There are as many as 14 chapters and 4 annexes in the *Handbook*. The first three chapters deal with the vital statistics system, in general, that is, with the history, uses and general organisation of the system. The subsequent four chapters describe the responsibilities for, and the procedures followed in, the registration of vital events. Chapters 8 to 13 are devoted to the collection of data for vital statistics, compilation and tabulation programme, and computation procedures. The last chapter presents methods of evaluating the efficiency of the vital statistics system. The four annexes are (1) chronological history of the development of vital statistics, (2) principles for a vital statistics system, (3) collection of stillbirth definitions, and (4) selected list of references.

The understanding of the history of vital records and statistics that the *Handbook* gives will enable one to appreciate the value and importance of vital statistics methods. Indeed, a knowledge of the origin of vital records, the various methods by which statistics may be obtained, the present status of the system and the efforts of international organisations—past and present—to remedy deficiencies "provides the background against which current methods, procedures and recommendations can be evaluated."

Social Welfare in India. Published by the Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi. Price: Rs. 8-8.

In his foreword to this neatly got-up 850-page publication, issued by the Planning Commission, and published by the Publications Division of the Government of India, the Prime Minister, Mr. Nehru, rightly avers that "the preparation of a standard reference book on this subject by the Planning Commission is particularly to be welcomed." He adds: "This will be of great value to the thousands of social workers in the country and many others will profit much by it." This is a well deserved tribute to a book which provides not only an insight into the welfare problems in this country but also a guide to the welfare organisations and the immensely useful work some of them are doing.

The book gives a historical background of social welfare service in India; the article on this subject is by Mr. M. S. Gore, Principal, Delhi School of Social Work, Delhi University. Other contributed articles deal with specific aspects of social welfare such as child welfare, youth welfare, women's welfare and services for the handicapped. These articles practically cover the entire field of social work. And the articles, since they have been written by experts in the field who have both a theoretical and practical knowledge of the topics, have more than a mere academic value. A notable feature of the book is a directory of social welfare organisations—this section also describes the work done by them—and a bibliography of the literature on social welfare and related subjects. We commend this book to the attention of welfare workers in this country. Since social programme, as Mrs. Durgabai Deshmukh, Chairman, Central Social Service Board, Government of India, points out in the preface, is a "dynamic process," we hope the volume will be periodically revised so as to provide a continuous review of the problems and achievements in this field.

The Statistical Outline of India, first published by the Tata Industries Ltd., Bombay, in 1953, has now been brought up to date, and some new features have also been added. The 1955 edition of this valuable handbook provides data relating to national income, population, natural resources, industry and transport, labour, foreign trade, banking and insurance, public finance, prices, Five-year Plan and certain miscellaneous topics such as loans from World Bank and foreign assistance for development. Compiled from authentic sources and presented in a readable form, the booklet is a small mine of very vital statistical information. It is also easy to handle and even to carry, thanks to its small size. A comprehensive index, given at the end of the publication, has greatly added to its utility. The booklet will serve as a valuable work of desk-reference to all those that are interested in different facets of Indian economy.

Fly PIA
TO KARACHI

from BOMBAY and DELHI

Fly to Karachi in modern Convair Skyliners. Superb accommodation, comfortably air-conditioned. PROGRESS OF VANASPATI INDUSTRY

PRODUCTION AND CONSUMPTION BETTER

THE *vanaspati* industry seems to have found 1955 a relatively more comfortable year than 1954. According to the Chairman of the Vanaspati Manufacturers' Association of India, Mr. A. J. C. Hoskyns-Abrahall, "a record increase in output in 1954 looked very much like reckless overproduction, a further increase of 30,000 tons in 1955, giving a total of nearly 260,000 tons, might very well have looked the same. In fact, it did not. Indeed, the year ended with manufacturers' stocks 5,000 tons less than at the beginning, indicating that demand had increased faster than our production." Besides, in 1954, a steep fall in groundnut oil prices and a rather frantic scramble by the industry to dispose of its high output at almost any price portended a gloomy outlook. But, in 1955, conditions in the oil market were stable and the industry was enabled to stage a recovery.

The year witnessed a steady increase in *vanaspati* production and consumption. Not only those factories that had been in production were able to improve the utilisation of their plant and capacities but four factories which had remained closed for long periods, were also in a position to resume production. Besides, two new units started production. The total number of factories in production during 1955 at 43 was the highest yet reached. The availability of sufficient supplies of edible oils at stable and very reasonable prices was chiefly responsible for this recovery. After nearly a decade, oil prices came down, according to the Annual Report of the Vanaspati Manufacturers' Association of India covering 1955, to parity with the general price level in the country during the 1954-55 crop year and, what is more important to the industry, they were fairly stable throughout the year. Ready groundnut oil prices in Bombay, for instance, fluctuated within a range of not more than 100 points on either side of Rs. 900 per ton. The low level of *vanaspati* and other food prices and the rising level of incomes from higher industrial production and other development activities appreciably helped increase the level of *vanaspati* consumption. On account of lower prices, the industry was able to export abroad 15,000 tons of *vanaspati*, as compared with about 7,500 tons in the preceding year.

The following table shows the trend of production of *vanaspati* since 1930:

Year	*Production* Tons	*Year*	*Production* Tons
1930	298	1943	90,654
1931	2,394	1944	113,030
1932	3,296	1945	132,827
1933	6,199	1946	142,836
1934	15,345	1947	97,160
1935	17,000	1948	127,664
1936	19,372	1949	154,923
1937	29,781	1950	172,437
1938	87,346	1951	171,551
1939	52,031	1952	190,597
1940	65,658	1953	191,182
1941	86,304	1954	230,749
1942	75,766	1955	260,000 (estimated)

The trend of consumption of *vanaspati* during the past four years is indicated by the following set of figures:

Year	Tons	*Year*	Tons
1952	195,629	1954	222,557
1953	183,679	1955	266,000

Some Problems

The encouraging performance of the industry in 1955 should not be taken to mean that all is well with the industry. On the contrary, the industry is still faced with a number of problems. The first Five-year Plan had set a production target of 300,000 tons. But, in the last year of the Plan, its output at 260,000 tons, though better than in previous years, was still well below the target. Further, the productive capacity, estimated at 500,000 tons, indicates the existence of a large volume of idle capacity. There are still, according to the Annual Report of the Association, seven factories completely closed and of those that are in production many are still operating below economic levels. The industry remains, therefore, vulnerable to periodical crises which usually follow sharp fluctuations in oil prices and, therefore, in the *vanaspati* trade.

This much maligned industry more sinned against than sinning, is also facing the dangers of public prejudices based on misconceptions and irrational attitudes even among men placed in positions of responsibility. One result of this attitude has been the demand for coloration of *vanaspati* when no suitable colour is available. This demand comes from those who believe that *vanaspati* is responsible for all the ills of the *ghee* trade. One of these ills is the adulteration of *ghee* and *vanaspati* is blamed for it on the ground that it facilitates this evil. But those who argue thus, conveniently overlook the fact that adulteration was in existence even before the advent of *vanaspati*. Referring to this issue in a pointed manner, Mr. Hoskyns-Abrahall said, in his speech at the annual meeting of the manufacturers, thus:

"*Ghee* was adulterated long before *vanaspati* was discovered. *Ghee* is still being extensively adulterated with substances other than *vanaspati*—witness the Studies in *Ghee*, I, recently published by the Agricultural Marketing Adviser to the Government of India—and according to which 54 per cent. of adulterated samples of *ghee* had, as their adulterants, such substances as animal body fats and vegetable oils like coconut and groundnut. Manifestly, therefore, the elimination of *vanaspati* as an adulterant of *ghee* by colouring or by any other means, does not stop the adulteration of *ghee*. From the figure given above, it would not seem to go even half-way towards solving the problem. Indeed, if it induced a false sense of security to prevail—a comfortable, if mistaken, feeling that at least some good had been achieved—the position might well become worse than it is now."

Demand for Colouring Persists

Unfortunately, an argument so convincing as this seems to fall on deaf years. The demand for colouring *vanaspati* continues to be the favourite pursuit of certain persons. The U.P. Vidhana Sabha, for instance, debated last year a private Bill demanding coloration and failing that, a ban on the manufacture of *vanaspati*. The Bill was rejected but the State Minister announced an increase in the prize offered for finding suitable colour for *vanaspati* from Rs. 10,000 to Rs. 25,000. It is understood that a private member has tabled a resolution in the Lok Sabha deploring the inordinate delay on the part of the Government in implementing its decision to colour *vanaspati*. This resolution is expected to be taken up for discussion in the present session.

These prejudices persist, in spite of the fact that, following the debate in 1954 in the Lok Sabha on a Bill seeking to ban the manufacture of *vanaspati*, the conference of leading scientists convened by the Union Food Minister was unanimously of the opinion that no suitable colour for colouring *vanaspati* was available and that there was no need for colouring *vanaspati*, as the latter contained a latent colour which would be effective in detecting its presence in *ghee*. The solution advocated by the conference was that the public authorities should enforce the Prevention of Food Adulteration Act more rigorously to root out the evil of adulteration.

The insistence by some for colouring *vanaspati* is based, perhaps, on the belief that they are being bluffed. There are people who still refuse to believe that a suitable colour is undiscoverable, when, for instance, sweets and drinks are so commonly coloured. Mr. Hoskyns-Abrahall's answer to such people is as follows:

"Such people overlook the simple fact that such colours are reckoned to increase the attraction of the foods to which they are added and there is thus no incentive to remove them. Those who adulterate *ghee* would have every incentive to remove a colour from *vanaspati* and the addition of any removable colour is consequently sheer waste of time. But besides being irremovable, a colour would have to be harmless to the human system, not unpleasant to the eye and readily and cheaply available. It is really not at all surprising that India's best scientists and in fact scientists all over the world, say that no such colour is available."

Industry's Anxiety

What is stated above should not, however, be taken as an indication of the Industry's desire to ignore the problem of adulteration or to minimise the gravity of the problem. Far from it. The industry is, indeed, very anxious to eradicate the evil, as witness the remarks of Mr. Hoskyns-Abrahall:

"I now categorically state that we are fully aware of this evil, that we deplore its existence, that we appreciate the difficulty of uprooting it and that we sincerely wish to play a full part in the process of doing so. We have in *vanaspati* a nutritious, vitaminised hygienically prepared and packed product, which is enjoying increasing favour with the public, and we wholeheartedly deplore its misuse as an adulterant of *ghee*."

He sincerely believes that the only solution to stop adulteration of *ghee* lies in the proper enforcement of the Prevention of Foods Adulteration Act.

During 1955, the industry was able to increase the vitamin A potency of *vanaspati* from 300 I.Us. to 700 I.Us. per ounce. With the increased vitamin A potency, *vanaspati* has, we are told, become as good a source of vitamin A as good *ghee*. This should enable the people to choose between *ghee* and *vanaspati* as comparable edible fats in the same way as people in other countries consume margarine and butter.

Target Under Second Plan

The Planning Commission, in consultation with the representatives of the industry, has fixed a target for the production of *vanaspati* at 350,000 tons at the end of the second Five-year Plan. Considering the trend of progress in the last two years and the expected substantial increase in the tempo of economic activity, the target is taken to be a modest one. Provided no unforeseen impediments are placed in the way of its progress, the industry hopes to achieve or even exceed the target. So far as the immediate outlook for the industry is concerned, Mr. Hoskyns-Abrahall struck a note of caution. He stated that, if the rate of increase in production in 1955 were to continue, it was quite possible that a crisis in the raw material supply position would arise. Giving his rationale for this conclusion, he remarked:

"The less good 1955-56 groundnut crop and the recent rather alarming increase in price form a danger signal not to be disregarded. Although I do not intend it to be the main theme of my remarks on this occasion, I cannot let it pass without saying that the cultivation, conservation and extraction of groundnuts, which provide the main raw material to our industry and a wonderful earner of foreign exchange to the country, cries out for all the encouragement that Government can give it. This, indeed, applies to edible oilseeds in general; and the cost of underestimating their importance to the economy could be disastrously high."

That there is considerable force in the aforesaid quotation cannot be denied. If the cost of living in India is to be kept stable, it is very essential to ensure an adequate supply of vegetable oils and fats, as they account for a sizable portion of the grocery bill of every household in this country, much more so in the case of the middle and lower income groups.

WHEAT CONFERENCE AT GENEVA

India is participating in the International Wheat Conference which has been in session at Geneva since the 20th inst. The Indian Delegation is headed by Mr. P. N. Thapar, Secretary of the Union Ministry of Food and Agriculture. Its other members are Mr. C. S. Ramakrishna, Director-General of Food, Government of India, Mr. S. K. Basu, Food Liaison Officer, High Commission of India, in London, and Mr. H. N. Vissanji of Wallace Flour Mills, Bombay.

The current Wheat Agreement signed in 1953 is due to expire towards the end of July next. The U.N.O. had convened a wheat conference in Geneva in October-November last year to consider renewal or replacement of the existing Wheat Agreement. That session discussed the various international measures designed to meet the special difficulties that existed or might arise in future, concerning wheat, and made certain recommendations for consideration by individual Governments. It took the existing Agreement as the basis for the negotiation of a new Agreement. All these questions are once again being discussed in the present session, so that a new Agreement can be drawn up with all important wheat exporting/importing countries in the world as members. The current session is expected to last for five weeks.

India is likely to import, according to official circles, substantial quantities of wheat from abroad during the next few years. Consequently, the Government has decided to take part in the deliberations of the Conference. The U.K., the world's largest importer of wheat, abstained from being a party to the current Wheat Agreement, as it felt that the maximum price of wheat ($2.05 per bushel) fixed was higher than what it should be.

ROPE INDUSTRY IN INDIA

The needs of defence, shipping and fishing provide a large scope for expansion of rope industry in India. The development of shipping, as envisaged in the second Five-year Plan, alone should offer a good opportunity for rope manufacturers to utilise their idle capacity to the utmost. Unfortunately, this is an industry about which very little authentic information is available. Some idea of the existence of idle capacity was, however, provided by Mr. K. N. Mukherjee, President of the Indian Rope Manufacturers' Association, Calcutta, in his address at the sixth annual meeting of this body held a few days ago. According to him, the existing capacity of the industry for sisal and manila rope production is around 5,000 tons, which, along with production of other ropes, may easily be 7,000 tons per annum on a single-shift basis, or over 20,000 tons on a three-shift basis. During the war, the industry produced about 10,000 tons yearly on a multiple-shift basis and fed the Eastern armies of the allied forces. This manufacturing capacity has since expanded further by the installation of new and small units. Mr. Mukherjee is, therefore, of the opinion that the expansion of the industry by further units should not be encouraged till the current output is fully absorbed by local demand for ropes. He seems to have no doubt at all that the expansion of shipping during the next five years would result in some increase in demand for ropes. But it is stated that some Indian shipping companies are getting their requirements of ropes from ports outside India, as these ropes are slightly cheaper than the Indian ropes. Besides, some companies are in the habit of importing them in large quantities and keeping them in bond, so that they may use them later whenever they want. These two practices, according to Mr. Mukherjee, would appear to have adversely affected the sales of Indian ropes.

Among others, two factors seem to be responsible for the high cost of production of Indian ropes, especially manila and sisal ropes. First, the industry is entirely dependent on foreign sources for its principal raw materials, namely, manila and sisal fibres. Secondly, although sisal prices in 1955, as compared with those in 1954, were not very unfavourable to the industry, their prices advanced substantially in the latter part of last year. Prices of manila fibre were relatively steady early in 1955 but towards the close registered an upward trend. The high price of the raw materials has affected its cost of production. The rope industry, therefore, is keen on reducing its dependence on foreign fibres, by augmenting indigenous supplies of fibre. In this context, Mr. Mukherjee says: "While manila fibre cannot be substituted, in many cases, chiefly due to its inherent superiority in breaking strength, sisal can be substituted and has been substituted to a great extent. It is wide to do so, as it results in considerable conservation of foreign exchange. The import of sisal fibre by the industry as compared with the previous years has declined. This decline in import was made possible by resorting to the use of aloe fibre grown chiefly in the Western Districts of Ahmednagar and the South Indian tract of Cochin." Unfortunately, as pointed out by Mr. Mukherjee, this fibre is not systematically cultivated, collected, graded or even purchased. In the result, the supplies are not only inadequate but the extractable growth of this fibre is also fast getting depleted. With a view to overcoming this drawback, Mr. Mukherjee has suggested that the cultivation of this fibre should be encouraged through co-operatives by supplying the cultivators information regarding right methods of cultivation and right kinds of seeds. He has also suggested for consideration the question of evolving a scheme for large-scale cultivation of sisal itself.

The Indian manufacturers of ropes are stated to be seriously handicapped by the sea freight paid for imported fibre. Although the distance between Manila and India by sea is far less than the distance between Manila and the U.S. and the U.K. seaports, the Indian industry pays £3 more per ton as freight than that paid by the industry in the U.K. or the U.S. This has reduced the ability of the Indian rope industry to compete in world markets.

Another handicap of the rope industry is the high freight rate payable on both manufactured ropes and the fibre consumed by the industry. On the ground that the classification of fibre is higher than that of the manufactured product, the railways have, it is stated, placed ropes in class VIII. Most of the traffic in fibre, however, has special station-to-station rates almost in the vicinity of class III. The high classification of ropes, it is stated, results in a heavy incidence of freight on the user. The industry has put forward for sympathetic consideration its case before the Railway Freight Structure Enquiry Committee.

The rope industry wants adequate facilities for importing rope fibres freely, since India has been a net importer of these fibres. It has suggested the need for renewing O.G.L. for import of sisal and manila in advance of the expiry of the relevant licensing periods and for making the licences valid for one year at a time, so that the difficulties of opening letters of credit or keeping them alive could be avoided.

LABOUR CONDITIONS IN CIGARETTE INDUSTRY

Of the 11,588 workers employed in 14 out of 19 cigarette factories in India, as many as 99.4 per cent. were time-rated, according to a survey conducted by the Labour Bureau, Government of India. A large number of them, namely, 95.3 per cent., were permanent. The total employment in these factories decreased from 12,300 in 1952 to 11,747 in 1953 and to 11,445 in 1954 but increased to 11,588 in 1955. Labour turnover was negligible during the years 1952 to 1954. Not only was the bulk of labourers permanent, but the labour force in the industry was more or less static.

The lowest basic wage for unskilled workers as on 1st May 1955 was Rs. 22-5 and Rs. 18 per month for males and females respectively in one unit in Hyderabad; while the maximum wage of Rs. 40 per month existed in one unit in Bombay.

With the exception of one unit in Bombay, all the units paid dearness allowance to their employees. It varied from Rs. 3 and Rs. 2 per month for male and female workers, respectively, in one unit in Hyderabad to Rs. 66-9 per month in one unit in Bombay.

In May 1955, an amount of Rs. 6,16,353-12 was paid as basic wages, dearness allowance, etc., for a total of 137,199 man-days worked in selected occupations (viz., machine operators, machine feeders, etc.) in all the units except one in West Bengal. The average earnings per day per worker, therefore, amounted to Rs. 4-7-11.

All the factories except one each in Bombay and Hyderabad and two in West Bengal pay annual bonus to their workers. The factories belonging to the Tobacco Manufacturers (India) Ltd., and Vazir Sultan Company in Hyderabad pay one-twelfth basic wages of the workers as annual bonus and one-sixth of the basic wage as gift every year. They also give a cigarette allowance or free cigarettes and free uniforms to their workers.

The hours of work are generally 48 per week. The period of rest interval is one hour. Seven units, i.e., two in Bombay and one each in Bihar, Uttar Pradesh, West Bengal, Hyderabad and Mysore work a late shift which extends up to midnight. All the units grant weekly holidays and, in addition, workers also enjoy certain leave privileges.

Only two units, one each in Bombay and West Bengal, have provided housing facilities to their workers. With the exception of one unit each in Bombay and Hyderabad, all units have provident fund schemes. About 10,943 out of a total of 11,514 workers employed in these units are members of these funds. Except for two units each in Bombay and Hyderabad and one in West Bengal, the remaining units have gratuity schemes. Only nine units, one each in Bihar, Uttar Pradesh, Hyderabad and Mysore, two in West Bengal and three in Bombay incurred expenses on welfare amenities, the amounts spent by them during the years 1952, 1953 and 1954 being Rs. 21,90,695-9, Rs. 21,19,870 and Rs. 17,57,819-11, respectively.

FUTURES IN COCONUT OIL

The Government of India has decided to accord recognition to the Alleppey Oil Millers and Merchants Association, Alleppey, to conduct forward trading in coconut oil. The recognition will become effective as soon as the Association has completed the modifications in its articles of association, trading by-laws and working procedures to the satisfaction of the Forward Markets Commission.

The above decision has been taken in pursuance of the recommendations of the Forward Markets Commission which submitted its report after examining the question of permitting futures trading in coconut oil and considering applications for recognition from the various associations concerned with the establishment of futures market in coconut oil. In its report the Commission recommended that section 15 of the Forward Contracts (Regulation) Act should now be applied to coconut oil in the State of Travancore-Cochin, that a futures market should be established immediately at Alleppey and that the Association mentioned above should be recognised for a period of three years. The Government, it may be noted, had banned, on 28th January 1955, transferable specific delivery contracts for purchase or sale of coconut oil in the country, except in the State of Travancore-Cochin, under section 17 of the Forward Contracts (Regulation) Act, 1952. Now under section 15 of the Act, futures market operations have been permitted.

BRITISH EXPORTS

The value of Britain's exports in January this year was £258,000,000. This was one per cent. less than the monthly average for the fourth quarter of 1955, but 6½ per cent. above the average for 1955 as a whole. Imports amounted to £346,300,000, 3½ per cent. more than the average for the fourth quarter of 1955, and seven per cent. above the average for 1955 as a whole.

Re-exports increased sharply to £14,200,000, £4,300,000 more than the monthly rate in 1955.

The excess of imports (valued c.i.f.) over exports and re-exports (valued f.o.b.) was £74,200,000 in January, £12,100,000 more than the average for the fourth quarter, and just over £2,000,000 more than the monthly average for 1955.

U.K. exports to North America in January were valued at £26,100,000, 15½ per cent. less than the monthly average in the fourth quarter of 1955.

Exports to the U.S.A. amounted to £16,000,000, 11 per cent. below the monthly average for the last quarter of 1955, but five per cent. above the monthly rate for the whole of 1955. Exports to Canada, which are usually seasonally low at this time, amounted to £10,100,000.

An Indo-Swedish Combine is shortly to put up an up-to-date factory for the manufacture of typewriting machines in Madras. This concern proposes to produce about 2,000 to 3,000 units a year for the present. Later on, the factory would be expanded to produce 6,000 units per annum. Prior to the manufacture, the concern will start "assembling" the machines; a Swedish technician is expected to arrive at Madras shortly for this purpose. Some Indian personnel are already undergoing training in Sweden and three more qualified engineers will be sent for training shortly. The factory is to be located at Guindy, a suburb of Madras City.

Mysore
TRANSFORMERS
1. Low Magnetic and Current Loadings.
2. Robust Mechanical Construction.
3. Every Modern Feature Incorporated.
4. Inspection by Trained and Qualified Staff at Every Stage of Construction.
5. Every Unit Tested Fully.

MIDDLE CLASS IN BOMBAY CITY

RESULTS OF SURVEY OF ECONOMIC CONDITIONS

COMMENTING on the report on middle class economic survey conducted by the Gujarat Chamber of Commerce in Ahmedabad City, we observed in these columns three weeks ago that there was an urgent need for improving the conditions of this class. This need is all the greater in an urban centre like Bombay City, where, thanks to high living costs, this class is subjected to relatively greater hardship. A perusal of the report on the survey of economic conditions of middle class families—middle class here covers persons paying house rent ranging from Rs. 16 to Rs. 75 per month—carried out by the Bombay Branch of the Indian Statistical Institute sometime ago brings out clearly the difficulties of middle class families in the City. Out of the 1,024 middle class households (with an average of 5.62 persons each) investigated in the survey, as many as 970 families (94.7 per cent. of the total) live beyond their means, the extent of their deficit ranging from 13.6 per cent. for the Rs. 75-Rs. 99 expenditure level group to 4.6 per cent. for the Rs. 100-Rs. 149 group. Only 54 households—that is, Rs. 150 and above expenditure level group—are in a position to save something; even here, the average level of saving is not more than 1 per cent.

The average monthly expenditure per household comes to Rs. 326, as against receipts (including money value of concessions) amounting to Rs. 303. The deficit thus averages Rs. 23. In addition to this deficit, there are payments for old debts (Rs. 7) and provident fund and insurance premium (Rs. 22). In other words, the average middle class household has to meet an expenditure of Rs. 355 or 17 per cent. over and above its monthly income of Rs. 303. The average deficit is highest—26.2 per cent.—for persons employed in commercial firms and least—17.6 per cent.—for Government employees. The percentage deficit for persons employed in railways and other institutions is 19.1 and 21.2, respectively. Even assuming that the middle class households meet the additional outlay from past savings or from undisclosed sources of current income, it is clear that a large majority of this class must be leading a hand-to-mouth existence. It is also likely that they are getting into debt. The average outstanding indebtedness per household is estimated at Rs. 367.

Details of Expenditure

The total average monthly expenditure of a middle class household, including expenses on current consumption items but excluding remittances for supporting dependents, is Rs. 319. The bulk of this expenditure is accounted for by food, followed by rent and electricity, clothing and footwear, and fuel. The following table gives the major items of expenditure and the percentage share of each in the total:

	Amount actually spent	*Percentage share*
	Rs.	
Food	153.88	48.1
Rent and electricity ...	26.77	8.4
Clothing and footwear ...	18.63	5.8
Fuel	14.35	4.5
Services	20.36	6.4
Conveyance	8.74	2.7
Amusements and recreation	3.08	1.0
Cigarettes, tobacco, etc.	4.86	1.5
Educational	9.57	3.0
Medical	10.37	3.3
Religious ceremonies ...	13.63	4.3
Travel	8.58	2.7
Other items	26.60	8.3
Total ...	319.42	100.00

There is, according to the Bombay enquiry, considerable variation in all the aforesaid items of expenditure, except fuel, among the different expenditure level groups. The expenditure per house on food items in the highest group is nearly twice that in the lowest group, although the average number of consumption units in the latter is higher at 5.3, as against 3.3 in the former. Similarly, the average expenditure per household on rent and electricity in the highest group is nearly twice that in the lowest group and the expenditure on clothing, footwear, etc., is four times greater.

The average monthly income of a middle class household is, as already stated, Rs. 303. The income from main occupations is the chief source, contributing about 92 per cent. of the total income of the head of the household. Subsidiary occupations yield only 2.8 per cent. and the money value of concessions account for less than 1 per cent. The balance is made up of income from property (1.7 per cent.), income from investments (0.2 per cent.) and income from "other" sources (2.8 per cent.). The principal occupation is the mainstay for most of the households and only at higher income levels, income from property and some subsidiary occupations give a little additional remuneration. Further, persons in Government service appear to rely entirely on their main source, whereas persons in "other" institutions have to supplement their main income by some other means. The popular belief that members of a large number of middle class households depend, to a sizable extent, on supplementary earnings does not appear to be true, though it may be true in particular cases.

Extent of Unemployment

About 6.7 per cent. of all adult males in the households is unemployed and the average number of persons (adults as well as children) dependent on the head of an average middle class household is about 3.6. Nearly 67 per cent. of the households lives in chawl-type tenements and the rest in self-contained flats or houses. Each middle class residential tenement has, on an average, less than two living rooms of 243 sq. ft. each. The average living area available per resident is thus only about 43 sq. ft. Only 45 per cent. of the tenements possesses separate kitchens and less than 40 per cent. has bathrooms exclusively for the use of residents of the tenement. In about 65 per cent. of the tenements, no arrangements exist inside for washing clothes or cleaning utensils. Regular repairs are carried out only in about 38 per cent. of the tenements and whitewashing is done regularly in not more than 9 per cent. of the tenements. The majority of tenements cannot boast of any extra amenities such as a compound, a garden, or a common room.

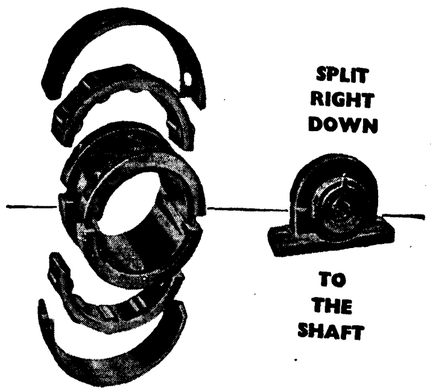
World rice (rough) production in the 1955-56 crop year (August to July) is forecast by the U.S. Department of Agriculture at 270,000 million lbs. This represents an increase of 3 per cent. over the 261,300 million lbs. produced in the preceding year and is 2.5 per cent. below the record harvest of 276,000 million lbs. in 1953-54. The increase in production is attributed to higher yields per acre in some areas and some extension of acreages. World rice acreage is reported at 199 million acres, as compared with 196 million acres a year before and 202 million acres two years before. The largest crop increases are in Asia, where 88 per cent. of the world's rice output is expected to be harvested. Particularly good yields are reported in Japan and Thailand, and the rice crops of Burma, Pakistan and the Philippines exceed those of the last crop year.

A Bill which seeks to wipe out any restrictive trade practices that may be breaking the nation's drive for economic recovery has been published by the British Government. The two main objects of the Bill are (1) to end the practice whereby manufacturing interests, through collective action, can enforce resale price conditions on their products and (2) to set up an official register of existing restrictive trading agreements—open to public inspection except where this would betray legitimate trade secrets. The restrictive agreements to which the Bill applies include recommendations by trade associations to their members and also agreements not explicitly restrictive which give benefits to people who comply with certain conditions. Restrictions applying exclusively to exports or overseas trade which does not involve imports into Britain or which relates to employment, wages, hours and conditions of work are not, however, affected by the Bill.

COOPER

Split

ROLLER BEARINGS



Cooper Split Roller Bearings are regular anti-friction roller bearings with the ADDED feature of being split right down to the shaft. The split feature enables the user to apply an anti-friction bearing where it would be impracticable or impossible to mount solid ball or roller bearings.

The split feature does not limit the use of the Cooper bearing, - a wide range of dimensions and load capacities is available to suit the majority of applications, and many Cooper Split Roller Bearings have been used where a solid bearing would have been adequate. The selection of Cooper Bearings in such cases is based on a record of dependability and long life.

Cooper Split Roller Bearings are first choice for continuous process plant equipment and other modern machinery.

ADONI, 28*th January* 1956.

Note.—The Dividends if sanctioned at the General Meeting will be paid by Warrants to all those shareholders whose names stand on the Register of the Company on the 26th March 1956.

SUGAR

(*Concluded from page* 344)

part of the Srivastava formula in India. The formula is comparatively simple, although it calls for determination of fibre per cent. cane, in addition to brix and sucrose-content. Juice samples are analysed and fibre determined by a Government check chemist for every 30 tons of cane crushed. The sugar extractable from the cane supplied is then calculated, applying the C.C.S. formula. The standard for payment each week is the average cane quality in that week. The average cane price is worked out for the whole season and the cane supplier receives payment either at this price rate each week or at a proportionately higher or lower rate according as the quality of his cane is superior or inferior to the average quality for that week. Another special feature of the Queensland system is that the supplier is paid at a fixed and presumed efficiency rate of sugar extraction, whatever may be the actual rate of extraction by the factory. This gives the factory the benefit of its own improvements in the processing of sugar.

The foregoing account will reveal that the system of payment for sugarcane varies from country to country, but the general principle adopted is that the sugarcane grower gets for his product a certain proportion, varying from 50 to 70 per cent. of the price of sugar that is manufactured from the same. The payment for cane on quality basis has been rendered feasible in these countries by the fact that sugarcane is grown either by the factories themselves or by private cultivators on large estates. The estates sell their cane to a factory on agreement. The basis for the determination of the sucrose content of the cane for making payment is the pol per cent. first expressed juice with a correction factor computed from the data relating to the previous crop. The question now arises as to which system will suit India, where, with some exceptions, sugarcane cultivation is carried on by thousands of agriculturists on small plots of lands scattered all over the country. This issue will be discussed in these columns next week.

INDIA SUGARS AND REFINERIES MAINTAIN PROGRESS

PRODUCTIVE CAPACITY TO BE DOUBLED

A SHARP rise in the quantity of sugarcane crushed, an equally impressive expansion in the output of sugar to a record level, and a modest increase in earnings are the outstanding features of the results of the India Sugars and Refineries Ltd. (*Managing Agents:* The India Sugar Agencies Ltd., Madras) for the year ended 30th September 1955. The gross profit for the year under review has been marked up to Rs. 13.21 lakhs from Rs. 12.17 lakhs, to which level it had risen from Rs. 10.42 lakhs earned in 1952 53. Thus, the rise in profit has been maintained for the second year in succession. The net profit which had gone up from Rs. 1.95 lakhs to Rs. 5.18 lakhs in the previous year, has staged a further, albeit small, rise to Rs. 5.39 lakhs in the year under review.

A dividend of 14 per cent. has been recommended by the Directors for the year under review, as against 17½ per cent. distributed for 1953-54; but the latest dividend is on an increased capital. It may be recalled that the dividend of 17½ per cent. paid for the previous year was itself on a higher capital of Rs. 28.71 lakhs raised by the issue of bonus shares of the value of Rs. 12.71 lakhs, out of a sum of Rs. 16 lakhs capitalised from out of the general reserve. The latest dividend is on a still higher capital of Rs. 31.48 lakhs raised by a further issue of shares of the value of Rs. 2.80 lakhs, out of the bonus shares suspense amounting to Rs. 3.29 lakhs, so that the quantum of distribution is much higher than that paid in either of the two preceding years. It also represents over 27.5 per cent. on the old capital before the capitalisation of reserves.

Record Sugar Output

The Company's factory crushed 127,609 tons of sugarcane during the year under review and produced 13,067 tons of sugar, as compared with 97.155 tons of cane crushed, producing 9,985 tons of sugar. Though the quantity of cane crushed by the factory has gone up substantially in the past two years, it still falls short of the record crushing of 1951-52. The output of sugar is, however, a record and exceeds the previous best of 12,502 tons by 565 tons. The Company has made a provision for the payment of Rs. 2 lakhs as bonus to sugarcane growers under the S.I.S.M.A. formula. The Government of India has not revised its bonus-payment formulæ for sugarcane purchases; however, the Company is committed to paying a bonus of about Rs. 2 lakhs for the past season to its sugarcane suppliers, if the Government of Mysore adopts the S.I.S.M.A. formula in its factory at Mandya. Accordingly, a provision for this liability has been made.

The Company's progress during the past three years is reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September			
	1955	1954	1953	1952
Sales and closing stock ..	117 54	90 24	107 28	133 66
Other income	2 81	4 82	2 67	1 71
Expenses	107 14	82 89	99 53	115 20
Gross profit	13 21	12 17	10 42	20 17
Managing Agents' remuneration	1 36	1 11	0 72	1 96
Depreciation	0 46	0 38	4 00	1 37
Provision for taxation and contingencies	6 00	5 50	3 75	7 50
Net profit	5 39	5 18	1 95	9 34
To reserves	..	..	..	6 00
Dividends—				
7½ per cent. preference ..	0 09	0 09	0 09	0 09
Ordinary	4 41 (14%)	3 11 (17½%)	3 25 (25%)	3 25 (25%)
Carry forward	5 22	4 30	2 32	3 71
Cane crushed (in tons) ..	127,609	97,155	89,660	132,634
Sugar produced (in tons) ..	13 067	9,985	9,425	12,502

The paid-up capital was increased during the year under review from Rs. 29.01 lakhs to Rs. 32.71 lakhs, as stated above, by the issue of 27,971 ordinary shares of Rs. 10 each as bonus shares. There are still 4,968 ordinary shares, out of the 160,000 bonus shares, to be issued. The present paid-up capital is thus made up of 327 068 ordinary shares of Rs. 10 each and 1 229 (7½ per cent.) cumulative preference shares of Rs. 100 each. Besides this paid-up capital, there is a sum of Rs. 2.91 lakhs standing to the credit of preference share application money received in respect of preference issue made in September last (a reference to which is made below). The reserves and surplus aggregate Rs. 19.22 lakhs and provision for taxation and contingencies amount to Rs. 31.19 lakhs. The current liabilities aggregate Rs. 39.13 lakhs. The gross block of the value of Rs. 30.53 lakhs has been written down to Rs. 11.84 lakhs. The current assets, at Rs. 99.83 lakhs, exceed the current liabilities and provision for taxation and contingencies by a margin of Rs. 43 51 lakhs.

The Company has decided to increase its crushing capacity from 700 tons to 1,000 tons per day by putting up an additional plant. The necessary permission has been obtained from the Union Ministry of Commerce and Industry. While implementing this scheme, the Directors also wish to replace and rehabilitate partly the existing plant, so that the Company can have, when the expansion is complete, a modern and efficient factory to crush 1,000 tons per day and capable of crushing 1,500 tons per day with some minor additions. The additional plant is expected to commence operations by the beginning of December 1956.

Financing the Scheme

The total cost of the scheme is estimated at Rs. 58 lakhs, including an additional working capital of Rs. 10 lakhs. More than half of this expenditure will be on imported plant. Part of this capital expenditure is proposed to be met from the Company's internal resources and the working capital is expected to be met by way of borrowings from banks. As regards the balance, the Company had already issued 4,771 preference shares (7½ per cent. taxable cumulative) of Rs. 100 each at par to the holders, as on 15th September 1955 in the ratio of one preference share for every Rs. 700 worth of preference and ordinary shares held. An application has been made to the Controller of Capital Issues for permission to issue 320,000 ordinary shares of Rs. 10 each at a premium of As. 8 per share to the existing shareholders as on 12th March 1956 in the ratio of one new share for every old share. A sum of Rs. 5-8 per share is payable on application, including the premium of As. 8, and the balance of Rs. 5 per share will be called later on either in one lump sum or in instalments. The new ordinary shares will rank for dividend as from 1st July 1956 in the proportion to the capital for the time being paid-up thereon.

The Company has also a stake in the Salar Jung Sugar Mills Ltd. This Company has also been permitted to expand its crushing capacity to 600 tons per day. The Directors hope that the expansion programme of the Salar Jung Mills will synchronise with that of the India Sugar and that, by this time next year, both the units will be in economic production and gainful working, so that about 275,000 bags of sugar will be available every year in this region.

Outlook

Referring to the outlook for the Company, the Directors observe, in the course of their circular to the shareholders regarding the proposed issue of capital, as follows:

"Your Directors need not point out that the profits we shall make with our expanded capacity largely depend on sugar marketing and sugarcane-buying conditions existing from time to time. You also know that these conditions are largely influenced by State policy. We have every reason to hope that, with their interest in increased production of sugar, both State and Central Governments will *foster reasonably favourable conditions.*"

The Company has been manufacturing sugar in Hospet from 1935 onwards. Since then, it has produced 134 844 tons of sugar and paid income-tax amounting to over Rs. 55 lakhs, in addition to other taxes aggregating Rs. 1.16 crores. The cane growers have received Rs. 4.79 crores as purchase price for cane supplied and shareholders Rs. 30 lakhs by way of tax-free dividends. An idea of the improvement brought about by the Company in the conditions for sugarcane farming in the area where the Company's factory is situated can be had from the following table:

	1953-54	1945-46
Yield of cane per acre (in tons)	30 to 35	18
Yield of sugar (tons per acre)	3.3	1.6
Sugar recovery (per cent.) ...	10.3	9
	Rs.	Rs.
Price paid for cane per ton ...	42	26
Gross return per acre to the cultivator	1,400	470

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 21-2 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 7.1 per cent. per annum, free of income-tax.

THIRUMBADI RUBBER'S PROFIT IMPROVES

FRESH CAPITAL TO BE RAISED

THE earnings of the Thirumbadi Rubber Company, Ltd. (Agents and Secretaries: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Malabar), for the year ended 30th September 1955, disclose a moderate improvement over those for the previous year. The gross profit, for instance, has gone up from Rs. 1.58 lakhs to Rs. 1.84 lakhs. This increase in profit is in refreshing contrast to the shrinkage noted in the previous year and has served to restore the upward trend in the Company's earnings noted since 1947-48. Also, the profit for the year under review has very nearly come up to the record level of Rs. 1.88 lakhs touched in 1952-53 and is the second highest in the history of the Company. The net profit, which had declined from Rs. 1.71 lakhs to Rs. 0.93 lakh in the previous year, has recovered to Rs. 1.08 lakhs in the year under review.

The allocation to the general reserve has been maintained at Rs. 25 000, to which level it had been reduced last year from Rs. 1 lakh. The cut in dividend from 30 per cent. paid for 1952-53 to 10 per cent. for 1953-54 on the increased capital doubled by the capitalisation of part of the reserves (which is equivalent to 20 per cent. on the old capital) has been partially restored with the proposed distribution of 12½ per cent. for the year under review or 25 per cent. on the old capital—the same as that paid for 1951-52.

The chief factors which have contributed to the improvement in profit to a near-record level are: (1) the increase in the rubber crop harvested, (2) the small decline in the cost of production and (3) the increase in the controlled selling prices granted during the year. The Company's crop of rubber harvested amounted to 323,000 lbs., an increase of 8 000 lbs. over that for the previous season. Though this increase has partially restored the fall in crop for 1953-54 from 328,260 lbs. to 315,000 lbs., the crop still falls short of not only the original estimate for the season of 335 000 lbs. but also the actual crop harvested in 1952-53 or 1951-52. The shortfall in crop is attributed to influence of weather. The cost of production has, however, shown a small but welcome decline from As. 12 81 per lb. to As. 12 66 per lb., thus reversing slightly the upward trend in costs noted since 1949-50. Nevertheless, the cost of production for the year under review is very much higher than that for any of the years preceding 1953-54. The average price realised has gone up from As. 20.73 per lb. to As. 22.02 per lb., thanks to the increases in statutory price of rubber, once in February 1955 from Rs. 138 to Rs. 150 per 100 lbs. (for Group I rubber f.o.b. Cochin) and again in September 1955, to Rs. 155-12 per 100 lbs.

The following comparative table brings out the progress of the Company during the past three years:

	For the year ended 30th September			
	1955	1954	1953	1952
	Rs.	Rs.	Rs.	Rs.
Sale proceeds of rubber	3,64,037	3,54,647	3,62,778	3,06,121

Average sale price per lb. ..	22 02	20.73	20 58	19.63

† On the higher capital of Rs. 6,10,200, doubled during the year by the capitalisation of Rs. 3,05,100.

The crop for the current season is estimated at 335,000 lbs. to be produced at a cost of As. 12.69 per lb. f.o.b.

The Company's balance-sheet as on 30th September 1955 shows that the authorised capital of the Company stands raised from Rs. 6.10 lakhs to Rs. 9.15 lakhs. In August 1955, the authorised capital was increased by the creation of 305,100 new ordinary shares of Re. 1 each. The new shares have not yet been issued to the shareholders, as the sanction of the Controller of Capital Issues has not been received yet. The new issue is for the purpose of financing the purchase of a new estate. The paid-up capital is unchanged at Rs 6.10 lakhs, after it had been doubled by the capitalisation of Rs. 3.05 lakhs in June 1954. With the addition of Rs. 25,000 from the profit for the year under review, the reserves and surplus stand at Rs. 3.25 lakhs, besides which there is a taxation reserve amounting to Rs. 1.04 lakhs, including a provision of Rs. 1.01 lakhs to cover the liability under the Madras Agricultural Income-tax Act for the seasons 1953-54 and 1954-55. The current liabilities aggregate no more than Rs. 1.15 lakhs. The gross block of the value of Rs. 8.97 lakhs, including cost of development amounting to Rs. 5.80 lakhs, has been written down to Rs. 8.31 lakhs. During the year, the Company spent Rs. 64,403 on the upkeep of immature areas and on opening and planting of 1955 new clearing of 50 acres. The current assets amount to Rs. 3.23 lakhs and more than adequately cover the current liabilities and provision for taxation.

The Company has decided to purchase the Calicut Estate, consisting of 1,023 acres of mature rubber of a total extent of 1,455 acres, from the Kerala Calicut Estates Ltd. The purchase of this estate is to be financed out of the proposed issue of ordinary shares (referred to above) and a debenture issue of Rs. 5 lakhs. As soon as the sanction of the Controller of Capital Issues is obtained, arrangements will be made for the issue of the new ordinary shares and debentures. The new ordinary shares will be issued at par to the stockholders as on 16th August 1955, in the ratio of one new ordinary share of Re. 1 for every Rs. 2 in the nominal value of stocks held. The debentures will carry interest at 7½ per cent. per annum taxable. They are redeemable after five years from the date of issue at Rs. 50,000 per annum.

The ordinary stocks of the Company in units of Re. 1 each are being currently quoted at Rs. 2-4 *cum-div.* On an *ex-div.* basis, the proposed dividend gives a yield of 6 per cent. per annum.

APPOINTMENT OF MANAGING AGENTS OF COMPANIES

On applications received by the Central Government under sections 86J, 87B(C) and 87CC of the Indian Companies Act, 1913, many companies have been informed by the Government that their proposals for appointment or reappointment of managing directors or managing agents or transfer of office of the managing agents will be favourably considered by the Government, if they accept the modifications suggested by the Government in regard to the tenure, remuneration and powers of managing directors or managing agents concerned.

Since the Companies Act, 1956, is expected to be brought into force with effect from 1st April 1956, all companies, which have been so informed, will have to apply *afresh* to the Government under the provisions of the new Act, if they do not get the final approval of the Government to their proposals before 31st 1956. This fact is being brought to the notice of the companies concerned, so that, if they desire their applications to be finally disposed of under the provisions of the present Act, they may intimate to the Government as early as possible, and in any case not later than 15th March 1956, their acceptance of the conditions imposed by the Government.

INVESTMENT CORPORATION OF INDIA LTD.

The Investment Corporation of India Ltd. one of the companies affiliated to the Tata organisation, has been appointed Registrars for the redeemable preference shares of the Standard-Vacuum Refining Company of India Ltd.

It is the first time in this country that an organised service of this nature is being offered to large industrial concerns. This type of service, normally available in countries like England and America, consists of advising industrial concerns as to the proper and correct procedure for the issue of prospectus, for the handling of publicity and of applications, for suggesting a fair basis of allotment in case of oversubscription, for expediting the issue of allotment letters and refund of excess subscriptions. It also advises on the proper methods of maintaining registers and subsequent handling of transfer of shares. In order to ensure quick and expeditious running of this service, most modern methods are being employed.

The Standard-Vacuum Refining Company of India Ltd. is the first company in India to have its share issue handled by the Investment Corporation.

COMPANY LAW COMMISSION

A five-man statutory commission under the chairmanship of Mr. Tenneti Viswanathan, former Finance Minister of Andhra State, will be appointed to advise the Government of India on the administration of the Indian Companies Act, 1956, which is expected to be enforced from 2nd April next. Mr. J. D. Choksi, of the Tata Industries, Bombay, Mr. G. D. Ambekar, President of the Indian National Trade Union Congress, Mr. C. S. Shastri, President of the Institute of Chartered Accountants, and Mr. B. N. Chatturvedi, President of the Calcutta Stock Exchange, will be its members. Mr. Viswanathan, who will be the wholetime chairman, will have his headquarters in New Delhi. The Commission will be required under the new Companies Act, to inquire into and advise the Government on applications for the termination of a managing agency, appointment of managing director and managing agents, the remuneration of directors, variation in their terms of a managing agency agreement and related subjects as well as such matters as may be referred to it by the Government.

Points From The Chair

Development of Sugarcane in Bhopal

"IT is heartening to note that the Government is alive to the very important question of sugarcane development under the second Five-year Plan. The area covered under intensive cane cultivation in the first Five-year Plan period was small being only about 625,000 acres which represents jute one-fifth of the total acreage under sugarcane. I only hope that the Bhopal Government would take some concrete steps to develop sugarcane in our factory area as non-availability of cane has always been our main problem, and although our farms have been showing steady improvements in yields . . . . water-supply for irrigation has always been our limiting factor. Unfortunately, the area under sugarcane in our zone of supply, since it decreased in the year 1951 due to the failure of the monsoon, has not been showing signs of returning to normal at a sufficiently fast pace and even after four years, it is still 20 per cent. lower than what it used to be. The normal area of cultivators in our zone used to be about 4,300 acres and, unless this is doubled, we cannot expect to have a reasonably good crush as supplies from our farms are now not likely to increase appreciably. I have referred above to the efforts the Government is proposing to make in this connection, but till now no tangible results are visible and I am afraid the problem would remain as serious as ever unless the Government takes a more realistic view of the situation and their intentions are translated into action."

M. M. AMERSEY,
Bhopal Sugar Industries Ltd.

Wider Use of Office Machinery

"Much the larger proportion of the equipment we manufacture, distribute, install and service is rented to users. The system of renting equipment in an expanding market necessitates the provision of more capital and financial resources of one kind and another as the business develops. This is a requirement with which your Board is at present dealing. This need for loans and capital for expansion is, in fact, the best indication of both the progress and the strength of your Company. The revenue of your Company has more than doubled since 1950. This not only reflects the trend towards the wider use of office machinery, but gives some indication of the scale on which we should be prepared to expand our activities, provided trading conditions remain favourable and assuming we are accordingly to maintain our place in the market. I would like to emphasise the important role taken in our business by our card-producing works in Letchworth and Alderley Edge, and in India, South Africa, Australia and Egypt. Cards are the basic requirement of our equipment and the sale of these represents a significant element in our revenue."

SIR CECIL M. WEIR,
British Tabulating Machine Co., Ltd.

World Sugar Agreement

"The sugar Bill does not interfere in any way with the terms of the Commonwealth Sugar Agreement, which gives Empire producers a market at fair negotiated prices for a large proportion of their production up to the end of 1963. For the remainder of their production British refiners have expressed their willingness to buy Empire sugar in preference to that of any non-Empire country and, as the duty on Empire sugar is £3 15s. per ton less than on foreign sugar, they have undertaken to pay this amount more for Empire sugar compared with foreign sugar. We support the Agreement, because not only does it ensure a remunerative market for Empire sugar, the crop on which many of the Colonies depend almost entirely for their prosperity, but it also ensures that over 90 per cent. of the sugar consumed here will come from sterling sources. The agreement also has the effect of setting a limit to the amount of sugar manufactured from home-grown beet. The beet industry is important to agriculture, particularly in the Eastern counties. It is also important strategically. While we support the view that it should continue at its present scale, we, as refiners and Empire producers, are naturally not anxious to see it expand."

IAN D. LYLE,
Tate and Lyle, Ltd.

True Measure of Disinflation

"All this clearly implies that the true measure of the disinflation brought about since February is the decline of just on 6 per cent. in bank deposits, leaving them no higher than in the middle of 1953. It is this decline in deposits—and, therefore, in the totality of bank assets—which is ultimately of importance, not the movement of the single asset, advances.... Conversely, a curtailment of advances would not spell credit restriction in the wider sense if it were to be offset by an increase in other bank assets: sooner or later, and through one channel or another, the funds created by the acquisition of those other assets would find their way into active employment. It is for this reason that a policy directed only to the restriction of advances can never really be a substitute for a proper monetary policy."

THE RT. HON. SIR OLIVER FRANKS,
Lloyds Bank Ltd.

COMPANY MEETINGS AND DIVIDENDS

AGARPARA JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 27th February, 1956. Dividend: As. 6 per share. Transfer books remain closed from 17th to 27th February 1956, both days inclusive.

INDIA JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 28th February 1956. Transfer books remain closed from 18th to 28th February 1956, both days inclusive.

MEGNA MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 28th February 1956. Transfer books remain closed from 18th to 28th February 1956, both days inclusive.

NORTH WEST COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th February 1956. Dividend: As. 12 per share (i.e., 7½ per cent.). Transfer books remain closed from 20th to 29th February 1956, both days inclusive.

BUDGE-BUDGE JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 2nd March 1956. Dividend: Rs. 2-8 per share. Transfer books remain closed from 18th February to 2nd March 1956, both days inclusive.

NATIONAL CO., LTD. Half-yearly General Meeting, Calcutta, 2nd March 1956. Dividend: As. 12 per share. Transfer books remain closed from 18th February to 2nd March 1956, both days inclusive.

DALHOUSIE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March 1956. Dividend: Re. 1 per share. Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

KINNISON JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March 1956. Dividend: Rs. 6 per share. Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

LANSDOWNE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March 1956. Dividend: Rs. 2 per share. Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

LAWRENCE JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March 1956. Dividend: Re. 1 per share. Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

NAIHATI JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March 1956. Dividend: *Nil.* Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

STANDARD JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March, 1956. Dividend: *Nil.* Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

UNION JUTE CO., LTD. Half-yearly General Meeting, Calcutta, 3rd March 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 21st February to 3rd March 1956, both days inclusive.

ANGLO INDIA JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 9th March 1956. Transfer books will remain closed from 1st to 9th March 1956, both days inclusive.

INDIA SUGARS AND REFINERIES LTD. Annual General Meeting, Hospet, 12th March 1956. Dividend: Rs. 1-8-2/5 per ordinary share. Transfer books remain closed from 22nd February to 12th March 1956, both days inclusive.

ROHTAS INDUSTRIES LTD. Annual General Meeting, Dalmianagar, 20th March 1956. Dividend: Re. 1-8 per old ordinary share, payable on 6th March 1956. Transfer books remain closed from 20th February to 6th March 1956, both days inclusive.

CALEDONIAN JUTE MILLS CO., LTD. Dividend of Rs. 2-8 per ordinary share, for the half-year ended 31st December 1955.

BELVEDERE JUTE MILLS CO., LTD. Dividend of Rs. 2-8 per ordinary share, for the half-year ended 31st December 1955.

BENGAL COAL CO., LTD. Dividend of Rs. 17-8 (includes a bonus of Rs. 7-8 per share) per ordinary share, for the half-year ended 31st October 1955.

KOHINOOR MILLS CO., LTD. Dividend of Rs. 12 per share (final) for the year ended 31st December 1955, payable on 20th March 1956. Transfer books remain closed from 20th February to 19th March 1956, both days inclusive.

WALCHANDNAGAR INDUSTRIES LTD. Dividend of Rs. 18 per ordinary share, payable on 2nd April 1956. Transfer books will remain closed from 16th to 31st March 1956, both days inclusive.

COMPANY REGISTRATIONS

C. S. MEHTA & CO., LTD. (First Director: Mr. Chimanlal S. Mehta.) Business: Buyers, sellers, importers and exporters in mercantile commodities. Authorised capital: Rs. 5,00,000. Private company. Address: Latif House, Iron Market, Bombay 9.

FRANCO-INDIAN MANUFACTURERS LTD. (First Director: Mr. Michel Postel.) Business: Manufacturers of drugs, patent medicines, chemicals, etc. Authorised capital: Rs. 5,00,000. Private company. Address: Bapnu Ghar, Hornby Vellard, Bombay 18.

DIFFICULT PERIOD ENVISAGED FOR INDIAN JUTE MILLS

SOUTH KARANPURA COAL SUFFERS LOSS

Standard Jute Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 2,43,207 (Rs. 37,680) for depreciation, the profit and loss account shows a loss of Rs. 2,95,112 (profit of Rs. 30,694) which is to be reduced by amount brought forward from previous half-year Rs. 19,821 (Rs. 2,588), transfer from general reserve Rs. 26,946 (Rs. 20,000), leaving a balance of Rs. 2,48,345 (credit of Rs. 53,282). To this amount has to be added the transfer to provision for contingencies Rs. 26,946 (*nil*), leaving a net loss of Rs. 2,75,291 (credit of Rs. 53,282) which the directors recommend should be carried forward.

The modernisation programme of the mill was completed in November 1955. The process of modernisation did not proceed, according to the Directors, as smoothly as in certain other mills, due mainly to labour resistance and full efficiency was not achieved until December 1955. Modernisation was also carried out during a period of falling goods prices, so that the additional production obtained was sold at a loss. During the period a substantial sum was paid to labour by way of retrenchment benefits.

With the removal of all export duties by the Government of India with effect from 1st August 1955, Indian mills were put in a stronger position to meet competition from other countries.

The devaluation of the Pakistani rupee on 31st July 1955, has not proved of any benefit to the Indian industry, in view of the decision of the Government of Pakistan to maintain its minimum export prices at the same sterling level as previously. Further, it has increased the export duty on raw jute, excluding habi jabi and cuttings, by Re. 1 per maund.

As a result of the Third Omnibus Tribunal Award the mill is called upon to shoulder an additional burden of approximately Rs. 10 per ton.

With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. will be unsealed—leaving 5 per cent. of the total looms sealed.

Since the close of the half-year under review, the Supreme Court of India has issued judgment in favour of the West Bengal Government in respect of an appeal made by the Shree Ganesh Jute Mills Ltd., against the levy of Bengal Sales Tax on sales to the Government of India during the years ended 31st March 1947 to 31st March 1949. Sales tax claimed by the West Bengal Sales Tax Authorities on the Standard Jute Company's sales to the Government of India amounts to Rs. 57,767. Out of this, a sum of Rs. 30,821 relates to contracts wherein it is stipulated that any sales tax ultimately payable to the Bengal State Government will be paid by the Central Government, but in respect of the balance of Rs. 26,946, no specific stipulation to the same effect exists. Representations, however, are now being made to the Government of India through the medium of the Indian Jute Mills' Association seeking assurance that local sales tax payable in respect of those non-stipulated contracts will also be paid by the Central Government.

The directors are unwilling to acknowledge any liability for sales tax on such sales, but in view of the Supreme Court's decision and as a matter of prudence the sum of Rs. 26,946 has been transferred this half-year out of general reserve account to profit and loss account and a like sum provided under the head of provision for contingencies.

In the period under review, trading conditions continued to be difficult. Initially prices of raw jute and manufactured goods drifted lower in the expectation of a bumper crop of good quality low priced jute and the removal of the fear of a tight position developing for old crop. The advent of serious flooding in the jute-growing districts with a consequent disruption of communications resulted in a shortage of raw material at consuming centres where prices advanced substantially. Even after communications were restored, imports were small and near delivery jute commanded a premium, making it difficult to dispose of the Company's goods at a profit. Stocks of finished goods in the industry have declined and now represent rather less than one month's production. During the half-year under review simultaneous business in standard constructions could only be concluded at a loss and the earning of even gross profits in the industry is thus dependent on taking correct speculative views as to the course of raw jute and goods prices.

Against the above background, shareholders may be interested to know that the approximate cost to the Birds/Heilgers group of jute mills of the benefits, apart from wages and dearness allowance, now granted to jute mill labour is Rs. 46 lakhs per annum made up of statutory leave Rs. 11 lakhs, festival leave Rs. 9 lakhs, sick leave Rs. 3 lakhs, provident fund Rs. 15.5 lakhs, retiring gratuities Rs. 5 lakhs and State Insurance Rs. 2.5 lakhs. In addition to the above, the latest Tribunal Award has increased the wages bill by approximately Rs. 14 lakhs per annum.

The desirability of improving the standard of living of jute mill workers is not in question but, with production costs thus substantially increased, the difficulties facing the industry in working at a profit under current market conditions will be readily appreciated. It should also be pointed out that the group's annual charge for depreciation is now approximately Rs. 35 lakhs. With growing competition from Pakistan and elsewhere, it would appear likely that the next few years will prove an extremely difficult period for the Indian jute mill industry.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	34,19,600	Block ...	79,57,504
Debentures	25,00,000	Stock-in-trade	10,91,979

		Capital expenditure in-progress	5,938
		Debts and advances ...	9,58,275
		Investments	1,56,507
		Cash ...	13,577
		Profit and loss account ...	2,75,291
Rs.	1,16,62,390	Rs.	1,16,62,390

South Karanpura Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st August 1955.

Raisings and despatches.—84,571 (99,663) tons of coal were raised and 85,487 (96,490) tons were despatched during the period in comparison with 90,000 tons raised and 93,324 tons despatched during tte previous half-year.

In the last report the directors referred to the proposal to change over from quarry to undercover mining. This is now in the process of implementation, but it will require a minimum of two years to obtain an economic output from this development. In the interval working conditions in the quarries have become difficult, owing to exhaustion of economic working with the result that raising costs now exceed selling prices.

Provided transport facilities become available in due time, it is hoped progressively to increase output from the Company's colliery from the present average of 12,000 tons per month to 30,000 tons per month.

After providing Rs. 26,164 (Rs. 32,469) for depreciation and including the sum of Rs. 7,546 (Rs. 276) brought forward from last half-year, the profit and loss account shows a debit balance of Rs. 51,533 (credit balance of Rs. 3,853 after paying 2½ per cent. dividend absorbing Rs. 21,875), which the directors propose to carry forward. The managing agents have decided to forgo their allowance in respect of this half-year.

As the Companies Act, 1956, which will come into effect as from the 1st of April 1956, provides for annual accounts and balance sheets with annual general meetings and as the computation of commission payable to directors and managing agents is required under the new Act to be on the basis of a percentage on net profits for the financial year of the Company, it has been decided that the Company adopts annual closing of accounts as from the year ending on the 31st August 1956. It has further been decided that the Board will review the position half-yearly with a view to pay an interim dividend, if possible.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	17,50,000	Block ...	22,71,113
Reserves ...	10,84,016	Capital expenditure in progress	10,872

		Profit and loss account ...	51,533
Rs.	36,92,378	Rs.	36,92,378

Budge-Budge Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October 1955.

After making necessary adjustments for taxation and transferring Rs. 1,25,000 (*nil*) from dividend equalization reserve there is a balance of Rs. 1,23,771 (Rs. 3,32,109) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 31,500 (Rs. 31,500) and on ordinary shares at Rs. 2-8 (Rs. 5) per share Rs. 90,000 (Rs. 1,80,000), leaving Rs. 2,271 (Rs. 1,20,609) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was unprofitable owing to the high price of raw jute in relation to the market for manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	40,31,627
Reserves ...	27,37,926	Stock of jute	19,73,448

Associated Stone Industries (Kotah) Ltd.

The directors of the above Company (Managing Agents: Rajputana Mining Agencies Ltd., Ramganjmandi, Rajasthan) submit the audited accounts of the Company for the year ended 30th September 1955.

The working of the Company has been quite satisfactory. The sales of polished stone has been showing a gradual increase for the last two years and this year also the sales of polished stone has increased and were 12,04,413 square feet. The total sales of rough and polished stone were 90,98,829 square feet and the sales of kheemuch stone were 1,61,680 square feet and 1,007 cubic feet during the period under report. The question of further development of company's business has been given active consideration by the directors and keeping in view numerous enquiries that are being received for the sand stone from various customers, during the year under review, the Company has acquired sand stone quarries, the stone excavated from which has been put in the market as an acid and alkali proof stone.

The year's working after allowing depreciation of Rs. 61,347 (Rs. 54,144) on assets has resulted in a profit of Rs. 4,21,820 (Rs. 12,19,288) which with the brought forward profits of the previous year of Rs. 9,34,100, makes a total of profits of Rs. 13,55,920 (Rs. 12,19,288). Out of these profits the directors recommend the following appropriations:—

For provision for charity and donations Rs. 10,000 (Rs. 10,000), for bonus to staff Rs. 25,000 (Rs. 15,000), and for bonus to labourers Rs. 25,000 (Rs. 21,000). The above appropriations, leave a balance of profits of Rs. 12,95,920 (Rs. 12,65,288) out of which the directors propose to appropriate a total of Rs. 2,39,188 (Rs. 2,39,188) as under:—

On 2,000 6 per cent. cumulative preference shares Rs. 12,000 (Rs. 12,000), on 85,000 ordinary shares at Re. 1 (Re. 1) per share Rs. 85,000 (Rs. 85,000) and on 1,00,000 deferred shares at Re. 1-6-9 (Re. 1-6-9) per share Rs. 1,42,188 (Rs. 1,42,188). This leaves a balance of profit of Rs. 10,56,733 (Rs. 9,34,100) which the directors propose to carry forward.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,50,000	Block ...	4,37,785
Reserves ...	4,49,950	Stock-in-trade	18,49,204
Liabilities ...	12,79,873	Stores, spare parts, etc.,	1,41,780
Profit and loss account ...	13,55,920	Other assets	2,000
		Debts, deposits and advances ...	18,31,882
		Investments	15,974
		Cash ...	3,57,118
Rs.	46,35,743	Rs.	46,35,743

W. H. Brady and Co., Ltd.

The directors of the above Company (Managing Director: Sir Joseph Kay, K.B.E., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The result of the year's working, after providing Rs. 7,00,000 (Rs. 5,00,000) for taxation, is a net profit of Rs. 10,80,061 (Rs. 10,79,736) which, together with the balance of Rs. 45,948 (Rs. 63,107) brought forward from last year's account, amounts to Rs. 11,26,009 (Rs. 11,42,843). The directors propose to make the following appropriations:—

To writing down investments Rs. 1,39,575 (Rs. 96,895), to writing down property Rs. 2,00,000 (Rs. 2,00,000), transfer to general reserve Rs. 1,00,000 (Rs. 1,00,000), transfer to gratuity fund Rs. 50,000 (*nil*) and paying a dividend of Rs. 20 (Rs. 20) per share free of income-tax Rs. 6,00,000 (Rs. 6,00,000). The balance to be carried forward to next year's account is Rs. 36,434 (Rs. 45,948).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	45,00,000	Block ...	4,17,500
Reserves ...	53,74,847	Stock-in-trade	52,50,084
Provision for taxation ...	16,37,903	Work-in-progress ...	1,34,046
Liabilities ...	39,09,172	Debts, deposits and advances ...	45,75,551
Profit and loss account ...	11,26,009	Investments	31,80,931
		Cash ...	29,89,819
Rs.	1,65,47,931	Rs.	1,65,47,931

N.B.—Figures within brackets relate to the corresponding period of the previous year.

GILT-EDGED WEAK

(From Our Own Correspondent)

BOMBAY, 22*nd February*

With the seasonal demand for bank credit gathering momentum, the call for funds from banks on the short-term money market was rather pressing during the week under review. But, as there was an acute shortage of floating funds, the volume of business was small. Nor was there any change in interest rates, as the Reserve Bank was a ready lender against usance bills at 3 per cent. It may be noted here that the new rate of 3½ per cent. plus the loss of stamp duty concession, is due to operate only from the 1st of next month.

In the inter-bank section, call money was quoted at 3 per cent. House money at call was unchanged at 3½ per cent. There was a good demand for short-term deposits and most of the banks offered 3¼ per cent. for one to six months.

The acute stringency in the money market is fully reflected in the poor response to this week's sale of the Government of India 91-day Treasury Bills and the sharp rise in the average rate of accepted tenders. The total amount offered was only a little over the amount invited for, namely, Rs. 100 lakhs. The exact amount offered was Rs. 100.75 lakhs, as against Rs. 153 lakhs in the previous week. The average rate of accepted tenders has gone up by 3 pies per cent. to Rs. 2-8-6 per cent. per annum, after having been maintained at Rs. 2-8-3 per cent. per annum for three successive weeks. This is the highest rate on record since the week ended 23rd September 1955. That, however, has not deterred the Reserve Bank from inviting tenders for next week, the amount of bills offered remaining unchanged at Rs. 1 crore.

Very minor changes are disclosed in the Issue Department of the Reserve Bank's statement for the week ended 17th February 1956. Notes in circulation are lower by Rs. 82 lakhs, while those held in the Banking Department have risen by Rs. 88 lakhs. In the Banking Department, the National Agricultural Credit (Long-term Operations) Fund is unchanged at Rs. 10 crores. Deposits of the Central Government and of other Governments have gone up by Rs. 4 crores and Rs. 2.06 crores, respectively. Deposits of banks also have risen by Rs. 1.11 crores. The rise of Rs. 88 lakhs in notes held in the Banking Department is reflected in an increase of Rs. 89 lakhs in cash balances. Balances held abroad are almost unchanged, while there has been a fractional rise in loans and advances to Governments. Other loans and advances have, however, fallen by Rs. 85 lakhs, of which advances to Scheduled banks against usance bills account for Rs. 69 lakhs. Fresh advances to banks against these bills during the week amount to Rs. 2.91 crores.

A further drop of Rs. 6.99 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 10th February 1956. This follows the aggregate fall of Rs. 19.24 crores noted in the previous two weeks. Time deposits have, on the other hand, gone up by Rs. 1.49 crores. Inter-bank borrowings are lower by Rs. 99 lakhs. Borrowings from the Reserve Bank are up by Rs. 4.67 crores, while those from the State Bank are lower by Rs. 1.04 crores. The upward trend in advances is maintained with an increase of Rs. 2.67 crores during the week. Inland bills purchased and discounted have also increased by Rs. 2.70 crores and foreign bills by Rs. 3.43 crores. Investments have declined by Rs. 1.46 crores, cash and balances with the Reserve Bank by Rs. 10.64 crores, balances with other banks by Rs. 61 lakhs and money at call and short notice by Rs. 1.41 crores.

In distinct contrast to the recent spell of cheerfulness, Gilt-edged market ruled weak during the week under review, though the volume of business was small. There was no support from life insurance companies which provided the main prop for the market in recent weeks; nor was there any demand from other institutional investors. On the other hand, most of the counters attracted sellers. The main reason for the change in sentiment was fears of a possible increase in the Bank rate, following the sharp upward revision in the U.K. Bank from 4½ per cent. to 5½ per cent. on Thursday last. The Reserve Bank, too, chose to keep out of the market. Its inaction only served to strengthen the fears about the Bank rate. Sizable fall in prices was recorded in all securities, the exceptions being 3 per cent. 1957 and 1958 loans and 3 per cent. 1970-75 loan. The worst sufferer was the Conversion loan.

3 per cent. 1957 hardened by an anna to Rs. 99-11, while 3 per cent. 1958 was better at Rs. 98 *ex-voucher*, as against Rs. 98 *cum-voucher* a week ago. 3 per cent. 1959-61 was placed an anna lower at Rs. 98-3 *ex-voucher*. 3 per cent. 1963-65 and 1964 were marked down by As. 3 each to Rs. 94-9, 3 per cent. 1966-68 held ground at Rs. 92-5, while 3 per cent. 1970-75 gathered As. 2 to Rs. 88-12. 3 per cent. 1986 Conversion Loan, however, lost As. 7 over the week to be nominally placed at Rs. 80. In the absence of any support from the Reserve Bank at this conventional support level, there were offerings in this counter even at Rs. 79-12, but much of these was of a speculative character. 3½ per cent. 1961 shed As. 2 to Rs. 99-6, 3½ per cent. 1964 As. 4 to Rs. 98-8 and 3½ per cent. 1965 As. 3½ to Rs. 98-5½ with sellers at the lower levels. In the State loans section, there was hardly any business. 4 per cent. 1967 Bombay was on offer As. 2 lower at Rs. 100-11 and 4 per cent. 1967 Madras an anna down at Rs. 99-12.

In the foreign exchange section, there was no change in the rupee-U.S. dollar exchange rate, banks' selling rate for ready dollars being maintained at Rs. 477½ per $100 and their buying rate at Rs. 473½ per $100. Sterling, on the other hand, gained strength in terms of the dollar, following the increase in the U.K. Bank rate. In New York, spot sterling moved up from $2.80-7/16—2.80-9/16 to $2.80¾—2.80⅞. Three months' forward, however, dropped from $2.79½—2.79½ to $2.78-15/16—2.79-1/16, while transferable sterling was unchanged on balance at $2.77½—2.77⅝.

GOLD TOUCHES NEW HIGH LEVEL

(From Our Own Correspondent)

BOMBAY, 22*nd February*

Gold continued to rule firm in the bullion market during the week under review also, while silver was featureless with the undertone remaining just steady.

The outstanding development of the week was the announcement by the Forward Markets Commission early in the week that it was examining the utility of forward trading in bullion and invited evidence from the trade associations concerned on the question. The first reaction of the market to this announcement was bearish and there was heavy unloading. Silver suffered most under this selling pressure, while gold managed to remain fairly steady, as the offerings were well absorbed, due to the favourable technical position. Subsequently, however, silver gained some ground on reports of an increase in offtake and in sympathy with the exceedingly cheerful tone in gold.

Persistent support from bulls, accompanied by heavy covering by short sellers and good offtake of ready metal lifted up the price of gold to record high levels since February 1952.

Silver for forward delivery (28th February settlement) was marked down early in the week from Rs. 175-3 to Rs. 174, but gathered strength to touch Rs. 175-9 today before finishing at Rs. 175-2. Forward silver for the March settlement fell from Rs. 176 to Rs. 175, but improved to close today at Rs. 176-4.

Ready silver (.996 Mint) advanced to Rs. 175-15, after an initial reaction from Rs. 174-15 to Rs. 173-14, and finished at Rs. 175-8. The floating stocks of silver are estimated at 1,300 bars. The daily average offtake was 25 bars.

Forward gold (27th February settlement) appreciated from Rs. 97-7 to Rs. 99-5, the highest level to be seen during the last four years, and closed at Rs. 99-3. The March settlement advanced from Rs. 97-6 to Rs. 98-15 before winding up at Rs. 98-13. It will be noted that the carry forward charges which were just an anna against sellers at the close of last week, widened to as much as As. 6 today, thus reflecting the extent of short position in this metal.

Ready gold picked up from Rs. 97-15 to Rs. 99-15 before closing at Rs. 99-10. The floating stocks of gold are reported to be 25,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake, which was 3,000 tolas early in the week, rose to 8,000 tolas today, the average for the week being 5,000 tolas per day.

There was a further hardening of silver prices in London and New York during the week. In London, the spot and forward prices rose from 79½*d.* to 79¾*d.* In New York, the white metal advanced from 91c. to 91⅝c. There was a decline in London gold price from 249s. 5½*d.* to 249s. 3½*d.*, due to hardening of sterling against U.S. dollars.

The following comparative table shows the trend of the market during the week under review:

	22-2-56	Highest	Lowest	15-2-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

BETTER LIQUORING TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, 21*st February*

Offerings during yesterday's export sale amounted to 61,300 chests. The market opened on an easy note, but as the sale progressed strong conditions developed and prices of best liquoring C.T.C. teas gained. The better liquoring teas and black fannings were firm, while prices for ordinary low mediums and commons sorts eased. The poorer C.T.Cs sold at rates below valuations. Whole leaf grades with style were fully steady and prices rose. Darjeelings with appearance were also steady. The quotations were: best C.T.C. Assam B.P. Rs. 2-5 to Rs. 2-6, plain B.P. Re. 1-5, clean black pekoe Re. 1-13, and medium Assam B.P. Re. 1-7-6 to Re. 1-8.

Export quota right was priced at eight pies.

Following improved demand, prices during last week's sale for domestic consumption rose. Offerings were lower at 19,300 chests, and the smallness of the quantity was also a reason for steadiness. The best liquoring C.T.C. Assams were strongly supported and were a few annas higher. A similar trend was in evidence in the black leaf teas suitable for Middle East consumption. The poorer C.T.C. Assams were easy by an anna to As. 2, but prices for non-wither Dooars were maintained. The rates were: best Assam C.T.C. Rs. 2-5 to Rs. 2-7, medium Assam grainy Re. 1-8-6 to Re. 1-9 and medium Dooars Re. 1-7 to Re. 1-8.

Leaf on offer amounted to 4,000 chests, of which residue grades were hardly wanted by buyers. Clean well-made teas fell by As. 2 to As. 3

IMPORT OF PAKISTAN COTTON

(From Our Own Correspondent)

BOMBAY, 22*nd February*

Cotton interests, the Forward Markets Commission and the Government of India are all eagerly awaiting the verdict of the Bombay High Court on the issue whether the Commission's directive to the East India Cotton Association (E.I.C.A.) to close out hedge contracts and to amend by-laws is valid. The Court is still hearing the petition filed by Dr. I. P. Gupta and two others challenging the directive. Although the High Court has not yet given its verdict, some cotton traders are reported to be considering the question of taking the case to the Supreme Court.

Meanwhile, there are rumours in the market that the authorities are contemplating to take some definite steps to prevent speculation in cotton trade for all time to come. The rumours are based on the remarks which Mr. T. T. Krishnamachari, Union Minister for Commerce and Industry, made in the Rajya Sabha during the debate on the Cotton Cess Amendment Bill. Justifying the Government's interference, Mr. Krishnamachari said: "The main reason for the recent Governmental interference in regard to the East India Cotton Association was the complete ineptitude of the Association and the fact that many members of the Association themselves were operating on the market. The fact of the matter was that, this year, the cotton crop was less than last year. Also, the staple link (length) had deteriorated in many parts of the country. Gambling was done in a particular type. Those who did this knew very well that somebody would have to be squeezed when gambling was done." The four considerations which weighed with the Government in deciding to intervene in the market, according to the Minister, are: (1) Complete ineptitude of the E.I.C.A., (2) activities of the Association members themselves, (3) harmful effects of gambling, and (4) Government's responsibility to keep prices of all agricultural produce at a parity.

A notable development in the spot cotton market is the Central Government's decision to allow with immediate effect import of raw cotton of staple length ⅞" and above from Pakistan. The application for licences, which will be valid for shipment for six months from the date of issue, are required to be accompanied with evidence of purchase from suppliers in Pakistan. The decision has had no effect on the market, since the operators feel that the price of Pakistan cotton is too high to permit imports into India, thanks to the heavy export duty levied by the Pakistan Government. The varieties of Pakistan cotton permitted to be imported are now quoted in India at about Rs. 900 to Rs. 950 per candy, as against Rs. 1,200 in Pakistan. It is also said that these varieties are not such as are needed in India, inasmuch as India produces about 1.5 million bales of similar varieties such as Punjab, Laxmi and Surti.

The spot market was quiet to steady during the major part of the week under review. Berar Jarillas, 1973 and Punjab styles met with good support from mills. Stray enquiries were reported for Vijay and Khandesh. Among exportable styles, Kalagin, Dholleras, Wagad, Zoda and Bengal *deshi* elicited sizable enquiries. Japan was particularly interested in Dholleras. Limited deals were put through in K4S and G6S Sudan cottons, at Rs. 2,175 and 42.50*d.* per lb., respectively. Some purchases were also reported in Africans, the prices of which recorded an improvement.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 710; Berar Jarillas Rs. 785; Khandesh Rs. 770; Vijay Rs. 890; Oomra *deshi* Rs. 750; Mogali Rs. 660.

The Karachi cotton market continued to rule very firm for the sixth week in succession. The persistent firmness was aided by the Government of India's decision to allow import of Pakistan cotton of staple length ⅞" and above. There were, besides, renewed enquiries from indigenous mills and overseas interests. Buying support was, therefore, sustained and prices of cotton registered a further rise. Improvement was, however, not so marked as in the last week. N.T. R.G. May delivery hardened from Rs. 82-9 to Rs. 83-1 before finishing yesterday at Rs. 82-15 per 82 lbs. March delivery improved by As. 7 to Rs. 85-2 yesterday, but closed lower at Rs. 84-5. The latest available quotations (in rupees per 82 lbs.) for a few popular varieties of Pakistan cotton in the spot market are given below:

Sind *deshi* 77; Punjab *deshi* 72-12; 4F Roller 82-8; S.G. 88-4; Punjab Roller 87; S.G. 93; 289F N.T. Sind Roller 90; S.G. 97; 289F Punjab Roller 95-8; S.G. 102.

The buying spree noted in the Alexandria cotton futures market in the past two weeks gathered considerable momentum this week. Thanks to excellent demand from abroad and renewed bullish advices from New York, operators showed keen attention to enlarge their commitments and, the sellers being reserved, values continued to forge ahead. The following are the closing rates—in tallaris per lb.—prevailing at Alexandria yesterday, as compared with those a week before:

	21-2-56	14-2-56
Ashmouni March	73.00	68.56
Ashmouni May	71.82	67.58
Karnak February	91.18	88.55
Karnak April	90.25	86.74

Egypt has officially informed the U.S. Government, through the U.S. Deputy Under-Secretary of State for Economic Affairs, Mr. Herbert Prochnow, that any sharp reduction in U.S. imports of long-staple Egyptian cotton may mean the end of U.S.-Egypt trade relations. Mr. Prochnow is understood to have promised that the Egyptian position would be carefully considered. Egypt supplies nearly all the U.S. imports of long-staple cotton—about 40 million lbs. of this year's quota of 45,656,420 lbs. It is much concerned, lest the quota should be cut, as this is almost its sole source of dollars. But the

Supima Association of America has other ideas. The members of this Association produce in the south-west a cotton known as Pima S-1, introduced commercially two years ago. The 1955 crop was 41,500 bales. A harvest of 50,000 bales is expected this year. The growers are confident that they can compete in price with Egyptian imports.

The estimate of the Uganda cotton crop in the current season is now placed lower at 320,000 bales, as against 365,000 bales anticipated earlier. An auction in Uganda cotton was held yesterday, when offerings aggregated 10,000 bales. A similar quantity will be auctioned tomorrow. Owing to the damage to crop, the price is expected to be higher than that obtained sometime ago.

A fully steady trend was in evidence in the Liverpool cotton futures market during the week under review. New May-June contract was particularly strong, due to commission house buying induced by reports that the local stocks of this description were negligible. In sympathy with this contract, the other contracts also ruled strong. Trading in Pakistan cotton was practically at a standstill, as the recent sharp advance in prices had put these varieties out of parity with the American C.C.C. releases. The latest available quotations (in pence per lb.) from the Liverpool cotton futures market are given below:

Old contract: March-April 26.15; May-June 25.40; July-August 24.50. *New contract*: May-June 30.40; July-August 28.75; October-November 26.60; December-January 26.20. *Egyptian Karnak contract;* March-April 50.90; May-June 50.35; July-August 50.35.

Firm conditions prevailed in the New York cotton market during the week under review too. There was enlarged trade support for both old and new crops, together with some buying in forward positions credited to foreign interests. The mills were buying later positions against the requirements for the second half-year, influenced by apprehensions of further price boosting as proposed in the new Farm Bill. Commission houses bought new crop position, in the belief that the maintenance of the rigid 90 per cent. parity price support would be approved of, despite the opposition by the Administration.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	21-2-56	14-2-56	7-2-56
Spot	36.60	36.50	35.80
March	35.77	35.75	35.07
May	33.39	35.05	34.60
July	34.19	33.93	33.65
October	32.10	32.20	31.81

SUGAR FIRM

(From Our Own Correspondent)

BOMBAY, 22*nd February*

For the third week in succession, the sugar market ruled distinctly firm. Buying support was sustained, thanks to renewed rumours of an upward revision in excise duty on sugar and of a possibility of the Centre imposing a levy on movement of sugar from one State to another in lieu of inter-State sales tax. Deals put through in sugar were quite large and prices continued their upward march. The rise in prices would have been more marked but for heavy arrivals—11,300 bags—of indigenous sugar into the market during the week.

D grade indigenous sugar was particularly strong in the spot section, its quotation spurting from Rs. 89-Rs. 94 to Rs. 92-Rs. 96 per bag. B grade rose from Rs. 95-Rs. 99 to Rs. 98-Rs. 99 and A grade from Rs. 99-Rs. 104 to Rs. 100-Rs. 104. C grade was done at Rs. 93-Rs. 99, as against Rs. 96-Rs. 98 a week before. British refined sugar was well maintained at Rs. 84 per 2 cwts. There has been heavy buying of this sugar, estimated at 10,000 bags, by spot merchants who did not want to take the risk of a fall in the price of sugar in case the expectations of a stiff increase in excise duty were not to materialise. As pointed out in this report last week, those sugar merchants who are speculating on the possibility of an increase in excise duty on sugar will suffer a loss if their surmise goes wrong. The risk has now become quite substantial, because the rise in prices during recent days has been large and the supply position of this commodity in the country is heavy, thanks to a record production and a large carryover of the previous season.

In the forward section, *Fagan* delivery for C grade sugar moved up from Rs. 93-2 to Rs. 93-14—the highest price reached since the commencement of business in this settlement—but was quoted lower at Rs. 93-8 today. The hectic activity witnessed in the settlement is attributed to rumours of excise duty and imposition of sales tax on inter-State movement of trade in sugar. Since Bombay State is deficit in sugar, imports from Uttar Pradesh and Bihar would, it is said, attract the proposed levy, thereby raising the cost of the commodity to that extent. At the time of writing, however, trade circles are cautious in making fresh commitments at the prevailing levels which are considered as quite risky.

N.B.—The rates for Indian sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

YARNS STRONG

(From Our Own Correspondent)

BOMBAY, 22*nd February*

The yarn market exhibited distinctly firm conditions during the week under review. Rayon yarns evoked enlarged buying demand on reports of good offtake in rayon fabrics. Cotton yarns also elicited support from operators, due partly to the inability of several mills to give early deliveries of yarn and partly to encouraging advices from consuming centres. In sympathy with these yarns, staple fibre yarns, too, ruled strong, despite the expectation of an improvement in the output, following the recent liberalisation in controls on production and comfortable staple fibre supply position.

In the forward section of the rayon yarn market, Snia rayon yarn (120 dull cones) tended to move up, under the impetus of better demand from local silk weaving mills, as well as upcountry markets. Over the week, February and April deliveries advanced each by Rs. 4 to Rs. 815 and Rs. 828, respectively. In the spot section, National Rayons 150 deniers Bt. cones 1st grade hardened by 18 pies to Rs. 3-11. 120 denier Bt. cones 1st grade was firm at Rs. 3-13-9. Among imported yarns, 150 Japan rose by three pies to Rs. 4-1-6. 120 Italy was fully maintained at Rs. 4-1, as also 150 Italy at Rs. 4-0-6. 120 Japan, however, was a shade easy at Rs. 4-8 for want of support.

The Government of India has decided to issue only one consolidated licence to actual users for import of art silk yarns for the current period (January-June) based on looms, shifts and days worked during the July-December 1955 period. No separate supplementary licences on an *ad hoc* basis will, therefore, be issued during the current period. In the previous licensing periods, it will be recalled, the practice was to issue regular licences on per loom quota basis and supplementary licences on looms, shifts and working days basis to the three Art Silk Mills Associations at Bombay, Amritsar and Calcutta, and also to those mills manufacturing artificial silk fabrics which are not members of the above Associations. According to the latest decision, only one application should be submitted (for both basic and *ad hoc* licences) so as to reach the authorities on or before the 29th inst. As there is only a limited monetary ceiling available for this item and as it is decided to distribute it amongst the applicants within the next few days, it is necessary that the applications submitted are complete in all respects within the time stipulated.

The prices of staple fibre yarns (40 x 2) staged an advance. Kohinoors rallied an anna to Rs. 4-3-3. Citys and Sitarams strengthened by nine pies each to Rs. 4-2-3 and Rs. 4-0-9, respectively. New Greats gathered half an anna to Rs. 4-1-6. Hinds rose by a like amount to Rs. 4-1-3. Srirams were better by 3 pies at Rs. 4-1.

The firmness of the cotton yarn section was particularly pronounced in 40 count yarns, the prices of which registered sharp gains. Minaxis were specially favoured, the quotation advancing by Re. 1-6 to Rs. 28-6. S'Rajas and Indus finished each Re. 1-4 higher, the former at Rs. 29-10 and the latter at Rs. 28-4. Moderns spurted by As. 12 to Rs. 27-4 and Maduras by As. 10 to Rs. 28-2. Among 60s, Finlays put on As. 14 to Rs. 61-6. Moderns were fully steady at Rs. 61. Deals in 80s were put through at higher levels, Moderns gaining As. 8 to Rs. 66 and Elphinstones As. 4 to Rs. 62-4. Ten count yarns were steady, Moderns being quoted at Rs. 13-4 and Podars at Rs. 13. Among 30s, Moderns rose by As. 4 to Rs. 22-14. Twenty counts, however, were quiet. Maduras receded by As. 2 to Rs. 17-10. Hinds lost an anna to Rs. 16-7. Raghuvamshis were dull at Rs. 16-12.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

		22-2-1956	15-2-1956	8-2-1956
		Rs. a.	Rs. a.	Rs. a.

LINSEED BETTER

(From Our Own Correspondent)

BOMBAY, 22*nd February*

A feature of the week under review was the sharp rise in the prices of linseed and linseed oil in the first few sessions of the week. Consistent bull support induced by favourable advices for linseed oil from the Continent at as high as £145 in the middle of the week, as against £125 a few days back, was chiefly responsible for the upward trend. Although linseed prices declined subsequently on profit-taking at the high levels, the decline was not enough to wipe out entirely the earlier gains. Almost a similar tendency was in evidence in the groundnut and oilseed sections. The upward trend in the castorseed section was particularly due to expectations of a broadening of demand for castoroil from the U.S. and in the groundnut section due to hopes of expectation of fresh quotas in groundnut oil. The decline witnessed in the last few sessions on budget uncertainties was, however, heavier than in the linseed section, with the result that the earlier gains in both the seeds were generally wiped out. The undertone remained uncertain at the close.

A notable development of the week under review was the permission granted by the Forward Markets Commission to the Bombay Grain and Oilseeds Merchants' Association to transact business in non-transferable specific delivery contracts in castor and cotton seeds with effect from the 16th inst.

According to a notification issued by the Joint Chief Controller of Exports, Bombay, it has been decided not to release any quota of groundnut oil to newcomer crushers who have applied for such quotas. Consequently, crushers (established shippers or crusher-exporters) who have relinquished their claim to allotments in the category of established shippers or crusher-exporters, as the case may be, in order to obtain quotas against the newcomer crushers' scheme, will be allotted quotas of groundnut oil admissible to them. The period of shipment of this allotment will be upto the end of February 1956 and no extension beyond that date will be granted.

In the groundnut section, Bold ready advanced from Rs. 30-2 at the end of last week to Rs. 30-8 on the 18th inst. Thereafter, it gradually declined to close at Rs. 29-5. On balance, it lost As. 13 over the week. February-March and April-May deliveries changed hands at Rs. 29-8 and Rs. 30-2, as against Rs. 30-2 and Rs. 30-12, respectively. Coromandals declined by As. 10 to close at Rs. 30. Khandesh quality receded by As. 8 to Rs. 30-2. Groundnut oil ex-mill, however, gathered As. 2 to Rs. 15-11. April and May deliveries were quiet today at Rs. 15-12 and Rs. 15-14. Groundnut oil was enquired at £128 per ton from Hong Kong and at £123 per ton from the U.K.

Bold ready, in the linseed section, opened the week at Rs. 30-14, as against Rs. 30 at the close of last week. It advanced to Rs. 31-8 on the 18th inst. Subsequently, it staged a downward trend and closed today at Rs. 30-4. On balance, it gained As. 4 over the week. April-May delivery was better by As. 6 at Rs. 30-2. Small Sutnas recorded a gain of As. 4 to Rs. 28-12. Linseed oil improved from Rs. 18-10 to Rs. 19-2. Linseed oil was quoted today on the Continent at £139 per ton.

May futures, in the castorseed section, changed hands early in the week at Rs. 120-10, as against Rs. 119-12 at the end of last week. It fluctuated between Rs. 122-6 and Rs. 117-4, before closing at Rs. 117-14. After improving from Rs. 23-4 to Rs. 23-14, Madras quality, in the ready section, declined to close at Rs. 23-2. Kanpurs were down by As. 6 at Rs. 21-2. Castoroil B.S.S. eased from Rs. 13-14 to Rs. 13-13 and Commercial quality from Rs. 13 to Rs. 12-13. Castoroil Commercial quality, was quoted on the Continent at £113 per ton.

Among others, *kardi* Bold gained As. 4 to Rs 16-10, while *niger* Madras lost As. 8 to Rs. 26-8.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	22-2-1956	15-2-1956	8-2-1956
	Rs. a.	Rs. a.	Rs. a.

PEPPER WEAK

(Messrs. Parekh & Co.)

BOMBAY, 22*nd February*

Malabar black pepper, during the week, turned weak in sympathy with New York where prices for spot after touching $0.33 went down to $0.31, owing to paucity of buyers and under pressure of arrivals of unsold parcels. Prices offered by New York being out of parity, business during the entire period remained meagre. As a result, Alleppey after touching Rs. 850, came down to Rs. 800 and is steady at Rs. 825. Garbled at Cochin moved down to Rs. 137½, but improved to Rs. 142½ under pressure of short covering and replacement buying by sellers to Canada and Europe.

All terminal markets are said to be steady with undertone healthy, there being no pressure of arrivals and consequently no anxiety to press sales.

Russian steamer for loading the former purchases of the U.S.S.R. is due by the first week of March, and a section of the trade believes that further purchases may be done for shipment by the same boat, if reasonable prices are offered.

The general opinion among the trade is for a sizable improvement during March when New York is likely to enter the Indian market after the liquidation of the heavy unsold consignments shipped during January. Rumours are current in the market regarding the reimposition of export duty on pepper in the coming Budget. There are also rumours regarding the devaluation of sterling in the near future.

Business in delivery was very small for want of interest by outsiders.

In the A.S.T.A., March, after touching $0.32½, went down to $0.31, while April-May-June, after reaching $0.33½ came down to $0.31½.

Following are today's nominal quotations: Ready delivery Rs. 112 (as against Rs. 112 a week ago) per Bengal maund, February Rs. 770-80 (Rs. 775-85) and March Rs. 770-80 (Rs. 785-95) per candy of 5½ cwts.

MEDIUM TEAS IMPROVE

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 16*th February*

Offerings in Sale No. 4, which was held on Tuesday, 14th February, amounted to 1,175,000 lbs. Quality remained much the same as the previous sale, although there was a much smaller quantity of high-grown tea on offer. Many of the medium teas showed improvement. From the outset there was a strong general demand with competition from all exporters. Common and low medium teas sold at rates which were fully firm on last prices. Good medium types were irregular, but improved quality invoices were often As. 2 to As. 4 dearer. Best liquoring teas met with some competition and showed little change although there was slightly less demand for high-grown fannings. There was a useful demand for pekoe grades, but all other whole leaf teas were neglected. Tippy teas sold well and clean black leaf types were about steady.

As our system of quotations is apparently confusing, in future we propose quoting as follows:—

	1956 Rs. a. p.
Plain B.P.	1 8 6
Low medium B.O.P.	2 0 0
Medium B.O.P.	2 6 0 to 2 8 0
Good B.O.P.	3 8 0
Well made black leaf O.P. ...	2 6 0

London Market—Sale of 13th February 1956.—Good tea strong. Others about 1d. easier following quality.

Sale of 14th February 1956.—Both Ceylons and South Indians strong at top and bottom. Others tended easier. Demand lessening as sale progressed.

Colombo Market—Sale of 13th February 1956.—Very strong demand. Generally dearer, particularly for better grainy dusts and fannings and broken mixeds with useful liquor.

Sale of 14th February 1956.—Strong demand. High-grown brokens irregular. Best flavoury kinds much dearer. Others below best frequently lower. Mediums five to eight cents dearer. All useful liquoring fannings very strong demand, appreciably dearer. Low-growns declined five cents. Persian Gulf types firm.

Calcutta Market—Export.—Limited demand. Commons one anna to As. 2 easier. Medium brokens one anna, medium Assam B.O.Fs. As. 1½ lower. Selected fannings again strongest feature. C.T.Cs. steady. Whole leaf grades neglected.

Internal.—Good general demand. Market firm to dearer for medium Dooars and Assams. Best C.T.C. and Middle East types strongest features. Commonest unwanted. Leaf market generally As. 2 to As. 3 easier.

Export Quota.—The market has again been easier and business has been done at 8 pies at which figure there are sellers.

Forthcoming Auctions.—Sale No. 5 will be held on Tuesday, 28th February.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Dust Sale D.*—360,000 lbs. Stronger market, particularly black Middle East types. Best liquoring As. 3 to As. 4 dearer. Others irregularly one anna to As. 2 higher."

SMALL RECOVERY IN JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, 21*st February*

A small recovery in the prices of jute goods was recorded during the week under review. This followed the revival of enquiries from overseas countries for both hessians and heavy goods. A good amount of covering business was done against the Burmese order, the delivery period of which is between April and June. Rumours of anticipated Russian orders continued. Speculative buying in the *jatRa* was another cause for this week's firmness. The jute trade and the industry unanimously welcomed the Government's Jute Textiles Control Order. Modernisation in jute mills is taking place at a rapid pace and is expected to be through in about six months. The old machines are disposed of as scrap, but instances were not wanting where speculative elements had purchased the machines discarded by the modernising mills and commenced producing jute goods without regard to quality. The growing competition from Pakistani mills, which all have modern machinery, can be met only if Indian prices are lower and a high quality is maintained. So there is all the more need to put a stop to the ingenious tendency to produce jute goods from the old machines. In this connection, it should be stated that the modernising mills have been in a hurry to dispose of the discarded machines as scrap.

Another news of significance to the jute trade and industry during this week has been the announcement in Karachi of Pakistan's intention to assist Iraq and Egypt in the construction of jute mills there. Pakistan is indeed anxious to increase raw jute exports as only by such a method the possible loss of the Indian market by stages can be made good in other countries. The assistance Pakistan will provide these two countries will be in the form of supplies of raw jute. During recent years, Pakistan has been placing many hurdles in the way of exports of raw jute to Indian mills, and Pakistani prices together with the high export duty are, frankly speaking, uneconomic to competitive production of jute goods. The minimum export prices are being maintained high by Pakistan in order that Pakistani mills may continue to offer competition in the export markets. At present, India is dependent on East Bengal for only a portion of its raw jute requirements, but as quality of the indigenous fibre improves the dependence on foreign jute will become less. Pakistan is only too well aware of this, and as such its anxiety to create more markets abroad for its raw jute can be understood.

Early in the week, prices of jute goods were quiet, with 40" 10 oz. quoting Rs. 40-8 and B. twills at Rs. 113-8, both for ready delivery. At this stage, figures relating to production during January were available, and the total of all constructions produced at 88,900 tons were lower by 8,400 tons compared to December 1955. The decline in hessians was as much as 3,700 tons, in sacking 4,000 tons, and miscellaneous constructions 700 tons. However, these lower figures were no consolation to the market as in spite of the fall in production (which was due to the lesser number of working days during January notwithstanding the increase in the loomage for better part of the month) stocks at the end of the month had increased by as much as 14,900 tons. At the lower levels, there was keen speculative enthusiasm and covering business was also done by shippers. Hessians recovered to Rs. 40-10 and B. twills to Rs. 113-12. Thursday was a holiday on account of *Basant Panchami* (*Saraswati Pooja*). The market reopened on Friday on a very steady note, following renewed covering demand. Hessians strengthened to Rs. 40-13 and B. twills to Rs. 115, but the closure for the week-end was slightly lower at Rs. 40-12 and Rs. 114-12 respectively. Yesterday, the reaction continued and the prices looked back to Rs. 40-10 and Rs. 114-4.

Only sparse interest was shown by mills in raw jute. All the same, sellers were reserved and quotations were maintained. Nevertheless, there were some changes which were in the downward direction to the extent of about As. 8 for certain constructions only as is evident from the latest rates given below with those of a week ago in brackets. There was a further increase in arrivals of raw jute, which was mostly Daissee Mesta. Strong Pakistani markets and the programme of increased production in mills were the factors which continued to encourage local stockists in maintaining the higher quotations:

	Middles Rs.	*Bottoms* Rs.
Pakistani:		
Northern ...	35-8 (35-8)	32-8 (32-8)
District ...	36-0 (36-0)	33-0 (33-0)

METALS STEADY

(From Our Own Correspondent)

CALCUTTA, 21*st February*

Steady conditions were in evidence in the metal market during the week under review, following good consumer demand and strong advices from overseas markets. Electrolytic copper, at Rs. 275, picked up 10 points. In view of the increased activity by the wire drawing industry, wire bars were in good demand, and all near shipments have already been booked. Consumers are reluctant to enter into forward commitments, in view of the uncertainty as to which side the wind would blow. At Rs. 241, the fire-refined material was also a few points higher. As usual, scrap was in good demand, and, because electrolytic scrap was in short supply, buyers turned their attention to scrap from the fire-refined ingots. Virgin lead advanced from Rs. 82-8 to Rs. 84-8. Demand was good and market circles averred that supplies were just sufficient to meet requirements. This factor naturally imparted strength to the price-trend. Earlier tin was quiet at Rs. 499, but subsequently an impressive recovery was made to Rs. 520. Electrolytic zinc also recovered to Rs. 70-4 from Rs. 69-4, following the strong conditions on the London Metal Exchange. Enquiries were for a moderate quantity.

FOODGRAINS BETTER

(From Our Own Correspondent)

HAPUR, 20*th February*

Hardening in foodgrains prices continued during the week under review, despite Government's efforts to check the upward trend. Besides releasing stocks of wheat from its reserves, other steps taken by the Government to reduce the prices were the ban on exports of *jowar*, maize, pulses, gram, rice and wheat products. Mr. A. P. Jain, Union Food Minister, informed the Lok Sabha that the Government's intention was to build up central reserves of 7.5 lakh tons of rice and wheat each and that the Government proposed to negotiate further purchases only to the extent that this stock had to be built up.

Wheat prices at Hapur advanced by As. 8 per maund during the week to Rs. 14-12 for average quality and *khati* prices also improved to Rs. 14-4. Fresh demand from Delhi millers was noticed dur-

(Continued on page 378)

INSURANCE

(*Concluded from page* 350)

over the use of life insurance funds, the Committee, said, "the same could be achieved without undue centralisation in administration." It added: "It is quite conceivable and in fact feasible to allow the existing insurance companies to continue under their existing names under State direction and control of their investments. Some rationalisation may be necessary. The life business of small composite companies and smaller life companies might be amalgamated with larger units in the region. Such a procedure would ensure that these companies, while retaining their autonomy in operation, would continue to compete with each other as at present." An alternative suggested by the Committee was the setting up of a number of corporations on an all-India basis, instead of a single agency. These corporations should have enough independence to enable them to compete with each other.

In the course of a commendably analytical exposition of the case for retaining the flexibility of organisation under a virtually nationalised set-up in insurance, the Mahratta Chamber of Commerce, Poona, has suggested that the Government could, on the analogy of the nationalisation of the Imperial Bank of India, take over a leading life office (like the Oriental) and subsidise its activities in the rural areas. As regards the remaining sector of life insurance business, the Chamber has suggested that while the entire controlled funds should vest in Government, the Government should keep intact various units which are carrying on life insurance business on sound and healthy lines. It has urged the Government to consider whether the purpose of nationalisation would not be best served by taking over the complete control of the controlled funds but allowing the existing well-managed insurance companies to function as autonomous units. This scheme would ensure nationalisation of controlled funds but, under it, there would be: (1) complete freedom to the companies to formulate their own plans, within the framework of the Insurance Act, and (2) competing agency organisation, there being no standardisation of premiums, policy conditions and agency commission but working within the expense ratio laid down by the Government.

The type of organisation suggested by the Federation or the Mahratta Chamber of Commerce, it is now obvious, does not appeal to the authorities. The Government feels that only a monolithic organisation, owned, controlled and directed by the State can effectively serve the purpose it has in view.

The proposal to set up a re-insurance corporation has not been given up. The recent decision of the Government to nationalise life insurance will not stand in the way of setting up this corporation, as it will be concerned with re-insurance of general insurance and not life insurance.

Notice

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE IS HEREBY GIVEN THAT THE Directors have decided to declare a second Interim Dividend on 5th March 1956 (additional to the Interim Dividend of 2 per cent., free of income-tax, declared on 17th August, 1955) in respect of the Company's financial year ending 31st March 1956, of 2 per cent., free of income-tax, payable on or after 28th March 1956, to registered shareholders whose names appear in the Register on 5th March 1956 or to their mandatees.

Transfers received at the Company's Registered Office before 1 p.m. on 3rd March 1956 will, if in order, be registered in time for the transferees to receive the Dividend.

By Order of the Board,
J. R. BLAIKIE,
Secretary.

VIRGINIA HOUSE,
37, CHOWRINGHEE,
CALCUTTA, 23*rd February*, 1956.

N.B.—Shareholders should inform the Registrar of any changes in their registered addresses.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d. = Ex.Dividend. c.d.=Cum. Dividend. I=Interim Dividend. f=Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

M—Managed by the board of directors ‡ Less income-tax. (s) Cilve Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. * Including bonus.
(i) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (k) Investments
(s) For seven months ended 31st March 1956

MARKET REPORTS

(*Concluded from page 369*)

ing the week and the week's offtake aggregated 8 *khaties*, reducing the local stock to 25 *khaties*, as against 13 at this time last year. While wheat prices continued steady in Bombay and Madras markets, prices improved appreciably in North

that, against the Rs. 375 crores which they are required to provide, their resources would amount only to Rs. 325 crores, made up of Rs. 225 crores to be contributed through the depreciation reserve fund during the Plan period, and Rs. 100 crores from revenue including expenditure on open line works, interest on the Railway fund balances, and revenue surpluses, which will be very small since a large proportion of the additional traffic will be low-rated and the dividend liability to general revenues on account of increases in the capital overhead will rise very steeply during this period. The gap of about Rs. 50 crores has to be filled to avoid a further restriction in the scope for the development of the transport capacity, and the railways must, therefore, endeavour to increase their earnings so as to meet the contribution required of them, and, if possible, something more, in order to reduce the margin between the present lower targets and the original targets of transport capacity. It is in these circumstances that I have to approach you to agree to a surcharge of one anna in the rupee on all freight traffic, with the exception of grains and pulses, fodder, manure, khadi, newspapers, newsprint and books."

The impact of the variations of the railways on the depreciation reserve fund, the revenue reserve fund and the development fund is indicated in the following table:

Reserve Funds and Capital At Charge

(As at end of each year)

(In crores of rupees)

	1953-54	1954-55	Revised estimate, 1955-56	Budget, estimate 1956-57
Depreciation Reserve Fund ..	112.8	100.7	-100.7	104.1
Revenue Reserve Fund ..	37.2	38.4	46.9	48.4
Development Fund	20.6	17.5	8.1	9.2
Capital at charge	869.3	901.6	973.7	1,087.1

Finally, it seems necessary to reiterate that the private sector cannot possibly ignore—let alone excuse—the fact that the Plan promises no relief from transport bottlenecks during the next five-year period. The revised Plan will provide only an additional transport capacity of 15 per cent. for passenger traffic and 47 million tons of goods. The total goods movement during the current year is expected to be 115 million tons, against an estimated demand of 120 million tons, leaving a gap of 5 million tons; this gap will, however, be covered. It has been computed that the net increase in carrying capacity during the second Five-year Plan would be about 42 million tons, as against an original estimate of 60.8 million tons. This increase is expected to meet fully the additional traffic load of 25 million tons on account of coal, and other raw materials required for expanding steel industry and its finished products, 6 million tons more coal and 4 million tons more cement. But the contemplated increase in railway capacity, the Minister himself admitted, would be insufficient to meet the increase in demand from other quarters. All this means that there is no hope of any relaxation of controls on movement of rail traffic; indeed, the business community must thank its stars, if the existing controls are not tightened. In this context, the following quotation from the Minister's speech is significant. "I am afraid it will leave a meagre margin for increase in trade and output in other sectors of our economy. It is also feared that the small increase of 3 per cent. per year in passenger train-miles now planned will not help much to relieve overcrowding as long as passenger traffic continues to grow as anticipated."

The Minister must be congratulated on the candid way in which he has explained the position. If the prospects for transport for the private sector are thus none too bright, there will, however, be no disposition to blame the Railway Ministry, for it has striven hard to plan for a larger increase in the transport capacity of the railways. At this stage, three observations might be made. First, is the Government not open to the charge of step-motherly treatment towards the private sector in that it has approved such portion of the Plan as will make it easy for the Public sector to meet all its transport requirements, ignoring the claims of the private sector? Secondly, will this not result in the creation of pockets of shortages in goods and commodities in different parts of the country and in needless suffering for the people, especially because a large amount of deficit financing is proposed to be resorted to? Thirdly, if the railways, for whatever reason, cannot be allowed to increase their carrying capacity to the necessary limit, why should not the Central and State Governments revise their road transport policy, in order to give greater scope for private transport operators? Clearly, these questions have a vital bearing on the progress of the country's economy.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2348 BOMBAY, 3rd MARCH 1956 PRICE Rs. 1/8

REFLECTIONS ON THE BUDGET—I

THE Congress Party can congratulate itself on its good fortune in having been able to retain the services of Mr. C. D. Deshmukh for manning the portfolio of Finance. This portfolio is important, for it is the way in which the fiscal and monetary policies are framed and administered that will determine the pace of ushering in a socialist society in a democratic country. The taxes proposed should be such as not to provoke a violent reaction or to tire out prematurely the donkey that carries the burden. At the same time, they should be sufficiently effective in carrying the country forward towards the declared goal of the ruling party. It is a job that requires considerable understanding of human psychology and dexterity in action. Mr. Deshmukh possesses these qualities in an abundant measure. He had already proved his efficiency in the task assigned to him. Nevertheless, there were doubts in certain sections of the Congress Party whether he really believed in the economic philosophy of theirs and whether he would be able to give a practical shape to it. After the new taxation proposals incorporated in the budget for 1956-57, these doubting Thomases in the Congress Party could have no reason at all for continuing their misgivings about his loyalty to their creed. In fact, they ought to be grateful to him, for he is very cleverly pushing the country to the goal of socialism, so cleverly, indeed, that not many of the victims seem to realise that they have already been made victims. For instance, the reactions of the captains of the business community and the share markets, who are most concerned with the tax proposals, suggest that they have swallowed the pill administered by Mr. Deshmukh on Wednesday last with apparent satisfaction. In fact, they have heaved a sigh of relief. "It could have been easily worse" is the general reaction to the new tax proposals.

Herein lies the skill of Mr. Deshmukh. The budget proposals were preceded by frightful reports of what they were likely to be: A tax on total wealth, fixation of low ceilings for individual incomes in urban areas, a stiff tax on expenditure, rationalisation of sales tax by introducing heavy excise duties, direct control on dividends, a straight increase in corporation tax and estate duty, and so on. The tax payers were thus prepared for the worst. Hardly any believed us when we said that most of these suggestions were impractical. Now that their worst fears have not materialised, many feel thankful to Mr. Deshmukh. But has he really let them off lightly? Not by any means. On the contrary, he has made a frontal attack on the private sector so tactfully that it will take quite a considerable time for its effect to be felt fully but will surely spread socialism throughout the country more quickly than many expect.

The budget for the coming year has been distinctly attuned to the ideology already proclaimed. It has been repeatedly stated in recent weeks that the goal before the country is the establishment of a socialist society, in which the public sector will hold the dominant place, with private sector in finance, industry and commerce relegated to an insignificant place. The increase in super-tax at the higher income brackets above Rs. 70,000, the enhancement of corporation tax in a novel way, the abolition of the one anna rebate on undistributed profits that had been in vogue for several years now, the further attack on the privileges of company managements and the assumption, on the ground of tax evasion, of drastic powers for assessing taxpayers—all these will narrow the scope of operation for the private sector and make it easy for the State to swallow the enterprises started and nourished by this sector.

The taxes on dividends and bonus shares are uniquely inequitable. They amount to taxing profits already taxed once. Nowhere in the free world do such taxes exist. Nor were they proposed by the Taxation Enquiry Commission whom Mr. Deshmukh quotes as his mentor. It is now clear that for him the report of this Commission is only a bible of convenience. He will swear by it when it suits him and disregard it without any qualms when it does not. The Commission had recommended that it would not be equitable to tax bonus shares and that it would be advisable to retain the rebate of one anna on the undistributed profit. It had, of course, expressed itself in favour of dividend limitation when warranted by inflationary conditions. But it had not advocated the type of curb now chosen by Mr. Deshmukh. He has thus ignored the Commission's recommendations even in regard to vital matters. Incidentally, it is worthwhile pointing out that, by withdrawing the rebate on undistributed profit, he has removed what little justification he had for subjecting bonus shares to a tax.

The underlying motives of the Finance Minister are now clear. The main idea of the scheme of taxation suggested by the Taxation Commission was to reduce the importance of individual enterprise by discouraging personal savings beyond modest ranges of income and exalt corporate enterprise by encouraging savings by corporations. Mr. Deshmukh framed his budget for 1955-56 on this pattern. Readers will recall that in this budget he had heaped direct taxes on a wide range of personal incomes. This year he has attacked the corporate sector also, besides proceeding a step further in appropriating more of individual incomes. It is not surprising that he has done so, for, after the Taxation Commission's report was published a year ago, the Congress Party decided to give a far greater prominence to the public sector than was originally intended, with a view to reducing, *inter alia*, concentration of economic power in the hands of a few individuals or groups of individuals. When this objective was given prominence, the contradiction, or lack of logic, in the approach of the Taxation Commission became quite glaring. Naturally, therefore, the Finance Minister has gone at the corporate sector. Thus, his proposals have at least one merit and, that is, they are logical with the policy he initiated last year, though they may not be economically sound or far-sighted.

The new taxes on corporation incomes will add to the difficulty of the private sector in finding capital for new development and expansion of existing industries. They, therefore, mean one more fetter to the hands of private enterprise which will ultimately provide an excuse for nationalisation of industries. Later on, the Government may conceivably argue that, since the private sector has failed to expand, the State must step in. It is probably with this ultimate aim in mind that the taxes on dividends and bonus shares have been introduced. This assumption is not unwarranted; nor is it far-fetched, because, if the raising of additional revenue was the main consideration, the Finance Minister could have raised the rate of corporation tax straightaway. An increase of 6 pies in corporation tax would have fetched about Rs. 7.5 crores, as against the Rs. 8 crores he hopes to collect as a result of all the three changes in the corporation tax structure.

By imposing a heavy tax on dividends, together with a tax on bonus shares, the Finance Minister is penalising companies which have been soundly managed. If certain companies are able to pay larger dividends on their paid-up capital today, it is because they followed a conservative policy in the past, built up large reserves and did not capitalise all of them. If, instead of doing so, they had paid big dividends in the past and/or capitalised the reserves as and when they reached a sizable level, they would not have to suffer much now. Prudence has thus been subjected to penalty, while extravagance has been rewarded. Why has Mr. Deshmukh, who was an ardent champion of private enterprise, and all that it stood for only less than eight years ago, done this most unnatural and unfair thing? For this simple reason, namely, to keep the cost of nationalisation in future at as low a level as possible and to attract as much money as possible to the public sector by way of both taxes and loans. His designs are very clear. By taxing big dividends, he apparently hopes to keep the market value of first class equities depressed, so that when the Government decides to take them over, it may not have to pay much by way of compensation. In fine, by resorting to this novel method of enhancing the collection of corporation tax, he is killing two birds with one stone.

To the credit of Mr. Deshmukh it must be said that he does not claim that the tax on dividends or that on bonus shares has been imposed primarily for the purpose of checking inflation. He has assigned the anti-inflationary function to this weapon as a secondary one. Even if he were to claim it to be the primary function, the argument would not hold much water, as there is no inflation in the country yet, at any rate not of that magnitude which warrants this curb at this juncture. In any case, if he wanted to be forearmed against inflation, in view of the heavy deficit financing he has contemplated, he could have introduced a more equitable and direct method of dividend control, as, for example, by pegging future dividends to an average of the past three or four years or by relating them to a specified percentage of capital employed.

The inequitable nature of the method now chosen by Mr. Deshmukh will be clear further from the fact that it will operate harshly on companies engaged in activities, where the fortunes fluctuate widely for more than one reason, or where the profit is had only after an interval of a number of years during which period the shareholders get no dividend at all. Typical examples of these are provided by plantation and heavy industries, such as chemical and iron and steel. As readers are aware, plantation companies pay high dividends in

some years when profits are high but nothing or very little when they run into adverse weather and make no profit. In these cases, the high dividends in certain years are meant to offset the lean ones in previous years. It will, therefore, be most unfair to tax these high dividends heavily. Similarly, in the case of heavy industries, the dividends received by shareholders have to be viewed in the context of the number of years they have gone without getting a dividend.

Then, there is the case of mining companies which are engaged in developing depreciating assets. Many successful mining companies, such as the Bengal Coal and Indian Copper, pay high dividends. In such cases, a part of the dividend represents repayment of actual capital. It is, therefore, most unfair to tax the dividends of these companies on the same footing as those of concerns engaged in a growing industry. It is this utter disregard which the Finance Minister has shown for fundamental principles of taxation that makes one fear that he has sinister motives in introducing a novel form of corporate taxation. What guarantee is there that a year or two before nationalising a particular industry or a group of industries, the Government will not enhance the rates of these new corporation taxes? In any case, a bad precedent has been set now by violating the sound principle of not taxing a profit twice.

The comment that the middle class has been spared in the budget is meaningless. It is true that there is no increase in the direct taxes payable by this section of population. But the enhancement of indirect taxes, especially on cloth, vegetable oils and art silk fabrics, means a far greater burden than what the Finance Minister can ever hope to get by raising the direct taxes without serious adverse effects on incentives and morale of the people. Of the additional Rs. 14.5 crores which the Finance Minister expects to collect through increased excise on cloth, as well as of the Rs. 5.5 crores on vegetable oils, the major portion will be borne by middle class people, especially in the urban areas, because it is these people that absorb a large portion of the cloth and oil produced in the country. Again, as a great bulk of shares of joint-stock companies is held by the middle class—of course, in the higher strata—the increase in corporation taxes is also a tax on middle class. Indeed, the richer class will not be interested in declaring high dividends, because it will result in its having to pay more direct taxation. For these reasons, it will not be wrong to say that this budget, too, belongs, as did its predecessor, to the "soak-the-middle-class" variety.

From the point of view of industries, the increases in excise and import duties have come at a time when they cannot be resisted effectively. In the case of most of the industries affected, the market is in favour of sellers now and they will be able to pass on the bulk of the increase, if not the entire increase, to consumers. The one comment that we wish to make here, in passing, is that the large taxes which the power-driven large-scale industries are paying and made to pay should open the eyes of the authorities and the Congress Party to the importance of these industries to the nation's economy and to the consequent necessity for improving their productive capacity through modernisation. It should be obvious even to the dullest person that the higher the efficiency of these industries the greater will be their capacity to contribute to the Exchequer without unduly straining the pockets of consumers.

While the budget now framed is consistent with the socialist philosophy of the Government, it is a moot point whether it will help bring about a speedy economic development of the country, without which there can be no real improvement in the living standards of the people. Mere levelling down of the haves can give only a psychological satisfaction to the have-nots. But any sense of contentment that may be induced among the latter in this way will, it is needless to add, be only of a fleeting nature.

RAILWAY BUDGET

IT is of the utmost importance that the Railways, being the single largest national enterprise, should have a prosperous career. And, it is also necessary that it should be run as a commercial enterprise, in the sense that the taxpayer, who has invested some Rs. 974 crores, should get a reasonable return. At the same time, the fact that it is a national and monopoly enterprise casts a certain special responsibility on the authorities to ensure that the consumer is not made to bear a particularly heavy burden. Judging from these considerations, the Railways have by and large acquitted themselves creditably. The lapses, such as they have been, are largely due to physical shortages which, despite the administration's best efforts, persist in a somewhat acute form.

The income of the Railways has been expanding at a satisfactory pace. From Rs. 274.3 crores in 1953-54, the gross traffic receipts rose to Rs. 286.8 crores in 1954-55 and the revised estimate for such receipts in 1955-56 places them at Rs. 314.1 crores. This improvement reflects the buoyancy of the Indian economy. There has been a great increase in agricultural and industrial production in recent years. This is due partly to the implementation of the Five-year Plan and partly to favourable monsoons (the floods notwithstanding) and to the absence of large-scale industrial unrest. Thus, during the first 10 months of 1955, the index of industrial production (base 1951=100) was 125.7, as against 112.9 for the whole of 1954, while the agricultural production for 1954-55 was almost on par with the previous year's record level. This improvement has naturally been reflected in the earnings of railways. The point to be noted is that these earnings cannot be isolated from the general progress in the overall economy. Since there is reason to hope that the pace of this progress will be maintained, if not improved, in the next few years, thanks to the second Five-year Plan, the Railways' earnings should climb to continually higher levels.

The long-term outlook for the Railways is thus bright. At the same time, there is need for meeting some of the heavy demands for capital equipment in the near future. The allocation made to the Railways under the second Plan is of the order of Rs. 1,125 crores, of which the Railways are expected to find Rs. 375 crores from their internal resources. It is in this context that one has to view the proposal for a 6¼ per cent. surcharge on freight on all items (with the exception of grains and pulses, fodder, manure, *khadi*, newspapers, newsprint and books) made by the Railway and Transport Minister, Mr. Lal Bahadur Shastri, in his budget. As a result of this charge, the Railways' earnings are expected to improve by about Rs. 12 crores. Normally, such an impost, especially at a time when the earnings are comfortable, would be rightly regarded as unjust. But one should look at it in the context of the future economy of the Railways and that of the country as a whole.

From the point of view of the Railways, there is, as already stated, an urgent need to improve the earnings, in order to provide for capital equipment and normal replacements of worn-out rolling and other stock. The question which arises here is whether such equipment should be financed out of current income. Now, the Railways, like any other commercial enterprise, should naturally look to current income for meeting a part of their capital needs. The fact is that the Government has agreed in principle to such a method of financing capital equipment in respect of certain controlled industries, as, for instance, steel, cement and raw rubber. This indicates a welcome trend in official policy, in that it shows that the Government is fully alive to the imperative need for permitting at least a part of capital expansion to be financed from current earnings.

Now that this principle has been accepted by the Government and applied by it in relation to the private sector, it would not be wrong for the Government to apply the principle to the public sector also. It is true that equity demands that the principle should be applied cautiously; care should be taken to ensure that the railway users are not made to bear too heavy a burden. There is no reason to believe that the new impost proposed by the Railway Minister violates this essential safeguard. It is particularly small; the incidence of the increase in goods freight will be in the neighbourhood of 8 pies per maund or less than a quarter pie per *seer*. From the larger point of view of the national economy, too, there is something to be said in favour of covering a part of capital expenditure through current earnings. The alternative to this is only deficit financing, which, when carried beyond a limit, will lead to inflation. But, as everyone knows, inflation is the worst form of taxation.

The fact that the Railways are trying to finance a part of their capital needs from their current income imposes a special responsibility on the authorities to see that increased earnings are not frittered away in running expenses. Economy must be vigorously pursued. Special efforts should be made to cut down wasteful expenditure. Some of the programmes for building imposing edifices for the less important stations could be wisely held up and the money diverted to the purchase of more productive equipment. It is not merely in this negative sense that economy should be pursued. It must be adopted in the more positive way of a more efficient handling of equipment. In this connection, it is gratifying to be told that the tonnage lifted in the first nine months of the current year was higher by 8¼ per cent. on the broad-gauge and 18 per cent. on the metre-gauge than during the corresponding period for last year. Again, the net ton-miles per wagon day during the year 1954-55 reached 483, as against the wartime peak figure (451). Also, the net ton-miles per day per engine in use on the broad-gauge rose to 29,345 or by 9 per cent. over the previous record in 1941-42; the corresponding figure over the metre-gauge was 12,851 or 4 per cent. over the previous record. A particularly welcome feature is that the Efficiency Bureau which has been set up by the authorities is maintaining a close watch over the problems relating to the efficient running of the Railway administration; its activities have been extended to cover such important aspects of the working of the Railways as civil engineering repairs and office organisation.

There will be widespread regret over the fact that there is no early prospect of seeing an end of the deplorable conditions of overcrowding in the trains. The allotment made under the Plan to the Railways is insufficient to augment its carrying capacity, whether in respect of goods or passengers. The Minister said that he feared that "the small increase of 3 per cent. per year in passenger train miles now planned will not help much to relieve overcrowding, as long as passenger traffic continues to grow as anticipated." Nevertheless, it is to be hoped that, within the limits imposed by lack of finance, special attention will be devoted to the problem of over-crowding in suburban trains in important cities like Bombay. Such attention is justifiable on two grounds. In the first place, over-crowding in suburban trains, since it is a daily ordeal for the passengers, cannot be regarded merely as part of the problem of general over-crowding in trains in which the passengers travel only occasionally. The suburban passenger's lot is, therefore, worthy of special attention. Secondly, the speed and efficiency with which suburban trains are run have a bearing on national economy. A break-down in suburban train service in an industrial area like Bombay means the loss of a day's production in many factories. Further, because of housing shortages, many workers as well as members of the technical and administrative staff are compelled to live in suburbs at great distance from their places of work. Travel in over-crowded trains destroys their efficiency to a degree that is not generally recognised. It is to be hoped that the authorities will take special care to relieve, as far as is humanly possible, over-crowding in the suburban trains.

There are two aspects of Railway administration which deserve special notice. The one relates to the zonal division of the Railways and the other to the organisation of the Railway Ministry. Both these issues have been examined at some length by the Estimates Committee. Pleading for the setting up of a high-power technical committee to study the zonal problem, the Estimates Committee quotes the opinion of Mr. I. S. Puri, ex-Financial Commissioner of the Railways, that "re-grouping has till now remained, to a large extent, reorganisation in paper only." Surely, if zonal division of the Railway system, initiated with such zeal and publicity, has led to a no more concrete result than changes in nomenclature, it is a matter that calls for expert study. As regards the reorganisation of the Transport Ministry, in view of the manifold problems of each of the different forms of transport and the gigantic problem of expansion of the Railways, the Committee has suggested the bifurcation of the Ministry of Transport and Railways. We do not believe in proliferations of ministries which makes subsequent co-ordination of efforts much more difficult. But there is some need to ensure that a senior Minister, like Mr. Shastri, is enabled to give his undivided attention to the Railways and that, in addition to his being ably assisted, as now, by the Deputy Minister or by a person with a higher ministerial rank, the whole Ministry is staffed by more men with knowledge of, and experience in handling, transport problems.

SHORT-COVERING PREVENTS LANDSLIDE IN EQUITIES

WORLD WHEAT TALKS—CONTROL OF CAPITAL ISSUES

THURSDAY, 5 P.M.

THE way in which the share markets have reacted to the budget may be an enigma to the uninitiated. But it is not so to those who know their ways. The budget is definitely a bearish one, from the investors' point of view. But many are puzzled, because the markets have not gone down very much after it was made public. After fluctuating within a wide range, the leading speculative counters have closed at levels well above the lowest seen in the early post-budget session. Over the week, of course, they show losses, but only of a minor nature. The volume of selling pressure, too, has not been aggressive and the tendency is to steady up at ruling rates. The explanation for this is simple. The markets had discounted the present budget well in advance. For several weeks now, equities have been retreating, owing to continuous liquidation, both by investors and speculators, induced by fears of heavy taxation. Further, a day or two before the budget the market was thick with rumours of almost all the measures that were announced by the Finance Minister in Parliament yesterday. To be candid, the budget had leaked out to an extent greater than at any time in recent years. That is what every responsible share broker tells us. So, when the proposals were actually broadcast, the element of surprise was absent. That apart, those who had got scent of the new taxes in advance had sold short; they booked their profits today, while the going was good. It is this short-covering that imparted some steadiness to the markets today. It remains to be seen as to how long this steadiness will last.

MARKET GOSSIP

Another factor that has neutralised, to some extent, the bearish implications of the budget to equities is the fairly substantial buying of Tata Ordinary and A.C.C. by the Chief Custodian of Life Insurance. It would appear that he has been buying Tata Ordinary at Rs. 220 and A.C.C. at Rs. 200. The object of this operation may be to cushion the shock of the budget and to create an impression that the new taxation proposals are not as heavy as they are said to be by some. If this surmise is correct, this special buyer will be out of the equities market after a while.

The worst sufferer as a result of the new tax proposals will be the cotton mill industry. It will have to bear a new burden of Rs. 14.5 crores, according to Mr. Deshmukh's estimate, by way of additional excise duty. This may, for all we know, be an under-estimate. Even if we assume that a part of it will be paid by consumers, the fact remains that the industry will have to pay the balance on top of heavier cost of production consequent upon (1) increased railway freight charges, (2) the new excise duty on diesel oil, vapourising oil and furnace oil, and (3) higher prices of raw cotton. Since there is not much scope for expansion of cloth production, except through modernisation which will require heavy capital investment, the profits of the cotton mill industry as a whole are unlikely to expand to any significant extent. It is against this general background that one has to view the effect of the tax on ordinary dividend and the increase in other corporation taxes.

* * * *

The significance of the tax on dividend is explained in our first reactions to the budget on the previous two pages of this issue. It may, however, be added here that the effect will vary from company to company. Accordingly, its incidence will have to be carefully calculated for every company. Generally speaking, however, if a company has a relatively small paid-up capital as compared with its turnover and profits, the incidence will be heavier than in the case of companies with large paid-up capital. In other words, in the case of companies where the percentage of dividend is higher, the incidence will be heavier than in the case of companies with smaller percentage of dividends. To give an example. The dividend of Bombay Dyeing is only 8 per cent., but it is 20 per cent. in the case of Kohinoor. The incidence of the tax on the dividend of the latter will be more marked than in the case of the former. The tea companies and some sugar companies—Belapur, for instance, pays 32 per cent.—have been paying big dividends in terms of percentage. They will, therefore, be hard hit. The dividend tax, it must, however, be borne in mind, applies only to ordinary dividend and that, too, only of non-section 23A companies. Another point to be remembered is that, since this tax is treated as corporation tax, individual investors will not be entitled to any refund of tax.

* * * *

So far as the tax on bonus shares is concerned, the tax will be collected from the companies themselves and not from shareholders, as had been originally expected. But this tax, too, is described as a corporation tax.

* * * *

What is a non-essential vegetable oil? There is a lot of confusion on this question. Even the Finance Bill, in which there is a clause imposing excise duty on this oil, contains no definition. Some are under the impression that the term covers only such non-edible oil as linseed oil. But they are wrong. Non-essential oils, according to our understanding, include both edible and non-edible vegetable oils such as groundnut, sesamum, linseed, castorseed, cotton seed, etc. For there are oils known as "essential vegetable oils" from which essence is extracted and are highly useful for the manufacture of medicines and perfumery. To this variety belong lemon-grass oil and sandalwood oil. So any vegetable oil that does not come under this category is non-essential oil.

* * * *

The fate of the International Wheat Agreement, which expires on 31st July next, hangs precariously in the balance. The withdrawal of the U.K. from the 60-nation Conference which commenced its session at Geneva on 20th February 1956, has made the task of reaching an agreement considerably more difficult, in view of the fact that the U.K. is the world's leading importer of wheat. The delegates of the other wheat-importing countries have, however, announced that they would continue negotiations with exporting countries for a new wheat agreement without Britain's participation.

The wheat situation is admittedly difficult, thanks to a world-wide increase in supply over anticipated demand. This was clearly indicated by Mr. F. Sheed Anderson, Chairman of the Conference, who said: "The present situation is still one of abundant supplies and, although we must keep in mind that certain grades of wheat are in short supply, or barely meet demand, and that wheat stocks should be related to domestic as well as to international market for human and animal consumption, the estimated total volume of wheat available for marketing is greater than last year." He pointed out that the prices of wheat, except of those grades for which demand in relation to supply is strongest, have been declining—those for the lower grade quite substantially. He further said that there was little evidence that lower price levels, although they may be warranted by the supply position, had affected significantly the overall demand for wheat. He added: "While the possibility of still lower prices remains, buyers naturally buy on a short-term basis."

If no agreement has so far been reached, it is at least not due to any lack of expert study of the problem. No less than three committees have submitted their reports to the Conference. The first of them, the Committee on International Measures, reported on possible alternative means of achieving the objective of the present Agreement, namely, to assure supplies of wheat to importing countries and markets to exporting countries at equitable and stable prices. A Technical Committee examined the technical aspects of a number of questions arising from various suggestions or from the operation of the present Agreement. The Committee on Surpluses considered the question of disposal of existing surplus stocks. It recognised that governmental measures guaranteeing or supporting wheat prices are operated in both importing and exporting countries and concluded that those policies do contribute to an increase in world production of wheat. The Committee admitted that the Governments must decide on their production policies in the light of their own needs and circumstances and that it would be impossible to incorporate in an agreement provisions which would impose regulations upon them in this field. It nevertheless suggested that further thought should be given by the concerned Governments to the international wheat problem.

Since the trend of the discussions at the Conference showed that there was no likelihood of any significant departure from the present type of agreement to which it is opposed, the U.K. Government has, as stated at the outset, decided to withdraw from the Conference. Announcing this decision, Mr. George Bishop of the Board of Trade said that the British Government did not consider an agreement of the present type would make a positive contribution to the solution of the problem of wheat surpluses. His objections against the Agreement were: (1) It contains no provisions which would link disposal of existing surpluses to the working of the Agreement (2) It does nothing to discourage continuance of production in excess of effective demand. (3) It does nothing to encourage increased consumption. (4) There are no effective provisions to ensure that prices are allowed to move freely even within the present price-range in accordance with current conditions of supply and demand. Yet another reason determining Britain's attitude, according to Mr. Bishop, is that any renewed participation of the U.K. Government in an agreement of the present type would necessitate a "reversion to Government control over the import of wheat into the U.K. and perhaps, even a return to State trading, in order to enable the Government to honour obligations which it would undertake if it were to subscribe to the agreement." The British Government, he said, would not find it possible to justify to public opinion such a major reversal of domestic policy, unless it could be shown that a new agreement made a positive and effective contribution to the world wheat problem. Thus, Britain's objections to any agreement of the present type are both clear and convincing. They should serve to exonerate that country of the charge that it is obstructing the conclusion of a really useful international agreement in wheat. It remains to be seen whether other countries would be able to negotiate an agreement without Britain's participation, and whether, even if they did, the Agreement would be a workable one.

* * * *

The debate on the Capital Issues (Continuance of Control) Amendment Bill, which was passed by the Lok Sabha this week, provided an occasion for the Finance Minister, Mr. C. D. Deshmukh, to give

N.B.—The highest levels during 1955 were touched mostly in the last week of October.

CEILING ON BANK MANAGERS' SALARIES

As we go to press, we reliably understand that an amendment to the Banking Companies Act is imminent. Under this amendment, the Government will take powers to appoint its nominees on the Board of Directors of banks. Further, a provision has been inserted for fixing a definite ceiling on the salaries of bank managers. It is reported that the ceiling will be in the neighbourhood of Rs. 3,500 per month.

It is also reliably understood that the salary of Custodians of life insurance business will not exceed the maximum of Rs. 2,500 per month.

Statement Showing Changes in Super-tax Payable on Individual Incomes of Over Rs. 70,000

NEW TAXATION PROPOSALS

FINANCE MINISTRY'S MEMORANDUM

THE details of the new taxation proposals contained in the 1956-57 budget are explained at great length in a memorandum, prepared by the Union Finance Ministry. The text of this memorandum, together with the additional revenue expected against each head, is published below. The reference clause numbers in the memorandum relates to the Finance Bill, 1956 introduced in Parliament on Wednesday:

Customs Duties

1. (*a*) *Liquid gold for glass making.*—The duty on liquid gold for glass making is being raised from 31¼ per cent., including surcharge, to 62½ per cent., including surcharge. The indigenous industry in liquid gold has to pay more for its raw materials and is also otherwise at a disadvantage *vis-a-vis* the imported product.

(*b*) *Flashlights and flash light cases.*—The present duty of 39⅜ per cent. on flashlights and flashlight cases is being raised to 50 per cent. This will be applicable to flashlights imported complete or in parts, but not to batteries which are also used for other purposes, e.g., hearing aids. This is being done in order to assist the indigenous industry against cheap imports from certain areas.

(*c*) *Spectacles.*—At present, while complete spectacles are charged to duty at 20 per cent. *ad valorem* as optical appliances, spectacle frames and parts thereof (excluding those plated with gold or silver) are assessed at 50 per cent. *ad valorem*. The favourable treatment accorded to complete spectacles is being abused by importing spectacle frames fitted with plain glasses or cheap glasses and passing them off as complete spectacles. The change in duty is intended to prevent this abuse. Before the abuse started, the normal pattern of trade was for spectacle frames and glasses to be imported separately.

(*d*) *Trade catalogues, advertising circulars, etc.*—At present, no import duty is charged on trade catalogues and advertising circulars imported by packet, book or parcel post. The International Convention to facilitate the importation of Commercial Samples and Advertising Material, to which India is a party, has come into force with effect from the 20th November 1955. It is, accordingly, necessary to amend this classification so as to bring it into conformity with the terms of the Convention.

(*e*) *Chemical manures.*—At present, no import duty is charged on manures, including certain chemical manures specified in the Tariff Schedule. The list of chemical manures has been re-examined and some items have been removed because they are not, and are not likely to be, in use in agriculture or because their import is detrimental to the development of indigenous industry.

Muriate of potash, urea and ammonium sulphates, which have also important uses in industry, have been excluded from the list, but a notification is being issued simultaneously authorising Collectors of Customs to grant duty-free entry to such imports of these chemicals as will be ultimately used only as manure.

(*f*) *Mineral oils.*—The existing entries in the Import Tariff relating to mineral oils are being amended so as to make the classification more rational and less difficult of administration. Countervailing duties are also being levied on certain items consequent on the levy of central excise duty on the same items indigenously produced.

The net effect of all the aforesaid changes will be an addition of about Rs. 1 crore to the revenues.

(*g*) *Vegetable non-essential oils.*—Countervailing duties on vegetable non-essential oils are being levied consequent on the imposition of a duty of central excise on indigenous vegetable non-essential oils. Consequently, the duty will be half an anna per lb. on all such oils.

[Clause 29.]

(*h*) *Tea.*—Export duty is levied at present on the basis of a slab system as follows:

When the price of tea	As. per lb.
(i) does not exceed Rs. 2-8 per lb.	4
(ii) exceeds Rs. 2-8 per lb. but does not exceed Rs. 3-4 per lb.	6
(iii) exceeds Rs. 3-4 per lb. but does not exceed Rs. 4-0 per lb.	8
(iv) exceeds Rs. 4-0 per lb. but does not exceed Rs. 4-12 per lb.	10
(v) exceeds Rs. 4-12 per lb.	12

The duty of eight annas on "slab (iii)" is being reduced, by notification, to six annas. The effect of this is that all teas falling within a price range "exceeding Rs. 2-8 per lb. but not exceeding Rs. 4 per lb." will be assessed at a uniform rate of six annas per lb. The reduction is being made in the interests of the tea industry.

The loss of revenue involved is expected to be about Rs. 1 crore.

Central Excise

2. (*a*) *Amendment of certain sections and schedules of the Central Excise and Salt Act.*—At present, only manufacturers in the taxable sectors can be licensed, and licensing of wholesalers dealing in excisable commodities is not permissible except in respect of tobacco, and to a limited extent, in the case of coffee. It is proposed to give powers to the Central Government to direct by notification, where necessary, that exempted categories of manufacturers of excisable manufactured products, and wholesale dealers in such products, may be brought under excise surveillance by licensing. This power is required for the proper administration of the exemptions given to the smaller units in the tariff and to prevent evasion.

[Clauses 32, 33 and 35.]

(*b*) *Kerosene and motor spirit.*—Definitions of petroleum products with reference to measurable specifications such as "flame height," "flashing point," "viscosity," are being more precisely provided. This is a part of a scheme of rationalisation of customs and Central excise definitions of such products designed to remove certain administrative difficulties which have hitherto been experienced in classifying them for assessment to customs and excise duties. The "flash point" now proposed for motor spirit is the same as the flash point of "dangerous petroleum" as prescribed in the Petroleum Act, 1934, and is sufficiently low to exclude "power kerosene" employed in agricultural tractors from the scope of the definition of "motor spirit" for which the rate of duty of Re. 0-15-9 per imperial gallon has been provided. No changes in the rates of Central excise duty on "kerosene" and "motor spirit" have been proposed.

[Clause 34 (*a*) and (*b*).]

(*c*) *Cotton fabrics.*—An increase of 6 pies per sq. yd. is proposed on all categories of cotton fabrics, except coarse *dhotis* and *saris*. The existing and the proposed rates of duty are as follows:

Category	Existing rate of duty (exclusive of a handloom cess of Re. 0-0-3 per square yard)	Proposed rate of duty (exclusive of handloom cess of Re. 0-0-3 per square yard)
	Per sq. yard Rs. a. p.	Per sq. yard Rs. a. p.
(i) Superfine ..	0 2 0	0 2 6
(ii) Fine	0 1 3	0 1 9
(iii) Medium	0 0 6	0 1 0
(iv) Coarse	0 0 6 (For all varieties)	(*a*) *Dhotis* and *Saris* 0 0 6 (*b*) All other sorts 0 1 0

Duties collected on the various categories of cloth during the last few years have been:

Category	Duty collected (in crores of rupees)				
	1951-52	1952-53	1953-54	1954-55	1955-56*
Superfine	6.80	3.62	4.15	4.60	5.00
Fine	5.61	3.90	5.26	4.05	3.98
Medium	3.31	4.42	5.08	10.81	11.17
Coarse	0.50	0.61	0.71	1.22	1.57
	16.22	12.55	15.20	20.68	21.70
Plus handloom cess..	..	0.87	0.57	6.91	7.55
Grand Total ..	16.22	13.42	21.77	27.59	29.25

* Estimated.

In Part B of the Finance Minister's Budget speech, reference has been made to the rise in the price of agricultural commodities and the fall in stocks of cotton fabrics carried by mills. The index for food articles which was 276.2 for the week ending 28th May 1955 has risen to 328.8 for the week ending 11th February 1956. Stocks with mills which amounted to 2.6 lakh bales on 26th March 1955 had declined to 1.4 lakh bales on 4th February 1956.

For the review of Bombay Stock Exchange, please see page 431.—ED.

Cotton powerloom factories (without spinning plants) have been given the administrative facility of paying duty on their production of cotton fabrics according to a system of compounded rates per loom per shift. With the increases now proposed in the tariff rates of duty on mill-made cotton fabrics, these compounded rates are being revised as follows:

	Rates per loom per shift per month	
	Present	Revised
	Rs. a. p.	Rs. a. p.
(1) Manufacturer employing more than 24 looms	22 8 0	30 0 0
(2) Manufacturer employing more than 9 but not more than 24 looms ..	20 0 0	24 0 0
(3) Manufacturer employing more than 4 but not more than 9 looms ..	18 0 0	(No change)
(4) Manufacturer employing not more than 4 looms	*Nil*	(No change)

The above proposals are expected to yield Rs. 14.5 crores.

[Clause 34 (*c*).]

(*d*) *Rayon or artificial silk fabrics.*—The existing rate of duty prescribed in the Central Excises and Salt Act, 1944, for rayon or artificial silk fabrics is 6 pies per sq. yard, exclusive of the handloom cess of 3 pies per sq. yard, but powerloom factories producing these fabrics have, as in the case of cotton powerloom factories, been given the administrative facility of compounding their tax liability on the basis of a rate per loom per shift.

As compared to the tax-free sectors of units consisting of four looms each in the cotton and woollen powerloom industries, the size of that sector at 24-loom per unit in the art silk industry is considered too large. This position is now being sought to be readjusted by—

(*a*) withdrawing the exemption to manufacturers employing upto 24 looms;

(*b*) replacing it by complete exemption from excise duty for manufacturers employing up to nine looms;

(*c*) exempting from the compounded levy, the first nine looms employed by any manufacturer in the production of rayon or artificial silk fabrics, and revising the current compounded rates as follows:

	Rates per loom per shift per month	
	Present	Revised
	Rs. a. p.	Rs. a. p.
First shift	22 8 0	27 0 0
Second shift	15 0 0	18 0 0
Third shift	11 4 0	10 0 0

[Clause 34 (d).]

(*e*) *Soap.*—At present, only those manufacturers of soap who employ power for their manufacture are liable to Central excise duty. It is now proposed to levy a new excise duty on soap produced by manufacturers who do not employ power. For practical reasons, the exemptions provided in the existing tariff definition for small manufacturers of soap are being withdrawn, and are being replaced by equivalent exemptions by executive notification. Similar exemptions are also being provided for small manufacturers of soap who do not employ power.

The following table shows the duty payable by manufacturers of soap employing power and those not employing power:

Manufacturers employing power (1954-55)		Manufacturers not employing power brought under excise duty (Estimated)	
Production	Duty realised	Production	Duty
86,300 tons	Rs. 1.36 crores	37,000 tons	Rs. 0.20 crores

Under the tariff definitions adopted in the Bill and the exemptions granted by executive notification, there will be the following differences between manufacturers of soap not employing power and those employing power:

(i) Manufacturers employing power are required to pay a higher duty (Rs. 14 per cwt.) on "toilet soap" than on "washing soap" (Rs. 5-4 or Rs. 6-2 per cwt. depending upon size). In the case of manufacturers not employing power, the distinction between toilet soap and washing soap is proposed to be dispensed with.

(ii) Manufacturers not employing power are proposed to be charged on their products at the rate of Rs. 4-8 or Rs. 5-4 per cwt. (according to size), i.e., at a rate which is one-seventh lower than the rate charged on "washing soap" produced by manufacturers employing power.

(iii) A manufacturer of soap employing power is now entitled to exemption from excise duty if his output does not exceed 125 tons per year of washing soap and 50 tons per year of toilet soap. A manufacturer not employing power is proposed to be exempt from duty if his output of all kinds of soap does not exceed 200 tons per year; it is thus proposed to give him an overall advantage of 25 tons.

[Clause 34 (e).]

(*f*) *Strawboard.*—At present, millboard is charged to duty at the rate of 6 pies per lb. but strawboard is exempted. Both types of board sell at more or less the same price and are used for the same purpose. It is, therefore, proposed to withdraw the exemption at present granted to strawboard. In order, however, to assist the smaller producers of "strawboard" as well as "millboard," an exemption is being provided by executive notification, for the first 500 tons of millboard, other than white and coloured, and strawboard, taken together, cleared by any manufacturer for home consumption in the financial year.

The total revenue effect of the changes in excise duties in respect of soap, strawboard and art silk fabrics is an increase of Rs. 50 lakhs.

[Clause 34 (f).]

(*g*) *Paints, pigments, etc.*—In the administration of the existing tariff for "paints, pigments, etc.," an anomaly arose between the rates of duty prescribed for the medium-size group of manufacturers of "water paints" and "oil paints and enamels" and the exemption provided for manufacturers of these products whose annual output does not exceed 50 tons. The exemption for the latter class of manufacturers is, therefore, being withdrawn from the tariff and replaced by an equivalent exemption by executive notification which has been so framed as to remove the anomaly now present in the tariff.

[Clause 34 (g).]

(*h*) *Vegetable non-essential oils.*—It is proposed to levy a new duty of Rs. 70 per ton (6 pies per lb.) on vegetable non-essential oils in the manufacture of which power has been employed. An exemption is also being provided, by executive notification, for the 125 tons first cleared by any manufacturer for home consumption during the financial year. The combined effect of this exemption and the proposal in the Bill would be to exclude from the scope of the taxation *ghanies* and such other non-power-operated units, as well as small power-operated units not producing in excess of 125 tons per year.

A rough survey has recently been conducted

(*Continued on page 429*)

NEWS IN BRIEF

THE Government of Mysore will introduce, in the current session of the State Assembly, a measure providing for labour participation in industry.

Further licensing of cotton sewing thread for export during the current half-year has been stopped with effect from Tuesday this week.

The Andhra Government proposes to raise the tax on petrol from an anna and a half to As. 3 per gallon. Disclosing this, the State Transport Minister said at Vijayawada the other day that the proposal would yield Rs. 9 lakhs annually.

In view of the unsatisfactory position of water levels in the Madras hydro-electric system, the State Government has felt it necessary to enforce, with effect from next month, a 25 per cent. cut in power consumption for industrial purposes in areas served by the system.

The Assam Finance (Sales Tax) Bill, which will be moved in the ensuing budget session of the State Assembly, due to commence on the 6th inst., seeks to impose a tax of six pies in the rupee on sugar and matches. The proposed tax will be realised at the source—manufacturers or importers.

The Working Journalists (Conditions of Service) and Miscellaneous Provisions Act, which provides certain minimum standards in respect of various aspects of employment of working journalists and others in the newspaper industry, will, like similar other measures, be administered by the Ministry of Labour.

The Government of India has accepted the principle of a centralised machinery for the purpose of buying Government requirements of stores, with adequate safeguards for direct purchases where necessary. The majority of the recommendations of the Stores Purchase Committee for improving the working of the Central Purchases Organisation has been examined and accepted by the Government.

More than half of a consignment of 1,000 railway wagons for India has been completed by the Austrian firm, the Simmering Graz Pauker Works. This firm has received—in competition with 30 other firms—a U.S. International Co-operation Administration order worth $1,942,000 for railway equipment for India. The consignment is due to be shipped through Hamburg to Visakhapatnam.

At its seventh general meeting held at Mysore last week, the Indian Coir Board decided to send a six-member delegation to Ceylon to study the production technique of coir mattresses there. It also decided to open show rooms and sales emporia in all important cities in the country, including Delhi, Bombay, Calcutta and Madras. The Board considered draft rules which would give it an effective control over the industry in the country. The rules were not accepted and were sent back for eliciting opinion from the various State Governments, co-operative bodies and other interests concerned.

The 23rd Annual General Meeting of the Indian Sugar Mills Association, Calcutta, will be held at New Delhi on 24th March 1956. The meeting will be inaugurated by Mr. Ajit Prasad Jain, Minister for Food and Agriculture, Government of India. Besides reviewing the various important developments in the sugar industry in the past year, it is understood that the Association will take up for consideration certain important aspects having a vital bearing on the sugar industry, such as measures for maximisation of production, intensification of cane development, future expansion of the industry, etc.

The Government of Saurashtra has set up the Saurashtra State Road Transport Corporation, with a capital of Rs. 2 crores. The Western Railway has contributed one-third of the capital for forming the Corporation. The Corporation which has been set up to nationalise the existing private-owned road transport, will not take over the entire privately operated routes immediately. Nationalisation will be brought about by stages. By October this year, half of the existing private-owned transport systems will be taken over and the remaining half will be brought under the Corporation by October 1959.

The railway repair workshop at Izzatnagar on the North-Eastern Railway is to undergo extensive remodelling, in order to equip it for the much larger outturn required during the second Five-year Plan period. The remodelling scheme is expected to cost approximately Rs. 1.86 crores. The scheme covers extension of accommodation available in the workshop and purchase of new equipment to deal satisfactorily with modern locomotives, carriages and wagons. The remodelled workshop will be in a position to give periodic overhaul to 104 locomotives, 2,400 passenger coaches and 3,000 goods wagons per year, in addition to immediate overhaul to 98 locomotives per annum.

A contract for the supply, erection and commissioning of plant for the expansion scheme of the Sindri Fertilisers and Chemicals has been awarded to Montecatini of Italy. The contract has been awarded on the "turn key" basis (completely erected and fully commissioned) at an all-inclusive price of £5.3 million. The Government of India has decided to set up three more fertiliser plants of 70,000 tons capacity at an estimated cost of Rs. 23 crores (£17 million) each. They are to be located at Rourkela steel works in Orissa, Bhakra Nangal Canal headworks in the Punjab and at Neiveli in South Arcot (South India).

The Punjab Cabinet is reported to have decided to levy an agricultural income-tax on a sliding scale on all landowners paying land revenue exceeding Rs. 70 per annum. The tax will be enforced after obtaining the concurrence of the State Legislature. The Government will either incorporate this measure in the next Finance Bill or introduce separate legislation. Under the proposed tax, a maximum surcharge of 200 per cent. will be levied on those who pay annual land revenue ranging between Rs. 1,000 and Rs. 2,000. In the lowest slab, those paying land revenue between Rs. 71 and Rs. 100 will be required to pay an additional agricultural income-tax of 50 per cent. on assessed revenue payable by them.

An interest rate of 3½ per cent. on the provident fund accumulations for 1956-57 under the Employees' Provident Fund Scheme was recommended by the Central Board of Trustees at its meeting held at New Delhi on Monday this week. The Board also recommended that loans from the Fund should be allowed to members in cases of serious sickness and for the marriage of their daughters. The annual report on the working of the Employees' Provident Fund Scheme and the budget for 1956-57 were also approved of at the meeting. The Employees' Provident Fund Act, which came into force in November 1952, covers nearly 1.6 million employees in 1,950 factories. The Act at present applies only to six major industries, namely, cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles. The collections so far made under the Scheme amount to nearly Rs. 55 crores.

A sericulture training institute is to be established at Srinagar, in order to meet the need for providing training facilities, particularly, in silkworm rearing. The Jammu and Kashmir Government has been sanctioned Rs. 14,070 for setting up the institute. Another sum of Rs. 13,953 has been given for implementing a scheme to improve silkworm rearing, by opening 10 centres in Kashmir and one in Jammu for one year for collective incubation. For financing a scheme to introduce short-stemmed mulberry plantations in the State, a sum of Rs. 11,250 has been sanctioned. About 500 centres are to be established for the purpose on experimental basis. Over Rs. 17,400 have been sanctioned to the Punjab Government for establishing a nursery for the supply of mulberry saplings and a basic mulberry nursery for the production of Japanese mulberry grafts. Himachal Pradesh has been sanctioned Rs. 10,000 for the scheme to provide irrigation facilities in Dadoh mulberry nursery in Mandi district. Manipur gets Rs. 15,200 for continuing the scheme for the muga seed producing centre.

The paper industry in India provided employment to 23,700 persons during 1955. With the expanding demand and increase in production, the industry is expected to provide 20,000 additional jobs by 1960-61. Another 5,000 additional jobs are expected to be provided by the newsprint industry. In addition, the number of labourers to be employed for the procurement of raw material is expected to be five times the number employed in factories. There are, at present, 21 units manufacturing paper and board, as against 17 at the end of 1950. The annual installed capacity of paper and board production units expanded from 137,000 tons in 1950-51 to 173,700 tons up to December 1954. The production is expected to increase to 450,000 tons by 1960-61. The *per capita* consumption of paper and paper-board is likely to go up from 1.9 lbs. in 1954 to 3 lbs. by 1961 with the expansion of literacy. Only 900 persons are reported to be employed in the newsprint industry at present. With the increased target of 100,000 tons of newsprint for 1961, under the second Five-year Plan, the employment potential is expected to increase.

• • • •

From Abroad

The Australian wool surplus is expected to aggregate 110 million bushels in the ensuing season.

The Singapore Government has published a Bill which seeks to simplify income-tax provisions regarding dividends and to grant concessions to rubber and tin companies.

Canada's output of electricity during 1955 aggregated 76,297 million kilowatt hours—an all-time peak—as against 69,137 million kilowatt hours, representing a rise of 10 per cent.

The Italian draft Bill on exploitation of the domestic oil industry is expected to be amended by a Parliamentary Commission so as to give an equal share in profits to both the State and the producer, instead of the present suggested 60 : 40 ratio.

The first part of the 1956 British Industries Fair opened at Earls Court (London) on 22nd February. The second part of the Fair will be held simultaneously at Olympia (London) and Castle Bromwich (Birmingham) from 23rd April to 4th May.

The East German fiscal authorities have imposed, with retrospective effect from 1st January 1954, a levy of 25 per cent. on all blocked accounts owned by non-residents. In addition, a capital tax of 1 per cent. is imposed on all those accounts which exceed 1,000 marks.

France has opened credits for financing the programme of imports from Indonesia. Under this programme, France will import black tea, leaf tobacco, hides and skins, cocoa, copra and copra meals, kapok, sisal, rubber, tin, spices, essential oils, oilseed and bones. Quotas for coffee, pepper and maize will be released later.

PERSONAL

MR. Murarji J. Vaidya has been elected President of the Indian Council of Foreign Trade for 1956. Messrs. P. B. Advani, D. C. Kothari, B. N. Banerjee and Sankalchand G. Shah have been elected Vice-Presidents, and Mr. D. M. Desai, Honorary General Secretary.

Mr. D. N. Hosali and Mr. K. M. Nanjappa have been elected President and Vice-President, respectively, of the Mysore Chamber of Commerce for the year 1956.

Mr. Maneklal Ujamshi has been re-elected President of the Bombay Sugar Merchants' Association for the current year. Mr. Chunilal Manekchand and Mr. Jamnadas Thakkurdas Talreja have been elected Vice-President and Honorary Secretary, respectively.

Dr. H. J. Bhabha, Chairman, Indian Atomic Energy Commission, and Mr. Arthur S. Lall, India's representatives at the U.N. Headquarters, are representing India at the negotiations for the establishment of an International Atomic Energy Agency which began at Washington on Monday last.

Mr. Charles H. Thaw has been named Assistant to the Vice-President in Charge of Foreign Operations, Worthington Corporation, U.S.A. Mr. Thaw assumes the responsibilities of co-ordination of product development, and sales and engineering problems which concern foreign corporation subsidiaries having manufacturing facilities.

Mr. R. L. Powell, F.C.I.I., Assistant Managing Director of the British India Corporation Ltd., has been elected President of the Upper India Chamber of Commerce for the year 1956. Mr. H. Hill has been elected Vice-President. The other members of the Committee are Messrs. A. H. Buckland, J. M. Heeramaneck, *Rai Bahadur* Ramnarain, P. K. Sahgal and K. M. Wilcox.

Dr. Parker D. Trask, a lecturer in geological engineering in the division of mineral technology, University of California, is arriving in India shortly to conduct a series of seminars on geological engineering which is becoming increasingly important to construction engineers. Dr. Trask will visit India as the representative of the U.S. Geological Survey under the educational exchange programme of the U.S. Department of State. He has also been appointed U.S. representative to the golden jubilee celebration of the Indian School of Mines and Applied Geology at Dhanbad.

OBITUARY

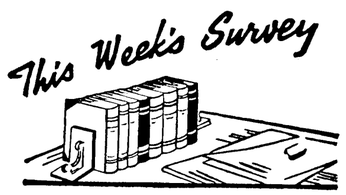
We deeply regret to record the sudden demise of Mr. John McNeil, one of the well-known metallurgists of India, in Bombay on 21st February 1956. Mr. McNeil was born in 1889 and educated at the Rothesay Academy and the Royal Technical College, Glasgow. He joined the Development and Research Department of the Mond Nickel Company in 1927. From 1940 until 1944, he acted as the Company's technical representative in Sydney, Australia. In 1944 he became the Manager of their Technical Office in Bombay. Mr. McNeil was elected a Fellow of the Institution of Metallurgists in 1949 and was a member of many metallurgical organisations, to which he presented numerous technical papers.

Construction will start soon at Columbus (Ohio) on the largest radio telescope in the world. The huge reflector-type telescope will be 700 feet long and 75 feet high. The designer of the telescope is Dr. John D. Krause of the Ohio State University's Electrical Engineering Faculty. Dr. Krause expects to be able to receive signals with the new radio telescope from as far off in outer space as the eye now can see with regulation-type telescopes.

The commercial banks in the Rhodesian Federation and building societies in Southern Rhodesia have raised their loan rates as from 22nd February 1956. The increases are said to be necessitated by the increase in the U.K. Bank rate. The interest rate on housing loans of Rhodesian building societies, some of which are subsidiaries of South African insurance groups, has been increased from 6½ to 7½ per cent. and interest on business premises from 7 to 8 per cent. Deposit rates of both banks and building societies in Rhodesia have also been increased by ½ per cent.

Last year's world output of merchant ships, excluding Russia, China and Poland, was the highest since 1920, except for the war years, according to *Lloyd's Register*. The tonnage of the ships launched was 5,316,742, an increase of over 64,000 tons as compared with 1954. During the year, 276 merchant ships, aggregating 1,473,937 tons, were launched in the U.K. The U.K.'s share of world output also increased. It was 27.7 per cent. last year, as compared with 26.8 per cent. in 1954. Tankers accounted for 44 per cent. of the total British output. Output from British shipyards in 1955 was nearly 1,500,000 tons, 65,063 tons more than in the previous year and the highest since 1929.

Long-term investigation into the preservation of hides and skins by treatment with radio-active materials such as atomic waste has been instituted in Britain. The investigation is announced in the annual report of the British Leather Manufacturers' Research Association. The Director of Research of this Association, Dr. Henry Phillips, says that investigation has begun at the Atomic Energy Research Establishment at Harwell, Berkshire. He has given the results of experiments into prevention of the growth of red heat organisms in dry-salted hides while stored in India and during shipment to the United Kingdom. Dr. Phillips has revealed that spraying the dry-salted hides with a solution of sodium pentachlorphenate can prevent these growths.



DEVELOPMENT OF TRANSPORT

IT is hardly surprising that Mr. B. M. Chinai, President of the Indian Merchants' Chamber, Bombay, devoted a large portion of his speech at the recent annual general meeting of the Chamber to a survey of the transport problems of the country. For, next to finance, transport is, perhaps, the most important of the conditions which must be fulfilled if the economic programmes under the Five-year Plan have to be successfully completed. And, what is equally important, transport is needed for implementing the economic programmes whether in the private or the public sector.

Appropriately enough, Mr. Chinai dealt with practically all forms of transport. After all, transport is like a multi-horsed carriage; all horses have to move abreast if the carriage is to run smoothly. The fact that some of the horses are State-owned and some are owned by the private sector does not in any way lessen the importance of seeing that they keep in step with one another. The Government, being the owners of the railways, has necessarily to see that no bottlenecks develop on this front. The Government is fully alive to this need. The Union Minister for Railways and Transport, Mr. Lal Bahadur Shastri, who inaugurated the Chamber's annual meeting, admitted that, if the "railway system is not geared up to sustain the manufacturing operations envisaged in the Plan, the progress of development contemplated would seriously be jeopardised." The allocation made in the Plan for the railways has been less than what they perhaps deserve to get. It is to be hoped that this allocation will be periodically reviewed, in order to see whether it could be supplemented, consistent with the availability of resources and the capacity of the Railways to utilise further investment. At the same time, necessary steps, as Mr. Chinai suggested, should be taken "to improve the existing facilities by increasing the turn-round of wagons, line capacity and the facilities at marshalling yards and at loading and unloading points."

We have repeatedly expressed the view that road transport is the weakest horse in India's transport stable. Since road transport could be an effective supplement to the railways, it is necessary to ensure that the motor vehicles come into their own. From this point of view, Mr. Chinai was right in stressing that "road transport, the development of which is inhibited by various imposts, including an admittedly very high rate of motor vehicle taxation and various kinds of restrictions on movement, should be encouraged so that it could also play an effective part in the transport economy of the country."

As regards shipping, Mr. Chinai deplored that India's tonnage is less than ½ per cent. of world shipping. He emphasised that if India has to secure its legitimate place in the maritime world, it should make a substantial addition to its shipping tonnage. Mr. Shastri admitted that the provision made for shipping in the Five-year Plan was much below what it ought to be. He quoted the limitations of finance as the cause for this inadequate provision. Shipping companies, as is well known, have been urging the Government to liberalise the terms and conditions under which the Government's loans are given to them. It is gratifying to note that the Government, according to the Railway Minister, is giving its "earnest" consideration to this issue. He added: "We hope to come to a satisfactory decision in this regard before long."

Mr. Chinai also raised the issue of the difficulties experienced by the exporters in obtaining freight for Mombasa and for ports in West Asia and South-East Asia and also referred to the hardship caused by inadequate facilities in some of the major ports and by lack of ancillary facilities in Kandla. Replying to some of these points, Mr. Shastri said that considerable progress had been made in extending and expanding port facilities in the first Five-year Plan. The Government, he said, was also paying special attention to the development of minor ports. A programme for improving 50 such ports had been "almost finalised." It is true that the Government's efforts at improving port facilities have not yet resulted in any corresponding improvement in the turnround of ships. But this, as Mr. Shastri himself pointed out, is due to deterioration in labour output. Clearly, the quicker turnround of ships will depend mainly upon the efficiency of port labour.

SHIPPING POLICY

Two important shipping developments were disclosed by Mr. O. V. Alagesan, Deputy Minister for Transport, in the course of his reply to the debate on the Control of Shipping (Continuance) Bill. First, the Government has decided to take over the entire capital and management of the Eastern Shipping Corporation. The Deputy Minister, however, preceded this announcement by the remark that "we do not propose to erase the private sector in the shipping line. But, whenever the shipping companies find it difficult to conduct the enterprise, the Government will step in." The slogan was, he said, "not nationalisation but more and more tonnage." Secondly, the Government would set up a second shipping corporation in a couple of months.

A notable feature of the Deputy Minister's speech is the immunity, albeit partial, granted to private enterprise in shipping against nationalisation. This is a welcome assurance. It is true that there has been some demand for nationalisation of shipping on the ground that the Government has not only to give large loans to shipping companies but also to find the men from its ranks to run the companies. But the advantages of letting private enterprise to operate shipping far outweigh such considerations. There are many aspects of operating a shipping concern which the Government would find it difficult or inconvenient to handle. In any case, the Government would still need to spend more resources in the event of nationalisation than if it let private shipowners to run the ships, even after taking into account the subsidy element. Again, it must be remembered that the very nature of shipping enterprise demands Governmental assistance of some kind or other. This has been the experience of all countries. Few maritime nations have developed their shipping service or shipbuilding industry without extensive State aid. Further, such assistance has proved more than economically justified in view of the invisible income the shipping industry brings to the country which owns it.

We have advisedly stated above that Mr. Alagesan's assurance gives only partial immunity against nationalisation, because much will depend on how the shipping companies in the private sector conduct themselves and the extent to which they reduce their dependence on the Government. While the need for State assistance to shipping is conceded, the type of, and the manner in which, aid is being sought are likely to aggravate the demand for nationalisation of shipping by the critics of private enterprise, who wield considerable influence over the Government, and may provide a convenient excuse for the powers-that-be to yield to that demand. The shipping companies must, therefore, set their house in order, be business-like in their attitude towards expansion of shipping and strive to achieve maximum efficiency in their operations. Now that the Government itself has entered the field of deep-sea shipping by assuming complete ownership of one corporation and proposing to start another, the private sector in this field has to be more alert and competent, if it is to survive.

Mr. Alagesan revealed that the Government proposed to take over the entire capital and management of the Eastern Shipping Corporation, because the other partner, namely, the Scindia Steam Navigation Co., Ltd., proposed to "walk away." The Corporation, which was set up in 1950 as a company under the Indian Companies Act, has an authorised capital of Rs. 10 crores. The issued and subscribed capital of the Company is Rs. 5.5 crores, of which a sum of Rs. 4.07 crores has been subscribed by the Government and the balance of Rs. 1.43 crores by the Scindia Steam Navigation Co., Ltd., which is the managing agent of the Corporation now but will cease to be so in August, 1956 under the provisions of the new Company Law. For the first time since its inception, the Corporation incurred a loss of Rs. 17.99 lakhs during the year ended 31st December 1955. This compares with the profit of Rs. 40.5 lakhs earned by the Company in the earlier years, of which Rs. 7.4 lakhs went to Government as dividend. According to an agreement between the Corporation and the Government, the latter has agreed to indemnify the Corporation for any loss it may incur.

The second shipping corporation is likely to be set up with capital of Rs. 10 crores. Mr. Alagesan advanced two reasons for the decision to set up this corporation, namely, (1) the need to have "our own ships" to cope with trade that was developing with the Soviet Union and other countries, and (2, the "tendency of private shipping companies to withdraw their ships from routes which do not pay." It is stated that, besides establishing a shipping line between Bombay and Odessa, the extension of the present Bombay-Hamburg service to Russian and Baltic ports will be considered shortly by the officials of the Soviet Ministry of Foreign Trade and the Government of India.

Now that the Government has announced that it would not nationalise shipping in the private sector, it is to be hoped that private *entrepreneurs* will leave no stone unturned to reach the target of 9 million tons fixed for the second Plan. At the beginning of the first Plan, India had a tonnage of 390 707 g.r.t. The target for the first Plan was fixed at 600,000 g.r.t. This falls short by nearly 100,000 tons, but this slack will be made in the second Plan period. After allowing for the obsolescence of 90 000 g.r.t., the total tonnage is expected to reach 900,000 g.r.t. in the second Plan. The proportion of overseas trade that will be carried by Indian ships at the end of the second Plan is expected to rise to about 15 per cent.

With regard to movement of oil on the coast, the Government of India has taken a firm decision to have at least three tankers. One of these will be owned by the private sector and is expected to be registered in India before the end of March 1956. The other two tankers will be acquired for the public sector by the Eastern Shipping Corporation shortly.

It is gratifying to note that the Central Government is considering further expansion of facilities for training of merchant navy personnel. Presiding over the seventh annual general meeting of the Nautical and Engineering College, Bombay, the other day, Mr. Lal Bahadur Shastri, Minister for Railways and Transport, stated that the Government had already spent about Rs. 2 crores on the various merchant navy training establishments. Welcoming the introduction in the College of a radar observer's course, Mr. Shastri suggested the desirability of instituting courses of study for the extra Masters' and extra first class engineers' examination, with a view to avoiding Indian officers being sent to the U.K. for advanced training. The Railway and Transport Minister further stated that the question of increasing the admission to the *Dufferin* and the Directorate of Marine Engineering Training—the two pre-sea training establishments in India—was under examination and soon more boys might be admitted. In view of the increase in the shipping tonnage contemplated under the second Plan, there is certainly need to augment the number of technical personnel for manning the ships.

FLAGS OF CONVENIENCE

In its latest report, published last week, the Chamber of Shipping, United Kingdom, has dealt with a number of international shipping problems, in general, and with "flags of convenience," in particular. The Chamber has alleged that ships flying "flags of convenience" have begun to threaten the development of world sea trade. To quote the Chamber, they have created "a situation with an element of farce in world sea transport." It has pointed out that the "flags of convenience" countries—Panama, Honduras Liberia, and Costa Rica—have registered a more than ten-fold expansion of tonnage under their flags in the past 10 years. Thus, the total tonnage of these countries today is estimated at about 9 million tons, as against 800,000 tons in 1946. Liberia with over 4½ million tons has emerged as a leading maritime nation. The increase, which is described as the "most startling phenomenon in international shipping," is attributed chiefly to two factors, namely, the avoidance of taxation and savings in operating costs. Elaborating this statement, the Chamber states:

"To be able to exchange a heavy burden of taxation for what is, in effect, no burden at all, is an advantage too obvious to require elaboration. The result is that shipowners, who are free to do so, have available to them a most convenient and profitable method of solving their replacement problems and so a means of increasing the size of their fleets at a rate quite beyond that of their competitors. Avoidance of taxation is, therefore, one, and almost certainly the principal motive."

The Chamber admits that the prospect for countries, such as Liberia and Costa Rica, being used as pocket boroughs to influence international shipping may seem fantastic, but, it feels that such a development cannot be ruled out altogether. It fears that, by virtue of their technical ownership, a number of countries, which have emerged as nominal owners of a large bloc of tonnage, although they have had no traditional maritime associations, may be able to participate in international discussions. They may by their vote affect both maritime law and safety regulations through, for instance, an inter-governmental maritime consultative organisation, if ever it should be set up. It is indeed a situation which, the Chamber says, could not have been envisaged either by the sponsors of that organisation or by the countries, which have acquiesced in transfer of ships from their flags. It is further stated that, in times of slump, these untaxed fleets may have a very serious deleterious effect upon those, such as the British fleet, "which are finding fleet replacement even in a period of buoyant world trade so difficult a problem."

The Chamber has dealt also with the problem of flag discrimination, which, it claims, "is continuing to grow." More and more countries have been turning to the system of cargo preference as a means to foster or maintain their national fleets. In the last three years, for instance, there were 19 trade treaties which contained clauses seeking to restrict the movement of cargoes under these treaties to ships of the signatory powers. It is pointed that in one case—Hungary—one of the parties has no seaboard at all. In addition, some seven countries had during this period "attempted to divert cargoes to the national flag by unilateral action," too. The Chamber attributes the reappearance of this type of flag discrimination to the encouragement given by the U.S. by its "application of the system of cargo preference in post-war years." Proceeding it states: "Although the American system is confined to Government-financed cargoes, some countries openly cite the American legislation on this subject, as justification for action on their part which goes even further by including privately-owned cargoes as well."

Finally, the Chamber makes the notable point that, in spite of the increase in the number of passengers carried by air transport, there has been no decline in the number carried by sea on the major passenger routes. In fact, this number has, it says, increased. Germany has now rebuilt its merchant fleet up to nearly 60 per cent. of its pre-war tonnage. Japan continues to expand its merchant fleet by Government aid. In this connection, it points out that British shipowners have objected to the Japanese Government's action by which, regardless of commercial considerations, "national fleets are artificially stimulated to force their services on the world and thus disorganise the international shipping scene." Finally, it discloses that, although there has been a serious shortage of pilots to operate ships through the Suez Canal, the Egyptian authorities have not been finding it "convenient to grant visas to foreign pilots to bring the services up to the required strength." As a result, it would appear that the flow of traffic through the Canal has been affected.

IMPORT TRADE CONTROLS

Judged by the observations made by Mr. Shantilal M. Shah, President, All India Importers' Association, Bombay, in the course of the speech at the annual meeting of this body held on the 27th ultimo, the trading community in India seems to be generally satisfied with the Government of India's import control policy. It can hardly view it otherwise as the present import policy has been the final outcome of a series of modifications and adjustments made, from time to time, in order to serve the interests of the consumer and domestic industry. Although opinion is divided as to how far the present import policy has been successful in fully serving these ends, it is sure to be unanimous on the broad principles on which the policy is based. Thus the policy is framed to secure speedier industrial development of the country. It has kept in view the magnitude of the requirements of the Plan and the shortfall of the available reserves. By extending the basic period, namely, 1954-55, to 135 items, it has afforded trading opportunities to commercial interests, and by enhancing the value of small licences and granting certain other similar concessions the small importers' interests too are being served. Consequently, as Mr. Shah has stated, the policy should receive a "warm welcome from both the trade and the industry."

But the policy seems to have, in the opinion of Mr. Shah, a snag, a serious one at that. It is the introduction of the monopoly imports in regard to certain commodities, whereby the State has sought to channel the trade in certain selected commodities through official or officially sponsored agencies. Mr. Shah criticised this system on the ground that it gave rise to monopolistic tendencies, deprived the established trade of its sphere of activity thereby causing unemployment at a time when everything was being done to increase the volume of employment in the country. Imports of raw silk from China, for instance, have been handled by the Central Silk Board, a Government agency. Two other agencies have been exclusively entrusted with the work of importing soda ash, in return for 12½ per cent. margin over the landed costs as charges. Mr. Shah contended that this system had not benefited anyone, not even the consumer in whose interest it was professed to have been designed, since the prices of these commodities had ruled unduly high. This contention of Mr. Shah is misplaced. Further, he is not fair to the Government, for he does not even properly present the reasons which impelled the Government to resort to the measures criticised by him. The special arrangements made by the Government for regulating imports of soda ash through certain specified trade channels are for protecting the interests of indigenous chemical industry, as other measures for doing so had not proved satisfactory. Similarly, import of raw silk through the Silk Board has been found necessary for safeguarding the fortunes of indigenous raw silk production—a cottage industry—in a manner without imposing undue hardship on consumers of natural silk. By repeatedly harping on this minor aspect of import control, Mr. Shah is making a mountain out of a molehill.

Another aspect of import policy which is of immense importance to the private sector is the proposal to establish a State Trading Corporation to handle foreign trade. One of the objects of State entry into the sphere of trade is stated to be to augment the resources of the State to finance development plans. This proposal stems from the belief that easy money could be had from trading operations conducted by the State. Evidently those who think on these lines seem to be quite unaware of the risks of huge losses to which trading operations are exposed and the skill and techniques needed by those who handle the trade. It is often forgotten that this skill is the result of acquiring not theoretical knowledge from text books but practical experience in a particular sphere over a period of years. Mr. Shah's observations in this context are worth reproducing here.

"The present channels of foreign trade have effectively contributed to the national development of the country and played their part in a very commendable form. Thus, there is no need to replace the existing channels by official agencies lacking in personnel with specialised experience of business to handle such responsible positions where initiative and judgment are most vital. Success in trading in commodities requires a close and continuous watch on the market situation, changes in tastes and price trends which require readiness to take normal risks and quick decisions, as the rapidly changing market conditions would demand. A State-sponsored institution by its very nature would be so slow in taking proper decisions that there is every likelihood of its incurring losses which would ultimately be borne by the taxpayers."

The logic of Mr. Shah's argument is too convincing to be treated lightly and deserves to be pondered by those who are responsible for taking decisions on trade policies. To think that there are easy profits in trade is only to entertain illusions.

The trading community, according to Mr. Shah, is experiencing innumerable difficulties while getting imported cargo cleared from the customs. Unduly long time taken in completing various formalities is causing them considerable loss of time and money. The delay is attributed to either the inefficiency or the inadequacy of the staff or lack of proper departmental co-ordination, delays are also caused by the long time involved in obtaining test-reports of certain merchandise from the customs laboratory. Again, holding up of seasonal goods like woollen fabrics for several weeks results in such goods being carried for sale to the next season, thereby needlessly blocking the funds of the importer concerned and adding to the stringency in the money market. Mr. Shah pointed out in his speech that the number of varied executive instructions which had been issued from time to time, had rendered the customs procedure both complicated and cumbersome with the result that the Sea Customs Act of 1871 had become outdated and unsuited to the needs of a growing enlightened democratic regime He, therefore, suggested the appointment of a Customs Enquiry Committee to enquire into the working of the Act and rules framed under it. This is, indeed, a reasonable suggestion.

DURGAPUR STEEL PLANT

After protracted negotiations, the Government of India has arrived at an agreement with the India Steel Works Construction Co., Ltd.—a consortium of British engineering firms—for the construction by the latter of a Rs. 106-crore steel plant at Durgapur, with one million tons ingot capacity. According to the terms of the Agreement, the plant, machinery and equipment, as also a considerable part of the steel structures, refractories and other materials required for the plant will be supplied by the member firms of the British consortium. The consortium will also carry out the entire work of erection and civil engineering at site under the supervision of the consulting engineers of the Government of India. Foreign exchange cost of the plant is expected to be about £50 million sterling. The rupee cost of the erection, engineering and materials, freight, etc., in India is estimated at about Rs. 39 crores.

Broad agreement has been reached also regarding the arrangement for financing the foreign exchange cost of the plant. A syndicate of British banks has agreed to give a credit of £11½ million sterling. The U.K. Government has offered to the Government of India a loan of £15 million sterling. Both will be used for making payments to the suppliers of the plant, etc., during the latter half of the second Five-year Plan. Payments that fall due during the next two years or so will be made out of India's own sterling resources.

The details of the Indo-British agreement, especially those relating to interest charges, etc., are yet to be worked out. It would appear to have been agreed that the rate of interest on the proposed loan would be linked to the prevailing British bank rate. Press reports from London indicate that the Indian Government has secured a substantial reduction in the cost of the imported steel plant. It is also stated to have secured the waiver of the escalator clause providing for unforeseen rise in labour and other costs. It is further stated that the Indian Government could freely draw from its sterling balances the amount required to finance the project. The U.K. Government seems to have agreed to replenish the sterling balances, when required by the Government of India, by raising a loan on the London money market. The British Government would act as trustees to the loan.

The Durgapur steel plant will be a complementary unit to the Rourkela and Bhilai steel plants, which will also be of one million tons ingot capacity each. The Durgapur plant will produce 750,000 tons per annum of light and medium sections of steel. The Rourkela plant is expected to manufacture 720.000 tons of flat products of steel, hot and cold rolled. The Bhilai plant will produce 750,000 tons of saleable steel, mainly heavy and medium products, including 140,000 tons of billets for the re-rolling industry. Besides, steel production at the Mysore Iron and Steel Works will be expanded to 100,000 tons. Thus, by the end of the second Plan, plants in the public sector will produce about 2 million tons of finished steel.

The Government of India expects to complete negotiations with a Russian official delegation for the erection of the Bhilai steel plant within a fortnight. In the case of this plant, a package deal is being negotiated and the cost of Russian equipment, materials, etc., is likely to be Rs. 43 crores out of a total of Rs. 125 crores that are expected to be spent on the plant. It is stated that the disproportion between the rupee and the foreign exchange cost of the British and the Russian plants is due to the fact that, while India will buy a considerable part of the necessary steel equipment for the Durgapur project from the British consortium, a greater part of the steel requirements in the case of the Bhilai project will be met from internal resources. The Russian Government has, it may be noted, already promised the Government of India credit at 2½ per cent. interest, repayable in 12 annual instalments. So far as the steel plant to be set up by the German firm, Krupps-Demag, is concerned, it is stated that the Government has decided against inviting global tenders chiefly on the ground that world prices were generally known and the question of calling for global tenders was causing undue delay.

INDIA'S ECONOMIC CONDITIONS SOUND

FINANCE MINISTER'S SURVEY

THE Finance Minister's speech presenting the Budget for 1956-57 consisted, as usual, of two parts, Part A and Part B. Part A consisted of 26 pages, of which the first half was devoted to a survey of economic conditions in India. Brief though this survey was, it provided an authentic account of all the essential aspects of India's economic position. A substantial summary of this survey is published on this page, so that it may serve as a record for our readers. Part B consisted of taxation proposals, a summary of which appears elsewhere in this issue:

The Finance Minister began by referring to the first Five-year Plan which, in his opinion, had been fulfilled generally to a satisfactory extent due to the encouraging response from the public and the friendly assistance from foreign countries. The second Plan envisaged a total outlay of Rs. 4,800 crores on development and investment in the public sector. A Plan of that size with possibilities of marginal increases and corresponding financial resources not fully within sight was, in his opinion, about the utmost that the country could, with realism, adopt. The second Plan was a bolder step forward in the direction of developing the economy. It involved an increase in the rate of investment from the present level of about 7 per cent. of national income to something like 12 per cent., and this could be feasible only if the necessary restraint in the matter of consumption was exercised by all sections of the community, each according to its capacity. Foreign assistance, though most welcome, could only help within limits and the bulk of the effort had to come from within the country by a progressive tax system and mobilisation of the savings of the community.

Reviewing the economic situation, the Finance Minister said that economic conditions in the country changed for the better in 1953 and 1954 and the Indian economy achieved greater strength in the course of 1955. The decline in agricultural prices was halted by May 1955, and, over the remaining part of the year, an upward trend was registered. In most industries, production reached significantly higher levels and the performance in regard to agricultural production was satisfactory. The rate of planned outlay was stepped up considerably without apparently releasing inflationary pressure. The slack in the economy which came into evidence after the collapse of the Korean boom had virtually disappeared. The first Plan had strengthened the economy a great deal and the stage was set for more rapid development.

Increase in Production

The output of foodgrains during 1954-55 amounted to 65.8 million tons, just over 4 million tons in excess of the Plan target. The easy supply position of foodgrains enabled the Government to remove the last remnants of controls on 18th March 1955, when the inter-zonal restrictions on movement of wheat were removed. The general crop prospects for 1955-56 were considered to be satisfactory.

The production of commercial crops showed further improvement. Oilseeds output at 5.9 million tons and raw cotton at 4.3 million bales had exceeded the first Plan target by 400,000 tons and 100,000 bales, respectively. Sugar production touched the record level of 1.59 million tons, while jute production had shown a significant increase of about 1.2 million bales.

The upward trend in industrial production had persisted through 1955, the increase over the previous year being 11 per cent. This increase was shared by almost all the important industries. The output of finished steel at 1.26 million tons was higher than the record of 1.243 million tons achieved in 1954. The production of mill cloth stood at 5,087 million yards in 1955 and exceeded the Plan target by 387 million yards. Production of handloom cloth had also increased to 1,450 million yards, the highest since independence. Cement production reached 4.5 million tons, against the highest since 1947. In jute, chemicals and paper, too, the performances were high.

Amongst significant developments, Mr. Deshmukh referred to the steps being taken to plan and execute large-scale development of the chemical industry, the plans of the National Industrial Development Corporation for laying the foundations of heavy machine making industries, and substantial expansion by the two major producers of steel and of the cement output. Special measures, he added, had also been taken for the promotion and development of small industries. A National Small Industries Corporation with four Regional Small Industries Service Institutes had been set up. A number of schemes for various small-scale industries in co-operation with the State Governments had been approved and financial assistance was being given, through the State Governments, on a greatly enhanced scale. The development of the *Khadi* and Village Industries and Handicrafts continued to receive systematic assistance.

Industrial enterprises in the public sector also advanced to higher levels of performance. Amongst the enterprises which had shown encouraging results, the Finance Minister mentioned, the Sindri Fertiliser Factory, the Hindustan Cable Factory and the Penicillin Factory. The Machine Tool Factory, the Integral Coach Factory and the D.D.T. Factory had commenced production.

Amongst the new projects to be taken up during the coming year was the Heavy Electrical Equipment Factory for the manufacture of generators, transformers, turbines, etc. Of the three new steel plants, the work on the first was progressing satisfactorily at Rourkela and a fair amount of progress was expected during the year on the preliminary stages of Bhilai and Durgapur Projects.

The downward trend in wholesale prices, which began in 1953 and gathered momentum in 1954, was halted by May 1955 and, since then, there had been a continuous rise. In December 1955, the prices were on par with the level in December 1954. The prices of food articles advanced from 276.1 in May 1955 to 323.7 in December 1955 and of industrial raw material from 396.4 to 438.3. The prices of manufactured articles remained virtually unchanged.

The fact that prices in general did not record any net rise over the year as a whole was, the Finance Minister said, significant in the context of the considerable expansion that had occurred in money supply with the public which had recorded an increase of 11 per cent. during the year.

Referring to the measures taken by the Government to arrest the downward trend of agricultural prices, which caused some anxiety early last year, the Finance Minister mentioned the purchases made by the Government of wheat and coarse grains at selected centres and the grant of larger quotas for the export of several agricultural commodities. Later, the Government had to release stocks of wheat for sale to prevent an undue rise in prices. The Finance Minister observed that measures for imparting relative stability to agricultural prices could not be fully effective without properly organised and integrated facilities for credit and marketing. An integrated programme of co-operative development covering all important aspects of rural economic life, including processing, warehousing and storage, had been formulated.

In regard to the employment situation, the Minister said that, notwithstanding the progress achieved in different sectors of the economy, the employment problem remained a matter of concern. The measure of unemployment and underemployment in an undeveloped economy, the Finance Minister continued, presented difficult problems of definition and procedure. From the inadequate data furnished by the employment figures, it appeared that unemployment in the urban areas was increasing. Whilst the increase might be due to a greater readiness to register with the employment exchanges and also to some movement from rural to urban areas, "the need for stepping up the pace of development and for diversifying the economic structure of the country is obvious."

Referring to the balance of payments, the Finance Minister observed that, on the trend of the first nine months' figures, the year as a whole might show a surplus of about Rs. 35 crores, as compared with the deficit of Rs. 4 crores in the previous year. The sterling balances stood at Rs. 735 crores at the end of 1955, as compared with Rs. 731 crores at the beginning of the year. The dollar position had also improved and India made a net contribution of $53 million to the Central reserve in 1955 as compared with the net withdrawal of $15 million in 1954. The improvement was achieved at a higher level of trade than in the preceding year, particularly in export of vegetable oils, jute manufactures, raw cotton and shellac.

Despite the satisfactory payments position, the projected increase in the pace of development contemplated in the second Plan would impose "a heavy strain," the Minister said, "on our payments position in future." In urging a note of caution, he observed that, if the second Plan were to proceed according to schedule, "not only shall we not be able to achieve any surplus in our external account but we are also likely to be faced with fairly substantial deficits." It was, therefore, necessary to promote exports by taking urgent and effective steps to modernise and rationalise major industries like jute and cotton textiles so as to make them capable of withstanding foreign competition. All-out efforts, he urged, were required to encourage export industries and otherwise to save or earn foreign exchange.

CENTRAL GOVERNMENT BUDGET

OVERALL DEFICIT ESTIMATED AT RS. 390 CRORES

THE Central Government's budget for 1956-57, which Mr. Chintaman Deshmukh, the Union Finance Minister, presented to the Lok Sabha on 29th February 1956, discloses an overall deficit of Rs. 390 crores. Of this, the deficit on revenue account is estimated at Rs. 51.83 crores and that on capital account at Rs. 338.17 crores. The revenue deficit of Rs. 51.83 crores is in striking contrast to the surplus of Rs. 12.31 crores in the revised budget for 1955-56. A considerable part of the deficit—as much as Rs. 34.15 crores—is proposed to be covered by recourse to additional taxation—direct and indirect. The huge deficit of Rs. 338.17 crores on capital account is due to the marked expansion in capital outlay, the estimate of which is placed at Rs. 703 crores. As against this, the resources expected to be available aggregate Rs. 365 crores—Rs. 100 crores from market loan, Rs. 70 crores from small savings, Rs. 85 crores from foreign aid, and Rs. 110 crores from other miscellaneous and remittance transactions. The uncovered revenue deficit of Rs. 17.68 crores and the capital deficit of Rs. 338.17 crores will together amount to Rs. 345.85 crores. In other words, if all the expenditure is incurred according to schedule, the Government will have created by the end of the year "paper money" of the order of about Rs. 346 crores through expansion of treasury bills.

The revenue deficit of Rs. 17.35 crores estimated in the current year's budget is now likely to be converted into a surplus of Rs. 12.31 crores. The improvement is due to a rise of Rs. 20.19 crores in revenue and a shortfall of Rs. 9.57 crores in expenditure.

Despite the abolition of or reduction in a number of export duties during the year, the customs revenue stand almost at the same figure as originally anticipated, due to improvement in import duties. Similarly, the income-tax receipts are not expected to show any variation. The major increase in revenue has occurred under Union excise duties which are now estimated to yield Rs. 7.73 crores more and in the Posts and Telegraphs revenue which is expected to be Rs. 1½ crores better. There is also a formal increase in revenue of Rs. 11.2 crores on account of sale proceeds of evacuee property which is offset by a corresponding increase in expenditure on its transfer to the compensation pool.

Of the savings in expenditure, Rs. 3.16 crores are in civil expenditure and Rs. 17.61 crores in defence expenditure, arising mainly from difficulties in procuring supplies; but these are offset by the transfer of Rs. 11.2 crores to the compensation pool, leaving the net savings at Rs. 9.57 crores.

The revised capital outlay in the current year is estimated at Rs. 170 crores, as against the budget estimate of Rs. 223.3 crores.

The next year's revenue, on the basis of existing taxation, is estimated at Rs. 493.6 crores and expenditure at Rs. 545.43 crores leaving a deficit of Rs. 51.83 crores on revenue account.

The revenue from customs would be less by Rs. 15 crores, while Union Excise duties would go up by Rs. 5.45 crores. The former is due largely to the full year's effect of the abolition of export duties made this year, cessation of imports of sugar and reduction in the imports of motor spirit as a result of increase in indigenous production. The last item, together with an improvement of Rs. 1.2 crores in tobacco, explains the increase in Union excises. The other significant increases are Rs. 6.3 crores in income-tax and Rs. 3.5 crores in the dividend payable by Railways, but these will be offset partly by decrease of Rs. 1.62 crores in the P. and T. revenue.

The Defence expenditure, estimated next year at Rs. 203.97 crores, shows an increase of Rs. 18.9 crores over the revised estimates for the current year, due to the normal expansion of the Navy and Air Force and, in the case of the Army, to the carryover of demands for stores which have not materialised in the current year.

Civil expenditure next year is expected to be Rs. 43.37 crores more, on account of the rising tempo of development expenditure. The expenditure on nation-building and development services is placed at Rs. 23 crores more than the current year. The provision for Community Development and National Extension Service has been increased by Rs. 1.4 crores, for welfare of scheduled tribes, scheduled castes and backward classes by Rs. 3.4 crores, for grants to the Central Social Welfare Board and expenditure on social and moral hygiene by Rs. 1.6 crores and for expenditure on displaced persons by Rs. 2.7 crores.

For the next year, capital expenditure is estimated at Rs. 316.7 crores, of which Rs. 113 crores are for Railways, Rs. 26.3 crores for Defence, Rs. 44 crores for the three new steel plants, Rs. 20 crores for cash compensation to displaced persons, Rs. 9.5 crores for Government trading schemes mostly for purchase of foodgrains and Rs. 5 crores for the Life Insurance Corporation. In addition to the provision for capital outlay, the estimates for 1956-57 include a provision of Rs. 386 crores for loans to State Governments and others, mostly for the execution of projects in the Five-year Plan. The budget and revised estimates for 1955-56 under this head are Rs. 355 crores and Rs. 327 crores, respectively.

BRITAIN REJECTS PHYSICAL CONTROLS AS REMEDY FOR INFLATION

MR. MACMILLAN'S EXPLANATION

THOSE who want to know as to how Britain has been grappling with inflation should find a helpful guide in the two-day debate in the House of Commons last week on the new Chancellor of the Exchequer, Mr. Harold Macmillan's statement on Government measures to check inflation. The debate highlighted the confirmed belief of the present Government in the efficacy of these measures as also the Opposition's reactions to them. The Chancellor of the Exchequer reiterated his firm faith in the principle that physical controls were more likely to do harm than good. The views of the Opposition were in accordance with the established socialist policy in which physical controls as opposed to monetary measures are given prominence.

The Government's measures which were debated included (1) the raising of Bank rates; (2) suspension of investment allowances to industry for capital expenditure and restoration of initial allowances; (3) tightening of hire-purchase controls and imposition of control on rental on a wide range of consumer goods; (4) adoption of a more critical attitude towards new issues by the Capital Issue Committee; (5) imposition of a cut of £38 million in the bread and milk subsidies and enhancement of retail prices; (6) cut, in the capital programmes of national industries, of the order of £50 million during 1956-57 and curtailment of local authority projects; and (7) reduction in direct Government spending to the extent of £20 million in the same year. These steps were intended to meet an industrial boom which has followed "much the same course in all the countries of Western Europe, with heavy investment in housing, leading first to a revival in consumers' demand, then to stock building and a rising export effort, and more recently to an upsurge in industrial investment and the demand for durable consumer goods."

Opening the debate, Mr. Macmillan declared that the stiffening of hire-purchase terms, the restraints on local authority investments, the removal of investment allowances, and the raising of the Bank rate represented a cut of several hundreds of millions of pounds. He made it clear that he had rejected the idea of import controls. For they would deal not with the causes of the malady but with symptoms. Unless they were applied over a large field, they would not bring very much relief. If they were applied over a large field, the Government would have to create the whole apparatus of allocation and rationing, involving a lot of expenditure of an unproductive nature. Again, there would also be, he pointed out, serious repercussions on the country's exports and the whole of its international trading relations, because imposition of restrictions might lead to retaliation by other countries. He maintained that retaliation would not follow, if imports dropped from natural causes, but it was likely soon to follow artificial cuts by quotas or licences.

Mr. Macmillan expressed his views on import controls in anticipation of criticism from the Opposition. In this anticipation he was not disappointed; for physical controls constituted one of the planks on which the Labour leaders rested to attack the Treasury Bench. Mr. Hugh Gaitskell, Leader of the Opposition, for instance, said that he could not understand why the Chancellor condemned import controls wholesale. "It is said," he remarked, "these controls would lead to retaliation, but, after all, one-fifth of our imports and half our dollar imports are still subject to import licensing, but this does not lead to retaliation." The Labour Party believed, he observed, in a combination of monetary and physical controls because the physical controls enabled a Government "to block up weak spots in the economy." This argument was rebutted by Mr. Peter Thorneycroft, President of the Board of Trade, who replied to the debate. He observed that the Government was not putting a stop to investment but moderating demand. It was not doctrinaire about import restrictions, but it did not believe they would benefit the country in its present circumstances. To quote Mr. Thorneycroft: "Increases in imports into this country are really not made up of handbags from Italy and matters of that kind. They are the imports created by the solid demand of an expanded industry—coal £57,000,000, steel £71,000,000, etc." A vast majority were essential, he added, and to cut them must lead inevitably to savagely rising prices or strict allocation and a rigid rationing scheme. The imports were the type of goods which would lead almost automatically and immediately to retaliation.

Price control was another form of physical control advocated by the Opposition. Mr. Macmillan dealt with this point also. He declared that objections to import controls applied with even greater force to the control of prices. "The basic cause of our trouble," he asserted, "is this —more purchasing power than there are goods to spend it on. Price control does not make more goods available from our own production. What it must inevitably do is to lead to more consumption. Therefore, if the price-controlled goods were imported, that would make our balance-of-payments position worse. Imports would have to be limited, the goods would have to be rationed. But if we keep down one set of prices, there is more money available to spend somewhere else. By sitting on one pressure point, the pressure is transferred with extra force to another place, and, if imports are not drawn in to relieve the pressure, then exports would be held back." Commenting on the efficacy of physical controls, as a whole, Mr. Macmillan said that there were two broad approaches to the problem of prescribing a treatment to the malady of inflation. To those who advocated a direct method of physical control internally and externally, there was, he said, the opposite approach holding that such measures never had been and never would be successful for their purpose. And he asked himself two practical questions: "Would the controls that were suggested do the trick and was there anything that had happened in the past to encourage us to believe they would work better in the future? Would they have to be applied so widely to enforce a degree of regimentation that no democratic party and no democratic people would accept?" Since these questions had within themselves their reply, Mr. Macmillan did not proceed to answer them and left them there for the Opposition to do it.

The cancellation of investment allowances was criticised by the Opposition as being "short-sighted." Mr. Harold Wilson, who spoke for the Opposition, stated that investment was still needed and that the U.K. needed all it could get of the right kind in the right use of industries. Because both essential and inessential investment had gone up, he accused the Chancellor of "blindly swinging an axe at the whole lot." He produced from the O.E.E.C. report a figure which showed that, in 1954, Britain spent the smallest proportion of the gross national product on fixed investment of any European country, except Greece. But, as the *Financial Times* pointed out, he conveniently omitted to quote the portion in the report which showed that public consumption, that is, the current expenditure of Government, was a higher proportion in Britain than in any other European country. This took the sting out of the criticism of Mr. Wilson.

Mr. Gaitskell also criticised the investment policy of the Government by pointing out that the new measures involved a cut in investment, while nearly every other industrial country was devoting more of its resources to investment. It was deplorable, he averred, that the country should be cutting back the very thing on which its future prosperity and productivity depended.

These criticisms were answered by Mr. Macmillan who stated that the extension of the control to capital goods was intended to meet the excess of investment demand which was now plain for all to see. The nation could not afford to be inflated yet further by credit through hire purchase. Supporting the views of Mr. Macmillan, Sir Edward Boyle, Economic Secretary to the Treasury, maintained that the main feature of 1955 was the striking increase in fixed investments other than in dwellings and, in particular, investment by the manufacturing industry. There was no question, he said, of any fall in investment in 1956. The information the Government had received showed that the manufacturing industry was expecting a further increase of pretty well comparable size in 1956. Informed opinion in the U.K., however, does not seem to agree with the overall investment policy of the Government. For, it is pointed out that the cut in investment, particularly in productive investment, tantamounts to mortgaging the future to provide for the present. It is felt that industry is investing too little and is falling behind in the creation of productive capacity. Attention is being drawn to the fact that the Chancellor's programme has been one of relatively big cuts in consumption and in social investment, of very big cuts in productive investments and of small cuts in Government expenditure. It is, in fact, this criticism which has prompted the Government spokesman to promise further cuts in Government expenditure.

Mr. Macmillan made certain interesting observations on the monetary measures adopted by the Government. He said that he had seen very little criticism of the higher Bank rate, except, perhaps, that it should have been done before. He opined that the policy of the bankers in reducing overdrafts and restricting new lending was becoming more and more effective. He did not subscribe to the opinion that bankers were concentrating only on small men. He recalled that many large industries, besides using their internal resources, were accustomed to borrowing from their bankers to finance the expansion of their enterprises until permanent capital would be raised. These "bridging operations" were being curtailed and industry was being forced to borrow from the market. Here the Capital Issues Committee was expected to operate in a more critical way. When these enterprises borrowed from the market, two advantages followed, according to Mr. Macmillan. First, the public would become a critical judge even more than the banker, because it was the public which decided whether or not to make an investment of its own money in the new issues. Secondly, if these market issues succeeded, they were drawing upon real savings and not upon inflationary credit.

The debate ended, as stated last week, in a victory for the Government's motion endorsing the latest measures to fight inflation by 325 to 259 votes.

TRAVANCORE BANK'S RECORD PROFIT

The working of the Travancore Bank Ltd. during the year ended 31st December 1955 has resulted in a profit of Rs. 10,19,966, which shows a rise of Rs. 2,83,926 over that for 1954. With this increase not only the small decline of Rs. 68,922 noted in 1954 has been more than made good but a record level of profit has been established, exceeding the previous high of Rs. 8.05 lakhs reached in 1953 by Rs. 2.15 lakhs. After bringing in the unappropriated surplus of Rs. 93,631 from the previous year, the Directors have raised the provision for taxation from Rs. 1,25,000 to Rs. 4,00,000 and the transfer to the reserve fund from Rs. 1,75,000 to Rs. 2,05,000. The allocation for bonus to staff has been maintained at Rs. 35,000, while that for gratuity fund has been reduced from Rs. 25,000 to Rs. 5,000 and for reserve for depreciation on investments from Rs. 50,000 to Rs. 25,000. No provision for contingencies has been made, while a year ago a sum of Rs. 25,000 had been utilised for that purpose. The dividend to the shareholders has been stepped up to 4 per cent. from 3 per cent., to which level it had been raised last year from the maiden distribution of 2½ per cent. made for 1953.

STATE BANK'S PROFIT WELL MAINTAINED

SMALL DECLINE IN DEPOSITS

THE first six months' working of the State Bank of India, since its inception on 1st July 1955, as a sequel to the Government of India's decision to assume effective control over the Imperial Bank of India, shows that neither the business of the Bank nor its earning has suffered on account of the change-over, except for a small recession in the Bank's deposits, a reference to which is made below. The total advances of the Bank as on 31st December 1955 disclose an increase of Rs. 5 crores. Investments have been strengthened by over Rs. 8 crores. The profit for the half-year is well maintained at the same level as that earned by the Bank's predecessor, the Imperial Bank of India, for the corresponding six months of 1954, and the dividend has been repeated at 16 per cent. per annum.

The gross earnings of the Bank for the half-year under review, in fact, have recorded a sharp rise from Rs. 372.71 lakhs to Rs. 416.10 lakhs, perhaps a record for any half-year. A break-up analysis of the gross income shows that interest and discount earned have gone up from Rs. 289.73 lakhs to Rs. 302.20 lakhs and the income from commission, exchange and brokerage has risen from Rs. 81.13 lakhs to Rs. 112.13 lakhs. The outgo by way of interest paid on deposits and borrowings is higher at Rs. 64.26 lakhs, as against Rs. 61.32 lakhs in the corresponding half-year of 1954. Expenses have gone up by no less than Rs. 40.80 lakhs to Rs. 277.22 lakhs and this rise has offset much of the increase in income. The principal rise in expenses is in respect of establishment, which has cost the Bank Rs. 35.11 lakhs more than in the corresponding period of 1954. Of this, Rs. 23 lakhs represent the increase in salaries, allowances, etc., given to clerical, cash department and subordinate staff arising mainly out of the adjustments made in implementing the Gajendragadkar Award. In the result, the net profit for the half-year, at Rs. 68.59 lakhs, shows just a fractional rise over that of Rs. 68.55 lakhs for the corresponding six months of 1954.

The dividend for the half-year under review has been maintained at the rate of 16 per cent. per annum, a rate which the Imperial Bank of India has been paying from the half-year ended 30th June 1950 onwards, when it had been raised from 14 per cent. per annum, paid successively since the half-year ended 31st December 1944. The aforesaid dividend gives a return of about 4.6 per cent. per annum on the purchase price of Rs. 350 per share, that is the price at which the shares of the State Bank of India (of Rs. 100 each) were issued to such of the shareholders who applied for the shares of the State Bank, in lieu of compensation payable to them. This is, however, of little consequence to the investing public, as only a small proportion of the State Bank's shares is held by the general public. By far the bulk of the State Bank shares is held by the Reserve Bank of India and so the major portion of the dividend declared for the half-year under review accrues to the Reserve Bank.

Although the face value of the Bank's shares is Rs. 100 per share, as the shares were issued at Rs. 350 per share, a suggestion would appear to have been made that a note be incorporated on the Bank's share certificate to the effect that the share was issued at Rs. 350 per share. Referring to the suggestion, Dr. John Matthai, Chairman of the Bank, observed, in his speech to the shareholders at their first annual general meeting held this week, as follows:

"The matter was given full consideration and it was, however, generally felt that, while there was nothing in law to preclude the inclusion of such a note, it was most unusual for a share certificate to mention anything more than the nominal amount of the share. Apart from the fact that this suggestion may not meet with the approval of all the shareholders, there are practical and technical difficulties involved which prevent its wholesale adoption. As the issue price of Rs. 350 was announced by the Reserve Bank by a special notification, it was considered unnecessary to make a note on the share certificate as suggested. The shareholders' natural desire to see that the price of Rs. 350 at which the share had been acquired is taken into account in determining the rate of the dividend has already been duly fulfilled by the State Bank declaring its dividend at the rate of Rs. 8 per share for the half-year, which is the equivalent of 16 per cent. per annum."

The Bank's deposits as on 31st December 1955 stand at Rs. 225.99 crores, as compared with Rs. 231.36 crores of the Imperial Bank at the end of 1954. This decrease of Rs. 5.37 crores over the year, though contrary to the general experience of other Scheduled banks which actually registered an increase, should be considered satisfactory in the context of a much sharper recession which took place earlier in the year. For, soon after the Government's decision to assume effective control over the Imperial Bank was announced, the Bank's deposits in India had fallen, from Rs. 203 crores in January 1955 to Rs. 184 crores in June 1955. This drop of Rs. 19 crores, according to the Chairman, "can only be explained by the initial apprehension in the minds of the public regarding the future policy of the Bank and the continuance of its commercial character in its altered status." These fears would appear to have proved baseless, as witness the steady rise in deposits in India during the last six months of the year, which stood at Rs. 202 crores at the end of December 1955, thus almost regaining the level of January 1955.

On the assets side of the balance-sheet, the Bank's advances are up at Rs. 105.81 crores, as compared with Rs. 100.82 crores at the end of 1954. A break-up of the advances show that loans, cash credits and overdrafts have declined from Rs. 94.65 crores to Rs. 89.01 crores, while bills purchased and discounted have risen sharply from Rs. 6.17 crores to Rs. 16.80 crores. Investments (shown below their market value) at Rs. 116.97 crores are higher by Rs. 8.25 crores, mainly on account of the increase in the Bank's holdings of Government securities and Treasury Bills from Rs. 96.47 crores to Rs. 106.40 crores. The Bank's holdings of Pakistan and other Government securities stand reduced from Rs. 11.34 crores to Rs. 9.20 crores. Other investments have gone up from Rs. 91 lakhs to Rs. 1.37 crores, consequent on the Bank's investments in the shares of State Financial Corporations and Land Mortgage Bank debentures, consistent with its enlarged responsibilities. Money at call and short notice has risen from Rs. 1.23 crores to Rs. 1.53 crores. Cash on hand and balances with other banks have declined from Rs. 36.64 crores to Rs. 29.38 crores.

FIRST NATIONAL CITY BANK OF NEW YORK

NOTABLE EXPANSION IN BUSINESS

THE year ended 31st December 1955 was an eventful one in the history of the National City Bank of New York, in that it witnessed the integration of the Bank with the First National Bank of the City of New York on 30th March 1955, the integrated institution coming to be known as the First National City Bank of New York. What made the merger a notable event was the fact that both the institutions were age-old ones. The National City Bank of New York was established in 1865, before which it was known as the City Bank of New York. The First National Bank had held a high position in American banking since its establishment in 1863, immediately after the enactment of the National Bank Act.

The working of the First National City Bank of New York during the nine months since the merger shows that the expectation held at the time of the merger that the activities of the two banks would broaden and complement each other and that the growth potential of the merged institution would be greater than that of the two banks separately has not been belied. In other words, the benefits of the merger had not been overestimated. For the merged institution has not only been able to cater to the American business at home and the diversified banking services overseas in this dynamic and competitive era but also improve its earnings and strengthen its financial position.

Business conditions in the U.S. during 1955 disclosed a very high level of activity, the highest in the history of the Company. Correspondingly, the demand for bank credit and services also expanded. While maintaining the conservative standards of lending, the Bank endeavoured to meet the enlarged demand of its customers wherever it was found that the loans would be soundly and constructively used to finance production and trade. At the same time, the resources of the Bank expanded, the deposits at the end of 1955 being larger than the combined deposits of the National City Bank and the First National Bank at the end of 1954. Though there was a decline in deposits soon after the merger, which is not unusual in cases of such merger on account of the duplication of accounts, the recession was much less than expected and was more than made good before the year-end. The Bank's performance in this respect is particularly gratifying in the context of the general banking trends and the Federal Reserve Policy of restraining inflationary growth of money supply. The impact of this policy was more marked on New York city banks, because of the shift of funds from the city to other centres and of the tendency among corporations to invest their funds in more remunerative Government securities.

Consequent on the larger turnover, the Bank was able to increase its earnings and to raise the dividend to 65 cents per share of $20 per quarter or an annual rate of $2.60 per share, as compared with $2.40 per share paid for the previous year.

The gross operating earnings of the Bank for the year under review amounted to $158.23

BOMBAY STATE BUDGET

SOME GENERAL ISSUES REVIEWED

ALTHOUGH the budget for the Bombay State for the year 1956-57, presented by the Finance Minister, Dr. Jivraj Mehta, reveals a small surplus of Rs. 23 lakhs (being the excess of receipts placed at Rs. 78.10 crores over the estimated expenditure of Rs. 77.86 crores) and no fresh imposts are contemplated, it should not lead one to think that higher taxation could be long delayed. For the State has a large Rs. 282-crore second Five-year Plan to implement, so that the State Government will, in course of time, be compelled to raise larger resources for meeting the expenditure on nation-building activities. Before the Government comes to the State Legislature with demands for fresh taxes, it is incumbent upon the State Government to show that no avoidable leakage in revenue is taking place and, further, that the people are getting the value for the money that is being spent.

These general considerations, which are important at all times, are of particular relevance in the context of the planned economic development of the country, in which the public sector has been assigned a considerably larger role than what it was expected to play in former years. Surely, it is reasonable to expect the State Governments to give a fuller account of their financial position than formerly, for they, like the Central Government, are encroaching upon the spheres formerly reserved for the private sector. No longer can the State or Central budgets be described as the revenue and expenditure pattern of an authority, the duty of which was merely to maintain law and order. From this point of view, the Bombay State budget papers should be regarded as somewhat deficient in the matter of giving a complete account of all its activities. Now that the Government is engaged in some trading activities, as well as in certain manufacturing activities, the budget papers ought to contain a detailed account of such activities. Some of these activities, like the fertiliser distribution or Aarey milk colony or State Transport, deserve separate treatment in the budget.

The public should be enabled to judge the efficiency with which these organisations are being run in just the same way as shareholders of a joint-stock company are given an authentic account of the working of the company. The absence of such treatment as part of the budget papers is a serious deficiency that deserves to be rectified. It is regrettable that the Central and State Governments should continue to follow the same method of presentation of budgets as used to be adopted in the earlier pre-independence period. This mode of presentation might have been appropriate in those days, because Governmental activity was then confined to a restricted and fairly well-defined sphere. The expansion of the State sector demands a certain change in the mode of presentation of the financial statements of the Governments. The budget should, as already stated, give a fuller financial picture of the activities of the State and, what is more, treat it separately.

Value for Money

Another important consideration is that people should get full value for the money spent. This, of course, is a vague concept, for, there is bound to be room for honest differences of opinion. Even so, it should be possible to form some objective judgment through the institution of periodical expert enquiries. The point is that the Government and the people should not merely equate expenditure with achievement. Here, one might take, for instance, that intangible but nevertheless vital function of the State Government, namely, education. The Bombay State Government, as is well known, is spending a considerable proportion of its revenue on education; for 1956-57 this accounts for Rs. 16.02 crores, as against Rs. 15.73 crores, the revised estimate for 1955-56 and Rs. 14.11 crores for 1954-55. It is important to know whether this high expenditure is justified by results. There is a growing feeling that educational standards have fallen. It is true that this is an all-India problem, for the complaints of a fall in scholastic standards have been made in every State in India. But that is no reason why the Bombay State, which can boast of a long succession of distinguished scholars, research workers and men of high professional attainments, should quietly reconcile itself to a fall in academic attainments. An enquiry should be held in order to ascertain whether there has been a fall, and to find the reasons for this fall, so that a drive for increased efficiency could be initiated. Besides, such an enquiry should cover the quantum of success achieved in recent years in relation to the actual money spent.

Sales Tax

An equally vital consideration is that there should be no leakage of revenue. This is best illustrated by reference to sales tax. The revenue from this source has been growing year after year, primarily because the incidence of the tax has been increased by 50 per cent. In 1951-52, the revenue from sales tax (on commodities other than petrol) was Rs. 11.89 crores, while the revised estimate for 1955-56 places the revenue from this source at Rs. 20.0 crores. Between these two years, there have been two changes in the system of sales tax. In 1952, the system was changed from single-point to the multi-point system and in 1954, it was changed into a double-point system. And yet, there is ground to believe that considerable evasion does take place in sales tax.

This is partly due to the presence of unscrupulous elements in the trade, and corruption in the tax collecting machinery, both of which should be given no quarter, and partly due to the complicated nature of the system itself. Now that the Government has ample data about the turnover of the merchants and has acquired greater knowledge and experience about the working of the sales tax system, it is a moot point whether the Government should not seriously consider the question of evolving a system that will be readily understood by the assessees and that will also ensure a steadily expanding source of income to the State exchequer. Many honest business men continue to complain that the deplorable aspect of the system of sales tax is not its incidence but the uncertainty of this incidence. And their task is rendered particularly difficult, because the authorities themselves are not always in a position to answer the complicated questions which arise in the matter of payment of tax.

Revenue and Expenditure

Turning to the broad pattern of the State budget, the following figures indicate the changes in revenue and expenditure since 1954-55:

(In crores of rupees)

	Revenue	*Expenditure*	*Surplus*
1954-55 (Revised Estimate)..	71.80	71.23	0.57
1954-55 (Actuals)	79.43	71.49	7.95
1955-56 (Budget)	80.11	79.88	0.23
1955-56 (Revised Estimate)..	79.72	78.89	0.83
1956-57 (Budget)	78.10	77.87	0.23

The large increase in actual receipts in 1954-55 over estimated receipts is attributed to larger collections from sales tax as a result of the general improvement under the double-point system introduced in April 1954 and collection of arrears. This factor led to an increase of Rs. 3.5 crores in revenue. There was also certain purely accounting receipts in the shape of adjustment of unclaimed deposits, the reimbursement by the Government of India of the expenditure incurred by the State on rehabilitation of displaced persons and larger transfer from the Central Road Fund.

The table above also shows how the budget position reveals a small surplus from year to year. This has caused jubilation in certain quarters. But it must be remembered that the surplus ought really to be larger than what the budget reveals, considering the general buoyancy in the economy of this premier industrial State. Further, if the taxes were more rigorously enforced the surplus could be still larger. Also, as already emphasised, there is need for keeping expenditure under constant scrutiny. It is true that the Public Accounts and Estimates Committees periodically examine the expenditure of the State Government. But their reports are published long after the accounts for the years to which they relate have been completed so that they have only an academic value. The Government should, therefore, be constantly conscious of the imperative need for economy. A large proportion of the total expenditure, estimated at nearly Rs. 9½ crores, is taken up by the police. This is understandable in view of the unrest that sometimes occurs and the growing number of anti-social elements in the society. Even so, it requires to be examined whether such expenditure is necessary. In any case, through economy in expenditure, it should be possible for the State Government to show larger surpluses.

It would then be possible to provide relief in taxation. In suggesting tax reliefs we are not unmindful of the need for maximising tax revenue for financing economic development. But, in the interest of such development itself, tax relief in certain spheres is clearly needed. Such relief is necessary, for instance, in the sphere of motor transport. There is urgent need to stimulate this means of transport in this State, for the economy of this industrial region is dependent upon the availability of adequate transport. Now that the Railway Minister has himself admitted that there is no possibility of any relief in the matter of goods transport even at the end of the second Five-year Plan period, it is all the more incumbent upon the States to develop motor transport. The Bombay Government has already nationalised passenger transport. The return on this investment is disproportionately low as compared with the capital invested. Not content with this, it is following a "dog-in-the-manger" policy in respect of goods transport. It would be much better if the Government abandoned this policy and created facilities for the private sector to expand goods transport by motor vehicles. Such facilities should take the form of the withdrawal of the threat of nationalisation and adequate tax relief. In the long run, the Government would, in fact, be the gainer through relief in taxation on motor vehicles, especially on those used in the transport of goods. This is because more vehicles will be pressed into service in road transport and there would be a general improvement in the economy of the State through the removal of at least part of the bottlenecks in transport by private operators.

Agricultural Income-tax

The State will need large resources for carrying out its economic programme under the second Five-year Plan. From this point of view, a possible source of income is the tax on agricultural income. It is not clear why the Finance Minister has not made any reference to this subject at all. Surely, the Government is aware of the possibility of enriching its coffers through a levy on agricultural income. Perhaps, one explanation is that, in view of the uncertainty in regard to the future of the State as a result of the disagreement among the principal parties over the States Reorganisation Commission's Report, the Government is unwilling to embark upon fresh taxation. But, if this uncertainty continues for more than a year, the Government will have lost sizable revenue. In any case, the political considerations regarding the future of the State should not be allowed to stand in the way of the imposition of agricultural income-tax. If the Government now settled the nature, the rates and the mode of collection of agricultural income-tax, it would have done a service to its successors in different linguistic regions in the event of a break-up of the State.

A notable feature of this year's Budget speech of the State's Finance Minister is the discussion of the second Five-year Plan. The Bombay State's Plan, as is well known, is the biggest of the States' Plans. The State Government approaches the second Plan with a sense of fulfilment in respect of the first. Thus, the total expenditure on the first Plan (inclusive of the revised estimate for the year 1955-56) is Rs. 147.2 crores, against the target of Rs. 146.31 crores. Of the total expenditure in the first Plan, agriculture and rural development claims Rs. 26.34 crores, major irrigation and power projects Rs. 27.25 crores, cottage and other industries Rs. 1.11 crores, roads, road transport and ports Rs. 30.10 crores, and social services (like education and public health) Rs. 62.38 crores. Besides the expenditure on these items, the State incurred expenditure on certain additional State schemes to the tune of Rs. 46.43 crores, so that the total expenditure during the period of the first Plan amounts to Rs. 193.6 crores.

Second Plan

As regards the second Plan, the State Govenment has proposed a draft outline involving an outlay of Rs. 282.8 crores. The Planning Commission has reduced this total to Rs. 264.4 crores, so that some changes will be required in the draft outline. Nevertheless, the broad pattern is likely to remain the same as in the draft outline. This contemplates substantial investment in irrigation and power schemes which will absorb 40.2 per cent., in agriculture and community development which will account for 22.1 per cent., and in public health (13.0 per cent.). Other heads

FINANCES OF SOME STATE GOVERNMENTS

SIZABLE DEFICITS DISCLOSED

A PECULIAR feature of the budgets of West Bengal, Uttar Pradesh and Madhya Pradesh is that the Finance Ministers of these States have merely endorsed the need for raising resources through additional taxation, as urged by the Planning Commission, but have not announced any fresh tax proposals for the ensuing year (1956-57). The West Bengal Finance Minister merely says that he intends to raise, in the next five years, the tax yield by Rs. 12.1 crores through measures such as entry tax on tea, extension of coverage of sales tax and irrigation rates, etc. His counterpart in Madhya Pradesh also says the same thing. Thus, he has stated that additional taxation is expected to yield a total of Rs. 12 crores in the next five years. In U.P., we are told, the level of existing taxes, including sales tax, will be raised, but it is not known how and when.

While thus the Finance Ministers of these three States have declared their intention to raise additional taxes, they have not sought to impose any of these in the budget for 1956-57. Nor have they given any reasons to justify the course they have chosen to follow. This is strange, indeed. Here are three State Finance Ministers who say that they want more money, that a part of this requirement must be found through new taxation and that they propose to levy new taxes. Yet, they do not say as to why they have not made a beginning in that direction now. Are they afraid of introducing new taxes just because 1956-57 is election year?

In striking contrast to this attitude, the Finance Ministers of Madras and Bihar have given a clear indication of the new burdens they would be imposing on the people of their States in 1956-57. The additional taxation proposed by the Madras Government is expected to yield Rs. 1.45 crores during 1956-57. The details of these proposals are as follows: Enhancement of the tax on diesel oil from 1¼ annas to As. 4 a gallon: this is estimated to bring in Rs. 30 lakhs. An additional sales tax of As. 1 in the rupee on the sale of sugar at any one suitable point; this is expected to yield about Rs. 40 lakhs. *Ryotwari* assessment on *inam* lands in lieu of quit rent, estimated to yield Rs. 30 lakhs, and a 30 per cent. increase in the rate of supply of electric energy to licensees and bulk consumers on the high tension tariff in the hydro-electric areas. This measure is expected to yield about Rs. 45 lakhs. The Madras budget proposes only one relief. It is exemption from sales tax on the sale of palm *gur* at all points. Bihar's Finance Minister has proposed to take recourse to three new taxation measures, namely, levy of a cess of one anna in the rupee on rent, tax of As. 3 per gallon of diesel fuel and levy of multi-point sales tax at low rates, as against the existing higher single-point tax.

A brief factual account of the budgetary position of the States of West Bengal, Madhya Pradesh, Uttar Pradesh, Madras and Bihar is given below:

West Bengal

The West Bengal budget for 1956-57 discloses an overall deficit of as much as Rs. 16.89 crores, of which the deficits on current and capital accounts amount to Rs. 14.19 crores and Rs. 2.70 crores, respectively. The deficit will be in excess of the opening balance of Rs. 6.42 crores, with which the new year begins, by Rs. 10.47 crores. Incidentally, the Government proposes to raise, in the coming months, a loan of Rs. 5 crores to finance certain development schemes of the second Five-year Plan. The current year's (1955-56) closing balance of Rs. 6.42 crores represents the sum left after meeting the net deficit of Rs. 2.64 crores. This deficit would have been considerable but for the sizable surplus of Rs. 12.45 crores outside the revenue account, the deficit on which is estimated at Rs. 15.09 crores.

The revenue deficit of Rs. 14.19 crores anticipated for 1956-57 is lower than that for the current year by Rs. 90 lakhs, notwithstanding a decline of Rs. 1.33 crores in receipts. The reduction in deficit is due to the anticipated fall in expenditure from Rs. 65.78 crores to Rs. 63.55 crores. The following table gives the estimates of revenue and expenditure for 1956-57, as compared with the actuals for 1954-55 and estimates (budget and revised) for 1955-56:

(In crores of rupees)

	1956-57 (Budget)	1955-56 (Revised)	1955-56 (Budget)	1954-55 (Actuals)
Expenditure ..	63.55	65.78	62.88	49.15
Revenue	49.36	50.69	45.76	42.65
Deficit ..	14.19	15.09	17.12	6.50

Out of the estimated expenditure of Rs. 63.55 crores for 1956-57, education claims the largest amount—Rs. 9.16 crores, to be precise. The next biggest item is police which accounts for Rs. 7.15 crores, followed by medical and public health departments with a provision of Rs. 6.50 crores.

The capital budget of the West Bengal Government provides for a total expenditure of Rs. 25.62 crores during the ensuing year, an increase of Rs. 11.20 crores, as compared with the revised estimate for the current year. The bulk of this outlay is accounted for by the Damodar Valley Project, the sum actually earmarked being Rs. 11.67 crores. The other important items of expenditure are building programme and colonisation scheme for displaced persons (Rs. 2.70 crores), coke oven plant-*cum*-power project at Durgapur (Rs. 2.28 crores), and payment of compensation under the Estates Acquisition Act (Rs. 0.74 crore). The major part of the capital expenditure is expected to be met from loans received from the Union Government, the estimate of which is placed at Rs. 28.28 crores, as against Rs. 35.42 crores in the current year. The decrease is due mainly to reduced provision for Central loan in respect of development schemes. In view of this, the West Bengal Government proposes, as already stated, to borrow next year Rs. 5 crores to finance development schemes. The public debt of the State is accordingly expected to rise to Rs. 19.94 crores at the end of 1956-57. This is in addition to debts due to the Centre. The total of these latter debts will increase from Rs. 136.65 crores at the end of the current year to Rs. 162.86 crores a year later.

In about four weeks' time, the first Five-year Plan will terminate and the State will be embarking on the second Five-year Plan. The aggregate amount spent during the first Plan period is estimated at Rs. 71.58 crores, as against the estimated outlay of Rs. 69.1 crores. This is exclusive of the State's share of expenditure on the D.V.C. and the schemes sponsored by the Centre on the basis of shared expenditure such as the Community Development Project and National Extension Service. Claiming that the implementation of the several schemes under the first Plan had been successful, Dr. B. C. Roy, Chief Minister and Minister for Finance, referred to the increase in industrial production, stabilisation of prices at a relatively low level, fairly steady cost of living index, satisfactory labour situation, rise in the earnings of the factory worker and increase in *per capita* income by 10 per cent.

The second Five-year Plan of the State envisages an aggregate outlay of Rs. 153 crores, including the State's share of expenditure on the D.V.C. Of this, 35.5 per cent. is expected to be spent on social services—education, health and housing. The percentage shares of other items are 21.7 for agriculture and Community Development, 19.8 for irrigation and power, 12.4 for transport and communications, and 10.0 for industry and mining. The State resources available for the Plan are: Rs. 12.1 crores by taxation plus Rs. 22 crores by borrowings plus Rs. 8.8 crores from small savings minus Rs. 13.4 crores being the deficit at current level of spending and taxation; or Rs. 29.5 crores in the aggregate. These estimates were prepared a few months back. Under arrangements made since then, the State will have to increase its effort correspondingly. Justifying the Government's intention to raise fresh taxation, Dr. Roy observes:

"West Bengal has a large current deficit. Hence taxation at current rates leave nothing for the Plan. Our current deficit at present level of revenue is large, but it is expected that, partly through the gradual strengthening of the administration and partly through improvement of the economic condition of the people, the taxes at current rates will be made to yield gradually increasing revenue, so that the total deficit in five years will be reduced to Rs. 13.4 crores only. We shall thus have to raise, by additional taxation or borrowing, money enough for covering this deficit of Rs. 13.4 crores and for paying our contribution towards financing the second Plan. It has been estimated that, by additional taxation, the State of West Bengal will be able to improve the aggregate yield of its taxation system by Rs. 12.1 crores in five years and that the State will, over a period of five years, be able to raise Rs. 25 crores by loan from the public. This loan of Rs. 25 crores will, after paying interest and sinking fund charges, leave a net sum of Rs. 22 crores for expenditure on the Plan. The additional taxes contemplated are the entry tax on tea, extending coverage of sales tax, irrigation rates, etc."

West Bengal's share of expenditure on the D.V.C., which is being financed by loans from the Government of India, amounts to about Rs. 15 crores in the second Plan period. Excluding the D.V.C., the State's plan is a Rs. 138-crore plan. As stated before, the estimated resources of the State are Rs. 29.5 crores. The balance of Rs. 108.5 crores is, therefore, to be allocated from the resources which will be raised by the Centre.

Madhya Pradesh

The budget of Madhya Pradesh for 1956-57 reveals a revenue deficit of Rs. 3.82 crores, the estimates of revenue and expenditure being placed at Rs. 30.93 crores and Rs. 34.75 crores, respectively. The deficit would have been more but for the anticipated reduction of Rs. 61 lakhs in expenditure as compared with the revised estimate for 1955-56. Nearly half of this deficit —Rs. 1.64 crores—is proposed to be covered by recourse to additional taxation measures. Explaining the deficit, the Revenue Minister said on behalf of the Chief Minister that, with the rising tempo of expenditure for the implementation of the second Plan, it could not be otherwise. He, however, pointed out that the financing position of the Government was not weak, as the deficit was only on revenue account, while the closing balance was still to the tune of Rs. 7 crores.

The second Plan for Madhya Pradesh contemplates a financial outlay of Rs. 139.93 crores, though the Planning Commission has so far accepted it only to the extent of Rs. 123.3 crores. The amounts (in crores of rupees) earmarked for some of the main heads of development are: Power 24.23; Community Development and *panchayats* 22.43; irrigation 20.05; agriculture 19.74; education 17.24; health 9.61; transport and communications 7.51; industry and mining 6.54; and housing 5.06.

The outlay of Rs. 139.93 crores represents a rise of as much as Rs. 91.33 crores, as compared with the overall financial target of Rs. 48.60 crores in the first Five-year Plan; the Government has fulfilled 91.7 per cent. of this outlay. Under the Plan, the Government has completed one and nearly completed three out of seven major irrigation projects, bringing under irrigation 34,635 additional acres; and completed 43 tank projects to irrigate 10,281 acres; electrified 56 new towns and 203 villages; exceeded the target of 13,000 primary schools; opened 9 new professional and technical college and institutions; opened 160 dispensaries and hospitals; completed the country's first newsprint project, namely, the Nepa Mills.

Uttar Pradesh

The U.P. budget for 1956-57 reveals a revenue deficit of Rs. 9.55 crores, with receipts estimated at Rs. 85.35 crores and expenditure at Rs. 94.91 crores. The estimate of capital expenditure is placed at Rs. 42.98 crores. The following table gives the budgetary position of the State Government in the past two years and in the ensuing year:

(In crores of rupees)

	1956-57 Budget	1955-56 Revised	1955-56 Budget	1954-55 Actuals
Opening balance	2.16	4.91	1.40	15.66
Consolidated fund—				
Revenue receipts	85.36	85.97	84.56	78.19
Revenue charges	94.91	85.97	90.06	77.58
	— 9.55	..	— 5.50	+ 0.61
Capital expenditure	42.98	29.44	32.70	16.00
Net receipts from public loans..	+11.65	+ 9.47	+ 6.00	..
Other debt and deposit heads (net)	+27.00	+22.20	+22.33	+17.19
Contingency fund	..	+ 0.01	..	— 0.03
Public account fund (net) ..	+12.40	+ 4.99	+ 9.36	—12.52
Net result of all transactions ..	— 1.48	— 2.75	— 0.51	—10.75
Closing balance	+ 0.68	+ 2.16	+ 0.89	+ 4.91

A salient feature of the budget is additional expenditure on welfare programme. Expenditure on education goes up by Rs. 2.60 crores, on industries by Rs. 1.15 crores, on medical and public health by Rs. 1.06 crores, on planning and development by Rs. 1.30 crores, on veterinary aid by Rs. 0.48 crore and on co-operation by Rs. 0.37 crore.

The State's second Five-year Plan aims at an increase in national income by 25 per cent., rapid industrialisation and expansion of employment opportunities. With a view to effecting industrial development, the Plan includes many schemes for the expansion of existing industries, improvement of marketing and establishment of new industries in both the public and private sectors. It also proposes to undertake other schemes and measures which are expected to provide employment to 1.3 million persons in the State. These schemes are calculated to promote production in various fields, which will raise the national income. The total outlay on the second Plan is estimated to be Rs. 248 crores, of which about Rs. 17 crores will be spent on industrial development. In the budget year itself, a provision of Rs. 44.66 crores has been made for the various schemes included in the second Plan, of which the State Government will spend Rs. 11.43 crores from its own resources and the balance will be contributed by the Government of India.

The overall size of the State's second Five-year Plan has been tentatively fixed at about Rs. 248 crores and the Plan drawn up within that ceiling provides for a revenue expenditure of about Rs. 85.5 crores and capital expenditure, including disbursement of loans, amounting to Rs. 162.5 crores. Out of this, provision has been made in the budget for a net expenditure of Rs. 12.32 crores on second five-year Plan schemes on the revenue side and of Rs. 30.85 crores on the capital side, making a total of Rs. 13.17 crores during the year 1956-57. Out of the revenue expenditure of Rs. 12.32 crores, a sum of Rs. 5.8 crores is expected to be provided by the Centre and the rest will have to be met by the State. In the same way, out of the capital expenditure of Rs. 30.85 crores, assistance amounting to Rs. 26.50 crores will be available from the Government of India and the rest will have to be found by the State. Apart from Plan expenditure, an expenditure of Rs. 82.59 crores from revenue and Rs. 21.65 crores from capital has been provided for. In this manner, the total net budget of Uttar Pradesh for 1956-57 comes to Rs. 147.41 crores, out of which Rs. 94.91 crores is revenue expenditure and Rs. 52.50 crores capital. As against this, the estimate of revenue receipts in the budget year comes to Rs. 85.36 crores only; and the revenue expenditure thus exceeds the anticipated revenue receipts by Rs. 9.55 crores.

Madras

The financial statement of the Government of Madras which Mr. C. Subramaniam, Minister for Finance, presented to the State Assembly this week, discloses a revenue deficit of Rs. 3.11 crores, the estimates of revenue and expenditure being placed at Rs. 59.33 crores and Rs. 62.44 crores, respectively. Nearly half of the deficit—Rs. 1.45 crores—is to be met by way of additional taxation, as indicated at the outset. The balance of Rs. 1.66 crores is left uncovered. The uncovered deficit is quite large, but it should not, Mr. Subramaniam declares, cause alarm, "because it is of the order which can be wiped off by the upward trend in revenue in a year of fair seasonal conditions," in addition to the possibility of revenue derived from readjustments in taxes proposed in the Central budget.

The Madras Government is expected to incur an aggregate capital expenditure of Rs. 27.61 crores during 1956-57. This, together with the net disbursements of Rs. 4.51 crores under loans and advances, repayment of debt to the Centre and the public (Rs. 3.68 crores), uncovered revenue deficit (Rs. 1.66 crores), and the balance to be kept in the Reserve Bank and the Treasuries (Rs. 0.50 crore), brings the total amount required under ways and means to Rs. 37.96 crores. This sum will be met from (1) opening cash balance of Rs. 1.66 crores, (2) net credit within the year under deposit heads and State trading schemes amounting to Rs. 1.80 crores. (3) loans from the Centre aggregating Rs. 24.50 crores, and (4) borrowings in the open market Rs. 10.00 crores.

Bihar

The Bihar budget for 1956-57 shows a deficit of Rs. 29.47 crores, the estimates of revenue and expenditure being placed at Rs. 66.75 crores and Rs. 96.23 crores, respectively. On the expenditure side, education occupies the first place, the sum actually earmarked being Rs. 10.33 crores, as against Rs. 8.26 crores in 1955-56 (revised).

During 1956-57, the Bihar Government will be spending about 18 per cent. of the total outlay of the second Five-year Plan. The Planning Commission has allotted a total ceiling of Rs. 204 crores for Bihar for the Plan. The original estimate drawn up by the State for the second Plan was Rs. 643 crores. The break-up figures for the Plan for Bihar are: Agriculture Rs. 15.31 crores; animal husbandry Rs. 6.12 crores; co-operation Rs. 4.17 crores; forestry Rs. 3.30 crores; N.E.S. blocks and Community Projects Rs. 19 crores; irrigation Rs. 30.30 crores; power including D.V.C. Rs. 28.43 crores; industry and mining Rs. 13.40 crores; roads Rs. 17.60 crores; education Rs. 25 crores; health Rs. 19 crores; housing Rs. 5 crores, and welfare of scheduled tribes, scheduled castes and backward classes Rs. 6 crores.

According to the Finance Minister of Bihar, the Government has undertaken to raise Rs. 55 crores out of its own resources for the Plan. Of this Rs. 14.9 crores will be found from the surplus from current revenues, Rs. 19.3 crores from additional taxation, Rs. 10 crores from public borrowing and Rs. 5 crores by withdrawal from reserves. As the deficit even on the non-developmental and the non-Five-year Plan part expenditure is already excessive, it is not possible to make any contribution from the current revenues for financing the second Five-year Plan in 1956-57. In order to make up the above deficit, apart from other measures, the Government has, as stated already, decided to enforce three additional taxation measures.

LINKING CANE PRICE TO QUALITY—II

CAN IT BE DONE IN INDIA?

LAST week, we examined in these columns the systems for the payment of sugarcane price on the basis of quality prevalent in several leading sugar-producing countries of the world. It is proposed to discuss this week the methods that are considered as suitable for adoption in India.

Mr. S. C. Sen, of the Indian Institute of Sugar Technology, Kanpur, is of the view that the payment for cane should be fixed according to recovery percentage of sugar in cane derived each day. This percentage should be determined for each factory by taking into account either the middle internodal brix of the standing cane or the Brix or the Pol. percentage of the primary juice of the mills. The salient features of the scheme suggested by Mr. Sen are: The optimum recovery period is from mid-January to the end of March. The cultivators supplying canes in this period are likely to get higher price if the payment is made on sucrose-content basis than growers supplying cane in the early or late crushing season. A little higher percentage of profit on the sugar produced should be fixed for these growers, in order to counterbalance their cane losses.

Commending this scheme, Mr. Sen observes: "Millowners would definitely get higher recovery in the early season and higher overall recovery on the basis of cane supply according to surveyed schedule than at random supply. They would, therefore, not murmur to pay the price as suggested." Taking 50 per cent. of the price of sugar as the cane price, Mr. Sen recommends a sliding scale for fixing the price adjusted to make up the losses to growers due to early or late supply; the percentage share of cane in the price of sugar produced is worked out as 55 for both November-December and April-May periods and as 50 for January-March period. Such a system of fixing the cane price, Mr. Sen claims, will impart quality-consciousness to the growers and will yield more sugar and more dividends.

Difficulties

There are, however, several difficulties in the way of payment for sugarcane on quality basis. Among these, three stand out prominently, according to Mr. Girdhari Lal, of the Daurala Sugar Works, Daurala. First, thanks to widespread illiteracy among cane growers, it is hard to believe that cane growers will be readily agreeable to a system of sampling, determination of its quality in the laboratory and payment on that basis. Secondly, an average factory in West Uttar Pradesh draws its requirements of cane from 8,000 to 12,000 growers. The supplies are made very largely in bullock carts and each unit of sampling will be approximately one ton. Taking the daily cane-crushing capacity of a factory as 1,000 tons, about 1,000 samples of cane will have to be drawn at the gate and the outlying road and rail centres for purposes of analysis. The existing facilities are, according to Mr. Girdhari Lal, too inadequate to venture such a large-scale sampling system. Even assuming such is possible, there will have to be several Government inspectors as well as factory representatives at various stages of sampling and analysis. The total expenses of such an analysis are estimated at over six pies per maund of cane. Thirdly, the handling of 1,000 to 1,500 samples of cane a day needs a simpler, reliable and fool-proof method of assessing quality. The hand refractometers giving brix, it is said, are not of much use for this purpose and there is no other handy reliable method available for such a procedure.

Indirect Measures

In view of all these difficulties, the task of assessing the quality of each lot of sugarcane purchased by the sugar factory is considered to be a formidable one. Mr. Girdhari Lal, therefore, lays stress on the need for some indirect measures for assessing the quality of cane which are simple to follow and intelligible to cane growers. He accordingly suggests a system for linking the price of cane to quality on the basis of its purity, nature of planting and the period of its supply. Under this system, the price of cane may be fixed on the basis of the cane being plant or ratoon and on the basis of its date of supply. The price of ratoons in the early period would be higher than the plant cane, the price of early varieties would be higher than late varieties, particularly in the early period, and the price in the earlier season would be paid for at lower rates than when these varieties are ripe. Such a system will, Mr. Girdhari Lal points out, serve the interest of both the cane grower and the sugar industry. In support of this view, he says:

"It (the system suggested) would pay the grower to supply early varieties in the beginning of the season and free his land for a second crop. The much higher price that he tends to obtain from these early varieties in the early period is another big attraction. Supplies of mid-season cane will tend to be offered when they are ripe enough and, as these give good ratoons, the supply of good ratoon crop is also assured. Supplies of early plant varieties can also be justified in the beginning of the season, thus enabling these varieties to be ruised only for plant crop and it will be seen that such a system will be conducive to a healthy crop in the area."

If the aforesaid scheme were to be implemented successfully, it should, Mr. Girdhari Lal emphasises, be entrusted to the care of persons who are trained in the nature of the planting of cane—ratoon or plant—and in the identification of varieties. According to him, there is also need for drawing up a scheme—this work can be done by the Director, Sugarcane Research—based on results of mill tests and average recoveries for the period in respect of each variety and planting. The schedule should be such as to cover factories with a more or less uniform climate and pattern of varietal distribution. As, however, the quality of cane varies from year to year, it would be helpful to draw up the schedule in the light of expected recoveries, instead of sticking to one standard set of figures.

Analysis of Primary Juice

A slightly different system for assessing the quality of sugarcane for making payment has been suggested by Mr. S. V. Parthasarathy, Sugarcane Specialist, Palur, Madras State. In his considered opinion, the only feasible method of assessing the quality of cane is to analyse the primary juice. This can be done by grouping the cane growers on a geographical regional basis or supply time basis as is indicated below:

Spatial groups: The factory supply area may be divided into convenient number of regions, keeping each region as homogeneous as possible. Distance from the factory and transport facilities have to be considered in demarcating the regions. The supply from each region is to be regulated, so that the factory may crush the canes from a region for a minimum of one or two shifts (6 to 12 hours) in a day. The primary juice at the mill may be tested for assessment of quality. Cane prices may be decided for each zone either for the whole season or for each supply concerned. This system has the advantage of locating the bad regions which could be pulled up in the coming seasons.

Time groups: Where spatial groups cannot be formed for any reason, time groups may be adopted. The primary juice may be analysed for every one or two-hour intervals for assessment of quality. For corresponding time units, the list of suppliers and quantity supplied may be drawn up. The cane supply cannot be grouped into homogeneous units of suppliers or regions. This time group may be adopted as a first step in a phased programme and is to be adopted where spatial grouping is not feasible.

With regard to cane deliveries, the maturity test on the crop in the field should be the basis. The delivery is required to be decided on the basis of (1) variety, (2) plant or ratoon and (3) date of planting or ratooning. Mr. Parthasarathy is, however, of the view that the percentage share of cane price derived by the grower cannot be fixed on any scientific basis; it has to be negotiated. Since the two basic factors, namely, cost of cane and cost of manufacturing sugar, are highly variable, the former should be the basis for the minimum price and the latter for the ceiling price. The percentage should be varied according to the sugar recovery per cent., in order to offer incentive for producing good quality canes. The selling price of sugar can be ascertained from the books of the sugar factory or assessed on the basis of market quotations. In this connection, Mr. Parthasarathy urges the need for constituting a price board for each sugar factory or region. Each board should have two agencies—one to assess the quality of cane on spatial or time zone and the other to determine the selling price of sugar. On the basis of data furnished by these two agencies, the price board may fix the price that should be paid for the cane supplied to the factory.

Lower Sugar Price

Whatever formula is adopted for fixing the price of sugarcane, the resultant should be such as to ensure a satisfactory margin of profit to sugar mills, on the one hand, and to induce the cultivators to raise the per-acre yield of better quality canes, on the other. In evolving a formula, due consideration must be given to the need for bringing down the price of sugar which at present is high in all conscience. It is of the utmost importance that the efficiency of production, both in the fields and in the factories, is stepped up. It is, for instance, said that Hawaii, one of the world's major sugar producing countries, has recently achieved a distinct improvement in the production of sugar per acre through research. Introduction of new varieties, it is claimed, has contributed to the increase in yield by 40-45 per cent. a change in manures has led to a rise of 15-20 per cent., in irrigation of 20-25 per cent., and in pest control methods of 10-15 per cent. If, therefore, the payment of sugarcane is linked to quality, the cultivator will be encouraged to take all possible care and steps for raising quality cane and for enhancing the yield per acre.

Before concluding this account, we wish to correct an incorrect impression in our last article. Summing up the survey of the systems of payment for sugarcane prevailing in other countries, we had observed that the share of the cane grower varied from 50 to 70 per cent. of the cost of sugar. The sugar meant here was raw sugar and not refined sugar. In terms of refined sugar, which is the basis adopted in certain areas in India—the S.I.S.M.A. formula, for example—the growers get a share varying from 40 to 50 per cent. only. Drawing our attention to this important point, which makes a lot of difference between the position in India and other sugar-producing countries, one of our esteemed readers says: "In most of the countries, the growers get a fixed portion of the sugar price realised and they do not have to do anything with profits or losses from the sale of sugar."

DISPOSING OF SUGAR SURPLUS

A proposal for examining the question of disposal of surplus stocks of sugar, should indigenous production exceed the demand in future, will be considered by the Development Council for Sugar Industry at a meeting to be held at New Delhi on the 9th inst. The Council will discuss the programme formulated for developing the sugar industry in the country under the second Five-Year Plan. Another important item on the agenda is examination of the recommendations of the Indian delegation sent to Australia and Indonesia to make a study of the industry. The Council will also have before it for consideration reports of the various committees set up by it for (*a*) devising a system for making payment for cane on the basis of its quality, (*b*) preparing a plan for the rehabilitation of unsuitably located and idle sugar factories, (*c*) advising on the establishment of subsidiary industries for the utilisation of the by-products of sugar, (*d*) introducing a uniform system of chemical control and reporting of technical data by factories, (*e*) standardising methods of costing used in factories, (*f*) encouraging employment of technically-qualified persons in the industry, (*g*) determining the comparative suitability of "A" and "L" twill bags for packing sugar, and (*h*) preparing a standard contract form for the sale and purchase of sugar.

Sugar production in India during the month of January 1956, according to the Indian Sugar Mills Association, was 357,092 tons, bringing the total production during the first three months of the current sugar season to 716,254 tons, as against 664,198 tons in the corresponding period last season. Out of a total of 142 factories expected to work this season, 139 had already started crushing by the end of January, as against 136 factories a year before. The offtake of sugar from the factories during the month of January was 125,545 tons, as against only 86,597 tons during the corresponding period last year. The total offtake during the first three months of the current season was 381,868 tons, as against 177,117 tons a year before. The closing stock with the factories on 31st January was 758,396 tons, as against 553,145 tons on the corresponding date last season.

NEIVELI LIGNITE PROJECT

LAST PHASE OF PRELIMINARY INVESTIGATIONS COMMENCES

THE progress of execution of the pilot project for mining lignite at Neiveli (South Arcot) discloses that the day may not be far off when mining operations on a commercial scale can be begun. Large-scale pumping tests were started on Wednesday, 29th February 1956. This is the last phase of preliminary investigations for finalising plans for actual mining and utilisation of lignite. It will be recalled that actual quarry operations started in March 1953. Since then, the Government of India has appointed Messrs. Powell Duffryn Technical Services (London) as consultants.

The Neiveli Project is perhaps the biggest among the industrial projects for South India included in the second Plan. Estimated to cost Rs. 70 crores, the project, when completed, will result in a production of three-quarter million tons of lignite per annum. Experts have calculated that there are 2,000 million tons of lignite over an area of 100 sq. miles at Neiveli. The project is a multi-purpose one. It provides for the erection of a thermal generating plant with a capacity of 200,000 kw. Lignite will serve as fuel for this plant. The first 50,000 kw. unit of the plant is expected to commence operations from January 1960. It also provides for the establishment of a plant for producing 200,000 tons of fertiliser by using gasses thrown off by lignite in the process of carbonisation and gypsum from deposits at Tiruchirapalli. It is expected to employ 5,000 workers of all grades. When completed, the Project is expected to support a further force of 3,000 people of the trading and allied classes.

It is said that successful exploitation of lignite on a commercial scale will be a tremendous engineering feet. For nowhere in the world, we are told, does lignite occur over strata containing water under as high a pressure as in Neiveli. Briefly speaking, this water is kept down under high pressure due to the weight of lignite as well as the overburden above it. If, therefore, the overburden is removed without controlling water, the confined water may heave the lignite up, break through and flood the mine, damage the mining machinery and imperil the lives of workers. Consequently, simple digging of lignite is out of question.

As the overburden of the lignite extends up to a depth of about 160 to 250 ft. from the ground and the thickness of the lignite seam is, on an average, about 55 ft., pump wells must be drilled to about 400 ft. below the ground. It is, however, stated that it will neither be necessary nor practicable to pump out all the water. All that is necessary is, it is reported, to lower the water level in the immediate locality to a depth of at least 50 ft. below the base of the lignite, thus reducing the pressure of water after which only the lignite can be taken out safely.

The discovery of lignite deposits in South Arcot has opened up new vistas of opportunities for economic development of not only the Madras State, but also the adjacent States of Andhra and Mysore, not to mention distant Travancore-Cochin. First, it will help ease the chronic fuel shortage in the South which has been an obstacle to industrial development of that area. It is estimated that the supply of coal to the South is hardly 2 million tons, whereas the demand is more than 3 million tons. Secondly, the lignite-fed thermal power stations will reduce dependence on hydro-electric power which is greatly affected by the vagaries of the monsoon. The cheap electric power will be available also for the development of electro-chemical and electro-metallurgical industries. The bauxite ores in Salem District, for instance, can be advantageously used for the manufacture of aluminium. Besides its value as fuel, lignite is also the source of numerous by-products, such as petrol, plastic and phenol.

The site from which lignite is being mined has also deposits of other products. There is a thick layer of white clay, which can help start ceramic industry and the manufacture of fire-bricks. The lignite contains also a high percentage of montan wax—essential for defence industries. The water that gets released in the course of lignite mining can be conveniently utilised for irrigation. Thus, all the contents of the mine, namely, the cover of clay, lignite, montan wax and water—can be effectively utilised. Verily, therefore, the lignite mines of South Arcot constitute a gold mine, richer in every respect than the gold mines of Kolar. They are indeed the black-diamond mines of the South.

The importance of banking to the COFFEE INDUSTRY

COMMERCIAL cultivation of coffee in India dates from about 1830, and is still almost entirely confined to South India. The yearly crop varies between 20,000 and 30,000 tons, most of which is consumed in India. When a surplus of Indian coffee is available for export, it finds ready buyers in fastidious foreign markets.

Without banking, the growth of the coffee industry would have been impossible. The availability of ready funds when needed, the collection of dues in any part of the country, and the other facilities and guidance offered by a good bank—these are an integral part of the structure of the coffee industry.

We at Palai are proud that so many leading coffee plantations, and indeed important firms in every field of business and industry in South India, employ the *complete* banking service we offer.

Current Accounts—Demand Drafts—Telegraphic Transfers—Investments—Bill Collection—Letters of Credit—Deposits—Loans & Overdrafts—Confidential Credit Reports, etc.

WORLD RUBBER SITUATION

DEMAND FOR NATURAL RUBBER EXPECTED TO RISE

WORLD production of natural rubber during 1955, according to figures released by the International Rubber Study Group, amounted to 1,895,000 tons, as compared with 1,802,000 tons for the previous year. Consumption during the past year aggregated 1,830,000 tons, thus leaving a surplus of 65,000 tons, as compared with 77,500 tons a year before. The consumption figure for 1955 includes an estimated import of 24,400 tons by Russia and of 31,750 tons by China.

The world production of synthetic rubber in 1955 amounted to 1,085,000 tons, an increase of 370,000 tons over the output in 1954.

It will be noted from the aforesaid figures that consumption of natural rubber during the past year rose by 105,500 tons, the pace of increase being much more than that in output, so that the world was left at the end of the year with a lower surplus than at the end of 1954. The increase in consumption of natural rubber was mainly due to the insistent demand from manufacturing industries throughout the world and, in particular, by the phenomenal output of the automobile industry in the U.S. This factor, coupled with the Russian buying on a substantial scale since May last, lifted the price of rubber to levels higher than those that prevailed during the previous two or three years. The price of spot rubber in London, for instance, touched a high of 3*s.* 7¾*d.* per lb. in the third quarter of 1955.

Of late, however, the increase in synthetic rubber production, noted above, and the recent cutback in automobile production in the U.S. and the U.K. have been having a depressing effect on natural rubber prices and spot rubber in London is being currently quoted at 2*s.* 4½*d.* per lb. This recession, coupled with the schemes of several countries to produce synthetic rubber or increase the capacity of the existing plants, has, once again, focussed attention on the future of natural rubber. Four major tyre manufacturing companies have decided to erect a plant for producing 50,000 tons of general-purpose synthetic rubber per annum. The United States is expected to produce over 1 million tons of general-purpose synthetic this year. Canada, West Germany and Russia are already manufacturing synthetic rubber. Italy also plans to produce the synthetic variety. These plans are subject to review, but it is estimated that, by 1961 or 1962, the capacity for synthetic production will be double that obtained in 1955.

Import of Synthetic by U.K.

Though the capital outlay on the British synthetic plant will be rather heavy, the benefit accruing from the large investment will be the considerable saving in foreign exchange now spent on purchase of synthetic rubber from foreign countries. Incidentally, it may be noted here that British rubber manufacturers have been given permission to import up to 70,000 tons of synthetic rubber during 1956 and further imports are not unlikely, if the balance of payments position permits, during 1957 and subsequent years till the plans for increased production of synthetic in the U.K. mature. The plan to produce synthetic rubber in the U.K. is the result of the post-war refinery programme, for these refineries and the closely associated petroleum chemical plants will provide the butadiene and styrene, the principal raw materials for synthetic rubber production.

The decision to erect a plant in Britain for manufacturing synthetic rubber is quite understandable, because the manufacturers of rubber goods in the U.K. have to compete for overseas markets with manufacturers of other countries which have the advantage of cheaper raw material and cannot, therefore, be expected to buy a raw material which is not only more expensive but technically unsuited for some varieties of products. In this connection, an interesting analysis of the outlook for natural rubber has been made by Mr. K. M. G. Anderson, Chairman of the Rubber Trade Association of London, in his address at the recent annual general meeting of the Association.

It is often stated that world consumption of rubber doubles itself every ten years. Though the truth of the statement largely depended upon the base year taken, Mr. Anderson said that it was broadly true, if the year-to-year fluctuations were ignored and the consumption over a full decade was taken into account. By way of illustration he quoted the following figures:

	Total consumption of new rubber for the decade (Tons)
1906-15	1,045,000
1916-25	3,397,000
1926-35	7,392,000
1936-45	10,734,000
1946-55	21,877,000

A significant feature of this trend is the increasing rate of consumption in countries other than the U.S. during the last ten years. Till ten years ago, the U.S. accounted for more than two-thirds of the total world consumption. In the post-war decade, however, the progress of the rest of the world gathered considerable momentum so that it is now consuming nearly as much as the U.S. Mr. Anderson considers it probable that, unless war intervenes, the consumption of the rest of the world will outstrip that of the U.S. In fact, for the first time, the rest of the world is expected to consume more than the U.S. during the current year itself.

The expectation that the demand for rubber will grow at a fast pace in the near future is based on three factors, namely, (1) the plans announced by automobile manufacturers all the world over for huge expansion, (2) the plans to establish extensive plantations in Liberia and Nigeria, and (3) the continued development of new uses, as witness the large demand for concentrated liquid latex, which amounted to 160,000 tons in 1955, despite the very high prices of this product.

It would, therefore, appear that the demand for rubber is not likely to slacken and all the natural rubber produced will be absorbed. The main factor which will, however, influence the manufacturer to make his choice between the natural rubber and the synthetic rubber for the products for which either of them is suitable, is the cost of the raw material. It is this consideration which has led the U.K. Government to permit an import of 70,000 tons of synthetic rubber during the current year.

According to Mr. Anderson, there are many ways in which economies can be made in the production of natural rubber. The most important of these is the replacement of uneconomic and obsolescent trees with high yielding material. Next to the price-factor, the manufacturers look for quality, more particularly uniformity of quality than actual grade, and for cleanliness and sound packaging. A notable step taken in this direction was the agreement reached at the second International Rubber Quality and Packing Conference held in New York in May last to adopt International type descriptions and samples, to which, it is expected, producers all over the world will conform and from which consumers will know precisely what they can expect to be delivered to them.

(*Concluded from next column*)

of domestic demand. The mills which have survived the crisis by virtue of their sheltered position as subsidiaries of other industries have emerged the stronger economically due to the elimination of a considerable weight of competition. Some of these mills have, in fact, stepped up their rate of production and taken new plans for expansion on hand.

Although much reduced, at present, than its original size, the Italian jute industry is still a strong and well-equipped producing unit. Disunity among mill owners continues to be a threat and the trade circles believe that the existing mills should proceed on some minimum joint programme even if they cannot agree to a common pricing policy. Otherwise, it is feared, trade conditions may easily bring about a recurrence of the crisis that has damaged the industry during the past year.

Imports of raw jute and similar fibres into Italy during January-September 1955, amounted to 37,698.3 tons of which 37,692 tons were supplied by Pakistan. Another 8,366.8 tons were received during this period, as temporary imports, scheduled for re-export after processing. Under a trade agreement with Albania, Italy is to export to that country jute goods of the value of $70,000 until September 1956.

About 33 jute mills are stated to have modernised—some of them partially—their preparatory and spinning sections. A statement to this effect was made in the Lok Sabha by the Minister for Commerce, Mr. D. P. Karmarkar. Asked about the extent to which modernisation had led to a lowering of cost of production and improvement in the quality of the goods, the Minister said that precise information was not available, because actual savings in costs or improvement in quality varied from mill to mill. He added that the output of a modern spinning frame was reported to be higher by about 25 per cent.

CENSUS OF JUTE TEXTILES IN 1953

FALL IN OUTPUT AND VALUE

THE number of jute mills in India in 1953, according to the *Census of Manufacturing Industries* 1953, an abstract of which has just been released by the Director of Industrial Statistics in Calcutta, showed no change, as compared with that in 1952. There were 109 jute mills, of which 98 were in West Bengal, 4 in Andhra and 7 in U.P., Bihar and Madhya Pradesh. Of the total, 104 mills submitted returns. The average number of days worked by these mills was 271 in 1953, as compared with 276 in the previous year.

The total production of jute goods (excluding carpets) dropped from 983,810 tons, valued at Rs. 170.64 crores, to Rs. 897,696 tons worth Rs. 113.86 crores. The fall in both the quantity and value was shared by all the regions. Thus, in West Bengal the output declined from 927,028 tons to 844,124 tons. In Andhra, it receded from 25,383 tons to 25,292 tons. The production of jute manufactures in U.P., Bihar and Madhya Pradesh receded from 31,399 tons to 28,280 tons. The value in the three areas came down from Rs. 161 crores to Rs. 107.85 crores, Rs. 4.52 crores to Rs. 2.88 crores and Rs. 4.98 crores to Rs. 3.13 crores respectively.

The total capital employed by the industry during 1953 was Rs. 66.86 crores, as compared with Rs. 68.69 crores in 1952. The fixed capital aggregated Rs. 29.71 crores and the working capital Rs. 37.15 crores, as compared with Rs. 28.36 crores and Rs. 40.33 crores respectively in 1952.

The number of persons engaged in the industry declined from 291,323 to 271,431 in 1953. The number of wage earners was 255,181 and that of salaried workers 16,250. The total pay bill, including other benefits, aggregated Rs. 28.12 crores, of which Rs. 23.79 crores were paid as wages and Rs. 3.76 crores as salaries. In 1952, the pay bill amounted to Rs. 29.70 crores.

The quantity of raw jute consumed by the mills in 1953 was 898,968 tons valued at Rs. 59.44 crores, as compared with 989,469 tons worth Rs. 109.58 crores in 1952.

The table below shows the quantity and value of different categories of jute manufactures produced in 1953:

	Quantity (In tons)	*Value* (Rs. in crores)
Yarn and twist	13,327	1.72
Twine	12,680	1.19
Cotton bagging cloth	20,889	1.45
Webbing	2,304	0.49
Other manufactures	407	0.05
Hessian—		
Cloth	380,098	60.23
Bags	16,047	2.24
Sacking—		
Cloth	26,839	2.83
Bags	423,328	42.89
Carpets (square yards)	615,682	0.10

The ex-factory value of products and work done for others during the year was Rs. 112.90 crores. The value at factory of materials, fuels, etc., consumed and work done for factory by other concerns (including the value of semi-finished products or finished parts manufactured earlier but consumed during the year) was Rs. 70.32 crores. The amount earmarked for depreciation was Rs. 1.66 crores. The value added by manufacture was Rs. 40.91 crores, as compared with Rs. 45.17 crores.

A summary of the State-wise position of jute mills in 1953 is given in the table below:

	West Bengal	*Andhra*	*U.P., Bihar and Madhya Pradesh*
No. of factories which submitted returns	95	4	5
Employees	255,379	6,828	9,224
	(Rupees in crores)		
Salaries and wages	26.55	68.51	0.89
Total capital	63.40	1.56	1.91
Value of materials consumed ..	63.54	1.69	2.12
Value of production	107.85	2.88	0.13

It will be seen that West Bengal accounts for the great bulk of the Indian jute industry.

ITALIAN INDUSTRY REDUCED IN SIZE

The Italian jute industry, one of the most modern and best equipped in Europe, last year experienced the worst trading conditions in its history, when six leading mills failing to work on the basis of agreed prices either ceased operations or went into liquidation, reports the *Jute Bulletin* of the Indian Central Jute Committee.

The loss of foreign business in face of strong Indian competition was the primary cause of weakness of the industry, but the practice of price-cutting for the home market, widespread among manufacturers, precipitated a crisis, as the aggregate rated capacity of the mills was far in excess

Notices

PALAI CENTRAL BANK LIMITED

NOTICE IS HEREBY GIVEN THAT THE 28th Annual General Meeting of the above Company will be held at the Registered Office of the Company at Palai on Thursday the 22nd March 1956, at 3-30 p.m., to transact the following business:—

1. To adopt the Directors' Report and the Audited Statements of Account for the year ended 31st December 1955.
2. To declare a Dividend.
3. To elect two Directors.
4. To appoint an Auditor or Auditors and to fix his or their remuneration. The retiring Auditor, Sri S. Srinivasa Iyer, Chartered Accountant, is eligible for re-appointment. A notice dated 13th January 1956 has been received from Sri Veraragavarajam, 42-IInd Main Road, Gandhinagar, Madras, of his intention to nominate Sri V. Ramarathnam, Chartered Accountant, Madras-18, to the office of Auditor of the Company.
5. To consider whether it is necessary to have the accounts of the Branch Offices of the Company audited as per Section 228 of the Companies Act, 1956.
6. To transact the special business referred to in the separate Notice of even date.

The Transfer Books of the Company will be closed from 22nd February to 22nd March, both days inclusive.

By Order of the Board,

K. JOSEPH AUGUSTI,
Managing Director.

PALAI, 18*th February* 1956.

RICHARDSON AND CRUDDAS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of Shareholders of Richardson & Cruddas Ltd. will be held at 12, Old Court House Street, Calcutta, the Registered Office of the Company, at 11 a.m. on Wednesday the 21st March 1956, for the following purposes:—

(1) To receive, consider and adopt the Report of the Directors and the Audited Accounts of the Company for the year ended on the 30th June 1955;

(2) To declare Dividends;

(3) To elect Directors of the Company;

(4) To appoint Auditors of the Company for the ensuing year.

The Share Transfer Books and the Register of the Members of the Company will remain closed from the 7th of March to 21st of March 1956, both days inclusive.

By Order of the Board,

S. B. INDUSTRIAL DEVELOPMENT CO., LTD.,
Managing Agents.

CALCUTTA, 15*th February* 1956.

RICHARDSON AND CRUDDAS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of Shareholders of Richardson and Cruddas Ltd., will be held at 12, Old Court House Street, Calcutta, the Registered Office of the Company, at 11-30 a.m. on Wednesday the 21st March 1956, to consider and, if thought fit, to adopt with or without modification the following resolutions proposed as specified, that is to state

AS AN EXTRAORDINARY RESOLUTION

1. Be it RESOLVED that the first sentence of Clause 5 of the Memorandum of Association of the Company be amended to read:—

"The Capital of the Company is Rs. Three Crores divided into 75,000 5½ per cent. (Income-tax-free) Cumulative Preference Shares of Rs. 100 each and 22,50,000 Ordinary Shares of Rs. 10 each subject to being increased or reduced or converted into stock in accordance with the Articles of Association of the Company and the legislative provisions for the time being in force in this behalf"

instead of

"The Capital of the Company is Rs. One Crore divided into 40,000 5½ per cent. (Income-tax-free) Cumulative Preference Shares of Rs. 100 each and 6,00,000 Ordinary Shares of Rs. 10 each subject to being increased or reduced or converted into stock in accordance with the Articles of Association of the Company and the legislative provisions for the time being in force in this behalf."

AS SPECIAL RESOLUTIONS

2. Be it RESOLVED that Article 5 of the Articles of Association of the Company be amended to read:—

"The Capital of the Company is Rs. 3,00,00,000 divided into 22,50,000 Ordinary Shares of Rs. 10 each and 75,000 5½ per cent. (Income-tax-free) Cumulative Preference Shares of Rs. 100 each"

instead of

"The Capital of the Company is Rs. 1,00,00,000 divided into 6,00,000 Ordinary Shares of Rs. 10 each, 40,000 5½ per cent. (Income-tax-free) Cumulative Preference Shares of Rs. 100 each."

3. Be it RESOLVED that the Article 6(*a*) of the Articles of Association of the Company be amended by deleting the full stop after the words:—

"nor confer any voting rights"

and adding thereafter

"except to vote on a poll only in proportion to the paid-up share value of the preference shares of the paid-up share value of the ordinary shares of the Company and only on resolutions placed before the Company which directly affect the rights attached to the Preference Shares."

4. Be it RESOLVED that the existing Article 100 of the Articles of Association of the Company be reconstructed to read:—

"On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every ordinary share of Rs. 10 held by him and ten votes for every Preference Share of Rs. 100 held by him where vote for preference share is admissible as hereinbefore mentioned provided that no member shall be entitled to vote so long as any dues on his shares remain unpaid and also provided that the holders of preference shares shall have no right to vote either in person or by proxy at any General Meeting by virtue or in respect of their holdings of preference shares unless a resolution is proposed affecting the rights or privileges of the holders of preference shares or for the winding-up of the Company"

instead of

"On a show of hands every member present in person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no member will be entitled to vote so long as any dues on his shares remain unpaid and also provided that preference shareholders shall not be entitled to vote."

By Order of the Board,

S. B. INDUSTRIAL DEVELOPMENT CO., LTD.,
Managing Agents.

The 15*th February* 1956.

WALCHANDNAGAR INDUSTRIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE FORTY-EIGHTH ORDINARY GENERAL MEETING of the Company will be held at 'Construction House,' Ballard Estate, Fort, Bombay, on TUESDAY the 20th March 1956 at 4-00 p.m. (S.T.), for the purpose of transacting the following business:—

1. To receive and adopt the Directors' Report and Audited Statement of Accounts for the year ended 30th September 1955 and to declare dividends on Preference and Ordinary Shares.
2. To elect Directors in place of those who retire by rotation and who are eligible for re-election.
3. To appoint Auditors for the current year and to fix their remuneration.

The TRANSFER BOOKS of the Company will remain CLOSED as from FRIDAY the 16th March 1956, to SATURDAY the 31st March 1956 (both days inclusive).

By Order of the Board,

THE PREMIER CONSTRUCTION CO., LTD.,
Agents,
B. D. SARDESAI,
Secretary.

CONSTRUCTION HOUSE,
BALLARD ESTATE,
BOMBAY, 14*th February* 1956.

Note.—The Dividends, if sanctioned, will be paid at the Bank of India Ltd., Fort, Bombay, on and from Monday the 2nd April 1956 to those Shareholders whose names stand on the Company's Register on Saturday the 31st March 1956.

To the Shareholders of the above Company and more particularly to:—Mrs. Marie Mascarenhas Monterio of Goa.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT AN Interim Dividend at the rate of 2¾ per cent., less Indian Income-tax thereon, will be paid to the Registered holders as on the 5th April 1956, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March 1956.

The Share Transfer Books of the Preference Shares will be closed from the 2nd April 1956 to the 5th April 1956, both days inclusive.

By Order of the Board,

D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA 1, 23*rd Februdry* 1956.

NEW BRIDGE OVER GANGA AT MOKAMEH

LINK BETWEEN NORTH AND SOUTH BIHAR

THE foundation-stone of the Ganga bridge at Mokameh in Bihar was laid on 26th February by Dr. Rajendra Prasad, President of India. On completion, this road-*cum*-rail bridge, estimated to cost Rs. 15 crores, will link north and south Bihar. It will also link West Bengal with its northern districts and Assam. The bridge will be able to take in all 20 broad-gauge, passenger and goods trains a day in each direction. This is besides the traffic that can be hauled by road transport vehicles.

The proposal for a bridge across the river Ganga in the neighbourhood of Mokameh dates as far back as 1909. It was, however, only in 1945 that the Railway Board sanctioned engineering and traffic surveys for a rail-*cum*-road bridge either at Patna or at Mokameh. The surveys indicated that, of the two places, Mokameh offered a more suitable site for the proposed bridge. The work was sanctioned by the Ministry of Railways in July 1948. In fact, preliminary work had been taken in hand in right earnest. But, as the Government of Bihar continued to press that the bridge should be built at Patna, work was slowed down so as to study the problem afresh. Unfortunately, however, as the ways and means position of the Government of India towards the end of 1949 became difficult, the Ministry of Railways decided to postpone the work. In the meantime, the hydraulic research station at Khadakvasla, near Poona, was asked to examine the relative merits of the Patna and Mokameh sites and to determine the optimum length of the guide bund and to wet the design of training works.

Fresh Examination

Consequent upon the Partition of the country and the construction of the Assam Rail Link, which changed the trend and flow of traffic to and from North Bengal and Assam, a fresh examination of the position was ordered in 1952. In March that year Dr. M. Visveswaraya, the famous engineer-*cum*-statesman, was approached to enquire into the whole question and recommended the most advantageous location for the bridge. After careful investigation, Dr. Visveswaraya adjudged, taking into consideration the flow of traffic and operational requirements and recurring costs, engineering factors and other relevant considerations, Mokameh as the most suitable site for the proposed bridge. As a result, in September 1953, the Railway Board set up an organisation, under a general manager and chief engineer at Hathidah, to resume the construction of the bridge.

The Ganga River near Mokameh has a discharge at mean flood level of 1,850,000 cusecs and at the highest flood level of 2,500,000 cusecs. Provision is made in the design of the bridge for a peak discharge of 2,750,000 cusecs. The deepest estimated scour for the guide bund at its head has been taken at a depth of 148 ft. below low-water level. According to Mr. H. K. L. Sethi, General Manager and Chief Engineer of the project, the maximum discharge of 2.75 million cusecs "is not an observed discharge, but has been compiled by the extrapolation of the various discharges observed for different H.F.Ls." The highest flood level recorded at Mokameh, it may be noted, was R.L. 141.5 in 1908.

The Project will consist of "14 main spans of 397 ft. centre to centre of bearings each and 4 shore spans of 104 ft. 9 in. centre to centre of bearing each." Only one guide bund along the left bank is being constructed, as the south bank consists of clay which is not known to have been eroded for the last century or so. Dealing with certain details of engineering problems, Mr. Sethi observes as follows:

"For the main spans, the wells will be 53 ft. 6 in. x 32 ft. with semi-circular ends and with two dredging holes of 7 ft. radius. On top of the wells will be a 6-ft. reinforced concrete raft. The wells will be constructed of mass concrete, and the steining will be 9 ft. thick. The piers will consist of a solid base upto 2 ft. above the highest flood level and will then have two circular columns of 15 ft. diameter each, with 4 ft. thick slab again on the top. The idea of providing circular columns is to economise in weight and thus reduce the pressure on the bottom of the foundation. About 40 lakh cubic ft. of concrete will go into the piers and well foundations. The wells have to be sunk 180 to 190 ft. below the bed of the river. At least, five to six well curbs have to be laid in 25-ft. deep water. As far as is known, these are the deepest foundations provided for any bridge in the world.

"The main girders are of the Petit truss type, somewhat modified at the ends. The top and bottom booms are parallel and the diagonals are of the double intersection type with vertical supports at the points of intersection. The girder consists of 16 panels of 24 ft. 9½ in. each, the span from centre to centre spacing of two girders is 29 ft. The main girders will be 60 ft. high.

"The railway track will be carried by a welded floor system bearing on the bottom booms, while the roadway will be carried on an upper floor with a clearance of 17 ft. 9 in. for the railway moving dimensions. The girders have been designed for railway main line B.G. Standard and for the Indian Highway Loading Class A/AA. The quantity of steel required for the main girders is nearly 13,000 tons, most of which is being imported from the U.K. The girders will be erected by the cantiliver method commencing from the south bank."

The economic importance of this bridge is great. The absence of a direct rail and road link between north and south Bihar has adversely affected the development of the State. While in U.P., the river Ganga has been bridged at six places over a length of about 600 miles, there is no bridge at all on the river in its course of about 250 miles in Bihar. Consequently, the passenger and goods traffic are being handled in barges across the river. The working of the barges, slow by its very nature, has resulted in delays at transhipment points. Again, frequent shifting of the ghats to suit the moods of the river has not only made transport a costly affair but has placed severe restrictions on traffic. It is stated that, at present, it is easier to transport coal from Dhanbad to Delhi than to northern districts of Bihar so close to the collieries. The capacity of the wagon ferry is limited to a maximum of about 250 ft. metre-gauge wagons per day.

The bridge, intended to replace the ferry barge, will connect north and south Bihar all the year round, irrespective of the intensity of the floods and other conditions of the river. It will help development of north Bihar by ensuring free movement of essential commodities such as steel, coal, cement, etc., from south Bihar. It is needless to point out here that north Bihar is primarily agricultural and produces large quantities of sugar and foodgrains while south Bihar is rich in such minerals as coal, copper, mica and cement.

Laying the foundation-stone, Dr. Prasad stated that, since the partition of India and the subsequent closing of the old Bengal-Assam railway route, it was most urgent to provide adequate traffic facilities between south and north Bihar and from Calcutta side to north Bengal and Assam. The construction of the Assam Rail Link seven years ago was only the first step taken towards joining north Bihar with Assam and the southern districts of West Bengal with its northern districts and Assam. The construction of the bridge at Mokameh would complete the process by providing a direct link between the abovementioned areas. This bridge would, therefore, be a vital link in the system of communications in eastern India. Proceeding, Dr. Prasad remarked: "Let me hope the Ganga bridge, which will link north and south Bihar, will be symbolic of the unity and strength of the Indian nation, which was once so well reflected in the glory and grandeur of Mithila, on the one hand, and of Magadha on the other—the two regions which this bridge will join together.

BALL BEARINGS INDUSTRY

Last week, it was the turn of the ball bearings industry to receive the attention of the Tariff Commission. The industry has put in a claim for the continuance of protection beyond 31st December 1956, when the present period of protection of four years is due to expire. The industry has asked also for assistance in the form of removal of import duty on raw materials and on large-sized grinding wheels, which are not manufactured in the country. Further, it has asked for a complete ban on the imports of those types and sizes that are manufactured in the country and their substitutes.

The rates of duty at present are 9½ per cent. *ad valorem* on items covered by Nos. 72 (35) and 72 (36) of the Indian Tariff Customs Schedule and 10 per cent. *ad valorem* on items covered by No. 72 (37). It will be recalled that the preferential treatment for ball bearings of U.K. origin falling under item 72 (35) was removed by the Finance Act, 1954. As a result, a standard rate of duty operates on all items of ball bearings.

Prima facie there seems to be a case for continuing protection to this industry, although the details of such protection have to be decided by the Commission. Four years is too short a period of protection for any industry to stabilise itself on economic foundations. Moreover, ball bearings industry occupies a key position in an industrial economy.

Mr. K. R. Damle, Chairman of the Tariff Commission, revealed, in the course of his address, while opening the public enquiry into the claims of the industry for the continuance of protection, that "the industry was in the peculiar position of having only one producer, namely, the National Bearing Company, Ltd., Jaipur." Its output in 1955 was 810,350, as against 708,220 in 1954, 648,376 in 1953 and 416,769 in 1952. As against this, the Planning Commission had estimated the demands for ball bearings in 1960-61 at about 2.1 million. The National Bearing Company, Ltd., had placed the current annual demand at 800,000 and expected that it would increase to 1 million tons within three years. Other estimates vary between 1.20 million to 2 million bearings. The Tariff Commission will, therefore, have to arrive first at an accurate estimate of the present and future demand for ball bearings.

Be that as it may, there is no doubt that there is a big gap between demand and output. Given sufficient protection, the industry can certainly rise to the occasion to a considerable extent. In that event, however, the industry owes a duty to its consumers to improve the quality of its products and to keep the prices thereof at reasonable levels. On the question of quality, the comment that is heard is that, while the quality of the indigenous product is good, there is still scope for improvement especially in regard to noiseless performance, smooth running and dimensional tolerance range. The industry will do well to pay prompt attention to this aspect of its manufacture.

BRITISH FIRM TO BUILD NEW COKE OVENS AT JAMSHEDPUR

A contract worth about £1,750,000 has been awarded by the Tata Iron and Steel Co., Ltd., Jamshedpur, to Simon-Carves Ltd., of Stockport, Cheshire. The order covers the reconstruction of two large coke-oven batteries and the building of 18 new ovens. Simon-Carves has had a long association with the Tata interests and has built a total of 216 ovens with an annual carbonising capacity of about 2,000,000 tons of coal. The first three coke-oven batteries were built by Simon-Carves about 20 years ago and the fourth in 1953. Under an earlier contract, the British firm is already engaged in reconstructing the oldest of the first three coke-oven batteries and the second and third batteries are to be reconstructed under the new contract. These three batteries comprise 124 coke ovens. Much of the material to be used will be of Indian origin, and the work will be done by Indian labour under the direction of Simon-Carves' resident technical staff. Besides this coke-oven reconstruction, Simon-Carves is at present engaged in a number of contracts placed with it during the last two or three years for the building of new steelworks equipment for Tatas at Jamshedpur, including a new steel-melting shop, blast furnaces, ore bins, open-hearth furnaces, soaking pits and the re-lining of blast furnaces.

NEW PRODUCTS AND PROCESSES

Producing Ultra-high Temperatures

ONE method for producing ultra-high temperatures that may become of industrial importance is that of using supersonic shock waves. Experiments have shown that, when a plunger or other device in a special container, such as a shock tube having a closed end, is moved at a speed sufficient to reproduce the effect of a speed faster than that of sound and the shock wave thus produced is reflected back from the end of the tube, temperatures of the order of 17,750 degrees centigrade can be produced. At such temperatures the shock also produces conditions where exceptional electrical conductivity occurs.

Hard Insulating Material

A new material which has both extremely good physical hardness and is, at the same time, a good electrical insulator, has been developed by the American Cyanamid Company, New York, U.S. The material, which is a plastic, called polyacrylonitrile, is also said to be unaffected by most industrial solvents, with the exception of a few highly active ones, such as ethylene carbonate. It is manufactured in the form of a white powder composed of particles of uniform size. This regularity of grain size enables it to be easily handled, since the uniformity of the dimensions of the individual particles enables the material to flow easily and freely through the plant in which it is being handled. Although the material is chemically inert, its form and chemical composition can be modified by certain types of chemical reactions, as, for example, hydrolysis.

Titanium Valves for Corrosive Fluids

Experiments with control valves made from titanium in place of stainless steel for handling the flow of corrosive fluids in chemical plants are said to have shown that they greatly increase valve life. The valves which have been developed and manufactured by the Valve Division of the Minneapolis-Honeywell Regulator Company, U.S., are made from titanium metal forgings each weighing 120 lbs. produced by Rem-Cru Titanium Inc., a jointly owned subsidiary of the Remington Arms Company and the Crucible Steel Company. In one test, these titanium valves were tried out in a chemical plant against valves made from stainless steel under conditions where both sets of valves had to handle a corrosive solution at an inlet pressure of 3,000 lbs. per square inch with a pressure drop of 2,700 lbs. per square inch across the valve. Under these stringent conditions, the stainless steel valves failed after seventy hours of routine operation, while the titanium valves worked for 1,680 hours without, it is claimed, requiring any attention.

Controlling Mosquito Larvæ in Rice Fields

Water-soluble insecticides can effectively destroy mosquito larvæ in irrigation water, according to the U.S. Department of Agriculture. At a recent meeting in Cincinnati, Ohio, of the Entomological Society of America, the scientists of the Department of Agriculture reported successful use of such insecticides against the larvæ of *Psorophora* mosquitoes. Mr. James B. Gahan of the Department's research service disclosed that less than an ounce of one insecticide added to 1,000,000 gallons of irrigation water as it flowed into a canal leading to rice fields was enough to kill all larvæ of the predominant mosquito species present in the water. The insecticide parathion was the most effective of four chemicals tested. Not normally soluble in water, parathion was rendered soluble by mixing it with a chemical emulsifier. It was found that, upon being dripped evenly into the irrigation water, the concentrated solution readily diffused in the water and flowed a half-mile through the canal and 400 feet further across the test fields. All of the *Psorophora* mosquito larvæ in the test area were dead within 48 hours.

Nickel-Iron Alloy

A new nickel-iron alloy recently made available in the U.S. represents, it is stated, a striking example of the ability of modern technology to produce alloys, the physical performance of which can be exactly forecast. The alloy is used to manufacture three small and very thin pieces of metal for a newly developed automatic safety aid for pilots flying supersonic jet aircraft. The alloy, which is manufactured by H. A. Wilson of New Jersey, U.S., contains nickel, iron, chromium and titanium in varying quantities. The alloy is claimed to measure virtually the altitude of the pilot after he has baled out and thereby forms the vital element of an automatic parachute opening device. This is achieved because the composition of the alloy, which is used in the form of three minute metal diaphragms, is so designed that it retains exactly the same flexibility at temperatures well above 200 degrees Fahrenheit as it does at temperatures of minus 90 degrees Fahrenheit—far below freezing point. Yet, at the same time, the behaviour of the alloy diaphragms varies according to the differences in pressure experienced at different altitudes. The alloy, by its response to the pressure of the air, and therefore to the altitude, and its subsequent activation of the automatic parachute opening device, enables a pilot to bale out from a jet plane at great heights in safety when he is either only partly conscious or even completely unconscious. When only partly conscious, a pilot may pull the rip cord releasing the parachute too soon and in consequence fall too slowly through the atmosphere where oxygen supplies are inadequate to keep him alive. If he is completely unconscious, on the other hand, he will, without the accurate and automatic measurement of these nickel alloy discs, plummet to the ground.

ASSOCIATED STONE INDUSTRIES (KOTAH) LTD., RAMGANJMANDI

SPEECH OF SARDAR DALJIT SINGHJI

THE Tenth Annual General Meeting of the shareholders of the Associated Stone Industries (Kotah) Ltd., held on 18th February 1956, at Ramganjmandi, Kotah District (Rajasthan), was presided over by Sardar Daljit Singhji, Chairman of the Company. Addressing the shareholders at the meeting, the Chairman said:

"GENTLEMEN,

"I deem it a great privilege in welcoming you all here this afternoon and presenting the Directors' report and the audited statement of accounts of your Company together with the auditors' report for the year ended 30th September 1955. These have already been circulated and it is hoped that you have gone through them.

"On looking to the aforesaid reports, you will agree with me that the result of working of the Company is quite satisfactory and that the financial stability of the Company is quite sound.

"Last year, I had occasion to comment on the problem of the availability of wagons to the Company which had assumed serious proportions. I am glad to report that the railway authorities have been very kind enough to pay their immediate attention to ameliorate the difficulties of this industry. Such imaginative sympathy in understanding the problems of an important industry is rare these days and I hope the gentlemen present here will join me in expressing our sense of gratitude to these authorities. I also hope that the facilities in regard to wagon supply will continue to be extended to this Company.

"It is gratifying to note that the relations between the management and the labour during the period under report have been harmonious throughout. The labour and the staff have given their unstinted co-operation in the working of the Company and have worked with steadfast loyalty. I assure you all that this Company will always have the welfare of labour at its heart and will try to provide still better amenities to its workers. I hope, with the financial assistance of the Central and State Governments, the scheme for providing better houses to the workers will be given concrete shape in the near future.

"This is the age of national reconstruction. Our Government have undertaken a constructional programme which is unparalleled in our history. Great capitals, beautiful buildings, industrial colonies and vast constructions are being built. We hope and trust that Kotah Stone, which has already attained popularity, will play its role in the service of the nation. Particularly in Rajasthan, where the prosperity of the State depends upon a plan of rapid industrialisation, Kotah Stone is assured of a great future.

"This Company is one of the few enterprises in Rajasthan which has worked with remarkable success so far and has also contributed much to the revenue of the State. Let me hope that the Rajasthan Government and their officers will adopt a more sympathetic and imaginative policy towards this concern in future.

"The credit for the successful working of the Company should largely go to our Director-in-charge, Shri Hiralal M. Parikh, who has guided the destinies of the Company with such remarkable skill and untiring efforts. In this he is assisted by our energetic Manager and Secretary, Shri J. D. Kora. Our thanks are due to them, as also to our officers, staff, labourers and customers for their sincere co-operation.

"I also thank our auditors and legal advisers for their invaluable advice and guidance.

"Thanking you all, once again, I now commend for your approval the resolution to adopt this report and the statement of accounts."

THE BANK OF NAGPUR LIMITED

P. H. KOTHARI,
General Manager.

RECENT TRENDS IN GOVERNMENT'S ECONOMIC POLICIES

MR. W. H. J. CHRISTIE'S SURVEY

NO business man ever regards risks as deterrents to activity. Rather, he believes that they call for additional effort on his part. But they must, of course, be calculable risks which he, as a prudent citizen, could take. How does a hard-working and conscientious business man in India react to the conditions around him? Do they permit him to go forward, to plan ahead and to make his effective contribution to national economy? To this question, the speech of Mr. W. H. J. Christie, President of the Upper India Chamber of Commerce, at the annual meeting of the Chamber, held at Kanpur on 24th February 1956, provides a comprehensive reply.

It is becoming increasingly obvious that there are elements in the present situation which must make even the habitually optimistic business man feel a little despondent. And yet, it should be possible for the Government to avoid creating this feeling through following somewhat more realistic economic policies than it has so far adopted, on purely political, rather than on economic, considerations. Mr. Christie's address is notable for the reason that it not only presents an objective assessment of the recent trends in Governmental policies but also gives a few concrete suggestions for such reorientation of the policies as will increase the pace of the country's economic progress.

Five-year Plan

Mr. Christie prefaced his address by a reference to the events that followed the emergence of India as a free country. The chief event was the "miracle" of administrative and political consolidation. Under wise and liberal leadership, India achieved political and economic stability which was the envy and admiration of its neighbours, and what is, perhaps, equally important, it was, after a period of natural hesitation, just coming to be regarded as a "good investment risk for foreign capital." The first Five-year Plan made rapid progress. There was a perceptible improvement in general standard of living. During this period, the concept of "mixed economy" held the field. Last year, this phrase was replaced by another, the "socialistic pattern of society." This year, the word "socialistic" has been dropped. There is talk of a new statement of industrial policy which in present circumstances is "hardly likely to be reactionary." In this connection, Mr. Christie quoted a shrewd observer who was in India recently. This observer had said that the prevailing trend of political and social thought in India was a mixture of Gandhism, Marxism and Liberalism. Mr. Christie's comment was: "I don't think she was far wrong, nor do I think that such an intellectual tonic or cocktail is necessarily bad for India in the context of the tremendous problems which have to be solved. It all depends on the proportions of the mixture. It is easy to see that, in certain proportions, it is liable to be not only intoxicating but explosive."

More recently there have been a few changes to which Mr. Christie drew pointed attention. There have been two acts of nationalisation—of the Imperial Bank and the insurance industry. In between these two acts came the Fourth Amendment of the Constitution, empowering the State to acquire property on its own terms and denying the courts the rights to pronounce on the justice of these terms. Next came the report of the Taxation Enquiry Commission, the publication of which was held up to coincide with a budget "that owed much to its recommendations and which stood forth as an avowedly socialistic budget." This was followed by the new Companies Bill, some of the provisions of which "seem to have been inspired, if not by vindictiveness, by a deep suspicion of private enterprise which, if occasionally justified, is surely not justified overall, to the extent of putting the whole private enterprise under duress."

It is true that private enterprise continues to receive the assurance that it has great scope in India of the future. But a great change has occurred through the emphasis on socialism. This change, according to Mr. Christie, is aptly summed up as follows:

"It means that Society and the State are more important than the individual. It envisages a far bigger role for the State than for individual initiative and enterprise."

Supplementing this quotation, Mr. Christie observed: "Sixty years ago, a King of England said: 'We are all socialists nowadays.' What was a paradox then is nearer to the truth today; and in India of 1956, we must certainly accept the fact that we are all socialised now."

Individual Liberty

Mr. Christie is not alone in indicating the meaning of this change to the individual. The precise implications of this change are being slowly discovered in this country. Already, some leaders are becoming aware of the inroads which the growth in administrative law could make into individual freedom. Last week, at a symposium on "Legal Problems of a Welfare State," held in Bombay, some of the foremost legal luminaries of this country expressed the view that the individual must zealously guard his rights and privileges guaranteed by the Constitution. One speaker pointed out that, while the Government could prevent the concentration of wealth in a few hands, it could not at the same time claim to avoid corruption in the State machinery.

An important result of this policy providing for increasing role of the public sector and for making the private sector conform to certain preconceived notions of national priority is the proliferation of administrative law. This serves as a severe handicap to private enterprise. On this subject, Mr. Christie had some notable observations to make. He said that India's leaders, who knew what they wanted, were "tempted, perhaps by over-confidence, perhaps by mistrust, to drive and compel where, perhaps, they should guide and persuade, tempted to experiment with inadequate resources, when perhaps they should allow the instruments of their policy to acquire a little more experience, tempted to jump to conclusions, which may be wrong, about who are on their side and who are not." He added:

"The outside observer would not see anything perturbing, wrong or disastrous in all this; indeed, he would see much that is commendable. He might recognise that it involved a certain amount of waste of effort and resources, and might admit that there were elements of danger in the situation, particularly if the present leaders should change. But what about ourselves? We are business men in what is called the private sector. Abandoning objectivity for a moment, but without complaining or justifying ourselves can we give, without exaggeration, a fair picture of the condition under which we have to conduct our business? We have enormous internal markets to serve and a good footing (though this barely applies to us in Kanpur) in international trade. We see prospects and the fact, of a rising standard of living around us; and inflation for the time being, held in check. We are told that we have a full scope in the expansion of economic activity and we are encouraged, even commanded to take part in it. We earnestly desire to do so, and moreover we are sincerely at one with the objectives of increasing the general level of prosperity, reducing inequalities of wealth, expanding employment and improving conditions of labour and relations between employer and workmen. We admit the need for a measure of regulation and direction. We should bend to our task with courage and confidence, and face the future jubilantly.

"What prevents us from doing so? In a very few words, it is this. With all this tantalising prospect before us, the prospect, not so much of personal or corporate profit but of service, we are pinioned, bound hand and foot; or rather, since we have agreed to eschew exaggeration, the illusory remnant of freedom and initiative that is left to us is about as much as the convict has in his daily walk for exercise round the prison yard. There is scarcely anything we can do in our business without Government's permission, and the delays attendant on it. We cannot start or close a business, expand or contract a factory without Government permission. We cannot raise capital or distribute to shareholders the reserves which are their property without permission. We cannot appoint a new director, a director cannot retire (it has even been said that the new Companies Act will not let a director die!) without Government's consent. Much that we buy and much that we sell is subject to official controls. In some industries, for instance the sugar industry, the price of 75 per cent. of all that enters into the cost of production is controlled by Government. We are dependent on State-controlled electricity for our power and State-owned railways for the transport of our fuel, our raw material, our finished goods. We cannot pay our staff at our discretion, though certain members of our staff have to be employed and paid at Government's dictation. We certainly cannot reduce our labour force without Government's consent, and without severe penalty. About the only thing we are free to do without consent is to pay a bonus to our labour, provided, of course, we pay enough. All this—and taxation too."

Mr. Christie, on his part, was aware that, if the men engaged in the private sector asked for more freedom, they also had to shoulder larger responsibilities. Accordingly, he emphasised that they should pay their taxes, should be honest in their business dealings, should treat labour fairly and maintain and improve the efficiency of their factories. At the same time, he pointed out that they should be allowed to make profits, for without profits, no industry could pay wages or increase jobs, or maintain efficiency, or expand production. And, without profits a company cannot attract capital nor look to the interests of either of its shareholders or its customers, and it cannot contribute to the revenues of the Government.

State's Responsibility

As regards the State's responsibilities, Mr. Christie said that its primary duty must be to guard against inflation. He said: "History has shown us that nothing can ruin a country or bring democracy to an end so rapidly as inflation." Secondly, there was the responsibility for promoting good labour relations in industry. He deplored that too many disputes "have been allowed to come to adjudication, litigation has been encouraged, and discipline has been undermined." He urged the revision of the trade union law, so that the unions could become genuine guardians of the workers' interests, and the removal from the field of dispute of "those two prolific sources of misunderstanding and litigation—bonus and workload." Thirdly, the State's responsibility should be to see that adequate transport was provided. Fourthly, the Government should allow capital formation to take place. In this connection, he warned that it would be wrong to underestimate the disincentive effect of high taxation on the man "who has to work with his brains more than with his hands." Fifthly, he stressed the importance of efficient administration of the new Company Law.

Surely, these responsibilities which Mr. Christie emphasised, are the minimum which should be fulfilled by the State if the private sector is to play its role in the national economy. To ignore them and then to expect this sector to make its contribution to the task of raising the living standards would certainly be to court disappointment, apart from the fact that it would be most unfair to the private sector itself.

The proposal for the creation of a "Scientific Civil Service" was now being considered by the Council of Scientific and Industrial Research. This was revealed by the Minister for Natural Resources and Scientific Research, Mr. K. D. Malaviya, in the course of his reply to a question in the Lok Sabha. The service would, to begin with, be confined to the Council and allied organisations. In reply to another question, he stated that it was intended to depute a batch or batches of technicians for training in foreign countries in oil drilling and other technique. The exact number and types of technicians to be sent but had not yet been finalised. It was probable that they would be sent to oilfields in Russia and Rumania and, if necessary, to other countries.

new light on your overheads

Actually its good lighting.
Fluorescent lighting—Philips.
Cutting overhead costs, and giving you over 3 times the light on the job.
All workers, office employees and factory labour, who have had experience of this new light correctly handled, will agree that they can work a lot better over a length of time under fluorescent lamps.
Less eye-strain, fewer mistakes, quicker work, and an improved general atmosphere, these are the results of better lighting. And working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have a burning life of 7500 hours, which is just about 4 years. These are a few reasons why Philips Fluorescent Lamps & Fittings are being installed in homes, offices and factories throughout the world.

TEXTILE MEN MEET PRESIDENT OF BOARD OF TRADE

CASE AGAINST CLOTH IMPORTS PRESENTED

From A Special Correspondent

MANCHESTER, 21*st February*

MANCHESTER LETTER

A DELEGATION from the cotton industry this week told Mr. Thorneycroft, President of the Board of Trade, that Lancashire feared that big orders for cotton cloth had recently been placed by customers in Britain with mills in Hong Kong. Delegates claimed that when cloth import figures for the first three months of the year are released they are likely to show record arrivals.

On the question of imports of cheap, duty-free cloth from Hong Kong and India, the industrialists were referred to a statement on 3rd May last year, by Sir Anthony Eden. Mr. Thorneycroft said the general considerations underlying the decision in that statement remained unchanged.

An agreed statement issued after the meeting said that the President of the Board of Trade recognised that the industry had made a strong case. He asked the industry to keep in close touch with him about all developments in the situation. "The deputation informed the President that early next week they would report his response to the case at a meeting of the industry's appropriate Standing Committee which would have to decide the policy to be pursued," the statement said.

Previous Submission

Lancashire's case for protection against imports of cheap cloth from Hong Kong and India was rejected by the Government last March. The Cotton Board's Standing Conference on Overseas Trade submitted a fresh case to Mr. Thorneycroft in December.

On 3rd May 1955, the Prime Minister told the House of Commons that India had announced a substantial reduction in tariff rates covering all cotton textiles. The general effect, he said, would be to reduce the rates on British goods by more than a half, to a level of 25 per cent. In addition, there was a specific duty of about 5 per cent. which Indian producers would pay.

The Government "are not prepared, at this time and in existing circumstances, to depart from their long-established arrangements for duty-free entry from the Commonwealth," Sir Anthony said. Last year, more than 268,000,000 yards of cotton grey cloth was shipped into Britain, including 130,552,000 yards from India, 48,761,000 yards from Hong Kong, and 63,879,000 yards from Japan.

Textile Prices Probe

Trade associations in the textile industry are among those who have received a questionnaire from the Monopolies Commission inquiring into "common prices and agreed tendering." This investigation, being made at the request of the Board of Trade, is aimed at obtaining information about restrictive practices in industry which the Government intends to curtail by legislative action as a result of new measures which are to be debated in Parliament.

According to the Silk and Rayon Users' Association, the questionnaire from the Commission asks for particulars of any agreements which have the effect of controlling the prices of goods or services supplied by member-firms. Although the association indicates its willingness to answer the appropriate questions it objects to being asked to comment on systems adopted by other organisations.

Mr. R. R. Catty, Director of the Association, says: "It should not be part of the responsibility of a trade association to provide an information service for the Monopolies Commission on the activities of other organisations in the industry."

New Take-over Bid?

Strong rumours have been current in Manchester textile circles that a take-over bid was imminent for the Amalgamated Cotton Mills Trust Ltd., the spinning and weaving combine. Linked with the reports was the name of Mr. Isaac Wolfson, Chairman of Great Universal Stores Ltd. An official of the Trust, however, refused to comment on the rumours.

According to usually well-informed sources, Mr. Wolfson was in contact with Mr. William Pickles, Chairman of Amalgamated Cotton Mills Trust Ltd., last year, but his approaches were then rejected. The price of the 2*s.* shares of the Trust has advanced from 9*s.* to 10*s.* 7½*d.*

Formed in 1918, Amalgamated Cotton Mills Trust controls about one million spindles and over 4,500 looms. In addition to spinning and weaving plant, the group owns a chain of 20 shops specialising in its "Aertex" brand of clothing.

Action Against Mutual Aid

Another stage in the Government's campaign to deal with restrictive practices has been reached by the publication of the Parliamentary Bill which is shortly to be debated in the House of Commons. The main outline of the proposals had already been indicated by the President of the Board of Trade and the details show no fundamental departure from the original scheme. Every effort has been made to provide a comprehensive plan offering no loopholes for evasion.

There is no doubt that the Government is taking the whole matter very seriously, even at the risk of aggravating some of its supporters who have for many years adopted some of the principles which are now to be condemned. The main source of criticism has been that the system is too long-winded, involving many months before individual practices can be investigated and action taken if they are found to be "against the public interest."

The scope of the Bill is so wide that few mutual aid schemes adopted by industrialists can escape the net. Certainly, there will have to be some adjustment to those in operation in various sections of the cotton industry if they are to avoid being banned. The most obvious method would seem to be the introduction of voluntary schemes on a similar basis, as the legal enforcement of the system is the main objection.

A great deal would then depend on whether mutual pacts on the lines of the pre-war "gentlemen's agreements" would stand the strain of current conditions within the industry. After years of working relatively harmoniously together some show of co-operation might still be achieved, but in adverse circumstances when orders were running short there could well be a reversion to the internal strife which was so characteristic of the trade a generation ago.

On the other hand, those who pledge their faith in unrestricted competition at all times contend that a more realistic price level will force out business and improve prospects. Indications point to the likelihood of a "free-for-all" before long, although under the Government's existing scheme it will be months at least, before any positive action can emerge.

Assessing Earnings

With attention once more focussed on the profitability of the industry—and particularly the spinning branch—following the comments made at the annual meeting of the Manchester Chamber of Commerce, it is as well that current trends should be closely observed. Since the turn of the year a number of textile companies have announced their results, which in most cases covered a large part of 1955.

Some variation in earnings is inevitable at all times but the general experience reflects the lower earning power of the industry, although there have been no real casualities as yet. Of the score of companies which have indicated their position, nearly all have reported lower gross profits and it is noticeable that purely spinning concerns have been the hardest hit. Those combining spinning and weaving have lost a little ground but in the majority of cases dividends have been maintained.

Reserves remain strong practically throughout the industry and cash balances for carry forward have been rarely altered and in some cases have been increased. There are signs in some instances, however, of adverse tidings yet to come, for at least one company has passed its interim dividend distribution and another has forecast that the year's results, when announced, will show a loss.

It is significant that companies largely devoted to the distribution of textiles have shown up to advantage in the figures so far disclosed, this being the result of the intensive home trade clearances which took place last summer. It provides a guide to what can be expected in similar returns during the months ahead. Producers are not so favourably situated but they have shown that adverse conditions can be surmounted and any revival of demand this year will increase their chances of financial success.—*All Rights Reserved.*

THE STATE BANK OF INDIA—FIRST ANNUAL MEETING

HUNDRED PLACES SELECTED FOR OPENING MORE BRANCHES

"INCREASE IN USANCE BILL RATE A RIGHT MOVE"

CHAIRMAN, DR. JOHN MATTHAI'S SPEECH

THE First Annual General Meeting of the shareholders of the State Bank of India was held at Bombay on 29th February 1956. Presiding over this meeting, Dr. John Matthai, Chairman, traced the history of the Bank and explained the progress that has been made in the fulfilment of the objectives for which the Bank was created. He disclosed that special arrangements were being made by the Bank to render financial assistance to small industries.

The following is the full text of Dr. Matthai's speech:

"I have much pleasure in welcoming you to the first annual general meeting of the shareholders of the State Bank of India.

"I would like at the outset to dwell briefly on the genesis of the State Bank and the objects Government had in view in forming it, so as to be able to assess the results that have been achieved in the first six months of our working. On the 20th December 1954, the Finance Minister announced in the Lok Sabha the decision of the Government of India to assume effective control over the Imperial Bank of India as a first step towards the setting up of a State Bank of India. This decision was taken by Government on the recommendations of the Committee of Direction of the All-India Rural Credit Survey, which had suggested, among other measures, the creation of 'one strong integrated State-partnered commercial banking institution with an effective machinery of branches spread over the whole country for stimulating banking development by providing vastly extended remittance facilities for co-operative and other banks and following a policy which would be in effective consonance with national policies adopted by Government without departing from the canons of sound business.' Following this announcement, the State Bank of India Act was passed by Parliament in May 1955.

"On the 1st July 1955, the State Bank of India came into being and the undertaking of the Imperial Bank of India, which was formed in 1921 by the amalgamation of the three Presidency Banks, was transferred to the new institution with the exception of the assets and liabilities of foreign branches to which a reference will be made later in my speech. The process of transfer from the Imperial Bank to its successor Bank was completed smoothly and it is a matter of gratification that the good work put in by all concerned and the satisfactory arrangements made have enabled the changeover to take place without any dislocation or difficulties either within the Bank or in the general economic life of the country. It will be agreed that, with the establishment of the State Bank, a new chapter has commenced in the history of banking in India.

Central and Local Boards

"The Bank started to function under the direction of a Central Board and three Local Boards at Bombay, Calcutta and Madras, initially appointed by Government, consisting of men of outstanding ability and experience in various fields of economic activity. The Central Board has had a variety of difficult problems to face during the initial period and I would like to take this opportunity of expressing my appreciation of the help and co-operation the Directors have extended to me in handling them.

Foreign Offices and Foreign Exchange

"In regard to the transfer of the assets and liabilities of the undertaking of the Imperial Bank to the State Bank as contemplated by the State Bank of India Act, it was felt that, while there would be no difficulty about the transfer in India, it was doubtful whether such 'vesting' would be recognised and given effect to in foreign countries. As a precautionary measure, it was therefore decided, on legal advice, to provide for the continued existence of the Imperial Bank as a corporate entity beyond the 'appointed day' to enable it to make over its assets and liabilities at its foreign branches to the State Bank. Accordingly, the State Bank of India Act was amended by an Ordinance on the 23rd June 1955 which was later passed into an Act of Parliament on the 21st September 1955. The present position is that the Imperial Bank of India is nominally in existence for the purpose of enabling the transfer of assets and liabilities in London, Burma, Ceylon and Pakistan to be effected. While the bulk of these assets and liabilities have already been transferred to the State Bank, there are still a few legal formalities to be completed for effecting the transfer completely and as soon as these are finalised the Imperial Bank as a corporate entity will cease to exist.

"While on the subject of our foreign branches, I would mention that these continue to serve a useful and important purpose and we have during the past six months examined the question of opening new branches in foreign countries with the object of fostering Indian trade and expanding our activities, particularly in the field of foreign exchange to which we attach much importance. For diverse reasons, our progress in the matter of further expanding foreign exchange business has been slow, but, in view of the great expansion in India's foreign trade, which will result from the second Five-year Plan, it is our intention to adopt a more vigorous drive towards attracting what we consider to be our legitimate share of this important sphere of banking business.

Branches in Pakistan

"In so far as our eight branches in Pakistan are concerned, the Pakistan Authorities have informed us that, in accordance with their policy not to allow any foreign bank to open branches in the interior of the country, the State Bank of India will be allowed to operate in port towns only. The position now is that, while our branches at Karachi, Chittagong and Narainganj may be allowed to continue permanently and those at Lahore and Dacca up to the 30th June 1959, our branches at Hyderabad (Sind), Mirpurkhas and Lyallpur will not be allowed to function beyond the 30th June 1956. Arrangements will therefore be made to close these three branches as required by the Pakistan Authorities. While on the subject of Pakistan branches, I would like to say that no loss has been suffered by us as a result of the devaluation of the Pakistan rupee which took place in August last.

Branch Expansion and Rural Credit

"I now pass on to deal with the question of the expansion of banking facilities in rural areas which is one of the main objectives before us towards furthering the banking development of the country. Arising from the recommendations of the Rural Banking Enquiry Committee, 1950, the Imperial Bank of India had, in consultation with the Reserve Bank of India, agreed to open 114 branches (both new and Treasury Pay Offices to be converted) during the period 1st July 1951 to the 30th June 1956. Up to the 30th June 1955, 63 offices had been opened by that Bank and, since that date, a further 20 offices have been established, leaving 31 centres where branches are still to be opened. The State Bank has a statutory obligation to open 400 new branches during the first five years of its existence or such extended period as the Central Government may specify in this behalf. The places where such additional branches are to be established have to be determined by the Central Government in consultation with us and the Reserve Bank. As a first step in this process, 100 places have been selected which are confined mostly to district treasury and the relatively more important sub-treasury centres; it is obviously not possible to include every centre which requires banking facilities in the initial list. These 100 centres, together with the 31 centres left over, will be covered in the first programme and thereafter a further list will be drawn up.

"It must be stated that the Imperial Bank experienced considerable difficulty in securing suitable premises and, in some cases, where accommodation was available in the local treasury buildings, there was inordinate delay in effecting the necessary alterations and additions to make them suitable for the Bank. The Reserve Bank gave the Imperial Bank the requisite assistance in several cases of this nature but even so the progress was slow for reasons beyond control. In the present phase of the expansion programme and with the assistance of the Reserve Bank, we are intensifying our efforts to open branches as expeditiously as possible. The Reserve Bank of India have been requested to ask the various State Governments to instruct the District Authorities to give all possible assistance to the Bank in securing accommodation for the office and, where necessary, for the members of the staff at the new centres where it is proposed to open branches. I need hardly add that arrangements are being made by us to recruit and train the staff, both supervising and clerical, required for the phased opening of branches.

"One of the chief reasons which prevented the Imperial Bank from pursuing a more vigorous policy of expansion was that, as a private shareholders bank it could not afford the heavy expenditure involved in opening new branches which were likely to prove unremunerative. This position has changed in the new context, as provision has been made in the Act for meeting the losses beyond an agreed figure on unremunerative branches, from an 'Integration and Development Fund' into which are paid the dividends due to the Reserve Bank on its holding of 55 per cent. of the total issued capital in the State Bank.

"An essential part of the development of the rural credit programme is the availability of adequate facilities for storage, warehousing and marketing of agricultural produce, in which the country has been lacking. The Government of India are shortly setting up an All-India Central Warehousing Corporation and State Warehousing Corporations, with a view to affording facilities for storage of commodities. An organised system with effective State participation will then come into existence, in which we, along with other interested institutional agencies, will be required to play our legitimate part. I welcome this move in the larger interests of the country and, from our own point of view, I have no doubt that this will increase our ability to make advances against suitable security to the small producer in rural areas.

Remittance Facilities

"Passing now to the question of providing extended remittance facilities for co-operative and other banks, which was one of the objects Government had in view in setting up the State Bank of India, we have, as agents of the Reserve Bank, agreed to liberalise the existing remittance facilities available to Scheduled banks (and State co-operative banks who enjoy similar facilities) by permitting free transfer facilities *twice* (instead of once) a week, with effect from the 1st November 1955. This matter will be reviewed during the year with the object of considering in what directions remittance and other ancillary facilities to Scheduled banks could be further liberalised without imposing any undue burden on our working.

Interest Rates and Collection Charges

"The State Bank's schedule of charges for the negotiation and collection of bills and interest rates on advances have been fixed in relation to its operating cost and the comparative rates charged by other banks. These rates are necessarily subject to review from time to time in the light of prevailing business and monetary conditions. The transformation of the Bank into a State Bank does not by itself justify relaxing the basis on which the rates are fixed. In any action which the Bank may be called upon to take in the matter, apart from the normal considerations governing the problem, it is necessary to take account also of the obligation placed on it to develop banking in rural areas and the mounting cost of its establishment charges on account of the successive Bank awards.

"Another matter which affects banks generally and which requires careful consideration is the gradually increasing burden of interest paid for attracting deposits. I understand that an attempt was made in 1954 to reach an agreement amongst banks in the matter of fixing ceilings on deposit rates. Unfortunately, this did not succeed, with the result that each bank now pursues its own policy in this highly competitive field. I cannot but view with concern the present trend amongst banks to offer increasingly higher rates of interest for deposits and consider that this is unhealthy competition which should be discouraged. A voluntary agreement among banks appears to be the solution, but, if this is not possible because of the diversity in their size and standing, the alternative is for Government to consider suitable action for regulating deposit rates.

Bill Market Scheme

"At this point, I feel I must make a reference to the helpful role played by the Reserve Bank of India through their bill market scheme inaugurated in 1952, by which cash was provided to banks against commercial bills, in terms of section 17 (4) (c) of the Reserve Bank of India Act. The scheme has been of considerable assistance to banks, including ourselves, during the busy season. When the scheme was introduced, the Reserve Bank agreed to charge interest at ½ per cent. below the Bank rate as a concessionary measure to popularise this method of finance and also to bear a part of the cost of the stamp duty incurred by banks in converting demand bills into usance bills. The Reserve Bank recently announced that, as the scheme is now well established and as the resources of banks have now materially changed, advances under the scheme will be made at 3½ per cent., instead of 3 per cent. and the concession of bearing a portion of the stamp duty will be withdrawn, with effect from the 1st March 1956. Although this step will result in some increase in the cost of our borrowings under the scheme, I consider that, under existing monetary conditions, it is a move in the right direction.

State-associated Banks

"The subject of the amalgamation of State-associated banks with the State Bank of India has been receiving our attention. While the broad outlines of the policy to be followed in this regard must await future developments, we are exploring, in consultation with the Reserve Bank, the feasibility of taking over some of the minor State-associated banks. We have made a beginning in this regard and have set arrangements in train for an investigation of a few selected institutions, with a view to making a fair and reasonable appraisement of their position and the problems that will have to be faced before integration takes place.

Small-scale Industries

"The second Five-year Plan accords high priority to the development of village and small-scale industries. Government are providing greater credit facilities to these industries under the State Aid to Industries Acts by liberalising the conditions for distribution of loans. While Government assistance would go some way, the bulk of the credit finance would have to be provided by institutional agencies operating in the field, whose support is likely to prove of more permanent value to the industries concerned. While the State Bank does not differentiate between small-scale and large-scale industries for purposes of providing credit, we feel that more positive efforts should be made to ascertain the credit requirements of small-scale industries and to devise methods by which substantial assistance could be made available to them so as to place them on a firm footing.

"Small industries run by co-operative societies naturally look to the co-operative credit organisation for assistance. Small industries requiring working capital for short periods and able to provide readily realisable security are normally helped by commercial banks. Those which require long-term capital on fixed security have usually to approach the State Financial Corporations. The credit requirements of small industries cannot, however, be adequately satisfied, unless a scheme is evolved for co-ordinating in an effective manner the activities of the above credit agencies. The initiative for planning such a co-ordinated scheme has been taken up by the State Bank. In this connection, we have had exploratory discussions with the representatives of the Reserve Bank of India and various institutional agencies. A 'pilot' scheme for providing credit to small-scale industries at certain centres in the three Circles of the Bank has recently been drawn up and arrangements are now in progress to work the scheme. In the light of the experience so gained, a general scheme for providing credit in a co-ordinated manner by the State Bank and the institutional agencies concerned will be drawn up and extended to various centres in the country. With a view to facilitating the work of the various institutional agencies, who have no branch organisation, we are arranging for the services of our branch agents to be placed at their disposal in the matter of compiling and furnishing opinions and confidential reports on the worth of prospective borrowers and generally assisting such credit agencies in their operational activities in the centres where they are not represented.

Section 31 (3) of the State Bank of India Act

"Before passing on to a consideration of the accounts and other matters of interest, I would like to refer briefly to section 31(3) of the State Bank of India Act which prohibits Directors of the Bank, even if they are merely ordinary shareholders in companies borrowing from us, from being present at any meeting of the Executive Committee of the Central Board (or the Local Board) when advances for such companies are being considered. This restriction often results in the want of a quorum for the meeting when the majority of the Bank's Directors are 'interested' in a particular company (although their interest may be merely that of a shareholder), thus necessitating the postponement of consideration of such proposals. It will be agreed that this is not satisfactory from the point of view of the Bank or its constituents and it is expected that Government will take early steps to remove the present disability which is hampering the expeditious conduct of the Bank's business.

Balance-sheet and Profit and Loss Account

"Turning now to the accounts, although the State Bank has been in existence only for the past six months, I propose to compare the figures of our first balance-sheet as at the 31st December 1955 with the corresponding figures of the Imperial Bank of India as at the 31st December 1954 and, similarly, the profit and loss account figures for the last half-year with the figures for the corresponding period in the previous year. Thus, it will be seen from our balance-sheet that our fixed deposit, savings bank, current and other accounts stood at about Rs. 226 crores, as compared with Rs. 231 crores at which this item appeared a year previously. Although there is a decrease of Rs. 5 crores over the year, the present position must be considered satisfactory if the downward trend in our deposits which started early in the year soon after the Government's announcement of their decision to assume effective control over the Bank is taken into account. Our deposits in India fell from Rs. 203 crores in January 1955 to Rs. 184 crores in June 1955 and this drop of Rs. 19 crores can only be explained by the initial apprehension in the minds of the public regarding the future policy of the Bank and the continuance of its commercial character in its altered status. I am glad to say, however, that any fears entertained in this regard have proved entirely groundless as is evidenced by the steady increase in our deposits in India during the past six months, which reached the figure of Rs. 202 crores at the end of December 1955, thus almost regaining the level of January 1955.

"On the other side of the balance-sheet, our total advances have shown satisfactory improvement and at about Rs. 107 crores are some Rs. 5 crores higher than a year previously. Amongst our assets, investments at Rs. 116 crores were some Rs. 8 crores up on the year. While a substantial portion of our investments portfolio consists of short-dated Government securities and Treasury Bills, we have, consistently with our enlarged responsibilities, participated in and taken up State Financial Corporation shares and Land Mortgage Bank debentures in suitable lots. It is needless for me to state that our investments appear in our balance-sheet at a figure lower than their market value. Of the remaining assets, cash in hand and with other banks stood at around Rs. 29 crores which represents a little over 13 per cent. of our total deposits, as compared with the 15 per cent. cash ratio which last year's balance-sheet disclosed.

"I come now to our trading results from which it will be found that, after allowing for interest paid, our gross profits for the half-year at over Rs. 351 lakhs are approximately Rs. 40 lakhs better than those of the corresponding period last year, as against which our charges are up by a like amount of Rs. 40 lakhs. The principal increase in charges is in respect of establishment which cost us some Rs. 35 lakhs more than in the corresponding period of 1954. Of this, Rs. 23 lakhs have gone to the clerical, cash department and subordinate staffs and represent for the most part increases in salaries, allowances, etc., arising out of the adjustments made in implementing the Gajendragadkar Award, which was published in August 1955. In the result, our net profit for the last half-year, at approximately Rs. 68 lakhs, is about the same as that for the corresponding period in the previous year.

Dividend

"The dividend has been declared by the State Bank at the same rate as was done by the Imperial Bank in June 1955 and the previous years, namely, 16 per cent. per annum. This on the purchase price represents a net return of about 4.5 per cent. By far the largest part of the sum distributed as dividends is payable to the Reserve Bank. Although, in terms of the notification issued by the Reserve Bank, it was laid down that the new shares of the State Bank would be issued to those shareholders who applied for such shares, in lieu of the compensation payable to them, at a price of Rs. 350 for each share of Rs. 100, only a small proportion of the old shareholders opted for the new shares, with the result that the Reserve Bank of India are at present holding a major portion of the State Bank shares. It follows, therefore, that the private shareholders who benefit from the dividend payable by the State Bank form only a very small minority and the matter consequently is one which affects the investing public to a small extent only.

Share Price

"At this stage, it is appropriate to refer to a suggestion which has been made that a note be incorporated on the Bank's share certificate to the effect that the share was issued at the rate of Rs. 350. The matter was given full consideration and it was, however, generally felt that, while there was nothing in law to preclude the inclusion of such a note, it was most unusual for a share certificate to mention anything more than the nominal amount of the share. Apart from the fact that this suggestion may not meet with the approval of all the shareholders, there are practical and technical difficulties involved which prevent its wholesale adoption. As the issue price of Rs. 350 was announced by the Reserve Bank by a special notification, it was considered unnecessary to make a note on the share certificate as suggested. The shareholder's natural desire to see that the price of Rs. 350 at which the share had been acquired is taken into account in determining the rate of the dividend has already been duly fulfilled by the State Bank declaring its dividend at the rate of Rs. 8 per share for the half-year which is the equivalent of 16 per cent. per annum.

Industrial Disputes and Awards

"As you are aware, the banking industry has been passing through a difficult time during the past eight years with disputes between banks and their employees dragging on from one Award to another without reaching a final solution. Arising out of the modifications made by Government in the Labour Appellate Tribunal's decision, which was implemented by the banks in November 1954, the Bank Award Commission was appointed by Government to conduct a fact-finding enquiry, which submitted its recommendations in July 1955. This Award, known as the Gajendragadkar Award, confirmed the decisions of the Labour Appellate Tribunal, with certain modifications and was accepted *in toto* by Government. Parliament have also given their approval to the Award by passing the Industrial Disputes (Banking Companies) Decision Act, 1955. The banks have accepted the terms of the Award and have interpreted them in a liberal manner, although their impact on certain institutions was considered to be onerous. The employees have taken objection to certain cuts that have been imposed upon them by the application of the Award and have, without resorting to the constitutional remedies provided in the Act, indulged not only in demonstrations but in various forms of direct action, which disrupted normal banking business in a number of centres, particularly in Calcutta.

STATE BANK OF INDIA

(SUCCESSORS TO THE IMPERIAL BANK OF INDIA)

Incorporated in India under the State Bank of India Act, 1955. The Liability of the Members is Limited.

CENTRAL BOARD OF DIRECTORS

Chairman :—DR. JOHN MATTHAI.
Vice-Chairman :—SHRI VAIKUNTH L. MEHTA.
Managing Director :—SHRI S. K. HANDOO.
Appointed by the Central Government under clause (c) of sub-section (1) of section 19 of the Act :—
SHRI V. N. CHANDAVARKAR.
SHRI BADRIDAS GOENKA.
SHRI S. V. RAMAMURTY.
SHRI NEVILLE NESS WADIA.
SIR GEORGE M. MACKINLAY.
SHRI A. M. M. MURUGAPPA CHETTIAR.

Nominated by the Central Government under clause (d) of sub-section (1) of section 19 of the Act :—
SHRI J. D. CHOKSI.
SHRI R. G. SARAIYA.
SHRI A. D. GORWALA.
PROF. D. R. GADGIL.
SHRI SACHINDRA CHAUDHURI.
SHRI SATYA PAUL VIRMANI.
SHRI MACHANI SOMAPPA.

Nominated by the Central Government under clause (e) of sub-section (1) of section 19 of the Act :—SHRI H. M. PATEL.

Nominated by the Reserve Bank under clause (f) of sub-section (1) of section 19 of the Act:—SHRI B. VENKATAPPIAH.

OVER 250 BRANCHES & SUB-BRANCHES AND 200 SUB-OFFICES

LONDON OFFICE:—25, OLD BROAD STREET, E.C., 2.

REPORT OF THE CENTRAL BOARD FOR THE HALF-YEAR ENDED 31st DECEMBER, 1955

The Directors report that, the usual and necessary provisions having been made, the net profit of the Bank for the half-year ended the 31st December, 1955, amounted to Rs. 68,59,396-1-0 which, with Rs. 33,56,438-13-8 transferred from the Imperial Bank of India, makes a total of Rs. 1,02,15,834-14-8.

This sum the Directors of the Bank have disposed of as follows :—

		Rs.	a.	p.
1.	In payment of a Dividend to the Shareholders at the rate of Rs. 8 per share	45,00,000	0	0
2.	Transferred to Pension Funds	2,78,500	0	0
3.	Bonus to Staff	20,00,000	0	0
4.	Balance carried forward to the Profit & Loss Account	34,37,334	14	8
	Total .. Rs.	1,02,15,834	14	8

The Balance Sheet of the Bank as at the 31st December, 1955, and the Report of the Auditors are annexed, together with a statement of the Profit and Loss Account for the half-year ended the 31st December, 1955.

By Order of the Central Board,
S. K. HANDOO,
Managing Director.

9th February, 1956.

BALANCE SHEET OF THE STATE BANK OF INDIA AS AT 31st DECEMBER, 1955

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED CAPITAL—						
20,00,00,000 shares of Rs. 100 each	20,00,00,000	0	0			
ISSUED, SUBSCRIBED AND PAID-UP CAPITAL— (pursuant to Section 5 (1) of the State Bank of India Act, 1955)—						
5,62,500 shares of Rs. 100 each				5,62,50,000	0	0
2. Reserve Fund and Other Reserves				6,35,00,000	0	0
3. Deposits and Other Accounts—						
Fixed Deposits	33,90,64,193	14	5			
Savings Bank Deposits	27,92,80,237	4	4			
Current Accounts, Contingency Accounts, etc. ..	164,15,83,667	2	11	225,99,28,103	5	8
4. Borrowings from Other Banking Companies, Agents, etc.—						
(i) In India	5,00,00,000	0	0			
(ii) Outside India	....					
	5,00,00,000	0	0			
PARTICULARS—						
(i) Secured by Bills Discounted per contra ..	5,00,00,000	0	0			
(ii) Unsecured	....					
	5,00,00,000	0	0	5,00,00,000	0	0
5. Bills Payable				7,80,78,009	3	7
6. Bills for Collection Being Bills Receivable as per contra—						
(i) Payable in India	39,71,210	15	4			
(ii) Payable outside India	8,38,910	0	5	48,10,120	15	9
7. Other Liabilities—						
*Dividend for the current half-year	45,00,000	0	0			
Inter-Office Adjustments (after deducting Rs. 9,16,542-6-9 due from Imperial Bank of India)	5,42,64,076	1	3	5,87,64,076	1	3
8. Acceptances, Endorsements and Other Obligations per contra				13,17,894	1	7
9. Profit and Loss—						
Balance transferred from the Imperial Bank of India	33,56,438	13	8			
Net Profit for the half-year	68,59,396	1	0			
	1,02,15,834	14	8			
Amount set aside for payment of a Dividend ..	45,00,000	0	0			
Amount transferred to Pension Funds	2,78,500	0	0			
Bonus to Staff	20,00,000	0	0	34,37,334	14	8
10. Contingent Liabilities—	Rs.	a.	p.			
Claims against the Bank not acknowledged as debts ..	6,49,754	12	8			
Bills of Exchange rediscounted	28,571	7	0			
Outstanding Forward Exchange contracts	16,28,93,925	4	7			
Guarantees given on behalf of Directors, Local Board Members or Officers of the Bank	29,031	4	6			
Guarantees given on behalf of others	4,89,97,724	9	9			
Total .. Rs.				257,60,85,538	10	6

* Of which Rs. 24,75,000 to be credited to Intergration and Development Fund in terms of Section 36 (1) (a) of the State Bank of India Act, 1955.

PROPERTY AND ASSETS	Rs.	a.	p.	Rs.	a.	p.
1. Cash—						
In hand and with Reserve Bank (including foreign currency notes)				25,17,25,404	10	8
2. Balances with Other Banks—						
On current account: (i) In India .. .. Rs. a. p. .... (ii) Outside India 4,20,81,268 9 10						
On deposit:						
	4,20,81,268	9	10	4,20,81,268	9	10
3. Money at Call and Short Notice				1,53,33,333	5	4
4. †Investments (securities valued in accordance with Regulation 73 ; shares, debentures or bonds at or below cost)—						
(i) Securities of the Central and State Governments and other Trustee Securities, including Treasury Bills of the Central and State Governments				106,40,44,520	11	4
(ii) Shares authorised under the State Bank of India Act, 1955				58,75,952	13	0
(iii) Debentures or Bonds				79,96,875	0	0
(iv) Other Investments—Pakistan and other Government Securities, etc.				9,20,21,901	8	3
†Of which investments of the face value of Pakistan Rs. 2,07,10,900 are pledged against borrowings from other Banks, Agents, etc.				116,97,39,250	0	7
5. Advances—						
(I) Loans, Cash Credits, Overdrafts, etc.— Rs. a. p.						
(i) In India 83,56,05,522 0 11

METALS OF RARE SOILS AND THEIR ALLOYS

THEIR VALUE IN INDUSTRY

By Madame Gaume-Mahn
NATIONAL CENTRE OF SCIENTIFIC RESEARCH, FRANCE

OVER the past few years, scientific research has made great strides in the field of mineral chemistry, making a systematic survey of certain subjects and compiling a comprehensive index of physical and chemical properties. Let us consider the section devoted to Rare Earth. We find that the metals of rare soils form a family of 14 elements: lanthanum, cerium, praseodymium, neodynium, samarium, europium, gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium and lutetium, with closely related properties, so closely related in fact that their separation is a very intricate matter and has called for a great deal of time and effort. Several teams of research workers are still working on them, both in France and abroad. In what way can these metals, so difficult to obtain, be used?

In their pure state, these elements have very few applications by reason of their high cost price and their oxidation properties. However, they do possess certain exceptional properties. Gadolinium is sensitive to magnetism below 16° C. and its ferro-magnetic moment is higher than that of iron. Considering the small number of metals possessing this property, it is highly probable that this metal could be used in the production of permanent magnets. Another curious element, only recently isolated, is thulium, of which the artificial isotope, of atomic mass 170, possesses the extraordinary property of giving off X-rays which can be used in making diagrams and negatives. This source of X-rays, already in use in medicine, may profitably replace the cumbersome equipment hitherto used.

But it is in the form of alloys that the metals of rare earth are at present chiefly used. A recent survey made by Monsieur Ballay gives an idea of the progress made in this field.

First of all, let us mention the alloy of lighter flints, ferro-cerium (30 per cent. iron and 70 per cent. cerium), with which everyone is familiar, and which will probably continue in use for a long time to come.

In the fusion of metals, the addition of small quantities of cerium (0.02 per cent.) induces desulphurisation and considerably improves the mechanical properties. This improvement can be readily understood on examination of the metals fused; they contain graphite which becomes localised in lamellate or granular form. It is particularly desirable to have the graphite crystallise in this latter form, for the lamellæ situated among the iron crystals create lower resistance areas. Very small quantities of cerium help the graphite to separate in the form of granules.

In magnesium fusing, certain elements, called subversive elements, such as lead, bismuth, antimony, aluminium and titanium prevent the crystallisation of the graphite in the form of almost spherical. The addition of cerium or misch-metal (mixed metal comprising most of the non-separated rare earth) neutralises the influence of these elements.

The properties of steels are also improved by the addition of misch-metal: increase in shock resistance at low temperature, improvement in welding qualities. In fact, in the cases of metals of rare earth, sulphur inclusions give sulphides with a low fusion rate which solidify before combation, giving rounded inclusions which cause much less difficulty among the primary grains than films or chain structures.

It is in the field of stainless steels that the rare earth have produced the most spectacular improvements. Certain special steels, composed of many elements, are almost impossible to work under heat (processes such as forging, and laminating). The addition of small quantities of rare earth enables such work to be carried out. Apart from misch-metal, the use of cerium fluoride has been suggested, chiefly for stainless steels containing titanium.

With regard to light alloys, with an aluminium or magnesium basis, the role of the rare earth is chiefly to improve the mechanical properties under heat (resistance to extrusion). In this case, the metal contents of the rare earth must be higher (about 10 per cent.). Among light alloys, remarkable results have been achieved in the matter of resistance to extrusion, with the alloy Mg-Zn-Misch-metal.

The field of research is a vast one by reason of the enormous variety of alloys possible between the known metals and those of rare earth. Hitherto, industry has mainly been concerned with the use of misch-metal without seeking to determine the individual effect of such and such a rare metal. Apart from its scientific interest, this systematic study would help us to a better knowledge of the properties of alloys by understanding their composition. There is a great deal of research to be done in this line.

From the few examples quoted, it will be readily seen that rare earth have taken their place in metallurgy, and it seems that this place will become increasingly important in the years to come.

REPORT OF THE AUDITORS TO THE PRESIDENT OF INDIA

We, the undersigned Auditors of the State Bank of India, appointed under Section 41 (1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1955.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank ; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory ; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank ; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit ; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account ; (vi) that in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law ; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

EAST INDIA DISTILLERIES AND SUGAR FACTORIES LTD.

MR. C. R. SRINIVASAN'S ADDRESS AT FIFTY-EIGHTH ANNUAL MEETING

MISGIVINGS ABOUT PURCHASE OF PARRYS' SHARES AND CAPITAL REORGANISATION CLEARED

THE Fifty-eighth Annual General Meeting of the East India Distilleries and Sugar Factories Ltd. was held at Madras on 23rd February 1956. Addressing the shareholders of the Company on the occasion, Mr. C. R. Srinivasan, Chairman, devoted almost the entire speech to clear the misunderstanding that had prevailed among a section of the shareholders about the terms offered by the Company for purchasing the entire paid-up ordinary capital of Messrs. Parry & Co., Ltd., and about the move for consolidation of 'A' and 'B' shares into one class of ordinary shares.

The following is the full text of Mr. C. R. Srinivasan's speech:

"GENTLEMEN,

"For the first time in the history of this Company, with a record, extending to well over 50 years, of great achievements in the industrial sector to its credit, you find an Indian presiding over the annual meeting of the Company. I have ventured to draw your attention to this fact for the reason that it has a significance that should not be missed. The E.I.D. is a sterling company registered in U.K., but with all its business interests in India. The management and control of the Company were shifted to India with the advent of *swaraj* and vested in a Board of Directors, on which the majority at the moment continues to be Europeans. In keeping with the spirit of the times, however, I expect an Indian majority to serve on the Board presently. During recent years, the majority of shareholding also has moved to this country and, in due course, I expect the Company will be placed on the Indian Register with a rupee capital. We are today on the edge of an expanding economy and naturally it is expected of every concern operating in the country to give of its best in the service of the motherland. It is in the confident hope that I can count on your goodwill and co-operation to make this Company play its allotted role in the redemption of our economy that I have made bold to accept additional responsibilities.

Confidence Not Misplaced

"That this confidence is not misplaced has been abundantly proved by what has happened during the past 48 hours. Shareholders in Madras will, doubtless, be aware of the litigation in which the Company and its Directors have recently been involved and which precluded us from proceeding with the consideration of one of the resolutions to be placed before you at the annual general meeting on the date convened, and with the consideration of any business at the class meetings and extraordinary general meeting convened for the same date. The main contentions of the plaintiff, who is a substantial shareholder in your Company, were (a) that your Company was offering to pay too high a price to the ordinary shareholders of Parry & Co., Ltd., who include certain of your Directors as stated in the documents annexed to the Directors' report circulated to you, (b) that the ratio of five Parry & Co., Ltd., shares for one E.I.D. 'B' share was unfavourable to the E.I.D. 'B' shareholders and (c) that the proposed capitalisation of reserves in favour of 'A' shareholders in the Company and equalising it with the 'B' share rode roughshod over the rights of the 'B' shareholders. Following the appeal I had made when adjourning the meetings, discussions were held by members of your Board with the shareholder concerned and I am happy to inform you that we were able to satisfy him that the price offered and the ratio proposed for exchange of shares by your Company to Parry & Co., Ltd., ordinary shareholders were fair and reasonable. Incidentally, I think it right that, in view of the publicity that the case has attracted, I should make it clear to you that such of the Directors of your Company as may claim to control the major shareholding in Parry & Co., Ltd., had *suo moto* at the time the original offer was made offered to accept a smaller price for those shares than that offered to individual shareholders, namely, Rs. 4-8, as against Rs. 5-8. This is clearly set out in the terms of the offer of 18th October 1955. This is *prima facie* evidence of their *bona fides*. As regards the other points made by the plaintiff who claims to speak for certain other 'B' shareholders also, his case was that the 'B' shareholders were being unfairly treated by the proposed conversion of 'A' shares into ordinary shares. It has never been the practice of your Board to attempt to ride roughshod over the rights of any class of shareholders and the argument that the resolution deprives 'B' shareholders of their rights to surplus profits in the Company, while only conferring on them the right to share in the surplus assets on liquidation, is not without force in the present context. Your Board after careful consideration of the matter has now come to the conclusion that they should approach the necessary authorities with a view to obtaining permission to capitalise reserves to the extent of £75,000 and issue simultaneously bonus shares to existing 'B' shareholders also in the ratio of 1 to 4, being the same ratio as the contemplated bonus issue in favour of 'A' shareholders. On receipt of assurances that this consent would be sought and that the class meetings and that part of the extra-ordinary general meeting dealing with the capitalisation of reserves would be adjourned to a suitable date the plaintiff withdrew the suit. It is but fair that I should state that the plaintiff has shown by the way he reacted to my appeal that the action he took was not intended in his own self-interest or for his own benefit, but to safeguard what he considered to be the rights of the shareholders generally, and 'B' shareholders in particular. Whilst ordinary shareholders of Parry & Co., Ltd., who have accepted the offer made to them by your Company and have elected to accept 'B' shares in lieu of cash will not participate in the proposed bonus issue to existing 'B' shareholders, I am happy to state that their rights will be fully protected as a result of a generous decision taken by the shareholders of the Coromandel Investment Trust Ltd. The persons concerned will receive in due course a letter from the Coromandel Investment Trust advising them of what is proposed.

Future of Sugar Industry Uncertain

"Let me now deal with what is relevant for consideration at the annual meeting. The report and accounts for the year ended 30th September 1955 have now been in your hands for some time and, with your permission, I propose to take them as read; the report of the Directors, as usual, gives a very full account of the activities of the Company during the year under review and I do not think there is any need to amplify what has already been stated in the report except to express the hope that you will share the satisfaction of the Board in the substantial improvement in the profits of the Company which has been recorded during the year under review. During the 1954 sugar season, the estimated all-India consumption of white sugar fell to 17 lakhs of tons, as against which the production of the Indian factories amounted to slightly under 16 lakhs of tons. The Government continued to import sugar and imports in this country during the season were over 5 lakhs of tons. This has resulted in an increase in the level of sugar stocks in the country from approximately 60,000 tons at the commencement of the sugar season to approximately 525,000 tons at the end. Licences have been issued for the integration of new units of production and the second Five-year Plan estimates consumption potential to move up to 22 and odd lakhs of tons by the end of the period. Desirous as I am to give due weight to this estimate, I wonder, if it is prudent for this Company to depend so much on the profit potential of the sugar industry to service its large capital. You will remember that Mr. S. G. H. Davis, my predecessor in office, in his address at the last annual meeting referred to the aura of uncertainty shrouding the future of the sugar industry. This uncertainty, I am afraid, continues to prevail and your Directors have, therefore, given time and thought to the possibilities and potentialities of your Company expanding its interests in other directions. The changes in Company Law which are due to come into force from April next, emphasise also the need for some hard thinking in respect of reconstruction both in structure and management.

Purchase of Parrys' Shares

"It is against this background that, in October last, your Directors decided to make an offer to Messrs. Parry & Co., Ltd., for the purchase of the whole of the issued ordinary share capital of the Company. Particulars of this offer and the advantages we expect to accrue are clearly set out in the Directors' report. The novelty of the proposal, for one thing, and the terms offered, for another, have attracted attention and provoked comment in some quarters, but it only needs dispassionate consideration to establish that the proposals made are fair to both companies, and, if anything, the E.I.D. shareholders stand to benefit by the transaction. Parrys have an established reputation all over the country. A study of their last balance-sheet will bear out that the price we offer is amply covered by real assets. It is relevant to point out in this context that no price is offered for the goodwill of Parry and Company; no compensation is paid either for the benefit arising from the agencies held by this firm; nor is any consideration paid for the transfer of a well-knit organisation, operating in the main cities of India and holding valuable internal and international connections. In fact, E.I.D. will only be paying fair value on investments and none for services.

"The purchase will include the Parry 1955 profit, subject to a small interim dividend of 5 per cent. paid in last October, and the profits for the year are rated higher than the figure for 1954. After servicing the Parrys' preference share capital, the net amount of Parrys' profits available for E.I.D. equity will exceed Rs. 10 lakhs and there is no reason to presume, on the data available, that this figure will not be maintained and improved upon in future. The ordinary dividend on the extra shares we propose to create in E.I.D., including the present 'A' share capital, will not cost more than Rs. 3 lakhs a year and, therefore, the advantages of the purchase, so far as the E.I.D. is concerned, are obvious. Apart from the direct benefits I have above referred to, the indirect advantages that will accrue to the E.I.D. are even more important, in the dynamic conditions which prevail today. We are on the threshold of a new industrial era and whoever can command talent and resources will most certainly play a great part in the build-up of our new economy. The E.I.D. has the resources, but has not the advantage of independent talent at its control, to make good. Parrys offer that in good measure; and in the new set-up contemplated, E.I.D. will control Parrys and not *vice versa*. Directed by a Board, whose concern will be to study and serve Indian interests, and possessed of the advantages that an institution like Parrys can offer, I hold that the future of the E.I.D. is assured. I commend, therefore, in all sincerity, the resolution that is placed before you in this behalf for confirmation.

'A' and 'B' Class Shares

"Shareholders have been duly notified that following this meeting, separate class meetings of 'A' and 'B' shareholders and an extraordinary general meeting thereafter will be held. Since giving notice and, as a result of exchange of views with shareholders who had alternative suggestions to make in the adjustment of equity between 'A' and 'B' shares prior to their integration into one class, the Board of the E.I.D. desires that these two class meetings be adjourned with your permission to Thursday, 29th March 1956, at 3-30 p.m. to enable the Board to take necessary action on the lines indicated. As a consequence, consideration of the first resolution set out in the notice of the extraordinary general meeting to the shareholders will also stand adjourned to the same day at 4 p.m. But the extraordinary general meeting will, however, proceed to consider and, if thought fit, to pass the second resolution, notice of which has been duly given. I hope I shall have your support for this course of action.

Misunderstanding Clarified

"In view of the misunderstanding that has prevailed in some quarters, I feel I should avail myself of this opportunity to set out the position in proper perspective. The first resolution intended to be placed before the extraordinary general meeting, but now to be adjourned, proposes that the nominal and paid-up value of each 'A' share, which was reduced to 16s. in 1903, should be restored to £1 and that 'A' and 'B' shares should both be converted into a new class of ordinary shares ranking *pari passu*. The first point to note in this context is that 'B' shareholders were not primary shareholders of the Company. The original shareholders of the Company were preference shareholders and 'A' shareholders. 'B' shareholders came to be created to adjust equities between these two; and that was taken on hand in the first stage of reconstruction. What is now proposed is the second stage of reconstruction. When people talk of the rights of 'B' shares they seem to forget that without 'A' shares there would have been no 'B' shares. I have heard arguments advanced that the equities of 'A' shareholders are sufficiently covered by the initial allotment of 'B' shares to them. This to my mind is merely begging the question. Obviously, bonus shares can only be allotted to the then existing shareholders. The present position is that the 'A' shares are entitled to all surplus assets of the Company and 'B' shares to all surplus income. It cannot be denied that any scheme for reorganisation or development must inevitably trench on the rights of one or the other class of shareholders. By way of illustration, I may point out that this question cropped up when Parrys Confectionery Ltd. was promoted and 'A' shareholders had to be satisfied that their rights would be adequately safeguarded. The powers that 'A' shareholders possess over surplus assets, therefore, are neither unreal nor illusory as some imagine. Should the Company be transferred to the Indian Register, for example, the problems posed would prove very real indeed. On a balance of considerations, the proposals should normally commend themselves, if it is remembered that 'B' shares were largely the creation of 'A' shares, that they came into the picture to achieve a definite purpose, and that it is to the interests of 'B' shareholders to recover their freedom of action for separating and streamlining their range of activities as and when need or occasion arises. However, during the last few days, as I have already indicated, another point of view has been firmly put before us and it could not be ignored. It is conceded that these two classes of shares should be merged into one. Only the question of capitalising a part of the reserves for the purpose of raising 'A' shares from 16s. to £1 before merging them with 'B' shares, it is argued, is inequitable and it has been suggested that, in order to protect the interests of the present 'B' shareholders, it would be desirable to capitalise another £75,000 from the reserve and issue it to present 'B' shareholders simultaneously. The idea is that, if £20,000 are to be capitalised for £80,000 worth of 'A' shares in the same proportion, £75,000 may be capitalised for £300,000 worth of 'B' shares. Certainly, the Company can afford to do this from its resources. If such a step will eliminate any undercurrent of discontent, it is certainly worth attempting. The Directors are agreeable to do so, but time is needed to make an application to the Controller of Capital Issues and get Government sanction for this additional bonus issue. That is why this adjournment is proposed.

Company Will be Controlled by Directors

"The second resolution is conditional and consequential upon the Company's offer dated 18th October 1955, to purchase the ordinary shares in the capital of Parry & Co., Ltd., becoming effective, in which event that Company will cease to be Managing Agent for your Company which will then become Director-controlled. It is, therefore, necessary that the Articles of Association should be altered in order to remove the present powers of the Managing Agents and to provide for the appointment of Executive Directors and for the provision of powers for such Directors.

"Before concluding, there is one other point I should like to refer to. For some years past, the Auditors of the Company have received remuneration of Rs. 6,000 per annum in respect of their statutory audit and have, in addition, received a fee of Rs. 5,000 per annum, plus out-of-pocket expenses, for carrying out an internal audit of the Company's factory accounts. The Auditors are of the opinion that the factory audit should form part of their statutory audit and have accordingly requested that the remuneration to be voted to them should be Rs. 10,000 per annum, plus out-of-pocket expenses, and the resolution has been framed to this effect. The total amount payable to the Auditors will, therefore, be Rs. 1,000 per annum less than in past years, this sum representing the cost of the factory audit at Nellikuppam, applicable to Parrys Confectionery Limited.

"In conclusion, I would like, on behalf of us all, to express our appreciation of the services of the Company's staff and labour during the year under review, which have so largely contributed to the satisfactory financial results. Before proposing the adoption of the report and accounts for the year ended 30th September 1955, I shall be glad to answer any questions which any shareholder may wish to put to me concerning such report and accounts."

HARNESSING OF SOLAR ENERGY

IS IT A FEASIBLE COMMERCIAL PROPOSITION?

By Rene Sudre

THE uninitiated who speak of using solar energy perhaps forget that agriculture already does so, since, by the still mysterious mechanism of protosynthesis, it is the sun which makes the plants, on which all life on the earth is dependent, grow. It is our foster-mother, the sun, which also assures the circulation of water in the atmosphere and thus keeps up the supply of water-power and stream-power which add to the energy of coal, another product of its solar activity during the first stages of the globe. In actual fact, solar energy is never lost, because it maintains the earth's temperature at a constant average and is responsible for a whole host of meteorological phenomena that one may sometimes find troublesome on a small-scale, but which go to make up a general harmony.

However, when one sees the energy given out over the immense sterile stretches of the Sahara, for example, one cannot help thinking that one could capture a good deal of it without harming the life of the rest of the planet. At the limits of the atmosphere, a surface of a square yard perpendicular to the sun's rays would receive a little more than 19 large calories per minute, that is to say, the third of a kilowatt-hour per hour. At soil level, the quantity can vary a great deal, because it depends on latitude, the density of the atmosphere crossed by the rays, the height of the sun, and the orientation of the receiver. In addition, with heat, energy subject to reduction, one must take into consideration its quality, that is to say, the temperature at which it arrives. The higher the temperature, the greater the amount of brute energy or electricity. It is for this reason that it is so advantageous to concentrate the heat by optical means.

French Experiments

A congress at Arizona in America had recently assembled several hundred scientists, in order to discover the best methods of using solar energy. It seems that there is not much optimism as to the time when nuclear energy will be universally used by industry, and it is known it will not be long before man will have exhausted the reserves of coal and petroleum. The sun is now counted on to provide the supply of energy that it once amassed in the bowels of the globe. The apparatus for extraction, which is known as a solar furnace, fortunately does not cost too much. The problem has been studied for a long time and solutions to it were found in France. We must remember that Buffon succeeded, by means of 130 mirrors and lenses, to make wood catch alight and even to make a piece of sheet-iron glow red at a distance of 65 metres. In 1772-1774 Lavoisier built a system of two big lenses drawn by a cart and free to swivel owing to mechanical works. The heat concentrated on the focussing-point easily melted iron and even platinum.

Experiences of this kind were abandoned for a century and a half, but a French scientist, M. Felix Trombe, started them up again after the war at Meudon, under the patronage of the National Centre for Scientific Research. The results obtained were so encouraging that General Bergerson, President of the Committee for Scientific Action at the Ministry of National Defence, created a Solar Energy Committee composed of high-up personalities. Mr. Trombe and his collaborators succeeded in doubling the temperatures obtained by Lavoisier. Even the most refractory oxides, ranging from aluminium (2,050°) to magnesium (2,800°), were melted. Even graphite was vaporised. Theoretically in a vacuum, without causes of absorption and loss, the temperature at the focussing point of a parabolical mirror should rise to that of the outer surface of the sun, that is to say, about 6,000°. No earthly body could resist this extreme heat. One is usually satisfied with collecting a little more than half.

Experience at Meudon

The experiences at Meudon lasted three years (1946-49), after which the Centre for Scientific Research sought a more favourable climate in the south of France. Its choice fell on Montlouis in the Eastern Pyrenees where the sunshine is almost perpetual. M. Trombe installed there a semi-industrial solar furnace of from 60 to 75 kw. in power. The reflector system is a paraboloid, 90 metres square. As it would have been difficult to realise such a curved surface out of a single piece, it was built by the juxtaposition of small squares of sheet glass of 50×50 cm. and a few millimetres thick. These squares are flat, but, by a special system, they acquire the necessary curve which is always very slight. The general fitting is obtained at the laboratory by geometrical methods. The focussing point of the paraboloid is six m. away from the top. The surface of the squares is silvered.

In order to follow the position of the sun, the mirror required to be constantly orientated by means of an equatorial frame similar to that of a telescope. With such a large surface, the problem was without a solution. The reflector has, therefore, been fixed in the vertical position and a beam of horizontal light is sent back on to it by means an automatic free-swivel mirror. It has a surface of 135 mq. and is formed like the reflector of a number of flat mirrors, 50×50 cm. The orientation in the two rectangular directions is given by motors directed by photo-electric cells. The cells are placed in the form of a cross around the opening of a screen through which a part of the reflected ray must always cross. If the ray ceases to be in the centre, it bites into the cells which make the motors undertake the necessary corrections.

Not A Dream

The prototype at Montlouis has been realised with a view to a maximum of low costs. As M. Trombe declared, it can easily be improved and, above all, enlarged in order to obtain a better output. It is not a wish-dream, according to him, to think of building a unit of 1,000 kw. along the same lines. At the American Congress at Arizona, it was pointed out that solar furnaces, of course small models, cost between 15 and 50 dollars. With large-scale production, it would be possible to produce them for 5 dollars, which means that they would be within the means of poor populations in sunny countries. Installations for central heating by water vapour are envisaged. The solar energy, instead of being concentrated on a single point, will be spread out by accumulation in a cavity and will then slowly give off its heat. This is the "golden energy" of which M. Trombe spoke.

Without at the moment counting too much on household services, France is interested in its industrial uses. Metallurgy there would find a much less expensive energy than electric energy, even in the water-power districts. For the fusion of precious metals and the preparation of their alloys, a furnace of 100 kw. like that of Montlouis would allow for the treatment of hundreds of kilogrammes of matter a day. The solar furnace can be adapted to the needs of the ceramic industry in which the baking of articles does not need such high temperatures.

The chemical industries also use golden energy, for example, in the synthesis of nitric acid from atmospheric nitrogen. This is a reaction which has been studied in detail by M. Trombe. At a temperature of from 2,500°-3,000° it is very economical. As for the transformation of the heat into mechanical energy, it is extremely advantageous at a high temperature and one day we will no doubt see solar generating stations in privileged countries. Perhaps the desert will one day be a flourishing region.

HEDGE TRADING IN COCONUT OIL

FORWARD MARKETS COMMISSION'S VIEWS

THE recognition granted to the Alleppey Oil Millers' and Merchants' Association, Alleppey, to conduct forward trading in coconut oil, as reported in these columns last week, is the outcome of a comprehensive enquiry conducted by the Forward Markets Commission into the position of the coconut oil industry. The Commission's report on the subject is undoubtedly the latest authoritative document which throws a flood of information on production, consumption and marketing of coconut oil in the country. In the view of the importance of the oil as raw material to the soap industry and as an edible commodity, especially to the people in the South-West Coast of India, the brief account of the coconut oil industry given below will be of benefit to those interested in it.

In India, the coconut palm grows in abundance right from the low-lying coastal areas to the far-off places in the interior. The most important region, however, is the South-Western Coast of the country, otherwise known as "Keralam" (Land of Coconuts) which extends over a narrow strip of land between the Western Ghats and the Arabian Sea and comprises the coconut area in Travancore-Cochin State and in the Malabar district of Madras State. This region accounts for more than one million acres of coconuts and more than two-thirds of India's coconut industry is concentrated there. The other important producing regions occur in deltas of the Cauvery, Godavari, Krishna and the Mahanadi Rivers and the Mysore plateau lying at a height of about 2,500 ft. from the mean sea level.

The table below shows the area and production of coconuts in the different States of the country in 1952-53.

	Area Thousand acres	Production of coconuts
Travancore-Cochin	663	1,335,478,000
Madras	639	1,994,490,000
Mysore	174	273,961,000
Bombay	32	47,351,000
West Bengal	18	22,205,000
Orissa	11	33,669,000
Assam	4	21,912,000
Others	1	2,000,000
Total	154	3,310,066,000

The area and production of coconuts in India in each of the ten years ended 1952-53 are given in the table below:

	Area under coconuts Thousand acres	Production of coconuts
1943-44	1,403	3,180,123,000
1944-45	1,486	3,217,834,000
1945-46	1,490	3,277,072,000
1946-47	1,499	3,284,770,000
1947-48	1,517	3,256,567,000
1948-49	1,534	3,303,227,000
1949-50	1,542	3,310,485,000
1950-51	1,548	3,323,364,000
1951-52	1,552	3,379,252,000
1952-53	1,544	3,301,066,000

The inner fruit of the tender coconut, when dried, is termed copra and is used partly for edible purposes and partly for crushing to obtain coconut oil. What is left over after extracting oil from copra is known as poonac or coconut oilcake, and serves as cattle feed. The fibre of the palm tree, known as coir fibre, is another of its important by-products. Indeed, it can be said that practically every part of the tree is brought into the service of mankind.

It is estimated that half of the tender coconuts grown is consumed for edible purposes, the remaining half being left for drying. Copra is either sun-dried or artificially dried. The latter is also called "smoked" copra and does not fetch as good a price as that of the sun-dried variety. Mechanical methods of drying copra are in vogue in other parts of the world but are rarely employed in India.

Yield of Oil

In India, about 20 per cent. of the total amount of copra, produced or imported, is used for edible purposes, while the balance is crushed into oil. The yield of coconut oil varies from about 65 per cent. in weight in case of mechanically dried or fully sun-dried copra to about 62.5 per cent. in case of smoked copra. The yield of oilcake is about 32 per cent. in weight. Clean coconut oil is obtained by storing the crushed oil in containers for about one full day for sediment to settle down.

The total production of coconut oil, crushed from imported as well as indigenous copra, amounted to 131,000 tons in the year 1952-53. The States of Travancore-Cochin and Madras shared equally between themselves about 86 per cent. of the total Indian production. The output in the Travancore-Cochin State shows practically no change over the years, while that in Madras shows an increase to some extent. The other States producing copra are Bombay, West Bengal, Orissa and Assam.

The estimated annual production of coconut oil from Indian and imported copra for the 10-year period ended 1952-53 is indicated below:

(In tons)

Year	From Indian copra	From imported copra	Total output of coconut oil
1943-44	105,369	23,669	129,188
1944-45	106,575	29,005	135,580
1945-46	105,981	21,859	130,476
1946-47	105,598	2,669	123,295
1947-48	107,992	12,614	120,516
1948-49	109,448	2,234	111,702
1949-50	168,574	7,940	117,514
1950-51	110,121	5,283	115,404
1951-52	111,967	7,139	119,106
1952-53	119,391	12,014	131,405

The Indian Central Coconut Committee has formulated plans for increasing the production of coconuts by 30 per cent. during the second Five-year Plan through intensive cultivation and pest control measures. On this basis, the target of coconut oil output to be reached by 1960-61 is estimated at 140,000 tons.

India is importing increasing amounts of both copra and coconut oil. Imports of copra rose from 4,000 tons in 1948-49 to 30,000 tons in 1953-54, and imports of coconut oil from 7,000 tons to 26,000 tons over the same period. The principal source of imports of copra is Ceylon, and the copra imported from the Island rose from 3,000 tons in 1948-49 to 19,000 tons in 1953-54. Coconut oil is imported from various other sources also, such as Straits Settlements, Ceylon and the Federated Malaya States.

Among the principal vegetable oils consumed in India, coconut oil is the only one which is imported, the other oils like groundnut oil, castor oil, linseed oil, rapeseed oil and mustard oil being on the export list.

Coconut oil is traditionally employed for edible purposes in Travancore-Cochin. It is also used in the manufacture of soap, as it has a higher saponific value than hydrogenated groundnut oil. The oil is also used in certain toilet preparations and as an illuminant and lubricant in certain parts of the country.

The second Five-year Plan envisages a production target of 250,000 tons of soap by 1960-61. On this basis, the industry's total requirements of coconut oil are estimated at about 50,000 tons.

Marketing

In marketing of copra and copra oil, the grower, the middleman, the crusher or miller, and the shipper, who buys coconut oil in his own containers through non-transferable contracts with the miller and ships the oil, figure prominently. The operations of copra crushing normally extend throughout the entire year. The busy season for millers is from about 15th February to 15th May. During this period, they take advantage of large arrivals of copra in the terminal markets to replenish their stocks so as to provide for rainy days, when arrivals of copra dwindle down to a meagre quantity owing to difficulties of drying and transport.

Prices of copra and coconut oil influence the prices of other oilseeds and oils and normally remain at relatively higher levels. In India, prices generally exhibit a trend similar to those in London which are the index of world prices. Since the beginning of World War II coconut oil prices have risen considerably. Between 1938-39 and 1945-46, the price of coconut oil rose from Rs. 200 to Rs. 709 per ton. When price control was removed in 1947, the rate advanced to Rs. 1,925. Subsequently, the devaluation of 1949 and the Korean War were instrumental in raising prices to an all-time high of Rs. 2,413 per ton in October 1951.

The tide, thereafter, turned and a decline in prices set in. It was partly due to a general fall in commodity prices and partly to the halt in the U.S. stockpiling programme. The reduction of import duty in November 1951 also accentuated the fall and, by March 1952, the rate came down to Rs. 1,212 per ton. There was a recovery to Rs. 1,878 by March 1953 and the price ruled around this level till the monsoon period 1954. Heavy arrivals from Ceylon at competitive rates brought about a downward trend again and the quotation dropped to Rs. 1,440 in April 1955. Subsequently, it staged an upward trend to touch Rs. 1,720 per ton towards the end of June that year. The present rate is Rs. 1,500 per ton.

Futures trading has been conducted only in coconut oil and not in copra or coconuts. It is confined to two centres in Travancore-Cochin, namely, Alleppey and Cochin. Apart from these, there does not seem to be any tradition of a futures market in any part of the country in this commodity. In Bombay, the Oil Merchants' Chamber has been conducting non-transferable contract but has not been engaged in hedge trading.

Is Futures Trading Necessary?

The Forward Markets Commission examined the question whether coconut oil was a suitable commodity for futures trading and whether there was need for permitting such trading in any part of the country. On the first issue, it came to the conclusion that there was a need, because coconut oil met all the principal requirements for the successful operation of a futures market. First, coconut oil is a standardised commodity and does not suffer from the existence of complicated varieties. Secondly, its prices have been fluctuating over a wide range since the last few years and the consumers cannot plan their purchases ahead without a futures market. Thirdly, the demand for coconut oil is wide, as it arises from a number of agencies such as soap manufacturers, producers of toilet articles and individual consumers. Fourthly, its supply is large but is concentrated on the West Coast of the country. The millers have to hold large stocks of copra and are, therefore, in need of hedge facilities. Fifthly, the functioning of two or three futures markets at Alleppey and Cochin in the past has shown that an adequate number of operators are available to deal in the commodity, and to hold its stocks. Lastly, ample storage facilities exist at terminal markets like Calicut, Cochin and Alleppey and stocks can be stored without deterioration in quality.

Applications Invited

With a view to granting recognition for conducting futures trading, the Commission invited applications from bodies interested in the operations. Three organisations responded to the invitation, namely, the Alleppey Oil Millers' and Merchants' Association, Alleppey (T.-C. State), the Oil Merchants' Association, Mattancherry, Cochin (T.-C. State), and the Oil Merchants' Chamber Ltd., Bombay. Both Alleppey and Cochin, from where two applications came, are served by adequate transport communications. Both are connected with important coconut centres in the interior. Both have telephone facilities. They are also well served by banking facilities. Futures trading was conducted at both the centres in the past. But Alleppey, according to the Commission, has a few more favourable advantages than Cochin. In the immediate vicinity of Alleppey, important coconut-growing areas are situated. Secondly, a large number of millers and dealers reside in Alleppey and an adequate number of operators are available to deal in the commodity and hold stocks. Thirdly, futures trading in coconut oil has been conducted at Alleppey more or less without any break for the last eight years under the auspices of two independent associations. One of these, namely, the Alleppey Chamber of Commerce, supported the application of the Alleppey Oil Millers' and Merchants' Association. Consequently, the Commission recommended the case of this Association for recognition. The recognition is for a period of three years and for the whole of India, subject to certain modifications in the by-laws of the Association on the lines indicated by the Commission.

As regards the application from the Oil Merchants' Chamber, Bombay, the Commission was of the opinion that three factors, namely, long distance of the city from the coconut oil producing area, small arrivals of copra and coconut oil, and absence of any tradition of futures trading in coconut oil in the city went against Bombay, as being a centre for hedge trading in this oil at present. The Commission, however, stated that the need for hedging facilities in Bombay City could be examined at a later date, after sufficient experience had been gained in the working of the market in Travancore-Cochin.

In industry, commerce, banking, law, records, libraries, universities, laboratories and hospitals, where reproduction of important documents is a frequent necessity, the Dupliphot is the ideal apparatus for copying by photographic process. It is economical to use, saves time and renders an exact facsimile of the original.

CONTROLLED IMPORTS OF CEMENT

The Government of India has decided to import 500,000 tons of cement during the current half-year. It is stated that the Associated Cement Companies will finance, import and distribute the entire imported cement on behalf of the Central Government without any charge. There have been offers for sale of cement from a number of countries including Russia, Yugoslavia, Poland, Bulgaria, Czechoslovakia, Denmark, Belgium, Italy, France, Britain, and Japan. It is, however, proposed to buy the commodity in the cheapest market.

The decision to import cement is not, it would appear, prompted by considerations of bringing down internal prices of the commodity. For the foreign supplies are expected to cost about Rs. 130 to Rs. 140 per ton, whereas in India the controlled price is Rs. 71 per ton, including freight. Nor does there appear to be any intention on the part of the Government to evolve a price equalisation scheme for cement, as in the case of steel.

The impact of the development programmes in the country under the two Five-year Plans on the demand for cement is expected to be such that, despite a rapid rise in cement production, there is bound to exist a gap between supply and demand, and this gap is expected to continue for a year or two more. In order to fill this gap, the Government is stated to have decided on a policy of controlled imports of cement.

The output of Indian cement rose from 3.29 million tons in 1951-52 to 4.5 million tons in 1955-56. The Government had expected that India would be in a position to export 200,000 to 30,000 tons. These expectations, however, did not materialise, as domestic consumption had expanded faster than expected.

Under the second Five-year Plan, the target for the cement industry is likely to be raised from 12 million to 15 million tons. The present construction programme of various cement companies indicates that the capacity will rise to about 8 million tons by the middle of next year. The Government has licensed the installation of new cement factories which will raise the capacity from 4.8 million tons at present to 11.95 million tons. About Rs. 85.8 crores will have been invested in the industry, if all licensed factories go into production.

NITROGENOUS FERTILISERS

The Conference of Ministers of Agriculture of different States which met at New Delhi on the 25th ultimo decided to recommend the launching of a concerted campaign all over the country for popularising new nitrogenous fertilisers and superphosphates. The new nitrogenous fertilisers are stated to be cheaper than ammonium sulphate and easier to transport at a lower cost, in view of their higher nitrogen content. For maintaining the soil fertility and for securing quality grain, it is necessary to encourage the utilisation of superphosphates. The necessity becomes all the more urgent, in view of the bringing into use of new lands under the river-valley projects which are being completed one after annother as envisaged in the First Plan. The maximum benefits of irrigation under these projects can be derived by only a judicious application of chemical fertilisers and organic manures. Besides, the targets of consumption for nitrogenous fertilisers to be achieved by 1960-61 have been fixed at 3.72 lakh tons in terms of nitrogen or 18.5 lakh tons in terms of ammonium sulphate. The achievement of this consumption target is possible by means of organising various measures of publicity and propaganda for educating the cultivators in the correct use and placement of fertilisers. Consequently, the conference mentioned above did well in emphasising the need for popularisation of nitrogenous fertilisers.

In this context mention must be made of a new method evolved in the National Chemical Laboratory, Poona, for the production of a mixed nitrogen-phosphorus fertiliser. The new method opens up possibilities of utilising the huge surpluses resulting from the caustic soda industry. Under the new method, the fertiliser is produced by adding rock phosphate to commercial hydrochloric acid at a temperature of 40-45° C. followed by the addition of ammonium sulphate to the slurry. On grinding the final product is a free flowing powder, stable to weather changes and containing 7.4 and 15 per cent. nitrogen and phosphorus respectively.

India has achieved self-sufficiency in the nitrogenous fertilisers, but the production of phosphatic fertilisers falls far short of its requirements.

ROHTAS INDUSTRIES MAKE STRIKING PROGRESS

PRODUCTION GOES UP—PROFIT AT A RECORD

SUBSTANTIAL progress in the working of the Rohtas Industries Ltd. (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) is indicated by the statement of accounts of the Company for the year ended 31st October 1955. The upward trend in production was well maintained, except in cement. The earnings, therefore, show a further sharp rise to stand at a record level. The dividend, maintained at the previous year's enhanced level, is comfortably covered.

The Company's gross profit for the year under review amounts to no less than Rs. 1.39 crores, an increase of Rs. 20 lakhs over that for the previous year, thus not only maintaining the upward trend in profit for the second year in succession but establishing a fresh record in the history of the Company. Indeed, the gross profit for the year under review would have been higher still but for the fact that the amount written off for bad debts and irrecoverable advances was far larger than in the preceding year, the exact amount utilised for this purpose being Rs. 10.75 lakhs, as against Rs. 1.21 lakhs in the previous year. No explanation has been offered by the Directors in their report for writing off such a large sum. The only clue to this loss is to be found in the previous year's balance-sheet, wherein the Directors had stated that, out of the total advances (namely, Rs. 51.19 lakhs) outstanding at the end of the year, a sum of Rs. 10.68 lakhs was considered doubtful, of which a sum of Rs. 10.47 lakhs was due from a company in liquidation which had a counter-claim against the Rohtas Industries. Presumably, this sum must have been considered irrecoverable and written off by the Directors.

As already indicated, the Directors have maintained the dividend at 15 per cent. to which level it had been raised last year from 12½ per cent. for 1952-53. The Directors' decision to repeat the dividend may seem incompatible with the sharp rise of Rs. 22.57 lakhs in net profit, even after writing off the aforesaid bad debts. The explanation for this is that the Company has had to pay accumulated bonus to staff and workmen for the years 1951-52, 1953-54 and 1954-55, aggregating Rs. 25.81 lakhs, and has strengthened its finances by transferring Rs. 15 lakhs to the general reserve; it may be noted here that a like amount was credited to this account last year. As regards bonus for workers in respect of 1952-53, the issue is before the Appellate Court. Pending the final disposal of the issue, the Company has made advance payments to the staff and workmen amounting to Rs. 7.62 lakhs and this sum is shown under advances to staff in the balance-sheet.

The progress in the Company's working during the past three years is reflected in the following comparative table:

(In lakhs of rupees)

—	For the year ended 31st October			
	1955	1954	1953	1952
Sale proceeds	9,76.31	6,71.61	5,43.98	6,03.90

* For the two years 1950-51 and 1951-52.
† For the three years 1951-52, 1953-54 and 1954-55.

It will be noted that the production during the year under review has gone up on all fronts, except in the case of cement, wherein the output has fallen from the previous year's record level. The decline in cement production is said to be due to operational difficulties and the consequent interruptions in the first kiln, because the machinery supplied for the modernisation of the kiln had to be altered several times. Consequently, the Directors' earlier anticipation that the full effect of the modernisation would be obtained during the year under review did not materialise. The position is, however, said to be improving. The production of clinker from the second kiln is stated to be satisfactory. If the rate of production attained during the first quarter of the current year shown in the table above is maintained during the rest of the year, the output for 1955-56 will exceed that of even 1953-54.

As regards the working of the other sections, the following extract from the Directors' report will be read with interest:

"The programme of paper factory modernisation and expansion is proceeding satisfactorily. Shipments have been made of the two Yankee paper machines and the glazing cylinders are expected to arrive by the end of March this year. If the transport of these big size cylinders is arranged promptly as promised by the railways, the work will be greatly facilitated. A new coating machine of 10,000 tons output per year is arriving this month and is expected to go into operation by the end of this year. It will enable your factory to meet the entire demand of the Indian market for coated varieties of boards.

"The expansion of the caustic soda and chlorine plants to meet the increased requirements of the pulp and paper factories was taken up. Certain alterations were made in the mercury cells to enable production of rayon grade caustic and the installation of the plant is now expected to be completed by the end of the year.

"The results in respect of refining of imported raw sugar were satisfactory in the early stages, but the position took an adverse turn after March 1955, particularly due to increase in the excise duty from Rs. 3-12 to Rs. 5-10 per cwt. from 1st March 1955, the entire burden of which had to be borne by the industry and your Company suffered considerable loss.

"The *vanaspati* factory worked in full swing and its products are finding improving demand."

During the year under review, in August 1955 to be precise, the Company issued 1,140,000 ordinary shares of Rs. 10 each to the then existing ordinary shareholders in the ratio of one new share for every old ordinary share (with option to such holders to apply for additional new ordinary shares). Of this new issue, 582,440 shares of Rs. 10 each have been subscribed and paid-up as on 31st October 1955. These new ordinary shares rank for any dividend that may be declared for 1955-56 and onwards. With the aforesaid issue, the paid-up capital of the Company has been raised from Rs. 219.05 lakhs to Rs. 277.29 lakhs, made up of 20,000 7 to 9 per cent. cumulative preference shares of Rs. 100 each, 85,047 4½ per cent. 'B' cumulative preference shares of Rs. 100 each and 1,722,440 ordinary shares of Rs. 10 each. Reserves and surplus as at the close of the year amount to Rs. 137.62 lakhs, besides the reserve for taxation at Rs. 45 lakhs. There is a debenture liability of Rs. 122 lakhs. The current liabilities aggregate Rs. 365.30 lakhs, including share application money (refundable). This money has since been refunded. The additions to the gross block during the year under review amounted to Rs. 63.53 lakhs, bringing the total value of the block account to Rs. 756.35 lakhs. The written-down value of this block is Rs. 408.40 lakhs. The current assets amount to Rs. 538.53 lakhs, exceeding the current liabilities and provision for taxation by a margin of Rs. 128.23 lakhs.

The Rs. 10 paid-up ordinary shares of the Company are being currently quoted at Rs. 19-8 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on the shares works out to 7.7 per cent. per annum.

(*Concluded from next column*)

620,000 ordinary shares of Rs. 10 each. As against this capital, the reserves and surplus aggregate Rs. 43.90 lakhs, besides a reserve of Rs. 23.21 lakhs for deferred income-tax liability. The current liabilities and provision for taxation amount to Rs. 91.55 lakhs. The gross block of the value of Rs. 189.39 lakhs has been written down to Rs. 150.41 lakhs. The current assets aggregate Rs. 101.25 lakhs, more than adequately covering the current liabilities and provision for taxation.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 20-6 *ex-div.*, at which rate and on the basis of the latest dividend, the yield on these shares works out to 3.9 per cent. per annum.

ALKALI AND CHEMICAL'S PROFIT HIGHER

DIVIDEND STEPPED UP

THE decision of the Directors of the Alkali and Chemical Corporation of India Ltd. [Secretaries: Imperial Chemical Industries (India) Ltd., Calcutta] to step up the dividend for the year ended 30th September 1955 from 6 per cent. to 8 per cent. per annum, follows the sharp rise in earnings for the year, thanks to very satisfactory production of all units, most of which worked to their capacity. The gross profit has increased from Rs. 17.21 lakhs to Rs. 28.89 lakhs, the highest in the last three years. It, however, still falls short by Rs. 5.97 lakhs of the profit earned in 1951-52, namely, Rs. 34.86 lakhs, from which level it had precipitously fallen to Rs. 16.33 lakhs in 1952-53. Thus, the decline experienced in 1952-53 has been made good to a large extent during the last two years. The profit for the year under review would have been higher still but for the loss of Rs. 3.20 lakhs suffered on foreign exchange.

The provision for depreciation has been raised slightly from Rs. 8.84 lakhs to Rs. 9.49 lakhs, while no provision has been made, as in the previous year, for taxation, as there is no current tax liability due to initial depreciation allowances. The Directors have, however, set aside as much as Rs. 12.50 lakhs, as against Rs. 3 lakhs a year ago, to reserve for deferred income-tax liability. They have transferred back a sum of Rs. 2.40 lakhs standing to the credit of reserve for exchange losses, as such reserve is considered no longer necessary, and have transferred Rs. 2.73 lakhs to the dividend equalisation fund, as against *nil* in the previous year.

The dividend of 8 per cent. proposed to be paid for the year under review is the highest in the history of the Company. It will be recalled, in this connection, that the Company paid a maiden dividend of 2½ per cent. for the year ended 30th June 1945. This was stepped up to 4 per cent. in the following year and maintained for 1946-47 also, before the Company went off the dividend list. In 1949, the Company's financial year-end was changed from 30th June to 30th September. The Company returned to the dividend list with a distribution of 4 per cent. for the year ended 30th September 1950. In the following year, the dividend was raised to 6 per cent., at which level it was maintained for the three succeeding years. It will also be noted that there has been no change in the capital of the Company since its inception.

The following comparative table shows the Company's progress during the past three years:

(In lakhs of rupees)

—	For the year ended 30th September			
	1955	1954	1953	1952
Sale proceeds	1,56.10	1,17.69	1,90.31	1,68.66

* Represents adjustment of provision for taxation for previous years and provision for income-tax on profit out of sales of Khewra fixed assets.

N.B.—The accounts for the years 1953-54 and 1954-55 exclude business of the Khewra Alkali Works in Pakistan, the sale of which was completed in 1953.

Referring to the working of the Company's various units, the Directors observe in their report to the shareholders as follows:

"All units of the Rishra Factory had a very satisfactory year of production. The chlorine-caustic soda plant ran at almost rated output and the usage of chlorine on site for the manufacture of other products increased substantially. The hydrochloric acid plant worked on maximum output throughout the year.

"The 'Gammexane' Benzene Hexachloride (B.H.C.) series of plants also had a good year. The output of Crude B.H.C. and of 'Gammexane' formulations, particularly Water Dispersible Powder, increased steadily.

"There was a keen demand for 'Duco' and 'Dulux' paints and we had no difficulty in disposing of all our production. This plant worked at maximum capacity and is being extended."

The Company's balance-sheet as on 30th September 1955 discloses a satisfactory financial position. The paid-up capital of the Company, at Rs. 93 lakhs, is made up of 31,000 5 per cent. cumulative preference shares of Rs. 100 each and

(*Continued in previous column*)

KOHINOOR MAINTAINS DIVIDEND

PROFIT A SHADE BETTER

THE general expectation that the profit margins of cotton textile mills for 1955 would be higher, following the high level of production and good demand for cloth, and that their dividend levels would be stepped up, has not materialised in the case of the Kohinoor Mills Company, Ltd. (Agents: Killick Industries Ltd., Bombay). The earnings of the Company for the year ended 31st December 1955 do not show any marked rise over those for 1954, the gross profit for the year amounting to no more than Rs. 41.74 lakhs, as against Rs. 40.86 lakhs for the previous year. In the circumstances, it is not surprising that the Directors have decided only to maintain the distribution to the shareholders at 18 per cent., to which level it had been reduced last year from 20 per cent. (made up of a dividend of 18 per cent. and a bonus of 2 per cent.) paid for 1953, by withholding the bonus.

The Company's net profit for the year under review, however, shows a rise of Rs. 9.21 lakhs to Rs. 22.72 lakhs. This has been mainly due to the sharp reduction from Rs. 17.76 lakhs to Rs. 6.33 lakhs in the provision for depreciation. This does not mean that adequate provision for depreciation has not been made. For, in addition to the aforesaid allocation made from the profit for the year under review, the Directors have appropriated for this purpose a sum of Rs. 15 lakhs from the machinery reserve account, as against Rs. 8 lakhs drawn last year. In other words, if the Directors had chosen to provide for the entire depreciation out of the year's profit, the net profit would have shown a sharp shrinkage and the dividend could not have been maintained, without drawing from the reserves. The provision for taxation has been raised from Rs. 5.55 lakhs to Rs. 8.50 lakhs. The Directors point out that the assessment of the Company's profit for 1954 has not yet been taken up by the income-tax authorities.

If, despite the higher net profit, the Directors have not raised the dividend for the year, it is because they have chosen to strengthen the reserves, which they could not do last year. The following comparative table shows at a glance the progress of the Company in recent years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net)	6,66.09	6,81.33	7,06.74	7,25.27
Other receipts	0.41	0.67	0.49	1.59
Cotton and fibre consumed	3,10.74	3,24.11	3,38.69	4,32.45
Silk and other yarn consumed	15.89	15.96	14.33	30.92
Other expenses	2,98.64	3,01.06	2,89.06	2,40.33
Gross profit	41.74	40.86	65.16	23.16
Agents' commission	4.19	4.04	6.50	5.36
Depreciation	6.33	17.76	14.97	14.38
Taxation	8.50	5.55	17.80	3.00
Net profit	22.72	13.51	25.88	0.42
E.P.T. post-war refund (net)	..	..	..	18.33
Transfer from reserves	..	2.50	..	..
To reserves	4.50	..	6.00	1.00
Dividend	18.00 (D. 18%)	18.00 (D. 18%)	20.00 (D. 18% +B2%)	18.00 (D. 18%
Carry forward	0.84	0.12	2.11	2.23

Note.—D = Dividend. B = Bonus.

It will be seen from the table that even for 1954 the reduced dividend of 18 per cent. had been paid only by drawing upon the reserves and the surplus brought in from 1953. This year, however, the dividend is more comfortably covered and there has, therefore, been no necessity to supplement the net profit by drawing from the reserves. Further, the Directors have placed a sum of Rs. 3 lakhs to the development reserve and of Rs. 1.50 lakhs to the employees' pension and gratuity fund.

Referring to the trading conditions during the year under review, the Directors observe:

"During the year no further controls were imposed and all existing controls continued without change. Cotton prices remained steady in the early part of the year, but declined somewhat before the start of the cotton season, as the crop was expected to be about 55 lakh bales which would have amply covered all demands. However, due to unseasonal rains, the Punjab, Madhya Pradesh and, to some extent, the Southern crops suffered a setback and this had the effect of pushing up the prices of all indigenous growths. At the close of the year, the prices of these growths were very much higher than the previous year and the tendency was firm. Foreign cotton remained fairly steady throughout the year with a slight tendency to harden towards the close of the financial year. Cloth prices and offtake were well maintained during the year, but there was a definite slump in the prices and demand for yarn and it was only in the last quarter of the year that a slight recovery was noticeable and the demand improved."

The Company's reserves and surplus as on 31st December 1955 aggregate Rs. 134.34 lakhs, as against a paid-up capital of Rs. 100 lakhs. Of these reserves, general reserve accounts for Rs. 22.25 lakhs, machinery reserve for Rs. 75 lakhs, development reserve for Rs. 3 lakhs, dividend equalisation reserve for Rs. 21.25 lakhs and employees' pension and gratuity fund for Rs. 12.50 lakhs. The current liabilities amount to Rs. 143.20 lakhs. There has been an addition of Rs. 7.42 lakhs to the gross block during the year, bringing the total value of the block to Rs. 356.88 lakhs. This has been well written down to Rs. 88.73 lakhs. The current assets amount to Rs. 288.80 lakhs, of which stock-in-trade and stores, fuel and grain alone account for Rs. 265.98 lakhs. The excess of current assets over current liabilities is as much as Rs. 145.30 lakhs.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 335 *cum-div.* (final dividend Rs. 12 per share). On an *ex-div.* basis, the yield on these shares works out to 5.6 per cent. per annum, free of income-tax.

Points From The Chair

Interest Rates

"THE State Bank's schedule of charges for the negotiation and collection of bills and interest rates on advances have been fixed in relation to its operating cost and the comparative rates charged by other banks. These rates are necessarily subject to review from time to time in the light of prevailing business and monetary conditions. The transformation of the Bank into a State Bank does not by itself justify relaxing the basis on which the rates are fixed. In any action which the Bank may be called upon to take in the matter, apart from the normal considerations governing the problem, it is necessary to take account also of the obligation placed on it to develop banking in rural areas and the mounting cost of its establishment charges on account of the successive Bank awards. Another matter which affects banks generally and which requires careful consideration is the gradually increasing burden of interest paid for attracting deposits. I understand that an attempt was made in 1954 to reach an agreement amongst banks in the matter of fixing ceilings on deposit rates. Unfortunately, this did not succeed with the result that each bank now pursues its own policy in this highly competitive field. We cannot but view with concern the present trend amongst banks to offer increasingly higher rates of interest for deposits and consider that this is unhealthy competition which should be discouraged. A voluntary agreement among banks appears to be the solution, but if this is not possible, because of the diversity in their size and standing, the alternative is for Government to consider suitable action for regulating deposit rates."

DR. JOHN MATTHAI,
State Bank of India.

Future of Sugar Industry

"During the 1954 sugar season, the estimated all-India consumption of white sugar fell to 17 lakh tons, as against which the production of the Indian factories amounted to slightly under 16 lakh tons. The Government continued to import sugar and imports in this country during the season were over 5 lakh tons. This has resulted in an increase in the level of sugar stocks in the country from approximately 60,000 tons at the commencement of the sugar season to approximately 5,25,000 tons at the end. Licences have been issued for the integration of new units of production and the second Five-year Plan estimates consumption potential to move up to 22 and odd lakhs tons by the end of the period. Desirous as I am to give due weight to this estimate, I wonder if it is prudent for this Company to depend so much on the profit potential of the sugar industry to service its large capital. You will remember that Mr. S. G. H. Davis, my predecessor in office, in his address at the last annual meeting, referred to the aura of uncertainty shrouding the future of the sugar industry. This uncertainty, I am afraid, continues to prevail."

C. R. SRINIVASAN,
East India Distilleries & Sugar Factories Ltd.

Uncertainty Facing Coffee Growers

"The shadow of Central income-tax continues to loom over us, and one could wish that there was some machinery for disposing speedily of income-tax cases of such far-reaching importance. In the present instance, the Income-tax Department levied assessments on a portion of coffee profits early in 1954, contending that part of the income from the production of coffee was non-agricultural in character and, therefore, taxable. This contention, in the opinion of coffee growers, was manifestly wrong and a test case was filed with the Appellate authority concerned. This was decided in favour of the growers in March 1955, but the Income-tax Department appealed against the decision to the Income-tax Appellate Tribunal. This Tribunal upheld the previous decision in favour of the growers, but it is not yet known whether the department will again appeal to the High Court. In the event of such an appeal being made, further delay will be involved and a final decision may not be available for a year or even longer."

J. N. A. HOBBS,
Kumergode Estates Ltd.

COMPANY MEETINGS AND DIVIDENDS

KOTAMULLAI TEA CO., LTD. Annual General Meeting, Calcutta, 6th March 1956. Dividend: *Nil*. Transfer books remain closed from 1st to 6th March 1956, both days inclusive.

ORIENT JUTE MILLS CO., LTD. Half-yearly General Meeting, Calcutta, 16th March 1956. Dividend: Rs. 4 per share. Transfer books remain closed from 3rd to 16th March 1956, both days inclusive.

RAYALASEEMA MILLS LTD. Annual General Meeting, Adoni-Thungabhadra Road, Adoni P.O., 18th March 1956. Transfer books will remain closed from 12th to 26th March 1956, both days inclusive.

KOHINOOR MILLS CO., LTD. Annual General Meeting, Bombay, 19th March 1956. Dividend: Rs. 18 per share (includes interim dividend of Rs. 6 per share). Transfer books remain closed from 20th February to 19th March 1956, both days inclusive.

SHREE CHANGDEO SUGAR MILLS LTD. Annual General Meeting, Bombay, 23rd March 1956. Dividend: Rs. 2 per share. Transfer books will remain closed from 9th to 23rd March 1956, both days inclusive.

NEW UNION MILLS, LTD. Annual General Meeting, Bombay, 28th March 1956. Dividend: Re. 1-12 per share, payable from 2nd April 1956. Transfer books remain closed from 27th February to 20th March 1956, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, 28th March 1956. Dividend: Re. 1-12 per share, payable on 2nd April 1956. Transfer books remain closed from 27th February to 20th March 1956, both days inclusive.

IMPERIAL TOBACCO CO. OF INDIA LTD. Second interim dividend of 2 per cent., free of income-tax for the year ending 31st March 1956, payable on 28th March 1956.

SHIVRAJPUR SYNDICATE, LTD. Dividend of Rs. 8 per share (includes bonus of Rs. 3 per share), for the year ended 30th November 1955. Transfer books will remain closed from 16th March to 5th April 1956, both days inclusive.

ORISSA MINERALS DEVELOPMENT CO., LTD. Dividend of Re. 1 per share, for the half-year ended 30th June 1955.

CHRESTIEN MICA INDUSTRIES LTD. Interim dividend of As. 12 per share, free of income-tax and As. 8 per deferred share, free of income-tax for the period ended 31st December 1955. Transfer books will remain closed from 6th to 12th March 1956, both days inclusive.

PREMIER CONSTRUCTION CO., LTD. Dividend of Rs. 8-8 per share, for the year ended 31st December 1955, payable on 24th April 1956. Transfer books will remain closed from 16th March to 7th April 1956, both days inclusive.

COIMBATORE COTTON MILLS LTD. Dividend of Rs. 25 per share, for the year ended 31st December 1955. Transfer books remain closed from 2nd to 15th March 1956, both days inclusive.

ATHIMATTAM RUBBER CO., LTD. Dividend of 3½ per cent. (one anna per share), for the year ended 28th February 1955.

DELTA JUTE MILLS CO., LTD. Dividend of Rs. 5 per share, for the half-year ended 30th November 1955.

CHEVIOT MILLS CO., LTD. Dividend of Rs. 4 per share, for the half-year ended 30th November 1955.

TIDE WATER OIL CO. (INDIA) LTD. Dividend of As. 8 per share, for the half-year ended 31st October 1955.

INDIA PAPER PULP CO., LTD. Dividend of As. 11-1/5 per share, for the half-year ended 30th September 1955.

NEW BEERBHOOM COAL CO., LTD. Dividend of As. 8 per share, for the half-year ended 31st October 1955.

SOOM TEA CO., LTD. Interim dividend of Re. 1 per share, for the year 1955.

DHELAKHAT TEA CO., LTD. Interim dividend of As. 8 per share, for the year 1955.

KALLINUGGER AND KHOREEL TEA CO., LTD. Interim dividend of Rs. 15 per share, for the year ended 31st December 1954.

ANGELO BROS. EARN HANDSOME PROFIT

NATIONAL COMPANY CUTS DIVIDEND

Angelo Bros., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Turner, Morrison & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 31st August 1955.

The profit for the year after providing for depreciation, directors' fees and taxation, amounts to Rs. 6,89,131 (Rs. 1,90,008), with the transfer from provision for taxation of Rs. 15,032 (*nil*) and the balance brought forward from last year of Rs. 2,39,798 (Rs. 4,24,790), there is a total amount of Rs. 9,43,961 (Rs. 6,14,798). The directors recommend payment of a dividend of 12½ (12½) per cent. and a bonus of 7½ (*nil*) per cent. absorbing Rs. 6,00,000 (Rs. 3,75,000), leaving a balance to be carried forward of Rs. 3,43,961 (Rs. 2,39,798).

The directors have much pleasure in recording this very satisfactory result for the Company's "Centenary" season especially since, as anticipated in the last report, trading conditions continued difficult throughout the first half of the year due to high prices and the scarcity of raw materials. Sales however, were well maintained and slightly in excess of the previous season in volume.

With the advent of a good Bysaki crop conditions improved considerably during April-June and have since remained favourable as winter crops have also been satisfactory. Prices however have again risen during recent months due to a temporary shortage of T.N. which can be attributed to the fact that production upcountry has for some time past been largely confined to seedlacs for which relatively high prices have been obtainable.

T.N. was quoted at Rs. 140 at the beginning of the season and fluctuated within fairly narrow limits until November when a sharp rise occurred to Rs. 177. The top was reached in December when the market rose to Rs. 183. A gradual decline then took place during the next six months in anticipation of a good crop and Rs. 120 was seen in June which represents the lowest level touched. At the end of the season T.N. was quoted at Rs. 130. The price at the time of writing this report is Rs. 157.

There were no major alterations to buildings during the year but several units of the production plant were replaced by more modern equipment.

The directors wish to express their appreciation of the good work done by the staff and workers whose wholehearted co-operation has been an important factor in making the season a success. A special centenary bonus has already been distributed to the staff and workers.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	30,00,000	Block ...	10,11,675
Reserves ...	38,05,079	Stock on hand	30,99,803
Provision for taxation ...	4,89,513	Stores ...	3,77,586
Liabilities ...	14,94,419	Debts, deposits and advances ...	32,02,592
Profit and loss account ...	3,43,961	Investments	4,81,126
		Cash ...	9,60,190
Rs.	91,32,972	Rs.	91,32,972

National Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October 1955.

After providing Rs. 1,20,000 (Rs. 3,30,000) for taxation and transferring Rs. 1,00,000 (*nil*) from dividend equalisation reserve, there is a balance of Rs. 3,50,554 (Rs. 5,55,626) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share Rs. 17,500 (Rs. 17,500) and on ordinary shares at As. 12 (Re. 1) per share Rs. 2,62,500 (Rs. 3,50,000) leaving Rs. 70,554 (Rs. 1,88,126) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was difficult owing to the high price of raw jute in relation to the market for manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	40,00,000	Block ...	19,01,902
Reserves ...	43,29,326	Stock of cloth and bags	7,03,813
Provision for taxation ...	1,00,275	Stock of jute	10,16,045
Liabilities ...	10,76,206	Stores and spare gear	9,02,766
Profit and loss account ...	70,553	Debts, deposits and advances ...	4,23,044
		Investments	15,69,845
		Cash ...	30,58,945
Rs.	95,76,360	Rs.	95,76,360

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 31st March 1955.

With the sum of Rs. 4,13,973 (Rs. 85,788) brought forward from the previous half-year and after providing for depreciation and all other charges, there remains a balance of Rs. 9,52,027 (Rs. 2,06,436) from which the directors have set aside Rs. 1,40,000 (Rs. 1,17,000) for taxation leaving a balance of Rs. 8,12,027 (Rs. 89,436). After deducting from this balance, the dividends and allocation to general reserve for the half-year ending 30th September 1954, there remains a balance of Rs. 5,02,027 (Rs. 2,39,436 after transferring Rs. 1,50,000 from reserve account) which the directors propose to deal with as follows:

To payment of dividend on 10,000 preference shares at 7 (7) per cent. per annum free of income-tax Rs. 35,000 (Rs. 35,000), to payment of dividend on 6,00,000 ordinary shares at 7½ (5) per cent. per annum free of income-tax Rs. 2,25,000 (Rs. 1,50,000) and to carry forward to next period Rs. 2,42,027 (Rs. 54,436).

In accordance with the provisions of the Indian Jute Mills' Association's working time agreement, the mills worked for 45 hours per week upto the 16th October 1954 and thereafter for 48 hours per week with 12½ per cent. of the total looms remaining sealed throughout the period.

Trading conditions were fair during the period under review. Prices of raw jute however rose steeply towards the close of the period without a corresponding rise in the prices of manufactured goods, whereby trading conditions again became difficult.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	70,00,000	Block ...	49,23,111
Debentures	12,00,000	Stocks ...	75,44,724
Reserves ...	54,00,000	Stores and spare gear	8,82,068
Provision for taxation ...	8,81,915	Capital expenditure in-progress	15,946
Liabilities ...	29,51,407	Debts, deposits and advances ...	41,50,828
Profit and loss account ...	8,12,027	Investments	5,50,673
		Cash ...	1,77,999
Rs.	1,82,45,349	Rs.	1,82,45,349

Lansdowne Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 35,000 (*nil*) for taxation and Rs. 82,867 (Rs. 88,873) for depreciation, the profit and loss account shows a profit of Rs. 51,004 (loss of Rs. 53,836) to which is to be added the amount brought forward from previous half-year Rs. 11,135 (Rs. 5,230), transfer from general reserve Rs. 36,518 (Rs. 1,30,000), transfer from jute stock reserve Rs. 10,000 (*nil*) and transfer from provision for taxation Rs. 40,000 (*nil*), making a total of Rs. 1,48,657 (Rs. 81,394). This amount is reduced by transfer to provision for contingencies Rs. 36,518 (*nil*), leaving an available balance of Rs. 1,12,139 (Rs. 81,394). The directors propose to dispose of this as follows:—

In paying a dividend on the preference shares at the rate of 7 (7) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 52,500 (Rs. 52,500), in paying a dividend on the ordinary shares of Rs. 2 (Re. 1) per share, without any deduction for income-tax paid by the Company Rs. 48,932 (Rs. 24,466) and in carrying forward Rs. 10,707 (Rs. 4,428)

In accordance with the working time agreement of the Indian Jute Mills' Association, the mill worked 48 hours weekly and 12½ per cent. of the total looms remained sealed.

In regard to the scheme for partial modernisation of the mill, some of the machinery has arrived on site and the balance is in transit.

With the removal of all export duties by the Government of India with effect from 1st August 1955. Indian mills were put in a stronger position to meet competition from other countries.

The devaluation of the Pakistani rupee on 31st July 1955, has not proved of any benefit to the Indian industry in view of the decision of the Government of Pakistan to maintain their minimum export prices at the same sterling level as previously. Further they have increased the export duty on raw jute excluding habi jabi and cuttings by Re. 1 per maund.

As a result of the Third Omnibus Tribunal Award your mill is called upon to shoulder an additional burden of approximately Rs. 10 per ton.

With effect from 9th January 1956, 2½ per cent. of the total looms in the mill were unsealed and as from 20th February 1956, a further 5 per cent. will be unsealed—leaving 5 per cent. of the total looms sealed.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	39,48,000	Block ...	59,26,581
Reserves ...	49,37,097	Stock-in-trade	8,41,333

		Cash ...	25,813
Rs.	99,92,050	Rs.	99,92,050

Lawrence Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 46,862 (Rs. 43,987) for depreciation, the profit and loss account shows a loss of Rs. 2,41,274 (profit of Rs. 1,55,256) to which is to be added transfer to provision for contingencies Rs. 63,570 (*nil*) making a total of Rs. 3,04,844 (credit of Rs. 1,55,256). This is reduced by the amount brought forward from previous half-year Rs. 14,440 (Rs. 14,415), transfer from provision for taxation Rs. 25,000 (*nil*), transfer from equalisation of dividends reserve Rs. 75,000 (*nil*) and transfer from general reserve Rs. 2,65,555 (*nil*), leaving an available balance of Rs. 75,151 (Rs. 1,69,671). The directors propose to dispose of this as follows:—

In paying a dividend on the "A" preference shares at the rate of 7 (7) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 17,500 (Rs. 17,500), in paying a dividend on the "B" preference shares at the rate of 5½ (5½) per cent. per annum, without any deduction for income-tax paid by the Company Rs. 27,500 (Rs. 27,500), in paying a dividend on the ordinary shares of Re. 1 (Rs. 4) per share, without any deduction for income-tax paid by the Company Rs. 27,997 (Rs. 1,11,988) and in carrying forward Rs. 2,154 (Rs. 12,683).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	43,00,000	Block ...	51,93,756
Debentures	16,74,000	Stock-in-trade	12,24,617

Rs.	1,24,63,458	Rs.	1,24,63,458

G. Claridge & Co., Ltd.

The directors of the above Company (Managing Director: Sir Joseph Kay, K.B.E., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

After charging Rs. 40,865 (Rs. 54,961) for depreciation and providing Rs. 75,000 (Rs. 50,000) for taxation, shows a net profit of Rs. 3,10,417 (Rs. 2,06,314), which together with the balance of Rs. 24,891 (Rs. 13,577) brought forward from last year's profit and loss account, gives Rs. 3,35,308 (Rs. 2,19,891) and this amount the directors propose to dispose of as follows:—

To pay a dividend of Rs. 16-8 (Rs. 12-8) per share on 8,000 shares of the Company, free of income-tax, Rs. 1,32,000 (Rs. 1,00,000), to transfer to rehabilitation of plant fund Rs. 1,00,000 (*nil*) and to transfer to gratuity and welfare fund Rs. 75,000 (Rs. 20,000), leaving a balance to be carried forward to next year's account of Rs. 28,308 (Rs. 24,891).

Government restrictions on the imports of printed matter have helped to increase the volume of business transacted and consequently the Press has been kept fully working for most of the year, with satisfactory results.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	8,00,000	Block ...	3,23,296
Reserves ...	9,75,076	Stock-in-trade and work-in progress	14,43,305

Liabilities ...	5,51,557	Investments	1,900
Profit and loss account ...	3,35,308	Cash ...	4,68,049
Rs.	33,76,129	Rs.	33,76,129

Kotamullai Tea Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the period ended 31st December 1954.

As the shareholders are already aware, the Indian estates of the Patrakola Tea Co., Ltd., were transferred at book value to the Company as at 1st December 1954 and the proportionate profits from that date have accordingly been transferred to the Company. The balance at credit of profit and loss account amounts to Rs. 73,171, which it is proposed to carry forward.

Planted area is 1,637.18 acres. Estimates for 1955 provide for a total crop of 16,300 maunds at a cost of Rs. 21,91,054, including inland freight and sale charges.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35	Block ...	17,00,000
Share suspense account ...	55,135	Stores and supplies for season 1955	66,010
Provision for taxation ...	45,000	Other assets	29,900
Liabilities ...	18,62,532	Advances and deposits ...	82,542
Profit and loss account ...	73,171	Cash ...	1,57,421
Rs.	20,35,873	Rs.	20,35,873

N.B.—Figures within brackets relate to the corresponding period of the previous year.

QUESTION HOUR IN PARLIAMENT

World Bank Mission to India

A WORLD Bank Mission will shortly visit India to discuss with the Government of India the requirements of help from the Bank for the second Five-year Plan. During 1955, the total amount of loans which India drew from the Bank was Rs. 3.53 crores. Negotiations are still pending with the Bank in respect of the Koyna Hydro-electric Project.

—*B. R. Bhagat*

Closure of Banks

About 88 offices of Indian banks in foreign countries were closed from the beginning of 1950 to the end of 1955. Of those, 56 were closed or merged with other offices in Pakistan. Of the remaining two, one was merged with its main office in Thailand and another was classified as a non-banking company in Malaya. Full information about the reasons for the closure of the banks in Pakistan is not available, as banks are not required statutorily to furnish reasons for closing any of their offices.

—*A. C. Guha*

Oil Exploration

The terms offered to the Standard-Vacuum Oil Company for exploration of oil in West Bengal will be placed before Parliament at the appropriate time. At present, the Government is carrying on negotiations with others (for oil exploration) and it would be "disadvantageous" to these negotiations to publish now the terms offered to the Standard-Vacuum Oil Company. Undoubtedly, all these matters will be laid before the House at the appropriate time.

• • • •

Atomic Energy

India has entered into agreement with the United Kingdom for the promotion and development of peaceful uses of atomic energy. The agreement is in the form of an umbrella agreement providing for co-operation and mutual help in the peaceful uses of atomic energy. Under the agreement, specific topics for co-operation can be undertaken by mutual agreement from time to time. The immediate project on which co-operation has been initiated under this agreement relates to the first Indian reactor of the swimming pool type now under construction. Except for the core of the reactor which is of standard design, the Indian reactor, its control system and its research facilities have all been designed and built by Indian personnel under the Department of Atomic Energy. The fuel elements for this reactor will be supplied by the United Kingdom.

• • • •

Remittances to Burma

The Indian Embassy in Burma has taken up with the Burmese Government the question of remittance facilities for Indians in Burma. Owing to the difficult foreign exchange position, the Burmese Government has recently tightened remittance facilities. It has also prescribed an elaborate procedure for the grant of such facilities, apart from strictly controlling the amount to be remitted.

—*Jawaharlal Nehru*

Russian Experts

Russian mining experts now in India are being paid Rs. 95 per day and Russian interpreters attached to them Rs. 65 a day. There are at present 13 experts and four interpreters who are expected to stay about 12 weeks in the country. I do not know whether the figures will aggregate Rs. 25,000 per month. (Mr. G. L. Bansal estimates that the rates of pay and other benefits provided for the Russians would aggregate about Rs. 25,000 per month.) However, the Government considers these terms to be quite reasonable and perhaps they are the cheapest. I doubt whether India can have so many experts from any other country under the Colombo Plan.

• • • •

Oil Investigations

Gravity and magnetic surveys have been completed and seismic investigations are in progress for locating mineral oil near Cambay in Kaira District (Bombay). A team of Russian oil experts visited the area during the first week of January. The Government is considering the question of drilling operations in this area.

• • • •

Oil Experts for Russia

Some Indian oil experts and trainees will be sent to the Soviet Union for studying the method of drilling oil-wells and exploration of oil.

—*K. D. Malaviya*

Technological Institute

The Soviet Government has agreed to assist in the establishment of the Western Higher Technological Institute at Bombay under the U.N.E.S.C.O.'s expanded programme of technical assistance for 1956. The assistance will be in the form of 15 specialists to work as instructors at the proposed Institute, three translators to prepare English versions of Russian texts for use at the Institute, supply of equipment for certain specified laboratories and higher training facilities for 20 Indian teachers of the Institute in the Soviet Union. The cost of the building of the Institute will be borne by the Government of India. The estimated cost of the building is Rs. 2 crores. Subject to parliamentary sanction, a provision of Rs. 28 lakhs for building and Rs. 15 lakhs for staff and equipment has been made in the next year's budget.

—*Dr. K. L. Shrimali*

Foodgrains Import

The Government's intention is to build up central stocks of 7.5 lakh tons of rice and wheat each. This may even go up to 10 lakh tons in each case. The Government proposes to negotiate for further purchases only to the extent that this stock has to be built up. Imports of foodgrains are only to build up the reserve stocks. The Government has always stated that it would import foodgrains to build up the stocks. Secondly, the food position in India is dependent on the monsoon, which varies. In addition, they are also subject to floods, cyclones, droughts, etc.

—*A. P. Jain*

Rise in Food Prices

The recent rise in prices of foodgrains is not abnormal; it is almost in sympathy with rises in prices of other commodities like oilseeds, cotton, etc. The price of wheat had gone up by about Re. 1 to Rs. 2 per maund, but this trend was checked immediately the Government released its stocks from the reserve. The other steps taken by the Government to reduce the price are the ban on exports of *jowar*, maize, pulses, gram, rice and wheat products. The rise in price has nothing to do with the export of 96,000 tons of rice in 1955. These exports were permitted to stabilise the price of rice which had begun to fall at the time. The wheat imports contemplated for 1956 and 1957 will be under the existing agreement with the international wheat organisation. It has nothing to do, therefore, with the proposed negotiations with the organisation for a reduction in the price of wheat for the future.

• • • •

Reconditioned Rice

The reconditioned rice taken possession of by the Centre from some of the States has already been partly disposed of. In other areas, it is in the process of being disposed of. The Government will not allow prices of rice to go up. In fact, the production of rice, in spite of damages caused by floods, has gone up by 7.5 per cent. this year. There is nothing to worry, therefore, about rice.

—*M. V. Krishnappa*

Price Index

A scheme for conducting fresh family budget enquiries and constructing consumer price index numbers for working classes on an all-India basis is being finalised in consultation with the State Governments. After the scheme is finalised, it is proposed to start the field enquiry, which is expected to last for about 12 months. Processing of data will take at least another year and preparations of index numbers can be taken up thereafter.

—*C. D. Deshmukh*

Heavy Electricals

India's new heavy electrical equipment plant would commence production in about five years from now and would develop its full capacity over a period of seven years thereafter. This is the fastest possible speed at which the Government can go.

• • • •

Coal Stocks

Inadequate transport facilities and inferior quality are the reasons for the accumulation of coal stocks at pitheads in the Bengal and Bihar coalfields. At the end of last year, 3.6 million tons of coal, mostly lower grades of slack coal, were lying at the pitheads.

—*Satish Chandra*

Housing and Insurance

The middle-income group housing scheme has to be reconsidered in the light of the Government of India's decision to nationalise life insurance. Under the scheme, loans are to be granted jointly by the Government of India and life insurance companies up to a maximum of Rs. 25,000 for every individual who comes under the middle-income group for constructing a house. The future of this scheme depends on the investment policy that will be followed by the proposed Corporation which will manage nationalised life insurance. It is hoped that the Corporation will be able to spare some funds for this scheme.

—*Sardar Swaran Singh*

Manufacture of Typewriters

An agreement has recently been entered into between an Indian and a Swedish firm for the manufacture of 6,000 English typewriters annually in India. The country requires 30,000 typewriters annually. Although two firms are already engaged in the manufacture of typewriters, permission is given to a third company (an Indian concern getting technical co-operation from a Swedish firm) also to manufacture these machines, so that the country will not be short of typewriters.

—*Nityanand Kanungo*

Employees State Insurance Fund

A sum of Rs. 3,06,42,615 was received during 1954-55 as contribution by the Employees State Insurance Fund, while Rs. 81,92,943 were expended. Of the contributions received, Rs. 1,87,89,480 were income from employers, Rs. 97,26,312 from employees, Rs. 11,97,574 as income from miscellaneous sources and Rs. 9,29,349 as grant-in-aid from the Central Government. Of the expenditure, Rs. 21,29,773 were by way of medical benefit, Rs. 17,13,303 for sickness benefit, Rs. 6,923 for maternity benefit, Rs. 7,59,125 for disablement benefit, Rs. 1,05,000 for dependents' benefit, Rs. 34,73,578 for administrative expenses and Rs. 5,239 for other benefits.

• • • •

Employment Bureaus

It is proposed to increase the number of employment exchanges in the country by 125 during the second Plan.

—*Abid Ali*

THE STATE BANK OF INDIA

(*Concluded from page 407*)

As a result of the intervention of the Chief Minister of West Bengal, to whose sympathetic and untiring efforts I would like to pay a special tribute, the employees in Calcutta agreed to complete the annual closing of accounts and also work overtime to clear arrears. This has been done and conditions have since returned to normal in the affected centres.

Warning Against Indiscipline

"In regard to acts of indiscipline committed by employees, the State Bank had to take action, in consultation with other banks, by issuing charge sheets. These, however, have not been proceeded with so far in the hope that better relations will hereafter be established between the banks and their employees. It is necessary for me to utter a warning that no institution, whether public or private, can possibly survive if respect for constituted authority is absent or gross indiscipline prevails. While it is impossible to overlook or condone acts of indiscipline committed by employees in violation of the laws, which is tantamount to flouting Parliament's authority, there can be no objection whatever to employees following approved trade union methods to ventilate their legitimate grievances and safeguard their rights and to work for the amelioration of their conditions of service. In fact, a move in these directions would lead to the creation of an effective machinery for solving labour problems by means of mutual consultations and to the establishment of healthier relations which will be for the benefit of the parties concerned and the country as a whole. Now that the unhappy events of the recent past are over and normal work is proceeding, it is a matter for consideration, if satisfactory conditions for smooth working of banks hereafter can be ensured, whether further avenues should not be explored to remove any undue hardships to the employees.

"Personally, I have great faith in direct and friendly talks across the table with the leaders of the staff unions and in exchanging ideas frankly with them, with a view to arriving at an amicable settlement wherever possible. I have already made a beginning in this regard and have met office-bearers of the unions in Calcutta, Bombay and Madras. The talks I have had have been useful and I am confident that this approach will contribute to a clearer understanding of the problems and a closer appreciation of the realities which have to be faced by both parties. I make an earnest appeal to all concerned to co-operate in finding a satisfactory solution to this problem and, for my own part, I would be prepared to do my best, so that the unpleasant chapter of strained relations between banks and their employees is finally closed.

Tribute to the Staff

"Before I conclude, I must pay a warm tribute to the supervising staff of the Bank for their loyal and devoted service during an exceptionally difficult period. Apart from the many transitional problems, which arose from the change-over to the Bank's new status, the difficulties due to disputes with our employees placed upon the supervising staff a heavy load of responsibility. I am grateful to them not merely for the work done by them but for the spirit in which they have done it. I would like also, in spite of the unfortunate happenings to which I have referred, to add a word of appreciation regarding the work done by the clerical and other staffs. I know the bulk of them are loyal and normally discharge their duties faithfully and competently and I shall be failing in my duty if I do not acknowledge the good work they have done during the period under review.

"My thanks are specially due to the Managing Director, Mr. S. K. Handoo, whose experience and knowledge of banking problems and whose administrative ability have been of the greatest value to us. I wish to place on record my deep appreciation of the energy and zeal with which he has applied himself to the discharge of his responsibilities as the first Managing Director of the State Bank of India."

Notices

THE RAVALGAON SUGAR FARM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-THIRD ORDINARY GENFRAL MEETING of the Company will be held at CONSTRUCTION HOUSE, Ballard Estate, Fort, Bombay, on MONDAY the 19th March 1956, at 4-30 p.m. (S.T.), for the purpose of transacting the following business:—

27*th February* 1956.

BOMBAY STATE BUDGET

(*Concluded from page* 392)

of development include transport and communications (9.1 per cent.), housing (6.4 per cent.), education (3.4 per cent.) and industry and mining (3.2 per cent). The major irrigation projects which will be undertaken are the Mahi project, Sabarmati project, Narmada project, Banas Valley project, Vir Dam project, Khadakvasla project, Mula project, Girna project and Gangapur project. The various measures proposed to be undertaken during the second Plan are expected to increase the yield of foodgrains by 6.44 lakh tons, of cotton by 5.16 lakh bales and of sugarcane by 12.26 lakh tons.

In the course of his discussion of the financing of the second Plan, the Finance Minister raised an issue of some far-reaching significance to the financial relationship between the Centre and the States. For fulfilling the financial target of the second Plan, the State Government will require Central assistance to the tune of about Rs. 175 crores. Normally, this assistance will be in the form of grants (about 20 per cent. of the total assistance) and loans and advances (80 per cent.). The State's indebtedness to the Central Government has already increased from Rs. 18.57 crores in 1951-52 to Rs. 68.61 crores in 1955-56. This is expected to increase to about Rs. 140 crores during the second Plan period. In this connection, the Finance Minister raised the issue of the terms and conditions under which loans are granted to State Governments. These loans are now made available at rates of interest varying from 3½ to 4½ per cent. The duration of the loans is generally 10 to 15 years, though, in the case of housing loans, it is 25 years.

The point that the Finance Minister made was that the terms and conditions of the Central Government's loan must be liberal. He based his argument on three grounds. In the first place, these loans are expended by the State Government on capital works which take a long time to yield results in terms of additional revenue. The Finance Minister's complaint was that the "legitimate annual depreciation provisions on the capital assets which have to be based on the life of the works and the paying capacity of the benefited citizens will not and do not pay for the annual equated instalments required to be paid to the Government of India." Secondly, the debt charges on the basis of the existing terms and conditions would impose a heavy burden on the State's revenues. Thirdly, the Central Government grants loans to the State Governments out of its own open market borrowing, from funds obtained by deficit financing and from foreign aid. There must be some "equitable harmony" between the terms and conditions under which the Centre raises its funds and those under which they are given to the States The Finance Minister has thus raised an issue, the importance of which is bound to increase in the next few years. It remains to be seen how the Centre will solve this problem.

ACUTE STRINGENCY IN MONEY

(*From Our Own Correspondent*)

BOMBAY, 29*th February*

The stringency experienced in the short-term money market for several weeks past became more acute during the week under review. While the supply of funds dwindled further, the pressure for bank credit was on a greater scale, with the result that banks had to seek accommodation from the Reserve Bank and the State Bank of India. The scramble for funds resulted in a further hardening of interest rates; even so, the volume of business done was very small.

In the inter-bank call money section, the rate among the Exchange banks was raised from 3½ per cent. to 3¾ per cent., while the common rate among the Indian banks was 3¼ per cent. House money was also bid up to 3¼ per cent. short-term deposits fetched 3¼ per cent. to 3¾ per cent. for periods up to six months. One or two banks are even reported to have offered 3½ per cent. for Rs. 5 lakhs and over.

There was, however, no change in the Government of India 91-day Treasury Bill rate which was maintained at Rs. 2-8-6 per cent. per annum. The amount offered was a little higher at Rs. 102.75 lakhs, as compared with Rs. 100.75 lakhs in the previous week, the amount invited being the same at Rs. 100 lakhs. Tenders for a like sum have been invited for the next week also.

A decline of Rs. 3.98 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 24th February 1956. Notes held in the Banking Department are up by Rs. 4.40 crores. The resulting rise of Rs. 42 lakhs in total notes issued is covered by a corresponding increase in rupee coin. In the Banking Department, there has been a further rise in deposits of the Central Government and other Governments by Rs. 1.96 crores and Rs. 3.06 crores, respectively. Deposits of banks have also gone up by Rs. 1.04 crores. On the assets side, cash balances have risen by Rs. 4.41 crores, while balances held abroad have shrunk by Rs. 3.46 crores. There has been an increase of Rs. 2.64 crores in loans and advances other than to Governments, mainly due to the rise of Rs. 2.93 crores in advances to Scheduled banks against usance bills. Fresh advances to banks against usance bills during the week amounted to Rs. 4.98 crores.

The Scheduled banks' statement for the week ended 17th February 1956 shows a rise of Rs. 2.75 crores in demand deposits and of Rs. 3.40 crores in time deposits. Borrowings from banks are lower by Rs. 72 lakhs and those from the Reserve Bank by Rs. 81 lakhs, while borrowings from the State Bank are up by Rs. 36 lakhs. A rise of Rs. 3.77 crores is noted in advances and of Rs. 2.02 crores in inland bills purchased and discounted, while foreign bills purchased and discounted have declined by Rs 4.21 crores. Investments have further declined by Rs. 1.55 crores. Cash on hand and balances with other banks have shrunk by Rs. 1.02 crores.

The Gilt-edged market continued to rule weak for the second week in succession, with no change in the Reserve Bank's policy in respect of supporting the market. Except for the long-dated loans, which attracted some buyers and consequently displayed a steady tone, the entire list sagged further.

2¾ per cent. 1976 rose by As. 2 to Rs. 82-8, following the stepping up of the Reserve Bank's selling rate to Rs. 82-8. Proximity of interest payment attracted buyers in 3 per cent. 1957 As. 2 lower at Rs. 99-9. 3 per cent. 1958 had sellers at Rs. 99-8, though there were buyers at Rs. 99-7½. 3 per cent. 1959-61 dropped an anna to Rs. 98-2, as also 3 per cent. 1963-65 and 1964 an anna each to Rs. 94-9. 3 per cent. 1966-68 had buyers an anna higher at Rs. 92-6 and 3 per cent. 1970-75 was sought for an anna higher at Rs. 88-13. 3 per cent. 1986 Conversion Loan slumped further to Rs. 77-8 at which some business was done. 3½ per cent. 1961 was offered at Rs. 99-6, 3½ per cent. 1964 an anna lower at Rs. 98-8 and 3¾ per cent. 1965 at Rs. 98-5. Among State loans, 4 per cent. 1967 Bombay and Madras shed As. 2 to Rs. 100-9 and Rs. 99-10, respectively. U.P. 1967 dropped an anna to Rs. 99-10, while West Bengal 1967 was unchanged at Rs. 100-1.

In the foreign exchange section, the rupee displayed strength in terms of the dollar, following the improvement in sterling, banks' selling rate of ready dollars being quoted at Rs. 476¾ per $100, as against Rs. 477¾ per $100 a week ago, and their buying rate at Rs. 472¾ per $100, as against Rs. 473¾ per $100. In New York, spot sterling improved from $2.80¾-2.80¾ to $2.80¾-2.80¾. Three months' forward rose from $2.78-15/16-2.79-1/16 to $2.79¼-2.79¼ and transferable sterling from $2.77½-2.77⅝ to $2.77-9/16-2.77-11/16.

LINSEED BETTER

(*Messrs. A. Bradley & Co.*)

CALCUTTA, 27*th February*

After ruling easy in the first few sessions of the week, the linseed market looked up. The price of linseed oil in the U.K. declined appreciably early in the week and this, together with the uncertainty regarding export duty, gave cause for local buyers of linseed, as well as shippers of linseed oil, to be rather reserved. The U.K. prices, however, reacted again to higher levels and there was, therefore, revival of demand from crushers for both ready and forward linseed. Sellers were, however, reserved. The stock of ready goods was scarce. The weekly turnover was small. The latest available quotations are: February-March delivery Rs. 24-8 and April-May delivery Rs. 21-8 per maund.

GOLD CROSSES Rs. 100-MARK

(*From Our Own Correspondent*)

BOMBAY, 29*th February*

Gold made history in the bullion market during the week under review by crossing Rs. 100-mark after a lapse of nearly four years; it remained well above that level throughout the week. Forward gold touched a high of Rs. 102 and ready Rs. 102-7, the highest levels touched since February 1952. At this level, forward gold was only about Rs. 17 less than the all-time peak touched in May 1950. The bullish trend in the yellow metal was attributed to speculative buying and frantic short-covering induced by continued heavy offtake in the ready section. Madras, Delhi and Calcutta were reported to have been the main buyers in the ready section. The higher levels, however, attracted heavy profit-taking and the closing prices today were perceptibly below the highest levels for the week, due to renewed fears about Budget proposals.

Silver, on the other hand, was listless, though the undertone was just steady. Early in the week, silver was depressed on rumours that the Government of India had granted licences for import of silver from Tibet. These rumours did not, however, find official confirmation. Consequently, the white metal gained some strength later in the week, thanks to the fairly good offtake in ready. The strong bullish trend in gold also aided sentiment.

Forward silver (28th February settlement) was marked down from Rs. 175-2 to Rs. 174-4 early in the week, but staged a rally to Rs. 176-9 before the settlement ran out at Rs. 176. The March settlement came up to Rs. 177-8, after an early relapse from Rs. 176-4 to Rs. 175-5. The closing was, however, lower at Rs. 176-7.

Ready silver (.996 Mint) advanced from Rs. 175-8 to Rs. 176-11, but closed lower at Rs. 175-15 today. The floating stocks of silver are placed at 1,200 bars. The daily average offtake was 20 bars.

Forward gold (27th February settlement) rallied from Rs. 99-3 to Rs. 102 before the settlement ran out at Rs. 101-15. The March settlement rose from Rs. 98-13 to Rs. 101-7, but finished at Rs. 100-7. The carry forward charges against sellers further widened from As. 6 to As. 11 during the week.

Ready gold improved from Rs. 99-10 to Rs. 102-7 before winding up at Rs. 101-6. The floating stocks of gold are estimated at 25,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was higher at 4,500 tolas on an average.

In London, there was a fall in silver and gold prices. Spot silver declined from 79¾d. to 78¾d. and forward silver from 79¾d. to 78¾d. Gold moved down from 249s. 3½d. to 249s. 1d. In New York also, silver retreated from 91⅛c. to 90⅜c.

The following comparative table shows the trend of the market during the week under review:

	29-2-56	Highest	Lowest	22-2-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (.99 fine Mint) ..	101 6	102 7	99 5	99 10
Forward*	100 7	101 7	98 9	99 8

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

PEPPER STEADY

(*Messrs. Parekh & Co.*)

BOMBAY, 29*th February*

During the earlier part of the week, Malabar black pepper showed improvement under pressure of buying by exporters, who after waiting for a lower price came out to buy against their uncovered balance of sale to Russia and the fresh sale of about 300 tons to Communist China. During the later part, however, the terminal markets both at Cochin and Alleppey eased on withdrawal of exporters as buyers. Alleppey after touching Rs. 850 came down to Rs. 837½, while garbled at Cochin marked down from Rs. 145 to Rs. 141½ with sporadic buying. In spite of the accumulation of floating stock in all the primary markets, which is estimated at more than 4,000 candies, the prices were well maintained showing resistance at lower prices. The growers were regulating the inflow of pepper in the terminal market according to the day-to-day sales effected.

There are various rumours regarding fresh business of about 1,000 tons with Russia but these have remained so far unconfirmed.

Despite healthy statistical position of Malabar black, opinion among a section of the trade is veering round the fact that, unless there is concentrated buying by America, the present prices may not be maintained, as growers are likely to get tired and come out to sell before the pressure of Sarawak new crop in the market. In A.S.T.A. section, long interests are reported to be trying to support the market and March shipments were done at $0.31½. For April-May-June shipments, there are buyers at $0.33.

In delivery section prices were well maintained. The following are today's nominal quotations: Ready delivery Rs. 113 (as against Rs. 112 a week ago) per Bengal maund, March delivery Rs. 800 to Rs. 810 (Rs. 770 to Rs. 780) and April delivery Rs. 810 to Rs. 820 per candy of 5½ cwts.

DEADLOCK IN COTTON PERSISTS

(*From Our Own Correspondent*)

BOMBAY, 29*th February*

The deadlock in the cotton futures market still persists, despite Mr. Justice Coyajee's verdict in favour of the Forward Markets Commission (F.M.C.). Dismissing the petition challenging the F.M.C.'s directive to the East India Cotton Association (E.I.C.A.) to close cut hedge contracts and to amend by-laws, His Lordship observed that the Commission had denied *mala fides* and had said that, before the hearing of Mr. Shah's appeal, the Commission had concluded that forward trading in cotton was detrimental to the interest of the trading or public interest and to the larger interests of the economy of India and, therefore, the Government had considered amendment of by-law 52AA immediately and without previous publication. The Commission had felt that, if an upward revision were effected in cotton, that would be detrimental to other commodity markets and to the public. His Lordship also held that the petitioners' contracts had been subject to the by-laws of the Association and there was no undertaking by the Association that the conditions of the contracts must or should necessarily remain the same until the contracts were worked out. On the contrary, there was an agreement that the contracts were to be worked out under the by-laws of the Association as they stood or as they might stand at all times. The substitution of the machinery under by-law 52AA, namely, the Forward Markets Commission for the Textile Commissioner, did not, he contended, affect the incidence of contracts.

This verdict was greatly disappointing to the aggrieved bull operators who immediately went in appeal and secured an interim injunction restraining the E.I.C.A. and its Directors from giving effect to the directive of the Commission. The case is being heard by the Chief Justice and Mr. Justice Tendolkar. Meanwhile, the E.I.C.A. had fixed the closing date on the 25th inst. and had asked the members to arrange inward payment. The outward payment will, however, be made after the legal hitch is solved.

In the spot market, Vijay, Khandesh and Punjab 320F varieties met with good buying support from mills. Sizable lots of Vijay and Wagad were reported to have been purchased by Kanpur and Delhi interests. Among exportable styles, Jarillas, Wagad, Zoda and *Deshi* cottons evoked particular interest from shippers. Fresh large export business was done with Japan. In the foreign section, Africans received buying enquiries; deals were put through in Budoma at Rs. 1,535 and in Busoga at Rs. 1,525. A small quantity of Garan was also lifted at 42.75d. per lb. The ruling rates of B.P.52, Bukhedi and Jinja were Rs. 1,615, Rs. 1,475 and Rs. 1,445, respectively. There has been no enquiry for Pakistan cotton stapling 7/8" and above which is now allowed to be imported. The landed cost of such cotton is presently about Rs. 300 per candy (approximately 7*d.* per lb.) above comparable domestic styles. The large export duty of Rs. 270 per candy is doubtless responsible for this. A prominent Pakistan shipper has pointed out that, although the market there is somewhat erratic, there is no indication of a big drop in prices at present, since the statistical position is sound.

The latest available quotations from the Sewri market are: Bengal *deshi* Rs. 710; Berar Jarillas Rs. 785; Khandesh Rs. 770: Vijay Rs. 890; Oomra *deshi* Rs. 750; Moglai Rs. 660.

The firm trend witnessed in the Karachi cotton market in the past six weeks abated during the week under review. In fact, the market ruled distinctly easy, thanks principally to lack of encouraging response from Indian cotton interests to the Government of India's decision to allow import of Pakistan cotton of staple length 7/8" and above. Traders would appear to feel that, so long as the heavy export duty was not reduced, there might not be any sizable shipments of Pakistan cotton to India. As there were no signs of the Government lowering the duty, operators did not evince any interest in extending commitments. Some even were inclined to sell their holdings which they had bought in anticipation of large export business with India. Consequently, cotton values staged a retreat. N.T.R.G. May delivery dropped from Rs. 82-15 to Rs. 81-8 before closing yesterday at Rs. 81-15 per 82 lbs. March delivery suffered over the week a loss of As. 14 to Rs. 83-7. In the spot section, barring Sind *deshi* and Punjab *deshi* which were on special request, the prices of all other popular varieties tended to recede. The following are the latest available quotations—in rupees per 82 lbs.—from the Karachi cotton market, figures in brackets giving last week-end's prices:

Sind *deshi* 78-8 (77); Punjab *deshi* 73-4 (72-12); 4F Roller 81-3 (82-8); S.G. 86-15 (88-4); Punjab Roller 85-7 (87); S.G. 91-7 (93); 289F N.T. Roller 88-7 (90); S.G. 95-15 (97); 289F Punjab Roller 93-15 (95-8); S.G. 100-7 (102).

The current Pakistan cotton crop is estimated at 1.70 million bales, of which Punjab varieties account for 1.15 million bales and Sind varieties for 550,000 bales. The local mills were expected to consume a total of 800,000 bales. Excluding this and also the 500,000 bales exported so far, the surplus that is still available for export amounts to 300,000 bales.

The Alexandria cotton futures market exhibited a firm trend in the first two sessions of the week on renewed buying enquiries from abroad and rumours of the possibility of further large barter deals with the communist countries of Europe and China. The market developed a weakness on the 23rd inst., following slackness in overseas demand, especially from Czechoslovakia, China, Rumania and Yugoslavia. Operators lent reduced support to the market and, the sellers being eager to sell in anticipation of a further fall in prices, quotations slided downwards. There was, of course, some recovery yesterday, which, however, was not so marked as to

erase the earlier losses. Over the week, the prices were lower. The following are the latest available closing rates—in tallaris per lb.—prevailing at Alexandria, as compared with those on the 23rd and 21st inst.

	28-2-56	23-2-56	21-2-56
Karnak March ..	90.20	94.55	91.18
Karnak May	89.30	93.40	90.25
Ashmouni April ...	69.43	93.15	71.70
Ashmouni June ...	68.30	—	—

The progress of the Gezira crop is reported to be quite satisfactory. Samples of S cotton from the early new crop arrivals already made available to buyers in Port Sudan included GS, XG2S and G2S. The impression of a prominent shipper is that the samples are superior in quality as compared with cotton of the same grades of the last crop. Auctions are expected to commence early next month. Following the high values of Egyptians, private holdings of Sudans are now quoted 400 to 500 Liverpool points per pound above the prices asked for a month ago. As compared with the previous auction, prices received for the 10,000 bales new crop A.R. Uganda, auctioned on Tuesday last week, were somewhat higher. A small quantity of A.R. Mwanza cotton which was also auctioned on the same day fetched an even better price than Lango. Compared to the prevailing values of Egyptian Ashmouni and Californians, A. R. new crop Uganda is selling at a very considerable discount even at current rates. Some quarters, therefore, envisage that the Lint Marketing Board is likely to obtain still higher prices in futures auctions. The recent tendency has been a strengthening of world prices for medium to long-staple cottons.

The Liverpool cotton futures market presented a fully steady trend this week too. The steadiness was due to trade and commission house buying. There was some Americans selling in near months which was, however, fully absorbed by mill fixations. While sellers were reserved, there was trade buying in new May-June contract. Prices of cotton, as a consequence, continued their upward march.

An extraordinary general meeting of the Liverpool Cotton Association will be held on 15th March when a Liverpool Sudan futures contract will be proposed for adoption. If approved, it is expected that trading in the new contract will be inaugurated as soon as possible.

The latest available quotations (in pence per lb.) from the Liverpool cotton futures market are given below:

Old contract: March-April 25.35; May-June 74.75; July-August 24.25. *New contract*: May-June 31.40; July-August 28.55; October-November 25.90; December-January 24.75. *Egyptian Karnak cotton*: March-April 51.15; May-June 50.60; July-August 50.60.

A quiet trend was in evidence in the New York cotton market. The chief unhelpful factor was the possibility of an increase in the C.C.C. releases of surplus cotton which would include higher grades and longer staples. There was some hedge selling and profit-taking. Prices, therefore, declined. The decline would have been more marked but for reports of continued good demand for new crop cotton in the South and expectation that the Senate would approve the rigid 90 per cent. of parity price supports in the new Farm Bill. The Secretary of Agriculture has declared his opposition to dumping American farm surpluses abroad. It is believed that the Department of Agriculture is contemplating an expansion of the present limited surplus disposal programme and will sell all grades and staples for export starting from 1st August 1956, with a somewhat smaller concession in price of the medium staples than is now being given for the 1 million bales short-staple cotton. No further sales on a competitive bid basis are anticipated during the current season, as the Secretary of Agriculture has repeatedly made statements to this effect.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	28-2-56	21-2-56	14-2-56
Spot	36.60	36.60	36.50
March	35.70	35.77	35.75
May	34.90	35.39	35.05
July	33.87	34.19	33.93
October	31.90	32.10	32.20

YARNS FIRM

(From Our Own Correspondent)

BOMBAY, 29*th February*

The yarn market was this week thick with all sorts of rumours regarding tax proposals in the Central Budget. The majority of traders was inclined to feel that there would be an upward revision in the excise duty on cotton cloth. Some operators expected a levy of excise duty on rayon yarn and a rise in import duty on foreign yarn, while others anticipated imposition of a higher level of excise on rayon fabrics. In view of these rumours, operators were extremely cautious in making fresh purchases. Deals put through were, therefore, not much. The undertone of the market, however, was distinctly firm, on expectations of an improvement in the offtake of yarn.

In the rayon yarn section, Snia rayon yarn (120 dull cones) for February and April deliveries met with buying support and spurted by Rs. 5 each to Rs. 820 and Rs. 833, respectively. Spot yarns evoked good enquiries from consuming centres and recorded an improvement in prices. 150 Japan rallied As. 2 to Rs. 4-3-6. 120 Japan strengthened by an anna to Rs. 4-9. 150 Italy gathered six pies to Rs. 4-1. 120 Italy was quoted at Rs. 4-0-6. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade rose by 15 pies to Rs. 3-12-3. 120 Bt. cones 1st grade gained a like amount to Rs. 3-15.

Prices of staple fibre yarns moved within a narrow range. 40×2 Kamlas advanced by half an anna to Rs. 3-13. Citys increased by three pies to Rs. 4-2-6. Kohinoors were higher by a similar amount at Rs. 4-5-6. New Greats were firm at Rs. 4-1-6, as also Centurys at Rs. 4-1-6. Sitarams, on the other hand, receded by six pies to Rs. 4-0-3.

Cotton yarns ruled distinctly strong, on expectation of enlarged buying enquiries from consuming centres. It was felt that, if the Union Finance Minister were to raise the excise duty on mill cloth, the competitive capacity of handloom cloth would improve. Buying support ensued, as a consequence, and prices registered a rise. Fine and superfine counts were specially favoured. Thus, 80 counts Finlays forged ahead by Rs. 3 to Rs. 73. Elphinstones picked up As. 4 to Rs. 62-8. Sixty counts Moderns rallied Rs. 2 to Rs. 63. Maduras advanced by Re. 1-12 to Rs. 46. Finlays put on Re. 1-2 to Rs. 62-8. Among 40s, Moderns and Indus gathered As. 4 each to Rs. 27-8 and Rs. 28-4, respectively. Maduras gained an anna to Rs. 28-3. Transactions at higher rates were reported in 20 counts yarns, Moderns rising by As. 4 to Rs. 17, Maduras by As. 2 to Rs. 17-12 and Hinds by an anna to Rs. 16-8. Among 10s, Podars rose by an anna to Rs. 13-1. Moderns were fully maintained at Rs. 13-4, as also Elphinstones at Rs. 12-6.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	29-2-1956	22-2-1956	15-2-1956
Art silk yarn (per case of 200 lbs.)-	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia February	820 0	815 0	811 0
,, ,, April	833 0	828 0	824 0
120 Japan (per lb.)	4 9	4 8	4 8½
150 Japan (per lb.)	4 3½	4 1¼	4 1¼

TEA DUSTS DEARER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 23*rd February*

There were 360,000 lbs. of dust on offer in Dust Sale "D" which was held on Tuesday 21st February. From the outset there was a much stronger tone. Low medium and medium types were irregularly an anna to As. 2 higher. There was strong competition for black leaf Middle East types and these were appreciably dearer. Best liquoring dusts were keenly sought after and were As. 3 to As. 4 higher.

London Market.—Sale of 20th February 1956.—Best liquoring dearer. All others difficult of sale. Prices often 2d. to 3d. lower.

Sale of 21st February 1956.—Good demand for Ceylons. Good mediums and best often dearer; low growns and poorer mediums irregularly easier. Best South Indians sold well, but all others 1d. to 3d. lower.

Export Quota.—Following the announcement given above, the market showed a temporary stronger tendency. The present quotation is 10 pies nominal.

Forthcoming Auctions.—Dust Sale "E" will be held on Tuesday, 6th March.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Sale* 5.—1,300,000 lbs. Less demand for low medium and medium types which are irregularly one to two annas easier, particularly fannings. Good medium and best quality very strong demand and prices advanced following quality. Whole leaf strong Middle East types much easier. Bazaar buyers very quiet."

LINSEED IMPROVES FURTHER

(From Our Own Correspondent)

BOMBAY, 29*th February*

The most notable feature of the week under review is the further advance in prices of linseed and oil, despite the fears of an excise levy on linseed oil in the budget to be presented this evening. The improvement was chiefly due to extremely encouraging overseas advices. Thus, linseed oil was quoted on the Continent at as high as £145 per ton, as against £139 end of last week. It will be recalled that the peak of £145 was touched once in the middle of last week also. The groundnut section too advanced partly in sympathy with the linseed section and partly due to the paucity of floating stocks. The castorseed section proved no exception to the general upward trend. Advices from the U.K. for castor oil, commercial quality, were better at £114 per ton, as against £110 per ton a fortnight back. As a result, business done on the market was substantial and prices recorded handsome gains over the week.

The budget session will be held on the Exchange today between 6 p.m. and 8-30 p.m.

Madras dealers are reported to have made representations to the authorities requesting them to extend the validity of export permits expiring today by a week, since steamers due to arrive during the last fortnight are scheduled to reach the Port only next week.

In the linseed section Bold ready delivery advanced from Rs. 30-4 to Rs. 32. April-May delivery rallied Re. 1-13 to Rs. 31-15. Small Sutnas improved from Rs. 28-12 to Rs. 30-8. Linseed oil disclosed a gain of Re. 1-12 at Rs. 20-14.

Bold F.A.Q. ready, in the groundnut section, put on Re. 1-4 to Rs. 30-12. April-May delivery changed hands higher at Rs. 31-4, as against Rs. 30-2. Coromandals gathered Re. 1-4 to Rs. 31-4 and Khandesh quality Re. 1-2 to Rs. 31-4. Groundnut oil *ex*-mill fared better at Rs. 16-5, as against Rs. 15-11. April and May deliveries were enquired at Rs. 16-9 each, as compared with Rs. 15-12 and Rs. 15-14.

May futures, in the castorseed section, opened the week at Rs. 118-4, as against Rs. 117-14, was done today at Rs. 118-12. The highest and the lowest touched during the week were Rs. 119-10 and Rs. 115-14, respectively. Madras quality, in the ready section, was done better at Rs. 23-4, as against Rs. 23-2 and Kanpur at Rs. 21-8, as compared with Rs. 21-2. Castor oil B.S.S. disclosed a gain of As. 3 at Rs. 14. Commercial quality too put on a similar amount to Rs. 13.

Among others, kardi Bold gained As. 10 to Rs. 17-4 and niger Madras As. 8 to Rs. 27.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	29-2-1956	22-2-1956	15-2-1956

SUGAR BEARISH

(From Our Own Correspondent)

BOMBAY, 1*st March*

The earlier expectation that the Finance Minister's budget proposals would propose heavier levies on sugar did not materialise. Consequently, the existing rate of excise duty and inter-State sales tax remained unchanged. As a result, the sugar market recorded the anticipated all-round fall in values in all sections, namely, ex-mill quotations, spot and forward prices. Ex-mill quotations of Bombay Deccan mills immediately fell by Rs. 2 per bag, spot values by Rs. 2 per bag on an average, in spite of a very thin spot stock position in the City and the forward section also recorded a fall of more than Rs. 2-4.

Arrivals of indigenous sugar during the week under review amounted to 6,900 bags and the fall in spot prices recorded a comparatively moderate fall. D grade sugar was quoted Rs. 89-91, C grade Rs. 91-97, B grade Rs. 97-100, and A grade Rs. 100-102 per bag, respectively, including sales from the bearish onslaught and this variety was freely offered at Rs. 83-8 per bag excluding sales tax.

In the forward section *Fagan* delivery contract for C grade sugar collapsed from Rs. 93-12 to Rs. 90-8 per bag with sellers at this price. The undertone of the market was essentially disquieting and weak at the close.

JUTE PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, 28*th February*

Prices of jute goods fluctuated within narrow limits during the week under review, but at lower levels covering demand was fair. Raw jute prices moved down fractionally. The feeling that during the month of February shipping has not been satisfactory is shared by a large section of the trade. As a result, stock figures as at the end of the month are expected to show a further rise over those of January, and this would be all the more so in view of the higher loomage at work compared to January. What with the present increased labour costs, higher prices for raw jute, and keen competition from foreign manufacturers (which rules out the possibility of higher prices for jute goods), the profit margin of mills has considerably been reduced is common knowledge.

This week's decline in prices of raw jute is welcome in this context. But the fall was fractional and followed continued weakness in the goods market and the consequent necessity on the part of mills to keep away from the raw jute market. Raw jute prices tend to move higher the moment mills enter the market. It is on account of such a tendency that the prices of goods and the fibre invariably bear an uneconomic relationship, and, although raw jute supply has been sufficient, fears of shortage are expressed often by interested quarters. The trade in jute goods is, therefore, looking forward to the day when all these uncertainties would no longer exist. The only remedy lies in more output of the domestic fibre and an improvement in quality. During the week under review, local daissee bottoms declined to Rs. 30 from Rs. 31, and Indian northern bottoms and upper Assam bottoms were both priced at Rs. 29-8, as against Rs. 30 a week ago. Quotations in the agencies were higher.

The markets were closed on Friday on account of the general *hartal* organised by the leftist organisations in Calcutta to oppose the proposed West Bengal-Bihar merger. By the week-end, ready 40" 10 oz. hessian lost to Rs. 40-2 from Rs. 40-8, and at the lower level covering demand developed. A small recovery to Rs. 40-4 was the feature in yesterday's trade. Forward quotations were higher, and the highest and lowest levels for April-June goods were Rs. 40-12 and Rs. 40-8 respectively. In heavy goods also there was some covering demand. Australia continued to show interest and purchased a fair quantity of woolpacks for April-June delivery. From Rs. 113-14 ready B. twills gave way to close at Rs. 113-6 by the week-end but recovered to close better at Rs. 114-4 in trading yesterday. Rumours of impending business with Russia continued, and although it was believed that an Indo-Russian understanding had been reached for barter, confirmation was lacking. This was a factor for more covering business during this week, but the lack of confirmation in this regard caused prices to fall.

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 28*th February*

Although there was good demand during the export sale yesterday, when offerings amounted to 59,240 chests, prices displayed a divergent trend. Thus, C.T.C. fannings and stylish leaf grades advanced, medium and low medium B.O.Ps gave way by an anna. Fannings were maintained at previous rates, and, among the remaining lots, teas with quality were well supported. Most other teas declined by half to one anna. The quotations were: best C.T.C. Assam B.P. Rs. 2-5 to Rs. 2-6 (nominal), clean black pekoe Re. 1-13 to Re. 1-14, medium Assam B.P. Re. 1-7, and plain B.P. Re. 1-14 to Re. 1-4-6.

Transactions in export quota rights were reported at rates varying from 7 to 9 pies.

Fairly steady conditions were in evidence during last week's sale for domestic consumption. Dusts offered aggregated 19,000 chests. Prices recorded fractional gains. Among C.T.C. Assams, the poorer lots advanced by ½ to 1 anna, while the best liquorings realised several annas above valuations. Black leaf teas were, however, slightly easier, but good support was afforded by buyers on behalf of the Middle East. All other teas gained by ½ to 1 anna. The quotations were: best Assam C.T.C. Rs. 2-9, medium Assam grainy dust Re. 1-8-6 to Re. 1-9-6, and medium Dooars Re. 1-7-6 to Re. 1-8-6.

Offerings of leaf grades totalled 4,500 chests. Demand was fair and prices rose by an anna to As. 2.

HIDES EASY

(From Our Own Correspondent)

MADRAS, 27*th February*

The E.I. tanned hides and calf market continued weak and prices declined further during the week under review to a level lower than what they were a year ago. Arrivals from the tanneries were as usual and clearance moderate. Enquiries from the U.K. were limited. Prospects for larger trading and improvement in prices appeared remote, as U.K. leather dressers had found their trade extremely disappointing.

The raising of the Bank rate in U.K. to 5½ per cent. on the 16th instant, the highest level since 1932 will have adverse effect on prices of hides and skins. The E.I. tanners will, therefore, be well advised to reduce their soakings in their tanneries and regulate the quantities exported, as otherwise they will be unable to arrest further decline in prices.

Tanned goat skins—market quality—declined by one to two annas per lb. and superior tannages by 3d. in the overseas market. Lining sheep skins ruled unchanged. In the auctions, which will commence in London on 12th March 5,70,000 tanned goat skins and 7,00,000 sheep will be available for sale and, in view of the large quantities involved, prices are expected to decline further.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 27*th February*

Sugar prices ruled quiet during the week as traders desired delivery before the announcement of the Budget proposals, but sugar factories were inclined to cover the risk of likely increase in excise duty. The volume of business thus was restricted. Renewed rumours of an upward revision in excise duty on sugar and of a possibility of the Centre imposing a levy on the movement of sugar from one State to another in lieu of inter-State sales tax were not ruled out. The Government has reduced the prices of some varieties of imported sugar. The latest available mill delivery prices are: Jaswant Rs. 28-14, Simbhauli Rs. 28-14, Mowana unquoted, Daurala Rs. 30-4, Amroha Rs. 28-4, Bijnore Rs. 28-8, Mansoorpur Rs. 30-4, Rampur Rs. 32 and retail Rs. 31 per maund. *Khandsari* prices ruled quiet and featureless in absence of any driving force at Rs. 23 to Rs. 28 per maund according to quality.

Ready *gur* prices continued to rule depressed, the only brightening factor being the allotment of 20 wagons to Gujerat in the beginning of the week and another 15 wagons at the end of the week. The daily arrivals have gone down, the total quantity put in the market during the week being 16,000 maunds. The local stock has swelled to 140,000 maunds. The estimated arrivals from the beginning of week were 4 lakh maunds. Prices are quoted from Rs. 10 to Rs. 10-4 per maund.

Future *gur* prices eased appreciably during mid-session, but covering at low levels accounted for some improvement at close. Opening at Rs. 10-5 and Rs. 11-5 for *phagun* and *baisakh* deliveries on Monday last, and touching the lowest at Rs. 9-12-3 and Rs. 10-9-3, respectively, in mid-session, the respective prices today touched Rs. 10 and Rs. 10-14. Sowings for the new cane crop are in full swing.

FOODGRAINS ADVANCE FURTHER

(From Our Own Correspondent)

HAPUR, 27*th February*

Almost firm conditions prevailed in the grain markets during the week under review and thus was partly attributed to some shortfall in the production *kharif* crops this year, following excessive rains and floods, and partly to speculation on the part of the trade, particularly in regard to wheat. The Government of India has been issuing about one lakh tons of wheat monthly from its reserves and it expects that prices of wheat will fall when the standing crop is about to come in the market in April.

Wheat prices at Hapur recorded further gain of As. 6 per maund to Rs. 15-2 per maund for average quality and *khati* prices advanced to Rs. 14-9. Millers from Delhi and Meerut were the main purchasers. The 300 tons of wheat released in Delhi daily from Government stocks is considered insufficient. The week's offtake was 3 *khaties*, reducing the local stock to 22 *khaties*, as against 12 at this time, last year. Rice prices also recorded modest gains during the week in sympathy with wheat prices. The latest available rates are: basmati Rs. 24 to Rs. 32, mainpuri Rs. 18-4, mungoni Rs. 15 and coarse quality Rs. 13-4 per maund. India exported 98,787 tons of rice during 1955, while the total quantity imported amounted to 2.65 lakh tons.

Coarse grains continued to rule steady for most part of the week. Cloudy weather and expectations of rains, however, accounted for slight fall in prices in the week-end. Gram prices ruled quiet at previous week's level. The latest available prices are: barley Rs. 10-8, *bejhar* Rs. 10, gram Rs. 10-4 to Rs. 10-8, maize Rs. 10-8, *bajra* Rs. 9-6, *jowar* Rs. 10-8 and *guwar* Rs. 8-8 per maund.

Hardening in pulses prices continued on poor stocks and peas *dara* was transacted at Rs 9-12 and white quality at Rs. 10-8 per maund. Stock position ran down to one *khati*, as against 16 at this time last year. *Arhar* prices advanced by As. 4 per maund to Rs. 11-8, with stock being placed at 3 *khaties* at the end of the week. Other pulses ruled quietly steady.

Pulses futures ruled quietly easy during the week. The prices on Monday were: peas *jeth* Rs. 8-0-7½, peas white *jeth* Rs. 8-14, *arhar jeth* Rs. 9-2-6 and *urd baisakh* Rs. 15-8, as against Rs. 8-4, Rs. 8-15-6, Rs. 9-8-3 and Rs. 15-7, respectively, quoted on 20th February.

BANKING

(*Concluded from page* 391)

million, having risen from $133.33 million earned in 1954 by the National City Bank of New York alone. Of these, interest on loans accounted for $85.61 million, as against $68.76 million in 1954. interest and dividends on investments for $49.02 million ($43.37 million) and other operating earnings for $23.59 million ($21.20 million). Operating expenses amounted to $118.15 million, an increase of $16.71 million over the year. Salaries were higher by $3.77 million at $37.26 million, consequent on the increase in staff and increment in their salaries. The outgo by way of interest increased by $1.28 million to $14.87 million and provision for taxes and assessments by $6.95 million to $31.85 million. The net operating earnings amounted to $40.08 million, an increase of $16.71 million over those of the National City Bank for 1954. The transfer to the reserves was reduced from $14.43 million to $8.14 million, while that for dividend reserve was raised from $17.12 million to $23 million. The undistributed surplus amounted to $7.34 million, bringing the accumulated surplus to a total of $60.01 million at the end of the year.

The total resources of the Bank as at the end of the year amounted to $7,001.30 million, as against $6,323.10 million (of the National City Bank of New York) at the close of 1954. Much of this increase reflected the additions resulting from the merger. Of these resources, deposits alone accounted for $6,308.78 million, as against $5,639.19 million at the end of 1954. There was no change in the capital of the Bank, at $200 million, despite the merger, because the shareholders of the First National Bank were paid cash instead of issue of National City Bank's shares in exchange. Loans and discounts rose from $2,337.06 million to $3,184.56 million, the increase being the result of sustained demand for funds during most of the year. To satisfy these demands, the Bank had to reduce its investments, the outstanding investments in U.S. Government securities at the end of the year amounting to $1,319.31 million, as against $1,843 million. Cash balances, gold and dues from banks aggregated $1,616.57 million, a rise of $305.46 million over the year.

EUROPE'S PROBLEM

O.E.E.C.'S INTERESTING ANALYSIS

From Our Own Correspondent

LONDON, 25*th February*

LONDON LETTER

THE O.E.E.C.'s Seventh Annual Report comes at a timely moment to remind persons in this country nervous about inflation that Britain's problem is by no means isolated. All Europe is suffering from inflation, but, whereas the North-Western Nations are at least enjoying full employment comparable to, if not quite at, the level of this country, the countries of Southern Europe have been as unable as the United States to escape from unemployment.

It is equally interesting to note that this country and those across the Channel have been using similar methods to combat inflation and with as much indifferent success. Their weapons have been greatly restricted credit and dear money, and, just as in Great Britain, they have unfortunately had the effect of attacking investment. The overseas international problem of these countries measures comparably to that of Great Britain: they have been equally recipient of dollar aid and, indeed, they have received aid in increasing ratio contrary to the trend in the United Kingdom. In spite of dollar aid, they have been importing more from the dollar area and they have failed to export more. Their increased dollar imports have been due to requirements of raw materials, including coal and iron from the United States.

It is not in this context that convertibility is likely—the report sagely comments! The overseas balance of payments apart, two significant features come to the O.E.E.C.'s notice. First, that wages have, with the apparent exception of Switzerland, tended to outstrip prices; it is, of course, this factor which is fundamentally responsible for inflation. For demand is outstripping output on all investment goods as a result of the continuous pressure on consumer goods.

The second feature has been the restriction of investment—the paradox of the situation is the way in which the shortage of investment goods is to be cured by reducing the purchase of investment goods! But among the four recommendations of the Organisation there is one which says that further restrictive measures should bear as little as possible on industrial investment.

The other points made by the Organisation are not particularly illuminating. They declare that the measures taken to restrict inflation might be insufficient and might therefore have to be supplemented and developed by such measures as raising interest rates and restricting credit with fiscal and budgetary measures. It is this stage which we have reached in the United Kingdom.

A last point made is that which will appeal to every Chancellor: increases in wages, profits and unearned incomes "must not exceed realistic limits, particularly . . . where it is necessary to improve the competitive position of exports." The diagnosis has been made but the remedy remains to be found.

We have already learnt that it will not be found by restricting investment and, as befits the international position of the Organisation, it has emphasised that it must not be found by restricting trade between countries; indeed, trade barriers should be further reduced and exports, we are told, should be increased. However, there is one important point which is emphasised in the recommendations: the international mobility of labour should be increased. In blunt language, the unemployed Italians who are willing to work in the undermanned coal mines of Britain should be let to come in. But, on the rock of trade union intransigence, the wisdom of the O.E.E.C. will undoubtedly break.

For the United Kingdom, the report nevertheless has an important lesson: Some of the European countries—Western Germany is the obvious example—are overcoming their problem with greater success than is this country. They are increasing their exports, and they are succeeding also in increasing their investments. In this country, the recent budgetary debate has shown that the Opposition will give the Government no help at all in the way of reducing the inflationary strain. Will the Government have the courage both to combat the inflationary pressure and see to it that vital investment is no longer restricted?

STOCK & SHARE QUOTATIONS

Abbreviations :—D = Deferred shares. P.O. = Preferred Ordinary shares. Y = Accounts published yearly. H = Accounts published half-yearly. P = Company has Preference shares. T = Company has Debentures. N = Nominal quotations. x.d. = Ex Dividend. c.d. = Cum. Dividend. i = Interim Dividend. f = Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. **Reserves** include general and other reserves and all other funds which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. **Block** represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

NEW TAXATION PROPOSALS

(*Concluded from page 384*)

of the mills **producing** these oils and the following figures will be found of interest:

Range of annual production	No. of factories	Labour employed	Production Tons
Above 500 tons	492	27,945	684,316
More than 125 tons but not more than 500 tons	762	17,065	200,086
More than 100 tons but not more than 125 tons	124	1,579	13,847
More than 75 tons but not more than 100 tons	193	1,998	16,993
More than 50 tons but not more than 75 tons	254	2,689	15,865
More than 25 tons but not more than 50 tons	522	4,015	18,696
More than 0 tons but not more than 25 tons	4,197	13,084	21,904
Total ..	6,544	68,375	971,707

No exemption is being given to vegetable oils consumed in the production of vegetable products or soap.

The yield expected is Rs. 5.5 crores.

[Clause 34 (h).]

(*i*) *Refined Diesel Oils and Vaporising Oil (Power Kerosene).*—It is proposed to levy a Central excise duty of As. 4 per imperial gallon on "Refined Diesel Oils" and "Power Kerosene" employed in heavy motor vehicles such as buses, lorries and agricultural tractors. In effect, this duty is merely a counterpart of the customs duty of approximately the same size chargeable at present on imports of "High Speed Diesel Oil" which have been almost wholly replaced by internal production.

(*j*) *Diesel Oils not otherwise specified and Furnace Oil.*—It is proposed to levy a new excise duty of Rs. 30 per ton (approximately 2 annas per imperial gallon) on "Diesel Oil not otherwise specified" (Low and Medium Speed Diesel Oil), and a duty of Rs. 15 per ton (approximately 1 anna per imperial gallon) on "Furnace Oil." These grades of mineral oil are also being produced in considerable quantities in Indian oil refineries and are replacing imported industrial fuel oils, which are liable to import duty.

These new duties are expected to yield Rs. 4.5 crores.

(*k*) *Surcharge on Motor Spirit.*—The basic import and excise duty on "Motor Spirit" is As. 15 per imperial gallon. There is at present a surcharge of 5 per cent. on this rate, which raises the effective duty to As. 15-9 per imperial gallon. It is proposed to continue this surcharge for another year.

[Clause 36]

Discontinuance of Salt Duty.—It is proposed to discontinue the import and excise duty on salt for another year.

[Clause 37]

Income-Tax

3. *Rates of tax applicable to individuals, firms, etc.*—(*a*) The rates of income-tax and surcharge on income-tax for individuals, Hindu undivided families, unregistered firms and associations of persons for the year 1956-57 will continue to be the same as for the year 1955-56. The only change proposed is in respect of super-tax rates as explained under (*c*) below.

(*b*) One important change in the income-tax rate structure is the proposal to levy income-tax on registered firms also. At present, a partnership firm which is registered under the Income Tax Act does not itself pay any tax, but the partners are directly assessed to tax on their share of profits at their personal rates of tax. It is now proposed that a registered firm as such should pay income-tax at the following rates:

On the first Rs. 75,000 of total income ..	9 pies in the rupee.
On the next Rs. 75,000	1 anna in the rupee.
On the balance of total income	1 anna 6 pies in the rupee

The partners of registered firms will of course be assessed to tax directly as before on their share of profits, but they will get a rebate for income-tax at their personal rates on their share of the tax paid by the firm under the new procedure. This new tax on registered firms will be levied only in cases where the total income exceeds Rs. 40,000 so that firms with small incomes are not subjected to this tax. Further, in order to remove hardship in border line cases, marginal relief is provided, that is, a firm whose total income ranges between Rs. 40,000 and Rs. 44,140 will, instead of paying the full tax at the proposed rates, pay only one half of the difference between Rs. 40,000 and its actual total income.

The effect of this new tax may be illustrated by the following example:

A firm with four partners having equal shares and earning Rs. 1,00,000 pays no tax as such at present. The partners, however, are assessed each on an income of Rs. 25,000, assuming they have no income from any other source. According to the proposal now made, the firm as such will be required to pay a tax of Rs. 5,078. For purposes of taxing the partners, the share of income of each will still be Rs. 25,000, but for purposes of income-tax (and *not* for super-tax), each will be assumed to have paid tax on one-fourth of Rs. 5,078 (i.e., Rs. 1,270) at the rate applicable to an income of Rs. 25,000.

(*c*) The slabs and the rates for super-tax are proposed to be altered from the stage of Rs. 70,000 of total income. The present and the proposed rates are as follows:

Existing	As.	Proposed.	As.	
First Rs. 20,000..	*Nil*	First Rs. 20,000..	*Nil*	
Next Rs. 5,000..	1	Next Rs. 5,000..	1	
Next Rs. 15,000..	3	Next Rs. 15,000..	3	
Next Rs. 10,000..	5	Next Rs. 10,000..	5	
Next Rs. 10,000..	6	Next Rs. 10,000..	6	
Next Rs. 20,000..	7	Next Rs. 10,000..	7	Surcharge at 1/20th as in 1955-56.
Next Rs. 20,000..	8	Next Rs. 10,000..	7½	
Next Rs. 50,000..	9	Next Rs. 10,000..	8	
Balance of total income ..	9½	Next Rs. 20,000..	8½	
		Next Rs. 20,000..	9	
		Next Rs. 30,000..	9½	
		Balance of total income ..	10	

(*d*) The effect of these proposals is that there is no change in the tax liability of an individual with incomes of Rs. 70,000 or less, unless a part or whole of his income is derived from share in a registered firm with an income of more than Rs. 40,000. For persons with incomes higher than Rs. 70,000, the changes in the total tax liability (income-tax, super-tax plus surcharge) may be illustrated by the following examples:

A person having a total income of	Total income-tax, super-tax and surcharge for 1955-56	Total income-tax, super-tax and surcharge for 1956-57 as proposed
	Rs.	Rs.
Rs. 80,000	38,920	38,948
Rs. 1,00,000	54,370	55,026
Rs. 1,50,000	97,026	98,667
Rs. 2,00,000	1,41,323	1,44,004
Rs. 5,00,000	4,07,104	4,20,229

The extra revenue on this account will be about Rs. 2 crores.

4. *Rates of tax applicable to companies.*—(*a*) The effective rates of tax now applicable to companies and the proposed new rates may be summarised as follows:

	Present rates per rupee		Proposed rates per rupee	
	Income-tax	Super-tax	Income-tax	Super-tax
	Rs. a. p.	Rs. a. p.	Rs a. p.	Rs. a. p.
(1) *Companies which have made prescribed arrangements for the declaration and payment in India of dividends and for the deduction of super-tax from dividends paid to shareholders not resident in India* :—				
(*a*) Companies in which the public are substantially interested, with total income not exceeding Rs.25,000.	4 annas *plus* surcharge at 1/20th	0 1 9	No change	No change [but please see para. (*c*) below]
(*b*) Other companies ..	,,	0 2 9	,,	,,
(2) *Public companies not included in* (1) (*e.g., foreign public companies*) :—				
(*a*) Income other than dividends from subsidiary Indian company.	,,	0 4 3	,,	0 5 9
(*b*) Dividends from a subsidiary Indian company.	,,	0 3 3	,,	0 3 3
(3) *Private companies not included in* (1) (*e.g., foreign private companies*) :—				
(*a*) Income other than dividends from subsidiary Indian company.	,,	0 4 9	,,	0 5 9
(*b*) Dividends from a subsidiary Indian company.	,,	0 4 9	,,	0 3 3

(*b*) As against the income-tax payable at the rates mentioned above, a rebate of one anna in the rupee is at present given on the amount by which the total income (less tax) of a company (to which section 23A does not apply) exceeds the amount distributed as dividend. This rebate is proposed to be discontinued. Adequate provision is being made for recovering the rebate given in the past, if dividends are distributed out of the amounts on which rebate was given. Where the dividends distributed by a company (to which section 23A does not apply) are in excess of its total income, the present law provides for the levy of an additional income-tax on the excess dividends if they have been distributed out of sums which have been subjected to tax at a rate less than five annas in the rupee. This additional income-tax is proposed to be discontinued.

(*c*) In addition to the normal super-tax payable by a company at the rates mentioned in paragraph (*a*) above, a special super-tax is proposed to be levied on dividends distributed by it during the previous year in excess of 6 per cent. of the paid-up capital. The rate of this tax will be 2 annas in the rupee on the amount of dividends in excess of 6 per cent. but not more than 10 per cent., and 3 annas in the rupee on the excess over 10 per cent. For this purpose, paid-up capital includes bonus capital but does not include "preference" capital. Dividends on preference shares will not be taken into account for determining the amount of excess dividends to be subjected to this extra super-tax. This extra super-tax will apply only to the companies referred to at (1) (*b*) of the table above. But it will not apply to companies in which the public are substantially interested having incomes not exceeding Rs. 25,000.

(*d*) It is also proposed to levy on the companies mentioned at (1) (*a*) as well as (1) (*b*) of the table, an extra super-tax at the rate of 2 annas in the rupee on the face value of bonus shares issued during the previous year. The extra super-tax on excess dividends and bonus issues taken together will not exceed an amount calculated at 4 annas in the rupee on the total income of a company of the type mentioned at (1) (*b*) of the table.

(*e*) Incidentally, the total tax liability on the profits made by foreign companies operating through branches is sought to be brought into line with the liability of such companies operating through an Indian subsidiary, which distributes the whole of its profits after tax as dividends. The existing distinction between foreign public and private companies for purposes of super-tax is being removed.

The net effect of all these changes in corporation tax will yield about Rs. 8 crores.

[Parts I and II of the First Schedule.]

5. *Proposals which have the effect of increasing the tax liability.*—(*i*) *Subjecting to tax the distributions out of profits, whether capitalised or not, made on the liquidation of a company.*—As defined in the Income-tax Act, the term "dividend" includes "any distribution made to the shareholders of a company out of accumulated profits of the company on the liquidation of the company." (The amount so distributed is taxable as dividends in the hands of the shareholder). One High Court, however, recently held that, if the company has capitalised any portion of its accumulated profits by issuing bonus shares, before going into liquidation, only the balance of the accumulated profits which have not been capitalised should be taken into account for ascertaining the amount which should be treated as dividend. It is, therefore, now proposed to make it clear that all distributions made on liquidation out of profits accumulated upto the date of liquidation, whether previously capitalised or not, will be treated as dividends.

[Clause 3 (a).]

(*ii*) *Disallowance in the assessment of a company of excessive remuneration or value of amenities or benefits provided by it to its directors or shareholders substantially interested in the company.*—By virtue of the control which they exercise over the affairs of the company, directors and shareholders who have substantial interest therein, vote for themselves, under colour of business necessity, extravagant benefits at the expense of the company. For instance, the company is made to purchase cars or build big houses which are meant wholly or mainly for the personal use of such persons, and the company is thus saddled with expenses and liabilities which legitimately should be regarded as their personal or private expenses. In order to prevent such abuses, it is now proposed that in cases where any expenses of the nature described above are excessive or unreasonable, considering the legitimate business needs of the company, the amount in excess should not be allowed in computing the profits liable to tax in the assessment of the company. This will be without prejudice to the assessment of the full remuneration or the benefits in the hands of the recipients under the law as it stands.

[Clause 7 (b).]

(iii) *Discontinuance of initial depreciation allowance on new buildings, plant and machinery, brought into use after the 31st March 1956.*—At present, the following allowances are made to an assessee in respect of the capital cost of erection of new buildings, or purchase of new plant or machinery:

(*a*) normal depreciation allowance at the usual rates,

(*b*) an additional depreciation allowance equal to the normal depreciation allowance for five years, but not beyond the assessment year 1958-59,

(*c*) a development rebate of 25 per cent. of the cost on new plant and machinery installed in any business, and

(*d*) initial depreciation allowance for the first year, for new assets other than plant and machinery entitled to the development rebate.

The initial depreciation allowance which was introduced in 1946 has lost its significance by the introduction of the development rebate last year. At present, such initial depreciation is allowable only for items such as buildings, motor cars, office equipment, etc., and for depreciable assets owned by persons assessed under the head "profession." It is now proposed to discontinue this initial depreciation allowance, and it will not be available for new assets brought into use after the 31st March 1956. Development rebate will, however, continue to be given thereafter for such of those assets as are eligible for that rebate.

[Clause 7 (a).]

(iv) *Increasing the flat rate of super-tax for non-residents.*—At present, non-residents have the option of paying super-tax at a flat rate or at the rate appropriate to their total world income. Under the existing law, this flat rate is the lowest slab of super-tax rate. This rate was 3 annas in the rupee in 1954-55. With the insertion, however, of a new lower slab of super-tax in 1955, the flat rate has now become 1 anna in the rupee. This reduction in the flat rate had been ignored in the 1955 Act having in view the Taxation Enquiry Commission's suggestions. According to the Commission's recommendations, however, this rate would have been reduced from 3 annas to 2 annas only which was the lowest slab proposed by it. It is now proposed to restore the flat rate of super-tax to 3 annas from 1956-57.

[Clause 13.]

(v) *Increasing the flat rate of super-tax for undistributed profits in the case of investment companies assessed under section 23A.*—At present, companies to which section 23A applies are required to pay a special super-tax at a flat rate of 4 annas per rupee on the whole of their undistributed profits if the profits distributed as dividends in any year are less than the prescribed minimum. The flat rate of 4 annas is low for purely investment companies which do not need to have any large reserves and the shareholders may prefer the company to pay this special super-tax at a comparatively low rate rather than themselves pay super-tax at higher rates which they will have to if the profits are distributed to them as dividends. It is, therefore, proposed to increase the rate of super-tax on such undistributed profits from 4 annas to 8 annas per rupee in the case of section 23A investment companies only. The rate for non-investment companies will remain unchanged.

[Clause 15.]

(vi) *Readjustment of the tax relief given to shareholders of a company on dividends received by them in cases where the company defaults in paying the tax due by it.*—Two taxes are imposed

on companies—a super-tax and an income-tax. By a legal fiction, they are deemed to have paid this income-tax on behalf of their shareholders in respect of dividends distributed out of the taxed profits of the companies. When the assessments of shareholders are made, including in their income the dividends received from the company, they are credited with the amount of income-tax deemed to have been paid on their behalf by the company. The credit is given on the basis of certificates issued by the companies that taxes in respect of the profits out of which the dividends are distributed have been paid or will be paid. It happens sometimes that this credit is given in shareholders' assessments even before the company has actually paid the tax on the corresponding profits. If, in any case, the company ultimately does not pay tax on its profits fully or in part the shareholders will have received refunds without Government having received corresponding taxes from the companies. In other words, refund will have been given of a tax which has never been paid. In order to remedy this situation, it is proposed to empower the department to make the necessary readjustment in the assessment of the shareholder if it is found that the company concerned has not paid its tax within a period of three years from the end of the year in which the dividend was distributed.

[Clause 19]

(vii) *Provisions relating to the reopening of assessments in cases of evasion and the grant of adequate powers to the income-tax authorities in dealing with such cases.*—(1) At present, there are two sections of the Income-tax Act which enable the department to deal with cases of tax evasion:

(*a*) Under section 34(1) (*a*) cases can be opened or reopened within eight years after the expiry of the year in which the income was first assessable. This section also provides:

(i) that the sanction of the Commissioner of Income-tax should be obtained before the opening or reopening of such a case; and

(ii) that the assessment or reassessment concerned should be completed within the aforesaid period of eight years or within one year from the date of issue of the relevant notice for assessment or reassessment, whichever is later.

(*b*) Under section 34(1A), cases of tax evasion during the war period can be opened or reopened subject to the following conditions:

(i) the sanction of the Central Board of Revenue should be obtained before any case is opened or reopened;

(ii) the notice for opening or reopening the case must be issued before the 31st March 1956;

(iii) the amount of income which has evaded tax must be at least Rs. 1 lakh.

No time-limit as in section 34(1) (*a*) is prescribed for completing the assessment or reassessment.

(2) There is also a section 34(1B) which applies only to cases opened or reopened under section 34(1A), but not to those dealt with under section 34(1) (*a*). Under this section, the assessee can, within six months of the receipt of notice opening or reopening his case, offer to the Central Board of Revenue to have his case settled.

(3) It is now proposed to incorporate, with certain modifications, the provisions of section 34(1A) in section 34(1) (*a*). The object is sought to be achieved by amending section 34(1) (*a*). The effects of the amendment are as follows:

(i) The time-limit of eight years mentioned above with reference to the existing section 34(1) (*a*) will be dropped. No assessment for the years earlier than 1940-41 will, however, be started or reopened.

(ii) As is now the case with assessments or reassessments made under section 34(1A), there will be no time-limit for the completion of the assessment or reassessment to be made under section 34(1) (*a*).

(iii) Opening or the reopening of cases more than eight years old will continue to be subject to the conditions prescribed in the existing section 34(1A), namely, (*a*) the sanction of the Central Board of Revenue will be necessary before any such case can be opened or reopened; and (*b*) the amount of income which has evaded tax must not be less than Rs. 1 lakh.

(iv) The provision relating to settlement now applicable to cases dealt with under section 34(1A) will continue to be effective in respect of cases of tax evasion relating to the war years dealt with under section 34(1) (*a*). The Central Board of Revenue will have no powers to make such settlements in respect of other years.

The Taxation Enquiry Commission has recommended that, as in many other countries, there should be no time-limit for dealing with cases of fraud.

(4) The experience of the Income-tax Investigation Commission and latterly of the Department itself has shown that the existing powers conferred by the Income-tax Act on the Income-tax authorities are very inadequate for dealing effectively with cases of evasion. The Investigation Commission itself was in a position to discover large amounts of concealed incomes because of the powers of search of premises, seizure of documents, etc., conferred upon it. Some State tax authorities are vested with such powers for dealing with local tax cases and the Taxation Enquiry Commission has recommended the conferment of these powers on the Income-tax authorities to prevent evasion of tax. It is now proposed to empower the Income-tax authorities to enter buildings, search the premises and seize any documents, take notes, and so on, which may be relevant to or useful for any proceeding under the Income-tax Act. Such powers can be exercised only with the previous approval of the Commissioner of Income-tax. The amendment also authorises Government to lay down rules in this connection.

[Clauses 18, 20 and 21]

6. *Proposals which have the effect of reducing the tax liability.*—(viii) *Deduction of expenses incurred by a salaried employee on the maintenance of a conveyance of his own used for purposes of his employment.*—At present, no tax relief is given to a salaried employee for the maintenance of a conveyance of his own even though such conveyance is used partly for purposes of his employment. However, in the case of business men, doctors, lawyers, etc., a portion of the expenses incurred by them on the maintenance and running of their conveyance is deducted from their income if the conveyance is used also for the purposes of the business, profession or vocation. Salaried employees have been denied a similar relief on the ground that their conditions of service do not require them to incur out of their remuneration expenditure on the maintenance of conveyances "wholly, necessarily and exclusively" in the performance of their duties. However, as a matter of fact, salary earners, quite often, do use their conveyances partly, if not wholly, for the purpose of their employment as it facilitates the performance of their duties and otherwise contributes to their efficiency. It is, therefore, proposed to permit in their assessments the deduction of a reasonable portion of the expense and wear and tear which can be attributed to the use of the conveyance on employment purposes as distinct from their purely private purposes.

[Clause 5 (b)]

(ix) *Grant of unilateral relief in India for income charged to agricultural income-tax in Pakistan.*—Agricultural income arising in Pakistan to a resident in India is assessed to agricultural income-tax by the States in Pakistan and is again chargeable to Indian income-tax as non-agricultural income on the ground that no income arising outside India can be classified as agricultural income for the purposes of the Indian Income-tax Act. Thus, the same income is liable to tax in India and Pakistan and the assessee is unable to get any relief from double taxation as the agreement with Pakistan for the avoidance of double taxation does not extend to income classified as agricultural in either of the countries. In order to remove this hardship, it is proposed to allow relief in India on this doubly taxed income equal to the Indian Income-tax or the Pakistan agricultural income-tax, whichever is less. As the double taxation has been in existence on incomes arising after the 15th August 1947, it is proposed to grant the relief retrospectively from the assessment year 1948-49. For this purpose, the assessee concerned has to make an application within 4 years from the end of the Indian assessment year. Applications for such relief in respect of the years 1948-49 to 1951-52 will however be treated as in time if they are made before 31st March 1957.

[Clause 23.]

(x) *Exemption of salaries of foreign technicians employed in Government undertakings.*—Provision was made in the Finance Act, 1955, exempting from tax for a limited period the remuneration received by a foreign technician employed in a business in India. The exemption does not apply to the cases of technicians employed directly by Government and other public bodies. Further, under the law as it stands at present a foreign technician who stays in India for 365 days or more, loses the benefit of the exemption for the second financial year of his stay in India, while one whose stay is for less than 365 days gets that benefit. It is, therefore, proposed to re-enact the provision with the following modifications:

(*a*) granting exemption to foreign technicians employed by Government, local authority or statutory corporations;

(*b*) granting exemption for the remuneration for one full year from the date of the technician's arrival in India in cases where the technician stays in India for more than 365 days. It is proposed to give retrospective effect to this amended provision from the 1st April 1955, the date on which the original provision came into force.

[Clause 4.]

(xi) *Continuance of the exemption for new industrial undertakings.*—At present, manufacturing and other industrial undertakings newly established are exempted from tax for a period of five years from commencement of manufacture or production if they satisfy certain conditions. The exemption is limited in each of the five years to profits not exceeding six per cent. on the capital employed in the undertaking.

The existing exemption will be available to undertakings established before 31st March 1956. It is now proposed to extend the date by another five years, so that the exemption will be available similarly to industrial undertakings established during the years 1956-1961 also.

[Clause 11]

7. *The other changes in the Income-tax law proposed are either consequential to the proposals mentioned above, or are clarificatory, or relate to matters of procedure.*

[Clauses 6, 8, 9, 10, 12, 14, 16, 17, 22, 24, 25, 26, 27, 28.]

M—Managed by the board of directors. ‡ Less income-tax. (a) Clive Mills have paid dividend at As. 10½ on bonus shares, for the year, 1955. ♦ Including bonus.
(f) Made up of an interim dividend of Re. 1-12 per share on 1,20,000 shares and final dividend of Re. 1-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (d) Investment. (e) For seven months ended 31st March ,1954.

EQUITIES CLOSE STEADY

RECOVERY ON SECOND THOUGHTS ABOUT BUDGET

(From Our Own Correspondent)

BOMBAY, 1st *March*

THE behaviour of the share market during both the special Budget session held today evening and the regular session held today indicated, as a whole, that the operators were not in a position rightly to assess the full implications if the Union Finance Minister's proposals. During the Budget session, as the proposals came in one after the other on the ticker, the market developed an erratic tendency and quotations fluctuated rather violently. In the initial stages, the sentiment was better, but later when news regarding dividend controls appeared, the market almost collapsed, though there was some recovery subsequently, at the end of the session. Today, too, more or less a similar trend was in evidence. For, on first thoughts, it appeared that the proposals would have a depressing effect on both capital formation and cost of living in the country. In fact, the super-tax on higher income groups has been raised, an extra burden has been cast on companies in several ways. Thus, the withdrawal of the rebate of one anna on undistributed funds of companies not covered by section 23-A, the levy of tax on dividends declared in excess of 6 per cent., the imposition of a tax on bonus issues, the additional excise duty of six pies on cloth, except in the case of *dhotis* and *saris* of the coarse variety, and an excise duty on vegetable (non-essential) oils, diesel and vapouring oils all seemed to be cumulatively responsible for producing an unsettled effect on the market.

Towards the close today, on second considerations, the market would appear to have, however, changed its earlier opinion regarding the overall effect of the Budget proposals on company finances. The absence of taxes either on wealth or on expenditure, or an increase in estate duties, as was feared earlier, was viewed favourably. The incidence of taxation on companies was considered to be not very heavy. It was felt that many well-managed concerns would be able to maintain dividends, since the amounts of additional tax they would have to pay on dividend distributed by them in excess of 6 per cent. being relatively small, was within the ability of these companies to pay. Besides, some of the Budget proposals had been discounted in prices during the pre-Budget sessions, as some market men were understood to have got scent of the propossals a few days ahead. Consequently, there was a fair-sized recovery in prices over a wide front due to bear-covering, though, on balance, the quotations were lower than those a week ago. The undertone of the market remained steady at close.

In the pre-Budget trading, the market remained quiet with values marked down due to the usual Budget uncertainties, thus preparing the ground for the worst.

In the steel section, operators seemed to have no clear ideas regarding the implications of the Budget proposals in the context of the impending issue of new shares. There was a tendency to await the outcome of the extraordinary general meeting of the Tata Iron and Steel Company, Ltd., on the 12th inst. Trading in Tata Ordinaries during the week revealed wide fluctuations in values. Earlier in the week, they rose from Rs. 226 to Rs. 229-8, but dropped to Rs. 222 in the immediate pre-Budget session. In the initial stages of the Budget session they shot up to Rs. 228, but receded to Rs. 219 on news of control on dividends. The closing today was, however, better at Rs. 222-8. Indian Irons came up from Rs. 32-6½ to Rs. 33, but slumped to Rs. 31 in the Budget session. There was a recovery to Rs. 31-15 at the close today.

Despite the increase in excise duty on cloth, except *dhotis* and *saris* of coarse variety, textile shares improved today, making good to a large extent the earlier losses. Bombay Dyeings fell from Rs. 524-6 to Rs. 509-6. In the Budget session they shot up to Rs. 541-4 before receding quickly to Rs. 507-8. Today again there was a recovery to Rs. 523-12. Centurys came up to Rs. 485 in the Budget session, as against the previous closing of Rs. 480. After dropping to Rs. 458 the shares improved to Rs. 473. Kohinoors finished the week at Rs. 328, with a loss of Rs. 7-8 over the week. Central Indias were better by Re. 1-8 at Rs. 137. Finlays were marked down by Rs. 2-8 to Rs. 320, Gokaks by Rs. 2 to Rs. 228-8, Indu Ordinaries by As. 5 to Rs. 12-1½ and Indore Malwas by Rs. 3-12 to Rs. 140-10.

Bank shares were listless with the volume of business at a low ebb on reports of nationalisation of a few more State-associated banks. Centrals lost Re. 1 over the week to Rs. 46-8 and their new shares Re. 1-8 to Rs. 49-8. Bank of India were unchanged at Rs. 152, while Barodas were a fraction better at Rs. 98-8. United Commercials had business at Rs. 45-8, with no change in price over the week.

The insurance section was quiet. Orientals declined from Rs. 3,960 to Rs. 3,910 and New Indias from Rs. 39-12 to Rs. 38-12. The other shares were unchanged.

Electricity shares ruled lower. Ahmedabad Electrics fell by Rs. 2-13 to Rs. 100, while Bombay Suburbans disclosed no change at Rs. 116-4. Surat Electrics moved down by Re. 1-4 to Rs. 122-8. Tata Hydros were a fraction higher at Rs. 131-8, while Tata Powers shed Rs. 7-8 to Rs. 1,345 and Andhra Valleys Re. 1-4 to Rs. 1,285.

In the miscellaneous section, A.C.C. recovered from Rs. 198-4 to Rs. 207 in the Budget session, but slumped to Rs. 199 before recovering to Rs. 205 at the close today, gaining Rs. 6-12 over the week. Digvijays also advanced by Re. 1-8 to Rs. 173. Sugar shares were fairly steady in the absence of any increase in excise duty on sugar. Belapurs came down from Rs. 213 to Rs. 206, but closed higher at Rs. 212. Walchandnagars improved by Re. 1-4 to Rs. 242-8. Phaltans were steady at Rs. 127. In the engineering and mining group, Alcocks fell by Rs. 5 to Rs. 355 and Larsen and Toubros by As. 10 to Rs. 15-2.

In the shipping and transport group, Scindias were done at Rs. 16-2½ *ex-div.*, as against Rs. 16-5 *cum-div.* a week ago. Great Easterns were better by As. 3 at Rs. 15. Hindustan Motors were dull at Rs. 8-14 and Premier Automobiles at Rs. 83. Among miscellaneous industrials Bombay Burmahs declined from Rs. 529-6 to Rs. 517-8, but in the Budget session rallied to Rs. 557-8 following the relief in export duty on tea. Today, however, they closed lower at Rs. 524-6. National Rayons were brought down from Rs. 220 to Rs. 207-8, before they recovered to Rs. 214-8 at the close. British India Corporations lost As. 8 to Rs. 11-2. Despite the levy of excise duty on vegetable oils, Tata Chemicals recorded a gain of As. 13½ to Rs. 17-6½. Tata Oils were steady at Rs. 42-4 and Wimcos at Rs. 188-2.

MARKET GOSSIP

(Concluded from page 383)

some valuable information about the working of the regulations relating to capital issues. The control on capital issues, it may be recalled, was first introduced in May 1943 under the Defence of India Rules. It was continued after the termination of the war by an ordinance and thereafter in 1947 by an Act for a term of three years. It was again successively extended in 1950 and 1952. When the Act was first introduced in 1943, the object was primarily to conserve the available investible resources of the country with a view to utilising them for war effort, and secondly, to combat inflation. Explaining the need for continued retention of this control, the Finance Minister said that, in the context of the Five-year Plan which calls for the mobilisation of the entire investible resources of the country for the implementation of approved projects both in the public and private sector, the control on capital issues "has become a specially important financial weapon in the repertory of the administration for regulating and directing the flow of funds in accordance with the requirements of the Plan."

The Government has used the powers under the Act, according to Mr. Deshmukh, in order to prevent the diversion of investible resources to non-essential projects. The powers have also been used to serve certain ancillary purposes: the regulation of the issue of bonus shares, regulation of capital reorganisation of companies, including mergers and amalgamations, the regulation of capital structure of companies, with a view to discouraging undesirable practices (such as the issue of shares with disproportionate voting rights), regulation of the terms and conditions of additional issues of capital, that is, issue prices of new shares, underwriting and brokerage charges.

The number of cases in which capital issues were sanctioned fell from 254 in 1952 to 232 in 1953 and to 220 in 1954 but rose to 289 in 1955. The total amount of issues involved in these sanctions rose from Rs. 39.8 crores in 1952 to Rs. 81.4 crores in 1953, Rs. 110.6 crores in 1954 and Rs. 125.4 crores in 1955. The bulk of these issues was in the form of equity shares, the proportion of the equities to sanctioned issues varying from 67 per cent. in 1952 to 45.5 per cent. in 1955. The total amount of capital involved in applications for consent which were rejected was the largest in 1952, being Rs. 112.5 crores. It would appear that this figure was unduly inflated through two "erratic" applications of Rs. 50 crores each. For subsequent years, the amounts covered by refusals were Rs. 8.4 crores in 1953, Rs. 6.4 crores in 1954 and Rs. 26 crores in 1955.

It must, however, be remembered that the consent for an issue of capital is not always followed by actual raising of capital. There is no reliable information about the actual amount of capital raised. This is because the companies, which are given 24 months following the grant of consent by the authorities and asked to submit periodical returns about the progress they make, do not regularly supply such returns. The Finance Minister emphasised that an important administrative problem "relating to the working of the capital issue control in recent years has been to reorganise and strengthen the machinery and follow-up work." It would appear that suitable separate cells for this purpose have recently been created in almost all the important offices of the Registrars of Joint Stock Companies. It is to be hoped that through this measure it would be possible for the Government to obtain the data about the actual raising of capital against the consent orders issued under the Act.

In the administration of the Act, the Government is assisted by a five-member Advisory Committee of representatives of trade and industry and the general public, constituted in accordance with Section 11 of the Act. The Committee does not deal with individual applications as such. It is, however, consulted on major issues of policy relating to corporate investments. Paying a tribute to the services which the Committee had rendered to the Government, Mr. Deshmukh said: "The help and assistance which the Government have received from the Advisory Committee in the past has been invaluable and I should like to take the opportunity of acknowledging the services which the members of the Advisory Committee have rendered to the administration."

Two important issues were raised in the course of the debate. In the first place, many members pointed out that considerable delay occurred in the grant of consent to applications for capital issues. It was also pointed out that more information about the working of the organisation should be made available to the public. The Minister himself agreed that the periodical reports issued by the authorities should be more informative. Secondly, the question of taxation of the issue of bonus shares was raised. Mr. Deshmukh did not reveal the Government's attitude towards this question. He said that the question was "very complicated," with opinion being sharply divided on the necessity or otherwise of a tax on bonus issues.

Obviously, as the budget proposal for the taxation of bonus issues (As. 2 on such issues) shows, he had made up his mind but could not reveal it. Nevertheless, Mr. Deshmukh is wrong in suggesting that opinion is sharply divided on this issue. Actually, all informed opinion has held that a tax on bonus issue is an unjust levy, since it tantamounts to taxing an income that has already been taxed. And, it is for this and other very good reasons, that the Taxation Enquiry Commission held that bonus issues should not be taxed. In a very unconvincing reference to his proposal, Mr. Deshmukh declared in his budget speech: "I have taken due notice of the recommendation of the Taxation Enquiry Commission that there should not be any tax on bonus shares. I consider, however, that there is adequate justification for imposing such a tax and, in any case, such tax is an integral part of the scheme I have proposed." Mr. Deshmukh seems to want the best of both worlds. When the Commission's report suits his case, he quotes it approvingly and when it does not, he says he is not convinced.

Notice

THE EAST INDIA DISTILLERIES AND SUGAR FACTORIES LIMITED

THE Speech made by Mr. C. R. Srinivasan at the Annual General Meeting held on the 23rd February 1956 has already been published.

2. At the Meeting:

(*a*) The Report of the Directors and the Accounts for the year ended 30th September 1955 were adopted.

(*b*) The consideration of the Resolution relating to the declaration of dividends was adjourned to 11 a.m. on the 27th February 1956.

(*c*) Mr. G. N. Noel-Tod and Mr. V. Ramakrishna, I.C.S. (Retd.), were re-elected Directors of the Company.

(*d*) The remuneration of the Auditors was fixed.

(*e*) Resolution No. 5 approving the acquisition by the Company of the Ordinary Share Capital of Parry and Company, Limited, was approved.

All resolutions were passed *nem com.*

3. The Class Meetings of the 'A' and 'B' shareholders were adjourned to the 29th March 1956 at 3-30 p.m. and 3-45 p.m. respectively. Consideration of Resolution No. I of the Extraordinary General Meeting was adjourned to 4 p.m. on the 29th March 1956.

4. The Directors of The East India Distilleries and Sugar Factories, Limited, have pleasure in announcing that their offer to purchase the Ordinary Share Capital of Parry and Company, Limited, as set out in their letter of the 18th October 1955 and confirmed at the Annual General Meeting of the Company on the 23rd February 1956 has been accepted and effect thereto has been given.

5. The allotment of shares to those shareholders of Parry and Company, Limited, who opted to take 'B' shares in this Company in exchange for their Ordinary Shares in Parry and Company Limited was duly made at a Meeting of the Board of Directors held on the 26th February 1956.

6. At the adjourned Annual General Meeting held at 11 a.m. on the 27th February 1956, final dividends for the year ended 30th September 1955, without deduction of Indian Income-tax, at the rate of 5 per cent. on the Company's 'A' Share Capital and at the rate of 10 per cent. on the Company's 'B' Share Capital, together with a special additional dividend of 5 per cent. on the Company's 'B' Share Capital were declared, payable on the 14th March 1956 to shareholders on the Register as at the close of business on the 29th February 1956.

By Order of the Board,
PARRY'S HOLDINGS LIMITED,
Secretaries.

NEED FOR FLEXIBLE PLAN

THE one, though not the only, common ground on which the Government and the business community seem to meet is the need for flexibility of approach in achieving the economic tasks ahead of the nation. This was particularly clear from the deliberations of the Federation of Indian Chambers of Commerce and Industry at its annual session, held at New Delhi, last week. Mr. Nehru, who addressed this body, emphasised the need for "flexible" thinking in an age which was "progressively becoming qualitatively different from the past." The President of the Federation, Mr. Shantilal Mangaldas, too, stressed that an "element of flexibility" should be introduced into the schemes of economic development formulated by the Government. Since there is a danger that a "flexible approach" might degenerate into a mere slogan; or the phrase may be used as an excuse for abrupt changes in policy, it is well to remember that it essentially implies an attitude of mind, a certain pragmatic outlook. Given such an attitude on the part of the Government, the business community and the workers, it should still be possible to find an ever-widening sphere of activity in which the three essential elements can co-operate in the interests of India's economic progress.

Looking at problems, as he generally does, in the global perspective, Mr. Nehru pointed out that, on the one hand, capitalism today in the very highly developed countries was different from what it was 50 years ago, and, on the other, the Soviet Union, so much given to theorising, had been compelled by circumstances to change its rigid attitudes. He envisaged a society in which class conflict ceases to exist. He pleaded for a reduction in economic disparities which were "psychologically, politically and economically bad." This is now generally accepted, for it is recognised that excessive inequalities breed malignant political evils. Even so, the many who accept this view might find it difficult to agree that socialism is inevitable and that "no other solution is possible." After all, all arguments about the inevitability of a particular social change are open to the charge that they deny human will, that they imply the reduction of human beings into automatons. Mr. Nehru was, however, on firmer ground when he stressed the concept of equality of opportunities. He said: "Everyone must have the same opportunities, though some might be able to make better use of them than others."

There is no particular reason why this concept of "equality of opportunities," though it was developed in a purely individual context, should not be applied to larger groups. In the economic sphere, the artificial dichotomy into the private and public sectors is particularly deplorable. So far, no convincing reason, apart from the arguments based on ideological considerations, has been advanced to justify the larger role allotted to the public sector in the second Five-year Plan. There is no getting away from the fact that the whole concept is a denial of that "flexible" approach which really makes for the success of a plan. In its resolution on economic policy, the Federation rightly insisted that the "activities of both the State and the people should be looked upon as national activities undertaken by the community as a whole, working in unison and co-operation in the mighty task of economic development that has been placed before the present generation." The chief justification for such co-operation lies in two factors. In the first place, it is widely recognised that, at least in the immediate future, the emphasis must all be on production of wealth. Obviously, there is no point in distributing poverty. Secondly, the private sector is in entire agreement with many of the major objectives of the Plan. As Mr. Shantilal Mangaldas said: "I would straightaway say that there are certain features of the new Plan that give us satisfaction. The clear emphasis on rapid industrialisation, the importance of basic industries, as also the developmental targets envisaged for different industries, and the recognition that the unemployment problem has to be tackled in a realistic manner are all in keeping with the approach which we in the Federation had outlined in our draft note on the second Five-year Plan."

It is, therefore, somewhat disconcerting to note that the private sector, even if it has not been given short shrift, has been assigned less than an adequate role. Judging by its past achievements—nobody can deny that this is an important standard to go by—it does certainly deserve a better deal. During the period of the first Plan, the private sector invested some Rs. 340 crores on modernisation, expansion and establishment of new industries, as against the target of Rs. 373 crores. The shortfall, small as it is, is more apparent than real. In some cases, there was some delay in the availability of power and certain basic requirements. Again, the estimates of investment could fortunately be revised downwards through a certain fall in the prices of capital equipment. Finally, the private sector actually improved upon the first Plan by venturing into certain important fields, not envisaged in detail in the Plan, such as dyestuffs and steel tube mills. The second Plan, as is well known, envisages a ratio of 62:38 in respect of the public and private sectors, respectively, as against the 50:50 ratio in the first Plan. But this is not the whole matter.

Mr. Shantilal Mangaldas brought out the inequity of the allocation of resources between the private and public sectors when he pointed out that, in the sphere of industry, while the investment in the public sector was being stepped up from Rs. 75 crores in the first Plan (the actual amount spent, as against the total allocation of Rs. 149 crores) to Rs. 691 crores or by 800 per cent., the investment in private industry is to be increased from Rs. 340 crores to about Rs. 500 crores (exclusive of Rs. 100 crores on plantations, private transport and electricity undertakings), or by 47 per cent. He did not, of course, suggest that the rate of investment in industry in the public sector was not capable of being increased beyond the level attained in the first Plan. Nor was he unaware of the fact that a substantial proportion of the investment was to be on three new iron and steel plants. But he could not resist the impression that, even after taking into account these two factors, the "desire to extend the public sector in the field of industry by reserving certain lines of activity to itself might have the result of slowing the pace of development." Surely, it cannot be the objective of the Government to see that industrial development is sacrificed at the altar of ideological considerations. It will, therefore, be well-advised to keep the Plan flexible at every stage, so that the two sectors might continually be engaged in supplementing, rather than supplanting, each other.

Clearly, it would be wrong to deny the claim of the private sector for a larger role in the national economy on the ground that it wants to carve a safe niche for itself. Actually, it wants no more favour than to be allowed to exist, to engage itself in a field into which all who want to enter may enter. In other words, it wants no monopoly for itself. Mr. Mangaldas did well to refute the charge that Indian industry was in the nature of "monopoly cap

feelings of the business community when he said:

"I realise that it is part of a major policy decision that the State must control and regulate the entire economic activity for planned development and enlarge the field of its ownership and running of certain basic industries essential to the community. Even if we may not be able to see eye to eye with this policy, I believe that it is possible to obtain the same objective through the type of regulation and control which obtains at present and by Government taking control of strategic heights of the economy. In a modern State with the vast power that it has, it is not necessary for Government to own and run in the physical sense businesses excepting those which the people generally are not in a position to undertake or which are essential to be so owned and run by Government for certain overriding considerations."

The view, expressed above, is not a purely academic one. It is based upon recent trends in governmental regulation and control over economic activity. Indeed, in India, it has been a particularly marked feature of legislative labours in recent years. The Government has armed itself with tremendous powers. Whether the assumption of these powers is justified or not, the Government at least cannot—rather, should not—complain that it is unable to prevent the growth of undesirable practices in the industrial sector. If it learns to use them well, with circumspection, deliberation and due regard to the prosperity of the managements, the investors and the workers, it will not have assumed the powers in vain. In any case, the point is that any plea that it does not have the necessary powers to control and direct economic development along desirable channels will not carry conviction to the people. Now that it enjoys such extensive powers, it would, on the part of the Government, be nothing short of vainglorious display of ideology, if it denied to the private sector a larger and more effective role in national economic development—a role which the sector is both anxious to play and so eminently capable of playing.

REFLECTIONS ON THE CENTRAL BUDGET—II

A COMMON criticism of the budgets presented by Mr. C. D. Deshmukh, India's Finance Minister, is that he underestimates the revenue and overestimates the expenditure, in order to justify the new taxes proposed by him. There is every reason to feel that the budget for 1956-57—the sixth one presented by him—will also not escape this charge. What prompts one to make this charge is the experience of the year drawing to a close. Taking into account the changes in the initial tax proposals made in the budget for 1955-56, the Finance Minister had expected the year to close with a deficit of Rs. 17.35 crores on revenue account, but the revised estimates show a handsome surplus of Rs. 12.31 crores, following an increase of about Rs. 20 crores in revenue and a fall of Rs. 9.50 crores in expenditure. The actuals for this year, which will be disclosed a year hence, may show a still greater surplus. In any case, in the light of the revised estimates themselves, it can be stated that the heavy taxes imposed on individual incomes in the 1955-56 budget were unwarranted.

The experience of 1955-56 is by no means an isolated one. It is but a continuation of the trend witnessed ever since Mr. Deshmukh assumed the office of Finance Minister. He has scrupulously endeavoured and succeeded in ending every year with a substantial surplus on revenue account, as will be seen from the following figures:

(In crores of rupees)

	Surplus (+) or Deficit (−)	
	Budget	*Actuals*
1951-52	+26.10	+128.09
1952-53	+18.75	+ 38.93
1953-54	+ 0.45	+ 8.50
1954-55	−14.21	+ 33.51
1955-56	−17.35	+ 12.31*
1956-57 before new taxes ...	−51.83	—
1956-57 after new taxes ...	−17.68	—

*Revised estimate.

There is, of course, nothing new in this criticism. It has been made almost every year and Mr. Deshmukh, too, has offered some explanation or other, while replying to the budget debates. But the fact remains that even the years which were definitely expected to close with a deficit —1955-56 was one of them—have wound up with a surplus.

Anticipating this criticism against the 1956-57 tax proposals also, Mr. Deshmukh had suitably prefaced them. Thus, at the very outset of "Part B" of his budget speech, he said:

"I believe that, with the administrative machinery both at the Centre and in the States getting increasingly geared to the execution of the Plan, shortfalls in expenditure of the order which have occurred in recent years will tend to diminish. The estimates for the coming year have been framed with as much care as possible; in particular, substantial reductions have been made under heads which have shown persistent savings and the provision for grants to States for various development schemes has been based on a proper assessment of the ability of the States to find their share of the resources required to finance those schemes. Although it is not possible to say categorically that the shortfalls will be entirely eliminated or that there will be no variations in estimates of revenue, the margin of fluctuations is likely to be narrower than in the past. Indeed, it may be said that the cuts that have been made in some of the demands for next year may prove to be too fine. I cannot but stress again the principle that current expenditure should, as far as possible, be met from current taxation. It is, therefore, necessary to cover the gap on revenue account in the coming year, if not wholly, at least substantially. My proposals for additional taxation are related to this objective."

While it must be admitted that no precise estimate of revenue and expenditure is possible in respect of a vast country like India, especially since its economy is influenced by several unpredictable factors, it stands to reason that, on the basis of experience in the past five years, a more optimistic view of the revenues in the coming year and a more sober view of the capacity to spend were warranted. If such an approach had been made, the necessity for imposing a heavy burden on the corporate sector would not have arisen. It would be wrong to assume that, if the Finance Minister had not enhanced the corporate taxes, the implementation of the second Five-year Plan would suffer a setback. On the contrary, it would receive a great fillip for three reasons. First, the savings which the Finance Minister now seeks to take away by these taxes would then be utilised by the corporate sector to expand its activities or to establish new industries. Secondly, the new corporation taxes are very likely to act as a brake on fresh enterprise and expansion of the existing industries in the private sector. This handicap would not have emerged, had these taxes not been imposed. Thirdly, investment by the private sector produces quicker results—and at less outlay—than investment by the public sector.

The general impression is that the Finance Minister has underestimated the revenue through the new taxes imposed by him. The increase in excise duty on cloth will easily fetch him five or six crores of rupees more than the Rs. 14.5 crores expected by him. Similarly, the increase in corporation tax and the imposition of a tax on bonus shares may yield Rs. 15 crores or Rs. 16 crores, instead of the modest sum of Rs. 10 crores he visualises. Since the export duty on tea was not more than As. 6 per lb. during the best part of 1955-56, the provision for a loss of Rs. 1 crore consequent on the reduction in the duty for the slab relating to the price range of Rs. 3-4 to Rs. 4 per lb. from As. 8 to As. 6 seems to be unwarranted. On the whole, the revised estimates for next year also may show a net surplus, instead of a net deficit of Rs. 17.68 crores, unless, of course, some unforeseen developments upset the present economic conditions in the country. Be that as it may, if Mr. Deshmukh is of the view that a revenue deficit of Rs. 17.68 crores can be safely left uncovered, he can, in the light of what has been stated, nay, should, for reasons mentioned in our last leading article on the budget, revise the corporation tax in a downward direction.

The revised expenditure estimates for the current year provide a number of instances where the Government has been unable to spend in full the amounts mentioned in the budget for that year. These instances are found in the revenue and capital sides alike. On the revenue side, the expenditure on education as well as on social welfare measures has been below expectation. The Defence Services, too, were not able to absorb the entire budgeted amount, the shortfall being no less than Rs. 17.61 crores. A convincing explanation given by the Finance Minister in so far as this item is concerned is that sufficient supplies could not be procured. Nonetheless, the provisions for these heads of expenditure in the budget for next year are substantially higher. The need for a higher provision may be there. It is, however, an entirely different question whether the departments would succeed in spending the enhanced allocations.

The extent to which the Government failed to implement the capital budget for 1955-56 is far greater than in the revenue budget. From about Rs. 223.30 crores estimated in the budget, the capital outlay, according to revised estimates, has fallen to Rs. 170 crores, a drop of over Rs. 53 crores. A sum of Rs. 29 crores had been earmarked for State trading schemes, such as imports of foodgrains and sugar. Of this, only Rs. 18 crores were utilised, owing to reduced imports of wheat and sugar, so that there was a saving of Rs. 11 crores. This shortfall is, of course, no reflection on the Government, but what is, is the shortfall in a number of industrial projects meant to be developed by the Central and the State Governments. To give an instance, a sum of Rs. 5 crores had been earmarked for Hindustan Steel Ltd., whereas not a pie was expended on this project. The provision for the second steel plant has been revised upward from Rs. 10 lakhs to Rs. 250 lakhs, but it is doubtful whether all this will be spent before the end of this year. It is true that, taken as a whole, the shortfall in the provision for industrial development by the Centre is only nominal, the revised estimate being Rs. 15.88 crores, as against the budget estimate of Rs. 16.42 crores. It is also true that, of the amount of Rs. 20.99 crores earmarked for displaced persons, only a sum of Rs. 99 lakhs is now expected to be spent. Further, the Finance Ministry may point out that it had set apart Rs. 279.29 crores for advances to State Governments, and, if the latter could take up only Rs. 250.98 crores, it should not be blamed. But all this is beside the point. The real point is that the Government frames a big, ambitious capital budget, without due regard to its capacity to spend. Having framed such a budget, it plans its borrowing programme and intensifies the small savings drive. When these plans and drives succeed, as they did during 1955-56, it drains away from the community's total savings an amount which is disproportionately large as compared with the ratio of deficit financing and borrowing to the total capital investment envisaged in the budget. The result is that the quantum of savings available for investment by the private sector needlessly gets depleted. This, in turn, retards the economic progress of the country. A clear picture of the extent to which the Government has overshot its mark is clear from the fact that the overall budget deficit for 1955-56 has shrunk from the estimated figure of Rs. 327 crores to Rs. 222 crores (revised).

The capital budget for next year also seems to suffer from the same defect. Under the head "industrial development," for instance, the Central Government has provided for an expenditure of Rs. 79.60 crores, as against a mere Rs. 15.88 crores for 1955-56, that is, a five-fold increase. The sums set apart for State Governments and under "other loans and advances" are also substantially higher than the revised estimates for the current year. We are afraid that the story of achievements, to be told a year hence, will not be materially different from the one which we have just stated. With the reorganisation of States still in preliminary stages, with the general elections falling due in the budget year 1956-57—these developments will necessarily take up the time and energy of the Ministers all over the country—and with incentives for the private sector further curtailed under the latest tax proposals, it will be most unrealistic to expect that the implementation of the capital projects will be on the same scale and at the same pace as is envisaged in the budget. Another factor that strengthens this conclusion is the acute shortage of technical manpower, not to mention that of basic raw materials such as cement and steel. It is extremely doubtful whether there will be such substantial improvement in this position during the coming twelve months as is necessary in order to implement the large investment programmes now proposed. In these circumstances, any discussion of large-scale deficit financing (placed in the neighbourhood of Rs. 360 crores) will essentially be of an academical nature. The fears about the consequences of an inflation of this order may be tempered by the prospect of the Governments, both at the Centre and in the States, not being in a position to implement the plans fully.

STEADY TREND IN EQUITIES PERSISTS

TAXING GENUINE PROFITS—EXCISE ON CLOTH—GENERAL INSURERS

THURSDAY, 5 P.M.

THE share market has put on a steady note. The improvement which followed the announcement of budget proposals last week has persisted, despite frequent profit-taking. Operators seem to have been guided by immediate developments, rather than by long-term prospects for industrial equities. Since the last few days, there have been good dividend announcements by a number of textile mills. Thus, Bombay Dyeing, Gokak, Phoenix and Dawn have stepped up their dividends, while a number of others have maintained the previous year's levels. The market is also thick with expectations of new bonus issues, as there seems to be a growing feeling in certain sections that companies with large reserves would prefer issue of bonus shares to announcement of higher dividends. Besides, some custodians of insurance firms are also stated to have extended limited support to the market. As a result, prices of equities have staged a sizable rally under the leadership of textiles. Despite the improved tendency, the tone of the market remains cautious, as there is still an undercurrent of misgivings regarding the long-term outlook for industries.

MARKET GOSSIP

At the moment, the minds of operators on the Stock Exchange are being exercised over the dividend limitation policy of the Central Government as enunciated by Mr. C. D. Deshmukh, Union Finance Minister, in his latest budget statement. In market circles, it is conceded that the Minister has had to gear his budget to the requirements of a "bold and ambitious plan," but it is felt that, in distributing the burdens arising from the need for financing the Plan, he has not been able to strike a reasonable balance. They view with concern the deleterious effect on industrial concerns of some of the corporation taxes proposed by the Minister. The graduated tax on dividends over 6 per cent. and the tax of As. 2 in the rupee on the face value of bonus issues, it is feared, will have an adverse effect on the psychology of investors. Thus, the investors cannot possibly look forward either to higher dividends or to appreciation of capital which are the two inducements to attract risk capital to industry. They tend to diminish the flow of such capital, particularly to new industrial ventures which, in turn, will arrest the progress of industrial expansion.

The graduated dividend tax and bonus tax are considered objectionable for several reasons. The former particularly does not stand scrutiny on grounds of economic justice. For this tax is a new tax on the same assessable income of companies, in addition to income-tax and corporation tax. The tax overlooks the fact that most companies—Tata Chemicals, for instance—yield no dividend in the initial years. In order to make up for passing over dividends in these years, it is only equitable and just that higher dividends should be declared in later years. Again, the companies which were managed on sound lines in the past and which built up reserves by ploughing back profits are generally the companies which give larger dividends. The present proposal to tax these dividends at a progressively increasing rate means penalisation of efficiency, especially because the tax takes into account only paid-up capital and not the reserves built by their companies.

The proposed bonus tax, too, is unjust and discriminatory in character. It is unjust because it is tantamount to double taxation. It is discriminatory because it places in an advantageous position the companies which have been paying higher dividends without building up reserves *vis-a-vis* companies which have been following a conservative and consistent dividend policy for ploughing money back into industry. Further, as both dividends and bonus issues are proposed to be taxed, the tendency among the companies will be to prefer bonus issues to dividends. For, in the case of the former, taxes are paid only once, whereas dividends are subject to tax every year. This tendency, in its turn, makes the finances of companies somewhat vulnerable, since they are left with only small reserves after capitalisation.

It looks as though the proposal to tax dividends at progressive rates has stemmed from the belief that companies are indulging in unduly large distribution of dividends and that the State should arrest the resulting inflationary trend in time by pursuing a policy of dividend limitation. If this is a correct reading of State policy, then it is open to several objections. First, at present, there is no boom in dividends such as to warrant a limitation of dividends. Secondly, such companies as have declared higher dividends have, in many cases, done so from enlarged profits resulting not from profiteering but from efficient and prudent management. To tax a portion of such genuine profits by an additional tax at a progressive rate is to punish efficiency. Moreover, it is doubtful whether, in the context of this country's developing economy, recourse to statutory limitation of dividends is an advisable step to adopt, when the U.K., which is passing through a critical phase of inflation, has opposed it. Only last month, Sir Edward Boyle, Economic Secretary to the Treasury, rejected the pressure from the Opposition in Parliament for dividend limitation on the ground that it was "impracticable to operate equitably." He stated in Parliament that Mr. Harold Macmillan did not favour the statutory limitations of dividends, "since it was impracticable to lay down any statutory standard which would equitably treat, in their widely varying circumstances and needs, all the companies concerned."

* * * *

It is somewhat surprising that the shares of cotton mills have registered a sharp rally in the past week, notwithstanding the fresh tax burden imposed on the mills by the Union Finance Minister. Thus, the excise duty on all categories of mill cloth, with the exception of coarse *dhotis* and *saris*, has been stepped up by half an anna. The new rates of duty (including the handloom cess of three pies) per square yard come to 33 pies for superfine, 24 pies for fine, and 15 pies for both medium and coarse counts. The excise on coarse *dhotis* and *saris* remains unaltered at 9 pies. The increase in the excise duty on mill cloth, together with that on cotton powerlooms, is expected to yield Rs. 14.5 crores during 1956-57. If at all this additional burden has not adversely affected the sentiment of operators in cotton mill shares, it is probably because of the feeling that the burden can conveniently be borne by the mills. In support of this view, attention is drawn to the steady upward trend in cloth consumption, which is reflected in the gradual depletion of stocks with mills; on 4th February 1956, the mills were estimated to have held with them a total of about 140,000 bales of cloth, as against 260,000 bales on 26th March 1955.

Whether or not the above interpretation is correct is a different issue. The real point is that it would be wrong in principle to step up the tax on a particular commodity merely on the ground that its consumption has gone up. This is especially so in the case of an essential item of consumption like cloth. Even before the recent increase in rates, the incidence of excise duty on cloth was very heavy, as will be seen from the following figures:

Representative variety of cloth	*Ex-mill price per yard*	*Excise duty including cess (pre-budget)*	*Percentage of excise duty to the price*
	As. ps.	As. ps.	
Grey drill (coarse) ..	11 0	1 3	11.4
Grey longcloth (medium) ..	7 4	1 3	17.0
Bleached longcloth (fine) ..	30 6	2 0	6.6
Bleached mull (superfine) ..	14 10	2 9	18.7

In addition to the excise duty, there is the sales tax. As if these taxes were not enough, the Union Finance Minister has again revised upwards the rates of excise duty by half an anna uniformly. In doing so, he does not seem to have taken into account the actual burden of higher duty that falls on the different categories of cloth. The extent of the increase in duty works out to 66⅔ per cent. for coarse and medium cloth, 33⅓ per cent. for fine counts and 22-1/5 per cent. for superfine categories. In other words, the Finance Minister has taxed the middle and lower classes and the agricultural community which use mostly the coarse and medium varieties of cloth more heavily than those who consume mostly finer counts. The additional burden is so heavy that the mills will find it difficult to pass it on to consumers by a straight increase in prices. They may, therefore, try to shift at least a part of the burden on to the cotton grower. Some of them may also reduce the quality of cloth which is another form of levy on the consumer.

The Directors of the Bank of India have proposed to issue a golden jubilee bonus issue of Rs. 50 paid-up for every five shares held. The issue is subject to the consent of the Controller of Capital Issues. Information to this effect was given by the Chairman of the Bank, Sir Cowasjee Jehangir, Bart., at its annual meeting held today. With the proposed issue, there will be two kinds of shares, one, a fully paid-up share and the other a partly paid-up one.

* * * *

Official pronouncements about the future of general insurance lack clarity. It is true that the Government has not taken over general insurance companies. During the debate on the nationalisation of insurance, many members of Parliament expressed the view that insurance as a whole should have been nationalised. At a meeting of the Congress Parliamentary Party too, a similar view is understood to have been expressed. It would, however, appear that the Finance Minister, Mr. C. D. Deshmukh, stated that the suggestion for the nationalisation of general insurance business was not acceptable to the Government. Replying to the debate in the Lok Sabha, he expressed the same view in relation to general insurance. He said:

"We do not consider from the point of view of assistance to our Plan, that general insurance is going to offer any significant help. Life funds are in the neighbourhood of Rs. 350 crores, whereas general insurance funds are less than Rs. 50 crores. Accumulation of life funds in private hands carries with it a danger. The funds may not be used in the interests of the country as a whole. This factor is not present in any degree in the case of the general insurance business. Moreover, persons who take out life insurance policies are men of small or moderate means. But policyholders in general insurance are persons in commerce and industry, who have given evidence of being able to look after themselves."

Mr. Deshmukh made it clear that the decision not to nationalise general insurance was not because foreign companies were doing the business. "Such a suspicion is entirely unwarranted," he said. Nevertheless, it is not clear why the Government should have undertaken to run the general insurance companies which were subsidiaries of life insurance companies which it has taken over. Mr. Deshmukh said: "But unwittingly we have become owners of three general insurance companies which are subsidiaries of life companies. We shall be getting a little experience in managing the general insurance business also. We do not intend to give it up." This is somewhat surprising; if it is not the Government's intention to nationalise general insurance business, why should it try to run the three general insurance companies which are subsidiaries of life companies? The argument that the Government wants to gain some experience in running general insurance business sounds a little odd. After all, the Government is not like an apprentice who wants to gain training and experience in a new field. A disconcerting aspect of the Finance Minister's statement is his announcement that he might have to re-examine the whole question at a later date. He said: "We are aware of the malpractices in the general insurance business also and if there is no significant improvement in that respect, we shall try to follow the advice of Mr. Asoka Mehta and see how effectively we can exercise our controls. We may have to re-examine the question." From this, it should be clear that general insurance will have to be constantly on its guard against any possible threat of nationalisation.

Meanwhile, it is interesting to note that the Government has taken some action against one aspect of what it regards as a violation of the Code of Conduct for general insurers. The Secretary to the Executive Committee of the General Insurance Council, it is stated, has issued a circular to general insurance companies to the effect that premium bills that are issued by the principal agents should be in company forms and further that they should be serially numbered. Each principal agent should send a copy of every premium bill to the office of the insurer to whom he is attached. This requirement, it is stated, has been enforced because, in respect of non-tariff policies, some agents used to charge the insured a higher rate than the one quoted by the insurance companies. For these policies, the insurance offices do not generally mention the premium rates; they use the phrase "as arranged." Some principal agents are in the habit of issuing their own bills and charging the insured more than what the companies would charge the insured. The restriction now enforced by the Government, it is believed, gives better protection to the insured.

* * * *

Although the basis of compensation provided in the Life Insurance Corporation Bill was generally regarded as satisfactory at the time it was announced, a detailed consideration of the provisions would appear to have induced certain misgivings. It is now believed that, in the case of certain companies, the mutual insurers, in particular, the compensation would be less than fair. Even in respect of other companies, it is felt that the Bill reduces the surplus available to shareholders from 7½ per cent. allowed under the Act, to 5 per cent. This is deemed a particularly invidious restriction, considering that even the statutory provision of 7½ per cent. of the surplus for the shareholders is lower than the 10 per cent. level in vogue in certain foreign countries. Apart from this consideration, it is felt that the period chosen for determining the annual average of the surplus includes years during which the insurers faced serious difficulties.

In a communication addressed to the Government of India, the Indian Insurance Companies' Association has suggested that, in order to arrive at the correct present position, which should form the basis of fair and equitable compensation to the shareholders, an actuarial investigation into the assets and liabilities of all insurers in respect of their life insurance business should be conducted as on 19th January 1956, being the date on which the management of the business has been taken over by the Central Government. This would have the advantage of covering the loss and/or profit accruing to the shareholders during the period since the last valuation and will also take into account the present market value of all their assets. If, however, for practical considerations, this is not considered feasible, the Association submits that the proper course would be to take only the last actuarial investigation as at a date preceding 1st January 1955, submitted to the Government in accordance with the Insurance Act.

In order, further, that a fair approximation to the surplus, which might have been disclosed in the valuation as on 19th January 1956, could be achieved, it will be necessary to project the result of the last actuarial valuation up to 31st December 1955 by adding to, or subtracting from, the surplus. The Association illustrates its suggestion by citing an example. The surplus as disclosed by company A in its last valuation as at 31st December 1954 was, say, Rs. 6 lakhs. This was for a period of three years and so the annual average surplus would amount to Rs. 2 lakhs. The surplus disclosed by the said company in its valuation preceding the valuation as at 31st December 1954 for a period of three years was, say, Rs. 3 lakhs. Thus, the increase in its surplus as at the last valuation over the preceding valuation would amount to Rs. 3 lakhs. The annual average of the said increase in surplus would, therefore, amount to Rs. 1 lakh. If, therefore, the said company A had undergone a valuation as at 31st December 1955, it would be reasonable to assume that the surplus disclosed would have increased by at least Rs. 1 lakh. The Association has, therefore, suggested that the annual average of the share of the surplus allocated to the shareholders should, therefore, be taken as 7½ per cent. or lesser percentage, as might have been adopted by the company at the time of allocation of such surplus in the past, of such surplus calculated on this revised basis, namely, on the basis of only the last actuarial investigation projected for the period since the last valuation.

SHARE MARKET FULLY STEADY

TEXTILES SHAPE WELL

(From Our Own Correspondents)

BOMBAY, *8th March*

THE performance of the share market during the week under review, fully conformed to the pattern set during the post-Budget session held on Thursday last week. There was an all-round rise in equity values to a substantial extent, under professional buying and heavy short-covering. The higher levels induced some caution among operators who preferred to book their profits, in view of the approaching settlement tomorrow. Advices from Calcutta, too, were not quite helpful. Nevertheless, the general sentiment was quiet cheerful in the absence of any adverse influences. Just at the close of the session today also, there was widespread profit-taking on fortnightly settlement considerations, but the undertone was quite steady.

The improvement in equity values during the week was attributed to the fact that the adverse factors of the Budget proposals had already been discounted in prices on account of the Budget leakage. Further, second thoughts about the Budget proposals would appear to have induced a feeling that the taxation measures were not very heavy. There were also talks that the free limit of super-tax on dividends would be raised from six per cent. to nine per cent. The declaration of higher dividends by some textile mills, notable among which was Bombay Dyeing, and expectations of more mills raising their dividend levels kept up the bullish sentiment.

In the steel section, Tata Ordinaries shot up from Rs. 222-8 to Rs. 228-8 on Monday. At higher levels, buyers were hesitant and the shares moved narrowly between Rs. 225 and Rs. 227-4 before closing at Rs. 226. The hesitancy was attributed to the operators' preference to await the clarification by the Chairman, at the forthcoming extraordinary general meeting on the 12th inst., regarding the premium on new shares and dividend prospects. Indian Irons gained ground from Rs. 31-15 to Rs. 33-2½ on Monday, but reacted to Rs. 32-6 at the close today on none-too-helpful advices from Calcutta.

The textile section was in the forefront with sharp rises in many counters. Bombay Dyeings staged a hectic rise from Rs. 523-12 to Rs. 557-8 on Monday this week, on expectations of bumper results and higher dividends. The market's optimistic expectations were not, however, belied, when the Directors declared on Monday a cash bonus of Rs. 5 per share, in addition to maintaining the final dividend at Rs. 12-8 per share, thus making a total distribution of Rs. 25 per share for the year, as against Rs. 20 per share for the previous year. The higher level, however, brought some profit-taking and the scrips finished today at Rs. 548-12. Centurys advanced from Rs. 473 to Rs. 491, before winding up at Rs. 486. Kohinoos advanced from Rs. 328 to Rs. 342, but closed at Rs. 340. Central Indias put on Rs. 3 to Rs. 140 and Finlays Rs. 12 to Rs. 332. Gokaks advanced by Rs. 15-8 to Rs. 332, following the Directors' decision to step up the dividend from Rs. 13 to Rs. 15. Indu Ordinaries gained As. 6¼ to Rs. 12-8, Khataus Rs. 6-11 to Rs. 217-3, New City Mills Rs. 7-8 to Rs. 170 and New Greats Rs. 39 to Rs. 235. Shree Niwas gathered Rs. 7-9 to Rs. 222-8 and Simplex Rs. 8 to Rs. 194. Standards provided a notable exception to the general trend with a fall of Rs. 3-12 to Rs. 4-10, following the Directors' decision to maintain the dividend at Rs. 20 per share. Svadeshis moved up by Rs. 8-8 to Rs. 219, Swans by Rs. 7-8 to Rs. 417-8 and Tata Mills by Rs. 3-4 to Rs. 55-12. Bradburys shot up by Rs. 24-6 to Rs. 191-4. Dawns rallied from Rs. 90-4 to Rs. 140, consequent on the increase in dividend from 12 per cent. to 30 per cent. The Directors' decision to step up the dividend from 8 per cent. to 10 per cent. pushed up Phœnix from Rs. 121-14 to Rs. 135.

Barring a rise of Rs. 2-12 to Rs. 49-4 in Central Banks, the banking section displayed a quiet trend. Centrals New were dull at Rs. 49-4. Barodas fell from Rs. 98-8 to Rs. 95 and Bank of Indias from Rs. 152 to Rs. 150. United Commercials were dull at Rs. 49-8 and Punjab Nationals were neglected at Rs. 43.

A rise of Rs. 2-4 to Rs. 41 in New Indias was a feature in the insurance section, in which business was at a low ebb. Orientals were further marked down from Rs. 3,910 to Rs. 3,800. Indian Mercantiles had business Re. 1 higher at Rs. 44. Other shares were neglected.

There was some activity in the electricity group and fair-sized gains were recorded in leading counters. Ahmedabad Electrics were keenly bid Rs. 2-8 higher at Rs. 102-8, following the encouraging Directors' report. Bombay Suburbans were unchanged at Rs. 116-4, while Surats gained Re. 1-4 to Rs. 123-12. Tata Hydros rose by Rs. 2-4 to Rs. 133-12, Tata Powers by Rs. 17-8 to Rs. 1,362-8 and Andhra Valleys by Rs. 10 to Rs. 1,295.

The miscellaneous section presented a cheerful note with sharp rise in value of several leading counters. In the sugar group, Belapurs were lifted from Rs. 212 to Rs. 223-8, before they wound up at Rs. 222-8. Bhopals gained As. 6 to Rs. 14-15. Phaltans rallied from Rs. 127 to Rs. 135-8 and Walchandnagars from Rs. 242-8 to Rs. 249-6. Cement shares also were in the forefront. On expectations that the premium on new issues would not be large, A.C.Cs. came to be lifted up from Rs. 205 to Rs. 212, before they wound up at Rs. 209. Digvijays moved up by Rs. 13 to Rs. 186. In the engineering and mining group, Alcocks gained Rs. 2-8 to Rs. 357-8. Premier Constructions were keenly bid Rs. 9-4 higher at Rs. 172-4. Tata Locomotives gathered Rs. 4 to Rs. 146 and Larsen and Toubros were done As. 6 higher at Rs. 15-8. Shivrajpurs changed hands Rs. 7-8 higher at Rs. 102. Indian Coppers were maintained at Rs. 6-6, while B. B. Petrols put on As. 5¾ to Rs. 4-3¾.

In the shipping and transport section, Scindias came up from Rs. 16-2½ to Rs. 17-3, but closed lower at Rs. 16-13½. Great Easterns changed hands As. 7 higher at Rs. 15-7. India Steamships were better at Rs. 8-5, as against Rs. 8-1. Hindustan Motors were bid up to Rs. 9-10, as against Rs. 8-14 and Premier Automobiles at Rs. 90, as against Rs. 85. Among miscellaneous industrials, Bombay Burmahs provided the highlight with a sharp rise from Rs. 524-6 to Rs. 577-8, before finishing at Rs. 568-12, on unfounded rumours about bonus issue. British India Corporations declined by As. 10 to Rs. 10-8, following the Directors' decision to pass over the dividend. National Rayons gained Rs. 10-8 to Rs. 225. Tata Chemicals picked up As. 1½ to Rs. 17-8, while Tata Oils put on Rs. 2 to Rs. 44-4 on expectations of encouraging corporate news. Industrial Investments were done Re. 1 higher at Rs. 81 and Wimcos rallied from Rs. 188-2 to Rs. 193-2.

* * * *

Calcutta Stock Exchange

CALCUTTA, *7th March*

The reaction of the market to the Central budget proposals was one of optimism and, since the proposals for new taxes did not justify the gloomy forecasts earlier, steadier conditions were in evidence on the Calcutta Stock Exchange during the week under review. The recovery that took place in some counters was just fractional, since there was buying support only in a restricted way. But the volume of business showed an increase. Indeed, as compared with the dullness of recent sessions, it was impressive. The Finance Minister has aimed to realise an additional revenue of Rs. 34.15 crores from all sections of the country's economy by the proposed changes in taxes. This sum is certainly large, but the recent publication of the second Plan and the Amritsar Congress session, as also the several speeches of the Finance Minister himself in recent months, had prepared industry and trade circles to expect much more additional burdens than those now proposed to be imposed. It is mainly on account of this mental preparation of *entrepreneurs* and traders prior to the budget that the market circles consider the proposed changes in taxes as being less burdensome.

Sentiment was cheered when, contrary to earlier rumours, there was no proposal to levy excise duties on jute goods, although it was realised that this was hardly the time to impose burdens on jute goods, as, in that event, it would have amounted to a partial withdrawal of the benefits to the jute industry as a result of the abolition of the export duties. Likewise, the proposal to reduce the export duty on tea had also a favourable effect on the Calcutta market. True, the proposal to levy an additional super-tax on dividends above 6 per cent., the tax on bonus issues and the raising of super-tax on personal incomes, all caused disappointment, which did not, however, invite lethargic conditions, in view of the benefits expected from increased industrial activity in both the public and the private sectors. Admitting that new taxes were inevitable, Mr. B. N. Chaturvedi, the President of the Calcutta Stock Exchange Association Ltd., did not see any reason in some proposals made against the share-holding community generally belonging to the middle class.

Sectionwise, cotton textiles were quiet, although there was no doubt that the increase in excise duties on cotton fabrics would be passed on to the consumer. Kesorams, at one time, had declined to Rs. 16-4 from Rs. 16-9 and closed at Rs. 16-6. New Victorias were unchanged at Rs. 2-1, but Bowreahs were marked down to Rs. 300.

The slight broadening of enquiries in evidence in the coal section was due to the realisation that there would be greater opportunities for the private collieries to increase production. From Rs. 13-4, Burrakurs picked up to Rs. 14-4 and finished at Rs. 13-12. East Indias, after easing to Rs. 31-12, regained to Rs. 32-4. Churulias were enquired at Rs. 3-4 and Amalgamated at Rs. 23-8. Bengals closed at Rs. 545, after having fallen from Rs. 548-8 to Rs. 538. New Beerbhooms were fractionally better at Rs. 19-15.

Jute shares were far from lively, and such a trend reflected the difficulties being met by mills in having to pay high prices for raw jute. During the special budget session on Wednesday last, Nationals had declined from Rs. 26-10 to Rs. 26-2, but subsequently made good the loss. Speculative Howrahs were fractionally better at Rs. 24-1, but Champdanies fell to Rs. 150 and Caledonians to Rs. 220 from Rs. 182 and Rs. 250, respectively. At Rs. 142, Alliances were higher by Rs. 2, Indias being unchanged at Rs. 153. Ganges sagged from Rs. 86-8 to Rs. 70.

A mixed trend was in evidence in the engineering section. Thus, while Indian Standard Wagons recovered from Rs. 166 to Rs. 171, Braithwaites and Cos. fell from Rs. 28-1 to Rs. 27-12. Indian Irons opened at Rs. 31-8 and closed at Rs. 32-9, after recovering to Rs. 33-1. Texmacos at Rs. 21-2 were better. Transactions in Kumardhubis were recorded at rates varying between Rs. 11-3 and Rs. 11-8. Jessop and Cos. changed hands at Rs. 35-4 on ex-right basis.

Teas came in for more attention, with shares of gardens in the Sylhet (Pakistan) area being the favourites of buyers. Thus, Patrakolas at Rs. 192 picked up Rs. 23. Dauracherras advanced from Rs. 7 to Rs. 11-15 and Lacktoorahs from Rs. 22-12 to Rs. 24-6. Among other counters, Dhelakhats were an anna better at Rs. 18, while Brooke Bonds and East Indias were fractionally lower at Rs. 20-2 and Rs. 23-2, respectively.

Among minings, Metal Corporations were a strong feature and rose from Rs. 11-8 to Rs. 12-14. From Rs. 6-7, Indian Coppers improved to Rs. 6-10, but subsequently sagged to Rs. 6-5.

Miscellaneous industrials were quietly steady with selected counters recovering. Thus, Bengal Flours hardened from Rs. 29-8 to Rs. 30-4 and Niccos from Rs. 21-4 to Rs. 23-4. Titaghur Papers were steady at Rs. 44-8, but B.I.Cs. at one time had declined to Rs. 10-10 from Rs. 11-7 on reports of nil dividend. From Rs. 8-6, India Steamships were done up to Rs. 8-10.

* * * *

Madras Stock Exchange

MADRAS, *7th March*

The Madras Stock Exchange put on an upward trend during the week under review. In fact, there was a mild wave of buying pressure in almost all the sections. The much expected depression, following the taxation proposals which included those relating to taxes on dividends and bonuses, failed to materialise. There seemed to be a feeling that well-managed companies could maintain, if not increase, the current dividends even after bearing the new dividend tax. Besides, there is a feeling of better prospects for industries and plantations. In fact, this feeling induced operators to indulge in some hectic activity this week. The reduction in duty on export of tea was particularly responsible to enthuse the sentiment in the tea section. The volume of business done on the exchange during the week was on the whole sizable and prices advanced, thereby recording good gains over the week.

There were a few dividend announcements this week also. The Indian Bank Ltd. declared a final dividend of 6 per cent., thereby making a total of 12 per cent. for the year ended 31st December 1955, the same as in the previous year. The share (Rs. 100 paid-up) was dull at Rs. 188 *cum-div.*, (Rs. 90 paid-up) at Rs. 163 *cum-div.* and (Rs. 65 paid-up) at Rs. 113-8 *cum-div.* Binny & Co., Ltd., has announced a final dividend of 6 per cent., thereby making a total of 10 per cent. for the year ended 31st December 1955, as against 8 per cent. in the previous year. The scrip was quoted at Rs. 162 *cum-div.* The Rayalaseema Mills increased the dividend from 9 per cent. to 10 per cent. for the year ended 31st December 1955. The share was dealt in at Rs. 137 *cum-div.*

A notable feature of the week under review is that 254 bearer debentures of Rs. 100 each of Cauveri Spinning and Weaving Mills Ltd. have been drawn for redemption on 1st April 1956. These debentures will cease to carry interest from 1st April 1956. Another feature which needs mention is that the share and transfer books of The Consolidated Coffee Estates (1943) Ltd. will remain closed from 16th to 24th March 1956 (both days inclusive) for the issue of bonus shares at 1 share for every 2 ordinary shares now held for which Government sanction has been received.

In the textile section, Bangalore Woollens advanced by Rs. 5 to Rs. 605 *cum-div.*, *cum-right*. Buckinghams improved from Rs. 171 to Rs. 179 and Coimbatore Cottons by Rs. 2 to Rs. 358 *cum-div.* Coimbatore Spinnings gathered Rs. 5 to Rs. 92. Lakshmis (Rs. 50 paid-up) were better by Rs. 2 at Rs. 180 and Janardhanas by Rs. 12 at Rs. 101. Radhakrishnas (Rs. 100 paid-up) put on Rs. 2 to Rs. 276. Premiers, however, were quiet at Rs. 175. Dhanalakshmis were lower by Re. 1-4 at Rs. 367-8 *cum-div.*

Blue Mountains, among teas, in the planting section, gained As. 5 to Rs. 5-3 and Coorg Teas As. 2 to Rs. 10-2 *cum-div.* Periakaramalais rallied As. 3½ to Rs. 8-2 and Talyars As. 5 to Rs. 13-4. Highlands advanced from Rs. 15-14 to Rs. 16 and Nilgiri Teas from Rs. 12-10 to Rs. 13-4. United Nilgiris, however, lost Rs. 5 to Rs. 305 *ex-div.* and Peermades As. 4 to Rs. 35-12. Among rubbers, Cochin Malabars gained As. 6 to Rs. 8-8 and Vaikundams As. 4 to Rs. 26-12. Teekoys gathered As. 8 to Rs. 10-8. Be Bes were, however, dull at Rs. 4-8 and Nenmenys at Rs. 21-8. Among coffee shares, Coffee Lands put on As. 12 to Rs. 19-10. Consolidated Coffees changed hands at Rs. 25-2 *cum-right*, as against Rs. 21-13. Kadur Coffees were dull at Rs. 2-9.

In the miscellaneous section, Aluminium Industries were up by As. 3 at Rs. 20 *cum-div.* and F.A.C.Ts. by As. 7 at Rs. 6-15. India Cements rallied As. 2 to Rs. 32-12 and Mysore Chemicals and Fertilisers As. 6 to Rs. 8-14. Ballis were quiet at Rs. 34 and Spencers at Rs. 17-8.

NEWS IN BRIEF

THE 1955-56 coffee crop in India is estimated at 28,795 tons, which is 1,415 tons over the previous estimate. The total crop is made up of plantation 12,610 tons, *arabica* cherry 6,800 tons and *robusta* 9,385 tons.

Japan is likely to invest several million dollars in the development of iron ore mines on the east coast of India. Japan, in return, will receive iron ore up to the value of its investment. The Japanese enterprise is likely to form part of the mining operations connected with the Rourkela steel project in Orissa.

It is estimated that gross investment in manufacturing and electrical undertakings which was placed at Rs. 802 crores in the private sector and Rs. 134 crores in the public sector at the beginning of the first Plan will have increased to Rs. 1,142 crores and Rs. 454 crores, respectively, at the end of the first Plan.

The Assam-Bengal Indian Tea Planters' Association has urged the Union Finance Minister to reduce the export duty on tea by at least As. 2 per pound in both the first and second slabs. While appreciating the Government's gesture of sympathy with the tea industry in its reduction in the export duty in the third slab between Rs. 3-4 and Rs. 4, it has, however, considered that this reduction is of no avail, in view of the fact that the present price level has been considerably below the third slab.

An agreement between the Government of India and Russia for the purchase of 20 drilling righs at a cost of Rs. 21,53,400 was signed recently. The righs, according to the agreement, shall be shipped by the suppliers as soon as possible but not later than the first quarter of 1956. The drilling righs will be utilised for prospecting and proving of coal in the Korba, Karanpura, Jharia, Raniganj, Chirimiri, Jhilimili and Ramgarh coalfields in Bihar, West Bengal and Madhya Pradesh. This was disclosed by Mr. K. D. Malaviya, Union Minister for Natural Resources, in Parliament.

A private limited company, known as the Nangal Fertilisers and Chemicals Ltd., has been, it is stated, registered to take over the control and management of the Nangal Fertiliser-Heavy Water Project to be started by the Government of India. The authorised capital of the company is Rs. 30 crores. The factory will have a capacity of 70,000 tons of nitrogen in the form of ammonium nitrate, and about seven to eight tons of heavy water per year. Mr. S. S. Khera, Secretary, Ministry of Production, is Chairman of the Board of Directors.

Consent was given by the Controller of Capital Issues to 109 applications from various industrial and non-industrial joint stock companies for the issue of capital amounting to about Rs. 30.74 crores during the third quarter, 1st July to 30th September 1953. Out of this, 22 applications were from new companies for the issue of capital amounting to about Rs. 15.63 crores. Of the 109 applications, 62 were from industrial companies, 23 from non-industrial and 24 from those carrying on agricultural and allied activities.

During the question hour in Parliament, Mr. Manilal C. Shah, Minister for Revenue and Civil Expenditure, stated that the Planning Commission had suggested an annual tax on total wealth. It was one of the fiscal devices, mentioned in the draft outline of the second Five-year Plan, for reducing inequalities of income and wealth. The Minister added that this, along with other fiscal devices proposed in the draft outline, were under examination by the Government and it was not possible at this stage to say what exactly the implications of this tax, if imposed, would be.

The value of India's total foreign trade in 1955 increased by Rs. 69 crores to Rs. 1,248 crores over that in 1954. Increased domestic output, on the one hand, and the growing need for capital goods for development activities in the country, on the other, were mainly responsible for this increased volume of trade. Exports during the year were valued at Rs. 604 crores, as against Rs. 563 crores during 1954. Imports rose to Rs. 644 crores from Rs. 616 crores in the previous year. The total trade thus increased from Rs. 1,179 crores in 1954 to Rs. 1,248 crores in 1955. The overall trade deficit declined from Rs. 53 crores in 1954 to Rs. 40 crores.

The Godhra-Ratlam section of the Western Railway, a distance of 116 miles on the main line, is to be doubled at an estimated cost of Rs. 9.5 crores. The existing line capacity of this section was increased recently by over 100 wagons per day by extending the loops at stations, but it is still working to saturation. In order to meet the further increased demand for the movement of coal *via* Agra East Bank and Ujjain to Ahmedabad district and to destinations on the metre-gauge in Saurashtra and North Gujerat, and also the anticipated increase in other goods traffic, an increase in line capacity by the doubling of this section has, it is stated, become necessary.

The 69-year old railway carriage and wagon workshop at Ajmer, on the Western Railway, is to be remodelled as part of the railway development programme during the second Five-year Plan period. The remodelling scheme, estimated to cost Rs. 108,00,000, will more than double the repair capacity of the workshop and enable it to undertake the periodical overhaul of about 2,000 passenger coaches and 3,600 goods wagons per annum. Originally built in 1887 by the ex-Rajputana-Malwa Railway, the Ajmer workshop has undergone very little major changes since then. Its capacity at present is considerably short of the Western Railway's requirements, which are likely to increase substantially during the second Five-year Plan period.

The construction of a wagon erection plant designed to assemble 750 broad-gauge goods wagons every month is now nearing completion at Visakhapatnam. Located inside the Visakhapatnam port area, about one and half miles from the main docks, the plant will go into production shortly. The South Eastern Railway, which is setting up the plant, has provided the requisite yard and the permanent structures like gantries. The contractors, who have been given the work of assembling the wagons, are supplying compressors, mobile cranes and other machinery. A Calcutta firm has been given the contract for assembling at this plant 8,800 wagons, both covered and open types, which are being imported in a semi-knocked-down condition from Japan, the U.S., the U.K., Australia and Poland against the railways' own procurement programme, as well as under international and technical co-operation schemes.

The work on increasing the capacity of the thorium plant at Trombay has been completed and the plant will now go into full production. It is expected that the plant will produce a few hundred tons of thorium and a few tons of uranium per annum, which is equivalent in fuel value to roughly a thousand million tons of coal. This is about thirty times the present annual production of coal in India. The work on the construction of the thorium plant, which will treat the crude thorium cake produced at the Monazite Factory at Alwaye in Travancore-Cochin State, started in May 1953. The plant went into regular production in August 1955 and two months later, it was possible to increase production by 30 per cent. more than the rated capacity of the plant. In the meanwhile, the Department of Atomic Energy decided to multiply the capacity of the plant and the work on the extension of the plant was immediately taken in hand. The plant was erected entirely by Indian engineers and a large portion of the equipment installed there was made in India.

A new trade agreement is likely to be signed between India and Bulgaria by the end of this month. It will be recalled that the agreement of 17th June 1953, governing Indo-Bulgarian trade expired on 31st December last year. A six-man trade delegation, led by Bulgaria's Deputy Minister for Foreign Trade, Mr. Ivan Perpeliev, will arrive in India shortly to explore the possibilities of intensifying Indo-Bulgarian trade. Bulgaria, which has trade relations with 41 countries, is stated to be keen to step up its imports of jute bags, shellac, furs and drugs from India. Indian spices also have a good market in Bulgaria. Bulgaria feels that it could import also a substantial quantity of Indian rubber, cotton and raw wool in exchange for its heavy chemical industry products. Fertilisers and urea are already being exported to India. A market is sought for Bulgarian agricultural, mining and textile machinery in India. In order to promote closer trade relations between the two countries, Bulgaria has invited India to participate in its annual trade fair starting September next.

From Abroad

Swedish Technical Assistance to Pakistan, which will take the form of training in small industry, will shortly start operation. Nine Swedes, out of whom one will be the supervising head, five teachers and technical personnel, will train their Pakistani counterparts.

The consumption of deep-frozen food per head of the population in Sweden amounted to 1.6 kilogrammes in 1955. The consumption has gone up from 200 tons in 1947 to 11,000 tons in 1955. Fish accounted for 5,200 tons and vegetables for 4,500 tons during the year under review.

The Norwegian Government has asked Parliament to approve a contribution of £140,000 to the United Nations' Programme for Technical Assistance to economically underdeveloped countries this year. This represents a considerable increase compared with last year's contribution of £25,000.

Ceylon had a record favourable trade balance of Rs. 478.9 million in 1955. The previous peak was Rs. 412 million in 1954. Nearly three-fifths of the total export revenue accrued from tea and slightly more than one-fifth from rubber. The exports during 1955 aggregate 357,260,000 lbs., valued at Rs. 1,175.9 million. Tea exports to the U.K. alone last year was 121,400,000 lbs., valued at Rs. 382.7 million.

Chile has 12 uranium deposits in the province of Atacama, according to Sr. Carlos Ruiz, Under-Secretary for Mines. The value of the mineral varies from 0.2 to 0.3 per cent., but samples have been found as high as 2 per cent. The Chilean Government proposes to form an agency to establish buying sources. It is stated that the Anaconda Copper Mining Company has been studying the possibility of starting an atomic plant in Chile to produce electric power.

Canada and Russia have entered into a three-year trade agreement, which provides for the exchange of most-favoured-nation treatment and for Russian purchases of between 400,000 and 500,000 metric tons of Canadian wheat in each of the next three years. Unless extended, Russia's most-favoured-nation treatment will end when its wheat purchases finish. The quantities involved will put Russia among Canada's first four or five customers for wheat.

It is expected that the National Coal Board, the U.K., will submit within the next few weeks its long-term investment programme, covering 10 to 15 years, to the Minister of Fuel and Power, Mr. Aubrey Jones. After receiving this programme, the Minister will submit to the Cabinet the amount by which the Coal Board's borrowing power is to be increased. There is no question of covering at the present stage the entire additional requirements arising from this programme, but the Government proposes to obviate the need of having to introduce legislation at too frequent intervals. The present limit of £300 million, which is nearing exhaustion, was fixed in 1951. The Minister is likely to introduce after Easter a Bill on the lines of the Coal Industry Act 1951, which contains two clauses, fixing the maximum limit of outstanding loans and the limit of the amount that can be borrowed in any one year.

According to an agreement signed between the U.S. and Indonesia recently, the latter will purchase $96 million (over £34 million) worth of surplus U.S. farm commodities. The purchase will be made in Indonesian *rupiahs*. It is stated that a part of the Indonesian currency will be loaned back to the country for financing development projects. The farm products to be purchased include about 550 million lbs. of rice valued at $35.8 million, about 206,000 bales of cotton worth $36 million, 23 million lbs. of leaf tobacco valued at $15 million, and about 1,270,000 bags of wheat flour worth $5 million.

The Standard Oil Company of New Jersey has announced that its affiliates will spend $60 million on constructing new refining units, embracing a process known as "power-forming." This uses a new type of catalyst, employing relatively small quantities of platinum to produce gasoline. Two of the new units are already in operation and 14 more are under construction, being designed or planned. Esso Standard Oil Company, one affiliate, will also construct a new plant for the production of ethylene at its Bayway refinery, Linden, New Jersey. The plant will be the first installation on the U.S. east coast to produce concentrated ethylene for sale to the chemical industry.

PERSONAL

MR. G. D. BIRLA left last week for the U.K., the Continent and the U.S. on a business tour.

Dr. Philip Cardon (of the United States), Director-General of the U.N. Food and Agriculture Organisation, has resigned.

Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Co., Ltd., who had been on a visit to Europe and the U.S., has returned to Bombay.

Mr. John Sherman Cooper, U.S. Ambassador to India, who had been to the U.S. for consultations, returned to New Delhi on Friday, the 2nd inst.

Mr. Dharam Vira, I.C.S., till recently India's Ambassador to Czechoslovakia, has been appointed Secretary to the Ministry of Rehabilitation, Government of India.

Mr. Satish Chandra, I.C.S., Deputy Commissioner of Delhi, has been appointed Joint Secretary in the Union Ministry of Commerce and Industry, to formulate proposals for the establishment of a State Trading Corporation. Mr. Satish Chandra is expected to submit his report in two months.

Messrs. Purshottamdas R. Ashar and N. H. Kotak have been elected President and Vice-President, respectively, of the All-India Exporters' Association, Bombay, for the year 1956. Mr. K. H. Narayan has been elected Hon. Secretary and Mr. Jayantilal R. Shroff, Hon. Treasurer.

Mr. Lakshmipat Singhania, the noted industrialist of Calcutta, has been elected President of the Federation of Indian Chambers of Commerce and Industry for the year 1956-57 and Mr. Babubhai M. Chinai, of Bombay, Vice-President. The following were co-opted to the Committee of the Federation: Mr. Shantilal Mangaldas, Mr. B. P. Singh Roy, Mr. S. L. Kirloskar, Mr. B. L. Jalan, Mr. Kamalanayan Bajaj and Mr. G. P. Kapadia.

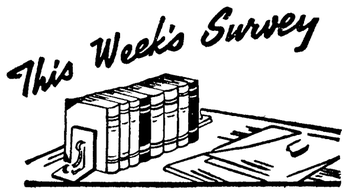
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *14th March*

Tax Burden Upon Industry

The fact that excessive taxation results in less money being available for business and enterprise is only too clearly apparent. Economists and industrialists know that the bad effects, though indirect, are none the less real, and that high taxation definitely retards the power of industry to increase employment. We cannot expect industry to recover, as it should be free to do, under the progressive loading of the real burden of taxation which arises from falling prices; and, as Lord Inchcape puts it: "Few will be found to dispute that relief which approaches too nearly, and in some cases oversteps, the wages level is, morally and financially, a sin against the people. It is truly a rake's progress." When a Chancellor of the Exchequer or a Finance Member is faced with a heavy deficit, he cannot reasonably impose additional taxation until economy has been practised to its utmost feasible extent in the public services; and, in this connection, we applaud what was said in the Legislative Assembly on Monday by Sir Hugh Cocke, when he asserted, as regards the Indian budget, that he was not satisfied that more economy could not be effected. In the aggregate, the civil services and local budgets, both in England and, in India, absorb hundreds of millions of pounds and many lakhs of rupees more each year than before the war. There is abundant room for reduction, without calling into question the debt services and necessary administrative and social outlays. Only by rigid economy can any Government confer upon industry that relief which it so sorely needs.



ROLE OF PATENTS

THE Indian patents centenary celebrations, held at Calcutta last week-end, mark the completion of 100 years of working of the patent system in India. The celebrations comprised the holding of a symposium on "the role of inventions in India and their protection" and the organisation of ten-day exhibition of patented articles, registered designs and other products of Indian manufacture. The Conference was presided over by Mr. C. R. B. Menon, Director-General of Commercial Intelligence and Statistics, Calcutta, and Chairman of the celebrations and inaugurated by the Union Minister for Commerce and Industry, Mr. T. T. Krishnamachari.

It was a century ago, in 1856, that the patents system was established in India with the passage of the Indian Patents Act. Although India is one of the very few countries in the world which can boast of having a century-old patents law, there is very little evidence to show that the system has benefited the country much. For the Patents Enquiry Committee, appointed in 1948 by the Union Government to survey and report on the working of the patent system in India, in its report, after examining the readily available records, observed: "The Indian patent system has failed in its purpose, namely, to stimulate invention among Indians and to encourage the development and exploration of new inventions for industrial purposes in the country so as to secure the benefits thereof to the largest section of the public. There were aiso numerous complaints that the patent system was being misused and in some cases abused, to the detriment of Indian interests."

If the Indian patent system has failed to achieve its object as noted above, such has been due to several peculiar features prevailing in India. Before referring to these features it may, in passing, be pointed out that a patent granted by the Government under the law, confers on the grantee "the exclusive privilege to make, sell and use an invention and also to authorise others to do so for a limited term." The grant is made in exchange for the disclosure of the invention to the public. Despite the exclusive privilege granted to inventors in this country, the progress of invention has remained insignificant. For, only 10 per cent. of the patents granted in India are held by Indians while as much as 90 per cent. were granted to foreigners. "The percentage of foreign patents," to quote Mr. J. C. Ghosh, a member of the Planning Commission, who inaugurated the symposium mentioned at the outset, "was 13.2 in the U.S., 24 in Japan, 25.8 in Germany, 29.9 in France and 51.7 in the U.K."

One of the causes for India's backwardness in inventions is the age-long separation of the sections of population which had learning and knowledge of theory from those which had only practical experience. "As a result, theoretical knowledge," to quote Mr. C. R. B. Menon, "was not fertilised by direct familiarity with materials and objects and those who had such familiarity were too ignorant to understand or interpret, the phenomena they observed." Secondly, the patent system in India owes its origin to the British system. For, it was introduced in India not so much for encouraging Indian inventors as for extending to India the protection which British manufacturers enjoyed in Great Britain. Further, another difficulty is that all technical literature has been in English and illiterate workmen have had no access to it and wherever such was made available, conservatism and reluctance to hug new ideas on the part of workers prevented it from being put to good use. Lastly, there was a tendency to keep inventions secret and this hindered progress.

At present, however, some increased attention is being directed by the Government to encourage inventions. This is indicated by Mr. Krishnamachari's speech at the centenary celebrations. The Government of India has, according to him, decided to institute a system of awards for inventions and new processes evolved by Indian or foreign workers in India. He said that popularity of patents depended on the number of patents secured by Indian inventors and considered that the future rested on the shoulders of young workers in the scientific and engineering fields. Incidentally, he referred to the controversy whether the patent law should be abrogated or tightened, and observed that India had to strike a golden mean between the two approaches. The Minister remarked that the social purpose of the Act should always be recognised and a monopoly should not be allowed to grow. He added that if sufficient steps were not taken to protect indigenous inventions —which was a national duty—then any system devised would provide an umbrella for foreign inventions.

CONTROL ON STOCK EXCHANGES

The report of the Joint Committee of Parliament on the Securities Contracts (Regulation) Bill, which was presented to Parliament by its Chairman, Mr. M. C. Shah, last week, makes a number of suggestions to modify the original Bill. Of these, its recommendation that the Government should be armed with extraordinary powers of control over Stock Exchange operations is sure to be viewed with some concern by the Stock Exchange authorities in the country. The fact that as many as six members of the Committee have appended minutes of dissent demonstrates how the issues involved in the reformation of Stock Exchanges are controversial and complex in nature.

While expressing the view that spot delivery contracts should ordinarily be freely transacted, the Committee has considered that power should, at the same time, be retained by the Central Government to regulate them by a system of licensing (in both notified and non-notified areas) where there is any abuse. It has proposed a new clause to the Bill which seeks to make all unrecognised Stock Exchanges illegal. The Committee does not see any special advantage in consulting—and this should be considered rather strange—the recognised Stock Exchanges concerned while taking action to prevent undesirable speculation. It has further felt that the Government should have the right to decide as to what should be the membership of a Stock Exchange. The Committee has restricted to three the number of Government nominees on the board of each Stock Exchange.

Regarding the regulation or prohibition of blank transfers, the Committee has felt that the currency of such transfers should be limited to a period of six months. The Committee has made changes also in clause 27 dealing with title to dividends, with a view to clarifying the clause. The object of the clause is to discourage blank transfers indirectly. It has, however, felt at the same time that the inclusion of bonus and other rights within the ambit of this clause might involve any person concerned in loss of capital and might also mean too severe a penalty. The Committee has, therefore, excluded from the purview of this clause bonus and other rights.

The Committee considers that a regular periodical audit of the accounts of members is not necessary and that it will be sufficient to provide for audit of accounts only where such audit is considered necessary by the Government. A new sub-clause has been added to clause 9 of the Bill which deals with the power of recognised Stock Exchanges to make by-laws. The sub-clause says that by-laws may provide for the publication of certain information by the clearing house at the end of every settlement period. The Committee is of the view that this information will provide an overall picture of the transactions on a Stock Exchange during a settlement period and be of considerable help to the public.

In his minute of dissent, Mr. U. M. Trivedi has, among others, referred to the limit of membership of a particular Stock Exchange and observes: "This may or may not work any hardship depending upon the maximum number so fixed, but it does interfere with the exercise of fundamental rights vested in every citizen of India. Article 19(1)(C) and (G) gives us the freedom to form associations and to practise any profession or to carry on any occupation, trade or business. The inhibitions to this freedom are that of interest of public order or morality or the lacking of professional or technical qualifications for carrying on any occupation, trade or business. If these restrictions are not covered by the restrictions provided for under the fundamental rights, then the law to that extent will be invalid."

In a joint note, Mr. K. K. Basu and Mr. T. B. Vittal Rao have suggested that blank transfers which have been peculiar to India should be prohibited or so regulated as to apply only to spot delivery within a few days. The Government should transfer and impose certain fees or charges on the transactions that pass through the clearing house on any clearing day. This would bring considerable revenue. Expressing "disappointment" with the various provisions of the Bill, they have declared that the measure, in its present form, will only allow bureaucratic control of the Stock Exchange.

NATIONALISATION OF INSURANCE

The resolution on insurance adopted by the Federation of Indian Chambers of Commerce, makes a very modest and very convincing defence of insurance in the private sector. This is the more notable because this body, as a representative of this sector, has reasons to feel aggrieved at the very exaggerated charges made against private insurers. At the outset, the resolution records the Federation's sense of disappointment over the "manner and method" in which the Government has chosen its decision to nationalise life insurance. In this, the Federation is supported even by Mr. Asoka Mehta, the ardent advocate of nationalisation. He said, in the course of this speech in the Lok Sabha, that the ordinance method, adopted by the Government, had served to give the impression that the executive was the dominant party and the legislature was merely a "registering body." Referring to the decision itself, the Federation points out that the Government has not advanced sufficiently strong and convincing reasons for the measure. The general record of insurance companies, it holds, is a "proud one, second to none in any part of the world." Now that insurance has been nationalised, it suggests that life insurance business should be conducted not through one large corporation but through half a dozen corporations.

A demand that the Government should appoint an impartial investigation commission into charges of malpractices levelled against the private sector of life insurance was made by two members of the Federation, Mr. Lalchand Hirachand Doshi and Mr. G. D. Somani. Mr. Doshi said: "A sort of vilifying campaign is going on against the private sector and it is necessary that we stand up and tell the public that this campaign must stop. If there is any doubt about anything, an impartial enquiry should be started so that the facts can be placed before the public." In the Lok Sabha, Mr. Tulsidas Kilachand too had taken strong exception to this campaign. He said that if the Government wanted to nationalise insurance it could do so without indulging in wild accusations against the private sector. The fact is that it is difficult to know from the general tone of Mr. Deshmukh's speech whether he felt happy that malpractices existed in private insurance—for, that provided the excuse for nationalisation —or he really deplored them.

In any case, some of his charges were clearly wide of the mark. For instance, he alleged that, in 1954, "about a thousand complaints were received in the Department of Insurance against various companies alleging delay or even non-payment of claims. Under section 47A of the Insurance Act, the Controller of Insurance is entitled to decide disputes relating to the settlement of claims on life policies assuring a sum not exceeding Rs. 2,000. The facts mentioned by Mr. Deshmukh are at variance with those given in the *Insurance Year Book*. The number of cases, according to the latest issue of the Insurance Year Book, was only 98, of which 11 cases were not entertained by the Controller, 69 cases were withdrawn, 16 cases were decided in favour of claimants and one in favour of the insurer and one was pending at the end of the year. It is noteworthy that one of the reasons given by the Controller for not entertaining certain disputes is that the concerned cases "did not come within the ambit of section 47A. Assuming that all the 16 cases, which he decided in favour of the claimants, were Rs. 2,000-policies, the amount involved was Rs. 32,000, as against the total claims of Rs. 14.26 crores paid by Indian insurers in 1954.

There is one aspect of the "vilifying" campaign which requires special notice. It has been suggested that the message of insurance had not been carried to the low-income groups. Mr. Deshmukh contrasted the position in India where industrial life assurance had not been attempted at all with that in the U.K. where such insurance had made rapid strides. Apart from the inappropriateness of comparing conditions in India with those in the U.K., it is well to remember that even in the U.K. which has had a long and unbroken history of industrial prosperity, insurance was for long confined only to the upper classes. In the Victorian era, the companies believed that life insurance was a luxury for which the poor could not afford to pay. Industrial life assurance is of recent origin even in that highly industrialised country. In India, industrial population forms a microscopic minority. Apart from this consideration, the fixation of statutory basic limit for insurance at Rs. 1,000 prevents insurers from offering policies for smaller sums.

There is also the lack of insurance consciousness to contend with. In this connection, it is well to remember that even the Government has failed to persuade the workers to agree to receiving national savings certificates as part of their bonus. In recent years, the workers have received crores of rupees worth of bonus; taking only one centre, Bombay City, the textile workers alone have received annually about Rs. 2½ crores. What has the Government, or the ruling political party, done to help the workers save at least part of this bonus for the rainy day? On the other hand, the record of private insurers is not much too black. As against about 5 lakhs of income-tax assessees, there are more than 40 lakh policyholders. At any rate, the Government cannot have it both ways. It cannot accuse the private insurers for keeping the profit motive uppermost in their minds and yet charge them with having left large fields, particularly rural areas, unexploited.

INDIAN SHIPPING

Problems facing the development of Indian shipping figured prominently in the addresses delivered by Mr. C. H. Bhabha, Chairman of the State-owned Shipping Corporation, and Mr. M. A. Master, a noted authority on shipping, at the meeting of the Standing Transport Committee of the Congress Parliamentary Party, held at New Delhi on the 2nd inst. Describing shipping "as one of the essential pillars of the very existence of our nation," Mr. Bhabha remarked that the mercantile navy was the country's second line of defence and its expansion should, therefore, be treated as an ancillary to the growth of India's defence forces. Elucidating this statement, he observed: "Without trying to be too presumptive, it cannot be considered improper if a small portion of our defence budget is earmarked for the growth of Indian shipping." Stating that the Defence Ministry spent annually a few crores on imports, Mr. Bhabha averred that, if only a calculation of the freight paid for these, and that too at high tariff rates, were made, it would surely reveal various good and sound reasons why the Defence Ministry should try and assist ships of the Indian flag. Through some social arrangement, he felt, a diversion of some of the defence funds needed to be made, at least for a few years, towards the expansion and encouragement of Indian tonnage. Mr. Bhabha suggested further that a complete tax exemption might be granted to shipping companies for a period of five years to enable them to raise their own finance, partly at least, for the purpose of adding rapidly to the tonnage of the country. There seems to be no serious objections to these constructive suggestions, and the authorities will do well to examine them from all angles; for the suggestions stem from the desire to have a strong line of second naval defence for protecting the country.

In his illuminating address, Mr. Master concurred generally with the views of Mr. Bhabha. He urged the Government to consider most favourably the suggestion of Mr. Bhabha for a complete tax exemption for a period of five years. Expressing the view that the shipping industry had failed to receive the priority it deserved, he recalled how, apart from granting loans of several hundred crores of rupees, Germany had struck upon a very novel method of raising finance for the construction of ships. "Loans granted out of the profits made by any industry for the purpose of constructing new ships," he said, "would be free of income-tax in accordance with paragraph 7(d) of the German Income-tax Law. It is estimated that about Rs. 140 crores were made available from this source for financing new German tonnage upto 1954. This ingenuous device demonstrates that, where there is a will, a way can be found to raise the necessary finances."

A notable feature of Mr. Master's speech is his reference to the hesitation on the part of the Government to permit a rise in rates of shipping freights and passenger fares, although the Government was so eager to raise the rates in the case of nationalised services, such as the air services. Recalling how the Railway Minister had raised the provision for depreciation on railways, he significantly observed: "My only appeal, therefore, to him is that the policy which is considered sound and proper for the railways and air services, important wings of transport, should also be considered desirable for another vital wing of transport, namely, shipping."

Mr. Master is a champion of private enterprise in shipping. That explains why he has not favoured the transformation of loans advanced by the Government for the acquisition of tonnage into equity capital. He called upon the Government to make it clear, beyond doubt, to all concerned that the loans granted to shipping companies would be created as loans alone.

One more aspect of Mr. Master's address to which a reference must be made relates to the carriage of Government cargoes by conference lines "at tariff rates *less* 40 to 50 per cent. and, sometimes even at tariff rates *less* 70 per cent." While appreciating the desire of the Government to see to it that its cargo was carried at the lowest rate possible, he observed: "I would most respectfully bring to their notice the fact that, if Indian companies are also required to carry cargo at tariff rates *less* 40 per cent., or even more, they will soon find that very little distance is left between efficiency and insolvency," and added: "That is not the way to build up a merchant navy and I do submit that the situation requires the most urgent and sympathetic consideration."

EXPANSION PLANS FOR COAL INDUSTRY

TRANSPORT HELD VITAL TO THEIR SUCCESS

THE importance of coal to the industrialisation of the country has, appropriately enough, received generous recognition by the Planning Commission which, in its draft-outline of the second Five-year Plan, has stated that during "the second Five-year Plan, on account of the requirements of steel and transport, the development of coal production will claim the first attention." Accordingly, it envisages an increase of about 23 million tons in coal output to 60 million tons at the end of the second Plan. It has, however, assigned a somewhat larger place to the public sector. Thus, this sector, which accounts for an output of about 4½ million tons, will increase its production to about 19 million tons or by 15 million tons and the private sector has been asked to expand its production by 8 million tons to about 41 million tons.

Although the public sector of the coal industry will expand faster than the private sector, there is no doubt that the latter has quite an important role to play. Quantitatively speaking, the private sector will still be the more important one. In a mixed economy of the kind visualised for the coal industry, there is an imperative need to ensure that both the segments are allowed to contribute their share to the national economy, and, what is more important, the private sector is not discriminated against. The chief problems which agitate the minds of private colliery owners were dealt with in a very comprehensive manner by Mr. B. Mitter, Chairman of the Indian Mining Association, in the course of his speech at the annual meeting of the Association, held last week at Calcutta.

The two important issues which he raised were the compensation payable to coal mines in the event of nationalisation of the coal industry and the transport bottlenecks. It may seem inappropriate to raise the question of compensation even before the Government has decided to take over the industry. But the view that the Government should nationalise the industry has been repeatedly expressed in certain quarters, so that no prudent business man can afford to ignore these statements. If the Government had at least given clear assurances to the industry in respect of security of tenure, there would be less misgivings about the future. But, since the Government has not been helpful in the matter of security of tenure too, the colliery owners have naturally to plan their expansion programme in the light of the official statements made on the subject of compensation to the management of coal mines in the event of nationalisation. These statements, as Mr. Mitter said, have indicated that if coal producers in the private sector laid out money for purposes of expansion of output, then, in the event of nationalisation, full compensation, after taking into account depreciation, would be paid for whatever money was laid out with the approval of the Government for this additional production. Mr. Mitter, when he subjected this formula to a critical scrutiny, found that it lacked the elements which would provide reasonable assurances for private management. Analysing this formula, he said:

"If the formula is examined, it will be seen to consist of three main parts, which lay down that compensation would be paid on capital outlay for increasing production, that it would be paid on capital expenditure less depreciation, and, finally, that it would be paid only on expenditure incurred with the approval of the Government. As regards the first part, in an extractive industry like coal which works a wasting asset, even the maintenance of existing levels of production requires a steady flow of new investments and it is technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production. The two are very closely linked when incurred in one and the same mine, and even the sinking of a new shaft in the same or another property might be regarded as necessary for maintaining production."

Even the second part of the formula, as Mr. Mitter showed, was unsatisfactory. This part relates to compensation in the form of capital expenditure less depreciation. Here, the point is that capital expenditure may yield returns over a long period of years and that, in the short run, it may show a disproportionately low rate of return. Commenting on this part of the compensation formula, he said:

"If a company were to invest a crore of rupees on fresh capital development and the Government were to decide to acquire the industry, say in five years' time, then taking into account the rates of depreciation applicable in the coal industry, the depreciated value of the outlay would be very substantially less than this crore at the end of five years. At the same time, in the course of these five years, the Company can hope to earn very little by way of return on its investment. Consequently, the outlook can hardly be construed as being reassuring to those who contemplate making large financial commitments."

The third part of the formula, though it has no direct relevance to the financial aspect of nationalisation, involves considerable administrative complications. This part implies prior approval of the Government for items of capital expenditure. Referring to the complications, which might result from this condition, Mr. Mitter said:

"If the necessity of having the initial investment approved by the Government were conceded, should the formula imply that an account had to be kept of every single item of plant and machinery installed at each individual colliery, and, further, that this had to be done for an indefinite period, various practical and procedural problems would inevitably arise making the satisfactory maintenance of the records extremely difficult, if not impossible, both from the point of view of the Government as well as that of individual producers."

That this is by no means an exaggerated view of the difficulties, which the colliery owners might have to face under the formula, will be realised by those who have had anything to do with the cumbrous and slow way in which the Government departments generally function.

Surely, the Government cannot expect the private colliery managements to take far too many risks in the matter of investment in capital expansion plans, if they are not certain that their reasonable claims for compensation will be met by the Government. Such an assurance is particularly necessary for two reasons. In the first place, the question of compensation is now outside the purview of the Courts. Secondly, the coal industry has certain distinctive features so that the question of compensation is a more vital issue for the industry than for other industries. It is to be hoped that the Government will be able to evolve a more comprehensive formula for compensation than the one it has now suggested.

Transport is one of those problems which continue to exercise the minds of colliery-owners. It is true that the Railway Plan provides for transporting larger quantities of coal. Even so, Mr. Mitter did well to emphasise that the "success of the coal plan cannot be assured, unless transport can move the expected volume of traffic." Since, in the immediate future, the transport that will be available will be somewhat restricted in relation to the demand for it, the authorities will necessarily have to continue some system of allocation of wagons. In this connection, Mr. Mitter complained that "it seems to have become the practice for the State collieries to get first priority in such allocations to the detriment of collieries in the private sector." He added: "If private enterprise is to be given a fair chance of expanding output, distribution of wagons should be made without arbitrarily subordinating the interests of one integral section of the coal industry to the dictates of another." The authorities will do well to investigate this grievance and also redress it, in the interests of justice as well as harmony between the two sectors of the coal industry.

PATENT SYSTEM IN INDIA

RIGHTS OF INVENTORS PROTECTED

By K. B. Lall, I.C.S.
JOINT SECRETARY, MINISTRY OF COMMERCE AND INDUSTRY

THE Indian patent system has its origin in an Act—the Exclusive Privileges Act, 1856—designed to protect the inventions in India. This Act came into force on 28th February 1856, just 100 years ago. It provided that the inventor of a new manufacture could petition to the Governor-General of India-in-Council for leave to file a specification, and after this leave had been granted and the specification filed, the inventor became entitled to the sale and exclusive privilege of making, selling and using the invention in India and of authorising others so to do for a term of 14 years.

The Act of 1856 was repealed and the provisions contained therein were re-enacted in an Act of 1859 which not only validated the exclusive privileges granted by the 1856 Act but extended their term to 14 years from the date of the 1859 Act. The Act was amended in 1872 and 1883; and in 1888 all the previous Acts were repealed and replaced by a consolidated Act, namely, the Inventions and Designs Act, 1888.

The Act of 1888 was revised and replaced by the Indian Patents and Designs Act, 1911, which has been amended from time to time since then. With the attainment of independence, questions relating to patents assumed a special significance, a new urgency. Soon, a Committee of Enquiry was appointed with comprehensive terms of reference to examine the patent system in all its aspects and to recommend what measures should be taken to ensure that the system becomes more conducive to national interests. This Committee submitted two reports—one an interim report and the other a final report. The Government of India accepted the recommendations in the interim report and enacted the Indian Patents and Designs (Amendment) Act, 1950, in order to implement them. Most of the recommendations in the final report have also been accepted by the Government. The Patents Bill, 1953, which was introduced in the Lok Sabha some time ago, embodies most of the recommendations in the Committee's report.

In law, the patent in India is a grant from Government; it confers on the grantee the exclusive privilege of using or selling an invention for a specified period of years. This grant is made in consideration of the disclosure of the invention to Government and through them to the public. The law of patents thus seeks to stimulate invention, and to persuade the inventor to disclose it by securing for him a share in the fruits of invention.

Nevertheless, the system of patents has from time to time been criticised on the ground that, as the exclusive privilege involved in a patent creates monopolies, it operates as a handicap to the industrialisation of the country. This criticism, however, fails to take account of the fundamental difference between a patent monopoly and other forms of monopolies. The owner of a patent brings into being a new process, a new article, which the community did not possess before and thus helps to add to the choice of goods available to the consumer. The patent monopoly does not prevent or restrain any member of the public from continuing any manufacture or trade he exercised before the grant of the patent; its scope is limited to only articles having qualities not present in articles previously in the market, and that too only for a strictly limited period. The system of patents does not thus inhibit free competition: in fact, because of it, a patentee is enabled to offer competition, not by offering the same article as the established manufacturer, but by offering a different article serving the same or a similar purpose and satisfying the same need more economically or perhaps even more efficiently. In this view, it will be readily conceded, the patent monopoly, even though it confers on the inventor certain limited but exclusive rights, constitutes an "addition to and not a subtraction from the public wealth."

It is a truism that "invention begets invention" and that, by appealing to the profit motive of the inventor, the patent system acts as a strong stimulus to invention. There are various types of inventions and the reward secured to the inventor by the grant of a patent may not always be commensurate with the importance of the invention. Nevertheless, the patent system recognises the principle that the size of the reward should be proportionate to the merit of the invention. The better the invention the greater the profit. The inventor is by nature an optimist and believes in the worth of his invention and the opportunity of being able to monopolise it for some time, therefore, attracts him and spurs him to further efforts.

It must be admitted with regret that although the patent system has been in vogue in the country for full 100 years, the nation has yet to derive substantial advantage from it. The law itself is not very well known and the number of Indian inventions protected by it is by no means considerable. That, however, is not the fault of the law. It is only lately—with the advent of independence—that the nation is waking up from sloth and slumber, and it is to be hoped that the centenary celebrations, held last week at Calcutta will serve to promote interest in inventions and to stimulate the inventive urge in our people.

If India's development is not to be based on cheap imitation of foreign products, and if the nation is determined to progress by its own exertions and according to its own genius, much greater attention will have to be paid to the need for new and more fruitful inventions, to the desirability of encouraging and stimulating inventive genius, and to the importance of assuring to the prospective inventor a reasonable share in the gains of the invention.

The patent law provides all the guarantees that a patriotic inventor can legitimately seek and it is to be earnestly hoped that with the improvements—procedural and structural—in the offing the Indian system of patents will help to create and maintain conditions conducive for the nation's inventive genius to blossom and to flower.

BILL TO LEGALISE MONOPOLIES

CURBS ON COMPETITION

From Our Own Correspondent

LONDON, *4th March*

PARLIAMENT this week will be discussing the Government's Bill to implement the report of the Monopolies Commission published last year. It will be remembered that that Commission had both a majority and a minority recommendation — advocating respectively rather more severe and rather less severe methods of attacking industrial and commercial monopolies. It was at the time feared that the Government would incline to the less severe—amounting fundamentally to registration by every firm indulging in monopolistic practices, thus enabling an inquiry into those practices to be made.

LONDON LETTER

In fact, the Government's Restrictive Practices Bill is even less severe than the minority report proposed. The most striking departure from the recommendations of the whole Commission is to permit, indeed to legalise by recognition, retail price maintenance. This pernicious practice is at the root of much of the commercial apathy in this country where no price competition is possible. If a trader can sell an article cheaper than someone else and make his business pay by selling more of that article, the manufacturer can stop him and put him on a level with the unenterprising seller who wants a quiet life and is content to go on selling his limited quantities in the confident knowledge that no one can outbid him. Up to now the sanctions on the price-cutting trader could only be applied by a manufacturer who would blacklist the offender and advise all his associated fellow-manufacturers to do the same. The legality of such proceeding was contested by the Monopolies Commission who insisted that manufacturers should not be permitted to enforce their prices in this way. The new Bill is cynical enough to prohibit black-listing by the manufacturer *but* to permit the latter to obtain a court injunction to prevent price-cutting. Thus the monopoly wielded by private business is now reinforced by the power of the courts.

This aspect of the Bill is anathema to all believers in competition. In America anti-monopolistic laws are severe and competition is regarded as the life-blood of enterprise—though this is not to say that American manufacturers do not try to dodge competition just as much as do their British counterparts. But Americans have always considered that in practice the road of the monopolist was always easier here than across the Atlantic and it looks as if it is going to be made even easier. Unfortunately 15 years of controls, fixed margins between traders, and excessive post-war demand have helped to create enormous vested interests in favour of limiting price competition and the latitude given to restrictive agreements in the new Bill springs from —or appears to spring from—habit.

Another difficulty is that interpretation of what is a restrictive practice is left to the courts.

(*Continued in previous column*)

(*Concluded from next column*)

Naturally the lawyers (and the money for paying counsel will be on the side of the manufacturers' associations rather than on that of the consumer) will enjoy themselves pointing out the hallowed nature of most restrictive practices—and will always be able to fall back on the final *alibi* of trade union restrictive practices (if the worker can do it, why can't his boss?) which it is not sought to control in any way under the proposed legislation.

Should not the whole approach to restrictive practices be economic rather than legalistic? Can the United Kingdom, back to the wall in the fight to increase exports and improve its balance of payments, afford not to have the keenest price competition? Competition is uncomfortable, it gives no peace, permits no business man to rest on his laurels—but in an unkind world can a nation such as this afford to ignore its spur? And yet it is doubtful whether Parliament will speak with a proper sense of urgency on this matter in the coming days.—*All Rights Reserved.*

Rubber Flooring

(*Manufactured according to British Standard Specification*)

Hard Wearing, Hygienic, Silent, Shock-Proof and washable. Decorative non-slip glazed floor.

Ideal for Homes and Hospitals, Hotels and Offices, Cinemas and Lecture Halls etc.

Installation by National's Own Team of experienced and efficient layers, will guarantee the best standard of laying, finish & workmanship.

FINANCES OF CENTRAL GOVERNMENT

PROVISION FOR DEVELOPMENT SCHEMES STEPPED UP

A BRIEF summary of the Central Government's budget for 1956-57, which Mr. Chintaman Deshmukh, the Union Finance Minister, presented to the Lok Sabha on 29th February 1956, was given in our last week's issue—*vide* page 388. It will be seen therefrom that the budget reflects the increasing tempo of development expenditure. Thus, the revenue deficit (Rs. 51.83 crores) and the overall deficit (Rs. 338.17 crores) are larger than those of any post-war year. The year 1956-57 coincides with the first year of the second Five-year Plan, under which the capital outlay in the public sector has been more than doubled as compared with the first Plan, the target actually fixed being as much as Rs. 4,800 crores, as against Rs. 2,356 crores. Naturally, the estimate of the capital outlay, including loans to State Governments and others mostly for the execution of the projects in the Plan, for 1956-57 is placed considerably high at Rs. 703 crores. This falls short of the anticipated available resources by Rs. 338.17 crores as stated above. This, together with the revenue deficit of Rs. 51.83 crores, brings the total overall deficit to Rs. 390 crores. Deducting from the revenue deficit the receipt of Rs. 34.15 crores, which the Government will receive as a result of the new taxation proposals, the total uncovered deficit on revenue and capital accounts comes to Rs. 355.85 crores. This deficit is proposed to be covered by expansion of Treasury Bills.

The revenue deficit of Rs. 51.83 crores disclosed in the budget for the coming year (1956-57) is in striking contrast to the surplus of Rs. 12.31 crores in the revised budget for 1955-56. The huge deficit is the result of a setback in revenue receipts, on the one hand, and expansion in expenditure, on the other. There is a drop of Rs. 8.00 crores to Rs. 493.60 crores (before the effect of the budget proposals) in revenue receipts. The fall is accounted for mainly by revenue derived from customs and Civil Administration. The estimate of revenue expenditure for 1956-57 is, as already stated, placed higher at Rs. 545.43 crores, as against Rs. 489.36 crores in the revised budget for 1955-56. The improvement is in a large measure due to the stepping up in the provisions made under Civil Administration, Defence Services (net), direct demands on revenue, and contributions and grants-in-aid to States.

Budgetary Position

The following table gives the summary of the final estimates for the year 1956-57, as compared with the budget and revised estimates for 1955-56 and actuals for 1954-55:

(In lakhs of rupees)

	1954-55 Account	1955-56 Budget	1955-56 Revised	1956-57 Budget
REVENUE				
Customs	1,84,86	1,64,50	1,65,00	1,50,00
Union excise duties	1,08,22	1,32,27	1,40,00	{ 1,45,45 +25,00*
Corporation tax	37,33	39,77	39,84	{ 41,84 +6,50*
Taxes on income	1,22,26	1,33,93	1,33,86	{ 1,38,16 +3,50*
Estate duty	81	3,00	2,00	2,50

Surplus (+) or Deficit (—)	+33,51	—17,35	+12,31	—17,68

* Effect of Budget proposals.

Capital Outlay

Next year's budget provides for a capital outlay of Rs. 316.7 crores, including Rs. 9.5 crores for Government trading schemes, mostly for the normal purchases of foodgrains for the Central reserve. This represents an increase of Rs 146.7 crores over the revised estimate of Rs. 170.0 crores for 1955-56. The bulk of this rise—Rs 105.07 crores, to be precise—is expected to be accounted for by industrial development and railways. The provisions made during 1956-57 under these heads are Rs. 79.60 crores and Rs. 113.43 crores, as against Rs. 15.88 crores and Rs. 72.08 crores, respectively, in the revised estimate for 1955-56. In addition to the enlarged provision for capital outlay, the budget estimates for 1956-57 include a larger provision for loans to State Governments and others mostly for the execution of the projects in the Plan, the sum earmarked being Rs. 386 crores, as against Rs. 327 crores and Rs. 355 crores in the revised and budget estimates for 1955-56, respectively. The capital outlay and loan requirements of State Governments and others together amount to Rs. 703 crores during 1956-57. As against this, credit has been taken for Rs. 365 crores, of which new loan accounts for Rs. 100 crores—incidentally, it is said that there is no loan maturity next year—small savings for Rs. 70 crores, foreign aid for Rs. 85 crores, and other miscellaneous and remittance transactions for Rs. 110 crores. The gap in the capital budget thus comes to Rs. 338 crores.

The current year's budget provided for an overall deficit of Rs. 327 crores to be met by expansion of Treasury Bills. On the basis of the revised estimates, the overall deficit is now expected to be Rs. 222 crores. As the opening balance of the year was about Rs. 18 crores less than the minimum of Rs. 50 crores, the expansion of Treasury Bills will amount to about Rs. 240 crores. Unlike the previous year when a combined loan was floated to cover the requirements of both the Central Government and the State Governments, this year the normal procedure of separate loans by the Centre and the States was followed. The Central Government floated a 10-year loan, the 3½ per cent. National Plan Bonds—second series. This loan which was for Rs. 100 crores was fully subscribed, the amount accepted being Rs. 103.7 crores.

Small savings have shown substantial improvement, the collections now expected being Rs. 65 crores, as against Rs. 52 crores in the budget. While the response so far has been encouraging, the task set for the next Plan is much bigger. As it is evident from the draft outline of the Plan, small savings are expected to yield Rs. 500 crores during the next Plan, which is more than double the target for the current Plan. The Government has been taking various steps to intensify the small savings movement.

The improvement in the ways and means position this year is due largely to the surplus in the revenue account and the savings in the capital expenditure and loans to State Governments and others. Foreign aid this year is now expected to amount to about Rs. 56 crores, as against Rs. 74 crores in the budget, but this has been more than offset by improvement in other heads.

Two loans which fell due for repayment this year were duly repaid, the amount involved being Rs. 69 crores.

Debt Position

The outstanding public debt of the Government of India is expected to go up by Rs. 525.55 crores during the next year, that is, from Rs. 2,586.19 crores at the end of March 1956 to Rs. 3,111.74 crores at the end of March 1957. The major portion of the rise—Rs. 390.00 crores—will be short-term, in the form of Treasury Bills and Ways and Means advances, which incidentally indicates the extent to which the Finance Minister proposes to resort to deficit financing with a view to covering the deficit on revenue and capital accounts. Current rupee loans and dollar loans are also expected to be higher by Rs. 100.49 crores and Rs. 27.37 crores, respectively. Loans from the U.S.S.R. amount to Rs. 9.20 crores. Expired rupee loans and capital portion of railway accounts, however, are placed lower, the former by Rs. 57 lakhs and the latter by Rs. 91 lakhs.

The statement below gives a broad analysis of the debt position of the Centre as on 31st March 1957, as compared with that at the end of 1955-56 and 1938-39:

(In crores of rupees)

	As on 31st March		
	1939	1956	1957
Rupee Loans:			
Current loans	437.87	1,509.61	1,610.10
Treasury Bills and Ways and Means advances	46.30	711.87	1,101.87
Special floating loan	..	212.60	212.60
Expired loans	0.65	11.31	10.74
Total	484.82	2,445.39	2,935.31
Sterling Loans:			
Current loans	396.50	0.59	0.56
War contribution	20.62	20.62	20.62
Capital portion of railway annuities	47.82	1.99	1.08
Expired loans	0.01	0.03	0.03
Total	464.95	23.23	22.29
Dollar loans	..	117.57	144.94
Loan from U.S.S.R.	..	..	9.20
Grand Total	949.77	2,586.19	3,111.74

The liability for the British War Loan remains suspended, while the outstanding railway annuities are covered by an equivalent deposit with the United Kingdom Government, which provides the necessary sterling as the payments fall due. Omitting these items, the total outstanding debt will be Rs. 2,564 crores at the end of the current year and Rs. 3 090 crores at the end of 1956-57. At the end of the Budget year, the outstanding debt would, as compared with the figure at the end of 1938-39, have risen by Rs. 2,209 crores.

In addition, the Government is liable to repay the balances in the various provident funds, the Post Office Savings Banks, the Post Office Cash, National Savings and National Plan Certificates, including Annuity Certificates, the Depreciation and Reserve Funds of the Railways, Posts and Telegraphs, etc., and certain other deposits, mainly relating to excess profits tax and income-tax. These balances are estimated at Rs. 9,49 crores at the end of the current year and Rs. 1,043 crores at the end of 1956-57, after making a very rough allowance for Pakistan's probable share in them. Taking the regular debt and these liabilities together, the debt position of the Government of India will stand as follows:

(In crores of rupees)

	As on 31st March	
	1956	1957
Regular loans	2,586.19	3,111.74
Other liabilities	940.34	1,043.32
British War Loan and railway annuities	(—) 22.61	(—) 21.70
Total	3,512.92	4,133.36

This outstanding debt may be analysed with reference to the purpose on which the money has been utilised or the assets by which it is covered. An analysis is given below:

(In round crores of rupees)

	As on 31st March	
	1956	1957
Railways	974	1,087
Posts and Telegraphs and other commercial departments	112	126
Investment in commercial concerns	56	135
Loans and advances	959	1,287
Purchase of annuities for sterling pensions	65	59
Subscriptions to the International Monetary Fund and World Bank	218	218
Debt due from Pakistan	300	300
Cash and other investments	50	51
Total	2,729	3,258

Allowing for these, the uncovered debt will amount to Rs. 875 crores at the end of the budget year, as against the pre-war figure of Rs. 188 crores. The whole of this cannot, however, be called unproductive debt, for the large grants to States for development in recent years, which increase the productive capacity of the country as a whole, are not entirely unremunerative. Similarly, the large capital outlay on Central property, the value of which is either not shown at all in the Government's accounts or is shown as non-commercial (such as the capital outlay on New Delhi and Defence capital outlay), is not without value.

Out of the total debt noted above, the interest-bearing obligations of the Government of India are expected to stand at Rs. 3,931.69 crores by the end of 1956-57, as against Rs. 3,311.59 crores (revised) at the end of the current year and Rs. 1,201.58 crores (excluding Rs. 4.18 crores on account of Service Funds—England) at the end of 1938-39. The bulk of this liability is covered by interest-yielding assets, the actual amount of such as on 31st March 1957 being Rs. 2,995.96 crores. This figure compares well with Rs. 2,468.29 crores (revised) at the end of March 1956 and Rs. 896.65 crores at the

WORLD BANK'S OPERATIONS IN SECOND HALF OF 1955

FURTHER RISE IN NET EARNINGS

THE financial operations of the International Bank for Reconstruction and Development (World Bank) during the six months ended 31st December 1955 resulted in an increase in the Bank's net earnings which improved to $13.7 million, as compared with $12.3 million for the corresponding period in 1954. This sum was credited to the supplemental reserves against losses on loans and guarantees. In addition, the Bank increased its special reserve by $7.2 million to $69.4 million during the period under review. On 31st December 1955, the total reserves of the Bank amounted to $204.6 million. Gross income, exclusive of loan commissions, was $31 million as compared with $29.3 million in 1954. Expenses during the six-month period aggregated $17.3 million.

Afghanistan and Korea became the members of the Bank during the half-year under review. Afghanistan's subscription to the Bank's capital stock is 100 shares with a total par value of $10 million. Korea's subscription is 125 shares, having a par value of $12.5 million. The Bank has now on its roll 58 members and its total subscribed capital stands at $9,050.5 million.

During the period under review, the Bank made 15 loans aggregating the equivalent of $146.3 million. This brought the number of loans since the start of operations to 139 in 41 countries and raised the gross total of commitments to $2,470.4 million.

Repayments of principal received by the Bank amounted to $12.6 million. The total of such repayments, including prepayments, amounted to $226.5 million on 31st December. This included $152.9 million repaid to the Bank and $73.6 million to investors who had purchased borrowers' obligations from the Bank.

The table below gives the names of countries to which loans were granted and the period as well as the rate of interest on the loans.

Country	Amount of loan	Period of loan	Rate of interest	Date when amortisation begins
	Million $	Years	Per cent.	
Algeria	10.0	20	4½	Mar. 1957
Guatemala	18.2	15	4½	Feb. 1959
Honduras	4.2	9	4½	Dec. 1957
Japan	5.3	15	4½	Mar. 1958
Lebanon	27.0	25	4½	Aug. 1961
Nicaragua	9.0	12	4½	Oct. 1957
Pakistan	19.0	15	4½	Aug. 1958
Panama	5.9	9	4½	May 1959
Peru	5.0	9	4½	Aug. 1958
Thailand	12.0	15	4½	Aug. 1958
U. South Africa ..	25.2	10	4½	July 1958
Uruguay	5.5	20	4½	May 1958

During the period under review the World Bank redeemed the outstanding balance of Can. $13.6 million of the 4 per cent. ten-year Canadian dollar bonds of 1952 due in 1962. A guilder issue of the World Bank bonds was offered in the Netherlands by an underwriting group headed by Nederlandsche Handel-Maatschappij. The issue consisted of £40 million (U.S. $10.5 million) of 3½ per cent. 20-year bonds. Further, a Swiss franc issue of Bank bonds was offered in Switzerland by an underwriting group headed by the Union Bank of Switzerland, Credit Suisse and the Swiss Bank Corporation. The issue consisted of Sw. Fr. 50 million (approximately $11.6 million) of 3½ per cent. 20-year bonds, due 1976. The bonds are dated 1st January 1956 and payment was made by the banking group on 3rd January 1956. The value of all Bank bonds outstanding on 31st January 1956 was $860.8 million.

Private investors have participated directly in 12 of the 15 loans made by the Bank since 1st July 1955. These participations amounted to the equivalent of $9.5 million, and took place in connection with loans in Algeria, Guatemala, Honduras, Japan, Nicaragua, Pakistan, Panama, Peru, Thailand and Uruguay. All of these participations were undertaken without the guarantee of the Bank. Between 1st July and 31st December 1955, sales from the Bank's loan portfolio, together with the participations, amounted to $20.6 million. Of this amount, $392,500 was sold with the Bank's guarantee and $20.2 million without guarantee. Total participations and portfolio sales amounted to $224.6 million on 31st December 1955, of which $165.7 million was without the guarantee of the Bank.

Ten countries have completed the action necessary for membership in the International Finance Corporation, the proposed new affiliate of the Bank. They are Australia, Canada, Costa Rica, Ecuador, Egypt, Ethiopia, Iceland, Mexico, the United Kingdom and the United States; their prospective subscriptions amount to $56,794,000, which is approximately three-quarters of the minimum capital required. The charter of the Corporation requires a minimum membership of 30 countries, together subscribing at least $75 million, before the Corporation can come into being. In addition to the ten countries that have completed action, 39 other member-countries of the Bank have expressed their intention of joining the Corporation and many of these have already carried to an advanced stage the domestic legislation required to authorise membership.

The Economic Development Institute was opened in Washington, D.C., on 9th January 1956. There are 14 participants in the first course, and all of them are senior officials of the country, or territory of the member-country, which nominated them. They come from Belgium (African Territories), Ceylon, Colombia, Egypt, Haiti, India, Japan, Mexico, Nigeria, Pakistan, Philippines, Thailand, Uganda and Yugoslavia.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION

Started on 1st March 1955, the Industrial Credit and Investment Corporation of India Ltd., Bombay, has just completed a year of useful service to industry. An account of its activities, as explained by the Directors of the Corporation in their first report for the period ended 31st December 1955, makes encouraging reading. The Corporation is stated to have had many requests for loans or other forms of assistance. But many of these requests related to businesses run by partnerships and individuals, and as such, did not lie within the scope of the Corporation's activities. For the Corporation has decided that it should not entertain applications for assistance from individual and partnership concerns.

During the period under review, the Corporation received enquiries covering a wide range of industrial activities from all corners of India. Of these, only 11 applications were accepted for providing financial assistance in one form or another, and at the close of the year, 25 applications were pending consideration. The Corporation decided to offer loans or other aid only in five cases, and the Directors observe: "It will be appreciated that since the Company examines all aspects of a project for the establishment of a new industry or the modernisation or expansion of an existing one before it agrees to give assistance, there is necessarily a substantial time lag between the receipt of an application and the disbursement of funds."

Of the 11 applications, five related to the underwriting of public issues of ordinary or preference capital, four called for direct subscriptions to ordinary or preference capital and two were concerned with loans. The industries covered by the applications included manufacture of paper, electric equipment, fuel injection equipment, chemicals and equipment for the textile industry, refining of sugar and metal ores, and cotton spinning. The amounts which it was agreed to provide for any one concern ranged from approximately Rs. 5 lakhs to Rs. 1 crore.

It is encouraging to note that the Corporation has bestowed much attention on the problem of underwriting public issues of capital. The establishment of a regular organisation for this purpose was long overdue. In fact, many official enquiries including that conducted by the Shroff Committee appointed in 1954 by the Reserve Bank of India had emphasised the urgency for establishing an organisation which could underwrite new capital issues. This lacuna has now been filled by the underwriting operations undertaken by the Corporation.

The audited accounts of the Corporation for the period under review shows a net profit of Rs. 25.33 lakhs. The income from interest and dividends was Rs. 32.16 lakhs. Underwriting commission and brokerage earned aggregated Rs. 2.04 lakhs.

The Directors have decided to write off, from the net profit, a sum of Rs. 1.09 lakhs by way of preliminary expenses and Rs. 1.42 lakhs, being the brokerage paid on the issue. A sum of Rs. 5 lakhs has been credited to general reserves. The provision for taxation has amounted to Rs. 10.58 lakhs.

STERLING AREA DOLLAR RESERVES IMPROVE

The gold and dollar reserves of the sterling area as at 29th February last show a smart increase of $61 million, a rise which is the biggest inflow for nearly two years. This compares with an increase of $29 million recorded in the preceding month. The fact that, for the second consecutive month, the reserves have shown an increase reflects an improvement in the British economy. It may be mentioned here that with the exception of January and April 1955, when the reserves registered a net gain of just over $1 million and $19 million respectively, there was an almost continuous outflow from the reserve.

The relevant figures published by the British Treasury last week-end show that at the end of February, the sterling area gold and dollar reserves stood at $2,210 million, as compared with $2,149 million in the preceding month.

Defence aid received from the U.S. in February was $6 million which was the same amount as in January.

The improvement in February is stated to be not wholly due to the increase in the Bank rate effected in the mid-month. For it is pointed out by officials of the Treasury that the inflow of gold was fairly even throughout the month and that it had been taking place before the Bank rate was put up.

That there is no cause for any undue complacency as a result of the inflow into reserves is, however, indicated by Britain's continuing deficits with the E.P.U. In February the U.K. had a deficit of £8 million, following deficits of £4 million in January last and £11 million in December 1955. There have been deficits every month since June 1955. In February a sum of $8 million was paid to the European Payments Union as 75 per cent. of Britain's January deficit, the balance being added to book debt. In addition, $2 million was paid to E.P.U. off old debts under bilateral settlements.

In spite of a deficit with the European Payments Union, Britain reaffirmed only last week at the O.E.E.C. meeting its adherence to the trade liberalisation programme. It is pointed out that several countries in Europe with whom Britain is individually deficit are less advanced than Britain in the matter of trade deficit.

MERCANTILE BANK OF INDIA LTD.

The Directors of the Mercantile Bank of India Ltd. have declared a second interim dividend of 7 per cent. less income-tax on all shares of the Bank for the year ended 31st December 1955. The dividend is payable on 20th March 1956. It will be recalled that the first interim distribution of 7 per cent. for the year was made in September 1955.

BANK OF MYSORE'S PROFIT NEARLY MAINTAINED

FURTHER RISE IN DEPOSITS

A FURTHER expansion in the resources and the turnover of business is indicated by the audited accounts of the Bank of Mysore Ltd. (General Manager: Mr. B. V. Narayana Reddy, Bangalore), for the year ended 31st December 1955. Thus, the deposits of the Bank, at the end of the year under review, disclose a rise of Rs. 56.50 lakhs. Advances show an expansion of over Rs. 42 lakhs and the investments and cash balances have been well maintained at the previous year's level. This expansion of business is duly reflected in the rise of nearly Rs. 4 lakhs in gross income. The profit has, however, suffered a small shrinkage, in distinct contrast to the general trend of bank profits, consequent on the sharp rise in expenses.

The profit of the Bank for the year under review amounts to Rs. 17.21 lakhs, as compared with Rs. 17.64 lakhs for the previous year and Rs. 17.91 lakhs for 1953. Thus, this is the second year in succession for which the Bank's profit has suffered a decline, albeit a small one. The provision for taxation, which had been raised last year from Rs. 6 lakhs to Rs. 7 lakhs, has been restored to Rs. 6 lakhs. The reserves, which had not received anything in the previous three years, have, on the other hand, been strengthened by the addition of Rs. 1 lakh to the reserve for contingencies. The allocation for distribution of bonus to staff has been further stepped up from Rs. 2.75 lakhs to Rs. 2.84 lakhs. The distribution to the shareholders has been maintained at 16 per cent. per annum, made up of a dividend of 12 per cent. and a bonus of 4 per cent., and this is the eleventh year in succession for which the distribution is being repeated.

The salient features of the Bank's profit and loss account for the past four years and the balance-sheet as at the close of each of these years provide an idea of the Bank's progress:

(In lakhs of rupees)

	For the year ended 31st December

* Before providing for depreciation on investments.
† Includes Rs. 1 lakh drawn from dividend equalisation fund.

The upward trend in gross income of the Bank noted in the previous two years has been maintained in the year under review also. What is more, with a further rise of Rs. 3.93 lakhs, it has established a fresh record in the history of the Bank. The increase has been shared by the income from interest and discount and that from commission and exchange, the rise in the latter being more marked than that in the former. The pace of increase in outgo by way of interest paid has also slowed down, while a sharp rise of Rs. 2.95 lakhs is noted in expenses, of which salaries and allowance and provident and gratuity fund contributions alone account for Rs. 2.67 lakhs.

The latest balance-sheet of the Bank discloses an increase of Rs. 56.50 lakhs in deposits over the year. Though this expansion in deposits is not as impressive as that noted at the end of 1954, it is no doubt a useful one and has served the Bank not only to maintain the upward trend since 1952, when the deposits fell from Rs. 9.92 crores as at the end of 1951 to Rs. 8.78 crores, but to establish a fresh record since the close of 1948. The rise in deposits is mainly accounted for by fixed deposits which have gone up by Rs. 56 lakhs to Rs. 4 crores and thrift and savings bank deposits which are up by Rs. 22 lakhs to Rs. 2.23 crores. Current accounts, contingency accounts, etc., have, on the other hand, declined by Rs. 22 lakhs to Rs. 4.32 crores, in distinct contrast to the rise of Rs. 85 lakhs noted at the close of 1954. On the assets side, advances show an increase of Rs. 42 lakhs, which has not, however, been shared by all classes of advances. For loans, cash credits and overdrafts are actually lower by Rs. 10 lakhs at Rs. 5.80 crores. Bills discounted and purchased are up by Rs. 20 lakhs at Rs. 1.21 crores and money at call and short notice by Rs. 32 lakhs at Rs. 51 lakhs. Investments (at or below cost) have been strengthened by Rs. 84 lakhs to Rs. 3.84 crores, most of which represent those in Central and State Government bonds and other trustee securities, the market value of the same being Rs. 3.77 crores. The difference between the market value and book value of the investments is more than adequately covered by the provision for depreciation in investments amounting to Rs. 9.33 lakhs. Cash balances have shrunk by Rs. 81 lakhs and, with the rise in deposits noted above, the cash coverage to deposits has halved from 17.3 per cent. at the end of 1954 to 8.6 per cent. at the close of the year under review. The total liquidity ratio is, however, very comfortable at 45.3 per cent.

(Concluded from next column)

It will be observed that the upward trend in the Bank's gross income has made a large stride during the year under review with a rise of Rs. 9.46 lakhs. This improvement in earnings has been well shared, as the table shows, by interest and discount earned, as well as exchange and commission. A substantial part of the rise in income has been offset by the increase of Rs. 1.94 lakhs in interest paid and of Rs. 4.57 lakhs in expenses.

With the addition of Rs. 2 lakhs out of the profit for the year under review, the Bank's reserve fund stands at Rs. 35 lakhs, as against a paid-up capital of Rs. 40 lakhs. As already pointed out, the deposits have gone up by Rs. 3.22 crores, thus more than making good the decline of Rs. 40.02 lakhs noted at the end of 1952 when the deposits declined to Rs. 5.66 crores from the then record level of Rs. 6.07 crores in 1951. The bulk of this rise in deposits is accounted for by current accounts, contingency accounts, etc., which have gone up from Rs. 3.51 crores to Rs. 5.97 crores. Savings bank deposits are up by Rs. 8 lakhs at Rs. 66 lakhs and short and fixed deposits and 3-year cash certificates by Rs. 69 lakhs at Rs. 2.48 crores. Consequent on the substantial improvement in cash balances, the borrowings from banks, which had stood at Rs. 40 lakhs at the end of 1954, have been repaid. Of the rise of Rs. 1.86 crores in advances, loans, cash credits and over-drafts account for Rs. 89 lakhs and bills purchased and discounted for Rs. 77 lakhs. At Rs. 5.50 crores, the total advances constitute a record (so far as the year-end figures are concerned) in the history of the Bank.

SHARP RISE IN UNION BANK'S PROFIT

DEPOSITS AT A RECORD LEVEL

THE audited accounts of the Union Bank of India Ltd. (General Manager: Mr. F. K. F. Nariman, Bombay) for the year ended 31st December 1955 make impressive reading, in that they indicate a substantial improvement in the Bank's turnover, accompanied by a sharp rise in earnings. The expansion in business is duly reflected in the rise of Rs. 5.09 crores to Rs. 13.05 crores in the balance-sheet total, thanks mainly to the increase of Rs. 3.22 crores in deposits to a record level of Rs. 9.11 crores. The expansion in resources, it may be noted here, has been well utilised to raise the main revenue-earning asset, namely, advances, from Rs. 3.84 crores to Rs. 5.50 crores, without in any way affecting the liquidity ratio.

The profit of the Bank shows a marked increase from Rs. 6.76 lakhs to Rs. 9.45 lakhs, thereby not only reversing the downward trend noted in the previous three years, when the profit declined from Rs. 8.92 lakhs earned in 1951 to Rs. 6.76 lakhs in 1954, but establishing a fresh record in the history of the Bank. Thanks to this impressive improvement in earnings, the provision for taxation has been raised from Rs. 1.15 lakhs to Rs. 1.75 lakhs and the addition to the reserve fund under section 17 of the Banking Companies Act, 1949, has been stepped up from Rs. 1.50 lakhs to Rs. 2 lakhs. The transfer to the contingencies account has, however, been maintained at Rs. 50,000, whereas the provision for payment of bonus to staff has been increased from Rs. 90,000 to Rs. 1.25 lakhs. In addition, a sum of Rs. 75,000 (as against *nil* a year ago) has been utilised to write off premises account. The dividend to shareholders has also been stepped up to 7½ per cent. per annum (free of income-tax) from 6¾ per cent.

The following comparative table provides an idea of the Bank's progress during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952

CENTRAL GOVERNMENT'S CAPITAL BUDGET

RECEIPTS FROM TREASURY BILLS ESTIMATED AT RS. 390 CRORES

THE capital budget of the Government of India for 1956-57 discloses a surplus of Rs. 52.24 crores, which compares with the surplus of Rs. 5.78 crores in the revised budget for 1955-56. The improvement in surplus has occurred despite the marked expansion of Rs. 141.44 crores in the capital disbursements, the estimate of which is placed at Rs. 691.63 crores, as against Rs. 550.19 crores. The improvement, it must, however, be said, is not real, inasmuch as it is largely the result of the Finance Minister taking credit for Rs. 390 crores as net receipts from Treasury Bills. The aggregate capital receipts of the Government for 1956-57 are expected to be Rs. 743.87 crores, as against Rs. 555.97 crores (revised) in the current year, or a rise of Rs. 187.90 crores.

The anticipated increase in capital receipts during 1956-57 has been shared principally by Treasury Bills, the net receipts from which are estimated, as already mentioned, at Rs. 390 crores, as against Rs. 240 crores in the revised budget for 1955-56. Receipts from new loans are also estimated higher at Rs. 139.50 crores (excludes the effect of budget proposals), as against Rs. 112.91 crores. The other important sources which are expected to yield larger receipts are 'other' loan repayments (+Rs. 4.55 crores), National Plan certificates (+Rs. 2.50 crores), other unfunded debt (+Rs. 1.26 crores) and post office savings banks (+Rs. 1.90 crores). The receipts under 'other' deposits and advances (net), on the other hand, are estimated lower at Rs. 66.89 crores, as against Rs. 74.51 crores.

The major portion of the expansion of Rs. 141.44 crores in capital disbursements for 1956-57, as noted above, must be attributed to the enlarged capital outlay on industrial development and railways, the increase being to the extent of Rs. 63.72 crores and Rs. 41.35 crores, respectively. Provision for other loans and advances and advances to State Governments have also been stepped up by Rs. 40.33 crores and Rs. 23.28 crores, respectively. Capital outlay on displaced persons, too, has been raised by Rs. 25.25 crores. The outlay on the discharge of permanent debt, however, is estimated substantially lower at Rs. 4.56 crores, as against Rs. 73.12 crores.

The details of capital disbursements in the 1956-57 budget, as compared with those for 1955-56 (budget and revised) and 1954-55 (accounts) are as follows:

(In crores of rupees)

	1956-57 Budget	1955-56 Revised	1955-56 Budget	1954-55 Account
Railways	113.43	72.08	66.09	32.25
Irrigation	0.18	0.11	0.23	0.24
Posts and Telegraphs	9.75	10.73	11.85	9.33
Industrial Development	79.60	15.88	42.42	13.37
Aviation	3.37	4.91	5.28	3.28
Broadcasting	1.55	1.75	2.00	0.33
Ports	5.76	5.10	5.29	0.43
Mint	0.38	0.43	0.50	0.33
New Capital at Delhi	10.07	6.86	6.86	4.06
Multi-purpose River Schemes	2.37	3.05	4.30	3.36
Electricity Schemes	0.77	0.45	0.38	0.08
Civil Works	18.24	22.33	10.26	13.08
Commutation of Pensions	—0.19	—0.28	0.01	0.02
Sterling Pensions	—8.32	—5.78	—6.95	—7.05
Defence Capital Outlay	26.30	20.40	22.38	8.47
Schemes of Government Trading	9.51	—11.02	29.00	63.47
Development Grants	12.39	14.83	18.31	10.31
Displaced Persons	26.24	0.99	20.99	11.74
Shipping Tankers, etc.	1.35	0.50	1.00	..
Other Civil Heads	4.50	9.42	9.10	0.30
Discharge of Permanent Debt	4.56	73.12	73.05	49.49
Inter-State Debt Settlement	0.06	0.68	0.45	1.10
Advances to State Governments	274.26	250.98	279.29	193.27
Other Loans and Advances	96.00	55.67	56.36	29.70
Total	691.63	550.19	632.45	440.90

It will be seen from the above table that, next to Railways, capital outlay on industrial development is the largest single item of its kind, the total sum earmarked being Rs. 79.60 crores. This includes provisions which the Government has made for a variety of undertakings—Government and quasi-Government. The provision for the three new steel plants alone is put at Rs. 44 crores, which represents as much as 56.5 per cent. of the total outlay of Rs. 79.60 crores. The details of the other items expenditure—in lakhs of rupees—under "industrial development" for 1956-57 (figures in brackets are the revised estimates for 1955-56) are given below:

Bhilai steel plant Rs. 18,74 (2.50); Rourkela steel plant 15,00 (5.00 budget); Durgapur steel project 10,00 (25) ; collieries 10,71 (1,16) ; Air Corporations 3,94 (4,90) ; purchase of shares of International Finance Corporation 2,11 (nil); grants to the Council of Scientific and Industrial Research 1,50 (79) ; oil exploration scheme 1,33 (59) ; Hindustan Shipyard 90 (64) ; Coal production programme 79 (nil) ; lignite development project 76 (89) ; Eastern Shipping Corporation 74 (37) ; Hindustan Antibiotics Ltd. 50 (70) ; National Instruments Factory 40 (20) ; Overseas Communicative Service 37 (40) ; heavy electrical equipment factory 37 (2) ; salt works 35 (13) ; Institute of Small-scale Industries 30 (nil) ; second D.D.T. factory 29 (3) ; corporation for mineral and sand separation industry 25 (nil) ; Hindustan Machine Tools Ltd. 25 (nil) ; additional fertilisers 25 (20) ; purchase of shares in Nangal Fertilisers and Chemicals Ltd. 25 (nil) ; civil explosives factory 24(8); uranium metal processing plant 20 (nil); acquisition of land for atomic energy establishment 18 (nil) ; atomic energy establishment buildings, store house, fencing and levelling 10 (nil); investment in State Trading Corporation 10 (nil) ; Housing Corporation, Delhi 5 (nil) ; Hindustan Insecticide Ltd. 5 (22) ; titanium metal sponge plant 5 (nil) ; equipment for Bureau of Mines 5 (nil) ; plant and equipment for dry freeze vaccine laboratory, Guindy 3 (nil) ; scheme for industrial development of Andamans 2.5 (nil).

Provision has been made in the capital budget for civil works estimated to cost Rs. 20,000 or more. This item will absorb Rs. 18.24 crores during 1956-57, as against Rs. 22.33 crores in the revised estimate for 1955-56. Of this, national highways and other roads account for Rs. 12.00 crores (Rs. 16.30 crores in the 1955-56) and construction of buildings for Rs. 8.47 crores (Rs. 4.16 crores). The estimate of expenditure on construction houses, etc., for displaced persons is placed at—Rs. 2.23 crores (Rs.+1.87 crores).

The Defence capital outlay is estimated at Rs. 28 crores, as against Rs. 24.06 crores. Credit has been taken under this head for Rs. 3.26 crores this year and Rs. 1.49 crores next year on account of realisation of sale proceeds of surplus stores and Rs. 40 lakhs this year and Rs. 21 lakhs next year for donations for the National Defence Academy.

Among the schemes of Government trading, the most important is purchase of foodgrains. As against the net expenditure of Rs. 29 crores budgeted for the year, the revised estimate shows a net recovery of Rs. 11.02 crores. The variation of over Rs. 40 crores is due almost entirely to less expenditure on food purchases and reduced imports of sugar from abroad, following improvement in indigenous production and the corresponding reduction in transfer of profits to revenue. Budget includes a net expenditure of Rs. 9.44 crores for the purchase of foodgrains, Rs. 66 lakhs for land reclamation scheme and a net recovery of Rs. 19 lakhs on account of import of iron and steel under Technical Co-operative Agreement. The expenditure of Rs. 2.24 crores for fertilisers imported from abroad is expected to be recovered in full from their sale proceeds. No sugar will be imported next year, but the Budget includes Rs. 1.25 crores on account of certain outstanding charges for the imports made this year and Rs. 5 crores for transfer to revenue of the accumulated profits on the sale of imported sugar. The whole expenditure of Rs. 6.25 crores will, however, be met from the sale proceeds of sugar.

A provision of Rs. 12.39 crores (as against Rs. 14.83 crores in 1955-56) has been made for giving development grants to States in the coming year. The purposes for which the grants will be given are: Local works Rs. 3.77 crores (Rs. 5.07 crores), industrial housing Rs. 3.70 crores (Rs. 2.90 crores) ; grants to Part B States Rs. 1.29 crores (Rs. 4.63 crores) ; national rural water supply and sanitation schemes Rs. 80 lakhs (Rs. 2.25 crores) ; roads of inter-State or economic importance Rs. 1.84 crores (nil) ; and grant to Punjab Government for construction of capital at Chandigarh Rs. 1.00 crore (nil).

Budget provides for the purchase of two tankers at an estimated price of Rs. 2 crores, of which only Rs. 1 crore are likely to be utilised during the year. In addition, Rs. 35 lakhs have been included on account of the cost of conversion of the third survey ship. Budget also includes Rs. 15 lakhs for the establishment of a security paper mill in India and Rs. 55 lakhs for the balance of payment to be made to the Reserve Bank next year on account of the shortfall in the Hyderabad paper currency reserve.

Apart from the aforesaid items of capital outlay, the capital disbursements in the 1956-57 budget include Rs. 274.26 crores that will be given as advances to State Governments. This sum represents a rise of Rs. 23.28 crores as compared with the revised estimate of Rs. 250.98 crores for 1955-56. The broad details of advances to States are given below:

(In crores of rupees)

Particulars	1956-57 Budget	1955-56 Revised	1955-56 Budget
Irrigation loans	69.71	60.00	80.56
Miscellaneous Development loans	48.83	67.56	51.00
Rehabilitation of displaced persons	9.53	9.36	14.50
Grow-more food schemes including tube-well schemes and Agricultural finance	28.88	38.40	48.90
Community Development Projects and National Extension Services schemes	14.55	8.02	10.50
Industrial Housing and other Housing Schemes	7.70	2.02	6.80
Low and Middle Income Group Housing Schemes	6.00	8.80	4.00
Relief Work in Natural Calamities and Improvement in Scarcity affected areas	8.00	19.00	21.00
Flood Control	5.00	9.50	10.00
Expansion of Power facilities for increasing employment	4.00	5.00	10.00
Development of Handloom and Small Scale Industries	5.80	4.55	4.57
Vaitarana cum Tansa Schemes of Bombay Municipal Corporation	..	2.50	1.50
Urban Water Supply Scheme	3.00	5.17	6.00
Schemes of sharing Small Savings Collections	18.00	16.00	..
Abolition of inter-State transit duty in certain Part B States	..	1.96	1.96
Food Purchase by Jammu and Kashmir Government	..	1.00	..
Ways and Means	50.00	..	..
Industrial Estates	1.00	..	..
Others	3.06	2.80	8.84
Total	283.06	261.73	290.19

A part of the loans for development purposes included above is proposed to be met out of the Special Development Fund, the credit actually taken being Rs. 5.00 crores, as against Rs. 7.44 crores, and other funds. The latter include fund for development of handloom and *khadi* industries Rs. 3.20 crores (Rs. 2.85), fund for benefit of cotton growers Rs. 40 lakhs (Rs. 28 lakhs), and sugar (temporary) excise fund Rs. 20 lakhs (Rs. 17 lakhs). All these together aggregate Rs. 8.80 crores, as against Rs. 10.74 crores. The net advances to State Governments thus come to Rs. 274.26 crores for 1956-57, as against Rs. 250.99 crores in 1955-56.

Another important item of capital disbursements is "other loans and advances," the provision for which has been enhanced, from Rs. 55.67 crores to Rs. 96.00 crores. Out of this amount, advances to Part C States account for Rs. 11.39 crores, as against Rs. 11.90 crores, while those to foreign Governments and Port Trusts for Rs. 15.00 crores and Rs. 7.06 crores, as against Rs. 5.19 crores and Rs. 8.11 crores, respectively. The sums proposed to be advanced to some of the other projects in the private and public sectors during 1956-57, as compared with those for the current year (budget and revised) are indicated below:

(In crores of rupees)

	1956-57 Budget	1955-56 Revised	1955-56 Budget
Loans to Tata Steel Company and Hindustan Steel Ltd.	20.42	12.96	12.50
Loans to private companies for Visakhapatnam built ships and ships for coastal and overseas trade	10.50	6.21	8.32
Industrial Finance Corporation	6.00	0.24	..
Sindri Fertilisers and Chemicals	3.84	1.63	1.50
Development of village and *khadi* industries	2.55	2.52	2.50
National Industrial Development Corporation	2.01	0.50	4.90
Life Insurance Corporation	2.00	..	..
Rehabilitation Finance Administration	1.50	0.65	2.45
Air corporations	1.50	2.09	1.10
Displaced persons	1.30	2.93	3.75
Low and middle class housing	1.11	0.06	..
National Small Industries Corporation	0.80	0.09	0.10
Loan to Atul Products Ltd.	0.75	..	0.75
Loans to private firms for industrial housing	..	..	..
Delhi Road Transport Authority	0.80	0.42	1.00
	0.70	0.28	0.58

The one item in the list of capital disbursements for 1956-57 which shows an appreciable fall is the provision made for discharge of permanent debt; the estimate is placed at Rs. 4.56 crores, as against Rs. 73.12 crores in 1955-56 (revised). This is because of the fact that no rupee loan is due for discharge next year. The budget includes Rs. 57 lakhs for expired loans, Rs. 94.67 lakhs for Railway sterling annuities, etc., Rs. 213.25 lakhs for loans from the World Bank (103.35 lakhs for the Railway project from Rs. 56.33 lakhs for the agricultural machinery project loan, Rs. 39.97 lakhs for Bokaro-Konar project loan and Rs. 13.6 lakhs for 11 Damodar Valley Corporation loan), and Rs. 80 lakhs as the first instalment of the repayment to the U.S.S.R. on account of equipment for the Bhilai steel project to be received during the year. Provision is included under this head for Rs. 11 lakhs on account of the repayment of the principal portion of 15-year Annuity Certificates.

TEXTILE EXPORTS IN JANUARY

FUTURE OF COTTON BOARD DISCUSSED

From Our Special Correspondent

MANCHESTER, *28th February*

ALTHOUGH exports of both yarn and cloth last month were slightly higher than in December, earnings from cotton goods as a whole declined so that the depressing picture of foreign trade remains unrelieved. The value of shipments was £7,402,243, the lowest figure for a number of years, if months when dock labour troubles intervened are disregarded.

MANCHESTER LETTER

Cotton yarn exports at 3,269 919 lbs. worth £1,303,254, were certainly in excess of several months during 1955 but the quantity now being shipped abroad is meagre in relation to former trade of this kind. The share of business absorbed by Australia is shrinking, with shipments during January of 552,000 lbs., but a revival has taken place in exports to India and Pakistan which amounted to 354,000 lbs. and 388,000 lbs. respectively.

Chief Buyers

The movement of cloth to overseas markets at 40,923,000 square yards, valued at £5,207,414, was below the monthly average for last year and current conditions do not foreshadow any immediate improvement. Chief buyers were unaltered compared with recent months, although takings by Australia were again down at 6,364 000 square yards. Business with South Africa accounted for 4,575,000 square yards and reduced purchases were also recorded for Nigeria and the Gold Coast, which took 2,871,000 yards and 2,230,000 yards respectively.

Against these trailing export figures must be set the volume of imported grey cloth which has lately shown signs of reviving. In January, arrivals aggregated 20,518,000 square yards, the highest figure since August, but well below the January 1955 level when more than 33,500,000 yards of material entered this country. It is significant that arrivals of foreign rayon cloth reached nearly 9,000,000 yards last month against only 5 000,000 yards in January 1955.

Imports of foreign cotton grey cloth last month were mainly from India, whose mills supplied 9,528,000 square yards. Arrivals from Hong Kong were 4,768,000 yards and from Japan 3,081,000 yards.

Cloth Imports

Although another delegation to London has failed to impress Mr. Peter Thorneycroft, President of the Board of Trade, with Lancashire's arguments for restrictions on cotton cloth imports, the campaign for what the cotton industry regards as justice seems likely to continue.

The first move towards more protests against unrestricted imports was taken in Manchester by the Legislative Council of the United Textile Factory Workers' Association which decided to press for a demonstration meeting of representatives from every section of the industry. This proposal will be put forward at a meeting of the Cotton Board Joint Standing Conference on overseas trade policy.

Mr. Harold Bradley, Secretary, said keen disappointment was expressed at the meeting of the Legislative Council that the delegation to Mr. Thorneycroft had been unable to make progress. "If trade remains as it is there will be no cotton industry in five years' time," he said.

Union leaders intend to summon a special meeting of the Legislative Council to discuss whatever action the Cotton Board Standing Conference decided to take.

Cotton Board's Future

Talks opened in Manchester this week between officials of the Board of Trade and representatives of the cotton industry on the future of the Cotton Board. A review of the functions and constitution of the Board is required every five years under the terms of the Industrial Organisation and Development Act, 1947, by which the Cotton Board was established.

During the past few months trade organisations in the industry have been considering their attitude towards the Board, as its current period of existence under the Act expires at the end of next month. Various recommendations have been submitted to the Board of Trade, resulting in the conference which was attended by Mr. L. H. Robinson, a Second Secretary at the Board of Trade.

According to the official statement issued after the two-hour meeting, "various proposals concerning the constitution and functions of the Cotton Board were discussed." Consultations were continuing, the statement added, and further meetings will be held on points of sectional interest with the trade bodies concerned.

There has been much speculation in Lancashire cotton circles at the outcome of these discussions. Leading figures in the industry have been outspoken in their criticism of the Board's handling of the case presented to the Government on foreign cloth imports and other important topics affecting the mills.

The view is widely held that certain sections are opposed to the retention of a permanent chairman of the Board and would prefer that a part-time chairman from the industry itself should be elected in place of Sir Raymond Streat.

Russia has become Lancashire's second best customer for textile machinery. Last month she purchased more plant than any of the 40 other countries which bought machinery from Lancashire, with the exception of India.

Figures given by the Board of Trade show that shipments to Russia aggregated 25,732 cwts., valued at £563,863. It is the first time that details of British textile plant exported to the Soviet have been given in Board of Trade returns.

A spokesman for the Textile Machinery and Accessory Manufacturers' Association said in Manchester this week: "It includes plant for spinning, weaving and finishing. The substantial shipments follow the £7,000 000 contracts placed by Russia some time ago."

Mill Manpower Rising

An improved recruitment trend since the beginning of the year has enabled Lancashire cotton spinning mills to increase their labour force by 650 workers.

Figures given by the Cotton Board show that the majority of the new recruits have been full-time operatives. These aggregated 384 as compared with 270 part-time workers. The number of operatives on spinners' books has increased to 100,610. Of this total, 91,200 were at work in the week ended 11th February, when output of cotton, rayon and mixture yarn rose by 20,000 lbs. to 17,670,000 lbs. Production in the corresponding week last year was almost 2,000,000 lbs. higher at 19,660,000 lbs.

Disappointment

A special committee representing every section of the cotton industry is to be set up to continue the campaign to persuade the Government of the merits of Lancashire's case for cloth import restrictions. This was the decision taken at a two-hour meeting of the Cotton Board Joint Standing Conference on overseas trade policy which expressed "profound regret" at what was described as the Government's inability to take action.

Suggestions on how the new campaign should be waged will be considered in detail by this special committee and it has already been decided to publish the full 30-page document presented to the President of the Board of Trade, Mr. Peter Thorneycroft, outlining Lancashire's arguments for controls.

Basically the function of the committee, until such time as it is thought opportune to make another approach to Mr. Thorneycroft, will be to acquaint responsible public opinion with the facts about the serious effects in Lancashire of growing imports of cheap cotton cloth.—*All Rights Reserved.*

UK'S IMPORTS OF CLOTH

Cotton traders in Lancashire have not given up the struggle to convince the Government that some curb on the import of foreign cloth is necessary, if the industry is to maintain its position and not lose further ground. Although members of the delegation who visited Mr. Thorneycroft recently returned to Manchester feeling that further journeys of such a nature were useless for the time being, the fact that the President of the Board of Trade admitted that their case was a good one has given them some heart to continue the struggle. Already, meetings have taken place and a fresh campaign is being planned. The idea is to publicise the case presented to the Government and leave it to the judgment of customers at large as to whether the call for protection is justified.

PROMOTING COTTON TEXTILE EXPORTS

SALE EFFORTS IN PRICE, QUALITY AND SERVICE MUST BE INTENSIFIED

WITH renewed emphasis, Mr. Chinoobhai C. Javeri, President of the All-India Exporters' Association, Bombay, in the course of his speech at the thirteenth annual meeting held in Bombay the other day, urged that the export trade in cotton textiles called for intensive selling efforts in price, quality and service. The trade needed, he declared, organising and systematising on sound scientific basis. While much care and caution were to be exercised by trade and industry in their dealings, a certain degree of Government assistance was, he said, necessary. In this connection, he specially pleaded for abolition of export duty on coarse cloth and removal of hardships involved in following the procedural formalities for collecting the duty.

Mr. Chinoobhai did not, of course, cry "wolf"; he stated that the writing on the wall did not warrant it. But he made it clear that the textile interests could not afford to be complacent, especially when the tempo of competition in world textile trade had gathered momentum. There is no exaggeration whatever in this view. As. Mr. Chinoobhai himself revealed, Lancashire has been clamouring for protection against imports of low-priced cloth from India, Japan, and Hong Kong. Since some time, the U.S.A. has been protesting against excessive imports of cloth from Japan, which was 115.98 million yards last year, as against 50.85 million yards in 1954. New China and Pakistan have also gained ground as competitors in the field. Thus, the world markets are contracting, while sellers are increasing in number. To cap it all, the domestic prices are high and more lucrative to induce mills to sell for export. Our position in export of medium and coarse count cloth has become vulnerable. More competitors are entering the field. Bulgaria has recently sold substantial quantities of coarse and medium counts cloth to Ethiopia and Sudan. Reports are also received that Afghanistan has imported a large percentage of its requirements from Russia. This indicates clearly that, in our natural markets, we are losing ground. No more do we enjoy our former monopoly.

What more evidence is required to underline the supreme importance of not merely stimulating exports to the traditional markets of India but also to explore new markets? This aspect has been lucidly stressed by Mr. B. C. Shroff, of Messrs. Chhaganlal Kasturchand, in his report on the prospects for Indian textiles in Aden, Ethiopia and Sudan, published in the *Texprocil Bulletin*. The report assumes added usefulness, inasmuch as it has been written on the basis of first-hand knowledge of the conditions obtaining in the aforesaid textile markets which Mr. Shroff gathered during his recent visit to these countries. In this report, the author surveys the position that actually obtains in the textile markets, draws attention to the complaints of overseas purchasers, examines the extent to which cotton textile exports can be stepped up, and suggests ways and means of meeting foreign competition effectively.

Importance of Markets

The importance of Mr. Shroff's study of the markets in the Sudan, Aden and Ethiopia lies in the fact that these three countries together account for as much as 22 per cent. of the total exports of cloth from India. Thus, out of the 760 million yards shipped during 1954-55, the three countries lifted nearly 171 million yards. The bulk of this quantum—82.52 million yards—was purchased by the Sudan, the share of Aden and Ethiopia being 51.15 million yards and 37.28 million yards, respectively. India is the largest individual supplier of cotton textiles to the Sudan, Aden and Ethiopia. The latter two countries buy from India every year about 66 per cent. and 50 per cent. of their total requirements of textiles, respectively. The principal varieties imported into these centres are grey sheetings, grey drills, leopards, bleached longcloth and mulls, and gadlapat.

Mr. Shroff considers that there is some possibility of augmenting exports of coarse and medium cloth to the aforesaid countries, provided the grievances of importers and consumers are redressed. According to him, there is also scope for stepping up exports of fine and superfine counts, which, however, depends on the ability of the mills to produce comparable foreign qualities at competitive prices. In this connection, he draws attention to the efforts that are now being made by the other leading textile producing countries to gain a foothold in the cotton textile markets referred to above. In the Sudan, for instance, Japan is said to have been successful in cutting out India completely in the trade in prints and in the Continental countries to some extent in bleached longcloth. Similarly, in Ethiopia, Japan has been successfully competing in the trade in khaki. Japan is mostly exporting printed goods and art silk goods with a sprinkling of other cotton textiles. Japan also sends cotton sheetings mixed with staple fibre which is becoming popular. The Russian and Bulgarian manufacturers are now shipping to some of these countries grey sheetings of a better variety than the Indian product at cheaper prices. There has not been much competition in the bulk of the varieties entering the Sudan. However, bleached goods, particularly longcloth from Holland, has been for some time successfully competing with similar Indian product, because of its finish, get-up and cheapness. Japan's efforts in this direction have not met with much success so far. Japan is mostly exporting printed goods and art silk goods. Japan is also exporting cotton sheetings mixed with staple fibre which is becoming popular there. There seems, however, a likelihood of formidable competition from a different quarter in grey sheetings in the near future. Russia has commenced the export of grey sheetings of high quality which are cheaper than the Indian variety of the same standard. While the U.S.S.R. has not pushed its wares further, Bulgarian grey sheetings have now appeared in the Sudan market, of quality similar to Indian greys, manufactured from better quality of Bulgarian cotton and at cut prices—below the comparable Indian variety. The quality and finish of the Bulgarian cloth is, however, much superior.

Valuable Suggestions

The foregoing account clearly brings out the fact that, unless energetic measures are taken to meet foreign competition in Aden, Ethiopia and Sudan, there is the danger of Indian cloth suffering a severe setback in the coming years. Emphasising this aspect, Mr. Shroff has put forward the following suggestions:

(1) The mode of packing must be improved; the Textile Commissioner should see that it is compulsorily adopted by all the mills in the case of exports; there is also need for a uniform system of packing of pieces according to qualities.

(2) Stamping of grey or even white goods should be neat and tidy, and the ink used must be of the glossy type.

(3) While efforts should be made to minimise the number of two-part pieces with a view to eliminating them completely, the stipulated specifications must in no circumstances be departed from.

(4) The tendency on the part of a section of the mills to delay deliveries whenever there is an increased domestic demand which results in late shipments of contracted goods must be curbed.

(5) There is an absolute need for more generous sampling, as it would help importers to show the sample to prospective buyers and secure orders.

(6) Claims for deficiency in quality or delay in shipment or damage to goods, etc., should be settled within a reasonable time.

(7) The ocean and railway freight on cloth exported must be revised downwards.

(8) There is need for appointment of trade representatives and establishment of showrooms.

The aforesaid suggestions of Mr. Shroff are both sensible and timely. If they are implemented in right earnest, the capacity of Indian textiles in overseas markets will be enhanced. Apart from the usual varieties of cloth now being exported, there is scope for exporting other varieties, though this will depend, as Mr. Shroff rightly remarks, on the capacity of the mills to supply goods at competitive prices.

(Concluded from next column)

The legal hitch over the cotton dispute having been solved, the way has been made clear for the commencement of trading in I.C.C. August contract. The proposals concerning the amendments to the by-laws governing the contract have already been submitted to the F.M.C. by the E.I.C.A. The proposals are: the basis and grade of the contract must be retained as fine stapling 13/16". The method of fixing tendering differences should be changed, so that these will be fixed on the basis of forward prices, instead of on spot prices as provided in the existing by-laws. These proposals, it is stated, are under the consideration of the F.M.C. which is expected to give permission for resumption of futures trading in the next few days.

DEADLOCK IN COTTON ENDS

FORWARD MARKETS COMMISSION'S DIRECTIVE UPHELD

THE deadlock in the cotton futures market has at last ended, thanks to the dismissal of the two appeal cases pending in the High Court by the Chief Justice and Mr. Justice Tendolkar. Of these cases, one had challenged the authority of the Forward Markets Commission to issue a directive to the East India Cotton Association (E.I.C.A.) to close out the ruling contracts and the other had challenged the E.I.C.A.'s resolution declaring an emergency in cotton.

Following the suspension of trade in hedge contracts by the Government of India with effect from 24th December 1955 the Directors of the E.I.C.A., it will be recalled, passed, on 6th January, a resolution fixing the ceiling price for hedge contract at Rs. 700 per candy. A member of the Association, Mr. Balchand Shah, thereupon filed a suit against the Directors of the Association to restrain them from acting on the resolution. This suit was eventually compromised on 24th January and it was agreed that the Directors should meet on 25th January and reconsider the fixing of the ceiling price; but, in the meantime, on the evening of 24th January, the Forward Markets Commission, acting under the amended by-law 52AA, fixed the closing out rates for February and May contracts at Rs. 700 and Rs. 686-8, respectively. By-law 52AA was challenged on two grounds. One was that it had a retrospective application and, therefore, was void. The second ground was that it purported to confer upon the Forward Markets Commission power which it could not do for fixing closing out rates.

The cases were heard by Mr. Justice Coyajee recently who upheld both the F.M.C.'s directive to the E.I.C.A. and the latter's resolution on the following grounds:

The allegation of *mala fides* on the part of the Commission is only a technical one, but there is no proof of *mala fides*. On the other hand, the Commission is a statutory body appointed by Government under the Forward Contracts (Regulation) Act with certain functions. Therefore, the allegation of *mala fides* fails. The petitioners have challenged the validity of the notification issued by the Central Government on 21st January last by which by-law 52AA of the E.I.C.A. was amended, and the closing out rates were fixed by the Commission under the amended by-law. Under section 12 of the Act, the Government has power to make or amend the by-laws of the Association, and its powers are co-extensive with the powers of the Association. Therefore, the notification is proper and the communication issued by the Commission is also valid.

Appeal Dismissed

This verdict was greatly disappointing to the aggrieved bull operators who went in appeal and received an interim injunction restraining the E.I.C.A. and its Directors from giving effect to the directive of the F.M.C. The case was heard by the Chief Justice and Mr. Justice Tendolkar. Dismissing the appeal, their Lordships referred to the scheme of the Forward Markets (Regulation) Act, particularly to sections 11 and 12, which confer powers to amend the by-laws. Their Lordships agreed with Mr. Justice Coyajee that the appellants, being members of the E.I.C.A., were bound by its by-laws for the time being in force and by any change in the by-law; it was not open to the appellants to urge that their rights should be regulated by a by-law which was no longer in existence. Their Lordships rejected the argument that a change in a by-law was binding on the appellants only if it was made by the E.I.C.A. but not if the change was made by the Government under the Forward Markets Contracts (Regulation) Act. The views expressed by their Lordships in support of the rejection may be summarised as follows:

Once the Central Government makes or amends a by-law, it is binding in the same way as a by-law made by the Association is binding. Therefore, by-law 52AA is valid and binding upon the appellants. There is no provision in the Act which prohibits the Commission from performing the functions, in certain circumstances, of regulating and controlling forward markets. The Commission has not acted *mala fide*. The affidavit filed by the Chairman of the Commission to the effect that the communication was issued in the interest of the economy of India is a complete answer to the allegation of *mala fides*. In the result, the appeal is dismissed with costs.

Immediately after the High Court dismissed the appeals, the Board of the E.I.C.A. met on Thursday last week and decided to effect outward payments on the 2nd inst. relating to the settlement of I.C.C. February and May contracts. The amount involved in payments was estimated at Rs. 65 lakhs. The inward payments had already been completed on Saturday last week.

COTTON TEXTILES IN THE SECOND PLAN

NEED FOR ENSURING SUPPLY OF CHEAP AND QUALITY CLOTH PARAMOUNT

By A Special Correspondent

THE draft outline of the second Five-year Plan does not contain production targets for the cotton textile industry. This omission, it has been explained, is due to the need for investigating the "technical and economic factors" relating to the possibilities of the *Ambar Charkha* as an instrument for producing yarn on a mass scale. The targets for cloth and yarn output in the organised sector will, therefore, be determined in a few months "after a clearer assessment becomes possible."

Two issues arise from these observations. In the first place, in a vastly complex and important matter like the clothing of a large and growing population, formulation of policies on the basis of a limited experiment may not prove to be wise. Even assuming that the present tests with the *Ambar Charkha* will be satisfactory, there is no certainty that the experiment can be successfully implemented on a country-wide scale. The distribution of the *charkha* in thousands of widely scattered villages in order that the yarn produced on it may become available to the handloom weaver at his doorstep involves considerable organisation which cannot be brought into existence overnight. Once the scheme is accepted and included in the Plan, it may not be possible to change it even when its inadequacy becomes obvious. This may lead to an acute shortage of cloth and yarn when more of both will be required in the coming years.

In this connection, I can do no better than recall the weighty observations of the Prime Minister who, it must be remembered, is as anxious to popularise the *Ambar Charkha* as its most ardent champions are. Drawing attention to the great difficulty of organisation and of spreading out the *charkha* "over thousands of villages," Mr. Nehru says: "The servicing of it, if something little goes wrong, is another problem. The giving of raw materials and the collection of yarn is a tremendous job. If this machinery does not work satisfactorily, as one might expect, then there might be a lack of production. Therefore, one should rather err on the side of overproduction. It is from that point of view, therefore, that one has to think of what spindles might be required in the mills or elsewhere."

Yarn Requirements

Secondly, in a recent memorandum, the Union Minister for Planning has stated that, by a more extensive operation of their spindles in the second and third shifts, the mills can produce far more yarn than will be required during the second Plan period. One may not agree with Mr. Nanda that all the spindles used in the first shift can be operated in the second shift or that a third shift can be introduced on a more extensive scale than at present, but his conclusion that the mills are capable of delivering the goods is important. Similarly, the Karve Committee has conceded that, "with the mill spindleage already in commission and taking into account the recently licensed spindleage which may, on reasonable estimate, be installed, the additional yarn supply which might be available for the handloom industry is estimated at about 150 million lbs. by the end of 1957-58, that is, just about equal to the estimated additional yarn requirements."

In these circumstances, it is not clear what necessity exists for exploring another source of yarn supply. Indeed, in the controversy over the *Ambar Charkha*, the predilections of the handloom weaver, who will be the major customer for its product, do not appear to have been given any importance. Price and quality will be the most decisive factors, if *Ambar* yarn is to become popular with the weaver. The campaign, launched in certain quarters, for overcoming this hurdle by suggesting the establishment of price parity between mill yarn and *Ambar* yarn cannot find favour with any right-thinking person. For instance, it has been suggested that an expenditure of Rs. 100.18 crores should be incurred during the second Plan period in order to sustain the *Ambar Charkha* in the national economy. It is for serious consideration whether the country's scare resources should be diverted to causes such as the propagation of a manifestly outmoded instrument of production, like this spinning unit, when most experts are agreed that encouragement to hand and household enterprises is only a temporary expedient for reducing the high incidence of unemployment.

A study of the budget of the second Plan makes it abundantly clear that finance will be the Achilles' heel of the Plan. Out of the proposed outlay of Rs. 4,800 crores in the public sector, as much as Rs. 1,200 crores is sought to be raised through deficit financing. The position regarding the other estimated resources is hardly encouraging. The anticipation that market loans and small savings will jointly yield Rs. 1,200 crores is clearly based on overoptimism, just as the expectation that external assistance will amount to Rs. 800 crores is divorced from the realities of the situation. Similarly, the provision of Rs. 450 crores by way of additional taxation ignores the capacity of the hard-pressed taxpayer to bear more burdens. It is significant that, in spite of such lavish budgeting, the planners are still confronted with an uncovered gap of Rs. 400 crores. In these circumstances, would it be wise to impose more burdens on the economy?

A Real Danger

Nor would it be prudent, in the larger interests of the country, to enforce an arbitrary curb on mill production. As the second Plan gathers momentum, there is every likelihood of an appreciable increase in the demand for cloth. There is, therefore, a real danger in the proposal to leave all the additional cloth requirements to be met exclusively by the handlooms. Should there be a shortage of cloth at a time when the pressure of demand becomes great, there will be an inevitable rise in cloth prices, thus rendering all anticipations of higher consumption illusory. Commenting on this aspect of the question, the Prime Minister observes that, if demand outstrips supply, conditions will be created that might affect "not only our cloth position but our whole economy."

It is, of course, not suggested that hand and household enterprises should not be encouraged. Indeed, so long as unemployment remains a major problem, the need for encouraging labour-intensive industries will remain. This is precisely the reason why the spokesmen of the cotton mill industry have whole-heartedly endorsed proposals for giving a higher production target to the handloom sector. They have, however, urged that the production goals of the two sections of the industry should be based on an impartial appraisal of both their capabilities and limitations.

It is evident that the Kanungo and Karve Committees have not given sufficient attention to this aspect of the problem. Both have recommended that the entire additional requirements of cloth during the second Plan period should be met exclusively by the non-mill sector by imposing a rigid ceiling on mill output at the present level of 5,000 million yards per annum. The Committees estimate that the *per capita* consumption of cloth in 1960-61 will be 18 yards. This will necessitate the production of 7,200 million yards to clothe a domestic population of 400 million. If we include 1,000 million yards per annum for purposes of export, the bulk of which has to be found from mill output, the share of the non-mill sector in the total cloth output will be 3,200 million yards per annum.

Complaint Baseless

Leaving the powerlooms to produce 200 million yards per annum as at present, it is too much to expect the handlooms to double their output within the short period of five years. It is part of State policy to give generous assistance to handlooms. Even so, handloom production was 1,200 million yards in 1953, 1,318 million yards in 1954 and 1,450 million yards in 1955. It is noteworthy that, even in the last year of the first Five-year Plan, the output of handloom cloth has fallen short of the target by 25 million yards. It has been argued that the handlooms would have given a better account of themselves, if there had been an adequate supply of yarn. There is, however, no foundation for this complaint. The fact that it has become necessary to export yarn is a clear proof that, so far, the handlooms have not shown any capacity for rapid expansion.

Experts feel that the estimates of *per capita* consumption of cloth made by the Kanungo and Karve Committees are needlessly low. Besides the Minister for Commerce and Industry, the two dissenting members of the Karve Committee, both of whom have intimate knowledge of the textile industry, have expressed the view that the rate of offtake will be 20 yards per head. The textile trade and industry, however, consider that 22 yards would be a more appropriate figure. Even taking the modest estimate of 20 yards *per capita*, the industry will be required to produce 8,000 million yards per annum to clothe 400 million people by the end of the second Plan, besides 1,250 million yards for export.

Undue Reliance

Current production by the three sectors is: 5,000 million yards by mills, 200 million yards by licensed powerlooms and 1,450 million yards by handlooms, all of which amount to 6,650 million yards. By freezing mill and powerloom production at 5,000 million yards and 200 million yards, respectively, would it be possible for the handlooms to expand their output from 1,450 million yards to 4,050 million yards, representing an increase of 2,600 million yards per annum? It is obvious that they are being asked to bite off much more than they can chew.

The spokesmen of the mill industry have, therefore, urged that the assignment of production targets to the different sectors should be both equitable and realistic. They consider that 2,000 million yards per annum would be a reasonable quota for the handlooms. Such a target will fulfil the twofold object of fuller employment and better wages to the men at present engaged in hand weaving.

Moreover, the national economy will greatly benefit, if the mills are permitted to raise their annual output of cloth to 7,000 million yards. Their contribution to the national income will increase from Rs. 130 crores to Rs. 188 crores, while the yield from taxes and levies will rise from Rs. 53 crores to Rs. 74 crores. There is, however, a strong case for reducing the tax burdens which are already weighing heavily upon the industry. The value of fuels, electricity, lubricants, etc., consumed will go up from Rs. 15 crores to Rs. 21 crores and that of materials from Rs. 239 crores to Rs. 335 crores. Wages, salaries and other benefits, accruing to the employees in the industry, will increase from Rs. 99 crores to Rs. 139 crores.

Moreover, the industry will be required to engage an extra 300,000 persons in order to give an additional output of 2,000 million yards of cloth. The textile machinery manufacturing enterprises in the country and the various auxiliary industries catering to the mills will receive a tremendous impetus by an expansion of mill activity. In fact, the impact of higher production by mills will be felt over an extensive area of the national economy, which is to the best advantage of the country as a whole.

To sum up, it is earnestly to be hoped that the allocation of production targets to the two sectors of the industry will be made after taking into consideration the paramount need for ensuring an abundant supply of cheap and good quality cloth in the coming years for both domestic and foreign consumption, so that the planners' dream of giving a better life to the common man may come true.

STATE COMMERCIAL BANK

ECONOMICS OF STATE TRADING

EXPERIENCE IN INDIA AND OTHER COUNTRIES ANALYSED

By R. G. Saraiya

[The Federation of Indian Chambers of Commerce and Industry which met at New Delhi last Sunday adopted a resolution which stated that the Federation viewed with great concern the proposal for setting up a State trading corporation by the Government of India. The resolution emphasised that State trading was far from helpful in augmenting the resources of the State and might, in fact, lead to the dissipation of the existing resources. The resolution was moved by Mr. R. G. Saraiya who, in the course of a comprehensive address dealing with all aspects of the problem, stressed that no single agency, however well-informed and competent, was in a position to negotiate commercially satisfactory trade deals with a host of foreign suppliers. He argued that, even for purposes of carrying on trade with communist countries, there did not seem to be any necessity for setting up a State trading corporation. In view of the topical nature of this question, the summary of Mr. Saraiya's speech which is published below is bound to be read with great interest.—ED.]

A GOOD deal has, during the last few years, been said and written on the subject of State trading. The Federation, as a representative body of trade, commerce and industry in the country. has, on more than one occasion in the past, placed its considered views on the subject before the authorities, and drawn their pointed attention to the defects and drawbacks inherent in the system of State trading. Fresh discussion on the subject has been necessitated by the announcement by Government spokesmen recently about their proposal to set up a State trading corporation to deal in certain commodities in foreign and/or internal trade.

The idea of a State trading corporation was examined by the Government from time to time —a committee under the chairmanship of Dr. Punjabrao Deshmukh examined it but it was later given up. The idea has, however, been revived now so as to make it necessary for the Federation to reiterate its views.

The wider incursion of the State into trading operations has been advocated on different grounds. The three broad arguments that have been advanced by the advocates of this form of trading are:

(1) Augmentation of the resources of the State; (2) facilitating trade in specific commodities with the communist countries; and (3) bringing about greater social and economic equality.

Let us examine each of these arguments. As regards the possibility of augmenting the resources of the State through State trading, one has only to see what the Taxation Enquiry Commission had to say. The Commission has, in this connection, observed as follows:

"We think that no spectacular results, purely from the point of view of revenue, may be expected from State trading over a short period. State trading requires personnel with specialised experience of business and raises the question of the adequacy of the Governmental machinery at present for the task. Also, the best time to extend State trading would be when prices are generally on the upgrade; the present, therefore, does not seem to be an opportune time for a wider incursion into this field. Altogether, the immediate scope for increasing non-tax revenue by enlarging State activity in the sphere of foreign trade seems to be limited, at any rate, for the time being.

"Another aspect of State trading relates to the domestic economy; in India, the most notable instances of this has been State trading in foodgrains during and after the war years. This, as well as other civil supplies schemes, have been concerned with regulated provision of certain essential articles in a period of relative scarcity and were generally conducted on a 'no-profit-no-loss' basis over a period, apart from the (substantial) subsidies directly provided in the budgets of Central and State Governments."

Wasteful

The experience in our country as also in foreign countries has already shown that State trading is both wasteful and costly. As will be seen from some of the instances of State trading which I will quote, bulk buying under the ægis of the State has generally led to a rise in prices in the supplying countries, especially in a period of rising markets. The State buyer enters the market for very large supplies and the fact of such large-scale buying becomes an incentive for the supplying countries to put up prices. The importing country, embarking on State trading, has thus to foot a higher bill than would be the case if several private traders made purchases on their own and explored the possibilities of procuring supplies from the cheapest source. Further, no single agency, however well-informed and competent, is in a position to negotiate deals with a host of foreign suppliers, whereas private traders with their traditional experience and continuous contacts with foreign suppliers are better able to secure the goods on favourable terms and conditions.

This is no reflection on the State agency, but by its very nature, it is incapable of taking executive decisions to fit a fluid or flexible situation. The question of the activity of a State trading organisation cannot, therefore, be expected to result in accrual of profits or additional resources for the State. On the contrary, it is very likely that the activities of such an organisation may actually reduce the income and resources of the State. Today, the State gets substantial revenues from the profits of private enterprise through income-tax and other taxes. If the State undertakes trading operations directly or under its own auspices, the revenue which is assured to it at present will not be forthcoming and, in fact, if past experience is any guide, the activities of the proposed State trading organisation might involve the State into actual losses, or the losses may be passed on to the country in the shape of higher prices for things bought and lower prices for things sold. The argument, therefore, that wider incursion of the State into the trading activities would bring in larger income and resources for the State which is required for the implementation of the various schemes of development under the second Five-year Plan is, therefore, a doubtful proposition.

Trade with Communist Countries

As regards the argument that State trading should be undertaken with a view to facilitating trade with the communist countries, one may first of all raise the fundamental question as to whether it is necessary at all to boost trade with those countries by artificial methods. I am saying this not out of any ideological prejudices in my mind against the political and economic systems in existence in those countries but from the experience of the other democratic countries in regard to their business relationship with the U.S.S.R. and the Soviet-bloc countries. The experience of the Swiss industrialists and bankers in regard to their post-war trade agreements with Poland, Switzerland, Rumania and Hungary was disappointing. The Poles defaulted in their coal-delivery contract with the Swiss. The wheat imported by Switzerland from Rumania a few years ago was of inferior quality and the price charged therefor was well above the international rate. The quality of the Czechoslovakian cars imported into Switzerland was inferior to that of the German, British and American cars and the prices were also relatively high. The experience of Greece in regard to trade with the Soviet Union is also similar. The Greeks have found it almost impossible to sell their commodities to the Soviet Union because of the persistent unreliability of the Russians in regard to price and quality of the goods and their deliveries. The Turks have also had a bitter experience about trading with countries with a State-controlled economy. A leading business man of Turkey is understood to have observed that it is impossible to carry on business with a State-controlled economy. Such instances can well be multiplied. Suffice it to say that it would be worthwhile to learn from the experience of other countries in regard to trading with the Soviet Union or the Soviet-bloc countries.

Even if we want to carry on trade with the communist countries, there does not seem to be any necessity or desirability to set up a State trading corporation for the purpose. From the discussions which the Indian industrialists and business men had recently with the trade delegations from those countries who had come to India in connection with the Indian Industries Fair, it would appear that the communist countries would be willing to appoint traders in the private sector as their agents and to contact Indian business men on commercial terms. Further, it is necessary to point out that, once a State trading corporation is set up, it will find it necessary to deal in certain commodities with the communist countries simply with a view to justifying its existence. Such a corporation will also want to trade with the other countries with a view to either increasing its turnover for meeting the overheads or balancing the losses which may be incurred in dealings with the communist countries in the same or similar goods. It must also be noted that a State trading organisation which is established for the purpose of trading with the communist countries may be required compulsorily to import goods from those countries which may not be needed in India or which may be more easily and cheaply available from other countries. The proposal for a State trading corporation for the purpose of carrying on trade with the communist countries is thus likely to disturb the pattern and composition of our trade without any economic or material advantages or benefits to the country. It would be worth while, in this connection, to recall some of the recent trading operations undertaken by the Government of India with the communist countries. The purchase of raw silk from China through the Central Silk Board is a case in point.

Lastly, we may examine the argument that State trading should be resorted to with a view to bringing about greater economic and social equality. It would not require any great effort to refute this argument. Ensuring adequate supplies of goods to the consumers at reasonable prices is an important aspect of the socio-economic advancement of the people, and in this, as already seen, State trading has not been successful. Any wider incursion of the State into the trading activities will, without bringing benefit to the community generally, result in displacement of the countless small agencies which have been traditionally engaged in the trade and lead to unemployment on a large scale. This is a prospect which cannot be viewed with equanimity in the context of one of the important objectives of the second Five-year Plan, namely, creation of additional employment opportunities.

Experience in U.K.

Participation by the State in trading activities both here and abroad has not been found successful and it has placed a heavy burden on the consumers and the community in general. The United Kingdom Commercial Corporation (U.K.C.C.) is a well-known example of a Government-sponsored organisation undertaking trading activities in that country during the period of the last world war. Although the Corporation was understood to be working on commercial principles, the results of its working were not found to be quite satisfactory. It was, however, envisaged as a war-time measure and was dismantled at the earliest opportunity after the cessation of hostilities. Similarly, the experience of the results of the schemes of bulk buying which were in operation in England was also far from satisfactory and it is worth noting that there were outspoken expressions in the British Parliament of the general discontent that was caused by the working of the schemes.

Arrangements for price fixation and for purchases on a long-term basis may have an advantage under conditions of rising prices, but when prices start falling, the community is naturally burdened with prior commitments. The adverse effect of the bulk purchase policy in regard to the requirements of metals, such as copper, zinc, etc., adopted by the U.K. led to that country being denied the benefit and advantage of the subsequent reductions in prices consequent upon the re-emergence of competitive conditions. In the same way, the experience of the spinning mills in the U.K. about the purchases of raw cotton through the agency of the Raw Cotton Commission was also none too happy. The Raw Cotton Commission first set up its own purchasing agencies in some of the foreign cotton-producing countries. The activities and functioning of the Commission, however, resulted in the prices of raw cotton in those markets being maintained at high levels. When it was, later on, found out that the system of buying through its agencies in the various cotton-producing countries was not serving the interests of the country, the Commission closed its agencies abroad and started purchasing their requirements in Liverpool itself through the agency of the established representatives of exporters in foreign countries in competition with the international buyers.

Another notable foreign experiment in State trading with wide scope and ramifications in recent years is that of the Argentine. The Argentine Institute for the Promotion of Trade (A.I.P.I.) was the sole buying agency in that country for all the requirements of the Government. It was also the only importer of a wide variety of goods and commodities needed by the people. The result of the working of this organisation should, if anything, serve as a sufficient warning against any feeling of complacency and

(*Continued on page 473*)

RECORD OUTPUT OF COAL IN EUROPE

SHORTAGE STILL PERSISTS

ALTHOUGH the output of coal in Europe broke all previous records in 1955, it fell short of demand. According to provisional figures published by the Secretariat of the United Nations Economic Commission for Europe (E.C.E.), the output of hard coal in European countries (excluding that in the U.S.S.R.), was as much as 616 million metric tons. As compared with the production of 610 million tons in 1954, this represents an increase of 6 million tons. The previous peak was 607 million tons in 1929. It is stated that the output of hard coal in all major coal-producing countries, except in the United Kingdom and the Netherlands, surpassed the 1954 levels.

The largest increases in the output of hard coal in 1955, as compared with 1954, occurred in Poland and West Germany (up by 2.7 million tons each). The output of France increased by a little less than one million tons and of Belgium by 0.8 million tons. Smaller increases occurred in Czechoslovakia and the Saar. On a calendar-year basis, the output in the United Kingdom fell by 2.7 million metric tons and that of the Netherlands fell below 12 million tons for the first time since 1949. The aggregate output of hard coal and lignite in the U.S.S.R. was up by 44 million tons over the level attained in 1954. The following table gives the output of hard coal in the various European countries:

(In millions of metric tons)

Country	1937	1952	1953	1954	1955
Belgium	29.9	30.4	30.1	29.2	30.0

* Revised figure. † Provisional. ‡ Including lignite.

Despite this increase in output in 1955, the demand remained dissatisfied, with the result that the import of coal in Europe was heavy. It is estimated that the import of coal from the U.S. in 1955 was as much as 24 million tons, as against 9 million tons in 1954. The principal importers of U.S. coal in 1955 were West Germany (7 million tons), Italy and the United Kingdom (5.6 million tons each).

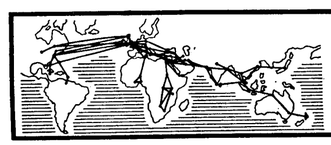
Imports of hard coal in general (imports from within and outside Western Europe) aggregated 82 million tons in 1955, as against 63 million tons in the previous year. Apart from the increase in imports from the U.S., imports from Belgium at 7.6 million tons were higher by 1.9 million tons over the previous year. Imports from France were up by 3.2 million tons at 6.3 million tons. Imports from Poland were higher by just over a million at 6.8 million tons. Imports from the U.S.S.R. at 1.3 million tons disclosed an increase of nearly half a million tons over those of 1954. On the other hand, imports from West Germany were below 3.5 million tons at 13 million tons and those from the U.K. disclosed a drop of one million tons at 11.4 million tons.

On balance, West Germany was the largest coal importer (16 million tons in 1955, as compared with 8.4 million tons in 1954). The United Kingdom moved up to second place with 11.7 million tons, recording thereby an increase of 8.7 million tons over the previous year. France, which has traditionally been Europe's largest importer of hard coal, occupied third place with a total of 11.2 million tons. Other large hard coal importers in 1955 were Italy (10.3 million tons, as compared with 9.6 million tons in 1954), the Netherlands (8 million tons, as against 7 million tons) and Denmark (5 million tons as against 4½ million tons).

It would appear that, despite plans for increased production of coal in the various European countries, especially Schuman Plan countries, it may not be in the very near future that a balance will be struck between indigenous production and demand for coal. For, with a steady rate of progress of plans for economic development, the demand for coal is bound to rise. Consequently, the European countries will have to depend for some time to come on imports.

'Slumberette' luxury by all B.O.A.C. Majestic services

Not only does B.O.A.C. offer you marvellous food and wines and really personal service... you'll enjoy the foam soft luxury of fully-reclining "Slumberette" seats. They're wonderful to sit up in... blissful to lie back and sleep in... scientifically designed to give you maximum comfort *all the time*. Much greater space between rows of seats—only 30 passengers on board—gives you spacious roominess. Sleep when you will in a luxurious full-length "Slumberette"—a superbly restful bed—and arrive at your destination fresh and well rested. *Consult your local travel agent or B.O.A.C. office, Calcutta, Delhi, Bombay and Madras.*



All over the world B·O·A·C takes good care of you

BONUS FOR PLANTATION WORKERS IN TRAVANCORE-COCHIN

CHIEF MINISTER GIVES HIS AWARD

TWO recent events of some significance to the South Indian plantation industry are the grant of an award on the question of bonus to workers in tea and rubber estates in the Travancore-Cochin State by the Chief Minister of the State, Mr. P. Govinda Menon, and the publication by the Government of Madras of rules under the Plantation Labour Act. The Madras Government has further announced that it will appoint special staff to supervise the implementation of the rules it has framed under the Act.

In recent years, the South Indian plantation industry has had its share of labour unrest in the shape of shoddy work turned out by the workers who have not also hesitated to employ go-slow tactics. Travancore-Cochin was particularly affected by these troubles. There has no doubt been some improvement in the situation. But those who know how easily plantation labour in India can be excited over small issues and what part the external political elements can play in these troubles will realise how difficult it is to maintain industrial peace in the estates. Whether difficult or not, there is no doubt that good industrial relations are important. Indeed, they are essential if the industry is to make an effective contribution to the national economy.

Generally speaking, the State Governments have tried to solve the problem of industrial disputes through labour tribunals. It is becoming increasingly clear that this method, whatever its virtues in other industrial spheres, has little to commend itself when it is applied to the plantation industry. It may be recalled that Mr. J. L. H. Williams, in the course of his presidential speech at the last conference of the United Planters' Association of Southern India, at Coonoor, made a critical review of the labour problems.

In Madras, Mr. Williams stated, a special plantation tribunal was in existence for the past three years. During its lifetime, the tribunal personnel had been changed four times. A vast amount of evidence had been collected from both sides which did not seem to bring them any nearer settlement. One of the worst effects of these prolonged proceedings was the indiscipline engendered by the necessity for endless petitions under section 33, which not only delayed the course of the main hearings but were themselves also delayed for months at a time before they could be heard and settled. He thought that employers, and probably labour too, would be very glad to have a decision on the main issues, and to see the end of these protracted and unsettling proceedings. In Travancore-Cochin, a plantation tribunal had been appointed. The number of issues, unions and estates concerned, he said, was much greater than those of the Madras proceedings. Continuing, Mr. Williams observed:

"Some years ago, when I was President of E.L.R.O., I expressed the opinion that tribunals were not the best way of effecting settlements of disputes. I hold that view even more strongly today, and I think that much better results could be achieved by direct negotiations, and fair and unbiased arbitration, if necessary. But to achieve this, legislation is required to ensure that such agreements shall be binding, and not merely used as stepping stones for further exaggerated demands as soon as they are concluded. It is also essential that both labour and employers' organisations should have trust in and respect for each other. One effect of the tribunal system now seems to be that both sides tend to regard each other as natural enemies, and to drift further and further apart, which, of course, is quite wrong fundamentally."

These observations, although they were made in connection with the plantation industry, are capable of wider application. Be that as it may, it is regrettable that the question of bonus to the workers in the tea and rubber estates in Travancore-Cochin has proved a difficult issue. In North India, however, an agreement on bonus for plantation workers has been negotiated this year. The agreement is applicable to about 8 lakh workers in the tea gardens of North-East India. So far as the South Indian plantation industry is concerned, a scheme of bonus payment has been in operation since 1947. Unlike the North Indian estates which grow only one produce, namely, tea, the plantation estates in South India grow many crops—coffee, tea, rubber and other produce. The bonus for the workers is, therefore, fixed each year, taking into account the different conditions attaching to the main plantation crops.

So far as the bonus question in respect of the tea and rubber estates in Travancore-Cochin is concerned, it would appear that a tripartite conference, which was held in Trivandrum on 25th February, 1956, failed to reach a settlement. Following this failure, the Chief Minister has given his award. In regard to tea estates, the award relates to bonus for the years 1951-54. While the parties were asked to accept what has been paid, or finally decided by the tribunals as the proper bonus for 1951 and 1952, the Chief Minister awarded an increase to 12½ per cent. of annual basic wages for 1953 and 1954 from 6¼ per cent. and 8⅓ per cent. respectively paid already. The question for the two subsequent years—1955 and 1956—were deferred for settlement later, as the employers' representatives said that the figures for these years were not complete.

The award said that the price of rubber was fixed by the Government of India and, consequently, bonus payable had also been fixed at 6¼ per cent. While employers paid the workers this rate of bonus, their staff were paid higher rates. The Chief Minister, therefore, advised them to increase the rate to the workers to 8⅓ per cent. for the years 1953 to 1955, and asked the workers to accept what was already paid to them in the years 1951 and 1952 as final.

A notable feature of the award is that the Government decided to constitute a standing committee for plantations within a month to settle all other outsanding disputes. The Chief Minister assured the rubber estate owners that the Government would help them by putting forward their claim for better prices for rubber, before the Central Government to meet the increased expenditure arising out of the settlement. A Press note issued by the Government stated that in the interest of peace in the industry, and for the harmonious settlement of other outstanding issues, the Government hoped that the award would be accepted by the parties concerned.

As regards the bonus issue for plantation labour in Madras, the representatives of managements and workers have already reached a settlement for bonus for the year 1954. The question of bonus for the previous years, namely, 1952 and 1953, is before a special tribunal. The State Government has published the rules framed under section 43(1) of the Plantation Labour Act. It is noteworthy that the Government, according to Mr. M. Bhaktavatsalam, Minister for Labour, has decided to appoint special staff to implement these rules.

FIAT 1100 BREAKS all previous records

COVERS 895 MILES IN 20 HOURS 7 MINUTES

Leaving Calcutta 7.25 a.m. Sunday, February 5 and reaching Delhi next morning at 3.32 a.m.—a distance of 895 miles in 20 hours, 7 minutes! That's the marvellous feat performed by Messrs Raja Roy Chowdhury and Sudha Mukherjee in their Fiat 1100, officially logged by the Automobile Associations at Calcutta, Allahabad and New Delhi. An all-time Indian record, surpassing those achieved by even bigger cars!

The sturdy and roadworthy Fiat 1100 is manufactured in India by THE PREMIER AUTOMOBILES LTD.

DISCONCERTING FEATURES IN RAILWAY OPERATIONS

PLANNING BODY ASSURES PERIODIC APPRAISAL OF TRANSPORT NEEDS

THE letters exchanged between the Chairman of the Estimates Committee on the Ministry of Railways, Mr. Balwantray G. Mehta, and the Deputy Chairman of the Planning Commission, Mr. V. T. Krishnamachari, disclose the steps that the Planning Commission will take during the second Plan period for proper expansion of the railways. Mr. Krishnamachari has assured, in his reply to the letters of Mr. Mehta, that the Commission would make periodic appraisal of transport requirements during the second Five-year Plan and take steps to ensure that the progress of the Plan was not impeded by inadequacy of rail transport. Admitting the need for the adequate expansion of both passenger and goods transport, the Commission could not, according, to Mr. Krishnamachari, allot the amount asked for by the railways due to a number of factors—the Commission allotted only Rs. 1,125 crores, as against Rs. 1,480 crores asked for by the railways. The Commission, he says, "had to keep in mind, while allocating funds to the railways, the difficult problem of foreign exchange and uncertainties of steel supplies, apart from the claims of other sectors on the available finances. The Commission proposed an outlay of Rs. 900 crores for the railways in addition to Rs. 225 crores which would be available from the depreciation reserve fund in the Plan period, as against the Plan-frame provision of Rs. 625 crores, excluding Rs. 175 crores as contribution from the depreciation reserve fund."

Dealing with passenger traffic, Mr. Krishnamachari admits that the 15 per cent. increase in passenger miles carried during the second Plan period may not give much relief to the existing state of overcrowding. But he hopes that a certain number of replaced coaches and passenger locomotives may be found in sufficiently serviceable condition to be retained in service in order to add to the facilities for dealing with increased passenger traffic within the available resources.

Rehabilitation

The Deputy Chairman of the Planning Commission further states that the rehabilitation programme of railways for rolling stock and track under the present allotment was considered quite satisfactory. The ratio of average rolling stock to the total track in line would be reduced also considerably. Proceeding, he remarks: "You will appreciate that there are some uncertainties in a Plan of this magnitude."

The foregoing explanation was given by Mr. Krishnamachari in reply to a number of disconcerting features in the operation of railways pointed out by Mr. Mehta, as Chairman of the Estimates Committee, in his letters to the Deputy Chairman. Mr. Mehta had, in his letters, emphasised the need for making adequate provision for rehabilitation and expansion of the railways. Referring to the serious overcrowding in trains, he urged the provision for additional coaching stock and other facilities in order to introduce more trains to relieve overcrowding. He had complained that, in view of the progressive increase in coal and goods loading, the availability of rail transport was totally inadequate. He, therefore, urged the need for additional wagons, increased capacity in the shape of expansion of marshalling yards, the break of gauge points and increased capacity on the various sections to carry more trains to cope with the situation.

Pointing out the need for replacement of a substantial percentage of overaged rolling stock and track, Mr. Mehta remarked: "The Indian railways will, therefore, have to make a supreme effort to complete the process of rehabilitation expeditiously. They will have to plan on a sufficiently large scale to improve their equipment and facilities in an adequate measure to enable them to discharge their functions properly."

Mr. Mehta had further urged for increased allotment of steel to railways, more funds to produce extra transport for general goods and track renewals. Regarding track renewals, he had stated the railways had something like 7,300 miles of track renewal arrears. If 5,000 miles or so of those renewals falling due in the second Plan period were added to this, the total would be about 12,000 miles. But according to the present programme, the railways will be able to renew only 8,000 miles, leaving about 4,000 miles of arrears by the end of the second Plan.

The problems relating to railways referred in the correspondence above, as also a few others of a certain amount of importance, figured during the three-day debate on the Railway Budget in the Rajya Sabha, which concluded on the 2nd inst. Intervening in the debate on the 1st inst., Mr. O. V. Alagesan, Deputy Minister for Railways, said that the railways had overreached their targets for the first Plan and he was sure that they would do so for the second Plan too. Most of the speakers had referred to the hiatus between the magnitude of the work that the railways had been called upon to do and the resources placed at their disposal. It was certainly there. But there was no use in their criticising the Planning Commission; they had to suggest the resources too. Nevertheless, he was sure that the appeal of members to the Commission would not go in vain. The plan was to be a flexible plan and the Deputy Chairman of the Planning Commission had assured the Estimates Committee that it was their intention to take steps, within the resources available, to ensure that the progress of the Plan was not impeded by inadequacy of rail transport.

As regards the capacity of the railways to carry traffic offered to them, the position, now, the Deputy Minister stated, was much better than before. It could not be said that they were able to carry all the traffic offered to them. But it had been done to a very great extent. A number of works had been carried out to enable the railways to have 20 per cent. more loadings. From 1st November 1955, they had been able to carry more. Simultaneously, steps had been taken to see that the detention of wagons in sick lines, in workshops and marshalling yards were reduced and more work was taken out of the wagons. Increase in loadings in January for the railways as a whole was 6.4 per cent. more on the broad-gauge and 10.7 per cent. on the metre-gauge.

Bottlenecks

As regards the bottlenecks at Vijayawada, this year there were no arrears of rice loading, the outstanding registration being only 285. For the next year, the railways had fixed a target of 20 per cent. more loading over the figures for the current year.

The unaudited figures from April to November 1955 of the wagon miles per wagon-day had gone up to 46 on the broad-gauge and net ton miles per wagon-day to 571, as against 43.5 and 483, respectively during 1954-55. The performance on the metre-gauge was not as good as on the broad-gauge, Mr. Alagesan added in reply to interruptions from members.

The Deputy Minister said that a question had been raised as to why last year the surplus had been funded in the revenue reserve fund, while this year it would be put in the development fund. Last year, he said, it was thought that the railways would now be in for a period of deficits. They were very much influenced by the picture that was before the Railway Convention Committee. It was felt that, in future, the railways might not be in a position even to pay their share to the general revenues. The picture was now different. That was why the surplus had now been funded in the development fund.

Referring to observations on overcrowding, Mr. Alagesan said that it was really a depressing feature. He did not wish to underrate the amount of suffering caused on that account. A recent census showed that overcrowding was bad on several broad-gauge sections and worse on some of the metre-gauge ones. For the present "we are forced to put up with this not very satisfactory state of affairs. We are doing everything possible with the available coaches and locomotives to mitigate the suffering." From 1st April 1955 to the end of December of that year, 105 passenger trains were strengthened, 66 extended, and 56 new trains introduced.

Replying to the three-day debate, Mr. Lal Bahadur Shastri, Railway Minister, feared that the limitation on the funds for railway development in the second Plan would come in the railways carrying the total load offered. He, however, expressed that "we will certainly try to make it good by better performance."

The Railway Minister expected that divisionalisation on most railways would be completed in about a year. At some future stage, when all these divisionalisation and other works were completed, it might be necessary, he said, to undertake a further reorganisation of the zones. To launch it now, he added in passing, might give rise to a situation "resembling on a minor scale the S.R.C. troubles."

On the question of speed of goods trains, Mr. Shastri said that it dropped by 0.98 per cent. in 1954-55, as compared with that in the previous year, whereas the density of goods traffic increased by 3.2 per cent. Viewed in the light of numerous disturbing factors, which arose in day-to-day operations, it must be accepted that traffic was being moved at very high pressure. Normally, there might be 20 per cent. flexibility to provide adequately for eventualities. The Minister feared that, in the next two or three years, the speed might be further reduced due to developmental works involving sometimes heavy and greatly complicated technical works. But the railways would, he assured, do their best to improve.

MR. ALAGESAN ON INDIAN SHIPPING

According to a statement laid by Mr. O. V. Alagesan, Deputy Minister for Transport, on the table of the Rajya Sabha, on the 1st inst., 34 ships aggregating 2,25,560 g.r.t. ply at present on six overseas routes. On four of the six routes only cargo is carried and on the rest passenger-*cum*-cargo. Besides setting up the Eastern Shipping Corporation Ltd., and grant of loans to Indian shipping companies at concessional rates of interest for acquisition of ships for the overseas trade, the Government of India is at present considering the establishment of a second shipping corporation for operating passenger-*cum*-cargo ships in the near trades. The overseas routes on which Indian shipping at present ply are: India-U.K.-Continent; India-Persian Gulf; India-Australia; India-Japan-Far East; India-Malaya; India-East Africa. The largest tonnage is on India-U.K.-Continent route with 1,73,406 g.r.t. The India-Australia route occupies the second place with 14,433 g.r.t. Orders for 22 ships aggregating 122,200 g.r.t. have been placed with Indian and foreign shipyards. Of the 22 ships, 11 are to be constructed in Germany, one in Japan and the rest at the Hindustan Shipyard, Visakhapatnam. Of the 11 ships ordered from Germany by two Indian shipping companies, three are expected by the end of 1956, another three by March 1957, one by May 1957, two by March 1956, one by June 1957 and one by July 1958. One ship ordered from Japan is expected to be delivered by February 1957. Of the 10 ships to be constructed at Hindustan Shipyard, Visakhapatnam, two are expected by May-September this year, two by February 1957 and another two by December 1957.

BERYLLIUM COPPER MOULDS

One growing use of beryllium, according to Beryllium Smelting Company, London, is the use of beryllium copper alloys as a material for the manufacture of the moulds and dies used in the production of plastic products having intricate patterns. These alloys have a number of advantages over steel as pattern-forming materials; firstly, they can be moulded into shape more quickly than steel. Indeed, it is claimed that a time saving of as much as 40 per cent. in the set-up for production time may result when beryllium copper alloys are used in place of steel, owing to the fact that the alloy reaches its moulding temperature more quickly than steel. Secondly, the beryllium alloy gives an exceptionally close reproduction of the surfaces of the castings, owing to the close dimensional tolerances to which the moulds can be made. The alloy can also withstand the repeated shocks which are experienced in long production runs on the moulding press and has excellent resistance to corrosion. The alloys, which are made from beryllium combined with aluminium, cobalt, silver, silicon, chromium, copper, nickel, tin, lead, iron and zinc, are also said to reduce the power required to heat the plastic-forming dies by about 50 per cent.

RADIO SHOW IN U.K.

The Queen will again be the patron of the National Radio Show, which will be held this year at Earls Court, London, from 22nd August to 1st September. This will be the first radio show since commercial television started in Britain on 22nd September 1955. Details released by the Radio Industry Council disclose that, for the first time, the Independent Television Authority and the commercial-television programme contractors will be co-operating in the exhibition. The British Broadcasting Corporation's wholehearted co-operation is assured once again with a large studio and outside-broadcast arena from which programmes will be released and transmitted daily. There will be a careers and electronics display.

Messrs. Lazard Brothers & Co., London merchants, have announced that they have arranged the £11,500,000 credit to the Indian Government which will be given by a syndicate of British banks for the construction of a 1,000,000-ton steel plant at Durgapur, West Bengal. The syndicate is composed of Lloyds Bank, Barclays Bank, the District Bank, Glyn, Mills & Co., and Martins Bank. The credit will be available for making payments to British manufacturers of equipment supplied from the United Kingdom.

NEW PRODUCTS AND PROCESSES

Pine Oil from Indian Turpentine

PINE oil, a product of wood rosin and turpentine industry, enjoys a world-wide market due to its intrinsic properties which permit of its being put to a variety of unrelated uses. In India, pine oil finds use in the concentration of ores by flotation, as a wetting agent for textiles, as an ingredient of laundry detergents, in pharmaceuticals, as a degreasing agent in leather manufacture, as a solvent and thinner for protective coatings, as a softener for rubber, as a constituent of disinfectants and deodorants and as a synergist for insecticides. The present requirements are met almost entirely from imports, mainly from hard currency areas. Exact statistics of quantities imported are not available but it has been estimated that the total requirements are of the order of 600 tons per annum. Consumption of pine oil may be expected to increase with rapid industrialisation and improved standards of living. A synthetic substitute of pine oil is obtained by reacting turpentine oil with a mixture of water, ethyl alcohol and sulphuric acid in defined proportions followed by suitable processing; the product obtained is sweet smelling and possesses the characteristic of natural pine oil. Indian turpentine, being derived from *Pinus longifolia*, contains appreciable proportions of carenes and is not amenable to the usual processing described above. Because the carene esters decompose during distillation, resulting in the liberation of free acid, and consequent dehydration of terpene alcohols. The pine oil so obtained would be of a definitely inferior grade. Investigations at Indian Agricultural Research Institute, New Delhi, have led to the working out of a simple modification in the usual technique by which the production of inorganic esters is avoided and a product corresponding to 50 per cent. terpene alcohols and 14 per cent. terpene ethers is obtained. Natural pine oil contains about 5-10 per cent. of terpene ethers and 20-25 per cent. of terpene hydrocarbons, the rest being terpene alcohols. Depending upon the efficiency of fractional distillation, the characteristics of the synthetic product can be improved even further. Synthetic pine oil so obtained is as good as natural pine oil and as a deodorant has properties even better than the natural product. Besides 45-50 per cent. of synthetic pine oil, about 50 per cent. of residual turpentine oil, the qualities of which are in many respects better than the starting material, is also obtained, the improvements being caused by the isomerization of some of the original terpenes to hydrocarbons of greater stability resulting in better keeping qualities. The recovered turpentine due to its more pleasant odour and better characteristics can be used with advantage for the same purpose as original turpentine oil. The process, covered by Indian Patent No. 48429 is of particular interest to rosin and turpentine industry and to chemical manufacturers. Parties desirous of undertaking the commercial development of the process are invited to correspond with the Secretary, National Research Development Corporation of India, Mandi House, Lytton Road, New Delhi-1.

"Tramp Metal" Trouble

Two British firms are working together to devise equipment for removing broken pieces of metal—known as "tramp metal"—that find their way into coal and ore. Tramp metal includes such things as chain links from pit tubs and teeth from automatic cutters. If these get into crushing-machinery, they cause considerable damage. Ferrous metals can be removed by passing the coal or ore under electro-magnets. An electronic equipment has been devised, which detects both ferrous and non-ferrous metals and gives warning of their presence. The electronic equipment and electro-magnets are made by two Birmingham firms, which are now co-operating in designing tramp-metal removers embodying both principles.

Radio-active "Sleuths"

Insects and germs can now be made radio-active to keep track of their functions in causing such diseases as influenza, polio, malaria, plague and leprosy, according to the World Health Organisation. Radioisotopes, which are peaceful products of atomic energy, are used for this purpose. Radio-isotopes are ordinary substances, such as iron, phosphorus or cobalt, which have been made radio-active in an atomic furnace or nuclear reactor. Their movements can be followed by means of radiation detecting instruments. Houseflies, made radio-active by introducing radioisotopes into the dirt from which they carry disease, can be tracked as far as 30 miles. Mosquitoes, the larvæ of which have been reared in radioactive liquid, have been traced for nearly half a mile. In addition, 11 disease organisms have been given radioisotope "labels," thus making it possible to follow their behaviour inside the living body.

"Cat Eye"

Development of an electronic device that, like the eye of a cat, "can see in the dark with daylight clarity," has been announced by the U.S. Air Force. The device, called an "optical amplifier," was developed by physicists of the U.S. Air Research and Development Command's aeronautical research laboratory at Wright Field, Dayton, Ohio, and is being perfected under contracts with Westinghouse Electric Corporation and Radio Corporation of America. It is hoped that the equipment can be adapted for colour work. The "cat eye" is stated to present a cathode ray tube image not unlike a television picture. The optical amplifier is approximately a thousand times more sensitive than the standard television camera. Even when used under the poorest lighting conditions at night, it presents a clear and sharp picture. In a flight test at Wright Air Development Centre, airborne observers were able to see the ground clearly on a moonless winter night.

The paint that gets around...

'Dulux' is used the world over on all types of transport vehicles. Outstanding durability and excellent gloss and colour retention under *all climatic conditions* make 'Dulux' specially suitable for vehicle finishing. Resistance to petrol and oil, great flexibility and excellent adhesion combine with much greater coverage per gallon, than other paints, to make 'Dulux' the finest finish for all forms of transport.

INDUSTRIAL APPLICATIONS OF INFRA-RED RAYS

PROGRESS OF FRENCH EXPERIMENTS

By Armand Hadni

NATIONAL CENTRE OF SCIENTIFIC RESEARCH, FRANCE

THE use of infra-red rays in the industrial field has extended considerably since the last war, and there is no one in the world of today who has not heard of infra-red with its manifold possibilities ranging from the detection of enemy aircraft to the roasting of chickens on a spit. We know that infra-red constitutes the electro-magnetic radiation which, in the spectrum, extends visible light (as does ultra-violet), but in this case, beyond the red. Like any radiation, infra-red has calorific, photo-electric and photo-chemical effects, the particular character of which is not only the invisibility of the radiation set up, but more especially the fact that this light has a special texture which makes it intermediary between visible light and radio waves. This texture is expressed by a "wave length." For blue, it is about 0.4 thousandths of a millimetre. For red, 0.7 thousandths of a millimetre. Radar waves begin at a centimetre and range up to a metre (radio short wave). It is generally admitted that infra-red ranges from red to radar waves, that is, from 0.7 thousandths of a millimetre to 1 centimetre, and it is the extent of this field that makes it so particularly interesting.

The use of the calorific effects of infra-red for "infra-red drying" or "infra-red heating" is one of the applications best known to the general public. It is the simplest. It is based on the conversion of electro-magnetic energy into heat. It must be admitted that this does not date from yesterday. Our grandmothers, when drying their washing in the sun, were already using infra-red, just as Monsieur Jourdain used to speak in prose without being aware of it. However, its use has been rationalised for the construction of particularly well contrived apparatus. We shall first quote three recent and particularly practical sources of infra-red. The first two were put forward last year by a subsidiary of Saint-Gobain specialising in fused silica. This material, transparent in a large range of infra-red, is at the same time very refractory. It is thus an excellent material for infra-red generators. The most limited of these sources is chiefly intended for use in chemical laboratories. It takes the form of a half-sphere with a handle, and is placed 5 or 6 cms. above the product to be dried. Thus, evaporation takes place without risk of projection and without altering the compound. The apparatus, through the chemical inertia of the silica, is absolutely proof against the steam given off. The greatest is the powerful source of infra-red rays in outward appearance very like fluorescent lighting tubes. It can give off rays on all sides, or else be used with reflectors. It is in this latter form that it is used for heating large spaces—factories, garages, theatres, rooms not in constant use, such as restaurant cloakrooms, and particularly for outdoor heating. The third source of infra-red rays that we shall describe is an electric burner, which is likely to replace the old Bunsen burners. An element is situated in the centre of a parabolic reflector which concentrates its radiation into a cone very like that in a Bunsen burner. In certain zones, the temperature may reach 700° C. and the regulating of the temperature can easily be made automatic. This burner, produced in Paris by a firm hitherto specialising solely in measuring apparatus, uses the same principles as the Mount-Louis solar furnace, in which the aim is to produce, by the concentration of the sun's rays, the very highest temperatures and to melt the most refractory materials. Perhaps, we are here on the threshold of a new technique which, theoretically, could create considerable sources of power in the Sahara.

We might recall, for memory's sake, the interest aroused in 1934 by the infra-red ray tunnels in the automobile industry for the ultra-rapid drying of the coachwork. But the process is now extending to all branches of industry in which slow drying often represents a large-scale immobilisation of capital—the drying of green or treated woods, leathers, etc.—The process is advantageous not only in large factories, but often in secondary industries—ornamental moulding, plastic gloves, dry cleaning and dyeing, etc.

In short, it may be said that the calorific effects of infra-red rays are widely sought after. Not only is the evaporation more rapid, but the heat is better utilised than in the older appliances in which it was first necessary to raise the temperature of often considerable masses of air which, by conduction and convexion finally heated and eventually dried the object in question. The advantages of the method are spectacular in the heating of streets. However, it must be noted that this usage demands certain precautions by reason of the fact that infra-red rays, like ordinary light, are propagated in a straight line. The object to be heated casts a shadow, in the extent of which everything will remain cold.

The photo-electric properties of infra-red rays, that is, the possibility of transforming them into electricity, are frequently made use of in signalling devices, which are very unobtrusive by reason of the invisibility of infra-red rays. Such devices are similar to those used in the Paris subway to set the escalators in motion as someone approaches them. A pencil of rays is constantly trained on a photo-electric cell which delivers a current as long as it is lighted up. When a person walks across the beam, the cell stops working, the electric current is checked and an electric relay is started up which activates an escalator, bell, etc. By means of a series of reflections, infra-red rays can create whole sheets of invisible light which bar the entrance to a strong-room, for example, or in front of the dangerous part of a piece of machinery. Military appliances, now well known, also use the photo-electric properties of infra-red rays, as, for instance, the "patrol-detector" recently put forward at the Institute of Optics by a French engineer. The infra-red signal is set up by the men themselves who in this case play the part of the warm bodies and as we know all bodies give off infra-red rays. Obviously, the apparatus must be very sensitive when the source of the infra-red rays is at a temperature hardly higher than its surroundings. All recent progress in the technique has been aimed at improving the detectors and today the outputs used are very often less than one-billionth of a watt.

Infra-red photography uses the photo-chemical properties of this invisible light, provided it is not too far removed from the red. An exhibition now being held in Paris in a room of the Louvre Museum shows how, in the particular case of paintings, this method can bring to light details hitherto invisible.

We shall now go on to deal with the applications of infra-red rays to chemistry, which are extremely important and much less generally known because they come into the field of molecular science. We have said that infra-red rays are electromagnetic, that is, rays capable of giving off a charge of electricity. If we remember that molecules are made up of atoms carrying electric charges, we will more readily understand that infra-red light can set up inter-atomic movements in the molecules it encounters. The energy given off by the infra-red rays is thus transformed into mechanical energy which finally produces the heat to be used in the ways we have mentioned above.

More detailed analysis of the phenomena of absorption, which we have not the space to discuss here, shows that the wave-lengths of the incident light are not absorbed, that is, do not manage to set up intra-molecular movements. Only a limited radiation series possesses this property. These radiations are greater in number as the molecule contains a greater number of atoms—a molecule of two atoms (for example, hydrochloric acid, HCl) absorbs strongly only one radiation (of a wave-length of about three thousandths of a millimetre for HCl), a molecule of three atoms absorbs three (for example, soda, NaOH., strongly absorbs radiations of wave-lengths of 3, 5, and 16 thousandths of a millimetre) and benzene, C_6H_6, absorbs 15. We find an analogy in music when, for example, every string in the piano corresponds to a characteristic note, that is, the physical object corresponds to a determined acoustical wave-length. The case of molecules in chemistry is a far richer one. For to every molecule corresponds an often large number of wave-lengths, which determine the character of the molecule in question. We may say that they make up a veritable anthropometric index for this chemical species. This index is called the spectrum of the molecule and experience shows that most of the wave-lengths forming it belong to the infra-red group.

Appliances called spectrometers give the infra-red spectrum of any compound within about half an hour and generally a fraction of a milligram of a compound is sufficient to obtain its spectrum. Gard-index systems for thousands of pure bodies already exist. It is thus easy to see the value of infra-red spectrometry in chemistry to identify a compound that has been isolated; it is enough to recognise that its spectrum is identical with that of a body already known. If further wave-lengths appear, we may assume the existence of some impurity, identify it by its spectrum and even determine its concentration.

Experiments in this direction had already been made at the Sorbonne by Mr. J. Lecomte well before the last war. It was at a time when a scientist had to construct his own spectrometer and the technique, which had not yet been exploited by industry, required several days to establish the spectrum which is so easily obtained today. These experiments had nonetheless been positive and it was possible, among other things, to bring to light the main components of an essence. Today, infra-red spectrometers are entirely automatic and are mass-produced. A firm in the United States sells hundreds every year in spite of the high cost of the apparatus (4 to 6 million francs). France, which was in the forefront of this research, seems to have caught up on the setback caused by the last war. O.N.E.R.A., among other organisations, has produced industrial spectrometers (National Centre of Aeronautic Researches), which can bear comparison with similar apparatus produced abroad. The university and industrial research centres now possess several hundred modern spectrometers for infra-red rays. Without betraying any secret, we may say that at the Petroleum Institute or in the Renault factories, the following substances are commonly added to hydro-carbons—hexane, heptane, benzene, etc. Similarly, lubricating oils are tested by infra-red rays for the addition, for instance, of fatty acids to increase their spreading on metal. Trhône-Poulenc, which prepares thousands of bodies—many of them for the pharmaceutical industry—systematically makes use of infra-red rays in its research and testing laboratories. The Atomic Energy Commission uses the infra-red spectrometer for treating of

NATIONALISATION OF INSURANCE

MR. C. D. DESHMUKH'S DEFENCE UNCONVINCING

THOSE who had expected to hear from Mr. C. D. Deshmukh, the Union Finance Minister, startling revelations of shockingly deplorable lapses on the part of Indian insurance companies, when he rose to move the Life Insurance (Emergency Provisions) Bill in the Lok Sabha—the Bill was passed by the Lok Sabha on 3rd inst.—must have been agreeably disappointed to find that the instances he quoted, amusing as they were, did not add up to a significant total in relation to the Rs. 301-crore assets which the life insurers own in this country. A somewhat disagreeable surprise was that he generally continued to urge in favour of nationalisation of insurance the arguments which have been used before by its advocates and met successfully by its opponents. The arguments related to high expenses of Indian insurers, lapses in policies and the failure of insurers to extend their operations to rural areas. The only two arguments which had not been hitherto used were that the Indian insurers' premium rates were high and that they were not prompt in the payment of claims.

Justifying the issue of the Ordinance, he stated, in effect, that if time had been allowed it might have led to additional malpractices. In this connection, he quoted a reference, made in this journal, to certain malpractices on the stock exchange by insurers, and said that comment was needless. We have never concealed the fact that malpractices exist. But we have always contended that they were confined to a few insurers, and that prompt and strict enforcement of the law, rather than nationalisation, was the obvious remedy. Be that as it may, the recent instances of malpractices by insurers he quoted were: a case in Bombay where Government securities worth Rs. 30 lakhs were missing, two cases in Calcutta where the amounts involved were Rs. 15 lakhs each, one case in U.P. involving Rs. 12 lakhs worth of securities, purchase of Rs. 1 lakh worth of land by an insurance company (in liquidation) from a person who had no title to the land and failure on the part of another company (in liquidation) to account for Rs. 20 lakhs worth of Government securities.

A Comprehensive View

Proceeding, Mr. Deshmukh explained the reasons which impelled the Government to decide on nationalisation. He said that the examination of this question by journals, students of economics and leaders of industry and commerce lacked comprehensive view of the problem whereas the Government, because it had the experience of the administration of insurance law, was able to appraise the points of view of all the interests concerned. This broad appraisal showed that the industry "was not being managed either efficiently or with an adequate sense of responsibility." A detailed enquiry with no "preconceived notions" was thereupon undertaken. The Government had been engaged in it since 1951. The conclusion it reached was:

"The industry was not playing the role expected of insurance in a modern State and efforts at improving standards by further legislation were unlikely to be any more successful than in the past. The concept of trusteeship which should be the corner-stone of life insurance seemed entirely lacking; indeed, most managements had no appreciation of the clear and vital distinction that exists between trust moneys and those which belong to joint stock enterprises."

Insurers' Faults

The Minister then dealt with the faults and imperfections of the Indian insurers. He said that the expense ratio was very high, about 27 per cent., as compared with 15 per cent. in the U.K. and 17 per cent. in the U.S. He added: "It has been contended on behalf of the companies that the high expenses are due to the small average sum assured in India. The matter is not so simple. The high expenses are due, in a very large measure, to extravagance in the field." Nor was there, according to Mr. Deshmukh, any post-sales service to policyholders. The result was that "lapses continue to be high."

Refering to premium rates, he said:

"Let us take the next criterion—premium rates. They are the highest to be found in any of the advanced countries of the world—a serious obstacle to any programme of expansion. It might be contended that the high premiums in this country are due to the higher mortality rates. There is no doubt that mortality rates are higher in India than in the U.K. and other Western countries but even after allowance is made for this it is the view of the experts that the difference in the premium rates should not be as much as it is. In other words, the difference has to be explained on some other grounds. And so far as our examination shows the only ground which can adequately explain the difference is our higher management costs."

Apparently, Mr. Deshmukh thinks that any stick is good enough to beat private insurance with. But the premium stick is hardly the one that could be so wielded. The premium rates in any two countries are not strictly comparable for, interest rates, mortality experience, tax rates, the total business in force and management costs differ from country to country. Even so, the Indian premium rates are not very much higher than those in the U.K. For instance, a leading British insurer quotes for age 30, for a 20-year endowment policy (without profits) about £4 6s. 9d. per £1,000 sum assured. The corresponding premium rate in India is about Rs. 46-14. If allowance were made for the concession which the Indian insurers give for annual payment of premiums, the difference in the rate between the Indian and the British premium comes to about Rs. 2-6. This cannot be considered very high in the context of the unfavourable mortality experience in India and lower interest rates as compared with the conditions in the U.K. It must also be pointed out here that it is somewhat unreal to discuss premium rates as if they are the only thing to consider in relation to selling of insurance. Insurance is not one of those commodities for which there is a very high elasticity of demand.

Settlement of Claims

Mr. Deshmukh also blamed the insurers for not settling the claims properly. He said:

"In 1954 alone, about a thousand complaints were received in the Department of Insurance against various companies alleging delay or even non-payment of claims. As against this, in Australia, where the number of life insurance policies in force is about the same, according to the report of the Commissioner of Insurance, there was only one complaint in 1954 relating to non-payment of claim! A number of cases were referred to the Controller of Insurance under section 47A after the claimants had despaired of getting satisfaction from the insurance companies. In most of these cases, the companies were found to be in the wrong."

A few other malpractices were mentioned by Mr. Deshmukh. He said that insurers had given loans on every type of security, good, bad and indifferent, and often, on no security at all. Unnecessary turnover of securities, granting loans on inadequate security and buying property at inflated prices were some of the ways in which the funds were jeopardised. He said that house properties had no clear-cut market value and investments in these categories offered considerable scope for malpractices. Although the Act prohibited the granting of loans to companies where the directors of the insurance companies were also directors, the managements had got round this restriction by floating debentures and making the insurance companies subscribe to them. Again, the Act limited the shareholding of any one person to five per cent. of the capital of the insurance company. This provision was overcome by holding the shares in the names of family members, friends and employees.

Insurance Should Not Fail

The Minister felt sorry that the truly well-managed companies were a small minority. Legislation and control, therefore, could no longer be considered as giving the Government a reasonable chance of achieving its objective. In his view, the fact that the minority of the well-run companies accounted for a considerable part of the business did not in any way affect this argument. He said insurance "is a business in which there ought never to be a failure and not a single policyholder should ever find his life's savings endangered." It may be recalled that the Finance Minister, in the course of his speech over A.I.R., at the time the Nationalisation of Insurance Ordinance was issued, had said that "insurance was a type of business which ought never to fail if properly run." Commenting on this statement, "Oudeis," in the leading British insurance journal, *Policy-Holder*, said:

"Of course, if that statement is viewed as a pious hope, it may be accepted, but in the mouth of the Finance Minister (whose words I quote) it is a terrible disclosure of ignorance; for the long history of insurance goes to prove that it is the type of business which will not run on pious hopes or good intentions. Insurance demands underwriting skill, organising ability, and investment knowledge of the highest order—and in combination—and frailty in any of these essentials will lead to disaster. Indeed, the record is strewn with just such disasters, and companies that have survived have done so because of all-round excellence which no government department can replace."

As regards the future of life insurance, Mr. Deshmukh said:

"Today, less than 30 lakhs of persons in this country are insured. Even if we were to do no better than double this number, we shall have increased the savings significantly. Actually, the possibilities of expansion are even greater. The urban areas alone contain a much bigger earning population, while the rural areas are as yet a wholly unexplored field. It had been claimed on behalf of private enterprise that it was confident of increasing the total life business in force from a little over Rs. 1,200 crores to Rs. 8,000 crores and the *per capita* insurance from Rs. 25 to Rs. 200 per head in the course of the next 10 years. I have very little doubt that the nationalised life insurance will be able not only to achieve this target but exceed it. And in doing so, we shall have made available for the implementation of our plans—the second and succeeding plans—substantial sums of money from the people's own savings."

It seems necessary to point out here that when private insurers confidently predicted the increase in the scope of life insurance business, they had not taken into account the possible emergence of inflationary conditions. It is to be hoped that any expansion that might take place in nationalised life insurance will not stem from mere inflation. Indeed, it should be the responsibility of the Government to see that inflation did not rob the people of their hard-earned savings.

Investments

Replying to the debate, Mr. Deshmukh said there would be no reduction in the investment of insurance funds in the private sector. He added:

"My main point is that, if our hopes are fulfilled we shall find such a rapid expansion in the total volume of business that there will be more available both for the public and private sectors—not in percentages, perhaps, but in absolute figures. But it is our firm intention to ensure that any disposal of funds in the private sector is in accordance with our plans and in accordance with the real interests of the country and not in the interests of any particular industrial or financial group."

During the clause-by-clause consideration of the Bill, the Minister for Revenue and Civil Expenditure, Mr. M. C. Shah, disclosed that the Government intended to start the proposed Life Insurance Corporation by 15th June at the latest. He added that the Bill for the confirmation of the Corporation would come up for discussion in the House on 19th March. The report of the Select Committee would be ready by the middle of April and before the end of the budget session the Bill would become an Act.

READY REFERENCER
ON THE INDIAN COMPANIES ACT, 1956
By JOHN and ROW, *Advocates*, MADRAS

A UNIQUE AND MOST helpful book, the outstanding feature of the book being the exhaustive grouping together of the sections of the Act pertaining to various persons concerned with Company Law and explaining the provisions in a language easily understood by laymen. The first Chapter deals with the officer in charge of the affairs of an existing company, what he should know and do also the bare Act as an appendix. This book must be in the hands of everybody concerned with the Act particularly executives of companies. Price Rs. 20 per copy if order received before 1-4-1956; thereafter Rs. 25.

A monthly supplement to keep the Law up-to-date will also be published.

Price: Pre-publication Rs. 18 and thereafter Rs. 24 per year.

Place your orders for the book and/or Supplements with

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Union Bank of India, Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the audited Returns of Kalbadevi, Rajkot, Mandvi and Surat Branches and the certified Returns from ten other Branches, and report that:—

(a) we have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and explanations given to us and as shown by the books of the Bank, and

(g) in our opinion the books of account have been kept by the Bank as required by Section 120 of the Indian Companies Act, 1913.

ANNUAL MEETING OF INDIAN MINING ASSOCIATION

PLEA FOR ASSURANCES TO PRIVATE PRODUCERS

MR. B. MITTER'S SPEECH

ADDRESSING the Annual General Meeting of the Indian Mining Association, held in Calcutta on Friday, 2nd March 1956, the Chairman of the Association, Mr. B. Mitter, deprecated the tendency to take every opportunity of casting aspersions on the working of collieries under private ownership. He pleaded for a comprehensive formula for compensation to the coal industry in the event of nationalisation so that private producers could be encouraged to undertake development of mines.

The following is the text of Mr. Mitter's speech:

"GENTLEMEN,

"The year that has passed since we last met has been primarily concerned in giving concrete shape to the future and the second Five-year Plan has dominated the affairs of the coal industry. I need hardly emphasise how vital it is for the industrial development of the country that the aspirations of the Plan should be matched by actual attainments, nor need I stress how closely its success hinges on the ability of the coal industry to meet its new responsibilities.

"In the past the industry has on the whole been able to give the country all the coal it required and if on occasions some consumers have had to go short, the cause was usually to be found either in special circumstances such as prevailed during the last war, or in the limitations of transport.

"The task before the industry today is, however, greater than it has ever been called upon to face in the past. It is required to make available 60 million tons of coal by 1960 as against the 38 million tons produced last year. The achievement of this target in the short space of five years undoubtedly poses a problem of formidable proportions, but with the concentrated and co-ordinated effort of all who are in a position to help, there is no reason why the goal should not be successfully attained. In coal the pattern of production is one in which collieries worked by private enterprise operate alongside those worked by Government, and, in the context of the immense increase of potential required, there is ample scope for both to develop and to make their respective contributions towards a common cause. For this mixed economy to function effectively it is important to create an atmosphere in which both the sectors can work to maximum effect in close co-operation. They should both have equality of opportunity and both be allowed to operate under similar conditions.

"In some quarters, there is a tendency to take every opportunity of casting aspersions on the working of collieries under private ownership. No one claims that in an industry which has several hundred individual producing units conditions everywhere are ideal. Similarly, I think, it would be difficult even for the stoutest champion of State enterprise to establish that the Government collieries are models of perfection. Negative generalisations against the private sector serve little useful purpose, and, at a time when so much depends on the fulfilment of the coal plan, the accent must be not on creating divisions but on mobilising all our resources behind one gigantic effort.

"To achieve the success we all desire it is important to examine what are the obstacles which stand in the way and I propose, therefore, within the time available to me, to lay before you what in my view are some of the main problems facing us at present. In mentioning these difficulties, however, I wish to emphasise that, contrary to what some people are only too ready to assume, there is no desire on our part to be obstructive in any way. On the contrary, I believe that only by a frank statement of difficulties will it be possible to devise remedies to overcome them.

Security of Tenure

"To achieve the new momentum in production required by the Plan, it is obvious that vast new development programmes will have to be launched involving large financial outlays. In the private sector, we are prepared to marshall our full potential behind these development projects and to finance them very largely from our own resources. However, whilst we are used to accepting normal commercial risks in the course of business, we cannot ignore the fact that, in a mineral industry like coal, it must necessarily take many years before any return on the capital outlay can be expected. We had accordingly hoped that the Government would be in a position to give the industry some reasonable security of tenure in the face of frequent mention of the possibility of nationalisation. The Government have unfortunately found themselves unable to give any security of tenure but it has been indicated that, if producers in the private sector made plans for increasing their production and laid out money for the purpose, then in the event of nationalisation full compensation, after taking into account depreciation, would be paid for whatever money was laid out with the approval of the Government for this additional production. Whilst we welcome the reasons which prompted this indication, it must be emphasised that the formula is too limited in scope and its application in practice is fraught with too many difficulties to enable it to instil any great sense of confidence amongst those who are not only able but eager to undertake large-scale capital outlays on development work.

"If the formula is examined it will be seen to consist of three main parts, which lay down that compensation would be paid on capital outlay for increasing production, that it would be paid on capital expenditure less depreciation, and, finally, that it would be paid only on expenditure incurred with the approval of the Government. As regards the first part, in an extractive industry like coal which works a wasting asset, even the maintenance of existing levels of production requires a steady flow of new investments and it is technically impossible to distinguish between capital outlay for maintaining production and capital outlay for increasing production. The two are very closely linked when incurred in one and the same mine, and even the sinking of a new shaft in the same or another property might be regarded as necessary for maintaining production.

An Illustration

"An example may help to illustrate the point. Let us assume, for instance, that a property is being worked through two shafts and that a small area round the shaft bottom has been developed. In order to develop in accordance with approved mining methods the remaining area of the property towards its boundaries, more haulage engines, motors, switches, cables, steel wire ropes, rails and a host of other things would be required. Such additional installations, far from increasing output immediately, may only enable the mine to maintain its output for five, ten or even fifteen years until the depillaring stage is reached, when output will rise sharply. Will the capital outlay on such additional plant and machinery be regarded as necessary to maintain output or to increase output? The outlay is necessary to maintain present production but it is equally necessary to increase future raisings.

"Examples such as this can be easily multiplied to bear out the fact that no distinction is possible between the two forms of capital investment. Turning to the second part of the formula, it is suggested that compensation would be paid on capital outlay less depreciation. If a company were to invest a crore of rupees on fresh capital development and the Government were to decide to acquire the industry, say in five years time, then taking into account the rates of depreciation applicable in the coal industry, the depreciated value of the outlay would be very substantially less than this crore at the end of five years. At the same time, in the course of these five years, the company can hope to earn very little by way of return on its investment. Consequently, the outlook can hardly be construed as being reassuring to those who contemplate making large financial commitments. As regards the approval of the Government to items of expenditure, if the necessity of having the initial investment approved by the Government were conceded, should the formula imply that an account had to be kept of every single item of plant and machinery installed at each individual colliery, and, further, that this had to be done for an indefinite period, various practical and procedural problems would inevitably arise making the satisfactory maintenance of the records extremely difficult, if not impossible, both from the point of view of the Government as well as that of individual producers.

"In the absence of any security of tenure, the terms of compensation are naturally of great significance to those who are making ready to make large investments of money in developing the coal resources of the country. Furthermore, the formula suggested, in its present shape, postulates the laying down by the Government of certain intricate procedural arrangements in regard to maintenance of records before any new development work can be undertaken. In view of all these considerations, I hope the Government will find it possible to evolve a more comprehensive formula which will transcend the limitations of the one mentioned. It has been stated by various Government spokesmen from time to time and even during the debate on the Fourth Amendment to the Constitution that the objective of the Government was not to deny compensation but only to make it non-justiciable. If that is the avowed objective of the Government, then the present suggestion militates against the fulfilment of the objective.

Transport

"In considering the general state of the coal industry, I cannot recall any occasion over the years where reference has not been made to the inadequacy of transport facilities available for moving coal. Nevertheless, I feel that I must dwell for a while on this old problem which, under the impact of the second Plan, has assumed new dimensions of magnitude and urgency.

"After the inevitable strains and dislocations caused by the last world war, the railways have made commendable efforts to restore the position, and to improve upon it, but the situation still remains one in which the capacity available is sadly deficient in relation to requirements. In 1946, the railways had stated that they were confident of attaining within two years a daily loading of 3,600 wagons in the coalfields of Bihar and Bengal. In 1955, however, after a lapse of nine years, the average number of wagons loaded daily in these two areas was only 3,262. Although this figure was a slight improvement on the 1954 figure of 3,205 wagons, it is manifest that the improvement is not keeping pace with the expanding output. When production plans are being designed to raise the output of coal by 22 million tons in five years, the industry is apprehensive that transport is not being expanded sufficiently to cope with the vastly increased traffic which will be offering. I referred the other day from another platform to the cut in allocations for the Railway Ministry under the second Plan. Since then the general managers of our railways have together given voice to what has been described as 'a chorus of complaints' emphasising their difficulties arising from shortages of steel, cement and timber. They are reported to have expressed misgivings about the ability of the railways to adhere to their schedules of work. Planning in their view had become increasingly difficult and so had the possibility of giving any assurances for the future.

"If there is any substance in these reports which have appeared in the Press, they naturally give rise to doubts as to whether adequate importance is being attached to the imperative necessity of achieving the closest co-ordination between the production and transport of coal. We are familiar with the results of the lack of such co-ordination in the shape of accumulated stocks at the pitheads and losses caused by spontaneous combustion. The Railway Budget presented last week also indicates that the development plans will be inadequate to cope with the level of coal production envisaged. The success of the coal plan cannot be assured unless transport can move the expected volume of traffic and I would urge that even greater efforts must be made for the breaking of this bottleneck.

"Apart from directly expanding the capacities of the railways, one way in which the strain on the railway system can be mitigated would be to make fuller use of coastal shipping for the carriage of coal. From this Association we accordingly welcomed the setting up last year of the Rail-Sea Transport Co-ordination Committee and urged before it our views that coastal freight rates for coal should be readjusted so as to bear a closer relation to rail freight rates. At present the disparity is glaring and this prevents the optimum utilisation of these two forms of transport.

"Within a restricted field, the possibility of improving transport was examined in 1955 by a committee set up to investigate pilot and depot capacities in the West Bengal and Bihar coalfields. This Committee has made some recommendations but only from the short period aspect of meeting requirements up to the end of 1957. Although it was limited to examining pilot and depot capacities, the Committee felt that existing route and junction limitations would have to be liberalised considerably in order to achieve a lasting solution and, it became obvious during its deliberations, that the transport problem could not be considered satisfactorily in small segments. For the movement of coal, a more comprehensive policy is required and not merely the stringing together of a number of *ad hoc* expedients.

"Since it appears almost inevitable, however, that for some time to come at least the insufficiency of wagon supplies will continue, steps should be taken to ensure that such supplies as are available for coal loading are allocated in an equitable manner. It seems to have become the practice for the State collieries to get first priority in such allocations to the detriment of collieries in the private sector. It is sometimes said that, in fact, no discrimination is made, the wagons being allotted strictly on the basis of priority of orders. This is, however, merely a form of sophistry for, if every order placed with a State colliery is *ipso facto* given a high priority, the resultant position is unaltered. If private enterprise is to be given a fair chance of expanding output, distribution of wagons should be made without arbitrarily subordinating the interests of one integral section of the coal industry to the dictates of another.

New Collieries

"The expansion of production and the development of new collieries will necessitate provision of new sidings and there are indications that the railways are now not averse to the construction of sidings on assisted terms. This is undoubtedly an improvement on their previous policy, followed for some time, of considering only applications on private siding terms. There is a possibility, however, that the rules governing the provisions of assisted sidings may be revised with a view to increasing the financial burden on the owners and proportionately easing the burden on the railways themselves. If the terms are modified in this fashion the effect would be to saddle on the owners most of the onerous provisions of private sidings. Private enterprise has already expressed its eagerness to embark on large financial outlays for the development of collieries and I trust that in respect of sidings no fresh impositions will be made as compared with the assisted terms known to the industry previously.

"Turning from availability of transport, the expansion in production contemplated under the second Plan will make it necessary for large-scale import of such plant and machinery as are not made in this country at present. Since Government collieries themselves would be interested in such imports, there is need to ensure that collieries in the private sector are not discriminated against in respect of import facilities, and further that, on the procedural side, all unnecessary hold-ups are obviated. In regard to essential requirements produced in India, some co-ordination at a high level is called for to see that the coal industry gets its fair share. I would like to stress, in this connection, that the position of cement supplies is far from satisfactory and is already causing considerable concern to colliery owners. The present allocations are quite insufficient to meet existing demands of the industry and this raises the doubt as to whether sufficient quantities will be available for capital works required in connection with the Plan.

"Some of the largest coal producers in the country, for instance, applied between them for a total of 2,364 tons of cement for period IV of 1955, against which actual allocations issued by the Cement Adviser amounted to only 428 tons. This insignificant figure included 178 tons of the more expensive sea-borne supplies from South India. Even though the collieries concerned agreed to accept their full balance requirements in cement imported from South India costing over Rs. 50 per ton more than the cement produced in Eastern India, the shortfalls were not made good. The example I have cited applies to a very large number of privately run collieries and perhaps I may be permitted to enquire whether the State collieries are in a similar position both as regards the proportionate allocation against demands as well as allocation of cheaper cement from factories located nearer the coalfields.

"The mention of the cost of cement brings me to the wider issue of production costs and prices. To shoulder effectively its onerous responsibilities, the coal industry must be placed in a position where it can secure an adequate selling price for its output. I think most of you are already aware that today's controlled prices are based on production costs of eight years ago and that over these eight years costs have moved steadily upwards, thus narrowing considerably the margin left to the industry. This process is still continuing.

"Under the Coal Mines (Temporary) Regulations introduced last year, for instance, additional precautions are required to be taken in regard to open cast workings and there are new stipulations governing the use of winding ropes, the construction of precautionary fire dams and the installation of electric lighting underground. The new Mines Rules (1955) require, amongst other things, additional provisions for first aid personnel and equipment, ambulance rooms, shelters and canteens. They also provide for employment of a much larger number of welfare officers who are required to have certain specified qualifications and to be of a certain status. The draft Electricity Rules, gazetted in 1954, lay down many stipulations regarding earth leakage protection gear, flameproof gear, and switchgear at sub circuits. They restrict the length of trailing cables, thus necessitating more gate-end boxes. Furthermore, they require that all cables in certain areas are to be double-wire armoured.

"All reasonable measures necessary to ensure the better working of mines, whether in the State sector or in the private sector, have our full support. It must be realised, however, that to implement all these new rules and regulations costs money. In so far as these provisions are progressive they are welcome, but the dynamics of progress cannot be contained indefinitely within the straight-jacket of an inflexible price structure.

"It is appreciated that coal being a basic commodity, the level of its selling prices has a bearing on costs in other industries; but these considerations apply equally to important commodities like steel and cement. Whilst this aspect should no doubt be borne in mind, I am sure you will all agree that no single industry should be made to subsidise others if its own economics justify an increase in selling prices. Nor can such an increase be denied on the ground that when production goes up in future, and when transport is available to move this increased production, costs would tend to go down. Consideration of this vital problem should not be allowed to languish in vague generalities of this nature. What is needed now is to make today's controlled selling prices reflect today's costs, and if the industry's costs go down in future, there is no reason why future prices should be impervious to such changes. I would suggest that the Government should no longer delay a comprehensive review of coal prices and that the results of this review should be made known at the earliest opportunity.

"Labour costs, as you are aware, constitute the most important single element in the cost of producing coal, and the wage structure of the industry is being reviewed at present by the All-India Industrial Tribunal. The issues before the Tribunal are of great consequence and its findings, which are expected shortly, will no doubt have an important bearing on the future of the coal industry.

"You have heard in the past references to the question of stowing and the quantum of assistance received for it. There has been no change in the position in the last year and the subsidy continues to be grossly inadequate. The rules governing the grant of assistance are in a large measure illogical, with the result that they give rise to various anomalies. For instance, owing to the peculiar rules governing depreciation, capital investment on mechanisation is penalised as compared with inefficient installations worked manually. Again, under the present rules a colliery situated on a river bank receives the same limit of assistance as a colliery situated many miles away from the source of sand supply. These and many other cases have been the subject of discussion for some considerable time but measures are still awaited to rectify the position. Nor is any solution yet available to the complaint that payment of stowing subsidies continues to be six months or so in arrears. There is need for urgent action in this matter as the present practice is a source of considerable hardship to those collieries which stow and, in so doing, implement one of the best known methods of promoting safety as well as of conserving coal.

"Very close to the subject of stowing is that of washing and for some time now the question of arranging supplies of washed coal for the steel works has been before the Government and the industry. I trust that before long we shall have a clearer picture both as to the location of washeries and as to the price to be paid for washed coal.

"Gentlemen, the years that lie ahead hold a great opportunity for the coal industry to make a significant contribution to the industrial growth of the country. The very magnitude of the expansion envisaged poses a challenge however, and there are many problems to be tackled. To overcome them we must all strive to our utmost and must all pull together. If the authority and power of Government is linked in a joint endeavour with the resources and potentialities of private enterprise, I am sure we shall be able to face with confidence the challenge of this new opportunity.

"I would like to conclude, gentlemen, by thanking your Vice-Chairman and the outgoing Committee for the help and support they have given me during the last twelve months. My appreciation also goes to our secretariat, both here and in the coalfields, for the work they have put in, and, finally, I wish to thank your technical adviser, Mr. L. J. Barraclough, and all the others whose untiring efforts have proved so valuable to me during the past year."

REPORT OF THE DIRECTORS TO BE PRESENTED TO SHAREHOLDERS AT THE FORTY-THIRD ANNUAL GENERAL MEETING TO BE HELD AT THE REGISTERED OFFICE OF THE BANK IN BANGALORE CITY

The Directors have pleasure in submitting to the Shareholders the Balance Sheet and Profit and Loss Statement as at 31st December, 1955.

The result of the Bank's working for the year ended 31st December, 1955, is a surplus of Rs. 17,21,293-15-4, which sum, together with Rs. 2,41,960-4-9 brought forward from 31st December, 1954, aggregates Rs. 19,63,254-4-1.

The following appropriations have been made :—

	Rs.	a.	p.
An Interim Dividend at the rate of 12 per cent. per annum and a Bonus at the rate of 4 per cent. per annum, free of Income-tax, was paid for the half-year ended 30th June, 1955, which absorbed	4,00,000	0	0
Transferred to Reserve for Income-tax and Super-tax	3,50,000	0	0
Transferred to Reserve for Contingencies	1,00,000	0	0
The Directors now propose:			
To pay a final Dividend at the rate of 12 per cent. and a Bonus of 4 per cent. per annum for the year ended 31st December, 1955, free of Income-tax, which will absorb	4,00,000	0	0
To provide for Income-tax and Super-tax	2,50,000	0	0
To pay a Bonus to Staff of three months' salary about	2,84,000	0	0
To carry forward to next account	1,79,254	4	1
Total .. Rs.	19,63,254	4	1

The Central and Head Office accounts, as at 30th June and 31st December, 1955, have been audited by Messrs. Fraser and Ross, Chartered Accountants, while the accounts of the Branches have been audited by Messrs. B. K. Ramadhyani & Co., Chartered Accountants, R. E. Kotre & Co., Chartered Accountants and Sri. S. R. Mandre, Chartered Accountant. Sri. R. V. Subramanyam, Deputy Controller, has examined the accounts for the year on behalf of the Government of Mysore.

Dharmaprakasa Sri. L. S. Venkaji Rao and Sri. S. M. Ramakrishna Rao are the two Directors who retire on this occasion. They are eligible for re-election and offer themselves accordingly.

The Auditors, Messrs. Fraser and Ross, B. K. Ramadhyani & Co., R. E. Kotre & Co., and Sri. S. R. Mandre, also retire and offer themselves for re-appointment.

The Dividend, when sanctioned, will be payable on and after 21st March, 1956.

THE BANK OF MYSORE, LIMITED,
AVENUE ROAD, BANGALORE CITY,
10th February, 1956.

By Order of the Board,
B. V. NARAYANA REDDY,
General Manager.

BALANCE SHEET AS AT 31st DECEMBER, 1955.

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED—1,00,000 shares of Rs. 100 each	1,00,00,000	0	0			
ISSUED, SUBSCRIBED AND PAID-UP IN CASH—50,000 shares of Rs. 100 each				50,00,000	0	0
2. Reserve Fund and Other Reserves— Reserve Fund (includes Rs. 46,70,613-0-0 on account of premia on Shares received in prior years)				84,00,000	0	0

FOREIGN TRADE UNDER SECOND PLAN

DIVERSIFICATION OF EXPORTS WANTED

By Chinoobhai C. Javeri
PRESIDENT, ALL-INDIA EXPORTERS' ASSOCIATION, BOMBAY

UNDER the second Five-year Plan, our total requirements of foreign exchange for capital goods are estimated at 1,600 crores, including Rs. 400 crores for imports of equipment for replacement. Assuming that we could finance Rs. 600 crores worth of capital goods from current earnings and save Rs. 200 crores of foreign exchange in imports on items where domestic production is likely to increase, there would still be a problem to find Rs. 800 crores of foreign exchange. About Rs. 200 crores will be available from sterling balances. This will leave a balance of Rs. 600 crores. Credit has been taken for Rs. 400 crores of foreign aid, which, even if forthcoming, would still leave in our foreign exchange a gap of Rs. 200 crores. This can be met by larger exports. But can we do it? Have we the means and the resources for spiralling up exports commensurate with the gap which will widen, if the expected foreign aid is not forthcoming. The Rs. 20 crores freely convertible loan given to Burma recently will constitute a further charge on our foreign exchange resources. The authors of the Plan have, however, made no attempt to discuss the prospects of earning the required foreign exchange, nor are any practical schemes and measures suggested for promoting exports.

The figures of our foreign trade during the last seven years show, on comparison, an average deficit of Rs. 105 crores per year, though the deficit during 1953-54 and 1954-55 were only Rs. 50 crores. The problem before the country is not only of striking a balance in our payment account but also of earning more foreign exchange to pay for larger imports as provided in the second Five-year Plan.

A Large Stake

We have a large stake in international trade. The total external trade places us among the first 10 countries with the largest share in international trade. Some of our important industries such as jute, tea, mica and coir, are dependent upon export. During the war, the cotton textiles and jute industries were strained to the utmost, wearing out the machinery. These are the key industries. Their rehabilitation as well as the construction of other new industries will account for large imports of capital goods.

On the other hand, with the growth of industries and as more money flows into the hands of the people, the demand for both consumer goods and industrial raw materials will greatly increase. When more money begins chasing after goods, prices will go up, which can be checked by larger imports sufficient to fill the widening gap between supply and demand during the intervening period, until production catches up the demand. Or demand has to be restrained by limiting consumption and by adopting strict austerity, but our standard of living is so low that little can be achieved in that direction. Thus, more foreign exchange for larger imports of merchandise other than capital goods will have to be provided, because the volume of our present imports, on the whole, is to the minimum and allows little scope for further reduction. Contemporaneously necessary controls will have to be imposed to prevent price inflation.

There is, therefore, no room for curtailing imports furthermore. Since the scope for retrenchment in our imports is small, there is correspondingly greater need for increasing exports. It is exports which ultimately can pay for larger imports visualised under the second Five-year Plan for which production of export goods will have to be stepped up. No amount of discussion and appeal will suffice. Subsidies, though helpful to an extent, will not achieve the objective. They might provide a temporary fillip but they do not offer a long-term solution. All our wits and ingenuity have to be applied to the task. The intensive international competition, the changing pattern of trade in all the countries of the world, the competitive position of our exportable goods and their quality are also factors to reckon with.

There have been vast changes in the composition and distribution of our trade. With the expansion of the dyestuff and chemical industries, their imports could be retrenched. Likewise, import of paper and art silk, staple fibre yarn could be tapered off. By the same token in cotton, too, import could be scaled down, since we have been successful in growing a variety of staple cotton hitherto imported. It is in these and other items that a saving of about Rs. 200 crores is estimated. A close and constant watch on the figures of production, the trend of demand, and fluctuation in prices is, therefore, paramount. In the light of these findings, an appropriate import policy may then be framed and followed, so that production may not be affected nor any shortage or scarcity created.

Potentialities

Let us review the prospects and potentialities of our export trade. The main commodities which have been earning us large foreign exchange may not help us to the same extent in future. Cashewnut is a valuable dollar earning item. It is imported into India from East Africa and, after being processed, re-exported to the U.S.A. A scheme is reported to be afoot for constructing processing plants for it in East Africa to develop direct export trade with the U.S.A. This scheme, when put through, will impair export of cashewnuts. In jute goods, Pakistan will be our formidable competitor, the industry having got the advantage of the latest type of machinery. In cotton textiles, too, the competition is growing and the cotton growing countries which are also the big consumers have started erecting cotton textile mills. The tea industry is in the throes of a crisis. It is seriously threatened by the expansion of the industry in East Africa. The tea acreage in British East Africa, Mozambique and Nyasaland has doubled in the last 14 years. New plantations are taking place in other parts of Africa. On the other hand, the *per capita* consumption of tea in importing countries has not only failed to rise but actually fallen compared to increase in population. Therefore, to withstand the growing international competition, the Indian tea industry must improve the quality and bring down the cost of production.

The improved foodgrain position in the country last year held out hopes as a promising item for export. But the recent ban on export of foodgrain and import of wheat, on the other hand, tell a different tale. Export of oils has substantially increased from Rs. 9 crores to Rs. 21 crores in 1954-55. This performance, let us hope, will excel in coming years.

Cotton is an item the crop of which can be increased, leaving a larger surplus available for export. But, instead of exporting our cheap cotton and creating competition for our cloth in foreign markets, we should spin the surplus cotton and encourage export of yarn, earning thereby more foreign exchange than by exporting cotton. Art silk fabrics, plastic ware, electric fans, sport goods, sewing machines, shoes, light engineering goods and umbrellas are a few of the important manufactured items, the export of which could be stepped up. Markets could be found for many new finished products in our neighbouring countries. It is here that our Trade Commissioners could help and guide us. Export of waste material provides considerable scope for earning more foreign exchange. The Government will do well to investigate in this matter and explore the possibilities of developing the export of these materials.

Tourism

Given proper and liberal facilities and amenities, tourism could earn us more foreign exchange. We should also develop our exports to Russia and other communist countries, reducing thereby the gap in our foreign exchange earnings. We could barter our products for their machinery, equipment and consumer goods, which will call for as great an effort and sacrifice on our part as the expansion of our exports in the traditional markets. Until production of our newly set up steel plants is forthcoming, large quantity of steel required by us will have to be imported. The proposed purchase of a million tons of steel from Russia, if matched by exports of Indian goods to Russia, will reduce the gap in our foreign exchange. However, our ability to sell will depend upon the willingness of those countries to offer fair prices for our products. It is, perhaps, with that object in view that the Government is working on the formation of a State Corporation for trading with communist countries. But, I hope, it is not a prelude to Government's plan of taking over ultimately the country's export trade in major items. I do not propose to discuss here the question of State trading. I may only mention that no less a body than the Federation of Indian Chambers of Commerce and Industry has strongly opposed its formation even for trading with communist countries. Much of the gain

REPORT OF THE AUDITORS TO THE SHAREHOLDERS OF THE BANK OF MYSORE LIMITED.

We have audited the Balance Sheet of the Bank of Mysore, Ltd., as at 31st December, 1955, and the Profit and Loss Account for the year ended that date and report that :

(a) We have obtained all the information and explanations we have required.
(b) Such information and explanations have been found to be satisfactory.
(c) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank.
(d) The returns received from the Branches have been found adequate for the purpose of our audit.
(e) In our opinion the Profit and Loss Account shows a true balance of profit and loss for the period covered by the audit.
(f) In our opinion the Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of our information and the explanations given us and as shown by the books of the Bank.
(g) We are further of the opinion that the books of account have been maintained in accordance with the Law.

METRIC SYSTEM OF WEIGHTS AND MEASURES

PRESENT IS THE RIGHT TIME FOR CHANGE-OVER

By H. V. R. Iengar

SECRETARY, MINISTRY OF COMMERCE AND INDUSTRY

SOME days ago, I had a visit from an English friend of mine who used to work in India before independence and has been paying an annual visit to this country ever since. He is a very sympathetic observer of events in our country. I happened casually to mention to him that I was soon going to broadcast a talk on the subject of introducing the metric system in India. He threw up his hands in dismay.

He spoke feelingly and at some length and what he said amounted to something like this: "You have had a tremendous major job in settling down as an independent country and you have not completed that job yet, not by any means. From the very day you started off, on 15th August 1947, you had to tackle the problem of refugees, you had to provide millions of them with shelter and food and then jobs and ultimately to settle them down. You had the task of integrating the old Indian States with the rest of the country. That in itself was a colossal task and has appeared simple only because of the sheer genius displayed by Sardar Patel. You have had to deal with communal problems and communist problems and now you have got a problem which transcends in importance all those mentioned previously, namely, of settling down as one nation in the aftermath of the S.R.C. Report. In the meanwhile, economic problems of great importance have been clamouring for attention. The Community Projects Administration is tackling a job which is of historic significance in contemporary history. You are engaged in virtually reshaping your economic structure into a socialistic pattern. In the midst of all these preoccupations, which tax to the fullest both your political ingenuity and your administrative skill, why," asked the Englishman, "do you bother about things like the introduction of the metric system in India? England is still carrying on with her pounds, feet and inches. So is the United States. Why should India, of all countries, attach importance to this, at a time of exceptional stress and difficulty such as the present?"

I think this is a fair question to ask and one that demands an answer. Why indeed is it that, at a time when our resources are being stretched to the utmost, we are considering a problem of this sort, devoting the services of badly needed funds and even more badly needed administrative personnel to the disturbance of arrangements that have been in existence for generations?

Lack of Uniform System

Before we answer the above question, It is necessary to understand certain basic facts which form the essential background against which the whole problem has to be considered. If we had in India the same system as exists in the United Kingdom and in the U.S., namely, a *uniform* system of weights and measures, then there would be a good case for arguing that we might leave things well alone and consider the necessity for a change when our administrative apparatus is less subjected to strain than it is now. Unfortunately, the system in use in India is the very opposite of being uniform; it is completely chaotic in its diversity. Some time ago the National Sample Survey conducted a survey regarding the weights and measures that have been in use in the country. The sample was conducted in some 1,100 villages scattered all over the country. It disclosed that, in terms of a standard *tola*, the local *seer* in use in different parts of the country varied between 8 tolas and over 120 tolas. That is to say, in some places, the so-called *seer* is only 8 tolas and, in some, 120 tolas. Similarly, the maund weighs between less than 400 tolas and over 5,600 tolas. The position is even worse where measurements based on linear distances are concerned.

In other words, although the same nomenclature may be used, it means completely different things in different parts of the country. If in *whole* States or *whole* districts there was a uniform weight or measurement, then perhaps it might have been argued that the need for a change is not particularly pressing. But, unfortunately, even that is not the case. These vary from district to district and quite often within the district. And these variations have a very practical consequence. The cultivator suffers. As long ago as 1928, the Royal Commission on Agriculture noted that, for example, in 16 markets of the one district, namely, East Khandesh of the Bombay Presidency, the maund had 13 different values ranging from 21½ *seers* to 80 *seers*. It added that innumerable other examples of a similar character could be cited and that the present lack of system affords great opportunities for cheating the cultivator. The position has not materially changed since then.

Once it is established that there is a chaotic diversity of weights and measurements and that these are causing injury to our people, the obvious corollary is that we should take steps to make a change and introduce a uniform system. The question then arises whether the present is the right time to do it. The answer to this question is clearly "yes," and the reasons are twofold. In the first place, this reform has been on the anvil for several generations. In fact, in the year 1870, the then Government of India actually passed a law introducing the metric system, but failed to carry it out. Since then, the matter has been repeatedly brought to the attention of Government.

Optimism Beyond Reason

A problem, which has attracted the serious attention of Government for nearly 100 years, cannot be postponed except on the basis that it is postponed indefinitely, that is to say, that it is considered never really worth taking up. There will always be political and administrative difficulties in the modern world, although their scale and intensity may vary, and I imagine there would scarcely be a time when it would be possible for a Government to sit back and say, "We have now solved most of our difficult problems and now we can take up the relatively simple matter of the metric system." To think that such a time will come is to be optimistic beyond reason.

Uniformity Will Have Cohesive Effect

The second point is this. Uniformity in standards that affect the daily life of the people is not a mere administrative matter. It is a matter that has political implications. I think it is a reasonable argument that the introduction, throughout the length and breadth of our country, of one system of measurements will actually help politically. I do not think it has been adequately realised that one of the factors that led, during the British regime, to the cohesion of the whole country was the uniformity of certain administrative standards and practices. It is, in my view, by no means far fetched to say that the uniformity of weights and measurements between the foothills of the Himalayas and the Cape Comorin will tend to have a cohesive effect and would then be desirable on political no less than on other grounds.

Apart from the above two reasons, it is also necessary to point out that in the context of the vast changes that are taking place in our country, the particular change proposed, namely, the introduction of a uniform system of weights and measures, is neither particularly expensive nor particularly burdensome on the administration, more specially because the change is proposed to be effected gradually and not overnight.

I think we have by now established two propositions, namely, (1) that a change is necessary and (2) that a change should be effected now rather than later. The question, then, is: "What should the change be? Shall we go in, as in the U.K. and the U.S. for an uniform system based on pounds, feet and inches, or shall we go over to an entirely new system with which we have been hitherto unfamiliar?" The answer to this question depends on whether the alternative system proposed has such intrinsic advantage over the existing system that, in the long run, it outweighs the disadvantages inherent in any change-over. It does not appear to me that there can be any argument but that the metric system is intrinsically far and away superior to the system of pounds, feet and inches.

Most of us would recall, with a shudder, the arithmetical problems we used to have in our school days, involving the conversion of feet, inches and pounds. These problems involved elaborate calculations of multiplication, division and fractions. These problems still plague the young generation today. Picking up the arithmetic textbook of my young daughter the other day, I came across the following:

> In a courtyard 67 ft. 6 in. long and 42 ft. 9 in. wide, there is a footway 5 ft. 6 in. wide running the whole length of the yard. What is the cost of paving the whole, the price per sq. yd. for the footway being Rs. 2-10 and for the remainder Rs. 2-4?

It must be an unusual person who can get through an exercise of this sort without acquiring a passionate and permanent feeling of hatred for arithmetic as a subject. My own attitude towards arithmetic in my young days was never enthusiastic, but it was not actively hostile till I was asked to tackle the horrors of these conversions.

Easily Understandable

From the educational point of view, I think it is fair to say that the use of the existing system causes among children a sense of difficulty and frustration which persists till quite late in life. On the other hand, the metric system is so simple that most children not only understand it but actually like it. A straight forward multiplication or division, followed by a mere transfer of a dot, appeals to the child, both because of its simplicity and of the ability completely to change the meaning of figures by the mere transfer of a dot gives the child a feeling of power and a sense of mystery and romance. Moreover, in ordinary trade and business, calculations all round become simple and easily understandable.

It is for this reason that the metric system has been in use in practically all countries of the world, with the exception of the U.K. and the U.S. As we have come to the conclusion that a change is necessary, we might as well change to a system that is simple and is in vogue in the greater part of the world rather than one which is complicated, is in vogue only in two important countries and is bound to die out even there.

Gradual Change-over

It has never been suggested that the change-over should be effected all at once. This, in fact, is impossible. The use of a particular system of weights and measures is so much a part of our daily life that a complete change-over will actually take several years. When we go along one of our roads, for instance, our milestones are marked in miles and furlongs. These will have to be changed. The rails of our railway tracks are measured in feet and inches and, in fact, all railway measurements have at present the same basis. Machinery is likewise based on feet and inches. Building measurements are calculated likewise. It would be necessary, in fact, to make a wholesale revolution in many things which we have always taken for granted and this would take time.

The first thing that it has been decided to do is to change our coinage system. Parliament has passed a measure amending the Coinage Act; this enables Government, on a date to be notified, to introduce a rupee divided into hundred units. That will mean a great deal of improvement over the existing system, but it will take some time for the public to get accustomed to the decimal coinages. Thereafter, it is proposed to make other changes gradualy and it is hoped to complete these changes over a period of 15 years. At the end of that period, we could truthfully claim that an important, though not spectacular, revolution has been added to the many that are taking place in our country.—*By Courtesy—All-India Radio.*

MANUFACTURE OF PLASTICS PRODUCTS

CONTINUANCE OF PROTECTION URGED

THE case of the plastics industry for the continuance of protection to such sections of the industry as are at present having tariff protection is now before the Tariff Commission for consideration. The plastics products which are protected are: (*a*) phenol formaldehyde moulding powder (p.f. moulding powder), (*b*) electrical accessories made by phenol p.f. moulding powder, and (*c*) plastic buttons. On behalf of the units engaged in the manufacture of these products, the All-India Plastics Manufacturers' Association, Bombay, has submitted a memorandum to the Tariff Commission urging the continuance of State assistance and protection to the three products for a few years more.

Referring to the present position of the units producing p.f. moulding powder, the Association states that there was only one firm manufacturing this commodity in 1949 when the last enquiry was held. The rated capacity of this unit was 450 tons per annum on a single-shift basis. But at present, there are three firms with a total estimated productive capacity of 1,182 tons. As against this, the actual production in 1954 was 472 tons, as compared with 373 tons in 1953 and 298 tons in 1952. The consumption of the powder was, however, higher at 650 tons in 1955. It is expected that it would go up to 900 tons by 1958. The gap between actual output and demand is covered by imports. One of the primary reasons why the indigenous output could not be increased was the lack of demand from the moulders. The industry, however, experienced no difficulty regarding the supply position of all the basic chemicals needed for the manufacture of p.f. powder.

In 1950, protection was granted to p.f. moulding powder by converting the then existing revenue duty of 30 per cent. into a protective duty. The duties of 25 per cent. standard on phenol and of 30 per cent. standard and 20 per cent. preferential on the powder were to be refunded on import to the manufacturers of the p.f. powder who had an annual output of 200 tons. This protection was later on extended to 31st December, 1955.

Imports of p.f. powder have been restricted since early 1950, and only limited imports are being permitted to actual users in cases where superior quality material is required for manufacturing electrical accessories and other special items. Again, the price of general purpose indigenous powder is stated to be ordinarily lower than the landed cost (inclusive of duty) of the imported variety, inasmuch as it amounts to Re. 1 as compared with 1*s.* 2*d.* (less 5 per cent. c.i.f.) for the Czech material, 1*s.* 3½*d.* (f.o.b. 50 per cent. resin) for the British product and 1*s.* 2*d.* (f.o.b. less 5 per cent.) for the German variety.

In view of the existence of a large unutilised productive capacity in the p.f. moulding powder producing units, the Association pleads for the continuance of not only the existing quantum of protection but also the present import policy. As regards the quality of the indigenous powder, it says that the units should be asked to improve their quality in order to satisfy the required standards of the manufacturers of electrical accessories. It suggests that the latter should be asked to utilise progressively the indigenous powder.

There has been good progress in the electrical accessories section of the plastics industry. But the pace of this progress is stated to have been arrested owing to unfavourable import policy of the Government of India in regard to p.f. moulding powder. In this context, the Association observes:

"Perhaps, with a view to protecting the indigenous p.f. moulding powder manufacturing section of the industry, the Government banned imports of p.f. moulding for some time. After several representations the Government granted licences for limited imports of special grade powder. Unfortunately, there was considerable delay in the issue of licences and by that time, owing to international developments, the supply position of these raw materials deteriorated with the consequent rise in prices. P.F. moulding powder, particularly of the electrical grade, is of special significance during war, as it is required for manufacture of electrical items. The licences issued to electrical accessories manufacturers were not of any material assistance as they were issued very late."

The supply position of non-ferrous materials, such as non-ferrous sheets, rods, tubes, etc., also worsened owing to the international situation and their prices, too, soared high. As a result of these difficulties, the output as well as the competitive ability of the industry would appear to have suffered a setback.

The present demand for electrical accessories is placed by the Association at 750,000 dozen, as against the installed capacity of the indigenous industry of about 1,300,000 dozen. The value of imports in 1954-55 amounted to Rs. 50.31 lakhs, as compared with Rs. 49.73 lakhs and Rs. 49.97 lakhs in the preceding two years respectively. The quality of the indigenous products is claimed to compare favourably with the imported products. There is, however, a prejudice among consumers which has affected the sales of the product.

The Association suggests that its present policy of allowing import of special grades of p.f. moulding powder not manufactured in India through actual users should be continued. It desires that at least a protective duty of 62½ per cent. *ad valorem* should be levied on imports of electrical accessories. The Government, it says, should also patronise the electrical goods and accessories manufactured in the country.

The production of plastic buttons is estimated at 950,000 gross in 1954 as compared with 857,000 gross two years before, in 1952. Some of the firms have imported the latest types of equipment for manufacturing plastic buttons. The rated capacity of the industry is estimated at 4 million gross. The consumption of plastic buttons at present is stated to be of the order of 2 million gross.

The raw materials required by the plastics buttons industry are urea formaldehyde moulding powder, p.f. moulding powder, melamine formaldehyde moulding powder, polystyrene moulding powder and polishing compositions. Of these only p.f. moulding powder is, as stated above, manufactured in the country. The rest are imported from abroad on payment of customs duty amounting to 31½ per cent. *ad valorem*. This rate of duty is considered by the industry to be very high. Besides, the industry has to pay a very high freight charge for the transport of its main industrial raw material, namely, urea formaldehyde moulding powder which is imported in refrigerator storage with a view to preventing deterioration in its quality owing to exposure to heat and moisture. The freight works out to, it is stated, as much as 15 per cent. of the total price. Again, it has to be stored subsequently also in cold storage, involving additional cost. On occasions plants of the units have to remain idle on account of delays in the receipt of imported raw materials. There is an inevitable high percentage of loss of raw material in the manufacturing process—about 40 to 45 per cent.—and import duty has to be paid on this waste which cannot be utilised. Further, the total capital invested in the industry is higher, as considerable portion of the same remains locked up in importation of raw materials. These would result in higher cost of production which evidently places the foreign competitor in a more advantageous position than the indigenous producer in marketing the product in India. What is more, the landed cost of foreign buttons is far lower than the fair exworks price of the indigenous buttons. The c.i.f. price of 16/18" foreign buttons—to quote an instance—amounts to As. 3.6 per gross, as against the ex-factory price of Re. 1 per gross of the comparable variety. In view of these difficulties, the Association pleads for State assistance.

THE SECURITIES CONTRACTS (REGULATION) BILL, 1954

MR. TULSIDAS KILACHAND'S MINUTE OF DISSENT

*[The Securities Contracts (Regulation) Bill now before Parliament seeks, as readers are aware, to prevent undesirable transactions in securities by regulating in a number of ways the business of dealing in securities on stock exchanges. In its last session, Parliament had referred the Bill to a Joint Select Committee. This Committee submitted its report to Parliament on 29th February last. Six members have appended to it their minutes of dissent. We reproduce below the dissenting minute of one of them, Mr. Tulsidas Kilachand, a member of the Committee. It will be seen therefrom how some of the provisions in the Bill are not only controversial but impracticable. Mr. Kilachand's emphasis on the undesirability of arming the Government with wide powers is worthy of attention.—*ED.*]*

THE Securities Contracts (Regulation) Bill, 1954, seeks to regulate stock exchanges and makes other provisions relating to the business of dealing in securities. "The legitimate function of a stock exchange," according to the Gorwala Committee, "is to provide, consistently with the larger public interest, a forum and a service which are so organised, in the interests of both buyers and sellers, as to ensure the smooth and continual marketing of shares." It is only to the extent that the Bill enables stock exchanges to fulfil this function more efficiently than at present that it can be said to be necessary or useful. The Bill needs examination only from this point of view.

While regulation may be desirable, excessive regulation is not. Mr. C. D. Deshmukh, when he was the Governor of the Reserve Bank of India, had said in 1948: "I am inclined to favour Government's framing minimum legislation covering only the vital aspects of reform, rather than its attempting a complete regimentation of the stock exchanges." For this purpose, it should have been sufficient had the Government taken the power to grant recognition to, and withdraw recognition of, stock exchanges. Had the Government restricted its interference to cases where the governing bodies of such exchanges had been unable owing to lack of powers, or unwilling owing to personal interest or inefficiency, to take action necessary to prevent unhealthy speculation or check it when it arises, that might have been understandable.

The present Bill appears to go beyond these limits. It grants to the Government, in addition to the powers listed above, the powers to approve by-laws made by stock exchanges, to make or amend by-laws on its own initiative, to direct stock exchanges to suspend business, and to supersede the governing bodies of stock exchanges. These are vast powers and will need to be exercised with care and after consultation with, at least, the governing bodies of the stock exchanges.

The Government, however, has not only taken powers finally to decide on many of these subjects, but to do so without consulting the governing bodies. The provisions to consult the governing bodies would not have detracted from the powers of the Government; they would certainly have added to their authority. However, the Government prefers to disregard procedure in its haste to assume unobstructed and absolute powers.

A market like the stock exchange is a sensitive market, and depends for its efficient and smooth functioning on confidence—confidence in its members that contracts will be performed as entered into and that there will be no outside interference affecting the making and performance of such contracts. Where interference does take place, it should be by persons whom the market trusts as acting in its general interest and in accordance with principles already laid down and known. However, the Government has assumed vast powers, such as those to suspend business and to prohibit contracts in certain securities except with Government permission, which may have a one-sided impact on the making and performance of contracts, affecting their sanctity and impairing the market's confidence in the proper fulfilment of contracts voluntarily entered into.

As the Gorwala Committee put it, "within its own sphere, the exchange should have a large measure of autonomy and Government's role should be limited to keeping in touch with happenings on the exchange and ensuring that it enforces its by-laws properly." Internal autonomy in the case of a market is not merely meant to satisfy the democratic urge of its members, it is also an essential condition for its smooth and efficient functioning. By giving powers to the Government to suspend business and to supersede the governing bodies, the Bill encroaches on the internal autonomy of the stock exchanges, and, I am afraid, may adversely affect their working.

In the following paragraphs, detailed comments are given on some important clauses of the Bill.

Clause 4 (2) (i) *and* (iii): These sub-clauses provide for Government power to lay down conditions regarding number of members of a stock exchange and for Government representation, by up to three nominees, on its governing body.

Transactions on the stock exchange are time contracts and are often made orally; the members of the stock exchange depend on each other's integrity for the carrying out of such time or oral contracts. Any insistence on the number of membership, by introducing persons who may not have the same standards, is likely to upset the smooth carrying out of contracts. Transactions being offsetting or interrelated, even a single failure to fulfil a contract may have repercussions disproportionate to the original failure. An unhealthy increase in numbers, by bringing about cut-throat competition, may lead to unhealthy speculation; if genuine investing business does not justify such increase, it will also increase the speculative business, destabilising the market and preventing it from fulfilling its function of satisfying genuine investors' needs.

The representation of the Government on the governing bodies of commercial bodies is obnoxious in principle as it gives power without responsibility or accountability; it is unhealthy in practice as the Government, from being a final arbiter in difficult times, becomes a participant in the process of making decisions. Should it be argued that Government representation is necessary to enable it to take informed decisions and exercise powers with knowledge—that is, to provide a liaison between the Government and the governing body—it should be sufficient to have one Government observer for the purpose; as the Gorwala Committee had recommended, such a person should be a Government or a Reserve Bank of India officer.

Clause 5 (*also clause* 11): The right of the governing body in the Government Bill to receive a "show cause" notice, and to make representations, has been whittled down in the Joint Committee to that of "being heard in the matter." While this does not preclude the former, the Government can, should it so desire, reduce the whole procedure into a mere formality. The original procedure was not only democratic; it would also have enabled the Government to take informed decisions.

Clause 6: This clause now empowers the Government to call upon a member of the stock exchange to supply information.

It should not matter to the Government whether the information required is obtained through the stock exchange or, as now provided, direct from the member concerned. The amendment is, however, bad in principle as it enables the Government to by-pass the governing body of the stock exchange. It trenches on the internal autonomy of the stock exchange.

Clause 9: The words "and from time to time amend" have been omitted from the Draft Bill. The Bill does not define "make" to include "amend." In other clauses of the Bill where powers have been given to the Government, as in clause 8(2) and 10(1), the words "and from time to time amend" have been used along with the word "make." It is likely, therefore, that a court may not hold the General Clauses Act definition of "make" including "amend," to apply. As everybody is agreed that stock exchanges should have the power to amend the by-laws, and as, with the deletion of the words "from time to time amend" the position is obscure, it would be proper, in the interest of clarity, to restore the words "and from time to time amend."

The publication of carry-over figures, as required under one of the amendments to Clause 9(2), would be fraught with serious risks. It would make generally known the market position, and place the market at the mercy of powerful bulls and bears who would exploit such information for engineering large-scale manipulations of a dangerous character. Manipulative operations based on knowledge of the carry-over position would introduce an element of instability, dislocate trading every now and again, and disrupt the normal working of the market. It also does not seem feasible to collect information regarding the number of squared up transactions in each security. At the most, the information would be available in respect of securities settled through the Clearing House; even then the work of collation would be extremely laborious and the results would serve no useful purpose.

As regards furnishing information regarding the total number of shares received and delivered, such information should be restricted to shares settled through the Clearing House.

The amendment which requires disclosure of the total value of differences for each security is *prima facie* impracticable. First, as is well known, members make up their accounts overall and not security by security. Secondly, these overall accounts are *temporarily* adjusted at, what are called, making-up prices. The differences arising therefrom are entirely fictitious. The differences would vary, and be large or small according as one making-up price or the other is fixed. In fact, the differences based on the making-up prices are an accidental offshoot of an accounting process, and the aggregate of such differences is of no real significance. The working out of such differences security by security would be impossible; the publication of figures relating to the aggregate differences would be mischievous and misleading as they would lend themselves to all sorts of erroneous misinterpretations and would be exploited by operators to manipulate the market.

The majority of the Joint Committee "feel that the currency of blank transfers should be limited by by-laws to a period not exceeding six months." Blank transfers lend negotiability to shares by reducing the cost of their transfer and stability to the market by increasing the floating stock of shares. With the right now taken by the Government to approve changes in management, there should be no fear that the system will enable some persons to capture control of companies on the sly. The Gorwala Committee considered this question in detail, and its report contains notes by its members on blank transfers. The practical difficulties are immense. In view of this, it would be advisable to keep the position flexible, by allowing the stock exchanges to use its discretion on the subject, as was proposed by the Gorwala Committee.

Clause 12: The Government were not required, either under the Gorwala draft or the Draft Bill, to consult the governing body prior to suspending business on a stock exchange for the purpose of meeting an emergency. The Select Committee amendment would empower the Government to determine when an emergency is deemed to have arisen, enabling it to suspend business whenever it so decides. Under clause 9(2) (*q*), the governing body is given power to determine whether an emergency has arisen or not. This may create avoidable conflicts between the Government and the governing body as to whether an emergency has arisen or not. It is essential that the Government intervene only when necessary and when certain circumstances exist. Either the Government should provide for consultation with the governing body of the stock exchange, or its decision about the existence of an emergency should be subject to appeal to court.

A broker acts as an agent between two parties, and for every transaction with his principal, he has to make a corresponding transaction with the other side; thus on the stock exchange, agency, offsetting and hedging transactions take place continuously. Should the original transactions not be enforceable, this will, by making impossible the fulfilment of the corresponding transactions, penalise innocent constituents or bazar parties. As it stands, the clause may punish not merely the guilty, but also in the process penalise third parties who may not be aware of the contravention under the clause. The extent of penalty will depend upon the difference in prices at the time of entering into the contract and at the time of its settlement. Where this is nil, no penalty may

(*Continued on page* 483)

PROFIT OF MADURA MILLS SHRINKS

DIVIDEND WELL MAINTAINED—IMPRESSIVE FINANCIAL POSITION

AFTER two years of successive rise, the earnings of the Madura Mills Company, Ltd. (Managers: Messrs. A. & F. Harvey Ltd., Madurai), have suffered a setback during the year ended 31st December 1955. The Company's gross profit, for instance, which had gone up from Rs. 90.48 lakhs in 1952 to Rs. 131.90 lakhs (the highest since 1948) in 1954, has dropped to Rs. 106.32 lakhs in the year under review. Despite this recession, the gross profit for 1955 stands well above that (Rs. 102.13 lakhs) for 1953. The net profit, which had gone up from Rs. 45.46 lakhs in 1953 to Rs. 55.31 lakhs in the following year, has shrunk to Rs. 44.20 lakhs in the year under review and is the lowest since 1950.

The dividend to shareholders has, however, been maintained at 20 per cent. per annum and this is the fifth year in succession for which this dividend is being repeated, after it had been stepped up in 1951 from 15 per cent. paid for 1950. Unlike in the previous four years when the aforesaid dividend had been paid after strengthening the reserves considerably—during these four years alone the addition to the reserves aggregates Rs. 70 lakhs—the Directors have repeated the dividend for the year under review without any addition to the reserves and have preferred to carry forward as large a surplus as Rs. 18.87 lakhs.

As the aforesaid dividend for the year under review is more than 6 per cent., the Company has to pay super-tax on the balance of 14 per cent. as per the latest Finance Bill, at the rate of As. 2 in the rupee on 4 per cent. of the paid-up capital and at As. 3 in the rupee on the balance of 10 per cent. The amount of super-tax on the dividend in excess of 6 per cent. works out to Rs. 4.16 lakhs. In addition, the Company will also lose the rebate of one anna in the rupee on income-tax on the undistributed amount of Rs. 18.87 lakhs, unless the Finance Bill is modified before it is passed.

The following comparative table, giving the salient features of the Company's working results for the past four years, provides an idea of its progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds (net)	14,82.85	16,01.79	15,22.48	16,51.70
Other income	3.27	2.07	2.20	2.25
Raw materials consumed ..	9,48.18	10,35.08	9,72.44	11,36.45
Wages and other expenses ..	4,31.62	4,36.88	4,50.11	4,27.03
Gross profit	1,06.32	1,31.90	1,02.13	90.48
Managers' commission	9.73	12.30	7.99	8.79
Provision for—				
Depreciation	18.73	19.03	17.98	8.70
Taxation	33.66	45.25	30.69	26.70
Net profit	44.20	55.31	45.46	46.28
To reserves		20.00	10.00	15.00
Dividend	35.00 (20%)	35.00 (20%)	35.00 (20%)	35.00 (20%)
Carry forward	18.87	9.67	9.36	8.90

There has been a sharp fall of Rs. 1.19 crores in sale proceeds of yarn and waste which at Rs. 14.83 crores are the lowest since 1950. The cost of cotton and rayon consumed has also declined by Rs. 87 lakhs, while the decline in wages and other expenses is of the order of Rs. 5.26 lakhs. A break-up analysis of this item shows that while wages (including bonus) have fallen from Rs. 2.95 crores to Rs. 2.79 crores, the other expenses have gone up from Rs. 1.42 crores to Rs. 1.52 crores. The all-round fall in sale proceeds, raw material consumed and wages indicate that the production of yarn by the Company must have been on a lower scale during the year under review.

The Company's balance-sheet as on 31st December 1955 discloses an impressive financial position. The paid-up capital is unchanged at Rs. 175.02 lakhs, made up of 1,166,832 shares of Rs. 15 each. Of this capital, as much as Rs. 115.86 lakhs represent that raised by the capitalisation of reserves. The reserves and surplus, even after the capitalisation of the aforesaid huge sum, aggregate Rs. 432.69 lakhs, of which renewal and replacement reserve accounts for Rs. 243.82 lakhs and general reserve for Rs. 170 lakhs. The provision for taxation, less advance payments, stands at Rs. 15.71 lakhs. The current liabilities aggregate Rs. 159.67 lakhs, having risen from Rs. 137.86 lakhs at the end of 1954, mainly due to the loans from banks secured by stocks and by guarantee, the outstanding amount of which as at the end of the year is Rs. 52.43 lakhs. There has been an addition of Rs. 7.43 lakhs to the gross block during the year, bringing the total value of the block account to Rs. 573.76 lakhs, the book value of the same being Rs. 215.02 lakhs. The current assets aggregate Rs. 568.07 lakhs, of which stock-in-trade accounts for Rs. 326.92 lakhs, stores and spares for Rs. 72.09 lakhs, investments in shares for Rs. 47.80 lakhs, book debts and advances for Rs. 90.22 lakhs and cash balances for Rs. 31.05 lakhs. Thus, the current assets exceed the current liabilities and provision for taxation by a huge margin.

The Rs. 15 fully paid up shares of the Company are being currently quoted at Rs. 50-6 *cum-div.* On an *ex-div.* basis, the latest dividend gives a yield of 6.3 per cent. per annum, free of income-tax.

JAY SHREE TEA DIVIDEND UNCHANGED

The distinction of being the first among tea companies to publish the statement of accounts for the year ended 31st December 1955 goes to the Jay Shree Tea Gardens Ltd. (Managing Agents: Messrs. Birla Brothers Ltd., Calcutta). The Company has earned a gross profit of Rs. 24.87 lakhs for the past year, which represents a fall of Rs. 24.18 lakhs or 49.3 per cent. from the record level of Rs. 49.05 lakhs for 1954. This sharp decline in earnings may seem incompatible with the record production of tea companies in general, but in the context of the drastic fall in tea prices during the year—in some cases the prices fetching below the cost of production—the results can be considered satisfactory. What is more comforting is that the profit for the year under review is much higher than that for any of the years preceding 1954 and, therefore, constitutes the second highest in the history of the Company.

The net profit has dropped from Rs. 21.70 lakhs to Rs. 8.89 lakhs, at which it is also lower than that (Rs. 10.75 lakhs) for 1953. After writing back a sum of Rs. 1.09 lakhs as a result of the readjustment of Managing Agents' commission and office allowance for 1953 and 1954 and making provision of Rs. 1.50 lakhs for bonus to labour for 1953 and 1954, the Directors have transferred Rs. 2.50 lakhs to the reserve fund, as against Rs. 15.52 lakhs set aside last year (after writing off Rs. 1.08 lakhs being the loss on revaluation of shares in a subsidiary company).

The Directors propose to pay a dividend of 10 per cent. per annum, the same as that paid for 1954 on the increased capital of Rs. 58.57 lakhs raised in March 1954 by the capitalisation of Rs. 19.52 lakhs and the issue of bonus shares in the ratio of one share for every two shares. As the Company's dividend distribution exceeds six per cent. of the paid-up capital, it is liable to pay the special super-tax levied under the latest Finance Bill at the rate of As. 2 per rupee on the amount distributed in excess of 6 per cent., unless the proposal is modified or withdrawn before the Bill is passed. The dividend distribution absorbs Rs. 5.86 lakhs leaving a surplus of Rs. 72,556 to be carried forward.

The following summary of the Company's balance-sheet as on 31st December 1955 reflects its satisfactory financial position:

Liabilities	Rs.	Assets	Rs.
Capital ...	58,56,900	Net block	1,09,00,000
Reserves and surplus ...	35,13,395	Stock - in - trade ...	32,82,280
Provision for taxation ...	24,43,222	Stores ...	9,39,360
Liabilities	68,97,377	Debts, deposits and advances ...	19,14,679
		Investments	4,31,139
		Cash ...	12,28,436
		Suspense ...	15,000
	Rs. 1,87,10,894		Rs. 1,87,10,894

During the year under review, the Company acquired the Towkok Tea Estate in Assam with 1,266.55 acres under tea cultivation and an annual crop of about 16,000 maunds at a cost of Rs. 47.20 lakhs. The Company also became the holding company of Messrs. Woodcraft (Assam) Ltd., which produces plywood and manufactures tea chests. It sold out the Lohagarh Tea Estate in Terai (440.13 acres under tea) and the Invercauld Estate (322.75 acres under tea), the former on 1st January 1955 and the latter on 1st January 1956. It has also been decided to amalgamate the Rishechat Tea Company, Ltd., with the Jay Shree Tea, subject to the sanction of the Calcutta High Court, with effect from 1st January 1956, from which date the Rishechat Tea Company will stand dissolved. The Company has built a new modern factory at a cost of about Rs. 9 lakhs for the Nahor Habi Tea Estate. This factory will be able to manufacture tea both of the Nahor Habi Estate as also of the Rajabari Division of the Lukwah Tea Estate which had been acquired in 1954. The Directors are also seriously considering the question of expanding the activities of the Company in other industrial and/or commercial spheres.

The Directors feel that the outlook of the industry for the current year is uncertain, in view of the increased production of tea in India, as well as in other major producing countries, without any corresponding increase in world demand, and the substantial increase in the cost of production in India and the heavy taxation imposed on the industry by the State and Central Governments.

NIZAM SUGAR MAINTAINS DIVIDEND

A substantial decline in earnings is indicated by the audited accounts of the Nizam Sugar Factory Ltd. (Managing Agents: Hyderabad Government Industrial Trust Fund, Hyderabad-Dn.) for the year ended 30th June 1955. The gross profit has shrunk from Rs. 80.49 lakhs earned in 1953-54 to Rs. 56.26 lakhs in the year under review. The net profit shows a fall from Rs. 36.59 lakhs to Rs. 31.95 lakhs, thus reversing the upward trend seen in the previous three years. The addition to the reserves has been reduced from Rs. 2.82 lakhs to Rs. 0.97 lakh, while the distribution to the ordinary shareholders has been maintained at 18 per cent., made up of a dividend of 12 per cent. and a bonus of 6 per cent., to which level it had been raised last year from 16 per cent. paid for 1952-53, by increasing the bonus part of the distribution from 4 per cent. to 6 per cent. Even this higher distribution made last year, it will be remembered, was on a higher capital raised in January 1954 by the capitalisation of Rs. 18.40 lakhs and issue of bonus shares in the ratio of one share for every five ordinary shares held.

The following comparative table gives a comprehensive view of the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 30th June			
	1955 I.G.	1954 I.G.	1953 O.S.	1952 O.S.
Sale proceeds of sugar, molasses, etc.	305.40	373.33	446.67	243.19
Proceeds of cane, etc.	94.50	91.63	66.17	79.92
Stocks of sugar	173.61	108.63	177.98	220.06
Other income	0.97	0.65	0.04	0.09
Manufacturing expenses ..	306.01	241.45	291.01	311.86
Cane cultivation expenses	76.62	76.44	69.97	69.06
Management and other expenses	25.95	24.00	28.29	25.56
Gross profit	56.26	80.49	81.62	59.29
Managing Agents' commission..	3.59	4.52	5.37	4.08
Depreciation	10.52	21.76	27.01	18.99
Taxation	10.20	16.00	13.00	14.00
Net profit	31.95	36.59	30.34	22.27
Provision for bonus to employees	9.84	11.89	9.93	6.80
Additional bonus liability for earlier years	4.40	0.62	0.13	1.58
Excess provisions written back ..	4.68			
To reserves	0.97	2.82	3.76	1.73

Preference	1.56	1.56	1.56	1.56
Ordinary	19.87 (D. 12% +B6%)	19.87 (D. 12% +B.6%)	14.72 (D. 12% +B.4%)	11.04 (D. 9% +B.3%
Carry forward	0.04	0.06	0.27	0.03

The figures for the year under review indicate that the output of sugar during the year has gone up. The manufacturing expenses, for instance, show a rise of Rs. 64.56 lakhs. While the sale proceeds of sugar, molasses, etc., have declined by Rs. 67.93 lakhs, stocks have risen by about Rs. 65 lakhs. In addition to the payment of Rs. 9.84 lakhs as bonus to employees, the Directors have utilised a sum of Rs. 4.40 lakhs being the balance of additional bonus paid to employees in terms of an award in respect of the years 1950-51, 1951-52 and 1952-53 (the provisions made in previous years for this purpose having fallen short). However, they have drawn back Rs. 4.68 lakhs from certain other provisions made in previous years. A sum of Rs. 27,500 has been transferred to the general reserve, as against Rs. 40,409 provided a year ago, Rs. 5,000 to the dividend equalisation reserve (Rs. 2,429), Rs. 20,000 to the investment depreciation reserve (Rs. 70,000), Rs. 20,000 to the special depreciation reserve (Rs. 56,171) and Rs. 25,000 to labour welfare and amenities reserve (Rs. 1,00,143).

The Company's reserves and surplus aggregate Rs. 67.48 lakhs, as against a paid-up capital of Rs. 145.90 lakhs, made up of 48,000 tax-free 5 per cent. cumulative preference shares of Rs. 25 each, 95,348 tax-free 4 per cent. cumulative preference shares of Rs. 25 each and 441,006 ordinary shares of Rs. 25 each. The provision for taxation stands at Rs. 23.33 lakhs and current liabilities aggregate Rs. 305.39 lakhs. There has been an addition of Rs. 14.41 lakhs to the gross block during the year, bringing the total value to Rs. 258.09 lakhs, as against which a depreciation reserve of Rs. 138.88 lakhs has been built up. The current assets amount to Rs. 428.48 lakhs, which more than adequately cover the current liabilities and provision for taxation.

Points From The Chair

Effects of British Credit Squeeze Overseas

"AS a British overseas bank our interest in the economic measures taken by this country lies partly in the repercussions they have elsewhere. For instance, it is vital that the United Kingdom should be able to continue to make important contributions to the Colombo Plan and to other similar developments within the Commonwealth as well as to expand its investments abroad through private enterprise. If we cannot do these things we shall lose our place in the market and in the regard of the countries concerned. It has also to be realised that the effects of the credit squeeze do not begin and end in London or in the United Kingdom. It is true that the centre of the sterling area naturally takes the first pressure; but the effects of action at the centre necessarily work their way outwards, and it would be idle to suppose that borrowers nearer the periphery of the sterling area will remain unaffected by recent monetary measures in this country. It will be of interest to watch the longer-term effects in this wider context. Overseas banking cannot but be made increasingly aware of this aspect of the squeeze during the current year, and I would not be surprised to see firmer rates in many countries which to outward appearances so far have not been affected."

J. K. MICHIE,
National Bank of India Ltd.

Economies of Argentina and Brazil

"The major economies of Argentina and Brazil offer the most complex and interesting examples of inflation in South America. Their experience has been fundamentally similar: both have extensive natural resources and have been tempted into over-ambitious programmes of economic development which, while achieving, particularly in Brazil, real progress, have involved a considerable degree of investment inflation. In the last few years the inflation has become increasingly one of costs, in which Government spending and uneconomic wage demands have been major elements. In Argentina, deficit budgeting has been essentially of the indirect kind, involving the subsidising of Government agencies rather than through the official budget. In Brazil, there has been an orgy of deficit budgeting, both direct and indirect. There are now good prospects that the economic problems of Argentina may be taken firmly in hand. The recommendations of the Prebisch Report do indeed involve some additional rise in prices as part of the effort to restore the balance between primary and secondary production, but only as an unavoidable measure in the attempt to restore a fundamental economic stability. Political considerations in Brazil since the death of President Vargas in August 1954 offer some explanation of the failure to come to grips with the inflationary problem, and it is to be hoped that the new Administration will be prepared to take the necessary drastic measures."

SIR FRANCIS M. G. GLYN,
Bank of London & South America Ltd.

World Price of Sugar

"A word of explanation is required about the term 'world price.' Almost every country in the world, except San Domingo and Formosa, has a guaranteed market for the bulk of its production. Take Cuba as an example. Cuban sugar commands a higher price in the United States than the Commonwealth negotiated price. It is only the surpluses, therefore, which establish the so-called world price, which, as a result, is quite artificial, being based as it is on sales of some 5 million tons a year (produced at marginal cost) out of a total world production in excess of 40 million tons. The negotiated Commonwealth price is at present approximately £10 per ton higher than the so-called world price, which has created an impression that the sole purpose of the Commonwealth Sugar Agreement is to provide a subsidy to Empire farmers who are growing sugarcane. Admittedly, it helps Empire farmers, indeed the economy of such Islands as Jamaica, Barbados and Mauritius is wholly dependent on it. But there is another side to the subsidy picture. It is surprising to learn that since 1940, when negotiated prices were first paid by the United Kingdom Government, the average price of Commonwealth sugar has actually been below the average world price."

PETER RUNGE,
West Indies Sugar Co., Ltd.

Monetary Weapon in India

"The recent decision of the Reserve Bank to put up its charges for discounting the bills of the banks has created apprehensions that the policy will be further extended so as to check the volume of bank credit and make it costlier. These have become real during the past few days, as a result of the rise in the British Bank rate. Whether credit will be costlier in future and restricted depends on the view the Central banking authority takes of a particular situation. I can only assure you that those in charge of the monetary policy do not suffer from any ideological dogma and their approach will remain sufficiently flexible. In wielding the monetary weapon, I am sure, they will take care to see that the axe does not fall so heavily as to create deflationary conditions in the country. And though the banking system will have to submit to the broad policies which might be decided by the Reserve Bank, the banks will have sufficient freedom to serve their clientele, provided sound banking is blended with national objectives while formulating their own policies."

D. K. SATHE,
Bank of Maharashtra Ltd.

COMPANY MEETINGS AND DIVIDENDS

UNITED MOTORS (INDIA) LTD. Annual General Meeting, Bombay, 13th March 1956. Transfer books remain closed from 6th to 20th March 1956, both days inclusive.

RAYALASEEMA MILLS LTD. Annual General Meeting, Adoni-Thungabhadra Road, Adoni P.O., 13th March 1956. Dividend: Rs. 10 per share. Transfer books will remain closed from 12th to 26th March 1956, both days inclusive.

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay, 19th March 1956. Transfer books remain closed from 5th to 23rd March 1956, both days inclusive.

SNOW WHITE FOOD PRODUCT CO., LTD. Annual General Meeting, Calcutta, 29th March 1956. Transfer books will remain closed from 19th to 29th March 1956, both days inclusive.

INDUSTRIAL CREDIT AND INVESTMENT CORPORATION OF INDIA LTD. First Annual General Meeting, Bombay, 2nd April 1956. Dividend: *Nil*. Transfer books will remain closed from 19th March to 2nd April, 1956, both days inclusive.

CALCUTTA TRAMWAYS CO., LTD. Interim dividend of 3½ per cent. free of income-tax on ordinary shares, for the year ended 31st December 1955. Transfer books remain closed from 6th to 19th March 1956, both days inclusive.

DHANALAKSHMI MILLS LTD. Dividend of Rs. 30 per share, free of tax, for the year ended 31st December 1955. Transfer books will remain closed from 17th to 30th March 1956, both days inclusive.

CENTRAL SCIENTIFIC SUPPLIES CO., LTD. Interim dividend of As. 4 per share, for the year ending 31st March 1956. Transfer books will remain closed from 27th to 31st March 1956, both days inclusive.

COORG TEA CO., LTD. Interim dividend of As. 8 per ordinary share for the year ending 31st March 1956. Transfer books will remain closed from 15th to 31st March 1956, both days inclusive.

COMPANY REGISTRATIONS

ROSIN INDUSTRIES LTD. (First Director: Mr. A. L. Sud.) Business: Manufacturers, buyers, sellers and dealers of rosin, turpentine and their by-products, etc. Authorised capital: Rs. 15,00,000. Public company. Address: 10, Clive Row, Calcutta.

GOSSAIN AND CO. (PRINTERS) LTD. (First Director: Mr. N. K. Gossain.) Business: Printers, stationers, lithographers, type founders, etc. Authorised capital: Rs 15,00,000. Private company. Address: 7/1, Grant Lane, Calcutta-12.

DURGA SUNDARI RICE MILLS LTD. (First Director: Mr. H. M. Poddar) Business: Exporters, importers and retail dealers in rice, paddy, etc. Authorised capital: Rs. 5,00,000. Private company. Address: P.O. Nayabazar, District Dinajpur.

ATTESWARI RICE MILLS LTD. (First Director: Mr. M. M. Manna.) Business: Husking paddy into rice, wheat into flour, etc. Authorised capital: Rs. 5,00,000. Private company. Address: 20, Mango Lane, Calcutta.

QUESTION HOUR IN PARLIAMENT

Atomic Reactor

THE possibility of establishing atomic reactors using thorium, instead of uranium, for breeding is now being examined by the Government. By the middle of this year, the swimming pool reactor in Bombay, now under construction, will begin functioning. A sum of Rs. 26 lakhs, including the cost of fuel elements which were obtained on hire from the U.K. Atomic Energy Authority, has been expended on this project.

—*Jawaharlal Nehru*

Foreign Investments

Ten foreign companies have been transferred to Indians during 1955. Certain incentives for the investment of foreign capital already exist. No additional steps are being taken to attract foreign capital.

—*M. C. Shah*

Small Savings Scheme

The system of appointing agents in connection with small savings scheme has worked satisfactorily on the whole in improving the collections. From 1st April 1952 to the end of November 1955, the total number of agent organisations appointed was 15,774, excluding *panchayats*, office-bearers of *panchayats*, presidents, vice-presidents, chairmen and vice-chairmen of municipalities and others appointed as agents on experimental basis under rural agency system in certain States. Up to the end of November 1955, a sum of about Rs. 33.64 lakhs had been paid as commission at the rate of 1¼ per cent. on their collections. The intensification of the savings campaign is under constant review and, among measures under consideration are formation of savings groups, extension of agency system, particularly in rural areas, wider publicity and introduction of the new schemes as gift coupons.

—*A. C. Guha*

Export of Iron Ore

The Government of India has not decided to enter into any economic co-operation with Japan during the second Five-year Plan. However, the Government has under consideration a project for additional transport facilities which would enable export of larger quantities of iron ore to Japan.

* * * *

Trade with Japan

India will supply to Japan two million tons of iron ore and Japan, in return, will supply to India 75 locomotives and also help in the development of harbours on the East Coast of India and the laying of new railway lines.

—*B. R. Bhagat*

Textile Exports

There had been some decline in Indian exports of textiles to Ceylon, Malaya and Singapore and Australia during 1955, as compared with 1954, while the Japanese exports to those countries had registered a rise. Apart from this, the Government has no precise assessment of the effects of Japanese competition.

—*D. P. Karmarkar*

Rourkela Steel Plant

The final report on the steel plant at Rourkela, prepared by the German experts, has been received by the Government. It has been decided to employ the "L. D. Process" of steel making for 75 per cent. and the "Open Hearth Process" for the rest of the total production.

* * *

Industrial Estates

The Government has a plan to set up industrial estates in the States during 1956-57. The construction and management of the industrial estates will be the responsibility of the States. The Centre has offered to advance the entire cost of estates as a long-term loan. If the rents to be charged on the users of the estates have to be subsidised, the Government of India will give 50 per cent. of this for a period of five years. Schemes for industrial estates for five places have been sanctioned during the current year and their construction is expected to be completed during 1956-57.

—*Nityanand Kanungo*

Purchase of Iranian Oil

India has signed an agreement with Iran for purchase of oil.

—*Sardar Swaran Singh*

Ambar Charkha

It will be possible to spin about 16 hanks of yarn on an average on *Ambar Charkha* by working eight hours a day, if the worker is not engaged in other operations such as carding. About the quality of the yarn, tests are being carried out. About 4,500 *Ambar Charkhas* are now working in the country.

* * * *

Fertiliser Factories

In addition to the fertiliser-heavy-water factory at Nangal, it has been decided to establish two more fertiliser factories. One of those factories will be located at Rourkela and the other at Neiveli in Madras State. The Rourkela factory will have a capacity of approximately 80,000 tons and the Neiveli factory 70,000 tons of nitrogen per annum. The factories are expected to cost Rs. 20 crores each. Both will be Government-owned.

—*Satish Chandra*

Newsprint Manufacturing

The Planning Commission has not approved any of the proposals for the establishment of newsprint factories. Proposals have been received from the Governments of Punjab, Himachal Pradesh and Uttar Pradesh. The question of bringing into existence additional capacity for manufacturing newsprint is under examination by experts with reference to locations, processes and raw materials.

—*S. N. Misra*

Notices

CALCUTTA CREDIT CORPORATION LIMITED

NOTICE IS HEREBY GIVEN THAT THE 18th Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 36, Chowringhee Road, Calcutta-16, on Tuesday the 27th March 1956, at 4.30 p.m., to transact the following business:—

1. To receive and pass the Audited Balance Sheet as at 30th June 1955 and the Profit and Loss Account, and the Directors' Report for the year ended the same date.
2. To declare Dividend.
3. To elect two Directors in place of Shri H. P. Poddar and Shri C. L. Poddar who retire under Article 116 of the Articles of Association of the Company but being eligible, offer themselves for re-election.
4. To appoint Auditors for the year ended 30th June 1956 and to fix their remuneration.
5. For incorporating in the Memorandum of Association of the Company specifically the power to give charities, etc., and for the purpose of it to consider and pass, if thought fit, with or without modification the following resolution which will be moved as Special Resolution:—

"Resolved that the Clause 3(x) of the Memorandum of Association be deleted and following clause be and is hereby inserted in substitution thereof:—

"*Clause* 3(x)—To support, subscribe or donate to any charitable or public object, fund, institution, trust, society, club or organisation, which may have its object to give assistance for advancement of education, public welfare, religion, sports, medical relief or help to the poor; or which may be in connection with any national or public object, or which may be calculated to assist directly or indirectly, the Company in the conduct of its business or for the benefit of its employees or any employee including officers who may have served the Company, or to the wives, children or other relations of such persons."

6. To transact any other business incidental to above.

The Share Transfer Register will be closed from 13th to 27th March 1956, both days inclusive.

By Order of the Board,
JAINARAIN RAMCHANDER,
Managing Agents.

Dated 1st March 1956.

THE GOKAK MILLS LIMITED

Agents.

BOMBAY, 1*st March* 1956.

Note.—The Dividend, when sanctioned, will be made payable, free of Income-tax, at The Chartered Bank of India, Australia and China, Bombay or Madras, on and after 2nd April to those shareholders whose names stand on the Register on the 22nd March 1956, to whom Dividend Warrants will be posted.

THE BENGAL PAPER MILL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at the Registered Office of the Company at 21, Netaji Subhas Road, Calcutta, on Thursday the 29th day of March 1956, at 12 noon, to consider and, if thought fit, to pass the following Ordinary Resolutions:—

(1) "That as from the date of the commencement of the Companies Act, 1956, subject to the approval of the Central Government, Balmer Lawrie and Company Limited shall be and are hereby reappointed the Managing Agents of the Company for a period of ten years, and that as from that date the Managing Agents shall hold such office upon the terms and subject to the conditions contained in the draft Agreement previously circulated to the members of the Company and submitted to this meeting and for the purposes of identification signed by the Chairman thereof and that, accordingly, the Directors be and they are hereby authorised to enter into an Agreement with Balmer Lawrie and Company Limited in terms of the said draft subject to any modification thereof that may be agreed between the Company and the Managing Agents for the purpose of complying with any condition imposed by the Central Government in granting its consent as aforesaid."

(2) "That as provided in Clause 9 of the said draft Agreement Balmer Lawrie and Company Limited and any Associate or Associates of theirs (as defined in subsection (3) of Section 2 of the Companies Act, 1956) be and are hereby authorised to retain any commission or other remuneration earned or to be earned by them respectively as the managing agents, secretaries and treasurers, manager, agent, secretary or selling or buying agent of any firm, body corporate, or other concern in respect of any goods, power, freight, repairs or other services, including insurance, for the sale, purchase, supply or rendering of which a contract has been or is to be entered into by such firm, body corporate or concern with the Company provided that the prices or amounts charged to or received by the Company are at rates which are not less favourable to the Company than the market rates or which are otherwise reasonable."

A copy of the draft Agreement referred to in the proposed Resolutions accompanies this Notice.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
A. T. MONTGOMERY,
Director,
Managing Agents.

CALCUTTA, 1*st March* 1956.

No application need be sent for dividend as relative dividend warrants will be posted to such shareholders on and from 25th April 1956. Shareholders are requested to notify change of address, if any, without delay.

MARTIN BURN LIMITED

NOTICE

AT A MEETING OF THE BOARD OF DIRECTORS of Martin Burn Limited, held on 1st March 1956, further consideration was given to the question of the distribution of profits as shown in the accounts for the year ended 30th September 1955, and it was resolved that the Cash Bonus recommended in the resolution passed on 25th ultimo be increased by one anna per share free of Income-tax.

The Directors further resolved that the abovementioned additional Cash Bonus of One Anna be incorporated in the Report and Accounts for the year ended 30th September 1955.

The Directors, therefore, now recommend a Dividend of Rs. 1-8 per share on the Ordinary Shares of the Company for the year ended 30th September 1955 together with an additional distribution by way of Cash Bonus of Five Annas per share, both without deduction of Income-tax.

This Dividend and Cash Bonus if passed by the Shareholders will be payable on and after the 23rd April 1956 to those members so entitled who are registered in the Company's books on the 28th March 1956. It was agreed that the Ordinary Share Register of the Company be closed from the 21st to the 28th March 1956.

By Order of the Board,
A. G. GIDLEY,
Secretary.

2*nd March* 1956.

Shareholders are requested to intimate to the Company immediately any change in their Registered Address.

INDUSTRIAL INVESTMENT TRUST LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE TWENTY-THIRD ANNUAL GENERAL MEETING of Industrial Investment Trust Limited, will be held at the Registered Office of the Company, 61 Apollo Street, Fort, Bombay, on Saturday the 31st day of March 1956, at 11 a.m. (S.T.), to transact the ordinary business of an Annual General Meeting of the Company.

THE SHARE TRANSFER REGISTERS OF THE COMPANY WILL BE CLOSED FROM SATURDAY, the 17TH MARCH 1956 to SATURDAY, THE 31ST MARCH 1956, BOTH DAYS INCLUSIVE.

By Order of the Board,
PREMCHAND ROYCHAND AND SONS,
Secretaries.

BOMBAY, 27*th February* 1956.

To the Shareholders of Industrial Investment Trust Limited, and in particular to:—

Richard Austein Leigh Esq., P. C. Francis Mascarenhas Esq., Noorul Hasan Qadri Esq., Kishenchand Verma Esq., Mrs. Edith Dawn Kingham and Jagan Nath Awal Esq.

RESULTS OF TIDE WATER OIL COMPANY SATISFACTORY

ANGLO-INDIA JUTE PAYS LOWER DIVIDEND

Tide Water Oil Co. (India), Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st October 1955.

After providing Rs. 5,425 (Rs. 7,327) for depreciation and Rs. 36,000 (*nil*) for taxation, there is a balance of Rs. 58,582 (debit of Rs. 70,248) at the credit of the profit and loss account. The directors recommend the payment of a dividend of As. 8 (*nil*) per share, absorbing Rs. 30,000 (*nil*) and leaving a balance of Rs. 28,582 (debit of Rs. 70,248) to be carried forward.

Trading for the six months was satisfactory. Since the close of the half-year, it has become necessary to increase the selling prices of some oils consequent upon increases in freight rates and in the prices of certain base bulk stocks.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	67,632
Reserves ...	8,95,900	Goodwill ...	2,00,000
Provision for taxation ...	1,14,581	Stocks ...	16,76,593
Liabilities ...	18,89,103	Debts, deposits and advances ...	12,11,095
Profit and loss account ...	28,582	Cash ...	3,72,346
	Rs. 35,28,166		Rs. 35,28,166

Anglo-India Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Duncan Brothers & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After providing an increased figure of Rs. 5,00,000 (Rs. 4,00,000) for depreciation because of new machinery and Rs. 2,25,000 (Rs. 3,50,000) for taxation, there is a credit balance on profit and loss account of Rs. 3,00,632 (Rs. 4,38,265). With the transfer from capital reserve of Rs. 5,94,144 (*nil*) and balance brought forward from previous half-year of Rs. 1,41,421 (Rs. 1,45,413), there is a total amount of Rs. 10,36,197 (Rs. 5,83,678). From this sum have been transferred to reserve account Rs. 5,00,000 (*nil*) and to machinery replacement reserve Rs. 1,0,000 (*nil*), leaving a balance of Rs. 4,36,197 (Rs. 5,33,678). Out of this the directors now recommend payment of a dividend on preference shares at Rs. 3-8 (Rs. 3-8) per share absorbing Rs. 1,40,000 (Rs. 1,40,000) and on ordinary shares at Rs. 3-8 (Rs. 5) per share absorbing Rs. 1,72,224 (Rs. 2,46,035), leaving to be carried forward a balance of Rs. 1,23,973 (Rs. 1,47,643).

Since the preparation of these accounts, the Supreme Court has delivered judgment in the Shree Ganesh Jute Mills' sales tax case and has awarded in favour of the Government of West Bengal. However attempts are being made through the good offices of the Indian Jute Mills' Association for reimbursement by the Government of India of tax payable on supplies made to the Department of Industries and Supplies. The Company's liability in this respect amounts to Rs. 2,70,141 which has been recorded as a contingent liability in the balance sheet.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week throughout the period with 12½ per cent. of the total looms sealed. As from 9th January, 2½ per cent. of the total looms were unsealed and a further 5 per cent. will be unsealed from 20th February 1956.

There was a bare sufficiency of jute to last the mills until the new season's crop arrived and at most times there would have been a loss on simultaneous purchase and sale. The current crop is larger and should suffice for the increased offtake necessitated by the unsealing of looms in the industry.

Government removal of export duties on manufactured goods on 2nd August, 1955 largely restored the competitive position of the Calcutta industry after the devaluation of the Pakistan rupee.

An increase in basic wages was awarded by the Third Jute Tribunal and became effective from 6th November 1955. This must inevitably increase the cost of production.

In order to minimise the rising tendency of costs, Jagatdal Mill was closed at the end of the year and Upper Mill commenced working on double shift as from 2nd January 1956. This rationalisation is calculated to reduce the eventual cost of re-equipment. Active investigations are proceeding for a suitable new use for the building and facilities at Jagatdal Mill. The first consignment of modern machinery for Middle Mill has arrived at site and erection will proceed over the coming six months.

Messrs. Landale & Clark Ltd. and Messrs. Landale & Clark (Pakistan) Ltd., both being subsidiary companies have not fared well. The results of both are still unsatisfactory although the restricted scale of operation and economies described a year ago have done much to reduce the losses.

Trading conditions in Pakistan during the current season have been favourable to date.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	89,20,700	Block ...	85,08,335
Reserves ...	72,00,000	Stock ...	65,44,006
Provision for taxation ...	12,97,297	Stores ...	11,83,556
Liabilities ...	53,51,354	Debts deposits and advances ...	23,34,175
Profit and loss account ...	1,23,973	Investments ...	41,20,153
		Cash ...	2,02,799
	Rs. 2,28,93,324		Rs. 2,28,93,324

Cheviot Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November 1955.

After making necessary adjustments for taxation and transferring Rs. 1,00,000 (*nil*) from dividend equalisation reserve and Rs. 75,000 (*nil*) from general reserve there is a balance of Rs. 1,01,415 (Rs. 3,00,079) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share absorbing Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 4 (Rs. 8) per share absorbing Rs. 63,800 (Rs. 1,27,600), leaving Rs. 2,615 (Rs. 1,37,479) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was unprofitable owing to the high price of raw jute in relation to the market for manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,95,000	Block ...	24,74,480
Reserves ...	28,39,282	Stock of cloth and bags	6,50,971
Provision for taxation ...	19,362	Stock of jute	15,17,114
Liabilities ...	7,39,310	Stores ...	9,47,631
Profit and loss account ...	2,615	Debts and advances ...	2,75,987
		Investments	66,291
		Cash ...	2,63,095
	Rs. 61,95,569		Rs. 61,95,569

Delta Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November 1955.

After making necessary adjustments for taxation, there is a balance of Rs. 1,68,412 (Rs. 3,27,008) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 2-8 (Rs. 2-8) per share absorbing Rs. 12,500 (Rs. 12,500) and on ordinary shares at Rs. 5 (Rs. 6) per share absorbing Rs. 1,40,000 (Rs. 1,68,000), leaving Rs. 15,912 (Rs. 1,46,508) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was unprofitable owing to the high price of raw jute in relation to the market for manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	33,00,000	Block ...	28,56,589
Reserves ...	44,74,179	Stock of cloth and bags	7,59,130
Provision for taxation ...	1,55,325	Stock of jute	12,82,388
Liabilities ...	10,02,366	Stores ...	9,62,094
Profit and loss account ...	15,912	Debts and advances ...	4,60,757
		Investments	15,13,729
		Cash ...	11,13,095
	Rs. 89,48,282		Rs. 89,48,282

Dalhousie Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submitted the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 79,118 (Rs. 71,241) for depreciation and Rs. 18,182 (*nil*) for taxation, the profit and loss account showed a loss of Rs. 50,927 (profit of Rs. 1,00,839) which was increased by transfer to provision for contingencies of Rs. 75,934 (*nil*). After adding the amount brought forward from previous half-year of Rs. 11,882 (Rs. 14,194) and the transfer from general reserve of Rs. 2,00,934 (*nil*), there was an available balance of Rs. 85,935 (Rs. 1,15,033). The directors have paid a dividend on the preference shares at the rate of 7 (7) per cent. per annum, without any deduction for income-tax paid by the Company absorbing Rs. 52,500 (Rs. 52,500) and a dividend on the ordinary shares of Re. 1 (Re. 1-8) per share, without any deduction for income-tax paid by the Company absorbing Rs. 31,459 (Rs. 47,189) and carried forward Rs. 1,996 (Rs. 15,344).

With regard to the modernisation scheme eighteen sliver spining frames and ancillary machinery have been installed by January 1956, and in order to make space for the layout and installation of the balance of machinery—part of which is afloat —double shift working of the mill came into operation from 2nd May 1955.

The difficulties found to be inseparable from the modernisation of a running mill are being experienced in the transition stage of the modernisation of the mill.

The directors inform that subscriptions to the 5½ per cent. debenture loan to finance the modernisation scheme, amount to Rs. 20.28 lakhs at the time of this report.

With the removal of all export duties by the Government of India with effect from 1st August 1955, Indian mills were put in a stronger position to meet competition from other countries.

The devaluation of the Pakistani rupee on 31st July 1955, has not proved of any benefit to the Indian industry in view of the decision of the Government of Pakistan to maintain their minimum export prices at the same sterling level as previously. Further they have increased the export duty on raw jute excluding habi jabi and cuttings by Re. 1 per maund.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	46,49,200	Block ...	69,79,719
Debentures ...	19,28,000	Capital expenditure in progress ...	5,15,796

		Debts, deposits and advances ...	12,09,599
		Investments	4,70,314
		Cash ...	25,05,844
	Rs. 1,33,29,057		Rs. 1,33,29,057

North-West Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 18,074 (Rs. 22,294) for depreciation and transferring Rs. 7,500 (*nil*) to general reserve, there remains a balance of Rs. 35,405 (Rs. 8,676) at the credit of profit and loss account out of which the directors recommend payment of dividend at 15 (*nil*) per cent. per annum Rs. 20,438 (*nil*) and carry forward Rs. 14,967 (Rs. 8,676).

Raisings during the half-year were 60,004 (52,902) tons as compared with 58,577 tons and despatches 64,684 (66,580) tons as compared with 65,074 tons during the last half-year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	2,72,500	Block ...	4,51,490
Reserves ...	2,55,192	Stores ...	20,226
Provision for taxation ...	5,096	Debts and advances ...	3,80,098
Liabilities	3,94,113	Cash ...	90,055
Profit and loss account ...	14,968		
	Rs. 9,41,869		Rs. 9,41,869

Orient Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November 1955.

After transferring Rs. 1,00,000 (*nil*) from dividend equalisation reserve there is a balance of Rs. 1,05,423 (Rs. 2,45,745) at the credit of profit and loss account from which the directors recommend payment of a dividend on ordinary shares at Rs. 4 (Rs. 5) per share thus absorbing Rs. 99,640 (Rs. 1,24,550) and leaving Rs. 5,783 (Rs. 1,21,195) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was unprofitable owing to the high price of raw jute in relation to the market for manufactured goods.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,91,000	Block ...	22,10,696
Reserves ...	26,81,049	Stock of cloth and bags ...	6,05,930
Provision for taxation ...	75,629	Stock of jute	13,75,205
Liabilities ...	7,88,680	Stores ...	9,62,035
Profit and loss account ...	5,783	Debts and advances ...	3,42,378
		Investments	53,242
		Cash ...	4,92,654
	Rs. 60,42,141		Rs. 60,42,141

N.B.—Figures within brackets relate to the corresponding period of the previous year.

STRINGENCY IN MONEY GROWS

(From Our Own Correspondent)

BOMBAY, *7th March*

The acute stringency in the short-term money market noted for some weeks past showed no signs of relaxation during the week under review. In fact, conditions were even more difficult during the week in the face of a rising trend in demand for money and growing shortage of floating funds. Banks had, therefore, to seek accommodation once again from either the Reserve Bank of India or the State Bank, notwithstanding the fact that the rate of discount of usance bills by the former had been put up from 3 per cent. to 3½ per cent. and the concession regarding stamp duty had been withdrawn with effect from the 1st inst.

The aforesaid conditions were duly reflected in a further hardening of the interest rates. Inter-bank call money was bid at 3½ per cent. more commonly among the Exchange banks and Indian banks, although a few were still offering no more than 3¼ per cent. House money at call was bid at 3½ per cent., as also short-term deposits for one to six months. Some banks offered 3½ per cent. for deposits of Rs. 5 lakhs and over.

There was, however, a fractional decline in the Government of India 91-day Treasury Bill rate this week from Rs. 2-8-6 per cent. to Rs. 2-8-5 per cent. per annum. The total amount offered was again higher this week at Rs. 136 lakhs, as compared with Rs. 102.75 lakhs last week and Rs. 100.75 lakhs two weeks ago. Tenders for Rs. 100 lakhs have been invited for next week also.

The Reserve Bank of India's statement for the week ended 2nd March 1956 discloses a sharp rise of Rs. 15.81 crores in notes in circulation, in distinct contrast to the aggregate decline of Rs. 4.80 crores in the previous two weeks. Notes held in the Banking Department, on the other hand, have dropped by Rs. 1.87 crores. The consequent rise of Rs. 13.94 crores in total notes issued is covered on the assets side by the increase of Rs. 15 crores in foreign securities and a contraction of Rs. 1.06 crores in rupee coin. In the Banking Department, the rising trend in deposits of the Central Government noted in the previous three weeks has been reversed with a decline of Rs. 6.95 crores during the week under review. Deposits of other Governments have, however, further risen by Rs. 1.90 crores, while those of banks have dropped by Rs. 5.81 crores. On the assets side, cash balances are lower by Rs. 1.92 crores and balances held abroad by Rs. 13.74 crores. Loans and advances to Governments are lower by only Rs. 71 lakhs, whereas other loans and advances are up by Rs. 7.14 crores, of which advances to Scheduled banks against usance bills account for Rs. 3.67 crores. Fresh advances to banks against these bills during the week amount to Rs. 4.22 crores.

The Scheduled banks' statement for the week ended 24th February 1956 shows a further rise of Rs. 2.01 crores in demand deposits and of Rs. 1.18 crores in time deposits, while inter-bank borrowings have declined by Rs. 1.05 crores. Borrowings from the Reserve Bank have gone up by Rs. 2.17 crores, while those from the State Bank have declined by Rs. 88 lakhs. A rise of Rs. 1.62 crores is noted in advances, Rs. 3.57 crores in inland bills purchased and discounted and Rs. 82 lakhs in foreign bills. Investments have declined by Rs. 2.17 crores. Cash and balances with the Reserve Bank are together higher by Rs. 1.87 crores, while money at call and short notice are lower by Rs. 1.61 crores.

The Gilt-edged market was featureless during the week under review, though the undertone was steady. Most of the counters, particularly medium and long-dated issues, attracted buyers, the notable exception being 3 per cent. 1986 Conversion Loan which continued to be on offer. There was no change in the Reserve Bank's policy in respect of supporting the market, despite the fall of Rs. 3 in 1986 Conversion Loan from the former support level of Rs. 80.

3 per cent. 1957 was in request at Rs. 99-9 ex-voucher, as against Rs. 99-9 *cum*-voucher last week. 3 per cent. 1958 was maintained at Rs. 99-8, while 3 per cent. 1959-61 was an anna lower at Rs. 98-1. 3 per cent. 1963-65 and 1964 held ground at Rs. 94-9 each. 3 per cent. 1966-68 gained As. 2 to Rs. 92-8, at which level also there were buyers. 3 per cent. 1970-75 was in demand an anna higher at Rs. 88-14. 3 per cent. 1986 Conversion Loan fell by As. 8 to Rs. 77, at which rate there were sellers. 3½ per cent. 1961 was unchanged at Rs. 99-6, though there were buyers at Rs. 99-5½. 3½ per cent. 1964 was in request at Rs. 98-7½ and 3½ per cent. 1965 an anna higher at Rs. 98-6. 4 per cent. 1967 State loans attracted enquiries at lower levels. 4 per cent. 1967 Bombay, after receding by As. 2 to Rs. 100-7, was in demand and rose to Rs. 100-8. West Bengal was sought an anna lower at Rs. 100. Madras fell by As. 4 to Rs. 99-6 before gaining to Rs. 99-7. U.P. dropped As. 2 to Rs. 99-8, Mysore As. 3 to Rs. 99-5, Hyderabad As. 2 to Rs. 99-3 and Saurashtra As. 3 to Rs. 99-9.

In the foreign exchange section, the rupee ruled weak in terms of the U.S. dollar during the week, banks' selling rate of ready dollars being quoted today at Rs. 478¼ per $100, as against Rs. 476¾ per $100 a week ago, and their buying rate at Rs. 474 per $100, as against Rs. 472¾ per $100. This is in tune with the similar trend displayed by sterling. In New York, for instance, spot sterling fell from $2.80¾—2.80⅞ to $2.80¼—2.80⅜. Three months' forward declined from $2.79¼—2.79⅛ to $2.78-7/16—2.78-9/16 and transferable sterling from $2.77-9/16—2.77-11/16 to $2.77¼—2.77⅜.

(Concluded from next column)

leaf teas also advanced. Prices of mediums, commons and Dooars were maintained, but the weaker quality from these types were easier. The quotations were: best Assam C.T.C. Rs. 2-9 to Rs. 2-11, medium Assam grainy dust Re. 1-8-6 to Re. 1-9, and medium Dooars Re. 1-7 to Re. 1-8.

Leaf grades on offer amounted to 4,370 chests. Demand was fair but prices were easier.

BULLION MOVES DOWN

(From Our Own Correspondent)

BOMBAY, *7th March*

While gold made history in the bullion market last week by crossing Rs. 100-mark per tola after a lapse of nearly four years, silver came into the limelight this week with a sharp drop of over Rs. 3 per 100 tolas early in the week. Though a part of this fall in the white metal was made good during the rest of the week, consequent on the excellent demand in the ready section, the undertone was still hesitant. Gold also ruled lower, in distinct contrast to the sharp rise noted in the previous week, due to slackness in offtake and apprehensions about import of gold coins. Just at the close, however, there was a notable recovery following a sharp rise in demand for gold of the order of 8,000 tolas today.

The heavy recession in silver early in the week was attributed to large arrivals of silver coins of Tibetan origin. Enquiries in market circles would appear to have revealed that the arrivals of these coins were under import licences against barter deal. However, no official statement about the appearance of these coins, which were a few days ago confiscated by the customs authorities, was forthcoming. The Board of the Bullion Association proposes to seek a clarification from the customs authorities in this regard. Fears of more arrivals of such coins chilled the enthusiasm of operators, though the good offtake in the ready section paved the way for a small recovery.

Silver for forward delivery (28th March settlement) slumped early in the week from Rs. 176-7 to Rs. 173-3. There was, however, a recovery to Rs. 174-7 on Monday this week on replacement buying encouraged by good offtake in the ready section. After a recession again to Rs. 173-8 yesterday on apprehensions about further imports of silver coins, forward silver staged a brisk rally to Rs. 175 today before finishing at Rs. 174-12, the recovery having been helped by the persistent demand in the ready section.

Ready silver (.996 Mint) dropped early in the week from Rs. 175-15 to Rs. 172-11, but slowly gathered strength to Rs. 174-4 at the close today. The floating stocks of silver are reported to be 1,000 bars. The daily average offtake was 30 to 35 bars.

Forward gold (27th March settlement) maintained the downward trend noted towards the close of the previous week and dropped this week from Rs. 100-7 to Rs. 98-6 yesterday on reports of unauthorised arrivals of gold and fears of import of gold coins against barter deal. Today, however, there was a brisk rally to Rs. 99-12, following the encouraging demand for ready gold.

Ready gold receded from Rs. 101-6 to Rs. 98-14 before gaining strength to Rs. 100-6 at the close today. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake, which was 3,000 tolas till yesterday, rose to 8,000 tolas today.

In London, the price of spot and forward silver moved up from 78½d. to 79d. and gold from 249s. 1d. to 249s. 8½d. In New York also, silver advanced from 90¾c. to 91¼c.

The following comparative table shows the trend of the market during the week under review:

	7-3-56	Highest	Lowest	29-2-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Gold				
Ready (.99 fine Mint) ..	100 6	101 8	98 14	101 6

TEAS STEADY IN EXPORT AUCTIONS

(From Our Own Correspondent)

CALCUTTA, *6th March*

The reduction in the export duty on tea by As. 2 per lb. in the present price range of Rs. 3-4 to Rs. 4 has been naturally welcomed in trade and industry circles. This is all the more so, because tea gardens are provided some relief and exporters can look forward to increase their activity within the quota. It was not surprising, therefore, to see that prices during yesterday's auctions were fully steady and rose several annas above brokers' valuations in respect of the market favourites. Offerings amounted to 54,000 packages, including Assam and Dooars teas, some of which was better in quality. C.T.C. brokens and fannings were the cynosures of all eyes and realised rates which were above brokers' valuations by As. 12 to Re. 1. The lesser attractive fannings were sold As. 3 higher. Clean broken teas advanced by ¼ anna. Poor liquoring stalky teas and low mediums opened easy, but conditions improved as the sale progressed. Stylish whole leaf grades were a particularly interesting feature and rose to surpass valuations. The quotations were: clean black pekoe Re. 1-15, medium Assam B.P. Re. 1-7 to Re. 1-7-6, plain B.P. Re. 1-4-6 to Re. 1-5, and best C.T.C. Assam B.P. not quotable.

Export quota right changed hands at 6 pies as well as 7 pies, sellers insisting on the latter rate.

Dusts offerings aggregated 19,000 chests during last week's sale for domestic consumption. General demand was good, and the best liquoring C.T.C. Assams were supported at higher rates. Black

FORWARD TRADING IN COTTON TO BE RESUMED SOON

(From Our Own Correspondent)

BOMBAY, *7th March*

Cotton traders have heaved a sigh of relief at the removal of the legal hurdle in the way of resuming futures trading in cotton which has remained suspended since 23rd December last. On Thursday this week, the Full Bench of the Bombay High Court upheld the decision of Mr. Justice Coyajee to dismiss the petitions challenging the validity of (1) the directive of the Forward Markets Commission to close out the hedge contracts in I.C.C. February and May at Rs. 700 and Rs. 686-8 per candy, respectively, and (2) the amendment effected by the Central Government in By-law 52AA of the East India Cotton Association (E.I.C.A.). The details of the judgment of the Full Bench have been covered elsewhere in this issue. Briefly, the judgment is as follows:

The Forward Markets Commission is not a corporation under the Forward Contracts (Regulation) Act, 1952, but a statutory body invested with certain functions. Amongst the functions set out in the Act is that the Commission will exercise such powers and duties as may be assigned to the Commission by or under the Act or as may be prescribed by the Rules. Section 12 of the Act, read with Section 11 which gives the Central Government power to make by-laws for the regulation and control of forward contracts, includes power to confer a function on the Commission of closing hedge contracts if that function has been conferred on the Commission, as has been done in the present case by the By-law 52AA. Therefore, such by-law conferred a function on the Commission "under the Act" and is, therefore, within the ambit of the Act.

After the above judgment was delivered, the E.I.C.A. Board effected outward payments on Friday Inward payments, it will be recalled, were done on the 25th ultimo. The payments having been made, cotton traders are now looking forward to the early commencement of futures trading in I.C.C. August. Some of the changes proposed by the E.I.C.A. in the contract are now being examined by the Forward Markets Commission which is expected to announce its decision shortly. Should these changes be approved by the Commission, the basis and grade of the hedge contract will continue to be the fine stapling 13/16" and the tendering differences will be fixed on the basis of forward prices, instead of on spot prices as provided in the existing by-laws.

The spot cotton market was quite active during the week under review. There were good mill enquiries for Vijay, Surti, Jarillas, Khandesh and Punjab styles. A large quantity of Vijay cotton for March-April delivery was bought by a leading mill at Rs. 885 per bale. Among foreign cottons, some deals were put through in old Jinja around Rs. 1,375. Old crop Sudans also evoked revival of interest. Business was done in XG6S and other lower varieties. Egyptians, however, failed to elicit support. Covering by shipping against commitments in view of the proximity of the current licensing period's maturity was the feature of trading in the export section, which was otherwise dull following the decision of the U.S. to sell its cotton at competitive prices in the world market. There were stray enquiries for Wagad, Dholleras and Bengal *Deshi*.

The latest available quotations from the Sewri market are: Bengal *Deshi* Rs. 720; Berar Jarillas Rs. 785; Khandesh Rs. 760; Vijay Rs. 895; Oomra *Deshi* Rs. 720; Moglai Rs. 660.

Conditions akin to panic prevailed in the Karachi cotton market. The chief bearish factor was the U.S. official announcement that it would launch a new cotton export sales programme on a competitive bid basis covering all qualities after 1st August next. The proposed sale would, traders feared, offer severe competition to Pakistan cotton in world markets. The fears let loose a wave of selling which brought about a precipitous fall in cotton prices. N.T.R.G. May delivery was hammered down by Rs. 3-4 to Rs. 78-11. March delivery slumped from Rs. 83-7 to Rs. 80-7. In sympathy with the futures, spot prices also suffered a severe break, with the exception of Sind and Bengal *deshi* varieties which continued to rule firm. The latest available quotations—in rupees per lb.—for a few popular varieties of Pakistan, figures in brackets giving last week-end's prices, are given below:

Sind *deshi* 79 (78-8); Punjab *deshi* 74-8 (73-4); 4F Roller 77-4 (81-3); S.G. 82-14 (86-15); 4F Punjab Roller 82-6 (85-7); S.G. 88-6 (91-7); 289F N.T. Roller 85-2 (88-7); S.G. 91-14 (95-15); 289F Punjab Roller 90-7 (93-15); S.G. 96-10 (100-7).

After depicting a firm trend in the first few sessions of the week, the Alexandria cotton futures market experienced a relapse on Monday which persisted till the close today. The initial firmness was aided by excellent buying enquiries from abroad in the wake of tight supply position. Some prominent shippers were reported to have suspended offers of higher grades Giza 30 due to paucity of stocks. Consequently, prices registered an improvement. The upward trend was checked on Monday when, following the U.S. move to sell cotton at competitive rates, the market came under pressure of sales and prices drifted lower. Much of the earlier gains were erased, so that yesterday's closing rates were slightly higher than those at the end of last week.

The latest available rates—in tallaris per lb.—from Alexandria market are: Karnak: March 90.50 and May 90.70; Ashmouni: April 71.05 and June 69.95.

The Managing Director of the Sudan Gezira Board has announced the opening of a pure Sudan futures market in Liverpool during the second half of this month. The New York futures market, even in normal circumstances, was never a good hedge for Sudan cotton. It is likely to be even less so, following the announcement of the accelerated

tempo of surplus sales. The Board has also decided to sell on fixed prices as from the start of the new season. This would mean that bids made at auction would represent fixed prices and there would, therefore, be no "on call" facilities. This decision was taken at a meeting of the Board on Wednesday last when representatives of cotton firms were also present. In the event of there being no possibility of opening the Liverpool Sudan futures market, the Board would, it is said, re-consider its decision.

There was active bidding at the recent auctions in A.R. Uganda new crop cotton and prices of all qualities registered an increase. B.P. 52 was in special request, induced by bullish interpretation of crop conditions. The crop, it is apprehended, has suffered in grade and staple. The harvest is also expected to be lower than that anticipated. The damage to the crop is attributed to abnormal weather conditions with late rains during the ripening period.

Despite the announcement of the new U.S. cotton export sales programme, the Liverpool cotton futures market presented a steady tone. Buying support was lent by trade and commission houses, and prices of cotton were fully maintained. The Egyptian contracts were neglected. The latest available quotations (in pence per lb.) from Liverpool are:

Old contract: March-April 25.65; May-June 25.47; July-August 24.65. New contract: May-June 31.75; July-August 28.00; October-November 26.25; December-January 25.85; March-April 25.75; Egyptians Karnak cotton: March-April 51.05; May-June 50-50; July-August 50-50.

Irregular conditions were in evidence in the New York cotton futures market during the week under review. Thus, nearby deliveries ruled firm, while distant positions were easy. Delivery notices against the spot month in which dealings will end on the 13th inst. were absent.

This, together with the mill, spot house and shipper demand, imparted strength to the May delivery. Buying in near position was also attributed to covering by exporters against commitments to Spain and tightening spot situation in the wake of heavy loan impoundings.

The U.S. Department of Agriculture has announced that it will initiate a new cotton export sales programme after 1st August next. Under this programme, the sales abroad of cotton will be on a competitive bid basis, on the same lines as the present programme. Substitution of cotton bought under the programme with cotton held privately is expected to be permitted. By this move, the U.S. is launching a new effort to recapture its cotton markets throughout the world. The goal, as announced at a Press conference by Mr. Benson, Secretary of Agriculture, is to export about 5 million bales of surplus short-staple or Upland cotton on a competitive basis with other nations. Mr. Benson said that sales through the new programme would be made in an orderly manner. To quote him: "I think this cotton will sell at the world level and I think sales will tend to firm up and give stability to world cotton prices. Our great surpluses have been one of the most uncertain things in the whole cotton picture." Mr. Benson, however, assured that, in making the sales, due consideration would be given to the need for avoiding any disruption in the world market prices and impairing of the traditional competitive position of friendly Governments.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	6-3-56	28-2-56	21-2-56
Spot	36.60	36.60	36.60
March	35.77	35.70	35.77
May	35.43	34.90	35.39
July	33.79	33.87	34.19
October	31.47	31.90	32.10

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, *7th March*

From the point of view of yarn traders, the latest budget of Mr. Chintaman Deshmukh is definitely a bearish one. For the budget contains two changes in excise duty which affect the prospects of trade in yarns. First, the compounded rates per cotton powerloom (per shift per month) have been revised upwards by Rs. 7-8 to Rs. 30 for manufacturers employing more than 24 looms and by Rs. 4 to Rs. 24 for those employing more than 9 but not more than 24 looms. Secondly, the position with regard to excise duty on rayon fabrics has been readjusted by reducing the exemption limit from 24 looms to 9 looms, and thirdly, raising the compounded levy of duty (per loom per shift per month) by Rs. 4-8 to Rs. 27 for first shift and by Rs. 3 to Rs. 18 for second shift. The duty for third shift has, however, been reduced by Re. 1-4 to Rs. 10. The incidence of these changes, yarn traders apprehended, would fall heavily on the cotton powerlooms and rayon weaving mills, forcing the latter to curtail output, which meant reduced demand for yarns. The apprehensions induced selling. and prices of both cotton and rayon yarns suffered a decline. In sympathy, staple fibre yarns also ruled weak, although the budget does not contemplate any revision in taxes on either staple fibre or yarn or fabrics.

Rayon yarns were subjected to much selling at lower rates. The decline in prices would have been precipitous but for reports of late arrivals of some purchases from foreign countries. Snia rayon yarn (120 dull cones) for April delivery dropped Rs. 8 to Rs. 825 before closing at Rs. 827. June delivery was quoted at Rs. 831—it had gone down even to Rs. 828—as against Rs. 838 at which business in this contract commenced on the 5th inst. In the spot section, 120 Japan and 150 Italy fell by As. 2 each to Rs. 4-7 and Rs. 3-15, respectively. 120 Italy receded by 18 pies to Rs. 3-15. 150 Japan was neglected at Rs. 4-3-6, same as last week. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade declined by 15 pies to Rs. 3-11. 120 Bt. cones 1st grade lost an anna to Rs. 3-14.

The staple fibre yarn section exhibited a weak trend. Kohinoors (40×2) were the worst to suffer, their quotation sliding down by As. 3 to Rs. 4-0-6. Citys decreased by As. 2 to Rs. 4-0-6. New Greats shed 18 pies to Rs. 4. Centurys lost a like amount to Rs. 4. Among imported yarns (80x2) S'Sellos retreated by As. 4 to Rs. 7-8. Suicos were neglected at Rs. 8-10, as against Rs. 8-13 a week before.

Cotton yarns of all counts staged a relapse. Sixty counts came in for sustained selling pressure Raghuvamshis dropped As. 12 to Rs. 59. Moderns fell by As. 4 to Rs. 62-8. Barodas and Citys suffered a loss of As. 4 each to Rs. 53-4 and Rs. 49, respectively. Among 40s, Minaxis receded by As. 4 to Rs. 28-4 and Maduras by As. 3 to Rs. 28. Shardas were lower by As. 2 at Rs. 26-12. Finlays, among 80s, lost As. 4 to Rs. 72-12. Elphinstones were quiet at Rs. 62-8. Moderns at Rs. 68 and Mahendras at Rs. 68. Deals in 20s were put through at reduced rates, Maduras, Moderns and Seksarias all losing As. 2 each to Rs. 17-10, Rs. 16-14 and Rs. 16-4, respectively. Sitarams lost an anna to Rs. 16-5. Business in 30s was also not encouraging, with Maduras declining by As. 2 to Rs. 22-10. Indus were dull at Rs. 22-8. In the 10 counts section, Podars receded by an anna to Rs. 13. Moderns were quiet at Rs. 13-4, as also Elphinstones at Rs. 12-6.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	7-3-1956	29-2-1956	22-2-1956
Art silk yarn **(per case of 200 lbs.)-**	Rs. a.	Rs. a.	Rs. a.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, *7th March*

Despite the introduction of an excise duty of 2 pice per lb. on vegetable non-essential oils, the oil and oilseeds market depicted a firm trend. This was due chiefly to scarcity of arrivals of oilseeds and oils and the prospects of better export demand for vegetable oil. Advices from North Indian markets also were encouraging and there were fears too of a shorter groundnut crop. As a result, prices advanced and recorded sizable gains over the week.

One section of the operators was of the view that the market was heading in for a higher rise. It was opined that, as vegetable oils were essential edible commodities, the trade would easily pass the burden of the excise duty on to consumers. The other section, however, failed to share this optimistic feeling. It seemed to believe that the present rise would not last long. If there were to be a sharp rise, the Government, they felt, would not hesitate in clamping further restrictions on exports of edible oils.

Referring to the levy of excise duty on non-essential oils, the Bombay Oilseeds Exchange has sought from the Government clarification regarding the procedure it would follow for permitting drawback of excise duty to shippers of vegetable non-essential oils. It states that, normally, where excise duty is levied on any goods or commodities, drawback is permitted to shippers when they are exported. It may be noted, in this connection, that excise duty is levied on all vegetable non-essential oils pressed by factories operated by power; exemption, however, is allowed for the first 125 tons cleared per year.

Sectionwise, groundnut Bold F.A.Q. advanced from Rs. 30-12 to Rs. 31-6. April-May delivery was higher at Rs. 32-3, as against Rs. 31-4. Coromandals gathered As. 12 to Rs. 32 and Khandesh quality As. 10 to Rs. 31-14. Groundnut oil ex-mill rallied As. 15 to Rs. 17-4. April and May deliveries were better at Rs. 17-3 and Rs. 17-4, respectively, as against Rs. 16-9 each.

In the linseed section, Bold ready improved from Rs. 32 to Rs. 33. April-May delivery gained Re. 1-3 to Rs. 33-2. Small Sutnas were up by Re. 1 at Rs. 31-8. Linseed oil gathered As. 4 to Rs. 21-2.

May, future delivery, in the castorseed section, which changed hands at Rs. 118-8, as against Rs. 118-12, was done today at Rs. 122. The highest and the lowest levels touched during the week were Rs. 123-2 and Rs. 116-2, respectively. In the ready section, Madras quality improved by As. 12 to Rs. 24 and Kanpur Re. 1 at Rs. 22-8. Castorseed B.S.S. were better by As. 12 at Rs. 14-12. Commercial quality was also up by a similar amount at Rs. 13-12.

Among others, *kardi* Bold improved from Rs. 17-4 to Rs. 18-8. *Niger* Madras quality gathered As. 4 to Rs. 27-4.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	7-3-1956	29-2-1956	22-2-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.

SUGAR WEAK

(From Our Own Correspondent)

BOMBAY, *7th March*

The spot section of the sugar market continued to rule distinctly bearish during the week under review also. Those traders who had purchased large stocks of sugar in the past few weeks, in anticipation of an upward revision in the excise duty on sugar, unloaded their stocks, thanks to absence of any change in excise duty. The selling pressure, coupled with reports of a drop of Re. 1 in ex-mill quotations for sugar produced in Bombay-Deccan region, brought about a further fall in sugar prices. The fall was also assisted by a marked rise in arrivals of indigenous sugar in the market, being 16,200 bags, as against 6,900 bags in the previous week.

Spot indigenous sugar A and B grades fell by Rs. 2 each to Rs. 98-Rs. 100 and Rs. 95-Rs. 98 per bag, respectively. C grade sugar declined from Rs. 91-Rs. 97 to Rs. 90-Rs. 95. D grade sugar lost a rupee to Rs. 88-Rs. 90. British refined sugar was unchanged at Rs. 83-8 per 2 cwts.

In distinct contrast to the weak trend of the spot section, the forward section exhibited a fairly steady trend. The steadiness was aided by large short sales in this contract, with comparatively slim stock position of tenderable variety. *Fagun* delivery contract for C grade sugar was fully maintained at Rs. 90-8.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugars are exclusive of the tax.

PEPPER MOVES NARROWLY

(Messrs. Parekh & Co.)

BOMBAY, *7th March*

Malabar black pepper ruled steady to quiet during the week with narrow fluctuations, the highest and the lowest at Alleppey being Rs. 850 and Rs. 825, respectively. Garbled at Cochin fluctuated between Rs. 140 and Rs. 145 per cwt.

New York dealers remained selective buyers and were reported to have paid $0.31½ for afloat and $0.31 for March shipment. They refused to pay anything higher as spot stocks at New York were selling slowly without margin.

Accumulated stocks—loaned or otherwise—in the primary centres were not moving as desired by the growers. Consequently, the market appeared to be vulnerable. If no sizable demand was coming forth during this month, prices might, it was feared, go down during April when the new crop of Sarawak would begin to cast its shadow, affecting the sentiment of New York and Europe reflecting on India.

In the A.S.T.A. section, March was done at $0.31, while April was sold out at $0.32 and April-May-June at $0.32½. Turnover in the market is poor, confining to short covering only. Buyers are holding off, awaiting new developments.

In the delivery section, the market, after improving to Rs. 825, went down to Rs. 810.

Today's nominal quotations: Ready delivery Rs. 112 per Bengal maund; March Rs. 790-Rs. 800 and April Rs. 800-Rs. 810 per candy of 5½ cwts.

BETTER QUALITY TEAS RULE HIGHER

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, *1st March*

Almost 1,300,000 lbs. were on offer in sale No. 5 which was held on Tuesday, 28th February. The quality of low medium and medium teas remained much the same as the previous sale. There was, however, a much larger weight of high-grown tea on offer and a number of really flavoury invoices were catalogued. There was also a weight of good medium tea of attractive quality, particularly from the Anamalais District. The sale opened to less demand for low medium and medium tea, particularly fannings grades, and these types were As. 1 to As. 2 easier. All improved quality teas sold well and exporters competed keenly for the best flavoury types. Prices advanced following quality. There was an improved demand for whole leaf grades, particularly Pekoes and Flowery Pekoes. Black leaf Middle East types met less demand and must be quoted easier. The following are the quotations:

	1956
	Rs. a.
Plain B.P.	1 7
	(nominal)
Low medium B.O.P.	1 13
Medium B.O.P.	2 2
	to 2 3
Good B.O.P.	3 0
	to 3 4
Well-made black leaf O.P.	2 6

London Market.—Sale of 27th February 1956:—A better market. Best appreciably dearer. Medium and plain sorts irregular, but often ½*d.* to 1½*d.* dearer.

Sale of 28th February 1956:—Best dearer. Others irregular and sometimes easier, following quality.

Colombo Market.—Sale of 27th February 1956:—Stalky off grades weaker. All others very strong demand, inclined dearer, particularly useful quality fannings.

Sale of 28th February 1956:—Active demand. High-growns dearer, following quality. Low-grown medium brokens 10 cents to 15 cents dearer. Persian Gulf types substantially dearer.

Calcutta Market.—Export:—Fair general demand. Commons and low mediums irregularly As. 1 to As. 1½ easier. Medium Assams full As. 1½ easier. Good liquoring and clean fannings often annas dearer. Stylish whole leaf good demand. Remainder irregular.

Internal:—19,800 packages. Good general demand. Best C.T.C. and black exportable types strongest features, being several annas dearer. Mediums, Assams and sweet liquoring Dooars firm to occasionally dearer. Commons and Commonest As. 1 to As. 2 easier. Leaf market irregular.

Export Quota:—The market has shown an easier tendency and business has been done at 8 pies and there are sellers at this figure.

Forthcoming Auctions:—Sale No. 6 will be held on Tuesday, 13th March.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Dust Sale E*:—400,000 lbs. Strong general demand. Commons and Mediums fully firm, occasionally one anna dearer; best liquoring As. 2 to As. 3. Black Middle East types strongest feature."

JUTE GOODS ACTIVE

(From Our Own Correspondent)

CALCUTTA, *6th March*

Contrary to general expectations that, in his search for more revenue, Mr. Chintaman Deshmukh would propose an excise duty on jute goods, there is nothing in the Central Budget proposals which can have a direct effect on jute goods. This contributed to a smart recovery in the prices of jute goods from last Thursday onwards, and, to a rising market, covering demand gave powerful support. Mr. Deshmukh's proposals to tax dividends over 6 per cent. as well as bonus issues would hardly affect jute mills, if their working results were to continue to be as unsatisfactory as at present. And current trends do not indicate any noticeable change in the fortunes of mills in the near future. It will be remembered that analysing the prospects of the different export industries, the Planning Commission had stated that exports of jute goods would be lower in the second Plan period in view of keener competition from other producing countries. If only prices of raw jute move down, mills can arrest the losses. But current trends do not provide much hope in this regard, and mills are left with the only alternative, that of increasing production and of sales in an attempt to reduce costs of production. In fact, during this week mills were extremely cautious in purchasing raw jute. It had been known that huge quantities of new arrivals were being retained by the stockists so that prices would go up. But any chance of a shortage in fibre supplies before the new crop is ruled out. Mills have a moderate quantity of both Indian and Pakistani fibres in stock. Stockists can ill-afford to continue blocking huge funds and, therefore, it is thought that they may begin selling at lower rates to attract buying by mills. Mills are awaiting some such opportunity to break the present high levels.

Early in the week good business was done in non-standard constructions, and that made the market fairly active, although in standard goods only moderate interest was shown. During this week also, the market derived support from continued rumours of imminent orders from Russia. However, covering demand from both local dealers and shippers was satisfactory, and that accounted for recovery in prices. From Rs. 113-14 ready B. twills advanced to quote Rs. 115 by the week-end. Moderate business was done, and speculators became active when they found that each stage of the advance was stabilising. Considerable speculative support raised the price further to Rs. 115-14 yesterday, and on Australian support cornsacks were as high as Rs. 118-12. At Rs. 116-6 April-June B. twills goods gained Re. 1-10, with one-month delivery advancing to Rs. 116-6 from Rs. 114-6. In hessians, the recovery was less substantial, and what recovery took place was merely in sympathy with the heavy goods market. Support from foreign countries was extremely limited to small quantities. Ready 40" 10 oz. hessians improved to quote Rs. 40-6 by the week-end, as against Rs. 40-3 early in the week. Further support was afforded yesterday and the price advanced to Rs. 40-11.

Raw jute was steady, and as the week progressed mills began purchasing. Prices gained by As. 8 for most varieties. Stocks in the bazar were believed to be heavy, and any question of shortage was overruled. However, stockists were disinclined to discount rates in the hope that the need for more fibre would make mills purchase on sellers' terms. This is, of course, not possible, if mills are to continue selling jute goods at current prices. In view of the keen competition, the margin by which prices for jute goods can move up has narrowed down very much. In the meantime, arrivals of raw jute from mofussil centres are on the increase, and cultivators are disposing of unsold jute in "good" time. During this week, local daisee bottoms improved to Rs. 30 from Rs. 30-8 and Indian northern bottoms to Rs. 30 from Rs. 29-8. The increased arrivals coupled with mills' cautious purchases suggest that this season's heyday for raw jute stockists is over and that prices may move down much quicker than expected earlier.

METALS BETTER

(From Our Own Correspondent)

CALCUTTA, *6th March*

Largely due to encouraging advices from overseas markets and partly due to the fact that the rigours of the new taxation proposals were much less than anticipated earlier, the metal market evidenced better conditions during the week under review. It was realised that the Finance Minister, in having to do a clever job to raise as much revenue as possible from new sources, had purposely given the impression during recent weeks as though he was going to raise taxes right and left and introduce several new levies. While the ground had thus been prepared for a high level of taxes, the actual proposals, when they came through the teleprinter on the evening of Wednesday last, proved to be much less than anticipated and were thus a blessing in disguise.

Thus, for trading in metals also, circumstances were much more conducive, and much encouragement was derived from the fact that trade and industry would expand considerably as a result of the execution of the several plans. Electrolytic copper, after an early jump from Rs. 280 to Rs. 296, was maintained at Rs. 290 for most part of the week under review. Consumers thought that the rising trend would prove only temporary and so were cautious to purchase only small quantities. However, supplies became tight and traders thought that the firm conditions in London and New York were indicative. I.C.C. fire-refined copper gained from Rs. 248 to Rs. 249. Despite weakness in the Far Eastern and London markets, tin displayed considerable strength in Calcutta and rose from Rs. 527 to Rs. 540. This was due to the support given by local consumers. Lead opened at Rs. 87 and, following heavy arrivals, sagged to Rs. 85. Moderate activity was reported in electrolytic zinc, with the price moving between Rs. 72 and Rs. 73.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *6th March*

The linseed market continued to rule firm, thanks to scarcity of ready supplies. The budget announcement of an excise duty of half an anna per lb. on oil crushed by power-operated mills had an unsettling effect on the market and trading was very much restricted. In addition, millers were unable to effect any deliveries, pending the enactment of the new regulations. The oil market showed little change. Overseas prices were maintained at around £148 for early shipment and at £142 for May-June, but little fresh business was reported.

The latest available quotations are: March Rs. 25 and April-May Rs. 22-8 per maund.

SUGAR RECEDES

(From Our Own Correspondent)

HAPUR, *5th March*

Sugar prices which had improved recently on apprehensions of an increase in excise duty subsided in the absence of any such proposal in the Budget. Traders who were reported to be keen on building up stocks are now anxious to liquidate their holdings. The first official sugar forecast for 1955-56 placing the production at 1,686,000 tons, as against the actual production of 1,590,000 tons in 1954-55, thus recording an increase of 6 per cent. over last year, also acted as a depressing factor. The total production in the current season upto 7th February was 797,511 tons, as against 741,606 tons in the corresponding period last year, and stocks with factories on this date were 808,866 tons, as against 608,899 tons a year before. Mill delivery prices recorded a fall towards the week-end and the latest prices on Monday were: Jaswant Rs. 28-8; Simbhauli Rs. 28-4; Daurala Rs. 29-8; Amroha Rs. 28; Bijnore Rs. 28; Mansoorpur Rs. 29-8; Rampur Rs. 31, retail Rs. 31 and *khandsari* Rs. 23 to Rs. 26-8 per maund.

Ready *gur* prices continued to be depressed around Rs. 10 to Rs. 10-4 per maund. Daily arrivals went down to an average of 2,000 maunds and the local stock had swelled to 150,000 maunds. Want of loading facilities and slack outside demand were the main depressing factors. *Gur* futures moved both ways on speculative bouts of buying and selling. The latest available rates as on Monday were very near the opening levels of the week, *gur phagun* being quoted at Rs. 10-2 and *Baisakh* at Rs. 11-1.

FOODGRAINS STEADY

(From Our Own Correspondent)

HAPUR, *5th March*

Steady to firm conditions prevailed in the foodgrains market during the week. Despite several measures taken by the Government, the upward trend in prices still persisted. The earlier expectations of a bumper *rabi* crop, it was reported, were being revised and the current shortage would

(*Continued on page 483*)

ECONOMICS OF STATE TRADING

(*Concluded from page 448*)

confidence that trading activities under monopolistic conditions can be successfully undertaken by Government either departmentally or through a specially set up body. During the period of the three years of operation of the A.I.P.I., the international prices of some of the staple primary products of the Argentine, such as linseed and wheat, slumped so much that it led inevitably to a reduction in the acreage under cultivation of those items. The retail prices of some of the essentials of life, such as sugar and vegetable oils, on the other hand, soared high. Plenty of stocks of materials, which were built up by the organisation, were understood to be not saleable. As a result of the activities of the A.I.P.I., the return to the farmer for the primary products was far less, being only about one-third of the price actually secured in the export markets. On top of all these, numerous instances of extravagence and inefficiency of management on the part of those in charge of the affairs of the organisation were noticed.

Experience in India

In India, State trading has so far been carried on in some of the items like foodgrains, fertiliser, steel, cloth, etc. In the case of foodgrains, the overhead costs paid by the State for purchases of foodgrains, particularly in the foreign countries, were heavy. As the Government was the only buyer in the foreign markets, the suppliers there tried to make the best of the bargain and quoted more than the normal rates. It is common knowledge that the cost of food rationing has been colossal and there were frequent complaints about the bad quality of the stuff given to the consumers. The Foodgrains Investigation Committee, which submitted its report in the year 1950 stated that there was "substance in most of the complaints" about the cost of administration and the quality of grains supplied and added that some of the complaints "are perhaps to some extent inherent in all systems of State trading." The arrangements made by the State in regard to storage, handling, distribution, etc., were also not quite satisfactory.

In the case of steel, the bulk purchases made on Government account placed a heavy burden on the community. The rates at which the purchases were made were invariably much higher than those at which the private business houses would have secured the supplies. Moreover, the lack of thorough knowledge about market conditions on the part of those in charge of the purchasing operations led to the purchase of supplies of the wrong type and in the wrong markets and the payment therefor at an exorbitant rate. Thus, the steel bars were on one occasion procured from Belgium at a price of $200 per ton, when the same quality goods could be bought from the U.S.A. at a much lower price, viz., $70 per ton. Many of the sections, sizes and qualities purchased from abroad were not suitable for Indian requirements, with the result that unwanted materials had to be forced down the throats of the unwilling buyers as a condition for getting supplies of the wanted varieties of the material.

The purchase abroad of fertilisers on Government account is another muddle by a Government department, which is too well known to require any elaborate mention. Similarly, the purchase of about 60 million yards of cloth from Japan was an unsuccessful deal. The price for the cloth was unduly high and the cloth could not be disposed of for a number of years. These instances of the various State trading operations, both abroad and in this country, amply justify the point of view that the machinery of the State or a State-sponsored organisation is singularly ill-suited for undertaking direct trading activities.

I think it is not necessary for me to dilate too much on the experiences of the other countries in regard to State trading. The examples, which I have already cited, should suffice to bring home the fact that the countries concerned had subsequently to abandon the experiments of State trading altogether or to modify the system in such a manner as to divest it of its original rigidity. It is rather strange that, in the face of these unpleasant and discouraging experiences of even the advanced countries in regard to State trading and when they are retracing their steps in the matter, our Government should think in terms of undertaking trading operations on a much wider scale through the agency of a State trading corporation. As a matter of fact, the limited experience in State trading in this country in the recent past does not justify such a move.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. I=Interim Dividend. F=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amounts per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

Preference Share Transfer Register will be closed from 28th March 1956 to 31st March 1956, both days inclusive.

By Order of the Board,
ASPINWALL & CO., LTD.,
Managing Agents.

COCHIN, *2nd March* 1956.

THE BANKURA DAMOODAR RIVER RAILWAY COMPANY, LIMITED

THE FORTY-NINTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Wednesday, the 28th March 1956, at 4-25 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March 1955.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 19th to 28th March 1956, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 10*th March* 1956.

Note.—Payment of the proposed dividend, if declared, will be made on or after 18th April 1956 to those members whose names are registered in the Books of the Company on 28th March 1956 or to their Mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE BURDWAN CUTWA RAILWAY COMPANY, LIMITED

THE FORTY-NINTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Wednesday, the 28th March 1956, at 4-15 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March 1955.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 19th to 28th March 1956, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 10*th March* 1956.

Note.—Payment of the proposed dividend, if declared, will be made on or after 18th April 1956 to those members whose names are registered in the Books of the Company on 28th March 1956 or to their Mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE AHMADPUR KATWA RAILWAY COMPANY, LIMITED

THE FORTY-EIGHTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Wednesday the 28th March 1956, at 4-20 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March 1955.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 19th to 28th March 1956, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 10*th March* 1956.

Note.—Payment of the proposed dividend, if declared, will be made on or after 18th April 1956 to those members whose names are registered in the Books of the Company on 28th March 1956 or to their Mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

THE TEXTILE MACHINERY CORPORATION LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Textile Machinery Corporation Ltd. will be held at 8, Royal Exchange Place, Calcutta, on Thursday the 29th day of March 1956, at 3-30 p.m., to consider and if thought fit, to pass with or without modification the following resolution as a Special Resolution:—

"Resolved that the Articles of Association of the Company be amended in manner following.

In Article 81, in line three, Rs. 200 be substituted in place of Rs. 50."

By Order of the Board,
BIRLA BROTHERS LTD.,
Managing Agents.

CALCUTTA, *2nd March* 1956.

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:
Bhagirath Palace, Chandni Chowk, DELHI
Head Office:
2, Royal Exchange Place, CALCUTTA 1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE THIRTEENTH ORDINARY GENERAL MEETING of the Shareholders of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Head Office of the Bank at 2, ROYAL EXCHANGE PLACE, CALCUTTA, on Wednesday the 28th March 1956, at 4 p.m., to transact the following business:

1. To receive the Report of the Directors and the Audited Balance Sheet as on 31st December 1955, and Profit and Loss Account for the year ended 31st December 1955.
2. To declare a Dividend.
3. To elect four Directors in the place of Shri G. L. Bangur, Shri P. D. Himatsingka, Shri M. L. Dahanukar and Shri M. L. Shah who retire under Article 95 of the Articles of Association of the Bank, and, being eligible, offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.
5. To consider the following as a Special Resolution:

"RESOLVED that the employment in the Bank of the following persons, who are relatives of Directors of the Bank, be and is hereby approved:

1. Nirodie Kumar Seal—Sister's son of Mr. A. C. Law, Director.
2. G. H. Wandrekar—Sister's son of Mr. M. L. Dahanukar, Director."

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, 3*rd March* 1956.

N.B. (i) The transfer books of the Bank will be closed from Thursday the 8th March 1956 to Wednesday the 28th March 1956, both days inclusive.

(ii) The dividend, if sanctioned, will be payable on or after 2nd April 1956, to those Shareholders whose names appear in the Register of Members on Wednesday the 28th March 1956.

(iii) Dividend Warrants will be posted to shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise change in their addresses, if any.

THE KALIGHAT FALTA RAILWAY COMPANY, LIMITED

THE FORTY-SEVENTH ORDINARY GENERAL Meeting of the Shareholders will be held at the Registered Office of the Company, No. 3, Netaji Subhas Road, Calcutta, on Wednesday the 28th March 1956, at 4-30 p.m., to transact the following business:—

1. To receive the Directors' Report and the Auditors' Report and to pass the Accounts for the year ended 31st March 1955.
2. To declare a Dividend.
3. To elect Directors.
4. To elect Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 19th to 28th March 1956, both days inclusive.

By Order of the Board,
McLEOD & Co., LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA, 10*th March* 1956.

Note.—Payment of the proposed dividend, if declared, will be made on or after 18th April 1956 to those members whose names are registered in the Books of the Company on 28th March 1956 or to their Mandatees.

Applications for warrants will not be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

DEFICIT FINANCING—NEED FOR MINIMISING THE RISKS

IT is not surprising that, in the Houses of Parliament and outside, considerable concern is being expressed over the prospect of the large volume of deficit financing contemplated in the first year of the second Plan. As readers are aware, the budget for 1956-57 discloses an overall deficit of Rs. 356 crores—Rs. 360 crores, to take a round sum—even after taking into account the new taxes, which are expected to yield a sum of about Rs. 35 crores. This is, indeed, a big deficit and the concern expressed is understandable, especially because the situation today is less favourable than it was a year ago when the deficit to be covered stood at Rs. 327 crores. The Finance Minister himself is fully conscious of the risks involved in undertaking deficit financing of this magnitude. Said he in his budget speech on 29th February:

"There is not, at the moment, any great slack left in the economy which would justify anything more than a reasonable amount of deficit financing. Up to a point, deficit financing is not only permissible, but even desirable in a developing economy. Experts differ as to the permissible limit, but it would be quite unrealistic to assume that deficit financing of this order can be maintained for any length of time without inviting inflation. The road to inflation is easy enough, but it opens floodgates which it would later be impossible to close. We are, in fact, taking a measure of risk with deficit financing proposed for 1956-57 and we shall have to watch its effects carefully and adjust subsequent programmes in the light of these effects."

Further evidence of the Government's realisation of the consequence of deficit financing was given by Mr. Deshmukh in his reply to the debate on the budget in the Rajya Sabha on the 8th inst., and more of it will be available when he winds up the general debate in the Lok Sabha shortly after this issue goes to print. Nevertheless, it is better to let the country have a broad picture of the extent of risk that is being taken and how that risk could be minimised.

Over the year, the climate for deficit financing, as already stated, has worsened. In the first place, since May last, there has been a steady rise in commodity prices. From a low level of 342, the wholesale price index (Base: year ended August 1939=100) has climbed up to 378 (mid-February), an increase of over 10 per cent. The upward trend continues, with little sign of any break in the near future. The rise which has taken place is more than that needed to offset he sharp fall in prices that occurred towards the close of 1954 and early in 1955. What is rather disquieting is the marked increase in the prices of such essential articles as foodgrains, vegetable oils and clothing. The index of food prices has advanced from 276 in May last to 329, that of vegetable oils from 330 in April last to 426 and that of textiles from 402 in October last to 409. The unbroken rise in price levels is the outcome of supply of goods not catching up with the increase in demand. In the case of foodgrains, there has actually been a contraction in supply, with the result that it has become necessary to reimpose the ban on exports and to arrange for larger imports. At the time of writing, there are optimistic reports that the forthcoming crops would be bumper; but, as yet, they have made no significant impression on the trend of foodgrain prices.

The world supply of commodities is no doubt plentiful, but, as world commodity prices, particularly prices of essential commodities such as wheat, rice and cotton, are well above those in India, its effect on the inflationary situation in this country caused by deficit financing can be felt only after the internal prices rise to world levels. It is needless to add that any such increase in prices will add to the cost of economic development. The alternative to this will be to subsidise the distribution of imported commodities among domestic consumers. But this, too, will require substantial sums which, in turn, will cut into the resources available for development. The position in regard to some of the basic materials such as steel and cement is worse than that of foodgrains and clothing, in that there is definite scarcity of these commodities in India. Efforts are being made to close the gap through imports. It remains to be seen how far they will succeed. Apart from the fact that world prices of these materials are appreciably higher than domestic prices, their availability is difficult.

It is obvious that, in a situation such as the one described above, deficit financing of the order now contemplated will lead to a big rise in prices, other things remaining the same. That will be so in theory at any rate. But, actually, it may not turn out to be so bad, for other things may change and the extent of increase in prices may be less than what is feared. The supply of goods, for instance, may increase or the velocity of money may go down, thanks to a part of the newly created purchasing power being hoarded or attracted by borrowings, not to mention taxes. If Dame Nature helps us by being kind enough to ensure fair weather throughout the year, there may be an increase in agricultural output. It is thus not easy to foresee quite clearly the extent of damage that may be inflicted on the rupee's purchasing power by the deficit financing now contemplated. But prudence demands that one should proceed to meet the situation on the assumption that deficit financing of Rs. 360 crores would actually materialise and that the worst might happen. It is in this context that there is good reason to fear that the Government's economic policy is not realistic and accentuates the risk of deficit financing. Its thinking is more on negative than on positive lines.

Answering the question as to what safeguards the Government is taking, the Finance Minister said in the Rajya Sabha:

"I can assure the House that I shall be careful. We know which indicators to study and watch. A little more experience has been gathered and we shall see how we get along. This is also the reply to those who state that Rs. 1,200 crores (for the whole Plan period) is too high a figure for deficit financing in the Plan. This is a matter of 'marco planning' as we say. Afterwards, all these things have to be split up into their different phases. Since we have already made a beginning, the immediate programme before us in the next year's time is to find out what this measure of deficit financing, minus the shortfall in expenditure, has done to our economy. If we find then that there are danger signals, that the red light has gone up, then we shall have to take notice and devise such measures as are practicable. Hon'ble members often ask: What are those measures? One answer can be given out of the textbooks on economics. Another answer can be given out of the experience of various other countries which are dealing with incipient inflationary situations in their own countries. My general answer is that we are now fairly familiar with fiscal, monetary and physical measures which enabled the country to deal with an incipient inflation. We have had a little experience ourselves. In 1952, we were charged with having somewhat overdone

this particular deflationary policy. Therefore, I am confident that when the time comes, we shall be able to check inflationary tendencies before too great a harm is done to the economy of our country."

One cannot help feeling that the aforesaid reply suffers from a tone of overoptimism and overconfidence in the efficacy of such negative measures as physical, monetary, and fiscal controls. In the first place, the quantum of deficit financing contemplated is very much more than what the country has already had in any one year; for 1956-57, it is nearly twice as much as it was in 1955-56, which has led to a rise of more than 10 per cent. in prices. Similarly, for the whole of the second Five-year Plan, it is nearly thrice as much as it was in the first Plan. Secondly, the 1951-52 experiment in monetary measures against inflation coincided with a depression all over the world as a sequel to the Korean war boom. There is no certainty that, when similar measures are taken in future, the world situation will once again oblige us. Thirdly, the three years following 1951-52 witnessed good monsoons which served to bring about a marked increase in agricultural production. One cannot be sure that the cycle will not turn against us just at the time when inflation gathers momentum. And fourthly—this is very important—the economic policies followed by the countries which Mr. Deshmukh has in mind are not so unrealistic as those of the Government of India, so that what applies to them may not equally effectively apply to India. They do not have, for instance, such contradictions in their economic policy as cottage industries *versus* large-scale industries and desire for rapid industrialisation *versus* desire to kill the rich, or opposition to monetary incentives. Further, the countries referred to by Mr. Deshmukh do not practise such ideological measures as prohibition which result in loss of valuable source of revenue, in unproductive employment and in a decline in the respect for law. Above all, they do not put a premium on uneconomic means of production as this country does.

It is obvious that the Government is thinking mainly in terms of physical controls for keeping inflation under check. Past experience tells us that physical controls will not be sufficient; they will not be effective in a vast country like India where the administrative machinery is weak and is being asked to take up, on top of it, many economic functions from which it was free in the past when there were no controls. What is more, such controls will weaken the moral fabric of the country which has already suffered a serious setback as a result of the war and early post-war inflation. They will make the party-in-power unpopular with the people and undermine the chances of its victory in the elections that will follow. Let it not be forgotten, in this connection, that, if the vast majority of masses are satisfied with the rule of the Congress Party today, it is because of the removal of controls on food and clothing. Mr. Deshmukh and his colleagues will do well to remember that the political stock of Rajaji and the late Kidwai, which was low at one time, suddenly went up because they had the courage to remove these controls. The Government's objective must, therefore, be to rely on physical controls only in the last resort. It must avoid such restrictive regulations as far as possible by adopting suitable measures for bringing about an early increase in the production of food, cloth and other essentials of life, and for moving these goods promptly from centres of production to those of consumption. The present policy of the Government in these respects is not conducive to such a development. The production of cloth by mills is being frozen at current levels, in order to promote the handlooms; similarly the output of yarn by mills is being sought to be restricted in order to prop up the *Ambar Charka*. Development of road transport is being retarded by the nationalisation programmes of the State Governments, by penal rates of taxation and by inadequate attention to road building. The expansion of rail transport is not going to be on a scale necessary to meet the demands that will arise as a result of increase in population and in production of goods. Unless something effective is done to remove these bottlenecks, and that without any further delay, deficit financing of the order envisaged in the budget for 1956-57 and in the Second Plan will subject the people to severe hardship and seriously undermine the value of the rupee.

TEA IN TROUBLE

THE transformation that has taken place in the fortunes of Indian tea industry during the last two years denotes that the industry has begun once again to tread on a slippery path. In 1954, the industry was very prosperous. Thanks to shortage and high prices of other competitive beverages, the demand for tea throughout the world was on the increase. Consumption of tea in Britain, India's chief customer for this produce, increased considerably. In the course of two or three years preceding 1954, it moved up by about 50 million lbs. Easy money conditions obtaining in the U.K. then enabled the innumerable small dealers of Mincing Lane to operate freely in London tea auctions. Demand from America also rose by about 10 per cent. With the reopening of the Iranian market after the end of the oil deadlock and the diversion of Egyptian demand from Ceylon to India, tea commanded a strong market. Tea prices were, therefore, ruling at their peak levels, export teas being sold at an average of Rs. 3-12 per pound. This prosperity, however, did not flourish long. With the turn of the year, tables were turned against the industry. Encouraged by high prices of tea, all countries increased their production. In 1955, world output of tea rose by 24 million lbs. to 1,350 million lbs., while consumers' resistance and other restraining factors curtailed world consumption by 26 million lbs. to 1,009 million lbs. At the end of the year, supplies were 142 million lbs. more than the world demand for tea. Of this excess, North Indian tea gardens and the warehouses in Calcutta accounted for as much as 100 million lbs. The average price of export teas had come down to Rs. 1-8 per lb.

The unhappy position of the tea industry, especially in North India, can be attributed to a number of reasons. A major contributory factor was the increase in the output of tea in North India from 513 million lbs. to 533 million lbs. in 1955. It was noted towards the end of the year that, thanks to favourable weather conditions, Assam crop alone had gone up by as much as 10 million lbs. With an additional crop of 23 million lbs.—besides the carry-over from the previous year—the North Indian tea gardens were not well placed in their struggle for markets. The hurdles they had to cross were many. As was pointed out by Mr. H. K. Stringfellow, Chairman, Indian Tea Association, Calcutta, in his address at the annual meeting of this body held on the 9th inst., North Indian teas "must make a long, costly and often interrupted journey to the ports; they must comply with customs formalities *en route*; they are subject to a multiplicity of Central and State taxes; and there are difficulties of supply—notably machinery, cement and coal—which do not seem to affect other producing countries."

Another chief cause for the setback in the tea industry in North India has been the fall in offtake of tea by some leading tea-consuming countries. Thus, imports of tea into Britain in 1955 dropped from 491 million lbs. to 482 million lbs. Similarly there was a fall in the U.S. purchases of tea from 114 million lbs. to 105 million lbs. Another country which lifted less tea was Australia, its absorption having amounted to only 55 million lbs., as against 60 million lbs. in 1954. Minor declines in offtake were noticed in respect of Canada and the Netherlands. A point to be noted here is that the fall in imports by countries such as Britain and Australia was due to anti-inflationary measures initiated by these countries to curb inflationary pressures there. The tight money conditions resulting from the credit squeeze in Britain, for instance, have brought about a considerable shrinkage in the volume of tea handled by distributors in London.

The Government policy, too, cannot, to a certain extent, escape the blame for the present unhappy position of tea gardens. It imposed restrictions on the quantity of North Indian tea which could be exported to London, with a view to expanding tea auctions in Calcutta. This restriction was, of course, in accordance with the recommendations of the Tea Auctions Committee. But this decision came at a time when the industry actually needed freedom to dispose of its stocks. The restriction, in fact, coincided with nine months of the 1955 season and hindered flexibility of selling arrangements. The U.K. buyers, being dealers of small means, were not enthusiastic about entering the Indian market. Consequently, no brisk shipments to London took place and the gardens had to accumulate stocks. It is, however, encouraging to note that the Government of India has suspended the operation of the limitation on shipments to London until 31st May next. Had this action been taken earlier, the industry would have had some relief from the growing tea stocks.

The high incidence of export duty on tea and its variation from month to month were further factors that added to the industry's difficulties. Taking advantage of the rising tea market, the Government raised the duty from As. 7 to As. 10 in January 1955. In the budget proposals last year, a new sliding scale of duties was introduced. This duty would rise or fall in accordance with the price of tea realised in London. "Since this London price," to quote Mr. Stringfellow, "is enhanced by the customer's readiness to pay more for goods at his doorstep than for goods many thousands of miles away, and since the amount of tea which can be exported unsold to London has until recently been restricted, it follows that the rate of duty in 1955 was generally to our disadvantage, particularly in the latter part of the season." In order to remove this handicap, the industry has suggested the establishment of a link between the tax and—not the London price of tea as at present—the weighted average of London, Calcutta and Cochin prices. The Government does not seem to have taken any decision in the matter. Even the merging of two slabs in the scale of duties, envisaged in the latest budget proposals, has afforded little relief to the industry. For the reduction in the duty will only take place if the price of tea rises to as much as Rs. 3-4, the official price of tea now being substantially lower. There is, therefore, a need to reduce the rate of duty in the slab which applies to current prices.

Today competition in world markets, fall in exports of tea, continuance of an unfavourable export levy, and accumulation of heavy stocks have all rendered the position of the tea industry in North India very vulnerable. If the situation is allowed to drift further, a worse slump is bound to hit the industry this year. The remedy lies in taking quick and adequate measures. One of the remedies suggested by Mr. Stringfellow is the destruction of all tea waste and all residue teas. This has been advocated for a considerable time now and experience has shown that it could be only of limited use. Another remedy lies in the renewal of the International Tea Regulation Scheme which lapsed in March last year. Although discussions are taking place for its renewal, it will be some time before an acceptable scheme is drafted and put into operation. Much of its success depends on the attitude of Ceylon which appears to be demanding an unduly higher quota of exports. However that may be, the industry in India can hardly afford to wait indefinitely.

The chief remedy, therefore, lies in initiating measures which would augment consumption of tea at home and abroad. At present propaganda to popularise tea drinking is being conducted on a large-scale, but it cannot by itself produce quick results. It should be supplemented by a reduction in the prices of tea to the consumer. This calls for rationalisation of the industry, which, in turn, depends on the measure of co-operation extended to the industry by both labour and Government. Since the production costs are somewhat rigid, there is little scope for effecting economies within the industry itself. Thus, wages remain high; transport charges have risen considerably; and the industry's obligation under the Plantation Act and the Provident Fund Act are expected to expand rather than shrink. In the circumstances, the initiative to provide relief could come mainly from the Government. The Central Government should be realistic enough to cut down drastically the export duty on tea, if at least it has no desire to abolish the duty totally, as it did in the case of jute goods. This is necessary in order to give the industry a fair start to compete in overseas markets. The State Governments of Assam and West Bengal, too, can provide relief by abandoning their proposals for a levy on the movement of tea. As regards housing in plantations, a statutory obligation has now been imposed on the industry. But the industry, it its present state, cannot be expected to undertake this burden single-handed. There is need to assist it with loans and grants-in-aid, as the Government has done in the case of other industries on which there is no statutory obligation for provision of housing. Until such assistance could be extended, the industry should be freed from the obligation to provide housing schemes. These concessions are necessary, if the industry has to play its role "as the largest employer of labour, the biggest earner of foreign exchange and pre-eminent amongst taxpayers."

OPTIMISM PERSISTS IN SHARE MARKET

OUTLOOK FOR T.I.S.CO.—IMPLICATIONS OF INCREASE IN BANK RATES

THURSDAY, 5 P.M.

MARKET GOSSIP

AN undercurrent of optimism still persists in the share market. This is confined mostly to speculators, and, strangely enough, is engendered by the proposed dividend tax and the impost on bonus issues. These tax measures have been interpreted to mean that the companies with large reserves as also those which earn large profits will hereafter think twice before taking a decision to make large allocations to their reserves. For one thing, it is well known that, when a new tax is introduced, it is rarely withdrawn. On the contrary, not only will it stick, but there is every likelihood of an increase in the burden of its incidence through a progressive rise in the rate of the tax. This tendency is particularly likely to persist from now, thanks to the fact that the Government has to find resources for financing its huge five-year development programme. In this context, one might, therefore, expect an increase in the rates of taxes both on dividends and bonus issues. Besides, the way in which the private sector is being treated in the name of establishing a socialist pattern of society, as, for instance, the nationalisation of the Imperial Bank of India or of the business of life insurance, has also created an anxiety among managements to avoid being caught napping. These considerations are expected to prompt business concerns to step up their distribution to shareholders as much, and as soon, as possible. An additional impetus to this tendency is provided by another factor. Hitherto, sound managements had imposed on themselves a voluntary limitation on dividends for two reasons. One was the desire to conserve funds for lean years, and the other the disinclination to adopt a distribution policy which would run counter to the anti-inflationary policy of the Government. Now that the Government itself has come forward to have its share in the distribution by way of new taxes on the same assessed income, it is felt that the Government is not opposed to declaration of high dividends by companies. Consequently, the managements seem to feel that there is no longer any need to impose on themselves a voluntary limitation on dividends. The origin of higher dividends declared recently by a number of textile concerns in Bombay, Ahmedabad and elsewhere is traced to these considerations.

The position, is however, somewhat different in the case of banking companies. Under section 17 of the Banking Companies Act, every bank is required to maintain a reserve fund and should add to it, before declaring a dividend, a sum equivalent to not less than 20 per cent. of its net profits every year till such time as the reserve fund comes up to the level of the paid-up capital. This reserve fund is to be kept intact and it can be neither diminished nor disposed of otherwise. In effect, the reserve is practically blocked up with the capital. In case a banking company has reserves equal to its paid-up capital, it is only just and equitable that for the purposes of the levy on dividends, both the capital and reserves should be taken into account and that the percentage of dividend paid should be calculated on the aggregate amount of capital and reserves. Take, for instance, the case of a bank which has a paid-up capital of Rs. 1 crore and a reserve of Rs. 1 crore and pays a dividend of 16 per cent. on the paid-up capital. The distribution for the purpose of the proposed dividend tax will be 8 per cent. only on the aggregate amount of paid-up capital and reserves. In this case, only the excess dividend of 2 per cent. over the free limit of 6 per cent. would have to be taxed. On the contrary, if, as it is now proposed, only the paid-up capital of Rs. 1 crore is taken, the bank has to pay tax at the graduated rate on the excess dividend of 10 per cent. above the 6 per cent. free limit. This will be harsh on banks which are consistently maintaining the dividends at high levels. They are placed in a disadvantageous position *vis-a-vis* the banks which have not so far brought up their reserves to the level of their paid-up capital. These latter can transfer any sums from out of the profits to the reserve fund, even restricting the dividend that could otherwise be paid to the shareholders, and thus avoid payment of the additional levy on sums thus transferred. In order to avoid this discrimination, due relief should be given to such of the banks as have brought up their reserves to the level of their paid-up capital.

• • • •

The shareholders of the Tata Iron and Steel Co., Ltd. (T.I.S.Co.) have—on Monday last—approved the new capital issue programme of the Company. Although approval was accorded by the shareholders, the discussions on the various aspects of the programme generated a considerable amount of heat. Much credit naturally goes to the Chairman of the Company, Mr. J. R. D. Tata, for his having convinced the shareholders on every issue raised by them. The resolution, unanimously adopted at the extraordinary general meeting, now empowers the Board of Directors to increase the capital of the Company by Rs. 9,63,75,000 by the addition of 12,85,000 new ordinary shares of Rs. 75 each at a premium of Rs. 30 per share or Rs. 105. With the new issue, the capital of the Company will increase from Rs. 17.38 crores to Rs. 27.02 crores. The new ordinary shares will be issued to the existing ordinary shareholders in the proportion of one share for every share held. They will not be made available to the preference shareholders "as the Company cannot take away the equity from the equity holders." It is proposed to close the transfer books from 12th to 26th April next. The payment of Rs. 105 per share will be in three equal instalments of Rs. 35 each, spread over a period of 18 months. The first instalment will be collected early in July. The second instalment will be in December this year and the third in June 1957.

The chief grievance of the shareholders, as was only to be expected, was over the decision of the Company to issue the new shares at a premium of Rs. 30 each. They were justified in raising a hue and cry regarding the premium, as the Chairman himself had promised in the last annual meeting to issue it at par. But it is now common knowledge that, thanks to the interference of the Government, the Company has not been able to keep its promise. Mr. Tata's reasoning to justify the change in issuing the new shares at a premium is quite convincing. It is a common practice to issue shares at a premium. The Company itself in the past had issued its now defunct deferred shares of Rs. 30 each at a substantially high premium. There is, therefore, nothing wrong in adopting the practice now. What is more, the Government wanted that the shares should be issued at a premium of Rs. 75, but the management has been able to get it reduced to Rs. 30, and in this, it has made the best of a bad job.

According to Mr. Tata, the premium now asked is not excessive in view of the profitability of the expansion scheme and the Company's earning power. The new scheme does not involve any increase in the existing labour force though the workers might get slightly higher wages. On the other hand, with the new plant and machinery, the cost of production will go down and efficiency will increase. The expansion programmee, when completed, will help produce 2 million tons of steel ingots annually, and the benefit will accrue as soon as the plant is built. It is stated that in the next five years, the increase of Rs. 63 per ton in steel prices will produce, after tax, about Rs. 20 crores. This will undoubtedly strengthen the Company's finance.

Mr. Tata has done well to throw some light on the future policy of distribution to shareholders. Although out of the price increase granteo for expansion, no dividend can be disbursed, there "is nothing to prevent"—to quote Mr. Tata—"the Company from declaring dividends from extra profits out of extra steel produced". The Company will try to maintain the yield on both the old and new issues including the premium, at 5 per cent. Besides, as soon as sufficient resources are available, the Company may, according to the Chairman, either capitalise certain reserves or increase the paid-up value of the shares. This is expected to be done over a period of three years.

On the issue of nationalisation, Mr. Tata's remarks are worth noting. He drew the attention of shareholders to the fact that although the Government did not intend to nationalise T.I.S.Co., it was not prepared to give any categorical assurance about it. In fact, it had not given such assurance to any Indian company. The only exception was the case of oil refineries in respect of which the assurance given was to foreign investors. Further, the Government did not want to commit future Governments.

Incidentally, Mr. Tata pointed out that the funds would be raised by borrowing from the World Bank. The terms of the loan were under negotiation. The loan is expected to be for a period of 15 years and to carry interest at 4¾ per cent. including the statutory commission of 1 per cent. According to Mr. Tata, the terms are favourable and there will be no repayment of the loan during the period of construction. Repayments, therefore, will be in instalments. The deal is expected to be finalised by Mr. J. D. Choksi, Vice-Chairman of the Company, who is to proceed to America at the end of this month.

It is sometimes said that, if the first half of the current century was a prolonged period of unemployment and depression, the second half might well turn out to be an era of boom in business and industrial conditions and monetary inflation. Indeed, the problem in the second half of the century might well be how best the world could live amidst inflationary conditions. In any case, there is no gainsaying the fact that in the immediate future, inflation will be a source of great danger. All this cannot be a matter of unconcern to this country. After all, India cannot isolate itself from the rest of the world. Further, the next Five-year Plan involves large-scale purchases from abroad of plant, machinery and equipment. It has been estimated that imports of machinery by the public as well as the private sectors of Indian economy during the period of the next Five-year Plan will amount to Rs. 1,250 crores. Besides these, India will also require considerable quantities of iron and steel, cement and intermediate products, not to mention foodgrains or sugar. If world inflationary conditions persist, the value of these imports will certainly go up.

Among the countries from which India can buy its capital goods, mention must be made of Western Europe, the U.K. and the U.S. Inflation has already reared its ugly head in these countries. This might conceivably affect the prospects of obtaining capital goods at fairly advantageous terms. It is, however, true that efforts are being made in these countries to counter inflation. The U.K. has struck the first blow this year by increasing its Bank rate from 4½ per cent. to 5½ per cent. with effect from 16th February and also put into effect several anti-inflationary measures. In the U.S., too, there has been a hardening of interest rates. For instance, the interest rate on savings accounts alone has been pushed up to about 3 per cent. per annum. Fiscal and credit authorities in that country have appealed for the renewal of controls over credit. The danger of inflation is, of course, less serious in the U.S. than in the U.K. Nevertheless, the authorities over there are alive to the need for combating inflation. In Western Europe, Holland, as is well known, has already raised its Bank rate from 2½ per cent. to 3 per cent. and West Germany has raised its Bank rate by 1 per cent. to 4½ per cent.

An important aspect of the increase in Bank rates in these countries is that it might reduce the export credit facilities which many industrially advanced countries were giving to their customers. Clearly, if these countries find it hard to raise the necessary funds at attractive rates of interest, they cannot possibly give export credit facilities to their overseas buyers. The cost of development in underdeveloped countries is, therefore, bound to go up. This aspect has been explained by Mr. V. A. Grantham, Chairman of the Chartered Bank of India, Australia and China, in the course of his statement circulated with the reports and accounts of the Bank for the year 1955. He says:

"The money markets of the Sterling Area are of necessity highly sensitive to policy pursued in the City of London and we have, therefore, to pay close attention to the policy of credit restriction now in operation in this country. While it is obviously proper for us to observe the official directive so far as it applies to customers who deal and trade exclusively in this country, it will be clear that our operations overseas must, in the end, be related to the policies and needs of those countries in which we operate, where we have obvious responsibilities to the Governments concerned, some of which are outside the Sterling Area. The rates of interest imposed in the United Kingdom must to some degree affect the cost of finance of new projects in the undeveloped countries, but the extent to which finance for those projects should be provided is properly a matter for the countries themselves to determine and our main concern must be to see that our own operations are carried out on sound lines in each country in relation to local conditions. The Sterling Area has far-flung ramifications and it is only too clear that uncertainties as to the results of the credit squeeze in this country could have

EQUITIES BUOYANT

SHARP RISE IN BOMBAY DYEING

(From Our Own Correspondents)

BOMBAY, 15*th March*

THE buoyancy in the Bombay share market noted in the previous week gathered considerable momentum during the week under review. Buying activity was not only on an increased scale but widespread and almost every scrip on the list participated in the rise. The buoyancy was more marked in Tata Steels, textile scrips and some of the leading miscellaneous industrial counters. The market's buoyancy is particularly noteworthy in the context of extreme stringency in the short-term money market and the general pessimism regarding the Government's policy towards the private sector of industries.

Several factors were responsible for the market's cheerfulness. The operators would appear to have ignored the effects on capital formation of the withdrawal of the rebate of one anna on profits ploughed back, the tax on dividends in excess of 6 per cent. and the impost on bonus issues of companies. On the other hand, they would appear to have taken a bullish view of the effects of deficit financing during the second Five-year Plan and the prospects of lighter tax measures for the first one or two years of the Plan period. Expectations of higher dividends, particularly from textile mills, despite the tax on dividends, the reassuring speech of Mr. J. R. D. Tata, Chairman of the T.I.S.Co., at the extraordinary general meeting held on Monday this week, hinting at the prospects of a bonus issue, thus repaying the premium to be taken on the new issue, and the payment of a reasonable dividend to provide a yield of 5 per cent. on the new and old shares, and the support lent by custodians of insurance companies to the market, though this was confined to a few counters, have cumulatively induced hectic buying and heavy short-covering. The undertone at the close was very firm.

In the steel section, Tata Ordinaries were very firm. Operators from Calcutta also extended good support by replacing their holdings of Indian Irons with Tata Steels. Consequently, the scrips rallied from Rs. 226 to Rs. 238, before closing at Rs. 237-12. Though Indian Irons also closed better, they were hesitant on rumours that the Bombay Stock Exchange authorities were considering some measures to impose margin on transactions in excess of 5,000 shares. After moving up from Rs. 32-6 to Rs. 33-8½, the shares gave way to Rs. 33-4½ at the close.

Textiles were conspicuous in this week's rise and almost every scrip scored smart gains. Heading the list were Bombay Dyeings, good blocks of which were reported to have been bought on behalf of a leading industrialist. From Rs. 548-12, they came up to Rs. 592-8 and closed at Rs. 591-14. Centurys shot up, on keen enquiries, from Rs. 488 to Rs. 508. Kohinoors gathered Rs. 9-8 to Rs. 349-8. Central Indias picked up Rs. 8 to Rs. 148. Finlays advanced sharply by Rs. 27 to Rs. 359, following the increase in dividend for the year ended 31st December 1955 from Rs. 16 to Rs. 20 per share. Gokak's moved up by Rs. 5 to Rs. 249 and Indu Ordinaries by Re. 1-1 to Rs. 13-9. Indore Malwas recorded a gain of Rs. 5-10 to Rs. 150 and Khataus Rs. 16-9 to Rs. 233-12. Morarjees improved by Rs. 12-8 to Rs. 235, Mysore Spinnings by Rs. 7-8 to Rs. 103-12, New Greats by Rs. 5 to Rs. 240 and New Kaiser-I-Hinds by Rs. 15 to Rs. 125-10. Phœnix gained further Rs. 2-8 to Rs. 137-8. Shree Niwas gathered Rs. 7-8 to Rs. 230. Simplex rallied from Rs. 194 to Rs. 212-8 and Svadeshis from Rs. 219 to Rs. 232-8. Swans shot up from Rs. 417-8 to Rs. 447-8, following the stepping up of the dividend from Rs. 20 to Rs. 25 per share.

Bank shares ruled steady, though business was still restricted and price-changes were small. Barodas gained As. 8 to Rs. 95-8, while Centrals were unchanged at Rs. 49-4. Centrals (New) put on As. 4 to Rs. 49-8, whereas Bank of Indias appreciated by Rs. 2-8 to Rs. 153 and United Commercials by Re. 1-8 to Rs. 51.

The insurance section was again featureless, but the undertone remained steady. New Indias gained As. 12 to Rs. 41-12. Orientals were restored to Rs. 3,910. Indian Mercantiles were done a fraction higher at Rs. 44-4, while British India Generals shed As. 5 to Rs. 13-4.

The miscellaneous section maintained its cheerful appearance with impressive rise in values of leading counters. In the sugar group, Belapurs gained Rs. 6-8 to Rs. 229, Phaltans Rs. 6-8 to Rs. 144 and Walchandnagars Rs. 10-10 to Rs. 260. In the cement group, Associated Cements advanced from Rs. 209 to Rs. 214-12 and Digvijays from Rs. 186 to Rs. 188. Among engineering and mining shares, Alcocks fluctuated widely. After an initial dip from Rs. 357-8 to Rs. 321-4, they shot up to Rs. 356-4 at the close.

Among shipping and transport shares, Scindias gained ground from Rs. 16-13¼ to Rs. 17-7, while Great Easterns, which were admitted on the forward list, were held at Rs. 15-7. India Steamships gained As. 2 to Rs. 8-6. Hindustan Motors steadied up to Rs. 9-12 and Premier Automobiles improved further from Rs. 90 to Rs. 95. Among miscellaneous industrials, Bombay Burmahs (old) were a bright spot and moved up from Rs. 568-12 to Rs. 618-12, before closing at Rs. 614-6. National Rayons were well fancied and rose by Rs. 10-4 to Rs. 235-4 on expectations of good results and better dividend. Industrial Investment Trust were done at Rs. 81 and Killick Industries Re. 1 higher at Rs. 165-8. Tata Chemicals also participated in the general rise and gained Re. 1-12 to Rs. 19-4. Tata Oils staged a smart rise of Rs. 3-4 to Rs. 47-8 and Wimcos were impressive with a gain of Rs. 11-14 to Rs. 205.

Calcutta Stock Exchange

CALCUTTA, 14*th March*

During the first two days of the week under review, there was little of note in the trading that took place on the Calcutta Stock Exchange, but since Monday, the lower levels attracted fresh buying support and a recovery was in evidence followed by a widening of interest. Market circles had had ample time to study the Budget proposals in detail, and second thoughts did not reflect the earlier optimism in full. For the stock market, the proposals relating to the levy of a super-tax on dividends of 6 per cent. and above, the tax on bonus issues, and the increase in corporation tax are particularly important, since these will affect the investors in a direct way.

There was very little activity in the textile section, Kesorams being fractionally lower at Rs. 16-10 and Elgin Mills finding it difficult to move beyond Rs. 27-7. At Rs. 310, Bowreahs made a slight recovery.

In the tea section, Sylhet (Pakistani) gardens were again in the limelight. The rise in prices in the tea auctions held this week and expectations of Russian interest in Indian tea were the factors which attracted buyers for Indian scrips, albeit at lower levels. From Rs. 179, Teliaparas moved up to Rs. 196 and at Rs. 224 Patrakolas made a further striking improvement. On strong support, Daurracherras advanced to Rs. 12-12 from Rs. 11-15, and New Samanabaghs to Rs. 17-8 from Rs. 15-2. Among Indian scrips, Brooke Bonds gained to Rs. 20-9 from Rs. 20-3 and Tezpores to Rs. 21-12 from Rs. 21. Hasimaras at Rs. 33-8 put on As. 4. On the other hand, Choonabhuttis eased to Rs. 305 and Brahmaputras to Rs. 8-9.

After early dullness, interest was in evidence for jute shares following the fall in raw jute prices. This, however, failed to change the trend in a noticeable way. From Rs. 24, Howraths receded to Rs. 23-2. Nuddeas and Kinnisons were lower at Rs. 40-8 and Rs. 179 respectively.

In the engineering section, a recovery set in after earlier weakness. Speculative Indian Irons closed at Rs. 33-4, after having risen to Rs. 33-10 and given way to Rs. 32-12. Jessop & Cos. had given way to Rs. 31-8 from Rs. 34-4 before recovering to Rs. 33. Texmacos gained to Rs. 21-6 from Rs. 20-14.

• • • •

Madras Stock Exchange

MADRAS, 14*th March*

The upward trend in equity values noted on the Madras Stock Exchange last week gathered further momentum during the week under review. In fact, the market exhibited a distinctly firm trend. The firmness was aided by the belief that the burden of additional corporate taxation imposed by the Union Finance Minister might be borne easily, what with the expansion in economy envisaged under the second Five-year Plan. The operators, therefore, lent sustained support to equities, the prices of which continued to move forward.

During the week under review, several dividend announcements were made. The Trichinopoly Mills Ltd. has recommended a tax-free dividend of 9 per cent. for the year ended December 1955, same as that for the previous year. The Buckingham and Carnatic Co., Ltd., has recommended a final dividend of 6 per cent. for the year 1955, making a total of 10 per cent., which is the same as that for 1954. The Indian Overseas Bank has recommended a dividend of 7½ per cent. for 1955, as against 6 per cent. The Janardana Mills Ltd. has recommended a dividend of 20 per cent. on ordinary shares for 1955, as against 10 per cent. The Directors of the Bangalore Woollen, Cotton and Silk Mills Co., Ltd., have recommended a final dividend of 20 per cent., making in all 30 per cent. for 1955, the same as that declared for the previous year.

Textile shares attracted good attention of operators and registered handsome gains. Bangalore Woollens rallied Rs. 15 to Rs. 590 *cum-div. cum-right*. Venkatesas picked up Rs. 14-8 to Rs. 155 and Vasantas Rs. 12-8 to Rs. 280. Coimbatore Pioneers forged ahead by Rs. 11 to Rs. 256. Lakshmis jumped up by Rs. 10 to Rs. 190 and Lakshmi 'A's by Rs. 6 to Rs. 96.

In the planting section, tea scrips met with enlarged buying demand. United Nilgiris were specially favoured, their quotation advancing by Rs. 15 to Rs. 323 *ex-div.* Highlands increased by Re. 1 to Rs. 17. Peermades put on As. 12 to Rs. 36-8. Chandramalais gathered As. 10 to Rs. 6-7, Haileyburias As. 8 to Rs. 26-8, Emerald Valleys As. 7 to Rs. 8-3 and Parksides As. 4 to Rs. 19-4. Rubber shares also received good support. Kalpettas rallied Rs. 2 to Rs. 29. Anandams strengthened by Re. 1-4 to Rs. 21-4. Cottanad and Malankaras finished each Re. 1 higher, the former at Rs. 16 and the latter at Rs. 28. Vaikundams improved by As. 4 to Rs. 27 and Pullangodes by As. 2 to Rs. 4-3. Among coffee shares, Coffee Lands climbed up by As. 9 to Rs. 20-3. Kadur Coffees were fully maintained at Rs. 2-9 and Mysore Coffees at Rs. 1-12.

In the miscellaneous section, Mysore Chemical Fertilisers were the brightest spot, the quotation advancing by As. 10-6 to Rs. 9-6-6. Indian Steel Rollings and Bangalore Transports moved up by As. 8 each to Rs. 12-4 and Rs. 13-12, respectively. India Cements rose by As. 5 to Rs. 33-1.

Trade with Australia and New Zealand

Business men trading with Australia and New Zealand are invited to use the complete banking service of the Bank of New South Wales.

The oldest and largest joint-stock bank operating in Australia and New Zealand, the Bank of New South Wales keeps in close touch with local conditions through over 850 branches and agencies (sub-branches) in Australia, New Zealand, Fiji, Papua and New Guinea. It is thus particularly well equipped to provide enquirers overseas with a full picture of the local business and rural scene.

Notices

BENGAL JUTE MILL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE 25th Ordinary General Meeting of the Members of the Company will be held at the Registered Office of the Company at 8, Dalhousie Square East, Calcutta, on Wednesday the 28th March 1956, at 4-30 p.m. for the purpose of receiving the Directors' Report, passing the Audited Accounts, declaring the Dividend recommended by the Directors for the year ended 30th June 1955, electing Directors in place of the retiring Directors, appointing Auditors and for transacting any other business of the Company that may be transacted thereat.

The Share Transfer Registers of the Company will remain closed from the 21st March 1956 to the 28th March 1956, both days inclusive.

By Order of the Board,

For and on behalf of
BENGAL JUTE MILL CO., LTD.,
SOORAJMULL NAGARMULL,
Managing Agents.

8, DALHOUSIE SQUARE EAST,
CALCUTTA. 9*th March* 1956.

THE TATA IRON AND STEEL COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Transfer Books of the Company will be closed from Thursday the 12th April 1956 to Thursday the 26th April 1956, both days inclusive.

Notice is also hereby given that pursuant to the Special Resolutions passed at the Extraordinary General Meeting of the Company held on Monday the 12th March 1956, the holders of Ordinary shares on the Register of Members of the Company on the 26th April 1956, being the date fixed by the Directors pursuant to the above Resolutions will be entitled to apply for the new Ordinary shares in respect of their holdings of Ordinary shares on such date. Application and Renunciation forms will be posted to the shareholders in due course.

By Order of the Directors,

TATA INDUSTRIES LIMITED,
Managing Agents,
J. D. CHOKSI,
Director.

BOMBAY, 12*th March* 1956.

NEWS IN BRIEF

THE estimated expenditure during 1955-56 on the construction and development of roads was Rs. 22.27 crores and that on the maintenance of existing roads Rs. 4.90 crores.

The Government of India is re-examining its industrial policy resolution of 1948 and a revised statement in line with the objective of a socialist pattern of society is expected to be ready in about two months. This was disclosed by Mr. Nityanand Kanungo, Minister for Industries, in Parliament on the 13th inst.

Kandla port is to be equipped with the latest harbour control radar equipment. The installation, estimated to cost Rs. 3.18 lakhs, is expected to be completed by 31st March 1957. There are proposals to install two experimental radars, one at Khanderi island at the approaches to the Bombay harbour and the other at Saugor island at the approaches to the Calcutta port.

The foundation-stone for a ferro-manganese plant in Dandeli (Karwar) was laid by the Governor of Bombay on the 13th inst. The plant, which is expected to go into production next year, is estimated to cost about Rs. 40 lakhs. According to Mr. Laibhai Patel, Managing Director, the plant would earn the country foreign exchange to the tune of Rs. 1 crore initially and Rs. 3 crores ultimately.

The Companies Act 1956, which was passed by Parliament at its last session and which received the President's assent on 18th January 1956, will be brought into force on 1st April 1956. The Companies (Central Government's) General Rules and Forms, the Companies Regulations and the Restricted Auditors' Certificates (Part 'B' States) Rules, which have been made by the Central Government under the new Act, will also be brought into effect simultaneously with the Act.

The Government of Saurashtra proposes to levy a betterment charge ranging from Rs. 100 to Rs. 150 per acre on land under the irrigable command of a canal in areas coming under new irrigation projects in the State. A Bill to amend the Saurashtra Irrigation Act 1951, with a view to enabling the Government to introduce the betterment levy has been published in the State *Gazette*. The Bill proposes also the levy of an irrigation cess on lands which are under command of an irrigation project but which are not irrigated by the owner.

The Government of India has approved of a project to manufacture polythene in India. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. The manufacture will be undertaken by the Imperial Chemical Industries' associate, the Alkali and Chemical Corporation of India Ltd., in which the Indian public has a substantial shareholding. Technical assistance in design, construction and operation of this plant will be provided under an agreement by I.C.I. The project will involve a total investment of about Rs. 3 crores.

More than 1,10,000 maunds of ghee were graded under the provisions of the Agricultural Produce (Grading and Marking) Act in 30 laboratories in India in 1954. The largest quantity—57,378 maunds—was graded in Uttar Pradesh where 13 laboratories are in operation. These facts have been revealed in a recently published brochure entitled "Grading of Ghee Under Agmark." The pamphlet is the second in the "Studies in Ghee" series brought out by the Directorate of Marketing and Inspection of the Union Ministry of Food and Agriculture.

The U.S. Atomic Energy Commission has announced that it has approved the shipment of 129 tons of heavy water to help the peace-time atomic programme carried on by India, Great Britain, France, Italy, Switzerland and Australia. Heavy water is used as a moderator to govern the action of neutrons in nuclear reactors. It is stated that, of the 129 tons of heavy water, 11 tons have already been shipped to Great Britain and five tons to France. The 129 tons have been allocated as follows: United Kingdom, 50 tons; France 30 tons; Italy, 10 tons; Switzerland, 7 tons; India, 21 tons; and Australia, 11 tons.

About 75 per cent. of India's total requirement of printing inks is met from indigenous production. The production of printing inks in India in 1955 was 2,090 tons, as against 1,675 tons in 1954. India is self-sufficient in respect of certain types of printing inks like letterpress, offset and litho. Facilities for increasing production are being provided to the industry which is being developed in the private sector. The production of fountain pen ink in the country in 1955 was 331,686 dozen of 2-oz. bottles, as compared with 597,606 dozen of such bottles in 1954 and 442,800 dozen in 1953. This information was given by the Minister for Commerce and Industry, Mr. T. T. Krishnamachari, in Parliament on the 12th inst.

Railway experts from several E.C.A.F.E. region countries began a 10-day tour of India on Wednesday, the 14th inst., prior to the fourth session of the Railway Sub-committee of the E.C.A.F.E.-Inland Transport Committee which opens in New Delhi on the 25th inst. The tour, which started from Calcutta, has been organised by the Railway Board in order to enable leading railwaymen from the various countries of the E.C.A.F.E. region to see important railway and other projects in the country. The itinerary includes, among other things, visits to the Chittaranjan Locomotive Works, Tata Steel Works, Visakhapatnam port, Integral Coach Factory, Perambur, Railway Research Sub-centre at Lonavla, Railway workshops in Bombay and the Railway Staff College, Baroda.

With a view to making ammonium sulphate fertiliser available at interior places at controlled rates, the Government of Bombay has sanctioned further facilities for transport of ammonium sulphate to centres far away from the railheads. Indentors for small quantities at places which have not so far been approved as centres for distance rebate may approach the District Agricultural Officers conerned, who will make allotments of ammonium sulphate and direct the indentor to purchase the fertiliser at not more than the controlled rates from a place nearest to his centre from a distributor, who has already taken the stocks from Government. The small indentors will get a fixed remuneration of Rs. 5 per ton and transport charges at As. 4 per ton per mile, subject to a maximum of Rs. 5 per ton, which limit is extended to Rs. 15 per ton in the case of Panchmahals, Sabarkantha, Banskantha, Dangs, Bijapur, Dharwar and Kanara districts.

Financial assistance to co-operative housing societies under the low-income group housing scheme will henceforth be granted by the Bombay Co-operative Housing Finance Society, Limited, Bombay. Hitherto, the scheme was being executed by the Registrar of Co-operative Societies. The Bombay Co-operative Housing Finance Society will separately administer the scheme for loans to the co-operative societies of low-income groups. The valuation of the properties and land as well as searching of legal title of the co-operative housing societies seeking loans under the scheme will be carried out by the Bombay Co-operative Housing Finance Society as at present and the costs thereof will be borne by the borrowing societies. The maximum period of repayment of loans will be 25 years, instead of 20 years as laid down earlier. The co-operative housing societies of low-income group people are granted loans to the extent of 70 per cent. of the actual estimated price of the houses, inclusive of land, subject to the maximum of Rs. 8,000 per house. As the Housing Finance Society advances loans to other co-operative housing societies to the extent of 60 per cent. only, the Government has guaranteed the Housing Finance Society for losses, if any, sustained by it to the extent of 10 per cent. only, i.e., the difference between the Society's loaning rate of 60 per cent. and the Government's loaning rate of 70 per cent.

From Abroad

The U.S. Supreme Court upheld, on the 5th inst., a lower court decision that the 1954 High Court ban on racial segregation in public schools applies not only to primary and secondary schools but to tax-supported colleges and universities. The Supreme Court affirmed the lower court decision without hearing arguments.

Canada's population on 1st January aggregated 15,818,000, according to a special estimate by the Bureau of Statistics, Canada. This represents an increase of 181,000 in the six months from 1st July last year. This gain compares with increases of 198,000 in the first half of last year and 233,000 in the second half of 1954. During the calendar year 1955, the population thus increased by an estimated 379,000. The estimated increases for the two previous years are 404,000 in 1954 and 386,000 in 1953.

The Pennsylvania Railroad has adopted for switching cars in its freight yard at Jersey City (New Jersey), a new type rubber-tyred switch engine, namely, the Switch-mobile. Its flexibility enables it to traverse streets or rail tracks, or cross over tracks. It can move nine loaded freight cars on one string. The vehicle straddles the rails with its pneumatic tyres riding the ties. It turns on its own length and moves easily in congested areas, forward or backward.

The world's first commercial application of rubber highway-railroad crossing has been installed at West Salem, Ohio, U.S. Designed and built by the Goodyear Tyre & Rubber Company, the revolutionary rubber crossing has been laid at a highway crossing on the main tracks of the Erie Railroad. This highway crossing described by railroad officials as one of the most heavily travelled in the U.S., received an almost constant battering from automobiles, trucks and trains. The rubber slabs now provide a smooth, cushioned crossing, thus eliminating a source of major irritation to motorists.

The year 1955 was a record one for the Goodyear Tyre & Rubber Co., according to Mr. P. W. Litchfield, Chairman of the Company. The industry in the United States consumed during that year as much as 1,510,000 long tons of new rubber (natural and synthetic). Replacement tyre sales in 1956 are expected to exceed those in 1955, because of more vehicles in operation. Sales exceeded the billion-dollar mark in the first nine months of 1955. There is hardly a Goodyear plant which does not have an expansion programme under way and the capital expenditure programme aggregates to the impressive total of $114,000,000.

The fifth travelling science exhibition organised by the United Nations Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.) will make a three-year tour of Asia after its three-week showing in Paris, where it opened on the 1st inst. The exhibition is entitled "Energy and its Transformation" and will be displayed in New Delhi and Colombo as well as in Saigon, Bangkok, Djakarta, Hong Kong, Tokyo. The present exhibition illustrates the application of various types of energy by means of diagrams, photographs, and models. Included in the display are two models of nuclear reactors used in the production of radio-isotopes and electricity.

A British company (Messrs. Ruston and Hornsby Ltd., of Lincoln) has secured an order worth more than £700,000 for the supply of engines and pumps to the Agricultural Bank of Iran, according to a statement issued in London. With the ancillary equipment—pipings and belts, etc.,—supplied by other British firms is taken into account, the order amounts to more than £1,000,000. The machinery ordered will be used for the irrigation scheme at Ahwaz, the main link between Teheran and the Persian Gulf. Three hundred Ruston horizontal oil engines, ranging from 20 h.p. to 156 h.p., will drive pumps to divert the waters of the Karun river to rice, date, maize, barley, cotton and tobacco crops in the area.

The production and export of the British plastics industry touched record heights during 1955. Thus, the output reached about 320,000 tons, an increase of 46,000 tons over the 1954 total of 274,000 tons and more than double the production 5 years ago (155,000 tons in 1950). Practically, all branches of the plastics industry improved their production and the increase was particularly marked in thermo-plastics materials. Exports of plastics materials in 1955 amounted to 85,000 tons, valued at £23 million, a rise of more than 11,000 tons and of £2.25 million on 1954, the previous highest figures. The tonnage shipped was more than 4 times that in 1947, when it was 21,000 tons, and approached 20 times the 1938 figure of 4,300 tons. Australia with over £3 million imports remained the best market, and South Africa, Denmark, Sweden and the Netherlands with over £1 million each were among the countries to which exports showed rises.

PERSONAL

MR. Naval H. Tata, a Director of Messrs. Tata Sons Ltd., Bombay, returned on Sunday this week after attending the meeting of the Governing Body of the International Labour Organisation.

Mr. C. E. J. Crawford of Imperial Chemical Industries of India Ltd. has been elected Chairman of the Paint Federation of India for the year 1956.

Mr. Shankarbhai P. Patel, District Traffic Superintendent, Bulsar, Western Railway, has been appointed Deputy Director (Transportation), Railway Board, Government of India.

Mr. H. T. Parekh, B.Sc. (Econ.) (Lond.), of the firm of Harkisondass Lukhmidass, Stock Brokers, Bombay, has been appointed Deputy General Manager of the Industrial Credit and Investment Corporation of India, Limited, and will join the Corporation on the 29th inst.

Prof. M. G. Kendall, Professor of Statistics in the University of London and a Director of the Division of Research Techniques in the London School of Economics, arrived in Bombay on Sunday last. During his brief visit, Prof. Kendall will discuss with the Indian Market Research Bureau, a subsidiary to Messrs. D. J. Keymer & Co., the problems connected with applied market research techniques in India.

Messrs. Chandulal Kasturchand, Rameshwardas Sabu, Bissessarlal Chirawawala, Nagarmal Sharaf, Basudeo Somani, Jwalaprasad Tiwari, Dalsukhlal Amthalal, Mangulal Trikamlal, Motilal Manilal, Kantilal Manilal, Mangaldas Kalidas, Maganlal S. Damani, Premchand Kedia, Mangaldas Ranchhoddas, Parikh Chandulal Dalsukhbhai and Vadilal Chhaganlal have been elected Directors of the Bombay Bullion Association for the new year. Mr. Chunilal B. Mehta and Mr. Mahavirprasad Ramrikhdas have been co-opted as Directors.

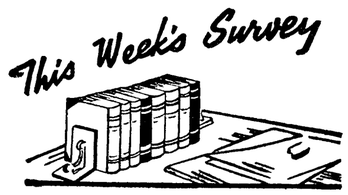
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, 21*st March*

Motor Vehicle Trade

The immediate outlook for the motor vehicle trade may not seem to be so promising as it was a year or so ago. But better times are ahead. And an encouraging factor is the new road-building programme which, when completed, will provide India with a number of good roads suitable for motor traffic. Some of the existing Indian roads are undoubtedly as good as any in the world. The fact, however, remains that there are thousands of square miles of country where no roads of any kind whatever exist. British India, with an area of well over a million square miles and a population of 350 million, has 454,000 miles of roads of all classes, but only 60,000 miles of these are good surfaced roads and a large amount of this mileage is unsuitable during several months of the year. Fortunately, increased attention is now being paid by both the Central and Provincial Governments to the provision of more roads and better roads. Then, again, during the last four years, there has been a marked change in the viewpoint and habits of the people of this country. There has not only been considerable expansion of the railway system but also a corresponding increase in the demand for motor transport. One has only to go a few miles out of the great cities of India today to see how a growing system of passenger buses is linking up the villages and towns. If the present rate of progress in the use of cars and passenger and goods trucks continues—and there is no doubt that it will, since Mr. Gandhi himself often uses a motor car—there will, within the next twenty years, be more than a million motor vehicles on the roads of India, Burma and Ceylon.



PROBLEM BEFORE SUGAR INDUSTRY

THE current sugar season is expected to witness a record level of production of white sugar. Presiding over the meeting of the Development Council for Sugar Industry, held at New Delhi last week-end, Mr. T. C. Puri, Joint Secretary, Union Ministry of Food and Agriculture, for instance, estimated the output at 1.70 million tons during 1955-56, that is, 110,000 tons more than the previous peak production of 1.59 million tons, touched in 1954-55. Thanks to the anticipated rise in output and to the huge opening stocks of 553,000 tons—indigenous and imported—the aggregate supplies of sugar will amount to over 2.25 million tons, as against 2.24 million tons in the preceding season. The consumption of sugar is also expected to rise; Mr. Puri places it at more than 1.8 million tons. Nevertheless, the surplus of supplies over consumption will be fairly wide, being of the order of 450,000 tons. This surplus is likely to increase further in the coming seasons, what with the expansion in the production capacity of the industry accompanied by an increase in acreage under cane. Indeed, there is, as Mr. P. Hadfield, Managing Director, Parry & Co., Ltd., stated at the meeting of the Development Council, a possibility of over-production of sugar within the next two or three years.

This brief account brings to the fore a most important issue: How best could any surplus sugar be disposed of? The poser did no doubt figure prominently in the discussions at the recent New Delhi meeting of the Council, but the answers provided by several members lacked correct appraisal of the situation. Thus, all stress was laid only on the need for promoting exports and stopping imports, as witness the remarks of a prominent member of the Council, Sardar Lal Singh, M.P.: "In case of over-production, the surplus sugar should be exported on a subsidised basis, in order to remove uneasiness in the minds of millowners and to stabilise the industry for all time. This is done by all other exporting countries and can also be done easily in India, where the surplus, if any, will form a small portion of the total production. The Government should definitely make up their mind not to import sugar in future, because the Indian sugar industry is capable of meeting the entire domestic demand of this important article of food."

While exports of sugar may be considered desirable from the point of view of earning precious foreign exchange, the scope for any large exports is very much limited. Even if exports were to be subsidised, the competitive capacity of Indian sugar in world markets would be poor, on account of the high cost of manufacture *vis-a-vis* that of sugar produced in other countries. It is the high cost of sugar that has been responsible for the low level of domestic consumption; the *per capita* consumption of white sugar now averages just 10 lbs. If, therefore, the capacity of the country to absorb more white sugar is to be stepped up, it is imperative that the price of sugar should be reduced substantially. There are two obvious ways of bringing about such a reduction in price. First, the per-acre yield of sugarcane with a high sucrose content must be raised by intensifying cultivation, not to speak of the need for lowering cane prices. Secondly, the heavy burden of taxes—Central and States—must be lightened considerably. These are the most pressing problems confronting the sugar industry, to the solution of which the Development Council will have to address itself in right earnest. Viewed thus, the Council's decision to set up a committee to examine the question of disposal of surplus sugar stocks in case indigenous production exceeds internal demand in future is not of much importance.

Be that as it may, the Council at its recent meeting, adopted the report of its expert committee appointed to prepare a plan for the rehabilitation of unsuitably located and idle sugar mills. The Committee recommended the shifting of only two plants and feels that 14 factories could be rehabilitated at their existing sites, if measures were taken for the development of sugarcane and communications in their areas of operation. It did not consider it worthwhile taking any special measures for rehabilitating 13 factories, owing to their plants being of uneconomic size. It did not also favour the grant of any special help to individual factories considered to be unsuitably located for development, in view of the assistance to be provided under the second Five-year Plan.

The question of formulating a programme for the development of the sugar industry under the second Plan also came up for consideration before the Council. The discussions centred round the report of a committee appointed previously. The Council finally decided to call a meeting, some time next month, to consider the Committee's report. During the discussions, it was emphasised by a representative of labour that it would help achieve the production target in the second Plan, if measures were taken for enhancing the productivity of labour by provision of better working conditions and amenities. In view of the importance of the subject, the Council decided to set up a sub-committee to go into the issue.

The question of sugar machinery fabrication in India and its utilisation in new factories to be put up under the second Plan was also raised in this connection. It was pointed out that a large number of *entrepreneurs* of new factories preferred to import complete plants from abroad and were not prepared to use the machinery manufactured in the country. Even such small items as gutters and pumps were required to be imported. This is only to be expected. One of the reasons why the import of foreign machinery is insisted upon is that factories have no qualified staff to guide them regarding the selection of machinery. Before one thinks of giving an impetus to the sale of sugar machinery and equipment, it is necessary to employ adequate technical staff for preparing specifications and placing orders for the machinery from the supplies available in India and abroad. The Council did well to emphasise this aspect and there was general support to the present policy of restricting imports to such machinery as was not at present made in the country.

The issue relating to sugar machinery is a vital one, considering that the sugar industry has now entered a new phase of development and expansion. The production target for sugar is fixed at 2.25 million tons in the second Plan. For achieving the target, it is proposed to augment the installed capacity of the industry to 2.50 million tons per annum. In pursuance of this programme, licences have already been issued, according to Mr. T. C. Puri, for setting up 50 new factories, of which 25 will be established on a co-operative basis. Licences have also been issued for a substantial expansion in 46 existing units. The total additional capacity that will become available as a result of these measures will be 850,000 tons—550,000 tons from new units and 300,000 tons through expansion of existing capacity. Considering the speed with which the proposed expansion is being carried out and new factories set up, there is, of course, no reason why the target envisaged in the second Plan will not be achieved. But the question is: At what cost? For, it is not enough that the targets should be reached. It should be reached through production of sugar at a price that the consumer can pay, if burdensome surpluses are to be avoided.

BHILAI STEEL WORKS

The Government of India has accepted the detailed project report submitted by the Soviet authorities in December 1955 for the erection of a steel plant by the Russian Government at Bhilai. Letters relating to certain modifications, which have been agreed upon to be incorporated in the design of the steel works, have also been exchanged between the two Governments. The detailed project report, drawn after discussions between the Indian Steel Mission, which visited the U.S.S.R. in August-September last year, and the Soviet experts, provides for the construction of steel works at Bhilai with three blast and six open hearth furnaces. It will be recalled that the draft agreement concluded between the two Governments in February last contemplated the erection of a steel plant with only two blast furnaces.

It is stated that the output of these blast furnaces will be increased significantly by the use of high top pressure in the blast furnaces and the sintering of iron ore. Steel will be produced by the straight basic open hearth process in the six open hearth furnaces. Ingots produced will be of six to seven tons in weight. But the large 1,150 mm. blooming mill will also be capable of handling 10-ton ingots. The rolling mills will be of modern design and layout and incorporate technological improvements well proved in the U.S.S.R. The capacity of the plant will be, besides 300,000 tons of saleable pig iron, one million tons of ingots yielding about 770,000 tons of rails, heavy and medium structurals, light structurals, sleeper bars and billets. With slight additions to the plant, such as an additional open hearth and a group of soaking pits, the capacity of the plant can be raised at any time to 1.3 million tons of ingots. No further additions to the rolling mills will be required to finish the additional ingots. Apart from this, the plant will be so laid as to expand it in the future to produce up to 2.5 million tons of ingots.

The Bhilai steel works will use the hitherto unexploited iron ore resources in the Dalli-Rajhara Pahar area, about 60 miles to the south of Bhilai. Coal will be drawn from Jharia, Bokaro and the nearby Korba fields now being developed. Power for the steel works will be supplied from a thermal station to be established on the coalfields of Korba by the Madhya Pradesh Electricity Board.

The equipment for the plant and the cost of constructing is estimated together at about Rs. 110 crores. The cost of equipment to be supplied by the U.S.S.R. will be approximately half of this amount. The steel works is expected to achieve full production by December 1959, but two coke oven batteries, two blast furnaces, two open hearth furnaces and the blooming mill will be commissioned about a year earlier.

Giving more details about the Bhilai steel plant in the Lok Sabha on the 8th inst., Mr. T. T. Krishnamachari, Minister for Commerce and Industry, disclosed that about 300 Soviet experts were likely to arrive in India in connection with the erection of the Bhilai steel plant and Indian experts would be associated with them. He added that the requisite equipment for the steel plant would begin to be shipped from the U.S.S.R. from the middle of 1956. Shipments would continue up to the end of 1958.

The Commerce and Industry Minister further stated that the processes to be adopted at the Rourkela and Bhilai plants would be different from each other. The Rourkela process would be a new one by which oxygen would be blown into converters. This was expected to save certain amount of labour. Asked whether this would mean that the Soviet process was not as modern as that to be adopted at Rourkela, Mr. Krishnamachari said, "It depends on what type of steel you want. In Rourkela, where they would make steel sheets, etc., a certain amount of carbon content was required." Mr. Krishnamachari stated further that the report of the Indian Steel Mission, which visited the U.S.S.R. to study the Soviet steel plants, was confidential and that it would not be in the public interest to reveal any information contained in it.

PAYMENT TO DOCK WORKERS

It is gratifying to note that new schemes for ensuring more secure employment and speedier turnround of ships have been worked out by the Government of India. It is proposed to achieve these results chiefly by the introduction of payment by results and a better administrative machinery for handling the dock personnel in place of the existing ones which have been found to be inadequate. The new schemes also seek to increase progressively the minimum number of days in a month for which wages are guaranteed to registered workers in the reserve pool.

Drafts of the revised schemes for Calcutta and Madras, which have been formulated on the basis of recommendations of the Dock Workers Enquiry Committee, have been published for eliciting public opinion. The draft scheme for Bombay is expected to be published soon. Indeed, the most notable feature of the revised schemes is the importance attached to the system of payment by results. This system has been tried elsewhere and proved quite sound. The studies of the International Labour Office, Geneva, in wage problems have also disclosed that the system of payment by results is now widely prevalent in many important industrial centres of the world, and that, in many industries, workers paid by results generally earn more than those paid on time-work in the same occupation or trade. By the introduction of the system here, the Indian dock workers, too, stand to benefit considerably.

Under the new schemes, the Dock Labour Boards at ports will prescribe forms of productivity in respect of cargoes of different kinds. A worker will be entitled to daily wage proportionate to the standard of output and there will be a basic floor. He will be entitled to a liberal incentive bonus if his output is more than the specified standard.

The Dock Labour Boards will be concerned with matters of policy and will not be responsible for the day-to-day implementation of the decisions. The Chairman of the Board in Calcutta will be able to depute many of his powers to a Deputy Chairman. In Madras, the powers will be delegated to an executive officer by the Chairman of the Board there.

The powers of handling personnel matters vest at present in comparatively junior officers known as special officers, who have not been able to function effectively. The new schemes, therefore, provide that these powers should be exercised by senior officers having sufficient authority like the Chairman and Deputy Chairman, with provision for appeal to the Central Government against any original order of the Chairman. This will give a feeling of security to workers.

SELF-SUFFICIENCY IN COCONUTS

Self-sufficiency in coconuts is the aim of the various schemes proposed under the second Five-year Plan. The draft second Plan seeks to raise the production of coconuts by 30 per cent. over the present estimated output of 3,350 million nuts from an area of 15.64 lakh acres. How is this to be achieved? The cultivation of coconuts requiries both short- and long-term planning. And the cultivators must be assured of an adequate reward for their labour, if they are to be induced to implement such plans. In this connection, it is interesting to note that Mr. M. S. Randhawa, President of the Indian Central Coconut Committee, in the course of his address to the recent annual meeting of the Committee, suggested the constitution of a sub-committee of the Coconut Committee to consider the fixation of a fair minimum price for coconuts. This suggestion, it is stated, has been prompted by the recent downward trend in coconut prices. There is no doubt that this suggestion requires the consideration of the Government, as the persistence of an uneconomic price for coconuts will be hardly any incentive to extend coconut growing. But the question is whether such a scheme could be implemented in respect of a somewhat unstandardised commodity like coconut, grown in many regions.

Mr. Randhawa suggested both long- and short-term measures to augment production of coconuts. The long-term measure as pertinently pointed out by him, should include augmentation of the production of coconut plants in nurseries, while the short-term measures should cover improvement in cultural and manurial practices as well as in the control of pests and diseases. A coconut tree, as is well known, will start bearing fruits only after about 10 years of its planting. The effect of increased production of seedlings from nurseries and planting of more area will not, therefore, be noticeable before 1965.

There is, according to Mr. Randhawa, considerable scope for the extension of coconut cultivation in Saurashtra, West Bengal, Hyderabad and the Andamans. It is stated that there is a stretch of land on the sides of railway lines in all coconut-growing States, which might be profitably brought under coconut cultivation. It will be recalled that, in 1953, the Coconut Committee requested the railway authorities to explore the possibility of growing coconut trees at the sides of railway lines. Unfortunately, no effective action has been taken so far. Mr. Randhawa disclosed further that there was scope for plantation of coconut palms in the Godavari and Krishna deltas and on the embankments of canals and channels in Mysore and Travancore-Cochin States.

A notable feature of Mr. Randhawa's address is the stress it laid on the need for greater co-ordination of the working of Coconut and Arecanut Committees. Both the Committees deal with tropical crops and have, therefore, many common problems. Mr. Randhawa expressed the view, that, through co-operation alone, these two Committees would be able to bring down the cost of administration and the savings effected thereby might be utilised for research work. He proposed the constitution of a five-member sub-committee to enquire into this problem and suggest ways and means for co-ordinating the work of the two Committees. Further, he suggested the re-organisation of the Agricultural Research Sub-committee of the Coconut Committee into Agricultural Research and Development Sub-committee, with two sections, one dealing with research and the other development.

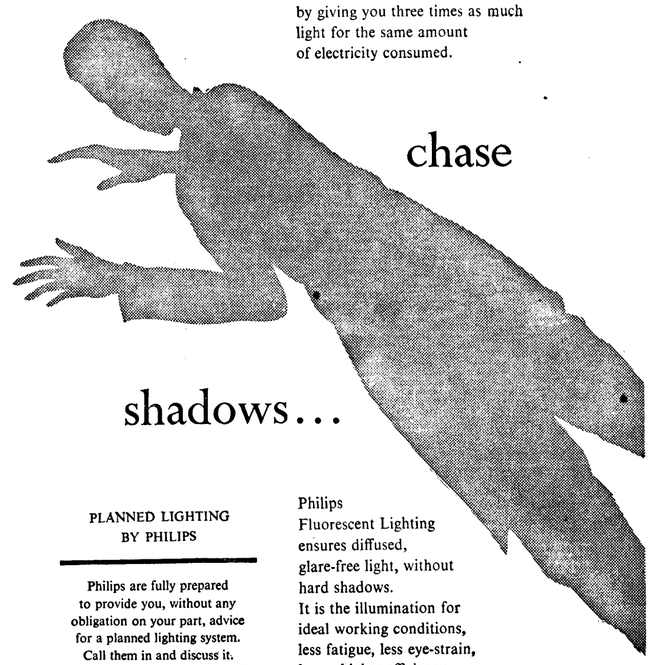
don't chase shadows...



An attempt to combine economy with efficiency is often like chasing shadows. Planned Lighting, however, is a sure road to success. Planned Lighting means greater output, fewer accidents, less absenteeism. It's Fluorescent Lighting—by Philips—which will help you reduce overheads by giving you three times as much light for the same amount of electricity consumed.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it. Philips Electrical Co. (India) Ltd.

Philips Fluorescent Lighting ensures diffused, glare-free light, without hard shadows. It is the illumination for ideal working conditions, less fatigue, less eye-strain, hence higher efficiency and increased production. Why not try it out yourself? Ask Philips Lighting Service Bureau to examine your existing installations and submit recommendations for any improvements required.

PARLIAMENT MEMBERS URGE STRENGTHENING COUNTRY'S DEFENCE

FINANCE MINISTER ON ADDITIONAL TAXATION

From A Special Correspondent

NEW DELHI, 13*th March*

THE echoes of the S.E.A.T.O. Conference held in Karachi a few days ago, particularly the pronouncements of the U.S. Secretary of State, Mr. John Foster Dulles, on this occasion, were fully reverberated in the Indian Parliament this week. Many responsible members of Parliament did not fail to draw the attention of the Prime Minister as well as that of the Defence Minister during their speeches on the Central Budget to the growing military strength of Pakistan as a result of large-scale military assistance given by the U.S. Some were of the opinion that the increasing number of Indo-Pakistan border incidents in recent weeks were the result of mounting U.S. military aid to the latter, and the deliberate effort of that country to continue to give India incessant trouble.

DELHI LETTER

Defence Economy

The repeated observations by members of Parliament on the need for strengthening the defence economy of the country during the Budget debate forced the Defence Minister, Dr. K. N. Katju, to intervene in the debate and to make some statements on the points raised by them. He pointed out that the basic idea of the Government of India was to make the armed forces well equipped and self-sufficient and to look after their comforts and conveniences. He also revealed that the armed forces had been almost completely Indianised but for a few officers in the navy and also contract officers in the army. About defence industries, he said that Government's objective was to become self-sufficient to as large an extent as possible in the production of war materials of every kind. He was anxious that there was no want of military equipment they required. He stated that machineries in ordnance factories were being adjusted in such a manner as to be able to produce some useful defence equipment. He also recounted briefly the progress of the Hindustan Aircraft Factory, Bharat Electronics, etc.

The debate on the Budget further revealed that all members were agreed on the building up of Indian industries with the utmost speed, although there were ideological differences in the approach. Business men naturally reiterated with emphasis the laudable part which the private sector had played during the first Plan by exceeding the target set for it in most spheres and urged rightly that if suitable climate were created and adequate opportunities were afforded, the private sector could contribute greatly to the development of the country. Some other members, particularly Praja-Socialists and orthodox Congress men, continued to harp on the great potentialities of the *Ambar Charka* and desired that full scope should be given to its development.

Generally speaking, many well-informed members of Parliament were inclined to approve the Government's economic policy, its philosophy behind the second Plan, its policy of flexibility and adjustability, etc. While broadly approving Government's proposal for large-scale deficit financing, they desired that Government should keep a strict watch over the progress of deficit financing, so as to prevent its deleterious effects sufficiently early. Some other members who participated in the Budget debate spoke from their local angles such as the development of particular projects which would confer benefits either to their constituencies, districts or States.

The Finance Minister, Mr. C. D. Deshmukh, who replied to the debate, was in a confident mood about the country's inherent capacity to go through the second Plan. He appeared to maintain that the proposed scale of deficit financing was within the ability of the country to withstand and that the Government would be able to check inflationary tendencies, should they arise during the implementation of the Plan. Mr. Deshmukh indicated a number of principles and policies which he would be following in the coming months in the orderly financing of the Plan. He pointed out that the total expenditure of a capital nature for the first year of the second Plan would come to a little over Rs. 700 crores, besides a certain amount of development expenditure which may roughly be estimated at about Rs. 100 crores. He revealed that in 1955-56, they had spent about Rs. 650 crores on Plan expenditure as against the proposed expenditure of a little over Rs. 700 crores. In order to prevent any slackness in planned expenditure, the Government must from now on accelerate the quantum of expenditure.

Taxation

This apart, the Finance Minister reiterated the view that additional taxation was inseparable from a bolder plan of economic development and drew the attention of Parliament to the fact that the successful implementation of the Plan could not be assured without the levy of additional taxation, and the proposals made in this respect should be judged in the light of the Plan and not in the light of the Budget surpluses. He revealed that taxation in the country in the coming years would be maintained on a progressive scale and in this connection, remarked: "Taxation has to come out of current increases in incomes. Since investments have to be made year after year, and since this is not a one-year but a five-year Plan and as national income rises out of the increased amount of marginal savings, we will take in more, both through borrowings and savings and taxation." In other words, fresh taxation would be imposed year after year taking into consideration the national income in the country, the general capacity of the people and general suitability of particular imposts, direct or indirect, etc.

Mr. Deshmukh maintained that borrowings from the public through the medium of loans and small savings would be kept up to the utmost limit with a view to reducing the dose of deficit financing. He, however, stated that a great deal of money would have to be put into circulation, before it would be possible for him to mop up the surplus. In this connection, he gave out some figures in order to indicate the success of Government's loan policy. The net borrowings (total borrowings minus repayment of loans) were Rs. 45 crores in 1953-54, Rs. 100 crores in 1954-55 and Rs. 82 crores in 1955-56. For the next year, he had budgeted for Rs. 100 crores for the Centre alone—and no loans were maturing next year for payment—and the States would be going in to the market separately. Last year, the States were able to collect nearly Rs. 50 crores and this year, they might repeat or even exceed this figure. The Finance Minister was conscious that he would be able to keep the country's economy on an even keel by preventing any runaway inflation. He stated that Government was fairly familiar with the fiscal, monetary and physical measures that would enable a country to deal with incipient inflation. He did not agree with the view expressed by some that corporate taxes would discourage investment, but pointed out that the whole question should be viewed in the light of large-scale expenditure in the second Plan on industrial development. Even in regard to the levy of excise duty, he was of the opinion that the common man too had to contribute his mite towards the running of the government and financing of development expenditure. He concluded by saying that "our taxes are as enlightened and as progressive as anywhere and they make no grave encroachment on the standard of life of anyone."

LIGHTENING THE PRESSURE ON BRITISH ECONOMY

EFFECT OF NEW MEASURES

By Ernest Atkinson

WITH the comfortable majority of 325 votes to 259 at the end of the recent two-day Commons debate on a motion of confidence in the measures the British Government proposes to use to deal with the economic position, attention now turns to the working out of these measures and the question, which some commentators have suggested, of whether they will, in fact, prove adequate. Briefly, these are: the credit "squeeze" and higher Bank rate, which could, of course, go higher still, if it were thought useful; cuts in national and local government expenditure and in the capital spending of the nationalised industries; discouragement of over-high levels of investment in industry; cuts in the subsidies on bread and milk; restrictions to make hire-purchase more difficult. All these weapons in the attack on inflation are to be used until demand can be seen to be matched with resources.

Before the debate, there had been fears that the economic point of the argument between the Government and the Opposition in the Commons might be lost in mere party-political bickering. But though indeed, there was a certain amount of recrimination of that kind, it was generally agreed afterwards that the Leader of the Opposition, Mr. Hugh Gaitskell, in particular had answered Mr. Harold Macmillan (now, as Chancellor of the Exchequer, holding the post Mr. Gaitskell had in the last Labour Government) with a very fair exposition, from his own point of view, of what was the matter and what remedy should be followed. And—as one commentator not always favourable to the Labour Party put it—little or nothing was said in the debate to bedevil the industrial situation.

There, indeed, is a point. For there are wage claims already in, or about to enter, the negotiating machinery; there is the General Council of the Trades Union Congress in the process of formulating its views on the prospect before us; and there is a situation—by no means desperate, but admittedly serious—to be cured. Any sound assurance that industrial trouble will not complicate it further is greatly to be welcomed.

Should the Chancellor of the Exchequer deem anything further to be necessary, he could, of course, act at any moment. But the next likely occasion for a review, and for any new measures to be taken, would be in the Budget.

The date for that is not yet officially announced, but the general view is that it would be in early April. We have, therefore, six weeks or so in which to see how matters develop and whether, in fact, the Chancellor will need to adopt the further measures that he assured the Commons, at the very outset of the debate, he has in reserve.

For, apart from the reductions in prospective expenditure that he listed—they come to something like £100,000,000 in all, and may well turn out larger—there are important incalculables; and they, according to unofficial as well as official estimates, may come to an additional £100,000,000 worth of excess demand on the capital side to be squeezed out of the economy.

One may put the sources of these incalculables under three heads: (1) The investment allowance for industry, which was, in effect, a subsidy for new plant, has been ended. This does not mean that new investment is brought to an end—far from it. But it does mean that firms will have to be convinced very thoroughly of the worthwhileness of investing in new plant before they go ahead. (2) If their new plant or other expansion projects involve raising more money, they will have to pass scrutiny of newly intensified strictness by the Capital Issues Committee. The effect here may well be—and indeed, there are signs that it already is, in some instances—that many less worthwhile projects will not come to the starting-point. But where the backers of an enterprise are convinced their project is in the national interest, they will have no fear in applying to the Committee for its authority. (3) Local-government authorities, whose capital investment is reckoned to account for perhaps a quarter of the national figure, have now a considerable accumulation of restraints on their capital spending. Decisions have to be made according to the merits of individual cases; but there must be a formidable effect here. In all, the extra £100,000,000 may well be an underestimate.

From the fine, confused welter of metaphors that economic discussions in Britain these last

(Continued in previous column)

(Concluded from next column)

few weeks has produced, there is one that stands out, in the suggestion that by cutting investment—and certainly industrial re-equipment can show some formidable needs—the Government is killing the goose that would be laying the golden eggs of future years.

The answer given to that is that indeed Britain's domestic capital investment ought to be higher than it has been, and that, in fact, investment this coming year may well be higher than before; but that this and continued advance can only be achieved, if the heavily excessive pressure on the economy can be lightened. This the new measures are intended to do.

AMERICAN LETTER

CONTROLS OVER CONSUMER CREDIT

FISCAL AND CREDIT AUTHORITIES PLEAD FOR THEIR RENEWAL

From Our Special Correspondent

NEW YORK, 9*th March*

THE outlook for the business and financial markets in the United States is still excellent on an overall basis. Some soft spots are in evidence, but they do not detract much from the picture of general prosperity. The demand for housing and automobiles has been slower in recent weeks and months, but the slack has been taken up by other industries like construction, so that the demand for steel, for example, remains at high levels.

The current wave of optimism was sustained and strengthened by President Eisenhower's announced decision to be a candidate for a second term in the White House. Since the law has been changed, this is his last chance to aspire to the highest political post in the country. No President may serve hereafter more than two terms of four years each.

The only thing which remains to be settled in the political arena in America is who the President's running mate as Vice-President is going to be. The final decision on that point is going to rest with the Republican National Convention at San Francisco this coming August.

Retail trade has held up better than expected and the prospects in this area are also very good, indeed. An indication of the general prosperity prevailing here also is that savings are pouring into mutual savings banks at a rate faster than they can invest them. It is quite a problem among managements.

The hardening of interest rates, which has been in progress for some time, has pushed up the interest rate on savings accounts to about 3 per cent. per annum. Most of the savings banks have invested just about half of their resources in mortgages which pay more than 3 per cent. However, when the influx of money becomes overwhelming, the banks face the dilemma of having to invest their funds in Treasury, State or municipal obligations, most of which pay considerably less than what they have to pay their depositors. The plethora of funds is a real problem.

Another indication of prosperity is spending by industry for plant and equipment. It looks, at this point, as though 1956 may be as good in this respect as 1955, if not better, owing to constant technological improvement which make necessary the replacement of machinery which was considered up to date, say, two years ago, but which is regarded as obsolete today.

One subject of particular interest to India should be cotton. Important progress is expected to be made in the disposal of farm products, now held by Washington agencies under the agricultural price support programme. As a first step, some $2,000 million worth of surplus cotton will be sold to the highest bidder overseas. Some 12 million bales of the commodity are involved. However adroitly the negotiations may be handled, the world price of cotton may be depressed by this offering.

The securities investment markets are in good shape. Many new issues are planned, but, in view of the large amount of savings, there should be no difficulty in placing them in the proper channels.

As usual, disturbing elements are in the minds of the American financial and business community. One of them is the smouldering controversy between Israel and the Arab countries. There is also still the unresolved problem of Asia in general.

The First National City Bank has just issued a very favourable report about the achievements of India's first Five-year Plan and the good it has accomplished in helping to feed the growing population of India. It has also outlined the aims of the second Five-year Plan of the Government of India.

Back in the United States, there have been no notable changes, except, perhaps, higher wages and higher fringe benefits for workers which are potentially inflationary. That is why there has been no real relaxation of tight monetary credit policies by the Federal Reserve System. In view, however, of the abovementioned soft spots in the U.S. economy, there have been no changes of import in interest rates. It is dubious, though, whether the U.S. can disassociate itself from the world trend and much attention has been paid in financial quarters to increase in the British Bank rate from 4½ to 5½ per cent.

Britain took steps to tighten its hire-purchase rules and, here, in the U.S., a similar trend is in evidence. Fiscal and credit authorities have made appeals for renewal of controls over consumer credit. New Federal legislation would be required to reinstate the regulations which were in effect during the war.

Like in Britain, in official quarters, the danger of inflation is regarded as much greater than that of deflation, despite the acknowledged soft spots in the U.S. economy. Hence, restrictive measures are being employed to stem the enthusiasm in a booming economy. Nobody knows whether this course is right or wrong. Many new factors have entered the American picture. Like in India, there is a constant increase in population in the U.S. It means greater demands for necessities, services, supplies and a variety of other human wants.

Along those lines, labour organisations have pressed for pension and retirement plans which are gradually becoming important factors as investors in the American securities markets. Despite the original objection of management to this movement, these trade union activities have turned out to be a stabilising element in the U.S. And as these organisations accumulate thousands of million of dollars, their influence in the U.S. economy is apt to increase.

An indication of the general U.S. prosperity is provided by the travel and resort industry. More people than ever get paid vacations and spend their money away from home. The expectation for 1956 is that 10 per cent. more will be spent in this field by Americans than last year. This type of spending supports many areas of endeavour and provides important sources of "invisible" income all over the world.—*All Rights Reserved.*

NEW MINIMUM WAGE IN U.S.

About two million industrial workers in the U.S. have received direct wage increases as the national minimum wage has become one dollar an hour with effect from the 1st inst. The previous minimum was 75 cents an hour. The new minimum wage will have an indirect influence on wage differentials for about 22 million other industrial, commercial and transportation workers covered by the law who already earn a dollar or more an hour. These workers are expected to receive compensating increases to maintain their differential over craftsmen with lesser skills.

The Labour Department estimates that consumer purchasing power will be increased by nearly $600 million annually, as a result of the new basic minimum. The new minimum is provided under an amendment to the Fair Labour Standards Act of 1938, which established a minimum wage and overtime pay provision for workers generally engaged in interstate commerce. The federal minimum of 75 cents has applied since a 1949 amendment. However, hourly pay for production workers in manufacturing industries today averages slightly more than $1.80.

Manufacture of Polythene in India

Imperial Chemical Industries Limited have received the approval of the Government of India to a project to manufacture polythene in India. The manufacture will be undertaken by the I.C.I. associate, The Alkali & Chemical Corporation of India Limited in which the Indian public has a substantial shareholding. The project will involve a total investment of about Rs. 3 crores.

Polythene was first discovered in the research laboratories of I.C.I. Ltd. in the U.K. The process to be used in India will be that developed by I.C.I. and used in the manufacture of their well-known 'ALKATHENE'. The use of this product in India has been developed by I.C.I. (India) Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. As elsewhere, the largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

BANKER'S REVIEW OF ASIAN AND EAST AFRICAN ECONOMIES

FIRMER RATES OF INTEREST CONSIDERED LIKELY

WITH more goods available for export following the implementation of the development programmes, men engaged in Indian industry and trade will have to be on the look-out for expanding the existing markets and exploring new ones for disposal of surplus goods. They have, therefore, to keep themselves in closer touch than hitherto with the business conditions in the various countries, especially in Africa and Asia where they have already established trade relations. They will perhaps derive considerable benefit from the appraisal of the present state of the economies in the two continents made by Mr. J. K. Michie, Chairman, the National Bank of India Ltd., London.

In his customary statement issued along with the Directors' report for the year ended December 1955 to the shareholders of the National Bank of India, Mr. Michie has given a bird's-eye view of the business conditions in the areas where this Exchange Bank is carrying on banking operations through its branches. The review covers Britain, India, Pakistan, Burma, Ceylon, Aden and East African territories including Kenya, Uganda, Zanzibar, etc.

Mr. Michie appears to be concerned more with developments at home than in areas where his Bank is carrying on operations. This is as it should be. For the economic measures taken by the Government in the U.K. will have repercussions elsewhere. For instance, it is vital to the Bank, if the U.K. continued to make important contributions to the Colombo Plan and to other similar developments in the Commonwealth as well as to expand its investments abroad through private enterprise. "If we cannot do these things, we shall," says Mr. Michie, "lose our place in the markets and in the regard of the countries concerned." Again, he points out that the effects of the credit squeeze do not begin and end in London or in the U.K. It is true that the centre of the sterling area takes the first pressure, but the effects of action at the centre necessarily work their way outwards. And it would be idle, he avers, to suppose that borrowers near the periphery of the sterling area will remain unaffected by recent monetary measures in the U.K. Overseas banking cannot but be made, he emphasises, increasingly aware of this aspect of the squeeze during the current year. It is interesting to note that Mr. Michie does not rule out the prospect of seeing firmer rates of interest in many countries which to outward appearances so far have not been affected.

Describing the position which led to the raising of the Bank rate in the U.K. to 5½ per cent. and to other credit squeeze measures, Mr. Michie observes that, during 1955, production in the U.K. was increased by about 4½ per cent. but spendable incomes rose by 7 per cent. As these incomes were spent, inflation occurred at least to the extent of the difference in that year. Pointing out how the sharp fall in the gold and dollar reserves was reflected in the U.K.'s adverse balance of trade, he visualises the imposition of further anti-inflationary measures upon the country, if the people as a community, fail to impose restrictions on themselves. He opines that the alternatives to a policy of reducing the volume of goods for internal consumption is either to make them more expensive (by means of a purchase tax) or to ensure through taxation that less money chases the goods available.

In his review of economic conditions of India, Mr. Michie gives an outline of the second Five-year Plan and nationalisation of the Imperial Bank of India and life insurance business. The latter action has created an uncertainty in the minds of industrialists, Indian and foreign alike, regarding the Government's further intentions towards the private sector. He notes, not without some disappointment, that the uncertainty has not been relieved by the principles of policy outlined by the authors of the second Five-year Plan. He expresses regret at the bank strikes and suggests that if the Government is to lay down any rules, it should at least ensure that both banks and their employees observe them. The alternative, according to him, is anarchy and the impossibility of banks carrying out their obligations under the Negotiable Instruments Act, which, in turn, would mean the paralysis of business—a state of affairs which was within a hairbreadth of happening in Calcutta early this year.

Mr. Michie considers that the revaluation of the Pakistan rupee is a wise decision, as it puts the country in a much better position to market its exports. With good crops in 1955, the Pakistan economy is stated to be more stable. The stability is also due to the austerity campaign started by the Government which cut imports very severely.

The economic picture of Ceylon is stated to be a favourable one. The country's balance of trade has improved considerably owing to lower rice prices combined with a larger internal production. Rubber prices remained at remunerative levels, but tea prices oscillated. The increase in rice output is considered to be a fine achievement.

Burma's position is, however, not encouraging. Decline in prices of rice has adversely affected the economy and the country's balances have fallen sharply from £41½ million to £32 million. This is partly due to larger orders placed in the past for importation of machinery. Mr. Michie thinks that Burma is not likely to solve its problems by barter transactions. He opines that improved port facilities and internal transport are the first necessities of further economic progress in Burma.

Among East African territories, in Kenya, the extreme phase of the Mau Mau movement having been over, there is some relief to the Government which is today faced with rehabilitation work. In 1955, the crops there were good. In Uganda, cotton had to be supported by the Cotton Price Assistance Fund. Sisal prices in Tanganyika were favourable and there was expansion in cotton and coffee crops. In Zanzibar, clove stocks were rising, while copra prices remained steady. Aden continued to be one of the most important fuelling ports in the world. It is stated that prospecting work is being carried on there, and any success is sure to add to the importance of the colony. The traditional entrepot trade is being well maintained.

U.K. BANK RATE AND INDIA

Replying to a question in the Lok Sabha the other day, Mr. C. D. Deshmukh, the Union Finance Minister, stated that the change in the British Bank rate announced recently by the U.K. Government was not likely to affect India's export trade with the U.K. He said that it was difficult to say what exact effect this general tendency would have on the trade between India and the U.K. According to the Minister, the main items of India's exports to the U.K. were tea, jute goods, leather and leather manufactures and tobacco. The demand for most of these items was, generally speaking, not likely to be affected significantly by the disinflationary measures adopted by the U.K. Government. India's imports from the U.K. consisted mainly of machinery, chemicals, iron and steel, vehicles and metal manufactures.

It was not easy to estimate at this stage to what extent the supply of these articles would be augmented by the restrictions on the production of consumer goods which the disinflationary policy of the U.K. would cause. Nor was it possible, according to him, to say that the prices for these articles would go down appreciably.

Mr. Deshmukh was not in a position to envisage the effect of the disinflationary measures that were now being adopted either on the price or on the quantum of Indian imports from the U.K. As a member of the sterling area, India was, he said, interested in the balance of payments of the U.K., as of all members of the sterling area with the non-sterling world. This balance had for some considerable time been adverse, with the consequence that the central gold and dollar reserves of the sterling area have of late been substantially reduced. Any steps which had the effect of improving the balance of payments of the sterling area, such as the disinflationary policies being followed by the U.K., were welcome to the Government of India.

W. GERMANY RAISES BANK RATE

The West German Bank rate has been stepped up by 1 per cent. to 4½ per cent. Following this rise, the Bank Deutscher Lander has increased the rate for advances against securities (the Lombard rate) from 4½ to 5½ per cent. and that for short-term municipal loans from 3½ to 4½ per cent.

The aforesaid measure is a fresh bid of the West German authorities to curb excessive inflation. It was only in August last, it will be recalled, that W. Germany raised the Bank rate from 3 to 3½ per cent. and the Lombard rate from 4 to 4½ per cent. At that time, the monetary authorities had stated that the deflationary measures were prompted by excessive borrowings from the banks, over-heated nature of the housing programme, and threat of large wage increases before the year-end. All these considerations are, it is now said, as sound today as they were then.

CANARA BANKING CORPN. COMPLETES 50 YEARS

STEADY ALL-ROUND PROGRESS

THE twelfth day of March 1956 constitutes an important landmark in the history of the Canara Banking Corporation Ltd. (General Manager: Mr. V. R. Kamath, Udipi) in that it witnesses the completion of 50 years of the Bank's useful role in joint-stock banking in this country, particularly in South India. On this day, exactly 50 years ago, the Bank was established as a *Nidhi* (Fund) in South Kanara District of the Madras State by a noble band of citizens of the district to cater to the financial needs of trade and industry and to inculcate the habit of saving among people in that part of the country. In fact, it has earned the distinction of being the first joint-stock bank to be started in South Kanara.

These 50 years have not proved to be a period of smooth sailing for Indian joint-stock banking and it redounds to the credit of the Bank that it has been able to steer clear of all the economic stresses and strains caused by the two world wars and make commendable progress during the half a century of its existence, as will be seen from the relevant figures of the Bank's balance-sheets as at the close of the past five decades, published elsewhere in this issue. Its paid-up capital has been raised from a mere Rs. 5,000 at the end of 1906 to Rs. 20 lakhs at the close of 1955 and its reserves have been strengthened from Rs. 5,000 in 1916 to Rs. 12 lakhs. The Bank's deposits have been enlarged from Rs. 4,000 at the end of 1916 to Rs. 4.23 crores. An idea of the extent to which it has served the needs of commerce and industry in the areas in which its field of activity extends can be had from the expansion of its advances from Rs. 5,000 in 1906 to Rs. 2.23 crores at the end of 1955. In consonance with this trend of expansion of the Bank's business, its profit also has improved from Rs. 2,000 in 1916 to Rs. 3.35 lakhs in 1955.

It is a happy augury that this unique occasion is being heralded by not only an expansion in business during the year ended 31st December 1955 but a small improvement in profit. The Bank has earned a profit of Rs. 3,34,507 for the past year, as against Rs. 3,29,140 for 1954 and Rs. 3,17,797 in 1953. This is the second year in succession for which the Bank's profit shows a rise, albeit small. This improvement during the past two years has not, however, enabled the Bank to make good the recession from the record profit of Rs. 3,54,707 earned in 1951 to Rs. 3,17,797 in 1953. The Directors have placed a sum of Rs. 76,000 to the statutory reserve fund, which had received Rs. 75,000 last year, and of Rs. 18,093 to the contingent fund, as against *nil* a year ago. The provision for taxation has been reduced from Rs. 1.25 lakhs to Rs. 1 lakh. The distribution on ordinary shares has been maintained at 10 per cent., made up of a dividend of 8 per cent. and a bonus of 2 per cent., for the sixth year in succession. Besides this usual distribution, the Directors have declared a special cash bonus of 1 per cent. in commemoration of the Bank's golden jubilee. This distribution on ordinary shares, together with the payment of dividend on the 5 per cent. and 4½ per cent. first preference shares, absorbs Rs. 1,40,500, leaving a surplus of Rs. 2,432 to be carried forward, as against Rs. 2,518 brought in.

The Bank's latest balance-sheet shows that, as against a paid-up capital of Rs. 20 lakhs (made up of 15,000 ordinary shares of Rs. 50 each, 7,000 5½ per cent. first preference shares of Rs. 50 each and 18,000 first preference shares of Rs. 50 each), the reserves stand at Rs. 12 lakhs. Deposits have enlarged from Rs. 3.43 crores at the end of 1954 to Rs. 4.24 crores. The bulk of these deposits represents fixed, cumulative and golden jubilee deposits amounting to Rs. 2.51 crores, as against Rs. 2.00 crores at the close of 1954. The borrowings from other banks have also risen from Rs. 0.87 lakh to Rs. 25.73 lakhs. On the assets side, advances have gone up from Rs. 1.58 crores to Rs. 2.23 crores, the increase having been shared by loans, cash credits and overdrafts which have risen from Rs. 1.20 crores to Rs. 1.59 crores and by bills purchased and discounted which have moved up from Rs. 38.28 lakhs to Rs. 63.85 lakhs. While meeting the increased demand for bank credit, the Bank has also taken care to strengthen its liquid assets, as will be seen from the rise in its investment from Rs. 1.61 crores to Rs. 1.75 crores and in its cash balance from Rs. 71.46 lakhs to Rs. 93.67 lakhs. In short, the Bank has made satisfactory progress during the year under review.

IMPRESSIVE RESULTS OF INDIAN BANK

SHARP RISE IN PROFIT—DIVIDEND, HOWEVER, REPEATED

AN impressive rise of Rs. 6.34 lakhs to Rs. 20.28 lakhs in profit is disclosed by the audited accounts of the Indian Bank Ltd. (Secretary: Mr. N. Gopala Iyer, Madras), for the year ended 31st December 1955. With this increase, the Bank has maintained the upward trend in its earnings for the second year in succession, the aggregate rise for the past two years being Rs. 7.37 lakhs. It is also noteworthy that the profit for the year under review is the highest since 1946 and falls short of the record profit attained in that year by only Rs. 3.17 lakhs. The sharp rise in profit for the year under review is the result of a substantial expansion in turnover of the Bank during the year, as witness the increase of nearly Rs. 11 crores in the balance-sheet total.

Notwithstanding the notable increase in profit, the provision for taxation is unchanged at Rs. 5.75 lakhs, while the allocation to the reserves has been raised from Rs. 1 lakh to Rs. 7.13 lakhs, by stepping up the transfer to the reserve fund under section 17 of the Banking Companies Act, 1949 from Rs. 1 lakh to Rs. 3.50 lakhs and providing Rs. 1 lakh to the reserve fund other than under section 17 of the Act and Rs. 2.63 lakhs to the sinking fund, neither of which had received anything last year. Such large allocations to the reserves do not, however, permit a higher distribution to the shareholders, which is being maintained at 12 per cent. per annum, made up of a dividend of 10 per cent. and a bonus of 2 per cent., for the second year in succession. The Directors' decision to repeat the return to the shareholders, despite the impressive rise in profit, is in distinct contrast to the step taken by many other leading banks in India in declaring higher dividends. It is, however, no reflection on the Board's dividend policy. The stable dividend policy which is being followed by the Directors is a commendable one, indeed.

The following comparative table shows at a glance the progress made by the Bank during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned ..	106.66	94.79	88.85	89.86

Cash	11.2	14.4	13.4	13.9

* Include investments of staff security deposits.
† After taking into account securities earmarked against borrowings from other banks.

The increase in gross income for the year under review has been shared by the income from interest and discount, as well as that from commission and exchange. In fact, the rise in the latter is proportionately greater. Another notable feature is that the rise in income from both these sources during the year under review is much sharper than in the previous years. A similar trend is noted on the expenditure side also, where the outgo by way of interest paid is up by Rs. 7.82 lakhs and expenses are higher by Rs. 9.56 lakhs.

The capital of the Bank shows an increase of Rs. 2.08 lakhs. This is due to the calls of Rs. 5 per share made on 20,000 shares of Rs. 85 paid-up and on 28,000 shares of Rs. 60 paid-up making these shares Rs. 90 paid-up and Rs. 65 paid-up, respectively, while the calls unpaid have gone up by Rs. 0.32 lakh. It will be noted that though a sum of Rs. 7.13 lakhs has been, as stated at the outset, added to the reserves from the profit for the year under review, the reserves are higher by only Rs. 2.25 lakhs over the year. This is because a sum of Rs. 4.88 lakhs has been drawn from the sinking fund during the year. The deposits are higher by Rs. 4.59 crores, thus maintaining the upward trend since 1949. The break-up of the deposits shows that fixed deposits have improved from Rs. 6.67 crores to Rs. 10.66 crores, season and short-term deposits from Rs. 2.58 crores to Rs. 2.61 crores, savings bank deposits from Rs. 4.56 crores to Rs. 5.24 crores and current and contingency accounts from Rs. 9.03 crores to Rs. 10.93 crores. Thus, as in the previous year, the expansion in fixed deposits is much larger than that in other classes of deposits, which to some extent accounts for the increase in outgo by way of interest paid.

The improvement in lendable resources has enabled the Bank to meet the increased demand for credit, as witness the rise of Rs. 4.09 crores in advances to a new record level of Rs. 17.54 crores. Of these advances, loans, cash credits and overdrafts together account for Rs. 12.95 crores, as against Rs. 10.58 crores in 1954, bills discounted and purchased for Rs. 4.59 crores, as against Rs. 2.43 crores, and money at call and short notice for *nil*, as against Rs. 44 lakhs. At the same time, investments also stand strengthened by no less than Rs. 1.40 crores to Rs. 11.15 crores. The investments are shown at cost, at Rs. 11.15 crores, but their market value is only Rs. 10.67 crores. This shortfall of Rs. 47.47 lakhs in market value of the investments is not a new feature for this year, but it compares favourably with the fall of Rs. 80.64 lakhs noted at the end of 1954. The shortfall is partly covered to the extent of Rs. 17.25 lakhs, by the sum of Rs. 10 lakhs standing to the credit of the non-statutory reserve and by Rs. 7.25 lakhs to that of the sinking fund.

(*Concluded from next column*)

time of the reconstruction of the capital, is also unchanged at £3.10 million. The current and other accounts and deposits have gone up further by £1.71 million to a fresh record level of £130.03 million, though the extent of increase is not as sharp as that (£24.76 million) noted at the end of 1954. On the assets side, advances and loans have risen for the second year in succession. As in the case of deposits, the pace of increase in this main revenue yielding asset also is relatively much shorter than that noted a year ago. However, the rise in advances and loans is greater than that in deposits. The aggregate increase of £20.58 million during the past two years has more than offset the decline suffered in 1952 and 1953 from £65.48 million at the end of 1951 to £45.86 million and has helped the Bank to establish probably a record in its history. Bills of exchange are a shade lower, but they are still at a much higher level than those at the close of any of the years preceding 1954. Notwithstanding the increase in advances noted above, the Bank's liquid assets stand strengthened,

NATIONAL BANK'S PROFIT GOES UP

FURTHER EXPANSION IN BUSINESS

A WELCOME improvement in the earnings for the year ended 31st December 1955 is disclosed by the latest statement of accounts of the National Bank of India Ltd. (General Manager: Mr. N. W. Chisholm, London.) The consolidated profit of the Bank (including its subsidiaries) for the past year has gone up from £385,923 to £421,839, thus reversing the downtrend noted since 1951. This increase in profit for 1955 is not, however, sufficient to make good the decline of £55,534 suffered during the preceding three years. The improvement in earnings is clearly the result of the management's successful effort at expanding its business, as is borne out by the further increase of £5.69 million to £145.53 million (a record in the history of the Bank) in the Bank's balance-sheet total at the end of 1955.

The aforesaid consolidated profit has been arrived at, as in previous years, after providing for taxation and transfers to contingencies reserves, out of which provision has been made for diminution in the value of assets. From the above profit, the Directors propose to transfer to the premises account a sum of £75,000—the same as in the previous three years—in keeping with their policy of allowing this account to grow until the Bank's major building and rebuilding operations are completed. The provision for contingencies account, which had been gradually cut from £140,000 to £70,000 during the previous two years, has been increased to £85,000, presumably to provide against the considerable fall in the value of the Bank's holding of Government securities, in common with other banks. The dividend for the year under review has been maintained at 15 per cent. less income-tax, by raising the first interim distribution from 7 per cent. to 7½ per cent. and reducing the second interim dividend from 8 per cent. to 7½ per cent. However, the net cost to the Bank, after deduction of income-tax, is higher at £245,947, as against £235,254 last year.

The following synopses of the Bank's balance-sheets as at the close of the last four years give an idea of its progress:

(In thousands of £ sterling)

	As on 31st December			
	1955	1954	1953	1952
Liabilities (Main)				
Capital	2,852	2,852	2,281	2,281

There is no change in the capital of the Bank, after its reconstruction in April 1954. The reserve fund, which had been reduced last year, following the capitalisation of £570,313 at the

(*Continued in previous column*)

COTTON TEXTILES DURING 1955

OUTPUT RISES, BUT EXPORTS FALL

REVIEWING the developments in the sphere of the Indian cotton textile industry and trade in our last *Annual Number*, we estimated the aggregate output of cotton cloth during the calendar year 1955 at 6,848 million yards on the basis of the figures for the first ten months. The production statistics now available for the whole of 1955 reveal that this estimate has very nearly proved correct. Thus, the quantity of cloth actually produced during the year was 6,621 million yards, as against 6,559 million yards in 1954, representing an increase of about 4 per cent. The improvement in cloth output was shared by all the three sectors—mill, handloom and powerloom. The mill production of cloth during 1955 aggregated 5,094 million yards, which compares favourably with 4,998 million yards in the previous year. The rise would have been still more noticeable but for the loss of about 34 million yards as a result of the Kanpur textile workers' strike during the months of May and June. Similarly, the output of handloom and powerloom cloth was higher at 1,454 million yards and 273 million yards, as against 1,318 million yards and 243 million yards, respectively.

The substantial rise in the production of cotton cloth followed a surfeit of yarn supplies. During the year under review, as much as 1,625 million lbs. of yarn came off the spindles, as compared with 1,565 million lbs. a year before. The loss in output on account of the Kanpur mill strike is placed at about 10 million lbs.

Trend of Output

The following table indicates the trend of cloth and yarn output in the mills—month by month—during 1955, as compared with the previous year:

(Cloth in million yards; yarn in million lbs.)

	Cloth		Yarn	
	1954	1955	1954	1955
January	418	430	132	132
February	398	399	122	124
March	405	422	125	133
April	424	419	129	131
May	422	407	129	129
June	415	415	128	132
July	440	446	136	144
August	411	415	132	137
September	410	435	131	143
October	380	437	123	144
November	423	432	135	132
December	452	437	143	144
Total ..	4,998	5,094	1,565	1,625

The bulk of the 1,625 million lbs. of cotton yarn produced during 1955 was consumed by the composite mills for weaving cloth. During the first two months of the year, for instance, 955.4 million lbs. were consumed, as against 945.9 million lbs. a year before. The deliveries of yarn for other purposes in the same period, as compared with the corresponding period of 1954, are shown in the following statement:

(In million lbs.)

	January-October	
	1955	1954
Quantity available for consumption by handlooms, powerlooms and others ..	365.78	367.48
Consumed for manufacturing hosiery and other articles	9.19	5.74
Delivered for export	15.13	4.43
Delivered for other purposes, excluding export and civil consumption	0.64	0.51

The mill sector of the cotton textile industry, as already stated, produced 5,094 million yards of cloth during 1955, that is, 96 million yards more than what was produced in the preceding year. As a detailed reference to the factors responsible for the rise in output has been made in the *Annual Review*, it is unnecessary to make a further reference to them here. Briefly, the main contributory factors are: (1) High level of offtake in cloth for domestic consumption which is reflected in the depletion of stocks with mills; on 4th February 1956, the mills were estimated to have held with them a total of 140,000 bales of cloth, as against 260,000 bales on 26th March 1955; (2) ready availability of large supplies of raw cotton at much reduced prices; (3) abolition of irksome controls on the purchase of cotton by mills; (4) better supply of wagons for transport of cotton and cloth; (5) improvement in power and fuel supplies; (6) absence of a big labour strike, barring the Kanpur mill strike; and (7) continuance of the decontrol policy in regard to prices and distribution of cotton textiles.

The distinctly upward trend in the mill production of cotton cloth during 1955 was accounted for solely by medium varieties, the share of which in the total output was 73.8 per cent., as against 64.3 per cent. in 1954. The percentage shares of coarse and superfine counts were almost at the same level as in 1954, being 11.2 and 6.0, respectively. The percentage share of output of fine categories, on the other hand, was lower at 9.0, as against 9.2.

Statistical data relating to the production of different varieties of cloth by the handlooms are not available. It is, however, stated that the year 1955 witnessed a shift towards the manufacture of fine and superfine categories of handloom cloth.

Retreat in Exports

While the offtake of cotton cloth for domestic consumption during 1955 was, as mentioned earlier, at a high level, that for exports staged a retreat. The total shipments of mill-made piecegoods in that year aggregated 836.0 million yards, as against 897.7 million yards in 1954, representing a fall of nearly 7 per cent. The downward trend in exports was in keeping with the world-wide recession in cotton textile trade, thanks to large offtake by various countries in 1954, imposition of trade barriers by several countries with a view to giving protection to the indigenous textile industry, and tightening of import restriction by a few countries for balance of payments considerations.

A month-by-month analysis of the exports of different varieties of mill cloth during the years 1955 and 1954 is given below:

(In million yards)

	Total	Coarse	Medium	Fine	Superfine
1954					
January	80.5	25.2	46.7	7.5	1.1
February	84.1	20.2	52.1	9.9	1.9
March	68.2	16.3	43.7	6.5	1.7
April	69.5	16.5	43.1	7.9	2.0
May	69.2	14.3	38.4	5.3	2.2
June	62.8	7.3	45.8	7.8	1.9
July	102.6	20.8	71.9	6.5	3.4
August	62.4	10.3	37.0	3.1	2.0
September	83.2	14.0	59.5	6.6	3.1
October	85.3	14.5	59.3	7.3	4.2
November	75.5	13.9	55.6	4.6	1.4
December	73.4	13.2	54.9	3.9	1.4
Total ..	897.7	186.5	608.0	76.9	26.3
1955					
January	63.9	9.5	51.2	2.3	0.9
February	69.5	7.8	59.0	1.4	1.3
March	72.8	14.6	53.0	2.8	2.4
April	76.2	16.4	51.8	4.8	3.2
May	71.2	16.0	48.4	4.7	2.1
June	77.2	19.2	52.1	3.9	2.0
July	77.5	17.2	54.5	4.0	1.8
August	66.6	15.1	46.7	3.0	1.8
September	73.3	17.8	49.3	3.9	2.3
October	61.4	13.6	44.6	2.0	1.2
November	61.9	15.4	44.2	1.2	1.1
December	64.5	14.0	47.8	1.8	0.9
Total ..	836.0	176.6	602.6	35.8	21.0

It will be evident from the figures given above that the decline in mill cloth exports was shared principally by fine varieties, the exports of which during 1955 were 35.8 million yards, as against 76.9 million yards. Similarly, the shipments of coarse counts were lower by 9.9 million yards at 176.6 million yards. The decline in exports of coarse and superfine counts was 5.4 million yards and 5.1 million yards, the quantity actually shipped being 176.6 million yards and 21.0 million yards, respectively.

During 1955, sheetings constituted the largest item of export; the quantity actually shipped from the port of Bombay was 336.28 million yards, or 43.1 per cent. of the total of 780.85 million yards. Next in importance came longcloth and drill. Exports of these categories amounted to 107.56 million yards and 105.00 million yards, representing 13.8 per cent. and 13.5 per cent. of the total shipments, respectively. The exports of other sorts (figures in brackets relate to the percentage shares) were: Shirting 85.80 million yards (11.0), voiles and mulls 54.27 million yards (6.9), coatings 33.48 million yards (4.2), domestics 28.97 million yards (3.7), chhintz 9.54 million yards (1.3), *dhotis* and *saris* 9.32 million yards (1.1), and "others" 10.63 million yards (1.4).

(*Concluded from next column*)

out on trade varieties for the Madhya Pradesh Government. Comparative large-scale saw ginning tests at a ginning factory at Nanded and double-roller ginning tests at the Laboratory were carried out on the same lots of 11 varieties and the lints obtained are being spun. A training course in ginning was started at the Laboratory and the literate personnel employed in the ginning factories were trained with a view to helping them to improve the ginning methods.

RESEARCH IN COTTON

WORK OF TECHNOLOGICAL LABORATORY

A WELCOME improvement is shown year after year in the quantum as well as the variety of research and experimental work conducted by the Technological Laboratory of the Indian Central Cotton Committee. Thus, during the year ended May 1955, according to the thirty-first Annual Report of the Director of the Technological Laboratory, Bombay (Dr. C. Nanjundayya), the total number of samples of cotton received for various tests at the Laboratory increased from 1,894 in 1952-53 to 2,405 in 1953-54 and still further to 2,683 in 1954-55. The results of the tests on samples were issued in the form of 663 reports during 1954-55 as against 544 in the previous year. The role of the Laboratory in relation to the actual cultivation of cotton will be evident from the fact that most of the testing work was connected with the evaluation of the quality of the new strains and improved varieties of cotton grown in India so that the results of the tests proved to be of immense use to agricultural officers in different regions.

The fact that the Laboratory is gaining strength as a link between the mills and the trade and the cotton-grower is evidenced by the large increase in the number of samples received for various tests this year at the Testing House, the increase being as much as 34 per cent. over that of last year's figure. Besides this, 114 samples were received from the East India Cotton Association, Bombay, for staple length and staple irregularity tests, and the reports sent expeditiously. In addition, the trade and industry sent a larger number of enquiries and asked for technical advice on various types of problems confronting them. One of the items on which technical advice was sought was in connection with the setting up of testing laboratories in the mills.

Technological bulletins on trade varieties of fair average quality usually handled by the trade and on Standard cottons grown in the experimental stations in the principal cotton-growing tracts were published for general information. Technological circulars on each trade variety were also issued as soon as tests on them were completed. These publications, it is stated, proved quite useful to the cotton trade and the textile industry. Some items of work done at the Laboratory deserve special mention. Tests carried out on Vijay cotton raised at Anand indicated that neither the different spacings, nor plants per hill nor manurings had any significant effect on yarn-strength. Tests of 11 Karunganni cultures grown at Coimbatore and Kovilpatti showed that 6188-8, 6312-4, 7907 and 8005A were significantly finer in staple and yielded significantly better spinning values than K2 and K5 controls. Mill tests carried out on Sea Island cotton grown in the West Coast of Madras State indicated that this cotton was suitable for making fine yarns upto 100s and it could replace Egyptians at present being used for this purpose.

As regards investigations on ginning, a technological leaflet on the most suitable settings, speeds, etc., in the saw, double-roller and single-roller gins for Westerns 1 cotton was written for publication. A bulletin was issued on the investigation of comparative tests carried out in the Laboratory gin when worked with hand and power. An experiment with the single-roller gin after conversion of bush bearings to ball bearings was completed and a brief note giving the results obtained, it is stated, will be published for the benefit of the owners of ginning factories. It was found that a saving of 30 to 40 per cent. in power consumption could be obtained by the conversion of bush bearings to ball bearings which is a substantial reduction in cost. The results of this investigation are of great commercial and economic utility.

Investigations on spinning and yarn characteristics continue to claim the attention of the authorities. All the results for the investigation of the effects of different processing treatments on the spinning value of M.A. 5 cotton are now complete; the data will now be statistically analysed. Experiments are continued with a view to ascertaining if it would be possible to breed varieties which would give almost nep-free lint, while maintaining its other fibre properties. Considerable experimental work was carried out with a view to standardising the nep-counting technique and a suitable method was devised.

In the ginning section, with a view to estimating the actual production of lint from that of *kapas*, ginning percentage tests were carried

(*Continued in previous column*)

NO CHANGE PREDICTED IN COTTON BOARD'S FUNCTIONS

STUDY OF WORKING CONDITIONS IN SPINNING INDUSTRY COMPLETED

From A Special Correspondent

MANCHESTER, *6th March*

MANCHESTER LETTER

NO change in the constitution and functions of Britain's Cotton Board, "for a period at least" is forecast in the Annual Report of the Master Cotton Spinners' Federation. Commenting on the discussions which have been in progress between the Board of Trade and representatives of the industry on the Board's future, the report confirms that the Federation has officially put forward the view that it would be preferable for the Chairman of the Board to be an honorary part-time officer appointed by and from the trade rather than an independent representative appointed by the Government.

"This is a matter of principle and does not imply any criticism of the present Chairman, whose devoted work in the interests of the industry is recognised," adds the Report. Sir Raymond Streat is the present Chairman, having served in that capacity for 15 years.

The final decision on the matter will rest with the Board of Trade, continues the Federation, and it is thought probable that, for a period at least, the Board will continue in approximately its present form, "although it is hoped that action will be taken long before a further five years elapse."

The survey of the year's working in the industry describes the recession in 1955 as not being as severe as in 1952, but the trade slackness in the former year was caused by factors which the Federation then forecast were artificial and temporary. "In 1955, the position was caused by more permanent factors which will continue to affect the industry adversely over a far longer period if no action is taken by the Government," the report declares. "The falling off in trade last year was also accentuated by uncertainty as to American price policy, which has caused business to be of a hand-to-mouth nature and which may persist until after the Presidential elections at the end of 1956."

According to the report, the Cotton Board is now taking the necessary steps to introduce a promotional activity campaign in the home market and the United States authorities have intimated that they would be willing to contribute funds towards such a campaign through the medium of the American disposal of surplus stocks programme. One of the difficulties of making cotton purchases through that channel at the present time is the importance to the national economy of utilising American aid funds by making purchases through the F.O.A. scheme. Discussions are also in progress with the Egyptian authorities with a view to a joint promotional effort for long-staple cotton.

The most favourable aspect of the announcement that the American Government is to dispose of more surplus cotton at world competitive prices from the beginning of next season is that it removes one more uncertainty from the confusing world cotton situation. Unfortunately, numerous uncertainties still remain and will persist so long as the lack of equilibrium between supply and demand is so pronounced.

Mr. Benson, the U.S. Secretary of Agriculture, has adopted a course which seemed his most obvious line in view of the way in which his first experimental venture has turned out. The disposal of the 1,000,000 bales of low-grade cotton can be termed a success as the whole of this surplus has been shifted in a matter of weeks. It is by no means certain that a larger quantity of better grade cotton will move off as freely but the plan is well worth trying from the Washington viewpoint.

Whatever the merits of the scheme, it has its detractors. Few merchants like the idea of a two-price system and the United States manufacturers are certain to intensify their campaign for curbs on imported cloth. It is not difficult to appreciate their natural antagonism to a system which offers rivals the opportunity of cheap cotton with which to compete on the American home market.

In Britain, an interesting development has been the final liquidation of the stocks held by the Raw Cotton Commission. These have lately consisted almost entirely of Egyptian types and have been sold at strictly competitive rates. The Commission has still to distribute supplies of Aden cotton, bought under the terms of past agreements.

Some years have passed since any serious attempt to revise the conditions of working in the Lancashire cotton industry was made. Since the committees set up soon after the war to produce more rational wage systems offered their suggestions numerous developments have taken place. The industry has passed through a phase of intense activity followed by a reversion to former seasonal trading and has seen both labour shortages and unemployment.

In the midst of this changing pattern, it is inevitable that existing wage structures and working conditions should become outdated. An attempt is now being made to move with the times, initiated by the Cardroom Amalgamation. According to the Annual Report of the Master Spinners' Federation, numerous joint meetings of a working party representing employers and unions in the ring spinning and cardroom sections have been taking place since October last.

In response to an approach to consider the improvement of working conditions throughout the departments involved, the Federation suggested discussions on a new alternative wage structure and a basis on which more shift working could be introduced in the spinning industry. The investigation is now nearing completion and final recommendations of the joint negotiators are likely to be submitted to the larger committees of both organisations at an early date.

Meanwhile, the deadlock on the wages issue seems to be following the traditional pattern. The Ministry of Labour has been notified that no local settlement appears likely, as the employers are standing firm in their rejection of a 10 per cent. increase, while the unions are equally anxious to press on with their demands. The failure of negotiations is being reported to the Industrial Disputes Tribunal, which will consider the respective cases in due course.

An 80-page "encyclopædia" about their industry, setting out prospects and opportunities, has been issued by Britain's textile finishing industry in a new drive to attract young recruits ready to make their career in the industry and qualify for posts of responsibility.

The Confederation of Textile Dyers and Finishers is to circulate 10,000 copies of the booklet to universities, public schools, technical colleges, grammar schools and youth employment centres.

It says that despite comment on the reduced size of the British textile industry "the need for young people to train to take responsibility in the dyeing and finishing section is greater than ever."

There is, the booklet says, a constant demand for technicians, chemists, engineers, research workers, foremen, managers, executives and other responsible posts. It adds: "The fundamental discoveries and rapid developments of recent years in the realm of man-made fibres have provided wide possibilities continually calling for further exploration and experiment."

More protests have been made by Lancashire cotton chiefs at the failure of the Government to assist Britain's textile mills against foreign competition.

Sir John Grey, Chairman of John Grey Ltd., the Burnley mill group, said severe competition had come not only from the East but from Western Europe and Iron Curtain countries. Rival prices not only reflected lower wage rates but dumping caused by subsidies or export incentives.

"Despite constant protests made by both employers and operatives and the serious loss of trade to Lancashire, our Government remains callously indifferent and does little or nothing to help," Sir John continued. Cloth production fell by 300 million yards last year and 35,000 operatives left the cotton and allied trades, due, he claimed, to under-employment caused by the Government, allowing the importation of cheap cotton fabrics from India and Hong Kong duty-free.

Mr. G. C. Neilson, Chairman of Jackson and Steeple Ltd., controlling mills at Nelson and Stalybridge, also blamed unrestricted and mounting imports of cloth from the East for the widespread lack of confidence throughout the industry. "No effective action was taken to deal with this situation," he said, in his Annual Report, "and the position deteriorated rapidly, particularly during the latter part of the year."

LANDMARK IN INDIA'S INDUSTRIAL DEVELOPMENT

FIRST MODERN TUBE PLANT GOES INTO OPERATION AT JAMSHEDPUR

IN the drive for self-sufficiency in all essential materials, India moved a big step forward on Wednesday, 7th March 1956 when Dr. Sri Krishna Sinha, Chief Minister of Bihar, formally inaugurated the operations of an up-to-date tube works at Jamshedpur. Situated some two miles from the great steel works of Tatas, the tube works constitute a fruitful example of valuable Indo-British co-operation. They are owned by a joint-stock company, entitled the Indian Tube Company (1953) Ltd., in which the Tata Iron and Steel Company, Ltd., and its associates have 60 per cent. interest and Stewarts and Lloyds Ltd., England, the balance of 40 per cent.

How important are steel tubes in the economy of a nation? It is better to begin this article with an answer to this question, so that one may easily understand the significance of the event referred to at the outset. Steel tubes are as essential to a nation as are the networks of pipes, veins and arteries to the human body for conveying fluids, gases and air. These tubes are indispensable for the development of agriculture and industry alike and for rendering effective social service. In this modern age, without pipes, there can be no protected water-supply in cities and towns; nor can there be any effective service in a modern hospital. Without steel tubes, there can be no tube-wells for irrigating land in rural areas for providing good, clean water to people in villages at a low cost. Tubes are also necessary for protecting agricultural crops against pests through spraying of insecticides.

Equally vital are tubes for industrial development. Locomotives, land boilers and ships need boiler tubes and many other types of pipe work. Modern mining techniques rely on pipes for water and compressed air and for stowage and dust suppression. The oil industry would stagnate without the supply of great quantities and varieties of pipe. Numerous secondary industries require tubes as a raw material. Tremendous strides have been made in recent years in the use of tubular steel as a structural section. In fine, steel tubes play a vital part in the life of the community; it is rightly said that the tube, as a benefit to mankind, is second only to the wheel.

So numerous and multifarious are the essential uses of steel tubes that it is, indeed, surprising that India has had no tube-making plant so far. It is not sufficient if mere steel is produced. It is very necessary that such steel should be supplied in a form that consumers need. Somehow or other, India has all along managed to get on with imported steel pipes and tubes. But the large development that is envisaged in the second Plan will neither be possible nor complete unless this void in the country's economy is filled. To the credit of Tatas, it must be said that they foresaw the need for putting up a tube-making plant several years ago and tried hard to meet it. Circumstances were, however, not favourable to them.

A Tube Plant For India

In his welcome address at the inaugural function, Mr. Jehangir J. Ghandy, Chairman of the Indian Tube Company, Ltd., gave an interesting account of the history of the project that has now come to fruition. He revealed that Tatas had first thought of setting up a tube industry no less than 40 years ago, and that the credit for conceiving and developing this idea went to the late Mr. Padshah, then Director-in-Charge of T.I.S.C.O., and the late Mr. Howard, Vice-Chairman of Stewarts and Lloyds. Mr. Ghandy's account showed that, right from the beginning, Tatas were trying to get the co-operation and collaboration of Stewarts and Lloyds. That is only as it should be, for Stewarts and Lloyds are the largest and, perhaps, the oldest steel tube manufacturers in Europe—the history of this Company dates back to 1860. They know the technique of making both steel and steel tubes, and have successfully established tube plants in Australia and South Africa. According to Mr. A. G. Stewart, Chairman of Stewarts and Lloyds, who was also present on the occasion, Stewarts and Lloyds are one of the cheapest producers of steel in the world. Besides knowing the technique of making steel tubes on up-to-date modern lines, this British Company has enough experience of the Indian market for steel tubes for, since 1903, they have been trading in India in this material on an exclusive scale. They know what types of tubes India needs and how to sell them.

The fruitful partnership between Tatas and Stewarts and Lloyds is the outcome of the desire of both to unite and produce steel tubes—a desire that sprang from the realisation of the advantages of their joint endeavour to themselves and to the country as a whole. With the attainment of independence by this country, Sewarts and Lloyds must have realised that they could not hope to retain their Indian market merely as an importer of tubes from their home factory. Sooner or later, somebody or other would be encouraged by the Government to start making tubes in India itself. In that event, they would stand to lose a large part of their market. It was, therefore, in their own interests to think of establishing the industry themselves. For this purpose, to whom else could they have turned except Tatas as a suitable partner? It is essential, as Mr. Stewart himself mentioned in his speech at Jamshedpur on that memorable day, that a modern tube mill should be tied to an efficient steel plant, if it is to succeed in making its products at economic cost. For this purpose, the T.I.S.C.O., as the cheapest producer of steel in the whole world, with the possible exception of Australia, was ideally suited. Accordingly, the attraction between the two was mutual and their partnership was natural. Mr. Stewart gracefully acknowledged this fact when he said: "Although Stewarts and Lloyds had traded on their own in India for many years, when the time became ripe to install a works, the natural development was that it should be a partnership venture and it was not surprising, I think, that we should look to Tatas as, indeed, they looked to us."

It may be interesting to note, in this connection, that, before the last war, when an agreement had been signed with Stewarts and Lloyds for setting up a tube plant in India, Stewarts and Lloyds wanted to be the major partner with 60 per cent. of the share capital to be owned by them and 40 per cent. by Tatas. But, after the war and India's independence, when a new agreement was drawn up, Tatas wished to keep majority control in their hands by reversing the ratio of capital to be held by the two partners. To this Stewarts and Lloyds readily agreed. This instance brings out the adaptability of the British partner to changing conditions and shows his trust and confidence in Tatas—an attitude that augurs well for the success of the Tube Company.

The present agreement under which the factory has been erected and started functioning was finalised in 1952. The Indian Tube Company (1953) Ltd. was formed and registered in 1954. At about the same time, the Tata-S. & L. Sales Ltd. was also formed to sell and distribute tubes to be made at Jamshedpur and those special categories which, for some years to come, will, of necessity, have to be imported from abroad.

First Phase of Project

The project for making tubes at Jamshedpur has been divided into three phases according to the country's needs. The first phase relates to the manufacture of commercial tubes (sometimes known as G.I. or W.I. pipes) in India. It is this phase that has been completed now and production has been going on for some time. The Company has selected the Fretz Moon process for making the commercial tubes. This process is well known all over the world for the high standard of tubes produced. By far the greatest proportion of commercial tubes used throughout the world is produced by this method.

The Fretz Moon Mill at Jamshedpur is the first one in India. Designed on highly modern lines, the capacity of the mill is approximately 90,000 tons per annum and covers a range of tube sizes from ½ inch to 3 inches n.b. The bulk of commercial demand for pipes in this country is in these sizes. It is stated that this mill alone is sufficient to meet the demand in India for tubes of these sizes for several years to come, the current demand being placed at 35 000 to 40,000 tons. It may be noted here that imports of all types of steel tubes in the past year were of the order of 60,000 tons. The foreign exchange that the country will save as a result of the Jamshedpur plant going into production is about Rs. 3.5 crores to Rs. 4 crores, taking the average price at Rs. 1,000 per ton of tubes.

Fretz Moon tubes are, we are told, uniform in size and wall thickness, free from outside or inside ridges and, due to the high standards attained as a result of modern developments, are frequently used nowadays for purposes formerly demanding precision tubes produced at a high cost. The process is a continuous one and produces welded tubes from coiled steel skelp. The entire mill is so laid out as to maintain a logical flow of material through the various departments, culminating in the warehouse, where marking, bundling, weighing and the like take place before the tubes are despatched by rail to customers. All available modern methods have been adopted to ensure a high level of efficiency and economy in operation. The capital cost of this phase of tube-making is Rs. 3 crores.

Second Phase

The second phase of the project consists of two principal sections, namely, an electric resistance weld tube and a cold rolling plant for the production of cold rolled strip.

The electric resistance weld plant will produce high quality precision tubes used in the boiler and cycle industries and for other pressure and non-pressure categories. This type of tube is required for all uses where a high degree of dimensional accuracy and surface finish is needed. The plant has a capacity of over 13.000 tons per annum. The range of sizes to be produced will be ½ inch to 2½ inches outside diameter in thicknesses ranging from 0.036 in. to 0.192 in. It is estimated that this production will satisfy the demand in India for this class of tube for many years to come.

The cold rolling plant will be capable of rolling strip with high quality finish upto 12¾ in. wide and from 0.015 in. to 0.192 in. thick. It will produce the closely dimensioned strip necessary for the manufacture of precision tubes on the electric resistance weld mill. It will also have surplus capacity which will be available for the production of high quality cold rolled strip used in the manufacture of electrical parts, bicycle components, box strapping and for other similar purposes.

The cost of this second phase, work on which is well under way, is placed at Rs. 2 crores.

Third Phase

The third phase, estimated to cost Rs. 3 crores, is now under planning. It aims at manufacturing seamless tubes, the demand for which will considerably expand when industrialisation proceeds apace. This demand is partly for tubes for high pressure work and for defence purposes, for which Fretz Moon tubes are unsuitable, and also for tubes for a variety of purposes which are required in dimensions outside the range of the electric resistance weld tube plant. Application has already been made to obtain the Government's permission for installing a seamless plant of modern design.

Provision has been made on the Company's site to accommodate this third plant, so far as space and services are concerned, and, when this is installed, the Tube Company's plant at Jamshedpur will combine, on one site, three modern plants, specially designed to cater for the demand for the various types of tubes which are likely to be required in India for many years to come.

Raw Materials

In the foregoing paras, a brief picture of the project, its history and its importance to Indian economy has been given. Now there remains the question of raw material. The basic raw material is, of course, steel. But this has to be processed into a special steel, known as "skelp," in technical parlance. The T.I.S.C.O. had made the necessary arrangements for manufacturing "skelp" well in advance. But the past few years have been a difficult one for getting the necessary equipment, with the result that the construction of the skelp mill has lagged behind somewhat. The erection of this plant is, however, going apace and production of skelp is expected to begin in a month. The capacity of the plant, when in full production, is 200 000 tons of skelp, which will provide ample raw material for the tube mill. Meanwhile, the tubes are being rolled from imported skelp.

An interesting feature of the tube-making project is that, out of the total expenditure on the construction of the plant, no less than 74 per cent. was incurred in India and only 26 per cent. on materials imported from abroad. Of the plant

E.P.U.'S ROLE IN WEST EUROPEAN ECONOMIC PROGRESS

INSTRUMENT OF MULTILATERAL PAYMENTS SYSTEM

By John Kingsley

THERE can be no doubt that the steady progress of Western Europe's economy during the last five years has been greatly assisted by the operation of the European Payments Union (E.P.U.), which has just issued its fifth annual report.

In the first post-war years, nearly all countries in Western Europe were faced with difficult problems of reconstruction. At the same time their currency reserves were depleted by the war, and little international credit was available. In order to ensure essential import and export trade between each other, the countries concluded bilateral agreements under which trade was balanced at a low level. It was inevitable that these agreements should involve discrimination.

When the Organisation for European Economic Co-operation (O.E.E.C.) was established in 1948, its member-countries agreed to expand their trade and, progressively, to reduce trade barriers between themselves. At that time the dollar shortage made it necessary to maintain strict controls on imports from the dollar area, but there were not the same reasons for maintaining similar restrictions on intra-European trade. Nevertheless, it was laid down by the O.E.E.C. that progress in Western Europe alone should not lead to permanent discrimination against the outside world, but should facilitate the gradual establishment of a world-wide system of freer trade and payments.

Liberalisation of Trade

It took another two years until the general improvement in Europe's economic conditions enabled the O.E.E.C. to create a system for multilateral payments and to adopt common rules for reciprocal liberalisation of trade—that is, the progressive abolition of quantitative import restrictions—between member-countries.

E.P.U., the instrument of the multilateral payments system, began its operations on 1st July 1950. Its members are identical with the members of the O.E.E.C., but its scope extends beyond Western Europe, since Western Europe's trade with the rest of the world if settled in the currency of a member-country is covered by E.P.U. (The United Kingdom represents the whole sterling area in the E.P.U.) Thus the E.P.U. has enabled the Continental countries to buy the raw materials of the sterling area without currency difficulties, and facilitated the expansion of their exports.

It is worth noting that of the total trade of the E.P.U. countries with each other (excluding trade within the same monetary areas), which is estimated at $39,400 million in 1954, one-third represents the trade of the Continental countries with the sterling area as a whole and the dependent territories of Continental countries. The trade of the E.P.U. countries with each other accounted for no less than one-quarter of world trade.

Restrictions Abolished

The E.P.U. is not always easily understood by the ordinary business man, because he does not directly participate in its operations. Individual commercial and financial transactions are, in the first instance, settled through the ordinary banking machinery, and only the resulting surpluses and deficits between the member-countries (or, more precisely, their central banks) are brought into the E.P.U. settlements. These establish the monthly balance of each country with all the other members as a group. Only this net balance, instead of the bilateral balance, has to be settled.

This "multilateral" compensation makes it unnecessary to resort to discrimination in trade between member-countries, since, for settlement purposes, all European currencies are of equal use. Consequently, it was possible to make steady progress in the abolition of quantitative restrictions, and today average trade liberalisation between member-countries exceeds 85 per cent. In addition, multilateral clearing allows a substantial economy in the movement of reserves, since only the net balance of each country towards all other member-countries as a whole has to be settled.

The E.P.U., furthermore, provides not only for automatic settlement but also for automatic credit. Each country's net balance is settled partly in gold and partly in credit, in accordance with predetermined rules.

These facilities were established in order to enable member-countries to cope more easily with temporary fluctuations in their balance of payments. Although these credits have supplemented the reserves of the member-countries, it has been a rule from the beginning of the E.P.U. that part of a country's balance has to be settled in gold (or dollars) according to a predetermined scale within a system of quotas. (The share of gold in the settlement has been progressively increased to 75 per cent.) Thus the incentive to discriminate against the dollar area has been lessened and, in fact, restrictions against dollar imports have been relaxed by a number of countries, the U.K. taking the lead with the opening of free commodity markets.

Further Extension Likely

In spite of the violent fluctuations in the trade of its member-countries during the first two years of its existence, as a result of the Korea boom, the E.P.U. stood the test well and was able to minimise the consequences of these fluctuations. Since then the position has become more stable.

Credits, however, had to be extended for a longer period than had originally been expected; and in 1954, at the request of some creditors, for whom the further extension of credits caused internal difficulties, a scheme for the partial amortisation of old debts through voluntary bilateral agreements was evolved. The U.K. agreed to repay old debts to the equivalent of $395 million in monthly instalments spread over a number of years.

Trade within the E.P.U. area rose by 51 per cent. in value and by 35 per cent. in volume between 1950 and 1954—an adequate proof that the multilateral payments system provided by the Union has fulfilled its task of promoting the expansion of European trade.

When the step to convertibility can be taken, the E.P.U. in its present form will become unworkable. Last summer, in order to continue European co-operation in the field of payments, the European Monetary Agreement was concluded, providing for (non-automatic) credits and settlements under the conditions of convertibility. The time for convertibility has not yet come, and the prolongation of the E.P.U. for a further period can be taken for granted. The U.K. is expected to support the continuation of the E.P.U. in its present form, which has proved its value as an instrument of European economic co-operation.

(*Concluded from next column*)

Oil: Production is limited by the power available and by the capacity of the refinery.

Rice: Continued delays in preparation at the State Agricultural Marketing Board's office of bills of lading, which are almost always stale, and the attendant grave risks to shippers from non-acceptance of such documents are disturbing features. Shippers are still faced with difficulties arising from delays in service of cargo to ships for which deliveries have been contracted and it is most important that shipping commitments by the Board should be promptly honoured.

Summing up the survey, the Burma Chamber emphasises that the restoration of pre-war standards of production in timber, rubber and mineral industries offers one of the readiest means of augmenting Burma's foreign exchange earnings. The Government of Burma would do well to take note of this statement and revise its attitude towards foreign enterprise which can play quite a vital role in the economic development of Burma.

BURMA'S ECONOMY IN 1955

RESTRICTIVE OFFICIAL MEASURES CRITICISED

IT is on a note of dissatisfaction that the Burma Chamber of Commerce, Rangoon, records, in its latest annual review, the developments in Burma's economy during 1955. For business men, as well as for the consuming public, the past year was, the Chamber declares, one of the most difficult since the war. In support of this view, it mentions some of the measures taken by the Government of Burma to arrest the deterioration in the financial position. These measures, which created severe trading difficulties, were tightening of foreign exchange control, stringent import controls and curtailment of State's capital development programme. These steps no doubt imparted some strength to the balance of payments position. Burma's foreign exchange reserves, which had receded from Rs. 55 crores to Rs. 36.22 crores at the end of July 1955, stood higher at Rs. 42.72 crores five months later. But they would appear to have strained the country's economy in other directions, as witness the Chamber's remarks that "scarcity of many categories of goods, combined with a time-lag in the reduction of private money supply from Government expenditure, has had its inevitable result in rising prices and inflationary conditions." This view of the Chamber was ably substantiated by its Chairman, Mr. E. P. Stuart-Williams. Addressing the annual meeting of the Chamber at Rangoon a few weeks ago, Mr. Stuart-Williams said:

> "Stricter import controls which the Government has imposed for reasons whose force we cannot but recognise, and reservation of so much of the country's trade to the Civil Supplies Organisation, which is expected to cope with all the intricacies of supply and distribution formerly handled by hundreds of merchants with years of experience, have inevitably led to shortage of consumer goods and to inflated prices. Moreover, heavy internal expenditure by the Government on capital development continues to increase the amount of money in circulation and thereby intensifies the demand for available consumer goods."

These observations of Mr. Stuart-Williams, though they are addressed to the Burmese authorities, apply with equal force to the Governments—Central and State—in India which are too eager to implement schemes based on ideological considerations. The authorities should, as Mr. Stuart-Williams aptly stated, reduce public expenditure and then "match a designed demand with an adequate flow and distribution of supplies and allow free competition to exercise its beneficial effects." He, of course, recognised the political and economic considerations involved, but, as one representing a commercial body, he could do no more than state that "economic truths have an embarrassing way of displaying the irresistible power of the underlying forces involved."

The President of the Burma Chamber regretted that, in the past two or three years, the treatment of foreign investors in Burma had not been such as to encourage fresh investment. He made a pointed reference to remittance difficulties. Giving instances of delays regarding permission to remit money—in some cases over a year and in others 2½ to 3½ years—the President said: "There can be no doubt that potential foreign investors must take into account not only the public declarations of the Government but also the actual treatment of foreign enterprises which have already been invested in Burma." He also made a pointed reference to the difficulties encountered in connection with the prior commitments entered into by traders for which import licences had been applied and were still pending, and said: "The restrictive measures to which we are now subject have caused us to examine closely our prospects in this country."

To revert to the Chamber's annual survey. Deploring the lack of security in the areas of timber, rubber and mineral production, the Chamber has made the following points in its survey:

Rubber: In most of the rubber-producing centres, conditions were unsettled throughout the year. The absence of control on estates results in extensive damage to trees, the economic life of which is rapidly drawing to a close. Notwithstanding Government's guarantee against nationalisation for 30 years, progress achieved in replanting of rubber and extension of old acres has been small; indeed, little will be possible until security in the districts allows experienced personnel to supervise.

Timber: Extraction work still remains restricted. If full benefit is to be obtained from this valuable asset, skilful marketing is needed.

(*Continued in previous column*)

RAILWAY FREIGHT AND SUGAR INDUSTRY

DOWNWARD REVISION URGED

ALTHOUGH the Union Railway Minister's proposal to impose a 6¼ per cent. surcharge on freight must be viewed in the context of implementing a fairly ambitious development programme for railways under the second Five-year Plan, the proposal will be rightly regarded as unjust at least in so far as the sugar industry is concerned. The surcharge is estimated to involve an average increase of about eight pies per maund in railway freight. The incidence of the surcharge, it is feared, is bound to step up the price of sugar by raising the cost of transporting sugarcane from the fields to the factories, on the one hand, and the sugar produced from the latter to the consuming centres, on the other. It is, therefore, only natural that the Indian Sugar Mills' Association (I.S.M.A.) has expressed its serious concern over the proposed surcharge on railway freight. In the course of a telegraphic communication addressed to the Union Minister for Railways and Transport, the Association points out that the surcharge would adversely affect the working of sugar factories.

The Association is fully justified in its aforesaid contention. As it is, the existing freight rates have been a severe burden on the sugar industry. There are at present no station-to-station rates which were available prior to the revision of freight rates in October 1948. All the sugar manufactured is, therefore, now moving at the prescribed class rate subject to a maximum charge. Similarly, the freight charges on cane are very heavy.

Recent Increases

An idea of the recent increases in freight rates on sugar and sugarcane in the past few years can be had from the following figures culled from the reply sent by the Federation of Indian Chambers of Commerce and Industry to Part I of the *Questionnaire* issued by the Railway Freight Structure Enquiry Committee:

	Pre-1948 rates	From 1-10-1948	From 1-4-1955	Rates now proposed	Percentage rise of revised rates to pre-1948 rates
Sugar (in pies per maund per mile)					
1st 300 miles ..	0.42	0.58	0.64	0.68	62
Next 300 miles ..		1.12	1.18	1.25	198
Beyond 600 miles..		1.07	1.06	1.14	219
Sugarcane (in pies per maund)					
20 miles	3.86	16.91	19.20	20.40	428
25 ,, ...	4.24	16.91	21.26	22.59	433
30 ,, ...	4.24	16.91	23.32	24.78	484
35 ,, ...	4.24	16.91	24.99	25.50	501
40 ,, ...	4.63	16.91	26.06	27.69	498
45 ,, ...	4.63	16.91	27.08	28.77	521
50 ,, ...	4.63	16.91	29.14	30.96	568

It will be seen from the above table that the incidence of railway freight falls more heavily on sugarcane, the principal raw material, than on the final product, sugar. According to the I.S.M.A., while the actual average freight per maund of rain-borne cane worked out to about 5½ pies in pre-war years, the same was raised by about 300 per cent. in October 1948. A further increase was effected on 1st July 1953, besides the levy of terminal charges of half an anna per maund each at the loading and unloading stations. At the same time, the minimum distance for charge was reduced from 49 miles to 20 miles. All these revisions have considerably pushed up the freight charges which now work out to 500 per cent. more than they were in pre-war days. The progressive enhancement in freight thus has, the I.S.M.A. observes, made it uneconomical for the factories to crush rail-borne cane. An indication of this is provided by the fact that, between 1950-51 and 1954-55, the share of rail-borne cane to the total quantity crushed by the sugar mills in Uttar Pradesh, the largest sugar-producing State, has gone down from 38 to 22 per cent. Similarly, in Bihar, the percentage share has receded from 40 to 30; it was still lower at 30 in 1953-54.

What further evidence is required to prove that the sugar industry has already been hit hard by the heavy incidence of railway freight? Instead of reducing the burden, the Railway Minister has proposed to increase it. Surely, the increase will worsen the position in respect of cane supplies to the factories, thereby proving detrimental to cane growers who will be compelled to realise a much smaller amount by converting cane into *gur* or *khandsari*, the two substitutes for sugar. The production of sugar will also be affected greatly. Drawing attention to these aspects, the I.S.M.A. has urged the Railway Minister to exempt sugar and sugarcane from the proposed increase in railway freight.

The plea of the I.S.M.A. is, as stated earlier, justified and deserves to be conceded, especially in the present context when the sugar industry stands on the threshold of a new era of expansion and development. The production target for sugar under the second Five-year Plan is fixed at 2.25 million tons, which represents a rise of more than 40 per cent. of the present annual rate of output. For the successful achievement of this target, it is necessary that the cost of transporting cane from fields to factories is kept as low as possible. What is more, sugar is an essential article of food which is becoming increasingly popular in the rural areas and, therefore, there is need to move into these areas more sugar at cheaper rates. Viewed thus, it is to be hoped that the Railway Minister will see his way not merely to abandon the proposed increase but actually to revise downwards the existing railway freight on both sugar and sugarcane.

In this connection, it would be worthwhile to consider the suggestion of the I.S.M.A. for the reintroduction of the special station-to-station rates from the various sugar factory stations to distant markets and also to port towns which are important sugar-consuming centres. Such rates would, it is opined, help ensure a regular movement of sugar, thereby leading to a reduction in transportation cost to the railways, since wagons will be fully loaded, and resulting in better utilisation of wagons. The I.S.M.A. has also suggested the desirability of quoting wagon-load rates for long-distance movement of sugar. This is undoubtedly a sound suggestion. After all, it must be remembered that the incidence of freight charge that actually falls on a commodity such as sugar which is transported in bulk over long distances should be very light.

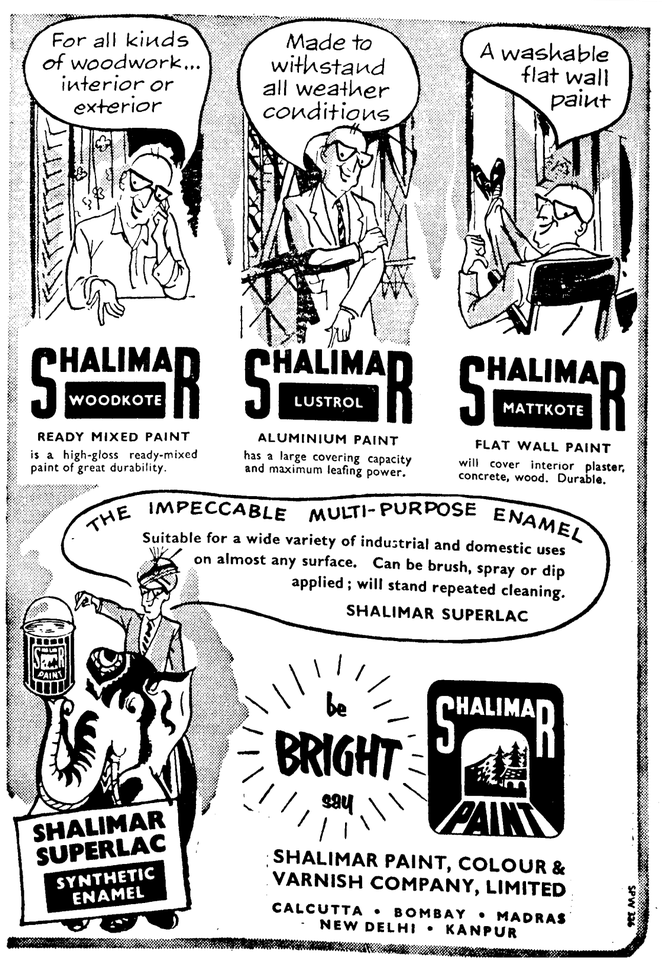
BARDOLI CO-OPERATIVE SUGAR FACTORY

The foundation-stone of the building of the Bardoli *khedut saharkari* sugar factory, the only sugar factory to be started on a co-operative basis in Gujarat and the twelfth in Bombay State, was laid by Mr. Morarji Desai, Chief Minister of Bombay, on Sunday last week. The sugar factory was started in February 1955 with a share capital of Rs. 30 lakhs, of which the share of the Bombay Government is Rs. 10 lakhs. The society has a membership of 1,300 farmers of Bardoli taluka. The factory is located in an area of 15 acres. The total cost of the factory, including machinery, buildings and other equipment, is estimated at about Rs. 75 lakhs. A loan of Rs. 45 lakhs has been granted to this factory by the Industrial Finance Corporation.

There will be no revision in the minimum price that the vacuum pan sugar factories will have to pay for the sugarcane purchased by them during the ensuing (1956-57) season. Thus, the minimum price for cane has been fixed by the Government of India at Re. 1-7 per maund for gate deliveries and Re. 1-5 for deliveries at rail centres. These prices are the same as those fixed for 1955-56.

Licences for the establishment of 20 new co-operative sugar factories were granted till the end of last year, according to the Union Deputy Food Minister. Thirteen out of these factories are to be established in Bombay State. Each co-operative sugar factory is expected to collect a minimum capital of Rs. 10 lakhs. The Government of India will give each factory a loan of Rs. 10 to Rs. 20 lakhs, depending on the merit of each case. The Industrial Finance Corporation will also give a loan up to Rs. 40 lakhs.

The aggregate quantity of sugar produced in the Indian mills during the period 1st November 1955 to 15th February 1956 is estimated at 896,000 tons, as against 834,000 tons in the corresponding period in the previous season, representing an increase of 7.4 per cent.



ATLANTIC COAL FREIGHT

NEW PEAK TOUCHED

URGENT demand for United States coal from European countries, and in particular from France, has raised Atlantic coal freight rates to a new high level of 72*s.* 3*d.* per ton. This compares with the peak of 72*s.* per ton touched in 1955. It would appear that the extreme cold weather throughout Europe during the past three or four weeks has caused heavy reductions in coal stocks. It is also reported that many coal cargoes have been frozen *en route* along inland waterways and railways. Further, there has been a shortage of vessels in the North Atlantic tramp trades, owing to the absorption of tonnage by grain trades and to the reluctance of many owners to ballast across the Atlantic from the Continent.

There is, however, a feeling that the present high level of freight rates might not persist long. It is true that there is a fairly good enquiry for North American grain shipments to a number of destinations and more activity in the trade is forecast in the coming months, following reports of severe damage to European crops by adverse weather conditions. But, as no strong demand is anticipated to develop in other regions, there is the likelihood of good tonnage being available for charter in Atlantic markets when spring gets under way. Besides, the expected continued absence of coal bookings on the U.K. National Coal Board's account will leave an appreciable marginal supply of tonnage free for employment. It will be recalled that coal bookings on the Board's account last year were chiefly responsible for maintaining North Atlantic rates at high levels during the customary quiet period.

European Coal Requirements

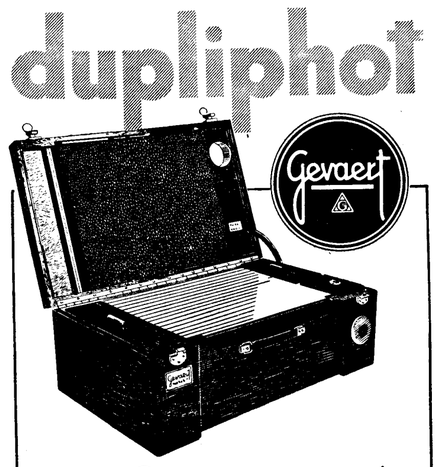
Coal requirements of the six nations of the European Coal and Steel Pool in the second quarter are estimated at about 3 million tons lower than in the first quarter. Unfortunately, the output of coal in these countries is likely to fall by more than 3 million tons, as compared with the first quarter. Thus, the output is placed at 60.8 million tons in the second quarter, as against 64.5 million tons in the first quarter, a fall of as much as 3.7 million tons.

Allowing for the maintenance of 1.9 million tons of exports to outside countries and for a reduction of another 1.6 million tons for consumption at the mines, etc., the production available for the Pool market will be in the region of 51.8 million tons, as compared with 53.9 million tons in the first quarter.

There are still over 7 million tons of pit-head stocks. Of these, 5.8 million tons are in France and since much of the stocks is low-grade, there may not be much demand on it. Imports are, therefore, scheduled at 7.3 million tons, an increase of some 800,000 tons over the first quarter. The major part of the imports will be secured from the U.S. The quantity that will be available from the U.K. is still under negotiation.

The estimates of coal consumption in the Pool countries are, it is stated, based on the continuance of the high rate of activity in the steel industry. It will be noted in this connection that European steel production in 1955 broke all records. The crude steel output in 1955 aggregated 138,883 million tons, or 13 per cent. increase over 1954. It is not yet possible to calculate fully the effect of the recent cold weather which by slowing deliveries to consumers and merchants has led to appreciable drawing from privately-held stocks.

There appears to be a general feeling that Europe would be having fuel shortage for some time to come. It is true that the European Pool as a whole is trying to boost the output of coal, but it will take considerable time for the U.K. and the Continent to become self-sufficient in coal. It is also true that some of the Pool countries are planning to supplement coal by atomic energy and liquid fuel but would not in the foreseeable future do more than that. Consequently, Europe is likely to be a net importer of coal for some more years. Here is an opportunity for India to find markets for some of its surplus coal. India may well include coal as one of the items of exchange in its trade agreements with European countries and scrupulously try to export coal of the required quality.



TRENDS IN WORLD COFFEE ECONOMY

BUMPER CROP ENVISAGED

THE inauguration of the Coorg Coffee-growers' Co-operative Society in Mercara last week provided an occasion for the Chairman of the Indian Coffee Board, Mr. K. Srinivasan, to remind the coffee planters of this leading coffee growing district of the need for conducting the affairs of the Society on such lines as would prove beneficial not only to the growers themselves but to the community at large. Mr. Srinivasan told the members of the Society that unless they faithfully fulfilled their obligations, they could not expect the Society to serve them satisfactorily.

The Coffee Board Chairman also made a reference to the representations by coffee growers for aid from the Coffee Board. He said that they would get aid from outside to the extent they efficiently conducted the affairs of the institution. Evidently, Mr. Srinivasan meant that coffee growers could not expect to get aid from the Board by reason of their having formed a co-operative society. He wanted the Society primarily to earn and maintain the confidence of the Board by its very conduct. As regards the plea for grant of loans, Mr. Srinivasan said that the Board could step in with justification only when the normal channels for getting loans failed.

In this context, it may be useful to pay attention to the trend of production in India and abroad and their possible effects on prices. The current coffee season bids fair to produce another bumper crop. As against the previous estimate of 27,800 tons, the Coffee Board expects the current season's crop to exceed 29,000 tons, which falls short by only 1,000 tons of the previous season's record output of 30,000 tons. Growers also anticipate a crop of over 29,000 tons. The conditions are stated to be ideal for another bumper crop next season. According to one leading coffee planter, a crop of about 40,000 tons can be expected in the 1956-57 season. This is the result of planting higher yielding strains of coffee in the past. The lowest unofficial estimate of next year's production is 33,000 tons. It is interesting to note here that the fifteen-year draft plan of the Coffee Board envisages the Indian output of coffee to reach 43,000 tons in the normal course under the existing voluntary expansion schemes of the producers, while the new plantings are expected to yield an additional 16,000 tons, so that the total output at the end of 1970-71 will be 59,000 tons. This target also is a revised one, having been reduced from 68,000 tons originally planned.

The trend towards higher production will not be a peculiar feature of the Indian coffee industry only. It has already been in evidence in other countries also. According to the U.S. Department of Agriculture, world exportable production during 1955-56 (that is the year ending 30th June, 1956) is expected to reach about 38.25 million bags of 132 lbs. each. This is said to be the largest supply during the last 15 years. Following the sharp fall in retail prices in the U.S. from the peak levels touched in 1954, the consumption is expected to improve, but, according to some sources, the increased demand will not be on such a scale as to offset the larger supplies. The U.S. Department of Agriculture estimates the world demand at 32 million bags, leaving a surplus of 6.25 million bags. Almost all producing countries would appear to have contributed to this increase in production, but the major increase in production is stated to have occurred in Brazil. According to the F.A.O., substantial stocks have accumulated in the two chief producing countries and there are prospects for further increase in production. The prices fetched in 1955, despite the fact that they have fallen, are said to be still generally very remunerative to producers and may continue to stimulate new planting. Should the experience of the previous three cycles be repeated, production may rise very substantially during the next five to seven years under the stimulus of attractive prices. There is, therefore, every possibility of the world coffee economy being confronted with a very difficult situation, not very much different from that experienced in the 1930's when large stocks of coffee had to be destroyed. Such a prospect can only be avoided by effective international co-operation.

The repercussions of this trend in production on coffee prices can easily be imagined. In this connection, it is noteworthy that the International Coffee Bureau formed last year to stabilise prices is expected to help coffee exporters, especialy new-comers to the world coffee trade from Asian and African continents. The U.S. has already opened its market for African producers, particularly those from Belgian Congo and Ethiopia, in its effort to get cheaper supplies of coffee. This has consequently affected to a considerable extent the marketing of Brazilian coffee. Prior to 1952, Brazil had been supplying almost 50 per cent. of the coffee consumed in the U.S., Columbia 23 per cent. and other Latin American countries about 17 per cent. The balance of 10 per cent. was supplied by other producing countries. But this pattern of trade has now changed considerably and, according to the latest estimates, supplies from Brazil to the U.S. account for 34 per cent. of the American imports, Columbia for 30 per cent. and other countries for 36 per cent. The total world imports during 1955 are estimated at 31.5 million bags, as compared with 30 million bags in 1954 and the record of 34 million bags in 1953.

While the major coffee-producing countries are thus confronted with the problem of stabilising coffee prices, a proposal to fix coffee prices in India on the basis of the average price realised during the past seven years, instead of assessing the cost from year to year, has been recommended by the Coffee Board. Producers, who form a small minority on the Board, are themselves said to be divided on the issue. There is, however, a section of opinion which believes that the Board should at least await the report of the Plantation Enquiry Commission before taking a decision on such an important issue.

RESEARCH IN NATURAL RUBBER

Despite the plans to make synthetic rubber on a commercial basis in Britain, research with natural rubber is extending its applications in industry and its use in domestic products, according to a report in the *Financial Times*, London. One example is a method of producing decorative finishes on pre-formed concrete. The method is applicable to modern pre-fabrication systems. This work follows an earlier experiment by the Natural Rubber Development Board and the Cement and Concrete Association. Full details of the process will not be available until later this year.

Latex foam sponge as an upholstery material for domestic furniture and automobiles continues to be in increasing demand. A new development which will help sustain the competitive position of natural rubber latex foam against other upholstery materials, including wholly synthetic foams, has recently been reported. This comes from the British Rubber Producers' Research Association, and involves the use of a modified natural rubber latex known as Heveaplus M-G.

Another innovation of interest to furniture manufacturers is a new form of upholstery webbing made entirely of natural rubber and called "Rotex." It was developed by Danish rubber and furniture experts. Its strength and resilience are said to be outstanding elongation at break being as high as 500 per cent. It is made in a variety of widths and lengths to meet all normal upholstery requirements. Prototype results indicated that it gives exceptional comfort in conjunction with latex foam cushions.

(*Concluded from next column*)

frictional properties of jute and substitute fibres, filament length, binning treatment, etc., are some of the more important items of physical research done at these laboratories. With the object of throwing light on the susceptibility of jute and other fibres to weight finishing process, their reaction to actual service conditions, and to improve their serviceability, the nature of some constituents, e.g., fat and wax, mineral matter and hemi-cellulose, as also the size of the alpha-cellulose molecule, has been studied from the chemical point of view.

The bulk of jute hemi-cellulose, constituting about 25 per cent. of the fibre weight, consists of six molecules of xylose in combination with one of methyl-glucuronic acid. The hemi-cellulose is suggested to be the cementing material for the short fibre elements forming the filament. It is acidic and highly hygroscopic and is responsible for many of the characteristics of jute. The brochure enumerates the methods worked out for peroxide bleaching, rot-proofing, softening hard root cuttings, brightening dark hessian, preserving the common sizing material, etc., and some of these have been given mill trials.

JUTE INDUSTRY IN 1955

MARKED RISE IN EXPORTS

WHILE the year 1955 turned out to be a good year for the jute industry, 1956 is likely to be a better one. The improvement is expected to be due partly to abolition of export duty on jute manufactures and partly to the provision of financial aid for modernisation of the obsolete machinery. A notable feature of the last year was that, while the production of jute goods in the country rose by 10 per cent. over the figure for the previous year, the exports of Indian jute manufactures were the highest since 1952. Thus, the output of Indian mills was 1.1 million tons in 1955, as against 949,000 tons in 1954. Exports of jute goods, the largest earner of foreign exchange, stood at 895,000 tons, as compared with 842 000 tons. The exports were 747,000 tons in 1953 and 736,000 tons in 1952.

Exports to the United States, which is the largest consumer of hessians, continued to rise. As much as 195,200 tons were exported during the jute season 1954-55. This compared with 181,600 tons exported in the previous season. During the five months ended November 1955, exports stood at as high as 88,100 tons, thereby recording a higher monthly average than in the 1954-55 season.

The most important step taken by the Government of India to help the development of the industry during the year under review was the abolition of export duty on jute manufactures in the wake of the devaluation of the Pakistan rupee. It will be recalled that the duties, which were at the high of Rs. 1,500 per ton on hessians and Rs. 350 on sackings during the Korean war boom, had been gradually reduced to Rs. 120 per ton and Rs. 80 per ton, respectively, before they were finally abolished.

As is only to be expected, the immediate result of the abolition of the export duty was to lower the prices of Indian jute goods to foreign buyers. Significantly, the internal prices of jute goods also did not rise following the removal of the duty. With cheaper prices, the demand for Indian jute goods increased, pushing up the rate of production. This led the industry to unseal 7½ per cent. of its looms in two stages. Only 5 per cent. of the looms now remain sealed. The industry worked the full 48-hour week during the whole year. It was in October 1954 that the mills, which had been working a 42½-hour week for a long time, started working full time.

Raw Jute

Supply of raw jute to Indian mills during the 1954-55 season were on the whole satisfactory. The indigenous production of raw jute during the season was 2.83 million bales, as compared with 3.13 million bales in the previous year. Imports from Pakistan during the season were 1.21 million bales, as against 1.54 million bales in the previous season. It may be noted, in this connection, that the devaluation of the Pakistani currency has not made Pakistani raw jute cheaper to India, as Pakistan has not reduced the export prices of its raw jute in terms of sterling. The requirements of the Indian jute industry have been on the increase on account of higher production.

It would appear that the year 1956 has opened with the Indian jute industry in a somewhat better position in the world markets than in the past few years. It has, however, still to face keen competition. Realising the need for helping the industry to modernise its equipment, the Government decided last year to grant loans to the mills through the agency of the National Industrial Development Corporation. Some steps in the direction of modernisation have already been taken and about 44 out of the 85 mills are reported to have modernised their equipment or are in the process of such modernisation. It is estimated that, since the beginning of 1954, licences up to the value of Rs. 8 crores have been issued to mills for the import of modern machinery. Arrangements are also being made for the manufacture of jute mill machinery in the country and licences have been issued to three firms under the Industries (Development and Regulation) Act.

PROGRESS OF JUTE TECHNOLOGY

The Technological Research Laboratories of the Indian Central Jute Committee have found a number of useful results having important bearing on the manufacturing process and quality control of jute products. A brief account of the progress made during 1949-54 is given in a brochure by Dr. P. B. Sarkar, published by the I.C.J.C. Elastic and

ELECTRICITY IN E.C.A.F.E. REGION

SCOPE FOR DEVELOPMENT

THE possibilities of developing electricity in Asia and the Far East are being explored by the fifth session of the E.C.A.F.E. Sub-committee on Electric Power still being held—at the time of writing this article—since the 7th inst. at Bangalore. In a report on electric power prepared for facilitating discussion, the Secretariat of the E.C.A.F.E. has expressed the view that Asian countries may have to continue developing hydro-electric, steam and diesel units, as the actual use of nuclear fission may become economically feasible only after a decade or more. It has suggested also that the countries of the E.C.A.F.E. region should continue to study current developments in the use of nuclear fission for generation of electric power and prepare themselves for taking advantage of them by prospecting their own resources of radio-active minerals and by training manpower with the assistance of the industrially advanced countries.

In order to assist future utilisation of nuclear power, the Secretariat has urged the countries of the region to consider actively the extent to which their means of production can be economically mechanised. They should also prepare forecasts of their energy requirements in terms of both commercial and non-commercial sources, with particular reference to the requirements of their programmes for agricultural and industrial development. The Secretariat has, in addition, stressed the desirability of the countries assessing the hydro-electric power potential capacities of their rivers and of their fuel resources and of estimating the approximate capital costs of electric power generation at various suitable sites. They should draw up their programmes for installing generating units on the basis of the comparative economics of hydro and thermal generation in each area.

Power Potential

It would appear that the Secretariat has estimated the potential capacity for power generation, based on the water powers of the region, excluding China, at approximately 75 million kw., of which only 8 million, or approximately 11 per cent., has so far been developed. The estimates in some of the countries relate, it is stated, to only some of the rivers, and much work, according to the Secretariat, remains to be done in regard to collection of data which would enable closer and comprehensive estimates to be made. If the assessment of all rivers of the region were available, the total power potential would, it is stated, be found to be considerably greater than the present estimate of 75 million kw. The Secretariat is reported to have pointed out that the region suffers a widespread shortage or deficiency of hydrological records and of technical surveys necessary for planning hydro-electric plants and for multi-purpose river basis development.

Welcoming the delegates, Dr. P. S. Lokanathan, Executive Secretary of the E.C.A.F.E., said that power situation of the region had continued to improve at an increasing rate in the last few years. Electricity supply in most of the countries, however, was still inadequate to cope with the rapid rise in demand, especially from industry and agriculture. The installed capacity of public utilities increased in 1954 by 11.48 per cent. to a record level of 15,613 million kw. This advance, though significant, lagged behind the advance in the industrially more developed countries. Electricity production, however, rose in 1954 only by 6.68 per cent. This was because some of the new plants were commissioned late in 1954. Dr. Lokanathan further revealed that the region (excluding the mainland of China), with more than one-third of the world's population, produced only 5.38 per cent. of the world's electricity supply, that is 64,900 million kw., as against 1,209 thousand million kw. for the whole world.

Dealing with rural electrification, Dr. Lokanathan said that several countries were considering the establishment of special demonstration centres in rural areas. The E.C.A.F.E. Secretariat had been assisting these efforts by drawing up blue-prints for such centres. Ceylon and Thailand had taken the initiative with the help of the E.C.A.F.E. to prepare project reports for such centres. Pakistan and the Philippines had also evinced interest in the matter.

Reviewing the work of the E.C.A.F.E. Sub-committee during the last two or three years, Dr. Lokanathan said that it had been recognised that, to secure the maximum overall economy in the operation of the power system, the countries should aim at co-ordinated development of thermal and hydro-electric power stations. Special attention had been given to problems of rural electrification including generation, transmission and distribution of power and tariffs for rural power supplies. The Sub-committee had made special studies in the application of electric power to metallurgical and chemical industries, including the manufacture of fertilisers, exploitation of the raw material resources of the respective countries and increasing the industrial prosperity of the region.

Inaugurating the E.C.A.F.E. session, Mr. K. Hanumanthaiya, Chief Minister of Mysore, surveyed the steps taken by India during the first Five-year Plan for power development and emphasised the importance of rural electrification.

Electric power, said Mr. Hanumanthaiya, had come to be recognised as the key to economic development. In the field of industry as well as agriculture, electricity was a vital factor in achieving an increase in the productive capacity. It was also necessary to ensure a balanced and co-ordinated development covering, in its scope, not merely electric power but also growth in the other related fields of industry and agriculture.

Power in India

Referring to the proposed power development in India, Mr. Hanumanthaiya said that at the beginning of the first Five-year Plan, the total installed capacity of all generating plants was 2.3 million kw. The target for the first Five-year Plan was fixed at 1.3 million kw. of additional capacity. Of this, it was expected that about 1.1 million kw. would have been achieved by the end of March 1956 and work on power projects bringing an additional capacity of 1.29 million kw. was in progress. During the second Five-year Plan, new projects would be undertaken and that would add generating capacity to the extent of 2.1 million kw. It was expected that the total generating capacity would reach a target of 6.8 million kw. by the end of the second Five-year Plan, i.e., March 1961. The *per capita* production, which was 14 units in 1950-51, was expected to rise to 25 units by the end of March 1956, and to 50 at the end of the second Five-year Plan period. The *per capita* production in Norway was 6,421 units, in Canada 4,500 units, U.S. 2,904 units, U.K. 1,435 units and Japan 676 units.

The programme outlined for the second Five-year Plan period, said Mr. Hanumanthaiya, was a mighty one and the targets were likely to be reached before time. But the experience in Mysore, as well as in other places in India, had been that the demand for power had always outstripped the provision of generating capacity.

Mr. Hanumanthaiya said that rural electrification was a matter of vital importance to the countries of the region as more than 80 per cent. of the population lived in rural areas. The extension of electricity to rural areas was not an economic proposition from the commercial point of view, but unless electricity was made available to the remotest corners, the lot of the common man could not be improved. It was a subject for the electrical engineers to think over, he added.

About the peaceful uses of atomic energy with particular reference to the generation of electric power. Mr. Hanumanthaiya said he was glad to learn from the experts that there was no possibility of the power plants utilising nuclear energy replacing low-cost hydro-electric plants in the near future. Even the replacement of the conventional thermal power plants by nuclear energy power plants was not likely to materialise within the next two or three decades. There was, therefore, no need to feel alarmed about the possibility of the present hydro and thermal power plants or those that were being planned for implementation during the next 10 years or so becoming obsolete within their lifetime.

It would appear that the Sub-committee has taken the decision to depute 15 power experts from the E.C.A.F.E. region to make a study tour of eight to nine weeks of the U.K., U.S.S.R., France, Sweden, West Germany, Czechoslovakia, Switzerland and the U.S. for a study of the power development techniques adopted in these countries. The experts will study, among others, (1) the latest technical developments of power plant design and operation in the field of thermal power stations, (2) modern methods and practices in the field of electricity supply and (3) standards and specifications adopted in these countries with a view to meeting the specifications of Asian purchasers.

EXPERIMENTS IN HOUSE BUILDING

The first meeting of the National Building Council, which was held in New Delhi last week, recommended the construction in each State of an adequate number of experimental buildings, involving departures from traditional specifications and designs, under the subsidised housing schemes of the Union Government. The Council suggested that about one per cent. of the annual building budget should be allowed to be utilised by each State and local authority for the construction of such experimental buildings. These buildings must incorporate new ideas likely to result in economy. The Council approved the opening of a building centre in Delhi under the control of the National Buildings Organisation. It suggested that, since the problem of building materials was to some extent local in character, the State Governments be requested to set up such centres, the National Buildings Organisation supplying the technical knowhow in organising them. The Council expressed the view that information on the constitution and working of the proposed building centre in Delhi, when finalised, be made available to all State Governments to enable them to assess the work and form an estimate of the expenditure involved. Another resolution directed the National Buildings Organisation to carry out in two States an intensive survey of the training facilities available for artisans and craftsmen in building trade, evaluate the standards, and recommend measures for their improvement.

The Council accepted in principle the appointment of liaison officers in the States, and laid down that the establishment cost of the organisation should be shared equally by the Centre and the States. It resolved further that the National Buildings Organisation should collect and collate information both about existing practices and desired improvements in the production of lime, bricks and timber. The resolution enjoined that the National Buildings Organisation should make available information likely to lead to economy in production, use of these materials and improvement in their quality. For this purpose, the National Buildings Organisation might select those States or regions where the quality of these products was at present inferior and production insufficient. The Council, by another resolution, approved the research programme of the National Buildings Organisation for the second Five-year Plan period. It recommended that highest priority should be given to the economic utilisation of traditional materials and manpower resources as they had a direct bearing on building costs.

DRYING AND PRESERVATION OF METAL STORES

Water displacing composition possesses the unique property of simultaneously drying and affording temporary protection against corrosion to metal parts. Its mode of application is simple dipping, spraying or flow-coating and requires no heating or power services. Such compositions find manifold industrial applications. The chief among them are as follows:

(i) Drying of metal parts particularly where conventional methods of drying, that is, drying at elevated temperatures or compressed air are inconvenient/unsatisfactory or definitely harmful.

(ii) Temporary protection of metal components awaiting further processing and temporary protection of freshly manufactured stores awaiting normal packaging.

(iii) Drying-*cum*-preservation of articles salvaged from water.

Small quantities of such water-displacing compositions are at present imported and used in ordnance factories and for other defence requirements; these requirements are likely to increase appreciably in the near future. Due to their essential utility in removing both loose and absorbed water from metallic surfaces, these materials are likely to find increased use in industrial engineering establishments also.

A water-displacing composition has been developed at Technical Development Establishment Laboratories, Kanpur. The process of manufacture involves the preparation of nitriles of higher fatty acids, followed by their dissolution along with organic soaps of higher fatty acids and an oil in a suitable solvent. The ingredients, excepting triethanolamine, which is used in very small quantities, are all indigenous. This composition, prepared by the above process, possesses all the essential and desirable features of a good water-displacing composition. Trials in engineering establishments have established that, in performance, it is equal to imported materials. Its production could profitably be undertaken by some industrial units already engaged in producing chemicals.

NEW PRODUCTS AND PROCESSES

New Man-made Fibre

A NEW synthetic fibre, namely, Darlan, which can be used for almost any kind of wearing apparel, has been developed by the B. F. Goodrich Chemical Company of Cleveland, Ohio, U.S. Darlan is expected to become as popular as nylon, rayon and Dacron. It is now being produced by the Company in a pilot plant at Avon Lake, Ohio, and has been found suitable for sweaters, dresses and suits. Women's coats, with a deep pile and soft, furlike texture, can be made with it. The chemical name of *Darlan* is vinylidenedinitrile.

Tin Compound Kills Fungi and Insects

A chemical compound of tin, originally used as a stabiliser in the manufacture of certain kinds of plastics and kinds of paints, has now been developed as a cure for tapeworm infections in poultry and chickens. Called dibutlytl tin dilaurate, the compound is widely used as an additive to transparent polyvinyl chloride plastics to increase their clarity. It is also used as a preservative in the manufacture of chlorinated rubber paints. Recent research has, however, shown, according to Dr. E. S. Hedges, Director of the Tin Research Institute, U.K., that the compound can be used in agriculture as a cure for worm infestation in poultry. Indeed, this tin compound, which is already in use in the United States for this purpose, is said to be one of the group of compounds which have been discovered to be among the most powerful fungicides known. In addition, they even, it is claimed, rival D.D.T. in potency as insecticides.

Increasing the Life of Wood-cutting Tools

Experiments carried out at the Forest Products Research Laboratory of the Department of Industrial and Scientific Research, U.K., have shown that the use of carefully sharpened tungsten cutting edges can lead to a greatly increased tool working life. The working life of such tungsten carbide tipped tools may be as much as from fifty to one hundred times that of a high-speed steel-tipped tool. Yet, it is claimed, the cleanness of cutting of the tungsten carbide cutters is equal to that of the high-speed steel cutters providing both the faces of the tool are ground to a fairly high order of smoothness. The extra care and labour required for this operation is regarded as obviously worthwhile. The experiments, which are described in detail in a special report published by the Forest Products Research Board of the Department of Scientific and Industrial Research (Stationery Office 2s), also indicate that the increasing of the sharpness angle of wood cutters can reduce the rate of tool blunting and so increase the general finish of the machined stock produced.

Keeping Air Clean

Researches in the United States steel industry believe they may at last have found an effective and economical way to end the clouds of dust and dirt that rise from the chimneys of open hearth furnaces where steel is made. For nearly two years, they have been conducting experiments with slag skimmed from molten metal and spun into fibre to form a filter. The tests will soon be expanded to include the operation of a pilot plant by Bethlehem Steel Company of Pittsburgh, Pennsylvania. Open hearth furnaces present a very difficult problem in keeping the air clean. The dust escaping from their flues is much finer than that from blast furnaces and is more difficult to prevent from escaping into the air. Also the great heat of the open hearth flues makes it difficult to install and maintain mechanisms to catch the dust. There is also an economic problem involved, since, whereas the dirt and dust from a blast furnace can be processed and iron ore and other chemicals recovered for use, the dirt and dust from an open hearth is valueless and represents merely an added cost for removal. This filter, made with the threadlike fibres of woolly slag, promises to be the most economical device that has been tried.

Rhenium for Industry

One material with many potential industrial uses in modern industry is the metal rhenium. Recent research has shown that the elasticity of the metal rhenium decreases with increasing temperature up to 900 degrees Centigrade in approximately linear manner, but, at certain pressures, it will remain constant even when exposed to very high test temperatures. Rhenium, which is currently primarily used in the manufacture of thermocouples, but which is finding increasing uses in other branches of the electrical industry, has high stress-rupture properties, the 100-hour being capable, it is estimated, of withstanding pressures of 20,000 lbs. per square inch at 1,000 degrees Centigrade and pressures of 800 lbs. per square inch at 2,000 degrees Centigrade. The researches, which were carried out by scientists at the Battelle Memorial Institute, London, also disclosed that annealed rhenium sheet has a yield strength of 131,000 lbs. per square inch, an ultimate tensile strength of 168,000 lbs. per square inch, and, when under standard test, shows an elongation of 28 per cent. in one inch. Rhenium sheet treated by cold working and reduced 30 per cent. has a yield strength of 282,000 lbs. per square inch, an ultimate tensile strength of 322,000 lbs. per square inch, and an elongation of two per cent. in one inch. It is also claimed that rhenium treated by cold by swaging, or wire drawing work, hardens more than does rhenium treated by rolling. Furthermore, the addition of thorium reduces the ultimate tensile strength and ductility of rhenium and lowers its recrystallisation temperature. It is corroded slowly by aluminium and quickly dissolved by molten nickel and molten iron but is resistant to attack by molten tin, zinc or silver.

Two people
... but the same tune

IN OTTAWA or in Delhi, in Montreal or in Calcutta, the pipers play the same tune.

This particular tune is of a ballad which says that, some twenty years ago, Canadian enterprise helped to initiate the development of the aluminium industry in India. Today, Canadian technical and financial resources are again helping the industry to install a new smelter, which will be India's biggest, at Hirakud, Orissa.

The ballad ends with the rejoicing that Canadians and Indians are partners in India's progress towards industrialisation.

COMPENSATION TO INSURERS

GOVERNMENT URGED TO RECONSIDER BASIS PROVIDED IN BILL

LAST week, we made a brief reference to the opinion in insurance circles which, on a detailed consideration of the provisions of the Life Insurance Corporation Bill, feels that the compensation provided therein is less than adequate or fair to the shareholders of insurance companies and policyholders of mutual offices. We also referred to the plea of the Indian Insurance Companies' Association that the Government should undertake a revaluation of the companies as on the date of nationalisation or adopt as the basis for compensation the last valuation prepared by the companies themselves at a date preceding the date of nationalisation.

The fact that there has been some misgivings in the minds of shareholders over the compensation is evident from the brief reference made to this subject by Sir Cowasjee Jehangir, Bart., Chairman of the Bank of India Ltd., in the course of his speech at the recent annual meeting of the Bank. He said:

"Since the end of the year there has been a further major operation on the part of the Government which cannot but cause uneasiness. I refer to the nationalisation of life insurance business throughout the country on the 19th of January. It is not to our credit that this nationalisation should have been effected by the undemocratic method of an ordinance. The worst aspect of nationalisation is the unfair method of compensating shareholders for the value of their shares. This is being done under the amendments made in the Constitution on the 27th of April 1955 by the Constitution (Fourth Amendment) Act, 1955. I know of an instance where the shares of a life insurance company have been valued by actuarial calculation at a certain amount and it is now well known that, on the basis of the compensation indicated in the Bill which has followed the Ordinance, the Government intend to pay less than half that value. I do not think it was ever intended in a country governed under democratic principles that the Government should take advantage of the amendment of the Constitution to deprive shareholders of their legitimate dues, especially to such an extent as I have just mentioned."

Sacrifices

To revert to the memorandum submitted by the Association. Since the issue of compensation affects thousands of shareholders of insurance companies in the country, the points raised by the memorandum do certainly deserve the attention of the Government. The Association expresses the view that the idea underlying the payment of fair compensation should not be only the reimbursing the shareholder any loss of property or of the value, as at the date on which the business is nationalised, but should also cover a fair estimate of the future gains the shareholder would have made, had the business continued in the private sector. In a business like life insurance, this aspect is more important than in any other trade or industry. Life insurance is a business of very slow growth. Before the business becomes a paying one to the shareholders, it takes a long period of anything between 10 and 20 years from the commencement. During this period, the shareholders make sacrifices and forgo dividends so that they may be able to profit in future. This fact, it is stated, should be borne in mind in assessing the compensation payable in respect of taking over of life insurance business by the Government.

In this connection, the Association has referred to the growth of new life business in recent years which has expanded from Rs. 125.8 crores in 1950 to Rs. 213.3 crores in 1954. It feels that if a dispassionate view of the future is taken it could confidently be stated that this increase would continue, and at the end of five years, say, 1960, the new business would be Rs. 450 crores and would increase similarly in the future. It adds:

"The growth of business in the past, as also the expectation of growth in future, are due to the planning done by the insurers and to the sacrifice made by them in the past in the form of spending fairly large amounts on organisation. These organisational expenses went to a great extent in reducing the profits in the past and these sacrifices by the shareholders were made with the hope that at a future date these sacrifices will not go unrewarded."

The Association further submits that at the time of the valuation, the companies usually did not estimate the future in a rosy way, but underestimated the favourable factors and overestimated the unfavourable. These margins, taken as a whole, took away a very large portion of the surplus which would have been available to the shareholders. Because of nationalisation, they should not be deprived of a fair increased compensation. Those who have acted prudently and with foresight, it is contended, should not be penalised.

Three Considerations

It is further submitted that the Government in coming to a decision on this question should bear three important considerations in mind. In the first place, the book value of any life insurance unit as represented by capital and shareholder's share of surplus is not the whole value. From the stockholder's standpoint, the insurance in force is the basis of the earning power. It has real encashable value which is derived through continued operations. The shareholder is interested in the company as an organised going concern. Secondly, the actuarial system of valuation does not take into account items materially affecting the earning, such as the increase or decrease of the business in force and the increase or decrease of assets such as its goodwill, its good name and popularity, its organisation, investment appreciation and the like. These are immaterial in a periodical valuation meant to assess the surplus of a long-term business in a summary manner. Thirdly, the "surplus" in a life valuation is really a difference between policy liabilities and the life fund. It is neither identical with operational or commercial profit nor with profit at all in a commercial sense. The surplus of the valuation balance-sheet is the combined effect of all operational and non-operational profits made and losses suffered during the inter-valuation period plus the surplus brought forward, if any.

A large body of the shareholders of insurance companies, it is stated, belongs to the middle class. The shares of insurance companies, particularly life insurance companies, have always been considered to be almost a gilt-edged security and the moneys of many widows and orphans have been invested in the purchase of these shares, because of the confidence placed in most life insurance concerns. The shares are well distributed and provide an investment which, in the long run, proves very attractive. Because of this, the usual return on these shares works out at about 4 per cent. and people had been holding these shares on that basis and purchasing them in the market on that basis. The suggested compensation should not, therefore, be such as is likely to affect adversely the interests of the middle-class shareholders.

After pointing out that the reduction in the proportion of the surplus allocated to shareholders from 7½ per cent. allowed under the Act to 5 per cent. under the Bill and the method for calculating the annual average surplus are the two inequitable features of the provisions relating to compensation to shareholders, the Association has, as we indicated last week, suggested an alternative method for calculating compensation. Proceeding, it observes that the Government should, in the matter of arriving at figures of compensation payable to shareholders, take into account the funds, such as dividend equalisation fund, specifically allocated by the companies for the benefit of the shareholders. It also claims a 7½ per cent. share in the appreciation of the market value of investments, as compared with their book value. Further, it suggests that compensation should not be subject to taxation. It says:

"It is presumed that the amount of compensation to be paid to the shareholders would not be treated as dividend, as actually it is a return of approximate present value of the capital calculated in accordance with the principles finally approved by Parliament. It is necessary and desirable that this point should be made clear in order to avoid shareholders being made liable to pay income-tax and other similar tax thereon by the income-tax authorities subsequently, on the plea that no such distinction or clarification has been made either in the Bill or otherwise by an order of the revenue authorities. It is, therefore, earnestly submitted that this point should be cleared beyond doubt as otherwise it may have the effect of reducing still further the quantum of compensation which would ultimately reach the shareholders."

As regards mutual insurers, the Association submits that the proposed compensation is totally inadequate and would appear to be unfair to the policyholders. Hitherto, the entire surplus was utilised for the benefit of the policyholders in the case of such insurers. Further, the proposed Corporation will have a share capital and, as provided therein, only 95 per cent. of the profits disclosed in their future valuation would be applied for the benefit of the policyholders, who would in fact lose 5 per cent. of the surplus which normally would come to their share along with 95 per cent. The Association, therefore, suggests that, in their case also, the average surplus for the year 1955 should be determined on the principles it has advocated for joint-stock insurance offices and 5 per cent. thereof multiplied by the period of their fuuure duration allocated to the present policyholders. It adds that with a view to arriving at some definite amount to be added to the sum assured at present instead of leaving it indefinite, a fixed, fair and reasonable period may be taken which would on an average approximate to the future duration of the present portfolio, taken as a whole.

The Committee of the Bharat Chamber of Commerce, Calcutta, states that, according to its information, the custodians of life insurance companies in Calcutta have been instructed to invest 84 per cent. of the liquid funds of the companies in Government and approved securities and the balance of 16 per cent. in approved debentures, preference and ordinary shares of companies and also in any current building programmes that the companies may have on their books. It learns that the 16 per cent. investment will be mostly utilised for new industries' capital which will be essential for the second Five-year Plan, making it impossible for the existing companies to raise fresh capital from the market. The local custodians, according to the further information of the Chamber, have been instructed to refer investment matters to the Chief Custodian in Bombay who himself will make the investment. The Committee has expressed its apprehension that the major portion of the investment of life insurance funds will be canalised to Bombay, leading to a virtual cessation of investment in Calcutta or in Eastern zone generally. It has suggested to the Finance Minister that the investment ratio in approved investments other than Government securites should be increased to 32 per cent., as laid down in the Insurance Act, 1938 and that each zonal custodian or corporation should deal with payment and deliveries independently under the general supervision of the Chief Custodian.

The Minister for Revenue and Civil Expenditure, Mr. M. C. Shah, in the course of his reply to a question, denied in the Rajya Sabha that remuneration of field workers of insurance companies had been withheld by the custodians who had taken over the running of the companies. He said that certain representations were received regarding the delay in the payment of salaries to the staff of certain insurance companies. The matter was looked into and, where the grievances were found to be genuine, the custodians were instructed to make payments immediately. In reply to another question he said that a delegation of representatives of the United Kingdom and Canadian life insurance companies transacting business in this country, recently visited India and made certain representations to the Finance Minister.

How far will 15 yards of cloth go?

Fifteen yards—no more—is our per capita consumption of cloth. The industry's target for 1960 is 22 yards per head.

Thirty years ago India was importing the bulk of her textile requirements; to-day, she has the second largest textile industry in the world. One hundred crores of rupees have been invested in this key industry. It employs a million workers and produces 5000 million yards of cloth annualy.

In our developing economy steel is essential. That is why the Tata Iron & Steel Company has launched an expansion programme which will raise its capacity.

COMPLETES ANOTHER YEAR OF EXPANSION

MR. J. K. MICHIE ON REPERCUSSIONS OF CREDIT SQUEEZE IN U.K.

THE Annual General Meeting of the National Bank of India Ltd. will be held in London on 27th March 1956. The customary statement of the Bank's Chairman, Mr. J. K. Michie, circulated to the shareholders along with the Directors' report and accounts for the year ended 31st December 1955, provides a brief analysis of the economic conditions and developments in the various countries in which the Bank operates. Referring to the Government of India's action in nationalising life insurance, Mr. Michie says that one of the results of this is a recrudescence of uncertainty in the minds of industrialists, Indian and foreigner alike, regarding the Government's further intentions towards the private sector. He is of the view that this uncertainty has not been relieved by the principles outlined by the authors of the second Five-year Plan. Mr. Michie also dwells at length on the repercussions of the British credit squeeze elsewhere, particularly in the countries where the Bank operates.

The following is the full text of Mr. Michie's statement:

"Since I last addressed you, we have strengthened our Board by the addition to our number of the Rt. Hon. Lord Colgrain, M. C., who joined us in April last. Lord Colgrain is Chairman of Grindlays Bank Ltd., and his presence on our Board contributes greatly to the very necessary co-operation between the two Banks.

"His appointment comes up for confirmation at the annual general meeting.

"Our balance-sheet again reflects expansion, the total of our consolidated figures being £168,653,013, against £162,031,432 at 31st December 1954.

"For reasons which are alluded to later, this trend is much more likely to be reversed than continued during 1956.

"After full provision for taxation, bad and doubtful debts and other necessary reservations our consolidated net profits are £421,839, against £385,923 for the previous year.

"The two dividends declared total 15 per cent. which is the same rate as for 1954.

"Of the resultant balance, as last year £75,000 has been transferred to premises account and £85,000 has been allotted to contingencies reserve account, against £70,000 last year. The balance carried forward has been increased by £15,892 at £342,158.

"In common with other banks we have suffered a considerable fall in the value of our holdings in Government securities, but this has been taken care of internally.

India

"Irrigation schemes, the increasing supply of water from tube-wells and improved methods of agriculture have all contributed to a most gratifying increase in agricultural productivity, particularly of foodstuffs, and imports in 1955 fell to a new 'low' of just over three-quarters of a million tons. This additional production is all wanted to keep ahead of the growth of population.

"Generally, the production targets set for the first Five-year Plan have been reached or exceeded and the Government is facing its second programme with some confidence.

"An outline of this has recently been published which provides for a total investment of Rs. 6,100 crores (£4,575 millions), of which investment in the public sector will be Rs. 3,800 crores (£2,850 millions), whilst investment in the private sector is placed at Rs. 2,300 crores (£1,725 millions). The ratio of public to private investment is 62 per cent. to 38 per cent. Combined development expenditure by the Central and States Governments is to be of the order of Rs. 4,800 crores (£3,600 millions). The broad aims are to create 10 million additional jobs, of which 8 millions will be non-agricultural, and progressively to raise national income by 25 per cent. and *per capita* income by 18 per cent. between now and 1961. We sincerely hope these aims will be achieved. It is proposed to finance the Plan to the extent of 50 per cent. from budget surpluses and loans. £900 milions is to come from deficit financing, while £600 millions is expected from foreign sources, leaving a gap of £300 millions to be filled.

"In a proposed amendment to the Reserve Bank of India Act indications are given of how part of the finance for the Plan is to be found. There are two proposals, one to reduce the backing of the paper currency from 40 per cent. to 30 per cent., thereby enabling the note circulation to be increased by Rs. 135 crores, the other to revalue the gold in the Paper Currency Reserve to the International Monetary Fund rate of $35 per ounce, thereby raising its value by Rs. 78 crores. The second is an entirely logical move.

"The Planning Commission purposes the creation of a socialist pattern of society and that includes 'a more even distribution of wealth and power' with limited ceilings for personal net incomes. Higher taxation is, therefore, in view.

"As a part of her economic policy India has just announced her decision to nationalise life insurance, so that she may channel the growing funds from this source more directly into the Five-year Plan than happens through the individual investments by companies in Government securities, etc.

"The immediate results of the Government's action have been a sharp and general fall in Stock Exchange values and a recrudescence of uncertainty in the minds of industrialists, Indian and foreigner alike, regarding the Government's further intentions towards the private sector, and this uncertainty has not been relieved by the principles of policy outlined by the authors of the second Five-year Plan.

"The Imperial Bank of India is now the State Bank of India and a controlling interest has been acquired by the Government through the Reserve Bank of India. It was foreshadowed that certain other indigenous banks would be included in the new State Bank, but so far this has not been done. The primary reason for the change of ownership and control was the provision of banking facilities in rural areas at a faster tempo than a purely commercial undertaking could justify.

"A very regrettable feature of the banking year has been the strikes and at times near-riots initiated by banking clerical staffs at Calcutta, Bombay and other of the principal cities which arose out of certain provisions in the Industrial Disputes (Banking Companies) Decision Act, 1955, which laid down the general lines on which staff should be paid.

"At the time of writing, the atmosphere is one of comparative peace, but if the Central Government is to lay down rules they should at least ensure that they are kept by both sides. The alternative is anarchy and the impossibility of banks carrying out their obligations under the Negotiable Instruments Act, which in turn would mean the paralysis of business, a state of affairs which was within a hair-breadth of happening in Calcutta early in January.

"Throughout our history in India we have taken pride in the good relations that have existed in our offices and we regret exceedingly that these have been disrupted—we hope only temporarily—by circumstances beyond our control. To all those who, in most difficult conditions, have helped to keep the machinery of banking from coming to a full stop we offer our sincere thanks.

Pakistan

"On 31st July last Pakistan revalued her rupee at 1s. 6d. and so came into line with other sterling area currencies. This was a wise decision which has put her in a much better position to market her exports. It also opened the way for a resumption of trading with India which could be widely developed. While in some cases the products of the two countries are competitive, they are in many others complementary to the needs of each other.

"Development of industry has had a high place in Pakistan's planning and both in West and East Pakistan many factories have been brought into operation during the year.

"On the whole, crops were good in 1955 and the economy of the country is distinctly more stable, partly as a result of an austerity campaign which cut imports very severely.

"The draft Constitution is now under discussion; a major proposal is to establish the same connection between the U.K. and Pakistan as exists between the U.K. and India, i.e., a Republic within the Commonwealth.

"Mr. Ghulam Mahomed, who had given devoted service to his country as Governor-General, recently had to resign because of ill-health and his place has been taken by another national figure in Major General Iskandar Mirza.

"Our fine new principal office in Karachi, a photograph of which is our pictorial feature this year, was formally opened for business in April last, and Mr. Habib Rahimtoola, Minister of Commerce did us the honour of performing the opening ceremony.

Ceylon

"Generally, the economic picture of the Island is a favourable one. Lower rice prices combined with a larger internal production greatly improved her balance of trade. Rubber prices have remained at remunerative levels, but the course of tea prices has borne a close resemblance to a fever chart, and no one can yet say that it has settled at 'normal,' although it is thought that the principal factors which caused last year's extreme swings have worked themselves out. The recent rapid increase in Ceylon's rice production is a fine achievement, although at the moment a severe drought is causing a setback. The target is 650,000 tons per annum which would go far to meet the needs of the increasing population.

"The Development Finance Corporation, I mentioned last year, has not yet been formally constituted, but this is expected to happen in the very near future.

"It has just been announced that an oil refinery is to be built near Colombo by British and American oil interests, which will be an important addition to the economy of the Island.

Burma

"Falling rice prices have again troubled Burma, but this was countered to some extent by larger rice exports. Nevertheless, her sterling balances declined sharply from £41½ millions to £32 millions over the twelve months, as orders previously placed for large quantities of capital goods had to be paid for.

"Strict rationing of imports was put into effect early in 1955 and it is hoped that this measure, coupled with a more active rice selling policy, will bring equilibrium.

"The barter transactions, which have recently become a feature of Burma's trading, I fear, are not likely to provide a real solution of her rice problems nor will they provide imports at the most economical costs, while they are doing much damage to the established trades with the United Kingdom.

"Production of mineral oil is increasing and this means a considerable saving of foreign exchange.

"Improved port facilities and internal transport remain the first necessities of further economic progress and Burma's friends would prefer to see greater concentration on these rather than that money should be spent on projects of more dubious merit and which offer much less certain rewards.

"Given successful handling of the present somewhat critical balance of payments position, there is no reason why Burma should not achieve and maintain a favourable balance of trade.

"Her economic policy continues to be dominated by socialist ideas and increasingly trading is going into the hands of State or quasi-State organisations. A corollary of this is the Government-owned State Commercial Bank to which a considerable amount of business is now directed.

Colombo Plan

"The Colombo Plan is being steadily enlarged and the tempo of development in Asian member countries continues to rise, as is indeed highly necessary, for it is estimated that the population over the area covered by the Plan is increasing at the rate of 10 millions per annum.

"In the not very long run, in spite of very satisfactory increases in food production in deficit countries, there seems to be a certain market for any rice Burma and/or Siam can export, particularly as *per capita* standards of nutrition are still estimated to be below the 1939 level.

"It is only right to point out that at least two-thirds of the Colombo Plan funds are found by the countries which benefit, but outside aid is not only in money and to date 7,200 men and women have been or are being technically trained outside the area. The long-term advantages of this scheme will be very great.

East Africa

"Politically both in Kenya and Uganda more stability has been achieved and the economies of the two territories have benefited accordingly.

"In pursuance of our policy of providing banking services where and when justified, we have opened two branches in Kenya, at Nyeri and at Kilindini Road, Mombasa, and one in Tanganyika at Mbeya. Sub-branches have been opened at Kakamega from Kisomu, Kenya and at Iganga and Kamuli from Jinja, Uganda.

Kenya

"The extreme phase of the Mau Mau movement seems to be over, which is a matter for thankfulness, and if this is confirmed by events it will not only give great relief to the Government financially and otherwise, but will, too, give confidence to all concerned in the development of the country. To date, it is estimated to have cost £30 millions. In the circumstances, progress during 1955 was good and crops on the whole satisfactory, although recent unseasonable rains have badly damaged the standing wheat crop. The next problem in Kenya will be resettlement and rehabilitation of those who were not too deeply involved in Mau Mau. It will be a task calling for statesmanship of a high order.

Uganda

"Cotton and coffee are the backbone of the economy of the Protectorate. Both crops were good in 1955 and only small inroads had to be made into the Cotton Price Assistance Fund previously built up by the Government in the years of high prices. The large surplus being carried by the U.S.A. is a constant cloud over the cotton markets of the world.

"Recently, trade has been freer than before the return of the Kabaka to Kampala, but confidence has not yet fully returned and the turnover of consumer goods is still somewhat restricted in Buganda.

Tanganyika

"Sisal prices improved during 1955 and since the turn of the year first quality has touched £90 per ton, against £80 a year ago.

"Cotton and coffee crops were again good and continue to expand.

"The port of Tanga has been greatly improved and extensions to deep sea berths at Dar-es-salaam are under way. Mtwara still carries only a small volume of traffic, but hopes are held that there will be a steady expansion of production in the Southern Province.

Zanzibar

"In 1955 exports of cloves considerably exceeded the figures for 1954, but as the new crop is a large one stocks held by the Clove Growers' Association have been rising.

"Copra prices remained fairly steady throughout the year and exports, as also of coconut oil, were only slightly below 1954 totals.

Somaliland Protectorate

"Unspectacular, but steady, progress is being made in this territory and these remarks apply equally to our business there.

Aden

"Aden continues to be one of the most important fuelling ports in the world.

"Prospecting for oil on a considerable scale is being carried out in Aden's hinterland and any success will add further importance to the Colony. The traditional entrepôt trade is being well maintained. It is hoped that our new main office premises in Crater will be completed within the next few weeks.

Subsidiaries

"Grindlays Bank Ltd. had a satisfactory year and higher profits are shown. Expansion in the Rhodesias continues.

"Our Finance and Development Corporation made an increased profit which is being retained in the business.

General

"A year ago to combat inflation the Bank of England rate was raised to 4½ per cent.; later the 'credit squeeze' was ordered, but even together these measures unfortunately have been proved inadequate. As I write the Bank rate has been hoisted to 5½ per cent. and other measures taken aimed to restrict spending. During 1955 production in the United Kingdom was increased by about 4½ per cent., but spendable incomes rose by 7 per cent., and as, by and large, these incomes were spent, we had inflation to at least the extent of the difference. The sharp fall in the gold and dollar reserves is another disquieting feature and is a reflection of our adverse trade balance. So, without doubt, we shall have further and very necessary anti-inflationary measures imposed upon us, we as a community having failed to impose them on ourselves.

"In a totalitarian society there is no comparable problem. Management and labour just have to produce prescribed 'norms' and, of their production, only a certain percentage is released for internal consumption, the balance being ploughed back into development or directed into export. As only a small percentage of each annual increment in production is earmarked for domestic enjoyment, the rate—though not necessarily the volume—of increase in gross national

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper Returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and Returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1955.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such accounts in accordance with the provisions of the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on this basis, give a true and fair view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Bank of India, Limited.

LONDON, 24th February, 1956.

product is greater in, say, Russia, than in democratic countries.

"In a free economy totalitarian methods are not permissible, and others must be used to produce similar effects. We, therefore, await the Budget in hope, tempered by some trepidation.

"The alternatives to a policy of reducing the volume of goods for internal consumption seem to be either to make them more expensive (e.g., by purchase taxes) or to ensure through taxation that less money chases the goods available. It would be far less painful to the Government and to us, if individuals were to save rather than spend and thereby achieve the twin necessities of a favourable balance of trade and a surplus for investment, but we cannot have the cake of economic freedom and simultaneously eat it.

"As a British overseas bank our interest in the economic measures taken by this country lies partly in the repercussions they have elsewhere. For instance, it is vital that the United Kingdom should be able to continue to make important contributions to the Colombo Plan and to other similar developments within the Commonwealth as well as to expand its investments abroad through private enterprise. If we cannot do these things, we shall lose our place in the markets and in the regard of the countries concerned.

"It has also to be realised that the effects of the credit squeeze do not begin and end in London or in the United Kingdom. It is true that the centre of the sterling area naturally takes the first pressure; but the effects of action at the centre necessarily work their way outwards, and it would be idle to suppose that borrowers nearer the periphery of the sterling area will remain unaffected by recent monetary measures in this country. It will be of interest to watch the longer-term effects in this wider context. Overseas banking cannot but be made increasingly aware of this aspect of the squeeze during the current year, and I would not be surprised to see firmer rates in many countries which to outward appearances so far have not been affected.

Staff

"With the qualification I have made we have had the usual high standard of service from our staff everywhere for which we offer our sincere thanks.

"Our General Manager, Mr. Chisholm, is nearing the end of a strenuous tour of our Eastern branches which is giving him and us an up-to-date appraisal of our business and of conditions in India, Pakistan, Ceylon and Aden from which we shall derive great benefit.

"This, of all times, is not one in which to indulge in prophecy, but, in so far as our immediate future is in our own hands, I see no reason to be pessimistic."

INTEREST RATES IN AUSTRALIA

Dr. Evatt, leader of the Labour Opposition in Australia's Federal Parliament, served notice on the Government on the 7th inst. to the effect that he would call on it to "employ all its possible powers" to reduce interest rates. Dr. Evatt gave notice of an amendment during the address-in-reply debate on Government policy, attacking the Government's "deliberate policy of failing to provide sufficient market support for Commonwealth securities." Because of this insufficient support, the amendment said, there had been a sharp fall in the market price of securities, a consequential increase in the interest yield, serious capital loss to original investors in Commonwealth bonds, and unfair gains to speculators. It is stated that this had aggravated inflation and caused a general rise in interest rates. The amendment called on the Government to reduce interest rates "for general public welfare, and so advance primary and secondary industry, home building, public works and national development." Ds. Evatt, giving notice of his amendment, remarked: "The Commonwealth Parliament has complete powers to fix rates of interest. It would be possible to tax income from interest, making it higher in relation to interest charges, which soon would bring interest rates down." Earlier, Mr. Menzies, the Prime Minister, had told the House that he was considering calling the State premiers together to deal with hire-purchase problems.

Self-Sufficiency in TUBES

On March 7, 1956, the works of the Indian Tube Company were formally opened in Jamshedpur by the Hon'ble Dr. Sri Krishna Sinha, Chief Minister, Bihar.

The Tata Iron & Steel Co. Ltd. and Stewarts & Lloyds Limited, the largest producer of steel tubes in Europe, have jointly sponsored this project. A Fretz-Moon Mill with an annual capacity of 12,000 miles of tubes (90,000 tons by weight) at a cost of Rs. 3 crores has been installed. A separate Electric Resistance Weld Mill for the manufacture of some 13,000 tons of high quality precision tubes will be in operation by 1957, and Government's permission is awaited to instal a third mill to make seamless tubes.

When all the three mills are commissioned the country's requirements of practically all varieties of steel tubes should have been met.

ZAGREB SPRING FAIR

March 30th to April 8th, 1956

This year's Fair will be even bigger than the 1955 Spring Fair at which over 1,000 enterprises displayed more than 3,000 exhibits and 126,000 visitors attended. The rapidly expanding economy in Yugoslavia makes it possible to offer a wide range of products, including mining, timber and wood products, textiles, engineering and electrical equipment, handicrafts, tobacco and medicines, glassware, foodstuffs and wines. A special section of the Fair will be devoted to featuring Yugoslav Craftsmanship. There are exceptional facilities for buyers and visitors with Fair Certificates, including 25 per cent. reduction in fares on Yugoslav Federal Railways, Yugoslav Airways and Adriatic Shipping Line, and visas issued at a reduced price.

Further information and Fair Certificates can be obtained from

Yugoslav commercial and diplomatic representatives, or direct from

THE CANARA BANKING CORPORATION LIMITED

GOLDEN JUBILEE 1906—1956

FIFTY YEARS OF DEVOTED SERVICE TO INDIA

TWELFTH March 1956 is, indeed, a great landmark in the history of the Canara Banking Corporation Limited. Fifty years ago, this day, this Bank had its origin. It is the first joint-stock bank started in the district of South Kanara in Madras State, in 1906. When the wave of '*swadeshism*' was spreading far and wide in our country, a noble band of citizens, endowed with vision and forethought, conceived the vast potentialities for good to the country, as a whole, of forming a banking institution to cater to the needs of trade, commerce and industry, as well as to inculcate the habits of thrift in all classes of people. The seed of banking was thus sown in the district. The history of the Bank is, no doubt, a fascinating one to all interested in the growth of banking in this great country. It started as a *Nidhi*. Slowly and steadily it built up its present capital structure. Then followed its expansion with sound and rapid development. The result has been, the paltry resources of Rs. 38-13-3 left at the close of the first day's working on 12th March 1906, have now developed to over Rs. 5.45 crores.

The first President-Founder of the Bank was the late Khan Bahadur Haji Abdulla Haji Kasim Saheb Bahadur who guided the destinies of the Bank from 1906 to 1929. He was not only a pioneer among the bankers of the State but also a public worker of proved ability known for his character and integrity. He was an elected representative to the Madras Legislative Council and the Legislative Assembly at New Delhi for several years and rendered yeoman service to the country. Above all, he was a great philanthropist whose princely hospitality and magnificent charities are a household word in the district.

Haji Abdulla Haji Kasim Saheb Bahadur
Founder-President

The late Shri Haradi Keshava Pai, B.A., B.L., leading lawyer of the place, was a Director of the Bank since 1927. As President of the Bank since 1929, he shaped the policies of the Bank on right lines till his premature death in 1934. This period was marked by real and rapid progress in diverse directions. In fact, no administrator could have been more sincerely interested in the affairs of the institution, of which he was the head.

The Late Shri H. Keshava Pai
Former President

Development

The growth and progress of this Bank, in the beginning, was steady. Started with a small beginning at a time when people were not used to the banking habit, it was really an uphill task to educate the clientele in taking advantage of the manifold banking services. The constitution, under which this Bank began its working, was in the form of a *Nidhi*—i.e., a person contributing to its funds a rupee or multiples of a rupee, every month, for a period of 45 months was entitled to receive at the end of the 46th month Rs. 50 or multiples thereof. These contributors were the first shareholders of the Bank. This system was soon found to be not helpful, in view of the fluctuating and fleeting character of the capital. In the year 1917, a radical change was brought about by amending the Articles of Association and permanent shares were issued. Till 1937, the authorised capital of the Bank was Rs. 3,50,000 and in 1938, it was raised to Rs. 10,00,000. In 1943, it was further raised to Rs. 25,00,000 which continues to be its authorised capital to this day. The subscribed and paid-up capital, in 1934, stood at Rs. 2,25,000. With the growth of confidence in the Bank, the deposits increased steadily and the Board, in consonance with sound canons of banking, thought it fit to increase the capital. In 1935, 2,500 ordinary shares of Rs. 50 each were issued at a premium of Rs. 40 and this issue was over-subscribed. In 1939, 7,000 5 per cent. first preference shares of Rs. 50 each were issued and were fully subscribed. In 1943, there was a further issue of 18,000 4½ per cent. first preference shares of Rs. 50 each and this issue, too, was fully subscribed. The last issue of capital was again made in 1947 when 8,000 ordinary shares of Rs. 50 each were issued at a premium of Rs. 40 per share. It may be of interest to note that all these issues had uniformly encouraging response. This is proof positive of the popularity and confidence that the Bank has been continuously enjoying both with the shareholders and the public. Today, its entire issued and subscribed capital of Rs. 20,00,000 is fully paid-up.

Reserves

Trade, commerce and industry can never be the monopoly of any class or community. It has been the policy of the Directors from the very inception of the Bank to strengthen the reserves by annually setting apart a fair portion of the profits towards the reserve fund. In the case of every institution, particularly a banking institution, building of its reserves is the acid test of its intrinsic stability. From a small sum of Rs. 6,894 in 1918, by substantial additions almost every year, reserves have now reached the figure of Rs. 12,00,000.

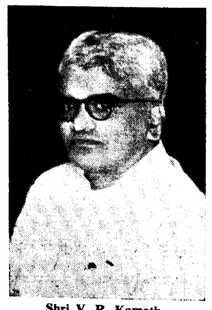
It is of particular interest to note that, as far back as nearly five decades, the Bank was formed with a cosmopolitan outlook without distinction of class or creed, motivated only by a spirit of ideal banking service. This wholesome tradition has been maintained by the shareholders of the Bank.

The cosmopolitan outlook is reflected even in the composition of the Board of Directors. It consists of men of eminence and high integrity coming from all walks of life. Their business acumen, farsightedness and cautious policy have all contributed towards attainment of the present stature of the institution in the banking field. The Bank is really fortunate in having such devoted men at the helm of affairs from time to time. One special feature of this Bank is that there has not been any Managing Director or Managing Agent from the very inception.

Dr. U. Sunder Ram Pai
Present Chairman

The mantle of presidentship of the Bank fell upon the able shoulders of Dr. U. Sunder Ram Pai, M.B.,B.S., the present Chairman. If the Bank owes its progress and popularity to any single individual, more than anybody else, it is the present popular Chairman of the Bank who continues to be associated with it since 1929. Though his jobs are not always pleasant, he works unceasingly with a pleasing word for everyone. A man of multifarious public activities, Dr. Pai is still never too busy to give the Bank his valuable guidance.

The present Chief Executive, Shri V. R. Kamath, B.A., LL.B., the General Manager, joined the Bank in 1934. He served in various capacities and rose to his present position as General Manager in 1937. "Service with a smile" is the slogan he preaches as well as practises. It is his tact and drive that make effective fulfilment of the Bank policy possible. In him, the staff of the head office and branch offices find a sympathetic and understanding officer. By his tact and ability of control and supervision he has been able to establish smooth work of the institution. Ably assisted by the Deputy General Manager and the inspectorate and other officers, he has been successful in maintaining a high level of efficiency both in the internal administration and public relations. This policy has enabled the Bank to tide over difficulties that came in the wake of bank failures. It also enabled the Bank to face successfully the heavy economic stress and strain caused by two devastating world wars and unprecedented inflation and slump during the last fifty years.



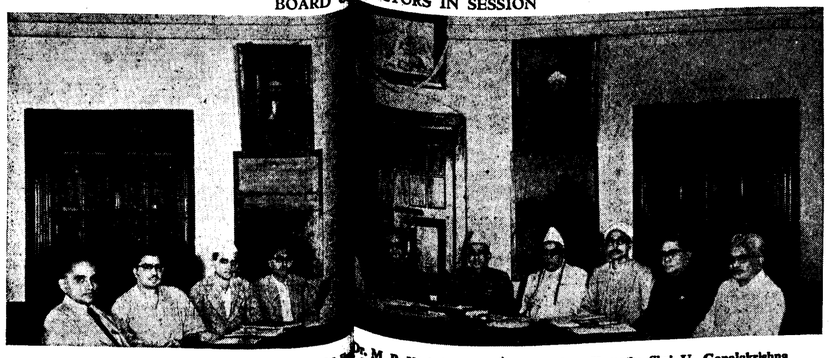
Shri V. R. Kamath
Chief Executive

Working of the Bank and Present Position

The Bank, at present, undertakes to make advances on approved securities and renders a variety of modern banking services. It has got a network of 42 branches spread over the States of Madras, Mysore, Bombay, Coorg, Andhra and U.S.T.C. It has got its own buildings at head office, Mangalore, Mercara and Malpe. There are safe deposit vaults for the convenience of the public at Mangalore and Mercara. As the Bank accepts deposits of not more than five years, it has to keep its resources in as liquid a state as possible. The high liquidity of the resources of the Bank and its intrinsic strength were demonstrated in the past, when some bank failures occurred in the country. As on 31st December 1955, the total cash in hand, including that with bankers and investments in gilt-edged securities, was at around 64 per cent. of the deposits. The total advances of the Bank were at 52 per cent. of the deposits. Seventy-six per cent. of total advances, including bills purchased and discounted, were fully secured. These factors indicate the Bank's policy of maintaining liquidity of its reserves and safety of its advances.

It is a matter of pride and joy that the Bank is ably served by its loyal and devoted staff who have, all along, worked with honesty and integrity, contributing their share to the growth of the Bank, both in size and reputation.

BOARD OF DIRECTORS IN SESSION



From left to right: Shri B. A. Mad... Nayak; Dr. U. P. Mallya; Dr. U. ... Shri Kalmady Rama Rao; Shri P. ... Dr. M. B. Kini; Shri M. Gopalakrishna Kamath; Shri U. Gopalakrishna Pai (Chairman); Shri B. Vaikunta Baliga; Shri K. Padmanabha Pai; Shri V. P. Pinto and Shri V. R. Kamath (General Manager).

PROGRESS REPORT

The Bank has been showing rapid progress and the following table shows the progress made by it during the last five decades:

(Rounded off to the nearest thousand)

Year	Paid-up capital	Reserves	Deposits	Cash	Investments	Advances	Working capital	Net profits
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1906	5,000	..	4,000	1,000	..	5,000	5,000	..
1916	26,000	5,000	6,44,000	46,000	..	35,000	38,000	2,000
1926	1,98,000	76,000	27,98,000	3,34,000	83,000	8,15,000	9,64,000	25,000
1936	2,89,000	3,52,000	2,07,48,000	13,67,000	14,87,000	24,13,000	46,32,000	45,000
1946	15,97,000	4,53,000	4,21,73,000	72,88,000	35,60,000	1,38,37,000	3,00,01,000	2,07,000
1955	20,00,000	12,00,000			1,86,99,000	2,23,27,000	5,45,09,000	3,35,000

MESSAGES

DR. S. RADHAKRISHNAN, *Vice-President of India*:

"... I am glad to know that the Canara Banking Corporation Limited will complete 50 years of service on the 11th March 1956. I wish your Golden Jubilee Celebration a success."

• • • •

SHRI S. V. KRISHNA MOORTHY RAO, *Deputy Chairman, Rajya Sabha*:

"... You have a very bright future for your Institution. .... Please accept my best wishes for your Institution. I hope and pray that it will grow sounder and stronger and reach greater heights in the service of the nation."

• • • •

SHRI K. C. REDDY, *Minister for Production, India*:

"... I congratulate the 'Corporation' on its creditable record of work during the 50 years of its existence. I am sure that the Canara Banking Corporation will make a signal contribution to the progress of the country. I wish the Golden Jubilee celebrations every success."

• • • •

SHRI GULZARILAL NANDA, *Minister for Irrigation and Power, India*:

"... Nandaji sends his blessings and good wishes for the occasion."

• • • •

SHRI D. P. KARMAKAR, *Minister of Commerce, India*:

"... The 'Corporation' has a creditable record of work and has rightly earned the confidence and goodwill of all who have had to deal with it in different capacities. I wish the 'Corporation' and function all success."

• • • •

SHRI A. B. SHETTY, *Minister for Health, Madras*:

"... The institution has grown from strength to strength during the last 50 years and attained a high place among the Indian Joint Stock Scheduled Banks.... I wish the Bank a still brighter future and many more years of useful service to the nation."

• • • •

SHRI V. K. KORATKAR, *Finance Minister, Hyderabad*:

"... The distinguishing record of the contributions made by the Canara Banking Corporation to the development of Industry and Trade in the area of its operations is a matter of pride not only to the 'Corporation' but to all those who are associated with the Banking Industry in India. I have every hope that the 'Corporation' will continue to prosper and to serve the needs of the people."

• • • •

DR. C. P. RAMASWAMI AIYAR, *Vice-Chancellor, Benares Hindu University*:

"... I wish the celebrations all success and the institution all prosperity."

SHRI A. S. P. AYYAR, *High Court Judge, Madras*:

"... A good bank is worth its weight in gold in this land of rapacious usurers and moneylenders. May your Bank continue its traditions and continue to serve the Motherland truly and well!!"

• • • •

SHRI F. H. HAYNE, *Principal, Bankers' Trading College*:

"... Hearty congratulations to the Canara Banking Corporation on 50 years of successful achievement and best wishes for continued progress and prosperity in the years ahead."

• • • •

SHRI V. R. RAMANATHA IYER, *Mayor of Madras*:

"... Judging from the trend of national and economic development, I feel sure that the Canara Banking Corporation Limited will play an even more effective part in building up the prosperity of South India. I wish it all success."

• • • •

SHRI RAM NATH, *Deputy Governor, Reserve Bank of India*:

"... I am glad to note that the Bank will be celebrating its Golden Jubilee on the 12th March 1956 and hope that it will continue to render useful service to the public."

• • • •

SHRI K. G. AMBEGAOKAR, *Deputy Governor, Reserve Bank of India*:

"... I have read with interest the brief history of the Bank which shows the tremendous progress it has made. I hope that your institution will continue to progress and render greater service to the public."

• • • •

SHRI BIKKANI VENKATARATNAM, *Member, Central Board, Reserve Bank of India*:

"... I wish the Bank every success in promoting not only the interests of the shareholders but also the interests of the public in obtaining financial accommodation for increasing the prosperity of the country by supplying the capital to Commerce and Industries."

• • • •

SIR SHRI RAM, *Director, Reserve Bank of India*:

"... I congratulate you on your success and wish and pray for continuance of the same."

• • • •

SHRI D. V. POTDAR, *Member, Local Board (Western Area), Reserve Bank of India*:

"... I wish the Bank all success. ..."

• • • •

SHRI M. L. TANNAN, O.B.E., I.E.S. (*Retired*), *Bombay*:

"... I hope and wish that your Bank will continue to serve the needs of the Nation in the years to come with the same efficiency, foresight and fortitude as it had been doing in the past."

• • • •

SIR COWASJEE JEHANGIR, *Chairman, The Bank of India, Ltd.*:

"... I am connected with one from its very inception which is celebrating its Golden Jubilee and therefore, it gives me peculiar pleasure to congratulate another Bank started in the same year and having a similar celebration in 1956."

• • • • •

SHRI C. S. RANGASWAMI, "*Indian Finance*," *Calcutta*:

"... The figures in the latest Balance Sheet and the trend of operations in the recent past, both suggest that the Canara Banking Corporation will progressively increase in strength and the services offered. In this task of financing Trade, Commerce and Industry in revitalised South India, I wish the Bank every success."

THE INDIAN BANK LIMITED, MADRAS

(ESTABLISHED 1907)

DIRECTORS' NINETY-SEVENTH REPORT

The Directors have the pleasure to submit a statement of Assets and Liabilities and of Profit and Loss Account of the Bank for the year ended 31st December, 1955. The Auditor's Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 20,28,454-10-2 and together with the sum of Rs. 1,30,785-0-11 carried from the previous year's account, makes a total of Rs. 21,59,239-11-1.

3. Out of this sum, the Directors have made the following interim appropriations—

	Rs.	a.	p.
An *ad interim* dividend at the rate of 5 per cent. and a Bonus of 1 per cent. (both free of Income-tax) was paid which absorbed	3,48,000	0	0
The Directors now recommend that the following further appropriations may be made—			
To pay a final dividend of 5 per cent. and a bonus of 1 per cent. (both free of Income-tax) thereby making the dividend and bonus for the year amount to 12 per cent.	3,48,000	0	0
To provision for taxes	5,75,000	0	0
To transfer to the Reserve Fund under Section 17 of the Banking Companies Act, 1949, raising it to Rs. 62½ lakhs	3,50,000	0	0
To transfer to the Reserve Fund other than that under Section 17 of the Banking Companies Act, 1949, raising it to Rs. 10 lakhs	1,00,000	0	0
To transfer to Sinking Fund raising it to Rs. 7½ lakhs	2,63,100	0	0
To transfer to Bank's Buildings account	30,000	0	0
To carry forward	1,45,139	11	1
Total .. Rs.	21,59,239	11	1

4. The Bank rate remained unchanged at 3½ per cent. during the year under report.

5. Offices of the Bank were opened during the year at Annamalainagar (South Arcot), Calcutta, Khammameth and Mettupalayam.

6. In accordance with Articles 95 and 96 of the Articles of Association of the Bank four Directors, Messrs. O. M. SP. L. M. Meyyappa Chettiar, A. M. A. Mit. Muruzappa Chettiar, Rao Bahadur Dr. M. R. Guruswami Mudaliar and C. Krishnamoorthy Mudaliar retire this year by rotation and they, being eligible, offer themselves for re-election.

7. The Directors regret to report the sad demise of Rao Bahadur Sri M. R. M. S. Periannan Chettiar Director of the Bank, on 17th December, 1955. In his place Sri Rao Bahadur T. S. Kachapikesa Mudaliar was co-opted as a Director on 6th January, 1956.

INDIAN BANK BUILDINGS,
MADRAS, 3rd *March*, 1956.

BALANCE SHEET AS AT 31st DECEMBER, 1955

Corresponding figures 31st Dec., 1954 Rs. a. p.	CAPITAL AND LIABILITIES	Rs. a. p.	Rs. a. p.
	1. **Capital**—

* In respect of the additional assessment for the year 1942 on account of Malayan Offices which had resulted in a demand of Rs. 3,06,762-6-0 as was referred to in the earlier Balance Sheets, the assessment has been set aside on appeal and a fresh assessment has been ordered to be made. In view of the small profit for the branches in Malaya during the war period it is expected that the further liability to income-tax for 1942 will be negligible.

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December 1955 and also the above Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the authenticated returns from branches and sub-offices and report that :—

(a) We have obtained all the information and explanations we have required;

(b) Such information and explanations have been found to be satisfactory;

(c) The returns received from the branches have been found adequate for the purpose of our audit;

(d) The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;

(e) In our opinion, the Profit and Loss Account shows a true balance of Profit for the period covered by the Audit;

(f) In our opinion, the above Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law;

(g) Such Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank; and

(h) In our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act 1913.

DEMOCRATIC VERSUS COMMUNIST PLANNING

INFLATIONARY DEFICIT FINANCING DOES NOT LEAD TO PROGRESS

By "Subodh"

I HAVE read with interest the article on "Physical Planning and Financial Planning," by A Special Correspondent, which appeared in *Commerce* of 18th and 25th February 1956. May I offer some comments on some of the points made in the article?

One may readily agree with your correspondent that what Professor Mahalanobis means by physical planning is something deeper than the physical counterpart of the financial magnitudes of a programme of investment in a democratic set-up. It is not just a case of evaluation in physical terms of the financial estimates of the investment programmes.

Physical planning of the Mahalanobis pattern would first determine the programme of investment by reference to the "men, materials, and resources" in the economy wherever they may be presently situated. Finance, in the sense of savings, is, to quote your correspondent, a "sort of camp-follower of investment." The volume of savings would be adjusted to the needs of investment.

This technique of planning is indistinguishable from communist planning. Under communist planning, consumption may be forced down by reducing the output of consumption goods through control over the allocation of resources, and, within limits, the blue-print of the communist plan can find the resources it required, though, even in a communist economy, consumption cannot be forced down indefinitely.

In a democratic set-up the position is different. Here the blue-print of the plan must necessarily adjust itself to the available resources, which must be determined first. Otherwise inflation, instability, and frustration would result. The availability of resources would be measured by the sum of current savings, past savings held in the form of currency reserves, and foreign aid. This sum would include non-inflationary deficit financing.

The difference in the approach is fundamental. In a democratic society, savings are the result of the free choices of individuals with regard to spending and saving. It is, therefore, not capable of the same measure of variation, as is attainable in a communist society. The success of democratic planning lies in the reliability of the estimates of the available resources. Under communist planning, within limits, adjustment between saving and investment may be brought about by running the steam-roller on the output of consumption goods.

Fellow-travellers in India, seeing that the term communist planning is not yet popular, find it convenient to take shelter behind the less offensive phrase of physical planning. But the two are identical in content and process and the choice between them boils down to a choice between the communist and the democratic patterns of society. In view of the presence of certain personalities close to Authority in India, we should beware of communism being sold to us in the guise of physical planning.

Official statistics of the economic progress of iron curtain countries suggest that communist planning makes for more rapid capital formation than is permissible in a democracy. These statistics, however, have been challenged by some economists. It has been suggested that they have a considerable propagandist content.

Promise of Employment

In a background of vast urban unemployment and massive underemployment in the agricultural sector, promise of employment has a great propaganda appeal. Unemployment remedies have figured prominently in political salesmanship.

Your correspondent is of the view that financial (democratic) planning "based on the theory of savings determining the rate of investment" is congenitally incapable of tackling the problem of unemployment and poverty in India. To support his thesis, he has produced a figure of 15.3 million as being the aggregate labour force seeking jobs; the employment potential of the Draft Plan, which is based on the democratic technique, is 8 million. The impression which the first two Plans may make on the problem of Indian poverty would be negligible and "the gap between the incomes of the people in India and other countries will go on widening." His remedy to both problems is to abandon "the present basis of planning" and adopt physical (communist) planning. He quotes, in support, Maurice Dobb, who "derives his theory from the history of economic development in Russia," and refers to the "leaping progress" made by the Soviet Union under "the physical approach to planning."

That the acquisition of investment resources does not always involve a reduction in consumption is not a communist revelation. An increase in investment may take place simultaneously with increased consumption, if production can expand sufficiently. This has happened both in democratic and communist countries. Your correspondent is, doubtless, aware of the acute hardships suffered by Russia in the early days of its economic development. It is not as if communism is a passport which purchases immunity from the operation of economic laws. The pace of progress of Russia cannot be wholly attributed to the virtues of communism, even as the vastly more striking progress of the U.S.A. cannot be wholly attributed to the virtues of free enterprise. Both countries had special advantages, which they still have, of vast unsettled areas. The environmental difficulties which confront us will remain a drag on development, whether we have a communist or individualist pattern of society.

The massive underemployment in India is largely the legacy of 200 years of British rule when, owing to a combination of factors, the rate of investment fell short of the minimum necessary to absorb into employment the natural growth in the labour force. This legacy cannot be written off in a five-year period. A solution to it lies in investment exceeding the pace of increase in population. This has been achieved in the first Plan. The second Plan may be expected to make more progress in the same direction and cause a larger dent in the volume of underemployment. Our performance under this head would not, therefore, justify crucifixion of the individualist order of society, and of the sovereignty of man over his private affairs and personal beliefs.

Credit Creation in Russia

It would be misleading to suggest that Russian economic development was made possible by inflationary credit creation. The market mechanism and the pricing system do not regulate the allocation of resources under communist planning. Here diversion of resources into investment is an arbitrary function of the planning authority. Finance steps in only after resource allocations have been made. The banking system creates credit in accordance with the needs of investment, to meet the wages bill and other payments. Under such an arrangement, there is little room for an expansionary issue of money. The pace of economic development is determined as soon as the decision to allot resources to the investment trades (at the expense of consumption trades) has been taken. Credit creation does not make this decision.

Let us not deceive ourselves into thinking that Government and the private enterprise, under a regime of the individualist market system, would "create new money and spend it only if all the factors of production including labour, equipment and raw materials are available." That may be so under the Russian arrangement indicated above. In a market economy, where the allocation of resources is effected by finance and the price device, money is created first and investment only follows. It is money that tries to bring the investment resources together; it is not the latter (as in Russia) that call for the creation of the necessary money media. The shortage of resources is discovered as a result of the operation of market forces, the discovery being reflected in inflation. Let us not get mixed up and try to apply to the free market mechanism the logic which is valid only in relation to the authoritarian Russian mechanism.

Your correspondent states that those who counsel limited use of deficit financing "lose sight of the meagre scale of economic development that is possible without it," adding that, "even if the second Plan is fulfilled 100 per cent. and the entire investment programme of Rs. 6,100 crores, including Rs. 1,200 crores of deficit finance, is put through, it will result in an increment of ten annas in the average monthly earnings of the people." From his standpoint, deficit financing of even Rs. 1,200 crores is inadequate.

It is an illusion to suppose that deficit financing unlimited can permit economic development to take place, which would not be possible in the absence of it. The fact of the matter is the exact opposite. If deficit financing is pushed beyond the point at which inflation begins, the rate of economic development would be *less*, not *more*, because of the economic instability which would necessarily ensue from inflation. The second Plan aims at a 25 per cent. increase in national income, as against an achievement of 18 per cent. in the first Plan. This is no mean ambition. It represents a 20 per cent. increase in *per capita* income, allowance being made for the increase in population. The quotation above mis-states the contemplated increase in the "average monthly earnings of the people." The *per capita* increase in income from the second Plan would be, not 10 annas per month, as this statement might suggest, but Rs. 4-12, the *per capita* monthly income rising from Rs. 23-12 per month to Rs. 28-8 per month. Whatever else we may do, let us not mislead an uncritical public by suggesting false facts

Mincing Matters

Things in India appear to be coming to a stage which does not permit mincing matters. Fellow-travellers in India, well supported by their professional comrades, would like to utilise the machinery of planning for imposing communism on the country. Failing this they would much rather have uncontrolled inflation than steady progress with stability. It is apt to recall here the following statement of Lenin: "Debauch the currency of capitalism and you destroy capitalism." It is significant that the communist and fellow-traveller technicians, whether from overseas or from India, not only do not regard deficit financing of Rs. 1,200 crores too high, but would recommend deficit financing of several times this amount.

Neither under communism nor under democratic planning can inflationary deficit financing lead to overall economic progress. It is incorrect to suggest that credit expansion is the secret of physical (communist) planning in the sense that it was the first link in the chain. The first link in the chain was the availability of real resources and their allocation by authority. Credit came only second. Under democratic planning savings (current, past and imported) came first. When savings were available, credit would not act as a bottleneck. Thus, whether in India or in Russia, the size of a plan was limited by the amount of the real resources, and this amount cannot be augmented by inflationary credit creation.

Pattern of Consumption

Your correspondent argues that the bulk of consumer expenditure in India being on "food articles," and, next, on cloth, if we could ensure adequate supplies of the two, "no amount of inflation can affect" our standard of living. Since created money would bring about increased output, inflation would, on the other hand, ultimately raise the level of living! When theory fails to support our fancy, let us not try to take shelter behind imaginary models and a display of irrelevant facts. If, indeed, this hocus-pocus would work, we have the philosopher's stone in Nasik, and it would be merely a question of time before all the underdeveloped countries of the world march to El Dorado!

The combined weight of theoretical analysis and economic history has demonstrated that the influence of money is all-pervasive. It does not move, nor can it be made to move, in compartments, whichever side of the iron curtain, or of economic well-being, we may be in. The pattern of consumer expenditure is immaterial in this respect. It makes no difference whether food articles and cloth constitute the bulk of consumer expenditure, as it will in poorer economies, or only a minor part of such expenditure, as in richer economies. Under proper classification, most patterns of consumption expenditure should be capable of being presented as showing heavy weightages on the side of some articles. The inflationary process, which is ruthless, cannot be induced to operate with lesser severity on the poorer economies, than upon the richer. In actual fact, for a given amount of monetary expansion, inflationary pressures would appear earlier in a relatively poor economy. If prices of foodgrains, and of cloth, are held down *unduly* (no matter by what device), and if money supply continued to expand, the prices of other commodities will rise *unduly*, and the general cost of living will reflect the inflationary situation. Let us not forget that during the miserable regime of price controls in India, we were witness to queer facts of hay being costlier than grain, firewood being dearer than *atta*, and cattle being fed on pulses of which men went short. There is no device whereby inflation may be kept out of one (major) sector, and made to operate only on the other sectors.

It appears unfair by Maurice Dobb in his observations relating to agricultural surpluses, to quote him, as your correspondent does, to support his fallacious thesis regarding inflation. Inflationary finance of development is one thing, and the use of agricultural surpluses for the same purpose, is quite another. The latter constitutes savings and those who have argued against inflationary deficit financing in India have not argued against the appropriate use of agricultural surpluses. If these surpluses could be conserved and mobilised into the "savings fund," instead of being used up in increased consumption, as hitherto, to that extent economic development may be accelerated. This will, indeed, require an expansion of money, as will all investment of increased savings. But the expansion of money would be in proportion to the expansion of investment and output. It would be non-inflationary.

In India Inflation was Not Inflationary

Many have argued as if, in the Indian background, inflation was not inflationary. They base their case on, and draw their inspiration from, the Indian post-independence experience, when large deficit financing had failed to drive up prices soaring. In fact, money supply had been declining until 1952-53, and prices in the agricultural sector until May 1955. Your correspondent has drawn, from the latter part of this experience, support for his fallacy that inflation may be held in check by an increased output of food articles.

As Professor Shenoy has poined out in his articles on "Union Budgets" in the *Times of India* of 28th and 29th February 1956, the recent price history in India has to be viewed, not with an eye on budget deficits in isolation, as many have done, nor with an eye on budget deficits and agricultural output in isolation, as your correspondent has done. Variations in money supply are the resultant of three forces: the state of the budget, the international payments position, and the public debt and the credit policy of the banking system. If money supply declined until 1952-53, it was because, as Professor Shenoy has pointed out, the monetary expansion of budget deficits was more than negatived, firstly, by a contraction of credit by the banking system and, secondly, by the deflationary effect of payments deficits. If prices declined until May 1955, broadly, it was because total output increased faster than money supply expanded, the index of industrial output rising to 140 and agricultural output to 114. The trick was not done by an increase in the output of foodgrains alone. If foodgrain prices were unduly deflated, this was the combined result of the low elasticity of demand for them and of the restrictions on exports.

In 1954-55 and thereafter, all the three factors influencing money supply, which we have cited above, moved in the expansionary direction at record rates, money supply rose to new peaks, and, since May 1955, prices have been moving up at an annual rate of over 11 per cent. In the interests of economic stability and progress, and of the supreme importance of not upsetting the (precarious) balance in the private budgets of tens of millions of the already indigent families in India, pray, let us look at the elephant as a whole and not, like the blind men, only a part each, and recognise that inflation in India, too, is inflationary. Our recent price experience lends no support to your correspondent's fallacy.

Time-lag Between Investment and Output

Your correspondent quotes Professor Shenoy as under in the matter of the latter's views on the crucial importance of the time-lag between investment and output in an analysis of the inflationary process: "It would be incorrect to suppose that inflation would be liquidated when the 'compensatory' increase in output becomes available." Instead of coming to grips with this phenomenon, he begins by stating that, in this argument, Professor Shenoy "has only echoed the views of the I.M.F. 'Mission to India" as embodied in their report, *Economic Development with Stability*, published by the Ministry of

(*Continued on page* 518)

FOREIGN AID DURING FIRST PLAN

TOTAL AUTHORISATIONS AGGREGATE RS. 300 CRORES

THE total finances made available to India from external sources during the first Five-year Plan are of the order of Rs. 300 crores, according to a pamphlet issued by the Department of Economic Affairs of the Union Ministry of Finance. The largest single contributor to this amount is the U.S. Excluding the wheat loan of 1951, the total U.S. assistance authorised to India to date under the Indo-U.S. aid programme is about Rs. 142 crores ($298 million). If the wheat loan and the assistance provided by private philanthropic agencies like the Ford Foundation are also included, the total of U.S. assistance will come to Rs. 238 crores (nearly $500 million). The other contributors to finances from external sources have been the World Bank on a loan basis, and the Commonwealth member-countries of the Colombo Plan, namely, Australia, Canada and New Zealand on a grant basis. Apart from the agreed releases of sterling balances, assistance from the U.K. has been mainly in the field of technical assistance.

The total of loans sanctioned by the World Bank up to date amount to nearly Rs. 60 crores ($125 million). Of these, over Rs. 20 crores ($42 million) were utilised before the Plan. Of the balance of $83 million, $58 million have been sanctioned to the private sector. Thus, the total quantum of World Bank loans to the public sector during the first Plan period amount to a little over Rs. 12 crores ($25 million). Assistance on a grant basis authorised by the Governments of Australia, Canada and New Zealand over the five-year period amounts to the equivalent of nearly $100 million or about Rs. 48 crores.

Of the total authorised assistance by way of external resources of the order of Rs. 300 crores, it is expected that, up to the end of 1955-56, utilisation will be only to the extent of Rs. 204 crores. The main reason for the delay in utilising these resources is the inevitable time lag between the authorisation of assistance or sanction of a loan and its utilisation on agreed projects by procurement of stores, equipment, etc. This means that an amount of Rs. 94 crores of external resources authorised during the Plan period will be available for utilisation in the second Plan period.

Aid from U.S.

The external assistance provided on a Government-to-Government basis by the U.S. and the Commonwealth countries has been used both for the supply of commodities like wheat and steel, as well as for equipment required for the various development projects. A wheat loan of $100 million was obtained from the U.S. and has been fully utilised.

The Indo-U.S. programme started in December 1950 when the Point Four Technical Assistance Agreement was signed with the U.S. Government. This was followed by the General Agreement of January 1952. This agreement contemplates the undertaking of joint projects laying emphasis on agricultural development, which occupied a high priority in the first Plan. It was agreed that the U.S. would pay for goods and equipment imported from abroad and a matching contribution would be made by the Government of India for taking care of the rupee expenditure within the country. According to the objectives laid down in the main agreement, stress was laid on joint projects in the fields of Community Development, tube-wells, river valley development, fertilisers and steel for agricultural purposes. Up to 1953-54, these were the main activities for which external assistance from U.S. was utilised.

From 1953-54 onwards, assistance was provided on a separate basis for purposes of economic development and was described as development assistance. There was also a separate allocation for technical assistance, that is, for payment of charges on account of experts from overseas, training facilities abroad, for candidates nominated by the Government of India, and provision of equipment and stores for demonstration, research and training. With this widening of the scope of the U.S. aid, the activities selected for utilisation of external assistance were more in the field of transport and industrial development, as, for example, supply of locomotives and railway wagons for the railway plan; steel for industrial uses and financing of such major projects as the Rihand Power Project.

During the year 1954-55, the pattern of development assistance underwent a further change. A new feature was introduced, namely, that about 75 per cent. of the development assistance was to be on loan basis. It was also stipulated for the first time that about 50 per cent. of the development assistance would have to be taken in the shape of surplus agricultural commodities. Of the 1954-55 allocation, the Government of India agreed to take a loan of $45 million which is to be repaid over a period of 40 years. The payments of the principal and the interest can be in dollars or rupees, the rate of interest being 3 per cent. or 4 per cent., respectively, with waiver of interest for the first 2-3 years. The Government of India has elected to repay in rupees. This pattern has been continued for the assistance that has been authorised for the American fiscal year 1955-56. Against the total allocation of $50 million for 1955-56, the loan component will be $37.5 million. The terms of repayment of this loan and the rate of interest are expected to be the same as for the previous year. For 1955-56, India has been asked to take surplus agricultural commodities to the extent of $20 million out of the total allocation.

Assistance From Other Countries

The total aid authorised by the Government of Canada as capital assistance to India for the first Plan (from 1951-52 to 1955-56) comes to approximately $75 million or Rs. 36 crores. The assistance has been provided in the shape of both commodities for sale and equipment for projects included in the first Plan. Canadian assistance has been made available for the rehabilitation programme of railways in the form of locomotives and boilers and for the development of power, both through the supply of raw materials and of equipment manufactured in Canada.

As in the case of Canada, assistance from Australia for the first Plan has also been provided in the shape of commodities for the sale and of equipment for projects included in the first Plan. The total aid authorised by the Government of Australia as capital assistance to India from 1951-52 to 1955-56 comes to approximately Rs. 10 crores.

The Government of New Zealand sanctioned an amount of £1 million at the inception of the Colombo Plan as assistance to India. An initial amount of Rs. 33 lakhs was drawn from the New Zealand Government as the first instalment in 1951-52. No amount has been drawn in the subsequent years, but the balance will be used in 1956-57 and 1957-58. In 1954-55, the New Zealand Government agreed to make available an amount of £250,000 (Rs. 33 lakhs) to be utilised for dairy development schemes. Again, in 1955-56, the New Zealand Government agreed to make available an additional amount of £400,000 (Rs. 53 lakhs) to be utilised for additional dairy development schemes.

Assistance from the U.K. has been offered mainly for the supply of research and demonstration equipment for the technical institutes. Lists of requirements aggregating about Rs. 50 lakhs for the various technical institutes have been sent to the U.K. Government. It is expected that, by the end of 1955-56, equipment worth Rs. 33 lakhs would have been received.

Loans from the World Bank have been taken since 1949 for projects in both the public and the private sector. The net loans contracted, that is after deducting cancellations, amounts to approximately $125 million. The loans negotiated were the railway loan, the agricultural machinery loan, the two D.V.C. loans, the loan for expansion of steel production in the private sector (I.I.S.Co.), the loan for the Trombay power scheme (Tata) and the loan for the Industrial Credit and Investment Corporation.

The total assistance promised, or provided so far, by the Ford Foundation has been of the order of $11 million (this does not include cost of study tours or other grants for private institutions). The major part of this assistance has been for training men and women, at all levels, for rural development work.

The Government of Norway agreed in 1953-54 to provide an amount of 10 million Kroner (Rs. 67 lakhs) for the economic development of India. An additional amount of approximately Rs. 1 crore is proposed to be provided by the Norwegian Foundation.

BANK OF INDIA LIMITED

SIR COWASJEE JEHANGIR'S ADDRESS AT FIFTIETH ANNUAL MEETING

3½ PER CENT. BANK RATE CONSIDERED OUT OF GEAR WITH CURRENT RATES

THAT the Bank rate, which has been 3½ per cent. since 15th November 1951, is out of gear with the current rates of interest in India was the considered opinion expressed by Sir Cowasjee Jehangir, Bart., G.B.E., K.C.I.E., Chairman, the Bank of India Ltd., Bombay, in his address at the Annual General Meeting of the shareholders of the Bank held in the City on 8th March 1956. Incidentally, Sir Cowasjee referred to the new Companies Act also and stated that the law was a gigantic piece of legislation going further, in a number of respects, than corresponding legislation in any other country.

The following are extracts from the speech delivered by Sir Cowasjee on the occasion:

"The year saw far-reaching events take place in the direction of State ownership and the progress towards a socialist State in India. Such events included the passing of the Finance Act, 1955, with drastic, and almost penal, increases in the taxes on salaries and incomes, the nationalisation of the Imperial Bank of India and the submission of the Companies Bill which has now become an Act. To an increasing degree the actions of the Government dominate business and the commitments of traders are more and more dependent upon their assessment of the probable future policies of the Government.

"The new Companies Act, which was passed on the 18th of January last and comes into force from the 2nd of April, is a gigantic and voluminous piece of legislation which, I believe I am correct in saying, goes further in a number of respects than corresponding legislation in any other country. The Act would appear to have been drafted, to some extent, with regard to considerations other than those concerning only the needs of trade and industry and the interests of shareholders and investors. The comprehensive and far-reaching character of the legislation will give rise to many difficulties and there will be inconsistencies and incongruities, and I think you will find that substantial amending legislation will have to be passed before the new Act has been in force for any length of time. The ramifications of the Act will call for much tolerance on the part of those administering it during, at least, the first months of its life.

Nationalisation of Insurance

"Since the end of the year, there has been a further major operation on the part of the Government which cannot but cause uneasiness. I refer to the nationalisation of life insurance business throughout the country on the 19th of January. It is not to our credit that this nationalisation should have been effected by the undemocratic method of an ordinance. The worst aspect of nationalisation is the unfair method of compensating shareholders for the value of their shares. This is being done under the amendments made in the Constitution on the 27th of April 1955, by the Constitution (Fourth Amendment) Act, 1955. I know of an instance where the shares of a life insurance company have been valued by actuarial calculation at a certain amount and it is now well known that, on the basis of the compensation indicated in the Bill which has followed the Ordinance, the Government intend to pay less than half that value. I do not think it was ever intended in a country governed under democratic principles that the Government should take advantage of the amendment of the Constitution to deprive shareholders of their legitimate dues, especially to such an extent as I have just mentioned.

"Banks continue to suffer from having to pay higher rates of interest on deposits without being able to charge correspondingly higher rates of interest on advances. The establishment and overhead expenses of banks, which call for a large margin between the cost of money lodged and the yield on money lent, continue to expand. The bank rate, which has been 3½ per cent. since 15th November 1951, is out of gear with the current interest rates in this country. To obtain and keep deposits, banks must pay interest to depositors at market rates of interest which are governed by the supply and demand of money. On the other hand, banks usually grant advances at rates of interest related to the bank rate. The rates of interest charged to borrowers consequently do not rise, if the bank rate remains stationary and lags behind current upward movements in the market rates of interest. In such conditions, banks are paying increasing interest on deposits and getting very little more interest from advances.

"The Bank's profits for 1955 are nearly Rs. 85 lakhs, as against Rs. 77 lakhs for 1954. Before the profit figure has been struck, usual appropriate and prudent provisions have been made and shareholders will, I feel sure, consider the increase of nearly Rs. 8 lakhs in the profits as eminently satisfactory.

"The provision for taxation absorbs Rs. 25 lakhs, as against Rs. 29 lakhs last year. By reason, of the revised taxation proposals in this year's Central Budget introduced last week on the 29th February, the Bank's liability for tax will now be about Rs. 5 lakhs more than the provision, but that will be met in the current year's accounts.

"Your Directors propose to place to the Bank's landed property account the sum of Rs. 3,00,000 and to pay an increased final dividend of 10 per cent., free of income-tax, absorbing Rs. 25 lakhs, and making, with the interim dividend of 6 per cent. paid last August, a total of 16 per cent. per annum, or Rs. 40 lakhs for the year, free of income-tax. The amount carried forward is increased at something over Rs. 13 lakhs against Rs. 9 lakhs a year ago.

Central Budget

"I should like to refer to the Central Budget introduced in the Lok Sabha a week ago, on the 29th February. I must confess to a pessimistic view of the proposals. I might describe the Budget as one to make the poor poorer and the rich poor. Leaving aside China, about which we know little, India is one of the poorest countries in the world and, taking into consideration the size of its population, it has fewer rich men than any other country. We hear a great deal about the equalisation of wealth. Since the landed classes have already been more or less wiped out, I presume that this can only refer to the industrialists. Does the Government mean that these industrialists are of no service to the country and that they do not give employment to hundreds of thousands and serve the country in many other directions of which the Government are well aware. There is now an impression that the intention of the Government is to wipe out the private sector. Every obstruction is being placed in its way and when it is unable to fulfil the targets contemplated for it in the Five-year Plans, the Government may have an excuse for nationalising all industries.

"The Budget has introduced the principle of double taxation. Dividends paid by companies above 6 per cent. per annum on their paid-up capital are to be taxed. No distinction is made between companies recently brought into existence and companies of long standing which have been managed with efficiency and honesty and which have conserved their resources, enabling them to pay high dividends. All companies have already paid tax on their profits from which dividends are paid. This undoubtedly is double taxation, but, worse still, companies which intend to capitalise some of their accumulated profits on which they have already paid tax will have to pay tax again and companies which have already issued bonus shares from reserves which have been taxed will be taxed again on the dissolution of the companies. Again, the withdrawal of the rebate of one anna in the rupee on undistributed profits will cause a further drain on the resources of companies. The penal tax of eight annas in the rupee on undistributed profits of investment companies which come under Section 23A of the Income-tax Act will preclude any ploughing back of their profits for financing the further development of the country. Also, it appears that all companies which come under Section 23A will fall within the mischief of the new dividends tax. This is grossly unfair as it means that the Government compel such companies to pay a very high dividend and then tax them for doing so.

"Few outside India realise that India can claim to be one of the highest taxed countries in the world. The Government have included all sections in the orbit of taxation by increased excise duties. Formerly, deficit financing was unheard of by financiers and economists. India has put into operation very big schemes by deficit financing. The success of these schemes will depend upon good administration and no corruption. It appears to me that the success of deficit financing mainly depends on getting value for money. Maladministration and corruption may frustrate the very foundation of deficit financing. I am only speaking aloud what I know thousands are saying in ordinary conversation.

Fifty Years

"Later in the year, the Bank will complete fifty years of its existence, and shareholders may like to know the intentions of the Directors regarding commemoration of such an event.

"The Directors consider that the completion of fifty years of the Bank's life should be marked by the issue to shareholders of one bonus share of Rs. 50 fully-paid for each five shares of the Bank. The Directors, therefore, propose to apply to the Controller of Capital Issues, Government of India, for the necessary sanction.

"The sum of Rs. 50 lakhs would be transferred to capital from the reserve fund, making the paid-up capital rupees three crores and the reserve fund rupees three crores and two lakhs. The Bank's capital would thereafter consist of two classes of shares, namely, the present partly-paid shares and the new fully-paid shares.

"Shareholders will appreciate that with the 2 per cent. extra dividend already recommended and the further proposed increase in capital, if sanctioned by the Government, the future dividends will depend not only upon the profits of the Bank but also upon the Government's taxation policy."

DEMOCRATIC VERSUS COMMUNIST PLANNING

(*Concluded from page 517*)

Finance, Government of India. This report is a classic and merits close study by all students of the problems of Indian economic development. It may disillusion those who may fondly believe in inflationary short cuts to development, or fancy that Keynesian, or post-Keynesian, analysis supports such short cuts.

In this comment your correspondent is not exactly fair by Professor Shenoy. The phenomenon of the time-lag between investment and output is common enough and simple. Though the Austrian school, in particular, Professor Hayek, were among the first to make effective use of it in economic analysis, it was common property of current economic thinking. You can ignore the time-lag in a study of the process of inflation only at your own peril. To accuse an economist as echoing another's viewpoint in this respect is almost like accusing that we are all echoing the words of the Oxford dictionary! One who has read Professor Shenoy's booklet on the *Post-war Depression* and his pamphlet on the *Bombay Plan* would see that the idea was not first suggested to him by the I.M.F. mission. Both drew it from a common source.

Your correspondent's opinion that in an economy dominated by agriculture, there was scope for vast deficit financing does not merit serious notice. In face of the post-war experience of the world, so fresh in our minds, we need not also waste time on his assertion that inflation need have no repercussions on balance of payments.

To sum up, the long and short of your correspondent's thesis is that India's economic salvation is best sought in physical (communist) planning, as planning in a democracy cannot make much impression on our standard of living. The long and short of my position is that we have done very well in the first Five-year Plan. Our income had risen by 18 per cent. in place of the anticipated 11 per cent., which is very much in excess of the rate of our population growth. On the same technique of planning we should do considerably better in the second Plan. Our performance would not merit shoving into the gas chamber individual liberty and democratic institutions, which we value as dearly as life. We cannot exchange them for doubtful promises of accelerated economic progress under communism.

PROBLEMS OF PAINT INDUSTRY

BAN ON ENTRY OF NEW UNITS SUGGESTED

THE hardships which the paint industry has had to undergo as a result of an excise levy on its products make sad reading. An idea of the difficulties with which the industry had to deal since 1st March 1955, when the levy came into force for the first time, is provided by Mr. B. Banerjee, Chairman, Paint Federation, Calcutta, in his address at the annual meeting of this body held in that city on the 2nd inst. He said: "It would, of course, be impossible, in the short time at my disposal, to present any detailed picture of the disorder which reigned during the succeeding months. Nor can I relate the hundred and one excise problems which the Federation has taken up with Government, both by personal and written representations, at all levels ranging between local factory officers and the Union Finance Minister." These troubles appear to be purely of an administrative and practical nature on account of certain peculiar features of the paint industry. The Federation seems to have had a trying time in overcoming the difficulties, as some of them stood unsolved even at the close of 1955.

The first difficulty of the Federation lay in persuading the Government of the unsuitability of an *ad-valorem* basis of excise collection. It succeeded in this, but the change-over to a tariff basis and the subsequent working of tariff classifications brought in their wake a crop of additional troubles which are stated to have not been settled even now. This position is attributed to a general lack of liaison, particularly between the customs and excise authorities, on the one hand, and between the excise authorities and the industry, on the other. The Federation has apparently succeeded in getting the consent of the Member (Excise) of the Central Board of Revenue to the setting up of a Regional Excise Liaison Committee comprising representatives of the trade, Excise Department and the respective Collectors or Assistant Collectors of Excise. The proposal is expected to take concrete shape in the coming months. Be that as it may, the Federation now seems to have reconciled itself to the fact that the possibility of a withdrawal of excise control is remote.

The Chairman of the Paint Federation seems to feel that the interests of the industry are not well served by the encouragement given to small units in the industry, whereas that is the avowed policy of the Government. He said that in view of the intricate nature of the paint industry, it was illogical to encourage small-scale industry in paint manufacture by means of exempting them from the excise duty, while pressing, at the same time, for an overall improvement in the quality of Indian production. In saying so, it is evident that he had at the back of his mind how these small units, lacking in technical personnel, latest equipment and adequate finance are not in a position to produce quality paints at relatively low costs.

According to Mr. Banerjee, the Paint Federation held discussions with the Planning Commission concerning the development programme for the industry during the second Five-year Plan. It is expected that the demand on paint and varnishes is likely to increase considerably during the Plan period, but the extent of such rise depends, it is stated, upon a number of imponderable factors which render accurate estimates of production target difficult. The Federation seems to have told the Planning Commission that most existing factories are running below their existing capacity, and could, therefore, easily absorb the expected increase in consumption. The Federation, however, feels that it will be in the interests of the industry, if no new units are allowed to be established during the Plan period.

The question of delays caused by the Government Departments in accepting tenders, in extension of delivery dates, and in payment of bills continued to engage the attention of the Federation this year also as in previous years. The Government was approached by the Federation on several occasions during the year in order to overcome the hardships caused to paint manufacturers. So far, the progress of its efforts does not appear to have been successful. In this context, Mr. Banerjee's remarks merit mention. He said:

"The Stores Purchase Report has made many recommendations to reform and improve the Central Purchase Organisation. It has recommended that requests for extension of the delivery date should be attended to within 15 days, and that payment of final bills should be ensured within 90 days from the despatch of stores. Athough Government has accepted these two recommendations in principle, the Federation has so far been unable to discern the effect of their practical application. In any case, the settlement of present disputes will take considerable time. Furthermore, the Federation feels that disputes will continue to arise even after the implementation of the above recommendations, since Government persists in defining the delivery date as the date on which acceptable goods are put on rails. Delays in the inspection and testing of samples by the Government Testing Laboratories make this definition the root cause of paint manufacturers' trouble with Government. The Stores Purchase Committee has recommended the restoration of a 21 days' grace period after the expiry of the contractual delivery date, but the Federation feels that this does not in any way kill the cause of the trouble. Disputes will continue to occur, until the delivery date is taken as the date on which acceptable goods are offered for inspection in writing."

Another difficulty experienced by the paint industry is stated to be the procedure employed by the Government Test House, Alipore. According to Mr. Banerjee, the methods at present being employed by the Test House are creating a situation in which production and supply of Government orders requiring Test inspection are seriously impeded and could be brought to a standstill. This experience is attributed to "lack of liaison between the Government and its various offshoots and the manufacturers." With a view to improving the situation, it is now proposed to set up a panel consisting of representatives of the Government Test House and the two paint associations. This panel is expected to help remove any misunderstandings and grievances through prompt consultations and mutual co-operation.

The Paint Federation faces certain difficulties regarding imports of lithopone. Referring to this, Mr. Banerjee said:

"As last year, however, members found their applications for licences for the import of lithopone so severely restricted that it became difficult to comply with Government orders specifying the use of lithopone. The Federation has drawn Government's attention to this anomalous situation, and is pleased to note signs that manufacturers are to be allowed to substitute the indigenous titanium dioxide wherever specifications mention lithopone. It should, however, be emphasised that lithopone is still not entirely dispensable as far as the industrial and civil markets are concerned and the Federation considers that the quantity of lithopone which manufacturers are at present permitted to import under licence constitutes an irreducible minimum."

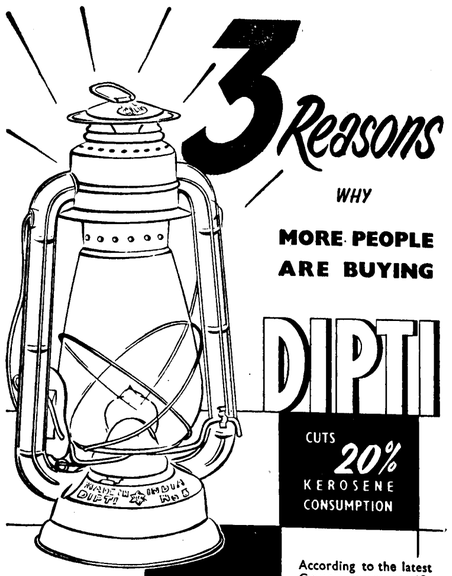
Mr. Banerjee referred to the scheme for drawback of import duty on raw materials contained in paints exported abroad and stated that the scheme evolved for the purpose had made slow progress. This position is, however, expected to change for the better, since the Government has suggested that a drawback scheme might operate under the supervision of excise officers, if arrangements could be made to manufacture paint meant for export in bond. The Federation has accepted this proposal in principle but is awaiting fuller working details from the Government.

MANUFACTURE OF TITANIUM THROUGH SODIUM PROCESS

Imperial Chemical Industries Ltd. has reduced the price of raw titanium to 21s. (below $3) per lb. This compares with the current price quoted in the U.S. at $3.45 per lb. The reduction means that titanium of the highest purity will be available at the lowest price in the world. It has been enabled by the adoption of a new sodium process in the techniques of extraction by I.C.I.

In August 1953, I.C.I. announced that it was going to build a plant to produce 1,500 tons of titanium a year by a new sodium process resulting from intensive research carried on in its laboratories. The plant went into operation in 1955. The titanium produced through this process has important advantages in its physical form. It is in the form of small granules which can be pelleted with alloying materials into a form ideal for the difficult process of melting.

Titanium, when free from harmful impurities, can be alloyed to possess the strength of stainless steel and is little more than half the weight. It has the highest strength-to-weight ratio of any commercial metal, and has outstanding resistance to corrosion. These properties make it immediately attractive for aircraft construction and for jet-engine components.



3 Reasons WHY MORE PEOPLE ARE BUYING DIPTI

CUTS 20% KEROSENE CONSUMPTION

TROUBLE FREE PERFORMANCE

According to the latest Government certificate, Dipti lanterns give you clear Six British candle light without any smoke.

STURDY IN CONSTRUCTION ATTRACTIVE IN PRICE

When you buy a lantern always insist on Dipti. Remember Dipti not only gives you a trouble-free service but also saves twenty percent of your kerosene consumption. It is sturdy in construction and smart in look. It has a special paint which is good for all weathers.

INDO-BRITISH TRADE DURING 1955

SIZABLE INCREASE IN INDIA'S IMPORTS OF MACHINERY AND EQUIPMENT

THE upward trend in trade between the United Kingdom and India noticed in earlier years was maintained in 1955. Thus the value of mutual trade, according to the statistics published in the *Trade and Navigation Accounts* of the U.K. aggregated £288 million. This represents an increase of 9.4 per cent. over the preceding year and 26.3 per cent. over 1953. Principal exports from the U.K. to India were machinery, chemicals, and road vehicles and aircraft, while major imports from India consisted of tea, leather and manufactures thereof, tobacco, oils, and cotton yarns and woven fabrics.

The following table gives the principal exports from the U.K. to India and the chief items of imports of Indian origin into that country.

Principal Exports and Imports

(In £ 000's)

	1954	1955
U.K.'s exports to India	114,808	129,793
Of which :—		
Machinery other than electric	28,142	32,344
Electric machinery, apparatus and appliances	14,809	16,246
Chemicals	15,140	16,159
Road vehicles and aircraft	9,357	10,038
Imports from India	148,384	158,949
Of which :—		
Tea	76,898	75,420
Leather and manufactures and dressed furs	13,260	12,625
Cotton yarns and woven fabrics	6,849	7,041
Miscellaneous textile manufactures	16,363	14,400

The total value of mutual trade between the U.K. and India in 1955, as the table above shows, was over £288 million, as compared with £263 million in 1954 and just under £228 million in 1953. Total U.K. exports to India in 1955 were valued at over £129 million—13 per cent. higher than the 1954 and 1953 levels of nearly £115 million. The U.K.'s imports from India in 1955 were to the value of just under £159 million—7 per cent. higher than the 1954 level of £148 million. The 1953 figure was £113 million.

In 1955 India received 4.4 per cent. of total U.K. exports to all countries—the same as in 1953. The corresponding percentage for 1954 was 4.3. Both in 1954 and 1955, India stood sixth as a market for U.K. exports. Machinery dominated the export picture and represented 37 per cent. of total U.K. exports to India in 1955. The figure for 1954 was also 37 per cent.

The biggest increase took place in exports of iron and steel which rose from a little under £6 million in 1954 to nearly £9 million in 1955. There were increases also in exports of chemicals from £15 million in 1954 to £16 million in 1955; of manufactures of metals from £5 million to just under £7 million; and of road vehicles and aircraft from £9 million to £10 million. Exports of railway vehicles (£3 million) and of wool and other animal hair and tops (slightly less than £5 million) showed little change compared with the previous year. On the other hand, the U.K.'s exports of petroleum and petroleum products declined from over £4 million in 1954 to nearly £2 million in 1955.

The following table gives the principal items of machinery exported by the U.K. to India in 1954 and 1955:

(In £ 000's)

	1954	1955
Total machinery	42,951	48,590
Of which :—		
Boilers and boiler-house plant	1,471	1,782
Internal combustion engines	1,852	1,787
Agricultural machinery	197	187
Agricultural and track-laying tractors	745	909
Machine tools (excluding portable power tools)	1,997	2,408
Pumps	744	887
Industrial and works trucks and tractor and mechanical handling equipment	1,617	1,504
Excavating and earth-moving machinery and road rollers	653	1,395
Mining and well drilling machinery	474	414
Printing and bookbinding machinery and printing type	578	700
Textile machinery	6,953	7,296
Air-conditioning and refrigerating machinery	251	296
Generating sets, generators and motors	2,240	2,224
Converting machinery, transformers, switch gear and switchboards	4,010	3,954
Electronic valves and radio, television, radar and sound reproducing apparatus	1,544	1,979
Telegraph and telephone equipment and line apparatus	1,420	645
Electric cables, wires, strips and stranda, insulated	2,705	3,027

The U.K.'s machinery exports (electric and other than electric) to India in 1955 were valued at £49 million—an increase of nearly 14 per cent. over 1954. India was an important market for the U.K.'s exports of machinery and was the third largest customer for both types of machinery.

In 1955, India received 6.9 per cent. of total U.K. exports of machinery (other than electric) to all destinations as compared with 6.8 per cent. in the previous year. The comparable figures for electric machinery were 8.3 per cent. and 8.8 per cent. respectively. The largest individual machinery export items were machine tools; textile machinery; generating sets, generators and motors; converting machinery, transformers, switch gear and switchboards; and electric cables, wires, strips and strands (insulated).

The following table gives the principal items of exports from India to the U.K. in 1954 and 1955:

(In £ 000's)

	1954	1955
Total all imports	148,384	158,949
Of which :—		
Tea	76,898	75,420
Leather, leather manufactures and dressed furs	13,260	12,625
Tobacco and tobacco manufactures	6,908	7,177
Hides, skins and fur skins, undressed	973	808
Wool and other animal hair and tops	5,551	4,911
Cotton	2,579	4,535
Miscellaneous textile fibres and waste	1,069	1,392
Metalliferous ores and metal scrap	3,068	2,431
Miscellaneous animal and vegetable crude materials	4,523	4,949
Animal and vegetable oils, fats, greases and derivatives	1,865	8,497
Cotton yarns and woven fabrics	6,849	7,041
Miscellaneous textile manufactures	16,363	14,400

Imports from India

In 1955, the U.K.'s imports from India, as the table shows, accounted for 4 per cent. of total imports from all countries. The corresponding figure for 1954 was 4.3 per cent. Again, in 1955, India ranked fifth as a supplier of U.K. imports; India occupied the same position in 1954. Tea was by far the largest item and accounted for 47 per cent. of total U.K. imports from India in 1955. The value of tea imports at £75 million was about 2.6 per cent. less than in the previous year. In 1955, India provided 59 per cent. of U.K. tea imports from all sources compared with 60 per cent. in the preceding year.

The biggest increase was recorded in the imports of animal and vegetable oils, etc., which rose from slightly less than £2 million in 1954 to £8 million in 1955, followed by those of cotton which increased from £2 million to £4 million. There were small increases in respect of tobacco and cotton yarns and woven fabrics. As compared with 1954, decreases of varying sizes occurred in the imports of leather and manufactures; wool and other animal hair and tops; metalliferous ores and scrap; and miscellaneous textile manufactures.

INDUSTRIAL ESTATES

The first five industrial estates in India are expected to be completed during the financial year 1956-57. The construction of these estates, expected to stimulate the growth of small industrial units, was sanctioned during the current financial year. These five estates are being set up at Okhla in Delhi, Rajkot in Saurashtra, Guindy and Virudhunagar in Madras and Quilon in Travancore-Cochin. At the same time, proposals of the Uttar Pradesh Government to set up industrial estates in Kanpur and Agra, are being examined by the Union Ministry of Commerce and Industry. Proposals for more such estates during 1956-57 are expected from State Governments.

The construction and management of industrial estates is the responsibility of State Governments.

The State Governments may run the industrial estates directly or through corporations or other agencies. They undertake to develop land, construct workshops and other buildings required by small units, make arrangements for supply of electricity, water, gas, steam, drainage and other facilities, arrange for railway sidings within the estate and provide for various other facilities like community services.

DICK'S

JOINTINGS

DICK'S "EAGLE" JOINTING JS. 514

The Economical Jointing for General Steam Work.

DICK'S "DICKTORITE" JOINTING JS. 528

For Highest Pressures and Superheat, Weak Acids, etc.

DICK'S "BESTORITE" JOINTING JS. 501

For all Steam Pressures, Oils, Ammonia, etc.

Supplied in sheets 40 ins. square, in thickness from 1/32 in. upwards.

DICK'S "EAGLE" ASBESTOS MILL BOARD JS. 520 FOR GENERAL UTILITY WORK

Supplied in sheets 40 ins. square, in thicknesses 1/16" and 1/8"

All Jointings marketed by Dick's Asbestos and Insulating Co. Ltd. London, are manufactured from the finest of materials, and the variety of types will be found to meet almost every Engineering and Industrial application.

BENGAL COAL'S PROFIT LOWER

DIVIDEND, HOWEVER, MAINTAINED—FINANCIAL POSITION EXCELLENT

THE decline in production of coal from the record level attained in the six months ended 30th April 1955, accompanied by a fall in despatches, and a sharp rise in freight, shipping charges and commission, have been the main factors responsible for the setback in earnings of the Bengal Coal Company, Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta), for the half-year ended 31st October 1955. The gross profit shows a decline from Rs. 50.42 lakhs for the previous six months to Rs. 44.91 lakhs. Notwithstanding this recession, the gross profit for the six months under review represents an increase of Rs. 7.56 lakhs over that (Rs. 37.35 lakhs) for the corresponding half-year of 1954 and is the second highest since 30th April 1952.

The provision for depreciation amounts to Rs. 14.27 lakhs, having been raised from Rs. 12 lakhs set aside for the previous half-year and Rs. 13.15 lakhs for the corresponding six months of 1954. The provision for taxation and cesses, which had been more than doubled from Rs. 8.59 lakhs to Rs. 17.60 lakhs six months back, have been reduced to Rs. 13.85 lakhs in respect of the half-year under review. The net profit has fallen from Rs. 18.14 lakhs for the half-year ended 30th April 1955 to Rs. 14.68 lakhs for the six months under review, but this is higher than that for any of the three half-years preceding that ended 30th April 1955. The reserves, which had received Rs. 7.23 lakhs for the six-month period ended 30th April 1955, have been further strengthened by Rs. 6 lakhs. The distribution to the shareholders has been maintained at 17½ per cent. per annum (made up of a dividend of 10 per cent. and a bonus of 7½ per cent.) to which level it had been raised last half-year from 15 per cent. per annum paid for three successive half-years since 30th April 1953.

The following comparative table shows the progress of the Company during the past three half-years:

(In lakhs of rupees)

	For the half-year ended			
	31-10-55	30-4-55	31-10-54	30-4-54
Sale proceeds	342.13	319.64	322.01	282.14
Other income	5.70	7.99	5.33	3.94
Stocks	8.63	11.91	9.02	22.72
Coal purchases	24.57	21.60	24.84	19.36
Freight, shipping charges, etc.	126.55	97.71	99.69	83.84
Mining, establishment and other expenses	148.51	160.79	151.76	155.92
Gross profit	44.91	50.42	37.35	30.45
Managing Agents' commission	2.11	2.68	1.67	1.37
Provision for—				
Depreciation	14.27	12.00	13.15	11.06
Taxation and cesses	13.85	17.60	8.59	8.60
Net profit	14.68	18.14	13.94	9.42
To reserves	6.00	7.23	5.29	2.50
Dividends—				
4½ per cent. preference	0.33	0.33	0.33	0.33
Ordinary	8.75	8.75	7.50	7.50
	(D. 10% + B.7½% p.a.)	(D. 10% + B.7½% p.a.)	(D. 10% + B. 5% p.a.)	(D. 10% + B 5% p.a.)
Directors' commission	0.09	0.09	0.09	0.09
Carry forward	7.32	7.81	6.07	5.30
	Tons	Tons	Tons	Tons
Raisings	1,182,551	1,327,236	1,162,401	1,178,629
Despatches (including purchased coal)	1,379,538	1,429,629	1,416,790	1,255,739

It will be noted that, despite the fall in raisings and despatches, the sale proceeds of coal are higher than those for the previous half-year and are, in fact, the highest since the half-year ended 31st October 1949. This is evidently due to the slight increases in the controlled prices of coal, once in July last when the price of grade I and above was raised by As. 3 per ton, in order to help the mines meet the increase in their provident fund obligations, and again in November when a further increase of As. 3 per ton in the prices of selected "A" and "B" grades I and II coals was allowed. The prices realised on export sales were, however, lower than those in the previous half-year or in the corresponding six months of 1954. The fall of Rs. 2.29 lakhs in "other income" is mainly due to the decline in *zamindari* income, from Rs. 2.69 lakhs to Rs. 0.49 lakh. The increase in freight, shipping charges and commission has been rather sharp, though this has, to some extent, been offset by the fall in colliery expenses and salaries and wages which account for Rs. 12.28 lakhs.

The Company's financial position as on 31st October 1955 is impressive. The reserves and surplus aggregate Rs. 147.81 lakhs, as against a paid-up capital of Rs. 120 lakhs, made up of 50,000 ordinary shares of Rs. 200 each fully paid (of which, Rs. 100 per share have been paid in cash and Rs. 100 per share for a consideration other than cash) and 20 000 4½ per cent. (taxable) cumulative preference shares of Rs. 100 each fully paid. The provision for taxation stands at Rs. 23.17 lakhs and that for cesses at Rs. 17.75 lakhs. The current liabilities amount to Rs. 181.32 lakhs. In pursuance of the policy of developing the collieries, the Company has spent, during the half-year under review, as much as Rs. 11.05 lakhs on the block account, bringing the total value of the block to Rs. 591.93 lakhs. This has been written down to Rs. 196.15 lakhs as at the end of the half-year. The current assets aggregate Rs. 293.90 lakhs, made up of plant in transit or pending installation of Rs. 14.54 lakhs, stocks of coal Rs. 8.63 lakhs, stores Rs. 80.80 lakhs, debts, deposits and advances Rs. 172.01 lakhs, investments Rs. 11.41 lakhs, and cash balances Rs. 6.50 lakhs. The excess of current assets over current liabilities and provision for taxation and cesses is as much as Rs. 71.66 lakhs.

The Rs. 200 fully paid-up shares of the Company are being currently quoted at Rs. 524 *ex-div.*, at which rate and on the basis of the latest dividend, the yield works out to 6.7 per cent. per annum, free of income-tax.

MARTIN BURN'S RECORD PROFIT

The working of Martin Burn Ltd. (Chairman and Governing Director: Mr. T. Leslie Martin, *Calcutta*) during the year ended 30th September 1955 has resulted in a bumper gross profit of Rs. 85.89 lakhs, representing an increase of Rs. 20.16 lakhs over that for the previous year. With this sharp rise, the Company has been able to maintain the upward trend in its earnings for the fourth year in succession. It may also be of interest to note that the Company's gross profit has, during these four years, gone up by no less than Rs. 40.40 lakhs, that is from Rs. 45.49 lakhs for 1950-51 to Rs. 85.89 lakhs for the year under review. The net profit for the year under review amounts to Rs. 37.53 lakhs, as compared with Rs. 32.82 lakhs for 1953-54. The relatively smaller increase in net profits is mainly due to the stepping up of the provision for taxation from Rs. 25 lakhs to Rs. 37.75 lakhs.

The distribution to the shareholders has been stepped up to 18¼ per cent. made up of a dividend of 15 per cent. and a cash bonus of 3¼ per cent., from 13¾ per cent., made up of a dividend of 12½ per cent. and a cash bonus of 1¼ per cent., paid consistently for the previous three years, after having been raised from 11¼ per cent. paid for 1950-51. Thus, it will be noted that the enhanced distribution for the year under review, after a lapse of three years, is being done by raising not only the dividend part of it but also the cash payment. The distribution for the year under review is also the highest so far in the history of the Company. It will also be of interest to note that the Directors had originally decided, at their meeting held on 25th *ultimo*, to distribute a cash bonus of As. 4 per share of Rs. 10, in addition to the dividend of Re. 1-8 per share of Rs. 10. At a meeting held subsequently on 1st March 1956, they reconsidered the question of distribution of profits and decided to raise the cash distribution by one anna to As. 5 per share. This decision of the Directors to enhance the distribution to the shareholders has evidently been done in the light of the latest Budget proposals announced on 29th ultimo.

G. R. WEST, *Manager.*

The aforesaid increase in distribution to the shareholders has been done only after ploughing back a substantial sum of Rs. 11.60 lakhs, though this represents a reduction of Rs. 1.60 lakhs from that added to the reserves last year. The addition to the capital redemption reserve fund has been maintained at Rs. 2 lakhs, while that to the general reserve has been raised from Rs. 3.50 lakhs to Rs. 5.50 lakhs. No amount has been set aside for investment reserve, which had received Rs. 3.50 lakhs a year ago. The allocation to the reserve for bad and doubtful debts has, however, been reduced from Rs. 1.20 lakhs to Rs. 0.61 lakh. Besides allocations to these reserves, the Directors have made a provision of Rs. 3.49 lakhs for construction of a new hospital block for female patients at Burnpur works of the Indian Iron and Steel Company, Ltd., for which purpose no amount had been utilised last year.

The following comparative table indicates the Company's progress during the past three years:

(In lakhs of rupees)

	For the year ended 30th September			
	1955	1954	1953	1952
Sale proceeds	572.17	500.16	460.58	473.49
Closing stocks and work-in-progress	297.09	259.28	190.01	102.25

The Company's paid-up capital stands at Rs. 167.53 lakhs (made up of 1,375,300 ordinary shares of Rs. 10 each and 30,000 5 per cent. redeemable preference shares of Rs. 100 each). This shows an increase of Rs. 6.57 lakhs over the year, brought about by the conversion of convertible notes of the value of Rs. 13.14 lakhs at the rate of 25 ordinary shares for every note of Rs. 500. The surplus arising from the conversion is Rs. 6.57 lakhs which has been added to the reserves. After the conversion, the outstanding convertible notes amount to Rs. 24.94 lakhs. The reserves and surplus aggregate Rs. 72.24 lakhs. The provision for taxation amounts to Rs. 47.79 lakhs and the current liabilities aggregate Rs. 470.07 lakhs. The gross block of the value of Rs. 22.58 lakhs, including an addition of Rs. 2.84 lakhs during the year, has been written down to a book value of Rs. 11.24 lakhs. Goodwill at cost stands at Rs. 25.18 lakhs. The current assets amount to Rs. 698.38 lakhs, of which stocks, stores and spares account for Rs. 107.28 lakhs, work-in-progress for Rs. 208.24 lakhs, investments for Rs. 168.79 lakhs, debts, deposits and advances for Rs. 202.44 lakhs and cash balances for Rs. 11.02 lakhs.

The Rs. 10 fully paid-up shares of the Company are being currently quoted at Rs. 28 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of about 7 per cent. per annum, free of income-tax.

NEW COMPANIES REGISTERED

The latest Monthly *Blue Book on Joint Stock Companies*, issued by the Department of Company Law Administration, shows an increase in new registrations during the first nine months of the current fiscal year. The total number of new companies registered during this period was 993 with a total authorised capital of Rs. 1,00,88 lakhs, as against 877 companies with a total authorised capital of Rs. 1,63,07 lakhs during the corresponding period of the preceding year (1954-55). The new companies comprised 138 public and 855 private companies, having an authorised capital of Rs. 55,54 lakhs and Rs. 45,34 lakhs, respectively.

During the month of December 1955, 101 new companies were floated with an authorised capital of Rs. 4,16 lakhs. Of these, ten were public companies with an authorised capital of Rs. 1.57 lakhs. Of these 101 new companies 36, 16, 15 and 9 companies were incorporated in the States of West Bengal, Madras, Bombay and Delhi.

A study of the size pattern of the new companies reveals that there is a heavy concentration of new companies in the authorised capital groups of over Rs. 50,000 to Rs. 1 lakh and of over Rs. 4 lakhs to Rs. 5 lakhs during the first nine months of the current year, as was the case during the corresponding periods of two preceding years. The two strata named above together contain 519 companies out of 993 new registrations during this year, that is, 52 per cent. of the total number of companies. Seventeen companies with a paid-up capital of Rs. 5 lakhs were reported to have been liquidated, dissolved or declared defunct during the month of December 1955. Five of these were public companies having a paid-up capital of Rs. 3 lakhs. Up to the end of December 1955 in the current fiscal year, the number of liquidated companies or those declared defunct aggregated 591 with a paid-up capital of Rs. 6,79 lakhs. Of these, the number of public companies was 200 having a paid-up capital of Rs. 3,83 lakhs and that of private companies 391 having a paid-up capital of Rs. 2,96 lakhs. The number of companies reported to have been struck off the registers under section 247(5) of the Indian Companies Act, 1913, during April-December 1955, was 394.

During the nine months ended December 1955, a total net increase of Rs. 34,82 lakhs in the paid-up capital of existing companies other than those incorporated during the current year was reported. Of this amount, Rs. 28,23 lakhs were raised by public companies and Rs. 6,59 lakhs by private companies, the share of the public companies in the total net increase being about 81 per cent.

AMBIKA SILK MAKES GOOD PROGRESS

DIVIDEND DOUBLED

THE decision of the Directors of the Ambika Silk Mills Company, Ltd. (Managing Agents: Messrs. Maganlal Bhagwandas & Co., Bombay), to double the dividend on the Company's shares for the year ended 31st December 1955 to 20 per cent. from 10 per cent. paid for the previous two years, follows the impressive performance of the Company during the past year. The gross profit of the Company has risen from Rs. 4.36 lakhs to Rs. 6.93 lakhs. With this increase the Company has been able not only to maintain the upward trend in earnings for the third year in succession but also to establish a record for the past seven years (for which period only statistics of the Company are available with us). After raising the provisions for depreciation and taxation, the net profit also has recorded a rise from Rs. 1.47 lakhs to Rs. 1.91 lakhs, at which level it is the highest in the past seven years.

As already indicated, the Directors have stepped up the return to the shareholders to 20 per cent. from 10 per cent., a level which had been paid from 1949 onwards, except for a break in 1952, when there was a cut to 8 per cent. The dividend for the year under review has been doubled, after transferring a sum of Rs. 41,280 to the reserve for rehabilitation of machinery, which had received Rs. 1.84 lakhs in the course of the previous five years.

The following comparative table, giving the salient features of the working of the Company during the past four years, provides an idea of its progress in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	73.78	61.89	59.17	50.17
Other income	0.75	0.79	1.51	1.72
Closing stocks	16.05	15.67	12.23	10.66
Manufacturing expenses (including yarn and stores consumed)	65.69	55.07	55.11	48.60
Other expenses	2.88	3.25	2.00	1.76
Gross profit	6.93	4.36	3.45	1.04
Managing Agents' commission	0.39	0.25	0.20	0.12
Depreciation	3.03	1.84	1.41	0.71
Taxation	1.60	0.80	0.75	0.40
Net profit	1.91	1.47	1.09	0.71
To reserves	0.41	0.31	0.31	0.10
Bonus to operatives	..	0.35	..	..
Dividend	1.54 (20%)	0.77 (10%)	0.77 (10%)	0.62 (8%)
Carry forward	0.05	0.09	0.05	0.04

The increase in sale proceeds, in the value of closing stocks, and in the manufacturing expenses indicates a larger turnover during the year under review, thus maintaining the progress made in preceding years. It will be noted that over the past three years, the sale proceeds are up by Rs. 23.61 lakhs, manufacturing expenses have risen by Rs. 17.09 lakhs and the value of closing stocks by Rs. 6 lakhs. The table also gives an idea as to how far the Company has been able to expand its output during the year under review to meet the increase in consumer demand, notwithstanding the slightly higher prices for art silk yarn.

The financial position of the Company is quite satisfactory, though it underlines the need for strengthening the reserves, as will be seen from the following synopsis of its latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	7,70,000	Gross block ...	21,96,997
Reserves and surplus ...	3,36,441	*Less*—Depreciation ...	14,88,808
Provision for taxation ...	4,01,704	Net block ...	7,08,189
Liabilities ...	15,64,859	Stock-in-trade	15,30,266
		Stores and spares ...	2,60,406
		Debts, deposits and advances ...	5,69,637
		Cash balances	4,506
Rs.	30,73,004	Rs.	30,73,004

There has been no change in the paid-up capital of the Company at Rs. 7.70 lakhs, of which a sum of Rs. 1.70 lakhs represents the amount raised by the capitalisation of the reserves once in November 1947 and again in August 1948. Of the reserves, the general reserve accounts for Rs. 1 lakh, the amount ploughed back from the profit for 1949, after which there has been no further addition. The reserve for rehabilitation of machinery accounts for Rs. 2.25 lakhs. There has been an addition of Rs. 3.07 lakhs to the gross block during the year. The gross block has been well written down. The current assets exceed the current liabilities and provision for taxation by a comfortable margin.

Points From The Chair

Interest on Deposits

"BANKS continue to suffer from having to pay higher rates of interest on deposits without being able to charge correspondingly higher rates of interest on advances. The establishment and overhead expenses of banks, which call for a large margin between the cost of money lodged and the yield on money lent, continue to expand. The Bank rate, which has been 3½ per cent. since the 15th of November 1951, is out of gear with the current interest rates in this country. To obtain and keep deposits, banks must pay interest to depositors at market rates of interest which are governed by the supply and demand of money. On the other hand, banks usually grant advances at rates of interest related to the Bank rate. The rates of interest charged to borrowers, consequently, do not rise, if the Bank rate remains stationary and lags behind current upward movements in the market rates of interest. In such conditions banks are paying increasing interest on deposits and getting very little more interest from advances."

SIR COWASJEE JEHANGIR, BT.,
Bank of India Ltd.

Industries Should not be Penalised

"If we want a vigorous and expanding economy, able to compete with all forms of foreign competition, we must surely see to it that these leaders in the industrial field are not penalised by excessive taxation to a point where further effort on their part only adds to the burden they already bear. I say this in no party spirit, because I find it hard to believe that any political party should not be concerned to assist in every way possible those whole well-being is essential, if we are to compete successfully with foreign competition."

LORD HOWARD OF GLOSSOP,
Guardian Investment Trust Co., Ltd.

Saving and Inflation

"So far the efforts to combat inflation and to redress the balance of payments have, in the main, been concentrated on reducing capital investment and consumer spending. It is the other field of action for which I want to make a plea—that of saving. A significant increase in saving, which would reduce consumption and provide new capital for useful ends, would go far to easing the nation's financial problems. Unfortunately, there appears to be an attitude of despair about increasing savings. Too often, the conclusion is voiced that it is hopeless to expect people to save when inflation is in the air. Stop inflation, it is said, and then and only then will people save. But isn't it true that if we save sufficiently inflation will be arrested? Saving will kill inflation."

HARRY L. SCORE,
Co-operative Permanent Building Society.

International Tin Agreement

"No progress was made in bringing into operation the International Tin Agreement during the year 1955 due to delay in ratification of the scheme by Indonesia, the world's second largest producer of tin. It has recently been reported that the Indonesian Parliament has approved the ratification of the Agreement and it seems possible that the International Tin Council may be called together during the first half of the year and that the Agreement may be in operation before the end of the year. It is reported that the United States stockpile authorities are scheduled to withdraw from the market by the middle of 1956, and the operation of the International Tin Agreement may have an important bearing on the market price of tin during the latter part of the year."

S. H. SMITH,
British Tin Investment Corporation Ltd.

Tin Mining in Burma

"With a view to strengthening its attenuated overseas balances the Government of Burma has been pressing the Company to complete the rehabilitation of its mines and thus increase output, but in the opinion of the Directors further re-equipment must be preceded by a renewal of the Company's leases, protection for life and property at the mines and a guarantee against nationalisation, or the payment of fair compensation in the event thereof. Having regard to the policy of advanced socialism to which the Government of the Union of Burma adheres and to which we must conform, the differences in their views and ours brought about a stalemate, which does not benefit the Government or the Company. Your Directors believe that partnership is the best solution and we have committed the Company to the principles of a joint venture with the Government which, we think, is unlikely to break down by disagreement on details. I personally have represented the Company to a point where the foundation has been built, and I wish to say that the Government's representatives as well as ours have given way, with a view to formulating a scheme which will work and develop in an atmosphere of mutual confidence and profit. I have no doubt that the Government's distant object is nationalisation and I believe we can arrange that if and when that comes we shall be treated fairly."

W. J. C. RICHARDS,
Consolidated Tin Mines of Burma Ltd.

CALCUTTA, *7th March* 1956.

Notices

THE STANDARD MILLS COMPANY LIMITED

NOTICE

To

THE SHAREHOLDERS OF
THE STANDARD MILLS CO., LTD.,
BOMBAY.

GENTLEMEN,

THE ANNUAL GENERAL MEETING OF THE Company was originally decided to be held on 29th March 1956 as advertised in *The Times of India* and the *Bombay Samachar* on 3rd of March 1956. However, it was not possible to send the individual Notices and the Balance Sheet and Profit and Loss Account of the Company to the Shareholders of the Company sufficiently in time. The Meeting will now be held on Monday the 9th of April 1956, instead of the 29th of March 1956, as notified below:—

NOTICE

Notice is hereby given that the Sixty-first Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, at Mafatlal House, Backbay Reclamation, Bombay 1, at 4 p.m. (S.T.) on Monday the 9th April 1956, to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account of the Company for the year ended 31st December 1955.

(2) To sanction the declaration of Dividends on First and Second Preference Shares and Ordinary Shares.

(3) To elect one Director in place of one who retires by rotation and who is eligible for re-election.

(4) To elect Shri Kishore M. Premchand appointed as Director under Article 124 of the Articles of Association of the Company who is eligible for re-election and offers himself accordingly.

(5) To elect Shri Jaykrishna Harivallabhdas appointed as Director under Article 124 of the Articles of Association of the Company who is eligible for re-election and offers himself accordingly.

(6) To elect Shri Bhupatirai M. Ghia, appointed as Director under Article 124 of the Articles of Association of the Company who is eligible for re-election and offers himself accordingly.

(7) To elect Shri Rasesh N. Mafatlal appointed as Director under Article 124 of the Articles of Association of the Company, who is eligible for re-election and offers himself accordingly, and for that purpose to propose the following Resolution as a Special Resolution as required by Section 261 of the Companies Act, 1956:

"Resolved that Shri Rasesh N. Mafatlal who is a Director of the Company and who retires under Article 124 of the Articles of Association of the Company, being eligible for re-election, be and is hereby re-elected as a Director of the Company."

Note.—It is necessary to propose this resolution as a Special Resolution because Shri Rasesh N. Mafatlal is a partner in Messrs. Mafatlal Gagalbhai and Sons, who are the Managing Agents of the Company, and therefore, his election as a Director of the Company requires a Special Resolution under Section 261 of the Companies Act, 1956.

(8) To appoint Auditors for the current year and to fix their remuneration.

(9) To transact any other business the Chairman may bring forward before the Meeting.

N.B.—A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The Transfer Books of the Company will remain closed from Monday 27th February 1956 to Tuesday 20th March 1956, (both days inclusive).

By Order of the Board of Directors,
For THE STANDARD MILLS CO., LTD.,
MAFATLAL GAGALBHAI & SONS,
Managing Agents.

MAFATLAL HOUSE,
BACKBAY RECLAMATION,
BOMBAY, *8th March* 1956.

N.B.—The Dividends, when sanctioned, will be made payable from Friday, 13th April 1956 to Tuesday 31st July 1956, at the Bank of Baroda Ltd., Reclamation Branch, Mafatlal House, Backbay Reclamation, Bombay 1, during banking hours and thereafter, at the Registered Office of the Company during office hours on all week days to those shareholders whose names stand on the Register on 20th March 1956.

The shareholders are requested to intimate immediately any change in their registered address to the Company.

To,

The Shareholders of The Standard Mills Co., Ltd., and in particular to:—

Ahmed Mohomed Vaej, Cassim Ahmed Vaej, M. A. Vaej & E. A. Vaej, Faredoon Pestonji Dastoor & Aloo F. Dastoor, Gulam Husein Ismail Pahad, George D. Jayes, Ismail Ebrahim Minty, J. A. Robertson, John Rankine, Jivanlal Vithaldas Madhvani & Nirmala J. Madhvani, M. H. Crowder, Narayan Shum Shere Jung & Mriga Narayan, Narayan Shum Shere Jung & Rani Diviarajia Laxmi, Nawajbai Ardeshir Cama & M. S. Bilimoria, Omar Latiff, Shiavax Rustomji & Gool S. Rustomji, Timothy Mariano Fernandes, Ugni Shum Shere Jung B. Rana, Zubeda Ahmed Patel.

BENGAL POTTERIES LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held on Friday the 30th March 1956, at 3-30 p.m., at the Registered Office of the Company at 45, Tangra Road, Calcutta, to consider and if thought fit to pass with or without modification the following Resolutions:—

(1) As Special Resolutions:—

(*a*) "That Allied Distributors & Co., a firm at present consisting of Messrs. Bharat Ram Charat Ram & Co., Ltd., The Hindusthan Selling Agencies Ltd., Shri R. K. Agarwal, Shri S. K. Agarwal, The Gupta Collective Farms Ltd., and Messrs. K. L. Poddar and Sons Ltd., sole selling agents of the Bengal Potteries Ltd., shall continue to be such sole selling agents after the commencement of the Companies Act, 1955, on the existing terms and conditions, subject however to such alterations as respects the period of their appointment as may be necessary in terms of the said Act."

(*b*) "That Shri H. P. Bhagat, Shri G. K. Bhagat and Shri R. N. Bhagat, who are officers in the service of the Bengal Potteries Ltd., shall remain in the service of the Company after the commencement of the Companies Act, 1955, subject to such agreements as the Managing Agents may on behalf of the Company enter into with them."

(2) As an Extraordinary Resolution:—

"Resolved that the Capital of the Company be increased to Rupees One Crore by creation of 27,03,115 new shares of Rs. 2-8 each ranking for dividends and in all respects *pari passu* with the existing shares in the Company, and that out of the said 27,03,115 new shares, or so much thereof, which the Directors may decide to issue at par, for subscription, with the permission of the Controller of Capital Issues, 1,00,000 shares of the face value of Rs. 2-8 each in the first instance, be issued to Mr. M. G. Bhagat (or his nominee or nominees) of 11, Rawdon Street, Calcutta, for consideration, payable in cash and thereafter the balance of the issue remaining after allotting the said 1,00,000 shares to Mr. M. G. Bhagat (or his nominee or nominees) as aforesaid, be offered to the existing members of the Company, as nearly as circumstances admit, in proportion to the existing shares held by each member of the Company as on the date of issue."

(3) In the event of the Extraordinary Resolution referred to above being passed with or without modification, the following resolution will be proposed as a **Special Resolution**:—

"That Article 4 of the Articles of Association of the Company be altered in the following manner, that is to say:—

(*a*) The figure 1,00,00,000 shall be substituted for the figure 32,42,212-8-0.

(*b*) The figure 40,00,000 shall be substituted for the figure 12,96,885.

(*c*) The figures 30-3-56 shall be substituted for the figures 19-6-47"

(4) As a Special Resolution:—

"That Article 47 of the Articles of Association of the Company be altered by deleting the words 'By Extraordinary Resolution.'"

By Order of the Board,
BHARAT RAM BHAGAT & CO.,
Managing Agents.

45, TANGRA ROAD,
CALCUTTA-15, *Dated 5th March* 1956.

EXPLANATORY NOTES

To comply with the provisions of the New Companies Act, 1955, which is due to come into force from 2nd April 1956 it is necessary that certain actions taken by the Directors and the Managing Agents are approved by the Shareholders in General Meeting.

1. The appointment of Messrs. Allied Distributors & Co. as sole selling agents has to be approved by the shareholders by a special resolution under Section 294 of the New Companies Act, 1955. Of the partners in Allied Distributors & Co., Shri R. K. Agarwal and Shri S. K. Agarwal are relatives of Shri Bishan Swarup Agarwal, a Director of Bengal Potteries Ltd., Sir Shri Ram and Shri Shri Dhar, Directors of the Bengal Potteries Ltd., are also Directors of Bharat Ram Charat Ram & Co., Ltd., Shri G. K. Bhagat and Shri R. N. Bhagat, relatives of Shri M. G. Bhagat, a Director of Bengal Potteries Ltd., are Directors of Hindusthan Selling Agencies Ltd. Both Bharat Ram Charat Ram & Co., Ltd., and Hindusthan Selling Agencies Ltd., are partners of Allied Distributors & Co.

2. According to Section 314 of the New Companies Act, 1955, certain categories of persons may be appointed to an office or place of profit under a company only with the previous consent of the shareholders accorded by a special resolution. Shri H. P. Bhagat, Shri G. K. Bhagat and Shri R. N. Bhagat are related to Shri M. G. Bhagat, one of the Directors of the Company.

3. An ordinary resolution to increase the Capital of the Company was passed at a General Meeting held on the 18th February 1956 at the Registered Office of the Company, but an amendment to the resolution provided that in order to comply with Article 47 of the Articles of Association of the Company the resolution be again passed as an extraordinary resolution.

4. Neither the Companies Act of 1913 nor the New Companies Act of 1955 require an Extraordinary Resolution to increase the Share Capital of the Company. It is thought fit to bring Article 47 of the Articles of Association in conformity with the statutes and therefore a special resolution is being placed before the shareholders to alter Article 47.

THE METAL BOX COMPANY OF INDIA LIMITED

THE BOARD OF DIRECTORS OF THIS COMpany have declared a dividend on the 6 per cent. (taxable) Redeemable Cumulative Preference Shares for the half-year ending 31st March 1956 at the rate of 6 per cent. per annum less tax. Payment will be made on or after 31st March 1956 to those Shareholders whose names appear in the Company's Registers on that date.

NOTICE is hereby given that the Preference Share Transfer Books of the Company will be closed from the 28th to 31st March 1956, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary.

CALCUTTA, *9th March* 1956.

INDIA PAPER MAINTAINS DIVIDEND ON INCREASED CAPITAL

AHMEDABAD ELECTRIC MAKES GOOD PROGRESS

India Paper Pulp Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

After providing Rs. 2,70,000 (Rs. 2,05,000) for depreciation and Rs. 2,50,000 (Rs. 85,000) for taxation, there is a balance at the credit of profit and loss account of Rs. 3,14,250 (Rs. 2,28,010) and after adding the balance brought forward of Rs. 2,10,695 (Rs. 2,16,318), the balance available is Rs. 5,24,945 (Rs. 4,44,328), from which the directors recommend a dividend at the rate of 7 (7) per cent. for the half-year absorbing Rs. 4,41,000 (Rs. 2,10,000), leaving Rs. 83,945 (Rs. 2,34,328) to be carried forward.

The 3,30,000 new ordinary shares of Rs. 10 each referred to in the circular of 3rd August 1955, to shareholders were fully subscribed, raising the Company's issued and subscribed capital to Rs. 63,00,000. The premium of Rs. 10 per share has been transferred to share premium account, the balance on which, after writing off brokerage and underwriting expenses, stands at Rs. 31,60,806.

Orders have been placed for plant to expand the mill's paper making capacity and the orders for the renovation and modernisation of the two existing paper machines will be placed shortly.

Production and sales during the half-year ended 30th September 1955, both showed a slight increase on the previous half-year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	62,98,250	Block ...	34,74,832
Reserves ...	66,03,861	Work-in-progress ...	2,56,851
Provision for taxation ...	5,31,272	Stock of paper and wrapper	5,71,060
Liabilities ...	18,75,935	Raw materials	13,78,753
Profit and loss account ...	83,945	Coal and stores	8,85,627
		Goods-in-transit ...	33,453
		Debts, deposits and advances .	19,63,654
		Cash ...	68,29,031
Rs.	1,53,93,263	Rs.	1,53,93,263

Ahmedabad Electricity Co., Ltd.

The directors of the above Company (Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th September 1955.

Share Capital.—The first and second calls at Rs. 25 each per share, on the further issue of 1,75,000 ordinary shares made in September 1954, were made payable on 4th April and 4th October 1955, respectively, making the issue Rs. 75 called up. There are 168 shares remaining to be allotted in exchange for quarter share coupons at the date of the report.

Rates for Supply.—There was no change in the rates during 1954-55. Certain legal-*cum*-financial matters which arose out of the Rating Committee's Report in August 1954, having been decided by the Central Electricity Authority in the Company's favour, the Company in consultation with the State Authorities concerned, introduced a surcharge of 8¾ per cent. effective from 1st October 1955, on supplies to industrial and commercial high tension consumers.

New Connections.—3,676 new connections were made during the year, bringing the total at 30th September 1955 to 42,833, which includes 107 large high tension supplies and the North Gujerat Grid.

Sales.—The following table shows the progress of sales during the last three years:—

For the year ended 30th Sept.	Public and private lighting and fans kw.	Power kw.	North Gujerat grid kw.	Total kw.	Percentage of increase on previous year
1953	17,478,013	305,938,554	62,605,500	386,022,067	19.48
1954	18,839,000	334,556,782	73,397,500	426,794,188	10.56
1955	20,713,965	380,673,009	84,589,000	485,980,974	13.87

Sabarmati Power Station.—The third 15 m.w. turbine and the fourth boiler in "C" Station were brought into commission on 31st March and 13th April 1955, respectively, thus completing the first-stage of the first-half of this Station, and bringing the total installed plant capacity of the combined "A", "B" and "C" Stations to 142,500 kw. The highest peak demand recorded during the year was 100,000 kw. All the plant has worked and been maintained satisfactorily. The fourth 15 m.w. turbine for "C" Station has now been placed on order.

Government Control on Supplies.—With the commissioning of all new plant in "C" Station, Government restrictions on supplies for domestic purposes and for low tension power (with certain exceptions) were withdrawn from June 1955, but h.t. supplies continue to be controlled. Coal deliveries were not very satisfactory, the daily stock having dwindled from about 21,000 tons in October 1954 to 17,000 tons in September 1955, against an average monthly consumption of 30,000 tons. Since the close of the year, there has been an improvement in the position.

North Gujerat Grid Scheme.—The demand from this source continued to rise and the maximum load recorded during the year was 17,000 kw., as against 14,100 kw. in 1953-54.

Mains Extensions.—4.19 miles of h.t. mains and 19.47 miles of l.t. mains were laid during the year. There have been no additions to the 66 k.v. transmission lines which remain at 20¼ miles. Eight new sub-stations for general supply, three for rural electrification and three for municipal drainage pumping and tube well stations were erected and commissioned. Both the transmission and distribution systems operated satisfactorily.

The profit for the year amounts to Rs. 36,11,988 (Rs. 39,80,703) after charging depreciation in accordance with the provisions of the Electricity (Supply) Act, 1948, amounting to Rs. 36,34,214 (Rs. 22,44,067). To the profit of Rs. 36,11,988 (Rs. 39,80,703) there falls to be added Rs. 6,00,000 (Rs. 8,80,000) transferred from equalisation of dividends reserve and Rs. 1,517 (Rs. 3,707) brought forward from last year, making a total of Rs. 42,13,505 (Rs. 48,64,410). After providing Rs. 3,27,722 (Rs. 2,79,148) for statutory contingencies reserve and writing off Rs. 5,100 (Rs. 5,100) from promotion expenditure, Rs. 22,628 (Rs. 21,663) from stamp duty and brokerage on mortgage debentures, Rs. 6,975 (Rs. 4,869) from new share capital issue expenses and Rs. 1,705 (Rs. 1,705) from discount on new issue of mortgage debentures, all in compliance with the Electricity (Supply) Act, 1948, it is proposed to take Rs. 55,680 (Rs. 37,662) to employees' retiring gratuities reserve. There then remains a balance of Rs. 37,93,695 (Rs. 45,14,272) and after deducting from this the ad-interim dividend of Rs. 2-8 (Rs. 2-8) per share, proportionate to the amounts called up, absorbing Rs. 18,25,090 (Rs. 17,13,033), there is available Rs. 19,68,605 (Rs. 28,01,239) which it is proposed to apply as follows:—

To payment of a dividend for the half-year ended 30th September 1955 at the rate of Rs. 2-8 (Rs. 4) per share, proportionate to the amounts called up (making 5 (6¼) per cent. for the year) Rs. 19,68,417 (Rs. 27,99,882) and leaving a balance to be carried of Rs. 188 (Rs. 1,357). The balances of Rs. 89,663 in the premium on shares account and Rs. 4,61,943 in the general reserve account have been transferred to equalisation of dividends reserve account.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,87,32,895	Block ...	11,07,10,009
Debentures ...	2,00,00,000	Work-in-progress ...	1,84,298
Reserves ...	69,90,563	Stores ...	52,65,735
Liabilities ...	1,88,47,013	Loose tools and instruments ...	2,92,763
Profit and loss account ...	188	Other assets	9,04,088
		Debts, deposits and advances ...	31,31,626
		Investments	12,28,919
		Cash ...	8,53,221
Rs.	12,45,70,659	Rs.	12,45,70,659

Bengal-Nagpur Coal Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1955.

After providing Rs. 4,800 (Rs. 17,315) for depreciation and transferring Rs. 17,780 (Rs. 10,448) to capital reserve, there remains a balance of Rs. 57,417 (Rs. 26,130) at the debit of profit and loss account. Rs. 3,938 (*nil*) has been transferred from the general reserve and the directors recommend that preference dividend for the half-year ended 30th June 1955, be paid out of it.

Arrangements have been made for the raising and despatching of approximately 20,000 tons of coal which remained to be worked at Bhuggutdih Colliery and to which a reference was made in the last report.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	3,37,500	Block ...	2,52,839
Reserves* ...	4,77,174	Stock of coal	11,143
Provision for taxation and cesses ...	12,048	Stores ...	6
Liabilities ...	1,15,473	Debts, deposits and advances ...	6,64,298
		Cash ...	13,909
Rs.	9,42,195	Rs.	9,42,195

Bararee Coke Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th September 1955.

The profit and loss account shows a balance of profit of Rs. 2,62,734 (Rs. 1,10,253) to which has to be added the balance brought forward from the previous half-year, viz., Rs. 12,449 (Rs. 31,068) and dividends forfeited, less paid Rs. 1,390 (*nil*), making a total of Rs. 2,76,572 (Rs. 1,89,248). Out of this sum there has been transferred to depreciation account Rs. 39,864 (Rs. 30,565), provided for taxation Rs. 1,05,000 (Rs. 40,000) and transferred to general reserve account Rs. 25,000 (*nil*), leaving a balance available for disposal of Rs. 1,06,708 (Rs. 1,04,386) which the directors recommend should be dealt with as follows:—

In payment of a dividend on the share capital of 7 (7) per cent. without any deduction for income-tax payable by the Company, absorbing Rs. 84,000 (Rs. 84,000), leaving a balance at credit of Rs. 22,708 (Rs. 20,386) to be carried forward to the next account.

Manufacture and despatches during the half-year were as follows:—

	Manufactured Tons	*Despatched* Tons
Coke	28,971 (23,187)	28,584 (23,638)
Tar and Pitch	1,242 (971)	1,169 (900)
Sulphate of ammonia ..	283 (210)	152 (197)
	Gallons	Gallons
Benzol	4,271 (4,007)	6,132 (6,422)

The directors consider the results for the half-year satisfactory under present-day conditions. Working during the current half-year has been satisfactory, so far.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	12,00,000	Block ...	2,65,000
Reserves ...	8,52,573	Stocks ...	11,73,640
Provision for taxation ...	2,28,334	Debts and advances ...	15,74,179
Liabilities ...	8,95,226	Investments	5,708
Profit and loss account ...	22,708	Cash ...	1,80,314
Rs.	31,98,841	Rs.	31,98,841

Belvedere Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 31st December 1955.

After making necessary adjustments for taxation and transferring Rs. 1,75,000 (*nil*) from emergency reserve, Rs. 50,000 (*nil*) from general reserve and Rs. 94,500 (*nil*) from dividend equalisation reserve there is a balance of Rs. 95,505 (Rs. 2,76,411) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share absorbing Rs. 24,500 (Rs. 24,500) and on ordinary shares at Rs. 2-8 (Rs. 5) per share absorbing Rs. 70,000 (Rs. 1,40,000), leaving Rs. 1,005 (Rs. 1,11,911) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was unprofitable owing to the high price of raw jute in relation to the market for manufactured goods. Agitation against the introduction of the Employees' State Insurance Scheme ended in a riotous demonstration. This resulted in a closure of the mill which involved the loss of 1,09,701 loom hours and further adversely affected the financial results for the half-year.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,00,000	Block ...	42,34,111
Reserves ...	32,30,123	Stock of cloth and bags	6,55,104
Provision for taxation ...	31,667	Stock of jute	23,57,930
Liabilities ...	21,08,106	Stores ...	8,97,308
Profit and loss account ...	1,005	Debts, deposits and advances ...	6,50,285
		Investments	55,358
		Cash ...	20,805
Rs.	88,70,901	Rs.	88,70,901

Caledonian Jute Mills Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th November 1955.

After making necessary adjustments for taxation and transferring Rs. 1,85,000 (*nil*) from general reserve there is a balance of Rs. 86,248 (Rs. 2,03,538) at the credit of profit and loss account from which the directors recommend payment of dividends on preference shares at Rs. 3-8 (Rs. 3-8) per share absorbing Rs. 35,000 (Rs. 35,000) and on ordinary shares at Rs. 2-8 (Rs. 5) per share absorbing Rs. 45,000 (Rs. 90,000) leaving Rs. 6,248 (Rs. 78,538) to be carried forward.

In accordance with the working time agreement of the Indian Jute Mills' Association, the mills worked 48 hours per week with 12½ per cent. of the total looms sealed. Trading during the period was unprofitable owing to the high price of raw jute in relation to the market for manufactured goods.

During the half-year the Hessian Warp Section of the mill was modernised with the installation of 15 sliver spinning frames and ancillary machinery. This section of the mill has since been working double shift.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	28,00,000	Block ...	45,64,476
Reserves ...	30,46,234	Stock of cloth and bags	5,85,673

		Investments	45,642
		Cash ...	20,693
Rs.	78,08,446	Rs.	78,08,446

N.B.—Figures within brackets relate to the corresponding period of the previous year.

*Reserves have been shown after deducting the debit balance in the profit and loss account, amounting to Rs. 57,417.

GILT-EDGED STEADY

(From Our Own Correspondent)

BOMBAY, 14*th March*

The short-term money market continued to experience stringency during the week under review also. The pressure for bank credit was rather heavy, as a result of the progress of the busy season. With no fresh avenues of supplies, banks had to seek frequently accommodation from the Reserve Bank and the State Bank of India. In view of the paucity of supplies, the volume of business in the market was confined to small proportions. In the inter-bank section, call money among the Exchange banks and Indian banks was keenly bid at the self-same rate of 3½ per cent. House money at call was also placed at 3½ per cent. Short-term deposits were offered 3¼ per cent. for one to six months and 3½ per cent. for large sums of Rs. 5 lakhs and over.

There was a fractional rise in the Government of India 91-day Treasury Bill rate this week from Rs. 2-8-5 per cent. to Rs. 2-8-6 per cent. per annum. The amount offered was lower at Rs. 106 lakhs, as compared with Rs. 136 lakhs offered last week. Tenders for Rs. 100 lakhs have been invited for next week also.

An expansion in notes in circulation to the extent of Rs. 25.44 crores is disclosed by the Reserve Bank of India's statement for the week ended 9th March 1956. This is the second week in succession for which the active notes have recorded a sharp rise, the aggregate expansion for the two weeks being Rs. 41.24 crores. Notes held in the Banking Department are again lower by Rs. 1.86 crores, so that the rise in total notes issued is Rs. 23.58 crores, which is covered on the assets side by an increase of Rs. 15 crores in foreign securities and of Rs. 10 crores in rupee securities and a decline of Rs. 1.42 crores in rupee coin. In the Banking Department, deposits of the Central Government have declined further by Rs. 5.25 crores. There has also been a fall of Rs. 7.47 crores in deposits of other Governments and of Rs. 1.94 crores in those of banks. On the assets side, cash balances are lower by Rs. 1.81 crores and balances held abroad by Rs. 13.36 crores. Loans and advances to Governments are up by Rs. 1.48 crores and other loans and advances by Rs. 4.96 crores. Of the latter, advances to Scheduled banks against usance bills account for a decline of Rs. 1.85 crores. Fresh advances to Scheduled banks against these bills during the week amount to Rs. 2.37 crores. There has been a distinct fall of Rs. 9.80 crores in investments, while Government Treasury Bills purchased and discounted have risen by Rs. 5.94 crores.

In distinct contrast to the aggregate rise of Rs. 4.76 crores noted in the previous two weeks, the demand deposits of Scheduled banks have declined by Rs. 8.61 crores during the week ended 2nd March 1956. Time deposits are also lower, but by a negligible extent. Inter-bank borrowings have gone up by Rs. 1.36 crores, borrowings from the Reserve Bank by Rs. 7.65 crores and those from the State Bank of India by Rs. 1.86 crores. A sharp rise of Rs. 9.33 crores is noted in advances and of Rs. 5.53 crores in bills purchased and discounted. Investments are lower by Rs. 1.73 crores, while cash in hand and balances with the Reserve Bank are up by Rs. 1.17 crores. Balances with other banks in current account have gone down by Rs. 37 lakhs, while money at call and short notice show a rise of Rs. 1.35 crores.

The Gilt-edged market displayed a distinctly better tone during the week under review. There were small buyers in most of the dated securities, a few of which, as a consequence, hardened in prices. Even the Conversion Loan, which was on offer in previous weeks, attracted some buyers, in view of the approach of the half-yearly interest payment. The 4 per cent. 1967 State loans also had small enquiries at quoted rates. The volume of business, however, remained small.

3 per cent. 1957 was in demand and gained an anna to Rs. 99-10. 3 per cent. 1958 had buyers at the unchanged rate of Rs. 99-8 and 3 per cent. 1959-61 held its own at Rs. 98-1. 3 per cent. 1963-65 and 3 per cent. 1964 were in request at Rs. 94-9. 3 per cent. 1966-68 gathered As. 2 to Rs. 92-10 and 3 per cent. 1970-75 as much as As. 4 to Rs. 89-2, at which level also there were buyers. 3 per cent. 1986 Conversion Loan put on As. 4 to Rs. 77-4 *cum-voucher*. 3½ per cent. 1961 was wanted at Rs. 90-6, 3¾ per cent. 1964 an anna better at Rs. 98-8 and 3½ per cent. 1965 at Rs. 98-6. Among 4 per cent. 1967 State loans, Andhra, Mysore, Saurashtra and Hyderabad gained an anna each to Rs. 99-4, Rs. 99-6, Rs. 99-10 and Rs. 99-4, respectively.

In the foreign exchange section, the rupee gained some strength in terms of the U.S. dollar, in sympathy with a similar trend displayed by sterling. The Banks' selling rate for ready dollars moved from Rs. 478¼ to Rs. 477¼ per $100 and their buying rate from Rs. 474 to Rs. 473. In New York, spot sterling gained from $2.80¾-2.80⅞ to $2.80¼-2.80⅜, three months' forward from $2.78.7/16-2.78.9/16 to $2.78⅜-2.78½ and transferable sterling from $2.77¼-2.77⅜ to $2.77½-2.77⅝.

LINSEED FIRM

(Messrs. A. Bradley & Co.)

BOMBAY, 12*th March*

Firm conditions have been maintained in the linseed market and values remain more or less unchanged. Although ready goods are still very scarce, there has been a fair turnover for forward delivery. Prices in the oil section have been well maintained, but owing to slightly weaker advices received from the U.K., shippers are operating cautiously.

Latest quotations are as follows: March Rs. 25 and April-May Rs. 22-12 per maund.

BULLION FLARES UP

(From Our Own Correspondent)

BOMBAY, 14*th March*

The bullion market ruled distinctly firm during the week under review, in refreshing contrast to the soft tone displayed in the previous week. The prices of both the metals advanced sharply, but gold had the distinction of establishing a fresh record high since February 1952, by touching today Rs. 103-2 in the forward position and Rs. 103-14 in the ready. Over the week, forward silver gained Rs. 3-1 per 100 tolas and forward gold Rs. 3-5 per tola.

The rise in gold has been so marked that it attracted the operation of the margin clause. As the closing quotation today stood more than Rs. 5 above the starting rate of Rs. 97 fixed for the current settlement, the bulls were obliged to pay a margin of Rs. 7 per tola on their outstanding purchases. A special clearing was also enforced.

The flare-up in bullion prices during the week was attributed to attempts of squeeze by a bull syndicate. Rumours that the U.S. would raise its price of gold, reports of good offtake of gold in up-country centres and decline in stocks of silver were all the bullish factors which induced the bears to cover up their sales frantically.

Silver for forward delivery (28th March settlement) advanced from Rs. 174-12 to Rs. 176-11 on Monday this week. After a short-lived recession to Rs. 175-13 yesterday, the white metal jumped to Rs. 177-14 to-day and closed at Rs. 177-13.

Ready silver (.996 Mint) hardened from Rs. 174-4 to Rs. 178-1 at the close today. It will be noted that the ready metal which had been quoted at a discount of As. 8 last week came to command, from yesterday onwards, a premium of As. 4 over the forward, reflecting the shortage of ready stocks. The floating stocks of silver are estimated at 900 bars. The daily average offtake was 25 bars.

Forward gold (27th March settlement) rallied from Rs. 99-12 to Rs. 101-13 on Saturday last. Reacting therefrom to Rs. 100-10, the forward gold shot up to Rs. 103-1 at the close today.

Ready gold gathered strength from Rs. 100-6 to Rs. 103-13. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 5,000 tolas, while the offtake was a shade lower at 4,500 tolas on an average.

In London, silver was unchanged at 79*d.* for both spot and forward deliveries, while gold declined from 249*s.* 8½*d.* to 249*s.* 4¾*d.* New York silver price was, however, unchanged at 91¼*c.*

The following comparative table shows the trend of the market during the week under review:

	14-3-56	Highest	Lowest	7-3-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 12*th March*

The foodgrain markets rules firm. The Government of India seems to be concerned over the rise in prices and more steps are being taken to ease the situation. Besides banning the export of husked rice, more wheat is being released through cheap depots in the affected areas of Northern India. The Punjab Government has requested the Central Government to impose a ban on export of wheat from the State until the arrival of the new crop. It has already released about 13,000 tons of wheat, in order to arrest the upward trend in prices.

Wheat prices at Hapur recorded a rise of As. 4 per maund during the mid-session of the week to Rs. 15-8 and *khati* prices rose to Rs. 14-12. Prices, however, receded to Rs. 15-6 and Rs. 14-9, respectively, towards the week-end, following Government's declaration to arrest the rising trend. Stock figure ran down by 6 *khaties* to 14 *khaties* during the week. Most of the offtake was for local requirements, as daily arrivals were scanty, the average being 50 maunds. Prices of other grains recorded a strident advance. Gram was transacted at Rs. 11-8 for local quality and Rs. 12 for Punjab quality. Stocks ran down by 3 *khaties* to 7 *khaties*. *Bejhar* and barley prices registered an improvement of As. 8 to Rs. 11-4 and Rs. 10-12 per maund, respectively. Maize and *bajra* prices also advanced to Rs. 11-4 and Rs. 10-4 per maund. Rice prices continued to harden, despite ban on export under previous contracts.

Stocks of peas and *arhar* went down and demand for pulses continued from Madras side. New arrivals of peas, it was expected, would begin by the end of the week. Prices of other pulses, namely, *urd*, *moong* and *masoor* appreciably advanced during the week and were quoted today at: *Urd* Rs. 17; to Rs. 18-8; *moong* Rs. 13-8; *masoor* Rs. 13-12.

Pulses futures registered an appreciable advance during the week on continuous bull support from Madhya Pradesh and Gujerat operators. The latest quotations as on Monday were: *Peas jeth* Rs. 9-1, peas white (gram) *jeth* Rs. 9-13-6, *arhar jeth* Rs. 10-8-6 and *urd baisakh* Rs. 16-14.

SPOT COTTON FIRM

(From Our Own Correspondent)

BOMBAY, 14*th March*

The permission of the Forward Markets Commission for the commencement of futures trading in I.C.C. August is awaited with considerable interest in cotton circles. The Commission, it is reported, has almost completed examination of the changes in the new contract proposed by the Board of the East India Cotton Association (E.I.C.A.). Immediately after the Commission gives its sanction, which is expected any day, the E.I.C.A. Board will convene a meeting and decide the date for the resumption of futures trading in I.C.C. August.

A notable development of the week in the spot cotton market was the directive of the Cotton Adviser to the Textile Commissioner asking the shippers to utilise the export licences issued in their favour by the end of this month, "in order that they may not lapse." The directive induced the operators to lighten their commitments, with the result that the prices of delivery contracts suffered a sharp fall yesterday. Thanks to this fall, the mills withdrew support to some extent, in anticipation of a further decline in prices.

But for the setback in spot values yesterday, the Sewri market put on quite a cheerful appearance during the week, Vijay was particularly firm, thanks to withholding of stocks by co-operative societies and reduced arrivals. Khandesh and Berar lots also met with good demand. Surti, Jayadhar, Laxmi and Morbi-Dhollera styles, too, evoked some enquiries. The export section ruled active, shippers' attention being concentrated on Oomras, CP 1 and CP 2, Khandesh and Jarillas. Some transacting were put through in Zoda cotton. In the import section, there were signs of revival of mill demand. Africans were specially sought after. A fairly large quantity of Busoga was reported to have been bought by a group of mills at Rs. 1,440 April-May shipment. Deals in Budama were put through at Rs. 1,445. Higher grade Egyptians elicited some enquiries.

The latest available quotations for the Sewri market are: Bengal *deshi* Rs. 730; Berar Jarillas Rs. 785; Khandesh Rs. 770; Vijay Rs. 910; Oomra *deshi* Rs. 730, *Moglai* Rs. 675.

The depressed tone noted in the Karachi cotton market deteriorated further this week. In fact, the market ruled distinctly weak. The morale of operators was almost lost, thanks to renewed apprehensions of a severe competition in world cotton markets, following the impending sale of U.S. cotton with effect from August next. These apprehensions, coupled with increased upcountry arrivals, forced the longs into sales which brought about a heavy landslide in prices. The downward trend persisted till yesterday when, on account of support at lower levels, the market staged a recovery. The recovery was, however, not so marked as to make up the earlier losses, so that yesterday's closing rates were still very much below those prevailing at the end of last week. N.T.R.G. March delivery slumped from Rs. 80-7 to Rs. 77-2 on Monday before finishing at Rs. 78-14 per 82 lbs. May delivery, after dropping Rs. 3-1 to Rs. 75-10, closed at Rs. 77-2. The spot prices of cotton also suffered a sharp break, as will be seen from the following quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

	13*th March* Rs. a.	6*th March* Rs. a.
Punjab *deshi*	73 0	74 8
4 F. Roller	73 10	77 4
Punjab Roller	78 14	82 6
S.G.	83 14	88 6
289 F. NT Roller	82 2	85 2
S.G.	87 0	91 14
289 F. Punjab Roller ...	86 14	90 7
S.G.	92 14	96 10

Cotton futures at Alexandria were subjected to a continuous pressure of sales, on fears of reduced purchases by oversaes interests. Consequently, prices moved downwards. The undertone of the market was weak. The latest available quotations —in tallaris per lb.—from the Alexandria cotton futures market (figures in brackets giving last week-end rates) are given below:

Karnak: March 86.40 (90.50) and May 85.65 (90.70); Ashmouni: April 68.15 (71.05) and June 67.00 (69.95).

The first auction of the new crop Sudan cotton was held on the 8th inst. At this auction, 600 bales of GS, 1,200 bales of XG2S and 2,400 bales of G2S were offered; the reserve prices for these varieties were 53d., 57d. and 56d. per lb., respectively. As these prices were very high, Indian mills do not appear to have evinced any interest in the auction. The second auction, covering 1,500 bales of GS, 1,800 bales of XG2S and 2,400 bales of G2S, is being held today. It will be recalled that the facility of buying "on call" has been withdrawn. The new crop sales are on a fixed price basis.

There was a sharp fall in prices of new crop Uganda cotton at the recent auctions. This is surprising, considering the lower estimates of the crop, the yield of which is expected to aggregate not more than 340,000 bales. Of this quantity, about 210,000 bales have already been sold.

Easy conditions prevailed in the Liverpool cotton futures market during the week under review. The new July-August contract was particularly neglected on the assumption that the U.S. Commodity Credit Corporation cotton could be shipped in time to be tendered against this contract. Cotton traders at Liverpool remain anxious, lest the new Washington policy should lead to a world price war. It is pointed out, for instance, that, despite the reiterated assurances of the U.S. Secretary of Agriculture that the U.S. would do nothing to disrupt the markets, the fear exists that growers of American-type cotton elsewhere may start to undercut America in an attempt to secure business before the cheaper U.S. cotton becomes available from the start of next season. The Liverpool Cotton As-

sociation has expressed the view that world prices may drop to what it called unnecessarily low leve's, if there is an all-out battle between U.S. growers and their competitors. If the Department of Agriculture insists on a floor price, it will be relatively simple for other producers to offer their growths at a lower level and keep the business they have already taken from the U.S. From the spinners' point of view, however, a reduction in the price of U.S. cotton may, it is expected, stimulate purchases, as Lancashire spinners generally prefer the quality and the continuity of supply which can be obtained from America. A fall in world cotton prices would, some feel, probably not cause any substantial stock losses, since stocks are at their lowest for many years.

The latest available quotations (in pence per lb.) from Liverpool are: *Old contract*: March-April 25.95; May-June 25.35; July-August 24.25. *New contract*: May-June 31.50; July-August 27.55; October-November 26.10; December-January 25.80; March-April 25.70. *Egyptian Karnak cotton*: March-April 49.10; May-June 48.56; July-August 48.55.

A quiet trend was in evidence in the New York cotton futures market. Selling in new crop positions continued, because of the repeated official pronouncements backing the flexible support formula. Activity in the spot market was slow. Shippers were generally covering their requirements of higher quality cotton from the C.C.C. The Bureau of Agriculture has announced mid-February parity price for cotton at 34.72 cents, which is 12 points lower than the mid-January parity. The net stocks of cotton in the loan as on 24th February was 6,626,012 bales. The sale of 109,578 bales of cotton early this month, with adjustment and correction, brings the total quantity of surplus cotton sold by the C.C.C. to 1 million bales, that is the quantity set for the cotton export programme. No further offers, it is said, will be considered.

The U.S. Department of Agriculture has, as stated in this report last week, decided to launch a new export sales programme for C.C.C. stocks of upland cotton. The details of the programme are: Sales will be made periodically on a competitive bid basis, as under the current special cotton export programme which is limited to cotton of 15/16" staple length and shorter. While cotton cannot be exported under the new programme before 1st August 1956, the programme is being announced at this time so that the domestic cotton industry, as well as foreign users of cotton, will know the Department's export sales policy and can begin to make forward sales and purchases. Sales under the programme will begin in the near future, as soon as the necessary programme of details can be developed. All qualities of upland cotton in the C.C.C. inventory and listed in the catalogue will be available for sale. Cotton sold under the programme will be eligible for delivery against all sales, including Public Law 480 sales. The U.S. cotton will be made available for export on a competitive basis, but sales will be made in an orderly manner to avoid disrupting world market prices and impairing the traditional competitive position of friendly countries. Export requirements and conditions will be contained in an announcement to be issued by the Cotton Division, Commodity Stabilisation Service. Terms and conditions of sales will be released, the catalogue will be issued, and all sales will be made by the New Orleans C.S.S. Commodity Office.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	13-3-56	6-3-56	28-2-56
Spot	36.60	36.60	36.60
March	—	35.77	35.70
May	35.22	35.43	34.90
July	33.26	33.79	33.87
October	31.77	31.47	31.90

YARNS RECEDE FURTHER

(From Our Own Correspondent)

BOMBAY, 14*th March*

The yarn market continued to rule bearish during the week under review also. Rayon yarns were particularly weak. Thanks to absence of a levy of excise duty on yarn in the budget and reduced offtake by consuming centres, the operators who had purchased large quantities of yarn before the budget proposals were eager to lighten their stocks. Consequently, prices of rayon yarns moved further downwards. The staple fibre yarn section was also subjected to selling pressure, induced by reports that the import trade control authorities were granting liberal licences for imports of foreign yarns. Cotton yarns, too, failed to elicit adequate support, owing to reports of slackness in demand from handlooms.

In the rayon yarn section, Snia yarn (120 dull cones) for April delivery dropped Rs. 12 to Rs. 815. June delivery fell by Rs. 11 to Rs. 820. 120 Japan lost half an anna to Rs. 4-6-6. 120 Italy and 150 Italy were both quiet at Rs. 3-15. 150 Japan, however, evoked some special support and put on six pies to Rs. 4-4. Among indigenous yarns, National Rayons 120 Bt. cones I grade receded by 21 pies to Rs. 3-12-3. 150 Bt. cones I grade declined by an anna to Rs. 3-10.

There was, as already stated, a wave of selling in staple fibre yarns. 40 x 2 Centurys slumped by As. 3-6 to Rs. 3-12-6. New Greats were hammered down by As. 3 to Rs. 3-13. Citys and Kohinoors both dropped a like amount to Rs. 3-13. Imported yarns also suffered a break in values. 80 x 2 Suicos moved down by As. 6-6 to Rs. 8-3-6. Paramounts fell by As. 2 to Rs. 7-11. Fujis were down by an anna at Rs. 7-14.

The prices of cotton yarns of all counts staged a retreat during the week. Among 10s, Podars decreased by As. 2 to Rs. 12-14. Elphinstones eased by an anna to Rs. 12-5. Deals in 20 counts were put through at lower levels. Maduras and Hinds losing an anna each to Rs. 17-6 and Rs. 16-7, respectively. Thirty count yarns were neglected, Maduras being quoted at Rs. 22-10 and Indus at Rs. 22-8. Among 40s, Minaxis lacked support and retreated by As. 8 to Rs. 27-12. Centurys climbed down by As. 2 to Rs. 27-2. There was a fall of As. 10 in the prices of both 60 counts Finlays and Moderns which were done at Rs. 61-14. Among 80s, Finlays dropped As. 8 to Rs. 27-4. Elphinstones lost As. 4 to Rs. 62-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	14-3-1956	7-3-1956	29-2-1956
Art Silk yarn (per case of 200 lbs.)—	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia April ..	815 0	827 0	833 0
June ..	820 0	831 0	—
120 Japan (per lb.)	4 6½	4 7	4 0
150 Japan (per lb.)	4 4	4 3½	4 3½
120 Italy (per lb.)	3 15	3 15	4 0½
150 Italy (per lb.)	3 15	3 15	4 1
Staple fibre yarn (per lb.)			
40 x 2 New Great	3 13	4 0	4 1½
40 x 2 Century	3 12½	4 0	4 1½
40 x 2 City	3 13½	4 0½	4 2½

80s Finlay	72 4	72 12	73 0

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, 14*th March*

With the exception of linseed, other sections in the oilseeds market registered an upward trend during the week under review. The firmness witnessed in the groundnut section persisted on good demand for seeds by *vanaspati* interests and crushers and on reports of short supply position of the seeds and oil stocks. Stock holders were, therefore, unwilling to dispose of their stocks. Despite the high prices for groundnut oil, certain trade interests were optimistic enough to expect announcement of export quotas in groundnut oil. Groundnuts, as a result, depicted a firm trend. The castorseeds section also advanced further on reports of good enquiries for castor oil from the Continent. A rise in castor oil prices in the U.K. from £115 to £117 per ton c.i.f. for B.S.S. quality induced speculative support and values staged a smart rally. The linseed section, however, put on a quiet tone on profit-taking at the high level touched last week. Quotations in this section were a shade lower, disclosing small losses on balance.

In the groundnut section, Bold F.A.Q. advanced from Rs. 31-6 to Rs. 32-8 thereby recording a gain of Re. 1-2. April-May delivery changed hands at Rs. 33, as against Rs. 32-3. Coromandals gathered Re. 1 to Rs. 33 and Khandesh quality Re. 1-2 to Rs. 33. Groundnut oil ex-mill ready improved from Rs. 17-4 to Rs. 18. April and May deliveries changed hands at Rs. 18-1 and Rs. 18-2, as against Rs. 17-3 and Rs. 17, respectively.

In the castorseed section, May delivery opened the week at Rs. 123, as against Rs. 122. After fluctuating between Rs. 127-4 and Rs. 122-12, it finished the week at Rs. 127. Madras quality hardened by As. 12 to Rs. 24-12 and Kanpur by As. 6 to Rs. 22-14. Castor oil commercial quality, however, changed hands lower at Rs. 13-8, as compared with Rs. 13-12, and B.S.S. at Rs. 14-8, as against Rs. 14-12.

Bold ready in the linseed section declined from Rs. 33 to Rs. 32-14 and April-May delivery from Rs. 33-2 to Rs. 32-8. Small Satna suffered As. 2 to Rs. 31-6. Linseed oil was done at Rs. 20-15, as against Rs. 21-2.

Among others, *kardi* bold gained As. 8 to Rs. 19, while *niger* Madras was quiet at Rs. 27-4.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	14-3-1956	7-3-1956	29-2-1956
	Rs. a.	Rs. a.	Rs. a.

SUGAR FULLY STEADY

(From Our Own Correspondent)

BOMBAY, 14*th March*

The sugar market depicted a fully steady trend, thanks to considerable amount of support extended by speculative interests. Even heavy arrivals of indigenous sugar into the market—amounting to as much as 30,200 bags, as against 16,200 bags in the previous week—failed to have any effect on the market. Nor were the reports about a drop of As. 8 per bag in the ex-mill quotations for Bombay-Deccan sugar of any significance. Operators were generally busy making purchases, while bears were covering their positions, with the result that the prices of sugar tended to look up.

In the forward section, *Fagan* delivery contract for C grade sugar rallied Re. 1-5 to Rs. 91-13 before closing at Rs. 91-10 per bag. In sympathy, the new forward delivery improved from Rs. 91-2 to Rs. 91-14; at one time, it was quoted still higher at Rs. 91-15.

In the spot section, D grade indigenous sugar rose from Rs. 88-Rs. 90 to Rs. 88-Rs. 91. C grade was quoted at Rs. 91-Rs. 94, as against Rs. 91-Rs. 94, and A grade at Rs. 97-Rs. 101, as against Rs. 98-Rs. 100. B grade, however, lost a rupee to Rs. 94-Rs. 97. British refined sugar was fully maintained at Rs. 83-8 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER EASY

(Messrs. Parekh & Co.)

BOMBAY, 14*th March*

During the earlier part of the week Malabar black pepper ruled quiet with a downward tendency. Prices remained nominally unchanged. In spite of fair-sized accumulation of floating stock in the primary centres, bulls among growers and traders were reported trying to support prices with a view to attracting American buying. New York buyers were, on the other hand, reported to be stiff and refusing to pay anything more than $0.30 for March shipment. They were also said to be indicating the price for afloat and unsold spot at $0.30, but were not anxious to give firm bids. Despite small export during February from India, New York is persisting in hand-to-mouth buying. This is making Indian growers all the more nervous. Refusal by local bankers at port markets to give further loan on pepper is forcing small holders to liquidate their stock at best prices.

Singapore market is reported quiet with small buying interest. Sarawak Black is selling at Singapore $93, the highest being Singapore $96. The latest crop estimate of Sarawak pepper by knowledgeable sources is placed at about 16,000 tons with prospect of exportable quality coming in much earlier than usual during April. If it is so, Malabar shall have to mark down its price for selling pepper in quantity in U.S.A. and European markets. Otherwise Malabar has to look to the U.S.S.R. for support, which in the present circumstances looks doubtful.

In the later part, the market in Alleppey and Cochin ruled easy with growers pressing sales. They are reported willing to sell at Rs. 800, but no exporter is coming forward to take up the quantity. Small sales do not help stabilise prices.

In the A.S.T.A. section, there are sellers for April at $0.31, May-June at $0.31½ and July-August-September at $0.31¾.

In the delivery section, prices, after showing steadiness for some days past, are now reported easy without attracting buyers.

Following are today's nominal quotations: Ready delivery Rs. 111 (as against Rs. 112 a week ago) per Bengal maund, March Rs. 780-90 (Rs. 790-Rs. 800) and April Rs. 790-800 (Rs. 800-Rs. 810) per candy of 5¼ cwts.

STRONG GENERAL DEMAND FOR TEAS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 9*th March*

Offerings in dust sale E which was held on Tuesday 6th March, amounted to 400,000 lbs. The sale opened to a strong general demand. Commons and mediums were fully firm and occasionally up to one anna dearer. Milled dusts were irregular and these types may be quoted slightly easier. Best liquoring dusts met with competition and advanced by As. 2 to As. 3. Clean black Middle East types were the strongest feature and prices were often As. 2 to As. 3 dearer.

London Market—Sale of 5th March 1956.—Best liquoring sorts and all fannings tended dearer. Brown leaf Dooars irregular. Plain firm to dearer.

Sale of 6th March 1956.—Improved quality high-growns appreciably dearer. Coloury mediums 1d. to 2d. dearer.

Colombo Market—Sale of 5th March 1956.—Off grades very strong. Generally dearer, particularly broken mixed and fannings with useful quality.

Sale of 6th March 1956.—Active demand. High-growns dearer, following improved quality, particularly finest. Good medium brokens irregular. Low mediums dearer. Low-grown brokens advanced 10 cents. Persian Gulf types substantially dearer.

Calcutta Market—Export.—Better general demand improving as sale progressed. Good liquoring C.T.Cs. and better whole leaf grades annas dearer. Black leaf fannings up to As. 3 dearer. Commons opened one anna to As. 1½ lower. Closed fully firm.

Internal.—20,000 chests. Fair general demand. Good liquoring Dooars and medium Assams strongest. Best C.T.C. fully firm. Fibrous teas easier. 4,750 internal leaf. Improved demand half to one anna dearer.

Export Quota.—The market has been rather quiet but small business has been done at 7 pies.

Forthcoming Auctions.—Dust sale F will be held on Tuesday 20th March.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:—

"*Sale* 6.—1,500,000 lbs. Exceptionally strong demand for good types, which sold at As. 6 to As. 8 above valuations. Low medium fully firm. Medium and best liquoring steady. Clean black leaf As. 2 to As. 3 dearer."

METALS ACTIVE

(From Our Own Correspondent)

CALCUTTA, 13*th March*

Fairly active conditions were in evidence in the metal market during the week under review. Consumers were interested for moderate quantities, and there was every indication that the busy season had commenced. Electrolytic copper was particularly an outstanding feature and at Rs. 295 was fully steady. Prices in both London and New York improved further, and the announcement of cuts in the British industry, which would lead to a reduction in copper consumption in the United Kingdom, had little effect on world prices. For world markets derived encouragement by the continuance of good demand by West Germany, the troubled situation in the Middle East, and the keen demand in the United States. In the local market, there was good demand for copper for wire drawing, but in view of the higher trend consumers were interested in small quantities only from Rs. 249, I.C.C. fire-refined copper rose further to Rs. 255. From Rs. 87, lead had lost to Rs. 85-8 earlier in the week, and reports of buoyant conditions in Bombay forced a recovery to Rs. 87. Some quantity changed hands, and covering was done for a Government enquiry. On the arrival of some shipments, ready tin returned to parity with Singapore prices. After touching Rs. 521 from Rs. 540, the price soon regained to Rs. 527, closing, however, lower at Rs. 523. Electrolytic zinc was quiet, the price remaining unchanged at Rs. 723.

SUGAR LISTLESS

(From Our Own Correspondent)

HAPUR, 12*th March*

Listless conditions prevailed in the sugar market. Fluctuations in prices were within fractional limits. Rajasthan, Gujerat and the Punjab bought small quantities. Crushing operations in the mills are in full swing and it is expected that sugar production this season will be more than last season. The latest mill delivery prices of sugar are: Jaswant Rs. 28-8, Simbhauli Rs. 28-4, Daurala Rs. 29-8, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 29-8, Rampur Rs. 31.

The *khandsari* market ruled dull, demand being negligible. Inferior grades were quoted at Rs. 20—Rs. 23 and superior grades at Rs. 24—Rs. 27 per maund.

Ready prices of *gur* improved fractionally, as arrivals during the week were small, the average being 1,500 maunds daily. Loading facilities were, however, restricted and there was a small offtake by Punjab. The local stock is put at 150,000 maunds. The total arrivals this season were put at 425,000 maunds as against 530,000 maunds a year before. Ready *gur* was transacted at Rs. 14 to Rs. 10-6 per maund, according to quality. Prices of *gur* also improved in the markets in the South.

Future *gur* prices moved within narrow limits on purely speculative bouts. The latest quotations as on Monday were: *Gur phagun* Rs. 10 and *baisakh* Rs. 11-0-6.

KIPS STEADY

(From Our Own Correspondent)

MADRAS, 12*th March*

The kip market ruled steady during the week under review. Arrivals met with good clearance at last prices. Stocks in the bazaar were small. E.I. tanners were not able to replace their tanned stocks at current raw levels. Shippers were active, and a few importers were trying to buy at current Madras prices, possibly because they believed that prices had touched bottom or near bottom. There was good demand for low grade cow hides from upcountry merchants. U.K. trading was patchy. Demand for buff hides and cow calf was poor from the U.K. Buff calf top marks were enquired after, but at very low prices, which were not accepted by the tanners. U.S.A. buyers showed some interest in buff calf skins.

The tanned skins market remained steady, in view of the proximity of tanned skins public sales this week. Evidently, importers are awaiting the result of the auctions.

Notice

GILLANDERS ARBUTHNOT AND COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Preference Share Register of Members of the Company will be closed from the 22nd March to the 2nd April 1956, both days inclusive, for payment on the latter date of a Second Interim Preferential Dividend for the year ending the 31st March 1956 on the Preference Shares of the Company at Rs. 2-8 per Share less Income-tax.

As Dividend Warrants are sent only to Registered Shareholders or to their Mandatees, shares on blank transfer should be submitted with completed transfer deeds for registration before the Preference Share Register of Members is closed.

By Order of the Board,
J. F. E. D'A. WILLIS,
Managing Director.

CLIVE BUILDINGS,
NETAJI SUBHAS ROAD,
CALCUTTA, 6*th March* 1956.

QUESTION HOUR IN PARLIAMENT

Heavy Water Production

THE Department of Atomic Energy has engaged Messrs. Costain John Brown to submit a project report on the production of heavy water at Nangal, Sindri and elsewhere. Two other firms, Messrs. Vitro Engineering Division and St. Gobain Chauney and Cirey, have also been engaged by the Ministry of Production to prepare a project report on heavy water, as well as fertiliser production at the Nangal plant. Messrs. Vitro Engineering Division will be paid a fee of $131,725, comprising a fixed fee of $74,000, travel and subsistence expenses for technicians up to $16,500 and an additional fee of $41,225 for extra studies of two comparative processes. The additional fee will not be paid, if the studies are asked to be dropped by the Government and will be reduced by 40 per cent., if the studies are found by the consultants as not worth pursuing. The fee to be offered to Messrs. St. Gobain Chauney and Cirey is still under consideration.

• • • •

Radio Isotopes

The Government of India has been obtaining and permitting others to obtain radio isotopes from the U.S. for medical and agricultural purposes. Such imports were coming into the country even before. The Union Government has announced a liberalised procedure for their export.

—*Jawaharlal Nehru*

Nepa Mills

The Centre has given loans of a little over Rs. 1.8 crores to the Madhya Pradesh Government for financing the Nepa newsprint mills, while the State Government has invested Rs. 60 lakhs in the share capital and has given loans of about Rs. 4.08 crores. Assistance has also been given to the mills in the procurement and movement of raw materials, import of machinery and spare parts, and supply of controlled commodities like cement, iron and steel. Exemption has also been granted to the mills from excise duty on sales of newsprint manufactured by it to registered newspapers with effect from 17th December 1955. Imports of newsprint has been restricted so as to create congenial conditions for marketing newsprint produced by the mills. Assistance has been given in procuring substantial orders from some leading newspapers.

—*Nityanand Kanungo*

Standardisation of Ships

Shipowners have accepted in principle the proposal for the construction of ships in Indian shipyards according to a few standardised designs. A committee has been appointed to recommend the standard types and its report is expected shortly. The standardisation is expected to lead to a reduction in costs and earlier deliveries, although the expenditure on the development of shipyard will be the same. It is not possible to indicate at this stage what increase in costs the proposed standardisation will result in.

—*Satish Chandra*

Employment Exchanges

The Union Government has accepted in principle the recommendations of the Shiva Rao Committee that all recruitment to Government posts not filled through the Union Public Service Commission should be made through Employment Exchanges. The recommendation will be taken up with the State Governments as soon as the administration of the employment service is transferred to them. The compulsory recruitment to Government establishments, including local self-government institutions, through Employment Exchanges, together with other activities under the second Five-year Plan, will involve the establishment of more exchanges. The target is one exchange for every district. Provision has already been made in the second Plan for 125 additional exchanges.

—*Abid Ali*

Kandla Port

Kandla port will be equipped with the latest harbour control radar equipment. This equipment is expected to be installed by 31st March 1957 at a cost of Rs. 3.18 lakhs.

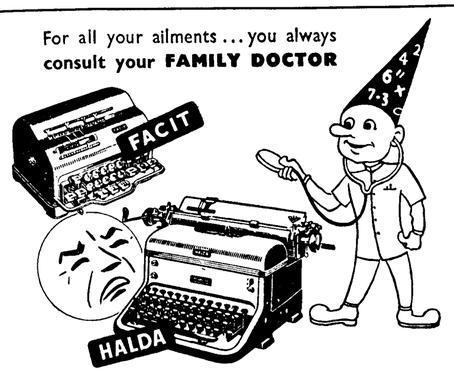
—*O. V. Alagesan*

Mercantile Marine

The development of the Indian mercantile marine will fall short of 110,000 tons of shipping of the target of 600,000 tons in the first Plan period. The shortfall is due to two reasons. First, shipyards have not been able to keep up to the schedule in delivering ships. Secondly, the target was raised in the course of the Plan period. Ships of a total tonnage of about 120,000 are under various stages of construction in Indian and foreign shipyards. Loans to the extent of Rs. 24.28 crores have been sanctioned to shipping companies for the acquisition of ships.

—*Shaw Nawaz Khan*

For all your ailments ... you always consult your **FAMILY DOCTOR**



Only your family doctor, and no other, is qualified to diagnose and treat. He alone understands ... he alone knows ... all about you.

So also with your HALDA and FACIT machines. Only the "factory-approved" concessionaires fully understand them. They alone are qualified to "doctor" them.

For repairs or servicing do not trust your HALDA and FACIT machines to "bazaar" mechanics or a competitive dealer. They cannot really help.

WARNING!

Don't expect HALDA and FACIT machines to serve you well if you don't protect them with genuine "factory-approved" replacement parts. Only authorized Sales and Service Concessionaires have them. See no one else for spares ... contract with no one else for servicing.

Authorised Service Concessionaires

Western & Northern India:
HALDA-FACIT Division of MOTOR HOUSE Limited.
BOMBAY 26, P. Box 6546 and NEW DELHI, P. Box 131
Branches:
Ahmedabad, Nagpur, Rajkot, Poona, Hubli — Gwalior, Jaipur, and Indore

Southern India:
THE RAYALA CORPORATION (Madras) LIMITED
MADRAS and BANGALORE

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations. x.d.=Ex-Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years
