3.4 and 3.6 per cent. State and municipal financing totalled $1,500,126,199 in the first quarter, against $1,408,743,802 last year.

Political Scene

International developments and the Presidential election may conceivably leave imprints on the U.S. economic scene. Public opinion may be scared by further outbreaks of hostilities between Israel and the Arabs and it is hoped here that the United Nations' mission to the Middle East may provide a part solution.

There is also the explosive situation on Cyprus where two nationalities, Greeks and Turks, clamour for independence and annexation to their homeland as well as for the end of the British protectorate rule.

The strongest base of Britain in the Middle East is threatened as are the American armed forces' installations in North Africa by the continuation of turmoil in that part of the world.

India has been top news here for some time, particularly Russo-Indian relations, agreements and exchanges. Some of these moves are not easily understood in the United States and they need clarification, because, otherwise an antagonism may develop—harmful to U.S.-Indian relations on all levels.

The Presidential election campaign is slowly getting under way. President Eisenhower seems to have recovered fully from his heart ailment and, at this point, there is hardly a question that he will be re-elected next November, unless there are drastic changes in the picture. Meanwhile, the three principal candidates for the White House, Adlai Stevenson, former Governor of Illinois, Senator Estes Kefauver and Governor Averell Harriman of New York, are in a contest to get the nomination from the Democratic Convention opposing the President. Otherwise, all is well.—*All Rights Reserved.*

A WELCOME SCHEME

One does not normally look for philanthropic service among hard-headed bankers. It is, therefore, no mean credit to the authorities of the Canara Bank that they should be thinking in terms of granting loans to deserving poor students for educational purposes. It is an altogether novel and well-conceived scheme which deserves high praise. The proposal, it is stated, has come from the Bank's friends and admirers. The idea is that a fund should be raised to commemorate the golden jubilee which the Bank will be celebrating this year. The Fund, to be called the Canara Bank Golden Jubilee Education Fund, will be registered as a charitable society. It will enter into an agreement with the Bank, under which the Bank will, on the guarantee and co-obligation of the society, advance loans at a low rate of interest (to be repaid in convenient instalments) to deserving poor students for pursuing their studies. The moneys in the Fund will be held by the Bank as a guarantee against the loans it advances to the students. The advantage claimed for this arrangement—for, it may be asked why the Fund should not advance loans on its own—is that the Bank will be able to give more money by way of loans than what it obtains by way of deposit from the Fund. It has been calculated that, for every Rs. 2,000 pledged by the Fund, the Bank will be able to award a loan scholarship of Rs. 10,000 every year.

Basing their comments upon the general experience of the scholarship funds in this country, the authorities observe that, if care is taken in selecting proper and deserving recipients of this benefit, besides the normal procedure of having a third party as surety and, if necessary, taking an insurance policy on the borrower's life, the lender will have not only earned interest on the loan but also contributed to the educational advancement of the country. The authorities rightly refer to such a scheme as an advance on the security of "brains of promising young men."

Perhaps, a great advantage from the association between the donors and the Bank is that it introduces an element of businesslike competence into an essentially humanitarian service. The Bank's experience in the credit field will be placed at the disposal of the donors who will have the additional satisfaction that more money than what they can find will be available for helping students. The working of the Canara Bank's educational-cum-banking scheme will naturally enough be watched with interest by other credit institutions.

THE BACKGROUND TO INFLATION

EXPENDITURE ON LUXURIES

From Our Own Correspondent

LONDON, *7th April*

LONDON LETTER

THE Government's *Economic Survey* for 1955 sets out the salient features in the British economy and then indicates the broad lines of policy to cure the ills disclosed. It is essentially a pre-Budget review of the general position and though, of course, the Chancellor might propose measures which conflicted with the findings of the Survey, that would indicate the points at which political sentiment overrode economic analysis.

The National Income of the U.K. now exceeds £16,600 millions, a rise of 5½ per cent. over the previous year. About 60 per cent. of the increase is attributable to home output and about 40 per cent. to imports: but half the home output in turn is only on paper—it was due to a rise in prices. Consumers spent nearly £800 million more in 1955 than in the year before—a rise of 6½ per cent.—but, alas, for their well-being, 3½ per cent. of the rise (more than half) was absorbed in higher prices. Retail prices, for instance, rose by 4½ per cent.—a record increase for a peace-time year. If we study on what the money was spent, we find that hardly any more went on food but that over 25 per cent. more was spent on private motoring. The other categories of expenditure took only small percentage increases. So luxury spending in the metal industries has a big share of the blame for the drive to inflationary destruction with which we are threatened.

Now for the other side of the picture: fixed investment was at a higher level in 1955 than in any previous year. The following table shows fixed investment (all at 1948 prices in order to keep to real terms) for the past three years—with and without new house building and the social services:

	(In million £'s)		
	1953	1954	1955
Total fixed investment ...	1,743	1,881	2,019
of which			
New houses, etc., ...	664	695	655
Industrial investment	1,079	1,186	1,364

Thus, industrial investment increased by no less than 15 per cent. over the past year, much the greater part of it in plant and machinery which accounted for £90 million of the rise and vehicles, ships and aircraft which took another £40 million. "While the basic trouble last year was the excessive level of total demand, the position was made still more difficult by the growing concentration of demand on the metal-using industries"—comments the *Survey*. We can see how that concentration of demand has come from consumers' expenditure on private motoring and the engineering companies' efforts to increase their own capital equipment. It is significant that one result of the credit squeeze has been to cut down drastically the demand for new cars and to cause a certain amount of standing off of workers in the motor industry.

The *Survey* goes on: "A high rate of productive investment remains an important national objective. Other demands on our resources must be restrained to make room for a higher rate of home investment and an improvement in the balance of payments." But clearly investment in industries making consumer goods does not meet this requirement unless the consumer goods are for export. The Government will have to be bolder and say what they mean—even though it will look as if they are borrowing their opponent's clothes and controlling the *nature* of investment. Otherwise, the above quotation looks odd against the phrase in the *Survey*, "the main expansionary force in the economy at the present time is the increase in fixed investment in industry. . ." And we are also told that, because of work in hand, the total of fixed investment in 1956 will be even higher than in 1955.

So far, the Bank rate has been raised from 4½ to 5½ per cent.; all capital issues above £10,000 are to be scrutinised; hire-purchase restrictions are applied to capital goods; programmes of public investment have been reduced (the one item of selective discrimination); consumers' subsidies on food have been reduced—but, on the whole, these are blind weapons and do not help exports against home consumer demand. The logic of the situation does appear to be pushing the Government nearer to the point at which they will have to intervene positively.—*All Rights Reserved.*

METHODOLOGY OF THE SECOND PLAN—II

REDUCTION IN THE RATIO OF CAPITAL TO OUTPUT NECESSARY

By C. N. Vakil and P. R. Brahmananda

[This article is based on the forthcoming publication by the authors entitled "Planning for an Expanding Economy—A Study in Employment, Accumulation and Technical Progress."—ED.]

LET us examine how the Planning Commission has derived the value of the capital coefficient. The average percentage rate of income growth between 1948-53 was 2.8 per year. The average ratio of net investment to national income was 6.2 per cent. Hence, the value of the capital coefficient is 2.3 : 1. The average productivity of capital is 46 per cent.

A number of questions arise in this context. The value of the capital coefficient has been derived from an experience of about four years. Statistics pertaining to the growth of national income are slowly being perfected in the country. For example, a part of the increase in income during this period is due to an increase in the extent of statistical coverage. Secondly, a part of the increase in income during this period has been attributed to windfall weather conditions which, in their turn, brought about a substantial rise in the level of agricultural output. The trends in national income have, therefore, been affected by factors other than changes in the volume of investment also. We have to exclude the impact of such factors if we have to obtain the precise nature of the quantitative relationship between investment and income. The National Income authorities themselves contend that the rate of growth of income may be placed on an average at about 2½ per cent. per annum. If we assume that the ratio of investment to income is 6.2 per cent., the value of the capital coefficient will be 2.5:1. The average productivity of capital will be 40 per cent. On this basis, in order to obtain the stipulated increase in income of Rs. 2,680 crores, the required investible funds will be Rs. 6,700 crores. If we assume that the actual rate of growth of income was about 2 per cent. per annum and that the ratio of savings to income was 6.2 per cent., the value of the capital coefficient will be about 3 : 1 and the average productivity of capital will be about 34 per cent. During the period of the formulation of the first Plan, the Planning Commission worked out the possible rates of increase in national income that could be obtained by means of appropriate variations in the ratio of savings to income. Here, they assumed the ratio of capital to output to be equal to 3 : 1. As we do not have firm estimates in regard to that proportion of the growth of income that could be attributed to investment efforts undertaken during the period, it would not be possible to derive the *precise* value of the capital coefficient during the First Plan. The Planning Commission have utilised a coefficient of 2.3:1; in other words, they have assumed the value of the average productivity of capital one-third higher than the value which they adopted for their extrapolations during the period of the first Plan. If the average productivity of capital is about 33⅓ per cent., then in order to obtain the stipulated increase in income of Rs. 2,680 crores, the required investible funds will have to be Rs. 8,040 crores.

Choice of Low Values Does not Imply Larger Resources

It may be noted that it is possible to indicate higher rates of increase of national income for given amounts of investible funds by appropriate assumptions concerning the values of the average productivity of capital. This naturally provides good meat to model builders intent upon formulating ambitious programmes of economic development. The problem that is relevant is that the choice of the appropriate value for capital coefficient may happen to be biased by the desire to indicate larger rates of increase in national income. As pointed out earlier, mere manipulations of the value of the capital coefficient do not imply an augmentation of the resources of the economy. If an appropriate perspective is not maintained in the formulation of economic models, there is a danger that the size and the structure of the targets may have little relationship with the economic realities of the country for which such targets are being formulated.

Under what circumstances can we assume that a given value of the capital coefficient will continue to hold constant? The Commission has assumed that constant returns to units of investment would be obtained. The general assumptions in this case are: (*a*) The relative proportions of different patterns of investment are the same as they were during the first Plan. (*b*) The relative proportions of final outputs are the same as during the first Plan. (*c*) The average production periods of investments, in general, are the same as during the first Plan. (*d*) The economy will be subject to the same relative extent of windfall gains and losses as during the first Plan. The general impact of the external situation in regard to the economy will be the same in its relative effects as during the first Plan, and so on.

Plan Becomes Bulkier

In general, these conditions would tend to obtain when steady growth is taking place. In other words, national income should be *steadily* growing. If the relative pattern of investment outlay is altered in favour of investments of a higher order, if the relative composition of different output is altered in favour of outputs which require larger investments in capital, if the average period of production in regard to investment as a whole increases, if the economy does not enjoy the same relative extent of windfall gains as it did during the earlier period, if the external situation in relation to the economy turns relatively adverse, the value of the capital coefficient will turn out to be higher than whatever it was before. The value of the ratio will definitely tend to be substantially raised, if there is a discontinuous change in regard to the investment pattern and if the average production periods of investments are lengthened.

The trouble with the second Plan is that a substantial proportion of the investments yield outputs only later on. During the period of the Plan and for some time thereafter, the structure of the economy will tend to manifest a higher degree of capital intensity. This is because only a part of the investment outlays will be contributing towards additions to national product. The objective of such shifts is that while increasing the degree of roundaboutness in methods of production, it may be possible to bring about a higher rate of income growth. The latter is deliberately kept low, in order that there may be a discontinuous rise in it at a later stage when the different capital goods industries are established, and when, with their aid, it would be possible to construct those complementary assets that would enable labour to raise its average productivity.

It may be somewhat surprising that, whereas the substance of the second Plan is to utilise the long-period advantages of unbalanced growth, the form adopted for arriving at the income and investment estimates is that of a model of steady growth. The very structure of the second Plan precludes the possibility of adoption of a value of average productivity of capital as that which ruled during the first Plan. In the latter case, as most of the investments were designed to bring about immediate increases in output, as the economy also expanded its output by raising the utilisation of capacity, as windfall weather conditions were very favourable, and as the external international situation too was in general very much in favour of the country, one can understand the *possibility* of a low value of the capital coefficient to have ruled during the period. Moreover, during the period of the first Plan, there were no deliberate efforts adopted in order to bring about an alteration in the investment structure. Hence, the period of the first Plan could be considered as one of steady growth though the rate of same growth was quite low. The second Plan brings about a reversal of the above process. Hence, it is unscientific to utilise the same value for the capital coefficient as that which obtained during the working of the First Plan.

It may be of interest to examine the conditions under which it may be possible to reduce the value of the capital coefficient. The historical experience of the advanced countries reveals that the capital-output ratio was fairly high in the initial stages of economic development. Gradually it tended to decline until it reached a more or less steady value of 3 : 1. In the initial stages of economic development, a good proportion of investment will have to be in the form of large outlays on construction of social overheads; large investments in capital-intensive activities like transport and communications, road construction, supply of public utility services, construction of urban areas, etc., are necessary. It is possible that, in the earlier states of economic development, the value of the ratio may be of the order of 6 : 1. For example, in the case of India, large investments are being made on irrigation, multipurpose projects, transport and heavy industries. In the case of transport and communications, the ratio of capital to output would be higher than 7 : 1. This is revealed by a study of the statistics pertaining to the working of the India railways. There is nothing unusual in this, inasmuch as in all countries investment in transport would imply a high ratio of capital to output. In the case of irrigation and multipurpose projects, the capital-output ratio is about 4 : 1. This has been ascertained on the basis of a study of the figures of net investment in regard to agricultural output in the case of the second Plan. As regards heavy industries, the ratio of capital to output would tend to be higher than 4 : 1. Naturally, as a substantial proportion of the investments in the second Plan are concerned with the above types of investments, the overall ratio of capital to output would tend to be fairly high. Even the assumption that the capital coefficient would rule round about 3 : 1 would not be valid, because this ratio has been derived from an observation of the experience of the developed countries during the *later* stages of their development.

Soviet Experience

A question may be asked here as to whether it is not possible to bring down the value of the capital coefficient by means of appropriate manipulations in regard to the patterns of investment and of output. There is no doubt that there is some scope for bringing about this result. In the case of the Soviet Union, the average productivity of capital was 70 per cent. This was so, because of a number of factors: (1) During the course of their first two plans, the Soviet authorities economised heavily on investments which were absolutely or relatively unproductive. The outlay on social overhead capital formed only a meagre proportion of total outlay. (2) Deliberate measures of industrialisation with appropriate policies pursued in regard to procurement of the marketable surplus enabled a large number of the formerly disguised unemployed rural folk to be converted into active workers in investment. A substantial proportion of former output, which was not considered as part of the national income, was considered now to be part of it when once the process of industrialisation gathered momentum. In other words, the work-force in investment activities was augmented and a substantial proportion of the supply of consumption goods for meeting their needs was procured through policy measures to raise the proportion of grains marketed. It is in this sense that both income and investment went up in the Soviet Union. (3) The Soviet authorities also pursued policy measures of wage discrimination; hence, they were in a position to reduce the construction costs substantially. (4) The overall ratio of the Soviet economy has been derived by means of the ascertainment of income changes at the *end periods* of the different plans. They do not, however, indicate the nature of the transitional pressures.

Policy Adjustments Necessary

In the case of India, it may be possible to reduce the value of the capital coefficient by means of a direct attack on the problem of disguised unemployment. At the end of the second Plan, the pressure on agriculture is bound to increase rather than decrease. Moreover, the second Plan concentrates a substantial proportion of investments on the construction of social overhead capital. Nor does the Plan visualise the evolution of a new technology in which capital saving innovations predominate. All over the economy, a process of standardisation of wage rates is being brought about. Hence, one can say that the possibility of reducing the value of the capital coefficient through policy measures has not been fully appreciated in this country. What the second Plan seeks to bring about is a relatively larger rate of expansion in small-scale and cottage industries. Even here, an appropriate procedure of maximising the investment potential concealed in the prevailing inefficient methods of production has not been adopted. Policy measures concerning a reduction in the ratio of capital to output must be so brought about that they do not reduce, in the process, the ratio of investment to income.

(Concluded)

PUNJAB NATIONAL'S BUMPER PROFIT

MARKED EXPANSION IN BUSINESS
RECORD DIVIDEND

ADDRESSING the shareholders of the Punjab National Bank Ltd. at their annual general meeting held last year, Mr. Shanti Prasad Jain, Chairman, had expressed his confidence that the Bank could look forward to larger profits and greater expansion in its business with the improved economic development of the country and monetary position. The shareholders, who had been sacrificing in the past years, Mr. Jain added, could look forward to improved prospects. The statement of accounts of the Bank for the year ended 31st December 1955 indicates that the management's efforts towards this end have been more than amply rewarded.

The Bank's working capital, which had grown to a high level of Rs. 91.16 crores at the end of 1954, has further risen to yet another record level of Rs. 112.89 crores as at the close of 1955. The upward trend in the Bank's deposits noted since 1949 has been maintained in the year under review also; what is more, the pace of expansion has been rather sharp, with an increase of Rs. 14.48 crores to a record level of Rs. 90.12 crores. The profit also has recorded a rise of Rs. 10.65 lakhs to a high of Rs. 64.41 lakhs, which, however, falls short of the peak of Rs. 70.23 lakhs, touched in the pre-Partition year 1947, by Rs. 5.82 lakhs. The prosperity of the Bank has been shared by the staff and the shareholders alike. The bonus to the former has been raised from Rs. 9.50 lakhs to Rs. 13.50 lakhs, and the dividend to the latter has been stepped up from 12 per cent. to 14 per cent. A good part of the year's profit has, however, been utilised to strengthen the contingency reserve which has received no less than Rs. 24 lakhs, as against Rs. 12.50 lakhs provided last year and Rs. 10.25 lakhs two years ago. Thus, a sum of Rs. 46.75 lakhs has been set aside to the contingency reserve during the last three years alone. The reserve fund has been provided with Rs. 5 lakhs, as against Rs. 2.47 lakhs last year.

The following comparative table clearly brings out the progress of the Bank during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	3,43.20	2,75.64	2,45.20	2,14.36
Commission and exchange	69.54	61.38	55.05	47.80
Other income	37.06	37.10	31.09	32.70
Interest paid	1,81.30	1,24.72	1,06.51	83.53
Expenses	2,17.42	1,80.08	1,78.85	1,71.15
Depreciation and repairs	6.67	5.94	6.21	6.05
Profit	64.41	53.76	39.96	34.12
Provision for taxation	11.00	16.00	12.50	15.00
To reserves	29.00	14.97	11.19	3.46
,, bonus to staff	13.50	9.50	7.50	6.48
,, other appropriations	1.30	0.90	0.50	8.34*
Dividend	12.25	10.50	7.00	5.25
	(14%)	(12%)	(8%)	(6%)
Carry forward	2.35	4.99	3.10	1.93

	As on 31st December			
	1955	1954	1953	1952
Capital	87.50	87.50	87.50	87.50
Reserves	97.50	92.50	90.00	89.00
Deposits	90,12.26	75,63.84	65,31.18	58,94.02
Borrowings from other banks	1,29.47	0.47	30.58	2,50.63
Bills payable	5,90.65	4,17.52	4,07.28	3,73.91
Bills for collection (contra)	6,97.91	5,84.18	5,55.93	5,05.19
Acceptances (contra)	6,53.54	3,57.33	2,68.47	1,92.36
Advances (including bills purchased and discounted and money at call)	42,12.88	33,57.40	25,69.91	29,39.40
Investments	45,64.58	35,37.50	36,14.27	28,79.90
Cash	9,17.44	10,09.23	7,32.49	6,53.78
Balance-sheet total	112,88.79	91,16.27	79,78.22	73,98.69
Ratio to deposits of—	%	%	%	%
Advances	46.7	44.4	39.3	49.9
Investments	50.6	46.8†	54.9†	44.6†
Cash	10.2	13.3	11.2	11.1

* Includes a sum of Rs. 7.92 lakhs utilised for scaling down of Pakistan assets.
† Ratio arrived at after taking into account the securities earmarked against borrowings from other banks.

The gross income of the Bank has risen by Rs. 75.69 lakhs to Rs. 449.80 lakhs, the bulk of which has been contributed by the income from interest and discount. Consequent on the rise in the Bank's deposits and borrowings from other banks and the higher interest rates which prevailed during the year, the outgo by way of interest paid on deposits and borrowings has gone up by Rs. 36.58 lakhs. In consonance with the general trend, the Bank's administrative and other expenses also have staged a rise of Rs. 27.74 lakhs.

The Bank's reserves are up by Rs. 5 lakhs at Rs. 97.50 lakhs, following the transfer of a like sum from the year's profit. A sum of Rs. 37.50 lakhs, out of these reserves, representing the premium received on shares issued in the past, has, however, been transferred to an account called "share premium account."

It will be noted from the above table that the rise in the Bank's deposits during the year under review has been much sharper than that in the previous years. More than half of the rise in deposits during 1955 is accounted for by fixed deposits, which have gone up from Rs. 51.63 crores to Rs. 39.86 crores. Savings bank deposits are up by Rs. 4.12 crores to Rs. 23.54 crores, while the rise in current accounts, contingency accounts, etc., is of the order of only Rs. 2.10 crores to Rs. 26.30 crores.

As against an increase of Rs. 14.48 crores in deposits, the rise in advances is Rs. 8.56 crores, thus pushing up the ratio of advances to deposits from 44.4 per cent. to 46.7 per cent. Of these advances, loans, cash credits and overdrafts account for Rs. 34.37 crores, having risen from Rs. 27.69 crores, bills discounted and purchased for Rs. 7.65 crores (as against Rs. 4.71 crores) and money at call and short notice for Rs. 10.67 lakhs (Rs. 1.17 crores). The Bank's investments (at or below cost) in Government and other trustee securities amount to Rs. 44.42 crores (as against Rs. 34.26 crores at the end of 1954), the market value of the same being Rs. 44.75 crores, while the other investments aggregate Rs. 1.23 crores, the depreciation on these being Rs. 18 lakhs. Cash balances are lower by Rs. 92 lakhs, which has brought down the ratio from 13.3 per cent. to 10.2 per cent.

The increase in the Bank's borrowings, bills, payable, bills for collection and acceptances and endorsements are all indications of the substantial expansion in the Bank's business during the year. The rise in acceptances and endorsements is particularly noteworthy.

HONGKONG AND SHANGHAI BANKING CORPORATION

In our issue dated 14th April 1956 (*vide* page 703), it was inadvertently stated that the Hongkong and Shanghai Banking Corporation was started one hundred and thirty-nine years ago. The Bank is only eighty-eight years old, having been incorporated in 1867 by Special Ordinance of the Legislative Council of Hong Kong.

LLOYDS BANK LIMITED

Subscribed Capital £ 73,302,076
Paid-up Capital £ 19,403,491
Reserve Fund £ 15,000,000

Let LLOYDS BANK look after *your* interests

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

ENCOURAGING RESULTS OF LLOYDS BANK

PROFIT HIGHEST SINCE 1929

AN increase of £136,367 to £2,322,439 in profit is disclosed by the accounts of Lloyds Bank Ltd. (Chairman: Sir Oliver Franks, London) for the year ended 31st December 1955, thus maintaining the upward trend in earnings since 1946. It may also be noted here that the profit for 1955 is a fresh record since 1929. The rise in the Bank's earnings is the result of higher money rates, though this has been offset to an appreciable extent by the increase in interest paid to depositors and by the further rise in operational costs. The increases in purchase tax, in postal and telephone charges and in distributed profits tax, introduced in the interim Budget of October 1955, were all additional imposts. The largest increase in the Bank's expenses arose, however, from the rise in salary and wage scales which took effect from 1st January 1955 and brought with it, in addition, a large increase in the Bank's already heavy commitments for superannuation and other staff funds.

With the undistributed surplus of £516,557 brought in from 1954, the profit available for appropriation is £2,838,996, as against £2,741,852 in the previous year. The Directors have transferred £500,000 each (same as in the previous year) to the general reserve and the reserve for future contingencies. The dividend on the 'A' shares has been reduced from 15 per cent. to 12 per cent. (less income-tax), but it is on the increased capital raised during the year under review by the capitalisation of a sum of £3,593,239 from the general reserve for raising the paid-up value of the 'A' shares from £1 to £1 5s. per share. The latest dividend is equivalent to 15 per cent. on the shares in their old form, that is, with a paid-up value of £1 each. Thus, the intention of the Directors, expressed last year, to maintain the distribution to the shareholders, subject to the profit being maintained, has materialised. The shareholders have, however, been benefited by the reduction in income-tax of 6d. in the £ made in the last April Budget, so that the net return to them is higher. Thus, the distribution on the 'A' shares has taken up £1,239,668, as against £1,185,769, and that on the 'B' stock £41,322, as compared with £39,526, leaving a surplus of £558,006 to be carried forward.

The following comparative table brings out the salient features of the Bank's balance-sheets as at the close of the last four years:

(In thousands of £'s sterling)

	As on 31st December			
	1955	1954	1953	1952
Capital	19,403	15,810	15,810	15,810
Reserve fund	15,000	17,000	16,500	16,000
Undistributed surplus	558	517	556	418
Deposits	1,190,146	1,244,306	1,203,030	1,168,011
Acceptances, endorsements, guarantees, etc.	124,171	131,058	94,784	121,770
Cash money at call and balances with other banks	245,066	252,892	252,040	252,165
Bills	242,853	254,806	247,158	195,664
Investments—				
Gilt-edged	387,542	424,525	410,055	406,019
Trade	10,046	8,990	8,119	8,184
Loans and advances	308,109	301,192	288,976	302,778
Items in transit	18,957	23,086	18,526	15,143
Bank premises	9,142	8,741	8,515	7,956
Balance-sheet total	1,350,899	1,410,461	1,332,702	1,323,908
Ratio to deposits of—	%	%	%	%
Cash	20.6	20.3	20.9	21.6
Gilt-edged investments	32.6	34.1	34.1	34.8
Loans and advances	25.9	24.2	24.0	26.5

Following the capitalisation of a part of the reserves referred to above, a sum of £1.09 million was transferred from the contingency reserve to the general reserve and this, together with the transfer from the year's profit, has brought the total reserves to £15 million. The Bank's deposits have fallen by £54 million from the record level of £1,244 million. The upward trend in acceptances, endorsements, etc., noted in 1954 has been reversed in the year under review.

On the assets side, notwithstanding a further rise of £6.92 million, loans and advances at the end of the year are lower than those at the close of 1952. The decline of £12 million in bills is mainly accounted for by the fall in holdings of British Government Treasury Bills from £248.91 million to £225.71 million. Holdings of British bills of exchange have, on the other hand, gone up from £3.10 million to £13.78 million and those of Dominion, Colonial and Foreign bills from £2.78 million to £3.36 million. Of the decline of £36.98 million in investments, British Government securities alone account for £35.68 million (to £342.12 million). The market value of these securities as on 31st December 1955 is £333.88 million. The

BOMBAY STATE CO-OPERATIVE BANK

LENDING OPPORTUNITIES SHRINK—OVERDUES HIGH

THE planners in India have assigned an important role to the Co-operative Movement in the rehabilitation of the rural economy. How far their expectation will be fulfilled by this system is a question to which no immediate answer could be given. For it is only during the past one year that the recommendations of the All-India Rural Survey Committee are being implemented gradually by the Central and State Governments. It may take some considerable time for the major recommendations to be given effect to and it will be longer still for these to yield results, provided they are translated into practice in the right manner and in good spirit. In Bombay State, however, some of these measures have already been implemented with the help of the Bombay State Co-operative Bank Ltd. The experience of this Bank so far in this field, though helpful, indicates that the problem of rural uplift through co-operation is beset with many complexities and that, unless these are successfully tackled, no quick progress can be expected.

The Bombay State Co-operative Bank Ltd. functions mainly as an apex bank for the co-operative societies in the State. It also functions as a central financing agency in the districts or parts of the districts in which co-operation is still undeveloped, or in which central financing agencies have yet to be organised. Thus, at present, it works as a central financing agency fully in seven districts including the Bombay Suburban District, and partially in eight other districts. According to the Administrative Report of the Bank for the year ended 30th June 1955, the Bank opened four new branches during the year. As, however, a similar number was closed, the number of branch offices stood unchanged at 69. The closure of branches was due to transfer of business to district central financing agencies by the Bank. Its paid-up share capital, which stood at Rs. 60.47 lakhs, moved up to Rs. 61.23 lakhs, an increase of Rs. 76,600, thanks to issue of additional shares of Rs. 10 each. The new shares were allotted to co-operative institutions at a premium of Rs. 10 each, the amount of premium being credited to the reserve fund. Of the total number of shares, institutions hold 41.1 per cent., individuals 16.4 per cent. and the State Government 42.5 per cent. The corresponding figures for the year 1953-54 were 40.1 per cent., 16.9 per cent. and 43 per cent. These figures indicate that, while there has been a fractional decline in the percentages held by the Government and individuals, the percentage held by institutions has registered a small rise. If this trend continued further, it will add to the strength of the Co-operative Movement, as it will reduce the Movement's dependence on State assistance for its progress.

A notable feature of the Bank's operations during the year was the marked rise in the total deposits of the Bank from Rs. 9.1 crores to Rs. 10.93 crores and this occurred in spite of the higher rates of interest on savings and fixed deposits offered by commercial and postal savings banks. Fixed deposits, particularly, rose from Rs. 3.39 crores to Rs. 5 crores, accounting for 45.7 per cent. of the total deposits, as against 37.17 per cent. in the preceding year. Apart from the fact that this increase is in keeping with the general trend of bank deposits, it may have also been the outcome of a new policy adopted by the Bank during the year, namely, of offering to co-operative societies remittance facilities, at its own cost for the maturing fixed deposits placed with it. This policy helped diversion of deposits of co-operative institutions from commercial banks to the Bank. This will also enable the flow of a relatively larger volume of funds into the orbit of co-operative finance. But the fact that the rate of interest on fixed deposits is higher than that on current deposits necessitates greater use of this money in remunerative channels. This becomes all the more imperative because low-interest bearing demand deposits to total deposits declined from 62.83 per cent. to 54.30 per cent. during the year. Unfortunately, the Bank does not appear to have been in a position to put all its surplus funds to profitable use. For it maintained a very large surplus as "fluid resources." Under Rule 18 (a) of the Bombay Co-operative Societies Rule, the Bank is required to maintain as fluid resources only a sum of Rs. 3.38 crores, but the actual fluid resources available were as large as Rs. 6.78 crores or a surplus of Rs. 3.4 crores. It is stated that, owing to closure of some branches, the avenues for investment in co-operative business was curtailed, resulting in a reduction of Rs. 10.6 lakhs in lendings on that account. Nevertheless the high proportion of liquid funds suggests that the spread of the Co-operative Movement is not being held up for want of money but for other causes.

With the high percentage of surplus funds as noted above, the Bank's need for borrowings from other agencies lessened. This is reflected in the marked fall in its borrowings during the year, from Rs. 130.90 lakhs to Rs. 57.59 lakhs. An analysis of this item shows that the Bank did not borrow any funds from the Reserve Bank of India for its own use during the year, as against Rs. 25 lakhs it borrowed in 1953-54, and that there was a marked fall in advances from the Reserve Bank on behalf of Central financing agencies from Rs. 99.40 lakhs to Rs. 49.27 lakhs.

Advances Decline

Again, the total types of all advances to societies and individuals, including bills discounted by the Bank, dropped from Rs. 572.76 lakhs to Rs. 504.51 lakhs. While advances to agricultural societies rose by Rs. 25 lakhs to Rs. 277.03 lakhs, those to central financing agencies recorded a sharp fall of about Rs. 50 lakhs, that is, from Rs. 99.40 lakhs to Rs. 49.27 lakhs. Bills discounted were lower at Rs. 8.49 lakhs, as against Rs. 9.54 lakhs. Advances to individuals declined by Rs. 27.52 lakhs, mainly on account of a fall of Rs. 16.29 lakhs in advances against agricultural produce and other tangible securities. The ratio of total advances to working capital dropped from 46.21 per cent. to 37.06 per cent.

Of the total advances of all types of Rs. 504.51 lakhs at the end of the year, the unauthorised arrears were high, being Rs. 109.66 lakhs as against Rs. 67.47 lakhs a year before. A part of this sharp increase in arrears is due to unsatisfactory crop conditions prevailing in some of the districts and the fall in prices of agricultural commodities in general. There was also a deterioration in management standards. Besides, delays in taking effective action against erring institutions or against wilful defaulters of societies and lack of supervision were also responsible for the increasing trend in arrears.

The accounts of the Bank for 1954-55 reveal that the gross income remained unchanged at the previous year's level of Rs. 24.39 lakhs. Expenses of management stood at Rs. 20.48 lakhs, as against Rs. 20.40 lakhs a year previously. The net profit was Rs. 8,000 lower at Rs. 3.91 lakhs. Several factors seem to have been responsible for this fall. Although, as stated at the outset, the deposits were on an upward trend, the Bank's investment declined by 12 per cent. Secondly, while the cost of borrowed funds was 3.05 per cent., the earnings from surplus funds could not be improved, since these had to be invested in low-yielding Government securities for lack of other fruitful channels. Besides, factors such as ceiling on the rate of interest on advances to co-operatives, gradual curtailment of operations of the Bank as a result of the deliberate policy of encouraging formation of district co-operative banks and the gradual elimination of advances to individuals cumulatively contributed to the fall in the Bank's earnings. The high cost of borrowed funds and the increase in the expenses of management also cut into the profit margin.

The distribution to shareholders for 1954-55 remained unchanged at 4 per cent., as it was in the preceding year. Similarly the loans to employees was kept unaltered at one month's basic salary.

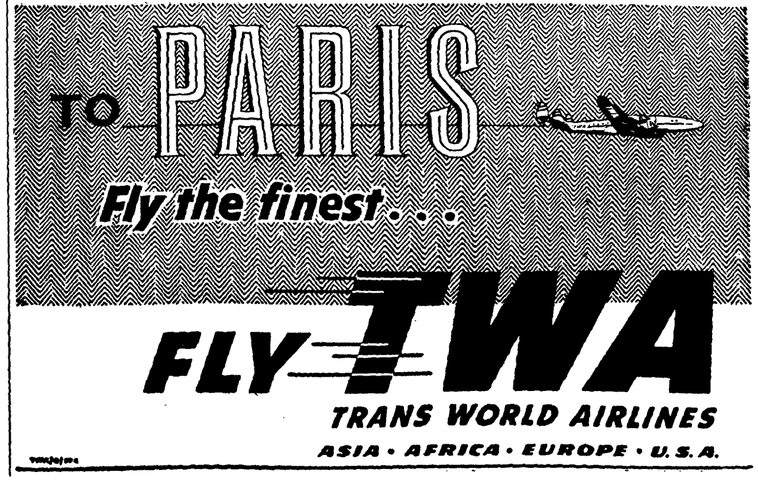
Rural Credit

The question of extending rural credit continued to engage the serious attention of the Bank. Its experience during the year under review also does not appear to be very encouraging. It may be noted that the total credit requirements of the entire agricultural industry of Bombay State was estimated in 1953 at Rs. 108 crores. It was anticipated, at that time, that the total volume of credit through co-operative institutions should reach a target of Rs. 50 crores, during the following five years. But the increase in the agricultural credit supplied by these institutions since 1953 has not according to the Report of the Bank, been of any large size and the amount made available was only 13 per cent. of the total crop requirements and 25 per cent. of the sum estimated to be supplied through the co-operatives. This unhappy state of affairs is attributed to certain difficulties and handicaps encountered by the Bank and the central financial agencies. These difficulties include lack of uniform growth of rural credit institutions and increase in the incidence of overdues, either on account of the failure of crops or the failure on the part of borrowers to discharge their liability or on account of mismanagement of the institutions themselves. In view of this sad experience, the Bank made, during the year, a number of recommendations, based on the Report of the All-India Rural Credit Survey, to the Government of Bombay. The chief among these related to grant of permission to the Bank to participate in the share capital of central financing agencies, and the primary credit and marketing societies and the creation of a special fund known as Integration and Development Fund for the purpose of subsidising uneconomic branches of the State Co-operative Bank.

ANSWER TO INFLATION

How both the monetary and fiscal policies in Britain were not always working in the desired direction to check inflation was clearly pointed out by Viscount Chandos, President of the Institute of Directors at Edinburgh a few days ago. He characterised credit squeeze as "an indiscriminate weapon" which hit companies in the process of development more heavily than mature companies. Many developing companies, he said, had not a profit record with which they could go to the capital market and they could not go to banks because the latter had no money to lend. He conceded that the Chancellor must squeeze something out of the economy, but, if in the process, he stopped or greatly retarded the general expansion which was now taking place, the Chancellor would have destroyed the seed corn.

Dealing with fiscal policies, Lord Chandos said that to take from taxpayers in two years over £750 million more than above-the-line Government expenditure was to distort and misuse the whole tax system. He believed that taxation should be designed primarily to raise the revenue which the Government required and not used as a political weapon. He posed the question: How can we expect the Chancellor of the Exchequer to make tax remissions in this period of inflation? And he answered it by saying that he can do so only if he is able to stimulate savings. Lord Chandos added that the answer to inflation was not restrictive fines on successes, but production incentives and savings.



CLOTH EXPORTS FROM INDIA

PERFORMANCE NOT SO UNSATISFACTORY

JUDGED by the marked contraction in international cotton textile trade during the calendar year 1955, India's performance on this front need not be regarded as having been very unsatisfactory. Thus, as against the estimated decline of as much as 11 to 12 per cent. in world trade in textiles, the drop in shipments of Indian cloth—mill-made and handloom—during 1955 was only 8.4 per cent. The quantity of cloth that actually went out of the country was 872 million yards, that for the previous year being 952 million yards, according to an interesting article on the pattern of India's export trade in cotton textiles in 1955, by Mr. P. K. Bhaumik, Statistical Officer, Cotton Textiles Export Promotion Council, appearing in the latest issue of the *Texprocil Bulletin*. The decline of 80 million yards was accounted for solely by mill-made piecegoods, the exports of which receded from 898 million yards in 1954 to 815 million yards in 1955. Exports of handloom cloth, however, rose slightly, from 54 million yards to 57 million yards. This is contrary to earlier estimates which showed that exports of handloom fabrics had actually declined by a few million yards.

The setback of late to cotton textile export trade of India and the world is attributed to several important factors. First, some of the cotton-growing countries which were hitherto large importers of cotton textiles for their domestic needs have themselves started manufacturing piecegoods. Secondly, there was competition from rayon and other synthetic fabrics, the world exports of which in 1955 were higher by 10 per cent. Thirdly, the volume of trade in textiles during 1954 was 10 per cent. more than in 1953, so that the need of several countries to meet the domestic requirements was less in 1955. The other unhelpful factors included trade regulations, import barriers, and labour disturbances, particularly dock strike in the U.K. and India.

During 1955, Japan and the U.K., the two major competitors of India in world textile markets suffered a greater setback. The exports from Japan were lower by 11 per cent. at 1,139 million yards, as against 1.278 million yards, and those from the U.K. by 12 per cent. at 555 million yards, as against 637 million yards. Notwithstanding a steeper fall in its exports, Japan still maintained its first place, followed by India as the second best.

Trend of Exports

The following table indicates the trend of cloth exports from India, Japan and the U.K. to some of the most important destinations in the past two years:

(In million yards)

	India		Japan		U.K.	
	1954	1955	1954	1955	1954	1955
Aden	69	47	17	7	3	2
Burma	39	14	69	43	10	4
Ceylon	28	25	28	35	8	9
Hongkong	15	12	54	17	3	2
Indonesia	33	90	234	108	3	2
Malaya	48	46	56	7	12	4
Saudi Arabia	10	32	4	12	2	1
Pakistan	28	10	85	32	6	7
British E. Africa ..	67	76	4	11	23	13
British W. Africa ..	70	73	60	58	107	109
Ethiopia	31	33	10	7	..	..
Sudan	89	63	..	5	6	..
Australia	56	43	68	71	122	100
India	..	..	..	2	3	6
Japan	..	..	..	..	..	..
U.K.	125	105	67	51	..	..

Mr. Bhaumik's survey of India's cotton textile exports during 1955 reveals that India had to meet considerable competition from Japan in the Asian zone and from the U.K. and European countries in the African and Oceanic zones. Japanese exports to the Asian markets, which are India's most natural and neighbouring markets, were 271 million yards, or about 90 per cent. more than what this country shipped. The supremacy of Japan in the Asian zone, it is said, is due to production technique and vigorous sales methods. Japan's attitude towards intensive market research and newer approach to productivity and costing is making Japan every day better equipped to capture new markets.

Although India was the world's second biggest producer and exporter of cloth in 1955, its export-dependence factor—that is, the ratio of production to export—was very much lower than in Japan and the U.K.; it stood at just 16 per cent. (calculated only for the mill sector), as against 42 per cent. for Japan and 32 per cent. for the U.K. The figure will be still lower when the total export and production for both the mill and non-mill sectors is taken into account. Drawing particular attention to this low export-dependence factor, Mr. Bhaumik has made the following interesting observations:

"As the production policy goes, there is no room for augmenting production in the mill sector. If the 1955 trade, both internal and external, taken together, is an indication, it, perhaps, shows that home consumption is growing somewhat faster than production. Mill stocks at the end of 1955 were only equal to two weeks' production, in spite of bigger stocks at the end of 1954, slightly higher production in the mill and non-mill sectors during the period, and less export business. Export target at the last Buxton Conference was conceived as the estimated production less estimated local consumption being equal to target for export. This approach is a residual one, rather than a direct one. Whatever might be the overall domestic production policy, unless there is a clear-cut policy for the export production line, consistent with export targets and various overseas market requirements, there is every possibility that our exports will oscillate, due to lack of planned control and, ultimately, it may lead to disastrous results, if our main competitors can take advantage of our position."

To revert to India's export trade in mill piecegoods during 1955. The bulk of the total shipment of 815 million yards of cloth was accounted for by medium cloth, the quantity actually shipped being 595 million yards, or 74 per cent. of the total. Next in the order of off-take came coarse, fine and superfine. The share of coarse and medium counts alone was 95 per cent.

Categories Shipped

The table below shows exports of the different categories of cloth during 1955, as compared with 1954 and 1953:

(In million yards)

	1953	1954	1955
Coarse	239	187	172
	(37)	(21)	(21)
Medium	255	615	595
	(39)	(68)	(74)
Fine	145	73	30
	(22)	(8.5)	(3)
Superfine	13	22	18
	(2)	(2.5)	(2)
Total ..	652	898	815

The pattern of mill-cloth shipments by different processes shows that grey cloth constituted the largest item of export, the quantity actually shipped being 410 million yards, or 50 per cent. of the total. Next in importance came dyed and printed cloth, the exports of which amounted to 226 million yards (or 28 per cent.). The share of bleached goods was 179 million yards (or 22 per cent.). The bulk of India's exports thus goes without any processing whatsoever. If an analysis of the end-uses of exports were made, it would be found that they are not used as exported but are further processed before final consumption. Mr. Bhaumik has done well to highlight this aspect and to emphasise that, if we do that processing in India, not only more employment opportunities will be created but also the foreign exchange earnings increased. "Every effort is," to quote him, " needed to see that the percentage of processed goods is raised considerably."

The single largest item of mill cloth exported from India during 1955 comprised sheetings, which alone accounted for 351.15 million yards, or as much as 43.1 per cent. of the total exports of 815 million yards. A breakdown of the exports of mill cloth by sorts—quantity and percentage share of each—is shown in the following table:

	Quantity (in million yards)	Share (percentage)
Sheetings	351.15	43.1
Longcloth	112.45	13.8
Drill	109.43	13.4
Shirting	89.74	11.1
Voiles and mulls	56.60	6.9
Coatings	34.94	4.2
Domestics	30.15	3.7
Chintz	9.96	1.2
Dhotis and *saris*	9.78	1.2
Others	11.18	1.4
Total ..	814.78	100.0

Summing up the review of India's export trade in cotton textiles during 1955, Mr. Bhaumik has alluded to several defects which are standing in the way of an expanding trade. Mention, for instance, is made of long-term problems such as lack of modernisation of plant and equipment, differential freight rates, absence of consolidation of export trade in a few experienced hands as in Japan, non-availability of credit facilities, and paucity of factual knowledge of market requirements. The other defects which exist in the trade include non-adherence to delivery date, supplies not being made as per contracted sample, unsatisfactory presentation of cloth, marking and labelling, non-adherence to standard bale packing specification and to quality specified in contract, and short supply, short length, unsatisfactory settlement of complaints. If all these defects are remedied and goods are subjected to the ITEX or the factual inspection scheme, there is, Mr. Bhaumik feels, every hope that Indian textiles "will get themselves firmly established in the various overseas markets and can gradually be stepped up."

In conclusion, Mr. Bhaumik emphasises the importance of textile research. There has of late been such a growing influence of synthetic fibres in the world textile trade, thanks to the ceaseless research being carried out in the U.K., Japan, the U.S. and Germany, that rayon and synthetic fibres will, it is feared, prove a severe threat to cotton textiles in course of time. If this competition in the field of cotton and rayon fabrics is to be met, it is, as Mr. Bhaumik rightly points out, essential for India to force the pace of textile research.

WORRALL'S TEXTILE AND ENGINEERING DIARY

The sixty-seventh edition of the above *Diary*, published by Messrs. John Worrall Ltd. Oldham, England, the well-known specialists in the field of textile publicity (Agents in India: Messrs. W. H. Brady & Co., Ltd., Brady House, 12-14, Veer Nariman Road, Bombay 1. Price: Rs. 15 plus Rs. 3 for sales tax, etc.) carries a small but significant alteration in the title to give due recognition to the growing importance of the textile industry in Pakistan. The publication is now named the *Textile and Engineering Diary for India and Pakistan*. The *Diary* contains a revised and up-to-date buyers' guide, furnishing information on several important aspects relating to textile machinery industry and trade in both India and Pakistan. It is replete with data on (1) machinery, accessories, power transmission equipment, mill supplies and stores, (2) chemicals, oils, etc., and (3) raw materials, yarn spinning, processing, finishing and merchanting. All these, together with the dissemination of information through the advertisement columns and associated buyers' indices to mills and machinery buyers of India and Pakistan, have enhanced the utility of the publication to such an extent that it will continue to serve as an invaluable book of reference to all textile firms.

NEW RAYON-COTTON FABRIC

A new rayon-cotton fabric, known as Jetpower, has been developed in the U.S. by two textile firms—the American Enka Corporation and Messrs. M. Lowenstein and Sons, Inc. The fabric consists of 50 per cent. each of rayon and cotton; solution-dyed rayon filament is woven with vat-dyed cotton to produce the fabric. The resultant material is said to gain in strength, colour fastness and resistance to abrasion through incorporation of the high-tenacity rayon. It is usable in apparel, home furnishings and motor car seat covers. It is expected to be used to make play clothes also later.

The new fabric is being introduced in the market first in the traditional blue colour and other shades will be added later this year. It will be produced in the first instance by the Lane Cotton Mills Division of Messrs. M. Lowenstein and Sons, Inc. The factory has a capacity to produce up to 1 million yards a week, but it will turn out only 150,000 yards for the present.

The Madras *Khadi* and Village Industries Board has decided to launch at an early date a pilot scheme for working the improved Ambar Charkha in Coimbatore district. Under the scheme, one hundred Ambar Charkhas of improved variety will be started in ten villages in the district. Two units—a spinning unit and a composite unit linked with handloom weaving—are envisaged to judge the economic aspects of the new Charkha. If the results of this experimental measure are satisfactory, the Government will consider starting its own workshop and draw up plans to produce the Charkha on a mass scale.

LABOUR UNION'S SUPPORT SOUGHT FOR FIGHT AGAINST CLOTH IMPORTS

WEAVERS' PRICE PLANS

From Our Special Correspondent

MANCHESTER, 10*th April*

MANCHESTER LETTER

FOR the first time, the trade unions in the cotton spinning and weaving industry are to appeal for the support of the T.U.C. and its 8 million affiliated members in campaigning for Government action to restrict the flow of cheap cotton cloth into Britain from India and Honk Kong. In the first two months this year these imports aggregated 29 million yards. An approach is also to be made to the National Executive Committee of the Labour Party.

This was announced after a special meeting of the Legislative Council of the United Textile Factory Workers' Association in Manchester to consider the Cotton Board's recently-published detailed case to the Government and to decide future policy.

Mr. Harold Bradley, Association General Secretary, said the aim now was to solicit the widest possible public support for Lancashire's case. "The position is serious," he added.

The Cotton Board is planning a publicity campaign in the home market on the theme "Buy Britain's Cottons" to counter cheap imports of overseas textiles. A preliminary outline of the campaign was given to the cotton union meeting by Sir Raymond Streat, Cotton Board Chairman, who is visiting the various cotton organisations in turn.

"Overall Week"

An appeal to factory workers throughout Britain to insist on protective clothing made only from fabric spun, woven and finished in Lancashire is being made as part of the first National Overall Week now in progress. It is sponsored by the Overall Manufacturers' Association of Great Britain, Liverpool, and retailers throughout the country are co-operating in special window displays. The campaign includes domestic as well as industrial overalls.

The organisers urge overall-wearers to be wary of buying overalls bearing Union Jack labels in the belief that they have been made in this country.

Mr. George F. Parfect, Chairman of the National Overall Week Committee, has urged the T.U.C. to pass on advice to factory workers to dress for the job in overalls "100 per cent. United Kingdom."

Higher Wage Level

Boosted by higher earnings in weaving mills, the average pay packet in the Lancashire cotton textile industry has risen to more than £7 3*s.* a week.

A Ministry of Labour survey shows that when a check was taken the average earnings of men in cotton weaving mills were £9 13*s.* 11*d.* weekly, youths £5 1*s.* 2*d.*, women £6 5*s.* 7*d.* and girls £4 13*s.* 4*d.*

Average wages of men in spinning—£9 11*s.* 8*d.*—were slightly lower than when the Ministry took its previous check six months earlier. Women spinners earned £5 18*s.* 9*d.*, youths £5 17*s.* 5*d.* and girls £4 16*s.* 5*d.*

The Industrial Disputes Tribunal will meet in London next week to decide the cotton unions' latest wage claim for a 10 per cent. increase. This was rejected outright by the employers.

Minimum Prices

After discussions lasting for nearly 18 months proposals have been drawn up by the Cotton Manufacturers' Association for the establishment of minimum prices in the cotton weaving industry. A questionnaire has now been circulated to all known manufacturing firms involving owners of more than 1,000 mills.

The scheme provides for basic minimum rates for various standard loom state cloths and does not include coloured goods or fancy materials. Comments are invited from manufacturers and their views on the project are being sought. The Committee responsible for drawing up the scheme strongly recommends its acceptance and firms concerned have been urged to reply stating their views on the proposals by the end of next week.

A spokesman of the Cotton Manufacturers' Association said that the future of the scheme depended on the measure of support gained for the plan as set out in the questionnaire. When the replies are collated the Committee will consider the response and decide what action should be taken.

Novelty in Textiles

Cheapness and novelty are the keys to a bigger share in world trade in textiles, according to Professor G. C. Allen, Professor of Political Economy, University College, London. With most countries now producing enough textiles to meet home needs, international trade was becoming relatively smaller, he told members of the Textile Institute at the Spring Convocation in Manchester. Thus success in international trade in textiles is going to depend increasingly upon distinct performance and will have to be fought for very hard.

He said: "But it is not a matter for despair. It constitutes a challenge and those who wish for eminence clearly cannot hope to achieve it by following a routine." He added: "Outstanding success can only come by doing superlatively well what others are doing indifferently well, or by discovering how to produce and sell new varieties of products that others have not yet devised."

Professor Allen said cheapness or novelty seemed to be the only two channels to success in international trade with competition likely to become even keener. He emphasised that it was only by continuous preoccupation with efficient measures and the innovation of techniques and commercial methods that any branch of the textile industry could hope to develop or even sustain itself.

The Changing Scene

Slowly but surely the process of elimination in Lancashire mill towns goes on. Since 1952, and even before, the tendency towards contraction of productive capacity has ebbed and flowed, but there has been a persistent movement of consolidation—one that becomes more emphatic as the years pass.

In the first quarter of 1956, the trend has been quite as noticeable as in the previous twelve months and the pace seems to be quickening. All the developments are not solely in the direction of pure destruction of plant; the larger groups in particular are using their resources to raise their efficiency by disposing of obsolete buildings while still retaining worthwhile machinery for transfer to more suitable mills.

Already, this year, the Directors of the Lancashire Cotton Corporation have decided to close down two of the group's older mills—the Brunswick and the Junction—following the acquisition of the Eagle and Durban mills around the year-end. In the fine spinning section, Combined English Mills have taken similar action. The Rumworth Mill and Howe Bridge No. 5 have been taken out of commission, while the company has branched out into the waste spinning trade by the absorption of Shawclough Mill and William Wild's Millersbrook and Moss mills at Heywood.

The combines are certainly in an advantageous position to grasp opportunities which occur to strengthen their hand, and not only make themselves more efficient but also more flexible. English Sewing Cotton Company which has lately widened its activities to include at least one big weaving group, has obtained an important merchanting business by gaining control of Hollins Mill. The spindles and looms are being scrapped, but the distributing facilities of this old-established firm are at the disposal of the new owners.

Nor have the machinery merchants been idle this year. The Owl Mill, at Oldham, was the subject of a battle for control between rival bidders. The winner, Mr. A. E. Hatton, has since announced his intention of closing the mill down. A similar fate appears likely to overtake the Neva mills, Middleton, while another Oldham spinning firm has lately been in the news by reason of an offer being made for the shares, believed to come from a second-hand machinery dealer.

Not at all the latest developments in the "takeover" field, however, have consisted of acquisitions in the horizontal sphere. The Fine Spinners and Doublers group has, for instance, absorbed further weaving interests in the looms owned by J. T. Clegg & Co., of Nelson. Another official linking of old-established contacts has been the purchase by Armitage and Rigby Ltd., of the merchanting and drill-making business of E. Spinner & Co.—*All Rights Reserved.*

Endorsements, Guarantees, and other Obligations			121,485,426

Notes.

I. Investments in British Government Securities amounting to £362,117,325 are taken at or under cost and below redemption price. The market value of these investments at the 31st December, 1955, was £325,788,617. Provision for this difference has not been made and is regarded as unnecessary as all the securities are redeemable at fixed dates, the majority within 10 years.

II. Other Investments: the market value of the quoted investments at the 31st December, 1955, was greater than the balance sheet figure.

III. Securities and Other Investments totalling £1,030,000 (1954: £1,036,666) nominal are lodged for Public and Other Accounts and for the Note Issue in the Isle of Man.

IV. In February, 1955, the sum of £3,593,239 was capitalised from General Reserve for the purpose of paying up 5s. per share on each of the 14,372,956 issued "A" Shares of £5 each and a sum of £1,656,239 was transferred to General Reserve from Contingency Account.

V. Foreign Currencies have been converted at the rates of exchange ruling at the 31st December, 1955; in the case of Eastern branches as at the 31st October, 1955.

REPORT OF THE AUDITORS TO THE MEMBERS OF LLOYDS BANK LIMITED

In our opinion and to the best of our information and according to the explanations given to us, the foregoing accounts of the Bank, with the annexed statements relating to the Bank's subsidiaries, The National Bank of Scotland Limited and Lloyds Bank (Foreign) Limited, give in the prescribed manner the information required of banking companies by the Companies Act, 1948, and on the basis therein authorised give, subject to Note I and to the observations in paragraph 3 on the accounts of The National Bank of Scotland Limited, a true and fair view of (a) the state of the Bank's affairs as at 31st December, 1955, and of its profit, ascertained as indicated in the accounts, for the year ended on that date and (b) the state of affairs and the profit, ascertained as indicated in the accounts and annexed statements, of the Bank and its subsidiaries so far as concerns members of the Bank.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit. In our opinion the Bank has kept proper books of account and obtained proper and adequate returns from the branches and the above accounts of the Bank are in agreement therewith. The accounts of the Eastern branches are included therein as at 31st October, 1955, and the accounts of the rest of Banks are made up to 1st November and 30th September, 1955, respectively.

8, Frederick's Place, London, E.C. 2, 17th January, 1956.

TRADE WAR IN COTTON FEARED

STRESS ON CO-OPERATION AMONG GOVERNMENTS

IT was only last week that we referred, in these columns, to the problem of cotton stocks which, we said, had become a matter of international concern. That there was no exaggeration in the remark is clearly evident from the grim warning administered by the International Federation of Agriculture Producers that there is developing a "disastrous international trade war in the world cotton markets." In the course of a statement issued at Washington the other day, the Federation points out that there is too much cotton in the world which has resulted in an increasing lack of balance between supply and consumption. In its opinion, the only way to prevent a world trade war in cotton is by more co-operation among Governments. Indeed, it recommends a "serious and continuing effort," through the International Cotton Advisory Committee (I.C.A.C.), to find a practical basis for world cotton trade.

The aforesaid statement of the Federation assumes utmost significance for two reasons. First, the Federation represents organisations in as many as 27 countries and any assessment of the world cotton position it makes is always based on expert and detailed data. Secondly, the statement of the Federation has come on the eve of the forthcoming meeting of the I.C.A.C. scheduled to be held at Washington shortly.

Boosting up Exports

In forecasting a "disastrous" world trade war in cotton, the Federation must have been prompted by the intensified efforts made by the Governments of the cotton producing countries to step up their export trade in this commodity. The U.S. Department of Agriculture, for instance, has already announced that the Commodity Credit Corporation (C.C.C.) would initiate, after 1st August next, a new export sales programme for C.C.C. stocks of upland cotton. There are three special features of this policy which have given rise to serious apprehensions that it might affect the world cotton trade by causing a sharp setback to prices. These features are: (1) The sales abroad of cotton will be on a competitive bid basis. (2) The cotton sold will be eligible for delivery against all sales, including Public Law 480 sales. (3) There are no restrictions on either the quantity or the quality of cotton sold for export.

Brazil and Turkey are the two other leading exporters of cotton which have come out with a move to boost exports. The Brazilian Government's scheme envisages subsidising of cotton shipments through the use of a variable exchange rate when exchange is surrendered to the Bank of Brazil. The scheme is estimated to yield a gross return of 508 cruzeiros per arroba (35.68 U.S. cents per pound at the exchange rate of 43.06 cruzeiros per dollar) f.o.b. Santos, Type 5 basis. Under the new cotton export policy of Turkey, sales of cotton to European Payments Union (E.P.U.) countries will be effected at competitive prices, while those for other countries will have to compensate the seller for the loss sustained on sales to the former. For every bale of cotton exported to non-E.P.U. countries, one bale must have been previously shipped to an E.P.U. country.

Performance of Other Countries

The export performance of the other cotton-producing countries has been extremely favourable. According to the latest monthly review of the I.C.A.C., cotton exports from Mexico during the seven months ended December 1955 were one-third greater in volume than in the same period last season. Unofficial reports to 31st January 1956 claim that exports have already reached the all-time record of 1.4 million bales and that the unsold surplus out of this season's record crop is only some 340,000 bales. Export demand, however, has slackened off recently due to a shortage of better qualities. In Egypt, exports upto the end of December were 46 per cent. higher than in the comparable period last season. In part, this has followed on the steep reduction in prices that has occurred this season, but also it is due to a marked increase in exports to China and Eastern Europe. Exports to China, Czechoslovakia and Rumania during this period were already higher than in the whole of 1954-55. Other exporters of Egyptian type cottons—Peru and Sudan—are also having a very successful season and it appears likely that most of the export availability will be shipped this season. Exports from the Sudan over the first six months were already nearly equal to total exports during the 1954-55 season. Exports from Pakistan are well ahead of last season's rate and here, again, there is likely to be no increase in carryover stocks into the new season; India and Pakistan have reportedly reached agreement for the import of up to 50,000 bales of Pakistan cotton into India effective immediately. As far as can be ascertained, exports from many of the smaller countries are ahead of last season. Syrian and Greek cottons have been in particularly good demand and stocks are now at very low levels. Roughly half of the export availability in Iran had been shipped in the first six months of this season.

If the upward trend in the shipments from the major exporting countries were to persist in the coming months, there would surely be a recession in world cotton prices. Naturally enough, interest is focussed on the U.S. Farm Bill which, after "a long and complex struggle" in both the Houses, was adopted by the Congress last week. The Bill, as it now stands, couples with the Soil Bank scheme—the details of the scheme have been discussed in our issue dated 21st January 1956 *vide* page 118—a one-year programme of Government-guaranteed prices of cotton (and other basic crops) at a fixed 90 per cent. of parity. The Bill has not met with the approval of the President who has urged the Congressional Republican leaders to get the Bill referred back to the joint conference committee of both Houses for re-drafting. The reactions of the Republican leaders are not known. Meanwhile, there are rumours that the President may use his veto on the Bill. If these rumours were to prove correct, the U.S. Agriculture Secretary himself would fix, through his discretionary powers, the support price for cotton for the ensuing season.

U.S. SURPLUS COTTON

The U.S. Government's extended export sales programme for cotton has been criticised by the New York Cotton Exchange. Selling on an auction basis for export would, the Exchange declares, be most costly to the taxpayer in America. In this connection, it observes:

"It will be extremely difficult for buyers to finance cotton bought at fixed price which are arbitrarily set and subject to change without notice by the U.S. Department of Agriculture, because the programme itself may easily render the normal 'hedging' process inoperative. Banks have found 'hedged' cotton a good risk, and have always made a wide distinction in the amount of money they would lend on 'hedged' cotton as compared with the amount they would lend on 'unhedged' cotton. Therefore, buyers will be required under the fixed price export sale programme to figure a much greater margin than if the sale programme was developed where cotton could be normally 'hedged.' This will make it difficult primarily for the smaller merchant, due to the restriction of his credit under an uncertain export sale programme.

"During the recent sale of one million bales for export, more than 50 per cent. was sold to three large merchants, because of their financial ability to handle 'unhedged' cotton. Such a programme under normal conditions will take several years in which to liquidate existing Government-held surplus cotton stocks, as net disappearance per year will be relatively small. This could lead to complete destruction of the present marketing system."

The New York Cotton Exchange has also opposed a two-priced system. It, however, says that, if necessity forces a choice between the fixed export price programme or an export subsidy, the latter is certainly the lesser of the two evils, inasmuch as it permits the distribution of cotton through an orthodox method.

IMPORT OF COTTON

The Textile Commissioner has clarified the position with regard to import of cotton from dollar and non-dollar areas. According to him, no ceiling has been fixed for import; the Government's decision, announced last week, it will be recalled, had fixed a ceiling of 40,000 bales. Announcing the revision in the import policy for cotton, the Textile Commissioner, in a Press Note issued last week-end, observes: "... due to somewhat indifferent quality of the Indian crop in the current season, import of cottons from dollar and non-dollar areas will be allowed in adequate quantities to meet the requirements of the mill industry."

ALL-INDIA COTTON ESTIMATE

The all-India fourth estimate of cotton for 1955-56 places the total yield at 3,705,000 bales (of 392 lbs. each), which represents a fall of 367,000 bales or 9 per cent. as compared with the adjusted fourth estimate of 4,072,000 bales for the previous season. The anticipated drop in yield has occurred despite a marked expansion of over 2 million acres or 11.5 per cent. in the area sown to cotton, from 17,506,000 acres to 19,525,000 acres. In other words, this means that the per-acre yield of cotton has suffered a sharp setback in the current season; on the basis of the fourth estimate, the all-India average per-acre yield comes to about 74 lbs., as against 92 lbs. in 1954-55 (final estimate). This setback must be attributed to the severe damage caused to the crop on account of heavy rains and floods.

The above estimate does not cover the entire area under cultivation of cotton. Past experience has shown that both the area and the production at the fourth estimate stage form roughly 95 per cent. of the crop finally reported. On this basis, the total cotton output may be estimated at 3,900,000 bales.

The official estimates of the cotton crop are always lower than the trade estimates which are invariably nearer the true crop position. For the 1955-56 season, trade estimates place the crop at nearly 4.65-4.78 million bales (commercial), as against 4.83 million bales for 1954-55.

LLOYDS BANK LIMITED—*(Continued)*

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949.

We report that we have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited, dated 31st December, 1955, and above set forth and the annexed Profit and Loss Account for the year ended 31st October, 1955, with the books and accounts as kept at the General Manager's (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the Indian Branches and have obtained all the information and explanations we have required. In our opinion such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law and the Balance Sheet exhibits a true and correct view of the state of the Bank's Indian Branches' affairs according to the best of our information and the explanations given to us and as shown by the books at Calcutta and the certified returns from the Branches. In our opinion books of account have been kept as required by law.

PRICE WATERHOUSE & CO., Chartered Accountants.

FUTURES TRADING IN PEPPER

BOMBAY LET DOWN BY FORWARD MARKETS COMMISSION

By I. T. Parekh

IT is gratifying that the Forward Markets Commission, after examining the various aspects of futures trading in pepper, has decided that the commodity should have a hedge market. The bone of contention, however, is the selection of centres for the establishment of hedge markets. It was reported that there were five applicants in the field: two from Cochin, two from Alleppey, and one from Bombay. The Commission has, however, recommended only Cochin for the purpose, the applications from Alleppey and Bombay having been rejected. It is reported that several important considerations weighed with the Commission in deciding not to recognise Bombay as a centre for conducting futures trading. Most of these reasons, however, appear to be unconvincing and untenable if viewed from practical angles.

The first reason put forward by the Commission against Bombay is that the City is very remote from the major pepper producing areas. May I know whether the Commission is adopting one and the same principle when recommending Bombay as a suitable centre for the operation of hedge markets in other commodities? If the principle as to distance between the producing area and Bombay City is followed, then there will be no scope at all for hedge markets for most of the commodities in Bombay, because the City is remote from the producing areas in these cases, too. Hence the argument of distance between Bombay City and the producing areas looks untenable, more so, in the present age of quick transport and communication.

When selecting a centre for the hedge market, the primary question which the Commission should consider is whether the centre is capable of undertaking the responsibility and has all the prerequisites for the successful functioning of a futures ring, and not such theoretical considerations as distance and production of a particular commodity in a particular area over others.

The second point raised by the Commission is that the production of pepper in the State of Bombay is only about 100 tons. This argument also is equally out of the mark, as pepper cannot be grown anywhere and everywhere.

Bombay's Share in Trade

The third argument advanced by the Commission is that the quantity of pepper received in Bombay is hardly 12 per cent. of the total production. Here, the Commission seems to have been either grossly misinformed or it has tried to exaggerate the shortcomings of Bombay City in its enthusiasm to give preference to Cochin. The production of black pepper in India has generally been fluctuating between 18,000 and 25,000 tons, while our exports have been between 12,000 and 15,000 tons. The balance of 6,000 to 10,000 tons is being consumed in the country. Nearly 50 per cent. of this quantity, say about 3,000 to 5,000 tons, is usually imported into Bombay for consumption and distribution. The truth, therefore, is that Bombay has been handling 50 per cent. of the total requirements of inland consumption, over and above the export done by Bombay interests from the port of Bombay and elsewhere. The Commission seems to have confused the issue by stating that Bombay is handling only 12 per cent. of the total production. For arriving at a correct calculation of Bombay's share in the total pepper trade, it ought to have taken the figure of 3,000 to 5,000 tons plus 8,000 to 10,000 tons of export done by the traders of Bombay to foreign countries.

The fourth argument advanced by the Commission against Bombay is that 90 per cent. of the export is effected by Cochin and Alleppey. Here also the Commission seems to have erred on the side of exaggeration. Nearly 66 per cent. of the export of pepper to foreign countries is handled by Bombay merchants either from Bombay Port or through other Indian ports. Therefore, in all fairness to Bombay City, the Commission ought to have taken the actual figure of export by Bombay merchants and not the figure of shipment done through Bombay Port only.

The fifth argument against Bombay is that the market in Bombay cannot serve the needs of merchants in assembling and export markets in the producing States. Here also, the Commission appears to have formed its opinion without collecting proper data or making thorough enquiries. Most of the pepper traders in Bombay have their offices for assembling and export purposes in all the primary centres and their total yearly volume of direct purchases from producing areas comes to a much bigger figure than that of local traders at Alleppey, Cochin and elsewhere.

The final argument against Bombay is that the Government of Bombay did not consider, in the first instance, that Bombay needed futures trading facilities in pepper. This might have been due to either of the following causes:

Importance Not Fully Realised

The Association concerned in the City did not put all the facts before the State authorities while requesting them to recommend their case to the Commission for a hedge market in Bombay. Or it is possible that the Association approached the Bombay Government after the Commission had already made up its mind in favour of Cochin or that the State Government did not take serious interest in this matter, as the figure of pepper export of 12,000 tons might have appeared to them trivial, as compared with such commodities as cotton, groundnut, castorseeds, etc., etc. Pepper being a spice, the quantum of its export or consumption is always smaller than that of food articles and industrial raw materials. It will be interesting to note, in this connection, that, in all foreign importing and consuming countries, the quantity of import or re-export of pepper is computed in lbs. or in cwts. In the U.S., for example, it is done in lbs. and in Europe in cwts. Accordingly, both the Bombay Government and the Commission ought to have taken the production figure in terms of lbs. and cwts. instead of tons, as they have done. Expressed in terms of these smaller units of weights, India's production of pepper comes to no less than 56,000,000 lbs., or to 500,000 cwts. If the Commission had taken into consideration the quantities of pepper produced in India either in terms of lbs. or in cwts., then, in my opinion, it would not have taken any objection to recognising more than one centre for the functioning of hedge markets, let alone the value of pepper in terms of rupees and the revenue on stamp duty on hedge contracts to the respective State Governments.

Two Prerequisites

For the successful functioning of hedge markets, there are two factors more important than those advanced by the Commission. The first is that the futures market for pepper should be primarily in a commercial city like Bombay having all facilities for quick and prompt contact with foreign countries which are the real arbiter of pepper prices. The second is that its trading members should be financially strong, so as to meet any contractual obligations *in times of crisis*. In this connection, an aspect to which the Commission ought to have given more serious thought is the past records of the various applicants. Bombay has a clean record for the last 30 years in running a hedge market either for a specific or forward delivery contract with a larger turnover than others, while the records of Cochin and Alleppey are far from satisfactory in so far as clearing payments and delivery of goods are concerned in time of crisis.

It may be noted here that the Commission itself has acknowledged in its report that, in times of crisis, Cochin and Alleppey have failed to observe the sanctity of contracts, have forced the closure of the market very often and fixed arbitrary prices to meet their own ends. And yet it has not hesitated to recommend that Cochin shall be the only centre to have the privilege of having futures trading in pepper. It is needless to stress that a hedge market has its usefulness only when it functions without payment difficulties.

In the absence of any hedging facility in Bombay, if Bombay merchants are forced to look to Cochin, they will have to bear, in times of difficulties, losses on two fronts, in that they will have to fulfil their contracts with overseas buyers, and will not be sure of getting their margin of profit when lifting the hedge at the time of shipment.

Pepper is a commodity subject to very wide and frequent fluctuations. It, therefore, requires close and constant attention on the spot. Accordingly, traders in Bombay would naturally hesitate to take full advantage of the hedge market at Cochin, even though it may be well organised, because personal attention and decision will be impossible by sitting in Bombay. Finally, if the daily turnover is to be any criterion for a successful functioning of the futures ring, there is reason to fear that Cochin will cut a sorry figure.

TR 860

AMMONIUM SULPHATE NITRATE

Ammonium sulphate nitrate is a nitrogenous fertiliser. It contains 26 per cent. nitrogen as against 21 per cent. nitrogen in ammonium sulphate.

Part of the nitrogen of the ammonium sulphate nitrate is immediately available to the plants to absorb. The rest will be gradually available to the plants during the growing period. In this respect, it is better than ammonium sulphate.

The new fertiliser, which will soon be available to farmers, can be applied to all crops and all types of soil. It can be applied before sowing, at sowing time or as a top-dressing. It should not be applied along with the seed.

The fertiliser should not be mixed with other fertilisers containing lime. It should not be applied too deep. After application, it should be mixed well with the soil by harrowing. Ammonium sulphate nitrate produces a lesser amount of acidity in the soil as compared to ammonium sulphate.

SEPARATE DIRECTORATE FOR SOIL CONSERVATION

The Central Soil Conservation Board has recommended the setting up of a Directorate of Soil Conservation, stated Shri Ajit Prasad Jain, Union Minister for Food and Agriculture in Lok Sabha in a written reply to a question.

The reasons for this decision, he continued, were to provide machinery for efficiently organising and executing the large programme of work on soil conservation in the second Plan period. About Rs. 1,30,300 had so far been sanctioned to the State Governments by way of grants for the schemes of training in soil conservation during 1955-56.

UNITED BANK OF INDIA MAINTAINS PROGRESS

DIVIDEND UNCHANGED

THE working of the United Bank of India Ltd. (General Manager: Mr. B. K. Dutt, Calcutta), during the year ended 31st December 1955 has resulted in a profit of Rs. 14.61 lakhs, as compared with Rs. 13.05 lakhs earned in 1954 and Rs. 12.07 lakhs in 1953. Thus, this is the second year in succession when the Bank's profit has shown an upward trend. Even the aggregate rise in the last two years has enabled the Bank to make good only a part of the recession which had occurred during the two years 1952 and 1953 from Rs. 21.01 lakhs to Rs. 12.07 lakhs. It may also be noted that the increase in the Bank's profit for the year under review is not as marked as in the case of many other Scheduled banks. The main reason for this is the devaluation of the Pakistan currency with effect from 1st August 1955 as a result of which the figures of the Bank's Pakistan branches for 1955 have been taken at par with India, while those for the previous year had been taken at the rate of exchange as on the last day of the year. In view of this, the accounts for the year under review are not strictly comparable with those for the previous years on account of the devaluation. Notwithstanding the effect of the devaluation, the Bank's deposits show a rise of Rs. 7.9 lakhs; advances are up by Rs. 3.83 crores; bills for collection have risen by Rs. 1.57 crores, and acceptances and endorsements by Rs. 64 lakhs. All these indicate that the Bank has had its full share in the economic prosperity of the country.

After making a provision of Rs. 3.50 lakhs for taxation, as against Rs. 2.46 lakhs set aside last year, the Directors have transferred to the statutory reserve fund a sum of Rs. 2.95 lakhs, raising it from Rs. 2.61 lakhs. The dividend has been comfortably maintained at the very modest level of 3 per cent. for the sixth year in succession.

The following comparative table provides a bird's-eye view of the Bank's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount	1,02.44	94.88	92.12	98.38
Commission and exchange	29.29	28.46	22.01	25.51
Other income	11.70	11.15	13.14	10.73
Interest paid	33.13	20.55	26.37	26.01
Expenses	91.14	87.92	84.98	84.44
Depreciation and repairs	4.55	3.98	3.84	3.97
Profit	14.61	13.05	12.07	20.21
Taxation	3.50	2.46	1.72	7.50
To reserve fund	2.95	2.61	2.42	4.05
,, investment account	..	..	..	0.50
Dividend	7.99	7.99	7.97	7.96
	(3%)	(3%)	(3%)	(3%)
Carry forward	1.70	1.53	1.54	1.58

	As on 31st December			
	1955	1954	1953	1952
Capital	2,66.56	2,66.36	2,66.35	2,65.22
Reserves	70.95	68.00	1,04.00	1,03.00
Deposits	31,26.71	30,47.79	26,93.33	26,06.24
Borrowings from other banks	1,00.84	..	..	..
Bills for collection	3,82.43	2,24.74	1,89.75	1,94.61
Acceptances	1,37.36	73.38	74.57	51.90
Advances (*including* bills purchased and discounted and money at call)	18,13.42	14,30.23	13,54.02	13,24.55
Investments	14,41.46	14,00.53	13,34.13	13,12.13
Cash	4,02.74	4,78.87	3,90.78	3,90.73
Balance-sheet total	43,40.19	38,22.35	34,72.66	34,14.38
Ratio to deposits of—	%	%	%	%
Advances	58.0	46.9	50.2	49.7
Investments	46.0*	47.9	49.5	49.2
Cash	12.9	15.7	10.4	14.6

* After taking into account the investments pledged against borrowings from other banks.

It will be observed that a substantial part of the rise in income has been offset by the increases in interest paid on deposits and borrowings and expenses, a trend which is in consonance with the general experience of banking in India.

The Bank's deposits, as already pointed out, show a rise of only Rs. 79 lakhs, as against an increase of Rs. 3.54 crores noted at the close of 1954. This moderate rise in 1955 is the result of devaluation of Pakistan currency. For "the actual increase in deposits taken on a par basis," the Chairman explains in his speech, "is approximately Rs. 2.60 crores." In other words, but for the devaluation of the Pakistan currency, the Bank's deposits would have shown an impressive rise of Rs. 2.60 crores. The difference in the case of advances, which have gone up by Rs. 3.83 crores, is not "quite so marked, because of the fact that proportionately advances are much higher in India than in Pakistan." At Rs. 18.13 crores, the advances constitute a record, of which loans, cash credits and overdrafts account for Rs. 14.60 crores, as against Rs. 11.85 crores a year ago, and bills purchased and discounted for Rs. 3.53 crores, having risen from Rs. 2.02 crores. Investments (at or below market value) show a fall of Rs. 19 lakhs; this, too, is accounted for by the Pak devaluation, for, "in reality, there is an increase, on a par basis, of over Rs. 74 lakhs." Cash balances, too, have shrunk by Rs. 76 lakhs, but the ratio of liquid assets has not been seriously affected.

JUTE STOCKS RISE FURTHER

OUTPUT, TOO, INCREASES

THE latest monthly returns of the Indian Jute Mills Association, Calcutta, disclose an increase of 5,200 tons to 94,600 tons in the stocks of jute goods held by the mills at the end of March 1956. This increase has occurred, despite the fact that despatches from mills for consumption in the home and overseas markets rose during the month from 81,800 tons to 94,100 tons. The rise in stocks must, therefore, be attributed to the increase of 6,500 tons in the output of jute goods during the month under review.

Another notable feature is that the stocks at the end of March 1956 were the same as those exactly a year before. While making this comparison, it should be borne in mind that, in March 1955, as much as 12½ per cent. of the looms remained sealed, whereas in March 1956 only 5 per cent. were kept idle. The stock position of mills may, therefore, be said to be better today as compared with that a year ago. This should, however, give no room for any complacency, since the stocks have been staging a steady rise from 62,300 tons in October 1955 to 94,600 tons in March this year. This continuous rise in the past six months indicates the need for a vigorous selling campaign for jute goods; the upward trend in production may revive a setback.

The table below gives at a glance the stocks of jute goods in each of the three months ended March 1956, as also those in the same month a year ago:

Jute Goods Stock

(In tons)

	As on			
	31-3-1956	29-2-1956	31-1-1956	31-3-1955
Hessian ..	30,200	28,200	25,600	34,000
Sacking ..	54,900	52,200	45,300	59,000
Others ..	9,500	9,000	7,500	1,900
Total ..	94,600	89,400	78,400	94,900

It will be seen from the table above that, during March 1956, stocks of hessians moved up by 2,000 tons to 30,200 tons. There has also been an increase of 2,700 tons in the stocks of sackings and of 500 tons in those of other goods. An outstanding feature revealed by the table above is a significant increase in stocks of other varieties of goods from 1,600 tons to 9,500 tons over the year.

The output of jute goods in March 1956 rose, as compared with that in February, by 6,500 tons to 99,300 tons. This increase was due to two factors, namely, March is a month of larger number of working days as compared with February and, secondly, March was the first complete month when the full complement of 7½ per cent. of the unsealed looms were in operation, whereas in February they were put to use only from the 10th of that month.

The table below gives an idea of the output of the three principal varieties of jute goods during each of the three months ended March 1956, as also in March 1955.

Jute Goods Production

(In tons)

	March, 1956	February, 1956	January, 1956	March, 1955
Hessian ..	34,800	32,000	30,300	35,000
Sacking ..	57,800	54,700	52,800	50,500
Others ..	6,700	6,100	6,000	3,400
Total ..	99,300	92,800	88,900	88,900

The increase in the total output of jute goods during the month has been, as seen from the table above, shared by all the three varieties. Thus hessian production has risen by 2,800 tons to 34,000 tons and that of sackings by 3,100 tons to 57,800 tons. The output of other types of goods has gone up by only 600 tons to 6,700 tons.

With the output in March, the total quantity of goods manufactured by jute mills in the first nine months of the jute season, 1955-56, amounted to 800,445 tons, as compared with 750,142 tons in the same period of the previous season.

The consumption of raw jute by mills in March may be placed at 575,940 bales, as against 515,620 bales in March 1955. The total consumption from July 1955 to March 1956 may be estimated at 4.6 million bales, as compared with 4.3 million bales in the same period a year previously.

JUTE PRESSING INDUSTRY IN PAKISTAN

The Pakistan Central Statistical Office has announced the census results for 1953 in respect of the jute pressing industry in Pakistan. There were in all 54 registered factories in this industry in the country up to December 1956, all of which were in East Pakistan.

The present release relates to 44 factories, all in East Pakistan, which submitted acceptable returns. The factories covered are those which used power and employ not less than 20 persons on any day during the year in their manufacturing operations.

The total amount of fixed capital invested and stocks held by the 44 factories reported stood at Rs. 5.33 crores at the end of 1953, of which Rs. 2.08 crores were invested in fixed capital and Rs. 3.25 crores were accounted for by stocks and stores.

The total average employment provided by this industry was 5,041 persons per day during the year 1953. Wages, salaries and benefits paid amounted to Rs. 68 lakhs.

RAW JUTE IN U.P.

The State Government of U.P. has appointed a special officer to direct the large-scale jute production programme drawn up by it. The Government is utilising the skill of East Bengal refugees to see the programme through. The jute production target to be reached by the end of the second Plan period is 556,500 maunds, as against the present production of 500,000 maunds. There are three jute factories in the State which together consume 750,000 maunds per annum.

A draft Bill to amend the East Bengal Jute Dealers' Regulation Act (1949) is being prepared by the East Pakistan Government. The Bill seeks to enable the Government itself to collect certain statistical data regarding raw jute, in order to regulate jute trade on proper lines. According to the preamble to the Bill, jute mills now working in East Pakistan purchase, store and consume substantial quantities of jute, but, under the present law, they are not required to take out any licence or to submit any return under the said Act. As a result, collection of statistics regarding raw jute is incomplete. The amendment proposed in the Bill is intended to rectify this drawback.

Burma has contracted to buy gunny bags valued at Rs. 2 crores from East Pakistan during 1956. It is reported that trade between Burma and Pakistan would grow steadily and that raw jute would become an important item of import for Burma, following the establishment of jute mills there.

The consumption of burlap in the U.S. is reported to have registered an improvement in March 1956. It amounted to 70.6 million yards in the month as against 68 million yards in February 1956 and 71 million yards in March last year. U.S. stocks, however, rose by 8 million yards to 253 million yards.

CANARA BANK COMPLETES FIFTY YEARS

MR. A. DAMODAR PAI'S SPEECH AT ANNUAL GENERAL MEETING

EMPLOYEE BENEFIT SCHEMES TO BE INSTITUTED

THE year one thousand nine hundred and fifty-six is a momentous one for the Canara Bank Ltd., as it marks the completion of 50 years of the Bank's existence. In order to commemorate this unique occasion, the Directors of the Bank propose to institute several schemes of permanent benefit to the employees. These include staff welfare fund, housing loans to employees, pension scheme, employees' participation in capital by the issue of a special class of shares and education fund for grant of loan scholarships. The details of the scheme, which are still under the management's scrutiny, were outlined by Mr. A. Damodar Pai, Chairman of the Bank, in his speech at the Annual General Meeting held at Mangalore on 16th February 1956.

The following is the full text of Mr. Pai's speech:

"FRIENDS,

"This year I seek your indulgence to address you at some length for more reasons than one. The first and foremost reason is the fact that we are completing fifty years of growth and entering our Golden Jubilee Year. This is a time not merely for looking back with joy and satisfaction at what has already been achieved but also for looking forward with courage and determination to what is yet to be achieved. By the grace of God, by the blessings of our elders and the friendliness and encouragement which has come to us in abundant measure from one and all, we have grown with the country, changed with the changing times and look forward to the next lap of our journey with hope and confidence.

"India is marching ahead towards a welfare State. The first Five-year Plan, with its emphasis on agricultural production, is coming to a successful end, with the achievement of self-sufficiency in food among its highlights. The emphasis now is on greater industrialisation and raising the national income, both of which call for more work, greater sacrifices, increasing savings and the ploughing back of individual savings in schemes of national development. In this great enterprise, the banks of our country have a vital role in increasing measure to play. It is time, therefore, that banks take stock of the situation and adjust themselves to the changing times, equipping themselves adequately to render more effective service to the nation.

Unhealthy Competition in Deposit Rates

"For the second year in succession, bank deposits continued to show a rising trend. Against an increase of Rs. 94 crores, shown by Scheduled bank deposits in 1954, a further increase of Rs. 90 crores was recorded in 1955. The increase of nearly Rs. 3 crores in the deposits of our Bank in 1955, as against only Rs. 1 crore in 1954, may be considered quite satisfactory. The increase, however, is mostly under time deposits. The ruling rates for time deposits are higher and so we had to pay higher interest charges on them. Deposit rates have increased steeply in recent months and may lead to unhealthy competition. This tendency, unless checked in time, may not augur well for the banking industry. As suggested by Mr. Justice Gajendragadkar in his report on the Bank Award, concerted action on the part of the banks is quite necessary. I hope the banks, with the guidance of the Reserve Bank and the Government, will move quickly in this matter so that the banking industry may develop on healthy lines and play its proper role in the country's expanding economy.

"Bank advances continued to be higher and the Scheduled banks availed themselves more and more of the facility offered under the bill market scheme of the Reserve Bank. This only shows that the greater economic tempo of the country enables the banks to utilise their increasing resources. Our advances, though higher than the previous years, were not so high as to force us to uneconomic borrowing. It was only towards the end of the year that advances increased and they may continue to rise for some time to come. By reason of this cautious policy, there has not been a spectacular increase in interest earned on advances in 1955.

"Our foreign department was able to command a better turnover and bring in more income. The turnover of this department for the year 1955 was about 40 per cent. more than that for the previous year. Perhaps amongst the Indian banks, we occupy sixth or seventh rank in the matter of foreign business. With a view to giving more prompt service to our customers in the south, we opened a branch of our foreign department at Madras which enabled us to attract more foreign business from the south. Mr. Freeman, who ably organised the foreign department and trained a large number of our staff members, returned home on the expiry of the period of his contract. I am glad to say that your Directors have been able to make use of his services as our Overseas Representative in England. Mr. C. Ekanath Kamath is now in charge of this department and, as years pass by, this department will play an important role not only in our Bank, but, I hope, also in the country's economic development.

Income Keeps Pace with Expenses

"Thanks to the success of the foreign department and our handling a larger volume of inland bills, we have been able to earn higher income. At the same time, interest paid on deposits has gone up and so too our establishment charges, consequent upon implementing the Award and also the revision in the emoluments of the officers. We have thus shared our prosperity with our depositors and our staff. The position, therefore, is that our income has kept pace with the expenses. We should now plan for future growth.

"During the year, five new branches were opened in the last quarter and the response we are receiving at these branches is quite satisfactory. The branch at Ahmedabad will enable us to serve a large number of our clients dealing in cloth in various centres where we are already established. Thanks to their patronage and co-operation, we have made a good beginning at Ahmedabad.

"The Bank has purchased a plot in Mandvi area in the city of Bombay during the year and we propose to put up a first-class building there to accommodate our Mandvi branch and to let out the additional space. Your Directors are also of the opinion that we should have our own premises for the Administrative Office. The Directors are, therefore, thinking of going in for a plot in a central place in Bangalore to construct a spacious and imposing building to house the Administrative Office.

Golden Jubilee

"The report that is before you now is our fiftieth annual report and we are now in our Golden Jubilee year. Considering the fact that we have passed through fifty years, the progress made by us may not look spectacular. This is the inevitable result of a policy of safety-first and hasten slowly followed by your Directors from the very inception of the Bank. Your Directors have never had occasion to regret it. This policy has enabled the Bank to lay a strong and sound foundation and extend its usefulness. The experience gained during the periods of economic depression followed by boom, war followed by peace, banking crisis followed by boom enabled your Bank to serve the clients better and consolidate its position.

"Till sufficient resources were built up and till the Bank was put on a sure foundation, your Directors did not think of opening branches. All of you know that for the first twenty years, no branch was opened. Today we have fifty-one branches throughout Bombay, Hyderabad, Mysore, Madras and Travancore-Cochin States. Likewise, it was only when we were satisfied about the adequacy of resources and we had the necessary trained staff, that we thought of opening our foreign department under the guidance of a foreign expert.

"Against a paid-up capital of Rs. 29 lakhs, we now have a statutory reserve of Rs. 29 lakhs. Our deposits are nearing Rs. 12 crores and our resources exceed Rs. 17 crores as on 31st December, 1955. Our securities stand in our books at less than market value, thus leaving our statutory reserve absolutely intact.

Employee Benefit Schemes

"With these solid results and reserves of strength built up through half a century of hard work with the valuable experience gathered in the past, we are entering our Golden Jubilee Year. Your Directors have decided that we should make our Golden Jubilee Year an occasion for some items of noteworthy development of the Bank and the further extension of its spheres of useful service. They have, therefore, decided that, in addition to a few functions of the usual type, that are arranged to celebrate such an event, the Bank should sponsor schemes of permanent value for the benefit of the employees of the Bank to whose hard work the growth of the Bank is chiefly due and for the benefit of the people of low-income groups in our society as a contribution by the Bank for the growth of our nation.

"Your Directors have before them a scheme of raising a fund called 'The Canara Bank Golden Jubilee Staff Welfare Fund.' Among the objects of the fund will be the economic, social, and moral advancement of the members of the staff and to help them to develop habits of thrift, self-help and better living and to give financial aid to members in case of sickness, or distress, and for education of children, etc. The membership will be purely voluntary and the benefits of the funds will be confined to members who will manage the funds under a democratic constitution. The funds will be raised by monthly deposits from members at not less than one per. cent. of their salary and the Bank will contribute a substantial amount to form a nucleus of the fund. If properly worked, the fund is calculated to play an important part in promoting the welfare of the members. It is hoped that the majority of the members of the staff would join the fund and work it out successfully.

"Your Directors have also before them a scheme for housing loans to employees on hire-purchase basis with a sufficiently long period of repayment. The amount of loan would depend upon the salary of the employee and the rate of interest would be as low as 3½ per cent. simple. I am sure this would enable a number of our employees to have houses of their own.

Employees' Participation in Capital

"Further, your Directors are also considering a pension scheme which can be chosen by the staff as an alternative to staff provident fund and also a scheme for employees' participation in capital through the issue of a special class of shares. The details are being worked out and I hope these would be welcomed by our employees.

"I may recall to you that at the general body meeting in 1952, you had appointed a committee of shareholders to consider ways and means to commemorate the centenary of our founder. This committee had drafted a scheme of loan scholarships with a view to promote and encourage higher technical and scientific education. The scheme for some reason or other could not be inaugurated. Your Directors have now decided that with necessary modification, this scheme could be inaugurated on the occasion of our Golden Jubilee, not only as a fitting memorial to our founder whose interest in education is so well known but also as the Bank's contribution towards the welfare of our rising generations of talented young men and women.

"I may here give in brief the salient features of this loan scholarship scheme. A separate fund, called 'The Canara Bank Jubilee Education Fund,' will be registered as a society by some friends and well-wishers of the Bank. The objects of the fund will be promoting and encouraging higher technical and scientific education by arranging with your Bank granting of loan scholarships on a low rate of interest to be repaid on convenient instalments. The Society will raise donations from the public to which the Bank also will make a substantial donation. The Bank would, out of its own funds, grant scholarship loans, up to a total of five times the funds of the society, but not exceeding ½ to 1 per cent. of our total deposits in all, at any time, to poor and deserving students of high merit for prosecuting higher technical and scientific studies. The society would guarantee the loans and undertake to hold intact the whole or part of its funds amounting to not less than 20 per cent. of the highest amount estimated to be outstanding at any time, to be made available to the Bank in case any loan has to be written off as bad debt. The granting of the loan and

PROGRESS OF IRRIGATION AND POWER PROJECTS SURVEYED

SCOPE FOR FUTURE USE OF WATER RESOURCES

MR. Jawaharlal Nehru, India's Prime Minister, frequently refers to the Five-year Plan as a "mighty adventure." Perhaps, this phrase is more truly applicable to the giant power and irrigation projects than to any other single activity undertaken by the Central and State Governments in this country. So enormous has been the work done in this sphere, and so securely are the foundations for the future of agricultural and industrial progress being laid by the multi-purpose and even the relatively minor projects, both those already completed and those under various stages of completion, that all this achievement will stand as a permanent testimony to the post-war efforts of the Government at national reconstruction, even if many of the other activities of the Government are gathered into oblivion.

It was an inspiring survey that Mr. Gulzarilal Nanda, Minister for Irrigation and Power, made of the development in the sphere of irrigation and power in the course of the debate in the Lok Sabha on the demand for grants in respect of his Ministry. He gave what must be acknowledged as a very encouraging overall picture of the country's efforts at harnessing the water resources of the country; the resources of river water alone are estimated at 1,400 million acre feet. It had once been computed that only 6 per cent. of the resources were utilised. By 1950, this proportion had risen to 12 per cent. At the end of the first Plan, it is estimated to have risen to 16 per cent. and at the end of the second, to 19 per cent. The fact is that the rivers cannot be drained to the last drop to serve irrigation and power purposes.

A rough assessment of the possibilities of maximum beneficial irrigation that can be had over and above what is contemplated in the first and second Plans has been made. According to this computation, another 130 million acres could be added to the land under irrigation after all the projects under the two Plans are completed. It has been further estimated that, if this limit were reached, the country would be utilising about 48 per cent. of the available supply of river waters. Presumably, this is to be regarded as the upper limit of availability. If this level has to be reached, the country will have to spend about Rs. 4,500 crores—that is, almost the entire outlay in the second Plan. Obviously, this goal cannot be reached in the near future, thanks to both financial and practical hurdles in the way of such an achievement. As regards hydro-electric power, the potential power supply is estimated at 35 million kw. So far, the country has been able to tap about 3.4 million kw. only; this will go up to 6.8 million kw. at the end of the second Plan. In another 15 or 17 years, it should be possible to go up to 15 million kw.

Total Expenditure

During the period of the first Plan, the total expenditure on irrigation and power projects was about Rs. 594 crores, as against the total allotment of Rs. 642 crores (inclusive of the later additions of Rs. 84 crores made to the original outlay of Rs. 558 crores). The total expenditure includes Rs. 229 crores, being the expenditure on the multipurpose projects financed by the Centre. At the beginning of the first Plan, the total area irrigated was 50 million acres and the power generated was about 2.3 million kw. Some 7 million acres are estimated to have been added to the total land under irrigation by the end of the first Plan and 1.1 million kw. to the total supply of electricity. The second Five-year Plan makes a provision of Rs. 898 crores and, when the projects included under this Plan are completed, it will add 21 million acres (12 million acres through major and medium projects and 9 million acres through minor schemes) to irrigated area and 3.4 million kw. to power supply. Some of the schemes taken in hand in the second Five-year Plan will yield results only at a later period; such schemes will help irrigate some 12 million acres.

It is interesting to note that the share of the private sector in the supply of electricity will gradually diminish as the Plan progresses. At the beginning of the first Plan, the public sector accounted for 26 per cent. and the private sector 74 per cent. of the total power supply. At the end of the first Plan, the respective proportions of the public and the private sectors would be 58 per cent. and 42 per cent. and at the end of the second, they would be 63 per cent. and 37 per cent. It is gratifying to note that the utilisation of power for industrial purposes is steadily increasing. Such utilisation accounted for 62.6 per cent. in 1950; it moved up to 65.7 per cent. in 1955; it is expected to go up to 72 per cent. at the end of the second Plan.

Rural Electrification

Considerable progress has also been made on the rural electrification front, though much still remains to be done. At the beginning of the first Plan, only about 11 per cent. of the total of 2,367 villages and towns with a population of 5,000 to 10,000 had been electrified. This proportion, at the end of the second Plan, will go up to 32 per cent. As regards villages with a population of less than 5,000, the proportion of electrified areas has risen from 0.5 per cent. to 0.8 per cent. Explaining the difficulties in the way of rural electrification, Mr. Nanda said:

"Provision of power to rural areas in view of small and scattered loads is not a paying proposition. We have had several discussions and seminars where engineers met and considered this problem. It was clear that rural electrification has to be subsidised. Proposals were made and the view was taken that each State must first make its own working self-supporting, in the sense that, if it has any profit on urban electrification, it must divert that to rural electrification before it asks for any help. Figures are being collected. Meanwhile, some advance is being made. Under the first Plan, only interest was to be paid—capital had not to be paid—during the first five years. Now it has been decided that, for the first five years, no interest will be charged. That is an element of subsidy but the scheme is still under consideration and something more may be done. I will at least try to see that something more is done for rural electrification than has been possible so far."

Individual Projects

Mr. Nanda gave some details about the progress of work in some of the individual projects. There has been no change in the estimate of Rs. 70.8 crores sanctioned for the first stage of the Hirakud project. The progress in this project, it is stated, has been "phenomenal during the past two seasons." The dam will be substantially completed by August, 1956 and water for irrigation for about 100,000 acres and 24,000 kw. of power from the first unit will be available then. In the course of another year, the remaining three generating sets will be commissioned when the total power made available by the project will be about 123,000 kw. By 1958-59 the project will be able to irrigate 450,000 acres. Work has been started by the Government of Orissa on the Delta irrigation scheme, which has been sanctioned as an adjunct to stage I of the Hirakud project. On completion, it will irrigate about 1,870,000 acres. The second stage of the Hirakud project is expected to cost Rs. 14 crores. This stage, when completed, will add 72,000 kw. to the power generated in the project. It had been alleged some time ago that an infructuous expenditure of Rs. 192 lakhs in digging certain canals had been incurred. This expenditure will be a direct charge on the second stage of the project, so that there will be no real loss except some Rs. 3 lakhs by way of compensation to contractors.

On the Bhakra Nangal project, all the works, except the Bhakra dam and its two power houses, as well as the power house at Kotla and the transmission system, have been completed. As regards the future programme, the Ganguwal power house, which was commissioned in January 1955, with an installed capacity of 48,000 kw., has been supplying power to Punjab, P.E.P.S.U. and Delhi and for construction purposes. The second power house at Kotla is expected to be completed by June 1956 with an installed capacity of 48,000 kw. The load demand on Bhakra power has considerably increased since the 1953 estimate was framed which provided for one unit of 90,000 kw. at the Bhakra power house in addition to the four Nangal power houses of 24,000 kw. each. This is mainly due to the requirements of the fertiliser-*cum*-heavy water factory at Nangal. The committee that was set up by the Control Board to examine the matter, recommended that along with the two additional units, one each at the two Nangal power houses, five units, each of 90,000 kw. should be initially set up at the Bhakra dam (a total 495,000 kw. installed capacity), to be followed up later with the installation of another four units as the demand developed. These recommendations have been accepted. The installation of these units is expected to be completed by 1959-60. In view of the increase in the scope of the electrical portion of the project, the estimate has been revised further. According to the revised estimate, which is under scrutiny, the project will cost Rs. 173.54 crores.

Damodar Valley Corporation

As regards the Damodar Valley Corporation (D.V.C.), Mr. Nanda confessed his inability to present a very optimistic picture. He revealed that the work that had been done was good, but there was delay. The Maithon part of the project has been nearly completed, so that the region will soon have power and water from this source. The delay of 6 to 8 months, which has occurred, has prevented the Government from transferring the surplus machinery to the Panchet Hill project, so that there has been some delay in undertaking the later project. Be that as it may, the load on the D.V.C. system, Mr. Nanda said, is rapidly growing. The aggregate demand has risen from 22,280 kw. in 1953 to about 74,330 kw. and the maximum load which the D.V.C. can carry is 104,000. The demand for power is expected to increase considerably in the near future. Among the industries in the valley, the T.I.S.Co. and the I.I.S.Co. will want more power very soon. There will be a new steel factory at Durgapur. The chemical industries at Dalmianagar are being expanded. By 1958, the region's demand for power is expected to go up by 150,000 kw. In order to meet this ever-growing demand, the Government proposes to augment the generating capacity of the D.V.C. by installing a fourth unit at Bokaro, a hydro station at Konar and a second thermal station at Durgapur.

In the course of his survey, Mr. Nanda dealt with two important issues—the standardisation of machinery and the setting up of the National Construction Corporation. He said that the machinery used in the projects had not been standardised so far. This had accentuated the problem of spare parts. The Government, he stated, had, therefore, decided to standardise the machinery and equipment in the projects which would ease the problem of spare parts and also facilitate the training of workers. Obviously, this has to be done with a certain degree of caution, for one has to avoid a situation in which a great part of the existing equipment may become redundant. The Government, he further revealed, had been thinking of setting up a National Construction Corporation to take up big projects. He felt that it could build up an organisation and attract to itself the best technical personnel and also utilise the surplus machinery. This proposal, he said, had been accepted by the Co-ordination Board of Ministers. The States had been consulted and only one State had said that it did not approve of the idea. He added: "There is also a constitutional aspect to this question. I do not think there is much in it. The point is whether the Centre can spend any money on a construction corporation which is going to work for the States, this subject being a State subject. I hope we will be able to straighten that out."

Surplus Labour

This is an impressive survey of the work done by the Ministry of Irrigation and Power, and of the work that it expects to do in the near future. Mr. Nanda need not have spoilt it by comparing the Government, as an employer, with a private capitalist. Replying to the charge that the Government intended to retrench some employees in the D.V.C.—he revealed that, during the next six months, some 3,000 work-charged and 3,000 muster employees of the D.V.C. would become surplus—he said that the Government would do its best to find alternative employment for the surplus workers. He added: "We do not take a view of our responsibilities in the same way as any private capitalist employer will do." It is a pity Mr. Nanda thought it fit to indulge in such cheap cynicism. There can be no real comparison between a private employer, with his obligations to the shareholders and the imperative need to keep costs down to a minimum in order to give a competitive service to the consumer, and the Government which can afford to be liberal to its employees at the expense of the taxpayer. We have the fullest sympathy for the Government in its difficult task of tackling the surplus labour problem in the D.V.C., and none whatever for the persons who wish to make political capital out of this problem. Only, this experience, it is to be hoped, will enable the Government to appreciate the problem of surplus labour in private establishments and induce it to take a realistic, if not a liberal, attitude towards private employers.

NEW PRODUCTS AND PROCESSES

Punched Card Accounting

A NEW series of punched card accounting machines, known as the Double 80, is being produced by Powers-Samas (Holborn Bars, London, E.C. 1). The new machines function on the same mechanical principle as the existing types and the name is intended to indicate their unusually large recording capacity. Although the cards have the same dimensions as the normal 65-column cards, they can accommodate 160 columns of information or even more under certain conditions. It is possible, for instance, to record 19*s.* 6½*d.* in only two columns. It is stated that much attention has been paid to the location and accessibility of the control buttons. In the tabulator—a machine which is preset by the operator for the type of work it is to produce—the controls are unidirectional. Those which move in the horizontal plane are pulled out to become operative while those in the vertical plane must be moved down before operations can begin. While the new machines have been designed to provide complete installations in themselves, they can, in addition, be operated in conjunction with electronic computers. It is claimed that they form a most efficient input and output adjunct to electronic data processing installations.

Airport Fuel "Dispensers"

Owing to the increasing size and speed of modern aircraft, conventional methods of re-fuelling at airports with road tankers are being replaced by hydrant fuelling installations. In these installations, the fuel is pumped direct from storage tanks through underground pipelines to special hydrant "boxes" located in the aircraft parking areas. From the hydrants, which are flush with the ground, the fuel is transferred to the aircraft by means of a "dispenser" or small trolley which carries the hoses, pressure controller, meter and other equipment. A large number of these "dispensers" is now being made for the Shell Petroleum Company. They have been designed by Thompson Bros. (Bilston) in co-operation with Shell and consist of detachable fibre-glass reinforced plastic bodies mounted on three-wheeled steel frames. The fibre-glass moulded bodies are claimed to offer considerable advantages in applications such as this. Attractive curves and shapes can be produced without expensive tooling and they are not subject to corrosion. In addition, they are light and can be easily repaired. The "Beetle" resin used in the manufacture of the plastic bodies of the new dispensers is being supplied by B.I.P. Chemicals of Oldbury, Worcs.

Nylon Tarpaulin

Tarpaulin made of nylon is widening its market in the U.S., especially in the trucking, railway, aircraft and warehousing industries. It is building up its share of the total market which until recently was dominated by tarpaulin made of canvas. A leading manufacturer of the nylon fabric, Reeves Brothers, Inc., measures the growth of its acceptance by an increase in its production facilities from a small six-man operation two years ago to a multi-million-dollar plant at Buena Vista, Virginia, at the present time. The biggest market for nylon tarpaulin at the present time is in the trucking industry. Open-top trailers, which are much more adaptable to varying loads than are enclosed trucks, have increased their operational value through the nylon fabric. This is hard-wearing and resistant to weather, and so light that it can be handled by the truck driver alone. The new fabric has also been used to cover aeroplanes left on airfields at night, and to cover the contents of open railway cars. The warehouse industry is also a customer of growing importance. The nylon tarpaulin comes with a coating of neoprene rubber. Besides being much lighter to handle, in comparison with standard canvas tarpaulin, it is said to be waterproof and very resistant to tearing, oil and acid damage, mildew and fungus.

Proteus Engine for Naval Patrol Vessels

A marine version of the Bristol Proteus turboprop engine, used in the Bristol Britannia airliner, is being developed by Bristol Aero-Engines Ltd, in collaboration with the Admiralty, to power high-speed patrol boats. The engine has already completed over 500 hours' running under stimulated sea-going conditions. In one test of 225 hours, salt water was sprayed into the engine at twice the maximum rate ever recorded at the intake of a gas turbine during sea trials. It was proved that, if the engine's compressor blades become so encrusted with salt that performance is affected, they could be washed clean and normal power restored within five minutes. The Proteus marine version is basically similar to the Proteus 755, power unit for advanced production versions of the Britannia airliner. It will weigh 3,000 lbs., and develop 3,500 shaft horse-power.

Tubes from a Plastic Substance

Algemene Kunstzijde Unie (A.K.U.) N.V., Arnhem, has developed in a pilot plant the manufacture of tubes from its own plastic product "Akulon." The special properties of this tube are, among other things, its low weight (1/7th of iron), high tenacity and hardness, resistance to high temperature and chemicals. The tubes can be made with an outside diameter of up to 110 mm. (4.3"). An agreement was concluded with a large Netherlands concern, which installs pipelines in ships, etc., to introduce the Akulon tube to shipyards and other industries, and further to develop its potential uses. At present, Akulon tubes are manufactured by three Netherlands factories and marketed by two big trading concerns.

STANDARDISATION OF CONDITIONS OF LIFE POLICIES

LIBERAL PROVISIONS MADE

ALMOST the first important announcement made by the Government after it took over life insurance business from the private sector was about the reduction of premium rates which were standardised at a level slightly lower than those quoted by the "Oriental." This has now been followed by standardisation of conditions in respect of life policies. This will apply to some of the most popular forms of life policies such as the limited payment life policy, the special whole life policy, the endowment assurance policy and the double endowment policy.

Standardisation has now been effected in respect of such conditions and privileges attaching to life policies as days of grace, revival of policies, non-forfeiture regulations, surrender value, assignments and nominations, suicide and disability benefit. In standardising the conditions and privileges, care has been taken to retain the liberal provisions which were found in the life policies issued by the leading insurers. The period denoted by "days of grace" for payment of premiums will be 30 days for payment of yearly, half-yearly or quarterly premiums and 15 days for monthly premiums. Policies, if they have lapsed, may be revived within six months of the due date of the first unpaid premium without evidence of health on payment of arrears with interest at the rate of ½ per cent. per month. If revival is effected within 14 days from the date of lapse, only a simple revival charge of As. 8 will be required. After six months, a lapsed policy can be revived only after the production of an approved medical report for which the assured will have to bear the necessary charges.

Non-forfeiture Systems

Two alternative systems of non-forfeiture regulations are available to policyholders. Under the first system, called system 'A', the policy will become automatically paid-up if, after at least two full years' premium have been paid, no subsequent premium is paid. Notwithstanding this clause, if at least three full years' premium have been paid, the policy will be deemed to be in force for a period of six months. Under system 'B,' if payment of premiums is discontinued after the policy has acquired a surrender value, the Company will automatically advance the premiums as they fall due and maintain it in force so long as there is sufficient net surrender value to cover these advances and interest thereon at 6 per cent. per annum.

A policy may be surrendered for cash after the premiums have been paid for at least two years or to the extent of one-tenth of the total number stipulated for in the policy, provided such one-tenth exceeds one full year's premium. Loans will be granted to policyholders within the surrender value of the policy, the only expense to the borrower being the stamp duty on the loan bond. All policies are free from restrictions as to travel, residence and occupation.

Disability Benefit

A notable clause is the one which relates to disability benefit. Briefly, this clause provides that, if a policyholder becomes disabled through accident, the Company will waive all further premiums payable by the policyholder though there is a limit set for such benefit. The conditions under which such waiver will be granted include:

(a) The maximum aggregate limit of assurance under all policies issued by the company upon the same life to which the benefit of the waiver will apply shall not in any event exceed Rs. 20,000. If there be more policies than one and if the total assurance exceeds Rs. 20,000, the waiver shall apply to the first Rs. 20,000 assured in order of date of the policies issued. The premiums payable after satisfactory proof of such disability is furnished to the Custodian shall be only for the assurance, if any, exceeding the maximum aggregate limit of Rs. 20,000.

(b) The disability above referred to must be disability which is the result of an accident and must be total and permanent and such that there is neither then nor at any time thereafter any work, occupation or profession that the life assured can ever sufficiently do or follow to earn or obtain any wages compensation or profit. Accidental injuries which independently of all other causes and within 90 days from the happening of such accident, result in the irrecoverable loss of the entire sight of both eyes or in the amputation of both hands at or above the wrists, or in the amputation of both feet at or above the ankles, or in the amputation of one hand at or above the wrist and one foot at or above the ankle, shall also constitute such disability.

(c) Immediately after the happening of the disability, full particulars thereof must be given in writing to the company at its head office together with the then address and whereabouts of the life assured and within 90 days after the happening of the disability there must be given to the company at its head office, in the manner required by it, proof of disability satisfactory to the Custodian and without any expense to the company, and thereafter similar proof must be given, as and when required by the company, of the continuance of such disability. Any medical examiner nominated by the company shall be allowed to examine the person of the life assured in respect of any disability claimed, in such manner and at such times before and/or after the disability is accepted by the company as the company may require.

A suicide claim, if it occurs after one year from the date of taking out the policy, will be passed. But, if it occurs within this period, the company will not normally pay the claim. The liability of the company will then be limited to the beneficial interest which a claimant has acquired at least one month previous to the death of policyholder. The relevant clause states:

"In case the life assured shall within one year from the commencement of this policy commit suicide whether insane or not at the time, the liability of the company shall be limited to the extent of the beneficial interest which any person (other than the life assured) shall prove to the satisfaction of the Custodian to have been acquired in the policy *bona fide* and for valuable consideration of which notice in writing shall, at least one calendar month previous to death, have been given to the company at its head office and save and except to that extent this policy shall be void and all claims to any benefit, advantage or interest in the funds of the company, by virtue of this policy, shall cease and determine."

Although standardisation of policy conditions has become inevitable through the nationalisation of insurance, it must be recognised that it involves at least one danger. There may be less incentive, particularly under a nationalised setup, to vary the policy conditions to suit changing conditions, to try new ideas and to test whether new forms of policies have popular appeal. For instance, a British insurance company recently hit the headlines in the financial Press by announcing a policy that will carry the right to a fixed bonus through payment of a small additional premium. A policy of this kind will certainly appeal to certain classes of the insuring public. It is, therefore, necessary to be alive to the need for changes and also to study the developments in other countries in order to see how far they can be adapted to conditions in India.

Language Used

Yet another consideration is the need for simplification of the language in which policy conditions are presented. If these could be translated—we advisedly use the word "translated," because the legal jargon in which they are expressed constitutes a language by itself—into simpler language, they would become far more readily intelligible to ordinary men and women. It is true that legal jargon cannot be altogether avoided, for courts might be required to interpret the policy conditions in the event of a difference of opinion between the authorities and the policyholders or their heirs. But this need not prevent the authorities from issuing a booklet which explains in simple language what the policy conditions mean to the insured. Such a booklet would also enable salesmen to explain the policy conditions to the layman. Generally speaking, these salesmen, without realising that merely because they know a thing well others need not necessarily know it equally well, are prone to use the legal language of the policy to the utter dismay of the insured. Finally, it must be realised that there is no opportunity for a policyholder to accept, alter or reject the policy conditions. Those conditions are there, fixed and unalterable. And the legal presumption is that the policyholder has read them and understood them. It is, therefore, morally incumbent upon the authorities to make some conscious effort in order to see that the policyholder knows what he is buying when he takes a life policy.

UNEMPLOYMENT INSURANCE IN U.S.

Like old age and survivors' benefits, unemployment insurance is another joint Federal-State project operated by the 48 States in co-operation with the Federal Government's U.S. Employment Service (U.S.E.S.). Although individual State programmes existed earlier, the national plan of unemployment insurance went into effect with the Social Security Act of 1935. At that time, the States were encouraged (by a tax device) to enact and administer their own laws which would meet general Federal standards. Those which did were given Federal grants sufficient for the programme to be properly administered. The costs are met by a tax on employer pay-rolls. By 1939, all States and territories were paying unemployment benefits. Today, the maximum weekly unemployment cheques range from $22 to $45 in the various States. The average weekly benefit in 1955 was about $25, or about one-third of the average worker's regular pay. All States, in addition, pay partial benefits for partial unemployment. The maximum duration of weekly payments ranges from 16 weeks in some States to 26 in others. During 1954, an average of 1,600,000 jobless workers received benefits each week. Altogether nearly 6,600,000 claimants received one or more benefit cheques during the year.

The United States Employment Service, which runs the programme, has more than 1,500 local jobplacement offices all over the country. Unemployment insurance claims are filed through these offices, and an attempt is made to have as many decisions as possible taken at the local level. Though the programme now covers 41,000,000 workers, many feel that its scope should be expanded further to include such groups as agricultural processing workers, domestic servants and employees of non-profit organisations.

The newest welfare benefit plan in America is the supplemental unemployment payment scheme which is popularly known as "guaranteed annual wage," (G.A.W.). Guaranteed wage agreements have been negotiated throughout most of the automobile and tin can manufacturing industries. The several G.A.W. plans differ in some details but all provide a company fund from which unemployed workers are paid supplements to the amounts paid by State plans. The Ford Motor Company agreement, which was the first of the big plans, calls for company contributions for up to 26 weeks of unemployment. During layoffs workers are to receive 60 to 65 per cent. of their regular take-home pay.

Insurance against unemployment is now taken for granted in America. The lack of bitterness in the successful drives for the guaranted wage—almost no time was lost in strikes—seems to indicate that it, too, has entered the American labour scene on firm footing.

PROGRESS OF LIFE INSURANCE

New life business in 1955 in the English-speaking countries, according to the Institute of Life Insurance of New York, was at peak levels. Such business in 1955, as compared with the previous year, expanded by 20 per cent. in Australia, 12 per cent. in the U.K., 5 per cent. in Canada and 4 per cent. in the U.S. Other countries also recorded large increases in business. An analysis of the life insurance figures for 31 countries showed that the increase in life business in force at the end of 1954 over that at the end of the previous year ranged between 1 per cent. and 33 per cent., and the 1954 business was two to 70 times the pre-war figures.

In many countries, the increase in life business over the 16-year period ended 1954 was larger than in the U.S. Thus, while the increase was only 10 per cent. in the U.S., it was 33 per cent. in Japan and Brazil, 32 per cent. in Greece, 31 per cent. in France, 28 per cent. in Mexico and Puerto Rico and more than 10 per cent. in Australia, Austria, Belgium, Chile, Colombia, Germany, Italy, New Zealand, Peru, the Philippines, Sweden, Turkey and Uruguay. It may be mentioned here that, in India, the life insurance business has expanded from Rs. 272 crores in 1939 to Rs. 1,059 crores in 1954, an increase of 289 per cent.

Since 1939, the gain in life business in the U.S. has been 206 per cent. There has been a 70-fold gain in Japan, 60-fold in Greece, 40-fold in Italy, 27-fold in France, 20-fold in Brazil and Colombia, 15-fold in Turkey, 13-fold in Peru, 12-fold in Finland, and between two-fold and ten-fold in Australia, Belgium, Canada, Chile, Cuba, India, Mexico, the Netherlands, New Zealand, the Philippines, Puerto Rico, Spain and Uruguay.

Commenting on the apparently large increase in life business in certain countries, the Institute says that they "reflect currency devaluation in certain countries and sharp price inflation in certain others." In some countries, however, there has been, according to this study, a net gain in insurance as measured by relating net life insurance in force to a year's national income. Greece leads all countries in the ratio of insurance to national income, such being 150 per cent. Canada is second with 128 per cent. The U.S., it is stated, is the only other country with a ratio greater than 100 per cent., with 111 per cent., to be precise.

HEALTH INSURANCE

Total benefits amounting to Rs. 10.29 lakhs were paid to workers under the Employees' State Insurance Scheme, which is operative in Greater Bombay, during the two months of November and December last. Of this amount, Rs. 95,710 were paid as temporary disablement benefit, Rs. 3,773 as dependants' benefit, Rs. 5,372 as partial permanent disablement benefit, Rs. 9,73,023 as sickness benefit and Rs. 51,674 as maternity benefit. Since the inception of the scheme in October 1954, total benefits amounting to Rs. 32.18 lakhs were paid to the workers by the end of December 1955.

During the last two months of 1955, as many as 20,047 workers were newly registered under the scheme, taking the total number of registered workers to 582,968. During the period under review, 8,180 accidents were reported from various factories. Payments amounting to Rs. 2.63 lakhs were made to chemists during November and December and of Rs. 6.98 lakhs to insurance medical practitioners. Again, during this two-month period, as many as 23,349 insured workers attended diagnostic centres, while X-ray plates were taken in 1,647 cases and blood examination in 6,673 cases. As many as 1,447 persons were admitted to the various hospitals.

INDIAN PAPER MAKERS ASSOCIATION

MR. V. MEHTA OUTLINES PROGRESS OF THE INDUSTRY DURING FIRST PLAN PERIOD

PLEA FOR RATIONALISATION OF EXCISE LEVY

ADDRESSING the Annual General Meeting of the Indian Paper Makers Association held in Calcutta on 12th April 1956, Mr. V. Mehta, Chairman of the Association, recorded with satisfaction the part played by the paper industry in achieving almost the targets set for production and installed capacity during the first Five-year Plan. He expressed the hope that the industry would repeat its performance during the second Plan period. There were, however, two factors which might, according to Mr. Mehta, retard the achievement of target under the second Five-year Plan, namely, inadequacy of transport and the burdensome excise duty.

The following is the full text of Mr. Mehta's speech:

"GENTLEMEN,

"On behalf of the Committee I welcome you to this annual general meeting of the Indian Paper Makers Association. The deliberations of the Committee during the past year are summed up in the report of the Committee already circulated to the members and I trust the members noticed that the office of the Association and the Committee carried out their duties with traditional faithfulness and promptitude.

"Almost four years ago, speaking here in this very capacity, I had the pleasure of welcoming the inauguration of the first Five-year Plan. By a coincidence my second term of office marks the conclusion of the first Five-year Plan and inauguration of the second Five-year Plan. This naturally gives me occasion to record with satisfaction that the paper industry played very well the part assigned to it during the first Five-year Plan and hopes to repeat its performance with credit during the second Five-year Plan. Against actual installed capacity of about 136,000 tons and production of 114,000 tons, the first Plan fixed targets of 211,000 tons installed capacity and 200,000 tons of production. Authentic figures for the year ended March 1956 are not yet available, but from production reports it would appear that the targets set for production and installed capacity have been nearly achieved.

Healthy Policy of the Industry

"On analysis it is revealed that almost the entire increase in installed capacity or actual production has come about on account of completion or part completion of expansion schemes of the units existing at the beginning of the Plan. A significant fact which emerges from this analysis is that very little new capital had to be raised for bringing into being the increased capacity and production. This speaks volumes of the very healthy and commendable policy of the industry of ploughing back the earnings into expansion schemes. It remains to be seen how the new tax proposals relating to undistributed profits react on this policy which is certainly not worth rejection.

"During the period of the Plan a number of new licences were granted, but I am not aware of any new project having actually gone into production. In fact, I would not be surprised if some of the schemes covered by new licences remained fated to be still-born.

"It will not be out of place here to make mention of progress, or shall I say the lack of it, on two important recommendations made by the Planning Commission in respect of paper industry. The one related to the formation of a Development Council for paper industry and the other related to survey of raw materials *vis-a-vis* the requirements of the industry so as to ensure harmonious development both of the existing units as also new units.

"Although, as far back as October 1952, the Government announced their intention and the Associations were asked to submit the names of their nominees on the Council, no Council was actually constituted. Your Association highlighted this omission in its memorandum submitted to the Planning Commission in June 1955 and emphasised the importance of setting up the Council without further delay. Probably, as a result of this representation, a paper panel was constituted and, although the names originally mentioned included some eminent persons connected with the industry, neither of the Associations were consulted and asked to nominate their representatives and, in fact, no member of our Association appeared to be included in the list at all. On a further representation, the Government extended an invitation to Mr. P. H. Sykes to serve on the Panel and, because this excellent choice was fully acceptable to the Association, he has since been adopted as the Association's representative. Though belated, I still welcome the formation of this Panel, but I fully share the feelings of my colleagues that the Government should recognise the representative character of the two Associations and accept their nominations on the Panel in a normal way. Ignoring both the Associations in a matter like this is a poor and thoroughly undeserved compliment to the spirit of utmost co-operation that has always existed between the Government and the industry. It is also felt that representatives of the industry guided by mandates from the Associations will ensure correct and dispassionate view on many ticklish problems on which this Panel will have to deliberate.

Survey of Raw Materials

"With regard to the survey of raw material again, I welcome on behalf of the industry the formation of an *ad hoc* committee with exactly the aims and objects which were outlined by the Association in its letter to the Planning Commission in June last. Here again, I am sorry that the Government are unable to appreciate the necessity of associating on this Committee representatives of the industry. While we admit that the Committee consists essentially of technical experts, it is to be realised that on the findings of this Committee will depend a good deal the question of licensing new projects or expansion schemes of the existing units.

"It cannot be doubted that people in the industry are bound to have a thorough familiarity with all the important raw material sources of the country and their practical experience and commercial knowledge as also their understanding of the problems of the industry should be immensely useful in compilation of the survey report intended by the ad hoc committee. Instances are not wanting in the past when over-enthusiasm for forest revenues or parochial outlook tended to disregard practical views on a project. In any case, the existing units have a fully justifiable right to make sure that no new projects are planned at the cost of their present production and reasonable aspirations for future expansions. Robbing Peter to pay Paul is not going to achieve targets of the Plan. Personal and provincial considerations must be vetted by impersonal and national considerations. In short, importance of taking representatives of the Associations on the ad hoc committee cannot be overemphasised.

"The targets fixed for the second Five-year Plan look for a rated capacity of 450,000 tons and production of 350,000 tons. The existing licences already cover 350,000 tons and capacity of only a lakh of tons still remains to be licensed or planned during the course of the second Plan. Out of the existing licences, 45,000 tons are covered by new projects, and the balance is contributed by the existing plants and their expansion schemes.

Transport

"It is too early to comment on the figure of 450,000 tons set as target for installed capacity, but there is no doubt in my mind that, if industrialisation in the country were to proceed according to the Plan and if spread of literacy gathers greater momentum, the demand is bound to rise and the industry will make every attempt to catch up with the demand. What is, however, agitating the mind of everybody in the private sector is a very apparent lack of emphasis placed on development of transport. I am not aware of any large size industry which may not be complaining against transport bottlenecks. The trouble has been of a chronic nature in so far as the paper industry is concerned, and hardly a year can be spotted when a pointed mention of transport difficulties may not have been made either in the annual report or in the presidential address. It can be well imagined, therefore, what anxiety must have been caused to those in the paper industry when the Railway Minister, while presenting the Railway Budget this year, stated clearly that transport would not be able to cope adequately with expanding trade and output except in the case of steel industry and, to some extent, in the case of cement and coal. This statement of the Railway Minister is bound to raise a big question mark before anybody about to engage himself in putting up additional plants to cover the targets set by the Planning Commission. It cannot be gainsaid that adequate development of transport is an essential prerequisite to development planned in other sectors and serious note should be taken of it by the Government.

Excise Duty

"Another retarding factor which might be in achieving the new target is the levy of excise duty. To me it appears irreconciliable in principle that any attempt should be made by the Government to enhance the customers' cost of any commodity, the use and production of which are sought to be increased twice over by the Planning Commission. Whatever attempts were made by the industry to keep their selling prices low in order to encourage greater consumption of paper, have suffered a serious setback by the levy of excise duty. People in the industry did pass through anxious days on account of pre-budget rumours that all excise duties were going to be enhanced. Many of us heaved a sigh of relief when the final budget proposals of the Finance Minister showed that there was no enhancement of excise duty on paper. I would like to state that the excise duty already levied has not been without repercussions on trade and industry and any further enhancement is likely to have serious adverse effects on any attempts made to achieve either the target of consumption or of production in respect of paper. While on the subject, I would like to state that in applying the present levy to actual items of production a certain amount of rationalisation and uniformity is badly needed. The Association is continuing to make attempts in this direction, but perhaps satisfactory solution will not be available without a conference between the Central Board of Revenue and the representatives of the Industry.

"Members would have already received new contracts from the Government and I would like to record that negotiations took place in a very pleasant atmosphere of mutual goodwill and trust. There has been no serious change in the market trend because the low selling prices maintained throughout served as a substantial cushion to the impact of excise duty. A notable feature, however, has been the sale of Indian newsprint commenced by N.E.P.A. a short while ago. I congratulate the management of N.E.P.A. on their success in their initial bout with difficulties. It is a new experiment and it has a great importance from the national point of view. I am sure, the management will continue to fight the difficulties and succeed ultimately in producing good newsprint at a reasonable cost.

"Before concluding I would like to tender my sincere thanks for the full measure of co-operation I received during my term from my colleagues on the Committee. My thanks are also due to our Secretary, Mr. Windridge, and the stac for their prompt and efficient service during the year."

CEMENT SUPPLY POSITION

Replying to a question in Parliament on the supply position of cement in the country, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, observed:

"There is a serious shortage of cement in the country. The present production is 5 million tons annually, as against a demand for 10 million tons. The charge that the present shortage is due to the unwillingness of the Government to grant new licences to start new units during the first Plan is entirely false. The Government has been trying its best not merely to grant licences but also to persuade people to start new ventures. Because of this, we shall be able to produce about twelve million tons of cement by 1960. Therefore, there is no need to correct our policy. It is quite possible for us to expand production quickly within the next two years. But the overall bottleneck is the railways incapacity to carry any additional production of cement or raw materials for its manufacture. A small expansion of 18,000 tons in the capacity of the Bhadravati Cement Unit has already been sanctioned."

(Continued in next page)

LAND REFORMS IN THE SECOND PLAN—II

CEILING ON HOLDINGS UNNECESSARY AND WILL LEAD TO UNDESIRABLE CONSEQUENCES

THE second aspect of land reforms proposed in the Draft Outline relates to ceilings on holdings. The question of ceilings does not arise in the case of land which is not held under personal cultivation by the owner. Such land is subject to resumption limit of one family holding at the most; the non-resumable areas are to be taken over by the State immediately against payment of rent and later as soon as practicable against payment of compensation. Ceilings, therefore, are relevant to lands which are personally cultivated by the owner. The first Plan did not recommend any specific ceiling on such lands for want of adequate data. But now that the results of census of land holdings are in the possession of the Planning Commission, the Draft Outline has recommended that "the ceiling should be fixed at three times the family holding for an average family whose members do not exceed five in number. Where the number of members is larger, the ceiling may extend to a maximum of six family holdings." The ceiling should apply, according to the Commission, to owned land (including land under permanent and heritable rights) held under personal cultivation.

This proposal is not so unrestrained and unsparing as that relating to resumption for personal cultivation. But lesser evil is nevertheless an evil. Before considering the proposal, it might be better to see how much scope does actually exist for the application of ceilings, and who will benefit from it. A family holding, as defined by the Planning Commission, may vary in land area in bulk of the cases between 10 and 25 acres. This means that part of the holdings above 50 acres and the majority of the holdings above 100 acres will be affected. To know the actual number of holdings affected, one must be in possession of the result of census of land holding and cultivation. These results are available with the Planning Commission and have not yet been made public. But an examination of other data available on the subject suggests that the land area covered by holdings liable to the application of ceilings may not be more than 10 per cent. and the area declared surplus after the application of ceilings may not be more than 2 per cent. of the total cultivated area in the country. If the types of holdings exempted by the Planning Commission, such as specialised farms and efficiently managed farms, are taken into account, the area available for redistribution as a result of application of ceilings will be even less.

This is also the conclusion contained in the first Plan which says:

"The general picture is one of numerous small holdings, a large proportion of them being uneconomic and a small number of middle peasants and a sprinkling of substantial owners. . . If it were the sole objective of policy to reduce the holdings of the larger owners with a view to providing for the landless or for increasing the farms of those who now have uneconomic holdings, the facts at present available suggest that these aims are not likely to be achieved in any substantial measure."

It may also be mentioned that the law of equal inheritance is already fast leading to the division of substantial-sized holdings. Every year, more than 5 per cent. of the holdings are being subjected to division into halves, thirds or even quartiles as a result of the law of inheritance. In a decade or so, most of the substantial holdings would, without fixation of any ceilings by Government, go out of existence.

Undeserving Will Benefit

Not only is the scope for redistribution very small, the benefit also will not go to those who are the most deserving, namely, the landless labourers. After taking into account the various economic, social and administrative factors, the Planning Commission, it seems, has laid down the following order of priority: (i) tenants displaced as a result of resumption of land for personal cultivation; (ii) farmers with uneconomic holdings; and (iii) landless workers. The Draft Outline itself says: "It is recognised that, with the existing pressure on land, only a small proportion of agricultural workers can be settled on land." It may be expected that whatever benefits thus accrue to the landless worker will be largely offset by the diminished employment opportunities for these workers as a result of break-up of the medium-sized farms.

If the distribution benefit of the proposal is negligible, where then is the need or justification for it? One should think that, in view of the small number of holdings liable to ceilings, these holdings should be preserved at least for the sake of maintaining the tradition of large-scale farming under private ownership. These holdings, in brief, are the receptacles of all that is progressive in agriculture. Their existence is necessary at least till co-operative farming gets firmly and widely established, and even later to serve as norms of efficiency for co-operative cultivation which often tends to be less efficient. These holdings combine the benefits of economies of scale and the working zeal of private ownership. This combination is possible neither in large-scale co-operative farming nor in small-scale peasant proprietorship. Therefore, instead of deliberately trying to break up these holdings, Government should take steps to safeguard them against division from the operation of law of inheritance, or sale in parts or other factors.

The proposal about ceilings, besides being needless, is also not free from certain defects. For the purpose of ceilings on holdings, a family is to mean husband, wife, dependant sons, daughters and grandchildren. Suppose a person has four sons, all married having children, and owns land equal to 10 family holdings. Since he is alive, his family can retain at the most only 6 family holdings. But, if he were dead, each son would be considered to be the head of a separate family entitled to three family holdings, so that the larger family as a whole would retain the entire land owned by it. Similarly, the children and grandchildren of two brothers, one of whom is dead and the other alive, would receive materially differential treatment. The family in which the grandparents are dead, though reduced in size, is entitled to retain larger area of land. Proposals where such circumstantial and demographic accidents make a world of difference are not workable in an equitable manner. This defect can be removed by changing the definition of family from two-generation to one-generation family.

Law of Progressive Reduction

What may be called law of progressive reduction cannot justifiably be applied to the question of fixing ceilings. A family with membership three times that of another family has its requirements also three times as large. And if it depends entirely on land, it needs three times larger area of land than the smaller family. The law of progressive reduction can apply only where the number of persons is given and constant. In income-tax, for instance, we use the principle that the larger the income of *a person*, the smaller the proportion of disposable income. We do not say that the larger the size of his dependants, the smaller the proportion of his disposable income. Similarly, in land holdings we can justifiably say that the larger the area owned by a person, the smaller the proportion that can be retained by him. But we ought not to frame a rule or law which would lay down that the larger the size of the family, the smaller the proportion of retainable land. To do this would be against fundamental concepts. The proposal in the Draft Outline fixing a ceiling of three holdings for a family of five members or less, and a maximum of six holdings for families of any larger size, is based on the law of progressive reduction, which is illogical. If the proposal is to be fair, it ought to be 'proportional' in its application—that is to say, three holdings for a basic family and one additional holding for every two members above the basic size.

Another point which deserves consideration is whether the size of family should be the sole determinant of maximum land it can hold, or the existing area of land under its ownership-operation should also be taken into account. After all, the reform does not relate to absentee landlords but to those who cultivate the land owned by themselves. Reduction in the size of the holding, by the application of ceilings, will immediately diminish the income of the family and reduce its intensity of employment. This in the case of most families would lead to a cut in their expenditure on current needs. It is not easy for one to slide down to a lower level of expenditure than the one he is accustomed to. Care, therefore, has to be taken to see that the land reform measure does not impinge severely upon the affected families. This is all the more necessary, because the impact would be sudden and not gradual. When 'sudden' and 'severe' combine, they become 'distress.' Those who hold larger areas and are better off now, should, no doubt, lose more than others but not so much as

AUDITORS' REPORT.

We have audited the Balance Sheet as on 31st December, 1955, and Profit and Loss Account for the year ending 31st December, 1955, of United Bank of India Ltd. as above and in attached sheets set forth respectively with Books of Accounts as kept at the Head Office with which are incorporated the Branch Balance Sheets as on 31st December, 1955, and Profit and Loss Accounts for the year ending 31st December, 1955 (both in India and Pakistan) as audited, certified and reported to by the respective Auditors and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory.

(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank.

(c) The Balance Sheets and Profit and Loss Accounts and the relative returns received from branch offices of the Bank have been found adequate for the purpose of the audit.

(d) The Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law.

(e) Such Profit and Loss Account shows a true balance of Profit for the year.

(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the Books of the Bank.

(g) In our opinion the Books of Account have been kept by the Bank as required by Section (130) of the Indian Companies Act, 1913.

to be reduced to an equal level of living with others.

An Inconsistency

The inconsistency between the proposal relating to ceilings and that relating to resumption of land may also be noticed. An owner who is cultivating his land himself at the time legislation takes effect can retain under his control three to six family holdings. On the other hand, if an owner, by chance or due to some circumstances, is not cultivating land himself at the time of enactment of the legislation but wants to do so after some months or a year, cannot regain control of more than one family holding. There may be numerous families which, for one reason or another, are not in a position to keep their lands under personal cultivation at the time of enactment of law, but are keenly desirous of cultivating it themselves after a short time when their circumstances permit. Law should not be such that a matter of a year or two should make a vast difference to owners.

Preferably, the ceilings on land cultivated by the owner and the limit on resumption of land for personal cultivation should be the same. In any case, the difference should not be as great as is proposed in the Draft Outline. If this is not acceptable, then the law should be such as to serve as a notice and not announce a *fait accompli*. It should lay down that owners can resume land for personal cultivation within, say, five years up to a ceiling and that, thereafter, they will not be allowed to resume land in excess of one family holding.

Thus, the proposal relating to ceiling, as it stands, is first needless; second, it is not free from defects, inconsistencies and anomalies; third, like the proposal relating to resumption of land, its implementation will create a white elephant of administrative set-up; and, lastly, it will create vast opportunities for corruption among the administrative personnel, on whose adjudgment of the income-yielding capacity of land will depend the area an owner can retain.

Question of Compensation

The third set of proposals relates to treatment of area in excess of ceilings and resumption limits. It has been recommended in the Draft Outline that non-resumable areas should immediately come under the direct control of the State, which should recover rent from the tenants and pay it to the landlord after deducting the cost of collection. (An unnecessary burden on the owner; why should he bear it?) As soon as it is feasible, State Governments may consider buying out the landlord's interest in the non-resumable areas on payment of compensation, which should gradually be recovered from the tenants. Provision is also to be made for voluntary purchase of ownership by the tenants. Land in excess of ceilings is immediately to pass from the ownership of the holder against payment of compensation.

This aspect of land reforms is a crucial part of the entire proposals. Upon the fairness and liberalism with which the compensation question is dealt with depends the ethical basis of the entire reforms. And the feasibility with which adequate compensation can be paid to the affected owners will determine the extent to which land reforms are practicable.

Proprietary holdings of small- and medium-sized owners may be likened to the holding of annuities. A person invests a lump sum in annuities, so that he can get a regular income to meet his everyday expenses. In the same way, ownership of land by small- and medium-sized owners—at least the portions purchased by the living owners—represents an investment of lump sum to get, in return, an annual income with which to maintain families. We cannot ask holders of annuities to surrender a part of them in exchange for non-transferable 1975 bonds. If we are not willing to show the same respect to agricultural property, we should at least see that the owner gets 'full' compensation for the property he is deprived of. There would be numerous small- and medium-sized owners affected by the land reform proposals, who would not have yet cleared the debts incurred by them to purchase their lands.

What is 'full' compensation? The Planning Commission has given a formula for determining compensation in the following words: "The amount of compensation (including interest charges) may be determined with reference to the aggregate of the net increased income accruing to the State (i.e., a fair rent minus land revenue) for a period of, say, 20 years." This formula has two or three arbitrary factors, one of which is 'fair rent.' A fair rent is not determined in market but is arbitrarily fixed by Government. If compensation has to be fair, it must be based on market evaluations and not arbitrary evaluations. It would, perhaps, be better to express the amount of compensation as multiple of the annual profit from a given piece of land. A family holding is one which yields a net income of Rs. 1,200 per annum. If the remuneration for the labour of the cultivator is excluded from this amount, the balance represents the profit. Assuming that profit on a family holding is Rs. 200, an amount 10 to 12 times this figure may represent 'full' compensation for land equal to one family holding. This amount, that is, between Rs. 2,000 and Rs. 2,500, can be regarded as 'full' compensation, if it is paid immediately after land is taken over. If it is to be in the form of 20-year bonds, the interest for this period must be added. Deferred payment might nearly double the amount of compensation. In other words, full compensation payable 20 years hence may be between Rs. 4,000 and Rs. 5,000 for land area equal to one family holding. This figure is only illustrative of the method. To the extent that compensation is not full, land reform measures would amount to confiscation of property of not the rich but of the middle, the lower middle and the poor classes.

Mode of Compensation

What will be the mode of payment of compensation? It cannot be in cash, because, in view of the nation-wide character of the reforms, this step would involve payment of huge amounts of cash which the Government does not have. If the Government pays part of the compensation, say, 25 per cent. in cash, it will mean making available in liquid form large sums previously invested at long term. This, too, will have a strong inflationary effect. The Government may pay compensation in the form of negotiable 20-year bonds. Most of the recipients of these bonds being people of modest or poor means, uprooted partially or wholly from their sources of employment and income, will try to sell these bonds in order to buy a shop, or a small workshop or other sources of employment and income. This, besides generating inflation will lower the value of bonds, which the Government cannot afford, because such will make its programme of borrowing in the second Plan very costly. Thus, payment in negotiable bonds is worse than partial payment in cash.

Lastly, payment can be in the form of non-negotiable bonds. But this will be grave injustice to the affected owners of land. They would not only be deprived of their means of employment but would not have any resources to seek alternative avenues of employment. For instance, a family of 20 members, deprived of half the area of land owned by it, cannot sustain all the members on land. Since the Government would be responsible for this, it should find them alternative avenues of employment.

What then is the solution? The answer is simple. And, that is, the Government should give up the very idea of having such dubious land reforms. This suggestion may come as a shock to many, because they have been led to believe that redistribution of land is the only solution. But it would not be so shocking to them if they pause and reflect a little on what we have to say. Suppose the Government is able to remove surplus people from land and give them alternative employment. In that case, there would be no need at all for land reforms of objectionable types. Such land reforms in the present phase are needed merely because of the demographic pressure on land, but this cannot be relieved by redistribution of land. As we have often said before, the solution for the problem of unemployment in rural areas and of spreading contentment among the masses in these areas lies in creating and providing job opportunities and in raising the productivity of land.

Thus, when we come to the question of compensaton, we see the crystallisation of the preposterousness of the entire scheme for the redistribution of land and the impracticability of putting them through in a manner which would be fair and just and which would not, at the same time, lead to seriously harmful consequences. We are then driven to discuss the possibilities of reconciliation between the interests of the tillers and the owners in some other way, and this brings us to the fourth aspect of land reforms, namely, those relating to tenancy.

(To be concluded)

SOME STATE-OWNED FACTORIES EXCEED TARGETS

Production targets under the first Five-year Plan have been exceeded by the State-owned fertiliser factory at Sindri, the penicillin factory at Pimpri, and the telephone cable factory at Rupnarayanpur, under the Ministry of Production.

The Sindri fertiliser factory produced 326,073 tons of ammonium sulphate in 1955-56 against the annual production target of 320,000 tons fixed under the first Five-year Plan. The penicillin factory, which started trial production in March 1955 and regular production in August last, had a total production of 6.4 million mega units at the end of the Plan period. This was appreciably higher than the target of 4.8 million mega units fixed under the first Plan.

The Pimpri factory has exceeded yet another target. In February 1956, it achieved a monthly rate of production considerably higher than the rate of 9 million mega units per year, envisaged when the factory was planned. Last month the production exceeded one million mega units giving an annual rate of 12¼ million mega units, as against the target of 9 million mega units.

The Telephone cable factory at Rupnarayanpur in West Bengal produced 525 miles of cables during 1955-56 against the Plan target of 510 miles of cables per year. The production in 1955-56 was considerably higher than the planned capacity of 469 miles of cables per year.

The D.D.T. Factory in Delhi, another State enterprise under the Ministry of Production, has been gradually stepping up its output. Last month, the production was nearly 40 tons of technical D.D.T., as against 36.1 tons in February and 35.7 tons in January.

Plans are already under way to expand the production of fertilisers, penicillin, D.D.T. and telephone cables under the second Five-year Plan. Sindri's production will be stepped up by 60 per cent. under a Rs. 10-crore expansion programme. The production of penicillin in the Pimpri factory will be increased to 25 million mega units. Equipment for additional production has already been ordered. The factory will take up, in addition, the production of streptomycin during the second Five-year Plan.

The cable factory is expected to increase its production to 1,000 miles of cables per year. It will also make 300 miles of co-axial cables, required for trunk lines, per year. The Government has already decided to double the capacity of the Delhi D.D.T. factory at present designed to produce 100 tons of D.D.T. per year. Another factory to produce 1,400 tons of D.D.T. per year is to be set up at Alwaye in Travancore-Cochin State.

U.K.'s FOREIGN TRADE IN MARCH

The value of United Kingdom exports in March was £269,600,000, exceeding by nearly £2,000,000 the previous highest monthly total recorded in October 1955. This was announced by the Board of Trade in London.

In the first quarter of 1956, the average monthly value of exports was over 4 per cent. higher than in the corresponding period of 1955, when shipments were increased by the carry-over from the October 1954 dock strike, and 6½ per cent. higher than the rate for 1955 as a whole.

Imports in March amounted to £330,300,000. This brought the monthly average for the first quarter of 1956 to £328,500,000—2 per cent. less than in the corresponding period of 1955, but 1 per cent. more than the average for 1955 as a whole. Re-exports, at £13,300,000, were slightly lower than in the two preceding months.

The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b) was £47,400,000 in March, £2,100,000 less than in February. The monthly average in the first quarter of 1956 was £57,000,000—£20,000,000 a month less than in the same period of 1955, and £15,000,000 a month less than for 1955 as a whole.

DIRECTORS' 109th REPORT TO THE SHAREHOLDERS FOR THE YEAR ENDED 31st DECEMBER, 1955

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1955.

The transactions for the year under report have resulted in a profit of Rs. 69,40,108-2-3 (including Rs. 4,99,039-13-6 brought forward from the previous year's account). The following amounts have been appropriated for the under-mentioned purposes:—

	Rs.	a.	p.
1. Transferred to Income-tax Provision	11,00,000	0	0
2. Transferred to Contingency Reserve	24,00,000	0	0
3. Transferred to Reserve Fund	5,00,000	0	0
4. Transferred to Bonus to Staff Account	13,50,000	0	0
5. Transferred to Charity Account	80,000	0	0
6. Transferred to Gratuity to Staff Account	50,000	0	0
7. Ad-interim Dividend @ Re. 1/5- per share free of income-tax paid	5,25,000	0	0
Total .. Rs.	60,05,000	0	0

The Directors recommend that the balance of Rs. 9,35,108-2-3 be disposed of as follows:—

	Rs.	a.	p.
(a) Dividend @ Rs. 2/- per share free of income-tax making the total at 14 per cent per annum	7,00,000	0	0
(b) Carry forward to the next year's account	2,35,108	2	3

The Bank rate remained unchanged at 3½ per cent. per annum.

A sum of Rs. 37,50,000, being the aggregate amount of premium received on shares issued in the past, has been transferred to an account called 'Share Premium Account'.

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors.

DELHI, 15th March, 1956. S. P. JAIN, Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1955

CAPITAL AND LIABILITIES	Amount Rs. a. p.	Total Rs. a. p.

Total .. Rs.		1,12,88,78,627 11 11

NEW PUBLICATIONS

The Technical Report (Volume III) of the Committee of Direction, All-India Rural Credit Survey. Published by the Office of the Committee of Direction, Post Box No. 1036, Reserve Bank of India, Bombay 1. Price : Rs. 10, Postage extra.

THIS is a marathon volume of 1,045 pages, setting out in detail the organisation and conduct of the rural credit survey by the Committee of Direction appointed by the Reserve Bank of India in 1951. Its chief feature is the presentation, in tabular form, of all the statistical information collected by the field staff. The survey covered 600 sample villages selected, at the rate of eight villages per district, from 75 districts chosen from all over the country. The field operations were scheduled to commence in the month of October when, in several parts of the country, the *kharif* season would be coming to an end and preparation for the *rabi* season would begin. It was expected that, by starting the investigation work in October, the Committee would have the advantage of obtaining information, in considerable detail, regarding the economic conditions and credit transactons of the cultivating families during the immediately preceding *kharif* season. By timing the survey thus wisely, the Committee was able to achieve its main aim of collecting information on the broad pattern of agricultural credit in the different regions of the country as accurately as possible. Details are given of the sampling techniques adopted for the selection of the districts themselves, first of eight villages in each district, and then of 15 cultivating families from each village for purposes of an intensive enquiry. Particulars relating to the selection of loans for case studies, additional centres in each selected district for investigating credit agencies and selection of units of credit agencies at the selected centres are also given. The section dealing with recruitment and training course for field staff, etc., and the information on tabulation of data collected make interesting reading and so also the one dealing with instructions to inspectors in regard to the preparation of various notes, all of which indicate the amount of planning and forethought put into the organisation of the survey.

The data collected in the intensive enquiry relate, among others, to capital expenditure in agriculture, sources of finance for such expenditure, value of seed and manure used on the farm for all crops and separately for rice, wheat, millets, sugarcane, cotton and oilseeds. Cash wages paid to casual labour for seasonal agricultural operations, value of gross produce, cash receipts from sale of crops, fodder, milk, milk products and wages, borrowings, repayments and outstanding debt, etc., are also covered.

Although the volume is full of tables which might mean very little to a layman, the scientific approach made by the authors to collection, collation, compiliation and interpretation of statistical data obtained through the comprehensive survey should serve as a model to many such enquiries to come in future in different economic spheres in the country. It is here that the permanent value of this volume to posterity lies. Departments of research, bureaux of economics, organisations dealing with collection of statistics and other bodies interested in economic surveys are sure to benefit by this volume.

The Federal Republic of Germany. Overseas Economic Surveys. Published by Her Majesty's Stationery Office, London. Price : 12s. 6d. net.

Despite the fact that there is practically no type of manufacture in Germany which is not paralleled in England and *vice versa*, the development of trade between the two countries over the past year or two shows that an extremely large number of British manufacturers have 'lines' for which German customers can be found. Western Germany, a country of 50 million people with a rapidly expanding national income and with high living standards, can offer a very profitable market to the enterprising trader. This is one of the conclusions drawn by the authors of the above Survey. The Survey was compiled by the Commercial Department of the United Kingdom High Commission (now the British Embassy) at Bonn. It is the first account of economic and commercial conditions in Germany to be published for the Board of Trade since 1935.

The Survey reviews the striking recovery which has been brought about in the German economic situation since the collapse of 1945. The part of pre-war Germany which now forms the Federal Republic is once again a major industrial power, with a standard of living for its people which bears comparison with any of its neighbours. The Survey traces the stages and policies by which this transformation was achieved. Clearly, the restoration of Germany to its former leading position amongst industrial and exporting nations has been of great significance for the United Kingdom. It is perhaps not fully realised in Great Britain that the German recovery has played a vital part in establishing the present prosperity of Europe. In recent years, Western Europe has formed the world's most highly developed trading area; it provides about a quarter of the United Kingdom's exports. The recovery of German industry enabled her neighbours to purchase once again the industrial equipment and other products which in the early post-war years had been obtainable, if at all, from dollar sources only. At the same time, it has also meant that the German market has been reopened to receive the specialised products of these countries.

The enterprise and vigour shown by German firms in their efforts to recover former markets and open new ones has certainly made the task of British manufacturers more difficult, but, in most cases, such competition has stimulated British suppliers to new efforts and new successes, as indicated by the achievements in Western Europe and North America, despite numerous obstacles and the absence of State subsidies. There are, however, exceptions. The competitive strength of Germany's manufactured goods has been demonstrated in a striking manner by the outstanding position acquired as a supplier to the Netherlands, Belgium, Switzerland, Austria, Sweden, Italy and some Latin-American countries.

The special problems facing British exporters to Germany are the subject of particular attention in the Survey. Other chapters of the Survey examine the banking and monetary systems, the taxation structure, the breakdown of the national income, the transport and communications systems, labour, employment and social insurance matters and the legislation and regulations governing foreign investment in the Federal Republic and transfers under the London Debt Agreement. Statistical tables in the Appendix to the Survey deal with employment, transport, foreign trade and other subjects.

Public Finance and Indian Financial Administration (In Hindi). By Mr. Giriraj Prasad Gupta. Published by Messrs. Ram Prasad & Sons, Agra.

The book deals with the Principles of Public Finance, Financial Administration and the system and Administration of Public Finance in India. The language is simple and the subject matter is up to date. The text is based on and is supported by the opinions of the accepted authorities on this particular branch of study. The method of presentation is such as can be easily understood by the readers. As the book is intended to be used by the students of degree classes, it covers most of the topics usually included in the syllabi. The book is of a small size and as an attempt has been made to include numerous topics of theory and practice, the treatment is naturally very brief. At many places,

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE PUNJAB NATIONAL BANK, LIMITED, DELHI

We have audited the annexed Balance Sheet of the Punjab National Bank, Ltd., Delhi, as at 31st December, 1955, and the annexed Profit and Loss Account for the year ended on that date, with the books and accounts kept at the Head Office in Delhi, in which are incorporated the Returns of the Bank's Branches in Indian Union, Pakistan and Burma certified by the respective Branch Managers. We report that:

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory

(b) the transactions of the Bank, which have come to our notice, have been within the powers of the Bank;

(c) the Returns received from the Branch Offices of the Bank have been found adequate for the purposes of the audit;

(d) in our opinion the said Balance Sheet and Profit and Loss Account are drawn up in conformity with law;

(e) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs and the Profit and Loss Account shows a true Balance of Profit for the year, according to the best of our information and explanations given to us and as shown by the books and records of the Bank kept at its Head Office; and

(f) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

DELHI, 15th March, 1956.

DANGER OF CONCENTRATION OF POWER IN OFFICIALDOM

WRONG APPRAISAL LEADS TO WRONG APPROACH

JUDGED from the speech delivered by Mr. Murarji J. Vaidya, Chairman, All-India Manufacturers' Organisation (A.I.M.O.), Bombay, at its annual meeting held at New Delhi on the 14th inst., the Organisation appears to be gratified at the developments in the field of industry in India during the last 10 years. Mr. Vaidya was particularly happy that these developments were more or less on the lines envisaged, at the time of establishing the Organisation 15 years ago, by "a band of young industrialists, under the leadership of our Founder-President, Mr. M. Visvesvaraya, with very broad objectives aimed at raising the standard of living of the Indian people." The Organisation evolved and published then two schemes; one for heavy industries and the other for lighter and small-scale industries. Since then, according to Mr. Vaidya, a great deal had happened in the sphere of industrial development both in the urban and rural areas. A number of new industries—large, medium and small—had sprung up all over the country. Besides, innumerable cottage and small industries had been revived and fostered. All this was possible because the Government and the people had, in the opinion of Mr. Vaidya, recognised the need for rapid industrialisation. The A.I.M.O. Chairman was particularly happy that both the Planning Commission and the Government had, during the past six or seven years, bestowed a good deal of attention on restoring an integrated economy in rural areas based on the development of agriculture and industry alike.

Although happy at the country's achievements so far, Mr. Vaidya saw no reason for any complacency. For a great deal still had to be achieved to reach the goal of the country, namely, rapid industrialisation through small, medium and large industries. He was glad that cottage and small industries had found a prominent place in the country's development plans. The problem of developing these being vast on account of the huge size of the country, still greater efforts were needed. He welcomed, in this connection, the establishment of Small Industries Service Institute and of the National Small Industries Corporation. In order to ensure that the development of these industries was extended to the whole country, Mr. Vaidya wanted the services of the Community Projects and National Extension Services to be fully utilised.

The A.I.M.O. Chairman suggested that the Central and State Governments should give special attention to the development and encouragement of medium industries. He drew attention to the fact that most of these industries had the advantage of employing labour-intensive processes with capital employed being relatively less as compared with those in large and heavy industries. The medium industries could provide also work to small and cottage industries by distributing contracts for the manufacture of components and parts, on the lines followed by the Small Business Administration in the U.S.

Reduction of Inequalities

Mr. Vaidya then referred to the objectives of the second Five-year Plan. Examining, in particular, the fourth objective of the Five-year Plan, namely, "reduction of inequalities in income and wealth and a more even distribution of economic power," he said that his organisation was in agreement with this basic overall approach to the problem of economic development for more equitable distribution of wealth. But he was doubtful of the wisdom of the manner in which it was sought to be achieved by the Government, since any hasty action would expose the country to dangers and pitfalls. One of the dangers to be avoided was concentration of power in the hands of rigid officialdom which was inherent in the process of transferring economic power from large and small industrialists to the State. Any vesting of such enormous economic powers in the hands of officials might lead to suppression of democracy and civil liberty by authoritarianism. It was necessary, he averred, to avert this trend of preserving the democratic character of the society. This, he said, could be achieved by the setting up of public corporations to manage State-owned industries and by appointing on the Boards of these Corporations men of known integrity and experience.

Secondly, in any action taken to avoid concentration of wealth in a few hands, it was necessary to keep in view the existing democratic structure of the economy which, according to Mr. Vaidya, was undergoing gradual transformation and becoming more and more egalitarian in character. The picture of this economic structure as pointed by Mr. Vaidya is impressive and bears reproduction. He said:

"In India, as in any other democratic country, there are millions of small enterprises scattered all over the country, started and worked by several millions of small men who have collected the small capital required for the purpose from their own small circle of friends or relations. Such small people constitute in themselves the composite roles of the *entrepreneur*, the investor, the manager, the technical man, the salesman and the owner. It is these small- and medium-scale industries whom our Organisation envisages the ever-expanding structure of industrial India, and who represent the best types of our countrymen of ability, integrity and common sense. In most cases, these men are themselves, in a way, technical men who know their jobs and who run their industries with the technical knowledge they have acquired in the hard way. With them can be grouped the millions and millions of small shopkeepers, tradesmen, craftsmen, and artisans who also make and distribute the thousands of articles of daily consumption required by crores of our people. They form the most stable element of our economy. They are the last people to be swayed away by any negative or undesirable ideologies. In fact, they form, under adult suffrage, the backbone of our body-politic and economic, and it would be no exaggeration to say that they constitute the millions and millions of our peasant proprietors and skilled workers. They constitute the sector of free and private enterprise. The slow and silent, but certain, transition that has taken place in our country since the Second World War began and which has been accelerated since the advent of Independence has gradually brought the peasant proprietors, and the skilled workers, within the fold of the class commonly known as the lower middle-class. At the same time, taxation policies higher cost of living and costly social customs, and the inelasticity of the income of the salaried middle-class have reduced the upper middle-class to a standard of living, which approximates that of the new middle-class. In this way, the structure of a large part of our society is in the process of becoming egalitarian."

Incorrect Appraisal

The object of Mr. Vaidya in drawing attention to this picture was to show that the policy-makers take decisions in regard to the private sector by imagining an entirely different picture in their mind. Another quotation from his speech will make this point quite clear:

"But, as it often happens, it is the tall poppies which appear to sway most in a breeze. In recent years, Government policies and legislation have been largely influenced by the sight of the few tall poppies that appear on our economic field. The policy of expanding the public sector can also be largely said to be influenced by the same field of vision. It is necessary, however, to keep in view the facts as they emerge in the changing pattern of a country like ours which in spite of all the protests of pessimists is undoubtedly changing fast and changing for the better. In the context of this rapid change, it is essential to avoid the dogmatic approach which might be generated by a wrong appraisal of the situation and which might perhaps do more harm than good to our economy and to the freedom and enterprise of the individual."

In fine, Mr. Vaidya affirmed his faith in achieving the economic objectives of the Plan by evolutionary methods, without resorting to any drastic measures which might cause upheavals in the country's social order.

In his inaugural address at the meeting, the Prime Minister appealed to industrialists to co-operate with the Government in its efforts at strengthening the country both economically and politically. He stated that the Planning Commission was not approaching the twin problems of economic expansion and equitable distribution of national wealth in a doctrinaire manner. A doctrinaire approach, he added, would lead to rigidity which, in turn, would be dangerous in the context of the revolutionary changes taking place in the world. But some of the recent actions of his Government do not bear out this claim.

DEVELOPMENT OF SMALL INDUSTRIES

The Report of the Small-scale Industries Board, which started functioning in January 1955, highlights a number of important measures taken during this year for the development of this sector of Indian industry. The Report emphasises the positive aspect of the programme. While restrictions on the large-scale sector may have to be adopted as a temporary experiment, this can only be, it says, of transitory value, and the real long-term remedy lies in improving the techniques of production and in adopting modern machines.

During last year, this Technical Assistance Agency was built up in the form of Regional Institutes at Delhi, Bombay, Calcutta and Madras with extension centres attached to them. These are now staffed with a corps of about 130 technical officers, who are in the nature of consulting engineers, free of charge to small units. A number of foreign technicians are working in extension centres on items like footwear, locks, surgical instruments, surveying and drawing instruments, etc. An important feature of the programme is to adopt and design small machines which can be used by our artisans.

Following the recent visit of the West German Vice-Chancellor, a team of three technical experts has arrived from West Germany. They are attached to the Union Ministry of Commerce and Industry, and are specialists in this art of machine-designing for small industries.

A popular method of acquainting our artisans with the use of such machines has been the mobile workshops in these Institutes, two of which recently gave demonstrations near Delhi. There are eight such mobile workshops on the road now, and 16 more have since been sanctioned. As a follow-up, the Small-Industries Corporation has launched a scheme for the supply of such machines on easy hire-purchase terms. The first few machines under this system have already been delivered to purchasers.

More Institutes

The Report outlines the programme to be taken up in 1956-57. Four more Institutes are to be located in Rajkot, Ludhiana, Patna and Travancore-Cochin. It is planned to have a network of 20 such Technical Service Institutes by the end of the second Five-year Plan. An important feature of the programme is the establishment of Industrial Extension Service Centres, which will be units of specialised technical and marketing officers for particular industries. These units would also introduce and maintain quality standards.

The nucleus of such extension centres has already been set up in certain places as, for instance, at Ludhiana for the bicycle parts industry; at Agra for the footwear industry; at Roorkee for surveying and drawing instruments; and at Dindigul in South India for the locks industry. With the assistance given by the Ford Foundation, it is understood that about 30 technical experts are now being recruited abroad for particular small industries, who would be located at these extension centres. Arrangements are being made during the coming year for training about 50 persons chosen from our small units in factories abroad.

The number of mobile workshops which has already been increased from 8 to 24 will be increased further, and will concentrate for longer periods in selected areas.

The scheme for hire-purchase of machinery which is a follow-up of such training and demonstration is to be expanded very considerably and a fund with Rs. 3 crores has been earmarked for this purpose.

To encourage the use of power-driven machines, the centre has asked State Governments to adjust, where possible, electricity tariff rates so as to supply power at only As. 1-6 per unit to small industries. Where such adjustments are not possible, it has been decided that the difference should be subsidised, the cost of the subsidy being shared between the Centre and the States.

Industrial Estates

Another major feature is the provision of Industrial Estates with the object of promoting industrial development on decentralised pattern. The Report lists 10 such schemes sanctioned this year at a total cost of more than Rs. 4.4 crores, all of which is met by the Centre. Land has been acquired in all these cases and in some of them construction work has already started. In the Industrial Estate near Rajkot, buildings have already been let out to industrialists. A sum of Rs. 10 crores has been provisionally earmarked for this purpose in the second Five-year Plan.

A third requirement is credit on comparatively liberal terms. This is being provided at present largely from Government sources and during the period under review a sum of Rs. 2 crores was advanced by the Central Government to the States for this purpose, and a budget provision of Rs. 94 lakhs made by the latter. Loans are advanced up to 75 per cent. of the value of the security offered. The rate of interest is only 3 per cent. with a special concessional rate of 2½ per cent. for industrial co-operatives.

A special feature of assistance to the small man is the grant of loans up to Rs. 5,000 on security only and Rs. 1,000 purely on personal bonds. Out of the provision, it is understood a sum of Rs. 1.5 crores has already been disbursed. The relatively slow rate of disbursement is explained by the fact that many State Governments had to amend their State Aid to Industries Acts, and also recruit special investigation staff for processing these loan applications.

The Report also mentions the pilot scheme now to be introduced by the State Bank of India for provision of credit from banking institutions. Nine pilot project areas have been selected by the State Bank, namely, Bombay, Kolhapur, Surat, Delhi, Ludhiana, Agra, Madras, Coimbatore and Vijayawada. The purpose of this pilot project is to examine and recommend how the provision of credit to small industries by the various agencies concerned—the State Bank, the State Finance Corporation, co-operative banks, commercial banks and Government sources—can be most effectively co-ordinated. Until such time, however, as credit is forthcoming in sufficient measure to small industries from banking institutions, this would have to be met by the Government and a provision for this has been included in the second Five-year Plan of the Ministry of Commerce and Industry. The tentative allocation under this Plan is about Rs. 63 crores for this particular sector of the industry, of which Rs. 10 crores will be direct Central Government expenditure on the technical assistance programme through the Service Institutes and extension centres. The balance of Rs. 53 crores is intended for the establishment of Industrial Estates and the provision of credit to small industries and for such schemes for the organisation of small industries, the emphasis being on co-operative development.

U.S. IMPORTS TOUCH NEW PEAK

The strength lately showing in some key sectors of the U.S. economy continues to surprise many of the experts. The Commerce Department has estimated the value of U.S. imports in February at $1,678 million, an all-time high for the month and a monthly total second only to the record of $1,098 million set in March 1951.

What makes the February record more impressive is the fact that it is set in a short month when the import total can be expected to decline. But this year February imports actually outstripped those of January by a slight margin, besides being a full 27 per cent. above those for February 1955.

Also these are preliminary data and finalisation of statistics often results in upward revision of the import total. When final figures become available, they may well show the February total to be a new all-time high. January is a good example of this tendency. Preliminary import estimates for that month showed a total of $1,045 million, compared with a final figure of $1,073 million. The rise of four per cent. in January's imports over December's resulted from increased receipts in all classes of goods. An increase in manufactured foodstuffs led the way, reflecting principally gains in imports of cane sugar. The increase in finished manufactures was due largely to greater imports of automobiles, automotive parts, and agricultural machinery and implements. Other products showing significant import increases included cocoa beans, crude rubber, unmanufactured wool, nickel and nickel alloys and fertiliser materials.

Another economic sector in which performance is better than expected is the steel industry. Steel production in the United States in March came to 10,921,000 short tons (9,938,000 metric tons) breaking all monthly records, and bringing the total for the first quarter of 1956 to a new high of 31,868,226 short tons (about 29 million metric tons).

March, by the way, was the sixth consecutive month in which the nation's steel mills poured more than 10 million short tons—evidence that an early-year decline in automobile output is being more than offset by continuing strength in other industries.

The value of new construction in the United States followed seasonal trends in March, adding another source of economic strength. The March total, according to estimates of the U.S. Departments of Commerce and Labour, was $2,980 million. For the first three months of 1956, construction activity amounted to $8,500 million—the same as for the first three months of 1955. Included in the total was a new March record in private non-residential building.

Significantly, contract awards for future construction last month constituted a new record for March, according to reports of the F. W. Dodge Corporation, construction news and marketing specialists. The total for the month was a full 12 per cent. above March 1955 and the highest for any month in the Company's 65 years, except for May 1951, when Government building contracts for the Korean war were exceptionally large. Contracts awarded so far this year are confined largely to civilian projects and indicate that actual construction in 1956 may forge ahead of earlier expectations.

Interestingly enough, residential contract awards were the highest in March for any month in history, 12 per cent. ahead of March 1955. This development supports the thesis that home building in 1956 will not be the drag on the economy that some had feared when the year began. Also, at new highs were heavy engineering awards and private non-residential awards.

INDIAN ALUMINIUM'S RECORD PROFIT

SIZABLE EXPANSION IN PRODUCTION—NEW SMELTER PROJECT AT HIRAKUD

HEARTENING results are disclosed by the statement of accounts of the Indian Aluminium Co., Ltd. (Managing Director: Mr. E. S. Greenwood, Calcutta) for the year ended 31st December 1955. The Company's gross profit, which had gone up from Rs. 2.11 lakhs in 1953 to Rs. 13.41 lakhs in the following year, has jumped up to Rs. 48.35 lakhs in the year under review. After providing for larger depreciation —there is, however, no liability for income-tax— the net profit aggregates Rs. 26.80 lakhs, a record in the history of the Company, in refreshing contrast to the loss of Rs. 5.23 lakhs suffered in 1954 and of Rs. 13.65 lakhs in 1953. Thanks to the substantial improvement in the financial results, the Directors have been able to strengthen the Company's reserves, after a break of two years, with an addition of Rs. 10 lakhs to the fixed assets replacement reserve, and resume payment of dividends on ordinary shares.

After a lapse of two years, the ordinary shares returned to the dividend list in December last, when an interim dividend of 4 per cent. was paid. This has now been followed by a final distribution of 5 per cent., making a total dividend of 9 per cent. for the year, the highest paid by the Company so far. It may be mentioned, in passing, that, after its incorporation as a public limited concern in 1945, the Company paid a maiden dividend of 3½ per cent. for the year ended 30th September 1950. This was raised to 5 per cent. in the following year. In 1952, the Company's accounting year was changed from September to December and for the 15 months ended 31st December 1952, a dividend of 5 per cent. was paid. This meant a distribution at the rate of 4 per cent. per annum or a cut of 1 per cent. from that paid for 1950-51. No dividend, however, could be paid for the subsequent two years, that is, for 1953 and 1954, on account of adverse results.

The highly encouraging results for the year under review are due to several favourable factors. In the first instance, there was a substantial expansion in production. The output of ingot rose from 2,945 tons in 1954 to 4 863 tons in the year under review, thanks to the completion of expansion of the smelter at Alupuram in 1954 and the availability of sufficient power since March 1955 to operate the smelter at the new capacity of 5,000 tons of ingot per annum. In fact, in the last quarter of 1955, the smelter operated at an annual rate of 5,400 tons. There was also an expansion in the range of aluminium alloy products at the Company's fabricating plant at Belur, where the fabrication facilities were improved by installing additional equipment. Production of aluminium paste also reached the full rated plant capacity of 260 tons, as compared with the output of 180 tons in 1954. The extrusion plant with an annual capacity of 1,000 tons, together with a die shop set up near the smelter at Alupuram, also commenced operations in March 1955.

The second favourable factor was the considerable improvement in demand, consequent on the acceptance of aluminium in many new applications, with the result that the Company was able to enlarge its sales considerably. Thirdly, the improvement in market conditions enabled the Company to obtain better prices on its principal products during the year under review. These favourable conditions are impressively reflected in the sharp rise in sale proceeds from Rs. 237.63 lakhs to Rs. 365.67 lakhs, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			For 15 months ended
	1955	1954	1953	31-12-52
Sale proceeds	365.67	237.63	117.85	161.46
Other income	2.03	1.80	1.40	1.53
Manufacturing expenses	288.16	199.35	94.57	109.06
Administrative and other expenses	31.19	26.67	24.45	19.56
Gross profit	48.35	13.41	2.11	34.37

5% preference (less tax)	1.47	1.47	1.47	1.85
Ordinary	14.40 (9%)	..	..	8.00 (4% p.a.)
Carry forward	1.80	8.49	9.15	22.23

Of the sale proceeds for the year under review, the Company's own products account for Rs. 288.71 lakhs, an increase of about 50 per cent. over the year, and agency and other products for Rs. 76.96 lakhs, as against Rs. 45.17 lakhs in 1954. On the expenditure side, the purchase of raw aluminium has cost the Company Rs. 72.61 lakhs, as against Rs. 40.28 lakhs, of which purchases from abroad were Rs. 49.90 lakhs, as against Rs. 14.36 lakhs. The cost of other raw materials, stores, power, freight, etc., has risen from Rs. 69.65 lakhs to Rs. 91.99 lakhs.

The Company's paid-up and authorised capital is unchanged at Rs. 200 lakhs, made up of 160,000 ordinary shares of Rs. 100 each and 40,000 5 per cent. cumulative preference shares of Rs. 100 each. Since the close of the year, however, the authorised capital has been raised from Rs. 2 crores to Rs. 6 crores and the Rs. 100 paid-up ordinary shares have each been split into 10 shares of Rs. 10 each, in order to facilitate a future new issue of capital to cover a part of the financial requirements of the Company's Hirakud project. The reserves and surplus aggregate Rs. 48.58 lakhs. The gross block of the value of Rs. 416.74 lakhs, including an addition of Rs. 28.19 lakhs made during the year, has been written down to Rs. 241.97 lakhs. The current assets amount to Rs. 230.14 lakhs, as against current liabilities aggregating Rs. 223.53 lakhs.

There is a growing demand for aluminium in this country, but the Company's smelter at Alupuram does not permit of any further expansion to meet it. After a thorough study of the various aspects, the Directors decided in July last to establish a smelter near the Hirakud power project. The initial annual ingot capacity of this smelter will be 10,000 tons and will be based on commensurate expansion of existing bauxite and alumina production facilities at Bagru Hill and Muri, respectively. A second phase of the Hirakud project to increase ingot production from 10,000 to 20,000 tons per annum is also under continuous study. There are, however, some difficulties in undertaking simultaneously the production of ingot at Hirakud and the development of bauxite and alumina. Referring to these, the Directors observe:

"Owing to various difficulties envisaged in a simultaneous expansion of integrated facilities required for production of 10,000 tons of aluminium ingot at Hirakud, a programme was developed in which the smelter would receive priority and would be expected to come into operation towards the end of 1958. The programme provides, however, for partial expansion of alumina facilities at a relatively small capital cost parallel with the construction of the smelter. It is expected that the major part of the bauxite-alumina expansion will take place after the Hirakud smelter has come into operation, when revenue from the sale of the additional metal will be available to finance this expansion which is scheduled for completion by the end of 1961."

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 22-6 *cum-div.* (final div. As. 8 per share) On an *ex-div.* basis, the dividend for 1955 offers a yield of 4.1 per cent. per annum, free of income-tax.

ADONI SPINNING AND WEAVING CO., LTD.

The Adoni Spinning and Weaving Company, Ltd. (Managing Agents: Messrs. Kothari and Sons, Madras), which was floated in December 1954, is expected to go into production early in May 1956. The initial capacity of the mill is 12,000 spindles; the installation of these has been completed. The Company has got a licence to put up an additional 12,000 spindles, and the question of implementation will be considered after six months.

The Company proposes to manufacture yarns of 20 counts, for which it has the advantage of obtaining cotton locally at competitive prices. The yarn will also be consumed locally. The mill is equipped with the most up-to-date modern machinery and will be able to commence work on a very rationalised work-load basis. The cost of production is, therefore, likely to be cheaper. The mill will work on one shift in the initial stages and will later go on to two shifts. When adequate supply of power is available from Tungabhadra, it will be able to work on three shifts.

The present paid-up capital of the Company is Rs. 25 lakhs, made up of 100,000 6 per cent. preference shares of Rs. 10 each and 150,000 ordinary shares of Rs. 10 each. The installation of the additional 12,000 spindles referred to above will require additional finance and the Company proposes to meet this by a fresh issue of capital to the extent of Rs. 10 to Rs. 15 lakhs and by borrowing a sum of Rs. 10 lakhs from the Industrial Finance Corporation or from a bank.

DUNLOP RUBBER PROFIT A SHADE LOWER

DIVIDEND WELL MAINTAINED

A FRACTIONAL fall in profit, notwithstanding a substantial increase both in the volume and value of goods sold, is disclosed by the report of the Dunlop Rubber Company (India), Ltd. (Managing Director: Mr. Cecil Stack, Calcutta), for the year ended 31st December 1955. The gross profit (before providing for depreciation and taxation) shows a drop of Rs. 2.35 lakhs, or 1.8 per cent., to Rs. 124.53 lakhs. The recession is negligible, but is in distinct contrast to the increase of Rs. 5.92 lakhs noted in 1954 after the successive decline from the record level of Rs. 146.54 lakhs in 1951 to Rs. 120.96 lakhs in 1953. Though the upward trend in profit noted in the previous year has thus been reversed, it is somewhat comforting to note that the profit for the year under review is still higher than that for 1953.

The net profit has fallen from Rs. 58.63 lakhs to Rs. 54.40 lakhs, the decline being greater than that in gross profit, despite the cut in the provision for depreciation from Rs. 30.20 lakhs to Rs. 27.51 lakhs. This is on account of the increase of Rs. 4.57 lakhs in the provision for taxation to Rs. 42.32 lakhs, with the result that the net profit for the year under review is the lowest since 1950. The provision for taxation includes a sum of Rs. 2.30 lakhs, representing the new super-tax on dividend in excess of 6 per cent. The Company has been ploughing back substantial sums year after year and in accordance with this practice, the Directors have transferred this year also a sum of Rs. 22 lakhs to the general reserve in order to provide the resources necessary for the expansion of the business and the increase of employment, though this represents a cut of Rs. 8 lakhs from that set aside last year. In addition, the Directors have provided Rs. 5 lakhs in respect of accruing liabilities under the staff retirement gratuity scheme introduced early in 1955. The dividend on ordinary shares has been maintained for the fifth year in succession at 15 per cent.

The Company's progress during the past three years can be judged from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	15,09.19	13,70.34	12,57.95	12,97.48
Other income	2.25	3.28	4.90	5.03
Cost of goods sold	12,39.20	11,13.40	10,22.19	10,66.03
Selling and other expenses	1,41.21	1,26.82	1,19.71	1,13.20
Debenture interest	6.50	6.50	6.50	6.50
Gross profit	1,24.53	1,26.88	1,20.96	1,25.94
Provision for—				
Bad debts	0.30	0.30	0.30	0.30
Depreciation	27.51	30.20	27.78	25.93
Taxation	42.32	37.75	37.50	33.05
Net profit	54.40	58.63	55.38	66.65
To reserves	22.00	30.00	24.00	39.00
,, provision for retirement gratuities	5.00	..	..	..
Dividends—				
6% preference (tax free)	1.80	1.80	1.80	1.80
6% 11 preference (less tax)	1.77	1.77	1.77	1.77
Ordinary	24.00 (15%)	24.00 (15%)	24.00 (15%)	24.00 (15%)
Carry forward	11.72	11.89	10.83	7.01

The increase of Rs. 1.39 crores in sale proceeds, notwithstanding a further cut in selling prices, and the rise of Rs. 1.26 crores in the cost of goods sold indicate that the production must have been substantially higher than in 1954, when the Company not only raised its production but expanded its manufacturing activities. The intensity of the Company's sales efforts, supported by sustained publicity, to popularise its products among consumers is reflected in the further rise of Rs. 14.39 lakhs in selling and other expenses. The reduction in selling prices, coupled with the mounting level of expenses, has further lowered the Company's profit margin in relation to turnover, as will be seen from the following figures taken from the Directors' report:

	(Per cent.)			
	1955	1954	1953	1952
Before taxation	6.4	7.0	7.4	7.7
After taxation	3.6	4.3	4.6	4.8

In addition to the sum of Rs. 22 lakhs transferred from the year's profit, the Company's reserves have been strengthened during the year by the transfer of Rs 113 86 lakhs to the special depreciation reserve, being the excess depreciation provision made on buildings and plant in post-war years at rates higher than normal rates. With the aforesaid transfer, made in accordance with the principle laid down in Schedule VI of the Companies Act, 1956, the reserves and surplus of the Company aggregate Rs. 326.58 lakhs, as against a paid-up capital of Rs. 230 lakhs. The debenture-stock is unchanged at

Points From The Chair

Restriction on Mill Cloth Production

"I MAY now refer to one very important aspect of Government policy regarding the textile industry. In pursuit of certain ideologies, Government have decided to put a ceiling on the production of cloth by textile mills at 5,000 million yards. Whilst Government agree with us that the demand for cloth in the country has shown a marked tendency to increase, and by the end of the second Five-year Plan may well exceed 18 yards *per capita*, in their wisdom, they have decided that the additional requirements of cloth should be found from the handloom weavers. It is certainly incomprehensible that at a time when the country's most imperative need is increased production all round, Government should deliberately decide not to utilise the capacity of the industry to make its effective contribution towards meeting the increased demand for cloth in the country. I am not, for one moment, suggesting that the handloom weaver should not be encouraged. As a matter of fact, I am entirely at one with Government that to find increasing employment for a large number of people who are unemployed in the country, self-employment through cottage and small-scale industries should be encouraged. At the same time, Government should not pursue a policy which is bound to result, much sooner than we may dare to imagine, in an acute shortage of cloth. With the tremendous new spending by Government, the two main things for which the additional purchasing power will create new markets are foodstuffs and cloth, and it is most regrettable that by restricting the supply of cloth through organised industry, Government will be accelerating the inflationary spiral in the country."

A. D. SHROFF,
Svadeshi Mills Co., Ltd.,

Coveted Position of Indian Textile Industry

"In short, it is tragic to find that a noose is being slowly put round the neck of the promoters of textile industry who, after going through hard times of pioneering days, have over a period of years through careful pruning of dividend, ploughing back of profits, etc., developed the industry by stages to the status of the premier industry of the country representing a national investment of over Rs. 113 crores. Not only is it a matter of national pride to possess such an industry but its progress and continual development and modernisation have brought to our country a high degree of prestige attracting envious eyes of those foreign countries who are our competitors on the international cloth market. It would be suicidal to hold back the energised gears of this dynamic and progressive national effort with the intention of revitalising the cottage and village sector on the plea of creating more employment. There is no doubt that those foreign countries which are now scared of the tremendous progress of the Indian textile industry would breathe a sigh of relief, as more curbs placed on the expansion of the Indian textile industry would adversely affect its competitive position in the export market which, in turn, would make the way easy for other countries who are forging ahead boldly to capture the coveted position in the textile world."

N. H. TATA,
Tata Mills Ltd.

Labour Problem in Industries

"No industry can hope to survive for long if it carries an excessive labour force which, for fear of retrenchment, opposes improvements in efficiency. On this issue, there was a disastrous 82 days' strike last summer in the textile mills of Kanpur, which affected the three cotton textile units of our group, while the Cawnpore Woollen Mills also went on strike at the same time on a different issue. The Cawnpore Woollen Mills dispute was, in a large measure, later resolved by direct negotiation with the representatives of labour, but the issue of rationalisation is still before an enquiry committee appointed by the State Government. These strikes have caused great losses to the Corporation, which is handicapped in its negotiations by lack of unity among the labour leaders themselves. We earnestly hope that future changes in the law affecting trade unions and industrial disputes will give more reality to the former, and will lessen the number of references to adjudication as well as helping to remove from the field of dispute the major irritants in industrial relations, of bonus and workload. Meanwhile, the management of the Corporation will spare no effort by joint consultation to reach a good understanding with our workmen and their representatives on all matters affecting our common interest."

SIR ROBERT MENZIES,
British India Corporation Ltd.

Notice

THE SOORAH JUTE MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE 119th Ordinary General Meeting of the Shareholders of the Company will be held at 8, Royal Exchange Place, Calcutta, at 2-30 p.m. on Wednesday the 9th May 1956, for the following purposes:—

(1) To receive and consider the report of the Directors and to pass the audited accounts for the year ended 31st December 1955.

(2) To declare Dividends on Ordinary and Preference Shares.

(3) To elect Directors in place of those retiring by rotation.

Sri G. P. Birla, an associate of the Managing Agents under the Companies Act 1956, retires by rotation but being eligible offers himself for re-election. As he has been acting as a Director of the Company since 1945, it is desirable to avail of his valuable advice by retaining him as a Director of the Company. Hence special notice is hereby given to pass with or without modification the following special resolution:—

"RESOLVED that Sri G. P. Birla, an associate of the Managing Agents under the Companies Act 1956 be appointed as a Director of the Company who is liable to retire by rotation under the provisions of the Articles of Association of the Company."

(4) To appoint Auditors and fix their remuneration.

Messrs. Lovelock and Lewes have intimated their intention not to be re-appointed as Auditors of the Company in view of the fact that the Account books of the Company are now being maintained in Hindi. A shareholder of the Company has given notice of his intention to propose the name of Messrs. Singhi & Co., Chartered Accountants, of 1-B, Old Post Office Street, Calcutta, for appointment as Auditors of the Company. A copy of such notice has been sent to the retiring Auditors. A special notice is hereby given to this effect.

(5) As special business to pass with or without modification the following resolution which will be proposed as special resolution:—

"THAT Article 112 of the Articles of Association of the Company be deleted and the following be substituted therefor:—

"112. The Directors will not be required to hold any qualification shares."

(6) To transact any other business which may be brought before the meeting with the permission of the Chairman.

The Share Transfer Books of the Company will remain closed from 30th April 1956 to 9th May 1956 (both days inclusive).

By Order of the Board,
HINDUSTHAN INVESTMENT CORPORATION LTD.,
Managing Agents.

CALCUTTA, 29*th March* 1956.

In particular to Mr. Kamalmani A. Dikshit, Pandit Kedarmani A. Dikshit and Mrs. Bidya Devi A. Dikshit, Mr. Kasam Ahmad Vaiz, Mr. Narendra Shumshere J. B. Rana and Mr. Prakashmani A. Dikshit.

Note.—(1) The Directors have recommended dividends on Preference Shares at 7 per cent. (free of income-tax) and on Ordinary Shares at Re. 1-8 per share (free of income-tax).

If dividends on shares as recommended by the Directors are declared at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS, whose names are on the Company's Register on 9th May 1956. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders within 3 months from the date of declaration.

The Shareholders are advised to notify any change of address.

Rs. 130 lakhs, against which there is a redemption fund of Rs. 20.22 lakhs. The additions to the gross block during the year aggregate Rs. 33.69 lakhs, bringing the total value of the block to Rs. 515.52 lakhs. This has been written down to a book value of Rs. 294 69 lakhs. The current assets amount to Rs. 605.02 lakhs, of which stock inventories (at or below cost) alone account for Rs. 391 63 lakhs, and exceed the current liabilities and provision for taxation, at Rs. 233.36 lakhs, by a huge margin of Rs. 371.66 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 31.4 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares works out to 4.8 per cent. per annum, free of income-tax.

COMPANY MEETINGS AND DIVIDENDS

JENSON AND NICHOLSON (INDIA) LTD. Annual General Meeting, Calcutta, 27th April 1956. Dividend: As. 9 3/5 per ordinary share. Transfer books remain closed from 17th to 27th April 1956, both days inclusive.

CALCUTTA JUTE MANUFACTURING CO., LTD. Half-yearly General Meeting, Calcutta, 30th April 1956. Transfer books remain closed from 20th to 30th April 1956, both days inclusive.

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 30th April 1956. Transfer books remain closed from 16th to 30th April 1956, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 30th April 1956. Dividend: As. 2 per share. Transfer books remain closed from 14th to 30th April 1956, both days inclusive.

BOWREAH COTTON MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 1st May 1956. Dividend: *Nil.* Transfer books remain closed from 21st April to 1st May 1956, both days inclusive.

DUNBAR MILLS LTD. Half-yearly General Meeting, Calcutta, 1st May 1956. Dividend: Rs. 2-8 per ordinary share. Transfer books remain closed from 21st April to 1st May 1956, both days inclusive.

KETTLEWELL BULLEN & CO., LTD. Annual General Meeting, Calcutta, 1st May 1956. Dividend: Rs. 4 per share. Transfer books remain closed from 21st April to 1st May 1956, both days inclusive.

RAMNUGGER CANE AND SUGAR CO., LTD. Annual General Meeting, Calcutta, 2nd May 1956. Dividend: Rs. 2 per share. Transfer books remain closed from 13th April to 2nd May 1956, both days inclusive.

INDORE MALWA UNITED MILLS, LTD. Annual General Meeting, Bombay, 4th May 1956. Dividend: Rs. 6 per share (final). Transfer books remain closed from 16th April to 5th May 1956, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Annual General Meeting, Kozhikode, 5th May 1956. Dividend: As. 6 2/5 per share. Transfer books will remain closed from 23rd April to 5th May 1956, both days inclusive.

SAVAMALAI ESTATES LTD. Annual General Meeting, Kozhikode, Malabar, 5th May 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 28th April to 5th May 1956, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 7th May 1956. Dividend: Rs. 11 per share (includes bonus of Re. 1 per share). Transfer books remain closed from 16th April to 9th May 1956, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 14th May 1956. Transfer books will remain closed from 5th to 14th May 1956, both days inclusive.

PREMCHAND JUTE MILLS LTD. Half-yearly General Meeting, Calcutta, 14th May 1956. Transfer books will remain closed from 7th to 14th May 1956, both days inclusive.

CALCUTTA STEAM NAVIGATION CO., LTD. Half-yearly General Meeting, Calcutta, 15th May, 1956. Dividend: Rs. 6-4 per share. Transfer books will remain closed from 2nd to 15th May 1956, both days inclusive.

TRAVANCORE OGALE GLASS MANUFACTURING CO., LTD. Annual General Meeting, Manjummel, Alwaye, 31st May 1956. Dividend: *Nil.* Transfer books will remain closed from 21st to 31st May 1956, both days inclusive.

TRAVANCORE RAYONS LTD. Dividend of As. 12 per ordinary share, for the year ended 31st December 1955. Transfer books will remain closed from 26th April to 9th May 1956, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Dividend of Rs. 12 per ordinary share, for the year ended 31st December 1955, payable on 25th May 1956. Transfer books will remain closed from 30th April to 24th May 1956, both days inclusive.

SHREE DIGVIJAY CEMENT CO., LTD. Dividend of Rs. 8-8 per ordinary share, for the year ended 31st December 1955, payable on 14th May 1956. Transfer books will remain closed from 27th April to 10th May, 1956, both days inclusive.

(*Concluded from previous page*)

(2) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(3) Explanatory statement in regard to special business to be transacted at the meeting.

It is desired to amend the Articles of Association of the Company by deleting the existing Article 112 requiring the Directors (other than ex-officio Directors) to hold 100 Ordinary Shares in the Company as qualification shares and by substituting a new Article providing that the Directors will not be required to hold any qualification shares. The Articles of Association of the Company may be inspected at the Company's office at 8, Royal Exchange Place, Calcutta during business hours.

INCREASED COMPETITION FROM COTTAGE PRODUCTS AFFECTS WIMCO

FINLAY GROUP MILLS PAY HIGHER DIVIDENDS

Western India Match Co., Ltd.

THE directors of the above Company (Chairman: Sir Chunilal V. Mehta, Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

During the year, a strike occurred at the company's Bareilly Factory which lasted for approximately two months. While production was maintained, sales in 1955 have been lower than last year due to increased competition from the low-priced products of subsidised cottage manufacturers, who have further expanded their output.

Negotiations are proceeding regarding disposal of the Shahdara Factory in view of the Pakistan authorities desire that the Company's interests in Pakistan be converted into a Pakistani company.

The factories and other property of the Company have been adequately maintained, and net fresh capital expenditure in respect of additions to machinery and buildings amounts to Rs. 12,89,232 (Rs. 42,37,266). Rs. 8,56,341 (Rs. 6,66,098) has been provided for depreciation on the same basis as last year. For 1955 a provision of Rs. 34,40,000 (Rs. 34,45,000) has been made for taxation, which includes the dividend tax as proposed in this year's budget.

The net profit for the year, after providing for depreciation and taxes for 1955 as aforesaid, is Rs. 39,65,281 (Rs. 41,47,258) to which should be added the sum of Rs. 5,28,887 (Rs. 4,26,761), being the balance carried over from last year, making a total of Rs. 44,94,168 (Rs. 45,74,019). The directors recommend that this amount may be dealt with as follows:—

To pay a dividend for the year ended 31st December 1955 at the rate of 10 (10) per cent. per annum (i.e. Rs. 10 (Rs. 10) per share) free of income-tax absorbing Rs. 27,50,000 (Rs. 27,50,000), to pay a bonus for the year ended 31st December 1955 at the rate of 1 (1) per cent. per annum (i.e. Re. 1 (Re. 1) per share) free of income-tax absorbing Rs. 2,75,000 (Rs. 2,75,000), to set aside for general reserve Rs. 5,00,000 (Rs. 6,00,000), to extra commission to the managing agents as per agreement Rs. 4,07,184 (Rs. 4,20,132) and to carry forward to next year's account Rs. 5,61,984 (Rs. 5,28,887).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	2,75,00,000	Block ...	3,03,67,181
Reserves ...	68,75,000	Stock-in-trade	22,84,222
Depreciation fund ...	1,63,71,846	Raw materials ...	83,86,274
Provision for taxation ...	1,67,95,368	General stores ...	44,37,762
Liabilities ...	1,04,94,823	Goods-in-transit ...	12,87,557
Profit and loss account ...	44,94,168	Debts, deposits and advances ...	1,99,23,765
		Investments	46,909
		Banderols held in trust ...	7,95,243
		Cash ...	1,50,02,292
Rs.	8,25,31,205	Rs.	8,25,31,205

Finlay Mills, Ltd.

The directors of the above Company (Agents: Messrs. James Finlay & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December, 1955.

The trading profit for the year amounts to Rs. 21,81,533 (Rs. 15,93,292). From this amount has been deducted—

To provision for income-tax, Corporation tax and dividend tax Rs. 5,60,000 (Rs. 6,00,000), retiring gratuity fund Rs. 10,000 (Rs. 70,000), development reserve Rs. 5,70,000 (*nil*) and depreciation on buildings Rs. 25,000 (Rs. 1,00,000), on machinery Rs. 2,35,000 (Rs. 2,00,000), on furniture Rs. 2,739 (Rs. 7,000) and on mill bungalow furniture Rs. 2,261 (*nil*) leaving a balance of Rs. 7,76,538 (Rs. 6,16,292). After adding the amount carried forward from previous year of Rs. 3,90,661 (Rs. 5,74,369), there is a total of Rs. 11,67,199 (Rs. 11,90,661). The directors propose to pay a dividend of Rs. 20 (Rs. 16) per share on 50,000 shares (free of income-tax) absorbing Rs. 10,00,000 (Rs. 8,00,000), leaving a balance to be carried forward of Rs. 1,67,199 (Rs. 3,90,661).

The Alexander and Finlay Thread Co., in which the Company has a 50 per cent. interest with the English Sewing Cotton Co., Ltd., Manchester, showed a loss during the year of Rs. 1,34,780 of which the Company's share is Rs. 67,390. This loss is mainly due to certain technical difficulties which have been experienced with regard to certain articles of the Company's production, and to the need to establish markets but it is hoped that the results for the current year will show improvement.

A new building to accommodate cloth, stores, dining hall and offices is under construction. The rehabilitation of the spinning machinery continues and 10,000 new spindles together with the necessary preparatory machinery have been received and are at present under erection.

The whole of the Company's property as at the date of this report has been insured against fire for Rs. 4,25,40,940 and the profits and standing charges have been insured for Rs. 1,04,00,000 covering indemnity for 24 months including liability for lay-off and retrenchment compensation. The property is also covered against riots and civil commotions all risks.

Accounts in brief are as under:—

Aruna Mills, Ltd.

The directors of the above Company (Agents: Messrs. P. M. Hutheesingh & Sons Ltd., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit after providing Rs. 5,00,000 (Rs. 6,52,929) for depreciation amounts to Rs. 16,06,548 (Rs. 3,56,611). After adding the last year's balance of Rs. 7,614 (Rs. 7,878), there remains a total amount of Rs. 16,14,162 (Rs. 3,64,489). The following appropriations have been made:—

To provision for taxation Rs. 8,50,000 (Rs. 1,20,000), machinery renewal fund Rs. 1,00,000 (*nil*), dividend equalisation fund Rs. 1,50,000 (*nil*) and contingency fund Rs. 1,50,000 (*nil*). There is a balance available of Rs. 3,64,163 (Rs. 2,44,489). The directors recommend the payment of dividends as follows:—

To the payment of a dividend on 10,000 5 per cent. cumulative preference shares for the year ending 31st December 1955 (less income-tax) Rs. 36,875 (Rs. 36,875), to the payment of a dividend of Rs. 30 (Rs. 20) per share income-tax free on 10,000 ordinary shares for the year ending 31st December 1955 Rs. 3,00,000 (Rs. 2,00,000) and to carry forward to next year's account Rs. 27,288 (Rs. 7,614).

The directors trust that the result of the working of the mills will be found satisfactory. The Company's properties have been insured against fire, excepting a certain risk, which is carried by the Company. The standing charges and profits have also been insured. The mills have 42,768 spindles, 1,452 doubling spindles and 912 looms and complete dyeing and bleaching plants.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	20,00,000	Block ...	94,37,398

Asoka Mills, Ltd.

The directors of the above Company (Agents: Messrs. Lalbhai Dalpatbhai & Co., Ahmedabad) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit for the year after providing for depreciation Rs. 3,10,000 (Rs. 3,50,000) amounts to Rs. 27,41,485 (Rs. 9,87,753). After adding the last year's balance of Rs. 55,358 (Rs. 1,23,642), there is a total of Rs. 27,96,843 (Rs. 11,11,396). The following appropriations have been made:—

To provision for taxation Rs. 13,25,000 (Rs. 4,50,000), to reserve fund Rs. 3,50,000 (Rs. 50,000), to machinery renewal fund Rs. 3,00,000 (Rs. 1,00,000), to dividend equalisation fund Rs. 1,50,000 (Rs. 50,000) and to contingency fund Rs. 2,00,000 (Rs. 1,00,000), leaving a balance available of Rs. 4,71,843 (Rs. 3,61,396). The directors recommend payment of dividends as follows:—

To the payment of a dividend on 6,000 5 per cent. cumulative preference shares for the year ending 31st December 1955 (less income-tax), Rs. 22,125 (Rs. 22,125), to the payment of a dividend on 6,000 4½ per cent. redeemable cumulative preference shares for the year ending 31st December 1955 (less income-tax) Rs. 19,913 (Rs. 19,913), to the payment of a dividend of Rs. 30 (Rs. 22) per share income-tax free on 12,000 ordinary shares for the year ended 31st December 1955 Rs. 3,60,000 (Rs. 2,64,000) and to carry forward to next year's account Rs. 69,806 (Rs. 55,358). The directors trust that the result of the working of the mills will be found satisfactory.

The Company's properties have been insured against fire, excepting a certain risk which is carried by the Company. The standing charges and profits have also been insured. The mills have 37,368 spindles and 914 looms and complete dyeing and bleaching plants.

Accounts in brief are as under:—

Jawahar Mills, Ltd.

The directors of the above Company (Managing Agents: Umaiyambika & Co., Salem) submitted the audited accounts of the Company for the year ended 31st December 1955.

After deducting all working expenses and interest and providing Rs. 2,34,762 (Rs. 3,79,724) for depreciation, the year's working has resulted in a net profit of Rs. 8,91,769 (Rs. 9,51,081). From this, the directors have appropriated Rs. 894 (Rs. 1,206) (Rs. 4,42,936) for taxes on the profit of 1955. There is a balance of Rs. 5,98,598 (Rs. 4,00,596) which the directors recommend to dispose of as follows:—

To general reserve Rs. 1,22,682 (*nil*), reserve for dividend equalisation Rs. 1,25,000 (Rs. 1,25,000), reserve for contingencies Rs. 1,50,000 (Rs. 1,20,373), pay a tax-free dividend of 12½ (12½) per cent. to shareholders Rs. 1,17,500 (Rs. 1,11,250) and to carry forward to next year Rs. 83,416 (Rs. 43,973).

The directors inform that the construction of the buildings of the branch mill at Chettinad, is well under progress. The machinery that have been ordered for this branch are all expected to arrive in a few months time.

Assam Match Co., Ltd.

The directors of the above Company (Chairman: Mr. Dinshaw D. Romer, Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The trading result of the year has been satisfactory, both production and sales being good. The factory and other property of the Company have been adequately maintained. Rs. 1,16,268 (Rs. 83,666) has been provided for depreciation on buildings and machinery on the same basis as last year. For 1955 a provision of Rs. 4,00,000 (Rs. 3,02,000) has been made for taxation, which includes the dividend tax as proposed in this year's budget.

The net profit for the year, after providing for depreciation and taxes for 1955 as aforesaid, is Rs. 4,35,902 (Rs. 4,07,965) to which should be added the sum of Rs. 1,17,493 (Rs. 1,34,528) being the balance carried over from last year, making a total of Rs. 5,53,395 (Rs. 5,42,493), which the directors recommend may be dealt with as follows:—

To pay a dividend for the year ended 31st December, 1955 at the rate of 7½ (7½) per cent. per annum (i.e., As. 12 (As. 12) per share) free of income-tax absorbing Rs. 2,25,000 (Rs. 2,25,000), to pay a bonus for the year ended 31st December 1955 at the rate of 5 (5) per cent. per annum (i.e., As. 8 (As. 8) per share) free of income-tax absorbing Rs. 1,50,000 (Rs. 1,50,000), to set aside for general reserve Rs. 60,000 (Rs. 50,000) and to carry forward to next year's account Rs. 1,18,395 (Rs. 1,17,493).

Rayalaseema Mills Ltd.

The directors of the above Company (Managing Agents: The Rayalaseema Development Co., Adoni) submit the audited accounts of the Company for the year ended 31st December, 1955.

The accounts show a profit of Rs. 4,84,225 (Rs. 2,42,820) has been made for the year 1955 after meeting all the expenses of operation and management and after providing Rs. 3,84,884 (Rs. 3,82,687) for depreciation to which has to be added the amount of profit for the previous year of Rs. 2,84,547 (Rs. 4,43,981) making a total of Rs. 7,68,772 (Rs. 6,86,800). Out of this amount the following appropriations have been made in the year 1955:—

To provision for taxes Rs. 10,000 (Rs. 50,000), plant replacement reserve Rs. 50,000 (Rs. 1,50,000) and payment of dividend Rs. 2,01,042 (Rs. 1,34,028) leaving a balance of Rs. 5,07,730 (Rs. 2,84,547). The directors now propose the following appropriations:—

To provision for taxes Rs. 2,25,000 (Rs. 10,000), dividend equalisation reserve Rs. 30,000, and a dividend of 10 (9) per cent. on ordinary shares Rs. 2,23,380 (Rs. 2,01,042) leaving a balance of Rs. 29,350 (Rs. 23,505) to be carried forward to next year.

The directors are glad that they have placed before the shareholders, the accounts of another year of satisfactory progress. During the year the price of the local cotton was favourable. As for yarn, excepting for the last 2 or 3 months when there has been a slight increase, the price continued to be steady for the rest of the year.

Government of India allowed export quotas during the year and they had to give an additional *ad hoc* quota due to the lack of interest in the local market and the good production of all mills generally.

The State Government of Andhra suddenly increased the electricity charges to over 100 per cent. This has caused an unexpected increase in the cost of production. The Government of India has relaxed the import policy regarding textile machinery. For every carding plant and spinning plant ordered with the indigenous manufacturers in India, the Government have permitted the import of equal quantity of foreign machinery. The directors have taken advantage of this aspect of the import policy of the Government and have decided to expand by installing another 6,400 spindles, thus making in all 21,200 spindles. At the request of the directors the Chairman Sri H. Sitarama Reddy visited the manufacturing centres of textile machinery in Japan. His visit has proved to be of immense benefit in negotiating the prices of foreign machinery. Orders for the Indian Machinery have been placed and the import licence for the balance of machinery is expected. It is expected that the new spindles will be put into commission before the end of this year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,29,625	Block ...	22,09,841
Reserves ...	12,10,000	Stock-in-trade ...	40,969

Liabilities ...	8,61,292	Mills stores and other spares ...	1,22,402
Profit and loss account ...	5,07,729	Debts, deposits and advances ...	18,30,981
		Investments	86,770
		Cash ...	2,52,315
Rs.	49,18,646	Rs	49,18,646

Shree Changdeo Sugar Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. A. H. Bhiwandiwalla & Co., Bombay) submit the audited accounts of the Company for the year ending 30th September 1955.

The accounts shows a net profit of Rs. 11,35,615 (Rs. 2,38,192) (subject to taxation). Adding to this a sum of Rs. 38,305 (Rs. 50,113) being balance brought forward from last year's profit, there is a total of Rs. 11,73,921 (Rs. 2,88,305) which the directors propose to dispose of as under:—

Dividend on 1,20,000 ordinary shares at Rs. 2 (Re. 1) per share free of income-tax Rs. 2,40,000 (Rs. 1,20,000), provision for income-tax Rs. 4,50,000 (Rs. 1,30,000) and balance to be carried over to next year's account Rs. 4,83,921 (Rs. 2,88,305).

During the year the production of sugar was 81,054 bags against 32,019 bags during the previous year and was the highest ever since the factory was established. The profits would have increased further had it not been for the fall in price of sugar during the year. The results are satisfactory. The plant and machinery are well maintained.

Factory Expansion.—As informed last year, the machinery ordered out for the expansion has arrived with the exception of turbo set and one crystaliser and all the machinery has been erected at the factory before the crushing was started.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

Committee on Public Expenditure

THE Government of India will take a decision on the appointment of a high-powered committee to go into the question of public expenditure and avoid waste, after this question has been considered by the National Development Council at its forthcoming meeting at the end of this month. The Committee will consist of Ministers and the Deputy Chairman of the Planning Commission. The broad terms of reference of the Committee and other details are still being worked out.

* * * *

Foreign Investments in India

The Government of India is not contemplating making any statement on investments by any particular foreign country in India.

* * * *

Indo-Pakistan Financial Talks

The Governments of India and Pakistan have agreed to hold a meeting at Secretariat level in New Delhi shortly to discuss the outstanding financial issues between the two countries. This meeting will prepare the ground for a future meeting of the Finance Ministers of the two countries. The date and agenda of the Secretariat level meeting are under discussion.

—*C. D. Deshmukh*

U.S. Investment Guarantee Scheme

The American Investment Guarantee Scheme is still being considered by the Government of India.

—*M. C. Shah*

Soviet Experts' Salaries

Seventeen foreigners are at present employed in the Bhilai steel project, being built with Soviet aid. They consist of one chief engineer on a salary of Rs. 4,500, five "leading specialists" each on a salary of Rs. 2,850, six specialists drawing Rs. 2,400 each and five interpreters on a salary of Rs. 1,950 each. These salaries are free from income-tax. At present, the Government of India is providing these foreigners with free accommodation. Whether they will pay rent for the accommodation in future is a matter to be discussed with the Soviet Government. The salaries the Russian experts are at present drawing are fixed after discussion with the Soviet Government. I have no knowledge of salaries these experts draw in Russia for similar work. We are employing one technical engineer at the Rourkela plant whose salary is comparable with that paid to the Soviet expert. The foreign technical personnel in the Bhilai plant will ordinarily remain in India for a year after the plant goes into full production.

* * * *

Iron Ore Deposits

The Government of India proposes to develop and work the iron ore deposits at Rajhara Hills (Madhya Pradesh) for the Bhilai steel plant. The Hindustan Steel Ltd. will develop and work the Bonai iron ore range in the Sudergarh District (Orissa) for the Rourkela steel plant. The estimated output from each of the deposits in Rajhara Hills and Bonai range is expected to be about 2 million tons per annum.

—*T. T. Krishnamachari*

Licences for Cement Factories

Ten applications for licences for setting up new cement factories are pending with the Government.

* * * *

Alwaye Fertilisers

The changes suggested in the process of manufacture of fertilisers at the Alwaye Fertilisers and Chemicals are now being put into practice and, consequently, the factory which had been a losing concern for several years is now expected to become an economic proposition. An expert committee which had gone into the matter has not only suggested a change in the manufacturing process but also recommended that the total production in the factory should be increased.

* * * *

Shortage of Motor Trucks

The shortage of motor trucks now experienced in the country is likely to be eliminated shortly.

—*Nityanand Kanungo*

Co-operative Farming

As many as 174 villages in 25 States turned into co-operative farming units during the first Five-year Plan period up to 31st December 1955. Apart from this, there were co-operative farming societies operating in villages, which did not cover the entire village. Separate assessment of increased production on account of co-operative farming has not been made.

—*Ajit Prasad Jain*

New Post Offices

More than 4,000 new post offices are to be opened in the country during 1956-57.

* * * *

Manufacture of Teleprinters

The Posts and Telegraphs Department has decided to establish a factory for the manufacture of teleprinters. The capital outlay of the factory will be Rs. 80 lakhs. No decision has so far been taken as to where the factory should be located. The factory, which will be set up with the help of a foreign firm manufacturing such machines, will manufacture 500 teleprinters annually in the initial stages. The Government of India is negotiating with various concerns manufacturing teleprinters in foreign countries to secure their help in the establishment of this factory.

—*Raj Bahadur*

Labour Film Unit

The Labour Ministry proposes to set up a film unit under the second Plan. The cost of the unit will be Rs. 18 lakhs. The unit will produce educational films covering various aspects concerning workers such as safety, health, welfare and vocational training.

—*Abid Ali*

Indo-Soviet Shipping Agreement

The total cargo to be imported from the U.S.S.R. under the new Indo-Soviet shipping agreement is expected to be about 350,000 tons per year and that to be exported from India will be nearly 50,000 tons per year in the next two years. It is expected that cargoes for export to certain Central European countries will also be available for carriage by the new shipping line.

* * * *

Second Shipping Corporation

No firm decision has been taken whether the second shipping corporation, when set up, should operate tramp ships exclusively or run regular liner services.

* * * *

Tankers for Coastal Trade

The Government has decided to acquire, through the Eastern Shipping Corporation, Ltd., two medium-size tankers of about 6,000 g.r.t. (8,500 d.w.t.) each, for coastal operation to carry refined products on the basis of time charter to the oil refinery companies in India. There is no proposal at present for the acquisition of tankers for bringing crude oil from abroad.

* * * *

Rural Communications

The Government of India is considering the question of appointing a special officer to assess the overall needs of the country in respect of rural communications.

* * * *

Road Development

The Centre has a non-lapsing fund to finance all road development. The Taxation Enquiry Commission had recommended that the States also should have such a non-lapsing fund. The Centre is in correspondence with the State Governments in this connection.

* * * *

Inland Water Transport

The Government has kept in view the desirability of co-ordinating inland water routes with rail and sea routes, while formulating plans for the development of inland waterways. Provisions have been made in the second Five-year Plan for the development of selected inland river stations on the Ganga and the Brahmaputra with provision for improved rail connections also. In the south, the possibility of linking the Buckingham Canal with the Madras harbour is being investigated.

* * * *

Kandla Port

The construction of Kandla port is estimated to cost about Rs. 14 crores. Works costing in all Rs. 6.25 crores have been given on contract to a firm of contractors. I do not consider as "abnormal" the rate of Rs. 2 lakhs per mile because of the tidal conditions of the area where the roads are constructed and the "superior specification" adopted in the light of these conditions.

* * * *

Railmen-Management Association

The manner in which railway labour is to be associated with management will be discussed with the National Federation of Indian Railwaymen shortly.

* * * *

Shipping Tonnage

Twenty-six ships of 89,622 tons were added to the Indian fleet up to the end of February 1956 during the first Five-year Plan.

—*O. V. Alagesan*

Notice

MACNEILL AND BARRY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5½ per cent. per annum for the half-year ended 31st March 1956.

Payment will be made on 1st May 1956 to those Preference Shareholders whose names appear on the Company's Register on that date, or in accordance with their instructions.

By Order of the Board,
A. H. FOSTER,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, *12th April* 1956.

Notices

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTIETH ANNUAL GENERAL Meeting of The Svadeshi Mills Co., Ltd., which was held on Thursday the 12th April 1956 was adjourned, with the consent of the shareholders present, owing to the sudden sad demise of a shareholder at the Meeting. The adjourned meeting will be held at the registered office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Friday the 20th April 1956, at 4-10 p.m. (S.T.) to transact the business left unfinished at the aforesaid meeting.

For and on behalf of,
THE SVADESHI MILLS CO., LTD.,
TATA INDUSTRIES PRIVATE LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, *13th April* 1956.

Note.—The dividends, if sanctioned at the General Meeting, will be payable at the Bank of Baroda Ltd., from Saturday the 21st April 1956 to the shareholders whose names stood on the Register of the Company on the 9th April 1956 and the Dividend warrants will be duly posted to the registered addresses of such shareholders.

ROLLING STOCK AND EQUIPMENT AGAINST GLOBAL PROCUREMENT PROGRAMME NO. GP8—1956-57

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to obtain from established and reliable manufacturers rolling stock and other Railway equipment shown in the list below. Manufacturers in Europe, United Kingdom and North America can obtain copies of the Indian Railways Global Procurement Programme of Rolling Stock No. GP8-1956-57 giving the particulars of items required and explaining the procedure for submission of quotations, from the Director General, India Store Department, Government Building, Bromyard Avenue, Acton, London W.3. Manufacturers in other countries and authorised agents in India of all foreign manufacturers can obtain such copies from the Chief Design Engineer, Central Standards Office, Baroda House Annexe, New Delhi, at a cost of rupees two per copy.

List of Rolling Stock and Railway Equipment

WAGONS:
Broad Gauge:
355 Nos. Petrol Tank Wagons 'TPR'
21 „ Heavy Oil Tank Wagons 'TOH'
30 „ Bitumen Tank Wagons 'TBT'
38 „ Liquid Caustic Soda Tank Wagons 'TCS'
3 „ Sulphuric Acid Tank Wagons 'TSA'

COACHING UNDERFRAMES:
Broad Gauge:
50 Nos. Bogie Coaching Underframe 2" Camber WA-16.
200 „ Bogie Coaching Underframe 2" Camber WA-15.

ELECTRIC MULTIPLE UNIT COACHES:
Broad Gauge:
90 Nos. E.M.U. Coaches 1500 Volts D.C. for Bombay Area.
203 „ E.M.U. Coaches 3000 Volts D.C. for Calcutta Area.

LOCOMOTIVES:
55 Nos. Electric Locomotives 3000 Volts D.C. for Calcutta Electrification.

TOWER WAGONS:
Broad Gauge:
9 Nos. Tower Wagons Self-propelled Diesel-powered.

CRANES:
Broad Gauge:
12 Nos. Steam Travelling Crane 5-ton capacity with 35' long jib.

H. D. SINGH,
Director, Railway Equipment,
Railway Board.

MONEY UNCHANGED

(From Our Own Correspondent)

BOMBAY, 18*th April*

Conditions in the short-term money market this week did not show any marked variation from those witnessed in the previous week. The pressure of demand for money, which showed signs of slight easing last week, did not ease further this week and banks were still keen borrowers. They were, however, able to get their requirements without much difficulty, consequent on the inflow of funds from mofussil and the maturity of Treasury Bills. In the absence of any large-scale improvement in supplies, the volume of business was still restricted and money rates were well held at the previous week's rates.

Inter-bank call money continued to be bid at 3¼ per cent., though occasional business was done at 3 per cent. also. House money at call and short-term deposits for periods from one to six months fetched 3¼ per cent. as in the previous week.

For the second week in succession, there was no sale of Government of India 91-day Treasury Bills. No announcement has been made by the Reserve Bank regarding resumption of Treasury Bill sales. Evidently, the authorities have no idea of resuming the sales until the money market presents distinctly easier conditions.

The Reserve Bank of India statement for the week ended 13th April 1956 shows a further rise of Rs. 9.29 crores in notes in circulation, and a decline of Rs. 4.73 crores in notes held in the Banking Department. The increase in total notes issued is, therefore, Rs. 4.56 crores. On the assets side, foreign securities have fallen by Rs. 4.97 crores, while rupee securities have gone up by Rs. 9.94 crores. Rupee coin is lower by Rs. 41 lakhs. In the Banking Department, there has been a further fall of Rs. 3.82 crores in deposits of the Central Government and of Rs. 3.33 crores in those of other Governments. Deposits of banks are also lower by Rs. 2.46 crores. Cash balances have dwindled by Rs. 4.74 crores and balances held abroad by Rs. 3.36 crores. Loans and advances other than to Governments have dropped by Rs. 1.74 crores, despite the increase of Rs. 3.51 crores in advances to scheduled banks against usance bills. Fresh borrowings by banks against these bills during the week amounted to Rs. 5.02 crores.

The Scheduled banks' statement for the week ended 6th April 1956 reflects the slight change noted in the money market last week. Thus, there has been substantial increase in the banks' deposits and cash balances, accompanied by a fall in advances, with the result that they have been able to reduce their borrowings from the Reserve Bank and the State Bank of India. Demand deposits show a rise of Rs. 13.93 crores and time deposits Rs. 4.33 crores. There has, however, been a rise of Rs. 1.19 crores in inter-bank borrowings. Borrowings from the Reserve Bank stand reduced by Rs. 14.20 crores and those from the State Bank by Rs. 6.21 crores. On the assets side, advances have declined, for the first time during the current season, by Rs. 5.38 crores, while bills purchased and discounted have gone up by Rs. 1.38 crores. Cash and balances with the Reserve Bank are up by Rs. 8.37 crores and balances with other banks by Rs. 86 lakhs. Money at call and short notice are lower by Rs. 65 lakhs.

The Gilt-edged market continued to rule steady. The demand from institutional investors for selected loans, the raising of the Reserve Bank's selling rate of 2½ per cent. 1976 by one anna to Rs. 82-10 and the paucity of floating stocks were the main helpful factors. There was, however, no improvement in prices of most of the loans, evidently because buyers were reluctant to take up the loans at higher rates. 3 per cent. 1957 was maintained at Rs. 99-12 and 3 per cent. 1958 at Rs. 99-10. 3 per cent. 1959-61 was featureless at Rs. 98-1. 3 per cent. 1963-65 held ground at Rs. 94-13 and 3 per cent. 1964 at Rs. 94-11. 3 per cent. 1966-68 was unchanged at Rs. 92-10, while 3 per cent. 1970-75 was quoted at Rs. 89-11 *ex-voucher*, as against Rs. 89-12 *cum-voucher* a week ago. 3 per cent. 1986 Conversion Loan, after receding to Rs. 76-10, gathered strength to Rs. 76-12. 3½ per cent. 1961 stood unchanged at Rs. 99-7 and 3½ per cent. 1964 at Rs. 98-12. 3½ per cent. 1965 was maintained at Rs. 98-9.

In the foreign exchange section, the rupee held its ground in terms of the U.S. dollar. The banks' selling rate was unchanged at Rs. 476½ per $100 and their buying rate at Rs. 472¾ per $100. Sterling, however, continued to display a hardening tendency. In New York, spot sterling moved up from $2.80⅜-2.80¾ to $80.13/16-2.80.15/16 and three months' forward from $2.78¾-2.78¾ to $2.79.1/16-2.79.3/16. Transferable sterling moved up from $2.78.5/16-2.78.7/16 to $2.78.9/20-2.78.11/20.

LINSEED RECOVERS

(Messrs. A. Bradley and Co.)

CALCUTTA, 16*th April*

Following the imposition of an export duty of Rs. 250 per ton on linseed oil, unsettled conditions prevailed in the linseed market during the week under review. The immediate downward reaction in prices was, however, short-lived and recovery was rapid with, values gradually rising towards the level at which they stood before the duty was announced. The two main reasons for this were (*a*) continued enquiries from local shippers who were heavily committed, (*b*) an appreciable rise in London prices to £153.

The immediate problem of shippers is how to meet the heavy losses involved against their overseas contracts which stipulate that export duty would be for sellers' account. No fresh business has been possible recently with prices now out of parity. Fairly large arrivals of new crop seeds continue to enter the market and crushers have been very active with good prices obtainable locally for ready oil.

The latest available quotations are: Ready Rs. 22-4 and April-May Rs. 22-4 per maund.

BULLION FEATURELESS

(From Our Own Correspondent)

BOMBAY, 18*th April*

The bullion market was featureless during the week under review, with fluctuations in prices of both silver and gold confined to a narrow groove. The undertone, however, remained fairly steady, though, on balance, both the metals showed fractional losses. Movements in silver prices were mainly influenced by the arrival of Tibetan coins and reports hinting at the possibility of these coins being subjected to import duty.

The sentiment in the white metal was adversely affected for a while by the large arrival of Tibetan coins amounting to about 400 bars, as well as by prospects of further arrivals next week. Subsequently, however, there were unconfirmed reports that the Government had asked the importers of these coins to pay a duty of Rs. 10 per bar. These reports induced the bulls to replace their stocks and the bears to cover their sales. It is not known how far these reports are correct, as imports of Tibetan coins are not carried out by bullion dealers, but by traders who are permitted to export textiles and other goods to that country and receive Tibetan currency in return.

Gold prices were affected early in the week by the decline in offtake. Later on, a broadening of the demand in the ready section imparted a steady tone.

Forward silver (26th April settlement) opened on a firm note, the price moving up from Rs. 180-10 to Rs. 181-6. The arrivals of Tibetan coins, however, affected the morale of the market and the prices sagged to Rs. 178-15. Reports about the levy of import duty lifted it up to Rs. 181 before the week wound up at Rs. 180-4. Business in May settlement opened on Thursday last at Rs. 181-14. After receding to Rs. 179-8, the price for this settlement gained to Rs. 180-11 at the close today.

Ready silver (.996 mint) drifted lower from Rs. 180-6 to Rs. 178-13, before gaining ground to Rs. 180-5. The floating stocks of silver are reported to be 900 bars. The daily average offtake was 20 bars.

After an initial advance from Rs. 105-14 to Rs. 106-3, forward gold (25th April settlement) gave way to Rs. 105-2. Encouraging advices from the ready section pushed it up again to Rs. 106 today. The closing was, however, a shade lower at Rs. 105-10. Forward gold (25th May settlement) ruled on par with the current settlement, the opening and closing prices being Rs. 106-2 and Rs. 105-10, respectively.

Ready gold sagged from Rs. 106 to Rs. 105-2 before regaining to Rs. 106. The closing was a shade lower at Rs. 105-10. The floating stocks of gold are placed at 30,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 3,000 tolas on an average.

In London, there was a further drop in silver and gold prices during the week. Spot silver was marked down from 78¾*d.* to 78¼*d.* and forward from 78¾*d.* to 78¼*d.* Gold moved from 249*s.* 2*d.* to 249*s.* 1*d.* In New York silver was unchanged at 91*c.*

The following comparative table shows the trend of the market during the week under review:

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 16*th April*

Sugar prices continued to rule dull and depressed, due to comfortable supply position and slack outside buying enquiry, coupled with restricted loading facilities. The overall increase in production of indigenous sugar, predicted by the Union Agriculture Minister, also acted as a damper. Mill delivery rates for sugar eased during the week. The latest prices as on Monday were: Jaswani Rs. 28-8, Simbhauli Rs. 28-5, Mowana Rs. 28-12, Daurala Rs. 29-8, Amroha Rs. 27-14, Bijnore Rs. 27-14, Mansoorpur Rs. 28-3 to Rs. 29, Rampur Rs. 31; retail Rs. 30 per maund.

The *khandsari* market was faced with heavy stocks and slack outside support. Prices ruled dull and featureless at Rs. 22 to Rs. 26 per maund, according to quality.

Ready *gur* prices eased towards the week-end, as daily arrivals increased to about 500 maunds. It was reported that harvesting operations had finished and producers were crushing the remaining cane crop. Loading facilities were restricted and this, too, accounted for a fall in ready *gur* prices which today was quoted at Rs. 10-12 per maund. Local stock was put at about 120,000 maunds. Small offtake during the week was to east U.P. and Punjab. Future *gur* prices moved both ways. While *baisakh* delivery eased, *fagan* delivery recorded modest gains. The latest prices as on Monday were: *Gur baisakh* Rs. 10-11-9 and *fagan* Rs. 10-1-6, as against Rs. 10-15 and Rs. 9-14, respectively, a week before.

COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 18*th April*

It has now become clear that the authorities are determined to put an end to speculative activity in the cotton market. Traders have been severely warned that any contravention of the Cotton Control Order through the purchase or sale of Indian cotton at prices higher than the basic ceiling prescribed under the Order will be taken serious notice of. The warning is a sequel to the reported tendency among a section of cotton traders to put through transactions in Indian cotton at prices above the basic ceiling price permissible under the Order. Drawing attention to such a tendency, the Textile Commissioner observes: "... purchase or sale of any variety of Indian cotton above the prescribed basic ceiling price requires prior certification by the East India Cotton Association (E.I.C.A.), Bombay, as to its quality. Without the required certificate, such transactions amount to contravention of the Cotton Control Order, punishable according to law. Mills and dealers are, therefore, hereby warned that no cotton may be purchased or sold, or offered to be purchased or sold, at a price higher than the basic ceiling prescribed for the variety, unless its staple and class have been certified by the East India Cotton Association to be such as to entitle it to a higher price under the Cotton Control Order. Serious notice will be taken of any contraventions, whether by purchasers or by sellers."

Simultaneously with this warning, the Forward Markets Commission, it is reported, has urged the E.I.C.A. to take immediate action to ensure that the delivery contracts conform to the Forward Contracts (Regulation) Act. The specific suggestions believed to have been put forward by the Commission are: (1) In future, delivery contracts should be in specifically prescribed forms; (2) there should be a difference between contracts which are transferable and those which are not; (3) weekly returns relating to all transferable contracts must be furnished to the authorities; (4) the differences relating to all transferable contracts should be pa

few popular varieties of Pakistan cotton, figures in brackets giving last week-end rates:

Sind Deshi 80-8 (78-8); Punjab *Deshi* 76-3 (75-0); *4F Roller* 79-15 (80-1); S.G. 84-15 (85-12); Punjab Roller 85-15 (86-4); S.G. 90-15 (9-4); *289F N.T. Roller* 86-15 (87-8); S.G. 93-7 (96-8); *289F* Punjab Roller 100 (94-4); S.G. 91-15 (94-4).

For the fourth week in succession, the Alexandria cotton futures market exhibited a buoyant tone, thanks to the growing scarcity of popular styles and considerable export sales already concluded. Prominent shippers were reported to have stopped offering current crop cotton. The remaining free stocks of cotton in Egypt, including local mill stocks and holdings of the Cotton Commission, are estimated to be very low. The free supply of Karnak, in particular, is said to be very limited. To quote one report: "Most of the Karnak requirements from now on will have to be covered from the Commission's stocks and leading shippers have indicated that these stocks are unlikely to be available, except near the prevailing high prices." During the week under review, the forward prices of all varieties of Egyptian cotton registered an improvement, as will be seen from the following table which gives the latest available quotations—in tallaris per lb.—from Alexandria, as compared with those a week before:

	17-4-56	10-4-56
Karnak		
May	95.50	91.44
July	92.10	89.05
November	87.15	86.55
Ashmouni		
April	75.40	73.00
June	73.85	72.65
October	68.10	67.65

At the recent auctions in Sudan cotton, S grades fetched prices about 2d. per lb. over the reserve prices of the Gezira Board. Even at present levels, the values of higher Gezira Sakel cotton are said to compare favourably with those of comparable Egyptians. Naturally enough, the demand for higher S grades has been active. If the demand were to be maintained in the coming weeks, the Board, it is stated, would have little difficulty in successfully selling the new crop cotton at the prevailing rates.

A fully steady trend was in evidence in the Liverpool cotton futures market. Induced by improvement in enquiry for ready and shipment cotton, the prices of futures were fully maintained. Local and trade buying absorbed the American hedge transfers. The Egyptian contract was well supported, on firm advices from Alexandria. Sudan contract also remained strong, with fairly large trade buying lifting up the prices. The latest available quotations—in pence per lb.—from the Liverpool cotton futures market are:

Old contract: May-June 25.25 and July-August 24.40. *New contract*: May-June 29.80, July-August 27.35, October-November 25.75, December-January 25.50 and March-April 25.35. *Egyptian Karnak cotton*: May-June 51.25, July-August 51.15, and November-December 51.15. *Sudan contract*: July-September 47.10, September-October 46.60 and *November-December 46.60*.

After exhibiting a firm trend early in the week, the New York cotton market developed a sagging tendency during the later sessions. The initial firmness was aided by good trade demand with active short-covering, particularly in new crop. Consequently, prices of cotton staged a rise. This trend was, however, checked on Monday when, following news of the President having vetoed the Farm Bill, selling ensued and cotton prices gave way. But the recession was not marked, thanks to buying support elicited by distant new crop deliveries, reflecting the Administration's decision to set price supports this year for five basic crops at least at 82½ per cent. of parity.

The latest reports from Washington indicate that there will be a delay in the announcement, by the Commodity Credit Corporation, of the details of the cotton export policy for the ensuing season. President Eisenhower has vetoed the Farm Bill as passed by the Congress, since it couples with the Soil Bank scheme a one-year programme of Government-guaranteed prices of basic crops at a fixed 90 per cent. of parity.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	17-4-56	10-4-56	3-4-56
Spot	36.63	36.90	36.80
May	35.75	35.70	35.63
July	33.48	33.68	33.60
October	32.56	32.59	32.06
December	32.61	32.66	32.15

YARNS MOVE UP

(From Our Own Correspondent)

BOMBAY, 18th April

There was a marked improvement this week in the sentiment of the yarn market, in contrast with the easy trend noted in the last fortnight. In fact, the market exhibited a distinctly firm tone. Rayon yarns elicited good support, thanks to fresh buying by mills. In the staple fibre yarn section, indigenous yarns came in for enquiries, while imported yarns were neglected. Cotton yarns ruled strong, following enlarged offtake by consumers in expectation of further rise in values, following the continued hardening tendency in raw cotton prices.

Under the impetus of consistent bull support, Snia rayon yarn (120 dull cones) for April delivery forged ahead from Rs. 818 to Rs. 838, but was quoted lower at Rs. 831 today. The net gain over the week was Rs. 13. June delivery improved by Rs. 2 to Rs. 807. Foreign spot rayon yarns recorded a rise in prices. 150 Japans were specially favoured, their quotation spurting by As. 4-8 to Rs. 4-6. 120 Japans advanced by an anna to Rs. 4-2-6. 150 Italys gained six pies to Rs. 3-12-6. 120 Italys were, however, a shade easy at Rs. 3-12-6. Deals in indigenous yarns were few and far between. National Rayons 150 Bt. cones 1st grade being quoted at Rs. 3-9 and 120 Bt. cones 1st grade at Rs. 3-11-6.

In the staple fibre yarn section, indigenous yarns (40×2) were bought at prices higher than those prevailing a week before. New Greats and Centurys both moved up by an anna each to Rs. 3-7. Citys rose by a like amount to Rs. 3-7-6. Kohinoors gathered nine pies to Rs. 3-7-9. Foreign yarns (80×2), however, were subjected to heavy selling and suffered a break in values. Paramounts dropped As. 3-6 to Rs. 7-6-6. Fujis fell by As. 3 to Rs. 7-5. Suicos declined by As. 2 to Rs. 7-14. K'Suns shed 18 pies to Rs. 7-10.

Cotton yarns of all counts registered an improvement in prices. Among 10 counts, Podars spurted by As. 6 to Rs. 13-4. Moderns advanced by As. 4 to Rs. 13-8 and Elphinstones by As. 2 to Rs. 12-8. Deals in 20s were put through at substantially higher prices. Hinds rising by As. 8 to Rs. 17. Maduras by As. 6 to Rs. 18-4 and Raghuvamshis by As. 4 to Rs. 17. Among 40s, Minaxis strengthened by As. 10 to Rs. 28-6. Centurys picked up As. 8 to Rs. 27-8. Among 60s, Raghuvamshis and Colabas rallied As. 12 each to Rs. 59 and Rs. 56-8, respectively. Moderns increased by As. 8 to Rs. 61-8. Finlays were firm at Rs. 61-8. Business in 80 counts Finlays was reported higher by As. 8 at Rs. 74. Moderns put on a similar amount to Rs. 66-8. Turnover in 30 counts was restricted; Maduras gained As. 4 to Rs. 23.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	18-4-1956	11-4-1956	4-4-1956

OILSEEDS IMPROVE FURTHER

(From Our Own Correspondent)

BOMBAY, 18th April

The outstanding development in the oilseeds market during the week under review was the decision to start futures trading in castorseeds September delivery. Accordingly business in this new contract commenced today on the Bombay Oilseeds Exchange at Rs. 150-4. On speculative support, it improved to Rs. 151-4, but subsequently closed quiet at Rs. 149, the lowest level for the day. The fall was due to unloading by shippers induced by reports regarding sales of Brazilian castor oil at competitive rates in the U.S. market.

The trading in September contract will be subject to certain changes in the terms and conditions as suggested by the Forward Markets Commission. Accordingly, the ceiling rate for the contract will remain unchanged at Rs. 251 per candy. The margin system will, however, be made a little stringent. Thus, the exemption limit for the purpose of imposing a margin on the net outstanding position of a member will be reduced from 15,000 candies to 5,000 candies. On the net outstanding position exceeding 5,000 candies but below 15,000 candies, the margin imposed will be at the rate of Rs. 2 per candy. If the net business is over 15,000 candies but less than 40,000 candies, the rate will be Rs. 3 per candy. All outstandings above 40,000 candies will bear a margin at the rate of Rs. 4 per candy. The revised rates of margin will come into effect from 1st June next.

In the present set-up, however, the margin system is comparatively more liberal. For there is no margin up to the first 15,000 candies. The margin at the rate of Re. 1 is applicable to the net outstandings between 15,000 and 25,000 candies, Rs. 2 to those between 25,000 and 35,000 candies and Rs. 4 per candy for all outstandings in excess of 45,000 candies.

The tightening of the margin system for the new September contract is attributed to the anxiety on the part of the Forward Markets Commission to avoid undue speculation.

The oilseeds market ruled firm till yesterday. Strong advices from overseas markets, especially from the U.S., were the chief cause for the firmness. Following the changes in export duties on vegetable oils in India, as reported in these columns last week, there was an upward adjustment in prices of oils in both the U.S. and the U.K. In the U.K., castor oil rates were put up by £3 to £4 per ton to £130 per ton for commercial quality and to £136 per ton for B.S.S. quality. Similarly, linseed oil shot up from £140 to £150 per ton. In the U.S., commercial grade castor oil rose from 15.25 cents per lb. to 15.50 cents. The firmness of these markets brought in its wake an upward adjustment in the prices prevailing in the local market. Operators who had sold previously appeared as keen buyers, while sellers became scarce. Prices in all the three sections forged ahead to establish new peaks on the 16th inst.

Since yesterday, however, the upward trend noted above gave way on profit-taking at higher levels. A leading operator was reported to have sold heavily on rumours that Brazil had appeared on the U.S. market as a seller of commercial castor oil at 15.25 cents a pound. This had a further dampening effect on other sections and both oils and oilseeds lost a part of the earlier gains. Nevertheless, the rates at close today were a shade higher than those at the end of last week. The undertone remained steady.

In the groundnut section, bold F.A.Q., which had closed last week at Rs. 33-12, opened this week at Rs. 34-12. It declined temporarily to Rs. 34-8 but recovered and rose to touch the year's peak so far at Rs. 35-6 on the 16th inst. In the subsequent sessions, it came down to Rs. 34-8 on profit-taking. April-May rallied from Rs. 33-10 to Rs. 34-14 before finishing at Rs. 34-10. Coromandel quality touched a high of Rs. 36-2 but retreated to Rs. 35-8. Khandesh quality moved between Rs. 34-12 and Rs. 36-4 and finally wound-up the week at Rs. 35-12. Groundnut oil, railway receipts, was done at Rs. 18-12, as against Rs. 18-4 last week.

Castorseeds May delivery improved from Rs. 141-8 to Rs. 145 but finished susbtantially lower at Rs. 141-14, thereby showing a gain of As. 6 on balance. September delivery finished today at Rs. 149, as against Rs. 150-4, as stated at the outset. Castorseeds F.A.Q. rose from Rs. 28-4 to Rs. 28-14 but closed at Rs. 28-10. Madras quality hardened from Rs. 26-4 to Rs. 28-12. Castor oil B.S.S. quality was in demand at Rs. 17-2, as against Rs. 16-8 last week.

Linseed bold put on As. 12 to Rs. 33-4, the highest rate touched during the week being Rs. 33-10. April-May rallied Re. 1 to Rs. 33-4. Indore quality had transactions at Rs. 33-4, as compared with Rs. 32-8. Linseed oil ready rose from Rs. 19 to Rs. 20-10.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	18-4-1956	11-4-1956	4-4-1956

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 18th April

The sugar market ruled distinctly easy during the week under review also. Following the substantial release orders issued to the Deccan mills, considerable, being 19,000 bags, as against 9,000 bags in the previous week. Another unhelpful factor was a further downward revision in the *ex*-Rs. 81-4 for 'D' grade sugar and Rs. 83-4 for 'C' grade. Advices from Kanpur, too, were bearish. The cumulative effect of all these factors was that stockists were eager to dispose of their holdings. Consequently, prices of sugar tended to look down.

In the forward section, 'C' grade sugar for *Vaisakh* delivery receded from Rs. 90-2 to Rs. 89-12, but was slightly better at Rs. 89-14 today.

In the spot section, medium grain indigenous sugar lost a rupee to Rs. 89-Rs. 90. Large grain declined by a like amount to Rs. 93-Rs. 98. Small grain was quiet at Rs. 86. British refined sugar, however, met with special buying support and hardened by As. 4 to Rs. 84-2 per bag of 2 cwts.

For the first time since the commencement of the current sugar season, the prices of indigenous sugar have tended to be lower than those of imported sugar. Incidentally, it is said that indigenous sugar when exported outside the city is entitled to a refund of town duty, while foreign sugar is not.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

* * * *

At a meeting of the International Sugar Council held recently at London, note was taken that the Statistical Committee had reviewed its estimate for 1956 and now considered that needs would amount to 250,000 tons above the estimate adopted by the Council on 1st December 1955. Total free-market requirements for the current year were placed at 4,770,000 metric tons. The Council meeting was attended by representatives of 22 Governments and by observers from India, Pakistan, Indonesia, Peru and New Zealand. The Council noted that the United Nations had issued invitations to an international sugar conference, to be held in New York, beginning on 21st May 1956. The Council's preparatory committee has forwarded to the U.N. a general review of the International Sugar Agreement as a basis for discussion at the conference. The Council decided that, if it were considered necessary, the next meeting of the Council could be held in New York during or after the projected U.N. international conference.

PEPPER TOUCHES NEW LOW

(Messrs. Parekh & Co.)

BOMBAY, 18th April

Malabar black pepper continued to drop during this week also, Alleppey having established a new low level of Rs. 737½. So also garbled in Cochin at Rs. 127½, and in Calicut at Rs. 810.

New York is holding back, asking for a concession in every offer made from the sources. Consequently, growers and holders are becoming all the more anxious sellers. Approaching monsoon and accumulation of floating stock in the primary markets are adversely telling upon the prices owing to the paucity of foreign demand. At Singapore, pressure of sales of Sarawak black old crop before the arrival of the new one was responsible for the further marking down of prices. The rate for Sarawak white is reported down owing to competition from Indonesia. The present lower premium for white over black has proved a handicap in marketing of the commodity. If such a lower premium persists for some time, production of Sarawak black is likely to increase as it will not be profitable for the growers to manufacture white. Indonesia, after maintaining the price of Lampong black at a very high level for a long time, is now reported tired and has come out to sell, the present price being Rupias 500, as against Rupias 975 in the beginning of the year.

A section of the trade believes that State trading in pepper may prove disastrous to growers, as it will antagonise our biggest buyers in U.S.A. who may look elsewhere for their supply since psychologically they are averse to trade with a Corporation established on Communist lines.

Lack of premium for ready over afloat or forward and absence of fluctuations in the prices of pepper in New York have forced many merchants out of the trade. Consequently, those few who have remained in the field are showing poor interest. They do occasional replacement buying against their sales of ready to grinders. Growers, having suffered losses in forward buying during the last two years, have become wise and are only covering their day-to-day needs.

Sarawak growers and traders are weak holders. If no support is lent when the new crop there begins to move, the prices of Sarawak may go still lower, reflecting adversely on our prices.

May shipment for New York changed hands at $0.27⅞, while June was done at $0.28 and July-Aug-Sept. at $0.28¼. In the delivery section, business is very poor, the prices quoted for April delivery being Rs. 695 nominal.

Following are today's nominal quotations: Ready delivery Rs. 100 (as against Rs. 107) per Bengal maund, April Rs. 695-705 (Rs. 740-50), May Rs. 710-20 (Rs. 755-65) and June Rs. 727½-732½ per candy of 5½ cwts.

HIDES FEATURELESS

(From Our Own Correspondent)

KANPUR, 16th April

The hides and skins market ruled featureless during the week under report. Price fluctuations were negligible. The week's offtake was comparatively less than that in the preceding week. There was appreciable demand for skins.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 200 to Rs. 275 and 3rd grade Rs. 100 per score; wet salted buffalo 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 300 and 2nd grade Rs. 250 to Rs. 275 per 100 pieces; sheep skins 1st grade Rs. 250 to Rs. 275 and 2nd grade Rs. 200 per 100 pieces.

BEST LIQUORING TEAS WELL SUPPORTED

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.

COCHIN, 12th April

A little over 112,500 lbs. were on offer in sale No. 8 which was held on Tuesday, 10th April. Quality continued to show a slight seasonal decline, and the effect of the lack of rain is particularly noticeable in leaf appearance. There were, however, several invoices which continued to show attractive quality. The sale opened to a good general demand and prices for low medium teas advanced by As. 2 per lb. Medium teas were rather irregular, buyers followed quality closely and prices were occasionally easier. Best liquoring teas were well supported and there was keen competition for a few flavoury invoices. Seasonal offerings sometimes showed a slight decline. The strongest features of the sale were all fannings grades which sold at rates As. 2 to As. 4 above last prices. There was an improved demand for whole leaf teas. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 10 0
Low medium B.O.P.	1 15 0
Medium B.O.P.	2 2 0
Good B.O.P. ... Rs. 3 0 0 to	3 2 0
Well made black leaf O.P. ...	2 10 0

London Market—Sale of 9th April 1956.—Strong general demand. Best liquoring fannings 6d. to 8d. dearer. Low medium and medium 4d. to 6d. higher and plain teas generally 2d. to 3d. dearer.

Sale of 10th April 1956.—Stronger, following improved quality. Good medium strongest feature in South Indians.

Colombo Market—Sale of 9th April 1956.—Strong demand. Useful liquoring broken mixeds and fannings dearer. Others firm. Quality dusts dearer. Others irregular.

Sale of 10th April 1956.—Active demand. Quality irregular but high-grown and medium brokens advanced 10 to 20 cents. Finest B.O.P.F. however declined 50 cents. Low-growns brokens 10 cents dearer.

Calcutta Market—Export.—Less demand. Prices generally one anna lower. Neat leaf fannings and well-made orange pekoes strongest feature.

Internal.—18,300 dmt. Much less demand. All types opened As. 1½ easier and closed As. 2½ easier. Exportable types fair demand. Leaf 3,500 chests. Only fair demand at easier rates.

Export Quota.—Special licence is changing hands at 4 to 5 pies. Business has also been done in 1956-57 export quota at 48 pies. It is understood that the first release of 1956-57 export quota will consist of 40 per cent. of the "best crop basis" compared with 50 per cent. of last year.

Forthcoming Auctions.—Sale No. 9 will be held on 24th April.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Dust Sale H.*—300,000 lbs. Good demand, but prices irregular. Best liquoring firm. Commons steady. Medium sorts easier."

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 16th April

The foodgrains market ruled easy during the week, thanks to new crop arrivals and slack outside buying enquiry. The decision of the Government to import 1 million tons of wheat and rice from abroad was expected to keep the grain prices at a reasonable level. Stockists were refusing to enter the local market as the implications of the new sales tax imposed by the State Government had not yet been fully realised. As local consumers were the only purchasers, there was a downward tendency in foodgrain prices. Wheat average quality was quoted at Rs. 12-8 and farm quality at Rs. 14 per maund, as against Rs. 14 and Rs. 15-6, respectively, last week-end. Daily arrivals of wheat averaged 600 maunds and stocks aggregated 3 *khaties*. Rice prices, however, ruled steady, despite reports that the Government had decided to resume rice auctions at the ports. The latest prevailing prices were: *Basmati* Rs. 25 to Rs. 33, *rangooni* Rs. 16-14, *ramajwayan* Rs. 22 and coarse Rs. 14-12 per maund.

Gram prices also eased to Rs. 10-2 per maund for local quality and to Rs. 10-8 for Punjab quality. Stocks were put at one *khati* and daily arrivals were small at 50 maunds. Maize and *bajra* prices declined, due to absence of ready demand, while prices of barley and *bejhar* recorded a sharp fall, following increased arrivals of new crop and want of outside support. But *jowar* ruled steady on increased demand for seed purposes. The prevailing rates were: Barley Rs. 8, *bejhar* Rs. 7-12, *jowar* Rs. 12-8 and *guwar* Rs. 10 per maund.

Despite increased arrivals—at an average of 2,000 maunds daily—ready peas recorded a steady trend to be quoted at Rs. 8-9 per maund for *Dara* green and white quality at Rs. 10-8. The entire arrivals found ready offtake in the form of pulses to Madras side and ready stock was almost *nil*. Beginning of arrivals in small quantity of new crop *arhar* at an average of 100 maunds daily accounted for a fall in *arhar* prices to Rs. 10 per maund quoted at: *Urd* Rs. 16 to Rs. 17, *moong* Rs. 13 and Other pulses also recorded a fall in prices to be quoted at: *Urd* Rs. 16 to Rs. 17, *moong* Rs. 13 and *masoor* Rs. 11-12 per maund. Arrivals of new *masoor* had begun.

While *arhar jeth* prices eased in line with the fall in ready prices, those of other pulses futures improved during the week to be quoted at: *Peas jeth* Rs. 8-8, peas white (gram) *jeth* Rs. 9-8-9, *arhar jeth* Rs. 9-15 and *urd baisakh* Rs. 17-4, as against Rs. 8-4-9, Rs. 9-5, Rs. 10-4 and Rs. 17-1, respectively, last week-end.

TANNED SKINS RECEDE

(From Our Own Correspondent)

MADRAS, 16th April

Arrivals of E.I. tanned cow hides were moderate in volume and met with ready clearance at the hands of exporters at improved prices. U.K. buying was patchy, but slightly higher prices were paid on medium and heavy weight kips. Demand from the U.K. for inferior cow was active, but the local market ruled a penny above U.K. importers ideas.

In the local market, *mundi* merchants put up their selling prices of loose kips by an anna per pound. This was resisted by the exporters. Prices of buff hides, buff calf and cow calf remained unchanged.

In the tanned skins section, prices of market qualities declined to a small extent, due to meagre enquiries from overseas.

The Textile Standards Sectional Committee of the Indian Standards Institution at its meeting held this week, considered the four draft standards on definitions of textile terms relating to (*a*) cotton, (*b*) wool, (*c*) jute and (*d*) silk, and decided to consolidate them in one standard. The Committee also decided to prepare separate drafts on definitions of textile terms relating to (*a*) machinery and mill accessories, and (*b*) types of fabrics. Two subcommittees were set up, one to deal with designation of yarn structure and the other to deal with definitions of terms relating to man-made fibres.

The U.K. Board of Trade has confirmed that licences have been granted by the British Government for the export of a limited number of agricultural tractors to China. Tractors are included in the list of goods which, on strategic grounds, are embargoed for export to China (though they do not figure in the embargo list for the U.S.S.R.). Control of the embargo is operated through a consultative group in Paris, composed of representatives of the N.A.T.O. Powers (except Iceland) and Japan. This, however, implies no change in the China list, as such exceptional exports do not impair the general purpose of the agreed controls.

LLOYDS BANK

(Concluded from page 762)

depreciation of £6.24 million has been left uncovered, because all the securities are redeemable at fixed dates, the majority within ten years, when any depreciation will be recovered.

The working of the Indian branches of the Bank during the year ended 31st October 1955 has been more encouraging than in the previous year. The profit for the year amounted to Rs. 21.42 lakhs, a rise of Rs. 5.03 lakhs over the year, in refreshing contrast to the decline of Rs. 10.17 lakhs in 1954. Notwithstanding the increase, the profit for 1955 is, however, lower than that (Rs. 26.56 lakhs) for 1953. Income by way of interest and discount has risen sharply from Rs. 126.80 lakhs to Rs. 140.81 lakhs and so also commission, exchange and brokerage by Rs. 4.85 lakhs to Rs. 38.79 lakhs. Interest paid on deposits and borrowings are up by Rs. 7.28 lakhs to Rs. 49.13 lakhs. The rise in expenses is of the order of Rs. 4.38 lakhs, the aggregate expenses being Rs. 103.15 lakhs. The provision for depreciation has been stepped up from Rs. 3.87 lakhs to Rs. 6.34 lakhs.

The Bank's deposits as on 31st December 1955 show an expansion of Rs. 1.89 crores to Rs. 41.69 crores, while borrowings from other banks stand reduced from Rs. 1.49 crores to Rs. 89.85 lakhs. Loans, cash credits and overdrafts have registered an increase of Rs. 2.80 crores to Rs. 17.86 crores, while bills purchased and discounted have declined from Rs. 2.54 crores to Rs. 2.18 crores. There has been a fall of Rs. 69 lakhs to Rs. 19.76 crores in investments, shown at or under market value. Cash on hand and balances with the Reserve Bank have shrunk from Rs. 3.32 crores to Rs. 3.24 crores and money at call and short notice from Rs. 2.60 crores to Rs. 1.79 crores.

BRITAIN RETURNS SILVER TO U.S.

Britain has started returning to the U.S. the 88 million ounces of silver borrowed during the war under lease-lend arrangements.

The silver is due to be repaid by April, 1957. In recent weeks the price of the metal has been between 78d. and 79d. per ounce, so that the current value of the 88 million ounces is about £29 million.

The metal received during the war was used mainly for industrial and, to a lesser extent, for coinage purposes. Most of that to be returned has been extracted by the Royal Mint from silver coinage withdrawn from circulation.

Britain's silver coinage, now being replaced by cupro-nickel, is 500 Standard—that is, 50 per cent. silver. The small percentage of pre-1920 coin remaining in circulation is of 925 Standard, or 92½ per cent. silver.

It has long been thought, says the *Financial Times*, London, that Britain had on hand nearly all the silver needed to repay the full obligation of 88 million ounces to the U.S.

It has been estimated that 10 million ounces of the metal were recovered by the Bank of England in 1955 from withdrawn silver coinage.

The largest lease-lend silver debt—226 million ounces—is that of India and Pakistan combined.

CANARA BANK

(Concluded from page 771)

recovery of the same will be the responsibility of the Bank whose existing organisation is well fitted to undertake this task. To begin with, about Rs. 10,000 would be advanced in 1956 and in due course we expect advances to go up to about Rs. 5 lakhs.

"The draft of the scheme and rules and regulations for grant of loans would be placed before the public soon and I feel sure this unique scheme would be received with approbation and serve a very useful purpose.

"A scheme to grant housing loans for middle class families more or less on the lines of the Government's scheme for housing for lower-income group will be considered by your Directors who may limit the total advances on such long-term advances to about 1 per cent. of our deposits. This is only a token attempt on our part to help the economically backward section of the community.

Savings Drive

"It is also the desire of your Directors that our Bank should contribute its share in the country's drive for small savings. So, we propose to launch an intensive drive for more of savings and thrift deposits and make these two services more popular among our people.

"I take this opportunity to thank our customers and members of the staff and, last but not the least, you the shareholders, for continued co-operation in making the working for the year a success. I am sure, I may look forward to continued co-operation on your part, which is a source of inspiration for all of us who are working for the Bank."

MR. T. T. K. ON SECOND FIVE-YEAR PLAN

PLEA FOR REALISM

IN his reply to the debate on demands for grants for the Ministry of Commerce and Industry in the Lok Sabha on Monday this week, Mr. T. T. Krishnamachari made a few realistic observations on the second Five-year Plan. The following are the relevant extracts from his speech:

"The second Plan envisages an investment in the public sector of about Rs. 710 crores on major industrial and mineral development and Rs. 200 crores for village and small-scale industries, together with an investment in the private sector now assessed to be Rs. 620 crores. Considering that only about Rs. 60 crores in the public sector and about Rs. 340 crores in the private sector were spent in the first Plan period, the targets for the second Plan look impressive.

"In the context of our physical needs, the appropriations that we have made for the second Plan might appear woefully deficient both as a means of raising the standard of living and as a major factor in providing employment opportunities. But those are primarily the kind of criticism made by people in this country. Such criticism is sometimes misguided and sometimes misleading. The reaction of people outside is somewhat different. That can be summed up in the few sentences which I am quoting from Arthur Lewis's book, *The Theory of Economic Growth*. 'The rate of economic growth can be too high for the health of society.... Societies are not necessarily wise to choose to speed up their rate of growth above its current level; if they do, they will enjoy substantial benefits, but they may also incur substantial costs, in social or in spiritual terms, and whether the potential gains exceed the potential losses must be assessed separately in each situation as best we may. It is because economic growth has both its gains and its losses that we are all almost without exception ambivalent in our attitude towards economic growth.'

Measuring Aspirations

"Speaking for myself with the little knowledge that I possess about planning in other countries, I would not commit this country, if I have any say in it, to a type of planning which, while it might seem to meet our immediate aspirations, would, in actual fact, be impossible of achievement. It does no good to flatter ourselves that we can do something more than what is actually possible. It would, in my view, be equally undesirable to undertake an expansion for which we may have to pay a price that is too high in terms of social and—may I say—spiritual cost. It is important to assess our physical needs. We must naturally aspire to satisfy them. But, if planning has any meaning, we must measure our aspirations against two yardsticks: (1) our financial resources both present and those likely to come into being in the Plan period; and (2) our physical resources specially in terms of personnel.

"From that point of view, what we call planning is the result of a compromise after applying all these tests. While the finding of personnel and finances for fulfilling the demand for the manufacture of consumer goods would not present the same problems as it would in the case of the producer goods industries, the future development of the economy depends primarily on the improvement in the producer goods industries. A dichotomy is, therefore, permissible between consumer goods industries and producer goods industries and a different approach in regard to planning for each type. While a relative flexibility can be maintained in regard to targets for consumer goods which should be treated as the minimum levels of production to be attained rather than ceilings, some rigidity in regard to targets for producer goods industries is vital in order to achieve our objective.

The Main Risk

"The main risk that is inherent in any planning for rapid industrialisation is primarily that of inflation. This risk is somewhat accentuated in our Plan because of a large amount of deficit financing that must necessarily be resorted to in order to make the Plan a success. The significant achievement during the second half of the first Plan period was a reduction in the index of wholesale prices for industrial raw materials and semi-manufactured articles, as well as the general index, as compared to the levels in the first half of the Plan period. This was supplemented by the avoidance of any diminution in our foreign exchange reserves, which, it was originally assumed, would result in an adverse balance of payments of about Rs. 200 crores during the Plan. In actual fact, our sterling balances have recorded a steady, though a moderate, rise during the last four years. But this result may not be obtained during the second Plan period. Indications are not wanting, notwithstanding the oft-repeated statement on the floor of the House by some hon'ble members to the contrary, that purchasing power is rising with the rise in the demand for consumption goods. In fact, the cumulative effect of the general rise in the level of purchasing power that occurred over the first Plan period is to be seen just now. It would, therefore, be wrong to assume the figures of industrial production in different fields included in the Draft Outline of the second Plan as ceilings. They are targets that have to be achieved *anyhow*. It is my own belief that the targets in regard to consumer goods are well below what would be our needs as the Plan progresses. That is why I emphasise the need for regarding the targets in the Draft Outline of the second Plan of the levels of production to be obtained to be the minimum rather than ceilings.

"Closely allied with this problem is another risk in rapid industrialisation, namely, the lack of adequate foreign exchange resources. Even as it is, we have envisaged a big gap of nearly Rs. 1,000 crores in our foreign exchange commitments of the second Five-year Plan. In arriving at this figure of Rs. 1,000 crores, we have not made any large allowance for imports of consumer goods, which we normally assume would be manufactured in the country. The assessment of this figure also is dependent on the management of our imports and exports. While no credit has been taken for any appreciable increase in exports and we do, in fact, expect some physical increase in our exports, it would be a sad state of affairs if, in order to counter inflation, we have to draw heavily on our foreign exchange resources by the import of consumer goods. Economists who speak about the desirability of curtailing conspicuous consumption do not always realise that there is public reaction to any shortages in what might be called essential and quasi-essential goods. I would, therefore, urge that it should be borne in mind that we cannot afford to get caught badly with supplies being short, as we had been in one or two cases in regard to certain articles of consumption.

Economic Philosophy

"Before I close, I would like to hark back on the question of our economic philosophy. I have been reading recently a note written with great modesty and restraint by a visiting economist who has remarked that the Indians whom he has met are beset with doubts and even with cynicism with regard to India's economic policy. Apparently, he has not met that class of people who, to use his own words, have an undying conviction of the rightness of their brand of particular economics.

"It is, however, true that we have not yet evolved an economic philosophy of our own and such as exists is necessarily ambivalent. We have, perhaps, no clear idea of the entire picture of the economic future that we desire this country to have. We are apt to think in compartments without any attempt at synthesising the conflicts that thinking in compartments necessarily engenders. We desire to succeed as advanced nations have succeeded in the economic sphere, like the United States and the U.S.S.R. But, while these countries are politically administered under a set of, what might be called, almost definite system of principles, their economic policies do change frequently. We have seen the remarkable rate of progress in the economic field in West Germany, following the liberal economic policies of its Economic Minister, Ludwig Erhardt. We have also seen the progress that is being made under democratic socialist administrations in Norway and Sweden. Have these examples any significance for us?

"For many of our questions, there may be no clear-cut answers. Economics does not solve problems in the abstract. As a science, if it is a science, it is essentially pragmatic. We cannot borrow wholesale from the examples of other countries, because our problems are essentially our own and, in some sense, unique—an enormous population with no outlet for it, the enormous magnitude of our unemployment, the shortage of land, machines and materials. These cannot be solved by any single set of solutions. Even in the functioning of Government, which is an organised unit, we have no synthesis in our economic philosophy. Many of the actions which we take are dictated by the narrow considerations of solving single sets of problems as they present themselves from time to time. Therefore, there is a great need to synthesise our aims and objectives or policies, and last but not the least in our thinking and actions. I have referred to the inextricable connection between transport—railways, road transport and shipping—and industrialisation, and to the problem of supplying the people with goods and services which they badly need and which they should not be denied, if raising the standard of living is our main objective. And, while I am a firm believer that physical controls are an essential part of economic planning, we cannot in peace-time planning ask our people, whose living standards are notoriously low, to postpone consumption for an indefinite period of time. How could all these factors be divorced from our fiscal policy, our monetary policy, our policy in regard to investments and our policies in regard to other matters of an administrative character which have a bearing on all these matters. If we undertake reform in any part of these tasks at one time without thinking of its effect on the economic structure as a whole, our work becomes amateurish and perfunctory. I recently came across a note produced by a Junior Statistical Officer in the Planning Commission, who has taken pains to show that we have no serious steel shortages and our needs of imports during the Plan period would be in the region of 3 million tons, and the note passes round as if it were a document of great importance.

"As I have said at the outset, this is my last budget speech before this House. I make bold to make an earnest plea for an injection of a large dose of realism in our economic thinking, in the shaping of our economic policy, and a larger and more sincere effort at synthesis. In one sense, we are poised almost on the edge of a precipice. If we choose the right set of principles and traverse in the right path, we can become an economically prosperous nation in ten years. If we proceed in a haphazard manner, as we are so often doing, my only prayer would be God help us."

NEW PUBLICATIONS

(*Concluded from page 783*)

as in the case of the Public Debt of India, nothing more than a brief narration of facts has been found possible. The treatment of certain other topics like Central Finances seems to be rather sketchy. On the whole, the book is good and will be found useful and interesting by students as well as by general readers.—T. R. SHARMA.

MARKET GOSSIP

(*Concluded from page 755*)

larger than last year. Of the 1,024-million-bushel carryover, about 859 million bushels are held under price support loans by the Government or owned by it. The quantity of the 1955 crop placed under loan and purchase agreement to the Government by the growers is expected to be larger than the 259 million bushels handled under the 1954 crop loans and purchases.

Consumption of maize in 1955-56 is expected to be considerably larger than in 1954-55. With a normal feeding rate for the increased numbers of livestock on farms, about 2,750 million bushels would be fed. The use of maize for food and industrial purposes is expected to continue at the 1954-55 rate of a little more than 250 million bushels. Exports of maize are expected to be somewhat larger than the 92 million bushels exported in 1954-55.

It is, however, the huge surplus of cotton in the U.S., on top of an uncertain farm policy, that has been the source of much discomfort to the world markets. For the 1955-56 season, the total supply of cotton in the U.S. has been estimated at 25.7 million bales (of 475 lbs. each), consisting of carryover stocks of 11.2 million bales and output of 14.5 million bales, as compared with 23.3 million bales, made up of carryover stocks of 9.7 million bales and crop of 13.6 million bales in the previous season. The supply of cotton in the U.S. is a little over 50 per cent. of the total supply of cotton in the free world. On the basis of the current rate of domestic consumption, the offtake by mills in that country could be 9.3 million bales in the 1955-56 season. The export situation is full of uncertainties. It was originally thought that it would be able to export some 2.5 million bales. But it is now thought that exports would absorb only about 2 million bales. Thus, the U.S. might well be left with a carryover of about 14.5 million bales, as compared with the 11.2 million bales brought in.

It is an unenviable situation for the U.S. which finds that its price support programme has left on its hands a huge surplus and the other cotton-producing countries in a state of borrowed prosperity. But the method which the U.S. intends to adopt for solving the problem has been rightly assailed as being contrary to that country's declared intention of not disrupting world markets. The U.S. has announced that it will, with effect from 1st August next, sell all the Government-owned stocks at competitive prices. These stocks are estimated at 6½ million bales. The U.S. view is that it must have a fair share of the world's markets. Available indications are that it regards a five-million bale figure as its legitimate share. The export of such large quantities at competitive prices would disrupt the markets in several countries. But the U.S. chief defence is that it has had to cut production, lose its markets, accumulate huge stocks because it has had to take into account the "interests of competing countries." Defending the U.S. decision on a more aggressive export policy, Mr. Ezra Benson, U.S. Secretary of Agriculture, said recently:

"As I have indicated on many occasions, the agriculture of the United States faces three great problems: (1) A declining share of the world market; (2) increasing stocks of unsold farm commodities; (3) and taking away land out of production. Despite these grave problems, the United States is possible and restrained. We are keenly aware of the need for statesmanlike action in handling our reserves of food and fibre. We are trying to resolve these problems without undue effect upon our friends. As any nation in similar circumstances would do, we are attempting to increase consumption of our farm products, both at home and in other countries. But in so doing, we are adhering to principles of fair competition. And, at all times, we invite the friendly co-operation of other nations in seeking to solve these serious mutual problems."

Nevertheless, protests from many countries continue to pour into the U.S. against its export policy. And, what is significant, they have come from both outside and inside the country. Many countries importing cotton from the U.S. have protested that, under present conditions, it has been impossible to operate a futures market in cotton. Last week, a suggestion was in fact made in the British Parliament to Mr. A. R. W. Low, Minister of State, Board of Trade, that he should consider making joint representations with other European countries to the U.S. Government about the effect of its cotton export policy on European trade. In his reply, Mr. Low said that while great importance was attached to the assurance given by the U.S. that they intended to effect sales in an orderly manner so as not to disrupt world prices, Britain's views on the subject would be pressed at a meeting to be held early next month of the International Cotton Advisory Committee. One member pointed out that the heads of the cotton industry in France, Belgium, Holland, and Italy all thought it was time joint action was taken so that the views of the European cotton users could be put to the U.S. The only people who were benefiting from this lack of imagination, he added, were the Japanese, and they were getting cotton on favourable terms. Mr. Low recalled that the U.K. had made a series of representations at very high levels to the U.S. during the last two plenary sessions of the I.C.A.C. and the matter had been the subject of special discussions by the Standing Committee of that body since last year.

Inside the U.S. itself, protest has come from that august body, the New York Cotton Exchange. The export programme, it points out, would render normal hedging process inoperative. It has also drawn attention to the fact that banks lend liberally against "hedged" cotton, and not against "unhedged" cotton. Any unrestricted export programme, according to the Exchange, would hit the smaller merchant who would be unable to carry the risk in the absence of effective hedging facilities for cotton.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2356 BOMBAY, 28th APRIL 1956 PRICE Rs. 1/8

MR. NEHRU'S COMMENDABLE SENSE OF REALISM

THE stand taken by Mr. Nehru on the much discussed Ambar Charka is very sensible and encouraging. Provoked by one of the members of the Rajya Sabha on Wednesday the 25th inst. to make a statement, the Prime Minister categorically refused to give an assurance that no licences would be issued for additional spindleage in the cotton textile industry, pending a final decision on the Ambar Charka scheme. He went further and said: "We shall give no such assurance now or later, or at any time, because that question is governed entirely by different factors." These factors, according to his explanation, include exports of cloth, growing domestic demand, and considerations of finance. It is gratifying to find that Mr. Nehru is fully aware of the implications of bolstering up Ambar Charka at the expense of mill industry to the national economy and that he would not let himself to be stampeded into any hasty action. He himself pointed out that subsidies to Ambar Charka would cost Rs. 200 crores for five years. This is by no means a small sum. The employment potential of investing this amount on other productive enterprises will be greater, more profitable and enduring than that offered by Ambar Charka. In these days of scarcity of capital, the Government has to ensure that capital is put to uses the productivity of which is high and the resulting employment is gainful and firm.

Encouragement to Ambar Charka on the lines demanded by its protagonists tantamounts to nothing more than providing unemployment relief. The wages that can be afforded to spinners of yarn on this instrument will be so low that the workers will not be able to make both ends meet. Then, there is no certainty that people will take to it easily, unless they are either compelled or on the verge of starvation. They will always be on the look-out for some better and more profitable sources of occupation and switch over to them whenever opportunities arise. There will, therefore, be considerable fluctuation in the supply of yarn and the weavers dependent on it will be greatly handicapped. The latter may even have to go without yarn and suspend their operations on certain occasions, especially during the sowing and harvesting seasons, when the majority of workers in rural areas are fully employed. If the supply of yarn is inadequate, there will be controls on production and distribution of mill yarn which in turn will breed corruption, blackmarketing and nepotism.

The technical and economic efficiency of Ambar Charka has not been proved to the satisfaction of all, contrary to all the boastful claims of its champions. If a sum of Rs. 30 to Rs. 40 crores per annum is required as subsidy to sell the yarn and cloth produced with the aid of this crude hand-operated spindle, it is obvious that it does not satisfy the test of economic efficiency. Technically, it may be an improvement over the *takli* or the ordinary charka. But it bears no comparison with a power-operated spindle. And it never can. It has been computed that, in order to produce a given quantity of yarn, the Ambar Charka will require 55 times the manhours taken by an ordinary power-spindle. The entire clock of economic progress will be put back, if the country is made to depend on Ambar Charka for its growing needs of clothing. In this age of Atomic power, Ambar Charka is an anachronism. In any case, from what Mr. Nehru said, it is clear that the Government of India is not yet convinced that this charka can do all that is claimed in its favour. The fact that an expert committee is still investigating the matter supports this conclusion. That the Ambar Charka is yet in the stage of experimentation is obvious from Mr. Nehru's disclosure that it is still undergoing changes. When such is the position, it is surprising that those connected with the All-India Khadi and Village Industries Board should go about making false propaganda in favour of Ambar Charka and try to mislead public opinion. The Chairman of this body recently stated to the effect that it was only Mr. T. T. Krishnamachari who was standing in the way of Ambar Charka being accepted by the Government. He was surely wrong in holding that view. A few days ago, Mr. C. D. Deshmukh revealed in public that he was in agreement with Mr. Krishnamachari. Now Mr. Nehru himself is doubtful of the wisdom of assigning to Ambar Charka the role demanded by the Khadi Board.

An attempt was made by the votaries of Ambar Charka in the Rajya Sabha to get the Government of India committed in advance to the findings of the expert committee still in the midst of its labours. Mr. Nehru was shrewd enough not to get caught on this point. It was argued by one member that, when an expert committee went into a problem and made recommendations for tackling it, the Government should accept them as the last word on the subject and implement them. To give such an undertaking even when the enquiry is on would be to hand over a blank cheque to the committee concerned. Further, an enquiry committee is not a body of arbitration the decisions of which are binding on both the parties to the dispute. Mr. Nehru was, therefore, right when he said that no Government could give an assurance that it would accept the recommendations of an enquiry committee, for experts were likely to come to conclusions in the field referred to them, without examining the question from the wider field. In the case of the Committee under reference, it could comment on only the quality of yarn produced by Ambar Charka, the cost of production and the economic price payable to such yarn. But the Government had to consider, he added, the question of subsidy payable and it alone was competent to do so.

The question of subsidy apart, there are other vital considerations to be taken into account. The consumption of cloth within the country is going up and will gather further momentum when the volume of purchasing power expands, following the large-scale development expenditure contemplated in the second Plan. The need for keeping up exports of cloth is essential and urgent in the context of foreign exchange requirements of the country. This cannot be successfully met if production of yarn and cloth does not rise quickly, for the increased domestic demand will cut into the cloth available for export. There are already unmistakable signs of this trend manifesting itself steadily. Exports of cloth in the first quarter of 1956, for instance, have been on a lower scale than in the corresponding quarter of 1955 and 1954. They may fall further, if no corrective steps are taken without any further delay. The most important of these is an increase in production. This step is equally important from the point of view of preventing any unhealthy rise in prices of such an essential item of consumption as cloth. But a swift and sustained rise in production cannot be had, if the country relies only on Ambar Charka and handlooms and places a ceiling on the spinning and weaving capacity of cotton mills. The only beneficiaries of this policy will be Japan, Britain, the Continental countries, Hong Kong and China, all competitors of India in the world trade in cotton goods.

Domestically, speculators and black-marketeers will reap a fortune when an acute scarcity of cloth arises, as it well may if the ceiling that already exists on the weaving capacity of mills is not raised, if not set aside. The Government can, of course, invoke physical controls to ensure an orderly distribution of available supply of cloth among the people. But this will cost the taxpayer a tidy sum, as controls cannot be administered with the help of *Shramdan* (voluntary labour). Further, as past experience has shown, controls cannot eliminate profiteering; on the contrary, they lead to corruption and moral degeneration, not to mention unproductive employment, the liquidation of which will become a difficult problem later. The social cost of controls will thus more than outweigh the cost of expanding the mill sector for bringing about an increase in the supply of cloth. It is, therefore, to be hoped that Mr. Nehru will display the same sense of realism in regard to the ceiling on the loomage of mills, as he has done in regard to the cry for a ceiling on the spindleage. We daresay that he will appreciate the need for it, if only he extends a bit the logic behind his decision on spindles. A settlement of this vital issue is long overdue. It should not be delayed any longer. Why not clinch the issue at least when the second Plan is finalised?

Expansion of the mill sector need not necessarily mean a restriction on handlooms. As the demand is rising, there is room for both, provided the handlooms are converted into more economic means of production. That the present policy of protecting handlooms through reservation of a part of the market has not been a great success and that the small gains which handlooms have had as a result have been neutralised by losses elsewhere is now admitted by both Mr. Krishnamachari and Mr. Kanungo, the two spokesmen of the Central Government who have been in charge of the problem and as such know where exactly the shoe pinches. Their colleagues at the Centre and in the States can serve the cause of handloom weavers better by listening to them and by carrying out their carefully considered suggestions for rehabilitating this ancient and largest cottage industry than by throwing stones at them and hugging to outmoded ideas and ideals. These two Ministers, be it noted, do not say: "Remove the restrictions that are now placed on the cotton mill industry in order to prop up the handlooms." Even though this advice is logically correct, they

know that, politically, it is not a feasible one and any realist will readily admit that, in a country like India where heads count more than brains, political pressure cannot be lightly brushed aside. What they have been advocating is modernisation of handlooms by replacing them with simple powerlooms that will give the weaver a decent wage and the consumer a better cloth at a cheaper price. The most appropriate time for introducing this reform in the handloom sector will be such as the present, when the demand for cloth is rising, stocks are low, prices remunerative and the mill sector can conveniently concentrate on expanding its export markets. It will indeed be a great misfortune to the handloom industry, if it misses this golden opportunity to strengthen its efficiency. Accordingly, those who oppose the changeover are doing, unwittingly perhaps, a great disservice to handlooms weavers, in particular, and the country, in general.

In fairness to Mr. Nehru, it must be recorded here that he did not disown Ambar Charka completely. While he was not prepared for any restriction on the expansion of mill spindleage, he declared that the Government was ready to render all reasonable assistance to Ambar Charka as a cottage industry. What he evidently meant by this was that he was for improving the quality and quantity of khadi production and, if Ambar Charka could help him achieve this objective, he was ready to support it. In other words, Ambar Charka has a purpose, albeit a limited one, namely, a mild modernisation of khadi industry. With this aim and purpose there can be no quarrel. There is, of course, a danger of the enthusiasts of Ambar Charka wanting to encroach upon the field of power spindles at a later date, as the champions of handlooms did and succeeded in their attempt four years ago. But that is a distant prospect, which, in the present political climate in the country, cannot be avoided. Meanwhile, the Prime Minister has tactfully prevented an embarrassing and fruitless controversy from gathering further momentum, an achievement for which he deserves high compliments.

DEBATE ON FINANCE BILL

THE debate in the Lok Sabha on the Finance Bill was, on the whole, a tame affair. Some members continued to press the case for a further steep rise in taxes. Others lent their support to this case, taking care to add that the relatively poorer sections should be left untouched. There was some concern over the increase in excise duties and the range of goods brought under this list. A few lone voices were raised in favour of providing some incentive to the private sector. But the debate, as such, was, perhaps, less stirring than what could be expected from a House which is shortly to gear itself to the immense task implied in the second Five-year Plan.

Nevertheless, a few important points emerged from the discussion. It was left to a lady member to urge some caution in deficit financing. After all, domestic felicity depends a great deal on price levels. And, perhaps, women in this country, unlike their counterpart in other lands, are shrewd buyers and have a healthy awareness of prices. The recent rise in prices of many essential commodities has rightly attracted attention. The Union Finance Minister, Mr. C. D. Deshmukh, in his reply to the debate, however, rightly opposed the suggestion that all this rise could be attributed to excise duties. He averred that the Government was watching the situation. Since physical controls were not acceptable to the vast section of the community, a certain amount of speculation was bound to exist. The Government, he said, was thinking in terms of buffer stocks, State trading and control on advances by banks. From all that he said it is reasonable to conclude that the Government will not lightly embark upon physical controls. This is some comfort for consumers.

Some fundamental issues relating to budgetary procedure and the presentation of the budget were raised by Mr. Tulsidas Kilachand. It is a pity that they did not evoke the necessary support. Nor did the Government spokesmen deal with them in their reply. The main point made by Mr. Kilachand was that the House should have wider and better opportunities for examination of budget proposals and the working of the State undertakings. In the context of the rising tempo of Governmental expenditure, the pre-war methods of budgetary presentation have little relevance. The frequency with which budget proposals have had to be recast in recent years serves only to underline the need for a more extended examination of these proposals by the House. Mr. Kilachand suggested that receipts and expenditure could be presented in February and the budget proposals in the middle of April or May. The Estimates Committee could split itself into sub-committees for examining the estimates of revenue and expenditure. A change in the official year, he further suggested, could be effected, in order to provide for adequate examination by Parliament of the Ministry's estimates and proposals. It may be recalled that the Estimates Committee reporting on the Railway Budget has also made a plea for more time for scrutinising the income and expenditure of the Railways, as well as the proposals made by the authorities concerned. In view of the increasingly large sums of money involved in Governmental outlay, it is certainly desirable that Parliament should not be denied adequate time and opportunity for proper scrutiny of Government's finances.

Equally important is the need for providing for a similar examination of the working of the enterprises in the public sector. Mr. Kilachand made out a notable point when he said that the State industrial undertakings in the second Five-year Plan will account for some Rs. 600 crores, in addition to a capital expenditure of Rs. 700 crores by the Railways. He rightly insisted that the House should have an opportunity exclusively to discuss the State industrial undertakings even as it has for discussing the Railway Budget. He even alleged that there was a great deal of secrecy about these undertakings. He asked for a consolidated white paper which should contain a report on the working of these undertakings, together with their balance-sheets and profit and loss accounts. It is to be hoped that the Government will be able to accede to this just demand by the time it presents the next budget. After all, the joint-stock companies are statutorily compelled to present the true state of their finances. For public undertakings, this responsibility is greater, not less. Publicity—full and wide publicity—is often the best antidote to suspicion. This is necessary on grounds of public policy alone. But even on the somewhat narrower ground, namely, efficiency in the working of these undertakings, the publication of informative reports and accounts should be genuinely welcomed. It is well to remember that the men who run these undertakings will be better disposed to acquit themselves creditably if they have the knowledge and the fear that their work will be judged by Parliament once a year and that they are responsible to the House through the Minister in charge of these enterprises.

In his reply to the debate, Mr. Deshmukh gave some indication of the Government's mind on ceilings on income, tax on wealth and land reforms. From the trend of his observations, it looks as though the Government has not yet formulated schemes for taxation of wealth. But it is seriously examining this proposition. It is not at present disposed to consider ceilings on income. But it will push through land reforms. Besides the recommendations of the Taxation Enquiry Commission, the Government "keep receiving suggestions from various quarters." One such suggestion, he said, is a tax on expenditure. He added: "All these are new ideas which have to be thoroughly sifted, investigated and related to their administrative implications and then only will it be possible for the Government, if it so thinks fit, to bring them forward before the legislature."

The Government is aware of the fact that there are "very formidable administrative difficulties" in the way of taxation of wealth. A return of wealth is now obtained from people with an income of over Rs. 36,000, against whom there is a *prima facie* reason for suspecting tax evasion. The Government, however, does not generally check these details. Obviously, a much more elaborate statement will be necessary, and means for checking it will have to be devised if the Government is to introduce a tax on wealth. These problems are being examined by the Government. Mr. Deshmukh, however, said that he could not say when the tax would be imposed. We fervently hope that the Government will not be hasty in taking a decision on this question. In a country where property is held in forms on which no correct market value could be placed (such as precious stones and jewellery), it would be extremely difficult to formulate an equitable scheme for taxing wealth. Perhaps, the Government, if it must impose this tax at all, will do well to wait till it has gained sufficient experience in the working of the Estate Duty. Further, since Estate Duty is itself a species of wealth tax, there is no reason why the Government should not perfect it, instead of pursuing new ideas.

Alluding to land reforms, Mr. Deshmukh said that they "would be accelerated along right lines in the future." By land reforms, he primarily meant the imposition of ceilings on agricultural holdings. In support of this policy, Mr. Deshmukh said that, in an old and thickly populated country like India, land was a much-sought-after and non-reproducible instrument of production, a scarce natural resource. He further said that, since ownership and cultivation of land determine, in an important way, the economic and social relationship within rural society, there was a special case for regulation of land ownership, tenure and land utilisation. Although large holdings were relatively few, they accounted for a considerable proportion of the total land available for cultivation. This disparity, he said, could not be justified when there were large numbers of landless peasants and those who had less than a basic or a minimum holding.

In thus presenting his case for ceiling on land holdings, Mr. Deshmukh did not cite figures to show how much land was available for redistribution and to what extent the landless peasants and small landholders would benefit through land gifts. The fact is that the dissatisfaction, not to say disaffection, and disloyalty caused by such forced redistribution of land, is likely to outweigh the satisfaction which the beneficiaries of this land policy are likely to derive. Apart from this consideration, the policy of ceiling on land is likely to aggravate further the problem of fragmentation of holdings and increase the pressure on land. Nor does it seem to be realised by the authorities that, in this country of large families, any scheme of redistribution of land will confer only a temporary benefit, in that inheritance laws will, in course of time, reduce the size of economic holdings which might have been created out of land reforms. The real remedy for the land problem lies not in discouraging large holdings which, in fact, make modern agriculture possible, but in creating more employment in agriculture by providing irrigation and other facilities for intensive cultivation, and in drawing the surplus rural population away from land through provision of ample employment opportunities in urban and semi-urban areas. In fine, intensive cultivation and industrialisation are the only remedies for India's land problem.

Mr. Deshmukh was, however, on firmer ground when he refuted the suggestion that, merely because the Government was committed to a policy of ceilings on landholdings, it should simultaneously impose a ceiling on all incomes. Nevertheless, the Government is constantly aware of the problem of reducing the disparity in incomes. It is to be hoped that, in adopting whatever measures it may deem necessary to take in this direction, it will not blindly yield to the essentially emotional demand for an omnibus ceiling on incomes.

There is one disturbing fiscal trend in this country to which it may not be out of place here to call attention. The Government has given the impression that it will no longer be guided solely by the recommendations of the Taxation Enquiry Commission. It is true that no Government would, or even could, bind itself by the report of any commission or committee, however important it may be. But one would expect the Government to treat the Taxation Enquiry Commission's report with a little more deference than it seems prepared to do. The tax on bonus shares is a case in point. The Commission reported against it. But the Government has imposed it. It is not, of course, suggested that the Government should not "keep receiving suggestions from various quarters." But the point is: Why should it reject the Commission's advice? It is not as if the Commission has been particularly soft to taxpayers. If anything, it has been harsh on them. Nevertheless, the Government seems to feel that it would always be justified in departing from the Commission's suggestions. There is already a tendency to treat the report as a thing of the past. Thus, Mr. Deshmukh said that, since conditions kept changing in this country and the Commission was appointed before the second Five-year Plan was drawn up, the report of the Commission, though it contained the general philosophy of taxation, was apt to get out of date in parts. This view, to say the least, is deplorable. It is now only a little over a year since the Commission submitted its findings. No remarkable changes have occurred during this period to lend support to the view that its report has become out of date. It is true that an ambitious second Plan has been drawn up and that the Government needs large resources to implement it. But, if the Plan shoe is larger than the country's feet, the obvious remedy is rather to trim the size of the shoe to suit the feet than induce an inflationary dropsy in the feet to suit the size of the shoe. The Plan is made for the country and not the country for the Plan.

FOOD SITUATION CAUSE FOR CONCERN

FORWARD MARKETS COMMISSION AND E.I.C.A. CHIEF

THURSDAY, 5 P.M.

MARKET GOSSIP

A SUBDUED tone has come to prevail in the share markets. There have been no new developments for any pronounced movement either way. Tired bull liquidation, coupled with some selling by institutional investors, has caused a slight fall in equity values. Among commodities, cotton has been firm and it is alleged that the volume of business at rates above the ceiling has increased, especially in upcountry markets. Oilseeds are quietly steady. In the bullion market, both gold and silver are well above last week's closing rates. A steady to firm tone prevails in the Gilt-edged market, while the money market still presents signs of brisk activity. Inter-bank money and house money in Bombay are quoted at the same rates as a week ago, though, in Calcutta, where the call rate was well above 4 per cent., it is now well below that level. Though the end of the traditional busy season is drawing to a close, there is not much evidence of it in the short-term money market. The hold-up in the docks, on account of labour trouble, and shortage of road and rail transport are arresting movement of goods and, to that extent, bank money, too, must have got tied up. In any case, with the nature of Indian economy becoming more and more industrial and with interest rates having gone up all over the world, it will be unrealistic to expect any marked variations of a seasonal nature in interest rates.

• • • •

The food situation in the country is by no means as comfortable as some of our Ministers want us to believe. Much is being made of the slight fall in prices of wheat and rice here and there. But it is forgotten that, although the movement of new crop into the market is in full swing and the reserved stocks of Government have been steadily thrown on the market for the past few weeks, the decline has occurred only in a few places and that it has been of a minor nature. In fact, this fall is nothing as compared with the steep rise that has already taken place all over the country. Hyderabad, Andhra, Mysore, Madras and Travancore-Cochin States have been the worst sufferers. In less than six weeks from now, the rains will begin, making it difficult for the grains to be moved freely. There is little scope for prices going down any further during this short period. If anything, they may go up after the rains start.

That the food position must be giving rise to anxiety is evident from the report that it is included in the agenda for the meeting of State Chief Ministers due next week at New Delhi. The Food Ministry seems to have been very complacent about the whole affair. It did not take any effective steps to build up buffer stocks last year, when prices in the country were low and there was a surplus of grains. On the contrary, it allowed some exports and permitted the shortfall in the 1954-55 cereal crops to be made good by dipping into the previous season's carry-over. It took no steps to replenish the reserves that were thus utilised. The output of both wheat and rice in the 1955-56 season is expected to be lower than even that in 1954-55. One estimate places the wheat crop down by 25 per cent. and the rice crop by 4 per cent. In terms of quantity, the drop will be about 2.2 million tons in wheat and nearly one million tons in rice.

After last year's floods, upseasonal rains and cyclone, at least the Food Ministry should have, as a precautionary measure, bought rice and wheat in the world markets for delivery now. It did nothing of that sort, but went on saying that production of foodgrains would not be adversely affected to any substantial extent. Meanwhile, prices of both rice and wheat have gone up in world markets, in spite of the mounting surpluses in the U.S. and Canada. Burma, which was an anxious seller till about the close of last year, is not so keen at present, having concluded large barter deals with China, Russia and Japan. The shipping position, too, has become tight and freight rates have gone up. The whole world knows that India wants to buy a million tons each of rice and wheat in the coming months. After the broadcast of this information by the Minister himself, will those who hold stocks of grains sell at old rates, or will the shipowners refrain from putting up the freight rates?

All these show that Government Departments are incapable of acting in right time or in the right manner. Who pays for this bungling by Ministers and officials? The public, of course. Yet, the Food Minister coolly accuses the traders by saying that some of them have started behaving in "a funny manner." The merchants and retail shopkeepers are not angels. Many of them lost money when prices went down last year and they would naturally try to make up for this loss by putting up the prices if circumstances were favourable for doing so. It is the duty of the Food Ministry to keep a watch over the situation, to make an intelligent assessment of the likely supply and demand in advance and to ensure proper balance between the two by arranging for either imports, if supplies indicated a shortfall, or purchases from producers if the crop showed signs of an increase. Managing the larder of a big country like India with its teeming millions is no joke. It requires vision, courage, agility and tact on the part of the Minister who is in charge of this responsibility.

• • • •

When the doyen of the cotton trade, Mr. Purshotamdas Thakurdas, bade good-bye last week to the East India Cotton Association, over the destinies of which he had presided in almost regal splendour for a period of over three decades, the event was variously described in market circles as a "first class issue," a "crisis" and a "scandal" because his retirement was as a protest against certain actions of the Forward Markets Commission. Since Bombay's cotton market has an international reputation, it was hardly to be expected that the event would go uncommented in the Press, particularly because the exit of the President, Mr. Purshotamdas Thakurdas, and of the Vice-President, Mr. Chimanlal B. Parikh, was prompted by considerations which have more than a merely local or technical importance. It raises a complex of issues about the relationship between the trade and the Commission.

Elsewhere in this issue, we have given a summary of the Commission's letters to the Association which provided the immediate provocation for the President's departure. The President has described the bunch of 11 letters as the "last straw on the camel's back." They are not a straw, but a bundle. But it is not clear why the Commission found it necessary to write a whole series of letters in a day. Nor is it clear from the letters whether all the issues covered by them had been the subject of discussion between the Commission and the Association. It is true that not all the letters are in the nature of directives to the Association, in that mutual consultations are envisaged in several letters. But it is also true that the Commission expects the Association to carry out certain changes in its by-laws. It is somewhat disingenuous for the Commission to argue that it will leave the day-to-day functioning of the market to the Association when its letters indicate a wide measure of control over every conceivable detail of the Association's working.

It is even more unconvincing on the part of the Commission to suggest that the President has tried to overawe the Commission. If anything, it is the Commission which has the whip-hand under the law. It can always get things done, thanks to the overriding powers it possesses. The real power and prestige of the Commission, however, lie not in the giant-like powers the Statute confers on it, but in the tact, the understanding and the wisdom with which it exercises them for the furtherance of the cause of those whom futures markets seek to serve. Recent events have shown that the Commission has absolutely arbitrary ideas about cotton prices. Indeed, nothing lends greater weight to Mr. Purshotamdas' statement than his reference to "ceiling within ceiling" imposed by the Commission.

In his rejoinder to the Commission's statement, issued this week, Mr. Purshotamdas again returned to this theme. He said he had carried on well with the Commission till he was told overnight to set up ceilings for cotton at Rs. 700, Rs. 140 below the official ceiling prices announced by the Government of India as its policy for this season. In the face of rising prices of other commodities such as foodgrains, oilseeds, etc., it was incomprehensible that the Association should be so willing a party to lower the ceiling to the detriment of growers. He hoped that the Commission and the authorities behind it had learnt the lesson that economic forces were stronger than the fiats of the Government, however powerful they were. The debacle in cotton in the U.S.A., despite the financial might of the U.S.A. he said, stood as an example in this connection. He rightly referred to the fact that, since the attempt to enforce the price level of Rs. 700 by taking the drastic step of closing down the futures market, economic forces had led to the prices in the spot market increasing by about Rs. 100 with mills still keenly seeking cotton at advancing prices. He claimed that economic forces had vindicated his opposition to attempt an arbitrary lowering of the ceilings for the futures contract. He reiterated his earlier view that the rise in the prices of cotton that took place from October to December was not the result of speculative manipulations. Denying that he had claimed a monopoly for speaking on behalf of growers, he observed: "It is strange that the Commission should in one breath say that it permitted futures trading for the protection of the cotton grower without explaining whether it was in the interest of the grower that it had closed down the futures market and again whether it was with a view to benefiting the grower that the Government's official ceiling price of cotton was sought to be lowered."

Explaining the circumstances in which he had resigned, Mr. Purshotamdas said that it was easy for him to have taken the path of least resistance and remained silent till the Government woke up to its mistake. Instead, he had taken the courage of doing his duty and telling the Commission what he thought. As regards the charge that he was not easily available for discussion, he said he had always placed himself entirely at the Commission's disposal and, if the Commission did not utilise his services in recent months, it was because the Commission was aware of his views which were unpalatable to it. Finally, he warned that the radical alterations sought to be imposed in the by-laws and procedures of the East India Cotton Association would so change the complexion of the cotton trade that the edifice built up during the last 35 years would come down. He, therefore, decided to quit with a view to making room for a more amenable successor in the hope that the Commission would have learnt its lesson from the experience of last year.

• • • •

It is thus clear that the prescription of a ceiling below the official ceiling was the original sin which demoralised the market to an extent that had not been witnessed in the years of worst shortages in cotton. The Commission, headed, as it is, by an economist of the eminence of Mr. Natu, could not have been unaware of the fact that there was shortage in cotton supply and that prices would go up. And prices do not behave to order. Unfortunately, there is a species of politicians in this country who will never cease to wonder why prices of cotton, like the price of a packet of blades or any other branded article, should not stay put at a level. In their view, the wicked machinations of the Machiavellian traders are the cause of all the rise in prices. Being an impartial and expert body, the Commission, however, should be able to develop an independent and correct view of the price situation.

It is bad enough that Indian cotton prices should be pegged at levels below even the currently low levels of world prices. But it is worse that a ceiling should be prescribed for the hedge control below even that low official ceiling. In any other agricultural country, the prescription of a low ceiling would become a first-class political issue. Even in this country, the Government has been compelled to yield to agricultural producers who are sufficiently well organised to demand their pound of flesh. The cotton farmer, on the other hand, has few spokesmen. Judging from its past performance, even the trade has given the impression that it will stand up for him only when that suits its case. Because the cotton farmers are a disorganised mass, the Government, too, has been encouraged to sacrifice their interests at the altar of textile workers and inefficient mills. The result is that the cotton farmer receives for his labour not only less than what he would get on world markets but also less than what other producers receive for similar effort.

MONTE CARLO BUDGET?

By Our London Correspondent

NO Chancellor of the Exchequer can ever hope—or should ever try—to please everybody. Mr. Macmillan has been no exception: "many a year," says one Editor, "since a Chancellor of the Exchequer packed so many changes of importance to so many people in a single Budget statement;" but "there is little new in his proposals" says another, "and even less of anything important." Truth no doubt lies between the two, but one thing Mr. Macmillan has certainly achieved and that is to improve confidence in sterling. Dear money is in to stay, the Chancellor can talk about surpluses of £500 million and increased taxes in the same breath, and anti-inflationism is firmly established on good solid ground.

Here is a budget of £5,200 million and on it for the past year the Government can show a surplus of £460 million. Normally, this would be an excuse for cutting up the cake and remitting taxes. But not with the new philosophy that Budget surpluses or deficits must be looked at against the economy as a whole. So the surplus is pocketed and the Chancellor takes a look at 1956-57. There he sees the ever buoyant revenue going to give him another £300 million over the estimates for the past year, while expenditure will cost about £180 million over the estimates for this year (£80 million being the bill for dearer Government borrowing). Thus, this new year may give a surplus more than £100 million over that actually realised for 1955-56. But the Chancellor takes the more cautious approach—he takes an estimated bill of £4,745 million from an estimated income of £5,190 million and looks at a prospective surplus of £445 million. But—true pupil of the economist Keynes—he then looks at capital expenditure by the Government, mainly by way of loans to local authorities and nationalised industries and declares he can see an outlay of £453 million to set against the income surplus. With inflation still in the air, he thus sees a deficit, in terms of capital and income all mixed together, of £8 million—and proceeds to clamp on new taxes.

But first he gives small gifts and prizes: a higher rate of Savings Bond interest (4 per cent. and 4½ per cent. are the new rates according to length of security, a rise of about ½ per cent.) and no tax on the first £15 Post Office savings interest. This will cost him about £8 million; then comes a popular move—the self-employed man, who provides for his retirement through insurance, is to be given the same advantages in tax rebates on his insurance premiums as firms enjoy—another £7½ million cost; house purchasers are to enjoy lower stamp duties, another £4 million gone. With sundry items the give-away bill is £20 million odd. The Chancellor now sees a deficit of £28 million! and proceeds to raise new taxes. Tobacco is the victim once again—it is so easy with a nation that spent £630 million on smoking last year—and the price of cigarettes, etc., will go up about 5 per cent. Then profits are called on for an extra levy—retained profits will pay 3 per cent. and distributed profits 30 per cent. So the Chancellor gets £28 million and the Budget, both above and below the line,

(Continued on next page)

SHARE MARKET LACKS DRIVE

PRICES CLIMB DOWN

(From Our Own Correspondents)

BOMBAY, 26*th April*

THE share market staged a further minor climb-down this week. Fresh incentives to bulls were conspicuous by their absence. The market, therefore, lacked drive and energy. On the contrary, tired bulls, who were disappointed at the poor performance of the market, were inclined to liquidate their holdings. This, in turn, curbed the bullish sentiment of operators who preferred to await further developments, in view of a number of uncertain factors such as the fate of Bombay City, the pending resignation of Mr. C. D. Deshmukh, and apprehensions regarding unfavourable changes in the Industrial Policy Statement to be published shortly. Transactions, in these circumstances, were far and few between and where they took place, values tended to drift downward and the week's lowest levels were seen just before the close.

The steel section depicted a bearish trend. Tired liquidation in Tata Ordinaries and selling pressure in Indian Irons from Calcutta were responsible for pushing down the quotations for both the scrips. The sale of a large parcel of Tata Ordinaries by a leading broker instilled fears of large deliveries in the ensuing settlement and brought in its wake fresh offers. These shares opened lower at Rs. 244-4, as against the previous close of Rs. 246-4, and rose by a fraction to Rs. 245 on the 24th inst. In the subsequent sessions, under pressure of sustained selling, they declined and wound up at the week's low of Rs. 239-4. Indian Irons drifted down from Rs. 34-14-6 a week ago to Rs. 34-5-6, after going up to a little over Rs. 35 earlier.

Textile shares also were a shade quiet, with leading counters registering sizable losses on balance. Bombay Dyeings lost 20 points to finish the week at Rs. 627-8. Centurys shed 9 points to close at Rs. 510. Finlays were marked down by Rs. 3 at Rs. 348, and Gokaks Rs. 3-8 lower at Rs. 227. Indu Ordinarys were As. 3 less at Rs. 12-4. Kohinoors staged a further retreat to the extent of Rs. 5-8 to Rs. 348. Shreenivas shares receded from Rs. 222-8 to Rs. 217-8. Lakshmis and Vishnus, however, put on Rs. 10 and Rs. 3-2 to finish at Rs. 705 and Rs. 193-12, respectively.

Bank shares remained generally neglected. But Bank of Barodas had some stray deals at Rs. 93, as against Rs. 94, and Bank of Indias at Rs. 153-12, as against Rs. 154-12. Centrals were unchanged at Rs. 47, while Union Banks lost As. 1½ to Rs. 6-8½.

Among public utilities, many counters were on offer, with the result that the section as a whole displayed an easy trend. Andhras moved down from Rs. 1,260 to Rs. 1,255. Bombay Suburbans shed As. 5 to Rs. 115, Surat Electrics, however, fared better at Rs. 120-10 as against Rs. 120. The Company has maintained the final dividend at Rs. 4-8 per share, making in all Rs. 7 for the year ended 31st December 1955, which is the same as for the preceding year. But hydro-electrics lost Re. 1-8 to Rs. 128 and Tata Powers Rs. 7-8 to Rs. 1,342-8.

Barring a few shares, the miscellaneous section, too, depicted a lower trend. Sugar shares continued to be dull. Belapurs drifted down by 6 points to Rs. 219, while Belapur coupons were steady at Rs. 117. Phaltons had deals done As. 8 lower at Rs. 141, and Walchandnagars Re. 1-14 lower at Rs. 242-8. In the cement group, A.C.C.s came down by Rs. 2-8 to Rs. 212-4, while Digvijays revealed no change at Rs. 185. The engineering and mining group fared no better. Alcocks fell by Rs. 8-12 to Rs. 341-4, Tata Locomotives by Rs. 3-8 to Rs. 150 and Premier Constructions by Rs. 5-4 (since *ex-div.* on 24th) to Rs. 171-4. Shivrajpurs fell by Re. 1-12 to Rs. 104-12. Indian Coppers, on the contrary, put on As. 5½ to finish at Rs. 6-9.

Among shipping shares, Scindias slided down by As. 4½ to Rs. 17-9. But Great Easterns were unchanged at Rs. 17-8.

Hindusthan Motors, in the transport section, had transactions at Rs. 9-4-6, as against Rs. 9-6 a week ago. Premier Automobiles remained unchanged at Rs. 90.

In the miscellaneous group, Bombay Burmahs moved between Rs. 620 and Rs. 632-8, before closing at Rs. 622-8. New shares, however, rose by Rs. 5-10 to Rs. 245. British India Corporations were up by As. 3 to Rs. 10-8 and Killicks by As. 4 to Rs. 169-8. National Rayons improved by Rs. 2 to Rs. 238-12. Tata Chemicals receded from Rs. 17-12 to Rs. 17-7 and Wimcos by Re. 1-4 to Rs. 201-4.

Calcutta Stock Exchange

CALCUTTA, 25*th April*

The Finance Minister's week-old statement in which he promised no relief in taxation but more taxes every year in the next ten years was still ringing loud in the ears of both investors and operators. Consequently, there was a shrinkage in the volume of business with a decline in equity prices on the Calcutta Stock Exchange during the week under review. For a time, of course, trading was lively, thanks to the Finance Minister's announcement in Parliament of a few minor concessions in corporation tax, and his assurance that the levy on bonus shares would not affect the shareholders in the least. Tea shares were particularly favoured, due to Mr. Deshmukh's announcement that 60 per cent. of the incomes of tea gardens, being agricultural incomes, would not be taxed. The liveliness was, however, short-lived, as operators desired to proceed cautiously, in view of the Finance Minister's clear hint that several taxes—not yet imposed—were under consideration for future use and that their introduction would depend on the progress of the country's economy. Political uncertainties also induced some selling. Mr. Deshmukh's speech in the Lok Sabha on Saturday last did not change the sentiment in the market for the better. For that was a balanced statement. He said that a tax on wealth was under consideration, and this eclipsed any change of sentiment that would have followed his view that placing a general limit on incomes was not a feasible proposition and that a ceiling on land holdings did not prohibit landowners to possess other forms of property.

Section-wise, jutes were lifeless, in view of the fact that prices of jute goods were not improving, while those of raw jute were high. Nationals were lower by As. 6 at Rs. 23-6. Barnagores changed hands at Rs. 133, as against Rs. 132 previously. Howrahs were quiet at Rs. 22-6 and Chitavalsahs at Rs. 14-2. From Rs. 39-4, Nuddeas receded to Rs. 38-12.

Although fears of an increase in excise duty affected the sentiment in cottons, Elgin Mills were fractionally better at Rs. 27-6. Kesorams were unchanged at Rs. 17-8.

Coals were shown sparse attention, on reports that the insufficiency of wagons was causing difficulty in collieries. Bengals were unchanged at Rs. 535, while East Indians declined from Rs. 32-12 to Rs. 31-8 and Central Indias from Rs. 6-15 to Rs. 6-13. Burrakurs were lower at Rs. 14 and Rancegunges quiet at Rs. 11-3.

In the mining section, Indian Coppers continued to attract attention on expectation of a bonus issue on favourable terms. From Rs. 6-4, the rate recovered to Rs. 6-11 yesterday but relapsed to Rs. 6-10 today. Burma Mines firmed up by As. 5 to Rs. 3-9. From Rs. 25-8, Karanpura Developments lost to Rs. 24-12 but recovered to Rs. 25 subsequently.

After depicting an easier trend, Engineering scrips were in better form. Good support was afforded to Jessop & Cos., which improved from Rs. 33-10 to Rs. 35-14. Texmacos, after rising to Rs. 23-14 receded to Rs. 23-9 today. Kumardhubis gave way from Rs. 10-6 to Rs. 10-2. From Rs. 27-6, Richardson and Cruddas improved to Rs. 28-12. Indian Irons opened at Rs. 35-4 and by the weekend had fallen to Rs. 34-13. On Monday, however, there was a pick-up to Rs. 35-1 to fall again today to Rs. 34-8.

Teas were supported at lower rates, Dufflaghurs meeting with business at Rs. 47-12, as against Rs. 48 previously. Tezpores dropped As. 12 to Rs. 26-4. Betjans changed hands at Rs. 57-8, as against Rs. 59-8 previously, while Hasimaras recovered from Rs. 41 to Rs. 41-12. Gungarams at Rs. 357 were higher by Rs. 7.

Among miscellaneous industrials, Electric Construction Equipments were steady at Rs. 13-6. B.I. Corporations were better at Rs. 10-10. Indian Cables were quiet at Rs. 31 and Indian Wood Products at Rs. 30-6. From Rs. 26, National Carbons recovered to Rs. 26-3. Rohtas Industries hardened from Rs. 22-6 to Rs. 22-10 before finishing lower at Rs. 22-2. India Steamships changed hands today at Rs. 8-7, as against Rs. 8-5 on Wednesday last.

Madras Stock Exchange

MADRAS, 24*th April*

The Madras Stock Exchange displayed a firm trend this week too, mainly on account of a feeling of optimistic outlook for industries, thanks to currency expansion and slight improvement in money supply conditions. Some of the concessions announced by the Union Finance Minister in the corporation taxes proposed in the 1956-57 budget also enlivened the sentiment of operators. The tea industry in particular, it was said, would benefit by these concessions. This feeling, together with reports of persistently good offtake of tea at higher prices, lent much support to tea shares. Coffee shares also elicited enlarged demand, which was inspired chiefly by the conclusion of an agreement with Soviet Russia for the export of 500 tons of coffee valued at over Rs. 41 lakhs to the latter country. Rubber shares also ruled strong, owing to reports of a growing demand for rubber from producers of rubber goods. Textile shares, too, were well favoured, the chief stimulating factor being the continued encouraging advices from both the yarn and piecegoods markets.

In the planting section, tea company shares provided the brightest spot. United Nilgiris rallied Rs. 5 to Rs. 355. An extraordinary general meeting of the United Nilgiri Tea Estates Company, Ltd., will be held on 22nd May next for the issue of three ordinary bonus shares for each five shares now held, or, on the sub-division of the present shares of Rs. 100 each to 10 shares of Rs. 10 each for every 10 shares now held. Mlamallay advanced by Re. 1 to Rs. 67. Periakaramalais recorded a rise of As. 5 to Rs. 9-10. Highlands and Nilgiri Teas moved up by As. 4 each to Rs. 13-2 and Rs. 14-2, respectively. Norwich Teas were firm at Rs. 37-4 *cum-div.* and Perksides at Rs. 20-13 *cum-div.* The directors of these two companies have declared an interim dividend of 10 per cent. and 5 per cent., respectively, for the year ended June 1956. Among coffee shares, Coffee Lands and Consolidated Coffees hardened by As. 3 each, the former to Rs. 22-15 and the latter to Rs. 13-11. Pulthutottams improved by 18 pies to Rs. 4-10-6. Among rubbers, Nemmenys strengthened by As. 10 to Rs. 24-4. Malakkaras and Nilamburs spurted by As. 8 each to Rs. 50-8 and Rs. 15, respectively. Midlands put on As. 6 to Rs. 21-10. Woodlands gathered a like amount to Rs. 12-4. Pullangodes increased by As. 4½ to Rs. 4-11 and Rajagiris by As. 3 to Rs. 24-3. Travancore Rubbers gained As. 4 to Rs. 28 *cum-div.* The Directors of the Company have declared a dividend of 30 per cent. on ordinary shares for the year 1955, as against 20 per cent. for 1954.

Induced by sustained buying orders, textile shares registered an improvement in prices. Virudhunagars and Premiers were in special request, their quotations advancing by Rs. 9-8 each to Rs. 40 and Rs. 197-8, respectively. Metturs climbed by Rs. 6 to Rs. 413. Bangalore Woollens rose by Rs. 5 to Rs. 570. Dhanalakshmis hardened by a similar amount to Rs. 350. Rajalakshmis put on Rs. 3-8 to Rs. 175 *cum-div.*, Rajapalayams Rs. 2-8 to Rs. 140, Malabar Spinnings by Rs. 2 to Rs. 114, and Coimbatore Spinnings by Re. 1-8 to Rs. 90. Kotharis, Lakshmi 'A's, Ranga Vilas and Venkatesas were better by a rupee each at Rs. 22-4, Rs. 95, Rs. 90 and Rs. 172, respectively.

In the miscellaneous section, gold company shares elicited very good attention of operators, on expectation of payment of liberal compensation by the Mysore Government which is nationalising the Kolar Gold Mining Companies. Champion Reefs rallied Re. 1-2 to Rs. 4-8. Nundydroogs picked up As. 10 to Rs. 6. Mysore Golds spurted by As. 4½ to Rs. 2-6-6. Rallis were in demand As. 8 higher at Rs. 34-4. India Steel Rollings, Mysore Tobaccos, and Radio and Electricals gathered As. 7 each to Rs. 14-10, Rs. 13-4 and Rs. 6 *cum-div.*, respectively. Central Scientifics put on As. 6 to Rs. 6-12, Ranes As. 5 to Rs. 10-4 and Singarenis As. 2 to Rs. 9-14.

OUTPUT OF GOLD

India produced 239,168 ounces of gold during 1954, of which 220,522 ounces were produced from Mysore Goldfields, according to the latest issue of *Indian Minerals*, published by the Geological Survey of India. The only other working mine—Hutti Goldfield in Hyderabad—is of minor importance and produced only 18,646 ounces during the period. The principal gold-bearing area in Mysore State is a 3 ft. wide vein stretching for about 5 miles. There are four mines in the State, namely, Mysore, Nundydroog, Oorcgaum and Champion Reef. The workings in the area have now passed a depth of more than 9,000 ft. and offer considerable difficulties in safe mining due to frequent rockbursts and heat. Gold-bearing veins are also known to exist in Dharwar district of Bombay, Wynaad and Anantapur districts of Madras, and Lowa in the Manbhum district of Bihar. These occurrences, however, show signs of old workings. Alluvial gold is found widely distributed in many parts of India, namely, Assam, Bihar, Orissa, Madhya Pradesh, East Punjab, Uttar Pradesh, Kashmir and West Bengal. Some of the rivers in these areas carry sands containing gold in exceedingly small quantity and the local villagers carry on gold-washing, in addition to their other occupations, as the yield is of inappreciable quantity.

MONTE CARLO BUDGET ?

(Concluded from previous page)

both on income and on capital account is balanced. From the economist's point of view, a perfect budget, indeed.

But, in income terms, there will be a surplus of over £450 million. This is not enough for the Chancellor—he attacks the bread subsidy which is to be abolished after the summer at an annual saving of £23 million, leaving milk the only consumer-subsidised food. He then attacks Government expenditure in general and aims to save in unspecified ways some £100 million in a full year. Add to this the normal buoyancy of the revenue and a £600 million surplus is looming up!

The Press and Parliament have focussed attention on the new (in modern times only) device of lottery bonds—but economically this is a small issue. In a gambling age, is it wrong for the State to appeal for savings to people who would rather take a chance on no interest (taxed anyway) or a big tax-free prize? These people would not save otherwise and the non-gamblers can still save in the old way. But the issue has branded this as a Monte Carlo Budget—in sly tribute to other events. But this is hardly fair to Mr. Macmillan—this is as disinflationary a budget as a Conservative Chancellor dare bring out, a budget that angles for a surplus of £600 million—as big as a pre-war budget. Tribute should go to him for a fair attempt at doing what all parties would agree needs to be done.—*All Rights Reserved.*

NEWS IN BRIEF

THE estimated production of bicycles during the period 1st July 1955 to 31st March 1956 was 415,772, of which 30,000 were from the small-scale sector.

The Central Government has made a profit of about Rs. 8 crores on the import of sugar. Disclosing this in the Lok Sabha the other day, Mr. A. P. Jain said that, out of a total quantity of 10.57 lakh tons of sugar imported during the last two years, 9.85 lakh tons had so far been consumed.

The Government of India has accepted in principle the necessity of affording assistance to the sailing vessel industry to enable owners of sailing vessels to mechanise their vessels. Details of the scheme to provide such assistance are now being worked out and will be included in a Bill which the Government will bring forward for the purpose.

Having regard to the fact that the Expert Committee appointed to examine the feasibility of introducing a scheme of Export Credit Guarantee for India has yet to consider a number of important items of work, the Government of India has decided to extend the term of the Committee upto 30th June 1956. The Committee was originally required to submit its recommendations to the Government by 6th May 1956.

The additional investment required to rehabilitate The Fertilisers and Chemicals Ltd., Alwaye (Travancore), is estimated at Rs. 256 lakhs. It will take three years to make its production near-economic. The objective of the Central Fertiliser Pool is to make ammonium sulphate available to cultivators at reasonable prices and its continuance will not depend upon the working of this particular firm.

The all-India final estimate of black pepper for 1955-56 puts the current year's area and production at 214,200 acres and 27,200 tons, as against the partially revised estimate of 208,300 acres and 25,800 tons for 1954-55. The increase in area has generally occurred in all the black pepper growing States, while that in production has occurred in all the States, except Travancore-Cochin, where production has declined by 100 tons.

The Government of India has so far paid Rs. 4,52,89,300 for the execution of development projects in Nepal. The aid given by the Government of India has been twofold—technical and economic. Technical aid covers schemes relating to scholarships for Nepalese students and deputation of experts to Nepal to advise on technical matters. Economic aid covers schemes like construction of roads, airfields, execution of minor irrigation projects, and trigonometrical and geological survey.

The Government of India is taking steps to have a detailed project report prepared for the setting up of a foundry in conjunction with a forge shop. No decision has yet been taken on the total number of foundries that will be set up. The estimate of the cost involved and the strength of the labour to be employed will be known after the detailed project report has been prepared. The decision regarding the location will also then be taken.

Out of the estimated production of about 220,000 tons of soap, about 57,800 tons are produced by foreign-owned units, according to Mr. T. T. Krishnamachari. Establishment of new units or expansion of existing factories is not permitted. Soap is an item in export promotion and is included in trade agreements. Import of soap is not allowed under the present import schedule, except for a small quantity of medicated soap.

The Railway Board has sanctioned traffic and reconnaissance engineering surveys for a broad-gauge (or alternatively metre-gauge) line between Dungarpur and Ratlam *via* Banswada, a distance of about 150 miles. The survey will be carried out by the Western Railway. This project is being examined in conjunction with the Udaipur-Dungarpur-Himmatnagar line and has alternate operational possibilities. In addition, it will benefit the underdeveloped Adivasi tracts of Rajasthan. The line passes through regions rich in minerals and natural resources.

Approximately 1,882,26 rattis of diamonds, worth about Rs. 3.5 lakhs, were obtained from the mines in India in the first ten months of 1955-56, the figures for 1954-55 being 1,866.99 rattis and Rs. 3.4 lakhs, respectively, according to Mr. K. D. Malaviya. While no oil deposits have been found in Himachal Pradesh, certain favourable structures indicating the presence of oil have been discovered. The Government has a programme for preliminary drilling in this area and it proposes to start drilling before the beginning of the monsoon.

Grants have been sanctioned to some of the universities, colleges and research institutions for conducting economic surveys of important towns in the respective States. Grants vary according to the estimated expenditure on a scheme. Quarterly statements of expenditure incurred and progress made are received by the Research Programme Committee of the Planning Commission. A scheme of Socio-Economic Survey of Bombay City, prepared by the School of Economics and Sociology, has been approved and investigation is now in progress. For certain other cities, schemes submitted by other institutions and colleges have been approved and are progressing. Bombay, Baroda, Surat, Poona and Hubli are the towns in the Bombay State where a survey has been made.

A mission from the International Bank for Reconstruction and Development arrived in New Delhi on the 19th inst. The leader of the mission, Mr. Thomas H. McKittrick, a retired senior Vice-President of the Chase National Bank of the United States, will be joining the mission later, that is, on the 30th inst. Besides the leader, the mission consists of five other members. The object of the mission is to make an assessment of the economic progress made by India so far and of the effects on its economy of the second Five-year Plan. In the light of this assessment, the Bank will determine the extent to which it can increase its loans to India. The mission's stay in India is expected to last six to eight weeks. While in Delhi, it will hold discussions with the various Ministries of the Government of India and with the Planning Commission. It will also visit important industrial centres and some development projects and will meet industrialists and business men.

* * * *

From Abroad

Argentina has decided to join the International Monetary Fund and the World Bank.

Stocks of wheat in Canada on 31st March this year amounted to 751.6 million bushels, the second highest in the history of the country.

The Egyptian Government has imposed a customs statistical duty of one per cent. on all goods imported with effect from the 19th inst.

The international conference, which is considering the renewal of the International Wheat Agreement, resumed its discussions in London last week. When the earlier sessions held in Geneva concluded, a draft text for a new pact was agreed upon, leaving to be decided only the issue of prices, quantities and duration.

The G.A.T.T. has to its credit ten years of substantial achievement, according to Mr. E. Wyndham White, Executive Secretary of the G.A.T.T. It is encouraging, he adds, that the inflationary pressure naturally resulting from the rapid rate of European economic recovery has not led to renewed trade restrictionism.

The Appropriation Committee of the U.S. House of Representatives has voted a sum of $1,200 million for setting up a farm "soil bank" immediately. The soil bank is intended to pay farmers for putting a part of their land out of cultivation and thus avoiding an increase in surplus food stocks.

Newsprint shortage is causing a "grave crisis" in the Pakistan newspaper industry, according to Mr. Fakhr Matri, General Secretary of the Council of Pakistani Editors. One Dacca newspaper has already ceased publication. Many other papers are threatened with a similar fate. District papers and periodicals are the worst sufferers.

Commercial banks in Sweden have agreed to reduce their advances by 5 per cent. by next August in a move to curb inflation. This is expected to reduce the amount of money in circulation by 500 million crowns. The Swedish National Bank had asked the commercial banks to make the reduction following a 6 per cent. increase in the past year.

The American overseas assistance aggregated nearly $4,000 million in 1955. This brought the net post-war total of assistance abroad to $53,000 million, with $11,000 million representing credits repayable to the United States. There was a decrease of about $1,000 million in military assistance, military aid for 1955 amounting to $2.200 million. Non-military aid last year, including technical co-operation and catastrophe relief, increased by about $200 million to reach $1,700 million.

The output of tea in Pakistan during 1955-56 amounted to 49 million lbs., a fall of 6 million lbs. from that in 1954-55, despite an increase of one per cent. in acreage. This decline is due to drought which hit the tea estates in the beginning of the season. Exports declined from 23 million lbs. to 21 million lbs., mainly due to a rise in domestic consumption. The Ministry of Agriculture has planned to increase production, in view of the rising trend in internal consumption.

PERSONAL

MR. John Maclay, a member of the British Parliament, has been re-elected President of the seven-nation Western European Union.

Mr. S. N. Haji of the Scindia Steam Navigation Co., Ltd., has been elected Chairman of the All-India Manufacturers' Organisation for 1956.

Mr. Jayantilal Amratlal and Mr. Chandulal Vardhaman have been elected President and Vice-President, respectively, of the Saurashtra Mill-owners' Association for the year 1956-57.

Mr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company, Ltd., has returned to India after attending the meeting of the International Civil Service Board held at New York recently.

Mr. Jaykrishna H. Patel, senior partner of the Managing Agents firm of Shri Ambika group of mills, Ahmedabad, has been elected President of the Ahmedabad Millowners' Association for 1956.

Mr. Saiyid Fazl Ali, lately Chairman of the States Reorganisation Commission and a former Governor of Orissa, has been appointed Governor of Assam, in place of Mr. Jairamdas Daulatram, who will be relinquishing his post in the middle of May.

Mr. Manilal H. Patel, senior partner of Messrs. Manilal Patel & Co., Bombay, who has been selected by the Government of India to represent it at the International Cotton Advisory Committee meeting to be held at Washington on 7th May next, left for Washington on the 22nd inst.

Messrs. N. Dandekar, G. Dodds, R. E. Forrester, A. H. Hume, F. H. Kemple, K. G. Milne, F. Parker, K. B. Sethna, R. F. S. Talyarkhan and N. M. Wagle have been elected members of the Committee of the Bombay Chamber of Commerce for the year 1956-57. The election of Mr. J. F. Sinclair and Mr. A. J. C. Hoskyns-Abrahall as President and Vice-President, respectively, has already been announced. Mr. B. Barker has succeeded Mr. L. A. M. Boult as Secretary. The Labour Adviser in charge of the Chamber's Labour Department is Mr. L. C. Joshi.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 25*th April*

Bamboo Paper Pulp

Although the experiments at Dehra Dun have not yet led to any very striking commercial success in making pulp from bamboo and grass, it is expected that, within a short time, one or two large companies will be floated to undertake this work, probably in Burma. In the meantime, work on a small scale has been carried out in Madras and in Calcutta. Woods and grasses have also been the subject of investigation for the manufacture of paper pulp, and much valuable advice has been given to those who sought it on this subject, but, although there are vast forest areas in India and Burma, there is not in them sufficient timber situated accessibly and suitable for pulp making at competitive cost. The Indian paper makers rely for their local supplies on sabai grass, which grows wild but not in sufficient quantities to serve a great industry. Their output of paper from local material has, therefore, remained stationary for 20 years at about 30,000 tons, while, for the rest of their manufacture, they have imported wood-pulp at heavy cost. The present position of India in relation both to local manufacture of paper and to its contribution of materials for world supplies is far from satisfactory, and the situation merits the close attention of all paper manufacturers who are so largely dependent on foreign countries for their pulp supplies.

VALUE OF ADVERTISING

TO many laymen, it may seem surprising that manufacturers should spend so much money advertising their goods. They wonder whether the goods will not sell of themselves. They might even ask whether it would not be in the interests of consumers if the manufacturers refrained from advertising their wares. But these doubts betray ignorance of the economics of advertising. It is not as widely realised as it should be that, through advertisement, the manufacturer reaches a wider section of consumers and is thereby in a position to cut down his costs through the larger turnover made possible by large-scale publicity.

This, of course, is only one, though a very important, aspect of advertisement in a competitive economy. But even those who grant this case are apt to argue that, in a socialist State, there would be no need to advertise, for competition would have been greatly minimised, if not altogether eliminated. In considering an argument of this kind, one must bear in mind at least two considerations. In the first place, it is of no particular relevance to this country, for even under the socialist pattern of society, now envisaged, there is expected to be large enough competition in the private sector. Secondly, industrialisation is only in its very early stages in this country, so that what is now needed is maximisation of the market. This could be achieved only through extensive publicity.

The ideological question whether the cost of advertising and publicity would be lower in a regimented economy raises certain fundamental issues. For one thing, even in such an economy, there would be need for advertisement. Nationalised sectors too would have to advertise their goods and services. Secondly, the fact is that in such an economy, there is no clear difference between propaganda and publicity, between advertisement and indoctrination. All agencies, the press, the radio, the platform and even the entire educational system, are pressed into service to advertise the State's activities. Apparently, there is no advertisement. But, in a concealed form, there is a great deal of it for which the community pays. The total bill could be much greater than under a democracy. And, what is more, there is likely to be considerable misdirection of publicity resources. Thus, Russia spent millions of roubles telling the people and the world that Stalin was an angel of virtue. It will now probably spend a few millions more explaining to people and the outside world that Stalin, far from being an angel, was a mere man, and a very wicked man at that.

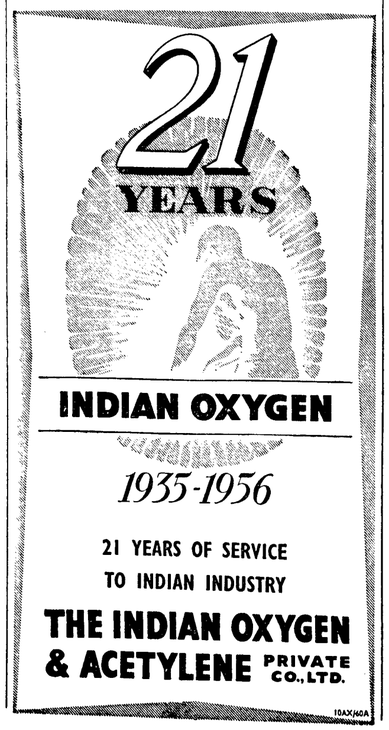
In a free country, the press cannot, of course, be coerced into publishing political propaganda. But the press does accept advertisement. This helps the press in keeping down its costs of production and in making available to the reader an attractively low-priced paper or a journal. It is true that there may be occasional lapses, in that the advertiser may compel a paper to publish some piece of tendentious material or try to influence its views by threatening the withdrawal of advertisement. Such cases are fortunately rare. In any case, such tactics pay neither the press nor the advertiser. Democracy has its own correctives for such misbehaviour. If a press yields to the threats or blandishments of the advertisers, it will soon find that its readership has been stolen by a more independent journal. It is, therefore, in the interests of the press as well as the advertisers to ensure that there is no loss of the freedom of the press. Be that as it may, it must be recognised that in so far as advertisers are a source of sizable income to the press and help stabilise its finances, they serve the democratic cause. Any attempt at limiting their freedom will have serious ill-effects on the functioning of democracy. On the other hand, there is a great deal to be said in favour of encouraging advertisers to make increasingly wide use of the press. Unfortunately, Indian economy, being in its early stages of development, contains only a few large advertisers. From this point of view, it may even be wondered whether the Government is furthering the democratic cause by permitting the State-sponsored journals to compete with the non-official press in selling space for advertisers.

These are some of the general problems of advertisers in the context of India's nascent democracy and early stages of industrial progress. Some of the more immediate problems of advertisers were dealt with by Mr. Dharamsey M. Khatau, in the course of his illuminating speech at the annual meeting of the Indian Society of Advertisers, held in Bombay this week. Speaking in his capacity as Chairman of the Society, Mr. Khatau deplored that the "attitude of certain sections of the public and of people in authority are causing considerable concern to the members of the Society regarding the lack of appreciation of the value of sound advertising in the building up of the national economy." He was, however, happy that the Government had tacitly recognised the enormous value of advertising. In this connection, he cited the campaigns the Government was conducting for the promotion of travel by air and sales of handloom cloth and cottage industry products. Obviously, the Government has realised that by "securing a sustained and steadily expanding demand for goods, advertising helps to stabilise and increase employment in the industries concerned." If this is true in regard to products of cottage industries or civil aviation, as Mr. Khatau argued, "how much more essential is advertising in regard to manufactured products where there is considerable competition among producers of different brands of goods and where the scope for securing the economies of large-scale manufacture is considerable."

There is, perhaps, another important reason why the Government should be liberal or even indulgent when taking into account the cost of advertisement for purposes of fixing prices for controlled commodities or for determining the quantum of protection for industries seeking such protection against imported goods. It is now clear that the preoccupation of the Government with heavy industries in the next few years may mean less attention to consumer goods and more purchasing power. Obviously, the private sector should be encouraged to fill the gap in the supply of consumer goods and the more efficient units enabled to cut their costs to a minimum through increase in turnover. Such a trend would be in the interest of the consumer as well as the exchequer. But no mass market, as Mr. Khatau said, can possibly be developed, without an intensive campaign of advertising.

It is sometimes naively assumed that advertisement can make anything sell. But, by and large, this assumption is clearly wrong. In advertising, as in all spheres of human activity, it is true that one may fool some people for all time and all people for some time but not all people for all time. The fact is that advertisement is an aid to selling a genuinely good article and not a substitute for quality. It is wrong to think that, through advertisement alone, one can "sell any product which does not have sufficient intrinsic merits of its own to make itself acceptable to the consumer." Not only is advertising an efficient aid to selling a good article but a very necessary one. "In our complex economy," Mr. Khatau said, "the consumer has to be told what the manufacturer has to offer him." This is the reason why modern advertising has become a technical subject, requiring considerable skill and knowledge of human psychology and economics.

These considerations should induce the Government to view the advertisers' problems in the larger national perspective. Appropriately enough, Mr. Khatau stressed that the Government would be "ill-advised to interfere with the advertising budgets of developing industries on outmoded conceptions of how goods are sold." He was, however, happy that the Indian Tariff Commission had recognised the importance of advertising. The Commission, in its report on the bicycle industry, had provided for a larger expenditure on advertising on the ground that advertising on a more intensive scale was necessary to popularise this handy and cheap means of transport. Mr. Khatau did well in advising Indian industrialists to disabuse their minds of the idea that production is all that counts and distribution and consumption will look after themselves. He added: "Many optimistic enterprises in India have come to grief, because they provided capital for production but did not provide sufficient capital for distribution and the integral means of distribution, namely, advertising and marketing." This is both an advice and a warning. It is to be hoped that this appeal for greater recognition of the role of advertising in industry, coming as it does from one of India's leading industrialists, will evoke the intended response from small and big manufacturers alike.



ENGINEERING STUDIES

It is now widely acknowledged that, if the industrial progress envisaged under the second Plan is to be achieved, there should be both improvement and expansion in facilities for technical education. But it is not, perhaps, equally widely realised that technical education should not consist of a mere knowledge of machines but should include knowledge of men too. This aspect of technical training was rightly emphasised by Mr. Jehangir Ghandy, in his address at the Annual Day of the Bihar Institute of Technology. Mr. Ghandy called for a new orientation in engineering studies, so as to equip future engineers to handle both men and machines with equal facility.

Mr. Ghandy, who is Chairman of the Eastern Regional Committee of the All-India Council of Technical Studies, said that Indian industry must accord equal emphasis to both sound technology and good management. He cited the example of the Massachusetts Institute of Technology in the U.S., where philosophy was now a compulsory subject. The basic idea was to give the engineering student a grounding in the humanities, so that he "emerged from the training institutions not as a mere technician but with a well-grounded personality."

Outlining the facilities for managerial training now available in the country, Mr. Ghandy disclosed that plans had been finalised to set up an Administrative Staff College at Hyderabad which would provide three-month courses to senior industrial executives. A National Institute of Management is also to be set up in accordance with the proposals framed by the All-India Council of Technical Education. In addition, several industries were developing their own internal training programmes for executives and supervisors. Citing the example of Tatas, Mr. Ghandy said that the Steel Company was now embarking on a programme of Training Within Industry (T.W.I.), following on company information courses instituted some time ago. Referring to technological studies, he called attention to the work done by the All-India Council of Technical Studies in expanding and strengthening training facilities to cope with the requirements of successive Five-year Plans. The Eastern Regional Committee of the Council had undertaken to assist in the development of eight degree colleges and 15 diploma institutions.

Some information about the expansion plans of the Bihar Institute was given by the Principal, Mr. D. L. Deshpande. He said that it was pro-

DANGER OF INADEQUATE CLOTH SUPPLY

MILL SECTOR'S CAPACITY MUST BE RAISED

THE crucial current problems facing the cotton textile industry were presented against the setting of national and international events by Mr. G. D. Somani, retiring Chairman of the Millowners' Association, Bombay, in his address to the annual meeting of the Association on Tuesday this week. Mr. Somani's survey was not only lucid but also realistic, and it will not be too much to say that no dispassionate observer of economic trends in India and the world will disagree with it. Take, for instance, his warning of the consequences of one-sided development in the cotton textile industry, following the reservation of the entire rise in demand for cloth in the coming years for the handloom sector by freezing the mill output at 5,000 million yards. Here is what he said:

"Whatever might be the target of production, I personally doubt whether the handloom industry will be able to produce anything beyond 2,000 million yards per annum, except at enormous cost to the consumer in the shape of taxes and levies on the mill industry to subsidise the handloom and Ambar Charkha cloth. Inflationary impact is already being felt due to deficit budgets of the last two years, and, in the current year, which is the first year of the second Plan period, deficit financing on a larger scale is contemplated. Unless the consumer goods industries are galvanised to generate more goods in time, I am sure the apprehensions of the planners, namely, that we may have the worst of both worlds, the consequences of which would be inflation or non-fulfilment of the investment planned, will come true."

In saying all this, Mr. Somani certainly did not cry wolf; he was only trying to make the powers-that-be see the clear writing on the wall. Considering the rapid increase in population—at an annual rate of 4.2 million—and the improvement in the standard of living of the masses as a result of the implementation of the series of development schemes under the second Five-year Plan, the need for ensuring adequate supplies of such an essential item of consumption as cloth cannot be too strongly emphasised. Employment is no doubt a vital consideration, but the point is whether this consideration should be carried to such an extent as to prop up uneconomic and outmoded means of employment. The adoption of such a course is beset with dangerous consequences to the community for the benefit of which it is that all economic plans are implemented. Mr. Somani minced no words when he said:

"The Government, in their enthusiasm for creating more employment, are only attempting to prop up inefficient and outmoded methods of production. The Ambar Charkha and the handloom will not be able to achieve the targets assigned to them, while the productively efficient mill sector is prevented by artificial curbs from expanding its production to meet the increased demand (for cloth) during the Plan period. You will thus see that such a policy will only lead to the opening of Pandora's box and, if the present market trends are any guide, the possibility of the emergence of a cloth famine in the country in the near future cannot be ruled out, as the available production will be grossly inadequate to meet the greatly increased demand. This, combined with the increased incomes generated during the Plan period, may result in inflation of the most virulent type, with all the consequent evils following in its train."

Even when considered from the point of view of judicious economy in the use of capital, a scarce commodity—one of the primary considerations which have prompted the Government to buttress the cause of Ambar Charkha and handloom weavers—the shift in emphasis from the mill sector, supposed to be capital-intensive, to the Ambar Charkha and handlooms, claimed to be capital-light, cannot be justified. As Mr. Somani rightly remarked, the contemplated expenditure of Rs. 100 crores on Ambar Charkha and Rs. 80 crores on handlooms by way of subsidies or otherwise alone can by no stretch of imagination be termed "capital-light"; on the other hand, it may ultimately turn out to be a colossal waste of capital.

The Key Question

It is against this background that one has to answer the question posed by Mr. Somani: Should the nation prefer a permanent and progressive contribution to the national income which the expansion of the mill sector can make or a continuous burden on the economy in the shape of subsidies to the handloom industry? Mr. Somani sought to answer the poser himself. His answer was as follows:

"If handloom industry is assigned a production target of 2,000 million yards, which would assure to handloom employees full-time employment, and the balance to the mill industry, not only will the latter directly generate an additional national income to the tune of Rs. 60 crores by 1960-61, besides making a handsome contribution to the State Exchequer in the shape of excise duties, sales tax and income-tax, but will also tend to widen the scope of production and employment in the ancillary industries, namely, machinery, machine tools, stores, chemicals, etc. I am sure you will agree with me that, in the production of machinery and machine tools and not of handlooms and Ambar Charkhas, a solid foundation of our economic development lies.

"As far as handloom interests are concerned, is it their desire to ask for and produce more, but, being unable to sell due to their high cost of production, again turn to Government for more protection rather than to consolidate and stabilise their position which a reasonably drawn up target can provide? In other words, is it their intention to remain for ever an infant in the economy and continue to be a burden to the consumer? Or is it the desire of a handloom weaver to stagnate himself with annual *per capita* income of Rs. 360, while his compeer in the mill sector can get as much as Rs. 1,360? These are the burning issues which ought to be brought before the bar of public opinion and discussed at length before any decisions are taken by Government. So far as I am concerned, I am quite confident that additional employment can be generated by investing more in durable goods and services, namely, extension of rail and roads, rural electrification, hospitals and schools, rather than in inefficient and outmoded instruments of production, namely, the handlooms and Ambar Charkhas. This will generate a volume of relating employment which, with the widening of industrial base on a decentralised basis, will, in due course, produce a certain amount of sedimented employment in areas in which it is desired. It is this and this alone which can transform the non-monetised rural sector into monetised one and thus enable the Government to enlarge its tax net for further developmental expenditure."

The planners and the authorities will do well to ponder this statement of Mr. Somani which is only a plea for taking a realistic view of the situation. The productive equipment of the mill industry must be allowed to be augmented commensurately and in time, lest our consumption standards which are already low should, as Mr. Somani aptly put it, be further diluted.

A Great Tragedy

Mr. Somani had also a few interesting words to say on the vexed issue of taxation. The tax policy of the Government as has been in force of late, he declared, was not conducive to saving and investment, at least in so far as the private industrial sector was concerned. Drawing attention to the downward trend in corporate savings, Mr. Somani feared that the super-tax on dividends and the tax on bonus issues taken together would adversely affect the resources available to the private sector. Significantly enough, he observed:

"If I am to call a spade a spade, while tax on bonus issues will only result in the diminution of fresh issues of capital, steep personal tax and super-tax on dividends would dampen incentive to investment. If, therefore, instead of adopting a taxation policy which is conducive to capital creation, Government were to be unnecessarily obsessed with the 'egalitarian' concept and resort to confiscatory tax measures, I am afraid that, in due course of time, we would be eating the very seed-

NATIONAL DEVELOPMENT COUNCIL TO MEET NEXT MONTH

DR. KALDOR RECOMMENDS TREBLING OF TAX TARGET

From A Special Correspondent

NEW DELHI, *24th April*

THE National Development Council, which is scheduled to meet in the first week of May in order to set its stamp of approval on the changes in the Government's industrial policy and also to finalise the second Plan Report, has an important task to perform. The Council has to take into consideration the various criticisms levelled against the draft Plan during the last two months and more and to incorporate in the Final Plan the constructive observations. It must be extremely careful in laying down priorities and also make a realistic approach to the various problems confronting the country at the present time. In the finalisation of industrial policy, it must allow sufficient scope for the development of industries in the private sector, without which it may not be possible to accelerate the economic progress of the country. "It is axiomatically necessary," Mr. C. D. Deshmukh observed in Parliament the other day, "for the country concerned, to divert a significant proportion of its resources for the establishment of basic and heavy industries. In other words, industrialisation is the kingpin of all economic development, including necessarily, therefore, the attainment of fuller employment in a backward country." The National Development Council must also be prepared not to put shackles on the production of some consumer goods such as cloth, so that the inflationary spiral in the country could be kept in check. Again, Government should not be allowed to take any hasty action in regard to subsidising the Ambar Charka, since there is considerable controversy on its economic working.

DELHI LETTER

The National Development Council has already an inkling of the Government's mind in regard to implementation of the second Plan. Great attention is now being paid by Government for a reassessment of the resources aspect of the Plan. The Government has already engaged a few prominent foreign experts on public finance, in order to get an independent opinion on the tax structure of the country and also to suggest ways and means of augmenting the revenue resources of Government in the coming years. Dr. Nicholas Kaldor of the Cambridge University, one of these experts, has been in the country during the last few months and has already made a number of suggestions such as a realistic rate of income-tax, not exceeding 50 per cent., reimposition of capital gains tax, higher death duties supplemented by a gifts tax, an annual tax on wealth, etc.

Dr. Nicholas Kaldor is reported to have stated that the Government of India should get two to three times the sum of Rs. 400 crores originally proposed to be secured in the second Plan period through additional taxation. This he considers necessary in order to prevent any inflation in the country in the coming years. Since Government is anxious to maintain stable economic conditions, it is likely to take such measures as will ensure orderly economic progress. It has already been taking steps to prevent unhealthy speculation in commodities through regulation of futures markets. Additional taxation will also be one of the instruments for keeping inflation under check.

During the debate on the Finance Bill, Mr. Deshmukh gave an indication as to how the mind of his Ministry was working. On the suggestion for a tax on expenditure, he observed: "All these are new ideas which have to be thoroughly sifted, investigated and related to their administrative implications and then only will it be possible for Government, if it thinks fit, to bring them forward before the legislature." He also hinted that the question of an annual tax on wealth was being studied by his Ministry from all angles. Further, the Finance Minister left an impression that there was still good scope for augmenting revenue through indirect taxation. Speaking on the incidence of indirect taxation, he quoted the findings of the Taxation Commission, by pointing out that, for the country as a whole, indirect taxation accounted for some 3.6 per cent. of the total expenditure. It may be noted that the incidence of indirect taxation was undoubtedly greater in urban areas than in rural areas and increased with total expenditure. Thus, for expenditure of less than Rs. 50 per month in rural areas, the incidence of indirect taxation was calculated by the Commission at 2.2 per cent. of the expenditure. For expenditure above Rs. 300 per month in urban areas, the corresponding incidence went up to 8.3 per cent. of the expenditure. Therefore, Mr. Deshmukh said, the effect of indirect taxes proposed in this or in previous budgets must not be considered as oppressive.

It may be noted that there is a certain amount of optimism among informed circles here that more resources will become available, as the Plan progresses. It is recalled that, even in regard to the first Plan, it was originally anticipated that Government would have to incur deficit financing to the extent of Rs. 655 crores when the expenditure on the Plan was computed at about Rs. 2,069 crores. When the target under the Plan was revised upward to about Rs. 2,300 crores, it was expected that the quantum of deficit financing would go up to about Rs. 800 crores. Although there has been a shortfall in the expenditure under the first Plan to the extent of

THE BATTLE FOR EXPORTS

STERLING STRENGTHENED

From Our Own Correspondent

LONDON, *15th April*

IF Britain does win the export battle over the next few months, the Government will compliment themselves on their credit squeeze and the efficacy of the coming budget, while the cynics will say it would probably all have happened anyway. Neither would be right. But the March trade figures and the first quarter figures for 1956 are interesting in the light they throw on the way the trade balance is moving before the most recent Government measures—general credit squeeze apart—have had time to take effect.

LONDON LETTER

Imports in March have been over 10 per cent. below the figure a year ago—but then they had been boosted by a dock strike. The first quarter average is also well down on that for 1955 first quarter but higher than for 1955 as a whole: so honours appear even on that part of the battleground. Exports are a more exciting picture: exports in March are nearly 4 per cent. higher than those in March 1955; in the first quarter also they were 4 per cent. higher than in the first quarter 1955. Similarly, re-exports are averaging substantially higher figures than they were on any comparable basis last year.

Thus, the crude trade balance is substantially less unfavourable either in March or the first quarter of this year than on any comparable basis in 1955. At £47 million, it was only half the March 1955 level and, at an average of £57 million for the quarter, it was £20 million less than in the first quarter 1955 and £15 million less than the monthly average for the whole of 1955. The table below gives the salient comparisons:

(Value: in millions of £s)

	Imports	Exports	Re-exports	Adverse balance
March, 1956	330.3	269.6	13.3	47.4
February, 1956	309.1	248.1	13.6	49.5
January, 1956	346.3	257.9	14.2	74.2
Monthly average—				
For the quarter 1956 ..	328.6	257.9	13.7	57.0
For first quarter 1955 ..	335.1	247.3	10.6	77.2
For whole of 1955	324.1	242.1	9.9	72.1

An overall net import bill saving of this order repeated in each quarter of 1956 would give about £240 million saving over the year as a whole. It would go a long way towards being the answer to the Chancellor's prayer.

But, obviously, the Chancellor is going to take no chances over that when he introduces his first Budget next week. Whatever he says to home taxpayers, he will really be addressing the E.P.U. countries and the holders of sterling overseas. He will do everything possible to reinforce the steady improvement of the pound as confidence that devaluation is not contemplated returns. As foreign money comes into the London Stock Exchange and buyers of transferable sterling find they cannot get as much as they want, so sterling on the free markets strengthens. These trade figures, coming on top of the March gold figures, all help the position and the Budget will be designed to give it a good hard push the way to convince the world that sterling has fully recovered itself and that inflation—even if it still persists domestically—is less a British than a world phenomenon.—*All Rights Reserved.*

about Rs. 250 crores, it is now estimated that the quantum of deficit financing will be very much less than the Rs. 800 crores anticipated at one time. It is, therefore, suggested that the extent of deficit financing in the second Plan might become less in proportion to the increase in Government's resources through higher revenue, larger foreign help, better borrowing programme, etc.

The possibilities of securing higher revenue are considered to be greater in the coming years. It is common knowledge that the revenue budgets of the Central Government have, in recent years, been grossly underestimated. It is suggested that the Planning Commission has also underestimated the possible revenue resources during the second Plan period. Leaving apart, for the present, the higher income through additional taxation in the coming years, there is scope for the total tax income to show a gradual rise in future, even at the current level of taxation, in view of the expanding nature of Indian economy.

BUREAUCRACY AND BANKS—I

FAULTS OF PRIVATE SECTOR MAGNIFIED TO BOOST PUBLIC SECTOR

By B. T. Thakur

A FAMOUS foreign banker visited this country some years back and met at a party India's Central Banker. The Central Banker asked him for his suggestions for bringing into the organised money market huge amounts of fallow funds lying diffused in millions of pockets and in hoarded chests. The foreign banker told him: "Introduce bearer instruments of savings and investments—bearer bills, bearer debentures and bearer share certificates." The Central Banker replied: "But this is what our bankers have been telling us too. We do not trust our bankers. Bearer bills will help tax-dodging." To this the foreign banker said: "You have been already given the right advice. Surely, you do not want to cut the nose to spite the face. If your banking and economic systems get strengthened, you will be more than amply compensated by growth in taxes through greater prosperity and bigger profits. But, as tax will be deducted at source on discount, interest and dividend payable on them, you will really not lose in taxes either. Your public revenues in fact will materially increase."

Later, the foreign banker happened to talk to an Indian banker and enquired of him as to what banking experience the particular Central Banker had, in what bank he had worked, and why had he disparaged Indian bankers so much. "If there is tax avoidance, or even tax evasion, that is nothing new. Every one all over the world takes advantage of loopholes in tax law, but no one accuses anyone, excepting the proved culprit, least of all the bankers."

Shocking Experience

The Indian banker replied that the Central Banker had no actual experience of any banking, but because he belonged to the omniscient Indian Civil Service, he was presumed to be competent to handle everything on the face of this earth and was considered capable to hold any office. The foreigner remarked: "The service which constituted the steel frame of the British Empire." "And now of our own Government," was the comment of the Indian.

The writer was in Europe when the above incident is reported to have taken place and where he learnt it for the first time. But he paid no attention to it, treated it as a joke—at the most a satirical remark of those who ceaselessly malign bankers and financiers. But, on his return to the country, he was shocked to find that the reported conversation was not a myth but had foundation in facts.

It must be said to the credit of Indian banking that the foreign banker was not influenced in the least by such adverse remarks—if anything he, too, was shocked that the Indian bureaucracy should be so suspicious of its country's bankers. In spite of official calumny, Indian banks not only continue to enjoy a good name in foreign countries, but their rating in the international markets, as good dependable bankers, is growing day by day, which is evidenced by their increasing participation in the financing of foreign trade of the country. If anyone can appropriately say, "God, save us from our friends," it is the Indian bankers, who, in the face of tremendous odds and of official opposition, have built up such an irrefutable record of good, and cheap banking service.

Others' Children Are Sweeter!

This story will perhaps shock many people in the country, including some members of Parliament, unless they are so biased against private banking and private enterprise, that they swallow all sorts of allegations and accusations against them, and feel tremendously happy when any abuse is hurled against them. But it is hoped that even they would not tolerate any statutory bar against the banks of the country which even today, in the tenth year of our freedom, exists in the Reserve Bank of India Act, section 17, sub-section 13. According to it, the Reserve Bank can open "an account with" or make "an agency agreement with," and act "as agent or correspondent of a bank incorporated in any country outside India," but not with an Indian bank. Sometimes others' children are sweeter than one's own offsprings! The Shroff Committee drew the attention of the officers of the Reserve Bank to this discriminating provision but still it continues to tarnish our laws. No Central banking constitution anywhere in the world distrusts its country's banks to this extent.

There would have been no need to refer to the above incident, but great official domination over Indian banking and Government's policies in regard to Indian financial institutions have made imperative the need for an objective study of India's banking and monetary problems, and for examining whether they can, under bureaucratic set-up, widely expand to meet the credit requirements of our growing economy, or bear the mounting strain of financial needs of our economic plans.

Business Men's Responsibility

Overnight nationalisation of Indian insurance by an ordinance, and arguments advanced to justify it, must warn all sections and components of private economy that similar arguments could easily be advanced to bring them more and more under public power, even if not immediately under public ownership. As it is, private business is already under severe handicaps due to increased restrictions, supervision and controls. If there were wise experienced men in charge of these measures, who would adopt objective attitude and be friends and guides to industry, regulation would do good. But, for such a purpose, industry and business should spare their best brains, who, instead of managing their individual enterprises, must volunteer to work for the larger interests of the country. When an ignorant bureaucrat, or a half-baked business manager, is given the task of manning these key positions, he falls far short of the measure of the knowledge, experience, elasticity, quick decision and responsibility required for his office. Whether under pressure from Government, or because he wants to please his superiors to retain his office, his decisions are generally biased and favour the public sector at the cost of the private section. The blunders of and leakages in the public undertakings are minimised and played down, while those of the private venture painted with heavy brush in the darkest possible hues.

The suggestion that capable private business and industrial managers should volunteer to take charge of important public offices presupposes that Government is eager to have them and is willing to respect their advice and freedom.

In every age and in every country, bureaucracy has tremendous administrative power. Governments may change, political parties may lose and win, but the services continue. Whatever be the form or constitution of the Government, it has to run with the help of administrators. They are indispensable tools by which Government's will is enforced and work is done. But these tools are not inanimate objects like machine tools, but are an institution with a will and ambition, and a solidarity to stand together and help each other. Whether one studies the behaviour and work of ministerial staff of the Moguls, or of the Peshwas in the days of Maharashtrian glory, or of the civil servants of the East India Company, or of the Colonial Empires, one cannot get away from the fact that bureaucracy is tenacious, and makes all possible efforts to hold to power, at any price or at any cost. It develops into a strong caste institution. And according to caste traditions, failure in one office is no bar to promotion in another, even to a higher and more responsible position.

Doubts and Suspicion

India is free today. Political leaders are in charge of the country's Government. But party membership cannot necessarily be the test or qualification for administrative ability. No wonder the combination of the ignorant and unrealistic politicians, with the bureaucrats greedy and hungry for power, is creating conditions in which private business and private banking are not trusted, nor given necessary freedom to grow, but looked upon with doubts and suspicion.

Bureaucracy is no different in Western countries. One has merely to read the history of the Bank of America, the largest bank in the world, to realise the ceaseless struggle it had to carry on with the official bank administrators, at every stage to smoothen its path of growth and ascendancy. But, there, due to pressure of informed and intelligent public opinion, and absence of hero-worship in politics, the civil administrator is always alert, and for better performance, often seeks the aid and guidance of the private business man and the private banker.

Indian business, however, should not so easily abdicate under combined pressure of the politician and the bureaucrat. It has a glorious history of good performance behind it, and a still more glorious future, if it could combine and mobilise its resources and influence. Large-scale industry and modern banking, by people of the country, are only 50 years old. But what great stabilising forces they have created for the country, in their productive enterprises, the huge employers in the land of eternal unemployment.

Private Sector's Creditable Record

If India's problems, economic and social, are less vulnerable than those of other recently freed Eastern countries, it is entirely due to the enterprise and initiative of the private business man and the private banker. If India is ready for big economic planning, it is again due to the foundations created by the Indian private business men, who through initial losses and sacrifices, paved the way for successful industrialisation. Against heavy odds, they have built up institutions of which any country can be proud. It is their industries and banks, which are providing trained men to man new enterprises, and offer huge employment to India's population. But for this development, there would have been many more gaps in employment, in economic satisfaction, and in manpower.

Indian banking is hardly of a century old. Ignoring a few small earlier attempts by Indians to establish banking enterprises, most of the country's banks were then in the hands of foreigners. The early banks that were registered in this country were also started with foreign help and foreign management. It is really marvellous that in such a short time India has been able to establish an indigenous banking system, which is large, safe, strong and sound. No doubt there have been banking failures, but the loss due to such failures is small as compared with the extensive successful business that has been built up. Some of these failures could have been easily avoided if there had been sympathetic Government, and not an alien Government, which gloated at every Indian banking failure, and created myth and mystery of difficulties of modern banking. The failure of the Alliance Bank of Simla, mostly owned and managed by foreigners, and the absorption of the Tata Industrial Bank, started by the great House of Tatas with Indian capital but entirely managed by Europeans, by the 100 per cent. indigenous Central Bank of India, in 1923, shattered once for all the theory of divine right of foreign bankers and proved the ability of Indians to run banks under most difficult conditions.

Progress of Indian Banking Remarkable

Every student of banking and finance knows that occasions do arise when banks are faced with serious situations, when the only means by which they can save themselves is to get credit against their liquid assets. Even exceptionally good banks with a very high ratio of liquidity cannot survive, unless there is some lender in the last resort to lend them in emergency or for seasonal purposes. Even the old Bank of Bombay, one of the major components of the great Imperial Bank of India, now the State Bank, could not at one time in its career meet its payments.

The foreign banks working in India could always fall back upon their home money markets, like London, to replenish their resources, whenever there were panicky withdrawals, but the Indian banks had nowhere to go. It is highly creditable that, in spite of an alien Government, hostile foreign competitors, ignorant clientele, and no lender in the last resort to help, they have succeeded in building up such a huge credit edifice in the service of the country's economy.

There is a tendency in official quarters to play up omissions, mistakes, shortcomings, and losses of the private enterprises and depict them as something unprecedented and unpardonable. But distortion of the picture, or unbalanced treatment of figures, does no credit to them or to their study. Every human progress, whether scientific, technical, industrial, banking, medical, administrative or of any other description, has cost in human toil, life and money, at times tremendously, before it has achieved a stage of safety, smooth running and steady service. Difficulties of the unknown, and of the new ideas and new enterprises struggling to take shape, can be several and varied; and mankind has

(*Continued on page* 833)

STATE OF BRITAIN'S ECONOMY

CONVERTIBILITY STILL A DISTANT GOAL

MR. Macmillan's Budget presented to the British Parliament on the 18th inst. provides a clear indication that the much-heralded convertibility of sterling is now nowhere in sight and not even round the corner. For Britain has not been able to take advantage of the prosperous conditions in the world to improve its balance of payments position and strengthen the pound. The world witnessed a good year in 1955. And the outflow of dollars from the U.S. continued at a high level in that year. Output was growing rapidly in all the major manufacturing countries and the trade between them was increasing at an exceptionally high rate. The primary raw material producing countries, too, remained generally prosperous and provided good markets.

Everything seemed in favour of Britain, but, in spite of these favourable external circumstances, the country's balance of payments position continued to be disappointing. This is evident from the figures given by Mr. Macmillan. The balance of the sterling area with the whole of the non-sterling world fell from a surplus of £97 million in 1954 to a deficit of £181 million in 1955, or a fall of £278 million. Of this fall, no less than £251 million was due to the U.K. itself. The result has been a loss of dollar and gold reserves. Thus, during 1955, the central gold and dollar pool lost as much as £229 million. At the end of the year, the reserves stood at £757 million. Since then, however, they have shown improvement. In January, reserves rose by £11 million, and in February by another £21 million. The upward trend persisted in March with a further rise of £24 million. Consequently, at the end of March 1956, the total gold and dollar reserves stood at £813 million. But they are still insufficient for serving their purpose. They represent only about 8 per cent. of the annual turnover of sterling area trade with the non-sterling world. This low percentage of the reserve is too inadequate even to face the swings in balance of payments, caused by temporary fluctuations in the economic fortunes of the world, let alone convertibility.

Why has Britain not been able to strengthen its balance of payments position, despite favourable economic conditions in the world? The answer to this question was provided by Mr. Macmillan in his Budget speech. Industrial production in 1955, no doubt, rose by 5 per cent. but the increase was smaller than the 7 per cent. rise in 1953. Again, productivity, or output, per man rose less than in 1954—about 2 per cent. against 5 per cent. Increase in home demand was far greater than that in output, with the result that less was available for export the need for which, however, was greater than even before because of bigger imports. Motor cars, television sets, washing machines and similar products were in great demand and all competed with exports. There was also a sharp increase in fixed investment. More orders were placed for capital goods than deliveries made, so order books and deliveries lengthened and despite heavy imports, many types of steel were scarce.

A Few Handicaps

Besides the above developments, the British economy has been suffering from other handicaps also. The number of jobs waiting to be filled has been larger than that of unemployed. In fact, the unemployment figures have remained at record low levels. Employers have been competing with one another for labour. Consequently, there has been an 8 per cent. rise in wages and salaries. A similar increase has been recorded in profits, while import prices have gone up by 3 per cent. In the result, costs have risen and with them prices. Retail prices, for instance, have been marked up by 4½ per cent., those of manufacturers by 3 per cent. and export prices by 2 per cent. "All these together," to quote the Chancellor, "are the symptoms of severe inflation."

The overall picture of the economy as presented by Mr. Macmillan is striking. He said: "On the home front, 1955 was a year of great prosperity for the mass of ordinary men and women in this country. Every one had a job; consumption rose appreciably; and investment also increased. But, in total, demand rose faster than output, and, in consequence, the economy was overstrained. Prices went up; there were shortages of labour and material; imports increased, exports were held back from foreign markets to be consumed at home. So the balance of payments suffered."

Although the investment boom has been responsible for stimulating both consumption and rise in stocks, the U.K. Government's policy has been not to restrict investments in industries. On the contrary, the policy has been one of expansion of investments. Such expansion is, however, sought to be confined, not to the production of consumer durable goods but to that of goods which are necessary for expanding exports. Remarking that "there is no future in importing extra materials that we cannot afford, in order to turn them into extra goods that we do not export," Mr. Macmillan added that "we must pay for these imports honestly by our exports and not by drawing on the reserves—or robbing the till."

Monetary Policy

It is now common knowledge that, in order to check inflation, the British Government has entirely relied on monetary policy. The extent to which this policy has succeeded is still the subject of controversy in the U.K. The Opposition has all along doubted its efficacy, and has been pressing for other measures, especially physical controls. So long as Mr. R. A. Butler held the portfolio of Finance, he did not view this demand with favour. His successor, Mr. Macmillan, however, seems to think differently, without, of course, losing faith in the monetary policy. He claimed that the policy had operated with increasing effect as the year proceeded, thanks to the persistent pressure exercised on the monetary system, both by the interest rate and by the control of credit through banks and the Capital Issue Committee. Since this technique had not been used for many years, there had arisen many new problems, especially as between the Exchequer and the monetary system. While preferring to continue the present restrictions, he referred to two results of this policy which were plain to all. First, high interest rates provided no easy way to restrict credit and, secondly—this is worth noting—"monetary policy could not 'go it alone.' It could only operate effectively in conjunction with fiscal and other measures to check demand, taken by the Government of the day and supported by an informed public opinion." It is thus obvious that the Chancellor has in mind other measures for stemming the tide of inflation. Is he thinking of combining monetary and fiscal measures with a judicious selection of physical controls? Let us wait and see.

Meanwhile, it is interesting to note that Mr. Macmillan has made a number of proposals calculated to reduce the purchasing power of the people. He has grouped them under the collective term "savings budget". The budget for 1956-57 itself envisages a surplus of £459,815, with revenue being estimated at £5,197 million, as against an estimated expenditure of £4,737 million. It lays emphasis on measures to encourage savings. They include a new 4½ per cent. Defence Bond, and a new Savings Certificate with the good tax-free yield of £4 3s. 11d. per cent. They also provide for tax relief on the first £15 of income from the Post Office and Trustee Savings Banks. It is proposed to cut down Government expenditure by not less than £100 million. The rate of tax on distributed profits has been put up by 2½ per cent. and that on undistributed profits by ½ per cent. The Treasury will take the responsibility of advancing funds to nationalised industries which hitherto got them from the banking system.

Premium Bond Scheme

The introduction of the Premium Bond Scheme is a new experiment so far as Britain is concerned. Explaining the scheme, Mr. Macmillan said, "Let me say at once that this is not a pool or a lottery where you spend your money. The investor in the Bond I propose is saving his money. He will get it back when he needs it. But, as long as he holds it saved, his reward, instead of interest, is the chance of winning a tax-free prize." The Premium Bond will be in units of £1 with a few top prizes of £1,000 and a larger number of smaller ones. Criticising the proposal, Mr. Harold Wilson, an Opposition member, said: "What a commentary it is on the financial stewardship of the Tory Party when the Chancellor has to have recourse to such methods! In 1951, they promised us a Britain strong and free. Now Britain's strength and freedom and solvency apparently depend on the proceeds of a squalid raffle." He added that it was not a budget measure. It was fit to be included in the Bill on Gambling and Betting and not in the Finance Bill.

LLOYDS BANK LIMITED INCORPORATED IN ENGLAND

WORLD BANK LOAN FOR SOME ASIAN COUNTRIES

India, Pakistan, Burma, Thailand and Japan are stated to have approached the International Bank for Reconstruction and Development for money for financing their development schemes. Information to this effect was given by Mr. Joseph Ruciniski, Director of the Bank's operations in Asia and the Middle East, who is also a member of the three-man delegation now touring Pakistan, headed by Mr. George D. Woods.

Mr. Ruciniski stated that at the annual meeting of the Bank to be held in September, India's request for a loan would be decided on the basis of the report submitted to the Bank by its mission now touring India, headed by Mr. Thomas H. McKittrick, President of the Bank for International Settlements. This mission is studying, he said, the achievements under the first Five-year Plan and the industrial targets set for the second Plan.

The Tata Iron and Steel Company has also applied for a loan of nearly $80 million to finance development schemes which will increase its annual production to 2.3 million ingot tons of steel. The loan is to meet the cost of equipment purchased abroad.

Mr. Ruciniski revealed that Burma wanted a loan to finance development of the Port of Rangoon and the railways.

As regards Pakistan, the leader of the World Bank delegation, Mr. Woods, stated that it was proposed to start an Industrial Finance Corporation in that country in about a year's time. The purpose of the Corporation would be to finance small and medium industries. Its capital would be modelled on lines similar to those of the Industrial Investment Credit Corporation of India. The shares of the Corporation would be purchased by private investors in the U.S., the U.K. and Pakistan. A loan would also be given to it by the World Bank.

BAREILLY CORPORATION (BANK) LTD.

A profit of Rs. 93,524 has been earned by the Bareilly Corporation (Bank) Ltd. (Managing Director: Mr. G. K. Capoor, Bareilly (U.P.) for the year ended 31st December 1955. This represents a slight shrinkage from that of Rs. 1,01,296 earned in the previous year and has been due to the decline in gross income from Rs. 6.47 lakhs to Rs. 6.37 lakhs. The provision for additional depreciation has been raised from Rs. 11,868 to Rs. 14,500, while that for taxation has been cut from Rs. 44,000 to Rs. 36,000. The dividend on ordinary shares is maintained at 6 per cent. (free of income-tax) and that on deferred shares at 72 per cent.

The Bank's reserves as at the end of the year amount to Rs. 7.31 lakhs, as against a paid-up capital of Rs. 5.84 lakhs. Deposits have been raised from Rs. 105.68 lakhs to Rs. 107.45 lakhs and borrowings from other banks from Rs. 4.45 lakhs to Rs. 17.47 lakhs. As against this expansion in resources, the advances disclose a rise from Rs. 34.60 lakhs to Rs. 59.94 lakhs. At the same time, investments also have been strengthened from Rs. 55.72 lakhs to Rs. 61.90 lakhs, while cash balances have shrunk from Rs. 29.36 lakhs to Rs. 12.62 lakhs.

The summary of activities of the World Bank for the quarter ended 31st March 1956 discloses that two loans made during the quarter brought the Bank's lending, at the end of the third quarter of its current financial year to 17 loans amounting to $159 million in 13 different countries. The total of the Bank's lendings is now $2,483 million in 41 countries.

RESULTS OF BANK OF JAIPUR ENCOURAGING

PROFIT HIGHEST SINCE 1948

AN encouraging feature of the working of the Bank of Jaipur Ltd. (General Manager: Mr. S. L. Kothari, Jaipur) in more recent years has been the steady upward trend in profit, though the rise has not been spectacular. From Rs. 3.99 lakhs earned in 1952, the Bank's profit had gone up to Rs. 5.52 lakhs in 1954. This trend was well maintained in the year ended 31st December 1955 also, with a further advance to Rs. 6.20 lakhs, the highest profit to be earned since 1948. Thanks to this steady improvement during the past three years, the Bank has been able to make good, to a substantial extent, the decline suffered during the six years following 1946, when the profit dwindled from a record high of Rs. 7.11 lakhs to Rs. 3.99 lakhs.

Following the improvement in earnings during the year under review, the dividend has been comfortably maintained at 4 per cent., to which level it had been stepped up last year from 3 per cent. paid for the preceding seven years. The allocation to the reserve fund has, however, been cut from Rs. 2 lakhs to Rs. 1.25 lakhs, but this is due to the larger provision for taxation which has been raised from Rs. 1.50 lakhs to Rs. 2.50 lakhs.

The progress of the Bank during the past three years is well brought out by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	31.87	28.05	24.34	23.37

Cash	20.5	23.1	23.8	20.5

* Ratios arrived at after taking into account the securities earmarked against borrowings from other banks.

The gross income of the Bank for the year under review amounts to Rs. 41.18 lakhs, which is a fresh record in the history of the Bank, and represents an increase of Rs. 6.22 lakhs over the year. Of this rise, the income from "interest and discount" accounts for Rs. 3.82 lakhs and that from "exchange and commission" for Rs. 2.31 lakhs. The bulk of the increase in income has, however, been offset by the rise in interest paid on deposits and borrowings, as well as in expenses—a common feature for all banks—the former recording an increase of Rs. 2.81 lakhs and the latter Rs. 2.73 lakhs.

Despite the mounting level of expenses, the Bank has been able to show a rise in profit mainly by expanding its business, as is borne out by the synopses of its balance-sheets given in the above table. The upward trend in deposits noted in the previous two years was kept up during 1955 also with a further marked increase of Rs. 1.12 crores. As in the case of other banks, the rise in fixed deposits was more marked than in savings and current deposits. Thus, fixed deposits went up by Rs. 72.04 lakhs to Rs. 353.38 lakhs, while the increase in savings bank deposits was of the order of only Rs. 16.43 lakhs (to Rs. 86.80 lakhs) and that in current accounts, contingency accounts, etc., Rs. 22.99 lakhs (to Rs. 374.85 lakhs). The demand for the Bank's funds was so keen that the Bank had to supplement the deposits by raising its borrowings from other banks, which at the end of the year amounted to Rs. 63 lakhs, as against *nil* a year before. There was an impressive rise in acceptances, endorsements, etc., by Rs. 74.24 lakhs to Rs. 102.23 lakhs, a part of which was secured by the Bank's investments.

On the assets side, advances rose by Rs. 121.54 lakhs, thus maintaining the upward trend for the third year in succession. At Rs. 536.08 lakhs, they constitute a record, exceeding the previous highest of Rs. 505.33 lakhs touched in 1947. A detailed analysis of the advances portfolio shows that loans, cash credits and overdrafts staged an increase from Rs. 285.06 lakhs to Rs. 382.35 lakhs and bills purchased and discounted from Rs. 94.98 lakhs to Rs. 146.22 lakhs, while money at call and short notice declined from Rs. 34.50 lakhs to Rs. 7.50 lakhs, another indication of the pressure of demand on the Bank's funds. Notwithstanding the increase in advances, the Bank was able to strengthen its liquid resources, as witness the rise in investments by Rs. 35.57 lakhs to Rs. 274.16 lakhs (mainly by increasing its holdings of Government securities by Rs. 36.97 lakhs to Rs. 263.86 lakhs) and cash balances by Rs. 4.84 lakhs. The Bank's investments are shown at book value, the market value being a shade lower at Rs. 273.47 lakhs.

GRINDLAYS BANK

A modest, but welcome, improvement in profit, from Rs. 1.12 lakhs to Rs. 1.66 lakhs, is disclosed by the audited accounts of the Indian branches of Grindlays Bank Ltd. (Chief Manager: Mr. D. D. Watters) for the year ended 31st December 1955. This increase in profit is in refreshing contrast to the successive recession noted in the previous three years from Rs. 13.14 lakhs earned in 1951 to Rs. 1.12 lakhs in 1954.

The higher profit for the year under review is mainly due to the substantial expansion in business, in consonance with the general trend. The profit would have been higher still but for higher administrative expenses. An idea of the Bank's progress during the past three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	34.10	30.15	34.89	35.84
Commission and exchange	28.72	25.98	27.27	28.13

Remitted to Head Office	1.62	1.83	..	3.97
Carried forward	0.84	0.80	4.51	..

	As on 31st December			
	1955	1954	1953	1952
Deposits	10,07.81	9,88.63	9,52.15	9,55.40
Borrowings from other banks	79.00	3.00	..	62.00
Bills for collection (contra)	1,13.21	78.58	1,19.40	1,22.47
Acceptances (contra)	1,86.93	1,63.83	1,65.14	1,31.92
Advances*	6,04.71	4,92.70	7,16.91	6,64.13
Investments	2,06.01	3,86.46	3,09.12	3,61.82
Cash	3,07.24	1,59.94	68.91	83.52
Balance-sheet total	14,43.41	12,98.19	13,91.43	13,65.88
Ratio to deposits of—	%	%	%	%
Advances	60.0	49.8	75.3	69.5
Investments	20.4	39.1	32.5	37.9
Cash	30.5	16.2	7.2	8.7

* Including bills purchased and discounted and money at call and short notice.

It will be noted that, for the second year in succession, the Bank's deposits show an increase, though the extent of expansion was smaller, the exact rise being Rs. 19.18 lakhs, as against Rs. 36.48 lakhs in 1954. Of this rise, the high interest bearing fixed deposits accounted for Rs. 10.11 lakhs (at Rs. 167.50 lakhs) and savings bank deposits for Rs. 20.25 lakhs (at Rs. 248.92 lakhs), while current accounts, contingency accounts, etc., actually declined by Rs. 11.17 lakhs to Rs. 591.40 lakhs.

As against the aforesaid rise in deposits, the increase in advances was Rs. 112.01 lakhs, of which the share of loans, cash credits, and overdrafts was Rs. 108.97 lakhs (at Rs. 457.35 lakhs) and bills purchased and discounted Rs. 28.04 lakhs (at Rs. 146.36 lakhs). The comparatively bigger rise in commercial advances, as against that in deposits, seems to have necessitated a reduction in money at call and short notice from Rs. 26 lakhs to Rs. 1 lakh, and an increase in the borrowings from other banks; the outstandings of such borrowings at the close of the year amounted to Rs. 79 lakhs, as against Rs. 3 lakhs a year before. Investments (at below market value) stood reduced by Rs. 180.45 lakhs, but this reduction had been made good to a large extent by an increase of Rs. 147.30 lakhs in cash balances, so that the total liquidity ratio was kept at a fairly high level of 50.9 per cent.

(*Concluded from next column*)

but this is more than amply covered by investment reserve amounting to Rs. 1.75 lakhs. Cash balances were strengthened by Rs. 18.86 lakhs, with the result that the total liquidity ratio stood at 69 per cent. as on the last day of the year.

BANK OF RAJASTHAN'S PROFIT SHADE LOWER

DEPOSITS AT RECORD LEVEL

THE year ended 31st December 1955 proved to be another one of expansion in the business of the Bank of Rajasthan Ltd. (General Manager: Mr. D. L. Gupta, Udaipur). Over the year the Bank's total working funds were higher by Rs. 82 lakhs, of which deposits alone accounted for Rs. 64 lakhs. Advances rose by Rs. 26 lakhs, while at the same time the liquid assets were strengthened by Rs. 45 lakhs.

The profit for the year is, however, a shade lower at Rs. 1 lakh, as against Rs. 1.13 lakhs, to which level it had risen in the previous year from Rs. 0.85 lakh earned in 1952. The slight shrinkage in profit, in distinct contrast to the experience of banks in general, is due to (1) the cautious policy followed by the Bank's management in its lending for reasons to be mentioned shortly, (2) the rising trend in administrative expenses, and (3) the higher rate of interest that had to be paid on deposits. The slight fall in profit has not, however, affected the allocation to the reserve fund, which has been maintained at about Rs. 0.25 lakh, and the dividend to the shareholders which is being repeated at 3½ per cent. for the fourth year in succession.

A broad idea of the Bank's progress during the past three years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	7.99	6.81	5.92	5.68
Commission and exchange	2.81	2.75	2.70	1.92
Interest paid	4.72	3.46	2.71	2.22
Expenses	5.48	5.16	4.98	4.63
Depreciation and repairs	0.12	0.20	0.22	0.11
Profit	1.00	1.13	1.05	0.85
Provision for taxation	0.43	0.58	0.50	0.27
To reserves	0.25	0.24	0.24	0.29
Dividend	0.32	0.32	0.32	0.28
	(3½%)	(3½%)	(3½%)	(3½%)
Carry forward	0.01	0.01	0.02	0.03

	As on 31st December			
	1955	1954	1953	1952
Capital	9.23	9.23	9.22	9.22
Reserves	5.28	5.03	5.01	4.82
Deposits	2,60.82	2,05.79	1,72.80	1,50.22
Advances (including bills purchased and discounted and money at call)	1,09.54	83.87	69.92	70.53
Investments	1,05.89	79.46	63.02	55.81
Cash	80.36	61.50	60.99	47.96
Balance-sheet total	3,20.76	2,39.02	2,09.50	1,90.23
Ratio to deposits—	%	%	%	%
Advances	40.6	40.7	40.5	46.9
Investments	39.2	38.6	36.5	37.1
Cash	29.8	29.9	35.3	31.9

The gross income of the Bank for the year under review amounts to Rs. 11.27 lakhs, an increase of Rs. 1.32 lakhs over the year, the bulk of which is accounted for by "interest and discount" earned, which is up by Rs. 1.18 lakhs. Interest paid on deposits and borrowings, on the other hand, has gone up by Rs. 1.26 lakhs—the average rate of interest paid by the Bank on its deposits having risen from 1.68 per cent. to 1.73 per cent.—and expenses by Rs. 0.27 lakh.

Following the increase of Rs. 55.57 lakhs noted in the previous two years, there was a further expansion of Rs. 64.03 lakhs in the Bank's deposits during the year under review to establish a fresh record of Rs. 269.82 lakhs. As against this rise in the main resources, the increase in advances was of the order of only Rs. 25.67 lakhs, with the result that the ratio of advances to deposits did not record any increase. The Directors report that the management did their level best to increase the advances, but, in the absence of demand for sound advances, they could not do so. They give two reasons for this state of affairs: (1) the business community in the sphere of the Bank's operations did not like to stock their purchases for fear of fall in prices after the busy season, and (2) the rainfall in the month of September last had delayed and damaged the cotton and *jowar* crops.

Of the advances, loans, cash credits and overdrafts accounted for Rs. 47.59 lakhs (as against Rs. 42.38 lakhs last year), bills purchased and discounted for Rs. 29.25 lakhs (Rs. 15.99 lakhs) and money at call and short notice for Rs. 32.70 lakhs (Rs. 25.50 lakhs). The bulk of the Bank's investments, which show an increase of Rs. 26.43 lakhs over the year, represent Government and other trustee securities, amounting to Rs. 100.09 lakhs, as against Rs. 79.18 lakhs in the previous year. The market value of these securities shows a depreciation of Rs. 1.03 lakhs,

(*Continued in previous column*)

EXPORTS OF RAYON GOODS FALL

NEED FOR A STUDY INTO INDUSTRY'S STRUCTURE

IT is, indeed, surprising that the Silk and Rayon Textiles Export Promotion Council should have taken more than sixteen months--the Council was registered on 13th December 1954—to recognise the need for re-appraising India's export possibilities in rayon piecegoods, with a view to taking measures designed to give a fillip to exports. The Council has, according to the Secretary of this body, just taken up the matter with the exporters and manufacturers and "is taking steps to reverse the trend (of exports)." Though belated, the Council's move must be welcomed. The export trade in rayon piecegoods has been continuously looking downward, with the exception of a slight recovery in 1954. The quantity of cloth actually exported during the calendar year 1955 was not more than 2.92 million yards (valued at Rs. 50.71 lakhs), as against 3.68 million yards (Rs. 61.18 lakhs) in 1954 and 7.98 million yards (Rs. 114.93 lakhs) in 1951. The offtake even by the Asian-African region, which is India's main customer for rayon fabrics, has fallen. Sudan, for instance, purchased from India only 147,000 yards of cloth in 1955, as against as much as 1.74 million yards in 1952 and 1.36 million yards in 1951. Similarly, the quantity lifted by Afghanistan was a bare 222,000 yards, which compares unfavourably with 943,000 yards and 1.22 million yards in the said two previous years. Pakistan has practically ceased to be a buyer of Indain fabrics.

The following table shows the shipments of rayon piecegoods from India to some of the most important markets during 1955, as compared with the preceding four years:

(In thousand yards)

	1955	1954	1953	1952	1951
Aden	260	396	228	67	100
Afghanistan	222	85	111	943	1,221

The major cause for the decline in rayon cloth exports is said to be the keen competition offered by Japan in almost all the markets. The prices of Japanese fabrics, it is stated, are much lower than those sold by India. The quality, designs and finish of Japanese art silk goods are also claimed to be better. Even though there have been no specific complaints on quality considerations against Indian goods, yet it is generally stated that the Japanese goods are of better standards and are available at very much lower prices. If, therefore, the exports of Indian rayon cloth are to improve, it is imperative that immediate attention is paid to these matters.

Export Target

Emphasising this aspect, the Export Promotion Council observes: "With the evolving of standards and laying down factual or other schemes for survey of goods meant for export, complaints about quality may be obviated. There have, of course, been considerable improvements in quality in recent years. Nevertheless, the industry should take further steps in this direction and endeavour to bring down the costs to the lowest level, so that it may be in a better position to compete in overseas markets." Incidentally, the Export Planning Sub-committee of the Council has fixed the target for rayon textile exports at 10 million yards per annum, which represents a rise of 233 per cent. over the average annual rate of exports—about 3 million yards—in the last two years. In fixing the target, the Committee, we are told, has taken an overall view of the anticipated indigenous production and consumption in the next few years, as also the existing pattern of trade.

The Council expects that, as and when its activities gather momentum, it will be in a position effectively to discharge its main function of maintaining and promoting the exports of rayon (and silk) fabrics from India in the following ways:

(1) Acting as an effective media between the foreign buyer and the Indian exporter, on the one hand, and the trade and the Government, on the other;

(2) undertaking market surveys of individual foreign markets, in order to assess their individual requirements; and

(3) laying down standards for exports, with a view to obviating any complaints that may emanate from overseas buyers.

The Council has already worked out a scheme for publicity in foreign markets which, it is said, will be implemented "systematically." It will also bring to the authorities concerned from time to time the problems affecting the export trade.

Industry's Position

While all these steps are in the right direction and require to be vigorously pursued, they will not, by themselves, be successful in giving the necessary push to exports of rayon goods, so long as the industry is not efficiently organised. The Export Promotion Council must, therefore, find out the secret of the success of its competitors in foreign markets and suggest suitable measures for strengthening the structure of the industry. This will be possible only if it makes a comparative study of the equipment, management, technique of production, etc., of Indian rayon mills with those of their competitors. It is needless to emphasise that, unless its internal structure is sound and healthy, the rayon industry in India cannot stand against the well-established manufacturers in Japan, Europe and the U.S. Another question that requires to be gone into by the Export Promotion Council is whether the domestic mills are making deliberate and determined attempts to develop export markets or whether they are resting content with executing whatever orders that come their way. Having been sheltered for several years now by a high tariff wall and the restrictions on imports for considerations of foreign exchange, the industry has had a flabby growth with very little inner strength. It will be natural for such an industry to follow the path of least resistance and try to secure easy profits by confining its attention to the internal market. Further, a section of informed opinion in this country holds the view that the industry consists of many weak units producing poor quality goods. Hence, great importance must be attached to the aforesaid two questions.

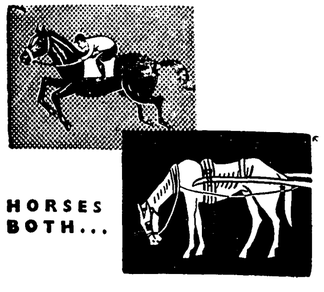
Survey of Foreign Markets

A recent study of some of the foreign markets for Indian rayon fabrics made by the Council reveals several interesting features which deserve to be taken note of by the rayon textile industry and trade. According to the study, India can augment exports of rayon fabrics to East African markets, if they are supplied at competitive prices. Rayon fabrics have the added advantage over silk fabrics in British E. Africa, in that the former is subjected to an import duty of only 20 per cent. *ad valorem*, as against 40 per cent. *ad valorem* on the latter. There has been a marked increase in the popularity of rayon textiles in this country. If the rayon industry can manufacture printed cloth in artificial materials, "a very good market" is assured for them. Aden also offers good scope as a market in which India can expand the export trade in rayon fabrics. Aden is a free port; there are no restrictions on the import of rayon (and silk) from India and the imports are free of duty. What is more, most of the imports into Aden find their way to the interior and many of the Middle East countries are being supplied from Aden. In this connection, traders' attention has to be invited to the findings of a representative of a leading Indian exporting firm who recently visited Aden, Ethiopia, Sudan, Eritrea and Egypt: In almost all the centres, according to him, there are at least two or three Japanese mill representatives who are studying the needs and requirements of the consumers. There are also representatives of Japanese export houses who are going round the markets canvassing and booking orders even for such small quantities as 2,000-4,000 yards. Japanese export houses supply one sample per case of rayon goods which are despatched as soon as the goods are packed in the factories.

The prospects for enlarging exports to Malaya are considered to be quite bright, provided due consideration is paid to quality and price. In this country, India enjoys tariff preference, the rate of import duty being 10 per cent. *ad valorem*, as against the full duty of 20 per cent. *ad valorem*. Some of the better varieties of rayon *saris*, it is suggested, should be made available with proper samples.

New Zealand is another country which offers bright prospects for Indian rayon goods which are at present practically unknown, thanks to the extremely specialised and keenly competitive nature of the market. The U.K. is the main supplier of rayon goods to New Zealand and Japan has been lately making its appearance in the market. If the Indian shippers are to build up an export trade with this country, they must pay attention to three important factors. First, the quality of fabrics should be comparable with, if not superior to, those of English and Continental fabrics. Secondly, the manufacturers should strive to keep in touch with the changing fashions in the market in respect of design and colour. Thirdly, the materials should be shrink-proof and the quality of the dye fast and hard.

In contrast to the opportunities in these markets, there is said to be not much scope for Indian rayon fabrics in Iraq, Thailand and Burma. Imports of rayon (and silk) textiles into Iraq are permitted subject to the grant of licences which are issued under limited monetary allocations. Competition from Japan, Italy, the U.S. and Germany is also severe. In Thailand, Indian goods are finding it difficult to compete with low-priced Japanese products. As regards Burma, in view of the present difficult foreign exchange position, the Burmese Government is interested in trading more with countries like Czechoslovakia, the U.S.S.R. and China which have entered into barter agreements with it. Consequently, the chances for Indian rayon goods in this market are meagre.



...But quality puts one above the other. Hair darkeners there are many, but quality puts *Loma* above the others.

COTTON TEXTILE OUTPUT AND EXPORTS

The aggregate mill output of cotton cloth in India during the first quarter of 1956 is provisionally estimated at 1,258 million yards, as against 1,251 million yards in the corresponding quarter of 1955. This quantity is, however, less than the previous quarter's output of 1,306 million yards by 48 million yards. The yarn output in the same quarter is estimated at 394 million lbs., as against 389 million lbs. a year before and 420 million lbs. in the last quarter of 1955. The trend of cloth and yarn output during the three months ended March 1956 as compared with the same period of 1955 is indicated below:

(Cloth in million yards: yarn in million lbs.)

	Cloth		Yarn	
	1956	1955	1956	1955
January ...	414	430	130	132
February ...	428	399	133	124
March ...	416	422	131	133
Total ...	1,258	1,251	394	389

During the quarter under review, exports of cotton piecegoods passed for shipment are estimated at 192.1 million yards, which compare unfavourably with 219.1 million yards and 242.7 million yards a year and two years before, respectively. The decline in exports is attributed to the resistance from overseas buyers following the rise in prices and increased competition from other countries, especially Japan.

Out of the installed capacity of 12.03 million spindles and a little over 200,000 looms of the cotton textile mills in India as on 1st January 1956, about 1.64 million spindles and 19,000 looms are not in active working at present. This information was given by Mr. T. T. Krishnamachari in his reply to a question in the Lok Sabha last week.

"BUY BRITAIN'S COTTONS" CAMPAIGN TO BE LAUNCHED

CAUSES OF DECLINE IN EXPORT TRADE

From A Special Correspondent

MANCHESTER, *17th April*

THE campaign waged by Lancashire traders for protection against the inroads of foreign goods into the home market has entered a new phase with the arrival of coach-loads of agitators outside the Houses of Parliament. Up to now the protests made on behalf of the industry have been solely through official channels, together with a steady flow of comment from the chairmen of trade organisations and individual firms when opportunity has arisen. Now the field has been thrown open on a wider front.

MANCHESTER LETTER

Union leaders, with their declining membership figures as a spur, have taken the initiative in calling for assistance from the weighty machine of the Trades Union Congress. The danger of a political approach as a result of such moves is inevitable in a matter which is felt to transcend party politics.

There are those who have dubbed the "march" to London, accompanied by banners and demonstrations, as "a stunt" but many people in the industry take the view that any agitation to bring home the facts of Lancashire's case is quite legitimate. The main purpose of the visitors to Westminster is to discuss the whole problem with Members of Parliament for the textile towns and to make their presence felt in the precincts of the House of Commons.

That is one way of drawing the attention of the authorities—and the man in the street—to the failure of the Government to take action to relieve local traders of the burden of keen competition in the home market. Another method of securing a hearing has been taken up by the Cotton Board, whose publicity scheme, based on the slogan "Buy Britain's Cottons," will be launched in the autumn, at a cost of some £250,000.

Tory Plea

Calls to the Government to take steps to limit imports of cotton grey cloth and other textiles were made in resolutions discussed at the annual meeting in Manchester of the Lancashire, Cheshire and Westmorland Provincial Area Conservative Council.

Mr. Ernest Stacey, Chairman of the Liverpool Constitutional Association, moved a resolution which while, allowing that the Government was anxious to support industrial activities in Hong Kong and to do nothing to jeopardise exports from the United Kingdom to India, urged that some action is now necessary to restrict the flow of yarn, grey cloth and manufactured textiles into the United Kingdom. This, it said, was necessary to maintain a healthy and progressive textile industry in Lancashire.

Two pieces of cotton cloth—one made in Britain and the other in Hong Kong—were produced by a Liverpool delegate at the conference as an example of the competition the Lancashire cotton industry has to face from cheap foreign imports.

Mr. Stacey said that the British-made cloth sample had been produced at Barnoldswick from yarn spun from American cotton and would cost £10 3*s*. 5*d*. per 100 yards. The cloth could be produced from other growths at a cost of £9 2*s*. 7*d*.—but neither of these figures included a penny for profit, reserve, or depreciation.

The cloth made in Hong Kong could be landed on the quay in Manchester and sold at £7 5*s*. 10*d*. per 100 yards. This was cheaper than the yarn delivered to the weavers' door in Lancashire before it was touched at all for weaving. The resolution was carried by a large majority.

Need for Action

Among those who have recently aired their opinions on the latest developments in the textile industry is Mr. James Ewing, Chairman of Bradford Dyers' Association, whose annual review invariably contains a far-reaching survey of current industrial affairs. He too has called for protection against imported fabrics coming into the home market and also for safeguards to enable Lancashire to maintain its contacts with Colonial outlets.

Mr. Ewing joins those who believe that at least double-shift working must come—and quickly—if Lancashire firms are to compete effectively in foreign markets against the production of low-wage countries.

"We must sweat the machine," he says. That the existing plant in the mills is far from being "sweated" can be recognised from the latest figures of double-shift working, which show that in the final quarter last year only 2 per cent. of Lancashire's spindles were so operating although 11.8 per cent. of local looms were engaged on shift work.

No effort should be spared to increase the productive power of the industry by using the most efficient methods. Yet the threat of foreign competition remains exceedingly real. Rivalry from low-wage countries such as India and Japan is frequently quoted as the reason for lost trade in many parts of the world. From Malaya, however, it has now been reported that the Soviet Union is shipping textiles in competition with Japanese goods. Cotton grey cloth is arriving in Singapore priced at 10½*d*. a square yard against a comparable Japanese fabric selling at 1*s*. 0*d*.

Empire Cotton

Cotton growing in Empire countries last year just failed to reach the 1954 record yield, according to the Annual Report of the British Cotton Growing Association.

Output was 1,222,200 bales compared with the peak production of 1,227,600 bales in the previous year. Unfavourable weather caused a drop of nearly 100,000 bales in the Uganda crop but increases of 44,000 bales in Nigeria, 18,000 bales in Tanganyika and 17,000 bales in the Sudan were registered.

The report pointed out that the Nigerian crop is now three times as big as the highest output recorded before the war and that Tanganyika's production of 120,000 bales is some 50,000 bales better than pre-war.

Empire crops have grown from around 600,000 bales soon after the war to an average of nearly 1,250,000 for the past two years, but, the report warns, "much can still be done, particularly by research and by encouraging the African farmer towards a better standard of cultivation, for the yield per acre in most countries producing American-type cottons is still very low."

Britain's Exports

The sharp decline in the volume of British cotton textile exports—from 904 million square yards in 1951 to 540 million by last year—is a "most serious" question for the trade and the nation, states the Annual Report of the United Textile Factory Workers' Association.

The report describes 1955 as "possibly the most unfortunate post-war year the cotton textile trade has experienced." It had brought the closure of 90 mills and the loss of more than 30,000 workers. Other factors helping to bring about this situation had been the increased volume of cheap overseas cloth retained in the United Kingdom for sale on the home market and uncertainty about American raw cotton policy.

On the fall in exports, the report says this is attributed to the opening up of Commonwealth markets to India and Japan, and to competition in the finer goods markets from Germany and Holland. It adds: "Japan and India, with low standards of living, increasing efficiency and price differentials have increased their share of world trade by about 1,000 million yards. We cannot hope to compete against them. We are now facing greater price competition than ever from the European producers and the future is not encouraging."

The downward trend of exports was so important that the President of the Board of Trade had set up a committee of trade representatives and Board officials to study certain markets.

The report will be presented to the Association's annual conference at Morecambe on 3rd May. Resolutions for discussion at the conference include one urging a limit on imports of yarn and cloth, particularly from India and Hong Kong, and for consideration of a subsidy on cotton cloth "so that the U.K. cotton industry may compete on equal terms with overseas competitors." Another resolution calls on the Legislative Council to apply for extended holidays for the industry's 250,000 workers "with the object of securing four weeks' paid holidays per year."

Weavers Move At Last

That it should have taken nearly 18 months to draft proposals for a price regulation scheme in the weaving section of the cotton industry is not surprising. Such a task, as has been

TWENTY-EIGHTH ANNUAL REPORT OF THE BOARD OF DIRECTORS

The Directors beg to submit to the shareholders the audited Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December, 1955.

	Rs.	a.	p.
The Net Profit for the year including Rs. 894-15-6 brought forward from the previous year amounts to	94,418	13	1
The Directors recommend that the above amount be appropriated as under:—			
1. To provision for Income-tax	36,000	0	0
2. To transfer to Property Depreciation Fund	14,500	0	0
3. To transfer to Gratuity Fund	3,500	0	0
4. To pay dividends at—			
6 per cent. per annum (less income-tax) on Preference 'A' Shares	4,425	0	0
6 per cent. per annum (free of income-tax) on Preference 'B' Shares	6,000	0	0
7 per cent. per annum (free of income-tax) on Ordinary Shares	26,008	8	0
72 per cent. per annum (free of income-tax) on Deferred Shares	3,816	0	0
5. To carry forward to next year's account	169	5	1
Total .. Rs.	94,418	13	1

There was a general fall in the rate of interest available on advances during the year and the competition in this regard was very keen. Steady progress has been maintained in the deposits of the Bank.

The business of the Bank during the year continued to be satisfactory although the net profit is slightly lower than that of the previous year.

Under Article 113 of the Articles of Association Sarvshri Sri Ram Khanna and Prem Chandra Capoor, two of your Directors, retire by rotation and being eligible, offer themselves for re-election.

Consequent to the resignation of Messrs. P. R. Mehra & Co., the Auditors, appointed at the last general meeting held in 1955, the Directors filled the vacancy by appointing Messrs. R. S. Gupta & Co., Chartered Accountants, Delhi, as the Auditors of the Company on the same remuneration. Messrs. R. S. Gupta & Co. retire at the ensuing Annual Meeting and offer themselves for reappointment for the current year.

The Directors are thankful to the shareholders and constituents of the Bank for their continued support and confidence and they also place on record their appreciation of the work done by the staff during the year.

BAREILLY, Dated the 11th March, 1956.

HIRA LAL KHANNA, SRI RAM KHANNA, NAWAL KISHORE, BALRAM SHARMA, HARISH KUMAR, PREM CHANDRA CAPOOR, } Directors.
GIRISH KUMAR CAPOOR, Managing Director.
Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1955

CRISIS IN COTTON EXCHANGE

TRADERS HOLD GOVERNMENT INTERVENTION TOO DETAILED AND EXCESSIVE

THE resignation of Mr. Purshotamdas Thakurdas, President of the East India Cotton Association, and of Mr. C. B. Parikh, Vice-President, announced last week, brings to the fore the basic and long-drawn conflict between the Association and the Forward Markets Commission. The former has resented what it regards as the rigid, meticulous and excessive control that is sought to be exercised by the Commission, while the latter, in its turn, regards such control as being necessary in the interests of forward trading itself. At the moment there appears to be no immediate prospect of a way out of the crisis in the local market. In view of the significance of this stalemate to forward trading, in general, and to such trading in cotton, in particular, it may be useful to set down briefly the immediate causes of the crisis.

A general reference to these causes has been made by Mr. Purshotamdas Thakurdas himself in his letter of resignation. He says that he has worked so long to preserve the independence of the cotton trade through difficult times. But he finds that he is unable either to fight the Government or to carry it with him. He, therefore, feels that he should make way for such members of the trade as may be able and willing to work under the changed conditions. He deplores that there has, of late, been a tendency on the part of the authorities to exercise "increasing powers or regimentation" and on the part of the business community to yield to them. He adds:

"The last bunch of 11 letters dated 10th April, from the Forward Markets Commissions bears testimony to this. The safeguards, procedures and rules of working which the Association has devised over a period of 35 years are in jeopardy to the detriment of the trade. I do not think that, when the trade accepted Government supervision, they expected to have to more or less surrender their initiative and to content themselves merely with carrying out the wishes of the Forward Markets Commission, both in the matter of prices and in the matter of day-to-day operations. Futures trading is a technical, complex and delicate art, and in my opinion, it is imperative that its control should be with such persons as are not only knowledgeable but are also in day-to-day touch with it and stand to suffer themselves from the results not only of misdirected policy but also of an error of judgment. This is not to question the wisdom of a strictly impartial overall superintending body, provided such a body attends to the general direction of the trade but does not interfere in the detailed and day-to-day working of the Association. The cotton grower in India is not vocal and is unorganised. Whereas there has recently been so much stress laid by the Forward Markets Commission on a rise in price and ceiling within a ceiling, there is conspicuous absence of stress on the need for the grower to secure a fair price, in accordance with the forces of demand and supply, as may be available to him even within the limitation of the official ceiling prices which are well below the world prices."

The bunch of letters to which reference has been made in the extract given above, carries, it is stated, certain directions of the Forward Markets Commission to the Association as well as some concrete proposals to be discussed by representatives of the Association with the Commission. It is learnt that these letters deal with such matters as the reopening of the August 1956 contract, proposals for hedge contract for the next season, fixation of maximum and minimum prices and of margins, amendment of by-laws relating to contracts, prohibition of options and so on. In the Commission's view, it is not expedient to commence trading in the August 1956 contract even under the terms recommended by the Hedge Contract Sub-committee of the E.I.C.A. This view is based upon considerations of the demand and supply position, movement of crop, spot market prices and other factors.

Minutes of Meetings

The Commission's directives to the Association are believed to be contained in no less than four letters. In the first place, the Commission wants that the minutes of the meeting of the Board, reports of the committees of the Board and other relevant papers should be made available to it. Secondly, it holds that certain amendments are necessary in the by-laws in regard to fixation of maximum and minimum prices. The amendments should ensure that maximum and minimum prices are fully effective even during the delivery period and any prices fixed should be fixed with the concurrence of the Commission. The Association has been asked to provide that the due date rate fixed shall not be higher or lower than the maximum and minimum prices respectively fixed under by-law 32. If the due date rate is within Rs. 25 per candy of the maximum price, the penalty shall be equal to the difference between the due date rate and the maximum price. If the due date price is equal to the minimum price and the last buyer of a hedge contract does not begin to take delivery after the time for it has expired and no arbitration is held, the contract will be closed at the due date prices.

Thirdly, the Commission points out that the present system of appointing full-time surveyors does not appear to have yielded satisfactory results. It cites, in this connection, the high percentage of modification of surveyors' decisions by the appeal committees. The Association has, therefore, been asked to consider a system in which a buyer and a seller could each nominate a surveyor from a panel of surveyors constituted by the Association, in consultation with the Commission. If the two surveyors differ among themselves, they could jointly select an umpire from a panel of umpires whose decision could be final. This system, it is stated, would obviate the need for maintenance of full-time selected surveyors at great cost. Fourthly, the Commission has expressed the view that the important offices of President and Vice-President should not be held for an indefinite period by some individuals, since it prevents other members from acquiring the necessary experience and knowledge. It has, therefore, requested the Association to amend the by-laws, in order to ensure that no person holds the office of President or Vice-President continuously for a period longer than five years.

Non-Transferable Contracts

The Commission has made several proposals and suggestions which it says it would be glad to discuss with the representatives of the Association. In the first place, it points out that non-transferable delivery contracts are, in practice, transferred and that this constitutes a breach of the Forward Contracts (Regulation) Act. It has, therefore, suggested that specific delivery contracts should be classified as non-transferable and terms relating to staples, grades, places of growth, period of delivery, etc., relating to each class should be specified. Information on these contracts should be reported to the Commission on a weekly basis. Differences relating to these contracts should be paid only through the clearing house. Secondly, it has asked the Association to formulate suitable proposals for enforcing prohibition of business outside official hours and of options through the setting up of a permanent committee. Thirdly, it has suggested modifications in the margin system, including the reduction of the free limit of open position from the present level of 10,000 bales to 2,500 bales. The suggested margins are: 0-2,500 bales —*nil*; 2,501-10,000 bales Rs. 6 per bale; 10,001-20,000 bales Rs. 8 per bale; 20,001-30,000 bales Rs. 10 per bale and above 30,000 bales Rs. 12-8 per bale.

The basis for determining the liability to pay margins, it is stated, could be the net open position at the end of settlement period instead of the highest net position during the period. Special clearing may be provided, if the price of any contract varies from the last settlement by more than Rs. 30 per candy. Fourthly, the Commission has suggested measures designed to improve the nature of the data presented by the members using the clearing house. Thus, only the contracts made by members with other members should be included in statements; the contracts made by members with non-members should be shown separately. Members should show separately the contracts entered into on behalf of their clients and on their own. Members who do not themselves enter into contracts but ask other members to enter into contracts on their behalf should report the contracts to the Commission in a separate form.

New Contract

As regards the hedge contract for the 1956-57 season, the Commission has suggested that the E.I.C.A. should formulate proposals of a kind that would ensure that hedging facilities are offered to all varieties of cotton grown in the country, that the contract is properly balanced, that it is not made vulnerable to squeeze or bear raid, and that it offers a safe hedge to all interests. In particular, the Commission has sought the Association's advice on (1) whether there should be one contract or two contracts in the light of the need for providing hedging facilities for different varieties and for hedging being started in mofussil centres; (2) whether the present months of delivery (February, May and August, should be altered so as to ensure adequate supply of cotton of tenderable varieties during the delivery period of each contract; (3) whether the by-law 55 relating to fixation of differences should be replaced by a provision for the fixation of varietal differentials on the basis of their intrinsic merit before the commencement of each season and holding good for all contracts during the season; (4) whether the seller should be required to decline on 25th of the month preceding the delivery month the extent to which he will give delivery against outstanding contracts and the extent to which he would buy back his contract; and (5) whether

AUDITORS' REPORT TO SHAREHOLDERS.

We have audited the above Balance Sheet of the Bareilly Corporation (Bank), Ltd., Bareilly, as at 31st December, 1955, with the books at Head Office in which certified returns by the Managers of the respective branches are incorporated and also the annexed Profit and Loss Account for the year ended that date and have obtained all the information and explanations we have required. The foregoing Profit and Loss Account and Balance Sheet are drawn up in conformity with the law. Such Balance Sheet as set forth above exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank. We also report that the books of account have been kept by the Bank for the period under report as required by Section 130 of the Indian Companies Act, 1913. We further report that (a) the information and explanations required by us have been found to be satisfactory, (b) the transactions of the Bank which have come to our notice have been within the powers of the bank, (c) Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit, and (d) Profit and Loss Account shows a true balance of Profit and Loss covered by such accounts.

CO-OPERATION IN SUGAR MAKING

LARGER STATE PARTICIPATION ENVISAGED

WHEN the Government first decided to encourage the establishment of sugar factories on a co-operative basis, some of the millowners feared that this was a beginning of State entry into the field of sugar through the back door. The main reasons for this fear were the provision by the State of the major part of the capital required by the sugar co-operatives and the possibility of favourable treatment being extended to the co-operatives in the matter of taxation, as well as supply of transport and water. Subsequent developments showed that the millowners' misgivings were not unwarranted. The latest developments serve only to confirm them.

It will be recalled that licences for setting up a number of co-operative sugar units have already been granted and the second Five-year Plan provides for starting 35 more co-operative units. The Governments—Central and State—have also been giving active support and encouragement to the establishment of such units by contributing to their share capital. Out of the total financial outlay on a co-operative sugar mill, as much as 85 per cent. is provided by the Governments as contributions to block capital and loans from the Industrial Finance Corporation of India, a body which is completely under the control of the Centre. In reality, therefore, the co-operative sugar mills are as good as State-owned units.

Direct Steps

Apart from issuing licences and giving considerable financial assistance, the authorities have also been taking direct steps to foster the development of co-operation in sugar manufacture. The first all-India seminar of Co-operative Sugar Factories, organised recently by the Union Food and Agriculture Ministry at Pravaranagar in Ahmednagar District, is an instance in point. The Seminar was presided over by Dr. D. R. Gadgil, Director of the Gokhale Institute of Economics and Politics, Poona, and one of the architects of "Neo-co-operation" conceived by the Rural Credit Survey Committee of the Reserve Bank and meekly accepted by all co-operators. One of the cardinal principles of "Neo-co-operation" is that the State should participate in both capital and board of directors of co-operatives by subscribing to the major portion of their capital and placing its nominees on the board. This principle runs contrary to all accepted fundamentals of the Co-operative Movement throughout the democratic world. It is, therefore, but appropriate that Dr. Gadgil, who engineered this peaceful, bloodless revolution in the co-operative world in India in collaboration with two Civil Service men, should have been asked to guide the Seminar. This function was attended by the registrars of co-operative societies from the various States, respresentatives of the Central Government, the Reserve Bank, the Industrial Finance Corporation and the Institute of Sugar Technology, and sponsors of the co-operative sugar factories. The various subjects that came up for discussions at the Seminar included problems of management, operation, finance, requirements of agricultural and industrial labour and relationship of the growers with the factories. The subjects chosen for discussion at the Seminar, as well as the personnel that attended it, suggest that the Government is keen on spreading the new gospel of Co-operation as quickly and effectively as possible.

The deliberations at the Seminar and the conclusions arrived at give rise to apprehensions that an all-out drive might be launched to bring about a greater incursion of the State into the field of sugar manufacture through the Co-operative Movement. How else is one to explain the plea at the Seminar that, "in no case should a licence be refused to a sugar co-operative, because of the demand for, or the possibility of, the expansion of a private factory?" This means that co-operatives should be given preference by the State in the matter of issue of licences for establishing new factories or even for expanding the existing ones. If this recommendation were accepted, there would be very little scope for the private sector to expand in sugar industry.

Financial Assistance

The Seminar expressed the view that financial assistance required for raising block capital should be given liberally and that, in special areas, such assistance should be given to small cultivators even for the purpose of purchasing shares of the co-operatives. This assistance, the Seminar said, should take the form of medium-term loans from co-operative banks. It was further suggested that the other rural co-operative societies also might be permitted to invest in the shares of the sugar co-operatives and that the State Government's share of contribution might be suitably enhanced, if need be.

While appreciating the helpful attitude of the I.F.C. towards the promotion of sugar co-operatives, the Seminar urged that there should be no hesitation hereafter on the part of the I.F.C. in sanctioning long-term loans to co-operative units on the ground that it had already invested a large amount in the sugar industry. In other words, the Seminar wanted the I.F.C. to place as many of its eggs as possible in the sugar co-operative basket. The Seminar also urged that adequate arrangements for the supply of working capital must be provided for from the beginning. As very large amounts were required by way of working capital, it felt that the Reserve Bank should be requested to make available necessary funds to the apex co-operative banks through the bill market scheme or on terms analogous to it. In those States where the apex co-operative banks were not sufficiently strong, the State Bank of India might be asked to afford the same facilities and terms to sugar co-operatives. The Seminar also emphasised the need for strengthening the Co-operative Section of the Central Food Ministry and for setting up a special unit which would devote its "undivided attention" to the problems and requirements of co-operative sugar mills.

If the aforesaid recommendations were to be accepted and implemented, the new sugar factories would be co-operative units only in name; for all practical purposes, however, they would be full-fledged State enterprises. It is necessary to point out, in this connection, that there are obvious difficulties in organising producers of sugarcane on a scale or magnitude which would make the establishment of an economic unit possible. As one of the leading sugar industrialists of India has rightly remarked, highly technical processing by producers of raw material has so far not proved a successful field for the application of co-operative principles, especially in this country of small cultivators. The co-operative method is good and fruitful only in so far as it spontaneously grows from within, but it has a poor chance of success when forced from above on comparatively ignorant people not equipped for running complicated technical organisations.

Observations Emotional

It is, indeed, unfortunate that this aspect was conveniently overlooked by Dr. Gadgil in his anxiety to stress the role of sugar co-operatives in ushering in an "era of co-operative commonwealth." In his speech, Dr. Gadgil observed: "Of all co-operative enterprises particularly, sugar factories alone cover a large sector of community item. Sugar co-operatives cover both industry and agriculture and they have the promise of leading up to a society based on the concept of a co-operative commonwealth. If the experiment of sugar co-operatives is a success, then the idea will spread to large sections of industry and may eventually cover the entire field. Thus, India can show to the rest of the world that a scheme of economic organisation, based on co-operation as opposed to competition, can succeed."

The observations of Dr. Gadgil are highly emotional and not based on hard facts. If past experience is any guide, co-operatives in India have not proved themselves equal to the burden they were expected to shoulder, notwithstanding the very favourable climate for its growth. It is true that, as one of the authors of the Rural Credit Survey Report, Dr. Gadgil knows full well the defects of the Co-operative Movement as it has existed all along and that it is with a view to overcoming these defects he has advocated State participation in the Movement. But our submission is that even this remedy for reforming the Movement and for giving new life to it has little chance of success. And, even if it does, with the State dominating the co-operatives, what the country will ultimately have is State Capitalism and its evils and not Co-operative Commonwealth as Dr. Gadgil hopes.

PALM "GUR" INDUSTRY

The implementation of the development programme for the palm *gur* industry has not been encouraging. An indication of this is provided by the poor response to the financial assistance shown by the State Statutory Boards, registered institutions, etc. Out of the total Central Government's grants of Rs. 10.61 lakhs sanctioned up to 8th January 1956, not more than Rs. 1,04,406 had been actually disbursed up to December 1955 by the All-India *Khadi* and Village Industries Board. Similarly, the amount of loans availed of by the State Boards, etc., was negligible, being Rs. 2,050, as against Rs. 5.74 lakhs sanctioned.

Thanks to the various steps directly taken by the Board for the development of palm *gur* industry, exports of palm *gur* have registered an improvement. During the first ten months of 1955-56, about 17,396 tons of palm *gur* were exported from India, which compare very favourably with 598 tons in the corresponding period of 1954-55. Nevertheless, the conditions obtaining in the industry are none too happy. Indeed, the industry continues to be faced with several disquieting factors. The methods of tapping and boiling palm juice are still crude. The cost of structure of the industry is also heavy, thanks to high wage level.

OUTLOOK FOR TEA IMPROVES

INTERNAL CONSUMPTION RISES

ADVICES from London state that tea markets are ruling strong and the general upward trend in prices noted for some weeks past is being fairly well maintained. The best quality teas are in keen demand and there has, consequently, been a smart advance in prices. Upper Assam C.T.C. types, for instance, fetched last week 2*d.* to 6*d.* per lb. more than in the previous week and there was a corresponding improvement in prices of medium broken orange pekoes and orange fannings also. There was, however, a slight fall in prices of plainest and commonest varieties, the Indian plain B.P. fetching 3*s.* 5½*d.*, as against 3*s.* 6½*d.* per lb. in the previous week. Nevertheless, the average price was higher at 4*s.* 9.58*d.*, as compared with 4*s.* 8.63*d.*

In contrast, tea prices in Calcutta during the last two weeks have been on the lower side, after experiencing a sustained rise during March. This decline is not due to any change in the statistical position of tea but to a decline in quality. With the season nearly over, the lower quality types are now on offer in greater quantities and the prices realised are naturally lower. Even here, the decline is more prominent in internal auctions than that in export sales, which are apparently being influenced by encouraging advices from London. Notwithstanding the recession, the latest prices are, it must be said, higher than those that prevailed at the beginning of March this year.

The following comparative table shows the trend of prices during the last three weeks:

	16-4-1956	9-4-1956	2-4-1956	26-3-1956
Export Sale	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Clean B.P.	2 0 0	2 2 0	2 2 0	2 0 0
Plain B.P.	1 7 6	1 8 6	1 9 6 to 1 10 0	1 9 6 to 1 10 0
Medium Assam B.P...	1 9 0 to 1 9 6	1 10 0	1 11 0	1 11 0
Best C.T.C. Assam B.P.	N.Q.	N.Q.	N.Q.	N.Q.
	17-4-1956	10-4-1956	3-4-1956	27-3-1956
Internal Consumption	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Medium Dooars dust. .	1 8 0 to 1 9 0	1 9 0 to 1 10 0	1 11 0 to 1 12 0	1 13 0 to 1 14 0
Medium Assam grainy dust	1 10 0	1 10 0 to 1 12 0	1 12 0 to 1 14 0	1 14 0 to 2 0 0
Best Assam C.T.C. dust	2 10 0 to 2 12 0	2 12 0 to 2 14 0	2 14 0 to 3 0 0	3 0 0 to 3 2 0

N.Q.=Not Quotable.

The comparatively smaller recession in export prices is evidently due, as already stated, to the firm trend at London auctions, where the reopening of the market after the Easter recess saw strong competition, bringing sharp increases in Indian tea prices, particularly those of best liquoring fannings. The rise in the London market represents the revival of normal buying induced by the sharp fall in stocks of tea in Britain. The stringency in the London money market, coupled with the Government of India's restriction on shipments of tea for direct sale at foreign auction centres, had been responsible for the tea merchants in London buying on a hand-to-mouth basis in the past. The stocks have now declined to such an extent that it has become necessary to replenish them. The removal of restrictions on exports of tea to London has also induced them to make larger purchases. It is just possible that stocks of tea in many Continental countries, too, are low and this may be one of the factors for the liveliness of Mincing Lane. Stocks of tea in London at the end of March amounted to 96.1 million lbs., as against 154.4 million lbs. a year ago. Since then, there has been a further fall to 95.9 million lbs. as on 6th April, as against 159.7 million lbs. on the corresponding date last year. It is true that the quantity of tea afloat (as at the end of March) was higher at 45.8 million lbs. as against 19.9 million lbs. a year before. But this does not fully offset the big reduction in the actual stocks. On top of this, the offtake too has been higher; thus, deliveries from warehouses in March 1956 were better at 53.7 million lbs., as against 43.2 million lbs. a year before.

Notwithstanding the recession in the prices of certain varieties of Indian tea during the past fortnight, the outlook for Indian tea is considered quite good. Besides the increased offtake from London, one of the important factors which have lent strength to the market in recent weeks is the expansion in Indian consumption. This expansion is partly due to lower prices ruling during the past six months. It is estimated that the internal market must have already absorbed about 120 million lbs. out of the North Indian tea, besides 60 million lbs. left over with South India plantations for internal consumption. There is also a possibility that a sizable portion of the remaining teas available for sale may still be taken up in the coming months. While a small quantity of the old season's teas yet remains to be sold and shipped, it is expected that the surplus of teas left over in India, as a result of increased production and earlier fall in shipments, has been taken up by the Indian consumer. According to one estimate, the current level of Indian consumption is placed at 220 million lbs. a year, as against 169 million lbs. in the previous year.

The improvement in Indian consumption has given rise to hopes that the Indian market is likely to absorb any surplus that may remain and "act as a great buffer in a year of excessive production like the one just coming to a close." Commenting on this aspect, Messrs. J. Thomas & Co. observe in their latest monthly report: "The demand for tea in India is, however, elastic and the internal consumption may temporarily fall if the prices were again to rise too high, but, in the long run, the internal market will always serve as a great insurance against any sudden slump in prices." Thus, the fear in certain quarters that there would be a great surplus of tea during the season on account of the increase in production of the main tea-producing countries accompanied by a sharp fall in tempo of shipments, especially from North India, is unlikely to materialise. Already, not only have all sold teas in Calcutta been almost fully absorbed but it looks as if there will be strong and sustained internal buying together with some competition from foreign markets for the closing sales of the season. The internal consumption in Pakistan and Ceylon is also said to have increased considerably.

Yet another factor which has improved the outlook for tea is the fall in output in South Indian and Ceylon gardens during the first quarter of 1956. The South Indian tea crop for January-March 1956 is estimated at 22.30 million lbs., a fall of 3 million lbs. over the year. Ceylon is likely to show a deficit of 8 million lbs. on account of unfavourable growing weather conditions. It is too early to forecast the North Indian crop for the 1956-57 season, though it is expected that the producers will concentrate on quality and produce slightly smaller crops as compared with the 1955-56 season.

Hopes are also entertained that the International Tea Agreement, which has been hanging fire for over a year now, will be signed shortly more or less on the same pattern as the old one, with increase in export ceilings for all signatory countries. It is also confidently expected that, with the signing of trade agreements between India, on the one hand, and Russia and other Eastern countries, on the other, fresh outlets for Indian teas will be found.

Incidentally, consequent on the increase in domestic offtake and shipments to London, sales of 1955-56 teas in both Calcutta and London are likely to close earlier than expected. The last export sale in Calcutta will be held early in May, while the sale of North Indian teas in London is expected to be completed by the end of June.

EXPORT OF COFFEE TO RUSSIA

The Governments of India and the U.S.S.R. have concluded an agreement for the export of 500 tons of coffee to Russia at a cost of about Rs. 41.22 lakhs. Two grades of coffee will be exported—the higher quality at Rs. 400 to Rs. 450 per cwt. and the lower quality at Rs. 360 per cwt. The export will be handled by the proposed State Trading Corporation.

(Concluded from next column)

per cent.) and the U.S. 2,750 (2.2 per cent.). Czechoslovakia's loomage amounted to 2,000 (1.6 per cent.), Poland 1,600 (1.3 per cent.) and the U.S.S.R. 1,315 (1.1 per cent.). The number of looms in Pakistan was 1,000 (0.8 per cent.). The percentage to total looms was below 0.8 in a number of other countries, including Spain, China, Japan and a few other countries. These figures, however, do not depict the true position today, for, since 1952, many countries have not only expanded their existing units but erected new mills. The I.J.M.A. will, therefore, do well to issue a supplement to its publication under reference, giving the latest figures of world loom statistics.

JUTE LOOM STATISTICS

DECLINE IN I.J.M.A. MILLS' SHARE

THE latest jute loom statistics, that is, as on 30th June 1955, complied by the Indian Jute Mills' Association, disclose that since the last census in 1953, the number of jute looms in India has declined by 77 to 72,625. This fall was the net result of a decline of 53 sacking looms and of 227 others, followed by an increase of 203 hessian looms. A clear picture of the position of jute looms can be had from the table below:

TABLE I

Looms	1953	1955
Hessians	44,234	44,437
Sackings	24,740	24,687
Others	3,728	3,501
Total ..	72,702	72,625

A groupwise analysis of looms discloses a fall of 1,000 looms that is, from 68,974 to 67,974 in the total loomage of member-mills of the Association. The number of looms owned by mills outside the I.J.M.A. has, on the contrary, risen by 923 looms to 4,651 looms. The fall in the number of looms in the I.J.M.A. member-mills is attributed, in the main, to the resignation of three mills from the Association as also to a reduction of 42 looms in one member-mill, a replacement of 8 looms by the same number of cotton bag looms by another mill and a fall of 345 looms in the sector other than sackings and hessians.

An idea of the position of the I.J.M.A. mills as compared with that of mills outside the Association in 1953 and 1955 can be had from Table II below:

TABLE II

1953	Hessians	Sackings	Others	Total
I.J.M.A. mills	42,771	22,978	3,225	68,974
Mills outside I.J.M.A.	1,463	1,762	503	3,728
Total ..	44,234	24,740	3,728	72,702
1955				
I.J.M.A. Mills	42,383	22,711	2,880	67,974
Mills outside I.J.M.A.	2,054	1,976	621	4,651
Total ..	44,437	26,687	3,501	72,625

In West Bengal, the total hessian and sacking loomage of the Association mills declined from 63,968 to 63,313. But the number of looms with mills outside the Association rose from 1,602 to 2,397. Again, the total hessian and sacking loomage of all mills outside West Bengal also rose from 3,404 to 3,414.

The total looms outside the Association in 1937 was 2,941. It rose to 3,290 in 1940. Four years later, the number stood higher still at 3,600 looms of which 3,156 were hessian and sacking and 444 other looms. In 1947, the loomage, however, declined to 3,393 of which 2,915 were hessian and sacking and 478 other looms. The downward trend persisted till 1949, when the looms stood at 3,355, consisting of 2,852 hessian and sacking looms and 503 other looms. The trend was, however, reversed by 1951, the loomage having gone up to 3,728 in that year. A further increase was seen in 1955 when the total number (*vide* table II) of looms rose to 4,651, comprising 4,030 hessian and sacking looms and 621 other looms.

The table below shows the trend of loom-strength of the I.J.M.A. mills since 1885:

TABLE III

Year	Hessian looms	Sacking looms	Total	Percentage of hessian to total
As on 1st January—				
1885	1,800	4,900	6,700	27
1890	1,958	6,006	7,964	24
1900	6,600	8,727	15,336	43
1910	18,334	13,421	31,755	57
1920	24,353	16,124	40,477	60
1930	36,745	21,804	58,639	61
1940	42,026	23,360	65,386	64
As on 30th June—				
1944	42,285	23,121	65,386	65
1947	42,523	23,014	65,537	65
1949	42,661	23,101	65,762	65
1951	42,811	22,909	65,720	65
1953	42,771	22,978	65,749	65
1955	42,383	22,711	65,094	65

A significant feature disclosed by the table above is that the percentage of hessian total looms has remained constant at 65 since 1944.

According to the I.J.M.A. statistics, compiled in 1952, India's share in the total world loomage of 122,510 was 68,557 or 56 per cent. of the total. The U.K.'s share came next, being far lower at 11,151 looms or 9.1 per cent. of the total. With 7,698 looms, France ranked third, its percentage to the total being 6.3. Germany and Brazil accounted for 6,349 and 4,987 looms, representing 5.2 and 4.1 per cent. of the total. Belgium owned 4,807 looms (3.9 per cent.), Italy 4,631 (3.8

AUDITORS' REPORT.

We beg to report that we have audited the Balance Sheet of the Bank of Rajasthan Ltd., Udaipur as at 31st December 1955 and the relative Profit and Loss Account of the Bank for the year ended on that date as above set forth with Books and Accounts of Udaipur and Jaipur offices and Returns of Branches and Pay Offices and report that—

(a) We have obtained all the information and explanations we have required and the same were satisfactory.
(b) In our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the law.
(c) Such Balance Sheet exhibits a true and correct view of the state of affairs according to the best of our information and explanations given to us and as shown by the books of the Bank. Also such Profit and Loss Account shows a true balance of Profit for the year.
(d) In our opinion, Books of accounts have been kept by the Bank as required by Section 130 of the Indian Companies Act.
(e) All the transactions which came to our notice were within the powers of the Bank.
(f) The Returns received from Branches for the year ended 31st December, 1955 were duly audited by Chartered Accountants.

BHAWAR, 10th March, 1956.

TASK FACING BUILDING INDUSTRY

ITS MAGNITUDE—NECESSITY FOR NEW OUTLOOK

By K. F. Antia, M.Sc. (Lond.), F.N.I., M.I.E., M.I.Struct.E.

THE building industry is faced with one of the largest tasks set to any industry by the second Five-year Plan. The question naturally arises whether the industry is geared to reach the targets set and whether a new approach to the task is desirable.

The second Five-year Plan has allotted Rs. 120 crores for the construction of houses alone. In addition, a certain percentage of the Rs. 891 crores earmarked for industries and mining would be required for the construction of factories and ancillary structures. To this must be added certain percentages of the allotments of Rs. 267 crores and Rs. 320 crores under health (for hospitals, dispensaries, etc.) and education (schools, etc.), respectively. The total of all these allocations, responsibility for the fulfilment of which devolves on the building industry, is an appreciable percentage of the colossal expenditure envisaged in the Plan. For a correct appraisal of the task, to the above figures from the Rs. 4,800-crore Plan, further sums must be added from the anticipated investment of Rs. 2,300 crores by the private sector.

The building materials and construction industry has not only to face a considerable increase in quantum but the tempo of supply of materials as well as of construction has to be geared to that of the second Plan. It must be admitted that the present tempo of construction will need considerable stepping up and this will involve:

(*a*) a very large increase in the quantity of materials of construction, and

(*b*) improvement of building techniques to increase the speed of construction.

Increase in quantum necessitates (*a*) the optimum use of all varieties of building materials available and the improvement of indigenous materials, and (*b*) the use on a very large-scale of modern building materials, namely, steel, cement, aluminium, etc.

New Outlook Wanted

Bold and unorthodox steps are necessary if the wherewithal for achieving the targets is to be found. Targets have been set not only on the magnitude of the tasks but also on the speed. If we have to build in one year what, perhaps, normally has taken five or more years, the effort will have to be commensurate with the requirements.

Building materials in ever-increasing quantities have to be made available. This means that manufacture of these has to be substantially increased and at a very rapid rate. This in turn necessitates planning and organisation.

Hitherto, the manufacture of building materials, except for items such as steel and cement, has been in the hands of the small manufacturer. These manufacturers have now to gear their output to the increased demand. Additional manufacture has also to be arranged and on a rational basis, if waste is to be avoided.

The quality of the materials has to be improved and standardised, so that wastage is reduced, smaller quantities of material are used and reliable results are obtained.

The sizes of individual units of building materials have also to be made uniform, resulting in an improvement of availability, avoidance of wastage due to alterations to suit requirements and simplification, and expedition of planning both on a small and mass scale.

In order to cover the large gap between demand and availability of traditional construction materials, modern building materials and modern techniques have to be employed on an increasing scale, side by side with all available traditional materials.

Not only has the output of conventional building material to be increased but the production of material such as steel, cement, aluminium, etc., has to be commensurate with the requirements. The latest constructional techniques have to be pressed into service to achieve maximum efficiency both in economy and speed.

The requirements of increased tempo and increased quantum may be broadly divided into three parts:

(*a*) research and application of research,

(*b*) efficiency and increase in production, and

(*c*) efficiency in design, technique and construction.

Research and Application of Research

Although the role of research may not be obvious to the man in the field, it plays a significant part in the building materials and construction industry. Research may be carried out (*a*) in products both with regard to improvement of existing material as well as the introduction of new and substitute materials, (b) in design, and (c) in techniques of construction.

For carrying out research for the construction industry, two significant divisions may be considered, namely, fundamental research and applied research. It is suggested that fundamental research should be concentrated at various universities, special grants being arranged where necessary. The existing system introduced by the Council of Scientific and Industrial Research, by which the nature of research is assessed and grants are allotted for specific items, is bound to produce handsome results and the scheme needs to be vastly extended. It is also desirable to diffuse information regarding this scheme as technical personnel does not appear to be fully aware of it. The issue of brochures, explaining the scheme to technical and other organisations, might go a long way towards increasing the advantages of the scheme.

Applied research is the primary concern of industrial research and allied organisations, and of the Central Building Research Institute. For research to be of any value, its results must be applied and with the least possible delay. One of the objects of the National Building Organisation, established by the Central Government, is "to co-ordinate efforts and findings of all agencies concerned with technology and practice of building materials or building materials production." It is, therefore, admirably placed to put into practice in the field what has been evolved in the laboratory. Intensive co-ordination in the application of research between the National Building Organisation, the Institution of Engineers, Public Works Departments, the Builders Association of India, the Concrete Association of India, the Institute of Architects, and other similar bodies is likely to pay handsome dividends.

Co-ordination with the specific purpose of assessing the value of and applying the results of research in building construction, would go a long way towards removing the natural inertia on the part of builders to innovations, particularly because of their fear of the economic implications.

Efficiency and Increase in Production

The second requirement of increased and rapid output is the attainment of a certain degree of efficiency in the manufacture of building materials, particularly of the traditional type, through (*a*) organisation, (*b*) standardisation, and (*c*) manufacture with local raw materials.

The quality of materials and the standard of efficiency attained in the manufacture of materials such as steel, cement and aluminium would stand very favourable comparison with any highly industrialised country and strenuous efforts are being made to increase the output very substantially in the second Five-year Plan. The output of steel, for example, will be raised from a little over a million tons to six million tons; and the present output of cement will be more than doubled. There is a great necessity, however, for increasing the efficiency in the manufacture of traditional building materials. To take an example, the quality of brick varies very considerably from place to place. The size also differs, that in the Eastern zone is 10 in. x 5 in. x 3 in., while the dimensions in the Western areas is 9 in. x 4½ in. x 3 in. The size of bricks recently advocated by the Indian Standards Institution is based on a 4 in. module. The manufacture of such standard bricks, however, lies in the hands of owners of brick kilns. One of the tasks before the construction industry is the ensurance, by persuasive as well as restrictive methods, of manufacture to accepted standards.

Manufacturers of different building materials might be encouraged by the National Building Organisation and the Builders Association of India to produce materials to specified standards and it would be an advantage to issue notes and reports to the affected parties, indicating the advantages of such standardisation. It is also desirable for Government Departments, such as the Public Works Department, to make alterations in the specifications where necessary to permit new techniques being introduced.

An incentive to the small manufacturer may be in the encouragement by the National Building Organisation of suggestions and indications of any special product or technique successfully adopted by them.

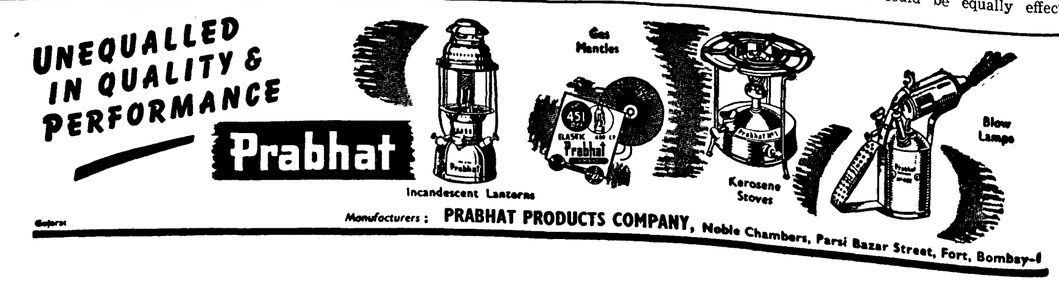
Establishment of firms specialising in the construction of a particular component of a structure would increase output and efficiency. In certain European countries, for example, there are firms that construct floors and roofs only of structures and can build them more economically and efficiently than is possible through general building contractors. Similarly, it would be advantageous for all welded steel construction to be carried out by specialised firms.

Efficiency in Design, Technique and Construction

Research and its application and the availability of standard quality building materials may be considered important requirements for the achievement of increased quantum and tempo. The fundamental requirements, however, for attaining these objectives are efficiency in design, in technique and in construction. It is essential not only to develop new designs but to use those which have been found economical. Considerable progress has been made in recent years in various countries in the evolution of new designs and full advantage has to be taken of such designs. A few examples will suffice to illustrate this very important requirement.

Prestressed concrete, prismatic roofs and shell roofs, not only enable very large areas to be covered in a simplified way but the quantity of materials required with these designs is a fraction of that necessary with more conventional designs. The adoption of limit design method might be encouraged, as it is a more rational method of design than the existing elastic method.

The development of techniques which (*a*) make optimum use of a material and thus lead to its conservation, and (*b*) permit expeditious construction is to be encouraged. Not so very long ago, one of our distinguished visitors from the U.S.S.R., Mr. Khrushchev, indicated very forcefully the wastage of steel in our country through the adoption of steel structures where concrete structures permitting a saving of 80 per cent. of the steel could be equally effective.



This subject was dealt with by the writer in an article published in this journal on 4th February, 1956. A brief analysis of this problem is of special interest to us at present. Reinforced concrete structures require only one-third to one half of the tonnage of steel, the percentage varying with the type of structure as follows:

Residential and office building	50%	that of steel frame
Factory building ...	45%	Do.
Warehouse	35%	Do.

Analysis of a typical structure in India has proved that a concrete structure will cost about 22 per cent. less than the steel structure designed for identical conditions and loads. There is a considerable steel shortage in the country and the building industry is experiencing great difficulties in obtaining its requirements. Even with the increased output of steel envisaged in the second Five-year Plan, the demand is not likely to be completely satisfied. A rough assessment of the quantities of steel thus saved is revealing. Of the 1.4 million tons of steel used in India in 1954, about 20 per cent. or 3 lakh tons, consisted of medium, heavy and light structurals, most of which may be assumed to have been used in buildings, industrial structures and bridges. The target for steel production to be attained in 1960 is 6 million tons of ingot and we may assume that 20 per cent. of this or about 1.2 million tons would consist of structurals. Replacement of steel structures with concrete structures would result in a saving of about half to three-quarter million tons of steel which could be put to other more advantageous uses. The steel saved would, however, have to be substituted by additional cement for concrete construction. An analysis of a typical industrial structure shows that, on an average, for a building frame, 1.33 tons of additional cement is required for every ton of steel saved. For substitution of steel bridges by concrete bridges more than two tons of cement may be required for every ton of steel saved. Assuming a safe provision of cement equal in tonnage to about one and three-quarters to twice the steel saved, the additional cement that would be needed to replace the steel would be about one million tons. The capital required for the installation of additional one million tons of cement capacity is estimated very roughly at Rs. 16 crores, whereas the capital necessary for the production of about half a million tons of steel would be approximately Rs. 75 crores. The above figures are of sufficient magnitude to justify investigation.

Prestressed Concrete

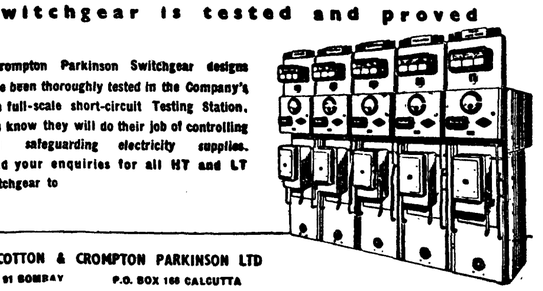
The adoption of the technique of prestressed concrete would also result in considerable advantage. The quantity of concrete in a prestressed concrete structure may be taken roughly as about one half that in an equivalent reinforced concrete structure. The quantity of steel necessary is only 25 per cent. but this steel has to be in the form of high tensile wire or rods. Although prestressed concrete is being used in the country, it is only on a very limited scale and for bridges only. Two conditions militating against increased use of this technique are: (*a*) Diffidence in the adoption of a new technique, and (*b*) non-availability of locally manufactured high tensile steel wire.

The first difficulty is likely to be gradually overcome through precept and example but specific action appears to be indicated with regard to the manufacture of high tensile steel wire in the country. It may be of interest to note that the tendered price for a bridge over the Sone River was 37 per cent. less with prestressed concrete than with steel and 4 per cent. less than with reinforced concrete.

Full advantage of the prestressed concrete technique can be obtained only if quality control is introduced and the permissible stress in concrete is increased. A stress of 1,500 pounds per square inch which was adopted in 1948 when the writer assisted in designing the first prestressed concrete bridge in the country, have only recently been raised to 2,000. Much higher stresses are used in Western countries and we have the wherewithal to do likewise.

If controlled concrete is used in reinforced concrete structures also, considerable savings can be effected. A little effort and scientific control are the only remaining requirements. A concerted effort by the Builders' Association of India for the adoption of controlled concrete by its members, would be advantageous to the members themselves. This would pave the way for the supply of ready-mixed concrete by special suppliers and relieve the building constructor from the necessity of arranging various ingredients of concrete and mixing them at site,

(*Continued on page 843*)



SURVEY OF INDIA'S ENERGY SUPPLY

ROLE OF OIL IN MEETING INCREASING DEMAND FOR FUEL

EVER since early man rubbed two stones and found to his primitive astonishment a spark of fire, man has been on the quest for new sources of heat, light and power which could meet his increasingly numerous and complex needs. Nuclear power is, of course, the latest—though it may not be the last—of this long and patient quest for newer and newer sources of energy. All the world over, the demand for energy is increasing, and so is man's ingenuity in meeting it. Before long, India, too, may be called upon to face a similar increase in demand. Already, there is a rise in its energy requirements. And, when the second Plan for economic development gets under way, they are bound to increase further.

A significant index of a country's industrial prosperity is the level of its energy consumption. Judged from this standard, India stands low down in the list of countries which are important consumers of energy, produced from different sources, such as coal, oil and electricity. An interesting survey, entitled *Energy and India*, issued by Burmah-Shell, focuses attention on the energy requirement of this country in the light of world trends. Since energy is produced from different sources, there is need to reduce it to a common equivalent. By using appropriate conversion factors, it has reduced energy to a common "coal equivalent."

Apart from the source of energy consisting of the effort of animal and human muscles, there are two main sources of energy, commercial energy and non-commercial energy. By commercial energy is meant the energy that is capable of organised planned development and distribution consisting of coal, oil, electricity, alcohol, benzol, etc., while by non-commercial energy is meant wood, charcoal, animal and farm wastes, wind-power, etc. Modern technology is mainly concerned with commercial energy produced from coal, electricity and oil. Among these three main sources of energy, oil has certain advantages which the other two do not possess. Thus coal, by virtue of being an intractable solid of a most diverse content, presents difficulties in handling and measuring, and an inflexibility in use due to the fact that the equipment required to release the energy in usable form is invariably bulky and of only moderate efficiency. The fact that there is a residual ash presents a limitation on its technical use even if the ash possesses a commercial value. Electricity, once it has been generated, cannot be stored and must be used instantaneously; furthermore, the equipment for its distribution is expensive and, therefore, inflexible as it involves a permanent and specialised connection to the source of generation, possibly over large distances. Oil, on the other hand, is packaged power in the form of a liquid which presents the easiest and cleanest method of handling, transporting and measuring. It is capable of being modified and packaged and sealed in many forms each of which is well suited for the purpose required. Its calorific value by weight or volume is high, and high thermal efficiencies can be obtained in use.

From Coal to Oil

Although the total consumption of energy is increasing at a rapid rate, there have been shifts in emphasis in the sources that produce it. There has been a particularly rapid increase in the consumption of energy in the last five years. Thus, in 1950, the rate of consumption was 10 times the rate a century earlier, whereas, in 1955, the rate was at least 12 times the 1850 rate. At the time of the industrial revolution, wood was supplanted by coal as a source of energy. Coal, in its turn, is being rapidly displaced by oil and natural gas. Hydro-electricity, as a source of energy, is growing steadily. But it is a source of energy needing very high capital outlay and is, therefore, not susceptible to very rapid increases.

The trend of consumption of energy shows that the increase, since 1920, has been at the rate of 3 per cent. per annum. In the next few years, the rate may be higher than this figure, what with the steadily increasing demand for energy from the industrially advanced countries and the source of demand for purposes of development in the economically backward countries. Population, too, has been increasing; this factor alone accounts for an increase of 1.1 per cent. in energy consumption. One might, therefore, expect a rate of increase of some 5 per cent. in such consumption. Oil as a flexible source of power can do much to satisfy the demand for power.

The U.S. is a leading consumer of oil products. It accounts for about 65 per cent. of the world's consumption of oil products, excluding the Russian sphere. But the demand for these products outside the U.S. is also rising fast. There are, of course, differences in the level of consumption. This is best illustrated by studying the quantum of oil products consumed in each region against the background of the population of that region. Excluding the U.S. and the Soviet-China bloc as not statistically well documented, the population concerned is about 1,600 millions. Of this, Western Europe has 20.5 per cent. of the population and 35 per cent. of consumption. Other heavy consumers like Canada and Australasia have 7.5 per cent. of the population and 16 per cent. of consumption and there remains a large block of low consumption areas with 72 per cent. of the population and only 30 per cent. of consumption. The remainder of the demand is ocean bunkers (19 per cent.).

Energy in India

How does India compare with this pattern? Although it has 15.5 per cent. of the areas' population, it accounts for only 1.8 per cent. of the consumption. The present output of commercial energy in India is estimated at 37.9 million tons (of coal equivalent) annually, consisting of 28.3 million tons of coal, 4.5 millions of coal equivalent for electricity consumed and 5.1 million tons of coal equivalent for oil consumed; by 1960-61, these figures are expected to increase to 66.9 million tons, 49.8 million tons, 8.0 million tons and 9.0 million tons, respectively. The sources of commercial energy provide only 0.1 ton of coal equivalent per head, as compared with 10 tons in the U.S., 6 tons in the U.K., 3½ tons in Germany, 3 tons in Russia, 0.8 ton in Japan and the world average of 1.2 tons. Even with non-commercial energy added, the total for India rises to only 0.36 ton per head.

Little is definitely known about non-commercial energy. The Survey has, however, made some very interesting calculations about this sphere of energy consumption. In India, non-commercial energy comes from animal dung, firewood, charcoal, bagasse and other agricultural products, animals used in wheeled transport and human effort. The Survey calculates that the dung burnt as fuel accounts for about 90 million tons of coal equivalent annually. Similarly, the contribution by charcoal, firewood, etc., is estimated at 9.7 million tons of coal equivalent, that of bullock carts at 2.1 million tons of coal equivalent, that of work animals at 65 million tons coal equivalent and that of human effort (involved in such operations as hand cultivation, crop processing, etc.) at 6 to 8 million tons of coal equivalent. Referring to human effort in India, the Survey says: "The most noticeable thing about our findings is that, as compared with the heart-breaking effort involved, the output is pathetically low. . . . Raising the standard of living consists, in essence, of providing the energy, and the equipment to use this energy, to enable man to release his own efforts for constructive, directive and recreational effort."

The rate of increase of commercial energy in India has been of the order of about 5.6 per cent. The demand, in the light of the expansion now planned in respect of industries and other sectors of the economy, it is computed, may rise at a rate of 10 per cent. per annum. From this point of view, the Survey emphasises that every source of energy will have to be pressed into use. It points out that the value of hydro-electricity, though it is very important, should not be overestimated. It involves huge outlay of capital. Even if India's total hydro-potential were harnessed immediately, it would mean the coal equivalent of only 0.16 ton per *capita*. Atomic plants too could be a valuable source of energy. But there are barriers of capital cost and practical technology. Having regard to all this, the most flexible source of energy is doubtless oil.

The Survey draws attention to some of the singular advantages of oil. It points out that the availability of oil can be rapidly expanded as soon as demand rises. Such increase in demand may come about as a result either of normal increase as a result of industrial expansion and rise in living standards or of failure of alternative sources of energy. Besides light for the people, oil provides fuel for high speed diesel trains and coaches, power generation for industry, process heat, transport for goods and agricultural products and mechanised agriculture. New applications too can and will be found. In this connection, the Survey says that the "industrial gas turbine burning black oils can be expected to become available for conditions which may be ideal in India for power generation and large-scale water lift and conditions where secondary process heat is required." Now that a good organisation in the shape of oil refineries has been established, bulk depots in the interior have been built up, oil could be readily depended upon to meet India's expanding requirements of energy.

CIVIL AVIATION

All-round improvement in civil aviation in India is reflected in the report for the half-year ended 31st December 1955. The total miles flown by Indian air carriers on scheduled and non-scheduled air services increased from 12.7 million in the first half of 1955 to an estimated 13.9 million in the second half of 1955, while the freight and mails carried increased from 90,320,218 lbs. and 4,987,154 lbs. to 96,678,400 lbs. and 6,629,253 lbs. respectively in the corresponding period. The total number of passengers carried by Air-India International, during the period under review, was estimated at 29,149 as against 21,975 in the earlier half-year. The number of passengers carried by the Indian Airlines Corporation on its scheduled services, however, declined. Thus, it carried 193,635 passengers as against 213,353 passengers in the first half of 1955. Despite the decrease in the number of passengers carried by the I.A.C. on scheduled services and an increase of 823,165 in the capacity ton-miles operated, the overall load factor rose from 71 per cent. in the first half of 1955 to 74.2 per cent. in the second half. Similarly, Air-India International increased its capacity ton-miles by 4,122,071 and its overall load factor from 56 to 59.5 per cent.

Air-India International on its scheduled services flew an estimated 2,455,388 miles, carrying 29,149 passengers, 1,192,842 lbs. of freight 45,520 lbs. of newspapers and 488,271 lbs. of mails during the period under review as against 1,908,606 miles flown and 21,975 passengers, 920,529 lbs. of freight, 45,118 lbs. of newspapers and 374,795 lbs. of mails carried in the preceding half-year. The capacity ton-miles operated were estimated at 17,570,665 as against 13,448,594 during the previous half-year.

The Indian Airlines Corporation is estimated to have flown 8,896,358 miles and carried 193,635 passengers, 49,435,091 lbs. of freight, 3,904,228 lbs. of newspapers and 6,140,982 lbs. of mails on its scheduled services as against 8,091,574 miles flown and 213,353 passengers, 39,624,608 lbs. of freight, 3,387,091 lbs. of newspapers and 4,612,359 lbs. of mails carried in the preceding half-year. The capacity ton-miles operated were estimated at 21,693,697 during the period under review as against 20,870,532 in the first half of 1955.

The night air-mail services of the Indian Airlines Corporation carried 13,524 passengers, 761,282 lbs. of freight and 1,878,543 lbs. of mails as against 10,195 passengers, 563,968 lbs. of freight and 1,722,705 lbs. of mails during the preceding half-year. The nightly average on night air-mail services rose from 56 passengers, 3,116 lbs. of freight and 9,518 lbs. of mails in the first half of 1955 to an estimated 74 passengers, 4,137 lbs. of freight and 10,209 lbs. of mails in the period under review. Non-scheduled services operated by Indian air carriers flew an estimated 2,564,981 miles, carrying 47,371 passengers and 42,100,715 lbs. of freight in the second half of 1955 as against 2,693,181 miles flown and 61,074 passengers and 46,342,872 lbs. of freight carried during the preceding half-year.

The total number of aerodromes maintained by the Civil Aviation Department at the end of December 1955 was 81. The construction of an aerodrome at Chandigarh was completed. In order to meet the requirements of the feeder service commenced by the Indian Airlines Corporation on the Delhi-Bikaner-Jodhpur-Ahmedabad-Rajkot route, an aerodrome office was opened and air traffic control services provided on a limited scale at Bikaner. The number of aircraft holding current certificates of registration at the end of December 1955 was 547, of which 210 held current certificates of airworthiness. The number of aircraft maintenance engineers holding Indian licences increased from 748 in June 1955 to 785 in December 1955. The number of 'A' and 'B' pilots holding current licences at the end of 1955 was 434 and 514 respectively.

At the end of December 1955, there were 12 subsidised flying clubs in India. During the period under review, a new club at Indore was brought into the subsidy scheme. These flying clubs trained 56 trainees for 'A' and seven for 'B' licences and logged a total flying time of 8,755 hours during the latter half of 1955. The Government Gliding Centre, Poona, trained 36 glider pilots and did a total flying of 184 hours.

GRINDLAYS BANK LIMITED

(Incorporated in England)

BALANCE SHEET OF INDIAN BRANCHES AS AT 31st DECEMBER 1955

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. **Capital**—						
Deposit with Reserve Bank of India under Section 11 (2) of the Banking Companies Act, 1949	20,89,500	0	0			
2. **Reserve Fund and Other Reserves**	Not applicable					
3. **Deposits and Other Accounts**—						
Fixed Deposits	1,67,49,790	14	0			
Savings Bank Deposits	2,48,91,715	2	3			
Current Accounts, Contingency Accounts, etc.	5,91,39,751	13	2			
				10,07,81,257	13	5
4. **Borrowings from Other Banking Companies, Agents, etc.**—						
(i) In India	79,00,000	0	0			
(ii) Outside India	Nil					
				79,00,000	0	0
PARTICULARS—						
(i) Secured	18,00,000	0	0			
(ii) Unsecured	61,00,000	0	0			
5. **Bills Payable**				7,84,270	10	11
6. **Bills for Collection being Bills Receivable as per contra**—						
(i) Payable in India	67,16,554	8	7			
(ii) Payable outside India	46,04,277	12	4			
				1,13,20,832	4	11
7. ***Other Liabilities***—						
(i) Inter-Branch Balances— (Net)—Head Office and Branches outside India	21,87,087	8	6

Chartered Accountants.

THE BANK OF JAIPUR, LIMITED

(INCORPORATED IN JAIPUR, LIABILITY OF MEMBERS BEING LIMITED)

DIRECTORS' REPORT TO SHAREHOLDERS

The Directors beg to submit the audited Balance Sheet and Profit and Loss Account of the Bank of Jaipur, Ltd., for the year ended 31st December, 1955.

After providing for all expenses and making necessary provisions, the net profit of the Bank for the year amounted to Rs. 6,20,151-8-6 to which is to be added Rs. 25,127-13-4 brought forward from last year making a total of Rs. 6,45,279-5-10 available for distribution. The Directors recommend its appropriation as under :—

	Rs.	a.	p.
Reserve under Section 17 of the Banking Companies Act	1,25,000	0	0
Dividend at 4 per cent. Tax Free	2,00,000	0	0
Provision for Taxes	2,50,000	0	0
Staff Gratuity Fund	25,000	0	0
Donation to Bharat Sevak Samaj	2,500	0	0
Contribution to Maharaj-Pramukh Memorial Fund	1,000	0	0

and the balance of Rs. 41,779-5-10 be carried forward to next year's account.

The working of the Bank during the year continued to be satisfactory.

The following Directors of the Bank retire under Article 114 of the Articles of Association and being eligible offer themselves for re-election.

(1) Shri Ramnath A. Podar. (2) Rawal Saheb Madan Singhji.

The Directors wish to convey their thanks to the members of the Local Boards for their guidance, the depositors for their valuable support and the members of the staff of the Bank for their devoted services.

Shareholders are requested to appoint Auditors for the ensuing year and fix their remuneration.

For and on behalf of the Board,

RAMNATH A. PODAR,
Chairman.

JAIPUR, 6th March, 1956.

(Continued on next page)

EDUCATION FOR INSURANCE STAFF

ITS IMPORTANCE STRESSED

THERE has, of late, been a great awakening in the insurance field. A considerable body of the workers in this field is now more alive than ever to the importance of education for the staff. It is now increasingly realised that they owe it as a duty to educate the staff, that the members of the staff should not merely be allowed to pick up pieces of insurance information—or misinformation—from their daily task but should have full knowledge of insurance. The importance of making available to the staff opportunities for the study of insurance has won much justifiable recognition. For this, the credit goes to the Federation of Insurance Institutes, to the enthusiastic band of insurance men behind it headed by that indefatigable worker in the cause of insurance in this country, Mr. C. R. C. Gardiner, the outgoing President of the Institute and the Chief of New Zealand Insurance Company in Bombay.

More than one speaker at the first Annual Conference of the Federation, held in Bombay last week, emphasised the importance of insurance education. Mr. Gardiner himself, in his presidential speech, explained at some length the efforts that were being made by the Federation in the direction of setting up insurance institutes at various centres in this country and of providing educational opportunities for the insurance staff. He stated that while an institute had been formed at Ahmedabad, "negotiations are well forward with various bodies in Delhi, Madras, Kanpur, Lucknow, Poona, Indore and Nagpur, to name but a few, for forming institutes." In taking the initiative in the formation of such institutes, the Federation is obviously carrying out one of its main objects, namely, "to provide and maintain a central organisation for the promotion of efficiency, progress and general development among persons engaged or employed in insurance and those wishing to make insurance a career, with a view not only to their own advantage but to rendering the conduct of such business more effective, safe and scientific, and securing and justifying the confidence of the public and employers, by reliable tests and assurances of the competence and trustworthiness of persons engaged or employed in insurance, or those wishing to make insurance a career."

Not a Political Body

After referring to this important aspect of its functions, Mr. Gardiner emphasised that the Federation was not a political body. He expressed the hope that it would never indulge in political matters but would restrict itself purely to the aims and objects of its own constitution. He added:

"I refer to this because the Federation has received many letters from individuals and bodies following the nationalisation of life insurance asking what steps we propose to take for publicity in the matter, and others asking why we have not issued instructions for the guidance of members. Such is not our function. Whether insurance be nationalised or whether it be in the private sector, the aims and objects of our constitution remain the same. Be it nationalised or be it in the private sector, the requirements of insurance knowledge are just the same, and I sincerely trust that the Federation will ever aim—if I may say so—at minding its own business, namely, in the main the spread of insurance education."

The Federation, as is well known, is affiliated to the Chartered Insurance Institute, London. But it is the earnest desire of the Federation that it should have its own examinations. It has a board of education which is engaged in the preparation of a suitable curriculum of studies. Mr. Gardiner did well to indicate what should be the aim of the curriculum. He said that the curriculum should be such as would enable the student to acquire a "full knowledge of insurance requirements both from an office point of view as well as from contact with the public and in assisting the public, in other words, an ideal insurance man." He revealed that, if the Federation's plans succeeded, it would be possible to hold Part I of the examination for the associateship by October 1957 and the complete examination by the end of 1960. He further revealed that the Federation had decided that the fellows and associates of the world-renowned insurance educational bodies like the Institute of Actuaries, the Chartered Insurance Institute and the Faculty of Actuaries can be elected fellows and associates of the Federation without being required to appear for any corresponding examination of the Federation.

Mr. Gardiner deplored that insurance was a "misunderstood industry" for which the insurance officials and companies were as much to blame as the insuring public. Explaining the need and the possibility of removing this misunderstanding, he said:

"Many insureds when taking out policies feel that irrespective of the cover granted, if they have a claim it should receive payment. In many cases this feeling is due to the insurance officials at the time of issuing the policy not having clearly explained the cover being given. Still further is the need for agents and canvassers to have a full insurance knowledge as they are the direct contact people with the business community and they should be friend, counsellor and guide of that community. They can only be that, if they have a thorough knowledge of the industry in which they are working and are able to understand fully the requirements of those they are insuring."

Nationalisation of life insurance has deprived the Federation of a portion of its income. It would appear that the Federation has lost nearly one half of its members. Mr. Gardiner disclosed that he had already, in semi-official correspondence, taken up this subject with the appropriate authorities in the Government. And it is gratifying to be told that the authorities have expressed the hope that the Government, acting through the Corporation, will make good the loss suffered by the Federation.

Tributes to Mr. Gardiner

Striking a personal note, Mr. Gardiner said that he was resigning his post due to his leaving India. He added that, wherever he was, he would be interested in the Federation and promised that, if any further assistance from him were needed, "it will be done with pleasure." Warm tributes to his work were paid by several speakers, in general, and by Mr. T. K. Desai, the newly elected President, in particular. Mr. Gardiner was presented with a paper weight as a token of appreciation of his services. Readers of *Commerce* are no doubt familiar with the writings of Mr. Gardiner who has, in the past, contributed to our columns. We would like to associate ourselves with the tributes paid to Mr. Gardiner who is leaving this country after a creditable record of service in the cause of Indian insurance extending over a period of over three decades which incidentally has witnessed some of the most exciting changes in insurance history.

Mr. M. C. Setalvad's Remarks

The importance of insurance education was also stressed by Mr. M. C. Setalvad, Attorney-General of India, who was the chief guest of the Conference, and Mr. L. S. Vaidyanathan, the Chief Custodian. Mr. Setalvad pointed out that nationalisation of insurance could not make any difference to insurance education. For the Government had stated that insurance was nationalised, with a view to making it popular in this country. This indicated, he said, the need for a large number of technically qualified workers in the field of insurance. He pointed out that such specialised training could not be left to universities. In any case, university training, even if available, could be given only to a small section of the population. He said that it was, therefore, appropriate that the Federation had concentrated on the educational aspect of the industry.

Mr. Vaidyanathan said that, in the field of insurance, theoretical knowledge was no less important than practical training. In his experience, he had found that between two persons—one with theoretical knowledge combined with practical training and the other with only practical training—the first was always able more readily than the second to grasp, to discuss and to explain a given problem in insurance. He expressed the hope that many members of the insurance staff would benefit from the educational opportunities provided by the Federation.

It is to be hoped that the authorities in charge of nationalised insurance will welcome the opportunities for acquiring technical knowledge of insurance provided by the Federation and that they will also find it possible to afford reasonable incentives to insurance staff for acquiring that knowledge.

ATOMIC INSURANCE

Among the new risks which general insurance offices might be called upon to face in the near future, the most important are those arising from the wider use of nuclear power. The risks involved may, however, be more than what could be borne even by the combined effort of offices through reinsurance. It would appear that, in some countries, insurance companies which want to underwrite this risk feel the need for special assistance by the State. Thus, in West Germany, the insurance offices are engaged in persuading the Federal Insurance Advisory Board to share the responsibility for covering atomic risks. These companies, according to the Bonn correspondent of the London *Financial Times*, consider that atomic damage exceeding DM-50 million would be in the nature of a "national catastrophe" and would consequently have to be underwritten by the State.

They are thinking of setting up an atomic risk pool, since normal reinsurance business might prove inadequate. Third party risk insurance will probably be made mandatory in the Atomic Energy Bill now being drafted, in that permission to establish works will be made dependent on adequate insurance shown to be available.

LAND REFORMS IN THE SECOND PLAN—III

WILL CO-OPERATIVE FARMING SUCCEED?

IF a poll were to be taken to ascertain the views of those very tenants who, in the calculations of the Planning Commission, would benefit as a result of ceilings and resumption limits, it would be no wonder if the result were to be a "high negative" What do the tenants gain and what do they lose? The gain would come in the form of redistribution of land above the ceilings and resumption limits. Most of the surplus land would go to tenants displaced as a result of resumption of land for personal cultivation. Such resumption would receive impetus as a result of the land reforms; if there were no so-called land reforms, much of the expected displacement would not occur. In this way, land reforms themselves would first create the problem for tenants in the shape of displacement, and, subsequently, solve that problem through allocation of land. In the process, the tenants would be losers to the extent of the period of their displacement. The remaining surplus land, which will be very little as compared to the numerousness of uneconomic tenancies, will be distributed, in most cases, in fractions of an acre among farmers with uneconomic holdings. Those who get less or inferior of the distributed land than their neighbours will, instead of being happy, have cause for positive grievance.

The ownership rights will not be conferred on tenants immediately or in the near future or, in the case of the vast majority, even in their life-span. For a long period, which may be between 15 and 20 years, they will continue to pay fair rent to Government as they are now paying to owners. And when at long last the ownership is vested in them, the money value of the gain to each beneficiary would be negligible. In any case, tenants are more concerned with the present and the immediate future than with what happens 20 years hence.

The "Peters" and the "Pauls"

In the immediate future, they will lose a great deal in the economic, social and spiritual sense. In a vast majority of cases, the "Peters" and "Pauls" would be those who have age-old friendly or even brotherly relations with each other. The "Pauls" would not wish that the "Peters" should be robbed and they should be paid. The so-called representatives of tenants who site solitary instances of rift between the tenant and the landowner and try to make generalisations from those solitary instances, cannot conceal the vast fund of goodwill and respect for each other's property existing between the two parties. The bulk of the tenants would not like that for the sake of insignificant material gains there should be loss of love, ancestral friendship and fellow-feeling. The voluntary surrender of tenancies and the crop-sharing tenants acknowledging themselves to be only paid labourers of the landowners, about which the Planning Commission has expressed so much concern, are nothing but clear evidence of the unwillingness of the tenants to get any benefits at the cost of their landowners. It is not democratic to introduce reforms in spite of those who are to benefit by them.

Landowners' Role

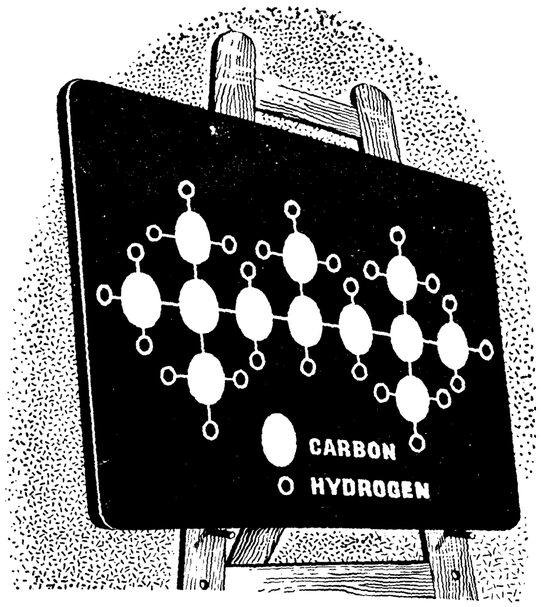
Our land reformers do not seem to appreciate the important role of landowners in the management of land, and the loss and the vacuum that would be felt by the tenants if their links with the landowner are broken. An overwhelming majority of the small, lower middle and middle class landowners live to a substantial extent on income from land, and, therefore, take an active interest in its proper management and cultivation. To varying degrees, landowners attend to the marketing side of the produce and the purchase of seeds, manures and fertilisers; it is the landowner's duty to maintain contact with the irrigation and revenue officials for arranging water facilities and settling several other affairs connected with land; he assumes a major share of responsibility in devising, initiating, directing and financing programmes of land improvement and better cultivation. Although he may not always live on the farm, he plays the role which a manager and supervisor plays on a Government or co-operative farm. No person who is acquainted with the uninterestedness and aloofness of Government officials or the weaknesses of co-operatives, will believe in the hopes that the landowner as financier, manager and supervisor can be fully replaced. The tenant will immediately feel that it is difficult to "survive the separatism," and the Government may later realise that the money spent on creating and maintaining an army of officers and staff to guide, advise and supervise the tenant could have been better spent on the welfare of tenants in some other way. So far as finance is concerned, even if we make the bold assumption that the State Bank of India will be able to step in immediately after the exit of the landowner and will provide speedy credit to the tenant, the fact remains that the Bank would be burdened with the task of replacing the existing sources of the tenant's credit at the expense of its main function of providing additional credit.

Co-operatives

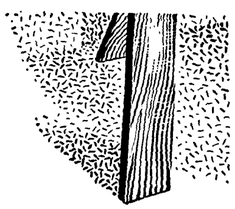
We are aware that the Government has a programme of "reforms of the reforms." All the adverse consequences of the reforms relating to ceilings and resumption limits are sought to be removed by developing co-operative farming and later co-operative village management. The idea of co-operative village management seems to be a whimsical speculation rather than a practical proposition, and as such may be ignored from the present discussion. So far as co-operative farming is concerned, its failures and failings are officially recognised. When co-operative farming has failed to serve as a remedy for the existing fragmented structure of our land, how can we allow land reforms which will bring about further fragmentation? When co-operative farming has failed to provide efficient and economic management, how can we dispense with the managerial and supervisory functions of the landowner? The Government cannot depend for rectifying the evil consequences of land reforms on a movement which has not budged forward an inch during the last few decades. In any case, co-operative farming must first be turned into a dynamic force before we can take up land reforms, which, after all, are unjustifiable even if its evil consequences could be rectified. It will be no wonder if, by the time co-operative farming becomes a real force, the law of inheritance has already done the job of the proposed land reforms!

Moreover, to most tenants, co-operative farming is worse than landlordism. Under tenancy, a tenant can freely make use of the labour of

(Continued on page 833)



AN EDUCATION IN *Oil*



This is not an abstract design in an Art Class. It is one of the chemist's symbols for the structure of hydrocarbons. And hydrocarbons are the most important ingredients in oil—that vital fluid on which India depends so much for the progress of industry, transport and agriculture.

In the Assam Oil Company, chemists, physicists and geologists are engaged all the time on research, helping to find new sources of oil, devising more efficient and more economical methods of refining oil and discovering new uses for oil.

The results of such research mean that more and more of the oil and oil products which are needed for our expanding economy come direct from India's own oilfields.

SOME ASPECTS OF INDUSTRY AND COMMERCE

REASONS FOR ESTABLISHING STATE TRADING CORPORATION

THE long awaited statement of industrial policy, a forecast of which was given in this journal two weeks ago, has not yet been announced. According to Press reports, the Planning Commission was expected to have finalised the draft early this week and the Central Cabinet would consider it within a few days. Meanwhile, it was also expected that a reference to the major industrial policy would be made in the Lok Sabha during the debate on grants for the Ministry of Commerce and Industry which was held on the 14th and 16th inst. Neither the Minister for Commerce and Industry, who replied to the debate, nor the Minister for Industries, Mr. Nityananda Kanungo, nor the Minister for Commerce, Mr. D. P. Karmarkar, both of whom intervened in the debate, made any references to it. Nevertheless, the debate provided an occasion for a few members to warn the Government against the dangers of indiscriminate extension of the public sector at the cost of the private sector. Mr. Asoka Mehta, in particular, expressed apprehensions of the danger of building up "monolithic State organisations" in the country. Mr. G. D. Somani stated that, while he was not opposed to the expansion of the public sector, he was anxious to see that the activities of the private sector should not be curtailed. No enforced idleness should be imposed, he said, on the capacity of those who could do a lot in promoting and expanding the various industries in the country. He appealed to the Ministry to bear this aspect in mind, while finalising the policy statement. He hoped that the proposed State Trading Corporation would not throw out of business the existing traders.

S.T.C.

The Government's spokesmen did not, as stated at the outset, reveal the Government's mind regarding the Industry Policy Statement, presumably because the Cabinet had yet to consider and approve the draft statement now stated to be before it. On State Trading, however, both Mr. Krishnamachari and Mr. Karmarkar made some reassuring statements. The *raison d'etre* for setting up the Corporation was provided by the former. It may be summed up thus:

The Five-year Plan envisages a very big expansion in India's foreign trade. The Government expects a gap of Rs. 1,000 crores in foreign exchange. This means that the country is going to import Rs. 1,000 crores worth of goods more than it will be importing normally. It must, to some extent, balance these imports with exports. This is what the Government is trying to do through bilateral arrangements with various countries. The unco-ordinated efforts of the private sector will not be adequate to fulfil these expectations and, accordingly, they need to be supplemented.

Cement and Steel Purchases

In anticipation of the State Trading Corporation being set up in the near future, the Ministry, according to Mr. Krishnamachari, is taking advantage of all the trading opportunities. Contracts for the purchase of 100,000 tons of cement and for the sale of 100,000 tons of iron ore have recently been entered into with East European countries. The Ministry has also striven to sponsor contacts between importers, distributors and suppliers for the import from cheap sources of substantial quantities of caustic soda and soda ash.

Mr. Krishnamachari then gave the following assurance to the mercantile community: "The proposed State Trading Corporation will not replace the private sector and only supplement trade envisaged in the second Plan, (b) the need for expanding India's foreign trade."

Mr. Somani had warned the Government against State trading because on one occasion State trading had resulted in a loss. Answering this argument, Mr. Krishnamachari said: "Would he carry his views to the logical conclusions and advise against private trade, because sometimes private trading results in a loss? If the State embarks on industrial or commercial ventures, it will be wrong to expect that it will always make a profit and never a loss. It is by our mistakes that we often profit most."

Mr. Karmarkar's Views

Alluding to the same subject earlier Mr. Karmarkar stated that "the matters are almost ripe for a State Trading Corporation to come into existence. What its precise field will be will also be before the House in a short time." He added that the State would have to step into fields with a view to seeing that a sufficient volume of the required commodity comes in and that it is distributed at average and fair prices.

It will be seen from the foregoing observations of the Ministers that the reasons for the establishment of a State Trading Corporation are: (*a*) The inability of the private sector to cope with the magnitude of expansion in foreign trade envisaged in the second Plan, (b) the need for balancing imports with exports, so that no difficulty regarding foreign exchange is experienced, (*c*) equitable distribution of imported goods in scarcity, (*d*) the relatively better position of the State to carry on negotiations with communist countries, and (e) the need for stabilising prices within the country.

Mr. Karmarkar dealt also with the criticisms of a number of members on controls on foreign trade. He was glad that there were few complaints regarding the mechanism of these controls. The officers, he added, were feeling encouraged by the appreciation of the House. Not only would they not relax in their efforts but try to improve their efficiency. There were also changes, he said, in the pattern of the country's trade. Food imports were, in the past, devouring a sizable portion of our foreign exchange earnings—almost one-third in a year. That stage had passed and the country was now in a position to import machinery and raw materials. As a result, there was progress in certain sectors of industry, showing an increase in production. The broad objective of import control was to ensure, through trading policies, that foreign commerce furnished to the country's economy all the help that it needed for attaining the objectives set out in the Five-year Plan, especially in respect of food, machinery and raw materials. It was satisfactory that the aggregate trade deficit was only of the order of Rs. 450 crores over the Plan period as a whole, including the amount of foreign exchange the country had to spend towards meeting deficits in food. Imports of machinery in the first Plan period amounted to Rs. 450 crores. In the second Plan period these imports were estimated to be at Rs. 1,350 crores despite the fact that by 1960-61, the country would be making more machines and in much larger quantities. The deficit of foreign exchange would be of the order of Rs. 1,000 crores and this would have to be covered by coaxing exports. The country has already been exporting items like cutlery, electric fans, photographic instruments, surgical instruments, diesel engines, etc.

Mr. Karmarkar informed the House that India's participation in foreign exhibitions had been a success, as they had resulted in good demand for Indian goods. The Export Promotion Councils had been established for encouraging exports, but demand for certain goods at home had imposed some limitations.

Export licences were issued, Mr. Karmarkar continued, irrespective of the countries to which the item was exported. As regards import licences, a broad division was made according to whether the commodity came from soft currency areas or from hard currency areas. Apart from this, the Government did not put in any difficulty in the way of an importer; he was free to import from any country of his choice within these two currency areas.

Small Industries

Mr. Nityananda Kanungo, who also participated in the debate, confined himself mainly to small industries. He visualised a bright future for small industries. He was gratified at the substantial increase in the production of consumer goods. During the first Plan period cloth production had gone up from 4,800 million yards per annum to 5,100 million yards. The production of footwear had risen from 85 million pairs to 90 million pairs. A greater part of this expansion had taken place in the small industries sector. He expected that, as a result of the introduction of improved techniques among the craftsmen, there would be a further increase in production, in the very near future, resulting in a significant fall in the costs. In this context, Mr. Kanungo alluded to the restrictions imposed on the large-scale sector. In various industries like leather-footwear, matches, cutlery, sports goods, agricultural implements and the like, the Government had imposed restrictions on expansion in the corresponding large-scale units. But these, he said, were only temporary expedients and could not be of lasting value. The real emphasis should be on the positive aspect, namely, improvement in technical efficiency, the provision of credit facilities and the organisation of these industries on the basis of co-operation. He revealed that 60 small machines, imported from Japan and installed in a workshop in Harduaganj, near Delhi, resulted in total failure. These machines had to be disposed of at a loss. Benefiting by this failure, the Government now proposed to get the artisan first trained in the use of machines and find out those which were best suited to the country. In providing training, mobile workshops had proved, he said, very successful. There were eight of them and it was further proposed to put 16 more on the road immediately.

Although the development of small industries fell under the sphere of State Governments, the Centre, too, provided assistance, such being of the order of Rs. 2 crores. Out of the funds earmarked for assistance, loans were provided up to 75 per cent. of the value of the security offered. The rate of interest was 3 per cent. to individuals and firms and 2½ per cent. to industrial co-operatives. The State Bank of India, according to Mr. Kanungo, was launching a new pilot project to provide credit to small industries. These trial projects are expected to provide valuable information for deciding how best credit could be provided by the various agencies convened, namely, the State Bank, the State Finance Corporation and the State Government. The Minister thought that, ultimately, with the help of this experiment, even normal banking services would be able to extend credit facilities to small industries and that the Government would gradually have to take less and less direct part.

PROMOTION OF HEMP EXPORTS

In view of the growing demand for sunn hemp in the country, the plea put forward by Mr. B. L. Jalan, President, Indian Hemp Association, Calcutta, that the Agricultural Marketing Department of the Government of India should furnish periodical returns on production, baling, shipping, etc., of sunn hemp acquires importance and should be favourably considered by the authorities concerned. The fibre is used mainly for making ropes, strings and twines required for various agricultural purposes. Considerable quantities are used for fishing nets, cot-stringing, matting and cordage. Coarse canvas and bags are also made of the fibre in certain districts of M.P. and Madras on a cottage industry basis. By adopting flax spinning machinery for sunn hemp, is should be possible to produce coarse fabrics for hose-pipes, belting, and canvas now imported from outside. A fair quantity of green hemp produced in the C.P. is now being used in the rope factories at Calcutta. The green fibre is also used as manure for land.

Reliable statistics relating to the consumption of sunn hemp are not available and published data on internal trade include also other fibres. Out of an estimated average annual production of 100,000 tons of sunn hemp, about 20 to 30 per cent. is exported and the rest is consumed in the country. The quantities retained by producers to meet their own requirements vary in different regions. The U.K., Belgium, and the U.S. are among important buyers of Indian hemp. In some of these countries, it is employed as a substitute for true hemp in the manufacture of twine cords, matting, sacking, tarpaulins, soles for shoes, sandals, and marine cordage. These countries prefer Indian hemp, because it is more resistant to sea water than Russian hemp. In the U.S., even cigarette paper is made of hemp.

The value of exports of hemp, both raw and manufactured, from India in 1954-55 amounted to Rs. 195 lakhs, as compared with Rs. 125 lakhs in 1953-54 and Rs. 151 lakhs in 1952-53. In the ten months ended January 1955-56, exports aggregated Rs. 131 lakhs, as against Rs. 148 lakhs in the same period of 1954-55. India can easily expand its earnings on these exports by adopting a more enlightened policy of encouraging the output and sale of sunn hemp. In this context, the suggestions made by Mr. Jalan at the annual meeting of the Association mentioned at the outset deserve the earnest consideration of the Commerce and Industry Minister. The enforcement of grade specification of hemp is stated to have benefited the industry much, inasmuch as the Indian hemp has acquired a considerable amount of prestige in international markets. In Mr. Jalan's opinion, grade specifications should be even from one season to another, and any demand for the same should be decided upon, having regard to the quality of produce in a season with particular reference to disadvantages or advantages noticed in a year. He felt that specifications under Agmark should have reference only to length, colour, refraction content and the broad area where the hemp is grown.

Mr. Jalan alluded to the difficulties caused by transport bottlenecks. Whenever there were large-scale movements of coal, foodgrains, etc., hemp movements, it is stated, suffered heavily, since it is listed very low in the priority schedule of railways. In the result, the foreign buyer is turning towards Italy, East Africa, the Philippines and Java for substitutes of hemp. Mr. Jalan opined that a certain quota for the movement of hemp should be fixed for the important loading stations, so that it may easily be moved to the docks and to the baling centres during the period between October and May, as was being done in pre-war days.

Mr. Jalan revealed that his Association had drawn up a scheme for promoting exports of hemp. He wanted the Government to adopt it and stated that his Association would extend its full and wholehearted co-operation to the Government.

The Indian paper industry is using hemp rope cuttings as raw material. Consequently, it used to object to exports of these cuttings on the ground that such would push up its raw material costs. It is encouraging to learn from Mr. Jalan that, thanks to the increase in the supply of these cuttings, the industry, is no longer raising any objection against exports. Its total offtake of cuttings is estimated to be about 3,000 tons per annum, as against a total collection of 6,000 to 8,000 tons. Since prices of these cuttings have remained steady, despite exports, it is felt that the industry has no cause for concern over the permission granted by the Government of India for enlarged exports of hemp cuttings.

Although no authoritative official statistics of hemp production in India are available, it will be useful to record here Mr. Jalan's estimate of the crop. The output in 1955 is placed by him at 77,000 bales of the Banares variety and 70,000 to 80,000 bales of green hemp. The carryover of Banares hemp from 1954 is estimated at 15,000 tons. The Banares (II) variety was quoted in the U.K. at the start of the season at £68 to £70 per ton, and when the season ended, the quotation stood lower at £67 to £68 per ton. Similarly, Jabalpur variety receded during the same period from £81-£85 per ton to £73-£76 per ton. This fall was in sympathy with the trend of world prices of this fibre and was due to the entry of Russian hemp into world markets after an absence of about 20 years.

INDUSTRIAL ESTATES

On the recommendation of the Small-scale Industries Board, the Government of India has decided to start a network of industrial centres all over the country. These centres will be located on plots ranging in size from 15 to 60 acres. These plots would be acquired by it and placed at the disposal of prospective small *intrepreneurs* who wish to set up factories of their own. The Government will construct roads, put up factory buildings, make arrangements for the supply of electricity and water and for conservancy and drainage facilities. Common service workshops would be set up for such items as heat treatment, electric furnaces and the like which the small units cannot normally afford to do on their own account.

Provision would be made for housing the workers. The factory buildings will be let out on rent or given on hire purchase terms or sold out straightaway as the occupant wishes. Loans for capital expenditure on machinery and equipment and also for working capital will be given on easy terms upto 75 per cent. of the value of the security offered. In pursuance of this decision, the Ministry of Commerce and Industry has sanctioned 10 Industrial Estates, one each at Rajkot, Okhla (Delhi), Guindy (Madras), Virudhnagar (Madras), Kalyani (W. Bengal), Mysore, Agra (U.P.), Kanpur (U.P.), Quilon (T.-C. State) and Palghat-Malampuzha (Malabar).

The total expenditure on all these estates is estimated at Rs. 4.43 crores. The entire cost is being met by the Central Government and will be treated as a long-term loan to the State Governments concerned.

KIL KOTAGIRI SUFFERS SETBACK

DIVIDEND CUT—RECORD OUTPUT OF TEA

A SHARP fall in earnings during the year ended 31st October 1955 from the previous year's record level is disclosed by the latest statement of accounts of the Kil Kotagiri Tea and Coffee Estates Company, Ltd. (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode, Malabar). After two years of successive rise from Rs. 3.52 lakhs to a high of Rs. 6.37 lakhs, the trading profit has dipped to Rs. 4.23 lakhs in the year under review. The net profit, too, has gone down to Rs. 2.32 lakhs, after having moved up from Rs. 2.44 lakhs for the year 1951-52 to Rs. 3.45 lakhs for 1953-54. It may, incidentally, be noted that the net profit for the year under review is the lowest since 1949-50.

Consequent on this setback in results, the Directors have cut the allocation to the general reserve from Rs. 1.25 lakhs to Rs. 1 lakh, and the dividend on ordinary shares from 30 per cent. to 20 per cent. It must, however, be noted that dividend for the year under review is on a further increased capital, raised by the allocation of 54,269 ordinary shares of the Company to the shareholders of the Nilgiri Neerugundi Estates Company, Ltd. (also under the management of Messrs. Peirce Leslie & Co., Ltd.) in part consideration, in accordance with the terms of the amalgamation agreement with the latter Company which was taken over by the Kil Kotagiri with effect from 1st July 1955.

It must also be noted that, though the amalgamation is with retrospective effect from 1st July 1955, the working of the Nilgiri Neerugundi Estates has not been taken into consideration in the accounts of the Kil Kotagiri for the year under review, because the legal formalities regarding "conveyance" have not yet been completed. Further, the aforesaid allocation of the 54,269 ordinary shares of the Kil Kotagiri to the shareholders of the Nilgiri Neerugundi has been made only subsequent to the closure of the accounts of Kil Kotagiri for the year under review, though these shares are also entitled to the dividend for the year under review.

The salient features of the Company's working results for the past four years are compared in the following table:

—	For the year ended 31st October			
	1955	1954	1953	1952
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of—				
Tea	8,09,975	8,00,047	7,46,742	5,63,173
Coffee	25,342	1,42,093	49,814	1,40,162
Stocks of tea ..	1,42,789	1,14,376	1,72,224	1,03,226
Tea estate expenditure ..	4,84,582	4,15,452	3,57,125	3,52,555
Coffee estate expenditure ..	71,303	96,575	64,661	61,405
Trading profit	4,22,900	6,37,508	5,47,242	3,92,911
Managing Agents' commission ..	20,203	30,191	25,272	21,512

To reserve	1,00,000	1,25,000	1,00,000	1,06,292
Dividends—				
6 per cent. preference ..	15,000	15,000	15,000	15 000
Ordinary	1,71,708	2,25,000	2,00,000	1,50,000
	(20%)*	(30%)†	(40%)	(30%)
Carry forward	15,720	70,418	90,651	79,174
Tea crop (in lbs.)	374,800	382,400	370,500	257,200
Cost per lb. (in cents)	129.29	114.64	96.39	137.07
Average price realised per lb. (in cents)	252.08	261.19	209.24	217.05
Coffee crop (in cwts.)	38	701	297	654
Cost per cwt. (in Rs.)	1,840.07	137.77	217.71	N.A.
Value per cwt. (in Rs.) ..	176.18	192.09	155.16	213.15

* On the further increased capital as a result of the issue of shares to the shareholders of Nilgiri Neerugundi Estates, following the amalgamation of the two companies.

† On the increased capital of Rs. 7.50 lakhs raised by the capitalisation of Rs. 2.50 lakhs.

The Company's performance during the year under review may not come as a surprise to those who have been in close touch with the trend of tea prices during the past year. In addition to the sharp recession in tea prices, the tea estates have had to face higher cost of production, despite an increase in tea crop. In the case of Kil Kotagiri, the average price realised for its tea shows a fall from the record level of 261.19 cents to 252.08 cents per lb., while the cost of production has risen from 114.64 cents to 129.29 cents per lb., in distinct contrast to the anticipated decline to 107.94 cents per lb. The tea crop, which had dwindled from 370,500 lbs. to 363,400 lbs. in 1953-54, has gone up to 374,800 lbs., the highest in the history of the Company. The year's crop has not only exceeded the previous best (370.500 lbs.) attained in 1952-53 but gone up very much beyond the estimated crop of 360,000 lbs.

In respect of coffee, the Company's experience has been even more unfavourable. The crop harvested is no more than 38 cwts., as against 701 cwts. in the previous year. Though a sharp setback in coffee production was not unexpected, the actual crop produced has been very much lower than the estimated output of 80 cwts. Consequent on this sharp fall in output, the cost of production has shot up from Rs. 137.77 to Rs. 1,840.07 per cwt. The crop has been valued at Rs. 2-4 per point or Rs. 176.18 per cwt., as against Rs. 2-8 per point or Rs. 192.09 per cwt. in the previous year.

The Company's balance-sheet as on 31st October 1955 shows that the reserves and surplus aggregate Rs. 5.16 lakhs, as against a paid-up capital of Rs. 10 lakhs. There is also a reserve for taxation aggregating Rs. 3.76 lakhs. The current liabilities amount to Rs. 2.58 lakhs. The gross block of the value of Rs. 14.52 lakhs stands written down to Rs. 11.65 lakhs. The current assets amount to Rs. 9.83 lakhs (of which cash balances alone account for Rs. 6.16 lakhs), exceeding the current liabilities and provision for taxation by Rs. 3.49 lakhs.

The estimated crop for the current season is 375,000 lbs., expected to be harvested at an average cost of 108.26 cents per lb. The coffee crop is estimated to yield 46 tons.

The Rs. 2 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 7-3 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 5.9 per cent. per annum.

KOLAR GOLD FIELDS

Reports in the daily Press about the trend of discussions held in New Delhi last week between the Ministers of the Government of India, of the Mysore Government and the representatives of the Mysore Gold Mining Companies over the question of nationalisation of the Companies indicate that nationalisation has almost become a *fait accompli*. The Government of India, it would appear, has agreed in principle to the State Government's proposal to take over the gold mining industry. The representatives of the Companies also seem to have bowed to the inevitable. The discussions in New Delhi last week, therefore, mainly centred round the compensation payable to the Companies and the establishment of a suitable machinery to run the nationalised mines.

During these discussions, the Government of India is stated to have insisted on two points, namely, (1) the quantum of compensation should be mutually agreed upon between the Mining Companies and the State Government, and (2) an effective machinery should be created to run the nationalised mines. The Government of India seems to be anxious that the question of compensation should be dealt with in a liberal way, so that no misgivings among foreign investors might be created. The Central Government is also said to have assured the State Government that its concurrence to the legislative enactment embodying the nationalisation would be available, if the terms of nationalisation were fair and mutually agreed upon.

As regards the first point, the Mining Companies has asked for compensation representing the book *value of their assets minus* the liabilities, while the State Government had regarded the market value of the Companies' shares before the decision to nationalise the companies was announced as "fair compensation." On the basis of the former, the compensation would amount to a few crores, while on the basis of the latter it would not exceed Rs. 80 lakhs. However, during the New Delhi parleys, the differences between the Companies and the State Government would appear to have narrowed considerably. The Companies are believed to be no longer insisting on receiving the book value of the assets *minus* the liabilities and a compromise is said to be possible if a lumpsum payment of Rs. 2 crores is offered by the State Government. Anyway, the talks over the question of compensation proved inconclusive and further talks will shortly be resumed in Mysore for evolving mutually agreed principles, on the basis of which the compensation would be fixed.

As regards the management of the nationalised mines, the State Government is reported to be considering the setting up of a State-owned Corporation, with which the present management also is likely to be associated.

MAHINDRA AND MAHINDRA

The success which attended the public issue of the shares of Messrs. Mahindra and Mahindra Ltd. (Chairman: Mr. K. C. Mahindra, Bombay) in July last (that is, soon after the Company was converted into a public limited one in June 1955), reflected the confidence of investors in the outlook for the Company. That this confidence was not misplaced is evident from the excellent results of the Company for the year ended 31st October 1955. The gross profit for the year under review amounts to Rs. 20.24 lakhs, as compared with Rs. 13.20 lakhs for the previous year and Rs. 4.52 lakhs for 1952-53. The provision for depreciation has been raised from Rs. 1.04 lakhs for 1953-54 to Rs. 1.52 lakhs and that for taxation from Rs. 5.30 lakhs to Rs. 9.50 lakhs. The net profit, thus, works out to Rs. 10.19 lakhs, as against Rs. 6.86 lakhs for 1953-54.

The Directors have transferred a sum of Rs. 6 lakhs to the reserve for additional taxation and contingencies, which had not received anything last year, when a sum of Rs. 2.25 lakhs was, however, added to the general and special reserves. A dividend of 10 per cent. per annum (free of tax) has been declared *pro rata* on the ordinary capital after its reconstruction in June last and the issue of shares to the public, as against 28.6 per cent. paid on the old capital for the previous year. This absorbs Rs. 2,74,443. The *pro rata* distribution on the 6 per cent. (tax-free) preference shares takes up Rs. 31,250 leaving a surplus of Rs. 86,830 to be carried forward.

The year under review has been a period of record sales turnover for the Company. The volume of sales of trailers and jeeps, allied vehicles and spares was 50 per cent. higher than that for the previous year. Imports of steel reached phenomenal figures, the Company's share in the total imports of the country (520,000 tons) being over 187,000 tons or 36 per cent. The sales of tractors, however, declined, but by an insignificant extent. The following table gives the comparative figures in terms of value of sales in the various divisions:

(In lakhs of rupees)

	Jeeps	*Trailers*	*Tractors*	*Steel*
1953-54 ...	174.63	11.10	14.98	120.87
1954-55 ...	264.10	16.54	13.85	272.08

The Directors report that the volume of business during the first five months of the current year is well above the average of the past year in all the divisions. The Company's programme in respect of jeeps envisages this year "the commencement of the plan to manufacture jeep transmission and axles, in order to establish product-output before *the end of 1957*." The increase in trailer sales has warranted an expansion in the Company's plant equipment. With the early transfer of this plant to Poona, where facilities for further expansion will be ample, further development in the various types and categories of trailers now offered is expected to be organised. Arrangements for assembly of trailer units in Madras have been completed. Steel stockyard in Calcutta has been working satisfactorily and, with its transfer to the new area leased from the Port Commissioners, it is hoped to develop further sales. Active investigations for similar stockyards in Bombay and Madras are being made. The Directors are also considering the question of setting up an export division under the ægis of Mahindra Engineering Company, Ltd.—a wholly owned subsidiary of the Company. The export division will, in the first instance, handle light engineering products and negotiations with several Indian manufacturers are being conducted. One of the senior officers of the Company has been deputed to make a market survey of some of the Middle East countries in the first instance.

The following is a synopsis of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	79,88,850	Gross block ...	18,35,884
Reserves and surplus ...	6,86,830	*Less*—Depreciation ...	5,23,273
Provision for taxation ...	18,62,243	Net block ...	13,12,611
Liabilities ...	2,65,71,958	Stock-in-trade	1,83,77,536
		Stores ...	10,33,900
		Work-in-progress ...	92,095
		Debts, deposits and advances ...	95,10,376
		Investments	19,32,255
		Cash ...	44,98,831
		Goodwill ...	3,52,277
Rs.	3,71,09,881	Rs.	3,71,09,881

The Company had reserves aggregating Rs. 16.68 lakhs at the close of the year 1953-54, but these were capitalised in June 1955 and 166,809 ordinary shares of Rs. 10 each were issued as bonus to the then shareholders in the ratio of one share for one. After this, the Company issued 216,382 ordinary shares of Rs. 10 each and 25,000 redeemable preference shares of Rs. 100 each to the public. The Directors had intended to replace a minimum of Rs. 3.50 lakhs of the reserves capitalised in June last, out of the profit of the current year. They have not been able to do so; however, a sum of Rs. 6 lakhs has been set aside to the reserve for additional taxation and contingencies. Of the current liabilities shown in the above summary of the balance-sheet, a sum of Rs. 2.02 crores represents borrowings from banks. These have since risen to Rs. 9.26 crores as on 31st March 1956: this is an index of the expansion in the volume of the Company's business.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 14-12 *cum-div.* On an *ex-div. basis*, the latest dividend provides a yield of 7.3 per cent. per annum, free of tax.

ATUL PRODUCTS' MAIDEN DIVIDEND

A maiden dividend at the rate of 5½ per cent. per annum has been recommended by the Directors of Atul Products Ltd. (Managing Agents: Messrs. Lalbhai Sons & Co., Ahmedabad) for the year ended 31st December 1955, which incidentally is the third full year of working after regular production was commenced by about the middle of 1952. This has been possible, because of the excellent results of working during the past year, the gross profit for the year being Rs. 20.61 lakhs, as against Rs. 12.44 lakhs for the previous year and Rs. 1.22 lakhs for 1953.

Out of the above profit, the Directors have set aside Rs. 12 lakhs to the depreciation fund, which had received in the previous year a sum of Rs. 13.59 lakhs, representing the entire gross profit for the year and that brought forward from 1953. No allocation has been made to the reserve fund. The dividend will absorb Rs. 8.36 lakhs—at Rs. 5-4 per share on the 100,000 fully paid-up shares as on 1st January 1955 and *pro rata* on the remaining 88,855 shares in proportion to the amounts called up from time to time.

The sale proceeds (net) of dyes, chemicals and pharmaceuticals aggregated Rs. 130.54 lakhs, as against Rs. 115.80 lakhs for 1954. At the same time, the cost of chemicals and stores rose from Rs. 83 lakhs to Rs. 88.12 lakhs and expenses from Rs. 22.20 lakhs to Rs. 24.99 lakhs.

(*Continued on next page*)

Points From The Chair

Copper Prices

"COPPER prices have again fluctuated to an unpredictable extent and the levels reached have far exceeded those attained in 1954, when all previous records were broken. The London Metal Exchange settlement price during the year has moved up and down between the limits of £290 and £405 per ton and in one day the movement was as much as £35 10s. Even the lower of these two prices is far above the figure which could be justified in relation to present copper mine production costs and the existing state of affairs not only adds enormously to the problems of financing and operating an industry which relies on copper as its main raw material but, from the national point of view, it contributes many millions of pounds to the present adverse trade balance. We are, of course, powerless in the matter, but it can only be hoped that world supply and demand conditions will change sufficiently to result in a lower and more stable price for this metal, or that in their own ultimate interests world copper producers will adopt a different sales policy. The Rhodesian Selection Trust have during the last year made a commendable effort to induce greater stability in copper prices by selling on a basis fixed by themselves independent of the London Metal Exchange, but there is no sign of their example being followed by the other main producers selling copper in this country. Whatever the immediate prospects are, it is obvious that a drastic reduction and greater stability in price is urgently needed, if the whole copper industry is not to be threatened with still further inroads by substitute materials."

P. V. HUNTER,
Thomas Bolton and Sons Ltd.

Research in Natural Rubber

"Natural rubber is no longer in excess supply in the sense of the 1934 agreement. In quantity it falls far below the requirements of rubber manufacturers, who must perforce resort to synthetics and other substitutes with which natural rubber must now compete in price and suitability. Despite this dramatic change in the rubber outlook, research and the varied activities which are carried on under that heading have continued to follow with a misguided emphasis the 1934 pattern. Ill-advised and vain attempts have been made by lavish expenditure on propaganda to check the flow of synthetic supplies. The rubber manufacturers, by their own enterprise and expertness, have vastly increased and extended the uses of rubber products. The strong and intensive competition which is such an outstanding feature of that side of the industry is a safe guarantee that development and extension will not cease. The producing industry's less expert excursions into this field of development, already so well served, have by contrast proved costly and barren of results. Such activities have for long involved a serious diversion of funds from what should be our primary purpose, namely, the pursuance of an extensive and sustained programme of research into the production of natural rubber. Directed with energy and imagination such researches should prove an invaluable aid to our industry in its competition with synthetics."

SIR JOHN HAY,
Labu Cheviot Rubber Ltd.

(*Concluded from previous page*)

Last year, the Government of India reduced, on the recommendation of the Tariff Commission, the import duties from 38.2 per cent. to 10 per cent. *ad valorem* on some of the specific intermediates used by the Company and raised the duties from 12 per cent. to 20 per cent. on imports of direct and acid dyes and sulphur black. These measures were expected to be of considerable help to the Company. However, due to a difference of interpretation by the customs authorities, the Company has not been able to secure as large an assistance from these measures as was expected. Consequently, the Company has made representations to the Government of India in this regard.

During the year under review, the Company has been able to establish a wide and dependable sales organisation. The dyes manufactured by the Company are said to have acquired a good reputation and command a wide market. The Directors are confident that this progress will continue in future. They have, accordingly, taken on hand plans to secure greater flexibility in the Azo plant and to increase the capacity of the sulphur black plant. These changes, when completed, will assure larger production.

In pursuance of the Company's arrangement with I.C.I. (India) Ltd. for the manufacture of Vat jade green, a separate company, known as Atic Industries Ltd., with an authorised capital of Rs. 5 crores and a subscribed capital of Rs. 50 lakhs, was registered in September 1955. According to the terms of the agreement, Atul Products Ltd. has subscribed to half of this capital. The plant for the manufacture of Vat jade green is in an advanced stage of construction and is expected to go into production in the near future. Atic Industries Ltd. has entered into a further agreement with I.C.I. Ltd. (England) for the manufacture of several other Vat dyes and their intermediates. Due to some unavoidable delays, the progress on the Company's Naphthol plant and the plant for Coramine and Viaform has not been as good as was expected. However, the Directors report that these plants are getting ready for trial runs. The plants for the manufacture of Cibagenes and Cibanogenes, by arrangement with Ciba, Basle, will also be ready soon for trial runs. The Company has so far availed of only Rs. 75 lakhs out of the loan for Rs. 3 crores arranged with the Government of India. Some expansion programmes have been submitted to the Government of India and further borrowings will be made against this loan arrangement for financing these expansion plans.

COMPANY MEETINGS AND DIVIDENDS

BELSUND SUGAR CO., LTD. Annual General Meeting, Calcutta, 30th April 1956. Dividend: As. 12 per share. Transfer books remain closed from 16th to 30th April 1956, both days inclusive.

CAMBODIA MILLS LTD. Annual General Meeting, Coimbatore, 30th April 1956. Dividend: As. 8 per share. Transfer books remain closed from 14th to 30th April 1956, both days inclusive.

BOWREAH COTTON MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 1st May 1956. Dividend: *Nil*. Transfer books remains closed from 21st April to 1st May 1956, both days inclusive.

DUNBAR MILLS LTD. Half-yearly General Meeting, Calcutta, 1st May 1956. Dividend: Rs. 2-8 per ordinary share. Transfer books remain closed from 21st April to 1st May 1956, both days inclusive.

INDORE MALWA UNITED MILLS, LTD. Annual General Meeting, Bombay, 4th May 1956. Dividend: Rs. 6 per share (final). Transfer books remain closed from 16th April to 5th May 1956, both days inclusive.

KIL KOTAGIRI TEA AND COFFEE ESTATES CO., LTD. Annual General Meeting, Kozhikode, 5th May 1956. Dividend: As. 6-2/5 per share. Transfer books remain closed from 23rd April to 5th May 1956, both days inclusive.

SAVAMALAI ESTATES LTD. Annual General Meeting, Kozhikode, Malabar, 5th May 1956. Dividend: Re. 1 per share. Transfer books remain closed from 28th April to 5th May 1956, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 7th May 1956. Dividend: Rs. 11 per share (includes bonus of Re. 1 per share). Transfer books remain closed from 16th April to 9th May 1956, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting, Bombay, 7th May 1956. Dividend: Rs. 12 per share.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 9th May 1956. Dividend: Re. 1-8 per share. Transfer books will remain closed from 30th April to 9th May 1956, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Annual General Meeting, Bombay, 14th May 1956. Dividend: Re. 1 per share. Transfer books will remain closed from 30th April to 14th May 1956, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 14th May 1956. Transfer books will remain closed from 5th to 14th May 1956, both days inclusive.

PREMCHAND JUTE MILLS LTD. Half-yearly General Meeting, Calcutta, 14th May 1956. Transfer books will remain closed from 7th to 14th May 1956, both days inclusive.

CALCUTTA STEAM NAVIGATION CO., LTD. Half-yearly General Meeting, Calcutta, 15th May 1956. Dividend: Rs. 6-4 per share. Transfer books will remain closed from 2nd to 15th May 1956, both days inclusive.

RADIO AND ELECTRICALS LTD. Annual General Meeting, Madras, 19th May 1956. Dividend: As. 5 2/5 per share (9 per cent). Transfer books will remain closed from 5th to 19th May 1956, both days inclusive.

TRAVANCORE OGALE GLASS MANUFACTURING CO., LTD. Annual General Meeting, Manjummel, Alwaye, 31st May 1956. Dividend: *Nil*. Transfer books will remain closed from 21st to 31st May 1956, both days inclusive.

KILLICK INDUSTRIES LTD. *Ad-interim* dividend of Rs. 4 per share, free of income-tax, for the year *ending* 30th June 1956 payable on and after 30th May 1956. Transfer books will remain closed from 14th to 28th May 1956, both days inclusive.

TRAVANCORE RUBBERS LTD. Dividend of Rs. 3 per share, for the year ended 31st December 1955. Transfer books will remain closed from 1st to 7th May 1956, both days inclusive.

COMPANY REGISTRATIONS

RADHAKISHAN NANDLALL PRIVATE LTD. (First Director: Mr. Radhakisan More.) Business: Exporters, importers, merchants and agents. etc. Authorised capital: Rs. 25,00,000. Private company. Address: Seksaria Chambers, Medows Street, Fort, Bombay.

NEW SONWAL TEA COMPANY (PRIVATE) LTD. (First Director: Mr. N. M. Dani.) Business: Cultivation of tea, coffee, rubber, sugarcane, etc. Authorised capital: Rs. 10,00,000. Private company. Address: Block No. 97, Fifth Floor, Stephen House, Calcutta.

WAGHELA INDUSTRIES PRIVATE LTD. (First Director: Mr. W. L. Waghetal.) Business: Ice manufacturers, *refrigerators, cold storage, etc.* Authorised capital: Rs. 10,00,000. Private company: Address: Nutonganj, Bankura, West Bengal.

SANYALA NEW ENGINEERING WORKS PRIVATE LTD. (First Director: Mr. D. K. Sanyal.) Business: Constructional engineering, mechanical, iron founders, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 309, Bowbazar Street, Calcutta.

NAVKALA NIKETAN PRIVATE LTD. (Mr. Rameshkumar Nanalal Vyas.) Business: Manufacturers, producers, distributors and exhibitors of cinematographic films and pictures. Authorised capital: Rs. 5,00,000. Private company. Address: 251, Famous Cine Laboratory and Studio Buildings, Haines Road, Bombay 11.

Notices

UNIVERSITY OF BOMBAY

SCHOOL OF ECONOMICS & SOCIOLOGY
DEPARTMENT OF ECONOMICS

APPLICATIONS ARE INVITED FOR THE post of a Senior Research Officer in Agricultural Economics in the grade of Rs. 500-25-800.

The Research Officer will be required to guide and conduct research in theoretical and fundamental problems of Rural Economy. He will be attached to the Agricultural Economics Section which works under the general supervision of the Head of the Department of Economics. He will carry out his duties under the guidance of the Professor of Agricultural Economics. Applicants must have specialised training in and knowledge of problems of Rural Sociology and experience in guiding and conducting field investigations.

The post carries the benefits of Provident Fund and dearness allowance according to scales prevailing from time to time. In the case of a person with high qualifications, a higher starting salary may be paid in the above grade. The post is tenable for four years only. The appointment will be on probation for a period of two years in the first instance.

Eight copies of the application in the prescribed form (to be had from the Registrar) should be submitted. Selected candidates will have to present themselves for interview at their own expense. Applications should reach the Registrar, University of Bombay, Bombay-1, by 15*th May* 1956.

T. V. CHIDAMBARAN,
University Registrar.

BOMBAY, 16*th April* 1956.

UNIVERSITY OF BOMBAY

DEPARTMENT OF ECONOMICS
SECTION IN BUSINESS MANAGEMENT

APPLICATIONS ARE INVITED FOR THE posts of (1) Professor in Business Management, and/or (2) Reader in Business Management. The Professor or Reader will be required to give instruction in one or more subjects included in the Postgraduate Diploma Course for Business Management.

The Professor or Reader will also be required to help in the organisation of this Section which, for the present, conducts part-time courses in the evening. Candidates must have high qualifications in one or more of the subjects covered in the Course. Those with teaching experience and/or practical experience in business will be preferred.

The grade of the post of Professor is Rs. 800-50-1,250 and that of the post of Reader is Rs. 500-25-800. The post carries the benefits of Provident Fund and dearness allowance according to scales prevailing from time to time. A higher starting salary may be paid to a person possessing high qualifications. The appointment will, in the first instance, be on probation for a period of two years.

Eight copies of the application in the prescribed form (which can be had from the Office of the Registrar) will have to be submitted. Selected candidates will have to present themselves for interview at their own cost. Applications should reach the Registrar, University of Bombay, Bombay-1, latest by 20th May 1956.

T. V. CHIDAMBARAN,
University Registrar.

BOMBAY, 16*th April* 1956.

JESSOP AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have declared the payment, on 1st May 1956, of the Dividend on the 5 per cent. Cumulative Preference Shares of the Company, as existing immediately prior to 6th February 1956, for the half-year ended 30th April 1956, without any deduction in respect of Income-tax payable by the Company.

The Preference Share Transfer Register will be closed on 30th April 1956.

Dividends will be paid only to Members registered on that date, or their Mandatees.

By Order of the Board,
G. M. ROBBINS,
Secretary.

63 NETAJI SUBHAS ROAD,
CALCUTTA, 18*th April* 1956.

DUNBAR RESUMES DIVIDEND—BOWREAH IS STILL IN ARREARS

PROFIT OF KHARDAH JUTE SLIGHTLY LOWER

Dunbar Mills, Ltd.

THE directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

The accounts after providing Rs. 1,00,000 (*nil*) for depreciation, show a profit of Rs. 9,92,376 (Rs. 1,18,455) from which has to be deducted the debit balance brought forward from the last account, namely, Rs. 7,06,925 (debit of Rs. 10,45,860) leaving for disposal a balance of Rs. 2,85,451 debit of Rs. 9,27,405). This amount the directors recommend, should be dealt with as follows:—

To transfer to reserve account Rs. 1,00,000 (*nil*) to paying a dividend on the ordinary shares at Rs. 2-8 (*nil*) per share without any deduction for income-tax payable by the Company Rs. 47,500 (*nil*), and to carry forward Rs. 1,37,951 (debit of Rs. 9,27,405).

The excise duty at 6 pies per square yard on all categories of cloth except coarse *dhotis* and *saris* has been increased since 1st March 1956, according to budget proposals of 1956-57. It remains to be seen what portion of this will be possible to pass on to consumers.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,00,000	Block ...	34,12,181
Reserves ...	25,17,571	Stock-in-trade	63,76,831
Provision for taxation ...	54,354	Stores and spare parts	8,94,307
Liabilities ...	80,03,969	Other assets	1,098
Profit and loss account ...	2,85,451	Debts and advances ...	19,23,044
		Investments	55,602
		Cash ...	98,282
Rs.	1,27,61,345	Rs.	1,27,61,345

Bowreah Cotton Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Kettlewell Bullen & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

The accounts show, without providing for depreciation, a profit of Rs. 84,028 (loss of Rs. 2,96,055) from which has to be deducted from the debit balance brought forward from the last account, namely, Rs. 24,31,401 (debit of Rs. 18,86,726) leaving a total debit balance of Rs. 23,47,373 (debit of Rs. 21,82,781) which the directors recommend should be carried forward to the next account.

During the half-year the Mills remained closed for 17 days due to power trouble which resulted in payment of Rs. 45,161 being involuntary payment and 9 days due to labour strike. There is a shortage of skilled labour and necessary steps are being taken for improving the same.

The excise duty at 6 pies per square yard on all categories of cloth except coarse *dhotis* and *saris* has been increased since 1st March 1956, according to budget proposals of 1956-57. It remains to be seen what portion of this will be possible to pass on to consumers.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	18,00,000	Block ...	37,54,142
Reserves ...	22,72,415	Stock-in-trade	41,30,930
Provision for taxation ...	173	Stores and spare parts	13,22,335
Liabilities ...	88,71,475	Other assets	3,040
		Debts and advances ...	12,40,695
		Investments	52,603
		Cash ...	92,945
		Profit and loss account ...	23,47,373
Rs.	1,29,44,063	Rs.	1,29,44,063

Khardah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Anderson Wright Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The revenue account after deduction of all working charges, commissions and bad debts amounting to Rs. 1,126 (*nil*) shows a profit of Rs. 7,56,677 (Rs. 8,19,099) to which is added the amount of profit on sale of assets Rs. 5,014 (*nil*) and the amount carried forward from the last half-year Rs. 57,501 (Rs. 94,623) making a total of Rs. 8,19,192 (Rs. 9,13,722). After providing for taxation Rs. 2,70,000 (Rs. 2,80,000) and depreciation Rs. 1,50,000 (Rs. 2,00,000) there remains an available balance of Rs. 3,99,192 (Rs. 4,32,864 after writing off Rs. 858 being loss on sale of car). This amount the directors recommend, be dealt with as follows:

For payment of dividends for the half-year ended 30th September 1955, without any deduction in respect of income-tax paid by the Company: on preference shares at the rate of 6 (6) per cent. per annum Rs. 27,000 (Rs. 27,000), on ordinary shares at the rate of Rs. 5 (Rs. 5) per share Rs. 2,70,000 (Rs. 2,70,000) and to be carried forward Rs. 1,02,192 (Rs. 35,864 after transferring Rs. 1,00,000 to general reserve).

In compliance with the working time agreement of the Indian Jute Mills Association, the Mill worked 48 hours throughout the half-year with 12½ per cent. of the total looms remaining sealed. As from 9th January 1956, 2½ per cent. and from 20th February 1956, a further 5 per cent. of the total complement of the looms were unsealed. This decision was mainly influenced by the favourable stock position both as regards hessian and sacking and also partly in anticipation of an increased demand from both internal and overseas markets.

The period under review witnessed very difficult trading conditions. The position of raw jute supplies continued to be very acute and, as a result thereof Fibre prices rose to a very high level. Subsequently, prices eased somewhat with the advent of the new crop. However, the increase in the crop which was estimated did not materialise on account of floods which damaged nearly 10 per cent. of the total crop. Due to speculative activities, simultaneous business in raw jute and manufactured goods was difficult of achievement at a profit. In spite of these adverse factors against which the Company had to contend during most of the period, the working profits for the half-year can be regarded as satisfactory.

The directors report that they are negotiating with the National Industrial Development Corporation for a loan to modernise the entire Mill. The first consignment of equipment for modernising the sacking section of the Mill is expected to arrive by June 1956, and erection will start simultaneously.

The sum of Rs. 14,162 was paid to workers as gratuity on retirement during the period, the Employer's contribution to the Mill Employees Provident Fund amounted to Rs. 1,43,679 and the Employer's contribution to the Employees' State Insurance Fund amounted to Rs. 21,399.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	63,00,000	Block ...	54,61,089
Reserves ...	23,83,375	Stocks ...	38,28,807
Provision for taxation ...	1,93,595	Stores ...	19,03,663
Liabilities ...	41,23,445	Debts and advances ...	16,37,134
Profit and loss account ...	1,02,192	Investments	1,41,459
		Cash ...	98,282
Rs.	1,31,02,607	Rs.	1,31,02,607

Cambodia Mills, Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Coimbatore) submit the audited accounts of the Company for the year ended 31st December 1955.

The result of the Company's working for the year after allowing Rs. 2,01,260 (Rs. 1,90,633) for depreciation is a profit of Rs. 1,96,274 (loss of Rs. 87,744). After deducting the loss brought forward of Rs. 55,087 (credit of Rs. 39,657) there is a balance of Rs. 1,41,187 (debit of Rs. 48,087). After paying dividend on cumulative preference shares Rs. 7,000 (Rs. 7,00,000), transferring to reconstruction and development reserve Rs. 6,594 (*nil*) there remains a balance of Rs. 1,27,593 (debit of Rs. 55,087). The directors recommend the payment of a dividend of 5 (*nil*) per cent. absorbing Rs. 1,00,000 (*nil*) leaving to be carried forward Rs. 27,593 (debit of Rs. 55,087).

It will be observed, that while the gross trading profit for the year under review shows a considerable improvement on the result of the previous year, the award of the Arbitration Board appointed by Government of half a month's bonus to labour for 1954 even though the Company sustained a loss, has necessitated charging of this amount to the accounts in addition to the usual provision for bonus to employees for the year of account. In these circumstances, the directors recommend payment of a dividend of 5 (*nil*) per cent.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	21,00,000	Block ...	18,03,003
Reserves ...	20,00,000	Stock-in-trade	10,96,952
Provision for taxation ...	32,074	Stores, spare parts and loose tools	2,14,850
Liabilities ...	8,95,949	Motor vehicles	5,139
Profit and loss account ...	27,593	Debts, deposits and advances ...	8,06,593
		Investments	33,640
		Cash ...	10,95,439
Rs.	50,55,616	Rs.	50,55,616

Kettlewell Bullen & Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit of Rs. 5,34,937 after providing for taxation and depreciation. After taking into account the credit balance of Rs. 1,52,360 brought in from the previous year there remains at the credit of the profit and loss account an available balance of Rs. 6,87,297 which, the directors propose, should be dealt with as follows:—

Transfer to general reserve Rs. 2,00,000. Payment of dividend on 20,000 first preference shares for the year ended 31st December 1955 at Rs. 5-8 per share, subject to deduction for income-tax payable by the Company Rs. 1,10,000, dividend on 10,000 second preference shares for the year ended 31st December 1955 at Rs. 4 per share, without any deduction for income-tax payable by the Company Rs. 40,000, dividend on 40,000 ordinary shares at Rs. 4 per share, without any deduction for income-tax payable by the Company Rs. 1,60,000 and to carry forward Rs. 1,77,297.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	54,692
Reserves ...	24,02,748	Debts, deposits and advances ...	50,69,452
Provision for taxation	13,14,152	Investments	72,12,987
Liabilities ...	14,59,904	Cash ...	16,970
Profit and loss account ...	1,77,297		
Rs.	1,23,54,101	Rs.	1,23,54,101

THE DUNLOP RUBBER CO. (INDIA) LTD.

MR. CECIL STACK'S REVIEW

THE Thirtieth Annual General Meeting of the Dunlop Rubber Company (India) Ltd. was held in Calcutta on 25th April 1956. Addressing the shareholders, Mr. Cecil Stack, Managing Director, said:

"GENTLEMEN,

"The Directors' report and accounts for the year 1955 have been in your hands for some time and, with your permission, I will take them as read.

"From the point of view of volume of sales, the year under review may be considered very satisfactory. Progress was achieved in all products and the factory worked to full capacity throughout the year, thus maintaining the highest possible level of employment. In my speech last year, I advised you that our consumption of crude rubber in 1954 was the highest recorded, being 18 per cent. above 1953. Another record was created in 1955, rubber usings being nearly 10 per cent. higher than in the previous year. Nevertheless, we had difficulty in meeting the demand for our products which is indicative of the continued expansion of India's economy and the growing importance of our own particular industry. As I suggested on this occasion last year, the level of output and employment will require to be expanded considerably, if the demand for rubber products under India's second Five-year Plan is to be met, and we, as a company, hope to play our full part.

"Distribution of the Company's products was again adversely affected by unsatisfactory transport conditions and shortage of railway wagons. The indications are that this problem will become more acute in years to come and, in my opinion, it calls for the most serious attention by the Government of India.

"Total sales in value were 10 per cent. higher than in 1954, but, as the result of selling price reductions, the net profit, at Rs. 96,72,154, was approximately the same as for the previous year and the ratio to turnover declined from 7 per cent. to 6.4 per cent. before taxation. The price reductions on this occasion arose out of Government's implementation of the Tariff Commission's recommendations regarding tyre prices. I do not propose to comment on the Commission's report, other than to say we do not necessarily agree with some of the findings, but this has not in any way affected our relations with the Government which I am pleased to say remain satisfactory.

Products

"In the rubber industry in recent years the most intensified research has been undertaken in relation to new varieties of raw materials and new methods of manufacture. Development work continues on a vast scale and no manufacturer can afford to stand still. In this respect, we are fortunate in having available the benefits of Dunlop research activities not only in Great Britain but in many other countries, notably United States of America, Germany, France and Malaya. Our technical staff are in constant liaison with the world-wide Dunlop Group research organisation, which ensures that the most modern production methods, equipment and materials are available to us.

"The Dunlop Trakmaster Giant tyre, which is specially designed for rough roads and cross-country routes, has proved most popular and it is hoped that this year supplies will be sufficient to meet all demands. Another important development has been the introduction this year of the new Dunlop Roadster Giant tyre which I have no doubt will be equally successful. This tyre has been thoroughly tested in many countries of the world on some of their worst roads and results everywhere have been outstanding. The tubeless car tyre, which your Company were first to introduce in 1954, has given excellent results and is now being fitted as original equipment by most car manufacturers.

New Records in Cycle Tyres

"Further progress was made in our sales of tractor, off-the-road and aero tyres and new records were again created in our production and sales of cycle tyres and rims. The use of the bicycle has grown so rapidly that we have not so far been able to keep our cycle tyre capacity abreast of the demand, although it is hoped to remedy this before long. Stock shortages, unfortunately, existed throughout the year and to ease the situation, Government have now adopted our suggestion of permitting tyres to be imported.

"Substantial increases were also achieved in sales of other products, for which increased manufacturing capacity is also required if the needs of our customers are to be met. Great strides were made in Dunlopillo Latex Foam Cushioning, which is now firmly established as the most economical and hygienic material for cinemas, hospitals, hotels and transport services. It is also being used increasingly for domestic purposes and by car manufacturers.

"Our rubber-ply transmission belting sold well throughout the year and we have had difficulty in maintaining dealers' stocks at an adequate level. Many important contracts for conveyor belts, which are supplied only against firm orders, have been fulfilled from our Sahaganj factory. It is gratifying to know that our industrial vee belts and fan belts are proving so popular as borne out by an increase in sales of over 60 per cent. compared with the previous year. The excellent quality of our braided hoses has justified our decision to increase our range of sizes, so that we can meet consumer needs more fully.

"During 1955, we further expanded our activities to cover the highly specialised field of anti-corrosive and abrasive linings. This service is available to a wide range of industries and we undertake the application of linings to vessels and pipes not only at our factory but at customers' premises as well.

Raw Materials

"The raw material supply position was satisfactory throughout the year, except in the case of crude rubber. Against the total consumption of rubber by manufacturers in 1955 of 27,543 tons, India produced only 22,481 tons, which means that there was a deficit of over 5,000 tons. In such circumstances, it is the larger manufacturers who are forced to import a portion of their requirements, especially when the world market price is higher than the controlled Indian price. We, in fact, imported 2,368 tons of rubber in 1955, but we experienced considerable difficulty in obtaining import licences from Government and our stocks at times fell dangerously low.

"The controlled price for local rubber was increased from Rs. 138 to Rs. 150 per 100 lbs. in February 1955 and again to Rs. 155-12 in September. The prices paid by us for imported rubber ranged from Rs. 144 to Rs. 207. There were no significant price changes in other raw materials.

Profit and Loss Account

"The net profit for the year was Rs. 96,72,154 and, after deducting the provisions for taxation and retirement gratuities, the balance of profit available for disposal is Rs. 61,28,686, as compared with Rs. 69,45,891 for 1954. The Directors propose the same rate of ordinary dividend as for 1954, that is, 15 per cent., which will absorb Rs. 24 lakhs. The Directors also recommend the transfer of Rs. 22 lakhs to general reserve, as against Rs. 30 lakhs last year. This will increase the general reserve to Rs. 1 crore 90 lakhs as shown in the balance-sheet. The total amount transferred to reserves during the last 11 years was Rs. 2 crores 67½ lakhs, representing earnings retained and fully employed in the business.

Balance-sheet

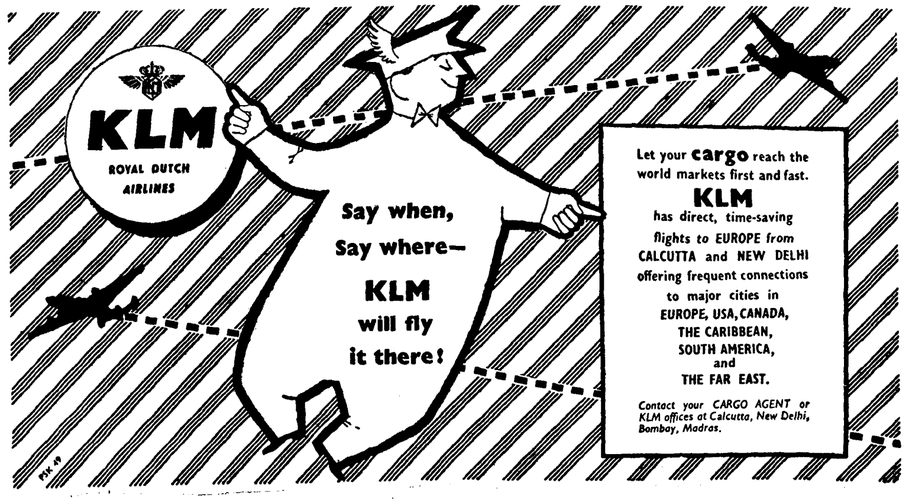
"The additions to fixed assets during the year amounted to Rs. 33,70,000, consisting mostly of plant for expansion and modernisation. The amount of depreciation written off in 1955 was Rs. 27,51,000, as against Rs. 30,20,000 in 1954. Schedule VI of the Indian Companies Act, 1956, lays down that any future amount written off for depreciation in excess of the amount reasonably necessary shall be treated as a reserve and not as a provision. In view of this, the Directors have considered it desirable to transfer to special depreciation reserve an amount of Rs. 113,86,000 representing depreciation on buildings and plant provided in the post-war years at higher than normal rates.

"Stock inventories at Rs. 391,63,000 are Rs. 4,18,000 lower than at the close of the previous year, in spite of expansion in the volume of production and sales. This was due mainly to abnormally low stocks of raw rubber and some categories of finished goods. Bank and current balances are also lower by Rs. 6,90,000, but sundry debtors are up by Rs. 16,74,000, as a result of the higher sales turnover, giving an increase of Rs. 7,16,000 in total current assets. Net working capital is, however, approximately Rs. 6 lakhs lower than at the end of 1954 and the closing bank overdraft is reduced by Rs. 17,49,000.

Employee Relations

"During the past year, no effort has been spared in maintaining our high reputation for working conditions and general labour relations, which, I am happy to say, remain consistently good. Further extensions and improvements have been made to our housing and social amenities for the benefit of our factory staff and operatives. The construction of new quarters for

(*Continued in next page*)



QUESTION HOUR IN PARLIAMENT

Ambar Charkha

THE Government will subsidise the Ambar Charkha for the purpose of large-scale experimentation. The question of drawing up a long-range programme, such as for the second Five-year Plan, must depend on and can be considered only after the exact economics of it are fully known. A pilot project for the production of Ambar Charkhas is now being worked out. As an immediate step, a decision has been taken to manufacture about 10,000 Ambar Charkhas. What the Government wants is the most effective instrument, or machine, for cottage industry for the purpose of producing yarn. Since the Ambar Charkha came on the scene, it has been greatly improved. During the past six months or so, the Ambar Charkha has undergone considerable improvements and it is in the process of improvement still. We will no doubt accept the final improvement and, if, after that, another improvement comes, we will accept that too. The Government are in favour of the highest technique being employed for cottage employment.

—*Jawaharlal Nehru*

U.S. Aid

The Government has no official information yet whether India will be getting $72 million as aid from the U.S. during the fiscal year 1956-57.

—*C. D. Deshmukh*

Textile Industry

Some types of furnaces such as tilting furnaces, cupolas and other "structural" type furnaces required for heating, heat-treatment or smelting and also some simpler types of laboratory furnaces are currently manufactured in the country. The manufacture of other types of furnaces, including industrial furnaces, has not yet developed in the country.

* * * *

Facilities for Co-operative Societies

Additional facilities given to co-operative societies in matters of imports and exports are: they are exempt from the income-tax verification requirements; they can apply for actual user licences for the import requirements of raw materials, etc., of their individual members; consumers' co-operative societies can import certain items of consumer goods for the use of their individual members which are otherwise licensed to established importers; co-operative societies are also allotted separate export quotas in respect of certain commodities such as H.P.S. groundnuts, onions and chillies.

* * * *

Industrial Estate

The Government of India has advanced a loan and a grant to the Government of Mysore for the setting up of an industrial estate in that State. The amount of the loan is Rs. 7 lakhs and that of the grant Rs. 10,000.

* * * *

Splint and Veneers Factory

There is a proposal to start a splint and veneers factory in Hyderabad State during 1956-57.

—*T. T. Krishnamachari*

D.V.C. Irrigation Water Rate

The Damodar Valley Corporation will supply the water to the Bengal Government which, in turn, will deliver it to the cultivators. While the rate to be charged by the D.V.C. from the Government of West Bengal has not yet been fixed, the State Government, with the concurrence of the D.V.C., fixed the rates (per acre) for 1955 at Rs. 10 for *rabi* and for *kharif* 1955 at Rs. 7-12 per acre. The D.V.C. rate compares favourably with the Bhakra Nangal rate. No rate has so far been fixed for Hirakud.

* * * *

Flow of Water in Indian Rivers

The total annual flow of waters of Indian rivers has been estimated at 1,356 million acre feet. About 28.6 million acre feet of water have been brought into use through various multi-purpose projects during the first Five-year Plan period. From the viewpoint of irrigation, the Brahmaputra and some major tributaries of the Ganga, like the Kamla, the Baghmati and the Burhi Gandak in North Bihar, have not so far been exploited. No irrigation projects on the Sabarmati and the Narmada were taken up during the first Plan period. A number of projects on the Narmada are, however, being included in the second Plan. So far as power development is concerned, the rivers which have remained untapped at the end of the Plan are Tambraparni, Periyar, Chalakudi, Cauvery, Sharvati, Krishna, Godavari, Mahanadi, Ganga, and Sutlej. The overall proposal for the second Plan is to utilise about 74 million acre feet of water for the major, medium and minor irrigation projects and the power projects.

Construction Plant and Machinery Committee

The Committee on Construction Plant and Machinery has pointed out that import of spare parts is not satisfactory. The Committee's recommendation relates to the import of ball-bearings. There is, at present, no complete ban on any size or type of ball-bearings. The general policy is to restrict the import of the types and sizes actually manufactured in the country or that could be easily substituted by such indigenously manufactured types and sizes. No further relaxation is considered necessary. A Standing Committee, consisting of a senior officer of the Central Water and Power Commission and of the Director-General of Supplies and Disposals, has also been set up to review periodically the supply position of machinery and spare parts on the projects and to remove bottlenecks, if any, by taking suitable action. The position of spare parts on the projects is now reported to be generally satisfactory.

—*Gulzarilal Nanda*

Pay of Bank Employees

In settling the dispute with the bank employees who have suffered a cut in their pay in pursuance of the Gajendragadkar Award, the banks have accepted the general line that there should be no further cuts in pay in April 1956 and afterwards. During my visit to Bombay, I had occasion to discuss with representatives of the employers what concessions they could give, in the present circumstances, to such of the bank employees as had suffered a cut in their salary in pursuance of the Bank Award. While it is left to the individual banks to settle the matter, the general line which the employers accept is that there should be no further cuts in pay in April and subsequently.

—*Khandubhai Desai*

Employees' State Insurance

The benefits of the Employees' State Insurance Act will be brought into force in Assam as soon as necessary arrangements for the medical treatment of workers are completed by the State Government. The areas likely to be covered are Dubri, Dibrugarh, Tinsukhia, Gauhati and Jorhat. The Scheme will be extended soon to cover an additional 85,000 employees in Rajasthan, Madhya Pradesh, Travancore-Cochin and Saurashtra. At present, 1,015,000 workers in various parts of the country are covered by the scheme.

—*Abid Ali*

State Transport Corporations

The Governments of Bihar, Saurashtra and P.E.P.S.U. have so far agreed to the Planning Commission's recommendations to set up a road transport corporation to manage the nationalised road transport in their States. The States which have been advised by the Planning Commission to set up road transport corporations under the Road Transport Corporation Act of 1950 are Assam, Bihar, Madhya Pradesh, Orissa, Punjab, Uttar Pradesh, Hyderabad, Mysore, Saurashtra, P.E.P.S.U., Travancore-Cochin and Himachal Pradesh.

—*S. N. Mishra*

Tilaiya Waters

The waters of the Tilaiya reservoir in Bihar have not so far been used for irrigation, because the terrain there is such that irrigation will be costly. Originally, the Tilaiya dam was mainly intended for flood control. Then its waters were used for generation of power. A scheme for utilising the water for irrigation also at a lesser cost is now being considered by the Bihar Government.

Diesel Cars

No additional diesel rail-car services are contemplated in 1956 on the Southern Railway. About 20 diesel rail-car services on three metre-gauge sections and 18 services on three broad-gauge sections are at present running on the Southern Railway.

* * * *

Building Electric Coaches

A Japanese firm has offered to manufacture multiple unit electric coaches in partnership with an Indian firm at Calcutta and the offer has been accepted. The coaches will, however, not be ready for some time and multiple unit coaches will be imported from Japan for use on the Calcutta railways when they are electrified. The question of manufacturing diesel engines in the Chittaranjan Workshop is under consideration of the Government.

* * * *

River Control Schemes

Development of transport facilities at selected stations on the Brahmaputra River has been accepted for inclusion in the second Plan. Other schemes accepted for inclusion in the second Plan are river control and conservancy measures including dredging, snag clearance, and provision of aids for navigation and river surveys. These schemes are recommended for inclusion in the second Plan by the Ganga-Brahmaputra Water Transport Board.

* * * *

Bengal Provincial Railway

The Central Government does not propose to take over the Bengal Provincial Railway of West Bengal which is understood to have closed down for traffic on 20th March last. Alternative transport arrangements will be considered by the State Government.

THE DUNLOP RUBBER CO. (INDIA) LTD.

(*Concluded from previous page*)

30 of our watch and ward personnel was completed and these are now fully occupied. Work on the additional married operatives' quarters which I mentioned last year was unavoidably delayed, but we shall shortly commence the building of 65 further houses. During the year, electric lighting was installed in 800 single quarters. The addition of a tennis and social club, consisting of a club-house and three floodlit tennis courts, has proved extremely popular and successful. A retirement gratuity scheme, which is additional to the provident funds which have been in force for many years, was introduced at the beginning of 1955 and will benefit all long-service staff and operatives.

"Once again all our employees, at head office, factory and in the field, have shown initiative and devotion to duty and played their part in the achievement of the year's results. I know you will wish to join with the Directors in sending them a message of thanks and appreciation of their continued efforts."

COTTON

(*Concluded from page* 811)

fresh trading during the delivery period, except for purposes of squaring up all existing contracts, should be prohibited.

Finally, the Commission has suggested some improvement in the present threefold system of classification (buyers, sellers and brokers), in order to improve the representative character of the Association. It has suggested a fourfold classification: mills, dealers, exporters and importers, and brokers. Further, the twelve seats now allocated to the three panels may be reallocated among the suggested four panels, so as to give two seats each to mills and exporters and importers, and four seats each to brokers and dealers.

These letters have served as the immediate cause of Mr. Purshotamdas Thakurdas's resignation. In a Press note, which carries the Commission's reaction to his statement, the Commission has stated that the resignation has not come as a surprise. It was, however, believed that he would continue for a few more months, until his normal period of office expired. While expressing regret at the resignation, the press note says that he had "neither been able to attend meetings of the Board of the E.I.C.A. of late, nor has he been easily accessible for discussion. During the last three months, there had been no contact of any kind between him and the Commission." The press note said: "It was obvious that this state of affairs could not be in the best interests of the cotton trade."

The Commission said that it shared the view that the detailed day-to-day working of the East India Cotton Association should ordinarily be with the trade, but it had to be in conformity with certain general principles which the "supervising authority has to lay down in the interests of the trade and in the public interest." It added:

"The Association could not have been unaware of the implications of the Forward Contracts (Regulation) Act when it sought recognition under it and recognition has been granted to it on the express condition that it shall comply with such directions as may from time to time be given by the Commission. The Commission has, however, always believed that the regulation of forward markets was a business in which the recognised associations and the Commission had to work hand in hand. The initiative rested with either and the final decision had to be taken after full discussion of the issues involved. The Commission has dealt with all requests from the Association with speed and consideration and has always preferred to put forward proposals for the consideration of the Association rather than to issue them as directions. The Commission has, likewise, shown the greatest courtesy to Mr. Purshotamdas personally. It is sad to record, however, that any proposal from the Commission has been looked upon with resentment and the Commission has had difficulty, on occasions, even in arranging for representatives of the Association to meet it for discussion.

"It is curious that trading interests should claim to be the sole custodian of the interests of the growers. It is because the Commission has the growers in mind and believed that forward markets would eventually be in their interests that it has recommended the opening of a number of markets in the mofussil areas so as to be within their easy access. The question of prices, however, is not one which could be determined merely by forces of supply and demand or in the interest of one section of the community. It has to be decided in the context of various factors such as the national income of the country and the requirements of planned development. The closure of the cotton market in December 1955 was necessary in order to prevent a squeeze on the February 1956 contract. The interests of the growers, however, were not prejudiced as they were able to sell their stocks in the ready market."

In conclusion, the Commission has emphasised that it has certain statutory responsibilities and must keep forward markets under observation. It stresses that the nature of its duties is comprehensive and that it will discharge them "without fear or favour." It declares that, while it is anxious not to hurt the susceptibilities of the trade or cause it any inconvenience, it cannot allow itself to be "overawed into abdicating" its functions.

GILT-EDGED FIRM

(*From Our Own Correspondent*)

BOMBAY, *25th April*

Conditions in the short-term money market during the week under review remained far from comfortable. There were no signs of any return of funds in appreciable quantities, although the general impression was that the peak of the seasonal demand had passed. Banks still appeared to be keen borrowers, but the volume of business was restricted owing to paucity of lenders. The interest rates were firmly held at their previous week's levels.

Inter-bank call money continued to be bid at 3¼ per cent., though one or two banks were unwilling to pay more than 3 per cent. House money at call was placed at 3¼ per cent. Short-term deposits too were taken at the same rate.

The sale of Government of India Treasury Bills continued to remain suspended for yet another week.

For the first time after seven weeks, notes in circulation declined during the week ended 20th April 1956, the exact amount of recession being Rs. 6.32 crores. Disclosing this, the Reserve Bank of India statement for the past week shows a rise of Rs. 6.62 crores in notes held in the Banking Department. The resulting small rise in total notes is covered by a corresponding increase in rupee coin. There has been a rise of Rs. 2.58 crores in deposits of the Central Government, while the declining trend in deposits of other Governments has been maintained with a further fall of Rs. 6.83 crores. Deposits of banks have gone up by Rs. 2.37 crores. On the assets side, cash balances are up by Rs. 6.62 crores, while balances held abroad have dwindled by Rs. 6.02 crores. Loans and advances other than to Governments have risen by Rs. 1.40 crores mainly due to the increase of Rs. 3.88 crores in borrowings by Scheduled banks against usance bills. There have been fresh borrowings to the tune of Rs. 8.89 crores during the week. Investments show a decline of Rs. 1.92 crores.

A fall of Rs. 1.48 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 13th April 1956. Time deposits, on the other hand, show an increase of Rs. 4.99 crores and inter-bank borrowings Rs. 1.15 crores. Borrowings from the Reserve Bank stand reduced by Rs. 1.46 crores and those from the State Bank of India by Rs. 3.68 crores. Advances have declined further, but by only Rs. 93 lakhs. Inland bills purchased and discounted have also fallen by Rs. 2.39 crores, while foreign bills are up by Rs. 1.33 crores. Investments too have declined by Rs. 3.19 crores. There has been a shrinkage of Rs. 6.32 crores in cash and balances with the Reserve Bank, while money at call and short notice have risen by Rs. 2.78 crores.

The Gilt-edged market ruled firm during the week under review. The persistent demand for selected counters, enquiries from Custodians of insurance companies for 4 per cent. State loans and scarcity of floating stocks were the main contributory factors for the cheerfulness. The volume of business, was, however, restricted, due to paucity of stocks.

3 per cent. 1957 gathered an anna to Rs. 99-13, at which price there were buyers. 3 per cent. 1958 was in demand an anna higher at Rs. 99-11. 3 per cent. 1959-61 also attracted enquiries an anna higher at Rs. 98-2. 3 per cent. 1963-65 gained an anna to Rs. 94-14 and 3 per cent. 1964 As. 2 to Rs. 94-13. 3 per cent. 1966-68 was marked up by an anna to Rs. 92-12 and 3 per cent. 1970-75 to Rs. 89-12. 3 per cent. 1986 Conversion Loan put on As. 2 to Rs. 76-15. 3½ per cent. 1961 had transactions an anna better at Rs. 99-8. 3½ per cent. 1964 was placed at Rs. 98-11 *ex-voucher*, as against Rs. 98-12 *cum-voucher* last week. 3½ per cent. 1965 changed hands at Rs. 98-9. Among State loans, 4 per cent. 1967 Bombay gained As. 2 to Rs. 100-9 and Madras As. 3 to Rs. 99-9. 4 per cent. U.P. 1967 gained an anna to Rs. 99-8 and Saurashtra to Rs. 99-9.

In the foreign exchange section, the rupee displayed signs of gaining strength in terms of the U.S. dollar early in the week, but soon lost its position, in sympathy with a similar movement in sterling. Banks' selling rate for ready dollars, after an early decline from Rs. 476¾ to Rs. 476½, gained to Rs. 476¼ per $100. Similarly, their buying rate fell from Rs. 472¾ to Rs. 472½, before recouping to Rs. 472¾. Sterling was a bit erratic, but the underlying tendency was firm. After advancing from $2.80.13/16-2.80.15/16 to $2.81-2.81⅛ the spot sterling closed at $2.80¾-2.81. Three months' forward was marked up from $2.79.1/16-2.79.3/16 to $2.79¼-2.79⅜. Transferable sterling was unchanged on balance at $2.78.9/20-2.78.11/20.

LINSEED REACTS

(*Messrs. A. Bradley & Co.*)

CALCUTTA, *23rd April*

The reaction to last week's buoyant trend has set in, and a generally easier feeling has prevailed throughout, whilst prices have shown a steady though unspectacular decline. The negative reaction from the Centre to shippers' proposals for exemption of export duty on previous sales of linseed oil has added to the generally quieter trend of the market. With arrivals of seeds maintaining a fairly high weekly average, prices have eased, and ready and forward are quoted at the same level. Crushers have been active with a healthy parity existing in the price of seeds and oil. The oil market has witnessed little fresh trading; with overseas values down to £146, leaving little or no trading margin, shippers have been in no mood to enter into any fresh commitments.

The latest quotations are as follows: Ready Rs. 21-10 and April-May Rs. 21-10 per maund.

BULLION BUOYANT

(*From Our Own Correspondent*)

BOMBAY, *25th April*

The bullion market exhibited buoyancy during the week under review, trading in which was interrupted by two holidays. Both silver and gold were substantially marked up in value over the week.

Early in the week, the market ruled easy on account of the weakness of silver which was subjected to aggressive selling pressure, attributed to reports of further business having been done in Tibetan coins. The bull unloading was aggravated by bear selling. Gold also was quiet, due to lack of buying enthusiasm. Despite the encouraging reports of good offtake in the ready section, prices tended to drift lower.

This trend, however, proved short-lived, as bulls came forward to replenish their earlier sales, on reports of good demand for both silver and gold —the offtake in the former being of the order of 30 bars per day and in the latter 7,000 tolas per day. Rumours that a leading bull operator would absorb delivery and that imports of Tibetan coins would be banned gave impetus to the bullish enthusiasm.

Silver for forward delivery (26th April settlement) was marked down early in the week from Rs. 180-4 to Rs. 178-13, but replacement buying and bear covering lifted the price to Rs. 182. The closing today was a shade lower at Rs. 181-11. The May (26th May) settlement came up from Rs. 180-11 to Rs. 182-8, after an early setback to Rs. 179-3. The closing was a bit down at Rs. 181-11. The carry forward charges from April to May settlement, which were As. 7 against buyers last week, changed to As. 8 today in their favour.

Ready silver (.996 Mint) advanced from Rs. 180-5 to Rs. 182-12, but wound-up at Rs. 181-12. The floating stocks of silver are reported to be 1,100 bars. The daily average offtake was 30 bars.

Forward gold (25th April settlement) moved up from Rs. 105-10 to Rs. 106-12, and closed at Rs. 106-5. The next settlement (25th May) staged a rise from Rs. 105-10 to Rs. 106-8 before finishing at Rs. 106-1. The carry forward charges which were *nil* last week came to be quoted today at As. 4 against sellers.

Ready gold finished the week with a gain of Re. 1-1 at Rs. 106-11. The floating stocks of gold are placed at 35,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was 6,500 tolas on an average.

In London, silver and gold were further marked down. Spot silver fell from 78⅛*d.* to 78⅛*d.* and forward from 78⅛*d.* to 78⅜*d.* Gold drifted from 249*s.* 1*d.* to 248*s.* 12½*d.* befose gaining to 249*s.* ½*d.* In New York, silver declined from 91c. to 90¾c.

The following comparative table shows the trend of the market during the week under review:

	25-4-56	Highest	Lowest	18-4-56
GOLD	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Ready (.99 fine Mint) ..	106 11	107 0	105 2	105 10

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

DEMAND FOR TEA FAIRLY GOOD

(*From Our Own Correspondent*)

CALCUTTA, *24th April*

Mixed conditions were in evidence during the export tea sale held yesterday when offerings aggregated 50,800 chests. Demand was fairly good. The strongest features of the sale were better fannings and the bright liquoring autumnals, prices of which rose by several annas. Prices for medium brokens were fully firm. Darjeelings were unwanted, as were whole leaf grades. Little support was given to the poorest stalky teas, prices of which gave way by ½ to 1 anna. All clean plain teas failed to catch buyers' attention and, as a result, prices declined by half an anna. The quotations were: best C.T.C. Assam B.P., not quotable, medium Assam B.P. Re. 1-9 to Re. 1-9-6, plain B.P. Re. 1-7, and clean black pekoe, not quotable.

Dusts offered during last week's sale for domestic consumption amounted to 19,500 chests. Demand was moderately good, but prices realised were lower. Prices for most varieties declined by As. 1½ to As. 2. However, the bright liquoring autumnals from all districts were a firm feature. The quotations were: best Assam C.T.C. Rs. 2-10 to Rs. 2-12, medium Assam grainy dust Re. 1-10, and medium Dooars Re, 1-8 to Re. 1-9.

Leaf grades offered aggregated 6,000 chests. There was fair demand, but prices were lower by about As. 2. C.T.C. fannings were well supported and occasionally realised higher prices.

DEADLOCK IN COTTON DEEPENS

(*From Our Own Correspondent*)

BOMBAY, *25th April*

The deadlock in the cotton futures market, which immediately followed the official closing out of hedge contracts in I.C.C. February and May with effect from 25th January last, has since taken a more serious form. Both Mr. Purshotamdas Thakurdas and Mr. Chimanlal B. Parikh have resigned their offices as Chairman and Vice-Chairman, respectively, of the East India Cotton Association (E.I.C.A.) on grounds of undue official interference with the functioning of the market. With the exit of these cotton trade stalwarts, the negotiations between the E.I.C.A. and the Forward Markets Commission (F.M.C.) with regard to the resumption of futures trading in cotton have come to a standstill.

The resignation of the E.I.C.A. Chairman and Vice-Chairman is an immediate sequel to the bunch of eleven letters—dated the 10th inst.—from the F.M.C. to the E.I.C.A., carrying certain directives to the Association, as well as some concrete proposals to be discussed by the representatives of the Association with the Commission. As these have been dealt with in detail in our last report and also elsewhere in this issue—*vide* page 811—it is unnecessary to refer to them here. Suffice it to say that the proposals put forward by the F.M.C. relate to more extensive use of the clearing house, introduction of a graded system of margins on outstanding business, introduction of a system of emergency clearing, prohibition of option business, assumption of greater degree of control on the day-to-day working of the market by the Commission, etc. If carried out, these proposals would, it is feared, rest with the F.M.C. "increasing powers of regimentation," which would "jeopardise, to the detriment of the cotton trade, all the procedures and rules of working that the association has devised over the last 35 years."

The protest and the dissatisfaction expressed by the cotton trade against the move of the F.M.C. to exercise greater control over the structure of forward trading in cotton have not, however, convinced the Commission. On the other hand, the Commission has categorically declared that the detailed day-to-day working of the E.I.C.A. must be in conformity with "certain general principles which the supervising authority has to lay down in the interest of the trade and in the public interest." It has also made it clear that "the nature of its duties is comprehensive and it will discharge them without fear or favour."

The aforesaid developments would appear to have had their effect on the spot cotton market, which at present rules dull. Some traders apprehended possibility of an emergency. To quote one report: "Actually, a near-emergency has arisen in Sewri." It is suggested that the market may remain practically closed, "pending the return of normalcy in the E.I.C.A. ranks." Meanwhile, the Board of the E.I.C.A. is understood to have decided to consider the resignation of the Chairman and Vice-Chairman at its meeting on the 27th inst. The decisions which the Board will take at this meeting will be watched with considerable interest.

The following table gives the latest available quotations from the Sewri market, as compared with those a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	25-4-56	18-4-56	11-4-56
Bengal *Deshi*	685	705	700
Berar Jarillas	790	780	770
Khandesh	790	785	775
Vijay	955	950	950
Oomra *Deshi*	690	700	700
Moglai	690	685	685

Irregular conditions prevailed in the Karachi cotton market during the week under review. Thus, forward deliveries, as also ready lots of Punjab *Deshi* and Sind *Deshi*, ruled fully steady on speculative support; the spot section continued to present an easy trend, thanks to slackness in demand from local mills and renewed fears of severe competition in world cotton markets. Over the week, N.T. R.G. May and July contracts rose by As. 6 each to Rs. 81-8 and Rs. 78-4 per 82 lbs., respectively. Induced by selling, the prices of spot cotton tended to look down, with the exception of *Deshi* varieties which staged an impressive rise. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton, figures in brackets giving last week-end rates:

Sind *Deshi* 88-8 (80-8); Punjab *Deshi* 84-8 (76-8); 4F Roller 79 (79-15); S.G. 84 (84-15); Punjab Roller 84-5 (85-15); S.G. 90-8 (90-15); 289F N.T. Roller 86-8 (86-15); S.G. 93 (93-7); 289F Punjab R.G. 99-8 (100).

The Alexandria cotton futures market exhibited a buoyant tone this week too. The persistent buoyancy was inspired by tight supply position, following a sharp setback to the current season's crop. The total production of all varieties of Egyptian cotton (less Scarto) is estimated at 7,252,000 kantars, as against 8,340,000 kantars previously expected and 7,567,000 kantars of last season's crop, according to the third and final estimate of the crop released recently by the Ministry of Agriculture. The strength of the statistical position thus let loose a wave of buying orders which lifted up the prices of cotton to further heights. The extent of the rise in prices during the week, as compared with the preceding two weeks, is indicated below:

(In tallaris per lb.)

	24-4-56	17-4-56	10-4-56
Karnak:			
May	97.40	95.50	91.44
July	95.25	92.10	89.05
November	88.90	87.15	86.55
Ashmouni:			
April	78.65	75.40	73.00
June	78.73	73.85	72.65
October	70.22	68.10	67.65

The Sudan Gezira Board has decided to give a rebate to buyers of more than 20,000 bales of long-staple cotton from the Gezira, AL/WL and Gash crop during the current calendar year. The rebate will be ½ per cent. of the value of the purchases over 20,000 bales made by any firm. For the purpose of assessing the rebate, the average price per bale will be taken into account.

The undertone of the Liverpool cotton futures market was generally quiet. Turnover was greatly restricted and values moved narrowly. Egyptian contracts were particularly dull. Sudan contracts, however, proved an exception and registered a rise in prices, thanks to support from commission houses and trade buying. The latest available quotations—in pence per lb.—from the Liverpool cotton futures market are:

Old contract: May-June 25.25 and July-August 24.50. *New contract*: May-June 29.30, July-August 26.50, October-November 25.30, December-January 25.15 and March-April 25.00. *Egyptian Karnak cotton*: May-June 51.25, July-August 51.15 and November-December 51.15. *Sudan cotton contract*: July-August 47.65, September-October 46.65 and November-December 46.65.

The reaction witnessed in the New York cotton market after President Eisenhower vetoed the Farm Bill last week gathered further momentum during the week under review. In fact, the market depicted a distinctly easy trend. The decline in prices would have been more marked but for fairly good trade demands, particularly for old crop July, and commission house buying induced by reports that cotton would be supported at least at 82½ per cent. of parity in the coming season.

On Tuesday last week, the Commodity Credit Corporation announced that the first competitive bids would be received on the 24th inst., under the new U.S. cotton export programme for shipments after 1st August next. The biddings are expected to be bi-weekly. Any upland cotton in the C.C.C. catalogue stocks is eligible and free substitution with privately-owned cotton will be permitted. The programme will cover all export sales of cotton, regardless of the date or the method of reimbursement.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	24-4-56	17-4-56	10-4-56
Spot	36.70	36.85	36.90
May	35.80	35.75	35.70
July	33.36	33.48	33.68
October	32.29	32.56	32.59
December	32.42	32.61	32.66

COTTON YARNS FORGE AHEAD

(From Our Own Correspondent)

BOMBAY, 25*th April*

Cornering of 120 deniers dull cones Snia rayon yarn for April delivery by a combine of a few dealers was the feature of trading in the forward rayon yarn section during the week under review. This was done with a view to squeezing those who had make blank sales and as such were not in a position to deliver the goods. Thanks to such cornering, some of the traders who had sold short for April delivery were compelled to pay as high a *budla* as Rs. 27 per case. Nevertheless, the April delivery continued to be quoted very much higher than the distant position—that is, June delivery—a curious phenomenon, indeed. Characterising the state of the market as being "unhealthy," a section of traders felt that, after the completion of short-covering operations, prices would suffer a sharp break. Staple fibre yarns were subjected to considerable selling pressure and moved downwards. Cotton yarns, on the other hand, evoked persistent buying enquiries from consuming centres and values forged ahead. Even reports that some of the North Indian spinners had sold for forward delivery coarse and medium counts at reduced prices failed to have any effect on the market.

Snia rayon yarn (120 dull cones) for April delivery was subjected to frantic short-covering and advanced by Rs. 9 to Rs. 840. June delivery spurted by Rs. 7 to Rs. 814. The spread between the two contracts widened over the week from Rs. 24 to Rs. 26. In the spot section, 120 Italy and 150 Italy both gathered half an anna to Rs. 3-13. 120 Japan was quoted at Rs. 3-14-6 and 150 Japan at Rs. 4-1. These rates are for general qualities of imported yarns and as such cannot be compared with last week's rates of Rs. 4-2-6 and Rs. 4-6, respectively, which were for the special qualities. Among indigenous yarns, National Rayons 120 Bt. cones 1st grade was fully steady at Rs. 3-11-6, while 150 Bt. cones 1st grade eased by three pies to Rs. 3-8-9.

Staple fibre yarns were, as already stated, subjected to selling pressure. Imported yarns (80×2) were the worst sufferers. Paramounts, S'Sellos and K'Suns dropped As. 4 each to Rs. 7-2, Rs. 7-3 and Rs. 7-6, respectively. Fujis fell by As. 3 to Rs. 7-2. Suicos lost 18 pies to Rs. 7-12-6. Among indigenous yarns (40×2), New Greats and Citys declined by 18 pies each to Rs. 3-5-6 and Rs. 3-6, respectively. Kohinoors receded by an anna to Rs. 3-6-9. Centurys eased by a like amount to Rs. 3-6.

Under the impetus of sustained buying support, cotton yarns registered a handsome improvement in prices. Ten counts Elphinstones were specially favoured, their quotation advancing by As. 12 to Rs. 13-4. Moderns registered a gain of As. 8 to Rs. 14. Podars were better by As. 4 at Rs. 13-8. Among 20s, Moderns spurted by As. 12 to Rs. 18. Podars rose by As. 8 to Rs. 17-6 and Dawns by As. 6 to Rs. 17-4. Deals in 30s were put through at higher levels, Kotharis increasing by Re. 1 to Rs. 24 and Maduras by As. 12 to Rs. 23-12. Similarly, 40 counts were done at enhanced prices; Vasantas rallied Re. 1-4 to Rs. 28-14. Minaxis put on Re. 1-1 to Rs. 29-7. Maduras and Moderns finished a rupee higher each, the former at Rs. 29-8 and the latter at Rs. 28-8. Among 60s, Kamlas firmed up by Re. 1-12 to Rs. 60. Barodas strengthened by Re. 1-8 to Rs. 54. Raghuvamshis hardened by a rupee to Rs. 60. A like amount was put on by Finlays which were quoted at Rs. 62-8. Among 80s, Elphinstones spurted by Re. 1-8 to Rs. 64. Moderns increased by As. 8 to Rs. 67.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	25-4-1956	18-4-1956	11-4-1956

PEPPER DRIFTS DOWN

(Messrs. Parekh & Co.)

BOMBAY, 25*th April*

Malabar black pepper, during the week, ruled friendless with prices drifting downwards almost daily. In almost all the important world markets, pepper established new low levels. Alleppey came down to Rs. 700, garbled at Cochin to Rs. 120, at Calicut to Rs. 800, spot at New York to $0.27, at Singapore to Strait $77 per picul and at Djakarta to Rupiahs 500. All the markets at the origin seem to be competing with one another. It is therefore, difficult to say the levels at which the markets would stabilise.

At Alleppey, there is a lot of distress selling of loaned pepper and, consequently, lower offerings to overseas seem to have scared away the prospective buyers in the U.S.A. In Singapore arrivals of new crop Sarawak black has started and holders are anxious to liquidate their storing before the impact of the new production is felt. In Indonesia, where prices of Lampong black and Muntok white were kept artificially high, holders seem to be in a hurry to dispose of their stock, in view of the proximity of the new season.

The undertone of the markets on the Malabar Coast appears to be nervous and, unless sizable buying is forthcoming from overseas, it is generally feared that the market may further deteriorate under the impact of selling of loaned pepper and liquidation by weak holders.

May shipment was done at as low as $0.26¾, while June was traded at $0.27 and July-August-September at $0.27. Rates for monthly delivery also came down and there was absence of fresh buying except some stray short covering.

Proximity of monsoon on the coast and of new crop in Sarawak has made New York dealers to stand on the fence which fact appears to be responsible for the present crisis-like prices.

Following are today's nominal quotations:—Ready Rs. 102 (as against Rs. 100 a week ago) per Bengal maund; May Rs. 720-30 (Rs. 710-20) and June Rs. 730-40 (Rs. 727½-732½) per candy of 5¼ cwts.

OILSEEDS QUIET

(From Our Own Correspondent)

BOMBAY, 25*th April*

Having remained officially closed for two days, namely, on 23rd and 25th inst., the oilseeds market had a short week of only four working days. Trading on these days was of a cautious nature. Neither sellers nor buyers were anxious to extend their commitments. Sentiment was, however, generally bearish. A number of factors was responsible for this. The chief among them was the warning issued by the Forward Markets Commission about the speculation that was going on in the guise of non-transferable specific delivery contracts. The deadlock in the cotton market resulting from the resignation of the Chairman and Vice-Chairman of the East India Cotton Association owing to "the increasing power of regimentation" exercised by the Commission was another. There was some hesitancy in entering into fresh deals owing to the approaching maturity of the May contract in castorseeds. In fact, the bulls were eager to transfer their holdings from the maturing contract to September contract, with the result that the spread between the two widened from Rs. 7-8 to Rs. 8 per candy. And, above all, the news that the Finance Minister had announced a reduction in the excise duty on cottonseed only came as a great disappointment to the market, and as a result the oils section too developed an easy tendency.

In the castorseed section, May delivery opened the week at Rs. 142. Under pressure of sustained selling, it gave way to the week's lowest today at Rs. 138-8 but closed slightly better at Rs. 138-10. September delivery which commenced the week at Rs. 149-4, dropped to Rs. 146-6 before winding up at Rs. 146-8. Castorseeds ready, F.A.Q. lost As. 10 to Rs. 28. Madras quality retreated from Rs. 28-12 to Rs. 28. Castor oil B.S.S. was on offer today at Rs. 16-11, as against Rs. 17-2 a week ago. Commercial quality was done at Rs. 15-1, as compared with Rs. 16-4.

In the groundnut section, dull conditions prevailed. F.A.Q. improved from Rs. 34-12 to Rs. 35 only to relapse to Rs. 34-8. Bold April-May delivery was easy at Rs. 34, as against Rs. 34-10. Coramandel variety receded from Rs. 35-10 to Rs. 35-4. In the oil section, railway receipts were down by As. 8 to Rs. 18-4. April delivery shed As. 9 to Rs. 18-4.

Business in linseed also was uninteresting. Bold ready declined from Rs. 33-6 to Rs. 33. April-May delivery dropped from Rs. 33-6 to Rs. 32-12. Satna quality was As. 6 lower at Rs. 31-10. Linseed oil was, however, a shade better at Rs. 20-14, as against Rs. 20-8.

The Saurashtra Oil and Oilseeds Association has decided to open forward transactions in groundnut and groundnut oil in Rajkot, Bhavnagar and Jamnagar from 1st May next and in Dhoraji and Veraval from the following day.

The following table shows the prices of oilseeds and oils yesterday, as compared with those at the end of the previous two weeks.

	24-4-1956	18-4-1956	11-4-1956

TEA PRICES IRREGULAR

[Messrs. Forbes, Ewart & Figgis (Private) Ltd.]

COCHIN, 19*th April*

Dust sale 'H' which was held on Tuesday, 17th April, contained 300,000 lbs. The sale opened to a good demand which eased as it progressed and prices were rather irregular. Best liquoring dusts remained firm, but medium types must be quoted easier. Commons were generally steady, but there was less demand for black Middle East type dusts.

London Market.—Sale of 16th April 1956:—Best liquoring C.T.C. 2d. to 6d. dearer. Medium B.O.P. and orange fannings strong to dearer. Clean plain fully firm. Commonest one penny to 2d. easier.

Sale of 17th April 1956:—Improved quality coloury South Indians up to 3d. dearer. Others irregular about steady.

Colombo Market.—Sale of 16th April 1956:—Dusts lower. All others very strong. Demand dearer, particularly good liquoring off grade fannings.

Sale of 17th April 1956:—Strong general demand. Quality declined. Finest firm. Below best irregularly lower following quality. Low mediums and low growns, including Persian Gulf types, five to ten cents dearer.

Calcutta Market.—Export:—Less demand. Prices for commons and low mediums one anna to full As. 2 easier. Better liquoring teas, particularly fannings, very strong demand. Whole leaf teas one anna to As. 2 easier.

Dust.—19,800 packages dust. Fair general demand. Medium Doours and Assams As. 1½ to As. 2 easier. Better liquoring sorts irregular. Best C.T.C. Assams As. 3 to As. 4 dearer. Commonest neglected. Leaf As. 2 to As. 3 easier.

Export Quota.—Business has been done in special licence at 5 pies. 1956-57 export quota has eased and can be quoted at 45 pies sellers.

Forthcoming Auctions.—Dust Sale 'I' will be held on Thursday, 3rd May.

As we go to press, Messrs. Forbes Ewart and Figgis (Private) Ltd. wire:

"*Sale 9*:—1,250,000 lbs. Strong general demand. Market fully firm for everything. Keen enquiry for all fannings grades. Whole leaf steady."

HESSIANS STEADY

(From Our Own Correspondent)

CALCUTTA, 24*th April*

Activity in the jute goods market during the week under review was on a limited scale. Prices of hessians were maintained, but those of sackings declined. Some satisfaction was caused in trade circles by reports that burlap consumption in the United States during March had increased to 70.6 million yards from 68 million yards in February. The fact that at the end of March stocks in the U.S.A. were higher by 8 million yards at 253 million yards indicated that American purchases were higher than consumption. With the present cheapness of Indian hessians, it is expected that American buyers would lift increasing quantities from Calcutta. So far, the expected order from the U.S.S.R. has not materialised, but a huge order from this source is held as certain. With India's desire to expand trade, jute goods would receive more attention in the export market. In all bilateral trade agreements, jute goods are one of the main items in the Indian list of exports. Accordingly, jute goods are included in the recent trade agreements with Yugoslavia and Poland. India has envisaged a greater volume of imports from the East European countries, all of which would have to purchase from India goods and raw materials worth the equivalent of exports to India. In addition to this factor, Indian jute goods are cheaper than Continental goods. In this view, trade circles anticipate a gradual increase in the volume of exports of jute goods, which would in days to come justify mills to unseal the remaining idle looms.

All things considered, mills require cheaper raw jute. But prices of the fibre have not so far declined by the same level as that of jute goods. This is because stockists who, in the firm knowledge that mills are committed to increased production, are reluctant to discount rates further. Mills are purchasing only cautiously, and during the week under review, they were interested in a wide variety of raw jute. Bottoms, cuttings and middles were all involved in the transactions. Prices for most varieties fluctuated As. 8 either way. Mills were reported to have adequate stocks of raw jute, and it is generally expected that by the time the new crop commences arriving there would be a marked decline in prices. Crop prospects were reported extremely good, and although for most part of the week, weather was dry and hot, some rains were reported subsequently. Mofussil markets maintained steady conditions and prices were above those ruling in Calcutta. Latest quotations in Calcutta are given below:

	Middles Rs. a.	*Bottoms* Rs. a.
Pakistani:		
Northern	33 0	30 0
Indian:		
Northern	31 0	28 0
Assam Upper ...	31 0	28 0
Murshidabad ...	30 0	27 0
Daissee	31 8	28 8
Western	30 8	27 8
Jungli	29 0	26 8
Uttar Pradesh ...	29 8	26 8
Daissee mesta ...	29 0	26 0
Bimli f.a.q.	...	26 0

Pucca bales 1st marks Rs. 177-8 per bale.

There were some enquiries for both hessian and sacking goods during the week, and business was also reported. But when prices gave way on profit-taking, mills withdrew from the market. Early in the week, there was covering business, and speculators were also active. This resulted in ready 40″ 10 oz. hessian being steady at Rs. 38-13. However, ready B. twills declined to Rs. 109-4 from Rs. 109-12 on profit-taking. On Wednesday, ready 40″ 10 oz. hessian gained As. 2 at Rs. 38-15, following reports of Russian interest in hessians. In sackings, however, there was little interest, and ready B. twills fell to Rs. 109-2 from Rs. 109-4. More interest in hessian followed, and by the week-end the price for ready 40″ 10 oz. had gained to Rs. 39. Covering business soon followed but forward rates were fractionally weaker. From Rs. 39-8 the July-September position lost to Rs. 39-6, and May goods to Rs. 39-2 from Rs. 39. Heavy goods were, however, weak, and by the week-end ready B. twills had fallen to Rs. 107-14 from Rs. 109-2 on Wednesday last, and the July-September goods at Rs. 107-10 were one rupee lower. Yesterday, there was fractional recovery in both hessian and sacking goods, with the 40″ 10 oz. hessian quoting at Rs. 39-2 and B. twills at Rs. 108. The present position is that hessians are stronger than sackings, and in order to balance production with demand, it is possible that mills may transfer a portion of the sacking looms to hessians.

SUGAR BETTER

(From Our Own Correspondent)

BOMBAY, 25*th April*

There was an improvement in the sentiment of the sugar market during the week under review, in contrast to the easy tone noted in the last two weeks. Two factors contributed to this improvement. First, the ex-mill quotations for sugar went up by As. 8 per maund. Secondly, arrivals of indigenous sugar into the market were very poor, being only 3,600 bags, as against as much as 19,000 bags in the previous week.

In the forward section, 'C' grade sugar for *Vaisakh* delivery met with buying support and advanced by As. 12 to Rs. 90-10, but was quoted today slightly lower at Rs. 90-7 per bag.

In the spot section, medium grain sugar put on a rupee to Rs. 89-Rs. 91. Small grain was fully steady at Rs. 88, as also bold grain at Rs. 92- Rs. 98. British refined sugar was fully maintained at Rs. 84 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

STRONG DEMAND FOR HEAVY BUFF

(From Our Own Correspondent)

KANPUR, 22*nd April*

During the week under review, the hides and skins market was confident. In relation to demand, supplies were ample. Demand for heavy buff was particularly strong. The main parties behind the major transactions were the local tanners, headed by Messrs. Cooper Allen. The Madras dealers were interested in lighter cow and goats generally.

The latest available quotations are: Wet salted cow 1st grade Rs. 280, 2nd grade Rs. 200 and 3rd grade Rs. 105 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 275 to Rs. 300 and 2nd grade Rs. 200 per 100 pieces; sheep Rs. 200 per 100 pieces.

KIPS IRREGULAR

(From Our Own Correspondent)

MADRAS, 23*rd April*

Shipment business in kips with the U.K. was irregular. Dressers were reported to have good stocks on hand and were able to buy the lines they were short of from spot goods with one factor or the other. Though Madras prices remained steady and U.K. factors followed prices at origin to some extent, business did not expand as anticipated by E.I. tanners here.

Arrivals of kips into the local market were moderate and clearances good at firm prices. As regards buff hides, buff calf and cow calf, business was patchy even for top marks.

Shipment business in tanned goat and sheep skins was on a limited scale and the market was quiet in consequence.

In the next tanned skins London auctions which commence on 7th May, 710,000 goat skins and 765,000 sheep skins will be on offer. As the quantities are on the heavy side, consignors expect decline in values. As shipments of tanned skins continue on a good scale, it is feared that the July auctions also may not be good. The credit squeeze in the U.K. is another deterrent against improvement in leather prices in the U.K.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, 23*rd April*

Steady conditions prevailed in the foodgrains market during the week under review, in contrast to the bearish tone witnessed in the last few weeks. The Government of India is taking a confident view of the country's overall food supply position, with nearly 200,000 tons of wheat and about 350,000 tons of rice in reserve. The volume of imports is likely to be substantially larger than in the previous year at 700,000 tons. The import of at least one million tons of wheat and an equal quantity of rice is envisaged this year, mainly for the creation of "food reserve."

Wheat average quality prices improved to Rs. 13-2 per maund. Arrivals averaged 500 maunds. Local consumers were still the main purchasers. Some outside buying enquiry from Delhi and other centres also appeared. Stock was estimated at 3 *khaties* of old quality. Gram prices eased fractionally, on increased arrivals—200 maunds daily—although prices were lower in the Punjab, but, want of loading facilities accounted for poor arrivals to this centre. Gram local quality was quoted at Rs. 10-2 and superior quality at Rs. 10-8 per maund. Barley was in good demand and, with poor arrivals, prices improved by As. 4 to Rs. 8-2. *Bejhar* was quoted at last week's level. Arrivals were still poor, with the result that there has been as yet no stock building.

Peas arrivals averaged 1,500 maunds, but outside buying enquiry was brisk and despatches aggregated 15 wagons to Madras and Bombay side in the form of pulses. Prices of peas continued to be steady at Rs. 8-12 for green quality and at Rs. 11 for white quality. Increased arrivals—at 200 maunds daily—accounted for a fall of As. 8 during mid-session in *arhar* prices to Rs. 9-12, but prices recovered towards the week-end to Rs. 10-3, due to increased outside support. *Masoor* prices also sagged to Rs. 11-4 per maund, thanks to increased arrivals of new crop.

Pulses futures advanced in all sections during the week, on bull support from east U.P. The latest prices were: Peas *jeth* Rs. 9, peas white *jeth* Rs. 9-12, *arhar jeth* Rs. 10-6-3 and *urd baisakh* Rs. 17-6, as against Rs. 8-8, Rs. 9-8-9, Rs. 9-15 and Rs. 17-4, respectively, a week before.

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

HAPUR, 23*rd April*

The sugar market continued to rule dull and depressed. Outside buying enquiry was slack, in the wake of continued increase in indigenous sugar production. The total production of sugar during the first five months of the season was 1,405,275 tons, as against 1,290,000 tons in the corresponding period last year. The total offtake during the same period was about 704,000 tons, as against 374,600 tons and the closing stocks amounted to 1,127,000 tons, as against 984,000 tons a year before. The mill delivery prices of sugar eased slightly during the week. The following are the latest available rates (per maund):

Jaswant Rs. 28-5; Simbhauli Rs. 28-5; Mowana Rs. 28; Daurala Rs. 29-8; Amroha Rs. 27-9; Bijnore Rs. 27-9; Mansoorpur Rs. 28-3 to Rs. 29; Rampur Rs. 30; retail Rs. 30 and *khandsari* Rs. 22 to Rs. 26.

After a slight improvement in mid-session to Rs. 11 per maund, ready *gur* prices eased towards the week-end to Rs. 10-12. Loading facilities were poor and despatches were negligible. Daily arrivals were small, the average being 400 maunds, and local stock is put at 115,000 maunds. The season is almost coming to a close. The latest reports indicate that germination of the new sugarcane crop is satisfactory.

Future *gur* prices eased towards the week-end after an early advance in mid-session. The latest prices as on Monday were: *Gur baisakh* Rs. 10-2-3 and *fagun* Rs. 10, as against Rs. 10-11-9 and Rs. 10-1-6 last week-end. The rates had touched the highest at Rs. 10-11-9 and Rs. 10-4-3, respectively, during mid-session.

Recent developments in respect of nutritional problems related to rice and the use of rice fields for fish culture will come up for discussion at the fifth session of the International Rice Commission to be held at Calcutta from 12th to 17th November next. According to the provisional agenda, the Commission will consider the reports of its working groups on rice-breeding, better fertilising practices, soil, water and plant relationships in rice production, mechanisation of rice cultivation, and reduction of losses through improved operational methods. It will also have before it the progress report of the Executive Secretary on the working of the Commission since its last session held in Tokyo in October 1954. The first meeting of the National Rice Commission, appointed by the Government of India with Dr. Panjabrao Deshmukh, Union Minister for Agriculture, as Chairman, to make arrangements for the forthcoming session of the International Commission was held last week. The Commission drew up a programme for organising excursions, holding an exhibition and collecting data relating to technological research.

BUREAUCRACY AND BANKS—I

(*Concluded from page* 805)

to exert and pay a price to overcome them and to master them.

Is Public Sector Free From Defects?

Have not Governments often badly bungled in their own administrative works, and in the industrial, currency, exchange, co-operative and other policies and enterprises? The scandals associated with foreign and stores purchases, the leakages and curruptions revealed in public works and public projects, and corrupt practices, known, unknown and winked at, relating to railways, revenue administration, controls, and so on, are only a few of the many thousands of instances that come to light. If the same freedom were given to the examiners of the private sector to look into the efficiency and integrity of the public sector, as is enjoyed by public administrators, the revelations will be astounding. No wonder the recent attempt in Parliament to enquire into working of public enterprises, even though for a helpful purpose, was turned down.

But Governments can do no wrong, nor their administrators. They have different rules and different code of conduct. Losses or failure in the private sector are borne by private men, and are the result of lack of experience or of bad judgment, in working, in investments or of men handling them. But losses in the public sector, although due to bureaucratic incompetancy or dishonesty, are borne by the innocent taxpayers.

Bureaucracy has several strong weapons in its armoury and many tricks up its sleeves, which it freely employs to curb criticism and to increase its importance and power: Whispering campaign, "give the dog a bad name and hang him," divide and rule, wanton use of discretionary power, patronage, titles, so on and so forth. Ordinary man easily succumbs to one or more of such pressures, attacks or blandishments. It is the wise, strong, fearless, unselfish and incorruptible who can save themselves from their bite or keep clear of their snare.

Today, with tremendous decrease in the purchasing power of money, high taxes on incomes and no counterbalancing increase in the emoluments to higher cadres in administrative services, the bureaucrat has been compelled to create compensating factors for himself, by hitting hard at private incomes, and by manœuvring to bring large sections of private business and industry under his sway. Of course, those amongst them who are corrupt have an added advantage to exploit their opportunities. There is great inadequacy of trained executive manpower, in all sectors, public and private, but still the bureaucrat goes on accepting more and newer burdens regardless of efficiency or capacity to deliver the goods. Power is what he wants, and he gets that in abundance with the State depending so much on him.

(*To be continued*)

LAND REFORMS IN THE SECOND PLAN—III

(*Concluded from page* 822)

his wife and young children, and this is facilitated by the existence of family atmosphere and the co-existence of his house and the farm at the same place. But, under co-operative farming, for a number of reasons, he has to write off this earning capacity of the family.

Thus, land reforms, undesirable from many considerations, will not be in the interest of the tenant either. While a truly democratic reform is one which benefits many without inflicting loss on any, under the reforms proposed in the Draft Outline many would lose but none would gain.

The truth is that, after the abolition of *zamindaris*, there is little room or need for land reforms, except on the side of security of tenancy and regulation of rents. The recommendations of the Planning Commission on these two aspects can hardly be contended with. It has recommended that ejectment of tenants should stop, except on grounds of non-payment of rent or misuse of land, and that rents should not exceed one-fifth of the produce of land. These two measures provide a remarkably useful means of reconciling the interests of owners and tenants. These would benefit the tenant without causing any hardship among the owners. It is, however, necessary that the provision regarding rent should be made more specific. Owners bear the fixed and variable costs of cultivation to varying degrees and should be entitled to recover their costs in addition to fair rent.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

INDUSTRIAL POLICY UNREALISTIC

THE new Industrial Policy Resolution, presented to Parliament on 30th April 1956, is as unrealistic as the second Five-year Plan, because it reflects the Government's ambitions that extend far beyond the bounds of practicability. The Government has earmarked for itself a large sector of industry. This reservation cannot be justified on the basis of either past performance or known facts about its capacity for satisfactory performance in future. The area left for the private sector is, of course, large, but, to the extent the sphere for the State sector has been widened, by including almost all the important industries, that for the private sector has got greatly reduced. Most of these cover fields where the private sector has already proved its merit. Again, of what is left for the private sector, a steadily increasing share should be set apart for development through co-operatives. The secondary importance thus attached to the private sector is absolutely unwarranted, if its excellent performance in the past, in the face of grave difficulties and under unfavourable political climate, and proved ability for the future, are any criteria. In view of this, one cannot help coming to the conclusion that the Government's approach to industrialisation is influenced more by ideology and less by pragmatism.

The assumption that "the adoption of the socialist pattern of society as the national objective, as well as the need for planned and rapid economic development, requires that all industries of basic and strategic importance or in the nature of public utility services should be in the public sector," is questionable. Such a pattern of society, in our humble opinion, can be evolved better by having the industries referred to in the private sector rather than in the public sector. In fact, ownership of all basic industries and services by the State will, in the long run, be inimical to democratic socialism, the basic principles and the fundamental rights written into our Constitution. This will be more so because of the types of land reform and land management that are being actively contemplated. The entire rural area is sought to be brought under a type of co-operative movement which is foreign to all accepted principles of co-operation. The future co-operative movement will, for all practical purposes, be no different from collectivism, as the guiding star will be the Government and not the elected members of the societies. It is this very type of co-operative societies that will function in the sphere of industries earmarked for the private sector. A beginning in this direction has already been made in sugar and cotton textile industries. The ultimate outcome of all this will be State capitalism, with all its evils. A sort of socialism may come to prevail for some time, but it may not survive for long, considering that India is a relatively underdeveloped and young democracy.

The resolution observes that "it is urgent to reduce disparities in income and wealth which exist today, to prevent private monopolies and the concentration of economic power in different fields in the hands of small numbers of individuals" and that the "public sector must expand," in order to achieve these objectives. It is hard to understand in what way the ownership and working of basic industries by the private sector *in a regulated economy* is incompatible with these objectives or will stand in the way of their realisation. It has been possible to achieve these objectives in other democratic countries and one does not see why it should be impossible in this country. If the Government is vigilant, has a fairly incorruptible civil service and administration, follows a fiscal policy that will encourage the growth of *entrepreneurial* class, and applies its regulatory powers with diligence and discretion, so that the spirit of venture might not be frustrated, there is no reason why monopolies and concentration of economic power cannot be avoided, even though heavy industries and/or basic services may happen to be in the private sector. The qualifications prescribed here are by no means unreasonable or impracticable of fulfilment. Only, they require certain qualities in administration. And, in any case, these qualities would be required in a greater degree, if the State itself were to own and operate successfully complicated industries as is now proposed.

It is equally hard to appreciate the argument that State-ownership or State dominance over basic and strategic industries and services will not lead to concentration of economic power in a few hands or to monopolies. On the contrary, in a country like India, where democratic traditions have not taken firm roots, where adult franchise exists side by side with 83.4 per cent. illiteracy, where no qualifications are prescribed for persons who seek to represent the people in Parliament and State Legislatures, and where hero-worship is still quite common, the chances of these evils, if evils they are, growing from strength to strength are greater than when the industries in question are in the hands of the private sector. The only difference will be that, instead of there being private monopolies, there will be State monopolies, with concentration of economic power in the hands of a few politicians, instead of business men. Since the politicians will be relatively inexperienced in the art of industrial planning and management, the real power will be in the hands of bureaucrats. State monopolies and concentration of economic power in the hands of politicians are, it is needless to add, more dangerous to the common man than private ownership, because there will be no scope for competition and redress of grievances.

Even if it is conceded for the sake of argument that all these misgivings are unwarranted, the fact remains that the Government has no personnel or experience to establish such a large variety of industries as is listed in Schedule A of the policy statement. Further, a democratic Government, by its very nature, cannot be as successful in establishing industries speedily or in running them profitably as the private sector. It may be argued that the private sector, too, is deficient in personnel and defective in certain respects. But the private sector can solve the personnel problem far more quickly than the Government. As for the defects, their elimination is one of the duties of a modern Government.

Another argument mentioned in the resolution in support of the prominence given to the public sector is that the quantum of investment required for establishing certain industries is so large that the private sector cannot cope with it, with the result that, if these industries were left to the latter sector, they will not come to be established in the near future. This is a very subtle argument, in that the existing state of the capital market imparts considerable strength to it. But it must not be forgotten that the Government itself has been responsible for the lack of sufficient resources in the private sector. By taxing the people to the hilt, by not taking satisfactory steps to keep costs at a reasonably low level, by issuing statements of a disquieting nature to investors, by nationalising the major part of institutional investors, and by not providing timely assistance to risk-bearing industries (such as automobiles, shipping and shipbuilding) started by groups of individuals, the Government has crippled the private sector's capacity to establish heavy industries. Now to quote this disability as an argument against the private sector tantamounts to adding insult to injury.

It is not suggested that the State should not enter the industrial field at all. Nor is it suggested that, in the prevailing conditions in India, some of the heavy industries contemplated in the second Plan can be brought into being without active State assistance or State initiative. To say so will be to court the same criticism that has been levelled against the Government at the outset, namely, lack of realism. What is suggested is that the sphere earmarked exclusively for the State is far bigger than it can manage and that it could have conveniently placed most of that in the category meant mainly for the private sector. It is true that the resolution makes it clear that the division of industries is not watertight and that, in appropriate cases, the private sector may be allowed to manufacture an item falling even under Schedule A. But what will happen in actual practice is that the private sector will feel

hesitant to take up the industries exclusively meant for the public sector, with the result that the pace of industrialisation will not be as rapid as is required. This is exactly what happened in the iron and steel sector during the period from 1948 to 1955 and is still happening in the coal industry.

This comment holds good in regard to the industries in Schedule B also. These are industries which can be developed by both private enterprise and the State either independently or in co-operation between the two. The fear of unfair competition by State enterprises or of having to compete with such enterprises when necessity demands will deter business men from entering this field and thus slow down the rate of progress. In this context, the following quotation from the speech of the World Bank President, Mr. Eugene R. Black, last year, is quite pertinent:

"..... Rare exceptions do not disprove the often illustrated rule that it is not in the nature of Government to act with the flexibility or the attention to business considerations that is required of good industrial management. And—successful or not—so long as the enterprise stays in Government hands, it does not stimulate the growth of similar enterprises, because private investors are not willing to try to compete with Government. The net result of these State ventures, more often than not, is to restrict the growth of production or, in other words, to defeat the very purpose they seek."

Even after the reservation of a formidable number of industries under Schedules A and B, there is no certainty that the State will not enter the field left for the private sector. More than once in the resolution, the Government categorically asserts that "it is always open to the State to undertake any type of industrial production." There was, of course, a similar reservation in the policy announced in 1948 also, but it was subject at least to one condition, namely, that it would enter only those industries the progress of which in the private sector was unsatisfactory.

The revised Industrial Policy Statement does, however, contain a few observations soothing to the private sector. After emphasising that this sector will have to fit into the framework of the social and economic policy of the State and will be subject to control and regulation in terms of the Industries (Development and Regulation) Act, it says:

"The Government of India, however, recognise that it would, in general, be desirable to allow such undertakings to develop with as much freedom as possible, consistent with the targets and objectives of the national Plan. When there exist in the same industry both privately and publicly owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them."

In another place, the Statement observes:

"It will be the policy of the State to facilitate and encourage the development of these industries (that is, those falling outside the Schedules A and B) in the private sector in accordance with the programmes formulated in successive Five-year Plans, by ensuring the development of transport, power and other services, and by appropriate fiscal and other measures. The State will continue to foster institutions to provide financial aid to these industries, and special assistance will be given to enterprises organised on co-operative lines for industrial and agricultural purposes. In suitable cases, the State may also grant financial assistance to the private sector. Such assistance, especially when the amount involved is substantial, will preferably be in the form of participation in equity capital, though it may also be in part in the form of debenture capital."

The private sector will no doubt feel grateful to the Government for these small mercies. In fact, it is these observations, as well as the assurance that there will be no rigidity about the division of industries into three categories, that have induced a section of industrialists to hail the statement as a liberal and realistic document. Further, this compliment to the Government stems from a sense of relief that the policy has not turned out to be as bad as was once feared, as well as from the realisation that it is futile to expect anything better from the Congress Party which has already travelled a long way towards the left. It is also possible that behind this sense of satisfaction lies the impression that the tasks facing the Government are so stupendous that it will have neither the time, nor the resources—finance and personnel alike—for taking up all the industries reserved for the public sector and that, therefore, the room provided for flexibility will turn out to be in their favour. This may be a practical way of looking at the whole thing, but whether all this is wishful thinking or not events alone will show.

The Policy Statement is also notable for the absence of any time limit and any reference to nationalisation. This feature adds to the uncertainty and lack of definiteness caused by the option given to the Government to reduce or expand the sphere for the private sector. If rigidity is a defect, lack of precision is no advantage. It is typical of the Congress Party, which believes in keeping its economic policy delightfully vague, so that it can be changed according to circumstances. In fine, the Party has no firm convictions of its own and a country that depends upon such a Party will have to pay a heavy price for its economic progress.

SOIL CONSERVATION

THE awful immensity of the problem of soil erosion was vividly brought home by the Union Agriculture Minister, Dr. Punjabrao Deshmukh, when he pointed out, in the course of his address at the States Ministers' Conference at New Delhi last week, that, if soil continued to be depleted as now, the land under cultivation would be reduced to 29 per cent. of the present acreage in another generation. This, in essence, is the problem. Either the country makes an all-out effort at preserving the basic capital on which its economy rests, namely, land, or it resigns itself to the certain fate of a near-total loss of its land wealth and decides also to write off the crores of rupees sunk in erecting the large river valley projects. It is not merely that the problem is large, but it calls for urgent solutions implemented with tenacity of purpose. The country must win the war against the ravages on land caused by nature and man alike.

Indeed, it is difficult to say who is the greater sinner against land—man or nature. Perhaps, both must share the blame equally. The wanton destruction of forests, axe-cultivation by the tribes and failure to prevent overgrazing, are all man's abetment in the crime against soil fertility. Nature has been no less cruel. High winds and heavy downpours, together with the rivers and streams, have been responsible for the continuing process of the erosion of soil. The rich alluvium of the soil, along the banks of the rivers and streams, is being steadily lost. Smiling fields of corn, green pasture and fertile land are being gradually reduced to soil of poor fertility and then to uncultivable land. Dr. Deshmukh put the truth bluntly enough when he said that the country would not be able to "maintain the satisfactory food position, attained during the first Five-year Plan, unless effective steps are taken to plan and execute soil conservation measures on a country-wide scale quickly and efficiently." If, in the absence of soil conservation measures, it would be difficult even to maintain food production at current levels, it would be obviously much more difficult to reach even the target of 15 per cent. increase in food production provided in the Draft Outline of the second Plan, not to speak of the 40 per cent. increase as suggested by the Deputy Chairman of the Planning Commission and endorsed by the National Development Council, this week. Mr. Nehru's statement that, "in a sense, the whole Plan depends upon food being relatively abundant and the price of it not being high" should give a new sense of urgency to soil conservation which could play an invaluable role in food production.

It is gratifying to note that the Union Government is alive to the dangers implicit in the process of soil erosion, but it is doubtful whether the State Governments also are equally so. It is after all the State Governments which have to implement the schemes drawn up by the Central Government. The outlay on the programme for soil conservation has been stepped up from Rs. 3.25 crores in the first Five-year Plan to Rs. 26.83 crores in the second Plan. In most of the States, boards have been set up for tackling the problem. There is also a central board. A number of research-*cum*-demonstration centres has been established. Individual projects have been taken in hand in the States, the Centre providing in many cases financial assistance. A separate Directorate of Soil Conservation has been set up under the Agriculture Ministry. Thus, as Mr. V. T. Krishnamachari said, the "preparatory" stage is now complete, so that it should now be possible to "organise concerted efforts all over the country for dealing with the evil of soil erosion."

The work of the desert afforestation research station at Jodhpur will certainly be watched with interest. This station, we are told, will be expanded under the second Five-year Plan for developing forests and pastures for the stabilisation of the Rajasthan desert. The arid sandy tract of the Rajasthan desert, it may be mentioned here, covers an area of about 80,000 square miles. Besides undertaking investigations into the silviculture of indigenous species and the possibilities of introducing exotic arid-zone species, the research station has maintained a large store of seeds of suitable species for free distribution and has also given demonstrations of methods of desert control. It has established shelter-belts along selected roads and railway lines, organised forest plantations on different types of sand, and set up a forest nursery for distributing plants. The Central Soil Conservation Board has now set up research-*cum*-demonstration stations at Dehra Dun, Kotah, Vasad (Bombay State), Bellary and Ootacamund. The Board has also started training courses, with a view to making an adequate number of trained personnel available for soil conservation in the country.

Soil conservation is of particular significance to land where irrigation is not possible; 50 to 60 per cent. of the cultivated land in this country belongs to this category. Measures for the conservation of moisture in the soil in dry areas, Mr. Krishnamachari said, fell into three classes: (1) Those which have to be undertaken in the cultivators' holdings, namely, contour-bunding, gully-plugging and strip-cropping; (2) those which require collective effort in a village as a whole, namely, control of erosion in the catchment within the village limits of small streams, control of grazing or raising a field or fodder reserve for the village; and (3) common work for groups of villages in the area which forms the catchment of a stream or streams. The first of these measures should be the responsibility of the owner of the land, the second that of the village as a whole and the third that of a group of villages. In order to implement the programme, Mr. Krishnamachari emphasised the need for suitable legislation designed to apportion the responsibility for common works and to arm State Governments with necessary powers to impose obligations on owners to carry out soil conservation programmes. So far as river valley schemes and multi-purpose projects are concerned, he rightly warned that failure to prevent denudation of forests and the choking of river beds with sand would reduce the effective life of dams and reservoirs constructed at enormous cost.

Clearly, the success of the programme would depend on the availability of adequate data on soil, agronomy, forestry, and engineering on which the programme has to be based, on trained personnel to carry out the programme and, above all, on the degree of co-operation which the rural communities are able to give. The authorities concerned, as Dr. Deshmukh said, should give their early attention to the collection of all necessary data. It would appear that an attempt has been made by the Central Soil Conservation Board to train the personnel who could undertake or guide the work. As regards people's co-operation, Mr. Krishnamachari said that the entire programme should be so organised as to become the programme of the people. He added that the National Extension Service was "the appropriate agency for this purpose." It is true that the N.E.S. blocks would be the ideal regions for trying the experiment in soil conservation. But it is sad to note from the report giving the appraisal of the work in these projects, issued this week, that little progress has been made in this direction. If this is the state of affairs even in these pockets of rural enlightenment, how much more difficult should it be to implement the programme in other areas? Indeed, this frank admission in the appraisal report on community projects should make the authorities redouble their efforts at winning the co-operation of farmers in the national task of soil conservation.

After reviewing the work of soil conservation, the Conference expressed the view that proper land-use practices and soil conservation methods should be introduced in all farmlands with the co-operation of the farmers. It recommended that the staff of agricultural departments should be thoroughly trained in this important aspect of farm management through a phased programme of agricultural education in schools and colleges. It set up another Committee of Ministers, with Dr. Deshmukh as Chairman, to examine the question of financial assistance to the States for soil conservation work. It is to be hoped that this Committee, besides merely allocating finance, will also take steps to ensure that the State Governments take a live interest in the problem and that the grants are effectively used for the purposes they are intended to serve.

SELECT COMMITTEE ON COMPENSATION TO LIFE INSURERS

INTERNATIONAL WHEAT PACT SURVIVES

THURSDAY, 5 P.M.

THE City markets have passed another week of listless conditions. The share market has placed a constructive interpretation on the revised industrial policy of the Government. Equity values are, therefore, a shade higher. In bullion, a minor bull squeeze is developing. Ready gold has crossed the level of Rs. 107 to close at Rs. 107-1; over the week, this rate shows a gain of As. 12. Silver has wound up with a net rise of Rs. 2-9 in the spot section and of Re. 1-13 in the forward. The Bullion Association authorities have allowed trading to go on simultaneously in two forward settlements in the hope of easing the pressure by bulls, but this may lead to fresh complications later. It will be recalled that a similar experiment last year encouraged the bears to hammer the contract in the hope that the slack season during the monsoon months would force the bulls to put their hands up in despair. This calculation did not prove correct and futures trading in bullion had to pass through the severest crisis in its history. The money market has undergone no perceptible change. Demand for bank credit is still keen, the volume of floating funds is next to nothing and the market continues to depend upon the lender in the last resort for supply. A Bill has been introduced in Parliament giving more powers to the Reserve Bank to regulate the volume of credit and seeking to revalue the gold holdings, of the Reserve Bank and lower the minimum level of currency reserve in foreign assets and gold. Among the commodities, cotton has been ruling firm and so also oilseeds, with the exception of linseed. The Government has not yet succeeded in arresting the upward trend in the price of groundnut or groundnut oil. Prices of foodgrains have declined further but only by a fraction again. The steady deterioration in the food situation has compelled the Government to open as many as 638 fair-price shops in Calcutta. It has also opened the eyes of the Government to the necessity for giving greater prominence to agriculture than it has done in the Draft Outline of the second Plan.

MARKET GOSSIP

• • • •

The Government's firm declaration that it has no intention to nationalise banks, its decision not to place any restriction on the spindleage of cotton mills and its studied silence on nationalisation in the revised industrial policy statement are interpreted in knowledgeable circles as signs of a welcome change in its attitude towards the private sector. While it is not denied that the industrial policy statement is not free from incongruities, or that it could have been drafted with a greater sense of reality than has been done by the Government, it is pointed out that the fact that it could have been easily worse is itself a cause for satisfaction. These circles feel that the Central Government has begun to give second thoughts to its economic policy, that it is no longer keen on nationalising steel, coal and other heavy industries and that, as years pass, it will give more and more freedom to the private sector. This will, however, depend to a considerable extent on the private sector itself. If business men behave well and prove themselves to be a model of good citizens, they will be assured of a safe and permanent place. In other words, business men must, if they are to hold their place in the economic sphere, produce efficiently, keep prices at reasonable levels, have decent labour relations and regard profits as something to be invested in further development and creation of employment opportunities, instead of diverting it to inflate their personal incomes and expenditures. It is to be hoped that business men will conduct themselves on these lines and thereby induce the Government and the Congress Party to give up their policy of distrust and disregard towards the private sector.

• • • •

Meanwhile, it is distressing to find that the Union Government has, on the whole, been unable to prevent the Mysore State Government from wasting its resources on nationalising the Kolar gold mines, instead of utilising them for more useful purposes. Any such plea from the Union Government will, of course, sound hollow. Having itself been tempted by the dazzling diamonds at Panna, the Union Government cannot possibly ask the State Government not to succumb to the temptation of owning the mines containing glittering gold. What is sauce for the goose is sauce for the gander. Thus, the only two issues are compensation and the future set-up for the working of the mines. In the Lok Sabha, the question of compensation was raised. But the Minister for Natural Resources, Mr. Malaviya, refused to say what compensation the companies demanded. The chief controversy centres round the principle of compensation itself. The companies want it on the basis of assets *less* liabilities, while the State Government would like to base it on the market value of the shares.

In a Press interview at Bangalore, Mr. Arthur H. E. Taylor, Managing Director and the chief spokesman on behalf of the Companies, confirmed that the companies had submitted that compensation should be based on an impartial valuation by experts of the assets *less* liabilities with due recognition for loss of earning power resulting from the premature termination of the leases, while the State Government was inclined to base the compensation on the recent market value of the shares. The companies had pointed out, he said, that the share market was a sensitive barometer and that the market quotations of the Kolar gold mining shares had been seriously and continuously affected and depressed ever since 1939 by special imposts and references to nationalisation, to doubling of royalty, etc., and that to take the depressed and prejudiced share values as a basis for compensation would be to inflict a double injury on the companies and investors. Mr. Arthur Taylor said that, in this connection, it was incorrect to imply that the mining companies' claim for compensation amounted to Rs. 2 crores. As already stated, their claim was based on the value of the assets *less* liabilities and loss of earning power due to the premature termination of the leases, which amounted to a figure between Rs. 6 crores and Rs. 8 crores. He added that far from being "anxious to be relieved," as reported in certain sections of the Press, the mining companies were anxious to get on with their job—which is that of producing gold. However, the present atmosphere of uncertainty, he said, was not conducive to the efficient working of the mines, was unsettling to the staff, and had created a condition in which long-term planning by the management was impossible. It was in this context that the mining companies were anxious to reach an early decision regarding compensation and the other matters arising out of the proposal to nationalise the mines.

As regards the future set-up, the State's Home Minister, Mr. H. Siddaveerappa, stated, in the course of a recent Press conference, that an autonomous body like a corporation would have to be set up. He added: "We have also made it clear to Messrs. John Taylor and Sons that, if by a separate agreement, we come to an understanding we have no objection to continue their services for such time and under such conditions as we deem necessary. We do not want to create any bitterness in the minds of anybody. I expect we will remain as friends even after this nationalisation." Mr. Taylor, on his part, revealed that the Mysore Government had asked the managers if they would be prepared to continue to manage the mines after nationalisation. He further revealed that the managers had indicated their willingness to continue to run the mines provided they were satisfied that the compensation was acceptable to the shareholders and the terms offered to the staff were fair and reasonable.

It is to be hoped that the State Government, if it must nationalise gold mining at all, will at least ensure that the State, in the national interest, retains the services of the expert management which has guided the mines all these years and sustains the confidence of investors by paying reasonable compensation.

Investors in insurance scrips have for some time now been awaiting with keen interest the decision of the Select Committee on the provisions relating to compensation in the Life Insurance Corporation Bill. Although the final version and the full text of the Committee's report have not yet been received, Press reports from New Delhi point out that some modest improvement has been effected in the original provisions. Briefly, the original Bill provided for compensation either (1) at the rate of 20 times the annual average surplus allocated to shareholders in the last two actuarial investigations prior to 1st January 1955 or (2) 10 times the annual average surplus allocated to shareholders in such valuations *plus* the paid-up capital or assets equivalent thereto or in the case of a composite insurer, that part of the paid-up capital or assets transferred to the Corporation, whichever is greater. Insurers had represented that the formula would not take into account the increase in business in more recent years. Thus, if a company had two actuarial valuations at the end of, say, 1950 and 1953, the surplus resulting from its business in 1954 and 1955 would not be taken into account.

Realising that such a procedure would be unjust to the companies concerned, the Select Committee has now devised a somewhat more equitable formula. Under this formula, the companies will be given compensation at the rate of 20 times the annual average of the surplus in the last actuarial investigation prior to 1st January 1955, multiplied by a "figure which represents the proportion which the average business in force during the calendar years 1950 to 1955 bears to the average business in force during the calendar years comprised in the period between the date on which the actuarial investigation immediately preceding the earliest of the relevant actuarial investigations was made and the date on which the last of such investigations was made."

The alternative form of calculating compensation is to give half the amount payable under the above formula *plus* the paid-up capital or assets equivalent thereto, or, in the case of a composite insurer, that part of the paid-up capital or assets equivalent thereto which have been transferred to the Corporation. Insurers will be given compensation under either of the two formulæ, whichever is more advantageous to them.

The formula now devised is a slight improvement over the original one, in that some attempt has been made to take into account the surplus arising from the business done in more recent years. Nevertheless, it is cumbrous as compared with the straight "projection" method suggested by the insurers. Obviously, the Select Committee has rejected the "projection" method, on the ground that it would have meant a somewhat larger compensation to the companies. This smacks a little too much of higgling in the market place.

Be that as it may, the Committee has stuck to the original 5 per cent. formula in respect of the proportion of the surplus allocated to shareholders. Thus, even if a company has allocated more than 5 per cent. of the surplus to shareholders, it will be deemed to have distributed only 5 per cent. for purposes of calculating the compensation. If an insurer has not allocated any such surplus to shareholders or has allocated less than 3½ per cent. of any such surplus, the insurer will be deemed to have distributed 3½ per cent. of the surplus. This is a slight improvement over the original Bill which had provided for a floor of only 3 per cent.

The ceiling for the proportion of the surplus allocated to shareholders has thus been kept at 5 per cent., even though the law gave the companies the right to allocate 7½ per cent. of the surplus. The injustice to shareholders involved in the ceiling on the shareholders' share of the surplus now prescribed, namely, 5 per cent., has been effectively brought out by the minute of dissent appended to the report of the Select Committee by Mr. Tulsidas Kilachand and Mr. G. D. Somani. They have pointed out that only a few companies have allocated less than 7½ per cent., the limit specified in the Insurance Act. The companies have done so for various reasons, such as, to attract more business and to conform to their articles of association. As long as the percentages taken into consideration for calculating the compensation payable to such companies are the same as or higher than those at which the respective companies appropriated their valuation surpluses for the benefit of their respective shareholders, no injustice, it is argued, would be done to them. On the other hand, injustice would be definitely meted out to companies, if the percentages taken into consideration are less than those at which they appropriated their respective valuation surpluses for the benefit of their shareholders. The minute of dissent further contends that share values had got adjusted on the basis of the arrangements in regard to the division of the valuation surplus between policyholders and shareholders, and it would be unfair to those shareholders who had purchased shares on the basis of such arrangements.

The limit of 7½ per cent. laid down in the Insurance Act, 1938, it is stated, is itself low, as compared to the limits prevailing even in advanced countries. In the U.K., there is no statutory limit, but the country's largest company, namely, the Prudential, has allocated 8 to 10 per cent. In India, the conventional limit was 10 per cent, up to the year 1950, after which it was reduced statutorily to 7½ per cent. The upper limit of 5 per cent. laid down in the original Bill and endorsed by the majority, according to the dissenting minute, is arbitrary and unfair. The signatories to the minute of dissent have accordingly urged that the ceiling should be raised to at least 6¼ per cent. But they feel that the equitable basis for any company would be the actual percentage appropriated by that particular company in its last valuation.

There is yet another consideration which, according to Mr. Kilachand and Mr. Somani, militates against the interest of the shareholders of existing companies. In valuing the surpluses, the assumptions regarding mortality figures, interest yields and expense ratios taken into account, it is pointed out, had always been on a conservative basis; the margin for this purpose, according to the representations made by life insurers, is of the order of about 20 per cent. They deplore that no adjustment has been made on this account in the amount of compensation payable. Finally, they have suggested that compensation should be made payable within a reasonable time, say, 31st December 1956, and that the amount of compensation should bear interest at 3½ per cent. from 19th January 1956, the date of acquisition of the business, till the date of payment.

The question of compensation to insurers is more a moral than an economic issue. It is the touchstone on which the people will test the Government's assurance that it will take no unfair advantage of the Constitutional amendment by which the issue of compensation has been placed beyond the purview of the courts. When the judiciary is robbed of the powers which, in a democratic country, would belong to it, then the least that the Government should do is to demonstrate that it uses the powers in the same way as a judicial tribunal would have done. The Government is in the enviable position of being the sole buyer and the insurers in the unenviable position of sellers, not by choice but by compulsion of the buyer whom they cannot resist. It behoves the Government to be just, if not generous.

• • • •

The question of maximum and minimum prices under the International Wheat Agreement which had proved a thorny issue till now, has at last been settled. The Executive Committee of the U.N. Wheat Conference, which met at London last week, drew up a draft pact providing for a price range of $1.50 at the minimum and $2 at the maximum for No. 1 Manitoba Northern wheat in bulk in store Fort William-Fort Arthur. This range compares with $2.05 (maximum) and $1.55 (minimum) in the current (1953-56) agreement which expires on 1st July 1956, and $1.80 (maximum) and $1.50 (minimum) in the first (1949-53) agreement.

Like the current agreement, the new agreement will also be for a period of three years (1956-59). The objectives remain the same, namely, to assure a market for wheat-growing countries and a source of supply for the importers. If the free market price rose above the maximum, the importing countries could call upon the exporters to deliver the agreed quantities at the maximum price. Similarly, if the price fell below the minimum, the exporters could ask the importers to buy the agreed quantities at the minimum price. The agreed or guaranteed quantities, to which the exporters have agreed, aggregate 303 million bushels, as against 395 million bushels in the current and 581 million bushels in

EQUITIES GAIN GROUND

FAVOURABLE REACTION TO NEW INDUSTRIAL POLICY

(From Our Own Correspondents)

BOMBAY, *3rd May*

AFTER three weeks of quiet trend and moderate recession in equity values, the share market struck an enthusiastic note during the week under review. There was renewed buying on a fairly good scale and equity values staged a recovery. Operators, however, were cautious in extending their commitments and support from buil operators was not also very aggressive, with the result that the recession in equity values noted in the previous three weeks could not be fully made good.

The main inspiration for the market during the week was provided by the enunciation of the Government's industrial policy which, contrary to earlier fears, proved to be more favourable to the private sector. The main feature of the policy was its flexibility and it did not tie the Government down to any rigid doctrinaire approach. Market circles would appear to have derived considerable encouragement from the fact that the policy provided ample scope for private enterprise to expand. Another encouraging feature of the policy was that the heavy State enterprises would have to depend to a large extent on private enterprises for their requirements of raw materials. Absence of any reference to nationalisation of industries was yet another feature of the policy statement. The rejection of a private member's resolution in the Lok Sabha for the nationalisation of banks provided a bullish factor for the market. The Minister's reply to the debate on the above resolution gave the indication that the Government was not keen on wiping out the private sector, as it was committed to a mixed economy and the nation depended for 90 per cent. of its wealth on the private sector.

The market remained officially closed today, being the 21st day of Ramzan.

In the steel section, after an early reaction from Rs. 239-4 to Rs. 236-12, Tata Ordinaries rallied to Rs. 245-4 on Tuesday. The higher level, however, attracted profit-taking in view of the holiday today and fortnightly settlement tomorrow and the scrips closed yesterday at Rs. 243-12. Indian Irons came up from Rs. 34-5½ to Rs. 34-15½ and finished at Rs. 34-9½.

Textile shares shaped well on revival of buying induced by encouraging performance of the industry. Despite the Chairman's rejection of the proposal to issue bonus shares, at the annual general meeting held last week, Bombay Dyeings advanced from Rs. 627-8 *cum-div.* (final div. Rs. 17-8) to Rs. 625 *ex-div.*, following the denial of the Chairman of the recent rumours regarding the change in the managing agency of the Company. The closing was, however, lower at Rs. 620-10. Centurys shot up from Rs. 518 to Rs. 530-4, before finishing at Rs. 528-8. Kohinoors wound up with a gain of Rs. 10 at Rs. 358. Central Indias recorded a handsome gain of Rs. 7-8 to Rs. 139. Finlays closed better at Rs. 329 *ex-div.*, as against Rs. 348 *cum-div.* (div. Rs. 20). Gokaks put on Rs. 2-8 at Rs. 229-8 and Indu Ordinaries As. 6½ at Rs. 12-10½. New Citys held ground at Rs. 162-8, while New Greats lost Rs. 3 to Rs. 232-8. Shree Niwas picked up Rs. 3-12 to Rs. 221-4 and Simplex Rs. 4-8 to Rs. 213-8. Standards rose by Rs. 7-8 to Rs. 417-8, Svadeshis by Rs. 2-4 to Rs. 222 and Tata Mills by Re. 1-8 to Rs. 53.

Bank shares, which had remained neglected in the previous week, came in for good support, following Parliament's rejection of the private member's resolution to nationalise banks. Bank of Indias were done Re. 1-8 higher at Rs. 155-4. Central Banks improved by Rs. 3 to Rs. 50 and their new fully paid-up shares by Re. 1-4 to Rs. 51. Punjab Nationals were done at Rs. 46 *ex-div.*, as against Rs. 48 *cum-div.* last week. United Commercials changed hands Re. 1-8 higher at Rs. 51.

Insurance shares were neglected and transactions were few and far between. New Indias had some business As. 8 higher at Rs. 40-4. British India Generals gained As. 2 to Rs. 13-6. There was hardly any business in other counters.

The electricity section was featureless and fractional changes were recorded in prices. Ahmedabad Electrics were done As. 5 lower at Rs. 100-10. Bombay Suburbans were unchanged at Rs. 115. Surat Electrics shed As. 10 to Rs. 120. Tata Hydros were bid Re. 1 higher at Rs. 126 *ex-div.*, as against Rs. 129 *cum-div.* (interim div. Rs. 3). Tata Powers showed no change at Rs. 1,342-8, while Andhra Valleys picked up Rs. 10 to Rs. 1,245.

The miscellaneous section followed the general pattern of the market. Sugar shares provided the highlight of the section with smart rises on keen buying. Belapurs shot up from Rs. 219 to Rs. 229-4. Phaltans advanced by Rs. 7-8 to Rs. 148-8, on rumours regarding bonus issue. Walchandnagars gained Rs. 3-12 to Rs. 246-4. Bhopal Sugars, however, provided an exception with a drop of Rs. 2 to Rs. 13. In the cement group, A.C.Cs. were erratic, moving between Rs. 214 and Rs. 210-12, but closed a rupee better at Rs. 213-4. Digvijays gathered Rs. 2-8 to Rs. 187-8. Engineering and mining shares presented a steady front, though the rise in values was not very marked. Alcocks gained but Re. 1-4 to Rs. 340. Tata Locomotives advanced by Rs. 2 to Rs. 152 and Premier Constructions by Re. 1-8 to Rs. 172-12. Mahindra and Mahindras were unchanged at Rs. 14-12 and Larsen and Toubros at Rs. 15-9. Shivrajpurs changed hands Re. 1-4 higher at Rs. 106, while Indian Coppers held their own at Rs. 6-9. B.B. Petrols were a shade higher at Rs. 4-1¼.

In the shipping and transport group, Scindias moved up from Rs. 17-9 to Rs. 18, but finished lower at Rs. 17-12. Great Eastern Shippings were done at the self-same rate of Rs. 17-8. Bharat Lines were neglected at Rs. 74. Hindustan Motors shaped well with a rise of As. 7 to Rs. 9-11 and Premier Automobiles also shot up by Re. 1-8 to Rs. 90. Among miscellaneous industrials, Bombay Burmahs (old) rallied from Rs. 622-8 to Rs. 645 before closing at Rs. 641-4. National Rayons came up from Rs. 232-12 to Rs. 248, but finished at Rs. 245-12. British India Corporations were in demand and advanced by As. 8 to Rs. 11. Tata Chemicals gathered As. 8½ to Rs. 17-15½ and Tata Oils Re. 1-4 to Rs. 47-12, while Wimcos were unchanged at Rs. 201-4.

• • • •

Calcutta Stock Exchange

CALCUTTA, *2nd May*

The Calcutta Stock Exchange put on a hesitant appearance in the first three sessions of the week, but picked up strength on Monday which persisted till the close today. The initial hesitancy was due to the tendency of operators to await the discussions on the second Plan at the meeting of the National Development Council and the enunciation of the new industrial policy. Buyers were not inclined to enter into large commitments, thanks to expectations of a cut in the Plan's outlay. The Union Finance Minister's resignation (held in suspense) was another factor which reduced the buying interest of operators. Consequently, deals put through in equities were restricted and prices tended to look down. The sentiment of the market, however, distinctly improved on Monday, reflecting the favourable reaction of operators to the new industrial policy announced by the Prime Minister in the Lok Sabha. The operators were encouraged to find that, although no assurances against nationalisation in the future have been given, the private sector has been allotted a large field. This factor, as also advices from Bombay that there would be no change in Bank rate, induced good buying support and equity values staged a recovery. The recovery would have been more marked but for fears of rigorous enforcement of rules for bonus issues and additional taxes, so that, over the week, the prices of most of the equities were lower.

Sectionwise, coals were quiet. Bengals dropped Rs. 6 to Rs. 529. Equitables fell by As. 10 to Rs. 28-8. Raneegunges moved down by As. 9 to Rs. 11-3. Unions declined by As. 6 to Rs. 12-4 and Burrakurs by As. 5 to Rs. 13-13.

In the textile section, Cawnpores were quiet at Rs. 8-4, as also New Victorias at Rs. 2-6. Elgins were done at Rs. 27-2, same as last week.

The volume of business passing in the jute section was extremely low. Nationals receded by As. 3 to Rs. 23-3, but recovered to Rs. 23-6 today. Ganges lost a rupee to Rs. 66-8. Chitavalsahs and Presidencies eased by an anna each to Rs. 14-4 and Rs. 5-6, respectively. Anglo-Indias, however, advanced by Rs. 3 to Rs. 173 on special support. Barangores were also favoured a rupee higher at Rs. 134.

Among mining company shares, Karanpura Developments received moderate attention which pushed up the rate to Rs. 27-10, as against Rs. 25-7 last week-end. Indian Coppers shed an anna to Rs. 6-9. But Burma Mines elicited good enquiries and spurted by As. 9 to Rs. 4-1.

NETHERLANDS TRADING SOCIETY

(Nederlandsche Handel-Maatschappij, N. V.)

BANKERS

Established by Royal Charter 1824

Paid-up Capital:

Nf. 60.030.000 (= £59.00.000)

Reserve:

Nf. 30.015.000 (= £29.50.000)

Extraordinary Reserve:

Nf. 10.000.000 (= £9.50.000)

Head Office: **AMSTERDAM**

Banking Transactions of every Description.

Bombay: 14, VEER NARIMAN ROAD.
Calcutta: 18A, BRABOURNE ROAD.

In the engineering section, Indian Irons, after declining by As. 9 to Rs. 34-2, recovered to Rs. 34-9. Britannia Buildings were supported higher at Rs. 8-2, as against Rs. 7-5 early in the week. Jessop & Cos. moved up from Rs. 35-9 to Rs. 36-2 and, after receding to Rs. 35 yesterday, recovered to Rs. 35-4 today. Texmacos shed an anna to Rs. 23-8. Richardson and Cruddas declined by As. 9 to Rs. 27-8. Burn & Cos. climbed down by Rs. 6 to Rs. 349. Indian Standard Wagons were quiet at Rs. 181.

Among tea shares, Lackatoorahs were sought Rs. 4 higher at Rs. 32. Hantaparas, however, dropped Rs. 8 to Rs. 336. Tezpores also declined by a rupee to Rs. 25-13. Methanis changed hands at Rs. 24-8, as against Rs. 25-8.

Miscellaneous industrials lacked support. Electric Constructions gave way from Rs. 13-5 to Rs. 13-1. Shree Gopal Papers fell from Rs. 18-2 to Rs. 18-1. National Carbons were done at Rs. 26-4, same as last week.

• • • •

Madras Stock Exchange

MADRAS, *2nd May*

The Madras Stock Exchange came in for restricted activity during the week under review. Although the new industrial policy has been welcomed, the operators preferred to be cautious and were reluctant to commit themselves. Consequently, except for some select scrips which met with some support, the rest ruled rather quiet. Business done in the market was limited and prices fluctuated within a narrow range. There was a sprinkling of both minor gains and losses over the week.

There were some dividend announcements this week also. Coonoor Teas declared a final dividend of 15 per cent., thereby making a total of 25 per cent. for the year ended 30th September 1955, as against 45 per cent. for the previous year. The scrip was dull at Rs. 28-14 *cum-div.* Parksides declared an *interim* dividend of 5 per cent. for the year ended 30th June 1956. The total dividend for the previous year was 25 per cent. The share was quoted lower at Rs. 20-3 *cum-div.*, as against Rs. 20-12.

Textiles witnessed some narrow fluctuations. Loyals gathered As. 4 to Rs. 48 and Travancore Rayons an anna to Rs. 15-11 *cum-div.* Ranga Vilas changed hands at Rs. 93-8, as against Rs. 90 and Trichinopolys at Rs. 13, as compared with Rs. 12-4. Bangalore Woollens, however, lost Rs. 10 to Rs. 560 and Cambodias As. 4 to Rs. 13-4 *cum-div.* Rajalakshmis were dealt with at Rs. 167 *ex-div.*, as against Rs. 175 *cum-div.*

Except for a few select scrips, plantings too lacked support. Among teas, Waterfalls and Periakaramalais gained an anna each to Rs. 6-6 and Rs. 9-2, respectively. United Nilgiri Teas moved up by Rs. 10 to Rs. 365 *cum-right.* Peermades, however, lost As. 8 to Rs. 37-8. In the rubber section, Pullangodes gained As. 5 to Rs. 5. Midlands, however, lost As. 2 to Rs. 21-8. Thirumbadis were fractionally lower at Rs. 2-3-6. Cochin Malabars were quiet at Rs. 9-1. Among coffees, Consolidated Coffees advanced by As. 9 at Rs. 19-4 and Coffee Lands by As. 7 at Rs. 23-6. Puthutotams and Mysore Coffees were slightly better at Rs. 4-11 and Rs. 2-4, respectively.

In the miscellaneous section, Binnys gained Rs. 2 to Rs. 172. Ashok Leylands disclosed a gain of an anna at Rs. 5-11. Spencers, however, lost As. 4 to Rs. 17. Champion Reefs were quiet at Rs. 4-8. Business was reported done in Parrys at Rs. 3 and New Victorias at Rs. 2-4.

Notice

EASTERN INVESTMENTS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3.30 p.m. on Wednesday the 30th May 1956, for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended 31st December 1955.
2. To declare Dividends.
3. To elect Directors and appoint Auditors.
4. To transact any other ordinary business that may be brought before the meeting.

The Share Transfer Registers of the Company will be closed from the 16th May 1956 to the 30th May 1956, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *25th April* 1956.

Note.—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

NEWS IN BRIEF

COTTON textile machinery, valued at about Rs. 3.65 crores, was manufactured in India during 1955.

A programme for the development of major ports at a cost of Rs. 62.28 crores has been drawn up for inclusion in the second Plan.

A sum of Rs. 30 crores is expected to be allotted by the Ministry of Natural Resources and Scientific Research for oil exploration during the second Plan period.

A sum of Rs. 26.83 crores has been provided for soil conservation work under the second Five-year Plan, as compared with Rs. 3.25 crores under the first Plan.

The Government of India has allotted for export 4,100 tons of coffee from the 1955-56 crop. The allotment consists of Plantation 2,850 tons, Arabica 650 tons and Robusta 600 tons.

The fourteen-day old strike by the reserve pool workers of the Dock Labour Board ended on Sunday last, when about 6,000 workers, representing almost the entire strength, reported for duty.

The Government of India is considering the assistance to be provided by it to the Nepalese Government for the implementation of the latter's first Five-year Plan. Nepal's first Plan is estimated to cost Rs. 21.63 crores.

Preliminary plans for the manufacture of streptomycin at the Hindustan Antibiotics Ltd. at Pimpri have reached the concluding stage and the scheme is expected to be taken in hand towards the end of 1956 or early in 1957.

About Rs. 6 crores are proposed to be spent on the Banaras-Cape Comorin national highway. The road is already in existence and all that is required is the construction of certain bridges and repairs. The 1,519-mile highway passes through eight States.

The Union Ministry of Production has announced that small-scale manufacturers of salt, whose individual holdings exceed 10 acres but not 100 acres, and who are organised as members of co-operative societies, will henceforth pay cess at the reduced rate of one anna, instead of As. 2 per maund.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 3-4-3 per lb. for the month of May 1956, as against Rs. 2-13-4 per lb. in force during April. There is no change in the existing rate of export duty of As. 6 per lb.

The Government of India has accepted in principle the necessity of affording assistance to the sailing vessels industry to enable owners of sailing craft to mechanise their vessels. The form in which this assistance will be given and the owners who should qualify for it have not yet been decided. A provision of Rs. 40 lakhs has been made in the second Plan for the purpose.

A new type of spinning wheel has been built by an East Pakistan refugee in Titagarh. The new spinning wheel, known as *Pnaarbasau Charka*, is an all-wood portable 28-spindle spinning wheel, designed to turn the waste from cotton, silk, wool, jute and hemp into quality yarn for making carpets, coverings, headgear and such other articles mainly for consumption in rural areas.

The discussions regarding the use of the Indus waters which have been taking place in Washington, D.C., between the representatives of India and Pakistan with the participation of the World Bank, were due to terminate on 31st March 1956. By agreement between the two Governments concerned and the Bank, the discussions are for the moment being continued. The new terminal date for the discussions is still under consideration.

Rolling stock and other equipment worth Rs. 20 crores are expected to be purchased by the Indian railways in the world market against their programme for 1956-57. The purchases will be confined to essential stock, not manufactured in India. These are in addition to the main orders under the 1956-57 procurement programme worth Rs. 30 crores for which offers were invited in September last.

A draft agreement between the Government of Mysore and a foreign firm has been prepared for the expansion of the Mysore Government Electric Factory. The factory is at present manufacturing electrical distribution equipment worth about Rs. 48 lakhs per annum. Under the second Five-year Plan, the production is proposed to be raised from Rs. 48 lakhs to Rs. 200 lakhs per annum, for which purpose an allotment of Rs. 125 lakhs has been made.

The Delhi State Government proposes to introduce a Bill to amend the Sales Tax Act, providing for an increase in the sales tax from 6 pies to an anna in the rupee on cosmetics and other luxury goods, such as watches, jewellery and motor cars, if the measure receives the assent of the Union Government. At present, the sales tax is levied at a uniform rate of 6 pies in the rupee on all goods. The additional revenue from the proposed enhanced rates of sales tax is expected to make good the revenue loss from prohibition.

The Government of India proposes to arrange training facilities for Indian personnel in oil prospecting and technology both within the country and abroad. As regards training within the country, it is proposed to obtain the services of foreign technicians in certain aspects of oil technology. Training facilities for fourteen persons in the U.S.S.R. in oil well drilling, seismic prospecting and instrument technology have been asked for under the United Nations Technical Assistance Administration Programme. It is proposed to send more trainees abroad in future years.

An agreement has been signed between the Assam Co-operative Sugar Mills Ltd. and Messrs. Skoda (Czechoslovakia) for the setting up of a big sugar factory in Assam. Under the agreement, substantial credit facilities will be made available by Skodas, the payments extending up to 1960. The cost of the scheme will be about Rs. 90 lakhs. Experts from Czechoslovakia will undertake the erection of the factory, which is expected to go into production during the 1957-58 crushing season. The factory, when completed, will meet to a substantial extent the sugar requirements of Assam. The agreement also provides for training of Indians in sugar technology by a team of experts who will come to India.

A scheme for small- and medium-scale industries has been formulated for inclusion in the second Plan to overcome unemployment among the refugees. The scheme contemplates grant of certain facilities to industrialists who are willing to set up industries in refugee townships colonies and whose schemes are found to be technically sound. The facilities include allotment of factory buildings on rental basis for a period of seven to ten years with the option to purchase them, grant of loans upto 50 per cent. of the value of machinery installed, and supply of water and electricity at rates comparable to those prevailing in the neighbouring industrial areas.

The Government of Travancore-Cochin has constituted a Plantation Labour Committee for the purpose of settling the existing disputes in the plantation industry. The Committee consists of the Labour Commissioner as Chairman, four representatives of planters and four representatives of labour and will hold office for one year. The announcement of the Committee follows the settlement of a long-standing dispute in the State planting industry in regard to bonus for the years 1951-54. The settlement in respect of bonus for these years was arrived at at a tripartite conference held in Trivandrum in the third week of April. The State Government expects the disbursement of bonus to be made by the employers on the date mentioned in the memorandum of settlement. Now that this important dispute has been settled to the satisfaction of both employers and labour, the Government considers that an atmosphere of goodwill has been created for the settlement of the remaining disputes in the industry by means of the Committee mentioned above.

A phased programme for the development of land mortgage banking has been drawn up by the Madras Government in pursuance of the recommendations of the Rural Credit Survey Committee of the Reserve Bank of India as part of the second Five-year Plan. This programme has as its object the issue of long-term loans for an aggregate amount of Rs. 380 lakhs through the existing 73 banking and the 25 new banks to be started during the Plan period. The primary banks are proposed to be helped with subsidy to meet the cost of additional supervisors to be appointed by them. Provision has also been made for the appointment of an agricultural officer and an agricultural engineer who will advise the prospective borrowers on the nature of land improvement they should undertake and also help the land mortgage banks in the valuation of land. The question of reducing the rate of interest on loans by land mortgage banks is expected to receive sympathetic consideration and a way may be found to provide funds to the ryots at a lower rate of interest than at present in respect of loans for land improvement and development.

From Abroad

Ceylon has accepted the invitation to attend the U.N.-sponsored conference to review the operation of the International Sugar Agreement of 1953 to be held at the U.N.H.Q. on 21st May 1956.

The United States and Ceylon have signed an economic aid agreement providing for $5 million during the current year under the Colombo Plan to finance Ceylon's second six-year development Plan.

The U.S. Census Bureau has estimated the total population of the United States at approximately 167,181,000 on 1st March 1956. The Bureau says that the estimated total is an increase of 16,049,000 or 10.6 per cent. since 1st April 1950, the date of the last population count.

Tea production in Ceylon during the first three months of 1956 amounted to 84.4 million lbs., as compared with 103.5 million lbs., during the corresponding period of last year. The decline in production this year is attributed to the adverse weather conditions, especially drought in mid-country and frost in upcountry areas.

Turkey and West Germany have signed a new trade agreement, under which the former will increase its exports to West Germany, with the proviso that 20 per cent. of the value of such exports is to be employed for the repayment of a $50-million trade debt. The proviso does not, however, apply to the customary substantial German cereal imports from Turkey.

Canadian Federal aid to gold mines under the Emergency Gold Mining Assistance Act will be extended for two years until 31st December 1958. A Bill to extend the assistance will shortly be introduced in Parliament. All except two of Canada's established gold mines receive the subsidy, based on a formula which relates the production costs to the fixed price of gold $35 (U.S.) per ounce.

The Appropriation Committee of the U.S. House of Representatives has rejected the Administration's request for a grant of $37.9 million to build experimental merchant ships, including an atomic-powered tanker. This sum had been included in the $1.522.67 million sought by the President to finance the Commerce Department for the fiscal year beginning on 1st July. The overall request has been reduced to $1,382 million.

Higher minimum support prices for the 1956 crop of wheat, rice and maize in the U.S. have been announced. These minimum support levels would be at 82½ per cent. of parity, as promised by the President on 16th April, when he rejected the Farm Bill which had set support levels for 1956 crops at 90 per cent. of parity. The 82½ per cent. of parity means a minimum support level of $2 for wheat in 1956, $4.50 per 100 lbs. for rice and $1.50 for maize.

Two leading New York City banks, namely, the First National City and the Chase Manhatten, have raised their interest rates on savings bank accounts to 2½ per cent. per annum with effect from 1st May. The new rate, applying to deposits ranging up to $25,000, is the highest that can be paid under the existing Reserve Board Ceilings. Hitherto the banks had been paying 2 per cent. on amounts up to $10,000 and 1 per cent. on deposits over $10,000 and up to $25,000.

The Sub-Committee on Anti-trust and Monopoly of the U.S. Senate has recommended in its report that the General Motors Corporation should cut its prices to customers because of its "extremely high profits." The report points out that General Motors has made during 1955 a profit of 31 per cent. on capital investment, after taxes, as compared with 12 per cent. earned by the average American manufacturing company. It adds that the time may have come to consider a limit on further expansion of the $6.000-million corporation.

The introduction of B.O.A.C.'s propeller-jet service through India will be commemorated by the issue of "Britannia" first flight covers. The turbo-jet service is due to commence in September over the London-Sydney route, with stops at Zurich, Beirut, Karachi, Calcutta, Singapore, Jakarta and Darwin. The souvenir covers will be priced at Rs. 2 each and will be flown between any two points on the route except to and from Zurich and Jakarta. On this occasion, arrangements will also be made for these attractively designed covers to be air-mailed to private individuals, provided their place of residence is situated in the United Kingdom, Lebanon, Pakistan, India, Malaya and Australia.

Active consideration is being given to the training of Indian personnel to manage and operate the £80-million iron and steel works at Durgapur, West Bengal, according to an announcement made in London last week. Site-work will probably start in July, and arrangements are now being made in Britain to assist in the training of Indian technicians and operatives. Technical co-ordination of the principal sections and ancillary departments of the works, engineering services for gas, water, steam and air supplies, and planning of road and rail facilities have, it is announced, been carried out by the engineering department of the Metallurgical Equipment Export Company. For all electrical work, this company and the consortium of firms with which the agreement for the building of the steel plant has been signed, have as their consultants McLellan and Partners, of London.

PERSONAL

MR. Malcolm Macdonald, High Commissioner for U.K. in India, left for London on Sunday last on a three-week routine visit.

Mr. H. A. Helb, Netherlands Ambassador to Yugoslavia and Bulgaria,, has been appointed Ambassador to India.

Mr. K. N. Subramaniam, I.C.S., of the Planning Commission, has been appointed Joint Adviser to the Rajpramukh of Travancore-Cochin.

Dr. Mono Mohan Das, M.P., has been appointed Deputy Minister in the Union Cabinet and attached to the Ministry of Education.

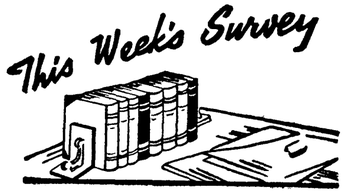
Mr. George D. Woods, leader of the three-man World Bank Mission to Pakistan, left for Cairo on Tuesday this week, after a brief holiday in Bombay.

Mr. Manharlal Mansukhlal Shah, Member of the Rajya Sabha, has been appointed Minister for Industrial Development in the Union Cabinet and attached to the Ministry of Commerce and Industry.

Dr. A. Lakshmanaswami Mudaliar, Vice-Chancellor of the University of Madras, has returned after a visit to London and New York, in connection with the meeting of the Executive Board of the U.N.E.S.C.O., of which he is the President.

Mr. Surendra M. Mehta, Proprietor, Paragon Textile Mills, has been elected President of the Indian Society of Rayon Technologists, Bombay, for 1956. Mr. S. R. Roy has been elected Honorary Secretary. Mr. J. G. Parikh, Hon. Joint Secretary and Mr. L. M. Nayak, Hon. Treasurer.

Mr. Colin Beever, fisheries economist from the Headquarters of the Food and Agriculture Organisation, Rome, has been appointed Acting Regional Fisheries Officer for Asia and the Far East, *vice* Dr. Cecil Miles, who has been appointed F.A.O. Regional Fisheries Officer in Santiago, Chile.



ROLE OF ENGLISH

WHILE inaugurating the Radio literary forum from New Delhi last week, Mr. Nehru hit out at those who criticised the retention of English in India. For two reasons, he pointed out, one could not minimise the importance of English; it helped people of various regions to understand each other and served as a link between India and the outside world. The rapidity of change in the field of science and technology, he went on to say, was so great that textbooks became out of date in no time—sometimes, even before they came out of the Press. He pointed out that, in the absence of English, scientists would be compelled to read hundreds of periodicals in many languages in order to keep themselves abreast of the changing world. Emphasising that English would not come in the way of the growth of Indian languages, he urged the people to give up their "sense of hostility towards English."

This is eminently sage counsel. And on the same day on which Mr. Nehru made this appeal from New Delhi, from Calcutta came a similar plea by Dr. U. P. Basu, General Secretary of the Indian Science Congress Association. The consensus of opinion among the members of the Association all over the country, he said, pointed to the need for considering English as part of Indian culture and using it to their best advantage. He considered English "indispensable" as a medium of scientific education. He said that not only was English the "finest and the most expressive instrument as yet evolved by man for the expansion of both scientific and humanistic ideas" but, as a vehicle of science, it was "miles ahead of any Indian language." Proceeding, he observed that there was absolutely no scientific literature, either elementary or advanced, in Hindi. The country would, therefore, have to depend more or less entirely on English if it had to maintain high standards in education and scientific research. He also emphasised that, in order to fight the "menace" of linguism, continuance of English was essential. In conclusion, he observed:

> "For the reasons stated above the medium of instruction at the University level should remain English. Even if Hindi is taught as a compulsory second language along with English in all schools and colleges so that it might be employed as a medium of contact and exchange of ideas among people of different States of India, in so far as scientific and technological study and teaching is concerned, international terminology should under no circumstances be disturbed. Numerals, symbols, signs and formulae should never be modified and be written in Roman script only."

These two statements have attracted considerable notice both in India and abroad. They have served to strengthen the growing volume of opinion in favour of retention of English and of a "go-slow" policy in respect of its replacement by Hindi. Dr. M. R. Jayakar, former Vice-Chancellor of the Poona University, has warned the protagonists of Hindi against any hasty attempt to foist that language on the country. Commenting on the two statements referred to above, the London *Times* endorsed the view that the use of the English language in India provided a link between India and the outside world. After referring to Dr. Basu's view that there could be no thought of replacing English by Hindi in the scientific world, the newspaper said: "Mr. Nehru, whose nationalism moves forward in the harness of reason, has echoed much the same viewpoint." It further pointed out that English was a link between Indians and between India and the outside world and that "this last observation is no platitude."

The whole question about the future of English has assumed a special significance in the light of the personnel requirements under the second Plan. It is now widely recognised that the Plan would need large numbers of technical personnel. Thus, the statement of industrial policy, issued this week, has made a special reference to the fact that the industrial development programme will "make large demands on the country's resources of technical and managerial personnel." In this connection, it is learnt that the engineering personnel committee has recommended that, in addition to the existing schemes for new training facilities, provision must be made for training a total of another 2,300 engineering graduates in mining, civil, mechanical, electrical and metallurgical engineering, besides provision for an additional 5,940 diploma-holders. The final draft of the Five-year Plan, according to a report from New Delhi, will include a Rs. 50-crore programme designed to augment technical education facilities in the country.

The Government deserves all praise for recognising the technical personnel problem, and even more praise, for taking steps to solve it. But it is not clear whether the Government has taken care to ensure that the quality of the education imparted to the trainees is high. An important factor here is the medium of instruction. If the movement towards the substitution of English by regional languages or Hindi which has already begun in some parts of the country succeeds, then there is no doubt that the standards of education would suffer grievously —at least, in the short run. This would be deplorable at any time in a country's educational history. But it would be particularly deplorable in the context of the present stage of India's industrial development. Besides this consideration, one has also to examine whether it is possible to run national enterprises efficiently if the employees are drawn from various linguistic regions where they have received technical education and training in their respective languages. These facts will have to be faced sooner or later—perhaps the sooner the better. The country would have to pay dearly if no attempt is made to stem this trend towards indiscriminate linguism in all stages of education.

It is wise to recognise that language has both a cultural and utilitarian value, though it is true that this distinction could be carried too far. English has both these values. But, if it is felt that its cultural predominance in India's national life should be reduced, then the authorities will at least do well to ensure that its utilitarian value is not given up. This would imply the retention of English in higher academic learning and in technological institutions. The consciousness of all-India unity, fostered by the study of English, is being steadily lost through the excessive, even exclusive, emphasis on regional languages. It is time that this trend, which commenced about six or seven years ago and which has already caused considerable damage to India's educational system and national life, were reversed. We would urge the Government of India to consider the question at the highest possible level in all its educational and national bearings and give a correct lead to the country. If it failed to give such a lead, posterity would hold it guilty of having paved the way for considerable confusion and unrest in all walks of national life.

CUSTOMS PROBLEMS

Importers, who know best where the import control and customs shoe pinches most, have repeatedly complained in the past against certain vagaries in the administration of control and customs regulations. Judging from the fact that the complaints continue to be made, it would appear that these vagaries persist. Thus, Mr. F. C. Kidd, Chairman of the Calcutta Import Trade Association, in the course of his speech at the annual meeting of the Association, held at Calcutta last week, reiterated his protest against some of the customs irregularities, such as arbitrariness over values for assessment, agency commissions and classifications. Evidently, he was provoked to reiterate the protest by the fact that, although the hardships caused by customs difficulties to the mercantile community have been repeatedly brought to the notice of the authorities ere now, there has been no improvement in the situation. The customs problems, Mr. Kidd declared, were well known, were all very real, but, so far, they remained unaltered. He, therefore, felt that "it is essential to go on reiterating them until satisfaction is obtained."

There are three disquieting issues to which Mr. Kidd made particular reference. First, the real value of goods imported is determined by the customs authorities for assessment purposes in an arbitrary manner as decided by individual appraisers. As a result, the importer can never be sure until the consignment is cleared as to the amount of import duty which will be charged; consequently, it is virtually impossible, without taking an undue business risk, to quote for forward delivery, particularly where Government contracts are concerned, as they do not permit any adjustments for non-statutory variations in customs duty. Secondly, agency commissions are allowed in part or in whole in one instance, but is totally disallowed in another. What is worse, the examination of individual agency agreements has been so protracted—over two years now—that discrimination arises; this piecemeal method of examination creates an unfair advantage in competitive markets. Thirdly, there is the considerable difficulty with regard to classification. In their anxiety to secure maximum revenue, the customs authorities adopt such a rigid system that appraisers are not permitted to use any common sense.

These, are, indeed, legitimate grievances which the Government will do well to redress. This need is particularly great in the present context, when, under the second Five-year Plan, imports of goods and commodities worth several hundred crores of rupees are contemplated. If the implementation of the series of development schemes is to be successfully carried out, it is imperative that the supply of goods and commodities is not hampered unnecessarily by customs difficulties and irregularities. It is high time, therefore, the Government of India paid some serious thought to the question of setting up a Customs Advisory Council as suggested, once again, by Mr. Kidd.

NAGPUR MILL STRIKE

At long last, the labour situation in the Nagpur cotton textile mills is returning to normalcy. After a prolonged strike, the workers—numbering about 14,000—employed in the six mills of the city are gradually resuming work. It was as early as on 28th January last that the mill workers commenced a sit-down strike as a protest against the introduction of rationalisation in Mill No. 1 of the Empress Mills. The sit-down strike was subsequently followed by widespread *hartals* and demonstrations which became so violent as to necessitate police action through arrests. Despite earnest persuasion by Government spokesmen and the enlightened section of the labour ranks, the workers did not yield, with the result that the managements were forced to close down the mills, till such time as "substantial numbers (of workers) indicate their willingness to resume normal working in a disciplined manner."

This strike, much more its prolongation, was clearly not justified at all. For the management of the Empress Mills decided to reorganise the Mill No. 1, after entering into an agreement with the I.N.T.U.C.-led *Rashtriya* Mill *Mazdoor Sangh*, the only recognised union in the textile industry of Nagpur. The agreement did not sacrifice the interest of workers, since it did not involve any retrenchment. Nor was there, as a result of reorganisation, any increase in the workload or any change in the service conditions.

The above agreement was, however, challenged by the leftist-led mill *Mazdoor Sangh*. The *Sangh*, which claimed a larger membership, engineered the strike. The agitation was a deliberate attempt to intimidate the workers and to provoke them to violence. It was, therefore, not only illegal but also anti-labour. Indeed, the agitation against reorganisation was no more than political blackmail. Thanks to the prolonged strike organised by this group, the genuine mill workers and their families were put to considerable hardship, as they were denied their wages during the strike period, not to speak of the loss to the nation by way of reduction in cotton textile output. It is gratifying to note that, though belated, wiser counsels have since prevailed with the labourers who have recognised the futility of continuing the strike and are accordingly resuming work.

Meanwhile, two agreements entered into between the management of the Empress Mills and the I.N.T.U.C.-led *Rashtriya* Mill *Mazdoor Sangh* were declared invalid and ineffective by the Nagpur High Court the other day on technical considerations. One of the agreements provided for the closure of Mill No. 1 and compulsory retirement of physically unfit operatives. The other provided for the compulsory retirement of workers on superannuation after 30 years of service, as also for the employment of other workers of Mill No. 1 on night shift in other units of the Empress Mills. The first agreement was declared invalid for want of proper registration and the second for want of notice of change. The management was restrained from enforcing the agreements as long as they were not validated. Immediately after the judgment, the Government of Madhya Pradesh issued a notification appointing the Labour Commissioner as the Registrar of Recognised Unions under the Trade Disputes Settlement Act. The newly-appointed Registrar registered afresh the two agreements declared invalid by the High Court on applications made by the parties to the agreements, which were considered to be in force with retrospective effect.

It is to be hoped that the Nagpur mill workers will not allow themselves to be misled, once again, by leaders who are wont to create trouble on political and ideological considerations. Propaganda is already being carried on to the effect that the mill workers are being subjected to victimisation by mill managements. If the workers were to believe this and resort to strike, the managements would have either to close down the mills or to curtail output drastically. In either case, it is the labourers who would be the worst sufferers.

ATOMIC REACTOR

An agreement has been entered into between Canada and India for the erection by the former of an atomic reactor at Trombay (Bombay). It will be recalled that Canada offered to India in April 1955, under the Colombo Plan, a high-powered atomic research and experimental reactor similar to the well-known NRX reactor at the Canadian Government's atomic energy establishment at Chalk River, Canada, and India accepted this offer shortly thereafter.

The total cost of the project, which is estimated at about Rs. 7 crores or a little over $14 million, will be shared by the two Governments concerned. The value of the Canadian contribution is about $7½ million (Rs. 3.75 crores) and of the Indian contribution over $6½ million (Rs. 3.25 crores). The general principle is that Canada pays for external costs and India for internal costs. Thus, Canada is providing the reactor itself, the steel for the rotunda, which will surround it. Indian contractors and Indian labour will carry out the major part of the construction work at the site, while Canada, represented by Atomic Energy of Canada Ltd., will be responsible for the supervision of engineering and erection works. The Department of Atomic Energy of the Government of India will be responsible for building the foundations and basement of the reactor. Work on the basement has already started. When the reactor is completed, full title and complete control will pass to the Government of India.

Arrangements have been made to send an adequate number of selected Indian technical personnel to obtain firsthand experience and training in the operation of the NRX reactor at Chalk River. Indian technical personnel will also be seconded to the engineering staff in Canada which is designing the reactor, the steel rotunda and the reactor foundations. Thus, Canada will provide India, through the agency of Atomic Energy of Canada Ltd., every opportunity for Indian scientists and engineers to become fully familiar with all aspects of the work connected with the reactor. The visits of Indian scientists and engineers to Canada will be paid for by Canada under its normal technical assistance programme.

The Canada-Indian atomic reactor, when built, will be a significant addition to research facilities under India's atomic energy programme. It is specifically designed to provide excellent facilities for fundamental research in physical, chemical, biological and metallurgical problems relating to atomic energy. It will be an efficient producer of radio-active isotopes for use in medical therapy, agriculture and industry and for tracer element studies in chemical, biological and medical research.

Above all, the reactor is specially suited for making engineering studies and research on reactor materials which can be tested under conditions of high neutron intensity met inside reactors. The research and development facilities of the reactor will enable advanced engineering experiments to be performed in connection with the design of future power reactors.

India has offered to make the experimental facilities of the reactor available to scientists approved by the Government of India from other countries, including Colombo Plan countries in South and South-East Asia. Thus, the installation of the reactor will advance development of atomic energy not only in India but also in Asian countries participating in the Colombo Plan.

NEWSPRINT MANUFACTURE

The National Newsprint Paper Mill, briefly known as "Nepa" Mill, in Madhya Pradesh, was formally opened by Mr. Nehru, Prime Minister, last week. The Mill, the first of its kind in India, was designed to produce 100 tons of newsprint daily. The cost of the project is estimated at Rs. 6½ crores. So far, the Government of Madhya Pradesh has advanced Rs. 3.93 crores as loan. When in full production, which will be by the end of next year, the Mill will meet about 40 per cent. of India's newsprint requirement and save nearly Rs. 2 crores worth of foreign exchange. It may be noted that a record daily output of 64 tons was reached on 25th April. The first sample of newsprint from indigenous salai wood was produced on 11th January last year. Over 2,000 tons of newsprint were produced till the end of October last using unbleached groundwood pulp. The following table gives briefly certain salient facts about the Mill:

Project cost (estimate)	Rs. 6½ crores.
Production capacity	100 tons of newsprint per day
Cost of one day's production (50 tons)	Rs. 43,156
Cost of year's production (300 working days)	Rs. 1,29,46,800
Water required per ton of paper	76,400 gallons
Water required per day (at present)	38,20,000 "
Number of workers employed	900
Population of Nepa township	5,000
India's annual requirements of newsprint	90,000 tons

Certainly, the setting up of the "Nepa" Mill is a landmark not only in the history of the industrial advancement of Madhya Pradesh but of the whole of India. For newsprint is a vital material in the scheme of democracy, inasmuch as it is vitally needed for the progress of the Press. Credit for the erection of the Mill goes, at the outset, to the original sponsors of the project, namely, Messrs. Nair Press Syndicate Ltd. Much greater credit is, however, due to the Government of Madhya Pradesh and subsequently to the Government of India for retrieving the project from certain doom in October 1949, when it became apparent that the Managing Agents had committed certain grave irregularities and were unable to cope with a project of this magnitude. Although the Mill has retained its character of a joint-stock company, it is, to all intents and purposes, a nationalised industry. The Company, however, functions as an autonomous body and is run by a Board of Directors.

The quality of newsprint produced at the Mill is said to compare favourably with the best of imported varieties. It is stated that, in the long run, the Nepa product would be cheaper than the imported newsprint. But, for the present, it is costlier and cannot easily find a market, unless it is subsidised heavily. Meanwhile, the Government is being asked by the "Nepa" management to pool the indigenous newsprint with that of the imported ones and sell the pooled newsprint at a uniform price. This would, of course, enhance the cost of newsprint to consumers, because a part of the benefit of low-priced foreign newsprint will be passed on to subsidise the high cost "Nepa" product. It will be recalled, in this connection, that the Press Commission had recommended the establishment of a State Trading Corporation for newsprint as a solution for solving the difficulty of smaller papers which for financial reasons are not able to import directly from overseas mills and are obliged to depend on local importers and dealers. The Commission, it is noteworthy, had also stated that the "sale of newsprint produced in this country would be problematical in view of factors that tend to increase its cost of production." It, therefore, suggested that it would be advantageous if a State Trading Corporation "took over the entire output of Nepa Mills on a fair basis and sold it along with imported newsprint at equated prices." The Commission thought it "necessary for newspapers to bear to some extent the cost of developing the Indian Mill and putting it on a sound basis and this can best be done through the organisation which also controls all imports from abroad." Apparently, these views of the Commission are the basis for the "Nepa's" request for a pooling arrangement.

MR. S. P. JAIN ON EMPLOYMENT

The question of employment that is sought to be provided in the second Five-year Plan was subjected to a dispassionate examination by Mr. S. P. Jain, Chairman, Punjab National Bank Ltd., in the course of his speech at the Bank's annual meeting held at Delhi last week. Mr. Jain cited figures to show that cottage industries would not provide larger employment, and that a proper investment in industries with modern techniques and of diversified character would provide equally large employment. Thus, as against the proposed investment of Rs. 400 crores in cottage and small-scale industries, the employment possibility visualised is 450,000, excluding the additional employment under trade, commerce, etc., while the direct employment potential in the large-scale industries—in both the public and private sectors—is as much as 1,800,000, the total investment envisaged being Rs. 1,290 crores. This is an analysis which is, as Mr. Jain rightly stated, significant from the point of view of the pattern of investment that must be pursued in order to achieve the objectives the country has hopefully placed before itself. Incidentally, he stressed a few other pertinent points to be taken into account in this connection. He said:

> "It must be borne in mind that cottage industries do not contribute to the revenues for social services, etc., unlike large-scale industries whose contribution is very large. The subsidy that is required to be provided to prop up cottage industries is an additional drawback. Further, cottage and small-scale industries will provide employment, but not employment that will afford an increasing standard of living. Large-scale industries will provide employment and give the means for increasing standard of living."

There is considerable force in these observations which the planners will do well to ponder. The anxiety to provide employment through development of cottage industries should not be stretched so far as to overlook the consideration of the price the community has to pay for satisfying its wants, especially that relating to such an essential item of consumption as cloth.

Mr. Jain had also a few interesting remarks to make on the resources required for the implementation of the Plan. Pointing to the underestimates of Government revenues year after year, he said that efforts had been directed towards drawing larger resources to the Government sector. Urging a correct appraisal of the possible revenue receipts, he warned that, if more money was gathered towards the Government sector, the private sector's effort would be stultified, as it would be deprived of resources that could be utilised to greater advantage in expanding output in order to counteract inflationary forces. This warning is not only timely but also wholesome, considering the heavy dose of deficit financing contemplated in the Plan. Further, there is the need for the Government to pursue rational economic and fiscal policies. These policies, as Mr. Jain rightly pointed out, must be such as to enable utilisation of resources in productive channels, so that inflationary tendencies might not develop.

HOUSING PLANTATION WORKERS

The Government of India has sanctioned a scheme for housing workers in estates governed by the Plantation Labour Act of 1951. The scheme envisages central loans to State Governments at about 4½ per cent. interest, repayable in 30 equated annual instalments. The State Governments will, in turn, advance loans, at the Union Government's rate of interest, to small planters for building houses for their workers.

The amount of loan to a planter during a financial year will not ordinarily exceed the amount admissible for the construction of houses for 8 per cent. of the resident workers employed on an average, in the plantation during the pre-

(Continued on page 885)

SIGNIFICANCE OF NEW INDUSTRIAL POLICY

PLENTY OF SCOPE FOR COURAGEOUS ENTREPRENEURS

From A Special Correspondent

NEW DELHI, *1st May*

MEMBERS of Parliament heard with rapt attention yesterday the announcement made by the Prime Minister on the industrial policy of the Government of India which is expected to influence Government's actions in the economic sphere during the next five to ten years. Most of them welcomed the Prime Minister's clarification on the subject and appreciated the approach of the Government to this controversial question. A perusal of the policy statement makes one feel that Government will be adopting a realistic policy, after taking into consideration the various political and economic conditions prevailing in the country. Government circles are conscious of the fact that the second Plan could become successful only if ample co-operation were forthcoming from the general investment public and hence they are inclined to the view that the private sector should be allowed due facilities and scope to play a prominent part. There is no doctrinaire approach by them to the solution of the economic problems of the country. It may be mentioned that, for a long time, there has been considerable recognition of the fact that the country's economic progress could be ensured only by following the principle of mixed economy. Further, the Prime Minister has stated many times that India will not blindly follow the precedents established elsewhere in the economic development of the country, but will develop according to its needs and genius.

DELHI LETTER

In other words, although the central idea behind Government's industrial policy is the enlargement of the public sector, there is every reason to believe that the development of the private sector of industries will not be neglected or relegated to a corner. On the contrary, Government is expected to undertake such measures as to ensure an orderly and regulated expansion in the private sector of industries through various devices. In order to bring about this desideratum, Government will be relying more on its administrative machinery and powers under the Industrial Development and Regulation Act. Its objective will be to provide help and stimulus to such of the industrialists and *entrepreneurs* who could be depended upon to undertake risk-bearing enterprises.

No Rigidity

Credence to this line of thought is being provided not only by the amplifications and observations contained in the text of the industrial policy statement but also in the speech made by Mr. T. T. Krishnamachari, Minister for Commerce and Industry, in the Lok Sabha on the question of production and distribution of cement in the country. The industrial policy statement proclaims that the State will progressively assume a predominant and direct responsibility for setting up new industrial undertakings and for developing transport facilities. It has classified industries into three categories. In the first schedule, the number of listed industries has gone up to 17, as against six when the industrial policy statement was made in 1948. The second schedule contains 12 industries, in which, it is suggested, the State will generally take the initiative in establishing new undertakings, but in which private enterprise will also be expected to supplement the effort of the State. Some observations contained in the statement are of particular significance to the private sector. Even in regard to the first schedule, it is stated that Government will give due consideration to the expansion of the existing privately-owned units or to the possibilities of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require. For instance, in some of the first schedule of industries, such as heavy machinery industry, machine tool manufacture, coal, mineral prospecting, etc., the private sector has already taken considerable initiative during the last few years as a result of which the value of production of machinery and parts has increased from about Rs. 3 crores in 1951 to about Rs. 23 crores at the present time. It is, therefore, expected that Government will provide maximum stimulus for the orderly development of these industries during the second Plan period.

In this connection, the industrial policy statement adds that "when there exist in the same industry both privately and publicly-owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them." This means that Government will provide all sorts of help for the development of such industries, despite the fact that many of them have fallen in the A and B categories. The observation in the policy statement to the effect that "private enterprise will also have the opportunity to develop in these fields, either on its own or with State participation" is of particular significance, inasmuch as it is indicative of the fact that Government is expected to co-operate with the private sector through participation in capital, provision of technical help, etc., in many of the risk-bearing enterprises, involving large capital outlay. Whenever industrialists with necessary acumen, character, initiative and organising skill take up some important key industries, it is certain that Government will not remain as a mere onlooker but provide every help and encouragement to foster the growth of important industries.

More Opportunities

Thus, more opportunities will be available for the private sector to show its mettle during the second Plan. For instance, heavy industries in the public sector are expected to rely for many of its needs on the private sector. The same principle will apply with even greater force to the relationship between large-scale and small-scale industries. The increased production of iron and steel, heavy machinery, heavy castings, forgings, structural steel, etc., will be conducive to the growth of a number of ancillary industries and in all these the private sector will have ample opportunities to take a leading part. The scope for the development of this sector will become considerably greater than is being visualised or thought of at present.

The observation that "it is always open to the State to undertake any type of industrial production" has also considerable significance to the private sector. Apart from the fact that the State has overriding powers, what this remark means is that the State will step in in any undertaking in case of inefficiency, corruption, etc. In other words, Government desires that the private sector should play an honest role in furthering the industrialisation of the country. In this connection, Mr. Krishnamachari, Minister for Commerce and Industry, made some pertinent remarks yesterday when discussing the question of cement industry. With regard to the industries the future development of which was, in general, left to the initiative and enterprise of the private sector, he remarked: "All industries which are of any reasonable size will be controlled. The fact that an industry goes into the third category does not mean that the Government will not enter that field; it might, but it is not one it will necessarily enter." He also stated that the industries included in the list had been very carefully chosen, "so that the Government might acquire a certain key position in those industries in time to come, may be five years or may be ten years." The latest policy of the Government in regard to the import and distribution of cement through the State Trading Organisation, with a view to maintaining price stability of cement in the country, can be taken as an indication of Government's determination to protect the interests of consumers.

The expert committee on aluminium would determine the quantum of aluminium which the country would need to produce during the second Five-year Plan and also the location of the aluminium factories as well as the processes that might be used for the production of aluminium. Disclosing this in Parliament, in reply to a question, Mr. T. T. Krishnamachari, Minister for Commerce and Industry, said that in this respect, some foreign collaboration might be necessary. Simultaneously, therefore, negotiations were now afoot for this purpose. Mr. Krishnamachari added that assessing the bauxite deposits in the country would also be one of the functions of the committee. In determining the location of the factories, the availability of power was more important than proximity to bauxite deposits.

DEATH OF A SALESMAN

NO SUBSIDY TO TRADE FAIRS

From Our Own Correspondent

LONDON, *28th April*

TWO B.I.F.'s in one year—and the second the last! For 41 years the British Industries Fair flourished at London and Birmingham—in London under the ægis of the Board of Trade and in Birmingham under that of the local Chamber of Commerce. Then, last year, the Government decided to leave the management to a business organisation and they, faced with the growing competition of specialist industrial fairs, decided to split the 1956 B.I.F. into two parts. In February, the Fair in London was devoted to consumer goods and this month the Fair represents industry. But it has been clear that industry itself was not sufficiently behind the new policy and the Government has decided not to subsidise any further ventures. Without subsidy, the Fair in London cannot go on.

LONDON LETTER

The heavy industries' section in Birmingham, however, goes on as before and continues satisfactorily to draw buyers and sellers together. In that vast hall half a mile long, the local hardware industries, the building trades, electricity and engineering show their products—cheaply and spaciously. One suspects that the trouble in London was the cost and difficulty of making the Fair sufficiently comprehensive that the buyer—the overseas buyer in particular—felt he could come there and save himself the trouble of shopping around. In Birmingham that was true—in any given sphere the shop-window was comprehensive and the visitor did not have to look further before signing a contract. In London, too, the division of the Fair into sections was in the hope of making it true, but it has not succeeded. At the same time one must give tribute to the fact that the 500 exhibitors of consumer goods in February did report record business and that the 1956 Fairs as a whole are attracting 120 more exhibitors than in 1955. This April there is also, for the first time, a substantial electrical exhibit in London and the chemical industry is fully represented.

Response Good

In the first three days, over 1,200 overseas buyers have presented their cards at Olympia, Australia leading the way with 100, South Africa and the U.S.A. coming next with 90 each, then India and Ceylon with 54, followed by Canada, New Zealand and impressive contingents from Holland, Belgium, Western Germany and even the U.S.S.R. In the same period, over 2,500 home buyers attended and the promoters consider that, taking the February and April Fairs together, they are likely to finish up with more attendances than in 1955. All the more pity that this salesman has to die.

What of the displays themselves: there is a wide variety of electrical and electronic plant and equipment on view, together with a comprehensive range of household electrical goods. The centrepiece of the display is the "Atom in Britain," exhibited by the U.K. Atomic Energy Authority. After a study of the impressive volume of data (including models of atomic reactors) and the plans and models of the various plants at Harwell (main research centre), Calder Hall (first electrical generator) and Dounreay (atomic fuel generator) one has the feeling that one could go away, split the atom and set up one's own private plant—but no doubt the explanations miss out some of the difficult points.

In addition to the chemical industry, which has its largest London display, there are scientific instruments, office appliances and packaging machinery on view. The layouts are all in the most modern tradition—but lack the warmth which a more varied exhibition can give. And what will happen to the money which the Government had been spending on the B.I.F.? It will be devoted (in part) to publicising British goods at overseas fairs—but most of it is apparently going to be "saved"! Not the most forward-looking attitude on the part of a Government which is bent on an export drive, though seemingly also bent on the exporters providing all the drive.—*All Rights Reserved.*

NATIONALISATION OF COMMERCIAL BANKS

GOVERNMENT NOT IN FAVOUR

THE Lok Sabha displayed a commendable sense of realism in rejecting, by an overwhelming majority, a private member's resolution urging the Government of India to nationalise commercial banks in the country. The debate on the resolution demonstrated how weak was the case for nationalising banks. The arguments advanced in support of this move were, as will be shown presently, a hotchpotch of ideas beaten into disjointed statements calculated to create an impression that the banking system could be made to serve the country better under State-ownership than under private enterprise. The Minister for Revenue and Defence Expenditure, Mr. A. C. Guha, who replied to the debate, hit the nail on the head when he stated that the mover could not muster much argument in favour of his own resolution and hence took shelter under some facts and figures most of which were quite irrelevant for the purpose of the resolution.

The resolution was moved by Mr. M. S. Gurupadaswamy, a Praja Socialist member. He made a long speech in favour of his resolution and was supported by some Congress as well as Communist members. He was, however, opposed by some Congress members, too, mainly by those representing Travancore-Cochin.

The arguments put forward by the mover and supporters of the resolution seeking nationalisation of banks may be briefly summed up thus.

(1) The history of private banking in India is one of disappointment, mismanagement, mishandling, misfeasance and mis-pursuit.

(2) The number of banks which suspended payments during the years 1926-52 was 351. The banks were failing at an average rate of 42 a year for the last seven years. Between 1939 and 1947, they were failing at the average rate of 61 a year. As a result depositors suffered heavy losses.

(3) Even at present many banks are either running at a loss or are not in a position to declare any dividend. Out of about 461 joint-stock banks of all descriptions, 116 have been working at a loss and 68 others had declared no dividend.

(4) In spite of the powers given to the Reserve Bank, the affairs of commercial banks have not been very satisfactory. Mere clothing of the Reserve Bank with more powers will not remove some of the grave defects in the private banks, as they were deep-rooted and inherent in the system.

(5) The creation and distribution of credit is clearly a public service rather than an enterprise for private profit. The banks which deal with such a vital function should not be entrusted to private enterprise, ridden by profit-motive. Public ownership of banks is the only way to achieve soundness and rationality in national economy. An underdeveloped country like India is in need of this more than the advanced countries of the world, because accelerated economic development depends on the availability and proper distribution of money and credit.

(6) The major part of the funds of commercial banks, by the employment of which profits are made, belong to depositors and not to shareholders. According to the statistical tables of the Reserve Bank of India for 1954, the total paid-up capital of Indian joint-stock banks was Rs. 40.58 crores and reserves Rs. 30.53 crores. As against this, the total deposits of all joint-stock banks amounted to Rs. 1,066.35 crores in 1954, which was several times more than the paid-up capital and reserves. In spite of this, these banks are managed for the benefit of the shareholders and specially to the advantage of a few families who hold the controlling interests.

(7) Nationalisation of commercial banks will, in effect, mean the utilisation of savings of the community not for the private profit of a few, but for the social benefit of the whole country. People's money should be used for people's requirements.

(8) The private control of banking in India, as elsewhere, is in conflict with public policy. The banking habit in the country is at a very low ebb. The joint-stock banks have failed to provide credit facilities to underdeveloped areas. In consequence, banks are heavily concentrated in a few towns and in a few States. Thus, there are only 6 banks in Andhra as against 45 in Bombay, 140 in Madras and 142 in Travancore-Cochin. In Orissa and Assam, there are only two and five banks, respectively. With a view to developing underdeveloped areas, public control and ownership of banking is very necessary.

(9) Depositors have no cause to fear a loss of their funds if banks are nationalised. The credit of the banks depends on national credit which, in turn, depends upon the Government and its policy.

(10) The performance of Government in the post office savings banks business is better than that of joint-stock banks. Between 1948 and 1954, deposits of the post office savings banks rose by Rs. 103.84 crores, i.e., from Rs. 128.11 crores to Rs. 231.95 crores. The number of depositors rose from 31.53 lakhs to 50.70 lakhs. As against this, the deposits of all joint-stock banks in the country fell from Rs. 1,118.23 crores on 31st December 1948 to Rs. 1,062.53 crores on 31st December 1954, or a decline of Rs. 55.70 crores.

(11) Insurance business was nationalised on the ground, among others, that "the concept of trusteeship which should be the cornerstone of life insurance seemed entirely lacking." It is suggested that the same criterion should be applied to private commercial banks.

(12) For fulfilling the second and subsequent plans, the Government requires enormous liquid resources. The objectives of the Plan can be realised only when the whole banking system is transferred from the private to the public sector.

(13) The banks are in the hands of those men who have monopolistic control over various sectors of the economy. The banks are benefiting these men and not the people.

(14) The central banks are nationalised in most capitalistic countries. In Australia and France other private banks have been nationalised. So banks in India, too, should be nationalised.

(15) Loans are being advanced to interested parties for speculation in commodities like jute and cotton, and some times without security. The banks discriminate against small deposits in the matter of giving loans.

(16) The commercial banks have made no efforts to spread the benefits of banking to rural areas. Nationalised banks could reach every section of society and serve the people without any profit motive. Nationalisation of banks is a prerequisite for establishing socialist pattern of society.

Signal Service

It is needless to add here that most of these are commonplace arguments which ignore the signal service that commercial banks have been rendering to the society by inculcating habits of thrift, mobilising savings and stimulating economic activity in the country. The way in which certain statistics were presented was misleading and had no sense of proportion to the overall results. This was particularly so in the case of figures relating to branch banking, liquidation of banks and drop in deposits. The mover of the resolution might have thought himself very clever in giving only the number of banks that failed, or the number of banks that were suffering from losses. But he cannot carry conviction to those who know the facts very well, for while the number is large the amounts involved are small. To be fair to the public and the august House to which he belongs he should have given also the facts about the size and representative character of the number of institutions he mentioned. A typical example of the misleading arguments advanced by the author of the resolution was the reduction in deposits between 1948 and 1954. As all students of Indian economy know full well, this shrinkage was due to the contraction of currency and credit that took place during this period. This was a factor beyond the control of banks in the private sector. Again, while the mover of the resolution took the period from 1926 to 1952 for giving a picture of banks that went into liquidation, he took only the six-year period from 1948 to 1954 to illustrate the inefficiency of banks *vis-a-vis* postal savings bank. Why did he not take a longer period, say, from 1938 to 1954, or give the latest figures? Obviously because such a comparison will not suit his purpose. Surely, it is most unbecoming of a member of Parliament to give a misleading picture. It is, indeed, a crime to do so, because the vast majority of Indian people are ignorant and will believe almost anything that is said. Instances of this nature in ordinary walks of life will be regarded in a court of law as attempts at cheating the public.

That apart, there is little sense in saying that most of the banks are suffering losses and, in the same breath, asking the Government to nationalise them, as it amounts to asking the Government to nationalise losses. That most of these arguments are not well founded is evident from the slashing replies given by no less an authority than the Government spokesman himself, namely, Mr. A. C. Guha.

Reiterating that it was the accepted policy of the Government and of the House to establish a socialist pattern of society in this country, Mr. Guha pointed out that it was also their accepted policy to proceed on the basis of a mixed economy. Neither the Government nor the House had decided to wipe out the private sector. It should be borne in mind, he said, that 90 per cent. or even more of the production of wealth in the country was still in the private sector.

Bank Failures

Since much was made of bank failures as an argument for nationalising banks, Mr. Guha alluded to the subject and pointed out how that argument was futile. The problem of bank failures assumed, he observed, an alarming proportion in West Bengal which was worst affected by the bank failures. The total amount involved in bank failures from 1926 onwards was, according to him, Rs. 30 crores, of which West Bengal accounted for about Rs. 20 crores. Bank failures in the pre-war years alone were negligible, as compared with those in post-war years, the total amount involved from 1926 to 1938 being only a little over Rs. 3 crores. In giving these figures, he took care not to cover up the shortcomings of the bank managers and the managing directors of the banks involved. His object in referring to them was to draw the attention of the House to the extraordinary conditions that prevailed in the country before and after Partition. He gently reminded the House that it should not ignore what Partition meant for the banks in Bengal and the Punjab. Mr. Guha then went on to refer to the would-be effects of nationalisation on banks in Travancore-Cochin. He remarked that, if the small banks, numbering about 160, were not allowed to function, the whole economy of that State would be dislocated considerably. If any banking standards considered normal not only in other countries but even in this country were applied to these 160 banks, they would evaporate almost in a month. The Reserve Bank and the Central Government had to make special arrangements, so that these banks did useful work. The last bank tribunal had suggested a special enquiry into the banks in the State and the Central Government had set up a committee to enquire into the working conditions in them. "I think," the Minister said, "nationalisation of banks is the last thing for Travancore-Cochin," and added: "More than in any other place, it will be more harmful in Travancore-Cochin."

One of the grounds on which nationalisation of banks was advocated was the need for increasing their efficiency. Alluding to this argument Mr. Guha rightly observed: "I am not one of those who would say that the private sector is by itself a paragon of efficiency or the public sector is automatically expected to be an example of efficiency. There may be inefficiency in both sectors and there may be efficiency in both. Otherwise, the Government would not have allowed both sectors to continue in the country. We expect that the private sector also can work just as efficiently as the public sector. Again, in the public sector also, there may be examples of inefficiency. There was that housing factory scheme which the Government cannot claim to have run very efficiently." This frank admission that the public sector also is not free from the follies from which the private sector suffers is an indication of this Minister's approach to problems with a commendable sense of humility and realism.

The argument that arming the Reserve Bank with more powers would not improve the banking system, Mr. Guha contended, was not based on facts. He stated that, since 1951, when the Reserve Bank was given certain authority to ensure that the banks were run properly and honestly, there had not been any failure among schedule banks. The Reserve Bank had been able to exercise effective control over the working of banks and the conditions in most of the banks had considerably improved.

Short-term Funds

The followers of the contention that nationalisation of banks would place more funds at the hands of the Government was also exposed by Mr. Guha. He drew the attention of the House to the wide difference existing between insurance companies and banks. Thus, while the funds available with insurance companies were of a long-term nature, those available with banks were of a short-term nature and were, therefore, not available for long-term investment and development purposes of Government.

Commenting on profits made by banking companies, Mr. Guha stated that not all the profits earned by banks were distributed to shareholders and that the amount distributed as dividend by all banking companies in 1954 was only about Rs. 2.62 crores. Of this, the share of the Imperial Bank (now nationalised) alone was Rs. 1 crore. Thus, only about Rs. 1.70 crores were distributed to shareholders. He did not think that this was a big amount.

Countering the argument that nationalisation was necessary for the creation and control of credit, Mr. Guha remarked that the Reserve Bank had got enough powers to discharge this function as effectively as it desired. Further, by nationalising the Imperial Bank and by the proposed extension of the co-operative organisation, the Reserve Bank was setting up a machinery

BUREAUCRACY AND BANKS—II

SOME REFLECTIONS OF A RETIRED BANKER

By B. T. Thakur

HAS the bureaucratisation of the Reserve Bank of India helped the cause of Indian banking or brought about expansion in its services? The Reserve Bank has a good economic division and it now works as a lender in the last resort to help banks against liquid securities in times of need. But that is all one can possibly say on the right side of its balance-sheet of performance. As a Central Banking Authority, it is its duty and responsibility to wisely manage currency and credit. This implies lending to banks for seasonal purposes. The bill discounting facility to banks, of which so much is made, is one of its statutory functions. But the inquisitorial enquiries of the bank before accepting any name of primary borrower, or the scrutiny of securities given by the borrower to the banker is not the normal method of discounting by Central Banks. From A to Z it is based on suspicion, mistrust and inhibited by petty-mindedness.

During the first ten years or so of its existence, the Reserve Bank of India was nothing more than an enlarged currency department of the Indian Treasury. Unlike the Bank of Canada, which was started more or less at the same time as our Bank of Issue, where a leading bank of the country was asked to spare a Canadian promising young banker to be trained for the office of the Governor of that bank, the Reserve Bank of India has been all along dominated by bureaucrats and controlled by official directions.

Reserve Bank Overloaded

If the functions of India's Central Bank had been restricted to merely Central banking, perhaps in course of time proper Central banking methods and technique might have been evolved. But, during the last decade or so, it has been terribly overloaded with many functions, with the result that it has failed to give that degree of satisfaction in the discharge of its various duties which was expected of it.

Today, the Reserve Bank is not merely a Central Bank, but a licensing authority for banks, authority to give permission to banks to open branches in India, and to Indian banks to open branches outside India, an examining body, an exchange control authority, and provider of credit to industrial and agricultural banks. With its ownership of India's biggest commercial bank, the State Bank of India, it has become a direct competitor with Indian commercial banks. In other countries of large geographical size and huge population, there would be separate agencies for these different types of duties.

If the Bank had good bankers to manage it and good trained banking assistants to help in its work, perhaps things might have been better. But it is sadly lacking in manpower of the appropriate type. This deficiency could only be overcome by widening one's knowledge, observation and study. But, if there is a tendency to hide lack of knowledge, shortcomings and deficiencies, with a grumpy official attitude, or disinclination to learn through discussion, then the working results cannot be satisfying.

Confidence Violated

Let us take some examples of actual methods and working, and determine whether they can be helpful to banks and helpful to banking expansion.

The purpose of bank examination is to protect the interests of depositors and to find out if banks are safe and liquid. It should not serve any extraneous purposes. The relations between banks and their clients are sacred, and even inspecting authorities cannot take advantage of their privileged position and divulge them. But one hears of so many instances in which information has been given by the Bank or its officers, or by Government which gets copies of inspection reports, information which should never have been given, excepting under judicial orders and in a judicial court. The Reserve Bank even uses pressure of its office over banks to give information to Government's agencies, even though there is no court order.

This violation of confidences between banks and their clients has led to shrinkage of banking custom. A large portion of commercial transactions take place through actual cash payments and not by bank cheques. This is the greatest disservice that could have been done to Indian banking or to its expansion. Herein lies the main cause why organised money market languishes in spite of heavy expansion in currency.

Licensing of Branches

Let us take another department of the Bank's activity, namely, licensing of branches. Recently, a very sad incident has come to the writer's knowledge through a very reliable source, which shows to what extent bureaucracy can abuse its authority and power. A foreign mission entered into an arrangement with one of the commercial banks of the country to open its branch in its premises and thereby handle its large banking business, and of its huge staff too. The bank applied to the Reserve Bank for necessary permission. Whether by design or through carelessness, the information leaked to the State Bank of India, which also subsequently applied for permission to open a branch in the same premises. The first bank's application was kept pending, but the State Bank was given permission straightaway. Later, the first applicant's request was turned down.

But the most curious thing happened when the State Bank applied to the mission to be permitted to open its office in its premises. It must be said to the credit of the mission that it refused permission to the State Bank on the ground that it was committed to the other bank, which should not be deprived of the advantage of its initiative and enterprise.

In spite of this rebuff, the State Bank has not surrendered its permission nor the Reserve Bank has cared to give permission to the first applicant. It might have been possible to condone the partial attitude of the Reserve Bank to its own child, but when that child did not succeed in its purpose, could not the Reserve Bank review its decision and allow the first applicant bank to open the branch and thereby reap the reward of its spade-work and effort?

There are other known instances, too, where the Reserve Bank's attitude in withholding permission to banks to open branches, inside the country and outside, cannot be justified on merits of wise use of discretion.

Exchange Control

Administration of exchange control law and regulation is highly discriminating in its application to official Indians and non-official Indians living abroad. It is an open secret how this has given India a bad name in other countries. Members of Indian missions outside India enjoy the status of residents, but other Indians working abroad are denied the same treatment. It is a moot point whether such discrimination is *intra vires* the Constitution.

In the matter of directions to banks on the conduct of their exchange business, different directions are given to different banks; and, if any bank makes any protest, the high hand of authority comes down with a bang. The Reserve Bank and its officers are all-knowing and they know best how to use their administrative discretion. Banks are too much under the control of the Reserve Bank to contest in a law court the undisputed right to wisdom of the Reserve Bank.

It is gratifying that the Reserve Bank has now power to help good banks in times of crisis against the general security of their assets. But the power has to be wisely used and only in such cases where banks can be saved. A few instances in which use was made of this power did not help the banks to survive. On the contrary, it increased the losses of the less cautious and less knowing depositors. Thus, any money that was provided by the Reserve Bank was swallowed up by earlier withdrawals of deposits, leaving empty husk for those who did not do so; these unfortunate depositors were shut out when the banks closed their doors. Whatever good assets these banks had, were earmarked for loans from the Reserve Bank. Such advances were wrong and the result of bad judgment. They helped in the swindle of poor, ignorant depositors.

No Guidance

Even on questions of help and guidance to banks, the record of the Reserve Bank is not what it should have been. At the time of the Partition of the country, it should have been the duty of the Reserve Bank of India to anticipate what havoc would be caused to securities of banks, and even to balances in currency chests in Pakistan, when lawlessness broke out, as it actually did. A private banker had the foresight to anticipate such events, but the Reserve Bank, either because of its official position, or of its inability to look into the future, did nothing to warn banks. Actually a banker approached the Government of India at that time and requested it to introduce insurance like war risk insurance to protect banks. Danger to smaller banks was great and some of them have been irreparably damaged. But nothing came out of it. The official class is usually obsessed by its omniscience and very rarely trusts the judgment of the private sector even in emergencies, in spite of there being so many instances of wisdom in its anticipations. On account of the great havoc that had occurred to the securities of banks, several banks ceased to exist and the bigger ones had to suffer huge losses.

Wrong Interpretation

There are several instances in which the Reserve Bank's interpretation of law and of its powers has proved grossly wrong and subsequently rectified. Every bank has to keep a statutory reserve with the Reserve Bank in relation to its liabilities. Any money transferred from a bank's account with the Reserve Bank at one place to its another account at another place is money that continues to be with the Reserve Bank. But, for many years, if the transfer was not completed the same day, the Reserve Bank ignored such balances in transit for computing reserve requirement, even though the money remained with the Bank and was not withdrawn. Banks were fined and had to pay heavy penalty. It was only after several years of agitation that the Bank admitted that its own reading of the law was wrong. But still it had not the sense of fairness to return the penalties that had been wrongly imposed upon banks. Originally, when a Civilian Deputy Governor of the Bank was approached on this wrong meaning of the law, he replied that his staff had advised him correctly—a usual answer one gets from a bureaucrat who takes shelter in the noting of his head clerk or superintendent.

According to a legal decision, reported in the *Amrita Bazar Patrika* of 29th January this year, the Reserve Bank's methods in handling alleged exchange control offences were commented upon. The report said: "The Chief Presidency Magistrate, Mr. M. Mookerjee, remarked against certain action of the Reserve Bank of India in the course of his judgment acquitting .... who was prosecuted under the Foreign Exchange Regulation Act of 1947. The Magistrate held that the prosecution had failed to prove that the accused had contravened any directive."

Foreign Bank Helped

When a Dutch bank closed its business in India some time back and entered into an arrangement to transfer its business to a new foreign bank, the Reserve Bank of India straightaway accepted application for licences from that bank, regardless of the fact that Indian banks were facing opposition in the native areas of the new bank. Some questions were asked about this in the Indian Parliament. A high authority in the Reserve Bank rebuked an Indian banker, whom he suspected, as to why he had resorted to questioning tactics in Parliament. The banker denied ever having instigated any such questions. The reply was: "We have our own sources of knowledge and information. It never pays a bank to oppose us." The banker kept dignified silence, thinking that it was no use talking to a man whose mind was dominated by reflexes, built up in the early career of a civilian, surrounded by police officers and submerged in police cases, tutored with police methods.

Integration of Money Market

India's money market is not integrated at all; nor has the Reserve Bank done much to achieve such a purpose. Bazaar lendings are generally divorced from organised bank lendings. The hoarded money and diffused small pocket balances, whether of the petty shopkeeper or of the individual, are entirely distinct and separate sections of the money market. Until through greater friendliness and trust, they can be welded into one bigger whole, the central monetary authority's capacity to regulate currency and credit will always remain inadequate and ineffective.

Since the war, and during the last few years, there has been a tremendous increase in the circulation of money, mainly as a result of deficit financing. But, because of lack of banking facilities and due to violation of confidential relationship between banks and their customers, the contribution of expanded currency to the resources of banks is getting less and less. In order to avoid the gaze of the prying eye, larger and larger number of commercial transactions is being put through by payment in actual cash. Unless faith in the inviolability of relations between banks and their customers can be fully restored, and banks are given the green light to expand, things are not likely to improve. In spite of abundance of created money, capacity of banks to provide legitimate credit to expanding industry and growing trade will remain insufficient.

It is an open secret how lack of understanding and common purpose between banks, on questions of policy in regard to interest rates on deposits, has created very onerous conditions, particularly for Indian banks, to which a reference was made by chairman of some banks in their last annual general meeting speeches. Attempts in the past have been made to adopt a common attitude on this question, but no concrete result has been achieved so far. It is the duty of the central monetary authority to help banks to achieve a common understanding, so that no irreparable damage would be caused to banking in this country—specially medium-sized and small banks, whose capacity for earnings and legitimate profit is poor.

The writer can give many more instances where the Reserve Bank has been found wanting. But enough has been said to show that all is not well with our Central Banking institution. His object is not to resort to sensational writing, but to draw attention to the abuses existing in the administrative methods of the highest banking authority of the country, and, by implication to the consequences that are likely to flow from the officialisation of banking itself.

Banks' Responsibilities

A community or a class of business gets what it deserves. The banks cannot be entirely absolved of their share of blame in the existing condition of affairs. Jealousy amongst the big, the hostility of the big against the medium-sized, and of the medium-sized against the small, have deprived the banking system of solidarity and singleness of purpose, which are so necessary to safeguard their legitimate interests.

The position today is, of course, much better than it was some years back. The Indian Banks Association does at times speak out about the difficulties and drawbacks of the present situation. The Indian Bankers' Clubs have created an atmosphere of friendliness amongst bank managers which has, to a large extent, kept subdued the spirit of senseless rivalry. But banks must do something more positive to establish their right to independence and freedom from great official thraldom.

If big banks take smaller banks under their guidance and protection, the latter will not suffer from inadequacy of knowledge or experience, and can be easily converted into good instruments of widening banking service. Banks must prepare their own code of conduct, like other public bodies, to insist on proper performance of duty; and those members who adopt undesirable practices should be severely censured.

Nationalisation

The writer is often asked by bankers and business men how imminent does he think is the nationalisation of banking in the country.† Nationalisation of credit institutions is not so simple as nationalisation of insurance. The Government knows that lending money is not so easy as selling insurance. It, of course, requires no effort to advance money; but to correctly judge the right to borrow and security behind the loan, and the capacity to enforce repayment, are quite different things. And the new Companies Act has given added powers to Government to bend banks to their will. It is reported that discussions are going on between the Treasury and the Reserve Bank how to impose greater vigilance and guidance over banks. The Government would, therefore, not be in a great hurry to take up the general question of public ownership of banks.

A substantial portion of banking through the nationalisation of the Imperial Bank has been already brought fully under official control; and, when the remaining "State" banks are also nationalised, the share of banking under public ownership will further increase. For some time, the old brigade will have much to do with the actual day-to-day working of the bank and no perceptible deterioration may be visible in the near future. But "public" banking cannot entirely escape from political and official pressure.

Continuance of private banking will depend upon several factors. First upon the experience of the working of the State Bank and the time at which this question is seriously taken up for decision; secondly, upon the banks themselves; thirdly, upon the attitude of the average man; fourthly, upon the way our political leaders continue to think and, finally, upon world developments.

Place of I.B.A.

Banks by their indifference are losing their very strong case for independent existence, and right to greater freedom from official control. They do not seem to realise that, in the modern world, adequate and right type of public relations, are indispensable even for the most obvious right causes. They must make every effort to educate the public, and be constantly before the eyes of the younger generation, not as "Shylocks" or as bloated capitalists, as their senseless opponents portray them, but as humble objective servants in the cause of national prosperity.

If the Indian Banks' Association takes a more serious and larger view of its duties and functions and enlists popular support, it can secure, on merits, a right for statutory representative capacity, as an advising body to the Reserve Bank. Banks in other countries, by law or in practice, usually enjoy such a recognition. When the Indian Banking Bill was being discussed, representatives of Indian banks did try for some such relationship between the banks of the country and the Central Banking Authority. But the officials severely turned it down, even though they fully realised that a right to give advice is not necessarily the same thing as the advised authority's duty to accept it. Refusing an advice, perhaps, involves an obligation to clearly put down on paper why the advice was not being accepted. The bankers' plea was rejected, because bureaucracy does not want any qualification on its authority or discretion.

If private banking is to continue unimpaired in its capacity to help the private sector of India's business and industry, and to help Government in placing its loans, then it is necessary that there should be closest co-operation and fullest understanding between them and the country's Central Bank. It is also imperative that the Central Banking Authority should be freed from many of the functions with which it is charged today, so as to leave it time and independence to deal with monetary problems. Separate agencies can be established to take over from the Reserve Bank responsibilities other than those directly connected with Central Banking.

Vigilance is the price of survival. The common man thinks that, by expropriating landholders, industrialists and bankers, he is building up a democratic State. But political freedom cannot exist without economic freedom. Examples of Italy, Germany and Japan before the war are clear pointers to the fact that, once man surrenders his rights in the economic field, he soon finds that he is deprived of the political rights, too, and the State assumes totalitarian shape.

The Indian business men actively helped the Indian National Congress in pre-independence days, with unlimited funds, to fight for the country's freedom. Today, however, they are suspect. The politician has kicked the ladder by which he rose to power. But still the private business is a divided house. Unless the business men wake up in time, restore unity of purpose and outlook among themselves, and show that, in free enterprise alone, the common man has more to gain, they too will find that, sooner or later, they will all be eliminated, one by one, if not all together. The change in the Constitution, whereby the question of compensation has been taken out of the jurisdiction of judicial courts, the new Companies Act, the abolition of private life insurance, the officialisation of the Imperial Bank, and other existing and contemplated measures, will remove the props of their existence.

Regional Reserve Banks

There are monetary thinkers who feel that, for a vast country like India, the Reserve Bank itself should be split up into four or five regional banks to be co-ordinated, guided and controlled by a Monetary Board, on the same lines as the Federal Reserve Board in the United States of America. Today regional interests do not receive the same care and attention. Calcutta seems to be agitated at the concentration of monetary power in Bombay. And other State capitals also complain of inadequate attention to their credit problems. Regional banks will eliminate such bickerings. The Monetary Board, with wide powers, can ensure the right working of these sectional banks, without sacrificing uniformity and unitary purpose, to the extent that may be desirable, in the country's overall currency and credit policies.

Deficit Financing

India's Finance Minister Mr. C. D. Deshmukh, remarked, in one of his speeches recently, that, whenever he spoke on deficit financing, he kept his fingers crossed. Everyone who has some knowledge of the many seen and unforeseen dangers that lurk in the path of created money, will fully sympathise with him. A recent study by Messrs. C. N. Vakil and P. R. Brahamananda shows that deficit financing of the order contemplated by the Plan, is likely to push up prices by 45 per cent. at the end of the second Five-year Plan, and that the value of our rupee, which is already one-third to one-fourth of what it was before the war, will further go down by about 30 per cent. Actual damage can be much more, because fear and psychological factors are powerful forces, particularly in a country like India, the baneful effects of which can far transcend the result of logical study.

Are savings likely to grow with the Damocles sword of inflation hanging over them? Is it safe for the country or its politicians and bureaucrats to take fullest responsibility on vital issues in the field of money and credit? Should not bankers be given greater freedom so that they may gather more and more of the diffused and scattered money, which in the aggregate amounts to hundreds of crores, and thus create better discipline and control over money and users of money? These and other vital questions require proper answers, if disappointments and disillusionments are to be avoided. More than study, they require experienced minds to find answers.

Expert Committee Wanted

There has been no real enquiry into India's monetary and banking problems since 1929. Then there was no Reserve Bank. It is highly necessary that these and connected problems should be examined by a high-powered committee of monetary and banking experts, so that Indian banking and credit system may not be found wanting in the quantity and quality of service expected of it, in the furtherance of the country's economic plans and projects. When the rest of the world is moving fast, India cannot afford to make errors or waste time.—*All Rights Reserved.*

(*Concluded*)

†*This article was written three weeks in advance of the statement of Mr. A. C. Guha, Minister for Revenue and Defence Expenditure, Government of India, in Parliament on 27th April 1956, to the effect that, having nationalised the Imperial Bank of India and taken over as much as 22 per cent. of the banking business, Government had no intention of going any further in that direction.*—ED.

COTTON TEXTILE INDUSTRY IN JAPAN

SURPLUS SPINNING CAPACITY TO BE DONE AWAY WITH

THE most pressing problem confronting the cotton textile industry in Japan is the huge surplus spinning capacity. The aggregate demand for cotton yarn in 1960 is estimated by the Council of General Textile Policy at 940.8 million lbs. And, as compared with the equipment needed to meet this demand, the existing spindleage—7.96 million as at the end of July 1955—is considered to be in excess by approximately 1.2 million spindles. The surplus capacity has led the Japanese cotton industry to take a rather grim view about its future. If the surplus is not disposed of in time, it is feared, there is bound to be a crisis of over-production in the industry in the next few years. It is with a view to preventing such a crisis, as also to ensuring a more orderly development of the industry, that the All-Japan Cotton Spinners' Association has evolved a tentative programme for eliminating the surplus spinning capacity. The programme envisages three important measures designed to (1) enforce a registration system on equipment and a licence system on new equipment, (2) dispose of the surplus capacity, and (3) bring about merger of small enterprises.

The first measure lays down that all equipment intended for spinning cotton yarn and spun rayon yarn must be registered as cotton and rayon spinning equipment, respectively. The machinery registered as cotton spinning equipment will be allowed to spin only cotton yarn and mixture thereof. For the time being, however, spinning of synthetic yarn and acetate yarn will be permitted. The machinery registered as non-cotton equipment will not be allowed to spin cotton yarn. All additions to and replacements of cotton and rayon spinning machinery shall be subject to a licence, to be given by a joint committee set up for this purpose. The Committee, which will be composed of official and private circles, shall make decisions according to the true state of affairs in the industry. It is specifically emphasised that no spinning equipment will be permitted unless there is a substantial change in the situation.

Surplus Disposal

Under the surplus disposal scheme, about 500,000 spindles out of the total surplus of 1.2 million spindles will be allowed to remain in the mills, but in an unoperable condition by removing gear-ends, etc. The spindles sealed in this manner will, however, be used to meet any emergency demand arising from natural calamities or unexpected sudden sharp rise in demand where the remaining equipment alone cannot cover the demand thus created. The allotment of such unoperable spindles will be in proportion to the existing spindles owned by each company. The balance of 700,000 spindles will be allocated in the same proportion among the spinning companies which will, in turn, dispose them of either by dismantling and storing them or by converting them to rayon spinning or by selling out outright. The All-Japan Cotton Spinners' Association (or its branch body) will act as the purchasing agency for such machinery. The funds needed for the purchase will be financed by a long-term loan at low rates of interest to be allowed by bankers, the repayment of the loan being through a levy on remaining spindles and the money obtained by sale of the redundant machinery purchased by the Association.

Simultaneously with the disposal of surplus spinning capacity, mergers of very small enterprises—of less than 10,000 spindles—will be encouraged. Accordingly, the obligation to dispose of surplus equipment will not apply in cases where the new unit reaches more than 10,000 spindles, as a result of merger with, or purchase by, another company.

It is recommended that a new law, called the Textile Industry Stabilisation Law, be enacted to give effect to the disposal scheme. At the same time, stress is laid on the need for enforcing curtailment of production, in order to adjust the supply and demand position. The existing anti-trust laws, it is said in this connection, preclude such curtailment of output.

The latest move of the Japanese cotton textile industry to dispose of the surplus spinning capacity is clearly understandable. The world trade in cotton textiles, as readers are aware, has suffered a setback of late; during 1955, for instance, the total world shipment of cotton textiles dropped by as much as 11 to 12 per cent. Among other things, two special factors have been responsible for the setback. First, some of the cotton-growing countries, which were hitherto importers of textiles for their domestic needs, have themselves started manufacturing piecegoods. Secondly, competition from rayon and other synthetic fibres is becoming keener and keener. Thanks to these factors, the cotton textile exports from Japan have drifted lower, the figure for 1955 being 1,139 million yards, as against 1,278 million yards in 1954, or a decline of 11 per cent. Since Japan exports as much as 35 per cent. of its total production of cotton textiles, the contraction in the world trade will naturally affect the economy of Japan considerably. This aspect has been lucidly emphasised by Mr. Kojiro Abe, President of the All-Japan Cotton Spinners' Association, in the course of an interesting article contributed to a recent issue of the *Oriental Economist*.

Modernisation

In this article, Mr. Kojiro Abe has not merely reviewed the developments in the Japanese cotton industry in recent years but also assessed the outlook. His review reveals that the spinning capacity which had been reduced to a poor total of 2.00 million at the end of the second war expanded to as much as 7.91 million at the end of February 1955 (and 7.96 million at the end of July 1955.) More significant than the quantitative recovery has been the progress made in modernising equipment. To quote Mr. Kojiro Abe: "Because the best part of the equipment in Japan's spinning industry were newly erected after the war, they were thoroughly modernised. For instance, carding engines, drawing frames, roving frames and ring spinning frames were converted into larger-package types. Roving frames were changed to the Simplex system and more ring spinning frames were re-ramped into super high-draft types (Draft: 30-700), while the pneumatic clearer was adopted for ring spinning. All these modernisations indicate that the post-war recovery in Japan's spinning industry was qualitative as well as quantitative in character. Such equipment modernisation is an outstanding feature of Japan's spinning industry, to which the international competitive power of Japanese goods may well be traced."

The following figures compare the latest position of the Japanese cotton industry with that existing during the years 1934-36:

	1934-36 (annual average)	1954	1955*
Operative spindles (in millions)	10.77	7.90	7.96
Yarn production (in million lbs.) ..	1,419	932	836
Yarn export (in million lbs.)	36	30	24
Fabrics production (in million sq. yds.) ..	3,889	3,039	2,819
Fabrics exports (in million sq. yds.) ..	2,671	1,278	1,139

* Estimates.

It will be seen from the above figures that, during 1955, the progress of the Japanese cotton industry was not only not maintained but was actually retarded. Thus, both production and exports of cotton textiles staged a retreat. Drawing attention to this aspect, Mr. Kojiro Abe refers to what he calls the "key problems" of the Japanese cotton textile industry. The deficit in the balance of payments in cotton trade —that is, the difference between the payments made for cotton imported and the earnings on textiles exported—for instance, must be reduced as much as possible. At the same time, as long as an adverse balance continues, attempts should be persistently made to curtail imports of raw cotton and other natural fibres, while encouraging the increased production of chemical textiles.

Limitations to Exports

Mr. Kojiro Abe refers next to the limitations on the future expansion of the world markets for Japanese cotton goods. He fears that there are great difficulties in the way of an expanding export trade. The fears are based on the marked fall in the shipments of Japanese textiles to some of the most important markets, as the table given below will show:

(In million yards)

	1954	1955
Indonesia	284	108
Thailand	109	97
Pakistan	85	32
Burma	68	43
U.K.	67	51
British West Africa	61	58
Malaya	56	7
Hong Kong	52	17
Ethiopia	10	7

According to Mr. Kojiro Abe, exports of Japanese textiles to the predominant South East Asian markets, such as Indonesia, Thailand, Pakistan and Burma, are destined to be markedly restricted in future, thanks to the low level of national income and balance of payments difficulties in these countries. The trade with Indonesia, in particular, is considered difficult, on account of the freezing of Japanese credits. Pakistan is endeavouring to achieve self-sufficiency in cotton goods. Large increase in exports to the U.K., British West Africa, Australia and the U.S. are, it is felt, hardly possible, due to competition from America and British cotton manufacturers. In conclusion, Mr. Kojiro Abe observes realistically that the future interests of the Japanese cotton textile industry should harmonise with those of all the free countries of the world, including countries which produce raw cotton or export cotton goods, and that they are particularly linked with the economic development of countries in the Central and South East Asian regions.

SALESMANSHIP FOR WIDENING THE MARKET FOR COTTON GOODS

INDUSTRY URGED TO USE MODERN METHODS

From A Special Correspondent

MANCHESTER, *24th April*

MANCHESTER LETTER

IN the light of subsequent events, one of the unfortunate features of post-war trade in Lancashire was the era of the seller's market when the world's shelves were bare and buyers were clamouring to obtain goods from any quarter. Although the far more difficult trading conditions which have ensued in the past five years could not have been foreseen at the time, the phase of easy selling created an atmosphere in many sections which has since done our local trade little good.

There is increasing realisation that the basis for any revival in export trade must stem from a changed attitude towards salesmanship. Gone are the days when goods of somewhat dubious quality would be accepted and representatives of British firms could adopt an independent selling attitude. The wheel has turned full circle and the need for keen salesmanship in disposing of finished goods is even more essential than it was 20 years ago. Nor should it be forgotten that exports of cotton cloth are at present only about a quarter of the quantity shipped abroad in the 1930's.

Merchanting

These views found open expression during the annual conference of the Textile Works Managers' Association when Mr. Wentworth Schofield, M.P. for Rochdale, urged the Cotton Board to pay as much attention to redeployment in merchanting as in the producing branches of the trade. "I would like to think there has been as much advance in the selling methods of the marketing section as there has been in the production section," he said. "If we are to retain our hold on markets abroad, we cannot afford to wait for busines to come. Someone has got to go out and bring that business back."

Many firms have accepted the truth of this assertion during the increasing problems which Lancashire has encountered since 1951, but the trade as a whole does not appear to be entirely convinced that more initiative is needed to dispose of textile products, especially abroad. During the conference Mr. J. R. Bulmer, of the Calico Printers' Association, presented a paper on the topic in which he was strongly critical of the present set-up in the merchanting branch.

"Our selling techniques are in need of an overhaul," he declared. He added: "The commission agency form of representation, still so typical of British export selling, may have got by during the days of our supremacy when competition was undeveloped. Today, abroad, as in the home market, our job is not order-taking but hard selling, backed by highly organised promotion."

There are, of course, exceptions to every rule and certain Lancashire exporting houses have brought modern methods to bear on their system of selling and have reaped the rewards accordingly. In too many cases, however, particularly among some of the smaller firms, opportunities have gone astray and overseas trade returns have suffered in consequence.

Even in the home market the industry has failed to secure as much trade as might have been expected in view of the greater spending power among domestic consumers. As Mr. Bulmer said in his paper: "The proportion of disposable income devoted to dressing our bodies and our homes is falling rather than rising. We are losing out to the suppliers of television, washing machines, tobacco, sweets and all the other amenities of modern life. For the most part we are offering no resistance to their encroachments."

Such advice, calling for more resourceful selling at all levels, is constantly being directed towards the distributor of Lancashire-made textiles. But competitors abroad are receiving very similar exhortations and in several European countries incentives are still being offered to exporters, providing them with more favourable terms on which to trade. Japan's share of world markets in cotton, and particularly rayon, is steadily mounting despite the decline in international trade as a whole.

While world markets are contracting sellers are increasing in number and unless there is a determined effort to satisfy the requirements of customers, the amount of overseas trade secured by Lancashire firms seems destined to dwindle. An individualistic attitude among local textile merchants has been a feature of the industry for many years but it is perhaps time that more co-operative methods were used to broaden selling opportunities.

Trade With India

Trade in textiles between Britain and India has taken on a very different complexion since the war. Exports have changed to imports and *vice-versa*, so that the whole situation has undergone an almost complete reversal. The total volume of Anglo-Indian trade, however, is of considerable interest to Lancashire in view of the comments made from time to time by Indian interests that any action taken to curb imports of cloth into Britain would involve countermeasures against other British exports.

Mutual trade between the United Kingdom and India in 1955, it is now disclosed, exceeded £288,000,000 of which British exports were valued at £129,793,000, an increase of 13 per cent. on the 1954 figures. Imports from India totalled £158,949.000, rising by 7 per cent. over the previous year's level.

British shipments to India were dominated by machinery, which represented 37 per cent. of the total. Within this main heading, exports of textile machinery were prominent, accounting for £7,296,000 out of total machinery shipments of £48,590,000.

Among goods imported to this country from India, the main item was tea, which accounted for nearly half the value. The next most important goods were miscellaneous textile manufactures costing £14,400,000 and leather and fur goods worth £12,625,000. There was a sharp increase in purchases of animal and vegetable oils and imports of tobacco totalled over £7.000,000. As compared with 1954, shipments of cotton yarns and woven fabrics from India were only slightly higher, the value last year being £7,041,000 against £6,849,000.

Bidding for Cotton

Any lingering hopes entertained in certain quarters that the American Government intended to revise its programme to dispose of surplus cotton supplies by the method of competitive bids were ended when the Department of Agriculture announced that the first offers would be considered this week. Actual exports under this programme will not begin until August, when the next season opens.

It has been officially disclosed that the American Government held 6,795,000 bales of upland cotton early this month and officials of the Department of Agriculture are hoping that their new disposal plan will shift a good deal of this surplus. The success of the earlier project, involving short-staple cotton, has resulted in guarded optimism among members of the Administration and the progress of the new scheme will be watched with considerable interest, not only by cotton growers and users throughout the world, but by American political leaders.

In the first six months of the current season, exports of raw cotton from America failed to reach 750,000 bales compared with shipments of nearly 2,000,000 bales a year ago. Undoubtedly many prospective customers have been holding off pending details of the new disposal plan, but there will have to be a sharp revival in business for exports in the second half of the season to make up the lost ground.

After the President's veto of the Farm Bill, containing provision for fixed price supports of 90 per cent. of parity, the loan rate for the new crop has been fixed by the Department of Agriculture at 82½ per cent. as forecast by Mr. Eisenhower. The possibility of a rise in support levels, however, has not been ruled out, provided the supply situation alters for the better between now and the end of July.—*All Rights Reserved.*

Encouraging progress in developing and improving raw cotton production within the Commonwealth was reported by Lord Derby in his presidential address to the annual meeting of the British Cotton Growing Association. The address was read for him in his absence through indisposition. From the period in the later war and early post-war years, when the annual production averaged around 600,000 bales, the crops had been increased to such an extent that output in the past two years had averaged 1,250,000 bales annually.

After speaking of substantial increases last year in Nigeria and Tanganyika territory where new records were set up, Lord Derby announced that he was planning to visit Nigeria early next year as President of the British Cotton Growing Association and also of the Empire Cotton Growing Corporation to see at first hand the work being done by both organisations. The Nigerian crop of more than 187,000 bales in 1955 was 44,000 bales more than ever previously achieved. To meet the additional demand for equipment to handle the crops, the Association was undertaking considerable construction work.

IMPROVEMENT OF ASHMOUNI COTTON

STUDY MISSION SUGGESTS SEVERAL MEASURES

DESCRIBED as the "bread and butter" of Egypt's cotton economy, the Ashmouni variety of cotton is one of the oldest and the most popular of the styles exported from that country. This variety has been grown and spun for close upon a century now. Nevertheless, a few years ago, spinners commenced noticing some deterioration in its quality. After 1953, the complaints become more numerous, so that the Egyptian authorities became greatly concerned and began to adopt several measures designed to make this variety more acceptable to spinners abroad. As part of these measures, they also invited, last year, the International Federation of Cotton and Allied Textile Industries, Manchester, to send a mission to Egypt to conduct a survey of the improvement of Ashmouni cotton. The report of this Study Mission, to which a brief reference was made in our issue dated 28th January 1956, contains several notable recommendations which, if implemented by the authorities, are bound to improve the quality of Ashmouni cotton.

It is interesting to note that, when the quality of Ashmouni cotton began to deteriorate a few years ago, some geneticists actually felt that the life of this variety would come to an end and that its degeneration could not be stopped. This opinion was soon discarded and it is now generally recognised that the deterioration in quality is not due to causes inherent in this variety but owes its origin to certain external factors. The Egyptian Ministry of Agriculture has accordingly instituted the Ashmouni purification scheme which is stated to have already yielded some valuable results. The Study Mission has, in fact, paid a tribute to this scheme. It notes that the scheme is "definitely showing positive results and that Ashmouni cotton is gradually improving, although it has still a long way to go." The Mission has recommended that, in order to reach the highest possible standards, "strictest supervision be exercised over the phases of plant breeding and seed testing." The Egyptian authorities, the Mission says, should also consider whether arrangements could be made whereby only the officially certified seed would be used for the sowing of each new crop.

The chief merit of the Study Mission's report lies in its careful examination of the external causes for the deterioration of the crop and in the remedial measures it has suggested. Since some of these causes could occur in any country and, where they occur, affect adversely the quality of the crop, the Mission's report deserves to be read carefully in other cotton-growing countries too. Thus, one of the first sources of contamination of the seed cotton (or *kapas* as it is known in this country), according to the Mission, occurs at the stage of transport from field to the gin. When the seed cotton is picked, it is usually put into large jute bags and transported by lorry or by barge to the gin yard. Some of the jute bags are not in good condition and are "often torn and full of holes." The Mission says that "if it were possible to use only jute bagging in perfect condition, one of the first sources of contamination would be eliminated."

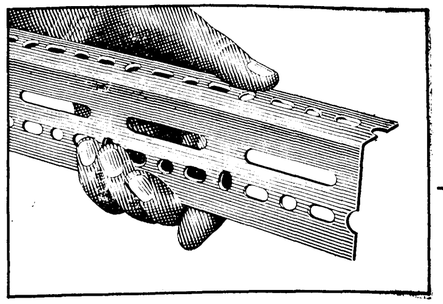
The Mission suggests that the quality of Egyptian cotton, in general, and of Ashmouni cotton, in particular, might be further improved by modernisation of ginning method, particularly as regards dust control, hand cleaning processes and the removal of foreign matter from the seed cotton to the ginnery. One of the problems with which the ginning experts have been concerned is the overheating of the rollers at the gin. This problem, it is stated, becomes an even greater one in hot climates, like that in Upper Egypt. Overheating may overdry the cotton. This overdrying of the cotton has later to be corrected by increased humidifying, before the cotton is hydraulically pressed. The Mission, however, finds that the present method of hydraulic pressing in Egypt is satisfactory. Only, it draws attention to the importance of clean wrapping material.

The same cleanliness requirements which apply to the various ginning operations are also valid in compressing and warehousing where there are stated to be additional chances of contamination of the cotton. As the iron band and the packing material are removed from the bales in the blending room, some outside layers are generally found to be soiled. These soiled outside layers are called "gueshra." Although these layers are first scraped off, a substantial part of "gueshra," it is stated, is subsequently mixed with cotton again. The Mission points out that, from the spinners' point of view, no part of the "gueshra" should be mixed back into clean cotton before it is steam-pressed. It adds: "This practice should be abandoned completely. There is no reason why 'gueshra' should not be sold separately as such." The Mission has also warned against excessive blending of superior lots of Ashmouni with the inferior lots.

One of the main responsibilities of the Study Mission was to make a special investigation of the problem of black specks in Ashmouni cotton. These specks, it is stated, have appeared both in the cotton and the woven cloth after it has been bleached. The reasons for black spots in cotton may be either botanical or physical. A chemical analysis of the black spots in bleached cloth, however, shows that "it is highly improbable that their cause is botanical." The Mission says that it "appears most likely" that they are caused by the use of fertiliser bags (made out of tar-coated paper) for the picking of cotton in the fields.

It would appear that there is an ample supply of empty paper bags of this variety near the cotton fields. Formerly, there was no need for the worker to use these bags. This was because he used to wear a long cotton shirt reaching down to the feet. He would just lift it with the left hand to form a bag into which he could put the cotton as he picked it. But now, he wears trousers or shorts, so that he needs a bag to collect the cotton he picks. Moreover, the worker in Upper Egypt is paid by piece rate. If he used a small bag, he would have to walk more frequently to the end of the field to empty the bag of its contents. By using a larger bag, he could increase the output and improve his earnings. The tar-lined paper bags, it is stated, serve his (though not the spinner's) purpose very well. This is how these bags have come to be used.

It is true that a law has been passed with effect from August 1954 to prevent the use of tar-lined paper bags. But the Mission points out that "it seems unrealistic" to expect that a law of such a nature could be applied widely enough to yield results quickly. The Mission has, therefore, suggested the stricter enforcement of the law against the use of tar-lined paper fertiliser bags for picking cotton. It has also suggested the investigation of the possibility of a small cash premium being paid by the Egyptian Government for any empty tar-lined paper bags delivered to the Government's inspectors. The authorities have also been urged to initiate negotiations with manufacturers of fertiliser in order to study the possibilities of using some other bagging material instead of the tar-lined paper bags.



Announcing

the appointment of

MAHINDRA AND MAHINDRA LIMITED

Gateway Building, Apollo Bunder, Bombay 1.

as

Sole Concessionaires in India for

DEXION REGD.

SLOTTED ANGLE

PSMM-719

Build your own Equipment with

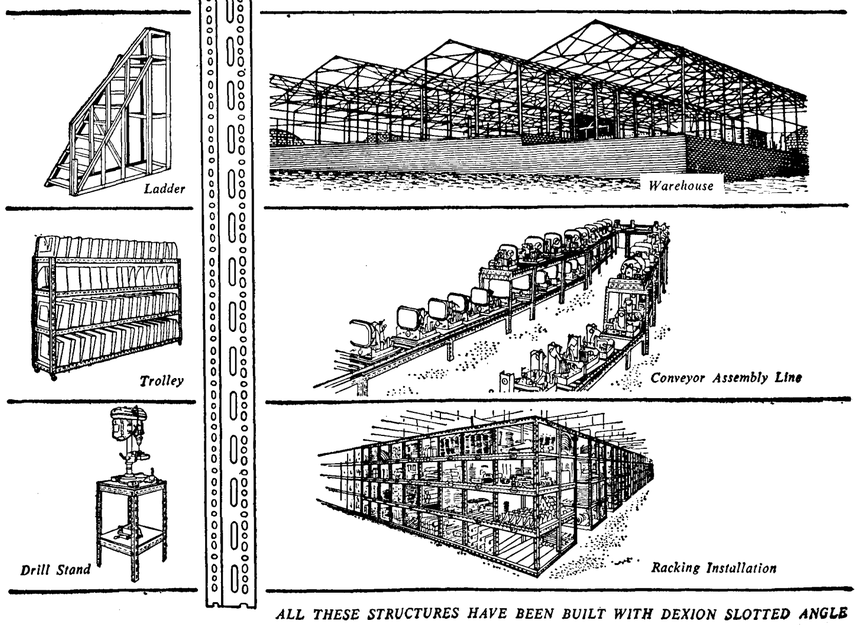
DEXION REGD.

SLOTTED ANGLE

HERE is a revolutionary material that builds and grows. Available in rust protected cold rolled Steel and in Aluminium Alloy, Dexion Slotted Angle can be used to build all types of industrial equipment ranging from work benches, racks or trolleys, to light buildings, godowns and garages.

Dexion Slotted Angle is supplied in packets of 100 ft. made up of 10 ft. lengths. 75 Nuts and Bolts are included in each packet.

The scientific pattern of slots and holes ensures that rigid structures, either permanent or temporary, can be erected by unskilled labour. No welding. No riveting. No measuring. No painting. All the work has been put into Dexion before you get it. Simply cut and bolt, that is all.



ALL THESE STRUCTURES HAVE BEEN BUILT WITH DEXION SLOTTED ANGLE

PUNJAB NATIONAL BANK LIMITED

PREMIUM MONEY TO BE CAPITALISED BY ISSUE OF BONUS SHARES

MR. S. P. JAIN URGES UTILISATION OF RESOURCES IN PRODUCTIVE CHANNELS

THE view that the large-scale deficit financing contemplated in the second Plan would not lead to inflation, provided production of essential materials were maintained at a high level, was expressed by Mr. S. P. Jain, Chairman of the Punjab National Bank Ltd., when he addressed the One Hundred and Ninth Ordinary General Meeting of the Bank held at Delhi on Thursday, 26th April 1956. He urged that the economic and fiscal policies of the Government must be such as to enable the utilisation of resources in productive channels, so that inflationary tendencies might have no chance to gather momentum.

The following is a long extract from the speech of Mr. Jain at the meeting:

"GENTLEMEN,

"I have great pleasure in welcoming you all to the 109th ordinary general meeting.

"1955 has been a year of great significance in the history of your Bank. The institution completed 60 years of its useful service to the country and this historic occasion was celebrated on a national scale. Messages of blessings and good wishes were received from the Prime Minister, the Vice-President, the Governor of the Reserve Bank and heads of large banking institutions in India and abroad, as well as from the innumerable constituents of the Bank. Mr. G. B. Pant inaugurated the function at Delhi, while Mr. Morarji Desai did us that honour at Bombay, Dr. B. C. Roy at Calcutta, Mr. Sampurnanandji at Lucknow, Mr. Mohanlal Sukhadia in Jaipur, Mr. B. Ramakrishna Rao at Hyderabad, Mr. Hanumanthayya at Bangalore and Mr. Takhatmal Jain in Madhya Bharat. H.H. the Jamsaheb of Nawanagar, Rajpramukh of Saurashtra, Yuvaraj Bahadur Karan Singhji, Sadar-i-Riyasat of Jammu and Kashmir, the Rajpramukh of Mysore, Mr. R. R. Diwakar, Governor of Bihar, Rajkumari Amrit Kaur, Union Health Minister, Bakshi Ghulam Mohamed, Prime Minister, Jammu and Kashmir and Mr. Brish Bhan, Chief Minister, P.E.P.S.U. and many other celebrities encouraged us by inaugurating or associating themselves with the celebrations at the different branches of your Bank It was my earnest desire to participate in the celebrations in a large number of offices, but I could do so only at a few places. The celebrations were in a manner befitting the prestige and reputation of your Bank and, with all these blessings and good wishes, I have confidence that the Bank will continue its march forward increasing its service and value to its constituents and the country.

Balance-sheet 1955

"The report of your Directors and audited statement of accounts giving the working results of the Diamond Jubilee year are already in your hands. The accounts for the year show a record profit of Rs. 69.40 lakhs, including the sum of Rs. 4.99 lakhs brought forward, as against a profit of Rs. 56.86 lakhs in 1954 and Rs. 41.79 lakhs in 1953. After the transfers—Rs. 11 lakhs to taxation, Rs. 24 lakhs to contingency reserves, Rs. 5 lakhs to general reserve, Rs. 13.5 lakhs for bonus to staff and Rs. 1,30,000 for gratuity to staff and charity, the Board has proposed a final dividend of Rs. 2 per share, in addition to the interim dividend of Re. 1-8 declared on 1st September 1955. This raises the rate of dividend to 14 per cent. per annum. I am sure you will agree with me that the results of the year under review are satisfactory.

"**Deposits:**—The Jubilee year has recorded increase in the total working capital by Rs. 21 crores, from Rs. 91.16 crores in 1954 to Rs. 112.89 crores in 1955. During the last five years, the total assets have nearly doubled. The deposits of your Bank increased from Rs. 75 crores to Rs. 90 crores during the year. The rise in our deposits in 1955 was 19.1 per cent. as against 8.8 per cent. in the case of other Scheduled banks, as compared with 15.82 per cent., as against 10.85 per cent. in 1954. It is noteworthy that the rate of increase in our deposits, which, in 1954, was nearly 1½ times of that of other banks became nearly double in 1955. The results of the first quarter of the current year give us the confidence that our progress at a higher rate will be maintained. We have also enlisted a large number of new depositors as is evident from the following table:

Number of Deposit Accounts

Nature of Deposits	All other Scheduled Banks			Punjab National Bank		
	June 1953	June 1954	June 1955	June 1953	June 1954	June 1955
Demand deposits	8,93,424	8,93,310	9,08,069	1,50,625	1,05,371	1,03,931
Savings deposits	17,70,802	18,45,532	19,23,598	2,35,117	2,48,550	2,71,402
Time deposits	2,88,162	3,07,562	3,40,341	40,736	46,736	57,659
Total	29,52,388	30,46,404	31,72,008	3,81,528	4,00,657	4,32,992
Percentage increase over June, 1954			4.12			8.07

"One point that is engaging the attention of all banks in the country, as is evident from the speeches of the chairmen of different banks, is the rising cost of money. A study of this question reveals that this feature is due to the change in the pattern of deposits arising out of two reasons. From semi-urban and rural areas where new business is developing, deposits are secured more in the shape of fixed and savings fund than as current accounts. This tends to raise the proportion of higher interest-bearing time deposits and increases the average cost of money to banks. The second and more important factor is the unhealthy competition among banks in large cities, especially ports. The banks are offering interest at substantial rates for call money on large amounts. This trend has been encouraged especially due to higher cost of money prevailing outside India. The consequent shift in deposits that is taking place is evident from the following table:

(In crores of rupees)

Year	Demand Deposits		Time Deposits		Total Deposits	
	Indian Scheduled Banks	Exchange Banks	Indian Scheduled Banks	Exchange Banks	Indian Scheduled Banks	Exchange Banks
(a) 1948	533	130	262	35	797	166
(b) 1955	483	136	349	75	832	211
(c) Increase or decrease ..	—50	+6	+87	+40	+35	+45
(d) Percentage of (c) to (a) ..	—9.7	+4.6	+33.2	+114.3	+4.4	+27.1

"I request the Reserve Bank of India carefully to consider ways and means suitably to deal with this development.

"**Liquidity:**—The liquidity position is very satisfactory. Our liquid assets, consisting of cash on hand amounting to Rs. 8,35,89,262, balance with other banks Rs. 81,55,186, money at call and short notice Rs. 10,67,420 and investments in Government and trustee securities, Rs. 44,41,88,690 totals Rs. 53,70,00,558, which form 59.59 per cent. of the total deposits. The bills purchased and discounted amounted to Rs. 7,64,69,766. When these are added to the other liquid assets, the total comes to Rs. 61,34,70,324, which represent 68.07 per cent., as compared with 60.53 per cent. in the case of other Scheduled banks.

"**Loans:**—During the year under review, loans and advances, including bills, increased by Rs. 9.62 crores to Rs. 42.02 crores. The percentage of our loans to deposits is 46.63, as against 63.34 of other Scheduled banks. There is thus a good margin for us to develop further, to bring ourselves to the level of other Scheduled banks.

"For the past two years, we have been expanding our foreign exchange business. There still remains large scope for improvement and expansion. Bill business expanded considerably. Bills purchased and discounted were Rs. 7,64,69,766, as against Rs. 4,71,31,112 in the previous year.

"You will recall that I mentioned at the last meeting about opening of new offices in suitable places. This programme was implemented after necessary detailed surveys. Thus, during the year, 13 new offices were opened, increasing the number of branches from 313 to 326. We have a programme of opening new branches in the current year almost on the same scale. We are taking steps to see that proper personnel with suitable qualifications and experience are available to man these branches.

Bonus Shares

"Your Directors have decided to issue three bonus shares against existing seven shares of the total aggregate value of Rs. 37.5 lakhs, raising the issued capital from Rs. 87.5 lakhs to Rs. 1,25,00,000. This issue is proposed against premium money received from shareholders. Application in this regard has been made to the Controller of Capital Issues. It is gratifying that, in the speech of the Finance Minister amending the taxation proposals, he has appreciated the difference between bonus shares issued from accumulated profits and those issued against share premia which are but receipts of capital from the shareholders themselves. The acceptance of this distinction ensures that this issue of ours will not be subjected to any tax and encourages us to hope that the requisite permission from the Government will be forthcoming soon. It is also a matter for satisfaction that the Finance Minister has rightly allowed inclusion of share premia in the capital base for purposes of dividend tax. Your reserves, including Rs. 5 lakhs now transferred, will stand at Rs. 60 lakhs. With the rising earning capacity of the Bank, it will be possible to transfer, without disturbing dividends, larger amounts to reserves and to build them up to Rs. 1¼ crores equal to the paid-up capital after the issue of bonus shares. This increased capital structure will give the Bank a much wider and stronger base. I am sure that this step will be welcomed by both the shareholders and the depositors.

"You will naturally expect me to make some observations on the general economic trends in the country. I shall deal with some aspects relating to banking and national development.

Banking for Development

"We have finished a phase of development and are on another phase of greater activity for building up our economy. We can look back with legitimate pride that the past few years have been full of fruitful activity and our achievements were amply reflected in the stability and generally buoyant trends that came to prevail in the economy. There was a phenomenal rise in the deposits of banks, from the stagnant figure of Rs. 850 crores in 1953 to Rs. 1,022 crores in 1955. Government borrowing expectations were exceeded by 50 per cent. After the serious debacle in 1946, it was probably for the first time that a number of new industrial flotations were launched with great success. In 1955, consent for raising as much as Rs. 127.7 crores was given by the Controller of Capital Issues. The investing public started taking greater interest in the activities of the old and new companies.

"The developments in the early part of the current year, however, caused a setback. Nationalisation schemes, prospects of heavy taxation and the policy of expanding State sector diverting resources from the people's sector to that of the State, and the uncertainty regarding supply of goods consequent on the bias in favour of developing small-scale and cottage industries restricting the development of large-scale industries—all cumulatively contributed to dampen the buoyancy and the spirit of confidence. The combined efforts of the different sectors of the economy are required for the tremendous venture of nation-building that we are embarking upon. It cannot be gainsaid that the achievement of the desired development, with the rapidity that is essential, would depend on the allotment of the resources in proportion to the ability of the sectors effectively to contribute to such development. It will be a sad mistake, if the enthusiasm that has been raised is caused to be deflated by policies that have largely an ideological bias.

Deposits and Currency Circulation

"Banks are effective instruments as structures of credit to support expanding activity. Development of banking is, therefore, an important factor. If we analyse details of notes in circulation and the deposits of banks, we find that, during the years 1954 and 1955, the deposits of banks have gone up at a much higher rate than during the earlier years. The notes in circulation have greatly increased since. However, the ratio of deposits to the notes in circulation has declined. During the war years, there was expansion of currency on a much larger scale. Due to the general scarcity of goods and difficulty of securing imports, there were larger savings and the banks increased their deposits. From the year 1943, there was an upward trend in deposits. The percentage of deposits to notes in circulation was as much as 86.6 in 1946. But it declined to 74.5 in 1953 and is only 70.4 at the present time, as will be seen from the following table:

Last Friday	Notes in circulation (1) (Rs. crores)	Deposit liability of Scheduled banks (2) (Rs. crores)	Column 2 as percentage of column 1
1946	1,225	1,061	86.6
1953	1,125	838	74.5
1954	1,200	932	77.7
1955	1,362	1,022	75.0
6th April 1956 ..	1,507	1,061	70.4

"The increase in deposits in 1954 was Rs. 94 crores, as against an increase in notes circulation by Rs. 75 crores, thus registering a ratio of 125 per cent. In 1955, the ratio was only 56 per cent. As against an increase in note circulation of the order of Rs. 162 crores, the increase in deposits was Rs. 90 crores. The trend in the first quarter of 1956 is still lower. Against an increase of Rs. 145 crores in note circulation, the deposits have increased by only Rs. 39 crores. The ratio is thus only 27 per cent. This trend indicates that the rise in deposits in the coming years will be anything like 40 to 50 per cent. It is not likely to be on the scale of the war years when the increase in deposits was very nearly equal to the increase in note circulation. With this low velocity of money, the inflationary pressure of deficit financing will be much less. Any pressure that will be felt will only be in respect of cloth and foodgrains.

Deficit Financing and Inflation

"In the context of larger doses of deficit financing, fears are expressed about inflationary trends showing themselves. But the price trends as they are do not lend any strength to such fears. Any increase in prices that has taken place is mostly in food articles and industrial raw materials of agricultural origin. In the former category, there has been a rise in the prices of both cereals and pulses. The rise in prices is, to an extent, attributable to the increase in taxes, especially sales tax. Further, prices are high in the offseason and the level is brought down with the arrival of new crops. It is also necessary to remember that prices had been hammered down last year, on account of the accumulation of stocks of foodgrains with the Government and the phenomenal increase in agricultural production in the country in 1953-54. Support schemes had to be introduced and prices had to recover to more economic levels. A part of the rise in prices must, therefore, be regarded as corrective. It is thus important that the meaning of the rise in prices should be clearly understood and there should be no efforts at restriction of consumption. On the contrary, the level of consumption should go up in the country, as that alone will encourage production and help build up a healthy economy and better life for the people.

"So far as the agricultural situation is concerned, I do not feel there should be any fear of a repetition of the experience prior to 1952. Large areas have been brought under irrigation in 1954-56 and there is ample evidence to suggest that the efficiency of agriculture has tended to increase. Food production can be expected to rise significantly and it may happen that the records of 1953-54 will be easily surpassed in many cases. If, however, due to a fall in agricultural production on account of adverse weather conditions, prices rise, it will not be due to inflationary factors. The situation must be met by adequate imports. If production of cloth is maintained, as also such other essential materials as cement, steel, etc., a healthy process of larger consumption and larger and added variety in production will evolve itself, and there will be no risk of the increased rate of deficit financing creating inflationary trends in the economy. However, the Government policies, economic and fiscal, must be such as to leave resources and enable their utilisation in productive channels so that inflationary tendencies have no chance to develop.

Need for Correct Revenue Estimates

"In this connection, an analysis of the budget estimates and actuals for the last five years reveals that Government have underestimated revenues and efforts have, consequently, been directed towards drawing larger resources to the Government sector. The following table shows that, as against an anticipated deficit of Rs. 2.43 crores, there was actually a surplus of Rs. 221.34 crores in 1951-56:

Year	Budget Estimates (Rs. crores)	Accounts (Rs. crores)
1951-52	+ 26.10	+128.09
1952-53	+ 3.73	+ 38.93
1953-54	+ 0.45	+ 8.50
1954-55	— 15.96	+ 33.51
1955-56	— 17.35	+ 12.31 (revised)
Total ..	— 2.43	+221.34

"Considering the actual surplus each year during 1951-56, it will be correct to assess that the total savings from current revenues of the Central and State Governments would be over Rs. 700 crores, as against the estimate of Rs. 573 crores. In the second Plan, the savings from current revenues are estimated at Rs. 800 crores. Out of this, Rs. 350 crores will be derived from the existing taxation and Rs. 450 crores from additional taxation. Obviously, this is an underestimate, as the buoyancy of revenues will be very much more in the coming years. Tax revenue has increased from Rs. 405 crores (including States' share of divisible taxes) in 1950-51 to Rs. 483 crores in 1955-56. In 1956-61, the increase in tax revenues will be much more pronounced. By 1960-61, on the basis of the existing taxation, a total of Rs. 610 crores is estimated to be secured, while the additional taxes that have been proposed this year for Rs. 36 crores will fetch more than Rs. 50 crores by 1960-61 and take the total of tax revenues to Rs. 660 crores. Taking these into consideration, the total savings from current revenues should be expected to be as much as Rs. 950 crores. It needs no emphasis that a correct appraisal of the possible revenue receipts should be made. If more money is gathered towards the Government sector, the effort of the private sector is stultified, as it is deprived of resources that could be utilised to greater advantage by it in achieving expanding production to counteract inflationary forces. As I suggested earlier, the allocations should be made according to actual performance and capability. It is also necessary to achieve results quicker in production, so that inflationary forces can be kept in check.

Employment

"This takes me to the question of employment that is sought to be provided in the second Five-year Plan period. This is a problem of vital significance to the whole economy and I would, therefore, like to refer to certain details. It is envisaged in the Plan to provide employment to 8 million people by an expenditure of Rs. 7,100 crores, that is, employment will be provided for 110,000 persons per Rs. 100 crores roughly. Towards this end, labour-intensive developments are lent powerful support. General estimates have been made of the amount of employment that cottage and small-scale industries and other fields of activity could provide against the investments proposed. The details of employment potential, however, seem to disprove the commonly held view in respect of cottage and small-scale industries.

Estimates of employment potential under the Second Five-year Plan

	Additional employment (in lakhs)				
	Investment (Rs. crores)	Direct employment	Construction	Trade, commerce and social services	Total employment
Irrigation and power.	898	0.51	3.72	2.10	6.33
Railways	900	2.53	..	..	5.60
Other transport and communications ..	484	1.80	1.27	..	
Industries and minerals ..	1,290	8.00	4.03	6.00	18.03
Cottage and small-scale industries ..	400	4.50	0.45	0.68	5.62
Others (fisheries, forestry, education, health, etc.) ..	3,128	13.65	11.53	18.26	43.45
Total ..	7,100	30.99	21.00	27.04	79.03

"The investment proposed in cottage and small-scale industries is about Rs. 200 crores. It should be expected that a similar amount would almost certainly be invested by the people. Against this total of Rs. 400 crores of investment, the employment possibility visualised is 4.5 lakhs. To this may be added at the most 25 per cent. by way of additional employment under trade, commerce, etc., totalling 5.62 lakhs. The investment envisaged in the large-scale industries in both the private and public sectors is of the order of Rs. 1,290 crores. The direct employment potential in this field, according to estimates in the Plan, is 18 lakhs. These figures indicate that cottage industries do not provide any larger level of employment and proper investment on industries with modern techniques and of diversified character will provide equally large employment. This is an analysis significant from the point of view of the pattern of investment that must be pursued in order to achieve the objectives that we have hopefully laid before ourselves. It must be borne in mind that cottage industries do not contribute to the revenues for social services, etc., unlike large-scale industries whose contribution is very large. The subsidy that is required to be provided to prop up cottage industries is an additional drawback. Further, cottage and small-scale industries will provide employment but not employment that will afford an increasing standard of living. Large-scale industries will provide employment and give the means for increasing standard of living.

Administration and Staff

"Banks in India have a growing role to perform in the national economy. I am confident that your Bank will maintain its high traditions in the service of the nation. Your Directors are devoting all their efforts in this direction to see that your Bank is organised into a perfect mechanism devoting itself to the service of the people. Your Bank is gradually introducing modern methods of administration and control in order to improve the facilities and the speed of service.

"The employer-employee relations in your Bank have been comparatively happier. The Board has always recognised the identity of interest between the institution and its employees. In keeping with its traditions, the Bank has given more concessions to its staff than any other bank in the country when complying with the provisions of the Industrial Disputes (Banking Companies) Decision Act, 1955. They should feel proud of being members of this premier banking institution and continue to work loyally and conscientiously.

"In conclusion, I must express my thanks to all our worthy constituents for their continued co-operation and confidence. I owe more than formal thanks to my colleagues on the Board and the Local Advisory Committees who extended unfailing help to me in the discharge of my work, endeavouring to preserve and build up the reputation of your Bank for stability, organisation and service. I extend my thanks also to the officers and staff at all levels who have contributed to the fulfilment of the common task."

THE BANK OF INDIA, LTD.

ESTABLISHED 7th SEPTEMBER, 1906

U.P. SUGARCANE ACT HELD VALID

SUPREME COURT'S VERDICT

ONE of the legal uncertainties interfering with the crushing operations of sugar mills in the State of Uttar Pradesh has been removed with the Supreme Court upholding the validity of the U.P. Sugarcane (Regulation of Supply and Purchase) Act, 1953, and the two notifications issued under it. These notifications pertain to the supply of sugarcane to the factories. One of them—that is, the one issued on 27th September 1954—lays down that, where not less than three-fourths of the cane growers of the area of operation of a cane growers' co-operative society are members of the society, the occupier of the factory, to which the area is assigned, should not purchase the cane grown by a cultivator in this area except through such a society. The other order, which was issued subsequently—on 9th November 1955, to be precise—reserves or assigns to the sugar factories specified in the schedule the cane purchasing centres for the purpose of supply of sugarcane during the 1955-56 season. In effect, the order specifies the agency of cane supply to the factories by creating specific zones for them.

The constitutional validity of the aforesaid Act and the notifications had been challenged by as many as 5,000 cane growers of the districts of Gorakhpur, Kheri, Meerut and Deoria. The Act, it was contended on their behalf, was *ultra vires* the powers of the State Legislature, inasmuch as the subject matter of the Act was within the exclusive field of Parliament. It was further contended that the Act was repugnant to the Industries (Development and Regulation) Act, 1951, and the Essential Commodities Act, 1955, passed by Parliament.

Petitions Dismissed

The petitions were dismissed by Mr. Justice N. H. Bhagwati, who delivered the judgment of the Supreme Court. Dealing with the argument that the Uttar Pradesh Legislature was incompetent to enact the impugned legislation, Mr. Bhagwati said: "An examination of the provisions of the impugned Act shows that it (the Act)/ merely confines itself to the regulation of the supply and purchase of sugarcane required for use in sugar factories and does not concern itself at all with the controlling or licensing of the sugar factories, with the production and manufacture of sugar, or with the trade and commerce in, and the production, supply and distribution of, sugar." If that were so, his Lordship declared, there would be no question whatever of the Act encroaching upon the jurisdiction of the Central Government in regard to sugar industry. He accordingly opined that the U.P. Legislature had the jurisdiction to enact the law with regard to sugarcane and had the legislative competence to enact the impugned Act.

Mr. Bhagwati also rejected the argument of the petitioners that the provisions of the impugned Act were repugnant to the Industries Act and the Commodities Act. There was, he said, no repugnance whatsoever between the provisions of the Sugarcane Control Order, promulgated by the Government of India and the impugned Act of Uttar Pradesh. In his considered view, the rules framed under the order, as also the U.P. Sugarcane (Regulation of Supply and Purchase) Order, 1954, did not encroach upon the field covered by the Commodities Act. There being no repugnance at all, no question arose of the operation of Article 254 (2) of the Constitution.

Now that the U.P. Sugarcane Act has been held valid, the cane growers should co-operate with the factories in the task of maintaining a high level of sugar output. They will do well to endeavour to see that the factories are assured of adequate and regular supplies of quality cane. If, however, they were to adopt an attitude of non-co-operation, there would be a setback to the crushing operations of the mills and this would ultimately adversely affect their own interests.

"INDIAN SUGAR INDUSTRY—1954-55 ANNUAL"

The annuals of the *Indian Sugar Industry* (Editor: M. P. Gandhi, published by Messrs. M. P. Gandhi & Co., Jan Mansion, Sir Pherozshah Mehta Road, Fort, Bombay 1. Price: Rs. 6) have become so well known that the latest one—the 1954-55 Annual of this publication—needs no introduction to readers. The latest issue describes in a lucid and comprehensive manner the developments in the sugar industry—Indian and international. The review covers a wide field in the sugar industry, including the *gur* and *khandsari* sectors and the agricultural sector, that is, sugarcane cultivation.

The *Annual* is divided into two parts—(1) sugar industry at a glance and (2) review of sugar industry. The first part is, in turn, subdivided into two sections, namely, statistical and general. The statistical section contains as many as 86 tables which give a wealth of statistical information relating to the various aspects of sugar manufacture and trade. The general section is devoted to the study of the sugar supply position, problems confronting sugarcane, prices of cane and sugar, imports, taxes, law and legislation, etc. Also incorporated in the section are organisations, concerning the sugar industry, Government's sugar policy for 1955-56, and important dates in the history of sugar industry. The second part deals with the developments in the sugar industry in India during the past three seasons, and a reference to the development programme for the sugar industry under the second Five-year Plan. The utility of the *Annual* is further enhanced by the references to the ninth session of the International Society of Sugarcane Technologists held at New Delhi, and the inclusion of several Government notifications, of a State-wise list of sugar mills in India and Pakistan, and a list of units that are proposed to be set up in the coming years.

Mr. M. P. Gandhi, the Editor of the *Annual*, has a few interesting remarks to make on the expansion scheme for the sugar industry as envisaged in the Draft Outline of the second Plan. The success of the scheme, he rightly points out, will depend "on increasing the yield of cane per acre by intensive cultivation," since, in his opinion, the acreage under cane cannot be further raised. Otherwise, he warns that the crushing capacity of factories will remain unutilised and this will present "a very serious problem." Mr. Gandhi accordingly urges intensive propaganda and publicity, in order to carry the results of laboratory research to the fields. To quote him: "To ensure larger cane yields of superior quality, it is essential to earmark larger funds for cane development and research. The average yield, which is at present 14 tons per acre, will have to be at least doubled during the next decade."

"GUR" INDUSTRY IN U.P.

The development of *gur* and *khandsari* industry in Uttar Pradesh is expected to receive considerable impetus during the ensuing (1956-57) season. The State Government proposes to launch a vigorous scheme for improving cane cultivation in the *gur* and *khandsari* areas. The scheme covers both research and development work, the expenditure provided for in the current year's budget being Rs. 1,30,337 and Rs. 5,62,574, respectively. The scheme will be implemented in the first instance in the southern belt of Uttar Pradesh and, as the work progresses, it will be extended to the northern belt. The relative importance attached to the southern region is due to the fact that this region has not received benefits of development, with the result that the cultivators still grow outdated cane varieties in an orthodox manner, the average per-acre yield being not more than 7 to 7.5 tons. The *gur* producing area in the northern region, on the other hand, is intermixed with the reserved factory areas and hence it has been receiving the benefits of cane development indirectly.

Under the scheme, those non-factory districts which at present do not have the staff of the Cane Development Department will be provided with one cane improvement unit of field staff. For purposes of co-ordination, the entire area of the northern belt will be divided into three regions. Since most of the districts where the work is to be conducted are deficient in irrigation facilities, the scheme envisages sinking of an adequate number of tube-wells and masonry wells. A subsidy at the rate of half the total cost of construction will be given.

The implementation of the above scheme will be entrusted to the Director of Agriculture. The experimental part of the research work will be conducted at three Government farms, namely, Bararas, Unnao and Etawah, where a 10-acre block will be separated for field trials on sugarcane. In the Tarai area, a block of 50 acres will be selected either at the Tarai State farm or at some private farm and, in the waterlogged area, a block of 20 acres will be chosen at the Ghoghraghat farm or at some private farm for the purpose. Since the experimental work will involve additional expenditure in field operations, a sum of Rs. 10,000 has been provided in the budget for 100 acres of land at five places at the rate of Rs. 100 per acre. A unit of agronomical, entomological and mycological staff will be posted at Tarai and waterlogged farms and of agronomical staff at each of the three farms in non-factory districts. The entomological, mycological and *gur* chemistry units for *gur* areas will be posted at the Sugarcane Research Station, Shahjahanpur.

SUGAR PRODUCTION AND STOCKS

The aggregate sugar production in India during the month of March 1956 was 332,226 tons, according to the Indian Sugar Mills' Association. This quantity compares favourably with 307,000 tons produced in the corresponding month of 1955. The total output of sugar during the first five months of the current season (1955-56) is estimated at 1,405,275 tons, as against 1,290,000 tons in the same period last season. The number of factories working this season is said to be 142, as against 136 during 1954-55.

The offtake of sugar from the factories during March 1956 amounted to 89,000 tons, as compared with 99,200 tons a year before. The aggregate offtake in the five-month period was substantially higher at 704,000 tons, the figure for the corresponding period last year being only 374,600 tons.

The closing stocks of indigenous sugar with the mills as at the end of March were 1,127,000 tons, as against 984,400 tons a year before.

Presiding over the eighth annual session of the Cane Development Council of Meerut district at Meerut, the other day, Mr. Hukum Singh, Agriculture Minister, of Uttar Pradesh said that, of the four sugar factories sanctioned by the Government of India for U.P., one would be located in Meerut district. It would be run on co-operative lines. The Government would take shares of Rs. 20 lakhs in it. A second factory might also be located in the Meerut district.

INVESTMENT IN U.K. COLLIERIES

£1,000 MILLION IN TEN YEARS

THE National Coal Board, United Kingdom, has proposed to spend nearly £1,000 million during the next 10 years on the reconstruction of the coal industry in the country. This represents something of the order of 4 per cent. or 10d. out of every £ invested in Britain. Explaining the increase required in the investment over that set out in the original plan for coal published in 1950, the Coal Board points out that, apart from the rise in prices which has pushed up the cost of machinery and other mining materials, a number of major projects has been added to the original plan.

The revised plan provides for an output of 240 million tons a year by 1965, of which 228 million tons will come from Coal Board mines, 10 million tons from opencast workings and 2 million tons from private miners. The output last year aggregated 221.6 million tons. A total of £590 million will be spent between now and 1960 and £410 million between 1961 and 1965. Of this, £860 million will be on collieries and £140 million on ancillaries. In orded to achieve the 1965 target, it will be necessary not only to complete the vast majority of major reconstruction schemes now in progress, but also start and complete more than another hundred schemes. It may be noted, in this connection, that 20 colliery reconstruction schemes were completed at the end of 1955, while at the same time there were 147 in various stages of implementation. The Board hopes to cover about two-thirds of the cost of the revised scheme by internal financing, as against the 1950 estimate of 75 per cent. self-financing and an actual of 50 per cent. self-financing between 1950 and 1955.

In arriving at its estimate of production, the Board has made no allowance for new mining techniques as yet unproved, but it has allowed for an extension in the use of proved techniques, especially power-loading machines. The Board aims at a fully mechanised support system and experimental equipment is already undergoing trials underground. The object is a fully mechanised coal face.

The estimates of future output are, however, based on two assumptions, namely, (1) that the industry is able to "get the requisite manpower in right places" and (2) that there is no decrease in total working time. This means that any reduction in the hours of work in the pit must be offset by improved attendance or productivity. According to the Coal Board, the industry will require 682,000 mine workers, with an output per man year of 319 tons in 1960 and 672,000 mine workers with an output per man year of 342 tons in 1965. This compares with 704,000 mine workers in 1955 with an output per man year of 298 tons.

The Coal Board does not anticipate any marked fall-off in the rate of investment after 1965. The new investment plan, it points out, is comparable broadly with the volume of investment already taking place on the Continent. Nor does the Board envisage any change in coal prices as a result of the new investment programme. To quote the Chairman of the Coal Board again: "We are determined that the mining industry shall not lose any chance now or in the future, of exploiting to the full any technical advance that clearly can help us."

Commenting on the new plan, the *Financial Times*, London, has made certain pertinent observations. According to it, there have been two "major disappointments" in the plan. "One is, of course, that the capital expenditure over the 15-year period to 1965 will be over twice as large as that originally envisaged and will produce less coal at the end of it. The other disappointment is that productivity has not risen as expected during the first five years of the period of the plan, and the manpower requirements of the coal industry during the 1960's have increased by some 50-60,000 above the original estimate, to allow for a lower output per man-year."

Proceeding, our contemporary remarks that the supposition that the higher rate of investment will not have any effect one way or another on the price of coal is based on two assumptions. One is that the Coal Board does not have to provide anything beyond "depreciation" out of its own earnings and that it borrows all the rest of the money that it needs for investment. The other assumption is that working time, including Saturday shifts and fifty weeks a year, is maintained at the present level. The first assumption, according to it, ought to be doubtful, while the second already is.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madura, Tinnevelly, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the *complete* banking service we offer:

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Letters of Credit—Bill Collection—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

EXPANSION OF INDIAN RAILWAYS

PROF. GALBRAITH'S OBSERVATIONS

MUCH concern has been expressed in the Press and elsewhere in recent months over the danger of the railways and other forms of transport not being able to meet the traffic that might be offered during the second Five-year Plan. In many quarters, the view is held that the programme for the expansion of the railways, significantly large as it is, may still fall short of India's requirements. There is a fear that, as a result of inadequate railway transport, the rate of implementation of the Plan itself might suffer appreciably. In this context, it is interesting to note that Prof. J. K. Galbraith of Harvard University, now in India, besides making a number of constructive suggestions for the improvement of the railway transport, feels that there is scope for capital conservation in implementing the development plan for railways.

The proposed investment of Rs. 900 crores on railway development and expansion, which involves foreign outlays to the extent of Rs. 425 crores, according to Prof. Galbraith, is heavier than it need be. The requirements of railways are, he says, based on an estimate of the anticipated volume of passenger and goods traffic and of the plant investment necessary to handle the expected increase. In this context Prof. Galbraith considers it necessary to bear in mind three aspects of railway investment. The first relates to the general nature and reliability of estimates of investment requirements in this industry. The second is whether the Indian railways should plan to accommodate all the traffic offered or whether it would not be more profitable to transfer some of the traffic to other carriers where investment would be on a more restricted level. Thirdly, whether investment has been planned with a view to effecting the maximum economy in capital outlays for the task to be performed.

Passenger Traffic

Prof. Galbraith is of the view that investment on schools, for instance, may be regarded as more urgent than on railways. He prefers discouragement of passenger traffic by railways especially for shorter distance. He says that, in India as elsewhere, the notion of that traffic should be discouraged or shifted to other carriers has understandably played little part in railway thinking. It will be noted that substantial part of the energies of the Indian railways is devoted to the movement of passengers and this provides a little less than one-half of the revenue of the railways. Between 1938-39 and 1954-55, the number of originating passengers on class I Government railways increased from 499 million in the pre-Partition system to 1,234 million in the present system. This compares with the increase in the population in the same period from 379 million to 381 million.

Alluding to the increase in passenger traffic, Prof. Galbraith says that the chief reason for this increase is that railway fare has remained at a relatively low level. In 1953-54, third class fares were 157 per cent. of the 1938-39 level, although commodity prices in general were 367 per cent. of pre-war. In relative terms, passenger travel costs only half as much as before the war. The railways have not increased their trains and equipment in keeping with the increase in travel. Instead, they, the Professor says, have allowed overcrowding. In the second Plan period, a 15 per cent. increase in passenger train services is proposed but this will be in addition to extensive replacements of existing coaches and of locomotives in passenger services.

The obvious solution to reduce passenger traffic, according to Prof. Galbraith, is to increase passenger fares. India, he says, cannot afford to give excessive support to cheap passenger travel. He has made a few other suggestions for discouraging passenger traffic. First, all concessional fares and excursions designed to promote travel, even if nominally profitable, must be reduced or abandoned. Secondly, passenger train schedules must be reviewed from the standpoint of minimising equipment usage. Where there is a choice between passenger convenience and more coach miles, the latter must rule. Thirdly, the fare schedule should be increased with concessions for categories of needy travel, such as those occasioned by reasons of health, family tragedy, livelihood or religious motivation. In the national interest, the public should be asked to travel less. The Professor has no doubt that, if the choice is between steel for steel mills and steel for coaching stock and rails, the preference would be for the former.

Since the available traffic is very large, Prof. Galbraith has urged the need for shifting passenger traffic from railways to other carriers, in particular to road transport. The movement of goods by rail over short distances, he says, is extremely wasteful of rolling stock "as the time spent in moving the goods is small, while that spent standing is greater." He has suggested that rates for short hauls, where alternative road transport is available, should be increased. A telescopic rate structure with high rates for short distances is, in the opinion of the Professor, very much in the interest of investment conservation in India. At the same time, he warns against inadequate investment in road transport.

Investment Policy

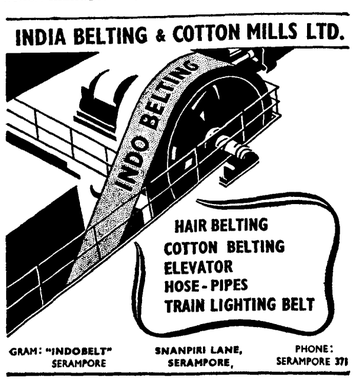
Observing that unnecessary use of capital in railways means a slower rate of development in other industries, whereas increased use of labour has no such effect, Prof. Galbraith suggests examination of the railway investment policy from the following points of view: First, whether labour can be substituted for investment in the performance of the prospective transport task even if at higher cost. For instance, sleepers are a capital outlay and renewal of a line reduces the cost of shimming and other kinds of patching. These have high labour cost. Secondly, whether there are alternative types of investment which would have the effect of economising the total investment outlay. This involves a preference for types of outlays which promise to accomplish the task even though at higher labour cost. In India, there is a *prima facie* case for investment in yard facilities which increase the speed of handling and thus the effective utilisation of rolling stock. Yard improvement, which merely or mostly reduces labour cost, has no such defence. One is also struck by the very large programme of double-tracking in the second Plan. Prof. Galbraith is surprised at the extent of the electrification programme now under way in India. Recent experience, he says, would suggest that diesels are capital-saving, as compared with electrification, and even their requirement of imported fuel might be offset by smaller investment now. The traffic can be accommodated even though this might mean larger investment later. Lastly, whether the investment is economising in regard to imported, as compared with domestically-produced, capital supplies. Proceeding, he observes: "There has always been the conflict whether railways should be built for eternity or to get safely by the next bulge in traffic. The next few years will be one of special stringency in India and thereafter steel, electrical equipment, heavy engineering products and the like will be available from Indian sources. Where there is a choice, railway investment should be for the short rather than the long pull. The need for examining investment for its bearing on the foreign balance is also obvious."

Elaborating his observations on the capital requirements of the railways, Prof. Galbraith says that in every country in the world whether the railway system is privately-owned or publicly-owned, the railway has an insatiable hunger for capital. In the running of a railway, capital and labour and, in even greater measure, capital and good management are substitutes. There is a considerable range in any system in which management and organisation can be substituted for investment and traffic handled with suitable expedition. In the context of India's second Five-year Plan, it is important that this substitution be carried out as far as humanly possible.

Road Transport

Clearly, the successful completion of the various industrial and agricultural expansion schemes depends upon the development of a well co-ordinated road-*cum*-rail-*cum*-river-*cum*-sea transport. There is, therefore, considerable force in Prof. Galbraith's plea that more capital should be found for road transport in order to reduce the load on railways. Unfortunately, the Government's policy of nationalisation of such transport and excessive taxation have prevented private *entrepreneurs* from investing in this field. In the latest industrial policy statement, road transport has been included in the concurrent list. Such inclusion means that the State will increasingly establish new undertakings in this sphere, though private enterprise will also have an opportunity to develop in this field, either on its own or with State participation. In practice, the recent trend has been towards State ownership of road transport. But, in view of the large increase in traffic that is likely to occur in the future and the inability of the railways even now to carry the traffic offered, it would obviously be more practical, in implementing the statement, to afford larger scope to private road transport operators.

Few will deny that passenger fares should not be far below the general price level. There is, therefore, some case for an increase in these fares. But any such increase will have political repercussions. In any case, it will be difficult in actual practice to implement a schedule which provides for concessions to categories of "needy travel" occasioned by reasons of health, etc. The authorities will, however, do well to examine the Professor's case for capital conservation and better management.



MODERNISATION OF BRITISH RAILWAYS

British railways are planning to spend about £23,000,000 on the construction of 1,750 multi-unit diesel trains and about £26,000,000 on new passenger coaches during the next two years. Some 2,600 new coaches will be built this year. These projects, part of British railways' £1,200 million modernisation scheme, are mentioned in a statement on the ways in which the scheme is to be implemented. A first instalment of 174 main-line diesel locomotives has already been ordered and delivery of them will start in 1957. More than 500 diesel shunting locomotives are now in service, and, during 1956-57, the total will be increased by over 400 more.

The new passenger coaches will include multi-unit electric vehicles with improved bogies and main-line corridor coaches that can be hauled by steam or diesel locomotives. All passenger-carrying vehicles will be of steel construction, apart from a few multi-unit coaches that will be built in light alloy. The modernisation plan envisages the replacement of all timber-bodied passenger coaches within the next seven years.

About 70,000 new freight wagons are to be built this year. Other improvements to be carried out in the next two years include measures to speed traffic, the construction of new tunnels, the extension of electrification, the establishment of diesel maintenance facilities at many towns and cities the construction of new marshalling yards and goods yards and major alterations to stations.

MOISTURE-PROOFING COMPOSITIONS

The necessity for conservation of metal stores cannot be overemphasised. With the cost of production going up every year and the world shortage of metals, it is imperative to preserve all metal stores. The preservation of metal stores is not complete, unless the preserved stores are properly wrapped to avoid removal of preservative films during subsequent handling and storage and the wraps are treated with a suitable material to prevent ingress of moisture which is enemy No. 1 for metal stores. Moisture-proofing compositions are extensively used for this purpose. At present, the requirements are mostly met by imports.

Composition suitable for the abovementioned purposes has been developed by the Technical Development Establishment (Labs), Kanpur. The developed composition possesses all the essential and desirable features of a good moisture-proofing composition and is in fact slightly better than the imported material in respect of impermeability to moisture vapour. The composition can also be conveniently applied to cartons and other packages wrapped in paper, cloth or hessian. The raw materials used are of indigenous origin and are easily available.

The manufacturing process is simple and equipment required can be easily fabricated. Production can be advantageously undertaken by industrial units already producing allied stores. The process is covered by Indian Patent No. 47272. The demand for the composition is limited at present, but with the establishment of more and more engineering industries, the requirements may be expected to increase to sizable proportions.

NEW PRODUCTS AND PROCESSES

Water Displacing Composition

A WATER displacing composition has been developed at the Technical Development Establishment Laboratories, Kanpur. The composition possesses the unique property of simultaneously drying and affording temporary protection against corrosion to metal parts. Its mode of application is simple dipping, spraying or flow-coating and requires no heating or power services. Such compositions find manifold industrial applications. It is generally used in drying of metal parts particularly where conventional methods of drying are inconvenient or unsatisfactory. Small quantities of such water displacing compositions are at present imported and used in ordnance factories and for other defence requirements. Due to their utility in removing both loose and absorbed water from metallic surfaces, these are likely to find increased use in industrial engineering establishments also. The process of manufacturing the new composition involves the preparation of nitrites of higher fatty acids, followed by their dissolution along with organic soaps of higher fatty acids and an oil in a suitable solvent. The ingredients, excepting triethanolamine, which is used in very small quantities, are all indigenous. The composition is covered by Indian Patent No. 46821 and possesses all the essential and desirable features of a good water displacing composition. Trials in engineering establishments have established that in performance it is equal to imported materials. Its production could profitably be undertaken by some industrial units already engaged in producing chemicals.

Magnetic Measurement of Coating Thicknesses

A magnetic measuring system for determining the thickness of coatings of non-magnetic materials, such as paint, enamels and platings, covering either iron, or steel, which incorporates a permanent magnet, has been developed by the Instrument Department of the U.S. General Electric Company. The measurement of coating thickness depends on the fact that the magnetic forces, or "flux," exerted by the permanent magnet between two contact points is affected by the thickness of the coating covering the iron and steel. These variations in the flux are then converted into units of measurement which indicate the thickness of the coating. The device can be used to measure the thickness of coating made from both electrically conductive materials and coatings made from non-conductor materials. It is small enough to be held in the hand. The same magnetic system can also be used to measure the thickness of non-magnetic materials, if they are placed over a plate, or disc, of magnetic materials, which will act as a reference source.

Graphite in Natural Resin

A new graphite and natural resin moulding material designed for use in the manufacture of "waveguides" has been developed by Acheson colloids, London. Waveguides form one of the most essential elements of all radar systems. The difficulty of machining metal waveguides and the greater weight of metal waveguide units, as compared with their plastic counterparts, has led to a growing amount of research into the use of plastic mouldings for the manufacture of waveguides. One problem, which has been causing some trouble in the production of plastic waveguides, has been the tendency for the performance of the finished product to vary. During experiments carried out recently at the Admiralty Signal and Radar Research Establishment, at Portsmouth, waveguides made with this new compound, which consists of a graphite dispersion in natural marco resin, gave, however, a more reliable performance than those made with materials compounded from graphite, or carbon mixtures, and synthetic resin.

New Electron Microscope

A new high resolution electron microscope which has been developed by Metropolitan-Vickers, Manchester (U.K.), incorporates an air lock for inserting the specimens to be examined, which has been specially designed to be readily adaptable for use with special stages and for the examination of unusual specimens. This air lock can, however, be removed easily when the specimens must be examined by a reflected electron beam. The microscope has an electron optical system, which incorporates a 100-kw. cathode and an adjustable anode plate. The beam of electrons which illuminates the specimen being examined is controlled by means of a two-stage condenser lens, while the electromagnetic stage which guides the electron beam into the specimen chamber can be adjusted to provide either a "normal" beam, or a beam which is tilted to the angle necessary to give a reflected image of the sample. The microscope is said to have a high resolution and at the same time to be of robust construction. The camera used to take pictures of the specimens being examined can be reloaded without admitting air to the microscope unit itself.

TECHNICAL TRAINING IN FRANCE

"THERE IS NO TRADE THAT CANNOT BE LEARNED"

By J. Bergeal

ANY nation that strives towards an increased national production and a higher international prestige must continually improve its system of technical training. Such a system should be well organised and designed to provide an apprenticeship for modern industrial living, so that the future may be met with confidence. This imperative need has been well recognised in France, where the problem is that of training young people to replace 100,000 office personnel and workers per year, vacancies that are created either by death or retirement. A solid structure of technical training at all levels has been established, for both public and private enterprises.

Since 1938, children leaving primary school have been required to take an examination for professional guidance. Nineteen guidance bureaus are in operation throughout the country, and most of the various "academies" have several examination centres, making 186 in all. The Paris region has about 50 centres. A national Institute trains the consultants. Another 93 private centres, called "optional," have been created by large institutions and enterprises.

An organisation called the *Bureau Universitaire de Statistiques et de Documentation Scolaire et Professionnelle* (B.U.S.), formed in 1932, completes the system by providing regular statistics on employment possibilities in all the professions, as well as many other types of information on different careers which may be chosen.

Professional Guidance

Professional guidance is still too recent in France for all of its ramifications and possibilities to have been exploited. It is only a preface established with liberalism and prudence to the actual technical training, its logical counterpart. In both public and private enterprises, this education programme operates throughout France, and its development in the French Union is being accelerated. In the public sector, the present facilities consist of 913 elementary apprenticeship centres, 233 technical schools for training staff members, 29 national professional schools for training technicians, and about 20 schools for engineers or commercial employees. The further training of already qualified workers who seek to be promoted to higher posts is also part of the programme. In the private sector, there are 566 schools, 92 private schools recognised by the State, and 1,233 training courses.

In the two sectors together, approximately 1,300 trades are taught. An annual contingent of 600,000 students, including 193,000 boys and 124,000 girls from all sections of public education, attend these schools. Many of the establishments are of international renown. Artisan apprenticeships are also carried out by the same means. Technical education is also provided by correspondence, so as to be within the reach of everyone, including boys and girls who are not able to attend classes and adult workers who are not free in the daytime but who wish to increase their professional capacities.

How is this training organised, so as to keep pace with technical progress and industrial development? Its principal characteristic is the great variety of schools and courses available. A wide choice exists for a given trade and for the various specialities in a given industry. The optical industry alone, for example, has about 15 important schools. For training higher-echelon personnel, schools are operated under one of the following four auspices: (1) Technical training alone (such as the Central School of Arts and Manufactures, or the Higher Institute of Building Materials and Mechanical Construction); (2) higher education and technical training (the National Advanced Engineering Schools); (3) private institutions and technical training (Advanced Commercial Schools); (4) private institutions which are recognised by technical training (Advanced School for Electricity, Bréguet School). These four different headings show the liberal functioning of these schools.

Trade Schools

There are many schools for training foremen, shop superintendents, specialists, accountants, and middle-echelon office personnel. There are also the national professional schools (for watchmaking, hotel-keepers, etc.,) and the old City of Paris professional schools which are now called technical colleges, such as the Ecole Boulle for furniture-making and the Ecole Estienne for printing. Many of them are of international reputation. In addition, there are trade schools created by the industrial federations, professional associations or large enterprises, as well as industrial complementary courses like those organised by the City of Paris.

Young workers are trained either through public or private professional courses or through the Public Apprenticeship Centres (created by a law of 1945), leading to the certificate of professional aptitude. More than 30,000 skilled workers, including a goodly portion of women, attend higher-level courses with the aim of obtaining more advanced posts.

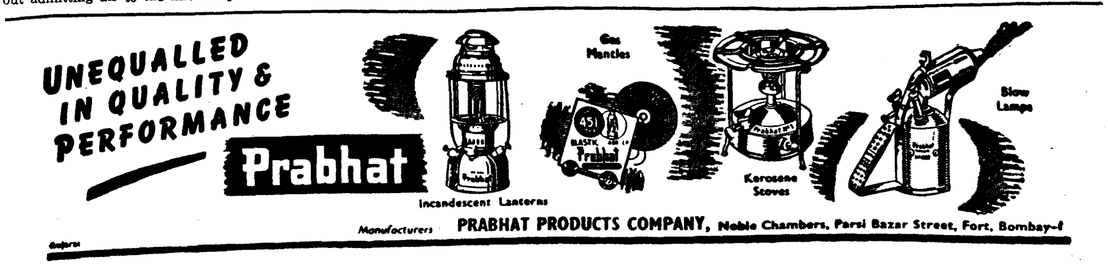
Special trades are often localised in regions corresponding to such needs. Tanning, for example, is more concentrated in Lyons, Paris and Mazamet; glove-making in Grenoble; hosiery in Troyes; shoe-making in Romans, Limoges, Paris, Nimes and Gap; cooperage in Gap and Paris; fine leather-working in Paris; textile trade in Roubaix, Tourcoing, and Lyons. Many small towns are famous for these and other artistic trades.

There is no trade that cannot be learned in France. Scholarships are given to many students and, in some establishments, training is even free. In apprenticeship centres, two-thirds of the trainees have either full or partial scholarships. These arrangements help draw students into comparatively new trades, such as electronics and the manufacture of precision instruments. It is interesting to note that, in public technical training alone, 58 different countries of origin are represented by 2,360 boys and 1,853 girls.

Admission to apprenticeship centres is relatively simple for foreign students and study aid grants are also provided. Admission to technical colleges, national professional schools and engineering schools must be approved by the French Minister of Foreign Affairs. Candidates take the normal entrance examination (with special classification) or a probative examination. The age limit for French candidates may be lowered by two years in certain cases. National professional schools also receive foreign students as boarders. Jobs for graduates are not difficult to find. Statistics show that about 95 per cent. of male graduates is placed in jobs, with a slightly lower figure for women.

French technical training, in conclusion, is both varied and extensive, and is well adapted to industry's needs for the future.

The 719 vessels in the French merchant fleet represented a total tonnage of 3,668,206 tons as on 1st October 1955, as compared with 670 ships weighing 2,753,633 tons on 1st September 1939. The present fleet includes 82 passengers ships (802,173 tons), 125 oil tankers (1,144,378 tons) and 512 other types of cargo boats (1,721,655 tons). Sixty new ships are being built, with an aggregate tonnage of 511,700.



EXPORT CREDIT INSURANCE

LIMITED SCHEME FAVOURED BY FEDERATION OF COMMERCIAL CHAMBERS

THE idea of providing export credit insurance, sponsored by the Government of India, is attracting both attention and support. This is an encouraging development, in view of the fact that such a scheme could be a valuable adjunct to India's export trade. It is gratifying to note that the Expert Committee which the Government has appointed in order to draw up a scheme of export credit insurance has generally met with good support. It may be mentioned here that the idea did not evoke any response when it was first propounded about two years ago. Now, at least in principle, the Government move seems to appeal to most sections of trade and industry.

Evidence of the private sector's interest in the scheme is to be found in the reply submitted by the Committee of the Federation of Indian Chambers of Commerce and Industry to the Expert Committee. The Committee of the Federation, though it appreciates the importance of the scheme, is in favour of only a limited scheme of export credit guarantee and not of a comprehensive scheme covering all goods. In its reply, the Committee has itself drawn attention to the role of export credit guarantee in any programme designed to stimulate exports. Under an export credit guarantee scheme, the exporter is protected against losses resulting from circumstances beyond his control. The chief merit of the scheme is that serious dangers of heavy capital loss to individual export houses are virtually eliminated by payment of a small premium. Moreover, in a buyers' market, where competitive credit terms are offered by a number of countries, export credit guarantees have tended to be an essential part of sales promotion drive. Yet another advantage of the scheme is that it makes it easier for the exporter to obtain finance through the banking system.

In the opinion of the Federation, the question of adopting an export credit guarantee scheme should be judged primarily by a reference to what extent it will assist the exporters to secure the benefits indicated above. The utility of the scheme and the question of its introduction must also be related to the composition and direction of India's foreign trade and the anticipation in this behalf during the coming years. The scheme, it is pointed out, should be fitted into the general pattern of foreign trade promotion policies. In this connection, the Committee draws attention to the fact that the large foreign exchange resources which would be needed to finance the second Plan underline the need for a vigorous export promotion policy. These are some of the general considerations which have induced the Committee to support the export credit guarantee scheme.

Coverage of Risks

As regards the coverage of the export credit guarantee scheme, the Committee points out that it need not be made applicable to commodities which are in short supply and the export of which is regulated. It is in favour of applying the scheme to the export of machinery of all kinds and of durable capital and consumer goods such as agricultural implements, electrical transformers, diesel engines, motor cars, fans, bicycles and sewing machines, inasmuch as credit facilities for a relatively long period have to be offered to the foreign importers of these goods. The Federation suggests that, at the first instance, the scheme should be made applicable to a few selected commodities. The scheme should, however, be flexible so that more commodities could be brought within its purview from time to time.

The advantages of the scheme should be weighed against the possible disadvantages such as an increase in the cost of Indian goods in foreign markets. The general aim of the scheme, according to the Committee, should be "to cover such consumer goods and capital goods which are newly developing lines of exports." The Expert Committee will, however, have to consider whether such a scheme could work in practice. For the risks involved in new lines of export are necessarily high. And, if the scheme were confined only to a few selected items, the rate of premium would also necessarily be high. A high rate of premium, in its turn, might reduce the competitive ability of these goods. In any case, if such a limited scheme has to be implemented, the Expert Committee will have to collect and examine the information relating to losses suffered by exporters of these selected goods.

So far as the proportion of risks to be covered is concerned, the Committee of the Federation appreciates that the exporter should bear some personal liability for the loss in export trade arising from causes or risks covered by the export credit guarantee scheme. In the U.K., the exporter and the Export Credit Guarantee Department share respectively 15 per cent. and 85 per cent. of the losses arising from insolvency or protracted default of the buyer and 10 per cent. and 90 per cent. of the losses from other causes. In Federal Germany, the exporter bears 25 per cent. of the loss resulting from the insolvency of foreign buyers, 10 per cent. of the loss resulting from transfer delay and 15 per cent. of the loss resulting from political risks. Again, the proportion of the loss the exporter is compelled to bear may vary from destination to destination. The Federation suggests that, in India also, the scheme should provide guarantee only to the extent of 80 per cent. of the goods shipped or contracted for and the exporters must retain a reasonable interest in the transaction and thus be required to exercise normal business prudence. The percentage of risks covered can, however, be made to vary from country to country.

Insolvency of Buyer

The scheme, the Committee further suggests, should cover the insolvency of the buyer, buyer's refusal to pay within 12 months of due date for goods accepted, action of buyer's Government which blocks or delays transfer of payment, loss through imposition of fresh import licensing restrictions in the buyer's country or through the cancellation of a current valid import licence, war between the buyer's country and the supplier's country, revolution or civil disturbances in the buyer's country and in respect of additional handling charges occurring through interruption or diversion of voyage which cannot be recovered from the buyer as also against other cases of loss accruing outside the supplying country and not within the control of the exporter or the buyer. Risks like the non-fulfilment of the contract as a result of factors such as non-availability of transport and risks due to enhancement of export duty subsequent to entering into a contract should also be covered by the "contracts policy." Apart from short-term policies for a duration of about six months, the scheme in India should be developed to provide cover for medium-term policies, involving export of capital goods. From a long-term point of view, it would be desirable to develop this line, as, in due course, India is bound to become an exporter of industrial plant and machinery especially to markets in South-East Asia and West Asia. Since the risks covered in other foreign countries are almost the same as in the U.K. policy, it is suggested that the risks enumerated in the Export Credit Guarantee Department in the U.K. may reasonably be adopted as a basis for working out the scheme.

Premium Rates

The popularity of the scheme will naturally depend upon the rate of the premium charged for it. In the absence of data relating to the losses suffered by exporters, it would not be possible to say what these rates should be. The Federation is, therefore, content with making certain general observations. Thus, it says that the rates should vary with the risks involved and the terms of payment. Moreover, if a shipper wants to cover only 50 per cent. of the risk, he should be charged a lower rate of premium than if he wants to cover 80 per cent. or more. The rates will thus differ with the nature of the commodity exported, the country concerned, as also the terms of export. The risks can be divided into different categories, say, those covering upto 25 per cent., 50 per cent. or 75 per cent. risks. But the rates should be just enough to make the scheme self-supporting. It has to be noted that the average premium rate is less than 1 per cent. of the invoice value in most of the foreign countries. As a rule, the companies which provide export credit guarantee do not publish their premium rates, the exception being the companies in W. Germany and Switzerland. The Committee of the Federation attaches considerable importance to fixation of low rates of premium. The premium rate should not exceed 1 per cent. in any case. Adequate attention should also be paid to the prompt settlement of claims. In fact, the whole success of the scheme will depend on the manner in which claims come to be settled expeditiously.

Finally, the Federation has suggested that private insurers should first be asked whether they would be willing to implement the scheme. In some countries, notably Canada, Belgium and Denmark, the export credit schemes are operated by Government-sponsored organisations, whereas in certain other countries, notably France, Italy and Germany, the schemes are managed by private companies. In the U.K., too, the scheme is operated mainly by a department of the Government. It remains to be seen whether private insurers in India will be prepared to operate the scheme. If they are not willing, the Federation suggests that the Government should form a corporation for implementing the scheme. It emphasises that it must be operated on commercial lines and that an advisory council of business men and bankers should be associated with the working of the scheme. Clearly, such a council could be expected to give the necessary advice and guidance that would enable the corporation to be run on commercial lines.

FIELD WORKERS

The demand for the inclusion of a representative of salaried field workers in the proposed Insurance Corporation and the withdrawal of such orders as have been issued for the termination of the services of field workers was made at the recent conference of the All-India Insurance Salaried Field Workers' Association held recently in Patna. Mr. S. L. Roy, President of the Association, said that if the Insurance Corporation worked under the "stranglehold" of the Central Government, the poor policyholders would have to give a fair portion of their savings to the "administrative vultures." He said that it had come to his notice that clerks and cashiers in insurance offices would not prepare, pass and pay commission bills "without realising a price for their labour." This charge, if true, is a serious one. The authorities will, therefore, do well to investigate it.

Mr. S. Sahay, M.P., Vice-Chancellor of Bihar University, inaugurating the Conference, advised the workers to evolve a formula for all grades of employees and to place it before the Government for consideration. As a member on the Select Committee to which the Insurance Nationalisation Bill had been referred, Mr. Sahay said that he had come across divergent views expressed by different organisations of insurance men. Such differences of opinion tended to make confusion worse confounded. Personally, he felt that the system of maintaining field workers on a commission basis should be retained even after nationalisation of the industry.

There is no doubt that, in the sphere of insurance, even under the nationalised set-up, the field workers will be called upon to play an increasingly important part in spreading the gospel of insurance. Many of the field workers have, of course, considerable experience in the art of selling insurance. Indeed, without their effort, life insurance in this country could not have made the progress it has made. Dummy agents will, of course, cease to exist, for they will have to yield their place to genuine workers.

The field workers, however, seem to fear that their case may not receive the recognition it deserves. It is not clear why or how they have come to entertain this fear. Perhaps, this is due to the fact that the authorities are known to be somewhat critical of the value of the services rendered by salaried field workers. In any case, the authorities will do well to dispel their suspicions and fears and to assure them that the good workers will be generously rewarded. The field workers, on their part, should realise that their prosperity is bound up with the future of insurance in this country and it is still in their power to shape it well.

STATE BANK OF INDIA
Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be — can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

INDUSTRIAL POLICY OF INDIA

TEXT OF GOVERNMENT'S RESOLUTION

THE following is the full text of the Industrial Policy Resolution presented to the Lok Sabha on 30th April 1956 by Mr. Jawaharlal Nehru, Prime Minister of India:

"The Government of India set out in their Resolution dated 6th April 1948, the policy which they proposed to pursue in the industrial field. The Resolution emphasised the importance to the economy of securing a continuous increase in production and its equitable distribution, and pointed out that the State must play a progressively active role in the development of industries. It laid down that, besides arms and ammunition, atomic energy and railway transport, which would be the monopoly of the Central Government, the State would be exclusively responsible for the establishment of new undertakings in six basic industries—except where, in the national interest, the State itself found it necessary to secure the co-operation of private enterprise. The rest of the industrial field was left open to private enterprise, though it was made clear that the State would also progressively participate in this field.

Need for a Fresh Statement

"Eight years have passed since this declaration on industrial policy. These eight years have witnessed many important changes and developments in India. The Constitution of India has been enacted, guaranteeing certain Fundamental Rights and enunciating Directive Principles of State Policy. Planning has proceeded on an organised basis, and the first Five-year Plan has recently been completed. Parliament has accepted the socialist pattern of society as the objective of social and economic policy. These important developments necessitate a fresh statement of industrial policy, more particularly as the second Five-year Plan will soon be placed before the country. This policy must be governed by the principles laid down in the Constitution, the objective of socialism, and the experience gained during these years.

Basic Principles

"The Constitution of India, in its preamble, has declared that it aims at securing for all its citizens—

'Justice. Social economic and political;

Liberty of thought, expression, belief, faith and worship;

Equality of status and of opportunity; and to promote among them all;

Fraternity assuring the dignity of the individual and the unity of the Nation.'

"In its Directive Principles of State Policy, it is stated that—

"'The State shall strive to promote the welfare of the people by securing and protecting as effectively as it may a social order in which justice, social, economic and political, shall inform all the institutions of the national life.'

"Further that—

"'The State shall, in particular, direct its policy towards securing—

(a) that the citizens, men and women equally, have the right to an adequate means of livelihood;

(b) that the ownership and control of the material resources of the community are so distributed as best to subserve the common good;

(c) that the operation of the economic system does not result in the concentration of wealth and means of production to the common detriment;

(d) that there is equal pay for equal work for both men and women;

(e) that the health and strength of workers, men and women, and the tender age of children are not abused and that citizens are not forced by economic necessity to enter avocations unsuited to their age or strength;

(f) that childhood and youth are protected against exploitation and against moral and material abandonment.'

"These basic and general principles were given a more precise direction when Parliament accepted, in December 1954, the socialist pattern of society as the objective of social and economic policy. Industrial policy, as other policies, must therefore be governed by these principles and directions.

"In order to realise this objective, it is essential to accelerate the rate of economic growth and to speed up industrialisation and, in particular, to develop heavy industries and machine-making industries, to expand the public sector, and to build up a large and growing co-operative sector. These provide the economic foundations for increasing opportunities for gainful employment and improving living standards and working conditions for the mass of the people. Equally it is urgent to reduce disparities in income and wealth which exist today, to prevent private monopolies and the concentration of economic power in different fields in the hands of small numbers of individuals. Accordingly, the State will progressively assume a predominant and direct responsibility for setting up new industrial undertakings and for developing transport facilities. It will also undertake State trading on an increasing scale. At the same time, as an agency for planned national development, in the context of the country's expanding economy, the private sector will have the opportunity to develop and expand. The principle of co-operation should be applied wherever possible and a steadily increasing proportion of the activities of the private sector developed along co-operative lines.

Role of the State

"The adoption of the socialist pattern of society as the national objective, as well as the need for planned and rapid development, requires that all industries of basic and strategic importance, or in the nature of public utility services, should be in the public sector. Other industries which are essential and require investment on a scale which only the State, in present circumstances, could provide, have also to be in the public sector. The State has, therefore, to assume direct responsibility for the future development of industries over a wider area. Nevertheless, there are limiting factors which make it necessary at this stage for the State to define the field in which it will undertake sole responsibility for further development, and to make a selection of industries in the development of which it will play a dominant role. After considering all aspects of the problem, in consultation with the Planning Commission, the Government of India have decided to classify industries into three categories, having regard to the part which the State would play in each of them. These categories will inevitably overlap to some extent and too great a rigidity might defeat the purpose in view. But the basic principles and objectives have always to be kept in view and the general directions hereafter referred to followed. It should also be remembered that it is always open to the State to undertake any type of industrial production.

First Category

"In the first category will be industries the future development of which will be the exclusive responsibility of the State. The second category will consist of industries, which will be progressively State-owned and in which the State will therefore generally take the initiative in establishing new undertakings, but in which private enterprise will also be expected to supplement the effort of the State. The third category will include all the remaining industries, and their future development will, in general, be left to the initiative and enterprise of the private sector.

"Industries in the first category have been listed in Schedule A of this Resolution. All new units in these industries, save where their establishment in the private sector has already been approved, will be set up only by the State. This does not preclude the expansion of the existing privately owned units, or the possibility of the State securing the co-operation of private enterprise in the establishment of new units when the national interests so require. Railways and air transport, arms and ammunition and atomic energy will, however, be developed as Central Government monopolies. Whenever co-operation with private enterprise is necessary, the State will ensure, either through majority participation in the capital or otherwise, that it has the requisite powers to guide the policy and control the operations of the undertaking.

Second Category

"Industries in the second category will be those listed in Schedule B. With a view to accelerating their future development, the State will increasingly establish new undertakings in these industries. At the same time, private enterprise will also have the opportunity to develop in this field, either on its own or with State participation.

Third Category

"All the remaining industries will fall in the third category, and it is expected that their development will be undertaken ordinarily through the initiative and enterprise of the private sector, though it will be open to the State to start any industry even in this category. It will be the policy of the State to facilitate and encourage the development of these industries in the private sector, in accordance with the programmes formulated in successive Five-year Plans, by ensuring the development of transport, power and other services, and by appropriate fiscal and other measures. The State will continue to foster institutions to provide financial aid to these industries, and special assistance will be given to enterprises organised on co-operative lines for industrial and agricultural purposes. In suitable cases, the State may also grant financial assistance to the private sector. Such assistance, especially when the amount involved is substantial, will preferably be in the form of participation in equity capital, though it may also be in part in the form of debenture capital.

"Industrial undertakings in the private sector have necessarily to fit into the framework of the social and economic policy of the State and will be subject to control and regulation in terms of the Industries (Development and Regulation) Act and other relevant legislation. The Government of India, however, recognise that it would, in general, be desirable to allow such undertakings to develop with as much freedom as possible, consistent with the targets and objectives of the national plan. When there exist in the same industry both privately and publicly owned units, it would continue to be the policy of the State to give fair and non-discriminatory treatment to both of them.

"The division of industries into separate categories does not imply that they are being placed in watertight compartments. Inevitably, there will not only be an area of overlapping but also a great deal of dovetailing between industries in the private and the public sctors. It will be open to the State to start any industry not included in Schedule A and Schedule B when the needs of planning so require or there are other important reasons for it. In appropriate cases, privately owned units may be permitted to produce an item falling within Schedule A for meeting their own requirements or as by-products. There will be ordinarily no bar to small privately owned units undertaking production, such as the making of launches and other light craft, generation of power for local needs and small-scale mining. Further, heavy industries in the public sector may obtain some of their requirements of lighter components from the private sector, while the private sector in turn would rely for many of its needs on the public sector. The same principle would apply with even greater force to the relationship between large-scale and small-scale industries.

Cottage and Small-scale Industries

"The Government of India would, in this context, stress the role of cottage and village and small-scale industries in the development of the national economy. In relation to some of the problems that need urgent solutions, they offer some distinct advantages. They provide immediate large-scale employment; they offer a method of ensuring a more equitable distribution of the national income and they facilitate an effective mobilisation of resources of capital and skill which might otherwise remain unutilised. Some of the problems that unplanned urbanisation tends to create will be avoided by the establishment of small centres of industrial production all over the country.

"The State has been following a policy of supporting cottage and village and small-scale industries by restricting the volume of production in the large-scale sector, by differential taxation, or by direct subsidies. While such measures will continue to be taken, whenever necessary, the aim of the State policy will be to ensure that the decentralised sector acquires sufficient vitality to be self-supporting and its development is integrated with that of large-scale industry. The State will, therefore, concentrate on measures designed to improve the competitive strength of the small-scale producer. For this it is essential that the technique of production should be constantly improved and modernised, the pace of transformation being regulated so as to avoid, as far as possible, technological unemployment. Lack of technical and financial assistance, of suitable working accommodation and inadequacy of facilities for repair and maintenance are among the serious handicaps of small-scale producers. A start has been made with the establishment of industrial estates and rural community workshops to make good these deficiencies. The extension of rural electrification and the availability of power at prices which the workers can afford will also be of considerable help. Many of the activities relating to small-scale production will be greatly helped by the organisation of industrial co-operatives. Such co-operatives should be encouraged in every way and the State should give constant attention to the development of cottage and village and small-scale industry.

Balanced Development of Economy

"In order that industrialisation may benefit the economy of the country as a whole, it is important that disparities in levels of development between different regions should be progressively reduced. The lack of industries in different parts of the country is very often determined by factors such as the availability of the necessary raw materials or other natural resources. A concentration of industries in certain areas has also been due to the ready availability of power, water-supply and transport facilities which have been developed there. It is one of the aims of national planning to ensure that these facilities are steadily made available to areas which are at present lagging behind industrially or where there is greater need for providing opportunities for employment, provided the location is otherwise suitable. Only by securing a balanced and co-ordinated development of the industrial and the agricultural economy in each region, can the entire country attain higher standards of living.

Personnel

"This programme of industrial development will make large demands on the country's resources of technical and managerial personnel. To meet these rapidly growing needs for the expansion of the public sector and for the development of village and small-scale industries, proper managerial and technical cadres in the public services are being established. Steps are also being taken to meet shortages at supervisory levels, to organise apprenticeship schemes of training on a large-scale both in public and in private enterprises, and to extend training facilities in business management in universities and other institutions.

Amenities and Incentives to Workers

"It is necessary that proper amenities and incentives should be provided for all those engaged in industry. The living and working conditions of workers should be improved and their standard of efficiency raised. The maintenance of industrial peace is one of the prime requisites of industrial progress. In a socialist democracy, labour is a partner in the common task of development and should participate in it with enthusiasm. Some laws governing industrial relations have been enacted and a broad common approach has developed with the growing recognition of the obligations of both management and labour. There should be joint consultation and workers and technicians should, wherever possible, be associated progressively in management. Enterprises in the public sector have to set an example in this respect.

Decentralisation of Authority

"With the growing participation of the State in industry and trade, the manner in which these activities should be conducted and managed assumes considerable importance. Speedy decisions and a willingness to assume responsibility are essential if these enterprises are to succeed. For this, wherever possible, there should be decentralisation of authority and their management should be along business lines. It is to be expected that public enterprises will augment the revenues of the State and provide resources for further development in fresh fields. But such enterprises may sometimes incur losses. Public enterprises have to be judged by their total results and in their working they should have the largest possible measure of freedom.

"The Industrial Policy Resolution of 1948 dealt with a number of other subjects which have since been covered by suitable legislation or by authoritative statements of policy. The division of responsibility between the Central Government and the State Governments in regard to industries has been set out in the Industries (Development and Regulation) Act. The Prime Minister, in his statement in Parliament on the 6th April 1949, has enunciated the policy of the State in regard to foreign capital. It is, therefore, not necessary to deal with these subjects in this resolution.

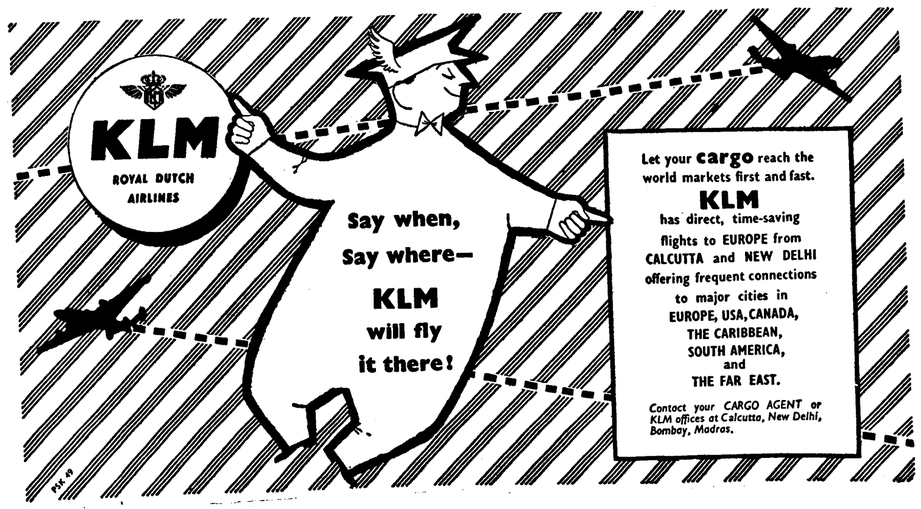
"The Government of India trust that this restatement of their Industrial Policy will receive the support of all sections of the people and promote the rapid industrialisation of the country."

Schedule A

1. Arms and ammunition and allied items of defence equipment.
2. Atomic energy.
3. Iron and steel.
4. Heavy castings and forgings of iron and steel.
5. Heavy plant and machinery required for iron and steel production, for mining, for machine tool manufacture and for such other basic industries as may be specified by the Central Government.
6. Heavy electrical plant including large hydraulic and steam turbines.
7. Coal and lignite.
8. Mineral oils.
9. Mining of iron ore, manganese ore, chrome ore, gypsum, sulphur, gold and diamond.
10. Mining and processing of copper, lead, zinc, tin, molybdenum and wolfram.
11. Minerals specified in the Schedule to the Atomic Energy (Control of Production and Use) Order, 1953.
12. Aircraft.
13. Air transport.
14. Railway transport.
15. Shipbuilding.
16. Telephones and telephone cables, telegraph and wireless apparatus (excluding radio receiving sets).
17. Generation and distribution of electricity.

Schedule B

1. All other minerals except "minor minerals" as defined in section 3 of the Minerals Concession Rules, 1949.
2. Aluminium and other non-ferrous metals not included in Schedule A.
3. Machine tools.
4. Ferro-alloys and tool steels.
5. Basic and intermediate products required by chemical industries such as the manufacture of drugs, dyestuffs and plastics.
6. Antibiotics and other essential drugs.
7. Fertilisers.
8. Synthetic rubber.
9. Carbonisation of coal.
10. Chemical pulp.
11. Road transport.
12. Sea transport.



INDIAN ALUMINIUM COMPANY, LIMITED

SCHEME TO ESTABLISH SMELTER AT HIRAKUD TO BE IMPLEMENTED

MR. K. C. MAHINDRA, CHAIRMAN, ANNOUNCES PLAN FOR RAISING CAPITAL

THE Eighteenth Annual General Meeting of the Indian Aluminium Company, Ltd., was held at Calcutta on 27th April 1956. Addressing the shareholders on the occasion, Mr. K. C. Mahindra, Chairman, said:

"Last year I expressed my view of the immediate future for your Company as one of restrained optimism. You will have observed from the audited accounts of the Company sent to you that net profit for the year 1955 amounted to over Rs. 26 lakhs, which is almost double that attained in any previous year. I think, we can regard this result, which reflects the benefits of expanded production facilities and improved market conditions for the Company's products, with satisfaction and pride. Although sales increased by more than 50 per cent. compared to 1954, the advantages of capacity operation of balanced plant facilities, which the expansion had made possible, were not fully realised in 1955, as output and production costs of metal were adversely affected by inadequate power supply to our Alupuram Works during the earlier part of the year. It would, therefore, not be unreasonable to expect some further improvement in the results of the current year's operations."

Fabricating Activities

Referring to the development of the Company's activities in the fabricating field, the Chairman stated:

"Apart from continued progress in the production of medium- and high-strength alloy rolled products at Belur Works, an extrusion plant was brought into operation at Alupuram in March 1955, and an expansion of the Kalwa plant was initiated which will increase the capacity for paste production by 50 per cent. during the current year. To sustain this expansion of fabricating activities, the Company continues to supplement its metal production by increased purchases of imported and indigenous scrap and ingot. However, the increasing cost of metal purchases under prevailing conditions of general world shortage is fast resulting in a situation which would compel us to increase prices correspondingly.

"The Directors have been alert to the need for expanding smelting facilities with a view to satisfying the Company's own increasing requirements of metal as well as those of other fabricators, and, in my earlier addresses, I have referred to the project which has been under consideration for some time for the establishment by the Company of another smelter near the Hirakud Development in Orissa. Your Directors have now decided to proceed with the scheme which envisages a smelter at Hirakud with an initial annual ingot capacity of 10,000 tons, but capable of easy expansion to 20,000 tons or even more, as soon as circumstances both warrant and permit it.

Cost of the Project

"The expansion of ingot production poses financial and organisational problems more serious than those of increasing fabricating capacity. Even though the plan for the proposed Hirakud smelter is based upon expansion of the existing facilities for bauxite and alumina production, thus requiring less capital compared to that which would be necessary if entirely separate integrated facilities were to be created, the requirements of the project are estimated at nearly Rs. 9 crores for the first stage of 10,000 tons annual production.

"You will, I am sure, readily appreciate the difficulties in financing an expansion of this magnitude which will more than treble the Company's existing fixed assets. Organisationally, technicians and experienced operators in this industry are scarce all over the world and even for engineering and design work we have to stand in a queue. Thus, a programme has been devised giving priority to the smelter, which is expected to come into operation by the end of 1958, and undertaking the major part of the subsequent bauxite-alumina expansion immediately after the completion of the smelter, so that the entire integrated plan is in operation before the end of 1961.

"The dominating feature in the economics of the aluminium industry is the large investment required in fixed capital assets and the heavy charges that it involves in the form of depreciation and the cost of obtaining money. In recognition of this, smelter projects are almost everywhere financed by the issue of fixed-interest debt to cover the greater portion of the total capital cost, the balance of the necessary capital being raised by a combination of share-financing and the accumulation of funds from depreciation and retained earnings. Accordingly, it is proposed to finance only a part of our requirements for the expansion project by a new issue of capital, the remainder of the funds being obtained by means of medium-term loans from banks and the cash flow from depreciation and earnings.

"I believe that the importance given to the ploughing back of earnings not only will serve the long-term interests of the Company and its shareholders but is also in keeping with the needs of the country during a period of intensive industrial development as foreseen in the second Five-year Plan. . . . ."

Apparent Inconsistency

"I welcome the co-ordinates on which the Plan is based, the adventure which it excites and the aspirations it hopes to fulfil," Mr. Mahindra declared, and while he also accepted without reservation the ideal of a socialist co-operative commonwealth, he wondered whether there had not been "a great confusion in targets and objectives in the scheme of planning." He drew attention to the apparent inconsistency between the emphasis placed on development of basic industries and the desire to find resources "for fashionable fads like an aircraft carrier or the Ambar Charkha," and the incongruity of allocations for development of communications which will provide only 30 per cent. extra carrying capacity as against the anticipated rise in industrial and agricultural output of about 50 per cent. superimposed on an existing shortfall of 10-15 per cent. in transport facilities.

"I will not comment on the reasonableness or otherwise of the approach to technological progress in the context of the various programmes," Mr. Mahindra continued, "but, taking another example, decentralisation and village self-sufficiency within limits may become the ideal basis for building a socialist co-operative country, but little or no attention has yet been paid to the organisational efforts needed to undertake such a mighty task. Some very radical institutional changes are required of the bureaucracy if the various State-sponsored industrial and social ventures are to succeed. We have, no doubt, a cadre of bureaucrats—perhaps as efficient, hardworking and patriotic as are to be found in non-governmental services. Nevertheless, the climate of service in bureaucracy is such that regimentation in thinking becomes a matter of course, and it has been the experience of almost every country in the world that the dead hand of bureaucratic control has not succeeded in inciting the requisite effort, zeal and inspiration, without which this great adventure in nation-building cannot succeed.

Scarcity of Managerial Talent

"The scarcity of managerial talent is already felt with the rapid growth of the so-called public sector. We will succeed or fail with the build-up or lack thereof of the organisational capabilities of State ventures. The supreme and exacting task of management is a task which cannot be learned from text-books or over a brief period of apprenticeship. While we proceed to do the learning, there is a grave danger of an oligarchic stranglehold by the army of bureaucrats. Perhaps, it is not widely recognised that nationalisation, public ownership, *sarvodaya* are not the passports which purchase immunity from the inexorable laws of industrial economics. One may honestly hold the view that classic theories of supply and demand do not apply to an underdeveloped economy. One may hold the view that private enterprise in India has been guilty of sins of omission and commission which it cannot be forgiven. One may also come to believe that profit motive is at the root of all evil. And yet, one should not ignore the vast lack in experience and in management knowledge which is required to run an industrial undertaking or a chain of co-operative marketing societies, or perhaps even the village industrial *panchayats* on whom such high hopes are set. . . ."

Adverting to the role of deficit financing in the second Plan, Mr. Mahindra said: "The Finance Minister has repeatedly expressed his awareness of the inflationary tendencies which would become more and more oppressive with the repeatedly large doses of deficit finance contemplated in the second Five-year Plan. He may have devised some built-in restraints or he may be thinking of imposing more detailed physical controls. I hope he is aware of the limitations of the techniques of controls which can only shift the pressure of excessive demands, but do not diminish the same. . . ."

Financing of the Expansion Plan

The Chairman then reverted to the Company's own financing problems in connection with the expansion at Hirakud and said: "The Directors consider that, in view of the large sum involved, the Company should invite from the shareholders and the public only a portion of the capital, the rest being covered by medium-term loan and funds generated within the Company. The Directors are examining the most appropriate way in which this new capital issue might be made by the Company. While the details of the issue are still under consideration, it has been decided that the issue will be in the form of convertible loan stock, which would carry a fixed rate of interest and confer upon the holders the right to convert the loan stock into ordinary shares of the Company. Since this type of stock combines the attraction of a secure rate of return over a number of years with the option of conversion for possible greater returns or capital appreciation which is expected from the equity of a growing and expanding enterprise, I hope that it will prove to be an attractive form of investment.

"In accordance with the statutory obligations, the stock would be offered, in the first instance, to the holders of ordinary shares in the Company in proportion to their respective holdings. Aluminium Limited, the Canadian majority shareholder of the Company, has agreed to take up half of the new issue, and to relinquish the remainder of its pre-emptive rights so as to permit increased Indian participation in the Company. This would provide an opportunity to holders of preference shares also to subscribe to the proposed new capital issue.

"The Company is now on the threshold of a new period of expansion and we hope to play our full part in the vast development that is taking place in the country's economy. I trust that we will continue to receive the active support and encouragement of the Government in this effort, and I should here like to express our gratitude for the understanding attitude of the Government and the Tariff Commission towards the needs of the aluminium industry evidenced by the extension of the protective tariff for a period of three years.

New Period of Expansion

"Before I conclude, I am sure all of you would like to join me in expressing our high appreciation of the services rendered to the Company by Mr. J. W. Cameron, who retired from the position of Managing Director towards the end of last year. The contribution he made towards the progress of the Company during 15 years of service in positions of increasing responsibility deserves our sincere gratitude, and to him and the other employees of the Company is due in large measure the credit for the successful results of the past year."

NEW PUBLICATIONS

Indian Economy Since Independence: Financial Policy of the Indian Union 1947-53. By Dr. M. H. Gopal. Published by the Delhi School of Economics, Delhi. Price: Rs. 4-8.

DR. M. H. Gopal is a well-known authority on public finance in India and his writings on the subject always bear the erudition of a scholar. Dr. Gopal's latest book, *Indian Economy Since Independence: Financial Policy of the Indian Union* 1947-53, is no exception. It represents the results of his study as Research Reader in Public Finance in the Delhi School of Economics, the study having been made possible through a generous donation to the School by Mr. Shantilal Mangaldas of Ahmedabad.

In the publication, Dr. Gopal has made a critical analysis of the implications of the Central Government's financial policy during the period 1947 to 1953. This brings out clearly the lack of integrated policy, or of correct appreciation of the problems, during the period. The financial policy of the Government, Dr. Gopal says, had been shifting, whether one considers changes in tax structure or in disinflationary measures or in food policy or in development expenditure; the shift has not had the two features of adjustability and flexibility which characterise a dynamic budget policy. Such a disquieting trend is attributed to two factors, namely, (1) vacillations caused by the transition from war to peace, and from dependence to freedom, as well as the avalanche of new problems in 1947, and (2) frequent changes of men who held the Finance portfolio where assessment of the issues and approach to the solutions were necessarily different.

With this brief background, Dr. Gopal has examined critically the Government of India's policies pertaining to tax, debt and expenditure. Dealing with tax policy, the author has not merely drawn attention to some of the defects but also sought to emphasise what a tax policy ought to be. According to him, each change in the tax structure has too often been treated independently without sufficient attention being given to the consideration of harmonising the tax policy with other related economic policies. There has also been very little co-ordination until recently. Stressing, in particular, the need for integration and co-ordination in tax policy, Dr. Gopal has made the following notable observations:

"Integration has to be within the tax system and means primarily that there has to be a proper balance among the various tax categories, such as direct and indirect taxes, producers' and consumers' taxes, business and personal taxes, and property and income taxes; also, it is implied that the taxes taken as a whole form a rational and not too complicated pattern. Further, integration implies cohesion in the structure of each individual tax—in definition of income, exemptions, allowances, rates, appeals, etc., in the income-tax structure and in grouping and choice of commodities, rates of taxation, etc., in customs duties and excises. . . . Co-ordination consists in harmonising tax policy with other related economic policies; linking up fiscal policy with credit policy is only a first step, since the two have to be in turn linked up with the policy regarding overall investment and national income (for which construction of social accounts is necessary), as well as with the wider social objectives lying outside the strictly economic sphere."

During the period under review, the public debt policy also, according to Dr. Gopal, lacked a long-term approach. The policy was not co-ordinated with the tax, expenditure, monetary and development policies. This was particularly evident during the period 1947-51. He no doubt admits that conditions have distinctly changed since 1951, but feels that there is still a long way to go towards evolving an integrated policy. The author discusses next the aspects relating to expenditure. Referring to the large money outlay made since 1948, more especially since 1951, he observes that the benefits of such enlarged outlay have been offset, to some extent, by inflation. According to him, there was no plan of expenditure during the period 1947 to 1951 and, though, since 1951, if there has been one, it has begun to operate only since 1953. In this connection, Dr. Gopal warns that resort to deficit financing is fraught with serious consequences and may accelerate inflationary tendencies.

At the end, Dr. Gopal has pointed to some of the disquieting features in the presentation of financial data in the budget of the Government. The data, he says, are not only unscientifically presented but are also inadequate. Indeed, he declares that the Indian budget deserves more refully than the American budget does the remarks of the Hoover Commission: "An inadequate document, poorly organised and improperly designed." In support of this view, he says: "The budgets and accounts are merely statements of amounts raised and spent under different accounting heads. Nor does the *Explanatory Memorandum* take us any further. The implications of the Government's financial policy, its effects on the national income, and its relation to the economic and social life of the community have not been either realised or studied. This state of affairs is partly because such an interpretation of public finance is very recent, and partly because data on national income and social accounting in India are meagre and in a nebulous stage. Little that is definite and precise is known about the quantum of national income and still less about its distribution among income groups."

It will be seen from the foregoing review that Dr. Gopal has not hesitated to call a spade a spade. By his forthright criticisms and comments, he has certainly sought to focus attention of the authorities on the importance of presenting the finances in the framework of economic environment and in terms of national income and social accounts. For, after all, it is the financial structure and policy that "mirror"—to use Dr. Gopal's apt phrase—economic and social environment of a country. The importance of this consideration is all the greater in the present context when India stands on the threshold of a new era of economic development. We commend this book to legislators and those interested in India's economic problems, in general, and to students of public finance, in particular.

Trade Barriers to Knowledge. United Nations Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.), Paris. Price: $5.

Tariff and trade restrictions severely limit the flow of knowledge around the globe. Nearly 12 per cent. of the countries of the world levies import duties on books, newspapers and magazines, 30 per cent. charge duties on paintings and sculpture, and 56 per cent. similarly tax scientific instruments. Newsprint, sound recordings and radio sets are even more widely taxed. Duties are imposed on newsprint by 64 per cent. of the countries, on recordings by 68 per cent., and on radio sets by 88 per cent. The most widespread obstacle, however, is the restriction of imports through exchange controls and licensing. Over 70 per cent. of countries limits trade in educational materials in this way.

These facts are disclosed in *Trade Barriers to Knowledge*, a U.N.E.S.C.O. Handbook published at Paris recently. Surveying more than 90 countries, the book gives a detailed account of the duties, sales taxes, licensing and exchange controls affecting trade in 33 groups of educational, scientific and cultural materials. At the same time, the manual draws attention to various means of reducing these restrictions. The restrictions themselves are revealed to be complex, onerous and at times illogical. Some countries, for example, tax book and sculpture by weight; others levy a duty on books, if they carry illustrations, are bound in leather, or are of a religious nature. Scientific films may be variously taxed by the foot or by the pound. In certain countries, an artist may import his own painting duty-free if he accompanies it through the customs; but if it is shipped separately, he may have to pay a heavy tax.

In a foreword to the above publication, the U.N.E.S.C.O. points out that all of the materials dealt with in the manual "are desperately needed as aides in the cause of enlightenment, at a time when half of the world's population is still illiterate and vast areas, underdeveloped or devastated by war, lack the means to dispel ignorance." Governments and the general public are urged to support U.N.E.S.C.O.'s campaign to remove these barriers to knowledge and "so speed the day when a manual such as this will no longer be necessary."

The U.N.E.S.C.O.'s remedial efforts are described in an introductory chapter. Among these is the International Agreement on the Importation of Educational, Scientific and Cultural Materials, now applied by 21 countries. This Agreement gives duty-free entry to books, newspapers, magazines, works of art, printed music and other articles. Also exempt are newsreels, educational films, recordings and scientific instruments if consigned to approved institutions. In addition, Governments undertake to grant licences and foreign exchange for publications required by public libraries. Internal taxes on imported articles must not exceed those levied on domestic products. The U.N.E.S.C.O. also encourages international negotiation for the reduction of tariffs. It has submitted to a 26-nation conference of the Contracting Parties to the General Agreement on Tariffs and Trade (G.A.T.T.), now meeting in Geneva, a list of materials on which duties might be lowered. These range from books to educational films, and from paintings to materials for the handicapped.

Most of *Trade Barriers to Knowledge* deals with tariff and trade regulations on a country-by-country basis. The book also contains a tabulated summary analysing the regulations according to materials, so that the reader may see at a glance the conditions affecting each material in all of the countries surveyed. The text of the U.N.E.S.C.O. Agreement is appended.

Madras Stock Exchange Official Year Book 1955-56. Compiled by the Madras Stock Exchange Association Ltd., 322-23, Linghi Chetty Street, Madras 1. Price: Rs. 7-8.

The functions and responsibilities of stock exchanges in India have vastly enlarged with the rapid industrialisation of the country. In fact, they provide an essential link between industries and the investing public and thus help mobilise the savings of the public through the pooling of the available resources to the common advantage of all. From this point of view, the part played by the Madras Stock Exchange in the growth of industries in South India has been commendable.

With a view to playing its role more effectively, the Madras Stock Exchange took up, four years ago, the work of compiling the working results and balance-sheets of leading joint-stock companies in a summarised form, as also particulars, such as registered office, capital structure, notes on capital history, etc., so that an investor might be enabled to make a correct choice of investments. The publication has since been enlarged and the latest one is the fourth edition, wherein the essential features of the earlier editions have been not only preserved but enlarged. The inclusion of particulars regarding other State loans, in addition to those of the Central and South Indian State loans, is an additional feature of the latest edition.

"INDIAN AGRICULTURE IN BRIEF"

The Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, has brought out the second edition of the handbook entitled *Indian Agriculture in Brief*. This booklet gives a snap-shot picture of the Indian agricultural economy as revealed by the current statistics. Besides figures of acreage, production, utilisation, prices of agricultural commodities and certain essential data in allied spheres, such as population and national income, needed for an understanding of the agricultural economy in its broader perspective, have also been included. The handbook is of a convenient size suiting the purpose it is meant to serve.

The Directorate has also brought out the sixth issue of the Bulletin on Food Statistics. It presents, within a brief compass, an integrated picture of production, imports and exports, inland trade and prices of cereals in India for the last ten years. Data relating to inland rail and river-borne trade and purchases made under the price support scheme have been incorporated in the present issue.

THE
CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA
(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)
Capital (Paid-up) - £3,500,000
Reserve Fund - - £5,000,000
Branches throughout India, Pakistan and the East
AFFILIATED BANK IN INDIA & PAKISTAN
THE ALLAHABAD BANK LTD., with over 70 offices in India & Pakistan.
The Bank offers a complete Overseas Banking Service and provides exceptional facilities for financing every description of trade with the East.
Deposits for Fixed Periods or repayable at call or at short notice are received at rates which may be ascertained on application.
The Bank's London Office undertakes Trusteeships and Executorships.

INDORE MALWA UNITED MILLS LIMITED

MR. KUDILAL GOVINDRAM SEKSARIA'S SPEECH AT FORTY-NINTH ANNUAL MEETING

PROGRAMME OF MODERNISATION TAKEN UP

ADDRESSING the shareholders of the Indore Malwa United Mills Ltd. at their Forty-ninth Annual General Meeting, held at Bombay on 4th May 1956, Mr. Kudilal Govindram Seksaria, Chairman of the Company, referred to the successful working of the Company during the past year. He also drew the attention of the shareholders to the task that lay ahead of the Directors, namely, the entire replacement and modernisation of the machinery at the Company's mills. A part of the machinery, for which orders had been placed during the past year, had been received and installed and was giving satisfactory results. Mr. Seksaria indicated that, despite several handicaps, namely, the sharp rise in cotton prices, the increase in taxation and the rise in excise duty on coarse and medium cloth, the Company's results for the current year would be satisfactory.

The following is an extract from Mr. Seksaria's speech:

"GENTLEMEN,

"It is with great pleasure that I extend to you my most cordial welcome today to the Forty-ninth Ordinary General Meeting of your Company. The Directors' report and the annual accounts of the Company for the year ended 31st December 1955 have been in your hands for some time, and with your permission I take them as read.

"You will agree with me that this meeting is taking place at a momentous time in the history of industries run by joint-stock companies in our country. Hardly a month back, a new and comprehensive Companies Act has been placed on our Statute Book. We are also meeting on the threshold of the inauguration of the second Five-year Plan which aims at a socialistic pattern of society and a Welfare State. For India, it was a great year of achievements in the international sphere. Preaching the gospel of peaceful co-existence and of non-alignment with any power bloc, India, under the enlightened leadership of Shri Nehru, has contributed the most to ease international tension. The adoption of 'Panchsheela' by more and more countries, the significant role played by India's representatives at the U.N.O. and the frequent exchanges of visits of high political dignitaries, have today focussed the world's attention on India. At home, we have had a peaceful year, except in the last quarter, when the unhappy events that followed the publication of the States Reorganisation Commission's Report threw the country in a political turmoil, unleashing the communal, separatist and provincial tendencies in the worst form, and thus giving the worst jolt to our body politic. But, thanks to the statesmanship of our Prime Minister and the Congress High Command, the situation is returning to normalcy. The significant factor of the S.R.C. Report, as far as your Company is concerned, is the amalgamation of Madhya Bharat, Vindhya Pradesh and a part of Madhya Pradesh into one State.

One of the Best Years

"In the economic sphere the year 1955 was one of the best years. There was an all-round increase in industrial production, especially in the production of mill-made cloth which, in spite of labour troubles in Kanpur, touched the new record of 5,094 million yards, as against 5,025 million yards in 1954. Thus, the target for the textile industry set under the first Five-year Plan has been exceeded in two consecutive years. High level of offtake of cloth, easy supply position of cotton and improved transport facilities for movement of raw materials and finished products have largely contributed to this achievement. However, despite the splendid performance of the textile industry, the Government, unfortunately, decided to put a ceiling on the production of cloth by textile mills at 5,000 million yards. While the Government estimates the *per capita* consumption of cloth at 22 yards by 1960-61, it has decided that the additional requirements of cloth should be met from the handloom weavers. It is certainly incomprehensible that at a time when the country's most imperative need is increased production all round, Government should deliberately decide not to utilise the capacity of the industry to make its effective contribution towards meeting the increased demand for cloth. In my humble opinion, the imposition of ceiling on the production of cloth by textile mills is meaningless as the handloom industry will not be able to cope with the demand, and there will be dearth of cloth in the country, which will not only accelerate the inflationary spiral but also adversely affect our exports. While the first Five-year Plan has been successfully completed, the draft outline of the second Five-year Plan has already been published. It is heartening to note that a dynamic and realistic approach is being made to the problems facing our country. Of particular interest to us is the inclusion in the Plan of the construction of a new hydro-electric plant as a part of the Chambal Project which is to be carried out by the Madhya Bharat Government in co-operation with the Rajasthan Government. On completion of this plant in a year or two, cheap electric energy will be available to the industry in Madhya Bharat where all the mills are at present running on coal. Further, Indore is being connected by a broad-gauge line with Ujjain and the railways have agreed to lay a railway siding in the mill area. As a result of the above, the transport costs will be considerably reduced.

Wholehearted Co-operation Needed

"The new Plan has been formulated with the principal objective of raising the level of the standard of living in the country by a sizable increase in the national income, rapid industrialisation with special emphasis on basic and heavy industries and large expansion of employment opportunities. I do not wish to go into the details of the Plan, but, in my humble opinion, such an ambitious scheme, designed with a view to ensuring a rise in the standard of living for the increasing population of our country, would succeed only if wholehearted co-operation from all sectors is assured. The Plan envisages deficit financing to the extent of 25 per cent. of the total outlay. Although opinions may differ as to the probable effect of deficit financing of this magnitude, it is certain that, unless there is a corresponding increase in production, there will be considerable increase in the general level of prices. Our Finance Minister, Shri Deshmukh, has assured us that the Government will keep a watchful eye on the general price situation and that deficit financing will be resorted to with the utmost caution. However, I deeply regret the restrictions imposed on the private sector when there is enhancement of the scope of the public sector. I do not understand why the private sector is not allowed to play its full role in the development of the country when it has hitherto had a fine record of achievement to its credit, particularly under the first Five-year Plan.

Nationalisation of Insurance

"I feel the Government would do better to give full opportunity to the private sector to achieve the target and not keep the Damocles sword of nationalisation hanging, thereby creating uncertainty and anxiety in the minds of the business community. In this connection, I refer to the untimely nationalisation of life insurance by ordinance overnight. One would have expected that before giving effect to such new policies and ideologies, Government would have learnt from the experience of other countries. Here I have in mind the experiments of the Socialistic Government in Great Britain and the bitter results that followed their hasty actions.

"Further, the taxation policy followed by the Government is such as would not leave to the private sector savings enough, out of which the capital required for the financing and development of various industries can be built up. It is regrettable that, although the private sector is willing to play its part fully in the second Five-year Plan, unfortunately the whole trend of Government legislation and taxation policy has been to take away the incentive from private enterprise.

"Coming now to the review of the past year's working of your mills, I am happy to present to you not merely a satisfactory but a progressive account, as can be seen from the Directors' report and the balance-sheet in your hands. In this connection I would like to refer to some of the important facts in the life of your Company. You all know that this Company was established as far back as 1907 through the enterprise of Messrs. Currimbhoy Ebrahim and Sons, Ltd. If I am not mistaken, it was the first enterprise of its kind by a private body in Malwa to take advantage of the vast resources of that area in raw materials and in manpower. Other undertakings swiftly followed their example. Unfortunately, in the year 1932, adverse fortune overtook Messrs. Currimbhoy Ebrahim and Sons, Ltd. and this undertaking saw its worst days. Thereafter, the Company was resuscitated and put on proper footing by my late revered father, Shri Govindramji Seksaria, as head of the then managing agency firm. It took some time to wipe out the debts and the debentures and your Company was then put on a sound footing. Reserve fund was steadily built up and converted into bonus shares, thus distributing these profits to all of you. It continued under his managing agency with the result that your Company has grown from strength to strength till it finds itself in a sound and flourishing position today. I may here be permitted to say that it is to this much criticised managing agency system that we owe the initiative and growth of almost all the great industries of India and the building up of the industrial life of the country in the last century. Though the system is still necessary for some time more under the present conditions, I do not, however, mean that with the advance of times and growth of experience we should not welcome the necessary change. It is with no regret, therefore, that we have ended the managing agency system of your Company and sponsored and readily welcomed a new management in its place. I feel, I would have failed in my duty if I had not paid a just tribute to a system which has contributed so much to the industrial growth of the country.

Profit Higher

"During the year under review the prospects were good. The demand for the cloth was well maintained throughout the year and prices remained steady. The cotton position also kept good and was available at cheaper rates throughout the year. I am happy to say that during this year (1955) the Company has shown a profit of Rs. 25,31,563, showing an increase of Rs. 19,21,311 over the previous year, i.e., 1954. This profit would have stood at still much higher figure but for the fact that Rs. 2,75,088 for past bonus had to be paid during the year and a provision for this year's bonus to the workers to the tune of Rs. 3 lakhs had to be made. This had to be adopted in accordance with the five-year bonus agreement entered into with the local labour union on the lines of the Ahmedabad agreement. I am glad to inform you that your Company has been able now to provide for up-to-date depreciation, including initial depreciation of Rs. 9,78,162, and has also made provision for taxation and thus the all-round position of the Company has been strengthened and is fully sound today.

Machinery to be Replaced

"But an important development remains to be done, towards which your Directors will hereafter devote their full attention. I mean the entire replacement of old machinery. You would remember that the machinery of your undertaking dates back to the year 1907 and it is obvious that today it is not merely outmoded but has run through its full life. It was not possible to replace this machinery during the war years and thereafter for very obvious reasons, though the management, being all along fully conscious of the need, has made some improvements therein from time to time. During the year under review orders had been placed for purchasing machineries—indigenous and foreign, especially of Japanese make—out of which some machinery has been installed and is giving satisfactory results. I hope in the next year and thereafter in due course of time your Directors will be able to replace the entire machinery with new and modern machines. I keenly look forward to the day when I shall be able to say that your undertaking is equipped with the machinery requisite to the needs of the times that is second to none.

"I am happy to say that during the year the relations between the management and the labour have been fairly good. In deference to the wishes of our Prime Minister, Shri Nehru, that labour should be given an honourable place

Notices

MAHINDRA AND MAHINDRA LIMITED

NOTICE

THE 10TH ANNUAL GENERAL MEETING of the Shareholders of Mahindra and Mahindra Ltd. will be held at the Registered Office of the Company, Gateway Building, Apollo Bunder, Bombay-1 on Monday the 14th May 1956 at 4-30 p.m., to transact the following business:

1. To receive and adopt the Directors' Report, the audited balance-sheet and profit and loss account for the year ended 31st October 1955.
2. To declare Dividend on Preference and Ordinary Shares.
3. To appoint a Director in place of Mr. K. C. Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.
4. To appoint a Director in place of Mr. H. C. Mahindra who retires by rotation under Article 110 of the Articles of Association but is eligible for re-election.
5. To appoint a Director in place of Mr. Jal H. Mehta who ceases to hold office by virtue of Article 116 of the Articles of Association but is eligible for re-election.
6. To appoint a Director in place of Raja Maharaj Singh who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for re-appointment.

   And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

   Ordinary Resolution:

   "Resolved that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to Raja Maharaj Singh who has attained the age of 77 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."
7. To appoint a Director in place of Sir D. N. Mitra who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for reappointment.

   And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

   Ordinary Resolution:

   "Resolved that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to Sir D. N. Mitra who has attained the age of 65 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."
8. To appoint a Director in place of Rai Bahadur Isher Das Sawhney who ceases to hold office under Article 116 of the Articles of Association of the Company, but is eligible for reappointment.

   And to consider and if thought fit to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is annexed hereto.

   Ordinary Resolution:

   "Resolved that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to Rai Bahadur Isher Das Sawhney who has attained the age of 73 years and who retires under Article 116 of the Articles of Association of the Company and that he be reappointed a Director of the Company."
9. To appoint Auditors for the current year and to fix their remuneration.
10. Section 293, sub-section (1) (d) restricts the total borrowing powers of the Board of Directors to the paid-up capital of the Company and its free reserves which amount to Rs. 80 lakhs. The Company's borrowings from the various banks amounted to Rs. 9,26,49,989 on 31-3-1956. It is therefore necessary to approach the shareholders for approval of these borrowings by the Company.

    And to consider and if thought fit to pass the following resolution as required by Section 293 (1) of the Companies Act, 1956 and the relative explanatory note as required by Section 173 of the said Act is annexed hereto.

    "Resolved that the consent of this Company be and it is hereby accorded to the Board of Directors borrowing monies in excess of the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose and that such borrowing shall be exclusive of the temporary loans obtained or to be obtained by the Company from the Company's Bankers in the ordinary course of business. Resolved further that the Company doth hereby ratify and confirm, all borrowings by the Directors after 2nd April 1956 which are in excess of the aggregate of the paid-up capital and free reserves of the Company."

A member entitled to attend and vote at a Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

By Order of the Board,
KESHUB MAHINDRA,
Director.

28th March 1956.

The transfer books of the Company will close from 30th of April 1956 to 14th of May 1956, both days inclusive. The dividend, when sanctioned, will be made payable to those shareholders whose names stand on the Register of the Company on 14th of May 1956 and the dividend warrants will be duly posted to them on or after the 25th May 1956.

The shareholders are requested to immediately notify any change of address.

Explanatory Statements as Required by Section 173 of the Companies Act, 1956.

In respect of Item No. 6 of the above notice of the 10th Annual General Meeting of the Company it is notified that Raja Maharaj Singh who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 77 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956 to be passed, for his re-appointment as a Director and special notice under the provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 7 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that Sir D. N. Mitra who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 65 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956 to be passed for his re-appointment as a Director and special notice under the provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 8 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that Rai Bahadur Isher Das Sawhney who retires under Article 116 of the Company's Articles of Association but is eligible for re-election is 73 years of age and accordingly the ordinary resolution set out in the said Item is necessary under Sections 280 and 281 of the Companies Act, 1956 to be passed, for his reappointment as a Director and special notice under the provision of Section 281 has been received by the Company from a member of his intention to move the said resolution at the said Annual General Meeting.

In respect of Item No. 10 of the accompanying notice of the 10th Annual General Meeting of the Company it is notified that the major portion of the borrowings from the Banks is on account of the financing of import of Steel which the Company has been doing on behalf of the Iron and Steel Controller as well as on its own account as a recognised stockist. In the calendar year 1955 out of the total imports of 520,000 tons of Steel in India by the Iron and Steel Controller the Company imported over 187,000 tons which represents about 36 per cent. of the total imports. Each ton of Steel costs on the average between Rs. 500 and Rs. 700. Financing of such large imports needs strong banking credits. The Company has been fortunate in securing such assistance from the following Banks: Lloyds Bank Ltd., Bank of India Ltd., Bank of Tokyo Ltd., Mitsui Bank Ltd., National Bank of India Ltd., Bank of China.

The Government of India has entered into several contracts with the Governments of Russia, Belgium, Germany and China for the import of Steel and the Iron and Steel Controller has allotted to the various importers of Steel the commercial handling of such business and the Company is receiving its share of such allotments.

With the advance planning to import three million tons of Steel in the next three years, the tempo of purchases will continue to increase and consequently the share of your Company in such imports will also increase. This will require provision of additional credit facilities.

The anticipated increased turnover in Jeeps, Spare Parts, and in manufacturing operations will also require additional finance provisions. Trading for the first five months of the current year is well above the average of the past year in all the divisions. In order, therefore, to maintain and develop its business it is necessary for the Company to have recourse to large credit facilities from Banks and other institutions.

EASTERN INVESTMENTS LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming General Meeting of Shareholders the following dividends for the year ended 31st December 1955.

On the Cumulative Preference Shares, a final Dividend at 2½ per cent. per annum, as already declared by the Directors and paid on 28th March 1956, making a total of 5 per cent. per annum, less income-tax.

On the Ordinary Shares at 9 per cent. per annum, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
BIRD & CO., (PRIVATE) LIMITED,
Secretaries.

MANAGEMENT OF STATE-OWNED INDUSTRIES

NOTED AMERICAN ECONOMIST ADVOCATES MULTIPURPOSE CORPORATIONS

THE problem of evolving a suitable structure to manage State-owned enterprises has been a subject of controversy for long and no satisfactory solution has yet been found. At present, no uniform pattern is being followed for administering these enterprises. Broadly speaking, there are three types, department-managed, autonomous corporations, and joint-stock companies. Since the activities of State-owned concerns are open to review by Parliament, their managements have been subjected to bitter criticism on the floor of both the Houses. Some members have complained that too much powers have been delegated to these managements, while others have criticised that these concerns are not being managed on commercial lines. The Estimates Committee, in its sixteenth report submitted to Parliament, observed:

"A commercial undertaking must be run on business principles, that is, it must have a large measure of autonomy in day-to-day administration. It should have its own system of procuring raw materials, recruiting labour and personnel and should have a separate organisation. It should, of course, be regulated on the basis of Company Law and subject to commercial audit, cost accounting and commercial principles of business. So far as broad questions of policy are concerned, it may be subject to the general control and supervision by the Government but it should be given a free hand within the framework of that policy to produce up to the optimum size at economic cost."

It will be seen from the above quotation that the Committee has confined itself mostly to the type of relationship that should exist between the Government and the undertakings, besides stressing the need for non-interference with their day-to-day administration. On the type of set-up to be followed, it seems to prefer the joint-stock company system. The issue cropped up during the debate on the demand for grants for the Production Ministry and Mr. K. C. Reddy, Minister for Production, gave a hint of the Government's mind on it. He stated that the joint-stock company pattern which the Government had chosen for the various undertakings was good and had worked well. Although the Government thus seems to be in favour of joint-stock company pattern for managing State-owned concerns, it has yet to announce its final decision. The subject is still under its study and it has been consulting foreign experts. In this context, the opinion of Prof. J. K. Galbraith, Head of the Department of Economics, Harvard University, is worth recalling. In his report on his impressions of India's economic plans, he has suggested that it would be advantageous for India to have a small number of large industrial corporations, each in command of a considerable and increasing number of enterprises, than to set up a new corporation for each new enterprise. His views on this subject are summarised below.

Four Dangers

Prof. Galbraith says that he was impressed by the number and variety of the tasks which the Government of India and the State Governments are assuming. He has no doubt that these responsibilities will greatly increase in the years ahead. But he points out that, in the field of organisation and administration, not economics, the Government is bound to meet with dangers, as Indian leaders are not being guided by experience and do not reflect deeply on the course they are following. Few will disagree with these views of Prof. Galbraith. Many observers in this country have been pointing out to the Government that lack of trained personnel to manage its undertakings is a great drawback in making them successful ventures. The Government, however, has paid no attention to them. In this connection, Prof. Galbraith's emphasis that the success of the second Plan requires that there be an unfailing confidence in the success of these enterprises deserves to be borne in mind. At this juncture, India cannot afford, he says, failure in the experiment, because of its great need. Nor can it afford a long period of search, experiment and doubt. He draws attention to four dangers in the sphere of State undertakings. These are:

(1) There are the preternaturally high standards to which public enterprise must conform and a private concern may not. "In a private firm," he says, "oddities and inequalities of pay and staffing arrangements are taken for granted. Errors in selection of high personnel are corrected by promoting the individual into a better compensated and more honorific but less important post. Nepotism is not only taken for granted but approved. What counts is the overall result and no public outcry arises, if there are occasional lapses even in that. None of the vagaries is vouchsafed to the public enterprise."

(2) The standards set for public enterprise are high, and officials and ministers, in a democratic Government, will always be tempted to protect themselves from criticism. While speeches and resolutions will be passed favouring the principle of decentralisation and autonomy, the next irregularity, or hint of one, will cause these intentions to be set aside in favour of the more fundamental principle, safety first. The tradition of close treasury control over finances and the institution of Parliamentary question-hour both contribute to centralisation. But these, according to the distinguished American Professor, are not the real cause. The cause lies much more deeply in the standards of public performance and the traditions of official caution. It is necessary to recognise this, says he, as, otherwise, there will be the temptation to seek a remedy by superficial tinkering with parliamentary or auditing machinery.

(3) There is the peculiar nature of the productive enterprise. A sharp line divides this and the ordinary administration of Government. The latter does not require any high technical knowledge, while a productive enterprise does. Accordingly, there should be an arrangement for bringing trustworthy technical or scientific knowledge and specialised experience quickly to bear on decisions. This requires that the organisation should be such where the members know on what matters and to what extent they can trust one another's judgment.

(4) The relative importance of the organisation as against the individuals has to be borne in mind. On the Government side, emphasis is on getting the right men in the right place, but the success of such enterprise depends on organisation and not on individuals. Organisation makes possible a level of achievement far above that of an individual. It also compensates for the uncertainties and shortcomings which are the counterpart of individual performance. In the effort to select the right man to head each of its new enterprise, the Government cannot expect to be right in more than three out of four cases. This may be a good average. But a 25 per cent. failure rate will be intolerably high. If, however, an organisation can be developed for the tasks the Government faces, it can count on a much higher chance of success. Prof. Galbraith illustrates this point with the examples of the General Motors Corporation and the Tennessee Valley Authority. These two bodies could be counted upon to do completely almost any productive task, though no one could, with complete assurance, pick any man from either organisation and be certain that he would be a success in developing the manufacture of an automobile or a diesel locomotive, etc. The T.O.D.T. in Germany was exceedingly competent but the individuals comprising it, he remarks, are ordinary men.

Situation in India

Prof. Galbraith says that all the four problems noted above are present in the Indian situation in one form or another. Indian productive enterprises will be judged by the high and even harsh standards which the Anglo-Saxon tradition reserves for public enterprise. He thinks that past experience of socialism under civil service has not been heartening and points out that in India this should be recognised in time. The relevancy of this warning lies in the fact that the experiment in India bears the same character.

In the light of the aforesaid reading of the situation, Prof. Galbraith has made a number of suggestions. First, the basic unit of organisation for productive enterprises should be the public corporation with autonomy in decision making. The Government should specify the tasks and the objectives to be achieved. It could prescribe rules of operation on staffing, salaries and wages, procurement practices, financial procedures and so forth, as also auditing procedures to see that these rules are enforced. The directing authority must have full freedom of decision within these rules. Performance should be judged not by questionable and wrong decisions, which are precisely the character of productive enterprises, but by results. Prof. Galbraith thinks that the delegation of powers to such authority is not yet accepted in India. Even after it is accepted, vigilance is required to see that what is accepted in principle is not modified in practice.

Secondly, the bulk of the directors of new corporations are officials. These officials should resist the tendency to interfere with the administration of the public enterprises. He admits that India has one of the world's best civil services and is in the process of raising this profession to new levels of esteem. It would be a shame, he remarks, if this service were to be implicated in misfortunes which resulted from its failure to understand the nature of the new tasks which the Government of India is assuming and the new organisation that it requires. This view has often been expressed by the Indian business community as also by this journal, but it seems to have fallen on deaf years.

Multipurpose Enterprises

Prof. Galbraith characterises as "unhappy precedent" the act of vesting the development of the new iron and steel plants in the Ministry of Iron and Steel. He opines that there should be no thought of organising a new corporation for each new enterprise. The pattern of industrial organisation in India should be a relatively small number of operating corporations each in command of a considerable and increasing number of enterprises. The corporations should plan for a steady increase in the number and range of their own activities. The multipurpose corporation involves, he says, no experiment, and quotes the instance of General Motors and T.V.A. in the U.S., the Mistui and Zaibatsu in Japan. The Mitsui, for instance, are engaged in activities as diverse as paper manufacture, textile and shipping. The T. V. A. builds thermal electric plants and makes synthetic ammonia. These examples remind us in India of the business houses of Tatas, Birlas, Sahu-Jains, Killicks—to quote only a few—which have entered into a number of productive lines and have proved how private enterprise can function efficiently. It will be interesting to note, in this connection, that the latest trend even in the private sector is for one corporation to take up more than one line of manufacture. There are instances where jute mills and cotton mills have taken to the manufacture of cement and chemicals without forming separate companies. Unfortunately, this form of organisation runs counter to some of the principles envisaged in the socialist pattern of society, namely, diffusion of economic power, ceiling on incomes, etc. But these principles are not intended to be applied to the public sector in which concentration of economic power in the hands of bureaucrats is taking place.

A few other suggestions made by this noted American economist are also interesting and quite pertinent. He is strongly opposed, as this journal has been, to the tendency to transfer frequently officials from one undertaking to another and to pull out men, who have proved themselves successful in one assignment, to initiate the next project. This procedure, asserts Prof. Galbraith, is "dead wrong," for a person, who may seem a wonderful success in the context of his organisation, may be a serious failure outside of it. The reason for this is that, in business enterprise of all kinds, organisation props up the man far more frequently than men make organisations. Vanity argues the reverse, but he dubs it by saying that it is only vanity.

Another valuable suggestion made by Prof. Galbraith is that officials, legislators, and the people at large should be made to realise the nature of the problems that are being faced in the operation of the public enterprises. This is essential in order to enable the legislators and the public to judge the enterprises not by individual decisions of the managers but by their overall performance. The American economist is in favour of greater financial autonomy and restriction of the scope of parliamentary questions on the details of business practice, as well as decisions, in public enterprises. In conclusion, he observes that, as the issues involved are technical and organisational and not ideological, considerations of democratic control diminish in importance. "Decentralisation and a large measure of autonomy for public enterprises with prescribed rules is not a frustration of democratic process," he asserts, and adds, "on the contrary, it serves the larger democratic decisions."

BOMBAY'S CASE FOR FUTURES TRADING IN PEPPER

There is a growing volume of opinion in the pepper trade that, in deciding applications for recognition to conduct futures trading in pepper, Bombay's case has not received the full consideration it merits at the hands of the Forward Markets Commission. Readers may have noted from an article on this subject in this journal dated 21st April, that some of the data on which the Commission based its conclusions did not represent the real position and that Bombay's case needed reconsideration. We have now a copy of the letter addressed by the Pepper and Ginger Merchants' Association Ltd., Bombay, to the Chairman of the Forward Markets Commission, putting forward a similar plea.

The Association draws the attention of the Commission that it was incorporated in 1937 and not in 1946 as the Commission has stated in its report to the Government. Since then, the Association has been rendering useful service to trade by settling disputes and organising trading activities on smooth lines. It was successful even during the commodity crisis in 1952 when other futures market had suspended their trading operations. The Association has been publishing regularly export figures relating to pepper and ginger every month. It was instrumental in organising the first session of the All-India Pepper Exporters' Conference at Cochin in 1952 to consider the question of detention of black pepper lots in the U.S. Very recently, the Government of India authorised the Association to issue certificates of origin, under Article 11 of the International Convention on Simplification of Customs Formalities. It has since begun issuing these certificates in respect of both pepper and ginger exported from India. The Association has, therefore, urged that the Commission should reconsider the question of according it recognition for conducting futures trade in pepper.

(Continued on next page)

Putting forward the case of Bombay as another suitable centre for the establishment of hedge market, the Association draws the attention of the Forward Markets Commission to the following points:

(1) Although Bombay City is far remote from the pepper-producing centres, thanks to the availability of quick and improved transport facilities, supplies of black pepper are regularly received in Bombay. Distance, therefore, should be no bar for recognising the city as a centre for futures trading.

(2) The annual production of pepper in the Bombay State is 700 to 800 tons and not 100 tons as assumed by the Commission. More than 50 per cent. of this is marketed in the city every year.

(3) The receipts of pepper in Bombay City, according to the trade, are estimated at 5,000 tons for 1953-54, the production during the year being 23,800 tons. The receipts into Bombay thus worked out to 20 per cent. of the total output. The Forward Markets Commission's estimates of receipts at 3,000 tons are on the low side, as compared with the actual figures.

(4) The Commission stated that 90 per cent. of the export of pepper was effected from the producing centres. Agreeing with this percentage, the Association points out that, out of this 90 per cent., 60 to 65 per cent. of the export business is handled by Bombay exporters only who have their offices in the producing centres. The sales by these offices are finalised by the Bombay offices. Besides several inland merchants, who have their offices in this city, also operate in this commodity from this centre. In view of these considerations, the Association contends that it is necessary that hedging facilities should be provided in Bombay also. Pepper being a most fluctuating type of commodity, hedging in it cannot be entrusted on a large-scale, it observes, to the branch offices of Bombay exporters in Cochin or Alleppey.

G.A.T.T. CONVENTION ON IMPORTS OF SAMPLES

The G.A.T.T. Secretariat has issued a specimen copy of the International Convention to facilitate imports of commercial samples and advertising material. The Convention came into force on 20th November 1955. As many as 17 Governments have deposited instruments of ratification or accession with the Secretary-General of the United Nations. These include Australia, Czechoslovakia, Denmark, Egypt, Finland, Federal Republic of Germany, Greece, India, Indonesia, Japan, the Netherlands, Norway, Pakistan, Spain, Sweden, Switzerland and the U.K.

The main purpose of the Convention is to minimise the costs and reduce the formalities and delays which traders and merchants have to face in sending samples and advertising material from one country to another.

The Convention contains 15 Articles setting out the procedure to be followed and conditions under which the samples could be imported by participating member-countries. Each Contracting Party is required to exempt from import duties sample goods of all kinds into its territory, provided such samples are of negligible value and are only to be used for soliciting orders for goods of the kind represented by the samples. In determining whether the samples are of negligible value, the customs authorities in the importing country may consider the values of individual samples or the aggregate value of all the samples in one consignment. The values of consignments sent by a consignor to different consignees, however, shall not be aggregated, though the consignments are imported at the same time. The customs authorities of the importing country will have the right to make the samples useless as merchandise by marking, tearing, perforation or other treatment but not so as to destroy their usefulness as samples.

The samples will be duty-free only if the articles concerned are owned abroad and are imported solely for demonstration purposes in order to secure orders to be supplied from abroad. They are not to be sold or put to normal use except for purposes of demonstration, and are intended for re-export in due course.

As regards vehicles and industrial and agricultural machinery or equipment of a value, for customs purposes, exceeding $1,000 (U.S.), importers may be required to declare the place of destination of such machinery, equipment or vehicles and their prices. The customs authorities may, however, seal such machinery, or otherwise preclude their operation during the time in which temporary duty-free admission is allowed and limit the places where these goods may be operated or demonstrated.

The articles of agreement relating to exemption of imported advertisement material provide that each Contracting Party should exempt from import duties catalogues, price-lists and trade notices relating to goods offered for sale, or transport or commercial insurance services offered by a person established in the territory of another Contracting Party. The advertisement material

TRAVANCORE RAYONS LIMITED

MR. A. R. RAMANATHAN'S SPEECH AT ANNUAL MEETING

ADDRESSING the shareholders of the Travancore Rayons Ltd. at their Annual General Meeting, Mr. A. R. Ramanathan, Chairman of the Company, claimed that the Company had successfully completed its expansion plans during 1955, thus fulfilling its part in the first Five-year Plan. He also announced the Directors' firm intention and eager desire to fulfil the new targets allotted under the second Plan. They have in view, he said, plans to step up rayon output by 1.8 tons per day and that of cellulose film by another 4 tons per day by 1957-58.

The following is the full text of Mr. Ramanathan's speech:

"GENTLEMEN,

"I have great pleasure in extending to you all a cordial welcome to this tenth ordinary annual general meeting of the shareholders of the Company. The Directors' report and statement of accounts have been circulated already and, with your permission, I shall take them as read.

"The net profit for the year 1955 is Rs. 25,40,383-13-4, after providing depreciation of Rs. 27,07,667-6-2. This amount, together with the balance of Rs. 1,23,122-1-11 brought forward from the previous year, makes a sum of Rs. 26,63,505-15-3. Out of this, your Directors have thought it prudent to transfer to deferred taxation reserve a sum of Rs. 14,00,000, bringing up this reserve to Rs. 30,00,000. I am sure you will agree that, in view of the heavy tax liability likely to arise in the future, this provision is essential. The balance left is Rs. 12,63,505-15-3. An increased dividend of 7½ per cent. has been recommended. Your Directors are following a steady and conservative dividend policy, having due regard to your long-term interests, and I hope their recommendation will receive your approval.

Further Expansion Planned

"I had the privilege of referring, at the last annual general meeting, to the partial completion of our expansion plans. I am now glad to report that all the schemes were fully and successfully completed during 1955. It is a matter for genuine satisfaction that we have, thus, been able to fulfil our part in the fruition of the first Five-year Plan. The second Five-year Plan has just emerged, with its principal emphasis on industrialisation. As the Directors have mentioned in their report, it is their firm intention and eager desire to fulfil amply the new targets allotted to this industry under the second Plan. We have in view the stepping up of the rayon yarn production by another 1.8 tons per day and that of cellulose film by another 4 tons per day by 1957-58.

"As you would have been able to see from the balance-sheet, the block account has registered a phenomenal increase. A creditable feature, in this connection, is that our entire expansion cost has been met out of our own resources. The shareholders would indeed be immensely pleased when they see during 1956 the full working results of the expanded plants. The liability to the Travancore-Cochin Government now stands reduced to Rs. 56½ lakhs, as against the initial figure of Rs. 96 lakhs. The machinery and buildings have been valued at Rs. 2,91,62,100 for purposes of insurance.

"The import policy of the Government of India continued to take due account of the indigenous interests. However, in the case of transparent cellulose film, the Government were obliged to allow imports in order to meet pressing demands. Our production position has since improved considerably and there is now enough justification for a revision of the Government's policy. In order that our expanded production may find a ready market and your Company may continue to sail smoothly, we have approached the Government and impressed upon them the fact that the country has attained self-sufficiency in this commodity and there is, hence, no need for future imports of the non-moisture-proof cellulose film. Let me hope that the Government will view our request sympathetically.

"While dwelling on this subject of Government policy, I feel that it may not be out of place for me to refer to some points of vital importance to the economy and progress of the country. The private sector has remarkably adapted itself to the changing pattern of society and, judged by its performance under the first Five-year Plan, it deserves every encouragement. It, therefore, behoves the Government to avail fully of the talent, money and experience of this sector, especially when there is so much to be done, and all that needs to be done as well and as fast as possible. Industry and business should take in all those who are prepared to venture and risk. Experience shows that progress has been built through individuality, initiative and enterprise. Here, I can do no better than quote the wise words of our revered Mahatmaji:

"'I look upon an increase in the power of the State with the greatest fear, because although apparently doing good by minimising exploitation, it does the greatest harm to mankind by destroying individuality, which lies at the root of all progress.'

"The Government have already taken many vital steps towards the socialistic pattern of society and, if I may say so, at too fast a pace. I would suggest that some time be given now to enable co-ordination, adjustment and consolidation, rather than be moving too hastily.

Raw Materials

"I referred last year to the need for eliminating the dependence of this industry on foreign wood-pulp. I am glad to tell you that the Government of India are keenly alive to this vital problem. They have constituted a Pulp Investigation Committee. Some Italian and German experts were deputed by the Government to carry out independent investigations as to the Indian raw materials best suited for rayon pulp and as to the most advantageous location for a chemical-pulp plant. The results are awaited with interest. The pulp-making plant, being a very specialised and costly machinery, thorough all-round investigations have to be made beforehand, especially with regard to the availability of raw material and whether adequate and continuous supply could be ensured for producing about 50 tons of pulp a day; otherwise, the factory will be faced with shortage of raw materials after some time. Planned reforestation will be necessary for feeding such plants. This will have to be investigated.

"Another noteworthy step taken by the Government of India is the setting up of a Development Council for the Art Silk Industry and it is hoped that the industry will benefit by this step.

"You may all be aware that from 1st April this year, the new Companies Act, 1956 has come into force—with its wide ramifications and revolutionary changes. We are studying the steps to be taken to bring your Company's working in line with the various provisions of the new law.

Labour

"The relationship with the employees continued to be cordial, on the whole, except for an unjustified strike of about three weeks' duration, precipitated by the workers in lightning fashion. The loss occasioned has certainly been reflected in the balance-sheet, and the working results would have been much better but for this. Employment in the factory has increased by about 20 per cent., consequent on its expansion. The wage and salary scales provided by your Company are, as far as I see, about the best prevailing around here, and I look forward to the uninterrupted and full co-operation of the employees. As their own advance and prosperity are inextricably intertwined with that of the Company, I ask of them to give of their best, work hard and efficiently, and produce more, so that they may in turn reap good dividends.

"I wish to place on record the valuable services rendered by the employees, by and large, during the period under review. Their continued co-operation, I am sure, will go a long way in our achieving our rightful place among the major industries of the country. I sincerely hope that, at this rate, there will not be any necessity to look for foreign technicians for running the present machines, though their help may have to be sought for running any new plant which we may acquire under our expansion plans.

"With these observations, I now beg to move that the Directors' report, balance-sheet and profit and loss account for the year ended 31st December 1955 be approved and adopted."

BHARAT LINE'S PROFIT DROPS AGAIN

EARNINGS DECLINE, DESPITE INCREASE IN FREIGHT RATES

A SETBACK in both freight earnings and gross profit, despite a slight advance in freight rates, is disclosed by the audited accounts of the Bharat Line Ltd. (Managing Agents: Messrs. Dinshaw Ltd., Bhavnagar) for the year ended 31st December 1955. The upward trend in freight earnings experienced during the previous eight years has suffered a setback for the first time. After going up from Rs. 11.40 lakhs in 1946 to a record level of Rs. 256.64 lakhs in 1954, they have dropped to Rs. 233.71 lakhs in the year under review. It is, however, comforting to note that the freight earnings for 1955 are higher than those for any of the years preceding 1954. The gross profits, which had declined from Rs. 53.99 lakhs in 1952 to Rs. 37.28 lakhs in 1954, has shrunk further to Rs. 31.95 lakhs, the lowest level since 1950.

The net profit (after providing for Managing Agents' remuneration and depreciation) is, however, higher, at Rs. 6.65 lakhs, as compared with Rs. 5.20 lakhs for 1954, thus maintaining the upward trend noted in the previous four years. The improvement in net profit is due to a cut in the provision for depreciation from Rs. 30.05 lakhs to Rs. 24.22 lakhs. The Directors have created an investment depreciation reserve by setting aside Rs. 1 lakh from the year's profit to safeguard its investments in subsidiaries and have maintained the dividend at 5 per cent., to which level it had been raised in 1952 from 4 per cent.

The following comparative table provides an idea of the Company's progress since 1952:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Freight earnings	233.71	256.64	214.07	205.95
Charter hire and other income.	0.76	6.18	8.00	7.11
Expenses	202.53	225.55	180.26	158.86
Gross profit	31.95	37.28	42.71	53.99
Managing Agents' remuneration	1.07	2.03	3.09	4.40
Depreciation	24.22	30.05	34.51	45.17
Net profit	6.65	5.20	5.11	4.42
To reserves	1.00	..	..	..
,, dividend	5.00 (5%)	5.00 (5%)	5.00 (5%)	5.00 (5%)
Carry forward	1.55	0.90	0.69	0.59

It will be noted from the above table that the setback in freight earnings is accompanied by a sizable fall in charter hire and other income. The decline in freight earnings and charter hire is attributable to the fact that no chartered tonnage was permitted on the coast during the year under review, as also to the sale of one of the Company's ships at the beginning of the year, both of which reduced the volume of tonnage employed in the trade with corresponding reduction in freight receipts. Further, the considerable fall in the Burma-India trade, following the cessation of rice import from Burma, also affected the Company's earnings. Besides, great delays at loading and discharging at ports, as well as high maintenance costs continued unabated during the year under review also, thereby affecting the operations and earnings. It must also be noted here that the year under review witnessed a slight advance in freight rates.

Of the expenses, salaries and wages show an increase from Rs. 26.09 lakhs to Rs. 29.23 lakhs, establishment charges from Rs. 3.56 lakhs to Rs. 4.07 lakhs and repairs, survey expenses and drydock charges from Rs. 18 31 lakhs to Rs. 23.86 lakhs, while coal, fuel oil, stores and victualling charges have declined from Rs. 61.17 lakhs to Rs. 57.91 lakhs, marine dues. light dues and customs charges from Rs. 19.78 lakhs to Rs. 16.94 lakhs and stevedoring charges, despatch money, etc., from Rs. 42.85 lakhs to Rs. 40.06 lakhs.

The Company maintained during the year under review a cargo service in the Persian Gulf —India—Burma trade with the three cargo ships acquired in the previous year, in addition to occasional voyages by some of the other units of the Company's fleet. The Directors report that the Company's service continued to receive fair support from shippers. It has not been possible so far to acquire a passenger-*cum*-cargo ship required for the passenger service in this trade.

The Company's paid-up capital is unchanged at Rs. 1 crore. There are no reserves, except a fleet replacement reserve amounting to Rs. 15.38 lakhs. Even this reserve shows a decline of Rs. 1.30 lakhs over the year, being the loss on sale of a ship written off from this account and income-tax paid. The current liabilities and provision for taxation aggregate Rs. 219.38 lakhs, of which loans taken from the Government of India secured by mortgage of seven ships of the Company account for Rs. 136.73 lakhs and borrowings from other sources for Rs. 25.72 lakhs. The gross block stands at Rs. 441.66 lakhs, after deducting the cost of one ship (Rs. 24.10 lakhs) sold during the year; as against this, there is a depreciation reserve of Rs. 185.09 lakhs, after making adjustment for the ship sold during the year. The current assets (excluding deferred revenue expenditure amounting to Rs. 8.98 lakhs) aggregate Rs. 70.76 lakhs.

Since the close of the year. the Labour Appellate Tribunal has decided in favour of piece-rate system of wage payment to dock labour. The Directors hope that, with this welcome change, the sad experience of the "go-slow" days will become a thing of the past and that labour will play its full part in future to the common advantage of both labour and the shipping industry. The Directors also hope that the trend towards improvement in freight rates, which appeared during the past year. will be maintained and that freight rates will reach satisfactory levels in the coming years, bringing some much-needed relief to the shipping industry.

NEW CENTRAL JUTE MILLS

The audited accounts of the New Central Jute Mills Co., Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta), for the year ended 31st December 1955 cover the first year's combined working results of three jute mills under the same management, the amalgamation of which into a single unit was the outstanding event in the history of the jute mill industry during the past year. Under the scheme of amalgamation, the Albion Jute Mills Company, Ltd., and the Lothian Jute Mills Company, Ltd., were merged with the new Central Jute Mills Company, Ltd., with effect from 1st December 1954, so that the working results of the combined unit include those of the Albion and Lothian Mills for a period of 13 months from 1st December 1954.

It may be recalled that all the above three mills were once under the management of Messrs. Andrew Yule & Co., Ltd., from whom the management of the Albion Jute and the New Central Jute was taken over early in 1950. At the same time, there was a change in the Board of Directors of the Lothian Jute, though the management was in the hands of Messrs. Andrew Yule & Co., Ltd., till last year. However, the Lothian Jute Mills remained leased to the Albion Jute Mills from February 1951 till the end of November 1954. For all practical purposes, the management of three mills was in the hands of Messrs. Sahu Jain Ltd. from the year 1950 itself.

The working of the amalgamated company during the year under review has resulted in a gross profit of Rs. 55.46 lakhs, as compared with the cumulative profit of Rs. 42.19 lakhs of the three units for the preceding year. The Managing Agents' commission takes up Rs. 6.42 lakhs and depreciation Rs. 2.50 lakhs. A sum of Rs. 2.90 lakhs has been paid out of the profit as compensation to the ex-Managing Agents of the Companies. After setting aside Rs. 13 lakhs as provision for taxation, the Directors have transferred Rs. 11.18 lakhs to the general reserve and have declared a dividend of As. 12 per share, or 7½ per cent. per annum, on the ordinary shares of the amalgamated company, absorbing Rs. 6.41 lakhs. A sum of Rs. 8.71 lakhs is left to be carried forward to the current year.

The following synopsis of the Company's latest balance-sheet gives an idea of its financial position as a result of the amalgamation:

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	1,18,50,000	Gross block	4,29,15,627
Reserves and surplus	2,80,15,635	*Less*—Depreciation ...	96,26,548
Provision for taxation ...	7,86,842	Net block ...	3,32,89,079
Liabilities	1,09,13,196	Stock ...	1,02,79,149
		Stores and spares ...	17,29,101
		Debts, deposits and advances ...	17,82,920
		Investments	34,12,034
		Cash ...	10,73,390
Rs.	5,15,65,673	Rs.	5,15,65,673

Of the above capital, 540,000 ordinary shares of Rs. 10 each and 19,000 7 per cent. cumulative preference shares of Rs. 100 each represent the capital issued to the shareholders of the Albion and Lothian Jute Mills in pursuance of the scheme of amalgamation. Of the reserves, a sum of Rs. 188.31 lakhs represents the surplus on revaluation of the block assets of the three amalgamating units. There has been an addition of as much as Rs. 93.87 lakhs to the gross block during the year under review.

Since the close of the year under review, the installation of the new sliver spinning machinery has been completed in all the three mills. Electrification is in progress, and is expected to be completed in the New Central Mills by the end of the year and in the Albion and Lothian Mills early next year. The modernisation and electrification of the three mills that has been undertaken with the Company's own resources will cost about Rs. 1 crore. The Company has placed an order for wide loom plant for the manufacture of carpet backing cloth which is said to be in increasing demand in the U.S. and is more remunerative. This plant, consisting of 79 looms with accessory machinery, is fully automatic and is claimed to be the biggest of its type in the world. Its installation is expected to be completed by the end of the year. The Company has also placed an order for circular looms which are being installed for the first time in India. The modernisation and electrification of the mills and the new lines of manufacture that are being undertaken will further strengthen the Company's position. The Directors visualise a good future for the Company.

A commendable feature of the Company's latest report is the inclusion of a chart showing the net profit per loom of the New Central Jute Mills Company, Ltd., as compared with that of the jute industry as a whole for the decade 1946-55. The chart shows that, though the trend of the Company's profit per loom remained the same as that of the industry as a whole, the Company's level of profit was markedly higher than the general average from 1950 onwards, that is, ever since the Company came under the present management. In the years 1946 and 1947, it is observed, the Company's profit per loom was about Rs. 400, as against Rs. 580 for the industry. From 1948 to 1950 the fortunes of the New Central fluctuated in line with those of the industry, though in 1949 when the industry experienced adverse circumstances, the loss suffered by the New Central was below the general average. But in 1951, the Company's profit per loom shot up to Rs. 3,000, while that of the industry stood at no more than Rs. 720. The corresponding figures for the subsequent three years are: 1952—Rs. 920 and Rs. 80; 1953—Rs. 1,000 and Rs. 320 and 1954—Rs. 1,040 and Rs 520, respectively. For 1955, the profit of the New Central was Rs. 1,600 while that of the industry as a whole is not available. This comparison shows that both the workers and the management of the Company worked efficiently and diligently and that they can be justly proud of their achievements. It may be noted here that this is one of the few jute companies to pay a dividend, while many others, including some well-known companies, have had to withhold the distribution to shareholders for want of profit.

INDORE MALWA UNITED MILLS

In consonance with the general trend of textile mill profits for the year ended 31st December 1955, the working results of the Indore Malwa United Mills Ltd. (Chairman, Board of Directors: Mr. K. L. Seksaria, Indore) also have been encouraging. The gross profit of the Company, which had shrunk from Rs. 16.82 lakhs in 1953 to Rs. 6.78 lakhs in 1954, has jumped up to Rs. 27.93 lakhs in the year under review. Thus, the recession in profit suffered in 1954 has been more than made good in 1955; further, the profit for the latest year is the highest earned by the Company since 1945. After making provisions for Managing Agents' commission, depreciation and taxation, the net profit amounts to Rs. 7.53 lakhs, as compared with Rs. 2.94 lakhs for 1954.

The provision for depreciation has been raised from Rs. 3.16 lakhs to Rs. 9.78 lakhs, but this includes accrued depreciation for 1954 also which was not provided for in the previous year's profit. Consequent on the wiping out of the arrears of depreciation, the Directors have had to set aside Rs. 8 lakhs for taxation which had not been provided for in the previous eight years. A sum of Rs. 3 lakhs has been added to the dividend equalisation fund, as against nil in the previous year. The dividend, which had been kept unchanged at 6 per cent. for the previous three years, has been stepped up to 9 per cent., the highest to be paid after the capitalisation of a sum of Rs. 30 lakhs in September 1948.

The following comparative table provides a broad idea of the Company's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net)	263.20	261.96	253.58	262.58
Cotton, stores, etc., consumed..	134.41	158.93	137.67	160.59
Other expenses	102.05	96.68	99.50	91.50
Gross profit	27.93	6.78	16.82	11.20

Commenting on the favourable trading conditions which were responsible for the excellent results of the Company, the Directors observe:

"During the year under report, the mills' output of cloth in the country registered a further improvement. This impressive performance of the industry was mainly due to high level offtake in cloth especially in the domestic consumption which induced the mills to make all efforts to maximise output. The cotton position throughout the year was satisfactory. The mills were able to get sufficient quantity of cotton at lower rates. The labour situation was also satisfactory. As a result thereof, your mill has shown better results, as above."

It will be noted from the above table that, while the cost of cotton, stores, etc., consumed shows a welcome decline of Rs. 24.52 lakhs during the year under review, other expenses have recorded a rise of Rs. 5.37 lakhs. These expenses include a sum of Rs. 5.75 lakhs representing the bonus to workers for the three years 1953, 1954 and 1955. During the year under review, the Company entered into a five year bonus agreement with the Indore Mill Mazdoor Sang for the years 1953 to 1957 on the lines of the agreement entered into by the Ahmedabad Millowners' Association with the Textile Labour Association there. As a result of this agreement, the Company had to pay bonus at 4.8 per cent. of the basic wages earned during 1953 and 1954 which amounted to Rs. 2.75 lakhs. A sum of Rs. 3 lakhs has been provided in the accounts for this purpose in respect of 1955.

The Company's reserves and surplus as at the end of the year under review aggregate Rs. 6.26 lakhs, as against a paid-up capital of Rs. 50 lakhs. The provision for taxation amounts to Rs. 24.37 lakhs and current liabilities to Rs. 69.17 lakhs. The gross block of the value of Rs. 133.92 lakhs, which includes an addition of Rs. 5.21 lakhs during the year, has been written down to a book value of Rs. 21.63 lakhs. The current assets amount to Rs. 128.17 lakhs and more than adequately cover the current liabilities and provision for taxation.

A commendable step taken by the Directors of the Company in fostering good relationship with labour is the decision to associate labour with the Company's management in accordance with the Government's policy of associating labour with the management of industries in general. The Directors propose to take a representative of labour on the Board of Directors of the Company.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 145-10 *cum-div.* (final dividend: Rs. 6). On an *ex-div.* basis, the dividend for the year under review gives a yield of 6.4 per cent. per annum, free of income-tax.

Points From The Chair

Restriction on Mill Cloth Output

"IN the economic sphere the year 1955 was one of the best years. There was an all-round increase in industrial production, especially in the production of mill-made cloth, which, in spite of labour troubles in Kanpur, touched the new record of 5,094 million yards, as against 5,025 million yards in 1954. Thus, the target for the textile industry set under the first Five-year Plan has been exceeded in two consecutive years. High level of offtake of cloth, easy supply position of cotton and improved transport facilities for movement of raw materials and finished products have largely contributed to this achievement. However, despite the splendid performance of the textile industry, the Government unfortunately decided to put a ceiling on the production of cloth by textile mills at 5,000 million yards. While the Government estimates the *per capita* consumption of cloth at 22 yards by 1960-61, it has decided that the additional requirements of cloth should be met from the handloom weavers. It is certainly incomprehensible that at a time when the country's most imperative need is increased production all round, Government should deliberately decide not to utilise the capacity of the industry to make its effective contribution towards meeting the increased demand for cloth. In my humble opinion, the imposition of ceiling on the production of cloth by textile mills is meaningless, as the handloom industry will not be able to cope with the demand and there will be dearth of cloth in the country, which will not only accelerate the inflationary spiral but will also adversely affect our exports too."

KUDILAL GOVINDRAM SEKSARIA,
Indore Malwa United Mills Ltd.

Inflationary Effects of Deficit Financing

"In the context of larger doses of deficit financing, fears are expressed about inflationary trends showing themselves. But the price trends, as they are, do not lend any strength to such fears. Any increase in prices that has taken place is mostly in food articles and industrial raw materials of agricultural origin. In the former category, there has been a rise in the prices of both cereals and pulses. The rise in prices is to an extent attributable to the increase in taxes, especially sales tax. Further, prices are high in the off-season and the level is brought down with the arrival of new crops. It is also necessary to remember that prices had been hammered down last year on account of the accumulation of stocks of foodgrains with the Government and the phenomenal increase in agricultural production in the country in 1953-54. Support schemes had to be introduced and prices had to recover to more economic levels. A part of the rise in prices must, therefore, be regarded as corrective. It is thus important that the meaning of the rise in prices should be clearly understood and there should be no efforts at restriction of consumption. On the contrary, the level of consumption should go up in the country as that alone will encourage production and help build up a healthy economy and better life for the people."

S. P. JAIN,
Punjab National Bank Ltd.

Scarcity of Managerial Talent

"The scarcity of managerial talent is already felt with the rapid growth of the so-called public sector. We will succeed or fail with the build-up or lack thereof of the organisational capabilities of State ventures. The supreme and exacting task of management is a task which cannot be learned from text-books or over a brief period of apprenticeship. While we proceed to do the learning, there is a grave danger of an oligarchic stranglehold by the army of bureaucrats. Perhaps, it is not widely recognised that nationalisation, public ownership, *sarvodaya* are not the passports which purchase immunity from the inexorable laws of industrial economics. One may honestly hold the view that classic theories of supply and demand do not apply to an underdeveloped economy. One may hold the view that private enterprise in India has been guilty of sins of omission and commission which it cannot be forgiven. One may also come to believe that profit motive is at the root of all evil. And yet, one should not ignore the vast lack in experience and in management knowledge which is required to run an industrial undertaking or a chain of co-operative marketing societies, or perhaps even the village industrial *panchayats* on whom such high hopes are set."

K. C. MAHINDRA,
Indian Aluminium Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 7th May 1956. Dividend: Rs. 11 per share (includes bonus of Re. 1 per share). Transfer books remain closed from 16th April to 9th May 1956, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting, Bombay, 7th May 1956. Dividend: Rs. 12 per share.

SOORAH JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 9th May 1956. Dividend: Re. 1-8 per share. Transfer books remain closed from 30th April to 9th May 1956, both days inclusive.

NEW CENTRAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 14th May 1956. Dividend: As. 12 per share. Transfer books remain closed from 5th to 14th May 1956, both days inclusive.

SITALPORE SUGAR WORKS LTD. Annual General Meeting, Calcutta, 14th May, 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 14th May 1956, both days inclusive.

MAHINDRA AND MAHINDRA LTD. Annual General Meeting, Bombay, 14th May 1956. Dividend: Re. 1 per share. Transfer books remain closed from 30th April to 14th May 1956, both days inclusive.

RADIO AND ELECTRICALS LTD. Annual General Meeting, Madras, 19th May 1956. Dividend: As. 5 2/5 per share (9 per cent.). Transfer books remain closed from 5th to 19th May 1956, both days inclusive.

BHARAT LINE LTD. Annual General Meeting, Bhavnagar, 21st May, 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 24th April to 23rd May 1956, both days inclusive.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 22nd May 1956. Dividend: Rs. 2 per share (final). Transfer books will remain closed from 14th to 22nd May 1956, both days inclusive.

TRAVANCORE OGALE GLASS MANUFACTURING CO., LTD. Annual General Meeting, Manjummel, Alwaye, 31st May 1956. Dividend: *Nil*. Transfer books will remain closed from 21st to 31st May 1956, both days inclusive.

SURAT ELECTRICITY CO., LTD. Final dividend of Rs. 4-8 per ordinary share, for the half-year ended 31st December 1955 (making Rs. 7 per share, for the year). Transfer books will remain closed from 28th May to 11th June 1956, both days inclusive.

EASTERN INVESTMENTS LTD. Dividend of 9 per cent. per annum, on ordinary shares, for the year ended 31st December 1955.

PARKSIDE (NEILGHERRY HILLS) ESTATE CO., LTD. Interim dividend of As. 8 per share (5 per cent.), for the year ending 30th June 1956. Transfer books remain closed from 7th to 21st May 1956, both days inclusive.

NONSUCH TEA ESTATES LTD. Interim dividend of Re. 1 per share, for the year ending 30th June 1956. Transfer books will remain closed from 10th to 16th May 1956, both days inclusive.

KILLICK INDUSTRIES LTD. *Ad-interim* dividend of Rs. 4 per share, free of income-tax for the year ending 30th June 1956 payable on and after 30th May 1956. Transfer books will remain closed from 14th to 28th May 1956, both days inclusive.

TRAVANCORE RUBBERS LTD. Dividend of Rs. 3 per share, for the year ended 31st December 1955. Transfer books remain closed from 1st to 7th May 1956, both days inclusive.

COMPANY REGISTRATIONS

MURLIMAL SHRI KRISHNADAS AND (INDIA) LTD. (First Director: Mr. N. R. Aggarwal.) Business: Importers, exporters, manufacturers and dealers in iron, steel, hardware, etc. Authorised capital: Rs. 10,00,000. Private company. Address: 19, Maharshi Debendra Road, Calcutta-7.

CICIKO OFFICES MACHINES PRIVATE LTD. (First Director: Mr. P. N. Chatterjee.) Business: Traders and manufacturers of all kinds of office machines, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 300, Bowbazar Street, Calcutta.

SHIPPERS LTD. (First Director: Mr. L. P. Bagaria.) Business: Boat contractors, lighter contractors, etc. Authorised capital: Rs. 5,00,000. Public company. Address: P21/22, Radhabazar Street, Calcutta-1.

Notices

INDIAN WOOD PRODUCTS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-sixth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, Clive Buildings, Netaji Subhas Road, Calcutta 1, on Tuesday the 22nd May 1956, at 12-35 p.m., for the following purposes:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th September 1955.
2. To declare a Dividend.
3. To elect a Director in place of one retiring by rotation under Article 126 of the Articles of Association of the Company.
4. To pass a Special Resolution for the re-election of Mr. S. M. Petrie, who is a Director of the Managing Agents of the Company and who retires by rotation and is otherwise eligible for re-election. (Please see Statement annexed to this Notice.)
5. To appoint Auditors and fix their remuneration.
6. To transact any other ordinary business of the Company.

Notice is also hereby given that the Register of Members of the Company will be closed from the 14th May 1956 to the 22nd May 1956, both days inclusive. Dividend Warrants will be sent only to Registered Shareholders or their Mandataries.

By Order of the Board,
For GILLANDERS ARBUTHNOT & Co., LTD.,
P. E. G. W. PARISH,
Managing Director,
Managing Agents.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 20*th April* 1956.

N.B.—A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

Statement for the Special Resolution to be passed at the Annual General Meeting of the Shareholders of the Company for re-election of Mr. S. M. Petrie as a Director of the Company:—

In pursuance of Section 190 of the Companies Act 1956, the Company has been given a Special Notice by its Managing Agents of their intention to move the following Resolution as a Special Resolution:—

"RESOLVED that Mr. S. M. Petrie, who is an Official of Gillanders Arbuthnot & Co., Ltd., the Managing Agents of the Company, be and is hereby re-elected a Director of the Company."

This Resolution is self-explanatory.

In accordance with Section 261(1) (*f*) of the Companies Act 1956 since Mr. S. M. Petrie is an Official of the Managing Agents, it will be necessary for the Shareholders to pass a Special Resolution if they decide to re-elect Mr. S. M. Petrie as a Director.

For GILLANDERS ARBUTHNOT & Co., LTD.,
P. E. G. W. PARISH,
Managing Director,
Managing Agents.

NETAJI SUBHAS ROAD,
CALCUTTA, 20*th April* 1956.

THE SENDRA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on the 26th April 1956, a Dividend of 2½ per cent. per annum was recommended to be paid for the half-year ended 31st December 1955, without any deduction for income-tax paid by the Company.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Managing Agents
CHARTERED BANK BUILDINGS,
CALCUTTA.

SOORAH JUTE STEPS UP DIVIDEND

PROFITS OF SAVAMALAI LOWER

Soorah Jute Mills Co., Ltd.

THE directors of the above Company (Managing Agents: Hindusthan Investment Corporation Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit of Rs. 12,20,857 (Rs. 11,62,696), including the balance of Rs. 1,66,758 (Rs. 2,54,934) brought forward from the previous year. After providing Rs. 7,56,791 (Rs. 7,05,933) for depreciation, Rs. 1,36,000 (*nil*) for taxation for the year and transferring a sum of Rs. 45,000 (*nil*) to the investment reserve account, there remains an available balance of Rs. 2,83,156 (Rs. 3,76,758 after placing Rs. 80,000 to contingency reserve) which the directors recommend, should be dealt with in the following manner:

In paying a dividend on 10,000 cumulative preference shares at 7 per cent. per annum free of income-tax for the year Rs. 70,000 (Rs. 70,000), in paying a dividend on 1,40,000 ordinary shares at Re. 1-8 (Re. 1) per share [15 (10) per cent. per annum] free of income-tax for the year Rs. 2,10,000 (Rs. 1,40,000) and in carrying forward the balance of Rs. 3,156 (Rs. 1,66,758),

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 351 looms—48 hours a week—out of the total complement of 401 looms, i.e., with 12½ per cent. of the looms sealed, throughout the year under review. The total number of working hours to be recovered as on 31st December 1955 under the working time agreement is 586. 2½ per cent. of the looms were allowed to be unsealed by the Indian Jute Mills Association on 9th January 1956 and another 5 per cent. were allowed to be unsealed on the 20th February 1956, and there now remains only a balance of 5 per cent. of the looms still out of commission.

A reference was made in the last report to the completion of the modernisation programme of the mill upto spinning. The full benefit of such modernisation has been felt during the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,00,000	Block ...	27,32,500
Debentures	8,00,000	Stock-in-trade	13,01,267
Reserves ...	11,25,000	Spare parts, etc. ...	4,02,783
Provision for taxation ...	1,64,993	Debts, deposits and advances ...	6,15,423
Liabilities ...	10,00,677	Investments	3,85,193
Profit and loss account ...	3,156	Cash ...	56,660
Rs.	54,93,826	Rs.	54,93,826

Savamalai Estates Ltd.

The directors of the above Company (Agents and Secretaries: Messrs. Peirce, Leslie & Co., Ltd., Kozhikode) submit the audited accounts of the Company for the year ended 30th November 1955.

After providing for depreciation and all charges except taxation the accounts show a profit of Rs. 1,03,366 (Rs. 1,21,637) to which is added the balance brought forward from last year of Rs. 89,904 (Rs. 1,01,620) making a total of Rs. 1,93,270 (Rs. 2,23,257). After transferring to taxation reserve Rs. 35,250 (Rs. 41,658) and to general reserve Rs. 50,000 (*nil*) there is a balance of Rs. 1,08,020 (Rs. 1,81,599).

The directors recommend payment of a dividend of 10 (25) per cent. absorbing Rs. 36,678 (Rs. 91,695) leaving a balance to be carried forward to next year of Rs. 71,342 (Rs. 89,904).

Reserves:—General—After transferring Rs. 50,000 from the profit and loss account this reserve now stands at Rs. 2,50,000 (Rs. 2,00,000). *Taxation*—In this reserve of Rs. 77,046 (Rs. 41,796) a sum of Rs. 73,070 (Rs. 38,875) has been included to cover the Madras Agricultural Income-tax liability for seasons 1953-54 and 1954-55.

Machinery—Expenditure during the year amounting to Rs. 11,927 represents cost of the new pulping machinery installed on the Estate. *Development*—The expenditure of Rs. 46,392 (Rs. 33,286) represents the amount spent on the upkeep of immature areas and cost of opening and planting the 1955 arabica new clearing of 23.30 acres.

Coffee—The crop of Cwts. 2,860-0-11 (2,203-1-12) was delivered to the Coffee Board and has been valued at Rs. 2-4 (Rs. 2-11) per point for which payment has been received. This works out at approximately Rs. 132-8 (Rs. 139-12) per cwt. for robusta and Rs. 180 (Rs. 204-4) per cwt. for arabica. The 1955-56 crop is estimated at 2,350 cwts. and the present indications are that this will be harvested.

Estate—The reports from the Company's visiting agent, Mr. G. S. Homewood, indicate that the Estate is in good order and that the new clearings are developing well.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,66,780	Block ...	6,08,242
Reserves ...	3,00,000	Stock-in-trade	90,499
Provision for taxation ...	69,385	Stores, tools, etc. ...	41,189
Liabilities ...	32,783	Advances ...	24,000
Profit and loss account ...	1,08,020	Investments	30,339
		Cash ...	82,699
Rs.	8,76,968	Rs.	8,76,968

Kanknarrah Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December 1955.

After taking credit for Rs. 2,50,000 (Rs. 75,000) being commission waived by the managing agents, the loss for the half-year, before providing for depreciation, amounted to Rs. 3,43,116 (profit of Rs. 6,49,894) from which has to be deducted the balance of profit brought forward from the previous half-year, viz., Rs. 19,297 (Rs. 68,418) leaving a net balance of loss of Rs. 3,23,820 (profit of Rs. 7,18,312). The directors have transferred from general reserve account Rs. 5,18,425 (*nil*) and provision for taxation Rs. 35,000 (*nil*) which results in a credit balance of Rs. 2,29,605 (Rs. 3,08,312 after providing Rs. 1,50,000 for depreciation and Rs. 2,60,000 for taxation). From this amount has to be deducted depreciation of Rs. 50,000 and provision for sales-tax contingencies Rs. 67,490 (*nil*) leaving an available balance of Rs. 1,12,115 (Rs. 3,08,312). The directors recommend payment of the half-year's dividend on the preference shares at Rs. 3 (Rs. 3) per share, absorbing Rs. 30,000 (Rs. 30,000) leaving a balance at credit of Rs. 82,115 (Rs. 62,312 after paying dividend on 'A' and 'B' ordinary shares at Rs. 4 per share absorbing Rs. 2,16,000) to be carried forward to the next account.

Jute stocks have been valued at average cost and stocks of sold goods at contract rates. Goods unsold on 31st December 1955 have been valued at market rates.

The difficulties referred to in the last previous report of the directors of profitably disposing of the Company's production simultaneously with the purchase of raw jute have persisted throughout the half-year. From mid-October last year until early March this year, prices of the raw material, with only minor fluctuations, have risen steadily and at no time during this period did any increase in the prices of finished goods keep pace with the rise in jute prices, thereby further increasing the difficulties of disposing of the Company's production at a profit. The steady rise in the price of raw jute had been due in some measure to the apprehension that, while supplies generally will be adequate to meet present demands, any recurrence of transport dislocation as a result of flooding during the early part of the coming season might result in there being insufficient raw material from the present crop to meet total requirements at the increased rate of production until the weight of the new crop reaches the market.

Heavy flooding in Assam and East Pakistan with consequent breaches in the Assam Link Railway, also briefly mentioned in the last report, accentuated the difficulties of maintaining jute stocks in the Mills which at one time during the half-year under review fell to dangerously low levels, preventing economical use being made of whatever raw material was left available. Further heavy flooding occurred later in Orissa and it is estimated that overall damage to this season's crop to the extent of 5 per cent. to 10 per cent. of the total outturn has occurred; it is now certain that neither in outturn nor in quality will the crop approximate to the prospects which had earlier been held out in regard to it.

An Industrial Tribunal set up by the West Bengal Government under the Industrial Disputes Act to adjudicate on matters concerning the basic wages and dearness allowance of all workmen in the Jute Textile Industry in West Bengal has issued its Award, effective from 6th November 1955 under the terms of which the emoluments of the majority of the Company's employees were increased by Rs. 3-12-9 per month. In terms of cost of production, this last increase represents an additional burden of approximately Rs. 14 per ton.

As the result of a recent judgment by the Supreme Court, it has been considered necessary to provide for Bengal Sales Tax on sales to the Department of Industries and Supplies, Government of India, during the period from 1st June 1946 to 31st March 1949 where the relative contracts have not specified that the Government of India will meet the demand for Bengal Sales Tax if this becomes leviable.

With regard to the scheme of modernisation of the Company's 'A' Mill, referred to in the last previous report, the Mill building has now been cleared of all old machinery, a considerable quantity of new machinery has already arrived at site and rapid progress is being made with its erection. Further considerable quantities of new machinery are afloat and it is confidently anticipated that shipment of all machinery under the scheme will be completed by the end of June 1956.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	64,00,000	Block ...	32,39,876

Liabilities ...	40.25,382	Stores ...	15,54,096
Profit and loss account ...	82,115	Other assets	2,250
		Debts, deposits and advances ...	6,81,141
		Investments	1,71,115
		Cash ...	3,37,658
Rs.	1,16,61,053	Rs.	1,16,61,053

Kamarhatty Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st December 1955.

After taking credit for Rs. 3,00,000 (Rs. 75,000) being commission waived by the managing agents, the loss for the half-year, before providing for depreciation, amounted to Rs. 2,00,588 (profit of Rs. 9,70,702) from which has to be deducted the balance of profit brought forward from the previous half-year, viz., Rs. 24,686 (Rs. 32,488) leaving a net balance of loss of Rs. 1,75,902 (credit of Rs. 12,03,189). The directors have transferred from general reserve account Rs. 4,07,975 (*nil*) and provision for taxation Rs. 55,000 (*nil*) which results in a credit balance of Rs. 2,87,073 (Rs. 12,03,189) from this amount has to be deducted depreciation of Rs. 50,000 (Rs. 2,00,000) and provision for sales tax contingencies Rs. 1,02,449 (Rs. 4,05,000) leaving an available balance of Rs. 1,34,624 (Rs. 3,48,189). Out of this the directors recommend payment of the half-year's dividend on the preference shares at Rs. 3 per share without any deduction for income-tax paid by the Company, absorbing Rs. 48,000 (Rs. 48,000) leaving a balance at credit of Rs. 86,624 (Rs. 84,189 after paying dividend at Rs. 5 per ordinary and 'B' ordinary shares absorbing Rs. 2,16,000) to be carried forward to the next account.

Jute stocks have been valued at average cost and stocks of sold goods at contract rates. Goods unsold on 31st December 1955, have been valued at market rates.

With regard to the modernisation scheme for the Company's 'B' Mill, referred to in previous reports, good progress has been made with the clearance of the old machinery from the Mill buildings which will ensure there will be no delay in the erection of the new machinery as and when it arrives. No shipments have yet been made by the manufacturers, but it is confidently expected that shipment will be completed by 30th June next.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	59,20,000	Block ...	13,47,800
Debentures ...	11,84,000	Capital expenditure in progress ...	25,07,945
Reserves ...	16,68,360	Stocks ...	50,70,039
Provision for taxation ...	1,84,955	Stores ...	24,70,318
Liabilities ...	40,26,605	Debts, deposits and advances ...	11.89,163
Profit and loss account ...	86,624	Investments	1,94,383
		Cash ...	2,90,896
Rs.	1,30,70,544	Rs.	1,30,70,544

Travancore Ogale Glass Mfg. Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Ogale Brothers Private Ltd., Ogalewadi) submit the audited accounts of the Company for the year ended 31st December 1955.

The directors recommend setting off the debit balance in the profit and loss account against the general reserve of Rs 1,10,000 and the dividend equalisation reserve of Rs. 40,000. The loss for the year amounts to Rs. 24,042 (Rs. 99,505) which together the debit balance brought forward makes a total debit of Rs. 2,30,092 (Rs. 2,06,050).

The glassware sales, including sales of bottles produced on the Monish automatic bottle-making machine, were Rs. 7,69,965 (Rs. 6,01,264) a record for the factory. With no relief in direct expenses, and falling prices of finished articles, the working for the year has, however, ended in a loss.

Arrangements are being made to increase current production. One of the automatic bottle-making machines has gone into regular production and the second is expected to be commissioned shortly and with the two machines going into full production, the prospects appear to be bright for the future.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	9,98,380	Block ...	11,14,709
Liabilities ...	4,07,012	Stock-in-trade ...	16,000
		Stock of raw materials ...	14,998
		Stores and spare parts	46,913
		Debts and advances ...	99,187
		Cash ...	33,493
		Miscellaneous expenditure and losses* ...	80,092
Rs.	14,05,392	Rs.	14,05,392

* The total loss including the previous loss of Rs. 2,06,050 brought forward, amounted to Rs. 2,30,092. Out of this Rs. 1,50,000 has been adjusted, by transferring Rs. 1,10,000 from general reserve and Rs. 40,000 from dividend equalisation reserve, leaving a debit of Rs. 80,092.

QUESTION HOUR IN PARLIAMENT

Cement Supply Control

THE Government has now decided to take over a large measure of control over distribution, because we have to tide over a period of two years, certainly, and, perhaps even more, when stricter control over movement will have to be maintained and, perhaps, some imports will have to be made. Anyway, a decision has been made. The State Trading Organisation that we are setting up will take over control of distribution in the same way as is being done in the case of iron and steel. Imports will be canalised through this Organisation and distribution will be arranged in such a manner that it will be reasonably efficient, but, at the same time, we will have a fair amount of control over it without spending much money on it. With regard to complaints that cement is too dear, so long as I am not able to produce cement which is coterminus with the demand or in excess of the demand, I am afraid the price mechanism is one of the things by which we inhibit the demand and we are not prepared to drop it merely because of sentimental considerations.

* * * *

Assistance to Rubber Growers

No amount was paid as financial assistance to rubber growers during 1955-56.

* * * *

Printing Machinery

Two firms are at present manufacturing blatant and flat-bed machines for printing. Another firm has also been licensed under the Industries (Development and Regulation) Act, 1951, for such machines, as well as for rotary presses. In addition, the National Industrial Development Corporation has under consideration a project for the manufacture of printing machinery.

—*T. T. Krishnamachari*

Soap Production

The soap production of foreign-managed concerns during the years 1953, 1954 and 1955 was 50,561 tons, 50,381 tons and 57,810 tons, respectively. Information relating to individual units is not generally given. Production in the organised sector during the same years was 32,786 tons, 38,100 tons and 42,530 tons. The production of unorganised units in 1955 is estimated at 120,000 tons. The nature of equipment used in the soap industry is such that the term "installed capacity" has no precise connotation in relation to the industry, but, for statistical purposes, the installed capacity of the organised sector is assessed at 245,000 tons, which is the aggregate of the figures given by each unit of the capacity it possesses. The installed capacity of the organised Indian sector is estimated at 168,000 tons. The installed capacity of the unorganised Indian sector has not been estimated and so it is difficult to state the total idle capacity in the Indian sector. The installed capacity of the foreign-managed sector is estimated at 77,828 tons and the idle capacity of the foreign-managed sector is 20,018 tons.

* * * *

Prices of Sulphuric Acid

The selling price of sulphuric acid in India is about Rs. 30 per ton more than that in the U.K. The Development Council (Acids and Fertilisers) has gone into the question and recommended that, to produce sulphuric acid at economic prices, only large-sized plants should be allowed to be set up. This is kept in view when licensing new units.

—*Nityanand Kanungo*

Integration of Banks

The All-India Rural Credit Survey Committee had recommended that 10 major State-associated banks should be taken over and that the suitability for integration of smaller State-associated banks located in the areas of the former Indian States should be examined by the Reserve Bank and the Government of India. The recommendation is still under consideration and no decisions have been taken so far. There is no proposal to integrate any bank outside those referred to in the recommendation.

—*A. C. Guha*

Invisible Earnings

During 1954-55, India's net invisible earnings from transportation, including shipping, was Rs. 23.4 crores and from insurance Rs. 1.4 crores. The major countries with which India had a favourable balance of payments during the year were Argentina, Australia, Canada, Ceylon, China, Holland, Malaya, New Zealand Pakistan and the U.S.

* * * *

All-India Economic Service

The Government does not propose to form an All-India Economic Service, because the State Governments are not favourable to forming such a service.

—*B. R. Bhagat*

Coal Mining By Private Sector

Instructions were issued on 16th April 1956 to all State Governments that no prospecting licences and mining leases in respect of coal mines should be granted to private parties. The entire programme about coal mining is under way. The target has been fixed for the second Plan at 23 million tons and, of this, 15 million tons will be in the public sector and 8 million tons in the private sector. Steps are being taken to prevent expansion of coal mining in the private sector beyond the 8-million tons target, except under special circumstances. If it is absolutely necessary to let a mine be worked under the private sector, we will allow private parties to exploit it by obtaining licences under exceptional circumstances.

* * * *

Manganese Ore

The total output of manganese ore during the year 1954 was 14,13,068 tons. The production during the year 1955 is estimated at 15,20,316 tons. The figure is provisional, as final returns from all mines have not yet been received.

* * * *

Oil Survey

The report of the team of Canadian experts, who conducted an aero-magnetic survey of oil in Jaisalmar, Rajasthan, is awaited. They have completed the work in Rajasthan and will now take up the survey of the Gangetic belt in Uttar Pradesh and Bihar. The prospecting for oil in the Ganga Valley in U.P. and Bihar is on the programme of the Oil and Natural Gas Directorate in the second Five-year Plan.

* * * *

Kolar Gold Mines

The question of nationalising the Kolar gold mines is still under consideration and the proposals of the Mysore Government are awaited. The question of compensation, etc., is now under negotiation between the Company and the Government of Mysore and members should wait for some time for its outcome. The Mysore Government has an ambitious programme and, after nationalisation, it proposes to run the mines with the same workers. The gross profit from Kolar gold mines was: 1950-51 (15 months), Rs. 174.81 lakhs; 1951 (nine months), Rs. 112.93 lakhs; 1952, Rs. 99.92 lakhs and 1953, Rs. 47.11 lakhs. The Geological Survey of India has undertaken survey of a 50-square mile area containing high gold-bearing schists around the Kolar gold mines. The survey work is still in progress. The completion of field work and mapping in the area will occupy about two to three years more.

* * * *

Training in Oil Technology

It is proposed to arrange training facilities for Indian personnel in oil prospecting and technology both within the country and abroad. As regards training within the country, it is proposed to obtain the services of foreign technicians in certain aspects of oil technology for the training of Indian personnel. It has been aranged that the suppliers of oil drill, which has been purchased from Rumania, will make available the services of their technical personnel to operate the equipment and train local crew for a period of six months in the first instance. This period can be extended, if considered necessary. Similar provision is likely to be incorporated in the contract for the purchase of oil drills from the U.S.S.R. which is being negotiated. Meanwhile, training in oil well drilling has been arranged with the Assam Oil Company and the S.V.O.C. has also agreed to provide certain training facilities. Further measures for training of Indian personnel within the country by introducing courses in the Indian School of Mines—applied geology—are under consideration. Training facilities for 14 persons in the U.S.S.R. in oil well drilling, seismic prospecting and instrument technology have been asked for under the United Nations Technical Assistance Administration Programme. It is proposed to send more trainees abroad in future years.

—*K. D. Malaviya*

Acquisition of Tankers

It has been decided to acquire three tankers for operation in the coastal trade, one in the private sector and two in the public sector. The one in the private sector has already been purchased by an Indian shipping company for Rs. 86 lakhs with the assistance of a Government loan. Steps for the acquisition of the other two tankers at an estimated cost of Rs. 2 crores are being taken by the Eastern Shipping Corporation Ltd., Bombay, in consultation with oil companies.

* * * *

Indo-Soviet Shipping

No separate passenger shipping service is at present contemplated between India and the U.S.S.R.

* * * *

Road Roller Manufacture

In a few States, road construction work has been suffering to some extent due to shortage of road rollers or other equipment. The first diesel road roller manufactured in India is expected to roll off the assembly lines by July next. The Government is also considering permitting the manufacture of steam road rollers in the country.

* * * *

Purchase of Ships from Poland

No agreement has been concluded between India and Poland regarding the purchase of ships.

—*O. V. Alagesan*

Sugar Production

There has been no appreciable increase in the production capacity of the 12 existing sugar factories in the country. Though they were granted licences for expansion in 1955, none of them had been able to complete the expansion, as it took from 12 to 18 months to do so. In the same way, no new sugar factory licensed during 1955 had gone into production, as it took about two years to establish a sugar factory.

* * * *

Co-operative Training

Out of the 17 new schools opened during 1955-56 for co-operative training under the Integrated Training Programme, advanced training was imparted in 12 schools.

—*Dr. Punjabrao Deshmukh*

Colliery Disputes Award

The award of the All-India Industrial Tribunal (Colliery Disputes), Calcutta, was received by the Government on 30th April last. It can readily understand the anxiety of the parties to know the decision. Keeping this in view, the award will be examined and published. It will be enforceable within 30 days of the date of publication. The Government will not take long in examining the award. But, since it runs to 600 pages, it will take some time to be published. There is no likelihood of Government modifying the award. The Tribunal was set up in February 1955 and it incured an expenditure of Rs. 4 lakhs which is not much, considering the number of workers involved.

—*Abid Ali*

Wagons for Coal Despatch

The estimated number of wagons required for the movement of coal by the end of the second Plan period will be of the order of 6,755 per day, as against a daily average supply of 4,045 wagons during 1955. The Government is discussing with the Ministry of Railways, the ways and means to cope with the increased demand. The stocks of coal that could not be moved due to wagon shortage were 3,019,795 tons in 1952, 3,411,194 tons in 1953, 3,501,388 tons in 1954 and 3,605,870 tons in 1955.

—*Satish Chandra*

Agro-economic Research Centres

There are four agro-economic research centres functioning at present in India and are located at the Delhi School of Economics, Delhi University, Delhi; Visva Bharati University, Santiniketan, West Bengal; Gokhale Institute of Politics and Economics, Poona; and Madras University, Madras. More such centres will be set up during the second Plan. Two new agro-economic research centres are proposed to be set up in the second year of the Plan. It has not yet been decided as to where the new research centres will be located.

* * * *

Foodgrains Godowns

The Central Government owns foodgrain godowns in seven centres, with a total effective capacity of 210,000 tons. In 1955, construction of godowns with a total capacity of 40,000 tons was completed at Calcutta, while, at Cochin and Vishakapatnam, construction to the extent of 12,000 tons and 8,000 tons, respectively, was commenced and is now in progress. No godowns were purchased in 1955. For the year 1956, the Central Government has in hand a programme of construction of godowns to the tune of 1,270,000 tons covering 54 centres. Towards this programme, purchase of godowns owned by the State Governments will also be considered, if such godowns are storage-worthy and suitable from operational points of view.

—*A. P. Jain*

Notice

THE BOMBAY BURMAH TRADING CORPORATION LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN IN COMPliance with Section 412 (2) of the Indian Companies Act, 1956, that the Company intends to apply to the Government of India, Finance Department, under Sections 269, 326 and 379 for approval of the following appointments with effect from 1st June 1956:—

(1) Appointment of a Managing Director, at a remuneration to be fixed by the Directors.

(2) Appointment of Messrs. Wallace and Company, of 9, Wallace Street, Fort, Bombay, as Secretaries and Treasurers, at a remuneration of 7½ per cent. of the net annual profits of the Company.

EXPLANATORY NOTE

The Board of Directors have secured the agreement of Messrs. Wallace & Co., subject to the approval of the Central Government, to resign from the position of Secretaries, Treasurers and Managers of the Company and to assume the position of Secretaries and Treasurers at a reduced remuneration as provided in the Companies Act, 1956. In order to secure the continued efficient management of the Company, the Board of Directors propose, in addition, to appoint a full-time or Managing Director to conduct the day-to-day affairs of the Company. A special General Meeting of the Company will be called shortly to consider and if thought fit to pass the necessary resolutions giving effect to the Board's proposals.

By Order of the Board of Directors,

J. F. PARRY,
Chairman.

BOMBAY, 30*th April* 1956.

STRINGENCY IN MONEY PERSISTS

(From Our Own Correspondent)

BOMBAY, 2*nd May*

The short-term money market has shown no sign of any relaxation in the stringency noted in previous weeks. Funds continue to be in short supply, while banks are still keen borrowers; they often have to get their requirements met by borrowing against usance bills. Interest rates remain unchanged.

Inter-bank call money found keen bidders at 3½ per cent., though one or two banks refrained from offering more than 3 per cent. House money at call continued to fetch 3½ per cent. Short-term deposits for one to six months were offered 3½ to 3¾ per cent.

For the second week in succession, notes in circulation have recorded a fall, albeit on a smaller scale, the latest week for which this trend is disclosed being that ended 27th April 1956. Following the drop of Rs. 6.32 crores in the previous week, there has been a fall of Rs. 4.64 crores in the week under review. Notes held in the Banking Department have gone up by Rs. 5.68 crores. The consequent rise of Rs. 1.04 crores in total notes issued is covered by a similar increase in rupee coin. In the Banking Department, there has been a further rise of Rs. 2.74 crores in deposits of the Central Government. Deposits of other Governments also have risen by Rs. 1.48 crores, while those of banks have declined by Rs. 2.49 crores. On the assets side of this department, balances held abroad have shrunk by Rs 8.51 crores. Loans and advances other than to Governments are up by Rs. 5.24 crores, of which advances to Scheduled banks against usance bills account for Rs. 4.69 crores.

The Scheduled banks' statement for the week ended 20th April 1956 shows a further decline of Rs. 2.25 crores in banks' demand deposits, while time deposits have gone up again by Rs. 4.17 crores. Inter-bank borrowings are lower by only Rs. 27 lakhs, while borrowings from the Reserve Bank have gone up by Rs. 1.38 crores. Borrowings from the State Bank of India have declined by Rs. 1.85 crores. A fall of Rs 4.87 crores is noted in advances, thus maintaining the downward trend for the third week in succession. Inland bills purchased and discounted, however, show a rise of Rs. 2.05 crores and foreign bills Rs. 67 lakhs. There has been a fall of only Rs. 78 lakhs in investments. Cash balances are up by Rs. 2.03 crores, while balances with other banks in current account and money at call are lower by Rs. 91 lakhs and Rs. 38 lakhs, respectively.

The Gilt-edged market continued to rule buoyant, with a modest appreciation in values ranging from one to four annas. The scarcity of stocks, enquiries from custodians of insurance companies for 4 per cent. 1967 State loans, and the stepping up of the Reserve Bank's selling rates for a few issues were the main factors which sustained the bullish trend. The Reserve Bank, it may be noted, put up its price for 2½ per cent. 1965 by an anna to Rs. 98-10, 2¾ per cent. 1976 by an anna to Rs. 82-11 and 2½ per cent. 1962 by As. 2 to Rs. 93-15.

In the market, 3 per cent. 1957 had buyers at Rs. 99-13½, while 3 per cent. 1958 was on offer at Rs. 99-11. 3 per cent. 1959-61 was in demand up to Rs. 98-2½. 3 per cent. 1963-65 put on As. 3 to Rs. 95-1 at which level it attracted sellers. 3 per cent. 1964 gathered an anna to Rs. 94-14. 3 per cent. 1966-68 rose sharply by As. 4 to Rs. 93, but there were still buyers at that level. 3 per cent. 1970-73 gained As. 3 to Rs. 89-15. 3 per cent. 1986 Conversion Loan put on As. 2 to Rs. 77-1. 3½ per cent. 1961, 1964 and 1965 each gained an anna to Rs. 99-9, Rs. 98-12 and Rs. 98-10, respectively.

Among State loans, 4 per cent. 1967 Bombay fared well with a rise of As. 4 to Rs. 100-12 and 4 per cent. 1967 Madras also gained As. 4 to Rs. 99-12. 4 per cent. 1967 U.P. rose by As. 3 to Rs. 99-11, Andhra by As. 5 to Rs. 99-5, Bihar and Mysore by anna to Rs. 99-5 and Rs. 99-6, respectively, and Hyderabad by As. 2 to Rs. 99-6.

In the foreign exchange section, the rupee displayed signs of slight weakening in terms of the U.S. dollar. Banks' selling rate for ready dollars rose from Rs. 476¾ to Rs. 477¼ per $100 and their buying rate from Rs. 472¾ to Rs. 473 per $100. This followed a similar trend shown by sterling abroad. In New York, spot sterling shaded off from $2.80.7/8—2.81 to $2.80¾—2.80⅞ and three months' forward from $2.79¼—2.79⅜ to $2.79—2.79½. Transferable sterling was, however, unchanged on balance at $2.78.9/20—2.78.11/20.

METALS REACT

(From Our Own Correspondent)

CALCUTTA, 1*st May*

A sharp reaction in prices was the feature of trading in the metal market during the week under review. This trend was in line with the advices from overseas markets. Electrolytic copper was the worst affected, and the price gave way from Rs. 270 to Rs. 260. This was rather not unexpected, because in recent weeks copper had touched very high prices. Activity was very much restricted, in view of the uncertainty caused by the declining trend. Buying support was available only to meet day-to-day requirements, and such restricted buying became a regular feature of the metal market irrespective of whether prices tend to move down or go higher. Fire-refined I.C.C. copper was quoted at Rs. 245, and the present tightness in supply was not felt in view of the restricted buying by consumers. From Rs. 70-8 electrolytic zinc lost to Rs. 69-8. Supplies were plentiful and more arrivals were reported. Stockists were alarmed at the declining trend and consumers' reluctance to buy only limited quantities. Lead, at Rs. 80-8, was lower by Rs. 3. Activity was meagre. From Rs. 509 tin lost to Rs. 508. The supply position continued to be good, and consumers were in no mood to enter into commitments.

BULLION ERRATIC

(From Our Own Correspondent)

BOMBAY, 2*nd May*

An irregular trend in prices of both silver and gold characterised the trading in the bullion market during the week under review. After an initial setback on heavy unloading influenced by reports of some fresh business having taken place in Tibetan silver coins to the tune of about 200 bars, the market staged a recovery on brisk buying by bulls and bear covering induced by rumours that further licences for import of Tibetan coins would not be given. Sentiment was also buoyed up by encouraging demand for silver and gold in the ready section. Consequently, there was a sizable appreciation in values of both the metals.

The higher levels, however, attracted heavy profit-taking yesterday. The reactionary trend was also assisted by reports that the Board of the Bullion Association, at its meeting today, was likely to decide on commencing immediately business in the next two settlements simultaneously, with a view to avoiding a bull squeeze in the current settlement. Up to the time of writing, the decision of the Board over the question was not available. Towards the close of business today, there was again a mild recovery.

Forward silver (26th May settlement) receded early in the week from Rs. 181-11 to Rs. 180, but, in the subsequent recovery, came up to Rs. 183-3 yesterday. After a reaction to Rs. 181-11 today, the white metal gathered some strength and closed at Rs. 182-8.

Ready silver (.996 mint) rallied from Rs. 181-12 to Rs. 184 before dipping today to Rs. 182-5. The closing was, however, better at Rs. 183-2. It will be noted that the premium of ready over forward which was As. 4 early in the week, widened to As. 12 yesterday, reflecting the encouraging statistical position. Today, however, the premium narrowed down a little to As. 10.

The floating stocks of silver are placed at 900 bars. The daily average offtake was 30 bars.

Gold for forward delivery (25th May settlement) moved down from Rs. 106-1 to Rs. 105-2 early in the week, in sympathy with silver, but gained strength to touch Rs. 106-2 yesterday. After reacting again to Rs. 104-15 today, the market closed at Rs. 105-4.

Ready gold came up to Rs. 106-15, after receding to Rs. 105-11 (as against the previous week's closing of Rs. 106-11), but finished today at Rs. 106-1. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was better at 4,000 tolas on an average.

In London, both silver and gold were marked up during the week. Spot silver rose from 78¾d. to 78¾d. and forward from 78¾d. to 78¾d. Gold advanced from 249s. ¼d. to 249s. 4¾d. before closing at 249s. 3d. In New York, silver was unchanged at 90¾c.

The following comparative table shows the trend of the market during the week under review:

	2-5-56	Highest	Lowest	25-4-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 30*th April*

Arrivals of kips into the market were on a moderate scale. Shippers were active buyers at unchanged prices. U.K. buying was limited, due to lower prices offered, which sellers could not follow, as prices in the local market ruled one anna above U.K. Stocks in the bazaar were small. There were more enquiries for top marks 4-4½ lbs. and 8-8½ lbs. cow hides, and light and heavy inferior fifths. Demand for F.A.Q. cow calf, buff calf and buff hides was poor.

The tanned skins section was unchanged and there was good clearance of market quality lining sheep for shipment to the Continent and Japan. Prices were a shade easier than last week.

HIDES CHEERFUL

(From Our Own Correspondent)

KANPUR, 29*th April*

During the week under review, the conditions of the hides and skins market were quite cheerful. Demand balanced the supply. The country tanners were keen buyers of the lighter varieties of cow. The Madras dealers were lukewarm. For the main categories of cow and buff, the local tanners were the main purchasers. Supplies from the local butcheries were ample.

The latest available quotations are: Wet salted cow 1st grade Rs. 275 and 2nd grade Rs. 225 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; goat 1st grade Rs. 275 to Rs. 300 and 2nd grade Rs. 250 per 100 pieces; sheep Rs. 250 per 100 pieces.

SPOT COTTON BUOYANT

(From Our Own Correspondent)

BOMBAY, 2*nd May*

The fears of some cotton traders that the spot market might remain practically closed pending the return of normalcy in the E.I.C.A. ranks, to which a reference was made in this report last week, have not proved correct. In fact, the spot cotton market has been exhibiting buoyant conditions. Evidently, the traders are inclined to believe that the deadlock in the cotton futures market would not persist for long. This belief is based on reports that the Board of the E.I.C.A. is making earnest efforts to bring about a settlement with regard to the resumption of futures trading in cotton. The Board has set up a ten-man committee to examine the eleven letters addressed by the Forward Markets Commission (F.M.C.) and to ascertain the views of the members on these letters. The Board has also requested the Chairman and the Vice-Chairman to reconsider their decision to resign from the Board.

It is difficult to say now how far and to what extent the Board of the E.I.C.A. would succeed in its efforts. Considering the sharp divergence of opinion in cotton circles over the proposals made by the F.M.C., the chances of success are not not very bright, at any rate in the near future. While a section of traders seems to be reconciled to the view that the F.M.C's. proposals are necessary for curbing speculative activity in cotton trade, another section is severely critical of them. The implementation of these proposals would, it is feared, prove detrimental to the cotton trade. To quote one report: "There can be no safety for the trading public, if contracts can be cut off at any price, at any time, and at the whims and fancies of Government nominees on plausible pretexts, as was done in December last." The report goes even to the extent of saying that, if the cotton traders value sanctity of contracts and their own safety in trading, they must give a definite mandate to their elected representatives of the E.I.C.A. Board "to ensure against any encroachments or undue interference in future by Government nominees."

The spot cotton market, as already stated, rules distinctly strong. The mills are purchasing fairly large quantities of Indian cotton, the prices of which are remaining fully firm. Attention is focussed particularly on Vijay, Jarillas, Surti, Jayadhar and Laxmi. Morvi, 320F and Wagad are also eliciting support. Among exportable styles, Zodia, Berar *Deshi*, Wagad, Yellow Pickins and Morvi are meeting with enlarged enquiries by shippers. In the foreign section, mill interest is concentrated on American cotton. Some deals are reported in Californian Acala 1.5/32" G.M. at Rs. 1,405 per bale. Africans are also said to be sought after, although the business actually passing is not much. B.P. 52, Busoga and Bukhedi are currently being quoted at Rs. 1,650, Rs. 1,550 and Rs. 1,525, respectively. Sudans and Egyptians appear to be somewhat quiet.

The following table gives the latest available quotations from the Sewri market, as compared with those a week and a fortnight before:

(In rupees per candy of 784 lbs.)

	2-5-56	25-4-56	18-4-56
Bengal *Deshi*	660	685	705
Berar Jarillas	795	790	780
Khandesh	800	790	785
Vijay	960	955	950
Oomra *Deshi*	700	690	700
Moglai	700	690	685

India, it is reported, has received an authorisation from the International Co-operation Administration to purchase $2 million worth of U.S. cotton. The quantity involved is estimated at 15,000 bales, the delivery of which is to be by 31st October next.

There was a boom in cotton prices at Karachi during the week under review. The chief bullish factor responsible for it was sustained demand from local mills and overseas purchasers, in the wake of depleting cotton stocks. The speculative interests were busy cornering supplies, with a view to selling them at higher prices at a later date. Consequently, cotton values forged ahead. The rise was very much more marked in the spot section than in the forward section. The latest available quotations —in rupees per 82 lbs.—for cotton futures and for a few popular varieties of Pakistan cotton, as compared with those a week before, are given below:

	1-5-1956	24-4-1956
Forward Contract (N.T.R.G.):		
May	82.11/16	81½
July	79.7/8	78½
Spot Cotton:		
Sind *Deshi*	100	88½
Punjab *Deshi*	94½	84½
4F Roller	81½	79
S.G.	86	84
Punjab Roller	87	84.5/16
S.G.	92	90½
289F N.T. Roller ...	88	86½
S.G.	94½	93

The firmness of the Alexandria cotton futures market continued unabated. Thanks to the prevailing high spot premiums for all tenderable grades—these are said to be the highest for the season— forward contracts touched new seasonal highs. Demand from East European countries and from the U.S. was sustained, particularly for Karnak. The remaining Karnak stocks are principally of the higher grades, most of which are in Government hands. Early reports regarding new crop are not encouraging and "there is every likelihood of a late maturing crop and a consequent dearth of supplies for September and early October shipment." All these reports induced a further wave of buying orders which lifted the prices of cotton to new heights. The prices of cotton prevailing at Alexan-

dria yesterday, as compared with those a week and a fortnight before, are given below:

(In tallaris per lb.)

	1-5-56	24-4-56	17-4-56
Karnak:			
May	105.25	97.40	95.50
July	105.50	95.25	92.10
November	99.05	88.90	87.15
Ashmouni:			
April	—	78.65	75.40
June	89.75	78.73	73.85
October	79.40	70.22	68.10

The Liverpool cotton futures market depicted a firm trend during the week under review, in contrast with the quiet undertone prevailing in the previous week. The firmness was aided principally by highly encouraging advices from Alexandria and Khartoum where cotton prices registered an impressive rally. Broader enquiry for spot and shipment cotton also influenced the sentiment of operators favourably. Buying support ensued as a result and cotton prices moved up.

A new style contract for American type cotton is to be introduced by the Liverpool Cotton Association on 16th July. The new contract, it is said, will provide opportunities for spinners and other users to widen the scope of their existing participation in the market, as equivalent types of cotton to the purely American staple will be tenderable against the contract. Trading will start for October-December 1956 delivery onwards. The growths tenderable against the new contract include U.S. cotton, Mexican, Nigerian, Syrian and East African. There will be five double-month delivery periods constantly on the quotation board. The future of the current American contract will be decided by members of the Association in the light of their experience in operations in the new contract. Over a period of not less than three months after mid-July, no further delivery periods will be added to the present American futures contract. An extraordinary meeting of the Association is being held today to consider the proposals drawn up by the Directors.

The latest available quotations—in pence per lb. —from the Liverpool cotton futures market are: *Old contract*: May-June 25.45 and July-August 24.95 *New contract*: May-June 30.15, July-August 27.25, October-November 25.70, December-January 25.40, and March-April 25.00. *Egyptian Karnak cotton*: May-June 56.50, July-August 56.30 and November-December 56.30. *Sudan cotton contract*: July-August 51.65, September-October 51.00 and November-December 51.00.

Irregular conditions were in evidence in the New York cotton market during the week under review. Thus while the spot section ruled easy, the futures section presented a fully steady tone on unfavourable weather reports. The Secretary of Agriculture has announced the minimum support prices for cotton at 82½ per cent. of parity. Based on the March parity figure, the minimum loan for the next season for upland cotton basis Middling ⅞" at a point of average location has been set at 28.85 cents. per lb. This is the minimum which cannot be reduced, but can be raised proportionately, if the parity price on 1st August 1956 is higher.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	1-5-56	24-4-56	17-4-56
Spot	36.65	36.70	36.85
May	35.95	35.80	35.75
July	33.89	33.96	35.48
October	32.28	32.29	32.56
December	32.38	32.42	32.61

RAYON YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 2nd *May*

What was considered inevitable last week happened in the rayon yarn market this week. No sooner were the short-covering operations indulged in by some traders, with a view to squeezing those who had made blank sales, completed than the prices of rayon yarn commenced their downward march. There was, besides, the slackness in demand, thanks to large arrivals of yarn imported by silk mills, handloom weavers, doublers and others who had received liberal direct import licences. Some of these interests were actually selling a part of the imports not immediately required. But buyers were hesitant to make large purchases in expectation of a further fall in prices. Consequently, rayon yarn values gave way. Staple fibre yarns lacked support, due to limited demand, and prices tended to look down. Cotton yarns, however, generally continued to rule strong on firm advices from the cotton market, although buying enquiries were not so pronounced as those witnessed in the preceding week.

In the forward rayon yarn section, Snia 120 dull cones for June delivery dropped Rs. 8 to Rs. 806. August contract was quoted today at Rs. 802, as against Rs. 805 at which business in this contract commenced yesterday. At one time, the contract had gone up to Rs. 814. In the spot section, National Rayons 150 Bl. cones 1st grade lost three pies to Rs. 3-8-6. 120 Bl. cones 1st grade eased by a like amount to Rs. 3-11-3. Among foreign yarns, 120 Japan declined by an anna to Rs. 3-13-6. 150 Japan, however, met with special buying support and rose by As. 2 to Rs. 4-3. 120 Italy and 150 Italy were also favoured both by half an anna higher at Rs. 3-13-6.

Foreign staple fibre yarns (80×2) were subjected to continued selling pressure and staged a retreat. Paramounts dropped As. 4 to Rs. 6-14. S'Sellos fell by a like amount to Rs. 6-15. Fujts, K'Suns and H'Races decreased by As. 2 each to Rs. 7, Rs. 7-4 and Rs. 6-14, respectively. Transactions put through in indigenous yarns (40×2) were greatly restricted, with values moving narrowly. Citys and Centurys both eased by three pies to Rs. 3-5-9. New Greats were quiet at Rs. 3-5-6, as also Kohinoors at Rs. 3-6-9.

Cotton yarns, as already stated, were strong. Sixty counts elicited particular attention of operators and recorded a handsome improvement in prices. Citys rallied Rs. 2 to Rs. 55. Moderns and Kamlas advanced by a rupee each to Rs. 62-12 and Rs. 61, respectively. Finlays hardened by As. 12 to Rs. 63-4. Eighty counts Moderns and G'Mores were favoured both a rupee higher, the former at Rs. 68 and the latter at Rs. 75. Among 10s, Gokaks increased by As. 4 to Rs. 14. Elphinstones gathered As. 2 to Rs. 13-6. Moderns were fully maintained at Rs. 14 and Podars at Rs. 13-8. Among 20s, Moderns, Indus and Gokaks put on As. 4 each to Rs. 18-4, Rs. 17-10 and 18, respectively. Edwards improved by As. 3 to Rs. 17. Dawns were better by As. 2 at Rs. 17-6. Cotton yarns of 30 and 40 counts, however, came in for selling, induced by reports that, as export business was slack, several mills had not been able to utilise their export quotas fully. Among 30s, Kotharis declined by As. 6 to Rs. 23-10 and Kanpurs by As. 4 to Rs. 21-12. Among 40s, Minaxis dropped Re. 1-1 to Rs. 28-6. Yasantas climbed down by As. 14 to Rs. 28. S'Rajas shed As. 10 to Rs. 31-8.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	2-5-1956	25-4-1956	18-4-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)—			
120 Dull Cone Snia April ..	—	840 0	831 0
June ..	806 0	814 0	807 0
August ..	802 0	—	—
120 Japan (per lb.)	3 13½	3 14½*	4 2½
150 Japan (per lb.)	4 3	4 1*	4 6

80s Modern	68 0	67 0	67 0

* Rate to general qualities.

CASTORSEED BETTER AT CLOSE

(From Our Own Correspondent)

BOMBAY, 2nd *May*

Except for some improvement in price in the groundnut and castorseed sections towards the close of the week under review, the oil and oilseeds market witnessed rather dull conditions; in fact, the linseed section ruled somewhat easy. This was chiefly due to lack of export enquiries for vegetable oils. It was reported that the price of linseed oil in the U.K. had fallen from £149 to £150 a week ago to £145 at present. Export trade in kardi seed and *niger* seed oils, it is stated, has become extremely difficult in view of the recent export levy. The upward trend at the close of the week in the castorseed section was due to some business in castor oil with the U.K. and the possibility of revival of demand on a large scale from the U.S. A similar trend in the groundnut section in the last two sessions of the week was due to some demand for oil from *vanaspati* interests and crushers.

A feature of the week is the amendment of the memorandum and articles of association of the Bombay Oilseeds Exchange Ltd. designed to broaden the objectives of the Exchange so as to include oils and oilcakes and articles manufactured out of oilseeds, oils and oilcakes in addition to oilseeds. The immediate objective of these changes is to facilitate the amalgamation of the Oil Merchants' Chamber Ltd. with the Exchange. The resolutions adopted provide for the change of the name of the Exchange into Bombay Oilseeds and Oils Exchange Ltd. A meeting of the general body of the Exchange will be held on 24th May to approve the amalgamation of the Chamber with the Exchange.

The Government of Saurashtra is not in favour of opening forward trading in groundnut kernels and groundnut oil immediately. In a communication to the Saurashtra Oil and Oilseeds Association, the Government has suggested that the opening of the forward trading might be postponed, preferably till the onset of the monsoon. Such postponement, according to the Government, is essential in view of the prevailing high prices for groundnut kernels and oils. The Board of the Association, however, is reported to have decided to wait in deputation on the Chairman of the Forward Markets Commission to appraise him of the need to open forward trading in the said commodities immediately.

In the groundnut section, gold F.A.Q., which opened the week at Rs. 34-6 as against Rs. 34-8, disclosed minor fluctuations during the greater part of the week. Towards the close of the week, however, it spurted, on covering by shorts, to Rs. 35. After ruling dull at about Rs. 34-13 in the first four sessions of the week, June-July delivery moved up to close at Rs. 35-8. Coromandals ready too was quiet at Rs. 35-7 in most of the sessions of the week. But as the week drew to its close, it advanced to Rs. 35-12. Groundnut oil ready was dull at Rs. 18-6 in the first four sessions of the week. Subsequently, it improved to close at Rs. 18-10.

Linseed Bold ready declined from Rs. 33 to Rs. 32-10 and June-July delivery from Rs. 32-2 to Rs. 31-14. Sutnas were lower by Re. 1 at Rs. 30-10 and Indores by As. 4 at Rs. 32-12. Linseed oil eased from Rs. 20-14 to Rs. 19-8.

In the castorseed section, May delivery opened the week at Rs. 137-4, as against Rs. 138-10 last week. After fluctuating between Rs. 142 and Rs. 135-12, it closed at Rs. 141-2. September delivery changed hands at Rs. 148-4 as against Rs. 146-8, the highest and the lowest touched during the week being Rs. 149 and Rs. 143-10, respectively. Madras quality gathered As. 2 to Rs. 28-2 and Kanpur As. 14 to Rs. 26-12. Castor oil, Commercial quality, was done better at Rs. 15-12 and B.S.S. at Rs. 16-12.

The following table shows the prices of oilseeds and oils yesterday, as compared with those at the end of the previous two weeks.

	2-5-1956	24-4-1956	18-4-1956
	Rs. a.	Rs. a.	Rs. a.
Groundnuts—			
Khandesh Quality Ready (per cwt.)	35 0	35 4	35 12

Ready	19 8	20 14	20 10

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 2nd *May*

The sugar market ruled easy during the week under review. The chief factor which adversely affected the sentiment of operators was the pressure of heavy arrivals of indigenous sugar, such being 19,500 bags, as against 3,600 in the previous week. Advices from Kanpur and Bombay-Deccan areas were also bearish. Rumours of an early monthly release of sugar for sale in the free market, too, acted as a damper. All these factors induced selling, but prices did not suffer any sharp fall. For a large part of the sugar offered for sale was absorbed by buying orders, thanks to a very substantial demand from Malabar Coast. During the week, a mixed parcel of indigenous and imported sugar amounting to about 13,000 bags was transacted for shipment by the 15th inst.

In the spot section, large grain indigenous sugar lost a rupee to Rs. 92-Rs. 97. Small and medium grains were unchanged at Rs. 88 and Rs. 89-Rs. 91, respectively. Similarly, British refined sugar was unaltered at Rs. 84 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER FIRM

(Messrs. Parekh & Co.)

BOMBAY, 2nd *May*

Despite restricted turnover, prices for Malabar black pepper, during the week, were pushed up, following manipulations by interested bulls. But, the dealers in New York refused to follow as they were in a position to buy more advantageously from Singapore and elsewhere. For some years, following the World War II, when India had a monopoly for the supply of pepper to world markets, such manipulations were successful because New York dealers were forced to pay higher prices through India's stiff attitude. Things, however, have now changed. There are other suppliers in Sarawak, Singapore and Indonesia. As a result, New York dealers can afford to neglect India. If New York grinders once take a liking to Sarawak, it is feared India may lose its pepper export trade to the U.S. Russian buying is State-managed and hence volatile; it should not be taken as a permanent feature. If India persists in keeping its price out of world parity, it is possible that Russia, if at all it wants to buy further, will look to other sources of supply.

It is reported that, with effect from the 1st May, the Conference Line has raised the rate of freight from India to the U.S.A., when on the other hand, freight from Singapore to New York is reduced by U.S. $9.50 by the Straits-New York Conference Line. Many traders feel that the rise in freight rate is a fit case for protest by the Government and the commercial bodies.

Following are the lowest and the highest rates for pepper in the principal markets:—

Market	*Lowest*	*Highest*
Alleppey	Rs. 700	Rs. 775
Cochin (garbled)	Rs. 120	Rs. 132½
New York	$0.27	$0.30
Singapore (Sarawak) ...	Str. $76	Str. $77

May shipment was done from $0.28 to $0.29½, while June changed hands from $0.28 to $0.30 and July-August-September from $0.28 to $0.30½. Alleppey is quoting Rs. 750 and Cochin Rs. 127½ for garbled.

Today's nominal quotations with previous week's quotations in brackets are: Ready Rs. 105 (Rs. 102) per Bengal maund; May Rs. 737½-42½ (Rs. 720-30) and June Rs. 750-55 (Rs. 727½-32½) per candy of 5¼ cwts.

TEA DEARER

(Messrs. Forbes, Ewart & Figgis [Private] Ltd.)

COCHIN, 26th *April*

The export auction held in Cochin on Tuesday, 24th April, contained approximately 1,250,000 lbs. Quality again showed a slight seasonal decline, but there were some useful colours medium teas on offer and some attractive high-grown invoices. There was a strong general demand and prices for all types were fully firm. Buyers showed particular interest in fannings grades and these types sold well. Best liquoring teas were a little irregular and buyers followed quality closely. High-grown leaf teas were often dearer, but other whole leaf grades were barely steady. The following are the quotations:—

	1956 Rs. a. p.
Plain B.P.	1 11 0
Low medium B.O.P.	1 15 6
Medium B.O.P.	2 2 0
Good B.O.P.	2 14 0
	to 3 0 0
Well-made black leaf O.P. ...	2 8 0

London Market:—*Sale of 23rd April 1956*:—Best strong to dearer. Good mediums firm. Others 1d. easier.

Sale of 24th April 1956:—Prices generally dearer. Best strongest.

Colombo Market:—*Sale of 23rd April 1956*:—Dusts declined 10 to 20 cents. Others good demand. Broken mixeds inclined lower on quality. Useful liquoring fannings dearer.

Sale of 24th April 1956:—Good demand. Dimbula Dickoya types generally lower, following quality. Uvas frequently dearer. Medium and bright liquoring low-grown brokens firm to dearer. Tea for price dearer. Persian Gulf types lower.

Calcutta Market:—*Export*:—Fair general demand with prices generally irregularly half anna to As. 1½ easier. Fannings very strong. Whole leaf teas unwanted. Withdrawals fairly heavy, particularly whole leaf grades.

Internal:—20,800 dusts. Quite good general demand. Best C.T.C. and black exportable firm to dearer. Remainder one anna to As. 2 easier. 6,200 internal leaf. Fair demand irregular rates.

Export Quota:—The market for 1956-57 export quota has been rather easier and there are now sellers at 33 pies. Business is still being done in special licence at 5 pies.

Forthcoming Auctions:—Sale No. 10 will be held on Tuesday, 1st May. Thereafter, export auctions will be held weekly.

As we go to press, Messrs. Forbes, Ewart & Figgis (Private) Ltd. wire:

"*Sale* 10.—650,000 lbs. Strong general demand. Market irregularly dearer for everything, particularly fannings."

DEMAND FOR TEA STRONG

(From Our Own Correspondent)

CALCUTTA, 1st *May*

There was strong general demand during the export auctions held yesterday and prices realised were higher. However, towards the close of the auctions some weakness was in evidence. Offerings amounted to 32,500 chests. C.T.C. teas realised higher prices with the better among these lots receiving the keen attention of buyers. Prices of clean common teas with black leaf advanced by As. 2 to As. 3, but stalky teas were quiet and often easier. A firm tendency was in evidence in the very poorest teas. There was good support for stylish whole leaf grades prices of which improved by an anna. Orange fannings and clean black B.O.Ps were also strong features, and prices improved by As. 2 to As. 4. Even a higher rise was recorded in some lots possessing more liquor. The quotations were: C.T.C. Assam B.P. not quotable; medium Assam B.P. Re. 1-10; clean black pekoe not quotable; and plain B.P. Re. 1-8.

Mixed conditions were in evidence during last week's sale for domestic consumption. Offerings of dusts aggregated 20,800 packages, which met with moderate demand. Prices for black leaf teas suitable for Middle East consumption were held at firm levels. Grainy teas lost about ½ to 1 anna and the better varieties 1 to 1½ annas. On the other hand, the best teas among autumnal C.T.Cs gained by As. 2 to As. 4. Most other teas lost As. 2. The rates were: best Assam C.T.C. Rs. 2-10 to Rs. 2-12, medium Assam grainy dust Re. 1-9 to Re. 1-9-6, and medium dust Re. 1-8.

Leaf grades offered amounted to 5,700 packages. Demand was good, and C.T.C. teas rose by 1 to 1½ annas. Other teas were easy.

JUTE GOODS GIVE WAY

(From Our Own Correspondent)

CALCUTTA, 1st *May*

Prices of jute goods gave way further during the week under review and, even at lower levels, business passing with overseas buyers was insignificant. This was so because the continuation of the decline was considered likely by buyers. For during the week under review, raw jute prices were in tune with the downward trend in jute goods. Even then, raw jute receded by As. 8 only for all constructions. The reserve of raw jute stockists was broken by their realisation that the mills possessed raw jute sufficient to see them through up to July, by which time the new crop would start coming to the market. Mills would no doubt require to purchase particular varieties, but stockists had good reason to believe that, if they did not induce the mills to buy now by lowering prices, there would be a glut in the beginning of the season and rates would fall.

Arrivals of jute from Pakistani and Indian districts have been remarkably higher than last year. The impression is, therefore, gained that, in spite of crop restriction in East Bengal, Indian mills can get as much jute as they require from Pakistan. Any fear that there would be a shortage in raw jute supplies can no longer serve as gunpowder for those interested in pushing up prices. There is a clear sign that there would be an adjustment in raw jute prices, a need that has been keenly felt by the mills for some time, in view of the lower levels which jute goods have touched.

Notwithstanding this week's decline in prices, business in raw jute was little. For the mills desired that, before they could extend support, prices should fall further. Sellers were after business, as they wanted to lessen their stocks before prices gave way further. Upper Assam bottoms at Rs. 27 were lower by As. 8.

Business put through with exporters in jute goods was, as stated earlier, poor, and prices were pushed back. Heavy goods were affected more noticeably than hessian. By Wednesday, ready B. twills had declined from Rs. 108-4 to Rs. 106-12. May and June goods also receded, but, at the lower levels of Rs. 106-14, were As. 2 higher than ready goods. This difference was, however, gradually wiped out and, by the week-end, the rates were lower than those for ready goods. Some covering demand was in evidence, and, on Thursday, ready B. twills recovered to Rs. 107, but genuine buyers were offering lower prices. By the week-end, ready B. twills eased to Rs. 106-8, May goods to Rs. 105-10, June to Rs. 105-8 and July-September to Rs. 105. Yesterday, the lower trend continued, with ready B. twills marked further lower at Rs. 106. During the week as a whole, ready 40" 10 oz. hessian fell from Rs. 39-1 to Rs. 38-4. After weeks of expectations and rumours, Russia surprised the market by placing an order for 2,700 tons of hessian, but, as the quantity was too small, a recovery in prices was difficult. It is, however, expected that Russia will place further orders.

LINSEED FEATURELESS

(Messrs. A. Bradley & Co.)

CALCUTTA, 30th *April*

The linseed market was dull and featureless, during the week under review, with a slightly easier tendency suggested by keener sellers for ready linseed oil. Arrivals had fallen short of the normal expected at this season, as a result of a firming up at certain centres where stocks were being withheld. This was followed by a rise in the local price of seeds, while the price of oil registered a small decline, owing to poor buying support. Export trading was virtually at a standstill, with overseas buyers still anxious over the fulfilment of earlier purchases which are now subject to the new export duty. There is no parity existing between local prices and the value of £142 10s. now prevailing in the U.K. markets.

The latest available quotations are: Ready and May-June both Rs. 22 per maund.

FOODGRAINS BETTER

(From Our Own Correspondent)

HAPUR, 30th *April*

Barring gram which ruled quiet, other grains recorded fractional gains during the week. Wheat *dara* was quoted at Rs. 13 and farm quality at Rs. 14-10, as against Rs. 12-12 and Rs. 14-4 respectively, last week-end. Outside buying enquiry during the week was fairly good from Bihar and Bombay sides and daily arrivals were at an average of 1,500 to 2,000 maunds. Stock was put at 3 *khaties* of old quality. Wheat appreciably declined in Punjab, while it was quiet in Madhya Pradesh. In Madras, wheat eased by As. 8 per bag. The Government of India has expedited imports and 500,000 tons of wheat are due to reach India within the next few months. Rice continued to be steady at almost unchanged price levels, although the final estimate of rice for 1955-56 shows an increase of 4 per cent. in area and 3.8 per cent. in production over last year at 76,233,000 acres and 25,474,000 tons, respectively.

Gram ruled quiet at Rs. 10 per maund for local quality and at Rs. 10-6 for punjab quality. Arrivals were at an average of 150 maunds daily. Gram was quoted at Rs. 8-8 per maund in some of the markets. Barley and *bejhar* recorded a small improvement in prices to be quoted at Rs. 8-12 and Rs. 8-10 per maund, respectively, due to good seasonal demand and small arrivals of new crop. *Jowar*, however, continued to rule steady at Rs. 12-14 per maund, on good demand for seed purposes.

Peas was very much in request from O.T.R. stations of east U.P. and Bihar, as also from Madras side in the form of pulses. But increased daily arrivals—at 2,000 maunds—accounted for a small fall in prices to Rs. 8-12 for *dara* green and to Rs. 10-12 for white quality. Stock was put at 8 *khaties*. *Arhar* was quoted slightly lower at Rs. 10-2-6, on account of heavy arrivals—at 800 maunds daily—and stock position increased to 10 *khaties*. *Masoor* improved to Rs. 12 per maund due to poor arrivals.

SUGAR DECLINES FURTHER

(From Our Own Correspondent)

HAPUR, 30th *April*

Thanks to comfortable supply position, following the overall increased production of indigenous sugar in the country which is expected to aggregate 1.7 million tons, sugar prices continue to rule dull and depressed. The production in the country in the current season upto 15th April amounted to 1,539,000 tons, as against the corresponding figure of 1,404,000 tons last year. Most of the mills in U.P. are still getting sufficient cane and the total production in this State alone is expected to touch a million tons. Mill delivery prices have eased fractionally, as outside buying enquiry is slack.

The latest available mill delivery prices (per maund) are: Jaswant Rs. 28-4, Simbhauli Rs. 28-4, Mowana Rs. 28-8, Daurala Rs. 28-14, Amroha Rs. 27-8, Bijnore Rs. 27-8, Mansoorpur Rs. 27-12, Rampur Rs. 30, retail Rs. 30-2, *khandsari* Rs. 23 to Rs. 26-4.

Ready *gur* prices eased towards the week-end for want of outside support and in line with an appreciable fall in the futures section. The crushing season has come almost to a close, although cane is still standing with the cultivator due to hot season. Arrivals of stocks, mostly detained by producers, is reaching the market at an average of 400 maunds daily and local stock is put at 110,000 maunds. Prices vary between Rs. 10 and Rs. 10-8 per maund, according to quality.

SURVEY

(*Concluded from page* 851)

ceding financial year. It will be limited to 80 per cent. of the estimated cost of construction, excluding the price of land, subject to a maximum of Rs. 2,000 per house in North India and Rs. 1,600 in South India. The maximum amount of loan is based on the recommendation of the Industrial Committee on Plantations that the two-room housing standards of the Indian Tea Association both for plain and hill gardens be adopted throughout North India and the single-room housing plan of the United Planters' Association for South India.

The State Governments are expected to prescribe detailed standards of accommodation and and specifications, on the recommendations of tripartite boards to be constituted by them under the Plantation Labour Act. The boards will consist of representatives of the State Governments, employers and labour. The specifications must ensure that the houses will last for at least a period of 30 years. The houses are to be constructed by the employers, who will also be responsible for their maintenance. Retarding colonies, the State Governments will prescribe the standards for roads, pathways, drainage and street lighting. The State Governments will name the authority responsible for enforcing the observance of the standards and specifications. They will frame detailed rules for the administration of the scheme in their jurisdiction and for the allotment of houses. The houses will be allotted to workers on a rent-free basis. The State Governments will be entitled to ask for adequate security from planters for the repayment of loans. Government-owned plantations are not entitled to assistance under the scheme.

The question of providing houses for plantation workers has, as is well known, engaged the attention of the authorities for several years now. It will be recalled that, in 1950, the third session of the Industrial Committee on Plantations recommended that employers should construct houses according to approved standards. The employers' associations were asked to implement the Committee's recommendations, but it was observed that, while satisfactory progress was made by big planters, small planters were not able to undertake their housing programmes because of inadequate financial resources. It is in order to enable the small-scale planters to meet the statutory obligation of providing houses to workers that the present scheme has been evolved.

It is true that the provision of houses, along with other amenities, to workers on plantation estates might ultimately result in an increase in prices of India's plantation products, which are among the chief foreign exchange earners for the country. But this, perhaps, cannot be avoided entirely. And the national income of the Western countries, which are the chief importers, is not only higher than in India but has improved a great deal in recent years, so that they should not grudge paying a higher price for their imports from this country.

There is, however, the danger that the provision of better amenities to workers in India when similar amenities are absent in other plantation countries, such as Ceylon and Indonesia, may reduce India's competitive capacity in these products. In order to avoid this handicap, the Government of India should move international bodies to see that the other countries also provide similar amenities. In fact, it must help formulate international labour welfare standards and also try to ensure that they are enforced at an early date.

COMMERCE AND INDUSTRY

(*Concluded from page* 877)

should not exceed in gross weight 1 kilogram and should consist of not more than one document, and if it so consists should not include more than one copy of any one document. The document should clearly indicate the name of the foreign concern producing, selling or renting goods, or offering the transport or commercial insurance services.

The Contracting Parties shall not apply import prohibitions or restrictions, whether through quotas, import licences or other measures, on the importation from the territory of another Contracting Party of goods which qualify for exemption from import duties under the articles of agreement. They can, however, impose restrictions in order to protect public morals, human or plant life, to secure compliance with laws or regulation relating to customs enforcement, and to prevent deceptive practices.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years
