COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2351 BOMBAY, 24th MARCH 1956 PRICE Rs. 1/8

JUTE INDUSTRY STILL IN THE DOLDRUMS

THE abolition of short-time working (in October 1954), the reduction in the percentage of looms kept out of commission from 12½ to 5, the shrinkage in stocks of jute goods in the face of higher production, and the improvement in exports and internal consumption alike may give the impression that the jute industry is in good form. But, in reality, it is not so. Those who do not believe this are advised to get a copy of the speech of Mr. M. P. Birla, delivered at the annual meeting of the Indian Jute Mills Association at Calcutta on the 16th inst. in his capacity as its Chairman, and read it carefully. This speech is a factual statement of the industry's affairs as they are found today. It contains no exaggeration nor any controversial pronouncements. A refreshing feature of the speech is its businesslike approach, in that it is confined only to the problems of the industry and trade with which the I.J.M.A. is concerned and makes no reference to either politics or general economic policies. That is only as it should be, for there are *other* appropriate platforms from which business men can air their views on these general topics. It will be no flattery to say that Mr. Birla's speech is a model worthy of emulation by chairmen of similar associations representing particular trades or industries. Speeches of this nature stand a better chance of being heard and well received in quarters that count.

Mr. Birla readily conceded that, in the past year, the jute industry had made some solid progress, that its position was definitely better than a year before, and that the Government was full of sympathy and understanding. This, however, does not mean that this premier export industry is out of the woods or that its working has become profitable. He gave enough evidence to substantiate this statement. Despite higher production, larger exports and better domestic consumption of jute goods, financial results of jute companies for the past year make distressing reading. For the half-year up to 30th September 1955, the results of 37 jute companies are now available. These companies are representative of the industry, inasmuch as they cover more than half of the entire jute mill loomage in India. Accordingly, they may be taken as a proper index of the financial position of the jute industry as a whole. Of the 37 companies referred to, no fewer than 12 incurred losses and, taken as a whole, the net profits of 37 companies for the half-year under reference amounted to only Rs. 4 lakhs. Since September last, the position must have deteriorated further, as the industry's labour costs have gone up sharply, thanks to the award of the third Omnibus Tribunal. Although this award is now being contested before the Labour Appellate Tribunal by both workers and employers, it has been in force from 5th November 1955 and has added a sum of approximately Rs. 1.25 crores to the industry's annual wage bill. These facts are sufficient to show that the working of the jute industry is far from profitable. What makes the position more tragic than it appears to be is that the industry should suffer from lack of profit at a time when it requires large financial resources for modernising plant and machinery and when its reserves, built up in the past, have been greatly depleted by trading losses for several years in succession.

In 1954, the Government of India progressively reduced the export duty on jute goods to substantially low levels and finally abolished it in August 1955, when the Pakistan rupee was devalued. The industry, assisted by the Government, launched an export drive which has yielded fairly satisfactory results. Why then is it unable to report satisfactory profits? This question is easily answered. The main reason for this is the high cost of production in the face of keen competition from substitutes and other rival producers of jute goods. Apart from the increase in wages, the cost of production has been adversely affected by a sharp rise in the price of raw jute. It has been computed that, during 1955, whereas the average price of jute manufactures was slightly lower than in 1954, the average price of raw jute increased by 15 per cent. The result was that raw material costs in 1955 were even more uneconomic than in the previous year, thereby more than offsetting the favourable effects of abolition of the export duty. In other words, the main beneficiaries of the withdrawal of export duty on jute goods have been the mill workers and the producers of raw jute.

The central problem of the jute industry relates to cost of production. Although world economy is in a buoyant state and production of goods requiring packaging material has gone up impressively throughout the world, this problem cannot be solved through the easy solution of passing on the increase in production costs to consumers, for the simple reason that there is a strong buyers' market in packaging materials. The problem can be solved only through the hard way of reducing the cost of production and selling jute goods as cheaply as possible. There is very little that can be saved in the workers' wage bill. In a highly populous democracy, where people are poor and leftist ideals have taken firm roots, it is politically neither feasible nor even desirable to ask the workers to accept a cut in their wages. All that one can legitimately expect from workers is a full day's work for a full day's pay. Appeals can be made to them to work hard and not to resort to go-slow tactics or strikes for settling their disputes with the management. It is comforting to hear from the Chairman of the I.J.M.A. that labour relations in the jute industry have been good and that there is no general discontentment among the workers, the dispute over the Omnibus Award notwithstanding.

As there is no scope for reducing the wage bill—indeed, there is every prospect of such going up, what with the threat of general inflation in the country—the cost of production can be brought down only in two ways, namely, modernisation of plant and machinery, and lower price for raw materials. Both are tough problems; they can be solved only by determined attempts on the part of both the industry and the Government. Fortunately, the Government of India is quite conscious of the depth and the width of the problems, though it is not as vigorous in its actions as is warranted by the situation. It can be said that the Government of India is doing its best for speeding up modernisation, but the same cannot be said so far as the raw material problem is concerned. A review of what is being done in both directions and of what yet remains to be done will plainly bring out this point. By providing much useful information in his speech, Mr. Birla has rendered this task fairly easy.

Modernisation of plant and machinery, it is needless to stress, will help bring down cost of production through high level of efficiency. It will lead to an increase in the productivity of workers. For some years now, the industry has been engaged on a large-scale programme of re-equipment, designed to replace the old type of spinning machinery with modern sliver spinning frames which operate at greater speed and considerably reduce the amount of manual attention required. By the end of 1955, approximately one-third of the programme had been completed, according to Mr. Birla, at a cost of Rs. 15 crores, all of it provided by the mills out of their own resources. To those mills—there is a good number of them—that are not in a position to finance modernisation schemes from their own resources, the Government has offered to give loans through the National Industrial Development Corporation. The first applications for loans were recently considered and sanctions are expected to be forthcoming very shortly. By agreeing to provide finance for

a complete success, for, even today, the Indian jute mills are dependent upon Pakistan for about a quarter of their raw jute requirements. This dependency is dangerous, in view of the hostile attitude of Pakistan towards the Indian jute industry. It is common knowledge that Pakistan has been placing all sorts of impediments in the way of a free flow of raw jute to India. To the extent this action is dictated by its anxiety to protect its nascent jute industry, it is understandable as something quite natural. But its actions have gone beyond what is required for this purpose. Thus, it has been trying to undermine the strength of the Indian jute industry by actively assisting in the dispersal of jute mills in many parts of the world. The sooner India achieves self-sufficiency in raw jute, therefore, the better for it. The problem was no doubt recognised by the Government long ago and has formed the subject of several studies and enquiries. But what is lacking is determined action, by both the Central and the State Governments.

A typical instance of inaction by the Governments is to be found in the manner in which the report of the Expert Committee on quality of jute has been dealt with. This report was submitted in October 1953. It contained a number of useful recommedations, the most important of them relating to the provision of better retting facilities, practical instruction in retting technique and, above all, the establishment of seed multiplication farms for the large-scale production of improved seed. These recommendations were accepted by the Government two years ago, but, so far, little has been done to put them into effect. Surely, it is high time that words were translated into deeds. The Indian Central Jute Committee has, we are told, already done all the necessary spade-work, particularly in the matter of research and the development of improved types of seed. All that is now needed is to ensure that the results of this work are made available to cultivators. This is undoubtedly the responsibility of State Governments, but the Centre cannot escape its share of responsibility. For here is a vital export industry languishing mainly for the reason that the raw material aspect of its economy has been badly neglected. This neglect is a far more serious matter than some of the developments to which public attention is sought to be drawn by a few of our zealous Members of Parliament by moving adjournment motions.

There is a special reason for laying so much stress on the necessity for increasing the output of jute through intensive cultivation. And it is this. The cost of raw jute to the mills has to be brought down without any adverse effect on the incentive of the grower to produce more. In other words, the grower must get a better return on his land. The best way to ensure this condition is to enable him to produce more quality jute per acre. It is unnecessary to add that the objective can be gained only through the use of improved seeds and adoption of better methods of cultivation.

In fine, the problem of raising the competitive capacity of the Indian jute mill industry is urgent and serious. At one time, it was thought that, with the abolition of export duty, the industry would be able to score over its competitors in other parts of the world. Experience during the past eight months has shown that, while this action has considerably strengthened the industry's position by placing it on an equal footing with its confreres, that by itself has not been adequate. The removal of the handicap has been neutralised by higher cost of production and the industry's competitors have managed to readjust their position. There has been no diminution in the steady growth of foreign jute manufacturing capacity or in the ability of substitutes to offer stiff competition. From what Mr. Birla stated, it seems that, within a very short time, there will be few countries in the Middle East without their own jute mills. The jute industry in Europe and Japan has also been firmly established. In Japan, it is actually expanding with another ultra-modern mill of 400 looms having gone into production recently. Strengthened by devaluation, the jute mills in Pakistan have emerged as powerful competitors to India in the US, Europe and the Far East. The rapid rate at which this neighbour of India is gaining a strong foothold in the world jute markets will be evident from the fact that, from 2,000 tons per month in the first quarter of 1955, the average monthly exports had risen to 8 000 tons by the last quarter of that year. This quantity is, of course, only one-tenth of India's present exports, but it must not be overlooked that the jute industry in Pakistan is growing and that every additional ton of goods produced there will be offered for export in direct competition with jute goods made in this country. In view of this growing challenge to Indian jute mills, complacency on the part of anyone—be they millowners, workers, or the Governments—in the task of restoring the competitive capacity of the industry will constitute a gross dereliction of duty.

COMPENSATION TO INSURERS

HOW far is the Union Finance Minister, Mr. C. D. Deshmukh, prepared to concede the demand of insurers for a more equitable compensation than the one now provided in the Insurance Corporation Bill? Although he spoke in a somewhat conciliatory tone when he dealt with this question in the course of his speech on the Bill in the Lok Sabha, he did not really yield much ground. Perhaps, he was concerned more with elucidating the compensation provisions of the Bill as they now stand than with committing the Government to a fresh approach to the problem. Perhaps, too, he preferred to let the Select Committee deal with the question. Whatever the reason, he gave the impression that he regarded the principles of compensation as generally fair and that they needed only slight modification.

Briefly, the compensation to insurers, in terms of the Bill, will be calculated at 20 times the annual average of the share of the surplus allocated to shareholders in the last two actuarial investigations as at dates earlier than 1st January 1955 or ten times such surplus *plus* the paid-up capital, whichever is more advantageous to the insurer. For purposes of calculating the surplus, it has been provided that, where an insurer has allocated to shareholders more than 5 per cent. of any such surplus, he shall be deemed to have allocated only 5 per cent. of the surplus and, where an insurer has allocated to shareholders less than 3 per cent. of any such surplus, he shall be deemed to have allocated 3 per cent. of the surplus. If no surplus has been allocated, the insurer will get the excess of his assets over liabilities. In the case of mutual and co-operative offices, compensation will be calculated at the rate of Re. 1 per Rs. 1,000 sum assured.

Insurers have contended that the compensation provisions are equitable, because first, they fix the maximum of the surplus allotted to shareholders at the unduly low level of 5 per cent. of such surplus and, secondly, the period taken for purposes of calculating the surplus was a disturbed one and would not, therefore, give a correct estimate of the compensation justly due to them. The first argument is based on the consideration that the Finance Act itself permits an allocation of 7½ per cent., which itself is lower than the proportion of the surplus allocated to shareholders in several other countries and also lower than the 10 per cent. permitted prior to 1950. It has also been represented that the insurers who took the full statutory provision for shareholders have been generously treated, while those who adopted a conservative policy for allocating surpluses have been penalised for their financial rectitude.

Mr. Deshmukh, on his part, recognised that "enlightened" insurers allocated a smaller percentage of the surplus than the maximum of 7½ per cent. Nevertheless, he naively argued that, if the Government based the compensation on the actual allocations, it would be rewarding those who had taken a "short-sighted view and allocated the maximum the law allowed." This is a funny argument, indeed; for implied in it is the assumption that the law itself was short-sighted enough to fix a high percentage. This is not altogether a correct assumption, in the light of the practice in other countries. In any case, where is the equity in treating the shareholders who received less than 5 per cent. of the surplus on a par with those who, without infringing the law, received the full 7½ per cent.? The principle now adopted comes to this: It is wrong for people to obey the letter of the law and equally wrong to observe the spirit of it. Surely, this is an absurd proposition. It is to be hoped that the Select Committee will examine the question in greater detail and render at least bare justice to the shareholders of insurance companies.

On the question of the period chosen for determining the surplus, however, Mr. Deshmukh was somewhat helpful. Here, the insurers' main grievance is that the two actuarial valuations prior to 1st January 1955 would cover a period which synchronised with a fall in the prices of gilt-edged securities and a rise in Bank rate, and leave out the year 1955 which was a favourable period from the point of view of the expansion of business. Referring to the suggestion that compensation should be based on the working during a standard period applicable uniformly to all and that the standard period should include 1955, Mr. Deshmukh said: "Now, we feel that there is something in this request and we propose to consider this suggestion at the Select Committee stage. It would be unnecessary—even unwise—to undertake a larger number of valuations and the results could be estimated by a suitable approximation." One has to be thankful to him even for this small mercy.

Mr. Deshmukh was brief—but less than just—in his reference to mutual and co-operative insurers. He said: "Now, it is doubtful if, in these cases, any compensation is at all payable." He added: "However, in order to avoid any possible legal objection, the schedule provides for payment of nominal compensation by way of addition to the sum assured at the rate of Re 1 per thousand of sum assured." This is condescension with a vengeance. Mutual insurers were allocating all their surpluses to policyholders, who under the law relating to the Corporation, are now entitled to get only 95 per cent. of the surplus. In concrete terms, the compensation they get is just nominal, being equivalent to one rupee bonus per Rs. 1,000 sum assured. Thus, in the case of the Bombay Mutual alone, it has been calculated that, if the Company had been a proprietory one, it would have received about Rs. 26 lakhs as compensation. It would now get only Rs. 2½ lakhs. The question is not whether there is any legal case for compensation to mutual or co-operative insurers, but whether they have not been more unfairly treated than even proprietory concerns.

The Government has done well to permit the foreign insurers to transfer to their head offices the policies in foreign currencies, issued to non-Indian temporary residents in India; such business, it has been calculated, forms about 15-20 per cent. of their business in India. This decision has been prompted by the consideration that it would be difficult for the Corporation to render satisfactory service to those policyholders when they return to their homes. Further, some of the foreign insurers have large assets in India, not all of which have been built out of receipts in this country. The Government has, therefore, agreed that the foreign insurers should be allowed to repatriate assets which are not required to meet their liabilities to policyholders in India. They will thus be permitted to transfer the excess of their assets over their liabilities. In other respects, they are being given compensation on precisely the same lines as the Indian companies. It is, however, gratifying to note that the "reserves they would leave behind would be as strong, if not stronger than, the reserves of the best of the Indian companies." But there is one thing more which nearly all of them will leave behind, and that it is a tradition for fair dealing which nationalised insurance may well learn to emulate. It is also well to place on record the fact that the association of many of the foreign insurers with India is as old as Indian insurance itself, and that they played a very vital and significant role in spreading insurance consciousness in this country.

In considering the question of compensation to insurers, the Government will do well to bear in mind that it is taking over, as a going concern, a very prosperous industry, with an immense potentiality. It is not as if the Government has underwritten a major risk in nationalising life insurance. The field is vast, the ground has been prepared through the labour of generations of workers. There is, therefore, nothing wrong in adopting a liberal attitude towards the shareholders of the companies which have spread the gospel of insurance in this country. Indeed, there can be no two opinions on the fact that the Government will not be able to nationalise any other industry with a comparable potentiality at less than the compensation it has to pay to insurers. It has been computed by a competent authority that only 52 out of the 154 companies that are being nationalised are entitled to compensation on the surplus-allocation basis. The total compensation in respect of these companies will be no more than Rs. 3 crores. The other 102 companies will get very small compensation, calculated on the basis of excess of assets over liabilities; actually, even here, the Government loses nothing. Thus, by spending a little over Rs 3 crores, the Government gets complete control over funds estimated at Rs. 400 crores, with prospects for further expansion in funds, thanks to its right to have a monopoly of life insurance business. Surely, it can afford a more generous gesture to those who have owned this business than what it now seems inclined to show.

RISE IN EQUITIES TOO RAPID TO STAY

BANGALORE WOOLLEN BONUS ISSUE—MANAGING AGENCY OF BENGAL PAPER

THURSDAY, 5 P.M.

MARKET GOSSIP

THE share markets are, once again, in the midst of a veritable boom. Equity values are going up, irrespective of intrinsic merits. Despite the increase in corporation tax, the graduated tax on dividends and the tax on bonus shares, values have shot up to levels which few would have expected on budget day. The pride of place in this boom goes to cotton textile scrips. Almost all the well-known shares such as Bombay Dyeing, Kohinoor, Svadeshi and Century have recovered so rapidly that they are now very near the peak levels touched in the last quarter of 1955. The rise in their case is, indeed, phenomenal, especially because the cotton mill industry has been subjected to fresh taxation of nearly Rs. 20 crores, besides the taxes on dividends, bonus shares, etc. To assume that cotton mills will be able to make a profit large enough to offset this additional burden and still be in a position to pay much bigger dividends than they have done for 1955 will be to indulge in hazardous speculation. Those who do so will do well to bear in mind that the day for the return of price and physical controls is probably not very far off and that the cotton textile industry will, perhaps, be the first to attract them. The prices of cloth and yarn have been steadily going up in recent months and so also those of cotton. A stage has already been reached when the Government is actively considering the necessity for reintroducing cotton quotas for the mills. If the Government finds it necessary to requisition cotton from growers, then the latter may demand that prices of cloth, too, should be controlled, so that they may not have to pay high prices for their clothing.

• • • •

The strident rise in equities after the budget can be attributed to the following factors:

(1) Short covering by bears who had entered the ring on a fairly large-scale after the nationalisation of life insurance and on the eve of the budget.

(2) Re-entry of bulls, inspired by bigger dividend announcements and hopes of still bigger dividends in the coming year.

(3) Expectation of heavy inflation in the following twelve months. The budget for 1956-57 provides for a net deficit of Rs. 360 crores to be covered by created money. This means deficit financing at the rate of well over a crore of rupees per day. The spurt in bullion and commodity markets have whetted the appetite of the bulls.

(4) A tremendous increase in the volume of option business.

(5) The apathy of real individual investors. Most of these neither sell when the market booms nor buy on any appreciable scale when values are down. If they at all act, they invariably buy in a rising market and sell in a falling market.

(6) Fairly substantial buying of selected scrips by custodians of life insurance shortly after the budget. This has helped in the absorption of floating stocks of shares.

(7) The fairly easy manner in which the bulls were let off by the stock exchange authorities in Calcutta in the last crisis. By cutting rates, squaring up contracts and effecting compromises, they allowed the professional speculators to conserve their strength and resources. Had the bulls been compelled to meet the losses in full, there could not have been such a quick resurgence of bullish activity.

It will be seen from the foregoing that much of the rise in prices has been due to speculation. Accordingly, it will be risky to follow the present upward trend, thinking that it will be sustained. If the budget proposals have not adversely affected the equity values, it is because they have undermined the confidence of company managements in the future. The way in which prudence and financial rectitude have been penalised by the Finance Minister has evidently encouraged these managements to pay as high dividends as possible so long as they have the freedom and capacity for doing so. In short, instead of encouraging conservation of profits, he has provoked them to indulge in a dividend spree, even if it means payment of a penal tax to the Government. Threats of fresh taxes in the coming years, of a ceiling on income, of nationalisation and of direct control on dividends have also aggravated this trend. "Take as much as possible by way of dividends while the going is good; why worry about the rainy days when the future of private enterprise is uncertain?" This sort of feeling seems to be spreading among those who are in charge of companies. This, however, is not a healthy development from the point of view of the larger interests of the country. Big dividends when profits are large will also mean small dividends when profits decline. An outcome of this will be wider fluctuations in equity values. While buying shares, therefore, investors will have to take this factor into consideration. They should change their ideas of yield in an upward direction. If they thought that 5 or 5.5 per cent. was satisfactory to them before the budget, they must now raise this limit by one per cent. It will not be advisable to take a lower basis of yield, as it will add to the risk of capital depreciation.

In staging a big rise in values, the share markets have ignored certain possible adverse developments. First, the large dividends which some companies have now declared may attract direct dividend control. Secondly, the Government may take some effective measures to restrain the upward trend in commodity and bullion markets. Thirdly, there may be a serious deterioration in Indo-Pakistan relations. Fourthly, some of the companies which have decided to issue bonus shares may drop the proposal on the ground that the tax on such issues is heavy. One of the biggest companies in Madras has already done so. Fifthly, the cost of bank credit may go up. It is reported that banks in Calcutta have already decided to raise the rates of interest on certain types of advances.

• • • •

It will be recalled that the Bangalore Woollen, Cotton and Silk Mills Co., Ltd. (Managing Agents: Messrs. Binny [Madras] Ltd. Bangalore), had proposed to capitalise a sum of Rs. 81 lakhs from the general reserve and issue bonus shares in the proportion of two such shares for every share held. This decision was taken in March 1954 and the Government's permission was sought in July 1954. But it was only in September 1955 that the Government gave its consent. Thereafter, the Company completed the usual procedure for getting the consent of shareholders. Notice of extraordinary general meeting to be held on 17th March 1956 was given on 17th February 1956. Then came the budget, with a tax of As. 2 per rupee on bonus shares. On a careful consideration of the effects of this tax, as well as of the tax on dividends, on the Company's finances, the Directors came to the conclusion that it would be in the best interests of the Company to defer action for the present. Accordingly, they advised the shareholders, at the Company's extraordinary general meeting referred to above, to vote against the resolutions placed before them for issuing bonus shares. This advice was heeded by them, with the result that the proposed bonus issue has been postponed.

It would appear that a rough and ready calculation made by the Company's authorities of the effects of the taxes proposed in the budget revealed the following position:

Assuming that there will be no change in future budgets in the rates of tax now proposed and also that the Company's profits and dividends remain constant, the Company would be faced with an initial cost of Rs. 10,12,500, being the tax at 2 annas in the rupee on the proposed bonus issue of Rs. 81,00,000, but, assuming the present 30 per cent. dividend on the present capital would be reduced to a 10 per cent. dividend on the new capital, there would be an annual saving of Rs. 1,11,375 on the excess dividend tax arrived at as follows:

Dividend payable on a 30 per cent. dividend on present paid-up capital

			Rs.			Rs.
6% of Rs.	40,50,000	=	2,43,000			Nil
4%	do.	=	1,62,000	at 2 annas	=	20,250
20%	do.	=	8,10,000	at 3 annas	=	1,51,875
30%			12,15,000			1,72,125

Dividend tax payable on a 10 per cent. dividend on proposed new capital

			Rs.			Rs.
6% of Rs.	1,21,50,000	=	7,29,000			Nil
4%	do.	=	4,86,000	at 2 annas	=	60,750
10%			12,15,000			

Annual saving.. Rs 1,11,375

It will be seen from the foregoing table that, while there will be an annual saving of Rs. 1.11 lakhs in the dividend tax on the increased capital, the initial cost of tax on bonus issues will be as large as Rs. 10.12 lakhs, a sum that is roughly equal to 9 times the additional amount that will be required to pay the dividend tax on the existing capital at the existing rate of dividend. Further, it would appear that the rates of tax now imposed refer to a bonus issue made and to dividends paid in the previous financial year, which in the case of the Company is that which ended on 31st December 1955. In that event, a bonus issue made in the Company's current year will be subject to whatever rate may be imposed in the next budget, that is, 1957 budget. In view of all this, it is not surprising that the directors came to the conclusion that the lesser of the two evils was to defer the issue of bonus shares. Incidentally, it may be interesting to note, in this connection, that, when the shareholders of the Kohinoor Mills, Bombay, suggested at the annual general meeting of the Company held this week, that a part of the reserves should be capitalised and bonus shares issued, the stand taken by the Chairman, Mr. Sheppard, was similar. Stating that the suggestion had to be examined in all its aspects, he pointed out that an issue of one bonus share for one share held would cost the Company Rs. 12.5 lakhs by way of bonus tax and that it would take a full decade to make up this amount by way of saving in the dividend tax which would be roughly Rs. 1.25 lakhs. If, however, the bonus tax was done away with, say, after two years, the Company would have paid the full tax on bonus issue without securing any substantial advantage on the dividend front. In any case, he thought that there was no point in examining the relative advantages before knowing the final version of the Finance Bill. The implication here is that he is hoping that some changes, apparently for the better, would be made in the Finance Bill before it is adopted by Parliament. It remains to be seen whether this hope will be fulfilled

• • • •

The boom on the stock exchanges last year witnessed a marked revival of cornering of shares of well-managed companies with the primary object of snatching away their managing agencies. Quite a number of tea, sugar, cotton textiles, engineering and jute companies have changed hands in this manner. In the case of some of them, the cornering and the subsequent take-over of the controlling interest took place with the connivance of the managements concerned. In most of the cases, however, the managing agency was forcefully taken away by the sheer weight of majority shareholding obtained by the "money bags" through purchases in the open market even by paying fantastically high prices. It may sound surprising to many that, despite the powers assumed by the Government to discourage trafficking in managing agencies, this evil tendency should persist. But the fact is that Government has never used these powers. We thought that this tendency would stop at least after the enactment of the new Company Law and the penal rates of taxation on Section 23A companies, because these developments have reduced the attractions of managing agency business. This expectation, too, has not materialised. The craze on the part of some Indian capitalists to snatch away the fruits of others still persists.

Apparently, the desire to make easy money continues to be the weakness of Indian capital. If any capitalist wishes to indulge in this game notwithstanding the new Company Law and Section 23A of the Indian Income-tax Act, it is reasonable to conclude that he must be having in mind adoption of very undesirable practices to recoup the heavy cost which he will have to incur for acquiring the control of a prosperous industrial concern. The victims of such practices will invariably be the workers, the Exchequer and the society as a whole. The Government must, therefore, be on the alert whenever it comes across instances of such cornering activities and try to nip them in the bud.

The latest victim of trafficking in managing agency seems to be the Bengal Paper Mill Co., Ltd., the Managing Agents of which are Messrs. Balmer Lawrie & Co., Ltd., Calcutta. Readers of this column will recall that, in our issue of 17th December 1955, we had drawn pointed attention to the possibility of this Company being faced with this danger sooner or later. A group of people went on buying the shares of the Company by paying very high prices completely unrelated to the prevailing yield on industrial equities. It now transpires that these people have found it necessary to come out in the open because of a move by the present management. They are trying to force the issue by resorting to well-known tactics.

Some of the shareholders of the Bengal Paper, under the leadership of one Mr. N. G. Maniar, have formed themselves into a committee and are leaving no stone unturned for terminating the managing agency of the Company. The present term of Messrs. Balmer Lawrie & Co. expires on 15th January 1957. The Board of Directors of the Bengal Paper has, however, thought it fit to enter into a fresh managing agency agreement on revised terms for a period of ten years with effect from 1st April 1956, that is, from the date of commencement of the Companies Act 1956, so that the services of such an experienced managing agency firm may be assured for the successful development of the Company's plans to modernise the plant and expand its capacity. The Directors have, it may be noted, planned to expand the capacity by the addition of one new modern high-speed machine, as this will greatly increase the output with little appreciable addition to the overhead costs, and bring down, at the same time, the unit cost of production. This will enable the Company to make handsome profits in good times and probably to compete successfully in times of keen competition. This programme of expansion requires adequate and guaranteed supply of raw materials.

As raw materials in any quantity are not obtainable in West Bengal and supplies from neighbouring States are not assured, the Company is faced with the only alternative of obtaining pulp from pulp mills. There is, however, no independent pulp mill which can meet the requirements of the Company. A scheme is, therefore, being examined by the Directors and the Managing Agents of the Company in conjunction with those of the India Paper Pulp Co., Ltd. for the erection of a bamboo pulp mill in an area where there are large and hitherto substantially undeveloped bamboo resources. In fact, this project, in one of the bamboo producing areas, solely for the manufacture of pulp for sale to the paper industry will be a major pioneering development in this country. The project is still in the stage of investigation, but preliminary reports would appear to have indicated the possibility of an assured supply of bamboo pulp to the Company at an economic cost. At this important stage of the Company's development plans, the discontinuance of an experienced managing agency as Messrs. Balmer Lawrie will mean a serious loss to the Company in particular and a definite setback to the economic development of the country in general. It is quite probable that the pulp manufacturing plans will fall through, if the present managing agency is terminated, as the India Paper Pulp Company may not be willing to join hands with the new management of the Bengal Paper.

The main grounds on which Mr. Maniar and his associates want to terminate the managing agency are inefficiency and lack of foresight on the part of the present Managing Agents. These charges sound farcical, indeed, in the light of plans disclosed above. In the course of a circular to fellow shareholders, they say that the Bengal Paper has been lagging behind other paper mills in respect of profits earned per ton of production, dividends paid to the shareholders and other allocations made. According to them, the Bengal Paper has earned

CAUTIOUS ADVANCE IN SHARES

UNDERTONE STILL FIRM

(From Our Own Correspondents)

BOMBAY, *22nd March*

THE upward trend in equity values on the Stock Exchange noted since the release of the Budget proposals was fully maintained during the week under review also. Many favourite counters received fresh support and fair-sized gains were recorded. However, the pace of advance was less marked than in the previous week, and the upward movement was somewhat irregular, because operators were more cautious in extending their commitments and preferred to book profit intermittently. The prospect of higher and additional taxation during the coming years, hinted at by the Finance Minister in Parliament, failed to check the bullishness, though it induced mild profit-taking at one time.

The main inspirations for the operators were the flow of good corporate news, particularly from textile mills, the rising trend in notes in circulation and good prospects for industries in general during the second Five-year Plan period. The buoyancy displayed by the bullion and oil-seeds markets also aided the bullish sentiment.

In the steel section, Tata Ordinaries continued to attract good attention following the report that the Company's expansion plans were being vigorously implemented. After an early recession from Rs. 237-12 to Rs. 233-4, the shares advanced to Rs. 240. Reacting to Rs. 237-8 on profit-taking, they recovered to Rs. 242 before finishing at Rs. 241-12. Indian Irons were concerned in a bout of fresh buying support, as a result of which the shares rallied from Rs. 33-4½ to Rs. 35-4½ and closed at Rs. 35-3½.

Textiles shares were, once again, in the forefront on sustained attention, following the encouraging results of working of the leading mills and good offtake in cloth. Bombay Dyeings and Kohinoors were particularly in good form, the former crossing the Rs. 600-mark after a lapse of nearly three months. The latter were keenly bid on prospects of better dividend for the current year. Bombay Dyeings moved up from Rs. 591-14 to Rs. 603-12 and, after a short-lived reaction to Rs. 596-14, jumped up to Rs. 615 today before finishing at Rs. 611-14. Kohinoors shot up from Rs. 349-8 *cum-div.* to Rs. 360-8 *ex-div.* (Rs. 12 final). Centurys picked up Rs. 9 to Rs. 517, Central Indias Rs. 3-8 to Rs. 146-8, Finlays Rs. 5 to Rs. 364 and Gokaks Re. 1-8 to Rs. 250-8. Indu Ordinaries fared well and gained As. 7 to Rs. 14. Minervas put on Rs. 4-12 to Rs. 86-12 and Morarjee Goculdas Rs. 5 to Rs. 240. New Citys hardened from Rs. 170 *cum-div.* to Rs. 173-12 *ex-div.*, while New Greats were done at Rs. 230 *ex-div.*, as against Rs. 240 *cum-div.* last week. Indore Malwas were lower by Rs. 3-12 at Rs. 146-4, as also New Kaiser-I-Hinds by Rs. 6-14 at Rs. 118-12. Shree Niwas lost Rs. 6-4 to Rs 223-12, while Simplex gained Rs. 2 to Rs. 214-8. Standards improved from Rs. 420 to Rs. 432-8. Svadeshis from Rs. 232-8 to Rs. 236-8 and Swans by Rs. 6-4 to Rs. 453-12. Tata Mills dropped Re. 1-12 to Rs. 59-4.

Interest in bank shares was selective. Bank of Indias received good institutional support and moved up by Rs. 6 to Rs. 159. On the announcement of a bonus issue, Punjab Nationals rose by Rs. 7-4 to Rs. 50-4. United Commercials also were in good form and gained Rs. 2 to Rs. 53. Barodas on the other hand, were quiet at Rs. 95. Centrals were steady at Rs. 49-8, while their New shares were up by Re. 1-8 at Rs. 50-12.

The insurance section was featureless and activity was very much restricted. New Indias softened from Rs. 41-12 to Rs. 40 and Orientals were dull at Rs. 3,900. Other shares were unchanged.

Electricity shares were quiet and fractional declines in prices were recorded. Ahmedabad Electrics were lower by As. 10 at Rs. 102-8, as also Bombay Suburbans at Rs. 115-10. Surat Electrics, however, gained As. 10 to Rs. 124-6. Tata Hydros shed Re. 1-12 to Rs. 132 and Tata Powers Rs. 5 to Rs. 1,375. Andhra Valleys were maintained at Rs. 1,295.

The miscellaneous section followed the general pattern of the market and kept up the firm undertone. In the sugar group, Belapurs came up from Rs. 229 to Rs. 234-8, before closing lower at Rs. 232-8. Phaltans rose by Rs. 3-8 to Rs. 147-8 and Walchandnagars by Rs. 6-4 to Rs. 266-4. In the cement group, A.C.C. continued to receive enquiries and moved up from Rs. 214-12 to Rs. 217. After an earlier recession from Rs. 188 to Rs. 186, Digvijays regained to Rs. 188-8, following the good outlook indicated by the Directors in their latest report. Among engineering and mining shares, Alcocks were conspicuous on good support from interested quarters. As a result the shares jumped by Rs. 21-4 to Rs. 377-8. Premier Constructions were in demand and rose by Rs. 3-8 to Rs. 186-8. Tata Locomotives added Re. 1-8 to Rs. 150-8 and Larsen and Toubros As. 4½ to Rs. 15-13½. Shivrajpurs were steady at Rs. 110-8, while Indian Coppers rose smartly from Rs. 6-8½ to Rs 7-3. B.B. Petrols lost some ground to Rs. 4-2½ on pessimism regarding dividend.

In the shipping and transport group, Scindias were a little erratic and closed As. 2½ lower at Rs. 17-4½, while Great Eastern Shippings advanced by Re. 1-3 to Rs. 16-10. Bharat Lines were on offer Rs. 2 lower at Rs. 73. Hindustan Motors improved by As. 5 to Rs. 10-1, but Premier Automobiles were Re. 1 lower at Rs. 94. Among miscellaneous industrials, good activity was witnessed in Bombay Burmahs. After a recession from Rs. 614-6 to Rs. 601-4, their old shares rallied to Rs. 621-4. National Rayons reacted from Rs. 235-4 to Rs. 231-8, but revived to Rs. 242 on expectations of higher dividend. British India Corporations were supported by interested circles, as a result of which they put on As. 7 to Rs. 10-14. Killick Industries were a rupee higher at Rs. 166-8. Tata Chemicals were quiet at Rs. 14-14, while Tata Oils were steady at Rs. 47-8. Wimcos maintained their upward trend with a further gain of Re. 1-4 to Rs. 206-4.

Calcutta Stock Exchange

CALCUTTA, *21st March*

Although the undertone on the Calcutta Stock Exchange was quietly steady in the earlier part of the week under review, conditions improved as the week progressed. Sentiment was assisted by higher advices from Bombay. Despite the Finance Minister's clear indication that further new taxes would be added in the coming years, if scrips attracted buyers, that was principally due to the attractively lower levels. The daily list of transactions since Monday was impressively higher. That fortunes for tea gardens were changing for the better was clear from the trend during auctions and, naturally, more buyers were after tea shares. Miscellaneous industrials, too, recorded transactions in an impressive way, and one of the reasons for this was the expectation of the Government of India meeting development expenditure by deficit financing the largest sum in the first year of the plan. Jute shares came under selling pressure early in the week, but this abated when raw jute prices fell and it was expected that working results of the mills for the current accounting period would improve. However, the reference of the outgoing Chairman of the I.J.M.A., Mr. Birla, at the annual meeting of the Association last Friday to losses of mills in 1955 continued to depress sentiment.

In coals, fractional gains were recorded. From Rs. 13-15, Burrakurs moved to Rs. 14-6. On strong support, East Indians recovered to Rs. 33-14 from Rs. 32 and Bengals to Rs. 534 from Rs. 523. On the other hand, Raneegunges were unchanged at Rs. 11-4 and New Beerbhooms at Rs. 19-11.

More interest was shown for textile shares. Kesorams at Rs. 18-3, picked up Re. 1-8, and Dunbars hardened from Rs. 289 to Rs. 301, while Cawnpores receded from Rs. 9-2 to Rs. 8-15. Elgin Mills were taken over to Rs. 27-10 from Rs. 27-7 and Bowreahs were unchanged at Rs. 310.

In jutes, most shares moved within narrow limits either way, but, with the decline in raw jute prices, the section attracted more buyers at lower levels. Thus, the daily list of transactions tended to increase from Friday last. From Rs. 23-8, Howrahs moved down to Rs. 22-14 and, from a previous rate of Rs. 420, Ft. Glosters gave way to Rs. 350. At Rs. 154, Orients added Re. 1, Nationals easing to Rs. 24-10 from Rs. 25-10.

A better trend was in evidence in the engineering section. Indian Irons opened at Rs. 33 and improved to Rs. 34-9. Texmacos were raised from Rs. 21-2 to Rs. 22-13. Interested buying raised Richardson and Cruddas from Rs. 24-12 to Rs. 25-2 and Burn and Cos. at Rs. 335 were higher by several points. Jessop and Cos. at Rs. 34-8 put on a better appearance.

Teas forged ahead and attracted a considerable portion of the funds in the market. Brooke Bonds hardened from Rs. 20-10 to Rs. 25-2, Hantaparas from Rs. 245 to Rs. 285, Rajabhats from Rs. 24-8 to Rs. 25-8, and Hasimaras from Rs. 32-8 to Rs. 26-4. Patrakolas were fully steady at Rs. 208 *ex-div.*

Alkali and Chemicals, among other miscellaneous industrials, were a notable feature and rose from Rs. 21-2 to Rs. 23-2 following the decision to commence manufacturing a new product. Rohtas Industries were in good demand and scored a gain of Re. 1 to Rs. 20-10.

* * * *

Madras Stock Exchange

MADRAS, *21st March*

Buoyant conditions prevailed on the Madras Stock Exchange during the week under review. Induced by investment and speculative support, equities forged ahead. Textiles were particularly firm, thanks to reports of continued upward trend in offtake of cloth and yarn for both domestic consumption and export. Tea scrips also met with considerable buying enquiries, reflecting operators' optimism about the outlook for the industry based on the recent impressive rise in tea prices at the Calcutta and London auctions. Coffee and rubber shares, too, evoked the attention of operators, on expectation of better working results in the current season. In sympathy with the general trend, sugar and miscellaneous sections exhibited a firm tone and recorded handsome improvement in prices.

During the week under review, there were a few important company announcements. The East India Distilleries and Sugar Factories Ltd. has received the consent of the Controller of Capital Issues for the proposed issue of bonus shares amounting to £75,000 to holders of 'B' shares and application has been made to the Capital Issues Committee of the U.K. whose consent is also necessary, as the Company is a sterling company. The Bangalore Woollen and Cotton and Silk Mills Co., Ltd., has deferred action on the issue of bonus shares, since the resolutions to that effect were declared lost at the extraordinary general meeting held on the 17th inst. The Woodland Estates Ltd. has taken over possession of the Braemore Estate from the Poonmadi Tea and Rubber Co., Ltd., with effect from 28th February 1956. The United Nilgiri Tea Estates Co., Ltd., has received official permission for the issue of 82,248 ordinary shares of Rs. 10 each as fully-paid bonus shares at 3 bonus shares for every 5 shares now held.

Textile shares were, as already stated, in the limelight. Venkatesas spurted by Rs. 11 to Rs. 166. Balasubramania 'B's rallied Rs. 10 to Rs. 132-8 and 'A' shares picked up Rs. 3 to Rs. 78. Vasantas advanced by Rs. 7-8 to Rs. 287-8, Radhakrishnas by Rs. 7 to Rs. 287, Saradas by Rs. 6 to Rs. 120, Buckinghams by Rs. 3-12 to Rs. 183-12 *cum-div.* and Rajapalayams by Rs. 5-8 to Rs. 135-8. Radhakrishna 'B's and Ranga Vilas rose by Rs. 5 each to Rs. 145 and Rs. 90, respectively. Coimbatore Pioneers and Premiers finished each Rs. 4 higher, the former at Rs. 260 and the latter at Rs. 184. Lakshmis gathered Rs. 3 to Rs. 193. Vijayalakshmis hardened by Rs. 2-8 to Rs. 130 *cum-div.* The directors of the Vijayalakshmi Mills Ltd. have recommended a tax-free dividend of 10 per cent. for the year ended December, 1955, which is the same as that paid in the previous year. Metturs gained a like amount to Rs. 407-8. Maduras gathered Re. 1-8 to Rs. 54-14 *cum-div.*

In the planting section, there was a buying spree in tea shares. United Nilgiris provided the brightest spot, their quotation advancing by Rs. 30 to Rs. 350 *ex-div.* Nonsuch Teas picked up Re. 1-8 to Rs. 35-4. Haileyburias appreciated by Re. 1-2 to Rs. 27-10 and Peermades by Re. 1 to Rs. 37-8. Coonoor Teas strengthened by As. 12 to Rs. 28-8. Highlands and Talayar Teas rose by As. 10 each to Rs. 17-10 and Rs. 13-14, respectively. Perksides put on As. 8 to Rs. 19-12, Blue Mountains As. 7 to Rs. 5-12, Chandramalais As. 6½ to Rs. 6-13½ and Nilgiri Teas As. 4 to Rs. 14-2. Among rubber shares, Peninsulars jumped up by Rs. 3 to Rs. 24-8. Malankaras rallied Rs. 2 to Rs. 30. Rajagiris and Midlands scored a gain of Re. 1-12 each to Rs. 23-4 and Rs. 21, respectively. Vaikundams changed hands Re. 1-8 higher at Rs. 28-8. Among coffee shares, Consolidated Coffees hardened by Re. 1-9 to Rs. 26-3. Coffee Lands spurted by As. 15 to Rs. 21-4. Puthutotams gathered As. 4½ to Rs. 4-14½. Rajendras were firm at Rs. 7-5 and Sheveroys at Rs. 2-8.

Turnover in sugar shares were large. United Breweries found good buyers Rs. 2 higher at Rs. 185. Deccans strengthened by As. 11½ to Rs. 9-3 and Indias by As. 11 to Rs. 20-15 *ex-div.* Travancores gained As. 7 to Rs. 13-9. E.I.D. 'A's were done at Rs. 26-8 *ex-div.*, as against Rs. 27 *cum-div.* a week before

In the miscellaneous section, cement company shares experienced keen demand and registered a handsome rise in values. Dalmia Cements picked up a rupee to Rs. 14-12. India Cements and Travancore Cements advanced by As. 7 each to Rs. 33-8 and Rs. 12-7, respectively. Among other shares, India Steel Rollings rose by Re. 1-6 to Rs. 13-10. Mysore Tobaccos increased by As. 8 to Rs. 12-2 and F.A.C.Ts. by As. 6 to Rs. 7-6.

Notices

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

AT A MEETING OF THE BOARD OF DIRECtors held on the 15th March 1956, the following Dividends were recommended to be paid for the half-year ended 30th September 1955, without any deduction for Income-tax paid by the Company:—

On 1st Preference Shares—8 per cent. per annum

On 2nd Preference Shares—4½ per cent. per annum

On Preferred Ordinary Shares—10 per cent. per annum

On "A" and "B" Ordinary Shares—As. 12 per Share plus As. 4 Bonus per Share.

By Order of the Board,
F. W. HEILGERS & CO., LTD.,
Managing Agents.

THE AMALGAMATED ELECTRICITY COMPANY, LIMITED

THE REGISTERS OF MEMBERS AND TRANSfer Books of the Company will be closed from 30th March to 5th April 1956, both days inclusive, in connection with Interim Dividend for the half-year ended 30th September 1955, payable on or after 6th April 1956.

By Order of the Board,
THE CONSOLIDATED ELECTRIC AGENCIES LTD.,
Agents,
N. C. JAVERI,
Managing Director.

BOMBAY, *17th March 1956.*

DRAFT BILL ON REORGANISATION OF STATES

MAIN PROVISIONS ANALYSED

THE reorganisation of the Indian Union into 15 States and seven "Union Territories," the creation of five zones, with a council for each zone, and the abolition of the institution of Rajpramukhs are the principal features of the 121-clause draft States Reorganisation Bill which was placed before Parliament last week by the Government of India. The Bill follows prolonged consideration by the Government of the report of the States' Reorganisation Commission (Chairman; Mr. S. Fazl Ali) submitted to the Government in September last. It is now expected that the new States will commence functioning with effect from 1st October 1956. The State Governments have been requested to communicate the views of their respective legislatures by 16th April, and even earlier, if possible. The final Bill will be drafted in the light of their views as well as those of both Houses of Parliament.

The introductory chapter of the draft Bill says that the Government has, since the publication of the Report of the Commission, considered the outstanding issues very carefully in consultation with the State Governments and the parties and interests concerned. Referring to its proposal for the retention of Bellary in Mysore State in the face of the Commission's scheme for transferring it to Andhra in order to facilitate the smooth and efficient execution of the Tungabhadra project, the Bill says that the Government has already examined the high level canal scheme of the project in some detail and that the purpose the Commission had in view could be achieved without making any territorial changes or reopening the question of the future of Bellary which had been settled after detailed inquiries.

Two Classes

The Bill seeks, in accordance with the recommendations of the Commission, to create only two classes of component units—"States" and "Union Territories." The 15 States envisaged in the Bill are: Andhra-Telengana, Assam, Bihar, Gujerat, Kerala, Madhya Pradesh, Madras, Maharashtra, Mysore, Orissa, Punjab, Rajasthan, Uttar Pradesh, West Bengal and Jammu and Kashmir. The seven Union Territories are: Greater Bombay, Delhi, Himachal Pradesh, Manipur, Tripura, Andaman and Nicobar and Laccadives, Minicoy and Amindive islands. The President is empowered to constitute Regional Councils for the new States of Andhra-Telengana and Punjab-P.E.P.S.U. for ensuing equitable development of the States merged. He will also make rules in respect of the functioning and powers of these Councils.

So far as the States are concerned, the Bill's departure from the Commission's Report relates to Bombay and Andhra-Telengana in that, while the Commission recommended the retention of a composite Bombay State, the Bill splits it up into Greater Bombay (Centrally administered territory), Maharashtra and Gujerat; similarly while the Commission envisaged Andhra and Telengana as two units to begin with and their subsequent merger with the consent of the respective legislative assemblies after the next elections, the Bill seeks to merge them straightaway. So far as the Union Territories are concerned, the Commission recommended only three—Delhi, Manipur and Andaman and Nicobar Islands. The Bill envisages seven such territories. The more important of the other minor adjustments include the retention of Bellary in Mysore State as against the Commission's recommendation for a transfer of that district to Andhra. No reference has been made to the possibility of the formation of Dakshina Pradesh or other merger proposals. The explanatory note, appended to the Bill, however, refers to the proposal for the merger of West Bengal and Bihar. Any decision ultimately taken on this issue, it is stated, will be implemented by means of a separate Bill.

Five Zones

The five zones, which the Bill seeks to set up, are:

1. *Northern Zone*: Punjab, Rajasthan, Jammu and Kashmir, Delhi and Himachal Pradesh;
2. *Central Zone*: U.P. and Madhya Pradesh;
3. *Eastern Zone*: Bihar, West Bengal, Orissa and Assam and Manipur and Tripura;
4. *Western Zone*: Maharashtra, Gujerat and Greater Bombay and
5. *Southern Zone*: Andhra-Telegana, Madras Mysore and Kerala.

The Zonal Council for each zone is to consist of the following; (1) A Union Minister to be nominated by the President; (2) the Chief Minister of each of the States included in the zone and two other Ministers of each such State to be nominated by the Governor; (3) where any Union Territory is included in the zone, one member from each such territory to be nominated by the President; (4) in the case of the Eastern Zone, the person for the time being holding the office of the Adviser to the Governor of Assam for tribal areas. The Union Minister nominated by the President is to be the Chairman of each Zonal Council. Each Chief Minister of the State included in each zone is to act as vice-chairman of the Council by rotation for a period of one year. Each Zonal Council, it is proposed, will have the following persons as advisers; (*a*) one person nominated by the Planning Commission; (*b*) the persons for the time being holding the offices of Development Commissioners in the States included in the zone; (*c*) and Chief Secretaries of the States. The Zonal Councils are to be advisory. Each Council will have a permanent secretariat located within the zone. It will be competent to discuss any matter in which some or all of the member-States and/or the Union have a common interest and to tender advice to the Governments concerned. The Zonal Council may also discuss matters arising out of the reorganisation of the States such as border disputes, linguistic minorities and inter-State transport, matters relating to economic planning or of common interest and benefit to the people in the sphere of social planning.

Assets

As regards apportionment among the States of assets and liabilities, assets like land and buildings, stores, articles and other goods, arrears of taxes and the assets of State undertakings, will, it is explained, pass to the successor State in which such assets are physically located or with which they are territorially connected. Certain other assets like treasury and bank balances, the right to recover external loans and advances and credits in certain funds are to be divided between the successor States where there is more than one, according to the population ratio. This is defined as being the ratio in which the population of an existing State as ascertained at the 1951 census is distributed territorially among its successor States. Thus, in relation to the successor States of Hyderabad, namely, Andhra, Maharashtra and Mysore, the population ratio will be A; B; C; where A is the census population of territory transferred from Hyderabad to Andhra, B is the census population of the territory transferred from Hyderabad to Maharashtra, and C is the census population of the territory transferred from Hyderabad to Mysore. The Central Government, it is stated, will ascertain in due course the population ratios in all relevent cases.

Public Debt

The provision for the appointment of public debts of the States follows the pattern which was adopted in the case of the division of public debt between Andhra and Madras. The explanatory note further states that the debt outstanding with the public and payable by an existing State will be allocated to a specific successor State, the other successor States, if any, reimbursing the one which carries the liability. These reimbursements will be in proportion to the total expenditure on all capital works and other capital outlays incurred upto the appointed day in the territories of the existing State included respectively in each of the successor States. In the case of the public debts of Bombay and Hyderabad, however, it is proposed that they shall stand transferred to the Central Government on 30th September 1956 and that the Central Government shall be deemed to have made a loan to each of these States. The object, it is explained, is to ensure that Andhra and Maharashtra as the principal successor States of Hyderabad and Bombay may not be saddled with an exaggerated public debt which may affect their future borrowings.

There are at present 18 High Courts, one each for Part A State and Part B State and seven Judicial Commissioner's Courts one for each Part C State, other than Coorg and Delhi. Some of these High Courts and Judicial Commissioner's Courts will become unnecessary after the reorganisation of States. It is proposed that the High Court at Bombay shall continue to be a High Court for Gujerat, Maharashtra and Greater Bombay and the High Courts now exercising jurisdiction in relation to the existing States of Madhya Pradesh, Mysore, Punjab, Rajasthan and Travancore-Cochin shall become the High Courts for the corresponding new States. After this reorganisation, there will be 14 High Courts and three Judicial Commissioner's Courts. Rights and liabilities under subsisting contracts and outstanding liabilities in respect of actionable wrongs are matters of immediate concern to the public. Since it is desirable that the private party should know with which successor State he would have to deal after the reorganisation, general provisions have been made for this purpose. Where there is more than one successor State to an existing State and the rights or liabilities in respect of a contract or actionable wrong cannot be logically allocated to a particular successor State, it is allocated to the principal successor State subject to subsequent financial adjustment between that State and the other successor States which may be concerned in the matter.

The reorganisation of the States obviously calls for the reconstitution of the services. Accordingly, the Bill provides for the reconstitution of all the State cadres of the Indian Administrative Service and the Indian Police Service which are affected by reorganisation. It is proposed that the cadres for all Part B States, Bombay, Madhya Pradesh, Punjab and Vindhya Pradesh should be wound up and the members borne on those cadres should be allocated to the State cadres for the new States or for other existing States by order of the Central Government. The scheme for other State services is that all persons serving in those Part B and Part C States which are to be completely merged in a new State will be deemed to have been allotted to that new State. Those serving in any other existing State which is affected by the reorganisation will provisionally continue to serve in the principal successor State, unless they are required by general or special order of the Central Government to serve provisionally in other successor State. One clause empowers the Central Government to set up one or more advisory committees for the purpose of assisting it in regard to the determination of the final allotment of Government servants, the proper integration of the services and the ensuring of fair and equitable treatment to all persons affected by the territorial changes and formation of new States. There is also a provision for the establishment of Public Service Commissions in all States.

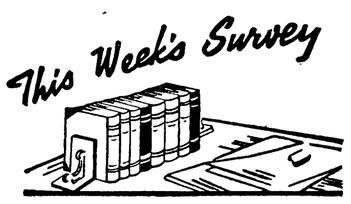
Many of the provisions in the Bill stem from the need for ensuing that there is no break in the continuity of financial, hydro-electric, industrial and transport arrangements which form part of the administration of the State Government. Thus, in order that the administration of a new State may be carried on until the State legislature has sanctioned expenditure from the consolidated fund of that State, provision is made for the Governor or Rajpramukh of the corresponding State to authorise such expenditure for a period of three months from the appointed day. All the existing agreements between the States and the Reserve Bank will be preserved. Some modifications of a more or less formal character will be necessary in these agreements in view of the changed circumstances; such changes will be made by the order of the Central Government.

Financial Corporations

The State Financial Corporations, constituted under the State Financial Corporations Act, 1951, for the existing States of Bombay, Hyderabad, Saurashtra and Travancore-Cochin will be deemed, with effect from the appointed day, to be the Financial Corporations for the States of Maharashtra, Andhra-Telangana, Gujerat and Kerala respectively. Provision has been made for payment of a part of share capital by each of the States to the States which lose the Corporation's services. Thus, the State of Maharashtra will be liable to pay to each of the new States of Mysore, Gujerat and Rajasthan and to the Central Government on account of its share of the paid-up capital of the Financial Corporation for the existing State of Bombay such amount as the Central Government may determine.

Some transitional provisions have been made for the functioning of the State Electricity Boards now existing in the States of Bombay;

(*Continued on page 595*)



INDO-BRITISH CO-OPERATION

BRITAIN, by reason of its traditional commercial relations with this country as well as of its steadily increasing role in India's economic development, has special reasons to appeal to India's business community. Even today, the U.K. constitutes the single largest market for India's total exports of which it takes some 32 per cent. and the single largest source for this country's imports, of which Britain's share is about 25 per cent. Many notable changes have taken place in the traditional lines of trade between India and the U.K. Thus, the U.K.'s offtake is not confined to raw materials alone; Indian cloth, for instance, finds a ready market there. Nor are the U.K.'s exports to this country restricted to the traditional supply of consumer goods. For a large part of Britain's exports to India now consists of machinery and equipment.

In his objective—and nevertheless very felicitous—appraisal of the problem of Indo-British economic co-operation. The Rt. Hon. Malcolm MacDonald, High Commissioner for the U.K. in India, in the course of his speech, at the Indian Merchants' Chamber, Bombay, emphasised that Britain's role in India's economic development would be essentially constructive. After pointing out that the "most effective" way of ensuring security amongst people was to create the economic and social conditions in which they could live happily. Mr. MacDonald cited the Colombo Plan in which a score of different nations now co-operate to promote the economic and social progress of more than 600 million people in Southern Asia. Referring to India, he realised that its vast economic programme implied the receipt of technical aid from the industrial West. He added realistically: "You are accepting it from many quarters. You are right to take it from every country where you can advantageously get it. We British have no quarrel with that, and are only glad that we can help in many ways. So far as we are concerned, the more ways the better."

There is one circumstance which facilitates Indo-British technical co-operation. It is the Indian technicians' familiarity with the English language. Further, the technical and engineering personnel in India, having acquired their knowledge from British text books and their experience from working with mostly British machines, find it easier to acquire technical know-how from Britain than from other countries. The imparting of technical knowledge and experience is a difficult process. A common linguistic medium could hasten this process and its absence retard it. It is sometimes too facilely assumed that he who knows can teach. The fact is that the communication of technical knowledge implies a certain rapport between the teacher and the taught—a rapport which is difficult to establish in the absence of a common medium of expression. Indians in Government-owned enterprises are known to find it hard to learn from non-British technical personnel. India cannot afford to take too long to learn the necessary technical know-how. It is, therefore, advisable perhaps to draw more heavily on British or American sources, inasmuch as it will eliminate the linguistic difficulty.

A welcome assurance—incidentally, one which can ring true only when it comes from a representative of a free country—is that Britain is not concerned with the national economic policies of this country. Mr. MacDonald said:

"The Indian Government is committed to creating in this country 'a socialist pattern of society.' Some people express qualms about that. So far as we in Britain are concerned, the policies which you choose for your national development are your own business. . . . We have, ourselves, engaged in a great deal of socialist action; and we are still actively seeking the right balance of co-operation between private enterprise and public enterprise in society."

The U.K. has made available technical and financial assistance to both the public and private sectors of Indian economy. The range of assistance, as an article on Indo-British trade in 1955 published in our last issue, shows, is commendably wide. Some of the more recent deals, which deserve mention, include the supply of one Viscount airliner (orders for five more liners have been placed by the Indian Airlines Corporation), £2-million order for 2,800 railway wagons. £1-million order for sugar machinery, £900 000-order for broad-gauge multiple unit trains, £500,000-order for Leyland Titan double-deckers for the Bombay Electricity Supply and Transport Undertaking, £200,000-order for supply of cranes and the contracts for the construction of bridges over the Chambal River (£290,000) and the Sone River £(349,000). The importance of Britain's private investments in India is brought out by the fact that the U.K. accounted for 82 per cent. of the net addition of Rs. 132 crores to private foreign investments in this country over the 1948-53 period. Nevertheless, there is, as Mr. Murarji J. Vaidya, President of the Chamber pointed out, great scope for many Indo-British ventures on a joint and co-operative basis in the private sector.

The conclusion of the Indo-British steel agreement is, of course, the most significant development in the sphere of economic co-operation between the two countries. It is of the greatest importance to the future of Indo-British economic relations that the Durgapur steel project should succeed. It is true that Britain labours under certain special disabilities. It has seriously to contend with its own inflationary conditions. Again, being a free country with a free economy, the U.K. cannot possibly give a political twist to a business deal. Thus, it cannot quote more attractive financial terms than are warranted by the economics of the undertaking. The authorities will, however, do well to ensure that these obstacles do not stand in the way of making a success of the steel project. Nothing succeeds like success, and, in the context of the divergent pattern of India's steel enterprises, nothing succeeds like comparative success.

RAILWAY LABOUR

Negotiations for patching up the differences between the All-India Railwaymen's Federation and the Indian National Workers' Federation have ended in success. Thanks to the intervention of Mr. Jayaprakash Narayan, the two unions have agreed once again to merge together to form a single Federation.

It will be recalled that an agreement had been arrived at between these two unions in April 1953 itself to form a single Federation, namely, the Federation of Indian Railwaymen. Unfortunately, differences crept in and they widened last year, resulting in the unions holding separate conventions, one at Bezwada and the other at Madras, each union claiming that it was the National Federation. It is, therefore, gratifying to find that the two unions have once again agreed to forget their differences and work in unison.

Under the terms of the agreement released on the 15th inst., the merger will first take place at the union level and later at the Federation level. A joint committee, consisting of one representative each of the affiliated unions, with an independent chairman, preferably a retired judge or, if no such person is available, the Regional Labour Commissioner, will scrutinise the membership lists of the two unions and will hold elections on the basis of the combined list of membership.

As a first step towards the merger of the two unions, joint committees, consisting of one representative each of the affiliated unions, will be formed to scrutinise the lists of membership for the year 1955-56. In the event of any dispute, the services of a retired High Court or Sessions Judge will be obtained and his award will be accepted as final by both sides.

Congratulating Mr. S. Guruswamy, General Secretary of the All-India Railwaymen's Federation, and Mr. Vasavada, General Secretary of the Indian National Workers' Federation, for their farsighted and large-hearted decision, Mr. Jayaprakash Narayan observed:

"I appeal to railwaymen all over the country to rally round and lend support to the two leaders who have brought about this unity in implementing it. Disunity has brought great harm to the cause of the railwaymen and I think this is the last chance to achieve unity. I hope all petty considerations and personal interest would be subordinated to the larger interests of unity."

Welcoming the agreement, Mr. V. V. Giri, a former Union Labour Minister, has appealed to all railwaymen to "adhere and carry out the terms of the agreement in all humility and without 'ifs' and 'buts' and accomplish the great task ahead of them." He has further expressed his appreciation by declaring that "no one is happier than myself that an agreement has been reached, as otherwise it would have resulted in the disintegration of one of the best trade union organisations in India to the detriment of peace in industry, thereby harming execution of the second Five-year Plan and the economic situation in the country."

The decision of the two bodies to merge into a single unit is, indeed, an encouraging development in the sphere of Indian labour. As all students of trade unionism will admit, each industry should have, as far as possible, one union only. For the success of collective bargaining, it is essential that there should be one single bargaining agent over as large an area of industry as possible. Separate unions for different units in the same industry are inimical to the growth of healthy trade unionism and their existence may be justified only in very exceptional circumstances. A single consolidated union will facilitate representation of grievances of workers forcefully and effectively. Such a step will accelerate progress towards the introduction of uniformity in wages and conditions of service throughout the country.

The Federation can hope to succeed only if its affairs are freed from the influence of any political parties. In fact, trade unions can serve their members effectively only by working for the improvement of the economic conditions of the workers. Unfortunately, contrary to trade union developments elsewhere in the industrial West, especially in the U.K., trade unions in India are in perpetual conflict with one another by virtue of their affiliations with the various political organisations.

There is a fear in certain quarters that a single union commanding allegiance of lakhs of workers, especially in public utility undetakings, is a potential danger not only to the undertaking in particular, but also to the country in general. It is said that the effect of labour unrest and the consequent stoppage of railways is only to be imagined. This fear is not wholly unwarranted, for, unless the union is led by leaders whose sense of responsibility to the society as a whole is high and who believe in negotiation and conciliation for settling disputes and not in a demonstration of the union's right by holding the authorities and the general public at its mercy, the merger will have been in vain. It is to be hoped that such a contingency will not arise in the railways.

The benefits of having a single union with large membership are enormous, apart from its role in the settlement of disputes. In view of its considerable resources by way of membership fee, it can initiate labour welfare activities on the lines undertaken by the unions in the industrial West. It can, for instance, run co-operative societies, undertake cultural activities and the like, thereby making the life of its members happier. Railwaymen have a vital role to play in making the second Five-year Plan a success. If only the National Federation were to make them realise the importance of duties and responsibilities before claiming rights and privileges, it will have fulfilled its national role.

SUGARCANE DEVELOPMENT

Sugarcane development will receive a fresh impetus during the second Five-year Plan period. Addressing a meeting of the Indian Central Sugarcane Committee at New Delhi on Monday this week, Dr. Punjabrao Deshmukh, Union Minister for Agriculture, gave the assurance that every possible assistance would be given to cultivators, with a view to obtaining much larger yields of sugarcane than hitherto. During the second Plan period, the cane development schemes are expected, according to Dr. Deshmukh, to cover the entire area under the crop, including *gur* areas which had not been attended to properly so far. Urging intensification of the tempo of research work on both cane and *gur*, along with the work on cane development, including the intensive cane campaign, the Minister observed:

"The Government of India has set apart Rs. 5 crores for sugarcane development schemes in the second Five-year Plan. For financing these schemes, Government has accepted certain principles of assistance in consultation with the Planning Commission. Due to the financial limitations of the Centre, it will not at present be possible to increase the allotment of Rs. 5 crores. Government will, however, endeavour to see that certain States in which no cane development work has been done so far are given increased assistance towards development than what will normally be possible."

These observations of the Minister are, indeed, reassuring. The responsibility now rests on the States to see that cane development is intensified. Mere increase in the quantum of Central assistance is not enough. What is urgently required is that the assistance should be made use of wisely. In other words, the amount must be spent on such schemes as would bring about an improvement in the per-acre yield of sugarcane with rich sucrose-content. In this connection, those in charge of the cane development work will do well to note the statement of Dr. Deshmukh that cane growers should be advised not only about the exact quantity of fertilisers that is to be used but also regarding the kind of mixture most suitable for different kinds of soil. It is again reassuring to be told that the Central Government is willing to give financial assistance to the States in order to enable the latter to grant loans to the cultivators for purchase of fertilisers.

In the course of his speech, the Agriculture Minister made a special reference to the campaign for top-dressing sugarcane with ammonium sulphate. He claimed that the campaign had been launched successfully, and quoted as proof the distinct improvement in sugarcane yields. The average increase in yields in Uttar Pradesh and the Punjab was of the order of 35.5 per cent. and 25.6 per cent., respectively. Dr. Deshmukh was so full of praise for this campaign that he said: "But for this campaign, I have not the shadow of a doubt, sugarcane production could not have progressed as well as it did and our sugar production would have, in all probability, fallen short of our requirements." He was of the view that, in spite of various handicaps, cane development during the first Plan period had turned out to be "very satisfactory." He felt that the target for cane output—63.1 million tons—would be achieved in the last year of the first Plan, that is, the current (1955-56) season.

RURAL CREDIT

The golden jubilee celebrations of the Canara Banking Corporation, Ltd., Udipi, South Kanara, held last week marked the completion of fifty years of its fruitful service to the nation. Started five decades ago—on 12th March 1906 to be precise—the Bank has made steady progress under the able and prudent management of a succession of presidents and chairmen, assisted by a board of directors comprising men of business acumen and integrity. In the initial days of its career when people were not used to banking habits, the Corporation must have had a trying time in winning the confidence of the public and in encouraging amongst them habits of thrift and saving. But ultimately, it succeeded in this direction admirably, as is evident from the working results of the Corporation reviewed in this journal last week. Mention must, however, be made here that, apart from playing an important role in the economy of the country, the Corporation has not only been subscribing liberally to the Government's borrowing programmes but also donating substantial sums for the various educational and philanthropic institutions.

A feature of the jubilee celebrations was the presidential address delivered by Mr. B. Rama Rau, Governor of the Reserve Bank of India. This address is noted for the emphasis laid by the Governor on the need for State participation in the work of expanding rural credit in India. Although commercial banks had played an important role in the development of trade and industry, Mr. Rama Rau pointed out that banking was still in its infancy in India. There were at least a hundred district headquarters in the country without a bank. The most important task of the State today was, according to him, the promotion of welfare of the masses through provision of adequate credit facilities to villages. Credit was needed for giving a fillip to agricultural production and small-scale industries. It was to achieve an increase in the standard of living of the masses and to build up a socialistic pattern of society that the Imperial Bank of India was nationalised and that the problem of rural credit was given top priority in the second Five-year Plan. Mr. Rama Rau was of the opinion that the State was better suited to serve rural areas than the private banking sector. The Government also proposed to spread the Co-operative Movement throughout the country, so that the people in villages might be well served with credit and other facilities. Today, he said, only 3 per cent. of the population enjoyed such facilities. At this stage, it is only to be hoped that the Movement will fulfil the tasks expected of it in a satisfactory manner.

The Governor of the Reserve Bank availed himself of the opportunity for drawing the attention of the private sector to the recent pronouncement of the Finance Minister in Parliament that the Government had no proposal to nationalise banking in India. He thought that the private sector had unlimited scope in the field and that well-organised banks such as the Canara Banking Corporation would serve the people with increased zeal and devotion in the future. Although these assurances are in line with the statements usually made by Ministers of the Central Government, the fact that the Government has, on several occasions, not stood by its professions may not induce confidence among the interests concerned in them. Nevertheless, such assurances serve a useful purpose in that they denote that nationalisation of the banking sector is not imminent.

PAKISTAN BUDGET

It seems that Pakistan's new Finance Minister, Mr. Amjad Ali, has so manipulated the figures as to present a surplus budget for the coming financial year, 1956-57. The budget discloses a fairly substantial surplus of Rs. 58 lakhs, which compares very favourably with the surpluses of Rs. 6 lakhs and Rs. 5 lakhs in the revised and budget estimates for the current year, respectively. But the surplus of Rs. 58 lakhs is, to say the least, fictitious and not real. For the figure has been arrived at after taking into account the anticipated net railway surplus of Rs. 7.68 crores. But for this surplus and for the amount of aid to be received from the U.S. Government—Rs. 6.9 crores for the fiscal year ending June 1956—the Pakistan Government budget would have shown a big deficit.

Be that as it may, Mr. Amjad Ali places the estimate of revenue receipts for 1956-57 at Rs. 131.02 crores, an increase of Rs. 3.32 crores over the revised estimate of Rs. 127.70 crores for 1955-56. The estimate of expenditure is also placed higher at Rs. 130.44 crores as against Rs. 127.62 crores (revised), thanks largely to the impact of the devaluation of the Pakistan rupee on Government expenditure. A bird's-eye view of the Pakistan Government's revenue and expenditure in 1956-57 (budget), as compared with the budget and revised estimates for the current year, can be had from the statement given below:

(In crores of rupees)

	1956-57	1955-56	
	Budget	*Revised*	*Budget*
Revenue	131.02	127.69	120.44*
Expenditure	130.44	127.62	120.39
Surplus	0.58	0.07	0.05*

*Effect of budget proposals.

Thanks to the improvement in the financial position of the Government, the Finance Minister of Pakistan has announced that he does not propose to levy any fresh taxes. In fact, he has endeavoured to provide some tax relief to the common man. The relief is in the form of a reduction in the import duty on drugs and medicines to 7½ per cent. *ad valorem* from 10 per cent. and 12½ per cent. in the case of the U.K. and other countries, respectively, (2) in the excise duty on coarse cloth from 6¼ to 4 per cent., and (3) in the sales tax on yarn from 10 to 6¼ per cent. In addition to these, the Finance Minister has announced two other important measures. First, the time limit for exempting money brought from abroad has been extended by another year. Secondly, foreign technicians employed by industrial undertakings under contracts of service approved by the Central

LIFE INSURANCE

LIFE BLOOD OF NATIONAL PROGRESS

Complete Security

With the advent of Nationalisation, Policy contracts completed on and after 20th January 1956 are guaranteed as to payment by the Government of India. What greater security can one expect?

In the new set-up, you pay less for insurance protection for your family, enjoy more liberal conditions. In addition, everyone in the business is pledged to give unexcelled service to every policyholder in all respects.

Renewed Pledge of Service

Take a Policy now and become eligible to reap the benefits of Nationalised Insurance. Remember that every rupee you invest in insurance today will not only guarantee the future financial security of your family but also ensure greater prosperity of the Nation.

PROSPECTING FOR OILS AND MINERALS

RUMANIA TO SUPPLY DRILLING EQUIPMENT

From A Special Correspondent

NEW DELHI, *20th March*

IT has now become customary for the various Ministries of the Government of India to publish, during the second half of March every year, their Annual Reports for the fiscal year that is to expire in the next few days. In these reports, they have been giving, in broad terms, their record of work, the problems that faced them during the year under review, the manner and method by which they have been able to overcome them, their plans for the forthcoming fiscal year, etc. They are presented to Parliament, and through it, to the general public. By doing so, these Ministries desire to avoid criticisms from the vociferous sections of Parliament on many of their omissions and commissions and also to create as favourable an atmosphere as possible for the passing of their respective budget grants by Parliament for the forthcoming fiscal year. Naturally, an attempt is made in these reports to explain away as neatly as possible some of the shortcomings in the working of Ministries during the preceding year.

DELHI LETTER

Generally speaking, considerable importance should be attached to the reports of such of the Ministries as are concerned with the economic and industrial development of the country. Of these, the Annual Report of the Ministry of Natural Resources and Scientific Research is of particular interest, in view of the intensive efforts that are now being made by it to discover and exploit oil-bearing areas in the country. This Ministry is concerned, among other things, with mines and minerals, scientific surveys such as geological survey, botanical survey, scientific and industrial research, etc. Before the end of this month, this Ministry is expected to come to an agreement with the Assam Oil Company for floating a separate rupee company for the exploration of oil in the new oilfields of that State, namely Narkatiya, Dubrijan, Moran, etc. In the proposed Company, the Government of India will have a controlling interest of 51 per cent. The Assistant Managing Director of the Assam Oil Company is expected in the Capital by next week for further discussions on the subject. There is also a proposal to establish a new oil refinery in Assam in case such a refinery is needed in order to refine new oil finds.

Agreement With Rumania

Another development in this connection has been the agreement concluded by the Government of India with Rumania for purchasing a drilling rig at a cost of Rs. 45.5 lakhs for prospecting oil in Jwalamukhi area in the Punjab. The agreement envisages the import of tools, accessories and spares for one year's working, which has 10,000 feet capacity. Satisfactory performance of the drilling rig tools and accessories for a period of 12 months has been guaranteed by Rumania. It is reported that the Russian oil experts, who recently toured India, have expressed the view in their interim report to the Government that the Jwalamukhi region is the likeliest source of oil in the country.

The Indo-Rumanian agreement for the purchase of an oil drill is the first of its kind. The Government of India is expected to buy many more drills for discovering oil when the final report of the Soviet experts is available. Maulana Azad, the Union Minister for Education, recently stated in the course of a Press Conference that during his proposed visit to the Soviet Union he would discuss the prospects of buying Soviet oil-drilling equipment.

The Government of India's policy is to carry out exploration as well as drilling of oil under the direct supervision of the Ministry of Natural Resources and Scientific Research. A new organisation has already been set up by Government for this purpose, its headquarters being in Dehra Dun. The general opinion of experts on oil is that conditions in this country are at least as favourable as in other countries where oil has been found recently. The maximum chances of successful exploration for oil and establishment of production are, however, linked up with exploration on a large scale, followed up by intensive prospecting, including drilling, in promising areas. Government has, therefore, decided that exploration for oil should be carried on not only in the Jaisalmer area, but should also be extended to the Cambay area, the Gangetic alluvium in U.P. and the Punjab and the areas in West Bengal and Assam. Geophysical exploration is already going on in the Jaisalmer area, while certain data is available in respect of the Cambay and the Jwalamukhi areas. An aeromagnetic survey has been arranged for the Jaisalmer area under the Colombo Plan through the good offices of the Canadian Government and plans are being made for carrying out aeromagnetic surveys over the U.P. Gangetic alluvium.

The exploration for oil has also been going on under participatory schemes with certain oil companies. The Standard-Vacuum Oil Company has completed refraction surveys and gravity surveys over a number of districts of West Bengal and are now carrying out reflection surveys in these regions in addition to geological prospecting. It is likely that, in the near future, they will be undertaking reference drilling. The Assam Oil Company is carrying out further prospecting work in addition to the sinking of a number of wells most of which have yielded oil.

Non-ferrous Metals

Another interesting feature of the Annual Report of the Ministry of N.R. and S.R. is the special attention devoted by the Ministry to the prospecting for non-ferrous metals, most of which are being imported at present. Geophysical investigations for copper in Kurnool, tin in Bihar, detailed mapping of and prospecting of copper deposits at Daribo Khetri in Rajasthan and Rangpo Copper Mines in Sikkim and Singhbhum Copper belt, detailed mapping of the lead-zinc deposits of Zawar, etc., are now being pursued with vigour. It may be mentioned that the Minister for Natural Resources personally led a team of senior technical officers to the Soviet Union, the U.K. and other European countries last summer with a view to studying the latest developments in practices and techniques in the field of petroleum and non-ferrous metals. Contacts of great value, says the Annual Report, were established as a result of their visit.

The Geological Survey of India has been carrying out geological mapping and investigation of various mineral deposits such as manganese, gold, coal, etc. It has taken exploration for coal in some of the coalfields in Bihar in connection with the expanded coal production programme under the second Five-year Plan. Detailed mapping of part of Ramgarh coalfield and Karanpur coalfield, investigation of semi-coking coals in Kanhan Valley coalfield, detailed mapping of Singrauli, Korba, Jhilimili coalfields by drilling, investigation of occurrences of coal in Tripura and East and West Godavari districts, etc., are being done at present. Large-scale mapping of the manganese belt in Madhya Pradesh is being continued. Numerous investigations on engineering geology and ground water are also in progress in different areas.

Prospecting for minerals required for the Rourkela Steel Project which was commenced by the Indian Bureau of Mines in July 1954 was completed by the end of January 1956. The Bureau is now carrying out similar work for the Bhilai Steel Project from May 1955. Since September 1955, drilling is being carried out for coal in the Korba coalfields. The Bureau and the Geological Survey of India have also been entrusted with the work of detailed prospecting in the Panna diamond fields with a view to deciding the future of Panna mining.

The Survey of India continued the preparation of maps to cover the country, to carry out geodetic and geophysical surveys, including tide predictions, and to prepare special large-scale maps for various projects and consolidation of holdings and flood control schemes. The Botanical Survey of India was being expanded by the setting up of three regional centres at Coimbatore, Poona and Shillong. The Zoological Survey of India was also being expanded.

Research work in the various National Laboratories under the Council of Scientific and Industrial Research and the National Research

AGRICULTURE IN BRITAIN

THE END OF FEATHERBEDDING

From Our Own Correspondent

LONDON, *17th March*

IT is a number of years now since a supporter of the Government responsible for introducing the agricultural guarantees of 1947 declared that the farmers of Britain were being featherbedded. It was no consolation to the farmers to be able to retort that their colleagues in the United States and the Commonwealth were also receiving Government assistance in some measure or other and that, indeed, since the end of the war farmers in all Western countries have been favoured members of the community. Britain has a manufacturing and importing complex, the slogan of efficiency is always to the fore, and the farmers knew that the sympathy which the nation always develops for them in war-time (and which this time was given some practical continuing basis in the 1947 guarantees) would fade the more rapidly the contention could be maintained that they were living off the backs of the taxpayer. Not unnaturally they viewed this year—with the Government committed to deflation—with particular foreboding. And the taxpayers waited to see whether Mr. Macmillan would carry his economies to the point of antagonising the powerful agricultural electoral support.

LONDON LETTER

Although this year's "February Review" of farm prices which has just concluded has not seen the drastic cuts in guaranteed prices which the "efficiency-at-all-cost" exponents would have liked, it has been sufficiently out of line with past reviews and sufficiently severe on the farmers to make it clear that feather-bedding is no longer an appropriate term of abuse. Indeed, the farmers have declared that this time the settlement is an imposed one with which they are not in agreement.

Economic Background

What is the economic background to this farming dispute? First of all, last year agriculture did not earn as much as had been anticipated, even though the farmers have been directly compensated for all wage increases made to agricultural workers. Secondly, they could show that output, though 2½ per cent. up on the year, was still nearly 3 per cent. short of the target the Government had set for this year and this, the producers argued, showed the need for more financial incentives. Thirdly, total costs have increased by some £35 million per annum. What the farmers wanted was a recoupment of this increase in costs *plus* some incentive to raise output further. What in the event they got was only £25 million against their increased costs and a demand that they should make ends meet by increased efficiency. Of course, the real difficulty about the whole principle of guaranteeing farmers in this country is that of not being able to pay the average farmer properly without overpaying the good farmer. But there is a good deal of realism in the approach of setting prices right for the efficient farmer and forcing the others to catch up.

As for the general principles behind the direction of British agriculture, this is seen in the special support given to livestock—fat cattle, fat sheep and milk have their costs met and so do the feed crops—oats, barley, potatoes, sugar-beet. But wheat, always an uneconomic crop in this country, is well under-recouped and so is wool. Pigs are costing far more here than they do in Denmark and now that herds have been made up from the war-time depredations pig-farmers are being forced to compete a little more closely with world prices. Egg production is also guaranteed in this country and so successfully that imports are now well under half the pre-war level; so they too are to get less encouragement. In short, there is a good deal of economic sense about this year's arrangements (it is also worth noting that the small farmer with difficult land gets benefit from the support given to oats and barley) simply because the Agricultural Ministers were free to adopt a tough policy and to confine help to where help was due. As far as the rest of the community are concerned, this £300 million industry will now be regarded as being as much subjected to the rigours of the time as everyone else, and nothing could be better for economic morale.

ALKALI AND CHEMICAL CORPORATION OF INDIA LIMITED

MANUFACTURE OF POLYTHENE TO BE TAKEN UP

MR. N. D. HARRIS' SPEECH AT ANNUAL MEETING

THE Nineteenth Ordinary General Meeting of the Alkali and Chemical Corporation of India Ltd. was held at Calcutta on 7th March 1956. Mr. N. D. Harris, Chairman of the Company, who addressed the shareholders on the occasion, gave, as usual, a review of the Company's progress during the past year. He also disclosed that the Company proposed to launch a project, subject to Government's approval, for the manufacture of polythene in India. The project would involve a total investment of about Rs. 3 crores the methods of raising which were being studied by the Directors. Mr. Harris, however, added that it would take two to three years to bring the plant into economic production.

The following is the full text of Mr. Harris' speech:

GENTLEMEN,

"The audited accounts and Directors' report for the year ended 30th September 1955 have been in your hands for some time and, with your permission, I propose to take them as read.

"Your Company has had another successful year in which production and sales of all its products have been considerably greater than in previous years.

"Production of chlorine and caustic soda was higher than during the previous year. Caustic soda sales improved, but there was very severe competition in liquid chlorine. We were able to sell the entire amount produced, but only at a considerably reduced price. An interesting factor, and one of deliberate policy has been the growth in the quantity of chlorine consumed internally for the manufacture of other profitable products. Investigations in this direction continue with vigour.

"Sales of hydrochloric acid and of zinc chloride, the latter a relative newcomer to our range, showed similar gratifying increases. In spite of very great competition from other manufacturers' products the demand for our well-known range of 'Gammexane' B.H.C. formulations has been difficult to satisfy. To meet this your Company installed greater formulating capacity during the year and sanctioned extensions, now being constructed, to the plant making Benzene Hexachloride (B.H.C.), the basic product.

"Our 'Dulux' and 'Duco' range of paints and allied products continue to be very popular indeed and we have been unable to meet the full demand for them. Your Directors have great confidence that the need for these high quality products will continue to grow as India develops industrially, and because of this they decided last year to double the factory's capacity. These considerable extension are now well in hand. An important new introduction is the range of metal-pretreatment products which, under the name 'A.C.P.', have already proved popular.

"I wish to mention here the introduction after the last Budget of an excise duty on paints. This sudden imposition on a range of manufactures very different from previously excisable products caused great dislocation to ourselves and to all others in the paint trade.

Cordial Relations with Employees

"Relations between the Company and its employees continued to be most cordial and the Works Committee set up at Rishra five years ago again proved its value by acting as a friendly and effective link between the management and the workers. I wish to express the thanks of the Company to all our staff and workers whose loyalty and hard work helped so much in achieving the year's good results.

"I have talked primarily about what we have produced. Products do not of course sell themselves and I would like to pay a tribute to the technical and sales staff of our selling agents, Imperial Chemical Industries (India) Ltd. They have made a remarkably fine effort in finding new markets and uses for our products. This applies in particular to our paints and 'Gammexane' products. I ascribe our successes in this direction during the last year very largely to their careful planning and hard work.

"The net profit for the year, after providing for depreciation, amounts to Rs. 19,39,845. This is more than twice that of the previous year. The sum available for distribution is Rs. 22,93,168, which includes a balance of Rs. 1,13,627 brought forward and a reserve for exchange losses previously held, but now no longer required.

"Once again there is no liability to taxation for the year due to initial allowances on the new plant installed, but a sum of Rs. 12,50,000 has been transferred to reserve for deferred income-tax liabilities. This brings this reserve to Rs. 23,21,000 which equals the total tax payment of which has been deferred by the operation of initial allowances. A sum of Rs. 2,73,000 has been transferred to dividend equalisation reserve. The dividends on the preference shares for the year absorbed Rs. 1,55,000 and your Directors recommend the payment of a dividend of 8 per cent. on the ordinary shares, 2 per cent. higher than that for last year. If you agree to this, a balance of Rs. 1,19,168 will be left to carry forward.

Manufacture of Polythene

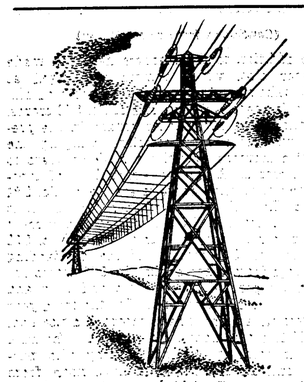
"You will be pleased to hear that we hope shortly to receive the Government's approval to a project to manufacture polythene in India. Imperial Chemical Industries Limited, your technical advisers, have agreed to supply their process and continuing 'know-how' on very favourable terms. Polythene was discovered by I.C.I. Ltd. who now manufacture large quantities in the U.K. and have licensed its manufacture in several other countries. The production, actual and projected, and consumption of polythene throughout the world have during recent years increased to a remarkable extent, and give every indication of continuing to do so.

"The process will be that used by I.C.I. in the manufacture of the well-known 'Alkathene' brand of polythene. The use of 'Alkathene' in India has been developed by I.C.I. (India) Ltd. who have operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. The largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

"The project will involve a total investment of about Rs. 3 crores, for which additional capital will have to be found. Methods of raising this are being studied by your Board at the moment, but I wish to take this opportunity of telling you that it will take two to three years at least to bring the plant into economic production. Although the project should ultimately prove profitable, capital invested during the construction period will earn no return and it may, therefore, be difficult for your Company to maintain the higher rate of dividend declared on the ordinary shares this year.

"The Directors retiring by rotation are Mr. B. R. Goodfellow, Mr. K. W. Young and Dr. E. C. Fairhead and my colleagues and I have pleasure in recommending their re-election.

"The Auditors, Messrs. Lovelock and Lewes, also retire and you are requested to re-appoint them for the current year. They have, however, asked for an increased fee of Rs. 7,500 as against Rs. 6,000 sanctioned for the previous year. As you are aware, the new Companies Act, which will come into force on the 1st April this year, imposes certain additional duties on Auditors for which we must necessarily pay. In my opinion the increased fee is justified and I recommend its acceptance."



CURRENT AFFAIRS

up to date

Electricity bills are a problem, and not only to the recipient. It is not surprising, therefore, that Electricity Supply Companies turn to mechanisation in their Billing Departments, in order that their bills may be promptly and accurately despatched. Mechanisation, of course, means Hollerith, and the Electricity Undertaking in Bombay despatches 170,000 bills per month prepared in this way. In Calcutta the figure is 190,000, in Madras 42,000 and in Kanpur 40,000. May we talk Hollerith with you?

PROFIT OF CENTRAL BANK OF INDIA NEARLY MAINTAINED

SHARP RISE IN ADVANCES

THE decision of the Directors of the Central Bank of India Ltd. (General Manager: Mr. N. K. Karanjia, Bombay) to repeat the dividend at 12 per cent. for the year ended 31st December 1955, that is, for the third year in succession, is fully justified by the Bank's working results for the year. For the profit has very nearly been maintained at the previous year's level. To be more precise, the profit, at Rs. 78.67 lakhs, is just a fraction lower than that of Rs. 78.75 lakhs earned in 1954. Despite this small shrinkage, the profit for 1955 is still better, albeit by a small extent, than that of Rs. 77.37 lakhs for 1953. Though the recession is negligible, it is in distinct contrast to the general trend of bank earnings for the past year.

The gross income of the Bank for the year under review has gone up by over Rs. 28 lakhs to a fresh record level of Rs. 5.69 crores, thus maintaining the upward trend noted in the previous year. This follows the substantial expansion in the Bank's turnover, indicated by the sharp rise in the balance-sheet total from Rs. 144.92 crores to Rs. 158.07 crores. The Bank's deposits are up by about Rs. 5 crores and advances by over Rs. 10 crores. These trends in gross earnings and turnover are in consonance with the general trend, but the rise in gross income has been entirely wiped out by the increase of Rs. 29 lakhs in outgo by way of interest paid and administrative expenses.

The following table brings out clearly the progress of the Bank in recent years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Gross income	5,69.44	5,41.05	5,11.40	5,19.61
Interest and discount earned	4,52.42	4,43.12	4,19.91	4,20.77
Commission, exchange, etc.	93.59	85.04	80.94	91.66
Interest paid	1,39.52	1,65.28	1,55.44	1,41.91
Expenses	3,18.38	2,94.02	2,75.61	2,73.19
Depreciation	2.87	3.00	2.98	3.13
Profit	78.67	78.75	77.37	1,01.38
Provision for taxation	5.50	5.75	6.50	10.00
To sinking fund on property	0.91	0.87	0.86	0.77
,, investment account	15.00	15.00	20.00	35.00
,, bonus to staff	13.50	13.00	13.00	12.00
,, staff gratuity fund	5.50	5.00	..	..
Dividend	37.74	37.74	37.74	44.04
	(12%)	(12%)	(12%)	(14%)
Carry forward	18.40	17.89	16.50	17.23

	As on 31st December			
	1955	1954	1953	1952
Capital	3,14.55	3,14.55	3,14.55	3,14.55
Reserves	4,01.81	4,00.56	3,99.80	3,99.06
Deposits	128,66.82	123,97.06	117,97.35	123,21.13
Borrowings from other banks	4,54.28	20.79	5,03.75	89.61
Advances (including bills purchased and discounted and money at call)	72,44.03	62,17.14	59,31.98	56,33.20
Investments	56,71.95	57,33.53	58,54.50	62,26.35
Cash	15,36.43	15,18.42	15,03.83	15,32.15
Balance-sheet total	158,09.31	144,92.26	143,48.02	142,66.58
Ratio to deposits of—	%	%	%	%
Advances	56.3	50.1	50.3	45.7
Investments†	44.1	46.1	45.4	50.4
Cash	11.9	12.2	13.5	12.4

† The ratio for the years 1952, 1953 and 1954 is arrived at after taking into account the investment earmarked against borrowings from other banks. The ratio for 1955 does not take into account this, as the extent of investments earmarked for this purpose is not known.

An idea of the extent to which the mounting level of the Bank's expenses has affected the profit can be had from the above table. Thus, while gross income has gone up by Rs. 50 lakhs in the course of the past three years, interest paid on deposits and borrowings as well as expenses have together risen by Rs. 72 lakhs, thus bringing down the profit by Rs. 23 lakhs. It will also be noted that the rise in income from interest and discount for 1955 is very much less than that noted in 1954. Besides the higher income by way of interest, discount, commission and exchange, the Bank has also earned a profit of Rs. 15 lakhs on sale of investments, which compares well with that of Rs. 5 lakhs in 1954. Of the rise in expenses, salaries and allowances alone account for Rs. 23 lakhs.

The upward trend in deposits noted in 1954 has been maintained in the year under review also with a further rise of Rs. 4.69 crores; but the total deposits at the end of 1955 still fall short of the record level reached in 1948 by Rs. 3.56 crores. Of the deposits, fixed deposits and cash certificates account for Rs. 38.95 crores (having risen from Rs. 37.20 crores), savings bank deposits for Rs. 28.20 crores (as against Rs. 27.11 crores), and current accounts, call deposits and contingency accounts for Rs. 60.52 crores (as compared with Rs. 59.66 crores). Thus, the bulk of the expansion in deposits is accounted for by the high interest-bearing fixed deposits and cash certificates. There has also been a sharp rise in borrowings from other banks, reflecting the heavy pressure for bank credit. On the assets side of the balance-sheet, advances have established a fresh record. Of these advances, loans, cash credits and overdrafts represent Rs. 59.77 crores, a rise of Rs. 8.44 crores over the year, bills purchased and discounted Rs. 12.44 crores, as against Rs. 8.74 crores at the close of 1954, and money at call and short notice Rs. 0.23 crore, as against Rs. 2.10 crores. Investments are lower by Rs. 61 lakhs, mainly due to the reduction in holdings of shares and foreign investments. Investments in Government securities and trustee securities have gone up by Rs. 44 lakhs to Rs. 48.96 crores (at book value). The market value of the total investments stands at Rs. 55.09 crores, so that the depreciation is Rs. 1.63 crores, having been reduced from Rs. 2.41 crores at the end of 1954 and Rs. 3.13 crores at the close of 1953. The shortfall in the book value of investments is accounted by Government securities and trustee securities, the depreciation in which is Rs. 1.69 crores. Cash balances are slightly higher, but the cash coverage to deposits is a shade lower.

(Concluded from next column)

No addition to the reserves has been made this year also, which remain unchanged at Rs. 128 lakhs since 1951. As already pointed out, the Bank's deposits show a rise of Rs. 5.66 crores. This follows the expansion recorded in the previous two years in succession, bringing the aggregate increase over the past three years to Rs. 11.34 crores. A break-down analysis of deposits shows that fixed deposits are up by Rs. 2.84 crores at Rs. 21.26 crores, savings bank deposits by Rs. 0.61 crore at Rs. 6.33 crores and current accounts, contingency accounts, etc., by Rs. 2.22 crores at Rs. 12.93 crores. Of the outstanding borrowings from other banks, Rs. 3.75 crores are secured by part of investments and bills and Rs. 28.45 lakhs are unsecured. For the third year in succession, advances have recorded a rise and, at Rs. 30.41 crores, constitute a record. The bulk of the increase is accounted for by bills purchased and discounted which have risen from Rs. 5.48 crores to Rs. 9.87 crores, whereas the increase in loans, cash credits and overdrafts is of the order of only Rs. 52 lakhs at Rs. 20.54 crores. Of the investments, securities maturing in 1962 or earlier (at book value) stand reduced from Rs. 7.82 crores to Rs. 7.41 crores. The market value of these securities is Rs. 7.18 crores, thus showing a depreciation of Rs. 22.13 lakhs, but the extent of depreciation compares favourably with that of Rs. 31.64 lakhs at the end of 1954 and Rs. 36.62 lakhs at the close of 1953. As in the previous years, the Directors have not thought it fit to draw upon the reserve or other funds to cover this depreciation. Securities maturing in 1963 or later (at or below market value) amount to Rs. 3.34 crores, as against Rs. 2.48 crores at the end of 1954, trustee securities (at cost) Rs. 16.10 lakhs, as against Rs. 14.50 lakhs, and shares and debentures (at or below market rate) Rs. 1.39 crores, the same as at the end of 1954. Cash balances also stand strengthened. There has again been a substantial expansion in the Bank's bills business, as witness the rise in bills for collection (*contra* item) from Rs. 1.35 crores to Rs. 2.76 crores and acceptances, endorsements, etc. (*contra* item) from Rs. 3.53 crores to Rs. 5.32 crores.

During the year under review, the Bank opened three more branches, at Ghatkopar (Bombay), Guntur and Radhanpur, besides establishing a temporary branch at the Indian Industries Fair held in New Delhi during the last quarter of 1955.

BARODA BANK'S PROFIT SLIGHTLY BETTER

NOTABLE EXPANSION IN TURNOVER

THE statement of accounts of the Bank of Baroda Ltd. (General Manager: Mr. N. M. Chokshi, Baroda) for the year ended 31st December 1955 provides another instance of the extent to which banks in India have contributed to the general economic prosperity of the country. The expansion in the Bank's turnover consequent upon increased economic activity is reflected in the sharp rise of Rs. 9.63 crores in its balance-sheet total as at the close of the year. On the liabilities side, the deposits are up by Rs. 5.66 crores and on the assets side advances are up by Rs. 4.91 crores. The gross income has also gone up by Rs. 27.52 lakhs to a record level of Rs. 180.04 lakhs. This is not, however, fully reflected in the profit, as in the case of many other banks. At Rs. 29.65 lakhs, the profit is higher by only Rs. 1.63 lakhs. This fractional rise in profit is the result of a sharp rise in expenditure by way of interest paid and expenses.

It is, however, comforting to note that the Bank has been able to maintain the upward trend in profit for the second year in succession and establish the highest level since 1949, when a record profit of Rs. 31.98 lakhs was reached. The Bank has also not been able to raise the distribution to the shareholders, as many other banks have done. The reason for this is to be found in the fact that the profit, after making a larger provision for taxation—this has been raised by Rs. 1 lakh to Rs. 9 lakhs—does not permit of an increase of even 1 per cent. in the dividend. Accordingly, the directors have just maintained the distribution at 12 per cent., a rate which they had paid for the previous nine years in succession. There has, however, been one change in the distribution. While in the previous years, it comprised a dividend of 10 per cent. and a bonus of 2 per cent., this year these two parts have been consolidated into a dividend of 12 per cent.

The salient features of the Bank's accounts for the past four years are compared in the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Gross income	180.04	152.52	119.76	122.39
Interest and discount earned	149.27	129.23	103.24	108.48
Commission, exchange, etc.	20.14	22.68	15.59	13.08
Interest paid	76.56	60.82	43.75	46.41
Expenses	71.95	62.36	53.02	50.56
Depreciation and repairs	1.58	1.32	0.54	0.56
Profit	29.65	28.02	22.45	25.09
Provision for—				
Taxation	9.00	8.00	3.00	3.00
Investment account	..	..	1.50	4.50
Bonus to staff	8.00	7.65	6.00	5.35
Dividend	12.00 (D. 12%)	12.00 (D.10% +B.2%)	12.00 (D. 10% +B.2%)	12.00 (D. 10% +B.2%)
Carry forward	3.36	2.70	2.33	2.38

	As on 31st December			
	1955	1954	1953	1952
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	1,28.00	1,28.00	1,28.00	1,28.00
Deposits	40,51.62	34,85.88	30,85.88	29,17.12
Borrowings from banks	4,03.45	3,78.80	25.00	..
Advances and bills purchased and discounted	30,41.56	25,50.18	17,98.74	14,56.79
Investments	12,29.79	11,83.72	11,62.05	10,96.09
Cash	4,76.61	3,64.06	3,85.38	5,77.25
Balance-sheet total	56,29.03	46,65.94	38,86.79	33,73.75
Ratio to deposits of—	%	%	%	%
Advances	75.0	73.2	58.3	49.9
Investments	30.4	34.0	37.6	37.6
Cash	11.8	10.4	12.5	19.8

The upward trend in gross income has been maintained for the second year in succession and, in consonance with the rise in advances and the bills business, the rise has been shared well by interest and discount earned and the income by way of commission and exchange. Though the pace of increase in gross income is slightly less marked in the year under review, that in the outgo is as sharp as in the previous year. Almost the entire increase in expenses is accounted for by salaries and allowances and provident fund to staff which are higher by Rs. 9.28 lakhs.

(Continued in previous column)

PRODUCTIVITY OF INDIAN BANK EMPLOYEES REQUIRES TO BE STEPPED UP

MR. BHABHA VOICES FEAR OF STATE BANK TAKING AWAY BUSINESS OF COMMERCIAL BANKS

THE concern expressed over the unhappy employer-employee relations in the banking spheres by Mr. C. H. Bhabha, Chairman, Indian Banks Association, Bombay, calls for vigorous steps to bring about an improvement in the situation. In fact, it was thought that the seven-year-old bank dispute would end with the passage of the Industrial Disputes (Banking Companies) Act, 1955, which gave legal force to the recommendations of Mr. Justice Gajendragadkar. With large amounts to be paid by banks to their employees under this Act, it was further expected that a more cordial atmosphere would come to prevail. Unfortunately, these expectations do not seem to have materialised fully. For, speaking at the annual meeting of the Association mentioned above on the 19th inst., Mr. Bhabha remarked that "some mischievous and unwise forces seem to be at work, creating a bad atmosphere and necessitating even a statement of wise counsel by the Prime Minister of India." He remarked that certain practices and tendencies prevailing among bank employees were of an anti-social nature. Mr. Bhabha considered it unfair on the part of any party to indulge in any violation of the law of the land or to resort to objectionable tactics without taking recourse to remedies of a constitutional and peaceful nature provided by the law.

Being connected with one of the big banks in the country, Mr. Bhabha could not but view the unhappy state of affairs in the banking industry with a certain amount of anxiety. He seemed to consider that its future would be at stake, if no action was taken to bring the situation under control in time. In this context, he did well in focussing attention in the leeway yet to be made up by Indian banking, if it were to keep in line with the progress of banks elsewhere in the world. Thus, the total assets of banks in India, including those of the Banking Department of the Reserve Bank, were in the vicinity of only Rs. 1,500 crores, as compared with Rs. 12,000 crores in the U.K. and Rs. 80,000 crores in the U.S. Again, the total assets of all Indian banks put together were, according to Mr. Bhabha, no more than those of a single big British or American bank. Indian banks compared unfavourably with banks in foreign countries in respect of productivity of employees. The total number of bank employees in the U.K. was 85,000 and in the U.S. 375,000, whereas in India their number was 65,000. The employees of British banks handled seven to eight times more business than bank employees in India, though they were 20,000 more than the latter. With five times the number of bank employees in India, the U.S. banks handled 50 times the quantum of business. Further, the general wages paid to bank employees were hardly 30 per cent. of the gross earnings of banks in foreign countries, as against 40 per cent. in India.

Another Handicap

Banks in India suffered from another handicap as compared with their confreres abroad. That was, according to Mr. Bhabha, a larger number of public holidays observed by banks in this country. In a place like Bombay, for instance, the number was 22, in addition to half holidays on Saturdays and complete holidays on Sundays. As against this, the number of holidays observed in the U.S. was eight, including one holiday for Christmas but no holiday for New Year. In the U.K., the number was still less at six, including two days for Christmas but no holiday for New Year. Russia observed only five public holidays. Japan seven and France 13. Said Mr. Bhabha: "In a city like Bombay, owing to more holidays in the year, the total working hours are 120 less in the year than in the other countries mentioned above. In other words, full pay is given for no work on 15 days plus the earned holidays." Mr. Bhabha, therefore, felt that for India's progress and prosperity, Indian banks would have to increase efficiency and hours of work, reduce the number of holidays and introduce gradually mechanisation and rationalisation. "But by such processes alone," he declared, "will it be possible to meet a higher wage bill." None could dispute the logic of these suggestions of Mr. Bhabha, for it was by the adoption of these very measures that banks have reached a high level of efficiency in advanced countries.

Among the other suggestions made by Mr. Bhabha was the need for amending the Industrial Disputes Act suitably, so as to make the procedure to be followed for taking disciplinary action quicker and less elaborate. He desired that managements of banks should be vested with certain special discretionary powers other than suspension. Another suggestion was that, as in the U.S., the Government should recognise only those unions which have 50 per cent. of the employees of a bank on their register and which keep their funds with the State Bank of India. These unions should be subjected to surprise checks by officers of the Government. Their office-bearers should, in his opinion, be held personally responsible for resorting to false propaganda, disobedience of law, etc.

Nationalisation of Imperial Bank

Commenting on the nationalisation of the Imperial Bank of India, the Chairman of the Indian Banks Association stated, without wishing to go into the merits of that policy decision, that the taking over the shares of the Bank at a certain rate not co-related to the intrinsic value of the institution had resulted in a loss of actual revenue of about 33 per cent. in the case of several charitable institutions and trusts which had to replace them by low-yielding Government securities. Besides, the action tended to create, he said, a distrust in the public mind regarding the future of sound and solid institutions with large resources. Mr. Bhabha made a significant remark on the relationship between the State Bank of India and the commercial banks. He said:

"I must publicly acknowledge the recent co-operation of the State Bank of India with the commercial banks in general, and the Indian Banks Association in particular, in certain spheres pertaining to the banking industry of this country. On the other hand, I have to be critical of the role of a senior brother which the State Bank quite often has been playing *vis-a-vis* the other banking institutions of this country. With all the advantages it possesses, it does not seem to be able to appreciate the difficulties and hardships of commercial banks. I refer particularly to the attitude of the State Bank of India in the matter of interest rates charged on certain types of advances. The State Bank of India is entitled to assist the common man and the small *entrepreneur* or agriculturist by means of low rates on loans, but, it smacks of unfair and unhealthy competition, if the State Bank of India finances large industrial ventures at uneconomic rates which it can alone quote, owing to its privileged position and owing to its possessing funds carrying little or no burden of interest."

Incidentally, Mr. Bhabha made mention of the harm caused to a number of credit institutions by the creation of a special institution, enjoying almost extra-territorial jurisdiction and functioning as the superbody *vis-a-vis* the other organisations in the country. Without naming this institution, he remarked:

"That institution is neither a registered organisation under the Indian Companies Act, nor comes within the statutory jurisdiction of the Central Authority, but functions as a special type of Indian State-owned Corporation. Its income is exempt from income-tax, being in the nature of profits from State trade. Even its investments in securities at present are free from income-tax. An exemption of this nature is not enjoyed even by the State Bank of India. The Shops and Commercial Establishments Act as well as the Central Industrial Tribunal have no authority over this institution since it is construed to be a department of the State. As if all these advantages were not sufficient, the debts due to this institution are put on the same footing as arrears of land revenue, giving them precedence over all other debts and allowing their recovery under the usual process of recovery of land revenue, which includes arrest and imprisonment of the debtor and confiscation of his property by an order of the revenue officer. Not being satisfied with all these advantages, open canvassing is done by the State officials for and on behalf of this institution."

Mr. Bhabha added that the foregoing instance was an illustration of "how and to what extent such ventures can exist to the detriment of similar organisations, brushing aside all fair practices and spelling ruin to other well-established organisations." Proceeding, he sounded a note of warning that "commercial banks should watch the activities of the State Bank of India, which tends to draw business by all-out methods. It is generally known that State institutions and semi-State organisations like local bodies, municipalities, etc., are not only persuaded but indirectly compelled by directives to place their funds to the utmost extent with the State Bank of India and utilise the services of the State Bank of India even at some sacrifice to themselves."

Another Danger

Referring to another danger from this source, he observed:

"One danger which is rumoured to threaten commercial banks is a move from certain quarters to canalise all the foreign exchange business of Government, semi-Government and public corporations exclusively to the State Bank of India to the detriment of all the other Indian commercial banks. In this connection, I wish to make a reference to the representation sent by our Association to the Government of India in the context of a statement made by the Deputy Finance Minister on the floor of the Lok Sabha on enquiries made regarding some portion of Government foreign exchange business being given to non-Indian banking institutions. While the Government needs all-out assistance from Indian commercial banks for the implementation of its various programmes and for subscription to its various loans, I am sure it would not be considered fair and equitable to allow such Government business to pass on to non-Indian banking institutions, or even to allow it to be canalised to the State Bank of India. I feel that, if a proper banking structure is to be evolved in the country for our regeneration and progress, suitable opportunities and assistance must be accorded to banking institutions. The achievements of Indian banks during the last 50 years or so have been laudable. In addition, they have not failed to keep abreast of the changed conditions and to adjust their methods to suit the changing needs of all. In this valiant effort, some direct and indirect assistance from all quarters, including Government, is needed. Instead of this, it is disheartening nowadays to find unnecessary impediments and hardships placed in the way of the natural growth of Indian commercial banks. I feel sure that the authorities will make a dispassionate and fair evaluation of the situation and do proper justice to this very vital industry of the country."

Dwelling on banking trends, Mr. Bhabha was particularly gratified to note the rise in deposits of Scheduled banks in the country. He stated that between the end of 1954 and 1955, the demand liabilities of Scheduled banks had increased by Rs. 41.12 crores from Rs. 573.36 crores to Rs. 614.48 crores, their time liabilities has increased by Rs. 49.69 crores from Rs. 368.71 crores to Rs. 418.40 crores and their total liabi-

(Continued on page 595)

WORLD COTTON SPINDLEAGE EXPANDS

MORE RING SPINDLES, WHILE MULE SPINDLES RECEDE

THE distinct expansion in the world cotton spinning capacity noted during the cotton year ended July 1954 gathered further momentum in the subsequent year, that is, 1954-55. The aggregate number of spindles in place in the world's textile producing countries as at 31st July 1955 was 129,838,000, which compares favourably with 129,521,000 and 129,322,000 on the corresponding dates in 1954 and 1953, respectively, according to the latest issue of the *International Cotton Statistics*, published by the International Federation of Cotton and Allied Textile Industries, Manchester. The net addition to the world cotton spindleage during the year under review was thus 317,000 spindles, as against 199,000 in the previous year. During 1952-53, it will be recalled, there was a fall of 260,000 spindles. Besides the 317,000 spindles actually installed during 1954-55, there were as many as 1,400,000 spindles in course of erection, of which 944,000 spindles represented an increase and 456,000 spindles were replacements to existing machinery. This figure is, however, lower by 174,000 spindles as compared with the 1,574,000 spindles which were in course of erection in 1953-54.

The bulk of the expansion in the world spindleage during the year ended July 1955 was accounted for by ring spindles, which aggregated 112.60 million, as against 110.60 million a year before. The number of spindles spinning rayon staple fibre also moved up from 5.17 million to 6.21 million. Mule spindles, on the other hand, suffered a decline, from 1.89 million to 1.72 million. Similarly, the number of spindles spinning Egyptian type cotton was lower at 1.71 million, as against 2.06 million. The change in the character of spindles thus brings out two significant features. First, the outmoded mule spindles are being scrapped and the world today has more modern spindles than before. Secondly, rayon staple is coming to play a more and more important role as a leading apparel fibre.

Changes in Spindleage

The upward trend in the cotton spindles installed has taken place entirely in Asia and Oceania, as also, to some extent, in Africa. The total number of spindles in place in the countries of Asia and Oceania as on 31st July 1955 was 28.95 million, which represents an increase of 2.26 million over that existing a year before. The African nations accounted for a higher spindleage, being 970,000, as against 943,000. The expansion in the cotton spindleage in these regions indicates the efforts on their part to develop the cotton textile industry with the twin objects of providing more employment opportunities to people and of reducing dependence on foreign textiles. Europe, North America and South America, however, experienced a reduction in spindleage, from 71.61 million, 25.05 million and 5.23 million to 70.04 million, 24.66 million and 5.21 million, respectively.

The following statement shows the changes in the spindleage in the world's leading cotton textile producing countries during the last three years:

(In millions)

	For the year ended July		
	1955	1954	1953
U.K.	25.18	26 56	27 26
U.S.A.	22.25	22 71	23 83
India	11 89	11.72	11 43
U.S.S.R.	10 15	10 15	9 00
Japan	7.06	7.85	7.50
France	7.62	7.63	7 81
W. Germany	6.01	6 06	6 31
Italy	5.70	5.76	5.78
China	5.40	4.15	4 10
Brazil	3.86	3 88	3 87
Czechoslovakia	2 45	2 42	2 41
Spain	2 34	2 34	2 23
Belgium	1.75	1 82	1.84
Pakistan	1.36	0 71	0 66
Other countries	16 42	16 26	15.88
Total	129 84	129.52	129.32

It will be seen from the above table that there was a sharp setback to cotton spindleage in the U.K. and the U.S., the actual decline in the number of spindles in these countries being 1.38 million and 460,000 respectively. The decline indicates that the spindles which had been worn out were not replaced but scrapped, following slackness in the export demand for cloth and downward trend in prices. Likewise, France, W. Germany, Italy, Belgium and Brazil suffered a setback. On the other hand, China accounted for a marked expansion in spinning capacity, the number of spindles installed rising by 1.25 million to 5.40 million. There was also a rise of 450,000 spindles in Pakistan and 170,000 spindles in India. In Japan, too, 110,000 spindles were added. Although this figure is lower as compared with the previous year when 350,000 spindles were added, it should not be concluded that the pace of expansion in spinning capacity of Japan has been retarded. For the Japanese cotton spinners are reported to be concentrating their attention more on modernisation of equipment designed to improve the technical efficiency and thereby enhance the quality and reduce the price of textile output than on expansion in the size of the industry.

Distribution of Spindles

An idea of the distribution of the different kinds of spindles in different countries can be had from the table given below:

(In thousands)

	Ring spindles	Mule spindles	Spindles spinning Egyptian cotton	Spindles spinning rayon staple
U.K.	10,889	14,294	9,773	2,630
U.S.A.	22,247	..	500	1,561
India	11,659	229	1,349	247
U.S.S.R.	9,150	1,000	..	N.A.
Japan	7,061	..	568	55
France	6,866	752	1,100	300
W. Germany	6,005	..	N.A.	N.A.
Italy	5,673	25	1,250	450
China	5,400	..	180	..
Brazil	3,361	..	..	40
Czechoslovakia	2,100	350	450	N.A.
Spain	2,190	145	450	140
Belgium	1,744	8	..	..
Pakistan	1,356	..	..	..

N.A.—Not available.

The foregoing figures reveal that ring spindles constitute the major portion of the spindleage of most of the countries. Mule spindles occupy a prominent place only in one country, that is, the U.K. As the efficiency of mule spindles is less than that of ring spindles, the spinners in the U.K. are making efforts to replace the former by the latter. The number of mule spindles installed in this country as at the end of July 1955 amounted to 14.29 million, as against 15.76 million a year before and 16.71 million two years before.

The expansion in the world cotton spinning capacity during the cotton year 1954-55, as noted above, was followed by a rise in cotton consumption, although at a slower rate. Thus, as against the increase of 0.24 per cent. in the number of spindles installed, the quantity of cotton consumed was higher by 0.19 per cent. at 35.71 million bales. Cotton consumption per 1,000 spindles actually declined to 275.01 bales, as against 275.23 bales a year before. The advance in cotton consumption was shared entirely by American cotton and sundries or outside growths, while East Indian, Pakistan and Egyptian varieties accounted for a fall.

COTTON TEXTILE EXPORTS

There was a sharp fall in exports of mill-made cotton piecegoods from Bombay port during the month of January 1956, the quantity actually shipped being 51.3 million yards, as against 63.3 million yards in the previous month and 56.5 million yards in January 1955. The *Textile Bulletin* attributes this fall mainly to reduced purchases by Asian, African and European markets. American and Oceanic markets, however, lifted from India a larger quantity of piecegoods.

The *Bulletin's* review of exports during the month under review reveals that 17.4 million yards were shipped to the Asian markets, as against 23 million yards a month before and 20 million yards a year before. The decline was due to lower offtake by Aden, Burma and Malaya. African and European markets took 2.2 million yards and 2.7 million yards less cloth from India than in the previous month. Thanks to improved offtake of Australia, the total exports from India to this zone were higher by 1.5 million yards. There was also a general improvement in Indian cloth exports to Canada, the U.S. and Haiti.

Out of the 51.3 million yards of mill-made piecegoods sent out of India from Bombay port during January, the major portion consisted of grey cloth, the quantity exported being 30.76 million yards, followed by coloured cloth 11.21 million yards and white cloth 9.83 million yards. The principal sort of cloth exported was sheeting which accounted for 26.85 million yards. The share of longcloth was 6.18 million yards and of drill 6.13 million yards. The exports (in million yards) of other sorts included shirting (4.21), voiles and mulls (2.40), coating (1.95), domestics (1.86), chintz (0.52), *dhotis* and *saris* (0.42) and others (0.78).

The U.K. was the biggest buyer of Indian mill-made cotton piecegoods during the month under review, followed by British West Africa, Sudan, Ethiopia and British East Africa. The next best customers were Australia, Malaya, Aden, Indonesia and Arabia. These ten countries together accounted for a total purchase of 38.30 million yards, or 74.7 per cent. of the aggregate shipments from Bombay port. The table below shows the quantities of cloth purchased by the aforesaid countries:

(In million yards)

	Grey	White	Coloured	Total
The U.K.	8.40	0.01	0.32	8.73
British W. Africa	3.45	0.50	0.90	4.85
Sudan	3.44	0.28	3.04	3.76
Ethiopia	2.63	0.53	0.59	3.75
British E. Africa	1.96	0.18	1.21	3.35
Australia	1.76	0.56	0.67	2.99
Malaya	0.44	1.86	0.68	2.98
Aden	1.89	0.81	0.26	2.96
Indonesia	0.58	1.00	1.16	2.74
Arabia	0.73	0.30	1.16	2.19
Total	25.28	6.03	6.99	38.30

Besides the export of 51.3 million yards of cotton piecegoods during the month under review, Rs. 90 lakhs worth of other miscellaneous items of textile manufactures, comprising cotton yarn, thread, hosiery, made-up garments and other related products were also shipped from Bombay port. This figure, when compared with the previous month's figure, however, shows a slight decline by Rs. 4 lakhs. This slight decline has been equally shared by all the markets, except the African markets where the *status quo* was maintained.

HANDLOOM FABRICS

The handloom industry constitutes the premier cottage industry in India. The production of handloom cloth during 1955 is estimated at 1,454 million yards. Now that the Government has assigned to this industry a significant role in the second Five-year Plan and has adopted certain measures for its development, standardisation of handloom products has assumed greater importance than ever before. Viewed thus, the 13 standards formulated by the Indian Standards Institution will, it is hoped, help the producers in eliminating unnecessary varieties and in maintaining uniformity of quality and the consumers in getting dependable supplies, thus establishing a steady market for handloom products in India and abroad.

The 13 standard specifications for handloom cotton fabrics cover bedsheets, blankets, bunting cloth, *dhotis*, *dungri* cloth, *maeri* cloth, *muslin*, *pugri* cloth, *saris*, *malmal*, *dosuti*, lint and gauze. The standards prescribe general requirements of the fabric, such as quality of yarn, freedom from defects in the cloth, and specific requirements such as ends per inch, picks per inch, weight, breaking strength, width and length, colour fastness, and scouring loss. Methods of test for the determination of the above characteristics have also been either included or referred to. The constructional details of different varieties were prescribed after a careful scrutiny of the manufacturing particulars and corresponding samples of handloom fabrics produced in different parts of the country.

NEW CRAFTSMANSHIP IN U.K. TEXTILE INDUSTRY

A new kind of craftsmanship emerging in the British textile industry was referred to by the Chairman of the Cotton Board, Sir Raymond Streat, in the course of his speech at a dinner to celebrate the 50th anniversary of Morton Sundour Fabrics Ltd., the firm which was the first to introduce fabrics with a non-fading guarantee, held at Carlisle last week. A new craftsmanship, Sir Raymond said, was emerging, of which science and technology were the first essentials, but which used scientific knowledge in combination with imaginative and creative feeling about the final product. The scientist had brought new fabrics to the textile world, but there was as yet no sign at all that man-made fibres would totally replace natural fibres. In this connection, he observed:

"Mother Nature has powers that the test tube cannot entirely reproduce. My own conviction is that, apart from certain end uses for which the planned fibre of the scientist is expressly and exceptionally superior, the most interesting and rewarding use of man-made fibres will be in mixtures with natural fibres. Mixing anything. . . . is a craftsman's work, and I think the textile industries of Britain, with all the inherited feeling for textiles on which they can draw, should lead the world in producing the best mixtures."

WORLD WOOL CONSUMPTION

Estimates compiled by the Commonwealth Economic Committee indicate that world consumption of virgin wool during 1955 reached a total of 2,580 million lbs. (clean), an increase of 3 per cent. over the figure of 2,502 million lbs. recorded for 1954. The estimate for 1955 is the third largest since the war, having been exceeded only in 1950 and 1953, when the respective aggregates were 2,681 million lbs. and 2,631 million lbs. (clean), respectively. In the eleven countries, which together use about two-thirds of the world's wool, consumption last year increased by 4 per cent. over 1954, the outstanding advances being in the U.S.A. (9 per cent.), West Germany (9 per cent.), Japan (13 per cent.), and Canada (22 per cent.). In the United Kingdom, still the largest user of wool in the world, the increase over the year was 3 per cent., but there was a sharp increase of 14 per cent. in the final quarter of the year. Wool consumption in France, however, was 4 per cent. less than in 1954, and in Italy the fall was 6 per cent., but France—like the U.K.—registered a sharp increase in consumption in the final quarter. Outside the eleven large manufacturing countries, wool consumption in the rest of the world during 1955 is estimated at 2 per cent. more than that in 1954. Approximately half the "rest of the world" total is accounted for by Russia, Eastern Europe and China; consumption estimates for which are 3 per cent. higher than 1954. The Soviet group of countries appear to have imported smaller quantities of wool than in the previous year, though their domestic clip is believed to have increased.

OUTLOOK FOR COTTON PRICES

INDUSTRIAL DISPUTES TRIBUNAL TO HEAR CLAIM FOR WAGE INCREASE

From A Special Correspondent

MANCHESTER, *13th March*

MANCHESTER LETTER

IT is doubtful whether raw cotton affairs have ever dominated the textile industry in Lancashire to quite the same extent as they have done in recent years. Gone maybe are the times when a variation of a penny-per-lb. in American cotton over a period of months would cause considerable agitation and have an appreciable effect on trade in manufactured goods, but the prevailing doubts over future prospects are an ever-present factor in assessing immediate business opportunities and the outlook for some months ahead.

The prospects of a battle over prices between producers of outside growths and the United States authorities is one which has always been a possibility since supplies held in American hands reached unmanageable proportions. The ultimate user of the raw material is not averse to securing his supplies at cheaper rates but he hopes to avoid unnecessary losses in the process. The fears of the Liverpool Cotton Association in this connection have been voiced in a cable sent to a trade paper in the United States.

Price-cutting

According to the Association, competitive growers of American-type cotton may well take the initiative and start cutting prices in order to make sales "before the pace gets too hot." It then remains to be seen whether the American Department of Agriculture will maintain a floor price and if such is the case their rivals will probably be able to sell at below these values and maintain at least a fair proportion of the available trade.

In such circumstances, the existing surplus would be reduced—although not to the extent which the authorities in Washington are perhaps anticipating. Spinners in many countries favour the use of the American staple for reasons of quality and continuity of supply and if the price differential is not too great would probably prefer to buy a larger proportion of their needs from the United States. Competitive growers, however, have so improved their crops in recent years and continue to expand production that their share in available markets must be expected to be considerably larger than it used to be.

The long-term prospect of cheaper rates for raw cotton is not entirely disturbing to Lancashire. More realistic price levels should stimulate sales of finished articles and increase the attractiveness of blends with synthetic fibres. The main cause for concern centres on whether the movement to lower price levels can be regulated so as to avoid undue stock losses.

In this connection, it should be pointed out that the hand-to-mouth buying which has been so prevalent in Lancashire for many months past means that few firms have built up an accumulation of supplies. Raw cotton stocks, too, are extremely low. Visible supplies at the moment barely exceed 200,000 bales at the ports or at sea. This is only half the quantity held a year ago and, with the elimination of the Raw Cotton Commission's stocks, makes the supply situation comparatively tight.

Advice In Adversity

History seems to be repeating itself industrially in various sectors of the United Kingdom's economy. It is four years since Lancashire mills faced the same sort of problems as those now confronting many firms in the Midlands and Southern countries. The 1952 recession in the cotton towns was widely publicised but received scant recognition in high places.

So far, at least, the motor car and allied trades have been offered much the same kind of advice as was given to Lancashire when unemployment rose sharply. It has been suggested that labour should become more mobile and that workers should be willing to change their employment according to the needs of the moment.

Short-time working in several basic industries can be attributed to a number of factors, including the Government's "credit squeeze." Sales resistance to expensive goods is also responsible for the development and casts its shadow over a far wider field of industrial endeavour than those immediately affected.

For instance, in recent weeks textile manufacturers catering for other industries have found what they have lately regarded as a valuable and permanent outlet for their products suddenly changed for the worse. Deliveries of specialised goods have been delayed as the finished products have accumulated and the assembly lines have slowed down. In this way, the repercussions of this slackening in activity can disturb British industry as a whole.

No doubt, in due course, the trades now adversely affected will make their own adjustments as textile traders have had to do since 1952. The situation may indeed have its brighter side for those cotton mills which are sufficiently well supplied with orders to be short of labour.

If the Lancashire cotton industry is to "keep in the field" it must always remain a few paces ahead of the rest of its competitors, Sir Raymond Streat, Chairman of the Cotton Board, told a one-day conference at the Textile Institute headquarters. The textile industry today was the most "highly" competitive in the world, he said. Where Lancashire had led more than 100 years ago, however, nations all over the world had followed its lead.

The textile industry was one composed of many independent units and decisions were not taken centrally but separately, by thousands of individual managers of firms and departments. He said: "For these reasons, the progress of the whole textile community depends on the wisdom, foresight and imagination which inspires these individual decisions in countless number and infinite variety."

Never before had techniques and technology been developing at so great a pace as today. Sir Raymond observed: "It is no longer sufficient for an individual to study alone, to think alone or to experiment alone. Life is too short for that and the pace is far too hot. The greatest genius who works in isolation today will be left behind." He said these were some of the reasons why it was important to study new techniques and the dissemination of information about them.

Fine Spinners and Doublers Ltd., the £25-million textile combine, has added more than 700 looms to its production by the acquisition of J. T. Clegg & Co., Ltd., cotton and rayon manufacturers, Nelson. A bid for the £36,360 capital has received 100 per cent. acceptance, it was announced from the group's Manchester headquarters.

The Bradley Mill, Nelson, owned by J. T. Clegg & Co. was constituted in 1893 and contains 728 looms, providing employment for nearly 300 operatives.

Cotton Workers' Pay

The Industrial Disputes Tribunal will sit in London on 17th April to hear the claim for a 2s.-in-the-£ wage increase for Lancashire's 256,000 cotton workers.

The application, which if granted in full would cost the industry an extra £10 million a year in wages, was rejected by the employers without a counter-offer being made. Both employers and union leaders will now begin to collate their arguments for presentation to the industrial court.

The Industrial Disputes Tribunal gave the cotton unions their last pay increase, in October 1954. The Tribunal awarded a six per cent. increase after millowners had rejected outright an application for a 2s-in-the-£ advance.

Output of cotton and rayon cloth by Lancashire weavers rose by 40 million yards weekly during January.

Figures given by the Cotton Board show that the mills produced an average of 47,370,000 yards of cloth a week. This compared with 43,350,000 yards weekly in the previous month and 53,690,000 yards in January last year.

During the month, the weaving mills gained 100 part-time workers but lost 330 full-time operatives. This reduced the weaving labour force to 126,350 and the manpower total for the industry as a whole to 256,580 compared with 286,490 in January, 1955.—*All Rights Reserved.*

The U.K. Board of Trade has announced that, pending decisions on which stockpiles should be run down and on the extent and period of disposal, it is not intended to make any further purchases of wool this season to replace sales made in the course of the normal turnover operations. This decision was made in view of the statement in the Defence White Paper to the effect that the Government had decided to make a start on running down to some extent the strategic holdings of industrial raw materials. The programme of turnover sales up to 31st March 1956, will be completed by the offerings at the current London wool sales. The turnover programme for the following year ending 31st March 1957, is for the sale of approximately 50,000 bales. These sales are carried out on behalf of the Board of Trade by the British Wool Federation.

ECONOMICS AND ADMINISTRATIVE POLICY*

NEED FOR ADAPTING THE TECHNIQUE OF TEACHING TO CHANGED CONDITIONS

By D. L. Mazumdar, I.C.S.

I THINK it would be correct to say, as a historical fact, that the turn of the century or a few years later saw the beginnings of the decline in the popularity of the classical humanities, as subjects for university studies, and the gradual emergence of the natural sciences as their rivals. From the beginning of the century to the end of World War I, was a period of concentrated scientific studies in almost all the older universities of this country. This was the period during which the study of the natural sciences was consolidated in the older universities, and the important part which they could play in the ordering of our lives was widely and popularly recognised. The harnessing of the natural sciences to the material development of the country was, however, a tardy process. We need not, in this context, enquire why this was so, but it is common knowledge that, after independence, the potentialities of the natural sciences for building up our economy in many different directions have enormously increased. The achievement of these sciences in the years after independence are not only a measure of their contribution to the betterment of our lives, but also an earnest of the still greater services, which they and their practitioners can render us in future. The recognition of the role of the natural sciences or their widespread application to practical administrative problems has not, however, been accompanied by a corresponding and comparable growth of what our Prime Minister never tires of describing as the scientific outlook or the scientific frame of mind. The need for developing this outlook or attitude is, however, now fully recognised and the means by which this can be done are also well understood.

New Urges

While the natural sciences were thus growing in stature, scope and importance, the faint glimmerings of yet another major development which were destined to have an equally far-reaching influence on the character of administration and the quality of administrative thinking, were visible on the horizon. The urgencies of our economic problems, which had been hitherto masked by the priorities forced upon the nation by the compulsions of our political struggle against our alien masters, became suddenly exposed to the public view in all their bewildering complexity. The demand for a Welfare State, culminating in the recent formulation of the goal of a socialist pattern of society, and for a continuing National Development Plan, and for an All-India Economic Civil Service—to mention only some of the major economic demands—which have been made with increasing frequency and vehemence, since our independence, are symptomatic of the new urges which must inevitably alter the character and contents of our Administration. The so-called bread-and-butter lines of the business of administration as we knew it in the earlier years of our service, are fast losing their pride of place in the order paper of day-to-day administration. Administration has, indeed, already unobtrusively entered into the new "economic age," which places a new obligation on economists and on administrators, who have to deal with economic matters, comparable in their extent and dimensions to the obligations which were imposed, in an earlier era, by the emergence of the scientific age, on scientists and administrators who had then to deal with the application of the natural sciences to administrative problems. What I propose to tell you tonight is concerned with only a few of the more important of the consequences which, as I see them, have flowed from the emergence of this new *milieu* for our administration.

Before I pass on to the implications of this change in the climate for administration, I shou'd like to say a few words to bring home to you the additional complications in administration which have been introduced in this case. These further complications did not exist when the scientific age emerged in, in this country, shall I say, about 50 years ago.

While it is generally recognised that the emphasis now placed on economic problems in the administration must, of necessity, bring about a reorientation in administrative policies and administrative methods and practices, the extent to which sound economic knowledge can be fruitfully brought to bear on such methods and practices is by no means clear. Those of you who are professional economists and are interested in the application of economic theory to policy must be aware of the intensive discussions that have taken place on this difficult subject among professional economists of the Western countries during the last few years, not to speak of similar discussions in the formative years of so-called "Welfare Economics" in the early twenties. It is not my object, on this occasion, to enter into a debate on this subject in our Indian context. I should, however, like to review, if I may, very hurriedly, the terrain in which economic administration has necessarily to be carried on, and the limitations to which such terrain is inevitably subject, by the nature of economic problems. The relationship between the scientists and the administrators, who were called upon to assist in the application of scientific knowledge to administrative problems, in an earlier age, was relatively simple. For, the application of the natural sciences to those administrative problems, to which the knowledge derived from such sciences could be usefully applied, was not hindered by any of those basic difficulties which, in many cases, impede the fruitful application of economic knowledge to practical administrative problems. These difficulties arise mainly from:

(*a*) the different nature and scope of the natural sciences on the one hand and of economics on the other,

(*b*) the different nature and quality of the data and materials with which economists have to deal,

(*c*) the somewhat intractable problem of separating "value judgments" from an objective study and analysis of economic data, and lastly,

(*d*) the relatively *unstandardised* methods of economic analysis, which make it difficult for administrators, without the necessary training in economics, either to assess the merits of such analysis or, as in the case of the natural sciences, to accept the validity of these methods.

Tools of Analysis

To take the last point first, while the efficacy and value of the basic tools of scientific analysis are accepted generally without question, the efficiency of the tools of economic analysis, I regret to say, has not yet secured the same measure of recognition. While this has been largely due to the absence of standardisation even in the more commonly used tools of economic analysis, general appreciation of the usefulness of these tools by administrators has been hindered also by the historical fact that, while the classical humanities or the natural sciences have hitherto formed the staple of the university education of our top administrators, training in economics has been, till lately, confined to a relatively few of them. Our deficiency in this regard is, however, being rapidly made good, and, perhaps it will be correct to say that, since World War II, students with good university degrees in Economics have constituted the largest single group among our new recruits to the top grades of the administrative services. I cannot but feel that this is wholly to the good of our administration, and will, in due course, make the task of economic administration much easier than it has hitherto been. A great deal more has yet to be done in this direction. But I can assure you that administrative thinking has been concentrated on this subject for the last five years, and it has been already recognised in authoritative quarters that economic administration, at the higher levels, at any rate, can no longer be entrusted to members of the Civil Service, who have not received the necessary training or acquired the requisite experience for this specialised field of administration. But full appreciation of the efficiency of the tools of economic analysis can never be expected, till our tools have been standardised and proved their worth as effective instruments of analysis. As professional economists know so well, hitherto we have been generally content to borrow our economic tools from abroad. We have indeed borrowed freely and our professionals are already busy adding to their tool box the latest of these borrowed tools, fashioned by the statisticians and econometricians abroad, e.g., statistical measurement of demand functions, "input-output" analysis, "linear programming," or econometric models based on "period analysis," and such like. But have we checked up the shape and design of these tools from the point of view of our analytical problems and have we made sure that they are just the appropriate type of tools for our purpose? Apart from occasional murmurings indicating mild irritation at the inadequacy of these tools for the analysis of some of our special problems, I do not think our "tool-makers" have really applied their minds to this problem. And yet this methodological issue is so increasingly important that, unless our professional economists are clear in their mind and can demonstrate to the intelligent public the suitability and effectiveness of the tools which they use in their analysis, I fear widespread public recognition of the value and efficiency of the methods of economic analysis would be slow to come. This is a challenge to the "tool makers" in the profession of economists—but where are they?

Capacity to Appreciate New Trends

The other factors which render the application of economic knowledge to problems of administration difficult are much more formidable. I shall now turn to them *seriatim*. I mentioned earlier about the different nature and scope of the natural sciences, on the one hand, and economics on the other. In the natural sciences, the subject of study is relatively homogeneous; not so in economics. For example, the study of the results of the application of heat to different classes of metals can be neatly categorised under well-defined heads, and any student of average intelligence would have little difficulty in understanding these results and drawing conclusions from them. Economics is, however, not a science in this sense. Casual relationships in economics follow more devious and complicated processes. What is, therefore, of primary importance in the application of economic knowledge to economic facts and situations is not so much a sound knowledge of the so-called "laws" of economics—indeed the subject can hardly claim any "laws" properly so-called—as a capacity to locate, to size up and to place in their proper relationship and perspective a number of complicated variables, which through their interaction, produce certain economic results. It would, therefore, seem that, while, by and large, the natural sciences operate on the basis of laws whose study involves the ability to acquire and master certain types of "skills," in the widest sense of the word, the study of economics involves, essentially the development of a frame of mind, a technique of thinking, which cannot, however, be developed by merely theoretical study or practical experimentation in the laboratories, but must depend largely on the capacity of the mind to take in within its compass, large aggregates, often heterogeneous in character and to evolve out of these divergent aggregates a logical relationship of cause and effect.

Non-Economic Factors

Further, the data and materials with which economists have to deal are basically different from those of the natural sciences. This is so, not merely because the former are non-measurable while the latter are, by and large, capable of being weighed or measured, but also because the former are far more variable in time and space than the latter. Indeed, many dominant schools of thought in economics strongly hold the view that economics is essentially a study of economic relativity. This makes it essential for economists and economic administrators to study and analyse an economic situation, not only from the point of view of its past history but also against the background of existing institutions in a country, if such study and analysis are to be of practical value in the formulation of economic policy and of help to economic administration. Lastly, there is the surrounding penumbra of "non-economic" factors, which not only conditions the environment in which economists operate, but also affects the quality of the materials with which they have to deal. Unlike natural scientists, economists, as much as economic administrators, can ignore these non-economic factors only at the risk of producing policy recommendations and action programmes which have no chance of being politically accepted.

I now come to what I think is the most formidable of the basic difficulties of applying economic analysis to the practical problems of administration. This is the difficulty of separating objective study from what are called "value judgments." In the physical sciences, the problem hardly arises. In the study of economic problems, however, it is extremely difficult even for the most balanced and discriminating students of economics to eschew "value judgments" altogether. For, as Prof. Pigou told us many years ago, it is not the Carlylean sense of wonder at the mysteries of the economic order, but the more common social enthusiasm which revolts from the sordidness of mean streets and the joylessness of withered lives that is the beginning of economic science. But having said this he also quoted with approval Comte's great phrase—"It is for the heart to suggest our problems; it is for the intellect to solve them." The professional students of economics will recall the warning with which, perhaps, most of them started on their career as economists. Economics, they were warned, was a positive and not a normative science, and yet we know how often and how readily do economists deliver themselves as to what the Government should or should not do in respect of matters which clearly involve or imply judgments of value! The administrators, who have to deal with the recommendations of the physical scientists, are not plagued with this besetting defect of immature economic analysis; and yet I think it will be wrong to blame this defect entirely on the economists. Even if they could resist their natural impulse to introduce their dearly held conceptions of what was right or wrong into the analysis of economic problems, in the great majority of cases they would hardly be able to proceed with their analysis, unless they were to assume tacitly certain "value judgments" as the major premise in their chain of analysis. We administrators must, in fairness, admit our failure if in presenting an economic problem to the economists, we have been unable to indicate to them, at some stage or other in course of their analysis, what "value judgments" they must assume for the sake of their analysis. It may not be easy even for administrators always to do so, but they are closer to our political masters, and, in any case, it is their duty to obtain from their political chiefs an affirmation of their faith, on which alone major administrative policy decisions can be based.

Teaching of Economics

The basic difficulties in the way of the application of economic analysis to practical administrative problems, some of which I have just enumerated, are merely illustrative of the highly complex nature of the terrain in which economics has to operate. The nature and the limitations of this terrain are, of course, well known to professional economists. If, nevertheless, I have taken some pains to emphasise these limitations, I have done so only to bring out as clearly as I can why the mental disciplines needed of the practitioners of economic science are so much more exacting and many-faced than those required of the votaries of the natural sciences. I doubt if these difficulties are always fully brought home to young students of economics when they enter upon the study of this most complex of the social sciences, and even if they are made aware of them, I am not sure if they always keep these limitations in mind. My remarks on this subject are not, however, addressed merely to them, but are also to those members of the wider public outside the universities who may be present here this evening. In recent years, they have shown a lively interest in economic matters and in the problems of economic administration, and have been persuaded to expect from economists and economic administrators not merely illumination, but also help and guidance in economic matters. It is, therefore, important that they should recognise some of the basic limitations of economic studies and fully appreciate the terms and conditions on which alone economic analysis can be fruitfully and effectively applied to current economic problems.

Having said this, I think I should, at this stage, warn you against a possible misconstruction of my observations. While, for the reasons which I have mentioned, I have tried to stress the special nature and scope of economics and the difficulties in the way of the application of economic analysis to the problems of practical administration, I do not, for a moment, wish to underrate the very great importance of economic studies, properly planned and designed, to the understanding and elucidation of economic problems, in the first instance, and ultimately to their successful solution. To administrators, a clear appraisal of difficulties is an essential first step, but only a first step, towards the formulation of effective measures to overcome them, and it is our belief that, in the long run, administration is not helped but greatly hindered, if, consciously or unconsciously, difficulties are ignored or slurred over. It is in the same constructive spirit, and imbued with the same anxiety for overcoming difficulties, which may easily arise from the improper application of economic knowledge to the complex economic problems of the day that I have ventured to draw your attention to a few basic methodological issues in the application of economic analysis to economic policy and administration, which are not so well known, or, at any rate, are not always so adequately brought home to those who are not professional economists.

Systematic Study Needed

Subject to these basic limitations arising from the nature and scope of economics, the very great contemporary importance of economic studies arises from a number of facts, which I should now like to re-state in positive terms. It is my conviction that, with all its limitations and in spite of the basic difficulties which hinder the full and effective utilisation of economic knowledge for the solution of economic problems, it is only through a systematic study of this subject that one can arrive at an objective and discriminating understanding, but also at a balanced assessment, of the forces underlying the working of the economic order in its different sectors. I need hardly add that this conviction has not been born of any sentimental attachment to a subject of which I was an academic student many years ago, but of my experience over the last 16 years in different fields of economic administration. In the same way as an elementary knowledge of the physical sciences is now recognised to be part of the essential equipment of any intelligent man or woman, so must, I venture to think, a working knowledge of elementary economics be also recognised to be part of the essential training for citizenship of any educated man or woman of today. This is, however, not to say that all of us must be academic students of economics. As in the case of the physical sciences, so also in the case of economics, it is possible to acquire a reasonably sound working knowledge of economics even outside the schools and the universities. Academic students of economics in the present generation do, however, stand in a special position of vantage in the ranks of the so-called intelligentsia.

Our new-found interest in economic matters has created new opportunities for them and they can do a great deal to spread economic knowledge and understanding in the country. I do not know if it is usual for present-day university lecturers to emphasise in their first-term lectures to their first-year students the distinction beween the "light-bearing" and the "fruit-bearing" properties of economic knowledge. This was, however, the common practice in my student days. Probably in those days, there was a tendency to exaggerate the latter at the expense of the former, and perhaps we now know a little better of the relative proportions in which these two properties should be mixed by the salesman of economic knowledge. In any case, if I were to express my personal views, I would say that the "light-bearing" quality of economics is, at least, of as great practical moment today as its "fruit-bearing" aspect. If the great majority of students who pass out of the Departments of Economics in the different universities were to be no more than bearers of the light of economic knowledge, I believe the University Economic Faculties would have fully justified themselves and rendered a signal service to the country and the nation. For, it is of primary importance to the successful administration of economic problems that there should be adequate and sufficiently broadbased understanding of the structure and processes of the economic organisation in which we live. It is only this understanding that can produce an intelligent and balanced interest in economic affairs and thereby create an effective demand, in political terms, for a balanced and appropriate economic policy, which is capable of effective implementation within the limits of the resources under which economic administration in any country must necessarily be carried on.

Prof. Robbins Quoted

As I try to evaluate the administrative significance of economic studies in the universities, this seems to me to be a most important aspect of the high task which our Universities and their Faculties of Economics have set themselves. Not being a university teacher of economics, I am not competent to say to what extent university courses in economics, designed for the great majority of students in economics, facilitate the achievement of this object. Prof. Lionel Robbins of the London School of Economics, a great teacher of this subject, has recently commented sharply on the inadequacies of university courses in economics in the United Kingdom, and called for some urgent reforms in this direction. I quote the following few words from his presidential address to the Royal Economic Society delivered in July 1955—

"Clearly," he said, "we are out to teach a certain basic minimum of general principles: it would be great mistake to conceive the appropriate economics course at this stage to be nothing but descriptive. But what is needed is not refinement of analysis of the kind suitable for the theory paper in final honours, but rather thorough understanding of the great elementary platitudes of the subject—supply and demand theory rather than what may be called the metaphysics of the theory of value—combined with descriptions of the real world which permit exercises in the applications of these platitudes and provide some general feeling of the background of institutions amid which economic relations develop. At this stage it is much more important for a man to know, for instance, what the stock market is and how stock-exchange fluctuations affect the raising of funds by firms, than to be expert in distinguishing the significance of the difference between measureable and immeasureable utility or the four different kinds of cost curve."

If the pass courses in economics in the British universities, which have had such a long tradition of economic studies, need such large-scale revision, are we sure that our own universities, which have hitherto modelled their economic courses generally on those of the British universities, do not need some readjustment in the light of current re-thinking on this subject? I crave your indulgence for having rushed into a field on which even the angelic dons may fear to tread. But, as I have already explained, we in the administration have a vested interest in informed and intelligent economic awareness in the community, and from this point of view I feel sure you will concede that it is a matter of some practical importance to us to know that the university courses on this subject are suitable and adequate.

Economists As Advisers

The other task of economics, which is of more direct and immediate interest to administration, concerns the offer of advice in matters of high policy and the provision of advisory services to the administration in diverse ways. I am afraid here we are on more difficult ground. The last ten years, more particularly the last five years, have witnessed a tremendous expansion in the advisory and consultative services rendered by economists not only to the Central Government but also to many State Governments in this country. The scope and manner of such consultations have varied from time to time and from place to place, but, during the last five years, at any rate, continuous and sustained efforts have been made by the administration to seek economic advice and guidance from professional economists on many major issues of policy, at different administrative levels, not merely on an *ad hoc* but also on a systematic and permanent basis.

While there can be no doubt that this close and continuous contact between economists and administrators has been of mutual benefit through the inevitable, though somewhat tardy, seepage of economic and administrative ideas, from all that I have seen and heard during the last five years, I have been often left wondering if economists and administrators have always felt reasonably satisfied with the result of these contacts or exchange of ideas. Can this be always attributed to the different attitudes or approaches of economists and administrators, or their different experience, or the different nature of the media in which they work or of the materials which they handle? I venture to think that this is only a partial explanation. The difficulties would seem to me to stem primarily from those basic hurdles in the way of the application of economic analysis to practical administrative problems to which I referred a little while ago. I would not like to re-state them again, but would merely offer you my observations on this subject for what they are worth. I do so with some hesitation and reluctance, but I would beg of you to take it from me that my views on this subject have been formed only as a result of prolonged reflection and close and continuous observation.

The senior branches of the Civil Service have, in the past, been brought up on a tradition which has enabled their senior members to accept, in the last resort, the policy formulations by the Ministers as the first premise from which they must derive their working methods and techniques in working out the implications of these policies. This does not, of course, mean that they have not advocated or pressed for what they have thought to be the best lines of policy in matters for which they were administratively responsible, but, as Prof. E. A. G. Robinson of

REPORT OF SUGAR DELEGATION TO AUSTRALIA AND INDONESIA

INDUSTRY SHOULD NOT BE SUBJECTED TO CONTROLS

IT is, indeed, surprising that the Government of India should have taken such a long time as more than six months to release for publication not the full text but a summary of the conclusions and recommendations of the five-man sugar delegation to Australia and Indonesia. It was as early as in August last, it will be recalled, that the delegation submitted its report to the Government; it returned to India towards the end of July, after a month's study tour abroad. The sugar delegation was led by Mr. P. A. Gopalkrishnan, I.C.S., Joint Secretary to the Union Ministry of Food and Agriculture, and consisted of Sardar Lal Singh, M.P., President of the All-India Sugarcane Growers' Federation; Mr. K. P. Jain, Director for Sugar, Government of India; Mr. M. N. Pittie (Bihar) and Mr. S. S. Kanoria, Vice-President of the Indian Sugar Mills Association. All these persons have an intimate and thorough knowledge of the conditions obtaining on the Indian sugar front. It is this factor, coupled with the fact that Australia and Indonesia have achieved remarkable progress in the field of sugar manufacture, that imparts considerable value to the report of the delegation.

The sugar delegation has done well to preface its report with a clear emphasis that the development of the sugar industry is checked under controlled conditions, unless, of course, the prices fixed are very attractive. Past experience in India (and also in Australia) reveals that the consumption of sugar, which had all along stood around one million tons during the war years when this commodity was subjected to price and distribution controls, jumped to 1.6 million tons in 1952-53 following the decontrol in the previous season and is now running at the rate of more than 1.8 million tons. The impact of the first Five-year Plan has already affected, as the delegation rightly points out, the price structure of agricultural commodities. While the effect of the second Plan on the economic conditions in the country is yet to be seen, this much can be said, namely, that, "when production in different sectors is increasing and is expected to increase, it might produce incongruous results if the second largest industry in the country is selected for control measures which will be difficult to co-ordinate with the changing conditions in the rest of the country."

Marketing Board for Sugar

Precisely in view of the aforesaid consideration, the Gopalkrishnan delegation has recommended postponement of the question of setting up a central marketing body for sugar and *gur* until economic conditions reach a certain degree of stability. Even when conditions turn for the better, the delegation stresses that an exhaustive enquiry should be conducted into the wider implications of establishing a marketing organisation for regulating the production and prices of sugar and *gur;* such an enquiry must be postponed at least up to the end of the second Plan. There is considerable force in this view. For experience of the working of the former Indian Sugar Syndicate does hardly encourage one to believe that a central marketing body would serve the general interests of the country. It is, therefore, undesirable that an association like a central marketing body for sugar should be legally imposed on the sugar mills all over the country. Moreover, the conditions prevailing at present in the field of sugar industry do not at all warrant the establishment of a monopolistic body such as the one commonly advocated by certain sections of the sugar industry. And, if the ambitious scheme for the development and expansion of the sugar industry envisaged in the second Plan is to be implemented successfully, it is of the utmost importance that the industry should be accorded as much freedom as possible with regard to prices and distribution, with least interference from the authorities.

The sugar industry, just as any other industry, would flourish best, if the laws of supply and demand were allowed to have their play. It is from this point of view that one has to view the sugar delegation's suggestion for continuing for the present the existing Government's policy of regulating the price and distribution of sugar by exercising control on the release of sugar from factories, by keeping the right to requisition 25 per cent. of the production at controlled prices, and by importing sugar and selling it at fixed prices. Even this policy of limited overall controls should be done away with as soon as conditions become more conducive to the full play of forces of demand for and supply of sugar.

It is gratifying that the Gopalkrishnan delegation has taken a realistic view with regard to the issue relating to payment for sugarcane supplied to the mills for producing white sugar. It has suggested a scheme for payment of cane on the basis of quality, instead of on quantity as at present, by a system of group analysis of cane in the case of small growers and individual analysis in the case of large growers. The present system of linking the price of cane to weight and the policy of fixing a minimum price for cane delivered to the sugar mills are, as we have so often emphasised in this journal, both defective in that they ignore completely the quality aspect. What interests the cane grower most is the yield of cane per acre and, naturally, little attention is devoted to the need for growing cane with high sucrose-content. India is, perhaps, the only country other than Cuba which has been adopting this system. In all the other sugar-producing countries, the payment for cane is based not only on the weight of the cane but also on the percentage of sugar contained in it. The sugarcane grower is thus made conscious of both the vital aspects, namely, sugar-content and yield.

Committee for Fixing Cane Price

If the scheme for linking the price of cane to quality were adopted and the policy in regard to the price of sugar and *gur* judiciously followed, there would, as the sugar delegation rightly opines, hardly be any occasion for distributing the extra profits made by the factories between them and the farmers. Viewed thus, the suggestion of the delegation for setting up a standing advisory committee—consisting of an equal number of representatives of cane growers and factory owners with an independent chairman, preferably a judge—to advise the Government on the level at which the price of sugarcane should be fixed from year to year deserves to be considered.

In this connection, the sugar delegation recommends fixation of a floor price for *gur* every year, in order to maintain a balance between production and price of *gur* and sugar. In its opinion, the Government should announce in advance of the season that it would be prepared to purchase *gur* at important producing centres at that price, if the prices in the markets fall below that level. It also recommends establishment of marketing co-operatives in the important *gur*-producing areas, in order to facilitate the operation of the Government's programme for purchasing and selling *gur*. Whatever may be the policy adopted for *gur*, due consideration must be given to the fact that the policy will not adversely affect the competitive cane growers in different States under an Act on the one hand, and to sell the sugar produced, on the other.

The sugar delegation has put forward several valuable suggestions for stepping up the yield of sugar—not sugarcane— per acre. For fuller details regarding these suggestions, one has to await the publication of the full text of the report. According to the Press version of the summary, the suggestions made by the delegation include (1) evolution of varieties possessing high sucrose-content and resistance to common diseases; (2) import of selected high sugar-yielding varieties from Australia, Java and other countries for trial in India; (3) testing of new varieties in the field to try them under varying conditions of soil and climate before release; (4) publication of an all-India journal on sugarcane cultivation; and (5) formation of cane pest and disease control boards in districts having one or more sugar factories. There is, of course, nothing new or novel in these suggestions, inasmuch as they have been repeatedly referred to ere now. Nevertheless, by drawing attention to them once again, the delegation has emphasised the urgency which attaches to the need for cultivating quality sugarcane at an economic cost.

Other Suggestions

The question relating to the utilisation of the by-products of sugar industry has also been examined by the Gopalkrishnan delegation. It has, for instance, called for research work on molasses to make it fit for consumption by cattle in larger quantities and a survey to find out the possibilities of establishing factories for the manufacture of insulation and building boards and paper from bagasse and various chemicals from molasses. It has also recommended that, in the interest of more rational distribution and fixation of prices, molasses should be brought under the control of the Central Government as early as possible. The delegation recommends research work on the refining of cane wax so as to make it usable in various industries and to find new industrial uses for the wax. Further, it favours the establishment of organisations of cane growers in different States under an Act on the lines of the Queensland Cane-Growers Association and a common organisation of growers and millers on the lines of the Australian Sugar Producers' Association. The other suggestions made by the delegation relate to formation of a sugar research board, deputing of research workers abroad, supply of sugar at concessional rates to fruit products and condensed milk industries, expansion of existing units in preference to the establishment of new factories, and adoption of a system of allowing duty-free imports of such agricultural implements and sugar machinery as are not manufactured in India.

The foregoing recommendations of the delegation should, surely, be able to provide guidance for solving the several problems of the Indian sugar industry. Among them, three stand out most prominently. They are: (1) Improvement in quality of cane, (2) formulation of a scientific and satisfactory method of fixing cane and sugar prices so as to do justice to the different sugar interests, and (3) fixation of the price of cane on the basis of its quality with a view to giving incentive to the farmer to grow better varieties of cane yielding higher sugar recovery. It is to these problems that the authorities should address themselves in right earnest, uninfluenced by any political and ideological considerations.

INTENSIVE SUGARCANE CULTIVATION

It was seven years ago—in 1948-49, to be precise—that the Indian Central Sugarcane Committee launched the scheme for intensifying cultivation of sugarcane in the factory areas of the important cane-growing States. The implementation of the scheme has been quite successful. The average per-acre yield of cane in blocks brought under the scheme, for instance, is now claimed to be 23.8 tons, which compares favourably with the all-India average of 13.9 tons. The extent to which the yields have gone up in the intensive cultivation blocks in different States in the past seven years is indicated below:

(Per-acre yield—In tons)

	1954-55	1948-49
Uttar Pradesh	18.9	12.9
Bihar	18.4	12.0
Punjab	20.7	12.9
Bombay	42.1	31.0
Madras	37.9	25.7
Andhra	30.5	25.0
W. Bengal	21.0	16.1
Mysore	31.4	18.8

These increases in the pre-acre yield, however, relate only to a very limited area, namely, 625,000 acres taken up under intensive development, which form about 16 per cent. of the total acreage under cane. It is now considered necessary that the entire area of nearly 4 million acres should be taken up under the development scheme and the average acre-yield over the area raised. The State Governments have been directed to do so under the second Five-year Plan and they have, accordingly, agreed to bring as much of the area as possible under such development.

COAL IN ASIA

INCREASED OUTPUT IN 1955

IT is provisionally estimated that the output of coal in Asia and the Far East increased from 151.1 million tons to 180.7 million tons in 1955, an increase of 29.6 million tons. Actual production in 1954 was 171 million tons, or 12 per cent. of the world coal output, excluding the U.S.S.R.

In China the output of coal increased from 63.5 million tons in 1952 to 83.3 million tons in 1954. The target for 1955 was 92.9 million tons, which is said to have been reached. The output is expected to touch a peak of 113 million tons in 1957.

Production of coal in South Korea is estimated to have increased from 890,000 tons in 1954 to 1,188,000 tons in 1955.

In Japan, however, the decline in coal production persisted. Thus, it dropped from 48 million tons in 1953 to 44.2 million tons in 1954 and again to 42.6 million tons (estimated) in 1955. This decline is attributed to increased competition of other industrial fuels, such as heavy oil and electricity.

It is understood that, under Japan's Six-year Plan, it is proposed to raise the productivity of labour from 12½ tons per worker per month in 1954 to 18.4 tons in 1960. This proposed increase in productivity is claimed to be necessary to reduce production cost to a point competitive with that of other conventional fuels.

India

More details are, however, available in regard to activities of coal industry in India. The output of coal in India increased from 36.88 million tons in 1954 to 38.22 million tons in 1955, according to provisional estimates released by the Chief Inspector of Mines in India. Despatches of coal also increased from 32.03 million tons to 32.91 million tons during the period. Coal stocks at pit-heads at the end of 1955 amounted to 3.61 million tons.

The average daily employment at the coal mines in India was 340,615 in 1955, as against 332,320 in 1954. On an average, miners worked about 8.5 million man-shifts per month in 1955, as against 8.3 million man-shifts per month in 1954. Average absenteeism was of the order of 14.0 per cent. in 1955, as compared with 13.3 per cent. in 1954. The output per man-shift worked by miners and loaders increased from 1.09 tons in 1954 to 1.10 tons in 1955. The productivity of underground and quarry workers also increased from 0.58 ton in 1954 to 0.59 ton in 1955.

The average weekly cash earnings of colliery labour increased slightly from Rs. 12-2 in 1954 to Rs. 12-5 in 1955. The average weekly hours showed a fractional increase and remained more or less stationary at 47.

An appreciable improvement was recorded in the use of mechanical equipment. During the year, about 8.5 million tons of coal were cut by coal-cutting machines, 1.3 million tons conveyed mechanically and 120,000 tons loaded mechanically. The corresponding figures for 1954 were 8.2 million, 1.2 million and 93,000 tons, respectively.

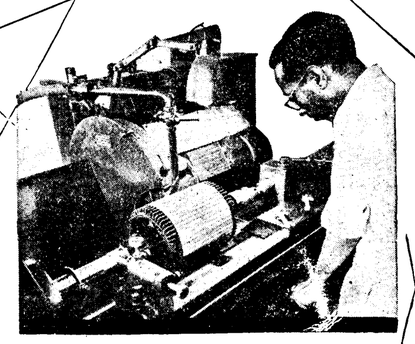
The picture thus presented may on the whole appear encouraging. But, except for India and China, almost all the other countries of Asia and the Far East are suffering from acute shortage of coal, which is so necessary for ensuring the economic development of these countries. This explains why there is intensive exploration for new reserves of coal and also lignite in most of the countries of the region.

All indications are that Asia and the Far East may not become self-sufficient in coal. It will have to supplement its coal resources with those of other fuels, such as hydro-electric power and oil. In fact, a balance of these three sources of fuel should be maintained. More so, because there are very little prospects of electricity being generated from atomic energy on a commercial scale—at a cost competitive with other conventional fuels—earlier than 10 to 15 years at least.

VOCATIONAL TRAINING IN COAL MINES

The question of recruitment and vocational training in coal mines and the problem of safety in the coal-mining industry are among the subjects for consideration by the sixth session of the I.L.O.'s Industrial Committee on Coal Mines, scheduled to meet at Istanbul on 30th April 1956. As usual, the Committee will consider also a general report dealing particularly with recent events and developments in the coal-mining industry. India is a member of the Committee and will be represented at the meeting by a tripartite delegation.

BRUSH KIRLOSKAR ELECTRIC MOTORS
Quality Machines in the making



Q. What is this man doing?
A. Grinding.
"Precision is our Motto."
All component parts of 'BRUSH-KIRLOSKAR' motors are machined to the closest tolerances.
The above picture shows the grinding of a Squirrel cage rotor of 'BRUSH-KIRLOSKAR' motor to a close tolerance of 0·0005". The rotors being ground to very close limits ensure an uniform air gap between stator and rotor resulting in smooth starting.

BASIS FOR LEVY OF EXPORT DUTY ON TEA TO BE CHANGED?

TEA MARKETS RULE STEADY

IN tea market circles it is believed that the Government of India is considering a proposal to change the basis on which the world price of tea is determined for purposes of levying export duty on Indian tea. At present, the world price of tea is fixed only on the basis of the London sale averages and does not take into account the prices fetched either in Calcutta or in Cochin. For this reason, the present arrangement is considered highly unrepresentative and often proves disadvantageous to the Indian producers. Market circles, therefore, feel that the Government should take an early decision in this matter and fix the world price of tea for the purpose of levying export duty on the basis of the combined sale averages of London, Calcutta and Cochin. In fact, the tea producers have already suggested to the Government of India that a link should be established between the export duty and the weighted average of London, Calcutta and Cochin prices.

The change in the basis of determining world price as suggested above, if finally decided upon by the Government, will only be a natural sequence to the Government's desire to develop Calcutta and Cochin as marketing centres for Indian tea through a progressive reduction in the quantity of tea consigned to auctions in London, as recommended by the Ghosal Committee. It is too early to judge how far this change will bring relief in the incidence of tax to the tea industry. The existing slab system of export duty is considered onerous, particularly after the drastic fall in prices during the past several months. The incidence of the duty is more keenly felt by the producers of common and low medium teas which have been selling below cost of production. The recent taxation proposals, under which the export duty of As. 8 per lb. in the slab Rs. 3-5 to Rs. 4 per lb. has been reduced to As. 6 per lb., do not bring any relief to the industry. The effect of this change is that all teas falling within the price range "exceeding Rs. 2-8 per lb. but not exceeding Rs. 4 per lb." will be assessed at a uniform rate of As. 6 per lb. In other words, the slab in which the export duty of As. 6 per lb. will operate has been widened to cover the world price of tea from Rs. 2-9 to Rs. 4 per lb. It is unlikely that prices will go beyond this range in the foreseeable future and the reduction in the rate of export duty is, therefore, of no immediate consequence. The only welcome feature of this change is that it ensures a stable and fixed rate of duty on a wider range of prices. However, as the world price of tea based on London sale averages is out of tune with the actual prices realised in India, a change in the basis of determining the world price of tea is necessary.

Meanwhile, prices in tea auctions in India have shown a steady trend during the past few weeks, as will be seen from the following table of prices fetched in Calcutta auctions:

	12-3-1956	5-3-1956	27-2-1956	13-2-1956
Export sale	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Clean B.P.	1 14 6	1 15 0	1 13 0 to 1 14 0	1 11 0 to 1 12 0
Plain B.P.	1 8 0 to 1 9 6	1 4 6 to 1 5 0	1 4 0 to 1 4 6	1 5 6 to 1 6 0
Medium Assam B.P.		1 7 0 to 1 7 6	1 7 0	1 8 6 to 1 9 0
Best C.T.C. Assam B.P.	Not quotable	Not quotable	2 5 0 to 2 6 0 (nom.)	2 5 0 to 2 7 0
	13-3-1956	6-3-1956	28-2-1956	14-2-1956
Internal consumption	Rs. a. p.	Rs. a. p.	Rs. a. p.	Rs. a. p.
Medium Dooars Dust	1 10 0 to 1 10 6	1 7 0 to 1 8 0	1 7 0 to 1 8 0	1 7 0 to 1 8 0
Medium Assam Grainy Dust	1 10 6 to 1 11 6	1 8 6 to 1 9 6	1 8 6 to 1 9 0	1 8 6 to 1 9 0
Best Assam C.T.C. Dust	2 14 0 to 3 0 0	1 12 0 to 2 14 0	2 9 0 to 2 11 0	2 5 0 to 2 7 0

The improvement in prices is more widespread and is not confined to the best grades only, though the rise in the latter is marked. It will be noted that plain Broken Pekoe, which had been hovering between Re. 1-4 and Re. 1-5 per lb., jumped sharply to Re. 1-8 at last week's auction. Medium Dooars dust and medium Assam grainy dust also rose sharply last week. It is stated that the larger internal blenders have been operating regularly for the past few weeks and it is mainly because of their efforts that the recession in prices has been checked. The sharp rise noted at last week's auctions is attributed to optimistic expectations about the renewal of the International Tea Agreement and the prospect of the voluntary crop regulation scheme, which is now being studied, taking final shape before long and being given effect to in the new season. The other factors which contributed to the improvement in prices were: (1) expectations that Russia would soon begin to buy a fair quantity of North Indian tea, (2) the easing of the pressure of stocks in Calcutta, on account of the large shipments to London for auction in that centre following the removal of restrictions on such shipments and (3) the decline in output in Ceylon, as a result of unfavourable weather and severe drought conditions.

The exact figure of additional quantities which will be released for the U.K. market consequent on the removal of restrictions on shipments is not available, but Messrs. J. Thomas & Co., Ltd., Calcutta, expect this to be in the neighbourhood of 30 million lbs. As a result of this diversion. Messrs. Thomas & Co. say a shortage of better quality teas, especially teas of C.T.C. manufacture, will be felt on the Calcutta market and these types should appreciate in value in Calcutta, while the existing gap in the price of such teas between the Calcutta and London markets should be narrowed down in the coming months. The removal of restriction on shipments to London auctions is also expected to make up substantially the shortfall in the U.K. imports before the close of the season.

The crop in Ceylon for January last was 2.3 million lbs. behind 1955 and a further shortfall of 5 million lbs. is expected for February, as a result of the drought in the tea districts. "Although this deficit may, perhaps, be made up at a later stage," Messrs. Thomas & Co. observe, "this shortfall will have a healthy reaction on the world buyers and may have, if only to a very small extent, the effect of helping the clearance of the present surplus on the world markets."

The outlook for the rest of the current season, therefore, appears to be good, as will be seen from the following observations of Messrs. Thomas and Company:

"There are now indications that the smaller internal buyers are realising that, with the increased amount on tea which has been shipped for direct sale in London, there may only be just enough available to carry them through to August, which is the earliest any quantity of new season's tea can be expected on this market. It, therefore, seems likely that with the United Kingdom buyers and other outmarkets operating in perhaps a limited fashion, and India's internal blenders and dealers continuing to purchase large quantities, the market will now start to rise and rather higher prices may be realised from now until the last offerings of 1955-56 crop have been sold."

Thus, the current season is expected to wind up on a buoyant note, which will augur well for the early sales of the 1956-57 season's teas.

CEYLON'S TEA POLICY

Addressing the Ceylon Chamber of Commerce at its annual meeting held last week, Mr. R. P. I. Ross, Chairman of the Chamber urged the Government of Ceylon to remove all restrictions on the export of tea to foreign markets.

Commenting on the reintroduction of controls at the beginning of last August, he said that surely the Government realised that it was against the interests of Ceylon to treat the Island's best market, London, in this way, to release unlimited quantities of tea for shipment to London when there was a slump at one moment, and to restrict shipments at another.

THE BANK OF INDORE LIMITED

INDORE

(Incorporated in Indore 1920)

AGRICULTURAL INCOME-TAX IN MADRAS

SOME GLARING DEFECTS

AGRICULTURAL income-tax on plantations in the State of Madras was introduced in March 1955 so as to take effect from 1st April 1954. The Rules under the Act as finalised were only published in the State *Gazette* late in December 1955, although many assessees were served with notices in advance requiring them to file their returns and otherwise comply with the regulations. The late publication of the Rules, coupled with the fact that a large number of assessees are being assessed to this form of tax for the first time, appears to have resulted in a great deal of confusion and some inconvenience to the majority of the assessees. Besides, a careful study of the Act and Rules now disclose the absence of various provisions which are normally provided in any income-tax legislation, in order to give the necessary relief to the assessees.

Section 16 of the Act requires an assessee to furnish to the Agricultural Income-tax Officer a return of income in the prescribed form to reach him before the 1st June every year. As stated above, the form 'prescribed' was only finalised and published late in December 1955. A number of assessees appear to have unwittingly delayed their returns and thus laid themselves open to action by the Department. One result was that some of them were assessed under Section 17(4) which is an assessment by the Officer "to the best of his judgment." The Act provides for no appeal against such assessments. Section 30 of the Indian Income-tax Act confers a right of appeal to the assessee against assessments of this type. The absence of similar provision in the Madras Plantations Agricultural Income-tax Act appears to be a serious lacuna and calls for an early remedy.

There is, however, a provision in Section 19 whereby the Agricultural Income-tax Officer, in certain circumstances can cancel his assessment and proceed to make a fresh assessment, but this is a purely discretionary power in the hands of the Officer. In fact, cases have arisen where the Officers concerned have declined to take action under this Section on some grounds or other.

It is reported that heavy penalties have been imposed by Officers in some cases where returns have not been filed before the date specified. In one case, a fine of Rs. 40,000 was imposed for not filing a return within the due date. In similar cases coming under the Indian Income-tax Act, penalties are usually small. Cases have also been reported where the Agricultural income-tax Officers have refused requests for extension of time required for submission of returns.

There appears to be considerable confusion over the definition of the term "previous year" under the Act. Many plantation assessees—companies as well as individuals—do not close their accounts on 31st March, the date on which the Government's financial year comes to a close. Thus, a company which closes its accounts on the 30th June 1954 should only be liable to pay income-tax for the period 1st April to 30th June 1954 since incomes earned before the 1st April 1954 are not taxable. But it appears that, in such cases, the whole of the income for the year 1st July 1953 to the 30th June 1954 has been held to be liable to tax. The reasonable thing to do is not to make any assessment now, but to add the broken period of three months (1st April—30th June 1954) to the next fiscal year and assess for the 15 months together. This would be in line with the procedure adopted by the Indian Income-tax authorities in assessing "new business."

There is also no provision in the Act or Rules for allowing bad debts written off, charities, in all reasonable cases, and medical and research expenditure where they are incurred. In regard to interest on borrowed capital, the Act allows only up to six per cent. on an amount equivalent to twenty-five per cent. of the agricultural income. In practice this amounts to a very negligible allowance. No other Agricultural Income-tax legislation in India fixes such a limit on the amount of interest admissible.

In addition to making the required adjustments in the Act and Rules, there is also a clear need for the law to be administered with sympathy and restraint, particularly during the early years of this legislation. The Government may also consider the appointment of expert commercial accountants (Chartered Accountants) to help the Revenue Officials in administering the Act and Rules during the early period.

THE FIRST NATIONAL CITY BANK OF NEW YORK

(INCORPORATED WITH LIMITED LIABILITY IN THE U.S.A.)

Balance Sheet of Indian Branches as at Close of Business, December 30, 1955.

CAPITAL AND LIABILITIES	Rs. a. p.	Rs. a. p.
1. Capital— 3% 1957 Government of India Bonds, face value Rs. 20,25,000 (market value as of date Rs. 20,14,875)	20,14,875 0 0	
2. Reserve Fund and Other Reserves		Nil
3. Deposits and Other Accounts— Fixed Deposits	3,46,54,823 3 2

POWER SUPPLY IN E.C.A.F.E. REGION

PROSPECTS FOR ATOMIC ENERGY DEVELOPMENT

THE E.C.A.F.E. Sub-committee on Electric Power, a reference to which was made in these columns last week, concluded its six-day deliberations in Bangalore on the 12th inst. Full details about the deliberations are not yet available. It would, however, appear from Press reports that the possibility of producing electricity from atomic energy figured prominently in the discussions. The United States offered 20,000 kg. of nuclear fuel to Asian countries wanting to develop atomic energy for peaceful purposes. While Russia made a statement amounting to an offer of general assistance and co-operation to Asian countries, in regard to atomic research, the U.K. is reported to have said that, at least, in the next five years, it would not be able to spare any atomic fuel.

It was pointed out at the Conference that nuclear electric power generating stations were being either designed or under construction in the U.K., the Soviet Union and the U.S. It was, however, considered that it would take at least another 10 to 15 years, before production of electricity from atomic energy could become economically competitive with other conventional fuels. Formosa (Taiwan), India, Pakistan and the Philippines reported that they were either installing nuclear reactors or negotiating for their construction.

Mr. A. F. Maddocks of the United Kingdom observed that there was little scope for hydroelectric development in his country. Hence, the United Kingdom had decided to embark upon an ambitious programme of electricity generation through atomic energy. An atomic energy station was nearing completion at Calder Hall in north England and this station was expected to supply power towards the end of the current year. This was to be followed by the construction of 12 stations in the next 10 years, using atomic energy for the supply of electricity to the national grid. Further, Mr. Maddocks stated that the U.K. would be glad to share the experience gained in the setting up of atomic energy stations with the countries of the E.C.A.F.E. region.

The United States delegate, Mr. F. S. Nevile, said that, in his country, seven power stations were under construction with a total of 750,000 kw. and among them was a reactor plant of 100,000 kw. capacity being designed. At the moment, his country had an installed capacity of 115 million kw. power and that by 1975, the estimated requirements would be between 360 and 420 million kw. It was hoped that, by then, 40 to 50 million kw. would be developed from atomic energy.

Mr. E. G. Mackie, the Indian delegate, said that the hydro-electric potential of India was estimated at between 35 and 40 million kw. The coal reserves were put at about 21,780 million tons of steam and coking coal and at about 39,650 million tons of non-coking coal. In addition, it was estimated that there was a reserve of about 2,000 million tons of lignite in the south. From this, it was seen that India "will not be short of power potential for many years to come."

Proceeding, Mr. Mackie said that the probable cost of power generation from nuclear energy had been placed at about 0.5 anna per unit for a station of 50,000 kw. or above. At present, the cost of generation at thermal stations, based on coal, in India was from 0.34 anna to 0.55 anna per kw., depending on the distance from the coal-producing areas. That of course was for stations of about 50,000 kw. capacity and above and the cost was as high as 1.2 annas per unit for smaller thermal stations. In certain circumstances, the installation of atomic power stations generating electricity could compete with power stations using coal, especially if the burden placed on an already overloaded railway system by the additional burden of hauling coal was taken into account. Surveys should, therefore, be undertaken and special cases examined.

The delegate from Japan speaking on the subject claimed that the theory of neutron was first introduced to the world by a Japanese, Yikawa. The results of the uses of atomic power should be open to the public and contribute to international co-operation. The Japanese Government he added, was at present selecting a suitable site for a reactor research laboratory. The reactor was to be imported from the United States and this was expected to be installed in 1957. The application of radio-isotopes for agricultural and medical purposes was also being actively pursued in Japan. The use of radio-isotopes for industrial purposes had rapidly advanced. In conclusion, the Japanese delegate said that his country's coal reserves were falling and the prices of coal rising continuously. As a result, the cost of electricity was going high and it was vital to the economy of Japan that the country should develop electric power from atomic energy within the next 10 years.

The Philippines delegate complained that the cost of nuclear fuel was very prohibitive and small countries like the Philippines could not afford the huge cost involved.

Mr. Mansur Ahmed of Pakistan said that his country was greatly interested in the development of atomic energy for electric power generation. The coal deposits in West Pakistan were of an inferior quality and were also limited in quantity. In East Pakistan, there was no coal.

The Conference devoted a good deal of attention to the problem of rural electrification. Speaking of the importance of rural electrification, Mr. S. S. Kumar, the Indian delegate, stated that the Government of India had on hand the preparation of a 20-year plan for rural electrification. With a view to effecting economies in rural electrification projects, the Government of India, through the Central Water and Power Commission, had been evolving a variety of economical designs which should be adopted for different parts of the country. The chief difficulty in accelerating the rural electrification programme in India recently had been the lack of adequate line materials—particularly supports and conductors. In spite of the attempts to arrange for the purchase of steel sections or second-hand rails and even wooden poles from outside the country, there had not been much success to meet the growing demands. In regard to conductors, India depended upon imported copper and aluminium ingots. A certain amount of rolling was being done here. Due to international shortage of these metals, the supply position was not as easy as it should be. Mr. Kumar urged also the need for investigation immediately into small power sites. He said that there were a number of localities in hilly areas where electricity generating sets could be established economically. He urged investigation into possibilities of utilisation of hilly streams for power generation.

Certain other important aspects that were discussed at the Conference were standards for electric plant and equipment and standardisation of system practices. Presenting a paper on these aspects, prepared by the E.C.A.F.E. Secretariat, Mr. Kulkarni of the Secretariat observed that standardisation helped simplify the manufacture of equipment. There were standard specifications of the International Electro-Technical Commission, but variations in climate presented problems. The Secretariat recommended that the countries of the region should, in establishing standards, take note of the recommendations of the appropriate international organisations, such as the I.S.O. and the I.E.C. and the standards established in other countries.

Mr. V. P. Appadurai (India), stressing the importance of standardisation of power system voltages and frequencies as the starting point for any electrical standardisation programmes, referred to the work of the Indian Standards Institution, which aimed at assisting the rationalisation of industry by co-ordinating the efforts of producers and consumers for the improvement of appliances, processes of manufacture, raw materials, etc., in India, especially in respect of ambient temperature. Continuing, Mr. Appadurai pointed out that standardisation would be stretched to cover layouts for power stations, sub-stations, fabrication of structures, etc., so that drawing work and fabrication of structures and equipment might be undertaken without much waste of time, when once the essential requirements were decided upon.

LIGHTHOUSE DEVELOPMENT SCHEMES

Schemes estimated to cost about Rs. 1 crore for lighthouse development and navigational aids were approved by the Central Lighthouses Advisory Committee, which met recently at New Delhi. Mr. N. M. Ayyar, Secretary, Union Ministry of Transport, presided. It was disclosed at the conference that the Union Lighthouse Department would be taking over the lighthouse on Minicoy island on or about 1st April 1956. It will be recalled that, seven years ago, the Committee had approved the proposal for the transfer of the lighthouse on Minicoy island from the U.K. Government to the Government of India. Negotiations with the U.K. Government for the actual transfer and subsequent arrangements for collection of light dues and transfer of assets were protracted. It has now been finally agreed that the U.K. Government would transfer the lighthouse to the Government of India. The Union Lighthouse Department is making arrangements for manning the lighthouse with Indian personnel from the date of taking over.

It was revealed also at the conference that the U.K. Government had agreed to give to the Government of India a proportionate share from the general reserve fund maintained by the U.K. Government on account of Minicoy island lighthouse and similar lights, and to continue collecting light dues in the U.K. on behalf of the Government of India. The Government of India would, however, be required to negotiate separate deeds with other countries, such as Ceylon and Pakistan, for collection of special Minicoy island lighthouse dues from ships visiting those countries.

The Committee approved a few schemes for development of lighthouses. They are: Decca navigator chains on the east and west coast of India (Rs. 80 lakhs); installation of a light near Samiyani island (Rs. 25,000); improvement of Samiyani lighthouse—purchase and installation of new optical equipment (Rs. 50,000); installation of a light and bell buoy off Veraval (Rs. 3,35,500); purchase of a tender for Khanderi island beacon and buoyed channel in Bombay harbour (Rs. 5 lakhs); replacement of the motor launch *Jambujay* by a new launch (Rs. 50,000); and six wreck-marking buoys for Indian waters (Rs. 9 lakhs).

The services of Mr. Dyminski and Mr. H. V. Hansen have been obtained from France and Denmark, respectively, under the auspices of the United Nations Technical Assistance Board, to assist the Union Lighthouse Department in the installation of costly and complicated equipment with which the new lighthouses have to be equipped. Besides functioning as technicians for the installation, testing and working of various complete units, optical equipment, fog signalling apparatus, their services will be utilised for training technical personnel of the Lighthouse Department who could ultimately take over charge of such installations and carry out the work.

Considering the isolated nature of lighthouses and arduous conditions of service, it is felt that the extra expenditure of approximately Rs. 6,300 per year involved in granting additional allowances now proposed for the lower paid staff is not excessive. At present, the total expenditure involved in continuing existing allowances is Rs. 3,000 per year. About 54 members of the staff will be benefited by the extra allowances now proposed.

WORLD SMELTER PRODUCTION OF COPPER

Despite a series of major strikes in the three largest producing countries in 1955, world smelter output of primary copper increased substantially above the previous record of 1954. According to the British Bureau of Non-Ferrous Metal Statistics, world production rose by 9 per cent. to 2,969,000 long tons, as compared with 2,720,000 tons in the previous year. This includes an estimated production of 355,000 tons in the U.S.S.R. Eastern Germany and other Soviet-controlled territories. Production in the rest of the world aggregated 2,614,000 tons, as compared with 2,371,000 tons in 1954.

With the exception of Northern Rhodesia, the smelter output of copper increased in most of the leading producing countries. In the U.S., which accounted for one-third of the world's total, the output rose by 17 per cent. to 988,000 tons, after having fallen substantially in 1954. Approximately 90 per cent. of this was smelted from domestic ores, the remainder being obtained from imported ores and concentrates.

There was a marked increase in production in Chile during 1955 and provisional statistics indicate an output of approximately 409,000 tons, making it once again the second largest producing country in the world. In recent years, the output had gradually fallen to approximately 350,000 tons per annum. In Northern Rhodesia, production fell by 30,000 tons to 316,000 tons, but, in Canada and the Belgian Congo, there were increases of 25,000 tons and 9,000 tons, respectively.

These five countries account for nearly 85 per cent. of world production excluding the Soviet sphere. A summary of world production in the last three years is given in the following table:

(In thousands of long tons)

	1953	1954	1955
U.S.	935	845	988
Chile	332	334	409
N. Rhodesia ...	340	346	316
Canada	192	234	259
Belgian Congo	206	216	225
Japan	63	68	79
Soviet Sphere ...	331	349	353
Other countries	315	328	338
Total ...	2,714	2,720	2,969

The figures cover total smelter production of primary copper in the form of blister and anodes, and do not include the considerable quantities of secondary copper recovered by refineries.

NEW PRODUCTS AND PROCESSES

A.C. Current in Aircraft

THE growing use of alternating electric current power supplies in certain types of aircraft is creating new problems for the manufacturers of aircraft instruments and special recording equipment. For example, operate on direct current power supplies of the order of 26 volts, whereas many new aircraft electric power systems are three-phase systems operating at from 200 to 400 volts. Yet, little space and weight is available for converting the alternating current into direct current. A number of systems for converting the alternating current into direct current have now been developed.

One miniature conversion system for overcoming this difficulty which has been developed by the U.S. Consolidated Electrodynamics Corporation occupies a total volume of only 4¼ inches by 5 inches by 7⅓ inches and weighs 13 lbs. The system is said to have functioned efficiently in experimental trials at altitudes up to 50,000 feet in a relative humidity of 95 per cent. It can withstand temperatures ranging from *minus* 65 degrees Centigrade to *plus* 150 degrees Centigrade.

Protecting Buildings

A material, which consists of carefully selected, graded and mixed minerals, cements and other components, has been developed in Norway. The compound, which can be applied to concrete, brickwork and other surfaces, including timber (with the aid of an independent wiring key for rendering) is available in Britain through Kendell's Stone and Paving Company. It can also be used to face precast concrete and to clad concrete slabs, moulded work and structural units. The compound is said to have high resistance to the passage of water, due to the fact that the aggregates in the material are themselves impervious to water, while the matrix contains water-proofing adhesives. The compacting of the material during its application is said to remove air-voids, surplus water and any excess of the fine aggregates present on the surface, which would otherwise weaken rendering. Rendering produced with the material is dense, but is at the same time resistant to shrinkage, cracking and crazing. The compound is being manufactured in 12 standard colours in the U.K., but can be made in other colours if required.

Insecticides Against Fruit Fly

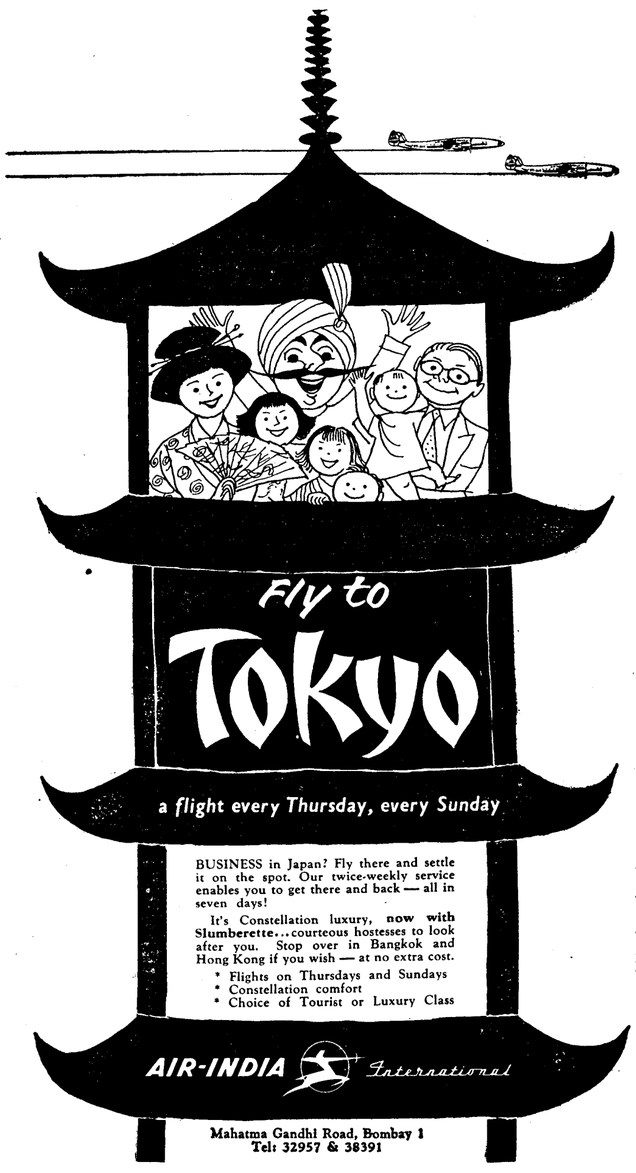
Danger of invasion of United States orchards by the Mexican fruit fly and resulting destruction of fruit is being lessened by the use of insect-attracting insecticides, according to the U.S. Department of Agriculture. The new baited insecticides, already proved effective against all kinds of fruit flies in the Hawaiian Islands, have been put to use against the Mexican fruit fly along the Mexico-California border in south-western United States. If the Mediterranean fruit fly, which appeared in Costa Rica last spring, should succeed in invading the United States again, the U.S. experts in charge of the programme expect these new insecticides to control the pest. The bait, the fruit flies find so attractive, is made from yeast partly or wholly decomposed (hydrolysed) with water or enzymes. The protein bait thus obtained is mixed with the insecticides, malathion or parathion and sprayed on plants. The fruit flies, attracted by the bait, actually fly to where the insecticide is to eat it, which means that the poison kills the maximum number.

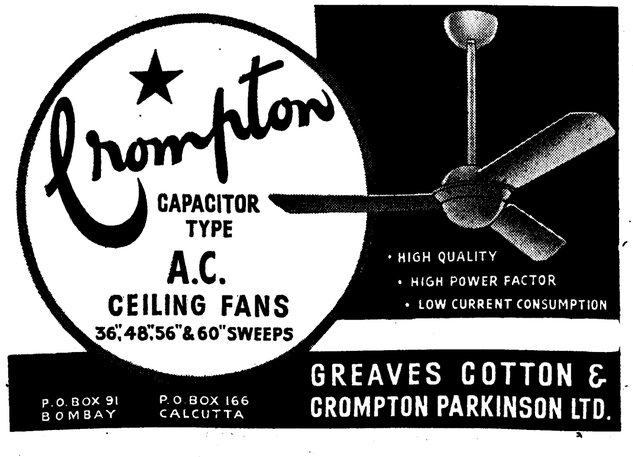
New Fertiliser

A new firm has been formed in Britain to market an entirely new type of fertiliser, which has been under test for some years. It incorporates a method of embedding the fertiliser chemicals in a special carrier material which replaces the essential trace elements in the soil. A majority of these trace elements—so called because they are found in plants only in minute quantities—are normally converted into compounds unavailable in plants growing in soil which has a certain degree of alkalinity. In order to counteract this difficulty, the carrier metal in which the new fertiliser is embedded, is rendered sufficiently acid to act as a buffer against alkalinity and so prevent "locking up" of the essential chemicals. Trials of the fertilizer are being undertaken by growers both in Britain and abroad, including Kenya, Malaya, and the Federation of Rhodesia and Nyasaland.

Bricks can now be made from Rice Hulls

A use for rice hulls, ordinarily discarded as waste, has been discovered by scientists at Louisiana State University in southern United States. From the ashes of the burnt hulls, they have developed a light-weight, low-cost brick that is especially valuable for farm buildings. When burned, the rice hulls undergo a chemical change, turning into a mineral ash which is 94.5 per cent. silica. The ash flakes are porous and contain numerous non-connecting cells, which give the bricks good insulating ability. When the bricks are made, equal quantities of ash and soil are mixed with some emulsified asphalt. Enough water is added to the mixture to make a plastic mass, of mortar-like consistency. This mass is poured into forms and the bricks are dried in the shade for about a week before being put out in the sun for curing. The bricks were subjected to rigorous tests for weather resistance. Water sprayed through a needle spray for 144 hours had no effect on their surface and they passed successfully through 20 alternate freezing and rapid thawing tests and resisted water soaking.





INVESTMENT OF INSURANCE FUNDS

NEED FOR MAINTAINING EXISTING PATTERN

NOW that life insurance business has passed under the control of the Government, many of the borrowers in the private sector who formerly depended on insurance companies for their needs, will naturally expect the Insurance Corporation to continue to aid them. Such borrowers have no doubt felt encouraged by the assurance given by the Union Finance Minister, Mr. C. D. Deshmukh, in the course of his broadcast speech on the 19th January 1956, that "as much money as is today made available for investment in the private sector will continue to be so made available." The Minister, it may be recalled, reiterated this assurance in the Lok Sabha when he recently piloted the Bill seeking to replace the Ordnance nationalising life insurance.

The Life Insurance Corporation Bill seeks to transfer to or vest in, the Corporation all the assets and liabilities pertaining to the controlled business of insurance companies. Also, the Bill authorises, *inter alia*, the proposed Life Insurance Corporation to invest its funds in such a manner as it may deem fit, subject to such rules as may be be made by the Government in this respect and to advance or lend money upon the security of any movable or immovable properties. Obviously, it will take some time before the rules are finalised. But in framing the rules, the Government, it is to be hoped, will ensure that the Corporation observes the Finance Minister's assurance to the private sector. In this connection, the Committee of the Bengal National Chamber of Commerce, in the course of its communication to the Government of India on the Life Insurance Corporation Bill, has made some suggestions which deserve the attention of the Government.

Large Assets

The Committee points out that a sizable proportion of the funds of insurance companies has always been invested in shares and debentures of Indian industrial concerns, the amount of such investments by Indian life insurance companies alone being more than Rs. 48 crores at the end of 1954, forming 16.1 per cent. of their total assets. While no separate figures of such investments of the life funds of non-Indian insurers are available, it is probable that these figures will run to a few crores of rupees. Indian industries have thus obtained valuable assistance from insurance companies and it is of the utmost importance that this important source of funds should not be closed to them in future and that the life insurance funds should continue to be invested in their shares and debentures at least in the same proportion as in the past. The Committee has also invited the attention of the Government to the substantial services rendered by insurance companies to the middle class people in urban areas in the form of loans and advances against immovable properties, thus helping them to acquire lands and construct buildings thereon. It would appear that about 10 per cent. of the funds of insurance companies had been invested in immovable properties at the end of 1954. It is eminently desirable, according to the Committee, that this form of investment also should continue to be encouraged in the future.

While, however, for reasons mentioned above, the Committee welcomes the provisions of section 6 of the Bill, and while it hopes that there will be no material change in the pattern of investment, it expresses the view that there should be adequate control over such investments. It has noted that the Government has reserved to itself the power to make rules regulating the manner in which, and the conditions subject to which, investments may be made by the Life Insurance Corporation.

The Committee further emphasises that the various industries which have already taken financial assistance from the life insurance companies and which will continue to depend in future on life insurance funds for additional finance, should, as far as possible, subject to the general form of control envisaged in the draft outline of the second Five-year Plan, retain their independence in the matter of running their business. It appears that this objective has been taken due note of by the Government inasmuch as the Government has not thought it necessary to exercise special control over the industries which would depend on life insurance funds, but has instead vested the control of this fund in the Life Insurance Corporation, subject to the rules which may be framed by it in this regard. The Committee is, however, of the opinion that the investment of such large funds should be entrusted to the Reserve Bank of India, instead of to the Life Insurance Corporation, in view of the very extensive experience which the Reserve Bank has in the matter of investment. This would, according to the Committee, help ensure unified control over the capital market by the Reserve Bank if, in addition to its normal functions, the Bank is placed in charge of the investment of such large funds as are now proposed to be transferred to the Life Insurance Corporation.

As regards compensation payable to the shareholders of insurance companies, the Committee is of the opinion that the surplus disclosed at the latest actuarial valuation of the companies, should be taken into account; the Bill provides for taking into account the average of the surpluses disclosed at the last two valuations, prior to 1st January 1955. The Committee argues that it is the latest actuarial valuation of insurance companies that provides the barometer for a proper and correct commercial valuation of shares of insurance companies. If any pre-latest valuation period is brought into the picture, with any idea of striking an average, it would obviously involve a deviation from the correct assessment of the compensation payable. Mixing up the question of compensation with any previous valuation, made several years ago, in a different set of conditions, would, therefore, be not only unrealistic but also unscientific. The Committee would, therefore, strongly urge that the latest valuation alone should be accepted as the basis for determining the compensation.

Share of Surplus

Further, the Committee refers to the provision made in the Bill that the share of the surplus to be capitalised shall not be more than 5 per cent. in the case of companies that have actually appropriated 5 per cent. or more of the surplus within the permissible limit of 7½ per cent. to shareholders' account and that it should not be less than 3 per cent. of the surplus in case of other companies even if they happen to have appropriated less than 3 per cent. This provision, according to the Committee, would involve discrimination and would be positively unfair to many companies. It points out that there are many insurance companies which had, in the past, appropriated less than 5 per cent. despite the higher statutory permissible limit, evidently in the interest of policyholders and/or for the purpose of strengthening the reserves. The shareholders of such companies would find themselves "most undeservedly punished" if, for their liberal self-denial in the past for promoting the interest of the company, they are given less compensation than the shareholders of those companies which had appropriated 5 per cent. or more. The Committee is, therefore, strongly of opinion that there should be no discrimination whatsoever on this score. It has, therefore, suggested that any compensation payable to shareholders should be on a flat rate basis of at least 5 per cent. as the maximum contemplated in the Bill, if the Government cannot be prevailed upon to increase the flat rate to the permissible statutory limit of 7½ per cent. A flat rate of 5 per cent., it is stated, would be a fair practical proposition, though even this could not be an ideal one inasmuch as the shareholders of the companies which have appropriated more than 5 per cent. would still be found to have obtained a differential advantage in the past for having appropriated more than 5 per cent.

Finally, the Committee presumes that the compensation will be paid to the companies concerned, and not to the shareholders individually. It is of opinion that it should be open to individual companies, after receipt of compensation, to decide whether they would wind-up themselves or would continue to function, with the approval of the shareholders and the consent of the Government, in any other direction. "It is almost impossible," says the Committee, "to raise resources for a joint-stock company of small size today, and the small capital that each company may have should not be frittered away by distribution but, as far as possible, should be canalised for other economic purposes." In this connection, it recalls that a similar procedure was followed in the case of the airway companies at the time of the nationalisation of the airway services.

INSURANCE BILL

The old and now familiar charges which the Government spokesmen have been wont to level against private insurers were again made, last week, by Mr. M. C. Shah, Minister for Revenue and Civil Expenditure, in the Rajya Sabha where he piloted the Life Insurance (Emergency Provisions) Bill, adopted already by the Lok Sabha. The Bill, which was passed by the Rajya Sabha, received the general support of the members. But there were some members who took exception to the fact that the Government issued an ordinance in order to nationalise the industry. A few members pointed out that the malpractices of the insurers had been exaggerated. The opinion was expressed that there should be a certain element of competition in the field of insurance, and that co-operative insurance should have been excluded from the scope of nationalisation.

Moving the Bill, Mr. Shah said that the Ordinance served to prevent the irresponsible section of insurance companies from acting against the interests of policyholders in the intervening period between the time of the Government's decision to nationalise insurance and that of actual nationalisation. Explaining why nationalisation of life insurance was necessary, Mr. Shah said that, apart from the "malpractices" of certain companies, instances of which he could 'multiply," the management expenses were extravagant. The premium rates in India were about the highest in any advanced country even allowing for the high rate of mortality. The interests of policyholders were no paramount consideration to the companies. Nor could they lay claim that the services rendered by them were good by any standards.

The Government, Mr. Shah said, had received numerous complaints from policyholders alleging delay in the settlement of claims. The number of such complaints in 1954 was over 1,000. He described as "hollow" the claims made by insurance companies about their record in popularising life insurance among the public. In other advanced countries, insurance companies had played a vital part in mobilising savings of persons of low economic means through industrial assurance schemes. In India, this kind of business had not even been attempted. Many provident fund societies which transacted business among the poorer classes were small insurers, small in size but "big in malpractices"; even in the case of ordinary life insurance, the record in India compared "very unfavourably" with that of other countries. "We are as far away as ever," said Mr. Shah, "in attaining standards associated with the name of insurance in countries like the U.K." The insurance managements, he said, had failed to look upon their task as an opportunity to serve policyholders. He added that there had been no dislocation in the normal functioning of the insurance companies as a result of the Government's action. He was glad to report to the House that business was "now better than before."

Dr. H. N. Kunzru asked if the issue of the Ordinance to nationalise life insurance was really necessary when Parliament was to meet hardly a month later. During the last six years, nearly 77 ordinances had been issued, about an ordinance a month. When the power to promulgate ordinances

ANNUAL MEETING OF KOHINOOR MILLS COMPANY, LIMITED

MR. E. D. SHEPPARD DEPLORES PENAL TAX ON DIVIDENDS

SELLING AGENTS AGREE TO TAKE 25 PER CENT. LESS COMMISSION

ADDRESSING the Annual General Meeting of the Kohinoor Mills Company, Ltd., held in Bombay on Monday, 19th March 1956, the Chairman of the Company, Mr. E. D. Sheppard, reviewed briefly the recent political and economic developments. Referring to the budget proposal for taxing dividends in excess of 6 per cent., he averred that it would operate "most unfairly" against companies which had prudently accumulated substantial reserves from the taxed profits of past years. Incidentally, he deplored that the "six per cent. mentality" still persisted in New Delhi.

The following are extracts from Mr. Sheppard's speech:

"GENTLEMEN,

"I am happy to address you again at the close of another year of your Company's working. The year has been an eventful one and I would like to mention to you some of the more important events.

"First of all, it is gratifying that there have been no major flare-ups in international affairs. Peace has been maintained throughout the year with the exception of an occasional foray in China, and periodic skirmishes on the Israel-Arab State borders. As far as the latter is concerned, although the fighting has been confined, the atmosphere in the Middle East has in recent months become explosive and might, if it is not brought under control, lead at some future date to a conflagration which might engulf the whole world. The United Nations are sparing no effort to bring about a peaceful solution of the problems that confront the differing parties. India, as usual, is in the forefront.

"One feature which is most encouraging is the increasing number of visits that are being paid by the Heads of all countries to others. Here in India, during the course of the year, we had visits from Marshal Tito of Yugoslavia, the Egyptian Prime Minister, the Head of the People's Government of China, Marshal Bulganin and Mr. Krushchev from Russia, H. M. King Saud of Saudi Arabia, and since the beginning of the year, Their Majesties the Shah and Queen of Iran. Before long, we hope we may have with us the President of the United States. Our Prime Minister has himself paid visits to China, Egypt, Russia, Poland, Great Britain and Yugoslavia, and has been invited to go to the United States as the guest of President Eisenhower. In my opinion, there is nothing which can be more conducive to bringing about peace and harmony in the world than such visits of leaders of nations to each other, during which they can see for themselves and understand the problems which confront each one of them and which, to some exent govern the policy that they follow in international affairs. As in the affairs of individuals so with nations, a sympathetic understanding is an essential for the fulfilment of our aspirations for world peace and the advancement of humanity.

"Very serious efforts are also being made by all the major powers to bring about the limitation of armaments and the complete banning of atomic and other weapons which, if ever utilised again, can only mean the complete destruction of man.

"It is most unfortunate that it has not yet been possible for us to arrive at an understanding on outstanding differences with our closest neighbour—Pakistan. Let us hope that this will be brought about in the near future.

"The power position, so far as we are concerned, continued to be satisfactory during the year. Tatas' thermal station should be in operation about the end of this year and then there should be no danger of a further shortage of power—at any rate, for two or three years, or even for considerably longer, if the Koyna Dam scheme is completed according to schedule. The second Five-year Plan has now been formulated and, although very much larger than the first in its scope, it is to be hoped that it will be as successful as its predecessor. It is unfortunate that the sponsors of the Plan have 'frozen' the mill industry at its present capacity and have decided to rely on the cottage and handloom industries to produce the additional cloth which the country will require. I feel that they could, without in any way prejudicing the position of the latter, have permitted reasonable expansion in your industry to enable it to supply the potential demand for mill-made textiles in India and, at the same time, retain its markets overseas.

"The mill industry has had a reasonably good year. The demand for cloth has been steady throughout the year. Earlier in the year, prices of cloth, though steady, were not quite at the levels they should have reached to permit of a reasonable profit, but as the year progressed they improved somewhat. Yarn prices, I am sorry to say, remained very low throughout the year making this part of your Mill's' business much less remunerative. This is the reason why your Mills have not shown the improvement in the profits one would have expected because of the good offtake and higher prices of cloth. It must be borne in mind always that, although your Mill has 1,20,000 spindles, half this number is working continuously on the making of yarns and sewing threads for which a special plant has been installed. In view of this 'dual personality' of your Mill, there may be times when, as compared to balanced spinning and weaving mills the profits may not seem very large, but there have been times in the past and they will surely come again in the future when with a rise in the prices of yarn and sewing threads your Mill will be in a position to show better progress than others.

"The Budget proposals as announced on the 29th of last month provide for the enhancement of the excise duty by 6 pies per square yard on all categories of cloth. This will mean that your Company will have to pay Rs. 9 lakhs more to Government under this head. It remains to be seen how much of this it will be possible to pass on to the consumer. The proposed penal tax on dividends declared at a rate of more than 6 per cent. on the paid-up capital will cost your Company Rs. 2 lakhs per annum if it reaches the Statute Book in its present form—assuming that the present rate of dividend distribution remains unaltered. This proposed tax operates most unfairly against companies such as yours which have prudently accumulated substantial reserves from the taxed profits of past years. Just as disturbing, to my mind, as the actual tax itself is the manifestation of the fact that the '6 per cent. mentality' persists in New Delhi. In conditions as they exist today—for example, the Bank rate in the U.K. is now 5½ per cent.—it does not seem reasonable that risk capital should only be allowed a return of 6 per cent. without a heavy penal tax, and particularly at a time when it is hoped to attract such capital to enter this country.

"As regards the Government's policy on personal taxation, I gave you my views on this last year and also reviewed the matter at some length in my address to the shareholders of your agency company. I do not propose to indulge in repetition and would only say that my views are unchanged. There is a saying in England that 'all work and no play makes Jack a dull boy.' It remains to be seen what effect the Government's present policy of 'all work and no pay' will have in this country.

"Trading in Indian cotton remained free of all restrictions during the whole year as, on account of ample availability, there was no reason for Government to reimpose the quota system. Prices of cotton remained steady throughout the year but weakened with the approach of the new season because of reports that the crop would be 55 lakhs of bales. This position was, however, short-lived as unseasonal rains caused damage to several of the growths and prices started to rise. Towards the close of the year there had been a very large appreciation and the forward market which had been moving around the Rs. 600-mark went up to Rs. 740. At this point, the Government decided to step in and take a hand. The contract was frozen at Rs. 700 and futures trading came to a stop. However, in the spot market prices continued to rise and some of the growths very nearly reached the ceilings fixed by Government. The position remains the same to the present time and it would seem that because of the statistical position there is little chance of any appreciable recession.

"Foreign cotton prices remained reasonably steady for most of the year but during the last quarter there was a definite upward tendency. Alexandria particularly recorded a steep rise. African and American growths remained fairly steady, but because of a recent announcement by America of the impending release of further large quantities of loan cotton, at competitive prices, these have tended to weaken.

"I will now turn to the report and accounts. The amount of Rs. 8.50 lakhs provided for taxation is made up of Rs. 5.01 lakhs for income-tax, Rs. 2.97 lakhs for corporation tax and Rs. 0.52 lakh extra for contingencies.

"To meet the statutory depreciation of Rs. 17,62,477 and to set off the initial depreciation of Rs. 3,70,175 allowed in previous years, your Directors have set aside a sum of Rs. 6.33 lakhs from the profits of the year and have appropriated a sum of Rs. 15 lakhs from the machinery reserve account. A sum of Rs. 3 lakhs has been appropriated from the profits of the year to the development reserve, being the amount of benefit derived from the development rebate. A sum of Rs. 1.50 lakhs has been put to the employees' pension and gratuity fund, bringing this to Rs. 12.50 lakhs which represents a full provision for present liabilities under this head.

"In view of the Millowners' Association's bonus pact with the Rashtriya Mill Mazdoor Sangh on the lines of the Ahmedabad Millowners' Association's agreement, it is calculated that your Company will be required to pay three months' basic pay as bonus for all the three years 1953, 1954 and 1955. It became, therefore, necessary to provide in the accounts of the year 1955, Rs. 4.43 lakhs in respect of 1954 in addition to Rs. 16.57 lakhs for the current year.

"The insurance value of your Mills' property and stocks on the basis of their reinstatement value now stands at Rs. 10.51 crores which is higher by Rs. 36 lakhs. This is due to an increase in machinery valuation by about Rs. 25 lakhs and to higher stocks of cotton.

"The balance-sheet figures show that your Company continues to be in a strong position as the current assets at Rs. 2.83 crores exceed the current liabilities and provisions by Rs. 1.45 crores. Secured loan of Rs. 38.64 lakhs is lower by Rs. 2.52 lakhs. The liability for expenses is down by Rs. 6.63 lakhs as no provision for arrears of D.A. was necessary this year. The liability for other finance is up by Rs. 11.27 lakhs due to the carry-over to the current year of the bonus unpaid for the previous year.

"On the assets side of the balance-sheet, the value of stocks of cotton and staple fibre is higher by Rs. 15.66 lakhs mainly due to the increase in the stock of cotton. Art silk and other yarns are up by Rs. 2.40 lakhs due to increase in the stock of art silk yarn. The stock of cloth, yarn and waste is lower by Rs. 3.66 lakhs due to good deliveries during the concluding period of the year. The stocks of stores, fuel and grain are lower by Rs. 2.36 lakhs. Book debts at Rs. 3.88 lakhs are up by Rs. 2.46 lakhs due to bills for cloth, yarn and cotton being outstanding at the close of the year. Advances at Rs. 10.27 lakhs are lower by Rs. 10.66 lakhs mainly due to cotton advances being down. Taxation under advances is down by Rs. 1.39 lakhs due to adjustments in the advance tax payments.

"Now I will give you some salient features of the profit and loss account.

"Cotton and fibre consumption is down by Rs. 13.37 lakhs due to the consumption of a larger proportion of cheaper cotton. Muccadumage is up by Rs. 0.80 lakh due to the increase in the muccadumage rate and also in the quantity of cotton received. Yarn and cloth commissions are slightly down due to the lower yarn and cloth values. The stores consumption, etc. is practically the same. Electric power is higher by Rs. 0.32 lakh due to increased consumption of energy. Salaries and wages are up by Rs. 9.99 lakhs due to the adjustment in the quantum of bonus as already explained. Dearness allowance is down by Rs. 11.89 lakhs compared to the previous year when Rs. 13.98 lakhs including arrears were paid according to a Court award. Rents and taxes are up by Rs. 0.47 lakh due to the increase in water rate by 2 annas per 1,000 gallons. Although stocks were higher, insurance is down on balance by Rs. 1.18 lakhs as the Company's contribution to the Employees' State Insurance amounting to Rs. 1.89 lakhs has been debited to salaries and wages this year as this item has been considered as a part of wages being the compulsory contribution to the Government Fund. Interest is higher by Rs. 0.68 lakh due to larger purchases of cotton. General charges are up by Rs. 0.58 lakh on account of the Indian Industries Fair, Delhi, where your Company's products were exhibited. Trade subscriptions are down by Rs. 1.98 lakhs, as a sum of Rs. 2 lakhs was paid as the Company's contribution to the Bombay Textile Research Association Fund in the previous year. Donations are up by Rs. 0.15 lakh due to a contribution to the Prime Minister's Relief Fund for flood-stricken areas in Bihar, Orissa and the Punjab.

"On the credit side of the profit and loss account, the sales of cloth, yarn and waste show a decrease of Rs. 9.89 lakhs mainly due to the production of a large proportion of the cheaper qualities. Yarn and cloth expenses are lower by Rs. 0.39 lakh in consequence. Miscellaneous receipts are up by Rs. 0.22 lakh due to a refund of excise duty.

"You will have seen from the notice that we have for confirmation by you at this meeting the renewal of the agreements of both our cloth and yarn selling agents. Messrs. V. S. Apte and Son and Messrs. Nahalchand Laloochand Ltd. have been your selling agents for 44 and 29 years respectively, and I can say without any hesitation that they have served your Company exceedingly well throughout this period. In keeping with the times they have agreed to reduce their commissions and from the 1st of April they will both be receiving about 25 per cent. less than hitherto. Our association with them has always been a very pleasant one, and I am confident that it will continue for many years to come.

"You will expect me to say something about the future. As far as your Company is concerned, it has practically completed a comprehensive programme of expansion and rehabilitation in the last ten years and a pause must now be made to consolidate the position it has attained. The outlook for cloth continues to be good and the yarn market is showing signs of improvement. We are now up to date with our bonus provision and the current year's accounts will not have to bear any additional burden in this regard, as was the case in 1954 and 1955. Further, your selling agents have agreed to a substantial reduction in their commissions. Against this, the year has got off to a bad start due to the disturbances in the city in the latter part of January, when several working days were lost and the Bombay cost of living index figure has not come down as much as was hoped. I must leave you to draw your own conclusions."

CANARA INDUSTRIAL AND BANKING SYNDICATE LIMITED

PROGRESS WELL MAINTAINED

DR. T. M. A. PAI'S CALL FOR GREATER SAVINGS AMONG PEOPLE

THE Thirtieth Annual General Meeting of the Canara Industrial and Banking Syndicate, Limited, was held in Udipi on 12th March 1956. Addressing the shareholders on the occasion, Dr. T. M. A. Pai, Chairman of the Bank, said that with the rapid change of the society into a socialistic structure, the part to be played by an individual member of the society had become greater and no one could escape his responsibilities. He also stressed the urgent need for associating all people in the great effort of building up the country and the increasingly important part which small savings would have to play in enlarging the resources of the country.

The following is the full text of Dr. Pai's speech:

"GENTLEMEN,

"During the year 1955 your Bank not only continued to maintain the progress it had made in the previous year but was able to record high under all heads of business. The following table gives you an idea of the progress for the last three years:

	On 31st December		
	1953	1954	1955
	Rs.	Rs.	Rs.
Paid-up Capital	25,34,158	25,52,152	26,75,568
Reserves	12,10,000	13,50,000	15,00,000
	37,44,158	39,02,152	41,75,568
Deposits	4,71,50,624	5,42,36,944	6,67,03,420

"The paid-up capital of the Bank increased by Rs. 1,23,416 to Rs. 26,75,568 with advance call being paid. With the transfer of Rs. 1,50,000 from the current year's profits, the reserves of the Bank stand at Rs. 15,00,000. Deposits have shown a progressive rise from Rs. 5,42,36,944 to Rs. 6,67 03,420 at the end of the year, while the total number of depositing accounts increased from 1,38 006 to 1,51,467. The total advances of Rs. 3,93,77,834 were made to 64,418 borrowing accounts and bills discounted for financing trade and the movement of goods amounted to Rs. 1,00,97,180, while by way of loans and advances an amount of Rs. 2,92,80 654 had been made for financing trade, commerce, industry and agriculture. The year's working brought the Bank total income of Rs 38,51,487, as against Rs. 33 10,054 last year. The following figures will give you an idea of the comparative allocation of the gross income and the net profits between various items:

Gross Income	Year 1953 of Rs. 27,44,043	Year 1954 of Rs. 33,10,054	Year 1955 of Rs. 38,51,487
	Rs.	Rs.	Rs.
Interest on deposits	8,35,846 (30%)	10,20,592 (31%)	12,61,226 (33%)
Interest on bank borrowings ..	23,305 (1%)	35,586 (1%)	49,818 (1%)
Salaries and allowances	9,16,006 (33%)	10,99,433 (33%)	13,49,415 (35%)
Stationery and printing, etc. ..	78,504 (3%)	1,16,018 (4%)	1,12,280 (3%)
Rents, rates, taxes, etc.	2,13,011 (8%)	2,14,990 (6%)	1,71,982 (4%)
Other expenditure	2,76,410 (10%)	3,02,223 (9%)	3,10,275 (8%)
Net profits	4,00,961	5,21,212	5,96,491

Net profit including amount brought forward	Year 1953 of Rs. 4,07,859	Year 1954 of Rs. 5,26,536	Year 1955 of Rs. 6,04,532
	Rs.	Rs.	Rs.
Transfer to reserves	1,10,000 (27%)	1,40,000 (27%)	1,50,000 (25%)
Dividends	1,52,536 (38%)	1,53,495 (29%)	1,75,701 (29%)
Bonus to staff	40,000 (10%)	50,000 (10%)	60,000 (10%)
Income-tax reserve	1,00,000 (24%)	1,75,000 (33%)	2,00,000 (33%)
Carry forward	5,323 (1%)	8,041 (1%)	18,831 (3%)

"The country's economy has made great progress with the completion of the first Five-year Plan and sure foundations have now been laid for a greater sacrifice and greater achievement through the second Five-year Plan, bolder and bigger than the first one which envisages a total expenditure of Rs. 4,800 crores in the public sector and increases the rate of investment of national income from 7 per cent. to about 12 per cent.

Importance of Savings

"Democratic planning calls for considerable voluntary restraint on the part of the citizen and the society should not only take the responsibility for laying down the targets of its requirements but also show its willingness to shoulder the burden and sacrifice which such a great effort necessarily entails. In a country determined to stand on its own, bulk of the resources will have to be found from within and the importance of current savings, therefore, on a large-scale is obvious. With the rapid change of the society into a socialistic structure which calls for not only the reduction in the level of high incomes but that the bulk of incomes should be made available to larger and larger numbers —the field from which such savings have now to be garnered is increasingly widened. This, therefore, calls forth a greater part to be played by an individual member of the society in having his own plan to be in conformity of the country's as no one can escape his responsibilities. Great achievements are a result of great sacrifice and no one should feel that, while he welcomed the investment of such a large-scale and magnitude, he has no responsibilities to meet the necessary resources for it. Rs. 4,800 crores after all will represent the sum total of the sacrifice we shall be called upon to make in the course of five years. What's necessary to appreciate is that you cannot take away anything from this pool unless you contribute to it in a big or small way. It has to come in either by way of tax receipts or loans or as deficit financing. Deficit financing is not a magic solution. It could only be the last resort and would mean, in short, the mortgaging of the future for the sake of the present.

"The need for enrolling everyone on this great effort, therefore, is urgent and the small savings would have to play an increasingly important part not only for the resources it might place at the disposal of the country but the psychological transformation it might bring about in our people and their thinking when they realise the part they play thereby in the grand task of building up the country. Our experience in the working of the pigmy scheme whereby we have enabled even the smallest man to save even two annas a day and the working of our rural branches in places which would not be considered bank-worthy has convinced me that, given the organisation and will, the task is not difficult.

Distinction between Private and Public Sectors

"An event of considerable importance has occurred recently when the State itself has taken over the responsibility of life insurance. Whatever the magnificent job private enterprise would have made of it, insurance had touched only the fringes of our people and if it had to cover aspects of social insurance like old age, sickness and unemployment—not only for a few, but a larger and larger section of the people—only a State enterprise could do it introducing an element of compulsion if necessary. In a national endeavour, the so-called distinction between private and public sector loses much of its pitch and point. These sectors are complementary and not mutually exclusive. The goal is of raising the country and its people into economic independence and utilising the available resources to the maximum advantage. If this is realised there is greater scope for co-operation and understanding between all sectors. Profit motive, however useful it might have been for economic development at one stage, has perforce to be tempered with service motive and as I said last year, if private enterprise cannot adapt itself to these dynamic changes, it would have lost its prime virtue and will go under.

"Banks should increasingly make themselves useful not only in collecting the savings of the community but in doing that these savings are best utilised in the objective of the national plan. It is a conscious effort to be voluntarily undertaken. The Chairman of the State Bank has rightly called upon the banks to stop the deliberate competitive rises in bank deposit interest rates.

"We should appreciate, the need of the hour is to reduce the costs of our services in the face of our unavoidable mounting charges. While I welcome the increasing remittance facilities extended by the State Bank to other banks, in my opinion it should reconsider its charges and reduce them for handling collection work at its branches for other banks and transmit these benefits particularly to the public, in view of the fact that the State Bank will have special privileges in opening branches.

"I am glad the relation between the banks and the employees is improving. As I have already pointed out, increasing costs of bank operation could be set off only by increasing efficiency of bank personnel. Is it too much for the trade union movement to instil among their members responsible leadership and the necessity for proper discipline and to improve personal efficiency by proper training and vocational aptitudes? On my part, I record with pleasure the part played by our own staff in the building up of the institution by hard and unstinted work under their General Manager, Mr. T. A. Pai."

I.M.F. LOAN TO CHILE

The International Monetary Fund has granted Chile an exchange stabilisation loan of $30 million. It is reported that the Chilean authorities expect to obtain a similar amount from American sources. In order to secure the balance of $34 million needed for the exchange stabilisation fund—the I.M.F. is apparently only willing to advance $30 million—the Government may have requested an advance from the Anaconda and Kennecott copper companies against future dollar taxation. While the companies would be amply guaranteed, because taxation payments are soon due and it has been customary to make such advances for many years, the companies would be in a strong position to induce the Government to refrain from asking for any increase in the price of Chilean copper exported to the U.S. Thus 46 cents can become the stabilised maximum for an indefinite period.

ZAGREB SPRING FAIR

March 30th to April 8th, 1956

This year's Fair will be even bigger than the 1955 Spring Fair at which over 1,000 enterprises displayed more than 3,000 exhibits and 126,000 visitors attended. The rapidly expanding economy in Yugoslavia makes it possible to offer a wide range of products, including mining, timber and wood products, textiles, engineering and electrical equipment, handicrafts, tobacco and medicines, glassware, foodstuffs and wines. A special section of the Fair will be devoted to featuring Yugoslav Craftsmanship. There are exceptional facilities for buyers and visitors with Fair Certificates, including 25 per cent. reduction in fares on Yugoslav Federal Railways, Yugoslav Airways and Adriatic Shipping Line, and visas issued at a reduced price.

Further information and Fair Certificates can be obtained from

Yugoslav commercial and diplomatic representatives, or direct from

ZAGREBACKI VELESAJAM
Savska Cesta 25, Zagreb, Yugoslavia.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the Central Bank of India, Ltd., as at the 31st day of December 1955 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the audited Returns of 76 Branches, the unaudited Returns of the Pay Offices and other Branches, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;
(b) The transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) The Returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit;
(d) In our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;
(e) Such Profit and Loss Account shows a true balance of profit for the year;
(f) Such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and explanations given to us and as shown by the books of the Bank: and
(g) In our opinion, books of account have been kept by the Bank as required by Section 180 of the Indian Companies Act 1913.

METRIC SYSTEM OF WEIGHTS AND MEASURES

SCIENTIFICALLY CONCEIVED DEVICE FOR SIMPLIFYING CALCULATIONS

By Mr. Pitambar Pant

IT is common knowledge that weights and measures in use differ from place to place in our country. Not only they vary from one area to another, but, in the same area, different weights and measures are used for different commodities. Even the same designated unit has very often different values. Some idea of this bewildering diversity can be had from information collected by the National Sample Survey which conducts investigations, throughout the country, twice or thrice a year, on various topics of social and economic importance. The survey revealed that in 1,100 villages, scattered at random all over the country, as many as 143 different systems of measurements of weight were in use. The situation was reported to be even worse in respect of measurement of volume and land area. Even if certain terms are apparently in wider use, often, they in fact do not represent the same weight. For example, there were observed 100 different *maunds* with weights differing in tolas from 280 to 8,320 in contrast to the standard maund of 3 200 tolas, and *seers* varying from 8 standard tolas to 160 tolas as compared with the standard seer of 80 tolas.

Chaotic Diversity

Such chaotic diversity in weights and measures, which constantly enter into the common transactions of daily life, is a source of much confusion and difficulty. Variations in weight from place to place prejudice the chance of the cultivator getting a fair price for his produce in the markets within his own State and also in the other States. Prices of different commodities in different parts of the country are quoted on the basis of local weights. Since the names of the weights used and the weights which each one of them indicates vary from place to place, the quotations are not understandable except by those in close touch with the markets concerned, and the cultivator is rendered helpless in his dealings with skilful traders. He is further deceived very often by the buyer of his produce who replaces the lighter weights with the heavier weights in weighments. He is also overwhelmed by the complexities of calculations, which he cannot even follow correctly, far from working out himself. Marketing developments on sound lines, the introduction of grades and standards, and supplying price quotation to rural areas will be of little use if this chaos of varying weights and measures is allowed to exist. Space does not permit to recount the many disadvantages of the present situation, but it is obvious that the inconvenience and harm resulting from lack of standardisation affects not only cultivators but all the people, except the unscrupulous few who exploit the situation to make profit for themselves by deceiving others. The only remedy is to set aside this multiplicity of local and regional systems of weights and measures and substitute in their place a uniform system which should be easy to learn and use, unequivocal and common throughout the country.

The need for this reform in India was recognised even a century ago and, in fact, the Government of India passed an Act in 1871 for standardising the weights in accordance with the metric system. Unfortunately, no interest was taken to implement the reform, and the confusion has more or less continued. The main significance of the recent decision of the Government is that it indicates a determination not to let matters drift and to take vigorous steps to introduce a uniform system of weights and measures based on the metric system.

Manifold Blessings

The blessing of metric standardisation to our country will be manifold. It will put an end to the confounding diversity of current weights and measures with all their attendant disadvantages and bring about the much needed standardisation of weights and measures so essential for widening commerce, facilitating trade and strengthening national solidarity. This standardisation will not only be achieved at the national level but simultaneously at the international level and will be of value to the country in its foreign trade and commerce. There are few examples of international collaboration as striking as the near-universal adoption of the metric system of weights and measures which is now the sole legal system in practically all the countries except the United States of America, the United Kingdom and the Commonwealth countries; and even in the U.S.A. and U.K. where the English system (also known as the foot-pound system) is the more common, the metric system has a legal status and is, in fact, increasingly coming into use.

Even more important than this blessing of standardisation is the tremendous simplification in calculations, of diverse kinds, brought about by the metric system. It is the only system scientifically conceived as a simple, uniform and integrated system of weights and measures suitable for international adoption. It has not grown haphazard like our so-called standard *maund*, *seer* system or the English system of foot-pound-gallon. The key to the simplicity and superiority of the metric system is to be found in its strictly symmetrical structure, systematised on one base ratio of 10 throughout, corresponding to the decimal place value notation in the representation of numbers. To understand why it is so, we have to delve a little into the history of arithmetic.

The ingenious method of expressing all numbers by 10 symbols, on which our arithmetic is based, each receiving a value of position as well as an absolute value, was given to the world by India about 1500 years ago, perhaps even earlier. This profound and important idea, because of its simplicity and the great ease which it has lent to all computation, puts our arithmetic in the front rank of useful inventions.

Previous to this epoch-making discovery, counting and calculation was a most clumsy affair. In fact, even as long ago as 500 years, calculations continued to be carried out in Europe through the Roman system of numbers. Numbers could be added and subtracted only by taking recourse to a counting frame, the *Abacus*. What now appears to us a simple exercise in multiplication and division, within the competence of any school child, was considered in those days a problem calling forth advanced knowledge of mathematics. There is a story of a German merchant of the fifteenth century who had a son whom he desired to give an advanced commercial education. He appealed to a prominent professor of a university for advice as to where he should send his son. The reply was that if the mathematical curriculum of the young man was to be confined to adding and subtracting, he perhaps could obtain the instruction in a German university, but the art of multiplying and dividing, he continued, had been greatly developed in Italy, which in his opinion was the only country where such advanced instructions could be obtained! An honest effort to multiply XIV (i.e., 14) by XL (i.e., 40) in the Roman way will convince anyone that the greatly increased facility with which the average man today manipulates numbers has nothing to do with the growth of human intellect. The truth of the matter is that the difficulties then experienced were inherent in the numeration in use, a numeration crude and inflexible, and not susceptible to simple clear-cut rules. The discovery of the modern positional numeration did away with these obstacles and made arithmetic accessible even to the dullest mind. This principle constituted a radical departure of method and ended the utter stagnation that had characterised the field of reckoning for thousands of years, and made possible the subsequent rapid advance in mathematics. Indeed, in a way, the Hindu numerals constitute the foundation on which the entire scientific and technological superstructure rests. We may recall with pride this great contribution of ancient India to the progress of civilisation.

Universally Adopted

As we all know, this system, now universally adopted, is a "tens" system, the value of any digit in a whole number varying with its place in the number, starting with units at the right and increasing to the left in the order: unit, ten, hundred, thousand and so on. Each place of value is 10 times the place value to its right. Thus 777 means 700 plus 70 plus 7. Simon Stevin's invention of the decimal point in 1585 extended the tens system to the right as to the left. It made it possible to decrease by tens as well as to increase by tens. Moreover, it made it possible to handle a whole number and a part as easily as a whole number was handled before; and most important of all it made

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Bank of Baroda, Ltd., as at 31st December, 1955, and also the above Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the audited returns from Bombay, Calcutta, Ahmedabad, Surat, Coimbatore, Madras and the three branches in British East Africa and the authenticated returns from the other branches and report that :—

(a) We have obtained all the information and explanations we have required, and have found them to be satisfactory ; (b) in our opinion, the said Balance Sheet exhibits a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shown by the books of the Bank ; (c) such Balance Sheet and the explanations given to us are as required by law ; (d) the transactions of the Bank which have come to our notice are within the powers of the Bank ; (e) the returns received from the branch offices of the Bank have been found adequate for the purpose of our audit ; and (f) the profit and loss account shows a true balance of Profit and Loss for the period covered by the accounts.

fractions—so inconvenient to deal with—completely unnecessary.

The metric system is nothing more or nothing less than the application of decimal number system, to measurement. In this integrated system the units of length, surface, volume, capacity and mass are based on the metre as the fundamental unit; and as a primary and essential condition of the system, all must bear a strictly decimal relation to each other. The metre is defined as the distance between two engraved lines on a bar of platinum-iridium alloy which is preserved as the standard Metre stick in the archives of the International Metric Commission at Sevres, near Paris. With this fundamental unit metre, by simply multiplying by 10 successively or by a similar simple process of decimal subdivision, is built up a system of measures of length which have been demonstrated as adequate for the needs of science, commerce and industry. For the multiples of its principal units, the metric system employs *Greek* prefixes *deca* (10 times), *hecto* (100 times) and *kilo* (1000 times); for the sub-multiples the *latin* prefixes *deci* (one-tenth) *centi* (one-hundredth) and *milli* (one-thousandth). With these six prefixes, used along with the three primary units 'metre', 'litre' and 'gram' and a more arbitrary unit 'ar' for area, it is possible to construct all the metric units in ordinary use. An important feature of the system is the simple relationship between the primary units. The mass of a volume of pure water equal to a cube of the one-hundredth part of a metre is a *gram*. As the *gram* is rather small for most weighings, the *kilogram* is employed as a practical unit. The *litre* is simply the volume occupied by the mass of one kilogram of pure water.

The much greater convenience in calculation resulting from the adoption of the metric system may be illustrated by giving some simple examples. Let us compare, for example, a problem calling for conversion of smaller units to larger ones in the English and the Metric systems:

157 inches=13 1/12 feet=4 13/36 yards.

157 centimetres=15.7 decimetres=1.57 metres.

In the English system to change inches to feet it is necessary to divide by 12 and since we cannot readily do this in mind, we have to work it out as a division problem and right away, we have to deal with fractions. To change feet to yards, we must divide by 3, a small number but again we run into difficulties because we have to divide a mixed number, that is a whole number and fraction. In the metric system the conversion is simply a matter of shifting the decimal point one place to the left to get the next larger unit.

Some Problems

Let us take the problem of calculating the capacity of some tank, the volume of water contained in it and its weight, as measured by the two systems. In English units the problem is: Given a tank 8 feet 9½ inches long, 6 feet 5½ inches broad and 4 feet 3½ inches deep, filled with water, find (*a*) capacity of the tank in cubic feet, (*b*) the volume of water in gallons, and (*c*) the weight of water in pounds. The same problem in metric units will be stated as: Given a tank 2.68 metres long, 1.97 metres broad and 1.31 metres deep, find (*a*) capacity of the tank in cubic metres, (*b*) the volume of water in litres and (*c*) the weight of water in kilograms.

In the English system we have first to reduce the measurement to inches to simplify calculation and then multiply these fractional measurements of length, breadth and depth to get the volume in cubic inches. The result, 421075⅔ cubic inches, has to be divided by the number of cubic inches in one cubic foot (1728) to get the volume in cubic feet. After a process of long division we arrive at x the result 243.678 cubic feet. To get the volume in gallons, the volume in cubic inches has to be divided by number of cubic inches in 1 gallon (231, a difficult figure to remember), giving the volume as 1822.843 gallons, after again a long division. To get the weight in pounds the number of cubic feet have to be multiplied by 62½, the pounds in 1 cubic foot of water, giving the result 15229.938 pounds. If any of these results are to be further reduced to smaller or larger units, one has to resort to cumbrous multiplications and divisions by numbers such as 27, 1728, 4, 8, 16, 112, 2240.

In the metric system the volume in cubic metres is arrived at simply by multiplying, as decimal numbers, the three measurements of length, breadth and depth, giving directly the volume in cubic metres as 6.916276. Since there are 1,000 litres in 1 cubic metre, by simply moving the decimal point three places to the right we get the volume in litres, which comes to 6916.276 litres. And finally since 1 litre of water, by definition, weighs 1 kilogram, by merely changing the name, we get the weight of water as 6916.276 kilograms. Conversion to smaller or larger units is, as we have already seen, a simple matter of shifting the decimal point.

Let us take a problem of working out costs starting with corresponding units and determining the cost for smaller units. In metric units and decimal currency:—

If 1 metric ton (of, say silver) costs Rs. 80000.00

then 1 kilogram costs Rs. 80.00

and 1 gram costs Rs. .08 naya paisas.

Whereas in English units and our present anna-pie coinage,

If 1 long ton costs Rs. 80.000

then 1 pound costs Rs. 35 as. 11 pies 5

and 1 ounce costs Rs. 2 as. 3 pies 8.

In metric unit and decimal currency, the effort involved is limited to shifting the decimal point three places to the right for deducing cost per kilogram from cost per ton or getting at cost per gram, given cost per kilogram. In English unit, to deduce the cost per pound one has to divide the cost per ton, by 2,240, the number of pounds in one ton: further, as the rupee does not have decimal sub-divisions, to convert the fractional part of rupee into annas and pies multiplication by 16 and 12 and divisions by 2,240 becomes necessary at successive stages. Stepping down to cost per ounce, the complex amount in Rs. as. pies, which is obtained as the cost per pound, has to be divided by 16, involving again much labour.

These are some simple types of problems. There are many others which must be taught if the child is to be able to calculate in various kinds of measures. All these involve addition, subtraction, multiplication, division and reduction to larger and smaller units in each of the different and unrelated tables of measures (length, area and volume, capacity and weight). And we have the further misfortune of having to learn not only one system but several, local, Indian, English and metric. The result is that our children learn less and take longer to do it than, say, the French or the Russian, the German or the Chinese children who use the metric system. Because of poor tools they are not able to develop the skill in handling measures that is enjoyed by children in countries using the metric system. Indeed, few even among educated adults in our country can readily cite the various tables of measures used in our daily life, and even fewer can handle with ease the bothersome calculations involved in their use.

It will be clear that it is almost impossible to design a system more easily learned than the metric system. The same simplification and increased efficiency that would occur in education, would be carried over into every phase of life because of standardised measurement.

To sum up, the superiority of the metric system rests on the following:

(*a*) The scientific character of the fundamental units of the *metre*, *litre* and *gram* and the simplicity of the interrelations between them.

(*b*) The simple decimal manner in which the multiplication and division of units of the same measure proceed and which makes the metric system easier to work with and facilitates simplicity in computation.

(*c*) The smaller number of units in common use and the greater ease with which the *names* are learned and retained.

(*d*) The greater convenience, the greater adaptability and greater comprehensiveness in filling the needs that a unified system of weights and measures is called upon to fill.

(*e*) Its international status, being used as the sole system in all except a few countries and parallelly used and legalised in the others.

It is obvious that this logic is not conditioned by geography or race or language. It applied equally to China or the U.S.A. or France, the U.S.S.R. or Germany, Afghanistan or Indonesia, America or England. If the last two have been clinging to the archaic, unscientific and cumbrous system of units—the English system—it is because the English system is too deeply entrenched there and its abandonment is correspondingly more difficult. The advantages of the metric system are so obvious and so overwhelming that it is easy to find the strongest support for it even in countries which have not adopted it.

One might quote from the excellent Report on Weights and Measures prepared by the U.S. Secretary of State, John Quincy Adams (later President of the U.S.A.), in 1921. Speaking of the metric system, then still in its infancy, he says:

"This system approached to the ideal perfection of uniformity applied to weights and measures and whether destined to succeed or doomed to fail, will shed unfading glory upon the age in which it was conceived and upon the nation by which its execution was attempted, and has in part been achieved. ... The single standard proportional to the circumference of the earth, the singleness of the units for all the various modes of mensuration; the universal application to them of decimal arithmetic; the unbroken chain of conversion between all weights, measures, moneys and coins; and the precise, significant, short and complete vocabulary of their denominations; altogether forming a system adapted equally to the use of all mankind, afford such a combination of the principle of uniformity for all the most important operations of the intercourse of human society; the establishment of such a system so obviously tends to that great result, the improvement of the physical, moral and intellectual condition of man upon earth, that there can be neither doubt nor hesitancy in the opinion that the ultimate adoption and universal, though modified, application of that system is a consummation devoutly to be wished."

Further he goes on to say:

"Considered merely as a labour-saving machine, it is a new power afforded to man incomparably greater than that which he has acquired by the new agency which he has given to steam. It is in design the greatest invention of human ingenuity since that of printing."

From the United Kingdom, we have the testimony of Lord Kelvin, the noted scientist:

"I believe I am not overstating the truth when I say that half the time occupied by clerks and draftsmen in engineers' and surveyors' offices—I am sure at least one half of it—is work entailed upon them by the inconvenience of the present farrago of weights and measures. The introduction of the world metric system will produce an enormous saving in business offices of all kinds—engineering, commercial and retail shop."

Even though in these countries the metric system has not been adopted as the sole system of measurement, progressively in many sectors it has come to its own. Electricity, radio and electronics, pharmaceuticals, and in several other fields, the metric system has been making rapid inroads. The existence of two systems where metric alone would have served the purpose better, creates unnecessary confusion and waste of labour. In the graphic words of Prof. Khvolson, who was speaking in 1875 at the Russian Technical Society, the prognosis is, however, clear: "The metric system is an elemental force impossible to subdue and to fight against it is sheer recklessness. Open the gates to it and it would come in as a friend, as a benefactor but if you close the door upon it, it would take you by storm as an enemy and would conquer territory inch by inch falling upon you through million chinks. It would be besieging on all sides and would step by step force you to yield positions to it. Against its invincible power you would have to lay down arms and would finally find yourself in a desperate position."

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE SEVENTIETH ANNUAL GENERAL MEETING of the Shareholders of THE SVADESHI MILLS COMPANY, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Thursday the 12th April 1956, at 4.30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Statements of Accounts of the Company for the year ended 31st December 1955.

(2) To declare Dividends.

(3) To appoint three Directors in place of those who retire by rotation but who are eligible for re-appointment.

(4) To consider, and if thought fit to pass, four resolutions (including three Special Resolutions) copies of which with an explanatory statement have been posted to the shareholders.

(5) To appoint Auditors and to fix their remuneration.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
TATA INDUSTRIES LIMITED,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 15*th March* 1956.

Note.—(*a*) The Transfer Books of the Company have been closed from Monday the 12th March to Monday the 9th April 1956, both days inclusive.

(*b*) The dividends, if sanctioned at the General Meeting, will be payable at the Bank of Baroda, Ltd. from Friday the 13th April 1956, to the shareholders whose names stand on the Register of the Company on the 9th April 1956, and the dividend warrants will be duly posted to the registered addresses of such shareholders.

To,

The Shareholders of The Svadeshi Mills Co., Ltd., and in particular to:—

Dr. Ali Athar H. Fyzee, Andre Caetano Lobo, Bai Amina Essop Mia, Mrs. Aloobai Minochar Dinshaw, Bai Dosibai Ardeshir Kapadia, Mrs. Doris Oldine Mitchell, Feroze Darashaw Dalal, Mrs. Jillah Merwan Nanavutty, Jose Joaquim Da Piedade Falleiro, Jal Hormasjee Piroshaw Byramjee, Mrs. Lucia Vaze Lima, Maneck Hormasji P. Byramjee, Mohamed Siddique Hasan, Mrs. Nan Ellis Jones, Omar Latiff, Pestonji Dinshaw Dastur, Mrs. Leena Ribeiro, Silvia Ribeiro Miranda and Virbaiji Pestonji Dastur.

THE SVADESHI MILLS COMPANY LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting the payment of the following dividends to the Shareholders for the year ended 31st December 1955:—

Rs. 5 per share free of income-tax on Preference Shares.

Rs. 12 per share without deduction of income-tax on Ordinary Shares.

For and On behalf of
THE SVADESHI MILLS CO., LTD.,
TATA INDUSTRIES LTD.,
Managing Agents,
T. V. BADDELEY,
Director.

BOMBAY, 15*th March* 1956.

THE TATA MILLS LIMITED

NOTICE

THE FORTY-FOURTH ANNUAL GENERAL MEETING of the Shareholders of THE TATA MILLS, LIMITED, will be held at the Registered Office of the Company, Bombay House, Bruce Street, Fort, Bombay, on Friday the 13th April 1956, at 4.30 p.m. (S.T.), to transact the following business:—

(1) To adopt the Directors' Report and the audited Statements of Accounts of the Company for the year ended 31st December 1955.

(2) To declare a Dividend.

(3) To appoint two Directors in place of those who retire by rotation but are eligible for re-appointment.

(4) To consider, and if thought fit to pass, a Special Resolution, a copy of which with an explanatory statement has been posted to the shareholders.

(5) To appoint Auditors and to fix their remuneration.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,
TATA INDUSTRIES LTD.,
Managing Agents,
A. D. SHROFF,
Director.

BOMBAY, 15*th March*, 1956.

Note.—(*a*) The Transfer Books of the Company have been closed from Monday the 12th March to Monday the 9th April 1956, both days inclusive.

(*b*) The dividend, if sanctioned at the General Meeting, will be payable at the State Bank of India, from Saturday the 14th April 1956, to the shareholders whose names stand on the Register of the Company on the 9th April 1956, and the dividend warrants will be duly posted to the registered addresses of such shareholders. The dividend is not payable on the new shares allotted in January 1956, in accordance with the terms of their issue.

THE BENGAL PAPER MILL COMPANY, LIMITED

THE DIRECTORS HAVE DECIDED TO RE-commend to the forthcoming General Meeting of the Shareholders dividends for the half-year ended 31st December 1955, as follows:—

(*a*) Dividend on Cumulative Preference Shares at 7 per cent. per annum, free of Income-tax.

(*b*) Dividend on "A" Cumulative Preference Shares at 7 per cent. per annum, free of Income-tax.

(*c*) Dividend on "B" Cumulative Redeemable Preference Shares at 6 per cent. per annum (subject to deduction of Income-tax).

(*d*) Dividend on Ordinary Shares at 20 per cent. per annum, free of Income-tax.

For and On behalf of
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA.

THE TATA MILLS LIMITED

NOTICE

THE DIRECTORS OF THE COMPANY HAVE decided to recommend to the Annual General Meeting, the payment of a dividend on Ordinary Shares at Rs. 4 per share, without deduction of income-tax, to the shareholders for the year ended 31st December 1955.

For and On behalf of,
THE TATA MILLS LIMITED,
TATA INDUSTRIES LTD.,
Managing Agents,
A. D. SHROFF,
Director.

BOMBAY, 15*th March* 1956.

THE MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD.

THE SHAREHOLDERS,

THE MAFATLAL FINE SPG. & MFG. CO., LTD.

GENTLEMEN,

THE ANNUAL GENERAL MEETING OF THE Company was to be held on Thursday the 29th March 1956, at 2-30 p.m. (I.S.T.), as advertised in the following papers:—

The Times of India, Bombay, on Saturday, the 3rd March 1956

The Bombay Samachar, Bombay, on Saturday, the 3rd March 1956

Sandesh, Ahmedabad, on Monday, the 5th March 1956.

It is, however, found that individual Notices and Balance Sheets and Profit and Loss Accounts of the Company could not be sent to the Shareholders sufficiently in time and it is therefore necessary to change the date of the Meeting which will now be held on Monday the 9th April 1956 at 3 p.m. (I.S.T.), as notified below:

NOTICE

NOTICE is hereby given that the Twenty-fifth Ordinary General Meeting of the Shareholders of the Company will be held at the Registered Office, Mafatlal House, Back Bay Reclamation, Bombay 1, on Monday the 9th April 1956, at 3 p.m. (I.S.T.), to transact the following business:

1. To receive and adopt the Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955.
2. To declare Dividends on Preference Shares and Ordinary Shares.
3. To elect a Director in place of Shri Arvind N. Mafatlal who retains Office till the General Meeting and is eligible for re-election.
4. To elect a Director in place of Shri Hemant B. Mafatlal who retains Office till the General Meeting and is eligible for re-election.
5. To elect a Director in place of Shri Kumudchandra K. Mahadevia who retires by rotation and is eligible for re-election.
6. To elect a Director in place of Shri Bipinchandra P. Patel who retires by rotation and is eligible for re-election.
7. To appoint Auditors for the current year and fix their remuneration.
8. To transact any other business the Chairman may bring before the Meeting.

A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

The Transfer Books of the Company are closed from Friday the 2nd March to Friday the 23rd March 1956, both days inclusive.

By Order of the Board of Directors,
NAVINCHANDRA PURSHOTAMDAS & Co., LTD.,
ARVIND N. MAFATLAL,
Director,
Secretaries, Treasurers & Agents.

MAFATLAL HOUSE,
BACK BAY RECLAMATION,
BOMBAY 1, 14*th March* 1956.

N.B.—The Dividends as recommended by the Directors when sanctioned by the Shareholders will be paid at the Bank of Baroda Ltd., Back Bay Reclamation Branch, Bombay, from Friday the 13th April 1956 to 31st July 1956, during business hours, and thereafter at the Registered Office of the Company during Office hours, excepting Saturdays, to those Shareholders whose names are on the Company's Register on 23rd March 1956.

Shareholders are requested to intimate to the Company immediately any change in their Registered address.

Ganges know the Ropes

The statement 'From a ball of string to a coil 26' in circumference,' is an appropriate description of the range of ropes manufactured at the Ganges Rope Factory. Equipped with the most modern Hard Fibre Spinning Plant in the East, using only the best raw materials and backed by the practical experience of over half-a-century in the rope business, it can well be said that 'Ganges know the Ropes'

Raw materials including Coir Yarn, Indian Hemp, Cotton Yarn, Jute, Philippines' Manila Hemp and East African Sisal Hemp are processed to produce a wide range of ropes: Yellow Rope, used by every villager; Manila and Sisal Ropes, employed in the Shipping Trade and Engineering Industry; Heald Cord and Hart/Ganges Lambeth Cotton Ropes, used by the Textile Industry; Coir Ropes, for inland steamer services (and also an important export to South East Asia) and Temperband Cord, used by the Jute Industry.

STORES PURCHASE POLICY OF GOVERNMENT

PRICE PREFERENCES FOR ENCOURAGING INDIGENOUS INDUSTRIES

THE experience of those in industry and trade engaged in supplying stores and materials to Government departments, has not been quite happy. This has been so particularly in respect of their dealings with the Central Purchasing Organisation of the Government. The Organisation has been criticised on many grounds. It has been said that the Organisation can no longer function efficiently and that the over-centralisation of purchase activities in one department has tended to hinder national incan no longer function efficiently and that the Directorate General of Supplies and Disposals is dilatory in dealing with post-contractual correspondence, particularly in the matter of requests for extensions or regularisation of delivery and finalisation of provisional prices. Such delays result in withholding, inordinately, payments to suppliers, thereby blocking large amounts of money. Again, it is complained that the Directorate is needlessly harsh in demanding guaranteed deliveries and in insisting that deliveries must be treated as the essence of the contract which should be adhered to, failing which penalties as provided in the conditions of contract are levied.

These complaints are doubtless not without foundation. For, if the traders have failed to fulfil the supply contract in time, the delays are often due to factors beyond their control, such as non-issue, in time, of import licences, non-availability of railway wagons, delays effected in Testing House Laboratory, etc. These delays on the part of suppliers, in their turn, hold up implementation of projects in the Plan and thus cause losses by creating operational inefficiency, payment of idle time to labour in workshops, etc. It was to review the whole position that the Government of India appointed a Stores Purchase Committee. This Committee was asked, among others, "to examine the scope and functions of the Central Purchase Organisation and to determine whether the Organisation should be continued and, if so, to what extent there should be delegation of powers to the indenting departments for direct purchases with particular reference to specialist stores and emergent demands."

The Central Purchase Organisation in India developed from the old Indian Stores Department set up in 1922 for the purpose of encouraging the development of Indian industries so as to meet Government's requirements as far as possible. During the war, it expanded enormously and took over the purchases on behalf of the Defence Services. It is claimed that the Organisation has been one of the major instruments for the development of a number of industries in the country and for ensuring that their products achieve the requisite quality and are available at competitive prices.

Central Body to Continue

The Stores Purchase Committee which examined the scope and functions of the Organisation came to the definite conclusion that not only should this central body continue, but should be strengthened so that it can progressively and effectively undertake the purchase of specialised equipment hitherto purchased directly by the indentors and serve the needs of all departments of Government including statutory authorities, river valley projects and State-owned industrial and other enterprises as and when possible. In arriving at this conclusion, it had the full support of trade and industry in India. The Committee made a number of other suggestions for improving the working of the Central Purchase Organisation so as to eliminate the existing causes of delay at all stages. It emphasised the need for co-operation between the D.G.S. and D. as the Central Purchasing Organisation and the various suppliers so that delivery schedules, once finalised at the time contracts were placed, should be strictly adhered to. Deliveries of acceptable stores by the due dates must necessarily contribute, it said, to eliminating protracted correspondence on the question of extension and regularisation which are the principal causes leading to delay in payment of suppliers' bills and the withholding of amounts due to suppliers over which the latter have been naturally agitated.

The majority of these recommendations have been, according to Sardar Swaran Singh, Union Minister for Works, Housing and Supply, accepted by the Government of India. The Government has accepted the principle of a centralised machinery for the purpose of purchasing Government requirements of stores subject to suitable provisions and safeguards for direct purchases where necessary, as, for instance, in the case of purchases of small value, purchases in an emergency and purchases by particular projects in the initial stages of construction. What is more, the Government has taken certain important steps. These include (*a*) the creation of a Progress Wing within the D.G.S. and D., the principal task of which will be to follow up contracts after they have been concluded, so that, in close liaison with the indentors, inspectors and the suppliers, the supplies can be arranged within the period stipulated in the contract, (*b*) the restoration of the 21 days' grace period which had been withdrawn earlier, and (*c*) insistence that the consignees' certificates are received without delay.

Delivery Schedules

It will be appropriate to recall here the experience gained by the Government in the work of purchasing its requirements from traders and manufacturers in India. The problems facing it were explained by Sardar Swaran Singh, the Union Minister mentioned above. Presiding over a conference of officials of the Government of India and representatives of trade and industry held at New Delhi last month, this Minister stated that, with the expansion of Government purchase activities in line with the growing importance of the State under the Five-year Plans, the importance of complying with delivery schedules had grown immensely. For proper implementation of the projects contained in the Plan and their completion within the target dates fixed in the Plan, the Central Purchase Organisation would necessarily have to ensure that its purchases were effected in such a manner and with such priority in regard to allocation of raw materials currently in short supply that the deliveries materialised within the dates furnished by the indentors, which were worked out on the basis of their overall plans for the completion of each project.

Referring to the complaint that the D.G.S. and D. was harsh in demanding guaranteed deliveries and in insisting on deliveries being treated as the essence of the contract, the Minister said that deliveries were an important aspect of purchase if the Government had to complete its projects within specified periods. Prolonged delays in several cases had not only created in the minds of the indentors a feeling of uncertainty about supplying materials in time, but had caused incalculable losses in operational efficiency and loss of time and money in maintaining idle labour due to failure of timely deliveries of stores, etc. He said that as a department, undertaking purchases on behalf of various Government departments, the Central Purchasing Organisation would have to ensure that the interests of taxpayers were adequately safeguarded. He stated that the conditions of contract should, therefore, be just and fair and should not differentiate between one supplier and another. In this context, he pointed out that some suppliers of stores had accepted the Government contracts promising supplies of stores within a specified delivery period but had delayed supplies for no apparent reasons other than to create conditions of scarcity. It was not infrequent, he added, that the very supplier who had failed to comply with his contract with the D.G.S. and D., supplied the same stores at much higher prices against emergent purchases effected by indentors themselves, owing to the failure of supplies against the D.G.S. and D.'s contract. Sub-standard stores, too, had been, he said, supplied on occasions causing inconvenience to all subsequently. Such undesirable practices as these deserve to be condemned in the interests of the genuine trade and the taxpayer, and people responsible for such tactics should be punished by removing them from the list of recognised vendors. However, in cases where the failure is due to genuine causes, consideration should be shown to the supplier concerned, especially if he has to his credit a fair record as a dealer in the stores concerned.

Indigenous Industries

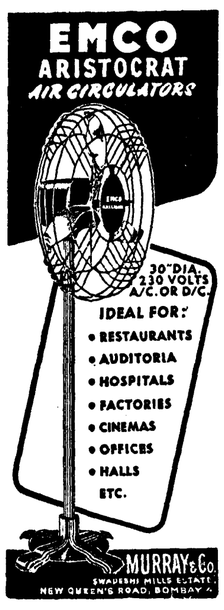
Sardar Swaran Singh indicated the policy of the Government in respect of placing orders for stores manufactured within the country. He pointed out that the Stores Purchasing Committee had given prominence to the necessity of the Central Purchase Organisation serving as an instrument for encouraging the development of indigenous industries, particularly with regard to stores purchased in substantial quantities. In implementing this recommendation, the Government had to proceed, he observed, cautiously so as not to encourage inflation of existing prices for indigenous products or a sense of complacency on the part of suppliers with regard to the need for improvement in efficiency, quality and economy in the manufacture of such products. The quantum of price preference for stores would have to be revised from time to time, he averred, as the aim should be to encourage the production of goods of the same quality as that of imported products and at prices which were competitive with world prices.

In view of the importance of cottage and small-scale industries in the national economy, the role of the Central Purchase Organisation in encouraging the industries was explained by the Minister. During the last three years, *khadi* purchases had increased from Rs. 27,000 to Rs. 87 lakhs. Purchases of stores produced by these industries amounted to Rs. 2.10 crores in 1955, as against Rs. 1.13 crores in 1952. "Such a policy is necessary," the Minister remarked, "not only to support an integral part of our national economy so as to provide greater employment and raise the standard of living in the rural areas, but also to ensure the fullest use of our national resources." He took care to add that in encouraging the small industries attention was given to economy, quality and prompt delivery.

Non-official Advisory Council

The Conference accepted the setting up of a non-official Purchase Advisory Council on the lines of the Import Advisory Council. This Council is to advise the Government on general purchase policy and procedural matters as well as to assist in the development of indigenous production, so that imported stores can be progressively replaced. The representatives of trade and industry urged for assistance to maximise production in the country and develop capacity for stores hitherto imported. Such help was considered necessary in respect of raw materials. The Conference recognised the importance of purchasing suitable stores from the cottage industry sector, consistent with quality and delivery in order to utilise the resources of the country to the maximum, providing employment and raising the standard of living in rural areas.

Regarding the question of setting up a permanent exhibition of samples and stores, the representatives of the Federation of Indian



Chambers of Commerce and Industry expressed the view that the Government should consider a co-ordinated scheme for displaying the requirements of the Government and industry in order to make the showroom more effective and useful.

The need for planned production through long-term booking of capacity in respect of stores in short supply and of stores the manufacture of which had to be developed was also emphasised at the Conference. Such a step would enable industries to expand with confidence and take up production of new items with an assurance of continuity of demand. Where adequate capacity was already in existence it was recognised that purchases should be made under the open tender system. The measures recently taken by the Government to conclude more rate and running contracts for specialised stores and for stores for which there were recurrent demands were considered to be a step in the right direction. The representatives of trade and industry agreed that it was of paramount importance that suppliers should quote realistic and firm delivery rates in their tenders so as to ensure that delivery dates stipulated in contracts were normally adhered to, as delays inconvenience indentors and hold up Government development projects.

OUTPUT OF PENICILLIN

The State-owned penicillin factory at Pimpri, near Poona, which has been gradually stepping up its output, has now exceeded the target rate of production. The factory produced 889,000 mega units of penicillin last month giving an average of 10.7 million mega units per year, well above the target of 9.0 million mega units per year envisaged when the factory was planned.

The factory, which is the first of its kind in India, began trial production in March last year with an output of nearly 67,000 mega units for the first month. Regular production began in August 1955 when the production stood at nearly 480,000 mega units. Till the end of February 1956, the factory's total production was nearly 5.6 million mega units of penicillin. This is well above the target of 4.8 million mega units fixed under the first Five-year Plan.

Within six months of the commencement of regular production, the factory has now outstripped the maximum rate contemplated under the joint plan of operations which was drawn up when the factory was planned four years ago with the co-operation of the United Nations International Children's Emergency Fund and the U.N. Technical Assistance Administration.

Penicillin produced at the factory has already been placed on the Indian market. The bottling plant of the factory at Bombay, which had so far been bottling imported penicillin, has for some time now been bottling the indigenous product. Samples of Pimpri penicillin were sent to the Food and Drug Administration of the United States Department of Health, Education and Welfare and to the U.K. Medical Research Council for confirmatory tests, after tests carried out at the laboratories of the factory had shown that the quality of Indian penicillin was equal to that of the imported stuff. Tests in the United States and the U.K. have confirmed that Indian penicillin compares favourably with penicillin produced in those two countries.

The Government has already decided to expand the installed capacity of the Pimpri factory by 60 per cent. at an estimated cost of Rs. 42 lakhs. After expansion, the factory will be able to produce about 25 million mega units of penicillin or more per year. All types of penicillin required by hospitals, physicians and surgeons and private practitioners in India will be produced at the factory. Streptomycin and bicillin are among other antibiotics, the production of which is expected to be taken up by the factory in due course.

U.S. SURPLUS COTTON

Mr. Harold M. Randall, U.S. representative on the Inter-American Economic and Social Council, assured the Council the other day that the United States would regulate its projected sale of cotton reserves to avoid disruption of the world market. Explaining the U.S. decision to enter the world cotton market on a competitive basis beginning from 1st August next, Mr. Randall said that, in the past three years, while the U.S. Government was restricting cotton production as an aid toward stabilising world prices, other cotton-exporting countries were increasing their crops. U.S. acreage planted to cotton aggregated 28.4 million acres in the 1934-38 crop years, he pointed out, and was 19.3 million acres in 1954-55 and 16.9 million acres in 1955-56. During this period, he said, six other major cotton-producing countries increased their acreages by 34 per cent.

The above statement was made as the Council weighed a Uruguayan proposal calling for a study of the effect of "current tendencies in the world cotton market." Following Mr. Randall's address, the Council set aside a vote on the proposal and referred the matter to its Economic Co-operation Committee.

Mr. Randall told the Council that, in entering the world market, the United States violated no treaties or international understandings. For the past few years, he said, the United States had maintained a programme aimed to assure stabilisation of the world price of cotton. However, the programme had worked serious difficulties upon U.S. cotton farmers because of its restrictions. According to him, cotton production in other parts of the world continued at an ever-increasing rhythm of growth. The U.S. had declared at the International Cotton Advisory Committee meeting in 1954 at Sao Paulo, Brazil, that, if other cotton producers continued to sow an acre every time the United States reduced planting by an acre, the U.S. Government would be forced to re-examine its position. He urged other countries to withhold judgment on the projected sales plan until it had been in operation for a reasonable time. He expressed confidence that, after the initial effect of it, the market would continue strong. He appealed to the Council to postpone voting on the Uruguayan proposal, since the International Cotton Advisory Council, representing the major producers, would meet at Washington soon to discuss the same questions.

FUTURES TRADING IN PEPPER

The Government of India has accepted the recommendation of the Forward Markets Commission that recognition should be granted for a period of three years to an association that may be constituted at Cochin for carrying on futures trading in pepper.

By a notification issued on 23rd January 1955, the Government of India had applied section 17 of the Forward Contracts (Regulation) Act, 1952, to pepper throughout India, except the State of Travancore-Cochin. As a result, while the ban imposed under the Essential Supplies (Temporary Powers) Act, 1946, on transferable specific delivery contracts for the purchase or sale of pepper was continued, no restrictions were placed on forward trading in Travancore-Cochin State.

The Forward Markets Commission has since examined the question of regulating futures trading in pepper and has come to the conclusion that a futures market should be established at Cochin. The Commission has recommended, *inter alia*, that recognition be granted in due course for a period of three years to an association that may be constituted for the purpose. The recognition, the Commission has recommended, should be granted on the condition that the association carries out such modifications in its articles of association, trading by-laws and working procedures as may be suggested to it by the Commission. These recommendations have been accepted by Government.

MANUFACTURE OF POLYTHENE IN INDIA

Imperial Chemical Industries Ltd. has received the approval of the Government of India to a project to manufacture polythene in India. The manufacture will be undertaken by the I.C.I. associate, the Alkali and Chemical Corporation of India Ltd., in which the Indian public has a substantial shareholding. Technical assistance in the design, construction and operation of this plant will be provided under agreement by Imperial Chemical Industries Ltd. The project will involve a total investment of about Rs. 3 crores.

Polythene was first discovered in the research laboratories of I.C.I. Ltd. in the U.K. The process to be used in India will be that developed by I.C.I. and used in the manufacture of their well-known "Alkathene." The use of this product in India has been developed by I.C.I. (India) Ltd., which has operated a plant at Calcutta for the manufacture of film from imported granules since 1953. Polythene is a tough, flexible, thermoplastic material with outstanding electrical insulating properties. Many thousands of tons are used every year throughout the world in the manufacture of packaging film, flexible pipes, submarine telephone cables, radar equipment and moulded domestic articles, to mention only some of the major uses. As elsewhere, the largest single use of polythene in India will probably continue to be for packaging purposes, both as film and as coating on paper and jute.

THE INDIAN OVERSEAS BANK LTD., MADRAS

(Incorporated in India)

Through a network of branches in India, Burma, Ceylon, Malaya, Thailand & Hong Kong and our correspondents at all important commercial centres of the world, we are in a position to offer the most complete Banking Service to Businessmen and Manufacturers engaged in the export and import trades.

Service is our motto

General Manager : Mr. C. P. Doraikannu

BINNY MILLS MAINTAIN DIVIDENDS

SHARP RISE IN BUCKINGHAM'S PROFIT—BANGALORE WOOLLEN'S PROFIT LOWER

THE Directors of the two leading textile mills under the management of Messrs. Binny & Co. (Madras) Ltd., Madras, namely, the Buckingham and Carnatic Company, Ltd., and the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., have decided to maintain the dividend on ordinary shares of the two companies for the year ended 31st December 1955 at the same rates as those paid for the previous year, notwithstanding the sizable variations in their earnings from those earned in 1954. Thus, the dividend of the Buckingham is being repeated at 10 per cent. despite the increase in its gross profit from Rs. 1.19 crores to Rs. 1.43 crores, the highest the Company has earned since 1948. The distribution to the shareholders of the Bangalore Woollen is being maintained at 30 per cent. although the gross profit has dwindled from the record level of Rs. 94.25 lakhs earned in 1954 to Rs. 80.78 lakhs. In fact, the Company is required to pay a higher dividend, under Section 23A of the Indian Income-tax Act, but the Directors have not done so for reasons stated below:

To revert to the working of individual companies. With the increase in profit for 1955, the Buckingham and Carnatic has more than made good the decline suffered in 1954, when the gross profit declined from Rs. 1.25 crores to Rs. 1.19 crores. Such an improvement in earnings is really heartening in the context of the rise in manufacturing costs and the reduced purchasing power of the consumers and of restrictions placed on the cotton mill industry, under which the Company cannot expand its equipment. Evidently, the better trading results are due to the management's successful endeavour in improving the efficiency throughout the range of its manufacturing processes.

The salient features of the working results of the Company for the past four years under review are compared in the following table:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	900.78	844.09	856.07	832.85
Other income	8.88	6.19	5.04	7.47
Stocks of process and finished goods	85.78	87.71	84.53	95.43
Raw materials and stores consumed	471.11	443.05	434.89	411.16
Expenses	203.07	201.30	200.74	244.08
Gross profit	143.55	119.12	124.59	20.73
Managing Agents' commission.	11.29	9.92	9.77	0.90
Provision for—				
Depreciation	30.60	19.90	17.89	11.70
Taxation	39.00	37.50	37.25	..

To reserves and other funds ..	23.00	12.07	20.53	8.64
,, discount on debenture issue.	..	..	..	3.00
,, bonus to employees ..	20.52	20.12	19.58	7.76
Dividends—				
7½% cum. preference ..	1.60	1.60	1.60	1.60
Ordinary	17.85	17.85	17.85	7.14
	(10%)	(10%)	(10%)	(4%)
Carry forward	2.38	2.69	2.53	2.40

The rise of Rs. 56.69 lakhs in sale proceeds reflects the expansion in production consequent on the progress in the capital programme referred to above. The Company has also been successful in exporting a substantial part of its production to overseas markets, in spite of import restrictions and keen competition in those markets. The benefit of the increase in sale proceeds has, however, been offset to a good extent by the rise of Rs. 28.06 lakhs in cost of raw materials and stores consumed. The provision for depreciation has been raised sizably to cover the charge on additional expenditure on buildings and machinery brought into use during the year. The Directors have raised the allocation to debenture redemption fund from Rs. 5 lakhs to Rs. 9 lakhs, bringing the aggregate allocation for the past four years to Rs. 20 lakhs, in accordance with the Directors' policy of equalising the appropriations to the final date of maturity in 1972. No provision for increased replacement costs of building and machinery has been made this year also, but a sum of Rs. 3.50 lakhs has been transferred to this reserve from the debenture redemption fund; this amount represents the face value of the debentures repaid during the year. The transfer to the general reserve has been raised from Rs. 6 lakhs to Rs. 10 lakhs. The raw materials fluctuation reserve and insurance reserve, which had not received anything last year, have been strengthened by the addition of Rs. 75,000 and Rs. 2.14 lakhs, respectively. The assessment of income-tax on the Company's profit for the year ended 31st December 1954 has not been completed and the relief from taxation on profit through the operation of the development rebate and extra normal depreciation for that year has, therefore, not yet been determined. As soon as the correct amount of relief has been ascertained, the Directors point out, the usual transfer from taxation reserve to provision for increased replacement costs of buildings and machinery will be made.

The balance-sheet as on 31st December 1955 reflects a sound financial position. The reserves and surplus aggregate Rs. 178.91 lakhs, as against a paid-up capital of Rs. 199.78 lakhs. Of these reserves, general reserve accounts for Rs. 51 lakhs, dividend equalisation reserve for Rs. 10 lakhs, raw materials fluctuation reserve for Rs. 10 lakhs, provision for increased replacement costs of buildings and machinery for Rs. 64 lakhs, debenture redemption fund for Rs. 6.52 lakhs, fire, accident and insurance fund for Rs. 20 lakhs and workpeople's housing fund for Rs. 15 lakhs. The outstanding liability on debenture stock is Rs. 86.50 lakhs. The provision for taxation stands at Rs. 21.21 lakhs. The current liabilities aggregate Rs. 140.32 lakhs and special liabilities Rs. 10.87 lakhs. There has been an addition of Rs. 202.79 lakhs to the gross block during the year, bringing the total value to Rs. 638.09 lakhs. This has been written down to a book value of Rs. 285.77 lakhs. Capital works in progress amount to Rs. 34.94 lakhs. The current liabilities aggregate Rs. 307.68 lakhs and investments held against special liabilities Rs. 9.20 lakhs.

The construction of the second weaving shed has been commenced and this, when completed, will have ample space to house the looms which are still operating in the old mills buildings. The Directors observe that it is still desirable to conserve the Company's resources in order to finance the completion of the rehabilitation programme and the Directors have borne this factor in mind in making their proposals for appropriations from profits for the year under review.

Bangalore Woollen

The decline in the earnings of the Bangalore Woollen reverses the upward trend noticed in the previous two years. Nevertheless, the profit for the year under review is one of the highest in the history of the Company. After raising the provision for depreciation from Rs. 16.30 lakhs to Rs. 18.17 lakhs and making a lower provision of Rs. 20.23 lakhs for taxation, as against Rs. 25.25 lakhs set aside a year ago, the net profit of the Company amounts to Rs. 36.10 lakhs, as compared with Rs. 45.50 lakhs for 1954. The Directors have reduced the allocation to the general reserve from Rs. 10 lakhs to Rs. 9 lakhs, but have raised the provision for workpeople's housing fund from Rs. 2.50 lakhs to Rs. 3 lakhs and maintained that for officers' retiring fund at Rs. 75,000.

The following table provides an idea of the Company's progress during the past three years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	481.94	472.25	432.29	450.20

	(30%)	(30%)	(25%)	(15%)
Carry forward	2.39	2.45	2.40	2.50

The Company comes within the scope of section 23A of the Indian Income-tax Act, as amended by the Indian Finance Act, 1955, and is, therefore, required to declare a higher dividend than that paid for 1954. The Company has, however, submitted to the Commissioner of Income-tax, Bangalore, that "having regard to the financial requirements that are necessary and advisable for the maintenance and development of the business, it would be unreasonable to pay a higher dividend than that already declared for the calendar year 1954." Pending a decision by the Commissioner, the Company has maintained the dividend for 1955 at the record level of 30 per cent., to which it had been raised last year.

Nothwithstanding the recession from the record level attained in 1954, the profit for the year under review is to be considered satisfactory in the context of the trading conditions which prevailed during the year. Referring to these conditions, the Directors observe in their latest report as follows:

"Production and sales showed a further increase, but it was not found possible to raise selling prices to cover the cess and excise duties which were imposed early in the year on woollen and union fabrics. These additional charges enhanced the loss in the woollen section and adversely affected the profit on union fabrics. The need to meet increased competition in the fine cotton section also reduced profit margins."

The Company's latest balance-sheet discloses an impressive financial position. The reserves and surplus aggregate Rs. 203.07 lakhs, as against a paid-up capital of Rs. 46.50 lakhs. Of these reserves, general reserves alone account for Rs. 105 lakhs. Dividend equalisation reserve amounts to Rs. 11 lakhs, fire and accident insurance reserve Rs. 12 lakhs, reconstruction reserve Rs. 33.89 lakhs, raw materials fluctuation reserve Rs. 12.80 lakhs and additional provision for depreciation based on replacement costs Rs. 26 lakhs. The provision for taxation stands at Rs. 10.39 lakhs. The current liabilities amount to Rs. 39.17 lakhs and special liabilities to Rs. 10.95 lakhs. The gross block of the value of Rs. 324.99 lakhs, including the addition of Rs. 40.36 lakhs during the year, has been written down to a book value of Rs. 82.61 lakhs. Besides, the capital works in progress amount to Rs. 8.71 lakhs. The current assets aggregate Rs. 227.85 lakhs, in addition to which the investments held against special liabilities amount to Rs. 10.92 lakhs. Thus, the current assets exceed the current liabilities and provision for taxation by a large margin.

The Company completed during the year under review the construction of the cotswol mill and further progress has been made with the programme of replacement of old machinery with up-to-date plant.

The Rs. 100 fully paid-up ordinary shares of the Buckingham are being currently quoted at Rs. 178 *cum-div.* and those of the Bangalore Woollen at Rs. 590 *cum-div. cum-right.* On an *ex-div.* basis, the yields on the shares work out to 6 per cent. per annum and 5.4 per cent. per annum, free of income-tax, respectively.

B.I.C. SKIPS OVER DIVIDEND

The year ended 31st December 1955 has turned out to be another unfavourable one for the British India Corporation Ltd. (Chairman and Managing Director: Sir Robert Menzies, Kanpur). In fact, the year has proved to be so adverse that the Company has suffered a gross loss for the first time after many years and has had to hold in arrears the dividend on its preference shares, also for the first time since the early thirties. It is quite obvious, therefore, that the ordinary dividend for the year under review has had to be skipped over.

The Company has suffered a loss of Rs. 15.24 lakhs for the year under review before providing for depreciation, as compared with a small profit of Rs. 5.20 lakhs earned in 1954, to which level the Company's earnings had dwindled almost successively from a bumper profit of Rs. 185.76 lakhs earned in 1950. After setting aside Rs. 15 lakhs for depreciation, as against Rs. 10 lakhs for 1954, the net loss works out to Rs. 30.24 lakhs, which compares unfavourably with the loss of Rs. 4.80 lakhs suffered in the previous year. Though the shareholders of the Company may not have expected such an adverse result for the year under review, they had at least been prepared for facing a difficult year.

The following comparative table shows the extent to which the Company's working results have been adversely affected during the past three years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds	615.54	603.20	719.55	784.45

		(1¼%)	(10%)	(12½%)
Carry forward	—27.37	2.81	8.59	1.99

The main reasons for the disappointing results of the year are: (1) the impact of the heavy excise duties, (2) the heavy cost of employing or discharging labour made redundant by changes in trade, (3) the strike by the labour in the textile branches of the Company in Kanpur lasting nearly three months during the summer of 1955, and (4) the disastrous floods in the Punjab which seriously dislocated the despatch of manufactured goods from the New Egerton Woollen Mill's branch. The Directors point out that the excise duties, which were intended to form a type of indirect taxation on the consumer, have operated as a direct tax on the producer. The Directors have continued to bring this position as forcibly as possible to the Government of India's notice. Besides the textile strike in Kanpur and the floods in the Punjab which affected the sales of the woollen branches, the profit margins were still restricted by competitive conditions. Towards the close of the year there was a considerable drop in prices of raw materials and provision had to be made against this decline. The quality and quantity of suitable raw hides available for the leather and footwear branches were unsatisfactory and prices were high. This affected sales, although prospects for the export of leather are now brighter than they were earlier. The Directors, however, point out that the excise duty on footwear still exceeds the profit margin on such products. They add that effort was made during the year to restore profitable working by trying to secure the co-operation of labour, but conditions were difficult.

During the year under review, the Company realised a profit of Rs. 15.29 lakhs on sale of investments and this, as usual, was credited to the investment reserve account.

The Company's reserves aggregate Rs. 116.12 lakhs, as against a paid-up capital of Rs. 406 lakhs. The provision for taxation, less advance payments, stands at Rs. 20.86 lakhs. The current liabilities aggregate Rs. 538.46 lakhs, having risen from Rs. 354.61 lakhs a year ago, mainly due to the increase in borrowing from bank secured against stocks and investments from Rs. 166.20 lakhs to Rs. 388.74 lakhs. There has been an addition of Rs. 12.76 lakhs to the gross block bringing the total value to Rs. 282.04 lakhs. This stands well written down to Rs. 59.90 lakhs. The current assets aggregate Rs. 778.12 lakhs and investments Rs. 216.10 lakhs.

The Directors have assured the shareholders that they continue to take all suitable action to restore the Corporation's trading to a profitable basis and, wherever possible, overhead expenses are being reduced. The capital expenditure programme is still under execution, extensive rehabilitation plans for all branches has been approved by the Directors and are in course of being implemented as rapidly as possible.

COIMBATORE COTTON'S PROFIT BETTER

DIVIDEND WELL MAINTAINED

A MODEST increase of Rs. 1.91 lakhs to Rs. 14.97 lakhs in gross profit is disclosed by the audited accounts of the Coimbatore Cotton Mills Ltd. (Managing Agents: Messrs. R. Bheema Naidu & Co., Coimbatore) for the year ended 31st December 1955. This improvement in earnings is in refreshing contrast to the drop of Rs. 1.36 lakhs suffered in 1954 and has raised the profit to the highest level since 1951. Besides the improvement in profit for which the year under review is noted, the past year is also a significant one in the progress of the Company, for it marks the completion of 25 years of its existence. The silver jubilee was celebrated in November 1955.

The distribution to the shareholders has, however, been maintained at 25 per cent., to which level it had been raised last year successively from 9 per cent. paid for 1952 and 20 per cent. for 1953. This represents the highest dividend to be paid on the present capital, doubled in 1947 by the capitalisation of a sum of Rs. 6 lakhs from the reserves. On the old capital, it represents a dividend of 50 per cent., exceeding the previous highest of 40 per cent. paid for 1943 on the old capital.

If the dividend has not been raised, in spite of the rise in gross profit, it is due to the fact that the net profit for the year under review is slightly lower at Rs. 3.87 lakhs, as compared with Rs. 4.11 lakhs for 1954. This is the second year in succession for which the net profit shows a decline, having fallen in the previous year from Rs. 6.42 lakhs earned in 1953. This is due to the further increase in the provision for taxation from Rs. 4.20 lakhs to Rs. 5.68 lakhs. No allocation has been made to the general reserve, which had received Rs. 83,941 a year ago.

The following comparative table, giving the salient features of the Company's results for the past four years, provides an idea of its progress in recent years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Sale proceeds and stocks ..	75.22	78.15	67.18	74.65
Other income ..	0.77	0.53	0.35	0.32
Opening stocks and consumption of raw materials, etc. ..	49.00	52.89	42.43	66.54
	12.02	13.23	10.70	9.61
Expenses ..	12.02	13.06	14.42	1.18
Gross profit (+) or loss (—) ..	+14.97	+13.06	+14.42	—1.18
Managing Agents' remuneration	1.91	1.67	1.66	0.67
Provision for—				
Depreciation	3.51	3.08	4.35	..
Taxation	5.68	4.20	1.97	..
Net profit (+) or loss (—) ..	+3.87	+4.11	+6.42	—1.85
To reserves	..	0.84	2.69	1.00
bonus to staff ..	..	..	..	1.00*
Dividend	3.00	3.00	2.40	(9%)
	(25%)	(25%)	(20%)	—1.85
Carry forward	0.34	0.05	..	

* Paid out of dividend equalisation reserve.

It will be noted that the sale proceeds and stocks show a decline of nearly Rs. 2.93 lakhs. The effect of this has, however, been more than made good by the fall of Rs. 3.39 lakhs in opening stocks and raw materials consumed and of Rs. 1.21 lakhs in expenses. This explains the increase in gross profit, despite the fall in sale proceeds.

The following synopsis of the Company's latest balance-sheet gives an idea of its financial position:

Liabilities	Rs.	Assets	Rs.
Capital ..	12,00,000	Gross block	34,66,396
Reserves and surplus ..	20,94,164	*Less*—Depreciation	27,86,527
Provision for taxation ..	6,99,621	Net block ..	6,81,869
Liabilities ..	10,64,206	Stock-in-trade ..	18,11,880
		Stores ..	1,30,561
		Debts, deposits and advances ..	4,84,742
		Investments	18,06,186
		Cash ..	1,42,753
Rs.	50,57,991	Rs.	50,57,991

It will be noted that the reserves stand at a comfortable level, notwithstanding the capitalisation of Rs. 6 lakhs in 1947 and the utilisation of Rs. 4.80 lakhs from the general reserve for paying a cash bonus of Rs. 40 per share in 1948. The gross block stands well written down. The investments include fixed deposits in banks amounting to Rs. 17 lakhs. These and other cash balances alone more than adequately cover the current liabilities and provision for taxation.

The Rs. 100 fully paid-up shares of the Company are being currently quoted at Rs. 333 *ex-div.*, at which rate the latest dividend gives a yield of 7.5 per cent. per annum, free of income-tax.

Points From The Chair

Tax on Dividends

"THE proposed penal tax on dividends declared at a rate of more than 6 per cent. on the paid-up capital will cost your Company Rs. 2 lakhs per annum, if it reaches the Statute Book in its present form—assuming that the present rate of dividend distribution remains unaltered. This proposed tax operates most unfairly against companies such as yours which have prudently accumulated substantial reserves from the taxed profits of past years. Just as disturbing, to my mind, as the actual tax itself is the manifestation of the fact that the 6 per cent. mentality persists in New Delhi. In conditions as they exist today—for example, the Bank rate in the U.K. is now 5½ per cent.—it does not seem reasonable that risk capital should only be allowed a return of 6 per cent. without a heavy penal tax, and particularly at a time when it is hoped to attract such capital to enter this country."

E. D. SHEPPARD,
Kohinoor Mills Co., Ltd.

Distinction Between Private and Public Sectors

"An event of considerable importance has occurred recently when the State itself has taken over the responsibility of life insurance. Whatever the magnificent job private enterprise would have made of it, insurance had touched only the fringes of our people and if it had to cover aspects of social insurance like old age, sickness and unemployment—not only for a few but a larger and larger section of the people—only a State enterprise could do it, introducing an element of compulsion if necessary. In a national endeavour, the so-called distinction between private and public sector loses much of its pitch and point. These sectors are complementary and not mutually exclusive. The goal is of raising the country and its people into economic independence and utilising the available resources to the maximum advantage. If this is realised there is greater scope for co-operation and understanding between all sectors. Profit motive, however useful it might have been for economic development at one stage, has perforce to be tempered with service motive and as I said last year, if private enterprise cannot adapt itself to these dynamic changes, it would have lost its prime virtue and will go under."

DR. T. M. A. PAI,
Canara Industrial and Banking Syndicate Ltd.

Disquieting Trends in India

"Notwithstanding ministerial assurances it must be admitted that certain trends are disquieting. The nationalisation of all life assurance companies, many of which are shareholders in the private sector of industry, is not a happy omen, and from the point of view of overseas firms that employ specialised foreign staff the rates of taxation on income, which are in no sense discriminatory, do pose a major problem. There are still many fields in the private sector of Indian industry where the capital, skill and enterprise of foreign firms could be of invaluable assistance to the Indian economy, but continued foreign investment in India and the promotion of industry with foreign help must necessarily depend not only on confidence but also on the ability to employ foreigners on terms that make overseas service attractive."

V. A. GRANTHAM,
Chartered Bank of India, Australia and China.

Contribution of Labour to Bring Down Costs

"Successive Governments have repeatedly warned the nation of the danger of inflation and called for economy in public and private expenditure and for stability of prices. On many occasions the T.U.C. have themselves referred in a most statesmanlike manner to the dangers of rising costs and have given appropriate advice to their member unions, but many of them have not yet realised the far-seeing wisdom and importance of this advice in the interest of their members as well as the nation as a whole. We welcome the T.U.C.'s realistic approach to the problems which are causing great concern to those of us who are trying so hard to secure export orders to help the nation's balance of payments, for in present conditions it is unpredictable how long we shall be able to continue to bring overseas orders to this country at the present level of costs. The contribution of all our employees to the solution of this problem must be ever-increasing efficiency in design and manufacture and we shall spare no effort to guide them in these directions."

SIR GEORGE H. NELSON, BT.,
English Electric Co., Ltd.

Outlook for Rubber

"In 1936, American car production is likely to revert nearer to the more normal figure of 1954. Hire purchase restrictions and withdrawal of credit should in themselves bring about some reduction in United Kingdom production of cars, although the 1955 level did not follow the American pattern. Offsetting these unfavourable factors is the expectation that, in response to the lower prices now prevailing, supplies of natural rubber are likely to fall below the figure for 1955 and there are indications that the countries behind the Iron Curtain may increase their purchases of the natural product. In the end, it may well be that any surplus will be contained within the manageable limits of 4 per cent. to 5 per cent. If these expectations are soundly based, then it would seem that the recent sharp fall in the price of rubber is more the expression of a mood than the outcome of serious consideration of the production/supply position."

SIR JOHN HAY,
Linggi Plantations Ltd.

COMPANY MEETINGS AND DIVIDENDS

BENGAL JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 28th March 1956. Dividend: Re. 1-2 per share. Transfer books remain closed from 21st to 28th March 1956, both days inclusive.

JUBBULPORE ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 29th March 1956. Dividend: As. 6-2/5 per share. Transfer books remain closed from 23rd to 29th March 1956, both days inclusive.

AGRA ELECTRIC SUPPLY CO., LTD. Half-yearly General Meeting, Calcutta, 29th March 1956. Dividend: Rs. 5 per share. Transfer books remain closed from 23rd to 29th March 1956, both days inclusive.

NEW BEERBHOOM COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th March 1956. Dividend: As. 8 per share. Transfer books remain closed from 20th to 29th March 1956, both days inclusive.

UNION COAL CO., LTD. Half-yearly General Meeting, Calcutta, 29th March 1956. Transfer books remain closed from 22nd to 29th March 1956, both days inclusive.

GOKAK'S PROFIT GOES UP BY NEARLY 50 PER CENT.

EXCELLENT RESULTS OF KRISHNA GYANODAY

Gokak Mills, Ltd.

THE directors of the above Company (Agents: Messrs. Forbes Forbes Campbell & Co., Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The accounts show a profit of Rs. 21,71,632 (Rs. 14,63,081) to which is to be added the net carry forward from 1954 of Rs. 37,169 (Rs. 85,195) which produces a total of Rs. 22,08,801 (Rs. 15,48,276). The following transfers have been made:—

To reserve account Rs. 2,00,564 (Rs. 50,715), depreciation Rs. 4,00,000 (Rs. 3,15,000), taxation reserve Rs. 7,20,000 (Rs. 5,00,000), development reserve Rs. 1,20,000 (*nil*) and staff gratuity fund Rs. 22,087 (Rs. 10,862), leaving available the sum of Rs. 7,46,150 (Rs. 6,71,699). From this balance the directors recommend the declaration of a dividend of Rs. 15 (Rs. 13) per share, free of income-tax which will absorb Rs. 7,32,150 (Rs. 6,34,530), leaving a balance to be carried forward of Rs. 14,000 (Rs. 37,169). Taxation.—The Company's income-tax assessment for the year ended 31st December 1954 has been finalised.

Machinery.—During the year, the following additions to machinery were made: Six ring doubling frames, three cheese winding machines, three carding engines, one roto-coner winding machine, one fabric loom and air-conditioning equipment for the testing room. Further, the humidification in No. 1 Mill was improved and enlarged and new fluorescent lighting installed. Ten doubling frames were re-conditioned. One line of new blow room machinery in No. 2 Mill has been erected and three additional lines have been received and are in course of erection. The 1,000 kw. diesel alternator which was mentioned in last year's report has been installed and is now in operation.

Accounts in brief are as under:—

	Rs. 1,84,88,671		Rs. 1,84,88,671

Shree Krishna Gyanoday Sugar Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st July 1955.

The year's working after providing all overheads and interest charges shows a surplus of Rs. 18,66,708 (Rs. 6,17,708). Out of this, provision has been made for depreciation amounting to Rs. 5,67,137 (Rs. 2,19,570), leaving a sum of Rs. 12,99,571 (Rs. 3,98,138). To this is added balance brought forward from last year of Rs. 5,475 (Rs. 3,337), making a total of Rs. 13,05,046 (Rs. 4,01,475). From this amount is deducted interim dividend on ordinary shares at Re. 1 (*nil*) per share (free of income-tax) for the year 1954-55 Rs. 2,00,000 (*nil*), leaving an available sum of Rs. 11,05,046 (Rs. 4,01,475). This amount the directors recommend to be appropriated as follows:

Payment of dividend (free of income-tax) for the year ended 31st July 1955, to the shareholders as on 29th March 1956: On 6,000 "A" class preference shares at Rs. 6 (Rs. 6) per share Rs. 36,000 (Rs. 36,000), on 12,000 "B" class preference shares at Rs. 5 (Rs. 5) per share Rs. 60,000 (Rs. 60,000), on 2,00,000 ordinary shares a final dividend at As. 12 (Re. 1-8) per share (making a total of Re. 1-12 (Re. 1-8) per share, i.e., 17½ (15) per cent. Rs. 1,50,000 (Rs. 3,00,000), provision for taxation Rs. 7,25,000 (*nil*) and transfer to general reserve (raising it to Rs. 19,00,000) Rs. 1,00,000 (*nil*). The balance of Rs. 34,046 (Rs. 5,475) is carried forward.

During the year under review, the sugar factories at Hathwa and Lauriya crushed 32,51,972 (15,05,570) and 27,39,217 (17,41,073) maunds cane and produced 3,29,406.3 (1,46,703) maunds and 2,89,619.7 (1,69,757) maunds sugar respectively. The cane crush at Hathwa is the highest recorded so far by this factory. The sugar recovery in the factories during the crushing season 1954-55 was 10.13 (9.74) per cent. at Hathwa and 10.57 (9.75) per cent. at Lauriya. The crush during the current year is expected to be substantially higher.

There has been shortfall in the production of distillery products during the year under review, the total production being 7,61,720 (9,03,122.9) bulk gallons of alcohol. This has been mainly due to the non-availability of molasses in adequate quantity at the commencement of the year. The production during the first six months of the current year amounts to 4,95,010 bulk gallons. On this basis, with improved supplies of molasses that will be possible with higher cane crush that is expected, the production will rise.

The Company undertook refining of imported raw sugar along with Rohtas Industries Ltd. Gururu Sugar Factory of Gaya Sugar Mills, Ltd. (in liquidation) taken by the Company on lease during the year was operated for the refining of imported raw sugar. The lease of the Gururu factory has now been renewed till 31st May 1956, for crushing of sugarcane during the current crushing season.

During the year under review the Company acquired about 2,500 acres agricultural farms near Lauriya factory for cultivation of sugarcane and for development and improvement of sugarcane varieties in this area.

With the issue of further Rs. 20 lakhs ordinary capital during the current year, interest charges should come down. The prospects for the current year continue to be satisfactory.

Orissa Minerals Development Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Bird & Co., Ltd., Calcutta) submit the audited accounts of the Company for the half-year ended 30th June 1955.

Iron Ore.—Raisings were 220,283 (234,549) tons compared with 303,531 tons during the previous half-year. Despatches at 224,788 (242,031) tons also showed a considerable fall as compared with 310,459 tons in the previous half-year. Raisings and despatches were low because of labour trouble at the mines. The steel works order was maintained at 40,000 tons per month during this period. Shipments to Japan mounted to 48,811 (27,010) tons compared to 19,002 tons during the previous period and this increase in shipments was due to the large quantity which had been stock piled at the docks in the last half-year.

Manganese Ore.—Raisings increased from 22,948 (27,564) tons to 38,720 tons as compared to the previous half-year. Sales, however, recorded a sharp drop from 27,388 tons to only 16,959 (8,626) tons and this was due to the very unsatisfactory wagon position prevailing during the period.

Manganese Dioxide.—Raisings showed a further decrease of 580 tons and were only 1,068 (2,297) tons during this half-year. Sales, however, increased from 1,074 tons to 1,547 (2,488) tons compared to the previous period. Proving still continues in the main deposit by the putting down of bore holes and trial pits.

Market.—The market improved somewhat and the prices at which the various grades could be sold during the period under review were better than before.

Transport.—The wagon position greatly deteriorated and was the worst that this Company has experienced for many years. This position continues and must have serious results on the Company's trading profits.

The Eastern Shipping Syndicate.—During the half-year, the share of profit from the above Syndicate amounts to Rs. 51,736 (Rs. 87,390) and this has been included in the accounts.

The profit and loss account after providing Rs. 89,344 (Rs. 83,975) for depreciation, Rs. 1,50,000 (Rs. 1,00,000) for taxation and taking Rs. 15,217 (Rs. 15,937) to provision for staff and workmen's accident and compensation, Rs. 50,760 (*nil*) to tax contingency reserve and Rs. 1,40,000 (Rs. 1,00,000) to mechanisation reserve and including Rs. 11,217 (*nil*) development rebate reserve written back, Rs. 1,50,000 (*nil*) taxation provision no longer required and Rs. 91,384 (Rs. 1,47,081) brought forward from the previous half-year, shows a credit balance of Rs. 3,05,053 (Rs. 3,39,969) which the directors propose to dispose of as follows:—

In paying a dividend on 2,00,000 ordinary shares at the rate of 20 (20) per cent. per annum, without any deduction for income-year paid by the Company Rs. 2,00,000 (Rs. 2,00,000) and in carrying forward Rs. 1,05,053 (Rs. 1,39,969).

Accounts in brief are as under:—

Bengal Jute Mill Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Soorajmull Nagarmull, Calcutta) submit the audited accounts of the Company for the year ended the 30th June, 1955.

The accounts show a gross profit of Rs.19,47,725 (Rs. 19,71,479). After providing Rs. 1,89,221 (Rs. 2,12,210) for depreciation and Rs. 4,27,225 (Rs. 4,73,932) for interest, commission allowance and other expenses, there is an available balance of Rs. 13,31,280 (Rs. 12,85,338). To this should be added the amount brought forward from the previous year of Rs. 2,95,071 (Rs. 2,45,983), making a total of Rs. 16,26,350 (Rs. 15,31,321). It is proposed to set aside as a reserve for taxation (income-tax, super-tax, etc.) Rs. 6,00,000 (Rs. 6,25,000), leaving a balance of Rs. 10,26,350 (Rs. 8,56,321 after providing Rs. 50,000 for bad and doubtful debts). The directors recommend that this should be dealt with as follows:

In paying a dividend of 5½ per cent. per annum on 10,000 redeemable cumulative preference shares for the year ended 30th June 1955 (free of income-tax) Rs. 55,000 (Rs. 55,000), in paying a dividend on 4,50,000 ordinary shares of Re. 1-2 (Re. 1-2) per share (free of income-tax) for the year ended 30th June 1955 Rs. 5,06,250 (Rs. 5,06,250), transfer to reserve fund Rs. 2,00,000 (*nil*) and carry forward Rs. 2,65,100 (Rs. 2,95,071).

During the period under review the mills have worked in accordance with the supplemental working time agreement of the Indian Jute Mills Association. The mills worked with 12½ per cent. sealed looms up to 8th January 1956.

In terms of the resolutions passed by the Indian Jute Mills' Association 2½ per cent. of the total looms in the mill had been unsealed on and from the 9th January 1956 and a further 5 per cent. looms have been unsealed with effect from the 20th February 1956 leaving 5 per cent. of the total looms sealed.

Accounts in brief are as under:—

Sirsilk Ltd.

The directors of the above Company (Managing Agents: Messrs. Birla Brothers Ltd., Somajiguda, Hyderabad-Deccan) submit the audited accounts of the Company for the year ended 30th September 1955.

During the year under review, the weaving plant was commissioned partially and the finished products were marketed. The fabrics having received a good response from the market, the functioning of the weaving section was gradually extended. But considerable difficulties were and are still being experienced both with the spinning and the weaving plants by reason of certain defective parts in the machinery and short capacity of certain sections of the plants. However, steps have been taken to repair, renovate, or replace the machinery, wherever necessary, in order to obtain better efficiency. So far, out of the 480 looms received, 230 looms have been installed and are working on triple shift.

As stated in the last report, the Company had to face certain difficulties in marketing the acetate yarn as this was a new indigenous product with which the market in this country was not acquainted. During the year under review, production of yarn had to be sold at low rates in order to popularise its consumption. By the end of the financial year, the Company was able to sell away its entire production in advance, though at low rates. This however considerably helped to create a very good demand for the Company's products and the prices have since then stabilised to better rates, at which, Company's products are already being sold in advance. It is not possible for the Company now to meet the entire demand of the market and early steps are being taken to enhance the production capacity.

The Company has been granted a licence by the Government for expansion to raise its production capacity from five to ten tons of yarn and correspondingly for cellulose acetate and other chemicals.

It is gratifying to report that an agreement has been entered into with the Labour Union whereby all the outstanding disputes have been mutually settled and the cases pending before the State and Central Industrial Tribunals have been withdrawn. The agreement is binding on the Company and the Labour Union for a period of five years generally and for three years as regards scales of basic wages and dearness allowance, etc., payable to workers.

The profit and loss account, after providing for Rs. 11,14,769 towards interest on loans, shows a loss of Rs. 7,61,504 which is proposed to be carried forward. Depreciation has not been provided for the year.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	2,93,85,643	Block ...	5,09,44,085

	Rs. 6,98,58,330		Rs. 6,98,58,330

Richardson & Cruddas Ltd.

The directors of the above Company (Managing Agents: Messrs. S. B. Industrial Development Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended on the 30th of June 1955.

The Company's working during the year under review shows a gross profit of Rs. 43,89,122 (Rs. 44,24,040). After charging overhead expenses, managing agents' allowance and commission and depreciation on the assets and after providing for miscellaneous receipts and profits on sale of assets, investments, etc., the trading resulted in a net profit for the year of Rs. 31,33,351 (Rs. 30,40,849). After deducting provision for income-tax Rs. 12,00,000 (Rs. 12,00,000) there is a balance of Rs. 19,33,351 (Rs. 18,40,849) to which is added last year's carry-forward balance of Rs. 14,00,642 (Rs. 7,43,748). After deducting appropriation as per decision of the last annual general meeting Rs. 13,76,021 (*nil*) there is a balance of Rs. 19,57,972. The directors have paid interim dividends declared by directors on 11th April 1955 on preference shares at Rs. 2-12 (Rs. 5-8 for the year) per share and on ordinary share at As. 8 (Re. 1) per share amounting to Rs. 4,10,000 (Rs. 5,29,075) leaving a balance of Rs. 15,47,972 (Rs. 14,00,642). The directors recommend disbursement and appropriation of the amount in the following manner:—

The second and final instalment of dividend on preference shares at 2½ per cent. per share Rs. 1,10,000, the second and final instalment of dividend on ordinary shares at Re. 1 (*nil*) per fully paid-up share Rs. 6,00,000, 2½ per cent. commission due to directors for the year ended on 30th June 1955 Rs. 78,334, transfer to dividend equalisation fund Rs. 4,00,000, transfer to rehabilitation reserve fund Rs. 3,50,000, and to be carried forward to next year Rs. 9,638 (Rs. 14,00,642). It is also proposed that the final instalment of dividend at Re. 1 on each ordinary share and at Rs. 2-12 on each preference share for the year be paid to those shareholders whose names appear on the register of the Company on the 21st of March 1956.

Capital: During the year under review fresh share capital was issued increasing the number of preference shares from 29,450 to 40,000 an increase by 10,550 shares of Rs. 100 each. The shares were issued at par and had been fully subscribed. Ordinary shares numbering 2,32,900 of Rs. 10 each were also issued at a premium of Re. 1-8 per share. The shares had been fully subscribed and the premium on shares collected has been treated as a reserve.

The results of the year's working have been satisfactory. During the year the Company has also paid bonus to its employees on the result of last year's working. *Expansion*: For the purpose of taking advantage of the heavy demands on all engineering workshops of repute mainly due to the development plans initiated by the Government the directors have considered the necessity of increasing the scope of the activities of the Company. With nearly a hundred years' experience the Company is destined to play an important role in the industrial development of the country. The directors have also decided to set up a modern workshop for the manufacture of railway wagons on a new site not far away from the city of Bombay.

To provide for more accommodation in the administrative offices in Bombay which will be required in the course of implementing the expansion of the Works a five-storeyed office building has been erected within the boundary of the Works premises. The structure which is nearly ready has been estimated to cost about Rs. 10,00,000 and it is expected that in the course of the next month the main office will be shifted there. The old office structure will then be demolished and the workshops extended.

In connection with the expansion scheme, the directors propose to raise fresh capital and an Extraordinary General Meeting of the shareholders of the Company will be held shortly after the annual general meeting for considering the proposal of increasing the authorised share capital of the Company from Rs. 1,00,00,000 to Rs. 3,00,00,000.

QUESTION HOUR IN PARLIAMENT

Revised Industrial Policy

AN official committee, consisting of the representatives of the various Ministries of the Government of India and the Planning Commission, is now examining the industrial policy resolution of 1948, with a view to issuing a revised statement, which will be in tune with the policy of the Government (the industrial policy resolution of 1948 demarcated the industries which should be developed by the public and the private sectors). Wait and see whether the Government has any idea of including the production of paper in the public sector, especially in view of the fact that "large amounts have been given to the newsprint factory in Madhya Pradesh. The House will certainly have a voice in the final determination of the policy. I am not in a position at this stage to commit the Government to anything beyond that.

* * * *

Cycle Manufacture

Five more firms, in addition to the existing units, have been licensed for the manufacture of bicycles. Of these new units, two will operate in U.P. and one each in P.E.P.S.U., the Punjab and Delhi. The new units have not yet gone into production.

—*T. T. Krishnamachari*

Iron and Steel Control Board

The Government of India is considering the question of setting up a statutory board to replace the present iron and steel control organisation. The iron and steel control organisation is at present handling roughly about 3 million tons of steel annually. In the course of the next five or 10 years, this amount is likely to go up to 6 or 10 million tons. The Government feels that, for administraive convenience, a statutory board would be desirable.

—*Nityanand Kanungo*

Neyveli Lignite Project

The observations recorded during the first week of the dewatering pumping tests in the Neyveli lignite project have given hopes of success, but it is too early to make any definite forecast. The trade delegation of the East German Government has availed of the facilities given by the Government to study the present stage of the project. No formal offer has been received so far. The chief chemist of the project has been sent on deputation to Europe. He will also visit important lignite processing establishments in East Germany. A proposal to send some other engineering specialists is under consideration.

—*K. C. Reddy*

Metallurgical Coal

Metallurgical coal will be used only by the steel plants once they are erected. In the meantime, since the country is now expanding production of metallurgical coal, part of it is being used by the railways. It has been decided in principle that all metallurgical coal should, as far as possible, be washed in future. A coal washing plant to be established at the Bokaro-Kargali colliery has already been ordered and the plant is expected to start functioning in 1958.

—*Satish Chandra*

Aid to Foreign Countries

A provision of Rs. 144.82 lakhs and of Rs. 26 lakhs have been made in the budget for 1956-57 for economic and technical assistance, respectively, by India to other countries under the Colombo Plan. Economic assistance for development projects already under way or to be undertaken will be given to Nepal. Technical assistance in the shape of experts and training facilities will be made available, as required, to the Colombo Plan member-countries in the South and South-East Asian region, namely, Burma, Cambodia, Ceylon, Indonesia, Laos, Malaya, Nepal, Pakistan, the Philippines, Viet Nam, Singapore, North Borneo and Sarawak.

—*C. D. Deshmukh*

Sugar Imports

There is no proposal to import any further quantity of sugar during the current year. Sugar worth about Rs. 81 lakhs (c. &. f. value) remaining to be shipped against contracts concluded in 1954 was, however, received during January-February this year.

* * * *

Sugar Mill Licences

More than 80 per cent. of the new licences for opening sugar factories has been given to applicants from the South. Normally, the principle of "first come first served" is being followed in the issue of licences for starting sugar factories.

—*Ajit Prasad Jain*

Price Support

The price paid for the "naked grain" under the price support policy of the Government during the year is Rs. 267 lakhs. Complete accounts of the incidental expenditure incurred by the State Governments have not, however, been received and it is not, therefore, possible to indicate such expenditure. Most of the stocks with the Union Government have been disposed of either by release to States or by sale to traders. The small balance left over is also being sold out.

—*Dr. Punjabrao Deshmukh*

Rice Production

According to the latest forecast, the production of rice in India during 1955-56 will be 23.8 million tons. The production this year is expected to be sufficient to meet the country's current consumption requirements. The Government has at present 500,000 tons of rice in reserve.

—*M. V. Krishnappa*

Employment Exchanges

The Government of India proposes to hand over the administration of Employment Exchanges in the States to the respective State Governments on the 31st inst.

—*Abid Ali*

Shipping

Six foreign ships of about 46,500 deadweight tons chartered by the Indian shipping companies are at present employed wholly or partly in the Indian coastal trade. The foreign exchange expenditure on these for a period of one year will be Rs. 1.06 crores. The charters are allowed on condition that they will be replaced by Indian ships in a year or two.

* * * *

Steel Needs of Railways

Indian railways will require about 5 million tons of steel during the second Plan period. The requirements will be met from indigenous sources and by imports.

* * * *

Locomotive Requirements

It is estimated that the railways will require 1,430 broad-gauge and 853 metre-gauge locomotives during the second Plan period. It has been planned to develop the Chittaranjan and the Tata Electric and Locomotive Company to meet the normal requirements of steam locomotives during the Plan period. The Chittaranjan factory would manufacture about 1,000 broad-gauge locomotives and TELCO about 300 metre-gauge locomotives during the second Plan period. Apart from the orders already placed, approximately 365 locomotives are to be imported during the same period. The output of the Chittaranjan works is 12 locomotives per month. The railways are also considering the manufacture of electric locomotives in India. This will have to await the setting up of the proposed heavy electrical plant. Out of a total of 152 recommendations of the Railway Corruption Enquiry Committee, the Government has accepted 135 and implementation of these have also begun.

* * * *

Yugoslavian Ships for India

Yugoslavia may soon build ships for India. Following a visit by a Government official to Yugoslavia to secure information on the facilities available, the Government of India has submitted its requirements for coastal and overseas ships. The Yugoslav Government has expressed its inability to build one of the types required and, consequently, the Government has put forward other requirements. Proposals from the Yugoslav shipyards concerning the design and other details are awaited.

* * * *

Ship Fares

The report of the Inquiry Board going into the Bombay Steam Navigation Company's request for an increase in the current passenger fares on ships plying on the Konkan coast is expected to be submitted to the Government by the middle of April. The Government has received representations from passenger associations that even these existing fares are high and these should be reduced. These representations will be considered by the Government while taking a decision on the recommendations of the Inquiry Board.

—*O. V. Alagesan*

National Management Organisation

A plan for the establishment of a national management organisation, to be called the Indian Management Association, as a joint enterprise of the Government and industry and commerce, has been prepared by a special committee. The committee has recommended that Delhi should be the headquarters of the Association. Among the main functions of the Association are development of ideas and means for the promotion of management in industry, commerce, Government, social services and other departments of national life; co-ordination of the activities of different professional institutions and organisations; and initiation and promotion of special studies and research on management problems of importance to India.

Probe Into Companies

Government inspectors are now investigating the affairs of 16 companies under section 138 of the Indian Companies Act. An interim report has been submitted in respect of one company.

—*M. C. Shah*

Foreign Exchange Business

Transactions in U.S. dollar and sterling currencies represents the major portion of the foreign exchange business of Indian banks. The Government has entrusted its foreign exchange business as far as possible to Indian banks.

—*A. C. Guha*

Savings Bank Accounts

A sum of over Rs. 4.4 crores has been claimed by 87,740 savings bank account holders who migrated from Pakistan to India since partition. The final time-limit for the exchange of the lists with Pakistan is June this year.

Press Telegrams to Japan

The Government of India held negotiations with the Japanese Government recently for the reduction of Press telegram rate between the two countries from 8½ annas to about 4 annas per word. The Japanese telecommunications authorities have indicated their view that the existing Press rates be continued until such time as there is a general international agreement on Press rates.

NEWS IN BRIEF

THE United States has selected the Philippines as the site for a $20 million research centre in Asia.

The Government of India proposes to transfer employment exchanges to the State Governments from the coming financial year.

The Government of Mysore proposes to set up a syndicate or corporation for better and greater exploration of mineral resources of the State.

The Government of India has sanctioned about Rs. 21.28 crores as loans to various States up to January 1956 under the Low-Income Group Housing Scheme.

The United States has signed an agreement with India for the sale of 21 tons of heavy water to India as part of a broader programme of co-operation in peaceful uses of atomic energy.

Letters have been exchanged between the Government of India and the Government of Finland extending the validity of trade agreement between the two countries up to 31st December 1956.

The production of castorseeds in 1955-56 is estimated at 126,000 tons, as against the partially revised estimate of 124,000 tons in the previous year. This represents an increase of 2,000 tons or 1.6 per cent. over the previous year.

The Coal Mines Provident Fund Scheme will be extended to cover coal miners of Hyderabad State with effect from 1st April 1956. The total membership of the fund at the end of January last was over 910,000. The fund now stands at Rs. 4.95 crores.

The production of food is increasing faster than world population. According to a U.S. Agriculture Department report, the 1955-56 index of world farm production was 119 per cent. of the 1935-39 pre-war base, while world population in mid-1955 was only 117 per cent. of the pre-war base. The overall production during 1955-56 crop year exceeded 1954-55 in every major geographical area.

It is learned that freight rates on all cargoes between the U.S., Canada and India would be increased by slightly less than 10 per cent., with effect from 1st May 1956. It is stated that the proposed increase in freight rates is due to mounting operational costs. The main classes of cargoes likely to be affected most will be newsprint, motor cars, tractors, cotton, sulphur, fertiliser and iron and steel goods.

Wage earners in the United States now have an average life expectancy of 70 years, according to the Metropolitan Life Insurance Company. This new high, it is stated, has been reached after a life expectancy increase of about one-third of a year since 1954 and more than five years in the last decade. The average life expectancy for industrial workers has, we are told, increased nearly 24 years since 1909.

The Government of India has extended the validity of all import licences which expired during the recent dock strike in Australia upto 15th April 1956. It is stated that no formal revalidation of the licences will be necessary. The customs authorities will allow clearance of goods against the import licences, provided the importers produce a certificate from their foreign suppliers/shippers to the effect that the goods in question would have been shipped during the period of original validity of the licence but for the strike. No further extension of validity will be allowed.

A new method for the production of a mixed nitrogen-phosphorus fertiliser has been evolved at the National Chemical Laboratory, Poona. The new method opens up possibilities of utilising the huge surpluses resulting from the caustic soda industry. The fertiliser, under the new method, is produced by adding rock phosphate to commercial hydrochloric acid at a temperature of 40-45° C. followed by the addition of ammonium sulphate to the slurry. On grinding, the final product is a free-flowing powder, stable to weather changes and containing 7.4 and 15 per cent. nitrogen and phosphorus, respectively.

The annual report of the Royal Mint, published recently in London, shows that Britain continues in its role of maker of the world's coinage. Of the 506,000,000 coins minted in 1954, more than 250,000,000 were supplied to oversea countries. Some 18 countries—both Commonwealth and foreign—placed orders for their coinage with the British Mint. They were British Honduras, British East Africa, British West Africa, Burma, Fiji, Iceland, Iraq, the Irish Republic, Jersey, Jordan, Malaya, British North Borneo, Mauritius, New Zealand, Nicaragua, Paraguay, Seychelles, Southern Rhodesia, and Uruguay.

In accordance with the decision arrived at at the Traffic Conference of the International Air Transport Association (I.A.T.A.) held at Miami in October last, first class air passage fares on the India-Europe and Europe-Far East sectors will be increased by five and ten per cent., respectively, from 1st April 1956 by Air-India International Corporation. Other international airlines, which are members of the I.A.T.A., are also expected to raise their fares from the same date. Announcements in regard to increase in first class air fares on various routes are expected from respective airlines headquarters shortly. It is stated that the increase in fares had been necessitated to meet higher operational costs incurred by member-international airlines on the provision of additional luxury facilities in the first class, such as slumberette services.

ECONOMICS AND ADMINISTRATIVE POLICY

(Concluded from page 555)

Cambridge has recently testified, from his prolonged personal experience of collaboration with the Civil Service in Britain, that the members of the Civil Service have always assumed it to be their job to carry out the Minister's policy, once that has been determined and laid down by the Minister, and to adjust their subsequent thinking and advice to the assumption, at least temporarily, that this element of policy must be taken as given. In other words, our senior administrators—the best of them, at any rate—have, in matters relating to economic affairs, endeavoured, as faithfully as they could, to eschew their own "value judgments" from the formulation and implementation of economic policy. On the contrary, economists, not having been brought up on any such tradition, have not always felt the same compulsion to adopt a similar neutralist attitude, if one may use this phrase, towards the formulation of the aims of economic policy; and, at times have unwittingly permitted their "value judgments" to intrude on their technical advice. Not suffering from the inhibitions to which the Civil Service is traditionally subject, they were, of course, free to give expression to their beliefs and convictions, but to the extent that their "value judgments" have directly or indirectly influenced their technical advice, can it not be said that the adoption of such advice has been rendered somewhat difficult? Or, can it not be said that, in some cases, at any rate, economic advice has been vitiated by value judgments based on imperfect study of the many non-economic and institutional factors which, as Mr. Rostow and Prof. Arthur Lewis have recently emphasised, play such an important part in the mechanics and processes of economic development, but which require prolonged study, examination and reflection before they can reveal even to the trained eye the structural and functional pattern of any particular type of economic organisation and the manner in which it responds to and behaves under different types of economic incentives and stimuli? Can it be that these facts cumulatively account for the relatively small impact which economic analysis has so far made on economic policy and administration?

Logic and Intution

Be that as it may, the present unsatisfactory situation in this regard can be improved only by competent economists with technical qualifications, who are fully seized of the limitations of their craft and are anxious and able to evolve suitable methods and techniques which take due note of these limitations. As Prof. Lionel Robbins has emphasised in the address to which I have already referred, "in contrast to some subjects (e.g., some of the mechanical sciences) in which an indifferent performance still implies some minimum of technical equipment, economics as a technical qualification is not much use unless at a high level of competence." There is, of course, the further difficulty that, even high technical qualifications may not always entitle an economist to pronounce judgment on matters of economic policy. For this, mental alertness and maturity of a type not easily defined, are as essential as high technical competence. This was, indeed, the view also of that greatest of modern practitioners of applied economics, the late Lord Keynes. As his biographer has observed, Lord Keynes always believed "in the amalgam of logic and intuition and the wide knowledge of economic facts most of which he recognised were not precise," as an essential prerequisite for judging economic problems. He was never tired of telling his students and disciples that this amalgam could be made only in the crucible of life's experience.

I have ventured to speak frankly on this subject, because I believe that this difficult amalgam of rare qualities needed of competent practitioners of the science of economics can be within the reach of only those who have acquired the requisite mental calibre for this purpose in the universities. Degrees or classes obtained by students may in themselves mean little and may, indeed, be sometimes misleading, unless they are assessed with knowledge and discrimination. What is needed is the training and the development of the mind. How our University Departments of Economics can best achieve this object is a problem which must, of course, be left to the professional judgment of the heads of these departments.

Notices

THE CENTURY SPINNING AND MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-ninth Annual General Meeting of the Shareholders will be held at the registered office of the Company at Industry House, 159 Churchgate Reclamation, Bombay, on Saturday the 14th April 1956, at 2-30 p.m. (S.T.), for transaction of the following business, and Special Notice is also given for the purpose of considering and if thought fit passing as Special Resolution, the special resolution specified below for approving the continuance in office of Shri Motilal Tapuriah, who is an Associate of the Managing Agents of the Company, as Director of the Company, whose period of office is liable to determination by retirement by rotation:

BUSINESS

1. To adopt the Directors' Report, the Audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955.
2. To sanction the declaration of a Dividend.
3. To appoint Directors in place of Shri Rasiklal Maneklal and Shri Madanmohan R. Ruia who retire from office by rotation but are eligible and offer themselves for re-election.
4. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL RESOLUTION

"RESOLVED that the Company approves the appointment and continuance in office of Shri Motilal Tapuriah, who is an Associate of the Managing Agents being a relative of Shri K. K. Birla and of Shri M. P. Birla, Managers of Messrs. Birla Brothers Ltd., as a Director of the Company whose period of office is liable to determination by retirement by rotation."

By Order of the Board,
MAGANLAL H. GANDHI,
Chief Executive.

BOMBAY, 17*th March* 1956.

TENDER NOTICE

TENDERS ARE INVITED FROM ESTABLISHED foundries in India only for the supply of Cast Iron C.S.T. 9 Sleeper Plates, Broad Gauge and/or Metre Gauge, to be supplied by 31st March 1957.

2. Approximately 35,000 tons of pig iron and 5,000 tons of unbroken ingot moulds will be available for allotment upto 75 per cent. of the quantity ordered on firms. 25 per cent. of the ordered quantity being supplied in Railway C.I. Scrap Grade I and/or Grade II by Railways at Rs. 75 and/or Rs. 53 per ton respectively F.O.R. Works Siding or station nearest to Firms' Works.

3. Applications for copies of tender documents should be made to the Director, Civil Engineering, Railway Board, New Delhi. Tender documents embodying conditions of supply and contract and relevant drawings will be supplied at Rs. 10 per set and will be available for sale from 23rd March 1956 onwards on any working day during office hours.

4. Tenders will be received upto 13.00 hours on 23rd April 1956, and opened in the office of the Railway Board, New Delhi, at 15.00 hours on the same day.

N. K. ROY,
Director, Civil Engineering,
Railway Board.

NEW DELHI, 17*th March* 1956.

MACNEILL & BARRY, LIMITED

NOTICE IS HEREBY GIVEN THAT PAYment of the Half-yearly Interest on the 5 per cent. Debenture Stock 1966-71 of the Company will be made on 2nd April 1956 to those Stockholders whose names appear on the Company's Register on that date or in accordance with their instructions.

MACNEILL & BARRY, LTD.,
A. H. FORSTER,
Secretary.

2, FAIRLIE PLACE,
CALCUTTA, 13*th March* 1956.

STRINGENCY IN MONEY KEEN

(From Our Own Correspondent)

BOMBAY, 21*st March*

Conditions in the short-term money market during the week under review disclosed no sign of diminution in the keen stringency noted for several weeks past, despite the release of the application money by the National Carbon Company and the payment of half-yearly interest on 3 per cent. Conversion Loan. Apart from the seasonal demand for bank credit, the position was rendered a little more difficult by the usual tax payments for the current financial year. In the inter-bank call money section, there was very little activity for want of lenders. With the demand for credit outstripping available supply of funds, banks had to seek accommodation from the Reserve Bank and the State Bank of India. Consequently, money rates were firmly held at the previous week's levels.

Inter-bank call money was continued to be bid at 3½ per cent. among all sections of banks. House money at call was also placed at 3½ per cent., while term money fetched 3½ per cent. to 3¾ per cent. *per annum for periods* one to six months.

The prevailing conditions in the short-term money market were duly reflected in the results of this week's sale of 91-day Government of India Treasury Bills. Thus, the total amount offered against the usual invitation for Rs. 100 lakhs declined from Rs. 106 lakhs to Rs. 102.25 lakhs. There was, however, no change in the average rate of accepted tenders which remained at Rs. 2-8-6 per cent. *per annum*, to which level it had hardened last week from Rs. 2-8-5 per cent. per annum. Tenders for Rs. 100 lakhs have been invited for next week also.

The customary statement of affairs of the Reserve Bank of India for the week ended 16th March 1956 is not available at the time of writing this report, on account of today being a bank holiday.

The Scheduled banks' statement for the week ended 9th March 1956 discloses a further sharp fall of Rs. 9.76 crores in demand deposits of banks. This follows the decline of Rs. 8.61 crores noted in the previous week. Time deposits also have declined by Rs. 1.10 crores. Inter-bank borrowings are lower by Rs. 1.97 crores, while borrowings from the Reserve Bank have risen by Rs. 5.23 crores and those from the State Bank by Rs. 1.47 crores. On the assets side, a marked rise of Rs. 13.55 crores is noted in advances, following a rise of Rs. 9.33 crores in the previous week. Bills purchased and discounted are, on the other hand, lower by Rs. 4.29 crores, of which inland bills account for Rs. 3.27 crores and foreign bills for Rs. 1.02 crores. This expansion in advances is accompanied by a sizable fall of Rs. 8.79 crores in investments and of Rs. 7.25 crores in cash on hand and balances with the Reserve Bank. Balances with other banks in current account are lower by Rs. 35 lakhs and money at call and short notice by Rs. 2.46 crores.

The Gilt-edged market maintained a steady tone during the week under review also, with persistent enquiries for medium and long-dated issues. The volume of business was, however, small, in the absence of sellers and scarcity of floating stocks.

3 per cent. 1957 was done at the unchanged level of Rs. 99-10. 3 per cent. 1958 hardened by an anna to Rs. 99-9, while 3 per cent. 1959-61 was maintained at Rs. 98-1. 3 per cent. 1963-65 picked up As. 2 to Rs. 94-11, at which there were buyers. 3 per cent. 1964, on the other hand, was unchanged at Rs. 94-9. 3 per cent. 1966-68 changed hands up to Rs. 92-12, a rise of As. 2 over the week, though at the close they shaded off to Rs. 92-11. 3 per cent. 1970-75 was in demand As. 6 higher at Rs. 89-9, while 3 per cent. 1986 Conversion Loan eased a little from Rs. 77-4 *cum-voucher* to Rs. 77 *ex-voucher*. 3½ per cent. 1961 held ground at Rs. 99-6. 3½ per cent. 1964 was done at Rs. 98-8 and 3½ per cent. 1965 an anna higher at Rs. 98-7. Business in State loans was small.

In the foreign exchange section, the rupee maintained its strength in terms of the U.S. dollar, in tune with a similar trend in sterling. The banks' selling rate of ready dollar was maintained at Rs. 477¼ per $100. In New York, spot sterling gained a little from $2.80½-2.80⅝ to $2.80⅝-2.80¾. Three months' forward, on the other hand, dropped from $2.78⅜-2.78¾ to $2.78.9/16-2.78.11/16. Transferable sterling improved from $2.77⅛-2.77⅜ to $2.77⅜-2.77¾.

HIDES LOOK DOWN

(From Our Own Correspondent)

MADRAS, 19*th March*

Arrivals of E.I. tanned cow hides have been as usual and clearances by shippers slow. Prices have declined by six pies per pound on last week's level. U.K. buying has been patchy, as dressers seem to follow a hand-to-mouth policy even at current low prices. E.I. tanners who had expected a revival of U.K. interest in kips last week have been disappointed. Instead, buyers are now offering lower prices to test the market at origin. Demand for buff calf, cow calf and buff hides has been poor.

Arrivals of tanned skins in the local market have been moderate and offtake fair. Shipment business has been poor, due to the progress of the London public sales.

In the London tanned skins public sales, prices of goat skins best tannages are unchanged and others have declined 9*d.* to 12*d.* on January levels. Clearance is good, but light weights lower grades in poorer qualities have suffered serious decline upto 2*s.* per lb. Sales of tanned sheep skins will be taken up this week.

BUOYANCY IN BULLION KEPT UP

(From Our Own Correspondent)

BOMBAY, 21*st March*

The bull syndicate's grip over the bullion market was tightened further during the week under review. There was, therefore, a strident rise in prices of both silver and gold. Forward gold in the first settlement touched a fresh peak of Rs. 106-10 and forward silver Rs. 182-6. The highest level touched by gold this week was only a few annas short of the 1952 peak, though it was still very much behind the all-time peak of Rs. 119-11 for forward recorded in 1949.

The persistence of bullish fervour is attributed to keen enquiries for gold from other centres, prominent among which was Madras which is said to be absorbing large quantities of the yellow metal. The white metal also made a strident advance, despite the report that licences had been issued for a further import of 400 bars from Tibet in the form of coins. This is due to the dwindling of the present floating stocks and the expectation that the Tibean silver, if imported, would find a ready market in view of its low prices.

Silver for forward delivery (28th March settlement) advanced from Rs. 177-13 to Rs. 178-12 early in the week. After a temporary recession to Rs. 177-9, the bullish trend gained fresh momentum and the price shot up to Rs. 182-6 today, before closing at Rs. 181-12. Forward silver for the next settlement jumped from Rs. 178-9 to Rs. 183-4 and finally wound up at Rs. 182-10.

Ready silver (.996 Mint) spurted from Rs. 178-1 to Rs. 182-10, but finished a shade lower at Rs. 182.

The floating stocks of silver are estimated at 800 bars and the daily average offtake was 30 bars on an average.

Forward gold (27th March settlement) moved forward from Rs. 103-1 to Rs. 104-11 early in the week, but soon slipped back to Rs. 103-2 on heavy unloadings by prominent bulls. This recession was, however, short-lived, as the bull operators once again began accumulating lines and forced the shorts to cover. Consequently, the price made a strident advance to Rs. 106-10 today before finishing at Rs. 105-8. The rate for the April settlement, too, kept pace with that for the current settlement; thus, it strengthened from Rs. 102-14 to Rs. 106-5 before closing at Rs. 105-4.

After spiralling up from Rs. 103-13 to Rs. 106-13, ready gold ended the week at Rs. 105-12.

The floating stocks of gold are reported to be no more than 25,000 tolas. The daily average arrivals were 3,000 tolas, while the offtake was 4,000 tolas on an average.

In London, the price of silver was unchanged at 79d. for both spot and forward. Gold was fractionally lower at 249s. 4½d. as against 249s. 4¾d. In New York, silver was maintained at 91⅛c.

The following comparative table shows the trend of the market during the week under review:

	21-3-56	Highest	Lowest	14-3-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
GOLD				
Ready (99 fine Mint) ..	105 12	106 13	103 9	103 13
Forward*	105 8	106 10	103 2	103 1
Sovereign	66 8	66 8	64 4	64 0
SILVER				
Ready (996 fine Mint) ..	182 0	182 10	177 14	178 1
Forward†	181 12	182 6	177 6	177 13
London Silver Ready ..	79d.	—	—	79d.
London Forward	79d.	—	—	79d.
London Gold	249s. 4½d.	249s. 4¾d.	249s. 4½d.	249s. 4¾d.
New York Ready	91⅛c.	—	—	91⅛c.

* 27th March settlement.
† 28th March settlement.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

LINSEED RULES STRONG

(Messrs. A. Bradley & Co.)

CALCUTTA, 19*th March*

Although there has been little advance in prices, there is a strong bullish undertone in the linseed market. This has been promoted chiefly by the virtual exhaustion of the old crop and the advance in price of new crop seeds which, however, will not reach this market for another three or four weeks. In addition, prices have been affected by the spectacular advance in the price of mustard oil, owing to reports of a very short crop. Crushers have been keen buyers on the whole, but the turnover is very limited. The oil market is steady. With very heavy commitments in hand for March-June shipment, buyers and sellers alike are pausing.

The latest quotations are: March Rs. 25 and April-May Rs. 23-8 per maund.

HIDES ARRIVALS LOWER

(From Our Own Correspondent)

KANPUR, 17*th March*

During the week under review, the conditions of the hides and skins market were similar to those that prevailed earlier in the week. Fresh arrivals were not as large as those of the previous week. Madras dealers were lukewarm. The main purchasers were the local tanners.

The latest available quotations are: Wet salted cow 1st grade Rs. 300, 2nd grade Rs. 240 and 3rd grade Rs. 100 to Rs. 110 per score; goat 1st grade Rs. 280 and 2nd grade Rs. 210 per score; wet salted buff 1st grade 2 lbs. and 2nd grade 2 lbs. 2 ozs. per rupee; sheep 1st grade Rs. 210 and 2nd grade Rs. 175 per 100 pieces.

SPOT COTTON MOVES UP

(From Our Own Correspondent)

BOMBAY, 21*st March*

Hopes of an early resumption of futures trading in cotton have once again receded. The aggrieved bull operators who lost their appeal in the Full Bench of the Bombay High Court against the closure of the hedge contracts and the amendments to the by-laws of the East India Cotton Association (E.I.C.A.) are now understood to have preferred an appeal to the Supreme Court. This development would appear to have been largely responsible for the delay on the part of the Forward Markets Commission to announce its decision with regard to the commencement of futures trading in I.C.C. August. Also, the Commission may be finding it difficult to accept the suggestion of the E.I.C.A. for continuing the fine stapling 13/16" as the basis and grade of the hedge contract. There are, besides, doubts as to whether it would be possible to run a contract of 13/16" staple length within the price ceiling of Rs. 730 fixed by the Government. Persistent negotiations are, however, being held between the Commission and the E.I.C.A. over the issue of commencing futures trading in I.C.C. August.

Meanwhile, a strong bullish fervour has seized the spot cotton market, thanks to lower ideas of cotton output, on the one hand, and continued upward trend in consumption by mills. Prices of cotton have, however, been moving up. Indeed, the quotations ruling at present are the highest reached so far in the current cotton season. Even the Textile Commissioner's directive to the mills asking them to furnish statements of ready and delivery cotton purchased by them as on 29th February last, it seems, has failed to have any effect on the market. This directive is being interpreted differently by different sections. Thus, while one section feels that the directive is a preliminary to the re-introduction of the individual mill quota system which was abolished only last year, some others are of the view that the directive has been issued only to ascertain the stock position of mills, with a view either to exploring the possibility of importing lower quality of American cotton or to stopping further extension of export licences due to expire at the end of this month.

An idea of the extent to which the spot cotton prices have rallied in recent weeks can be had from the following table:

(In rupees per candy of 784 lbs.)

	21-3-56	14-3-56	22-2-56	7-12-55
Bengal *Deshi* ...	730	730	710	650
Berar Jarillas ...	790	785	785	710
Khandesh ...	770	770	770	715
Vijay	927	910	890	885
Oomra *Deshi* ...	730	730	750	700
Moglai	685	675	660	640

Despite firmness in cotton prices, mill buying is quite sustained. Vijay is evoking particular attention. Surtis, Jarillas and Wagad are also being favoured. Activity in the export section is brisk, shippers' enquiries being concentrated on Moglais, Zodas, Bengals, Oomra *Deshi* and C.P. 1 and C.P. 2. Thanks to the consideration that export licences will not be extended beyond the 31st inst., shippers are now more concerned about the unutilised balance of the licences. There are rumours that, out of the unused quantity, an *ad hoc* quota of 50,000 bales will be given by the Government for export to Italy. Among foreign cottons, African varieties elicited support. Deals were put through in Busoga at Rs. 1,437, in Jinja at Rs. 1,355, in Budama and Bukhedi at Rs. 1,425-Rs. 1,430 in BP 52 at Rs. 1,530-Rs. 1,535. Because of high prices, there was not much interest in Egyptians, except some business in high grade Karnak.

The distinctly weak conditions which prevailed in the Karachi cotton market during the last three weeks abated this week. The low levels touched by the cotton prices evoked some support, which was also aided by revival in demand from overseas interests and indigenous textile mills. Consequently, the prices of cotton staged a recovery. N.T.R.G. May delivery, which had gone down from Rs. 80-7 to Rs. 78-14 last week, recovered to Rs. 80-6 today. May contract improved by As. 6 to Rs. 77-8. At one time last week, this contract was quoted at as low as Rs. 75-10. The rise in forward cotton followed the improvement in spot rates. Punjab *Deshi* was quoted yesterday at Rs. 73-8 per 82 lbs., as against Rs. 73 a week before. The following are the latest available quotations (in rupees per 82 lbs.) for a few popular varieties of Pakistan cotton:

Sind *Deshi* 77-8; 4F Roller 75-4; S.G. 80-4; Punjab Roller 80-12; S.G. 85-12; 289F NT Roller 82; S.G. 88; 289F Punjab Roller 88-8; S.G. 94-8.

The Alexandria cotton futures market ruled irregular during the week under review. Karnak cotton was subjected to continuous selling while Ashmouni met with support. The selling in the former was induced by negligible demand from abroad, the interest displayed being only by countries buying Egyptian cotton against barter transactions. Prices, as a result, continued their downward march. The improvement in the prices of Ashmouni followed a steady trend in spot market premia, thanks to buying by local mills and also, to some extent, by overseas interests.

The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market (figures in brackets giving last week-end rates) are: Karnak: March 85.80 (86.40) and May 84.80 (85.65); Ashmouni: April 69.08 (68.85) and June 67.95 (67.00).

The second auction of the new crop Sudan cotton was held on the 14th inst., when an aggregate quantity of 8,000 bales was offered. As the reserve prices were very high and in line with the Egyptian prices, the Gezira Board was not able to sell more than 2,000 bales. The balance had, therefore, to be withdrawn. There was practically no interest on the part of Indian mills in the auctions.

The undertone of the Liverpool cotton futures market continued to be easy during the week under

review also. The easiness was due to the impending arrivals of shipment purchases of American C.C.C. cotton, Mexican, Brazilian and African qualities. Selling was, therefore, renewed and cotton prices drifted lower. The decline would have been more marked but for commission house buying on expectation that a fair price for cotton would be maintained under the new C.C.C. release programme. The following are the latest available quotations (in pence per lb.) from Liverpool:

Old contract: March-April 25.59; May-June 24.92; July-August 23.99; new contract: May-June 31.05; July-August 27.05; October-November 25.60; December-January 25.35; March-April 25.25; Egyptian Karnak Cotton: March-April 49.45; May-June 48.90; July-August 48.35.

Barring nearby position which met with trade and commission house buying, the New York cotton futures market depicted an easy trend. July delivery was particularly weak under commission house liquidation, induced by the belief that the rising loan repossessions would relieve the tight supply situation before the end of the current season.

It is now generally expected that the support price for the new crop will be about 3 cents below that of the present season. The official loan rate for Middling 1" cotton for the current season at a point of average location is 34.68c. and, if private predictions turn out to be true, the support price for new crop of the same quality will be around 31.68c. The new crop futures contract October is now priced at 31.75c. with December and March about 15 points lower. Details of the new export sales programme are still not known and the general expectation is that they will be announced only next month. The first bids might be taken immediately after the details are announced.

Out of the total supply of about 25.8 million bales this season, about 13.5 million bales are in Government hands in the 1955 loan and C.C.C. stocks as on date. This leaves a total free supply of 12.3 million bales. The estimated total disappearance for the season is about 11.5 million bales, made up of domestic consumption of 9 million bales and exports of 2.5 million bales. The free carry-over at the end of the season will, therefore, be 800,000 bales. This, it is said, is very inadequate and the minimum pipeline supplies required are about 2 million bales. In view of this, it is considered that further repossessions from loan or purchases of C.C.C. stocks of over a million bales are essential to meet the needs of the season. This would appear to indicate even higher domestic prices than now prevailing during the remaining part of the season.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	19-3-56	13-3-56	6-3-56
Spot	36.75	36.60	36.60
May	35.52	35.22	35.43
July	32.94	33.26	33.79
October	31.80	31.77	31.47
December	31.82	—	—

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, 21*st March*

For the third week in succession, the yarn market exhibited a bearish trend. Rayon yarns were particularly weak on fears of large sales, by the local rayon yarn producing unit, of its output for April-May-June delivery at Rs. 3-6 per lb. for 150 deniers 1st quality bright cones and at Rs. 3-10 for 120 deniers 1st quality bright cones. These fears and the reports of heavy arrivals of imported yarns in the wake of limited offtake from the weaving mills let loose a fresh wave of selling and rayon prices staged a further sharp drop. On expectation of large imports against the reported liberal licences, staple fibre yarns also were subjected to pressure of sales. Despite firmness in raw cotton prices, cotton yarns ruled easy, thanks to slackness in demand from consuming centres and unloading of stocks by speculative interests.

Snia rayon yarn (120 dull cones) for June delivery fell by Rs. 10 to Rs. 810. April delivery dropped Rs. 4 to Rs. 811. In the spot section, 150 Italy was the worst sufferer; it was hammered down by As. 2½ to Rs. 3-12-6. 120 Italy lost an anna to Rs. 3-14. 120 Japan receded by six pies to Rs. 4-6. 150 Japan was neglected at Rs. 4-4, being the same as last week. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade was quoted six pies lower at Rs. 3-9-6.

Both indigenous (40 x 2) and foreign (80 x 2) staple fibre yarns staged a retreat. Among the former, New Greats climbed down by As. 2 to Rs. 3-11. Citys and Kohinoors both declined by 21 pies each to Rs. 3-11-9. Centurys moved down from Rs. 3-12-6 to Rs. 3-11-3. Deals in foreign yarns (80 x 2) were put through at reduced prices. Paramounts and S. Sellos eased by an anna each to Rs. 7-10 and Rs. 7-8, respectively. Suicos were lower by half an ana at Rs. 8-3. Fujis were quiet at Rs. 7-14.

Fine and superfine count cotton yarns were subjected to much selling. Among 60s, Raghuvamshis dropped Re. 1-8 to Rs. 57. Barodas fell by a rupee to Rs. 51-12. Moderns lost As. 14 to Rs. 61. Colabas shed As 8 to Rs. 55-4. Business was reported in 80s at lower levels, Finlays losing As. 4 to Rs. 72 and Elphinstones As. 2 to Rs. 62-2. Forty count yarns also lacked support. Minaxis moved down by As. 9 to Rs 27-3. Sharadas declined by As 6 to Rs. 26-4 and Minervas by As. 4 to Rs. 27. Maduras, Moderns and Centurys lost As. 2 each to Rs. 27-10, Rs. 27-4 and Rs. 27, respectively. Thirty counts were quiet, Indus being quoted at Rs. 22-7 and Maduras at Rs. 22-12. Among 20s, Raghuvamshis declined by As. 4 to Rs. 16-12. Podars and Edwards finished each an anna lower, the former at Rs. 10-9 and the latter at Rs. 16. Elphinstones lost a like amount to Rs. 16-5. Ten counts, however, proved an exception and recorded a slight improvement in prices on special support. Podars and Elphinstones gathered an anna each to Rs. 12-15 and Rs. 12-6, respectively. Moderns were fully firm at Rs. 13-4.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	21-3-1956	14-3-1956	7-3-1956
Art Silk yarn (per case of 200 lbs.)–	Rs. a.	Rs. a.	Rs. a.
120 Dull Cone Snia April ..	811 0	815 0	827 0
June	810 0	820 0	831 0
120 Japan (per lb.)	4 6	4 6½	4 7
150 Japan (per lb.)	4 4	4 4	4 3½
120 Italy (per lb.)	3 14	3 15	3 15
150 Italy (per lb.)	3 12½	3 15	3 15
Staple fibre yarn (per lb.)			
40 x 2 New Great	3 11	3 13	4 0
40 x 2 Century	3 11½	3 12½	4 0
40 x 2 City	3 11½	3 12½	4 0½
Cotton yarn (per bundle of 10 lbs.)–			
10s Elphinstone	12 6	12 5	12 6
20s Raghuvamshi	16 12	17 0	16 12
30s Madura	22 12	22 10	22 10
40s Minaxi	27 3	27 12	28 4
60s Modern	61 0	61 14	62 8
80s Finlay	72 0	72 4	72 12

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 21*st March*

The oil and oilseeds market ruled firm during the week under review. Under strong bull support, prices of all the sections advanced and recorded sizable gains. Restricted arrivals of seeds, expectations of large overseas demand for linseed and castor oils and firmness in the bullion, share and cotton markets all were cumulatively responsible for the buying fervour and the business done in the market was, therefore, relatively larger than in the last week. The market remained closed today owing to *Jamshedi Naoroze*.

Some sections of the trade have urged the Government to raise the exemption limit for excise duty on non-essential oils from 150 tons to 500 tons. They have demanded that oil produced prior to 1st March should be totally exempted from the levy. Some others have asked for a reduction in the rate of excise duty. The Executive Committee of the Central Organisation for Oil Industry and Trade has urged the Government to remove totally the excise duty on oils. In the alternative, it has asked for the refund of the excise duty on oils used as raw materials in manufacturing industries.

Sectionwise, Bold ready in the groundnut section, advanced from Rs. 32-8 to Rs. 35-10. April-May delivery gathered Rs. 2-12 to Rs. 35-12. *Khandesh* quality put on Rs. 3-2 to Rs. 36-2. Coromandals changed hands at Rs. 36, as against Rs. 33. Groundnut at ex-mill gained Re. 1-9 to Rs. 19-9. April and May deliveries were enquired at Rs. 19-4 and Rs. 19-8, as against Rs. 18-1 and Rs. 18-2, respectively.

Bold ready, in the linseed section, rallied Rs. 2-2 to Rs. 35. April-May delivery gathered Rs. 2-6 to Rs. 34-14. Small Sutnas were up by Re. 1-10 at Rs. 33. Linseed oil disclosed a gain of Re. 1-1 at Rs. 22.

In the castorseed section, May delivery opened the week at Rs. 128-4, as against Rs. 127. After declining to Rs. 126-8 on the same day, it advanced to as high as Rs. 134-10, before declining slightly to close at Rs. 134-8. Madras quality in the ready section improved from Rs. 24-12 to Rs. 26-14 and Kanpur from Rs. 22-14 to Rs. 24-14. Castor oil B.S.S. and Commercial quality put on Re. 1-10 each to Rs. 16-2 and Rs. 15-2, respectively.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	20-3-1956	14-3-1956	7-3-1956
Groundnuts—	Rs. a.	Rs. a.	Rs. a.
Khandesh Quality Ready (per cwt.)	36 2	33 0	31 14
April-May	35 12	33 0	32 8
Linseed—			
Bold Ready (per cwt.) ..	35 0	32 14	33 0
April-May	34 14	32 8	33 2
Castorseeds—			
May	134 8	127 0	122 0
Madras (per cwt.)	26 14	24 12	24 0

Commercial (per quarter) ..	15 2	13 8	13 12
Linseed Oil—			
Ready	22 0	20 15	21 2

SUGAR EASY

(From Our Own Correspondent)

BOMBAY, 21*st March*

The hectic activity witnessed in the sugar market last week has abated. In fact, the market is distinctly easy. The holders of sugar in the pre-budget period who had lent support for some time now, induced by the overall bullish trend of commodity markets, have withdrawn from the market. Reports of an upward trend in sugar output, together with free availability of imported sugar, have also contributed to the present easy trend. The decline in prices would have been quite marked but for reduced arrivals of indigenous sugar into the market, being 6,100 bags, as against 30,200 bags in the previous week. Some sugar traders are inclined to feel that the market cannot stabilise at the existing price levels, until the monthly releases are issued on a 50 per cent. production basis.

In the forward section, *Fagan* delivery contract for C grade sugar receded from Rs. 91-10 to Rs. 90-10 but is quoted slightly higher at Rs. 90-10 per bag today. Vizag contract has dropped As. 14 to Rs. 91-1.

In the spot section, A grade indigenous sugar has declined from Rs. 97-Rs. 101 to Rs. 97-Rs. 100 and D grade from Rs. 88-Rs. 91 to Rs. 88-Rs. 90. C grade sugar is quiet at Rs. 91-Rs. 94. Deals in B grade have been put through at Rs. 95-Rs. 97, as against Rs. 94-Rs. 97 a week before. British refined sugar, however, has put on As. 2 to Rs. 83-10 per 2 cwts.

N.B.—The rates for indigenous sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER QUIET

(Messrs. Parekh & Co.)

BOMBAY, 20*th March*

Except for a small short-lived flurry at the end of the week, Malabar black pepper during the entire period ruled quiet with minor fluctuations. Alleppey moved between Rs. 800 and Rs. 825 with size of business smaller than the arrivals. Garbled at Cochin fluctuated between Rs. 137½ and Rs. 140. A section of the trade is said to be bullish, not for any other reason but for the present low level of price at Rs. 800 which appears very attractive, when compared with the highest price of Rs. 4,000 seen during the past. The present market being shorn of fluctuations, most of the traders are sidelining. Growers also seem to be getting tired. They are trying to liquidate their accumulated stock but without result. If such a state of affairs persists for some time to come, it is generally felt that the present stagnant condition may soon be replaced by downward trend, affecting the morale of all the sections of the trade. The policy of hand-to-mouth buying by New York dealers is very much discouraging. It is reported that they are waiting for a bottom, but at every reduced offers, they are reported to be revising their idea of the bottom lower and lower. Most of the former operators in the local market have already left the ring.

During mid-week New York dealers bought afloat and March shipment at $0.31 and $0.30½ respectively, but this purchase proved patchy, as they withdrew the next day asking for a concession in the price. The enthusiasm created by the recent purchases among the bulls, therefore, proved short-lived.

The speculators are trying to manipulate the market with a view to lifting the prices but in the absence of any encouraging follow up by New York, the feelings of despondency are being felt among the majority of the holders. The weakest spot in the whole situation is the accumulation of sizable loaned stock and approaching dull period both in India and overseas. Under the circumstances, if the growers and/or bankers any time decide to liquidate, prices may be marked down, though it appears that the fall in the prices may be slow, as the rates are already considered low.

In the delivery section the trading is on a very restricted scale.

Following are today's nominal quotations: Ready delivery Rs. 110 (as against Rs. 111 a week ago) per Bengal maund, March Rs. 765-75 (Rs. 780-90), April Rs. 775-85 (Rs. 790-800) and May Rs. 785-95 per candy of 5¼ cwts.

TEAS MOVE UP

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 16*th March*

The offerings in sale No. 6 which was held on Tuesday, 13th March, aggregated 1,500,000 lbs. Quality remained good, although occasional invoices showed a slight falling away. There were several invoices of flavoury high-grown tea on offer. The sale opened to a very much stronger tone. Common and low medium teas were fully firm and there was more enquiry for these types. Medium teas were about steady. There was an exceptionally strong demand for good medium descriptions with cup quality. Buyers competed keenly and prices were often As. 6 to As. 8 above valuations. Best liquoring teas sold well and prices were about steady with buyers following quality closely. Black Middle East types advanced by As. 2 to As. 3 and there was slightly more demand for whole leaf grades. The following are the quotations:

	1956 Rs. a. p.
Plain B.P.	1 7 0
Low Medium B.O.P.	1 13 0
Medium B.O.P.	2 2 0
Good B.O.P.	3 6 0
	to 3 8 0
Well-made black leaf O.P. ...	2 7 0

London Market: Sale of 12th March 1956.—Very strong demand. Best 3*d.* sometimes more. Medium top grades 2*d.* to 3*d.* dearer. Others 1*d.* to 1½*d.*

Sale of 13th March 1956.—2*d.* to 4*d.* dearer; more for improved quality.

Colombo Market: Sale of 12th March 1956.—Stalky kinds weaker. Black leaf dusts lower. Liquoring dusts dearer. Others very strong demand. Dearer for good liquoring kinds, particularly fannings.

Sale of 13th March 1956:—Strong general demand. Bright liquoring low-growns up 5 cents. Mediums up 5 to 10 cents. High-growns dearer following quality. Persian Gulf types easier.

Calcutta Market: Export.—52,000 packages. Strong general demand with most kinds advancing As. 2 to As. 4. Whole leaf grades fibrous C.T.C. types steady. Good liquoring teas strongly completed for flavoury Darjeelings strong.

Internal:—19,000 dust. Strong demand. Improved Assam and Dooars As. 2 to As. 3 dearer. C.T.C. fully firm to dearer. Darjeelings and Middle East types well supported. 3,000 internal leaf. Quite good demand slightly dearer rates.

Export Quota:—The market has been very quiet and there are sellers at 4 pies but buyers are scarce.

Forthcoming Auctions:—Sale No. 7 will be held on Tuesday, 27th March

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"Dust Sale F.—350,000 lbs. Very strong general demand. Market As. 2 to As. 3 all round."

FALL IN JUTE GOODS PRICES

(From Our Own Correspondent)

CALCUTTA, 20*th March*

During the week under review, prices of both raw jute and jute goods declined. The recurrence of rain in most jute districts has enabled cultivators to prepare the land for sowing, and, in fact, in some of the low-lying districts of Pakistan sowing has already commenced. Naturally, an earlier crop is expected, and stockists who were expecting a squeeze became nervous sellers. This had a sympathetic effect on prices of jute goods. Both these developments are welcomed to the export trade, as with the continued fall in prices, the competitive ability of jute goods in world markets will be strengthened. In this view, it is to be hoped that the lower levels for raw jute are stabilised, and indications are that this would be so. For, stockists are believed to possess fair quantities, which they had accumulated on the expectation of higher prices. The prospect of an earlier crop has robbed the fortunes of these stockists, and the fact that a new crop is already quoted at a discount of Rs. 2 to Rs. 3 as compared with the prices for ready jute, overrules the possibility of any significant rise in the rates in the near future. However, it is necessary that the decline in prices of jute goods is arrested, even if raw jute continues to move down. For, although with the increase in jute goods production exports have gone up, profits of mills have considerably lessened. This subject was dealt with at length by Mr. M. P. Birla in his address from the chair last Friday to the Indian Jute Mills' Association, when he said that of the 37 jute mill companies that had so far published working results for the last accounting period, as many as 12 had incurred losses and that the net profit of the companies as a whole was only Rs. 4 lakhs. This would be no surprise when it is disclosed that as much as 66 per cent. of the costs of production accounted for the price of raw jute. And, as stated by Mr. Birla, this price was 15 per cent. higher than in 1954.

This state of affairs is to be deplored particularly when there are many mills which have been unable to carry out modernisation from their own resources and are, for the purpose, dependent on the National Industrial Development Corporation. And, although prices of jute goods could have been kept firm, albeit the recession in raw jute, genuine business for export during this week was affected when bear-selling put down quotations and buyers withdrew their support. Another factor for the recession in jute goods was the publication of the output figure for February 1956. Although February was a shorter working month, production was higher at 92,800 tons, as compared to 88,900 tons in January on account of the higher number of looms at work. Taking the stock of 78,400 tons at the end of January, the availability of jute goods during February was 171,200 tons from which if the stock of 89,700 tons as at the end of February was deducted, the demand for the month was of the order of 81,500 tons, which was naturally less than production. However, the month of March has begun well, and shipments including coastal shipments of hessians and sackings aggregated 32,700 tons from 1st to 10th March, i.e., higher by 5,400 tons compared to shipments in the corresponding previous period.

At lower levels, a moderate quantity of jute goods was taken by shippers for deliveries extending up to the end of this year, although subsequently bear sentiment affected this trend. Activity of speculators was much restricted inasmuch as they were disinclined to extend commitments. From Rs. 114-10 ready B. twills touched a low of Rs. 111-12 by Thursday. At this stage, in addition to the business with shippers, covering demand was also in evidence. As a result, there was a recovery to Rs. 112 by the week-end. Yesterday the rate remained unchanged at Rs. 112 and business on account of shippers was limited. Considerable orders from overseas were expected. Earlier, the April delivery rate was As. 2 to As. 4 lower than the ready goods but with the subsequent recovery reached to quote in parity. April-June goods were, on the other hand, lower by As. 4 to As. 8 all the time. Ready 40" 10 oz. hessians opened at Rs. 40-5 and gradually lost to Rs. 39-6 by the week-end. There was no change in yesterday's rate. The near goods were higher by As. 3 and April-June by As. 6.

As stated, raw jute prices eased following the prospect of an early crop. Local daisee bottoms at Rs. 29 were lower by Re. 1-8. Indian northern bottoms sagging to Rs. 28-8 from Rs. 30. Assam upper bottoms also lost to Rs. 28. Similar recession was noted in most other constructions. Mills withdrew from the market, as they expected the recession to continue. In the meantime, sellers were anxious for business, and made offers. Reports from East Bengal of lower stocks of jute there do no longer cause any anxiety here, since it is believed that there is plenty of Indian jute yet to be disposed of by cultivators as well as stockists who have become nervous sellers at the prospect of an earlier crop.

EXPORT TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, 20*th March*

A quantity of 47,700 chests was catalogued during yesterday's tea export sale, which met with a strong general demand. Prices of most teas advanced by an anna to As. 3. Well-made whole leaf grades, stylish B.P.S. teas, plainest varieties and teas with bright liquors reflected the general trend. Among the last mentioned description, non-withering Dooars and useful autumnals were strongly supported. Darjeelings were a note easy, but the limited teas with autumnal flavour received good attention. The quotations were: Medium Assam B.P. Re. 1-11, plain B.P. Re. 1-9-6 to Re. 1-10, and clean black pekoe Rs. 2.

Export quota right realised 5 pies.

Conditions akin to buoyancy prevailed during last week's sale for domestic consumption. Dusts offered aggregated 18,700 chests. There was strong support for black leaf teas suitable for Middle East consumption, and, generally, teas with improved quality were buyers' favourites. Medium C.T.C. Assams advanced by several annas, and the best C.T.C. Assams received impressive support. Prices of plain liquoring teas and teas with poorer leaf appearances improved by As. 2. Residue types were also firm. The quotations were: Best C.T.C. Assam Rs. 2-14 to Rs. 3, medium Assam grainy dust Re. 1-10-6 to Re. 1-11-6, and medium Dooars Re. 1-10 to Re. 1-10-6.

Leaf offerings amounted to 3,000 chests. Demand was better, and prices were higher.

FOODGRAINS ADVANCE

(From Our Own Correspondent)

HAPUR, 19*th March*

After a slight fall during mid-session, following the Government of India's determination to check the rising trend of wheat prices by releasing heavy quantities in the different parts of the country, wheat prices recorded strident advance towards the week-end. Wheat *dara* was today transacted at Rs. 15-12 and *khati* at Rs. 14-11, having touched the lowest at Rs. 15-6 and Rs. 14-8, respectively, during mid-session. Poor stock position and unfavourable weather during most part of the week were the main stimulating factors. Local wheat stock ran down during the week by 2 *khatias* to 12 *khatias*. The Union Government is expediting imports and a further quantity of 5,600 tons of wheat was received during the week ended the 7th inst., and the total imports since 1st January amounted to 42,100 tons.

The all-India second crop estimates now available reveal that there are prospects of larger production than last year. The production of rice is expected to be about 24 million tons and that of wheat is likely to exceed the target of 8.5 million tons.

Prices of all coarse grains registered a sharp advance during the week as stocks of all the grains were very small and the new crop was expected to reach the market only after a fortnight. Gram was transacted at Rs. 12-4. Barley and *bejhar* were done both As. 8 higher at Rs. 11-12 and Rs. 11 per maund, respectively. Despite arrivals of new peas, prices recorded a further advance in line with prices in the future section. *Arhar* rose by As. 6 to Rs. 12-2 and other pulses also advanced, the latest prevailing rates being *urd* Rs. 17-8 to Rs. 19, *moong* Rs. 14 and *masoor* Rs. 14-2 per maund.

Firmness in the future prices of pulses continued during the week and the latest quotations on Monday were: Peas *jeth* Rs. 9-7-9, peas white (gram) *jeth* Rs. 10-2, *arhar jeth* Rs. 11-4-3 and *urd boisakh* Rs. 17-11, as against Rs. 9-1, Rs. 9-13-6, Rs. 10-8-6 and Rs. 16-14, respectively, last week-end.

Hailstorm in some areas have caused some damage to the standing crop. Want of winter rains has also resulted in poor crop in non-irrigated areas. Otherwise, the standing crop conditions are fairly satisfactory.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 19*th March*

The sugar market continued to rule dull and depressed, thanks to easy supply position and expectation of an overall increase in the production of indigenous sugar. The Union Food Minister informed the Lok Sabha this week that there was no proposal to import any further quantity of sugar during the current year, except some quantity already received in January-February against contracts concluded in 1954. The latest prevailing mill delivery prices are: Jaswant Rs. 28-9, Simbhauli Rs. 28-9, Mowana Rs. 28-10, Amroha Rs. 28-2, Bijnore Rs. 28-2, Mansoorpur Rs. 29-8 to Rs. 30-8, Rampur Rs. 31; retail Rs. 30-8 and *khandsari* Rs. 23 to Rs. 27 per maund.

Easy loading facilities in the form of *gur* special to consuming areas of Gujerat and poor arrivals—at an average of 1,000 maunds daily—led to a sharp advance of Re. 1 to Rs. 11-12 per maund in the price of *gur*. The stock position was reported to be gradually declining and was put at 120,000 maunds. Continued bull support, influenced by a hardening tendency in ready *gur* prices, accounted for an appreciable advance in future *gur* prices during the week. The latest quotations were at the highest level of the week. *Gur fagun* was today quoted at Rs. 11-11 and *bisakh* at Rs. 12-10, as against Rs. 10 and Rs. 11-0-6, respectively, last week-end.

INSURANCE

(Concluded from page 562)

was given to the President, at the time the Constitution was drafted, nobody thought that it would be abused in such a manner. He further asked if, considering the extent of irregularities of life insurance companies as shown by the Report of the Controller of Insurance, there could be no remedial action other than nationalisation. In the case of banks, things were set right by proper administration organisation. Evils in the sphere of company management were sought to be removed by suitable modifications of the company law. Why, in the case of insurance companies, did the Government take this "extraordinary action?" Referring to the argument that nationalisation was justified on the ground that the resources of the business were necessary for economic progress, he said: "But do we lay stress only on economic progress? We are heading towards totalitarianism. When economic matters are being considered, unfortunately, nobody thinks of what will happen to democracy."

Similar sentiments were expressed by Prof. A. R. Wadia. He was strongly critical of the nationalisation of insurance and also the issue of an ordinance for that purpose. He was doubtful whether under Government management the expense ratio would be brought down and claims settled quickly. He felt that by now the Government would have been able to see which were the "good" companies. These could have been allowed to continue. Dr. R. K. Mukherjee criticised the "indecent hurry" in which nationalisation was effected when the Government was already controlling a large proportion of the investment of the companies. Mr. B. C. Ghose supported the Bill but felt that it would be desirable to have an element of competition by having six or seven insurance companies operating throughout the country: the corporation proposed by the Government should be a sort of holding company.

Mr. S. P. Jain said that the arguments advanced by the Finance Minister in support of nationalisation were not convincing. It was known that instances of official corruption were growing. Did it mean that the Government would dismiss the whole class of officials instead of improving them? If the Controller of Insurance had been a little more vigilant, then the alleged malpractices would not have been there. He urged the appointment of an enquiry committee of members of both Houses of Parliament to find out whether the private sector was really responsible for the malpractices and "to see how far Government's leniency has been responsible for them."

While Mr. H. C. Dasappa pointed out that the States which were carrying on life insurance business should be allowed to continue such business, the case for co-operative insurance was presented by Mr. P. S. Rajagopal Naidu. To the great shock of co-operators, Mr. Naidu said, the Government had "equated" the co-operative societies with private insurers. He was in favour of nationalising not only life insurance but also general insurance, but co-operative insurance societies should be left alone. Co-operative insurers, he contended, had not only fulfilled the statutory obligation to invest a part of their funds in Government securities but invested the surplus within the societies through grant of loans to policyholders and other ways.

Mr. M. C. Shah, in his reply, referred to the plea for exempting co-operative insurance from nationalisation but he only begged the question by asserting that when the Government decided to have a monopolistic business, it would not be safe and proper to allow any other concern to compete with the Corporation. He said that the main reason for nationalising life insurance was to mobilise the nation's savings to the full. The Government felt that all social security services should not only be controlled by the Government but also run by it. Defending the issue of the Ordinance, he said that if an ordinance had not been issued, manipulations of accounts would have taken place giving room for fraudulent transactions.

SURVEY

(Concluded from page 547)

Government have been exempted from tax on salary income for the first two years.

The total outlay on defence earmarked for the coming year is, as already stated, very heavy; it is estimated at as high as Rs. 90.00 crores, which is Rs. 8.07 crores more than the revised estimate of Rs. 81.93 crores for the current year. The stepping up of this expenditure has been done under both revenue and capital accounts, the former from Rs. 75.89 crores to Rs. 79.35 crores and the latter from Rs. 6.04 crores to Rs. 10.65 crores. The total defence estimate of Rs. 90.00 crores is exclusive of the U.S. military aid. The outlay of Rs. 90.00 crores on defence represents as much as 68.6 per cent. of the aggregate revenue receipts, including those of railways. This is, indeed, a huge amount, considering the size of Pakistan and the more urgent need for accelerating the pace of economic activity in the country.

The capital budget of the Government of Pakistan for the coming year provides for a total expenditure of Rs. 127.36 crores, as against Rs. 124.40 crores (budget) for 1955-56. Of this amount, direct capital outlay on Central Government development programme accounts for Rs. 61.89 crores, loans to Provinces for development and other purposes for Rs. 53.01 crores, and expenditure from various reserve funds for Rs. 12.46 crores. In addition, Rs. 33.48 crores have been committed on obligations against aid received from the U.S. Only a small sum of Rs. 1.0 crore has been made for financing measures to step up agricultural output.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly P=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

M—Managed by the board of directors. ‡ Less income-tax. (a) Calve - *We* have paid dividend at As. 10/- on bonus shares, for the year, 1955. * Including bonus. (k) Investments.
(l) Made up of an interim dividend of Rs. 1-12 per share on 1,20,000 shares and final dividend of Rs. 3-10 per share on 2,40,000 shares of which 1,20,000 shares are bonus shares. (s) For seven months ended 31st March 1956.

DRAFT BILL ON REORGANISATION OF STATES

(*Concluded from page 545*)

Madhya Pradesh and Saurashtra. Under these provisions, the Boards will continue to function for a period of one year in the same areas at present even after the formation of new States of Maharashtra, Gujerat and Madhya Pradesh. As and when the new States set up Electricity Boards, the existing Boards will be able to transfer their assets and liabilities to the corresponding new Boards and wind up their affairs in the regions which will pass to the jurisdiction of the new Boards. The Bill provides for the continuance till 1st April 1957 of inter-State agreements and arrangements in regard to the generation and supply of electric power, the supply of water and the execution of projects for the promotion of irrigation, water-supply or drainage, etc. During this interval, the new States are expected to reach an agreement regarding the future. If no agreement is reached before 1st April 1957, the relations will be governed by the order of the Central Government. Again if it appears to the Central Government that the arrangement in regard to supply of electric power or supply of water for any area has been or is likely to be modified to the disadvantage of that area, the Central Government may give such directions as it deems proper to the State Government or other authority concerned for the maintenance, so far as practicable, of the previous agreement. Similarly, the terms of agreement between two or more States or between the Central and State Governments in respect of a project which has been taken in hand or included in the second Five-year Plan may not be varied without the consent of the Central Government. If two or more successor States are concerned, a new agreement may be concluded and, if no such agreement is reached, the Central Government may from time to time give such directions as may appear to it to be necessary for the due completion of the project and for its administration, maintenance and operation thereafter.

Road Transport

A special provision has been inserted in the Bill to cover the Road Transport Corporation in Bombay. The Corporation will continue to function and operate till 1st October 1957 in those areas in which it is now functioning, subject to the directions of the Central Government. The successor States to the existing State of Bombay may, of course, establish road transport corporations of their own. The Bombay State Road Transport Corporation will be deemed to have been dissolved on 1st October 1957 and on such dissolution, the assets and liabilities of the Corporation will be apportioned between the successor States in such proportion as the Central Government may by order determine.

It has been further provided that a permit granted by a State or a Regional Transport Authority in an existing State will continue to be valid in respect of the areas to which the permit applies notwithstanding the fact that the areas may become parts of new States. The permits need not be countersigned by any other State or Regional Transport Authority. They will, however, be subject to the provisions of the Motor Vehicles Act for the time being in force in such new areas. Also, the Central Government is empowered, after consultation with the State Government or Governments concerned, to add to, amend or vary the conditions attached to the permit. No tolls, entrance fees or other charges of a like nature may be levied after the appointed day in respect of any transport vehicle for its operations in any transferee territory under any such permit if such vehicle was, immediately before that day, exempt from the payment of any such toll, entrance fees or other charges for its operations beyond the boundaries of the State in which such permit was granted. The Central Government is again empowered, after consulting the State Government, to authorise such imposition.

Several amendments to the Constitution have become necessary as a result of the reorganisation of the States. Some of these amendments are mere technical adjustments and refer to such matters as the reallocation of seats in legislatures. An important amendment relates to the recommendation of the States Reorganisation Commission to the effect that the interests of linguistic minorities should be safeguarded. Accordingly, one of the amendments proposed is the addition of a new Article 350-A which says: "It shall be the endeavour of every State and of every local authority within the State to provide adequate facilities for instruction in the mother tongue at the primary stage of education to children belonging to linguistic minority groups and the President may issue such directions as he considers necessary or proper for securing the provision of such facilities." As regards the Commission's suggestion to alter the composition of the All-India Services in each State so that at least half of them were drawn from outside the State, the Government does not think it necessary to undertake legislation to achieve this object. It would appear that the Government has already adopted a policy by which the suggestion of the Commission can be put into practice.

BANKING

(*Concluded from page 551*)

lities had increased by Rs. 90.82 crores from Rs. 942.06 crores to Rs. 1,032.88 crores. To this extent, the increased purchasing power created in the country was, he averred, attracted towards Bank deposits for the best benefit of the nation. He then alluded to the trend of higher interest rates paid by banks on deposits. He attributed this trend to the change in the pattern of deposits arising out of unhealthy competition among banks. In this context, Mr. Bhabha remarked:

"In this connection, it appears that the Exchange banks, owing to the peculiar and more profitable nature of their business and to the higher bank rates prevailing at their head offices, have with advantage to themselves, been able to maintain a pace which Indian banks cannot keep up with any margin of profit. I trust that due attention is being paid to this trend by those in charge of our financial destiny, because the trend may prove injurious to Indian banking and ultimately to the nation, if not carefully watched and suitably dealt with."

Pattern of Deposits

With a view to substantiating his above thesis, Mr. Bhabha drew attention to the changes in the pattern of deposits of both the Indian Scheduled banks and Exchange banks, during the seven-year period 1948 to 1955. The total deposits of Indian Scheduled banks rose during the period by Rs. 35 crores to Rs. 832 crores, while those of Exchange banks increased by Rs. 45 crores to Rs. 211 crores. Thus the increase in the total deposits was much larger in the case of Exchange banks than in the case of Indian Scheduled banks, in spite of the fact that the total deposits of Exchange banks were only a fourth of those of the Indian banks. Again, the time deposits of Indian Scheduled banks advanced during 1948-55 from Rs. 262 crores to Rs. 349 crores or a rise of 33 per cent., whereas those of Exchange banks improved from Rs. 35 crores to Rs. 75 crores, or an increase of 114 per cent. This brought to light, Mr. Bhabha pointed out, the present-day tendency of converting demand into time deposits. He further corroborated this trend by drawing attention to the trend of demand deposits which, in the case of Indian banks, declined by Rs. 52 crores to Rs. 483 crores, while in the case of Exchange banks, such rose by Rs. 6 crores to Rs. 13 crores. The large drop of Rs. 52 crores in the demand deposits of Indian Scheduled banks was the result partly of diversion to time deposits and partly of diversion to other investments and avenues.

In order to give an idea of the actual cost of the increased deposits to the Exchange banks, Mr. Bhabha gave the table below showing the percentage of total deposits secured by them as well as by Indian Scheduled banks at various rates of interest in 1954:

Rates of interest per cent.	Percentage to total deposits of Major Indian banks	Exchange banks
Nil	35.3	27.4
0 to ½	12.2	24.1
over ½ to 1	13.0	1.3
over 1 to 2	11.4	22.2
over 2 to 3	24.0	23.6

The figures in the above table showed, according to Mr. Bhabha, that the percentage of the deposits of Exchange banks at the level over 1 per cent to 2 per cent, to their total deposits was double that of the major Indian Scheduled banks.

The Chairman of the Indian Banks' Association then referred to the net results of working of Indian banks which were none too encouraging. Although their gross earnings increased by Rs. 4.60 crores between 1948 and 1953, their expenses rose by as much as Rs. 3.75 crores. Again, the percentage of establishment expenses to working funds showed a marked rise during the period. It advanced from 10.13 in 1948 to 16.50 in 1953, though it slightly declined to 16.08 in the following year. As against this increase, gross earnings rose only by 25 per cent. The total working funds were lower at Rs. 876.56 crores in 1954, as against Rs. 937.89 crores in 1948. Their net profits declined from Rs. 8.7 crores to Rs. 7 crores. In the result, banks were not in a position to build sufficient reserves to cover depreciation in securities, extraordinary hazards and violent fluctuations in prices. Mr. Bhabha stated that this consideration should be uppermost in the minds of all concerned with the welfare of banking in India, because any feeble shock to the structure of banking was bound to have a chain of reactions on the whole economy.

DELHI LETTER

(*Concluded from page 548*)

Development Corporation progressed considerably. Several research investigations were completed and a number of new problems was initiated. The National Physical Laboratory continued the study of industrial standards, standardisation of raw materials, processes and finished goods, framing and drafting of standard specifications, etc. Very useful results have been achieved in the work on wireless receiver component parts. New methods for the estimation of vanadium in the presence of copper, lead and tin were established. In the National Chemical Laboratory, the work on citric acid fermentation was continued. A new process has been developed for the direct extraction of nicotine from tobacco waste. Work on chlorination of rubber and regeneration of nickel catalyst, continued. In the National Metallurgical Laboratory particular attention was paid to the production and industrial application of alloys, especially low carbon ferrochrome alloys. In the Fuel Research Institute, considerable work has been carried out on coal tar chemicals and other allied products. In the Central Glass and Ceramic Research Institute, the process of making signal glasses was simplified. The Central Drug Research Institute focussed its attention on the systematic and scientific study of the crude drugs in use in indigenous system of medicine. The Central Electro-Chemical Research Institute has carried out experiments on the utilisation of South Arcot lignite for the production of calcium carbide.

The Central Leather Research Institute developed processes for producing shoe upper leathers, rapid tanned sole leather, industrial leathers like picking bands, roller skins, belting leathers and chamois leathers. Processes have been evolved for making leather boards of suitable thickness, flexibility and strength using the waste by-products of leather industry. The Institute has successfully carried out researches on suitable substitutes for imported wattle bark and for the preparation of tanning auxiliaries.

MARKET GOSSIP

(*Concluded from page 543*)

during the last 4½ years only Rs. 125 per ton, while another paper mill with a lower capacity has earned Rs. 250 per ton and yet another with an equal capacity Rs. 400 per ton. They are of the view that the

REORGANISATION OF STATES

THE reorganisation of the States of the Indian Union is a continuing historical process and, when the Bill on this subject, now being considered by the States Legislatures, finally comes to be placed on the Statute Book, it will have reached a very advanced stage of completion. The process began with the attainment of Independence, and, in its initial stages, the problem was essentially one of integration. At the commencement of the Indian Constitution, the 600 and odd political units of varying sizes and in different stages of political maturity—more appropriately, immaturity—were grouped into 9 Parts A States, 8 Part B States and 10 Part C States. This was an act of statesmanship, unparalleled in world history, and would have seemed incredible even a few years ago. Integration having been successfully achieved, a new problem arose in the shape of the demand for reorganisation of States on a linguistic basis. Unfortunately, this problem, though apparently simple, has actually proved well-nigh intractable, especially as compared with the earlier and what then seemed to be the insoluble problem of integration.

Basing its decisions on the report of the States Reorganisation Commission, the Government of India has now framed a Bill which sets out to realign the States in a manner which would be broadly in keeping with the linguistic pattern of the country. The chief gain is that the unnatural distinction in the shape of Part A, Part B and Part C States will disappear, and there will be only two classes of component units—"States" and "Union Territories." As compared with the recommendations of the States Reorganisation Commission, a major departure has occurred in regard to the future of Bombay State which will now be split up into the Union-administered Greater Bombay and two other States, Maharashtra and Gujerat, augmented by the addition of other areas. The Commission, as is well known, recommended the retention of the composite nature of the State. It is a pity that the Government has been compelled to reject this wise recommendation, based on geographic facts, economic importance and historical tradition. At this week's debate in the Bombay Legislature, the Chief Minister, Mr. Morarji Desai, himself admitted that a multi-lingual Bombay would be in "the interests of the progress of the country and essential for the building up of the country." On more than one occasion, Mr. Nehru, our Prime Minister, has also stated that, in so far as the Bombay State was concerned, the recommendations of the S.R.C. were the best. It is certainly deplorable that the Commission's recommendation has had to be replaced by a scheme that is demonstrably detrimental to the future of not only the State but the country as a whole, and that it is only an unsatisfactory solution that stands the best chance of commending itself to the Congress Party. This is a sad commentary on the essentially irrational nature of linguistic nationalism. It is to be hoped that the present decision will prove temporary and that it will be possible to reach a more acceptable solution in the form of either a composite State or Greater Bombay as part of Maharashtra at a later date when linguistic passions which now cloud the issue have subsided.

Once the principle or the urgency of linguistic reorganisation of States is conceded, there is no doubt that the Bill provides a method whereby transition is effected in as smooth a manner as possible. In this, the authors of the Bill have benefited from the pattern evolved by the Andhra State Act. It is of the utmost importance that the reorganisation of the States does not lead to any break in the continuity of the services rendered by the State Governments nor to any delay in the execution of the projects undertaken by the Central Government in the States or by the State Governments themselves. From this point of view also, one finds that the provisions of the Bill have been wisely conceived, and, legally speaking, neatly drafted. Thus, if, after the reorganisation of the States, a State Government tries to modify an existing agreement for the supply of water or power to an area to the disadvantage of that area, the Central Government will take steps to ensure the maintenance of the original agreement. Further, all agreements covering the operation of a project and distribution of benefits such as the right to receive water or electric power, whether between States or the Central Government and the States, will be continued till April 1956. If no fresh agreement is reached by that date the Central Government is empowered to make such adjustments as it deems necessary. The projects included in the Five-year Plan are in various stages of execution.

The Bill seeks to ensure, as already stated that there is no delay in the execution of the projects. It says:

"Where a project concerning one or more of the existing States affected by the provisions of Part II has been taken in hand, but not completed or has been accepted by the Government of India for inclusion in the second Five year Plan before the appointed day, neither the scope of the project nor the provisions relating to its administration, maintenance, operation or to the distribution of benefits to be derived from it shall be varied—

(a) in the case where a single successor State is concerned with the project after the appointed day (1st October 1956), except with the previous approval of the Central Government, and

(b) in the case where two or more successor States are concerned with the project after that day, except by agreement between those successor States, or if no agreement is reached, except in such manner as the Central Government may by order direct,

and the Central Government may from time to time give such directions as may appear to it for the due completion of the project and its administration, maintenance and operation thereafter.

In this section, the expression "project" means a project for the promotion of irrigation, water-supply or drainage or for the development of electric power or for

regulation or development of any inter-State river or river valley."

It would be idle to deny that linguistic agitation, which has led to the proposed scheme of reorganisation of States, represents a certain disintegrating force, though its protagonists deny any such suggestion. Whatever the intentions of the best among them or of the leaders, there is no doubt that, by and large, this agitation, in its more recent manifestations, has taken a turn which must be depressing to all patriotic citizens. Side by side with this agitation, there is, however, a growing volume of opinion which is in favour of merger of contiguous States. This section naturally attaches greater importance to the economic and social gains which must accrue to the people through the merger of States into larger and viable units. There is a third section—now a small one, it is true—which, in fact, believes that the whole country must be administered as a single unit.

All sections of opinion, however, grant that the overall unity of the country must be maintained at all costs and that nothing should be done to blur this sense of unity. Indeed, it would appear that the Official Language Commission, which is now engaged in the task of suggesting measures for the change-over from English to Hindi, has found, wherever it has gone, considerable anxiety for the preservation of the sense of unity among the people. This is a very encouraging sign. And it is necessary that, in any reorganisation of the States on a linguistic basis, some positive measures are undertaken to create as many opportunities as possible for the people to come together for purposes of studying their mutual problems. One such measure, contemplated in the Bill, is the creation of Zonal Councils (*vide Commerce*, dated 24th March 1956, page 545). The powers of the Councils are, however, purely advisory. But when the Councils start functioning and acquire experience, their decisions, by convention, may well come to possess the force of law. The Councils thus provide a common forum for the discussion of problems of mutual interest to the States which must go a long way towards making the leaders view the issues in their larger perspective.

Realising the importance of preventing the development of parochial or exclusive outlook by the State Governments, the States Reorganisation Commission had suggested the creation of certain all-India services such as the Indian Service of Engineers, the Indian Forest Service and the Indian Medical and Health Services. It had also recommended that 50 per cent. of the new entrants in the all-India services should be from outside the State concerned. Unfortunately, these wise recommendations have not found any place in the Bill. The Government, it is stated, is aware of the need for adopting a policy by which the Commission's suggestions can be put into practice. But mere awareness will not do, for Governments change and even the moods of present Governments change. Considerations of the future and of the unity of the country demand that these recommendations of the Commission be given statutory recognition.

It must, however, be conceded that the creation of Zonal Councils and composite or cosmopolitan administrative cadres will at best bring about a certain atmosphere in which only the administrative problems can be viewed in their larger perspective. But the sense of unity must be fostered among the people themselves, for, in the absence of that sense, even schemes of administrative co-ordination, however tidy they may appear on paper, will not succeed. This sense is bound to receive a setback when the present movement towards an exaggerated and exclusive emphasis on regional languages in the educational curricula in the States gains further momentum. There is no evidence to show that the Central Government is fully alive to the dangers implicit in this movement.

Till now, it is the knowledge of English, confined though it is to the educated minority, that has helped to keep alive the sense of national unity. The States Reorganisation Commission observed: "English, though a foreign language, has helped to bring the people of different regions in India closer to each other, first, because it has been the official language at both the Central and Provincial levels, and, secondly, because it has been the medium of instruction for higher education throughout the country. It has, therefore, provided a common vehicle for higher thought as well as for administrative activity and has helped to maintain common standards at the higher educational institutions." After emphasising that the replacement of English by Hindi should be so phased that there is no fall in educational standards, nor any vacuum in social and political intercourse between the different parts of the country, the Commission stated that suitable measures should be adopted to encourage the study of English and other foreign languages in educational institutions.

These are weighty observations which deserve the immediate attention of the Central and State Governments. The reorganisation of the States on a linguistic basis and the decision to have Zonal Councils lend a new urgency to the question of preserving a sense of all-India unity through the wider use of a common language. It is of the utmost importance that, till Hindi grows to become competent to take the place of English—that is, even assuming that the present system cannot be allowed to continue for a very long time—the place of English in the educational curricula should not be disturbed. A practicable solution would be to ensure that English continues to be the official language for a much longer period than is envisaged in the Constitution and the medium of instruction in the technical schools and colleges and in post-graduate instruction. In any case, it is time the Central Government abandoned its policy of indifference to what takes place in the educational sphere at the States level, convened a conference of the educational leaders in the States, and re-examined the whole issue. If the present policy of drift on the educational front is not arrested in time, it will be well-nigh impossible to set things right later.

IS THERE PREJUDICE?

NOTHING intrigues the men engaged in the private sector more than the relatively small place (as compared with the place devoted to the public sector) allotted to this sector in the second Plan, especially because, both on grounds of past performance and of the immense scope for economic development in the country, there is urgent need to utilise the services of the private sector on a much larger scale than at present. This was the general theme of the speech of Mr. Shantilal Mangaldas at the recent meeting of the Federation of Indian Chambers of Commerce and Industry. Apparently, the Government has not been able to justify its stand to the satisfaction of trade and industry, for business men continue to wonder why the Government is not prepared to press into service the talent, money and energy available in the private sector.

In his address at the annual meeting of the Bombay Chamber of Commerce and Industry, its outgoing President, Mr. K. G. Milne, too, raised this issue. He felt intrigued by the fact that, in the second Five-year Plan, "organised private industry is only given an additional 40 per cent. increase in its target figure, while the public sector is allotted and expected to fulfil a target 900 per cent. greater than *what it was able to achieve* in the first Plan." This insufficient recognition of the importance of the private sector cannot obviously be due to any failure on its part in the past, for this sector, as is well known, was able not only to hit the targets set for it but even exceed them in many spheres. Nor can it be that the field is so limited that it would be hazardous to permit the functioning of both the private and the public sector at least on an equal footing. Actually, the industrial leeway to be made up is so vast that it will require all the best in both the sectors to complete it. And yet, the private sector is frowned upon and even kept at arm's length when all that it demands —to quote Mr. Milne—is the "chance to respond, hand in hand, never in conflict with the Government and its complementary public sector."

Why then has the Government developed an attitude of what may well be called economic untouchability in relation to the private sector? Is it because malpractices take place in the private sector? Perhaps, that is one reason, though not the only reason. If that is so, the Government will do well to ponder the few home-truths Mr. Milne cited. In the first place, "everyone knows that malpractices take place in the private sector, but equally we all know that malpractice is not the preserve of that sector." Secondly, the private sector is a much larger sector than the public sector and must always remain so, unless a totalitarian State is to be created; so it is not surprising, if cases of dishonesty are found to occur in it from time to time. Thirdly, one should not forget that there are "very many businesses in India whose standards of integrity challenge the best anywhere in the world." In any case, what is to be gained by neglect of the private sector and by expansion of the public sector effected by taking away personnel and financial resources from the private sector?

After all, as Mr. Milne pointed out, there is "no reason to suppose that the morality of the people thus transferred will necessarily improve by the transfer; if not indeed the reverse, for the control upon them is bound to be much less personal in the public sector." On this issue, it is gratifying to note that Bombay's Chief Minister, Mr. Morarji Desai, struck a very realistic note. Speaking at the annual meeting of the Chamber, Mr. Desai referred to the criticism levelled against the private sector and averred that there was no section of society which might be said to be entirely bad or any other section entirely good. To single out any one section for special attack, in his opinion, was either a "sign of ignorance or a sign of stupidity." He added: "We should take whatever is useful and good for us and reject what is not good for us." It is to be hoped that the wisdom embodied in these words will permeate the Government's economic policies.

There is certainly much good in the private sector which is of immense value to the future of Indian economy. What are the men engaged in this sector best qualified by knowledge and experience to do? It is, as Mr. J. F. Sinclair, the incoming President of the Chamber, said, "to plan a project, whether it be a factory, a distributive system or a sale, with the utmost care, precision, speed and economy and, having planned it, to push it through with all the energy, tenacity and accumulated special skills he can organise for the purpose." He added: "It all sounds simple enough, but I believe it is worth emphasising that these qualities and painfully learnt skills are not to be picked from a mango tree; they are very, very valuable commodities, in short supply, and I would say with all the earnestness I can command that to neglect them or suppress them at this critical hour is as criminal as to rob a bank." Surely, by letting so much skill go to waste or remain imperfectly utilised, the Government is bartering away the economic future of the country for paltry ideological gains.

It is no disparagement of the system under which the private sector can give its best to suggest that it is motivated by the earning of profits. After all, profits are the reward of competitive efficiency. And even a State enterprise, as Mr. Milne said, cannot afford to run at a loss which then becomes a "national loss and the burden has to be borne by the taxpayer." The Government is, of course, fully entitled to a share in the profit the private sector makes. But there must obviously be some balance between what it can take and what it ought to leave behind in the interest of further growth. The recent tax proposals are weighted a little too heavily on the side of the Government's share. In this connection, Mr. Milne singled out for special comment the tax on dividends and the bonus tax. The tax on dividends, he said, was most inequitable in its incidence, especially in regard to those enterprises with low or nominal capital and/or those with fluctuating incomes such as mining and trading concerns. Again, Section 23A concerns, which are first compelled to distribute most of their taxed profits only to have them caught again by this dividend tax, will form cases of "particular hardship." Further, the companies which did not capitalise their savings in the past are going to be penalised by the tax. The tax on bonus shares is sought to be justified on the ground that it is an integral part of the tax on dividends. But this is a poor argument for a tax of "very questionable validity," because it amounts to justifying one wrong action in order to cover another.

Mr. Milne next referred to the high incidence of taxes on personal incomes. He rightly held that the rates of personal taxation in India were "just about equal to the highest in the whole world at all points of the income-tax scale." This is certainly deplorable, considering that no special allowance is given for the support of children and for certain peculiar features of Indian family life such as the support of indigent and aged relations and that no account has been taken of the fact that an Indian citizen has himself to provide for his old age, sickness and death. The case for relief in personal taxation is very strong indeed. We are, therefore, surprised that Mr. Milne should have weakened, if not spoilt, the case by importing into his advocacy extraneous considerations such as the special considerations for relief for foreign personnel working in India. The fact is that, when the rates are lowered—as they no doubt deserve to be—both Indian and foreign personnel will benefit, so that the latter would have no grounds to complain of special hardship.

CLIMATE FOR DEFICIT FINANCING UPSET BY ALL-ROUND RISE IN PRICES

STRINGENCY IN MONEY—MR. G. D. BIRLA ON BANK RATE—BULL GRIP ON EQUITIES

THURSDAY, 5 P.M.

MARKET GOSSIP

ALL available indices show that India is entering a strong inflationary phase earlier than was anticipated by many. During the past three months, there has been a sharp rise in prices of almost everything—cereals, pulses, cotton, oilseeds, cloth, yarn, *gur*, sugar, gold, silver and equities. Some idea of the actual increase in prices can be had from the relevant statistics presented in a tabular form on this page. A significant feature of the rise in commodities and foodgrains is that it has taken place right at the time when the movement of crops has been in full swing. This means that agriculturists have received a good price; it must have been very welcome to them, especially after the low prices they realised in the last marketing season. To some extent, a rise in prices was necessary, in order to neutralise the drop witnessed last year. But the rise has been more than that. It has assumed a proportion which will push up the cost of living and also the cost of production. And what is disturbing is the prospect of a further rise in prices during the coming months. The marketing of the bulk of cash crops is over and that of food crops will be over soon. Consequently, arrivals into wholesale markets will fall and the demand will have to be met from the stocks with traders. As readers are aware, after the marketing season, prices generally rise. This seasonal upward pressure is likely to be greater than normal, as the demand for most of the commodities and manufactured goods is bigger than the supply. In such a situation, speculative forces may also take a hand and aggravate the inflationary trend.

* * * *

It is surprising that the Government has done nothing effective so far to arrest this movement. It, of course, tried to check the boom in cotton by arbitrary interference with the working of futures trading, but that has not had any significant effect on ready cotton prices. The exportable short-staple and short-medium staple varieties have already pierced the ceilings, while such long-staple varieties as Vijay, Surti, Jayadhar, Lakshmi and Karungani are bumping against the ceilings. It is only the medium varieties—Jarilla, for example—that are standing a little below the ceilings.

The main difficulty about cotton is that the crop has turned out to be much shorter than expected, the latest estimate placing it at no more than 4,300,000 bales. As against this, consumption is running at the high level of a little over 5 million bales, of which the share of Indian cotton is 4.4 to 4.5 million bales. In view of the high prices of foreign cotton, many mills have switched over to Indian cotton to the maximum extent they can. While this is the position, one cannot get a reliable view of the next crop till November or December 1956. Imports of foreign cotton are not going to solve the position to any material extent, as world prices of cotton are still at a considerable premium over Indian cotton. It, therefore, looks as though a rationing of available supplies of cotton among the mills will become inevitable sooner or later, if all the mills are to be kept working and if the ceilings are not to become farcical. It is, however, striking that the cotton mill industry has not so far asked for such a measure. Evidently, it is afraid that, if it were to make any such demand, it would be courting reimposition of controls on production and prices. Since there is no control on prices of cloth and yarn and the demand for them is quite good, it need not, of course, feel very much concerned over the rise in cotton prices. Indeed, at no time during the current year did the cotton mills complain about what was happening in the E.I.C.A. or about the spurt in cotton prices. It was the Government which voluntarily put its foot into the futures ring.

* * * *

There has been a steady rise in prices of cloth and yarn. It is, however, not easy to indicate the extent of increase that has taken place in the value of these two manufactured articles during the past six months. This is more so in the case of cloth, of which several hundreds of varieties are being manufactured. No reliable record of quotations in the various wholesale and retail cloth markets is available to the Press. It is not known whether any representative associations of these trades are maintaining such records at all. The index numbers of cloth and yarn prices are defective in many respects and cannot, therefore, be relied upon to give a correct indication. But from our personal experience, it can be stated that, even in a city like Bombay, where almost all varieties of cloth are being manufactured, consumer prices are prohibitive for good quality piecegoods and, where prices are not so high, the quality is poor.

The danger of allowing this trend to continue is clearly stated by Mr. R. E. Castell, Chairman of the Buckingham and Carnatic Co., Ltd., in his speech at the Company's annual meeting last week, reproduced on page 616 of this issue. He has pointed out that the present trend would tell upon exports of cloth and necessitate reimposition of controls that are unpleasant to all. It is to be feared that the history of 1943 or 1948, when there was a premature abolition of controls, would repeat itself in cotton textiles. Mills and dealers might start hoarding and create an artificial scarcity much sooner than is expected by the Government and/or the leaders of the textile industry. The only effective solution to prevent this from happening is to allow expansion in the mill sector, especially on the weaving side. Some think that the situation can be met by encouraging those mills, which are now working only two shifts, to work three shifts. But this is not a desirable solution, for reasons so pithily put forward by Mr. Castell. To quote him: "In all processes, but particularly weaving, the third shift is severe on machinery, discomforting to labour and harmful to quality." These remarks are based, it may be noted, on the Company's experience during the last war.

* * * *

The rise in prices of oilseeds and oils has been precipitous and has exceeded by a very wide margin even the levels thought to be reasonable. from the point of view of growers, by Mr. T. T. Krishnamachari, Minister for Commerce and Industry. For over a year, he held the view that, so long as the price of groundnut oil did not exceed Rs. 1,000 a ton, there was no need for the Government to interfere. Early this year, when this limit was exceeded, he raised it to Rs. 1,200 per ton. But now even this enhanced notional fair price has been left far behind, the latest quotation being Rs. 1,520 per ton. Prices of other vegetable oils also have moved up in the same fashion. Considering that vegetable oils constitute an essential item of food, especially for the poor and the middle classes, the increase in their prices will cause a severe hardship to them and add to their cost of living. The need for taking suitable measures for restraining the upward trend in this commodity became apparent even at the commencement of the year. But the Government did nothing; if anything, it actually winked at the rise. Apparently, political considerations were allowed to override economic considerations.

* * * *

When the country was faced with surpluses of certain agricultural commodities last year, the Government was advised by a section of the business community and the Press, including this journal, to buy them and build up buffer stocks to meet situations of the type through which the country is passing now. This advice was not heeded. It will be pertinent to recall here that, when Mr. T. T. Krishnamachari visited Bombay early in 1955 to study the position, he realised the value of this advice. He actually telephoned to Mr. C. D. Deshmukh asking for funds to buy cotton and store it on Government account. But Mr. Deshmukh refused. Further, many were of the view that the Bank rate should be reduced and credit made available cheaply and easily for enabling merchants to buy and hold stocks. But the Government did not concur with it. Indeed, instead of conserving the surpluses within the country, the Government took all possible steps to encourage their export. Quantitative and qualitative restrictions on exports were relaxed. Export duties were reduced. Shipments of foodgrains were freely permitted and it was proudly claimed that India was in a position to export rice, wheat flour and wheat products, coarse grains, pulses, etc. All this was being done even at a time when the Government and the Planning Commission knew that the second Five-year Plan would be a far bigger effort than the first Plan and that it would entail deficit financing of over Rs. 1,200 crores. The spokesmen of the public sector, from the Prime Minister down to the Deputy Secretary of the Government, have been preaching from 1950 onwards, when the first Five-year Plan was conceived, that we are living in an era of planning and that controls and regulations were inevitable. Could anyone say that the manner in which the agricultural surpluses were allowed to be drained out of the country twelve months before was in consonance with planning? The argument that such exports brought in foreign exchange will stand no scrutiny, for, in the coming eight or twelve months, more imports of cotton, wheat, rice, staple fibre and rayon, not to mention vegetable oils, may be found necessary.

* * * *

The rise in bullion prices is in keeping with the trend of commodity markets. It is too early to say, as in the case of commodities, whether the end of appreciation in bullion values is in sight. It is common knowledge that both gold and silver are subject to seasonal fluctuations. Invariably, after mid-January every year, these precious metals tend to look up, reach the peak in May or June and then wilt in the monsoon months. Between September and January, they rise and fall, albeit on a small scale. This year, the increase in prices has been sharp and swift; besides, it has set in earlier than usual. Many attribute this development to fears of inflation. It seems to us this reasoning is rather premature. The main reasons appear to be early revival of seasonal offtake, shortage of stocks and decline in the arrival of smuggled gold. It is rather significant that, even though there has not been any marked rise in the free market price of gold, either in the Middle East or on the Continent, the increase of Rs. 10 to Rs. 11 in the price of ready gold since the commencement of the year has not accelerated the influx of gold into Bombay or Calcutta. Does this mean that the anti-smuggling measures of the Government are beginning to make an impression on the traffickers in gold? Or does it mean that smugglers feel that the spurt in prices will not be sustained for any reasonable length of time to warrant the risk of arranging for a larger supply from abroad? Or does it mean that the rise in prices has been so rapid that it has not been physically possible for them to indent bigger supply in good time for taking advantage of the situation? Developments in the coming weeks should provide an answer.

Be that as it may, it seems that much of the demand for gold and silver has been of the customary seasonal nature, exaggerated, perhaps, to some extent, by speculative activity, and that purchases of bullion as a hedge against inflation have not yet started in right earnest. Enquiries made in the ready bullion market reveal that the demand for gold and silver alike is in small quantities. It is stated, for instance, that, when industrial workers in Bombay and Ahmedabad received their annual bonuses recently, the offtake of gold, and of silver on a relatively smaller scale, experienced a perceptible improvement. There are no indications that, in recent weeks, big people with large assets have been buying either gold or silver. It is only monied persons that would usually be worried about the prospect of a fall in the purchasing power of the currency and seek bullion as a hedge against such a contingency. So far, there would appear to have been no such large-scale buying. It is needless to add that, when such activity arises, there would be a further rise in gold, as well as silver, unless, of course, the inflow of smuggled gold were to gather momentum, once again.

* * * *

Nothwithstanding the impressive expansion in notes in circulation since the commencement of the current season—from the first week of November 1955 to the fourth week of March 1956 the increase was as much as Rs. 147.91 crores, as against Rs. 115.24 crores in the corresponding period of the preceding season, and that on a base Rs. 144 crores higher than that a year before—the money market is passing through a stringency not witnessed in recent years. In Bombay, call money is being quoted at 3½ to 3¾ per cent., while in Calcutta, it is as high as 4½ per cent., that is, ¾ per cent. higher than the Bank rate. Short-term deposits are fetching 3½ per cent. for one to six months even with the biggest commercial banks. Apparently, the money supply is proving itself to be inadequate to finance the expanded production, more particularly because of the increase in prices. It is not known whether hoarding of commodities and goods has started on any large scale, though reports from certain cotton-producing centres aver that farmers are being encouraged to hold their produce by co-operative societies, which are in the privileged position of getting credit at appreciably below the Bank rate. If this is true or if this trend gathers momentum, the Reserve Bank will have to reconsider its policy of making available cheap credit to the co-operatives.

Surprisingly enough, the increase in the cost of commercial banks' borrowing rates has not been followed by a corresponding rise in their lending rates. It is true that, during the past two or three weeks, several banks, including a number of Indian banks, have put up their advances rate by ¼ to ½ per cent. But this increase is only fractional and not commensurate with that in the borrowing rates. Again, large-scale borrowers from banks are still paying the same old rates of interest, possibly because of their control over the banks.

The anomaly between the Bank rate and short-term money rates has tended to become glaring following the latest developments referred to above. There are two ways in which this anomalous position can be rectified. One is for the Reserve Bank to step up its lending rate to the banks, that is, both the usance bill rate and the Bank rate, to be followed by similar action by the State Bank of India. The other is for the Reserve Bank to reduce the usance bill rate to 3 or 2½ per cent. and expand the rediscounting facilities, thereby pumping into the money market more funds and putting an end to the scramble among banks for the available supply of money. The former course will be opposed by that section of public opinion which feels that higher interest rates will be inimical to economic development, and the latter by the other section which contends that to lower the Reserve Bank's lending rate at a time when the economy is passing through an inflationary phase would tantamount to adding fuel to fire. It will be interesting to see which way the monetary authori-

SHARES CLOSE FIRM

TATAS RALLY FURTHER

(From Our Own Correspondents)

BOMBAY, *28th March*

THIS week's review of the Stock Exchange covers only three sessions; for, besides the usual fortnightly closing on Saturday last for settlement, the market remained officially closed on Monday, 26th March, on account of *Holi*, while this report is sent to the press a day in advance on account of Friday, the 30th inst., being a bank holiday. During these three sessions under review, a strong bull grip continued to hold sway over the market and prices hardened all round to touch in a number of cases fresh high levels so far for the year.

The last settlement ended on a cheerful note, despite the end-of-account realisation. The new account also opened yesterday on a promising note, but due to lack of follow-up support and profit-taking, prices suffered a mild recession from the opening levels. The opening today was also slightly subdued, but soon the market regained fresh strength on feverish short-covering and replacement buying and the session closed on a firm note. In the absence of any adverse influence, the bullish sentiment continued to prevail. The increase in notes in circulation, the rise in commodity prices, oilseeds, cotton and bullion, and prospect of cloth shortage and an increase in cloth prices were interpreted as signs of inflation in the country and they provided the necessary stimulus to speculative operators on the Stock Exchange.

In the steel section, Tata Ordinaries shot up from Rs. 241-12 to Rs. 249-12 and closed at Rs. 249-8. Indian Irons gained from Rs. 35-3½ to Rs. 35-15, but finished a fraction lower at Rs. 35-12.

Textile shares were again conspicuous with sizable gains over a wide front on strong support. The encouraging trend in cloth offtake and optimistic outlook for textile mills were responsible for the bullish activity. Bombay Dyeings shot up from Rs. 611-14 to Rs. 621-4 and, after a recession to Rs. 613-12, recovered to Rs. 622-8 at the close. Centurys attracted good attention and jumped from Rs. 517 to Rs. 533 before closing at Rs. 531-8. Central Indias gained Re. 1-8 to Rs. 148 and Colabas Rs. 10 to Rs. 90. Finlays were lower by a rupee at Rs. 363, but Gokaks were marked up by Rs. 5-8 to Rs. 256. Indu Ordinaries showed no change at Rs. 14, while Indore Malwas gathered Rs. 10 to Rs. 156-4. Khataus were maintained at Rs. 234-6 and New Greats at Rs. 230, while New Citys lost Rs. 2-8 to Rs. 171-4. Podar Mills moved up by Rs. 3-2 to Rs. 175 and Shree Niwas Cottons by Rs. 3-12 to Rs. 277-8. Simplex were featureless, but steady at Rs. 215. Standards firmed up from Rs. 432-8 to Rs. 436-4 and Svadeshis from Rs. 236-8 to Rs. 240-12. Tata Mills were dull at Rs. 59, while Vishnus put on Re. 1-4 to Rs. 184-6. Azam Jahis and Osmanshahis, which were admitted to the Bombay Stock Exchange last week, were done at Rs. 94, a rupee higher over the week, and Rs. 74, respectively.

Banks were steady and quotations revealed fractional rise on balance. Barodas gained Re. 1 to Rs. 96. Centrals were done As. 8 better at Rs. 50 and their new shares As. 4 higher at Rs. 51. Bank of Indias had business at Rs. 155 *ex-div.*, as against Rs. 159 *cum-div.* last week (final div. Rs. 5). Punjab Nationals were unchanged at Rs. 50-4. Union Banks changed hands at Rs. 6-10 *ex-div.*, as against Rs. 7 *cum-div.* (div. As. 6). United Commercials were taken up As. 8 higher at Rs. 53-8.

The insurance section provided an exception to the general trend, the undertone remaining quiet and business passing on a small scale. New Indias dropped As. 12 to Rs. 39-8 and Indian Mercantiles Rs. 3-8 to Rs. 49-12. There were no transactions in other counters.

Electricity shares were featureless with small variations in some counters. Ahmedabad Electrics showed no change at Rs. 102-8, while Amalgamated Electrics shed a fraction to Rs. 11-8. Bombay Suburbans attracted some support and rose by As. 15 to Rs. 116-9, while Surat Electrics were marked down by As. 10 to Rs. 123-12. Tata Hydros were taken up a rupee higher at Rs. 133, while Tata Powers lost Rs. 5 to Rs. 1.370. Andhra Valleys were maintained at Rs. 1,295.

The miscellaneous section provided some features, sugar shares, shippings, Bombay Burmahs and Premier Constructions, coming to enjoy the major attention. In the sugar group, Belapurs improved from Rs. 232-8 to Rs. 237, before closing at Rs. 236. Phaltans gained Re. 1 to Rs. 148-8. Walchandnagars attracted considerable attention and gathered Rs. 8-12 to Rs. 275. Cement shares were, however, quiet. A.C.C. lost some ground from Rs. 217 to Rs. 215-4 on reports that the Company had been permitted by the Government to issue the new shares at a premium of Rs. 20 per share. Digvijays were Re. 1-8 lower at Rs. 187. Among engineering and mining shares, Alcock Ashdowns relapsed from Rs. 377-8 to Rs. 375, while Premier Constructions staged a sharp rise of Rs. 8 to Rs. 194-8. Tata Locomotives had business Re. 1-4 higher at Rs. 151-12. Larsen and Toubros were steady at Rs. 15-15. Shivrajpurs were in demand and moved up by Rs. 3-8 to Rs. 114. Indian Coppers were done up to Rs. 7-7 before closing at Rs. 7-4½, as against Rs. 7-3.

In the shipping and transport group, shipping shares were in keen demand on reports that the coastal freight rates were likely to be raised. Scindias gained a rupee to Rs. 18-4½ and Great Easterns Re. 1-2 to Rs. 17-12. Hindustan Motors improved further by As. 7 to Rs. 10-8 and Premier Automobiles were steady at Rs. 94-8. Among miscellaneous industrials, Bombay Burmahs (old) appreciated from Rs. 621-14 to Rs. 640-10, but closed a shade lower at Rs. 638-12. National Rayons were quiet at Rs. 241. British India Corporations gained As. 3 to Rs. 11-1. Tata Chemicals were supported up to Rs. 19-4, before they closed at Rs. 19-1, as against Rs. 18-14 last week. Tata Oils were featureless at Rs. 47-4, while Wimcos gathered further Re. 1-4 to Rs. 207-8.

• • • •

Calcutta Stock Exchange

CALCUTTA, *27th March*

The period under review covers only three sessions on the Calcutta Stock Exchange, i.e., Wednesday to Friday last, as both yesterday and today, the market remained closed on account of *Holi*. But the performance of the three days was encouraging. For, conditions akin to buoyancy existed, and with an impressive increase in the daily volume of transactions, several counters made a considerable portion of the ground lost during the prolonged dullness that set in, following the settlement difficulties which accompanied suspension of clearing work in Banks and continued even after banks resumed normal working. There was a definite broadening of investment buying during the three days, and speculative enthusiasm was fanned by thoughts of inflationary conditions, following deficit financing. The commodity markets were sending out encouraging reports, and note was made of the increasing trend in the cost of living following the Budget proposals.

There is a feeling in the City and industrial circles about the desirability of locating the headquarters of the proposed State Insurance Corporation in Calcutta. The present system of investing insurance funds in equities through Bombay is leading to neglect of first class investment scrips in Calcutta at the hands of this institutional investor, and if the headquarters of the Corporation are set up in Bombay, which already houses the head offices of the Reserve and State Banks, it is argued that Calcutta's importance as a trading and industrial centre would be overlooked. Moreover, in life insurance, Calcutta has played a pre-eminent part, and the demand that Calcutta insurance funds, that are set aside for private investment, should not go to Bombay when there is no dearth of first class shares in Calcutta has been eloquently put forward.

There was an impressive recovery in speculative Indian Irons, following bear-covering. Advices from Bombay were helpful in that the statement of Mr. J. R. D. Tata that the possibility of a bonus issue or of increasing the nominal value of Tata Steels might be examined when reserves would support the same. Other engineering scrips also forged ahead. Tea shares continued to attract investment buying as prices in auctions were advancing and export prospects for the coming crop were considered good.

Sectionwise, cotton textiles were firm on good production reports. At Rs. 18-4 Kesorams gained a further fractional ground, and Bowreahs changed hands at Rs. 165 *ex-rights*. Jayshrees were maintained at Rs. 6-5 as were New Victorias at Rs. 2-9.

Coals were steady, and mainly in sympathy with the general trend recorded gains. Bengals reached as high a rate as Rs. 550, as against Rs. 529, and on good support East Indias gained to Rs. 36-2 from Rs. 33-14. From Rs. 6-15 Western Bengals firmed to Rs. 7-5. At Rs. 11-12 Raneegunges were higher by an anna, South Karanpuras remaining unchanged at Rs. 9-12, and Burrakurs moved to Rs. 14-15 from Rs. 14-5. On the other hand, Borreas reacted to Rs. 26-11 from Rs. 27-8.

In contrast with the general trend, jute shares were shown only sparse interest. This was due to the poor turnover in jute goods and to raw jute prices being higher. From Rs. 24-10, Nationals recovered to Rs. 25-14 and Howrahs from Rs. 22-14 to Rs. 23. Birlas at Rs. 17-2 accounted for a recovery of As. 10, while Megnas fell to Rs. 81 from Rs. 84-8. Nuddeas were unchanged at Rs. 40-8, Ganges being easier at Rs. 67.

Engineering scrips fully reflected the general trend, and on strong investment support Burn & Cos. rose as high as Rs. 385 from Rs. 350. Interested buying raised Texmacos to Rs. 23-10 from Rs. 22 and Richardson and Cruddas to Rs. 26-8 from Rs. 25-4. At Rs. 35 Jessops were better. Indian Standard Wagons were steady at Rs. 177 and Braithwaites at Rs. 28-2. Kumardhubis were taken to Rs. 11-2 from Rs. 10-8. Indian Irons opened at Rs. 34-8 and improved to quote Rs. 35-13.

Paper mill shares were counters of considerable activity. A dividend of 10 per cent. (8.75 per cent.) was announced for the six months ended December last for Bengal Papers, following good working results. These mills are also carrying out expansion plans. For the six months ended September last, 10 per cent. dividend has been maintained for Titaghurs, which changed hands at Rs. 44-8 as against Rs. 44-4 earlier.

Gains continued to be recorded in the tea section, and included the following: Gungaram rose by Rs. 50 to Rs. 300 and Hoolungoorie by Rs. 24 to Rs. 309. Banarhat were Rs. 14 better at Rs. 364 and Basmatia by Rs. 3 at Rs. 38-12. East Indias were steady at Rs. 26-12. Huldibari rose by Rs. 2-8 to Rs. 37-8 and Carron by Rs. 23 to Rs. 227.

Among minings, Indian Coppers advanced to Rs. 7-4 from Rs. 6-10, following expectation of bonus issue. Burma Mines were steady at Rs. 2-7, in oils Indo-Burma Petrols improved to Rs. 45-2 from Rs. 43-8, and among sugars Carew & Cos. to Rs. 9-13 from Rs. 9-8.

Several miscellaneous industrials were fully steady. Nicecos were wanted at Rs. 23-8. Martin Burns gained to Rs. 26-3 from Rs. 25-8 to close at Rs. 25-10. B.I. Corporations were steady at Rs. 11-1 as were National Tobaccos at Rs. 13-2.

Madras Stock Exchange

MADRAS, *27th March*

The Madras Stock Exchange put on a bright appearance this week also. Textile and miscellaneous scrips came in for rather widespread activity, while plantings met with selective support. The upward trend in the textile section was chiefly due to reports regarding continued demand for cloth and yarn from important consuming centres. In the tea section, buying enquiries were in evidence on rumours of a possible revival of good demand for tea leaves from the Continent. Prices of equities, therefore, generally forged ahead and recorded substantial gains over the week. The undertone was steady.

In the textile section, Cambodias gained As. 3 to Rs. 13-15 and Coimbatore Pioneers Rs. 10 to Rs. 270. Kotharis were better by As. 12 at Rs. 19-4 and Metturs by Re. 1 at Rs. 408-8. Rajalakshmis improved from Rs. 177-8 to Rs. 179 and Vasantas from Rs. 287-8 to Rs. 292-8. Rangavilas advanced from Rs. 90 to Rs. 90-12. Coimbatore Spinnings, however, lost Re. 1-8 to Rs. 90-8. Coimbatore Cottons were quiet at Rs. 333 and Rajapalayanns at Rs. 135-8. Mysore Silk Filatures were unchanged at Rs. 2-7. There was considerable disappointment in the market at the postponing of the proposed bonus issue by the Bangalore Woollen, Cotton and Silk Mills Company, Ltd. The share was quoted at Rs. 555 *ex-div.*, as against Rs. 580 *cum-div.*

Among plantings, Devasholas, in the tea section, rallied As. 10 to Rs. 28 and Parksides As. 4 to Rs. 20. Periakaramalais gained an anna to Rs. 8-11. But Blue Mountains lost As. 3-6 to Rs. 5-8-6 and Chandramalais As. 2-6 to Rs. 6-11. Highland Produces were quiet at Rs. 17-10, and Waterfalls at Rs. 6-5. Rajagiris, among rubbers, gathered As. 2 to Rs. 23-6. But Cochin Malabars lost an anna to Rs. 8-15 and Kailas As. 2 to Rs. 5-11. Pullangodes were fractionally lower at Rs. 4-5-6. Thirumbadis were quiet at Rs. 2-5-6. It is reported that the National Industries Development Corporation has recommended to the Government of India for the setting up of a synthetic rubber plant in India.

In the miscellaneous section, Bruntons advanced from Rs. 7-11 to Rs. 8-8 and F.A.C.Ts. from Rs. 7-8 to Rs. 7-14. India Cements improved from Rs. 33-8 to Rs. 34-4 and India Steel Rolling Mills from Rs. 13-10 to Rs. 14-4. Mysore Chemicals and Manufacturings disclosed a gain of As. 4 at Rs. 24-4 and Mysore Papers As. 2 at Rs. 17-6. Rallis were up by As. 4 at Rs. 33-12. But Spencers lost As. 2 to Rs. 17-6.

ELECTRICAL ENGINEERING EXHIBITION IN U.K.

The biggest exhibition ever organised by the British electrical engineering industry, the exports of which last year were worth nearly £200,000,000, was held at Earls Court, London, for five days from 20th March.

With 25,000 pieces of equipment, including over 2,500 new products, on show, the exhibition had, it is stated, a power supply of 1,500 kilowatts —enough to meet the needs of a small township. The display items ranged from transformers weighing eight tons each to a miniature micro-switch smaller than a thumbnail. The special lighting arrangements on the stands are estimated to have cost over £250,000. Buyers came from Western Europe and also from India, New Zealand, Finland, Norway, Italy, and Portugal. Concurrently with the first two days of the five-day exhibition, a meeting of electrical experts from all over the world discussed an international safety code for electrical equipment.

RISE IN U.K. EXPORTS OF COMBUSTION ENGINES

The strength of the overseas market for British-made internal combustion engines is shown both by the fact that the export value of engines and parts last year advanced by 12 per cent. and by the continued increase this year of the upward trend. Figures released in London place the value of combustion engines and parts sent abroad in 1955 at £26,461,107. For January this year, similar direct exports were valued at £3,122,401, an increase of about £482.000 on the same month of 1955. Also in January, the sales abroad of British marine engines were the highest recorded. According to a spokesman of the British Internal Combustion Engine Manufacturers' Association, exports of diesel engines have been rising in spite of growing foreign competition. The biggest sales increases in 1955 were in the United States, which took 31 per cent. of British diesel engines, and Australia, which took nearly 21 per cent.

NEWS IN BRIEF

THE next session of the Rajya Sabha will commence on 23rd April next.

The Demag Engineering Company of Germany has secured the contract to build a rolling mill for the Tata Iron and Steel Company.

The packing charges for cement packed in new bags during the second quarter of 1956 are fixed lower at Rs. 13-4 per ton, as against Rs. 13-7 in the first quarter.

The Central Government is considering the development of diamond mining industry at Panna in Vindhya Pradesh at an estimated cost of Rs. 2 crores.

Sunn hemp and sunn hemp manufactures, including fishing nets, are not controlled under the export trade control regulations. No licence is, therefore, necessary for their export.

Nearly 1,500 delegates hailing from all parts of India are expected to attend the second national convention of farmers, to be held at New Delhi from 31st March to 5th April.

The Government of India proposes to undertake prospecting of coal seams for the development of the State collieries in an area of about 31 square miles in Mendu, Barkagaon and Ramgarh *thanas* of Hazaribagh.

The Government of India has extended the facilities for the conversion of holdings of Hyderabad currency into Indian currency for a further period of six months, that is, up to the end of September 1956.

Two contiguous oil berths, each 600 feet long, are to be constructed in the Visakhapatnam harbour to accommodate oil tankers which will bring 675,000 tons of crude oil annually for the Caltex oil refinery from 1957.

The annual review of the air agreement between India and the U.K. is proposed to be held some time in the middle of April next. The review will relate to determining the frequency of services to be operated by the airlines designed by the Governments of the two countries.

With effect from tomorrow, power supply in Madras will be cut by 25 per cent., owing to the low water level in the hydro-electric reservoirs. The cut will not, however, apply to essential purposes such as agriculture, railways, hospitals, water-supply and sanitary arrangements, and domestic consumption of 20 units and less.

A special committee with a member of the Union Public Service Commission as Chairman has been set up to recruit qualified personnel for the three State steel plants at Rourkela, Bhilai and Durgapur. The personnel required includes about 15,000 technicians below the foreman category and 2,100 persons of the rank of foreman and above.

During the second Plan period, the Government proposes to construct about 4,000 irrigation tube-wells in 15 States at an estimated cost of about Rs. 24 crores. The number of tube-wells in U.P. will be 1,500, 466 in the Punjab, and 250 in P.E.P.S.U. This programme is expected to bring an additional area of about 1.2 million acres under irrigation.

The Government of India has sanctioned Rs. 99,42,000 as grant and Rs. 98,67,000 as loan to the West Bengal Government during the current financial year for flood and drought relief. No specific amount has, however, been given for flood relief only. In addition to this, Rs. 10,000 have been given from the Indian People's Famine Trust and Rs. 40,000 from the Prime Minister's National Relief Fund, while 1,500 tons of rice and 500 tons of wheat were received from the gift foodgrains received from U.S.A.

The Central Government has told the Government of Andhra that it would not honour the latter's bills, if expenditure above the allotments were allowed to continue. Disclosing this in the State Legislative Assembly on Monday last, the Chief Minister of Andhra said that, during the 30 months following the formation of the State, revenue deficit stood at Rs. 11 crores. He estimated the total outstanding debt of the Government as at the end of the current financial year at Rs. 70 crores, including Rs. 30 crores debited from the composite Madras State.

Additional allocations aggregating more than $2½ million have been provided under the technical co-operation programme of the United States for 12 different projects in India, the agreements in respect of which were signed at New Delhi last week between the Governments of India and the United States. This is the second series of agreements to be signed against the development assistance of $50 million allocated to India for the year July 1955 to June 1956. The first five agreements providing for a total of $26 million were signed recently.

The Government of India is considering the question of establishing an aero-engine production unit in the country. The Hindustan Aircraft Factory, Bangalore, is manufacturing at present air frames only. For want of experts, the capacity of the Hindustan Aircraft Factory is not being utilised fully. The Defence Ministry is negotiating with some high class experts and technicians and, very soon, it is expected to get a team of experts from abroad to design the manufacture of aeroplanes in India. The idea is to manufacture aero-engines in India only on a licence from the original manufacturers of these engines. A team of Rolls-Royce engineers and a party from the Bristol Aircraft Factory in the United Kingdom have recently visited the Hindustan Aircraft Factory.

It has been decided to invite applications from uneconomic units in the art silk weaving industry for their expansion, with a view to assessing the total requirements of additional looms, according to a Press note issued by the Textile Commissioner. Applications should state the number of looms required to be installed by each unit and the justification therefor. The Government, it will be recalled, announced its decision to disallow further expansion in the industry on the 7th inst. Since then, the question of allowing a limited expansion to units of uneconomic size has been under consideration. Weaving establishments of uneconomic size which desire expansion are, therefore, invited to forward their applications to the Textile Commissioner, stating details of their requirements before 30th April. It is, however, stated that there is no obligation on the part of the Government to allow expansion.

• • • •

From Abroad

From next year, Norway will adopt the "Pay As You Earn" tax system. Up to now, the Norwegians have paid tax on the preceding year's earnings.

Sharp reductions in the prices of synthetic yarns, nylon and Dacron have been made by the U.S. producers, in order to stimulate a sluggish domestic textile market. Messrs. E.I. Du Pont, for instance, have reduced their prices on the various grades of nylon and Dacron filament from 10 to 30 per cent. It would, however, appear that export prices have been kept unchanged.

Hongkong and Malaya may never regain their lost trade with China, unless there is a substantial reduction in the embargo on certain British and Commonwealth goods in the near future. This view was expressed by Mr. C. Blacker, Chairman of the Hongkong and Shanghai Banking Corporation, in the course of his address at the annual general meeting of the Corporation held recently in Hongkong.

Three Canadian wood-pulp producers have announced increases of $5 per ton in their prices for sulphate pulp. Two of them have announced the increases on export shipments to the U.S. only. Messrs. Macmillan and Bloedel of Vancouver have raised their prices of both bleached and unbleached sulphate pulp by $5. Messrs. Fraser Companies and Howard Smith Paper Mills have raised their prices on exports to the U.S. by a similar amount.

The U.S. Eastbound Shipping Conference and the Canada Eastbound Conference have increased freight rates on all cargoes between the U.S. and Canada and India by just under 10 per cent. as from 1st May. It is stated that the increase had been prompted by increased costs. The main types of cargo likely to be affected are stated to be motor cars, tractors, newsprint, cotton, sulphur, fertiliser and iron and steel goods.

Messrs. Richard Thomas and Baldwins, United Kingdom, propose to erect a £160 million integrated steel works in New South Wales. According to Mr. H. F. Spencer, Managing Director, the Company has not yet entered into any commitment beyond a complete and full investigation, which is now in the hands of its own consulting agents. Once it is decided to establish and work commences, it will take five years to put the plant in full commission.

The General Electric Company will build Spain's first atomic reactor. The reactor will produce 3,000 kilowatts of power for use in agricultural and medical research and for the training of Spanish personnel. The power plant will be the 'swimming pool' type, with a radio-active water-cooled core. It will be possible for several experiments to be carried out simultaneously. It may be noted that the U.S. companies have already announced plans to build reactors for Italy and Belgium.

Shipping has been selected by the British Chancellor of Exchequer for preferential treatment in connection with the measures announced by him recently to arrest inflation. One of the most important measures proposed by the Chancellor is the discontinuance of the investment allowances of 20 per cent. granted to all industries in the Budget of 1954, but capital expenditure on the construction of ships and scientific research assets have been exempted from this measure. In granting this special concession to British Shipping, the Chancellor of the Exchequer has, it is stated, set a bold example to other nations, which wish to develop their merchant fleets but are rather hesitant to show special tax concessions to this industry, despite its unique role in national economy. It may be noted in this connection that France, Germany, Italy and the Netherlands are some of the other countries where special tax concessions are given to the shipping industry.

Anaconda copper has proposed a radical change in pricing policy for its Chilean copper. As a result, in future, copper frim Chilean mines sold in the U.S. market will command the same price as in the U.K. and Western Europe. At present, Anaconda's Chilean Copper is being sold in the U.S. market at the same price as domestically produced copper, that is, 46 cents a pound. Latterly, this had worked out to a discount of 6 to 7 cents from the price quoted on the London Metal Exchange. According to the present change, prices will be based on those quoted on the London Exchange on the day of shipment *less* freight and other charges in London. This, presumably, will end Chilean pressure to divert copper from the U.S. to European markets. Anaconda apparently intends to keep its domestic copper price at 46 cents. It may be noted in this connection that Anaconda is the leading U.S. producer in Chile, accounting for some two-thirds of the output of U.S.-owned mines which together produce about 40,000 tons a year.

PERSONAL

MR. T. H. Rydin, Swedish Consul-General in Bombay, left for the U.K. *en route* to Sweden on home leave.

Mr. D. M. Holten, Canadian Trade Commissioner in Bombay, left for the U.K. *en route* to Canada on Sunday this week on home leave.

Mr. J. P. Young, Director and Manager of Messrs. Angelo Bros., Ltd., has retired from the service of the Company.

Mr. H. P. Stuwart, Director of Messrs. Blackwood India Ltd., Calcutta, has retired after 27 years' service in the Company. He left for the U.K. on Sunday this week.

Mr. J. R. D. Tata, Chairman, Messrs. Tata Sons Ltd., Bombay, has been re-elected President of the Court of the Indian Institute of Science, Bangalore, for the quinquennium 1956-60.

Mr. H. A. Twist, Deputy High Commissioner for the U.K. in Bombay, left for London last week. He will return to India towards the end of July next.

Major-General Mahinder Singh Chopra, who recently retired, has been appointed Minister of India to the Philippines. He will assume charge of his appointment shortly.

Mr. B. K. Mehta and Mr. B. M. Ghia have been elected President and Vice-President, respectively, of the Association of Merchants and Manufacturers of Textile Stores and Machinery (India), Bombay, for the ensuing year.

Prof. M. S. Thacker, Director, Scientific and Industrial Research, Government of India, will undertake a five-day tour of Israel in April, with the object of studying the scientific work carried on in that country.

Mr. G. A. S. Sim, Chairman of Messrs. Andrew Yule & Co., Ltd., Calcutta, has retired from the service of the Company. He recently laid down office as President of the Bengal Chamber of Commerce and the Associated Chambers of Commerce. Mr. Sim left Calcutta for the U.K. on Thursday last week.

Mr. C. H. Bhabha, Vice-Chairman of the Central Bank of India, and Mr. D. R. Thom, General Manager of the Bank of India, have been re-elected Chairman and Deputy Chairman, respectively, of the Indian Banks Association for the year 1956. Mr. S. L. Kothari of the Bank of Jaipur has been elected Honorary Secretary. The other members of the Committee are Messrs. Pranlal Devkaran Nanjee (Dena Bank), N. M. Chokshi (Bank of Baroda), B. N. Puri (Punjab National Bank), O. H. Gheewala (United Commercial Bank), M. S. Captain (Union Bank of India), Sanjiban Banerji (United Bank of India), S. Krishnaswamy Iyengar (Indian Bank), C. V. Joag (Bank of Maharashtra) and C. Eknath Kamath (Canara Bank).

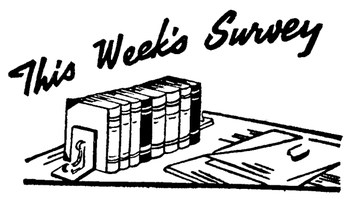
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *28th March*

Tea Trade Troubles

The tea industry has other expedients in view also. It has under anxious consideration the question of reducing production costs, so that these, in the case more particularly of estates producing low quality teas, may be brought into line as far as possible with the prices realised for better teas. It is not, however, possible for us to go into the position in detail, as conditions vary considerably in each district and even on adjacent gardens. What the industry aims at is a cut in production costs with justice for all and concerted and co-ordinated action. Other industries, the jute industry, for example, have taken strong action to meet their position, in spite of having to meet strong opposition in other countries and the economic situation all-round makes it imperative that whatever action the tea industry may take to meet the crisis ahead should be recognised as absolutely necessary and, therefore, entirely warranted. Turning to recruiting costs, with the present reduced demand for labour from industrial areas, the restricted development programme of the railways and the prevailing economic conditions in the recruiting areas, it is not too much to expect that the time is opportune to reduce some of the extravagant overhead charges in connection with recruitment, generous expenditure for which the industry gets no credit, as it does not represent actual wages paid to the individual labourer.



THE RULE OF LAW

THE country naturally looks to the High Courts and the Supreme Court to interpret the Constitution in a manner that will ensure that, while on the one hand, the liberty of the citizen is not sacrificed at the altar of administrative expediency, or the shifting political composition of the Government, there is, on the other, no impediment to national progress through an exaggerated emphasis on individual freedom as such. Democracy rests on the rule of law and the guarantee of individual freedom. The Indian Constitution is based upon these principles. And it often becomes the sacred duty of the courts to give, in the light of the Constitution, their verdict upon particular statutory enactments or portions thereof. To the long succession of its memorable pronouncements, which have amplified and deepened the concept of the law of the Indian Constitution, belongs the judgment which the Supreme Court recently gave in a case involving the question of transfer of income-tax assessment from one place to another.

The case arose out of an application filed by Messrs. Bidi Supply Company—a firm carrying on business as manufacturers and sellers of bidi with its head office at Calcutta and factories near Chakradharpur in Bihar. Since its inception, the firm was all along being assessed to income-tax by the Income-tax Officer, Calcutta. The Company, however, received on 25th January 1955, a letter from this Income-tax Officer informing it that its assessment records had been transferred from his office to the office of Income-tax Officer, Special Circle, Ranchi. There was no previous notice of the intention of the income-tax authorities to transfer the assessment proceedings from Calcutta to Ranchi nor was any opportunity given to the Company to make any representation against such decision. The validity of the order for transfer of the case was challenged by the assessee firm in a petition before the Supreme Court which has now upheld the petitioner's contention.

Briefly, the points of law which had to be settled were whether sections 5 (7A) and 64 (5B) of the Income-tax Act, which empower the Central Board of Revenue to transfer any case from one income-tax officer to another, were *ultra vires* Article 14 (equality before the law) and Articles 19 (1) (G) and 31 (right to trade and property) of the Constitution. In this judgment, the Chief Justice held that the omnibus wholesale order of transfer was not contemplated by section 5 (7A) of the Act. It was implicit in that section that the Commissioner of Income-tax or the Central Board of Revenue, as the case may be, should, before making an order of transfer of any case, apply his or its mind to the necessity or desirability for the transfer of that particular case. The income-tax authorities, according to the Chief Justice, had by an executive order, unsupported by law, picked out this Company and transferred all its cases by an omnibus order unlimited in point of time. Here, the "State" which included its Income-tax Department, had by an illegal order, denied to the petitioner, as compared with other *bidi* merchants who were similarly situated, equality before the law or the equal protection of the laws and the petitioner could legitimately complain of the infraction of his fundamental right under Article 14 of the Constitution. Accordingly, the Court issued a writ directing the Income-tax Officer, Ranchi, not to initiate assessment proceedings against the firm.

In a separate judgment, Mr. Justice Vivian Bose held that sections 5 (7A) and 64 (5B) of the Income-tax Act to be discriminatory and *ultra vires* the Constitution. He said that, under the Act, there was no need for the department to give reasons with the orders transferring the case from one place to another without any warning. He added: "The power given by the Act is to transfer from one end of India to another; nor is that power unused. We have before us in this Court a case pending in which a transfer has been ordered from Calcutta in West Bengal to Ambala in the Punjab." Explaining the implication of the fundamental rights under the Constitution, his Lordship said:

"After all, for whose benefit was the Constitution enacted? What was the point of making all this bother about fundamental rights? I am clear that the Constitution is not for the exclusive benefit of Governments and States: it is not just for lawyers and politicians and officials and those highly placed. It also exists for the common man, for the poor and the humble, for those who have business at stake, for the 'butcher, the baker, and the candlestick maker.' It lays down for this land 'a rule of law' as understood in the free democracies of the world. It constitutes India into a sovereign democratic republic and guarantees in every page rights and freedom to the individual side by side and consistent with the overriding power of the State to act for the common good of all."

As regards the particular power of transfer of cases given to the income-tax authorities under the Act, his Lordship felt that such a power could be conferred on them only if it was hedged round with reasonable restrictions, the absence or existence of which could, in the last instance, be determined by the Courts. The exercise of the power, his Lordship further observed, must be in conformity with the rules of natural justice; the parties affected must be heard when that is reasonably possible and the reasons for the order must be reduced, however briefly, to writing so that men may know that the powers conferred on those quasi-judicial bodies are being justly and properly exercised.

His Lordship further emphasised that in a "democracy, functioning under the rule of law, it is not enough to do justice or to do the right thing; justice must be seen to be done and satisfaction engendered in the minds of the people at large in place of a vague uneasiness that star chambers are arising in this land." Proceeding, his Lordship stressed the need for constant vigilance which has been rightly regarded as the price of liberty. Mr. Justice Vivian Bose warned: "We have received a rich heritage from a very variegated past. But it is a treasure which can only be kept at the cost of ceaseless and watchful guarding. There is no room for complacency, for, in the absence of constant vigilance, we run the risk of losing it."

N.I.D.C. TO TAKE UP NEW PROJECTS

The Directors of the National Industrial Development Corporation (N.I.D.C.) have, at their meeting held at Delhi on the 23rd inst., made some far-reaching recommendations to the Government. One of them relates to the setting up of a synthetic rubber plant in India—a problem on which, as readers are aware, there is divided opinion in this country. The Directors of the N.I.D.C. seem to feel that production of synthetic rubber is desirable, because it has certain valuable properties not possessed by natural rubber and also because the consumption of rubber has been rising and cannot be met by expanding the production of natural rubber. This latter view is open to the criticism that had the Government taken proper interest in the industry's welfare in good time, today the position of rubber supplies would have been different; and even now it is strongly felt that there is land which could be used for growing natural rubber, thereby providing gainful occupation to thousands of workers in the south-west coast of India. Besides, it is a moot point whether grant of priority of investment in synthetic rubber industry, as visualised by the N.I.D.C., is advisable. There is, again, the question of securing raw materials such as petroleum and coal, technical know-how, and the huge capital needed for the project. As the decision of the Corporation is subject to the approval of the Central Government, it is to be hoped that the latter will give its final verdict after a careful examination of all the issues involved.

The N.I.D.C. has also recommended to the Government of India for taking up for investigation three more projects connected with the manufacture of (*a*) industrial machinery and plant, (*b*) aluminium and (*c*) elemental phosphorus. The Corporation will examine the technical and economic aspects of machinery manufacture, and the manner in which it can be linked with the existing capacity in the private and public sectors as well as the new capacity which the N.I.D.C. itself will set up. There are already certain units manufacturing, or have obtained licences for manufacturing, machinery required by cotton textiles, jute, sugar and tea industries. There are, however, still certain industries which depend on imports for plant and machinery required by them. It is now considered that the N.I.D.C. should be able to supply the major components for the fabrication of machinery required by these industries. The N.I.D.C. proposes to engage a firm to prepare a detailed project report specifying the plant and machinery required for setting up foundries and forges. It has been decided that a structural-*cum*-machine shop should be set up at Bhilai and a structural shop at Durgapur.

As regards aluminium, the demand is expected to go up to between 30,000 and 40,000 tons per annum by 1960-61. The present capacity is only 7,000 tons. With the implementation of all the schemes approved for increasing the capacity, the total production will be about 20,000 tons. The N.I.D.C. considers that there is room for starting one or two additional plants. Similarly, it is felt that there is good scope for a factory with a capacity of 25 tons a day for manufacturing phosphorus. This chemical is needed to meet the requirements of the match, dyestuffs and drugs and phosphates fertilisers industries.

The N.I.D.C. considered the question of financial assistance to cotton textiles industry for rehabilitation and modernisation. A committee appointed at the Board's last meeting to recommend a procedure for grant of loans to cotton mills had suggested the appointment of a survey team to examine loan applications. Accepting this suggestion, the Board decided that a survey team of the Textile Commissioner's Office should scrutinise the applications and submit its recommendations to a sub-committee under the chairmanship of Mr. V. Nanjappa, the Textile Commissioner. The recommendations of this Sub-committee will be accepted by the Board. The other members of the Sub-committee are Mr. Krishnaraj M. D. Thackersey, Mr. A. N. Mafatlal, Mr. Madanmohan Mangaldas and Joint Secretary, Ministry of Finance (I. & C. Division). Mr. N. Majumdar, Industrial Adviser (Textile Production), will be the Member-Secretary.

LABOUR PROBLEMS

The views of employers on the issue of participation of labour in management are varied. Addressing the annual general meeting of the Employers' Federation of South India held in Madras last week, Mr. E. F. G. Hunter doubted whether the time was ripe for such participation. He even feared that such a partnership might result in constant friction between employers and workers, "instead of promoting harmony and improving industrial relations as visualised in the second Plan." This view is in sharp contrast with those of the framers of the Plan who have categorically held that, "for the successful implementation of the Plan, increased association of labour with management is essential."

Mr. M. R. Masani, Director of Industrial Relations, Tata Industries, has expressed the view that care and caution are needed "in adopting in India the foreign practice of workers' participation in management." Speaking recently in Ahmedabad, he stated that the experience of West Germany in this regard was that the board or council composed of management and workers' representatives "tended to be in a state of continual deadlock." He, however, felt that the presence of a third force comprising technicians and managers might prove desirable. He further suggested that there should be tripartite councils, with equal representation for shareholders, workers, technicians and managers. In fine, he was of the view that the experiment of workers' participation in management was "sincerely intended" but had "not reached its full scope."

There is thus certainly need for proceeding warily in the workers' participation in management. But the trend itself cannot possibly be reversed, now that the Planning Commission has recommended it and the Government has accepted it. Perhaps, there is no choice before the employers. It is only a question of time before the Government implements its decision and employers will do well to do some hard thinking, instead of taking a negative attitude.

As at present envisaged, each undertaking will have to constitute a council of management consisting of an equal number of representatives of management and workers. It will be the responsibility of management to supply full information on all subjects to the council of management, which will be entitled to discuss all matters pertaining to establishment which will be other than financial. The council will, however, be supplied with the financial information needed for the settlement of wage and bonus disputes. Matters which fall within the purview of collective bargaining would, however, be excluded from the scope of the council's discussions. Labour welfare problems might be discussed in works committees in the first instance and later brought up, if necessary, before the council of management.

Such a scheme, it is felt by a section of employers, makes the workers conscious more of their rights than of their responsibilities. From this point of view, it would be better to make the employees shareholders of companies for which they work. By this, the employers will achieve the twin objective of instilling in the workers a greater sense of responsibility for rendering efficient service and spreading the ownership of companies over a large number of people, thereby meeting the criticism that the country's productive machinery is owned by a handful of individuals.

To revert to Mr. Hunter's address, he emphasised that the workers must realise their responsibility and suggested the prescription of penalties for those who break the law. Elaborating this statement, he declared—pertinently at that—that, if India were to achieve that degree of success as was desired by the planners, those responsible for calling illegal strikes, initiation of go-slow tactics in factories and docks and for other unfair labour practices should be made to realise that such anti-social activities would not escape unpunished.

Obviously, it is only when the workers are conscious of their duties that the development of trade unions can take place on healthy lines. In this connection, Mr. Hunter welcomed the proposal for the restriction of outsiders in trade unions. He expressed the view that the time had come to eliminate completely outsiders from such unions at least, where the employees were no longer insufficiently educated to look after their own affairs.

Proceeding, Mr. Hunter dealt with the problem of wages. The Planning Commission has envisaged the raising of living wages. "Such a policy can," it has held "only be based on increase in productivity, accompanied by a firm assurance to labour that an equitable share will accrue to it." While commending this policy, Mr. Hunter found it difficult to predict to what extent tribunals and other authorities charged with the task of fixing wages would have that policy in view. He felt it advisable for the Government to issue directions to the tribunals who had frequently to deal with disputes relating to wages and dearness allowance. Such a reform was long overdue.

A MILLOWNER SPEAKS

Mr. R. Venkataswami, Chairman of the Southern India Millowners' Association (S.I.M.A.), rightly emphasised, in the course of his speech at the recent anual meeting of the Association held at Coimbatore, the need for permitting an expansion of loomage in the mill sector of the cotton textile industry. As readers are aware, the domestic consumption of cloth has of late registered a marked expansion which will gather further momentum in the coming years, with the rise in population and the efforts that are being made to improve the standard of living. If the pace of increase in the production of mill cloth were thwarted by considerations of encouraging development of handlooms, a situation is bound to arise, sooner or later, when there will be an acute shortage of cloth, resulting in higher prices. Further, by relying excessively on the capacity of the handloom sector to meet the entire increase in demand for cloth in the coming years—apart from the fact that this sector may not live up to the Government's expectations—the authorities are seeking only an uneconomic measure as an expedient for providing employment to weavers. Whatever may be the final decision of the Government with regard to the future pattern of development in the cotton textile industry, there is, as Mr. Venkataswami rightly pointed out, the urgent need for permitting installation of a definite number of looms at least in units which are uneconomic, so that they may be converted into economic units and produce cloth at competitive rates.

In the considered opinion of Mr. Venkataswami, the solution to the ills of the handloom industry, of at least that section which is engaged in the manufacture of grey and plain goods, lies in the conversion of such handlooms into power-looms. "If this section is to exist, it must," to quote him, "economise in its cost and that can only be done by conversion." It was only then, he declared, that the handlooms would survive and stand on their own feet, without subsidy or external or artificial aid. Mr. Venkataswami, however, urged all possible assistance to the "traditional" handloom which produces articles of rarity and artistic types and caters to the peculiar and traditional requirements of the people. Nevertheless, he pointed out that the equipment used by weavers for such production should be improved.

In the course of his address, Mr. Venkataswami touched on the Ambar Charka. He drew particular attention to the heavy commitment of the Government on account of the Charka in the next five years, estimated at Rs. 80 crores. Surely, the question whether the Government will be well advised to spend so much on what Mr. Venkataswami called a "temporary expediency" is one which requires serious thought.

Mr. Venkataswami had a few words to address to the Government of Madras. He regretted the imposition of a surcharge of 30 per cent. on power, in addition to the war-time surcharge of 20 per cent. already existing. He also criticised the Government for the latter's failure to make any provision for meeting dislocation of hydro-electric power supply in the State during the summer and emphasised the urgency of setting up sufficient thermal plants in suitable industrial areas.

WHAT IS WRONG WITH BRITISH ECONOMY?

The fairly accurate picture of the British economy today presented in the White Paper on the "Economic Implications of Full Employment" should go a long way towards securing the active co-operation of every British citizen in fighting the country's battle against inflation. The outstanding feature of the British economy today is the maintenance of full employment. In the immediate pre-war years, the average rate of unemployment in the U.K. was 10 per cent. It was below 2 per cent. during 1945-55. And it is now about 1 per cent. What is very encouraging is that this has been accompanied by a rapid rise in production. Thus, since 1946, there has been an increase of 30 per cent. in the national output of goods and services and of 56 per cent. in industrial production, a record which is quite impressive. This has been possible because of changes in attitudes to production and application of advanced techniques, which have taken place among both employers and employees. Says the White Paper: "The possibilities of economic progress and the importance of productivity command a greater understanding and a wider degree of acceptance than they did 10 years ago. As new techniques of production are developed, more efficient methods of work are introduced, and the benefits of rising investments are felt, we can look forward to a continuing expansion of our capacity to produce; and this rising productive capacity will provide the means for a further progressive improvement of our standard of living."

Although this capacity to produce more is welcome, it is not by itself enough to sustain a country like the U.K. which depends for its economic progress on imports of food and raw materials. For the capacity should be sufficient to enable the country to produce and sell abroad enough exports not only to pay for essential imports of food and raw materials but also to meet the cost of its overseas capital commitments and to build up reserves. In other words, the country should produce the goods its overseas customers want at prices they are willing to pay and on terms readily acceptable to them. This ability to compete is contingent upon many factors, namely, quality, promptness of delivery, effective salesmanship, good after-sales service and, above all, the price. Does Britain possess this ability? The facts provided by the White Paper disclose that the country is not having it in full measure. For competition in the overseas market is very keen. The U.K. no longer enjoys the pre-eminent position which it held early in this century in the sphere of world trade. Its rivals are formidable both in foreign and Commonwealth markets. The dislocation caused by the last war left the U.S. as the only important source of supply for many goods. Its share in world trade in manufactures rose from 20 per cent. in 1937 to about 25 per cent. today. West Germany, which was far behind the U.K. in as late as 1950, has since staged such a recovery that today its share in world trade is 14 per cent., as against 7 per cent. in 1950, or an increase of 100 per cent. There has also been a rise in the total world trade of over 40 per cent. But the U.K.'s share has shrunk from 25 per cent. in 1950 to about 20 per cent. today in the same. The effect of this decline has been that exports are not adequate to meet the growing imports bill and to finance other external commitments.

What is the main cause for the failure of Britain to hold its own in the export markets? In reply to this question, the White Paper points to the increase in prices of British goods. Between 1946 and 1955, the prices of the final output of goods and services of all kinds increased by about 50 per cent. Much of the post-war rise in prices in the U.K. has been due to abnormal world conditions associated with the war and subsequently with events in Korea. Apart from these abnormal factors, the rise is due to the "continuing tendency," to quote the Paper, "for prices to rise as incomes increase faster than output." Proceeding further, it remarks: "This is what gives ground for concern." If this tendency persists and incomes go on rising faster than output over the economy as a whole, full employment will continue to be associated with rising prices and with consequent economic and social strains."

The chief factor which has been responsible for the rising tendency in prices is the rise in wages and salaries, and dividends. This is fully reflected in the indices for these two items since 1938. The index for wages and salaries rose from 100 in 1938 to 217 in 1948 and then to 255 in 1955. During the same period the figure for dividends advanced from 100 to 180. Says the Paper: "Apart from the relatively minor effects of changes in subsidies and indirect taxation, these prices are determined partly by the prices of our imports and partly by our costs of production. These costs are themselves determined by the incomes of those who produce the goods and services at each stage of the productive process—in other words, by wages and salaries and profits." These increases in incomes have resulted in an excessive domestic demand followed by two grave consequences, namely, (*a*) absorption of too much of the output that the country needs to sell abroad for paying its import bills and (*b*) pushing up prices, thereby weakening the competitive ability of the country in world markets. In order to avert the economy from this danger, the White Paper lays stress on self-restraint on the part of trade unions in making wage claims and fixing profit margins and prices so that total money income does not rise faster than total output. It appeals to industry to pass on the gains from higher productivity to lower prices and to expand its profits not by the maintenance of high profit margins but by the expansion of turnover.

INVESTMENT PROBLEMS OF WESTERN EUROPE

IMPORTANCE OF CAPITAL MARKET AS A SOURCE OF FINANCE

THE Secretariat of the United Nations Economic Commission for Europe (E.C.E.) fears that in a number of western European countries restrictions on investment to meet immediate difficulties may be compromising the achievement of levels and patterns of investment required for a satisfactory long-term rate of economic expansion. These and other fundamental problems of investment are discussed in considerable detail in the Secretariat's *Economic Survey of Europe in* 1955.* The analysis of problems involved in maintaining a high level of investment in western Europe concerns, particularly the operations of predominantly private enterprise economies. The *Survey* shows that, in most western European countries, the ratio of gross fixed investment to gross national product has been higher since the war than it was before. For Denmark and the Netherlands, the increase of the ratio since before the war has been particularly large. The only country for which it has fallen is the United Kingdom, where, during the entire post-war period, a smaller share of national product has been devoted to investment than in 1938. The *Survey* also draws attention to the relatively small share of investment in industry in total investment, and in the growth of total investment in recent years, in most western European countries.

After reviewing investment developments, the *Survey* makes its only direct contrast between investments in western Europe and those in the Soviet Union and eastern Europe, which are discussed separately. This suggests that not only is the rate of capital accumulation far higher, in relation to national product, in the Soviet Union and in the countries of eastern Europe, but also that the composition of net investment in those countries is designed to secure over the long run relatively high rates of economic growth at the price of less quick returns in the form of national product.

Policy Issues

After discussing various physical limitations to investment in western Europe, and the competing claims of consumption, the *Survey* tackles the policy issues. It states that virtually all Governments of western Europe are committed, in principle, to the need for a high rate of investment. Nevertheless, a number of Governments has during the last year or so adopted measures which tend to restrict investment. The main considerations influencing Government policies in this direction appear to be (*a*) fear of rising wages and prices—disliked partly for their own sake and partly for their effects on balances of payments—(*b*) fear of the direct effects of an excess of demand on balances of payments.

The conflict between long-term and immediate objectives is enhanced by the cumulative character of economic development, and it is very difficult to hit the right point of balance between too much pressure of demand and too little, and still more difficult to stay there. According to the E.C.E. Secretariat, while policies may at times err in the expansionist direction, the greater risk seems to be that they will be more restrictionist in their effects on investment than they need be or less positively expansionist than they could be, with resulting losses in current production and the expansion of productive capacity.

Co-operation Required

According to the E.C.E. Secretariat analysis, Governments would need to foster two different kinds of co-operation to ensure satisfactory rates of investment and growth in western Europe. One is the co-operation with labour, and also with employers, so as to render a high level of activity consistent with reasonable stability of prices and with an acceptable distribution of income, and to ensure that the behaviour of money wages and consumption is not such as to imply inadequate consideration of the case for capital accumulation from the point of view of wage-earners.

The other kind of co-operation advocated by the Secretariat *Survey* is between countries. The balance of payments stands out as a dominant consideration—frequently the dominant consideration—in the minds of those responsible for moulding a country's economic policy. If it is not actually an adverse balance, it is often the fear of a balance which might become adverse, coupled with limited monetary reserves, which dictates caution. So far as this is the case, it follows that, if a considerable number of countries worked out their internal policies in co-operation with one another, each taking into account the effect on its own balance of payments of the policies of the others, the outcome would be more expansionist than that dictated by the play of competition for monetary reserves taking place between countries, each acting on the false assumption that its own policy will have no influence on those of the others.

Co-operation of this kind is particularly advantageous between countries each of which, one way and another, has to limit its imports to what its exports will pay for. This criterion covers most of the countries which produce primary products, the trade of which has enjoyed little share in the recent growth in the trade of western Europe. The *Survey* insists that for the future growth of this trade and that between European countries, as well as for the achievement and maintenance of adequate levels of investment and general economic activity, it is particularly important that countries whose balance-of-payments positions are strong in relation to those of others should not needlessly resort to measures of domestic contraction under the influence of restrictions which countries in a more exposed position may find necessary.

Role of Savings

Besides discussing the problems which arise, especially in connection with wage movements, in reconciling high levels of general activity and of investment with reasonable price stability and a satisfactory balance of payments, the Secretariat also discusses the role which additional saving can play in bringing about this reconciliation. It insists that the encouragement of private saving—and of personal saving in particular—offers important possibilities. But, the *Survey* adds, whatever may be done by Governments to encourage private saving, the most important practical issue of public policy in this field will usually be the part which should be played by the Governments in promoting public saving in the form of excess revenue over expenditure. Cases are studied in which additional taxation might or might not be necessary as a concomitant of measures designed to stimulate investment. The Secretariat suggests that, where there is no problem of a general excess of demand, it is important that measures to restrain consumption and increase saving should be accompanied by positive inducements to expand investment in order to avoid unnecessary waste of productive resources.

In view of the importance of public saving in most countries of western Europe, recent changes in Central Government budgets and in budgetary policies are reviewed. The analysis necessarily includes consideration of the share of defence expenditure. This shows that over the period 1950 to 1955 no less than 30 or 40 per cent. of the increase in total Government expenditure was in most countries accounted for by defence (the share is as high as 80 per cent. in the United Kingdom).

Main Instruments of Policy

The Secretariat stresses that, at times when measures to relieve the pressure of demand are necessary, fiscal restrictions are not to be regarded simply as alternatives to credit restrictions. At the expense of restraint on consumption, they provide a means of foregoing restrictions on investment which would otherwise be necessary. The study points out that some Governments have recently recognised the desirability of a somewhat greater emphasis on fiscal measures to implement policies designed to relieve demand pressures.

The task of devising effective taxes on consumption which do not produce undesirable repercussions on wages and prices is seldom easy. A merit of indirect taxation for this purpose is, however, that its structure can be modified so as to weigh more heavily on commodities which are imported or might be exported, and less heavily on other commodities—and also more heavily on commodities of which supply is relatively inelastic and less heavily on others, thus securing a more balanced utilisation of productive capacity.

Continuing, the Secretariat points out that, in general, and other things being equal, a reduction of direct taxes is stimulating to enterprise and in particular to the taking of risks. Further, taxation of profits, if additional to taxation of personal income, is a direct tax on enterprise and may also indirectly limit investment by reducing the amount of firms' undistributed profits available for self-finance.

Monetary and Credit Policies

In discussing the uses of monetary and credit policy, the *Survey* says it is now fairly widely recognised that the main long-term influence of credit policy is on fixed investment. Effects on consumption are, of course, also important, particularly with the growth of hire purchase, as also are the effects on stocking and short-term capital movements.

The Secretariat suggests that there are some indications that credit policy is more popular as a means of exercising restraint than as an expansionist instrument. If the pressure on resources is too heavy, there may be a case for monetary restraint, perhaps supplemented by other measures. If it is not, and there is a case for increasing the pressure, monetary expansion will do good and not harm the Secretariat insists. It adds that a decision always to aim at a conventionally balanced budget is a positive decision to refrain from using one possible means of guiding the development of the economy, no matter what spontaneous trends may be apparent.

The E.C.E. Secretariat stresses that few things are more inhibiting to creative and imaginative endeavour than the knowledge that, even if promising plans were evolved, the necessary finance would not be available on reasonable terms. But its interest in removing financial obstacles to industrial investment arises not only from their influence on the business climate and spirit of enterprise, for the existence of financial defects also throws a heavier weight on monetary and credit policy than it should properly bear. This explains the conclusion, which would otherwise be paradoxical, that industrial investment, while relatively unresponsive to cheap money, suffers too much of the incidence of restrictive measures when restriction appears necessary.

The Future of Self-finance

An important question examined in the *Survey* is whether the relative prominence of self-finance at the present time is to be regarded as a passing phase. This turns partly on the development of the global relationship between undistributed profits and industrial investment, partly on the development of the degree of dispersion between firms of this relationship, and partly on the desire of firms to go on building up liquid assets. Each of these points is discussed.

As against the significance of self-finance in facilitating investment in the absence of an efficiently functioning capital market, adverse features of this method are considered. One of these is that, quite apart from the drag on the total level of investment, reliance on self-finance tends to concentrate investment on existing enterprises. As the *Survey* observes, industries with high profits are not necessarily those in which expansion is most needed from the general economic point of view. This is especially so where there have been restrictions on prices for certain products.

Capital Market

The *Survey* next considers the capital market as a source of finance for industrial investment. The main conclusion that emerges from the discussion is that, despite all its vagaries and inconsistencies, the stock exchange has an important part to play in the economic life of a capitalist country and that, as a matter of technique, of machinery and of education, improvements in its functioning should be pressed forward. In particular, it is declared desirable to extend the range of shares which receive a quotation. This is bound up with the desirability of encouraging a greater readiness to hold shares—subject to the risks involved considered on a reasonably objective basis—as opposed to less risky and risk-free fixed-interest securities and to various forms of property and speculative stocks of commodities. Any success in this

CENTRAL BANK OF INDIA LIMITED

CHAIRMAN, MR. HOMI MODY'S SPEECH AT ANNUAL MEETING

WISDOM OF ALLOTTING DOMINANT ROLE TO PUBLIC SECTOR QUESTIONED

THE wisdom of earmarking the major part of economic development for the public sector under the second Five-year Plan was questioned by Mr. Homi Mody, Chairman, Central Bank of India Ltd., when he addressed the Forty-fifth Ordinary General Meeting of the Bank, held in Bombay on Thursday, 29th March 1956. Mr. Mody thought that, in the interest of the Plan itself, a much larger scope should have been given to the private sector. With a much larger number of complicated schemes involving enormous amounts of capital investment, the administrative problems in the public sector, he declared, were bound to present considerable difficulties. He also warned that, owing to over-emphasis on household goods industries, acute shortages of essential articles of consumption might come about, involving a risk of serious inflation which it would be difficult to control.

The following is the full text of Mr. Homi Mody's speech:

"LADIES AND GENTLEMEN,

"In presenting the Directors' report and statement of accounts for 1955, I would like to say a few words on some of the important developments in the country during the year. The volume of trade, both internal and external, and industrial and agricultural production continued to rise and, if it had not been for some of the measures undertaken by Government to expand their sphere of operations and tighten their control over the private sector, economic activity might have shown a still greater buoyancy.

"The growth of banking business during the year was very pronounced in consequence of the impetus to production provided by increased public expenditure on development, the demand for bank credit showed a sharp rise and advances made and bills discounted by banks went up from Rs. 554 crores to Rs. 642 crores at the end of 1955. In relation to deposits, the proportion of advances and bills, which was already high, increased to 62 per cent. at the close of the year. Simultaneously, the ratio of cash in hand and balances with the Reserve Bank declined from 11 per cent. to 9.5 per cent. All this activity is reflected in the amount of currency in circulation, which went up by about Rs. 160 crores.

Second Five-year Plan

"The expansion of economic activity which should result from the sharp increase in the tempo of investment under the second Five-year Plan must create an enormous demand for bank credit and, if a profitable margin can be maintained between the rates of deposits and of advances and if establishment charges do not get out of hand, the future growth of banking would seem well assured.

"The tremendous role which the second Five-year Plan must play in the economy of the country cannot be exaggerated. The Planning Commission has published its proposals in the form of a Draft Outline. According to it, the total investment during the period would be of the order of Rs. 6,100 crores, which is Rs. 500 crores higher than what was envisaged in the Plan Frame. The view that the size of the Plan should be curtailed in order to make it more realistic has not found favour with the Planning Commission. The pattern of investment has, however, undergone a slight change and larger amounts have been allocated to transport. Since the size of the Plan has been enlarged, the question of securing the resources needed for its fulfilment has naturally become more difficult. Even after estimating on a liberal scale, the resources that could be obtained through taxation, borrowing, deficit financing and external assistance, the planners have left a gap of Rs. 400 crores, which, presumably, will also have to be met from internal resources.

"Though the investment in the second Five-year Plan is to be much larger (Rs. 6,100 crores) than that in the first Plan (Rs. 3,500 crores), the share of the private sector has been greatly reduced. As against a more or less even division under the first Plan, 62 per cent. of the investment in the second Plan is to be in the public sector and 38 per cent. in the private sector. The shift in emphasis on the development in the public sector becomes more significant when it is realised that the increase in investment from Rs. 1,700 crores in the first Plan to Rs. 3,800 crores in the second represents an increase of the order of 124 per cent. in the public sector, as compared with an increase of only about 28 per cent. in the private sector. In the interest of the Plan itself, a much larger scope should have been given to the private sector. The wide and varied experience which it possesses and the managerial personnel it commands should have been utilised to the fullest possible extent. With a much larger number of complicated schemes involving enormous amounts of capital investment, the administrative problems in the public sector are bound to present considerable difficulties and, if they had been shared with the private sector to a greater extent, the successful implementation of the Plan would certainly have been more assured.

Risk of Serious Inflation

"As things are, the Plan must involve enormous burden being placed upon the community; even so, through the over-emphasis it places on household goods industries, acute shortages of essential articles of consumption might come about, involving a risk of serious inflation which it would be difficult to control.

"The Budget proposals for the year have to be viewed in the light of the needs of the Plan for additional resources by way of taxation. Between the Centre and the States, the figure laid down is Rs. 450 crores and, as if that was not sufficiently drastic, the Finance Minister has hinted at the possibility of raising another Rs. 200 crores to finance the heavy defence programme which the situation on our borders is deemed to have rendered necessary. In the face of all this, detailed criticism of particular aspects of the Budget proposals, however valid and relevant, is not likely to receive much attention, but it is necessary to state all the same that the process of disincentives has been carried several steps further, and the future can only be viewed with serious misgivings. There is, however, a ray of hope, and that is to be found in the assurance that has been given that our planners contemplate periodic reviews of the situation, with a view to making such adjustments as are found necessary and, if that happens, we should see a more realistic approach to the problems of our underdeveloped economy.

Working Results

"I shall now pass on to matters of more direct interest to the shareholders and refer to some of the important features of the statement of accounts which has been presented to you. The working results of the year showed substantially higher earnings, but the net profit has been about the same as that of the previous year. This is accounted for almost entirely by an increase of as much as Rs. 23 lakhs in our establishment charges which now stand at the huge figure of Rs. 2.60 crores. The effect of this will become clearer, if I point out that the ratio of establishment charges to total expenses has gone up to over 82 per cent. Your Board is giving very close attention to this situation and is doing everything possible to retrieve it by effecting greater efficiency in working and by closing down unremunerative branches, wherever that can be done without detriment to the Bank's business.

"The improvement in earnings, to which I have just referred, was brought about largely through a more active pursuit of business possibilities. Our figure of advances recorded an increase of over Rs. 12 crores and stood at Rs. 72.20 crores at the end of the year. The average during the year, it must be pointed out, was not as high—the bulk of the increase occurring during the last quarter of the year—but showed a definite improvement over the figures of the previous year. To enable us to cater to the growing needs of business, we had to resort to borrowings against our securities and under the Bill Market scheme. In that connection, it is somewhat unfortunate that the Reserve Bank should have found it necessary to raise the rate of interest on advances under the scheme from 3 per cent. to 3½ per cent. and, further, to discontinue the practice of sharing the cost of stamps.

"On the income side, there has been an increase under the item of 'interest and discount.' There has also been a substantial improvement under the item of 'commission, exchange and brokerage'; apart from an expansion of our exchange business, this result has been due to no small extent to the devaluation of the Pakistan currency.

Deposits

"Deposits of Scheduled banks showed a marked increase during the year, on account of the monetary conditions that prevailed. We have shared in the increase to the tune of Rs. 4.69 crores. Our deposit figure of Rs. 128.66 crores might easily have been larger, had we participated in the growing scramble for deposits at steadily rising rates of interest. With the Bank rate being somewhat out of alignment with the prevailing interest rates in the country, the margin between the rate at which working funds are obtained and that at which they are lent out tends to be not sufficiently remunerative, and I hope you will agree that the policy we have been pursuing is right in the circumstances of the case. It has been responsible for the comparatively small rise of Rs. 4.24 lakhs in the item of interest paid on deposits, borrowings, etc.

"Our investment portfolio shows a reduction of Rs. 62 lakhs and stands at Rs. 56.71 crores. During the year, the Bank had to take up sizable blocks of the Central and the State Governments loans and, in addition, a large allocation of 3½ per cent. National Plan Bonds, 1965, was received in lieu of shares of the Imperial Bank of India held in the portfolio. While the total figure shows only a small reduction, profits have been secured wherever possible and there has also been a shift towards better yielding securities. It may be mentioned here that, while the reduction in the portfolio may appear small, the ratio of investments to deposits has come down from 50 per cent. in 1953 to 44 per cent. in the year under review. A special Committee of the Board has been looking after our investments, and you may be sure every effort will be made to effect reductions in the portfolio.

"At the end of the year, the difference between the book value and the market value of our investments was substantially narrowed. It now stands at Rs. 1.62 crores. When we recall that, at the end of 1953, the gap was of the order of Rs. 3 crores and 13 lakhs, we can appreciate the improvement in the position that has taken place.

Management-Staff Relations

"During the year, the report of Mr. Justice Gajendragadkar's Commission was published. All the recommendations made by it were accepted by Government and embodied in a Bill which was passed on the 22nd of October. This enactment is to continue in force for a period of five years. The Act provides a suitable machinery for dealing with matters arising from the interpretation of the recommendations made by the Commission. It is very unfortunate that this liberal measure of amelioration of working conditions should not have been adequately appreciated by those in whose interest it was conceived. The adjustments made in accordance with the terms of the Award occasioned disturbances and dislocation of work in a number of banks, and it would appear as if a section of the employees had made it its business to perpetuate the unhappy relations subsisting for so many years and which the Commission's recommendations had done their utmost to remove. I am glad that the majority of the members of our staff have given no countenance to such activities which are calculated to react very adversely on the fortunes of themselves as well as of the bank they serve. I am sure no one who has any understanding of the conditions under which banking business has to be carried on will fail to appreciate the great advance that has been made in the working conditions of employees and realise the close identity of interest between managements and staffs. I reiterate the hope I expressed last year that a new era of closer and happier relations will be ushered in and that all of us who are engaged in the service of banks, from the highest to the lowest, will do all in their power to promote the growth of the

(*Continued on page* 637)

EXPANSION IN BUSINESS OF CHARTERED BANK MAINTAINED

PROFIT HIGHER—DIVIDEND UNCHANGED

THE statement of accounts of the Chartered Bank of India, Australia and China (Chief General Manager: Mr. H. F. Morford, London), for the year ended 31st December 1955, indicates that the Bank has been able to repeat, during the year under review, the success achieved by it in the previous year in contributing to the economic development of the countries where the Bank operates and in fostering international trade. The resulting expansion in its turnover is reflected in the rise of over £20 million in the balance-sheet total, though this is partly due to the rise in prices of some commodities. The net profit (after providing for taxation and after making allocations to contingency accounts, out of which accounts full provision has been made for diminution in value of assets) shows a rise of £36,193 to £759,340.

The aforesaid rise in profit follows that of £29,349 noted in the previous year, thus maintaining the upward trend in earnings that started since 1942, except for a break in 1953. The profit for the year under review is the highest since 1926 when it stood at £778,576. The higher profit for the year under review has been achieved, despite the increased working costs in all countries where the Bank operates. Fortunately, the effect of the increased costs has been overcome by the expansion of business, which in turn is due to the increase in world trade. The Chairman has, however, taken care to strike a note of caution regarding the rising trend in world trade. Thus, he says: "The scale on which world trade has increased during the last two years is due partly to the intense effort being made by each country to become self-supporting and partly to inflation. On either count it is vulnerable and liable to setbacks, and I would ask stockholders not to lose sight of that fact."

Together with the undistributed surplus of £392,910 brought in from the previous year, the profit available for distribution amounts to £1,152,250, as against £1,126,660 a year ago. The Directors propose to repeat the allocations made last year that is, £200,000 to write off Bank premises, £125,000 to the officers' pension fund, £20,000 to the widows' and orphans' fund and £100,000 to the contingencies account. Making a pointed reference to the allocation of £200,000 to the Bank premises account, the Chairman says: "Considerable expenditure continues to be incurred in meeting the cost of expansion and modernisation of our offices in the East. Without suitable premises and accommodation to our staff, it is clear that our business cannot operate and we must expect to have to continue to set aside substantial amounts each year in the writing down of this item." The distribution to shareholders has also been maintained at 15 per cent. per annum (less income-tax) to which level it had been raised last year from 14 per cent. paid for 1953. This, however, absorbs a larger sum of £301,875, as against £288,750 taken up last year. This is due to the reduction in the rate of income-tax from 9s. in the £ to 8s. 6d. in the £. Nevertheless, the surplus left to be carried forward is higher at £405,375 as against £392,910.

The following synopses of the Bank's balance-sheets as at the close of the past four years will provide an idea of the Bank's progress in recent years:

(In thousands of £'s sterling)

—	As on 31st December			
	1955	1954	1953	1952
Liabilities (Main)				
Capital	3,500	3,500	3,500	3,500
Reserve fund	5,000	5,000	5,000	5,000
Undistributed surplus	405	393	403	399
Current and other accounts ..	172,434	159,651	147,925	160,609
Fixed deposits	30,658	20,483	17,112	19,480
Notes in circulation	2,906	2,902	2,765	2,564
Bills payable	1,705	1,220	926	1,372
Acceptances	7,109	10,391	9,185	15,935
Assets (Main)				
Cash	40,207	33,616	31,495	31,788
Investments—				
Government and other securities	58,411	62,309	58,787	66,300
Securities	2,684	2,889	2,679	2,670
Advances	91,871	74,737	67,249	69,248
Bills of Exchange	17,036	14,646	11,235	13,110
Bank premises, etc.	2,180	2,166	1,961	1,945
Remittances in transit	3,140	2,148	3,587	4,833
Balance-sheet total	223,969	203,686	186,963	208,515

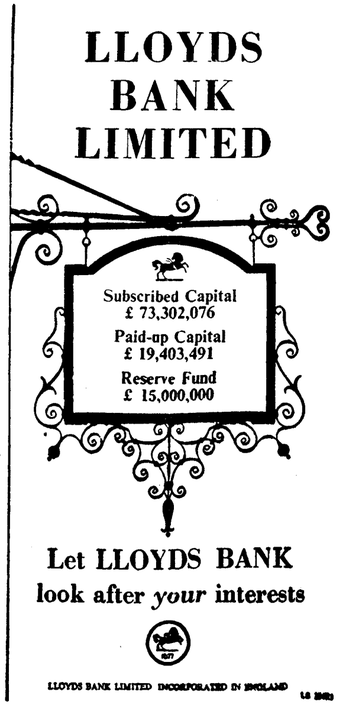
The rise in the balance-sheet total has been maintained for the second year in succession and is due, as the Chairman explains, "partly to an increased volume of international trade in those Eastern countries where the Bank is represented and partly to the higher prices of some of the staple Eastern commodities, notably rubber and tin." On the liabilities side of the balance-sheet, there has been an increase of £12.78 million in current and other accounts, of £10.18 million in fixed deposits and of £0.48 million in bills payable due to inflationary conditions. Acceptances on account of customers show a decline of £3.26 million and this fall is "accounted for by the higher discount rate in London compared to other centres and partly due to the larger holding of sterling by Japanese banks."

On the assets side, advances have recorded a notable rise of £17.13 million and bills of exchange £2.44 million, indicating once again the extent to which the Bank is assisting its customers and taking its share in financing world trade with Eastern countries. Investments are lower by £4.11 million, of which Government and other securities, excluding those lodged against note issue, account for £3.90 million. As usual, these have been taken into account at market value and full provision for depreciation on these has been made out of the internal reserves. The Bank's holdings are all dated ones, a good part of which mature within ten years. Cash in hand, at call and at banks, shows a substantial rise of £6.59 million and, at £40.21 million, its coverage of demand and time liabilities, excluding notes in circulation against which securities have been lodged, is 21.86 per cent., as compared with 18.54 per cent. last year.

CANARA INDUSTRIAL AND BANKING SYNDICATE

All-round progress in the working of the Canara Industrial and Banking Syndicate Ltd. (General Manager: Mr. T. A. Pai, Udipi) is indicated by the audited accounts of the Bank for the year ended 31st December 1955. Not only has there been an expansion in the Bank's resources but these have been well utilised to improve the earnings of the Bank without in any way affecting the liquidity ratio. The profit for the year under review amounts to Rs. 5.96 lakhs, as compared with Rs. 5.21 lakhs, thus maintaining the upward trend noted since 1952 when the profit aggregated Rs. 3.52 lakhs. The Directors have raised the allocation to the statutory reserve fund from Rs. 1.40 lakhs to Rs. 1.50 lakhs, after increasing the provision for taxation from Rs. 1.75 lakhs to Rs. 2 lakhs. The dividend on ordinary shares has also been stepped up from 9 per cent. to 10 per cent. (tax-free). Besides, a cash bonus of 2½ per cent. (tax-free) has also been declared for the year under review, thus restoring the total distribution to 12½ per cent. paid in 1949, from which it had been reduced to 9 per cent. (dividend only) in 1950 and maintained at the latter level till last year.

(Continued on next page)



ANDHRA BANK'S PROFIT SHRINKS

DEPOSITS RISE TO RECORD LEVEL

A NOTABLE expansion in deposits, accompanied by a very modest rise in advances, and a setback in profit are the notable features of the audited accounts of the Andhra Bank Ltd. (General Manager: Mr. E. Ramachendramurti, Masulipatnam) for the year ended 31st December 1955. The deposits are up by Rs. 1.79 crores to establish a fresh record level of Rs. 8.32 crores. Though the advances are also higher, the rise in this main revenue-earning asset has been disproportionately smaller—being of the order of only Rs. 56 lakhs—than that in deposits. In fact, this has been the cause for the drop in profit from the record level of Rs. 5.37 lakhs to Rs. 4.28 lakhs.

With the aforesaid recession, the upward trend in the Bank's profit witnessed in the previous two years has been reversed, though the profit for the year under review is still higher than that either for 1953 or for 1952. Consequent upon the decline in profit, the provision for taxation has been reduced from Rs. 2.30 lakhs to Rs. 1.40 lakhs and so also the transfer to the statutory reserve fund from Rs. 1.10 lakhs to Rs. 86,000. The dividend also has been cut to 6½ per cent. per annum, free of income-tax, from 7½ per cent., to which level it had been raised last year from 6½ per cent. for 1953. It must, however, be added that, though the rate of dividend has been reduced, the amount required to meet it is larger on account of the increase in capital during the year.

The salient features of the Bank's accounts for the past four years are compared in the following table:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount	32.73	31.98	25.45	23.61
Commission and exchange ..	6.78	6.10	5.70	5.02
Interest paid	18.68	16.09	12.41	11.11
Expenses	17.25	16.33	15.00	14.06
Depreciation and repairs ..	0.39	0.27	0.25	0.20
Loss on sale of investments ..	..	0.02	..	0.13
Profit	4.28	5.37	4.12	3.68
Provision for taxation	1.40	2.30	1.65	1.40
To reserves	0.86	1.10	0.85	0.75
Dividend	2.06	1.87	1.62	1.50
	(9%)	(7½%)	(6½%)	(6%)
Carry forward	0.12	0.16	0.07	0.07

—	As on 31st December			
	1955	1954	1953	1952
Capital	33.47	25.00	25.00	25.00
Reserves	14.37	13.51	12.41	11.28
Deposits	8,31.95	6,52.94	5,30.86	4,67.45
Advances (including bills purchased and discounted and money at call) ..	4,55.30	3,99.25	3,11.97	2,85.69
Investments	2,83.80	1,88.69	1,90.79	1,54.93
Cash	1,51.24	1,14.13	87.84	75.89
Balance-sheet total	10,03.72	8,17.55	6,82.73	6,03.12
Ratio to deposits of—	%	%	%	%
Advances	54.7	61.1	57.8	61.1
Investments	34.1	28.9	35.3	33.1
Cash	18.2	17.5	16.3	16.2

The gross income of the Bank amounts to Rs. 40.60 lakhs, an increase of Rs. 1.92 lakhs over the year, of which the income from interest and discount accounts for a rise of only Rs. 0.75 lakh, as compared with Rs. 6.53 lakhs in 1954. This is due to the meagre increase in advances. The rise in income has been more than offset by the increase of Rs. 2.59 lakhs in interest paid on deposits, borrowings, etc.

The Bank's capital was raised during the year by issuing a fresh call of Rs. 20 per share on the partly paid-up shares, making them Rs. 70 paid-up per share. However, calls amounting to over Rs. 1.12 lakhs remained unpaid at the end of the year. As already pointed out, there has been a sharp rise of Rs. 1.79 crores in deposits to Rs. 8.32 crores, of which fixed deposits (including cash certificates and season deposits) account for an increase from Rs. 3.28 crores to Rs. 3.88 crores, savings bank deposits from Rs. 1.82 crores to Rs. 2.43 crores and current accounts, contingency accounts, etc., from Rs. 1.43 crores to Rs. 2.01 crores. Of the advances, loans, cash credits and overdrafts represent Rs. 3.83 crores, as against Rs. 2.73 crores, bills discounted and purchased Rs. 59.61 lakhs (Rs. 42.88 lakhs) and money at call and short notice Rs. 13 lakhs (Rs. 83 lakhs). The Directors observe in their report that the demand for bank finance was slack during the first half of 1955 due to the abnormal fall in the prices of paddy and rice. This, coupled with the rapid growth in the Bank's deposits, resulted in decreased earnings as compared with the previous year.

TRAVANCORE BANK'S PROFIT A RECORD

DIVIDEND LEVEL RAISED AGAIN

THE decision of the Directors of the Travancore Bank Ltd. (General Manager: Mr. D. R. Vedamuthu, Trivandrum) to step up the dividend for the year ended 31st December 1955 by one per cent. to 4 per cent. is quite in consonance with the improvement in the Bank's earnings for the year. This rise in distribution to the shareholders follows the fractional increase made last year to 3 per cent. from the modest maiden dividend of 2½ per cent. for 1953. Thus, this is the second year in succession when the Bank's shareholders receive a higher distribution since the payment of a maiden dividend.

The Bank's profit for the year under review has recorded a welcome increase to Rs. 10.20 lakhs from Rs. 7.36 lakhs earned in the previous year, to which level it had dwindled from Rs. 8.05 lakhs for 1953. With this rise, not only the upward trend in the Bank's profit, which had suffered a slight reversal in 1954, has been resumed but a fresh record in profit has been established, exceeding the previous best of Rs. 8.05 lakhs by Rs. 2.15 lakhs. The provision for taxation has been stepped up sharply from Rs. 1.25 lakhs to Rs. 4 lakhs. The allocation to the general reserve has been raised from Rs. 1.75 lakhs to Rs. 2.05 lakhs, but the contingency reserve, which had received Rs. 25,000 last year, has not been strengthened further. The transfer to the reserve for depreciation on investments has been reduced from Rs. 50,000 to Rs. 25,000, whereas the bonus to staff has been kept unchanged at Rs. 35,000. The provision for gratuity fund has, however, been cut from Rs. 25,000 to Rs. 5,000.

The following comparative table shows the progress of the Bank during the last three years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned ..	23.81	21.16	19.11	18.41
Commission and exchange ..	4.64	3.92	3.78	3.55
Interest paid	8.82	8.76	6.20	6.79
Expenses	9.22	8.63	8.29	7.97
Depreciation	0.35	0.35	0.36	0.33
Profit	10.20	7.36	8.05	6.88
Provision for taxation	4.00	1.25	2.00	1.00
To reserves	2.05	2.00	2.25	2.00
„ depreciation on investments ..	0.25	0.50	0.50	5.00
„ bonus to staff and gratuity fund	0.40	0.60	0.25	..
Dividend	4.00	3.00	2.50	..
	(4%)	(3%)	(2.5%)	
Carry forward	0.44	0.94	0.93	0.88

—	As on 31st December			
	1955	1954	1953	1952
Capital	1,00.00	1,00.00	1,00.00	1,00.00
Reserves	23.80	21.75	19.75	17.50
Deposits	4,76.70	4,39.06	3,77.35	3,80.62
Advances and money at call ..	3,03.07	2,63.57	2,20.03	2,12.11
Investments†	2,55.60	2,55.50	2,33.56	2,36.80
Cash	58.94	56.90	54.55	62.42
Balance-sheet total	7,40.81	7,32.20	5,69.16	5,77.62
Ratio to deposits of—	%	%	%	%
Advances	63.6	60.0	58.4	55.7
Investments	53.6	58.2	61.9	62.2
Cash	12.4	13.0	14.4	16.4

† After deducting the reserve for depreciation.

It will be observed that the upward trend in income from the main source of earnings has been well kept up during the year under review also. Interest paid and expenses are also higher, but the increases in these two items have not been large enough to offset the rise in income.

(Concluded from previous page)

The Bank's paid-up capital shows an increase from Rs. 25.52 lakhs to Rs. 26.76 lakhs, on account of the calls paid on the partly paid-up ordinary and preference shares. A feature of the Bank's capital structure is that the bulk of it is represented by preference share capital, this accounting for Rs. 21.07 lakhs at the end of 1955, the balance representing ordinary capital. There are two classes of preference shares (6 per cent. and 5 per cent. cumulative) and two classes of ordinary shares ('A' and 'C'). The 'C' class ordinary capital and 6 per cent. preference capital are fully paid-up, while the 'A' class ordinary capital and 5 per cent. preference capital are made up of shares of different paid-up values. The reserves stand at Rs. 15 lakhs. The deposits aggregate Rs. 6.67 crores, having risen from Rs. 5.42 crores at the end of 1954. With this increase the upward trend in deposits has been maintained for the fourth year in succession. It may be noted here that the bulk of the Bank's deposits comprises fixed deposits, these accounting for Rs. 4.08 crores at the end of 1955. Advances and bills aggregate Rs. 3.94 crores, as compared with Rs. 3.17 crores at the close of the previous year. Investments stand strengthened from Rs. 2.09 crores to Rs. 3.08 crores and cash balances from Rs. 75.63 lakhs to Rs 81.96 lakhs. The combined ratio of the investments and cash balances to deposits has gone up from 52.4 per cent. to 58.4 per cent.

On the liabilities side of the balance-sheet, deposits are up by Rs. 37.61 lakhs, following the expansion of Rs. 61.74 lakhs in the previous year, and have established a record in the history of the Bank (so far as can be judged from the year-end figures). Of these deposits, fixed and thrift deposits have declined from Rs. 223.81 lakhs to Rs. 218.48 lakhs, but savings bank deposits have gone up from Rs. 22.70 lakhs to Rs. 30.44 lakhs and current and contingency accounts from Rs. 192.57 lakhs to Rs. 227.78 lakhs. As against the increase of Rs. 37.61 lakhs in total deposits, advances (including money at call) have risen by Rs. 39.50 lakhs, so that the ratio of advances to deposits has gone up further from 60 per cent. to 63.6 per cent. The rise in total advances has been shared by all classes. Thus, loans, cash credits and overdrafts show an increase from Rs. 201.03 lakhs to Rs. 218.83 lakhs, bills purchased and discounted from Rs. 20.54 lakhs to Rs. 32.75 lakhs and money at call and short notice from Rs. 42 lakhs to Rs. 51.50 lakhs. Investments (at or below cost) aggregate Rs. 261.69 lakhs (as against Rs. 261.50 lakhs) and, as in the previous year, the whole of these investments are in Central and State Government securities and other Trustee securities and have been written down by Rs. 6 lakhs. Of these securities, those of a face value of Rs. 35.50 lakhs are encumbered, but it is not clear from the balance-sheet what these securities are encumbered against, whereas in the previous year's balance-sheet it had been clearly stated that securities of the face value of Rs. 50.63 lakhs were encumbered against part of the fixed and thrift deposits. Cash balances are also higher by Rs. 2.04 lakhs. As the increase in these liquid assets is proportionately very much smaller than that in deposits, the total liquidity ratio has gone down, but it is still at a comfortable level.

(Concluded from next column)

The Bank's deposits, as already pointed out, have swelled by Rs. 1.05 crores to a record level of Rs. 5.12 crores, which exceed the previous high of Rs. 4.70 crores touched in 1948. Of these deposits, fixed deposits show a rise from Rs. 1.36 crores to Rs. 1.92 crores, savings bank deposits from Rs. 15.26 lakhs to Rs. 18.62 lakhs and current and contingency accounts from Rs. 2.56 crores to Rs. 3.01 crores. On the assets side, advances have gone up by Rs. 99.50 lakhs, of which loans, cash credits and advances account for a rise of Rs. 42.83 lakhs to Rs. 236.05 lakhs and bills purchased and discounted for Rs. 74.65 lakhs to Rs. 144.11 lakhs, while money at call and short notice has fallen by Rs. 18 lakhs to Rs. 10 lakhs. Investments stand strengthened by Rs. 14.27 lakhs. The bulk of the Bank's investments, that is about 93 per cent., are held in Government of India and State Government securities, of which 87 per cent. mature within the next nine years. The investments are shown in the balance-sheet at below market value. Cash balances are slightly better, but the cash coverage has dropped sizably, on account of the sharp rise in deposits, but it is still well above the general average of Scheduled banks in India. The Bank's foreign exchange business has shown an appreciable expansion, as witness the rise in acceptances and endorsements from Rs. 1.59 crores to Rs. 2.51 crores.

HIND BANK MAKES GOOD PROGRESS

SIZABLE EXPANSION IN BUSINESS

THE year ended 31st December 1955 turned out to be a favourable one for banks in general, and it proved no exception to the Hind Bank Ltd. (General Manager: Mr. S. D. Pardiwalla, Calcutta.) The audited accounts of the Bank for the past year indicate that the Bank has had its full share in the general improvement. Its business during the year expanded impressively. There has been an increase of Rs. 1.05 crores, or over 25 per cent., in deposits and of nearly Rs. 1 crore in advances. The profit, which had suffered a slight recession from Rs. 7.91 lakhs to Rs. 6.56 lakhs in 1954, has jumped up to Rs. 10.86 lakhs, thus establishing a fresh record in the history of the Bank; the previous high was Rs. 9.48 lakhs earned in 1951.

In consonance with this improvement in earnings, the provision for taxation has been raised from Rs. 2.80 lakhs to Rs. 4 lakhs and the reserve fund has been strengthened by Rs. 2.50 lakhs, representing an increase of Rs. 1 lakh over the previous year. Thus, the allocation to the reserve fund, which had been cut in the course of the previous two years from Rs. 2.50 lakhs to Rs. 1.50 lakhs, has now been restored. The dividend to shareholders has been doubled from 3 per cent. to 6 per cent. It will be recalled that the Bank, which was established in 1943, entered the dividend list only in 1951, with the payment of 2 per cent. This was repeated in 1952; it was stepped up to 3 per cent. in 1953 and maintained at that level in 1954 also.

The following comparative table provides an idea of the Bank's progress during the past three years:

(In lakhs of rupees)

—	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned ..	19.81	15.54	14.51	10.67
Commission and exchange ..	11.49	8.26	7.89	9.11
Interest paid	9.86	7.73	5.75	4.87
Expenses	10.34	9.38	8.53	7.86
Depreciation and repairs ..	0.24	0.19	0.24	0.36
Profit	10.86	6.56	7.91	6.75
Provision for taxation	4.00	2.80	3.86	2.90
To reserve fund	2.50	1.50	2.00	2.50
„ bonus to staff and gratuity fund	0.88	0.64	0.40	0.35
Dividend	3.00	1.50	1.50	1.00
	(6%)	(3%)	(3%)	(2%)
Carry forward	1.66	1.13	1.01	0.86

—	As on 31st December			
	1955	1954	1953	1952
Capital	50.00	50.00	50.00	50.00
Reserves	26.00	23.50	22.00	20.00
Deposits	512.48	407.01	380.30	317.59
Borrowings from other banks ..	0.02	..	..	0.78
Bills for collection (*contra* item)	10.87	30.81	60.32	56.33
Acceptances	251.28	159.23	229.96	96.33
Advances (including bills purchased and discounted and money at call) ..	390.17	290.67	251.59	198.06
Investments	195.94	112.33	110.25	114.83
Cash	80.06	79.65	99.89	77.81
Balance-sheet total	866.42	679.87	761.79	552.19
Ratio to deposits of—	%	%	%	%
Advances	76.1	71.4	66.2	62.4
Investments	38.2	27.6	29.0	35.8
Cash	15.6	19.6	26.3	24.3

The Bank's earnings by way of interest and discount, as well as commission and exchange, show an impressive rise and this has been offset to a very small extent by the increase in interest paid and expenses.

(Continued in previous column)

A CAMPAIGN AGAINST CLOTH IMPORTS

U.K. COTTON BOARD'S NEW MOVE

From A Special Correspondent

MANCHESTER, 20*th March*

THE arguments for restrictions on cotton cloth imports which were presented to the British Government by Lancashire cotton industry leaders in the form of a 30-page document, will be disclosed to the public next week.

This will mark the opening phase of a new campaign to persuade the Government that restrictions on cheap cloth imports, which last year exceeded 150 million yards, are essential if the Lancashire cotton industry is to escape irreparable damage. The object of the new campaign, led by the Cotton Board, will be to win public sympathy and support in the hope that the Government will eventually be persuaded to take action by the weight of public feeling. The Legislative Council of the United Textile Factory Workers' Association—central assembly of the cotton unions—decided in Manchester this week to call a special meeting for 9th April to discuss the case and decide what action can be taken to "solicit support."

MANCHESTER LETTER

More Machinery Stops

The flood of cheap foreign cloth into Britain caused the shutdown of the Glossop mills of Francis Sumner Ltd., the £560,000 textile spinners and manufacturers. They employed 800 workers, who operated more than 1,800 looms and 70,000 spindles.

Reasons for the closure of the mills—they produced shirtings and dress fabrics—have been given by Mr. Lyulph Partington, Chairman, in his annual report. During the past year there had been a very considerable jump in the volume of cloth imports. "Unfortunately for this company a great proportion of these cloths come into direct competition with us at prices much below those at which we could compete," said Mr. Partington. The shutdown was decided after serious consideration and negotiation are now taking place for the disposal of the mills.

Instability Abroad

It is poor consolation for Lancashire traders to learn that their rivals in textile industries abroad are undergoing a similar discouraging experience and that conditions in other mill areas are equally disturbing. The fact, however, remains that, largerly as a result of the continuing uncertainty over American raw cotton price prospects, foreign spinners and manufacturers have very similar problems to those in this country.

According to reports received by the International Cotton Federation from a number of European countries, the situation in the closing months of last year did little to brighten the outlook and even in those cases where orders were flowing more freely margins were by no means satisfactory. In almost every textile centre there were indications of profound nervousness on the part of buyers and a reluctance to operate except on a hand-to-mouth basis.

At the two extremes were Germany, where an improved trend was experienced, and Italy, whose mills were said to have stagnated at the lowest levels of the year. The improvement in trading in Western Germany was mainly in volume and little encouragement was found in the prices secured. Satisfactory sales obtained during the fourth quarter of last year were limited to certain categories of goods, chiefly knitwear and embroideries.

German spinners and manufacturers, however, were unable to improve prices and blamed cheap competitive offers from foreign producers for this trend. Keen rivalry was felt from Austrian spinners in the rayon staple trade, while offers from Egyptian mills had a disturbing influence on the cotton yarn market.

Production in the Italian cotton industry was low throughout 1955 and nothing in the reports received indicated much hope of a quick revival. Instability of demand was characteristic of the whole year, both at home and abroad, and as in other countries the Italian cotton industry has clearly been affected by the preference of domestic customers for durable products rather than consumer goods.

A slowing down in spinning and weaving production in France took place in the second half of last year and order books were considerably smaller than 12 months previously. From Portugal the news was that "the industry is suffering badly from the effects of a long period of depression which has nearly exhausted its financial resources."

Despite a modest recovery in the volume of business recorded in cotton goods made in Switzerland in the final quarter of last year, prices and margins were regarded as most unsatisfactory. Production in Swiss spinning firms is being curtailed by 20 per cent. as compared with last year's total output and a cut of 15 per cent. is being made on the weaving side.

First Sudan Cotton Futures Market

The first Sudan cotton futures market ever to operate was introduced in the Liverpool cotton market on Monday. All the business will be done in Liverpool and there will be no similar market in Sudan.

Trading in the new market is now taking place round the Egyptian ring on the floor of the Liverpool Cotton Exchange and in accordance with tradition the first transaction was between the President and Vice-President of the Association. Mr. J. T. Porritt, a Director of Combined English Mills, as President, performed this opening ceremony with Mr. Walter S. Hulme the Vice-President.

This development is the result of pressure from Lancashire spinners of Egyptian type cotton for increased facilities for hedging their sales of yarn on a wider scale. When the Egyptian futures contract based on Karnak cotton was adopted last September it was realised that its value to the trade as a whole was limited by the fact that its quality clause only called for cotton grown in Egypt. Efforts have since been made to create a futures contract to provide the usual facilities for growers, users and merchants of Sudan cotton.

The new contract has been approved by the Sudan Government, the Sudan Gezira Board and Lancashire millowners, who use more Sudan cotton than anyone else in the world.

The minimum quantity to be dealt in is a single contract representing 24,000 lbs. of Sudan cotton contained in 56 bales. First delivery position open for trading will be July-August.

Yarn Price Basis

One aspect of the new proposals to sell American cotton at world competitive prices from the beginning of the new season in August is of fundamental importance to Lancashire traders and may well prove the means of causing an adjustment in the price structure of the spinning trade. It concerns the effect of this development on the present system of calculating American yarn prices under the marginal rates agreements.

Some drastic revision of the current methods of establishing yarn prices will be required as the New York futures market, on which quotations are now based, will no longer reflect the price at which American cotton can in fact be bought. There is a reluctance to predict the level of values likely to be ruling when this cotton is offered for sale and much will depend on the types which are available. If the first scheme of this kind can be taken as a pattern the prices accepted by the Commodity Credit Corporation will range to some six or seven cents below the New York futures price.

On this assumption the position of local spinners would be untenable without some change in the present arrangements which are linked to fluctuations in the current New York rates. For some time past talks have been proceeding on this highly involved matter but a solution to the difficulty has not yet been found.

Spinners in Lancashire have certainly welcomed the stability in rates for American yarns created by the "one-price-daily" method adopted by the sponsors of the price regulation schemes. Any return to a system involving frequent adjustment of prices would be strongly opposed.

It cannot be denied, however, that there are disadvantages in the current system as, for example, New York has been out of touch with world cotton developments for some little time, and has not reflected the general view of the price of the raw material. If trading could be re-established in Liverpool on a broader basis it might be possible to arrange a revival of former customs, so long as fixed daily quotations were still the rule.—*All Rights Reserved.*

THE HIND BANK LIMITED

DIRECTORS' REPORT TO THE SHAREHOLDERS

GENTLEMEN,

The Directors have pleasure in presenting herewith the Audited Accounts of the Bank for the year ended 31st December, 1955.

		Rs.	a.	p.
The Profit and Loss Account after deduction of all working expenses shows a profit of	..	10,86,457	9	1
to which must be added the amount brought forward from previous account	..	1,12,820	6	8
Total	.. Rs.	11,99,277	15	9
which the Directors have disposed of as follows:—				
Provision made for taxation	..	4,00,000	0	0
Amount transferred to Reserve Fund	..	2,50,000	0	0
Bonus to Staff	..	83,000	0	0
Balance	..	4,66,277	15	9
Total	.. Rs.	11,99,277	15	9

Out of the balance of Rs. 4,66,277-15-9 the Directors recommend to the shareholders payment of Dividend at Rs. 3 per share free of Income-tax which absorbs Rs. 3,00,000-0-0 leaving Rs. 1,66,277-15-9 to be carried forward to the next year's account.

The business of the Bank during the year under review and the results achieved have shown an all-round progress. Banks in general have had a good year in 1955 and your Directors are glad to report that your Bank also had its full share in the general improvement. The deposits show an increase of about 25 per cent. over last year and the profits have been marked up from Rs. 6.56 lakhs in 1954 to Rs. 10.86 lakhs in 1955. About 93 per cent. of the Bank's investments are held in Government of India and State Government Bonds of which 87 per cent. mature within the next 9 years. The Bank's Investments in the Balance Sheet stand at below market value as at 31st December, 1955.

Due to general increase in business, the Head Office of your Bank was shifted on 4th July, 1955, to more spacious premises at 4, Brabourne Road and we are glad to report that your Bank is now in an improved position to offer better service to its clientele.

During the year under review Mr. Surottam P. Hutheesing of Ahmedabad, at the request of your Board, joined the Board of Directors. You are requested to confirm his appointment on the Board as a Director.

Under the provisions of the Articles of Association of the Company Mr. B. L. Jalan, Mr. N. D. Bangur and Mr. N. L. Kanoria retire from the Board of Directors and being eligible offer themselves for re-election.

The Auditors appointed by the shareholders at the last General Meeting, Messrs. K. N. Gutgutia & Co. and Messrs. Dalal & Shah retire, but offer themselves for re-appointment.

The Directors express their gratitude to the shareholders and the constituents for their support in the growth of the institution and also to the members of the Local Advisory Boards at Ahmedabad and Bombay for their valuable advice. They also record their appreciation of the loyal and efficient services rendered by the staff at Head Office and branches.

For and on behalf of the Board of Directors,
K. P. GOENKA,
Chairman.

Dated, CALCUTTA, the 7th March, 1956.

BALANCE SHEET AS AT 31st DECEMBER, 1955

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED CAPITAL— 2,00,000 Shares of Rs. 100 each	2,00,00,000	0	0			
ISSUED AND SUBSCRIBED CAPITAL— 1,00,000 Shares of Rs. 100 each	1,00,00,000	0	0			
AMOUNT CALLED UP— 1,00,000 Shares at Rs. 50 per share				50,00,000	0	0
2. Reserve Fund and Other Reserves— Reserve Fund (including under Section 17 of the Banking Companies Act)				26,00,000	0	0
3. Deposits and Other Accounts— Fixed Deposits	1,92,43,141	8	5			
Savings Bank Deposits	18,61,640	14	2

Total .. Rs.	31,30,316	14	0

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of the Hind Bank Limited, as at 31st December, 1955 and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated Branch returns audited by the Statutory or Local Auditors, and report that :—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory ;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank ;
(c) the returns received from Branch Offices of the Bank have been found adequate for the purpose of the audit ;
(d) in our opinion, the foregoing Balance Sheet and the Profit and Loss Account are drawn up in conformity with the law;
(e) such Profit and Loss Account shows a true balance of profit for the year ;
(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank ; and
(g) in our opinion, books of accounts have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

TASK AHEAD OF SUGAR INDUSTRY

SCOPE FOR EXPANSION VERY VAST

COMMENDABLE though the production performance of the Indian sugar industry is—white sugar output is now running at an annual rate of 1.6 to 1.7 million tons, as against 1.1 million tons in the beginning of the first Plan period—one cannot feel complacent about the outlook for the industry. Considering the vast potential demand for such an essential energy food as sugar in the coming years, thanks to the rising population and the growing habit of the people to take white sugar following the improvement in the standard of living, the industry cannot afford to rest content with its present achievements. The *per capita* consumption of sugar in India at present is very low. It is only 29 lbs. (made up of 10 lbs. of white sugar and 19 lbs. of *gur* (brown sugar), as against 103 lbs. in the U.S., 100 lbs. in Denmark, 93 lbs. in Switzerland, 90 lbs. in the U.K., 71 lbs. in Germany, 43 lbs. in Poland, and 31 lbs. in Egypt. The position thus leaves much to be desired, the leeway remaining to be made up being quite large. The task ahead of the sugar industry is, therefore, very stupendous. It is gratifying to find that this aspect received adequate emphasis at the hands of Lala Charat Ram, President of the Indian Sugar Mills' Association (I.S.M.A), when he addressed the twenty-third annual general meeting of the Association held at New Delhi on Saturday last. The sugar industry, Lala Charat Ram declared, had to think of its future in a bold way; every factory should plan to raise its crushing to economic capacities of about 3,000 tons a day and many more new plants should be set up.

Consumption

The mere expansion in the size of the sugar industry is not, however, enough; it should be attained through production of sugar at a price that the consumer can pay. After all, it must be remembered that the problem of sugar consumption is, as has been emphasised in this journal ere now, the problem of prices. Despite the long period of eighteen years' protection enjoyed by the sugar industry, the price of sugar continues to rule high in all conscience *vis-a-vis* that of sugar produced elsewhere in the world. What is this state of affairs due to? Answering this question, Mr. Charat Ram said: "Purchasing power in India is still low . . . 60 to 65 per cent. of the cost of sugar is accounted for by sugarcane, as against 50 to 55 per cent. in other countries. Union and State Government taxes at various levels increase the cost of sugar to the consumer by another about Rs. 6-4 per maund (23 per cent.). Thus between high Government taxes and low cane yields, the Indian consumer is denied the adequate consumption of a valuable energy food." In the opinion of Mr. Charat Ram, a price of about Rs. 20 per maund will be a fair one from the point of view of the consumer. As against this, the present price varies from Rs. 29 to Rs. 33 per maund.

Characterising the taxes on sugar as penal, he urged that sugar, like wheat, rice, etc., should be free from *all* taxes and be made really cheap. This plea, however, is unlikely to command much support, for the Government needs vast sums of money for economic and social development. As the scope for levying direct taxes has been practically exhausted, indirect taxation is the mainstay of revenue for Governments. And, as the main object of economic development is to raise the living standards of the common man, the common man, too, has to pay for it. This is inevitable, if the country is to make economic progress with stability. Sugar being a commodity of common consumption, it cannot escape a certain amount of tax burden. All that one can reasonably ask for is a reduction in the present incidence of taxation which is undoubtedly very heavy. Incidentally, in the context of Mr. Charat Ram's contention, it will be pertinent to remind those who are inclined to agree with him that *gur*, which accounts for 66 per cent. of the total sugar consumed in the country, is free from the taxes to which the white sugar is subjected. But we feel that even *gur* should be subjected to a certain amount of taxation so that the country may have enough resources for development.

Cost of Sugarcane High

To return to the subject of reducing the cost of sugar to consumers. Besides lowering the incidence of taxation on white sugar, the price of sugarcane also requires to be brought down to achieve this objective. Such a reduction has to be brought about without cutting into the return the farmer gets now. There are only two ways in which this can be done, namely, (1) a downward revision in the cess on cane crushed in the sugar mills—this accounts for as much as 15 per cent. of the total cost of cane—and (2) improvement in the per-acre yield of sugar. Drawing attention to the latter aspect, the I.S.M.A. President regretted that, as compared with other cane-producing countries, cultivation of cane in India continued to be backward, the enormous sums of money spent on cane development all these years notwithstanding. In support of this view, he cited the following figures:

	Yield of cane per acre Tons	Recovery per cent.	Sugar per acre Tons
Hawaii	62.0	10.46	6.5
Java	56.2	11.49	6.4
Peru	41.1	12.33	5.0
Puerto Rico ...	24.2	12.23	2.9
Mauritius ...	19.6	12.08	2.3
India	15.0	10.00	1.5

In view of the disappointing results in the sphere of cane cultivation, Mr. Charat Ram called for an objective reappraisal of the problem. He was afraid that much too much reliance and responsibility had been placed on the sugar factories in the scheme of cane development. Elucidating this point, he observed:

"The cotton grower does not look to the textile mills, nor the jute grower to the jute mills, in the way that the cane farmer has been trained to look to the sugar mills. Also, the farmer is not called upon by the factory to help it in its techniques. This misplaced reliance has taken away all the initiative from the farmer, who now thinks that the responsibility for improvement of his land and agricultural practices is that of the factories or of the Government. This attitude needs to be firmly changed. This is not to say that the sugar industry should dissociate itself completely from all schemes of cane cultivation; the primary responsibility in the matter, however, must remain with the farmer, helped by the resources of the State and the experience of the industry. As matters stand at present, as between the Union Government, the State Government, the farmer and the factory, responsibility for improvement in cane cultivation seems to be nobody's baby. Conferences are held galore, but a sense of urgency and reality is lacking in all these. It is time that the responsibility for all this was placed where it is due, namely, on the farmer. He must appreciate the fact that it is he who has to strive the most in this matter."

Linking Cane Price to Quality

There is considerable force in these observations of Mr. Charat Ram, as also in his statement that an important reason which continues to militate against the farmer's understanding and efforts towards improving the quality of the cane he grows is the system of paying for cane on the basis of gross weight, instead of on the sucrose-content, as is the practice in the advanced sugar-producing countries. How defective is this system will be appreciated better if it is remembered that, while the cotton mills, jute factories and engineering firms pay different prices for raw materials according to quality, the sugar mills alone are compelled to pay a uniform price of Re. 1-7 per maund of cane irrespective of quality. What incentive will there be to the cane grower for growing quality cane, when he is assured of the minimum price? The Government-sponsored sugar delegation to Australia and Indonesia has done well, therefore, to urge early adoption of a system of cane payment on recoverable sugar-content. The delegation says:

"The sysem of payment (for sugarcane) on recoverable sugar-content provides incentive to both growers and manufacturers to effect improvements in their respective spheres. A large number of leading sugar-producing countries has adopted this system and, in fact, much of the progress made in Australia is attributed to it. In India, the need for introducing such a system has been felt for a long time. The system of quality payment has great potentialities for raising the standard of efficiency, of which there is great need in India, particularly on the farms. We are, therefore, of the opinion that the system should be introduced without delay."

Since the salient features of the system of linking the cane price to quality, the method of application adopted in other countries and the peculiar difficulties encountered in India in the introduction of the system have been discussed in detail in these columns only recently, it is unnecessary to refer to them again. Suffice it to say that, if any improvement in sugarcane farming practices is to be achieved, it is essential that the price for cane should be linked to quality. Whatever be the system chosen for adoption in India, it must be as simple and foolproof as possible. Considering the fact that sugarcane cultivation is being carried on on small plots of land scattered throughout the country, it is certainly not practicable to crush separately the cane of every farmer every day for determining the quality of the cane. In order to get over this difficulty, Mr. Charat Ram suggested the adoption of a group incentive system under which the total average recovery of the factory would be taken for the cane of all the farmers together, supplied in the period of a week, or a month or the whole season, and payment made on the period recoveries. He personally favoured a system of weekly recoveries and payment, with the stress on provision of safeguards and facilities for ensuring full satisfaction to the farmer.

Some are inclined to feel that the aforesaid system may lend itself to corruption. This view is not correct. Even if it is correct, the solution to corruption lies, as Mr. Charat Ram rightly said, in tracking down the corrupt persons without mercy than in giving up a system which is fundamentally in the interest of the country. It is to be hoped that the Government of India would soon take a decision on this vital question.

Rehabilitation

In the course of his speech, Mr. Charat Ram put forward a vigorous plea for the Government taking steps to see that the sugar industry was able to undertake schemes of rehabilitation and modernisation. In this connection, he made the following observations:

"Although now there is no statutory control on prices, the Government do announce a price based on the cane price fixed by them. In actual practice, the open market rates are often lower than this price. The announced price is worked out on the basis of what is known as the Srivastava Scale which was evolved more than 10 years ago. During this period, costs of machinery have gone up and taxes have gone up, but the Srivastava Scale remains where it is. According to this scale, a gross profit of As. 14 per maund of sugar is permitted based on a bloc of Rs. 18 lakhs. While there could be some justification for this meagre margin during the pre-war years, when taxation, accounted for only 20 per cent. of the gross profit, there can be no justification for this basis or price fixation now, when the replacement costs of equipment are five times higher, taxation much more and net retention of profits much less. It is necessary for the Government so to maintain the fair price of sugar as to enable the industry to undertake the back-log of replacement and to effect modernisation, at the prevailing high prices of plant and machinery."

The above plea is fully justified. As readers are aware, the majority of sugar mills in India, especially in Upper India, has suffered for want of sufficient funds for replacements, re-equipment and modernisation. The present plants in most of the sugar factories were put up more than two decades ago. During the war and the period following it, even normal replacements could not be carried out, as the machinery parts were not easily available. Even now, the prices of machinery and parts are ruling high and factories need considerable funds to carry out the back-log of replacements. Funds are also needed for adding new devices for improving the efficiency of production.

The extent to which technological progress has been made in the world sugar industry was highlighted by the International Society of Sugarcane Technologists at its ninth Congress, held at New Delhi recently. The deliberations of the Congress revealed that, in every operation, starting from the handling of cane at the cane carrier, through mills, clarification, pan station, centrifugals, bagging, etc., the advance in machinery development had been phenomenal. One basic change contributing to economy has been in the matter of changing from steam drives to electrical drives. Irrespective of capacity, a modern sugar plant, it is claimed, can be operated by one-fourth of the number of operatives employed in an average Indian sugar factory. It is, of course, not suggested that the Indian sugar industry should straightaway embark on a scheme of full-fledged modernisation on these lines. In fact, such is not possible now, thanks to the rigid cost structure of the industry and the very low margin of profit available. But it is very necessary to replace at least the worn out equipment with as up-to-date machinery as possible, so that a high level of efficiency in production of sugar can be maintained.

CONFECTIONERY INDUSTRY IN INDIA

The address of Mr. P. Mohanlal, President of the Indian Confectionery Manufacturers Association, at the tenth annual general meeting of this body held at New Delhi on Thursday last week, did not contain any new points; it was a mere repetition of what his predecessors had observed at the annual meetings in previous years. Thus, Mr. Mohanlal narrated the same old story of the industry passing through a period of crisis, the rate of output falling considerably short of rated capacity; the quantity of confectionery actually produced during 1955 was not more than 550 tons which represents a bare 13.75 per cent. of the estimated rated capacity of 4,000 tons. Again, Mr. Mohanlal alluded to the inability of the industry to make any headway by way of exports to foreign markets, thanks to high prices of sugar. He also reiterated the pleas for a total ban on imports of confectionery, refund of excise duty on sugar and of cane cess, ready availability of quick rail transport, export subsidy to manufacturers, and simplification of the method adopted for refunding excise duty on sugar used for producing confectionery meant for export.

The crisis through which the confectionery industry has been passing is largely the industry's own making. The industry consists of hundreds of small producers who have flooded the market with low-priced sweets of doubtful quality manufactured under doubtful hygienic conditions. This is the result of lack of proper organisation. Consequently, several units have been compelled to curtail output, while some have even closed down. In these circumstances, it is for the confectionery industry itself to find a way out for solving the difficulties. Mr. Mohanlal did well, therefore, to draw pointed attention to this aspect. "It is," he declared, "the duty of the industry to take every possible step to help itself and hence I cannot too strongly emphasise the question of mutual co-operation and support for the Association."

Mr. Mohanlal reiterated, as already stated, the plea for the imposition of a complete ban on imports of confectionery. It is difficult to support this demand. There is already a heavy revenue duty of 62.5 per cent. on confectionery imported from abroad, with the result that the price of foreign confectionery in India is prohibitive. Anybody can easily verify this statement by walking into any one of the respectable stores in cities like Bombay and Calcutta, where foreign confectionery is generally available. The demand for such confectionery is so poor and sporadic that there are not many stockists in them and that, in most cases, what is available is invariably old. Accordingly, even those who want to buy foreign confectionery are afraid of doing so, lest they should be saddled with old, damaged stocks. Further, the quantity and value of imports are negligible. In the twelve months ended December 1955, the total import of confectionery was no more than 1,128 hundredweights (112 lbs. each), valued at Rs. 3.08 lakhs. This is but a fraction of domestic production and is generally consumed by foreigners living in India who have a special liking for sweets made in their own country. The cry of foreign competition by confectionery manufacturers in India is, therefore, thoroughly unjustified and more so their demand for a ban on imports.

The ills of this industry are self-made. As Mr. Mohanlal himself admitted, the market is being flooded with low-priced sweets of doubtful quality manufactured under doubtful hygienic conditions. This situation is bound to deteriorate if conditions of monopoly are created by a total ban on imports. Such a ban, it is needless to add, will take away even the little incentive among the indigenous industry to produce high quality confectionery at competitive prices.

There is, however, some justification in Mr. Mohanlal's plea for the refund of excise duty on sugar consumed by confectionery factories. For the incidence of duty is very high, amounting to as much as Rs. 4-2 per maund of sugar. Since sugar is the basic raw material in the manufacture of confectionery products, the levy of excise duty will tantamount to a tax on raw material which is wrong in principle. It is an accepted canon of taxation that raw materials of an industry should be exempted from tax. The same arguments hold good with regard to the cess on cane crushed in the mills for producing sugar which, in turn, is used in the production of confectionery. If these concessions are granted, it will be possible, as Mr. Mohanlal maintained, to effect some reduction in the prices of confectionery which is necessary if domestic consumption is to be stepped up. Incidentally, it will be interesting to note that the consumption of confectionery in India is at a very low level, as is evident from the fact that the total production of confectionery, including hand-made products, is now at an annual rate of 11,000 tons only, as against as much as 600,000 tons in the U.K. with a very much less population.

Similarly, Mr. Mohanlal's suggestions for formulating a practical scheme for refund of exise duty on sugar used in the production of confectionery for export and for grant of drawback of customs duty on imported raw material deserve the sympathetic consideration of the Government. The export trade in confectionery has suffered a distinct setback of late. During the first nine months of the financial year 1955-56, about 393 cwts. of confectionery were exported, as against 731 cwts. in the corresponding period of 1954-55. The setback is attributed to two factors. First, the price of Indian sugar is far above the world parity. Secondly, the confectionery industry depends on quite a number of items which are imported from abroad and on which heavy customs duties have to be paid. In view of these, it is to be hoped that the Government will adopt suitable measures for stimulating exports of confectionery. By doing so, the Government will only be helping the industry to maintain a high level of output "at a time when machinery is lying idle, labour laid off and capital tied up in stocks which do not move."

SUGARCANE DEVELOPMENT

An indication of the lines on which sugarcane cultivation would be developed during the second Five-year Plan period was given by Mr. T. C. Puri, Joint Secretary, Union Ministry of Food and Agriculture, in the course of his speech at the recent meeting of the Indian Central Sugarcane Committee held at New Delhi. According to Mr. Puri, the Committee would be financing 108 schemes on cane research and development, as well as on *gur* research, in the next five years, as against only 37 under the first Plan. The Planning Commission has fixed a production target of 77 million tons of sugarcane. A sum of Rs. 5 crores has already been set apart by the Government of India for cane development which is scheduled to cover the entire area under cane, as against only the factory areas hitherto covered.

Addressing the meeting, Mr. Puri revealed that the Government of India was examining the proposal for giving subsidy to certain States where sugarcane development had been none too encouraging. This proposal is based on the recommendations of the Sugarcane Committee. In view of the commitments made for other development work under the second Plan, the finances of a large number of States do not, it is said, permit expenditure on any elaborate scheme for cane research and development. The position is particularly bad in regard to the underdeveloped States where no work has so far been undertaken. With a view to offering help in such cases and to providing necessary incentive for them to work their schemes, the Sugarcane Committee has recommended a Central subsidy to the extent of 50 per cent., which may be raised up to 75 per cent. with regard to certain States the finances of which are greatly limited.

Mr. Puri made special mention of the need for intensifying the development of *gur* industry. It was essential, he stated, that this commodity was improved on all its aspects and research on the manufacture and storage of *gur* further intensified by the State. He revealed that many States had not come forward with any elaborate research schemes on *gur* and, naturally, out of the total allotment of Rs. 20 lakhs for the purpose, the Committee had not been able to provide, as its share, for an expenditure of more than Rs. 4 lakhs.

At the end of the meeting, the Sugarcane Committee sanctioned schemes costing about Rs. 20 lakhs for the control of insect pests at the regional centres in the various cane-producing States. Further, it approved of the cane development schemes in Madhya Pradesh, Assam and Mysore under the second Plan and proposals for soil survey in Bombay, Mysore and Hyderabad. The Committee also recommended that the scope of trials of varieties evolved at the Sugarcane Breeding Institute, Coimbatore, should be enlarged to include foreign varieties. It emphasised the importance of publicity for communicating the results of research on cane and *gur* through suitable bulletins and brochures to be issued in large numbers for the cultivating community. The Committee also sanctioned (1) an all-India scheme for studies of physical and chemical criteria of *gur*, leading to the formulation of a basis of *gur* grades for two years at the Indian Institute of Sugarcane Research, Lucknow; (2) schemes for research in the manufacture and storage of *gur* in Madhya Bharat, Assam, Mysore, Hyderabad and Andhra, and (3) a scheme for trials of bullock-driven crushers available in the market for a period of five years.

Licences for 25 co-operative sugar mills have been given. Of them, one had already been started and ten will be started before the next season

IMPROVING QUALITY AND YIELD OF JUTE

CO-ORDINATION BETWEEN I.C.J.C. AND STATES NECESSARY

FEW would question the view that the Indian Central Jute Committee is seized of the problem of stepping up the yield and the quality of raw jute. For this problem has found emphasis at every meeting of the Committee. It figured again at the plenary session of the Committee held at Calcutta on the 23rd inst. Presiding over the meeting, Mr. M. S. Randhawa, Additional Secretary to the Union Ministry for Food and Agriculture and Vice-Chairman of the Indian Council of Agricultural Research, stated that the research had been directed towards the achievement of intensive cultivation by improved agricultural methods which ensured better quality with higher outturn. Mr. Randhawa opined that there was need for close co-ordination between the Indian Central Jute Committee and the National Extension Service at all levels. Since this latter agency is directly connected with the village uplift, its association with the introduction of modern methods of jute cultivation is sure to yield good results. In the past, experience has shown that low yields were due not only to adverse climatic conditions, but also to a number of other causes, such as poor quality of soil, inadequacy or absence of manuring, imperfect soil preparation, haphazard, weeding, partial failure of germination, thick weeds, difficulties of weeding, waterlogging and consequent premature harvesting, pest attack, damage by stray cattle, etc.

The causes noted above are not alone responsible for the low yields. There are, besides, others which merit the attention of the Central Jute Committee. It is now common knowledge that the performance of seed drill has not been satisfactory on certain types of soils. Again, the much talked of wheel hoe has been found to be ineffective in the muddy soil and in plots infested with weeds. Further, farmers have experienced difficulty in regard to the supply of improved seeds and retting facilities. These considerations must have been at the back of the mind of Mr. M. P. Birla, the erstwhile Chairman of the Indian Jute Mills' Association, when he stressed, at the annual meeting of the Association held on the 16th inst., the need for translating into deeds the recommendations of the Expert Committee on jute which submitted its report in October 1953. He said: "I should be failing in my duty, if I did not take this opportunity of pressing, once again, for vigorous and effective action to implement the recommendations, so that India may become self-sufficient in jute at a very early date. The Indian Central Jute Committee have already done all the necessary spade-work particularly in the matter of research and the development of improved types of seed. It is now up to the State Governments to ensure that the results of this work are made available to the cultivators."

In making these observations, Mr. Birla was convinced that "if the improved seeds and methods of cultivation which have been evolved were generally applied, India could produce all the additional raw jute she needs without any increase whatsoever in the existing acreage under jute, and, if the problem is approached from the point of view of increasing the acreage yield and improving the quality of the crop, the cultivator would automatically obtain a better return for his land." It is needless to mention here the vital importance of growing jute on scientific lines. For the unsealing of looms in jute mills, growing competition of jute textiles made by Pakistan and Japan, modernisation of the industry in the U.K. and on the Continent, and Pakistan's offer to help setting up new jute mills in some Middle East countries, all these underline the necessity for India growing more good quality jute in each acre sown to it than at present, so that the low cost of the raw material resulting therefrom can strengthen the competing ability of Indian jute mills. It is a matter for considerable satisfaction to note from Mr. Randhawa's address referred to above that the current seasons output would be 4.14 million bales, as compared with 2.93 million bales in 1954-55 and 3.09 million bales in 1953-54. The ground lost in the preceding seasons had, he remarked, been thus considerably recovered, with the average jute yield per acre registering an increase of nearly 14.5 per cent. This had been the result, he claimed, of research at the Institute.

It may, however, be mentioned that, in spite of this rise the average yield per acre in West Bengal is 2.51 bales which is far below that of East Bengal at 3.42 bales even which is very much below what it easily could be, if adequate steps are taken to look after the crop. In any case, even the gap between the yields in West Bengal and East Bengal is big enough to remind one of the large leeway that remains to be made up in India.

Mr. Randhawa referred also to the programme for jute cultivation under the second Five-year Plan. There was the possibility of raising jute production, he said, in India under the Plan from a target of 5 million bales recommended by the Planning Commission to 5.12 million bales, given normally favourable conditions and proper facilities. The Statewise break-up of the revised target of 5.12 million bales is as follows:

State	*No. of bales to be cultivated by 1960-61*
West Bengal	2,325,000
Assam	1,225,000
Bihar	1,150,000
Orissa	250,000
U.P.	110,000
Tripura	60,000
Total ...	5,120,000

The Government of India intends, it is stated, to fix the ultimate figure for all-India output in consultation with the State Directorates of Agriculture. That the Government of India is anxious to do all it can to improve the quality and yield of jute is reflected in its readiness to place increasing amounts of funds at the disposal of the I.C.J.C. According to Mr. Randhawa, it has increased the grant-in-aid to the Committee from Rs. 10 lakhs to Rs. 15 lakhs with effect from the current year, namely, 1955-56, and has further provided another Rs. 25 lakhs in the second Plan period for jute research.

(Concluded from next column)

curement of raw jute at relatively lower prices. Modernisation as a part of rationalisation is proceeding but slowly, and it may take a considerable time before the programmes are completed by all mills. As regards raw jute, however, the position remains uncertain. The prices during the past few months have remained high on reports that the damage to jute crop last year by floods was bigger than expected and that mills might need more raw jute consequent on unsealing of looms. Latterly, however, there seems to be a change in the sentiment of the market as the new season's crop, thanks to timely good rains last week, is expected to be bigger and earlier than usual. This feeling has been responsible for a fall of Rs. 2 per maund, with Assam bottoms being quoted at Rs. 29. It, however, remains to be seen whether this downward trend will continue.

FUTURES MARKET FOR JUTE AND JUTE GOODS

The constitution of a futures market for jute and jute goods has been hanging fire for a considerable time now. The need for such a market was emphasised by the Jute Enquiry Committee which suggested that the proposed market should be modelled more or less on the East Indian Cotton Association, Bombay. The proposal was referred to the Forward Markets Commission and this body is reported to have submitted its scheme to the Government of India last year. Meanwhile, the Government asked the Indian Jute Mills' Association to formulate a scheme and forward it to the Government for consideration. The I.J.M.A. convened, according to Mr. M. P. Birla, who was the Chairman of this body last year, a joint meeting of the trade with a view to framing a constitution for the proposed market. In 1955, a small sub-committee was appointed for the purpose, under the chairmanship of Mr. K. E. Tosh. The Sub-committee's drafts of the Articles of Association and by-laws of the proposed Futures Market organisation were placed before the various trade associations in September last and were also discussed informally with the Forward Markets Commission in Bombay. The original drafts have been revised since, particularly in regard to the appointment of the Board of Directors, which has, we are told, involved some delay.

In framing the by-laws, the Sub-committee has been, it is stated, at pains to include adequate safeguards against undue speculation. It is expected that it will not be long before the futures market is opened in Calcutta.

RISE IN JUTE STOCKS PERSISTS

OUTPUT, TOO, GOES UP

THE monthly returns of the Indian Jute Mills' Association, Calcutta, for February 1956 disclose a further increase in stocks of jute goods held by mills, from 78,400 tons at the end of January to 89,700 tons a month later. This expansion took place despite the fact that February was a short month and in spite of an increase in the despatches from 74,000 tons to 81,700 tons. The rise in stocks was due chiefly to higher production during the month amounting 92,800 tons, as compared with 88,900 tons in the preceding month. The table below discloses the position of stocks of the principal categories of jute goods with the I.J.M.A. mills, at the close of each of the three months ended February 1956, as also at the end of February 1955.

Jute Goods Stock

(In tons)

—	As on 29-2-1956	31-1-1956	31-12-1955	28-2-1955
Hessian	28,200	25,600	23,500	26,700
Sacking	52,500	45,300	34,400	54,900
Others	9,000	7,500	5,600	1,300
Total ..	89,700	78,400	63,500	82,900

It will be seen from the table above, that all the three categories of goods have a share in the increase in stocks during the month under review. Thus hessian stocks have gone up from 25,600 tons to 28,200 tons, and those of sackings from 45,300 tons to 52,500 tons. Other varieties of goods, too, have similarly risen from 7,500 tons to 9,000 tons.

Although the stocks of jute goods at 89,700 tons is less than a month's output, the fact that there has been a steady rise since October 1955 when they stood at the lowest level for some years gives rise to a certain amount of concern. If the situation is allowed to drift further thus, the industry may be put to severe hardship.

The output of jute goods during February rose, as stated above, by 3,900 tons to 92,800 tons. The increase is evidently due to the bringing into use, as from 20th February, of an additional 5 per cent. of the 10 per cent. of total looms, which were under seal since 10th January, according to a previous decision of the I.J.M.A. In spite of this increase in the number of looms in operation, the output during the month was still lower than that in December 1955, when it amounted to 97,300 tons, a month when the total loomage was subject to sealing of 12½ per cent. as against 5 per cent. now. Although part of this decline may be traced to the fact that February is a shorter month than December it must be stated that, during the latter month, the mills were not worked to capacity probably due to the fear of incurring a loss, as prices of raw jute were out of gear with those of jute goods.

The table below gives an idea of output of jute goods during each of the three months ended January 1956 as also in January 1955:

Jute Goods Production

(In tons)

	February, 1956	January, 1956	December, 1955	February, 1955
Hessian	32,000	30,300	34,000	32,800
Sacking	54,700	52,600	56,600	46,400
Others	6,100	6,000	6,700	3,100
Total ..	92,800	88,900	97,300	81,800

As in the case of stocks, the increase has been shared by the three categories of goods. The output of hessians has risen from 30,300 tons to 32,000 tons and that of sackings from 52,600 tons to 54,700 tons. In the case of other varieties of goods, the rise is only of the order of 100 tons to 6,100 tons.

With the output of jute goods for February, the total for the first eight months of the current season, namely, July 1955 to February 1956, was 701,145 tons, as compared with 661,242 tons produced during the same period in 1954-55. On this basis, total raw jute consumed during the eight-month period may be placed at 4.06 million bales, as against 3.84 million bales in the preceding season.

From the foregoing statement, two important problems, emerge, namely, the accumulation of stocks with jute mills and the existence of a considerable idle capacity. They call for urgent solution, if the industry is to hold its place in the world trade in jute goods and contribute its quota of foreign exchange needed by India. A chief remedy lies in bringing down costs of production by means of rationalisation of the mills and pro-

THE ANDHRA BANK, LIMITED

ESTABLISHED : 1923

Head Office: **MASULIPATNAM**

The 32nd Report of the Board of Directors to be presented to the Shareholders at the 32nd Annual General Meeting to be held at the Registered Office of the Bank, Cantonment Road, Masulipatnam, on Saturday the 31st March 1956 at 4-45 p.m.

The Directors have the pleasure to submit to the Shareholders their annual report on the working of the Bank for the year 1955 together with the Balance Sheet as at and Profit and Loss Account for the year ended 31st December, 1955, and the Auditors' Report thereon.

The net Profit of the Bank for the year 1955, after payment of one month's substantive salary as bonus to staff and after making necessary provision for contingencies, amounted to Rs. 4,28,253-8-6 and including a sum of Rs 16,321-7-0 brought forward from the previous year's account, the total amount available for appropriation came to Rs. 4,44,574-15-6. Out of this, the following interim appropriation was made by your Directors.

	Rs.	a.	p.
Interim dividend for the half-year ended 30th June, 1955, at the rate of 6 per cent. per annum free of Income-tax	89,000	0	0
The following appropriations were further made by your Directors :—			
Transfer to Statutory Reserve under Section 17 of the Banking Companies Act, 1949	86,000	0	0
Transfer to provision for taxes	1,40,000	0	0
Your Directors now propose :—			
To pay a final dividend for the half-year ended 31st December, 1955, at 7 per cent. per annum free of Income-tax, making a total of 6¼ per cent. per annum for the year 1955, which will absorb	1,17,200	0	0
To carry forward to the next year's account	12,374	15	6
Total .. Rs.	4,44,574	15	6

The official rate of the Reserve Bank of India remained at 3½ per cent. per annum.

The demand for bank finance was slack during first half of 1955 due to the abnormal fall in the prices of paddy and rice. Added to this there was a rapid growth in our deposits and these factors resulted in decreased earnings to us compared to the previous year. In other respects the progress has been well maintained.

A Branch at Secunderabad (Dn.) and three Sub-offices at Warangal, Khammameth and Mandapeta were opened during the year.

Messrs. Maddi Sudarsanam, Dantu Suryarao and P. Parthasaradhi Naidu are three of the Directors retiring by rotation under Article 94. From the next longest in office, Sri S. Ramachar has volunteered to retire. The retiring Directors are eligible for re-election.

You are requested to appoint Auditors for the current year and fix their remuneration Messrs. Brahmayya & Co., and Ch. V. Lakshmaiah & Co., the retiring Auditors, offer themselves for re-appointment.

By Order of the Board,

S. R Y. SIVARAMA PRASAD BAHADUR,
Chairman.

14th March, 1956.

(Continued on next page)

FUTURES TRADING IN PEPPER

COCHIN ASKED TO CONSTITUTE NEW BODY FOR RECOGNITION

SEVERAL important considerations have weighed with the Forward Markets Commission in deciding not to recognise Bombay City as a centre for conducting futures trading in pepper. First, Bombay City is far remote from the major pepper-producing areas of Travancore-Cochin and Madras. Secondly, production of pepper in the State of Bombay is only about 100 tons which is less than one per cent. of the total production in the country. Thirdly, the quantity of pepper received in Bombay for marketing is hardly 12 per cent. of the total production in the country. Fourthly, 90 per cent. of the export of pepper is effected from the ports of Cochin and Alleppey. Fifthly, the market at Bombay cannot serve the needs of merchants in the assembling and export markets in the producing States. Lastly, the Bombay Government did not, in the first instance, consider that Bombay needed futures trading facilities in pepper, though later on, it supported the only application for recognition from the City to the Forward Markets Commission. Although these points were against the selection of Bombay, the Commission has taken care to add that the need for hedging facilities in Bombay City be examined again after sufficient experience has been gained of the working of the market in Cochin, where permission to start a futures market has, as briefly reported in these columns last week, been granted by the Commission.

There were, in fact, five applications for recognition to conduct futures trading—four from Travancore-Cochin and one from Bombay. Travancore-Cochin produced in 1954-55, 16,700 tons of pepper or 65.2 per cent. of the total production in the country. The next big producer was Madras State, with an output of 8,900 tons or 34 per cent. of the total. No application, however, came from Madras. Mysore and Coorg raised about 100 tons, so also Bombay.

Characteristic Features

Before disposing of the applications, the Commission examined the various aspects of futures trading in pepper and came to the decision that this commodity had all the characteristic features necessary for according hedging facilities. These features are: (1) Pepper is homogeneous in character and lends itself to easy gradation and does not suffer from the existence of complicated varieties. (2) It can be stored for fairly long periods. (3) The supply of pepper is adequate to support the functioning of a futures market. (4) The demand for it is wide, mostly for export to the U.S.A., the Continent and the U.K. Since exporters have to sell forward deliveries for distant shipments, they require hedging facilities to protect themselves against wide price fluctuations, occurring during the interim period between the date of sale to the foreign buyer and the actual date of shipment. (5) The wholesalers and commission agents who buy pepper from growers and sell them to exporters after garbling also require hedging facilities in view of the time lag of one to two months between the dates of purchase and sale. (6) And the functioning of two or three futures markets at Alleppey and Cochin, in the past, has shown that there are sufficient number of operators, dealers and exporters capable of providing hedging facilities.

Cochin Selected

Rejecting all the four applications received from the existing associations in Travancore-Cochin State, from both Cochin and Alleppey, towns to be precise, for recognition to conduct futures trading, the Commission has stated that a new association should be constituted at Cochin on the lines recommended by it. This association should be recognised for a period of three years in the first instance. Of the two centres claiming recognition, namely, Cochin and Alleppey, the former was selected, because it enjoyed certain additional advantages over the latter. These are: (*a*) Pepper being essentially an export commodity and as much as 72 per cent. of the total shipments being exported from the port of Cochin, opening of futures trading in this centre would facilitate export trade. (*b*) Almost all the important pepper exporters of Alleppey and Bombay have their offices in Cochin. (*c*) The offices of the Deputy Chief Controller of Exports and the Export Promotion Council for Pepper and Cashewnuts are located at Cochin. Lastly, Cochin is a major port and affords facilities for quicker transport of the commodity all through the year.

As a background to the subject of futures trading in pepper, the Forward Markets Commission has given, in its report to the Government, full details regarding production, consumption, distribution and export trade of pepper. The table below gives the area and production of pepper during the six years ended 1954-55:

Year	*Area* Acres	*Production* Tons
1948-49	196,000	18,500
1951-52	202,000	23,000
1952-53	204,800	21,600
1953-54	207,700	23,800
1954-55	208,200	25,800

The increase in the area under pepper, as compared with the pre-war year, has been very small, being only 6 per cent., while the output has risen by 40 per cent. The yield per acre again varies from area to area. The average yield per acre is 350 lbs. in Travancore-Cochin, 200 lbs. in Madras, 100-112 lbs. in Mysore and Coorg and 240 lbs. for the whole country.

No Marked Increase in Output

It will be seen from the table above that, since 1951-52, the output of pepper crop has not shown any marked increase. This is due to several factors. Since the vine begins to yield pepper only after a period of about five to seven years from planting and as there is no guarantee against a sharp fall in prices during the long interval between planting and harvesting, there is no incentive to the grower either to bring more land under pepper or to take other steps for raising the yield per acre. Secondly, growers are reluctant to increase production by replacing old vines by new ones, since the old give satisfactory returns at the prevailing prices. Thirdly, there is little scope for extension of cultivation in the States of Travancore-Cochin and Madras where pepper holdings account for 99 per cent. of the total output. Extension of cultivation, it may be noted here, will be possible only in areas possessing adequate rainfall and the required soil and climatic conditions.

During pre-war years, internal demand for pepper was about 9,000 tons. Owing to reduced supply and high prices, domestic consumption declined to 5,000 tons as consumers took to chillies. During the last two years, the internal demand improved owing to fall in pepper prices and it is estimated now to be about 6,000 to 8,000 tons per annum.

Exports

In 1938-39, India exported hardly 1,000 tons, with Indonesia supplying more than 95 per cent. of world needs. With the Japanese occupation of Indonesia during the last war, India became the principal source of supply to the Allied powers and exports rose to 10,000 tons by 1946-47. In 1947, the Government of India removed the restrictions on exports and the U.S. Government withdrew price ceilings on internal sales of pepper. As a result, exports from India touched the all-time peak of 16,600 tons in 1947-48. In 1948-49 it dropped to 7,000 tons, as U.S. importers had ample stocks, thanks to excessive purchases in the previous year. Although they rose in 1949-50 to 15,000 tons, there has been a decline since then, as will be seen from the table below:

Year	*Pepper exports* Tons	*Value* Rs. (lakhs)
1945-46	8,950	117.2
1946-47	11,000	206.5
1947-48	16,600	372.1
1948-49	7,050	267.2
1949-50	15,000	1,368.6
1950-51	15,390	2,040.3
1951-52	14,910	2,322.0
1952-53	12,310	1,606.5
1953-54	12,760	1,287.1
1954-55	13,690	695.1

The value of pepper exports advanced from Rs. 3 lakhs in 1938-39 to Rs. 23 crores in 1951-52, nearly 66 per cent. of the latter being in dollars. Owing to the decline in price, the value of exports fell to Rs. 16 crores in 1952-53 and still further to Rs. 6.9 crores in 1954-55.

In 1938-39, the price of pepper at Alleppey stood at Rs. 16-14 per cwt. Owing to loss of supplies from the South-East Asian countries, pepper prices in India firmed up to Rs. 24-4 in May 1942, to Rs. 103 in December 1946 and then to Rs. 475 per cwt. in September 1949. In October of the same year, a further advance to Rs. 675 was recorded. The outbreak of hostilities in Korea pushed up the price further to Rs. 775 per cwt. Since then there has been a decline in prices, owing to the appearance of Indonesia and Sarawak as sellers of pepper. Currently, Indian pepper is being quoted at about Rs. 140 per cwt.

AUDITORS' REPORT.

We have audited the Balance Sheet of the Andhra Bank, Ltd., as on 31st December, 1955, and the Profit and Loss Account for the year ended on that date, as set-forth above, with the books of the Head Office and the certified returns from Branches and Sub-Offices and we best to report that :—

(a) We have obtained all the information and explanations we have required and such information and explanations have been found to be satisfactory ;

(b) the transactions of the Company which have come to our notice have been within the powers of the Company ;

(c) the returns received from the Branch Offices of the Company have been found to be adequate for the purpose of our audit ;

(d) the Profit and Loss Account shows a true balance of profit for the year ended 31st December, 1955 ;

(e) the Balance Sheet and Profit and Loss Account are, in our opinion, drawn up in conformity with the Law ;

(f) the Balance Sheet exhibits a true and correct view of the state of the Bank's affairs as on that date according to the best of our information and explanations given to us and as shown by the books of the Bank ; and

(g) that, in our opinion, the books of account have been kept by the Bank as required by Section 150 of the Indian Companies Act.

THE BUCKINGHAM AND CARNATIC COMPANY, LIMITED

THIRTY-FIFTH ANNUAL MEETING

MR. R. E. CASTELL PLEADS FOR REVISION OF RESTRICTION ON MILL CLOTH PRODUCTION

AN earnest plea for lifting the restriction on the production of the cotton mill industry was voiced by Mr. R. E. Castell, Chairman of the Buckingham and Carnatic Company, Ltd., in the course of his address to the shareholders at their Thirty-fifth Annual General Meeting, held in Madras on 23rd March 1956. By complying with this suggestion the Government would, Mr. Castell said, guard against a shortage of cloth and its consequent inflationary results and the probable counter-measures in the form of controls which would be costly and generally vexatious.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN,

"The report of the Directors and the accounts for the year ended 31st December 1955 having been in your hands for some time, I propose, with your permission, to take them as read, but I will be glad to answer questions later.

"Your Company has closed another successful trading year and I am glad to report that a useful increase in the production of yarn and cloth has contributed towards this result. This increase in production arises from the further progress made with the Company's rehabilitation programme and the continuing efforts to improve efficiency in all processes.

"The position remains unchanged to the extent that your Company cannot expand its manufacturing installation because of the regulations affecting the cotton textile industry. I feel it is my duty to add my voice to the warnings so often uttered lately by other representatives of the industry about the danger of continuing to limit mill cloth production to the present level which is about 5,000 million yards; it was, in fact, 5,094 million yards in 1955. The Government estimates that by the end of the second Five-year Plan in 1960, 7,200 million yards of cloth will be needed to provide for 400 million people at the rate of 18 yards *per capita*, in addition to which it is hoped to produce 1,000 million yards annually for export. Of the total target production of 8,200 million yards, 3,200 million is planned for the handloom-*cum*-powerloom sector: this is almost double the present output from handlooms and powerlooms and it is open to serious doubt whether anything like such an increase can be achieved.

'Per Capita' Consumption

"I might add that the estimated consumption of 18 yards *per capita* may well prove to be inadequate, in view of the plans which are in train for India's further agricultural and industrial development, and the reasonable expectation that the *per capita* income will materially improve.

"I earnestly hope, and I am sure that you will join me in this, that the Government will soon revise its present policy of limiting the production of the mill industry and so guard against a shortage of cloth and its consequent inflationary results and probable counter-measures in the form of controls which, as past experience has shown, are costly and generally vexatious.

"Whatever may be the true potentialities of the handloom industry and the powerlooms, including partial substitution of the latter for handlooms, I do think that the Government would be well advised to examine the possibilities of considerably increasing the present production of mill cloth. In my view, the increase which is desirable cannot be achieved substantially by the introduction of a third shift. Our own experience during the last war definitely showed that in all processes, but particularly weaving, the third shift is severe on machinery, discomforting to labour and harmful to quality. The need for a change of policy is urgent not only because signs of a cloth shortage are already apparent but also because, as time goes on, the difficulty of planning and executing any expansion promptly is bound to increase.

"For the information of those of you who do not already know, I would mention that your Company operates an India-wide system of distribution of its cloth and its policy of controlling the selling prices of the mills' dealers continues. We often receive complaints from various parts of India that our cloth is not readily available, but that, I can assure you, is not the Company's fault. Apart from the statutory limitation of our capacity which we suffer along with the rest of the industry, we continue to fill two responsibilities which to us are traditional, the first being to supply large quantities of cloth to the defence services, and the second being to make our contribution towards India's export trade and her foreign exchange resources: we also supply increasingly large quantities of cloth for the needs of other Indian industries, particularly the coated abrasives industry. These responsibilities, although it is important in the national interest that we should continue to discharge them, handicap us in our effort to meet the needs of the general public. As I believe there are other mills in a somewhat similar position, here is an additional reason why the Government, in the interest of the ordinary consumer, should encourage without delay an expansion of present mill cloth production by permitting the installation of more machinery.

Prospects for Exports

"In 1955, your Company exported nearly one-fourth of its total production of cloth. As you may know, there was a considerable shrinkage in the world trade in cotton textiles last year: India was not affected quite so much by this decline as the U.K. and Japan, but, nevertheless, her exports of mill cloth fell from 898 million yards in 1954 to 816 million yards in 1955: exports of handloom cloth from India were also lower in 1955, being 55 million yards, against 61 million yards in 1954. I do not feel hopeful about this shrinkage in the world trade in cotton goods being reversed, since other cotton-growing countries will, undoubtedly, continue to develop their own textile industries, and competition from those countries foremost in the export field is likely to become keener than ever. In the past, India's exports of cotton textiles have at times been restricted by controls and, as a result some part of overseas demand has been permanently lost to her. I hope that no restrictions of any kind will ever be imposed again on exports of cotton textiles, but, on the other hand, I hope that the Government will do everything it reasonably can to encourage such exports. Here again is a strong reason for allowing the expansion of mills' productive capacity, as when cloth is not enough for domestic needs, mills and traders will be less inclined to export, particularly when increasing competition overseas makes export less attractive. Even now your own Company and their representatives overseas have to exercise constant energy and vigilance, and prices have to be kept strictly competitive in order to maintain the mills' exports.

Excise Duty on Cloth

"You will know that by the 1956 Finance Bill, the excise duties on all kinds of mill-made cotton cloth (except coarse and medium *dhotis*) were increased by 6 pies per square yard. In spite of the current generally good demand for cloth, I doubt if consumers' present purchasing power can absorb this increase in cost on all varieties, and to some extent it may have to be borne partly by the industry, at least for the time being.

"Your Company's installation is so designed that in ordinary circumstances almost all its spinning production would be woven in its own looms, but in order to fulfil its obligations to the Government and to assist the handloom industry, your mills have for some years by adjustment of their manufacturing programme contrived to supply fairly substantial quantities of yarn to the handlooms: in 1955 over 8,400 bales were supplied, this being more than one and a half times the previous year's supply.

"I now propose to comment on the published accounts and draw your attention to the very considerable transfer from capital works-in-progress to machinery account, due to the completion of the new weaving shed, the power house and the progress made in the machinery replacement programme.

"You will notice that our current assets have been reduced, when compared with the previous year, by approximately Rs. 38,00,000 and this is mainly accounted for by the reductions in stores and stock-in-trade of approximately Rs. 11,00,000 and Rs. 48,00,000, respectively, offset to the extent of Rs. 22,00,000 by an increase under the heading 'book debts.'

"On the liabilities side, there is a reduction of Rs. 3,50,000 on our debenture debt, Rs. 27,00,000 in the overdraft from bankers and Rs. 5,00,000 on taxation account. There is also a reduction of approximately Rs. 24,00,000 in our liability for acceptances as, owing to the recent increase in the bank rate in the United Kingdom, we have temporarily discontinued our practice of paying for the purchases made in that country by means of exchange bills. This last reduction, however, is offset to the extent of approximately Rs. 11,00,000 appearing under a new heading 'loans unsecured' and this has been lent to us by Binny & Co., Ltd., London, on favourable terms.

"The Directors' report has drawn your attention to the increase in sale proceeds of cloth, yarn and waste and I think the only other item calling for comment in the profit and loss account is the increase in the depreciation charge resulting from new buildings and machinery brought into use during the year.

"Section 23A applies to this Company for the financial years 1954 and 1955, but the dividends already, respectively, declared or proposed comply with the provisions of that section in that they exceed 60 per cent. of the assessable income less the tax thereon.

Inter-State Sales Tax

"For the greater part of the year the difficult administrative problems referred to in my last speech on account of inter-State sales tax continued, but, although some relief resulted from the Supreme Court's decision in September 1955 that the levy of this sales tax was *ultra vires*, additional problems arose from the many demands which were received from our customers for refund of the inter-State sales tax collected from them. We, in our turn, demanded refunds from the various State Governments and it was not until the Ordinance was issued in January 1956, legalising the levy and collection of inter-State sales tax from 1st April 1951 to 6th September 1955 that the position was clarified to some extent. There are, however, several important points still to be decided and I fear that it will be many months before the unhappy history of this unfortunate taxation measure, which has caused the business community so much harassment and expense, will be concluded.

"The mill labour advisory organisation has continued to function in a most satisfactory manner, but this year, I regret, I cannot say that there has been no loss of production from stoppages of work by labour. In common with many other workers throughout India, our employees joined in the *hartal* called in memory of those who lost their lives in the Goa incidents. They also participated in an unwarranted strike on 24th November 1955. The issues which were the pretext for this second stoppage will shortly be the subject of arbitration by the Hon. Mr. Justice Ramaswamy Gownder.

Employees' Insurance

"In November 1955, the Employees' State Insurance Scheme was implemented in Madras City and its immediate effect in these mills was a considerable increase in absentation. The position has lately improved somewhat, but it is clear that absenteeism on account of sickness is likely to prevail in future to a greater extent than before the Act came into force.

"Shareholders will be interested to know that at the request of the workers, Sunday, 29th January 1956, was treated as a normal working day and the wages earned by the workers for that day and the profit earned by the Company will be given to the Madras Cyclone Relief Fund. An advance payment of Rs. 50,000 has already been made.

"It will also be of interest to you to learn that the liabilities of the Workpeoples' and Employees' Provident Funds, the accounts of which are now maintained by the Trustees, amounted at 31st December 1955 to Rs. 1,31,87,122 and Rs. 14,48,932, respectively, and corresponding

AUDITORS' REPORT TO THE SHAREHOLDERS OF THE TRAVANCORE BANK, LTD.

We have audited the Balance Sheet of the Travancore Bank, Ltd., as at 31st December, 1955, and the Profit and Loss Account for the year ended that date as above set forth, with the Books of Account at the Head Office and the certified returns received from the Branches of the Bank and have obtained all the information and explanations we have required, which were found to be satisfactory.

In our opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the Law and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank as at 31st December, 1955, and the Profit and Loss Account shows a true balance of profit for the period covered by such account according to the best of our information and the explanations given to us and as shewn by the books at the Head Office and the certified returns from the Branches.

We are further of the opinion that the Bank has maintained the Books of Account as required by Section 130 of the Indian Companies Act, 1913, the transactions of the Bank which have come to our notice are, in our opinion, within the powers of the Bank and the certified returns received from the Branch Offices of the Bank have been found adequate for the purpose of this audit.

TRIVANDRUM, 14th *February*, 1956.

(This is not a Prospectus but only an Announcement of Prospectus. The Prospectus dated 17th March 1956 has been filed with the Registrar of Companies, Bombay, and a copy thereof can be inspected at the Registered Office of the Company on any working day during business hours. Copies of the Prospectus may be obtained from the Head Office and branch offices of the Bank of Baroda Limited mentioned below.)

(Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.)

An application will be made to the Native Share and Stock Brokers' Association, Bombay, in due course for a quotation of the shares.

The Subscription List will open on Saturday the 31st day of March 1956 and will close on Thursday the 12th day of April 1956, both days inclusive, or earlier as may be decided by the Directors, but not before the 6th day of April 1956.

POLYCHEM LIMITED

(INCORPORATED UNDER THE INDIAN COMPANIES ACT, 1913.)

SHARE CAPITAL

AUTHORISED CAPITAL:

80,000	Redeemable 7½ per cent. (taxable) Cumulative First Preference Shares of Rs. 50 each

TERMS OF ISSUE

Preference Shares

The Redeemable 7½ per cent. (taxable) Cumulative First Preference Shares (hereinafter called the "Preference Shares") shall entitle the holders thereof to a fixed cumulative preferential dividend at the rate of 7½ per cent. per annum (taxable) on the capital for the time being paid up thereon, and the right in the winding-up to the payment of capital and arrears of dividend (if any), whether declared or not, up to the commencement of the winding-up in priority to all other shares in the capital of the Company, but shall not confer any further right to participate in the profits or assets of the Company, nor confer any right to the offer or allotment of further shares whether issued by the Company or by the Directors.

The Company shall have the right after 15 years from the date of issue of the Preference Shares to redeem at par all the said Preference Shares or such of them, by drawing lots, as the Directors may from time to time decide, after giving six months' previous notice in writing in that behalf addressed to the holders of the Preference Shares so to be redeemed. All outstanding Preference Shares will be redeemed within 20 years from the date of issue.

The Preference Shares shall confer no right of voting at any General Meeting of the Company except

(i) When resolutions are placed before the Company which directly affect the rights attached to Preference Shares (and for this purpose any resolution for winding-up the Company, or for the reduction of its share capital shall be deemed directly to affect the rights attached to Preference Shares); or

(ii) When the dividend due on such capital or any part of such dividend has remained unpaid in respect of an aggregate period of not less than two years preceding the date of the commencement of the meeting and for the purpose of this clause dividends shall be deemed to be due on Preference Shares on the last date specified for the payment of such dividend in the Articles or other instrument executed by the Company even though no dividend has been declared by the Company on such capital.

Ordinary Shares

Every holder of an Ordinary Share shall be entitled to be present and to speak and vote at any General Meeting and when present in person shall have one vote on a show of hands and on a poll when present in person or by proxy shall have one vote in respect of every Ordinary Share held by him.

Under the Articles of Association of the Company, no member shall be entitled to be present or to vote at any General Meeting either personally or by proxy or as proxy for any other member or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

No person as the bearer of a Share Warrant in respect of the shares mentioned therein shall be entitled to attend or vote at any General Meeting of the Company.

BUSINESS OF THE COMPANY

The Company has not yet obtained Certificate to commence business.

The Company has been formed for carrying on all or any of the objects mentioned in its Memorandum of Association. One such object is to carry on the business of manufacturers of and dealers in styrene, polystyrene, vinyl chloride, polyvinyl chloride, polyethylene, cellulosic plastics and other thermosetting and thermoplastic materials (synthetic and natural origin), oxygen, nitrogen, hydrogen, hydrocarbon gases including ethylene, and acetylene, reagents, agricultural chemicals, insecticides, fumigants, weedicides, pesticides, colouring materials, pigments and lakes, paints, varnishes, lacquers, finishes, dyes, toners, perfume and flavouring chemicals, rubber chemicals, plastic and resinous materials, elastomers, gums, glues and adhesive composites, plasticizers, surface active agents, tanning agents, coating resins, drugs and pharmaceutical chemicals, solvents, marine chemicals, synthetic fibres, fertilisers and all types of industrial chemicals, acids, alkalies, hormones, trace elements.

The promoters of the Company have entered into an agreement with Dow Chemical Company of U.S.A., one of the foremost chemical concerns in the world and a leader in the world production of polystyrene for the exclusive grant to the Company of the formulæ for the manufacture in India of polystyrene moulding powders by the continuous technique of polymerisation and for other technical assistance.

The principal raw material required is styrene monomer, the supply of which has been provided for over a period of five years by an Agreement entered into with Dow Chemical International Ltd. of U.S.A. and the Promoters.

This is the only unit sanctioned by the Government of India for the manufacture of polystyrene in India.

Polystyrene is at present used in India by the plastic moulding industry for the manufacture of numerous articles of industrial and domestic consumption. Polystyrene has many other uses which have hardly been touched upon in India.

Polystyrene has been consumed in India so far for manufacturing articles of domestic use such as toys, combs and toilet articles and articles of personal use. The importance of polystyrene in the industrial field is now being recognised. The consumption of polystyrene in India has grown from below 2,000,000 lbs. in 1948 to about 5,000,000 lbs. in 1954, almost all in the consumer items alone, some of which are finding export markets at present. Its future potentialities can be judged from the fact that the Indian Plastic Manufacturers' Association has estimated a consumption of 10,000,000 lbs. annually during the period of the second Five-year Plan and has requested the Planning Commission to plan accordingly.

The Company's plant has been designed to a rated capacity of 6,000,000 lbs. of moulding powder per year with a margin for expansion which will meet the requirements of the moulding industry. Further provision will be made for the manufacture of 1,200,000 lbs. of modified polymer. The unit will be expanded with appropriate additions to take care of increased consumption by the plastic moulding industry. There is also a very wide scope for development of many other products of considerable commercial value such as Styrofoam (insulating material), Styroflex (Electrical insulating film and sheet), Synthetic resins (Co-polymers, synthetic rubbers), Paints (Styrinated alkyd resins), Films and Sheets based on Styrene as well as other important chemicals and plastics.

Negotiations are in progress for obtaining suitable site for the Company's factory at Goregaon in the Bombay Suburban District.

CAPITAL OUTLAY

Import licence for the greater part of the plant has already been obtained, the designing of machinery has also made much progress and orders will be placed for equipment without delay. The capital outlay for the plant will be about Rs. 39,30,000 made up as under:—

	Rs.	a.	p.
Land and buildings	7,00,000	0	0
Machinery and equipment ...	20,00,000	0	0
Utilities and other expenses ...	3,00,000	0	0
Issue of stock to Dow Chemical Co. for exclusive grant of formulæ	6,00,000	0	0
Brokerage and underwriting	1,80,000	0	0
Preliminary expenses	1,50,000	0	0
	Rs. 39,30,000	0	0

Working capital required per year is expected to be approximately as follows:—

	Rs.	a.	p.
Technical fee to Dow Chemical Company $25,000 for each of 5 instalments.	1,20,000	0	0
Raw materials (about 3 months' stock)	22,00,000	0	0
Finished goods (about 3 months' stock)	25,00,000	0	0
	Rs. 48,20,000	0	0

The capital outlay and the working capital will be provided for the greater part from the present issue of capital totalling to Rs. 80,00,000. Any balance will be provided by borrowings.

On the basis of existing prices and after allowing for all costs, overheads, depreciation and a margin for contingencies, the Directors are confident that the Company will be able to pay an attractive dividend on the Ordinary Shares after meeting interest on loans and Preference Shares.

UNDERWRITING AND BROKERAGE

The issue of 40,000 Ordinary Shares and the 80,000 Preference Shares has been fully underwritten by the Industrial Credit and Investment Corporation of India Ltd. and the Bank of Baroda Ltd. In the opinion of the Directors the resources of the said Underwriters are sufficient to discharge the underwriting obligations.

The Company will pay brokerage at the rate of one per cent. to recognised brokers or banks on allotments made in respect of applications bearing the stamp of such brokers or banks.

DOCUMENTS OPEN FOR INSPECTION

The copy of the Prospectus, Memorandum and Articles of Association of the Company, Consent of the Government of India for issue of capital, permission to allot shares to Dow Chemical Company, Agreements between the Promoters and the Dow Chemical Company and Dow Chemical International Limited, Promoters Agreement and the Underwriting Agreements contained in correspondence are available for inspection during office hours at the Registered Office of the Company until the subscription list is closed.

GENERAL

Copies of the Prospectus and Application Forms may be obtained from the Company or from the Head Office of the Bank of Baroda Ltd. at Baroda and its branches at Baroda, Ahmedabad, Bangalore, Bhavnagar, Bombay, Calcutta, Coimbatore, Delhi, Dhulia, Hyderabad, Jalgaon, Jamnagar, Kanpur, Madras, Mehsana, New Delhi, Patan, Poona or Rajkot.

Application forms should be delivered before the closing of the subscription list to the Head Office or any of the above Offices of the Bank of Baroda Ltd. accompanied by payment of the application money. Where no allotment is made, the deposit will be returned in full less the money order charges (if any) and where a partial allotment is made, the unutilised balance will be applied towards the further amount due. The Directors reserve the right to refuse any application wholly or in part without assigning any reason.

Applications from the Public for the shares described in this announcement will be received only on the footing of the full Prospectus and in the printed forms of application accompanying such Prospectus. This announcement is not to be regarded, for the purposes of the Companies Act, as an invitation to the public to subscribe.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

ANXIOUS TO HELP IN DEVELOPMENT OF COUNTRIES SERVED BY IT

MR. V. A. GRANTHAM'S COMPREHENSIVE SURVEY OF ECONOMIC CONDITIONS IN FAR EAST

THE One Hundred and Second Ordinary General Meeting of the stockholders of the Chartered Bank of India, Australia and China will be held in London on 4th April 1956. In the course of his customary annual statement, accompanying the Directors' report and audited accounts for the year ended 31st December 1955, Mr. Vincent Alpe Grantham, Chairman of the Court of Directors, draws pointed attention to the good deal of success achieved by the Bank in adapting its operational technique to changed political and economic conditions. He feels that the continuation of the Bank's operation in the East can be justified only for so long as the Bank is willing to associate itself with the economic development of the territories it serves.

The following is the full text of Mr. Grantham's statement:

Introductory

"The report I have to present will be found to justify the note of restrained optimism upon which I concluded my statement last year. Political relations between the Peoples Republic of China and the Atlantic countries are less strained, but fundamental differences remain unsolved. The volcanic situation in the Formosa Channel continued surprisingly quiescent and towards the end of the year its menaces were obscured to some extent by new crises in the Levant and the Middle East. The tide of Asian nationalism continues to flow strongly and it is inevitable that this should follow emancipation from colonial rule. No harm can emerge from this, provided that, as the new Asian regimes become more mature politically, they realise that in the modern world no country, however well endowed in material resources, can live in isolation. Since the end of the war it has been assumed that the achievement of political independence would liberate hitherto submerged reserves of zeal for the public good and impart a new sense of responsibility to labour. To some extent this has happened, but the redistribution of power, both political and economic, may be gravely imperilled by the pressure of population. It is useless to attack poverty by political and economic measures, if hardly-won improved living standards are submerged by an infinite multiplication of mouths to feed. This is not a problem which can be remitted to the third and fourth generations; in several Eastern countries it already exists.

"It is often said that the answer to Communist propaganda and infiltration in the East is largely to be found in the granting, by the Atlantic countries, of generous economic assistance. Aid must be given, however, in ways which do not affront national pride or damage the national economies, particularly those which are necessarily still based upon agriculture. No constructive purpose can be served by unloading upon Southern and South-Eastern Asia export surpluses of agricultural produce and of consumers' goods that the recipients wish to grow or manufacture themselves. The eastern lands need technological assistance most of all and of that there would not appear to be a large export surplus in the United Kingdom. Of the making of five-year plans there seems no end. Some of them are soundly conceived and they should do much to provide productive employment in countries where large reserves of manpower are dissipated in endless divisions of labour. But there is a limit to what the world can consume in relation to its population and the ultimate success of these plans must depend upon a balanced economy where the increase in population, which is bound to take place, is more than matched both by increased production and internal consumption.

The Constitution of the Bank

"A year ago, I said that the Directors felt that in consequence of the closing down of the branches in China which had for many years constituted an important part of the Bank's oversea establishment there must be expansion elsewhere. To facilitate expansion when opportunities offer it is desirable to obtain a revision of those provisions of our Royal Charter which circumscribe our oversea organisation and of others which hinder the adaptation of what may be called the polity of the Bank to the revolutionary changes which have taken place in many parts of the world and particularly in the East, which must, of course, remain the principal theatre of our operations, since the Charter was last renewed in 1939. The Court of Directors have, accordingly, petitioned Her Majesty the Queen for the grant of a consolidating Royal Charter and I am pleased to say that Her Majesty's Treasury have intimated that they approve of the changes proposed. I should like to take this opportunity of expressing our gratitude to the Treasury Officers and their legal advisers for their assistance.

"In a letter to the stockholders, which accompanies this report, I have explained in detail the constitutional and administrative changes proposed by the Court of Directors.

The C.B.I. Development Corporation Ltd.

"For many years the business transacted by the Bank was related almost wholly to the financing of oversea trade and to the provision of banking facilities and services for a clientele which consisted mainly of merchants. Between the wars the merchant communities became increasingly associated with local enterprise throughout the East and the industrialisation of hitherto undeveloped countries was accelerated. These tendencies have been accentuated by the upsurge of Asian nationalism since 1945. The Bank has achieved a good deal of success in adapting its operational technique to changed political and economic conditions and during the past ten years an increasing proportion of its resources has been employed in the financing of infant industries and new public works. Many of the credit operations that the Bank is now being asked to undertake are likely to extend over periods longer than those for which banking accommodation is usually granted. I am sure that the Bank's continuing to operate in the East can be justified only for so long as it is willing to associate itself with the economic development of the territories it serves. Nevertheless, it is not possible, from the ordinary banking point of view, to expand the dispensation of what may be called medium-term credit, that is to say, the granting of accommodation for periods extending from two to ten years, and it has become apparent that a new type of credit institution is required to finance development, both agricultural and industrial, and to sponsor, and perhaps underwrite, the raising of capital from the public. To meet these requirements within the Bank's sphere of activity, the Directors have formed the C.B.I. Development Corporation Ltd., which has been registered with an authorised capital of £2,000,000, of which £500,000 has been paid up. The new company is a wholly owned subsidiary of the Chartered Bank of India, Australia and China and I am pleased to say that Sir John Tait, Sir Henry Richardson and Sir Arthur Bruce are associated with me as Directors. I am hopeful that the new institution will be able to play an important part in assisting those countries with whose prosperity the Bank has been so long identified to modernise their economies. Medium-term credit institutions have been formed under the ægis of the Governments of several of the countries of Southern and South-Eastern Asia. It must be presumed that these Government-sponsored institutions will undertake the financing of major industrial enterprises and public works schemes, but there are likely to be many projects on a smaller scale which the Bank's development corporation could effectively support.

Court of Directors

"I record with deep sorrow the death, on 26th May 1955, of Mr. James Leslie Milne, who was elected to the Court of Directors in 1942 and served as Deputy Chairman from 5th April 1950 to 1954. Mr. Milne brought to our councils many talents and a wide experience of Eastern trade, industry and finance. During the dark days of Japanese ascendancy in the East he was a tower of strength to the Court and when the clouds lifted in 1945 his knowledge and resourcefulness were invaluable in helping to plot the course of the Bank through the shoals of political and strategic complications and organisational difficulties which so often appeared. In the place of Mr. Milne the Directors have elected to the Court Sir Charles Watt Miles, O.B.E., a partner in Messrs. R. G. Shaw and Company. Sir Charles has long been associated with the plantation industries in the East and we are glad to have the benefit of his knowledge and experience.

"Mr. Cecil Robbins Cherry who became a Director in 1948 resigned in July last on his retirement from business in the City of London. Mr. Cherry, who spent many years as a merchant in Malaya, was able to contribute much to the deliberations of the Court.

"Mr. Cherry has been succeeded by Sir Kenneth Brand Harper, Chairman of the Burmah Oil Company, Ltd. There are numerous problems of administration and policy common to the Bank and the international trading organisation over which Sir Kenneth presides and his joining the Court of Directors reinforces a much-valued business connection of long standing.

The Staff

"At home and abroad the Bank is served devotedly by the staff of all ranks and it is impossible to speak too highly of the work they do in their various capacities and in their different spheres. Personnel management has become difficult enough in the stable and homogeneous social conditions encountered in the United Kingdom, but, although the service of the Bank is more widely diversified than that of many international economic organisations, it is highly gratifying to know that its problems of staff administration are much less intractable than might be expected in the present political and social ferment throughout the East.

"The rapid extension of trades unionism throughout our clerical staffs in the East has revolutionised relationships between the Bank and its Asian employees. The paternalism which was for so long appropriate to the conduct of those relationships has inevitably given way to formal agreements and the setting up of conciliation machinery. Much oriental trades unionism is inspired by nationalistic fervour which inevitably complicates negotiations related ostensibly to material conditions of service.

"A year ago, I referred to the decision of the Court to admit Asian officers of the Bank to the covenanted rank of sub-accountant. Nine such promotions have now been made and I am hopeful that the Bank will continue to find, within its service and in the colleges and universities of the East, young Asians qualified for appointment to the rank of sub-accountant. The training college at Dormans Park continues to flourish under the direction of Sir Alexander Campbell. During the summer Asian supervisors are brought to this country and given opportunities to gain a wider comprehension of the British financial tradition and of the principles upon which British banking enterprise in the East is based. During the winter months the college prepares British recruits to the service for life and work in the East.

The Bank's Balance-sheet

"The total of the Bank's balance-sheet has this year risen to £223,968,987, an increase of £20,283,292 over last year's figure. This is due partly to an increased volume of international trade in those Eastern countries in which the Bank is represented and partly to the higher prices of some of the staple Eastern commodities, notably rubber and tin.

"On the left hand, or liabilities side of the balance-sheet, current and other accounts, fixed deposits and bills payable show increases of £12,782,807, £10,175,189, and £485,423, respectively. Inflation has, undoubtedly, contributed to these increases. Acceptances on account of customers are down by £3,282,066, which is accounted for by the higher discount rate in London compared to other centres and partly due to the larger holding of sterling by Japanese banks.

"On the right hand, or assets side, cash in hand, at call and at bankers shows the substantial increase of £6,591,069, the ratio to our 'demand and time' liabilities, excluding notes in circulation against which security has been lodged, being 21.81 per cent. against 18.54 per cent. last year. The figure for Government and other securities apart from those lodged against note issue, is lower by £3,898,420. As usual, these have been taken into account at market value and we have made full provision for depreciation out of our internal reserves. Stockholders will be glad to know that all holdings are dated and in large proportion mature within ten years. Bills of exchange and advances to customers and other accounts show increases of £2,439,731 and £17,133,312, respectively, once again indicating the extent to which we are assisting our customers and taking our share in financing world trade with Eastern countries.

"Considerable expenditure continues to be incurred in meeting the cost of expansion and modernisation of our offices in the East. Without suitable premises and accommodation for our staff it is clear that our business cannot operate and we must expect to have to continue to set aside substantial amounts each year in the writing down of this item.

Profit and Loss Account

"The net profits for the year at £759,340 are higher by £36,193 than last year, in spite of increasing working costs in all countries where we operate. Fortunately, these increased costs have been more than covered by increased business.

"The scale on which world trade has increased during the last two years is due partly to the intense effort being made by each country to become self-supporting and partly to inflation. On either count it is vulnerable and liable to setbacks, and I would ask stockholders not to lose sight of that fact.

"The Bank paid an interim dividend in September last of 7½ per cent., less income-tax, absorbing £150,938 and it is proposed that out of the balance now available a final dividend of 7½ per cent. should be paid, costing £150,937, making the total distribution for 1955 15 per cent.

"It is proposed to repeat the allocations made in each of the past five years to the pension fund and widows' and orphans' fund of £125,000 and £20,000, respectively.

"The sum of £200,000 has again been applied towards writing down bank premises and furniture account.

"It is proposed to transfer £100,000 to contingencies account and to carry forward the increased balance of £405,375.

"I trust the stockholders will approve of all these proposals.

Aden

"Our branches in Aden, in highly competitive conditions, have continued to extend their connections with the commercial community. Aden is the natural focal point for trade routes traversing the Middle East from the south and east and is well situated to serve as an entrepôt for an area to which oil is bringing increasing wealth. Following the exploitation of their large oil deposits, extensive development is taking place in a number of territories in the Middle East and, as a result, Aden should grow in importance and prosperity in the years to come.

India

"It is satisfactory to record that the country has continued to progress in the economic field during the past year. Since the first Five-year Plan was drawn up in 1951 the Indian economy has steadily gained strength and it now seems likely that, whereas the Plan was originally designed to expand the national income by 11 per cent. over the period 1951-56, the actual increase will be about 18 per cent. This increase is a result of the expansion of both agricultural and industrial output.

"India's capacity to increase production of cereals and industrial raw materials, such as cotton and jute, has brought about an improvement in the country's balance of payments in the last few years, since food imports have virtually ceased and there has been a substantial reduction in imports of raw cotton. The rise in agricultural production owes much to favourable monsoons, but is also due to the wise planning of development expenditure in extending irrigation, to the increased use of fertilisers and to the general improvement which is gradually being effected in agricultural technique. In the industrial field production has also expanded, following increased investment in industry and a more efficient use of existing productive capacity.

"It is a remarkable fact that increased national income and substantial Government expenditure in connection with the first Five-year Plan has not been accompanied by inflation. Indeed, prices have tended to fall during the past year and the decline has been sufficiently marked to cause the Government to support agricultural prices in certain areas. Fears have been expressed in the past that to implement the Plan the authorities would be forced to resort to deficit financing on a considerable scale. In fact, it has not proved necessary to adopt this potentially inflationary expedient to anything like the extent envisaged when the Plan was first drawn up, and there has been little difficulty so far in maintaining the country's foreign exchange reserves at a comfortable level.

"We now have the draft outline of the second Five-year Plan. The Government's proposals are to stimulate rapid economic development and to create employment, commendable objectives which it is not easy to reconcile in a predominantly agricultural country like India, where an improved agricultural technique may cause unemployment rather than create jobs. This dilemma is particularly illustrated by the Karve Committee's report on small-scale rural industries which suggests substantial investment under the Plan in this sector of the economy, not from any motive of promoting economically efficient enterprises but in order to provide whole and part-time employment for a small fraction of the rural population. To carry out their proposals and to permit village industries to expand, the Committee consider that it may be necessary to restrict output and thus penalise the development of important and progressive manufacturing industries.

"It is clear that the resources available fall far short of the expenditure envisaged under the second Five-year Plan, viz., Rs. 4,800 crores in the public sector and Rs. 2,300 crores in the private sector. The Plan aims at raising living standards by rapid industrialisation and expects that, apart from agriculture, eight million more jobs will be available. But it stresses the fact that new industrial units producing basic capital goods and heavy machinery must be under public ownership and management, while at the same time it expects that the rate of investment of the national income will be raised from 7 per cent. to 12 per cent. Moreover, the Minister of Planning has categorically stated that the Government intend progressively to impose a ceiling on personal incomes within the period of the Plan, the order of which may only give a maximum income of Rs. 3,000 a month. And steps are to be taken to limit agricultural holdings to a maximum of three times the average family holding.

Deficit Financing Necessary

"Clearly, deficit financing will be necessary since the scope for substantially increasing the revenue from taxation is limited. Moreover, public ownership and heavy personal taxation do not march hand-in-hand with either individual effort or personal saving, while the limitation on the size of agricultural holdings would not appear at first sight to be the best way to ensure the growth of agricultural products on economic lines.

"Consequently, a far larger measure of assistance from abroad will be necessary than has been the case under the first Five-year Plan. Although foreign capital has been entering India in recent years, it has been doing so only on a modest scale. The Indian Government has received grants and loans from abroad and there has been investment from abroad in co-operation with Indian capital in particular industries. A substantial proportion of the foreign investment that has been made has been in the form of profits ploughed back by British firms already established in India. It is hoped that these sources of foreign funds will continue to assist the Indian economy, but investment in particular must largely depend on confidence in the future of private enterprise. Export earnings will no doubt help to swell the country's foreign exchange resources, but even so it is not clear how sufficient foreign exchange is to be found to implement the new Plan.

"In this connection I expressed hope last year that nothing would be said or done which would have the effect of discouraging individual effort or frightening away potential investors. Notwithstanding ministerial assurances, it must be admitted that certain trends are disquieting. The nationalisation of all life assurance companies, many of which are shareholders in the private sector of industry, is not a happy omen, and from the point of view of oversea firms that employ specialised foreign staff the rates of taxation on income, which are in no sense discriminatory, do pose a major problem. There are still many fields in the private sector of Indian industry where the capital, skill and enterprise of foreign firms could be of invaluable assistance to the Indian economy, but continued foreign investment in India and the promotion of industry with foreign help must necessarily depend not only on confidence but also on the ability to employ foreigners on terms that make oversea service attractive.

"Meanwhile, as a result of the development that has taken place, Indian oversea trade has expanded during the past year and the rise in the aggregate value of exports has had the effect of reducing the trade deficit. The Government is, therefore, permitting a further increase in imports of raw materials and capital goods during the first half of the present year. During the past year the competitive power of the Indian jute industry in the international market was improved by the abolition of the jute export duty and exports rose sufficiently to permit re-starting some of the looms that were sealed in order to restrict production when trade was in the doldrums six years ago. The tea industry has suffered from the fall in prices during the year, which is partly a reaction from the high level of prices that received so much publicity in the British Press towards the close of 1954 and partly the result of increased production. The cotton industry, although exports of cotton cloth were lower last year than in 1954, has benefited from increased purchasing power in the home market.

"On present indications, it is reasonable to expect that the Indian economy will continue to progress satisfactorily during the present year, although it is possible that the growing power of the labour unions may cause industrial unrest. I may mention that banks have had a recent and disquieting experience of labour demands which resulted in a strike of bank employees throughout the country at the turn of the year.

Pakistan

"The outstanding event in the banking field in Pakistan during the past year was the devaluation of the Pakistan rupee to parity with the Indian rupee last August. When the United Kingdom devalued its currency in terms of dollars in 1949, Pakistan was the only country in the sterling area that did not follow suit. At that time Pakistan's balance of payments was in favourable position, owing to strong international demand for its staple exports, cotton and jute. Subsequently, and in particular since the collapse of the Korean war boom, the country's exchange reserves have been on more than one occasion under severe strain and the competitive power of the country's exports was not assisted by the overvaluation of the currency. For these reasons it had been expected for some time that the authorities would take advantage of a favourable opportunity to devalue the currency to a more realistic level.

"The actual timing of the measure caused some surprise, but in choosing an occasion when there was no suggestion of an economic crisis and no immediate pressure on the country's exchange reserves, the authorities certainly acted wisely. The Government gave as its main reason for the decision its wish to encourage exports, particularly manufactured exports from the country's new industries, with a view to facilitating a further expansion of the national economy, an end which would obviously be helped by devaluation. For the time being jute goods are the only manufactured products which are shipped abroad in any appreciable volume, but it is hoped that in due course exports of cotton piecegoods will be an increasing source of foreign exchange, although international markets in cotton textiles are highly competitive. There is more confidence in the currency at its new exchange value and devaluation has solved the obvious practical difficulties, which arose from the propinquity of the two countries, in maintaining the Pakistan rupee at an exchange level above that of the Indian rupee.

"In previous statements I have referred to the aim of the Government of Pakistan to change the basis of the country's mainly agricultural economy by pressing forward with a policy of industrial development. Efforts to accelerate this process have been intensified during the past year and measured in terms of productive capacity the development of industry so far has been spectacular. The expansion of the textile industry, in particular, has progressed to the extent that the country has now become self-sufficient in the coarse and medium varieties of cotton yarn. The jute industry has continued to progress satisfactorily during the year and, of the twelve mills which were originally planned, ten are already in production and the remaining two

in the last stages of completion. Thus, development in this important export industry is well ahead of schedule and, taken in conjunction with a similar expansion of productive capacity in other new industries, is gradually assisting the establishment of a more balanced economy, less dependent on the vicissitudes of the international markets for raw jute and cotton, which still provide the bulk of the country's foreign exchange earnings.

Sui Gas

"One aspect of economic development, Pakistan's lack of fuel resources, such as coal and oil, caused particular concern in the early stages of the industrial expansion programme. Last year, I mentioned to you that this Bank and five other Eastern Exchange banks had joined with the World Bank in granting a loan to the Sui Gas Transmission Company, which was engaged in constructing a 330-mile pipeline to convey to Karachi natural gas, which had been discovered at Sui. It is gratifying to record that the pipeline has now been completed, thus enabling a number of industries in the Karachi area, both new and old, to utilise this source of power. Furthermore, it now appears that the reservoir of natural gas at Sui is more extensive than was originally estimated and that its discovery has solved the problem of providing industrial power in West Pakistan for many years to come. Nevertheless, the search for oil and new supplies of natural gas is being intensified in both East and West Pakistan.

"Inevitably, however, in a country whose foreign exchange earning capacity is limited, an ambitious programme of industrialisation has not been implemented without sacrifice. Although it has proved possible to allow a more generous allocation of import licences during the first half of the present year, priority as in the past has necessarily been given to the import of machinery, capital equipment and industrial raw materials. The consequent shortage of consumer goods and the rise in prices within the country press hard on a population whose purchasing power is restricted. Some improvement in the situation is to be expected as new industries start to manufacture a wider range of consumer goods and so replace supplies which were formerly obtained from abroad. Meanwhile, shortage of foreign exchange causes difficulty also in industry, where productive capacity is affected in some cases by lack of materials and spare parts.

"The arrivals of goods and raw materials shipped under the United States aid programme has helped to ease the shortage both of consumer goods and raw materials and to stabilise Pakistan's economy after the devaluation of the rupee. Fortunately, the serious floods which caused widespread misery in both East and West Pakistan last year appear to have damaged food and export crops less than had first been expected. Nevertheless, foreign assistance will be necessary for some years to come to supplement Pakistan's own foreign exchange earnings and to help in consolidating the remarkable industrial development which has been achieved since the country gained its independence.

"The draft of the new national constitution is now under consideration and includes a provision rendering it impossible to contest in the courts the amount of compensation awarded in the case of nationalisation. This is a provision which we have met elsewhere and is one which must give food for thought to all potential investors.

Burma

"Last year, I mentioned that Burma's exchange reserves were being drawn upon at a rapid rate to finance Government purchases of capital goods and equipment required for the country's economic development schemes. From their peak in the middle of 1953, when they stood at K.114 crores, the external assets drained steadily away until last June when they totalled K. 40 crores (£30,000,000). They have lately increased slightly, a reflection of the drastic steps taken by the Government last March to restrict the volume of imports and of better overseas sales of the current rice crop.

"The crux of the country's economic problem has been the progressive fall in the price of rice in the international markets since 1953, for the export of this staple foodstuff provides Burma with approximately four-fifths of its earnings of foreign currencies. The world shortage of rice supplies in the years following the second World War and the high prices exacted by countries like Burma and Thailand with surplus production available for export, stimulated production in neighbouring territories in South-East Asia such as Malaya, while further afield the United States and Italy have substantially increased their exports of rice and have thus become competitive factors in the international market. Another effect of high prices and shortage of supplies in past years has been the increasing tendency in the East to consume in place of rice other cereals, notably wheat, which are substantially lower in price.

"In these circumstances, Burma has had difficulty in maintaining overseas sales of its rice. The whole of the crop is sold through the State Agricultural Marketing Board, and most of the rice exported is sold on long-term Government contract, which has frequently caused Burmese rice to be more expensive than supplies available elsewhere. During the past year, however, exports were slightly higher than in 1954 and it appears that the new markets which have been opened up by agreement with the Soviet bloc, augmented by sales under existing inter-Governmental arrangements to South-East Asia, Japan and elsewhere, may absorb much of the Burmese exportable surplus available during the present year. This is a more satisfactory prospect, but reports from the major rice-producing countries of Asia suggest that rice production in the current season will be much the same as in 1954-55, and it remains to be seen whether present prices will be maintained.

"The financing of the Government's economic and social development plans presents difficulties inasmuch as Burma lacks capital and is no longer in a position to dissipate exchange reserves. In introducing the budget estimates for the fiscal year 1955-56 the Finance Minister made it clear that deficit financing will remain an important feature of the Government's policy. Efforts are being made to obtain assistance from the World Bank in financing various industrial and harbour projects and the Government of India has agreed to lend Burma Rs. 20 crores, the entire loan to be convertible into sterling area currencies, but the Minister for Industries has recently stated that he expects that the Soviet Union will assist in developing Burma's industrialisation and rural electrification and says bluntly that this is a matter not of politics but of economics, as neither Britain nor the United States provides Burma with sufficient foreign exchange.

"It is doubtful whether Burma has fully exploited the possibility of increasing the export of commodities other than rice, such as timber and minerals, which could be a valuable source of increased foreign exchange earnings, but it can only be hoped that sufficient foreign assistance will be forthcoming to enable the authorities to maintain the country's exchange reserves at least at their present level and at the same time to implement their economic development programme. So far as the Soviet Union's economic aid to Asia is concerned, it should be remembered that apart from what has been given to countries in close political association with them, it has been insignificant and not free from counter-obligations. Asia's most important source of external economic assistance has come through the Colombo Plan in which Britain has played a leading part.

"The improvement in the internal security of the country is of good augury for the future.

Ceylon

"Ceylon has enjoyed a prosperous year and the island's oversea trade surplus in 1955 reached record figures. Month by month throughout the year exports exceeded imports and, in consequence, except for a small deficit in April, the external reserves continued to rise once again to the levels at which they had stood at the height of the boom which followed the outbreak of the Korean War. The measure of the progressive improvement that has taken place in the economic situation in Ceylon is that little more than two years ago, as a result of changes in the terms of trade following the collapse of the Korean War boom the external assets had been reduced to their lowest level since 1943, whereas during the past two years a combination of sound financial policy by the Government and the effective exploitation of remunerative markets abroad for rubber and tea has had the effect of almost doubling the external assets.

"More than three-fifths of Ceylon's export earnings are now derived from shipments of tea. Although tea prices in the international market subsequently receded from the high levels they reached late in 1954 and early last year, they were sufficiently satisfactory on average during the past year to raise the aggregate value of tea exports above the figures recorded in 1954. Rubber shipments increased last year and owing to the remunerative prices ruling for that commodity, export earnings rose substantially. Exports of copra and coconut oil also expanded in volume and value. On the import side, an important factor that has contributed significantly to the trade surplus has been the reduced cost of food imports, particularly rice and wheat.

"Last year, Ceylon shipped to China the annual quota of rubber, 50,000 tons, stipulated in the rice-rubber contract between the two countries and also a small additional quantity outside the contract for which payment is to be made in sterling. The export of sheet rubber by the trade in Ceylon is prohibited and all sheet rubber for export has to be sold to the Rubber Commissioner for shipment to China under the contract. Last October, the price structure was again revised. China agreed to pay for rubber shipped from Ceylon in 1956 and in the latter half of 1955 a floor price considerably above the Singapore monthly average price, while Ceylon will pay world prices for Chinese rice instead of fixed prices as previously.

"During the course of the year the Government published a programme of investment which does not cover the whole economy, but only the public sector, during the six years from 1954-55. It is to the credit of the authorities that in drawing up the plan they have resisted the temptation of being over-ambitious and, on the other hand, cannot be criticised on the grounds that their programme is inadequate. Broadly speaking, the aim is to maintain a minimum increase in the *per capita* national income sufficient to keep pace with the growth of the population. About half the sum to be invested is to be spent on new projects and the remainder on the completion of schemes already in progress, the emphasis being very reasonably laid upon the further development of such industries as tea, rubber and coconuts, which are the mainstay of the Island's economy.

"In implementing this very practical programme the Government has no intention of resorting to the potentially inflationary expedient of deficit financing. In October, the formation of a Government-sponsored Development Finance Corporation of Ceylon was announced to assist in the establishment, expansion and modernisation of private industrial and agricultural enterprises in the country and to encourage and promote the participation of private capital, whether raised internally or abroad, in such enterprises. It is intended that the Corporation should borrow, free of interest, from the Government sums equivalent in the aggregate to double the authorised share capital, while the Government is also to guarantee any loans the Corporation may raise from the World Bank, so that its activities should not suffer from inadequate funds.

"In order to assist development in the private sector of the economy the authorities are anxious to encourage foreign capital to enter local industry. Assurances have been given that nationalisation is not a general aim of Government policy and that oversea investors will enjoy the same tax concessions as are extended to local capital entering new industry in Ceylon as well as unrestricted facilities for the remittance of profits and repatriation of capital. The stability of the balance of payments during the past two years strengthens the country's chances of obtaining additional capital from abroad at a time when it is on the threshold of an important phase in its economic development.

Malaya

"The past year has been a notable one for both the Federation of Malaya and Singapore. In the economic field, rubber and tin have fetched remunerative prices in the international market and both territories have enjoyed considerable prosperity. Great interest has been aroused by the publication of the long-awaited report of the World Bank mission on the economic development of Malaya, a report which, since it recommends the establishment of a central banking system, is of particular concern to this Bank and the exchange banks in general.

"Politically, 1955 has seen the accession to office of the first Governments to be elected by popular vote under the new constitutional arrangements in both territories. In Singapore, a succession of strikes caused much trouble and concern following the election, but the new Government showed commendable firmness in dealing effectively with a dangerous situation. In the Federation the Alliance party gained an overwhelming victory at the polls and the new Government felt its position sufficiently strong to declare an amnesty for all those who had taken up arms against the Federation Government. Although the amnesty failed to have the desired effect in bringing the Emergency to an end, the meeting which took place at the end of the year between the Chief Ministers of the Federation and Singapore and the Communist leader has put the Communists, in view of their decision not to surrender, in the invidious position of deliberately choosing to continue a revolt, directed now not against the British authorities but against a Government which has been freely elected by the people of Malaya and to which, as far as can be judged from reports of the recent constitutional discussions in London, virtually complete control of its own affairs will be transferred within a comparatively short time.

"The Governments of both the Federation and Singapore have accepted in principle the recommendation of the World Bank mission that a central banking system should be established and it was recently announced that inquiries were being hastened forward with the object of implementing the proposal. It is a source of satisfaction that, in connection with the project, the two Governments have sought the assistance of the Bank of England which has made available the services of a senior official to help with the preliminary inquiries.

"It has been recently announced that the Government of the Federation is preparing a five-year development plan based on the recommendations of the World Bank mission. In reviewing the problems of economic development in Malaya as a whole the World Bank mission suggested that, in order to assure further and satisfactory progress, it will be necessary to encourage a broader range of activity both in the export trade and in those sections of the economy which serve domestic requirements. Already by Asian standards Malaya has a relatively advanced economy, which is more varied and complex in pattern than in most territories whose wealth is founded on the exportation of primary commodities. At the same time it is necessary to recognise that Malaya's past economic progress has been largely due to specialisation in the production and export of rubber and tin.

"Therefore, while some widening of the range of agricultural production and manufacturing industry in Malaya is doubtless desirable to create new economic opportunities for a population which, if present trends continue, may be doubled within the next quarter of a century, it will not necessarily have the effect of increasing the national wealth to the extent that the mission appears to envisage. So far manufacturing industry in Malaya comprises in the main small-scale units. The domestic market is small by standards of modern industrial output and it appears that any substantial industrial development must necessarily entail the opening up of oversea markets, which under modern conditions are almost certain to be highly competitive.

"Meanwhile, it was reassuring to hear from the High Commissioner for the Federation of Malaya, when he spoke on the Budget for the present year, that it remains the present Government's policy to encourage investment from abroad and to foster conditions in which the oversea investor can continue to assist the Federation's economic development without fear of discrimination or unfair treatment. An assurance was also given that the oversea investor will also continue to be free, after payment of local taxes, to remit abroad profits and dividends and to repatriate his capital. This is a welcome official endorsement of the emphasis laid by the World Bank mission on the importance of maintaining an investment climate calculated not only to persuade oversea capital already invested in Malaya to remain there but also to attract new investment from abroad. It would also seem to be essential that there should be some assurance in regard to the grant of land leases on a long-term basis, for the rubber industry, in particular, would find it difficult to retain and, where necessary, attract more oversea capital if there were insecurity of land tenure.

Rubber Exports

"Last year, Malaya's rubber exports increased in volume by over 8 per cent. to 994,176 tons, substantial increases being registered in the tonnage shipped to the United Kingdom and the United States. The incentive of higher prices caused rubber production in Malaya to expand to its highest level since 1950, when the Korean War boom was at its height. Although the relative cheapness of synthetic rubber has caused a distinct increase in the ratio of synthetic to natural rubber consumption in the United States, overall international demand for natural rubber still appears to be strong.

"Malayan exports of tin also improved last year, totalling 71,157 tons, the largest quantity shipped in any year since 1950, while production was the highest recorded since the second World War. The upward trend of tin prices in the international market last year can be attributed to a rising world demand for tinplate which has changed for the better the prospects of what at the beginning of 1955 appeared to be the weakest of the base metals in terms of price. The recent ratification by the Indonesian Parliament of the International Tin Agreement will have the effect of bringing the agreement into force, a development which entails the establishment of a buffer stock and is likely to be a substantial influence in the market in the coming months.

"With both rubber and tin exports fetching remunerative prices abroad, the oversea trade of Malaya as a whole last year showed an increase over 1954. The buoyancy of trade was reflected in the Federation's estimated Budgetary surplus for 1955 of M$26 million in place of the expected deficit of M$148 million, a surplus largely accounted for by the high yield of the export duties. It is estimated that Singapore will show a small surplus for 1955 and, although both territories have budgeted for a deficit in the present year, their financial positions remain sound and their economic prospects favourable.

"Any review of Malaya, however short, would be incomplete without mention of what may be the outcome of self-government and independence. It seems to me that economically it would be to the obvious advantage of both the Federation and Singapore to unite. The World Bank report on Malaya is based on the assumption that the Federation and Singapore will be one economic entity with one Central Bank and one currency. At the moment, I fear, the indications are that such is not to be, and it seems not improbable, should both the Federation and Singapore proceed with the idea of a Central Bank, that they will have separate currencies. Should this be the case, and I sincerely hope it will not be, it is difficult to foresee the future of Singapore, which, with its labour troubles in no way facilitating its industrialisation plans, may have only its entrepôt trade to maintain its large and growing population.

North Borneo

"Although trade figures are not yet available for the year, there are indications that the aggregate value of North Borneo's exports increased substantially during 1955. This is mainly due to the prosperity enjoyed by the territory's principal industry, rubber. Shipments of rubber from North Borneo rose in volume by 17 per cent. to 20,068 tons during the year and, owing to the remunerative prices ruling in the international market for this commodity, have been of more than proportionately greater value compared with 1954. The rise in the aggregate value of exports has been reflected in increased imports, but it is likely that there was a comfortable trade surplus for the year as a whole. In any case the additional expenditure oversea was largely concentrated on capital equipment and other necessities and should thus prove beneficial to the territory's economy in the long run.

"I mentioned last year the steps taken by the Government to encourage rubber replanting with a view to assisting the industry ultimately to reduce its costs and so putting it in a better situation to compete with the synthetic product in world markets. The industry's prosperity during the year has assisted the replanting scheme in its early stages and the demand from smallholders for clonal seedlings has far exceeded supply. On the other hand, there is little doubt that rubber production could be greatly increased if more labour were available.

"The Government fully recognises the importance to the economic development of the territory of securing more labour and in August an agreement was signed with the Philippine Republic which permits employers in North Borneo to recruit Filipino agricultural workers. The practical details of the agreement are still the subject of negotiation between the two Governments, but meanwhile there has been appreciable immigration on the East Coast from the Philippines and Indonesia.

"Of the other staple export commodities, shipments of timber and copra increased in volume, much of the copra being re-exports from neighbouring countries.

"In order to assist economic development generally the Government-sponsored North Borneo Credit Corporation has been established. The new institution will provide credits for agriculture and industry and endeavour to stimulate private investment in the territory.

"North Borneo's prosperity during the past year has been reflected in the budgetary position. The estimates for 1955 were based on the assumption that the local price of rubber, averaged throughout the year, would be substantially lower than in fact it has been and thus the export duty on rubber has yielded more revenue than was estimated. Part of the surplus which is anticipated in the present year will be used for funding a general reserve to preserve budgetary stability in future years, and the rest will be appropriated for the development programme. This year a development fund is being established, which will be credited with funds accruing from budgetary surpluses and with any external aid that is received.

"North Borneo is situated in an important strategic position astride vital lines of communication in South-East Asia and it seems possible that Labuan, in particular, may be on the threshold of further development both as an international air centre and as a port. The Secretary of State for the Colonies during his visit to North Borneo last August indicated that, although it was purely a matter for the people of the territories concerned, the British Government would give every assistance if they should decide that North Borneo might advantageously federate with Brunei and Sarawak.

"As you are doubtless aware, the currency in British Borneo is the Malayan dollar. With self-government, independence, and central banking on the Malayan peninsula it is possible that Borneo may not desire to have a currency outside its control and a solution may have to be found in having Currency Commissioners for a British Borneo dollar. A different dollar will in no way facilitate the large trade existing between the three colonies and Singapore and indeed, unless transfers are free and the separate currencies kept at the same level, it may be positively detrimental.

Sarawak

"The rise in rubber prices in the international market has been of benefit to the economy of Sarawak. Shipments of rubber from the colony show an aggregate increase of approximately 50 per cent. in volume and, although final trade figures are not yet available for the whole of last year, all indications are that rubber exports have more than doubled in value. Exports of timber have almost certainly reached record levels and the timber trade has continued to have the benefit of remunerative markets in the United Kingdom, Australia and on the Continent of Europe. On the other hand, pepper, which excepting refined petroleum, was Sarawak's most valuable export in 1953 and 1954, had a less favourable year. Much the same tonnage was shipped abroad, but particularly during October prices were low and it is likely that the aggregate value of pepper exports was lower by approximately one-third in comparison with 1954.

"Of the other exports, the illipe nut crop was virtually a failure except in the Baram River area and sago shipments were lower both in tonnage and in value. Thus, the Colony's trade balance, excluding what is for statistical purposes largely a transit trade in petroleum, is unlikely to show much change from 1954 when there was a favourable balance of M$3.7 million. It is clear that increased shipments of rubber have more than offset the fall in export earnings from pepper and other commodities and that increased prosperity has led to a corresponding rise in imports. But unless pepper prices improve, Sarawak's economy will depend on a continuance of the remunerative prices which rubber is now fetching. Pepper production is still being hampered by 'sudden death' disease, although the Government has established a research laboratory in an endeavour to discover the nature of the disease and to eradicate it.

"Sarawak raises a substantial part of its budgetary revenue from customs duties and the increase in rubber exports has caused this particular source of revenue to yield almost M$12 million more than was originally estimated. This is a considerable increment for the Government of a territory whose total revenue for the present year is estimated at M$41 million. Allowing for a contribution of M$3 million to the Colony's Development Fund there should be a small budgetary surplus in 1956. The Development Plan for the period 1955-60, which is now being implemented, is being substantially financed by accumulated surplus balances and includes provision to assist rubber replanting with a view to improving the industry's efficiency and its ability to compete in world markets.

"Meanwhile, there is reason to hope that the search for new sources of oil which has been

proceeding along the coast of Sarawak and elsewhere in British Borneo will succeed and be the means of bringing greater prosperity to Sarawak.

Indonesia

"It is gratifying that the underlying optimism which has sustained our operations in Indonesia and our faith in the Republic's ability to overcome its economic and other troubles are seemingly more warranted now than at any time during the last two years. The deterioration, almost continuous during that period, has been halted and the process of recovery has started and bids fair to continue. This recovery, which is evidenced in financial, economic and political fields, dates from the replacement in July of the communist-supported coalition Government by a strong Masjumi-led caretaker Government determined to suppress malpractices, combat inflation and restore governmental authority.

"This quick change round in the Republic's fortunes clearly demonstrates that the inherent wealth of the country is sufficient for its continued prosperity provided world prices for agricultural products remain at a reasonable level and sound administration in Indonesia ensures that law and order and wages are such that produce can be delivered and exported at competitive world prices. Complementary to this is, of course, a policy which ensures that those imports considered necessary for the country are obtained from the best world markets and are made available to the people without undue distortion of internal prices. This emphasis on sound Government is, I believe, well understood by those moderate leaders in Indonesia on whom the future of the country so much depends and there should be sufficient good statesmanship in the three great Muslim parties to guarantee stable government for two or three years at least Coalitions, however, particularly in young countries, are subject to internal dissensions and the success or otherwise of the new Government expected in May next may depend perhaps on its united determination to grapple with labour, whose demands are still so unreasonable that they form a major threat to the country's continued prosperity.

"Another threat, and one which should to some extent temper the general optimism, is the continued inflation. Until the cost of living is appreciably reduced, further trouble even from the more responsible labour unions, can be expected and to date the tight-money policy of the caretaker Government and the excessive duties imposed upon luxuries have not achieved sufficient improvement to engender a feeling that the situation is in hand. Furthermore, very stringent money conditions have been created by this policy and the operations of the banks have been so circumscribed that the Governor of the Bank Indonesia may deem it necessary to introduce some relaxation in the present regulations.

"In keeping with the trend to simplify import procedure generally and to eschew outright discrimination against foreign trading firms, is the recent reasonable Government statement on foreign capital investment. Unfortunately, the statement does not entirely allay fears regarding existing investments; nor does it perhaps envisage land leases of sufficient tenure to make further investment in rubber and tea estates sufficiently attractive.

"In view of the differences between the internal and external value of the rupiah we cannot expect to obtain profit remittances at the official rate, but, in my opinion, the authorities have been much too drastic in the scaling down effected by the new profit regulations and we have to undertake an undue amount of business, with its attendant risks, in relation to the final reward we are allowed to bring to this country.

Thailand

"The successful outcome of Thailand's decision last year to restore the rice trade to private hands paved the way for one of the most interesting post-war experiments in the Far East—a country returning to a free economy. When it was seen that private traders would succeed in disposing of the whole of the previous season's rice crop, the Government, which is to be congratulated on the smooth and sensible manner of the transfer, introduced further measures to remove unnecessary restrictions on exports and followed this by freeing imports. It is expected that adjustable customs duties will make luxuries expensive and keep imports generally within an acceptable pattern.

"Before Thailand could take this step it was obviously necessary for the country's foreign exchange holdings to be able to withstand the added drain to be expected from the increased imports following the elimination of controls and permits. Fortunately, in addition to unexpectedly large sales of rice, which were over 200,000 tons more than during the previous year, the exports of rubber and tin also increased and at more favourable prices.

"To ensure that the stability of the tical was maintained an equalisation fund with initially U.S.$63,000,000 at its disposal was set up and this fund is now operating freely in the inter-bank market. The policy governing its operations is to endeavour to keep the tical strong, but not so strong that it will penalise exports. Only experience will show which is the best rate for the country. At the moment it seems to be settling around Ticals 58 to £1, but it is significant that with the large amount of dollars accruing to Thailand through its exports to Laos under American aid, the equalisation fund has, so far, had to operate entirely against an undue appreciation in the external value of the currency.

"As a bumper rice crop is expected next season and as substantial amounts of American aid are likely to be forthcoming, one can be restrainedly optimistic of Thailand's prospects during the coming year and of its ability to stand up to normal impacts on its free economy. American aid, apart from the I.C.A. allocations, which incidentally have not been availed of by local merchants to the extent expected, will be concentrated on the improvement of roads and communications gnerally, and, I think, it is very much in Thailand's favour and an assurance of the country's future well-being that its Government has decided to open up the country and improve its agricultural products rather than embark on large industrialisation schemes.

Vietnam

"Seldom can there have been more divergent views on the political and economic future of a country than those existing in Vietnam at the moment. Nevertheless, following the initial confusion resulting from the withdrawal of the French and the handing over of power to young and inexperienced administrators, order and stability have begun to appear. To that extent conditions have improved, but stability, economic and political, is dependent upon American aid which will have to continue on probably an undiminished scale if the nation is to survive and make progress.

"At the present time the United States not only sustains the defence of Vietnam but overcomes the lack of exports by providing the foreign currency to pay for essential imports. The United States too, by supporting M. Diem, has succeeded in creating an effective, although hardly democratic Government. M. Diem has shown himself capable of taking strong action when necessary and an important factor of the near future must be the ability of his regime to survive.

"M. Diem seems adamant in his determination that the Government of South Vietnam will not participate in the general elections agreed upon at the Geneva Conference and there is bound to be much uneasiness locally and in many other quarters until the repercussions, if any, arising from this decision are known. This suggests that if Vietnam manages to escape trouble from over its borders during the coming year a gradual return to normal trading should result. It will, however, take a considerable time before national traders can take the place of the large French firms which have for so many years dominated the country's commerce and which, in some part, have decided to close down rather than to take their chance under the new regime. In this period of transition there will probably be less normal business for banks such as ours.

Cambodia

"Cambodia is celebrating its independence with marked restraint and the young country's cautious approach to its monetary and economic problems has much to commend it. By using for the most part American aid for imports and allowing the foreign currency proceeds of exports of rice and rubber to accrue, a sound external payments position is being built up. This, in conjunction with the confidence inspired by the recently elected stable and popular Government, bids fair to make Cambodia's new independent currency, the riel, sound and acceptable.

"Although the Government has no declared intention of embarking on schemes for industrialisation there is a realisation of the necessity for agricultural improvement and foreign investment will be especially welcome in this sphere. It is possibly this agricultural policy that accounts for the close friendship developing between Cambodia and Japan and for the announcement by the Japanese Foreign Minister that this country plans to send fifty thousand emigrants to Cambodia in the next five years.

"Our own business in Phnom Penh has received fair treatment and encouragement from the authorities and the newly-formed central bank and is developing along sound and conventional lines.

The Philippines

"For some years now in these reports I have been able to point to the Philippines as one of the few countries in South-East Asia having political and economic stability and I have more than once cited the Republic's successful struggle against inflation and its achievement in maintaining its international reserves at about U.S. $300,000,000, or roughly equal to its note issue. Unfortunately, 1955 has seen a very rapid deterioration in these key factors and at the end of the year the foreign holdings had dropped to a figure close to U.S.$200,000,000. As there were too, no signs that exports, including the invisibles from American aid, were sufficient to cover imports, it is not surprising that distrust of the peso was generated. Business circles for the most part are of the opinion that only the determined stand of the Governor of the Central Bank has prevented devaluation and fears are expressed that, unless a substantial loan is obtained from the United States, there is the possibility of a change in the external value of the unit of currency.

"Official circles contend that the situation is not nearly as bad as figures suggest as a large proportion of the imports have been in the form of machinery, agricultural equipment and other capital goods essential to the economic development of the country and that the adverse trend was inevitable pending the effect of increased production from the products of this dollar expenditure. This contention would perhaps have more force were there unanimity of feeling that the Republic's development schemes had been well-planned and well-phased, but an analysis leaves a feeling that the emphasis has been much too much upon new manufactures and not enough on agriculture and communications. For this reason, and as the too rapid economic development has been financed by the issue of bonds which, in the absence of public support, are frequently purchased by the Central Bank, the country's strength tends to be undermined. Unless, therefore, the development programme is slowed down and geared to monetary stability, lack of confidence may continue.

"Above all this President Magsaysay stands as a great rallying point for the nation and never has his prestige been higher. Even he, however, cannot eliminate the lack of co-ordination in Government circles which is perhaps the outstanding weakness of the administration. Nevertheless, there have been determined drives during the year to stamp out bribery and corruption and, although some of the investigations were depressing and perhaps undignified, one is left with an impression that there is a steady and continuing improvement in the general standard of administration. Due to the proliferation of new legislation it is perhaps not surprising that occasionally regulations seemingly anti-foreign and obviously not to the country's advantage, are adopted. The uncertainty thereby created tends to discourage foreign investment.

"Although the Bell Act constitutes the main prop to the oversea trade of the Philippines, the terms of that Act, by tending to reduce economic dependence upon the United States as time goes on, are prompting the country to look more towards Europe and the sterling area generally as an alternative market. This could give an added importance to our branches in the Philippines, but it is too early yet to say to what extent.

Hong Kong

"Although the external trade of Hong Kong during 1955 increased by almost five per cent. in value from its level in the previous year, the figures indicate no fundamental improvement in the position of the entrepôt trade, which has always been the mainstay of the colony's economy. Exports to the China mainland declined drastically in value, a depressing indication that China prefers to import the limited range of goods and commodities which it is able to obtain from the free world direct from the countries concerned rather than through the entrepôt facilities of Hong Kong. On the other hand, Hong Kong's imports from China increased substantially, particularly in respect of textile yarns and piecegoods, in the international markets for which China shows signs of becoming an increasingly important competitor.

"There can be no doubt that Hong Kong has been more severely penalised than any other territory by the imposition of the United Nations' embargo on what are defined as strategic goods and commodities. At present, China is conducting approximately eighty per cent. of its external trade with the Soviet bloc, so that the possibilities of expanding trade between China and the free world are by no means unlimited, unless the Chinese authorities are prepared to make drastic changes in the direction of their foreign trade, which is unlikely. At the same time, the existence of an embargo list which includes some 400 items, many of which the Chinese are anxious to import, is clearly a severe deterrent to any expansion of trade whatsoever with China and, short of pruning the list or abrogating the embargo entirely, Hong Kong's export trade to China seems doomed to become smaller, an unpleasant prospect for a small territory with a large refugee population. Fortunately, there appears to be a growing realisation both in this country and the United States that the embargo is now doing more harm than good to the Western cause and it is to be hoped that steps will be taken at least to modify it.

"The new industries that have been developed so successfully in recent years have had a satisfactory year and have contributed substantially to a rise in Hong Kong's exports to the United Kingdom. Early in 1955 Hong Kong manufactured products received unexpected advertisement in Britain from the public complaints of British manufacturers in certain industries that the low prices of these goods made it difficult to compete with them in the British market. British demand for Hong Kong products has, undoubtedly, been stimulated by their relative cheapness and by the fact that their quality has substantially improved. It should be remembered that industrial development in Hong Kong has necessarily been accelerated since the imposition of the United Nations' embargo restricted the entrepôt trade and so made it urgently necessary for the colony to develop alternative forms of economic activity in order to feed its rapidly expanding population.

China

"During the year we finally vacated our premises in Shanghai and transferred outstanding accounts and securities, as called for under the agreement with the representatives of the People's Government.

"Our only foothold in China is now a liaison office in Shanghai, although we have retained our banking licence and can open up again for business should times become more propitious.

"In the meantime, correspondent arrangements with the Bank of China, which are working satisfactorily, enable us to participate to some extent in financing the external trade of the country.

Japan

"In commenting last year on the encouraging results in Japan following the introduction of the deflationary policy and other austerity measures I said that the country was by no means out of the wood as much of the improvement was due to artificial restrictions and stimulants rather than to genuine economic improvement. It is with pleasure, therefore, that I am able to report that a further twelve months has seen such continuous improvement in industry and oversea trade that the Japanese economy is now nearer to achieving genuine stability than at any time since the war.

"The increase in exports is perhaps the most impressive manifestation of this new prosperity and to achieve a balance in international payments of U.S.$493,000,000, notwithstanding a further decline of twenty-nine per cent. during the year in United States Special Procurement contracts, is an effort worthy of congratulation. Japan's foreign currency holdings have now reached their highest post-war figure and, although in some countries there is resistance to the rapid increase of certain classes of imports from Japan, a good augury for the future is that Japan's exports are now more diversified and more widespread, and thus less likely to be the subject of restrictive legislation abroad. In fact, in view of this year's bumper rice crop, which may allow Japan to reduce her annual imports by 200,000 tons, the country's problem may be the wise increase in imports rather than the marketing of its exports. With many countries and areas still inclined to work on balanced trade figures Japan must give its trading partners the ability to pay for the goods they require and perhaps a sound policy at this juncture would be for the country to set a safety figure for its foreign holdings and to use any surplus after normal trading for the import of goods necessary in long-term internal improvement schemes, such as communications, power, irrigation and, in particular, roads which fall far short of the standard expected today in any country.

"The buoyant economy has brought its own problems for, committed as the country is and must be to a deflationary monetary policy, the Governor of the Bank of Japan is endeavouring to bring down interest rates which are still considered an undue handicap to industry. Then too, although industrial output in 1955 reached a new record, there was considerable unemployment and it was by no means certain that monetary and other restrictions were having the desired effect of forcing labour from unproductive to productive employment.

"Throughout the whole period money became more plentiful and the liquidity of the leading Japanese banks showed distinct improvement.

"In perhaps only one direction has Japan been unsuccessful in its trading efforts and that is with mainland China, where the anticipated increase in trade between the two countries following the interchange of trade missions has not materialised.

"Our own prospects in the country must remain obscure until we know for certain the effects of the new taxation laws shortly to be submitted to the Diet.

New York

"The value of our New York office in our branch system has again been apparent this year, although we did not reap all the advantages which might have been expected from our having branches in countries receiving American Aid and an office in New York. In fact, as imports under aid programmes usually cause an equivalent reduction in imports through ordinary trade channels, our turnover in some Eastern countries is adversely affected. Nevertheless, this is often more than offset by the stability brought to those countries and in the areas in which we operate, the generosity of the Americans is most marked.

"We are glad too, that the disposal of surplus farm products has so far been effected in a manner which has not unduly disturbed world prices.

"The United States' economy continued to be very buoyant during the year and this was to a certain extent reflected in the amount of business passing through our New York office.

Hamburg

"Our Hamburg agency continues to extend its connections with those sections of the commercial community in West Germany which are concerned with trade with the East. The Federal Republic has so far remained singularly free from strikes of any consequence, although demands for pay increases are becoming more persistent.

"In trade and industry the trend of production, employment and sales has continued, generally speaking, to rise, and the external trade surplus for last year, although smaller than in 1954, was still substantial. Exports expanded once again and it is clear that German competition is being intensified in Asian markets.

Manchester and Liverpool

"Our branches in Manchester and Liverpool continue to assist the flow of trade between Lancashire and the East. The services they provide will be of particular assistance to merchants and manufacturers in the North of England in the highly competitive conditions which have now developed in so many Asian markets.

West End, London

"Our West End, London, branch is well situated to provide banking services for the many visitors who come to London from the East on business or holiday.

Conclusion

"The money markets of the Sterling Area are of necessity highly sensitive to policy pursued in the City of London and we have, therefore, to pay close attention to the policy of credit restriction now in operation in this country.

"While it is obviously proper for us to observe the official directive so far as it applies to customers who deal and trade exclusively in this country, it will be clear that our operations oversea must, in the end, be related to the policies and needs of those countries in which we operate, where we have obvious responsibilities to the Governments concerned, some of which are outside the Sterling Area.

"The rates of interest imposed in the United Kingdom must to some degree affect the cost of finance of new projects in the undeveloped countries, but the extent to which finance for those projects should be provided is properly a matter for the countries themselves to determine and our main concern must be to see that our own operations are carried out on sound lines in each country in relation to local conditions.

"The Sterling Area has far-flung ramifications and it is only too clear that uncertainties as to the results of the credit squeeze in this country could have far-reaching results not only in this country but also in the many countries in which we operate. It must be hoped that the policy that is now being put into effect will counteract those uncertainties without undue delay."

POSITION AND PROSPECTS FOR TRANSPORT

SHIPPING COMPANIES ADVISED TO EXPAND

THE reply of Mr. Lal Bahadur Shastri, Minister for Railways and Transport, to the debate in the Lok Sabha, on the Transport Ministry's demand for grants, and the Annual Report of the Ministry of Transport for 1955-56, published recently, give one a general idea of the present position of and the prospects for transport other than railways. In this debate, shipping received considerable attention. A notable feature of the Minister's reply was his reiteration that the Government would not hesitate to enter the field of shipping with a view to expanding tonnage, if the shipping companies were to fail to utilise the loan the Government had placed at their disposal. The Transport Minister expected the Indian shipping companies, which had already been approached by the Ministry for working out their individual plans, to come forward and utilise the provision for loans actually made in the second Plan within the first three years of the plan period itself. Upon that, he said, would depend the possibility of his Ministry's securing larger funds for additional tonnage within the second Plan itself.

Mr. Shastri estimated the current tonnage of Indian shipping at about 480,000. Proceeding, he said that a further 120,000 tons required to complete the target of 600,000 tons in the first Plan were now under construction in the various shipyards both in India and abroad. These ships were expected to be ready for delivery before the middle of 1957. The second Plan, which had now been practically finalised, provided for a target of 900,000 tons of shipping. Mr. Shastri added that no one was surer than himself that it had not been possible to provide for the full target of over 10,000,000 tons of shipping recommended by the Study Group of the Consultative Committee of Shipowners. The House, he said, must realise that the limitations imposed by lack of finance could not be got over. Despite these limitations, the Transport Minister hoped that, by the end of the second Plan period, "we will be able to lift not only 100 per cent. of our coastal trade, which we are even now doing, but also at least 50 per cent. of adjacent trade and 15 per cent. of our overseas trade."

Self-sufficiency in coastal shipping will not be achieved so long as the mineral oil now being carried by foreign-owned bottoms is not transported on national tankers. There has, therefore, been considerable agitation in this country that India should buy and ply oil tankers. Alluding to this subject, Mr. Shastri said that a firm decision had now been taken that India should have at least three tankers to begin with. He added: "We expect that one of these tankers, which will be owned in the private sector, will be registered in India before the end of this month. Two other tankers are expected to be acquired in the public sector by the Eastern Shipping Corporation and these two should be in commission before long."

Soviet Assistance

Dealing with the establishment of a regular shipping service between India and the Soviet ports, the Minister said that discussions were now proceeding between his Ministry and a delegation of the Soviet Government with a view to establishing this service immediately. He added: "The talks are nearing conclusion and I expect that an agreement for establishing this service will be signed some time next week. The proposals envisage regular operation between Indian ports and Black Sea ports of the Soviet Union by a fleet of 10 to 12 ships comprising Indian and Soviet vessels on a parity basis, as regards tonnage, according to a prearranged schedule for a period of three months after consultation between the Soviet and Indian authorities. It is expected that the service will come into operation as soon as the agreement is signed. The intention is to expand the service by the addition of more vessels to keep pace with the development of trade between the two countries."

Mr. Shastri informed the House that talks were also now in progress with a trade delegation from Yugoslavia for the establishment of a shipping service between India and Yugoslavia and for the utilisation of spare capacity in Yugoslavia shipping yards to meet the needs of India for additional shipping during the second Plan period.

Development of ports is closely allied with the problem of expansion of shipping. It is, therefore, natural that this subject, too, should have figured in the debate. Mr. Shastri said that the construction of Kandla port was fast nearing completion. He hoped that, by October next, two cargo berths would be completed and the remainder by March next year. This port would increase India's port capacity by one million tons. In the second Plan, provision has been made for providing two more berths at this port. Besides, a sum of Rs. 40 crores has been provided as Central assistance for the development of other major ports.

Mr. Shastri said that Rs. 5 crores had been provided for development of minor ports. Half of this sum would be required for individual items of work at several of these ports. It is proposed to utilise the remaining Rs. 2.5 crores on projects like the development of such ports as Pardip (Orissa), Tuticorin, Mangalore and Malpe (all in Madras State). Mr. Shastri disclosed that the Government of India would shortly be sending an officer to Pardip to prepare a scheme for the provision of certain interim shore facilities, like a pier for loading and unloading of ores.

After shipping, the Transport Minister touched upon inland water transport. He said that the main problem to be tackled in this sphere was the designing of a suitable craft for economic operation on shallow waterways. Fortunately, after very careful consideration and on the advice of a foreign expert, a special type of craft had been designed and orders had been placed for their construction. He hoped that these craft would be delivered in a year. Further, he stated that it was proposed to operate a modern diesel ferry service at a selected point on the Brahmaputra River. It may be noted here that a provision of Rs. 3.4 crores has been made in the second Plan for the development of river transport.

Road Transport

Mr. Shastri dealt with road transport also. He stated that it was expected to reach the target envisaged in the Nagpur Plan for road mileage by the end of the second Plan. The Nagpur Plan (published in 1943), it may be noted here, laid certain broad objectives for road development. The chief among them was that, at the end of 20 years, that is by 1963, no village in a well developed agricultural area should remain at a distance of more than five miles from the main road. It aimed at an addition of only 400,000 to the then existing road mileage and that in a period of 20 years. By the end of the first Plan, 107,000 miles of metalled roads and 167,000 miles of earth roads would have been completed. The second Plan provided for doubling the road mileage reached in the first Plan. The Nagpur Plan target in respect of bridge construction, however, he feared, would not be hit even in the second Plan. This deficiency, he expected, would be made up in the third Plan. The table below, taken from the Annual Report of the Ministry of Transport, shows the progress of expenditure on roads during the first Plan period:

(In lakhs of rupees)

	Total expenditure during the first four years of the Plan period from 1951-52 to 1954-55	Anticipated expenditure 1955-56	Anticipated expenditure 1956-57
Expenditure on the development of National Highways	1,779.44	950.00	900.00
Central Aid Programme for the development of roads of inter-State or economic importance	66.89	400.00	215.00
Other roads in Part C (except Coorg) and Part D states, N.E.F. Agency, and Sikkim and special projects	672.80	385.05	300.00

In addition, expenditure has been incurred or is proposed to be incurred from the Central Road Fund (including the special reserve) on road development in the country as given below:

	Rs. (lakhs)
1951-52	282.93
1952-53	363.44
1953-54	382.64
1954-55	480.06
1955-56 (anticipated)	588.66
1956-57 (anticipated)	663.51

The following figures indicate the overall position in regard to the expenditure on the development and maintenance of roads controlled by the Ministry of Transport (Roads Wing):

	Rs. (crores)
1951-55	59.12
1955-56	28.16
1956-57	25.94

Reiterating the importance of bullock carts to the Indian economy, Mr. Shastri averred that the Central Government would do all that was possible to improve the carrying capacity of this mode of transport. He pointed out that the Government had given free steel for construction of wider steel tyres for these carts. The Central Road Research Institute was performing experiments on different "self-aligning-hubs" for these carts. The Transport Advisory Council had decided to start a pilot scheme to test the load-carrying capacity of carts fitted with rubber tyres. The State Governments had agreed to go ahead with this scheme. If necessary, the Central Government would give financial assistance to them for this scheme.

SHEET ROLLING INDUSTRY

The problems facing the development of sheet rolling industry figured prominently in the presidential address of Dr. C. A. Mehta to the Seventh Annual General Meeting of the Western India Sheet Rollers Association, held at Bombay, recently. Dr. Mehta complained that the industry was passing through critical times, as a result of increased cost of production and the reduced margin of profit. He pointed that, while the price of copper had shot up from about £307 per ton, the highest touched in 1954, to £404 per ton in 1955, the price of brass and copper sheets could not be increased correspondingly. Consequently, the margin of profit declined from about Rs. 30 to about Rs. 15 per cwt. At times, it was much lower than even Rs. 15 per cwt. He was of the considered view that the margin of profit could not be maintained, let alone increased, because of the elastic demand for the products of this industry in India, unlike in Western countries.

The picture thus presented is indeed depressing. But it is all the more so considering the fact that, while the installed capacity of the industry has increased sharply, the output has lagged chronically behind. The following table gives a clear indication of this state of affairs:

Year	Installed capacity (In tons)	Output (In tons)	Percentage
1951	45,000	15,700	35.0
1954	54,000	13,500	25.0
1955	54,000	14,250	26.4

The sheet rolling industry has also not made much progress in producing cold rolled industrial sheets. This is chiefly due, according to Dr. Mehta, to lack of demand.

How is the future of the industry to be made more secure than at present? Dr. Mehta is of the opinion that the future of the industry can be better only if it is assured of a steady supply of raw materials at a reasonable price. Welcoming, in this connection, the Government's proposal to establish an All-India Metals Board, he remarked:

"This is a most timely proposal and it is to be hoped that the Government will soon take necessary steps to implement it. Such a Board will be in a position to secure adequate supplies and import of non-ferrous metals at reasonable and economic prices and also make adequate plans for full development of indigenous mines and the expansion of production of non-ferrous metals, such as copper, zinc, etc. I am confident that the establishment of such a Board will considerably help in securing adequate supplies of non-ferrous metals at more favourable terms by entering into trade contracts with some of the important producers of the world and also fix reasonable prices for indigenous metals like copper and lead as in the case of steel. This will enable the industry to get the metals at lower prices than at present."

Dr. Mehta also urged the conversion of the idle capacity of the brass and copper sheet rolling industry to aluminium, for which he claimed there was growing domestic and export markets as well. He, however, averred that this conversion alone would not be economical, unless import of aluminium scrap was allowed free of duty.

It will be recalled that, recently, the Government imposed a duty of 25 per cent. on import of aluminium scrap, in order to protect the indigenous producers of aluminium. Dr. Mehta was of the view that this protection was unnecessary, as the entire production of aluminium ingots could be utilised for other purposes like conductors, extruded sections, alloy-sheets for industrial purposes, etc., leaving the scrap to be utilised for making sheets and circles for utensils. The following table gives the prices of aluminium ingots, aluminium sheets scrap and aluminium circles in September 1955 and March 1956, respectively:

	Aluminium		
	Ingots (Per lb.)	Sheets scrap (Per lb.)	Circles
	Rs. a. p.	Rs. a. p.	Rs. a. p.
September, 1955	1 8 2	1 5 0	1 13 0
March, 1956	1 11 10	1 9 0	1 15 0

It is clear from the above sets of figures that the price of aluminium circles has increased by As. 2 per lb. and of aluminium scrap by As. 4 per lb. Dr. Mehta averred that the price of Indian aluminium too had increased by As. 2 per lb., since the imposition of the duty. Despite this increase, the aluminium producers, he complained, were not able to offer any aluminium ingots to the sheet rolling industry.

NEW PRODUCTS AND PROCESSES

Chemicals in Plants

RECENT experiments on the effect of rain on the retention of chemicals in crop plants using radio-isotopes have shown that heavy rain may remove considerable quantities of compounds such as phosphorus and potash which are vital for the plants' growth. The experiments, which were carried out at the Michigan State University, U.S., have disclosed that for example, up to 71 per cent. of the potash present in plants was removed when they were exposed to four hours of stimulated rain. In a number of cases, the quantity of nitrogen, calcium, magnesium, boron, manganese, iron and copper present in the leaves was also markedly reduced. In the experiments, the chemicals being investigated were "labelled" with radio-active isotopes. This enabled the scientists to make quantitative measurements of the amounts of each chemical present in the plants when they had been separated one from another by chemical analysis. The experiments have also indicated that continued rain may weaken plants, not only by washing out nutritious chemicals from the soil—a phenomenon known for many years—but also by removing significant quantities of these vital nutrients from the plants themselves. The results suggest that not only well-known nutritious chemicals, such as phosphate and potash, but also chemicals which are present in the soil in only small quantities, but which are necessary to the plants' existence and growth, may have to be applied to plants which are exposed to continuous rain.

Antibiotic Food Preservatives

Pilot scale experiments on the use of antibiotics to preserve fish in trawlers are now being carried out aboard a trawler belonging to the Fish and Fish Products Division of the Department of Scientific and Industrial Research, London. Results so far obtained show that when minute quantities of the antibiotic, called chlorotetracycline, are added to the ice, which is used to preserve the fish while the ship is at sea, the fish can be kept in good condition for from seven to ten days longer than usual. Experiments on the use of antibiotics for preserving fish have also been carried out in Canada, while somewhat similar experiments in the use of antibiotics for preserving food have been carried out in the U.S. The latter experiments have disclosed that the storage life of chicken carcases, under normal conditions of handling, can be at least doubled by injecting antibiotics into the animals just before they are slaughtered. Other experiments are now in progress at the Low Temperature Research Station, Cambridge, to see whether procedures analogous to those used with meat animals might extend the life of chicken carcases in the somewhat different conditions of handling prevailing in Britain. In the present state of the law, the use of any antibiotic as a food preservative would be illegal in Britain. A regulation permitting their use, in a strictly limited application, has just been made in the United States. Obviously, before any similar application could be made in Britain, the health authorities would have to be satisfied that the procedure proposed was safe.

Making Dense Ceramics

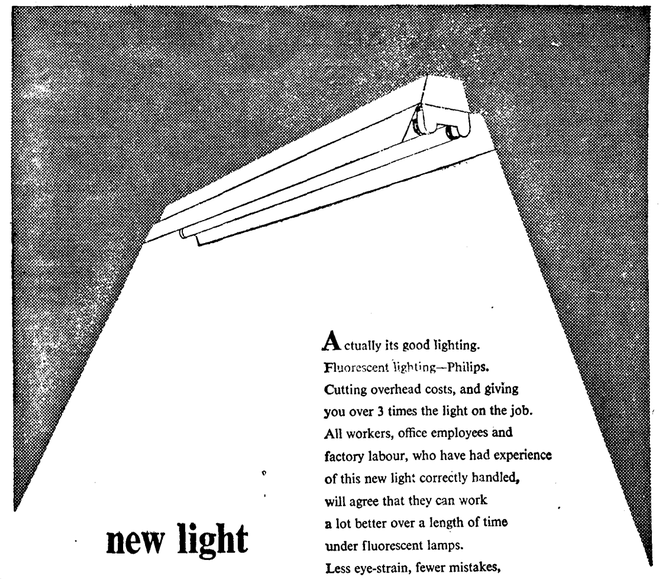
Experiments into different methods of production of dense, high-purity magnesia ceramics carried out at the Battelle Institute, London, are said to have shown that the density is affected markedly by the physical form of the powder from which the ceramics are made. By the use of proper heat treatment in calcining the magnesia powder, ceramic bodies, with no apparent porosity, were, for example, obtained at sintering temperatures as low as 1650° Centigrade, when certain heat treatments were used in calcining the magnesia powder. Moreover, it is claimed, each species of magnesia powder appears to have an optimum calcining temperature at which those powders that densify most readily can be obtained. Although the experiments were limited to magnesia and magnesia ceramics, it is believed that the same techniques could be useful for simplifying preparation of dense ceramics of other high-purity oxides.

Speaking Meter

The astonishing progress made in tele-communications has given a Swiss electric meter factory the idea of designing a *speaking meter*, which, in response to a simple telephone call, indicates its call-number and the position of its counting mechanism *viva voce*. This instrument is, it is claimed, destined to render excellent sevice in electricity supply systems, for instance, in daily reading at a distance of meters in unattended substations. This electro-technical novelty in the field of tele-communications will be exhibited and demonstrated, along with many others, at the Swiss Industries Fair, which will be held from 14th to 24th April 1956 in Basel.

Steel Wheelbarrow with Mechanical Dump Body

A factory at Assen (the Netherlands) produces a new type of steel wheelbarrow with a pneumatic-tyred wheel, patent application for which has been filed. It is suitable for carrying out earthwork and concrete jobs, as well as for agricultural and horticultural purposes. When dumping, the body automatically tilts to a vertical position. After discharging, the body falls back to its normal position. The advantage of the dump body is that, with less exertion, the work can be done more smoothly, while the barrow itself has a longer life, due to less wear. The body can be very readily detached from the supporting frame and the various parts can be simply packed together for shipping, as a result of which they occupy only one-third of the space of a normal steel wheelbarrow.



new light on your overheads

Actually its good lighting.
Fluorescent lighting—Philips.
Cutting overhead costs, and giving you over 3 times the light on the job.
All workers, office employees and factory labour, who have had experience of this new light correctly handled, will agree that they can work a lot better over a length of time under fluorescent lamps.
Less eye-strain, fewer mistakes, quicker work, and an improved general atmosphere, these are the results of better lighting. And working tests have proved that Philips Fluorescent Lamps, used with quality control gear, have a burning life of 7500 hours, which is just about 4 years. These are a few reasons why Philips Fluorescent Lamps & Fittings are being installed in homes, offices and factories throughout the world.

PLANNED LIGHTING BY PHILIPS

Philips are fully prepared to provide you, without any obligation on your part, advice for a planned lighting system. Call them in and discuss it.

LIFE INSURANCE CORPORATION BILL REFERRED TO SELECT COMMITTEE

VALUABLE ASSURANCES TO POLICYHOLDERS

THE debate in the Lok Sabha which took place last week over the motion for referring the Life Insurance Corporation Bill to a Select Committee provided an occasion for the Union Finance Minister, Mr. C. D. Deshmukh, who moved the Bill, to expand the Government's attitude towards certain important questions relating to the future of the Corporation, of the policyholders, agents and other interests concerned. Last week, we reviewed his reference to the issue of compensation to shareholders. His references to other interests are also of equal importance for the future of insurance in general.

Mr. Deshmukh prefaced his speech with a reply to certain general criticisms against the Government's nationalisation policy. He referred, in particular, to the criticism that only a small part of insurance funds had been involved in mismanagement. He said that he had always admitted that there had been a few companies which conducted their affairs well and which observed good standards. But there were only a few companies of this kind and even these, he asserted, were not representative of life insurance. Although the field of malpractices might have been small, it indicated, according to him, the existence of a disease which had become endemic in the system and was, therefore, full of dangerous potentialities. He then stated that one had to consider the "consequence of malpractices, even to a small extent, on the people affected," for such malpractices "jeopardise the savings of men of small means to whom this loss might easily be a matter of life and death." He added: "But the principal point about nationalisation is that the State did not have to make out a case that the private sector had failed. Nationalisation is justified on many other grounds of ideology, philosophy, on the objectives of a welfare State. So, it is futile for any one to take his stand only on this, that, unless the Government proves, as in a court of law, that there have been malpractices over a very wide extent, by implication, the State has no right to nationalisation."

This passage indicates that the Government has been moved by ideological considerations to nationalise insurance. In that case, there was no need for the Government spokesmen to have initiated a campaign of indiscriminate vilification against private insurers. It is really monstrous to say, as Mr. Deshmukh did, that even the few companies that followed good standards were not representative of Indian life insurance.

Increase in Business

Life insurance business, as is well known, has expanded steadily in recent years. Between 1953 and 1954, new life business, transacted by Indian insurers alone, expanded from Rs. 138 crores to Rs. 213 crores, or by 54 per cent. It is gratifying to note that this trend has continued, though the pace of this increase has not apparently been maintained. Mr. Deshmukh stated that new business in Bombay since the nationalisation of insurance was Rs. 15.53 crores, as against Rs. 13.51 crores in the corresponding period of last year—an increase of 15 per cent. —and that the business in Madras during the same period was Rs. 1.89 crores, as against Rs. 1.43 crores or an increase of 32 per cent. He said that, as he had himself been prepared for some decline in business, he was "agreeably surprised"—he hoped, to the "discomfiture" of the Government's critics—that the business was "better" than under private management. This is not a valid conclusion. After all, life business ought to improve from year to year. That apart, the groundwork for the major part of the business reported after nationalisation must have been done before nationalisation. Mr. Deshmukh is, therefore, not right in claiming the entire credit for himself.

There has been some criticism that there is complete absence of competition in the set-up proposed by the Government for insurance. If it is conceded that the Government should be the only body that should operate insurance, it is difficult to see how an element of competition could be introduced into Government-owned insurance. The more we think of it, the more are we convinced that the suggestion is absurd. Mr. Deshmukh made out a convincing case against starting more than one Government-owned corporation. Pointing out that the spirit of competition would necessarily be restricted even if there were a number of corporations, he said:

"It would be difficult to have different investment policies. Then, there could hardly be any difference in employment policy or in the standard of servicing. Therefore, in a nationalised set-up, competition would have a restricted field and could only be in terms either of efficiency in service or in the rate of development of new fields of business. And we believe that a competition of this nature could be achieved through zonal organisations that are contemplated in the Bill, without creating other complications that would almost inevitably ensue, if there were several autonomous corporations competing with each other throughout the country."

Central Office

Explaining the relationship between the central office of the Corporation to the zonal offices, the Minister said that the former would be responsible for the policy aspects of insurance business, such as, determination of premium rates and the determination of policy relating to investment of funds, and the control and supervision of zonal offices. He added:

"So far as day-to-day business is concerned, it is our intention that the zonal organisations should, for all practical purposes, be autonomous and should be allowed to run their insurance business without undue interference. We would regard the zonal organisations as the executive arms of the Insurance Corporation, and it will be for these zonal organisations to sell insurance within their territories, to service the policies issued and, generally, to ensure that insurance becomes more widely known, more popular and thereby to mobilise even larger volumes of the savings from all sections of the people, in order to attain the principal objective of this measure of nationalisation."

Dwelling on the future of persons now engaged in life business, Mr. Deshmukh pointed out that the Bill provided that all whole-time employees would be taken over by the Corporation initially on the existing terms and conditions. One of the first tasks of the Corporation would be to formulate suitable scales of pay and terms and conditions of service and fit the existing staff appropriately into these scales. Referring to agents, he said that their relationship with the insurance companies was of a contractual nature. The Corporation would honour all *bona fide* obligations of the companies. But he was afraid that the chief agents, who had till now exclusive jurisdiction over certain territories, would "have to go." In this connection, he recalled that the "trend over the last decade or two has already been towards the elimination of the chief agents and their substitution by branches."

Bonus

The policyholders of the well-established offices have been under an apprehension that the prospects of their earning attractive bonuses might be jeopardised through amalgamation of their companies' businesses with those of ill-managed companies. They will no doubt be relieved to hear from Mr. Deshmukh that there will be no attempt at robbing "Peter to pay Paul." The Government's intention, he said, was to group the existing policies into a suitable number of groups on the basis of the reserves they bring into the Corporation and each group would get a bonus appropriate to its reserve strength. All policies, taken out after the Ordinance would, of course, get a uniform bonus. The policies of insolvent companies, he pointed out, would have to be suitably reduced. He realised that such a measure would be hard for the policyholders. Although he could not commit the Government in advance, he, however, stated that it would be "our endeavour to treat the policyholders who fall in this category as generously as possible."

The point was raised in the course of the debate whether the Government intended to take over the insurance schemes administered by the Mysore State Government and the Travancore-Cochin Government. Mr. Deshmukh said that such was the Government's intention. He admitted that the Government had received a memorandum from the co-operative insurers and said that it would be made available to the Select Committee. A suggestion was made that the Corporation should transact motor insurance. On this question, Mr. Deshmukh said: "I have no doubt that once the Corporation gets into stride, it will cast its eyes on any other form of insurance which could be taken over but I do not wish to threaten and I do not wish to prognosticate. It is for the Corporation to find out what its strength is and what its capacity is to bear other kinds of business."

Referring to the demand that the Government should transact general insurance, crop insurance, cattle insurance and so on, he said:

"I think the Government should be given some time to digest them and see what their implications are. As the Speaker has already ruled, so far as this Bill is concerned its scope cannot be expanded to accommodate the working out of ideas of this kind so that if I ignore them it should not be taken as proof of lack of sympathy with the objectives of those who made the suggestions. But I repeat these are difficult questions so far as cattle and crop insurance are concerned. I doubt whether in our country conditions exist today which would make it possible to establish such institutions on any but a pilot or experimental basis."

Business in Other Countries

In the course of his reply to the debate, Mr. Deshmukh admitted that there had been a significant increase in life business between 1938 and 1954. But he added that, while considering this increase, one had to take into account whether it had been effected at a reasonable cost and whether it had been accompanied by "undesirable practices" and finally how it compared with the experience of other countries. He calculated that, if the period between 1935 and 1946 was ignored, then the increase in business was only 36 per cent. the lowest for all advanced countries. In fact, countries like Japan, Italy, France, and Turkey, which were also as poorly developed in the matter of insurance as India, had shown increases ranging from 197 to 547 per cent.

It is difficult to concede that Japan, Italy and France are as "poorly developed as India" in insurance. In any case, international comparisons of this kind have to be interpreted with a great deal of caution. For inflation has greatly distorted the value of insurance in many countries. Further, a totally different set of conclusions, different from the one that the Finance Minister reached, could be derived from a comparison of index numbers of insurance in force in different countries in 1953 (Base: 1939=100). The index numbers are: India 354; Australia 334; New Zealand 311; Norway 226; U.K. 208 and U.S. 273. On this basis, the index numbers for the group of countries, Mr. Deshmukh mentioned are: France 2,086; Japan 4,166; Italy 3,429 and Turkey 1,263. The impressive levels at which index numbers for insurance in those countries stand represent the impact of inflation.

ACC
Issued by: THE ASSOCIATED CEMENT COMPANIES LIMITED Sales Managers: The Cement Marketing Co., of India Limited

THE UNITED COMMERCIAL BANK, LIMITED

(INCORPORATED ON 6TH JANUARY, 1943)

AUTHORISED CAPITAL	Rs. 8,00,00,000	PAID-UP CAPITAL	Rs. 2,00,00,000
SUBSCRIBED CAPITAL	Rs. 4,00,00,000	RESERVE FUND	Rs. 95,00,000

THIRTEENTH REPORT OF THE BOARD OF DIRECTORS.

The Directors submit to the shareholders the Audited Balance Sheet of the Bank as on, and the Profit and Loss Account for the year ended, 31st December, 1955.

	Rs.	a.	p.
The net profit for the year, after providing for all known and anticipated charges and including Rs. 1,08,724-8-9 brought forward from the previous account, amounts to	37,77,761	2	0

The Directors have made the following appropriations out of the net profit:

1.	Transfer to Reserve Fund	8,50,000	0	0
2.	Provision for Taxes	14,00,000	0	0
3.	Provision for Bonus to Staff	4,00,000	0	0
4.	Balance	11,27,761	2	0
	Rs.	37,77,761	2	0

Out of the balance of Rs. 11,27,761-2-0 the Directors recommend to the shareholders payment of Dividend at Rs. 2-12-0 per share, free of Income-tax, which will absorb Rs. 11,00,000 leaving Rs. 27,761-2-0 to be carried forward to the next year's account.

The Bank's business has shown a gratifying expansion during the year. The profit for the year 1955 is higher than that of the preceding year due largely to the fact that the deposits of the Bank had shown a substantial increase during the year. Your Directors consider the working of the Bank and the profits for the year as satisfactory. The Bank's investments appear in the balance sheet at below market value.

During the year your Bank took over the business of the Pondicherry branch of the Banque de L'Indochine.

On his appointment as a Director of the State Bank of India, Mr. R. G. Saraiya resigned his seat on the Bank's Board. The Directors wish to place on record their appreciation of the valuable services rendered by him as Director since the inception of the Bank.

The Directors have to report with great sorrow the death in August 1955 of Mr. Navinchandra Mafatlal who was a Director of the Bank since its inception and had contributed greatly to the building up of the Bank. He was held in high esteem and respect by his colleagues and the Directors desire to place on record their high appreciation of the great service rendered by Mr. Navinchandra Mafatlal during his long period of office.

In the vacancies caused by the resignation of Mr. R. G. Saraiya and the death of Mr. B. N. Jalan and Mr. Navinchandra Mafatlal the Directors have appointed Mr. Yogindra N. Mafatlal, Mr. G. D. Kothari and Mr. T. S. Rajam respectively as Directors of the Bank.

The Directors have also to report to you changes in the general management of the Bank. Mr. B. T. Thakur, who was the General Manager since the inception of the Bank, resigned, on grounds of health, from the chief executive charge of the Bank in April 1955 and requested that he be allowed to go on long leave preparatory to retirement. In view of the medical advice received by Mr. Thakur the Directors accepted his resignation with reluctance and regret. The Directors place on record their high appreciation of his service in building up the Bank to its present position, size and strength within a comparatively short period and wish him happiness and restoration to normal health.

The Directors have appointed Mr. S. T. Sadasivan as General Manager in succession to Mr. B. T. Thakur and promoted Mr. R. B. Shah and Mr. O. H. Ghoewala as Deputy General Managers of the Bank.

The Directors place on record their appreciation of the services of the General Manager and the officers and staff of the Bank during the year.

Under Article 95 of the Bank's Articles of Association four of your Directors,

SHRI M. L. SHAH — SHRI P. D. HIMATSINGKA
SHRI G. L. BANGUR — SHRI M. L. DAHANUKAR

retire by rotation, and, being eligible, offer themselves for re-election.

The Shareholders are requested to appoint auditors for the current year and to fix their remuneration.

By Order of the Board,
I. P. GOENKA,
Vice-Chairman.

CALCUTTA, *15th February*, 1956.

BALANCE SHEET AS AT 31st DECEMBER, 1955.

CAPITAL AND LIABILITIES	Rs.	a.	p.	Rs.	a.	p.
1. Capital—						
AUTHORISED CAPITAL— 8 lakhs shares of Rs. 100 each	8,00,00,000	0	0			
ISSUED AND SUBSCRIBED CAPITAL— 4 lakhs shares of Rs. 100 each	4,00,00,000	0	0

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the foregoing Balance Sheet of the United Commercial Bank, Limited, as at 31st December, 1955, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated the Branch returns audited by the Statutory or Local Auditors, and report that:—

(a) We have obtained all the information and explanations we have required and have found them to be satisfactory;

(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(c) the returns received from branch offices of the Bank have been found adequate for the purpose of the audit;

(d) in our opinion, the foregoing Balance Sheet and Profit and Loss Account are drawn up in conformity with the law;

(e) such Profit and Loss Account shows a true balance of profit for the year;

(f) such Balance Sheet exhibits a true and correct view of the state of the affairs of the Bank according to the best of our information and the explanations given to us and as shown by the books of the Bank, and

(g) in our opinion, books of account have been kept by the Bank as required by Section 130 of the Indian Companies Act, 1913.

OPTICAL AND PRECISION INSTRUMENTS

COMPREHENSIVE SURVEY SUGGESTED

NO authentic data relating to the country's requirements of scientific, optical and electrical instruments are available. The quantum of imports of these instruments every year appears to be sizable, and India is spending on this account more than Rs. 1.7 crores worth of foreign exchange, although there are two departmentally managed Government concerns manufacturing these instruments. The following table indicates the imports of different categories of instruments, during the four years ended 1953-54:

(Rs. in lakhs)

Year	Advanced Instruments for Scientific and Industrial Research	Optical and Ophthalmic Instruments	Electrical Instruments Meters
1950-51	53.94	30.42	84.17
1951-52	59.74	66.00	107.42
1952-53	49.20	37.39	67.15
1953-54	48.84	47.85	62.82

It is seen from the table above that the value of imports, on an average for the four-year period, was of the order of Rs. 173 lakhs, a sum which is by no means inconsiderable from the point of view of the large foreign exchange resources necessary for financing the development scheme under the second Five-year Plan. Savings in foreign exchange apart, it will be desirable for the country to obtain as much self-sufficiency as possible in these instruments, as they are essential for the economic and social progress of the country. It is, therefore, encouraging to note from the report of the Estimates Committee on the activities of the National Instrument Factory (N.I.F.), Calcutta, that the Ministry of Production, which is in charge of this factory, has requested the Development Wing of the Ministry of Commerce and Industry to carry out a survey of the capacity and output of scientific instruments in the private sector. Welcoming this move, the Estimates Committee observes: "The Committee consider that, besides a survey of capacity, a survey of the requirements of the country at present of the various kinds of scientific instruments and the position that would develop with the increasing industrial activity in the country should be undertaken without any further delay, especially as the manufacture of scientific instruments forms an important part of the second Five-year Plan of the country." A survey of the kind suggested by the Committee, it is needless to add, will be of great utility. It would appear that, besides the plans for the increase in the output of the N.I.F., as well as the Ordnance Factory at Dehra Dun various schemes have been submitted by State Governments to the Planning Commission for the setting up of similar factories under the small-scale industry schemes. It is further proposed to establish servicing workshops in the various parts of the country. Since there is a danger of overlapping of plans and duplication of effort, there is need for co-ordination of all these schemes. The data which the survey referred to would shortly make available will be useful for this purpose.

The National Instruments Factory, into the affairs of which the Estimates Committee conducted investigation, is an 125-year old institution located in Calcutta. It had its origin in the Mathematical Instruments Office founded in 1830 for the maintenance and repair of precision instruments, such as theodolites required by the Survey of India. It specialised in repair work also of other varieties of precision instruments. Its services were utilised by the Union and State Governments and semi-Government bodies in the country. During the last war, it became a full-fledged factory for the production of survey, drawing, mathematical and optical instruments. Its principal functions at present are (*a*) to manufacture, repair and sell surveying, mathematical and other scientific instruments, (*b*) to purchase and test imported and indigenous instruments for supply to indentors on outright sale, (*c*) to design and develop new instruments and conduct research work, fundamental or applied, in connection therewith, and (*d*) to certify standard lengths, rain gauges and flash-point apparatus.

With a view to reviewing the progress of the N.I.F., the Government of India, appointed in 1947, an Expert Committee under the chairmanship of Prof. G. R. Paranjpe. This Expert Committee made a number of valuable suggestions for the development of the factory. Among the short-term measures was the shifting of the factory to a new site near the College of Engineering and Technology at Jadavapur in Calcutta. The scheme is estimated to cost Rs. 71 lakhs. The Ministry expects, according to the Estimates Committee, to complete the construction of buildings and the purchase and installation of machinery in 1956-57. The Committee regrets the delay of as many as 8 years that has taken place in implementing the scheme.

There is a common belief that underestimates of revenues and overestimates of expenditure have been a characteristic feature of Indian budgets. This belief is substantiated by the estimates of expenditure submitted by the Production Ministry on behalf of the N.I.F. Says the Estimates Committee: "In the budget for the year 1955-56, the provision originally made on account of buildings, plants and machinery, additional staff, etc., was Rs. 38.26 lakhs. The Ministry have, however, now stated that the whole of this expenditure may not be incurred and that the provision will have to be scaled down to about Rs. 18.09 lakhs in the Revenue Estimate due mainly to the expenditure on building and the optical glass factory not materialising as anticipated." The fact that the expenditure was cut by more than half indicates the lack of serious planning and forethought on the part of the officials at the time of framing their budgets.

What is even more distressing is the non-implementation of the Expert Committee's suggestion for erecting an optical glass factory. The Estimates Committee has done well in criticising the Ministry for not taking adequate interest in the project. "Since the optical glass is an essential requirement for the manufacture of these (ophthalmic) instruments, the postponement of the project necessitates the continued wastage to a substantial extent of our foreign exchange resources and at the same time delays the development of an important industry."

The Paranjpe Committee had suggested the need for manufacturing a number of new items, which, in its opinion, might not appeal to the private sector. These included, among others, vacuum pumps, calculating machines, photographic lenses, microscopes, cameras, cine projectors, range finders, eye instruments, etc. It is now stated that the development of most of these has not yet been undertaken at all. Instead, the items that are being manufactured now consist of drawing boards, chains of sorts, levelling plane table, etc., items which are not by any means high precision instruments the manufacture of which could well be undertaken in other factories either in the public or the private sector.

The Estimates Committee has pointed out a number of other defects, too, in the running of this factory. Among these are frequent breakdowns in plant and machinery caused by failure to replace obsolete machinery and by running the factory on a departmental basis instead of on a commercial basis. The factory does not prepare any profit and loss account; hence it has been difficult to assess the exact amount of loss incurred. The sale price of certain instruments manufactured in the factory is stated to be lower than their cost price. One of the important posts has been left vacant for over a year as a result of which the work in the factory has suffered considerably. Two foreign experts are employed in the factory, but these experts, it is stated, are not doing the work of a highly specialised technical nature and they could easily be replaced by Indians. Pointing out these defects, the Estimates Committee has suggested a number of measures for eliminating them.

The Ministry has prepared a scheme for the manufacture of scientific instruments on cottage- and small-scale basis. Under this scheme, a number of components and small parts will be manufactured in cottages. These units will act as feeders to the main assembling factory. The latter would provide technical advice to the subsidiary industries, distribute various raw materials, and arrange for the supply of tools, gauges, fixtures, etc., and undertake inspection of production in all the various stages. It is stated that clinical thermometers could be manufactured on these lines. Other items proposed are measuring chains, woodwork, stands, plane tables, drawing boards, set squares, etc. Referring to this scheme, the Estimates Committee states that full details for organising production on this basis should be worked out before steps are taken to implement them.

U.K. TERMS OF TRADE IMPROVE

The export price index in the United Kingdom rose by one point to 105 in February, 1956. Announcing this in London on 20th March, the Board of Trade said that, as the import price index was unchanged at 105, the terms of trade improved by one point to 100. (The average for 1954 was 100). The rise in the export index was attributable to a two-point rise (from 98 to 100) in the index for textiles and a one-point rise to 105 in the index for the miscellaneous manufactured goods category. These index numbers, it is pointed out, are calculated from the average values of a selection of commodities shown in the monthly Trade and Navigation Accounts.

CANADIAN KNOW-HOW – serving a vital Indian industry

INDIA'S fast-growing aluminium industry owes much to the know-how and experience of Canadian experts.

Indian Aluminium Company's Canadian consultants are helping to erect a new smelter at Hirakud in Orissa which will more than double the country's total production and embody techniques and advances resulting from continuous world-wide research.

A lot of money, too, will be required to construct this smelter, and part of the funds will be raised by a proposed issue of new capital by the Company.

hold a complete range of V-Belts made by FENNER for immediate delivery and manufacture Pulleys quickly

BENGAL PAPER'S PROFIT IMPROVES

DIVIDEND STEPPED UP—RECORD OUTPUT

A SIZABLE improvement in financial results is disclosed by the audited accounts of the Bengal Paper Mill Co., Ltd. (Managing Agents: Messrs. Balmer Lawrie & Co., Ltd., Calcutta) for the half-year ended 31st December 1955. The gross profit has risen to Rs. 18.37 lakhs from Rs. 14.33 lakhs for the previous half-year, to which level it had gone up from Rs. 11.46 lakhs for the six months ended 31st December, 1954. Thus, this is the second half-year in succession to witness an increase in profit; with the latest rise, the Company has established a record level of profit for the past ten years.

The net profit has, however, shrunk from Rs. 8.94 lakhs to Rs. 6.60 lakhs, consequent on the larger provision for taxation, namely, Rs. 5.95 lakhs, as against Rs. 0.30 lakh provided in the previous half-year. The large provision for taxation is the result of changes in corporation tax introduced in the last Budget. Consequent on the decline, the net profit has come down almost to that (Rs. 6.61 lakhs) for the corresponding half-year of 1954.

Notwithstanding the drop in net profit, the Directors have transferred Rs. 1 lakh to the general reserve, which had not received anything six months back. In the previous half-year, however, the Directors had added Rs. 4 lakhs to the tax contingency reserve. A higher dividend at the rate of 20 per cent. per annum, as compared with 17½ per cent. per annum paid for the previous half-year and 12½ per cent. per annum for the corresponding six months of 1954, has also been proposed.

With the improved results for the half-year under review, the Directors' expectations, held out in their previous report, have materialised, thanks to the higher production and to consistently better chemical recovery. The Directors report that the output for the half-year under review amounted to 6,944 tons, as compared with 6,613 tons in the previous six months and 6,107 tons in the corresponding half-year of 1954; this, we are told, is a record for any half-year. The Directors expect this record to be bettered in the current and subsequent half-years.

The following comparative table, giving the salient features of the Company's profit and loss account for the past four half-years, provides an idea of the Company's progress in recent times:

(In lakhs of rupees)

	For the half-year ended			
	31-12-55	30-6-55	31-12-54	30-6-54
Sale proceeds	107.42	90.94	89.51	88.09
Stocks	4.68	6.21	0.72	3.86
Manufacturing and other expenses	87.54	82.23	76.30	77.68
Gross profit	18.37	14.33	11.46	12.83
Managing Agents' remuneration	1.47	1.06	0.88	0.89
Depreciation	4.35	4.03	3.97	3.91
Provision for taxation	5.95	0.30	..	0.30
Net profit	6.60	8.94	6.61	7.72
Reserves and provisions written back	..	..	0.30	..
To reserves	1.00	4.00	3.25	4.00
Dividends—				
Preference (7% and 6%)	0.81	0.81	0.81	0.81
Ordinary	4.50 (20% p.a.)	3.94 (17½% p.a.)	2.81 (12½% p.a.)	2.81 (12½% p.a.)
Carry forward	2.02	1.73	1.54	1.50

The increase in production referred to above is duly reflected in the rise in sale proceeds and in the manufacturing and other expenses.

The Company's paid-up capital is unchanged at Rs. 71 lakhs, of which ordinary shares account for Rs. 45 lakhs, 7 per cent. cumulative preference shares for Rs. 2 lakhs, 7 per cent. 'A' cumulative preference shares for Rs. 4 lakhs and 6 per cent. 'B' cumulative redeemable preference shares for Rs. 20 lakhs. The reserves and surplus aggregate Rs. 38.74 lakhs. There is a debenture liability of Rs. 5.49 lakhs. The provision for taxation stands at Rs. 8.30 lakhs. The current liabilities aggregate Rs. 38.21 lakhs. The gross block of the value of Rs. 203.42 lakhs stands written down to Rs. 54.02 lakhs. The current assets amount to Rs. 107.72 lakhs and cover the current liabilities and provision for taxation by a large margin of Rs. 61.21 lakhs.

The extensions to the Company's chemical plant will shortly be completed when a further improvement in chemical recovery is expected. The Company has got plans to bring the production of the mill up to almost double its present capacity. These plans (a reference to which was made in our last issue) are, the Directors say, rapidly maturing and, when ready, orders for the plant would have to be placed without delay as deliveries are becoming more and more extended. The Directors do not expect to make any call on the shareholders to finance the expansion, as they hope to find a large part of the required finance from the Company's own resources, and the balance by raising a debenture loan. The Company has also a proposal to undertake, in conjunction with the India Paper Pulp Co., Ltd., a project for the manufacture of pulp from bamboo.

The Rs. 25 fully paid-up shares of the Company are being currently quoted at Rs. 135 *cum-div.* On an *ex-div.* basis, the latest dividend provides a yield of 3.8 per cent. per annum, free of income-tax.

POLYCHEM LTD.

The distinction of being the first company to undertake the manufacture of polystyrene in India goes to Polychem Ltd., a new company incorporated in Bombay as a joint venture by Messrs. Kilachand Devchand & Co., Ltd. and the Dow Chemical Company of Midland, Michigan, U.S.A. The Company, which was incorporated in October 1955, has come out with an offer of its shares to the public. The authorised capital of the Company is Rs. 1.50 crores, made up of 80,000 redeemable 7½ per cent. (taxable) cumulative first preference shares of Rs. 50 each, 80,000 ordinary shares of Rs. 50 each and 140,000 unclassified shares of Rs. 50 each. The issued capital is Rs. 80 lakhs, made up of the entire 80,000 preference shares of Rs. 50 each and 80,000 ordinary shares of Rs. 50 each.

Of the issued capital, the promoters, Messrs. Kilachand Devchand, their friends and the Dow Chemical Company will be allotted ordinary shares of the value of Rs. 20 lakhs. Only the balance of ordinary capital and the entire preference capital will be offered to the public at par. The list for public subscription will open on 31st March and close on 12th April or earlier, but not earlier than the 6th April. A sum of Rs. 15 per share on the preference share and Rs. 25 per share on the ordinary shares is payable along with application and a similar instalment on allotment. Thus, the ordinary shares will become fully paid-up on allotment, but the preference shares will remain partly paid at Rs. 30. The balance of Rs. 20 on the preference shares are payable on calls not exceeding Rs. 10 each, the calls to be made at intervals of not less than two months. The Company has the right to redeem the preference shares at par after 15 years, either in one lot or in parts, but the entire preference capital will be redeemed within 20 years from the date of issue.

The manufacture of polystyrene is an entirely new venture in India and Polychem Ltd. is the only unit which has received the sanction of the Government for this purpose. In order to ensure the success of the project, the promoters, Messrs. Kilachand Devchand & Co., have secured the technical assistance and advice of the Dow Chemical Company, one of the foremost chemical concerns in the world. Dow Chemical Company is also claimed to be a leading producer of polystyrene and other plastic materials, accounting as it does for 50 per cent. of the U.S. output of polystyrene. The principal raw material for the production of polystyrene is styrene monomer, which will be supplied by one of the subsidiaries of the Dow Chemicals for a period of five years. Polychem Ltd., is, however, free to purchase the raw material from other sources also, if it can obtain the product at a cheaper price. If the Company finds it advisable to manufacture later on styrene monomer in India, the Dow Chemical Company will provide technical assistance. The basic raw materials for this are ethyl alcohol and benzene and these are available in India in sufficient quantities to meet the Company's needs.

Polystyrene is at present used in India by the plastic moulding industry for the manufacture of numerous articles of industrial and domestic consumption. Polystyrene has been found to have many other uses also not so far touched upon in India. The scope for consumption of polystyrene is, therefore, expected to increase vastly. The consumption of polystyrene in India is said to have risen from below 2 million lbs. in 1948 to about 5 million lbs. in 1954. It is estimated that it will grow further to 10 million lbs. per annum during the second Five-year Plan period. The factory will be located in Bombay, with a plant having a capacity of 6 million lbs. of moulding powder per year, with a margin for expansion. Further, provision will be made for manufacture of 1.2 million lbs. of polymer. The capital outlay on the plant will be Rs. 39.3 lakhs and the working capital is expected to be Rs. 48.2 lakhs per year. The greater part of the capital outlay and working capital will be met from the present issue of Rs. 80 lakhs and the balance will be met from borrowings. The public issue has been underwritten by the Industrial Credit and Investment Corporation of India Ltd. to the extent of 40,000 ordinary shares and 40,000 preference shares. The Bank of Baroda Ltd. also has underwritten 40,000 preference shares.

INDUSTRIAL INVESTMENT TRUST

The working of the Industrial Investment Trust Ltd. (Secretaries: Messrs. Premchand Roychand and Sons, Ltd., Bombay) during the year ended 31st December 1955 has resulted in a further improvement in earnings, the gross revenue rising from Rs. 6.52 lakhs to Rs. 6.88 lakhs, and the profit before taxation showing an increase from Rs. 5.44 lakhs to Rs. 5.82 lakhs. This is the second year in succession for which both the gross earnings and profit have recorded an advance. The distribution to shareholders has been comfortably maintained at 4½ per cent., free of income-tax, after setting aside Rs. 1.03 lakhs for tax assessed for the years 1950-51 to 1953-54 and after strengthening the reserves by Rs. 31,013.

The Company's income by way of interest on securities and dividend on shares amounts to Rs. 6.79 lakhs, as against Rs. 6.50 lakhs for 1954 and this is supplemented by a larger income of Rs. 8,691 from other sources and profit on sale of investments, as against Rs. 4,238 in 1954. The profit on sale of investments amounts to Rs. 6,013, which compares favourably with Rs. 853 earned in the previous year. There has been a welcome decline in expenses from Rs. 78,385 to Rs. 74,583. The Secretaries' commission is higher at Rs. 31,153, as compared with Rs. 29,125 for 1954. With the surplus of Rs. 2.85 lakhs brought in from the previous year, the profit available for appropriation is Rs. 8.67 lakhs. Of this, the Directors have transferred to the general reserve Rs. 6,013, being the profit on sale of investments, in accordance with Article 144 of the Company's Articles of Association. As in the previous year, the investment reserve has been strengthened by Rs. 25,000. The dividend absorbs Rs. 4.50 lakhs, leaving Rs. 2.83 lakhs to be carried forward, subject to taxation for the years ended 31st December, 1953, 1954 and 1955.

The following is a synopsis of the Company's latest balance-sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	99,99,250	Investments	1,22,03,694
Reserves and surplus ...	22,30,522	Debts, deposits and advances ...	27,797
Provision for taxation ...	74,385	Furniture and fittings ...	3,085
Liabilities ...	5,67,717	Cash ...	6,37,298
	Rs. 1,28,71,874		Rs. 1,28,71,874

The investments stand reduced from Rs. 1.28 crores as at the end of 1954, to Rs. 1.22 crores. A break-up analysis of these investments shows that Government securities account for Rs. 4.12 lakhs, as against Rs. 2.94 lakhs a year ago, ordinary shares for Rs. 91.17 lakhs (Rs. 97.90 lakhs), preference shares for Rs. 18.81 lakhs (Rs. 19.05 lakhs) and debentures for Rs. 7.62 lakhs (Rs. 7.63 lakhs). The investments are shown at cost and their approximate valuation at market quotations as on 31st December 1955, or in the case of investments where no quotations were available on that date at the latest quotations received, was higher than the book value by 8.15 per cent., as against 2 per cent. at the end of 1954. At the close of 1953, it will be recalled, the market value of the Company's investments was lower than the book value by 4.54 per cent. and at the close of 1952 by 9.75 per cent. This comparison gives an idea of the extent to which the market value of equities have appreciated in the course of the past three years. Evidently, the Directors must have availed themselves of the rise in market values and sold some of the ordinary shares. For there has been a rise of Rs. 5.94 lakhs in cash balances, of which call deposits with banks account for Rs. 5.50 lakhs.

The provisions of section 314 of the Companies Act, 1956, which seeks to restrict the holding of a place or office of profit in a company by any of its directors or any of his relatives, apply as much to private companies as to public companies.

INVESTMENT PROBLEMS OF WESTERN EUROPE

(*Concluded from page 604*)

direction is likely to show itself also in a smaller desire to hold wealth in the form of bank deposit but, it is explained, this need not necessarily be regarded as an end in itself.

Investment trusts, the *Survey* continues, provide an obvious means of enabling those whose wealth is limited to take a greater interest in shares. In this way, risks can be widely spread and the problem of management delegated to experts. The exploitation of investment trusts, and when necessary their establishment and expansion, should form part of any programme designed to interest the small man, and personal owners of wealth in general, in this method of holding real values at two stages removed. Shares in an investment trust might also appeal to companies as a method, through an intermediary, of holding part of their liquid assets in a more remunerative and socially useful form, though certainly in a far less liquid form.

The *Survey* next considers public or semi-public corporations which would hold shares on a large scale and which may be needed in addition to everything else, at least in those countries in which the financial obstacles are really serious. It stresses the importance of not confusing the functions of such a national investment corporation with those of other specialised financing institutions which themselves are no doubt in need of expansion and activation in many cases.

Points From The Chair

Role of Foreign Capital in India

"THE role of foreign capital in present-day India is difficult to forecast. A survey published recently by the Reserve Bank of India showed that nearly 83 per cent. of all foreign investments in India at the end of 1953 came from the United Kingdom and, during the period 1948-53, the percentage of the United Kingdom's share of new business investment was not much less. These figures show to what extent British capital is involved. While speeches of individual ministers promise fair treatment to foreign capital they have recently made it clear that India is not likely to change her internal policies to attract foreign investment. It seems probable that in the future the role of foreign private investment in India will be smaller than in the past and that the emphasis on foreign investment as a whole is more likely to be on a Government-to-Government basis. The large sums required are probably beyond the means of all but the largest concerns, but there is, I am sure, a marginal role in which private capital can play its part if given its chance."

C. BLAKER,

Hongkong and Shanghai Banking Corporation.

Trade Practices in Tobacco

"The publication of the Government's Restrictive Practices Bill brings into prominence a number of questions which have been the subject of controversy, both inside and outside Parliament, in recent years. In the tobacco industry there are no agreements between manufacturers on prices such as are referred to under Part I of the Bill. The industry is, however, directly concerned with Part II of the Bill which deals with resale price maintenance and which, *inter alia*, seeks to prohibit the collective enforcement of resale prices. Until there has been more time to consider the implications of these measures it would be premature for me to speculate on their likely outcome or on their effects on the distributive trade. I would, however, say that in our judgment the system of collective enforcement of resale prices, as operated for many years in the tobacco trade, has worked fairly and well; and that while on the one hand it has protected retailers and wholesalers against price-cutting it has not, on the other hand, been used to restrict new outlets and it has helped materially in building up an efficient distribution service for the public."

SIR ROBERT SINCLAIR,

Imperial Tobacco Co. (of Great Britain and Ireland) Ltd.

Japan's Economy

"The anti-inflationary policy has continued and the balance of overseas trade further improved: exports rising substantially (some 24 per cent. over 1954), whilst imports remained approximately unchanged, the balance is expected to yield a surplus of some 360 million U.S. dollars. Japan enjoyed record food crops which resulted in lower prices and a reduction in food imports, which saved much foreign exchange. The anti-inflationary policy is expected to continue and, although the standard of living is rising, many difficulties still lie ahead of Japan. The population continues to increase by nearly one million a year, Labour Unions are becoming more active in demanding higher pay and better working conditions and the uncontrolled hire purchase system is increasing facilities for buying on credit which may some day have serious repercussions. Japan's economy continues to be based on trade with the free countries and on American offshore procurement, but as the countries of South-East Asia increased their own industrial potential, trading conditions may become more difficult for Japan. Trade with the Chinese mainland, her natural market, continues to hold political dangers which Japan cannot safely ignore. Japan became a member of the G.A.T.T. during the year, but unfortunately her admittance to the United Nations was vetoed by the Communist bloc. This was a considerable disappointment to Japan and is a matter which all well-wishers must hope will be rectified at an early date."

SIR KENNETH W. MEALING,

Mercantile Bank of India Ltd.

Industrialists' Perplexities

"As for the prospects for the current year, industrialists and business men alike are to-day faced with many perplexities and, in the field of capital investment, have many difficult decisions to make. The steps recently taken by the Chancellor were obviously carefully thought out, were deliberate and are doubtless having the effect they were intended to have. Industries directly affected by the credit squeeze are cutting down production, and staff must ultimately be released for other jobs. The period of readjustment is bound to be painful. Once a movement of this sort has been started, it is difficult to know where and when it is going to stop, but my own belief is that, in the course of the next twelve months, we shall be in a healthier economic position."

J. S. WILLS,

The Birmingham and District Investment Trust Ltd.

COMPANY MEETINGS AND DIVIDENDS

BOKARO AND RAMGUR LTD. Half-yearly General Meeting, Calcutta, 3rd April, 1956. Transfer books remain closed from 29th March to 3rd April 1956, both days inclusive.

STANDARD MILLS CO., LTD. Annual General Meeting, Bombay, 9th April 1956. Dividend: Rs. 20 per share, payable from 13th April to 31st July 1956, both days inclusive.

Notices

INDIAN ALUMINIUM COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Eighteenth Annual General Meeting of Indian Aluminium Company, Limited, will be held at the registered office, 31, Chowringhee Road, Calcutta 16, on Friday 27th April 1956, at 11 a.m., for the following purposes:

1. To receive and adopt the balance sheet at 31st December 1955, and profit and loss account for the year ended December 1955, together with the reports of the Auditors and Directors.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.
5. To transact the following special business, namely, to consider and, if thought fit, to pass the subjoined resolution as a special resolution:

"That the Regulations contained in the typewritten document submitted to this Meeting and for the purpose of identification subscribed by the Chairman thereof be and are hereby adopted as the Articles of Association of the Company in substitution for and to the exclusion of all existing Articles thereof."

The Share Transfer Register of the Company will be closed from 13th to 27th April 1956, both days inclusive.

Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on 27th April 1956, or to their mandatees. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

By Order of the Board,
JAMES HARDWICK,
Secretary.

14th *March* 1956.

Note.—(i) The typewritten document referred to above consisting of a draft of the proposed new Articles of Association of the Company can be inspected at any time during usual office hours at the registered office of the Company.

(ii) Any member of the Company who is entitled to attend and vote at the Meeting convened by this Notice is also entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

THE TITAGHUR PAPER MILLS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE ONE Hundred and Forty-sixth Half-yearly Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3-00 p.m. on Wednesday, 25th April 1956, for the following purposes:—

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the half-year ended 30th September 1955.
2. To declare Dividends.
3. To transact any other ordinary business that may be brought before the Meeting.

The Share Transfer Registers of the Company will be closed from the 11th April 1956 to the 25th April 1956, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO., LTD.,
Managing Agents.

CHARTERED BANK BUILDINGS,
CALCUTTA, 15*th March* 1956.

Printed copies of the Report and Accounts will be despatched to Shareholders on or about 28th March 1956. Dividends will be paid to Registered Shareholders only.

PROFIT OF CAREW AND CO. DWINDLES

SVADESHI AND TATA MILLS REPORT BETTER RESULTS

Carew & Co., Ltd.

THE directors of the above Company (Managing Agents: Messrs. Gladstone Lyall & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 30th June 1955.

There is a working profit, after payment of Rs. 19 (Rs. 312-8) forfeited dividend, of Rs. 2,63,548 (Rs. 9,73,417), to which must be added a carried forward balance of Rs. 61,723 (Rs. 66,210) making a total of Rs. 3,25,271 (Rs. 10,39,628). After deducting provision for taxation of Rs. 1,30,826 (Rs. 4,35,905), there is a balance of Rs. 1,94,445 (Rs. 6,03,723) which the directors propose to dispose of as follows:—

In paying a 6½ per cent. dividend, without deduction of income-tax, on preference shares for the year ended 30th June 1955 Rs. 52,000 (Rs. 52,000), in paying a dividend of As. 4 (As. 12) per share, without deduction of income-tax, on ordinary shares Rs. 80,000 (Rs. 2,40,000) and in transferring to the debenture redemption reserve fund Rs. 50,000 (Rs. 2,00,000), leaving to be carried forward Rs. 12,445 (Rs. 61,723).

The Company's distilleries returned an appreciable profit which, at Rs. 8,01,944 before taxation, compares favourably with the figure in the previous year of Rs. 3,79,187. One of the major factors which accounted for this increase was the ability to import into West Bengal substantial quantities of industrial spirit from the Rosa Distillery. Unfortunately, however, there is now a ban upon the importation of spirit into West Bengal from any outside State and this is, of course, having an effect upon the present-day sales. The sales of foreign liquors were more than maintained during the year.

Once again a loss of Rs. 17,257 (Rs. 2,906) has been shown in Darsana's pharmaceutical accounts. Unfortunately, the severe competition from the sale of imported pharmaceutical products continued during the year. The directors are confident, however, that the Tariff Commission Report, which is expected to be issued shortly, will contain recommendations which will assist the indigenous manufactures to compete on more favourable terms with the imported pharmaceutical products. The directors are pleased to report that the overall sales in the current year show a marked improvement. Unfortunately, difficulty has been and is still being experienced in obtaining import licences for raw materials although every effort is being made to impress upon Government authorities the necessity for our receiving these essential commodities.

As was envisaged in the last directors' report, the Darsana crush proved to be the highest on record at 46,08,158 maunds and compares with a crush in the previous year of 24,31,817 maunds. The recovery, however, fell from 8.98 per cent. in the previous year to 8.46 per cent. due to the fact that the crushing season had necessarily to be of longer duration and resulted in our crushing in the early part of the hot weather. Unfortunately, as forecast in the last report, the price fixed by the East Bengal Government affected adversely the overall position and on the whole season a loss of Rs. 2,73,860 resulted. This arose from the fact that in fixing the ex-factory rate per maund of sugar, Government assumed that the molasses resulting from the crush would yield Rs. 8 per maund to the factory whereas, in point of fact, the market rate was approximately half Government's anticipated rate. Very strong representations have already been made to Government at several conferences and the directors now understand the matter is receiving further consideration. This Company, in conjunction with other sugar mills in East Pakistan, is claiming compensation from Government for the difference between the actual rate at which molasses was sold and the rate Government assumed would be the selling price when fixing the ex-factory sugar price. If the claim is admitted and paid, the loss at present shown by Darsana will be wiped out and a profit will be recorded. The result, however, is not likely to be known for some little time.

The maintenance of the estates at Darsana resulted in a loss of Rs. 1,74,822, due largely to the fact that the yield from the farms was not as good as was anticipated and because Government reduced the price of cane by As. 4 per maund. The directors are contemplating the closing down of certain of the farms of marginal economy but it is essential that the Company maintains some of the farms for the purpose of seed cultivation and cane development.

Although the Company has not been able to remit profits earned in Pakistan to India during the year, the directors are in negotiation with the State Bank of Pakistan, Karachi.

Rosa ended with a crush of 26,85,315.75 maunds at an overall recovery of 9.44 per cent. This compares with the previous season's crush of 15,50,367 maunds with a recovery of 9.66 per cent. The fall in recovery was due, in part, to detrimental climatic conditions and also to the fact that the Company's farms experienced, in several areas, an outbreak of cane disease. The current season's anticipated crushes at both Dasana and Rosa have every indication of exceeding those recorded in the year under review.

The price fixed by the East Bengal Government for sugar produced in the 1955-56 season is again unsatisfactory. This matter has been the subject of strong representations to the East Bengal Government but the outcome of such representations is not, at the moment, known.

Accounts in brief are as under:—

	Rs. 2,14,63,751		Rs. 2,14,63,751

Svadeshi Mills Co., Ltd.

The directors of the above Company (Managing Agents: Tata Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit for the year, after making a provision of Rs. 19,00,000 (Rs. 3,00,000) for depreciation, amounts to Rs. 15,47,509 (Rs. 8,30,903). Adding thereto the balance brought forward from the accounts of the previous year of Rs. 43,799 (Rs. 40,896), the total is Rs. 15,91,308 (Rs. 8,71,799). From this sum, the directors have appropriated to equalisation of dividend fund Rs. 14,38,697 (Rs. 8,00,000) and to provision for gratuities account Rs. 35,000 (Rs. 28,000), leaving a balance of Rs. 67,611 (Rs. 43,799), which amount the directors propose to carry forward. The directors recommend payment of the following dividends for the year ended 31st December 1955 (to be paid out of the equalisation of dividend fund):—

On preference shares at Rs. 5 (Rs. 5) per share free of income-tax Rs. 75,000 (Rs. 75,000) and on ordinary shares at Rs. 12 (Rs. 8) per share without deduction of income-tax Rs. 12,00,000 (Rs. 8,00,000). The directors hope that the result of the year's working, which shows substantial improvement over that of the preceding year, will be considered satisfactory. The trading conditions were favourable during the year. No further controls on the industry were imposed and there was a sustained demand for cloth at remunerative prices. For the first time since partition the Indian cotton supply position became very easy, the quota system was abolished and the mills were able to secure all their requirements at satisfactory rates.

Further progress was made in the re-organisation and renovation of the mills during the year. Machinery of the value of about Rs. 37,11,000 was installed during 1955. This included cards, ring frames, sizing machines, automatic and ordinary looms, calenders, stentering and drying machine, etc. At the end of the year machinery of the value of about Rs. 3,62,000 which was received had still to be installed.

On the 25th May 1955 the Labour Appellate Tribunal gave its decision on an appeal against an award of the Industrial Court respecting mill clerks dealing with their pay scales and grades, dearness and other allowances, leave, gratuity, etc. Under the Tribunal's decision modifying the award pay scales were revised, increased dearness allowance was granted with retrospective effect from May 1953, a reduction was made in working hours and a few modifications made in working conditions. As a result a sum of about Rs. 82,300 had to be paid by the Company to give retrospective effect to some of the terms of the award. There will also be an extra liability in future in this connection of about Rs. 22,000 a year.

The directors have considered it desirable that the Company should become a member of the Cotton Textiles Export Promotion Council which had recently been formed for the promotion of the export of cotton textiles. The Company also participated along with other Tata concerns in the Indian Industries Fair held at New Delhi last year.

The last date for the presentation of fractional certificates against the issues of 15,000 and 25,000 ordinary shares made in 1949 and 1954 respectively has been extended by the directors by one year upto the 30th September 1956. During the year under report eight fractional certificates of the 1949 issue were presented for conversion into two whole shares, leaving a balance of 30 shares on the 31st December 1955, still to be allotted. Similarly 2,310 fractional certificates of the 1954 issue were converted into 770 shares, leaving 113 shares still to be allotted.

The Company's buildings, machinery and stocks were insured as at 31st December 1955 for Rs. 5,03,33,000. Profits and standing charges were insured for Rs. 50,00,000 per annum indemnity being payable for 24 months. The installed capacity of the mill is 72,236 spindles and 2,000 looms.

Tata Mills Ltd.

The directors of the above Company (Managing Agents: Tata Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 31st December 1955.

The profit for the year, after making a provision of Rs. 10,00,000 for bonus, of Rs. 20,00,000 (Rs. 5,75,900) for depreciation and of Rs. 55,800 for taxation amounts to Rs. 7,69,559 (Rs. 3,33,552). Adding thereto the balance brought forward from the accounts of the previous year of Rs. 11,417 (Rs. 6,865), the total is Rs. 7,80,967 (Rs. 3,46,417). From this sum the directors have appropriated to dividend reserve account Rs. 6,52,482 (Rs. 3,00,000) and to provision for gratuities account Rs. 85,000 (Rs. 35,000), leaving a balance of Rs. 43,485 (Rs. 11,417), which amount the directors propose to carry forward. The directors recommend payment of a dividend on ordinary shares at Rs. 4 (Rs. 2-8) per share, without deduction of income-tax, for the year ended 31st December 1955 (to be paid out of the dividend reserve account) Rs. 5,24,630 (Rs. 3,25,944).

The directors hope that the result of the year's working, which shows substantial improvement over that of the preceding year, will be considered satisfactory. The trading conditions were favourable during the year. No further controls on the industry were imposed and there was a sustained demand for cloth at remunerative prices. For the first time since partition the Indian cotton supply position became very easy, the quota system was abolished and our mills were able to secure all their requirements at satisfactory rates.

On the 25th May 1955, the Labour Appellate Tribunal gave its decision on an appeal against an award of the Industrial Court respecting mill clerks dealing with their pay scales and grades, dearness and other allowances, leave, gratuity, etc. Under the Tribunal's decision modifying the award pay scales were revised, increased dearness allowance was granted with retrospective effect from May 1953, a reduction was made in working hours and a few modifications made in working conditions. As a result a sum of about Rs. 1,14,000 had to be paid by the Company to give retrospective effect to some of the terms of the award. There will also be an extra liability in future in this connection of about Rs. 32,000 per year.

In pursuance of the Company's plan for the re-organisation and renovation of the mills, machinery of the value of Rs. 16,70,000 was installed during 1955. This included a set of barber colman high speed spooler and warper, a high production stentering and drying range, a humidification and ventilation plant in the loom shed, a Tomlinson's raising machine and a locally made 16-cylinder vertical drying range. At the end of the year, machinery of the value of Rs. 1,90,000 which was received had still to be installed. The directors, have ordered out 12 inter frames, 20 ring spinning frames, 48 cards, fluorescent lights for the loom shed and a H.T. switchgear. In order to meet the requirements of the Tata Hydro Companies the mills again worked the two diesel engines during the whole year.

In accordance with the special resolutions passed at the extraordinary general meeting of the Company held on 7th November 1955, the authorised capital of the Company was increased from Rs. 66,12,500 to Rs. 1,00,00,000 by the creation of 1,35,500 new ordinary shares of Rs. 25 each. In terms of the special resolutions, out of the increased authorised capital of the Company, 1,31,157½ new ordinary shares were offered to the holders of the existing ordinary shares for subscription at par in the proportion of one new share for every ordinary share held by them with the option to the shareholders to apply for additional shares. As considerably more additional shares were applied for than the number available, the directors in allotting these shares gave preference to shareholders with small holdings.

During the year no debentureholder exercised option 11 under the Debenture Trust Deed under which a debentureholder would get 13½ ordinary shares of the Company of Rs. 25 each for every debenture of Rs. 1,000.

The Company's buildings, machinery and stocks were insured as at 31st December 1955 for Rs. 4,39,80,000. Profits and standing charges were insured for Rs. 40,00,000 per annum, indemnity being payable for 24 months. The installed capacity of the mill is 62,096 spindles and 1,800 looms.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	32,78,938	Block ...	1,77,34,839

QUESTION HOUR IN PARLIAMENT

Uranium and Thorium

URANIUM and thorium are at present produced in India in compound forms only. The Government has a scheme for the production of these fissile materials in the near future for peaceful purposes. The Atomic Energy Commission proposes to obtain from abroad the materials required for carrying on research till such time as they are produced in our country.

—Jawaharlal Nehru

Insurance Premium Rates

My remarks in the Lok Sabha about life insurance premium on 3rd March 1956 have been interpreted by some to mean that a further reduction in premium rates is likely to occur in the near future. This may have caused some holding back of business temporarily. I would like to make it clear, however, that the Government has no such intention.

• • • •

Rate of Interest

The rate of interest on the Government loan will be the rate at which the Government itself can borrow *plus* a small element to cover costs of issue and management. The rate of interest on the loan to be given by the Bankers' Syndicate will be 1 per cent. above the Bank of England rediscount rate with a minimum of 4½ per cent. It is not possible to raise any foreign public loans on reasonable terms under the present market conditions. On the question as to what extent the sterling balances would be utilised to repay the loans, sterling balances represent practically the total of the foreign exchange assets of the country. All foreign earnings, including the proceeds of loans, are credited to them and all foreign expenditure, including the repayment of loans, is debited to them. In a sense, the loans will be repaid from the sterling balances.

—C. D. Deshmukh

Imperial Preferences

The Government of India feels that no change is called for now in the system of imperial preferences operating at present.

• • • •

X-ray Equipment

The Government has set up a committee to go into the question of manufacture of X-ray equipment and surgical instruments. Only an infinitesimal fraction of X-ray equipment is now being produced in the country.

• • • •

Training of Indians for Steel Plants

The Soviet technicians' scheme to train Indian workers, technicians and engineers for work in Indian steel plants will come into operation from 1st April 1956. The scheme envisages primary training (individual and crew) for a period of two to nine months for about 4,500 unskilled and low skilled workers who have had elementary education; supplementary training for a period up to one year for about 300 skilled workers who have some previous experience of operations and about 40 workers who have received primary training; probationary training for about 500 qualified engineers and technicians who have had no previous practical experience in steel works. About 300 skilled workers who have undergone supplementary training and 135 engineers and technicians who have had probationary training are to be sent to the U.S.S.R. for advanced training.

—T. T. Krishnamachari

Soviet Aid to Coal Industry

The Government of India has received from the Soviet Union an offer of technical assistance for the development of the Indian coal industry. The Government is considering whether such assistance is required and, if so, to what extent and on what terms. There have been some preliminary correspondence in this connection between the two Governments. There have been offers of such assistance or enquiries from other countries also, such as West Germany, East Germany, France and the U.K.

• • • •

Drills for Coal Mining

A few drills for coal mining have been purchased from the Soviet Union at an economic price. The Government's intention is to call for global tenders for the purchase of coal mining equipment, so that it can get this equipment at the cheapest possible price.

—K. C. Reddy

Gold Production

The number of gold mines in working condition in India is four. The value of gold produced in these mines during 1955 was Rs. 5,30,13,649, as against Rs. 5,62,05,682 in 1954 and Rs. 5,08,21,592 in 1953.

• • • •

Assam Oil Company

The Assam Oil Company has expressed its desire to widen its sphere of oil exploratory activities and talks between the representatives of the Government and of the Company are now in progress in this region.

• • • •

Aero-magnetic Survey

A Canadian team has arrived in India to conduct the aero-magnetic survey of the country. The services of the team have been secured under the Colombo Plan aid.

Russian Drilling Rigs

A contract between the Governments of India and the Soviet Union may be signed for the purchase of drilling rigs as soon as the quotations received from the Soviet Union have been examined and accepted by the Government of India. India may be able to strike a good bargain with the Soviet Union. The Government of India hopes that it will be able to get these rigs not only from the Soviet Union but also from other countries whose terms are attractive.

—K. D. Malaviya

Educated Jobless

The Planning Commission has asked the study group on educated unemployed to work out details for a pilot project. If the pilot projects are successful, the question of adequate allocations for special schemes will be considered. The study group has recommended special schemes which are likely to provide employment to 240,000 educated persons in the country. The investment required for this under the second Plan will be of the order of Rs. 130 crores.

—S. N. Mishra

Loans to Co-operative Sugar Mills

A sum of Rs. 5 crores has been provided for loans to the State Governments for subscribing to the share capital of the co-operative sugar factories.

—Dr. Punjabrao Deshmukh

CENTRAL BANK OF INDIA LTD.

(*Concluded from page 605*)

industry and enable it to make its full contribution to national development.

"The Directors' report has referred to the great loss suffered by the Bank by the passing of Mr. H. C. Captain within a very few days of his retirement from service. Mr. Captain, in spite of ill health during the closing stages of his life, had continued to devote himself unstintedly to the interests of the Bank and it was a matter of great regret to the Board that his long connection of 34 years had come to such a tragic and abrupt end. The Board and the members of the staff have severally placed on record their appreciation of all Mr. Captain had done for the Bank and I am sure the shareholders share their sense of loss and wish to convey to the members of his family their heartfelt condolences.

"On the retirement of Mr. Captain, the Board appointed Mr. N. K. Karanjia as General Manager of the Bank. It was a fitting recognition of his long and meritorious service and, during the few months in which he has been working as Chief Executive of the Bank, the Board have every reason to be satisfied with the wisdom of their choice.

"To strengthen the organisation of the Bank and to exercise greater control over the day-to-day working, the Board appointed Mr. C. H. Bhabha Vice-Chairman and delegated certain powers to him under Article 107 of the Company's Articles of Association. Mr. Bhabha has since been devoting a great deal of his time and energies to the affairs of the Bank and I cannot speak too highly of the work he has been doing.

"To Mr. N. K. Karanjia, General Manager, and Mr. F. C. Cooper, Deputy Manager, our acknowledgements are due for the zeal and efficiency with which they have been discharging their responsibilities. I would also like to thank other members of the staff at the Head Office and the branches and the members of the local committees at various centres for the services they are rendering.

"I now move the adoption of the Report and the Audited Statement of Accounts for the year ended 31st December 1955."

THE BUCKINGHAM AND CARNATIC CO., LTD.

(*Concluded from page 616*)

amounts have been invested in Trusteee securities.

"The lot of those concerned with the management and operation of industry in these days is by no means enviable. In addition to the complexities of recent legislation covering all aspects of their work, there is the burden of severe personal taxation and uncertainty about the future.

"I hope you will gladly join with me in expressing appreciation of the cheerful and determined manner in which the executive and supervisory staff of the management and the mills have carried out their duties. I think we should be particularly grateful to the Manager and other officers of the mills who have worked so hard and intelligently in implementing the Company's aim to attain the maximum improvement in efficiency."

Notices

THE BENGAL PAPER MILL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Thirty-second Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, 21, Netaji Subhas Road, on Friday the 20th April 1956, at 12 noon, to receive the Directors' and Auditors' Reports, to adopt the Statement of Accounts for the half-year ended 31st December 1955, to declare dividends, and to transact the ordinary general business of the Company.

Notice is hereby also given that the Transfer Books and Register of Members of the Company will be closed from 16th to 20th April 1956, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
Managing Agents.

21, NETAJI SUBHAS ROAD,
CALCUTTA.

THE DHUNSERI TEA COMPANY LIMITED

For THE ASSOCIATED CEMENT COS., LTD.,
CEMENT AGENCIES LTD.,
Managing Agents,
N. DANDEKER,
Managing Director.

BOMBAY, 23*rd March* 1956.

FIAT CARS

For the second successive year, Fiat cars, both 500C and 1100, came out with flying colours in their respective classes in the tough reliability trial arranged by the Western India Automobile Association. The 1956 reliability trial held on 17th and 18th March in Poona, was the most rugged trial held so far. The route covered about 237 miles from Poona, to Khopoli, Pen Mahad, Mahabaleshwar, Surul and back to Poona. It included crossing four dangerous ghat sections, (1) the steep 5-mile long Bhor Ghat, (2) the 25-mile long, treacherous Mahabaleshwar Ghat, (3) the 5-mile long Khambakti Ghat and (4) the 4-mile long Katraj Ghat. The cars had to maintain fixed average speeds, in the normal traffic conditions after observing all traffic rules. The middle lap of 120 miles was the most difficult one which included patches of rough roads unfit even for bullock carts. Each car had to return to the finishing line within a minute of the scheduled time. Those who completed the reliability trial in right time had to enter the elimination test on the next day, which consisted of reversing through a narrow enclosure, negotiating three hurdles and then racing along an oval-shaped track. Miss Perin Dorabji (Premier Automobiles Ltd.) in her Fiat 500C won the Standard-Vacuum Challenge Trophy and Sardar Jagannath Maharaj Pandit Cup. She also won the tyresoles Concessionaires Challenge Trophy for motor car with best performance entered by a lady. Mr. J. M. Vakil (Premier Automobiles Ltd.) in his Fiat 1100 won the Premier Automobiles Challenge Trophy.

MONEY RATES FIRM

(From Our Own Correspondent)

BOMBAY, 28*th March*

For yet another week, the short-term money market displayed stringent conditions. The demand for bank credit showed no sign of relaxation, while the supply of funds was still tight. Consequently, banks had to seek accommodation from the Reserve Bank and the State Bank of India. The rates of interest were firm and tended to harden further.

Inter-bank call money was bid by all sections of banks at 3¼ per cent. Banks offered 3¼ per cent. to 3⅜ per cent. for house money; even 3½ per cent. for large blocks. Short-term deposits were placed at 3½ per cent. for all periods upto six months.

The aforesaid conditions in short-term money were fully reflected in the poor response to this week's sale of 91-day Government of India Treasury Bills. The amount offered was no more than that invited, that is Rs. 1 crore. The average rate of accepted tenders also stood firm at Rs. 2-8-6 per cent. per annum. *Nothwithstanding this poor response, the authorities have invited tenders for* Rs. 1 crore next week also.

The Reserve Bank's statement for the week ended 23rd March 1956 shows a further expansion of Rs. 4.92 crores in notes in circulation. Notes held in the Banking Department have, on the other hand, declined by Rs. 4.57 crores, so that the fractional rise in total notes is covered by a similar increase in rupee coin. Foreign securities have gone up by Rs. 3.97 crores and there has been a corresponding decline in rupee securities. In the Banking Department, Central Government's deposits have declined by Rs. 2.96 crores, while those of other Governments and banks have risen by Rs. 1.57 crores and Rs. 3.18 crores, respectively. On the assets side, cash balances have dwindled by Rs. 4.57 crores, while balances held abroad are up by Rs. 82 lakhs. There has been a sharp rise of Rs. 5.41 crores in loans and advances other than to Governments, this increase being mainly due to the rise of Rs. 7.84 crores in advances to Scheduled banks against usance bills. Fresh advances during the week against these bills aggregate Rs. 10.44 crores.

The consolidated statement of position of the Scheduled banks for the week ended 16th March 1956 discloses a rise of Rs. 2.33 crores in demand deposits, in distinct contrast to the aggregate decline of Rs. 18.31 crores in the previous two weeks. Time deposits, on the other hand, have dropped further by Rs. 2.92 crores. Inter-bank borrowings have gone up by Rs. 87 lakhs, while borrowings from the Reserve Bank show a rise of Rs. 7.89 crores and those from the State Bank Rs. 1.86 crores. On the assets side, advances have maintained their upward trend with a further sharp increase of Rs. 12.95 crores. Bills purchased and discounted have also gone up but only by Rs. 92 lakhs. Investments are lower by Rs. 90 lakhs. Cash balances show small variations.

The Gilt-edged market displayed a firm trend during the week under review, with prices of dated loans marked up by one to two annas. The only notable exception to the general trend was provided by 3 per cent. 1986 Conversion Loan which shed As. 5 due to lack of support. The general firmness was mainly due to shortage of stocks and large demand on account of State funds. The volume of business was fairly large. 3 per cent. 1957 hardened by an anna to Rs. 99-11, while 3 per cent. 1958 and 3 per cent. 1959-61 were well held at Rs. 99-9 and Rs. 98-1, respectively. 3 per cent. 1963-65 gained As. 2 to Rs. 94-13 and 3 per cent. 1964 an anna to Rs. 94-10. Despite the approach of interest payment 3 per cent. 1966-68 remained dull at Rs. 92-11. 3 per cent. 1970-75 was taken up As. 2 higher at Rs. 89-11. 3 per cent. 1986 Conversion Loan was marked down by As. 5 to Rs. 76-11. 3½ 1961 was unchanged at Rs. 99-6. 3½ per cent. 1964 and 3½ per cent. 1965 were wanted As. 2 higher at Rs. 98-9 and Rs. 98-8, respectively.

In the foreign exchange section, the rupee was unchanged in terms of the U.S. dollar at Rs. 477½ per $100 (banks selling) and at Rs. 473 per $100 (banks buying). Sterling was, however, a shade weaker, spot sterling in New York dropping from $2.80⅜-2.80⅜ to $2.80.7/16-2.80.9/16 and forward sterling (three months) from $2.78.9/16-2.78.11/16 to $2.78.7/16-2.78.9/16. Transferable sterling was a fraction better at $2.77⅛-2.78, as against $2.77⅛-2.77⅜ a week ago.

TEA DUSTS ADVANCE

(From Our Own Correspondent)

CALCUTTA, 27*th March*

There was no sale yesterday being a holiday on account of Holi festival.

The offerings of dusts during last week's sale for domestic consumption aggregated 19,200 packages, prices for most of which advanced by virtue of the fact that there was a strong general demand. The strongest features of the auction were black leaf teas and all grainy types, prices for both of which recorded gains of As. 4 to As. 6. Other types of teas on offer rose by As. 3 to As. 4. Buyers paid good attention to the very best C.T.C. Assams possessing good liquors and, although the balance varieties of this category were slightly irregular, prices were higher by several annas. The rates were: best Assam C.T.C. Rs. 3 to Rs. 3-2, medium Assam grainy dust Re. 1-14 to Rs. 2, and medium Dooars Re. 1-13 to Re. 1-14.

Offerings of leaf amounted to 2,200 packages. Demand was good and prices gained by As. 2 to As. 4.

BULLION STEADY

(From Our Own Correspondent)

BOMBAY, 28*th March*

A somewhat irregular trend in bullion was witnessed during the week under review. The undertone, however, remained steady, mainly due to the strength of silver. Over the week, while silver recorded a small gain, gold was fractionally lower.

In the earlier part of the week, both silver and gold were subdued, due to holiday influences, fears of fresh imports of silver coins from Tibet and a tapering of demand in the ready section. Trading was also restricted. The reopening of the market yesterday after *Holi* witnessed a fresh spurt in silver, due to renewed buying by a leading bull operator. Sellers were also reserved. Improved demand in the ready section also assisted the upward trend. In the absence of any special influence, gold ruled steady in sympathy with silver. Today, also, there was a further rise in prices of both silver and gold, but the slackness in demand and larger arrivals pruned a part of the earlier gains.

Silver for forward delivery (28th March settlement) hardened early in the week from Rs. 181-12 to Rs. 182-11, but slided back to Rs. 180-14. Yesterday, however, there was a sharp upswing to Rs. 183-12 before the settlement ran out at Rs. 182-15. Forward silver (26th April settlement) moved up from Rs. 182-10 to Rs. 183-10. After a recession to Rs. 181-12, this settlement appreciated to Rs. 184-7 today, but reacted to close at Rs. 183-6.

Ready silver (.996 Mint) rose from Rs. 182 to Rs. 184 before finishing at Rs. 182-14. The floating stocks of silver are reported to be 800 bars. The daily average offtake was 25 bars.

Forward gold (27th March settlement) advanced early in the week from Rs. 105-8 to Rs. 106-15, but reacted to Rs. 104-15. After a recovery to Rs. 105-11, the settlement wound up at Rs. 105-9. Forward gold (26th April settlement) rallied from Rs. 105-4 to Rs. 106-10, but this rise was short-lived, and the price reacted to Rs. 104-13 on Saturday. Today, however, the rate for the current settlement came up to Rs. 106-2 before closing at Rs. 105-1.

Ready gold gained from Rs. 105-12 to Rs. 106-5, but closed at Rs. 105-2.

The floating stocks are placed at Rs. 25,000 tolas. The daily average arrivals were 3,500 tolas, while the offtake was slightly lower at 3,000 tolas on an average.

In London, the price of silver was unchanged at 79d. for both spot and forward. Gold, on the other hand, gained a penny from 249*s.* 4½*d.* to 249*s.* 5½*d.* In New York, silver hardened by ⅛c. to 91⅛c.

The following comparative table shows the trend of the market during the week under review:

	28-3-56	Highest	Lowest	21-3-56
	Rs. a.	Rs. a.	Rs. a.	Rs. a.

N.B.—Foreign bullion prices shown in the above table relates to the previous day.

GOOD OFFTAKE IN KIPS

(From Our Own Correspondent)

MADRAS, 26*th March*

Trading in kips with the U.K. was poor, as buying was selective, though, in some cases, higher prices were established. It looked as though price declines had been arrested, and with regulated flow of tanned output to Madras, E.I. tanners, it was felt, should be able to establish workable price levels and trade profitably. Arrivals of kips were moderate and offtake good. Stocks did not accumulate in the market. Demand for Inferior fifths cow hides was insistent from upcountry merchants. Prices of buff hides and buff calf were unchanged and of cow calf weak.

In the London tanned skins public auctions, primes and semi-prime sheep skins were sold at unchanged levels before a fair attendance of buyers. All other descriptions declined badly, and the worst sufferer was rejection assortments.

Prices in the local market declined by As. 2, in sympathy with the poor results in the March London public sales.

CONFIDENT TONE IN HIDES

(From Our Own Correspondent)

KANPUR, 25*th March*

During the week under review the general tone of the Kanpur hides market was one of confidence. Arrivals were relatively lower than those a week ago, except in goats in which supplies were comparatively large. The main purchasers were local tanners headed by Messrs. Cooper Allens. The latest quotations are as follows: Wet salted cow 1st grade at Rs. 300; 2nd grade at Rs. 200 to Rs. 300 and 3rd grade at Rs. 100 to Rs. 120 per score. Wet salted buff 1st grade at 1 lb. 12 ozs. and 2nd grade at 2 lbs. 2 ozs. per rupee. Goat 1st grade at Rs. 275 and 2nd grade at Rs. 225 per 100 pieces. Sheep 1st grade at Rs. 300 and 2nd grade at Rs. 250 per 100 pieces.

SPOT COTTON QUIET

(From Our Own Correspondent)

BOMBAY, 28*th March*

It now looks as though there is no possibility whatever of futures trading in cotton being resumed in the near future. The Forwards Markets Commission would appear to have deferred consideration of the question, thanks to the aggrieved bull operators' move to take the dispute to the Supreme Court. In the meantime, the cotton market is thick with rumours of some Government action to check the buying spree in the spot market which has pushed up the prices of cotton to near the ceiling rates. In fact, the prices of some of them have already hit the ceiling. There are, according to cotton circles, two measures which the Government seem to be contemplating. These are: (1) Reintroduction of the quota system for allocating the available supply of Indian cotton among the mills on an equitable basis; and (2) revision of import policy, permitting purchases of U.S. cotton stapling 7/8" and above. At present, American cottons with a staple of 1-1/16" and above only are allowed to be imported. It is not known whether the authorities will take recourse to both these measures or one of them. Since there has been no official statement supporting or rejecting either of the aforesaid conjectures, a section of cotton traders surmises that both the steps may be adopted simultaneously.

While news on the attitude of New Delhi is being keenly awaited, the fear of Government's direct intervention has already had a psychological effect on the spot market. Now this market is not as cheerful as it was in the past three weeks. In fact, mills and dealers are very cautious in entering into fresh commitments. Turnover is, therefore relatively small and prices have showed a tendency to remain unchanged or to look down slightly. Mill enquiries are not large. Only stray lots of good quality cotton are being picked up by mills. Exportable styles, however, are evoking keen demand, on expectation that the traders' plea for the extension of export licences by 15 days after the 31st inst. may be conceded by the authorities. The quantity of cotton remaining unutilised, it may be noted, is estimated at 60,000 bales. Shippers' attention is focussed principally on Bengals, Zodas, Oomra Deshi, Kala and Wagad.

In the foreign section, Africans are meeting with renewed buying support. Large business has been concluded in A. R. Uganda new crop styles. Over the week, the price of Busoga has gone up from Rs. 1,437 to Rs. 1,460-Rs. 1,465. Jinja is also quoted higher at Rs. 1,365, as against Rs. 1,355 a week before. Egyptians, however, continued to rule quiet, in view of the high level of prices.

The latest available quotations—in rupees per candy of 784 lbs.—for cotton from the Sewri market (figures in brackets relate to last week's closing rates) are given below: Bengal *Deshi* 730 (730); Berar Jarillas 790 (790); Khandesh 770 (770); Vijay 930 (927); Oomra *Deshi* 730 (730); Moglai 685 (685).

The recovery witnessed in the Karachi cotton market last week proved to be short-lived. The market, once again, relapsed during the week under review. Apart from the lack of follow-up support, fears of increased competition from U.S. cotton in world markets acted as a damper. These fears were based on reports that the U.S. Senate had approved of an amendment directing the Agriculture Secretary to sell in the world markets about 150,000 bales of extra long staple cotton at competitive prices. Selling was, therefore, predominant and prices moved downwards. In the forward section, N.T.R.G. May delivery dropped Re. 1-5 to Rs. 75-13 per maund of 82 lbs. July delivery was quoted lower at Rs. 74-11, as against Rs. 76-14 at which business in this contract opened on Monday.

The latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton are: Sind *Deshi* 77; Punjab *Deshi* 72-8; 4F Punjab R.G. 73-5; S.G. 78-5; L.S.S. Punjab R.G. 78-13; 289F N.T. Roller 79-9; S.G. 85-9; 289F Punjab R.G. 86-5; S.G. 82-5.

A distinctly firm trend prevailed in the Alexandria cotton market. The firmness was aided by the appreciably low estimate of the current crop which placed the total yield at 6.75 million cantars, as against 8.04 million cantars forecast in the official December estimate. After allowing for a minimum carryover, cotton traders felt that the quantities available for export, including Government stocks, during the six months ended August next would be only 700,000 cantars of Karnak, 250,000 cantars of Giza 30 and 500,000 cantars of Ashmouni. These reports induced good buying enquiries and prices of cotton registered a rise. The improvement was more marked in the case of Karnak than in that of Ashmouni.

The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market (figures in brackets giving last week-end rates) are: Karnak: March 87.75 (85.80) and May 87.03 (84.80); *Ashmouni*: April 69.95 (69.08) and June 69.20 (67.00).

There was no change in the sentiment of the Liverpool cotton market which continued to be quiet. Operators preferred to await a clear enunciation of the U.S. cotton policy, especially with relarged C.C.C. sales programme. Turnover was, as a consequence, restricted and prices moved narrowly. The Sudan cotton contracts (Basis cotton: G6S) came on the board on the 19th inst., the opening price of July-August, September-October and November-December deliveries being 42.65d.

The latest available quotations—in pence per lb.—from Liverpool are:—*Old contract*: March-April 25.60; May-June 25.35; July-August 24.85. *New contract*: May-June 29.90; July-August 27.27; October-November 25.40; December-January 25.17; March-April 25.07. *Egyptian Karnak cotton*: March-April 49.45; May-June 48.90; July-August 48.35.

The New York cotton market exhibited firm conditions during the week under review. Induced by trade buying and short covering, prices marched forward. The rise was further assisted by support based on the view that new crop positions at present levels were around the prospective support price of the 1956 crop.

The U.S. Senate has approved of an amendment which directs the Secretary of Agriculture to sell, under the new export programme announced recently, about 150,000 bales of extra long staple cotton for export at world competitive prices. The Senate has also voted in favour of putting dollar limits on the amount of price support aid that any farmer can get from the Government. The annual ceiling on price support loans that the Government will accord to any one farmer is set at $100,000.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	26-3-56	19-3-56	13-3-56
Spot	36.80	36.75	36.60
May	35.59	35.52	35.22
July	33.37	32.94	33.26
October	32.20	31.80	31.77
December	32.28	31.82	—

SUGAR STEADY

(From Our Own Correspondent)

BOMBAY, 28*th March*

Steady conditions prevailed in the sugar market during the week under review, in distinct contrast to the easy trend noted last week. The steadiness was aided by rumours of some delay in the issue of monthly release of sugar for sale in the free market, following representation by North Indian millowners. A section of traders had expected the announcement by Saturday next. There was also some buying by genuine traders. Accordingly, prices tended to look up.

Arrival of indigenous sugar into the market aggregated 9,900 bags, as against 6,100 bags in the previous week.

In the spot section, A grade indigenous sugar improved from Rs. 97-Rs. 100 to Rs. 99-Rs. 101 per bag. D grade sugar was firm at Rs. 88-Rs. 90 and B grade at Rs. 95-Rs. 97. C grade was quoted at Rs. 91-Rs. 93, as against Rs. 91-Rs. 94 last week. British refined sugar gained As. 2 to Rs. 83-12 per bag of 2 cwts.

In the forward section, *Fagan* delivery contract for C grade sugar was squared up As. 2 higher at Rs. 90-12. *Vaisakh* delivery improved by a similar amount to Rs. 91-3.

N.B.—The rates for Indian sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

YARNS RULE STRONG

(From Our Own Correspondent)

BOMBAY, 28*th March*

The behaviour of the yarn market is tending to be peculiar. Thus, despite the bearish news of National Rayon's forward sales of yarn at reduced prices, large arrivals of imported yarn and possibility of further heavy imports following the move of the Central Government to arrange bartering of Italian yarn in exchange for Indian raw cotton, the market ruled distinctly firm. Evidently, the traders appeared to expect the demand for yarn from consuming centres considerably to broaden in the coming weeks. This expectation was based chiefly on hopes of a substantial improvement in offtake of rayon fabrics and also, to some extent, on the impending expansion in the weaving capacity of the uneconomic units, now that official permission for the same has been granted. Staple fibre yarns were also exhibiting a firm trend, notwithstanding the reports that cotton mills were contemplating to spin a larger quantity of yarn from staple fibre, the import of which has been liberalised by the authorities. The firmness was presumably due to good buying enquiries from Surat and other centres. Although the cotton market was quiet and overseas enquiries for Indian yarn were not encouraging, cotton yarns, too, were strong, thanks, perhaps, to the support extended by speculative interests.

During the week under review, Stnia rayon yarn (120 dull cones) for April and June deliveries spurted by Rs. 10 each at Rs. 821 and Rs. 820, respectively. In the spot section, 150 Japan rallied As. 3 to Rs. 4-7. 150 Italy advanced by an anna to Rs. 3-13-6. 120 Italy was fully maintained at Rs. 3-14. 120 Japan, however, eased by half an anna to Rs. 4-5-6 for lack of support. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade moved up by 18 pies to Rs. 3-13-6. 120 Bt. cones 1st grade was steady at Rs. 3-14.

The National Rayon Corporation, Bombay, is reported to have concluded some forward sales of yarn for the second quarter of 1956 at Rs. 3-8 and Rs. 3-12 per lb. for 150 deniers and 120 deniers, respectively. These prices are, as already stated, lower than those at which sales were made in the current quarter, namely, Rs. 3-10 and Rs. 4, respectively. The downward revision in prices quoted by the Company, it is said, has been necessitated by heavy arrivals of imported yarn, the total quantity that actually arrived in Bombay port during the first two months of 1956 being 6.09 million lbs., as against 4.42 million lbs. in the corresponding period of 1955. Imports are expected to be still larger in the coming months, in view of the liberalised import policy with regard to 150 deniers and 120 deniers.

In the staple fibre yarn (40 x 2) section, New Greats picked up 21 pies to Rs. 3-12-9. Kohinoors put on a like amount to Rs. 3-13-6. Citys gained 15 pies to Rs. 3-13. Centurys were higher by nine pies at Rs. 3-12. The prices of imported yarns (40 x 2) were fully maintained. Fujis being quoted at Rs. 7-14, S'Sellos at Rs. 7-8 and K'Suns at Rs. 7-15.

In the cotton yarn section, 40 count yarns were particularly in the limelight and recorded improvement in prices. Raghuvanshis advanced by Re. 1-12 to Rs. 58-12. Citys and Moderns increased by As. 8 each to Rs. 49-8 and Rs. 61-8, respectively. Colabas appreciated by As. 4 to Rs. 55-8. Among 80s, Finlays gained As. 8 to Rs. 72-8. Elphinstones were fully steady at Rs. 62. Forty counts changed hands higher, Minaxis rising by As. 9 to Rs. 27-12 and Moderns by As. 4 to Rs. 27-8. Among 20s, Edwards and Moderns strengthened by As. 2 each to Rs. 16-2 and Rs. 17, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	28-3-1956	21-3-1956	14-3-1956
	Rs. a.	Rs. a.	Rs. a.
Art Silk yarn (per case of 200 lbs.)—

GROUNDNUT EASY

(From Our Own Correspondent)

BOMBAY, 27*th March*

The oil and oilseeds market presented a two-way trend during the week under review. The groundnut section ruled easy in the absence of export quotas for oil and fears of Government action to curb prices of edible oils in general and groundnuts in particular. The castorseed section was also generally easy on lack of overseas demand. The linseed section, however, continued to rule better. Operators did not hesitate to commit themselves in view of the growing enquiry for linseed oil from the Continental and other foreign markets. As a result, prices of groundnuts and castorseeds sustained some losses, while those in the linseed section recorded gains.

In the groundnut section, Bold F.A.Q. lost As. 14 to Rs. 34-12. April-May delivery eased from Rs. 35-12 to Rs. 35. Coromandals disclosed a loss of As. 8 at Rs. 35-8. Khandesh quality was also down by a similar amount at Rs. 35-10. Groundnut oil ex-mill eased from Rs. 19-9 to Rs. 19-2 and railway receipt from Rs. 19-8 to Rs. 18-14. April and May deliveries changed hands at Rs. 18-14 and Rs. 19, as against Rs. 19-4 and Rs. 19-8, respectively.

In the castorseed section, May 1956 delivery opened the week at Rs. 135-8, as against Rs. 134-8. It shot up the same day to Rs. 137-14. Later on, it gradually declined to touch Rs. 131-4 on the 23rd inst. Subsequently, the rate improved to close at Rs. 136-2. On balance it gained Re. 1-10 over the week. Madras quality declined from Rs. 26-10 to Rs. 26-4 and Kanpur from Rs. 26-14 to Rs. 26-8. Castor oil B.S.S. and commercial quality disclosed a loss of As. 4 each at Rs. 15-14 and Rs. 14-14, respectively.

Bold ready, in the linseed section, improved from Rs. 35 to Rs. 36. April-May delivery, however, lost As. 4 to Rs. 34-10. Indore quality was up by Re. 1 at Rs. 36. Small Sutnas were also better by a similar amount at Rs. 34. Linseed oil gathered As. 10 to Rs. 22-10.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	27-3-1956	20-3-1956	14-3-1956
	Rs. a.	Rs. a.	Rs. a.

PEPPER EASY

(Messrs. Parekh and Co.)

BOMBAY, 28*th March*

Malabar black pepper ruled easy during the week, prices tending downward owing to absence of demand from overseas and under pressure of sales by growers both in Tellicherry and Alleppey areas. Calicut is reported sellers at Rs. 825, where growers who were until recently holding tight are now said to be eager sellers, as they need cash for spending during *Ramzan*. Sympathetic easiness is seen everywhere in South Malabar. Alleppey is reported down to Rs. 775, while garbled at Cochin are offered at Rs. 135. If prices at terminal markets are marked down further, distressed selling of loaned pepper appears to be within the bounds of possibility. During the mid-week, A.S.T.A. showed some steadiness owing to the report that the higher rebate in the freight to the U.S.A. was likely to be withdrawn as from April 1956. Consequently, there was lot of covering by shorts in the local market. April shipment was done at $0.31⅞ to $0.31¾. However, later on, the news that the non-conference line is willing to book freight at reduced rate has again unnerved the holders. Prices came down to $0.29⅜ for April shipment, in spite of fair buying by shorts. About 100 tons for April shipment was covered in a day at $0.30¼. There are sellers for May shipment at $0.30¼, June at $0.30½ and July-Aug.-Sept. at $0.30½. In the delivery section, the market proved one way affair and prices for April delivery came down to Rs. 745.

The future of the market depends upon the attitude of New York buyers. If they continue to buy on a hand-to-mouth basis, further fall in the prices is not ruled out, for no other reason than nervous pressing by holders and growers, in view of the approaching monsoon and possible competition from Sarawak which is likely to develop early. Reports from Sarawak regarding the size of new crop are conflicting. Bulls are estimating at 12,000 tons, while bears put it as large a figure as 18,000 tons.

Following are today's nominal quotations: Ready delivery Rs. 108 (as against Rs. 110 a week ago) per Bengal maund, April Rs. 745-55 (Rs. 775-85) and May Rs. 755-65 (Rs. 785-95) per candy of 5½ cwts.

STRONG DEMAND FOR TEA DUSTS

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 23*rd March*

There were 350,000 lbs. on offer in dust sale "F" which was held on Tuesday 20th March. From the outset there was a very strong general demand for all types. Commons and milled dusts were well supported and were an anna to As. 2 dearer. Medium dusts sold well and black leaf grainy types advanced by As. 2 to As. 3. Best liquoring dusts met with keen competition and prices were As. 2 to As 3 dearer.

Internal.—19,400 dust. Very strong general demand. Middle East and grainy Dooars strongest. Best C.T.C. well supported. 320 internal leaf. Irregularly As. 2 to As. 4 dearer.

Export Quota.—At the end of the week there was some activity and business has been done up to 5 pies.

The books of the Joint Controller are now closed for transfer of quota and will remain so until 31st March 1956. Thereafter export rights will be transferable as special licence.

Forthcoming Auctions.—Dust Sale "G" will be held on Tuesday, 3rd April.

As we go to press, Messrs. Forbes, Ewart and Figgis wire:

"*Sale* 7.—1,050,000 lbs. Good general demand, but somewhat irregular. All fannings very strong and dearer. Low medium and medium brokens half to one anna easier. Best liquoring very strong; whole leaf fully firm."

DECLINE IN JUTE GOODS PRICES

(From Our Own Correspondent)

CALCUTTA, 27*th March*

During the week under review, prices of jute goods and raw jute continued to decline. But the declines were disproportionate, and placed jute goods at a considerable disadvantage *vis-a-vis* raw jute. Simultaneous business at a profit in the raw material and the finished product was thus impossible. Support from overseas was hesitant, as buyers believed that jute goods would become still cheaper. For, an earlier, and at the same time, a bumper crop is considered almost a certainty, both in India and Pakistan. This consideration has compelled stockists to dispose of their accumulations to mills who are unable to support even the prevailing low prices. The U.S.A. was reported as having in possession burlap sufficient to meet four to five months' requirements, and the news that during the month of February consumption there declined by 5 million yards was available. All these reports chilled the sentiment in Calcutta, and were among the factors that pushed down prices of jute goods to levels that were new lows so far for this year. In fact, these prices were new lows after the recovery that set in from November last onwards. In spite of the huge stocks of burlap the U.S.A. has, it is possible that American buyers would be only keen to enter into commitments if prices become steady. For, according to a report in the *Jute Bulletin* of the Indian Central Jute Committee, Japan was finding it increasingly difficult to make attractive offers to American buyers in view of the sharp advance in Pakistani raw jute prices, and that Japan was unable to meet the competition from Calcutta. Also, Japanese mills were relieved to have sold considerable production of the forthcoming months to Uruguay and Turkey at higher prices.

At present, Calcutta goods are second to none in their cheapness. But in order to work on a reasonable margin of profit, mills attempted to bring down raw jute prices and gave only limited support to raw jute during recent weeks. Although this led to a decline in prices, such a trend affected jute goods also. The decline in the latter was more than in the former, and this only made matters worse than they were prior to the fall in prices. Raw jute prices recorded declines during this week also, but the stock position of mills would not permit them to give only restricted support any longer. It would appear that the stockists were aware of this circumstance. However, the fact is that stockists have also to dispose of huge quantities in the near future, and perhaps mills would be content to make surprise purchases here and there. It is, therefore, possible that prices may not register violent rises, but what mills require is that prices should go down further. In this view, the trend of the market in raw jute in the coming few weeks will receive added significance, and if mills succeed in their attempts, they would consider the possibility of unseating the balance of the idle looms. For, after all, no apparent difficulty is anticipated in marketing a higher production, but what mills desire to prevent is the repetition of losses in working results.

During the week, some business was again put through in corusacks with Australia, and more interest was expected. There was little buying from other countries, and prices declined. From Rs. 111

last Tuesday, ready B. twills touched the lowest rate of Rs. 108-6 during Thursday last. Even after this decline, excepting for some covering demand, there was little other activity. The fall was precipitated by the anxiety of certain mills to sell. Buyers took the cue and interpreted this anxiety as a definite indication of the continuation of the falling trend. Covering demand continued, however, and enabled the rate to recover to Rs. 109-6 by the week-end. The market was closed both yesterday and today on account of *Holi*. While April-June, goods were a few annas higher than the ready, the July-September goods were lower by 2 points earlier and after the decline were lower only by about a point. Ready hessians 40" 10 oz. opened at Rs. 39, and declined to Rs. 38-3 to recover to Rs. 38-7 by the week-end.

Mills gave restricted support to raw jute, and prices continued to decline. Mills sounded sellers by offering rates lower by about As. 8. But stockists were disinclined to further discounts. Assam upper bottoms declined to Rs. 27-8 from Rs. 28-8, and Indian northern bottoms at Rs. 27-8 were lower by Re. 1-8. Local daissee bottoms were quoted at Rs. 28-8 as against Rs. 29-8 at the beginning of the week.

LINSEED REACTS

(Messrs. A. Bradley and Co.)

CALCUTTA, 27*th March*

There has been a reaction in the Linseed market during the week. Ready supplies which had commanded a premium have now fallen into line with forward delivery. New crop seeds have commenced moving in certain sectors, and sellers have been more in evidence. Crushers have shown a keen interest, and trading is reported on a fair scale daily. The oil market is more or less unchanged. A recent demand for ready goods for shipment against former commitments has helped to improve prices. No fresh export business is reported, with buyers pausing. Latest quotation is March-April-May Rs. 23 per maund.

SUGAR FEATURELESS

(From Our Own Correspondent)

HAPUR, 26*th March*

The sugar market ruled featureless during last week and price fluctuations were within fractional limits. Demand was from Rajasthan, but inadequate loading facilities accounted for small offtake. Latest available figures showing production of indigenous sugar upto 22nd February at 980,649 tons, as against the corresponding figures last year at 912,199 tons, also acted as a dampening factor. Stocks with the factories on this date were put at 898,321 tons, as against 733,329 tons last year. The latest mill delivery prices were:—Jaswant Rs. 28-9, Simbhauli Rs. 28-9, Mowana Rs. 28-10, Daurala Rs. 30, Amroha Rs. 28-2, Bijnore Rs. 28-2, Mansoorpur Rs. 29-8 to Rs. 30-4, Rampur Rs. 31; retail Rs. 30-8, khandsari Rs. 23 to Rs. 27 per maund.

Last week-end's improvement in ready *gur* prices to Rs. 11-14 per maund was short-lived and prices sagged to Rs. 10-12 per maund quoted today. Loading restrictions and slack outside support were the main depressing factors. Daily arrivals have gone down to an average of 1,500 maunds and local stock is put at 135,000 maunds.

After early spurt to the highest at Rs. 11-15-4½ and Rs. 12-15-4½ for *fagun* and *baisakh* delivery respectively, future *gur* prices declined in the week-end on bear pressure, influenced by fall in ready prices. They closed at Rs. 10-9-6 and Rs. 11-6 respectively on Monday.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 26*th March*

Despite a series of measures taken by the Government of India to check the rising trend in prices, foodgrain prices continued to rule firm. Short supplies, and not speculative buying, as earlier alleged by the Government, was the main stimulating factor. Wheat average quality was transacted at Rs. 15-12, farm quality at Rs. 16-12 and *khati* at Rs. 14-10. The week's offtake at 5 *khaties* was mostly for local requirements and local stock at 7 *khaties* is considered insufficient, till the arrivals of the new crop in the market which will be by the end of April. In order to strengthen the internal wheat reserves, more wheat is reaching the country from abroad and the total arrivals from 1st January to 14th March 1956 amounted to 48,700 tons.

Poor stocks and regular demand accounted for the firmness in gram and its products. The all-India second estimate of small millets, now available, for 1955-56, puts the current year's area and production at 11,446,000 acres and 1,693,000 tons respectively, or a fall of 6.3 per cent, in area and 15.4 per cent. in production as compared with the figures for last year. This announcement also had a hardening effect on the prices of coarse grains, which recorded fractional gains in the earlier part of the week. Prices, however, receded in the week-end, as new crop arrivals in the market are to begin very shortly. Demand for maize and *bajra* has gone down, due to fall in seasonal requirements. Latest prices were:—Barley Rs. 11-4, *bejhar* Rs. 10-8, maize Rs. 11-12, *bajra* Rs. 10-8, *jowar* Rs. 11-12 and *guwar* Rs. 10-8 per maund. Harvesting of barley and *bejhar* is in full swing, and arrivals of new crop will begin by the end of the month.

Increased arrivals of new peas at an average of 1,000 maunds, daily accounted for sharp fall in prices to Rs. 9-8 for *dara* quality. The arrivals found ready offtake for pulses from Madras side and stock position is still almost *nil*. *Arhar* prices were nominally quoted at Rs. 12-4 per maund, due to poor stocks and standing crop was reported to be normal in this part of the country. Other pulses ruled steady at almost unchanged prices to be quoted at: *Urd* Rs. 17 to Rs. 19, *moong* Rs. 14-8 *masoor* Rs. 14-12 per maund.

MARKET GOSSIP

(Concluded from page 599)

ties will act. We are, however, afraid that those who are anxious to know the authorities' mind will have to wait at least for some six to eight weeks. It is quite conceivable that, before making a move, the authorities might want to know whether the present state of affairs in the money market is only of a seasonal nature or reflects a fundamental change in the basic trend.

Accordingly, the question whether the Bank rate will be raised or not is not of immediate import, even though the share market may be worried about it. Meanwhile, the debate on this question goes on in banking circles. Opinion seems to be divided quite perceptibly. The Chairman of the Bank of India broadly hinted that he would welcome an increase in the Bank rate. Dr. Matthai, in his capacity as the Chairman of the State Bank of India, gave his approval to the stepping up of the Reserve Bank's usance bill rate. It can, therefore, be argued that, by implication, he would not be opposed to an increase in the Bank rate. The Chairman of the Central Bank, Mr. Homi Mody, is of the view that the Reserve Bank should not have raised the usance bill rate at all. Carried to its logical conclusion, this argument of his may be interpreted to mean that he is not in favour of a higher bank rate. Mr. G. D. Birla, Chairman of the United Commercial Bank, is definitely opposed to a higher Bank rate. Without mincing words, he has stated his views on this question quite clearly in his annual statement to the shareholders of his Bank. The relevant extract from it reads as follows:

"On a superficial assessment of the situation, it would appear that the Indian Bank rate is unrealistic in the light of the competition for deposits which has carried the deposit rate almost to the level of the official bank rate, but there has never been any integration with the official rate of the various interest rates quoted in the market and the money rates prevailing in the bazar have never had any relation to the official bank rate. The impact of the rise in the Bank of England rate has so far been confined to a rise in the deposit rate and a sporadic increase in the rate of interest charged by some banks on certain classes of advances but has had no significant influence otherwise.

"The problems facing India are wholly different from those of the United Kingdom and the prevalence of unemployment and the existence of a steady level of prices which have characterised Indian economy are in sharp variance with over-employment and inflation which are the features of British economy. We are now engaged in bringing into fruition a planned economy which has for its objects increased production, increased national income, the provision of employment on a large scale and the maintenance of stable economic conditions.

"One result, however, of the rise in the Bank of England rate is that more and more of the foreign trade of India will have to be financed out of Indian resources. But these resources are expanding and the stage has not yet been reached when they may be said to be inadequate. The bill market scheme inaugurated by the Reserve Bank of India in 1952 is a sufficient guarantee that seasonal expansion of credit could be effected without a change in the bank rate, and the recent announcement of the Reserve Bank of India that advances under the scheme will be made at 3½ per cent. interest, instead of at 3 per cent. as hitherto, is not to be interpreted as a measure of dearer money. Moreover, the export trade is financed on the basis of the higher money rates prevailing in London through an adjustment of the exchange rates applicable to usance bills and in an emergency the bills could be rediscounted in the London market. It is only in the case of imports that the pressure for finance will be squarely transferred to the Indian money market but the expansion of resources resulting from the operation of the second Five-year Plan appears to be adequate to take care of such increased responsibility as might devolve on the Indian money market.

"It is necessary for the success of the borrowing programmes associated with the second Five-year Plan that stable and healthy conditions should be maintained in the money and gilt-edged markets and the continuance of the Indian bank rate unchanged at its present level is a necessary condition for the fulfilment of our development plans.

"The question of an upward revision of the bank rate will arise in the event of the spectre of inflation raising its head or the scramble for deposits developing to the extent of a run-away rise in deposit rate to a level higher than the bank rate. The authorities will, no doubt, keep a close watch on the situation and act without hesitation when the contingency arises."

The last para in the aforesaid quotation is a major qualification to Mr. Birla's main thesis on the Bank rate. It only shows that, as a shrewd business man, he realises that a situation may arise when an increase in the Bank rate will be the lesser of the two evils.

* * * *

Despite the keen stringency in the money market, the buoyancy of share markets also has been sustained. There has been fresh buying by bulls in leading speculative scrips such as Tata Ordinary, Indian Iron, Bombay Dyeing, Indian Copper and Bombay Burmah. With bears frightened out of their wits, the market is completely at the mercy of the bulls. Many are inclined to feel that prices are too high, but none is prepared to go short, because no bearish factors, it is argued, are in sight. Technically, the position of the market appears to be unhealthy. This is evident from the *budli* rates in the last settlement. On Indian Irons, bulls paid interest for carrying over their purchases at as much as 18 per cent. per annum. The rate on Tata Ordinary, too, was equally high, even after making allowance for the fact that the Company's transfer books are due to be closed. On the basis of the average *budli*, the rate of interest for carrying over purchases varied from 6 to 10½ per cent. on textile scrips, 5½ per cent. to 8½ per cent. on sugar shares, 7½ per cent. on cements, 15 per cent. on Alcock Ashdown, 9 per cent. on Bombay Burmah, 15 per cent. on Shivrajpur, 9 per cent. on Scindia Steam, 7½ per cent. on Premier Construction, 9 per cent. on TELCO. and 12 per cent. on Indian Copper. In almost all cases, the *budli* paid by the bulls was more than the yield that could be had on the shares concerned and that at a time when the scope for a further rise in prices is regarded as not very appreciable. The fact, that the bulls are prepared to pay such high penalties rather than take delivery of the shares bought by them suggests that they have bitten much more than they can chew and digest. How long will they be able to stand this position? And what is more, since the last settlement, prices of several scrips have gone up still further, due to fresh commitments undertaken by the bulls. In the light of these facts, it is difficult to resist the conclusion that bull speculation is being overdone and that the market has become highly vulnerable.

WHITE PAPER ON FULL EMPLOYMENT

A RESPECTABLE DOCUMENT

From Our Own Correspondent

LONDON, 24*th March*

NEVER before in peace-time have prices risen so fast and so far as in the past decade. Between 1946 and 1955, consumer goods (in Britain) increased in price 49 per cent. all goods increased 52 per cent., our export goods increased 55 per cent. and our import costs increased 69 per cent. For half of this period, the present Government have been in—one can hardly say enjoyed—office and for more than a year they have been taking some kind of steps (broken temporarily by last April's featherbed budget) to combat the steady march of inflation. Now they have produced a document, believed to have been prepared last autumn, to focus attention on the problem, analyse its causes, explain its dangers and then "suggest what will have to be done by the Government and people . . . if reasonable price stability is in future to be maintained." The result has been termed by *The Times* as "a respectable document"—which in this context means uninspired and inadequate.

LONDON LETTER

The trouble is that by now no one needs to have attention focussed on a problem into which everyone's noses are being rubbed daily, while its dangers are obvious. As for its causes they are arguable and anyway only interesting in the context of what measures are proposed to deal with them and cure the ill. At the Press Conference at which the Chancellor put out the document, he felt impelled to anticipate criticism by saying that he was not going back to "Government by exhortation"—because that is just what it does look as if is happening. And since at the same time the country has been told of the balance of payments deficit of over £100 million in the second half of last year, the need for positive, as opposed to exhortatory, measures is the more obvious.

"We all want full employment and we all want stable prices," says the Paper, "But we have not yet succeeded in combining the two." . . . "The Government does not believe that there is any inevitable conflict between the two objectives. We can achieve them both if certain conditions are fulfilled" . . . all excellent creed, but not much help on "what will have to be done." But perhaps we can find enlightenment by looking at the "certain conditions" which must be fulfilled for price stability!

First, the Government must "seek to ensure that the pressure of domestic demand does not reach a level at which it threatens price stability and endangers the balance of payments"; next, the Government must "ensure that the level of demand for goods and services is high and rises steadily as productive capacity grows." But the balance between these two situations "lies in self-restraint in making wage claims and fixing profit margins and prices, so that total money income rises no faster than total output." So the problem is all thrown back onto the individual. Next, management is exhorted to increase capital investment and eliminate restrictive practices, labour must co-operate to the full in the adoption of new methods of working, and both sides must co-operate "in maintaining an efficient and enlightened system of industrial relations." Now efficient methods of work and sound industrial relations should result in a sustained growth of productivity . . . the gains from which should be passed on in lower prices. In sum, the efficient working of an expanding capitalist system "depends upon everyone involved being fully aware of the issues at stake, and upon their acceptance of the full duties of citizenship which this realisation places upon them."

What an excellent treatise, what an excellent sermon, all this is—and how far removed from the hurly-burly of rising prices, rising costs, rising wage claims which are the realities of the hour! The Government must find the means to enforce its precepts and no doubt it will then have the answer to its—and everybody's—problems.—*All Rights Reserved.*

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake

VOL. XCII. No. 2353 BOMBAY, 7th APRIL 1956 PRICE Rs. 1/8

WANTED—A SQUARE DEAL FOR ELECTRICITY INDUSTRY

THE development of electricity, which is vital to industrial expansion, acquires a new significance in the light of the Government's policy for preventing industrial concentration and promoting regional development. The Government has no doubt been at great pains to increase the installed capacity for electricity which, during the last five years, has expanded from 1.1 million kw. to 3.4 million kw. A great part of this increase has taken place in the public sector, thanks to the execution of several hydro-electric projects; the increase of hydel power is of the order of 0.8 million kw. to 1.4 million kw. The target for the second Plan is placed at 6.8 million kw., or an increase of 100 per cent. over the existing capacity. A large part of this increase will again take place in the public sector which will account for an expansion of 2.9 million kw., leaving the electricity supply companies to undertake an increase of 200,000 kw. and the industrial establishments to augment their internal generation by 300,000 kw.

The distinction between the private and the public sectors, which is somewhat invidious in the context of India's controlled economy, very nearly breaks down when it is applied to the electricity industry. Few industries are more rigidly controlled than the electricity industry. The State, not the industry, is the arbiter of its fate. The fortunes of the industry are determined by reference to that omnibus, if not ominous, phrase "standard return," which is now fixed at 5 per cent. of the capital at base. There is an entire Act—a dubious distinction, indeed—designed to ensure that the industry behaves well, that it does not charge the consumers what they can pay or what it deserves to get. It must organise its financial affairs in such a way that it does not offend any of the innumerable provisions of this Act.

It is against this background that one has to consider the problems involved in the expansion of electricity industry. The private sector of the industry even today accounts for a major portion of the output. And it is of the utmost importance that it should be enabled to maintain this output and also to increase it. This raises some intricate issues relating to the role of the State in relation to the industry and the reward for constructive endeavour. At first sight, it might seem that State-ownership of the industry will be in the best interests of consumers, for that might be held to eliminate profit motive. But on careful thought, it will be found that this is wrong, for State-ownership cannot obviate the need for making profits. Even a State-owned enterprise must make profits, if it has to expand its services. Be that as it may, the chief weakness in State-owned enterprise is that it does not readily respond to changes in demand. It has to be prodded and coaxed to do this. There is an inevitable time lag, interminable delay, for it would first like to have the assurance that additional power supply is genuinely needed. This has happened in Madras where, despite the existence of acute shortage of electricity, the State has been chary of starting thermal stations. The position in that State seems to be that its hydro-electric resources have been nearly exhausted, so that reliance has necessarily to be placed on thermal stations. In Bombay, it was only after a great deal of persuasion and some intervention by an international agency that the Government agreed to concede the need for an expansion of installed capacity in the private sector of the industry. The fact is that Governments play for safety first. They are either unable or unwilling to foresee a rise in demand for electricity and to adjust their policies in relation to increase in such demand. A power crisis must occur and factories brought to a standstill, or at least near-standstill, before the State can become aware of the need for expansion in electricity supply.

All this is certainly not in the interests of India's expanding economy, or in those of the diversification of that economy. A resolute policy, designed to increase the supply of electricity in the areas where it is needed, must be pursued, irrespective of whether it takes place in the public or the private sector. Since the private sector in this industry is rigidly controlled, there is little to be said in favour of maintaining the ideological distinction between the two sectors. Given the necessary incentive, the private sector has both the knowledge and the experience to meet the country's electricity needs. In any case, the incentives asked for by the private sector in electricity are of a very modest nature. They are necessary in the interests of even the maintenance of its present services. Nobody will, of course, suggest that it must be given a free hand in determining tariffs. But it should be clear that its case for a sufficiently more attractive return than what is now available to it is so strong that it would be unwise to deny it. The justness of this demand will be clear when it is remembered that State-owned enterprises—the Railways and the Posts and Telegraphs, for example—do not deem it an economic sacrilege to increase their tariffs when they need funds for expansion or when they find that the cost is high. Indeed, the draft outline of the Five-year Plan has approved of this consideration, for it has rightly held that public enterprises have to earn the surplus they need for expansion and their price policy "has to be framed with due regard to this aspect of the problem." Surely, the Government cannot apply a very different yardstick when it comes to judging the case for the private sector to earn the surpluses it needs for financing expansion.

It will be pertinent to recall here the remarks made by Mr. Eugene R. Black, President of the World Bank, at the eighth annual meeting of the Bank on 9th September 1953. Analysing the problems of financing power development in underdeveloped countries, he observed:

"I see considerable merit in the view that those who are the users of power should contribute more than they have done in the past towards providing the funds for expansion. I do not believe that such an approach would impose an unduly heavy burden; the cost of power within any likely limits can only be a small factor in the production costs of industry or in the domestic budget. . . .

"It is, I think, regrettable that, at some times in some countries, the rates charged to the consumer for power are fixed by the authorities more with reference to the political factors of the times than with proper regard to the economic necessities of particular situations. When this happens, every sound financial and business consideration runs the risk of being sacrificed in what is believed to be the cause of cheap power. But, if power can be made cheap only by charging rates that do not provide an economic return, the power undertakings are denied the ability to raise not only funds to finance needed expansion, but even the funds to maintain their existing plants in good order. In such circumstances, a community in the long run must be a heavy loser. All these considerations that I have mentioned apply with equal force whether the industry is Government-owned or privately-owned, and whether the private segment is in domestic ownership or in foreign ownership. The economic facts of life are no respecters either of Governments or of persons."

The fact that the foregoing quotation is still relevant to Indian conditions, though 30 months have elapsed since Mr. Black made his speech, is a tribute to the Government of India's tenacity to cling to unrealistic attitudes.

If it is conceded that the private sector has a role to play in development, or even in the mere maintenance, of power supply, it should at the same time be conceded, for reasons mentioned above, that this sector has a right to receive an adequate return on its investment. This is virtually conceded in the Bill to amend the Electricity (Supply) Act which the Government, after protracted deliberations, has brought forward. But is the Bill a complete, or even an adequate, answer to the industry's case for relief? It is to this question that Mr. K. G. Milne, Chairman of the Ahmedabad Electricity Supply Company, Ltd., devoted a considerable part of his closely-reasoned speech at the annual meeting of the Company held last week. He subjected to a critical scrutiny the three important features of the Bill—the proposal to link the standard rate to the Bank rate with a differential of 2 per cent. the provision for allowing the industry to avail itself of the benefits of development rebate and the disallowance of debenture and loan interest as an expense in the computation of permissible "clear profit."

The effect of the first proposal is to raise, on the basis of the current Bank rate, the standard rate of return from 5 per cent. to 5½ per cent. This is by no means a rate that will enable the industry to borrow from the public, considering that even well-known and prosperous companies offer for public subscription preference shares carrying 6 per cent. interest, free of tax. Mr. Milne pointed out that the situation called for a differential over the Bank rate of 2½ per cent. at least, though, "even with that, there will be no scope for providing that measure of internal finance which the extensive capital development programmed for the industry in the country's second Five-year Plan could absorb." It may be mentioned here that the expansion programme of the industry is expected to cost about Rs. 50 crores. Can the industry, the return of which is fixed so low as 5½ per cent., be expected to raise

finances from the banks or the investing public? The electricity scrips were once regarded as almost equivalent to gilt-edgeds. Even today, one will find that investors in these shares include trust institutions. And yet, by making it difficult for the electricity companies to earn reasonable profit—the Ahmedabad Electric has had to cut its dividend from 6½ per cent. to 5 per cent.—the Government is jeopardising the interests of all classes of investors. No wonder, many "electrics" on the Stock Exchange have become friendless and declined in value at a time when all other equities have appreciated. Thus, whereas the index number of equities belonging to manufacturing industries has gone up from 118.4 in January 1955 to 131.6 in the week ended 19th March 1956, that of electricity equities has declined from 124.2 to 117.9 in the same period. In the light of this trend, the inordinate delay on the part of the Government to come to a decision on this question makes even the sober investors wonder whether the Government has an ulterior motive in following a policy that forces the shares down to a lower level. The fear is that the Government, having driven the industry into a position in which it cannot find the finance for expansion, might make the static nature of the industry the ground for nationalisation through payment of inadequate compensation based upon unreal market values.

Normally, one would expect an industry to welcome the kind of relief that the "development rebate" affords it. But what is meat for others is poison for the electricity industry, because of the form in which the rebate is dressed. Any compulsory appropriation to development reserve to rank as a prior charge in the calculation of "clear profit," as Mr. Milne explained, would create a "perilous situation indeed, for who could be sure of being able to earn enough clear profit every year to meet both this prior charge and the full 'reasonable return'?" Nor is this the only difficulty involved in taking advantage of the development rebate. If appropriations are based, not on revenue surpluses of any year, but on 25 per cent. of the capital expenditure during the year, it would, as Mr. Milne pointed out, give rise to "fluctuations with which the tariff structures of a highly regulated and capital-intensive industry, such as electricity, could never adequately cope." Finally, it must be remembered that the grant of the rebate is of no benefit to the shareholders, since the reserve has to be deducted from the capital base, so that the ultimate beneficiary is the fortunate purchasing authority. Surely, it cannot be the Government's intention to punish the industry for its temerity in asking for tax relief. And yet, that is precisely the effect of the development rebate on the industry. There is thus a clear case for the authorities to make such changes in the procedure for the grant of the development rebate as will enable the industry to accept gratefully what has been so gracefully given.

If the development rebate is in the nature of meat, dressed in poison, the Government's proposal for the disallowance of debenture and loan interest for calculation of permissible profit is, to use the apt Biblical phrase, as Mr. Milne did, a gift of stone for the bread the industry asked. This proposal is bound to deprive the industry of an advantage which has enabled it to attract capital from the public. Far from following the Christian injunction of not letting the left hand know what the right hand gives, the Government has actually taken away with one hand more than what it has given with the other. This is true of the effect of the proposal at least on one prominent company, the Ahmedabad Electric, for Mr. Milne calculated that the Company would lose more from disallowance of interest charges than gain from the proposed upward revision of the standard rate of return.

Such are some of the immediate problems before the industry. But the entire approach of the Government to the industry deserves to be examined afresh. The Government ought not to sacrifice the chances of increased power supply for the sake of adhering to a body of fiscal principles which, besides impinging heavily on the industry, is clearly of no value to the Government. If anything, the principles are a definite disadvantage to the country, as they are arresting the pace of development and decentralisation of production. It is time, therefore, the Government gave up its negative policy of excessive preoccupation with the profits to be made by the industry—it is always open to the Government to control them—in favour of a constructive attitude towards the country's power requirements. After all, a power shortage can mean irretrievable loss to national economy; the 1952 power crisis in Bombay cost the country Rs. 8 crores per month. It would be folly not to adopt the obvious measures for the prevention of such crises.

DR. B. C. ROY ON NATIONALISATION OF INSURANCE

ANY frank expression of opinion is greatly to be welcomed in a democracy. And Dr. B. C. Roy, Chief Minister of W. Bengal, has done a distinct service to the country by expressing his disagreement on the policy of nationalisation of insurance. In a speech at the annual meeting of the Bharat Chamber of Commerce, Calcutta, Dr. Roy stated that he had not liked the nationalisation of insurance by the Union Government. He, however, added that he did not know the full facts of the industry as they appeared to the Union Government. Apparently, the Chief Minister, like many other leaders in the country, has not been convinced that, on the basis of the facts so far disclosed, the Government was right in nationalising insurance. Our enquiries reveal that several Congressmen hold a view similar to the one expressed by Dr. Roy, though they do not wish to embarrass the Government by a frank expression of their opinion. Clearly, such a situation could have been avoided, if the Government had instituted an impartial enquiry into insurance before taking a decision on the industry. As it is, the Government has faced both the Party and the country with a *fait accompli*, so that intellectual honesty has necessarily to be suppressed for the sake of party discipline.

Dr. Roy's views on nationalisation of insurance are based on the consideration that, if there was abuse in the private sector, there was also abuse in the public sector; he did not see how this could be avoided by transferring something from one to the other. It may be recalled that the Chief Minister of Bombay, Mr. Morarji Desai, also gave expression to a similar view in the course of his address at the annual meeting of the Bombay Chamber of Commerce. Referring to the criticism levelled against the private sector, he said that there was no section of society which might be said to be entirely bad or any other section entirely good. To single out any one sector for special attack, in his opinion, was "either a sign of ignorance or a sign of stupidity." He added: "We should take whatever is useful and good for us and reject what is not good for us."

To revert to Dr. Roy's address. He said that he had already made a strong plea for the location of the office of the Chief Custodian of Insurance in Calcutta. He added that he did not see why each zone should not be given more powers over the investment of money. Dr. Roy was prompted to express these views by what Mr. R. N. Bangur, President of the Chamber, had to say on this subject. Mr. Bangur said that an attempt to limit the investment of life funds to approved debentures, preference and ordinary shares of companies to 16 per cent. would be harmful, as it would be difficult for existing industries to find an alternative source of investible funds for a long time to come. He felt that the location of the head office of the Chief Custodian in Bombay would deprive Eastern India, with its major industries such as jute, tea and coal, of its legitimate share of industrial finance from life funds. He, therefore, suggested that the office should be located in Calcutta.

The reign of custodians is bound to be a passing phase in Indian insurance, for, ultimately, the entire life business will come to be managed by the Life Insurance Corporation. Apparently, Mr. Bangur's plea is for locating the head office of the Corporation in Calcutta. But there are certain obvious advantages in establishing the office in Bombay, rather than in any other city. For one thing, Bombay, apart from the fact that it has the reputation of being the commercial capital of India, is the place where both the Reserve Bank and the State Bank have their head offices, so that mutual consultation among all the important nationalised credit institutions would be facilitated, if the head office of the Insurance Corporation were also located in Bombay. While investing its funds, the Insurance Corporation will find it necessary to be in constant touch with the Reserve Bank, because there must be a fair amount of co-ordination of the market operations of both the institutions.

Again, Bombay State always had a larger number of insurance offices than any other State; most of them had their head offices in Bombay City. Thus, out of a total of 149 insurance offices in India, both life and composite offices, Bombay accounted for 65, West Bengal for 31, Madras 21 and Delhi 15, while the rest were distributed among other States. Also, Bombay had a larger proportion of the total life funds. Out of a total of Rs. 277.83 crores, the Bombay State accounted for Rs. 175.37 crores, followed by West Bengal (Rs. 56.47 crores). Further, now that the City is to become a Centrally administered area, there can be no ground for grievance of the kind that might be expected in the event of location of the head office of the Corporation in a State capital. In any case, it would certainly be unwise to allow the location of the head office to become another vexed issue among the States of India similar to the controversy over the S.R.C. Business men, of all people, are supposed to have an all-India outlook, because their markets lie all over the country.

It is true that Calcutta is an important capital market. It deserves to get its fair share of investment support from nationalised insurance. But it would receive such support wherever the Insurance Corporation is located. There is no reason to think that any particular State will be singled out for special favour by the Insurance Corporation. In fact, investment is not a matter of favour at all. The Corporation would normally be in search of attractive, safe outlets for investment, consistent with considerations of regional development and national interests. If the fear is that, in the event of investment being channelled through Bombay, it is only the brokers in this City that will get the benefit of brokerage, it could at any time be set at rest by evolving a system under which approved brokers working in all the leading Stock Exchanges will get the Corporation's business in the investments quoted on their respective Exchanges. Even in regard to Government securities a scheme could be devised whereby the Corporation's orders could be carried out partly in Bombay and partly in Calcutta. It is to be hoped that the Corporation will in fact evolve a suitable system for this, if only to avoid giving the impression that only brokers in any one centre are being favoured by it.

Earlier, Mr. Bangur said that the apprehensions and misgivings of private enterprise had been deepened by the recent nationalisation of life insurance. He thought that the malpractices in this sphere could have been effectively dealt with if the Government of India had been more watchful. This line of argument, as is well known, is repugnant to the Union Finance Minister, Mr. C. D. Deshmukh, who, in the course of his speech at the recent debate on the Insurance Corporation Bill, was indignant that it is only after the event that the critics of nationalisation of insurance have come out with the plea that the Government should have been more strict with the offenders against the law and that their main grievance had always been that Government control was much too strict. Three observations may be made at this stage. In the first place, it is not true that it is only the critics of nationalisation that have complained of lack of control by the Government. Mr. Deshmukh may well turn his wrath against the editor of his party organ, the *Economic Review*, who alleged that insurers were in the habit of showing falsified accounts and added: "We have not much evidence of the use by the Controller of Insurance of his powers to probe into falsified accounts." Secondly, it is hardly to be wondered at that private insurers were reluctant to ask the Government to exercise its powers against the erring members in the industry. In any case, good insurers were far too busy with their own affairs to bother about what other insurers were doing. After all, the Government cannot expect private insurers to do its duty. Thirdly, if the Government had used the powers it possessed, it could have certainly detected the malpractices in time and administered the appropriate remedies. Nor were its faults confined only to acts of omission. For, where it did use its powers, it used them in an injudicious manner to stifle competition in the insurance field. Its hostile attitude towards reduction in premium rates is a case in point. If it had encouraged competition, instead of curbing it in the name of the so-called small insurers, several mergers would have taken place and the industry would have emerged stronger through the disappearance of mushroom insurance offices. To the extent that the Government curbed the spirit of competition in the field by placing its good offices at the service of uneconomic units, it virtually helped to keep them alive. Such a policy was certainly not calculated to end malpractices in the field.

Finally, it is perfectly possible to reconcile the above view that the Government did not exercise its control properly with the other, namely, that the control was rigid. The latter view stems from the consideration that certain aspects of insurance legislation, such as the omnibus control on expenses, did not permit such flexibility in administration as was necessary for different insurers with varying sizes of business to operate successfully in what was essentially a competitive field.

STRINGENCY IN MONEY BECOMES ACUTER

I.C.I.C. CHAIRMAN'S WISE COUNSELLING—FATE OF INTERNATIONAL WHEAT TALKS

THURSDAY, 5 P.M.

MARKET GOSSIP

THE talk of the City this week has been the continued stringency in the money market. There has been a fractional increase in the inter-bank call money rate; it is being currently quoted at 3¾ per cent., as against 3½ per cent. a week ago. This means that the inter-bank money rate in Bombay has hit the ceiling set by the usance bill rate. House money repayable on a week's notice is fetching 3¾ per cent., with some banks offering even 3¾ per cent. if the amount is fairly large. Reports from Calcutta indicate no change in the state of affairs described in these columns last week. The demand for bank credit is keen, in the face of a rapidly diminishing supply of loanable funds. The call on the resources of the State Bank of India must be so large that even the weekly sale of Central Government Treasury Bills for next week has been suspended. It is, of course, possible that this suspension might have been due to absence of any maturity of Bills before 13th April, but it remains to be seen whether the sale will be resumed the week after. It will be interesting to note, in this connection, that, in all the four weeks of last month, Treasury Bill sales were maintained at Rs. 1 crore per week, though there were no maturities after 16th March right up to 5th April. Another interesting point worth mentioning here is that the sale of these Bills was not suspended even for one week in the busy season of 1955. This indicates that the stringency in the money market during the current busy season is more acute than in the previous year.

There are, of course, other facts to prove this. Scheduled bank credit has gone up from Rs. 592.40 crores to Rs. 749.73 crores, that is, a rise of Rs. 157.33 crores since the end of October 1955, when the busy season usually commences, up to 23rd March 1956, the latest date for which figures are available. During the same period of the 1954-55 busy season, it had gone up by from Rs. 525.84 crores to Rs. 622.57 crores, an increase of Rs. 96.73 crores. It will thus be seen that the pace of expansion in bank credit during the current busy season has been far greater than in the 1954-55 season. A similar comparison of the rise in total deposits of Scheduled banks shows that the net increase in the banks' resources this season was of the order of only Rs. 10.28 crores, as against Rs. 38.50 crores during the same period of last season. It must, of course, be mentioned that deposits, as on 23rd March 1956, amounting to Rs. 1,031.40 crores, were Rs. 88.69 crores higher than those (Rs. 942.71 crores) a year before. But this makes little difference to our conclusion, because the level of advances, too, is higher; indeed, the increase in bank credit (as on 23rd March 1956) over the year is heavier than that in deposits, being as much as Rs. 127.16 crores. Consequently, the ratio of advances to deposits is as high as 72.7 per cent. In fact, this is the highest on record for Scheduled banks as a whole, the previous peak touched being a little over 70 per cent. in March 1952. One would not, therefore, be wrong, if one were to describe the present stringency in the money market as something unprecedented.

It is not surprising, in the light of what has been stated above, that the fear of the Bank rate going up in the near future persists. Enquiries made in knowledgeable circles, however, indicate that the authorities are not yet fully convinced of the necessity for putting up the Bank rate. As mentioned by us last week, they would appear to prefer to watch the situation for a few more weeks, in order to make sure that the hardening of short-term money rates to levels even in excess of the Bank rate and the expansion in bank credit are not merely seasonal but something more. It is only this week that the central banking authority has taken up the question of investigating the developments in money and commodity markets. A circular has been sent to banks asking them to submit particulars of their advances according to the purposes for which they have been made. Apparently, the Reserve Bank wants to find out whether there are any undesirable trends, such as hoarding and excessive speculation, in the capital and commodity markets. An investigation of this nature will take time. It, therefore, seems safe to infer that an increase in the Bank rate either next week or even a fortnight after is unlikely. May or June will be the crucial month from this point of view. If any action is to be taken at all, it must be before implementing this year's borrowing programme.

* * * *

There are, however, reports hinting at the possibility of the Reserve Bank putting up the usance bill rate further. If the trend of Scheduled bank borrowings against these bills last month is any indication, it looks as though such an increase will not serve any purpose, unless it is preceded by a rise in the Bank rate itself. It will be recalled that, with effect from 1st March 1956, the rate of interest on usance bills has been 3¼ per cent., as against 3 per cent. before. Since the concession in respect of stamp duty on these bills was also withdrawn from this date, the net increase in the cost of borrowing from the Reserve Bank through this medium has been ½ per cent. It seems that even this increase has been sufficient to kill the enthusiasm of banks for the bill market scheme. The following sets of figures, showing the trend of bank borrowings from the Reserve Bank, confirm this impression:

(Value: In crores of rupees)

	Loans and advances from Reserve Bank	Of which loans against Usance Bills	Loans not against Usance Bills
1955			
1st January ...	20.00	3.53	16.47
28th January ...	19.96	3.56	16.40
4th March ...	28.61	8.25	20.36
1st April ...	48.14	27.17	20.97
1956			
6th January ...	44.68	14.62	30.06
27th January ...	44.33	17.69	26.64
2nd March ...	63.29	25.32	37.97
30th March ...	81.67	27.43	54.24

It will be observed that between 2nd March 1956 and 30th March 1956, the Reserve Bank's loans and advances, almost all of which are to banks, went up by Rs. 18.38 crores. But, of this increase, loans and advances against usance bills accounted for only Rs. 2.11 crores, the share of loans not against usance bills, which are generally against Government securities, being as high as Rs. 16.27 crores. The experience in the preceding two months, as well as in the corresponding months of the previous year, was the opposite, that is, the credit facilities availed of by the banks were more against usance bills and less against Government securities. In March 1955, for instance, the net increase in borrowings against usance bills was as high as Rs. 18.92 crores, such against Government securities being only Rs. 67 lakhs. Another indication of the fall in the popularity of usance bills, thanks to the cost being almost equal to that of borrowing against Government securities, is provided by the fact that, although the demand for bank credit so far this year has been greater than in the same period of last year and the increase in deposits smaller, total borrowings by Scheduled banks against usance bills from 1st January to 30th March 1956 have been only Rs. 27.43 crores, as against Rs. 27.17 crores in the corresponding period of 1955.

In view of this experience, the efficacy of putting up the usance bill rate with a view to restraining the rising trend in bank credit is extremely doubtful. On the contrary, any such increase will only aggravate the unhealthy trend of banks borrowing more and more against Government securities. It would be remembered, in this connection, that the main object of introducing the bill market scheme was to arrest the trend. While it will be unwise to come to definite conclusions on the basis of only a month's experience, the indications given by the foregoing figures are so sharp that it will be equally unwise to ignore them.

* * * *

Has the Government of India's bias for nationalisation undergone any real change? An answer to this question is likely to be provided some time next week, when the Central Government is scheduled to discuss the Mysore Government's insistent demand for nationalising the Kolar Gold Mines. The Chief Minister of Mysore has been invited by Maulana Abul Kalam Azad, Minister for Natural Resources and Scientific Research, Government of India, for considering this demand in all its aspects. It is significant that, in order to strengthen his case, the Mysore Chief Minister proposes to take with him a few members of the Opposition in the State Legislature, which has unanimously adopted a Government resolution for taking over the gold mines. Under the Indian Constitution, the Centre has the final say on this matter, for the President has powers of veto. If the Centre succumbs to the pressure from the Mysore State, it may be interpreted by the share markets as a bearish factor for other mining shares also.

* * * *

When an international statesman of Mr. A. Ramaswami Mudaliar's stature speaks on current affairs of the country to which he belongs, he certainly deserves to be heard with respect. After all, he cannot be accused of either economic or political predilections. Indeed, when he addressed the annual general meeting of the Industrial Credit and Investment Corporation, Ltd., (of which he is the Chairman) he even admitted "a complete acceptance of the pattern of society that has been decided upon." And yet, if he could not help being critical of some of the policies of the Government, it is certainly time that the authorities sat up and took notice of what so friendly a critic had to say.

The Chairman of the I.C.I.C. need owe no apology for speaking on current economic affairs, for they are of immediate concern to the activities of the Corporation. Having been set up at a very important and crucial stage in the economic development of the country, the Corporation is trying to do what a capital market, in highly industrialised countries, has learnt to do after many decades of experience gained through the painful process of trial and error. Surely, it is of the utmost importance to the smooth functioning of the Corporation that credit mechanism is not thrown into disrepair. And yet, that precisely will be the effect of some at least of Government's policies. Mr. Ramaswami Mudaliar revealed that the Corporation had carried, to an advanced stage, negotiations for underwriting some further public issues of shares but was unable to "bring these into fruition in consequence of unfavourable and unsettled conditions in the stock market." Without seeking to make an elaborate examination of the causes for the failure on the part of the investing public to take up the issues, he said:

"It will be evident to everyone that if the establishment of new industries and the expansion and modernisation of old ones in the private sector is to be as successful, as we all hope, during the second Five-year Plan, it is necessary that all interested in the economic and social progress of the country should avoid a continuing series of shocks to the investing public. Since this Corporation came into being, there has been, I think it is fair to say, a series of measures which have produced a feeling of some uncertainty. But even more serious than the measures which Government has adopted are the constant suggestions, proposals and recommendations made by persons holding leading positions but not directly responsible for the enactment of fiscal measures regarding how the private sector should be altered, modified or even abolished."

Mr. Ramaswami Mudaliar confessed to being accustomed to the practices of an era when the public received, except in a period of emergency, the news of fiscal measures normally only during the budget time. There were no "anticipatory shocks given from time to time and a continuous threat of possible measures having a demoralising effect on the investing public." He added:

"The unsettling effect on the public mind, particularly on the mind of the investing public, does not seem to be adequately appreciated by persons in leading positions who forecast the nature of possible fiscal measures but are, only remotely connected, if at all, with actual decisions on such measures and who continuously threaten the private sector with expropriatory or near-expropriatory proposals. I hope that conditions will soon be brought about both by the Government and by other spokesmen whose views may influence the Government which will maintain a reasonable certainty of stability over a period so that private industries, backed by savings of both corporate and private investors, may be enabled to fulfil the substantial role which it has been allotted in the second Five-year Plan."

Those who have noticed how even ministers, in callous disregard of the effect of their words on public sentiment, make offhand statements on fiscal policies will be able to appreciate the significance of Mr. Ramaswami Mudaliar's observations. Not a day passes without some person, in responsible position, speaking derisively of the "rich" or threatening a tax on wealth or singing the virtues of a ceiling on incomes. Little do these men realise that their statements will serve only to drive the traditionally shy Indian capital to the bullion market. They cannot then complain that the investment habit is not so widespread in the Indian community.

It is now widely, though not perhaps sufficiently adequately, realised that the private and public sectors have both to work in close co-operation with each other. But what has not received adequate recognition is the consideration that that is the only way in which they can exist at all. Mr. Ramaswami Mudaliar did well to emphasise this aspect of the problem of co-existence of the two sectors. He observed:

"In our country today, where we are concerned with conditions as they are at present, I feel that the plans for a large-scale expansion of the public sector of industry will fructify best, not independently of, but in conjunction with the private sector. The two are inextricably bound up and, unless the private sector is enabled to fulfil its role, the public sector will be prevented from carrying through to a successful conclusion the very substantial plans which have been laid for it."

* * * *

The I.C.I.C.'s Chairman referred to some of the effects of nationalisation of insurance also. As a result of this measure, the Government now owns nearly 18 per cent. of the Corporation's share capital, a figure that represents the value of the Corporation's shares held by the insurance companies now taken over by the Government. The Corporation, as is well known, was conceived as a wholly privately-owned business. It was on this basis that the co-operation of the various parties in the U.K. and the U.S. and of the World Bank was extended to the Corporation. As a result of nationalisation of insurance companies, the Government has now become the largest single shareholder of the I.C.I.C. It would appear that the Directors have brought these facts to the notice of the Government and that they have been assured that the "Government have no intention of taking advantage of their adventitious position in this regard to influence the day-to-day working of the I.C.I.C." This is a welcome assurance. And it is to be hoped that the Government will adopt a similar attitude towards all companies in which it has become a shareholder through nationalisation of insurance companies.

(*Continued on page 695*)

HINDUSTAN MOTORS

The capital market will have, in the not distant future, one of the biggest new issues. The credit for this will go to Hindustan Motors, which has a programme for the fabrication of certain important items required for the construction of the new steel plants. The Company proposes to raise Rs. 5 crores by way of preference capital, carrying interest at 6 per cent., free of tax and cumulative. The issue price is par. The shares will be definitely redeemed after 10 years and carry the right to be converted into ordinary shares at face value after two or three years. Half of the issue has been taken up by the Nizam's Trust, so that the public will be left with only Rs. 2.5 crores.

EQUITIES ERRATIC

SHARP RISE IN BOMBAY DYEINGS

From Our Own Correspondents

BOMBAY, *5th April*

AN erratic movement in prices of equities marked the activity on the Stock Exchange during the week under review. There was no sustained enthusiasm on the part of operators to keep the trend of prices upward. On the other hand, profit-taking at every rise and renewed support at each decline caused prices to oscillate both ways. Towards the close, however, selling gathered some momentum and as a result, equities, excepting the leading ones, disclosed small losses. But the undertone still remained steady.

There was no adverse influence to affect the sentiment of operators. On the other hand, all the factors which had been interpreted as signs of inflation in the previous week, such as further expansion in notes in circulation, a rise in commodity prices and a fresh flow of good corporate news were still prevalent. Nevertheless, operators were hesitant to follow the rise in prices due to fears about enforcement of monetary measures to curb inflation, uncertainty about the Indo-Pakistan political relations and rumours about the possibility of an interim budget to cover any increase in defence expenditure.

In the steel section, Tata Ordinaries were marked down early in the week from Rs. 249-8 to Rs. 247-12, before being lifted up to Rs. 254-8 on Monday this week. There was a sharp recession yesterday to Rs. 248 on bull liquidation, but a revival of support restored the shares to Rs. 252 at the close today. Indian Irons moved between Rs. 36-4 and Rs. 34-13 and closed with a fractional gain at Rs. 35-13.

The textile section presented a mixed pattern. The highlight was, however, provided by Bombay Dyeings which attracted large professional support and were taken to new high levels, well above the peak touched in 1955. Following the release of the Company's accounts for 1955 which disclosed excellent results, the shares were lifted from Rs. 622-8 to a high of Rs. 665 (as against the peak of Rs. 628-12 touched in 1955), but heavy profit-taking at the higher level brought them down to Rs. 638-2 yesterday. They were again marked up today to Rs. 663-12 before closing at Rs. 657-8. Centurys also moved erratically between Rs. 547 and Rs. 524-8 and closed at Rs. 538, as against the previous week's closing of Rs. 531-8. Central Indias were steady at Rs. 148-8. Kohinoors were marked down over the week by Rs. 7 to Rs. 358-8. Finlays shed Rs. 3 to Rs. 360. Gokaks drifted lower from Rs. 256 *cum-div.* to Rs. 237 *ex-div.* (div. Rs. 15). Indu Ordinaries receded on lack of support by As. 9 to Rs. 13-7. Indore Malwas eased on pessimism regarding dividend, declining from Rs. 156-4 to Rs. 148-12. Khataus advanced from Rs. 236-4 to Rs. 258-12 in anticipation of an additional dividend of Rs. 8, consequent on the recent amendment of Section 23A of the Income-tax Act. But the announcement of an additional distribution of only Rs. 2 per share by the Company caused disapointment and the shares reacted to Rs. 250. New Citys dropped Rs. 2-8 to Rs. 168-12, while New Greats were unchanged at Rs. 230.

Bank shares presented a quiet tone. Central Banks changed hands As. 8 lower at Rs. 48, while their new shares were done at Rs. 49-8. Bank of Indias were dealt in Rs. 1-12 lower, at Rs. 153-4. Punjab Nationals met selling pressure and fell by Rs. 3-4 to Rs. 47. United Commercials were dull at Rs. 50-8 *ex-div.* Union Banks had transactions at Rs. 6-10.

The tendency in the electricity section was quiet and prices were marked down fractionally. Tata Hydros lost Rs. 2 to Rs. 131, while their new shares were done As. 12 better at Rs. 125-12. Tata Powers (old) declined by Re. 1-4 to Rs. 1,368-12 and new shares by Rs. 2-8 to Rs. 1,312-8. Andhra Valleys (old) changed hands Rs. 6-8 lower at Rs. 1,287-8 and new shares Rs. 7-8 lower at Rs. 1,235. Bombay Suburbans shed As. 5 to Rs. 116-4, while Ahmedabad Electrics gained a like amount to Rs. 102-13. Surat Electrics receded by Re. 1-4 to Rs. 122-8.

The miscellaneous section presented a mixed pattern. Sugar shares ruled easy and were well marked down. Belapurs retreated from Rs. 236 to Rs. 229, before closing at Rs. 230. Phaltans drifted down by Rs. 6 to Rs. 142-8 and Walchandnagars were put through at Rs. 255 *ex-div.*, as against Rs. 275 *cum-div.* last week (div. Rs. 18 per share). In the cement section, Associated Cements attracted some investment support early in the week and rose from Rs. 215-4 to Rs. 225, but soon met realising pressure and relapsed to Rs. 217. The closing was, however, a shade better at Rs. 219-4. Digvijays lost on balance Rs. 3 to Rs. 184. Among engineering and mining shares, Alcocks met selling pressure, losing Rs. 13-12 to Rs. 361-4. Tata Locomotives were, however, a feature on keen support following reports of good working and anticipations of a maiden dividend. The shares were lifted up from Rs. 151-12 to Rs. 163-8, before finishing at Rs. 161-8. Larsen and Toubros were lower by As. 6 at Rs. 15-9 and Premier Constructions looked down from Rs. 194-8 to Rs. 190-8. Kamani Engineering had business at Rs. 4-12. Shivrajpurs had deals, Re. 1-8 lower, at Rs. 112-6. Indian Coppers were affected by adverse rumours about the bonus issue and reports about the possibility of the industry being taken over by the Government. The shares receded from Rs. 7-4½ to Rs. 6-15. Favourable rumours about dividend pushed up B.B. Petrols by As. 3½ to Rs. 4-7.

In the shipping and transport group, Scindias, after an earlier improvement from Rs. 18-4½ to Rs. 18-11, gave way to Rs. 17-8 and closed at Rs. 17-12½. Great Easterns lost As. 3 to Rs. 17-9. Bharat Lines were done at Rs. 74. Hindustan Motors were a little quiet at Rs. 10-4. There were reports that the Company would shortly come out with a preference issue for Rs. 5 crores at 6 per cent. (tax-free). Premier Automobiles were placed at Rs. 93. Among miscellaneous shares, Bombay Burmahs were erratic, moving between Rs. 653-12 and Rs. 622-8 and closing unchanged at Rs. 638-12.

Calcutta Stock Exchange

CALCUTTA, *4th April*

The Calcutta Stock Exchange presented cheerful conditions during the major part of the week under review, but developed easiness in the later sessions. The initial firmness was aided by several indices showing signs of inflation in the country, particularly the persistent rise in money supply and continued upward trend in commodity and bullion prices. Investment buying broadened further and equity values forged ahead, registering sizable gains. But these gains were practically erased during the later sessions of the week, by selling pressure induced by settlement considerations. The closing rates for many popular scrips were a shade lower than those at the end of last week.

Sectionwise, coal shares staged a retreat. Bengals dropped Rs. 15 to Rs. 535. East Indias receded by Re. 1-6 to Rs. 34-12. New Beerbhooms declined by a rupee to Rs. 20. Burrakurs climbed down by As. 5 to Rs. 14-10. Central Indias lost As. 2 to Rs. 7-5. Western Bengals were unchanged at Rs. 7-5.

Among jute shares, Nationals decreased by As. 12 to Rs. 25-2. Birlas were lower by As. 2 at Rs. 17. Howrahs were quiet at Rs. 23. Anglo-Indias were done at Rs. 180, Barnagores at Rs. 141, Chitavalsahs at Rs. 14-9, Indias at Rs. 137 and Kamarhattys at Rs. 135.

Over the week, engineering shares suffered losses. Burn & Cos. were hammered down by Rs. 30 to Rs. 355. Jessop & Cos. fell by As. 14 to Rs. 34-2. Richardson and Cruddas slipped by As. 11 to Rs. 25-13. Indian Irons lost As. 5 to Rs. 35-7. Braithwaite & Cos. lost As. 4 to Rs. 27-14. Britannias changed hands As. 3 lower at Rs. 18-15. Indian Standard Wagons, however, evoked special buying support and hardened by Rs. 9 to Rs. 186.

Among miscellaneous industrials, Martin Burns receded by As. 11 to Rs. 25-8. British India Corporations declined by As. 5 to Rs. 10-12. Aluminium Corporations and Shaw Wallaces lost As. 2 each to Rs. 10-3 and Rs. 15-10, respectively. Imperial Tobaccos eased by an anna to Rs. 14-12.

In contrast to the generally declining trend, the prices of tea scrips were higher over the week. Banarhats rallied Rs. 8 to Rs. 372. Gungarams advanced by Rs. 2 to Rs. 302. Huldibaris gained Re. 1-8 to Rs. 39. Basmatias put on As. 6 to Rs. 39-2.

Madras Stock Exchange

MADRAS, *3rd April*

For the sixth week in succession, the Madras Stock Exchange exhibited a buoyant tone. This sustained buoyancy was fanned principally by thoughts of a possible development of intensified inflationary conditions, following deficit financing. The Press report suggesting the possibility of a rise of Rs. 1,500 crores in the public sector's outlay of the second Plan led operators to believe that a larger dose of deficit financing than what is now contemplated might be resorted to. In fact, the effect of deficit financing was interpreted so bullishly that even the statement of Mr. M. C. Shah, Union Minister for Revenue and Civil Expenditure, that tax on total wealth was one of the several proposals that were being considered by the Government failed to have any adverse effect on the market. Fresh buying by bulls, which emerged as a result in several counters, pushed up the values to new highs. Coffee shares were particularly firm, thanks to the release of a further quantity of 450 tons of coffee for export. Tea shares also met with good buying support, on high encouraging advices from tea markets. Rubber scrips, too, were well supported, due to expectation of better working results. Enquiries were persistent for textile shares, owing to reports of continued excellent offtake of cloth at higher prices. Sugar, bank and miscellaneous company scrips ruled fully steady, in sympathy with the general upward trend of the market.

There were two important company announcements during the week under review. The Kerala Estate belonging to the Kerala Calicut Estates Ltd. has been purchased for Rs. 14.50 lakhs, half of which is being acquired by the Cottanad Plantations Ltd. and the other half by the Anaparai Estates Ltd. The Thirumbadi Rub-

AMERICAN LETTER

BUSINESS UPSURGE STILL PERSISTS

DANGERS OF INFLATION

From Our Special Correspondent

NEW YORK, *20th March*

PRESIDENT Eisenhower's decision to be a candidate for another four years in the White House has enhanced the atmosphere of optimism among the people and in business, industrial and financial quarters. Members of the Democratic Party also have been quite active in probing public opinion in primary elections in various of the forty-eight States. Democratic Senator Kefauver won one election over Adlai Stevenson who is the Democratic standard-bearer. He ran against President Eisenhower the last time and lost.

Mr. Stevenson is a brilliant man with a distinguished career, with lots of family money to back up his status. He has, however, several factors against him in comparison with Mr. Eisenhower. In the first place, he is not a national hero. Secondly, the average man in the street somehow distrusts anybody with more brain-power than he possesses himself and, finally, a man in the millionaire class is not necessarily popular with the masses, although some people maintain that individuals of that calibre make more honest politicians than others who require income to keep the home fires burning. At this point, it looks to this correspondent that Mr. Stevenson is not a particularly serious contender for President Eisenhower, also considering that he divorced, a fact which in many parts of the United States is still looked upon with some misgivings.

This does not mean that the President's re-election is assured. Many things can happen between now and the November election day. The most serious question which has not yet been answered is who the Vice-Presidential candidate will be.

Many persons, unreasonably or otherwise, suggest that the President may not outlive his second term, so that the choice of the Vice-President at the forthcoming Republican Convention at San Francisco will have an important influence. So far, it looks as though the Government ticket headed by the President can hardly be defeated.

On the business scene, all is well—except there are still indications of a more than normal business upsurge. Loans by commercial banks in New York which feed money through correspondents throughout the country have risen so far this year by almost $800 million, as compared with an increase of less than $200 million in the comparable period last year. The demand for credit arises from various sources. Consumer credit, or hire-purchase, plays a large part, although the gain in this field has not been too extraordinary, even considering the decline in the automotive field.

There has been a notable increase in inventory in recent months which led to some borrowing. It shows signs of levelling off. However, much borrowing is caused by expenditures for improvement in plant and equipment. Some companies borrow on short-term paper in anticipation of large returns in the meantime. Others borrow on short-term, pending the arrangement of capital financing. In addition, at this time of the year, there is borrowing for Federal and State tax payments.

All told, the expansion in loans has been considerable and it supports the theory of the Federal Reserve system and of the Treasury that the dangers of inflation are still greater than those of deflation.

Employment and retail sales are holding up very well, indeed, and Easter business has been good. It was impeded only by inclement weather. Rain and snow have been quite abundant this winter and spring season in the United States and it has kept many people indoors.

There has been an improvement in the prices for farm products, particularly in the last reporting period from mid-February to mid-March. Also, the huge Government surpluses of grain and dairy products are expected to be moved satisfactorily on the basis of new international agreement. The securities markets, appraising current and discounting future events, also put on a good show. It was nothing spectacular, but prices crept up gradually and sound investment in both equities and in senior obligations were in good demand.

Likewise, the underwriting markets have been in a happy state. Borrowings have been heavy. Industries find it necessary to improve their plant constantly and the growth in the number of automobiles and trucks has made it necessary to build, maintain and plan new highways over which the steadily increasing traffic can be moved. This has led to many new issues both by private companies and by State municipalities.

Under conditions of rising interest rates, as have been in evidence in the last few months—brokers' and dealers' loans on securities are now up to 4 per cent.—prices of outstanding securities in the fixed interest field have, naturally, declined, because of rising yields. In the banking and investment fields, it has led to higher operating earnings, offset by securities losses. The overall effect has been beneficial to the United States economy, but the obvious question arises how far this trend can go before it becomes a headache to those who have to take cash losses, against imaginary or, in some cases, real earnings.—*All Rights Reserved.*

NEWS IN BRIEF

THE Central Government proposes to establish at Banaras a factory for manufacturing parts of railway coaches.

A six-member trade delegation from Bulgaria, headed by Mr. Ivan Perpagiev, arrived in Bombay on Sunday this week.

The fifth session of the International Rice Commission of the F.A.O. will be held in Calcutta from 12th to 17th November next.

India has a total labour force of 139.3 million, consisting of 98.7 million men and 40.6 million women, according to the International Labour Organisation.

The Indian Central Oilseeds Committee has decided to set up five regional research stations for oilseeds at Kanpur, Hyderabad, Coimbatore, New Delhi and Ludhiana.

The Government of India has fixed the price of tea, for the purpose of determining the export duty, at Rs. 2-13-4 per lb., as against Rs. 2-11-4 per lb. in force from 1st March 1956. There is no change in the existing rate of duty of As. 6 per lb.

The Indian Coffee Board has released a further quantity of 450 tons of coffee seeds for export. The quota consists of 250 tons of plantation A, B and Triage and 200 tons of Arabica cherry gleanings, flats and P.B.

The Government of India has decided to release a further quantity of raw wool for export during the period April-September 1956. The details of the licensing procedure are being notified by the Export Trade Controllers at the ports concerned.

An export promotion council for tanned hides and skins leather goods and tannery by-products is expected to be set up by the end of May or the beginning of June this year. The Council will have its headquarters at Madras.

The Union President has given assent to the Bill which seeks to extend the life of the Control of Shipping Act, 1947, for a further period of two years ending March 1958. The Act provides for the control of coastal shipping through a system of licensing and contains other ancillary matters.

With effect from the 1st inst., the Registrars of Companies in Assam, P.E.P.S.U., Rajasthan, Madhya Bharat, Saurashtra and Mysore have taken over the functions of Registrars in Manipur and Tripura, Himachal Pradesh, Ajmer, Bhopal and Vindhya Pradesh, Kutch and Coorg, respectively.

The Government of India has permitted the Government of Assam to have its own provident fund legislation for tea garden workers in this State. The permission is subject to the condition that the Assam enactment will stand repealed when the Employees Provident Fund Act, 1952, is applied to plantations.

Orders have been placed for 60 drills required in connection with the coal production project. The drills will be purchased from the Soviet Union, Sweden, the U.S. and the U.K. Tenders have been invited for a few items of earth removing equipment and equipment for stone blasting, cutting and removal of coal and ancillary equipment, as well as some essential items of workshop equipment.

Under its phased programme of extending aids to navigation, the Union Lighthouse Department completed work on 25 new lighthouses at an estimated cost of Rs. 22 lakhs during 1955-56. Improvements, at an estimated cost of Rs. 2 lakhs, were effected in the case of eight more. Radar equipment for Khanderi Island and Saugor Island, for which orders have been placed, is expected to be delivered by May next. By that time, lighting equipment for the lighthouses at Perotan Island, Korlai Fort, Pentakotta, Vakalapudi and Alleppey is likely to be available.

The new Companies Act (I of 1956) has come into force with effect from the 1st inst. Some of the provisions of the Act have already been enforced, while others will come into force after the lapse of certain periods. For the facility of the public, offices of Regional Directors have been established at Bombay, Calcutta, Madras and Delhi, and Registrars of Companies are functioning at 18 centres all over India. The public are advised that they should get in touch with the nearest Regional Director or the Registrar of Companies and seek help from them in regard to the interpretation of the provisions of the new Act. The Regional Directors and the Registrars of Companies have received instructions to give all possible assistance promptly.

At its meeting held in Bombay on Monday last, the Development Council for Woollen Industry agreed in principle to the holding of a wool auction market in India for indigenous wool and formed a sub-committee to make detailed recommendations for the same. The Council also discussed the formation of an export promotion council for the woollen industry, measures to be taken for the efficient running of the woollen cottage and small-scale industries, participation of Indian wool traders in the wool terminal market in London, export credit guarantee scheme for the woollen export trade and proposal for the starting of a wool combing plant in India.

An agreement between the Governments of India and the United Kingdom for the avoidance of double levy of Estate Duty was signed at New Delhi on Tuesday this week by Mr. M. C. Shah, Union Minister for Revenue and Civil Expenditure, and Mr. Malcolm Macdonald, High Commissioner for the United Kingdom. It endorses an agreement on the subject reached at official level on 14th January last between a British delegation headed by Mr. J. R. McWills and the representatives of the Government of India's Central Board of Revenue led by Mr. A. C. Bose. Since an agreement on this matter can, under the Estate Duty Act, 1953, be entered into only with the Government of reciprocating countries, the United Kingdom has been declared such a country. The agreement will be laid before the Parliaments of India and the United Kingdom in the next few days and come into force on a date to be announced later.

The Government of India has decided to grant licences to consumers' co-operative societies to import, upto a reasonable value, a number of essential goods required for use by their members. The goods listed include canned and powdered milk, milk food for infants, patent medicines, stationery articles and lead pencils, knitting wool, cotton sewing thread, woollen piecegoods and blankets, boots and shoes, thermos flasks, pressure cookers, safety razor blades, bicycles, watches, cod liver oil and contraceptives. The new concession is in addition to the permission given to co-operative societies in December 1955 to import items open to new-comers. In order to be eligible to import the essential goods mentioned in the list, the co-operatives should have a membership of not less than 100 and a minimum annual sales turnover of Rs. 20,000. They should also have been in operation in the last two calendar years. Eligible societies should submit their applications for import licences to the appropriate licensing authority before the 30th inst.

A contract for the supply of equipment for the Bhilai Steel Works was concluded at New Delhi on the 2nd inst., Mr. Khlebnikov and Mr. Sergeev signing on behalf of the Ministry of Iron and Steel of the U.S.S.R. and the Soviet export organisation "Technoexport," and Mr. S. Bhoothalingam, Secretary, Ministry of Iron and Steel, on behalf of the Government of India. The equipment, which will cost approximately Rs. 55 crores, will be supplied on credit repayable in twelve equal annual instalments. Credit will be raised on each consignment in accordance with a general average price agreed upon and interest will be payable at 2½ per cent. per annum from the date from which credit is raised. The first consignment is expected to arrive towards the end of June 1956 and the entire supply completed by the middle of 1959. The Steel Works are expected to achieve full production by December 1959, but two coke oven batteries, two blast furnaces, two open hearth furnaces and the blooming mill will be commissioned about a year earlier. The cost of equipment includes insurance and freight charges. Arrangements for shipping, insurance, etc., will be made by "Technoexport," a Soviet organisation specialising in exports from the U.S.S.R. Shipments will be made generally at Black Sea ports and delivered at Visakhapatnam in India which would be the nearest and most convenient port for onward movement to Bhilai.

* * * *

From Abroad

Soviet Russia is reported to have offered to sell to Egypt entire atomic plants and the necessary atomic fuel, in return for cotton.

The production of gold in the U.S.S.R. is estimated at 12 million fine ounces per annum, having risen from 1 million ounces at the beginning of Russia's first Five-year Plan in 1928. Just before the last war, the output was over 5 million ounces.

The U.S. Census Bureau reports that more Americans held jobs in 1955 than ever before. More than 63 million persons were employed—or two million more than in 1954. The number of unemployed fell about 600,000, averaging 2,650,000 persons in 1955.

The National Coal Board of Britain suffered a loss of about £19 million in 1955, bringing the accumulated deficit to £37 million. The loss would have been greater but for the surplus of £9 million earned in the last quarter of 1955, the largest for any quarter since nationalisation.

The High Authority of the European Coal and Steel Community has authorised the Belgian Government to pay subsidies upto Frs. 700 million to Belgian coal mines in 1958, to cover a part of the costs which the mines have to meet because of the reduction in working hours.

The World Bank has granted a second loan of $5 million to Ecuador for financing the expansion of the country's electric power. The loan will have a maturity of 20 years, carry interest of 4¾ per cent, and is granted to a corporation which is the sole supplier of power to the area around the capital, one of Ecuador's most important industrial regions.

Egyptian cotton exports to Soviet bloc countries are being dumped on the market and are being offered by transit dealers at low prices in Germany, according to a spokesman of the German Ministry of Economic Affairs. As a result of this, Germany is able to buy in neighbouring countries Egyptian cotton 10 to 14 per cent. cheaper than in Egypt.

The production of cars in the U.S. during the second quarter of 1956 is expected to be a little over 2 per cent. higher than that in the first quarter, but 15.6 per cent. below that in the corresponding period of 1955. This will mean an output of 1.79 million cars for the quarter. On this basis, the production for the first six months of the year would be at an annual rate of nearly 7 million cars, as against the actual production of about 8 million cars in 1955.

The United States' foreign trade, aid and investment in other countries rose to a record total of $21,327 million in 1955. According to the Commerce Department, the expansion in both receipts and payments reflects the continued business improvement in the U.S. and other countries. The U.S. imports set a new high of $11,500 million. Other countries continued for the sixth consecutive year to gain gold and dollar assets in international exchange with the U.S.—the increase last year amounting to $1,500 million.

The Netherlands State coal mines will shortly establish a big polythene factory with an initial capacity of 5,000 tons per annum. So far polythene has been mainly imported from the U.S. and Britain. The production will cover the entire consumption of the Benelux countries. It will be stepped up later on, so that the surplus can be exported. Based on the German Zieler process, the production will start from coke-oven gas. The cost of the scheme is expected to be several million pounds.

The Egyptian pound has been freed with effect from 26th March by an order of the Minister of Finance. Its exchange value in foreign markets will be on the basis of the rates published by the International Monetary Fund. Following Egypt's withdrawal from the Sterling Bloc in 1947, an Order was issued fixing the Egyptian pound exchange rate in foreign markets in accordance with sterling rates. Under the latest order, the National Bank of Egypt, in co-operation with the Minister, will fix the exchange rate on the basis of parity rates to be announced by the I.M.F. within a maximum fluctuation margin of 1 per cent. up or down. In the event of the non-announcement of any member country's parity rate and in the case of non-member countries of the I.M.F., the National Bank will fix the Egyptian pound's exchange rate on the basis of prices prevailing in foreign markets.

PERSONAL

MR. R. Mukerjee, Commissioner of Income-tax, Madras, has been appointed Director of Income-tax Inspection, New Delhi.

Mr. Joseph W. Letzkus, Trans World Airlines Regional Sales Manager for West and East Asia, has been promoted to the rank of Vice-President.

Dr. K. L. Rao, Chief Engineer, Flood Planning and Designs, Central Water and Power Commission, Government of India, has been appointed a member of the Commission.

Mr. N. Nagai, until recently Mitsui Line's representative in London, has assumed charge as the Line's representative in Bombay *vice* Mr. T. Ono who has been transferred to Japan.

Mr. B. P. Patel, General Manager of the B.E.S.T. Undertaking, Bombay, is understood to have been appointed Managing Director of the State Bank of India. Mr. Patel is likely to be succeeded by Mr. M. G. Monani, Director of Local Authorities, Southern Division.

Sir Miles Thomas, who recently resigned his post as Chairman and Chief Executive of the British Overseas Airways Corporation, has been elected Director of Monsanto Chemicals Company. Sir Miles will become full-time Chairman of the Company not later than 1st July next.

Sardar Ujjal Singh, a former Finance Minister of the Punjab, Mr. L.S. Misra, a retired Chief Justice of the Hyderabad High Court, Mr. M. V. Rangachari, for some time Secretary to the Union Ministry of Finance, and Dr. B. N. Ganguli, Professor in the Delhi School of Economics, have been appointed members of the Finance Commission. The appointment of Mr. K. Santhanam, a former Governor of Vindhya Pradesh, as the Chairman of the Commission had been announced some time ago.

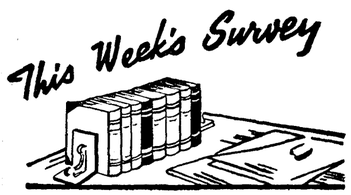
"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

CALCUTTA, *4th April*

Mineral Wealth of India

In respect of mineral wealth, Nature has not been lavish in her gifts to India. There are only three valuable minerals known to be present in this country in large quantities of high quality. These minerals are iron, manganese, and mica, and it would seem that it is upon them, in conjunction with coal, that the industrial future of India mainly depends. The output of manganese and mica fluctuates within narrow limits and shows no immediate prospect of expansion. As these minerals are at present mined mainly for export to foreign countries, it is, perhaps, as well that our resources are being conserved for future use in Indian industry. The production of iron-ore is, however, steadily increasing and there is reason to believe that, with the shelter afforded by the protective tariff, the iron and steel industry will continue to expand. The present appears to be a favourable time for the establishment of new works. Up to the present, the whole of the iron-ore mined has been smelted in this country, but there is now said to be a strong probability of the development of a large export trade in iron-ore.



MR. G. D. BIRLA ON THE PLAN

THE Government spokesmen are never tired of reiterating that they welcome constructive and positive criticism. Such criticism has been forthcoming from the leaders of trade and industry in the country in respect of the Five-year Plan. Although many of these critics do naturally express grave misgivings about the basic economic philosophy of the Plan, there is no doubt that they all recognise that the Plan must succeed, for with its success is intimately connected the problem of raising the living standards in the country. But even such critics find that the Plan assumes a little too much—especially in regard to resources and men. One such critic is Mr. G. D. Birla, the well-known industrialist and Chairman of the United Commercial Bank, who subjected the second Five-year Plan to a brief, though critical, examination in the course of his annual statement to the shareholders.

Mr. Birla prefaced this part of his statement with some general observations which, though they run counter to popular conceptions, will need to be borne in mind by the authorities in the interests of successful implementation of the Plan. He stated that higher employment, though a desirable objective, could not be as important as the creation of greater wealth. He averred that only such employment as was highly productive could create prosperity which, in its turn, could definitely be a precursor to greater employment. The main problem, according to him, is not so much to create just some kind of employment but to create highly productive, wealth-creating employment. From this point of view, he naturally found that the Ambar Charkha was no answer to India's economic problem. This is a basic consideration which unfortunately escapes the Government's attention, presumably because it sees in this outmoded device so ready a remedy that it is unwilling to examine all the implications of an economic system based upon the Ambar Charkha and other similar devices. Strictly speaking, there ought to be no conflict between large-scale and small-scale industries, provided they supplemented each other. Indeed, cottage industries, as Mr. Birla indicated, can and should follow large-scale industries and not *vice versa*.

Proceeding, Mr. Birla analysed the Plan from the point of view of internal resources, foreign exchange resources, technical personnel, transport and Government machinery. As regards internal resources, he wondered whether it was fully realised that "additional taxation, savings and loans come into play only after production and wealth have increased and cannot precede them." For, if one began with additional taxation and compulsory savings, then there would be failure "to create the new purchasing power which is expected to create the increased demand for goods." He reinforced this argument with an apt simile: "If a house is taxed before it is built, the result would be that no house would be built to pay the tax."

The Planning Commission has estimated the foreign exchange requirements at Rs. 1,600 crores and the gap between the availability and requirements at Rs. 800 crores. Mr. Birla felt that the Rs. 1,600-crore estimate was an underestimate, and that the gap would, therefore, be more than Rs. 800 crores. And even if one accepted the Commission's estimate of the gap, it would still have a direct effect on national economy. He said: "I fear the seriousness of the paucity of foreign exchange is not fully realised. With proper efforts, foreign exchange should be available. And we have to work for it." There are two ways in which such resources can be found. One is an increase in exports and the other is foreign assistance. Ways and means must be found to get foreign exchange through both the methods. Mere reliance on import restrictions has its own shortcomings. It can add to inflation within the country and may provoke retaliation against India's exports from abroad.

The dearth of trained personnel is already a serious bottleneck and, as the Plan progresses, it is bound to create more and more difficulties. Elsewhere in this issue, we have referred to the views of the Chairman of the Indian Engineering Association on this important question. Mr. Birla too had something relevant to say on this subject. In the first place, he averred that the private sector could command a large number of technically qualified experts, whereas the public sector had to begin from scratch. Although he did not say as much, the obvious conclusion is that, when the private sector is denied the fullest opportunity to utilise all its talent, it should be regarded as a national waste. Secondly, he emphasised that there should be no restriction on the "incentives that go to stimulate technical education and knowledge." As regards transport, he warned that, if the "railways do not bear the strain that is proposed to be put on them, the whole edifice of the Plan will collapse." Finally, so far as the Governmental machinery is concerned, he said that a thorough overhaul would be needed if it were to cope with the problems of industrial expansion in the public sector.

It must thus be clear that Mr. Birla's approach to the Plan was essentially constructive. If he mentioned the difficulties in the way of the implementation of the Plan, it was because he wanted the problems to be solved. He insisted that "we need to make the Plan a success." But pious intentions will never get the country anywhere. The Government must resolutely face the realities of the economic situation. There is much in that situation that should cause misgivings to the planners. Any ostrich-like attitude towards the stark facts of Indian economy will not enable the Government to implement the Plan successfully. Mr. Birla has done a real service to the nation in calling attention to some of these facts.

PURCHASE TAX IN ANDHRA

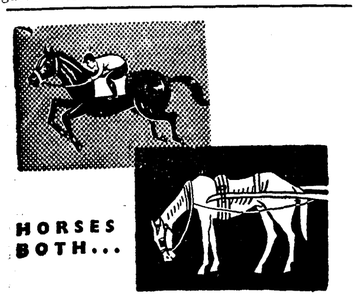
Two factors must have prompted the Government of Andhra to accept the Sales Tax Enquiry Committee's recommendation for the levy of a tax on the purchase of paddy, rice, coconuts, copra, raw jute and turmeric. First, the Government is faced with the problem of covering the huge deficit of Rs. 11 crores on revenue account during the 30 months following the formation of the State, not to mention the outstanding debt of as much as Rs. 70 crores. Secondly, the Government has to provide for a large capital outlay under the second Five-year Plan. This problem would have been less acute had the Centre not told the State that it would not honour the latter's bills, if expenditure above the allotments were allowed to continue.

The Andhra Government's decision to levy the aforesaid purchase tax and to amend the Madras General Sales Tax Act, 1939, has been incorporated in a Bill—published in a *Gazette Extraordinary*—which is expected to be introduced in the State Legislative Assembly shortly. The rate of purchase tax per rupee of turnover proposed in the Bill is one anna on turmeric, six pies on paddy, rice, coconut and copra, and three pies on raw jute. Except in the case of raw jute, the rate of tax on other commodities is the same as that suggested by the Sales Tax Enquiry Committee; on raw jute, however, the Committee had recommended a tax of nine pies.

The levy will be a single-point tax and will be imposed on the first purchase effected in the State of goods produced within the State or imported from either outside India or any other State in India. The tax for each year may be provisionally assessed, levied and collected in advance during the year in monthly or quarterly instalments on the basis of the estimated or actual turnover of the dealer. All dealers in the commodities mentioned above, with the exception of petty dealers, are required to register themselves, failing which they will be liable to a fine which may extend up to Rs. 2,000.

The Andhra Government's move to substitute a purchase tax in the place of sales tax is a departure from the present system of taxation of sales. In this connection, it may be recalled that the Taxation Enquiry Commission, after referring to the case for purchase tax, stated that the proposal required "more elaborate examination." The Commission said that purchase tax had been advocated mainly on the ground that it would solve the problem of taxation by each State of non-resident dealers. But it felt that, although the levy of the purchase tax on the State's own dealers who had bought the goods rather than on the non-resident dealers who had sold them seemed attractive, there were certain serious limitations to the levy. A purchase tax, the Commission held, was practicable only in a very limited context—motor cars and other readily available traceable articles, for example—and its limited application made it a very negligible source of revenue. It further held that a purchase tax as a substitute for the taxation of non-resident dealers was of no advantage from the revenue point of view; at the most, it provided a check to be exercised at the purchase end of a resident registered dealer's transactions. In the case of resident registered dealers and consumers who were outside the administrative arrangements for collection, the levy of a purchase tax was, in its opinion, impracticable.

It is for these reasons that the Commission maintained that a purchase tax was clearly not an effective solution for the particular difficulties it was supposed to solve. If, despite these considerations, the Andhra Government has accepted the suggestion of the Sales Tax Enquiry Committee, it is probably because the Government wants at least to check the evasion of tax by dealers in agricultural produce which is reported to be considerable.



...But quality puts one above the other. Hair darkeners there are many, but quality puts *Loma* above the others.

W. GERMAN CAPITAL EXPORTS

The latest move of West Germany to relax restrictions on capital exports is of special importance to India. West Germany, as readers are aware, is coming to play an increasingly important role in the task of India's economic development. It is directly participating in the Rourkela Steel Project, one of the biggest State enterprises. It is also assisting the expansion of several projects in the private sector, particularly in the engineering field, as, for example, the Tata Iron and Steel Company Ltd., and the Tata Locomotive and Engineering Company Ltd.

The relaxation of controls on capital exports from West Germany is expected to take many forms, of which two are said to be most important. These are: (1) Business men will be permitted to keep their export proceeds abroad for an unlimited period and to invest them abroad in foreign shares and securities including dollar securities, without any special application to the authorities; (2) all German residents will be allowed, on application, to buy abroad shares and securities, including dollar securities, although, probably, not to an unlimited amount. At present, it will be recalled, the West German exporters can keep their proceeds in foreign accounts with W. German banks only for a period of 180 days, after which they must deliver the currency to the Bank Deutscher Lander; the Bank, in turn, pays them the equivalent in marks.

The implementation of the two proposed measures will go a long way towards encouraging a large outflow of West German capital to the underdeveloped and undeveloped countries of the world. Incidentally, the measures will greatly benefit W. Germany itself. Thus, according to some financial experts, the payment in marks to W. German exporters by the Bank Deutscher Lander, with its attending inflationary effects, may be reduced. Further, the balance-sheet of the Bank will no longer reveal the total amount of W. German foreign exchange resources. The strength of W. Germany's foreign exchange can also be used to build up a long-term balance of payments abroad in the form of regular dividend and interest accruals.

There are, however, some financial experts in W. Germany who are somewhat sceptical about the proposed measures resulting in any large outflow of capital. "Few business men," to quote a report, "will be able to spare large amounts from their operating funds and even fewer will be inclined to buy shares in soft currency countries." In this connection, the report draws attention to the possibilities of imposition of three checks on investment abroad of W. German funds. The first is that investment in the form of real estate and similar long-term assets will remain subject to a special permit, although this is expected to be granted liberally. The second safeguard aims at preventing the "watering-down of German foreign exchange," that is, switching from soft currencies to dollar shares will be permitted, but not the other way round. Thirdly, by insisting on applications in the case of non-exporters, the monetary authorities will be kept informed about the scope of transactions and be able to take action, should the need arise.

INDO-YUGOSLAV TRADE

The Indo-Yugoslav trade treaty which took effect from the 1st inst. should pave the way for a wider and closer economic co-operation between these two countries. The conclusion of the treaty, signed on 31st March last at New Delhi by the representatives of the two countries, was facilitated by the exchange of visits by Marshal Tito and Mr. Jawaharlal Nehru last year.

The terms of the agreement reveal that the trade between the countries, besides being complementary, could be developed to the mutual advantage of both. The lines on which this development could take place were clearly brought out by Mr. Martini Cetinic at a Press conference in New Delhi. India has for long been experiencing shortage of shipping. And the agreement is expected to relieve this shortage to some extent. The Government of India and the Indian shipowners are expected to place orders with Yugoslavia for a number of ships of a tonnage ranging from 9,000 to 11,000 and fitted with diesel engines. The exact number to be supplied by Yugoslavia will depend on the price quoted for the ships and the date of delivery, which would be furnished within the next two or three weeks. According to Mr. Cetinic, the prices and quality of the ships would compare favourably with those made in other countries. Yugoslavia, we are told, has a long tradition in shipbuilding and has been meeting the shipping demands of Switzerland, the Soviet Union, China and certain other countries. The shipbuilding industry is not under the control of the Government, but the latter can give assistance to shipbuilding concerns in executing Indian orders for ships.

It is stated that, besides supplying ships, Yugoslavia can assist India in the construction of shipbuilding yards and ports. It claims to have abundant technical experience in the construction of hydro-electric power stations also. It has almost completed a deal for erection of a power house in Pakistan and is building three hydro-electric plants in Burma. It can lend the services of these experts to India. But these may not be of much benefit to India, since it too has made commendable progress in the construction of power generating stations. This country may, however, need technical assistance from Yugoslavia for the establishment of factories to produce electrical plant and machinery, as also iron and steel materials and cement, in which supplies are short. It is stated that Yugoslavia may supply about 50,000 tons of iron and steel products and about 100,000 tons of cement a year.

Yugoslavia may also buy from India consumer goods such as coffee, tea, spices, certain varieties of textiles, oilseeds, jute products, raw cotton and wool provided they are competitive in price and quality. Iron ore is another commodity that may figure in India's exports to Yugoslavia. A quantity of about 100,000 tons is mentioned in this connection. Tea is stated to be not in good demand and, therefore, the prospects for expanding tea sales are limited. There seems to be scope for exports of coffee, as the people are mostly coffee drinkers. About 4,000 tons of coffee seeds per year are likely to be bought by that country. In the field of technical aid, Yugoslavia may find the services of Indian experts on irrigation useful; India, we are informed, is quite ahead of Yugoslavia in the development of irrigation techniques.

At present the trade between India and Yugoslavia is very negligible. The total exports from India to that country in 1954-55 were worth Rs. 2.25 lakhs, as compared with Rs. 1.45 lakhs and Rs. 10.61 lakhs in the two preceding years. India imported goods worth Rs. 16 lakhs in 1954-55, Rs. 7 lakhs in 1953-54 and Rs. 9 lakhs in 1952-53. In 1955-56, however, the trade is likely to record considerable expansion. For, in the first nine months of the year, imports into India of Yugoslav merchandise amounted to Rs. 24.31 lakhs, as against Rs. 12.35 lakhs in the corresponding period of 1954-55. Shipments of Indian cargoes to that country aggregated Rs. 15.51 lakhs, as against Rs. 1.33 lakhs. This improvement in the volume of trading may be taken as an indication of a further expansion in the coming years.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated in England by Royal Charter, 1853)
(Liability of Stockholders Limited)

Capital (Paid-up) - £3,500,000

INDIA'S TRADE WITH RUSSIA AND EAST EUROPE

GROUND PREPARED FOR EXPANSION

From A Special Correspondent

NEW DELHI, *3rd April*

DELHI LETTER

FOR some days now, the Commerce and Industry Ministry has been devoting special attention to the development of India's export trade with East European countries and the Soviet Union. With this purpose in view, it has been concluding or renewing, as the case may be, a number of bilateral agreements with these countries. Only a few weeks ago, it entered into a new agreement with Rumania. This was followed by the visit of Mr. Mikoyan, Deputy Minister of the Soviet Union, with whom the Government of India had intimate talks on a number of subjects. Perhaps, the important among them were the development of Indo-Soviet trade and the possibilities of help which the Soviet Union could provide in furtherance of India's industrialisation. Representatives of the Yugoslav Government were also in the Capital last week, with a view to improving the trade relations between the two countries. Besides renewing the trade agreement with this country, they were able to make provision for a greater flow of trade between the two nations. These apart, the trade representatives of the Polish Government are now having talks with the Commerce and Industry Ministry on the possibilities of increasing the value of trade flowing between the two nations. A fresh trade agreement has just been signed between the two countries.

It is recognised that the flow of India's export trade to East European countries and the Soviet Union has been negligible during the last many years. The restricted trade relations with these countries is attributable to the fact that the Governments in these countries have been controlling external trade, while, in India, the export trade has largely been in the hands of private persons. During the post-war period, there has been no dearth of customers for India's industrial raw materials, semi-manufactured goods and some types of consumer goods. However, ever since the attainment of independence, the Government of India has been trying hard to maintain the most cordial and friendly relations with almost all the countries. In furtherance of this policy, the Government of India has been trying to improve the economic and trade relations with a number of countries with which it had restricted relationship during the pre-independence period. Hence the series of bilateral agreements with almost all the East European countries during the last few years.

Generally speaking, the Government of India's conclusion of bilateral trade agreements in recent years has not resulted in any appreciable increase in the flow of trade from India to the agreement countries. It is well known that the main outlet for Indian goods has been the Commonwealth countries, besides some Western European nations such as West Germany, Italy, France, Holland and Belgium, the U.S.A., Japan and Burma. The Commonwealth countries, for instance, were able to absorb about 55 per cent. of India's export trade in 1954-55, while the U.S.A., Japan and West European nations took about 27 per cent. of the value of Indian merchandise in that year. India's exports to East European countries were very meagre. Exports to the U.S.S.R. were only Rs. 2.12 crores, while those to Poland, Yugoslavia, Rumania and Hungary amounted to Rs. 39 lakhs, Rs. 2 lakhs, Rs. 4 lakhs and Rs. 2 lakhs, respectively. In some years, there were practically no exports to some of the countries mentioned above. In other words, exports to these countries, including those to the Soviet Union, were about ½ per cent. of India's total exports in 1954-55.

It is against this background that the possibilities for the expansion of India's export trade to these regions must be examined. It will, therefore, be a difficult task for the Government of India to develop increased trade relationship with these countries where the sole importers are Governments themselves. From another angle, perhaps, this type of Government trade control in these countries might facilitate greater exports from India, provided these Governments make a determined effort to buy more of Indian goods. India is doubtless anxious to import from these countries industrial machinery, iron and steel and some essential raw materials in furtherance of its Second Five-year Plan during the coming years. However, in view of the difficulties of payments position, and the need for conserving foreign exchange resources as much as possible, India will not be in a position to fulfil its wishes, in case East European countries and the Soviet Union are not inclined to augment their imports from India.

Considerable significance must, therefore, be attached to the statements made by Mr. Mikoyan, Soviet Deputy Prime Minister, the other day when he was entertained at a dinner by the Commerce and Industry Minister, Mr. T. T. Krishnamachari. The former is reported to have observed that the Soviet Union would be using its receipts of the sale of its goods to India to buy Indian raw materials and manufactured goods. In this connection, he is stated to have remarked: "The Soviet Union does not mean to sell to India such goods as she herself manufactures in sufficient quantities, since we do not want to compete with her own industry or agriculture. On the contrary, we offer to India such goods as will promote the development of Indian economy."

It is hoped that the visit of the Soviet Deputy Prime Minister, who is stated to be a good trade expert, will result in a greater flow of goods between the two countries. It is suggested that the Soviet Union will be interested in the intake of Indian tea, jute goods, spices, particularly pepper, leather goods including shoes, certain handloom fabrics of attractive designs and patterns, etc. It is expected that the cost of one million tons of steel which the Soviet Union has agreed to sell to India during the next three years will cost between Rs. 60 and Rs. 70 crores. During this week, the Soviet Union has signed another agreement covering the sale of machinery to the Bhilai Steel Plant. The flow of machinery to this plant will take place from June next. Hence the Soviet Union will be having considerable amount of rupee credit in the coming months to be utilised for purchase of Indian goods in this country.

There are thus indications of a marked expansion in India's foreign trade with East Europe and the Soviet Union in the coming years. The Minister for Commerce and Industry has also taken a hopeful view of the problem. According to him, the implementation of the second Plan will result in the expansion of India's foreign trade to the extent of 30 to 40 per cent. In other words, India's exports, which now stand at Rs. 600 crores per annum, must improve to about Rs. 800 to Rs. 850 crores before 1961. This target might not be impossible of achievement if India were to take certain constructive measures. The Government has already proposed to set up a State Trading Corporation, with a view to conducting the trade with countries like the Soviet Union where the Government is the sole importer and also to trade in certain commodities which may be strategic to the economy of the nation. These may include iron and steel, soda ash, caustic soda, raw silk, gypsum, rock salt, cement and tobacco.

Greater flow of export trade from India would be possible, provided India were to step up the production of such articles as are in keen demand in the Soviet Union and East Europe. Further, the prices for these commodities and manufactured goods should be competitive, so that the importing countries might be able to buy sufficiently large quantities of goods. This means that India should keep in check the inflationary conditions which have already come into being. The Minister for Commerce and Industry has assured the country that he would be taking steps not to divert the trade from the existing channels, but to create new channels by increased production. In other words, his Ministry will soon be taking suitable measures for encouraging production of export articles.—*All Rights Reserved.*

N.I.D.C. TO EXECUTE NEW INDUSTRIAL PROJECTS

A number of industrial projects submitted by the National Industrial Development Corporation to the Government of India for approval have been accepted. These schemes include: (1) steel foundries, forges and fabrication of steel structurals, (2) intermediates for dyestuffs, (3) wood-pulp, (4) carmachinery, (7) air compressors and fractional bon black, (5) sulphur from pyrites, (6) printing horse-power motors, and (8) refractories. Detailed investigations regarding these projects are now in progress in collaboration, where necessary, with foreign firms and experts. Besides these, the Corporation has submitted other schemes to Government for approval as reported in this journal last week.

The N.I.D.C., we are told by a Press note issued by the Government, may itself execute the projects or may establish a subsidiary for the purpose, in which case all the shares of the subsidiary would be owned by the Corporation. The execution of the project may be taken up also in varying degrees of collaboration with private enterprise. In other words, the methods adopted by the Corporation for the execution of its project will depend upon the circumstances of each case.

The Corporation is an agency of the Government for securing a balanced and integral development of industries in both the private and public sectors, the primary object being the setting up of new industries to fill gaps in the industrial structure so as to achieve better co-ordination of progress in different fields. The Corporation will, subject to the previous approval of the Government, plan and formulate projects for setting up new industries or developing new lines of production. It will itself take up the study and investigation of industrial schemes, and while implementing them will try to ensure the maximum use of industrial equipment, experience, and skill available in the country. The industries which it develops would, in their turn, encourage the growth of ancillary industries. In order to carry out its functions, the Corporation will try to build up a corps of competent technical and managerial staff. It will undertake financing only in so far as it is incidental to the development of a particular project.

ECONOMIC TRENDS IN U.S.

BOOM CONTINUES—OUTLOOK OPTIMISTIC

DESCRIBING the latest economic trends in the U.S., the April issue of the *Monthly Bank Letter* of the First National City Bank of New York observes as follows:

"The business reports during March have been impressively strong. Rising prices in stocks and commodities, heavy demand for money, and pressure on the bond markets, together with indications from well-regarded surveys that business spending will expand further and that consumers are confident, all reflect heightened optimism and extension of the boom. Industrial activity and employment, in the aggregate and with allowance for seasonal fluctuations, hold about the same as in other recent months, for automobile output is curtailed and there are other instances of moderate slackening to offset moderate advances. With the spring selling season here, automobile operations are expected to hold steady during the next two or three months. In home building, the other main soft spot, evidence is accumulating that the decline has largely spent itself and that the trend is now sideways or slightly rising.

"Industrial activity has been nearly stable, at record or near-record levels, during the past six months. In that period, some industries, including steel and many kinds of heavy goods, have lifted output further. Their orders have run steadily ahead of shipments and their unfilled orders have increased. In some other lines, including, in addition to automobiles, farm implements and synthetic textiles, the trend has been downward. Thus adjustments have been going forward, reflecting shifts of business and consumers' demand from one area to another.

"This is a healthy condition. After a long rise a point was reached where expansion could no longer be general, and where inventory accumulation or shifts of demand required adjustment. Business trends, therefore, are more diverse. The significant matter is that the adjustments are not falling concurrently, and that they are not causing any substantial slackening in overall levels of activity. Offsetting movements have dovetailed so smoothly that overall production is off less than 1 per cent. from its high and non-durable goods manufacturing is at a new record. The steel industry has made the shift from a consumers' goods boom to a producers' goods boom without a hitch. Its best customer, automobiles, which in 1955 took nearly one-fourth of finished steel shipments, cut weekly passenger car production 30 per cent. between mid-December and the end of February. Yet steel mills continued near-capacity operations and in March set a new weekly output record.

Upswing in Capital Spending

"Business men plan to spend nearly $35 billion on new plant and equipment this year, topping their record 1955 outlays by a startling 22 per cent. These figures were gathered in January and early February by the Department of Commerce and the Securities and Exchange Commission, and reflect a marked expansion in programmes since last fall. A McGraw-Hill survey, taken a few weeks after the President's heart attack, showed business at that time planning to boost investment 13 per cent. during 1956.

"Impressive as an upswing of 22 per cent. sounds, it actually does not involve much further gain in the capital goods industries beyond that already experienced. In the first quarter of 1956, business men estimated that their capital outlays, at an annual rate of $53.2 billion, were 16 per cent. above the 1955 average. In the second quarter, they anticipate a $35.2 billion rate of spending, 23 per cent. above 1955. In the latter half of this year, new plant and equipment expenditures would have to rise less than 1 per cent. over the second quarter rate to bring the 1956 total to the projected $35 billion. In fact, much of the initial impact of second half investment spending has already been absorbed by the economy. Large orders for heavy equipment have been placed, contracts for industrial and commercial construction have been signed, and in turn equipment manufacturers and contractors have placed orders with their suppliers.

"Past experience tells us, however, that these preliminary capital spending plans are almost invariably underestimated. Since the latest

(*Continued on page 695*)

COMPANY LAW ADVISORY COMMISSION

ITS MAIN FUNCTIONS OUTLINED

By K. R. P. Aiyangar

JOINT SECRETARY, DEPARTMENT OF COMPANY LAW ADMINISTRATION

THE extensive powers and the wide discretion allowed by the Companies Act, 1956, to Government for according approval on matters relating to or regulating the affairs of companies cannot be exercised arbitrarily. For this purpose, the Act provides that, in a large number of cases referred to in section 411, the Central Government should act on the advice of a Commission constituted in terms of section 410.

The Commission under the new Act will consist of not more than five persons with suitable qualifications, one of whom will be appointed the Chairman. The provision in the new Act in this regard is similar to that in section 289B of the Indian Companies Act, 1913. A study in retrospect of the working of the Commission set up under the old Act would give the best indication to the public of the role of such a statutory body in regard to the administration of the Company Law.

The first Commission under the old Act was set up in 1951 when Parliament conferred extensive powers on the Central Government in terms of the Indian Companies (Amendment) Act, 1951, to curb the growing malpractices in the management of companies. The 1951 Act added important provisions to the Company Law providing for securing prior Government approval to changes in the constitution of the board of directors and/or managing agency, in their terms of remuneration and in regard to their appointment or extension of the existing terms. These provisions in the Act were intended to enable Government to exercise an effective check over the anti-social activities of a small number of people who, somehow or other, had succeeded in acquiring a majority holding and controlling interest in the shares of companies and whose object in securing control over management often proved to be more an attempt to further their own interests than the real well-being of the managed company.

Need for the Commission

When these provisions were introduced in the Statute, the administration of the Company Law still suffered from the shortcoming that it was being handled by the States as an agency function and a proper central machinery to guide the administration was lacking. It was realised, as has been done even in the U.K., that it was not possible for the civil services to rely on their own resources and judgment in dealing with all matters that might come up for the exercise of official discretion and for taking decisions in connection with a complicated law which called for a thorough knowledge of and insight into the practice and procedure of business management. It was for this reason that the important function of advising Government on all these matters was vested in a statutory body like the Advisory Commission.

The first Commission was headed by Mr. C. H. Bhabha, who was at that time Chairman of the Committee enquiring into the revision and consolidation of the companies law. The other members of the Commission were Mr. D. L. Mazumdar, the then Secretary of the Company Law Committee, who later became the Commissioner of the Company Law Investment Administration and now the Secretary of the Ministry of Finance in the Department of Company Law Administration, and Mr. N. Sundaresan, a Deputy Governor of the Reserve Bank. The Commission, as constituted, was intended to fill in the deficiencies in the administrative experience of the regular Government machinery in administrative charge of companies and their advice enabled the functions assumed by the Central Government to be discharged in a just and equitable manner without in any way retarding initiative. The annual review by Government of the working of the Companies Law (Amendment) Act, 1951, is in fact a record of the work and achievement of this Commission.

With effect from 21st February 1956, the old Commission headed by Mr. Bhabha having resigned, Government have set up a new Commission under the chairmanship of Mr. Tennati Viswanatham, with Mr. J. D. Choksi and Mr. G. D. Ambekar as members and Mr. B. N. Chaturvedi and Mr. C. S. Shastri as advisers. From 1st of April, when the new Act comes into force, the reconstituted Commission under the chairmanship of Mr. Viswanatham will consist of all the above as members.

Commission's Duties

The Commission has the duty to advise the Central Government on various matters. Before a notification is issued by the Central Government under section 324 to the effect that companies engaged in a specified class of industry or business shall not have managing agents and on the question of the necessity and advisability of issuing the notification, the Commission will be consulted. Consultation is also obligatory in dealing with applications received by the Central Government from a public company or a private company which is a subsidiary of a public company regarding:—

(i) increase in the number of its directors beyond the maximum provided for under its articles,

(ii) amendment of provisions whether contained in the memorandum or articles or in any agreement or in any resolution passed by the company in its general meeting or by its board of directors relating to appointment or reappointment of a managing or whole-time director or of a director not liable to retire by rotation,

(iii) appointment of managing or whole-time director,

(iv) increase in the remuneration of a director (including a managing or whole-time director) or manager.

Consultation is necessary in the case of all companies for:—

(v) increase in remuneration or reappointment or first appointment of a managing director or whole-time director,

(vi) appointment of managing agents or secretaries and treasurers,

(vii) reappointment of managing agents or secretaries and treasurers for a fresh term when the existing term has two years or more to run,

(viii) variation of agreement with the managing agents or secretaries and treasurers,

(ix) determination of the companies of which a person shall be managing agent on his failure to comply with the provisions relating to the limitation of the maximum number of companies of which he could hold office as managing agent,

(x) transfer of office by managing agents or secretaries and treasurers,

(xi) succession to managing agency or office of secretaries and treasurers by inheritance or device,

(xii) changes in the constitution of a managing agency firm or corporation, or of secretaries and treasurers,

(xiii) payment of additional remuneration which may be paid to the managing agents or secretaries and treasurers, in excess of the limits specified in sections 198, 348 and 348 read with 381,

(xiv) appointment of directors by Government to prevent the affairs of a company being conducted either in a manner which is oppressive to any member of the company or in a manner which is prejudicial to the interests of the company, and

(xv) issue of order by the Central Government directing that no change in the board of directors of a public company or a private company which is a subsidiary of a public company shall have effect unless confirmed by the Central Government.

Any other matters may also, at the discretion of the Central Government, be referred to the Commission for advice.

Issue of Notice

The application for consent of the Central Government in regard to the matters mentioned above should be made in forms prescribed for the purpose in the Central Government's General Rules and Forms, 1956, which incorporate the forms that had been brought into vogue by the old Commission. Before an application is made to the Central Government, it is incumbent on the company to issue a general notice to its members giving particulars of the application made. It should also publish a notice on the same subject in a newspaper in English and in the principal language of the district in which the registered office of the company is situated. A copy of this notice is also required to be attached to the application to Government. In regard to applications relating to changes in the constitution of managing agents or secretaries and treasurers, the notice has to be published on behalf of both the managed company as well as the managing agents. Applications to Government should be accompanied by the following documents:

(i) seven copies of the articles of association of the company (of both the managed and managing agency/secretaries and treasurers companies if the company is managed by managing agents/secretaries and treasurers);

(ii) seven copies of the directors' reports and audited accounts for the last three years of the company (of both the managed and managing agency/secretaries and treasurers companies if the company is managed by managing agents/secretaries and treasurers);

(iii) seven copies of the agreement with the managing agents/secretaries and treasurers/managing directors;

(iv) seven copies of the partnership agreement of the managing agency/secretaries and treasurers firm if the managing agents/secretaries and treasurers, is a firm;

(v) statements showing the composition of the board of directors and shareholdings of individual directors in the company (where the company is managed by managing agents/secretaries and treasurers, shareholdings of partners/directors of managing agency/secretaries and treasurers, and of the managing agency/secretaries and treasurers, itself in the managed company should be indicated);

(vi) a copy of the resolution of the board of directors/general body of the company in respect of the company's proposal to which Government's approval is sought.

In view of the new overall ceiling fixed on managerial remuneration under section 198 of the Act, the Commission will now have to be informed by all applicants of the financial effect of the application of this ceiling to the subject covered by the application. Extensive powers have been conferred on the Advisory Commission in regard to the discharge of these duties. They may require the production of any books or documents in the possession, custody or control of the company relating to any matter under enquiry and call for any further information or explanation if they are of the opinion that such information or explanation is necessary for dealing with the particular matter to which the application relates. The Commission have also the power to inspect any books or documents of the companies, require any managing director or director, or manager or secretaries and treasurers or an officer of the company or any shareholder or any other person who is likely to furnish the requisite information regarding the affairs of the company and relating to any matter under enquiry to appear before them. It may examine any such person on oath or require him to furnish such information as may be needed. Refusal to carry out the directions of the Commission would constitute contempt for which a penalty of upto two years' imprisonment has been prescribed.

Traditions Built Up

The outgoing Commission have held, during their tenure of under five years, 42 meetings, and dealt with nearly 2,500 applications. The majority of cases dealt with related to appointment of managing directors, etc., and changes in constitution. In the course of their work, they had evolved a number of working principles which were duly made known to the business world. The importance of these principles was recognised when many of them were also embodied in the provisions in the new Act. Thus, in the case of a director of a managed company more than one managing director has not ordinarily been approved and the remuneration of directors-in-charge, including technical directors, have been sanctioned after considering the nature of the duties required to be performed. Tenure of appointment also has not been accepted for more than five years. In the case of companies managed by managing agents, the tenure of ten years had been consistently enforced and the scale of remuneration limited to 10 per cent. of net profits, only out-of-pocket expenses being allowed in lieu of office allowances. Various restrictions were also set on perquisites sought to be included in the agency agreements. Powers of the managing agents were also curtailed, so as to establish the power of the board to control and guide the working of managing agents and to limit the sphere of financial operation by them. In regard to the last matter, exhaustive enquiries regarding the financial resources of the companies, their past earnings, their capital resources, their turnover and the nature and duties of the various managerial staff were scrutinised before fixing either the scale of remuneration or the exercise of limits on financial powers such as making calls on shareholders, investment of funds, borrowing powers, engagement of persons related to the director or the managing agent.

While the extent to which the advice of the old Commission has been embodied in the provisions of the new Act is a measure of their valuable role in assisting the Government, the tradition they have set in this regard would constitute a guarantee that the request of company managements for Government consent on various matters as required by the law would always receive prompt and judicial consideration.

UNITED COMMERCIAL BANK'S PROFIT AT RECORD LEVEL

SHARP RISE IN TURNOVER—DIVIDEND RAISED

THE year ended 31st December 1955 has turned out to be a favourable one for banks in India. This is only as it should be in the context of the good progress made in the country's economy, what with the commendable expansion in industrial production, the increase in agricultural production and the favourable trend in foreign trade and balance of payments position. The increased prosperity of the country has been shared by almost all commercial banks in India, resulting in an expansion in their own business and earnings. Quite a few of these banks, as readers of these columns are well aware, have been able to earn record profit and to raise their dividends. The United Commercial Bank Ltd. (General Manager: Mr. S. T. Sadasivan, Calcutta) is one of them.

The upward trend in the Bank's business continued during the year under review, as witness the rise of Rs. 19.52 crores in the balance-sheet total as at the close of the year. This increase compares very favourably with the aggregate increase of Rs. 16.96 crores in 1953 and 1954. On the liabilities side of the balance-sheet, deposits have increased by Rs. 7.27 crores to establish a fresh record level of Rs. 47.69 crores, while, on the assets side, advances (including bills purchased and discounted and money at call and short notice) have gone up by nearly Rs. 3 crores to Rs. 27.81 crores which is also a new high level in the history of the Bank. Further indicators of the growth of the Bank's business are provided by the increase of Rs. 1.10 crores in bills for collection and of Rs. 10.14 crores in acceptances and endorsements.

In consonance with this improvement in business, the gross income of the Bank has increased by over Rs. 26 lakhs to Rs. 2.44 crores, but much of this rise in earnings has been wiped out by the increase in expenses and interest paid on deposits, so that the profit is up by only Rs. 5.63 lakhs at Rs. 36.69 lakhs. It is, however, gratifying to note that the profit for 1955 is a record one, exceeding by a fraction the previous highest of Rs. 36.48 lakhs touched in 1948. This is the second year in succession for which the Bank's profit has recorded a notable rise, the aggregate increase for the past two years being Rs. 13.68 lakhs, that is from Rs. 23.01 lakhs in 1953 to Rs. 36.69 lakhs. Consequent on the improved results, the provision for taxation has been raised from Rs. 12.50 lakhs to Rs. 14 lakhs and the addition to the reserve fund from Rs. 6.50 lakhs to Rs. 8.50 lakhs. The bonus to staff has also been increased from Rs. 2.50 lakhs to Rs. 4 lakhs and the dividend has been stepped up slightly to 5½ per cent. from 5 per cent., to which level it had been raised from 4 per cent. paid successively for four years from 1950 to 1953.

The progress in the working of the Bank during the past three years is well illustrated by the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	163.90	142.42	127.42	107.04

Advances	58.3	61.4	55.0	46.2
Investments†	37.6	33.6	38.5	45.9
Cash	12.8	14.5	14.7	21.2

† Ratio arrived at after taking into account securities earmarked against borrowings from other banks.

The continuance of the rising trend in income from "interest and discount" is the result of a substantial increase in advances and bills purchased and discounted. The rise in income from "commission and exchange" for 1955 is less marked than that in 1954. The upward curve of expenditure is no less steep, with a rise of Rs. 9.81 lakhs in interest paid on deposits and borrowings and of Rs. 10.32 lakhs in establishment expenses. The sharp rise in "interest paid" is not surprising in view of the substantial expansion in the Bank's deposits—particularly fixed deposits, as will be shown below—and borrowings and the higher rates of interest on them.

The Bank's reserves have been considerably strengthened and, during the last four years alone, there has been an addition of Rs. 27.5 lakhs. Of the rise of Rs. 7.27 crores in deposits during 1955, fixed deposits alone account for Rs. 4.37 crores (at Rs. 19.54 crores), current and contingency accounts for Rs. 2.18 crores (at Rs. 23.64 crores) and savings bank deposits for Rs. 0.73 crore (at Rs. 4.51 crores). The rise in deposits, and particularly that in fixed deposits, is a feature common to all Scheduled banks and is attributed to "higher production and an expanding economy which are the results of successful implementation of the first Five-year Plan." It will be interesting to note, in this connection, that, during the last three years alone, the Bank's fixed deposits have more than doubled from Rs. 9.75 crores at the end of 1952 to Rs. 19.54 crores, whereas the increase in current accounts, etc., is of the order of only Rs. 5.49 crores to Rs. 23.64 crores and that in savings bank is Rs. 1.53 crores to Rs. 4.51 crores.

On the assets side, advances have maintained the upward trend for the third year in succession, the aggregate increase for the three years being Rs. 13.54 crores. Of the advances at the close of 1955, loans, cash credits and overdrafts account for Rs. 17.85 crores, an increase of Rs. 1.78 crores over the year, bills discounted and purchased for Rs. 9.74 crores, as against Rs. 8.57 crores at the end of 1954, and money at call and short notice for Rs. 22 lakhs, as against Rs. 20 lakhs. Investments are higher by Rs. 5.01 crores, of which Government and trustee securities account for Rs. 4.95 crores. This means that the bulk of the increase in deposits has gone to strengthen the holdings of Government securities. During the year, the Bank received compensation for its holding of Imperial Bank shares in the form of Government securities. The Bank also made a fresh investment of Rs. 23.93 lakhs in the shares of the Industrial Credit and Investment Corporation of India Ltd., incorporated early in 1954. The Bank's investments are shown, as usual, at below market value. The Bank's foreign exchange business has considerably improved during the year, as witness the rise of Rs. 10.14 crores in acceptances and endorsements.

(*Concluded from next column*)

favourably with that of Rs. 1.60 crores in both 1953 and 1954 put together. As in the case of most other banks, fixed deposits account for a sizable part of the expansion in deposits, having gone up from Rs. 3.32 crores to Rs. 5.16 crores. Savings bank deposits have risen from Rs. 1.93 crores to Rs. 2.18 crores and current and other accounts from Rs. 3.66 crores to Rs. 4.61 crores. On the assets side, the expansion in advances also is larger than that either in 1954 or in 1953. Loans, cash credits and overdrafts have gone up from from Rs. 2.68 crores to Rs. 3.51 crores, bills purchased and discounted from Rs. 1.64 crores to Rs. 2.57 crores and money at call and short notice from Rs. 47.72 lakhs to Rs. 50 lakhs. There has been a notable rise in foreign bills, as witness the increase of Rs. 1.36 crores in acceptances and endorsements. The liquid assets also stand strengthened and, despite the fall, the liquidity ratio is still at a very comfortable level.

The Bank will be celebrating its Golden Jubilee during the current year and it is good to hear that the Directors propose to sponsor some schemes of permanent value for the benefit of the Bank's employees and low-income group to mark the occasion. This solicitude for the welfare of the employees is highly commendable and will bring rich rewards in the long run. Since the progress and efficient working of a banking institution depends largely on the contentment of its employees, the money spent on the welfare of the staff will represent a good investment.

CANARA BANK'S PROFIT RISES FURTHER

GOOD PROGRESS ALL ROUND

GRATIFYING results are disclosed by the audited accounts of the Canara Bank Ltd. (General Manager: Mr. P. S. Nayak, Mangalore) for the year ended 31st December 1955. In consonance with the general trend of bank earnings for the past year, the Bank's profit has staged a further modest rise from Rs. 9.20 lakhs to Rs. 10.01 lakhs to establish a fresh record in the history of the Bank. What is more heartening is the fact that the Bank has been maintaining an upward trend in its profit since 1940, except for a break in 1949. The improvement in earnings for the year under review is the result of a substantial expansion in the Bank's turnover, a trend fully in consonance with the general trend.

The gross income of the Bank has gone up by Rs. 8.88 lakhs to Rs. 55.07 lakhs, a sizable part of this rise being accounted for by the income from interest and discount, which is up by Rs. 6.25 lakhs. Commission and exchange earned have also risen by Rs. 2.45 lakhs. These increases in income have been wiped out substantially by a rise of Rs. 8 lakhs in outgo by way of interest paid (which alone accounts for Rs. 4.75 lakhs)† and administrative expenses (Rs. 3.25 lakhs).

It is noteworthy that the bulk of the increase in profit mentioned at the outset has been utilised to strengthen the reserves. At the same time, the dividend level also has been enhanced and the bonus to staff stepped up. Thus, the allocation to the reserve fund has been raised to Rs. 3 lakhs from Rs. 2.50 lakhs transferred in each of the previous two years. It may, however, be noted that, in the previous two years, the published reserves had also been strengthened by the transfer of Rs. 4.50 lakhs (Rs. 2.50 lakhs in 1954 and Rs. 2 lakhs in 1953) from the inner reserves, but no such transfer has been made this year. This is evidently due to the fact that, with the transfer from the year's profit, as just mentioned, the published reserves have been brought to the level of the paid-up capital. The dividend has been stepped up to 10 per cent. from 9 per cent. paid for the previous 14 years in succession. As a matter of additional information it may be mentioned here that, for the years from 1941 to 1947, the distribution had consisted of a dividend of 8 per cent. and a bonus of 1 per cent.; it was consolidated into a dividend of 9 per cent. for 1948.

The following table clearly brings out the progress of the Bank during the past three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	86.34	80.09	28.17	24.39
Commission and exchange	15.02	13.47	9.19	8.25
Interest paid	17.67	12.92	10.10	8.86
Expenses	28.46	23.21	20.30	17.73
Depreciation	0.83	0.87	0.77	0.66
Profit	10.01	9.20	8.67	7.54
Provision for taxation	3.75	3.75	3.40	3.10
To reserves	3.00	2.50	2.50	2.06
bonus to staff	1.25	1.01	0.85	0.75
Dividends—				
6per cent. preference	0.52	0.52	0.52	0.52
Ordinary	1.50	1.35	1.35	1.35
	(10%)	(9%)	(9%)	(9%)
Carry forward	0.19	0.21	0.14	0.09

	As on 31st December			
	1955	1954	1953	1952
Capital	29.00	29.00	29.00	29.00
Reserves	29.00	26.00	21.00	10.50
Deposits	1,195.57	891.80	789.81	731.85
Acceptances	252.08	115.81	41.42	19.68
Advances (including bills purchased and discounted and money at call)	658.66	479.85	414.53	334.94
Investments	388.64	333.32	210.93	197.46
Cash	233.17	186.43	184.78	271.22
Balance-sheet total	1,765.73	1,285.17	1,045.63	919.31
Ratio to deposits of—	%	%	%	%
Advances	56.1	53.8	52.5	45.8
Investments	32.5	37.4	33.0	27.0
Cash	19.5	20.9	23.4	37.1

It will be observed from the above table that the rise in "interest and discount" during the year under review is much sharper than that in the previous year, while the pace of increase in "commission and exchange" has slackened.

The Bank's balance-sheet as at the end of the year under review shows that the expansion in business during the year was much larger than in the previous years. The balance-sheet total, for instance, has risen by over Rs. 5 crores, as against the aggregate increase of Rs. 3.46 crores in the previous two years. The increase of Rs. 3.04 crores in deposits compares

(*Continued in previous column*)

PROFIT OF MERCANTILE BANK UP

DIVIDEND MAINTAINED ON HIGHER CAPITAL

THE expansion in the business of the Mercantile Bank of India Ltd. (Chief Manager: Mr. R. N. Drake, London), noted during the year 1954, was well maintained in 1955 also, albeit at a somewhat slower pace. Thus, the Bank's balance-sheet total as at the close of the year shows an increase of £3.47 million over the year. This compares with £5.04 million noted at the close of 1954. Deposits have expanded by £3.76 million, which compares with a rise of £3.84 million in the previous year. On the assets side, loans and advances have gone up by £2.30 million and investments by £4.69 million. The profit for the year has grown by £41,099, in refreshing contrast to the negligible decline noted in the previous year.

The net profit (after providing for taxation and making allocations to contingency accounts, out of which full provision has been made for bad and doubtful debts and any other diminution in the value of assets) amounts to £235,423, as compared with £194,324 for the previous year. With the sum of £200,284 brought in from 1954, the amount available for appropriation is £435,707, as against £395,304 a year ago. The Directors have, however, maintained the allocation to the officers' pension fund at £13,000. The amount utilised to write off freehold banking premises and property is also unchanged at £35,000, to which level it had been reduced from £50,000 last year. The additional provision for contingencies has been maintained at £50,000. The dividend has been maintained at 14 per cent. per annum, less income-tax, but the amount required for distribution of this dividend takes up a larger sum at £118,335, as against £97,020 for 1954. This is due to two reasons: (1) the dividend is on a capital which was increased in September 1954 by the capitalisation of a part of the reserves, and (2) the incidence of tax has been reduced from 9*s.* to 8*s.* 6*d.* in the £.

It will be recalled that the first interim dividend for 1954 was on the old capital, while the final one was on the increased capital.

The undistributed surplus left to be carried forward is £219,372, as compared with £200,284 brought in.

The progress of the Bank during the past three years is fully indicated by the following comparative table:

(In thousands of £'s sterling)

	As on 31st December			
	1955	1954	1953	1952
Liabilities (Main)				
Capital	1,470	1,470	1,050	1,050
Reserves	1,750	1,750	1,500	1,500
Unappropriated surplus	219	200	201	200
Notes in circulation	259	273	279	278
Deposits and other accounts	66,984	63,219	59,382	68,510
Bills payable	1,085	1,137	927	1,729
Acceptances (*contra* item)	195	445	211	299
Assets (Main)				
Cash	10,043	14,013	13,696	15,208
Investments	20,877	16,180	13,804	20,651
Securities against note issue	371	371	371	371
Bills receivable	16,500	15,315	14,670	14,580
Loans and advances	25,862	21,063	20,206	21,846
Fixed assets	652	652	620	644
Balance-sheet total	72,065	68,594	63,684	73,655

There has been no change in the capital of the Bank after its reconstruction in September 1954, when a part of the reserves was also capitalised. The reserve fund is unchanged at £1.75 million, following the capitalisation of £420,000 and the transfer of £670,000 from the inner reserves to the reserve fund in 1954. The deposits and other accounts, which include provision for taxation, provision for doubtful debts and reserves for contingencies, have risen for the second year in succession, but, despite the aggregate increase of £7.60 million during the past two years, the decline suffered in 1953 has not yet been fully made good. Thus, the deposits as at the close of 1955 still fall short of those at the end of 1952 by £1.53 million. Bills payable and acceptances have suffered a recession.

Loans and advances, which had gone up by £0.86 million in 1954, have further risen by £2.30 million in the year under review to stand at the highest level since 1951. Bills receivable also have increased by £0.70 million. As in the previous year, the most notable change on the assets side is the rise of £4.70 million in investments (other than the British Government securities deposited as security against note issue). Of these investments, Government securities quoted in Great Britain account for an expansion of £5.02 million. The quoted investments are shown at or under market value, while the unquoted ones are shown at or under cost. There has been a considerable decline in the value of the Bank's holding of Government securities, for which full provision has been made. Of the investments quoted in Great Britain, 77 per cent. are due to mature within the next five years, while the remainder mature on fixed dates beyond that period. Similarly, 50 per cent. of the securities quoted on overseas stock exchanges mature within the next five years. Another notable change among the assets is the sharp fall of nearly £4 million in cash balances to the lowest level since 1947. This reflects the intensive utilisation of the resources during the year. Since the fall in cash has been offset by the rise in investments, the ratio of liquid assets to deposit liabilities has not been adversely affected.

(*Concluded from next column*)

depreciation in the market value of the investments in securities.

It will be noted that there has been a marked rise in earnings from the main sources of commercial banks' income, the increase being very much greater than that in any of the previous years. This is not surprising in the context of the sharp rise in advances and bills business, both inland and foreign. As in the case of most of the banks, the expansion in revenue has been offset to a considerable extent by the rise of Rs. 4.85 lakhs in "interest paid" and of Rs. 7.81 lakhs in expenses, the share of emoluments to the staff alone accounting for Rs. 5.18 lakhs.

It is gratifying to note that, as a result of the Bank's steady progress in recent years, the reserves have been considerably strengthened, nearly 50 per cent. of the reserves having been accumulated during the last four years alone. (The Bank is 18 years old.) Of the increase of Rs. 3.13 crores in the Bank's deposits during 1955, fixed deposits account for Rs. 1.28 crores (at Rs. 4.99 crores), savings bank deposits for Rs. 0.38 lakh (at Rs. 2.23 crores) and current and other accounts for Rs. 1.47 crores (at Rs. 7.20 crores). Notwithstanding the expansion in these resources, the Bank's borrowings from other banks at the end of the year show a sizable rise. It will also be noted that the increase in advances has been greater than that in deposits and this has pushed up the ratio of advances to deposits from 48.9 per cent. to 62.8 per cent. Another interesting feature of the Bank's advances is that the bulk of them comprise bills discounted and purchased, amounting to Rs. 5.83 crores (as against Rs. 2.78 crores at the end of 1954), while loans, cash credits and overdrafts aggregate only Rs. 3.22 crores, as against Rs. 2.70 crores a year ago. Thus, the increase in advances is mostly accounted for by the bills discounted and purchased. Of these bills, those payable outside India amount to Rs. 3.87 crores, as against Rs. 2.08 crores. Likewise, of the bills for collection, those payable outside India aggregate Rs. 2.46 crores, having gone up from Rs. 1.91 crores. All these data bear out the substantial expansion in the Bank's foreign exchange business.

INDIAN OVERSEAS BANK RAISES DIVIDEND

PROFIT AT A RECORD LEVEL

THE decision of the Directors of the Indian Overseas Bank Ltd. (General Manager: Mr. C. P. Doraikannu, Madras) to step up the dividend for the year ended 31st December 1955 to 7½ per cent. after having maintained it at 6 per cent. for four years in succession, that is, from 1951 to 1954, is not only in consonance with the all-round improvement in the working of the Bank during the past year but also in conformity with the general pattern of bank dividends for the year. The profit for the year under review amounts to a record high of Rs. 16.56 lakhs, an increase of Rs. 3.21 lakhs over that for 1954, thus maintaining the upward trend since 1949. What is, however, noteworthy in this trend is that the rise in 1955 has been much sharper than in previous years.

The other striking features of the Bank's accounts for the year under review are: (1) deposits have expanded by Rs. 3.13 crores; (2) there has been an increase of Rs. 3.53 crores in advances; (3) borrowings from other banks have gone up by Rs. 88 lakhs; (4) investments have been strengthened by Rs. 75 lakhs; (5) acceptances and endorsements show a rise of Rs. 2.27 crores, and (6) the cash coverage is at a much higher level than the average for all Scheduled banks.

The following comparative table provides an idea of the Bank's progress during the last three years:

(In lakhs of rupees)

	For the year ended 31st December			
	1955	1954	1953	1952
Interest and discount earned	45.91	38.64	37.31	36.83

RATIONALISATION OF COTTON MILL INDUSTRY

ITS URGENCY AND IMPORTANCE STRESSED

ALL those who oppose rationalisation of the cotton mill industry will do well to ponder the statement made by Mr. V. Nanjappa, Textile Commissioner to the Government of India, while presiding over the Thirteenth All-India Textile Conference held at Indore last week. It was necessary, Mr. Nanjappa declared, to install modern machinery in the textile industry in the interests of building up a prosperous export trade and of making available to the domestic consumer good quality cloth at attractively low prices. If, however, the industry were to use the antediluvian machinery at a time when its rivals produced cloth from the most modern equipment, the advantages which the industry now enjoyed would, he warned, have no effect.

This warning is, indeed, most timely and wholesome. Never in the history of the cotton textile industry was the need for applying technological developments to production so urgent as it is now. The domestic consumption of cloth is growing at a rapid rate and, if this upward trend is to be sustained, it is of the utmost importance that the consumer should be supplied with quality cloth at an economic price. The prices of cloth currently prevailing are very high. In fact, it would be no exaggeration to say that, on account of high prices, the Indian consumer is wearing today less cloth than he did in pre-war years. On an average, every Indian is now consuming at the rate of 13-14 yards of cloth, as against 16 yards prior to the war. The need for rationalisation is no less imperative from the point of view of stimulating exports, what with the need for foreign exchange to implement the second Plan. This aspect was forcefully stressed by Mr. Nanjappa who said: "In the interests of earning immense amounts of foreign exchange, the industry should be enabled to maintain a high level of export. There are, however, two factors which make this task difficult. In the first place, world trade in textiles is shrinking, because many countries which formerly had no textile industry at all or were large-scale importers of textiles, such as Egypt, Pakistan and Thailand, have succeeded in establishing textile industries. Secondly, Japan has re-emerged as the world's leading textile exporter. It is true that India enjoys an advantage over some of its rivals in the shape of plentiful supply of raw cotton available at fairly cheap rates. This advantage will avail the country nothing, if the industry uses antediluvian machinery."

Productivity of Labour Low

These observations of Mr. Nanjappa are more than enough to underline the urgency of the situation. The writing on the wall is clear and it is time all discussions over the issue of rationalisation in the cotton mill industry were ended. Unless rationalisation is carried out speedily, there is absolutely no hope for the production cost to be reduced, much less for raising the quantity and the quality of textile goods. This is more so, because the productivity of labour is very low *vis-a-vis* that elsewhere, as will be seen from the figures cited below:

	No. of machines handled by one operative	
	Spindles	*Looms*
India	380	2*
U.K.	800	6*
Japan	1,600—2,000	30—40†
		14—15*
U.S.	1,500—2,100	60†

*Ordinary. †Automatic.

To the extent modern machines are introduced, the productivity of the worker will go up and cost of production will come down, provided labour does not seek to offset this advantage by putting forward unreasonable demands of increase in wages. What is more, rationalisation will considerably widen, and not restrict as some fear, the scope for employment. To quote a prominent millowner: "Even a modest rise of three yards in the *per capita* consumption would mean an increase in production, at the rate of 1,100 million yards per annum. Such a rise in output would inevitably widen the scope for employment. It is estimated that more than 90,000 men can be provided employment in the industry, if production is stepped up by 1,100 million yards. Thus, rationalisation holds the key to higher consumption, production and employment, besides bringing about a general improvement in the living standards of the community."

What better evidence do the opponents of rationalisation need of the beneficial aspects of this reform? No less a doughty champion of the cause of labour than Mr. V. V. Giri has urged the imperative need for rationalisation, as witness his following remark in one of his "Scindia Lectures in Industrial Relations":

"If rationalisation of industry means improvement in every possible respect—whether through better management policies, better production methods, better work lay-out, better trained workers, better machines or any other means—I have no doubt that, from the industry's point of view, rationalisation is not only desirable but indispensable. Industrialisation is largely a product of Western civilisation and, if we have to industrialise India rapidly, we have to take into consideration the experiences of the West and, if we intend to make good in that sphere, we have to profit by their experience and example."

Now that their own esteemed leader has given his verdict in favour of rationalisation, it is to be hoped that the workers' attitude to the question will be more constructive in future. The workers will do well to cast off their apprehensions and co-operate with the management of mills in their efforts to secure maximum efficiency for the industry.

HANDLOOM INDUSTRY

The All-India Handloom Board's recognition of the need for ensuring quality of handloom fabrics exported from the country has come none too soon. At its meeting held in Bombay on Saturday last, the Standing Committee of the Board appointed an expert committee, consisting of officials and non-officials to investigate and report on the possibilities of implementing a scheme of quality marking of handloom fabrics meant for export. As readers are aware, in spite of all the active encouragement and assistance given by the Governments—Central and State— the export trade in handloom goods has not only not improved but has actually suffered a setback. During the calendar year 1955, the shipment of handloom cloth aggregated not more than 55 million yards, as against 61 million yards in the previous year. Apart from the competition in world textile markets, deterioration in the quality of cloth is also reported to have been responsible for this decline. Viewed thus, it is, indeed, gratifying that the Committee has now thought it necessary to take various measures for stepping up of export of handloom fabrics.

The Handloom Board's Standing Committee also considered the report on the indebtedness of handloom weavers and recommended to the Central Government that one or two pilot schemes for giving relief to weavers of silk on handlooms might be approved. The introduction of such schemes would, it was felt, enable the Government to assess the efficacy of applying the schemes in a wider field in course of time, that is, after the data regarding the indebtedness of weavers in different parts of the country are collected. The Committee took three other decisions. First, the silk handloom fabrics should be eligible for a rebate on sales in the same way as *khadi* silk. Secondly, assistance must be admissible for the acquisition of land by weavers' co-operative societies for warping and sizing of yarn required by their members. Thirdly, the provision of working capital for handloom weavers must be increased from Rs. 200 to Rs. 300 per loom.

FACTUAL INSPECTION OF TEXTILE EXPORTS

The Cotton Textiles Fund Committee has evolved a scheme for the factual inspection of cotton textiles meant for export. The inspection will be done by the Committee's Inspectorate whenever the mills or the exporters desire to obtain inspection reports. Before such factual inspection takes place, the mills are required to carry out pre-inspection of all supplies of material, so as to eliminate any material which is not up to the required standard and to rectify such defects as loose threads, snarls and removable stains. The mills may flay all the major defects in accordance with the relevant instructions contained in Regulations, Part II, of the Committee's original scheme for inspection. The Inspector of the Committee shall give general inspection to the material tendered by the mills. For detailed inspection, he will select at random 20 per cent. of the total material for quality (presence of weaving and other flaws) and 5 per cent. for construction particulars. A higher percentage may, however, be inspected, if specifically desired by the party concerned.

For the purposes of identification only, all the pieces offered for inspection in the lot shall be stamped with a circular seal of the Committee on the face plait. In addition, the Inspector's seal shall be put on the pieces actually inspected. The report of the Inspector shall be for the entire quantity of the textiles offered and shall be made available to the applicant in standard form.

The main object underlying this factual inspection scheme is to enable the overseas buyer to know the nature of the goods he is purchasing from India. Incidentally, the scheme will induce the mills to produce quality goods for export.

RAYON INDUSTRY IN BELGIUM

In keeping with the world-wide expansion in rayon textile industry and trade, the production of rayon fibres in Belgium, one of the first countries to produce what was originally called artificial silk, has registered a distinct improvement. The annual rate of output now averages over 19,000 tons, which compares favourably with 6,000 tons in 1930 and 1,500 tons in 1910. Every year, Belgium produces, on an average, 7,300 tons of viscose rayon yarn, 1,000 tons of acetate rayon yarn, and 6,000 tons of rayon and fibre fabrics. There are in Belgium about 250 weavers of rayon and 450 knitting mills. The manufacture of rayon fabrics is very diversified; it comprises dress fabrics, linings of pure or mixed rayon, velvets and plushes, as well as numerous upholstery fabrics. The knitting mills produce a full range of knitted woven fabrics. They produce rayon stockings on cotton looms and also nylon stockings. Rayon fibre is also used by a large number of cotton spinners for purposes of pure or mixed spinning, the quantity actually used being more than 3,500 tons per annum. Rayon fibre is used, too, in the carpet and cover industries.

Belgium, it is claimed, is very well equipped for both finishing fabrics and ready-made articles. The country exports viscose rayon not only in the raw material state as continuous filament yarns and staple fibre but also in the semi-finished state products such as rayon staple yarns and all kinds of loom-state yarns, in addition to the finished products like ready-made fabrics and knitted articles. Belgian exports of rayon yarn now average 5,000 tons per annum.

It is reported that Burma has concluded negotiations with the Japanese firm for the erection of two new spinning factories in Burma, one at Thamaing and the other at Myingyam. Each factory will be equipped with 40,000 spindles and 400 looms at an initial cost of Kyats 10 millions. Plans are also afoot for doubling the present equipment of 20 000 spindles and 200 looms of the existing mill at Thamaing.

TEXTILE CONTROVERSIES IN THE U.K.

CLOTH AND YARN EXPORTS DECLINE

From A Special Correspondent

MANCHESTER, *27th March*

IN the weeks that have passed since Mr. H. E. Pardoe made his challenging speech to members of the Manchester Chamber of Commerce an uneasy peace has reigned in Lancashire cotton circles over the many controversial topics at issue. Now the "war of words" has broken out again at the instance of Mr. Fred Wood, President of the Master Spinners' Federation.

MANCHESTER LETTER

It is known that correspondence has passed between the two organisations, whose respective members feel strongly on the main topic of Mr. Pardoe's address—the profits made by the spinning industry at a time when the trade as a whole has been in difficulties.

Mr. Wood did not disguise the fact that his remarks, made at the annual meeting of the Federation, were intended to answer the criticisms made by Mr. Pardoe. He reiterated the fact that no other major textile producing country in the world admits duty-free imports of yarn and cloth and contended it was the duty of any Government to preserve basic industries and basic skills.

"Skills which are dissipated cannot be easily recovered," he went on, "and we should not become dependent for our supplies on far-distant countries which may not remain within the Empire and whose costs may in the future increase greatly. The strategic value of the industry may not be so great as formerly but it could still have major importance in case of international strife."

Capital Outlay

It has often been alleged that the Lancashire cotton industry is outdated and inefficient and that modernisation is not up to the standards of competitive countries. Replying to such criticism, Mr. Wood commented that the leading combine of machinery makers had admitted that orders placed in 1954 by customers in this country were higher than in any previous year. An inquiry made recently among a number of the bigger groups, he continued, showed that 23 firms with an issued capital of £45,000,000 had spent £28,000,000 on capital development in the past six to ten years.

Surveying the fall in exports of cotton cloth, Mr. Wood dealt in detail with the decline of 267,000,000 square yards lost between 1949 and 1954. Trade with India and Pakistan was restricted by over 100,000,000 square yards, while Eastern rivalry in British, Colonial and Dominion markets accounted for the loss of 142,000,000 yards. These were the major setbacks, but in a smaller way 15,000,000 square yards were lost in Latin American countries and European trade fell by about the same amount.

Harking back to the controversy which has persisted for so long about the duty-free entry of Indian and Hong Kong cloth into Britain, Mr. Wood blamed the Government for being too anxious about foreign reactions to the imposition of restrictions on imports. Discussions should have been instituted, he declared, and a fair and amicable arrangement reached. "We have every evidence that Hong Kong and Indian business men would not have regarded this as at all unreasonable," he added. "It is our view that the Government is unduly apprehensive about reprisals in other fields."

A Passing Mention

Criticism of the Government and its attitude towards the textile industry has not been confined to Mr. Wood's comments. It found open expression when Mr. F. J. Erroll, Parliamentary Secretary to the Ministry of Supply, made an ill-advised reference to the cotton trade in a speech in Manchester. It is generally accepted that the official view of the future of the industry is by no means favourable but to suggest, as Mr. Erroll did, that the decline in the cotton industry was part of the price to be paid for successes in newer industries was a dangerous comment to make when speaking in the very heart of the trade.

Joining in the "free-for-all" on the past, present and future of the trade, Mr. S. S. Hammersley, Chairman of Cotton and Rayon Spinners Ltd., the Oldham mill group, has also had some pungent comments to make. In confirmation of Mr. Wood's remarks on modernisation, he has disclosed that about £540,000 has been ploughed back into the business in the past six years—a sum within measurable distance of the issued capital concerned.

Unfortunately, however, full value is not being obtained from the new machinery installed. Mr. Hammersley says: "It is unreasonable to expect Lancashire to maintain its competitive position when the textile industry persists in running its spindles at fewer hours than any other country in the world. We would like to introduce two-shift working at one of our mills but the inertia against such an innovation is hard to move."

Exports Still Falling

The latest overseas trade returns concerning textiles show earnings from British cotton goods at a lower level than at any time since 1947 and a further sharp reduction in cloth shipments abroad. A point of interest has been the continued increase in imports of rayon grey cloth into this country from 10,400,000 square yards to over 15,000,000 square yards in the first two months of this year.

Cotton cloth exports to the end of February were 80,110,000 square yards, valued at £10,278,750. A year ago, the total was 111,430,000 yards and the value little short of £14,000,000. Yarn exports too, were lower, the two-month total being 6,147,793 lbs. against 7,092,011 lbs., while the value declined by over £500,000 to £2,495,459.

Although Australia continued to hold the leading position as buyer of Lancashire-made cotton cloth, the quantity at 12,500,000 square yards fell by over 8,000,000 square yards. On the up grade are shipments to India and Pakistan, which increased from below 500,000 square yards in each case to 1,741,000 yards for India and 2,404,000 yards to Pakistan. Much smaller shipments have been sent to Nigeria and the Gold Coast, where takings have been halved.

A feature of trade in rayon and synthetic fibre piecegoods has been the replacement of Australia as leading buyer by Rhodesia and Nyasaland, as well as by South Africa. Shipments to Australia fell from nearly 4,000,000 square yards last year to 2,450,000 yards while Rhodesia and Nyasaland have taken an extra 1,000,000 yards, bringing their total to 3,185,700 yards.

Imports of cotton grey cloth to the end of February were lower than a year ago but remained at a higher level than in the final quarter of last year. They amounted to 40,190,000 square yards against 61,416,000 square yards in 1955. Hong Kong virtually maintained its shipments at 7,858,000 square yards, but smaller quantities arrived from India at 21,056,000 square yards and supplies from Japan fell from over 21,000,000 square yards to 5,677,000 yards this year.

Further light has not been shed on the methods which are being adopted by the Yarn Spinners' Association to adjust its price regulation schemes in line with current requirements, caused in part by the American Government's future cotton policy.

Traders not directly concerned with the operation of the marginal rates scheme have always been a little hazy over the methods used by spinners in calculating prices. It was widely known that the NYS symbol provided the basis for the level of selling rates for American yarn and that it fluctuated according to movements in the appropriate futures month in New York. What was not so readily understood was that a system of differentials was in existence whereby adjustments could from time to time be made in the margins applicable to particular grades and qualities of yarn.

Now the NYS basis has been abandoned as being out of touch with the existing position. No longer will spinners and their customers need to adjust prices by an odd point or two to keep strictly in line with the symbol. The rates will reflect the trend of the market without the necessity for day-to-day revisions.

Having ample warning of the arrival of particular grades of cotton, the Yarn Spinners' Association is able to adjust its marginal rates to take into account any special features affecting forthcoming supplies. Already action has been taken to deal in this way with the quantities of low-grade American cotton due from the United States under the first 1,000,000 bales disposal programme. Prices for the lower qualities of coarse counts of yarn have been reduced to a level more in keeping with the cost of these new supplies, as well as those from other sources which were lowered competitively at the same time. In due course it will be necessary to make similar adjustments when further supplies of the American surplus sold at competitive rates next season begin to cross the Atlantic.—*All Rights Reserved.*

THE AHMEDABAD ELECTRICITY COMPANY, LIMITED

MR. K. G. MILNE'S LUCID ELUCIDATION OF INDUSTRY'S HARDSHIPS

THE hardships of electricity undertakings caused by rigid controls on tariffs and return on capital employed were lucidly elucidated by Mr. K. G. Milne, Chairman of the Ahmedabad Electricity Company, Ltd., in his speech at the Forty-third Annual General Meeting of the Company's shareholders held at Bombay on 29th March 1956. The cut in the Company's dividend was the outcome of such controls. Explaining the significance of the Electricity (Supply) Amendment Bill, introduced in the Lok Sabha in September last, to investors in electricity industry, Mr. Milne remarked that, when the industry asked for bread, it was being offered a stone.

The following is the full text of Mr. Milne's speech:

"GENTLEMEN,

"The year under review has been one of continued growth and consolidation, culminating in the peak demand on your power plant reaching 100,000 kw. Your Directors have always adopted a progressive policy, coupled with a spirit of initiative, and, as a result, the expansion of your Company's power facilities is ahead of the demand, which affords the City of Ahmedabad an enviable position when compared to many other places in India.

"Unfortunately, the fortunes of few industries today are conditioned solely by their own foresight, howsoever astute. External factors intervene to nullify the most careful planning, and the electricity supply industry has come in for more than its share of such intervention. It is solely on account of this that your Directors have thought fit to propose to you a cut in the year's dividend from 6½ per cent. to 5 per cent., and, as you may well be very disappointed at this, as your Directors are also, I will discuss at some length the factors which have influenced your Directors to come to this decision and about which I gave you warning at this time last year.

"In 1946-47, your Company's plant capacity was of the order of 37.5 MW. This rose to 97.5 MW. in 1950-51, and, in 1954-55, the plant capacity had reached 142.5 MW. when the combined subscribed share capital and debentures stood at Rs. 10,75,00,000. A further 15 MW. turbo-alternator set has recently been placed on order to meet the ever-increasing demand, a demand which in your Company's area of supply is increasing by an average of more than twice the accepted world average of 7 per cent. It is this very magnitude and pace of expansion in recent years, which, paradoxical though it may seem, has reacted to penalise the investor.

Return on Capital

"During these years of rapid investment and expansion with high-cost plant and attendant high annual capital charges, and with rising expense levels generally, even the very modest return permitted under the Electricity (Supply) Act has not been achieved for several years past. For the year under review, we are short of it by the calamitous figure of Rs. 27 lakhs. We have been caught by the continued necessity to expand even within the by no means adequate level of return prescribed under the Electricity (Supply) Act what time our charges for electricity have been conditioned by politics and by the contradictions inherent in diverse provisions of the Electricity (Supply) Act *versus* the Indian Income-tax Act, as repeatedly stressed from this chair at former annual general meetings. Hence it has only been possible to keep up our moderate dividend level at all by drawing subsistence from the tax relief resulting out of accelerated depreciation allowances given under the provisions of the Income-tax Act, but which properly should have been made additionally available for us to place in reserve to meet the corresponding future tax liability which must arise when the allowances decelerate in their turn.

"The proposal of the Company in April 1954 to put its house in order by a 15 per cent. increase of its rates, was overtaken by the imposition by Government of a Rating Committee whose report is common knowledge to you all. This was followed by the freezing of the Company's old rates where they stood, and until circumstances changed. (In the meantime, the Company referred for arbitration by the Central Electricity Authority the long-standing dispute with the State Government over the admissibility of interest on loan and debenture capital as an item of operating expenditure for purposes of determining the clear profit. The Award of the Central Electricity Authority in the Company's favour was not announced until April 1955, but, when it came, it proved a fundamental change in the circumstances as viewed by the Rating Committee, and there followed at once a resumption of negotiations with the State Authorities for an upward revision of rates. Unfortunately, even then these negotiations were prolonged, and it was only at the beginning of the current year that an 8¾ per cent. surcharge on supplies to industrial and commercial H.T. consumers could be effected. No benefit to the Company's finances could, therefore, accrue during the year ended 30th September 1955. The delays and curtailments inherent in these developments, which have been entirely beyond the Company's control, have culminated in the diminution in the Company's disposable surplus to the point we have reached in the proposal for a lower dividend.

Tax Liability

"It might be asked whether we could not have availed of the dividends equalisation reserve to a greater extent than Rs. 6 lakhs to maintain the dividend level, in the hope that earnings hereafter would equal the return permitted under the Electricity (Supply) Act. I may say that your Directors have given most careful consideration to this point, but a number of factors have influenced them to come down on the side of austerity. Our liability for payment of tax at present deferred is gathering momentum. The final verdict on the liability of the Company for additional income-tax in respect of past years, and to which I will refer later, is still unresolved. The margin of profit allowed by the law makes it likely that, even in the best years, subsequent replenishment of free reserves will be possible only in meagre amount, if at all. In the circumstances, it has been thought best to conserve our resources, already drawn down to a level incommensurate with the size and position of the Company, so that we may be better able to meet contingencies which might arise. I feel confident that, in the light of the circumstances, you will be in agreement with this policy.

"The Electricity (Supply) Amendment Bill introduced in the Lok Sabha in September 1955 still awaits reference to a Joint Select Committee of both the Houses of Parliament. If this materialises during the current Budget session of Parliament, the Bill might find its place in the Statute Book before the close of the Company's current financial year. From the financial point of view, the principal changes sought to be made to the Electricity (Supply) Act are three. First, the proposal to link the standard rate to the Bank rate with a differential of 2 per cent. (instead of the present fixed overall level of 5 per cent.). Second, to provide for the electricity supply industry to "avail of the benefits of the development rebate permitted under the Finance Act, 1955." Third, to disallow debenture and loan interest as an expense in the computation of permissible clear profit, on the ground that debentures and loans find their places in the capital base upon which the standard rate of return is already allowed.

"Much has already been said about the need for greater incentive to sustain and promote investment in the electricity supply industry, and it is most unfortunate, therefore, that the proposal regarding the standard rate as outlined in the Bill will not positively ease the industry's difficulty in raising finance for expansion. The situation calls for a differential over the Bank rate of 2½ per cent. at least. Even with that, there will be no scope for providing that measure of internal finance which the extensive capital development programmed for the industry in the country's second Five-year Plan could absorb. With the disappointment prevalent regarding "electrics" amongst the investing public, approaches to other agencies, e.g., banks and investment corporations, for the necessary finance will become imperative more often than not. What the fate of such approaches will be, and on what terms of interest and security such agencies might lend, if at all, gives much food for thought; especially when viewed in contrast with the very low rate of statutory return delimited for equity capital itself in this industry. In this connection, I should like to say how grateful we are as a company to the Bank of India Limited for the confidence they have always shown in us, and for the great volume of assistance they have rendered to us on most fair terms over the last few years.

"While the proposed revision of the standard rate does not enthuse the industry, the provision in the Bill with regard to a development reserve is extremely unwelcome as it stands. Any compulsory appropriation to development reserve ranking as a prior charge in the calculation of the clear profit would create a perilous position indeed, for who could be sure of being able to earn enough clear profit in every year both to meet this prior charge and the full reasonable return! An appropriation based, not on revenue surpluses of any year, but on 25 per cent. of capital expenditure during that year, must give rise to fluctuations with which the tariff structures of a tightly regulated and capital intensive industry, such as ours, could never adequately cope. Moreover, the creation as proposed of the development reserve visualises no benefit to shareholders, since the reserve would have to be deducted from the capital base and ultimately passed on to any purchasing authority. The authorities have been specially apprised of the dangers, and the suggestion has been made that at least appropriations to any statutory development reserve should be made optional within a limit, so that the virulent threat of such a reserve encroaching upon the reasonable return would be removed.

Debenture and Loan Interest

"The proposal to negative the allowance of debenture and loan interest as a charge before arriving at permissible profit, will remove an advantage which played its part in helping us to maintain a level of return sufficient to attract new capital during all the years of heavy capital expenditure since 1948—the year the controlling Act was passed. During these years, we raised and invested in electric service Rs. 5.25 crores of equity capital and Rs. 1.5 crores of debentures. Now, in fact, your Company stands to lose more from disallowance of interest figures than it stands to gain from the proposed upward revision of the standard rate of return. Thus, when we asked for bread in the shape of greater incentives to attract more capital, we are in fact likely to be offered a stone, as the proposals before Parliament are framed at present.

"The draft outline of the second Five-year Plan refers to the need for a re-statement of the Industrial Policy Resolution formulated by Government in April 1948, so as to indicate 'fresh fields to be reserved for public enterprise, the fields in which public enterprise is to take on larger responsibility and the fields in which private enterprise is to function subject to overall regulation and control.' Until this re-statement has taken place, it is difficult to foresee what the future of the electricity supply industry will be, but, considering that the industry is subject to rigorous financial control by the Electricity (Supply) Act, there is no reason why the place at present occupied by the private enterprise of the industry in the country's power development should not be maintained. There have recently been discordant notes about the respective roles of the public and the private sectors, but the Planning Commission has stated that the 'two sectors have to function in unison and are to be viewed as part of a single mechanism. The Plan as a whole can go through only on the basis of a simultaneous and balanced development in both sectors.' I am entirely in agreement with this view.

"To those who repeatedly advocate nationalisation of electricity undertakings, the unfortunate position of consumers in Madras State should stand as a warning. For several years, this State has been repeatedly hit by droughts which seriously curtailed hydro-electric supplies, and, yet after all these years, the State Authorities, which control 98 per cent. of the generation, have not been able to put their house in order by firming up the hydro-electric plant by suitable additions to the thermal capacity of their inter-connected system. Once again, this year, consumers are being subjected to drastic rationing in their electric supplies.

"The first Budget of the second Five-year Plan, if nothing much else can be said in its favour, promises to diminish some of the difficulties arising out of the contradictions between the Electricity (Supply) Act and the Income-tax Act in respect of depreciation. The withdrawal of the initial depreciation allowance will assuage the problem of deferred taxation to a certain extent; but only to a certain extent, and that in respect of the future. The abolition of additional income-tax in its past form relative to dividend will mean that in future this vexed question will no more plague the electricity supply industry. The sword of Damocles, however, in the shape of the contingent liability for this additional income-tax in respect of the past years still hangs over us, as you will see from one of the footnotes to the balance-sheet. High hopes were entertained recently that this note would no longer be required, with the Company's freedom from the tax definitely established when the High Court pronounced its decision in favour of a company whose position was similar to ours. Since then, however, the Income-tax Department have gone in appeal to the Supreme Court, with the inevitable delay and uncertainty which this entails. Linked closely with the ultimate ruling by the Supreme Court will be the right or otherwise to 'gross up' your dividend from your holdings in this Company; so you will still have to wait some time yet to have the long overdue answer to this question. I have told you previously that the Agency Company itself is also involved in this complicated matter and will contest its case at the opportune time.

"In November 1955, the Government of Bombay in the Public Works Department issued a directive to licensees in the State that 'the consent of the State Government is necessary to declare dividends in excess of 3 per cent. until all arrears of depreciation are cleared off.' The Central Electricity Authority has since ruled that, so long as the depreciation for the year and any instalments in respect of arrears are appropriated, there can be no bar to payment of dividends above 3 per cent. This Company never admitted to having any arrears in any case, but the general result is satisfactory and solacing to investors, who had been much worried. This ruling settles one more controversy between the State Governments and the undertakings in favour of the industry. Another matter recently settled in the industry's favour is the right of an undertaking to increase its rates to enable it to reach the reasonable return under the Electricity (Supply) Act, although the rates will thereby be brought into excess of the maxima laid down in the Company's licence.

"We have through constant and successful effort so increased the efficiency of the Company's operations as to have been able to counteract a number of those increases in cost which are beyond our control. With coal in particular, a substantial saving, counted in lakhs of rupees, has been effected during the year under review by reason of an average coal consumption of 1.5 lbs./kw.h. being attained, and this despite deterioration in quality of the coal received. There is a limit, however, to our ability to absorb rising costs, and nowadays much of the increased cost arises from burdensome levies of the State or of Government monopolies, the latest being the surcharge to be imposed by the Railway Ministry from the first of next month.

"No one can cavil at Government's policy of intervening to shield its citizens at large, whether industrialist, businessman or householder, against obviously undue burdens being placed on them by monopolists or others. It is, however, exasperating in the extreme for us to see so much time and effort being given by Rating Committees to the examination of the affairs of electricity supply undertakings whose books show they need to increase their rates, and where the necessary actions by and large will have a very small effect on a manufacturer's production cost or on a householder's budget, while State monopolies literally by a stroke of the pen impose much more far-reaching economic burdens on us all, without the public knowing anything about any investigation into their affairs. At least one feels entitled to ask that Rating Committees should not reject the swift and accurate results which may be had from a study of the audited accounts, that normally satisfy everyone else, in favour of bringing in much more delayed findings derived only after pondering a labyrinth of complex calculations in which all but the specialist will certainly be misled.

"To the Resident General Manager and his staff I must express my high appreciation of their service and the standard of efficiency maintained during the year. A competent staff is one of a company's biggest assets, and we are very fortunate in that. The Company's welfare facilities at Sabarmati Power Station, at Shahpur Road, and at the office at Lal Darwaja, continue to keep pace with the needs of the situation. As the great need of the day is more and more emphasis on education at all levels, I would like to make special reference to the opening, in June 1955, of a kindergarden school at Sabarmati, which will supplement the other educational arrangements already assisted by the Company in the locality.

"Having commented earlier on the circumstances leading up to the recommendation of a lower dividend for the year under review, and on other aspects of the situation affecting or likely to affect your Company, there is, I think, nothing of particular interest for me to add in respect of the accounts which are before you, and which, together with the notes appended to them, are sufficiently informative.

The Outlook

"To conclude—in spite of the setback reflected in the proposal for a lower dividend for the year under review, I feel that the future can be viewed with a modest degree of confidence, and certainly so far as those difficulties are concerned which are within our control. The recent additions to the plant have given the Company an instrument of high technical efficiency which should enable it to earn the statutory standard rate prescribed under the Electricity (Supply) Act, given no undue reapplication of external pressures. The question of dividend which should thereby result will of course also be dependent upon the terms of the controlling legislation from time to time, and possibly therefore upon the Bank rate. Given no change in the latter, however, and other things being equal, I would hope to be able to aim for about 6 per cent. for future years.

"The creation of Maha Gujerat, with possibly Ahmedabad as the capital, should open up to this Company still further opportunities of growth and service; and I can only hope that, before long, the law will be so amended as to afford the future investor in our industry sufficient incentive to remove the least doubt about its ability to fulfil its great task throughout the country. But we must be afforded incentive, and not increasing restrictions, if we are to maintain that balance between the consumer and the investor and the worker which would be ideal. Above all, we must be given the freedom to adjust our rates to the economic level necessary to produce a steady commercial yield commensurate with the cost of the development capital we need for ourselves and, through us, for the service of so many others."

TRANSPORT FOR COAL

SHORTAGE EXPECTED TO PERSIST

THE coal industry's role in the industrial development of India is fully recognised by all. At one time those engaged in the industry were very much concerned over the threat of nationalisation. This fear has, however, receded to the background, at any rate for the time being, since the Government and the industry are now seized of the problem of allocation of the proposed additional output of 23 million tons during the second Five-year Plan between the public and private sectors. The Government has tentatively allocated 15 million tons to the public sector and 8 million tons to the private sector. The industry has, however, asked for a higher allocation and the question is yet to be finally decided. Meanwhile, a recent statement in Parliament by the Finance Minister hinting at a revision of the allocation has kindled hopes of a better deal among colliery owners. The Finance Minister is reported to have stated that, at the first instance, seven million tons of additional output would be allocated to the public sector and a similar quantity to the private sector and that the balance would be left open for allocation to both the private and public sectors. Alluding to this statement, Mr. G. D. Daga, Chairman, Indian Mining Federation, Calcutta, observed, in his address at the annual meeting of this body held in that city on 23rd March 1956, that "it is most likely that the private sector will be allocated more than eight million tons." It is a moot point whether this optimism is justified, because a couple of days after the Finance Minister's statement in Parliament, the Minister for Planning, Mr. Nanda, reiterated at Calcutta that there would be no change in the Government's original decision. By this he meant that there would be no increase in the share of the private sector. In any case, the conflicting nature of the statements made by two ministers with voting rights in the Central Cabinet have only served to worsen the confusion. There is thus a clear need for an early clarification of the exact position.

Shortage of Wagons

Another uncertainty facing the coal industry relates to transport. Mr. Daga, therefore, requested the Government to announce its decision not only on the allocation to each sector but also on the apportionment of transport needed to move the additional coal. He added that, unless the coal industry is told as to what extent the railways will be able to move its output and unless the allocation to each sector is fixed in advance, planning will remain incomplete." Mr. Daga declared that, given all facilities by way of transport, assisted sidings and essential materials without any discrimination between the private and public sectors, the coal industry could be relied upon to fulfil the tremendous task which it has to perform in the development of industries under the second Five-year Plan.

No Priority for Coal Transport

Mr. Daga seemed to have his own doubts whether it would be possible for the industry to obtain full transport facilities, especially by rail, to move the coal raisings. He pointed out that the output in mines could be raised by three ways, namely, (a) sinking new shafts in the virgin areas, (b) sinking down to unworked bottom seams, and (c) mechanising and improving the present method of working. For all this, of course, large capital expenditure has to be incurred and Mr. Daga rightly stated that no one could be expected to invest large sums of money in development, unless one was sure whether the offtake from the mines would be regular and continuous. Particularly mechanisation of mines required, he remarked, a regular daily supply of wagons without which the advantage of mechanisation would be lost. He, therefore, observed that the prerequisite for any plan for increased production of coal was regular, daily supply of wagons. For the first year of the second Plan, the daily wagon requirement for Bengal and Bihar had been fixed at 3,675. As the supply of wagons during March this year was only 3,075 per day, that is, 600 wagons below the target, Mr. Daga doubted whether it would be possible for the railways to step up the supply of wagons by as much as 20 per cent. within the next few weeks or even months. The chances of failure were, according to him, larger, as coal transport had lost its position of priority in the movement of goods.

Since there is little prospect of railways being able to carry the entire output of collieries in the immediate future, an alternative form of transport is coastal shipping. But even here the

(*Continued in previous column*)

(*Concluded from next column*)

prospects for relief appear to be bleak. Said Mr. Daga: "The prohibitive coastal freight rates constitute the greatest obstacle." He was glad that the Planning Commission was mindful of the necessity for developing the inland waterways as well as coastal shipping for the carriage of goods traffic. While these possibilities should be fully exploited, one could not forget that it is the railways that would have to remain the life-line of the coal industry.

Some time back the Government of India had invited plans for additional production of coal from individual colliery undertakings. It was then stated that the acceptance of the plans would be intimated to them by about February 1956. According to Mr. Daga, the Coal Board has not so far announced its decision as to whether permission would be given for the opening and reopening of mines. This has been responsible for unnecessary delay in opening of mines even for purposes of maintaining the output. The Government would be doing a great service to the industry and the country if it announced its decision on this vital question without further delay.

Coal Mining Machinery

Since most of the coal mining machinery has to be imported, Mr. Daga suggested the advisability of setting up some units for manufacturing coal mining machinery and equipment. He stated that, though the country might continue to import most modern types of machines, its requirements of coal cutting machines, drills, haulage conveyors and pumps, etc., could be conveniently manufactured in India. This advice is in line with the ambitions of the second Plan which lays additional stress on the need for establishing heavy industries.

EXPANSION OF INDIAN SUGAR INDUSTRY

CAUTION AGAINST INDISCRIMINATE SETTING UP OF NEW UNITS

THE sugar millowners would appear to have some misgivings about the Government's policy relating to expansion of sugar industry. Evidence of this is to be found in the resolution on licensing of new units which the Indian Sugar Mills' Association adopted at its last annual meeting. In this resolution, the Association stated that the policy of expansion of sugar industry had been decided upon without a proper estimate of the capacity and potentialities of the existing units. It, of course, recognised the need for augmenting the size of the sugar industry, but urged the Government to take, before allowing establishment of new factories, adequate and appropriate steps to reassess the present overall capacity of the sugar industry, along with its future possibilities of expansion. To quote the exact wording of the resolution: "This Association, while complementing the Government of India on its decision to increase the installed capacity of the sugar industry to 2.5 million tons during the second Plan period, recommends that due care should be exercised in sanctioning new units, so that no indiscriminate and unplanned expansion is effected."

There is much force in these observations of the Association. Already, licences have been issued, or are being issued, for the setting up of as many as 52 new sugar mills, in addition to the expansion in the size of 45 existing units. The total capacity so far licensed amounts to 810,000 tons of sugar per annum. Few would dispute the need for an expansion in the production capacity of the sugar industry. Indeed, considering the rise in population which is still increasing at the rate of 4.2 million every year and the increase in consumption of white sugar as a result of the improvement in the standard of living following the implementation of the series of development programmes under the first Five-year Plan, even the production target of 2.25 million tons seems somewhat conservative. But, before the Government thinks of an upward revision of the target, it could do well to take note of the observations of Mr. K. K. Birla and Mr. R. P. Nevatia, two leading sugar industrialists of India, who moved and seconded the aforesaid resolution, respectively. Both the speakers drew attention to the fact that, by increasing the installed capacity of the existing mills, coupled with the production of new mills already planned, the target of sugar production envisaged in the second Plan would be outstripped by nearly half a million tons. The rate of sugar output at the end of 1960-61 will thus be 2.75 million tons. They, therefore, cautioned the Government against liberalising issue of licences for any more new sugar units for which there is a great temptation now due to the desire to avert a slump in *gur* industry. The investment on additional sugar units, they suggested, might as well be diverted to development of other industries.

Co-operation in Sugar Making

Viewing the sugar industry from the long-term standpoint, it must be said that it is not the increase in the number of new sugar mills but the wisdom of giving too prominent a place to the co-operative sugar units that should be questioned. Out of the 52 newly licensed units, 29 are to be on co-operative lines; one of these has already come into production and ten others are expected to be ready before the beginning of the next season. The formation of the sugar co-operatives marks, as we have pointed out on more than one occasion, the entry of the State into the sphere of sugar manufacture. For the cane growers' share in the capital outlay of the co-operative factories constitutes only a very small proportion—about 12 to 13 per cent.—the entire balance being met by the State in the form of direct contribution to share capital and loans from the State-controlled Industrial Finance Corporation of India.

Considering the reports that the Co-operative Movement cannot raise even the small amount of capital—Rs. 8 to Rs. 10 lakhs—for setting up a new sugar mill, it is, indeed, surprising that Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, should have said, as he did, in the course of his inaugural address at the annual meeting of the I.S.M.A., that the progress made by the sugar co-operatives would appear to be satisfactory on the whole. It is all the more surprising, because it was Mr. Jain himself who was until recently asserting that the experience in regard to co-operative enterprise had not been encouraging. Mr. Jain stated that, after the establishment of the co-operative sugar mills, side by side with public limited companies and private concerns, these different patterns of organisational set-up "will have ample scope to demonstrate their utility to the larger national interests." This is a fair observation, provided the Government does not go out of its way to support the sugar co-operatives and place the units in the private sector at a great disadvantage.

Authorities Not Justified

Whatever may be the views of Mr. Jain on co-operatives, it is extremely doubtful whether they will succeed in supplying sugar to the public at economic prices. Manufacture of white sugar is a large-scale industrial process and not a cottage industry business. It requires considerable managerial efficiency and organising ability which will not be readily available to the Co-operative Movement. The cost of sugar making will, therefore, be very high and the consumer will have to pay dearly. Having regard to all this, the authorities are not at all justified in foisting the Co-operative Movement on the sugar industry. If the authorities are really anxious to step up output of sugar at a price that the common man can pay, they can do so in many other ways. As readers are aware, the Governments—Central and State—themselves have been greatly responsible for the series of impediments in the way of larger sugar production by private enterprise. In fact, they have all along been treating the sugar industry as their milch cow. How else can one explain the official policies with regard to supply of water to sugar factories, rents on lands leased to factories for growing cane, disposal of molasses, etc., and the anxiety to net in as much revenue as possible by way of cane cess, electricity and water charges, excise on sugar, and other taxes?

Modernising Equipment

To revert to Mr. Jain's speech. Alluding to the fabrication of sugar machinery in the country, Mr. Jain claimed that sufficient progress had been made in that direction. He revealed that many important items of sugar machinery, including improved types of pans and evaporators, were now being manufactured in this country; some industrialists had also entered into agreements with reputed foreign concerns to fabricate machinery according to their specifications. He expressed confidence that, before long, India would be self-sufficient in its requirements of most of the important items of sugar machinery. In this connection, he wanted the existing plants in the sugar industry to be modernised.

The sugar industry should doubtless be grateful to the Union Food and Agriculture Ministry for having recognised the need for modernising the equipment in the mills. But one wonders whether he realises that the vast majority of the units are not in a strong financial position to undertake rehabilitation of their productive equipment. The rigid cost structure and the heavy incidence of taxation—Central and State—leave very little profit for being ploughed back. Thus, out of every rupee a sugar mill gets on sale of sugar, cane price accounts for As. 8-2, taxes for As. 3-8, manufacturing charges for As. 1-11, and salaries and wages for As. 1-9. The profit that accrues to the mill comes to a bare half an anna, which is hardly sufficient to meet the large financial outlay on rehabilitation and modernisation. As we pointed out only last week, the prices of sugar machinery and parts are ruling high and the factories need considerable funds to carry out the back-log of replacements. Funds are also needed for adding new devices for improving the efficiency of production. If, therefore, the sugar industry is to undertake modernisation, it is imperative that there should be an increase in the rate of profit of sugar mills.

Incidentally, Mr. Ajit Prasad Jain alluded to the old question of shifting some of the sugar factories in Eastern Uttar Pradesh to better sites. He said that the question was engaging the attention of the Development Council. The Council had appointed an expert committee to examine the matter in detail. Stating that any Governmental compulsion upon an existing factory to move to another site would be wholesome, Mr. Jain asked the Association to suggest, with the consent of the units concerned, schemes for shifting the unsuitably located units to better sites.

SUGAR BILL IN U.K.

The Sugar Bill, which will end State trading in sugar, set up a sugar board, and re-establish the London terminal market, was given the third reading in the House of Commons on 27th March 1956. Commenting on the Bill, Mr. D. Heathcoat Amory, Minister of Agriculture, said that, though there was an element of controversy in the Bill, arising from the different views taken by the Opposition and the Government about the merits of Government trading, members had co-operated in seeking to make the most of the ground on which there was complete agreement; the result was that the Bill had been improved in several respects. According to the Minister, there had been complete agreement on two fundamental points. The first was the policy of fostering sugarcane industries in the Commonwealth through the Commonwealth Sugar Agreement. The second was the policy of providing support for the U.K.'s sugar-beet industry through guarantees under the Agriculture Act of 1947.

The Minister was confident that the cane-sugar producers in the Commonwealth would see in the Bill an earnest of the Government's wholehearted support for the Commonwealth Sugar Agreement. To quote him: "With the agreement behind them and this Bill on the statute book, I am sure that the sugar industries in the West Indies, in British Guiana, in Mauritius, in Fiji, in the coastal areas of Queensland, and in Natal can look forward to the future with confidence. The refiners, too, have an important part to play. They have given me an assurance, as they gave before the war, that they would make it their practice to prefer Commonwealth sugar for their home trade requirements, provided that it is offered competitively. With their help and with the goodwill of the other sections of the sugar trade, the new Sugar Board would, I am confident, be able to face its task with assurance of general support."

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of February 1956 aggregated 356,795 tons, bringing the total output during the first four months of the current sugar season to 1,073,049 tons, as against 982,600 tons in the corresponding period of 1954-55, according to the Indian Sugar Mills' Association. The number of factories crushing as at the end of February was 142, as against 136 a year before.

The offtake of sugar during the month was 234,000 tons, a rise of as much as 135,600 tons on the same month last year. The total offtake during the aforesaid four-month period amounted to 615,000 tons, which compares very favourably with 275,400 tons in the corresponding period of the previous season.

The closing stocks of indigenous sugar with the factories at the end of February were 882,059 tons, as against 775,100 tons a year before.

CLARIFICATION

In the second instalment of our article on "Linking Cane Price to Quality"—*vide* page 396 of *Commerce* dated 3rd March 1956—it was mentioned that, "in terms of refined sugar, which is the basis adopted in India—the S.I.S.M.A. formula, for example—the cane growers got a share varying from 40 to 50 per cent. The percentage meant here related to the share which the cane growers in other countries got under a formula similar to the one adopted by the S.I.S.M.A. The percentage should not, therefore, be taken as the share given by the S.I.S.M.A. formula. On the basis of this formula, the percentage of the share passed on to the growers by the factories in Andhra and Madras during the 1952-53 and 1953-54 seasons ranged, it is said, from 61.24 to 63.45.

1000 000 SKF AXLEBOXES

With SKF axleboxes nothing is left to chance—and it is not by chance that SKF is the first to have supplied 1,000,000 roller bearing axleboxes to the railways of the world. Designers and railway engineers have long known that there is always an SKF axlebox that is exactly right for their particular requirement. Standard axleboxes, special axleboxes, single and double bearing axleboxes for mounting inside or outside the wheels—all are included in SKF's first million. All these types—and more special types too if the need arises—will make their contribution towards SKF's second million.

RUBBER PRICES CONTINUE TO FALL

MALAYA DESIRES EXPORT OF RUBBER TO CHINA

THE decline in natural rubber prices which began some weeks ago has gathered fresh momentum. The latest price in London for spot rubber is 2*s.* 2¾*d.* per lb. and compares with 3*s.* 1¼*d.* per lb. at the beginning of the year and the 1955 high of 3*s.* 7⅜*d.* touched in the third quarter of that year. Though the latest price is fractionally higher than that (2*s.* 2⅜*d.*) which prevailed a year ago, it is significant that almost the entire rise in prices that had occurred in the second and third quarters of 1955 has been wiped out in recent months. A similar trend is noted in New York also, where the price has tumbled from the 1955 peak of 52 cents per lb. (touched on 5th December) to a low of 32⅞ cents on 1st March. The latest price is not very far from this level. Thus, there has been a drop of nearly 20 cents or over 40 per cent. in the course of three months.

The sustained recession in prices of natural rubber is evidently due to the fact that the market has not recovered from the influence of the anticipated fall in U.S. requirements this year as a result of the cutback in automobile production and increased competition from synthetic. In fact, reports from New York show that the reduction in car production has been more than expected and the private sector which had bought back the synthetic rubber plants from the Government has restored the production of synthetic back to normal with unexpected speed. Thus, the expectation that the private synthetic industry would take time to bring production back to normal, as it would have to go through a period of adjustment, has been belied and there has been practically no production lag. On the other hand, it is stated that many major producers have already stepped up their output and are planning to increase production further. Output of synthetic rubber in Canada and Germany is also said to be increasing. Another factor which had been expected to bring about a recovery in the price of natural rubber was Russian purchases, but so far no reliable indication of the extent of Russian buying is available.

There were also reports that the 1957 models of automobiles would have different sized tyres. These reports had led to the belief that tyre manufacturers would build up stocks to meet the requirements of different sized tyres. But the high prices which prevailed in December discouraged the building up of stocks and, when prices actually began to fall, buying was delayed in the hope of entering the market at still lower levels.

Fall in American Consumption

Yet another factor which has contributed to the recession is the decline in the U.S. consumption of natural and synthetic rubber during February this year, as compared with that in January. The total consumption of rubber fell from 133,013 tons in January to 125,292 tons. Much of this decline is accounted for by the fact that February was a short working month. As compared with February 1955, when consumption amounted to 118,611 tons, the offtake was, however, sizably higher. The consumption of natural rubber alone during February this year amounted to 49,915 tons, as compared with 53,599 tons in January and 50,997 tons in February 1954. The consumption of synthetic aggregated 75,377 tons, as against 79,414 tons in January and 67,614 tons a year ago. Thus, although the total consumption of natural and synthetic in February shows an increase over the year, that of natural rubber has recorded a fall.

World production of natural rubber in 1955 amounted to 1,895,000 tons, an increase of 93,000 tons over the previous year. The output in 1956 is expected to be maintained at the 1955 level. The output of synthetic rubber in 1955 aggregated 1,085,000 tons (as against 715,000 tons in 1954), of which the U.S. alone accounted for 972,000 tons. The output in the U.S. during the current year is expected to reach 1,200,000 tons.

Notwithstanding the rising trend in synthetic rubber production, the demand for natural rubber is generally expected to go up. Reports from Singapore say that the Singapore Government has formally asked Britain to seek the removal of the ban on rubber exports to China. The Rubber Trades Association of Malaya has also submitted a memorandum to the Chief Minister of the Federation in which it has pointed out that there is no point in further strangling Malaya's economy by maintaining the embargo on the export of rubber to China when rubber was being freely shipped there from Indonesia, Burma and Ceylon. The memorandum has also urged the Chief Minister to seek a promise from the British Government that it will not allow the import of synthetic rubber from America into the U.K. next year. The memorandum further states that Britain should also give an assurance that its use of synthetic in 1957 should be limited to 70,000 tons, the quantity which it will produce next year. It is doubtful if Britain will accede to this request of the Malayan rubber producers, though it may lift the ban on exports to China. Opinion in trade circles about the extent to which Malaya will benefit from the removal of the embargo is, however, divided. It is stated in some quarters that China will be interested only in first grade rubber of high tensile strength for armament, but there are some who believe that purchases of lower grade rubber also will be made.

(*Concluded from next column*)

ber 1955, as much as 161.8 million yards were from the Indian market. This was 23.5 million yards more than the quantity purchased by the U.S. in the corresponding period of 1954. This increase is, however, insignificant as compared with the expansion in the production of Indian jute mills.

EXPORT OF JUTE PRODUCTS

The Minister for Commerce, Mr. D. P. Karmarkar, informed the Lok Sabha at question time on the 2nd inst. that exports of Indian jute manufactures during the nine months April to December 1955 amounted to 695,400 tons, as against 652,700 tons during the corresponding period of 1954. There was, however, a decline in exports in January and February 1956 which were generally regarded as the slack season for export of jute goods. The Minister added that some welcome break in the downward trend had since become noticeable and actual exports during March 1956 were expected to be higher.

In reply to a further question Mr. Karmarkar stated that 20 countries including the United States, Canada, China, Australia, Egypt, Indonesia, the Netherlands, the Philippines and Thailand imported larger quantities of Indian jute goods during April to December 1955, as compared with the corresponding period of 1954. During the same period, 22 countries including the United Kingdom, Argentine, Burma, the Netherlands and Kenya imported reduced quantities of Indian jute goods.

JUTE CULTIVATION IN FORMOSA

Jute cultivation in Formosa to supply the local bag factories dates long back, according to the *Jute Bulletin* of the Indian Central Jute Committee. Production is controlled and encouraged by the Government-sponsored Industrial and Mining Corporation. The system obtaining in recent years is that of fixing a price for jute in advance by the Corporation, which also actually buys the bulk of production from growers for delivery to the mills. The rated capacity of the Formosan industry in 1954 was in the vicinity of 11 million gunny bags, but there has been a slight expansion since, and two new factories went into production early in 1955. Demand from the new units led to quick exhaustion of the supply of retted jute in June last year, when the entire factory production was suspended. The 1955 crop in Formosa gave a fibre yield of nearly 87,000 bales, against a target of 100,000 bales set for the year. The season 1955-56 had started with little or no carry-over.

RE-EQUIPMENT IN U.K. JUTE INDUSTRY

Mr. D. R. Miller, retiring Chairman, said at the annual meeting of the Association of Jute Spinners and Manufacturers in Dundee on 28th March last: "By another year the jute industry will have spent some £10,000,000 on re-equipment in the post-war period. There is no surer sign of our determination to give our many industrial and farming users the best possible service than this high rate of investment." He added that there was no room for complacency about the future. Competition in both the home and export markets was extremely keen, and the raw jute supply position was bedevilled by circumstances over which they had little or no control.

THE
CANARA BANKING CORPORATION
LIMITED
Estd.: 1906 *Head Office:* UDIPI (S. India)
1956—Our Golden Jubilee Year!
Started in the year 1906, the 'CORPORATION' completes its 50 years of service to the country. Ever growing in size and popularity, it acknowledges the unstinted co-operation of its Shareholders, Depositors, Well-wishers and other Customers. With a net-work of branches, total resources of over Rs. 4½ crores, thousands of customers all over, and service with a smile, it offers "best in Banking" to one and all.

BURLAP CONSUMPTION IN THE U.S.

RISE IN OFFTAKE LIKELY

BURLAP consumption in the U.S. during February 1956 amounted to 68 million yards, as compared with 72 million yards in January this year and 65 million yards in February 1955. The consumption during the first two months of this year aggregated 140 million yards, an increase of 13 million yards or about 10 per cent. over the same period last year.

U.S. stocks of burlap at the end of February rose by 2 million yards to 245 million yards, made up of 138 million yards spot and 107 million yards afloat.

The fall of 4 million yards in U.S. consumption of burlap in February, as compared with the preceding month, is attributed to two factors. First, consumers had with them enough stocks of burlap to cover all their foreseeable immediate requirements. Secondly, traders were not in a hurry to make fresh purchases, since they expected a fall in prices of burlap owing to enlarged supplies stemming from increased production in India. This expectation was engendered by the fact that Indian mills had decided to put to work 7½ per cent. of the 12½ per cent. looms which had been kept idle for some years.

The U.S. burlap trade seems to be looking forward to enlarged consumption of burlap in the coming months. Many considerations appear to have prompted them to entertain a cheerful outlook. With paper prices on the rise and burlap being more competitive than ever since the war, the chances for burlap to replace paper to a large extent in the agricultural packaging market are considered to be fairly good. The Burlap Council, in particular, seems to be pinning its hopes on the 50-lb. potato bag which it recently introduced to compete with the multi-wall paper container. The promotion campaign for sales of those bags among farmers has been successful. In the first eight months of 1955, for instance, the use of this small bag was 13 per cent. higher than during the whole of 1954.

New Containers

Another promising outlet for burlap is the seed bag market which has also been largely taken over by multi-walled paper bags. Burlap interests are stressing the durability of burlap bags in re-use. Development of speciality jute bags for industrial uses in the form of various containers that are lined with asphalt paper and polyethylene, has helped expansion of the outlet for jute bags. The initial experiments in the use of the speciality containers as substitutes for the more expensive fibre and steel drums for chemicals and hydroscopic commodities have proved successful. Further, preference for burlap among fertiliser users and manufacturers is generally well established, because the container makes it easier to handle and stack. It is non-breaking and has a resale or re-use value which means lower net cost per ton. As against this preference for burlap bags, dissatisfaction with non-textile bags is widespread. Breakage is frequent in handling paper containers, which means extra cost to the manufacturer to the extent of 20 to 25 cents per ton.

It is reported that the Burlap Council in New York is studying prospects for a planned effort to satisfy demand for smaller size bags. Some initial resistance to the change to a new size is not discounted, but the savings on breakage and handling costs, as well as customer satisfaction to result from the change-over, are expected to establish a sound sales argument.

Japan's withdrawal from the U.S. burlap market is considered to be a favourable factor for promotion of sales of Indian burlap. In this context, it is pointed out that the sharp advance which took place in Pakistani prices for raw jute, has made it difficult for Japan to compete with India. Besides, Japanese mills have sold to Turkey and Uruguay about 8 to 9 million yards for forward delivery at prices better than those it could obtain in the U.S. Pre-occupation with the execution of these orders has compelled Japan to suspend its sales in the U.S.

The data relating to imports of burlap into the U.S. during the first 11 months of 1955 disclose that the U.S. offtake of Indian burlap has risen considerably over the imports in the same period in 1954. Out of 191,700 million yards of burlap purchased abroad during January-Novem-

SOME BASIC REQUIREMENTS OF ENGINEERING INDUSTRY

GRADUALNESS IN TRANSITION TO METRIC SYSTEM NECESSARY

NOW that the Government has abundantly made it clear that the emphasis in the second Five-year Plan will fall heavily on the side of industrial expansion, even as the emphasis in the first fell on agriculture and hydro-electric projects, it should be obvious that, in the next five years, the engineering industry will be called upon to play an increasingly important role in the national economy. This industry cannot, of course, make the progress demanded of it, unless some of its basic needs in men, material and organisation are met. And it is to some of these problems that Mr. K. Chatterton addressed himself in the painstaking survey of the industry which formed the bulk of his address at the recent annual meeting of the Indian Engineering Association held at Calcutta.

The engineering industry has reasons to face the future with a confidence based on a creditable record of past performance. Mr. Chatterton was able to quote some impressive data about what the industry in the private sector was able to achieve in the period 1948 to 1954. During this period, the production of electric motors moved up by 203 per cent., of transformers by 390 per cent., bicycles 570 per cent., sewing machines 300 per cent., steel 45 per cent., pumps 250 per cent., diesel engines 750 per cent. and electric fans 32 per cent. No impartial critic will dispute Mr. Chatterton's claim that these "are remarkable figures, which should be given greater publicity, as they provide the complete justification of the system of private enterprise under which they were achieved." One must remember that the statistics cited by Mr. Chatterton represent only a sample of what the many-sided engineering industry has been able to achieve so far.

A Comprehensive List

Some of its basic requirements have necessarily to be met before even the engineering industry, despite its creditable record of performance, can play the role it has to play in the next Plan. The industry, it must again be emphasised, is a many-sided one; it has to build and equip the vast range of workshops necessary to make products ranging from ships and locomotives to bicycles and sewing machines. Mr. Chatterton framed a comprehensive list of five requirements which must be met before the industry is called upon to carry out its work, the list consisting of capital, raw materials, transport, labour and supervision. And in respect of each of these items, he had something important to say and he said it well. Leaving aside what he called the technical subject of capital formation, he said that the industry has insufficient capacity either to build or equip the plant required. He, therefore, insisted that highest priority should be given to the establishment and expansion of primary production such as structural fabrication and machine tool building. The Government, however, proposes to enter both these fields. And it is doubtful, according to Mr. Chatterton, whether "plants which are established *de novo* can make any substantial contribution to the Five-year Plan." He, therefore, suggested that it should be possible for the Government to enlist the co-operation of the private sector in extending the capacity of this important section of the engineering industry.

Shortage of Steel

Iron and steel constitute the basic raw materials of the industry. The Government is no doubt aware of the shortage of these materials and is making great efforts to obtain steel from abroad. These efforts may have to continue for some time more, especially because appreciable amounts of steel cannot be obtained from the Government-owned units before 1959 or 1960. The success of the Plan will, therefore, depend on imports of steel, though there is unfortunately very little surplus steel available in the world today. Mr. Chatterton felt that pig iron, which is also scarce, had not received the attention which had been given to steel. He said:

"Manufactured cast iron goods are now being imported to an increasing extent and unemployment, which will develop in foundries, could be alleviated if early action is taken to bring pig iron from abroad. It is suggested that, in view of all these shortages, a balance-sheet might be drawn up, showing the iron and steel requirements for the Plan against the amounts available from various sources. It is possible this may have been done but, if so, it is without the knowledge or co-operation of the industry, whose experience might be of value."

To the engineering industry, no less than to any other industry, transport is of vital significance. Mr. Chatterton referred to the present shortage of transport and also to the fact that, even when the present Railway Plan is completed, transport capacity would be insufficient to meet the traffic offered. He said that there must undoubtedly be a slowing down of those industries which are dependent on rail transport. He insisted that more funds must be devoted to rail transport even at the expense of community and nation-building projects, for "it is better, if necessary, to sacrifice a part of the Plan than to jeopardise the whole." Although palliatives would not solve the problem, it is necessary to seek relief from all available sources. From this point of view, Mr. Chatterton's two suggestions deserve notice—diversion of short-haul traffic to road transport, thereby freeing wagons for long-distance haulage and exploring the possibilities of increased river transport.

Skilled Workers

Although there is no shortage of labour in the country, it is well known that there is an acute shortage of skilled labour and experienced technical personnel. In Western countries, it is computed that a five-year training is necessary before an apprentice becomes a skilled worker. Since India cannot afford to wait for so long a period, the Government has decided to concentrate on short-term courses. Mr. Chatterton commended this decision. But he felt that "greater difficulties will be met in providing the highly skilled men who undertake such work as tool setting, maintenance and jig and die production." There is also urgent need to train men who could fill supervisory posts. Although the number of such men has increased in recent years, there is, according to Mr. Chatterton, still a "pronounced shortage." It will be necessary to import the services of experts from abroad. This, as is well known, is being done by the Government. In this connection, Mr. Chatterton made two important points. In the first place, he conceded that some inducement must be given to the men who come here but thought that the grant of tax-free salaries to such men is "hardly in consonance with the principles of democracy." Secondly, the stress that is being laid on short-term supervision—foreign experts are being employed for short periods only—is of "doubtful merit." Explaining this point, he said that "engineering works cannot be run effectively if the personnel is continually changing and more emphasis needs to be placed on continuity of service." As regards the sending of Indians abroad for training, he felt that it had its merits as well as its shortcomings. It no doubt enabled them to gain an insight into advanced techniques. But such training, he pointed out, should not "supersede the practical experience to be gained in this country." He added:

"It is essential, if one is to control workmen, to understand their viewpoint and there is no better way to do this than to work alongside them. For this reason, institutional training of supervisors, although valuable, has its limitations, as it does not provide the direct contact which is needed if there is to be harmony in the industry. This is a weakness in engineering in this country. Few supervisors or managers have risen from the ranks, with the result that the intimate knowledge of the working conditions of labour is often lacking."

Metric System

An immediate problem before the industry is the change-over to the metric system. No sector of India's economy has perhaps a greater right to be heard on this subject than the engineering industry. It is comparatively easy for a trade to change over from the Indian or British system of weights and measures to the metric system. But when the change-over has to be effected in the engineering industry, a host of technical problems of bewildering complexity will immediately arise. Mr. Chatterton felt that any immediate implementation of the suggestion of the Standing Metric Committee for conversion of drawings and recalibration of balances and measuring devices would "lead to complete chaos." He rightly suggested that "some phased programme is essential, so that all engaged in a particular industry or section of an industry convert at the same time." He also emphasised the need for a wide educational campaign—the campaign to start with reform in schools and engineering text-books—so that the new generation may not meet the difficulty which the present generation, after having been trained in pound-inch system, finds in changing over to the metric system. There is already a shortage of trained draughtsmen. It will be difficult to change the system without affecting their output adversely. Mr. Chatterton also pointed out that "further consideration must be given to the problem of technical periodicals and it will probably be found that all engineers will have to be, so to speak, bilingual, so that they can keep up to date with engineering thought." Clearly, there is urgent need to ensure that the transition to the metric system, which is desirable in itself, takes place in a way that does not cause undue strain to the industry. If the authorities recognised that a certain element of gradualness is inevitable in this reform, they would, perhaps, be rendering a real service to their cause.

HEAVY ELECTRICAL EQUIPMENT

The well-known British electrical firm, the English Electric Company, Ltd., has been appointed by the Government of India as a subsidiary consultant for the manufacture of hydraulic turbines and associated equipment as part of the Heavy Electric Equipment project. The main consultants for the project, the Associated Electrical Industries Ltd., another British firm, it is stated, will now be in a position to proceed with the design and layout of the complete heavy electrical equipment factory including hydraulic turbines to meet the needs of hydro-electro development in India.

The draft-outline of the Five-year Plan, it may be recalled, made a brief reference to the development of the heavy electrical equipment industry in the public sector. The report stated that the total investment on the project, which is expected to take seven or eight years for completion, might be of the order of Rs. 25 crores. It added: "Heavy transformers, industrial motors, traction motors and switch gears are likely to be produced before the end of the second Plan but the production of items of equipment like hydraulic turbines and generators and generators for diesel sets is expected in the early part of the third Five-year Plan." The report also referred to the fact that "for the manufacture of heavy electrical equipment, consultants' agreement has been reached with a leading British firm and the project report is to be prepared before the end of 1956."

The British firm, to which the reference was made in the Plan, is no other than the well-known Associated Electrical Industries Ltd. Since the A.E.I. does not manufacture hydraulic turbines and associated equipment, the Technical Collaboration Agreement between the Government and that firm, concluded in November 1955, provided that, in consultation with the A.E.I., a subsidiary consultant would be appointed. It is in pursuance of this part of the agreement that the English Electric Company, Ltd., has been appointed a subsidiary consultant. It would appear that several leading turbine manufacturers of international repute were invited to submit offers of collaboration in the manufacture of hydraulic turbines through the A.E.I. Seven offers were received through the A.E.I. from firms in the U.K. (two of them in conjunction with American and Swedish firms), Switzerland, France and W. Germany. After detailed negotiations with the representatives of the firms, the Government, on the basis of technical, financial and other merits, selected the English Electric Company for subsidiary technical assistance. Following this selection, a formal agreement will be concluded between the firm and the main consultants.

Some idea of the manufacturing programme can be obtained from the information now made available. It is proposed to manufacture, at the first instance, turbines and generators up to 50,000 kw. It is believed that it will be possible to take up, at a later date, the manufacture of very large single units. The heavy electrical equipment factory is expected to go into production by 1961. When India attains an increasing measure of self-sufficiency in the manufacture of power plants, industrial utilisation of power is bound to increase at a rapid rate.

Total .. Rs.		17,65,73,328 5 4

Schedule of particulars required by the Banking Companies Act, 1949 (Act X of 1949) attached to and forming part of the Balance Sheet as at 31st December, 1955

PARTICULARS OF ADVANCES	Rs. a. p.
(i) Debts considered good in respect of which the Banking Company is fully secured	4,86,84,850 8 3
(ii) Debts considered good for which the Banking Company holds no other security than the debtors' personal security (inclusive of advances on joint and several pro. notes)	76,65,680 0 7
(iii) Debts considered good secured by the personal liabilities of one or more parties in addition to the personal security of the debtors	45,15,733 5 2
(iv) Debts considered doubtful or bad not provided for	Nil
Total .. Rs.	6,08,66,263 14 0

PARTICULARS OF ADVANCES	Rs. a. p.
(v) Debts due by Directors or Officers of the Banking Company or any of them either severally or jointly with any other persons	32,600 6 9
(vi) Debts due by companies or firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of private companies, as Members	13,19,978 3 3
(vii) Maximum total amount of advances including temporary advances made at any time during the year to Directors or Managers or Officers of the Banking Company or any of them either severally or jointly with any other persons	88,979 8 9
(viii) Maximum total amount of advances, including temporary advances granted during the year to the companies or firms in which the Directors of the Banking Company are interested as Directors, Partners or Managing Agents or, in the case of private companies, as Members	37,55,599 5 9
(ix) Due from Banking Companies	5,87,948 1 2

PROFIT AND LOSS ACCOUNT FOR THE YEAR ENDED 31st DECEMBER, 1955

EXPENDITURE	Rs. a. p.
1. Interest paid on Deposits, Borrowings, etc.	17,66,656 5 8
2. Salaries and Allowances and Provident Fund (inclusive of salary of the General Manager Rs. 26,385 and allowances nil)	13,92,184 9 2
3. Directors' and Local Committee Members' Fees and Allowances (inclusive of the remuneration to Supervising Director Rs. 18,000)	37,165 8 0
4. Rent, Taxes, Insurance, Lighting, etc.	1,80,682 14 7
5. Law Charges	5,310 14 0
6. Postage, Telegrams and Stamps	1,56,697 12 5
7. Auditor's Fees and Travelling Expenses	3,000 0 0
8. Depreciation on and Repairs to the Banking Company's Property	93,288 4 1
9. Stationery, Printing, Advertisement, etc.	2,11,186 2 9
10. Loss from Sale of or Dealing with Non-Banking Assets	Nil
11. Other Expenditure	1,60,163 7 1
12. Balance of Profit	10,01,227 8 7
Total .. Rs.	55,07,372 6 4

NOTE.—The balance of profit in the Profit and Loss Account of Karachi Branch has not been incorporated in the Profit and Loss Account.

INCOME (less provision made during the year for Bad and Doubtful Debts and other usual or necessary provisions)	Rs. a. p.
1. Interest and Discount	36,34,218 0 10
2. Commission, Exchange and Brokerage	15,91,855 2 8
3. Rents	3,987 2 0
4. Net Profits on Sale of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any Particular Fund or Account)	4,232 13 8
5. Net Profits on Revaluation of Investments, Gold and Silver, Land, Premises and Other Assets (not credited to Reserves or any Particular Fund or Account)	Nil
6. Income from Non-Banking Assets, and Profit from Sale of or Dealing with such Assets	Nil
7. Other Receipts	2,66,129 3 7
Total .. Rs.	55,07,372 6 4

AUDITOR'S REPORT.

1. I beg to report that I have examined the foregoing Balance Sheet of the Canara Bank Ltd., as at 31st December, 1955, and the Profit and Loss Account for the year ended 31st December, 1955, with the books and vouchers of the Administrative Office and the certified returns from the branches and that I have visited the major branches of the Bank during the year and have examined the books and accounts and cash securities as at the time of my visit and that I have obtained all the information and explanations I have required.

2. In my opinion, such Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and the Balance Sheet exhibits a true and correct view of the state of affairs of the Bank according to the best of my information and the explanations given to me and as shown by the books of the Bank. Further, in my opinion, the books of accounts have been maintained by the Bank as required by Section 120 of the Indian Companies Act.

3. The information and explanations required by me have been found to be satisfactory.

4. The transactions of the Bank which have come to my notice have been within the powers of the Bank.

5. The returns received from the Branch offices of the Bank have been found adequate for the purpose of the audit; and

6. The Profit and Loss Account shows a true balance of Profit and Loss for period covered by such account.

BANGALORE, 15th January, 1956.

P. SARVOTHUM NAYAK, General Manager.

A. DAMODAR PAI, H. LAXMINARAYANA KAMATH, K. P. J. PRABHU, A. NARAYANA PAI. } Directors. Chairman.

FUTURE OF GENERAL INSURANCE

SOME PROBLEMS REVIEWED

THE Government, through its action in nationalising life insurance, has, as was only to be expected, administered a certain shock to general insurers. General insurance, though it has not been nationalised, is apprehensive that the day may not be far distant before it is taken over by the Government. It is true that the Union Finance Minister, Mr. C. D. Deshmukh, has generally indicated that it is not the Government's intention to nationalise general insurance. At the same time, he has averred that the Government is aware of the malpractices in this field. He has also uttered the warning that the Government may reconsider its decision not to nationalise this section if conditions do not improve.

All this indicates that general insurance is in a state of *parole*, that its continued freedom from nationalisation rests upon its good behaviour. General insurers will, therefore, do well to see that they conduct their business on sound lines, so that there may be no room for the Government to doubt their *bona fides*. Again, they should strive to strengthen their reserves, for it is only the companies with strong reserves that can really render efficient service to the insured. It is gratifying to note that general insurers are fully alive to the need for improvement along these lines. Thus, Mr. J. P. Bhargava, President of the Indian Insurance Companies' Association, in the course of his speech at the recent annual meeting of the Association, held at Calcutta, said that, unless the position of general insurance companies was strengthened and sound reserves were built up, the Government "may later on try to justify its policy of nationalisation and extend it to general insurance." He emphasised that general insurers must develop a new urge—an urge to develop their business on sound lines. He warned:

"Insurance, in general, is very much in the public eye and, unless the fears both of the Government and the public are allayed, we shall be brought to actual disaster. I do earnestly request each one of you to think deeply on these matters, as I am quite certain you will realise that, in this respect, our fate is in our own hands."

We are not, of course, quite so certain that the general insurers' fate is entirely in their own hands. For, if the Government decides on nationalisation of general insurance on purely ideological considerations, there is nothing that the general insurers can do about it. But, to the extent that they can ward it off through improvement in the conditions under which they work, they should, of course, see that the Government does not nationalise general insurance on the ground—rather, on the pretext—that malpractices exist in this field. But the chief difficulty, as Mr. Bhargava pointed out, is that the term "malpractices" has not been defined, so that "one wonders what exactly is in the Government's mind to which so much importance is given." He added: "For any Government it is by no means difficult to bring to book persons misconducting their business and to rectify matters. Should any amendment to the existing laws be necessary or reinforcement of the administering personnel required, the Government could always make appropriate provisions."

Code of Conduct

If the Government has in mind the "code of conduct," it appears to us that there are certain features in it which stifle competition. It is no use formulating a law which places an artificial curb on competition and then expect the private sector, which must essentially operate on the principle of competition, to abide by it. Further, it seems necessary to examine whether insurance legislation cannot be modified in order to make it a little more flexible than at present.

Referring to this aspect of general insurance business, Mr. Bhargava said:

"Whilst some preventive legislation to safeguard the public may be justified, it is quite unjustifiable that, for the sake of a few offenders in the market, the trade as a whole is penalised. Those companies which are sound and could move ahead are, with heavy legislative chains, forced to keep back. There is far too much rigidity in the law which permits no flexibility to insurers to adopt their working to meet their individual requirements. During the past five years, considerable difficulties have been experienced in this direction by the industry, and it is the duty of the Government to amend the provisions of the law in the light of experience gained. Unless scope is allowed to solvent companies to grow, the position of the industry must remain unsatisfactory. My own feeling is that controls must be focussed on those who are unable to maintain solvency—and others allowed full freedom to run themselves efficiently."

A new problem which general insurers have to face is that of competition from the general insurance subsidiaries of the life companies now taken over by the Government. Referring to this problem, Mr. Bhargava said:

"The Government will undoubtedly be influencing the trends of the market through these companies, and if after practical experience the Government finds that there are serious defaults of omission or commission by their competitors, they will take a grave view of things to the detriment of the private sector. As I have said before, it becomes consequently everybody's duty to run their business on sound lines and not give the Government any opportunity of blaming their contemporaries in business. The position in which the private sector finds itself placed *vis-a-vis* the Government, reminds one of the theory of the mediæval Kings of England, 'The King can do no wrong.' Let us, therefore, not be indifferent to what may not affect us immediately, but is sure to do so tomorrow, and be vigilant from now onward."

Nationalisation of life insurance has raised an important question, namely, the insurance of the buildings, vehicles and other fixed assets of the insurance companies which will pass into the hands of the Government-owned Insurance Corporation. It is felt that the Government might direct the Corporation to insure these several crores worth of assets with the subsidiary general insurance companies it owns. We think that the correct thing for the Government to do would be either to let the Corporation carry its own insurance on these assets or to treat them as Government-owned property and place the insurance of these assets through the Insurance Companies' Pool.

Another Problem

The threat held out by the State Governments of their entry into certain fields of general insurance constitutes another problem for general insurers. Thus, the Madras Government has proposed to take over the third party insurance of motor vehicles. This might well encourage other States to follow the example of the Madras Government. The main argument against this proposal is that it is wrong for a Government, which is not committed to a policy of nationalisation of general insurance, to take over some aspects of such insurance merely because they happen to be somewhat profitable. This was emphasised by Mr. Bhargava when he said:

"Perhaps, the Government has been prompted to consider the proposal in view of the third party claims experience being known to be somewhat favourable. It is true that the private sector transacting third party insurances efficiently settles claims out of court, and attempts to keep the cost of claims low. It avoids legal battles and litigation as far as possible. The Government, however, should not overlook the fact that the companies' experience in comprehensive car insurance business is generally far from good. Even so, the companies have continued to afford their cover, in order to avoid inconveniencing the public. In the fitness of things, therefore, the Government should not interfere with third party insurance but allow general business, both good and bad, to be conducted by the private sector, and not leave it with only the unprofitable end."

The overall outlook for general insurance is certainly bright. The growing economic progress of the country, as Mr. Bhargava pointed out, provides scope for the extension of general insurance. It is to be hoped that general insurers will strive hard to utilise the opportunities provided by the industrial progress of the country to extend and improve the scope of their activities.

SOCIAL SECURITY IN U.S.

American workers continue to add to their insurance holdings, one of their many forms of economic security. Preliminary estimates by the Institute of Life Insurance, a private trade association, show that, in 1955, workers and businesses in the United States bought more new group life insurance than in any previous year. Through group purchase plans, which often are provided for in union-management contracts, workers can obtain the advantages of broader coverage and higher benefits at lower cost. Many companies pay all or part of their employees' insurance programmes.

The value of new group insurance plans set up for American workers last year aggregated $9,300 million, about $2,700 million more than in 1954. More than 2,400,000 employees in private industry were brought under group insurance protection for the first time. Adding U.S. Government employees also brought under group insurance protection by an Act of Congress, 1955 purchases came to $11,200 million and the number of newly insured to 2,900,000.

An estimated 31 million workers, more than half the non-agricultural labour force of the United States, now own group life insurance. Insurance now in force with employee groups is estimated at $102,000 million, about $80,000 million more than 10 years ago and some $16,000 million more than a year ago. In addition to the $11,200 million in new policies, about $5,000 million of the 1955 increase came from additions of workers to previously established groups or from additional protection for those already covered.

There is strong evidence that increase in private insurance ownership in the United States is continuing in 1956. Life insurance purchases in January were at an all-time high of $3,742 million, an increase of 21 per cent. from a year ago.

HEALTH INSURANCE

Nearly 85,000 employees will benefit under the Employees' State Insurance Scheme, which is being extended to 22 more areas in India shortly. These include seven centres in Rajasthan, four in Madhya Pradesh, six in Saurashtra and five in Travancore-Cochin State. The Scheme, which came into force in February 1952, at present covers 10.5 lakh employees in 31 centres in the country. The gradual extension of the Scheme to new centres, it is stated, is likely to bring down the overhead cost of the Scheme. Due to the need for an all-India organisation the administrative cost formed 75 per cent. of the total expenses in 1952-53 when the number of employees benefited under the Scheme was only 1.2 lakhs and sickness and maternity benefits were paid only for a part of the year. As the number increased to 1.5 lakhs during 1953-54 and the first group of 1.2 lakhs drew benefits for a full year, the percentage of administrative expenses came down to 50 per cent. It further declined to 42 per cent. during 1954-55 when the Scheme was extended to cover 7 lakh employees, of whom only 1.5 lakhs drew all the benefits all the year round. It is calculated that when the Scheme covers the total insurable employees in India by 1958, administration expenses will not exceed eight per cent. of the total contribution income.

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

SEVENTY-THIRD ANNUAL MEETING

MR. R. E. CASTELL ON BURDEN OF EXCISE DUTY ON MILL-MADE COTTON CLOTH

ADDRESSING the shareholders of the Bangalore Woollen, Cotton and Silk Mills Company, Ltd., at their Seventy-third Annual General Meeting held in Bangalore on 24th March 1956, Mr. R. E. Castell, Chairman of the Company, made a reference to the increase in excise duty on mill-made cotton cloth under the latest Finance Bill. Although there had been a good demand for cloth in India, which might be expected to continue and even increase, he doubted whether the consumers could afford now to meet this extra burden. He feared that, for the present, the industry would have to carry a part of this additional levy at least for some varieties.

The following is the full text of Mr. Castell's speech:

"GENTLEMEN,

"The Directors' report and accounts for the year ended 31st December 1955 having been with you for some time, I propose with your permission to take them as read, but after my speech I shall be glad to answer any questions members may wish to ask.

"Although further progress in the Company's efforts to increase efficiency by the rehabilitation and replacement of machinery, and the improvement of processing methods has led to a useful increase in production and sales, the profit for the year is lower than the high level attained in 1954. Nevertheless, I hope you will regard the result as satisfactory having regard to all the circumstances.

Excise Duty

"As was expected, the cess and excise duties newly imposed on woollen goods by the 1955 Finance Act had an adverse effect on the Indian woollen industry. In the case of your own Company it was found impossible to raise selling prices to cover the new taxes on these goods, so that the working of the woollen section made a bigger subtraction than in the previous year from the profits earned by the other departments of the mills.

"The cess and excise duties also affected the Company's union fabrics and reduced the profit margin thereon. The construction of the 'Cotswol' Mill was completed during the year and in addition to this well-known union fabric, a heavier cloth, 'Angola' is now being produced for the armed forces and is also being sold for general consumption.

"The Company's cotton goods continue to be in good demand, but the margin of profit on fine cotton varieties was reduced to some extent by competition.

"By the 1956 Finance Bill the excise duties on all mill-made cotton cloth, with certain exceptions which do not concern your Company, were increased by 6 pies per square yard. Although there has been a good demand for cloth generally and this may well continue and even increase, I doubt if consumers can afford to meet this extra indirect taxation now, and perhaps for some varieties a part of the additional excise duty may have to be borne by the industry for the present.

Mill Cloth Production Should be Expanded

"As you may know, there is a difference of opinion between Government and the textile industry both regarding the size of the demand for cloth in India during the period of the second Five-year Plan, and regarding the methods by which this demand can best be met. I will not worry you with all the figures connected with this matter, but would like to say that whatever increase in production may arise from encouragement of the handloom industry, including the replacement in the course of time of some of the handlooms by powerlooms, it is vital that a considerable expansion of the present capacity for producing mill cloth should be permitted, and indeed encouraged. I hope that this encouragement will soon result from a change of policy and so prevent any serious shortage of cloth arising.

"Along with other mills, your Company is still precluded by regulations from expanding its installation for the manufacture of cotton cloth, and as it would take some time to arrange any addition to existing plant, I hope the Government will not wait until an emergency arises before deciding upon a change of policy. In my opinion, third-shift working could not offer a proper solution for meeting a cloth shortage, for, as is widely known in the industry, continuous operation shortens the life of machinery, reduces its efficiency, is disliked by the workers and lowers standards of quality.

"The Mills' silk section has made good progress during the year and its productive capacity has been increased. We now use much raw silk and spun silk produced in Mysore State, and as the local filature industry makes headway in its efforts to improve quality, we hope to use still more indigenous silk products without any sacrifice in the quality of our well-known silk *saris* and other fabrics.

"Owing to competition in overseas markets and, in some of them, to import restrictions imposed for economic reasons, our export sales suffered a setback in 1955. It seems likely that competition abroad will increase, but in spite of that your Company will make every effort to maintain and, if possible, increase their exports, and they have reasonable hopes of success particularly, as they can rely on good connections with many active and substantial constituents and representatives overseas.

"There is not much for me to comment on in the published accounts. The figures in the balance-sheet show little material change from the previous year and in the profit and loss account there have been increases in manufacturing costs commensurate with the higher production but, as explained in the Directors' report, profit margins have been reduced in order to cover to some extent the cess and excise duties which were imposed earlier in the year on woollen and union fabrics.

"I have still no further news to give you on our application to the Commissioner of Income-tax under section 23A of the Indian Income-tax Act, but I trust it will not be necessary for us to make a further distribution from the profits made in the calendar year 1954.

Capitalisation of Reserves

"It is possible that you will have been disappointed at our decision to defer action on the proposed bonus issue, but I hope you will all agree with your Directors that it is in the interests of the Company to delay matters until we are in a position more fully to understand the somewhat complicated provisions of the 1956 Finance Bill regarding the proposal to impose taxes on bonus issues and dividends in excess of 6 per cent. of the issued ordinary capital.

"The financial interest of the shareholders in this Company is approximately Rs. 2½ crores, being the total of our capital and reserves, and, though the balance-sheet shows that practically the whole of this amount was employed in the business, it is important to bear in mind that the figures as at 31st December show the working capital required at its minimum amount, as at the close of the year raw material stocks are generally at their lowest and normally the Company has by that time disposed of its 'seasonal' finished products of the Cotswol and woollen departments. For nine months of the year 1955 we were indebted to our bankers, the highest point being reached in June when the overdraft stood at over Rs. 66 lakhs.

"It is most unfortunate, therefore, that the Budget proposals may prevent us from carrying out the very necessary rationalisation of our balance-sheet by the increase of the issued capital so as to bring it more into line with the capital actually employed.

"The imposition of a heavy octroi duty on all raw materials entering the City limits and also on many other items essential to the operation of the mills, announced by the Bangalore Corporation in December 1954, is still *sub judice*, but I repeat now what I said in my speech last year that, if this duty be implemented, it will add materially to the costs of the local industry and place it at a disadvantage in relation to mills elsewhere in India.

"As mentioned in the Directors' report, a final settlement was reached with the employees whereby a sum amounting to 12½ months' basic wages has been paid for the four years 1952 to 1955.

"Whilst I am glad to say that during the year under review no major industrial disputes have arisen, we have, unfortunately, been involved in long-drawn-out and vexatious proceedings on certain issues most of which can scarcely be described as of major importance. Much time, which could more usefully have been devoted to the development of our manufacturing business, has, therefore, been sacrificed, and I cannot but feel that many of these minor differences could be more easily and more happily resolved were the Labour Association to accept our offer to introduce in these mills an industrial disputes settlement procedure on the lines of that in force in our sister mills in Madras, where it has proved most beneficial to both parties.

"We shall continue to do our utmost to settle our differences with labour by direct negotiation as problems arise, for your Directors remain convinced that it is in the best interests of industrial harmony and progress that, whenever possible, differences should be settled without reference to a third party.

Housing of Workers

"Your Directors propose to set aside Rs. 3 lakhs to cover the estimated expenditure on workpeople's housing during 1956.

"The workpeoples' and employees' provident funds do not appear in the published accounts of the Company as they are vested in trustees. The liabilities of these funds as at 31st December 1955 amounted to Rs. 51,88,956 and Rs. 5,59,908, respectively, and corresponding amounts are invested in trustee securities.

"In conclusion, you will no doubt wish to join me in recording appreciation of the wholehearted co-operation which we have received from the executive and supervisory staff both of the management and of the mills. We should be grateful to the Manager and his staff who by their enthusiasm and skill have contributed so much towards the increased efficiency and production to which I have already referred."

THE UNITED COMMERCIAL BANK, LIMITED

MR. G. D. BIRLA'S STATEMENT

SOME VALUABLE SUGGESTIONS FOR SUCCESSFUL IMPLEMENTATION OF SECOND PLAN

SOME constructive criticisms of the second Five-year Plan as is outlined in the draft now before the public were offered by Mr. G. D. Birla, Chairman of the United Commercial Bank Ltd., in his statement to the shareholders at their Thirteenth Ordinary General Meeting held at Calcutta on 28th March 1956. He drew pointed attention to certain problems that must be satisfactorily solved if the Plan were to prove a success. These are, according to Mr. Birla, the inadequacy of internal resources, foreign exchange, technical personnel and transport and the rigidity of Government machinery. Mr. Birla sought to impress on the authorities that these handicaps must be got over by a realistic approach towards economic planning.

The following is the full text of Mr. Birla's speech:

"GENTLEMEN,

"Before I proceed with the ordinary business of this thirteenth annual general meeting of the Bank, I should like to refer with great sorrow to the loss sustained by the Bank in the premature death, in August 1955, of Mr. Navinchandra Mafatlal, who was a Director since its inception and had contributed greatly to its growth. He was a staunch friend of the Bank and was held in the highest personal esteem by us all who miss his genial presence and wise guidance. The sorrow is tempered by the fact that his son has joined our Board and the connection of the Bank with the House of Mafatlal will continue unbroken.

"I have also to report to you the resignation from the Board, on his appointment as a Director of the State Bank of India, of Mr. R. G. Saraiya, who as a Vice-Chairman guided the affairs of the Bank, particularly in Bombay, since its inception.

"In the vacancies which had arisen in the Board the Directors have appointed Mr. Yogindra N. Mafatlal, Mr. G. D. Kothari and Mr. T. S. Rajam. I am glad to welcome them on your behalf and I am confident that the Bank will benefit greatly by their wide experience in their respective spheres of industry and trade.

Tribute to Mr. Thakur

"Reference has been made in the Directors' report to the changes which took place last year in the general management of the Bank. Mr. B. T. Thakur, who was the General Manager of the Bank since its inception, resigned, on grounds of health, from the chief executive charge of the Bank in April 1955 and has gone on leave preparatory to retirement. I take advantage of this occasion to pay a tribute, on your behalf, to the ability and zeal with which he had served the Bank during his period of office and built it up to its present position as one of the leading banks of the country, and to place on record our high appreciation of his valuable services.

"Mr. S. T. Sadasivan has been appointed to succeed Mr. B. T. Thakur as General Manager and I extend to him our good wishes for success during his period of office. Mr. Sadasivan was the Deputy General Manager of the Bank since 1945 and has also acted as General Manager. I have every confidence that the progress of the Bank will continue with great vigour under his zealous care and able guidance.

"I also take this opportunity to thank the members of the staff in India and abroad for their devoted service to the Bank and for their valuable contribution to the satisfactory results achieved during the past year.

"I now turn to the ordinary business of the meeting. The balance-sheet and the profit and loss account have been in your hands for some time and they bear testimony to the continued improvement of the Bank's business in the past year.

Bank's Business

"*Deposits.*—You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1955 stood at Rs. 47.69 crores, as compared with Rs. 40.42 crores at the end of 1954. The increase in deposits of Rs. 7.27 crores represents a rise of 17.9 per cent. which is a much higher rate of increase than 7.1 per cent. recorded in 1954 and is higher than the rise of 9.7 per cent. in the deposits of Scheduled banks as a whole. The rise in deposits, which is common to all banks, should be attributed to higher production and an expanding economy which are the results of successful implementation of the first Five-year Plan.

"*Cash.*—Cash on hand, balances with banks and money at call and short notice accounted for Rs. 6.21 crores and represented 13.02 per cent. of our total deposit liabilities.

"*Investments.*—The investments of the Bank in Government and other approved securities stood at Rs. 22.17 crores showing a rise of Rs. 5 crores, as compared with the figure at the end of 1954. The bulk of the increase in deposits has thus gone into Government securities. During the year, as a result of the nationalisation of the Imperial Bank of India, we received compensation for our holding of shares in the Imperial Bank of India in the form of Government securities. We have, however, made a fresh investment of Rs. 23,93,200 in the shares of the Industrial Credit and Investment Corporation of India Ltd., which was incorporated in the beginning of last year with the assistance of the Government of India by way of interest-free advance, for the purpose of carrying on the business of assisting industrial enterprises in the private sector of industry in India by providing finance in the form of long and medium-term loans or equity participation and for sponsoring and underwriting new issues of shares and securities. The ratio of our investments to our deposits, after deducting the amounts borrowed thereagainst is 37.60 per cent., as compared with 33.6 per cent. at the end of 1954. Cash resources and unencumbered investments together amount in the aggregate to Rs. 24.14 crores, giving a liquidity ratio of 50.62 per cent. to total deposits. The Bank's investments are shown in the balance-sheet, in accordance with our usual practice, at below the prevailing market rates.

Bills

The amount of bills discounted and purchased has increased during the year from Rs. 8.57 crores to Rs. 9.74 crores. You will be gratified to note that this self-liquidating asset forms 20.42 per cent. of the deposits of the Bank.

"*Liquidity Ratio.*—The total of our most liquid assets—cash on hand and with banks, money at call and short notice, unencumbered investments and bills—represents 71.04 per cent. of our deposit liabilities. This is a very high liquidity ratio and enables us comfortably to expand credit during the busy season.

"*Foreign Exchange Business.*—Our foreign exchange business continues to improve. It forms an important part of our banking operations and the turnover in this department has increased during the past year, as a result of the rise in the value of the foreign trade of India and the neighbouring countries. We are constantly expanding the network of our foreign correspondents and overseas connections in order always to be ready to handle any business that might be offered to us.

"*Advances.*—Our advances showed a moderate increase from Rs. 16.07 crores to Rs. 17.85 crores. This gives a ratio of 37.43 per cent. to our deposits, against 50.58 per cent. for the banking system as a whole.

"*Bank's Property Account.*—The additions to the Bank's property account during the year were Rs. 10.03 lakhs. This is due to the purchase of the premises of the Banque de L' Indochine at Pondicherry in connection with the acquisition of their business and to the construction of our own premises at Parliament Street, New Delhi. We hope shortly to commence the construction of the head office building at Calcutta at the site which we have acquired for this purpose at the corner of Brabourne Road and Royal Exchange Place Extension.

"*Profit and Loss Account.*—Turning to the profit and loss account you will notice with satisfaction that the profit for the year 1955 is Rs. 36.69 lakhs, as compared with Rs. 31.06 lakhs for the year 1954. This satisfactory result has been achieved, in spite of heavy increase in expenses and in interest paid on deposits. As stated in the Directors' report, the total profit, including the sum of Rs. 1,08,724-8-9 brought forward from 1954 accounts, is Rs. 37,77,761-2-0. Out of this amount, the Directors have already transferred Rs. 8.50 lakhs to the reserve fund which now stands at Rs. 95 lakhs and have made a provision of Rs. 14 lakhs for taxation and Rs. 4 lakhs for bonus to staff, leaving a balance of Rs. 11,27,761-2-0. In view of the improved working results, the Directors feel justified in recommending a slight increase in the dividend from 5 per cent. paid last year to 5½ per cent. per annum, free of income-tax.

The Bank Award

"Since we met last, the Bank Award Commission which was appointed by the Government of India to go further into the dispute between banks and their employees in the matter of salaries, dearness allowance, etc., gave its decision which the Government of India accepted *in toto*. By its decision, the Commission restored, with slight alterations, the Award of the Labour Appellate Tribunal which the Government had previously modified. It also decided that no employee should be asked to refund any excess paid to him under the then existing scheme over what he would be entitled to under its Award. In order to lighten the burden on banks imposed by the higher salaries and allowances recommended, the Award permitted banks to pay the employees any arrears that may be due to them in three instalments. Favourable to the employees as such recommendations were, the banks went further and waived their right to pay the arrears in three instalments and paid the entire amount due to each employee in one lump sum. The banks also waived their right to recover the excess dearness allowance paid during the period July to November 1955. Notwithstanding such generous concessions the employees were not satisfied, instead they carried on an agitation culminating in the refusal to work overtime for the purpose of the annual closing of accounts which was consequently delayed and also finally resorted to a two days' strike in January this year. It is extremely regrettable that they should adopt such an attitude and go on a strike which was clearly illegal. It is to be hoped that the employees will take the provisions of the Industrial Disputes (Banking Companies) Decision Act as final and devote themselves to strenuous and harmonious work in close co-operation with the management. Needless to say, such co-operation will naturally produce better working results for the Bank which, in turn, will enable the management further to improve the conditions of service of the employees.

Bank Rate

"The Bank rate in India remained unchanged at 3½ per cent. throughout the year 1955, though the Bank of England rate was raised from 3 to 3½ per cent. on the 27th January 1955 and again to 4½ per cent. on 24th February 1955. Notwithstanding the fact that the year 1955 saw an upward revision of Bank rates in varying degrees in different parts of the world, it is a matter of gratification that the Bank rate in India remained unchanged and adequate finance could be secured by commerce and industry on the basis of 3½ per cent. official Bank rate. The increase in the Bank of England rate on the 16th February 1956 from 4½ per cent. to 5½ per cent. has raised the question whether it will be necessary or desirable to effect any change in the Indian Bank rate.

"On a superficial assessment of the situation it would appear that the Indian Bank rate is unrealistic in the light of the competition for deposits which has carried the deposit rate almost to the level of the official Bank rate, but there has never been any integration with the official rate of the various interest rates quoted in the market and the money rates prevailing in the bazar have never had any relation to the official Bank rate. The impact of the rise in the Bank of England rate has so far been confined to a rise in the deposit rate and a sporadic increase in the rate of interest charged by some banks on certain classes of advances, but has had no significant influence otherwise.

"The problems facing India are wholly different from those of the United Kingdom and the prevalence of unemployment and the existence of a steady level of prices which have characterised Indian economy are in sharp variance with overemployment and inflation which are the features of British economy. We are now engaged in bringing into fruition a planned economy which has for its objects increased production, increased national income, the provision of employment on a large scale and the maintenance of stable economic conditions. In the financial sphere, the operation of the first Five-year Plan has resulted in increased bank deposits, a larger note circulation and enhanced bank advances without any appreciable increase in commodity prices or the cost of living. This was because increased money supply has been matched by increased production.

Result of Rise in U.K. Bank Rate

"One result, however, of the rise in the Bank of England rate is that more and more of the foreign trade of India will have to be financed out of Indian resources. But these resources are expanding and the stage has not yet been reached when they may be said to be inadequate. The bill market scheme inaugurated by the Reserve Bank of India in 1952 is a sufficient guarantee that seasonal expansion of credit could be effected without a change in the Bank rate, and the recent announcement of the Reserve Bank of India that advances under the scheme will be made at 3½ per cent. interest instead of at 3 per cent. as hitherto is not to be interpreted as a measure of dearer money. Moreover, the export trade is financed on the basis of the higher money rates prevailing in London through an adjustment of the exchange rates applicable to usance bills and, in an emergency, the bills could be rediscounted in the London market. It is only in the case of imports that the pressure for finance will be squarely transferred to the Indian money market, but the expansion of resources resulting from the operation of the second Five-year Plan appears to be adequate to take care of such increased responsibility as might devolve on the Indian money market.

"It is necessary for the success of the borrowing programmes associated with the second Five-year Plan that stable and healthy conditions should be maintained in the money and Gilt-edged markets and the continuance of the Indian Bank rate unchanged at its present level is a necessary condition for the fulfilment of our development plans. From this point of view it is regrettable that the authorities have allowed the price of 3 per cent. Conversion Loan to go below Rs. 80. A little support to this loan will inspire confidence in the stability of the Gilt-edged market.

"The question of an upward revision of the Bank rate will arise in the event of the spectre of inflation raising its head or the scramble for deposits developing to the extent of a runaway rise in deposit rate to a level higher than the Bank rate. The authorities will, no doubt, keep a close watch on the situation and act without hesitation when the contingency arises.

"Before proceeding to review the economic conditions in India, I shall briefly comment on the conditions prevailing in the countries where we have branches.

Burma

"At the beginning of the year, Burma was faced with the problem of rapidly dwindling balance in foreign exchange. As a corrective measure the Government imposed a 50 per cent. moratorium on all outstanding import licences in March 1955 and this action was followed by the complete suspension of the Open General Licence. This had the inevitable repercussions on business and commerce. The prices of imported consumer goods, such as textiles, toilet requisites, tinned provisions, etc., shot up to a very great extent. As a result of these corrective measures, the position improved somewhat in the latter part of the year and since then the Government has been issuing a few licences for import, mostly from countries like China, Hungary, Yugoslavia, and the U.S.S.R. with whom agreements for payment on barter basis have been concluded. As a result of these and of severe restriction on private remittances, the shrinkage of foreign holdings of the Union Bank has been arrested and a moderate improvement has set in. The Government's policy in recent months has shown a tendency towards the scaling down of capital expenditure which is not considered as wholly essential or immediately productive.

"During the year, the Government of India granted a loan of Rs. 20 crores to Burma to assist her in financing her development plans. The loan is repayable in half-yearly instalments of Rs. 2.5 crores beginning from March 1959. The rate of interest on the loan is 4 per cent.

"The prospects of Burma's most important export crop—rice—seems to be bright this year. It is reported that, out of an exportable surplus of about 1.5 million tons, agreements have been practically concluded for disposal of very nearly the entire quantity.

Malaya

"The total value of Malayan trade last year was ST$ 7,977.1 million—a rise of 27.61 per cent. over 1954. With imports at ST$3819.4 million and exports at ST$4,157.7 million, the adverse balance of trade of 1954 was turned into a favourable balance of ST$338.3 million. This improvement was largely due to better prices of tin and rubber. The exports of these commodities registered a rise of 8 per cent. and 1 per cent., respectively. Rubber production was highest since 1950 at 637,463 tons and the average price during the year was $1.14 per lb., as against the average of 67 cents during the previous year. Tin production, at 61,244 tons, was in fact a post-war record and the average price during the year was ST$365.50 per picul, compared to the average of $353.59 in the previous year. As a result of improved trade with Indonesia, the conditions in the textile market showed signs of improvement. On the whole, the year 1955 can be considered as the second best year, the best so far being 1952.

"The Colony of Singapore and the Federated States of Malaya had their first measure of self-government when the general elections were held. The general conditions in Malaya were still disturbed and the 'Amnesty' proposals made by the Government were unsuccessful. There were also signs of industrial unrest resulting in a number of strikes in industrial organisations, rubber mills, transport, etc.

"The prospects for 1956 would be bright, if the prices of rubber and tin are sustained even at their present levels.

Hong Kong

"The industrial production of the Colony continued to rise and the number of registered factories as well as the number of workers employed showed an appreciable improvement over the previous year. This has enabled Hong Kong to stabilise her economic position and to a certain extent has made up for the loss in her trade with China after the embargo. The Colony was able to compete with certain amount of success with the industrialised countries in finding markets for its industrial products in South-East Asia, U.K., and other British Colonies. The export of industrial products registered an increase of HK$48 million—an increase of nearly 7 per cent. over the last year's exports.

"A significant feature of last year was the continued influx of a very large amount of Chinese capital into the Colony from countries in South-East Asia. As a result of this, boom conditions were prevalent on the Stock Exchange and in real estate markets.

Pakistan

"Our next-door neighbour, Pakistan, continued during the year to show resilience and progress. The important development on the economic side was the devaluation of the Pakistan rupee. The Pakistan rupee, which had a higher value than its Indian counterpart since September 1949, was brought on a par in July 1955. The need for obtaining capital goods from abroad and the peculiarly monopolistic nature of the country's export goods combined to stave off devaluation. These two factors, however, could no longer continue to support the artificially inflated rupee.

"The economic progress as a whole was maintained. The trade position also showed an improvement. Exports rose from Rs. 190.5 million to Rs. 371.1 million during the three months August-October 1955 and, instead of trade deficit on private account of Rs. 53.5 million, there was a surplus of Rs. 131.5 million. During the year an agreement was also signed between the United States of America and Pakistan providing the use of 20 million dollars of U.S. Assistance Fund for the improvement of Pakistan ports, highways, air-bases, etc. Industrial output also continues to rise and it is hoped that she could look forward with confidence to a year of good development.

"On the political side, a Constitution for the country has just been drawn up and Pakistan has been proclaimed as an Islamic Republic within the Commonwealth.

Economic Conditions in India

"*The Capital Market.*—During the year under review, the Government of India floated a 3½ per cent. ten-year loan at an issue price of Rs. 98.8 and secured Rs. 103.7 crores. Collections from small savings, to which more attention is now being devoted, yielded Rs. 65 crores. The previous year's experiment of floating a combined loan for the requirements both of the Central Government and the State Governments was scrapped and the States came out with their own loan issues—all 4 per cent. loans maturing in 1967, but at different issue prices—and gathered in all Rs. 47.50 crores. The expansion of treasury bills —the measure of deficit financing—is expected to be Rs. 240 crores.

"The Industrial Credit and Investment Corporation of India Ltd. issued its share capital of Rs. 5 crores of which Rs. 3½ crores were privately placed and Rs. 1½ crores were successfully offered for public subscription. Two big debenture issues and quite a number of preference and ordinary shares flotations met with satisfactory response. Altogether the capital market had an active and successful year.

"During the year State Financial Corporations were floated in Madhya Bharat, Andhra, Uttar Pradesh and Rajasthan.

Foreign Trade and Balance of Payments

"The foreign trade of India during 1955 registered a significant growth both in exports and imports and the visible trade deficit has been reduced. The relative figures are as follows:

Foreign Trade—January-November

(In crores of rupees)

	1953	1954	1955
Exports ...	477.84	499.90	539.85
Imports ...	530.13	559.29	577.47
Balance ...	—52.29	—59.39	—37.62

"Import policy is now designed to allow an increase in import of industrial raw materials and capital goods while extending further the principle of protection to Indian industry. The large internal demand for steel has necessitated its import from wherever it is available, but the loss of foreign exchange has been offset by the cessation of imports of foodgrains and sugar and the saving of exchange arising from the import of crude mineral oil in place of refined petroleum products. Imports of chemicals, drugs, electrical goods, newsprint and rayon have remained steady, while import of iron and steel, non-ferrous metals, vehicles and wagons have begun to show a rising trend. The growth of Indian industry is making itself felt in the pattern of our import trade.

"In exports, most of the major commodities, with the significant exception of tea, have been doing well. Exports of jute manufactures showed expansion.

Jute Industry

"The jute industry's success last year is attributed partly to the Government's prompt abolition of the export duty on jute goods in the wake of the devaluation of the Pakistan rupee. The prices of Indian jute goods, thus lowered, enabled the industry to compete on better terms with Pakistan and other jute manufacturing countries. Exports of cotton textiles in 1955 were slightly lower than in 1954 and may again decline in 1956 due to the growth in domestic demand. The decline in export earnings on this account has been more than made good by the large increase in exports of raw cotton, so that the total value of raw cotton and textiles amounted in the eight months April-November 1955 to Rs. 67 crores, as compared with Rs. 55 crores in the corresponding period of 1954.

"The continued weakness of the tea market is an adverse factor likely to offset the increased export earnings in 1956 from other commodities.

"With reference to our export trade the emphasis has shifted in recent years from sending raw materials to sending manufactured goods abroad. The rapid pace of industrialisation has enabled some of our industries to produce manufactured goods which can find an outlet into the world market on a competitive basis both as regards quality and price. On the export side, all restrictions which were necessary in earlier years have been removed, as a result of the improvement in the internal supply position. In fact, except for a few isolated commodities, exports of most major items are being allowed without any control. About 80 to 85 per cent. of the country's export is today free from control.

"In order to secure adequate foreign exchange resources for the second Five-year Plan efforts have to be made to stimulate exports and

the recent announcement of the Commerce Ministry on this subject gives hopes of considerable development in this field in the near future. The Ministry is thus anxious to canalise all measures of rationalisation, so that foreign trade can be regulated properly. Similarly, the Government of India is taking all possible steps through Export Promotion Councils to promote exports of cotton textiles, silk piecegoods, engineering goods, plastic manufactures, cashew and pepper. With adequate financial assistance these bodies would be able not only to help the normal flow of export trade but will also conduct research, propaganda and publicity in foreign markets. Export Credit Guarantee Scheme is sure to give added confidence.

"During the first nine months of 1955 trade with the dollar area resulted in a surplus of Rs. 31 crores, against a deficit of Rs. 3 crores in the corresponding period of 1954. By reason of this satisfactory position, the outstanding loan from the International Monetary Fund was repaid to the extent of Rs. 19.3 crores, leaving only a small balance of Rs. 6 crores still due to the Fund at the end of 1955. The country's net balance of payments on current account for the same period showed a surplus of Rs. 25 crores and the year as a whole is expected to show a surplus of about Rs. 35 crores, as compared with a deficit of Rs. 4 crores in the previous year.

Agricultural Production

"Progress in the field of agricultural production was satisfactory. The output of foodgrains during the year amounted to 65.8 million tons, which, though a little lower than the previous year, was yet in excess of the Plan target by just over four million tons as a result of implementation of irrigation and power projects in the first Five-year Plan, now drawing to a close. By the end of 1954-55, fresh irrigation facilities and increased water-supplies were provided to over four million acres of virgin and irrigated soil. The easy supply position of foodgrains enabled the Government to remove the last remnant of control on foodgrains.

"The production of commercial crops showed further improvement during the current year. Oilseeds output at 5.9 million tons and raw cotton at 4.3 million bales have exceeded their targets under the first Five-year Plan by four lakh tons and about one lakh bales, respectively. The production of sugar touched the record level of 15.9 lakh tons as compared to 10.01 lakh tons in 1953-54, while that of jute, which remained depressed during the last two years, has shown a significant increase of about 12 lakh bales during the 1955-56 season as compared to the last.

"The general crop prospects for 1955-56 are considered to be satisfactory. They would have been better still but for the calamitous floods in the North and the devastating cyclones in the South that occurred during the year.

Industrial Production

"Industrial production has made commendable progress during the year under review. The upward trend in industrial production persisted through 1955. A revised index of industrial production is now available. According to this series the index of industrial production (Base: 1951=100) for the first ten months of 1955 works out at 125.7, as against 112.9 for the whole of 1954. This represents an increase of over 11 per cent. over the preceding year. This increase in production was shared by almost all the major industries. The output of finished steel, at 1.26 million tons, was higher than the record achieved in 1954. The production of mill-made cloth, at 5,087 million yards, in 1955 was 09 million yards higher than the production of 1954 and exceeded the target fixed under the first five-year Plan by 387 million yards. Cement production during the year reached 4.5 million tons. In jute, chemicals and paper too the performances were very high. Considerable strides have also been made by the engineering industry. Licences for manufacturing jute mill machinery have been given. Progress in the modernisation of jute mills has already been made.

"Further, in terms of expenditure, the position in respect of the centrally financed multi-purpose projects—the Damodar Valley Corporation, Bhakra Nangal, Hirakud and Harike—is that, against a provision of Rs. 224 crores, about Rs. 238 crores will be spent by the end of the Plan period. In regard to State projects, the outlay will be Rs. 352 crores, against the Plan figure of Rs. 378 crores. Against a provision of Rs. 30 crores, a total of Rs. 20.8 crores has so far been spent on the new projects undertaken during the last two years of the Plan—Kosi, Koyna, Chumbal, Rihand, and Nagarjunasagar.

Second Five-year Plan

"It is some time now since the draft outline of the second Five-year Plan has been published; the total amount of expenditure envisaged, the departmental allocations, the State-wise distributions, the various targets aimed at, etc., have now been so widely publicised that it is hardly necessary to repeat them here. But the lapse of time has also enabled us to get over our first emotional enthusiasm and to take an objective and dispassionate view of the Plan.

"The Plan has been variously criticised as either too optimistic or too ambitious. There is nothing wrong about being too ambitious. In the present condition of India to aspire to progress at as quick a pace as possible cannot but be a laudable object. But to be too optimistic is certainly a danger, if in that mood we ignore realities and base our hopes on mistaken calculations and emotional approaches. Failure to reach the goal would mean disaster of the severest kind and, therefore, to shut our eyes to the realities and create difficulties by our own actions would be, to put it at the mildest, a first-rate blunder.

Employment and Wealth

"In the first place, I wish to emphasise that higher employment, though a very desirable objective, cannot be as important as creation of greater wealth. It may sound a little unorthodox, but I wish it to be realised that increased employment cannot in all cases result in greater prosperity. Only such employment as is highly productive can create prosperity. On the other hand, prosperity can definitely be a precursor to greater employment. A highly productive employment alone can create prosperity, and once we have the effective means, we can create all kinds of employment. The main problem, therefore, is not so much to create any kind of employment as to create such employment as would yield higher production and greater wealth. With wealth a large number of tertiary employment would grow automatically. Higher production is thus the objective which really matters.

"Judging from this angle, the Ambar Charkha is not the answer to the problem. It has a place, no doubt, provided it is proved that the most efficient methods of production within our resources are already fully utilised and that the only resources, potential or otherwise, left for us is the utilisation of the Ambar Charkha in which case it functions in a supplementary capacity. Since this is not the position, the Ambar Charkha is likely to obstruct rather than pave the path to progress, if by progress we mean higher standard of living. This stark reality, if fully realised, should stop us from toying with ideas likely to take us on a backward march. If the Ambar Charkha could have solved our problems, it would have done so centuries before.

"Again, the relative treatment accorded to cottage industries *vis-a-vis* the factories seems to be based on fallacious grounds. There would be no conflict between the two if they could be supplementary to each other. Cottage industries can only follow the large-scale industries and not *vice versa*. If one plans that the large-scale industry shall follow the cottage industry, then one might as well plan that railways shall progress only through the bullock cart. The fact of the matter is that more bullock carts will be in the streets to feed railways if the latter expand. Paradoxical as it may sound, railways alone can support more bullock carts. In more economically advanced countries cottage industries play a much bigger role than in India because there is such a great task for them for feeding the large-scale units.

Real Difficulties

"The real difficulties that must be faced and solved if the Plan is to be successfully implemented are:

1. Inadequacy of internal resources;
2. Inadequacy of foreign exchange;
3. Inadequacy of technical personnel;
4. Inability of transport systems to keep pace with the development in other fields; and
5. Rigidity of Government machinery.

"*Availability of Internal Resources.*—How is the money to be invested in the public sector to be raised. The means suggested are: additional taxation, loans, small savings and deficit financing. I wonder whether it is fully realised that additional taxation, savings and loans come into play only after production and wealth have increased and cannot precede them. We have to begin with deficit finance. The criterion of its success would be that by raising the purchasing power of the people we create greater demand for goods which stimulates higher production. If higher production of goods is suppressed, then what follows is inflation and failure. In other words, we should rely on much larger production of essential goods to absorb the newly created purchasing power that would come into being through deficit financing. This is one aspect of the question. The other aspect is that, if we begin with additional taxation and compulsory savings, then we fail to create the new purchasing power which is expected to create increased demand for goods. The resultant decrease in consumption would lead to lower production and to decrease of employment and of wealth. These two aspects must be kept in mind.

"From the way in which the Budget is planned, it looks as if it is believed that taxes and savings could precede increased wealth and that savings could take place before earnings materialise. If a house is taxed before it is built, the result would be that no house would be built to pay the tax. To appreciate this sequence is very important. In a car the brake is as useful as the accelerator. But one does not start the car with a brake. The brake is useful only after the car is started. If you tax a person and compel him to save before increasing his earnings you, in reality, restrict his consumption and give a setback to production, which is obviously not the goal in view.

Availability of Foreign Exchange

"Whatever may be the method of estimating our requirements of foreign exchange, I personally feel we shall need anything like Rs. 1,600 to Rs. 2,000 crores.

"Even accepting the figure of Rs. 1,600 crores as correct, it might be difficult to get all this amount. Sterling balances Rs. 350 crores, trade surplus Rs. 300 crores on the basis of Rs. 60 crores per year (this assumption is justified by cessation of food imports) and invisible exports Rs. 150 crores make up Rs. 800 crores, leaving Rs. 800 crores still to be found.

"Of this amount, the Government expects to raise Rs. 400 crores by way of foreign aid; but the total American aid to India from July 1955 to June 1956 is $50 million, i.e., Rs. 25 crores. On this scale, foreign aid will amount only to Rs. 125 crores in five years.

"I fear the seriousness of the paucity of foreign exchange is not fully realised. With proper efforts foreign exchange should be available. And we have to work for it. But the Planning Commission seems to have underestimated its importance and has abruptly ended the chapter after pointing out that there is a gap of Rs. 800 crores. I fear the gap would be much more, but even if we accept the figure of Rs. 800 crores, its direct effect would be on the productive industries and transport leading again to less wealth and less employment.

"*Availability of Technical Personnel.*—The dearth of technical personnel is admitted on all hands. It is one of the main reasons for the country's inability to make spectacular headway. State-owned steel plants alone require 5,000 engineers and 10,000 skilled personnel. This shortage of technical personnel will be a serious handicap in the working of the Plan.

Private Sector

"The private sector today can command a large number of technically qualified experts. In its search for technical talent, it has gone far and wide and has, with great difficulty, built up at least a nucleus of expert administrators. The public sector has nothing like this and has to start the training of its staff right from A B C. But if we talk in terms of austerity for the technicians, then neither the public nor the private sector will have enough technical knowledge at its disposal. We should not restrict the incentives that go to stimulate technical education and knowledge.

"*Availability of Transport.*—Under transport, specially with reference to railways, the allotment in the second Five-year Plan has been cut down very substantially. If the railways do not bear the strain that is proposed to be put on them, the whole edifice of the Plan will collapse.

"*Rigidity in Government Machinery.*—Experience has shown us again and again that Government machinery is dilatory, hide-bound by rules and unaccustomed to take quick decisions. While this machinery is eminently qualified to deal with long-range questions of policy,

SIXTY-THIRD ANNUAL REPORT OF THE BOARD OF DIRECTORS TO THE SHAREHOLDERS

The Directors submit to the Shareholders of the Bank the General Balance Sheet and Statement of Profit and Loss Account for the year ended 31st December, 1955.

The Balance of Profit and Loss Account for the year, after providing for Taxation and after Allocations to Contingency Accounts out of which full provision has been made for Bad and Doubtful Debts and any other diminution in the value of Assets, amounts to £235,423

to which has to be added the balance brought forward from last account .. 200,284

making the amount available .. £435,707

out of which the following appropriations have been made:—

To Interim Dividend of 7 per cent. on the "A", "B" and "C" shares, less Income Tax at 8/6d. in the £, paid on 27th September, 1955	£59,168	
To Second Interim Dividend of 7 per cent. on the "A", "B" and "C" shares, less Income Tax at 8/6d. in the £, payable on 20th March, 1956	£59,167	
To Officers' Pension Fund	13,000	
To Amount written off Freehold Banking Premises and Property	35,000	
To Additional Allocation to Contingencies Account ..	50,000	
		216,335
Balance to be carried forward to next Account		£219,372

The Directors do not recommend any further dividend distribution for the year 1955.

Branches of the Bank were opened on 2nd January, 1956 at 123, Pall Mall, London, S.W.1, and at Connaught Place, New Delhi, India.

The following Directors retire by rotation under Articles 120 and 121 of the Articles of Association but, being eligible, offer themselves for re-election:—
Sir Kenneth W. Mealing.
Sir Cyril E. Jones.
Mr. C. D. Miller.

Messrs. Cooper Brothers & Co. and Messrs. W. A. Browne & Co., the present Auditors, will continue in office pursuant to Section 159 (2) of the Companies Act, 1948.

By Order of the Board,
R. N. DRAKE,
Chief Manager.

LONDON, 13*th March*, 1956.

NOTES.

1. Currency Assets and Liabilities have been converted into Sterling at the following rates:—1s. 6d. per Indian, Pakistan and Ceylon Rupee and Burma Kyat, 2s. 4d. per Straits Dollar, 1s. 2d. per Hong Kong Dollar, 7s. per United States Dollar, 4d. per Baht, Yen 1,000=£1 and Shanghai Yuan 8=£1.

2. Group Accounts are not prepared as the Directors consider they would be of no real value to members in view of the insignificant amounts involved in the accounts of the Subsidiary Companies.

3. Contracts for outstanding capital expenditure £27,631 (1954, £7,034).

4. There are Contingent Liabilities in respect of the following:—
Bills Receivable re-discounted Nil (1954, £1,509,358)
Outstanding Forward Exchange Contracts.
Confirmed Credits and Guarantees entered into in the ordinary course of business, including Guarantees to Government Departments in India amounting to £109,720 (1954, £98,144) for which security has been deposited with the Reserve Bank of India.
Uncalled Capital amounting to £54,963 (1954, £54,963) in respect of partly paid shares in Subsidiary Companies.

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the annexed Balance Sheet and Profit and Loss Account which are in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and on such basis the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1955, and the Profit and Loss Account gives a true and fair view of the profit ascertained in the manner therein indicated for the year ended on that date.

THE MERCANTILE BANK OF INDIA LIMITED

ANOTHER YEAR OF EXPANSION IN BUSINESS COMPLETED

SIR KENNETH W. MEALING REVIEWS ECONOMIC DEVELOPMENTS IN THE EAST

THE Sixty-third Annual Meeting of the Mercantile Bank of India Ltd. will be held in London on 17th April 1956. The Chairman, Sir Kenneth W. Mealing's statement accompanying the Bank's accounts for the year ended 31st December 1955, to be submitted at the meeting, contains, as usual, a survey of the economic developments in the countries of South-East Asia and the Far East, the principal area of the Bank's operations. Alluding to India's progress, Sir Kenneth has expressed the hope that the second Five-year Plan will meet with at least the same measure of success as the first Five-year Plan. He, however, observes that whether or not this can best be accomplished by the Government concentrating its energies on creation of new industries, rather than on acquisition of the old and well-tried ones, is a matter of opinion.

The following is the full text of Sir Kenneth's statement:

"The expansion recorded last year in the Bank's general business continued during 1955. The balance-sheet total is £72,065,153, against £68,594,152 on 31st December 1954. Deposits are higher by nearly £4 million, whilst on the assets side there are increases of over £2 million in loans and advances, nearly £1 million in bills receivable, whilst the holding of Government securities is £4½ million higher.

"There has been a considerable fall in the value of our holding of Government securities, for which full provision has been made. Of those quoted in Great Britain, 77 per cent., are due to mature within the next five years, whilst the remainder mature on fixed dates beyond that period. Similarly with securities quoted on overseas stock exchanges 50 per cent. mature within the next five years.

Profit

"The net profit, at £235,423, is higher by £41,099. The two dividends declared total 14 per cent. payable on the increased capital and cost £118,335, compared with £97,020 for 1954. From the balance the usual allocations have been made to the officers' pension fund, premises account and contingencies reserve account, leaving the balance carried forward at £219,372, against £200,284.

"The year 1955 produced high hopes of a relaxation of international tension following the 'summit' talks at Geneva in the month of July. These hopes, however, were shattered at the ensuing Foreign Ministers' Conference when it became clear that the Soviet bloc had no intention of permitting free elections in East Germany as a preliminary to German reunification, nor of paying more than lip-service to the principle of international disarmament. This reversal of the Geneva atmosphere, coupled with the provocative references made by the two Russian leaders in India and Burma to 'colonialism,' crystallised the opinion that there is little or no prospect of a real relaxation of tension or of ending the 'cold war' until a real disarmament agreement can be brought into effect.

United Kingdom

"In England, the freedom from all economic physical controls, the very full employment and increased internal consumption reflected in a higher standard of living for the majority, set up a rising spiral of wages and costs. As a result, the country was importing and consuming more than it was exporting and this economic unbalance resulted in a weakening of sterling in the world's markets. The initial remedial steps were to raise the Bank rate to 4½ per cent. and to place certain restrictions on hire purchase terms. In October, an autumn Budget increased purchase tax on most consumer goods, whilst further steps were taken to restrict credit. It is to be hoped that these steps and those subsequently taken, including a 5½ per cent. Bank-rate with further restrictions on hire purchase, together with restraint by all sections of the community will remedy the situation without necessitating the reimposition of economic physical controls, such as limitation of imports, price fixation and rationing.

"In the United States of America industrial activity continued under boom conditions. President Eisenhower suffered a severe illness and politically thoughts are turning towards the Presidential Election to be held towards the end of 1956.

India

"1955 was a year of steady and satisfactory progress for India. Agricultural and industrial output continued to rise and the standard of living of the people has also risen. The average monthly earnings of workers is calculated to have risen by nearly 50 per cent. since 1947. Although the first Five-year Plan, which is due to be completed by March 1956, has not in all respects achieved its targets, it has been a success as far as the economic life of the country is concerned and it appears that deficit financing has produced a higher rate of development expenditure without causing inflation.

"By Constitutional amendments, by a drastic revision of the Indian Companies Act and by the Finance Act, 1955, as well as in numerous pronouncements, some of the proposed steps towards a 'socialistic pattern of society' were promulgated during the year. With the third successive good monsoon there was no food problem, notwithstanding the normal increase in population: and this again resulted in a large saving in foreign exchange expenditure on imported food. During the year the Imperial Bank of India was nationalised and became the State Bank of India, thus terminating a long and honourable chapter of banking history. The State Bank has been created largely in order to extend banking facilities widely throughout rural India to an extent which it would be impossible for other than a State Bank to undertake.

"In January 1956, an Ordinance took the first step for the nationalisation of all life assurance business in India, both Indian and foreign. The disappearance of some of the fine old Indian life companies and the prohibition of this field of business to private enterprise in the future will be regretted by many and must inevitably cause some speculation as to how far the nationalisation of existing business and industry is to be carried in India.

Second Five-year Plan

"The second Five-year Plan is now under consideration. It is a massive project and, bearing in mind its great objective of raising the standard of living of the people and providing for the rapidly increasing population, it must be hoped that it will meet with at least the same measure of success as the first Five-year Plan. Whether or not, however, this can best be accomplished by the Government concentrating its energies on creation of the new, rather than acquisition of the old and well-tried, is a matter of opinion.

"In July the first reading was given to a Bill to decimalise the coinage and it is understood that at a later date it is the Government's intention to bring in a metric system of weights and measures.

"A disturbing feature of 1955 has been the numerous strikes of various kinds by the clerical staff of banks in the principal cities of India, owing to the discontent of the banking trade unions with some of the provisions of the Industrial Disputes (Banking Companies) Decision Act of 1955. In Calcutta, especially, they were of such magnitude that the clearings had to be suspended for 22 days and it became almost impossible for banks to fulfil their legal obligations.

"The good relations that have existed in our branches have always been a source of satisfaction to us and we regret that in some of our offices in India these should have been disturbed, we trust only temporarily. Our thanks are due to those who, by carrying on during this very difficult period, helped to enable our Indian branches to carry out at least some of their functions.

Pakistan

"Mr. Gulam Mahomed, the Governor-General of Pakistan, retired through ill-health in the month of September 1955, and General Iskander Mirza (the then Acting Governor-General) became Governor-General in his place. Mr. Mahommed Ali was replaced as Premier by Mr. Chaudri Mahommed Ali, the Finance Member, and the new Government proceeded to enact the One-Unit Bill which has amalgamated all the Provinces and States of West Pakistan into a single Province, from which only the Federal capital, Karachi, has been excluded. Thus, the way is clear for a new Federal Constitution with equality between the two States of East and West Pakistan.

"The framing of the new Constitution is making progress, but problems in regard to the allocation of powers between the Centre and the Provinces and on the question of joint electorates still present some difficulty.

"Pakistan has decided to become a Republic and it is good to learn that it is her intention to remain in association with the Commonwealth.

"The second event of major importance was the devaluation of the Pakistan rupee to its old level of 1s. 6d. One effect was to assist Pakistan's exports, but another was an immediate rise in the internal price of imported goods.

"The country's shortage of foreign exchange remains a problem, although there has been some improvement during the year. As a result, the control of imports has been somewhat relaxed and the internal finances of the country are considered to be reasonably sound and the budgetary position satisfactory.

"Pakistan's industrialisation programme has made great strides. In the textile industry the number of spindles increased from 923,875 in June 1954 to 1,565,552 in June 1955, whilst the number of looms increased from 14,484 to 22,633 in the same period. The country is now self-sufficient in coarse and medium varieties of textiles. In the jute mill industry the target for 1957 of 6,250 looms is expected to be achieved shortly. Two new cement factories, a sugar mill and mills for the manufacture of paper and paperboards are in or nearing the production stage.

"The completion of the 330-mile pipeline from the gas field at Sui to Karachi *via* Hyderabad, Sind, and the gradual replacement of imported coal and oil by gas and gas-generated electricity opens a new era in West Pakistan's industrial economy.

Ceylon

"With a record tea output for 1955 of 380 million pounds the industry generally has not done badly, but has understandably been hampered, in that overseas buyers especially have been handicapped by the frequent administrative changes in the export duty.

"The rubber industry has had a reasonably successful year, but the generally higher external prices for the commodity have resulted in the China-Ceylon Trade Agreement not being so beneficial to Ceylon as in 1954.

"Coconut oil and the copra industries have also had a reasonably successful year, whilst the cost of food imports fell substantially. It is, therefore, not surprising that the Ceylon Government had a net cash operating surplus of Rs. 128.7 million, which compared favourably with the figure of Rs. 33.7 million at the close of the previous financial year and is one of the biggest surpluses ever recorded in Ceylon.

"The united National Party under the leadership of Sir John Kotelawala, the Prime Minister, remained firmly established in office throughout the year. Parliament has now been dissolved and new elections will take place in April 1956.

Burma

"There has been some improvement in the internal security situation of Burma during 1955. The insurrection still continues, but successful operations by the army and security forces have reduced its effectiveness to hit-and-run raids carried out by gangs of bandits support-

ed by the Communist Party. Nevertheless, the Government is optimistic of achieving internal peace before the General Elections which are due to be held in April 1956. At these elections the Anti-Fascist People's Freedom League, the party which controls the present Government, expects to be re-elected with a large majority. Their political creed is the socialist State and the complete nationalisation of Burmese trade, and in furtherance of this policy the Civil Supplies Management Board, which has hitherto imported 12½ per cent. of the country's consumer requirements, will in future import 50 per cent. The department will have the sole monopoly for the import of most forms of textiles, cement and a number of other necessities. All this and much other business has to be channelled through the Government-owned State Bank. Nevertheless, there is much goodwill towards the British and there may well be mutual advantage in a new growth of industrial and trading relations with Burma.

"During the year the Government realised that the country was running into financial difficulties. These were caused by heavy overseas capital expenditure, combined with a sharp fall in foreign exchange earnings from the export of rice. In 1954, Burma sold rice forward in quantity with a 'fall clause,' whereby should they make subsequent sales at lower prices, then these contracts would also have to be fulfilled at such lower prices. In order to dispose of the large surplus of rice on hand without the 'fall clause' operating, Burma has entered into 'Barter' agreements with the Communist bloc of countries. Barter agreements are, of course, never satisfactory, and there is little doubt that Burma will return to normal trading practice as soon as possible, particularly if the Western Powers are prepared to assist.

Malaya

"1955 has been an eventful year for the Federation of Malaya and for Singapore. Economically, it has been a prosperous year, prices for rubber, tin and other commodities produced in these territories having maintained reasonable and, indeed, profitable prices. The export figures for 1954 (including re-exports) proved to be considerably lower than had been estimated and, in fact, only reached the figure of $2,985 million. The export figure to the end of November 1955, however, amounted to $3,698 million, so that the year 1955 should show a balance of somewhere in the neighbourhood of $230 million in favour of Malaya compared with a deficit of $154 million in 1954.

"The main events of the year, both in Malaya and in Singapore, were the General Elections followed by the setting up of the new Governments with, in the case of Malaya, Tengku Abdul Rahman as the Chief Minister, and in Singapore, with Mr. David Marshall as Chief Minister. In Malaya, the transition to a measure of self-government was achieved remarkably peacefully, but in Singapore there were disturbances and setbacks and a considerable amount of striking by labour.

"In Malaya, although there may have been some measure of improvement in the Emergency, unfortunately there are few signs of this coming to an end. Towards the end of the year talks were held between the Chief Ministers and the leader of the Malayan Communist Party, but these talks were fruitless and the *status quo* of the Emergency continues. In Singapore, political uncertainties and the attitude of labour brought about a good deal of nervousness and there was a general and substantial marking down of share prices. In due course confidence began to return and prices again improved, and this was assisted by an assurance by the High Commissioner on behalf of the Government in Malaya that a square deal would be given to foreign investors by permitting them to continue to remit reasonable profits abroad. It is quite certain that, unless an assurance of this nature regarding both capital and profits is implemented fully in the future, there will be little inducement to ensure the flow of overseas capital required for Malayan development in the future.

"The inauguration of a new self-governing democracy is always liable to be attended with some risk, dependent upon the wisdom of the newly elected Government and the co-operation they receive from their electors and their experienced predecessors, and the manner in which they receive this co-operation. In the context of the multi-racial Federation and Singapore these problems are enhanced by the Emergency and Communist infiltration, and the extension and receipt of friendly co-operation in the building up of stable and sound Government is, therefore, the more necessary.

Thailand

"Overseas trade improved considerably during the year 1955. As I told you a year ago, the rice export trade was given back to commercial enterprise and, as a result, total shipments of rice amounted to 1,223,937 metric tons compared with 993,719 in 1954. The largest individual purchaser was Japan who took just under 350,000 tons. Singapore and Malaya between them took 400,000 tons, Hongkong 170,000 tons and the Philippines 66,000 tons. In September, the Government announced that imports and exports were in balance and removed the requirement that part of the proceeds of rice, rubber and tin exports should be sold to the Bank of Thailand at the official rate. The various steps taken to free trade were bold in conception, but have been proved successful. On the other hand, the teak industry of Thailand appears to be in decline and there seems little doubt that the quantity of teak available for export will decrease considerably in the next few years.

"During the year several important events occurred in Thailand. The first conference of the South-East Asia Collective Defence Treaty commenced in February in Bangkok. In September, an even bigger international conference took place in Bangkok when delegates from over 35 countries met at the tenth World Assembly of the World Federation of United Nations Associations. During May and June, the Prime Minister, Field-Marshal Pibulsonggram, made a world tour. On his return he inaugurated a number of reforms and made changes in his Cabinet. It is believed that General Elections will be held in two years' time; so political activity may be expected to commence during that period.

Hongkong

"The total value of imports and exports in 1955 amounted to $6,253 million, against $5,852 million for the previous year. Imports, at $3,719 million, were up by $284 million, whilst the value of exports, at $2,534 million, recorded an increase of $117 million. There was a substantial increase in the value of imports from China, but this was rather offset by a very large decrease in the value of exports to that country.

"Hongkong continues to make great strides in industrial expansion and the establishment of new industries; no less than $663½ million of Hongkong-made goods were exported in the first eleven months of 1955, the principal buyer being the United Kingdom which absorbed $125 million. This helped to replace the heavy decline in exports to Burma, Indonesia and Pakistan. The airport is being reconstructed and a tunnel between the Island and Kowloon is under consideration. The squatter problem of refugees from China continues to be a major headache for Hongkong.

"Hongkong continues to be an oasis of good government and law and order, unencumbered with political problems and able to concentrate on industrial growth and commercial activity of high quality and resultant prosperity.

Mauritius

"The cane sugar industry had another profitable year in 1955. The crop proved to be an all-time record with a total of 523,200 metric tons produced at the high average extraction rate of 12.61 per cent. In November, the British Ministry of Food agreed to purchase 351,000 long tons of the 1956 crop on the same terms as for 1955. Under the terms of the international agreement the export quota from Mauritius is fixed at 470,000 long tons and the balance of 119,000 tons in excess will, therefore, be offered for sale in the preferential markets of the United Kingdom and Canada. The outlook, therefore, for the sugar industry in Mauritius in 1956, given reasonable weather, should be very satisfactory. The cyclone and drought insurance fund has now risen to a total of approximately Rs. 87½ million.

"The population of the island is increasing rapidly. It is estimated that the natural increase of the population is in the neighbourhood of 31 per thousand per annum and this must represent very nearly the highest birthrate in the world. This is largely due to the much improved health conditions prevailing in the island and it may be noted that something like 24 per cent. of the Governmental expenditure goes on education and health services. The finances of the Colony are in sound condition and the year to the end of June 1955 provided a surplus of some Rs. 6 million of revenue over expenditure. On the revenue side 34.6 per cent is budgeted for from direct taxation with a further 24 per cent. from Customs duties. The Government of Mauritius found it expedient to float a loan in October on the London market for £2,090,000 at 97 and carrying interest at 4¾ per cent.

Japan

"A general election took place on 27th February 1955, as a result of which the Democrats and Liberals (who subsequently merged) secured between them 297 seats and the Socialists and others 170 out of a total House of 467. Mr. Ichiri Hatoyama continued as Premier with a substantial majority: but not quite sufficient to make the revisions in the Constitution he desires, for which a majority exceeding two-thirds is required. Thus, for the first time, Japan has a two-party Parliamentary democracy.

"The anti-inflationary policy has continued and the balance of overseas trade further improved: exports rising substantially (some 24 per cent. over 1954), whilst imports remained approximately unchanged, the balance is expected to yield a surplus of some 360 million U.S. dollars. Japan enjoyed record food crops which resulted in lower prices and a reduction in food imports, which saved much foreign exchange. The anti-inflationary policy is expected to continue and, although the standard of living is rising, many difficulties still lie ahead of Japan. The population continues to increase by nearly one million a year, labour unions are becoming more active in demanding higher pay and better working conditions and the uncontrolled hire purchase system is increasing facilities for buying on credit which may some day have serious repercussions.

"Japan's economy continues to be based on trade with the free countries and on American offshore procurement, but as the countries of South-East Asia increased their own industrial potential, trading conditions may become more difficult for Japan. Trade with the Chinese mainland, her natural market, continues to hold political dangers which Japan cannot safely ignore.

"Japan became a member of G.A.T.T. during the year, but unfortunately her admittance to the United Nations was vetoed by the Communist bloc. This was a considerable disappointment to Japan and is a matter which all well-wishers must hope will be rectified at an early date.

"During the year arrangements were made to open branches of the Bank in New Delhi and in the West End of London and these two branches commenced operations on 2nd January 1956.

"Our branches and offices throughout South-East Asia and the Far East continued to give good service in every department of banking and, particularly, in our main function in financing overseas trade, and our thanks are due to Mr. Drake, our Chief Manager, Mr. Hawkins, our Deputy Chief Manager, and to the Managers and staff in London and at our branches for their hard and successful work during the past year."

INDIA'S FOREIGN TRADE IN 1955

ADVERSE TRADE BALANCE SHRINKS

WITH the release of the full data relating to the sea- and air-borne trade of India for December 1955, a complete picture of the country's foreign trade during 1955 is now available. A comparative study of the figures reveals two notable features. There has been an improvement in the total foreign trade, with both imports and exports having run at a higher level than in 1954. The visible trade deficit has been very much smaller than in the preceding year, the decline in adverse trade balance being as much as 31 per cent. These features reflect the results of efforts that were being made to promote exports and to regulate imports in order to meet the needs of a growing economy.

The table below gives imports into, and exports from, India during 1955, as compared with those during the previous two years:

TABLE I.

Sea- and Air-borne Trade of India

(Value: In crores of rupees)

	1955	1954	1953
Exports	588.57	556.80	524.42
Imports	617.63	595.16	545.02
Balance (—Deficit)	—29.06	—38.36	—20.60
Total trade	1,206.20	1,151.96	1069.44

It will be seen from the table that the value of the total trade had gone up from Rs. 1,151.96 crores in 1954 to Rs. 1,206.20 crores, an increase of 4.8 per cent. The increase was due to a rise in the value of both exports and imports. During the year under review, the total value of exports aggregated Rs. 588.57 crores, as against Rs. 556.80 crores in 1954, or an improvement of Rs. 31.77 crores over the year. Imports rose by Rs. 22.47 crores, that is, from Rs. 595.16 crores to Rs. 617.63 crores. The net result was a shrinkage in the country's adverse balance of trade from Rs. 38.36 crores in 1954 to Rs. 29.06 crores in 1955.

The general price index of exports which stood at 104 in November 1954 (Base 1952-53=100) declined by 13 points to 91 in November 1955, and that of imports by 5 points from 91 to 86. The net result was a decline in the index number of the terms of trade (that is, the ratio of export price index to import price index) declined from 114 in November 1954 to 105 in November last year. The terms of trade were thus unfavourable to the extent of 9 points.

Table II below shows the composition of trade commoditywise divided into four different groups, namely, (*a*) food, drink and tobacco, (*b*) raw materials and produce, (*c*) articles wholly or partly manufactured, and (*d*) animals, postal articles, etc.

TABLE II.

Groupwise Distribution

(Value: In crores of rupees)

	Imports		Exports	
	1955	1954	1955	1954
I. Food, drink and tobacco ..	75.30	104.00	166.25	185.84
II. Raw materials and produce.	157.56	190.15	163.24	106.22
III. Articles wholly manufactured	382.07	297.61	254.61	259.72
IV. Animals and postal articles, etc.	2.70	3.40	4.47	5.02
Total ..	617.63	595.16	588.57	556.80

The table reveals certain broad changes in the pattern of both import and export trade. Changes on the import front reflect the import policy of the Government. The main object of this policy is to promote industrial development within the country. Accordingly, imports of capital goods and raw materials needed by Indian industries are given prominence. Again, with a view to protecting domestic industries and conserving foreign exchange, imports of manufactured consumer goods are kept under strict control. The increase in domestic production of sugar and food has reduced the necessity for imports of these from abroad.

Thus, there has been a marked decline in the value of imports in the food group from Rs. 104 crores in 1954 to Rs. 75.30 crores in 1955. Similarly, there has been a fall in the value of imports under the raw material group. This fall is accounted for mainly by a decline in imports of mineral oils. There was also a minor decline in the value of cotton imported into the country. Imports of articles wholly manufactured, on the contrary, have shot up from Rs. 297.61 crores in 1954 to Rs. 382.07 crores. A substantial part of this rise is due to higher imports of machinery of all kinds, metal manufactures and vehicles other than locomotives.

On the export front, too, there has been a fall in value under the food group. This fall is shared by tea, spices and tobacco. On the contrary, there has been a sharp rise in the exports of raw materials from Rs. 106.22 crores to Rs. 163.24 crores. This improvement is due to an increase in the value of exports of vegetable and mineral oils, raw cotton, and gums and resins. Exports of wholly manufactured goods showed a slight decline from Rs. 259.72 crores to Rs. 254.61 crores. While exports of jute goods were better, those of cotton textiles suffered a fall, thanks to keen competition in world markets.

Table III gives the trend of imports commoditywise during the last three years in greater detail:

TABLE III.

Trend of Imports

(Value: In crores of rupees)

	1953	1954	1955
Foodgrains	84.5	48.83	35.54
Mineral oils	86.0	94.04	63.43
Raw cotton	50.0	57.53	53.51
Machinery	87.0	84.33	108.19
Chemicals and drugs	24.4	30.75	34.22
Iron and steel	23.0	26.61	50.42
Vehicles excluding locomotives ..	23.2	34.43	50.97
Dyes and colours	15.8	19.40	18.24
Electrical goods	15.0	11.02	14.02
Cutlery, etc.	14.8	16.17	22.87
Non-ferrous metals	16.7	24.07	25.76
Paper	12.6	13.60	15.23
Cotton manufactures	3.3	3.20	3.43
Sugar	3.3	30.55	10.08

Among the various items of imports, marked declines are noticed in foodgrains, mineral oils and sugar. The value of foodgrains fell from Rs. 48.83 crores to Rs. 35.54 crores, reflecting the improvement in the cultivation of food crops in the country. Mineral oils imported into India last year dropped from Rs. 94.04 crores in 1954 to Rs. 63.43 crores. Sugar imports too fell by Rs. 30.55 crores to Rs. 10.08 crores, mainly due to expansion in the output of sugar by domestic sugar mills during the year. Raw cotton imports were only a shade lower at Rs. 53.51 crores, as compared with Rs. 57.53 crores. This decline must have been due mainly to the recession in prices of foreign cotton. Imports of most others, however, rose considerably. Machinery jumped up from Rs. 84.33 crores to Rs. 108.19 crores. The notable items among these were agricultural tractors, boilers, earthmoving machinery, machine tools, textile, sugar and paper making machinery and printing presses. Another item, the imports of which rose by nearly 100 per cent., was iron and steel materials, their imported value going up from Rs. 26.61 crores to Rs. 50.42 crores. Reflecting the shortage of road transport vehicles was the rise in imported vehicles from Rs. 34.43 crores to Rs. 50.97 crores, mainly cycles, motor cars, chassis. Electrical goods purchased also rose from Rs. 11.02 crores to Rs. 14.02 crores and cutlery, etc., from Rs. 16.17 crores to Rs. 22.87 crores. Paper and paper board imported from abroad continued to rise and amounted to Rs. 15.23 crores in 1955, as compared with Rs. 13.60 crores in 1954 and Rs. 12.60 crores in 1953, indicating evidently the growing demand for this article of necessity.

The expansion in overall imports was due to several changes in the import policy. The Government continued its policy of liberalisation of import controls by permitting more and more

STATE BANK OF INDIA

Successors to the Imperial Bank

Bank with the State Bank

OUR country is planning for prosperity. This cannot be achieved unless the interests of the small depositor, the small trader and the small producer alike in towns and in the countryside receive the same consideration that is bestowed on the more affluent constituents and the larger industrial units.

You are not perhaps aware that the clientele served by the State Bank of India consist predominantly of persons of modest means and modest requirements. It is on the broad and secure foundation of their patronage that the Bank's structure has been built and will continue to rest.

The State Bank's services are many-sided and it would interest you to know that your varied plans and activities—no matter how small they be — can be made to run more smoothly with the help the Bank can offer.

Why not talk things over with your nearest bank agent, or write for information?

The State Bank's local head office at Bombay, one of more than four hundred offices waiting to serve you throughout India

STATE BANK OF INDIA

Largest of the Indian Joint Stock Banks

newcomers, by larger quotas, by extension of licensing to new items and enhancement of the value of licences. As already stated, the import policy was guided by the need for securing a larger supply of industrial raw materials required by the indigenous industries. In several cases quantitative restrictions on imports were adhered to only when the need for protection to the infant industries became urgent.

Table IV below shows the trend of exports of various commodities during the three years ended 1955:

TABLE IV

Trend of Exports

(Value: In crores of rupees)

	1953	1954	1955
Jute manufactures	110.5	121.7	126.29
Tea	102.6	130.21	111.38
Cotton manufactures ..	63.4	71.89	62.94
Manganese	36.5	15.20	9.76

Non-metallic ores	9.3	8.67	10.43
Lac	7.5	9.23	12.59
Wool	6.5	8.17	8.10
Hides and skins (raw)	5.9	6.8	6.6

A notable feature revealed by the above table is the setback in tea exports which in 1954 ranked first among India's earners of foreign exchange. The value of tea exported declined rather sharply from Rs. 130.2 crores to Rs. 111.38 crores, the fall being due to a decline in both the volume and value of this commodity. Exports of jute textiles, on the contrary, rose to top the list once again, their value being Rs. 126.29 crores as against Rs. 121.7 crores in 1954 and Rs. 110.5 crores in 1953. The abolition of export duty on jute goods following the devaluation of the Pak rupee on 31st July 1955 helped considerably to step up exports of jute goods. Thanks to competition from the U.K. and Japan, exports of cotton manufactures could not fare well in 1955 and amounted in value to Rs. 62.94 crores as compared with Rs. 71.89 crores. Exports of manganese ore and hides and skins also receded, the former from Rs. 15.20 crores to Rs. 9.76 crores and the latter from Rs. 22.3 crores to Rs. 20.68 crores. Owing to liberalised export quotas in terms of both quantity and quality and to the drastic cut in duties on *deshi* cotton, raw cotton exports doubled from Rs. 18.48 crores to Rs. 36.61 crores. Even more spectacular was the rise in the exports of vegetable oils from Rs. 11.04 crores to Rs. 40.85 crores. The performance of non-metallic ores (mainly mica) and of lac was decidedly better at Rs. 10.43 crores and Rs. 12.59 crores, respectively, as compared with Rs. 8.67 crores and Rs. 9.23 crores in 1953. Exports of wool, as also hides and raw skins, were maintained at Rs. 8.10 crores and Rs. 6.6 crores, respectively.

The improvement in exports was due to liberalisation of export restrictions, grant of bigger export quotas in respect of oilseeds, cotton, rice, grain, etc., reduction or abolition of export duties on several items of export, establishment of export promotion councils, relatively lower price levels in India as compared with countries abroad, despatch of trade missions abroad and the conclusion of trade pacts with a number of countries, including those in Eastern Europe. The increase in agricultural and agricultural production also helped expansion of exports.

Table V gives the trend of imports from various countries during each of the three years ended 1955:

TABLE V

Main Exporters to India

(Value: In crores of rupees)

	1953	1954	1955
U.K.	140.6	143.8	158.57
U.S.	89.5	73.2	88.71
West Germany	28.8	34.5	53.56
Australia	26.6	14.2	18.57
Egypt	21.7	25.0	18.48
Italy	21.0	20.8	16.23
Canada	18.9	15.13	6.02
Burma	18.2	44.1	22.69
Bahrein Islands	17.6	21.2	11.03
Kenya	16.1	17.3	20.99
Singapore	14.6	16.7	13.94
Saudi Arabia	13.4	17.5	9.74
Japan	10.5	16.5	29.67
The Netherlands	10.9	13.4	13.55
Switzerland	8.1	10.2	10.95
Sweden	8.3	6.95	6.95
Belgium	7.2	7.2	8.74

The U.K. continues to be the chief supplier of goods to India, shipments from that country accounting for Rs. 158.57 crores or nearly a quarter of the total imports. The U.S. share of Indian imports amounted to Rs. 88.71 crores, as against Rs. 73.20 crores in 1954. India's purchases from West Germany rose from Rs. 34.50 crores to Rs. 53.56 crores. Imports from Australia improved from Rs. 14.20 crores to Rs. 18.57 crores. The offtake by India of goods from Egypt, Italy, Canada, Burma, Bahrein Islands, Saudi Arabia dropped considerably during the year. Imports from Japan rose, on the other hand, sharply from Rs. 16.5 crores to Rs. 29.67 crores.

Table VI contains the list of countries which were among India's best customers during the three years ended 1955:

TABLE VI

Main Countries Importing from India

(Value: In crores of rupees)

	1953	1954	1955
U.K.	147.5	176.7	161.60
U.S.A.	95.0	85.3	88.19
Japan	25.9	16.5	25.49
Argentina	20.9	13.7	11.62
Burma	20.3	16.5	18.04
Ceylon	17.6	16.8	17.90
Australia	16.0	22.7	25.98
Canada	13.9	15.0	15.55
West Germany	10.3	14.6	16.02
Singapore	9.3	7.0	7.60
Aden	8.7	7.3	6.87
Nigeria	8.0	8.6	8.31
The Netherlands	6.8	9.9	16.65
Italy	5.4	5.9	6.88
France	5.3	5.2	5.97
Belgium	5.5	4.4	9.40

Here too, the U.K. continued to hold the first rank, its offtake having recorded a high of Rs. 161.60 crores during the year, as against Rs. 176.7 crores in 1954 and Rs. 147.5 crores in 1953. The U.S. held its second place with an offtake of Rs. 88.19 crores, as against Rs. 85.3 crores in 1954. West Germany, too, had become a prominent customer, its purchases of Indian merchandise showing a steady rise year by year. Thus, its share in India's exports rose from Rs. 10.3 crores in 1953 to Rs. 14.6 crores in 1954 and then to Rs. 15.02 crores. Japan's imports from India also had risen similarly from Rs. 16.3 crores to Rs. 25.49 crores over the year. Argentina's offtake was Rs. 11.62 crores, as against Rs. 13.7 crores. There was also an increase in the offtake by a number of countries, the more notable among them being Italy, Canada, Burma, Australia, the Netherlands and Belgium.

RISE IN POWER GENERATION

The *per capita* generation of electricity in India registered an increase of more than 100 per cent. between 1938 and 1953, according to the handbook *Planning for Power Development in India*. The average monthly generation of 283 million kilowatt hours (kw.h.) of power in 1938 rose to 536 million kw.h. in January 1953. During the same period, the *per capita* generation in the United States and the United Kingdom increased by 150 per cent. The booklet indicates that, according to recent surveys completed by the Central Water and Power Commission, India has an approximate hydro-electric power potential of 10.5 million kw. at 60 per cent. load factor.

The third edition of the handbook, brought out by the Central Water and Power Commission, Ministry of Irrigation and Power, presents information relating to the electricity supply industry in India as in 1953-54. It deals with the power resources of the country, organisation for power development, historical review of power development, progress of power schemes in the various States under the first Five-year Plan, concept of the integrated power systems, manufacture of heavy electrical plant and equipment and utilisation of electric power. Besides regional power maps, the handbook includes two maps giving details of the power potential of rivers in South India. The appendices give the technical particulars of existing major power stations and the transmission system in the country. The publication contains exhaustive and authoritative information, which would be of general interest to the public as well as of value to the electricity supply industry. The booklet emphasises the need to utilise low grade coal, the reserves of which are estimated at 39,650 million tons, in thermal power stations.

"TIN AND ITS USES"

The latest issue of *Tin and Its Uses*, published by the Tin Research Institute, contains three items dealing with pewter. The first describes how pewter foil can be the basis of a handicraft, the second discusses methods of producing pewter wares that can be hardened by heat-treatment, and the third is a note referring to the continuing use of pewter plates by German restaurants. Tin-rich solders are playing an important part in the development of 'printed' circuits for electronic work. Among their advantages are low melting point, good strength and excellent penetration. Fusible alloys containing tin can be great time-savers in the making of moulds for injection mouldings. By using cooling coils embedded in the fusible alloy moulds, they can be adapted for use with some of the higher melting point plastics. An investigation into an interesting case of lack of adhesion between an electroplated coating and a tin-base die-casting showed that the trouble was due to the loss by diffusion of a plated flash of copper.

SHIVRAJPUR REPORTS SATISFACTORY MINING OPERATIONS

BHARAT COLLIERIES MAINTAIN DIVIDEND

Shivrajpur Syndicate Ltd.

THE directors of the above Company (Managing Agents: Messrs. Killick Industries Ltd., Bombay) submit the audited accounts of the Company for the year ended 30th November 1955.

Output.—The mining operations in all sections of the mines continued satisfactorily throughout the year. The total production amounted to 91,427 tons compared with 96,405 tons during the previous year. The small drop in production is accounted for by the fact that the opencast working in Bamankua, as mentioned by the Chairman last year, was gradually approaching the end of its useful life.

Shipments.—As anticipated, consequent on the abolition of the export duty in August 1954, the demand for manganese ore improved. Shipments, mainly to the U.S.A., totalled 81,775 tons as against 74,477 tons during the previous year.

Sales.—The effect of the slump in the Indian manganese ore trade during 1954 was not felt by the Syndicate due to the policy of forward selling of ore. The Syndicate was able to conclude forward sales during 1955 at favourable prices for delivery extending into the financial year 1956-57, thus bringing the total outstanding commitments to 2,31,898 (132,823) tons at the close of the year under report.

Development and mining operations.—Stopping operations continued satisfactorily on the 200 ft. level in Shaft No. 2 at Shivrajpur and the tonnage yield amounted to 26,835 tons as compared to 17,958 tons during 1953-54. At Bamankua mines, preliminary operations have already been undertaken to sink a shaft. Development at Pani mines proceeded according to plan. The first level crosscut at shaft No. 2 reached the ore body and the drive in ore is now proceeding on the reef.

Power plant.—The additional power plant of 300 h.p. referred to in last year's report has since been erected at Shivrajpur and the installation of the new power plant at Pani will soon be nearing completion.

Building Programme.—The construction of several semi-permanent labour quarters, a bachelors' colony at Bapotia, a creche at Bamankua and extension to various buildings was completed during the year and plans for a fully equipped hospital for women and children have already been finalised.

Increase of Authorised Capital.—An ordinary resolution was passed at the extraordinary general meeting of the Company, held on 24th November 1955 to the effect that the authorised capital of the Company be increased from Rs. 7,50,000 divided into 75,000 shares of Rs. 10 each, to Rs. 25,00,000 by the creation of 1,75,000 new shares of Rs. 10 each. An application has been made to the Controller of Capital Issues in connection with the issue of bonus shares.

Income-tax assessments on the profits for the years ended 30th November 1952, 1953 and 1954 are pending with the authorities but it is expected that they will be finalised in the very near future. The trading profits for the year amounted to Rs. 35,49,059 (Rs. 34,37,532) after deducting depreciation of Rs. 3,60,493 (Rs. 3,10,464). To this has been added Rs. 269 (*nil*) being profit on sale of assets and Rs. 13,381 (Rs. 32,364) being the balance brought forward from last year's accounts. After providing Rs. 12,25,000 (Rs. 10,75,000) for income-tax and super-tax, writing off Rs. 558 (*nil*) being expenses incurred in respect of the increase of authorised share capital, setting aside Rs. 27,867 (Rs. 1,665) to workmen's compensation reserve, Rs. 6,10,511 (Rs. 7,69,890) to staff welfare reserve, Rs. 3,50,000 (Rs. 4,00,000) to mine development and prospecting reserve, Rs. 5,00,000 (Rs. 5,00,000) to general reserve, Rs. 1,50,000 (*nil*) to equalisation of dividends reserve, and Rs. 1,17,112 (Rs. 1,46,822) to retiring gratuities reserve, the balance available for distribution is Rs. 5,81,661 (Rs. 5,73,381) which it is proposed to appropriate as follows:—

To payment of a dividend for the year ended 30th November 1955, at the rate of Rs. 5 (Rs. 5) per share, free of income-tax Rs. 3,50,000 (Rs. 3,50,000) and to payment of a bonus to shareholders for the year ended 30th November 1955, at the rate of Rs. 3 (Rs. 3) per share, free of income-tax Rs. 2,10,000 (Rs. 2,10,000), leaving a balance to be carried forward of Rs. 21,661 (Rs. 13,381).

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	7,00,000	Block ...	23,37,172
Reserves ...	57,30,000	Work-in-progress ...	4,07,883
Provision for taxation ...	11,69,055	Stock-in-trade ...	37,91,068
Liabilities ...	33,00,886	Stores and spares ...	12,20,523
Profit and loss account ...	21,661	Other assets ...	18,525
		Debts, deposits and advances ...	13,19,351
		Investments ...	9,99,111
		Fixed and call deposits ...	7,00,000
		Cash ...	1,27,969
	Rs. 1,09,21,602		Rs. 1,09,21,602

Bharat Collieries Ltd.

The directors of the above Company (Managing Agents: Messrs. Sahu Jain Ltd., Dalmianagar, Bihar) submitted the audited accounts of the Company for the year ended 30th June 1955.

The year's working shows a surplus of Rs. 6,65,145 (Rs. 12,59,767). After transfer from capital reserve and provision for depreciation and debts unrealised, there remains a net balance of Rs. 6,78,789 (Rs. 7,04,051). To this is added Rs. 13,644 (Rs. 6,280) brought forward from the last year, making a total of Rs. 6,92,433 (Rs. 7,10,331). This sum the directors recommend to be appropriated as follows:—

Payment of dividend (without deduction of income-tax) for the year ended 30th June 1955, on 30,000 cumulative preference shares at 5½ (5½) per cent. Rs. 1,65,000 (Rs. 1,21,688) and on 4,00,000 ordinary shares at 6¼ (6¼) per cent., i.e., As. 10 (As. 10) per share Rs. 2,50,000 (Rs. 2,50,000), transfer to contingency reserve Rs. 2,30,000 (*nil*). The directors recommend, that balance of Rs. 27,433 (Rs. 13,644 after setting aside Rs. 3,25,000 for taxation) be carried forward.

The directors regret to observe that the Company has had to suffer considerable losses in respect of shipments of coal to South Korea contracted for in early 1954. Deductions have been made by the purchasers from the Company's bills relating to the two years ended June, 1954 and 1955 on the basis of arbitrary and unsystematic samples drawn by them. Due steps have been taken in the matter, but in the meantime credit has been taken only for the amount realised. Raisings and despatches of coal from your collieries have been as under:—

	1953-54	1954-55
Raisings (tons)	5,47,725	5,60,579
Despatches (tons)	5,34,424	5,73,680

Despatches during the year have been the highest on record. Raisings at Ekra Khas colliery could have been higher but for pegging restrictions imposed by the Coal Board on metallurgical coal. The working of the collieries continues to be satisfactory.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	69,99,998	Block ...	68,01,474
Debentures	30,00,000	Stock-in-trade	8,02,584
Reserves ...	5,50,000	Stores and provision stores, etc.	11,78,781
Provision for taxation ...	14,73,235	Debts, deposits and advances ..	45,78,354
Liabilities ...	20,01,761	Investments	6,13,692
Profit and loss account ...	6,92,432	Cash ...	7,42,541
	Rs. 1,47,17,426		Rs. 1,47,17,426

Rampooria Cotton Mills Ltd.

The directors of the above Company (Managing Agents: Messrs. Hazareemull Heeralall, Calcutta) submitted the audited accounts of the Company for the year ended 30th June 1955.

During the year under review, the Company has earned a gross profit of Rs. 19,96,313 (Rs. 14,60,537) and after making provision for depreciation, interest on loan and commission to the managing agents, etc., the net profit amounts to Rs. 5,28,937 (Rs. 1,33,000) which together with Rs. 26,932 (Rs. 15,666) brought forward from previous year amounts to Rs. 5,55,869 (Rs. 1,48,666) which the directors propose to distribute as follows:—

To taxation reserve Rs. 20,000 (*nil*), to tax-free dividend at 10 (6¼) per cent. on ordinary shares Rs. 1,94,775 (Rs. 1,21,734), to tax-free dividend on deferred shares Rs. 1,70,000 (*nil*) and to general reserve Rs. 1,70,000 (*nil*) leaving a balance to be carried forward of Rs. 1,094 (Rs. 26,932). Considering the fact that the net profit accrued as Rs. 5,28,937 against previous year's net profit of Rs. 1,33,000 there has been a marked progress in the working of the Company, and its management is very commendable. The directors expect far better results on implementation of the further machineries added to the mills.

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	24,47,750	Block ...	22,57,946
Reserves ...	5,75,000	Stock-in-hand	38,19,595
Provision for taxation ...	12,63,738	Debts, deposits and advances ...	17,59,066
Liabilities ..	31,96,429	Investments	10,000
Profit and loss account ...	5,55,869	Cash ...	1,92,179
	Rs. 80,38,786		Rs. 80,38,786

Dawn Mills Co., Ltd.

The directors of the above Company (Agents: Messrs. Ramnarain Sons Ltd., Bombay) submitted the audited accounts of the Company for the year ended 31st December 1955.

The result of the year's working shows a profit of Rs. 14,69,959 (Rs. 6,00,555) subject to provision for depreciation and taxation. To this has to be added a sum of Rs. 47,117 (Rs. 38,562) brought forward from last year's account, making a total of Rs. 15,17,076 (Rs. 6,39,117) which the directors disposed of as under:—

Paid dividend at the rate of Rs. 15 (Rs. 6) per share free of income-tax, for the year Rs. 4,80,000 (Rs. 1,92,000), transferred to reserve for taxation Rs. 6,00,000 (*nil*), set apart to depreciation on buildings Rs. 20,000 (Rs. 50,000) and on machinery Rs. 2,00,000 (Rs. 1,50,000) and carried forward to next year's account Rs. 2,17,076 (Rs. 47,117).

Accounts in brief were as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	16,00,000	Block ...	69,10,861
Reserves ...	24,36,896	Stock-in-trade	25,29,635
Depreciation account ...	52,46,041	Stores and spare gear	3,43,707
Provision for taxation ...	7,07,630	Debts and advances ...	19,17,924
Liabilities ...	19,41,768	Investments	90,000
Profit and loss account ...	15,17,076	Cash ...	16,57,284
	Rs. 1,34,49,411		Rs. 1,34,49,411

Bengal Assam Steamship Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st October 1955.

After providing Rs. 2,62,772 (Rs. 2,87,062) for depreciation and Rs. 8,90,000 (Rs. 3,55,000) for taxation, and after transferring Rs. 75,000 (*nil*) from reserve fund and Rs. 1,39,300 (*nil*) to capital reserve, there is a balance of Rs. 2,26,826 (Rs. 2,70,699) at the credit of the profit and loss account. The directors recommend the payment of a dividend on the preference shares at the rate of 7 per cent. per annum Rs. 21,000 (Rs. 21,000) and a dividend on the ordinary shares of Rs. 7-8 (Rs. 7-8) per share Rs. 1,50,000 (Rs. 1,50,000), leaving to be carried forward Rs. 55,826 (Rs. 99,699).

Freight earnings improved during the year, and the Company's vessels carried more jute and coal than in the previous year. There was a satisfactory profit of Rs. 8,80,449 resulting from the sale of the Company's Calcutta Harbour Block.

Consequent upon the devaluation of the Pakistani rupee on the 31st July 1955 the Company's current assets and liabilities in Pakistan were revalued as at that date, and the loss on the exchange adjustment of Rs. 12,28,094 has been debited to the profit and loss account.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	23,00,000	Block ...	1,08,44,146
Reserves ...	1,00,69,622	Stores ...	13,616
Provision for taxation ...	7,62,339	Debts, deposits and advances ...	1,47,028
Liabilities ...	9,12,905	Investments	2,55,000
Profit and loss account ...	55,826	Cash ...	28,40,902
	Rs. 1,41,00,692		Rs. 1,41,00,692

Marshall, Sons & Co. (India) Ltd.

The directors of the above Company (Managing Agents: Marshalls (Direction) Ltd., Calcutta) submitted the audited accounts of the Company for the year ended 30th June 1955.

The trading account showed a profit of Rs. 5,61,081 (Rs. 1,13,176). After adding the profit on sale of furniture and fittings and motor vehicles Rs. 3,521 (Rs. 7,182) and dividend from John Fowler (India) Ltd. Rs. 6,250 (*nil*), there is a total of Rs. 5,70,852 (Rs. 2,04,497). From this amount is deducted general depreciation Rs. 1,03,067 (Rs. 61,310), adjustments in respect of previous years Rs. 70,657 (Rs. 42,877), payment of forfeited dividends Rs. 723 (Rs. 682), provision for bad and doubtful debts Rs. 20,000 (*nil*) and reserve for taxation Rs. 2,00,000 (Rs. 70,000). The year's trading shows a net profit of Rs. 1,76,406 (Rs. 29,627). After adding the previous year's balance of Rs. 93,713 (Rs. 1,95,335), there is a total sum of Rs. 2,70,118 (Rs. 2,24,963). The directors recommend payment of a dividend of 15 (12½) per cent. free of Indian income-tax amounting to Rs. 1,57,500 (Rs. 1,31,250) leaving a balance of Rs. 1,12,618 (Rs. 93,713) to be carried forward.

Since the last report, income-tax assessments have been completed up to the end of the accounting year 1953. Owing to the improved results it is suggested that a sum of Rs. 2,00,000 should be placed to reserve for taxation purposes.

During the year the Company's trading improved considerably. Sales for the year in question show an increase, being Rs. 2,12,35,000 as against Rs. 1,29,00,000 last year. The trading profit for the year in question shows an increase, and the directors feel justified in recommending a dividend of 15 (12½) per cent. free of tax. The directors have pleasure in reporting the satisfactory working of the Marshall/Britannia agreement, and would like to record their appreciation of the manner in which the Britannia Engineering Company, Ltd., have co-operated and used every endeavour to increase output to meet the tea industry's heavy demand for replacement machinery. They would also like to record the satisfactory improvement in sales of the Marshall Electric Motors, production of which has been stepped up to try and meet the heavy demand. Continued efforts are being made to expand the Company's activities in manufacturing and marketing indigenous products, and further manufacturing licences are awaited.

With regard to the future, the directors are confident that the Company can assist in forwarding the Government policy of development, and therefore look forward to a further period of satisfactory trading.

Accounts in brief were as under:

Points From The Chair

Insurance Compensation

"ON the economic side, the year saw far-reaching events in the direction of State ownership and the progress towards a socialist pattern of society. The first casualty to socialism in the current year was life insurance. While some members of the Government were hard put to it in trying to justify their action on the grounds that there was a misuse of power and misappropriation of life insurance funds, others were frank enough to admit that the step was taken to augment Government's resources for the second Five-year Plan. The method of compensating the shareholders of life insurance companies, as laid down in the draft Bill, will adversely affect the conservative, well-managed companies and it is to be sincerely hoped that the Select Committee will take into consideration the shareholders' point of view in making their final recommendation on the Bill. In their zeal to hasten towards socialism, the Government, we hope, will not forget the fact that most of the sound and well run joint-stock enterprises belong to a large number of small shareholders belonging primarily to the middle classes and it would be contrary to principles of social justice not to give them adequate compensation at the time of nationalisation. The proposed amendment of the definition of 'income' in the 1956 Finance Bill will enable the Government to tax this compensation in the hands of the shareholders to the extent that it is in excess of the paid-up capital, so that now there is no fear of endangering socialistic principles of paying adequate compensation to shareholders."

MANEKLAL PREMCHAND,
Industrial Investment Trust Ltd.

Higher Employment and Greater Wealth

"In the first place I wish to emphasise that higher employment, though a very desirable objective, cannot be as important as creation of greater wealth. It may sound a little unorthodox, but I wish it to be realised that increased employment cannot in all cases result in greater prosperity. Only such employment as is highly productive can create prosperity. On the other hand, prosperity can definitely be a precursor to greater employment. A highly productive employment alone can create prosperity, and once we have the effective means, we can create all kinds of employment. The main problem, therefore, is not so much to create any kind of employment as to create such employment as would yield higher production and greater wealth. With wealth a large number of tertiary employment would grow automatically. Higher production is thus the objective which really matters. Judging from this angle, Ambar Charkha is not the answer to the problem. It has a place, no doubt, provided it is proved that the most efficient methods of production within our resources are already fully utilised and that the only resources, potential or otherwise, left for us is the utilisation of Ambar Charkha in which case it functions in a supplementary capacity. Since this is not the position, Ambar Charkha is likely to obstruct rather than pave the path to progress, if by progress we mean higher standard of living. This stark reality, if fully realised, should stop us from toying with ideas likely to take us on a backward march. If Ambar Charkha could have solved our problems it would have done so centuries before."

G. D. BIRLA,
United Commercial Bank Ltd.

Tax on Dividend and Bonus Issue

"The new direct taxation proposals, namely, the withdrawal of the rebate of one anna of income-tax at present given in respect of undistributed profits, the levy of super-tax at two annas and three annas in the rupee on distribution of dividends in excess of six per cent. and ten per cent., respectively on the paid-up capital and a levy of a tax of two annas in the rupee on bonus shares—all these will, it is feared, prove a damper to the corporate section of the private sector and will cripple company finances and flotation of new companies. The proposed tax on dividend over six per cent. is not only unjust, inasmuch as it amounts to double taxation, but it also fails to distinguish between old-established and conservatively managed companies and newly set up companies or companies which have not ploughed back their profits. In order to remove this inequity, I would suggest that the super-tax should be levied on distribution over six per cent. of the paid-up capital and free reserves, instead of paid-up capital alone."

THULSIDAS KILACHAND,
Bank of Baroda Ltd.

Incentive to Electrics

"Much has already been said about the need for greater incentive to sustain and promote investment in the electricity supply industry, and it is most unfortunate, therefore, that the proposal regarding the standard rate as outlined in the Bill will not positively ease the industry's difficulty in raising finance for expansion. The situation calls for a differential over the Bank rate of 2½ per cent. at least. Even with that, there will be no scope for providing that measure of internal finance which the extensive capital development programmed for the industry in the country's second Five-year Plan could absorb. With the disappointment prevalent regarding 'electrics' amongst the investing public, approaches to other agencies, e.g., banks and investment corporations, for the necessary finance will become imperative more often than not. What the fate of such approaches will be, and on what terms of interest and security such agencies might lend, if at all, gives much food for thought; especially when viewed in contrast with the very low rate of statutory return delimited for equity capital itself in this industry."

K. G. MILNE,
Ahmedabad Electricity Co., Ltd.

COMPANY MEETINGS AND DIVIDENDS

BINOD MILLS CO., LTD. Annual General Meeting, Ujjain, Indore, 9th April 1956. Dividend: Rs. 10 per share, plus a special dividend at As. 8 per share. Transfer books remain closed from 2nd to 16th April 1956, both days inclusive.

QUESTION HOUR IN PARLIAMENT

Atomic Energy Library

ALL scientists will be permitted access to the atomic energy library at Bombay where technical reports on atomic energy developments which are presented to India by the U.S. are kept. The value of the technical library of research reports is $100,000.

* * * *

Heavy Water Purchase

The U.S. has agreed to sell 25 tons of heavy water and certain equipment required for the atomic energy programme in India. It has also accepted and offered to accept Indian scientists, sponsored by the Department of Atomic Energy, for advanced training in certain fields of development and use of atomic energy.

* * * *

Nangal Project

The Government of India has appointed a British firm—Messrs. Costain John Brown—as one of the three consultants to report on the Nangal Project. The fertiliser plant at Nangal will produce 70,000 tons of nitrogen in the form of suitable fertilisers. It will also produce heavy water as a by-product. The plant is expected to be installed by 1960.

—*Jawaharlal Nehru*

Foreign Assistance

The total foreign assistance authorised to India by various countries during 1955-56 amounts to Rs. 49.45 crores. The authorisations are for various projects such as malaria control, steel for railways, hydro-electric projects, supply of wagons, equipment for A.I.R. and miscellaneous projects. Of these authorisations, the U.S. accounts for Rs. 35.31 crores, Canada for Rs. 9.5 crores, Australia for Rs. 1.91 crores, New Zealand for Rs. 0.53 crore and the Ford Foundation for Rs. 2.2 crores.

—*C. D. Deshmukh*

All-India Taxation Council

The Government of India considers it premature to come to a decision on the setting up of an All-India Taxation Council till the reorganisation of States is completed and the Finance Commission completes its labours.

* * * *

Estate Duty

The Government has not so far thought of negotiating an agreement with any country other than the U.K. for the avoidance of double levy of Estate Duty on properties left in India by foreign nationals. This is because other countries have not so far approached India for such an agreement.

* * * *

New India Fisheries

An Indo-Japanese concern, under the name of New India Fisheries Ltd., has been registered in Bombay to exploit fishing potentialities in Indian waters with modern equipment. The Company's fishing activities will, however, be restricted to operations beyond seven miles from the coastline of India. Further, the Company will not fish in the Gulfs of Kutch, Cambay and Mannar, Palk Bay, Pamban Channel and such other areas as may be specified by the Government of India. The authorised capital of the Company is Rs. 1 crore and paid-up capital Rs. 15 lakhs. The capital of Indian interests is 51 per cent., that is, Rs. 7,65,000.

—*M. C. Shah*

Sewing Machines

Forty-two countries, including Aden, Australia, Afghanistan, Burma, Ceylon, Egypt, Greece, the Gold Coast, New Zealand and Gautemala, import Indian sewing machines. The Tariff Commission had estimated in 1954 that the production of sewing machines had exceeded the demand. In recent years, both demand and production are increasing and a precise indication of the one outrunning the other is not available.

—*T. T. Krishnamachari*

Tata Iron and Steel Works

The Tata Iron and Steel Company Ltd., Jamshedpur, which was recently permitted to increase its production capacity to 1.5 million tons of saleable steel per year, has entered into agreements with two American firms. The agreement with Messrs. Kaiser Engineers Division of Messrs. Henry J. Kaiser Company, U.S.A., is for providing the engineering services required for designing, planning and executing the expansion programme, other than the service to be performed in India. The agreement with Messrs. Kaiser Engineers Overseas Corporation (a subsidiary of Messrs. Henry J. Kaiser & Co.) is for securing the engineering services required at the site of the project, including construction management services and construction services. The agreements provide for the payment of a fixed fee to the foreign firms, a guaranteed ceiling for engineering fees for construction, management and procurement services, and for payment of other charges like cost of transporting Kaisers' employees, etc. Kaisers have undertaken to complete the project by 31st May 1958.

—*Nityanand Kanungo*

Motor Tax

A proposal to fix a ceiling for taxes on motor vehicles in all States has been under the consideration of Government for a long time, but the States are anxious that no ceiling limit should be put on their taxation powers in this respect. However, at the last meeting of the Transport Advisory Committee, a suggestion was made that the States should limit the tax to 70 per cent. of the Madras tax, considered to be the highest in India. The States wanted time to examine this suggestion further.

Notices

THE GOLD MOHUR MILLS, LIMITED

NOTICE

THE THIRTIETH ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Wednesday, the 25th April 1956, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those retiring.

(*a*) Sir Chunilal V. Mehta, K.C.S.I., retires by rotation under Article 114 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company that it is proposed to move a Resolution to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Sir Chunilal V. Mehta has signified his willingness to stand for re-election. The following Resolution will, therefore, be proposed as an Ordinary Resolution:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who was born on the 12th day of January 1881 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Indian Companies Act, 1956, shall not apply to him."

(*b*) Mr. Ambalal Sarabhai retires by rotation under Article 114 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company that it is proposed to move a Resolution to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Mr. Ambalal Sarabhai has signified his willingness to stand for re-election. The following Resolution will, therefore, be proposed as an Ordinary Resolution:—

"RESOLVED that Mr. Ambalal Sarabhai who was born on the 25th day of February 1890 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Indian Companies Act, 1956, shall not apply to him."

(*c*) Mr. P. G. Kendall, who is an employee of James Finlay & Co., Limited, the Managing Agents, vacates Office under the provisions of Section 261 of the Indian Companies Act, 1956, and can only be re-appointed a Director by a Special Resolution. Mr. Kendall offers himself for re-election. The following Resolution will, therefore, be proposed as a Special Resolution:—

"RESOLVED that Mr. P. G. Kendall, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can, therefore, under the provisions of Section 261 of the Indian Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) The following Resolution will be proposed as a Special Resolution:—

"RESOLVED that James Finlay & Co., Limited, be and are hereby appointed buying agents for the Company in the United Kingdom to carry out the work of purchasing for the Company goods, plant and machinery which are required to be purchased in the United Kingdom. James Finlay & Co., Limited, maintains its Head Office in Glasgow for the purpose of dealing with the various aspects of its business such as Tea, Jute, Shipping, Insurance, etc. The scale of its operations is commensurate with a Company with a Capital of £3½ million. The expenses incurred in maintaining its offices are approximately £103,000 per annum and the proportion of those expenses which may reasonably be attributed to the work done on behalf of the Company is approximately ¾ per cent. Further RESOLVED that in respect of all such work the said James Finlay & Co., Limited, shall be entitled to receive from the Company and the Company shall pay to the said James Finlay & Co., Limited:—

(i) A commission of not more than 2½ per cent. on the prices of all stores purchased by them in the United Kingdom for the Company.

(ii) A commission of not more than 4 per cent. in respect of machinery and plant so purchased for the Company."

(6) The following Resolutions will be proposed as Ordinary Resolutions:—

(i) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of The English Card Clothing Co., Ltd., 151, Tardeo Road, Bombay, may earn from them on any sales to the Company by The English Card Clothing Co., Ltd., of Card Clothing, Comber Needles and Lickerin Wire and any other products sold by The English Card Clothing Co., Ltd., and required to be purchased by the Company in the normal course of business from The English Card Clothing Co., Ltd., providing the rates at which such goods are sold by The English Card Clothing Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(ii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Tullis, Woodroffe & Co., Ltd., 1/21, North Beach Road, Madras, may earn from them on any sales to the Company by Tullis, Woodroffe & Co., Ltd., of Picking Bands and any other products sold by Tullis, Woodroffe & Co., Ltd., and required to be purchased by the Company in the normal course of business from Tullis, Woodroffe & Co., Ltd., providing the rates at which such goods are sold by Tullis, Woodroffe & Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(iii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, may earn from them on any sales to the Company by Igranic Electric Co., Ltd., of Starters and Switchgear and any other products sold by Igranic Electric Co., Ltd., and required to be purchased by the Company in the normal course of business from Igranic Electric Co., Ltd., providing the rates at which such goods are sold by Igranic Electric Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(iv) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Brookhirst Switchgear Ltd., Northgate Works, Chester, may earn from them on any sales to the Company by Brookhirst Switchgear Ltd., of Starters and Switchgear and any other products sold by Brookhirst Switchgear Ltd., and required to be purchased by the Company in the normal course of business from Brookhirst Switchgear Ltd., providing the rates at which such goods are sold by Brookhirst Switchgear Ltd., to the Company are not less favourable to the Company than the market rates."

(v) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, may earn from them on any sales to the Company by Cantie Switches Ltd., of Starters and Switchgear and any other products sold by Cantie Switches Ltd., and required to be purchased by the Company in the normal course of business from Cantie Switches Ltd., providing the rates at which such goods are sold by Cantie Switches Ltd., to the Company are not less favourable to the Company than the market rates."

(vi) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the National Insurance Co. of Great Britain, Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, covering motor vehicles belonging to the Company against all risks, covering fidelity guarantee and covering cash in transit, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said National Insurance Co. of Great Britain, Ltd."

(vii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the South India Insurance Co., Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said South India Insurance Co., Ltd."

(viii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company as the Principal Agents of the London & Provincial Marine & General Insurance Co., Ltd., in regard to any contracts for the purpose of effecting marine insurance on cotton and textile machinery and stores against all risks which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said London & Provincial Marine & General Insurance Co., Ltd."

(ix) "RESOLVED that the draft agreement whereby Ratansi Mulji, Manekbai Mulji, Dwarkadas Jamnadas, Madhavsingh Dwarkadas, Doongersey Jamnadas, Anil Dwarkadas, Narottam Dwarkadas, Jaysinh Dwarkadas and Mathuradas Mulji, carrying on business in partnership in Bombay and elsewhere in India under the firm name and style of Vasonjee Morarjee are to be appointed the Sole Selling Agents of the Company in respect of cloth and yarn for the territory, period and on the terms and conditions contained therein and which draft agreement has, for the purposes of identification, been signed by the Chairman of the Company, be and is hereby approved, and that the engrossment and duplicate of such agreement be duly executed on behalf of the Company."

Note.—The Head Office of James Finlay & Co., Limited, the Managing Agents, is situated in Glasgow in the United Kingdom and the Company from time to time makes purchases of mills stores and plant and machinery through the Head Office of the Managing Agents. It is therefore, necessary, having regard to the provisions of Section 358 of the Indian Companies Act, 1956, to pass the resolution set out under item No. 5 in order that James Finlay & Co., Limited, may be remunerated for this work.

Note.—James Finlay & Co., Limited, the Managing Agents, are representatives of The English Card Clothing Co., Ltd., 151, Tardeo Road, Bombay, Tullis, Woodroffe & Co., Ltd., 1/21, North Beach Road, Madras, Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, Brookhirst Switchgear Ltd., Northgate Works, Chester, and Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, and the Company from time to time purchases its requirements through the representatives, James Finlay & Co., Limited. It is therefore necessary, having regard to the provisions of Section 359 of the Indian Companies Act, 1956, to pass the resolutions set out under items Nos. 6 (i), 6 (ii), 6 (iii), 6 (iv) and 6 (v) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned by them from any of these Companies.

Note.—James Finlay & Co., Limited, the Managing Agents, are Principal Agents of the National Insurance Co. of Great Britain, Ltd., the South India Insurance Co., Ltd., and the London & Provincial Marine & General Insurance Co., Ltd., with which Companies the Company places its Insurance business. It is therefore necessary, having regard to the provisions of Section 359 of the Indian Companies Act, 1956, to pass the resolutions set out under items Nos. 6 (vi), 6 (vii) and 6 (viii) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned or to be earned by them from any of these Companies.

Note.—It is proposed to appoint the firm of Vasonjee Morarjee as Sole Selling Agents for the Company for cloth and yarn and it is therefore necessary to pass the resolution set out under item No. 6 (ix). The draft agreement referred to in the resolution can be inspected at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, during usual business hours on any working day.

Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

The Transfer Books of the Company will be closed from 31st March to 25th April 1956, both days inclusive.

By Order of the Board of Directors,
JAMES FINLAY & CO., LIMITED,
By its Constituted Attorney,
J. C. BURNS.

BOMBAY, *8th March* 1956.

Note.—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 26th April 1956, to those Shareholders whose names stand on the Register on 31st March 1956, to whom Dividend Warrants will be posted.

To

The Shareholders of the Gold Mohur Mills, Limited, and in particular to:—

Andrew Geddis and Mrs. Jean Baikie Geddis, Gordon Furze, Alex Higgins, Donald Reginald Cavendish Hartley, Genl. Ugni Shum Shere Jung Bahadur Rana, Mrs. Mehra Phiroze Cooper, John Marshall Furze, Mrs. Beryl Muriel Stileman.

SWAN MILLS, LIMITED

NOTICE

THE FORTY-EIGHTH ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Tuesday the 24th April 1956, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those retiring.

(*a*) Sir Chunilal V. Mehta, K.C.S.I., retires by rotation under Article 114 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company that it is proposed to move a resolution to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Sir Chunilal V. Mehta has signified his willingness to stand for re-election. The following resolution will, therefore, be proposed as an Ordinary Resolution:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who was born on the 12th day of January 1881 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Indian Companies Act, 1956, shall not apply to him."

(*b*) Mr. P. G. Kendall retires by rotation under Article 114 of the Company's Articles of Association and in addition, as he is an employee of James Finlay & Co., Limited, the Managing Agents, he would vacate office under Section 261 of the Indian Companies Act, 1956, and can only be appointed a Director by a Special Resolution. Mr. Kendall offers himself for re-election and the following resolution will be proposed as a Special Resolution:—

"RESOLVED that Mr. P. G. Kendall, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can therefore, under the provisions of Section 261 of the Indian Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(c) Mr. C. H. Campbell, who is an employee of James Finlay & Co., Limited, the Managing Agents, vacates office under the provisions of Section 261 of the Indian Companies Act, 1956, and can only be re-appointed a Director by a Special Resolution. Mr. Campbell offers himself for re-election. The following resolution will therefore be proposed as a Special Resolution:—

"RESOLVED that Mr. C. H. Campbell, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can therefore, under the provisions of Section 261 of the Indian Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) The following Resolution will be proposed as a Special Resolution:—

"RESOLVED that James Finlay & Co., Limited, be and are hereby appointed buying agents for the Company in the United Kingdom to carry out the work of purchasing for the Company goods, plant and machinery which are required to be purchased in the United Kingdom. James Finlay & Co., Limited, maintains its Head Office in Glasgow for the purpose of dealing with the various aspects of its business such as Tea, Jute, Shipping, Insurance, etc. The scale of its operations is commensurate with a Company with a capital of £3½ million. The expenses incurred in maintaining its offices are approximately £103,000 per annum and the proportion of those expenses which may reasonably be attributed to the work done on behalf of the Company is approximately ¾ per cent. Further RESOLVED that in respect of all such work the said James Finlay & Co., Limited, shall be entitled to receive from the Company and the Company shall pay to the said James Finlay & Co., Limited:—

(i) A commission of not more than 2½ per cent. on the prices of all stores purchased by them in the United Kingdom for the Company.

(ii) A commission of not more than 4 per cent. in respect of machinery and plant so purchased for the Company."

(6) The following resolutions will be proposed as Ordinary Resolutions:—

(i) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of The English Card Clothing Co., Ltd., 151, Tardeo Road, Bombay, may earn from them on any sales to the Company by The English Card Clothing Co., Ltd., of Card Clothing, Comber Needles and Lickerin Wire and any other products sold by The English Card Clothing Co., Ltd., and required to be purchased by the Company in the normal course of business from The English Card Clothing Co., Ltd., providing the rates at which such goods are sold by The English Card Clothing Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(ii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Tullis, Woodroffe & Co., Ltd., 1/21, North Beach Road, Madras, may earn from them on any sales to the Company by Tullis, Woodroffe & Co., Ltd., of Picking Bands and any other products sold by Tullis, Woodroffe & Co., Ltd., and required to be purchased by the Company in the normal course of business from Tullis, Woodroffe & Co., Ltd., providing the rates at which such goods are sold by Tullis, Woodroffe & Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(iii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, may earn from them on any sales to the Company by Igranic Electric Co., Ltd., of Starters and Switchgear and any other products sold by Igranic Electric Co., Ltd., and required to be purchased by the Company in the normal course of business from Igranic Electric Co., Ltd., providing the rates at which such goods are sold by Igranic Electric Co., Ltd., to the Company are not less favourable to the Company than the market rates."

(iv) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Brookhirst Switchgear Ltd., Northgate Works, Chester, may

earn from them on any sales to the Company by Brookhirst Switchgear Ltd., of Starters and Switchgear and any other products sold by Brookhirst Switchgear Ltd., and required to be purchased by the Company in the normal course of business from Brookhirst Switchgear Ltd., providing the rates at which such goods are sold by Brookhirst Switchgear Ltd., to the Company are not less favourable to the Company than the market rates."

(v) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, may earn from them on any sales to the Company by Cantie Switches Ltd., of Starters and Switchgear and any other products sold by Cantie Switches Ltd., and required to be purchased by the Company in the normal course of business from Cantie Switches Ltd., providing the rates at which such goods are sold by Cantie Switches Ltd., to the Company are not less favourable to the Company than the market rates."

(vi) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the National Insurance Co. of Great Britain, Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, covering motor vehicles belonging to the Company against all risks, covering fidelity guarantee and covering cash in transit, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said National Insurance Co. of Great Britain, Ltd."

(vii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the South India Insurance Co., Ltd., in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said South India Insurance Co., Ltd."

(viii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the London & Provincial Marine & General Insurance Co., Ltd., in regard to any contracts for the purpose of effecting marine insurance on cotton and textile machinery and stores against all risks which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said London & Provincial Marine & General Insurance Co., Ltd."

(ix) "RESOLVED that the draft agreement whereby Ratansi Mulji, Manekbai Mulji, Dwarkadas Jamnadas, Madhavsingh Dwarkadas, Doongersey Jamnadas, Anil Dwarkadas, Narottam Dwarkadas, Jaysinh Dwarkadas and Mathuradas Mulji, carrying on business in partnership in Bombay and elsewhere in India under the firm name and style of Vasonjee Morarjee are to be appointed the Sole Selling Agents of the Company in respect of cloth and yarn for the territory, period and on the terms and conditions contained therein and which draft agreement has, for the purposes of identification, been signed by the Chairman of the Company, be and is hereby approved, and that the engrossment and duplicate of such agreement be duly executed on behalf of the Company."

Note:—The Head Office of James Finlay & Co., Limited, the Managing Agents, is situated in Glasgow in the United Kingdom and the Company from time to time makes purchases of mills stores and plant and machinery through the Head Office of the Managing Agents. It is therefore necessary, having regard to the provisions of Section 358 of the Indian Companies Act, 1956, to pass the resolution set out under item No. 5 in order that James Finlay & Co., Limited, may be remunerated for this work.

Note:—James Finlay & Co., Limited, the Managing Agents, are representatives of The English Card Clothing Co., Ltd., 151, Tardeo Road, Bombay, Tullis, Woodroffe & Co. Ltd., 1/21, North Beach Road, Madras, Igranic Electric Co., Ltd., Victoria Station House, Victoria Street, London, S.W. 1, Brookhirst Switchgear Ltd., Northgate Works, Chester, and Cantie Switches Ltd., Port Causeway, New Ferry, Birkenhead, and the Company from time to time purchases its requirements through the representatives, James Finlay & Co., Limited. It is therefore necessary, having regard to the provisions of Section 359 of the Indian Companies Act, 1956 to pass the resolutions set out under items Nos. 6 (i), 6 (ii), 6 (iii), 6 (iv) and 6 (v) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned by them from any of these Companies.

Note:—James Finlay & Co., Limited, the Managing Agents, are Principal Agents of the National Insurance Co. of Great Britain Ltd., the South India Insurance Co., Ltd., and the London & Provincial Marine & General Insurance Co., Ltd., with which Companies the Company places its insurance business. It is therefore necessary, having regard to the provisions of Section 359 of the Indian Companies Act, 1956, to pass the resolutions set out under items Nos. 6 (vi), 6 (vii) and 6 (viii) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned or to be earned by them from any of these Companies.

Note:—It is proposed to appoint the firm of Vasonjee Morarjee as Sole Selling Agents for the Company for cloth and yarn and it is therefore necessary to pass the resolution set out under item No. 6 (ix). The draft agreement referred to in the resolution can be inspected at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, during usual business hours on any working day.

Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and such proxy need not be a member of the Company.

The Transfer Books of the Company will be closed from 31st March to 24th April 1956, both days inclusive.

By Order of the Board of Directors,
JAMES FINLAY & CO., LIMITED,
By its Constituted Attorney,
J. C. BURNS.

BOMBAY, 8*th March* 1956.

Note:—The Dividend, when sanctioned will be made payable at National Bank of India, Limited, Bombay, on and after 25th April 1956, to those Shareholders whose names stand on the Register on 31st March 1956, to whom Dividend Warrants will be posted.

To

The Shareholders of Swan Mills, Limited, and in particular to:—

Mrs. Allu Faredoon Dastur and Faredoon Pestonji Dastur; Ahmed Ismail Mohamed Baggia; M. H. Crowder; Essabhoy Abdul Hussain; G. Furze; Mrs. J. B. Geddis; Gerald Percy Cooke and Alexander Sim Murray Young; A. Geddis; Hayim Ezekiel Hayim; Karim Mohamed Motiwala; H.H. Ranisaheba Jagdamba Kumari Debi; and Miss Laura Edith Rebekah Wadeson.

THE FINLAY MILLS LIMITED

NOTICE

THE FIFTY-FIRST ORDINARY GENERAL Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, on Friday the 27th April 1956, at 4-00 p.m. (S.T.), to transact the following business:—

(1) To receive and adopt the Directors' Report and Audited Statement of Accounts made up to 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To elect Directors in place of those retiring.

(a) Sir Chunilal V. Mehta, K.C.S.I., retires by rotation under Article 114 of the Company's Articles of Association. In addition he has attained the age of 65 years. Notice has been received by the Company that it is proposed to move a resolution to the effect that he be re-appointed a Director of the Company and that the age limit shall not apply to him. Sir Chunilal V. Mehta has signified his willingness to stand for re-election. The following resolution will, therefore, be proposed as an Ordinary Resolution:—

"RESOLVED that Sir Chunilal V. Mehta, K.C.S.I., who was born on the 12th day of January 1881 and has therefore attained the age of 65 years be and is hereby appointed a Director of the Company and that the age limit laid down in Section 280 of the Indian Companies Act, 1956, shall not apply to him."

(b) Mr. P. G. Kendall retires by rotation under Article 114 of the Company's Articles of Association and in addition, as he is an employee of James Finlay & Co., Limited, the Managing Agents, he would vacate office under Section 261 of the Indian Companies Act, 1956, and can only be appointed a Director by a Special Resolution. Mr. Kendall offers himself for re-election and the following resolution will be proposed as a Special Resolution:—

"RESOLVED that Mr. P. G. Kendall, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can therefore, under the provisions of Section 261 of the Indian Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(c) Mr. C. H. Campbell, who is an employee of James Finlay & Co., Limited, the Managing Agents, vacates office under the provisions of Section 261 of the Indian Companies Act, 1956, and can only be re-appointed a Director by a Special Resolution. Mr. Campbell offers himself for re-election. The following resolution will therefore be proposed as a Special Resolution:—

"RESOLVED that Mr. C. H. Campbell, who is an employee of James Finlay & Co., Limited, the Managing Agents, and can therefore, under the provisions of Section 261 of the Indian Companies Act, 1956, be appointed as a Director of the Company only by a Special Resolution, be and is hereby appointed a Director of the Company."

(4) To appoint Auditors for the current year and to fix their remuneration.

(5) The following Resolution will be proposed as a Special Resolution:—

"RESOLVED that James Finlay & Co., Limited, be and are hereby appointed buying agents for the Company in the United Kindom to carry out the work of purchasing for the Company goods, plant and machinery which are required to be purchased in the United Kingdom. James Finlay & Co., Limited, maintains its Head Office in Glasgow for the purpose of dealing with the various aspects of its business such as Tea, Jute, Shipping, Insurance, etc. The scale of its operations is commensurate with a Company with a capital of £3½ million. The expenses incurred in maintaining its offices are approximately £103,000 per annum and the proportion of those expenses which may reasonably be attributed to the work done on behalf of the Company is approximately ¾ per cent. Further RESOLVED that in respect of all such work the said James Finlay & Co., Limited, shall be entitled to receive from the Company and the Company shall pay to the said James Finlay & Co., Limited:—

(i) A commission of not more than 2½ per cent. on the prices of all stores purchased by them in the United Kingdom for the Company.

(ii) A commission of not more than 4 per cent. in respect of machinery and plant so purchased for the Company."

(6) The following resolutions will be proposed as Ordinary Resolutions:—

(i) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of The English Card Clothing Co., Limited, 151, Tardeo Road, Bombay, may earn from them on any sales to the Company by The English Card Clothing Co., Limited, of Card Clothing, Comber Needles and Lickerin Wire and any other products sold by The English Card Clothing Co., Limited, and required to be purchased by the Company in the normal course of business from The English Card Clothing Co., Limited, providing the rates at which such goods are sold by The English Card Clothing Co., Limited, to the Company are not less favourable to the Company than the market rates."

(ii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Tullis, Woodroffe & Co., Limited, 1/21, North Beach Road, Madras, may earn from them on any sales to the Company by Tullis, Woodroffe & Co., Limited, of Picking Bands and any other products sold by Tullis, Woodroffe & Co., Limited, and required to be purchased by the Company in the normal course of business from Tullis, Woodroffe & Co., Limited, providing the rates at which such goods are sold by Tullis, Woodroffe & Co., Limited, to the Company are not less favourable to the Company than the market rates."

(iii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Igranic Electric Co., Limited, Victoria Station House, Victoria Street, London, S.W. 1, may earn from them on any sales to the Company by the Igranic Electric Co., Limited, of Starters and Switchgear and any other products sold by Igranic Electric Co., Limited, and required to be purchased by the Company in the normal course of business from Igranic Electric Co., Limited, providing the rates at which such goods are sold by Igranic Electric Co., Limited, to the Company are not less favourable to the Company than the market rates."

(iv) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Brookhirst Switchgear, Limited, Northgate Works, Chester, may earn from them on any sales to the Company by Brookhirst Switchgear, Limited, of Starters and Switchgear and any other products sold by Brookhirst Switchgear, Limited, and required to be purchased by the Company in the normal course of business from Brookhirst Switchgear, Limited, providing the rates at which such goods are sold by Brookhirst Switchgear, Limited, to the Company are not less favourable to the Company than the market rates."

(v) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised until the next Annual General Meeting of the Company to retain all commission or other remuneration which they as representatives of Cantie Switches Limited, Port Causeway, New Ferry, Birkenhead, may earn from them on any sales to the Company by Cantie Switches Limited, of Starters and Switchgear and any other products sold by Cantie Switches Limited and required to be purchased by the Company in the normal course of business from Cantie Switches Limited, providing the rates at which such goods are sold by Cantie Switches Limited to the Company are not less favourable to the Company than the market rates."

(vi) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the National Insurance Co. of Great Britain, Limited, in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, covering motor vehicles belonging to the Company against all risks, covering fidelity guarantee and covering cash in transit, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said National Insurance Co. of Great Britain, Limited."

(vii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company, as the Principal Agents of the South India Insurance Co., Limited, in regard to any contracts of insurance covering buildings, machinery and stock including stock in process, against fire and riots and civil commotions all risks, covering loss of profits including compensation payable as a result of complete or partial closure of the mills due to fire or riots, which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said South India Insurance Co., Limited."

(viii) "RESOLVED that James Finlay & Co., Limited, Managing Agents of the Company, be and they are hereby authorised to retain all commission or other remuneration already earned or to be earned by them at any time hereafter until the next Annual General Meeting of the Company as the Principal Agents of the London & Provincial Marine & General Insurance Co., Limited, in regard to any contracts for the purpose of effecting marine insurance on cotton and textile machinery and stores against all risks which have been, or which may at any time hereafter during the period aforesaid, be entered into between the Company and the said London & Provincial Marine & General Insurance Co., Limited."

(ix) "RESOLVED that the draft agreement whereby Ratansi Mulji, Manekbai Mulji, Dwarkadas Jamnadas, Madhavsingh Dwarkadas, Doongersey Jamnadas, Anil Dwarkadas, Narottam Dwarkadas, Jaysinh Dwarkadas and Mathuradas Mulji, carrying on business in partnership in Bombay and elsewhere in India under the firm name and style of Vasonjee Morarjee are to be appointed the Sole Selling Agents of the Company in respect of cloth and yarn for the territory, period and on the terms and conditions contained therein and which draft agreement has, for the purposes of identification, been signed by the Chairman of the Company, be and is hereby approved, and that the engrossment and duplicate of such agreement be duly executed on behalf of the Company."

Note.—The Head Office of James Finlay & Co., Limited, the Managing Agents, is situated in Glasgow in the United Kingdom and the Company from time to time makes purchases of mills stores and plant and machinery through the Head Office of the Managing Agents. It is therefore necessary, having regard to the provisions of Section 358 of the Indian Companies Act, 1956, to pass the resolution set out under item No. 5 in order that James Finlay & Co., Limited, may be remunerated for this work.

Note.—James Finlay & Co., Limited, the Managing Agents, are representatives of The English Card Clothing Co., Limited, 151, Tardeo Road, Bombay, Tullis, Woodroffe & Co., Limited, 1/21, North Beach Road, Madras, Igranic Electric Co., Limited, Victoria Station House, Victoria Street, London, S.W. 1, Brookhirst Switchgear Limited, Northgate Works, Chester and Cantie Switches Limited, Port Causeway, New Ferry, Birkenhead, and the Company from time to time purchases its requirements through the representatives, James Finlay & Co., Limited. It is therefore necessary, having regard to the provisions of Section 359 of the Indian Companies Act, 1956, to pass the resolutions set out under items Nos. 6 (i), 6 (ii), 6 (iii), 6 (iv) and 6 (v) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned by them from any of these Companies.

Note.—James Finlay & Co., Limited, the Managing Agents, are Principal Agents of the National Insurance Co. of Great Britain, Limited, the South India Insurance Co., Limited, and the London & Provincial Marine & General Insurance Co., Limited, with which Companies the Company places its insurance business. It is therefore necessary, having regard to the provisions of Section 359 of the Indian Companies Act, 1956, to pass the resolutions set out under items Nos. 6 (vi), 6 (vii) and 6 (viii) in order that James Finlay & Co., Limited, may retain any commission or other remuneration earned or to be earned by them from any of these Companies.

Note.—It is proposed to appoint the firm of Vasonjee Morarjee as Sole Selling Agents for the Company for cloth and yarn and it is therefore necessary to pass the resolution set out under item No. 6 (ix). The draft agreement referred to in the resolution can be inspected at the Registered Office of the Company, Chartered Bank Buildings, Fort, Bombay, during usual business hours on any working day.

Any member entitled to attend and vote is entitled to appoint a proxy to attend and vote

instead of himself and such proxy need not be a member of the Company.

The Transfer Books of the Company will be closed from 31st March to 27th April, 1956, both days inclusive.

By Order of the Board of Directors,

JAMES FINLAY & CO., LIMITED,
By its Constituted Attorney,
J. C. BURNS.

BOMBAY, *8th March* 1956.

Note.—The Dividend, when sanctioned, will be made payable at National Bank of India, Limited, Bombay, on and after 28th April, 1956, to those Shareholders whose names stand on the Register on 31st March 1956, to whom Dividend Warrants will be posted.

To

The Shareholders of The Finlay Mills, Limited, and in particular to:—

Mrs. Allu Faredoon Dastur and Faredoon Pestonji Dastur; Alfred Rudolph D'Abreo and Mrs. Theresa Mary D'Abreo; Dr. Abilio Coelho Pereira; Ghulam Mahboob, Ghulam Mohyu Din and others; Adolphus Swithin Duarte; Mrs. Edith Mary Shuttleworth; Gunvantrai Ambaram Vaidya; Jose Vitorino Alvares e Brito and Mrs. Almira Coutinho e Brito; Kanji Hansraj and Mrs. Kasturbai Kanji; Mustafa Abdulla Mohamed; Mohamed Ahmed Ta Baggia and Ahmed Ismail Mohamed Baggia; Shapurji Edulji Soparivala and Mrs. Thritty Shapurji Soparivala; Vaikunthlal Motiram Clerk and Mrs. Rasila Vaikunthlal Clerk.

THE BOMBAY DYEING AND MANUFACTURING COMPANY, LIMITED

NOTICE

THE EIGHTY-FOURTH ORDINARY GENERAL Meeting of the Shareholders of The Bombay Dyeing and Manufacturing Company, Ltd., will be held at the temporary Registered Office of the Company, State Bank Buildings, Bank Street, Fort, Bombay, on Thursday the 26th April 1956, at 5 p.m. (S.T.), to transact the following business:—

1. To adopt the Directors' Report, the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1955.
2. To sanction the declaration of a Dividend.
3. To elect a Director in place of Mr. J. D. Choksi who retires by rotation, but is eligible for re-election.
4. To elect a Director in place of Mr. N. M. Wagle who retires by rotation, but is eligible for re-election.
5. To appoint Auditors for the current year and to fix their remuneration.

AND for the purpose of considering, and if thought fit, of passing the following Resolutions as Special Resolutions and/or Ordinary Resolutions as specified below:

SPECIAL RESOLUTIONS

I. RESOLVED that in accordance with the provisions of Section 261 of the Companies Act, 1956, the Company hereby consents to and approves of the appointment, as a Director of the Company, of Mr. H. R. Batlivala, a Director and employee of Nowrosjee Wadia and Sons (Private) Ltd., the Managing Agents of the Company.

II. RESOLVED that in accordance with the provisions of Section 261 of the Companies Act, 1956, the Company hereby consents to and approves of the appointment as a Director of the Company, of Sir Jamsetjee Jejeebhoy, Bart., an employee of Nowrosjee Wadia and Sons (Private) Ltd., the Managing Agents of the Company.

III. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all sales, purchases, or supplies or transactions already entered into or to be entered into by virtue of or under a contract dated the 22nd day of March 1956, between the Company and the Managing Agents, Nowrosjee Wadia and Sons (Private) Ltd., in respect of goods in which the Managing Agents regularly trade or do business in such as Rings, Ring Travellers, Lubricating Oils, Hair and Leather Beltings, and other Leather Goods such as Pickers, Picking Bands and Buffers, Sprinklers and Sprinker Equipment, Machine Cloths, Ginning, Pressing and Delintering Machinery, and Machinery spare parts, and Mechanical Handling Equipment or in respect of which they may trade or do business in as well as in respect of sales to the Managing Agents by the Company of sundry stores, petrol, tubular banding, cloth and such other ancillary items and in respect of the supply or rendering of any service by either to the other, other than that of Managing Agents, including receiving loans or deposits at interest not exceeding the State Bank of India's rate of interest from the Managing Agents, for all of which payment shall be made to the Company within one month from the date of such transactions.

IV. RESOLVED that pursuant to the provisions of Section 360 of the Companies Act, 1956, the Company hereby approves of all purchases or supplies from or transactions already entered into or to be entered into by virtue of or under a Contract dated the 19th day of March 1956 between the Company and Spin-Weave Textiles, an associate of the Managing Agents as defined under the provisions of the Companies Act, 1956, in respect of Bobbins, Pirns, Skewers, Wood, Wooden Cases, Wooden Articles such as Sleys, Hand Tops, Rollers, Picking Sticks, Leather Goods such as Beltings, Picking Bands, Pickers, Buffers, Loom Straps, Ram Rings, Castings and Machinery spare parts and other sundry mill stores, at rates fixed by the Directors from time to time.

V. RESOLVED that the Company hereby approves of the purchase, on 29th March 1956, from Mr. Neville N. Wadia, an associate of the Managing Agents, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., of the reversionary rights in the lands admeasuring about 1,27,924.6 square yards previously leased by the Company (and in the occupation of the Spring Mills) at or for the price of Rs. 10,50,000 by Indenture of Conveyance dated 29th March 1956.

VI. RESOLVED that the Company hereby approves of the purchase, on 29th March 1956, from Mr. Neville N. Wadia, an associate of the Managing Agents, Messrs. Nowrosjee Wadia and Sons (Private) Ltd., of the reversionary rights in the lands admeasuring about 44,460 square yards previously leased by the Company (and in the occupation of the Textile Mills) at or for the price of Rs. 4,50,000 by Indenture of Conveyance dated 29th March 1956.

(Explanatory statement under Section 173 (2) annexed in respect of the above Resolutions Nos. I to VI.)

The Agreements referred to in Resolutions Nos. III and IV and the Indentures of Conveyance referred to in Resolutions Nos. V and VI are open for inspection by any shareholder at the temporary Registered Office of the Company on working days except on Saturdays from 11 a.m. to 4 p.m. (S.T.).

ORDINARY RESOLUTIONS

VII. RESOLVED that pursuant to the provisions of Section 359 of the Companies Act, 1956, the Company hereby authorises Nowrosjee Wadia and Sons (Private) Ltd., the Managing Agents of the Company, to retain the commission or other remuneration earned or to be earned by them in the business of principal agents of Insurers, and in the business of Agents or Representatives of other principals for supply of goods to the Company, such as Rings, Ring Travellers, Lubricating Oils, Hair and Leather Beltings, and other Leather Goods such as Pickers, Picking Bands, Buffers, Sprinklers and Sprinkler Equipment, Machine Cloths, Ginning, Pressing and Delintering Machinery and Machinery spare parts, Mechanical Handling Equipment, and also the interest in respect of any loans or deposits made to the Company.

VIII. RESOLVED that pursuant to the provisions of Sections 372 and 373 of the Companies Act, 1956, the Company hereby confirms the investment made by the Company in National Peroxide Ltd. [of which the Managing Agents are Nowrosjee Wadia and Sons (Private) Ltd.], of 15,000 shares of the face value of Rs. 100 each, amounting to Rs. 15,00,000 (Fifteen Lakhs) and authorises its continuance.

IX. RESOLVED that pursuant to the provisions of Section 294 of the Companies Act, 1956, the Company hereby approves of the continuance of the appointment as sole Selling Agents of the Company under the existing terms and conditions of:—

(1) Messrs. Chaturbhuj Gordhandas & Co. for Cloth for the whole of India.

(2) Messrs. Doongersey Gangjee and Sons, Ltd., for Yarn for the whole of India.

X. RESOLVED that the Company hereby approves of the continuance of the present arrangements of the Company with:

(1) Messrs. G. & R. Wills & Co., Ltd., Adelaide.

(2) Messrs. G. B. Warne Corporation, New York.

for the sale of the Company's products in Australia and New Zealand, and Canada, United States of America, Central and South America, respectively.

By Order of the Board,

NOWROSJEE WADIA & SONS (PRIVATE) LTD.,
NEVILLE N. WADIA,
Director,
Managing Agents.

BOMBAY, 31*st March* 1956.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

The Transfer Books of the Company have been closed from 19th March to 5th April 1956, both days inclusive.

The Dividend when sanctioned will be made payable at the National Bank of India Ltd., Bombay, on or after the 27th April 1956, to those shareholders whose names stand on the Register of the Company on 5th April 1956, and the Dividend Warrants will be duly posted to them.

The shareholders are requested to immediately notify any change of address to the Company.

To,

The Shareholders of The Bombay Dyeing and Manufacturing Company, Ltd., and in particular to:—

Mr. Abdullah Rahimtullah, Mr. Ahmed Ismail, Miss Beatrix E. Alston, Capt. John S. Alston, Miss Ethel B. Ashby, Mr. Ebrahim Mamoojee Badat, Mr. P. J. Chinoy & Mrs. Arnavaz P. Chinoy, Mr. I. C. KANKNARRAH COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Forty-sixth Annual General Meeting of Shareholders will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 11-45 a.m. on Friday the 27th April 1956, for the following purposes:—

(1) To receive and adopt the Directors' Report and Audited Accounts for the half-year ended 31st December 1955, and the Balance Sheet as at that date.

(2) To declare a Dividend on the Preference Shares.

(3) To elect a Director.

(4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 13th April to 27th April 1956, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, 27*th March* 1956.

Note.—(*a*) A Member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) Payment of any dividend declared will be made only to those members whose names are registered in the books of the Company on the 27th day of April 1956, or to their Mandatees. No applications for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

MACKINNON, MACKENZIE AND COMPANY, LIMITED

NOTICE

IT HAS BEEN DECIDED THAT MACKINNON, Mackenzie & Co. (Private) Ltd., will in future confine its activities to shipping. That Company's Head Office in Calcutta has, therefore, with effect from 31st March 1956, resigned its Managing Agencies of the India Jute Co., Ltd., the Megna Mills Co., Ltd., the Salonah Tea Co., Ltd., and other Agencies unconnected with shipping, while the Bombay Branch has similarly resigned its Managing Agency of Mazagon Dock Ltd. The Company will, however, continue its connection with the Peninsular and Oriental Steam Navigation Co., and other Shipping Companies as Managing or Port Agents.

The intention is that Mazagon Dock Ltd., the India Jute Co., Ltd., and the Megna Mills Co., Ltd., will, as from 1st April 1956, be Director-controlled, while the Salonah Tea Co., Ltd., which is a Sterling Company, will be transferred to the Agency of Messrs. Macneill and Barry Ltd.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5 per cent. per annum for the half-year ended 31st March 1956.

The Preference Share Registers will be closed from the 16th to the 21st April 1956, both days inclusive. Payment will be made on or after the 1st May 1956 to those Preference Shareholders whose names are on the Company's Register on the 21st April 1956, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LTD.,
T. LESLIE MARTIN,
Governing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA, 2*nd April* 1956.

HUMAYAN PROPERTIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-seventh Ordinary General Meeting of Humayan Properties Ltd. will be held at the Lighthouse Miniature Cinema, Calcutta, on Wednesday, 18th April 1956, at 4-30 p.m., for the following purposes:—

1. To receive the Directors' Report.
2. To pass the Audited Accounts.
3. To declare the Dividend on Ordinary Shares recommended by the Directors.
4. To elect Directors under Article No. 123 in place of Messrs. S. A. Basil and H. E. Barber who retire by rotation. (Messrs. Basil and Barber being eligible, offer themselves for re-election.)
5. To appoint Auditors.

The Share Transfer Register of the Company will be closed from 11th April 1956 to 18th April 1956, both days inclusive.

By Order of the Board,
(Sd.) S. A. BASIL,
Managing Director.

1, HUMAYAN PLACE,
CALCUTTA, 27*th March* 1956.

RESERVE BANK OF INDIA

APPLICATIONS ARE INVITED FOR THE following posts in the various departments of the Reserve Bank of India:

(A) POSTS AND SCALES OF PAY

1. Research Officers, Department of Research and Statistics—Rs. 375-55-815 E.B. 55-925-60-1,045.

The appointments to the above posts will be made on a temporary basis in the first instance but are likely to be made permanent.

Note: Candidates possessing exceptionally good qualifications and experience may be given a higher starting salary in the prescribed scale.

2. Probationary Assistants—Rs. 250-25-450 E.B. 25-650.

Note: Promising Probationary Assistants will be eligible for promotion as officers in the scale of Rs. 375-55-815 E.B. 55-925-60-1,045.

(B) ADDITIONS TO PAY

1. *Local pay*: 10 per cent. of pay with a minimum of Rs. 10 per mensem rounded up to next higher complete rupee to the staff working at Bombay, Calcutta, Madras, Delhi, Kanpur and Ahmedabad.

2. *House rent allowance*—

Research Officers: 15 per cent. of pay with a minimum of Rs. 60 and a maximum of Rs. 300 per mensem.

Probationary Assistants: 10 per cent. of pay with a maximum of Rs. 50 per mensem.

3. *Dearness allowance*: At prescribed rates.

Research Officers: The present rate is 16⅔ per cent. of pay with a maximum of Rs. 125 per mensem.

Probationary Assistants: Rs. 65 per mensem for pay (including local pay) upto Rs. 300 per mensem.

(The rate of Dearness Allowance is subject to revision from time to time.)

(C) AGE LIMIT AS ON 1st MAY 1956

Research Officers: Candidates should not ordinarily be over 30 years of age. The age limit may be extended upto 35 years in the case of candidates with exceptional qualifications and/or research experience of value to the Bank.

Probationary Assistant: Candidates should not ordinarily be over 24 years of age.

Age limit may be extended but not beyond 30 years in the case of candidates possessing special qualifications and experience of value to the Bank and also in the case of

(i) candidates with approved war service,

(ii) ex-employees of Banking Institutions whose services have had to be terminated for reasons of economy or as consequence of the closure of unremunerative branches or as a result of the Banks going into liquidation,

(iii) personnel retrenched from Government offices after at least one year's service, applying through the Employment Exchange, and

(iv) candidates belonging to the Scheduled Castes or Scheduled Tribes.

(D) QUALIFICATIONS

1. *Research Officers, Department of Research and Statistics*: First or high second class Master's degree in Economics, or Commerce or Statistics/Mathematics of an Indian or foreign University or a Doctorate degree in Economics or Statistics of an Indian or foreign University and a period of research work in one or more of the subjects, viz., (*a*) monetary economics, (*b*) banking theory and practice, (*c*) international finance, and (*d*) sampling theory and econometrics, etc.; a period of practical banking training will be an additional qualification in respect of applicants with specialisation in (*a*) and (*b*).

2. *Probationary Assistants*: Applicants should have had a brilliant academic record and must possess a first or very high second class Master's degree or a first class Bachelor's degree of a recognised Indian or foreign University in Economics, Commerce, Banking, Accountancy, or Law as a special subject of study.

THE BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS GOOD ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees.

The selected candidates for the posts of Research Officers will ordinarily be on probation for a period of three years which may be reduced or extended at the Bank's discretion. Candidates selected for the Probationary Assistants' posts will also be on probation for a period of three years during which they will be liable to be discharged at one month's notice or pay in lieu thereof. Candidates selected for the Research Officers' posts will ordinarily be stationed in Bombay but those selected for the Probationary Assistants' posts must be prepared to serve in any office of the Bank in India.

Applications should be in a special form to be obtained from any office of the Reserve Bank. All the applications should be accompanied by copies of two testimonials (originals should not be sent; the Bank does NOT accept responsibility for returning the originals if sent through oversight) and forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before 1st May 1956. Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes or Scheduled Tribes should mention this fact prominently on their applications.

Applicants for the above posts must remit application fees of Rs. 7-8-0 per application by Postal Order, Cheque or Bank Draft on a SCHEDULED BANK PAYABLE AT BOMBAY along with the application. The application fee is in no case refundable. *Bonafide* refugee candidates who are NOT IN EMPLOYMENT applying through any of the Government Employment Exchanges are exempted from payment of application fees while in the case of Scheduled Castes/Scheduled Tribes candidates the fee will be reduced to one-fourth.

Appointments will be subject to candidates being found medically fit for service in the Bank. If any candidate desires to have his application acknowledged he should enclose a stamped self-addressed envelope or a post-card. Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into any correspondence with them.

Canvassing in any form will be regarded a disqualification.

THE LAKHSHMI COTTON MANUFACTURING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixty-first Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Thursday the 26th April 1956, at 4.30 p.m. (Standard Time), for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To appoint Auditors for the current year and to fix their remuneration.

(4) To elect a Director in place of Mr. Pratapsinh Mathuradas who retires by rotation but being eligible offers himself for re-election. Mr. Pratapsinh Mathuradas is interested as a Director of Vissanji Khimji & Co. (Private) Ltd., the Cotton Buying Agents of the Company, and his re-election will therefore be proposed as a Special Resolution.

(5) To elect a Director in place of Sir Vithal N. Chandavarkar who also retires by rotation. Sir Vithal N. Chandavarkar, although otherwise eligible for re-election, having attained the age of 68 years, is not eligible for re-appointment, unless his appointment is made or approved by the Shareholders in general meeting in terms of Section 281 of the Companies Act 1956.

Special Notice is hereby given that it will be proposed as an Ordinary resolution that Sir Vithal N. Chandavarkar be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him.

(6) To transact the following further special business, namely, to consider and if thought fit, to pass the undermentioned resolutions as Ordinary resolutions:—

(*a*) "Resolved that the appointment of Messrs. Jwalaprasad Radhakrishna, as the sole selling agents of the Cloth and Yarn produced by the Company, in the market of Uttar Pradesh, be approved, upto 31st March 1957."

(*b*) "Resolved that the appointment of Messrs. Dwarka Prasad Chiranjee Lall, as the sole selling agents of the Cloth and Yarn produced by the Company, in the market of Bihar, be approved, upto 1st March 1961."

(*c*) "Resolved that the appointment of Messrs. K. D. Continental traders, as the sole selling agents of the Cloth and Yarn produced by the Company, in the market of the State of Kashmir, be approved, upto 2nd July 1959."

(*d*) "Resolved that the appointment of Messrs. Jamnadas Bhunji Patel as the sole selling agents of the Cloth and Yarn produced by the Company in the markets of Saurashtra and Cutch, be approved, upto 1st January 1958."

By Order of the Board of Directors
of THE LAKHSHMI COTTON MFG. CO., LTD.,
For THE BOMBAY COMPANY LIMITED,

R. L. COGHLAN,
Managing Director,
Secretaries, Treasurers and Agents.

BOMBAY, 24*th March* 1956.

Note:—Warrants for the above dividend, if declared, will be posted to Shareholders on 30th April 1956, and payments will be made on or after 1st May 1956. Shareholders are requested to notify to the Company immediately any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The resolution in connection with the re-election of Mr. Pratapsinh Mathuradas, which will be proposed as a Special resolution, under item (4) is as under:—

"Resolved that Mr. Pratapsinh Mathuradas, who retires from the Board by rotation, be re-elected a Director of the Company."

The reasons which make this resolution necessary have already been given in the Explanatory Note accompanying the Notice of the Extraordinary General Meeting to be held on 13th April 1956, which has been posted to shareholders.

The resolution in connection with the re-election of Sir Vithal N. Chandavarkar, which will be proposed as an Ordinary resolution, under item (5) is as under:—

"Resolved that Sir Vithal N. Chandavarkar be and is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 shall not apply to him."

Sir Vithal needs no introduction, as, for many years, one of the leading figures in the textile mill industry of India, and since his appointment as a Director of the Company in December 1949, he has always given the Company the benefit of his wide experience. The Company is indeed fortunate to have him on the Board.

The Company's policy has for many years been to establish direct connections with consuming markets upcountry, and for this purpose it has appointed sole selling agents in various upcountry centres. The draft resolutions under item (6) have been necessitated by the fact that under Section 294 of the Companies Act, 1956, the appointment of existing sole selling agents requires the approval of the shareholders in general meeting. The agents mentioned above are all well connected in the textile trade in their respective territories, and have been active in the promotion of the sale of the Company's Cloth and Yarn.

THE VISHNU COTTON MILL LIMITED

NOTICE IS HEREBY GIVEN THAT THE Forty-ninth Ordinary General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, No. 9, Wallace Street, Fort, on Wednesday the 25th April 1956, at 4-30 p.m. (Standard Time), for the purpose of transacting the following business:—

(1) To adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1955.

(2) To sanction the declaration of a Dividend.

(3) To confirm the appointment of Mr. M. G. R. Aitken and Mr. J. F. Parry as Directors.

(4) To elect Directors in place of Mr. C. M. Khatau and Mr. J. F. Parry, who retire by rotation but being eligible offer themselves for re-election.

(5) To appoint Auditors for the current year and to fix their remuneration.

(6) To transact the following special business, namely, to consider and if thought fit, to pass the following as Ordinary Resolutions:—

(*a*) "Resolved that the appointment of Messrs. Jwalaprasad Radhakrishna, as the sole selling agents of the Cloth and Yarn produced by the Company, in the market of Uttar Pradesh be approved, upto 31st March 1957."

(*b*) "Resolved that the appointment of Messrs. Dwarka Prasad Chiranjee Lall, as the sole selling agents of the Cloth and Yarn produced by the Company, in the market of Bihar, be approved, upto 1st March 1961."

(*c*) "Resolved that the appointment of Messrs. K. D. Continental Traders, as the sole selling agents of the Cloth and Yarn produced by the Company, in the market of the State of Kashmir, be approved, upto 2nd July 1959."

(*d*) "Resolved that the appointment of Messrs. Jamnadas Bhunji Patel, as the sole selling agents of the Cloth and Yarn produced by the Company, in the markets of Saurashtra and Cutch, be approved, upto 1st January 1958."

By Order of the Board of Directors,
of THE VISHNU COTTON MILL LIMITED,
For THE BOMBAY COMPANY LIMITED,

R. L. COGHLAN,
Managing Director.
Secretaries, Treasurers & Agents.

BOMBAY, 23*rd March* 1956.

Note.—Warrants for the above dividend, if declared, will be posted to shareholders on 28th April 1956, and payments will be made on or after 30th April 1956. Shareholders are requested to notify to the Company immediately any change of address, failing which their dividend warrants will be posted to the addresses as registered with the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT

The Company's policy has, for many years, been to establish direct connections with consuming markets upcountry, and for this purpose it has appointed sole selling agents in various upcountry centres. The draft resolutions under item 6 have been necessitated by the fact that under Section 294 of the Companies Act, 1956, the appointment of existing sole selling agents requires the approval of the shareholders in general meeting. The agents mentioned above are all well connected in the textile trade in their respective territories, and have been active in the promotion of the sale of the Company's Cloth and Yarn.

THE INDIA SUGARS AND REFINERIES LIMITED

5, Deenadayalu Street, MADRAS-17

To

THE SHAREHOLDERS.

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Shareholders of the Company will be held on Monday the 30th April 1956, at 5-30 p.m., at the factory of the Company, at Hospet, to consider, and if thought fit, to pass the following resolutions, with or without modifications:—

As Ordinary Resolutions:—

1. RESOLVED that the appointment of Amalgamated Commercial Traders Ltd. as Sole Selling Agents to the Company, in terms of the agreement subsisting between them and the Company and dated 29th December 1952, be and is hereby approved *vis-a-vis* sub-section 3 of Section 294 of the Companies Act, I of 1956.

2. RESOLVED that the Board of Directors and/or their delegates be authorised to borrow on behalf of and for the purposes of the Company, whether with or without security, from time to time or at any time, from and after the commencement of the Companies Act, 1 of 1956, such sum or sums as they may consider necessary or desirable, to any extent and without limit.

As Special Resolution:—

3. RESOLVED as a *Special* Resolution, that consent be and is hereby accorded to the Managing Agents, to appoint Sri C. Hariprasad as ex-officio Director of the Company, the Company having taken note of the fact that Sri C. Hariprasad is

(i) General Manager and employee of the Managing Agents, the India Sugar Agencies Ltd.

(ii) Director and shareholder of the Amalgamated Commercial Traders Ltd., the sole Selling Agents of the Company.

You are requested to attend the meeting in person or by proxy. You may appoint one or more proxies and your proxy need not be a member of the Company. Forms appointing proxies may be filed with the Company at its Registered Office by 5-30 p.m. on the 28th April 1956.

By Order of the Board,
for THE INDIA SUGAR AGENCIES LTD.,
Managing Agents,
C. HARIPRASAD,
General Manager.

MADRAS, 29*th March* 1956.

UNITED COMMERCIAL BANK LTD.

(*Concluded from page* 666)

it can hardly meet the needs of day-to-day industrial expansion when rapid decisions are necessary. A thorough overhaul is needed.

"I have mentioned all these difficulties not that they cannot be solved—but that they must be solved. I fail to see any sign of awareness on the part of the authorities of these hurdles and, therefore, I give expression to my misgivings. What I have said is not by way of criticism. We need to make the Plan a success. But we cannot do so by minimising or underestimating the difficulties and by starting in a complacent mood. Forewarned is forearmed and what I have suggested is a constructive note of caution in order that we may meet the difficulties squarely in the face and solve them and not create more difficulties by our own actions. We have enough troubles on our hand to engage our thoughts and energies, and it would be unwise to create avoidable problems."

CALL MONEY RATE HARDENS

(From Our Own Correspondent)

BOMBAY, *4th April*

Extremely stringent conditions prevailed in the short-term money market during the week under review. Besides the usual seasonal demand for bank credit to finance trade and movement of crops, the demand to meet the financial year-end commitments also aggravated the stringency, while the supply of funds was tight. Although banks could get their requirements from the Reserve Bank of India and the State Bank of India, there was keen bidding for funds in the inter-bank call money section and rates were put up during the last two days.

After being done at 3½ per cent. upto Monday, inter-bank call money rate moved up to 3⅞ per cent. In Calcutta, inter-bank call money fetched as high a rate as 4½ per cent.

House money at call was placed at 3½ to 3⅞ per cent. and at 3½ per cent. for large blocks. Short-term deposits were offered 3½ per cent. for all periods from one to six months.

There was, however, no change in the Government of India 91-day Treasury Bill rate, which stood unchanged at Rs. 2-8-6 per cent. per annum this week also. The amount offered was fractionally higher at Rs. 103.25 lakhs, as against Rs. 100 lakhs in the previous week. Tenders for next week have not been invited by the Reserve Bank. There has, however, been no announcement to the effect that the sale of these bills has been suspended.

For the fifth week in succession notes in circulation show an expansion, with a rise of Rs. 12.86 crores during the week ended 30th March 1956. The aggregate increase for the five weeks is Rs. 63.78 crores. Notes held in the Banking Department are also up by Rs. 1.93 crores during the week under review, so that the rise in total notes is Rs. 14.79 crores. On the assets side, there has been a fall of Rs. 19.87 crores in foreign securities and an increase of Rs. 34.78 crores in rupee securities. Rupee coin is lower by Rs. 11 lakhs. In the Banking Department, Central Government deposits have risen by Rs. 14.66 crores and those of other Governments by Rs. 13.51 crores. Deposits of banks are also up by Rs. 3.52 crores. Cash balances have improved by Rs. 1.93 crores and balances held abroad by Rs. 18.17 crores. A decline of Rs. 1.73 crores is noted in loans and advances other than to Governments, due to a decline of Rs. 5.04 crores in outstanding advances to Scheduled banks against usance bills. Fresh borrowings by banks against these bills during the week amount to Rs. 4.09 crores. There has also been a sharp increase of Rs. 9.77 crores in investments.

A rise of Rs. 10.67 crores in demand deposits is disclosed by the Scheduled banks' statement for the week ended 23rd March 1956, as compared with that for the previous week. Time deposits have, however, declined by Rs. 66 lakhs and inter-bank borrowings by Rs. 1.22 crores. Borrowings from the Reserve Bank are higher by Rs. 5.34 crores and those from the State Bank of India by Rs. 2.29 crores. A marked rise of Rs. 10.93 crores is noted in advances and of Rs. 3.79 crores in bills purchased and discounted. Investments have declined by Rs. 1.72 crores and cash balances by Rs. 1.24 crores. Balances with other banks show an increase of Rs. 62 lakhs and money at call and short notice a decline of Rs. 62 lakhs.

The gilt-edged market ruled steady during the week. There were buying enquiries in most of the dated loans, but, in the absence of any sellers, prices were marked up by a fraction. There was also paucity of floating stocks which restricted the volume of business.

3 per cent. 1957 and 1958 had buyers half anna better at Rs. 99-11½ and Rs. 99½, respectively. 3 per cent. 1959-61 was on offer at Rs. 98-1. There were enquiries for 3 per cent. 1963-65 at Rs. 94-13½, while 3 per cent. 1964 had sellers at Rs. 94-11. 3 per cent. 1966-68 dropped an anna to Rs. 92-10, at which buyers were in evidence. 3 per cent. 1970-75 picked up an anna to Rs. 89-12. 3 per cent. 1986 Conversion Loan gained an anna to Rs. 76-12. 3½ per cent. 1961 was done an anna higher at Rs. 99-8. 3½ per cent. 1964 was in demand fractionally higher at Rs. 98-10½ and 3½ per cent. 1965 at Rs. 98-9. State loans ruled dull with sellers at quoted rates. 4 per cent. 1967 Bombay was featureless at Rs. 100-7 and West Bengal at Rs. 100. 4 per cent. 1967 Madras dropped an anna to Rs. 99-6, as also U.P. loan to Rs. 99-7 and Saurashtra to Rs. 99-8.

In the foreign exchange section, the rupee ruled a shade weaker in terms of the U.S. dollar early in the week, but the recession was made good towards the close, in consonance with the strength of sterling. Banks' selling rate of U.S. dollar rose from Rs. 477¼ to Rs. 477¾ per $100 early in the week, but declined again to Rs. 477¼ per $100. After rising to Rs. 473½ per $100, the buying rate came back to Rs. 473 per $100. In New York, spot sterling moved down from $2.80.7/16-2.80.9/16 to $2.80.5/16-2.80.7/16, but recovered to close better at $2.80.9/16-2.80.11/16. Three months' forward gained on balance from $2.78.7/16-2.78.9/16 to $2.78⅝-2.78⅞ and transferable sterling from $2.77⅛-2.78 to $2.77.15/16-2.78.1/16.

BRISK TRADING IN LINSEED

(Messrs. A. Bradley & Co.)

CALCUTTA, 2*nd April*

In the linseed market, greatly improved movement of supplies from the centres, with new crop seeds entering the market more freely, plus a healthier supply and demand position have been the main features during the past week. Arrivals have averaged about eight to ten wagons daily and trading has been brisk; crushers are consuming all available quantities, encouraged by the existing parity in the prices of seeds and oil. If, as expected, arrivals are maintained as at present, for the next few weeks, prices should show a reversal of the inflationary trend which set in directly after the Budget. In the oil market, there is a good demand from shippers for ready in order to fulfil earlier commitments; buyers for forward delivery, however, are a bit cautious with support from foreign markets lacking at present and values nominally placed at around £142 for prompt shipment.

Latest quotations are as follows:—Ready Rs. 21-8 and April-May Rs. 21-4 per maund.

RECESSION IN SILVER

(From Our Own Correspondent)

BOMBAY, *4th April*

A sharp recession in the price of silver was the outstanding feature of trading in the bullion market during the week under review, in distinct contrast to the firmness noted in the previous two weeks. Movements in gold were somewhat erratic, but the undertone was steady.

Sentiment in silver was shaken by reports that the Government of India had issued licences for import of silver coins from Tibet. The desire to book profits induced by these reports gained considerable momentum yesterday, when there was an assertive report to the effect that the influx of silver coins from Tibet was being allowed by the Government to enable that country to pay for its imports of cotton piecegoods from India. The slight weakness of other commodity markets was an additional factor which induced bull liquidation and bear selling. Today, however, there was a partial recovery, but the undertone still remained easy.

Gold displayed a firm trend upto Saturday on good offtake in the ready section. Yesterday, however, there was sharp setback in sympathy with silver, coupled with larger arrivals and lower offtake. Today again, there was a reversal of the downward trend, due to a decline in arrivals, though yesterday's recession was not fully made good.

Silver forward (26th April settlement) opened higher and gained to Rs. 184-3 (as against last week's closing of Rs. 183-6), but receded to a low of Rs. 179-9, before closing a shade better at Rs. 181-7.

Ready silver (.996 Mint) declined from Rs. 182-14 to Rs. 179-1, but improved to Rs. 180-15 at the close. The floating stocks of silver are placed at 800 bars. The daily average offtake was 20 bars.

Gold for forward delivery (25th April settlement) advanced from Rs. 105-1 to Rs. 106-5 and, after a reaction to Rs. 104-6, finished at Rs. 105-5.

Ready gold hardened from Rs. 105-2 to Rs. 106-7, before drifting lower to Rs. 104-5. Today, however, it gained strength to Rs. 105-5 at the close. The floating stocks of gold are reported to be 30,000 tolas. The daily average arrivals were 4,000 tolas, while the offtake was 3,000 tolas on an average.

In London, silver was unchanged for both spot and forward at 79*d.*, while gold improved early in the week, before closing unchanged at 249*s.* 5¼*d.* In New York, silver was marked down from 91¼*c* to 90⅞*c.*

The following comparative table shows the trend of the market during the week under review:

	4-4-56	Highest	Lowest	28-3-56

SPOT COTTON RECEDES

(From Our Own Correspondent)

BOMBAY, *4th April*

Cotton circles are greatly intrigued at the way in which the authorities have been handling the affairs of the cotton market. The one question that is put by all traders is this: Why should the authorities not allow resumption of futures trading in cotton, now that the aggrieved bull operators have decided not to take the dispute to the Supreme Court? The continued suspension of futures trading has, it is pointed out, caused much hardship not merely to the cotton trade but to the mills, the merchants, and the growers as well, since there are no facilities now to hedge and reduce risks. The Government no doubt appreciates this position, but is not prepared to revise its policy in line with the opinion in the market. Obviously, the Government fears that, once futures trading in cotton is resumed, speculation will again emerge and ready cotton prices will swiftly move up. In fact, New Delhi seems now to be concerned more with the problem of checking a further buying spree in the spot market than with permitting futures trading in cotton. Its concern is so great that it has turned down the traders' plea for even the extension, by a fortnight, of unutilised export licences for the small quantity of about 60,000 bales. The Government is also contemplating, according to certain reports, a ban on the resale of cotton purchased by mills. There are renewed rumours, too, with regard to the introduction of the quota system of allocating Indian cotton among the mills and/or permission to traders to import lower varieties of American cotton.

Thanks to the aforesaid rumours, trading in the spot cotton market has turned out to be a dull affair. Being perturbed over the reported ban on resale of cotton, the mills have withdrawn support. As the Government has not extended the period of export licences for cotton beyond 31st March, business in the export section is also at a standstill. Consequently, the prices of cotton at Sewri have tended to move down. Over the eight-day period ended today, Oomra *Deshi* has gone down by Rs. 30 to Rs. 700. The fall in the prices of certain other varieties during the same period is indicated below:

(In rupees per candy of 784 lbs.)

	4-4-1956	28-3-1956
Bengal *Deshi*	710	730
Berar Jarillas	775	790
Vijay	920	930
Moglai	675	685
Khandesh	765	770

The Karachi cotton market exhibited a firm trend during the week under review, in distinct contrast to the recession noticed last week. The firmness was aided by expectation of enlarged demand for cotton from both indigenous mills and overseas enquiries. This expectation, coupled with rumours that the Indian Government might allow import of foreign cotton in view of shortage of domestic supplies, induced the traders to extend their commitments. Consequently, prices of cotton moved upwards. N.T.R.G. May delivery rallied Re. 1-4 to Rs. 77-1 per 82 lbs. July delivery improved by As. 8 to Rs. 75-3. The spot prices also registered a rise. The following are the latest available quotations—in rupees per 82 lbs.—for a few popular varieties of Pakistan cotton:

Sind *Deshi* 77; Punjab *Deshi* 73: 4F Punjab R. G. 76-4; S.G. 81-4; L.S.S. Punjab R.G. 80-4; S.G. 85-4; N.T.R.G. 81-4; S.G. 88-8; 289F Punjab R.G. 88-4; S.G. 95-4.

Conditions in the Alexandria cotton market continued to be strong, thanks to renewed fears of a possible scarcity of stocks in the coming months. The fears were based partly on lower ideas of the current season's crop and partly also on good buying enquiries from abroad. The buying support was, therefore, sustained and cotton values maintained their rising trend.

The latest available quotations—in tallaris per lb.—from the Alexandria cotton futures market (figures in brackets giving last week-end rates) are: Karnak: May 89.05 (87.03) and July 87.45 (85.30); Ashmouni: April 70.80 (69.95) and June 70.45 (69.20).

At the recent auctions in Uganda cotton held at Kampala, there was reported to be keen competition which led to a marked improvement in prices. Indian interests, it is said, purchased a fairly large quantity, despite high prices.

The Lint Marketing Board will hold another auction tomorrow, offerings being estimated at 10,400 bales; the bulk of this quantity is accounted for by Busoga and Jinja.

The auctions by the Sudan Gezira Board are reported to be in full swing. About 20,000 bales of GS, 9,000 bales of GL and 10,000 bales of white Sudans have recently changed hands at prices much below Egyptians of similar spinning value.

Activity in the Liverpool cotton futures market remained restricted this week too. Operators continued to be cautious in their purchases, pending a clear announcement regarding the U.S. export policy. Egyptian contracts were particularly neglected, with values tending to look down. The prices of cotton—in pence per lb.—prevailing at Liverpool yesterday are given below:

Old contract: May-June 25.35; July-August 34.35. *New contract*: May-June 30.05; July-August 27.30; October-November 25.40; December-January 25.20; March-April 25.10. *Egyptian Karnak cotton*: May-June 48.70; July-August 48.15; November-December 48.15.

A mixed trend prevailed in the New York cotton futures market during the week under review. Thus, nearby positions were fully steady on good trade demand in the wake of limited offerings, while distant deliveries failed to evoke support, with the majority of traders awaiting farm legislation developments. In the spot market, business put through was small, on account of lack of mill interest.

The following are the latest available quotations, as compared with those a week and a fortnight before:

(In cents per lb.)

	3-4-56	26-3-56	19-3-56
Spot	36.80	36.80	36.75
May	33.63	35.59	35.52
July	33.60	33.37	32.94
October	32.06	32.20	31.80
December	32.15	32.28	31.82

YARNS BEARISH

(From Our Own Correspondent)

BOMBAY, *4th April*

The yarn market which withstood several bearish reports and depicted a strong note last week suffered a relapse during the week under review. In fact, the market ruled distinctly easy. The easiness was particularly in evidence in the rayon yarn section, thanks to enlarged floating stocks, following heavy arrivals of imported yarn and slackness in demand from consuming centres. The consequent selling pressure brought down the prices of rayon yarn. The staple fibre yarn section also came under the pressure of sales, since there was lack of follow-up support from weavers in Surat and other places. The drop in the values of these yarns would have been more marked but for expectation of curtailment of output by Coimbatore mills, necessitated by the 25 per cent. power cut in Madras with effect from the 1st inst. Trading in cotton yarns was very much subdued with prices drifting lower, on account of a fall in raw cotton prices and absence of encouraging reports from consuming centres.

On heavy sales by bears, spot Japanese rayon yarns suffered a severe setback. 150 deniers slumped by As. 5-6 to Rs. 4-1-6. 120 deniers dropped As. 4 to Rs. 4-1-6. In sympathy with these yarns and on reports that the Government of India was arranging to get Italian rayon yarn in exchange for raw cotton, 150 Italy receded by an anna to Rs. 3-12-6. 120 Italy was neglected at Rs. 3-14. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade eased by three pies to Rs. 3-10-9. 120 Bt. cones 1st grade was quiet at Rs. 3-14.

In the forward section of the rayon yarn market, Snia rayon yarn 120 dull cones for June delivery fell from Rs. 820 to Rs. 811 before recovering to Rs. 814. April contract declined by Rs. 8 to Rs. 813, but finished higher at Rs. 818.

Both indigenous and foreign staple fibre yarns encountered, as already stated, considerable selling pressure and staged a retreat. Among the former (40 x 2), Citys and Kohinoors decreased by 27 pies each to Rs. 3-10-9 and Rs. 3-10-3, respectively. New Greats climbed down by As. 2 to Rs. 3-10-9. Centuries lost a like amount to Rs. 3-10. Among foreign yarns (80 x 2), Fujis dropped As. 3 to Rs. 7-11. Suicos and Paramounts eased by an anna each to Rs. 8-2 and Rs. 7-9, respectively. K'Suns were lower by half an anna at Rs. 7-14-6.

With the exception of superfine counts cotton yarns which met with special buying support and registered a slight improvement in prices, all other counts failed to elicit attention of traders. Ten counts Moderns declined by As. 2 to Rs. 13-2. Podars lost an anna to Rs. 12-15. Among 20s, Maduras decreased by As. 2 to Rs 17-8. Moderns were dull at Rs. 17, Raghuvanshis at Rs. 16-12, Podars at Rs. 16-10 and Elphinstones at Rs. 16-5. Deals in 30 counts Madras were put through As. 4 lower at Rs. 22-12. Indus were unaltered at Rs. 22-6. Forty counts lacked support. Minaxis retreated by As. 2 to Rs. 27-10. Maduras were quiet at Rs. 27-10, as also Moderns at Rs. 27-8. Among 60s, Finlays shed a rupee to Rs. 61. Moderns eased by As. 8 to Rs. 61. Eighty counts yarns, on the other hand, changed hands at higher prices, Moderns, Finlays and Elphinstones advancing by As. 8 each to Rs. 66-8, Rs. 73 and Rs. 62-8, respectively.

The following table gives the prices of rayon, staple fibre and cotton yarns quoted today as compared with those a week and fortnight before:

	4-4-1956	28-3-1956	21-3-1956
	Rs. a.	Rs. a.	Rs. a.

80s Finlay	73 0	72 8	72 0

OILSEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, *4th April*

The oilseeds market presented a subdued tone during the week under review. Operators appeared to be disinclined to enter into fresh commitments, owing to rumours of an impending change in the export policy of the Government of India in respect of oils and oilseeds. It was, for instance, feared that the Government of India might ban exports of groundnut and groundnut oil and raise the existing rate of export duty on linseed oil. There were also rumours that the quota system might be reintroduced for castorseed oil exports. These rumours apart, market sentiment was adversely affected by the nervousness in the cotton and foodgrain markets. The possibility of an increase in interest rates on borrowings from banks also acted as a deterrent factor. Consequently, buyers preferred to await further developments, while stockists were inclined to reduce their holdings. Transactions, however, were of a limited nature. Quotations in many cases were nominal, but the trend was slightly downward.

Activity in the groundnut section was limited to sporadic support from crushers and *vanaspati* interests at declines. Groundnut F.A.Q. improved from Rs. 34-12 to Rs. 35 but receded, on selling pressure, to Rs. 34-8. April-May delivery was a shade lower at Rs. 34-10, as against Rs. 35 a week ago. June-July delivery lost As. 4 to Rs. 35-6. Coromandals were only a fraction lower at Rs. 35-4. Khandesh quality moved down from Rs. 35-10 to Rs. 35-6. Groundnut oil ex-mill was quoted As. 2 less at Rs. 19 and railway receipt one anna less at Rs. 18-15.

In the castorseeds section, there was some activity early in the week, thanks to favourable overseas advices. May delivery moved up as a result from Rs. 133-8 to Rs. 137-12 but, on rumours regarding the introduction of export quota for castor oil, the rate declined to Rs. 137-4 today. In the spot section, F.A.Q. was nominally quoted at Rs. 26-4, while Madras quality receded from Rs. 27-4 to Rs. 27. Castor oil B.S.S. quality was subdued at Rs. 16, as against Rs. 16-4 early in the week.

On reports of an increase in arrivals, the linseed section put on an easy trend. Ready bold was done at Rs. 34-10, as against Rs. 36 a week ago. April-May delivery was lower at Rs. 33-2, as compared with Rs. 34-10. Kanpur quality was nominally quoted at Rs. 33-8. Linseed oil was a shade easy at Rs. 20-10, as compared with Rs. 22-14 last week.

The following table shows the prices of oilseeds and oils today, as compared with those at the end of the previous two weeks.

	4-4-1956	27-3-1956	20-3-1956

SUGAR QUIET

(From Our Own Correspondent)

BOMBAY, *4th April*

The sugar market ruled quiet during the week under review. Arrivals of indigenous sugar into the market were quite considerable, being as much as 14,300 bags, as against 9,900 bags in the previous week and 6,100 bags two weeks before. The increase in arrivals was not, however, accompanied by a rise in demand, thanks to a fall of As. 4 to As. 6 in the ex-mill rates of North Indian sugar and to expectation of a similar drop in Bombay-Deccan ex-mill rates, following the impending release for sale in the free market.

In the forward section, *Vaisakh* delivery contract for C grade sugar receded from Rs. 91-4 to Rs. 90-10 per bag for want of support.

In the spot section, small grain indigenous sugar was quiet at Rs. 88, medium grain at Rs. 89-Rs. 92 and large grain at Rs. 95-Rs. 100. British refined sugar, on the other hand, received some enquiries and gained As. 2 to Rs. 83-14 per 2 cwts.

N.B.—The rates for Indian sugar are inclusive of sales tax, while those for foreign sugar are exclusive of the tax.

PEPPER STEADY

(Messrs. Parekh & Co.)

BOMBAY, *3rd April*

During the earlier part of the week, Malabar black pepper ruled easy under pressure of liquidation of A.S.T.A. April shipment which was done at as low as $0.29¼. May-June shipments changed hands down to $0.30¼. Alleppey sold out some parcels of ready at Rs. 775, while garbled at Cochin was marketed at Rs. 132½.

Before the Easter holidays, New York dealers, after buying a few parcels for March shipment for named steamers at $0.30, reduced their buying limit to $0.29¼. But no business was reported. In the later part of the week, however, local bulls, taking advantage of the holidays in New York, tried to manipulate the market by lifting up the prices. Rumours that Russia might come in for further purchases of Malabar, possibly for June shipment, helped the sentiment. Present prices being considered low, short sellers who try to press on an easier market withdraw, and, consequently, there remains scarcity of contracts. Unless Russia buys sizable quantity, the present spurt, which is generally considered as a technical correction, may prove short-lived, as there is enough floating stock in the primary centres, and the growers who have already become tired long are likely to liquidate at every upswing. A section of the trade believes that the present advance may not be followed by New York because the dealers there would like to wait for the development in Singapore where the new crop of Sarawak pepper is expected to move in the near future. Knowledgeable reports from Sarawak indicate that the Sarawak Government are contemplating to abolish the present export duty of 15 per cent. on pepper, most probably at the beginning of the season.

The future of Malabar, however, depends upon how the American market develops after the Easter holidays.

At the time of writing, there are buyers for April shipment at $0.31¼, May at $0.31½ and June at $0.32¼.

In the delivery section, the market, after touching the lowest at Rs. 745 for April delivery, has improved to Rs. 795 under pressure of buying by bulls and short covering.

Following are today's nominal quotations:—Ready Rs. 108 (as against Rs. 108 a week ago) per Bengal maund, April Rs. 795-805 (Rs. 745-55) and May Rs. 810-20 (Rs. 755-65) per candy of 5¼ cwts.

TEA IRREGULARLY LOW

(Messrs. Forbes, Ewart and Figgis Ltd.)

COCHIN, 30*th March*

The offerings in sale No. 7 which was held on Tuesday, 27th March, amounted to 1,050,000 lbs. Quality showed a slight decline from the previous sale, although one or two flavoury high growns were on offer. There was a good general demand, but prices were rather irregular and tended easier as the sale progressed. Low medium and medium brokens were half to one anna easier. Good medium teas were irregular and reflected the falling away in quality. All fannings grades met with keen competition and must be quoted dearer. Best liquoring high grown teas met with a very strong demand and were generally dearer. Below best were not so well supported and prices occasionally declined. There was a rather better demand for whole leaf grades with the exception of Pekoes. The following are the quotations:—

	1956 Rs.	a.	p.
Plain B.P.	1	8	0
Low medium B.O.P.	1	13	0
Medium B.O.P.	2	2	0
Good B.O.P. ... Rs. 3 2 0 to 3	4	0	
Well made black leaf O.P. ...	2	8	6

London Market.—Sale of 26th March 1956:—

Best, particularly fannings, appreciably dearer, plain and medium ½*d.* to 1*d.*

Sale of 27th March 1956.—Ceylon low-growns 1*d.* to 2*d.* dearer. Others sometimes fractionally off the boil. South Indians generally dearer.

Colombo Market.—Sale of 26th March 1956.—Dusts irregularly lower, but other kinds very strong demand, particularly good quality. Broken mixed and fannings substantially dearer.

Sale of 27th March 1956.—Very active demand. High-grown and good medium brokens advanced 30 to 50 cents. Average mediums 15 cents dearer. Plain liquoring low medium and low-grown brokens declined 10 to 15 cents. Persian Gulf types substantially lower.

Calcutta Market.—No sale this week.

Export Quota.—The market has remained steady at 5/5½ pies.

Forthcoming Auctions.—Sale No. 8 will be held on Tuesday, 10th April.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. wire:

"*Dust sale G.*—325,000 lbs. Strong general demand, particularly black middle east types. Market irregularly As. 2 dearer."

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 2*nd April*

After several weeks of bullish activity, foodgrain prices presented a bearish trend during last week. The trend was mainly attributed to the approaching harvest season and to the arrivals of the new coarse grains here and in other markets. With early arrivals in prospect of new crops in large quantities, the fear of prices shooting up again have receded. Wheat average quality was now quoted at Rs. 14-8 and *khati* at Rs.13-6, as against Rs. 15-8 and Rs. 14-8 respectively quoted last week-end, and daily arrivals of old stocks have increased to an average of 200 maunds. Stockists here and in other centres were now reported to be anxious to part with their stocks before the new crop arrivals which are likely to begin within a fortnight. The week's offtake was mostly for local requirements, as outside buying enquiry was dormant due to large-scale sales by the Government in different consuming areas. Strong westerly winds during the week have done some damage to the standing wheat crops. Harvesting of wheat has begun in some areas.

Gram prices also eased during the week, in line with appreciable fall in wheat prices, although the stock position has run down to 2 *khaties*. Harvesting of gram crop is in full swing and arrivals of new crop will begin by the week-end. Barley and *bejhar* prices eased further with increased arrivals of new crop and maize and *bajra* prices declined on falling seasonal demand. Rice prices also eased by As. 8 to Re. 1 per maund, during the week in line with the general bearish trend in all foodgrain prices. Latest prices were: gram Rs. 11, barley Rs. 9, *bejhar* Rs. 8-8, maize Rs. 10-8, *bajra* Rs. 9-8, *jowar* Rs. 12-12, per maund.

Increased arrivals on an average at 2,000 maunds daily accounted for sharp fall in *dara* peas prices to Rs. 8-8 and white quality to Rs. 10; all the arrivals, however, found offtake for pulses to Madras side and stock is still almost *nil*. *Arhar* prices ruled quiet, at almost last week's price levels, old quality stocks having completely exhausted and new crop arrivals still to take about a month. Other pulse prices eased fractionally during the week to be quoted at: *urd* Rs. 16, to Rs. 17-8, *moong* Rs. 13-12 and *massoor* Rs. 13-14 per maund. Pulses futures also eased during the week, in line with ready prices. Markets were closed today as a mark of protest against the increase in sales tax by the State Government.

SUGAR SUPPLY EASY

(From Our Own Correspondent)

HAPUR, 2nd *April*

Easy supply position due to increased overall production of indigenous sugar in the country which was put at 1,073,049 tons by the end of February, as against 982,600 tons during the corresponding period last year, accounted for depressed outlook in sugar prices during the week. Mill delivery prices eased slightly and booking by railway continued to be restricted. Latest mill delivery prices were: Jaswant Rs. 28-9, Simbhauli Rs. 28-7, Mowana Rs. 28-12, Daurala Rs. 29-6, Amroha Rs. 28, Bijnore Rs. 28, Mansoorpur Rs. 29-8, Rampur Rs. 31 and retail Rs. 30-4 per maund. The *khandsari* market also remained inactive and price fluctuations were within fractional limits. Inferior grades were quoted between Rs. 20 and Rs. 23 per maund, while superior quality between Rs. 25 and Rs. 27 per maund.

Arrivals of *gur* having gone down in producing centres and the demand being fairly good from importing centres, ready *gur* prices ruled steady during the week. Loading restrictions, however, hampered despatches on a large-scale. In view of the near end of the season, buyers were also interested to keep stocks to sell at higher rates in the off season. Daily arrivals at Hapur were at an average of 800 maunds and stock is put at 120,000 maunds. Prices vary between Rs. 11 and Rs. 11-8 per maund according to quality. Futures *gur* prices also advanced during the week from Rs. 11-6 for *baisakh* delivery on Monday last to the highest at Rs. 11-13 quoted on Saturday. A new contract for *phagun* next delivery has also opened in the market. Futures and ready markets were completely closed to protest against the imposition of sales tax on different essential commodities by the State Government.

JUTE GIVES WAY

(From Our Own Correspondent)

CALCUTTA, 3rd *April*

This review is necessarily short, in view of the Easter holidays on Friday and Saturday last. During the short session, the declining trend continued in both raw jute and jute goods. Prices of raw jute gave way by about As. 8 per maund, and sellers indicated that they would not discount prices further. And so mills extended their buying support at these levels and purchased a fair quantity on Wednesday and Thursday last. Although, during the month of March, a fair number of enquiries were received and business was done for fair quantities, it is expected that stocks at the end of March would show a rise for the second month in succession. The rise in stocks should be attributed to higher production, following the unsealing of looms. This factor alone has affected prices in the last two weeks, and the fact that there has not been a compensatory reduction in raw jute prices has left the industry athinking. In spite of all these happenings, there has so far been no move to curtail production, but the circumstances are being watched by mills very carefully. If raw jute prices fall, then the situation can be saved. And, considering the various estimates of the crop still to be marketed, it can be said that plenty of jute is left behind, although imports from upcountry centres have tended to decline. In Cossipore alone, it is estimated that about 800,000 maunds of raw jute are awaiting buyers. With the need of mills to consume more raw jute, it is felt that the carry-forward for the next season will not be much, but a bigger crop is expected.

Sellers of raw jute are disinclined to discount prices further. For, with mills committed for higher production, stockists believe that their holdings will find their way to mills sooner or later. Mills have patiently resisted buying raw jute in the hope that such a cautious policy would bring in a better relationship between the fibre and goods prices. But, so far, this expectation has not been realised, although raw jute prices have fallen. Mills could not wait indefinitely and, during the week under review, purchased some quantity for replenishing their stocks. But hope is still entertained by mills, in view of the possibility of the harvest of the new crop one month earlier than usual. Most jute-growing lands have now been kept ready for sowing, and sowing will commence in the next few days when rains are again expected. In fact, a fair quantity of Daissee white jute has already been sown. In East Bengal, further progress in sowing has been reported.

Earlier in the week, upper Assam bottoms gave way from Rs. 28 to Rs. 27-8 and a similar decline was recorded in Indian Northern bottoms at Rs. 27-8 and local Daissee bottoms at Rs. 28. Only the weak holders desired to sell, as they were anxious to dispose of their stocks, thanks to the present uncertainty originating from the inability of mills to support even the present levels. On Wednesday and Thursday last, mills purchased about 150,000 maunds and, during the week-end also, mills showed interest. As a result of this support to raw jute, prices rose yesterday to erase the decline of As. 8 with Northern bottoms quoting Rs. 28, local Daissee bottoms at Rs. 28-8 and upper Assam bottoms at Rs. 28, all April-May delivery.

A further decline in prices was the feature in the jute goods market. There was selling pressure and, at lower levels, covering business was done. Overseas enquiries were also received and some business was done. From Rs. 109-12 ready B. twills fell to Rs. 107 on Thursday last and yesterday, with the rise in raw jute prices, a slight recovery to Rs. 107-8 was recorded. With the fall, the July-September goods reached parity with ready goods. On Tuesday last, they were quoted at Rs. 108-8, falling to Rs. 107 on Thursday and recovering to Rs. 107-8 yesterday. April-June goods fell from Rs. 109-8 to Rs. 108 but subsequently recovered to Rs. 108-8. Hessian 40" 10 oz. at Rs. 38 were As. 6 lower on Thursday, yesterday's quotation being Rs. 38-2. July-September goods were higher by As. 6 and April-June by As. 10.

ACTIVITY IN METALS RESTRICTED

(From Our Own Correspondent)

CALCUTTA, 3rd *April*

Although activity in the metal market during the week under review was restricted, in view of the *Holi* and Easter holidays, prices were steady at higher levels. This was because of the confidence entertained by stockists. The copper supply position in India is so tight that this week's decline in prices in both New York and London did not affect prices here. The decline in overseas markets followed the announcement of a new pricing policy by a major producer of copper in the U.S.A., and it was also reported that consumer resistance in the U.S. against paying higher prices was becoming evident. Although stockists in India were not alarmed by the fall in prices in the overseas markets, buyers were chary to enter into commitments in the belief that, irrespective of the tightness in supply, prices in India must also go down. Electrolytic copper remained unchanged at Rs. 295 throughout the week, clean wire scrap being priced at Rs. 260 and utensils scrap at Rs. 211. Tin was quiet at Rs. 508, and the rise in Singapore by a few points was unnoticed, in view of large arrivals recently. Lead was priced at Rs. 85 with little activity. Electrolytic copper changed hands at Rs. 71. Buyers were shy as they were anticipating that the decline in price on the London Metal Exchange would be noted.

EXPORT TEA IN GOOD DEMAND

(From Our Own Correspondent)

CALCUTTA, 3rd *April*

Very steady conditions were again in evidence during the export auctions in tea held yesterday. Buyers showed preference to quality teas and the offerings aggregating 60,000 chests met with good demand. Fannings were dealt with at firm rates and those lots suitable for Middle East consumption were in better demand. Although common and plain liquoring brokens opened firm, an easy tendency set in, as the sale progressed, to bring down prices slightly occasionally. The strongest features of the auctions were whole leaf grades and stylish B.P.Ss., prices of which rose by As. 3 to As. 4. Keen competition was offered to all good liquoring teas. Darjeelings were steady. The rates were: Medium Assam B.P. Re. 1-11; plain B.P. Re. 1-9-6; black pekoe Rs. 2-2.

BUFF CALF IN DEMAND

(From Our Own Correspondent)

MADRAS, 30*th March*

There has been no material change in the E.I. tanned cow hides market in the U.K. Enquiries have been trickling through at prices quoted last week and sometimes, at even ½d. more. Shippers and *mandi* merchants have been holding for steady prices, and it is believed that U.K. factors who hold spot stocks are also not anxious to sell at below Madras quotations. The tone of the market is, therefore, steady and if the resumption of U.K. buying, after the Easter holidays, on a moderate scale materialises, hardening of prices is a certainty. There has been a good call for top class run parcels in buff calf, but sellers have more thirds than run assortments to offer. Demand for buff hides and cow calf has been poor.

In the tanned skins section, overseas importers are trying to buy at 6*d.* below pre-auction levels, and trading has been small for shipment.

HIDES ACTIVE

(From Our Own Correspondent)

KANPUR, 1*st April*

During the week under review, the local hides and skins market witnessed a somewhat brisk activity. New arrivals were ample. Demand for goods was strong all along the line. Purchasers were mainly local tanners. The country tanners were keen buyers for second grade cow and goat.

The latest quotations are as follows; Wet salted cow 1st grade Rs. 300, 2nd grade Rs. 275, and 3rd grade Rs. 125 to Rs. 175 per score; wet salted buff 1st grade 1 lb. 12 ozs. and 2nd grade 2 lbs. 2 ozs. per rupee. Goat 1st grade Rs. 275 and 2nd grade Rs. 225 per 100 pieces; sheep 1st grade Rs. 275 and 2nd grade Rs. 250 per 100 pieces.

A ten-member American mission will leave the United States shortly on a three-month tour of Asia to determine the extent of potential utilisation of the Asian Nuclear Centre which the United States has decided to build at Manila. The survey is being handled by the Brookhaven (New York) National Laboratory to help Asian nations put atomic energy to work for peaceful purposes as soon as possible. The American scientists and technicians will discuss atomic matters with their Asian colleagues to determine the research and training facilities each country could best use in the centre. Upon their return to the U.S. in June, the members will submit recommendations to the International Co-operation Administration (I.C.A.). The U.S. has offered funds for laboratory facilities and equipment, a reactor for research and training purposes and assistance in training Asians.

Notice

THE WESTERN INDIA MATCH COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-third Annual General Meeting of the Shareholders of the abovenamed Company will be held at the Registered Office of the Company at Indian Mercantile Chambers, Nicol Road, Ballard Estate, Bombay, at 4 p.m. on Monday the 7th day of May 1956, to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December 1955.
2. To declare a Dividend and a Bonus.
3. To elect a Director in the place of Sir Chunilal V. Mehta, K.C.S.I., who retires by rotation. Sir Chunilal V. Mehta, having attained the age of 75 years and though otherwise eligible for re-election, is not eligible for re-appointment, unless his appointment is made or approved by the shareholders in general meeting in terms of section 281 of the Companies Act, 1956.

   Special Notice is hereby given that it will be proposed as an ordinary resolution that Sir Chunilal V. Mehta, K.C.S.I., be and he is hereby appointed a Director of the Company and that it is hereby specifically declared that the age limit of 65 years shall not apply to him.
4. To elect a Director in the place of Mr. M. G. R. Aitken, who retires by rotation, but is eligible for re-election and offers himself accordingly.
5. To appoint Auditors for the ensuing year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 16th day of April 1956 to the 9th day of May 1956, both days inclusive.

By Order of the Board,

A. HYDARI,

Deputy Managing Director.

INDIAN MERCANTILE CHAMBERS,
NICOL ROAD, BALLARD ESTATE,
BOMBAY, 23*rd March* 1956.

The dividend and bonus when sanctioned will be payable at the Central Bank of India Ltd., Bombay and Calcutta, on and after the 14th day of May 1956 to those shareholders whose names stand on the Register on the 9th day of May 1956 and warrants will be posted in due course to each shareholder at his registered address.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

Explanatory statement under section 173 (2) *of the Companies Act,* 1956, *regarding resolution to be passed at the Annual General Meeting for re-appointment of Sir Chunilal B. Mehta, K.C.S.I., as a Director of the Company.*

Sir Chunilal V. Mehta, K.C.S.I., has been a Director of the Company since 14th January 1937 and the Chairman of the Board of Directors since 8th December 1938. He is 75 years old. He retires by rotation at the next Annual General Meeting of the Company. There is no bar other than the age limit to his re-election as a Director of the Company. His re-appointment requires a resolution to be passed by the shareholders specifically declaring that the age limit of 65 years shall not apply to him.

Sir Chunilal V. Mehta is a businessman of wide and varied experience, and during the 19 years he has been associated with your Board he has rendered very valuable services to the Company.

A. HYDARI,

Deputy Managing Director.

BOMBAY, 23*rd March* 1956.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.=Deferred shares. P.O.=Preferred Ordinary shares. Y=Accounts published yearly. H=Accounts published half-yearly. F=Company has Preference shares. T=Company has Debentures. N=Nominal quotations x.d.=Ex.Dividend. c.d.=Cum. Dividend. i=Interim Dividend. f=Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns "Paid-up Ordinary Capital" and "Paid-up per share."

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds, which a company may have, excluding depreciation funds, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any, and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year, they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly, dividends shown are for their financial year. Where, however, the accounts are closed half-yearly dividends are shown separately for the respective half-years

16 APR 1956 GOVERNMENT

UNPROVOKED NATIONALISATION OF ONE MORE INDUSTRY

THERE are yet no signs that the Government of India is willing to give up the policy of the dog in the manger, or heads I win, tails you lose in regard to certain industries. The new industrial policy now in the making is expected to clarify the position and advance reports about it are optimistic that the private sector will be provided with a big field for its operations. While we have no desire to anticipate this statement of policy which may be out any time now, the statements made by Mr. K. D. Malaviya, Minister for Natural Resources and Scientific Research, and Mr. K. C. Reddy, Minister for Production, during the past few days, show hardly any change in the Government's attitude towards mining at any rate. The mining companies, whether they are coal or diamond or metal, are in for a *difficult time. Their freedom* will be curtailed; their activities will be severely restricted; and they may be taken over by the Government at any time. It is surprising that, in the face of these uncertainties, the Ministers expect the mine-owners to put forth their best and produce maximum results consistent with the larger interests of the country.

A typical instance of the sudden manner in which the Government may take over a mining concern is provided by its decision about the Panna Diamond Mining Syndicate Ltd., a private limited company converted into a public limited joint-stock company in 1954. This is, of course, an entirely new enterprise, with, perhaps, a limited number of shareholders. Its absorption into the public sector might not mean much loss to investors, in general. Many might, therefore, wonder why it should be made an issue of public discussion at all. But the point is one of principle. Here is an enterprise which is the outcome of the efforts of a few individual *entrepreneurs.* These individuals took the initiative, did a lot of prospecting in the jungles of Vindhya Pradesh, secured the services of Russian technicians and risked several lakhs of rupees before striking the diamond mines at Panna. It is stated that the promoters of the project had spent as much as Rs. 15.36 lakhs on prospecting and geological tests before coming to the public for capital and had laboured hard for well-nigh three years. They were the first to conceive of mining diamonds in India on scientific and modern lines. They had bought all the machinery needed for the purpose, opened the mines, built 12 miles of metalled roads in thick inhospitable jungles, constructed houses for workers and commenced production some six or seven months ago. After private enterprise has thus discovered a fairly rich diamond mine and brought it to a working condition, the Government decides to take over the property without even having a word with *the interests concerned.* And, what is more, none knows what *compensation* the Government will pay to the owners of the mine. What a reward for doing pioneering work!

Why did the Government decide to take over this mine? Mr. Malaviya who made the announcement in Parliament on Monday last gave no convincing answers. He said that the present production of the Company (valued at Rs. 6 lakhs per year) was not even one hundredth of what the country required. "As soon as we take it over," he added, "we hope to produce a much larger quantity of diamonds." But he could not say what the quantity would be, though he observed that, within the second Plan period, the Government proposed "to multiply production possibly 20, 30 or 40 times." This observation implies that the Company is guilty of not producing enough diamonds. But *the facts* are the Company had started production only a few months ago, the mine is not yet fully developed, and the directors themselves had programmed to complete full mechanisation and development of mines only by 1958. The charge against the Company implied in the Minister's statement is thus unjust and unwarranted. Moreover, it is obvious from his remarks that the Government itself does not yet know the extent to which it will be able to increase the production in the mine. "The *difference between* 20 and 40 is as much as 100 per cent. and no estimate subject to such a great variation can *ever be called an estimate. In any case, did the* Company at any time say that it would not be able to increase production to the optimum level? It is obvious that *a company started with* an issued capital of a crore of rupees could not have proceeded with the implementation of the project aiming with a turnover of only Rs. 6 lakhs per annum. The Company had located 22 diamond-bearing blocs and the first pipe it had succeeded in sriking, alone was expected to produce crores of rupees worth of the coveted treasure. In due course, it would have struck more pipes and improved the percentage of recovery.

The diamonds produced at Panna are of both industrial and gem varieties. The industrial diamond is doubtless of strategic importance. But the national interests in this respect could have been easily secured without nationalising the mine. After all, the Company is the only producer and there would have been no difficulty *in securing its consent for ensuring the nation's* requirement of industrial diamonds. It is no secret that, when the Government wanted to prospect for diamonds in the Company's area, it encountered *no opposition from the management* and readily obtained the latter's co-operation. Apparently, the management had then no idea *that its mine would be snatched away by the* Government. There is thus no valid ground for the authorities to nationalise this mine. It looks as though this is a clear case of "heads I win, tails you lose." Having verified the richness of the mine through its own investigations, the Government seems to have decided to transfer the mine from the private to the public sector by a stroke of the pen.

A reference to copper and other mines was also made by Mr. Malaviya. After referring to the existence of a successfully working copper mine in Bihar, he said: "We now propose to take over copper mining also directly under Government and it will also work in the nationalised sector. In *order to produce copper* ores from copper mines, we must complete a programme of detailed investigations.... We propose to take over one copper mine at least during the second Five-year Plan and it would most probably be in Rajasthan." This statement means that nationalisation of the copper mine *in Rajasthan,* the development of which was undertaken by the private sector only recently, is certain in the second Plan period and that the other copper mines may be taken over either during this five-year period or after. Thus, the Indian Copper Corporation, too, has been brought under the sword of Damocles. With this uncertainty hanging over its head, what incentive will the Indian Copper Corporation have to work its mines with great care and attention or to invest large sums on further development? The worst sufferer of this policy will be not so much the shareholders of Indian Copper as the country as a whole. None can seriously contend that the absence of this producer in the public sector has impeded the country's economic progress so far or will do so in future. Why then generalise that copper mines should be nationalised and thereby subject *the country to avoidable economic handi*caps? Apparently, the Government's mind is now dominated by ideological considerations to such an extent that its capacity to think and act prudently has been blunted. It is by no means an exaggeration to say that the ready availability of technicians and mining equipment from Russia and other Communist countries seems to have intensified the Government's desire to bring mining under its ownership.

The statement made by Mr. K. C. Reddy on nationalisation of coal industry only serves to confirm these impressions. Stating that the Government's ideology and objective regarding coal industry were quite clear, he declared: "This (coal) is a basic industry, which we would like to nationalise at the earliest possible moment." Thus, nationalisation of coal is only a question of time. The Government will resort to it when the circumstances are found favourable. It will give no assurance about the time factor, but, at the same time, it expects the present colliery owners, as good citizens, to carry on cheerfully, to produce more coal, to open up new mines, to conserve the old ones scientifically, and to modernise production methods wherever possible without displacement of labour. *Its desire* to be honest about its intentions is commendable, but not its faith in human beings. The colliery owners are as much human as *anyone else.* They, too, need encouragement for and incentives to raising production. It is quite unrealistic to expect that all of them will do all that is expected of them when they know that they may be dispossessed of their assets at any time. The result of this uncertainty may be indifferent mining, more accidents resulting in loss of both manpower and coal reserves, quick exploitation of all good coal instead of conservation, and many other similar undesirable practices. Indecision is thus no alternative to nationalisation. It will, indeed, turn out to be a very costly policy. If the Government wants to nationalise coal and other wasting assets, despite all the sincere and sound advice against such a course, it will be my day better to give effect to it without any further delay, rather than leave the issue hanging [illegible]

however, it feels that it cannot do so because it has neither the resources nor the requisite managerial personnel, the least that it should do is to permit the private sector to go ahead by giving it *immunity from nationalisation for a period of* twenty-five to thirty years; the longer the period of immunity the better. But the best solution is, as we have all along maintained, to drop the very idea of nationalisation itself. The theory that nationalisation of coal and mining industries is necessary for achieving a socialist pattern of society is as out of date as Karl Marx. But the tragedy of India is that it has amongst its leaders many Rip van Winkles.

ESTIMATES COMMITTEE ON RAILWAYS

THE Estimates Committee must be complimented for raising certain fundamental issues of Parliamentary financial procedure in its report on the Railway Budget for 1956-57 and for dealing exhaustively, in its report on staff matters, with many intricate aspects of personnel administration in the railways. The Committee, as is well known, functions under Rule 243 of the Rules of Procedure and Conduct of Business of the Lok Sabha which defines its functions. Briefly, the Committee is intended to suggest economies and improvement in organisation and efficiency, to examine whether the money is well laid out within the limits of the policy implied in the estimate, and to recommend the form in which the estimates are to be presented to Parliament. Clearly, it is a delegated responsibility, but it is one which is of utmost importance to the functioning of a democratic financial procedure.

It would appear that, in the last five years, the Committee has not been able to discharge in full the responsibility laid on its shoulders. Thus, it could probe into the administration of only a few ministries every year, so that the bulk of the estimates came up before Parliament without the Committee's prior scrutiny. At one of its recent meetings, the Committee decided to "examine generally and survey briefly" the budgets immediately after presentation, in addition to performing the detailed examination of a few selected ministries. This decision probably signifies the most practicable approach to the problem in the existing circumstances of heavy Parliamentary business and the brief interval which separates the presentation of the Railway and the General budgets. But it is doubtful whether the Committee, by following such a procedure, could be said to be doing all that it is expected to do under Rule 243 of Parliamentary Rules. The Estimates Committee, together with the Public Accounts Committee and the Audit Department, has so far served a very useful purpose in highlighting the administrative and other problems, besides bringing to light many of the defects in Governmental expenditure, so that these bodies have come to be regarded as the effective watchdogs of the taxpayer's money. It is, therefore, of the utmost importance that the Estimates Committee should be enabled to perform its duties efficiently. Perhaps, Parliament will do well to devote some time for examining how best the Committee could carry out the tasks allotted to it.

In any case, the complaint of insufficient time and inadequate preparation for examination of estimates, which the Committee has made, deserves the attention of the authorities. Because of the brief interval which separated the presentation of the Railway budget and the commencement of the Railway debate and also of the lack of adequate preparation for tackling the job, the Committee could not make as detailed an examination of the budget as it, perhaps, would have desired and as the subject certainly deserved. The Committee has accordingly suggested that its "task would be very much facilitated, if a larger interval could be allowed between the presentation of the Railway budget and the commencement of the discussion, as also the voting thereon, either by a suitable modification of the Parliamentary programme or by granting the Railways a 'Vote on Account' until the budget is voted." The suggestion is well worth the attention of Parliament in the interests of proper scrutiny of estimates.

Despite the handicaps of insufficient time for scrutinising the Railway estimates for 1956-57, the Committee has been able to present a critical appraisal of certain aspects of the Administration. It has drawn attention to the fact that the operating ratio of the Railways—that is, the proportion of ordinary working expenses, including appropriation to depreciation reserve fund, to gross earnings—has risen from 77.0 per cent. in 1951-52 to 82.6 per cent. in 1955-56, though it is expected to decline to 78.0 per cent. in 1956-57. No overall comparison between the pre-war and the present position is, however, possible. Nevertheless, it is interesting to note that the ratio for class I Government Railways in 1938-39, when the route mileage was 36,573, was 66.48 per cent., the corresponding ratio for the Railways in 1954-55, when the route mileage was lower at 34,152, being 81.76 per cent. The Committee recognises that the high operating ratio in post-war years is due to the general rise in costs and to increased pay and allowances. At the same time, it has rightly exhorted the Administration to have in view the "need for a constant review to keep down the working expenses."

Appropriately enough, the Committee has devoted a sizable portion of the Report to an analysis and check of the expenditure under the first Plan and that proposed under the second Plan. Under the first Plan, the Railways spent Rs. 432 crores, as against the total allotment of Rs. 400 crores. Actual expenditure included Rs. 24.3 crores from revenue, Rs. 209.2 crores from depreciation reserve fund, Rs. 50.7 crores from development fund and Rs. 147.8 crores of capital expenditure. An analysis of the actual expenditure under different heads (with figures in brackets representing planned outlay) shows that expenditure on rolling stock and machinery was Rs. 253.4 crores (Rs. 207.9 crores), tracks and bridges Rs. 64.4 crores (Rs. 70.5 crores), structural and engineering works Rs. 49.9 crores (Rs. 45.9 crores), restorations, new lines and electrification Rs. 33.2 crores (Rs. 34.2 crores), passenger amenities Rs. 13.3 crores (Rs. 15.0 crores), and labour welfare Rs. 20.5 crores (Rs. 24.1 crores). This analysis has provoked the Committee to make two important observations. Actual expenditure on rolling stock and machinery is higher at Rs. 253.4 crores, as against the planned outlay of Rs. 207.9 crores. In terms of equipment, however, the Railways have bought only 1,589 locomotives, 4,837 carriages and 61,773 wagons, as against the original provision for 1,038 locomotives, 5,674 carriages and 49,143 wagons. The Committee has drawn the obvious conclusion that the "additional rolling stock acquired is not quite in proportion to the additional financial outlay."

Commenting on the expenditure on track and bridges, the Committee says that it was unable to ascertain, within the short time available to it, the extent to which physical targets envisaged under the Plan have been actually reached. It, however, refers to the dismal fact that "whereas, at the beginning of the first Plan, speeds had been restricted over 3,000 miles due to weak condition of the track, at the end of the Plan, speeds still remain restricted over about 1,784 miles." This remark suggests that the authorities will have to devote sufficient attention to track maintenance, for any neglect of this important function, apart from affecting adversely the speed and turn-round of trains and wagons, is bound to cause considerable human misery through serious accidents. For the Railways, as for all transport agencies, "safety-first" ought to be the first and foremost consideration.

The Committee has done well to emphasise that, on the eve of the commencement of the second Five-year Plan, the Railways "are not in a position to meet fully even the existing demands of passenger and goods traffic." Since these demands will, in fact, increase in the next five-year period, the Committee has suggested to the Planning Commission that the annual allotment to the Railways should be relatively higher in the first three years. The position now is that, while the Railway Plan itself has been attenuated from the originally planned outlay of Rs. 1,480 crores to Rs. 1,125 crores, the proposed expenditure in 1956-57 under even this abbreviated Plan is only Rs. 200 crores. The Committee has expressed the view that "urgent measures should be taken to expedite the execution of the various projects included in the Plan, so that the Railways might not find themselves lagging behind not merely in the traffic requirements but also the reduced outlay of Rs. 1,125 crores." Apart from this consideration, it is only by hastening the pace in the early years of the Plan, as the Committee itself recognises, that the Railways could hope to earn the additional resources that would permit them to increase the outlay on development and expansion to the level they originally set for themselves.

No one need be surprised that the Estimates Committee should have felt that it should devote an entire report to "staff matters." The Railways are the single largest employers in the country. They have on their pay-rolls some 980,000 employees, consisting of 2,616 class I and class II employees, 352,428 class III employees and 625,163 class IV employees. They recruit annually about 30,000 to 40,000 persons. With such a large labour force and in the light of the need to keep this force both quantitatively adequate and qualitatively efficient, the Railways have necessarily to undertake effective measures for recruitment, training and welfare of their employees. As regards recruitment, the present practice is to fill class I vacancies by direct recruitment after a difficult test, reserving one-third of the vacancies for promotion from the ranks of class II employees, to fill class II vacancies through promotion and to effect direct recruitment to class III posts through the agency of the Railway Services Commissions. The Committee has rightly advocated the substitution of the present method of interview for recruitment to class III posts by one that will combine both written test and interview. Among the employees, there is a feeling that the pre-independence practice of giving preference to their sons in the matter of recruitment to class III and class IV jobs should be retained. The Committee has suggested that the question should be examined in the light of the obvious Constitutional impediments in the way of the retention of the old "preference" system. Apart from the fact that such a practice is Constitutionally incorrect, it is doubtful whether it is in the long-term national interests to make the Railways a "closed shop" or to add one more caste, namely, railway employees, to the innumerable social divisions in the country. Indeed, it is doubtful whether it is in the interests of the employees themselves to keep alive a medieval system of hereditary preferment which must breed smug self-conceit and undermine confidence and initiative in their own children.

The success of the Railway Plan is not entirely a matter of procuring equipment. It will obviously depend upon the efficiency of the men in the Railways. The superior personnel, whether technical or administrative, are given a two-year training after recruitment. Training facilities below this level, according to the Committee, are inadequate. There are 24 training schools, including 14 traffic training schools, 4 technical schools attached to Railway workshops and one each for the Chittaranjan Locomotive Works and the Integral Coach Factory. It would appear that the Ministry has not yet implemented the recommendations of the Technical Training Committee (Chairman: Mr. S. L. Saxena) appointed in 1953 to examine the adequacy of technical training facilities in the Railways. If the position continues to be as bad as what the Saxena Committee found, one might as well give up all hopes of seeing any improvement in the technical efficiency of the Railways. This Committee stated that, "generally speaking, an apprentice is, at present, permitted to pick up whatever he can at the good graces of an illiterate workman, who knows little and wants to hide whatever little he knows, with the result that the trade ability of apprentices on the completion of even five years' training does not come up to the desired standard." Surely, it is high time the authorities set about, without any further delay, the task of devising means whereby the existing training facilities could be both augmented and improved.

The section of the Committee's Report dealing with wages and amenities for the workers makes interesting reading. The Committee has recommended the wider adoption of intensive bonus scheme. One such scheme, it is stated, has been tried with success in the Chittaranjan Locomotive Works. As regards amenities, the second Plan provides for an expenditure of Rs. 30 crores on staff quarters. But the far more important question is the education of the employees' children. This is essentially a human problem. Many of India's railway stations lie in centres far removed from civilisation. They are situated in areas where neither schools nor other educational facilities exist. It is hardly to be expected that the children of the Railway employees at these centres, for whom the only available reading matter is probably the time-table, would be able to make any headway in life. It is true that the Railways maintain as many as 154 schools and a few subsidised hostels. But for the employees of a railway system, which serves a country of India's continental size, the available educational facilities are quite inadequate. Indeed, if the leaders of Railway labour were genuinely solicitous, and not merely vociferous, about the welfare of the employees, they would not hesitate to run the risk of a little unpopularity by demanding an extension of these facilities, even if that meant some compromise on the question of wages.

PREVIEW OF FORTHCOMING INDUSTRIAL POLICY STATEMENT

UPWARD TREND IN COMMODITIES HALTED?

THURSDAY, 5 P.M.

MARKET GOSSIP

THE announcement of the Central Government's new industrial policy, which is expected to be made shortly, is naturally enough awaited with keen interest. This policy is likely to determine the shape of things to come in the field of industries, provided, of course, the Government really sticks to it and the country sticks to the ruling party. Since there is no immediate prospect of the Congress being dislodged from power and there is a reasonable prospect to believe that the Government, once it enunciates a policy, will generally want to abide by it, the statement of industrial policy is bound to remain the guiding star for India's industrial pattern for a long time to come. This statement, together with the Government's fiscal and labour policy, might conceivably be regarded as the tripod on which the country's economic structure will be raised.

Obviously, fiscal policy cannot be announced straightaway. It will have to be fashioned year after year. And, on the basis of available indications, there is likely to be no immediate threat of a tax on total wealth or ceilings on income. A tax on expenditure is perhaps well within the bounds of practical possibility; for a measure of this kind is believed to have been advocated by the British tax expert, who has been invited by the Government of India. But to build such a measure into the already heavily complicated structure of the Companies Act and the Income-tax Act will require time, so that any radical change of this kind will necessarily be a somewhat slow process.

As regards labour policy, the question of providing for workers' participation in management, as is well known, continues to engage the attention of the Government. Apart from this innovation, the labour policy will probably not undergo any material change. But, judging from the recent statement of the Union Minister for Labour, Mr. Khandubhai Desai, some consolidation of labour legislation may well be effected. He averred, in the Lok Sabha this week, that the time had come when they should incorporate in a single security legislation the various welfare schemes which are dealt with by such legislative enactments as the Workmen's Compensation Act, the Provident Fund Act and the Employees' State Insurance Act. Finally, there is the Government's known intention to set up a State Trading Corporation. It might conceivably cause some concern to the private sector. But this sector should be able to take it in its stride, considering that the Corporation is expected to demarcate a sphere all to itself without necessarily robbing the private sector of its share.

Of immediate concern is, therefore, the impending announcement of the Government's new industrial policy. In view of the Government's clearly-expressed socialist predilections, the statement is bound to contain a further emphasis on the role of the public sector. But this cannot be wholly unwelcome to the private sector. For one thing, many persons engaged in this sector have expressed the view that they would prefer to know their sphere clearly, instead of being left in a state of uncertainty. The important question, however, is whether the statement will contain any element of "nationalisation" surprise. Such a surprise is ruled out on the ground that the Government would like to utilise its available resources for implementing the Plan rather than for acquiring the existing units. But the future for certain basic industries will continue to remain uncertain, as the Government will retain the option to nationalise them at any time it chooses.

Generally speaking, the statement is bound to carry a reiteration of the views expressed in the Draft Outline of the second Five-year Plan. This Report, it may be recalled, has emphasised that in the light of the objective of a socialist pattern of society, the State has to prevent concentration of economic power in private hands and has itself to "take on heavy responsibilities." It has also held that the exploitation of minerals and the establishment of basic and capital goods industries will be the special concern of the State so that the "responsibility for new developments in these fields must be undertaken, in the main, by the State." It has, however, been recognised that even in these fields there may be scope for joint ownership of new units by the Government and the private sector. The Report has also stressed the need for "equity participation" by the State in industries which depend on the Government for long-term finance.

It may reasonably be expected that these and similar ideas, expressed by the Government spokesmen and embodied in the Economic Policy Resolution adopted at the Amritsar session of the Congress, are bound to find a clearer expression in the much-awaited statement of industrial policy which is to take the place of the earlier policy statement made in 1948.

The general aim of the statement will be to divide industries into three categories and indicate the role of the State in each of them. The first category is represented by industries in which all further development will be the exclusive responsibility of the Central Government. The 1948 statement included six industries in this list—coal, iron and steel, aircraft manufacture, shipbuilding, mineral oil and manufacture of telegraph, telephone and wireless and radio equipment. It also stated that the production of atomic energy, arms and armaments and ownership of railways will be the exclusive monopoly of the Central Government. As air transport and life insurance have since been nationalised, the list will necessarily have to include these two industries. The Government is said to feel that there are other spheres in which the private sector has not shown any marked inclination to invest its money, so that it will be perfectly entitled to enlarge the scope of the public sector to include them. These spheres are heavy castings and forgings of iron and steel, heavy electrical plants, hydraulic and steam turbines, copper, lead, zinc, tin, molybdenum and wolfram-bearing minerals, the machinery used in iron and steel production, for mining, for manufacture of machine tools and certain industries. The mining of diamonds as well as the manufacture of cables may also be included in the list of industries under the first category, namely, the category of industries in which all fresh development will be the responsibility of the State. But provision may be made for the Government to enter into partnership with private enterprise in establishing new units in this sphere.

The second category of industries is the one where both the State and the private sector will operate side by side. This list, it is believed, will include fertilisers, mining of iron ore, manganese ore, chrome ore, bauxite and a few other minerals involved in the production of atomic energy, aluminium, machine tools, ferro-alloys, basic and intermediate products required by chemical industries, synthetic rubber, carbonisation of coal, chemical pulp, generation and distribution of electricity and sea transport. It will, however, be laid down, we are told, that the Government must accord equal treatment to the State-sponsored and private-owned units in this sphere.

The remaining industries will be left to the initiative of the private sector, though the State may walk in any time if the position is unsatisfactory. In any case, the private sector is expected to function within the limits that might be laid down by the Government out of considerations of building up the welfare State. The State will continue to set up institutions for providing financial aid to the private sector, particularly to the co-operative sector. But in cases where any direct aid that may be given by the Government exceeds a certain limit (Rs. 7 crores is mentioned in this respect), the Government may provide it in the form of equity capital. As regards the question of large-scale *vs*. small-scale industries, the Government's policy is expected to remain favourable to the cottage and small-scale units. In other words, it will continue the policy of restriction of the output of the large-scale sector, imposition of differential taxation and grant of subsidies to the weaker units. The Government is also expected to emphasise the consideration of regional and balanced development.

In many respects, the industrial policy statement will presumably be no more than the affirmation of the *status quo* in the industrial sphere. It may, as stated at the outset, be expected to re-emphasise the considerations which have already been eloquently expounded from the Congress Party-platform and summarised in the Draft Outline of the second Plan. But industrialisation of the country is not at all a matter of neatly-worded statements. For, even in the limited sphere that may be accorded to the private sector, the existing units may not be able to do very well if the only right they will enjoy is the unrestricted freedom to make losses, the State becoming an increasingly dominant partner in all their gains. The future of existing units will depend upon the Government's fiscal policy.

* * * * *

It will be seen from the foregoing forecast that the industrial policy statement will not provide much consolation to the bears in the share market. The stress on the need for devoting the available resources to establishing new industries would mean that the existing producers in the iron and steel sector would be left alone. The fear of nationalisation of the T.I.S.Co. and the I.I.S.Co. in the foreseeable future might, therefore, recede to the background. Since these Companies are indebted to the Government for more than Rs. 10 crores, it is possible that, at some stage, a part of these loans, possibly the excess over Rs. 7 crores, would be converted into equity capital. But that need not frighten investors. On the contrary, it could be a bullish factor. For the Government would then have to pay a premium for these shares which in turn would ensure a fair basis for calculating compensation in the event of nationalisation. Again, when the Government becomes a direct shareholder, it might not object to payment of higher dividends.

It is noteworthy that cement does not figure in the forecast of industries reserved for the public sector. Nor is there any mention of sugar. From time to time, there have been fears in the share market and elsewhere that these two industries might be nationalised. While cement falls under the category of basic industries, sugar offers scope for a sizable income. It will be recalled that even the Taxation Enquiry Commission had mentioned sugar as a fit case for fiscal monopoly which was interpreted by some sugar millowners as amounting to virtual nationalisation.

The possibility of the industrial policy statement not proving to be bearish is already being discounted in the share market. In fact, it is one of the factors for the revival of the upward trend in equities after the perceptible break they suffered early in the week. Other factors that have contributed to the recovery of equities are: (a) the impression that the acutest phase of the stringency of the money market is over or will soon be over; this impression has strengthened the belief that the Bank rate would not be put up in the near future; (b) the continued firmness of cloth market without attracting any new controls from the Government; and (c) encouraging reports about the activities of certain individual companies.

* * * *

This week saw no further intensification of the stringency in the short-term money market. There was actually a slight diminution in the demand for bank credit accompanied by some influx of funds. Some of the banks reported return of money lent against sugar and cotton. There have also been large payments by the Governments as reflected by the sharp rise of over Rs. 40 crores in notes in circulation during the week ended the 6th inst. Treasury bills to the tune of a crore of rupees matured without any offtake. For the next week also, the Reserve Bank has not invited any tenders for these bills and it looks as though their sale will remain suspended until money becomes quite easy. A fall of ¼ per cent. is reported in most of the short-term money rates.

* * * *

The upward trend in prices of foodgrains, commodities and bullion seems to have been halted. It is too early to say whether this is only a pause before a fresh advance or the end of upsurge. There is cause for this doubt, because, in the case of some of the commodities and bullion, after declining to some extent early in the week, prices are up again and the trend is steady to firm. The imposition of stiff export duties on linseed oil, niger seed, and kardi seed and the enhancement of the duty on castor oil have not made any perceptible impression on the prices of oilseeds and oils. Apparently, the supply of these is not adequate to meet both domestic and export demands. In world markets, too, the market is in favour of sellers in the case of most of the vegetable oils, due mainly to Russia's entry as a keen buyer. It is significant that the Government has not done anything to arrest the appreciation in the value of groundnuts.

Raw cotton has been ruling very firm, the number of varieties knocking against the ceiling having increased. The announcement permitting imports of 40,000 bales long-medium staples of ⅞" to 1.1/16" from all sources, including the U.S., has had no effect on the firmness of Indian cotton. This is not surprising, because even today Indian cotton is the cheapest in the world. Even the sacrificial price at which the U.S. Commodity Credit Corporation is selling comparable varieties of cotton is Rs. 150 above Indian parity. Similarly, thanks to the high export duty, Pakistan cotton is costlier to Indian mills by as much as Rs. 300 per candy. Thanks to the prospect of early arrival of new crop foodgrains and the Government's programme for building up adequate buffer stock of wheat and rice, prices of these two stable foodgrains are a shade lower and the rush among merchants to stockpile has diminished.

In the bullion market, the rising trend has been held under check by the arrival of silver coins from Tibet and Sikkim in sizable quantities and the desire among the bulls to book profits. The demand for both gold and silver but more particularly for the former, is said to be still good, while the influx of gold is very limited. It is stated that the Government's vigilance against smuggling is so strong and sustained that there has been a big fall in the flow of illegal gold. By chasing this gold right up to the dealers' shops and refineries, the Customs and Police have frightened many a smuggler into inactivity. The flow, of course, has not been completely stopped, but what is coming now is only a fraction of what it used to be at this time of the year in the past. The greatest beneficiary of this development is undoubtedly the Kolar Gold Mines. It is, however, to be hoped that the protagonists of nationalisation of these mines will not try to use this factor as an additional argument in their favour.

* * * *

This reminds one of the forthcoming Conference between the representatives of the Mysore and the Central Governments fixed for Monday next at New Delhi. From what Mr. Hanumanthaiya, Chief Minister of Mysore, disclosed at Bangalore early this week, it would appear that the management of mining companies has finally succumbed to the pressure from all sides in the State, including workers, and that it is now keen on getting only fair compensation. The Chief Minister declared that the issue to be discussed with the Central Government was not whether or not the gold mines should be nationalised but the quantum of compensation, payable to the Companies. If this is the only issue, it is not clear as to why the Companies' representatives are not scheduled to participate in the proposed talks and why Mr. Hanumanthaiya is taking with him the leader of the Opposition in the State Assembly. On the subject of compensation, while the Government of Mysore is prepared to pay, according to the Chief Minister, on the basis of the market value of the Companies' shares before the idea of nationalisation was raised, the management of the Mines feels that the book value of the assets minus liabilities should be taken.

Some hint about the attitude of the Central Government towards nationalisation of gold mines was given by Mr. K. D. Malaviya. He said that, generally, the Government did not attach as much importance to gold mining as it did to coal, lignite, petroleum, and non-ferrous metals. But, in so far as the Mysore Gold Mines were concerned, he would welcome the move of the State Government if it wanted to nationalise its mines "without prejudice to the merit of the work entailed in it." This is a very vague statement; nevertheless, it is sufficient to conclude that the Centre is not keen on nationalising these mines. It is to be hoped that, in view of the limited resources at the disposal of the Government and the need for establishing new industries, the Government of India will have the courage of its conviction to tell the Mysore Government definitely and firmly that its request for nationalisation of the Kolar Gold Mines could not be granted.

SHARES RECOVER AFTER EARLIER SHAKE-OUT

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, 12*th April*

THE share market opened the week with the sentiment considerably upset by a series of bearish factors. As a prelude to keep the present threat of inflation under check, the Reserve Bank issued directives to commercial banks to furnish fortnightly statements giving break-up figures of their advances, against commodities and shares. This gave rise to fear that a credit squeeze was in the offing. Some of the operators visualised the prospect of an increase in the Bank rate in the not very distant future. This induced considerable profit-taking by bulls and short-sales in speculative industrials on the 6th inst. and values closed lower all round.

The declining trend was further accelerated in the new account on Monday by fear of nationalisation of Indian Copper. This fear stemmed from a misleading Press report which stated that the Government had decided to take over diamond and copper mines. This sent several scrips toppling down and values touched the lowest levels for the week on Tuesday. A part of this damage was also due to renewed pressure arising from the technical weakness of the market, and deterioration in the Indo-Pak relations.

In the subsequent two sessions, however, the market staged a mild rally. A correction by the news agency that Indian Copper was not listed for immediate nationalisation brightened the sentiment. The value of this scrip, which had dropped from Rs. 6-12 to Rs. 5-4 in the earlier stampede, recovered to Rs. 6-9. Among the other counters, the lower levels touched earlier induced some active professional support over a broad front. Fresh incentive to this support was provided on Wednesday by a marked increase of Rs. 40 crores in the expansion of currency which indicated that expenditure on development, coupled with the possibility of freezing of additional productive capacity of cotton mills for assisting Amber Charkha, was bound to result in inflation. Added to this was the report that there was some institutional buying in some textile scrips, particularly Kohinoors. Operators were also emboldened to enter into commitments by the report that the stamp duty on transfer deeds on shares had been fixed at a uniform level of As. 12 for Rs. 100 all over India from the 1st inst., as against Re. 1-2 in Bombay, Re. 1-8 in Madras and As. 12 in Calcutta.

In the recovery which followed as a result most of the shares regained a portion of the losses suffered by them early in the week. Nevertheless, at close, the quotations were generally lower than those at the end of last week, though the undertone was steady.

Tata Ordinaries, in the steel section, were marked down from Rs. 252 to Rs. 241-4 in the initial days of the week. Subsequently, however, on professional support, they rallied to close higher at Rs. 246-12, recording on balance a loss of Rs. 5-4. Indian Irons which had moved down from Rs. 35-13 to Rs. 34-7-6, improved to Rs. 35-6 on persistant support from Calcutta. The week-end recovery is attributed to reports that the Government is likely to indicate in its new industrial policy its desire not to nationalise the existing steel companies.

The textile section was considerably active on professional support, though profit-taking at bulges tended to push down values. Bombay Dyeings which held the leadership, moved both ways and ultimately emerged with a loss of 10 points. They opened the week at Rs. 632-8, as against Rs. 638 at the close of last week, and improved to Rs. 636-4 on Tuesday. Yesterday and today they evoked sustained interest and wound up the week at Rs. 647-8. After a recession from Rs. 358-8 to Rs. 343, Kohinoors rallied to Rs. 357-4, as a result of buying by an insurance company. Svadeshis, however, were fractionally better at Rs. 240, as against Rs. 239-8, owing to expectation of a higher dividend. Centurys were subdued and closed with a loss of Rs. 3 at Rs. 535. Indu Ordinaries were As. 9 lower at Rs. 12-14, and Deferreds an anna less at Rs. 2-3. Standards, on the contrary, fared better by Rs. 5 to close at Rs. 438-12.

Bank shares were a shade weak with leading counters registering losses on balance. Bank of Barodas shed 3 points to finish at Rs. 93-8. Centrals also met with some realising pressure and came down to Rs. 47-8 from Rs. 48. Bank of Indias receded by Rs. 2-4 to Rs. 151, while Punjabs gained a rupee at Rs. 48. United Commercials, however, remained unaltered at Rs. 50-8.

The trend in electricity shares, too, was downward. Transactions were done in Tata Hydros at Rs. 130-8, as against Rs. 131 a week ago. Tata Powers declined by Rs. 6-4 to Rs. 1,362-8. Ahmedabad Electrics changed hands Re. 1-4 lower at Rs. 101-9, and Andhras fell by Rs. 15 to Rs. 1,272-8.

In the miscellaneous section, all favourites lacked sustained support. In most of them, prices moved both ways and ultimately revealed minor losses. Sugar shares were generally easy. Belapurs retreated further from Rs. 230 to Rs. 226-8. Phaltans were dull at Rs. 142-8, while Walchandnagars closed Rs. 7-8 lower at Rs. 247-8. A.C.Cs. among cement shares, declined from Rs. 219-4 to Rs. 215-4, while Digvijays improved from Rs. 182-12 to Rs. 184. In the engineering section, Tata Locomotives lost Rs. 4 to Rs. 157-8. Larsen and Toubros were fractionally down at Rs. 15-6. Premier Constructions met with realising pressure and retreated from Rs. 190-8 to Rs. 186. Shivrajpurs declined by Rs. 6 to Rs. 106-8.

In the shipping and transport section, Scindias staged a setback from Rs. 17-12-6 to Rs. 17-2-6, but recovered subsequently to Rs. 17-9-6. Hindusthan Motors had buyers at Rs. 10-4 after going down to Rs. 9-13.

Among other miscellaneous shares Bombay Burmans (old) reported a loss of Rs. 11-4 to Rs. 627-8, but new shares improved by Rs. 7-8 to Rs. 236-4. Tata Oils were unchanged at Rs. 49-8, but Tata Chemicals were down by As. 11 at Rs. 17-13. Wimcos were easy at Rs. 201-4, as against Rs. 206-14 a week ago.

* * * *

Calcutta Stock Exchange

CALCUTTA, 11*th April*

An irregular trend was in evidence on the Calcutta Stock Exchange this week. The market opened the week on a buoyant note, reflecting operators' continued favourable reaction to growing signs of inflation in the country. The buoyancy was more or less sustained till the 9th inst., when, thanks to rumours regarding nationalisation of the Indian Copper Corporation, the market developed weakness. In the subsequent two sessions, however, the market once again turned cheerful, following the denial of nationalisation of the Company and revival of interest in some speculative scrips at lower levels. Industrial equities, as a result, staged a recovery. But the recovery was not so marked as to make good the earlier losses, so much so that the closing quotations for equities today were generally below those prevailing a week before.

Over the week, jute company shares were subjected to heavy selling and their prices were marked down. Dalhousies and Lansdownes slumped by Rs. 11 each to Rs. 104 and Rs. 109, respectively. Burnagores fell by Rs. 10 to Rs. 131. Lawrences dropped Rs. 9 to Rs. 107. Champdanys receded by Rs. 5-8 to Rs. 153-8 and Anglo-Indias by Rs. 5 to Rs. 175. Budge Budges slipped by Rs. 2 to Rs. 140. Nuddeas declined by Re. 1-4 to Rs. 39-4. Howrahs and Nationals lost As. 9 each to Rs. 27-7 and Rs. 24-9, respectively.

Coal shares also came in for selling pressure. East Indias moved down by Re. 1-12 to Rs. 33. Burrakurs decreased by As. 5 to Rs. 14-5. West Bengals eased by a like amount to Rs. 7. Bhalgoras gave way from Rs. 7-4 to Rs. 7.

Most of the engineering and mining company shares lacked support. Among the former, Britannia Engineerings receded by As. 14 to Rs. 18-1. Indian Irons finished As. 7 lower at Rs. 35. Among mining shares, Burma Mines climbed down by As. 7 to Rs. 3-3, notwithstanding reports of higher net profit and declaration of a maiden dividend of 2½*d.* per share. Indian Coppers dropped As. 6 to Rs. 6-8. B. B. Petrols lost As. 3 to Rs. 4-1. Several miscellaneous company shares, too, were neglected. Indian Cables retreated by As. 9 to Rs. 31-4. Dunlop Rubbers reacted from Rs. 31-10 to Rs. 31-4, on reports of a fall in the profit margin of the Company in relation to turnover during the year 1955. Rohtas lost As. 4 to Rs. 22-8.

Tea company shares recorded handsome gains, on account of sustained buying support induced by reports of an impressive rise in tea prices in London and encouraging deliveries for export. Hantaparas forged ahead by Rs. 41 to Rs. 319. Bishnauths rallied Rs. 3-1 to Rs. 26-1. Bhagmaris strengthened by Re. 1-2 to Rs. 28-10. Tezpores hardened by a rupee to Rs. 27-3. Borapukuris climbed up by As. 14 to Rs. 24-2. East Indias put on As. 6 to Rs. 27-2. Atals gathered As. 3 to Rs. 8-15 and Hasimaras As. 2 to Rs. 40.

* * * *

Madras Stock Exchange

MADRAS, 10*th April*

The distinctly bullish fervour which characterised the trading on the Madras Stock Exchange for well over six weeks, abated somewhat during the week under review. In fact, the market ruled generally easy, with the exception of some selective scrips which encountered special buying enquiries and continued their upward march. The easiness was due to fears regarding imposition of credit restrictions by the authorities to curb inflationary tendencies developing in the country; the fears were based on the latest move of the Reserve Bank in asking the banks to submit particulars of their advances according to the purposes for which they had been made. There were also rumours of the possibility of a rise in Bank rate. The deterioration in relations between India and Pakistan also acted as a damper. The cumulative result of all these factors was unloading in several counters, leading to a break in their values.

There were a few important company announcements during the week under review. An extraordinary general meeting of the East India Distilleries and Sugar Factories Ltd. and seperate class meetings of 'A' and 'B' shareholders will be held on the 30th inst. to consider the proposals of the Board for the issue of bonus shares to 'A' and 'B' shareholders and for the consolidation of the two classes of shares into one class of ordinary shares. The Anapari Estates Ltd. proposes to raise the authorised capital of the Company from Rs. 20 lakhs to Rs. 40 lakhs by issuing 100,000 preference shares of Rs. 10 each (7 per cent. free of any deduction for agricultural income-tax) and 500,000 ordinary shares of Rs. 2 each. The Cottanad Plantations Ltd. proposes to increase the authorised capital from Rs. 5 lakhs to Rs. 20 lakhs by issuing 150,000 shares of Rs. 10 each. The Kothari Textiles Ltd. has decided to make a capital issue of Rs. 24 lakhs, consisting of 60,000 'B' preference shares of Rs. 10 each and 180,000 new ordinary shares of Rs. 10 each, both at par, in the ratio of one 'B' preference share and three new ordinary shares for every four ordinary shares held by shareholders as on 1st May 1956.

The week under review was also notable for a few dividend announcements. The Savamalai Estates Ltd. has recommended a dividend of 10 per cent. for 1955, as against 25 per cent. for the previous year. Radio and Electricals Ltd. has recommended a dividend of 9 per cent. for 1955, as against 7½ per cent. The Kil Kotagiri Tea and Coffee Estates Company, Ltd., has recommended a dividend of 20 per cent. for the year ended October 1955, as against 30 per cent. The Directors of the Guntur Power and Light Company, Ltd., have sanctioned the payment of a further 15 per cent. *ad-interim* dividend (free of income-tax), making in all 25 per cent. for the year ended 31st March 1956, as against 20 per cent. for the previous year. The Travancore Ogale Glass Manufacturing Company, Ltd., has passed over the dividend this year too.

Thanks to lack of support, textile mill shares staged a recession. Lakshmis and P. Andavar 'A' dropped Rs. 6 each to Rs. 190 and Rs. 160, respectively. Buckinghams fell by Rs. 5 to Rs. 181-8. Bangalore Woollens declined by a like amount to Rs. 565. Rajalakshmis climbed down by Rs. 4-8 to Rs. 171-8 *cum-div.*, Metturs by Rs. 4 to Rs. 406, Anglo-Frenchs by Rs. 3 to Rs. 102, Coimbatore Pioneers by Rs. 2-8 to Rs. 270 and Ranga Vilas by Rs. 2 to Rs. 89. Lakshmi 'As' lost a rupee to Rs. 95. Maduras shed As. 12 to Rs. 50-4.

In the planting section, coffee shares were particularly subjected to selling pressure. Consolidated Coffees moved down by As. 13 to Rs. 17-15. Coffee Lands receded by As. 8 to Rs. 22-4. Puthutotams declined by As. 3 to Rs. 4-10. Kadur Coffees were quiet at Rs. 2-9. Among tea shares, United Nilgiris dropped Rs. 10 to Rs. 350. Peermades suffered a loss of As. 8 to Rs. 38-4. Blue Mountains shed As. 5 to Rs. 5-9. Periakaramalais and Waterfalls eased by As. 3 each to Rs. 8-11 and Rs. 6-3, respectively. Among rubber shares, Valkundams retreated by As. 12 to Rs. 27-12 *cum-div.* Cochin Malabars declined by As. 3 to Rs. 8-11 and Thirumbadis by As. 2½ to Rs. 2-3. Be Bes lost an anna and a half to Rs. 4-15-6.

In the miscellaneous section, Bruntons dropped As. 4 to Rs. 8. F.A.C.Ts. finished As. 2 lower at Rs. 7. Mettur Chemicals lost a similar amount to Rs. 9-12. Binnys, on the other hand, elicited good attention of buyers; they moved up by Rs. 6 to Rs. 162. Deals in cement shares were put through at higher levels, Andhra Cement 'As' increasing by Rs. 2 to Rs. 158 and India Cements by As. 8 to Rs. 35-4. Dalmia Cements were firm at Rs. 14-10. Mysore I.T.Ls. evoked good buying interest and spurted by As. 10 to Rs. 5.

PRODUCTION OF SKELP BY TATAS

Another landmark in the industrial development of India has been established with the inauguration of the skelp mill as Jamshedpur on 29th March 1956. This event also marks the completion of an important phase of the modernisation and expansion of the Tata Iron and Steel Co., Ltd.

Skelp is the term applied to hot rolled steel strip with square or slightly levelled edges from which welded tubes or pipes can be manufactured. This is the first time skelp is being made in India and the Tata Iron and Steel Company has thus earned the distinction of being the pioneer in this field. The skelp produced in this mill will be supplied to the Indian Tube Company (1953) Ltd., another joint enterprise by the T.I.S.Co. and Stewarts and Lloyds Ltd. of U.K., for the manufacture of tubes, which was inaugurated on 7th March 1956. The Indian Tube Company had commenced production with imported skelp. The capacity of the skelp mill, when in full production, is 200,000 tons.

BENGAL PAPER MILL

Messrs. Balmer Lawrie & Co., Ltd., have been reappointed Managing Agents of the Bengal Paper Mill Company, Ltd., for a period of 10 years with effect from 1st April 1956, the date of commencement of the Companies Act, 1956. At the extraordinary general meeting of the Company convened on 29th March 1956 for the purpose, the resolution extending the term of the managing agency was duly adopted. The resolution was, however, opposed by a group of shareholders for reasons referred to in our issue dated 24th March 1956. The dissidents, we are told, have since applied for an injuction to restrain the Company from putting the resolution into operation.

NEWS IN BRIEF

THE current session of the Lok Sabha, previously scheduled to conclude on 26th May, is expected to be extended up to 10th or 15th June.

A high altitude cosmic ray station is proposed to be set up by the Government of India above the Gulmarg-Khilanmarg area in Kashmir.

The annual general meeting of the Millowners' Association, Bombay, will be held in Bombay on Tuesday, 24th April 1956.

The Government of India has decided to allow clearance of prohibited types of motors if they are imported at integral parts of plant and machinery.

The *baisakhi* lac crop in India for 1956 is estimated at 751,000 maunds, as against the previous year's final estimate of 813,000 maunds.

The Tariff Commission has taken up for investigation the question of continuing protection and assistance to the antimony industry beyond 31st December next.

The Bombay Tenancy and Agricultural Lands (Amendment) Act 1955 will be brought into force on 1st August next, on which date the revenue year of the State begins.

Large deposits of high grade iron ores with an iron content of more than 60 per cent. have been discovered over extensive areas in the districts of Khammameth and Warangal in Hyderabad State.

Cotton cloth packed for internal consumption in India and other cotton manufactures are now permitted to be exported to Tibet, Bhutan and Sikkim without an export licence.

The Central Government has imposed an export duty of Rs. 250 per ton on linseed oil. It has also levied an export duty of Rs. 200 per ton on nigerseed oil and kardiseed oil and raised the duty on castor oil from Rs. 125 to Rs. 175 per ton.

The Andhra Government will shortly float a loan of Rs. 6 crores to finance the first year programme of the second Plan. This was disclosed by the State's Development Commissioner and Planning Secretary at Kurnool last week.

A Government of India delegation left for the U.K. on the 12th inst. to negotiate with the representatives of the British Government the annual review of the air services between the two countries under the Indo-U.K. Air Transport Agreement. The delegation is led by Mr. D. C. Das, Joint Secretary, Ministry of Communications.

Eleven schemes for the development of sericulture intended to increase silk production in Andhra State from the current level of 800 pounds to 30,000 pounds annually are expected to be put through under the second Five-year Plan. These schemes, which are estimated to cost Rs. 10.5 lakhs, will soon go before the Central Silk Board for finalisation.

The International Co-operation Administration has authorised a procurement of $17,389,670 worth of steel mill materials and other supplies to aid India's economic development programme. About $13,800,000 worth of iron and steel mill materials are to be purchased in the world market for delivery to India by 31st January 1957. The balance is for the purchase of farm pesticides, lumber and saw mill products and heavy and light trucks for delivery to India.

The foundation-stone of the Rs. 60-lakh Thapar Institute of Engineering and Technology was laid by President Dr. Rajendra Prasad at Patiala on Monday this week. This is the first institute in PEPSU for imparting theoretical and practical training upto graduate and post-graduate courses in civil, mechanical and electrical engineering and textile technology, as also diploma course in all the three branches of engineering and in automobile engineering.

The import policy for cycle tyres and tubes during the current half-year has been liberalised. Accordingly, the 40 per cent. limit to the face value for import of cycle tyres has been withdrawn and these tyres can now be imported up to the face value of additional licences which, *inter alia*, will be valid for import of cycle rickshaw tyres also. Applications for import of cycle and cycle rickshaw tyres will also be considered from established importers on an *ad hoc* basis.

On the recommendation of the Reserve Bank of India, the Central Government has declared that, in the case of any banking company incorporated in the State of Travancore-Cochin and which has been confining its activities to that State, the provisions of Sub-section (1) of Section 240 of the Banking Companies Act, 1949 shall not apply for the period from 1st April 1956 to 31st March 1957, in so far as such provisions require such a banking company to maintain, in cash, gold or unencumbered approved securities valued at a price not exceeding the current market price, an amount in excess of 15 per cent. of the total of its demand and time liabilities in India.

A conference at ministerial level between the Government of Mysore and the Government of India will be held at New Delhi on the 16th inst., to take a final decision in regard to matters connected with the nationalisation of the Kolar Gold Mines in Mysore State. Mysore will be represented at the Conference by the Chief Minister, Mr. K. Hanumanthaiya, and the Home Minister, Mr. H. Siddaveerappa, and three representatives of the two Houses of the State legislature, including the leader of the Opposition in the State Assembly. The Government of India will be represented by Maulana Azad, Education Minister.

* * * *

From Abroad

World consumption of tin metal during January 1956 is estimated at 12,900 tons, as against 12,400 tons in December 1955 and 11,800 tons in January 1955.

The demand for oil in the U.S. is expected to increase by 5 per cent. in 1956, according to the Director of the Bureau of Labour Statistics of the U.S. Department of Labour. Petroleum is said to provide now more than 40 per cent. of the energy used in the U.S. It is predicted that, within another 10 years, 50 per cent. of the U.S. chemical output will be derived from petroleum products.

The Trans World Airlines carried a record number of passengers, at over 4 million, during 1955 and its gross operating revenues also reached a record total of over $217.4 million. The net income after providing for taxes was, however, lower at $5.4 million, as against $13.4 million in the previous year. The T.W.A. is aiming at carrying more passengers and earning higher revenues during the current year.

The U.K. oil refinery companies are expected to announce shortly their plans to expand their capacities in order to meet the large increase in demand for gas, diesel and fuel oil expected over the next five years. The consumption of the "black" oils in the U.K. is expected to rise from 7.75 million tons in 1955 to 21.75 million tons by 1960 and increases on a similar scale are expected in most of the West European countries.

The production of automobiles in France during 1955 amounted to 725,000 vehicles, an increase of 20 per cent. over that in 1954. It is, however, considered that the French automobile industry will be fortunate if it is able to maintain its modest position in world exports in the face of competition from Britain and Germany. Harsher legislation in regard to depreciation than in other countries, heavy customs duties, averaging 15 per cent. on imported machinery, rising wages and social burdens are said to be the main causes for the industry's deteriorating export potential.

The output of cars in the U.S. during March this year is estimated at about 530,000, as compared with 554,667 units in February and 611,190 in January. Thus, the trend of production during the current year so far has been downwards, contrary to the general seasonal pattern. Normally, in the early part of the year, production used to rise month by month reaching a peak in March, but this year the trend has reversed. In 1955, for instance, the output rose from 659,619 cars in January to 676,000 in the succeeding month and to 794,015 in March.

A large block of General Motors shares will be offered to the public by about 1st May this year. The shares, amounting to about 1.28 million, will be released by the Alfred P. Sloan, Inc., a non-profit organisation, which provides funds for educational, scientific and charitable purposes, set up in 1934 by Mr. Alfred P. Sloan, Chairman of General Motors. The shares were received by the Foundation recently, following the death of Mrs. Alfred P. Sloan, whose husband retired last week from the chairmanship of General Motors. The decision to sell the additional shares accruing from Mrs. Sloan's estate has been taken to diversify the holdings of the Foundation, which at present are heavily concentrated in the stock of General Motors.

The Soviet Union is to give China 2,500 million roubles (£227 million) worth of aid under an agreement signed in Peking on 7th April. The Soviet Union will provide the materials, machinery and engineers and technicians needed to build 55 new industrial enterprises. The 55 new enterprises would comprise 156 industrial units, in accordance with a previously concluded Soviet-Chinese agreement. These would include metallurgical, machine building and chemical works, factories producing artificial yarns and plastics, electro-technical and radio enterprises, a synthetic fuel plant and a number of electric power works. They would also include scientific research institutes for China's aeronautical industry. The money involved in the agreement would be paid back by the Chinese Government in goods.

The industrial fund for the advancement of scientific education in British schools is within £600,000 of its financial target of £3.5 million. The fund, inaugurated last November, was formed with a view to assisting the teaching of science in Britain's independent and direct-grant schools by the provision of capital grants towards the building, expansion, modernising, and equipping of science laboratories. The 17 founder-member companies undertook to provide £1.9 million and since then 73 additional companies have agreed to support the fund. The total now subscribed is £2.9 million. The information obtained from a questionnaire completed by 439 schools shows that the schools "have very much in mind the importance of extending and improving the volume and quality of science teaching. Remarkable results are already being secured."

PERSONAL

SIR Joseph Kay, K.B.E., Chairman and Managing Director, Messrs. W. H. Brady & Co., Ltd., Bombay, left for the U.K. on Tuesday this week.

Mr. Wilfrid Russell, alternate Managing Director of Killick Industries Ltd., who recently retired from the Company, left for the U.K. on Tuesday last.

Mr. N. A. S. Lakshmanan, former Director-General of All-India Radio, has joined the Union Ministry of Iron and Steel.

Mr. M. A. Chidambaram, Chairman of the Automobile Products of India Ltd., has been re-elected President of the Indian Chamber of Commerce, Madras, for the current year.

Mr. Tan Tzu-li, Chinese Ambassador to North Korea, has been appointed Chinese Ambassador to India *vice* Gen Yuan Chung-hsien, who has been appointed Deputy Foreign Minister, Government of China.

Dr. H. J. Bhabha, Chairman of the Atomic Energy Commission, returned from Rome on Tuesday last after participating in the meeting of the Working Level Committee (Atomic Energy Agency) in Washington.

Nawab Ali Yavar Jung, India's Ambassador to Egypt, will represent India at the forthcoming U.N. conference on the creation of a Special United Nations Fund for the Economic Development of the underdeveloped areas (S.U.N.F.E.D.).

Mr. Kanwar Sain, Chairman of the Central Water and Power Commission, left for Bangkok on an assignment from the E.C.A.F.E. in connection with the study of water resources development of the lower Mekong basin.

Baron Von Pallandt, the Netherlands Ambassador in India, left for Genoa *en route* to The Hague, after his three-year term of office. Mr. J. Haverkorn, *Charge d'Affaires* for the Netherlands at New Delhi, will officiate till the appointment of a new Ambassador.

Mr. M. M. Philip, Director-General of Posts and Telegraphs and leader of the Indian delegation to the Executive and Liaison Commission of the Universal Postal Union (U.P.U.), left for London *en route* to Berne to attend the meetings of the U.P.U. executive and its sub-commissions.

Mr. N. Majumdar, Industrial Adviser (Textile Production), Office of the Textile Commissioner, has been appointed Member-Secretary of the Cotton Textiles Loans Advisory Committee, to whom applications from cotton mills for grant of financial assistance for rehabilitation and modernisation should be addressed.

Messrs. D. Das Gupta of Hindustan General and B. K. Setalvad of Ruby General have been elected President and Vice-President, respectively, of the Indian Insurance Companies Association, Calcutta, for 1956-57. Messrs. J. P. Bhargava (Concord), R. C. Rakshit (National Fire), N. M. Medora (British India General), T. S. Muthuswami (Standard General) and P. Balan (United India Fire) are the other members of the Committee.

Dr. Vinayak G. Panse, Statistical Adviser to the Indian Council of Agricultural Research, has been appointed by the U.N. Food and Agriculture Organisation to undertake special fisheries missions in Egytp and Mexico. In Egypt, Dr. Panse will advise and assist the Government in the re-organisation and develoment of the fisheries administration and statistical service. In April, he will go to Mexico as a member of the Board of the Training Centre on Experimental Designs and Survey Techniques of Agricultural Experimentation.

"COMMERCE" 1931

FROM OUR FILES OF TWENTY-FIVE YEARS AGO

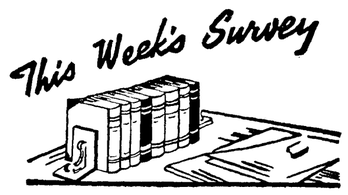
CALCUTTA, 11*th April*

Policy of Dear Money

Although money rates in India have been high in relation to the rest of the world, they have been no more than normal for the busy season in India. The experience of recent years shows clearly that, with an effective Bank rate of 7 per cent., the long-term Government securities may quite well be selling on a 4½ per cent. basis. Money has only been tight for short periods during the past year. The main cause of the decline in Indian securities is, therefore, to be looked for elsewhere.

It is, of course, inevitable that, with great but uncertain constitutional changes hanging over the whole position, the price of securities should fall. Rupee securities in India must, in the main, move in relation to London prices and the London business world dislikes uncertainty, above all things. It need not necessarily mean distrust in those who may be responsible for working the new constitution, but rather a fear of the unknown and a feeling that the new machine must prove itself.

Sir George Schuster asked those who resent it to realise that the changes under discussion are not only sudden but vital, and that the outside world must get accustomed to new ideas and, in the meantime, demand some proof or guarantee for the new order, and he maintained that, if, for these reasons, safeguards are proposed, their object is the maintenance of confidence and credit until the new order has proved its stability. If India can restore trust in the future, investors will regain confidence, the movement of capital will stop, further borrowings in London.



INDUSTRIAL HOUSING

REPLYING to the debate on grants to the Ministry of Works, Housing and Supply, in the Lok Sabha the other day, the Minister, Sardar Swaran Singh, stated in effect that the implementation of the housing programme was "not bad." His reason for this conclusion was that during the first Plan period, out of a total actual sanction of the order of over Rs. 44 crores for the construction of housing in the country, the actual disbursements were a little over Rs. 24.5 crores. Of these, the actual disbursements for industrial schemes were a little over Rs. 13 crores, as against Rs. 22 crores sanctioned for the purpose. The Minister thought that even these disbursements could be regarded as satisfactory, as they were achieved in the face of several handicaps. It is, however, difficult for any dispassionate observer to share his view. Apart from the fact that the amount spent was only about 55 per cent. of the sum allotted for housing, the achievements in physical terms were very poor indeed. The sum of Rs. 13 crores spent on housing for industrial workers has resulted in the construction of 79,500 units only, which represent an infinitesimal fraction of the demand.

A still sadder tale is told by the figures for low-income group housing scheme. Only a sum of Rs. 11 crores could be disbursed out of a total sanction to the tune of Rs. 21.5 crores. And it should be noted that acute shortage of housing in urban areas is being experienced mostly by low-income groups which form the bulk of urban residents, let alone the groups living in rural areas. In the circumstances, the Minister's claim that the first Plan targets had been "more or less achieved" is most unconvincing. It will be pertinent to recall here the utter disappointment expressed at the poor progress of housing in colliery fields by no less a person than the Production Minister, Mr. K. C. Reddy himself. Speaking in the Lok Sabha on the 5th inst., Mr. Reddy remarked in an apologetic tone: "We are very sorry over the absence of proper housing facilities for colliery workers in the private sector and in the public sector also."

It will be noted from the above quotation that the public sector too has been lagging behind in providing housing for workers. The poor progress on the housing front is not due to any want of willingness on the part of those who run industries in both the sectors. For there has not been any lack of proper appreciation of the importance of housing to the efficiency and physical fitness of the industrial worker. Enough emphasis has been laid on this important aspect in blue books and in the Press. What has not, however, been given proper recognition is the complexity of the housing problem, involving money and materials of a magnitude bigger than the available resources. Housing materials such as bricks, cement and steel are in short supply and could be had only at a price. Then there is the question of procuring the land for construction of houses. This is, as Sardar Swaran Singh himself said, the crux of the housing scheme. Not only land is not easily available but also its cost has been prohibitive and where it is available, the legal procedure to acquire it has proved to be a cumbersome process.

These difficulties explain why, in spite of a 25 per cent. subsidy and 37½ per cent. loan, employers have not been able to proceed with the housing programmes. As Sardar Swaran Singh himself pointed out, even after this assistance, the employers have to find the remaining 37½ per cent. of the funds and shoulder the liability to repay the loan. He added: "All that is obviously reflected in the cost structure, and they (employers) say that this social overhead pushes up the price of manufacture to levels far beyond what it is worth."

The lack of monetary and material resources apart, more erection of a four-wall tenement with a roof does not constitute housing. For the houses will not be worth living in, unless the area selected for building them is developed by the construction of roads, by the supply of water and electricity and with provision for sewage. All these cost enormous amounts and by no stretch of imagination could it be concluded that by compelling industrial concerns, as was suggested by a few members of the House, decent quarters could be provided for all workers. Industry can hardly be expected to find funds when there is a shortage of capital and when the public sector has been expanding, snatching away the country's savings in very many ways. Consequently, the suggestion made in Parliament for compelling employers to build houses lacks logic and a proper understanding of the problem. It is, indeed, surprising that, on this subject, even Sardar Swaran Singh, who is fully aware of the difficulties of housing, in general, and of the private sector, in particular, should have remarked that the Government was still undecided whether or not to use compulsion on employers to build tenements for their workers. He should have straightaway rejected the very idea of compulsion. Any such compulsion would only retard the pace of industrialisation. The Government of Bombay once tried it, by insisting that no employer would be allowed to establish new factories, unless he undertook to build houses for 60 per cent. of the employees. Later, it had to relax this condition to a very considerable extent, as it found that the restriction was a great impediment to the establishment of many new industries in the State and that it tended to divert the attention of *entrepreneurs* to other States. Sardar Swaran Singh disclosed that the matter of exercising compulsion over employers was still being considered by the Planning Commission in consultation with the Ministry for Commerce and Industry. It is to be hoped that the Planning Commission would study in greater detail the problems involved in industrial housing and give the country the right lead. It will do well to study the results of the Bombay Government's experiment referred to above before taking a decision.

INDO-RUSSIAN SHIPPING AGREEMENT

Much significance attaches to the Indo-Russian shipping agreement signed by the representatives of the two countries, last week. For one thing, it is the first agreement of its kind. It is true that the bilateral trade agreements which India has concluded with other countries include a clause to the effect that steps will be taken to ensure that a fair proportion of the trade is carried by Indian ships. But this has often turned out to be a routine clause, with no special significance, as Indian tonnage is negligible, taking into account India's foreign trade. The Indo-Russian shipping agreement is the only shipping pact which India has signed with a foreign country. Secondly, the fact that a shipping agreement has been signed indicates that the authorities do visualise a certain expansion in the trade between the two countries which, as is well known, forms at present a very small proportion of the foreign trade of either of the two countries. Some recent developments point to an expansion of trade with Russia—more appropriately, Russian export trade to India. Apart from the Indo-Russian steel enterprise, the Bhilai plant, in which Russian machinery will be used, there are other sectors in which Russian technical know-how and technical equipment will probably be increasingly used. These sectors include mining and prospecting operations in the public sector. Then, there are the million tons of steel which Russia has agreed to supply in three years, beginning from 1st April 1956. Russia has agreed to accept payment for these goods and services in Indian goods to the maximum extent possible. India has, therefore, to export a sizable quantity of merchandise to Russia. Accordingly, in the near future, the trade between the two countries will be a two-way traffic.

It is in the light of the possibility of the expansion of trade between the two countries—a reference to this was made in the Joint Indo-Soviet *communique* issued in December 1955—that the shipping agreement has to be viewed. The agreement follows detailed discussions which were held between an Indian delegation consisting of officials and a Soviet shipping delegation. It provides for the distribution of the cargo on a parity basis. An understanding has also been reached regarding mutually beneficial freight rates.

The terms of the agreement visualise the use of six ships (of a total tonnage of 55,000 (dw.t.) on either side for purposes of providing regular cargo shipping communication between the Indian ports of Bombay and Calcutta, on the one part, and the Soviet ports of Odessa and Novorossiisk, on the other. The schedule of sailing will be fixed every three months after mutual consultation. The two countries will grant to each other's ships "most favourable conditions" allowed by the corresponding laws in force from time to time. Further, freight earnings of Soviet ships will be exempt from Indian income-tax and similar treatment will be accorded to those of Indian ships at Soviet ports.

In pursuance of their general policy of minimising delays to shipping and accelerating their turn-round at ports, the parties to the agreement will, consistently with their international obligations and the laws and regulations applicable to each port, adopt all possible measures for increasing the norm of output of loading and unloading through the introduction of one or two additional work shifts, working on Sundays or holidays or earmarking berths for the loading and unloading of special commodities. For settling all questions connected with the operation of the service, India will be represented by the Directorate-General of Shipping and Russia by its official shipping representative. The Indian ships at Soviet ports will be handled by "Infloat" while the handling of Soviet vessels at Indian ports will be effected by Indian firms to be appointed by the Soviet party as their agents in consultation with the Directorate-General of Shipping, Government of India.

A list of freight rates for different commodities has been appended to the agreement which incidentally indicates the goods that might participate in Indo-Russian trade. From Soviet ports, Odessa-Novorossiisk, to the Indian ports, Bombay-Calcutta, the freight rate (per metric ton) for machines, machine tools and equipment will be Rs. 107-150, for metals Rs. 74-82, for grain Rs. 74, for pipes Rs. 83-95, textiles Rs. 166, paper Rs. 115, for cotton Rs. 150, for cement Rs. 60 and for dyestuffs Rs. 150. The freight rates from Indian ports to Soviet ports will be Rs. 155 for tobacco, Rs. 216 for tea, Rs. 115 for jute goods, Rs. 133 for cotton, Rs. 120 for shellac, Rs. 150 for wool, Rs. 166 for spices, Rs. 160 for hides, Rs. 130 for nuts, and Rs. 170 for footwear. For commodities not mentioned in this schedule, the freight rates, it is stated, will be fixed through joint consultation by the authorities specified in the agreement.

LABOUR IN FREE WORLD

Mr. Walter P. Reuther, Vice-President of the 15-million strong American Federation of Labour and Congress of Industrial Organisations (A.F.L.-C.I.O.), has, ever since he arrived in India at the invitation of the *Indian National Trade Union Congress*, been expounding a new and vigorous philosophy of labour. In a perfectly happy phrase, he described the philosophy as "pragmatic idealism." Briefly, it stems from the intensely practical American outlook on life which, in its search for practical values, is unwilling to lose sight of the non-material ends that make life worth living—the freedom and worth of the individual. It is a philosophy which ought to commend itself to this ancient country which too is determined to make good the age-old deficiencies in material achievement without sacrificing either its rich heritage or the newly-won democratic way of life.

The basic problem which faces the underdeveloped countries is how best they can reconcile freedom with rapid economic progress. The danger is that, in their understandable anxiety to ensure economic prosperity, they may lose, or be induced to lose, individual freedom. On the other hand, if, for any reason, such progress is held up, freedom itself might be endangered. At the one end stands Russia which has paid a heavy price for its economic achievements. Russia, as Mr. Reuther pointed out, has made considerable progress in the field of industrialisation. China too might be able to repeat Russia's success. Indeed, Mr. Reuther was convinced it would. But Russia, he said, had paid "for economic progress in terms of human freedom, liberty and dignity." The problem before India is how best economic progress can be achieved without paying so heavy a price. Clearly, foreign aid from industrially advanced nations could help India and other underdeveloped countries solve the problem relatively easily. In this connection, Mr. Reuther's proposal for such aid merits the study of world powers. His suggestion was that the U.S. as well as the U.S.S.R. should contribute to a world fund a sum equal to two per cent. of their gross national product for a period of 25 years for helping the underdeveloped countries find the necessary capital for developing their economic resources.

Real trade unionism can naturally flourish best only in a free society. Mr. Reuther emphasised that he believed in free trade unions and a free society, because they alone could lead to the fulfilment of the creative powers of an individual. He described the trade unions in communist countries as "political company unions." The supremacy of the free system over the communist is due, as he said, to the consideration that it is creative. In the course of one of his impassioned utterances, he affirmed there was no limit to human progress and that the American labour movement had unlimited faith in the future of free men. He added: "The American labour believes that deep down in the bosom of every decent human being, there is a willingness and longing for joining together in the pursuit of positive peace values."

The secret of American prosperity lies in the attitude as much of its industrial leaders who are willing to face risks as in that of its workers who attach far more importance to wages and productivity than to political gains. U.S. labour, as Mr. Reuther declared, is "not tailed to any political party's kite." Asked what he thought about Indian trade unions and their political affiliations, he said that it must be remembered that India had won its freedom only recently and that unions participated in the movement for political freedom. He recognised that these conditions could not be changed overnight. But he declared that, while trade unions should help the Government in implementing its development programmes, they should not be a tool in the hands of the Government. Clearly, it is time the Indian unions too refused to toe the line of any political party, and worked, in a genuine trade union spirit, for the betterment of working conditions, instead of allowing themselves to be used as pawns in the game of politicians.

TRADE AND BALANCE OF PAYMENTS

A review of India's foreign trade in the calendar year 1955 was made in our last issue. This, however, was incomplete to the extent that it did not include the land-borne trade. Imports through land in 1955 amounted to Rs. 27.24 crores, as against Rs. 21.65 crores in 1954, while exports through land were of the order of Rs. 6.24 crores, as against Rs. 5.86 crores in the previous year. There was thus an adverse balance of Rs. 21 crores on land trade, so that the adverse trade balance on the total foreign trade for 1955 was as much as Rs. 50.06 crores and not Rs. 29.06 crores as stated in our last issue; the latter figure refers to the net trade position of only the sea- and air-borne trade.

The following table shows at a glance the position of India's total foreign trade (after adjustments made for transit trade) in 1955, as compared with that for 1954:

(In crores of rupees)

	1955	1954
Imports	643.90	586.02
Exports	595.51	562.20
Trade deficit	48.39	23.82

The above figures, however, do not reflect the value of certain stores imported on Government account and also that of exports on this account. Particulars of these Government transactions are given by the Reserve Bank in its March 1956 Bulletin, where a detailed review of the balance of payments position appears. According to this source, the adverse balance of trade in 1955 was Rs. 46.6 crores, as against Rs. 91.8 crores in 1954, that is, it was only about half of that in the previous year.

The balance of payments position for 1955 was even more happy, because the year ended, according to the Reserve Bank, with a surplus of Rs. 41.60 crores, in refreshing contrast to a deficit of Rs. 4.10 crores in 1954. This improvement in balance of payments was the result of other invisible receipts which were large enough to offset the adverse trade balance. These other receipts included official donations amounting to Rs. 12.2 crores, other Government invisibles Rs. 31 crores and private invisibles Rs. 45 crores, the corresponding figures for 1954 being Rs. 15.1 crores, Rs. 19.6 crores and Rs. 53 crores, respectively. Full particulars of the invisibles, however, are not available.

The areawise analysis of trade discloses a marked improvement in India's trade with dollar countries. During the year, the surplus with these countries rose from Rs. 9.9 crores to Rs. 44.7 crores being the net result of a 11 per cent. increase in exports and a 19 per cent. fall in imports. Another notable feature of the trade was a larger increase in the imports from the O.E.E.C. countries than in the exports to them. India's adverse balance with these countries, however, remained high at Rs. 74.9 crores as in the previous year.

On the capital account, there was an inflow of capital amounting to Rs. 2.8 crores in 1955, as compared with an inflow of Rs. 16.6 crores in 1954. The outflow of private capital was heavy, being as much as Rs. 14.8 crores, as against Rs. 7.4 crores in the previous year.

HONGKONG BANK CHAIRMAN'S STATEMENT

The extensive survey of the economic conditions prevailing today in most Asian countries by the Hon'ble Mr. C. Blaker, Chairman of the Hongkong and Shanghai Banking Corporation, in his statement to the shareholders of the Corporation, would be of immense interest to manufacturers and traders in India who are having close trade relations with those countries. Started a hundred and thirty-nine years ago in Hong Kong, this Corporation has established its branch offices in almost all countries in Asia, including India, Burma, Japan, Thailand, Indonesia, Ceylon, North Borneo, Malaya, Viet Nam, and the Philippines. Its long association with industry, trade and finance in these countries enables its chairman to view the conditions in these countries dispassionately and with understanding.

No survey of economic conditions in the East will be complete or easily understandable, unless it is presented against the background of trends in the West with which Asia has close connections. Naturally, therefore, Mr. Blaker has devoted a considerable part of his statement to the developments in the economically advanced countries. And this part of his statement, too, makes interesting reading. As readers are aware, in 1955, considerable industrial expansion continued in them and in some of the more highly developed countries, the economy was becoming overstrained. A growing industrial demand for materials and labour and high level of employment resulted in active domestic inflation. This, in turn, had adverse effect on their balance of payments. The measures to combat these dangers varied from country to country. The main emphasis was, however, on monetary rather than on physical controls, and on dearer money rather than on restriction of imports. These monetary controls did not have, remarked Mr. Blaker, any effect, as the cost of borrowing was no longer the restraining influence which it once was. And with the great increase of activity in the public sector, other supplementary measures were necessary. The rising Bank rate had had only limited effects in the circumstances.

In Asian countries, there was good progress in the implementation of development plans. In many cases, however, these plans had to be revised for lack of capital and shortage of trained technicians. Although dearer money was resorted to and had a limited effect on urban economies, it was not, in the opinion of Mr. Blaker, the real answer to the problem. For the aim was not to restrict demand in an over-expanded economy, but to improve the productive resources quickly enough to provide work for the growing population. At the same time, they had to increase the supply of food and consumer goods to meet the requirements arising as a result of industrialisation.

Mr. Blaker's statement is also notable for the advice he gave to Asian countries for securing foreign capital for financing their development schemes. He candidly remarked that much lip service was being paid by certain countries to attract foreign capital and that this would bring no result. He pointed out that foreign funds could be attracted only by creating stable conditions and improving the prospects for an adequate return on capital. "The conditions," to quote him, "have to be such that risk of loss of income or loss of capital is at a minimum, and secondly, that the yield is likely to be sufficient to offset any such danger as remains." These are doubtless basic considerations for stimulating the inflow of foreign capital, but they require to be reiterated from time to time, because some of the underdeveloped countries which badly need such capital still not only indulge in sentiments which will cut no ice with foreign investors but also follow fiscal and monetary policies that are calculated to make them shy.

D.V.C. BUDGET

It is gratifying to be told by the authorities of the Damodar Valley Corporation (D.V.C.) that they, in framing the budget for the current year —1956-57—have fully borne in mind the need for "utmost possible economy," while maintaining at the same time, satisfactory progress in the execution of works. Equally gratifying is the care taken to ensure that variations between the estimates and the actuals are kept down to the minimum. For such variations introduce a big element of speculation into all estimates of the costs of long-term projects like the D.V.C. Frequent upward revisions in the estimates of cost of such a project would upset all calculations about the economics of the project. This is especially true when the revised estimates exceed the original estimates by crores of rupees. To the extent that erratic fluctuations in basic construction costs are avoided, the appraisal of benefits of the project, which

LAND REFORMS IN THE SECOND PLAN—I

UNSOUND AND UNJUST IN MANY RESPECTS

THE proposals on land reforms in the Draft Outline of the second Plan seem to be the product of a sentimental mind rather than rational thought. No sound and sagacious philosophy runs through them, nor do they appear to have been based upon a proper weighment of the advantages and disadvantages that might result from their implementation. In general, they mark a more drastic approach than they did in the first Five-year Plan, and fail to realise that the principles which governed policy in regard to *zamindaris* cannot be applied with the same force of equity now.

The two accepted goals of policy are economic efficiency and social justice. So long as the issue related to the high concentration of land ownership in the hands of big *zamindars*, measures aimed at dispersal of land ownership, and distribution of power, social status and income were conformable to the fundamental aim of social justice. But, when these measures tend to favour the small owner at the expense of middle-sized proprietorship, their distributive equity and justice no longer remain indubitable. In practice, such measures work towards the abolition of the middle class in the agrarian population.

From the point of view of economic efficiency, too, the claim for reforms of the type proposed in the Draft Outline seems to be tenuous. The break-up of big *zamindaris* was rightly expected to lead to better management and more intensive cultivation of land; but the middle class farmers, on the other hand, are generally believed to be capable of making a superior performance in terms of costs and yields than petty farmers. Apart from these considerations, reforms relating to land ownership which make incursion into medium-sized farms and tend to establish an agrarian structure based on family holdings raise problems of implementation, in the light of which it seems scarcely worthwhile to pursue any meagre gains that might be possible at all from their implementation. Tenancy reforms, however, stand on a different footing.

Obsolete Slogan

Though it is not overtly stated in the Draft Outline, the Planning Commission seems to be pursuing the slogan of "Land to the Tiller"; for without this assumption, several proposals in the Draft Outline would appear completely devoid of reason. In this connection, it is important to distinguish between means to an end and the end itself. The ends of land reform policy are only two, namely, economic efficiency and social justice, and no third. "Land to the Tiller" is a means to achieve the ends. Frequently, means may be regarded as goals for the immediate future; nevertheless, they remain means destined to achieve higher objectives.

The slogan "Land to the Tiller" was first raised when the agrarian structure was characterised by a high concentration of land ownership. In that context, it was in accord with the ultimate objectives of social justice and economic efficiency. There was so much unanimity of opinion over this that "Land to the Tiller" no longer remained a slogan but acquired the force and appeal of an ideal and began to be regarded as the end itself. But now, when big estates have been abolished and the targets of attack are the medium-sized and small to medium-sized holdings, the policy of "Land to the Tiller" cannot be regarded as furthering the ultimate ends. It is important, therefore, to stress that the present phase of the land reforms policy should be formulated with reference to the original objectives of economic efficiency and social justice and not "Land to the Tiller."

Four Aspects

Land reforms proposed in the Draft Outline relate to:

(i) limit on land that can be resumed by the owner for personal cultivation,
(ii) ceilings on owned land already being cultivated by the owner himself,
(iii) treatment of non-resumable land and land in excess of their ceilings, and
(iv) security of tenancy and the level of rents.

On the question of resumption of land by the owner for personal cultivation, the first Five-year Plan proposed that the limit for such resumption should be set at three times the family holding. The Draft Outline says that these recommendations have not proved adequate in practice. It has, therefore, recommended that the "limit should now be fixed at one family holding and be subject to a minimum area being left to the tenant."

Why the recommendations of the first Plan on this aspect of the problem have "not proved adequate in practice," has been left obscure, and so an important part of the statement which could enable the public to understand the logic and practicability of the new recommendations has been left out. There are several considerations which make these recommendations unappealing both in broad theory and in practical details.

Limit Inadequate

The limit of one family holding, or even of three holdings as proposed in the first Plan, is utterly inadequate in a country like India where an agricultural family is generally not the "elementary family" of the European type consisting of husband, wife and non-adult children. Owing to the immobility of agricultural population and lack of alternative work opportunities outside agriculture till now, an agricultural family in India is often of a bigger size than an elementary family. It may be composed of two adult generations which depend for their living on a common piece of land; or it may even be a "larger family" comprising several couples and single persons living under the same roof, each couple depending for its living

DELHI AND LONDON LETTERS

The two of our customary weekly features that generally appear on this page, namely, Delhi and London Letters, are published on page 738 of this issue.—ED.

entirely or mainly on land. It is at once clear that, for a substantial proportion of land-owning families in India, the limit prescribed in the Draft Outline on resumable land is ridiculously low. There will be many types and groups of two-generation families which will be hit hard, if this proposal is put through. Let us not forget that, in the present phase of land reforms, we are not dealing with the land resources of rich people but of those who are dependent for their very day-to-day expenditure on income from land.

The inequity of these recommendations is not easily realised by the people in the urban areas. But let us take a comparable case: suppose a person, who laid by some money during his active period of life, has built up a workshop of ten handlooms so that he can live in modest comfort. What would he feel, if, after some time, he is told that he can retain to himself only two handlooms, and the rest he can either let out at a rent sufficient to give him, say, 3 per cent. rate of interest on invested capital or he can sell against non-negotiable bonds due for maturity 20 years hence? If anything like this were to happen in urban areas, where people are more conscious of the value of right to property, it would create a stir. Yet this is what the Planning Commission intends to do by telling a person, who owns, say, land varying between 20 and 50 acres in order to give income and employment to his children, that he can use only one family holding and take a 20-year bond for the rest. (The argument about the fixity of the total area of land is not relevant. Fixity of total land area does not prevent immediate payment of full value of compensation.)

Not only is the limit distressingly low even for a small family, the proposal also fails to provide for variation in the sizes of families. All families, irrespective of their size, are to be subject to a flat limit of one family holding. Disregard of the size of family in imposing a limit on resumption of land for personal cultivation is most inequitable.

Fundamental Objection

A fundamental objection relates to family holding as forming the basis of reform. A family farm is defined "as the area of land which yields a gross average income of Rs. 1,600 per annum, or a net annual income (including remuneration for family labour) of Rs. 1,200 and is not less than a plough unit." Such a unit may not be an optimum-sized farm, which is the size that ensures full employment for the manpower available within the family. A rigidly defined family holding which is not expressed in terms of production man-work units available within the family cannot be an optimum-sized holding except by chance. To found a permanent agrarian structure on non-optimum holdings cannot hold good from economic considerations.

A family holding, as defined by the Planning Commission, will obviously vary not only from State to State, district to district but even from one block of land to another. Before this concept of family holding can be applied for determining resumable lands, and ceilings on owned land already under personal cultivation, it will be necessary to verify income from practically each piece of land. Since there is great deal of variation in output from year to year as also from different crops falling in rotation, an average of several years will have to be worked out. This will involve stupendous administrative work. Would it be matched by sufficient practical gain in terms of the welfare of the people? It would at least provide a boon to the administrative personnel, because on their findings about the income-yielding capacity of a farm, will depend what ceiling on holding or limit for resumption, measured in land area, ought to be fixed for that farm. Thus, the administrative personnel in the rural areas would be vested with enormous powers which would provide immense scope for graft and corruption.

Just as the size of a family holding cannot be rigidly fixed in space, it cannot also be rigidly fixed in time. A fall in prices of farm products out of proportion with the prices of non-farm products, may substantially reduce the money and real income from a farm and render its size below that of a family holding. Similarly, a reversal of this trend or an improvement in the arts of cultivation, and extension of irrigation, etc., may tilt a holding in the opposite direction.

The limit of one family holding with the provision that a minimum area (that is, a basic holding) be left to the tenant will obviously lead to parcelisation of land. Suppose in an area the family holding consists of 15 acres and a basic holding 6 acres of land. As a result of the implementation of the proposal of the Draft Outline, all holdings in that area ranging between 15 and 21 acres will be subject to the possibility of bifurcation into parcels of land, each below the family holding. Since a family holding is one which "is not less than a plough unit," the bifurcated holdings will not be able to make optimum use of the indivisible plough unit and so will be uneconomical.

Rationale Not Stated

The Draft Outline goes a step further and recommends that a person owning one family holding or less should be permitted to resume, for personal cultivation, one half of the area owned by him but not less than a basic holding. It is a pity that, in making these drastic recommendations, the Planning Commission has not stated the principles, logic or experience which have governed their decision. Any division of land below the size of family holding, that is, below the area necessary to give full employment to a plough unit, must be regarded as fragmentation. Already the law of equal division of inheritance is operating rapidly in the direction of sub-division of land. The proposal of the Planning Commission will hasten the process, and, if one may say so, institutionalise the evil.

The Draft Outline also tries to define the expression "personal cultivation." It says that personal cultivation may be deemed to have three elements, namely, risk of cultivation, personal supervision and performance of minimum labour. A person who does not bear the entire risk of cultivation or parts with a share of the produce in favour of another cannot be described as cultivating the land personally, and may not be allowed to resume land. This means that a person anxious to resume land for personal cultivation cannot have crop-sharing arrangements with the labour he may employ on his holding. We all know that a share in output or profit provides a greater incentive to the worker than wages. This principle, although desirable, meets with certain difficulties in its application in the industrial sector. But, in agriculture, it has been applied with considerable advantage and success. In agriculture, the interest with which a worker performs his work makes a good deal of difference in output. If this recommendation of the Planning Commission is implemented, a healthy tradition of sharing output with labour will end and the yield of crops will suffer.

LABOUR POLICY UNDER SECOND FIVE-YEAR PLAN

SOME IMPORTANT ISSUES REVIEWED

By E. F. G. Hunter
CHAIRMAN, EMPLOYERS' FEDERATION OF SOUTHERN INDIA

DURING the year 1955, the Ministry of Labour issued a note on labour policy under the second Five-year Plan, the Industrial Disputes (Amendment and Miscellaneous) Bill was published, the Employees' State Insurance Scheme was extended, labour in Kanpur and Nagpur went on prolonged strikes in opposition to the introduction of rationalisation, the usual legal battles continued on the bonus front and an award of a Madras Industrial Tribunal was considered by the Editor of *Punch* sufficiently entertaining to be included in his publication dated 9th February 1955. In August, we experienced a *hartal* when hooligans were allowed much licence. One assumes that lessons were learned, however, for when the next *hartal* was called, in February 1956, the Government made it abundantly clear that it would tolerate no nonsense and the police and security arrangements for this second *hartal* were such as to ensure the maintenance of law and order. This Federation congratulates the Government on the firm stand taken for whilst some labour leaders and some politicians appear to consider a *hartal* to have special significance, *hartals* are really strikes, and in public utility concerns, illegal strikes at that. Experience and enquiries go to show that workers are not as a rule really interested in such stoppages. They stay away from work because they fear attacks from hooligans *en route*, or because of intimidation by ill-advised fellow workers or equally ill-advised politically-minded labour leaders.

Industrial Development

Under the labour policy for the second Five-year Plan, the Government clearly intends to tighten its control in the field of labour relations and industrial development, leaving little initiative to the employer or the worker. It has been pointed out that whilst workers are to be guaranteed certain rights and amenities nothing is laid down regarding their obligations, their discipline or their output. I suggest that our planners should be asked to set out the responsibilities of labour and to provide penalties for those who break the law just as penalties are provided for employers who infringe rules and regulations. If the industrial development of this country is to achieve that degree of success to which the planners aspire, those responsible for illegal strikes, the calling of *hartals*, the initiation of 'go-slow' tactics in factories, docks, etc., and other unfair labour practices should be made to realise that such anti-social acts will not escape unpunished. It is perhaps not out of place to mention here that in the first ten months of 1955, 4,800,000 man-days were lost in India through stoppages for various reasons!

Important features of the labour policy in the second Five-year Plan are the proposal to restrict the number of outsiders in trade unions and, under certain conditions, to give unions statutory recognition. To provide legislation for the protection of union office-bearers against victimisation and to improve the financial base of the trade union movement from its own resources. While the restriction of the number of outsiders in unions is welcome, I suggest the time has come completely to eliminate outsiders, at least

(*Concluded from previous page*)

Thus, the set of proposals seeking to place a limit on the land that can be had for resuming personal cultivation will lead to fragmentation, sub-optimum cultivation and adversely affect production in other ways; bring about an unsound agrarian structure; eliminate the middle class which has served as the carrier of modern thought, culture and techniques to the rural people; and tell on the income and employment resources not only of those who are no more than persons of modest and average means and subsist on their current income but also of many small owners who belong to the poor sections of the population. As they stand, the proposals are justifiable neither on grounds of economic efficiency nor of social justice. Besides being positively harmful to the social and economic interests of the country, the equitable implementation of the proposals will involve huge administrative work which will not be worth the expense and energy of the nation.

(*To be continued*)

in those industries where employees are no longer "insufficiently educated to look after their own affairs." The usual excuse given for the presence of outsiders is the lack of education among the industrial workers in India. In banking, insurance and commercial establishments, it cannot be said that the majority of employees are inadequately educated. Therefore, if the policy of the second Five-year Plan is to be implemented progressively, an experiment could be made by prohibiting outsiders from trade unions relating to banking, insurance and commercial establishments. There is nothing personal in this matter of "outsiders" but the fact remains that we are frequently left with the feeling that many issues are agitated and re-agitated for the sole reason of endeavouring to justify the continued existence in office of certain union leaders.

It is proposed to protect office-bearers against victimisation, by prohibiting their transfer, or punishment, without the permission of a prescribed authority. Provision already exists for the protection of all employees against victimisation or unfair labour practices and several awards have been made since the Industrial Disputes Act, 1947, came into force, restoring the conditions of service of employees where victimisation or unfair labour practices were proven. 'Protection' as envisaged in the Plan could well lead to the growth of mushroom trade unions with large executive committees, so constituted in an endeavour to protect as many as possible from the normal rules of discipline. Quite apart from employers considering such legislation to be undesirable, such measures are unlikely to benefit workers because the growth of rival unions is not in the interest of healthy trade unionism. The finances of unions are to be improved by fixing a minimum subscription and by compelling employers to recover subscriptions through pay-rolls. Whilst the need for fixing a minimum trade union subscription is apparent, if only to avoid fictitious membership return, I suggest the method of collecting trade union subscriptions through pay-rolls is most undesirable, especially so when these funds can be used for political purposes. Where a trade union is unable to persuade its members regularly to pay subscriptions, it is obvious that the workers are not very interested in that union. If a worker can be persuaded to authorise the management to make a deduction from his pay, it should be possible to persuade him to pay the amount direct to the union.

The draft Plan mentions the training of trade union workers. In Western countries, certain standards of education are laid down for those aspiring to important trade union posts such as secretaries, treasurers, etc. The ability to agitate is not the main criterion. Candidates have to pass written and oral tests before they are eligible for election. It will be possible to lay down such standards in India only when workers have provision for training in trade union leadership. It is, therefore, suggested that provision should be made for the opening of more establishments to train those who aspire to trade union leadership. One such establishment is already functioning in India and the Government should recognise the need for others in the Plan period.

Recognition of Unions

As regards the question of statutory recognition of unions it is felt that multiplicity of trade unions in any industry leads to frustration in that unions compete among one another in promising their members greater and greater benefits which frequently fail to materialise. For compulsory recognition I suggest the minimum membership should be at least 50 per cent. of the employees in the industry or establishment for which the trade union is functioning.

The Plan envisages greater emphasis on mutual negotiations for the settlement of disputes and voluntary arbitration. It is proposed that Government intervention should be resorted to only in intractable cases. We welcome this greater freedom, but when Government intervention becomes necessary, it should be seen that conciliators and adjudicators have that degree of industrial experience and training, which is so necessary if they are to have the confidence of the contending parties. In this country, it is by no means uncommon for conciliation officers to be appointed soon after graduating with little, if any, experience of industry. They cannot, therefore, be expected to appreciate the viewpoint of the two parties. It is, therefore, suggested that while Government considers it desirable to train management and labour, attention should also be given to the training of conciliation officers and/or adjudicators. In the United Kingdom, industrial relations advisers are selected by the Ministry of Labour from those with considerable experience in industry and their services are offered only on a request from the parties to a dispute. Men of experience and mature judgment are chosen and their advice is, naturally, respected.

One of the most important provisions of the second Five-year Plan is the somewhat revolutionary proposal that labour be associated with management. Whilst in theory the advantages of capital and labour jointly running an industry is obviously very sound, one wonders how it would work in practice under existing circumstances and conditions. In the first place, one feels that to be successful a joint venture should be the result of voluntary partnership, one partner should not be thrust upon the other. Apart from this aspect, I doubt if the time is ripe for such joint enterprise. It is difficult to reconcile the argument that industrial workers are not yet ready completely to eliminate outsiders from trade unions, with the view that workers are now ready to sit with the board of management to direct the affairs of an industrial undertaking. The board of management of any successful industrial undertaking generally consists of men of experience in industry who have had practical training over a long period and have been groomed for the appointments they hold. Is it not idle to contend that workers who may or may not have the necessary educational qualifications and who certainly will not have any experience in the management, will be suitable usefully to participate in the management of, say, a large industrial undertaking, unless the idea is that they be the watch-dogs of outside trade union leaders? Surely, such a partnership is unlikely to lead to a healthy atmosphere and is bound to result in constant friction instead of promoting harmony and improving industrial relations as visualised by the framers of the Plan.

The Plan recommends that public undertakings should set an example to private undertakings by not seeking exemption from laws. This is a good move, for at present public undertakings are exempted from almost all social welfare legislation.

Wage Policy

Under the heading "Wage Policy," the Plan envisages the raising of real wages and rightly points out that this can be done only by an increase in productivity, with an assurance to labour that an equitable share will accrue to it. The general wage policy laid down by the Planning Commission is commendable but to what extent tribunals and other authorities, charged with the task of fixing wages, will bear this policy in view, is difficult to predict. It would be advisable if, on such an important matter, the Government gives certain directions to tribunals who have frequently to deal with disputes relating to wages and dearness allowance. Although in certain regions such as Bombay, Ahmedabad and Kanpur, a living wage has been determined by various committees, in other large industrial centres living wages have not been determined, with the result that tribunals frequently grant wage increases on the ground that the living wage standard has not been reached, despite the absence of a correct estimate of the living wage. It is, therefore, advisable to determine the living wage in all important industrial centres, and then lay down a policy indicating the lines on which the living wage standard should be attained, by linking all increases in wages to greater output.

It is hardly necessary to emphasise the need for a uniform wage policy as the large majority of industrial disputes are for higher wages in one form or another. Not very long ago, the Bombay High Court remarked that "it is not in the interest of labour that in the same industry in the same occupation workers doing the same type of work should receive different wages." Unfortunately, tribunals still grant *ad hoc* wage increases without taking into account either the workload or the prevailing rate of wages in the industry or in the locality. Such arbitrary *ad hoc* increases given by tribunals go

(*Continued on page 751*)

HONGKONG AND SHANGHAI BANK'S PROFIT HIGHER

DIVIDEND MAINTAINED ON INCREASED CAPITAL

THE continued expansion of world trade and the rise in the prices of certain primary commodities, particularly rubber and tin, during 1955 contributed to more prosperous trading conditions generally in the territories in which the Hongkong and Shanghai Banking Corporation (Chief Manager: Mr. Michael W. Turner, Hong Kong) operates. This prosperity is duly reflected in the audited accounts of the Bank for the past year, what with a rise of H.K.$240 million in advances to customers and of H.K.$66 million in trade bills and an expansion of H.K.$1.29 million in the profit. The profit for the year under review amounts to H.K.$20.58 million, as compared with H.K.$19.29 million for the previous year and H.K.$17.29 million for 1953, and constitutes a fresh record in the history of the Bank since 1930, when it amounted to H.K.$20.68 million.

With the undistributed surplus of H.K.$10.21 million brought in from the previous year, the distributable amount, at H.K.$30.80 million, is higher by H.K.$1.65 million. A sum of H.K.$4 million has been utilised to write off Bank premises account. This provision is H.K.$2 million less than that set aside in the previous year. The dividend has been maintained at £5 per share for the ninth year in succession, and is made up of an interim distribution of £2 per share and a final one of £3 per share. It must, however, be noted that both these distributions are on an increased capital of H.K.$25 million, raised by the capitalisation of H.K.$5 million of reserves in March 1955. The total dividend for the year under review represents a distribution of £6 5s. per share on the old capital. Thus, the Chairman's hope, expressed last year, to pay the same annual divdend of £5 per share for 1955 on the increased capital, provided, of course, the profit of the Bank was maintained, has materialised. The increased dividend absorbs H.K.$16.19 million, leaving a balance of H.K.$10.61 million to be carried forward to 1956.

The following comparative table, giving the synopses of the Bank's balance-sheets as at the close of the last four years, gives an idea of the Bank's progress:

(In thousands of H.K. $)

	As on 31st December			
	1955	1954	1953	1952
Capital	25,000	20,000	20,000	20,000
Reserve fund	128,000	128,000	96,000	96,000
Undistributed surplus	10,607	10,215	9,359	9,489
Note issue	675,742	675,742	755,742	755,742
Current deposits and other accounts	2,557,376	2,672,641	2,636,471	2,639,319
Acceptances	20,350	56,521	10,557	12,861
Cash	260,260	330,936	439,317	421,389
Money at call	180,788	576,059	680,530	654,597
Securities against excess note issue	645,883	645,883	725,883	725,483
Investments—				
In Government and other securities	415,347	406,760	388,213	387,435
In subsidiary companies	9,264	2,136	2,136	2,135
Advances	1,069,660	829,455	645,653	699,841
Bills receivable	787,807	702,371	622,581	615,918
Premises	18,687	19,323	21,817	21,754
Balance-sheet total	3,427,200	3,571,195	3,536,687	3,541,413

The Bank's capital was increased, as already stated, in March 1955 by the capitalisation of H.K.$5 million from the reserve fund and the issue of one share for every four shares held by the then shareholders. Later on, during the year, the Directors transferred an equivalent sum from the inner reserves to the reserve fund, so that the reserve fund is unchanged at H.K.$128 million. The current deposits and other accounts show a drop of H.K. $115.27 million, in distinct contrast to the increase of H.K.$36.17 million in 1954. Explaining the cause for this decline in deposits and other accounts, the Bank's Chairman said that the trend of the Bank's ordinary deposits had, in fact, been upward, but the withdrawal of certain substantial sums, which had been left with the Bank on a short-term basis, resulted in this overall reduction. The decline of H.K.$36.17 million in acceptances on behalf of customers is attributed to "an alternation in the methods adopted by certain large customers during the year."

On the assets side, advances and bills receivable have gone up by H.K.$240.21 million and H.K.$84.94 million, respectively. Of the latter, trade bills account for H.K.$66.09 million and treasury bills for H.K.$18.85 million. The expansion in advances and trade bills is mainly due to the higher prices which ruled throughout the year for some of the primary commodities produced in the areas in which the Bank is interested. It also reflects the growing demand for larger advances from banks to finance current and capital commitments arising from the growing industrial development in South-East Asia. Investments in Government and other securities (at or under market values) have been strengthened by H.K.$8.59 million. The increase in investment in subsidiary companies is accounted for by the Bank subsidiary, namely, the Hongkong and Shanghai Banking Corporation of California, opened in San Francisco in August 1955. Besides this investment, the amount due from the Californian subsidiary stands at H.K.$10.15 million. A sharp fall of H.K. $457.60 million is noted in cash and money at call which is the result of the increase in advances and trade bills and of the decline in deposits referred to above. Although this has resulted in a drop in the ratio of the Bank's liquid assets to its total liabilities, the ratio still stands at over 47 per cent. which can be regarded as a satisfactory degree of liquidity.

BRITISH BANK OF THE MIDDLE EAST

The statement of accounts of the Indian branches of the British Bank of the Middle East for the year ended 31st December 1955 (which represents the second year of the Bank's operations in this country after it took over the branches of the National Handelsbank N.V. on 1st January 1954) disclose that the Bank has had its full share in the general prosperity enjoyed by banks in India during the past year. The balance-sheet total as at the end of the year shows a rise from Rs. 8.43 crores at the close of 1954 to Rs. 9.99 crores; the gross income for the year has improved from Rs. 22.85 lakhs to Rs. 33.47 lakhs and the profit (subject to auditor's fees) has shot up from Rs. 2.12 lakhs earned in 1954 to Rs. 9.63 lakhs. After bringing in the surplus of Rs. 0.88 lakh from the previous year, a sum of Rs. 8.59 lakhs has been remitted to the head office, leaving Rs. 1.92 lakhs to be carried forward.

The Bank's income from interest and discount for the year under review amounts to Rs. 20.36 lakhs, an increase of Rs. 5.35 lakhs over the year, and that from commission, exchange and brokerage Rs. 13.11 lakhs, as against Rs. 7.76 lakhs for 1954. On the expenditure side, interest paid on deposits and borrowings has gone up from Rs. 4.44 lakhs to Rs. 5.84 lakhs and establishment as well as other expenses from Rs. 16.29 lakhs to Rs. 18 lakhs.

There has been an increase of Rs. 69.41 lakhs in the Bank's deposits to Rs. 244.43 lakhs; of this increase, fixed deposits (standing at Rs. 29.3 lakhs) account for Rs. 13.03 lakhs, current accounts, etc. (standing at Rs. 214.43 lakhs) for Rs. 56.25 lakhs. The outstanding borrowings from other banks have gone down from Rs. 25 lakhs to Rs. 10 lakhs, all of which are unsecured. On the assets side, advances have risen from Rs. 453.03 lakhs to Rs. 557.45 lakhs. Of these advances, loans, cash credits and overdrafts account for Rs. 303.65 lakhs, as against Rs. 230.28 lakhs at the close of 1954, and bills discounted and purchased for Rs. 253.79 lakhs, as against Rs. 222.75 lakhs. The bulk of these bills (aggregating Rs. 213.96 lakhs, to be precise) are payable outside India. Notwithstanding the sharper rise in advances, as compared with that in deposits, the Bank's investments, too, have expanded from Rs. 20.50 lakhs to Rs. 30.92 lakhs and so also cash balances from Rs. 34.83 lakhs to Rs. 53.05 lakhs. Money at call and short notice has, however, declined from Rs. 30 lakhs to Rs. 21 lakhs.

STERLING AREA RESERVES

The Sterling Area's gold and dollar reserves rose by $67,000,000 during March, and on the last day of the month stood at $2,277 million. The March increase compares with a rise of $61,000,000 in February and $29,000,000 in January.

On the provisional figures for March, Britain had a deficit of less than £500,000 with the European Payments Union, compared with £8,000,000 in February.

Defence aid received from the U.S.A. during March was estimated at $5,000,000. A sum of $8,000,000 was paid as the quarterly instalment on the Canadian interest-free loan; $16,000,000 was paid in gold or dollars to the European Payments Union for February; and $2,000,000 was paid to creditors of the Union in bilateral settlements.

In its issue dated 5th April the *Financial Times* London, comments: "At the beginning of the year, there was every reason to feel anxious about the movement of the reserves in 1956. The experience of 1955 had been very serious and in the summer, there were two major crises of confidence. The last quarter had shown a welcome stability, but that had not sufficed to offset the December repayments on the American and Canadian loans. In any case, the seasonal improvement had done no more than bring the position back into balance.

"Looking forward, it was possible to see that another year like 1955 would be more than the reserves and foreign confidence could stand. In order to provide for the seasonal downturn in the late summer, it was clearly essential that substantial recovery should be achieved in the first quarter.

"At the time, we set the figure of $150,000,000 as the minimum that would be satisfactory. It was not pretended it would be an easy figure to reach, and many people thought it would not, in fact, be achieved. In fact, the first quarter of 1956 has produced an increase of $157,000,000—the best result since the second quarter of 1954."

The newspaper adds: "The gold and dollar position has now improved steadily and without relapse since Mr. Butler's Istanbul speech of last September. There has been a six-month period of recovery, and the last month is the best of the six. This undoubtedly means that a more confident view can be taken of the future."

BHARAT NIDHI LTD.

The working of Bharat Nidhi Ltd. (Manager: Mr. J. B. Jaini, New Delhi) during the year ended 31st December 1955 has resulted in a profit of Rs. 17.70 lakhs, which represents an increase of Rs. 6.08 lakhs over the year. As in the previous year, this profit has been transferred to the general reserve. The Directors have, however, drawn back a sum of Rs. 12.45 lakhs from the general reserves to pay a dividend of 6 per cent. on the preference shares (absorbing Rs. 3.21 lakhs), a dividend of As. 10 per share on the Rs. 10 fully paid-up ordinary shares and of As. 2-6 per share on the partly paid-up (Rs. 2-8) ordinary shares, as against As. 8 and As. 2 per share, respectively, paid for 1954. The ordinary dividend in all takes up Rs. 9.24 lakhs.

Interest and dividends (gross) on debentures and shares earned by the Nidhi amount to Rs. 12.23 lakhs, having risen from Rs. 8.05 lakhs, and interest (net) earned aggregates Rs. 5.66 lakhs, as against Rs. 4.82 lakhs.

The Nidhi's capital is unchanged at Rs. 201.34 lakhs. The capital reserves stands strengthened at Rs. 11.24 lakhs, as against Rs. 9.71 lakhs a year before and the general reserve at Rs. 14.41 lakhs, as against Rs. 13.21 lakhs, after writing off during the year bad debts amounting to Rs. 16.18 lakhs and paying income-tax for the year 1950-51. Investments in debentures and shares in joint-stock companies (at cost) amount to Rs. 212.03 lakhs, as against Rs. 93.14 lakhs at the close of 1954, and in securities Rs. 2.49 lakhs, as compared with Rs. 5.69 lakhs a year ago. The Directors report that the market value of the Nidhi's holdings of shares and debentures in joint-stock companies at the close of the year showed an appreciation of Rs. 70 lakhs over the cost. There has been no progress in respect of pending income-ax assessments of the Nidhi. The tax position of the Nidhi, therefore, still remains obscure.

CANADA RAISES BANK RATE

The Bank of Canada has announced a further credit-tightening move by increasing its rate of interest to a record 3 per cent. from 2½ per cent., effective from the 5th inst.

This is the fourth increase in the Bank rate, since last August when it was raised to 2 per cent. from 1½ per cent.

There was a second increase to 2¼ per cent. in October and a third in November to 2¾ per cent., the previous record.

A drop in advances from Rs. 141.13 crores to Rs. 137.21 crores is shown by the State Bank of India for the week ended 6th April, 1956. Cash in hand and with the Reserve Bank has risen from Rs. 12.34 crores to Rs. 17.34 crores.

METHODOLOGY OF THE SECOND PLAN—I

BLIND APPLICATION OF CAPITAL COEFFICIENT RATIO DANGEROUS

By C. N. Vakil and P. R. Brahmananda

(This article is based on the forthcoming publication by the authors entitled "Planning for an Expanding Economy—a Study in Employment, Accumulation and Technical Progress."—ED.)

IT may be noted that the Planning Commission has formulated the global targets on the basis of a capital coefficient of 2.2 : 1 and on the assumption that the income-saving ratio could be raised from 7 per cent. of national income to 11 per cent. The methodological assumptions underlying the above technique of formulation of economic plans are those connected with the conditions of a steadily growing economy. The rate of growth of income is derived by multiplying the ratio of savings to income by the coefficient, indicating the average productivity of capital. According to the different values accorded to the ratio of average productivity of capital and the income-savings ratio, it is possible to obtain different rates of income growth. The ratio of average productivity of capital is the inverse of the capital coefficient or the capital-output ratio. Let us designate the coefficient indicating the average productivity of capital as A and the ratio of savings to income also called the investment rate as B. The rate of growth of income is A×B. If we know also the percentage rate at which population is growing, we can obtain the rate at which *per capita* standards are rising by means of the formula A×B−P, where P happens to be the rate of growth of population. If we assume that the average productivity of capital is 47 per cent. and that the ratio of savings to income is 11 per cent., the rate of growth of income will be 5 per cent. and, if we assume that the rate of growth of population is 1.125 per cent., the rate of growth of *per capita* standards is 3.9 per cent.

Models of Income Growth

In the case of some of the advanced countries, the average productivity of capital has been about 33⅓ per cent. and the ratio of savings to income between 18 and 20 per cent. Hence, the rate of growth of income has been about 7 per cent. The above value of the average productivity of capital is that which has ruled during the last 70 years in the case of some of the advanced countries during a period in which economic development was a matter of course in these countries.

In the case of the Soviet Union, if we take the final results at the end of their three plans, the value of the capital coefficient was about 1.4 : 1; the average productivity of capital was 70 per cent. In the case of India, statistics over a long period in regard to growth of income as well as rate of capital formation are not obtainable. Hence, the value of the capital coefficient can only be obtained from the experience of the last few years and this would not correctly indicate the long period trends. The Planning Commission has derived a value of 2.3 : 1 for the capital coefficient on the assumption that the ratio of savings was 6.2 per cent. and the rate of growth of income was 2.8 per cent. Detailed figures in regard to net investment are obtainable only for the period 1948-49 to 1953-54. It is only since 1948-49 that detailed figures in regard to national income are available.

The object of this article is to examine in detail the assumptions underlying the methodology of the technique of planning effort characterising the second Plan. As pointed out above, global targets have been derived on the basis of certain assumptions regarding the values of the capital coefficient and of the investment rate. At one time, it was contended that the method of formulation of the second Plan indicated how any country can obtain rapid rates of increase in national income, provided appropriate techniques of formulation of targets are followed. During the course of this article, we shall examine in some detail how models of economic development derived on the basis of the experience of advanced countries may tend to run away from the realities of the economic situation in underdeveloped countries.

The Concept of Capital Coefficient

The concept of capital coefficient or its inverse, the output (or product)—capital ratio, is a relatively new tool of analysis in economics. The capital coefficient tells us how much of investment is necessary in order to produce a given amount of output. If we are given the rate at which income has grown in a particular period and also the ratio of net investment to income in that period, by dividing the investment rate by the rate of growth of income, we obtain the value of capital coefficient. For example, if income is growing at the rate of 2 per cent. per annum and if the investment rate is 6 per cent. of income, the value of the capital coefficient will be 3 : 1. However, if we divide the investment rate by the rate of growth of income, we obtain the output (or product)—capital ratio. In the above example, it is one-third or 33⅓ per cent. If we are given the trends in the growth of national income over a given period and also have the figures regarding the rate of capital formation during the above period, we can obtain the value of the capital coefficient that ruled during the period.

The capital coefficient provides us the basis for the quantitative estimates to ascertain how, with different rates of capital formation, we can obtain different rates of income growth. This is, however, on the assumption that the value of the capital coefficient will not tend to vary. The implications of this type of analysis is that long-period changes in income depend upon change in the total stock of capital. The policy implication of the above is that, by varying the amounts of savings, it is possible to bring about changes in income. The use of the capital coefficient implies the belief that it is only through higher rates of capital formation that higher rates of income growth can be obtained.

By studying the trends in the growth of income and of capital during the critical periods of economic development of some of the advanced countries, it may be possible for us to obtain a rough guide as to the requirements of savings for bringing about a given magnitude of change in income. But care has to be exercised in regard to the precise periods with which comparison is sought.

Reasons for Changes in Value of the Ratio

Let us examine a little more carefully how any given value of the capital-output ratio might, in a closed economy, tend to vary.

(*a*) In the first place, one has to study the changes in the relative proportion of different types of output. Unless we assume that constant returns to investment operate in regard to all types of output, in other words, unless we assume that the ratio of capital to net output would tend to be the same in all types of output and that it would be so irrespective of variations in the quantities of the different types of output to be produced, we would not be warranted in arriving at the conclusion that the value of the agregate capital coefficient is not affected by changes in the relative proportion of outputs. Obviously, some products are more capital-intensive than others; hence, a larger proportion of the above types of products to total output would raise the value of the capital coefficient.

(*b*) In the second place, one has to take into account the possibilities of scarcities in regard to the supplies of certain factors of production which co-operate along with equipment in producing output. For example, there may be diminishing returns to investment in regard to certain types of output, because of the scarcity of certain co-operative factors, land, for example. In some cases, diminishing returns to investments in certain outputs will be a long-period tendency; in some cases, it may be a short-period phenomenon. A rise in the rate of investment will raise the capital coefficient, unless the additional supply of the different inputs are obtained with the same relative ease as before and unless these inputs happen to be of the same order of quality as before. In other words, we cannot assume constancy of value of capital coefficient, unless we make necessary assumptions about the elasticity of supply of different factors. A doubling of the rate of investment implies a doubling of the demand for all the inputs that go to make up the investment process. Hence, there is every possibility that, in the absence of appropriate arrangements, the ratio of capital to output would rise when the economy is put to strains in order to maintain a higher rate of investment. Here, one has to keep in mind the overall impact of the different types of shortages.

Pattern of Investment

(*c*) Let us now look at the problem from the point of view of the pattern of investment. Given the investment rate, a raising of the proportion of investments in industries at higher stages would imply an increase in the degree of capital intensity. The average gestation, as well as the production periods of investment, would tend to be raised. Hence, unless one can say that the relative proportion of different investments in the total scheme of investment outlay happens to be the same, one cannot come to the conclusion that the capital coefficient will tend to maintain the same value, even when the rate of investment is stepped up.

(*d*) One has also to keep in mind the variations in the proportion of marketable, as against non-marketable, outputs. If, in the scheme of total outlay, the relative proportion of unproductive investments happens to be raised, then the value of the capital coefficient too will be raised.

(*e*) Changes in the degree of capital intensity may be brought about both because of new technical changes and of adjustments in the light of changes in the structure of relative prices. Unless inventions in general are neutral from the point of view of the economy and unless the rate of interest does not change, the above changes and adjustments cannot be ruled out.

(*f*) Changes in the degree of utilisation of capacity affect the value of the coefficient.

(*g*) In the above analysis, we have considered only the possibilities in a closed economy. If we introduce foreign trade into the picture, then there is a further possibility of the the coefficient being subject to change.

It will be seen from the above discussion that a number of stringent conditions have to

THE ECONOMICS OF AMBAR CHARKHA

CONSUMERS WILL HAVE TO PAY HEAVILY

By R. K. Hazari

LECTURER IN ECONOMICS, ST. XAVIER'S COLLEGE, BOMBAY

IT is well known by now that the emphasis in the second Plan would, unlike in the first Plan, be on more employment. For this purpose, as well as for conserving scarce capital resources for what are termed basic industries, the Draft Outline of the second Plan proposes to allocate Rs. 200 crores, or about 4 per cent. of the total outlay, to village and small-scale industries as against Rs. 30 crores or about 1 per cent. of the total outlay in the first Plan. In this context, the *Khadi* Board has made a powerful plea for the *Ambar Charkha* to increase gainful employment and incomes in rural areas. It desires the distribution of 25 lakh *charkhas* in these areas at a cost of about Rs. 25 crores during the second Plan period. At the outset, the programme recommended by it may be briefly summarised.

Production of mill and power-loom cloth should be frozen at the present level of 5,000 million and 200 million yards, respectively. The increase in cloth demand over the next five years, expected to reach 18 yards *per capita* in 1960-61, should be satisfied by expansion of handloom and *khadi* production from 1,500 million yards now to 3,000 million yards in 1960-61. The net increase in the demand for yarn should be met by full-time and part-time operation of 25 lakh *charkhas*, the full-time equivalent of which is computed at 18 lakh *charkhas*. Yarn requirements for the next five years are set out as follows:

TABLE I

Yarn Requirements

(Millions)

	1 1955-56 Base year	2 1956-57	3 1957-58	4 1958-59	5 1959-60	6 1960-61	7 Total of 2 to 6
Cloth production .. (yds.)	1,500	1,575	1,725	2,025	2,425	3,000	10,750
Yarn requirements .. (lbs.)	350	371	412	494	618	763	2,658
Mill supply (lbs.)		350	350	350	350	350	1,750
Balance .. (lbs.)	..	21	62	144	268	413	908

Source: A.I.C.C. *Economic Review*, Feb. 11, 1956, p. 211.

In other words, while the supply of mill yarn—the only source of yarn for handlooms at present—would be frozen at (the present assumed level of) 350 million lbs. (=1,400 million to 1,600 million yards at the rough conversion ratio of 1 lb. of yarn=4 to 4.5 yards of cloth), *charkha* yarn will expand from practically *nil* in the base year to 21 million lbs. in the next year and is targeted to record an increase in production of the order of 1,967 per cent. or about 20 times by 1960-61. This phenomenal feat is proposed to be accomplished through the setting up of centres for *charkha* manufacturing, production, finishing, training of spinners and carpenters, and regional directorates and inspectorates, etc. The implementation of this programme would involve a capital outlay of Rs. 34 crores, a subsidy of Rs. 101 crores and loan facilities to the extent of Rs. 632 crores over the Plan period

On the basis of a wage rate of As. 12 per day and taking the price of cotton at Rs. 700 per candy for 18s and 20s and Rs. 600 for 16s, the cost and price of *Ambar* yarn is expected to be as follows:

TABLE II

Cost per lb. of Yarn

	16s	18s	20s
	Rs. a. p.	Rs. a. p.	Rs. a. p.
1. Raw cotton	0 12 3	0 14 2	0 14 2
2. Wastage	0 1 7	0 1 9	0 1 9
3. Spinning wages	1 8 0	1 11 0	1 14 0
Cost per lb. of yarn	2 5 10	2 10 11	2 13 11
Plus 6⅓% of cost of handling charges	0 2 5	0 2 8	0 2 11
Price per lb.	2 8 3	2 13 7	3 0 9*

* Should be 10 pies.

Source: A.I.C.C. *Economic Review*, Feb. 11, 1956, p. 213.

The comparative prices of mill and *Ambar* yarn would be as follows:

TABLE III

Prices per lb.

Counts	*Ambar*	Mill	Percentage difference
	Rs. a. p.	Rs. a. p.	
16s	2 8 3	1 8 0	67.71
18s	2 13 7	1 9 6	78.76
20s	3 0 9	1 10 6	83.96

Source: *Ibid.*

The programme would involve a Government subsidy of Rs. 76 crores in supplying *Ambar* yarn to handlooms and Rs. 25 crores in the manufacture of *khadi* cloth, making a total of Rs. 101 crores over the five-year period of the second Plan. As against this expenditure, the social benefits that are expected to accrue are estimated at Rs. 293 crores in terms of the income of 49 lakh workers who would get more employment under the programme.

To give the *Khadi* Board its due, it must be admitted that they have taken some care to place their case for the *Ambar Charkha* with a not inadequate attention to the rather stern requirements of a plan programme. Their statisticians also deserve to be congratulated for using a correct ratio for the first time in the recent history of textile statistics for the conversion of yarn into cloth.

In view of the great importance of the problems of employment and cloth supply, the major facets of the programme may be dealt with point by point before we proceed to comment on it as a whole.

(1) It is unfortunate that, to serve the convenience of the Textile Commissioner's office, the production of powerlooms has remained statistically constant at 200 million yards for the last ten years or so, without showing any upward—or downward—movement. In the meanwhile, the number of powerlooms on record in various other Government statistics has been increasing almost continuously, thereby favouring the presumption that the present production of powerlooms is nearer 250 million yards than 200 million yards. In addition, the demand for mill yarn from such industries as hosiery, sewing thread plants, tape, banding and belting, fire hose, tyre cord fabric, fishing nets, jute mills and the electricity and cable industry, etc., particularly the first two, has been increasing at a very rapid rate since the war. In the three pre-war years, the non-handloom consumption of yarn was estimated by the Fact Finding Committee at 70 million lbs. annually. Rough calculations indicate a current level of at least 125 million lbs. of yarn, thus leaving only about 275 million lbs. for the handlooms and not around 350 million lbs. as assumed earlier in the Plan-frame and now by the *Khadi* Board. The net effect of these factors is that an upward bias is introduced into the conjectures of cloth produced on handlooms. In brief, the figure of 1,500 million yards of handloom cloth produced in the current year is probably an overestimate. Its expansion to nearly 3,300 million yards by 1960-61, therefore, would require a larger quantity of yarn than is estimated in Government and *Khadi* Board statistics.

(2) The recent buoyancy in the home demand for cloth, leading to a serious depletion of stocks with trade and industry, together with the large amount of expenditure proposed for the second Plan by the Planning Commission, not to mention the large increase in incomes expected by the *Khadi* Board through its programme, justifies fears that the targeted level of cloth consumption *per capita* of 18 yards by 1960-61 errs on the lower side. Freezing of mill and powerloom production at the present levels may, therefore, result in cloth shortage and higher prices, thereby diverting cloth and yarn from the export market, to the detriment of our balance of payments position.

(3) Coming to the *Ambar Charkha* proper, it should be clearly understood, first of all, that, compared to a mill, it requires, on an average, *at least* 56 times the number of man-hours to produce a pound of yarn:

TABLE IV

Comparative Data

20s yarn

	Mill	*Ambar Charkha*
1. Men: machine ratios ..	14 men per 1,000 spindles*	2 men per *charkha* (4 spindles)
2. Spindles per man	71.43	2
3. Production per spindle per 8 hours	5 ozs.†	3.2 ozs.
4. Production per man-hour..	44.64 ozs.	0.8 oz.
5. Man-hours required to produce 100 lbs. of yarn ..	35.84	2,000
6. Ratio of (5)	1:56	

* This level may be taken as the maximum in the mill industry on 20s. One mill in Modinagar actually has only 6.5 men per 1,000 spindles.

† The actual average is about 5.5 ozs. Further, since the *charkha* relies far more on the human factor than the mill does, the variations of technical performance in the *charkha* sector may be legitimately expected to be wider than in the mill sector, thereby making its average performance more unreliable as a guide to evaluation and policy.

Lest this ratio be mistaken for the employment potential of the *Ambar Charkha*, an investigation of the yarn cost data may be considered in order. The *Khadi* Board data given above do not make any allowance whatever for stores, interest on loans, depreciation, repair and maintenance and other overheads including the expenses of the Board and its various institutions. Since the Board has, fortunately, not pleaded for the liquidation of standard accounting practices, I may be permitted to amend the cost and price data of *Ambar* yarn accordingly and compare it with the cost and price of mill yarn:

TABLE V

Relative Costs per lb. (pies)

	Mill	*Ambar charkha*
Cotton*	170	170
Wastage	21	21
Wage cost†	30	360
Depreciation, maintenance, overheads, etc.‡	35	17.5
Total cost ..	256	568.5
Ratio ..	1 :	2.22
Selling price .. .. .. (Rs.)	1-10-6§	3-2-4‖
Ratio ..	1 :	1.9

* Cotton cost would probably be higher for the *charkha* due to higher distribution cost.

† Wage cost data are admittedly of a mill known for its high wages and technical performance, but a less efficient mill would not have a significantly higher wage cost, since its lower performance would be partly made up by lower wages.

‡ Mill data include power and light. *Charkha* cost on this account can hardly be less than one-half of that in a mill.

§ Market price.

‖ Making a 6¼ per cent. allowance for handling charges. The actual may be expected to be higher.

The fact that the selling price of *Ambar* yarn would have to be higher than the *Khadi* Board estimates would involve an upward revision of the figure for subsidies.

(4) To deal with the subsidy before passing to other matters. The *Khadi* Board does not mention whether the subsidy it envisages would be limited to the second Plan period or continued thereafter, too, as a more or less permanent feature of economic policy. If the latter is favoured, the Government would become liable to the extent of at least Rs. 16 crores a year, probably more; if the former is accepted, nearly 50 lakh persons enveloped in the *Khadi* Board's domains would be left in the lurch from 1961 onwards, with disastrous consequences all round.

(5) The *Khadi* Board's production programme is limited, for the present, to the count range 16s to 20s or an average of 18s. It appears to have slipped the Board's memory that *dhotis* and *saris*, the demand for which may be legitimately expected to keep on rising, cannot be made from counts less than 25s. With mill production of yarn frozen at the present level, and assuming hosiery and other production to increase rapidly, the handlooms would be unable to produce enough *dhotis* and *saris* to satisfy the increase in demand during the second Plan period. *As a matter of fact, the Board's programme has nothing whatever to say about correlating the production and marketing patterns of handlooms with* Ambar *yarn production.* The counts proposed to be produced on this *charkha* can actually be utilised only for the production of fabrics like bedsheets and covers, towels, Madras handkerchiefs, etc., which occupy only about one-half of the handlooms at present. The *charkhas* cannot possibly be expected to produce above 25s *economically*, since, as even the Board's data indicate above, the cost differential between mill and *Ambar* yarn widens increasingly with higher counts.

Reading through the Board's programme, one regrettably gets the impression that it appears to have ignored the tremendous diversity of production patterns and, consequently, yarn requirements, of the handloom industry—a diversity even greater than that found in the mill industry.

(6) A reference may be made to the findings of the Agricultural Labour Enquiry. It indicates that the average number of work-days available to agricultural labour per year in different regions varies from 120 to about 250. Obviously, the necessity of part-time employment and, therefore, the possible scope for the *Ambar Charkha*, too, varies from region to region. Where the work available exceeds 200 days in a year, only a maximum of 100 days could conceivably be devoted to spinning and the yarn supply would, therefore, be small and uncertain. Where seasonal unemployment is rife, the *Ambar Charkha* would have better scope but here, too, production would have a pronounced seasonal pattern (remembering that there is usually a shortage of labour at harvest time, etc.). It should be recalled, in this connection, that handlooms also are subject to seasonal suspension of activity, particularly during the monsoon when warping and sizing become impossible. The impact of seasonality at the source of demand as well as supply during different portions of the year would necessitate, *inter alia*, the carrying of large stocks and a considerable exertion of organisational effort.

Moreover, since the yarn collection centres would not be invested either with police powers or with the less visible influence of the moneylender, there is no assurance that yarn of the requisite specifications would be delivered in time. This danger is very real in areas with relatively high employment and high wages where the carrot of a 12 annas wage may fail to tempt the villager. Even in other areas, the spinners may forsake the *charkha*, at least temporarily, whenever any chance occurs of earning a wage higher than As. 12—or As. 8-10 which the *Khadi* Board hopefully expects to find sufficiently attractive in some States. Actually, the socio-economic conditions in the poorer areas are, at present, known to be such as to militate against consistency at work. To place the cloth consumer and the handloom industry in a state of dependency on such an uncertain source of supply may well define a unique type of planning, dedicated to the achievement, instead of the defeat, of scarcity.

Evaluating the programme as a whole, credit may, once again, be given to the *Khadi* Board for conceiving and drawing up an ambitious plan for providing gainful employment to millions of our countrymen. Whether one agrees with specific targets and policies or not, emphasis on relief of unemployment, has to be one of the keynotes of our Plans. If, therefore, the Board's programme is criticised, it is certainly not due to the fear of as many as five million persons getting gainful employment, an objective which, if achieved, would gladden all hearts in this country. The only fear one entertains in this connection—and that is a fear which the Planning Commission has fortunately taken cognisance of—is the inflationary potential that would be generated by higher incomes and expenditures, *not* sufficiently matched by an equivalent supply of consumer goods at stable prices.

Taking an overall view of the programme, the main defect one discerns in it is its excessive optimism about the organising capacity of the Board. A highly decentralised agency of yarn production is proposed to be created practically overnight and is expected to attain a rate of progress within a few years which even Russian industry has not claimed so far. The annual breakdown of the five-year production programme, given in Table VI, uncovers the hidden oceans of vitality which the *Khadi* Board proposes to discover in itself and its agencies (which *shall* be created):

TABLE VI

Production Programme.

(Million lbs. of yarn)

	1956-57	1957-58	1958-59	1959-60	1960-61	Total
(1) Annual output of yarn ..	20.6	61.9	144.4	268.2	412.5	907.6
(2) Annual consumption in *khadi* ..	18.75	56.25	56.25	56.25	56.25	243.75
(3) Available for distribution to handlooms ..	..	3.65	88.15	211.95	356.25	660.00

Source: A.I.C.C. *Economic Review*, p. 215.

Converting (1) and (3) above into *cumulative* percentages, one would get the following results:

	1956-57	1957-58	1958-59	1959-60	1960-61
(1) Annual output of yarn.	100	300	233	186	154
(2) Available for distribution to handlooms ..	..	..	2,415	240	168

It is apparent from the aforesaid calculations that (i) a very high rate of progress has been assumed by the *Khadi* Board, particularly in the matter of yarn that would be available for distribution to handlooms, which is expected to be 9,760 per cent. of 1957-58 in 1960-61, the total output of yarn being 2,002 per cent. of 1956-57 in the same year, *both starting from practically nil* in 1955-56; and (ii) 75 per cent. of the total yarn and 86 per cent. of the *Ambar* 'free' yarn output over the Plan period will be concentrated in the last two years of the Plan, justifying the conclusion that, for the first three years, consumers and handlooms would have to wait patiently and stoically for the *Khadi* Board to deliver the goods towards the end of the Plan.

Another argument advanced in favour of the *Ambar Charkha* is that it will economise on the need for capital funds, since its cost is apparently less than that of mill machinery. The tables below compares the total investment required to fulfil the target of 908 million lbs. of yarn, over the second Plan period, care being taken in the assumptions to place the mills in as unfavourable a position as possible:

TABLE VII

No. of Spindles required to fulfil yarn target of each year by Shifts.*

(Lakhs)

Shifts	1956-57	1957-58	1958-59	1959-60	1960-61
One	2.24	6.61	15.36	28.59	44.05
Two	1.12	3.31	7.68	14.30	22.03
Three	0.76	2.25	5.23	9.73	14.99

* As set by the *Khadi* Board in Table I.

Basis of computation: (i) production of 20s yarn at 5 ozs. per spindle per shift on first two shifts and 4.60 ozs. on third shift; (ii) each spindle works 300 days in a year, no allowance being made for idle capacity, as done by the *Khadi* Board in the case of the *Ambar Charkha*.

Net increase in Spindles required each year.

(Lakhs)

Shifts	1956-57	1957-58	1958-59	1959-60	1960-61	Total
One ..	2.24	4.37	8.75	13.23	15.46	44.05
Two ..	1.12	2.19	4.37	6.62	7.73	22.03
Three ..	0.76	1.49	2.98	4.50	5.26	14.99

Investment Cost of Installing Spindles by Shifts.

Shifts	Spindles required	Total Investment required
	(Lakhs)	(Rs. crores)
One	44.05	128.5159
Two	22.03	64.2725
Three	14.99	43.7333

Computed at Rs. 291.75 per spindle on the basis of Rs. 35,00,000 for erecting a complete mill of 12,000 spindles, and ancillary equipment, including buildings, etc.

TABLE VIII

Charkha Yarn

No. of Spindles required to fulfil yarn targets of each year.

1956-57	3.50
1957-58	10.33
1958-59	24.00
1959-60	44.67
1960-61	68.33

Basis of computation: (i) production of 18s yarn at 3.2 ozs. per spindle; (ii) each spindle works 300 days in a year.

Net increase in Spindles required each year.

(Lakhs)

1956-57	3.50
1957-58	6.83
1958-59	13.67
1959-60	20.67
1960-61	24.16
Total ..	68.83

Investment Cost of Installing Spindles.

Spindles required (lakhs)	68.83
Direct cost* (Rs. crores)	34.00
Subsidy* (Rs. crores)	76.00
Total investment (Rs. crores) ..	110.00

* As per estimates of *Khadi* Board.

It is assumed in Table VII that all the increase in yarn output in the mill sector comes from new mills and new spindles—an assumption which is less than just to known facts about present mill capacity and use of second-hand machinery. The technical performance of mills has been taken at the very low level of 5 ozs. per spindle-shift. Table VII indicates that the investment required to produce 908 million lbs. of yarn in the mill sector over five years would be Rs. 129 crores, if all the spindles are worked only one shift, Rs. 64 crores if all of them are worked two shifts, and only Rs. 44 crores if all of them are worked for three shifts. On the other hand, the *Ambar Charkha* would require, according to the *Khadi* Board's own estimates which we have shown to err on the lower side, Rs. 110 crores (Table VIII). On the reasonable assumption that the new mill spindles work two shifts, the capital investment required for the *Ambar Charkha* would be nearly 72 per cent. higher! The advantage in favour of mills would, of course, be even greater if the existing mills expand their yarn production through more spindles, intensive shift working and higher technical performance.

There is, of course, no doubt that the *Ambar Charkha* can provide more employment than the mills can. Table IX fully supports this statement:

TABLE IX

Direct Employment (excluding Construction, etc.)

Shifts	Mills: At 14 men per 1,000 spindles	Mills: At 12 men per 1,000 spindles	*Charkha*: At 1 man per 2 spindles
One shift	61,600	52,800	34,41,000
Two shifts	123,200	105,600	..
Three shifts	184,800	158,400	..

The maximum employment that can be provided by mills would be much less than 2 lakhs while the *Ambar Charkha* can employ more than 34 lakh persons. But to the figure for mills should be added the increased and more secure employment in powerloom, hosiery and other industries, construction and trade, not to mention the benefits that would accrue to the handloom industry through secure yarn supply. Cheaper yarn and cloth, moreover, would increase the consumer's purchasing power and help to diversify trade and industry. This would all be in addition to the higher income per mill worker that would be generated without imperilling the supply of commodities which account for nearly a quarter of our consumer expenditure. It might be suggested that this line of reasoning ignores the social cost of unemployment or underemployment in rural areas. *The answer to that is that inflation, too, imposes social costs, a factor of which the Khadi Board makes no mention.* The emphasis on employment in the second Plan is not dedicated to the complete abolition of unemployment, for the simple reason that the present Plan, at any rate, cannot go any further than it has in the Draft Outline without endangering the whole basis and structure of the economy. *Planning has to take account of realities and not merely desires.*

This rather lengthy discourse should not be meant to imply that there is no case whatever in favour of the *Ambar Charkha*. Rural underemployment and poverty are so severe in some parts of the country—even by Indian standards—that no Plan would be worth the name if it does not provide some avenue of relief, albeit temporary, till something more substantial can be effected. In that specific context, the *Ambar Charkha* could play a useful role in pockets where distress is severe and no employment is available for the greater portion of the year. In such situations, Government subsidies and paraphernalia of the *Khadi* Board could help on a relief basis. But this is something entirely different from the ideological fervour with which the *Ambar Charkha* has been advocated by the *Khadi* Board recently and that in a manner which suffers from a rather conspicuous absence of humility that, one understands, is one of the pillars of the ideology, on which the *charkha* is based.

MR. K. C. REDDY ON AMBAR CHARKHA

Intervening in the debate on the Production Ministry's demands for grants in the Lok Sabha on Thursday last week, Mr. K. C. Reddy, Union Production Minister, claimed that the potentialities of the Ambar Charkha were immense. The price of cloth and yarn produced by the Ambar Charkha would, he pointed out, be lower by 50 per cent., if not more, as compared with the cloth and yarn produced by the traditional charkha. Proceeding, he observed:

"If you compare the economics of traditional *khadi* production with the economics of *Ambar khadi* production, you will find that *Ambar khadi* production is by far superior to the economics of traditional *khadi* production. There is no doubt about that. On that basis, Government have decided that a well-thought-out programme—may be as a result of the pilot project scheme to which reference was made—of replacing the existing traditional *charkhas* by *Ambar Charkhas* should be proceeded with and the financial implications of it will be worked out by the Government at the proper time.

"What about the larger programme, the five-year programme, for *Ambar Charkha* for producing 400 odd million pounds of yarn and 1,700 million yards of cloth to be produced through the *Ambar Charkha* which will not require the additional licensing of any spindleage, which will not require any additional powerlooms or anything of the kind? These are the implications. With regard to this, I would like to touch on only one or two important aspects. First, there is what may be called laboratory tests or Sarva Seva Sangh in Wardha. The *Khadi* and Village Industries Board, so far as they are concerned, are completely satisfied about the economics of the *Ambar Charkha* and they say that the various assumptions that they have made for the *Ambar Charkha* can be fully proved. That is the verdict that they have arrived at. But so far as the public are concerned, so far as the Government are concerned, so far as Parliament are concerned, we want to have certain assurances, we want to have no doubts in our minds as it is a question of Rs. 144 crores, to which the Hon'ble Member referred.

"... About the *Ambar Charkha* programme, I would like to say this. The Planning Commission have not provided so far any funds for the *Ambar Charkha* programme in the Draft Outline of the second Plan. If any amount is provided, as we, indeed, expect will be provided as a result of the *charkha* tests being favourable, then another Rs. 200 crores will have to be provided—about Rs. 150 to Rs. 200 crores—in addition to the size of the present Draft Outline of the second Five-year Plan. That point we should not forget. The Finance Minister referred on a previous occasion to the fact that the size of the Plan will have to be probably increased, if and when a decision is taken on the *Ambar Charkha* Programme and we will have to provide about Rs. 200 crores for that purpose. We are keeping all these things in view."

FREE WORLD'S COTTON SURPLUS

DETAILS OF U.S. EXPORT POLICY AWAITED WITH ANXIETY

COTTON circles the world over are anxiously awaiting the details of the U.S. Government's new export sales programme for the ensuing cotton season (1956-57). The broad features of the policy which is being discussed in the U.S. Congress, it will be recalled, were announced sometime in February last. These include sales of cotton on a competitive bid basis and permission for substituting such cotton with cotton privately owned. The anxiety over the final decision of the U.S. Government with regard to cotton exports stems from fears that, as a result of the sale of American cotton on a competitive bid basis, there will be a severe setback to world prices of cotton. It is not surprising that several countries, particularly the net exporting countries have bitterly criticised the U.S. move to sell cotton in world markets on a competitive bid basis.

Voicing its severe protest against the new export policy of the American Administration, a leading cotton trader in Peru, for instance, recently said: "The U.S. cotton surplus disposal programme, embracing all grades and staples, and the granting of credit facilities and special payment terms in local currency, will, of necessity, originate a price war in the world market of detriment effects, particularly to countries that rely on cotton exports—as in the case of Peru—for their economic and social development." Expressing opinions more or less similar, Egyptian cotton circles warn that the basic economic laws cannot be flouted for ever and, in the end—which may come after two, three or more years—means will have to be found to straighten out the position. Syria is another prominent cotton-growing country which has criticised the U.S. cotton export programme which, *it is said*, has already caused a considerable dislocation of price. To quote a report: "Such of the Syrian exporters as are holding stocks of cotton find it difficult to dispose of their cotton, because foreign mills have completely withdrawn from the market as a result of the U.S. export plan."

Stocks Heavy

The aforesaid fears of the U.S. surplus cotton disposal plan adversely affecting the world cotton trade and causing a severe setback to prices are quite understandable. As readers are aware, the free world carryover stocks have registered a sharp rise in the current season; the International Cotton Advisory Committee estimates these stocks as on 1st August next at more than 23 million bales of 478 lbs. each, as compared with 20.3 million bales a year before. The increase of nearly 3 million bales thus is expected to be accounted for solely by increased stocks in the U.S., so that "there will be little variation in total stocks elsewhere." The heavy stock position must be attributed to the substantial expansion in free world cotton supply, from 48.3 million bales (made up of a crop of 29.4 million bales and carryover stocks of 18.9 million bales during the 1954-55 season to as much as 51.2 million bales (consisting of a crop of 30.8 million bales and carryover stocks of 20.4 million bales) in the current season. Indeed, the problem of cotton stocks has become a matter of international concern, especially in net exporting countries.

Viewed in the context of the present cotton surplus, the increase in production in some countries has, as the Committee points out, somewhat limited significance. It must, of course, be mentioned here that the entire improvement in output has by no means been earmarked for export. For higher domestic consumption has been a strong incentive to augment production in some countries, such as Pakistan and India. Although the upward trend in output the world over has given rise to the problem of world cotton surplus, the position of individual countries, principally the U.S., has been affected by a drop in total free world exports.

Cotton Surplus in U.S.

The accumulation of cotton stocks in the U.S. is attributed to three factors. First, notwithstanding the acreage restrictions, cotton production in the last two seasons has gone up by 2.6 million bales and 4.5 million bales as compared with the calculated marketing quotas, thanks to marked improvement in yields which are at record levels. Secondly, the average domestic consumption in the last five seasons has risen only fractionally over the 1949-50 level. Thirdly, exports have declined almost continuously; in the current season, they are expected to be less than half the normal volume. Commenting on the trend of exports, the Committee says: "How serious this has been to the U.S. cotton economy can be seen in the fact that the decline in exports from the five-million bale level has meant a market loss of seven million bales in the last four seasons, or more than the aggregate increase in production outside the U.S. in this period."

Output and Consumption

Taking the free world as a whole, the rise in the total production of cotton during the period 1949-50 to 1955-56 has been as much as 4.16 million bales, while that in consumption is not more than 2.87 million bales. The following table indicates the extent of the rise in the estimated production and consumption of cotton in the producing countries:

(In thousand bales of 478 lbs. each)

	Production	Consumption
U.S.A.	—1,500	300
Mexico	1,185	115
Central America*	300	*Nil*
India	1,550	880
Pakistan	289	600
Turkey	155	210
Syria	355	10
Other Asian countries	345	50
W. Europe†	345	185
Argentina	*Nil*	100
Brazil	450	75
Peru	115	20
Other South American countries	130	130
Egypt	*Nil*	140
Sudan	130	5
Uganda	20	*Nil*
Other African countries	300	50
Total Free World	4,160	2,870

* Nicaragua, Guatemala and Salvador.
† Mainly Greece and Spain.

It will be seen from the above table that, since 1949-50, while cotton production in the U.S. has receded by 1.5 million bales, that in the other countries of the free world has advanced by 5.6 million bales. In other words, the net rise in free world output has been 4.16 million bales. Out of the increase of 5.6 million bales in the cotton output of the free world outside the U.S., 3.1 million bales have gone into increased domestic consumption. Most of the remaining 2.5 million bales represent an addition to annual export availability. During the period 1949-50 to 1955-56, exports have actually advanced by 2.5 million bales, that is, from 5.7 million bales in 1949-50 to 8.2 million bales (estimated) in 1955-56.

A large part of the rise in the free world's cotton output has originated in Mexico and Central America. Mexico is now producing well over double the 1949-50 volume, namely, 2.1 million bales, as compared with 0.9 million bales. The Central American countries—Nicaragua, El Salvador and Guatemala—in the aggregate are expected to produce about 350,000 bales this season, as against only 57,000 bales in 1949-50. Domestic consumption in Mexico and Central America has increased by 100,000 bales, but the balance of 1.5 million bales represents an addition to export availabilities.

The Asian countries together account for a rise of 2.69 million bales of cotton, as compared with 1949-50, the current season's output being estimated at about 7.0 million bales. Of this rise, the share of India and Pakistan alone comes to 1.83 million bales. But the rise in output has not contributed to the present world cotton surplus, inasmuch as it has been accompanied by an increase in consumption. Without an increase in production and assuming the same increase in consumption, imports would have had to be stepped up significantly above even the high 1949-50 level. Nor has the increase in production in the two countries led to any increase in exports, which, in recent years, have averaged no more than those in 1949-50. Increased self-sufficiency has, of course, resulted in lower imports. Similarly, production in Turkey has increased by 200,000 bales since 1949-50, but consumption has increased by a like amount. Aggregate production in Asia outside these three countries has more than doubled—an annual increase of 600,000 bales—almost all of this has been produced for export.

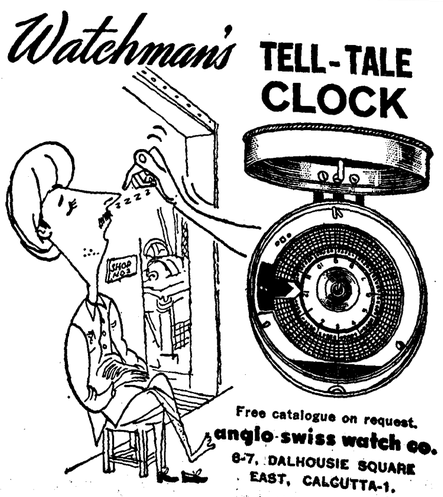
In the major African producing countries—Egypt, Sudan, Uganda and the Belgian Congo—there has been virtually no increase in the aggregate production. Production in Egypt since 1949-50 has tended to be lower on the average and significantly under the pre-war level. This has offset the gradual increase in production in the Sudan. Elsewhere in Africa, efforts have been made by European interests to expand cotton growing and the aggregate production this season is expected to be 300,000 bales or 50 per cent. higher than in 1949-50.

In Western Europe, production has expanded rapidly in Greece, Spain and Italy. The total production in 1949-50 was 100,000 bales, but is expected to reach 450,000 bales this season.

South America has contributed little to the present surplus. Production here has increased since 1949, but that was a year of exceptionally low yields in Brazil and Peru and for this reason was not representative of what might be termed the normal level of cotton production in this Continent. Production in South America this season should be somewhat larger than in 1954-55, on account of the expected increase in Brazil. Colombia is an exception to the general trend in South America. Cotton growing here has become far more important. From a mere 39,000 bales in 1949-50, production has increased to over 100,000 bales. A final point on South America is that domestic consumption has expanded at a rate fully equal to the increase in production and the average exports in the last six seasons have been much lower than the average for the early post-war years.

IMPORT OF COTTON

The Government of India has decided to permit import, with immediate effect, of cottons stapling 7/8" to 1-1/16" up to a ceiling of 40,000 bales from both dollar and non-dollar areas. Licences will be issued in favour of mills and importers on a first-come-first-served basis and will be valid up to 30th June 1956. The nature of evidence required will be the same as in the past.



FALL IN PROFITS OF TEXTILE MILLS

COTTON BOARD PRESENTS THE CASE AGAINST CLOTH IMPORTS

From A Special Correspondent

MANCHESTER, *3rd April*

THE cotton company reports for 1955, published early this year, had shown that the year was by no means a prosperous one for the industry. It had then been predicted that later results would almost inevitably show up the situation in a more sombre light. Those that have followed have duly confirmed this prediction—as was only to be expected after a period of such uncertain trade.

MANCHESTER LETTER

To set the scene in its true perspective—and to guard against any undue optimism in certain quarters—an up-to-date list has been drawn up of those companies whose profits and dividends have been announced since the beginning of the current year. Comparisons with the 1955 figures are given below:—

	1956		1955	
	Profit or Loss (—) £	Dividend % (less tax)	Profit or Loss (—) £	Dividend % (less tax)
SPINNERS				
Butts	2,108	20	21,038	20
Cairo	5,674	12½	23,630	20
Cotton and Rayon Spinners	104,257	15	136,538	15
Cromer	172,975	10	234,657	8½
Mersey	12,388	10	31,779	10
Mutual	23,118	12½	55,544	17½
Ocean	— 8,875	3½	6,545	5
Ripponden Commn.	247	5	4,434	15
Stockport Ring	7,519	10	36,522	10
Townhead	24,981	20	25,118	25
Tulketh	10,926	12½	27,500	15
Victoria	11,976	43½	15,773	38½
SPINNERS AND WEAVERS				
Ashton Bros.	70,696	12½	92,829	15
Barlow & Jones	200,444	10	220,260	10
Birtwistle & Leigh	60,000	10	75,662	12½
Clegg & Orr	72,155	10	97,272	12½
G. & R. Dewhurst	—26,201	..	30,723	4*
Francis Sumner	—17,712	..	9,223	..
David Whitehead	233,430	20	199,567	20

Blue Printers	24,349	7*	76,493	20
John Grey	3,504	10	34,086	17½
Samuel Holden	29,016	36	53,832	74
Jackson & Steeple	12,862	†12½	33,709	33½
Olympia (Redacre)	29,701	7*	42,554	10
William Uttley	69,357	25	81,114	25

* On reduced capital. † On doubled capital.

Total net profits earned by these 26 companies, according to results announced this year, were £1,157,320 compared with £1,703,478 12 months ago. This means that the average profit has fallen from £65,903 per company to £44,512, while the dividend has been reduced from 15.18 per cent. to 12.14 per cent.

Despite the fact that in two instances losses have been incurred, those firms engaged in spinning and weaving have been least affected by the general state of trade. The average profit announced this year is £84,759 as against £103,656 and the dividend has fallen from 10.60 per cent. to 8.93 per cent.

Purely spinning firms are still offering the highest return, as their dividends average 14.56 per cent. as against 16.22 per cent. a year ago. The profits of the 12 companies involved, however, have declined from £51,591 to £30,607 on average.

The situation of firms in the weaving industry has shown a sharp deterioration. From average profits of £52,684 a year ago the latest figure is £28,103 and the average dividend paid last year of 17.98 per cent. has been cut to 11.22 per cent.

In addition to the companies shown in the above table one of the trade's leading spinning and manufacturing groups—Amalgamated Cotton Mills Trust—has announced a fall in profits from £660,574 to £407,693. Its dividend distribution, however, is being maintained at last year's level.

With so many uncertainties besetting the market and trade, particularly in the past few weeks, showing a severe decline, prospects for better financial results are far from bright. Those sections which have the ability to maintain price regulation schemes are at an advantage, but in all directions the industry remains extremely vulnerable to foreign competition.

Limiting Imports

The Cotton Board has obtained much valuable publicity for the industry's case against what it calls "*the corrosive effect*" of foreign cloth imports, by releasing the documented evidence on the subject already submitted to—and rejected by—the Board of Trade.

The wide circulation of this well-presented statement of fact can do no harm. Those who read the welter of information contained in the booklet cannot fail to be impressed by the threat which is only too apparent to all out those who deliberately wish to be blind to the repercussions of the present policy.

The industry's justified claim is clearly stated. No complete ban on imported textiles is either demanded or desired. The trade wants foreign cloth arrivals to be limited to reasonable proportions and to have the assurance that their volume cannot go on expanding indefinitely year after year.

As a first step the Government has been urged to limit by quota the importation of cloth and yarn for consumption in the home market to a level not exceeding the average volume of the three years, 1952 to 1954 inclusive. This, says the document, would establish figures which would at least hold the position "against a fatal degree of deterioration." It would restrict arrivals to between 50,000,000 and 80,000,000 yards annually.

Many of the facts contained in the document are already known to the trade as a whole. The steadily growing volume of duty-free imports from India and Hong Kong is the major source of discomfort in Lancashire and has caused the loss of 30,000 workers in the past year and the closure of at least 90 mills. The case presented emphasises the strategic importance of Lancashire cotton textiles in the event of an emergency and the threat to supplies of relying too much on mills thousands of miles away.

Yarn Suppliers

The statements provide details, for the first time, of the suppliers of foreign yarn over recent years, showing that, in 1950, this country imported over *9,000,000 lbs. of yarn from India* and 4,000,000 lbs. from Italy. In the following year, when imports reached their peak, 11,000,000 lbs. came from Belgium. In the first eight months of 1955, import trade in yarns was more evenly spread, but supplies from Egypt were running at an annual rate of 3,000,000 lbs. and further quantities were arriving from several European countries as well as Hong Kong.

To counter some of the criticism which has been levelled against the Lancashire trade from outside sources a short survey of the post-war scene is included as a section of the report. Figures have already been given showing the growing expenditure on new machinery since the 1952 recession and the document asserts: "Great progress has been made in the installation of modern spinning machinery, in electrification, the introduction of larger packages and the elimination of dust." Ring spindles now represent about 53 per cent. of the total mule equivalent spindles installed, as against about 37 per cent. in 1937.

In weaving, 12 per cent. of the looms installed, and 15 per cent. of running looms, are now automatic as compared with about 3 per cent. before the war. Most of these machines are working on two shifts, accounting for an important proportion of the industry's output.

Japan's Lead Lengthens

No vital change occurred in the placings of the leading countries affected by world trade in cotton textiles last year. Total shipments showed a general fall, being 11 per cent. lower than in 1954, but Lancashire's share suffered a further serious decline.

The main feature of international trade in such goods centres on the sharp increase in exports of rayon cloth from Japan. When exports of cotton and rayon fabrics are combined the supremacy of Japanese mills becomes even more pronounced than in recent years. The following table shows the relative performances of the main textile producing areas:

(In million yards)

	1955			1954		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K.	554.5	133.9	688.4	687.4	175.3	812.7

MADRAS GOVERNMENT'S MOVE TO RAISE SALES TAX ON SUGAR

INCIDENCE ON CONSUMERS WILL BE HEAVY

THE Madras Government's move to levy an additional sales tax of one anna in the rupee on the first sale of sugar over and above the existing multi-point tax of three pies is, indeed, regrettable. As it is, the multi-point sales tax of three pies is very high, accounting for nearly 5 per cent. of the price which the consumers pay for sugar, on the basis that the commodity changes hands thrice—factory to wholesaler, wholesaler to retailer and retailer to consumer. The proposed imposition of an additional sales tax will mean a fresh burden on the consumers in Madras, especially in the present context of an all-round rise in commodity prices. How heavy this burden is has been clearly brought out by the South Indian Sugar Mills Association in the course of a communication addressed to the Finance Minister of Madras, urging the latter to drop the levy.

The immediate effect of the proposed additional sales tax will be, the Association points out, an increase of as much as Rs. 5 to Rs. 6 per bag in the price of sugar, the current selling price of which is Rs. 87 to Rs. 89 in the important markets of the State. In other words, on every pound of sugar costing As. 7, the consumer will have to pay a fresh sales tax of over five pies, in addition to the existing tax which works out to about four pies. With the proposed new impost, the incidence of sales tax on sugar in Madras will be the highest in the country, as will be seen from the following figures compiled by the Association:

State	System of sales tax	Rate of tax per rupee (in pies)	Sales tax per bag of sugar*
Madras	Multi-point	3	Rs. a. 3 12†
	Single-point	12	5 0
Total			8 12
U.P.	Single-point	6	2 8
Bihar	Do.	6	2 8
Hyderabad	Do.	9	3 12
Mysore	Do.	9	3 12
Madhya Pradesh	Do.	6	2 8
Bombay	Do.	12	5 0
Travancore-Cochin	Multi-point	3	3 12†
Andhra	Do.	3	3 12†

* Sales tax per bag of sugar from factory to wholesaler, wholesaler to retailer and retailer to consumer on an ex-factory price of Rs. 80 per bag.

† Sales tax calculated at a minimum of three points.

There are no sales tax on sugar in Delhi and Pondicherry.

The foregoing table shows that the sales tax which the consumers are being called upon to pay on purchases of sugar will work out to as much as 11 per cent. of the price of sugar. This compares very unfavourably with 3 per cent. in Bihar, Uttar Pradesh and Madhya Pradesh, 4·7 per cent. in Hyderabad, Mysore, Andhra and Travancore-Cochin, and 6.2 per cent in Bombay.

The latest move of the Madras Government goes counter to the declared objective of reducing the price of sugar which is already high enough in all conscience. It was only two weeks ago that we referred, in these columns, to the heavy incidence of taxation on sugar, and emphasised that, thanks to high Government taxes (and to low cane yields), the Indian consumer was denied the adequate consumption of a valuable energy food. If the present upward trend in sugar consumption is to be sustained and if it is to gather further momentum, it is of the utmost importance that the incidence of tax on this commodity must be reduced. Otherwise, there is the danger of consumption receiving a setback, a highly undesirable trend, indeed. The Association has done well to stress this aspect. It observes: " . . . sooner or later, he (the consumer) will turn to *jaggery* which is available at As. 6-6 to As. 9 per *viss*. The consequence of this will be a fall in demand for sugar at a time when the agitation for more sugar factories is being actively supported by the Government. It was only two years ago that, owing to the high price of *jaggery*, the pattern of consumption began to change from *jaggery* to sugar, resulting in greater demand for the latter commodity. The trend hereafter as a direct result of the new impost is likely to be in the direction of higher consumption of the cheaper substitute—*jaggery*. The prospects for the sugar industry in this State, which are already affected by the 50 per cent. increase in excise duty last year, are thus bound to recede further by this heavy additional sales tax."

There is no exaggeration whatever in these observations of the Association. A change-over to consumption of *jaggery* (unrefined form of sugar) will amount to a national waste. It is a well-known fact that, when sugarcane is crushed for making *gur*, there is considerable loss of sucrose, estimated at 20 per cent. No one benefits by this loss. The country's objective should, therefore, be to utilise the maximum amount of cane that is grown for the manufacture of white sugar. The logic of this objective is so strong that even the Karve Committee, the staunch supporter of cottage industries, has recognised it.

Another argument against the proposed new sales tax on sugar is that it will afford more opportunities for tax evasion and corruption, resulting not only in loss of revenue to the exchequer but also diversion of the sugar trade to other States. For, according to the Association, there is widespread evasion of even the existing multi-point sales tax on sugar. Transactions are carried on extensively without any bills being issued and, even when bills are issued, the names and addresses given therein are often fictitious. By the imposition of the new sales tax at the penal rate of one anna in the rupee or Rs. 5 to Rs. 6 per bag, the temptation for evasion will, it points out, be greater and will lead to large-scale smuggling from Andhra and Mysore. A lorry carries 50 to 55 bags of sugar and the amount of single-point sales tax is estimated at Rs. 250-Rs. 300 per lorry-load. "There is," to quote the Association, "enough margin in this for an attractive 'reward' at any checking points the Government may establish on the borders of the State, assuming that all the points of entry into the State will be manned by checkers. The result will be not only loss of revenue to the State Government but a diversion of the sugar trade to other States. The morale of the honest merchant is bound to be shaken in these circumstances."

The foregoing account clearly brings out the fact that the proposed new sales tax on sugar will raise the living costs of the poor and middle classes and ultimately affect the increased production of sugar in the South. The Madras Government will, therefore, do well to drop the proposal. In fact, it should think in terms of lowering the price of sugar by reducing the existing taxes on the sugar industry, such as the cess on sugarcane crushed by the mills.

SUGARCANE CESS IN U.P.

The legality of Section 20 of the U.P. Sugarcane (Regulation of Supply and Purchase) Act, 1953, was questioned recently at the Allahabad High Court through a writ petition filed by a sugar mill of Siswa Bazar, district Gorakhpur—the Maharbir Sugar Mills Ltd. Section 20 of the Act empowers the State Government to levy cess on sale and purchase of sugarcane.

It was argued on behalf of the Mill that Section 20 was similar in nature to Section 29 of the U.P. Sugar Factories Control Act of 1938 which had already been declared null and void. The Company submitted that a sum of Rs. 12 lakhs already paid by it as cess should be refunded and that the Government be asked not to realise further cess as Section 20 of the Act was "unconstitutional."

Mr. Justice V. D. Bhargava, after preliminary hearing, admitted the petition and issued a notice to the Government. His Lordship also directed the Government to stay further realisation of the cess from the petitioner till the application was decided.

A sum of Rs. 14.09 crores had been realised by way of excise duty on sugar during the financial year 1955-56 (up to January 1956). This information was given by Mr. Ajit Prasad Jain, Union Minister for Food and Agriculture, in the course of his reply to a question in the Lok Sabha recently. According to the Minister, no expenditure on development of sugarcane was incurred directly out of the excise duty collected. Such expenditure was met from the Central revenues to which the excise duty was merged.

Dextrans, which are the chemicals made from sugar, can be used as relatively economical soil conditioners, according to a report in the U.S. publication, *Journal of Agricultural and Food Chemistry*. Dextrans, it is claimed, act as a source of nitrogen, phosphorus and potassium for plant growth when mixed with soil. Tests with these chemicals have revealed increases of as much as 70 per cent. in plant growth and marked improvement in soil stabilisation.

WAGON NEEDS OF COAL

CHANGE IN CONTROL BOARD'S POLICY NECESSARY

THE coal industry has been assigned an important role to play during the second Plan period. It can undertake its responsibility if only proper conditions are created for its full development. Unfortunately, this requirement is unlikely to be fulfilled. In one respect at least it has all along suffered a severe handicap and is likely to do so during the second Plan period and that is, inadequate supply of wagons to move all the coal which the industry is capable of producing. Its experience of wagon supply during the first Plan period is not very happy. This is evident from the remarks of Mr. B. L. Agarwalla, President, Indian Colliery Owners' Association, Dhanbad. Addressing the annual meeting of this body a fortnight ago, he said that the overall coal output between 1951 and 1955 rose from 31.99 million tons to 38.21 million tons, an increase of 6.22 million tons. Further rise in output could not take place, he added, due to transport limitations.

Again, in the last year of the Plan, the rising tempo in output was maintained but despatches failed to keep pace with it, such being less by about 0.5 million tons. Mr. Agarwalla pointed out that a target of 60 million tons to be reached by the end of the second Plan period had been fixed for coal, taking for granted the availability of adequate transport to move the additional coal. He did not feel that the planners were realistic in making this assumption. "It is bewildering, indeed, that, at this moment, after a year-long planning at a high level for elaborate transport of coal, some of the mills should," to quote Mr. Agarwalla, "be closed, export trade in iron ore, manganese, etc., should collapse, and similar other consequences should follow, all because the railways cannot provide a few hundred more wagons for movement of coal and minerals." These adverse consequences of shortage in wagon supplies just when the country has entered the second Plan period do not augur well for the Plan. For the success of the Plan, an increase in coal output and coal supply at the average rate of 5 million tons a year for the next five years is considered to be quite necessary. To move this coal, according to Mr. Agarwalla, there must be a progressive increase in the allotment of wagons at the daily rate of about 600 for the first year, about 1,200 for the second year, rising up to 3,000 wagons for the fifth year. This is undoubtedly a stupendous task.

Again, the supply of wagons alone will not enable the coal industry to play its role during the next Plan period. It should be supplemented "by the provision for extension or grant of sidings and loading accommodation, for necessary increase in pilot capacities, increased operational efficiency, removal of bottlenecks, lessening the burden of freight, rationalisation of the overloading and underloading charges, demurrages and other impositions and for all other facilities which are essential for quick and easy disposal of the increasing volume of coal to be raised under the stimulus of the Plan." Mr. Agarwalla desired that railways should regard the provision of these facilities as their responsibility. He was, however, sceptical of the railways' ability to fulfil these expectations. For the railways' demand for a development expenditure of about Rs. 1,500 crores during the second Plan period has been pruned to Rs. 900 crores by the Planning Commission.

Industry Fully Controlled

Although the Minister for Production, Mr. K. C. Reddy, in his speech in the Lok Sabha the other day ruled out the possibility of nationalisation of coal industry for some years to come, the threat continues to hang over the head of the industry like the sword of Damocles. It is, therefore, natural that this threat should continue to cause concern among mineowners. Mr. Agarwalla, too, was worried about it and he did not see any logic in nationalising the coal industry at any time in future, since every aspect of the industry was under the control of the Government, which virtually did away with whatever difference there was between the public and private sectors in this industry. Pointing out that the coal industry was being controlled from the opening of a mine right up to the point where the coal was handed over to the consumer, Mr. Agarwalla observed:

"One often hears of the nationalisation of coal industry. It is said coal is a basic industry and, therefore, it should be nationalised."

"But you cannot open a mine, unless the Coal Board permits it. Even when permitted to open a mine, you cannot develop it, except as directed by the Coal Board. Even the height, length and width of galleries, in fact all mining operations, are controlled by the Mines Act. The control does not end even when the coal is brought to the surface. You cannot sell it except to a person who holds a permit and that too, at a price fixed by the Government. There are other controls as on wages, labour amenities, safety measures and so on. In fact, the so-called private sector of the industry is being run as directed by the Government and such directions are given at every stage."

Mr. Agarwalla, therefore, asked as to what remained to be nationalised, when the industry was thus being run, as directed by the Government, at every step and at every stage. This sound reasoning of Mr. Agarwalla, however, is unlikely to have any effect on the minds of those whose decision settles the fate of industries. For similar reasoning failed to have any effect on those who were responsible for nationalising life insurance, a business which was also being run under the directions of the Controller of Insurances and the Insurance Act. In any case, it has already been advanced by other leaders of the coal industry with no apparent effect on the Government's intentions to nationalise the industry.

No Gain Through Nationalisation

The President of the Indian Colliery Owners' Association wondered what further advantages were likely to be gained by nationalisation when the industry had offered its full co-operation to produce 16 million tons or even more of coal from the various fields. This additional coal could be raised within the existing leaseholds, without any financial help or without any conditions save an assurance that the coal raised would be moved. One cannot understand why this offer of the industry should not be accepted by the Government.

The need for a change in the Coal Board's policy was also emphasised by Mr. Agarwalla. Its policy about grading, degrading, upgrading and regrading coal seams needed, according to him, improvement and reorientation. The Board's attitude towards controlling the opening and reopening of mines also required adjustment to suit the needs of the Plan. And, finally, the Government should give representation to the industry on the Board. There was also need for rationalisation in the policy of the Board regarding flowing and washing coal.

Incidentally, Mr. Agarwalla stated that, in his opinion, safety records in Indian mines were the best in the world. He alluded to this statement because some questions, based on inadequate information, on this subject were asked in Parliament.

HYDERABAD COAL MINES PROVIDENT FUND SCHEME

As a part of their expanded social security programme, the Government of India has framed a scheme, called the Hyderabad Coal Mines Provident Fund Scheme, for granting provident fund benefits to about 17,000 coal miners of Hyderabad State.

The scheme, which follows the pattern of the existing Coal Mines Provident Fund Scheme functioning in the coalfields of West Bengal, Bihar, Madhya Pradesh, Orissa, etc., has been made applicable to all the four coal mines of Hyderabad with retrospective effect from 1st October 1955, and collection of contributions would commence from 1st April 1956.

Under the scheme every employee whose basic wage does not exceed Rs. 300 per mensem and who earns a bonus under the Hyderabad Coal Mines Bonus Scheme, is required to become a member of the Fund. The employees who have already been contributing to the employer's provident funds would however, join the Fund straightaway from 1st April 1956.

The Fund established under the scheme would merge in that already functioning in respect of West Bengal, Bihar, etc., coalfields and would be administered by the Board of Trustees constituted for the existing statutory fund.

SYNTHETIC RUBBER PRODUCTION

FIRST FULL-SCALE PLANTS TO BE ERECTED IN BRITAIN

THE world natural rubber industry had some disquieting news last week when plans were announced by the Esso Petroleum Company in the U.K. for the manufacture of petroleum chemicals, including butadiene, an essential raw material for the manufacture of synthetic rubber. The Esso Petroleum Company has planned to spend £9 million over the next two years on the construction of a plant at its refinery in Fawley, near Southampton, for the production of these chemicals. The new plant will process about 250,000 tons of crude petroleum per annum into a variety of chemicals, namely, ethylene, propylene, butylene and butadiene. This is the first time that the Esso has entered this field.

What is more significant from the point of view of natural rubber producers is the increase in competition from synthetic rubber, the production of which will be facilitated by the production of butadiene by the Esso. For most of the butadiene from the new Esso plant will be fed to the two new plants for the manufacture of synthetic rubber to be erected shortly at Fawley on a site adjacent to that of the Esso refinery. The synthetic rubber factory is to be built at a cost of £5 million by the International Synthetic Rubber Company, which was formed in November 1955 by four major tyre companies, namely, Dunlop Rubber, Goodyear Tyre and Rubber (Great Britain), Firestone Tyre and Rubber and Michelin Tyre. The output of the two plants, which are due to be completed in 1958, will provide 50,000 tons of GR-S rubber annually, approximately equivalent to the present total volume of Britain's GR-S rubber imports from the U.S. A saving of about $30 million per annum will be effected when the synthetic rubber plants go into full production.

This is the first time that large-scale production of synthetic rubber in the U.K. is being attempted, because home supplies of butadiene and styrene, the major raw materials needed, were not available in sufficient quantities hitherto. Now that ample supplies of these chemicals are being assured by the Esso, there is no impediment in the way of setting up large-scale synthetic plants. Further, the supply of styrene, another principal raw material for the manufacture of synthetic rubber, is also assured with the availability from the Esso plant of ethylene used for the manufacture of styrene.

The initial capacity of the proposed British synthetic rubber plant is confined only to the present import volume of synthetic rubber from the U.S. There is, however, no indication that the capacity of the plant will not be increased. Nevertheless, there is still scope for the use of both synthetic and natural rubbers. That the consumption of the latter by the U.K. will not be affected is evident from the departure of the British rubber delegation on a goodwill mission to Malaya. A five-member delegation of the British rubber manufacturing industry, led by Mr. L. J. W. Bailey of the Dunlop Rubber Company, Ltd., and consisting of representatives of the Firestone Tyre and Rubber Company and the Goodyear Tyre and Rubber Company, Ltd. (Great Britain), left for Malaya on 3rd April in response to a suggestion made by the Chief Minister of the Malayan Federation when he had been to London recently for the constitutional Conference. When the Chief Minister and other Malayan leaders were in London they expressed certain fears, as was pointed out in these columns last week, about Britain's present import programme for synthetic rubber and its plans for producing it at home. Referring to these fears, the leader of the British delegation said, just before leaving London, that they were exaggerated. In view of Malaya's importance to the Commonwealth and because of the fact that Britain was Malaya's best customer for natural rubber, according to Mr. Bailey, the British rubber manufacturers had agreed to send a delegation to Malaya for talks with the Malayan Rubber Producers Council. Mr. Bailey added: "Natural rubber has got to put its house in order now that it is in open competition with synthetics and we are looking forward to constructive discussions both in Singapore and Kuala Lumpur."

Commenting on the decision to set up synthetic rubber plants in Britain, *The Times*, London, expresses the view that the markets for natural and synthetic rubber are interlinked and growing fast to sustain both the industries. It says:

"The decision to make synthetic rubber in Britain, and particularly the decision to make GR-S, was taken rather late, though admittedly it could hardly be taken until oil refining was being established and could provide the basic raw material. Now the need to use increasing quantities of synthetic rubber for purely technical reasons has been fully established.

"Synthetic rubbers—not one but a range of substances—are not just substitutes for rubber; they are different materials which have rubber-like qualities in varying degrees, but usually also have other qualities which natural rubber does not possess. For many purposes, they are essential; even for tubes and the treads (but not the walls) of motor-car tyres they are better. This is now acknowledged, but, fortunately, it is now equally clear that markets for natural and synthetic rubber are often interlinked and growing fast enough to sustain both industries."

In conclusion, *The Times* observes that the establishment of the new industry is overdue, but that the synthetic rubber does not offer now the threat that it formerly seemed to the rubber plantations of Malaya and other countries.

TEA STATISTICS

The output of tea in South India during February 1956 amounted to 6.60 million lbs., as against 7.07 million lbs. in January this year and 7.83 million lbs. in the corresponding month of 1955. This brings the total output during the current season so far (April 1955 to February 1956) to 117.38 million lbs., as compared with 122.40 million lbs. in the corresponding period of 1954-55.

Shipments of tea from Cochin during February 1956 aggregate 5.86 million lbs., as compared with 5.88 million lbs. in the corresponding month of 1955, bringing the total shipments for the first two months of the current calendar year to 12.54 million lbs., as against 10.68 million lbs. consigned in the same period of 1955.

The stocks of tea in the U.K. as on 30th March 1956 amounted to 109.4 million lbs., which represent a decline of 63.90 million lbs. over the year.

(*Concluded from next column*)

in enabling the new mills in these areas either to become independent of jute goods supplies from India or compete with Indian goods in world markets. Forewarned is forearmed and India should, therefore, be on its guard to meet the situation by striving to grow quality jute in ample quantities within the country itself.

One of the recommendations of the Commission was that State Governments should enforce laws against usurious practices strictly because of extensive indebtedness among jute cultivators. Referring to this, Mr. Karmarkar stated that these recommendations had been brought to the notice of the State Governments concerned. He added that they were examining them individually and implementing them "as far as possible."

An important recommendation of the Commission was that energetic measures should be taken to enhance the quality of raw jute and the yield per acre. The jute industry has reasons to feel that the Governments have not done all that they can to implement this vital suggestion, as witness the remarks of Mr. M. P. Birla at the last annual meeting of the I.J.M.A. (*vide* the leading article in *Commerce* dated 24th March 1956). It is surprising that Mr. Karmarkar had nothing to say on this subject.

JUTE BALING INDUSTRY IN WEST BENGAL

The West Bengal Government has appointed a special officer on special duty to investigate and report on the best way of utilising the warehouses and press houses of the jute pressing industry in and around Calcutta. This officer is expected to submit his report within three months.

The move has been prompted by the desire to rehabilitate about 30 jute baling presses with a capacity of about eight million bales a year which are lying almost idle at present. Before the Partition, jute baling was a prosperous industry employing about 100,000 workers. In addition to supplying about 1.5 to 2 million bales of jute a year to local mills, jute balers practically met the entire demand for jute. They pressed on an average about 4 million bales a year for export.

The Partition, however, gave a severe blow to the industry, but, in spite of this, a large quantity of jute, even from Pakistan, was imported into Calcutta and baled for export up to 1949, when the Government of India placed an embargo on the export of raw jute. This embargo crippled the industry. The present efforts of the State Government to help the idle balers deserve appreciation.

AID TO JUTE MILLS

ACTION TAKEN BY GOVERNMENT

AN idea of the action taken by the Government of India on the recommendations of the Jute Enquiry Commission is provided by the statement placed before the Lok Sabha by Mr. Karmarkar, Minister for Commerce, last week. The Commission, it will be recalled, was appointed by the Government of India under the chairmanship of Mr. K. R. P. Iyengar, Joint Secretary to the Government of India, Ministry of Finance, New Delhi, in August 1953. Its report was submitted to Government in March 1954. The other members of the Committee were the late Dr. B. V. Narayanaswamy Naidu, then Chairman of the Forward Markets Commission, Mr. P. S. Gupta, Deputy Director General of Supplies, and D. Sandilya, Joint Director, Finance, Railway Board. The Commission did the best job of its enquiry and its constructive suggestions were well received by the industry and the public.

One of the suggestions of the Commission related to the regulation of futures trading in jute and jute goods. It said that a single well-knit and regulated organisation like the East India Cotton Association, Bombay, should be set up for the establishment of a futures market in these goods. Alluding to this recommendation Mr. Karmarkar said, in his statement to Parliament, that the Forward Markets Commission had invited applications from associations concerned with the regulation of futures market in jute and jute goods for the purpose of recognition under sections 5 and 6 of the Forward Contracts (Regulation) Act, 1952, and the Government expected that the matter would be finalised in the near future.

The Commission recommended that no licences should be issued as a rule for starting new jute mills. The Press version of the statement does not say whether the Government has accepted this suggestion, but it is now common knowledge that the Government sanctioned the establishment of a new unit in Assam on the ground that the State was one of the backward regions in the country urgently requiring industrialisation.

The Minister further revealed that the Reserve Bank had issued necessary instructions to the banks in order to stop any recurrence of banks financing speculation in jute and jute goods, as they did in 1952. This action had been taken in pursuance of the Commission's recommendations that it was necessary to prevent intense speculation in jute and jute goods market in the interests of the industry, which is an important foreign exchange earner.

With regard to rationalisation, the mills had, Mr. Karmarkar stated, already taken to modernisation according to a set programme. By the end of 1955, approximately one-third of the programme had been completed at a cost of about Rs. 15 crores, out of the resources of the mills themselves. The Government of India had decided to advance loans to the individual mills requiring such assistance and had actually sanctioned loans in two cases. In this context, it may be mentioned that National Industries Development Corporation, a Government agency, has been entrusted with the work of assisting jute mills in the implementation of their expansion programme. This Corporation has appointed a committee with Mr. M. R. Kazmi as member-Secretary for scrutinising applications for loans. As however, this programme is being carried out in such a manner as to cause the least possible displacement of labour, it will take a number of years for completion.

The Commission had suggested that imports of raw jute from Pakistan should be restricted to grades which were not available in the required quantity in India. This suggestion is no doubt being pursued by the Government and suitable provision was made in the Indo-Pakistan Trade Agreement last year for importing about 1.8 million bales of raw jute. But it is unlikely that this policy of dependence on Pakistan jute would ultimately be in the interests of jute mills in India. For there are one or two good reasons why India should try to achieve self-sufficiency in raw jute. First, experience has shown that there has always been difficulty in getting freely supply of raw jute from Pakistan for some reason or other. Secondly, with a view to having a safe market for its raw jute, Pakistan is assisting certain countries in the Middle East to erect jute mills. This policy would result not only in making Pakistan become independent of India for the sale of its surplus jute, but
