NEW SEASON PROSPECTS FOR TEA

HIGH COSTS AND INCREASED COMPETITION

SINCE the passing of the 1954 boom, it has become increasingly clear that the world's tea industries are launched on a period of steadily growing competition. Total production in the major exporting territories—India, Pakistan, Ceylon, Indonesia and East Africa—is seen to have reached a new record during 1955, having exceeded the previous year's figure by 25.5 million lbs. and the 1950 figure by as much as 158 million lbs. World consumption has probably also shown an increase, but with the process of de-stocking in major consuming countries, there has been a substantial decline in prices. Although there is little firm reason yet to believe that production is far outpacing consumption, the indications are that established producers have good cause to worry over the long-term outlook. In a commodity such as tea, which is prone to sudden and violent fluctuations of fortune—fluctuations caused often by unpredictable factors like the weather—estimates of supply are liable to go away from year to year. But the evidence available today clearly suggests that the longer trend is towards bigger and bigger crops. This trend is dictated partly by the cost advantages of new areas with a large potential for expansion, such as East Africa. Partly, it springs from the need of developing countries like India and Ceylon to earn more foreign exchange; the former, for instance, hopes to be producing about 100 million lbs. more tea five years hence. Partly, it may be expected to result from the gradual rehabilitation of war-ravaged economies such as Indonesia's. While it is generally expected that consumption will also increase, the signposts to the future in this case are not nearly as certain. The rise in demand for tea depends, more than anything else, on its remaining one of the cheapest beverages in the world, and thus being able to compete effectively with such substitutes as coffee, cocoa and soft drinks. Yet the entire trend of recent years in the major exporting countries has been that tea has become steadily more expensive to produce. The restrictive effect of this trend on consumption has so far been offset by growing consumer prosperity, both within and outside the producing areas; but it is clearly too risky to assume that this will continue to be the case. With such a prospect before the industry, the Calcutta tea-broking firm of Messrs. J. Thomas and Co. Private Ltd. issues this week in its annual report a useful reminder suggesting that costs and quality are likely to be the major keys to success for producers in the more competitive world of the future.

The fact that costs are too high, and too inelastic for an industry which is traditionally faced with sharp and sudden changes in trading conditions, has often been mentioned as one of the greatest threats to the health of India's second biggest foreign exchange earner. But the warning has been steadily ignored. It has been ignored partly on the plea of political demagogues who are sometimes naive enough to wonder why an industry should make any profit at all; and who, when one makes big profits as tea did in 1954, forget to compare them with the almost devastating losses of a couple of years earlier. It is ignored almost as often by State Governments eternally on the hunt for new sources of revenue out of the few left them by the Centre. It is ignored often also by the Central Government, which has not yet fully understood the lesson that foreign merchants who have large alternative sources of tea supply, and who are aware of their strength in a buyers' market, cannot always be pushed into paying the prices and tariffs New Delhi considers proper. Messrs. J. Thomas and Co. points out in its report that the past year has brought no cessation to the inflationary tendency in costs despite the considerable decline in the price of tea. The Assam Government has raised its carriage tax from three pias a lb. to one anna a lb. The West Bengal Government has decided to levy an octroi duty of one anna a lb. on all teas "for consumption, sale or use" in the Calcutta area, thereby interfering with the Centre's declared intention of promoting the growth of Calcutta as a tea market. The new

scales of bonus for workers, stipulated for 1954, 1955 and 1956, have "succeeded in establishing costs at considerably above their recent level."

An increase in taxes, and in wages and amenities for labour, is not in itself unjustified; indeed, it is a feature of progressive industries that they should be able to contribute more to governmental coffers and help raise the living standards of those they employ. But before an industry can pay either its Government or its workers it must be in a position to attract investment and offer a reasonable return on it. If it cannot offer a reasonable return, it will not attract the investment, and there will come a time when there will be nothing left to pay to the Government and the workers. The scale of foreign disinvestment in the Indian tea industry suggests that anxiety about investments and returns is growing—and understandably so in the light of trends prevailing in recent years. It is worth noting, for instance, that the increases in taxes and labour burdens during the past year have taken place at a time when large quantities of tea have been sold at less than the cost of production. Messrs. J. Thomas and Co. points out that in February 1956, which was by no means the worst month of the sale year just ended, "69.76 percent of the tea offered for sale sold under a figure of Rs. 1-12 a lb. We are informed that the cost of bringing tea to Calcutta for sale at the present time is often up to this figure." The first cold blast of tea company reports for 1955, which has so far been felt more strongly in London than here, suggests that not many apart from the quality producers are likely to show sufficient profits to meet the normal expectations of shareholders, and yet leave sufficient money for rehabilitation, replanting and improved cultivation.

The need for rehabilitation and other improvements is the more necessary now as the world market becomes more competitive in relation not only to prices but also to quality. The increasing discrimination in favour of good teas has been one of the outstanding features of buying activities for the past nearly eighteen months. In some circles, it has led to loquacious comment on the lines that if producers did not get good enough prices, they had only themselves to blame, since they did not produce good enough teas. Messrs. J. Thomas and Co. puts the whole issue in its proper perspective when it says that the 1955 season "proved unkind to north-east Indian growers who set out with the firm intention of producing quality tea at the expense of quantity.....Not only did the climate prove most

derable doubt is likely to accompany banking expansion, and the watch on it will have to be a close one. The failure of the Department of Controller of Insurance to clear up the abuses which existed in privately-owned life insurance, does not speak highly for the efficacy of official control. But it appears from the Report that the Reserve Bank has been more vigorous and painstaking. It is to be hoped this is a true and balanced picture with which the public is being presented. The risks of failure by the Reserve Bank in its essential functions of control are likely to be worse than the nationalisation of private banking; they could lead to the complete wrecking of the five year plan.

A good deal of the most important expansion of the banking system is scheduled to take place in agricultural areas. The pure will generally have to be forced, because of the likelihood that the first few years of working of any new branch in a rural area will be unprofitable. The nationalisation of the Imperial Bank was devised with this purpose in mind and 400 new branches in the next five years was the target. In the first six months of its working, the State Bank established 20 new branches. It is, of course, clear enough that the disorganisation of the change-over must have interfered with development plans, but 20 new branches in six months represents a rate of only 200 in the five year period, or exactly half the target figure; and this with the help of the Integration and Development Fund, a form of assistance which might have made a good deal of difference to the performance of the Imperial Bank's rural branch expansion. There appears to be considerable room for improvement yet in this portion of the State Bank's activities. The provision of credit facilities, through co-operative banks and State financial corporations for small-scale and rural industries, is proceeding on the basis outlined in the Report of the Rural Credit Survey Committee. The problem, according to the Reserve Bank Report, "is one of collaboration between the various agencies in the field and of co-ordination of their activities".

The Report draws attention to the responsibilities which the small, privately-owned banks will have for deposit expansion. The powers of regulation are sufficient to prevent mushrooming and the kind of indiscriminate expansion which took place during and immediately after the war, and it is now up to private bank managers to work within this framework for their own profit and in accordance with the priorities laid down in the second five year plan. This should leave considerable scope for initiative. The Report contains a clear warning when it points out that there will be ample opportunities for banks to do good business without resorting to the competitive bidding up of deposits which, it states, "if carried beyond limits, would adversely affect the system as a whole." The inadequacy of the reserves which some banks maintain is also commented on, with the advice that they be strengthened "to help inculcate confidence in the system."

THE CONGRESS RECIPE FOR SMALL SAVINGS

THE Report of the Congress Small Savings Committee, just released, stresses those obvious measures which have to be taken to promote small savings in this country, especially in its rural parts. The second plan target for small savings is Rs. 500 crores—that is, Rs. 100 crores a year. This target is officially considered feasible, because the trend of collections during the first plan, especially in the final year, was encouraging, during this period, the collections went up to Rs. 65 crores. But even this sum is a long way short of the annual second plan average. This of course does not mean that Rs. 100 crores a year is beyond the range of practical possibility, as there remains considerable savings potential in the country still to be tapped. But that potential lies more in the villages where the community has profited from better agricultural prices and production than in urban areas where the possible savers are being left with less and less of the margin for savings due to a variety of factors such as taxation and high cost of living.

The only way to approach the right source, the report stresses, is to utilise the services of those agencies of rural political and economic progress, such as co-operatives and village panchayats, which are in a position to do a good deal to popularise the movement. On the official plane, the post offices can do the work of savings banks, with the village postmaster acting as an agent of collection. Official attention has already turned to these sources, but the important question is how the whole machinery is to be re-organised for the purpose, since organisational weakness is one of the basic defects of the movement at present. The Committee and some of the leading public men who replied to its questionnaire, are of this opinion, and one of them, Sardar Pratap Singh Kairon, holds the view that the machinery was effective mostly in urban areas and their environs.

This is the problem to which official attention could now be increasingly given, because without there being visible facilities to inspire the confi-

dence of the villager, mere appeals to patriotism will not be enough. On the mobilisation of savings, the Committee's recommendations are many. Some of these are the co-ordination of nationalised insurance and national savings as different wings of the drive with lower premiums for small denomination policies, the utilisation of religious properties in suitable cases, voluntary deduction from workers' wages on local pay-days, amendment of the Payment of Wages Act to make investments in National Savings Schemes permissible deductions, provision in rules to secure the investment of a fixed proportion of provident fund money in small savings securities, and in some cases such as compensation to injured workers or their relatives and bonus to workers, payment of the amounts partly in national savings certificates.

The last-named appears to amount to a kind of forced saving, but that is unavoidable since the industrial working class in this country is better off than other groups of workers, and is gradually taking the social place of middle and lower middle classes. An economist who replied to the Committee's questionnaire stressed the point that apart from ensuring the liquidity of these securities, the rate of interest should be fixed at an "appropriate" level. Some already feel that the existing interest rate structure is out of line with the prevailing trends in the market, and should be suitably revised. The Committee has also underlined the necessity of savings groups, such as function in the U.K., and a system of nation-wide collections such as in the U.S.A. which includes even school children. In India, these examples could be followed, though their limitations are obvious enough.

CURRENT COIN

Increased Cost of Coal.—Where a comment was made in the issue of *Capital*, 31st May, on the award of the All-India Industrial Tribunal (Colliery Disputes), it was estimated that the probable increase in the cost per ton of coal would be in the region of Rs. 2. This figure was arrived at by taking the increase in wages to be an average of about 40 percent. It was then concluded that the present wage bill of the industry would increase in that proportion. This would have meant that the wage bill would have increased by an extra Rs. 9 crores a year, which, divided out over current output, gives an increase of Rs. 2 a ton of coal. This estimate was intended to be very rough and it was mentioned that other provisions of the award were likely to increase it. The industry has now made its own estimate of the probable cost of implementing the award and this has been found to be well in excess of Rs. 4 a ton. The industry's figure has been arrived at by taking a weighted average of estimates submitted by various collieries selected at random. It may therefore be taken as reasonably well substantiated, although it is pointed out that no definite figure can be reached until the collieries have worked under the award for some months. It can be seen that the more authoritative estimate which has been made by the industry gives added point to the comment which *Capital* originally made that unless a substantial increase in coal prices is granted by the Government, many collieries will be forced out of business. Considering the final coal output target for the second five year plan, such an eventuality can scarcely be accepted with equanimity by the Government of India. Representatives of the industry are now in consultation with the Government on the question. It was recognised by the Government in 1947 that a suitable profit for the industry, bedding in mind that it is extractive in nature, is about 10 percent of the selling price. This proportion has since been eaten up by rising costs and lower prices enforced by the Government itself. It would seem only reasonable that investment of the kind involved in coal mining should receive a return of at least 10 percent, especially when the calls on the industry during the second five year plan are to be so substantial.

General Insurance Problems.—The Indian Trade and General Insurance Company celebrates a further expansion in its business during 1955 with an increased dividend of Rs. 2 a share, against the previous Rs. 1-8. Lala Karam Chand Thapar, chairman, tells shareholders in his annual statement (which appears on a later page) that business conditions are highly competitive. The underwriting results of the fire department show an expected decline, but a recovery seems likely in the current year. In the marine department, conditions are much the same as a year ago. There are some signs of a slight improvement in claims for theft and pilferage, but the very small margins on which shippers are operating "is undoubtedly reflected in the volume of damage claims received, and one is sometimes led to believe that we are now expected to cover trading losses, however they may arise." In the accident department, more selective underwriting has caused a fall in premium, but the loss rate has been reduced. Private motor-car business, according to Lala Karam Chand, remains unremunerative "and the level of premium rates bears no economic relation to the ever-increasing cost of claims." Discussing the broader consequences of

life insurance nationalisation, the chairman states that composite companies "are now undergoing a surgical operation which will separate the life from the general section of their business, and while I have no doubt that the operation will be pronounced successful, I fear that many of the weaker patients will not long survive the surgeon's knife." Another result of life companies having been taken over is that the attention of advocates of nationalisation has been turning to general insurance companies. The Government has given assurances that it will not nationalise the latter, but it is for them to cure themselves of "certain long-standing ills." Lala Karam Chand criticises pleas that the Government should interfere, and asks for greater faith and understanding among the companies themselves.

New Steel Prices.—The Government's decision to introduce uniform prices for steel is likely to give a considerable boost to the price of engineering goods throughout the country. The object of the scheme is to affect, over time, the location of steel-consuming industries, and there is little doubt that centres outside what are at the moment the chief areas of engineering activity will now lose their former competitive disadvantage. But in the short run, when most engineering concerns are already situated in areas where the price of steel will have to rise, the influence on the industrial price level is going to be adverse. Whether eventually this tendency will be completely neutralised by the other social and economic advantages which the Government expects to result from a wider spread of the engineering industry, only the future can decide. But the decision of the individual firm about future location will depend largely upon whether other factors, such as the economies to be gained from operating in an area already heavily industrialised, will outweigh the higher price of steel. On these criteria it would seem that the new price is unlikely to persuade many established industrial concerns to move their locations, although it may influence some new ones when choosing a site; but here again, other factors may predominate. The ultimate result of the present price adjustment, then, is likely to be an all-round and permanent increase in industrial costs. The adjustment in the price of pig iron will act in a similar manner. The Government's justification for the change in pig iron prices is that large imports are now required at a considerably higher price than is being charged for the Indian product, and it is now necessary to increase the price of Indian pig iron to achieve an average. An increase in the price of steel and pig iron, even so early in the five year plan, is unlikely to have serious effects on economic expansion, but when inflation is threatened and there is a general need to keep down the industrial price level, adjustments of this kind, unless absolutely necessary to cover increased cost, are best avoided.

Reserve Bank's Powers.—The Federation of Indian Chambers of Commerce and Industry has just issued its comments on the Reserve Bank of India (Amendment) Bill, 1956; they largely follow the detailed criticisms made editorially in *Capital* on 10th May. The Federation emphasises the prime importance of maintaining confidence in the rupee; it fears that confidence might be impaired if the currency is expanded rapidly, as it could be when the Bill removed the present restraint set by the stipulation about maintaining proportionate reserves. The Indian rupee, it says, is being increasingly used as a medium for international transactions in west Asia, such as in Bahrain and Kuwait. The Federation criticises the clause giving the Reserve Bank additional powers to increase the minimum reserve requirements of commercial banks. The system of variable reserve ratios, it says, is a recognised method of central bank control over bank credit. But the clause will enable reserve requirements to be increased by as much as four times the present legal minimum. In the United States, where the system of variable reserve ratios prevails, the maximum increase which can be made is limited to only twice the legal minimum. The Federation therefore suggests that, under the Indian Bill, the power of increasing reserve requirements should be limited to 10 percent of demand liabilities and 4 percent of time liabilities. It adds that the Act should specify that interest will be paid at a rate above the prevailing bank rate to all scheduled banks on the excess of balances they are asked to keep with the Reserve Bank.

U.S. Business Hesitates.—The month of May has brought a mixture of good and bad business reports, says the First National City Bank of New York in its newsletter for May. The strong spots in industry, which in general are the capital goods lines, seem to have become stronger, for new evidence has appeared that business plans for plant and equipment expenditures are still expanding and unfilled orders in these lines have risen further. The soft spots, on the other hand, are softer, with automobile sales disappointing, production cut further, and estimates of the year's output reduced. The leading automobile companies now say that passenger car sales this year will

fall below 6 million, compared with estimates of 6,500,000 last January, and with 7,400,000 domestic sales in 1955. In terms of overall production and trade, it is unlikely that the sideways trend on a high level, which has persisted for a good many months, has been significantly altered. In business comment and sentiment, however, a shift of emphasis is apparent. The buoyant confidence of last winter appears to have given way to a tendency to stress the soft spots. The sharp decline in stock prices both reflects and adds to unsettlement. Money policy has been increasingly criticised. Inventory accumulation and estimates of a reduced level of housing starts have come in for more attention. There are indications that the flow of orders has slackened in some lines, although the evidence is conflicting. During April, the volume of new durable goods orders continued to exceed shipments, and order backlogs rose further. In a period of mixed reports such as this, there are two ways of looking at almost any item in the news. The cut of over 40 percent in weekly passenger-car production since last December is depressing, but the fact that other activities have absorbed the curtailment with only a minor drop in overall production and employment should be encouraging. The industrial production index (seasonally adjusted, 1947-49 = 100) edged up slightly from 141 in March to 142 in April as the result of a general advance in durable goods output. Factory employment rose moderately on a seasonally adjusted basis, after declining from November through March. The number of new homes started in April increased somewhat more than seasonally to 106,000 units. To some, these reports are heartening. For others, the reaction is one of disappointment that all three series continue a little lower than they were early last autumn, and of belief they will go lower before they turn up again. For many months the business trend has been sideways and inconclusive. In some lines the "pause" has been more than a pause; it has cut deep. Yet the country is fortunate in the smoothness with which large-scale adjustments have cancelled out, leaving an overall pattern of stability.

Insurance and Social Security.—Commenting on the nationalisation of life insurance in India and the inertia that has followed, Professor S. Kesava Iyengar, Director of the Indian Institute of Economics, said in Hyderabad recently that under the present circumstances in India, nationalisation of life insurance was to be interpreted much more as a social security measure than as an avenue for the nation's saving. "But the Government of India has taken over only theoretically, and practically nothing has been even begun to gear up the life insurance movement to modern standards." He was afraid that the Government of India had saddled itself with too many big tasks, and the Planning Commission was mostly in the academic chair still. Nationalised life insurance was a local affair, and could be tackled properly and adequately by a capable unit organiser, one for each district. In the *Enquiry in the Hyderabad-Secunderabad City Area, among Shops and Establishments*, only 407 employees were insured out of 4,302 members, only 40 percent. What about the balance samples (846 percent). Professor Iyengar wanted to know? The right end to begin with, he maintained, would be to tackle unorganised labour in industry and agriculture. The ideal should be to endow each family in the lowest ranges of income with at least Rs. 1,000 life insurance. As pointed out in the Report: "Schemes for all-pervading State Life Insurance Corporation and a State Provident Fund Corporation (with subsidised premiums and contributions for low-income groups) should be worked out, and public revenues should make up net losses if any." Unemployment and under-employment had been the nightmare of the Planning Commission, but actually, employment potential was much larger than manpower potential in fields like intensive cultivation, housing and life insurance. The recent Report by the Indian Institute of Economics said: "Employment potential should substantially increase for helpers, doctors, lecturing and training staff and insurance office employees." Professor Iyengar appealed to the Finance Minister, Government of India, to start actual work in at least one district in every State, taking life insurance to the door in every hamlet. "Unfortunately," Professor Iyengar concluded "our commonsense has been drowned by theories and fifth column activities."

Agricultural Production.—The re-thinking that has lately been done at the highest level on many aspects of the plan has left the impression that some of its basic features are likely to undergo a complete change. The agricultural development programme is one of these. When the plan-frame was being drawn up, the emphasis was away from agriculture and towards heavy industries; that agriculture and towards heavy industries; that appears now to be changing. This is so, firstly because larger agricultural production than the targets fixed in the plan will be necessary to offset the inflationary effect of deficit financing. And, secondly, the proposed increase in the agricultural income will amount to only 16 percent of the income level, whereas the national income as a

whole is planned to rise by 25 percent more. This will obviously widen the gap between rural and non-rural incomes, which will go against prevailing egalitarian principles. It is not known what has happened to Mr. V. T. Krishnamachari's suggestion for an increase in foodgrains production of 26 million tons against the 10 million ton target officially fixed, but the Planning Commission, of which he is Deputy Chairman, has just addressed a letter to State Governments pressing them to take all possible steps to increase agricultural output well above the targets set. The Food and Agriculture Ministry is also concurring. This optimistic view is prompted by the belief that the phenomenal increase in farm production over the first quinquennium was largely due to the official drive launched to raise the output. This was the point which Dr. Deshmukh, the Union Minister for Agriculture, made in a recent radio broadcast talk. His point can, of course, be granted with the qualification that good monsoons played a not inconsiderable part. But this fact notwithstanding, the case for raising the production targets is unassailable. Some of the targets are: foodgrains 10 million tons or 15 percent, oilseeds 1.5 million tons (27 percent), sugarcane (gur) 1.3 million tons (22 percent), cotton 1.3 million bales (31 percent), jute 1 million bales (25 percent), coconut (oil) 0.8 lakh tons (62 percent) and lac 4 lakh maunds (33 percent). The Planning Commission's letter advises the State Governments to proceed in the five directions, namely, national extension and community projects, seeds and fertilisers, irrigation, development of co-operation, especially in credit and marketing, and take other measures such as pest control, extension of dry farming methods, research and application of results, and information for farmers. The plan

provides substantial sums for these programmes totalling more than Rs. 1,000 crores, of which Rs. 381 crores are to be spent on major and minor irrigation projects and Rs. 95 crores on flood control. A drive to popularise the use of fertilisers has also been launched. The country's present demand for fertilisers is estimated at 600,000 tons of which Sindri alone produces 404,000 tons, the balance coming from outside. It is believed that this figure can be raised by several times, and according to one expert estimate, the consumption of nitrogenous fertilisers in India ought to be nearly 3,035,000 tons on the basis of the existing irrigated and assured-rainfall areas.

LANCASHIRE'S CAMPAIGN

It would be difficult, we think, to find a more lugubrious advocate for a cause than Sir William Wedderburn, and we have rarely listened to a more dismal speech than that he made when moving the adjournment of the House on the 18th ultimo. Having started him on his dreary task, the Benches of the House were rapidly emptied, the only Minister remaining being Lord George Hamilton, who looked the picture of grief. The front Opposition Bench was vacant. Sir William Wedderburn did not make much of his case, and Sir John Leng did not appreciably improve it. If it is conceded that Lancashire is to have a voice, the present arrangement of the cotton duties is fair to the Indian and English mills, i.e., a duty of 3½ percent on all cotton goods woven by them. Sir John Leng, no doubt, made a point, when he stated that there was no countervailing excise on the Indian paper and woollen industries, but the maxim *de minimis lex non curat* may be applied. Piece-goods are the great staple of Lancashire, and India her great customer. If India is to derive the blessings of the Pax Britannica she must yield something, and the Indian mill-owners have recognised this. It is ridiculous to talk of the duty on piece-goods pressing on the poor, and the line taken up by Sir William Wedderburn is a false and misleading one. The people of India never objected to the duty on piece-goods, the objection came from Manchester; and, if instead of bringing pressure to bear on the Secretary of State to veto all taxation, the Lancashire members had insisted only on all piece-goods, Indian or English, being taxed, there would have been little or no agitation.

Company Meeting

INDIAN TRADE & GENERAL INSURANCE COMPANY, LIMITED.

A SATISFACTORY YEAR.

DIVIDEND INCREASED.

Statement by the Chairman, Lala Karam Chand Thapar, on the accompanying Report, Accounts and Balance Sheet for the year ended 31st December, 1955.

Once again I am happy to be able to report further expansion of your Company's business, and if this has not been so marked this year as in the last few years, I hope you will agree that the accounts presented disclose a continued strengthening of your Company's reserves which will enable us to play a full part in the increased tempo of industrial expansion which plays such a large part in the Government of India's Second Five-Year Plan.

What is of paramount importance is that we have been able to maintain our place amongst the leading Indian Insurance Offices, an achievement which should not be lightly disregarded in these highly competitive days. Our gross world-wide Premium for the year fell a little short of a Crore of Rupees and our Nett Premium in all Departments totalled Rs. 58,63,163 as against Rs. 57,10,597 in 1954.

To the Nett Premium income of Rs. 58,63,163 must be added Interest and Dividends (less Income Tax) amounting to Rs. 1,91,571 and Miscellaneous Receipts of Rs. 13,587; the total income of the Company thus amounted to Rs. 60,68,321. Claims Paid and Outstanding take Rs. 31,40,787 (53.5 per cent.), Commissions, Expenses of Management and Foreign Taxes Rs. 23,75,359 (40.5 per cent.); and Bad Debts and other debits account for a further Rs. 1,19,803 (2.04 per cent.) leaving a balance of Rs. 4,32,372 to which must be added the balance carried forward from the previous year amounting to Rs. 17,211, making a total credit balance of Rs. 4,49,583 (7.67 per cent.). Out of this balance an amount of Rs. 2,59,303 (4.4 per cent.) has been placed to the Reserve for Unexpired Risks in all Departments, and after making a provision of Rs. 43,033 for Taxation there is an available balance at the end of the year of Rs. 1,45,247.

Having regard to the satisfactory underwriting results combined with the favourable margin between the aggregate Book and Market Values of our Investments at the close of the year, your Directors have decided to recommend an increase in the Dividend from Rs. 1-8 to Rs. 2 per Share, free of tax.

The sum of Rs. 1,20,000 which it is proposed to distribute to Shareholders is well covered by Nett Interest earned by the Company on its Investments which amount to Rs. 1,91,571.

FIRE DEPARTMENT

	Rs.	Rs.	Percentage of Premiums
Nett Premiums	Surplus		
1955	28,87,406	2,13,827	7.4
1954	27,87,331	3,25,415	11.7
1953	25,97,027	2,47,346	9.5

In my statement to Shareholders last year I said that consequent upon the reduction of Fire premium rates combined with some serious Fire Losses reported in the early months of 1955 it was unlikely that the very favourable underwriting results of 1954 would be repeated this year and my prediction has unfortunately been justified in the event.

In the circumstances, however, results can be considered satisfactory and credit is due to them in charge of the Company's Underwriting in this department.

That there was only a modest increase of 4.3 per cent. in the Premium income is to an appreciable extent due to the devaluation of the Pakistan Rupee and the substantial reduction in the Fire premium rates to which I have already referred.

Indications this year point to an increase of business in this branch and a possible improvement in the Un-

derwriting results; let us hope that events will in due course justify my guarded optimism in this regard.

MARINE DEPARTMENT

	Rs.	Fund as at 31st December	Percentage of Premiums
Nett Premiums		Rs.	
1955	19,77,035	18,97,941	96
1954	18,80,133	16,92,120	90
1953	16,75,458	13,25,967	80

There is a little change in market conditions since my statement last year.

There are possibly some signs of a slight improvement in claims for theft and pilferage but on the other hand the very small profit margin on which shippers are operating in the present "buyer's" market is undoubtedly reflected in the volume of damage claims received and one is sometimes led to believe that we are now expected to cover trading losses however they may arise.

One welcome event is the reintroduction of a limitation of the period of cover after discharge of cargo but current rates are still below those prevailing in 1939 when conditions all round were infinitely better and there has been no halt in rate cutting notwithstanding the substantial reduction in "War" rates.

The continuation of the present competition for Premium income irrespective of results can serve nobody's interest but the assured's.

Once again we have thought it prudent to strengthen the Marine Fund by a transfer from the Profit and Loss Account which brings our Reserve up from 90 to 96 per cent. of our premium income—it is not out of place, however, to remark here that had your Directors decided to maintain the previous level of Reserve at 90 per cent, there could have been a small Underwriting profit on the account.

ACCIDENT DEPARTMENT

	Rs.	Rs.	Percentage of Premiums
Nett Premiums	Surplus		
1955	9,98,722	48,843	4.9
1954	10,63,133	(1,43,726)	(13.5)
1953	9,03,662	36,104	3.9

I said in my statement last year that as a result of more selective Underwriting there was likely to be a fall in premium and this has proved to be the case; on the other hand, we have as a result succeeded in reducing our loss rate from 63.9 to 52 per cent. and are once again able to make a transfer to Profit and Loss Account.

Private Motor Car business, however, continues to be unremunerative and the level of premium rates bears no economic relation to the ever-increasing cost of claims; in this context it is astonishing to find people occupying positions of responsibility saying in the same breath that whilst the loss experience displays an upward trend and a further increase of rates for Private Car Comprehensive Cover is warranted, we should not rely on increased rates to enable us to put this business on a profitable basis. With more and more Private Car traffic on the roads and the ever mounting cost of repairs, premium rates have fallen once again well below an economic level and an upward revision of rates is already well overdue.

It has only been by developing other branches of Miscellaneous Accident business that we have been able to produce a surplus in this account.

Balance Sheet

The Balance Sheet follows the same pattern as the previous year and calls for no particular comment; interest and dividends less tax deducted at source give the satisfactory return of 4.23 per cent. on the aggregate Book Value of our Investments.

On these occasions I am expected to say something about major events which may directly or indirectly affect our business and of course the nationalisation of Life Assurance early this year must take pride of place; however so much has already been said on this subject that there is little point in my adding to the many and various views already so freely ventilated; in two or three years' time we shall be in a position to judge whether this experiment, which has proved a failure in almost every other country in the world where it has been tried, can be a success here in India.

The repercussions are twofold, first, composite companies are now undergoing a surgical operation which will separate the Life from the General section of their business and whilst I have no doubt that the operation will be pronounced successful, I fear that many of the weaker patients will not long survive the surgeon's knife.

Secondly, General Insurance Offices such as yours are now in the limelight and those who think that nationalisation is the panacea for all ills now focus their gaze on us.

At a time when it is fashionable to decry private enterprise and those who have devoted all their time, talent and energy to building it up, I may perhaps be permitted to present a few facts about your own Company which if they prove nothing else may convince the discerning few that far from having anything to be ashamed of we can, on the contrary, take pride in the sound and conservative lines upon which we have managed and continue to conduct our business.

I set out below an analysis of the total Nett Income

and Outgo of your Company over the period of 12 years since we commenced business in 1944:

	Rs.	%
Total Premium Income	3,26,72,376	
" Interest and Dividends	13,17,874	
" Miscellaneous Receipts	2,30,437	
	3,42,20,687	
Total Claims Paid and	Rs.	%
Outstanding	1,48,13,004	43.29
" Commissions paid—Nett	33,73,278	9.86
" Expenses of Management	1,08,53,843	31.72
" Reserves for Unexpired Risks	38,41,005	11.22
" Other Provisions and Reserves	9,49,557	2.77
" Dividends	3,90,000	1.14
	3,42,20,687	100%

The total Commission and Management Expenses at 41.58 per cent. of the Nett Premium will bear comparison with almost any company anywhere in the world and there can surely be no room for criticism on this account whilst the claims ratio most certainly reflects the soundest Underwriting principles.

As against just over Rs. 21 lakhs of Reinsurance Premiums ceded abroad in 1955, we received Rs. 38 lakhs of Nett Premiums from our Overseas connections—surely this does not justify criticism on account of mismanagement.

We give employment to a staff of over 300 to whom we paid last year in salaries, wages, contribution to Provident Fund and Bonuses in the aggregate a sum exceeding Rs. 10 lakhs; it will not be out of place to add here that we paid bonus to our staff long before Shareholders received any return on their investment. The Founder of your Company, your ex-Managing Director and present Chairman, has throughout this period of 12 years entirely waived the remuneration of Rs. 20,000 a year to which he was entitled under the Articles of Association. I sincerely hope that these few facts and figures will be sufficient to convince you that we are quite capable of running our business in accordance with the best traditions and hardly merit the wild allegations constantly levelled against the industry from certain ill-informed quarters.

Although the Government have recently repeated their assurances that they have no intention of nationalising General Insurance, it cannot be denied that our industry suffers from certain long-standing ills which must be put right; in this connection I strongly deprecate the feeling, often expressed by some executives of Insurance Offices, that we should ask Government to put these matters right for us; surely it is not impossible for Indian Offices acting together with to their problems, and it is a terrible confession of ineptitude and weakness in the trade if we cannot put our heads together and find a remedy for our own ills.

I sincerely hope that those now seeking a remedy will have learned from the lessons of the past, these can in my view be summed up very simply as follows:—

- (1) No amount of legislation will turn bad management into good management.
- (2) What might be termed "Police methods" are no more likely to be successful in the future than they have proved to be in the past.

The present state of affairs arises entirely from the lack of confidence between one company and another and it is quite obvious that an entirely fresh approach must now be made; any new approach to be successful must spring from the utmost good faith, for without this any measures taken, no matter what they may be, are doomed to failure; I feel confident, however, that before very long commonsense and the hard other countries of the world in building up a sound and virile Indian Insurance Industry.

Another milestone in the history of Insurance in this country is the formation of an Indian Reinsurance Corporation which it is expected will shortly commence operation; there is no doubt that, properly managed, as I have every reason to believe it will be, our domestic affairs will perform a useful function in course of time it should not broaden its activities to embrace the larger markets of the world.

Your Company has expressed its confidence in the future of this Corporation and as Promoters have already agreed to take shares of the total face value of Rs. 5,70,000 which is the maximum amount to which we are entitled to subscribe on the present basis of allocation of shares; I would like to take the opportunity here afforded to wish this brave new venture every success in its operations.

What of the future? I firmly believe that if we continue to apply all our energies and resources to the proper fulfilment of our functions as a necessary adjunct to the industrial and economic progress of the country we cannot but grow and prosper with it.

Within the limits of our resources we are doing what we can to train and build up a body of young men who will be technically and otherwise equipped to fill responsible positions in our organisation in the future, and we are also doing everything we can to support and encourage the recently formed Federation which gives such excellent opportunities to those in our profession who wish to equip themselves with that technical knowledge of the various branches of our business which is so essential to sound management in the future.

One of our greatest assets and one which does not figure in the Balance Sheet must always be in the persons of those who represent us in India or abroad, and if this is a tribute to them for good work put in the past I hope it will also act as a spur to even greater efforts in the future.

I cannot conclude without once again paying tribute to Mr. T. M. Sturge, our General Manager, and the Executives and Staff of the Company, wherever they may be, for their continued devotion to the interests of your Company, and finally I must thank those good friends of ours at home and abroad whose confidence in us has contributed so largely to the position which your Company has been able to build up and maintain amongst the leading Insurance Offices in India.

Finance in India and Abroad

EXPANSION IN BANKING BUSINESS

INCREASE IN EARNINGS MOSTLY OFFSET BY HIGHER EXPENSES

THE year 1955, states the Reserve Bank's latest annual report on the *Trend and Progress of Banking in India*, was significant not only for the increased volume of banking business but also for momentous and far-reaching organisational changes. Steps were taken to ensure wider facilities and to strengthen the banking structure so as to equip it better for its important rôle in coming years in financing economic activity. The generally healthy picture of economic activity was fully reflected in the trends in banking business during the year. Over 1955, scheduled bank credit expanded by Rs. 80 crores, against an increase of Rs. 57 crores in 1954 and a fall of Rs. 10 crores in 1953. This figure, however, conceals seasonal variations. The expansion of bank credit in the busy season of 1954-55, at Rs. 107 crores, was Rs. 5 crores lower than in the busy season of 1953-54. What was of greater interest, however, was that in the ensuing slack season, the return of funds to the banking system was no more than Rs. 32 crores which meant that well over two-thirds of the total credit made available earlier remained in the pipeline. The report observes that the tendency towards contraction of the "financial" slack season, noticed recently, might be interpreted not so much as an aberration of the pattern but as a reflection of the beginning of an underlying trend of a general increase in, and lengthening of, credit demands as a result of the growing diversification of the Indian economy.

The resources position of the Indian banking system was, taking a broad overall view, fairly comfortable in 1955. An interesting feature of the Reserve Bank's lending has been that while hitherto the Indian banks had been main borrowers under the Bill Market Scheme, in 1955 exchange banks also took considerable interest in the Scheme. This development gives ground for the belief that the Indian money market is acquiring a greater degree of autonomy. In 1955, in continuation of the trend in the two preceding years, the deposits of scheduled banks increased by Rs. 91 crores to Rs. 1,013 crores, passing the Rs. 1,000-crore level for the first time in seven years. The expansion in deposits in 1955, though similar in magnitude, differed markedly from that which occurred in 1954. In 1954, demand deposits had shown a much larger rise, at Rs. 56 crores, than time deposits, which had gone up by Rs. 35 crores. In the year which had gone up by Rs. 35 crores, against somewhat more significant at Rs. 47 crores, an increase in bank deposits of about Rs. 43 crores. Over the year, the relatively larger increase in bank deposits than in bank credit and the reduction of cash reserves helped scheduled banks to add to their investment portfolios by as much as Rs. 42 crores. Of this, more than Rs. 36 crores represented investments in Government securities. The additional gilt-edged investments were entirely accounted for by Indian scheduled banks and were made in the second half of the year, partly through subscriptions to the Central Government loan floated in July 1955. The maturity pattern of scheduled bank gilt-edged holdings underwent some interesting variations.

More Offices

During the year, the total number of offices of banks recorded an increase for the first time in the postwar period. The increase was mostly in the offices of scheduled banks which increased by 91 to 2,798. There was an increase of one to 66 in the offices of exchange banks, while the number of offices of non-scheduled banks declined by 28 to 1,258. The report refers to the State Bank's branch expansion programme. According to the State Bank Act, the Bank has to establish not less than 400 additional branches within a period of five years of such extended period as the Central Government may specify; as a first step in its expansion programme, a list of 100 centres covering mostly the important district centres has been prepared with the approval of the Central Government and the selection of centres has, for the time being, been confined to Part A and Part C States. Up to 30th June, 1955 the (former) Imperial Bank of India had opened 63 branches in Part A and Part C States out of the 114 it was expected to open in pursuance of the recommendations of the Rural Banking Enquiry Committee (1950). In the first six months of its working, the State Bank opened branches at 20 centres out of the 51 left over to be opened by the Imperial Bank of India. Thus, the trends in branch banking as a whole reflected the steady widening of the area of the banking system by extension of branches into the interior of the country. The scope of operation—mainly by establishment charges. The report refers to the appointment of the Bank Award (Gajendragadkar) Commission to conduct a fact-finding enquiry and make recommendations on the further modification, if need be, of the decision of the Labour Appellate Tribunal as modified by the Government in August 1954. The recommendations of the Bank Award Commission, submitted towards the end of July 1955, were accepted in full by the Government. Accordingly, the Industrial Disputes (Banking Companies) Decision Act, 1955, was passed in September under which the terms and conditions of the Award will remain in force for a period of five years from 1st April, 1954.

Bigger Earnings

The profit and loss accounts of 18 larger Indian scheduled banks showed that during 1955 their

gross earnings registered a rise of Rs. 3.8 crores to Rs. 35.0 crores, over three-fifths (Rs. 2.4 crores) of this being accounted for by the rise in interest and discount earned. Total expenses also rose significantly—by Rs. 3.4 crores, more than one-third of which was made up of an increase in interest paid on deposits, borrowings etc. Net profits, therefore, went up by Rs. 40 lakhs to 5.7 crores. In the sphere of banking organisation and control, the outstanding event of the year was the inauguration of the State Bank of India. The report briefly recapitulates the circumstances which led to this major step in the building of a co-ordinated banking system. The expansion programme of the State Bank, and its rôle in the fields of industry, trade, commerce and rural finance are also explained briefly. With its network of branches reaching into the interior of districts, it is expected to assist in devising institutional remedies for difficulties connected with short-term finance for rural and small-scale industries. Apart from this, the State Bank's part in furthering rural credit may be visualised in the provision of vastly extended remittance facilities for co-operative institutions, and of financial assistance, illustratively, through the purchase of debentures of land mortgage banks or through direct advances against agricultural produce or small-scale industry products, and generally in co-ordinating its activities with those of co-operative institutions in a variety of ways. The report indicates how some of the other important recommendations of the Rural Credit Survey Committee were also translated into law. Thus, to enable the Reserve Bank to play an active part in the organisation of the co-operative structure and to facilitate the supply of rural credit, the Reserve Bank of India Act was amended so as to provide for the setting up of the National Agricultural Credit (Long-Term Operations) Fund and the National Agricultural Credit (Stabilisation) Fund.

Inspection of Banks

Efforts continued to be made to tone up the quality and standards of the existing banking system. The Reserve Bank's regular inspection of banking companies initiated six years ago is referred to in the report. The first round of inspections of practically all the reporting banks has been con-

Let

BIRKMYRE BROTHERS LIMITED
P. O. BOX 14, CALCUTTA

from Rs. 23-12 to Rs. 24-2 with few declared sellers. Ramnagar Cane, after being taken up to Rs. 29-2, turned sellers at the close at Rs. 28. Other shares like Belsund, Carew, Cawnpore and Champarun were unchanged at Rs. 11-4, Rs. 8-14, Rs. 20 and Rs. 29-6.

The outstanding event in the stock market during the week was the announcement by the Board of Directors of the Indian Iron & Steel Company, at its meeting held yesterday, that the Government has given permission for a rights issue to Ordinary shareholders at Rs. 13-8 a share in the proportion of one for one should the company wish to take advantage of it. The initial reaction to this news was bullish and the price recovered spontaneously from Rs. 38-8 to Rs. 39-1. Subsequently, a prominent bull operator began unloading on a large scale shares which were purchased at very much lower prices, and the quotation fell away steadily to Rs. 37-4. At the lower levels, some replacement buying was in evidence and the shares recovered at the close to Rs. 37-6. Business was reported in Braithwaite at around Rs. 28-4 and Bhartiya Electric Steel improved from Rs. 16-14 to Rs. 17-4. Following the news of the lock-out at the works of Burn & Co., Howrah, the shares reacted from Rs. 37-4 to Rs. 37-0. Indian Galvanizing were unchanged at Rs. 24-8 as were Indian Standard Wagon at Rs. 182 and Kumardubi Engineering at Rs. 10-8. Jessop & Co. and Richardson & Cruddas closed below the best at Rs. 35 and Rs. 26-9. Textile Machinery too came in for some selling pressure and receded from Rs. 24-14 to Rs. 24. Marshalls were unchanged at Rs. 6-10.

In paper, India Paper Pulp recovered from Rs. 25-4 to Rs. 25-10, but Titagur and Orient were easier at Rs. 44-10 and Rs. 38-11 respectively. Shree Gopal were steady at Rs. 35 and Rs. 19-6.

In cement, Assam Bengal provided the outstanding feature, improving from Rs. 7-14 to Rs. 8-8; tonight's closing quotation, however, is easier at Rs. 7-15. Ashoka Cement were active at around Rs. 12 and business was done in Dalmia Cement at around Rs. 17-8. Sone Valley were steady at Rs. 8-13.

In insurance, Concord of India were notably unchanged at Rs. 12-8 as were New Asiatic at Rs. 3-14. Ruby General were done at Rs. 6-2. In shipping, India General Navigation were shaded at Rs. 11-8 while India Steamship improved from Rs. 9-2 to Rs. 9-8 cum-dividend. Tonight's closing quotation is Rs. 9 ex-dividend (eight annas a share).

Among miscellaneous industrials, Alkali & Chemical were steady at Rs. 21-8 as were Aluminium Corporation at Rs. 10-4. Assam Saws, on the publication of a disappointing report, had sellers at Rs. 4-4. Bengal Flour were offered at Rs. 26 ex-dividend as were Britannia Biscuits at Rs. 15-2. British India Corporation were shaded at Rs. 11-4 while Clive Row, on sustained investment support, improved from Rs. 11-10 to Rs. 12-3. Dunlop Rubber were unchanged at Rs. 30-8 as were Eastern Investments at Rs. 14-7 and Godfrey Phillips at Rs. 23-4. Hindustan Motors eased from Rs. 10-12 to Rs. 10-1 while Imperial Tobacco were unchanged at Rs. 14-12. Indian Aluminium were supported at around Rs. 23, but Indian Cables were offered at the lower rate of Rs. 34-10. Electric Construction were done at Rs. 14 and Indo-Burma Petroleum were easier at Rs. 40-8. Indian Wood Products were steady at Rs. 39 and Jardine Henderson were crossed at Rs. 102-8. Martin Burn were offered at Rs. 24-14 while Metal Box on the announcement of a higher dividend, met with keen investment support and improved from Rs. 28 to 28-14. Other steady features were National Insulated Cables, which rose from Rs. 23 to Rs. 24-12, Rallis from Rs. 49 to Rs. 50, Rohtas Industries were marked back from Rs. 24-11 to Rs. 24-6. National Tobacco were slightly easier at Rs. 13-6. Walford Transport were reported at Rs. 2-7.

In the mining group, Burma Mines were better at Rs. 4-1 while Western Stockholders Investment were unchanged at Re. 1. There was a very good enquiry for Orissa Minerals which rose from Rs. 25-8 to Rs. 27-4 with few declared sellers. Metal Corporation were unchanged at Rs. 11 while Karanpura Development were slightly better at Rs. 24-8. Interest in this section was centred on Indian Copper Corporation shares and following the announcement of a final dividend of 35% (10% dividend plus 25% bonus) at today's meeting, the shares recovered from Rs. 6-14 to Rs. 7-4; tonight's closing quotation is Rs. 7-1.

There was again little of interest to report in tea shares. In the Assam section the only feature was Betjan, which improved on interested buying from Rs. 57-8 to Rs. 59. Baghmari changed hands at Rs. 29-4 as did Basmatia at Rs. 40-4. Brooke Bond were slightly easier at Rs. 23-2 as were Bishnauth New at Rs. 21-12. Dheklakh found buyers at Rs. 21-6 and a small lot of Hoolungoor were placed at Rs. 29-5. Methoni were fractionally better at Rs. 24 while Tezpur were quoted at Rs. 26. Among Doonars scrip, small lots of Banarhat changed hands at Rs. 362-8 and Hantapara fluctuated between Rs. 221 and Rs. 223. New Doonars were crossed at Rs. 362. Of the remaining shares, Sungma were done at Rs. 11-3 and Hansqua improved to Rs. 23-6.

The profit of the HOOGHLY MILLS COMPANY, LTD. rose by Rs. 2.98 lakhs to Rs. 5.30 lakhs for the year ended March 1955. Transferring Rs. 1.51 lakhs (Rs. 24,033) to tax reserve, Rs. 1 lakh (same) to depreciation, making other adjustments and bringing in Rs. 32,401, there is Rs. 3,72,148. The ordinary dividend has been raised from 5% to 12%, leaving a carry-forward of Rs. 44,548.

Providing Rs. 69,000 (Rs. 67,000) for depreciation, Rs. 1.65 lakhs (Rs. 1.26 lakhs) for taxation

and cesses, transferring Rs. 50,000 (same) to general reserve, making other adjustments, and bringing in Rs. 40,187, there is a balance of Rs. 1,09,299 for the SEEBPORE COAL COMPANY for the half-year ended last December. The ordinary dividend has been maintained at Rs. 1-4 a share, leaving Rs. 49,299 to be carried forward.

THE KALPAHARI COAL COMPANY has carried forward a debit balance of Rs. 2,21,237 for the half-year ended last February. There is again no dividend. Depreciation absorbs Rs. 15,528 (Rs. 13,620). The profit amounted to Rs. 1,38,130, after transferring Rs. 69,393 from excess liabilities provision. Capital reserve is allocated Rs. 63,105. Raisings increased from 1,660 tons to 22,440 tons, and despatches from 1,752 tons to 22,767 tons.

The latest development relating to the cornering move in the shares of the BENGAL PAPER MILL CO. LTD. is a Government of India order saying that no change is to be made in the company's board of directors without New Delhi's sanction. According to the order, a complaint dated 12th April, 1956, has been made to the Central Government by Mr. A. T. Montgomery, a director of the Bengal Paper Mill Co. Ltd., that as a result of a change in the ownership of shares held in the company, a change in the board of directors is likely to take place which, if allowed, would affect prejudicially the affairs of the company. In exercise of the powers conferred by the Companies Act, 1956, the Government has directed that no resolution passed or action taken to effect a change in the board of directors after the date of the complaint shall have effect unless confirmed by the Central Government.

Providing Rs. 1.78 lakhs for depreciation and making other adjustments, the loss of the ASSAM SAW MILLS AND TIMBER COMPANY amounted to Rs. 97,045 for the year ended last September. There is again no distribution, and a debit balance of Rs. 5,14,537 has been carried forward. The directors regret to report that though the tea trade continued to prosper during 1954-55, indigenous manufacturing capacity was greatly in excess of demand with the result that selling prices were forced down to an uneconomic level. This factor, combined with the definite limitation on output and consequent increased costs caused by inadequate all-weather communications with the works, led to a further loss for the year under review. The insecure communications have been the subject of continued reference to the Assam Government and North-East Frontier Agency administration, which have expressed their intention to assist in providing proper road communication. Surveys of probable alignments have already been taken in hand. Although there is now every likelihood of adequate communications with the mill being provided, some time must elapse, before suitable roads can be constructed and it is unlikely that any profit can be realised from the current year's operations, the directors add.

The profit of the RANEEGUNGE COAL ASSOCIATION LTD. rose by Rs. 43,000 to Rs. 1.83 lakhs for the half-year ended last September. Bringing in Rs. 33,013, there is a balance of Rs. 2,16,827. Taxation absorbs Rs. 60,000 (Rs. 45,000). Machinery replacement reserve is the same at Rs. 50,000. The dividend has been increased from 4 annas to 6 annas a share, leaving a carry-forward of Rs. 16,846.

Messrs. Tata Industries Private Limited, managing agents of the TATA IRON AND STEEL CO. LTD., report that the total approximate production of iron and steel at the steel works at Jamshedpur during May 1956 was: pig iron 96,600 tons; steel ingots 89,400 tons; semi-finished steel for sale 17,200 tons; and finished steel 49,100 tons.

BOMBAY MARKET RULES QUIETER

BOTH DUTY AND RUMOURS AFFECT SENTIMENT

Wednesday Evening.
IRREGULAR fluctuations have marked trading on the Bombay Stock Exchange in the past seven days. During the early part of the week, equities forged ahead on sustained bull support, and operators were inclined to take an optimistic view of the future of private enterprise. Later, sentiment deteriorated on fears that there would be an increase in the excise duty on cloth to mop up surplus profits arising from higher prices. Optimism flowing from reports that the Government would consider favourably the question of increasing mill output and of rationalisation of the mill industry, was more than offset by subdued feeling at the close.

Long liquidation in steels resulted in slump of Indian Irons, and Calcutta operators were reported heavily on Tuesday on the news of a possible rights issue. After rising to Rs. 39-2, the scrip declined to Rs. 37-6 on disappointment caused by the report that the Government had sanctioned a one-for-one rights share at a premium of Rs. 3-8. Tata Steels also declined sharply to Rs. 196-8 in sympathy. Tata Locomotive were shaded to Rs. 152, as were

Alcock Ashdown to Rs. 357-8. Premier Construction realised Rs. 187.

Earlier gains in the mill group were lost towards the close. Bombay Dyeing declined to Rs. 647-8, as did Kohnoor to Rs. 368. India United Ordinary were taken at Rs. 13-10-6, and Svadeshi at Rs. 245-8. Century were absorbed at Rs. 556 and Simplex at Rs. 218-4.

Except for mining shares, the miscellaneous group were lower in sympathy with the general trend. Indian Copper were maintained at Rs. 7-1 on the publication of a final dividend of 35 percent. Results for the year ended last December were excellent. Shivrampur Syndicate gained at Rs. 106. Sugar shares were barely steady, with Belapur making Rs. 235-8. Walchandnagar Industries were done at Rs. 255-10. After rising to Rs. 19-6 on the expectation of a maiden dividend, Tata Chemicals reacted to Rs. 18-14 on adverse rumours about the expansion programme. Shipping shares were steady, with Scindia coming to hand at Rs. 18-9. India Steamship were transacted at Rs. 9-8. National Rayon fetched Rs. 248 in view of the forthcoming dividend. Associated Cement were done at Rs. 217-12.

Banking shares were steady. Central Bank were done at Rs. 52 and Bank of India were absorbed at Rs. 162. Insurance shares were slightly better, with New India improving to Rs. 43-12.

There was little interest in electricity supply undertakings. Ahmedabad realised Rs. 97-8 and better, with New India improving to Rs. 43-12.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago the last named being shown in parenthesis and will not be given where such a quotation is not available).

STOCK VALUES RECOVER ON FRESH OPTIMISM

EXCITEMENT OVER TRINIDAD OIL PURCHASE OFFER

London 13th June.

THE stock markets staged an appreciable recovery during the past week from the low levels reached at the beginning of the previous week, and on balance, prices in the main sections of the markets were higher. The fall which followed the nervousness over the labour situation and the disappointing May gold reserve figures appeared to have been overdone. Once the selling had dried up, buyers came in and prices recovered as quickly as they had fallen. The recovery was assisted by the Chancellor of the Exchequer's confidence in the country's ability to overcome its economic difficulties. The sudden illness of President Eisenhower and the fall on Wall Street made for fresh uncertainty in London later, but the effects of these were not severe. With business generally at a very low level, the markets were dominated by the excitement and activity in oil shares which followed the news of an American bid for the purchase of the Trinidad Oil Company. The shares of this company soared immediately after the news appeared, eased later on doubts whether the deal would go through in view of the powerful opposition to it, but then moved up again on growing expectations that it would be allowed. Other Trinidad oil shares moved similarly, while the rest of the oil market also advanced.

Gilt-edged securities went strongly ahead from the low points reached on the previous Monday, and on balance, recorded widespread gains ranging to about a point. Further improvement was made following the May overseas trade figures which made a favourable impression. Industrial equities recovered with the gilt-edged market, and on balance, were higher, with the *Financial Times* Industrial Ordinary index a point or two higher compared with the previous week. Gold shares improved at one time, but then drifted back in the absence of interest and support to record small losses on balance. The first batch of June dividends had little effect. Diamonds and base metals moved irregularly and recorded little material change. Rubbers and teas moved within narrow limits, but several of the latter were appreciably lower following disappointing dividend statements.

The Money Market

There has been little change in general credit conditions in Lombard Street over the past week, and on most days discount houses were hard pressed in their search for funds. On one or two days, it was necessary to borrow from the central bank on full Bank rate terms, but the loans were usually for small amounts. At times, the authorities were obliged to give assistance through the normal channels, but there were occasions when market houses managed to get through with the aid of privilege money. Rates for short-term loans from banks ranged from 3-3/4 percent to 4-3/4 percent. Business transacted in bills was usually for late-August maturity, the rate for which was 4-15/16 percent. The Treasury bill position was much the same as in the previous week and the average rate was 100s 4/90d percent. Applications for £260 million worth of 91-day Treasury bills totalled £413,805,000, and were allotted at an average rate of 100s 4/90d, against 100s 3/91d in the previous week. Offerings this week comprise £240 million worth of 91-day bills. The Bank of England return for the week ended 6th June showed that bankers' deposits were £1 million lower at about £224 million, while notes in circulation were unchanged at around £1,871 million.

Activity on Wall Street

In a slow-moving market for foreign bonds, Serbs dropped on small offerings. Greeks were also lower, while Germans were fractionally mixed. Norwegians were a shade lower, but Denmark held steady. Japanese showed both plus and minus signs of fractions to a point. In the South American list, the active Chile 3 percents came within striking distance of the year's high of \$ (U.S.) 44 1/2. Domestic convertibles were irregular, with the market largely following the trend of foreign securities. Price changes were mostly fractional, although some issues moved over a wide range. The feature was Dow Chemical 3 percent which advanced eight points before falling back slightly. Oils and rails were mixed in limited activity. U. S. Governments were slow in moving, with the long end of the list making small headway. Quality corporates ruled firm in light dealings.

Hongkong Gold Easy

Hongkong gold prices eased following the recovery of sterling abroad. Otherwise there were few incentives for trading. Prices attempted to rally early in the week, but at every advance, bears entered the market. Opening at \$ (H) 255-3/8, the market advanced to \$ (H) 255 1/2, but eased to \$ (H) 254 1/2. A further rally was attempted which brought the price to \$ (H) 255 1/2, but thereafter bears dominated with the values touching the week's low at \$ (H) 255 1/4. Prices recovered slightly later and closed at \$ (H) 255 1/2. Carry-over charges were 35 cents in seller's favour. Official offtake was 4,030 taels and unofficial 20,000 taels. Arrivals at Macao totalled 25,000 ounces and forward contracts were done at \$ (U.S.) 37.91 c.i.f. Macao.

Vegetable Oil Market

The oilseeds market was generally featureless and values were barely steady. Coconut oil started on an uncertain note, and weakened during the day in sympathy with the cheaper trend in copra and due to a paucity of demand. Straits bulk oil was freely offered in the later stages at £92 1/2, while Ceylon was obtainable in the region of £96 c.i.f. Groundnut oil was idle with actual trading levels and sellers' ideas still well apart, except for occasional cheap re-sale offers for prompt arrivals. Linseed oil was lacking attention, although sellers were rather less bearish than at the past week-end. Philippine copra was subject to selling pressure in the near positions and June-July parcels were available down to £178 c.i.f. while \$181 was wanted for July-August. It is understood that re-sales of Nigerian groundnuts were put through to north Continental ports over the week-end at £77 c.i.f. July-September, while the undertone was fractionally steadier with British East African rarely mentioned under £75 c.i.f. British East African castorseed hardened in the more forward positions, but buyers were reticent.

Rally in Rubber

The recent prolonged decline was felt to have been overdone in a market generally believed to be short, so there was naturally a sharp upturn when buying orders appeared last week in the London rubber market. The removal of the ban on shipments to China provided the stimulus and the rally was extended by short-covering, accompanied by improved factory interest. A contributory factor was a squeeze in the July delivery in New York. Some profit taking in quiet phases pared the gains a little, and dealers were temporarily undecided about which way to operate. Business in sole crepe was only moderate, but with limited arrivals and small stocks, dealers held to the recent level of 38d a lb. for 1/8 inch smooth No. 1 on the spot.

Bombay

COTTON FUTURES TRADING TO BE RESUMED

BURMA OFFERS MARKET FOR INDIAN TEXTILES

(FROM OUR BOMBAY CORRESPONDENT)

THE six-month old cotton deadlock has at last been solved and futures trading in raw cotton will be resumed in Bombay from the 18th of this month. Mr. Morarji Desai, Bombay's Chief Minister, will formally open the market and business will be done in the 1956-1957 crop. The new cotton season will therefore begin with adequate trading facilities. The deadlock has not been an easy one to solve. There has been a great deal of controversy about the type of contract that should be brought into operation. Conservative elements in the trade have maintained, and still maintain, that a single contract based on Jarilla 13/16 inches staple length should suffice. This would be in accordance with past practice. But the majority view is that in the circumstances of present production, domestic consumption and the export demand, a single contract does not provide adequate hedge protection. In the case of a single contract, it is pointed out, it has happened in the past that cotton with a premium value of about Rs. 400 above the lowest variety have been tendered against the Jarilla 13/16 contract. Such a procedure has led to a wide disparity between the contract price and the spot value and therefore nullified the advantages of a hedge market. The majority view has prevailed, and two forward cotton contracts will be brought into force. The first will apply to Fine M. G. Jarilla cotton of 25/32" staple length grown in Khandesh and Madhya Bharat and also to American varieties grown in Rajasthan, while the second contract will apply to Fine M. G. Vijays of 27/32" staple length grown in the Bombay State. The delivery months for the first contract will be March, May and July and those for the second, April, June and August. Trading in the first contract for the new crop will begin before the end of June every year and in the second, before the end of July.

For the first contract the floor and ceiling prices are proposed to be fixed at Rs. 500 and Rs. 825 for Khandesh and Madhya Bharat-grown cottons and Rs. 450 and Rs. 775 for the Rajasthan-grown varieties. The floor and ceiling prices for the second contract cottons have been suggested at Rs. 625 and Rs. 975 respectively. The emergency provisions under negotiation between the East Indian Cotton Association, Bombay, and the Forward Markets Commission stipulate the payment of a deposit of Rs. 35 a bale when prices are Rs. 50 below the ceiling fixed or Rs. 50 above the floor below the ceiling. The deposit will automatically be raised prices. The deposit will be Rs. 25 below the ceiling or above the floor price. In the event of indiscreet bear operations, the proposed weightage cruminate bear operation will be raised to 25 percent. In view of the Government's anxiety to check the rising trends in prices of agricultural commodities, the East India Cotton Association has agreed to revise the method of fixing tendering differentials. These will now be fixed on the basis of forward prices which will be fixed on the basis of forward prices and only. It is doubtful if this is a sound policy and certain sections of the trade believe that the fixing of differentials on the basis of spot prices would be more appropriate. This, they contend, would link closely the spot and forward markets.

Commission's Relations with Market

The Forward Markets Commission has assured the trade that it will not interfere with the normal working of the market. But the exact relationship between the Commission and the market will be determined after futures trading has been in operation for some time. "Normal working is a vague term and it remains to be seen how it is defined. But judging from the general attitude of the Commission it seems there will be hardly any interference unless a major crisis develops. Meanwhile, it is expected that Vijay 27/32" and Jarilla 25/32" will begin at not less than Rs. 830 and Rs. 710 respectively. The former contract is likely to be popular with mills interested in superfine cotton. The turnover in spot cotton has been extremely slow. Mills have shown hardly any interest beyond a few enquiries for the Surti, Western Farm, Jay-dhar and Lakshmi cottons. Prices generally declined by about Rs. 25 a candy at the beginning of the week, but recovered somewhat towards the end. There was hardly any export demand from ship-owners.

There was a moderate demand for foreign cottons but this was confined to Californian Good Middling 15/32" at about Rs. 1,355 a candy for October-November deliveries. Most of this business has been transacted by importers and the mills have kept aloof. There was no interest in the Egyptian, Sudanese and East African growths. Cotton yarn has also shared in the decline. The finer counts lost about eight annas a bundle while 40 singles were marked down by three annas a bundle. Buyers have shown no interest and traders have been forced to unload a part of their stocks. Reports from Coimbatore that the cut in electricity supply has been reduced from 62 1/2 percent to 25 percent has helped this downward trend. Foreign buyers are still not interested at the current price level. The textile market also continues to slacken. Prices of all varieties have declined by about 3 percent and considerable stocks are accumulating with wholesalers who are faced with the prospect of having to accept further deliveries on the basis of their existing commitments. Retail

dealers, on the other hand, are reluctant to replenish their stocks as, despite the fall, the current price level is considered high. Bombay's mills, however, have not reduced their prices because most of them have sold forward their entire production till the end of September. City circles believe that the reduced demand is due to seasonal factors and the present stringency of the money market. If this downward trend continues, it is believed cloth prices will decline still further and the impact will fall on wholesale dealers.

Export Position

Meanwhile, an interesting situation is developing in India's export markets. According to an official announcement in Rangoon, Burma has decided to import cotton textiles to the value of Rs. 8.33 crores before the end of September this year. Imports will be of cotton fabrics manufactured from American cotton bought by Burma in kyats. According to official sources, import licences for textiles from West Germany amounting to nearly Rs. 1.25 crores will be issued during the coming week. An additional Rs. 4.16 crores worth of cotton piecegoods will be bought from Japan as soon as negotiations under the same agreement are completed. These negotiations are now said to be in their concluding stages and it is expected that Japanese textiles in large quantities will be available in Burma within a few weeks. The Burma Government has fixed a quota of Rs. 3 crores for the United Kingdom and India. A representative of the British Board of Trade is scheduled to arrive in Rangoon next week to complete arrangements on behalf of British manufacturers. Negotiations are also being conducted between India and Burma over the Indian quota. It is to be hoped that this opportunity of regaining an important export market will not be lost. A similar transaction was rejected by India last year but now conditions are vastly different and India's textile exports have dwindled at an alarming rate in face of competition from Pakistan and the Communist countries.

A condition imposed by the Burma Government is that all deliveries must be completed by the end of September, which also marks the close of their financial year. An official statement added that if there are unwarranted delays with any of the prospective suppliers, then their tentatively scheduled shares will be switched to other countries. Admittedly, Indian mills will have to make a great effort to fulfill this condition in view of their domestic commitments, but such an effort will have to be made if a valuable export market is to be retained. The opportunity comes at an appropriate time because of the intensified Communist drive in this area. There are now several Communist missions touring the region. For instance, a Bulgarian team is at present visiting Ceylon with the object of concluding a trade agreement. In return for rubber, coconut oil and tea, the Bulgarians are offering large quantities of textiles. Similarly, a Hungarian-Government trade delegation has arrived in Colombo. Hungary is interested in Ceylon tea, coconut oil and crepe rubber, and in exchange offers textiles among other consumer goods. With this threat looming large in Asian markets it would be folly not to take advantage of the Burmese offer.

INDIA CYCLE MFG. CO. LTD.,

CALCUTTA-1

"Where now the city stands,
there was once naught but the city's site." OVID

Madras

February 1640. Sailing along the Eastern coast of India Francis Day reached a tiny village of a few scattered huts. In a short time human hands raised a small town of palm-thatched mud houses. In the course of the centuries on this very site has arisen a modern city with well laid-out roads, palatial buildings, a busy port and harbour, and flourishing industries. Thousands of tons of STEEL have helped to bring this great city into being.

The Americas and the Middle East are not the only places with oilfields! Oil is produced here in India, too, and derricks are a familiar part of the landscape at Digboi in Upper Assam. The Assam Oil Company has been operating this oilfield for over fifty years, producing some 300,000 gallons of high quality petroleum products daily.

Everyone in the country benefits from this flow of home-produced oil. It speeds food production. Keeps factories running smoothly. Keeps goods moving by rail, road, sea and air. Takes people to work and provides work for them—as well as saving precious foreign currency.

The Assam Oil Company itself employs over 8,000 'oil men'. It spends much time and money in looking ahead. Not only in training technicians and executives, but also in finding new sources of oil and new methods of processing it into the much-needed petroleum products which are so vital to India's expanding economy.

NON-OFFICIAL VIEWS OF THE
BRITISH ECONOMYROYAL STATISTICAL INSTITUTE
FORECASTS MORE ACTIVITY

(FROM OUR LONDON CORRESPONDENT)

THE annual surveys of the study section of the Royal Statistical Society fill a real need in bringing together the judgments of a fair number of economists outside the Government. What non-official economists expect to happen in the rest of this year may be summarised in the following table, which shows the predicted changes in 1956 over 1955, and also the actual changes in 1955 over 1954.

CHANGES IN REAL DEMAND AND SUPPLIES

('£ million at 1954 factor cost')

	Forecast for 1956		1955 compared with 1954
	compared with 1955	compared with 1954	
Consumers' expenditure	+ 170	+ 290	
Public authorities' current expenditure on goods and services	- 60	- 155	
Gross fixed investment	+ 130	+ 185	
Investment in stocks and work in progress	- 35	- 210	
Exports of goods and services	+ 190	+ 245	
Total change in demand	+ 395	+ 875	
Changes in Supplies			
Gross domestic product	+ 340	+ 525	
Imports of goods and services	+ 55	+ 350	
Total change in supplies	+ 395	+ 875	

In the past five years, for which these estimates are available, they have varied considerably as to their accuracy, and it must be remembered that this year's estimates were reached immediately after the Budget, and that many developments have occurred since. It will be seen that the combined forecast expects further expansion in industrial production, exports and personal expenditure, but at rates little more than one-half of those achieved in 1955. The forecasters believe that industrial production will revive from the stagnation of the past few months; it must revive sharply in the autumn in order to reach the predicted increase of 2.9 percent for the whole year. They are reasonably hopeful about exports. As for personal spending by consumers, they are assuming that last year's spending spree will not be repeated in spite of the sharp rise in wages that has already taken place. But apparently they think that this moderation in spending will come about through higher prices rather than through more saving. The forecast of another rise in the interim index of retail prices by 5.7 percent, after a rise of 4.2 percent last year, assumes that inflation will not be quickly brought under control. On the other hand, they predict an easing of the demand for labour.

Some of the more detailed forecasts of changes in real demand and supplies suggest that the gross domestic product this year will increase by just over 2 percent, compared with an average expansion of more than 3 percent a year between 1948 and 1955. Imports of goods and services are expected to increase by about 3.7 percent compared with an average since 1948 of over 4.5 percent. An interesting prediction is that gross fixed investment, which last year increased by £185 million, will increase this year by another £130 million; this figure assumes a reduction of about £40 million in expenditure on new dwellings. Another prediction is that investment in stocks and work in progress will fall by £35 million compared with a rise of £210 million last year. Thus, of a total increase in supplies (including imports) estimated at £395 million, nearly half (£190 million) would go into exports, a little less (£170 million) would go into consumption, and about £130 million would go into gross

fixed investment. The rest is made up by reductions in stocks and Government expenditure. If these predictions should be borne out, they would bring some relief to the British economy, and it is in line with this that the economists expect an increase in the gold and dollar reserves to nearly \$2,500 million at the end of the year.

Gold and Dollar Reserves

Unless the reserves can be added to at a much faster rate, even that target seems too high. The May figures, just released, show an increase of \$41 million, raising the reserves to \$2,369 million, whereas in the preceding month the increase amounted to \$51 million. More disappointing was the reduction in the residual surplus. After taking account of defence aid of \$3 million, the \$29 million received from the European Payments Union in settlement of the April surplus and \$2 million paid to E.P.U. creditors in bilateral settlements, the May surplus came out at only \$11 million, which compares with a residual surplus for April of \$49 million. The sterling area's surplus with E.P.U. was also down from £14 million in April to £8 million last month. While May is traditionally less favourable than April, and it is always dangerous to generalise from the experience of any one month, the May showing is mildly disappointing. On the one hand it carries on the improvement which began in the autumn of last year; on the other, it indicates that recovery is disappointingly slow. This sort of view found expression in financial markets.

British Commonwealth Investment

Britain's long-term overseas lending in the sterling Commonwealth has been well over £100 million annually for the last four years, the Chancellor of the Exchequer, Mr. Harold Macmillan, told the Commonwealth Correspondents Association at a luncheon in London on 6th June. Mr. Macmillan said: "In the field of international investment—of the movement of long-term capital from country to country—£100 million a year is a lot. It is a very substantial part of the sterling area's inflow of long-term capital". The Chancellor of the Exchequer added that it was still considerable when compared with the outflow of long-term capital from the U.S.A. In fact Britain came a very close second to the U.S.A. as a provider of long-term capital, and if long-term overseas investment was expressed as a percentage of the national income, then the U.K. percentage was far and away the highest proportion in the world. "A very large slice of this long-term lending has gone to the colonies, and this was a point worth remembering in connection with colonial sterling balances", Mr. Macmillan said.

Sterling Balances

"Sterling balance figures tend to catch the eye. They had risen fast in the last six years—by about £700 million—but this £700 million was not a sort of tribute the U.K. exacted from the colonies. They put their money into sterling balances in London because...it is an obvious place to put them; and they have built them up because in periods of high earnings from their own commodities it seemed sensible to put money aside for times when earnings might not be so high. Many of the colonies—especially the less prosperous ones—have been able to put these sums aside from current earnings because the inflow of grants and long-term funds from the U.K. was taking care of a substantial part of their development. The Chancellor of the Exchequer added that the sterling area system had served well not only the area itself but also the rest of the world since the end of the war. Without it, world trade could never have expanded as it had done, and, as one commentator had said, if it did not exist someone would have had to invent it.

Turning from overseas investment to defence expenditure, Mr. Macmillan said that within the Commonwealth the U.K. carried, compared with its resources, a very heavy burden of defence. In the last year for which there were reliable figures—1954—10 percent of the U.K. national output went into defence. In total, the U.K. defence effort easily exceeded that of the rest of the Commonwealth put together. The U.K. accepted this heavy

responsibility; nevertheless, it was an extra burden and it did make a difference.

The Bank Squeeze

At first sight the May return of the clearing banks might suggest a relaxation of the credit squeeze. Deposits are slightly up, advances to customers have remained unchanged, and the "liquidity ratio" is still over 33 percent, which is high for this time of year. But deposits have risen mainly because of an increase in cheques in collection. Advances are still inflated by the borrowing of the nationalised industries, which will go on raising loans for both capital and current needs until July, when the new system of Treasury financing comes into effect. This means that loans to private business and individuals have dropped. The relatively high liquidity ratio gives the banks more funds to lend, but they cannot lend them because the Chancellor's directive stands in the way. How long this edict will retain its terror may be questioned, but at the moment banks seem to be resisting the temptation to relax the squeeze. It seems that the authorities still have faith in the power of the directive. That must be why they are at present not greatly concerned over the increase in bank funds. Talk of early funding operation to convert a portion of the Treasury bills into bonds has died down. Of course, when the Finance Bill is passed and the Treasury takes over the capital finance of the nationalised boards, a new situation will arise. The problem of avoiding an excessive growth of bank funds will then merge with the redemption or conversion of the big War Bond issue in August.

Hopes of Moderation

Meantime, the Prime Minister is to see representatives of employers and of the nationalised industries again within the next fortnight. These talks will be the latest in the series that Sir Anthony has been having with both sides of industry. The problem of reaching a level of stability in the economy and particularly of keeping down prices will dominate the talks. It is on this "self-help" approach that the Government is continuing to concentrate. For the moment the Government has little thought of imposing fiscal controls, and is as firm as ever against any idea of import control, if only for fear of retaliation from abroad. A practical reason for not reimposing building controls is that the defence regulation under which they were imposed has been repealed, and such a measure should now require a complete new statute. It will be noted that in the latest series of talks the Prime Minister is only seeing the management side of industry; this does not mean that he is in any way neglecting his contact with the trade unions. He is still very conscious of the dual aim for achieving stability, of keeping down prices, and restraining wage increases. He is hoping for moderation in all sides.

Brevities

The Indian Iron and Steel company is to redeem its 4½ percent first mortgage debentures on 1st January, 1957, at a premium of 2 percent.

The liquidator's accounts of Mysore Gold Mining show a balance in hand of £68,276, together with a sum of £105,338 Savings Bonds 3 percent 1955-55. However, a claim against the company of £107,988 has been made by the Mysore Government. If this claim were upheld it would give rise to a counter-claim by the company against the concern which took over the mining property, the Mysore Gold Mining Company (K.G.F.). Until the claim has been settled, no distribution can be made to stockholders.

In reporting on the full accounts of James Finlay, the Chairman points out that the good results of the trading and agencies side of the company's Indian and Ceylon business stem from the bumper year experienced by the tea estates in 1955. Profits before tax, from all aspects of trading, were nearly doubled at £1,103,476, against £565,342. While the prospects for the cotton and jute interests are not viewed over-favourably, the tea companies are expected to have a good year. Results are unlikely to approach those for 1955, but well-managed tea estates should continue to fare satisfactorily.

Madras

CHIEF MINISTER FAVOURS
SEPARATE MADRASPROBLEMS OF THE TOURIST
INDUSTRY

(FROM OUR MADRAS CORRESPONDENT)

THE Chief Minister of Madras, Mr. Kamaraj Nadar, declared at a conference last Saturday that a small State with 12 districts only would be satisfactory after reorganisation. His views, expressed at a meeting in Tiruchi district, suggest that he is not in favour of Madras combining with Kerala or Mysore. Whatever his colleagues may have said in the last two months, Mr. Nadar feels that a Tamil State will not be small or without influence in Delhi. Apart from warning landowners and tenants about the danger of agrarian unrest, Mr. Kamaraj served notice on the Dravida Munnetra Kazhagam about behaving itself. Though some Congressmen might be sympathetic at present to the objects of the Kazhagam, committed to an election campaign on its own, Mr. Kamaraj, by calling attention to the Communists were prominent in February in which the Communists were not bent, has made it clear that disorder will not be tolerated. Freedom to protest against the idea of Dakshina Pradesh does not imply a right to challenge the Government, which is prepared to follow decisions relating to States' reorganisation and to be guided by the wishes of the majority.

Many here see in Mr. Nadar's forthright warning a decision to stop subdued speculation by his followers or inconvenient declarations by his colleagues. A Congress M.L.A., Dr. P. Varadarajulu Naidu, pointed out last month that Ministers, by speaking about the economic gains and the desirability of a merger of Kerala with Madras, played into the hands of the opponents of the Congress Party. Nadar sees that discipline in the Congress Party has been undermined by individual Ministers' declarations as to preferences and has quashed oppositions as to preferences and has quashed oppositions, within and without, by affirming that a campaign for territorial adjustments will not do at present for territorial adjustments on Travancore-Cochin. This means that no claims on Travancore-Cochin can or will be made, and boundary adjustments in relation to Andhra will be reached by negotiation. Keep calm is the watchword though Keep Left is also familiar.

Foreign Tourists Wanted

Foreign tourists are certainly wanted in the South and the increase in tourist traffic has made Madras aware of what it should do to attract tourists. Mr. T. Purushotham, M.L.C., who went to Delhi last week to attend the Tourist Advisory Committee meeting pleaded for restoration of monuments that appeal to tourists as well as for development of amenities. The hill stations appear to need most consideration at present. Water shortage in Kodaikanal this summer has produced enough road sense on the hills, a foreign resident pointed out that Ottacamund today is better off. Although the Government is unlikely to make a move every year, the idea of a session of the State legislature in the hill station has not been discouraged though any decision on this point must come after the elections. Local authorities have been asked to help in promoting the tourist trade, the opening of restaurants, the suppression of the beggar nuisance, etc. Better travel facilities have also been canvassed.

Banking in Travancore-Cochin

Banking problems in Travancore-Cochin State have been under examination by a committee since March. According to a memorandum issued recently there are 48 banks out of which three are scheduled. The total deposits exceed Rs. 26 crores, but the deposits of the State-controlled banks must be excluded. The Travancore-Cochin Bankers' Association, in pleading for special treatment, calls attention to the population problem, unemployment and the dependence of small-holders too on the State and the crops mostly grown for export. While commercial crops have always retarded progress, the lack of funds has always retarded progress. The small man has been forced to rely on outside help and the Brahmins of Kalladakurichi in Tirunelveli, a business group resembling the economic life of Kottari Chettis, dominated the economic life of Travancore. Co-operation was insignificant and local joint stock banks organised in the State had to take the field. According to the memorandum, there are 144 banks with 575 offices which have embarked on rural banking. The preponderance of time deposits has helped the banks to advance more for longer periods and to rely on land as security for loans. It is claimed that the money-lender has been displaced, thrift promoted and interest rates lowered by the growth of banks. The Banking Act of 1949, however, creates serious difficulties. Restrictions on dividends hamper additions to capital and a high cash ratio is an obstacle. It is noted that the State Bank of India has only five branches in the important towns of Travancore-Cochin State.

The bankers' memorandum complaints that the advice offered by the Reserve Bank of late takes no account of the conditions under which the small banks in Travancore-Cochin operate. The criticism that advances are over-extended misses the point that money-lenders will exploit the agriculturists. It is contended that while outside banks are allowed to open branches, the banks incorporated in Travancore-Cochin are not permitted to open new offices inside or outside the State. There have been no banking crisis and liquidation of some banks has not really injured depositors or shareholders.

You feel better, work better
—in an office cooled
by the **NEW** model

Unobtrusively
smart, the new
model 'CRYSTAL'
fits into a window,
a ventilator or a
small space in the
wall — blends
with your office
furniture

THERE'S no doubt about it—your efficiency is doubled when you work in a cool, clean office! And that's the atmosphere you get with the new model 'CRYSTAL', finest room air conditioner yet made for the Indian climate.

Installation costs are low, running costs are low—and what wonderful health and efficiency dividends the 'CRYSTAL' pays! Get your secretary to write to Voltas Limited now for details of the new model 'CRYSTAL'!

THE jute market is still in a state of uncertainty, but the news that the rivers are falling

and that there is less fear of flood damage the new jute crop should give buyers more confidence. If raw jute were to advance to a higher level, there is no doubt that consumers would withhold their orders until it came back again. Jute prices are too high as it is and it is about time that Pakistan took more heed as to the future. Spells of high prices over the past few years have created markets for substitutes and much business has been lost through the introduction of bulk handling, extension of the use of paper bags, etc. At the moment, the trade in the U.K. is really dull and short time and general curtailment of production of yarns and cloth are spreading. A few months of this is likely to go on, but hopes are high that business will be in full swing again by the end of the year. As in India, prices for jute production are cheap in comparison with those ruling for the raw material. Spinners are still using the jute bought at higher rates than those quoted for new crop, but values of yarns are based on new crop. The nominal value of the later for Mill Firsts is £96 and Mill Lightnings £86, while Mill Hearts are at £84, against £91, £81 and £75 wanted for new crop, c.f. U.K. Daissee is offered at £91 for good marks of assortment and £81 for grade. September-October, but June-July grade is at £85, while grade Tossa-2/3 is at minimum level for old or new at £100 and grade fours at £90, c.f. U.K. Dundee spinners are simply looking on. They have little incentive to purchase in view of the quietness in the yarn market. Jute cloth and bags are in demand to a limited extent. Inquiry is of a volume to indicate that there are wants to be met, but consumers are slow to place their orders at 12.80d for 10oz. 40in. and 10.51d for 8oz. a yard. Calcutta goods are easier and it looks as if the proposal to fix minimum prices or these had fallen through. Hessians are down to 58s 0d for 10oz. and 44s 9d for 7oz. June, 58s 3d and 44s 6d July and 58s 3d and 44s 3d August-September, with B Twills at 161s 6d, 161s and 160s for the respective positions of shipment, all f.o.b. Calcutta.

Calcutta Markets

DISCRIMINATING DEMAND AT TEA EXPORT SALE

GOOD MARKET FOR DUSTS

At Sale No. 1, held on 11th and 12th June, offerings at the Export auction amounted to 24,759 chests of the New Season's teas and 123 chests of the Old Season's teas. The market was very discriminating and buyers only gave good support to the few Doars teas showing useful first-flush quality and these often sold above their valuations. But those later invoices which showed a marked decline in quality and also the bulk from Cachar and Assam which carried plain liquors were almost neglected and withdrawals were heavy. Stylish Whole Leaf grades sold well, while Darjeelings, especially those with flavour were fairly well supported.

At the Internal Sale, Dust offerings were 21,500 packages of the Old Season's teas. There was a good general demand with black leafy exportable types once again being the strongest feature. A very few good C.T.C.'s on offer sold well, but the remaining C.T.C. teas, which were very ordinary, were considerably weaker. Clean Common and Medium teas were well supported and prices were a full 1 anna dearer, while residue kinds were keenly competed for and were often 2 to 3 annas dearer.

Quotations

Medium Doars Dust	1-5-6
Medium Assam Grainy	
Dust	1-7-0
Best Assam C.T.C.	
Dust	2-6-0 (Nominal)

Other grades offered totalled 327 chests. They met

with a fair demand at prices which were generally fully firm to dearer.

FOODGRAINS FEATURE FREIGHT MARKETS

FOODGRAIN movements were the feature of last week's operations and covered a wide field. Rice was sent to the U.S. Gulf to West and East Pakistan at rates ranging from \$ (U.S.) 36 to \$ (U.S.) 38.50 according to size and position, vessels being taken between June and August. Australia India wheat was arranged at 137s 6d from Western States to Bombay July-August, at 140s West Australia-full range India July and at 155s Australia full range-East Coast India July. A large business in coal was reported from Hampton Roads to Japan over 1957 at rates ranging from \$ (U.S.) 19.50 for July-December up to \$ (U.S.) 19.80 for January-March. Some 250,000 tons is involved. Chinwang-tao-Karachi was done at 70s f.i.o. and Calcutta-Karachi at 80s f.o.b. Rates continued firm in the time charter section with two 5,000 tonners obtaining 51s 6d for the voyage out to Indonesia with delivery Savona in June. A 9,000 ton motorship was fixed at 56s, voyage out, delivery U.K., re-delivery Japan and two 22,000 ton ore-oil carriers accepted \$ (U.S.) 4.50 for five years' trading.

SUGAR MARKET RISES AGAIN

During the week ended 12th June, sugar sales in the Calcutta market averaged 6,000 bags a day including those sent outside West Bengal. Rates for ready sugar ex-Kantapur delivery were Rs. 32-3 for ordinary grain and Rs. 32-14 for big grain. Export rates were 2 to 4 annas higher than those of the previous week. Demand was higher, particularly from Assam and other places outside the State, as a result of which prices advanced by 2 to 4 annas in the local market.

LINSEED FALLS

Prices were further depressed last week because demand was generally slack. They fell as low as Rs. 21-8. Later, with some deterioration in the supply position, rates rallied slightly. The condition of the market was dull with crushers showing a very limited interest. The oil market was inactive with buyers more or less out of the market, and millers were unwilling to reduce prices in the absence of any appreciable decline in the value of seeds. Interest from overseas was negligible and no fresh business has been reported. Latest quotations were based on ready Rs. 21-12 a maund.

HIDES AND SKINS QUIET

The market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 5th June and 11th June, 1956)
Cowhides: Wet salted (Ord.) 25,000 pcs. on the basis of Rs. 6-12 to Rs. 7-8; Wet salted (Slaughtered) 18,700 pcs. on the basis of Rs. 12 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 33,600 pcs. on the basis of Rs. 205 to Rs. 215, Rs. 240 to Rs. 250 and Rs. 325 to Rs. 362-8; Assam-Dinajpur-Jalpaiguri 22,000 pcs. on the basis of Rs. 250 to Rs. 270; Purneah-Kissenganj 12,000 pcs. on the basis of Rs. 235 to Rs. 247-8; Muzafferpore-Patna 61,300 pcs. on the basis of Rs. 245 to Rs. 250.

Bazaar Stocks

(11th June, 1956)

Cowhides: Wet salted 2,21,500 pcs.

Goatskins: Wet salted (Daissee, Killed) 30,600 pcs.; Assam-Dinajpur-Jalpaiguri 71,000 pcs.; Muzafferpore-Patna-Purneah-Kissenganj 1,77,500 pcs.

SHELLAC MARKET FIRM

During the week ended 12th June, the market was dull at the beginning, steady at midweek and firm at the close. The range of quotations was as follows:

Pure Buttonlac	Rs. 145 value, 142 to 146 buyers, 146 done.
Lemon No. 1 Shellac	Rs. 144 to 147-8 buyers, 150 done.
Lemon No. 2 Shellac	Rs. 139 buyers, 142 done and buyers, 144-8 buyers.
F.O. Std. 1 Shellac	Rs. 133 buyers, 135 to 137 done and buyers.
Pure TN Shellac	Rs. 127-8 buyers, 127 to 132 basis done and buyers.
4% I.T.N. Shellac	Rs. 120-8 to 125-8 buyers.
No. 1 Kusmi Seedlac	Rs. 132, 133 value, 132, 136 buyers.
No. 2 Kusmi Seedlac	Rs. 126-8 value, 127, 130 buyers.
Fine Bysaky Seedlac (Manbhumi)	Rs. 123 buyers, 125, 127 done and buyers.
Fine Bysaky Seedlac (C.P.)	Rs. 120, 121, 119, 124-8 buyers.
Ordinary Bysaky Seedlac (C.P.) Under 3%	Rs. 115-8 buyers, 115 done and buyers, 114-8, 118-8 buyers.
Ordinary Bysaky Seedlac (C.P.)	Rs. 110 buyers, 112 done, 110-8 to 113-8 buyers.
Kireelac	Rs. 56 to 59 buyers.

Shipments during June until the 9th were 8,843 packages comprising shellac 4,451 packages, seedlac 3,786 packages, buttonlac 45 packages and others 561 packages.

Plantation Topics

PROSPECTS FOR THE NEW TEA SALE SEASON

NEED TO IMPROVE QUALITY AND CUT COSTS

IN their latest annual report covering the 1955-56 tea season, Messrs. J. Thomas and Co. Private Ltd., tea brokers, say that "several factors exercised an important influence on the Calcutta market at the commencement of the season. It would be advisable to assess these factors carefully since each one of them played a part in causing an almost disastrous situation during the closing months of the year. Although it was obvious that any hope of a return to the boom conditions of 1954 would be an idle dream, few could have envisaged a return almost to the slump of 1952; 1956 saw the market stage a recovery very similar to that of 1953. However, the lesson learned that year, that when the price of common tea falls below a certain level, internal consumption rises to abnormal heights seemed to have been forgotten. By May, the price of common tea in London had collapsed to the disastrous price of 3s 4d a lb. compared with prices of 6s a lb. and over early in the year. Most buyers therefore were holding expensive stocks and it was clear that their entry into the Calcutta auctions would be delayed until their existing stocks had been consumed, or anyway, considerably depleted. In addition, their purchasing power was being curtailed by the credit squeeze which necessitated a policy of purchasing spot tea in London rather than a long-term investment in possibly cheaper purchases abroad. Although there were occasions during the season when U.K. buyers were accused of boycotting the Calcutta auctions, the unfairness of this accusation was readily apparent when it was realised that lack of funds precluded them from financing any large-scale commitments.

Tea Auctions Committee

"The eagerly awaited report of the Committee on Tea Auctions, 1955, was published in July. After a careful study of this document, the Government of India announced its decision to limit the amount of tea to be shipped for London auctions for the 1955-56 season to 140 million lbs. There was, however, to be no restriction on private sales. This restriction scheme had an unfavourable reception from the trade as a whole, as it was regarded as an unwarranted interference in a free market and liable to have an unsettling effect on prices realised at the London and Calcutta auctions. Doubt was also expressed whether the existing warehouses were sufficient to accommodate the extra quantity of tea intended for export could be avoided at peak periods. The success of the scheme, therefore, depended on consistent buying throughout the year by the U.K. operators. Unfortunately this buying support failed to materialise, and the Government of India's decision in June, and the Government of India's decision in February to go back on its original edict and to lift the ceiling for London auctions might be regarded as an admission of both the impracticability of the original scheme and the advisability of a policy of free trading for the tea industry.

"Considering the weak state of the London market at that time, the early season sales at Calcutta opened on a very satisfactory note. Demand from the outmarkets was good and useful prices were realised for teas possessing anything but approaching useful liquors, whilst sales, realising table for Iran enjoyed excellent success, as very high prices indeed. By August, however, as all major producing countries continued to forge ahead in crop, it became clear that 1955 would be a bumper year for production. It had also become evident that the U.K. buying policy dictated by the credit squeeze was to concentrate solely on the very best quality teas, and only to pay top prices for these when they were available immediately after purchase. It is quite understandable that London buyers, especially when finance is short, should prefer to buy 'spot' teas on their own market, pending a quick turnover on their money, rather than a grave danger, as far as India is concerned, that they will turn increasingly to countries such as Africa for their requirements of common teas. Emphasis was given to this danger in September, when the weight of North Indian 'rains' teas started to flood the Calcutta market, there being precious little demand for them as the London buyers were able to fulfil their requirements with teas more readily to hand manufactured elsewhere. By October, the situation had become serious that the Calcutta Tea Traders' Association decided to limit the weekly offerings for export to 50,000 chests a week, while it was also decided to miss two sales during the Puja holidays. This palliative had a temporary stabilising effect on the market but the worst blow was yet to fall. When the November crop figure was eventually announced in mid-December with that of the previous year. With the prospect of a record North Indian crop fairly certain, buyers became extremely discriminatory over their purchases, with the result that a large amount of poor liquoring stalky tea was withdrawn from sales weekly, without a bid.

Surplus Expected

"This was the gloomy picture that greeted the year 1956, and with world supply apparently far outstripping world demand, buyers reacted accordingly on the assumption that tea available during surplus of cheap north Indian tea available during the final months of the season. At first sight, this was a reasonable appreciation of the situation, but a glance at the opening sale prices of 1953 should have sounded a warning note. At that time, in-

ternal absorption had been stimulated by the ridiculously cheap price of common tea, and January 1956 was to witness the same occurrence. It would appear that when the price of common tea falls to a figure economically suitable to the purveyors of loose tea in the Indian bazaars, this country's internal absorption may suddenly rise by 20 or 30 million lbs., thus putting a completely different complexion on the world supply and demand position. This is exactly what occurred in 1953 immediately following the slump of 1952, and again, in the beginning of 1956 contrary to expectations, the opening sales of the year witnessed a strong demand, especially from internal buyers. In February, when the Government of India withdrew restrictions on the shipment of teas for the London auctions, the congestion in the Calcutta warehouses was quickly relieved as the majority of good quality tea was immediately shipped to the U.K. This was an additional indication of a possible internal shortage and the operators for Indian consumption were encouraged to replenish their stocks.

Final Sales

"The final sales of the season closed on a buoyant note, largely because it had become apparent that internal demand had accounted for more than 200 million lbs. of the crop. There was also the unusual spectacle of U.K. buyers operating vigorously in the Calcutta auctions as late as May in a vain attempt to safeguard their stock position during the summer months. In May, the U.K. stock had fallen to 100 million lbs. while their total imports for the period from 1st April, 1955 to 31st March, 1956, show an alarming drop of 105 million lbs. below that for the same period last year.

"The combined figures showed a further increase during 1955. This was the largest crop ever harvested and was 158 million lbs. in excess of the crop made in 1950, the overall rise in world black tea crops being 15 percent in five years.

OUTTURN FIGURES FOR MAJOR PRODUCING COUNTRIES

	1955	1954	Difference
North-East India	533.2	513.6	+ 19.6
South India	129.0	125.5	+ 3.5
Ceylon	380.0	366.7	+ 13.3
Pakistan	52.5	54.6	- 2.1
Indonesia	95.4	103.1	- 7.7
East Africa	47.3	45.4	+ 1.9
Total	1,237.4	1,211.9	+ 25.5

† Estimated

"The import into Britain from all countries for 1955 totalled 499 million lbs., compared with 542 million lbs. during 1954. The biggest decline was suffered by India, this amounting to no less than 38 million lbs. The other main tea producers also showed short-falls though these were small as compared with India. The supplies from East Africa and other currently small producers however showed an increase of 15 million lbs. as compared with 1954. Producing countries such as those whose output increases yearly, are able to land tea in London at a cost often as little as half that of India."

International Tea Agreement

The last International Tea Agreement expired on the 31st March, 1955. Although there has as yet been no official announcement, it is understood that a new Agreement is at present under consideration by the major producing countries and is likely to be signed shortly.

The maximum permissible quantities for export under the last Agreement based on 135% of "Standard Exports" were as follows:—

India	470,132,330 lbs.
Pakistan	47,245,607 "
Ceylon	339,643,816 "
Indonesia	234,355,950 "
Total	1,091,377,703 lbs.
It is believed that the new Agreement will assign the following quantities:—	
India	560 million lbs.
Ceylon	400 "
Indonesia	175 "
Pakistan	47.5 "
Total	1,182.5 million lbs.

It is further understood that there will be no restrictions on extensions and replacements under the new Agreement.

Referring to the outlook for 1956, the report says: "Present indications are that the statistical position of the tea industry augurs well for the coming season. Good as the prospects appear, however, the buoyancy of the market must always be conditional on certain factors being favourable. While the control of some of these factors may be in the hands of the industry, there are others whose fate must rest with nature or other countries. The first bullish feature immediately apparent is the fact that the record world production manufactured during the 1955-56 season, appears to have been fully absorbed by the world markets. At the end of May, the world's largest tea consuming country, was 361 million lbs. below last year's figure at the same date. The pronounced drop in this figure indicates that the U.K. buyers have not been stockpiling but buying for the immediate use of their consumers. The same would appear to be the case with most of the other large out-market consumers, none of whom appear to be holding any excess of tea above their normal requirements at this time of year.

"One of the most noticeable features of the Season just completed, has been the greatly increased absorption of tea by the internal market in India. Approximately 30 million more lbs. of

tea has been taken up by internal operators than in previous years, and although the majority of this increase has been purchased at prices not very favourable to the producers, this larger off-take has been the major factor in absorbing the surplus of tea that appeared at one time in 1955 to be flooding the world market. There would seem every likelihood that this increased rate of absorption in India will be maintained so long as tea is retailed at an inexpensive price to the Indian consumer.

"The record crops manufactured by all producing countries in 1955 were mainly on account of the coincidence of favourable growing conditions occurring in all tea-producing areas throughout the world in the same year. Although it is now the policy for all producers to increase their output by more scientific cultivation and the application of artificial manures, record crops will not continue to be made unless climatic conditions are favourable. It is therefore unlikely that there will be another extraordinary coincidence of climatic conditions favourable for heavy tea production occurring simultaneously in north and south India and Ceylon. North-east India has had favourable growing weather now for three years out of the last four, and as climate in this country appears to go in cycles, it is anyway a fair chance that the climate in the 1956-57 season may be conducive to quality rather than quantity. It has also become very apparent that producers are aware that the production of a large amount of ill-manufactured tea is not a profitable policy, and there are indications that increases in crop are being tempered by improvements to quality and manufacture. The last bullish factor which may affect the coming season is the likelihood of a Russian order for Indian tea. At the moment, no confirmation of Russian intentions to purchase tea is available, but it is rumoured that she may be considering the purchase of 20 to 30 million lbs. under her barter agreement with India. In this eventuality, a strong market should result for all types of tea.

"Our forecast for the coming season therefore is optimistic. Certainly estates adopting a policy of fine plucking and careful manufacture should reap good dividends. Providing world crops are kept within reasonable bounds, and costs of manufacture are not allowed to rise above their already dangerous levels, the coming season should prove better than that of 1955-56, and profitable to all owners of Indian tea estates. Let us hope then for weather conducive to quality production rather than quantity; the entry of Russia into the Indian tea market; and, lastly, no extra financial demands on estate owners to increase the cost of production."

WORLD TEA OUTPUT EXCEEDING DEMAND

URGENCY OF STEPS TO EXPAND CONSUMPTION STRESSED

"IN the last two years we have produced more tea than the world at present wants and the effect on prices has been too obvious to require comment from us. I should like strongly to emphasise that unless we can bring about equilibrium between supply and demand then serious trouble must lie ahead." This was the warning Mr. H. C. Bannerman, chairman of the Indian Tea Association (London) gave at the last Assam Dinner held in London recently.

He went on: "The position today is somewhat akin to that which existed in 1952 and it is perhaps interesting to quote the advice given to us at the 1952 Dinner by a well-known buyer who said, among other things: 'Rarely in the history of the trade has there been such a demand for good tea.

BRITISH OVERSEAS AIRWAYS CORPORATION

Unfortunately the production emphasis has not been entirely laid on quantity. The answer is to make stronger and better teas.

"We must improve our product if we are to retain the patronage of consumers. They have shown that they are prepared to pay a fair price for a good article and good tea is still the best drink in the world."

"By following that specialist's advice the 'patient' became strong and healthy in 1953 and 1954, but I regret to say that there has been a relapse. The doctor, too, seems to have made one or two mistakes in diagnosis and if ever there had to be an inquest, the coroner would almost certainly find that the doctor and the patient—the buyers and the producers—both made mistakes that contributed to the violent changes in the patient's health—that is to say the instability of prices in recent years. High prices in one year and low prices in the next year bring no good to any of us.

International Agreement

"If we are to achieve a greater measure of price stability we must rely on two factors of which the first is the International Tea Agreement. From 1933 that Agreement was administered by the International Tea Committee with superb judgment, in such a way that the world suffered neither a shortage nor a glut of tea. The delay in negotiating the renewal of that Agreement has been most unfortunate, and it is greatly to be hoped that the producing countries will lose no more time over this matter. The destinies of the industry in this respect are unfortunately not in its own hands. All over the world, except perhaps in America, the business man has lost a great measure of his freedom while retaining his responsibilities and the most he can hope is that his new masters will understand his needs.

"Adjustment of supply to demand is, however, only the lesser half of the answer to the problem of the tea industry. More important is the renewal of campaigns to expand consumption. It is unfortunate that in some parts of the world, the vigorous work being done by the propaganda campaigns before the war in the field has not been renewed. In America and Canada, I am glad to say the post-war campaigns have been well conceived—though we have had too many disappointments in those countries in the past to be able to build firmly on results there. India offers perhaps the most helpful field for expansion of consumption and it is with great satisfaction that we have learned of the Indian Tea Board's intentions of reviving the somewhat moribund campaigns in that country.

"The formation of a Tea Council in Britain along lines not dissimilar to the Councils in the U.S.A. and Canada is most urgently needed and I sincerely hope that during his forthcoming visit Mr. Iengar, the Commerce Secretary to Government of India, will be able to initiate the formation of such a body. By the way, do not let us ever forget that Britain is the world's biggest buyer and drinker of tea.

"I need hardly emphasise the importance of tea in the economies of India and Pakistan. In these two countries over 700 million lbs. of tea a year is produced, nearly a million labourers are employed, and through the export of tea, a very considerable amount of foreign exchange is earned. The continued prosperity of the tea industries of India and Pakistan is, therefore, a matter of major importance to the Governments."

Lord Inchcape's Speech

Lord Inchcape who was the chief guest at the Dinner said: "The history of the relations between the tea industry and the inland steamer companies over the last 90 years is one of the closest co-operation and of mutual growth as indeed it was bound to be, for the river in the early days was Assam's first line of communication."

He also said: "Your Chairman has referred to the resourcefulness of the Planters. Their difficulties indeed today are immense and their responsibilities great. I would say, however, although I know that each generation thinks that its problems are the most difficult, I am sure that there would be few, who with all the benefits of advancing civilisation, would not exchange the physical difficulties of the pioneers for today's constant worry over labour, taxation, Government forms, and excise formalities, which is the harvest you the pioneers' successors have reaped from the growth and developments of the industry."

LONDON TEA SALES

AT last week's London tea sales, the 72,324 packages on offer realised an average price of 4s 3.87d a lb. against 4s 5.98d in the previous sale and 3s 9.38d a year ago. Plain broken pekoe was quoted at 3s to 3s 0½ a lb. nominal; the previous sale 3s 1d nominal. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	430	4/14
Assam Cons.	607	4/04
Assam Doars	1,110	3/94
Assam Frontier	1,130	5/9
Central Provinces	837	4/11½
Chubwa	750	4/5½
Chulsa	564	3/21
Consolidated Estates	728	5/5½
Cons. Tea and Lands	3,406	3/61
Doars	777	3/33
Doom Dooma	827	5/34
Jokai	1,861	4/4½
Jorehaut	1,639	4/10
Kanan Devan	766	4/3
Moran	468	5/3
Standard	536	5/74
United Planters	606	5/7½
Upper Assam	680	4/9½

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for the month of May 1956:

Upper Assam: Weather generally seasonable, but abnormally hot at Tingri; unusually heavy rain with floods reported from Dibrugarh; immediate prospects fair to good; red spider blight prevalent in Dibrugarh, Sonari and Doom Dooma.

Central Assam: Weather generally unfavourable; outturn last month poor to normal; immediate prospects fair to good.

Lower Assam: Weather seasonable but abnormally hot in Bishnauth; rainfall for the month excessive in Mangaladi and Tezpur; immediate prospects fair to good.

North Cachar: Weather favourable; good rain has fallen generally and prospects are now brighter; outturn to date about level with last year; red spider prevalent throughout the district but is lifting in Lak-himpur; thrips reported from some districts of Lak-himpur.

South Cachar: Weather favourable; immediate prospects fair; outturn last month normal to good but slightly under last year in Longai.

South Cachar: Red spider blight prevalent throughout the district but is lifting in Longai.

Eastern Doars: Rainfall for the month excessive; immediate prospects fair; outturn last month good; slight red spider.

Western Doars: Rainfall for the month excessive; immediate prospects good; outturn last month normal; red spider lifting.

Darjeeling: Weather seasonable; immediate prospects fair; outturn last month normal; red spider blight severe.

Terai: Weather seasonable; crop prospects fairly good; outturn to date normal; red spider lifting; helio-pelts in evidence.

COCHIN TEA SALES

At Sale No. 15, 1,200,000 lbs. of tea were on offer. The market was irregular and demand was much less with Low Mediums and Mediums 2 to 3 annas lower for all grades. Withdrawals were heavy. Best liquorings met with a useful enquiry around the current valuation. Whole Leafs were rather dearer.

Commodity Markets

NEW MEASURES FOR IRON AND STEEL DISTRIBUTION

WITH a view to meeting the shortage of steel in the country, the Government of India has decided to import steel in larger quantities. Most of the imported steel will be consigned to the ports of Calcutta, Bombay and Madras. To facilitate the issue of import licences and customs clearance permits in the western and southern zones of the country and to keep a proper check on the movement of imported steel to the consuming centres without any loss of time it has been decided to open two regional offices of the Iron and Steel Control at Bombay and Madras. The main functions of these offices will be as follows: (1) the issue of import licences for iron and steel materials and pig iron falling under Part I of the I.T.C. Schedule; (2) the issue of customs clearance permits relating to import licences issued by the regional offices; (3) the issue of export licences for scrap arisings within their respective areas after inspection; (4) distribution of industrial and railway scrap arisings within the jurisdiction of regional offices and (5) all correspondence relating to the distribution of imported steel after the distribution order has been issued by the headquarters office of the Iron and Steel Controller, Calcutta and (6) clearance and transport of steel imported on Government account and under the T.C.A. Scheme.

The jurisdiction of the Bombay and Madras offices will be as follows:

Bombay: Bombay State, Madhya Pradesh, Madhya Bharat, Rajasthan, Saurashtra, Ajmer, Bhopal, Kutch and Vindhya Pradesh. Madras: Madras State, Andhra, Hyderabad, Mysore, Travancore-Cochin, Coorg and Pondicherry. The rest of the States will be under the jurisdiction of the central office of the Iron and Steel Controller at Calcutta. The Bombay Office will start functioning with effect from 15th June, 1956. From this date all applications for import licences and customs clearance permits emanating from the western zone, as defined above, should be addressed to: The Deputy Iron and Steel Controller, "Everest" Building, (6th floor), No. 100, Marine Drive, Bombay.

Customs clearance permits relating to the licences issued by the Iron and Steel Controller, Calcutta, cannot be issued by the Deputy Iron and Steel Controller, Bombay, unless he is in possession of the necessary documents. It will, therefore, be in the interest of the importers to apply for C.C.P.s. in good time so that the Deputy Iron and Steel Controller at Bombay may obtain the necessary documents from the Iron and Steel Controller, Calcutta. The date of opening of the Madras office will be announced soon. Until then, all applications for import licences and customs clearance permits should be addressed to the Iron and Steel Controller at Calcutta as heretofore.

WHOLESALE PRICE INDEX ALMOST UNCHANGED

THE official wholesale price index (base: year ended August 1939=100) stood at 391.1 during the week ended 26th May, 1956 as compared with 391.3 (revised) for the previous week. The index was higher by 0.2 percent and 14.7 percent respectively as compared with the corresponding weeks of the previous month and of last year. The average for May 1956 worked out to 390.2 as compared with 391.3 for April, 1956 and 342.0 for May 1955. Prices of tea for internal consumption (—14%), gram (—6%), sugar (—2%) and rice at Calcutta and coffee (—1% each) moved down while those of jowar (+9%) wheat and dal arhar (+2% each) and rice at Vijayawada and salt at Calcutta (+1% each) were marked up. Consequently, the index for Food Articles, receded by 0.7% to 348.2. The index for Industrial Raw Materials rose further by 0.2% to 484.3 because of higher prices of lac (+7%), rapeseed (+3%), copra (+2%) and raw cotton and raw wool (+1% each) despite declines in the prices of manganese ore (—4%), raw silk, groundnut and castorseed (—2% each) and linseed (—1%). The Semi-Manufactures group also advanced further by 0.5% to 386.9. Items which showed noticeable changes in this group were: gingelly cake (+14%), mustard oil (+2%), gingelly oil, linseed oil, and copper (—3% each) and groundnut oil, castor oil and zinc (—2% each). The Manufactures group index stood at 376.9 as compared with 377.1 for the previous week: prices of lute manufactures (—1%) witnessed a fall while glass was marked up (+1%). A further rise of 1.4% to 508.2 in the index for Miscellaneous group was brought about by an advance in the prices of black pepper and tobacco leaf (+3% each) and chillies and betelnuts (+1% each) despite a decline in the prices of cashewnuts (—2%).

COMPANY AND PUBLIC NOTICES

THE EMPIRE JUTE COMPANY, LIMITED.

NOTICE is hereby given that the Eighty-seventh Ordinary General Meeting of the Shareholders of THE EMPIRE JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 16th July, 1956, at 3.40 P.M. for the following purposes:—

- (1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
- (2) To Declare Dividends.
- (3) To appoint a Director in place of Mr. R. G. Edwards who retires by rotation, but who is eligible for re-appointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. R. G. Edwards an Associate of McLeod & Co. Ltd., the Managing Agents of the Company who retires by rotation be and is hereby re-appointed a Director of the Company."

- (4) To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria an Associate of McLeod & Co. Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

- (5) To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1)(d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys hereby permitted to the carrying on from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

- (6) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June, 1956 to 16th July, 1956, both days inclusive.

By Order of the Board,

MCLEOD & CO., LTD.,

A. T. DOIG,

Managing Director,

Managing Agents.

3, Netaji Subhas Road,

Calcutta, 12th June, 1956.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 6th August, 1956, only to those members whose names are registered in the Books of the Company on the 16th July, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statements

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. R. G. Edwards is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to re-appoint him as a Director of the Company.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

A Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

3. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

59C, Chowringhee Road, Calcutta.
8th June, 1956.

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Tenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta on Wednesday, the 11th July, 1956, at 3 p.m. for the following purposes:—

1. To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st December, 1955.
2. To declare a Dividend on the Ordinary Shares.
3. To elect Directors.
4. To appoint Auditors and to fix their remuneration.

The Transfer Register of the Company's Ordinary Shares will be closed from 30th June to 11th July, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy who need not be a Shareholder of the Company. If it is desired to use a Proxy, the same should be completed in the manner described by Section 176(5) of the Companies Act, 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

By Order of the Board,
C. A. CUNLIFFE,
Director.

4, Bankshall Street, Calcutta.
14th June, 1956.

THE INDIAN GALVANIZING CO. (1926) LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company the payment of the following dividends for the year ended 31. 12. 55.

Dividend on Preference Shares at the rate of 6% (subject to deduction of Indian Income Tax).

Dividend on Ordinary Shares at 10% free of Income Tax.

By Order of the Board,
BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 6th June, 1956.

WAVERLEY JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-seventh Ordinary General Meeting of the Shareholders of WAVERLEY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 16th July, 1956, at 3-30 P.M., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
2. To declare Dividends.
3. To appoint a Director in place of Mr. D. P. Goenka who retires by rotation, but who is eligible for re-appointment.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. D. P. Goenka an Associate of McLeod & Co. Ltd., the Managing Agents of the Company who retires by rotation be and is hereby re-appointed a Director of the Company."

4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria an Associate of McLeod & Co. Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1)(d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

6. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June, 1956 to 16th July, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 12th June, 1956.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 6th August, 1956, only to those members whose names are registered in the Books of the Company on the 16th July, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statements.

1. In the Special Notice given to the Company of the resolution under item No. 3 of the above Notice, it has been pointed out that Mr. D. P. Goenka is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to re-appoint him as a Director of the Company.

2. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

3. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to

enable them to borrow moneys from time to time for the Company's business in excess of the paid-up Capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

CHITAVALSAR JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-ninth Ordinary General Meeting of the Shareholders of CHITAVALSAR JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company on Monday, the 16th July, 1956, at 3-45 P.M., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
2. To declare Dividends.
3. To appoint a Director in place of Rai Bahadur Nityananda Singh Roy, J. P., who retires by rotation, but who is eligible for re-appointment.

4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution:

"That Mr. B. L. Bajoria an Associate of McLeod & Co. Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1)(d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

6. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and to vote instead of himself. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June, 1956 to 16th July, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 12th June, 1956.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 6th August, 1956, only to those members whose names are registered in the Books of the Company on the 16th July, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statements.

1. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

2. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

At Bhakra, where the Sutlej has cut deep gorges in the mountains and strewn its banks with boulders, an endless conveyor belt carries these aggregates to the location of the dam. The conveyor system, the longest in India, is operated with push-button ease. The belt was made by Dunlop in India.

Dunlop conveyor belts, made to B.S.S. at Sahagani, are superior:
★ Tailor-made for specific service conditions.
★ Spliced at site by a Mobile Splicing team.
★ Tested rigorously to ensure world-famous Dunlop quality.

TEA COMPANIES

O. Po. C. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

GROWING REALISM IN MINERALS

IMPROVEMENT IN THE CLIMATE FOR EXPANSION

LARGE-SCALE mineral development is to be among the more important features of the second five year plan. That is why the statement made by Mr. K. D. Malaviya, Union Minister for Natural Resources, to the Bangalore meeting of the Mineral Advisory Board last week, must be weighed carefully for what evidence it may reveal about present Government thinking on the subject. So soon after the appearance of the second industrial policy resolution, this might seem unnecessary. But the many vague generalisations which that exposition contained, and the effort which had obviously been made to avoid ruling out completely the participation of the private sector, suggests that the Government has no clear idea yet of how far it intends to go towards reserving to itself all but the least important and remunerative mineral-mining operations. Mr. Malaviya has stated that official policy will continue to be flexible and will maintain a "healthy balance between the private and the public sector." This appears to contradict the impression that private activity will gradually be squeezed out of all but a few insignificant projects as soon as the State is able to secure the capital, the equipment and the technical skill necessary for exploiting the important ones. It suggests the Government has a positive intention of keeping private enterprise permanently alive in the field of mineral exploitation. This is a principle which has not yet been fully acknowledged even for the key activity of coal mining, where private collieries are threatened eventually with finding their expansion completely stifled.

If it is the Government's intention to enlist the services of private enterprise permanently in mineral mining, suitable encouragement will have to be given. Apart from the curtailment of leases—much of which is not necessarily seriously damaging for private concerns—the chief difficulty appears to be a psychological one. Mineral mining is faced with too many uncertainties for its expansion and working to go forward smoothly. The Government has amended the Constitution, produced the industrial policy resolution and hinted at the possibilities of expropriation in a hundred-and-one speeches and ministerial statements. And lately there has been the introduction of State trading to frighten the private mining concerns, if not into terminating their activities altogether, at least into keeping them down to the level where any losses which might be forced upon them will be no greater than can be avoided. If mining and prospecting companies are now to extend their horizons, some positive evidence is needed to persuade them that they have everything to gain by doing so. The Government has recently shown some appreciation of this point, although it has still fought shy of giving, for example, the coal industry anything but the most flimsy guarantees for the future. Perhaps the best guide to current thinking is being provided by the negotiations on the compensation to be paid to the Kolar Gold Mining Companies. There are complications here due to these concerns being foreign-owned, but short of reversing this unwarranted and misguided step altogether, the Government appears to be attempting to show that it stands against expropriation and in favour of a fair deal for all well-run private concerns engaged in mineral mining.

*

The formulation of a policy for the coal industry has tested the Government's long-term intentions. The final allocation of increased output between the private and public pits has just been announced. That for the market collieries is larger than provided for in the earlier tentative allocations. But it is not yet by any means as large as it might have been had the Government not shown itself reluctant to abandon the ideological considerations which have influenced its attitude to coal since the industrial policy resolution of 1948. Ambitions of complete nationalisation have had to be abandoned for the time being due to a shortage of the funds necessary for paying compensation on the scale

required. But the unnecessary expense of large-scale expansion in the public sector is to be undertaken and an increase in private coal output is being allowed only to the extent that the State-owned pits are unable to achieve it themselves. This is neither realistic nor wise considering that private pits have affirmed their ability to produce all the coal required, with little extra investment, provided they are allowed to do so. Such a decision may simply be the price the Government is prepared to pay for its early dreams of dominating the country's entire coal output. And the appreciation of reality already suggested in the change which has taken place since the original suggested allocations may indicate the Government's future attitude towards the problems of coal expansion. But there is nothing about the present attitude which suggests that the private companies are tolerated for any reason other than the public pits' complete inability to achieve the impossible targets expected of them—certainly not the Government's wish to maintain a healthy balance between the private and the public sectors.

The coal industry appears to be in the process of being twisted out of shape to suit ideological considerations. The Government has an admirable opportunity to prove that this is not so by maintaining conditions under which private pits can operate economically. Promises have already been made on the vexed question of transport allocations, but these will not be easy to keep, and scrupulous care will have to be taken if the reality is to conform with intentions. The question which is now of vital concern to all market collieries is that of price. It is already generally accepted that the private pits have not been treated fairly in this matter. When costs are largely out of the industry's hands, it is neither equitable nor economically expedient to impose a rigid price level or even to reduce it. The Government has an admirable opportunity of proving its good intentions towards the entire range of mining industries by conceding the legitimate claims of the private collieries at present being pressed in New Delhi. The coal industry has a multitude of problems which could be solved if the official intention is in fact to maintain a healthy progressive private sector as a complement to a growing public one. Even the mechanism of control itself could be streamlined to suit the needs of the times and encourage the confidence necessary for expansion. If this is found to be administratively impossible, perhaps it is not too late for the lesson to be learned and for greater freedom to be

PLANNING FOR AN UNPLANNED NUMBER

ALTHOUGH India has the distinction of being the first country in the world to accept a national policy for limiting population and reducing its rate of increase, the honour may be largely theoretical. The value of the victory in principle is

INDUSTRIAL TRENDS IN THE UNITED KINGDOM

GOVERNMENT POLICY TOWARDS AUTOMATION AND EMPLOYMENT

(FROM A SPECIAL CORRESPONDENT IN THE U.K.)

AS might have been anticipated, the first flush of elation at the idea of automation being the remedy for the ills of inflation having died away, there is now more evidence of doubt in some quarters of this being, after all, the philosopher's stone. But it cannot be said at present that doubts are vigorously expressed, and it looks probable that automation and its companion provider of great expectations, namely, atomic energy are likely for long to come to provide one lens each for the nation's rose-coloured spectacles. What element of caution is at present discernible seems to be developing most among certain members of the Government who, a few weeks ago, were unambiguous optimists. This less exuberant mood proceeds, no doubt, from a feeling that, in the popular estimate, automation and atomics being capable of doing so much, if anything untoward makes its appearance in the economic realm, then it must be that the Government is to blame. Hence the present official warnings that while it is certain that by travelling in the directions named the goal will be reached, there is a long way to go and many difficulties are to be overcome. The Government, as well as safeguarding itself in the manner mentioned has also strengthened its plans for trying to prevent unemployment—should that be seen to be approaching, despite all hopes that a large-scale lack of work is impossible in the modern enlightened State. Thus, where disputes of any considerable magnitude occur between employers and employees, the Ministry of Labour now opens its own office as quickly as it can within the works concerned. Getting to the centre of the trouble speedily by this means is a great gain compared with the old style of attempted control from remote Whitehall. But, of course, it still remains that the Ministry cannot create employment in factories which have to close or partially close through lack of orders. It cannot do so, that is to say, unless it is able to place orders on behalf of Government departments

—which resort would cut right across the declared policy of lessening official expenditure.

Satellite Towns

A prominent firm of public works contractors has offered to take full responsibility for the creation of a satellite town to house an initial population of 25,000, and to ensure full employment for the working members through the firm's own activities and its sub-contracting associates. The project is feasible, and there must be a number of companies which the conditions of the past few years have favoured and which have command of the capital resources necessary for such an undertaking. It is clear that, in the case of public works contractors, taking responsibility for the bringing into existence of satellite towns means, among other things, causing a great amount of work for themselves. That the local authorities or the Government would have to find much of the money required to pay for this work is not necessarily an overwhelming argument against town planning schemes so originated. Nevertheless, they will certainly be viewed with caution, if only for the reason that inflation has many forms of expression. It would be easy to populate an area beyond its real capacity of support over a lengthy period, and the fact might not be plain in the early years of a prosperity brought about by passing influences. Admittedly, populations are far more mobile in these days than they were formerly, and workers have facilities to hand to travel long distances and return home again should the volume of work in the vicinity of their own homes substantially decrease. This power of adaptation is valuable. But it would render more difficult the maintaining of a right balance between agriculture and industry—already a problem hardly within bounds. There are other difficulties. On the other hand, the bringing into existence of a whole town after the fashion suggested is only a logical extension of the building of entire villages by industrialists to house their workers; and plenty of these villages have made their appearance during recent years. Nor would it be impossible to find towns for whose genesis a single enterprise is responsible. Indeed, examples were not absent in the Victorian era. Saltaire, Yorkshire, a woollen centre owned by Salts (Saltaire) Ltd. springs to mind in this respect.

Whether ideas for the setting up of satellite towns are brought to fruition by capitalist con-

cerns, by municipal authorities, or by the Government, the result will certainly be different from the towns we have hitherto known in Britain. This is evident from those already well advanced. The absence of congestion, other than that caused by traffic, is striking. Then, too, whereas Britain until the last few years relied upon her own architectural experience, she has now no hesitation in drawing upon that of other countries, and especially upon that of the United States. This tendency is to be seen more in the external appearance of blocks of flats and offices than it is so far in houses and factories. American and Canadian experience is also being drawn upon in fittings, as in the plumbing arrangements,—the use of stainless steel sinks, etc. Plastics, after a temporary decline in popularity, are in renewed and greater demand by the building and furniture industries for doors, panelling and table tops. But not all current demand is along modern and American lines. Venetian blinds, beloved of the Victorian generation, have "come back", with the difference that the slats are now often of light metal instead of wood.

Use of Raw Materials

The question has been raised whether the use of new raw materials or old materials in completely fresh forms is likely to the degree that is being pursued elsewhere. It is said that half the industrial forces in the United States is producing and distributing products unheard of fifty years ago. That statement does not mean that raw materials used have changed to an equal extent. But the tendency with them must be largely the same. One has only to think of the light alloys now so widely used in the engineering industries, but almost unknown half a century ago, a time also when the use of oil for transport and industry was nominal and the by-products of coal and petroleum could be counted on the fingers, whereas today they have to be numbered by hundreds. If it is the case that the enormous switch over to new materials and new industries now gathering force can be accomplished without rendering important old industries obsolete, then it is clear that not only will the volume of the nation's employment be maintained at its present level, but that the shortage of labour will become increasingly acute. Under such circumstances there could be no stabilising of wages at their present levels, very high though these seem to be.

The cotton industry, in co-operation with the Council of Industrial Design, has staged its first design exhibition at the newly opened Design Centre in London. This event is regarded as the first of many to be taken subsequently as the outcome of a decision of the Manchester Cotton Board to follow broader aims in its publicity work on behalf of cotton textiles. Undoubtedly, it has been anomalous to have so many exhibitions of cotton textiles in Lancashire itself, and to leave other parts of England neglected. This policy has been in marked contrast with that pursued by those in charge of propaganda for wool, where the effort has been literally to make the virtues of wool known in every town and village. It must be added that this has meant the expenditure of a vast amount of money, but the sums received through the Australian Government have placed the wool propagandists in an enviable state of affluence. The textile industry as a whole is giving attention to bulked yarns, the chief feature of which is evident from their name. A wider range of designs is expected to be secured through their use. But there are no truly outstanding textile developments to report at the time of writing. A few more firms have managed to win over trade unionists to the three shift system. There is, however, no general movement in that direction.

Diploma Course in Technology

The National Council for Technological Awards, which is charged with the task of stimulating the interest of students in technical matters, has quickly got to work. It is hoped, through the Council's activities, to remedy at an earlier date than could otherwise be the case the great deficiencies in skilled technologists available, of which every important industrial company complains, as well as the Government's Atomic research stations. The first work of the Council has been concerned with the devising of courses, by the taking of which and the passing of subsequent examinations, a diploma in technology can be obtained. The diploma is to be equal to an honours degree of a British university. One of the objects of the courses is to ensure the integration of academic training with practical training in industry. The insisting upon the two kinds of training is an outcome of the Council's belief that even in the technical world, there must be a "liberalising" influence at work. All that is implied by liberalising has not yet been stated—perhaps the Council is not yet completely decided on this point. Its proposals, as so far announced, suggest that the technical student will be better fitted for his ultimate tasks if his studies include English language and literature, accountancy and some instruction in industrial organisation. The Council is working in accordance with an ambitious five year plan. Nevertheless, it is not thought that the provisions at present indicated are adequate, because the Russians, allowing for the difference in the size of their population, are turning out technical students for industrial occupations at three times the rate of Britain. It is not expected to overtake this rate within the period of five years; but it is thought that the difference in the rates may be offset to some extent by the reason that "we in this country are extremely good at fundamental research and invention."

Old fashioned? But it's still very useful

VINTAGE MODEL YOU SAY. OR perhaps you haven't even seen one. Well that's old fashioned partnership which we still find very useful.

Ever since the days when tandem cycles were the vogue, Indian Aluminium Company and its Canadian associate have ridden the road together. Today Canadian technicians are design-

ing and helping to erect a new aluminium smelter at Hirakud, that will more than double India's aluminium production. Canadian money too is helping to pay for the project, to finance a part of which the Company proposes to issue new capital.

Together we travel—an old pair on a new road.

A DITCHER'S DIARY

insufficient data, chanced upon a few broken fragments of the *chakra* and in piecing them together gave it an incorrect form. The mistake thus made, urges Dr. Mukerjee, has ever since been perpetuated and remains embodied in the present crest. According to him, the *chakra* was not conceived by Emperor Ashoka, although it is named after him, but by the Buddha who had referred to it as the *Dharmachakra* (the wheel of spiritual strength) in his first sermon at Sarnath. The Emperor Ashoka, who propagated the Buddha's message through numerous stone edicts, also had a *chakra* made after the Master's design. It showed, Dr. Mukerjee informs us, four lions surmounted by a wheel, thus signifying the triumph of *dharma* (spiritual strength) over brute force. In the crest, the wheel has been placed at the foot of the leonine group, and the symbolic meaning has thereby been completely reversed—that brute force must triumph over spiritual strength. Dr. Mukerjee argues that the wheel on the top of the capital—which is installed in the Sarnath museum—has fallen victim to the years and that the stone surrounded by the lions still shows a hole eight inches in diameter, where, he says, the bottom of the wheel was originally fixed. The *stupa* at Sanchi, built in the 2nd century B.C., shows a lion capital of the form Dr. Mukerjee claims to be correct. I understand that this revelation is causing wry faces in Delhi. Although some of the bigwigs are thought to be in favour of allowing the error to continue, President Dr. Rajendra Prasad, a man with a historical conscience, is said to have declared against it. So, I presume, we may shortly expect to see an operation *Ashoka Chakra* working overtime to replace the old crests from the Rashtrapati Bhavan, the Raj Bhavans, the Secretariats and the legislative buildings; minting new coins (I hope, before the new decimal coinage is introduced), printing new currency notes and stamping fresh official letterheads.

Powerful pressure groups can be the curse of democracy. But a balance of power is just as essential in domestic as it is in international politics and two groups diametrically opposed to one another may be much less of a danger than the one which holds the field on its own. On those grounds, if on no other, one cannot help but feel that there is perhaps a need in trade-union and bureaucracy-ridden Britain today for a body such as the newly-formed "People's League." This organisation has announced that it intends to fight the growing abuses by the trade unions and seek by all constitutional means the reform of the law as it affects their arbitrary powers; ensure the freedom of the Press by sponsoring its own printing undertaking; campaign against bureaucratic waste and abuses of power and for a progressive reduction of taxation; and generally to fight all infringements of traditional liberties. It is to have no ties with any political party. That these ends are entirely laudable is clear enough. It is equally obvious that this body is unlikely to be a non-starter because its backing is already substantial enough to permit its putting money down for full-page advertisements in *The Times*, *The Manchester Guardian* and the *Financial Times*, Britain's three widest-read "quality" newspapers. But whether it is true that two wrongs can make a right and that this is the correct way to secure freedom from trade union

and bureaucratic tyranny, is another matter. The whole tone of this body's appeal to the people appears to be dominated by a disgust for the present inadequacies of the law for dealing with these two threats to individual liberties. So long as the League directs its attack through legal channels, it can do a great deal of good, but if the time should ever arrive when it loses patience with the law, or when it becomes so powerful that the trade unions find it worth their while to establish a *modus vivendi*, then its activities may make democratic government even more difficult than it is at present and the revival of individual liberties every bit as far off. The trouble is that the constituents of the League's top brass do not kindle any great faith in its future dedication to abstract conceptions of liberty and the rule of law. And, rather significantly, one of its aims is a reduction in the present level of taxation. Britain surely does not want to see the birth of a Poujadist movement.

While opposition is being expressed, sometimes even in high places, to the principle of granting tax concessions to foreign nationals working in India, it is interesting to note that the Chancellor of the Exchequer has found it expedient to drop a Budget proposal of his which would have deprived foreigners employed in Britain by overseas firms of the right to tax immunity on that part of their salaries paid in their homeland. The reason given is that the cost to the country is likely, in the long run, to be far higher than the benefit to the Exchequer. If this is true of a rich country such as Britain when taxing foreigners, it would seem to be even more to the point in poverty-stricken India where the need for enterprise, whatever its nationality, is so great. The fact Mr. Macmillan has had to face is that Britain is not indispensable as a business centre for firms established overseas and that a national of another country, although he must be prepared to keep Britain's laws, cannot always be expected to help carry her present disproportionately-high tax burdens, especially when these have been inflated by welfare commitments from which he does not necessarily benefit and which, in any case, he has no legal power to influence through the polls. Even in Britain, where the standard of living is comparatively high, a foreigner may consider himself, quite justifiably, to be suffering from considerable hardship if the standard he has been used to in his own country is even higher and he finds he has to maintain it on a British after-tax income. And when that fact is added to the usual anxieties of separation from home and family, and perhaps of isolation in an unfamiliar community, he may feel that without a few extra advantages, it is simply not worth his while. If Britain has admitted that she cannot afford to deprive him of what might make his job worth having, it seems strange that many here seem to believe that India can go on doing just that without any cost to herself. Or is the answer, once again, that some people are always prepared to put their own prejudices before the long-term interests of their country?

"I've just been out riding."
"Horseback?"
"Yes, he got back two hours before I did!"

STOCK MARKETS IMPROVE

INDUSTRIALS RISE, BUT
GILT-EDGED SUBDUED

THE firm conditions prevailing in the stock markets prior to the week-end gave way to an uncertain and rather easier tendency later. Even so, fairly widespread gains were recorded compared with the previous levels. The oil market continued to attract most of the attention under the influence of the American bid to buy the Trinidad Oil Company. The opposition to it raised doubts whether the deal would be allowed to go through, but the Government announcement that it had agreed to the sale removed all uncertainty and Trinidad Oil shares were around 10s higher on the week. The improvement in the markets followed the rally on Wall Street, which had moved sharply downwards on the news of President Eisenhower's illness. The May overseas trade figures, which were considerably better than had been expected, also encouraged the market. Gilt-edged securities remained subdued, and prices moved within narrow limits prior to the week-end, but a distinctly easier trend developed subsequently. The industrial market went ahead on small selective buying, and despite an easier tendency which developed after the week-end, most prices were higher on balance. Leading issues were the chief beneficiaries and gains here ranged to about 2s, occasionally more. The *Financial Times* Industrial Ordinary index is a point or so higher. Gold shares were subdued, and even June dividends failed to stimulate interest. Prices held steady earlier, but then inclined easier to record small losses on the week. Coppers were slightly firmer where changed, while other base metals recovered from the small falls sustained early in the week. Oil recorded an all-round advance under the lead of Trinidad Oil. Leaders were often several shillings higher, while other Trinidad issues, apart from Trinidad Oil, also

INDUSTRY AND THE BANK.

United Bank
of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET,
CALCUTTA.

moved up. Rubber and tea shares attracted little attention and prices were mixed on balance.

The Money Market

Short-term loan conditions were somewhat mixed during the past week, with the position never really certain. At times, calling by banks was on a considerable scale, particularly on Thursday, when revenue transfers were being made. Some discount houses were forced to go to the Bank of England and borrow on the full Bank rate terms, and some houses also had repayments of the previous week's loans to make. At the end of the week, disbursement of education money aided the market, although this was offset to some extent by the transfer of oil money. Short-term loans arranged in the market were transacted at rates up to 4½ percent, but at one time, the supply of credit was such that night money was obtainable at down to 3½ percent. Business in bills was on a fair scale at times, with the late August and early September dates changing hands at 4½ percent. Treasury bill tendering again proved uneventful, the market obtaining 4½ percent against the previous week's 4½ percent at an average of 100s 4.20d against 100s 4.90d in the week before. Applications for £240 million worth of 91-day treasury bills totalled £396,025,000, and were allotted at an average rate of 100s 4.20d against 100s 4.90d in the previous week. Offerings this week consist of £260 worth of 91-day bills. The Bank of England return for the week ended 13th June showed that bankers' deposits were £1 million higher at about £226 million, while notes in circulation were £4 million higher at around £1,875 million.

Activity on Wall Street

Convertible bonds were marked down in the early part of last week in sympathy with the sharp decline in the stock market. Losses ranging from one to six points were recorded, with Sinclair Oil, Standard Oil of Indiana and Vanadium Corporation on the stock market brought better conditions later. Rails also went ahead after early softness. U.S. Government obligations were generally quiet and were steady in a small turnover. In the foreign bond market, Greek 6 percents eased early in the period, but later the loss was reduced. Italian Governments were firm with 3 percent 1977 prominent. German Nationals were mixed with 5½ percent 1969 in demand. Danmarks and Norwegians were steady in a small volume of business. Among Japanese issues, Government 6½ percents advanced, but the 5½ percents were slightly easier. In South Americans, Brazilian 3½ percents advanced, but Chile, 3 percents were easier.

Hongkong Gold Listless

Trading in the Hongkong gold market was very slow due to a lack of incentives and demand from the usual overseas outlets, but the undertone was very steady. Values advanced initially and then gradually receded, but recovered following the firmer tendency of U.S. dollars in Hongkong. The closing price was \$112.25. Total carryover charges were 121 cents in favour of sellers. Official offtake was 3,250 taels and unofficial 17,000 taels. Arrivals from Macao totalled 30,000 ounces and forward contracts were done at \$(U.S.)37.91.

Woolfram Price Change

A slightly steadier undertone was discernible in the woolfram or shipment market, with business unit c.i.f. for June shipment. Fresh European demand was generally described as quiet and the current price range is now mentioned at 26½ to 268s, compared with 26½ to 268s previously. This is the first price change since the latter part of April.

Vegetable Oils Quiet

The market was quiet and featureless with a number of buyers holding off in view of the June. Coconut oil was a shade easier on lack of support, with Straits bulk offered down to £90½ c.i.f. and Ceylon at £94. Copra was also weaker, offered down to £17½ c.i.f. for August-September shipments of the Philippine copra, and further sellers wanting from £17½ for June-July up to £17½ for August-September. Linseed oil came under selling pressure, but buyers were not responding to the request for bids for cheap Indian bulk oil nut oil to Continental ports were holding steady, but sellers to the U.K. offered off of groundnut, but were not keen to trade at current valuations. Oil was weak in the background, reflecting the arrival of heavy unsold quantities. Linseed was further reduced, but so far buyers were not reacting. Soyabeans were also moving in buyers' favour without apparent result. It is understood that the bulk of the cottonseed recently auctioned in Uganda was taken up by the local mills, so the prospect of its export as seed is unlikely.

Rubber Market.

With most traders cautious pending more definite developments, the market was somewhat quiet in the week ended 14th June. Price movements were largely dominated by overseas news. President Eisenhower's illness initially caused a sharp recession, which was extended by lower Singapore advices over the week-end, but the decline was short-lived. A renewed squeeze in and with some nervous short-covering finding Singapore offers also relatively scarce the prices of sole crepe remained extremely tight on spot, and dealers were still indicating a nominal 38d a lb. for 4th inch smooth No. 1.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

SLOW DECLINE CONTINUES

Wednesday, 20th June.

DEMAND for funds has continued to fall slowly during the past week. The requirements of most of the important industries are slightly easier, and there has been some return of funds from upcountry areas. The interbank market remains fairly firm, and the call rate is unchanged at 3½ percent.

There has been a good showing of export bills this week, especially in the latter half of it. Both tea and gunny bills have been in evidence. Remittance has been normal. The strength of sterling is unchanged, and the dollar rate continues to be quoted at Rs. 477½.

Silver was steady on bull support and the price advanced from the previous week's level of Rs. 167.10 to Rs. 169.8, quoted today. The rate for ready was quoted at Rs. 170-4. The London price declined from 78½ to 77½. The price of foreign silver in New York also fell from 90½ to 90¼ cents.

Gold was quiet on lack of support and the price dropped from Rs. 104.8 to Rs. 103.8. The sovereign at Rs. 66-15 was Rs. 1-1 higher.

During the week ended 15th June, Government of India Treasury Bills for Rs. 38,61,75,000 were sold in favour of the Reserve Bank.

A fall of Rs. 10.50 crores to Rs. 1,504.31 crores in notes in circulation was the outstanding feature of the return of the Reserve Bank of India for the week ended 15th June, 1956. The total note issue was fractionally higher by Rs. 79 lakhs to Rs. 1,525.06 crores. Notes held in the Banking Department consequently rose by Rs. 1.29 crores to Rs. 20.74 crores. Deposits of the Government of India and other Government accounts increased by Rs. 3.33 crores and Rs. 34 lakhs to Rs. 55.80 crores and Rs. 5.27 crores, respectively. Balances of commercial banks at Rs. 51.18 crores showed a rise of Rs. 1 crore. Balances held abroad declined by Rs. 4.55 crores to Rs. 28.55 crores. Investments were fractionally higher by Rs. 3 lakhs to Rs. 36.38 crores. Other loans and advances dropped from Rs. 74.91 crores to Rs. 73.36 crores, of which advances to scheduled banks against usance bills amounted to Rs. 41.43 crores (Rs. 42.91 crores). These advances aggregated Rs. 154.03 crores since 1st January, 1956. Ways and means advances stood at Rs. 4.99 crores against Rs. 4.55 crores.

The return of the State Bank of India for the week ended 8th June, 1956, shows a drop of Rs. 1.92 crores in total deposits to Rs. 224.53 crores. Investments in Government securities are down by Rs. 42 lakhs to Rs. 90.26 crores, while other authorised investments are up by Rs. 25 lakhs to Rs. 10.58 crores. Advances, including loans, cash credit and overdrafts, and bills discounted and purchased have increased by Rs. 77 lakhs to Rs. 139.43 crores. Cash and balances are, in consequence, shown at Rs. 16.64 crores or Rs. 15 lakhs less.

The statement of the position of scheduled banks for the week ended 8th June, 1956, discloses Demand and Time liabilities at Rs. 636.36 crores (Rs. 8.71 crores on account of borrowings from banks) and Rs. 444.21 crores (Rs. 2.91 crores), compared with Rs. 638.59 crores (Rs. 7.37 crores) and Rs. 441.22 crores (Rs. 3.21 crores), respectively in the previous week. Cash has increased by Rs. 11 lakhs to Rs. 37.41 crores, while balances with the Reserve Bank have decreased by Rs. 65 lakhs to Rs. 49.42 crores. There is a drop of Rs. 68 lakhs in investments to Rs. 349.00 crores. Advances and bills discounted at Rs. 769.03 crores show an increase of Rs. 88 lakhs. The ratio to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 8.1 percent and 71.2 percent, against 8.1 percent and 71.1 percent.

Provisional figures of foreign sea and air-borne trade of India on private and Government accounts during May 1956, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding transit trade of Pakistan but including that of other land frontier countries: Exports Rs. 4,399 lakhs, re-exports Rs. 89 lakhs (transit trade—negligible). Imports Rs. 6,750 lakhs (transit trade—Rs. 3 lakhs). Total trade Rs. 11,246 lakhs. *Treasure*: Exports of currency notes Rs. 62 lakhs, others—nil. Imports of gold Rs. 1 lakh, currency notes Rs. 126 lakhs, others—nil. *Balance of trade*: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures and to the exclusion of figures for transit trade, the total value of exports (including re-exports) of merchandise, gold and silver fell short of imports by Rs. 2,268 lakhs.

LONDON FINANCIAL LETTER

SPEAKING OUT OF TURN

IT was generally agreed in the City this month that the Chancellor of the Exchequer made serious psychological errors in his statements on the dangers of wage increases. The warnings may have been perfectly valid and, in themselves, salutary; but it should have been obvious that foreign operators in sterling would become nervous if anyone in Mr. Macmillan's authoritative position foretold disaster unless the rising spiral of wages and prices was halted—especially when it appeared to be proceeding as strongly as ever. It can now be seen that the premature weakening of the pound—which is, anyway, approaching its period of seasonal recession—was largely caused by this nervousness. Subsequently, the tone of the Chancellor's statements was distinctly modified, and the more optimistic note assisted sterling. What effect it had at home is difficult to gauge. The Chancellor's position would be easier if he could say one thing in private to the wage-earners and another thing in private to the international operators. He would not necessarily deceive either, for the trend is reasonably promising though at the same time precarious, and a remark that is appropriate in one context may be out of place in another.

These objections to the Chancellor's recent activities are not frivolous. He took it upon himself to supplement his monetary actions, whose effects were too slow, with exhortatory words, whose effects were uncertain at home and damaging abroad. He confirmed the opinion of financial circles here that exhortation could do little good and might do harm; not only because of the unfortunate phrasing, but also because the mere idea of exhortation, after it has been used so often as a substitute for action, has a disturbing effect abroad. The world must know what the Treasury is thinking, even though what the Treasury is doing is of more practical importance. In the few weeks that culminate in the Budget there is always a superabundance of information, thereafter too little that is considered authoritative. It is felt that a monthly bulletin—a more comprehensive version of the bulletin that the Treasury already issues on particular subjects—would be a valuable addition to this country's economic data.

Shift of Emphasis

So strongly was the Chancellor criticised for his apparent reversion to words that he was goaded into warning, or reassuring, the sceptics that he would not hesitate to act as well if it seemed to him necessary. Immediately, he set in motion again the dispute whether Bank rate should be raised again. Those who have always had faith in this instrument are still convinced that it can be effective if used resolutely, but its comparative failure so far has strengthened the opposition of those who have always doubted its efficacy. It seems that we have reached a position where Bank rate cannot be easily raised because it has not proved that its deflationary effects outweigh the extra burden on the Exchequer on the interest payable on the overseas sterling balances, and cannot be safely lowered because the psychological effect of such a move would be damaging abroad. The flexible instrument that Mr. R. A. Butler reintroduced with a flourish in 1951 is flexible no longer. Mr. Roy Harrod is not the only economist who is uncertain whether (as he has written to the *Financial Times*) "the credit squeeze played an important part, or whether the investment boom just wore itself out in the ordinary way". The boom has not yet worn itself out, but Mr. Harrod is satisfied that it will do so eventually, if not in six, then perhaps in 18 months. More and more company chairmen are testifying to the effects of the squeeze but even they can only guess whether their trading conditions would have remained easy without it. Mr. Harrod, anyway, believes that the moral for future policy is that "we cannot afford to treat future booms by repeated credit squeezes, unless we can simultaneously bring under control that large sector of capital investment which is at present immune from the effects of the squeeze".

In these notes previously, the Chancellor's inclination to work on the supply of money rather than on the cost of credit has been mentioned. He has begun to tackle the difficult problem of funding the floating debt. But he has now, apparently, turned his attention to another aspect of the national debt—particularly but not exclusively of the floating debt—the inflationary expenditure of the Government itself. It seems that the Government, from the Premier downward, has at last been convinced that military expenditure on the present scale is not a strengthening but a weakening factor in this country's position. Even if the boom is subsiding, it is still necessary to ease the pressure on industry, as well as to restrict the flow of money into the banking system, by reducing the Government's orders, and to allow—indeed, to compel—industry to devote more energy to the increasingly competitive export trade.

Spending and Saving

There are signs already that inflation is under control, and it may be that the Chancellor's economies, if progressive, will complete the long and arduous process of adjustment. The inflation of bank-money came under control last year, while the supply of currency continued to increase. Now the supply of currency was, in general, ceased to expand, even while prices and wages continue to rise. The physical volume of retail trade seems to be rather less than it was a year ago. In the consumers' sector the boom has already subsided, and the first signs of the subsidence have appeared

in the producers' sector. In the absence of adequate statistics (the deficiency is by now notorious), it is impossible to see where the money is going. One would assume that more was being saved, but the available figures of savings do not support this assumption. If when the Budget emphasised saving, anyone doubted its importance, the doubts must have been knocked away by the shock of the American offer (permitted with reservations) for the Trinidad Oil Company—a piece of the sterling area's economy that would not have to break off into the dollar area if Britain were saving enough to finance the development of the sterling territories.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 6-4-56:

Head Office: 4

LONDON INSURANCE LETTER REPORT ON NUCLEAR RISKS

THOSE WHO COMMAND-DEMAND...

QUEEN ANNE

Scotch Whisky

HILL THOMSON & CO. LTD. Edinburgh ESTABLISHED 1792

THE interim report of the committee investigating nuclear energy insurance has been well received in the industry. The committee was set up last October by the British Insurance Association and Lloyd's, and it published its report at the end of May. The essence of the report is that nuclear risks are not different in kind from conventional risks, with the exception of radioactive contamination, which might involve both damage to the power station and damage to third parties. This new element involves some problems not because it is necessarily very menacing, but because the extent of the hazard is peculiarly difficult to assess. It is comforting to know that work in the Atomic Energy Authority's establishments is officially regarded as safer than most industrial work. Because the theoretical danger is so great, the precautions against it are extremely elaborate. But there remains the remote possibility of a disaster affecting so much property and so many people that insurance claims could be exceptionally heavy, and it is not pretended that this problem has been completely solved. What is encouraging is that British insurers are not inclined to impose a limit on the cover that they will provide. The American insurance companies' proposed limit of \$65 million is certainly high, but if the experts are right in their opinion that the figure is still much less than the potential need the limit can impede development of nuclear energy. The British committee's report emphasises the social obligation by its suggestion that insurers, "recognising these developments as of the greatest importance in Britain's industrial progress, will, no doubt, feel a

responsibility to afford cover in respect of the new risks involved". And it can be assumed that, having accepted the principle in Britain, the companies will make their services freely available abroad.

Fires in Factories

Insurance companies have always known that fire precautions in factories are, on the whole, inadequate. A fire, which cost eight lives, in a Yorkshire woollen mill last February, compelled the Government to investigate this inadequacy, and in his statement on the subject to the House of Commons in the middle of May the Parliamentary Secretary to the Ministry of Labour, Mr. Robert Carr, revealed a deplorable situation. For that situation, moreover, the authorities themselves are partly to blame. Nearly two decades ago, in 1937, the Factories Act laid it down that every factory must be equipped with a fire alarm that would be "clearly audible throughout the building". Mr. Carr could not give precise figures, but he estimated that 50-70 percent of the factories covered by these regulations had no fire alarms at all. The Ministry's factory inspectorate has never been adequately staffed, and when a special survey was demanded it had to borrow men from other departments. In fact, however, inspecting fire precautions is not primarily the responsibility of this inspectorate; it should be done by the local authorities, who have disgracefully neglected the task—partly, it seems, because they did not realise that they were responsible for it. Now that the facts have been clearly exposed, there is a reasonable possibility that the fire hazard will be perceptibly reduced. Research is also being intensified. The Fire Research Board has revealed in its latest report that its annual expenditure is planned to increase from a little less than £90,000 to a maximum of £125,000, its staff from less than 80 to more than 100; and that new buildings and equipment are to be provided at a cost of some £365,000. In relation to direct fire damage of nearly £28 million in this country last year, these figures are not extravagant. At the same time, some trends are working against the fire-fighting movement. At the recent conference of the Industrial Fire Protection Association of Great Britain it was pointed out that the layout of automatic factories, with large areas of uninterrupted operating space, would be contrary to the principles of "fire-segregation". Automation, it was suggested, must incorporate new fire detecting and warning devices. It must be reported that some delegates were severely critical of the alleged reluctance of the insurance companies to approve new devices.

Export Credit Insurance

The Export Credits Guarantee Department has reported that 13-14 percent of British exports are insured against default of credit. This is a higher percentage than any other country's. Germany's coming next, apparently, with a figure of about 10 percent. However, after a remarkably rapid growth of business, that began seriously about 30 years ago, the underlying trend seems to be no longer upward. A peak of £666 million was reached in 1951-52; in 1955-56 the figure was down to £553 million. Yet the Department does not believe that the reverse signifies a decline in the need for this kind of insurance. While exports in general expand, exports in particular categories diminish, and it happens that one of the diminishing categories, textiles (more precisely, cotton and rayon textiles), uses credit insurance on a relatively large scale. It may be that experience teaches traders, as well as underwriters, to assess risks more accurately and that as they get to know their customers they feel that precautions are less needed. But if exports continue to expand, as is obviously necessary, they will break new ground, and will presumably include the goods of some relatively inexperienced exporters. At least, it can be said that the anxious discussion of export credit in this country does not refer to E.C.G.D.'s facilities. The difficulty is that the banking system is not adapted to provide the long credits that many customers overseas require—so the question whether they can be adequately insured does not arise. It is, however, argued that if profit margins are being "cut to the bone" to promote exports, the Department should reduce its rates, since, if static, they tend to increase as a proportion of gross profit on the transactions concerned. It is true that the average cost on all business where the term did not exceed six months was the same in the last financial year as five years previously, but a larger proportion of the business was on terms near to six months last year, so that the true cost was lower. Anyway, an average cost of 11s 7d a £100 does not seem excessive, and premiums on exports to more stable markets have, in fact, been reduced this year.

MANUFACTURE OF COMPUTERS

The General Electric Company Limited and the British Tabulating Machine Company Limited announce that they have entered into arrangements for collaboration in the design of efficient and competitively-priced computers and like equipment to cover the field in which such devices can be employed, and particularly the sphere of office machinery and automation. They believe that, by collaboration in these matters and the application of the specialist knowledge and resources of both companies, significant advances in the development of these devices will be made, both in terms of design and engineering for production. To implement this policy it is intended to form a new company, the capital of which will be held equally by the parent companies. The financial, production and distributing structure of the parent companies will not be affected by this arrangement.

Stocks and Shares

SHARE MARKET BRIGHTER AFTER DULL START

ENQUIRY FOR COALS: TEAS MORE ACTIVE

Wednesday Evening.

THE Calcutta stock market has passed a dull week, but the past two days have brought signs of returning life and Indian Irons have risen from last week's clearing level of Rs. 37-6 to as high as Rs. 38-4; profit-taking brought the price back to Rs. 37-15 after hours this evening. The feature among the speculative counters has been Indian Copper which rose to Rs. 7-8 in an otherwise dull market. The closing price today is Rs. 7-7. Other speculatives have gained in sympathy with Indian Irons and the market has an altogether brighter look than it had a week ago. One of the factors which appears to have helped sentiment has been the reported resignation of the Finance Minister, Mr. C. D. Deshmukh, and the rumour that he may be replaced by the present Minister for Commerce and Industry and Iron and Steel, Mr. T. T. Krishnamachari.

Activity in the sections has been mixed, but on the whole there has been little investment support. Coal shares have benefited from the expectation that the Government is going to grant an interim increase in coal prices to help the industry implement the recent Tribunal Award. Tea scrip has ment the recent Tribunal Award. Tea scrip has enjoyed support following reports of large-scale Russian interest in the Calcutta auctions. The jute section has remained entirely neglected. Engineering and miscellaneous shares have received their usual interest and prices have been buoyant. Government securities have been better after last week's losses.

Details of the week's trading follow.

There has been a revival of interest in Government securities and prices recovered from the setback reported last week. The volume of business was, however, on a restricted scale. Three percent Conversion Loan continued on offer and the price declined to Rs. 77-5 but closed one anna better, while Non-terminable Paper was nominally quoted at Rs. 77-6. Short-dated loans ruled steady with buyers for 3% Loan 1957 at Rs. 99-13 and 3% 1958 at Rs. 99-10. In the medium-dated group 3% 1959-61 was recovered to Rs. 98-2 buyers, while 3% 1963-65 was taken at Rs. 95-1-6 and 3% 1964 changed hands at Rs. 95-1 ex-voucher; 2½% 1961 was quoted at Rs. 93-9, while 2½% Loan 1960 had buyers over at Rs. 93-6 and 2½% 1962 changed hands at around Rs. 93-5-6. Among National Plan issues, 3½% 1961 and 3½% 1964 were unchanged with sellers at Rs. 99-11 and Rs. 98-12 respectively, but 3½% 1965 was marked up two annas to Rs. 98-13 with buyers over. In long-dated loans 3% 1966-68 was on offer at Rs. 93-4 but 1970-75 was quoted higher at Rs. 90-7. Provincial loans were extremely dull and there were no price changes.

Selected miscellaneous preference shares met with enquiry at around last quotations, but buyers were not prepared to chase prices in order to obtain their requirements. In the case of jute preference shares, selling orders could be executed only by lowering prices. Among miscellaneous issues, Alkali & Chemical were taken at Rs. 105 and Burn & Company 6% Preference at Rs. 123. Calcutta Electric were quoted at Rs. 11-8 and Dalmia Cement Rs. 40 paid-up were done at Rs. 40 ex-dividend. India General Navigation were taken at Rs. 87 and Indian Aluminium at Rs. 86. There were buyers of Indian Iron & Steel at Rs. 107 and New Victoria were reported at Rs. 4-14. Rohtas Industries "B" were taken at Rs. 64 and Orient Paper Second Preference were crossed at Rs. 74-8 as were Railis India at Rs. 65. In jute, Anglo-India were offered at Rs. 111-8 and Dalhousie at Rs. 105-8. A solitary transaction was reported in Fort Gloster Second at Rs. 80, and National were taken at Rs. 116. Reliance changed hands at Rs. 98-8.

The outstanding feature in the banking section was Punjab National which met with keen enquiry at around Rs. 58. United Commercial were unchanged at Rs. 51, but Hind Bank improved from Rs. 33 to Rs. 34-8.

In the railway section Dehri-Rohas were dealt in at around Rs. 13-10, Howrah-Amta were marked at Rs. 53-8 and Howrah-Sheakhala at Rs. 37.

In the cotton section, Kesoram provided the outstanding feature improving from Rs. 18-12 to Rs. 20-10, but profit-taking at the close brought the price down to Rs. 19-14. Elgin also improved from Rs. 28-5 to Rs. 28-15 while Cawnpore Textiles were depressed at Rs. 8-13. Muir Mills reported business after a long interval at the higher price of Rs. 88. Dunbar were better at Rs. 314 as were Bowreah at Rs. 167.

On expectations of an increase in coal prices, coal shares met with good enquiry during the week and prices improved on a wide front as will be seen from the following table:

	Opening 14-6-56. Rs.	Closing 20-6-56. Rs.
Amalgamated	23 8	23 14
Bengal	538	558
Borrea	23 12	25 8
Burrakur	13 13 x.d.	14 5
Equitable	30 6	31

New Beerbhoom	19 12	20 8
Raneegunge	11 4 x.d.	12
South Karanpura	9 4	10
Western Bengal	6 15	7 5
Karanpura Collieries	116	124

Jute shares attracted little attention and prices on the whole were unchanged.

Here are the week's representative price movements:

	Opening Rs.	Closing Rs.
Agarpara	12 4	12 1
Barnagore	148	138
Anglo India	170	170
Birla	18 8	18 6
Cheviot	208	202
Ganges	73	72
Howrah	23 12	23 4
India	140	140
Kelvin	238	238
Kinnison	175	172
Naihati	94	90
National	25 2	24 14
Nuddea	40 4	40 8
Reliance	10 13	10 12

There is little change to report in the electric supply section and the minimum amount of business was put through. Benares were crossed at Rs. 18-2 and Patna were marked at Rs. 11-3. Calcutta Electric changed hands on several occasions at around Rs. 13-8.

There were a few isolated features in the sugar section namely Carew which advanced from Rs. 9 to Rs. 10-4, and Purtabpore from Rs. 14-8 to Rs. 15-6. Cawnpore and Champaran were both better at Rs. 20-4 and Rs. 29-8. Darbhanga were scarce at

Rs. 24.2. Kamnager were marked back from Rs. 27-12 to Rs. 26-12 but again recovered today to Rs. 27-4.

In the engineering section, Indian Iron and Steel recovered from Rs. 36-13 to Rs. 38-2 which is to-night's closing quotation. Jessops met with some selling pressure and were quiet at Rs. 35. Burn & Company were neglected at Rs. 36.8 and Indian Galvanising were marked at Rs. 23-6 ex-dividend. Richardson & Cruddas were offered at Rs. 26 while Textile Machinery recovered from Rs. 24 to Rs. 24-6. Kumardhubi Engineering and Indian Standard Wagon were steady at Rs. 10-8 and Rs. 182 respectively. Britannia Engineering improved today from Rs. 18-8 to Rs. 18-15.

In paper, India Paper Pulp were well maintained at Rs. 25-14 while Orient Paper recovered from Rs. 38-13 to Rs. 39-6. Shree Gopal were steady at Rs. 19-7 while Titagur met with some selling pressure and eased to Rs. 44-2.

In cement, Assam Bengal were steady at Rs. 8-3 while Sone Valley were dealt in freely at around Rs. 8-14. Ashoka were enquired for at Rs. 12-2 and Dalmia were placed at Rs. 16-12 ex-dividend.

In insurance, New Asiatic changed hands at Rs. 4-3 and Ruby General at Rs. 6-2.

In shipping, India General Navigation were shaded at Rs. 116 while India Steamship recovered from Rs. 9-1 ex-dividend to Rs. 9-5. Port Shipping were marked at Rs. 16-8.

Among miscellaneous industrials, Alkali & Chemicals were better at Rs. 22-4 while Bengal Flour were offered at Rs. 26. British-Burmah Petroleum, on dividend rumours, moved up from Rs. 4 to Rs. 4-8. Despite the satisfactory final dividend of 14 annas a share making Rs. 1-6 a share for the year, Clive Row Investment shares reacted from Rs. 12-8 to Rs. 12-6, but considering the attractive yield which they offer, the price should adjust itself upwards before long. Dunlop Rubber were unchanged at Rs. 30-8 as were British India Corporation at Rs. 11-4. Hindustan Motors were quiet at Rs. 10-1 while Indo-Burmah Petroleum improved from Rs. 40-8 to Rs. 41-8. Indian Cables were steady at Rs. 34-10 as were Indian Wood Products at Rs. 39. Metal Box were steady at Rs. 28-11 while Martin Burn were offered at Rs. 24-14. National Carbon were wanted at Rs. 27-6 and National Tobacco were a shade better at Rs. 13-5. Rallis were marked back from Rs. 48 to Rs. 45 but National Insulated Cables, on bonus rumours, had strong buyers at Rs. 25-11. Despite the reduction of the ordinary dividend, just announced, by Shaw Wallace and Company (Re 1

against Rs. 1-4) the shares were steady at Rs. 15-5. Rohtas Industries were slightly easier at Rs. 24.

In the mining section there was a considerable turnover in Indian Copper shares which at one time were taken up to Rs. 7-8; tonight's closing quotation is lower at Rs. 7-6 on profit taking. Karanpura Development were a shade better at Rs. 25-4, while both Burma Mines and Western Stockholders investment were unchanged at Rs. 4 and Re. 1 respectively. Metal Corporation were easier at Rs. 10-12 but Orissa Minerals were in demand at Rs. 27-12.

Enquiry for tea shares broadened considerably towards the end of the period under review as a result of better auction prices this week and the announcement that India would enter into an agreement with Russia for the exchange of tea for steel.

Of the Assam shares, Bateli were wanted at Rs. 23-8 and Bishnauth Old changed hands at Rs. 25-8. Dibrugarh were called at Rs. 29-8 and Tyroon were done at Rs. 50. Brahmaputra improved from Rs. 8-14 to Rs. 9-4 and Brooke Bond were marked up sharply to Rs. 24-10. Dhelakhat had buyers at Rs. 22-14 but Dhunseri were fractionally easier at Rs. 23-8. Grob "B" recorded Rs. 19-12 and Methoni improved on investment support to Rs. 25-12. Interested buying pushed Sapoi to Rs. 25-8 and Telojan improved to Rs. 31-10. Among Doora scrip, Banarhat improved to Rs. 370, as did Hantapara to Rs. 232 and Rajabhat to Rs. 27. Hasimara were done at Rs. 39-6 and New Doora changed hands at Rs. 372. Of the remaining shares, Darjeeling Tea & Chinchona were crossed at Rs. 190 and Hattikihira were called at Rs. 21-4. Belgachi recorded Rs. 55 and Hansqua improved from Rs. 23-12 to Rs. 24-2. Jayshree were better at Rs. 12-6. Patrakola had buyers at Rs. 196.

The BURRAKUR COAL COMPANY increased its profit by Rs. 37,000 to Rs. 11,90 lakhs for the half-year ended last December. Providing Rs. 4,30 lakhs (Rs. 4,90 lakhs) for depreciation, Rs. 5,53 lakhs (Rs. 4,93 lakhs) for taxation, transferring Rs. 6,900 (Rs. 32,000) to development rebate reserve, Rs. 55,500 (Rs. 75,000) to tax contingency reserve, Rs. 50,000 (same) to debenture redemption reserve, Rs. 1½ lakhs (same) to ropeway rope replacement reserve, Rs. 25,000 (same) to general reserve and bringing in Rs. 1,40,510, there remains an available balance of Rs. 4,89,965. The ordinary dividend has been maintained at 3½%, leaving a carry-forward of Rs. 1,15,375. Rallies increased from 513,556 tons to 516,165 tons, and despatches from 506,361

tons to 526,106 tons. The directors say that good progress has been made with the repair programme of the Loyabad coke plant and 31 ovens are now in production; 40,712 tons of metallurgical hard coke were manufactured during the half-year under report, compared with 36,710 tons. Corresponding despatch figures were 40,491 tons and 36,726 tons, respectively. In response to the Government's request for the coal industry's plans for the future, the company signified its willingness, in certain circumstances, to increase its coking coal output substantially to meet the future demand from the steel-making industry. No direct reply has yet been received from the Government, but the directors have reason to believe that the collieries will be called upon to increase their output. In conformity with the Companies Act, 1956, the company's accounts will henceforth be drawn up on an annual basis. It has been decided that the first annual closing of accounts will take effect from the period commencing on 1st July, 1956. The directors will, however, arrange for unaudited half-yearly draft accounts. It is their intention to declare interim dividends when, in their opinion, the state of the company's affairs warrant such action.

The AMALGAMATED COALFIELDS, LTD., increased its profit by Rs. 1,39 lakhs to Rs. 6,83 lakhs. Bringing in Rs. 38,026, there is a balance of Rs. 751,205. Taxation absorbs Rs. 2,83 lakhs (Rs. 1,46 lakhs) and depreciation Rs. 2,62 lakhs (Rs. 2,52 lakhs). Machinery replacement reserves is doubled to Rs. 21 lakhs. The dividend has been increased from 6½ percent to 7½ percent, leaving a carry-forward of Rs. 26,953. Rallies rose from 398,250 tons to 415,791 tons and despatches from 390,920 tons to 436,024 tons. The directors say that capital expenditure incurred during the half-year under report on development, machinery and buildings amounted to Rs. 3,00,396, against Rs. 1,73,837. Extensive development has been taken in hand to replace some of the old collieries nearing exhaustion so as to enable the company to maintain and increase production.

Providing Rs. 1,75 lakhs higher at Rs. 2,90 lakhs for taxation and lowering depreciation slightly to Rs. 57,226, the profit of the BRIDGE & ROOF COMPANY (INDIA) LTD., amounted to Rs. 3,25 lakhs (against Rs. 1,73 lakhs) for the half-year ended last December. Bringing in Rs. 1,15,742, there is Rs. 4,41,297. General reserve allocation is Rs. 1,25 lakhs higher at Rs. 2 lakhs. The dividend is the same at 7½ percent, leaving a balance of Rs. 1,51,297 to be carried forward. The directors say that in view of the need to add to the company's plant, and finance stocks and work in progress, they have recommended a substantial allocation to reserve in preference to any increase in the dividend.

The profit of the DALMIA CEMENT (BHARAT) LTD. was Rs. 7,71 lakhs higher at Rs. 56,57 lakhs for the year ended last December. The ordinary dividend has been raised from Re. 1 to Rs. 1-4 a share. General reserve gets Rs. 10 lakhs (same) and dividend equalisation fund Rs. 5 lakhs (nil). Taxation absorbs Rs. 26 lakhs (Rs. 24 lakhs), leaving a carry-forward of Rs. 2,87,995, against Rs. 2,86,599 brought in. The directors comment that the shares held in Orissa Cement Ltd. having been mostly distributed among the shareholders of Dalmia Cement Ltd., Orissa Cement is no longer a subsidiary of the company. But it still holds 77,454 ordinary shares of Rs. 10 each in Orissa Cement Ltd. which it is proposed to distribute at par among the ordinary and deferred shareholders against dividends to the extent of 75 percent of the dividend amount payable to them.

Andrew Yule and Co. Ltd. have ceased to be managing agents of the Sockieting, Dukenhengra and Ghillidary divisions of the ASSAM CONSOLIDATED TEA ESTATES LTD. with effect from the close of business on 16th June, 1956. The affairs of the Sockieting and Dukenhengra tea estates are now being conducted by the directors of the Sockieting Tea Co. (Private) Ltd., while the affairs of the Ghillidary tea estates are being conducted by the directors of the Ghillidary Tea Co. Ltd. The address of both the Sockieting Tea Co. (Private) Ltd. and the Ghillidary Tea Co. Ltd. is 23/24, Radha Bazar Street, Calcutta 1.

SENTIMENT IMPROVES IN BOMBAY

TEXTILE NEWS ENCOURAGES BULLISH FEELING

Wednesday Evening.
EQUITIES on the Bombay stock market closed higher after earlier easiness caused mainly by disappointment over the terms and conditions attached to the rights issue of the Indian Iron and Steel Company. There are a number of factors which have helped improve sentiment at the closing stages. The new cotton policy of the Government has been interpreted bullishly, in so far as the mills will be allowed to increase output by rationalising and modernising equipment. Mr. C. D. Deshmukh's resignation from the Finance Ministry was taken calmly because it is felt that a competent successor would be selected before he vacates his post. Good corporate news has also been a help factor.

Replacement buying, coupled with short-covering, raised steel shares to new high levels, though top gains were fractionally shaded at the close. Tata Ordinary ended at Rs. 204-12 and Indian Iron were quoted higher at Rs. 37-15 on strong support from Lyons Range. Tata Locomotive were taken

at Rs. 150-8 and Premier Construction met with steady demand around Rs. 188-8. Alcock Ashdown were absorbed at Rs. 355 on maintaining the same distribution.

Brisk activity was seen in the mill group, and improvement along the entire list was registered. Bombay Dyeing soared to Rs. 659-6, as did Century to Rs. 568-8. Simplex were higher at Rs. 219-8 and Kohinoor were in demand at Rs. 569-8. Brisk activity lifted India Ordinary to Rs. 13-15 and Svadeshi changed hands at Rs. 254-12. Elphinstone gained at Rs. 62 on raising the distribution.

Miscellaneous industrials improved in sympathy with the general trend. In the mining group, Indian Copper was a firm feature and rose to Rs. 7-7 on Copper were a firm feature and rose to Rs. 7-7 on strong investment buying. Shivrajpur Syndicate were higher at Rs. 109 on better manganese prices. National Rayon were absorbed at Rs. 234-12, while Gwalior Rayon slipped back to Rs. 18-2 on profit-taking. Increased sugar prices evoked scattered interest in shares. Belapur came to hand at Rs. 236-8 and Walchandnagar Industries realised Rs. 255-10. Among shipping shares, Scindia Steam were steady at Rs. 18-11 and India Steamship were a shade better at Rs. 9-6 on short-covering. Hindustan Motors declined to Rs. 10-2, while Tata Mill improved to Rs. 58 on replacement buying. Tata Chemicals were supported around Rs. 19.

Insurance shares were selectively firm. New India improved to Rs. 47 on reports of capitalisation of reserves. Bank shares were about steady, with minor changes in rates. Central Bank were done at Rs. 51-8 and Bank of India were transacted at Rs. 158.

There was little interest in electricity supply undertakings and prices moved in favour of buyers. Ahmedabad were offered at Rs. 96-14 and Tata Hydro were quoted at Rs. 129.

THE WEEK'S TRANSACTIONS

(In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate: Opening Quotations—Highest for the week—Lowest for the week—Closing Quotations—Quotation for the Corresponding Closing Date a Year Ago, the last named being shown in parenthesis and will not be given where such a quotation is not available.)

BRITISH TEXTILE REVIEW
MORE CONFIDENCE IN WOOL

THE wool industry, the opinions of which are not formed hastily, has at last been convinced that the decline of values has been firmly checked and that the trend has turned upward; the recovery being stronger where the decline was more severe, in the merino section. Renewed confidence in values is already affecting trade. There is less caution in holding stocks and in buying for delivery a reasonable period ahead; indeed, precautions against the risks of short positions can often be observed. Buyers are less inclined to dispute quoted prices, and topmakers and spinners are able to cover their primary costs with more adequate margins than have been obtainable in the recent past. These are healthy developments, but farsighted operators recognise that their benefits could soon be lost if the movement proceeded far. What is required, they say, is stability, not inflation, of wool prices. Financially the industry suffered from the weakening of values last year, but its physical trade has responded this year to the cheapening of the material. It may be recalled that the May issue of the Commonwealth Economic Committee's Wool Intelligence showed world consumption in the first quarter of this year about 5 percent more than in the last quarter of last year and about 10 percent more than in the first quarter of last year. In the whole of 1955, compared with 1954, the U.K.'s consumption increased by about 3 percent. The recent trend, as shown in the monthly summary of the Wool Industry Bureau of Statistics at the end of May, is hesitant, with consumption in April rather less than a year previously but more than in the preceding month; but later figures will probably show a more decided advance. Even in April more worsted yarns were delivered than a year previously, and the labour force in worsted spinning increased against a general trend that was still slightly downward.

On the export side it is the topmaking section that feels most confident, for combining capacity abroad has not been expanded commensurately with spinning and weaving capacity. The vigorous subsidised competition from Uruguay is, indeed, causing some concern in Yorkshire, but China, Canada and India—first, second and third on the list of U.K. topmakers' overseas customers last year—will, it is believed, continue to buy in substantial quantities. In piecegoods price-competition is very keen, and the "newer" textile countries are less willing buyers. It is worth remarking, however, that the value of wool cloth of all types exported from the U.K. to North America last year was much larger than the corresponding exports of tops—\$61.75 million, compared with \$14.75 million. At home the trend of fashion, which last year favoured knitted goods has turned again towards worsteds. This section would suffer again if prices rose too far, but at least it does not intend to stagnate technically. The Wool Industries' Research Association has planned the building of a new block at Leeds to be devoted entirely to research on worsteds.

New Cross-sectional Yarns

Both technology and pricing will play their part in the future competition between natural and man-made fibres. From the picture, presented in Snia Iscosa's annual report, of steady progress in world production of man-made fibres it is evident that the big surplus of cotton was not affecting this development last year; or, if the surplus had an effect, it was against cotton rather than substitutes. Artificial prices for cotton have impeded consumption of that fibre, and certainly that prices must come down has inclined consumers towards more stable substitutes as a protection against stock losses. Lancashire foresees, however, that in due time normal competition will be restored. The annual conference of the Textile Institute at Blackpool last month, attended by 530 delegates (a record number), discussed man-made fibres in both general and technical terms. The president, Mr. William T.

Winterbottom, remarked that developments of new fibres and of new techniques with older fibres and fabrics were "proceeding at a spanking pace" and concluded that by "judicious blending we could come nearer than ever before to giving the consumer the perfect article". Among many interesting papers presented to this conference one may mention that of Mr. H. C. H. Tallies, of British Nylon Spinners, on "Developments in Nylon 66 and 610 Fibres". He discussed the production of 66 nylon yarns with filaments of triangular and elliptical cross-section; by changing the cross-section the drape and appearance of fabrics can be changed. Mr. D. L. Munden, of the Hosiery and Allied Trades Research Association, suggested that monofilament yarn of triangular cross-section could produce a cheaper nylon hose for women; and Mr. K. Mecklenburgh, of British Nylon Spinners, remarked that yarns with the circular cross-section so modified would produce a material that was not dull but glittering. Something, apparently, will have to be done to revitalise the hosiery trade. At another annual conference, that of the National Union of Hosiery Workers, at Scarborough, delegates said that most of the export trade had disappeared and that supplies for the home market were being over-produced to the extent of 15-20 percent; the excess is particularly large in the fine-gauge section.

Adapting Activities

Accustomed as we are to the extension of old-established textile firms' activities, the range of new activities envisaged in amendments to the memorandum of association of British Cotton and Wool Dyers' Association is a little surprising. The business already covers dyeing, bleaching and printing of cotton and rayon cloth and dyeing and bleaching of hosiery yarns, as well as the slubbing of wool that has earned it the nickname "Slubbers". The amendments empower it to act as electricians, electrical and general engineers, manufacturers of and dealers in leather, rubber, paper, boxes, stationery, fabrics, yarns, and synthetic materials. The directors have no big non-textile project in mind at present, but they are prepared for many eventualities. Other firms are trying new techniques within their normal orbit: for instance, a subsidiary of English Sewing Cotton has installed experimentally two Swiss looms that use no shuttles, obtaining weft yarn from a continuous supply.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced by 0.1 percent to 391.6 during the week ended 2nd June 1956 as compared with 391.1 for the previous week. The index was higher by 0.7 and 15.0 percent respectively when compared with the corresponding weeks of the previous month and of last year. The index for Food Articles rose by 1.6 percent to 353.6 as a result of an increase in the prices of Wheat at Jabalpur (+9%), tea for internal consumption (+8%), bajra (+5%), rice at Vijayawada (+3%), and salt—Tuticorin Fine—in Calcutta (+1%), although the prices of gur at Muzaffarnagar (-3%) and wheat at Hapur (-2%) showed declines. The index for Industrial Raw Materials declined by 1.3 percent to 478.0 because of a fall in the prices of manganese ore (average export price) (-10%), groundnuts (-6%), linseed (-5%), castorseed (-4%), rapeseed and copra (-2% each) and cottonseed at Amravati and lac (-1% each); prices of raw silk (+4%) and gingellyseed (+2%), however, were marked up. The index for Semi-Manufactures also moved down by 0.4 percent to 385.4. Items which witnessed significant variations were linseed oil (-8%), gingelly cake (-6%), gingelly oil, zinc and copper (-4% each), groundnut oil (-3%), coconut oil (-2%), mustard oil (+3%) and castor oil (+2%). The index for Manufactures stood at 376.7 as compared with 376.9 for the previous week; prices of rayon and silk manufactures and glass (-1% each) moved down while jute manufactures showed a nominal rise. Lower prices of black pepper (-3%), Turmeric in Calcutta (-2%) and chillies and betelnuts (-1% each) were responsible for a decline of 0.4 percent to 506.0 in the index for the Miscellaneous group.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: Year ended August 1939=100)

INDUSTRY WELCOMES NEW
TEXTILE POLICY
FORWARD TRADING IN COTTON
AND GROUNDNUT

(FROM OUR BOMBAY CORRESPONDENT)

THE Government's textile policy announced by the Commerce and Industry Minister this week has been well received by industrial circles here. An encouraging feature is that the Government concedes the need to expand the mill industry, despite the recommendation of the Kanungo Committee that mill production should be pegged at the present level of 5,000 million yards a year. Apart from this concession, the Government's policy represents a compromise in other respects between the findings of the Kanungo Committee and the views of the cotton textile industry. For instance, while the Committee was of the opinion that the domestic consumption of cotton cloth would increase to approximately 18 yards a head each year, the industry feels that this is too conservative a figure and an estimated increase to 22 yards would be more realistic. In formulating its policy, the Government accepts the committee's view provisionally. The Commerce and Industry Minister, however, stated: "The Government is not unprepared to accept a higher target, say 20 yards," if consumption over the next year or so shows a tendency to rise substantially. The general view here is that the production target figure will have to be revised, and the Minister's assurance is welcomed.

The output of the mill industry is to expand by an additional 350 million yards. This expansion will involve the installation of 200,000 spindles and 14,600 looms and it has been made clear that licences would be granted on the distinct understanding that the extra cloth will be reserved for the export trade. This is indeed a step forward, but does not go far enough. It is now generally admitted that India is fast losing her export trade in the face of competition from the relatively modernised industries of Japan and the Communist countries. India's annual export target is 1,000 million yards; if this figure is to be achieved then considerably more than 350 million yards must be produced under economic conditions to make Indian cloth fully competitive. It might have been wise to adopt a bolder policy in this direction and permit a wider section of the industry to expand and to rationalise its production methods.

The Problem of "Ambar Charkha"

Under the present allocation, the Government has kept 150 million yards in reserve. This quantity, it is pointed out, will be allocated later in accordance with circumstances that might develop in the future. It might be well to assign this quantity to the mill industry for export purposes. This would bring the total quantity produced by modern methods to 500 million yards a year or 50 percent of the export target figure. The handloom and the Ambar Charkha programmes still continue to raise doubts. As an experimental measure, the Government has sanctioned the establishment of 75,000 Ambar Charkhas this year at an estimated cost of Rs. 4 crores. Assuming that the money is available and that 75,000 Ambar Charkhas will, in fact, be installed, the problem is how this yarn will be consumed. The handloom industry is generally reluctant to use hand-spun yarn and much prefers the mill product. This reluctance might well mean that stocks of hand-spun yarn will accumulate, leading to the stagnation of the Ambar Charkha industry. Account has also to be taken of the additional Rs. 8 crores required to finance the expansion of the handloom industry. In all, about Rs. 18 crores will have to be found to equip all sectors of the small-scale industry. The threat still remains that the small-scale industry may not be able to fulfil the targets set for it, in which case a further expansion of the mill industry will be necessary.

Forward Trading in Cotton

The scope for forward trading has been widened with the resumption of futures business in cotton and groundnuts. Mr. Morarji Desai, Bombay's Chief Minister, formally inaugurated both markets. The cotton futures market opened on the basis of two hedge contracts, Jarilla March 1957 delivery and Vijay April 1957 delivery opened at Rs. 681-4 and Rs. 825-4 a candy respectively. After the inaugural deal of 100 bales of Jarilla cotton, the price slumped to Rs. 660. Buyers were interested at this level and the price recovered to Rs. 665. Vijay declined to Rs. 807, but after a few scattered transactions, rose to Rs. 821. Heavy showers during the week-end and the prospect of a large crop contributed to the weakness of the market. The futures market moved in sympathy with the spot market, where prices have declined by about Rs. 25 a candy in rapidly declining turnover. Spinners have already covered their immediate requirements and are showing no interest. The trade is adopting a cautious attitude until a clear pattern emerges in the futures market. It is clear, however, that futures trading has begun on a realistic note.

Groundnut Futures

Forward trading in groundnuts has been resumed after a lapse of nearly 13 years. The contract will be based on the Bombay bold variety. The unit will consist of 100 candies, with three delivery contracts—February, May and August. Trading in cottonseed and linseed will also be resumed as soon as the relevant bye-laws have been framed. There will be no marginal restrictions on trading of up to 7,500 candies in each oilseed, or in all seeds taken collectively. Graded rates will apply only in the case of quantities in excess of 7,500 candies.

Transactions in different oilseeds may be offset against one another.

Meanwhile, the oilseeds and oils markets have declined appreciably. The steep fall in castorseed touched off a general landslide. Under heavy selling pressure it fell from Rs. 145-6 to Rs. 132-12. Groundnut fell in sympathy from Rs. 34-10 to Rs. 32 and linseed from Rs. 31-12 to Rs. 28-9. The main reason for this depression seems to be the complete lack of export business. American quotations for castor oil of commercial quality fell from 15-25 cents to 14-70 cents. The latter quotation remained nominal since no business was done. The U.K. also kept aloof and quoted £112 a ton for commercial and £118 for B.S.S. Groundnut oil was marked down by a rupee at Rs. 17-10 following expectations that dealings in groundnuts futures would be bearish in character. With the absence of foreign demand and lower price levels in overseas markets, the linseed and linseed oil markets also declined. Britain, India's main customer for linseed oil, reduced its quotation to £128 a ton and no business was transacted. Linseed declined from Rs. 31-2 to Rs. 28-9, but eventually steadied at Rs. 29-2. Linseed oil lost 14 annas at Rs. 16-6.

ENQUIRY INTO AUTOMOBILE PRICES

The Tariff Commission, which is at present conducting an investigation into the prices of automobiles, will hold a public enquiry on 28th and 29th June at the Commission's Office, Central Government Offices Building, 3rd floor, Queen's Road, Bombay-1. The enquiry will commence at 11 a.m. on each day. Dealers of automobiles and others interested may attend the public enquiry and tender evidence. Those desirous of attending the public enquiry are requested to intimate their names, addresses and the interests they represent to the Secretary of the Commission before 20th June so as to facilitate the seating arrangements at the meeting.

LESSONS OF THE TONBRIDGE BY-ELECTION

BRITISH ECONOMIC RECOVERY STILL INADEQUATE

(FROM OUR LONDON CORRESPONDENT)

THE substantial drop in the Conservative majority in the Tonbridge by-election has given the Government much food for thought, and Sir Anthony Eden and his principal lieutenants have not had an easy time trying to explain it away. It is not good enough just to point to past achievements and the difficulties inherited from the Socialists. Something more positive and concrete is the need of the moment in the matter of political policy, and none of the parties seems to know just what this should be. Mr. Harold Macmillan, the Chancellor of the Exchequer, said the other day that Britain's economy had made some progress in the past year, but not enough. Great efforts were still needed. He was speaking at a luncheon of the Commonwealth Correspondents Association in London, and naturally referred to investment. "Over the whole period 1950-55 we have had an average current surplus on our balance of payments of some £70 million a year. If all we aimed to do was, on average, to get a bare balance in our current transactions—and that, after all, is all that many countries need—we should have no great cause for alarm. By what one might call average world standards, we have not done too badly. The fact is, we don't have an 'average world standard' in this matter: we have our own higher, more rigorous standard, of trying to reach a considerable current surplus, in order to cover our capital commitments." Long-term lending to the Commonwealth was easily the largest item in those commitments, so it could be said that it was the main reason why the United Kingdom tried to have a large current surplus. It was by that higher standard of earning a large surplus that the country had not done well enough in recent years. All the weapons, both of action and persuasion, would be used in defence of the pound.

For the present persuasion is being given an extended run, but hitherto with comparatively little to show in the way of results. The Prime Minister and other senior Ministers are continuing their series of talks with both sides of industry in an effort to secure support for Mr. Macmillan's idea of stabilising prices at the level they will reach after allowing for recent wage awards. Private industry, which accepted this position earlier, has had second thoughts and now demands as a *quid pro quo* that the nationalised industries lead the way by holding fuel and freight costs. Labour appears to be fully appreciative of the needs of the situation, but hitherto has displayed little sign of trying to curb fresh wage demands, which are still being pressed vigorously and will continue to be so pressed until some price stability can be achieved. The only real prospect of finding a solution appears to lie in holding joint discussions and reaching a joint agreement. When these can be arranged remains to be seen.

Trade Balance Restored

For the time being the trade balance has been restored as a result of very good figures for May. For the first five months of this year, the total

value of exports was 6½ percent greater than in 1955, whereas imports grew at the much lower rate of 1½ percent. Britain's trade gap, measured by the excess of imports over exports, narrowed appreciably last month. At £31.9 million it was £25.4 million less than in April, and was at the lowest figure reached since October, 1954. This improvement was due to a remarkable achievement on the export side. Britain's exports established a new record in May at £283.8 million. The figure was swollen by two special items: the delivery to Canada of the new 26,000-ton liner *Empress of Britain* brought in £5 million, and further repayments of silver bullion to America accounted for £2½ million. But even allowing for these special factors, the May export figure was about £20 million above the April level of £256.4 million and is still a record.

The import bill, at £329.1 million, continued at a stubbornly high level. The May figure, however, was only £1.7 million above the April total. The hoped-for reduction of imports following the credit squeeze is thus proving a slow process. Sales to the dollar markets continued to rise last month. Shipments to North America reached £47.1 million, and even excluding the value of the *Empress of Britain* and silver bullion repayments, constitute a record. In the first five months of this year, Britain's sales to the dollar markets were over 32 percent higher than for January-May last year. The gold and dollar reserves ought to benefit from this welcome development.

Fourth Round

The traffic negotiations that ended at Geneva last month turned out much better than had been expected. Details are now available in the White Paper just published and in the volume of schedules that was issued separately. As the United States delegation was empowered to reduce tariffs by no more than 15 percent, no dramatic cuts were possible. But this restriction was largely compensated for by the wide range of bargains struck, in which altogether 22 countries participated. Credit must go to the Americans. Within the limits set by Congress, they appear to have done all that was possible to ensure a successful outcome to the negotiations. British exporters have fared well in the concessions that were granted on dollar tariffs. Motor-cars, aeroplanes and whisky are among the commodities on which the American duty will be cut by the full 15 percent over the next three years. Other useful, if minor, concessions have been won from Western Germany and the Scandinavian countries. The chief reductions in United Kingdom duties affect machinery and motor vehicles, imports of which are still to some extent subject to quotas. Preferences are afforded only to a minor extent; Australia's case for a wider revision of these remains to be dealt with when the Prime Ministers meet. Unexciting as most of these changes are, they add up to substantially more than was thought likely when the conference met. This was the fourth round of multilateral negotiations completed under the General Agreement on Tariffs and Trade. To have got so far is creditable, but it seems doubtful whether much more can be achieved along bilateral lines. Further progress must almost certainly await the next steps in American trade policy.

Hard Fibre Cordage

The Monopolies Commission strongly condemns, in its latest report, the restrictive practices enforced in the supply of hard fibre cordage. The members

of the Hard Fibre Cordage Federation supply nearly all the hard fibre cordage in this country and "so conduct their affairs as to restrict competition in connection with its production and supply." Hard-fibre cordage is the name given to all ropes, cords and twines made of certain fibres known commercially as "hard-hemp fibres." This includes such products as rope for marine use, packing cord and twine used by farmers, and matting twines for carpeting. The importance of this report is not confined to the individual industry. With the publication of more and more reports by the Commission a growing body of precedents is being built up, so that the conditions existing in one industry can be compared with those in another. There is clearly a limit to the amount of relevant comparison which can be made, but after so clear-cut a recommendation as that made in the latest report, it is to be expected that other industries may be encouraged to curtail their restrictive arrangements without waiting for full-scale investigation by the Commission.

The Hard Fibre Cordage Federation's common price system is the practice principally condemned. The industry itself claimed that it is particularly vulnerable to excessive price competition since, if there were competition, there would not be sufficient increase of demand to make the lower prices economic. The Commission points out that there are no industrial or commercial users whose total costs would be significantly affected on the price of this one item. The Commission argues that, in these circumstances, the manufacturer is relieved of the normal pressure of the buyer wanting his goods at the lowest possible price and it is particularly desirable that there should be some form of price competition to keep him up to the mark, particularly as there is no satisfactory substitute for the product. The Commission admits that the prices fixed by the Federation in the past have not been unreasonable in relation to average costs. The Federation's arrangements for distribution are also condemned, including the resale maintenance and exclusive dealing.

Lancashire's Grievances

The House of Commons was furnished last week with a great many facts and figures about the present condition of the Lancashire textile industry. Opinions were expressed about what its future would be if that condition was not changed and about some of the changes which could be made. It is a long time since so much was said in Parliament about the industry and since so much interest was shown in it. The Government, however, still seems reluctant in any domestic matter to discriminate in favour of Lancashire and, in overseas trade, it fears that if any steps were taken to limit imports of cotton goods, there would be retaliatory measures abroad which would prejudice the exports of some of the newer industries. Nothing seems capable of producing a change in this attitude, and it is widely believed in Lancashire that conditions will continue to deteriorate.

Meantime, Lancashire's problems seem to be on the increase. Brazil has increased its export bonus on cotton yarns and fabrics in order to stimulate sales abroad, while the United States is to subsidise its exports of cotton goods from 1st August onwards. Another change in the conditions of international trade which must be expected to increase Lancashire's difficulties, both in its home market and in its exports, has recently been made by India. Under an order dated 15th May, the Government of India exempts cloth exports from the whole of the export duty. For the previous twelve months, both coarse and fine cloths had been exempted only from so much of the duty as was in excess of 6½ percent *ad valorem*. Before that the export duty on coarse cloth had been 10 percent, and the reduction appears to have been successful in checking a tendency for total exports to decline which had become apparent in the first quarter of 1955. For 1955 as a whole, shipments of mill-made cotton cloth were 836,000,000 yards, or only 7 percent less than those in 1954, whereas world trade as a whole decreased by 11 percent last year.

Brevities

Current negotiations for the sale of the Indira estate of Borholla Assam Tea are likely to result in a return to members of about the par value of their shares. The directors warn holders not to sell. A direct approach has been made to some members by a Calcutta firm.

An offer has been received by General Ceylon Rubber and Tea Estates for the six remaining estates of the company. This is under consideration by the board, but any contract for sale would be subject to the approval of stockholders and the consent of the Treasury. Meanwhile, stockholders are advised not to sell their holdings.

Arrangements have been made with the Indian Ministry of Commerce and Industry whereby the Ferguson tractor will be progressively manufactured in India. The Standard Company's subsidiary will undertake production at its Madras plant. Hitherto all Ferguson tractors have been imported. Since 1949, 10,000 have been sold in India, this being roughly one-half the total of all the wheeled tractors imported.

In January shareholders of Attock Oil Company were warned that the altered rate of exchange would influence the sterling value of earnings for 1955. Now the company announces a group net profit of £413,138, against £633,394, after all charges, including £161,148 (£163,201) for depreciation and £537,305 (£726,855) for taxation. A final dividend of 2s. 4d. makes 2s. 11d. tax free. The payment is almost equal to the 5s., less tax, paid for the previous year.

Uttar Pradesh

PROPOSAL FOR NEW SYSTEM OF SALES TAX

U.P. EFFORT TO RAISE RAW

JUTE YIELD

(FROM OUR LUCKNOW CORRESPONDENT)

THE introduction of a single-point sales tax, leviable at the point of sale by a registered dealer to an unregistered dealer or consumer, is likely to be the main recommendation of the Sales Tax Committee appointed by the State Government with the Finance Minister, Hafiz Muhammad Ibrahim, as chairman. The Committee, which has just held a three-day session at Naini Tal, also considered the recommendations of its two sub-committees. It will meet again in Lucknow soon to finalise its report, which is awaited with great interest in view of the recent State-wide agitation against the increased sales tax levy on a multiple-point basis with effect from the current financial year. To minimise the chances of evasion, the Committee is understood to have recommended the erection of check posts and barriers, and the introduction of a system of counter-signatures on railway receipts.

The State Government's suggestion to the Centre to re-impose restrictions on the inter-State movement of foodgrains has not found favour with the latter. According to information received here, all the Centre wishes to do is to pump more foodgrains into deficit areas. One of the main reasons for the present high prices in U.P. grain markets is the multiple point levy on foodgrains. Speculators are reported to have been active, besides others who have been exporting grains. To counteract scarcities the Centre has already placed 30,000 tons of wheat at the disposal of the State Government. Relief shops in scarcity areas will also be opened soon.

New Seed Drill

A new seed drill, which is expected to give a fillip to the agricultural economy of Uttar Pradesh, has been evolved at one of the State Government's workshops and is at present under experimental use at the Goghaghrahat jute farm in Bahraich district. Initial results yielded by the drill give rise to the hope that it may become an important contribution to higher jute production in India. It is capable of increasing the yield by about half a bale an acre (which means 25,000 bales or 2½ lakh maunds a year in U.P. alone) at the end of the

second five year plan). It can do the job of four similar machines of the Carl Ohmes type at present in use all over the country. Jute is an important cash crop in Uttar Pradesh, and under the second five year plan an additional area of 18,000 acres will be brought under it, taking the total to 50,000 acres. Production, which was 68,000 bales in 1955-56, is expected to increase to approximately 1.11 lakh bales in the final year of the plan. The distribution of improved seeds of different strains is expected to account for an additional yield of 10,000 bales. Use of better fertilisers and manures, more efficient plant protection measures and the line-sowing method will be popularised under three different schemes.

Jute Retting Campaign

While no new retting tanks are to be dug at Government expense, a *Shramdan* drive is likely to be launched in this connection. A campaign in the course of which growers will be trained in the latest methods of retting, extracting and grading fibres on a quality basis, is to be organised during the coming rainy season throughout the sub-mountainous belt stretching from Saharanpur to Ballia, particularly in the districts of Lakhimpur, Sitapur, Bahraich, Gonda, Faizabad, Gorakhpore, and the Terai areas of Naini Tal. The Government jute farm at Goghaghrahat, in consultation with the Indian Central Jute Research Committee, has set up a research sub-station. One of the jute grading parties sent by the Central Committee is already operating in the State. More parties are expected to arrive, and instead of working only for four months as at present, they will work on a round-the-year basis.

Plight of Oil Mills

A memorandum submitted to the Government by the U.P. Oil Millers' Association points out that out of about 250 oil mills in the State, 100 are working at present with full complement, 36 are utilising just half their installed capacity, and the rest are using much less than half or are totally closed. The Association attributes the closing down of the mills to a combination of factors, such as the coal shortage, electricity duty, labour laws, pure food laws, transport difficulties, shortage of raw materials and sales tax. The price of U.P. oils is higher than the price of oils in other States so they are unable to stand competition from outside. Uttar Pradesh is an oilseed producing area, and the Millers' Association is willing to agree to a 100 percent increase in the sales tax on oils, provided the State Government exempts oilseeds from tax. The memorandum states: "The anomaly in the sales tax law encourages the export of oilseeds produced in Uttar Pradesh to neigh-

bouring States and the import of oils therefrom by big consumers like *vanaspathi*, paints and varnishes, soaps and toilet manufacturing industries which use oils as raw materials. It also affords an incentive for large-scale smuggling on the borders of Uttar Pradesh."

Railway Development

More than 40 schemes costing about Rs. 15 crores have been sanctioned by the Railway Ministry for the development of railway lines in Uttar Pradesh. These include laying double tracks on many lines, extension of loop lines, modernisation of loco-sheds, building of quarters for railway workers. A workshop to build iron bridges will be set up in Lucknow at a cost of Rs. 25 lakhs. A signal workshop will be set up in Gorakhpur at a cost of Rs. 16 lakhs. The present workshop in Gorakhpur is to be expanded at a cost of Rs. 80 lakhs. The Izatnagar workshop of the North-Eastern Railway for repairing wagons and coaches will be extended at a cost of Rs. 186 lakhs.

CALCUTTA TEA SALES IN MAY
BUYERS SHOW PREFERENCE FOR
QUALITY TEAS

THREE sales consisting of 127,200 packages were held during May, say Messrs Carritt Moran & Co. Private Ltd., in their monthly tea market review. Sale No. 46 met with a good general demand, particularly for black leafed Fannings grades and the few bright liquoring autumnals. In the two following sales, most kinds sold at lower rates though in Sale No. 48, black leafed medium Assam B.O.P.s and stylish Orange Pekoes were often 1 to 2 annas dearer. A final clearing-up sale of the Old Season's crop was held on 4th June. Leaf appearance from all districts was typical of end-of-season manufacture and the majority of the offerings contained a high percentage of stalk. Very few teas with bright liquors were available and cup quality for the most part was extremely poor.

At Sale No. A and Sale No. B of the Export Season 1956-57, 4,290 and 10,280 packages of New Season's Darjeeling teas were on offer. They were held on 9th and 28th May respectively. Leaf appearance was of a high standard, but cup quality was rather disappointing and only a few invoices had any really attractive flavour. Sale No. 'A' met with a good general demand and a few invoices with attractive flavour realised prices well above brokers' valuations. Stylish leaf grades and Fannings also met with useful support and generally sold above valuations. The more ordinary descriptions met with less demand and were rather irregular. In Sale No. 'B', buyers showed much greater discrimination and although the very few best flavouring invoices were keenly competed for and realised high prices, there was considerably less demand than in the previous sale for the more ordinary kinds, which generally sold at about 6 to 8 annas below valuations and withdrawals without bids were fairly heavy. Sale No. 1 consisting of New Season's teas from all districts was held on 11th June.

Internal Markets

In the four sales held during the month approximately 18,950 chests of Leaf were offered. The majority of the offerings consisted of stalky residues and prices generally declined in each sale, other than for the few clean leaf teas on offer. Dust offerings amounted to approximately 85,700 chests. There was a fair general demand at reduced rates other than for the black leaf teas suitable for the Middle East which were keenly sought after and were occasionally dearer. The few good autumnal C.T.C. Assams were a strong feature and prices for the best were several annas above valuations. Commons and Low Mediums were about firm, but generally declined in the final sale of the month.

whilst the poorer liquoring residue types also met with a reduced demand.

Quotations	1955-56		1954-55	
	Rs. As. P.	Rs. As. P.	Rs. As. P.	Rs. As. P.
Sale No. 46 Clean Common Dust	1 10 0	1 14 0		
Sale No. 47 " " "	1 8 9	1 14 9		
Sale No. 48 " " "	1 8 6	Not quoted		
Sale No. 49 " " "	1 6 9	" "		

Export sales up to and including Sale No. 48 of the 1955-56 season totalled 2,268,656 chests at an average price of Rs. 2-0-4 compared with 1,590,410 chests at an average price of Rs. 3-1-6 during the previous season. Internal sales of 132,379 chests of Leaf and 744,182 chests of Dust (Rs. 1-3-5 and Rs. 1-15-5) go against 437,863 and 744,427 (Rs. 2-3-7 and Rs. 2-6-2) in the corresponding period of last year.

Business in Special Export Licences was conducted at 4 pies a lb. at the beginning of the month, but following the announcement that licences would be extended until the end of June prices rose to 12 pies of the Export Quota, declining to 7 pies at the close. There was only a little business done in New Season's Quota at rates which varied between 30 and 39 pies a lb. Non-transferable shipping licences followed this trend, rising from 2 pies to 5 pies and declining to 2½ pies a lb. at the end of the month. The estimated North India crop to the end of April, 1956 was 19,475,655 lbs. as compared with 18,895,048 lbs. to the same date last year. The average figure at this date for the three years 1953-1955 was 18,848,774 lbs.

The Government of India has issued a notification fixing the price of tea for the purpose of determining the export duty at Rs. 3-5-0 a lb. as against Rs. 3-4-3 a lb. in force from 1st May. The export duty, therefore, remains unchanged at 6 annas a lb.

Arrivals (in chests) in Calcutta warehouses during the period 24th April to 23rd May, 1956 with the corresponding figures of the previous year in parentheses, were as follows: by rail 21,442 (26,897), by steamer 18,658 (25,416) and by air 8,845 (12,067), making a total of 48,945 (64,380) chests. Since the beginning of the season, 1st April, 1956 to 23rd May, 1956, arrivals have been: by steamer 36,328 (27,193), by rail 13,209 (30,772), and by air 31,054 (14,416), making a total of 80,591 (72,381) chests.

STIFF COMPETITION FOR
COIR EXPORTSRUSSIAN PURCHASE OF PLANTATION
PRODUCTS

(FROM A SOUTH INDIAN CORRESPONDENT)

INDIA's monopoly in coir goods is threatened by the emergence of Japan as an exporter of fine coir goods manufactured from Philippine fibre. The Philippines is one of the largest producers of coconuts in the world. India uses a primitive system of retting coconut husk by soaking it in water for about six to ten months, but the Filipinos extract and process it in seven days with the use of a new machine supplied by Japan. This fibre is exported to Japan, where it is spun with the help of power looms, and fine products such as mats and matting are made with the use of modern machinery. These articles are exported by Japan in considerable volume. This information was given to the Press by Mr. Narayana Menon, who has just retired from the chairmanship of the Coir Board. Mr. Menon suggested the mechanisation of India's coir industry to help it retain its position in world market.

The coir industry in India is still in a primitive stage. The extraction of fibre from coconut husk and the preparation of the fibre and spinning of the yarn are all done in crude ways in cottages along the thickly-populated coastal belt of Kerala. It is estimated that about 500,000 families are employed in the industry wholly or partly. This is much more than it can support, and the massive dependence is a source of its weakness. If mechanisation is introduced and production methods are rationalised, a large number of workers will lose their only means of livelihood. The well-organised coir workers' unions and their leaders, who are the most vociferous of Kerala's politicians, are sure to oppose reforms which will result in unemployment, whether or not the good of the industry is promoted. Mechanisation is not likely to find favour with the Government also, especially at a time when the State is experiencing a serious unemployment problem. But it appears inevitable for the survival and progress of an industry which earns about Rs. 8 crores of foreign exchange every year. The Philippines and Ceylon, two major producers of coconuts, are making use of their coconut husk for the manufacture of coir and its goods. Ceylon is seeking the services of a coir expert to develop the indigenous industry.

Trouble in Cashew Industry

The new staff union's agitation for recognition, and some of its other demands have brought almost a crisis to Kerala's cashew-processing industry. Following the strike of their staff, most factories in Quilon and nearby places, where the processing industry is concentrated, were locked out, rendering more than 25,000 workers idle. The Government interfered and declared both the strike and the lock-out illegal. The dispute was referred to a special tribunal. After four or five days of disturbances, work has been resumed.

The Staff Association president, who is a local I.N.T.U.C. leader, it is reported, has submitted a memorandum to the Union Ministers for Labour and Commerce and Industry, in which he suggests the setting up of a cashew board, development of

the industry through workers' co-operatives and the declaration of the cashew processing industry as non-seasonal. The bonus question for cashew workers is still unsettled. A recent conference failed to arrive at any decision. Further trouble may develop on this issue. Raw nut supplies being below normal, factories are likely to be closed earlier this year.

Russian Purchases

The newly set up State Trading Corporation has finalised a deal for exporting 500 tons of coffee worth about Rs. 40 lakhs to Russia. A Russian steamer will load the cargo at Cochin to transport it to Odessa. The Russian interest in India's plantation crops such as pepper, coffee, tea, cashew and coir goods is expected to provide some strength to the markets, and Russian purchases are getting good publicity.

LONDON TEA SALES

AT last week's London tea sales, the 69,902 packages on offer realised an average price of 4s 2.95d a lb. against 4s 3.87d in the previous sale and 3s 9.02d a year ago. Plain broken pekoe was quoted at 3s a lb. nominal; in the previous sale 3s-3d 0ld nominal. Prices obtained by some of the companies are given below:

	No. of packages	Average a lb.
Amalgamated	516	3/8 3/4
Anglo-American	557	4/6 1/2
Anglo-Ceylon & General	420	5/3

U.K. Tea Stocks

U.K. stocks of tea on 8th June amounted to 121.1 million lbs. against 134.8 million lbs. a year ago.

U.K. TEA CONSUMPTION AND IMPORTS

U.K. imports of tea in April totalled 42,941,000 lbs., according to an International Tea Committee announcement. Re-exports totalled 2,223,000 lbs., leaving the net imports at 40,718,000 lbs. India was the main supplier with 28,896,000 lbs., followed by Ceylon with 7,217,000 lbs. U.K. consumption in April amounted to 34,740,000 lbs., compared with 31,450,000 lbs. in April of last year.

COCHIN TEA SALES

At Sale No. 16, 1,500,000 lbs. of tea were on offer. Low and Low Mediums were neglected, particularly the stalky types, and withdrawals were heavy. There was a useful demand for teas of good appearance. Whole Leaf grades were stronger.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers' Association:

	Closing prices on 8-6-56 (Rs. a lb.)	Average for the period (Rs. a lb.)
Sheet:		
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	-75	-75
do 2	-70	-70
Crepe:		
Water White	—	—
R.M.A. No. 1X	1.15/16	1.14 1/2
R.M.A. No. 1	1.13/14	1.13
	C.P.E. No. 2	1.11
	" No. 3	1.09 1/2
Scrap Crepe:		
Sc. Crepe No. 1	.80 Nom.	.79 1/2
Sc. Crepe No. 2	.70/75	.71 1/2
Sc. Crepe No. 3	.65/69	.66 1/2
Flat Bark	.57/60	.58 1/2
	Sc. Crepe 3X	.69

To arrive at f.o.b. Colombo prices add 53.4 cents a lb. in respect of rubber other than scrap crepe and 31.45 cents in respect of scrap crepe to the above market prices.

Jute

MEASURES TO IMPROVE INDIAN JUTE
OUTPUTNEED FOR HIGHER YIELD OF FIBRE
FROM PLANTS

IN the leading article which appeared in the issue of Capital of 31st May, reference was made to the high proportion of the price of raw jute in the price of manufactured jute goods, and its relation to the welfare of the growers. It was also pointed out that one of the factors which has prevented the problem of the high price of jute being tackled has been concern for the welfare of the growers. It has, however, become manifest in the past two jute seasons that the holding power of the growers has greatly improved, and that they are better off than they have ever been. In these circumstances, it seems unnecessary to let this consideration be given too much weight in any scheme for lowering the price of jute to enable the mills to compete in the world's markets without incurring losses which would ultimately ruin the industry. Moreover, if the industry were to collapse or if its output were to be drastically curtailed because of its inability to compete in world markets, the growers would suffer more than they are likely to suffer if jute prices are lowered now in order to restore the balance between the world prices of manufactured jute goods, the costs of production of these goods and the price of raw material.

One thing that militates against any lowering of the price of raw jute is the fact that India is still dependent on Pakistan for about 20 percent of her requirements and, with the price of Pakistani jute being artificially maintained at high levels, there is little chance of Indian jute becoming cheaper. The surest way to bring the price of Indian jute into line with world prices is, therefore, to expand the size of the Indian crop. To do this, however, in present circumstances means utilising more marginal lands where yields are small or taking land away from rice cultivation, which is not desirable from the food production point of view. Since the expert enquiry committee issued its report, much has been said and written about the supply of improved types of seed, greater use of fertilisers, line sowing and improvement of retting facilities. But achievements have fallen far short of promises, and the tangible results so far have been almost negligible. As far as agricultural research is concerned, it is still directed towards producing bigger plants and better quality. The latter appears to be a waste of time and money, for there is at present a glut of the higher qualities of Indian jute and a shortage of the lower qualities. Merchants all over the jute districts are holding stocks of the higher grades of jute for which they cannot find a market. Partly, that is due to the use of modern machinery, which enables mills to produce the same quality of goods from lower grades of jute than they used before. Partly, it is because the demand for superior fabrics has fallen off and the prices obtainable for them are not remunerative, so the mills have ceased to manufacture them.

Bigger Plants

As for research directed towards the production of bigger plants, it has frequently been pointed out in these columns that it is an uneconomic way of increasing the crop. It causes a waste of land, fertilisers, retting water and labour. What is needed is the development of strains which will give a higher yield of fibre per plant. If the yield of fibre per plant could be increased by only 1 percent of the green weight over the whole crop, the increase in the total crop would be enough to make India independent of the import of jute from Pakistan without diverting any more land to jute cultivation. Moreover, every grower would be producing more jute on the same area of land and so would be able to sell his crop at a lower price without suffering any loss of income. In fact, he would be better off because of the reduction of expenditure on labour and fertilisers. Unfortunately, this aspect of jute agricultural research does not yet appear to be appreciated by those in charge. Until it is and results are achieved, there appears to be little chance of raw jute prices being lowered to levels which would be competitive in world markets.

MOVE TO SEAL LOOMS
RUMOUREDFURTHER HIGH-LEVEL TALKS
EXPECTED SOON

THE Calcutta raw jute and gunny markets have experienced a particularly dull session over the past week, mainly because of the uncertain trading conditions which operators had to contend with. Overseas interests have had to face a very difficult problem, and due to the continued lack of authentic news they have been unable to plan ahead. The majority are reluctant to enter into fresh commitments at present, since there is talk that plans might have to be modified if new trading regulations are issued in India. For the same reason, local shippers have had to curtail their activities. This has left the field open for speculators, but even in this sphere, activity has been restricted, and price movements resulting from fatka operations have been relatively small. The mills

have shown hardly any interest in the markets, and have postponed sales on hopes of a rise in the price of jute goods.

It is reported that discussions have continued on the question of minimum prices and certain other measures. Further talks, it is expected, will be held with the Government of India shortly. Many mills are not in favour of a price support scheme; they feel that the remedy lies in curtailing production by sealing looms.

Arrivals of Jute from Pakistan

The publication of the raw jute arrival statistics for May 1956 once again emphasised the fact that purchases from Pakistan may become increasingly difficult in the near future. Arrivals last month from that country dropped to 47,315 bales. This was 54,930 bales less than in May last year, the lowest figure recorded in any month since August 1954, and the lowest May total since 1953. Admittedly, arrivals so far this season are over 180,000 bales ahead of total arrivals from Pakistan during the whole of the last season, and one can look for a drop at this time of the year; but it was not expected that a drop of 50 percent on the previous month would be recorded. The price of Pakistan jute makes it prohibitive for Calcutta mills to buy it, and if the disparity between it and Indian jute remains at the present level, arrivals may drop even further in months to come. Arrivals from India also showed a sharp drop, and at 306,315 bales were 77,145 bales less than in the previous month, making (with Pakistani jute) a total drop of 123,840 bales. The grand total, however, is well above last year's figure. At 60,55,545 bales, it is 3,86,335 bales more than in the whole of the last season, with one month still to go.

The figures suggest that there is little likelihood of a shortage of jute before the New Crop begins to arrive, especially as stocks in Cossipore still remain at about 1½ lakh bales. The only snag at the moment appears to be transport. Many sellers are experiencing great difficulty in obtaining space, especially from northern Bengal and western agencies, where a shortage of wagons is causing embarrassment to operators. It is understood that the shortage is mainly due to the fact that all available wagons have been commandeered by Government departments to carry food etc. to areas affected by the recent cyclone. These difficulties will eventually be overcome when the Government releases the wagons but, in the meantime, the supply is very poor, and large quantities of jute are lying waiting to be moved. This has led to an increase in the demand for jute ex Calcutta, and prices in Cossipore are very firm. Mills are looking for large quantities of Bottom grade jute. High prices are being demanded, and paid, for it.

THE JUTE MARKETS

Manufactured Goods: The Calcutta jute goods markets were inactive during the past week, as mills, shippers and overseas consumers awaited the outcome of the talks on the controversial price support scheme. Gunny prices were maintained by speculation, but price movements were small, and over the week tended to cancel each other out. Opening quotations last Thursday showed a decline of 4 annas in the sacking section. B Twills dropped to Rs. 105-4 a 100, bags for June shipment, with October-December shipment at a discount of Re. 1. Hessian was a little steadier due to rumours of interest from America, but quotations were unchanged at Rs. 38-2 a 100 yards for 40in. 100z. for both June and October-December shipment. Prices advanced during the day under speculative activity on continuous rumours that official minima would be fixed. Heavy goods rose by 8 annas and Hessians by 2 annas by Friday morning. During the day, it was learnt that this was not true, so prices in both sections eased and the week finished on a quiet note. There was very little change in the market after the week-end as trade circles awaited the decision on minimum prices, but in the absence of definite news prices fell back. By Tuesday morning, B Twills had dropped to Rs. 38-1. Activity was at a standstill throughout the day as the trade in general awaited the result of the meeting of the I.J.M.A. committee. The market remained quiet.

At the close, the market was steady and prices in all sections showed a slight improvement. Opening quotations on Wednesday morning were as follows:

	June	July	July-Sept.	Oct.-Dec.
	Rs.	Rs.	Rs.	Rs.
40in. 80z.	31-12	31-6	31-4	31
40in. 100z.	38-2	38-5	38-7	38-2
B Twills	105-6	105-4	105-4	104-12
Heavy Cees (Plain)	103	104	105-4	104-12
A Twills	126-8	127	127-8	127-8
Liverpools	116	116-12	117-4	117-4
Cornacks	105-6	105-12	106	105-12

Raw Jute: Calcutta mills in general displayed no interest in the raw jute markets, their policy being governed by talk about the fixing of jute goods prices. The notable exceptions were when two mill groups entered the market, one after the normal trading hours, and bought between them

about 80,000 maunds of New Crop jute for July and July-August shipment. This caused a temporary easing, and after this sellers were more reserved. They were encouraged to remain so by the unsatisfactory transport position, and although this is likely to be only a temporary difficulty, it has had far-reaching effects on the market. Mills unable to get their supplies have had to resort to local purchases to see them through, and sellers in local markets have been encouraged in their bullish sentiments by buyers' willingness to pay premium rates for quick delivery jute, or for Bottoms only. Quotations remained constant throughout the week at Rs. 26-8 a maund basis Bottoms for June-July shipment, but in the absence of Old Crop business these could be regarded as nominal, although attempts towards the close to force discounts proved unsuccessful. New Crop quotations were based on Rs. 25-8 a maund basis Bottoms for Dhubri-Assam jute for August-September shipment, with appropriate premiums for earlier shipment.

Business in Old Crop jute was on a small scale. Dhubri-Northern jute passed at Rs. 26-8 a maund basis Bottoms for June shipment, and Local Northern jute at Rs. 26 to Rs. 26-8 a maund for one month's delivery. Tossa from various districts changed hands at Rs. 26-8 to Rs. 27 a maund for one month's shipment and also small lots of Daissee at the same price for June delivery. Daissee Mesta was done at Rs. 25 a maund basis Bottoms, and Pakistan Cuttings at Rs. 123 a bale for ready delivery.

Business in Indian New Crop jute was mainly confined to the July-August positions, and Dhubri-Raha-Northern jute was purchased at Rs. 26 a maund basis Bottoms. Some small lots were also done at Rs. 25-8 a maund for August-September shipment.

At the close, the market was steady, with the majority of mills looking for quick delivery jute. Opening quotations on Wednesday morning were as follows:

Indian Jute (Old Crop Kutch):	Landed at Mills Rs. a md. basis Bottoms	Shipment.
Lower Assam	26-8	June-July
Northern	26-8	"
Murshidabad White	26	"
Daissee ex Agency	27	"
Daissee ex Cossipore	26-8	"
Local Packing (Northern)	26 1/2	"
Bimbi	24-8 for F.A.Q.	"
New Crop (Kutch):	Rs. a bale	Shipment.
Lower Assam	25-8	Aug.-Sept.
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	165	Aug.-Sept.
Mill Lightnings 2/3	150	"
Mill Hearts 2/3	135	"
S. G. Daissee 2/3	160	Sept.-October.
L. G. Daissee 2/3	145	"
Pakistan Jute (New Crop Kutch):	Landed at Mills Rs. a md. basis Bottoms	Shipment.
Jat	29	August-Sept.
District	28-8	"
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	190	August-Sept.
Export Firsts 2/3	170	"
Export Lightnings 2/3	155	"

The Cossipore markets have been very steady due to an increase in the demand for local delivery jute. Stocks are still large and imports have been maintained at a high level. During the week, a total of 465 wagons arrived at the sidings, but a large percentage contained low-grade jungli fibre. At the close, quotations were based on Kishanganj jute at Rs. 26-4 a maund for garsat quality. There is very little good Daissee jute left in the markets, and for this sellers are asking high prices. At the close, quotations in Sheoraphuli were based on Rs. 28 a maund for garsat quality. Conditions for the New Crop Daissee have not been particularly favourable over the past week and a spell of sunshine is required to counteract the effect of the recent rainy spell. Some small damage is reported to recent sowings of Daissee and Mesta, and in some areas, fresh sowings have again been washed away. Early Daissee and Mesta sowings, however, have been unaffected. The Daissee white crop in all areas is reported to be good.

Mofussil: Upcountry markets continue to rule steady and only small business is reported. All agencies are reporting an accumulation of stocks due to the shortage of wagons, and this has caused sellers to be reserved. New Crop reports indicate that in the northern areas there has been no rain, and a long spell of sunshine is now required, but the crop has not been affected and is in a healthy condition. In the western areas, conditions have been favourable and the crop is progressing. At the close, Old Crop quotations in Dhubri were based on Rs. 23-8 a maund for Bottoms.

Raw Jute Arrivals

In May 1956, 353,630 bales of raw jute arrived in Calcutta and at mill stations. In the corresponding month of 1955, arrivals were 311,665 bales. Of the arrivals last month, 306,315 bales were of Indian origin and 47,315 bales were from Pakistan. In May 1955, arrivals from India amounted to 209,425 bales, while those from Pakistan totalled 102,240 bales. Thus, in May 1956, arrivals from India were 96,890 bales more than in May 1955, but those from Pakistan were down by 54,930 bales, making an overall increase of 41,960 bales. Total arrivals for the current season now amount to 60,55,540 bales, made up of 14,21,510 bales from Pakistan and 46,34,030 bales from India. Compared with last season, arrivals from India show an improvement of 371,530 bales, while those from Pakistan are up

by 286,960 bales, making an overall increase of 656,490 bales.

GUNNY SHIPMENT STATISTICS

The following figures including coastal shipment relate to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented:

	Hessian		
	Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th June 1956	1,202.3	14,420.3	15,622.6
1st to 10th May 1956	1,784.5	14,631.7	16,416.2
1st to 10th April 1956	1,336.1	18,174.2	19,510.3
	Sacking		
1st to 10th June 1956	10,600.3	564.3	11,164.6
1st to 10th May 1956	6,330.7	700.6	7,031.3
1st to 10th April 1956	20,893.0	628.9	21,521.9

THE FOREIGN JUTE MARKETS

DULLNESS STILL PREVALENT

(FROM OUR DUNDEE CORRESPONDENT)

THE market is still featureless at all producing centres at the moment, and consumers of jute goods appear to be awaiting further developments. There seems little likelihood of Pakistan exporters making any reduction on the fixed minimum prices for the raw material, as they can get rid of all the crops at their own terms. Then there is the question of fixing minimum rates for jute goods for export from India and the uncertainty whether this will take place. Raw jute is offered here at unchanged terms. Old crop is more or less nominal and could probably be bought at about £2 to £3 a ton above the new crop. Business has been done here in new crop Mill Firsts at £91. Mill Lightnings at £81 and Mill Hearts at £75 and £76, August-September, with August alone at £2 more, c.i.f. U.K. Daissee and Tossa are still unchanged at £91 for good marks of Daissee-2/3 and £81 for grade, with Tossa-2/3 at £100 and four at £90 for grade marks, c.i.f. U.K. September-October. Spinners here are picking up only an occasional parcel, having little incentive from sales of yarns which are limited to small quantities for quick despatch. Short time and curtailment of production is still pretty rife here yet, few spinners being unaffected by the dull conditions. Prices are very firm, as also are those of jute cloth, in which there has been a rather better tone this week, with an increase in enquiries.

In his statement with the report of Low & Bonar Ltd., Mr. H. V. Bonar, the chairman of this £2 million firm, says that the future outlook is not free from difficulties in so far as the textile business is concerned. It has become clear that at present price levels in the U.K., jute's position as a packaging material for certain commodities is being more and more challenged by competition from substitutes such as paper and from bulk handling. From the point of view of the U.K., a golden opportunity was missed by Pakistan in early August of last year

to assist in dealing with the problem. If at the time of devaluation Pakistan had reduced minimum sterling prices of raw jute to the same extent, not only would spinners and manufacturers in countries such as the U.K. be looking at a brighter and more stable future, but Pakistan herself would have taken a step which may in the long run be necessary for her, if she is to maintain at least at existing levels a valuable source of foreign exchange. She did not do so and the opportunity was missed.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption during May at 73 million yards, was the same as for May a year ago. For the first five months of this year, the estimated consumption has been about 6 percent higher than for the same period of last year. U.S. burlap stocks declined by 8 million yards, last month—the first decline since January. At 247 million yards, the estimated stocks included 151 million yards spots and 96 million yards floats. The following are two tables which include the May figures—(1) based on member reports to the Textile Bag Manufacturers Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Millions of Yds.)		U.S. burlap consumption (Estimated industry total) (Millions of Yds.)

Engineering and Transport

STEEL TUBE PLANT TO BE EXPANDED

MANUFACTURE OF NEW PRODUCTS PROPOSED

SANCTION to expand the steel tube plant at Jamshedpur, a joint Indo-British venture, has been received from the Government of India, it is learnt. The tube plant, jointly sponsored by the Tata Iron and Steel Company and Stewarts and Lloyds, was formally inaugurated in March this year. It has an annual capacity of 90,000 tons of tubes for conveyance of gas, air and water. A second plant, which is an electric resistance weld plant, is already under construction for the manufacture of locomotive and other boiler tubes, cycle tubes, electrical conduits, transformer tubes, furniture and other similar tubes. As an ancillary to the second plant, a cold rolling mill is being installed for the production of cold rolled strip for tube-making in the electric resistance weld plant, and also for sale as cold rolled strip.

The present sanction relates to a third plant to manufacture seamless tubes for high-pressure work, and for purposes for which the tubes produced on the other two plants are not suitable. This plant will have an annual capacity of 30,000 tons of tubes a year. An adjunct to this plant will be a pole plant for the production of tubular steel poles and lighting columns. The first part of the project, already in operation, cost Rs. 3 crores. The second stage represents an investment of Rs. 2 crores, while the seamless tube plant now projected will involve an outlay of Rs. 3 crores.

RAYMON ENGINEERING TO MANUFACTURE WAGONS

THE Raymon Engineering Works Ltd. has been granted a licence by the Government of India to manufacture complete railway wagons and bogie coaching underframes. The company's works also have plans for forging, spring manufacture, machining, stamping etc. It is reported that an amount of Rs. 60 lakhs, representing 50 percent of the blocked capital, has been sanctioned to the company by the Government of India. The factory is expected to begin production by July 1957. It is being built in Santragachi, West Bengal, and orders for machinery have been placed in Western Germany, Switzerland and the United Kingdom. It is stated by the company that it has already got orders from the Railway Board, Ministry of Railways and the Government of India.

ADDITIONAL PLANT FOR COACH FACTORY

Orders for the supply of additional plant and machinery for the integral coach factory at Perambur, near Madras, are to be placed soon. Global tenders were invited on behalf of the Government of India earlier this year by Messrs Swiss Car and Elevator Manufacturing Corporation Limited, Schlieren, Switzerland. The Government of India has an agreement with this firm for providing technical aid for reaching the full production capacity at the integral coach factory. To eliminate delays and expedite the supply of plant and machinery, the Government of India has decided to depute two railway officers to Schlieren, in Switzerland, to assist in scrutinising the tenders and placing contracts without back reference to New Delhi. The two officers are Messrs C. T. Venugopal, Director (Finance) Railway Board and J. Mathan, Deputy Chief Mechanical Engineer. If necessary, Mr. Mathan will also visit the U.K., France, Western Germany, Australia, Czechoslovakia and Italy along with the experts of the Swiss Car and Elevator Manufacturing Corporation Limited, to inspect plant and machinery at the works of the various manufacturers who have submitted tenders.

HYDRO-ELECTRIC POWER FROM MACHKUND PROJECT

The completion of the Machkund hydro-electric project will be one of Andhra's major tasks under the second five year plan. When complete, the project will generate over 1,00,000 kW of power. The first phase is already nearing completion and consists of a main storage dam at Jalaput on the Machkund river with a gross capacity of 25,650 m.c.ft. and a net capacity of 25,400 m.c.ft., a diverter dam across the river, an elaborate water conductor system, and a power house with three units each of 17,000 kW capacity with space provision for three more units in the second stage. A shortage of power has so far impeded the industrial development of the State, but with the Machkund project a new era opens for Andhra. The Caltex Oil Refinery at Visakhapatnam, for instance, will need about 7,000 kVA for running the installation. This energy will be supplied by the Machkund Project and power will be carried from Machkund to the Caltex refinery, a distance of 90 miles, in three stages. The first stage envisages a 132,000-volt dual feeder line from Machkund to Simhachalam Supply station. The second stage will consist of a 33,000-volt dual feeder line from Simhachalam to Visakhapatnam. Finally, the Visakhapatnam supply station, which will be adjacent to the refinery site, will step down the voltage from 33,000 to 11,000. The refinery will use 11,000 volts and a number of small stations located within the refinery will reduce the voltage still further to suit various requirements. Designed to process 675,000 tons of crude oil annually, the refinery is scheduled to come on stream early next year.

Calcutta Markets

BETTER DEMAND IN TEA EXPORT AUCTION

GOOD GENERAL SUPPORT FOR DUSTS

AT Sale No. 2, held on 18th and 19th June, export offerings consisted of 19,600 chests of New Season's teas and 626 chests of Old Season's teas. Better demand was experienced, particularly for the brighter liquoring Doors teas and flavoury Darjeelings. However, plain and Medium Broken and Whole Leaf grades except for the most stylish kinds met with a poor demand and were 1 to 2 annas easier and the withdrawals of these descriptions were again quite heavy. The C.T.C. Assam teas were mostly of early quality and green in character, but they were fairly well supported and invariably sold above valuations. The few lines of tippy teas on offer sold well. Plain B.P. was quoted nominally at Rs. 1-9 a lb.

At the Internal Sale Dust offerings consisted of 21,241 packages and comprised typical end-of-season types. There was a good general demand for all descriptions, with Middle East types again the strongest feature of the sale. C.T.C. teas were slightly dearer, while poor residue types were very strong and were 1 to 2 annas dearer. The remaining sorts were firm to an anna dearer.

Quotations		1956	1955
		Rs.	Rs.
Medium Doors Dust	1 6 6	1 15 0	1 15 0
Medium Assam Grainy Dust	1 7 6	2 0 0	2 1 0
Best Assam CTC Dust	2 6 0 (Nominal)	2 12 0	2 14 0

Other grades offered consisted of 536 chests of Old Season's and 323 chests of New Season's teas, which met with a fair demand at irregular rates.

FREIGHT MARKETS QUIETER

THE markets were generally quieter during the past week. Charterers succeeded in obtaining reductions in some trades, the most marked being the American coal trade, where rates have declined in the past two weeks from 80s to 73s 6d for single voyages. An interesting contrast in ore fixtures is the payment of 128s from Vizagapatnam or Madras-Rijeka compared with 98s from Mormugao to the same destination. With the recent increase in tax on freight earnings, 11.4 percent of gross freight earnings of tramp vessels goes in tax. Although the authorities maintain that this is a deposit partly recoverable, few tramp owners consider it as other than a penal tax and adds it to freight rates. This represents about 14s 6d a ton on the above fixture and the remaining 13s 6d a ton is accounted for by the delays in loading at Vizagapatnam and Madras and the difference in port charges. Delays at the former port are now as much as 40 days before a berth is obtained. Rice and grain fixtures featured largely in last week's transactions and Shanghai-Colombo paid 82s 6d f.i.o.s., Gulf-Chittagong-China \$(U.S.)36 for rice, South Australia-Colombo 158s 9d for flour and West Australia-Bombay 135s for wheat.

The time charter section contained some interesting fixtures, among which the payments of 55s to an 8,500 ton motorship for six months, and 51s to a Liberty for a round trip delivery Sibenik re-delivery Saigon via Sfax, were outstanding.

LINSEED DULL

Activity has been limited during the past week and conditions have been generally dull. Only the shortage of ready seeds has prevented a sharp decline in prices; the undertone has been quiet and values have lost further ground. Sellers have been more in evidence for forward delivery, but crushers are showing little interest with an unfavourable outlook. The oil market is stagnant. With a poor local demand and declining overseas prices, sellers have been discounting rates to attract enquiries from local consumers. Latest quotations were as follows: ready Rs. 21-8 a maund; June-July Rs. 21-4 a maund.

HIDES AND SKINS

The market continued easy. Stocks were higher than in the previous week.

Bazaar Sales

(Between 12th June and 18th June, 1956)
Cowhides: Wet salted (Ord.) 7,200 pcs. on the basis of Rs. 6-8 to Rs. 7; Wet salted (Slaughtered) 17,800 pcs. on the basis of Rs. 12 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 81,350 pcs. on the basis of Rs. 265 to Rs. 285. Rs. 340 to Rs. 350 and Rs. 300 to Rs. 350; Assam-Dinajpur-Jalpaiguri 44,250 pcs. on the basis of Rs. 242-8 to Rs. 260; Patna-Pakur 12,500 pcs. on the basis of Rs. 205 to Rs. 220; Muzafferpore-Patna 63,400 pcs. on the basis of Rs. 225 to Rs. 246-8.

Bazaar Stocks

(18th June, 1956)
Cowhides: Wet salted 2,44,000 pcs.
Goatskins: Wet salted (Daissee, Killed) 24,000 pcs.; Assam-Dinajpur-Jalpaiguri 73,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissanganj 1,95,000 pcs.

THE GANGA SUGAR CORPORATION LTD. DIRECTORS' REPORT

Ladies and Gentlemen,

We have the honour to present to you the annual accounts and profit and loss statement for the year ending 31st March, 1956. For certain important reasons an interim Balance Sheet was presented to you together with the Profit and Loss account for the half-year ended 30th September, 1955. The present statement includes and incorporates the results of the first six months of the season for which a separate report was presented to the shareholders. So these accounts should be taken as consolidated accounts for the whole year ending on the 31st March, 1956.

The shareholders will be glad to note that the operations of the year under report have been successful. We succeeded in crushing 55,78,088 mds. sugarcane as against 39,43,788 mds. in the previous year.

The recovery for the year has also been 4% higher than in the previous year. The factory worked for 213 days during the season as against 147 days in the previous year. The performance of the plant was quite satisfactory but the market conditions were not so favourable; otherwise, the financial results for the year would have been much better. However, in all the circumstances of the case, we have decided to recommend distribution of dividend to the shareholders at the same rate as last year.

In the last year's report the Directors informed the shareholders that suitable additions would be made to the plant to increase its capacity because permission from the Govt. of India had been received to increase the capacity of the factory to 1600 tons. Order for the machinery was placed in England and with Continental firms and delivery times of the additional machinery were so fixed that we might be able to use it during the 1956-57 season. All efforts are being made to instal this machinery when received so that even if it does not work for the whole of the next season it may be tried well under service conditions during a part of the 1956-57 season. As the cane supply is estimated now (and with future development) to exceed the requirements of a 1600 tons plant, we have submitted a further application to the Govt. of India for licensing the factory for crushing of 2500 tons of cane per day. This application is receiving consideration of the Govt. and we hope it will be sanctioned. By running our present plant and the additional machinery we hope to achieve the capacity of 2500 tons with very few further additions.

The order for the additional machinery has put a great strain on our financial resources. We have been granted permission by the Controller of Capital Issues to increase our capital by issue of bonus shares for Rs. 10 lacs and right shares for a similar amount at par to increase our capital resources. We are also arranging for a Debenture Loan of Rs. 30 lacs which we hope to secure in due time and have in view other proposals to arrange the necessary finances. These measures will enable us to complete the project satisfactorily. The additions to the plant and buildings and their erection will cost the company about 70 to 75 lacs of rupees.

After providing Rs. 2,75,000/- for bonus to labour and staff and writing off Rs. 95,174-1-0 depreciation and including Rs. 22,813-15-2 carried forward from last year's accounts the profit comes to Rs. 24,96,579-9-3 which is allocated as follows.

Towards General Reserve	Rs. 6,00,000 0 0
(This includes Rs. 5 lacs written towards General Reserve in September 1955 account)	
Towards reserves for taxation (inclusive of Rs. 1,82,960-2-0 provided in September 1955 accounts)	Rs. 10,35,000 0 0
Towards tax free dividend @ 20%	Rs. 6,98,598 0 0
Towards charity	Rs. 85,000 0 0
Carried forward	Rs. 77,981 9 3
Both labour and staff have worked satisfactorily at the factory and at the head office of the company and the relations between the Management and Labour have continued to be cordial.

NELLIMARLA JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Thirty-third Ordinary General Meeting of the Shareholders of NELLIMARLA JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 24th July, 1956, at 3 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
- (2) To declare Dividends.
- (3) To appoint a Director in place of Rai Bahadur Nityananda Singh Roy, J.P., who retires by rotation, but who is eligible for re-appointment.
- (4) To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution.

"That Mr. B. L. Bajoria an Associate of McLeod & Co. Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

- (5) To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1)(d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the Paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

- (6) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 3rd to 24th July, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3. Netaji Subhas Road,
Calcutta, 20th June, 1956.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 14th August, 1956, only to those members whose names are registered in the Books of the Company on the 24th July, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statements.

- (1) In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

- (2) The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

THE TINNEVELLY-TUTICORIN ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that the Preference Share Register of the Company will be closed from 23rd June, 1956 to 29th June, 1956 both days inclusive.

A dividend at the rate of 6½ per annum free of income-tax on the Preference share capital of the Company for the half-year ended 30th June, 1956 has been declared payable on 2nd July, 1956.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 13th June, 1956.

THE KELVIN JUTE COMPANY, LIMITED

NOTICE is hereby given that the Ninety-seventh Ordinary General Meeting of the Shareholders of THE KELVIN JUTE COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 16th July, 1956, at 4-0 P.M., for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
2. To declare Dividends.
3. To appoint a Director in place of Mr. Ramsundar Kanoria who retires by rotation, but who is eligible for re-appointment.
4. To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution.

"That Mr. B. L. Bajoria an Associate of McLeod & Co. Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution.

"That with effect from the commencement of the Companies Act, 1956 and in compliance with the provisions of Section 314 thereof, Messrs. Luchminarain Kanoria & Co., a firm in which Mr. Ramsundar Kanoria, a Director of the Company, is a Partner, be and are hereby permitted to hold an office or place of profit under the Company, namely as Guarantee Brokers."

6. To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1)(d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

7. To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 25th June, 1956 to 16th July, 1956, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3. Netaji Subhas Road,
Calcutta, 12th June, 1956.

NOTE:—Payment of the proposed dividends, if declared, will be made on or after 8th August, 1956, only to those members whose names are registered in the Books of the Company on the 16th July, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statements.

1. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

2. By virtue of an agreement dated 25th June, 1936, Messrs. Luchminarain Kanoria & Co., a firm in which Mr. Ramsundar Kanoria, a Director of the Company, is a Partner, were appointed as Guarantee Brokers to the Company in respect of Gunny Sales. Although a resolution was passed by the Company at the 55th Ordinary General Meeting held on 8th March, 1937, consenting to Messrs. Luchminarain Kanoria & Co. holding an office of profit under the Company, it is considered desirable to regularize this appointment under Section 314 of the Companies Act,

1956. The resolution under item No. 5 of the Notice provides for this. A copy of the aforesaid agreement is available for inspection at the Registered Office of this Company during business hours.

3. The resolution under item No. 6 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

TEA COMPANIES

O. Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

RECONCILING IDEOLOGY WITH MALTHUS

CHINA STRUGGLES TO FEED MILLIONS MORE A YEAR

DISCUSSION of India's economic problems never gets far without reference to the yearly increase of four million in the population. It is, therefore, chastening to remember that China's population increases by twelve million per annum. While India has a falling birth rate per thousand child-bearing women, China's natality rate has risen since the Communist conquest from 35 percent to 37 percent, and in the same period the mortality rate has fallen from 25 percent to 17 percent. The result of these two movements is that the annual increment in the population has doubled, from one percent of 600 millions to 2 percent—and this means that in less than eight years the population will rise by 100 millions, or much more than the total population of Pakistan. Figures of such magnitude paralysed the imagination, and probably the only impression one retains after reading them is that whatever population problems India has, China has many more. This already serious demographic situation may even deteriorate in the years immediately ahead because China, like every Asian country that is extending Western hygienic methods, is steadily reducing her death rate. Parson Malthus must stir in his grave at the mention of such prospects.

The irony is that Parson Malthus can be mentioned in China only to be denounced. Marxist dogma requires this. The true faith of Communism holds the proposition that demographic increase might outrun the production of sustenance to be a capitalist myth. It is, the converted declare, only capitalist societies that cannot keep up with the increase in numbers. A Communist society can always match output with population increase—any population increase. The absolute terms in which this belief is framed sufficiently expose its mythical, religious foundations, because commonsense has no difficulty in conceiving a rate of human multiplication that would outpace any imaginable productive régime. Mythical or not, Communist States draw drastic practical conclusions from this article of faith, one of which was the prohibition of birth control in Russia once the Stalinist period had set in. But the Chinese are Communists with a difference. Whatever Marxist dogma requires in the form of speeches in Peking, in practice contraception is permitted in China. Even before Russia, as part of destalinisation, made abortion legal again under certain circumstances, China had permitted it for families that already had four children, for students whose studies must not be interrupted, and for the unemployed, of whom there are many millions. Moreover—and here the contrast with other Communist States is more marked—contraceptive materials are available in the cities. But these lapses from Marxist faith are not publicised. The Chinese Government plainly does not regard limitation of births as an important part of its economic programme.

Effort is concentrated (as indeed it must be even in a society that does practise birth control widely) on the production of extra resources. So far, the increment in food production has kept just far enough ahead of population increase to maintain the status quo—and a very miserable status quo it is. At first the Peking régime forecast that it would have no difficulty in arranging a substantial increase in food production, and the first plan promised a 30 percent rise in five years. Anybody with a knowledge of Asian agriculture could have seen at once that this audacious prophecy was impossible of fulfilment—and at the beginning of last year, Peking reduced the promised increment from 30 percent to 17.7 percent. Even this figure is too high, and it appears that in the past three years the actual increase in food production was 10 percent, and it should be emphasised that the year 1955 was an unusually favourable one for Chinese farming. For agriculture as a whole, including crops other than foodstuffs, Chinese output does not seem like-

ly to increase by the 4.3 percent per annum that is the latest official forecast.

The lesson that Peking has drawn from this barely-adequate performance is that the collectivisation of agriculture must be considerably hastened, and this process has been in full swing since the middle of last year when Mr. Mao Tse-tung took personal control of the situation. The result is—and this is the major interest of the Chinese economic scene today—that after carrying out the most extensive revolution of land tenancy in all history, the Chinese are now launched on a collectivisation experiment that makes the Stalin episode seem very mediocre by comparison. We need not dwell on the human cost of this vast operation. It is sufficient to recall the human harvest that was reaped by Stalin and Khrushchev in the Ukraine collectivisation (which failed), and to emphasise that the regimentation of a reluctant peasantry calls for a measure of naked violence that Indian opinion would never tolerate. But, as the undeniable economic progress of Soviet Russia shows, brutality works. It eventually produces economic results, though there is not a shred of evidence that those results could not be exceeded by a more humane and democratic policy. China has chosen—or rather the Peking dictatorship has imposed—the path of coercion, and the economic interest of the case is whether the country will manage to find by this method resources to support its growing population.

The whole of the Chinese economic plan has been recast in mid-course to permit this acceleration of collectivisation. Up to last year the process had been proceeding fairly slowly and it was expected that by the spring of 1958 half the peasantry would be "organised." But the new plan requires that this objective be attained during the course of this year. It is now proposed that by 1958 the whole of the peasantry should be grouped on two million collective farms. The Peking rulers are not blind followers of Stalin, so it is reasonable to conclude that they have decided on this policy because they found that over the last few years, when, as we have said, the performance of Chinese agriculture was not impressive, at least that part of it that was organised in collectives was producing better results than the unorganised part. The reports of non-Communist economists who have visited the country indicate that the collectives in the past three years achieved increases in output of 10 percent to 30 percent, which is much higher than the figure for the whole agricultural sector given above. Mr. Mao evidently hopes

Russia and Czechoslovakia was perhaps sufficient as long as collectivisation was proceeding at a leisurely pace. But it is definitely not enough for the much more grandiose collectivisation programme that is now in hand. And in excess of domestic requirements, Peking needs enough of these materials to pose as a supplier of anything and everything to its political satellites in East Asia—and to countries it hopes to convert into political satellites such as Burma and Indonesia.

It has become fashionable to say that India and China are today in competition, each one representing a political system applied to the task of rapid economic development. India represents democracy and China totalitarian ruthlessness, and both are aiming at the same goal of material advancement. This is ideological talk, and could only be believed by well-fed intellectuals who have not realised that the basic fact in Asia today is hunger. India and China are not competing with each other—but with famine. In both countries population threatens to outrun sustenance and the most brilliant economic advances and planning successes can only provide temporary respite before population increments again swallow up the gains. We do not underestimate the vital interest of the confrontation of democracy and dictatorship that is taking place in Asia in this century. But that confrontation is of less importance than the problem of whether human science and energy, under whatever political banner, can provide food for the growing millions.

RETURN OF THE CONSUMER

A FURTHER WEAPON AGAINST INFLATION

THE recent revival of interest in the output of consumer goods is the natural complement to the increase in the second plan's food-production targets as a means to combat inflation. The need for attention to consumer goods has been pointed out in these columns since the plan's emphasis on heavy industry first became apparent. There is no doubting the necessity; the question which must now be asked is whether this expedient can be relied upon to achieve anything of value in the next five years after the discouragements which the consumer-good industries have had to face during the last two. The sound development of industries of this kind has been one of the more notable casualties of the doctrine of a "socialistic pattern of society". The interest which is now, apparently, to be taken in them, appears as a measure of retreat from the more rigorous interpretation of this doctrine—and a welcome one at that. But a good deal of the damage has already been done and it may not be as easy as it sounds to rebuild the morale of consumer industries and renew their interest in such matters as expansion, quality improvement and competition.

The largest and most important of these consumer-good industries—cotton textiles—is perhaps the one which has suffered most from recent political trends. The strength of demand for its products will have ensured that little ground has been lost while the industry has been working under output restrictions. But the production-capacity backlog which will now have to be made up is a large one, as was shown by the recently-published textile-plan figures, and the profits from increased output which might have gone some way to meeting new capital needs will not now be available. Many units in the industry may be faced with having to approach the market for their requirements, and after the experience of the private sector in the last two years, this is not likely to be forthcoming except at enhanced rates. Attempts to expand other consumer-good industries are likely to come up against this reluctance of capital to commit itself without substantial inducement. Investor activity is almost completely absent from the country's stock markets at the present time, while only the oldest-established and most prosperous concerns will be able to satisfy their needs from their own resources. With the best will in the world, it may not be possible for manufacturers, under present conditions, to meet the calls which will be made upon them. High prices and reduced quality are the most likely results of attempting to increase consumer-good output rapidly in an economy which has been twisted out of shape to accommodate doctrinaire ideas of socialism. Whether Mr. Krishnamachari would be able to fill the gap with the aid of foreign capital, as he has threatened, is by no means certain. India has been busily building a reputation as a bad risk for the foreign investor which will take a great deal of time, and much positive effort besides, to extirpate. With determination, it will be possible in time to overcome the reluctance of both the foreign and the indigenous capitalist, but the inflationary potential generated by the plan is not going to wait that long.

With established consumer-good industries reluctant to undertake large-scale and expensive expansion programmes until the climate for invest-

ment in the country becomes more favourable, there is likely to be a mushroom growth of small producers turning out shoddy articles and charging high prices to poor people with money in their pockets for the first time in their lives. This can be dismissed as inevitable in the growing period of any economy which aims to satisfy the demand of the consumer, but it will undoubtedly have been intensified by recent trends. Unless the ordinary consumer, whose purchasing habits are of the utmost importance to a developing economy, is supplied with goods which are worth buying he is likely to divert his expenditure into less productive fields. It will be of little value to the economic future of the country to encourage an increase in the spending of money on jewellery or weddings or dowries; it is better that newly-earned wealth should be persuaded into channels which will help to improve the standard of living, health or comfort of a mass of people who badly need those things. Ensuring quality will not be easy in a fast growing trade, but it would be simpler if established manufacturers were encouraged to expand and permitted the means to do so. That way, standards are likely to be higher and consumer habits better formed.

Hand in hand with an expansion of the consumer-good industries in this country will have to go an extension of marketing techniques. The one which has suffered most from recent Government policy has been advertising. There seems to be little grasp in official circles of the importance of this aid to the sale of an industry's products. Without it, expansion in consumption beyond the level of bare subsistence will be slow, and if consumption goods are to make any contribution towards solving the country's inflationary problems, this method will have to be made use of more extensively than it is now. One of the best ways of ensuring this would be to revise all current prejudices against advertising, some of which have been expressed freely in Government circles in the past two years. It has been said often enough in the past that distribution is the main problem of the consumer-good industries in India. If that is true, a rapid increase in the popularity of advertising among industrialists would be the best contribution towards its solution.

CUTTING CAPACITY IN JUTE MILLS

INDUSTRY TO SEAL 2½ PERCENT OF LOOMAGE

THE Indian Jute Mills Association's decision this week to re-seal 2½ percent of the total loomage in its membership from 16th July is a step in the right direction. But whether it is a sufficiently long one only time will show. The fact is that for some months the jute industry has been producing goods at a rate far in excess of demand. When the first unsealing move (affecting 2½ percent of the loomage) came into effect in January this year, stocks had dropped to a very low level (63,500 tons) and it was necessary to replenish them. So production was increased. Soon afterwards followed the decision to unseal another 5 percent of the total loomage. In many market circles, the necessity for this second boost in production was not very clear, and subsequent events suggest that discretion might really have been the better part of valour. The rapid accumulation of stocks (by the end of May, they amounted to 119,100 tons) has weighed down gunny prices. Meanwhile, raw jute has followed a very steady trend, with the result that mills' profits have been badly squeezed, where they have not been entirely eliminated.

For many weeks, discussion has proceeded on how this unfortunate situation might be righted. Producers, consumers and the trade, have all reason to be grateful that the early idea of evolving a minimum selling price scheme for gunnies now seems to have been shelved. There were three important objections to the scheme. The first was that it would greatly annoy foreign consumers, whose goodwill the Indian industry had spent many years of valuable effort in cultivating. The second was that it would not help the mills, because if gunny prices rose, raw jute would have risen simultaneously. The third was that the price minima would have been difficult to enforce, especially at a time when consumers were well stocked. The apparent decision to shelve the scheme is therefore realistic.

It is widely agreed that the jute mills cannot be expected to continue running at a loss, as they have been doing for many months. There are three basic ways of restoring profitable working. One is to raise the price of manufactured goods. The second is to lower the price of raw jute. The third is to do both together. The first is the most difficult of the three, because the price of jute goods depends very largely on foreign demand since India is no longer a monopoly producer. The second is not too easy either. The third is the simplest, and it implies a cut-back in the rate of production, such as the industry has now decided upon. But

the markets' early reactions have been significant. Gunny prices have fallen, on the bear view that the cut is not enough to make much difference to the stock position. Raw jute has risen, partly with the assistance of flood reports from upcountry growing areas. And jute shares have fallen.

The hope however remains that demand for jute goods will increase in the near future. Russia's purchases have not yet got into full swing, presumably because she has spent all the Indian currency she has earned so far. The U.S. buying season is approaching. India's own domestic needs also might well rise.

CURRENT COIN

Index of Industrial Activity.—Corrected for seasonal fluctuations, Capital's Index of Indian Industrial Activity shows a drop of 9.7 points during January 1956. Contributing to this were decreases in cotton consumption, jute manufactures, steel ingots, cement, paper and coal. Cheque clearances also dropped.

Preferences from Kesoram.—Subscription lists opened on Monday last week for a capital issue by Kesoram Cotton Mills Ltd., the details of which appear on a later page. The issue consists of 100,000 cumulative redeemable second preference shares of Rs. 100 each, offered at par, and carrying a return of 5½ percent, tax-free. Half the total has already been subscribed by the company's equity shareholders, their nominees and other persons. The remaining 50,000 shares are now offered to the public. The shares will be redeemed at par on 31st March, 1967. Prospective buyers have to pay Rs. 25 a share on application, Rs. 25 on allotment and Rs. 50 after 31st March next year, on one month's notice from the company. Applications must be for five shares or a multiple of five. The company's present paid-up capital consists of 20,000 7 percent (tax-free) cumulative preference shares of Rs. 100 each, and 1,600,000 ordinary shares of Rs. 10 each. The new shares will rank for dividend and return of capital after the existing preference shares. The purpose of the issue is to raise money for expanding the company's activities. It is proposed to install a plant for the manufacture of continuous filament viscose rayon yarn in Mouza Raghunathpur, Hooghly district, near Calcutta. The Government has given a licence for establishing a ten-ton plant, but for the present it is intended to set up one of six or seven tons' capacity only. Its cost of installation is estimated at Rs. 3.7 crores, for which the company proposes to raise Rs. 2.7 crores from its existing resources, bank loan, deferred payments, etc. The return on the new preference shares seems suitable in present market conditions. Past earnings suggest that it is adequately covered. Net profits (after depreciation and taxation) moved around Rs. 25 lakhs for three years, and have risen to Rs. 43.8 lakhs during the year ended last March. The prospects for cotton yarn, cloth and hosiery goods, which are the company's chief interests at present, seem good; those for rayon manufactures seem better. The new preference shares are said to qualify as an "approved investment" under the Insurance Act. The managing agents of Kesoram Cotton Mills are Birla Brothers Private Ltd.

Record Coffee Production.—Indian coffee production in 1955-56 reached the 33,172-ton mark, which Mr. K. Srinivasan, chairman of the Coffee Board, described as a record at the recent meeting of the Board. The prospects for the next season are equally good, the estimate being for a 33,000-ton output. According to Mr. Srinivasan, the level of productivity in the industry has reached a stage when 30,000 tons can be expected as the normal annual production and this, in its turn, has given rise to new problems. First, the resources of the Board will have to be increased to cope with the handling of the crop which always comes in a rush during the last few months of the season, and secondly, steps will have to be taken to raise domestic consumption to absorb the extra production that will hereafter come to the market. During the 1955-56 season, the monthly average offtake in the internal market was 1,825 tons, making for an annual figure of 21,900 tons. Of the balance, 3,910 tons were exported of the first quota of 4,160 tons, and a further quota of 3,700 tons was later sanctioned for export. Thus, while the exports have been doing well, the primary emphasis has to be placed on raising internal consumption, and Mr. Srinivasan explained the drive which is being launched to popularise coffee consumption in India, particularly in the north. A "Drink More Coffee" publicity campaign is in the offing, and a draft plan is under consideration to establish propaganda units in all State capitals. Of the measures to increase coffee production in the country, Mr. Srinivasan mentioned the deputation of two officers

to the Andaman and Nicobar islands to explore the possibilities of coffee cultivation there.

Cauvery Sugars and Chemicals.—Subscription lists open today for the public offer of 20,000 6 percent tax-free cumulative preference shares and 29,000 ordinary shares in the Cauvery Sugars and Chemicals Ltd. Both classes of shares are valued at Rs. 100 each and are offered at par. The company was originally formed in 1948. It has now been reorganised with Parry and Co. Ltd., as Secretaries, and the East India Distilleries and Sugar Factories Ltd. as technical advisers. The intention is to establish a sugar factory in Pettavaytalai, Tiruchirappalli district, which will crush 800 to 850 tons of cane a day, and manufacture 15,000 tons of sugar a year. Steps have been taken to ensure that the company gets regular supplies of good quality cane; cultivation will be on its own lands. The schedule of working, as outlined by the directors, suggests that the prospects are good.

Canalising Ore Exports.—The Bharat Chamber of Commerce has criticised the Government of India's note on canalising exports of iron and manganese ores through the State Trading Corporation. It denies the Government's assertion that the "existing trading mechanism is quite inadequate to cope with the developments". The trade, it states, has already proved its capacity to export nearly 1.6 million tons of manganese ore during 1953-54; the target for exports at the end of the second five year plan is only 1.5 million tons. There was no export target for iron ore during the first plan, but, in spite of many difficulties, the trade sold nearly 1.3 million tons abroad in 1953-54. It cannot therefore be said that the trade will not be able to achieve the export target of 2 million tons for iron ore and 1.5 million tons for manganese ore, assuming it is given the necessary facilities. The real bottleneck in ore exports, the Chamber points out, has all along been the wagon scarcity. A quota system was introduced for Calcutta in 1953 with the definite purpose of ensuring wagon supplies at least up to the allotted quota, but even these could not be provided by the Government and the railways. The Chamber fails to understand how canalisation of exports through the State Trading Corporation could increase the wagon supply. The trade was previously given to understand that the State Trading Corporation would function as a private limited company doing business in certain commodities, including iron ore, without in any way impeding the operations of the existing interests. The latest official decision seems to be a reversal of this policy. The indications given about the allocation of export quotas to mineowners and shippers on the basis of averages for the last three calendar years, restrictions on the interchangeability of quotas for export from different ports, prescription for scrutiny of contracts, all seem to give the impression that the State Trading Corporation may squeeze exporters out of the trade and make them subservient to its own operations. The Chamber feels that the policy of canalisation will jeopardise exports. In the case of manganese ore, it says, there is absolutely no scope or reason for the entry of the State Trading Corporation.

Jobless Doctors and Engineers.—From the viewpoint of the academic analyst, one of the most useful services performed by the Government of India's Directorate-General of Resettlement and Employment is its periodic special investigations into various aspects of the unemployment problem. The report of the Directorate-General for April contains the results of two such investigations—on engineers and doctors—which offer a dismal commentary on the Indian educational system. On the one hand, it is frequently proclaimed that the country is desperately short of qualified persons in these two categories. On the other, it is seen that even those who are available cannot be wholly and usefully employed. The latest figures show that on 31st March, 1956, there were 439 engineering graduates on the live registers of employment exchanges. Although this was nearly 200 less than at the end of last year, the decline seems to have been mainly "seasonal in character" and is accounted for by a considerable fall in the number registered rather than a sharp increase in the number employed. As was to be expected, most of them were concentrated in West Bengal, Delhi, Bombay and Mysore; the vast majority were electrical, mechanical and civil engineers—and they were young, being 18 to 30 years of age. The Directorate-General seems to be drawing an unduly cheerful conclusion in saying that the unemployment among them was mostly "frictional", since only 24 percent of them had been waiting for jobs for more than a year. At least two out of every five had no previous experience; 67 percent wanted a minimum salary of Rs. 200 to Rs. 300 a month, while 24 percent wanted at least Rs. 300. In the case of medical graduates, of the 207 who

had registered with the employment exchanges, as many as 145 were in West Bengal. The majority had little experience, some had none at all, but only 9 percent were willing to accept salaries of less than Rs. 200 a month. The salary expectations of both the engineers and the doctors may or may not have been high in relation to their individual qualifications and in relation to what they had spent on getting their degrees. But it seems hard to believe that the country cannot absorb a few hundred of each in its present desperate shortage of qualified personnel. This raises a point which needs to be pondered over carefully: where lies the reason for the yawning gap between unfilled technical jobs and the supposedly qualified jobless? The fairest suspicion is that the education and training of the latter does not fit them for the former. It merely gives them certificates, often after a deliberate lowering of standards; and then flings them before employers who have become increasingly chary of accepting at face value the rubber-stamping procedures of the universities.

Food Ministers' Task.—In view of the Planning Commission's recent directive to the State Governments to make an all-out effort for raising agricultural, particularly food, production well beyond the second plan targets, more than usual significance attaches to the forthcoming conference of State Ministers of Agriculture at Mussoorie. The views of the State Governments should give a fair indication of what can ultimately be achieved on the food front—whether the targets will be exceeded, or even fulfilled at all. But happily enough the realisation is now firm in all places of authority that higher production of food, and of cloth, will hold the key to the economic development of the country at the rate it is now planned to be achieved. The States can therefore be expected to make the effort the Planning Commission advises them to make, to raise the food production to the level it is physically possible to attain with the generous Central aid that will hereafter be provided to the farmer in a variety of forms. Judging from Dr. Deshmukh's recent statements, the Central Gov-

"A SURVEY OF TRANSPORT IN INDIA"

With this week's edition of CAPITAL, dated 28th June, is published an 80-page survey of the transport and the allied industries in India. The supplement will be supplied free to registered subscribers and will be available to others at Rs. 5 a copy. Postage extra. Enquiries may be addressed to the Manager, CAPITAL, 5, Mission Row, Calcutta-1.

ernment appears to believe that with more energetic efforts on the administration's part and also of the rural agencies of national construction, food production can be increased substantially during the current plan. But the task of administering aid to agriculture in the country has not only become greater, but also infinitely more complicated because of the nature of the aid now proposed. It will almost wholly depend upon how the existing rural administrative machinery rises to its task. This administrative responsibility belongs to State Governments, and they will have to accept all its practical implications. The next question that has occasioned some controversy is whether it is a realistic decision to raise the target of food production to 21 percent (from 18 percent) above the 1955-56 production level. Like all plan targets, this, too, represents the measure of the economy's need. Whether it is practicable, it is not easy to say, but no useful purpose is likely to be served by going into that fine speculation. The country must produce more food for the plan not to get bogged down in the inflation mire; it produced much more during the first plan than even the most optimistic could expect.

JOURNEY OF THE MAILS

WE publish in another column some correspondence between Sir John Leng, M.P., and the Secretary to the Treasury on the subject of the contemplated speed in the new postal contracts. We are strongly of the opinion that the minimum speed should be 15 knots, and we take exception to the statement by Mr. Hanbury that there does not appear to be any pressing demand from the public for the speed suggested by Sir John Leng. We entirely agree, and are sure that the Indian public are in accord with Sir John Leng's views as to speed, and if the Cheap Passage Association, instead of issuing ridiculous pamphlets, were to agitate for speed, it would be doing a useful service. A service, via Marseilles, between Bombay and London of 14 days' duration would be a boon and a blessing to the Indian public; it is what they want and what they ought to have. The community is indebted to Sir John for pressing the matter.

SOME MORE CASES FROM U.K. COURTS

SANITARY INSPECTORS, TAX EVADERS AND DIVORCEES

(FROM OUR LEGAL CORRESPONDENT)

IN browsing through the law journals in search of material for this short commentary on recent English cases, one comes across many an interesting titbit by the wayside. A few weeks ago we had occasion *à propos* the word "officer" to refer to the increase of pompous snobbery in the use of words and expressions, and we noted the fact that there no longer exists a tradesman in England; they are all styled "traders". Nor a chamber of trade; they have become chambers of commerce. There is nothing new about this tendency, and we instanced the fact that the late Mr. Bumble did not like being styled a Beadle, and called himself a Porochial Officer; and Mr. Dennis, who died at the hands of his successor in office, preferred the title Constitutional Officer to that of Public Hangman. But neither gentleman went so far as to promote an Act of Parliament to make the *alias* legal; and for sheer pertinacious snobbery and humbug, surely the present instance takes a lot of beating. It concerns the deserving, highly respectable set of—suppose we must say—officers known hitherto as sanitary inspectors. Now, there is, unhappily, no disguising the fact that the—again, we suppose we must say—profession of a sanitary inspector involves the inspection of sewers, that is the carrying off of the human excreta of cities, towns and villages. The sanitary inspectors do not object to doing this work and drawing the emoluments thereof, but they feel that the nature of their calling should be veiled in respectable obscurity. Wherefore they have got hold of an M.P., and no less a one than Sir Warrall Wakefield, the famous former England rugby captain, to promote a Bill in Parliament containing one single clause. It has the im-

posing title—The Sanitary Inspectors (Change of Designation) Bill—and provides that sanitary inspectors shall henceforth be called "Public Health Inspectors."

Possibly, of all the English judges, the one held in greatest respect, and even affection, by the general public is the Lord Chief Justice of England. One reason, no doubt, is that Lord Goddard always expresses himself in clear, pungent English, so that he who runs may read; and more often than not the runner, i.e., the common man, finds that the judge has put into words exactly what he himself was thinking. His lordship, in imposing fines totalling £8,000 upon two men who confessed to tax frauds totalling £29,537, criticised "the long delay" before it was decided to prosecute, and said that the conduct of the Inland Revenue authorities amounted to "cruelty". This "cruelty" saved the two men from jail sentences. "There was disclosure to the Commissioners at a meeting in October 1952 sufficient for them to decide whether they would or would not prosecute. Yet there was no prosecution until 27 months later!" The words of Lord Goddard are noteworthy, both as an indication of the normal punishment in these cases and of the effect of undue delay upon the part of the authorities. Said he: "I have never yet, except in the case of a very old man who was ill, passed any sentence other than imprisonment for these tax frauds, but what has affected my mind is the fact that I think you have received, through the conduct of the Inland Revenue in this case, very considerable punishment.....and speaking with a full sense of responsibility, as head of the criminal law in this country, I say that that conduct amounts to cruelty to you and to those who are near and dear to you. You were kept in suspense during the whole of this time.....and I cannot think that that is proper conduct for a Government department..... I gravely disapprove."

And talking about Lord Goddard, that brings us back to the case of the gold clause in a lease, and his lordship's decision that the gold clause applied, with the result that a rent affixed in 1930 at £1,900 a year became by 1955 approximately £7,600

for the same period; and our note on this astonishing case last week. You will remember that the Lord Chief Justice himself had grave doubts about the correctness of his decision, and said that he was "happy to think that this judgment can, and no doubt will, be considered by the Court of Appeal and, perhaps, the House of Lords." His lordship's hope is in course of fulfilment. From the May issue of *Law Notes*, received just as these lines were being penned, we observe that Lord Goddard's decision has been reversed on appeal. The Court of Appeal, though only by a majority. (Denning and Morris L.J.J., Harman J. dissenting), decided that the words "gold sterling" meant gold coins of sterling currency but did not mean gold coins regarded as a commodity. The word "value" denoted nominal value and the lease therefore fixed a rent of £1,900 which could be paid either by 1,900 gold sovereigns regarded as currency or by 1,900 £1 Bank of England notes regarded as currency. Said Denning L.J.: "A man who stipulates for a pound must take a pound when payment is made, whatever the pound is worth at that time." "It is important to bear in mind Section 6 of the Coinage Act, 1870. That section, in my opinion (but this was not, it seems, the opinion of the L.C.J. and Harman J.), makes it unlawful for a creditor to stipulate for payment of a money debt in any other way than by lawful currency." Two judges to two: but, of course, the Court of Appeal decision prevails. For the present, that is. We shall look out for the House of Lords' decision in due course; and fully realising the entire worthlessness of his opinion, the writer would be prepared to wager, laying a slight shade of odds, that Lord Goddard's judgment will be restored. Grounds? The Appeal judgment, by a forced and unnatural construction of the words of the gold clause, frustrates the clear and lawful intention of the original parties to the lease.

Here is one of those delightful titbits which one picks up on one's way to the actual *Law Reports*. It is really a prize editorial "slip up." For it we are indebted to a newspaper published in a Yorkshire city. Following details of the granting of eight divorce decrees on the grounds of eight sets of adultery respectively, the news editor adds the interesting, but one would have thought legally irrelevant, words "all of which were greatly enjoyed." But we are not to assume that the editorial department was in a position to impart this cheering information through being in the confidence of the 16 participants or any of them as to their joyous adventures. The newspaper has explained with dignity to *Law Notes* that all but the last two lines of a block of type relating to items played at a piano recital were lifted out to allow more space for the list of decrees. It was the recital the items of which were "greatly enjoyed", not the eight acts of adultery.

This was the official verdict of a coroner's jury—of course, an Irish one—just reported, duly recorded by the coroner, equally of course an Irishman: "Death owing to the visitation of Providence, accelerated by an injudicious post mortem examination."

And how is the plaintiff or, for that matter the defendant either, going to get on with the issues settled on these lines? "Facts admitted or proved.....On 13th January, the plaintiff died suddenly. The plaintiff did not discover this fact until 19th January."

This is a startling case, and one wonders whether it may have any repercussions in India. It relates to the recognition by courts of countries belonging to the Commonwealth of divorce decrees pronounced in English courts. "There may be a few persons", says *Law Notes* (London) "—possibly not all laymen—who are inclined to regard a divorce decree pronounced by the English courts as unassailable and recognised as valid throughout the world, much in the same way as a Bank of England note was regarded before the 1914-18 war." This is, it seems, not so. A recent decision of the Supreme Court of Ontario will come as a surprise, if not as a shock to those who toy with the idea of the inviolability of an English divorce; indeed, it may well cause consternation to quite a number of couples who have married after one of the spouses has obtained a divorce since a previous marriage. As is well known, by reason of its large Roman Catholic population, the law in Canada, and especially in the French-speaking part of it, does not lean in favour of divorce in any case; and the decision was that a divorce obtained in England under the Matrimonial Causes (War Marriages) Act, 1944, cannot be recognised in Canada. Mr. Justice Barlow, giving judgment, said that Mr. James Stanley Price and his second wife were not legally married, because Mr. Price's first wife, whom he married in England in 1945, obtained her divorce under a British law, for which there was no counterpart in Canada. The judge added that the basis of divorce in Ontario was domicile of the husband. There was no law in Canada providing for the recognition thereof of a divorce granted by virtue of the Imperial statute. "It makes one wonder, with a certain amount of uneasiness, what, given similar facts, would be the position in India."

ONE of the most depressing features of the cold war's impact on Western democracy has been the spread of that pernicious doctrine, "guilt by association". It was already well enough established in totalitarian and communist countries where it has always been as convenient a method as any of indicting an undesirable. But the democracies remained mercifully free from it until the notorious McCarthy interlude in the United States. It has cropped up there from time to time since, and still, ridiculously enough, in that home of liberty the fact that one's best friend is a communist may still be taken as valid grounds for withholding a passport. Britain's attitude has usually been more enlightened and less neurotic, but even there the official stand against the communists' fifth-column activities has not been without a trace of this kind of thinking—perhaps inevitably. That is why the Lang case stands out as so flagrant an example of injustice, and has incurred so much criticism in the United Kingdom. The only reason which has so far been given for threatening the Imperial Chemical Industries with the withdrawal of all secret contracts unless it sacked a certain solicitor on its senior staff named Lang, is that the unfortunate fellow's wife was once a communist. Apart from the fact that this reason seems based on the wholly mistaken idea that a man and wife never have differences of opinion, depriving any person of a livelihood on such flimsy grounds is such a negation of the values for which democracy stands that one suspects a deeper justification is lurking somewhere. The British Government has not acted without giving the matter a good deal of thought. Apparently it took four years to make its mind up whether in fact Mr. Lang was a good security risk—it is not said whether there were any complaints against him in that time. It would not be fair to blame I.C.I. for Mr. Lang's dismissal. After all, it is not the duty of a private firm to champion the rights of the British people when there is the whole mechanism of Parliamentary representation to do it for them. But it does seem to be going too far for a democratic government to associate itself with the view that all communists are potential traitors to their country, and certainly to suppose that their relatives are as well. Britain is not in the midst of a hot war and the cold one is not perhaps what it used to be, so Mr. Lang may eventually get away without being deprived of a living. If he does, his might be the last case of its kind, and a good job too. Even if he does not, the present outcry will ensure that the British Government will hesitate before taking such a step in future unless the international climate alters radically for the worse.

It is, of course, a popular fallacy that poets dwell in ivory towers and drink eau-de-cologne. Many of them have lived the humdrum life of the workaday world. Chaucer was, of all things, a Customs official and Royal emissary; Milton was Latin Secretary under the Commonwealth; Goethe was a Minister to the court of Weimar, and Francois Villon was a thief and more than once was on the point of being hanged for his murderous squabbles. For a spell, T. S. Eliot was in the Foreign Exchange department of Lloyds Bank and is now a director of the well-known publishing house, Faber & Faber; while Walter de la Mare, who has just died, used to earn a living at an occupation as prosaic as compiling statistics for the oil trade. It was only after he had produced some remarkable poetry that Asquith was moved by his talents and ill-health to grant him a Civil List pension of £100, which released him from his statistical desk to pursue his poetic bent. His, as well as Mr. Eliot's example, leads me to imagine that in Clive Street today there may exist some children of the Muses,

A DITCHER'S DIARY

hidden perhaps behind ledgers and company reports; and I suspect that at association meetings when speakers dwell with ruthless persistence upon the threat of nationalisation or the hardships of taxation, some among their audiences may be reduced by despair to doodling most passable verses on the sly. The truth seems to be that all of us contain a dual personality and that, for the gifted ones, the milky way may be but an extension of Clive Street. To return to de la Mare, he was one of the few present-day English poets whom one could read without constantly reaching for the aspirin bottle. His novel, *The Return*, won the Polignac Prize in 1911, and *The Memoirs of a Midget* won the James Tait Black Prize in 1921. Both in his prose and verse we sense the same quality and feel that the outposts of commonsense are constantly invaded by mystery. His cadences are soft, like the footfalls of a rabbit on mown hay, and his world shimmers in the pale glow of fairy lamps.

The knack of turning a fine phrase is worth possessing and I submit that Mr. Dulles has it. His description of Mr. Krushchev's attack on Stalin as "the most damning indictment of despotism ever made by a despot" deserves to be remembered for oratorical merit quite apart from its intrinsic value as a neat statement of the truth. For once I find myself agreeing with Mr. Dulles. If Stalin was all the things Mr. Krushchev said he was, then why did Mr. Krushchev hold office under him and carry out his orders? The ready answer would be that he had to. But surely that was the excuse made, without exception, by all those who eventually stood accused of the crimes committed under the Hitler régime, and I cannot remember that it was accepted from them when they faced the judges at Nuremberg. It is a tribute to the world's tremendous yearning to see Russia back among the community of nations that the full implications of Mr. Krushchev's statement are being overlooked. The parable of the prodigal son springs to mind; it seems that all the world loves a penitent even more than it loves a lover. But is Mr. Krushchev a penitent? Certainly he does not say so. His only justification for having connived at the crimes which are now admitted is that he was forced to do so; presumably if another Stalin were to rise he would do just the same again. All this public confession is, as I predicted some time ago, causing much confusion among those who have spent the last thirty years whitewashing all the crimes that have been committed in the sacred name of communism—the world's communist parties. Signor Togliatti appears to have led the way by condemning outright the attitude of Russia's present leaders, while the confusion among the ranks of the British, French and Indian communists is scarcely less obvious. Perhaps Russia has deliberately decided to exchange foreign communist parties for foreign trade and aid as the instruments of her expansionary policies. If so, provided the world exercises caution, it may have little to fear and much to gain. But to assume, in the absence of the proof which only the years can bring, that the motives behind the present changes are any more laudable than these, is to accept the self-confessed accomplices of one of the greatest rogues and mass-murderers who has ever lived as the models of what civilised statesmen ought to be.

As I have said once before, crossword puzzles are not my cup of tea. Although I put in my nine

hours a day, I have never felt the need to unbend over this so-called intellectual pastime. But that seems scarcely the reason why I should grudge others their favourite relaxation, and I do not. I can even sympathise in a mild way with those who are writing strong letters of protest to *The Statesman* against a correspondent's suggestion that crosswords be dropped. But most of them, one notices, are women, presumably of the non-bread-winning variety, and there is perhaps little to wonder at in this. They must have such a hard time ordering servants about, selecting the right shade of face powder and lipstick and berating sheepish husbands for their inability to see the logic of allocating the better halves of domestic budgets to the better halves. Besides, bridge parties can be so exacting and neighbours' doings always demand so much attention. If all these activities, with some occasional social work thrown in in the form of distributing to the poor other people's biscuits and old clothes, cannot be called exhausting work, I do not know what can. As for the menfolk who are helping swell the chorus of protest, I am inclined to believe that they must either come from the class of the idle rich, or are bachelors. Money and time are a combination that favours the growth of many eccentricities, and a penchant for crosswords is at worst a likeable one. Bachelordom is also a state suitable for the cultivation of such time-consuming and inconsequential hobbies. It would seem hard to believe that anybody with a wife at home can find a quiet quarter of an hour to devote to a crossword. If among the protestants there are any married men, either their wives must have been afflicted with dumbness, or they themselves are grass-widowers.

Favouritism and nepotism are dreadful things. But whether the right way to eliminate them from Government postings and transfers is to do the selecting by machinery, is quite another matter. The tentative decision of the West Bengal Health Department to mechanise the procedure shows a commendable desire for impartiality. It may achieve it; on the other hand, it may find that it has simply substituted the existing method of getting square pegs into round holes for one which does precisely the same thing and is no better for being mechanised and up-to-date. After all, they are still human beings who are being selected for posting and transfer and those indefinable qualities of determination and adaptability, which vary so widely according to an individual's environment and circumstances, are every bit as important as qualifications and experience—if not so readily punched into record cards. Besides, favouritism and nepotism may just as easily creep in at the first stage in the new process—when the cards are punched—as at the last stage in the old. The modern way of selecting a man for a certain post is supposed to involve some assessment of his wife's suitability as well as his own. It does not seem to be the Government's intentions to arrange that the machine takes care of this too. But without some effort being made to weigh the human factors, it is difficult to see that there is any better chance of getting the right man to the right place than there ever has been. Perhaps the West Bengal Government has no such aim in view and is merely restricting itself to dealing with favouritism. If that is so, it could achieve the same effect by drawing the names out of a hat in the presence of impartial witnesses; it need not go to the expense of buying a machine.

A copy of the Prospectus has been delivered to the Registrar of Companies, West Bengal, for registration together with the necessary documents which are required by Sec. 60 of the Companies Act, 1956.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office (Head Office) of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this new industrial undertaking of which a copy is open to public inspection at the Registered Office (Head Office) of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

THE SUBSCRIPTION LIST OPENS ON MONDAY, THE 18th OF JUNE, 1956.

All applications for shares must reach the Registered Office of the Company by 21st of July, 1956. The Directors may extend the date for receipt of applications, as they may in their discretion think fit.

PROSPECTUS OF KESORAM COTTON MILLS LIMITED.

AUTHORISED CAPITAL:

20,000—7% (Income tax free) Cumulative Preference Shares of Rs. 100/- each	Rs. 20,00,000 0 0
1,40,000—5½% (Income tax free) Cumulative Redeemable Second Preference Shares of Rs. 100/- each	Rs. 1,40,00,000 0 0
24,00,000 Ordinary Shares of Rs. 10/- each	Rs. 2,40,00,000 0 0
Total	Rs. 4,00,00,000 0 0

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL:

20,000—7% (Income tax free) Cumulative Preference Shares of Rs. 100/- each	Rs. 20,00,000 0 0
16,00,000 Ordinary Shares of Rs. 10/- each	Rs. 1,60,00,000 0 0
Total	Rs. 1,80,00,000 0 0

PRESENT ISSUE:

1,00,000—5½% (Income tax free) Cumulative Redeemable Second Preference Shares of Rs. 100/- each	Rs. 1,00,00,000 0 0
---	---------------------

Out of the present issue of one lakh shares of Rs. 100/- each, 50,000 shares have already been subscribed by the equity (ordinary) shareholders, their nominees and other persons. The remaining 50,000 shares are now being offered to the public for subscription at par. These shares carry 5½% (income tax free) Cumulative Preference Dividend and shall be redeemed at par on 31st March, 1967, out of the profits of the Company and/or out of the proceeds of a fresh issue of capital made for the purpose of redemption. These shares shall rank for dividend and return of capital next after the existing Preference Shares but in priority to the Ordinary Shares.

The subscription for the present issue shall be payable as follows:—

Rs. 25/- per share on application.

Rs. 25/- per share on allotment.

Rs. 50/- per share after 31st March, 1957 on one month's notice from the Company.

Applications must be for a minimum of five shares or a multiple of five.

Applications for shares may be presented at the Company's Registered Office or at the Head or branch offices of the Company's Bankers where application forms and copies of the Prospectus will be available.

The Directors shall have the discretion to refuse to allot any shares or to allot less than the number applied to any person or persons without assigning any reason for the same.

The Preference Shares offered for subscription are approved investments within the meaning of Section 27A of the Insurance Act, 1938.

QUALIFICATIONS AND REMUNERATION OF DIRECTORS:

Under the Articles of Association of the Company as amended by the Shareholders at the Extraordinary General Meeting held on the 6th June, 1956, each Director is to hold 200 Ordinary Shares on which all calls shall have been paid and each Director will receive by way of remuneration a sum of Rs. 200/- for each meeting of the Board attended by him, provided, however, until the sanction of the Central Government is received the aggregate of such payment to each Director in any financial year will not exceed Rs. 1,200/-.

PARTICULARS ABOUT THE MANAGING AGENTS:

The Managing Agents is a Private Limited Company with a subscribed and paid-up capital of Rs. 50,00,120/-.

Under Article 101 of the Articles of Association, the Managing Agents were authorised to a commission on the basis of gross sale proceeds of manufactured products of the Company and purchases of cotton and certain guaranteeing commission. The said basis became inapplicable from 1. 4. 1956 under the provisions of the Companies Act, 1956.

The term of office of the present Managing Agents will expire on the 15th January, 1957. An application is intended to be made to the Central Government for a fresh agreement renewing the appointment of the Managing Agents for another term of ten years and to fix their remuneration @ 10% of the net profits on the basis of the provisions of the Companies Act, 1956.

The Company has been carrying on business since about the last 36 years. The Company suffered loss upto the year 1930 as a result of which the value of the assets of the Company were written off as on 24th January, 1931, as per Reduction Scheme and the value of the Ordinary Shares was reduced to Rs. 2/8/- per share from Rs. 10/- per share. Since then the Company has made steady progress. Consequently in 1943, the Company capitalised a sum of Rs. 5,00,000/- from its reserves and issued fully paid-up bonus shares of Rs. 2/8/- each on the basis of one such bonus share to every

RIGHTS ATTACHED TO DIFFERENT CLASSES OF SHARES:

According to the provisions of Section 87 of the Companies Act, 1956, every member of the Company holding any equity (ordinary) share capital has a right to vote, in respect of such capital, on every resolution placed before the Company and his voting right on a poll shall be in proportion to his share of the paid-up equity (ordinary) capital of the Company.

Every member of the Company holding any Preference Share capital has, in respect of such capital, a right to vote only on resolutions placed before the Company which directly affect the rights attached to his Preference Shares.

The Preference Share capital carry preferential right to the fixed amount of dividend but does not carry any right to any further participation in profits.

In case of winding-up of the Company, the rights of the shareholders as regards dividend and return of capital shall, subject to the provisions of the Companies Act, 1956, be governed by Article 127 of the Articles of Association of the Company which provides as follows:

"If the Company shall be wound-up the assets available for distribution among the members of the Company shall be applied in the first instance in payment of the cumulative dividend or dividends on the Preference Shares which may be unpaid or in arrears at the commencement of the winding-up and thereafter the balance, if any, of the assets available for distribution as aforesaid shall be distributed in manner following, as to one-quarter thereof among the holders of Preference shares in proportion to the capital paid up thereon at the commencement of the winding-up and as to three-quarters thereof among the holders of Ordinary Shares in proportion to the Capital paid up thereon at the commencement of the winding-up."

RESTRICTIONS ON MEMBERS' RIGHTS:

So long as any money is due from a member of the Company in respect of any shares held by him, he shall not be entitled to vote at any meeting of the Company in respect of such shares.

The Directors may, without assigning any reason, decline to register any transfer of shares not fully paid-up or upon which the Company has a lien.

OBJECTS & BUSINESS OF THE COMPANY:

The main objects are inter alia the following:—
"To carry on all or any of the following businesses, namely cotton spinners and doublers, flax, hemp and jute spinners, linen and cloth manufacturers, flax, hemp, jute and wool merchants, wool combers, worsted spinners, woollen spinners, yarn merchants, worsted stuff manufacturers, bleachers and dyers and makers of vitriol, bleaching and dyeing materials".

"To purchase, comb, prepare, spin, dye and deal in cotton, flax, hemp, jute, wool, silk and any fibrous substances".

The Company has been carrying on business since about the last 36 years. The Company suffered loss upto the year 1930 as a result of which the value of the assets of the Company were written off as on 24th January, 1931, as per Reduction Scheme and the value of the Ordinary Shares was reduced to Rs. 2/8/- per share from Rs. 10/- per share. Since then the Company has made steady progress. Consequently in 1943, the Company capitalised a sum of Rs. 5,00,000/- from its reserves and issued fully paid-up bonus shares of Rs. 2/8/- each on the basis of one such bonus share to every

holder of 3 Ordinary Shares of Rs. 2/8/- each. Further the face value of the Ordinary Shares was raised from Rs. 2/8/- per share to Rs. 20/- per share by the capitalisation of the profits of the Company from time to time on four different dates between 1948 to 1954 amounting in all to Rs. 1,40,00,000/-. In 1955, the entire 8,00,000 Ordinary Shares of Rs. 20/- each were sub-divided into 16,00,000 Ordinary Shares of Rs. 10/- each. The present market quotation for these shares is about Rs. 19/8/- per share.

The assets of the Company consisting of land, buildings and machinery, etc., were re-valued in the year 1950 and a surplus of Rs. 1,45,87,000/- lies to the credit of capital reserve account of the Company as on 31st March, 1956.

PURPOSE OF PRESENT ISSUE:

The Company has so far been engaging itself in the manufacture of cotton yarn and cloth and hosiery goods. After carefully studying all the pros and cons of the matter, the Company has now decided to extend its activities and with that end in view it is proposed to instal a plant for the manufacture of Continuous Filament Viscose Rayon Yarn. There is a good demand for rayon cloth and it is expected that the rayon yarn, which will be manufactured by the Company, shall fetch a good return to the Company. A licence necessary for the establishment of a 10 ton plant for the manufacture of the said goods has been obtained from the Government of India. It is, however, proposed to instal for the present a plant of 6/7 tons said 6/7 tons plant is estimated to be about Rs. 3,70,00,000/- as per particulars below:—

(i) Land, buildings, roads and other constructions	About Rs. 80,00,000/-
(ii) Machinery and equipment	Rs. 2,50,00,000/-
(iii) Working capital	Rs. 40,00,000/-
Total	About Rs. 3,70,00,000/-

Out of the above sum the Company proposes to meet about Rs. 2,70,00,000/- for the purchase of land, machinery and equipments and certain construction work from its existing resources, bank loan, deferred payments, etc. The balance amount is proposed to be met by the present issue of shares. In the opinion of the Directors, the minimum amount which must be raised by the issue of these shares is Rs. 80,00,000/- inclusive of the 50,000 allotted which have already been subscribed and Rs. 2,70,00,000/- will cover all the expenses except working capital.

It may be stated here that a portion of land required for the purpose aforesaid has already been acquired at Mouza Raghunathpur (where the said Rayon Plant is proposed to be located) in the District of Hooghly near Calcutta. Negotiations for the purchase of the required land as well as for the parties, are in progress.

Copies of the Balance Sheets and Profit and Loss Accounts on which the report of the Auditors is based and Memorandum and Articles of Association of the Company may be inspected at the Registered Office of the Company during office hours until the subscription list closes.

The Directors may at their discretion, pay brokerage and/or commission at a rate not exceeding 2% of the face value of the shares in respect of shares already allotted or to be allotted by them.

KESORAM COTTON MILLS LTD.—Cont'd.

The financial position of the Company will appear from the Auditors' Report set out below:—

AUDITORS' REPORT

Messrs. BIRLA BROTHERS PRIVATE LTD., Managing Agents, KESORAM COTTON MILLS LTD., Calcutta.

Dear Sirs,

We have examined the books and accounts of (a) Kesoram Cotton Mills Ltd., as kept in Calcutta and Gwalior in which are incorporated the certified returns from the Mills and retail shops for the five years ended 31st March 1956 and (b) Bharat Kala Bhandar Limited, a wholly owned subsidiary of Kesoram Cotton Mills Ltd., which is audited by Messrs. Singhi & Co., Chartered Accountants, Calcutta for the five years ended 31st March, 1956 and report that subject to the completion of the audit for the year ended 31st March, 1956 of both the Companies the profits are as set out below. The audits of the Company and its subsidiary for the year 31st March, 1956 have not yet been completed. These profits have been arrived at after charging all expenses of working and management including provision for normal depreciation on the basis allowable for Taxation and after making such adjustments as are in our opinion, appropriate.

THE IMPORTANCE OF MARKET RESEARCH IN INDIA

SAMPLING TECHNIQUES FOR STATISTICAL SURVEYS

By M. N. Ghosh

MODERN industries are quick to grasp the technical possibilities offered by research in applied science, and in India they have not lagged behind in this respect. But production is only one function of an industrial enterprise; the problems of marketing remain even after the most efficient techniques of manufacture have been adopted. Industries in leading western countries have felt the need for scientifically organised methods of marketing, and research on this subject has become very important. In India, before the war, production was limited to a few specialised channels such as jute, cheap cotton textiles, coal, sugar, etc. The markets for these were well organised and because

of the more or less standardised nature of the products, there was little scope for extension by assessing consumer reactions. That probably was one reason why, despite modern industrial techniques, market research did not gain popularity among business men in India. Now that Indian industry is producing a large assortment of manufactured articles, and consumers have developed a higher level of product-discrimination, it is necessary for business men to evolve marketing methods suited to the new situation. Planning is no less essential in large-scale business than in the Government. A business manager is often faced with the problem of evaluating the market for the expansion programme of the firm or for the introduction of new products and services. There are many established firms which have a wide experience of marketing techniques, but experience produces the best results only when it is reinforced by the use of techniques developed by organised research activities.

The scope of market research has been indicated by the U. S. Department of Commerce in 1932

as "the study of all problems relating to the transfer and sale of goods and services between producer and consumer, involving relationships and adjustment between production and consumption, preparation of commodities for sale, their physical distribution, wholesale and retail merchandising and financial problems concerned." Stated in this form, the scope of market research is very wide indeed, but the more important practical problems can be narrowed down to an assessment of consumer reactions on the specific qualities of products, assessment of sales and advertising campaigns, estimation of the total sales potential for new products or modified forms of old established products, etc. Problems of this nature have to be solved by surveying the populations, and recording the opinions and judgments of people on the various products offered for sales. But it is very expensive and takes a long time to make a complete record, so one has to rely on sample surveys. To ascertain if most consumers who buy soap in a certain price range prefer a white to a coloured soap (or a particular scent), it would be absurd to interview the whole population; only a sample of the population needs to be interviewed. A great deal of the complexity of the problem centres on how to choose a representative sample at a reasonable cost. The survey technique has to be made to fit the budget allocation for the survey.

Sample Surveys

Though the sample survey technique is a modern statistical innovation, based on the theory of probability, it constitutes a basic method of estimating social attitudes, and its simplicity is often a source of error. A person may be inclined to believe for instance, that the new Industrial Policy Resolution of the Government is popular, if most of those with whom he comes into contact think so. But the social and business contacts of a person are determined very largely by his status and activities, and never provide a representative sample of the whole population. Similarly, a firm interested in gauging the reactions of consumers to a certain product may, in the first instance, try to get the information through its own sales organisation. But the section of the consuming population it can reach in this manner is really a sample and one cannot be sure if it is representative of the whole population. Often this method leads to biased judgments due to the non-representative character of the sample. Thus, a firm manufacturing high-grade soap may decide to build market for the cheaper varieties, and then have to ascertain what scents and colours would have the greatest appeal. If it tries to gather the information through its regular sales organisation and from the existing clientele, the information may not have much relevance to the likes and dislikes of those who use the cheaper soaps. Correct information is the more essential when production has been limited to a few standardised varieties in order to reduce costs, as happened in some countries during the war. Unless the products are standardised to suit consumer needs, there will be a surplus in the industry, while the needs remain unsatisfied. Such situations have often arisen because managers have chosen to rely on their own notions of buyers' needs and preferences. Modern market research methods alone provide the scope for objective evaluation and serve as a basis for rational expectation in business planning.

Element of Chance

In any kind of sample survey one has to take chances, because no sample is entirely representative of the population. The problem of the research worker is to minimise the element of chance by choosing the best possible sampling technique allowed by a given budget. Obviously the size of the budget has much to do with the accuracy of survey results. But there is a practical limit, beyond which accuracy becomes only specious, and this sets a limit to the budget, depending on the size and degree of heterogeneity of the population surveyed. The success of a market research programme depends not only on the use of the most modern statistical techniques, but even more on the experience and training of the research personnel. There have been many organised statistical surveys in India during the last two decades, especially in connection with Government work, and a body of trained personnel exists, which will provide a valuable reserve for market research programmes.

*U.S. Department of Commerce, Market Research Agencies, 1932.

KESORAM COTTON MILLS LTD.—Cont'd.

(Continued from page 903)

We also report that the dividends paid by Kesoram Cotton Mills Ltd. out of Profits on its paid up Capital without deduction of tax for the four years ended 31st March, 1955 are as follows. No dividend has yet been declared for the year ended 31st March, 1956.

Ordinary 8,00,000 Shares.		Preference 20,000 7% Cumulative Preference Shares of Rs. 100/- each.	
Year ended 31st March, 1952.	Rs. 1-12-0 per share on 8,00,000 Ordinary Shares of Rs. 15/- each—Rs. 14,00,000.	7% p.a.	Rs. 1,40,000
Year ended 31st March, 1953.	Rs. 1-12-0 per share on 8,00,000 Ordinary Shares of Rs. 15/- each—Rs. 14,00,000.	7% p.a.	Rs. 1,40,000
Year ended 31st March, 1954.	Rs. 1-12-0 per share on 8,00,000 Ordinary Shares of Rs. 20/- each—Rs. 14,00,000.	7% p.a.	Rs. 1,40,000
Year ended 31st March, 1955.	Rs. 1-12-0 per share on 8,00,000 Ordinary Shares of Rs. 20/- each—Rs. 14,00,000.	7% p.a.	Rs. 1,40,000

Note: These Ordinary Shares have since been sub-divided into 16,00,000 Ordinary Shares of Rs. 10/- each.

Calcutta, 14th June, 1956.

Finance in India and Abroad

THE CALCUTTA MONEY MARKET

DEMAND STILL HIGH

Wednesday, 27th June.

THERE has been very little change in the offtake of bank funds during the past week. Demand from all sources remains at a level which is substantially higher than is usual for this time of year. Requirements of the sugar industry are only slightly easier, and those of the jute mills now total some three times their value this time a year ago. There is still considerable call for accommodation on account of seeds and grains in upcountry areas. The interbank market is tight at the unchanged call rate of 3½ percent.

Business in the bill market has been dull in the past few days, with only a few isolated tea bills reported. There have, however, been a few dollar export documents seen on account of gunny shipments to the Philippines. Remittance has been good. Sterling is slightly weaker on the world's markets, and the value of the U.S. dollar has increased to Rs. 477½.

Silver was steady and the price was quoted around Rs. 170-12 today. The rate for ready metal was quoted at Rs. 170-4. The London price advanced to 78½d. The price of foreign silver in New York was the same at 90½ cents.

Gold was easy and declined from Rs. 103-8 to Rs. 102-8. The sovereign at Rs. 66-10 showed a loss of 8 annas.

During the week ended 22nd June, Government of India Treasury Bills for Rs. 7,73,00,000 were sold in favour of the Reserve Bank.

Declines of Rs. 17.45 crores and Rs. 8.51 crores in notes in circulation and the total note issue to Rs. 1,486.86 crores and Rs. 1,516.55 crores were outstanding features of the return of the Reserve Bank of India for the week ended 22nd June, 1956. Notes held in the Banking Department consequently rose by Rs. 8.94 crores to Rs. 29.68 crores. The currency contraction was covered by reducing foreign securities by Rs. 10 crores to Rs. 656.54 crores. Deposits of the Government of India and other Government accounts increased by Rs. 6.78 crores and Rs. 2.74 crores to Rs. 62.58 crores and Rs. 8.01 crores. Balances of commercial banks were Rs. 70 lakhs higher at Rs. 51.88 crores. Balances held abroad were up by Rs. 3.72 crores to Rs. 32.27 crores partly by a transfer from the Issue Department. Investments fell by Rs. 39 lakhs to Rs. 35.99 crores. Other loans and advances declined from Rs. 73.36 crores to Rs. 71.62 crores, of which advances to scheduled banks against usance bills amounted to Rs. 41.91 crores (Rs. 41.43 crores). These advances aggregated Rs. 164.85 crores since 1st January, 1956. Ways and means advances were shown at Rs. 5.01 crores against Rs. 4.099 crores.

The return of the State Bank of India for the week ended 15th June, 1956, shows a fall of Rs. 71 lakhs in total deposits to Rs. 223.92 crores. Investments in Government Securities are up by Rs. 1 lakh to Rs. 90.27 crores, while other authorised investments are down by Rs. 9 lakhs to Rs. 10.49 crores. Advances, including cash credits and overdrafts, and bills discounted and purchased, have decreased by Rs. 1.66 crores to Rs. 137.77 crores. Cash and balances are, in consequence, shown at Rs. 16.65 crores or Rs. 1 lakh higher.

The statement of the position of scheduled banks for the week ended 15th June, 1956, discloses Demand and Time liabilities at Rs. 635.32 crores (Rs. 8.88 crores on account of borrowings from banks) and Rs. 446.73 crores (Rs. 2.82 crores), compared with Rs. 636.36 crores (Rs. 8.71 crores) and Rs. 444.21 crores (Rs. 2.91 crores) respectively in the previous week. Cash has increased by Rs. 24 lakhs to Rs. 37.65 crores, while balances with the Reserve Bank have decreased by Rs. 17 lakhs to Rs. 49.25 crores. There is a drop of Rs. 14 lakhs in investments to Rs. 348.86 crores. Advances and bills discounted at Rs. 764.01 crores show a fall of Rs. 5.02 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.0 percent and 70.6 percent, against 8.1 percent and 71.2 percent.

According to the land-borne trade returns received in the Department of Commercial Intelligence and Statistics, the provisional figures of total value of foreign trade of India by land with Pakistan, Afghanistan, Iran and Burma during May 1956, are as follows (in lakhs of rupees):

	Exports to	Imports from
Eastern Pakistan	10	86
Western Pakistan	1	1
Other Countries	8	19

Total trade amounted to Rs. 139 lakhs. Trade in treasure was negligible and re-exports were nil. There was thus an adverse balance of trade amounting to Rs. 73 lakhs.

The International Bank has raised its interest rates on future loans to member countries. The rates on loans up to 15 years will be 4½ percent and those granted for 16 years and longer will now cost 5 percent a year. Hitherto, there were three rates: 4½ percent up to five years, 4½ percent from six to

10 years, and 4½ percent for 11 years and upwards. The new rates were announced in Washington a few days ago. The Bank has changed its interest rates a number of times in the past. Under its rules it has based its charges on the estimated cost of borrowing money for a comparable period in the United States capital market, where most of the funds loaned by the Bank to member countries are actually raised. In addition, a commission of 1 percent a year is included in the rate for the purpose of creating a reserve against losses. Finally, a small fraction is added for administrative costs. The full interest rate is only charged on that part of the loan that has actually been dispersed. For the balance of the money committed, a charge of 3½ percent is made. The new interest rate for long-term loans is equal to the peak rate of 5 percent to which charges were raised in 1953.

LIFE INSURANCE CORPORATION ACT

According to a notification published in the Gazette of India (Extraordinary) on 26th June, the Life Insurance Corporation Act will come into force on 1st July, 1956. The effect of this will be to enable the Government and companies concerned to take certain preliminary action without waiting for the Corporation itself to come into being. In terms of Section 2 of the Act, the Corporation will be established only on the "appointed day" which will be notified separately later. It is hoped to be able to establish the Corporation some time in August or in September.

GAVE A COPY

and got a copy in just One Minute

Insist on 'Gevacopy' Paper. This is a photographic paper which reproduces letters, drawings, documents and any other printed or written matter clearly and faithfully... in a matter of one or two minutes—usually in just a minute! You can learn to handle this process in a few hours. It is extremely simple and does not even require a darkroom. This process based on the reversal transfer principle was developed by Gevaert chemists and technicians

over the past 17 years. Gevacopy has to be used with special exposing and developing units supplied by the undernoted firms.

MORE TECHNICAL AID GIVEN BY U.N.

ACTIVITIES DURING 1955 REVIEWED

THE year 1955 witnessed a striking increase in the general level of the activities carried out under the U.N. expanded programme of technical assistance. Recorded obligations for the year totalled \$25.8 million, representing, according to the annual report of the Technical Assistance Board, the highest level in the five years of existence of the U.N. programme. Total contributions from 71 Governments amounted to \$27.9 million, as compared with \$25 million in 1954. The T.A.B.'s report prepared for submission to the Technical Assistance Committee of the U.N. Economic and Social Council, describes developments under the programme during 1955, with some details on 1956 activities and brief indications of plans for 1957.

During 1955, 101 countries and territories received assistance in some form and approximately 1,400 international experts were working at the end of the year to promote better living conditions through improved agricultural and industrial production, health, education, public administration and communications. This volume of assistance rendered by the U.N. and the seven participating specialised agencies, says the report, is small in relation to the priority requirements of the less developed countries. Technical assistance projects formed part of larger national development plans executed by Governments and it was not, therefore, possible, to isolate the impact of U.N. technical assistance on the economic development of assisted countries or to measure it in precise terms. Nevertheless, certain examples may serve to illustrate the scope of the programme and some of its accomplishments to date.

In Yugoslavia, expert assistance resulted in doubling one plant's output of cylinder blocks for internal combustion engines and in reducing production costs at an electrical equipment factory by more than 50 million dinars a year. In Jordan, production of phosphate from the Ruseifa mines has been raised from 2,000 tons a month to 20,000 tons. Venezuela has been helped to establish what will eventually be the largest fertiliser and insecticide factory in South America. In the farm mechanization plan of the State of Uttar Pradesh in India, some of the field workshops have increased their output by nearly 300 percent and more than 500 instructors and operators have been trained by international experts. In East Pakistan, work is proceeding on a pilot area of 230,000 acres on the right bank of the Ganges where approximately one-fifth of the main canal has been excavated in co-operation with the International Co-operation Administration and the Colombo Plan; it is expected that irrigation water will be available in the Kushtia area by the end of the present year. In Egypt, programme for increasing wheat and rice production have been undertaken, and in Ethiopia, a development scheme for coffee cultivation has been started. Cotton cultivation trials in Yugoslavia have given a substantially increased yield per acre. In Central America and Mexico, technical assistance experts have helped the local authorities to keep the locust plague under control everywhere but northern Honduras. Suppliers of vaccine to control animal diseases have been built up in Afghanistan, Austria, Burma, Ceylon, Ethiopia, Honduras, India, Iraq, Pakistan, Thailand and Yugoslavia.

In Colombia, an educational programme of radio broadcasts has been started. In Somaliland, the education of nomads is being introduced. In Haiti, over 1,000 rural teachers attended courses. Technical assistance helped the Government of Burma to launch a social security scheme, assisted Iran in the adoption of a new social insurance law and Mexico and Turkey in establishing training centres in labour administration. During the year, about 500,000 persons were treated for trachoma in Morocco and Tunisia and a high percentage of cures has been reported. Epidemic malaria is no longer prevalent in about half of the island territories of the Caribbean and about two-fifths of the estimated population of south-east Asia now benefits from anti-malaria preventive measures. In India, it is estimated that over 40 million people have been

given at least some elementary health education by anti-tuberculosis teams organised with international assistance. A statement of the assistance provided for the different regions during 1955, as compared with past years, is given below.

Planning and Management

The report notes a considerable improvement in the general financial stability of the expanded programme, although the tempo of operations had to be held in check for a while during the first half of 1955. This general improvement enabled the administrators of the programme for the first time since the early days of its existence, to carry out all except a small proportion of the planned operations. The methods used by the T.A.B. in planning the 1955 programme were a forerunner of the new country-programming procedure adopted by the Economic and Social Council in July 1954. Target figures were communicated to Governments that were to receive assistance and, following negotiations between those Governments and the participating organisations, the programme submissions of the latter, based on Government requests, were reviewed by T.A.B. in November, 1954.

"The expanded programme of technical assistance is not only a great adventure in international and economic co-operation," declares the report. "It is an important experiment in combined action by eight international organisations. The year 1955 brought with it enlarged opportunities of service, new responsibilities and some difficult problems for all the participants. Nevertheless it may be said that the arrangements worked well and that their effectiveness in the future would seem to be assured, whatever the level of field activity and expansion of available resources makes possible."

Use of Funds

Approximately two-thirds of the expenditure on projects was used to send experts to requesting countries, while more than half of the remaining funds was devoted to the award of fellowships. The field of activity upon which the largest sum was spent, 6.3 percent of the total, was land and water use, with farm machinery and tools. An almost equal amount (6.1 percent of the total) was devoted to manufacturing, processing and mining, while the third largest expenditure in terms of activity was the 5.8 cent allocated to vocational training. Other leading fields of activity were animal production and disease control (4.7 percent), crop production and protection (4.6 percent), public administration (4.2 percent), civil aviation (4.1 percent), forestry (3.8 percent), fisheries (3.1 percent) and malaria and insect control (3.1 percent).

The improvement in the financial situation in 1955 enabled the participating organisations to increase their provision of equipment needed in connection with their field activities. The total value of equipment supplied during 1955 amounted to \$2,390,000, compared with a previous record figure of \$1,701,000 in 1952. It is felt that the provision of a considerable quantity of training equipment is a vital part of such technical assistance activities as the setting up of a laboratory or a demonstration centre and it is increasingly realised that enduring economic progress can hardly be achieved without an investment in equipment to strengthen such basic institutions. Examples of essential equipment supplied under the programme in 1955 are electronic equipment for India, saw mill machinery for Brazil and Ceylon, farm machinery for Burma, Chile and Pakistan and forestry equipment for Syria.

The report has been prepared in two parts. The first is concerned with the programme as a whole, while the second consists of detailed descriptions of the technical assistance projects undertaken throughout the world. Part one includes a general introduction and chapters on operations in 1955, statements by the participating organisations, administration and financing of the programme and developments and plans for 1956 and 1957. In addition, a number of annexes and figures present a detailed breakdown on the financing, administration and management of the expanded programme.

Stocks and Shares

PRICES MARKED DOWN ON WIDE FRONT

LITTLE INVESTMENT SUPPORT EXCEPT IN TEA SHARES

Wednesday Evening.

THE Calcutta stock market has had a quiet week, with very little business transacted. The past few days have been exceptionally dull and prices sank to new low levels at today's clearing. The reason for the general lethargy appears to be the reluctance of any bull operator to come forward and support the market at these levels. Indian Irons slumped to Rs. 37-3 at the clearing and were later quoted down to Rs. 36-12 after hours this evening. Indian Coppers slid back from last week's level of Rs. 7-8 to Rs. 7-3 on brisk profit-taking. Today's carry-forward charges are slightly lower than usual, which suggests that the market is in fair technical shape, but in the absence of bull support, the present depressed conditions may last for a few days yet.

It is not only the speculative counters which have lacked support during the past week. Jute shares slumped heavily following the news that only 2½ percent of looms are to be re-sealed. Coal scrip have fallen in value due to the delay in the Government's consideration of the industry's claim for an increase in prices. Engineering counters have been quiet, while activity among miscellaneous has been limited. Only tea shares have found ready buyers as a result of improved auction prices and renewed rumours of impending Russian purchases. Government securities have been dull—a fact which has led to rumours that the new loan will not now come to the market before Mr. Nehru returns from Europe.

Details of the week's trading follow.

The Government security market ruled extremely dull and the business reported was on a mediocre scale. Three percent Conversion Loan continued to meet with selling pressure and the price eased further to Rs. 77-4 while 3½ percent Loan Non-terminable Paper was quoted at Rs. 77-6 nominal. In short-dated loans, 3½ percent 1957 had buyers at Rs. 99-13 and 3½ percent 1958 changed hands at Rs. 99-10-6. In the medium-dated group, 3½ percent 1959-61 hardened further to Rs. 98-2-6 while 3½ percent Loan 1963-65 was asked for at Rs. 95-2 and 3½ percent 1964 was traded at Rs. 95-1; 2½ percent 1961 was on offer at Rs. 93-9 but 2½ percent 1960 was taken at Rs. 96-6-6 with buyers over at this price. Among National Plan issues, 3½ percent 1961 shed two annas at Rs. 99-9-6 sellers, while 3½ percent 1964 was on offer at Rs. 98-12 but 3½ percent 1965 met with good enquiry up to Rs. 98-14-6 due to the approach of the half-yearly interest payment date (30th instant). Long-dated loans were easier with 3½ percent 1966-68 on offer at Rs. 93-4 and 3½ percent 1970-75 at Rs. 90-6. There was an enquiry for selected 4½ percent State Loans and although there were no price changes, sellers were reserved.

Little business was completed in preference shares during the week. In jute, Anglo-India were crossed at Rs. 112-12 and Belvedere were reported first at Rs. 110 and then at Rs. 113. A small lot of Auckland 2nd changed hands at Rs. 72 and Lawrence were quoted at Rs. 112. A solitary transaction was done in National Company at Rs. 119. Among miscellaneous issues, a small lot of Burrakur Coal 2nd was placed at Rs. 7-12 and Dalmia Cement Rs. 100 paid-up at Rs. 96. Elgin Mills "B" Preference were crossed at Rs. 9-6. Brooke Bond were marked at Rs. 86-8 and Humayan Properties at Rs. 9-14. Indian Iron & Steel met with enquiry at around Rs. 107-8 and Indo-Burma Petroleum were crossed at the same rate. Martin Burn changed hands at Rs. 104-8 and New Victoria were dealt in freely at around Rs. 4-12. Orient Paper 2nd came to hand at Rs. 74-4 and Rohtas "B" at Rs. 64 while Titagur Paper 1st were taken at Rs. 146.

In the banking section, Punjab National were quoted at Rs. 57-3, United Commercial and Hind Bank were unchanged at Rs. 51 and Rs. 34-8 respectively. United Bank of India were slightly easier at Rs. 4-6.

In the railway section, a solitary transaction was reported in Bukhtiarpur-Bihar at Rs. 10 and Dehri Rohtas were turned over freely at around Rs. 13-11. In the cotton section, Dunbar reacted from Rs. 314 to Rs. 306. Kesoram dropped from Rs. 19-11 to Rs. 18-14 following the announcement of a fresh issue of preference shares. Cawnpore Textile and Elgin Mills were unchanged at Rs. 8-13 and Rs. 28-12.

Interest in coal shares tended to flag and prices were marked down on a broad front possibly because of the delay in announcing the anticipated increase in coal prices. Here is a chart showing price trends of a selected list of shares.

	Opening	Closing
Amalgamated	23 14	22 8 x.d.
Bengal	558	542
Borra	25 9 c.d.	23 10 x.d.
Burrakur	14 1	13 10
East Indian	33 8	33
Equitable	31	30 6
New Beerboom	20 8	19 11

Contrary to the general trend, Raneegeunge were steady at Rs. 12-2 as were Union at Rs. 12-12 and Karanpura Collieries at Rs. 122.

The decision of I.J.M.A. to seal 21½ of the looms in the industry had a bearish effect on the jute section and prices were inclined to soften. The following table shows the representative price movements.

	21-6-56	27-6-56
Agarpara	12 4	12
Anglo-India	168	165
Auckland	128	125
Barnagore	138	136
Budge Budge	140	135
Champdany	163	155
Howrah	23 6	22 8
India	140	136
Lansdowne	120	115
National	24 12	23 14
Reliance	10 12	10

Electric supply shares were featureless with the possible exception of U.P. which were steady at Rs. 143. Agra were unchanged at Rs. 152, Benares at Rs. 17-14, Jubbulpore at Rs. 14-6, Patna at Rs. 11-6 and Calcutta at Rs. 13-6.

With the exception of Ramnugger and U.P., which met with enquiry at Rs. 27-4 and Rs. 21, sugar shares showed little change. A few deals were reported in Carew at around Rs. 10. Balrampur at Rs. 7-4 and Belsund at Rs. 11-15. Cawnpore were crossed at Rs. 20-8 but closed at Rs. 19-12 and Shree Krishna Gyanoday were done at Rs. 13-8.

Less interest than usual was displayed in engineering shares. Prices on the whole tended towards lower levels. Bharia Electric Steel were marked down to Rs. 17-2 and Burn & Co., continued their downward trend to close at Rs. 360. Indian Iron & Steel receded from Rs. 37-14 to Rs. 37-3 on settlement considerations to close at the latter rate. Jessop & Co. were offered at the lower rate of Rs. 34-6 as were Richardson & Cruddas at Rs. 25-12. Textile Machinery reacted from Rs. 23-15 to Rs. 23-2. Marshalls were reported at the lower rate of Rs. 6-8.

In paper, Titagur were offered at Rs. 43-10 and Orient were marked down from Rs. 39-4 to

Built to endure with Concrete

The versatility of concrete for modern styles of architecture is demonstrated in this 13-storied building believed to be the tallest in Asia.

STOCK MARKETS GENERALLY FIRM

OIL AND GOLD SHARES IN GOOD DEMAND

London, 27th June.

GENERALLY firm conditions prevailed in the stock markets during the past week, although buying interest was centred almost exclusively on the oil and gold share markets. A sustained advance in oil shares, a revival of interest in gold shares and the weakness in gilt-edged securities provided the outstanding features of the week. There was little to help the markets generally, but the tone was satisfactory in the absence of any adverse news. Business outside the oil and gold share markets was small throughout. The weakness of gilt-edged followed persistent small selling on a market without support, and substantial losses were recorded prior to the week-end. A spirited recovery was staged on Monday on the view that the fall had been overdone, but the market turned downwards again later, following the weakness of sterling in foreign exchanges. Further local authority issues did not help sentiment in the gilt-edged market. The feature of an otherwise quiet foreign market was the sustained advance in German Potash Bonds, which recorded substantial gains. Activity in the industrial market was at a low level throughout, but the tone was satisfactory and small gains predominated. A number of good features developed due to company news or other specific developments. The Financial Times Industrial Ordinary index was around two points higher compared with the previous level. Sears and Scottish Motor Tractor were active on take-over developments, while Standard Motor went strongly ahead on rumours of a bid, but reacted subsequently following denials. Steel shares were dull on labour disputes. B.S.A. fell sharply following a reduction in the interim dividend. Gold shares had their most active week for a long time, and although they quietened down later, they recorded widespread and appreciable gains. The revival here was assisted by the Chancellor's forecast of possible tax reductions for overseas companies in the next Budget. Coppers recovered their early losses and other base metals improved. Oils were strong, helped by the reinvestment of profits from the Trinidad Oil developments and substantial gains were scored, particularly by British Petroleum and Shell Trinidad. Trinidad Oil

shares themselves were little changed. Rubbers and teas were subdued throughout, but the tone was satisfactory and prices generally were well maintained.

The Money Market

Credit conditions were very comfortable in the London money market during the past week. There was an increased and steadier flow of funds from the main clearing banks and as the discount houses had a smaller bill take-up, borrowers were readily accommodated with fresh money and good business was effected in bills. Rates for day-to-day loans moved around 3½ percent to 4½ percent. It is expected that this week, conditions may change for the worse in view of the approaching half-year-end. To cover themselves, discount houses lowered their prices for last week's offer of Treasury bills, which resulted in an increase of approximately 1/16 percent in the average rate of bills. Applications for £260 million worth of 91-day Treasury bills totalled £358,690,000, and were allotted at an average rate of 10½ 8.17d against 100s 4.20d in the previous week. Offerings this week consist of £280 million worth of 91-day bills. The Bank of England return for week ended 20th June showed that bankers' deposits were £5 million higher at about £231 million, while notes in circulation were £4 million higher at around £1,879 million.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 20th June shows gold stocks \$1 million higher at \$21,798 million. Foreign deposits declined by \$18 million to \$326 million, while foreign investments rose by \$26 million to \$3,729 million. The Federal Reserve made no alteration in its holdings of Government securities. Total discounts and advances rose by \$56 million to \$752 million, while aggregate excess reserves of member banks declined by \$155 million to \$367 million. The daily average excess of member banks rose by \$81 million to \$606 million, while their daily average borrowings rose by \$22 million to \$764 million. Business loans of the New York city banks expanded by \$377 million to \$10,209 million, compared with an increase of \$26 million to \$8,074 million a year ago.

Hongkong Gold Improves

Improved activity was noticeable in the Hongkong gold market after the middle of last week, following the trend of sterling. Bullion dealers are of the opinion that the steadiness is likely to continue. Opening the period at \$(H)255½, prices moved fractionally until the market steadied to \$(H)256½ on Friday, which was the period's high.

It closed at \$(H)255½. Carry-over charges totalled 77 cents in sellers' favour. Official offtake amounted to 4,140 tael and unofficial to 18,900 tael. Arrivals at Macao totalled 50,000 ounces. Forward contracts were done at \$(U.S.)37.9.

Quicksilver Prices

European quicksilver prices continue to ease with the spot metal offered at \$257 to \$260 a flask of 76 lbs, against the previous range of \$260 to \$262. The domestic consumers' demand was light, while spot supplies were described as adequate. Mexican quicksilver for July shipment from that country, it was reported, was quoted around \$255 a flask. There were reports in the trade that the U.S. Government had contracted to purchase some 10,000 flasks of Italian quicksilver at or around \$231.5 a flask.

Platinum Sags

The price of free platinum in the U.K. continued to show a sagging tendency, and is currently indicated at around £374 a troy ounce compared with around £38 recently. Dealers say that the present price of the metal is largely nominal because of a lack of trading interest. The two leading refiners in the U.K. continue to quote £34 to their established customers.

London

SIR ANTHONY RELIES ON TALKS TO SECURE PRICE STABILITY

T.U.C. WANTS GOVERNMENT AND EMPLOYERS TO ACT FIRST

(FROM OUR LONDON CORRESPONDENT)

SIR ANTHONY EDEN stated categorically in the House of Commons the other day that the Government has no intention to legislate for the freezing of prices, profits and wages, believing that the best results in this respect can be secured from co-operative discussions and a proper appreciation by all sides of the present economic situation and the need to hold prices. It is difficult to see how anything concrete can emerge from this policy of individual discussions between Ministers, the employers and the T.U.C. leaders; but the fact remains that the employers have at least indicated their willingness to play their part if the nationalised industries and labour will also come forward to do the same. The Prime Minister is seeing the chairman of the nationalised industries this week, but two of them, of the Central Electricity Authority and the National Coal Board, have anticipated what he means to say to them by announcing that, unless something unexpected happens, their present prices will be held for a year. Only labour's attitude is still open to some doubt. That is not to say that the T.U.C. has any doubts about the need for stable prices, but it has hitherto emphasised that the lead must come from the Government which must cut its own expenditure, and the employers who must cut profits and dividends; then labour might be expected to make its contribution by moderating wage claims.

The Prime Minister was to have met the nationalised industries' chairmen this week, but has postponed the meeting. It now looks as though these preliminary discussions were all carefully planned and timed. This week the Chancellor of the Exchequer will present to the Commons an interim list of cuts in Government expenditure totalling some £80 million of his target of £100 million. The Government's action in making serious economies in its own demands on available labour and materials is calculated to give an atmosphere of realism to the talks with industry. About £50 million will be saved in the defence field and some £30 million in civil expenditure. For the first time since the war, departments have pruned drastically not only their estimates but also their actual current expenditures. In both defence and civil expenditure the savings are being made by "trimming the fat." There is no alteration in the basic pattern. The social services are not being cut. Home defence, including civil defence, is making the biggest contribution. The savings are being secured by cutting establishments, maintenance costs and building, and by running down stocks.

Checking Inflation

This succession of events might almost be called an economic "squeeze" policy in a different direction, and if it proves as successful as the credit squeeze is now turning out to be, all may not yet be lost. Concrete signs of the cutting in expenditure by local authorities are now available. The value of loans "sanctioned" during the first quarter of this year is well below the figure for the same period of 1955. It is not possible to say at this stage whether fewer loans are being put up for sanction or whether the Government is rejecting a higher proportion: it is probably a bit of both. The sanctioned figure for the first quarter this year was £155 million, compared with £168 million, £172 million, £155 million and £124 million for the same periods of 1955, 1954, 1953 and 1952. Sanctions last year were at a peak—£622 million, against £583 million in 1954-55 and £604 million in 1953-54. As expenditure on housing (70 percent to 75 percent of the total) declines, sanctions can be expected to fall further.

The quarterly analysis of bank advances issued by the clearing banks shows how the banks are responding to the Government's request to favour the "essential" borrowers. The total of advances has remained remarkably steady for six months now. If the gas and electricity borrowings are left out, the total for May was £1,894 million, against £1,903 million in February, £1,900 million in November, and £2,008 million last August. The vaunted 10 percent cut which we heard so much about has not been achieved, but there have been some significant changes in the composition of the total which are clearly the result of official exhortations. Loans for hire-purchase finance companies are down to £31 million, a drop of £5 million on the quarter and of £10 million over the year. The "personal and professional" loans have fallen further—£335 million in May, against £348 million in February and £401 million a year ago. This fall of £66 million made room for a rise in the engineering and metal working groups which have gone from £187 million to £243 million in the same period. These are the main changes. Textiles, agriculture, food and drink and the "unclassifiable industry and trade" group are all down, though only slightly. Loans to public utilities (in effect, to gas and electricity) are up to £89 million in May against £58 million in February, but this figure should fall soon when the new method of financing the nationalised industries starts.

Pioneer Industries Overseas

Mr. Macmillan's confidence in his economic policy was displayed in an assurance he gave in Parliament during the Finance Bill debate that next year he would introduce legislation to give tax

reliefs to pioneer industries operating overseas—an assurance welcomed both by his own supporters as well as by the City. He said that this would apply to profits earned after 6th April this year. The Chancellor explained that to alter the law to relieve overseas trade corporations, as recommended by the Royal Commission on taxation, would be too big an operation to include this year. The cost to the Exchequer would be about £75 million. It would also be more complicated legislation. The acceptance of the principle that companies operating overseas should be entitled to tax relief is regarded as of considerable importance. A number of Conservatives have been pressing for this change for the past five years. The City will certainly welcome the Chancellor's promise to consider in the future tax reliefs for overseas trade corporations. Failure to make any start on overdue reform of company taxation in the last Budget, and particularly in taxation of overseas profits, had caused much disappointment. As Mr. Macmillan pointed out, overseas tax relief would undoubtedly result in a moderate loss of revenue. This loss would be greatly outweighed eventually by the encouragement given to British investment in the Commonwealth and elsewhere.

May Trade Details

The most encouraging feature of the detailed trade figures for May, which have just been released, is the way the United Kingdom is selling more in hard-currency markets. The record in the dollar area is impressive: during the first five months of this year exports were 32 percent up on the same period of 1955. In May, if the two special items of the return of lend-lease silver to the United States and the delivery of the *Empress of Britain* to Canada are excluded, the gains were well spread, machinery, cars, textiles and ships doing best in Canada, and aircraft, machinery, metals and consumer goods being the best items in the United States market. Exports to O.E.E.C. countries are improving too, but at nothing like the same rate. The first five months are only 2½ percent up on last year. Exports to the sterling area are down. In the last two months they have been running at a rate 3½ percent lower than during the first three months of the year. This trend is not surprising and, from the point of view of the reserves, not wholly unwelcome. On the import side the pattern is little changed. Steel imports fell heavily in May as a result of the lower car output. But imports of iron and steel during May were still worth £55 million, against £32 million last year. The dollar content was steady at the equivalent of £17 million. High exports by the engineering industries demand heavy imports. There seems to be little chance of any fall in the total import bill, and our salvation rests on continued success with exports.

Another Mission to India

A technical mission representing leading British engineering firms will be arriving in India in the autumn to advise the Government of India on the further extension of heavy machinery manufacturing capacity during the second plan. Following discussions with the Government of India, the mission will be jointly sponsored by the Colombo Plan and the Federation of British Industries. Sir Graham Heymann, President of the F.B.I., said, when announcing the fact in London, that the Federation was glad to have been able to initiate this important step in furtherance of Indo-British trade and industrial co-operation. The personnel of the mission is under consideration and preliminary work will be completed in London before the mission leaves. The Government of India has made it clear that it is determined to see heavy machinery produced in India on a large scale.

Duke of Edinburgh's Study Conference

The delicate task of choosing who shall, and who shall not, attend the Duke of Edinburgh's study conference on the human problems of industry next month has just been completed. Judging from the list of managers, trade unionists and workers from the United Kingdom, the organisers have done a scrupulous job. Of the 90 names on it, half belong to the "bosses' side" of industry and the rest to the "men's side." The same care over protocol has been devoted to the number of places allocated to each Commonwealth country. Canada leads with 30 seats, followed by Australia and India with 25 each. Pakistan is well down the list, but the organisers presumably try to forestall any

jealousy or hurts to national pride by explaining that all members have been invited as "individuals and not as delegates."

Steel Output Drops but Stocks Rise

For the first time for many months, the production figures issued by the Iron and Steel Board show that the weekly average output of ingots and castings in May showed a drop of nearly 25,000 tons compared with that for April. This was largely due to the ban on overtime by maintenance men in support of wage demands. The Board's figures show that the weekly average output of steel in May was 396,400 tons, compared with 421,100 tons in April. The annual rate of production last month was 20,612,000 tons, against 21,896,000 tons in April. The May figures also show a decline on those of May last year. Then the weekly average was 401,600 tons, and the annual rate 20,884,000 tons. The Iron and Steel Board has also been making special enquiries about steel stocks. These are usually made twice each year, but this year the Board of Trade asked it to make a special enquiry into the position at the end of the first quarter. The results are now available. They show a distinct and sharp change in the rate at which consumers and merchants have been accumulating stocks. During 1955 stocks in their hands increased at an average rate of 1.8 percent a quarter. Through the post-war period the average quarterly rate of increase was 1.1 percent. But in the first quarter of 1956 stocks increased by 7.8 percent. Supplies, it may be noted, have increased very sharply. Deliveries to the home market were up by 12.8 percent in the first quarter. In April, 1956, they were 16.3 percent higher than in April, 1955. This increase in supplies went mostly into stocks. In the first quarter, when supplies increased by 12.8 percent, the use of steel increased only by 6.5 percent. Stock accumulations were more strongly marked in some lines than in others. Consumers' stocks of tinplate rose from 1,207,000 tons in December, 1955, to 1,328,000 tons in March, 1956. Their stocks of sheet rose by 9.6 percent and of plate by 8.1 percent. Unfortunately, it does not follow that the steel shortage is over. The men engaged in supplying steel to industry say that they are still unable to meet demand and do not even feel in sight of being able to do so.

U.K. Airlines in 1955

The United Kingdom airlines carried 2,990,000 passengers on scheduled services during 1955, according to a report issued by the Ministry of Transport and Civil Aviation. This was 22 percent more than in 1954, and the total of 7,807 million passenger miles flown meant an increase of 19 percent. The total traffic carried went up by 21 percent to 246 million ton miles, and freight traffic rose by 36 percent to 48 million ton miles. Compared with 1954, British Overseas Airways Corporation's total of 346,000 passengers carried meant an increase of 23 percent, and the 1,001 million passenger miles flown, an increase of 14 percent. Freight ton miles rose by 23 percent on B.O.A.C.'s eastern routes, and by 3 percent on western routes. British European Airways carried 2,157,000 passengers, 18 percent more than in 1954. On international services 496 million passenger miles were flown, an increase of 25 percent, and on domestic services 192 million, an increase of 19 percent. B.E.A. freight and mail ton miles increased by 45 percent and 35 percent, respectively, on domestic operations, and by 22 percent and 21 percent respectively, on international operations.

Breivites

The Government has now called a meeting of plenipotentiaries from all countries to ratify the International Tin Agreement to be held in London on 29th June. The meeting will decide when the International Tin Pact comes into effect.

To ensure that aluminium scrap metal is retained in Britain, the Board of Trade has announced that the export of certain aluminium and aluminium alloy goods to any destination will be subject to licence as from 11th June.

The Treasury is making an adjustment in the sterling holdings of the Exchange Equalisation Account and £300 million will be returned to the Exchequer this month. This is a technical adjustment resulting from an accumulation of sterling in excess of the equalisation account's current requirements.

NON-FERROUS CASTINGS

MARINE PROPELLERS

Marine Propellers in Manganese Bronze, to Lloyds, British Corporation, Bureau Verites or any other Inspection Authority's specification, machined, keywayed and balanced, are made in our Mechanised Non-Ferrous Foundry.

UNIQUE IN LUXURY... IN SPACIOUSNESS... IN ELEGANCE

President Classic
AND *Commander* 1956

PRODUCTS OF

STUDEBAKER-PACKARD

WITH THE
ALL-NEW
V8
(Over Head Valve)
ENGINE

The big new PRESIDENT CLASSIC and COMMANDER are stand-outs in comfort, performance and safety. Designed and produced after the merger of the Studebaker and Packard Corporations, they carry the impress of Packard's prestige engineering and craftsmanship and Studebaker's leadership in styling.

They are powered by the world's most efficient V8 Engine. The conventional six cylinder engine, designed in pre-war years, is an out-dated type of power unit now being discarded by leading automobile manufacturers in America.

In India, the President Classic and the Commander alone are powered by a perfected Over-Head Valve V8, which is the most powerful engine manufactured in this country.

New features like the Pyramid design low-level ride, dual safety-action brakes, new safe-lock doors, "Cyclops-eye" speedometer, plus all-steel "shield of protection" body, make these cars ideally suited to today's motoring needs.

The COMMANDER is a unique car in its price-range and the grand new extra-spacious PRESIDENT (120 1/2" V.V.B.) is the only LUXURY car available in India.

Madras

IMPLICATIONS OF BELLARY BY-ELECTION

MAIN AIMS OF LAND REFORM IN ANDHRA

FROM OUR MADRAS CORRESPONDENT
THE success of the Kannada candidate against his Telugu rival in the Bellary by-election seems to have settled the issue of the transfer to Mysore of six Kannada taluks, including Bellary town. The result shows that no boundary dispute need arise, and the by-election is treated as the end of Telugu agitation for the inclusion of Bellary in Andhra. This has apparently contributed to the successful inter-State negotiations for running the Tungabhadra project jointly. Both Governments want the high-level channel to be enlarged and a larger area to be brought under irrigation. The headworks are located in Mysore, but the water will be available to parts of Hyderabad. A plea for raising the outlay to Rs. 14 crores has been addressed to the Planning Commission by Mr. Sanjeeva Reddi.

"Ryotwari" to Stay

With the land reforms Bill on the anvil, the Andhra Government has taken steps to extend the ryotwari system. The idea of a ceiling on holdings is in the background, and the main change proposed is the reduction of rent on small farms to the advantage of cultivating tenants. The exhaustive enquiries by the Subba Rau Committee have induced the Andhra Government to consider only the

extension of the ryotwari tenure, and to desist from interfering with crop-sharing arrangements for the present. The pace of agrarian reform in Andhra is likely to be slower than in Tamilnad, chiefly because the well-marked differences between Rayalaseema and the Circars preclude any radical changes in the tenancy law. The incorporation of Telengana will, of course, entail some changes later in landlord-tenant arrangements, but the Andhra Government is now more concerned with the removal of its offices from Madras to Hyderabad.

The chief result of this transfer will be that about 15,000 people will leave Madras city. Real estate values, which have fallen since 1953 here, are not likely to improve. The withdrawal of the Andhra districts from the composite State has had the result of promoting the growth of major Andhra towns. But the municipal administrations have proved unequal to their task, and two important municipalities, namely, Guntur and Vijayawada, have been superseded recently. The usual protests have been made, but the decision has been welcomed by the public. The improvements needed by the rate-payers may be effected by the executive officers who have long experience of municipal administration.

Government Employees' Grievances

The failure of the non-gazetted officers' deputation from Madras to Delhi for securing parity in their salary scales with Central Government servants has led to doubts about the next step they have to take in line with the decisions of the last conference. The Chief Minister has given a vague assurance about an upward revision of pay scales when circumstances allow. Since the Prime Minister has expressed the inability of the Central Government to interfere in the dispute, it is recognised that representations to the Madras Ministry alone are possible. The officials have again been advised about the need for family planning. But as Dr. A. L. Mudaliar told Secretariat officials recently, incentives are necessary to raise the quality of work, such as by offering greater opportunities for promotion. Low-cost housing schemes could help, but in Madras city, the Improvement Trust is operating in a few chosen areas and has been unable to do much. This is because the instalment plan for the sale of houses which the trust builds, is not a subsidised one such as that for the working class.

Traffic Handling on Southern Railway

The Public Relations Officer of the Southern Railway told the Press here that additions to rolling stock on the metre gauge and broad gauge in the next five years would help meet the demand for traffic. There has been a hint that 424 miles would be dieselised. The railway intends to prevent the entry of unauthorised persons into its premises, and to promote the careful handling of parcels. The public has been asked to pack and label all consignments properly. The progress of the Quilon-Ernakulam line undertaken in the last four years has been substantial. Of the proposed 96.5 miles, 42 miles have been completed; 17 major bridges out of the projected 34 are ready, and 12 more are under construction. The fears about the inadequate allotment for the railways under the second plan have not been dispelled by the promise to re-model sections or double track. The starting of more wagon-building plants, preferably in the south, is advocated. In Meenambakkam, near Madras, metre gauge wagons are being assembled by Binny during the last two months, but more engineering enterprises are ready to undertake this kind of work. The concentration of the engineering industry in Calcutta may not seem satisfactory, but except for the subsidiary of Binny which has turned from textiles to engineering, there are very few undertakings capable of doing large-scale contract work.

Decimal Coinage

During a talk with reporters, Mr. Deshmukh indicated that his views on the decimal coinage system were unaffected by Mr. C. Rajagopalachari's comments. Deficit financing with the proper safeguards, he felt presented no dangers, and his experience under the first plan had made him shed his fears. Mr. Deshmukh had no mention of Mr. Kaldor's proposals for increasing the yield from income-tax by checking evasion. The Kaldor report, which is being examined by the Centre, contains little consolation for the States. One important point made by the Minister was that the formation of Dakshina Pradesh would not lead to any increase in the allotment of funds for Madras under the second plan. In this State, the big schemes are the Nelveli project, for which the Centre has contributed money, and the Kundah hydel scheme, for which Canadian aid is now assured. Objections based on regional disparities in development have been dismissed as of little consequence, as the plan relates to India as a whole and Madras does not offer the same advantages as Bhopal for the location of a plant for heavy electrical equipment manufacture.

COLOMBO PLAN TRAINEE FROM INDIA AT LEEDS

Among trainees now in the U.K. under the Technical Co-operation Scheme of the Colombo Plan is Mr. S. Hariharan Iyer, of Trivandrum, who is engaged in research work for his Ph.D. in the department of electrical engineering at Leeds University. Mr. Hariharan Iyer, a 32-year-old lecturer in physics at Travancore University, is investigating ultra-short-wave and micro-wave techniques. He arrived in the U.K. in April for a two-year stay. When he returned to India, he said, he would like to inaugurate a research course on the same subject at his own university.

Plantation Topics

RECORD COFFEE OUTPUT IN 1955-56

PROPAGANDA DRIVE TO BOOST DOMESTIC CONSUMPTION

IN his address at the Coffee Board meeting on 22nd June, Mr. K. Srinivasan said: "The year we have had a record crop. The last record, established only in 1953-54, is now eclipsed. The receipts into the pool so far are 33,172 tons, and it is possible that these figures may be further improved to some extent. The estimates for the 1955-56 crop were placed at 28,795 tons at the February meeting of the Marketing Committee, and at 30,000 tons at its meeting in April. It is obvious that it was not possible to foresee in the earlier months of the year that we would be exceeding in actual performance these estimates and also breaking all records this year again. One remarkable feature this year, which I hope will be maintained in future years also, is that the proportion of Cherry coffee to Plantation produced is low: perhaps the lowest so far. The total receipt of Cherry coffee into the pool as on 31st May, 1956, was 5,030 tons, which represents only about 23 per cent out of the total Arabica coffee delivered into the pool.

"The next year's prospects seem to be equally optimistic from all accounts, as far as one could see now, and the very rough preliminary estimate is round about 33,000 tons. The seasonal conditions have been fairly satisfactory, although in certain areas the rains were premature or delayed. We seem to be getting into a period now where a crop of over 30,000 tons would be normal. The matters of increasing the resources of the Board—financial and warehousing—to handle the increasing production have been under consideration of the Board for some time past. These questions are incidental to larger production. Coffee comes into the pool with a rush in the course of a few months but, after the requisite time for curing and preparation for the market, has to be necessarily marketed gradually.

Exports

"As resolved by the Marketing Committee and agreed to by the Government of India, the Board was to sell for export out of the 1955-56 coffee crop 4,100 tons (i.e., Plantation 2,850 tons, Arabica Cherry 650 tons and Robusta 600 tons). Of these, all but 250 tons of Arabica Cherry which have been kept by for monsooning have been sold. The prices were fairly high in the months of March and April but in later months, they have shown a slight decline. The Marketing Committee has just resolved that another 3,700 tons (3,000 tons Plantation, 100 Cherry and 600 Robusta) may be exported.

Of the quantity sold for export, 500 tons were sold through the State Trading Corporation to Russia and the coffee was shipped a few days ago. Out of the 1954-55 crop, in January of this year, 275 tons of Arabica Cherry coffee were sold for export.

Internal Market

The total offtake in the internal market each month since January 1956 has ranged from 1,700 to 1,900 tons, at an average of about 1,825 tons. The monthly sales through the various channels being 1,300 to 1,600 tons in pool sales, 160 to 250 tons in local sales, 75 to 160 tons through co-operative societies, and 70 to 130 tons through the Propaganda Department.

The range of prices at the pool sales was: Plantation A ... Rs. 191-2 to 235-15 a cwt. A. Chy. Flats ... Rs. 140-11 to 194-5 a swt. Rob. Chy. Flats ... Rs. 140 to 178 a cwt.

With a more than usually good crop, fairly good prices for export coffee and judicious releases for the export and the internal markets, it is hoped internal prices would remain stabilised during the rest of the year and also give a reasonable return for the producers.

Development Plan

"The plan for increasing the production of coffee has been sent to the Government of India and we are awaiting orders thereon. I understand that there will be very little difficulty in finding the loan part of the finances for it. The non-recurring charges as well as the establishment charges for administration of the plan will however have to be met by the Coffee Board in accordance with the policy of the Government, according to which such expenditure on any development scheme should be met by the industry itself.

"The Government of India is desirous of deputing the Officer on Special Duty and an Officer of the Research Department to make a survey in the Andaman and Nicobar Islands to explore the possibility of coffee cultivation there. It has now agreed that the expenditure on these officers should be borne by itself. It is proposed to send them to undertake this survey immediately after the Director of Research returns from East Africa.

Propaganda

"With the increase in the production of coffee every year, the need for increasing the consumption of coffee in the home market cannot be overstressed. I mentioned at the last meeting that the Propaganda Committee was considering a draft plan for propaganda and, since the Propaganda Committee has approved this with certain modifications. The main proposals of this plan are to have a propaganda unit in all the State capitals, gradually

to shift the emphasis of propaganda from south to north India, and to have only coffee buffets and depots in South India, as far as possible. With this policy in view, the India coffee houses at Alwaye and Nagercoil have been converted into powder depots and the India Coffee House, Bellary, into a buffet. In the north, arrangements are nearing completion to open a buffet at Rourkela for the employees of the steel plant there. In addition to this, certain proposals for a publicity campaign for "Drink More Coffee" are under consideration. Efforts are being made to get suitable premises for opening coffee houses at Banares, Aligarh, Kanpur, Bhopal etc."

The Government of India has recently sanctioned a scheme of granting loans to small coffee planters through State Governments to enable such planters to build quarters for plantation labour. The report of the Plantation Enquiry Commission, it is understood, is being finalised, and will be submitted to the Government shortly.

LONDON TEA SALES

AT last week's London tea sales, the 63,815 packages on offer realised an average price of 4s 1.11d a lb. against 4s 2.95d in the previous sale and 3s 7.70d a year ago. Plain broken pekoe was quoted at 3s a lb. nominal; in the previous sale, same. Prices obtained by some of companies are given below:

	No. of packages	Average a lb.
Amalgamated	570	3/11
Anglo American	402	4/3
Assam Cons.	921	4/0 1/2
Assam Frontier	1,138	6/

Tea Corporation	330	4/8
United Planters	522	5/2 1/2

U.K. Tea Stocks

U.K. tea stocks in London and provincial warehouses on 15th June amounted to 109,000,980 lbs. against 103,141,830 lbs. in the previous week. Total amount to be landed on 15th was 11,617,870 lbs. Deliveries during the week totalled 9,589,580 lbs. Landings during the same period were 15,488,730 lbs. Total offtake on 15th June were 37,693,056 lbs. including 24,854,990 lbs. from Calcutta.

TEA PROMOTIONAL CAMPAIGN IN U.S.A.

DURING the first four months of 1956, the U.S. Tea Council's campaign has moved through a period of intensive review and activity. Significant changes have been made in the sales approach to increasing tea consumption. The new pattern of advertising follows the proved philosophy basic to successful tea promotion in the U.S.A.—to concentrate the advertising so that one talks to the same people often enough to move them to action. In addition to concentration in selected markets for shorter periods of time, all the television spots will run only during evening viewing hours in 1956, instead of being split between day-hours and evening viewing periods. This step has been taken to concentrate a superior sales situation, which is considered a predominant of television spots has been created and produced for this summer based on a new assumptive sales approach. Deliberately ignoring the customary use of reiteration of a series of specific sales arguments, the new theme asks this simple question: "Why don't we have iced tea more often?" As projected, this provocative question is asked by a man of his wife. They are pictured in relaxed home settings and as the short drama unfolds in the television and radio spots the decision is reached to have iced tea more often.

The new assumptive approach was developed after a comprehensive motivational research study revealed that the old approach, while effective, was limited in its appeal. It has been portraying iced tea as a quick relief from heat, the best refresher when summer weather makes you feel uncomfortable. The research contained strong evidence that iced tea should be coupled with the pleasant, enjoyable side of summer. It should be relaxed, easy-going, slow-paced—to present iced

tea as a beverage of pleasure that eases tension rather than a beverage for pain that releases tension. The publicity programme for this summer has been re-styled to support the new advertising theme. Seventy-nine percent of the people use sugar in their iced tea; 57.5 percent use lemon. With these facts as the springboard, the Tea Council has produced material for all three products and each organisation will be out in the field selling, retailers, and through them the consumer, the basic idea that iced tea is the best summertime refresher.

FIRST MODEL TEA FACTORY FOR KENYA

Tea growers in the Nyeri district of Kenya have subscribed £58,000 to build the colony's first model tea factory. It is to open in September, and will be the focal point of a new industry in the area. The factory will also process the tea planted across the border in Embu district until the tea acreage in Embu is sufficient to warrant the setting up of a factory there. Work on the Nyeri factory began in March at Ragati, seven miles west of Karatina on the slopes of Mt. Kenya. Loan funds for the building from the Central Province African-grown Tea Board are to be returned by a cess on each pound of tea produced in the district.

COCHIN TEA SALES

At Sale No. 17, 1,250,000 lbs. of tea were on offer. There was rather a better demand for Low and Medium types though the prices were irregularly 2 annas lower. There was a good enquiry for better liquoring and Whole Leaf grades. The Middle East types were strong and dearer.

COLOMBO RUBBER PRICES

The following prices have been issued by the Rubber Board of India from the weekly market report published by the Colombo Brokers Association:

Sheet:

	Closing prices on 15-6-56 (Rupees a lb.)	Average for the period (Rupees a lb.)
No. 1	1.41	1.41
No. 2	1.38	1.38
No. 3	1.35	1.35
No. 4	1.11	1.11
No. 5	1.06	1.06
Sheet Cuttings 1	.75	
Sheet Cuttings 2	.70	

Crepe:

Water White	—	—
R.M.A. No. 1X	1.17 Nom.	1.16 1/2
R.M.A. No. 1	1.15/16	1.15
Crepe No. 2	1.13 1/2	1.13 1/2
Crepe No. 3	1.11 1/2	1.11 1/2

Scrap Crepes:

Sc. Crepe No. 1	.80/82N	.81
Sc. Crepe No. 2	.72/76	.74
Sc. Crepe No. 3	.66/72	.68 1/2
Flat Bark	.60/65	.62 1/2
Sc. Crepe 3X		.71

To arrive at f.o.b. Colombo prices add 53.45 cents a lb. in respect of rubber other than scrap crepe and 31.45 cents in respect of scrap crepe to the above market prices.

INDUSTRIAL INCOME IN U. P.

TRENDS INDICATED BY THE CENSUS OF MANUFACTURES

By Harish Chandra

IN terms of capital and employment, Uttar Pradesh ranks third among the industrial States of India. Bombay is first and West Bengal second. The results of the *Census of Indian Manufactures, 1953*, published recently by the Directorate of Industrial Statistics, Government of India, show that there are 618 factories in U. P., engaged in 29 major industries covered by the *Census*. The total productive capital they employ is Rs. 63,38 lakhs. The number of employees is 170,560. The value of gross output is Rs. 112,74 lakhs, and that of net output (computed after making allowance for the value of input and depreciation) Rs. 28,25 lakhs. The value of net output measures the income generated in the manufacturing sector, and it is this income from which the employees are remunerated, overhead expenses met and interest and taxes paid before profits accrue to the entrepreneur. Any increase or decrease in industrial income is therefore of major importance for the business community.

The industries which make a substantial contribution to the income of U. P. are sugar, cotton textiles, woollen textiles, vegetable oils, general engineering and electrical engineering, chemicals, paper and paper board, tanning, distilleries and breweries, and iron and steel. These may be considered the major industries of the State. Their contribution to the industrial income of U. P. in 1953 is shown in the table below:

Industrial Income in U.P. in 1953.			
Name of Industry.	Value of net output.	Percentage of the total.	
1. Sugar (excluding Gur)	Rs. 11,99,43,989	42.5	
2. Cotton Textiles	8,43,43,577	29.9	
3. Vegetable Oils (excluding Vanaspathi)	65,47,214	2.3	
4. General Engineering and Electrical Engineering	93,74,252	3.3	
5. Chemicals	82,91,753	2.9	
6. Paper and Paper Board	43,27,159	1.5	
7. Tanning	47,66,522	1.7	
8. Distilleries and Breweries	35,97,073	1.3	
9. Iron and Steel	18,43,190	0.7	
10. Other Industries	3,94,42,991	13.9	
Total	28,24,78,320	100.0	

The size of the industrial income during the last eight years for which Census figures are available has varied considerably from year to year, as the following statistics show:

Industrial Income in U.P. from 1946 to 1953

Year.	Industrial Income (000 Rs.)	Index number of wholesale prices adjusted with 1946 as base year.	Industrial income at 1946 price level (000' Rs.)	Percentage increase (+) or decrease (-) over 1946.
1946	21,71,00	100.0	21,71,00	—
1947	27,52,37	111.5	24,68,49	+13.7
1948	31,60,68	137.6	22,97,01	+5.8
1949	23,92,13	142.9	16,73,99	-22.9
1950	25,65,12	150.2	17,07,80	-21.3
1951	29,73,61	164.7	18,05,47	-16.8
1952	27,23,80	145.1	18,77,19	-13.5
1953	28,24,78	147.7	19,21,51	-11.9

Industrial income (at a constant price level) was thus high during the first three years of the period under study. There was a steep fall in 1949, when it dropped to about 23 percent below the 1946 level. It rose steadily thereafter but, even so, in 1953 it was about 12 percent less than in 1946 and about 22.5 percent less than the peak level of 1947.

Slightly similar trends are brought out by the following table indicating the value added a worker. As in the case of total industrial income, the value added a worker was the highest in 1947. Then it began to decline and the trend was arrested only in 1951. Yet, the index for 1951 was 16 points lower than 1946 and 30.7 points lower than the highest reached in 1947. In 1952 and 1953, the value added a worker was even lower than in 1951.

Year.	Workers employed.	Total value added at 1946 level of prices.	Value added a worker.	Index of value added a worker with 1946 as base.
1946	144,188	(000 Rs.) 21,71,00	Rs. 1,506	100.0
1947	143,079	24,68,49	1,725	114.5
1948	150,601	22,97,01	1,525	101.3
1949	142,040	16,73,99	1,179	78.3
1950	145,909	17,07,80	1,170	77.7
1951	143,009	18,05,47	1,262	83.8
1952	150,915	18,77,19	1,244	82.6
1953	154,734	19,21,51	1,236	82.1

The rise and fall in industrial income, both in the aggregate and in the value added a worker, are conditioned by many factors. The relationship between input and output and the percentage of the capacity utilised is important. The table below presents the relationship of the input (as represented by the value of materials, fuels, etc., consumed at factory work done for factory by other concerns and depreciation) to the value of gross output (as represented by the ex-factory value of products and by-products manufactured for sale and work done by the industry for customers).

Input and Output

Year.	Output.	Input.	Input as percentage of output.
	(000 Rs.)	(000 Rs.)	
1946	71,41,13	49,70,13	69.5
1947	97,39,00	69,86,67	71.7
1948	1,08,83,87	77,23,19	70.9
1949	1,00,74,02	76,81,89	76.2
1950	1,06,49,96	80,84,84	75.9
1951	1,37,09,33	1,07,35,72	78.3
1952	1,15,28,37	88,04,57	76.3
1953	1,12,74,17	84,49,39	74.9

During the first three years, the value of both input and output showed a steady and comparable rise; input accounted for 71 percent of the value of gross output. From 1949, the value of output was less compared with the value of input. Consequently, during the last five years of the period under study, input began to account for about 76 percent of the value of gross output. The rise in the prices of manufactured goods during these years was less than the rise in the prices of industrial raw materials. This is borne out by the index numbers of prices shown below:

Index Numbers of Wholesale Prices.

(Base: Year ended August 1939=100)

Year	Industrial Raw Materials	Manufactured Articles
1946	Not available.	Not available.
1947	365.3	276.6
1948	430.5	340.6
1949	463.9	343.9
1950	503.2	348.4
1951	608.2	395.5
1952	453.8	377.5
1953	459.7	367.0

It is the change in the relation between input and output which reflects the fall in the value added a worker during the five years, 1949 to 1953.

Information on installed capacity and capacity utilised in the industries is not available from the *Census of Manufactures*. An estimate of the capacity of capital for absorbing labour during each year subsequent to 1946 can, however, be made on the basis of the amount of total productive capital employed a worker. The ratio of the actual employment of workers to the estimated employment can then be taken as the capacity utilised during each year. The data compiled on

this basis for each of the years, 1946 to 1953, are given in the following table:

Estimate of Capacity Utilised

Year	Productive capital employed (in lakhs of Rs.)	Workers that should have been employed (in thousands)	Workers actually employed (in thousands)	Percentage of capacity utilised
1946	46.22	144	144	100.0
1947	58.30	182	143	78.6
1948	63.61	198	151	75.8
1949	54.25	169	142	83.9
1950	59.21	185	146	78.9
1951	77.11	241	143	59.4
1952	76.98	240	151	62.8
1953	66.89	209	155	74.1

The table shows that the additional capacity created after 1946 was not fully utilised. While productive capital employed was higher in each subsequent year than in 1946, the number of workers employed was less in three of the seven years. Even in years of higher employment, the rise in employment was not commensurate with the rise in the total productive capital. The best year as far as employment of workers was concerned was 1953 (when 155,000 were at work, an increase of about 8 percent over 1946). But even in that year, the rise in productive capital was of the order of 45 percent over 1946. On the other hand, while 1951—the most favourable year from the point of view of productive capital, recorded a rise of 67 percent over 1946, there was actually a drop of 1,000 workers from employment. This non-utilisation of the additional capacity must have exercised an adverse effect on the generation of industrial income.

Production Costs

"Costs of production vary with the relation of the actual output to possible output, tending to increase as production falls below the maximum, and to drop to a minimum when they are running at full capacity. Even a single firm has no one cost of production, but a series of costs varying according to the scale of output. This is due to the fact that the different items of expense do not respond uniformly to changes in the volume of production, some of them altering as output alters, others remaining relatively constant." The disadvantages of idle installed capacity are more obvious in mechanised industries, where large sums are invested in plant and machinery and where the "variable costs" of human labour are replaced by the "constant costs" of the machine; in such industries, with decreasing output in relation to installed capacity, cost a unit rises. It is interesting to note, in this connection, the conclusions of the U.K. Committee of Industry and Trade. Taking the cost a unit in 1913 as equal to 100, a heavy oil engine firm working at 94 percent capacity showed a rise to 137; a bicycle firm, working at 90 percent capacity, a rise to 185; while locomotive construction firms, working at 35.5 percent capacity, showed an increase to 320.

The size of industrial units is another important factor. This aspect is shown by the table below:

Factories in Uttar Pradesh classified according to size in 1953.

Employment class interval	Frequency	Percentage
Below 20	133	22
20-49	178	29
50-99	109	18
100-249	70	12
250-499	23	4
500-999	43	7
1000-1999	37	6
2000-4999	12	2
5000—above	3	N
Total	606**	100

** Information for the remaining factories in U.P. is not available.

More than half the factories in U.P. are small units. Their average daily employment is below 50. Evidently small units are the predominating feature; and, as would be quite consistent with this fact, the predominant form of industrial organisation in U.P. is the individual proprietorship and the partnership firm rather than the joint stock company. The former accounts for 59 percent of factories as against only 38 percent accounted for by the latter. The financial resources of the former are much less. Thus, these inter-related factors in U.P.'s industrial system have been operating slowly and imperceptibly against broadening the flow of industrial income.

The distribution of the industrial income is interesting. Employees' remuneration takes the largest share. Of the income of Rs. 28 crores in 1953, wages and salaries amounted to over Rs. 16 crores, or 58 percent. This proportion has steadily increased. In 1946, it was 45 percent of the income. By 1949, it had increased to 63 percent, although the industrial income in that year had fallen steeply and the index of value added a worker had declined. In 1950, the employees' share dropped to 54 percent. But from 1951 onwards, it has been increasing. The cotton textile industry is the biggest paymaster (over Rs. 6 crores) and is followed by sugar (over Rs. 4 crores). Further details on the distribution of industrial income are not available from the *Census* reports, so it is not possible to get an idea of the trends in net profits.

See the *Indian Trade Journal*, 31st March, 1956, and earlier issues.

See Percy, *Economics of Modern Industry*, 1954.

Jute

GUNNY MARKETS WEAKEN ON LOOM SEALING DECISION

FLOOD REPORTS HOLD UP FIBRE PRICES

It was announced on Monday that member mills of the I.J.M.A. will re-seal 2½ percent of their loomage with effect from 16th July, 1956. This will have the effect of reducing the industry's production by about 2,500 to 3,000 tons a month, with a decrease in raw jute consumption of something like 60,000 maunds a month. The decision has not come as a surprise. It is the culmination of several weeks of discussion at top level with the Government of India, and it had been expected that the present move would find favour over the latter's own proposal to fix a minimum price for jute goods. The industry has been obliged to cut production because of the large disparity between the price of manufactured goods and the price of the raw material. The decision partially reverses the unsealing of 5 percent of the industry's loomage only four months ago. That the latter move was premature, is now only too clear; world consumption has not been sufficient to absorb the large increase in production. Mills' stocks of jute goods rose from 89,400 tons at the end of February to 119,100 tons at the end of May, a total increase of 29,700 tons. The increase in production over the same period was equivalent to about 20,000 tons, all of which was thus left in the industry's hands. During this same period, goods prices dropped by nearly Rs. 80 a ton while the cost of the raw material fell by only Rs. 50 a ton, so not only were mills left with unsold goods, but their profit margins suffered severely due to the disparity between jute and gunnies.

It was obvious that drastic action had to be taken. Overseas buyers remained completely out of the market and did not hide the fact that they strongly resented attempts to increase the price of gunnies, which they already considered to be uncompetitive in relation to paper and other packaging materials. Several large concerns stated that when their present orders had been fulfilled they would turn to substitutes rather than support higher prices. The decision then rested between the Government's proposal to fix minimum prices, and the industry's counter-proposal to curtail production and, by so doing, allowing finished goods to find their own level. By adopting the latter procedure, it was hoped that goods prices would show a gradual rise. But it appears that the market considers the curtailment to be inadequate to meet the present situation. Since the announcement, operators have adopted a bearish attitude, and, contrary to expectations, prices have weakened.

The raw jute markets, in the meantime, encouraged by persistent rumours of flood damage up-country, have been steady. Although goods prices have dropped, fibre sellers have raised their quotations and thus defeated the whole object of re-sealing looms. They are very reserved and have withdrawn from the market. In spite of the disparity between jute and gunnies, certain mills continue to take up large quantities of jute from the local Cossipore markets at rising prices, and have strengthened sellers' already bullish ideas. A large group has resumed jetty purchases of Daissee and mesta in spite of the high prices; these activities have eventually led to rumours of a shortage of stocks in some mills' godowns.

New Crop Reports Cause Anxiety

Recent New Crop reports have caused a certain amount of anxiety in the trade. The only areas where conditions have been favourable are in Murshidabad, and here the prospects are good. In all other districts, however, weather conditions have been very unfavourable due to excessive rain. The northern Bengal areas have suffered most; since the beginning of February, rainfall in the Siliguri-Jalpaiguri region has been almost double that of last year, and many fields are inundated. River levels in Assam have been rising rapidly, and although the standing crop in the lowland is still immature, it has had to be cut to prevent further damage. In the Daissee districts, conditions are far from satisfactory, especially in the Midnapore-Baduria-Bongaon areas, where most of the fields are waterlogged and a large part of the crop has again been washed away. The Daissee white crop is well established and has suffered very little damage, but the mesta plants are very poor and their growth very irregular. It is estimated that the land under mesta is greater than ever before.

THE JUTE MARKETS

Manufactured Goods: Conditions in the Calcutta jute goods markets were very dull at the beginning of the week. Prices were depressed as business came to an almost complete standstill while the trade in general awaited fresh developments in the industry's attempts to stabilise prices. Overseas buyers showed no interest and mills would not sell at the current rates. As the prospect of a curtailment in production gained precedence over the Government's proposal to fix minimum prices, bazaar speculators, who had earlier taken up large quantities of goods in the hope of making a profit when prices were fixed, saw this profit slipping from their grasp and began to unload their holdings. Prices immediately fell and opening rates on Thursday morning dropped by 8 annas in B Twills

for June shipment to Rs. 104-14. October-December shipment fell to Rs. 104-6 a 100 bags. Hessian reacted less, 40in. 10oz. losing 2 annas for the near and forward positions to be quoted at Rs. 38 a 100 yards. Prices fluctuated within narrow limits throughout the day, but the general movement was in a downward direction. Friday's opening showed B Twills to have fallen another 2 annas, although hessian remained constant. Towards the week-end, prices hardened in sympathy with the firmer raw jute market. Heavy goods recovered by 4 to 6 annas and hessian was quoted at 2 annas above the week's opening quotations. After the week-end, the market was hesitant and quotations were nominal. Operators held back in anticipation of the I.J.M.A. making public the decisions taken at its meeting over the week-end. Late on Monday, it was announced that with effect from 16th July the industry would close down 2½ percent of its loomage. Market reaction to this news did not follow the pattern expected by some, as operators considered it to be an inadequate reduction in the mills' output. By the close on Monday, B Twill rates had fallen right back to Rs. 103-8, a drop of nearly Rs. 1-8 from the morning rates, and the only factor that prevented a further drop was the steadiness of the jute market. Prices recovered slightly after the initial setback, but declined sharply again on Tuesday afternoon in spite of fairly heavy shipper covering at the lower levels. At the close, the market was again weaker and opening quotations on Wednesday morning were as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 8oz.	Rs. 31-8	Rs. 31-2	Rs. 31	Rs. 30-12
40in. 10oz.	37-10	37-14	38	37-14
B Twills	102-6	103	103-2	103
Heavy Cees				
"Plain"	102	102	103	103
A Twills	124-8	125-8	126	126-8
Liverpools	114-8	115-8	115-12	116-4
Cornsacks	126-8	127	127	126-8

Raw Jute: The Calcutta raw jute markets opened on a very steady note last Thursday as reports from upcountry indicated that New Crop prospects had deteriorated rapidly. Opening quotations were based on Rs. 27 a maund for Assam Bottoms for June-July shipment but mills showed no interest in this rate or delivery. They appeared to be more interested in quick delivery jute, and one or two buyers took up fairly large quantities from the local Cossipore markets at rising prices. This was thought by operators to indicate a shortage of stocks. Although this was true in one or two cases, in general it was an attempt to regularise stock positions, as the demand was in the main for Bottom quality jute only. After the week-end, raw jute rates again advanced by 8 annas a maund, and remained steady even after the announcement of the re-sealing of looms, which, in normal circumstances, would have led to a complete ignoring by raw jute sellers, and they continued to be governed by the adverse crop reports that arrived almost hourly from both India and Pakistan. In view of the disparity at this stage between jute and gunnies, buyers left the market, but very firm conditions continued to prevail in spite of the heavy losses recorded in the goods market.

Business concluded over the week was on a very small scale. Dhubri-Northern jute passed at Rs. 27 to Rs. 27-4 for assortment jute, and Rs. 27-8 for Bottoms only for June-July shipment. Local Northern jute was also purchased in varying quantities at prices ranging between Rs. 26-8 and Rs. 28 a maund, the latter price being paid for low assortment and quick delivery. Small lots of Assam and Bongaon-Karimpore Tessa changed hands at Rs. 27 to Rs. 27-8 a maund basis Bottoms for June-July shipment. Daissee Mesta and Bimil were neglected, and only small lots were reported at Rs. 24-8 to Rs. 25 a maund. Pakistan Cuttings were done at Rs. 120 a bale for ready delivery ex-Calcutta. The only business at Rs. 25-8 a maund basis in Northern Assams was for August-September shipment.

At the close, the market was a little easier and nominal quotations were 8 annas below the previous day. Opening rates on Wednesday morning were as follows:

Indian Jute (Old Crop Kutcha):	Landed at Mills Bottoms	Rs. a md. basis	Shipment.
Lower Assam	27		June-July
Northern	27		"
Murshidabad White	26-8		"
Daissee ex Agency	27-8		"
Daissee ex Cossipore	27		"
Daissee Mesta	26		"
Local Packing (Northern)	27		"
Bimil	25-12	for F.A.Q.	"
New Crop (Kutcha):			
Lower Assam-Northern	26		Aug-Sept.
Pucca:	Rs. a bale		Shipment.
Mill Firsts 2/3	170		Aug-Sept.
Mill Lightnings 2/3	155		"
Mill Hearts 2/3	145		"
S. G. Daissee 2/3	165		Sept. Oct.
L. G. Daissee 2/3	150		"

Pakistan Jute Landed at Mills (New Crop Kutcha): Rs. a md. basis

Jat District	Bottoms	Shipment.
Jat District	29-8	August-Sept.
Pucca:	Rs. a bale	Shipment.
Mill Firsts 2/3	195	August-Sept.
Export Firsts 2/3	175	"
Export Lightnings 2/3	160	"
Jat Cuttings	107-8	Sept.-Oct.

The Cossipore markets are very firm due to three large groups buying freely at premium rates. Imports have fallen by nearly half, and only 275 wagons arrived at the sidings during the week. As a result of the increase in demand for local jute and the poor arrivals, stocks in Cossipore have fallen to below 100,000 bales, and sellers now hold very reserved ideas. At the close, quotations were based on Kishenganj jute at Rs. 27-8 a maund for garsat quality. No business is reported in the Daissee markets. Sellers are very reserved and rates have advanced by about Re. 1 a maund due to the adverse New Crop reports. Quotations in Sheoraphuli are based on Rs. 28-8 a maund for garsat quality.

Mofussil: Indian upcountry markets are very steady and the business reported is negligible. There have been no Old Crop imports in agencies over the past week, but some small sample lots of New Crop jute were presented for examination. These were found to be very immature, due to early harvesting forced by a rise in river levels. Adverse weather conditions in the jute growing areas have given operators bullish ideas, and at the close quotations in Dhubri were based on Rs. 24-4 a maund basis Bottoms.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the Port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 20th June, 1956	1,397.4	16,280.3	17,677.7
1st to 20th May, 1956	1,977.0	17,227.8	19,224.8
1st to 20th April, 1956	1,761.9	19,928.8	21,690.7
1st to 20th June, 1956	15,469.7	971.4	16,441.1
1st to 20th May, 1956	12,006.5	1,519.2	13,525.7
1st to 20th April, 1956	25,219.9	1,147.1	26,367.0

GUNNY SHIPMENT STATISTICS FOR MAY

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of May 1956 after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	3,920.9	25,008.5	28,929.4
Short shipped	208.2	821.7	1,029.9
May 1956 (Nett)	3,712.7	24,186.8	27,899.5
April 1956 (Nett)	2,914.6	26,309.1	29,223.7
March 1956 (Nett)	2,100.4	25,553.7	27,654.1
Gross	37,747.5	2,877.3	40,624.8
Short shipped	448.0	3.6	451.6
May 1956 (Nett)	37,299.5	2,873.7	40,173.2
April 1956 (Nett)	36,728.5	1,598.3	38,326.8
March 1956 (Nett)	31,674.4	1,886.3	33,560.7

THE FOREIGN JUTE MARKETS

(FROM OUR DUNDEE CORRESPONDENT)

ANOTHER change in cloth prices in Dundee has been made in an endeavour to bring more orders to manufacturers. After a meeting held on 15th June, it was intimated

NEED FOR STABILITY IN FOOD MARKETS

IMPORTS, EXPORTS AND PRICE SUPPORT POLICIES

(FROM A CORRESPONDENT)

THE food problem attracts attention only when there is a substantial rise or fall in prices. There has been a fair rise in the past few months, but some feel that the Government is as helpless in checking it as it was last year in providing a floor. Since the beginning of this year, it has asserted that the overall food situation will not be much affected by the floods and cyclones which occurred in some parts of the country last autumn. It claims that it will be possible to meet requirements from Government stocks, prospects for the rabi crop are bright, and there is no cause for anxiety. In January 1956, the Government warned that hoarders were strengthening the hands of those who advocated physical controls. In April, Dr. Deshmukh stated: "Traders try to be funny. But we are dealing with them by releasing stocks."

Before the war, India was a net importer of foodgrains, taking about 2 million tons of rice from Burma. With the entry of Japan into the war, the normal source of supply was lost and the situation became very difficult. A widespread system of controls and rationing had to be established. Controls brought corruption and blackmarketing, and also led to an apparent fall or stagnation in food production. With partition, Pakistan got less than one-fifth of the sub-continent's population, but one-fourth of the total area under food crops. Partition thus aggravated the food problem, and was followed by two successive and severe crop failures, in 1950-51 and 1951-52. Food imports, which had increased from 300,000 tons in 1943 to 2.5 million tons in 1946, touched the peak figure of 4.7 million tons in 1951. After that, the situation began to improve. Three successive good seasons, 1952-53 to 1954-55, enabled the country to end many controls and reduce imports to 700,000 tons in 1955.

Improved Cultivation

The increase in food production cannot be ascribed solely to good weather. Since independence, the area under food crops has increased by about 50 million acres and the irrigated area by about 20 million acres. The use of manures, particularly chemical manures, has multiplied several times. Community projects and National Extension Service schemes have also played their part in improving standards of cultivation. As a result of the increase in production and the gradual removal of controls, the black market has disappeared. A

good deal of de-hoarding appears to have taken place during and after 1953.

The fall in foodgrain prices, in its early stages, was widely welcomed. But later, as the fall continued and other prices remained stable, there was much anxiety and the Government was hustled into taking steps which brought about a substantial revival in food prices. A price support policy was announced in December 1954. Minimum prices for purchases by the Government were fixed at Rs. 11 a maund for rice, Rs. 6 for bajra, and Rs. 5-8 for jowar and maize. The purchase prices for wheat and gram were fixed in March 1955 at Rs. 10 and Rs. 6 a maund respectively. Before the price support policy was announced, the Government had in July 1954 allowed the export of husked rice up to a ceiling of 2 million tons from Bombay and Calcutta. At the same time, the export duty on husked rice was raised from 2 annas 3 pies a maund to 20 percent ad valorem. In February 1955, exports of rice were allowed from all ports and the export duty was reduced to the original level of 2 annas 3 pies a maund. Exports of wheat products were permitted as early as February 1954. Exports of jowar, up to a ceiling of 50,000 tons, were allowed in June 1955 and of maize as late as 10th August, 1955.

Export of Pulses

Prices of pulses fell rapidly in the early part of 1954. In June 1954, the export of a small quantity of pulses was allowed; as this concession did not stop the down-trend, the export quota was soon raised to 15,000 tons. A fresh quota of 50,000 tons was announced in March 1955. Later, on 16th June, 1955, gram and other pulses were placed on the free export list up to December 1955. The Government had already announced its decision not to purchase rice from abroad, and a similar decision for wheat was announced on 18th March, 1955. It had thus made up its mind to maintain reserves by internal purchases. On 7th April, 1955, the Government announced that it would send a trade mission to explore foreign markets for India's foodgrains. On 11th April, the Centre advised State Governments to purchase wheat at 200 selected markets at Rs. 10 a maund and advanced Rs. 12 crores for the purpose. Sales of foreign wheat were stopped from that date to Bombay and Calcutta flour mills, and they were allowed to purchase their requirements in the internal markets. Under the price support scheme, Government purchases by July 1955 amounted to 115,000 tons, consisting of 76,000 tons of wheat, about 38,000 tons of jowar, 1,300 tons of gram and a small quantity of maize.

The export of wheat products was permitted in February, of pulses in June and of rice in July 1954. Thus exports were allowed for the first time after more than a decade. In 1954, exports of foodgrains amounted to 11,000 tons and were valued at Rs. 11 lakhs. Exports in that year consisted of

about 7,000 tons of rice, 1,500 tons of wheat flour and about 2,300 tons of pulses. Exports of foodgrains increased sharply to 195,000 tons and earned more than Rs. 84 crores in 1955. They consisted of 102,000 tons of rice, 2,000 tons of wheat flour, 9,000 tons of coarse grains and about 82,000 tons of pulses. Indian foodgrains reached countries as far apart as Japan and the United States. As a result of these steps, prices of foodgrains recovered substantially by July 1955. The rather sharp increase was attributed to transport bottlenecks and scanty rainfall in some parts of the country. But apparently this was regarded as a temporary phase by the Government. In spite of the rise in prices, it released 30,000 tons of maize for export on 10th August, 1955. The price support scheme was first announced in December 1954. This was considered too late because by that time cultivators had already sold their produce. To prevent the same thing recurring again, the Government announced its decision to purchase rice, including paddy, during the 1955-56 season at the minimum prices fixed for them in 1954-55 on 25th August, and the decision to purchase coarse grains on the same basis on 20th September, 1955.

Releasing Stocks

The first step to check the uptrend in foodgrain prices was taken in October 1955. The Centre directed the Madhya Pradesh Government to release jowar stocks held on the former's account and advised consumers not to pay more than Rs. 5-3 a maund for jowar. It was also decided to sell foreign wheat in eight cities of Bombay State; and on 14th November, 1955, the sale of foreign wheat was resumed in Bombay and Calcutta. On 5th December, 1955, the sale price for foreign wheat was raised to Rs. 14 a maund. In January 1956, the Government released 15,000 tons of wheat for the Punjab and 20,000 tons for U.P. The issue of wheat also commenced in Bihar and Delhi in the same month. In Madhya Bharat, the issue of wheat began in March 1956. The export of husked rice was banned early in January 1956. The export ban was extended to jowar on 24th January, and to wheat and pulses in February 1956. To alleviate the wheat shortage, India gave 15,000 tons of wheat to Pakistan in exchange for the same quantity of wheat. Meanwhile, the rice situation in West Bengal had become difficult, so the Centre had agreed to sell 15,000 tons a month whenever prices nounced on 21st February, 1956, that during the 1.6 million tons more and the wheat crop 700,000 tons more than in the last season. It was stated that foodgrain prices would come down by April and the Government had no commitment or programme for the import of rice.

The increase in wheat prices was attributed to a fall in the production of coarse grains, particularly jowar. The Government was distributing about 100,000 tons of wheat at Rs. 14 a maund. It announced that 300,000 tons would arrive within a few weeks from Australia and the United States, 200,000 tons have not yet arrived. On 13th March, 1955, the Government again declared that rice production would be nearly 24 million tons, and "hoarders are bound to lose. There will be no shortage." On 9th April, 1956, it was stated that the Reserve Bank was ready to check any inflationary rise in prices. At the same time, the Government announced its decision to build a buffer stock of one million tons of rice and one million tons of wheat. The earlier decision not to import rice had to be reversed in less than two months. On 2nd May, 1956, the Government declared that it was prepared to supply any amount of rice to check price rises and for fair price shops. It is now supplying wheat at Rs. 14 and rice at Rs. 16 a maund. The States are free to subsidise sales and the Centre Fair price shops have started functioning in such States as Bihar, Orissa, Tripura and West Bengal. The serious food situation in East Pakistan is partly responsible for the sharp rise in rice prices in the adjoining States of Assam, Tripura and West Bengal. To check the rise in prices, the Government has already banned the export of foodgrains. At the same time, it has been releasing stocks of rice and wheat for distribution in various States. Its stocks have decreased from 1.67 million tons in June 1955 to 500,000 tons in April 1956.

Rice and Wheat Advances

Statements of advances submitted by scheduled banks to the Reserve Bank have shown that rice stocks pledged with banks are nearly doubled and wheat stocks 50 percent more than those pledged with banks last year. The Reserve Bank has already directed scheduled banks to raise their margins and to try to reduce their aggregate advances to almost the same level as a year ago. In spite of all that has happened, the Government considers that the situation is well in hand and is confident of maintaining "a stable level of prices". It has concluded an agreement with Burma for the purchase of 2 million tons of rice within the next five years. It has also bought 700,000 tons of wheat from Australia and the United States for the half-year purchase of one million tons of U.S. wheat, for the import between November 1956 and May 1957, has been subsidised. If the recent purchases arrive soon in substantial quantities, a further sharp rise in prices may be avoided. The latest available price more, pulses 50 percent more and all food articles combined nearly 25 percent more than a year ago. In a poor country like India, the case for keeping food prices at as low and stable a level as possible is strong. The prospect of heavy deficit financing in the next few years has already induced hoarding. It is for the Government to combat this tendency.

Commodity Markets

WHEAT AREA INCREASES BUT OUTPUT FALLS

INFLUENCE OF CLIMATIC CONDITIONS

ACCORDING to the Directorate of Economics and Statistics, Ministry of Food and Agriculture, the all-India final estimate of wheat, 1955-56, puts the current year's area and production at 29,225,000 acres and 8,348,000 tons respectively as against the partially revised estimate of 27,517,000 acres and 8,778,000 tons for 1954-55. The current year's estimate thus shows an increase of 1,708,000 acres or 6.2 percent in area and a decrease of 430,000 tons or 4.9 percent in production as compared with the partially revised estimate for 1954-55, which was a peak year for wheat production. As compared with the average of the preceding five years' estimate, however, the area and production during the current year show an increase of 4,086,000 acres or 16.3 percent and 1,050,000 tons or 14.4 percent respectively. The current year's production of wheat equals the target of 8.3 million tons fixed for 1955-56 under the first five year plan.

The increase in area during the current year has been shared by all the wheat-growing States except Bihar and is generally attributed to favourable weather conditions at the time of sowing. This increase in area is partially marked in the case of Uttar Pradesh, Bombay, Rajasthan, Hyderabad, Madhya Pradesh and P.E.P.S.U. Despite the substantial increase in area, production of the crop has suffered a decline in most of the major wheat-growing States; particularly in Uttar Pradesh, Punjab, and Madhya Pradesh. In Uttar Pradesh, production has gone down from 3,284,000 tons last year to 2,984,000 tons this year; in the Punjab from 1,535,000 tons last year to 1,296,000 tons this year and in Madhya Pradesh from 784,000 tons to 705,000 tons. The decrease in production is generally attributed to unsatisfactory climatic conditions during the growing period. The decrease in Uttar Pradesh is largely due to damage to the crop caused by hailstorm and strong westerly winds during March 1956 while in the case of Punjab, it is due to drought followed by hailstorm and strong winds during March, 1956. The decrease in production has, however, been offset to some extent by the increase recorded mainly in Rajasthan and Madhya Bharat. In Rajasthan, the production has gone up from 757,000 tons last year to 881,000 tons this year and in Madhya Bharat from 399,000 tons last year to 446,000 tons this year.

The production estimates for Bihar, Bombay, Madhya Pradesh, Punjab, Uttar Pradesh, West Bengal, Hyderabad, P.E.P.S.U., Rajasthan, Ajmer, Bhopal, Himachal Pradesh and Vindhya Pradesh are based on the results of random sample crop-cutting surveys. Crop-cutting surveys on wheat during 1955-56 were also conducted in Madhya Bharat, Saurashtra and Delhi, but reliable survey results from these States have not become available so far. Hence, the production estimates for these States utilised in this estimate are based on traditional estimates and as such are subject to revision. The estimate also includes information on the "non-reporting areas", that is, areas for which forecast reports are not prepared for this estimate. The non-reporting areas for this estimate comprise Andhra, Madras, Jammu and Kashmir, Travancore-Cochin, Manipur and the non-reporting pockets in Madhya Pradesh, which together account for an area of 300,000 acres and a production of 78,000 tons during 1955-56.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production in India during the month of May, 1956 was 132,958 tons bringing the total production during seven months of the current season to 1,788,956 tons against 1,569,000 tons during the corresponding period last season. The offtake of sugar from factories during the month of May was about 148,000 tons against 126,000 tons during the corresponding period of last year. The total offtake of indigenous sugar during seven months of the current season was about 953,000 tons against 591,000 tons of the previous season. The closing stock of indigenous sugar on 31st May was 1,241,000 tons against 1,020,000 tons during the corresponding period of last season.

EXPORT OF COMMODITIES

The following announcements have been made in trade notices issued recently by the office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta: "Export of films made from transparent cellulose or viscacella roxamine, transparent cellulose wrapping and other transparent paper will be licensed freely on shipping bill to all permissible destinations. Licences for the export of coffee husk will be issued only to the parties and for quantities recommended by the Coffee Board, Bangalore. Indigenous gum resin will continue to be licensed freely on shipping bills for export up to the end of December 1956 to all permissible destinations. Export of iron and steel drums and barrels of 40/45 gallons round barrels, five gallons round drums and 35 gallons round drums and barrels will continue to be licensed freely as hitherto till the end of December 1956. Export of second-hand drums and barrels will also continue to be licensed freely till the end of December 1956 provided they are in

sound condition. A limited quota of cotton rags and hosiery cuttings including cotton old rope cuttings but excluding those containing woollen, rubber impregnated or bituminous fibres which are on, Open General Licence No. 3 and Khaki olive green cotton cloth and hosiery cuttings which are licensed freely has been fixed for export from Calcutta port to all permissible destinations other than Portuguese possessions in India during the period July-December 1956.

WORLD WOOL CONSUMPTION INCREASES

The forecast made some time ago that there has been a rising demand for wool in the principal manufacturing countries since the opening of the year, has now been confirmed by the latest estimates published by the Commonwealth Economic Committee, which shows that the world wool consumption in the first quarter of 1956 was about 5 percent higher than that of the previous three months and 10 percent higher than in the corresponding period of last year. It is pointed out, however, that the daily rate of consumption increased by rather less than 5 percent on the previous quarter, as the chief manufacturing countries had more working days in the first three months of this year. The outstanding features of the quarter were the improvement in consumption in the United States and Japan which, in each case, were 11 percent up on the fourth quarter of 1955. There was a marked rise in France and a lesser improvement in the United Kingdom, but Western Germany and Italy appear to have experienced a slight setback.

In ten major consuming countries, the proportion of raw wool to total materials used in wool textile production rose for the second successive quarter and reached 60 percent, the highest figure for nearly two years. This, states the Committee, confirms a prediction made after the fall in raw wool prices last September. The combined figures for the United Kingdom, U.S.A., France, West Germany, Japan, Italy, Belgium, Australia, the Netherlands, Canada and Sweden, show wool consumption in the January-March quarter of this year to have been 474 million lbs (clean), which was higher than in any quarter of last year and compares with 451 million lbs in the October-December quarter, which was the highest three-monthly figure during 1955. In 11 major producing countries, wool top production in the January-March quarter this year is shown to total 277 million lbs, an increase of 9 percent on the previous three months. Wool yarn output is estimated to be 1 percent higher, but total wool cloth output in nine chief manufacturing countries is assessed to be 2 percent lower than in the previous three months.

WOOL IN THE SECOND INDIAN PLAN

Interesting facts and figures relating to sheep and wool development in India during the period 1956-60 are now available. The second five year plan provides Rs. 1.5 crores for sheep and wool development. It is proposed to establish 396 sheep and wool extension centres in different regions, and three new sheep breeding farms—one each in Himachal Pradesh, Madhya Bharat and Saurashtra. The farms are intended to produce range of good quality, both for pure breeding and for cross-breeding. At each farm, a fleece testing laboratory and a wool utilisation centre will be set up. It is officially estimated that there are about 38 million sheep in India producing 60 million lbs. of wool a year. About 24 million lbs. of the indigenous raw wool is utilised in the country and the balance is exported. Finer varieties of wool are imported to the extent of about 11 million lbs. a year. The average yield of wool from indigenous sheep is estimated to be 2 lbs. a head. Improved varieties of sheep can yield about 6 lbs., so that there is considerable scope for development.

The demand for wool comes from five main sources, namely, from cottage industries, for carpets and floor rugs, for blankets, for the manufacture of clothing material and knitting yarns in mills and for other industries such as the manufac-

ture of shawls, tweeds and other goods. Imported wool is used mainly by mills. Over many years, studies have been undertaken in the cross-breeding of local types with the merino type sheep in Kashmir, Mysore and the Deccan, in the selective breeding of Bikaneri, Deccan and Bellary types, and in the grading up of local inferior sheep with the Bikaneri. These have led to the adoption of a long-term approach which includes: (a) selective breeding of indigenous breeds in the plains and where definite breeds exist, (b) upgrading of non-descript breeds with Bikaneri, and (c) cross-breeding with foreign breeds in selected hilly areas. Cross-breeding with foreign sheep has given valuable results both in respect of the quantity and the quality of wool produced. Encouraging results have also been obtained from selective breeding and from grading of local inferior sheep. As against the average yield of the Kashmiri breed of 16 oz of fleece, the yield of the half-bred variety is about 37 oz., and in certain cases as much as 56 oz. There is thus considerable scope for improving the present yields of wool.

RUSSIAN BUYING OF INDIAN WOOL

The Russian Government has so far contracted for about 2 million lbs of wool, white and pale yellow, in the Indian market, comprising mostly Bikaneri and Joria best qualities, according to an I.W.S. news bulletin. The first shipment, it reports, is to be made by the end of June when the Russian steamer is expected to call at Bombay. The terms of the contract are generally f.o.b. Fairly good purchases of Tibetan wool has also been made by Russia through India, and this is reflected in the recent advance in prices recorded by Tibetan qualities in the Bombay market.—e.g., Tibet first white 75d., ordinary white 73d., light grey 60d. and dark grey 56d. The main outlet for Tibetan wools is Kalimpong where they are pressed and despatched to Calcutta for export without any grading or export restriction. But this is strictly for the sales of Kalimpong origin.

Indian trade circles report that in the American market, Pakistan has been the main competitor of Indian wools. Since the Pakistan Government does not impose any export quota restrictions, exporters in Pakistan are able to make better offers.

SMALLER BAISAKHI LAC CROP

The yield of the Baisakhi lac crop in India for the current year is expected to be lower than in the previous two years, says a report issued by the Indian Lac Cess Committee, Ranchi. According to the revised reports, the yield is put at 87,000 tons against the preliminary estimates of 95,000 tons, issued in March last, and the final estimates of 813,000 maunds for 1955. The normal yield based on the average production of 10 years preceding 1955 is 710,000 maunds. In the Manbhum and Singhbhum districts of Bihar, the biggest lac-producing State of India the arrivals of the new crop are lower than expected. Hence, the revised estimates for Bihar have been reduced to 425,000 maunds. In the major lac-growing areas of Madhya Pradesh also, the crop suffered damage due to excessive heat in the months of April and May and hence the estimates for this State too have been reduced to 139,000 maunds. From other States the arrivals of the crop in the market have been up to expectations.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended August 1939=100) advanced further by 0.4 percent to 393.0 during the week ended 9th June, 1956 as compared with 391.6 for the previous week. The index was higher by 0.8 and 15.2 percent respectively when compared with the corresponding weeks of the previous month and of last year. The index for Food Articles rose further by 0.8 percent to 356.3 as a result of an increase in the prices of wheat at Hapur (+5%) and Amritsar (+4%), rice and bajra (+2% each)

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to May, 1956. As compared with April, the May indices for Food and Clothing show rises of 9 points and 6 points, while those for miscellaneous, and Fuel and

and gram at Hapur (+1%), although the prices of gram at Patna (-5%), wheat at Jabalpur and tea for internal consumption (-3% each) and dal arhar (-1%) showed declines. The index for Industrial Raw Materials receded further by 0.4% to 476.0 because of a fall in the prices of manganese ore (average export prices) (-32%), gingellyseed in Bombay (-3%), groundnuts at Cuddalore, linseed in Calcutta, castorseed and lac at Bombay (-1%), raw silk and rapeseed (+5% each) and gingellyseed in Jhansi (+2%) were however, marked up. The Semi-Manufactures group index advanced by 0.2% to 386.0. Items which witnessed significant variation in this group were Gingelly cake (+10%), linseed oil in Bombay (+5%), groundnut oil in Bombay (+4%), coconut oil in Calcutta and zinc (+3% each), groundnut cake (+2%), linseed oil in Calcutta (-4%) and groundnut oil in Madras (-2%). The index for Manufactures also moved up by 0.5% to 378.4 due to an advance in the prices of chemicals (+2%) and jute and cotton manufactures (+1% each). Higher prices of chillies in Calcutta (+3%) black pepper and tobacco leaf both in Calcutta (+2% each) were responsible for a rise of 0.6% to 509.0 in the index for Miscellaneous group despite declines in the prices of turmeric (-2%) and betelnuts (-1%) both in Calcutta.

ELECTRICITY OUTPUT IN JANUARY

During January 1956, 731 public utility undertakings in India, produced 155.6 million kWh of power, of which 621.8 million kWh were sold to ultimate consumers. Power generation during the month decreased by 28.7 million kWh in comparison to December 1955. One diesel-generating station at Begusarai in Bihar, and six purchasing undertakings at Jagatpur, Bahugram, Salepur, Kendupatna and Rourkela in Orissa and Rajpur, Sonarpur in West Bengal were the new additions during January, 1956. Power output and sale during January, 1955 were 665.8 million kWh and 545.2 million kWh and during January 1959, 210.9 million kWh and 176.6 million kWh respectively.

During February 1956, 739 public electric supply undertakings in India produced 748.4 million kWh of power, of which 622 million kWh were sold to ultimate consumers. The output was 7.2 million kWh less than in January 1956. Four generating undertakings in Parlakmedti in Orissa, Harishchandrapur in West Bengal, Nizamsagar in Hyderabad and Somewarpet in Coorg, and four purchasing undertakings at Balakati and Chandanpur in Orissa, Joyngar-Majilpur in West Bengal and Mahe in Pondicherry were the new additions during the month. The figures for power generation and sale for February, 1955, are 626.2 million kWh and 521.8 million kWh. For February, 1959, these were 187.7 million kWh and 159.4 million kWh respectively.

BRITISH MISSION TO ADVISE INDIA ON HEAVY MACHINERY MANUFACTURE

A British mission is to visit India later this year under the joint auspices of the Colombo Plan and the Federation of British Industries (F.B.I.) to advise on further extensions of heavy machinery manufacturing during the period of the second five year plan. The Government of India has welcomed the proposal to send the mission, which will include representatives of leading British engineering firms. It will leave for India this autumn, as soon as preliminary work in London has been completed. The membership of the mission is under consideration and has yet to be decided. Sir Graham Hayman, president of the Federation of British Industries, has stated that the F.B.I. is glad to have been able to initiate this important step in the furtherance of Indo-British trade and industrial co-operation.

Engineering and Transport

DISPLAY AND EXHIBITION OF BRITISH AIRCRAFT

INTERNATIONAL SHOP-WINDOW OF U.K. AVIATION INDUSTRY

A JET-AGE review of aircraft, products of the revolution which in a single decade has smashed the sound barrier and created new conceptions of war and peace, will be on show in early September when the Society of British Aircraft Constructors stages its seventeenth flying display and exhibition. Individual displays by the U.K.'s most successful—and most recent—aircraft will be watched by many thousands of guests from home and overseas who, in the words of the Society's President, Mr. J. J. Parkes, "have come to regard a visit to the display as an essential part of their year's activities". Only last year, the vast exhibition hall had to be increased in size to accommodate the products of a record number of manufacturers. This year, the hall is to be made even larger, as no fewer than 338 companies—some 20 more than in 1955—will be displaying their products, which will range from complete aircraft to washers, aero-engines to nuts and bolts, and leather for seats to plastic saucers.

Last year, a record number of more than 6,000 important guests from 106 countries and territories—designers, Service chiefs, heads of the world's great airlines, engineers, pilots, Government officials, industrialists, technicians and Press representatives—saw 42 different types of aircraft give seven complete flying displays during the "Farnborough Week". Prince Bernhard of the Netherlands, General Gruenther, Supreme Allied Commander in Europe, Signor Martino, Italian Foreign Minister, Dr. Heinkel and Professor Dornier from Germany and Mr. Robert Six, president of U.S. Continental Airlines, were but a few who mingled with the thousands of other V.I.P.s. from abroad, while Sir Anthony Eden and members of the Government were among the many thousands of home guests who attended. More than 14 million people have attended these displays since 1948 when the public was first admitted. Since the first show was held at Hendon in 1932, the Society has staged no fewer than 64 separate flying displays, an unrivalled record of experience and achievement.

Annual Progress Report

What does this huge display of air power achieve, and why is it held every year? The display is an annual progress report where our newest products, which reveal something of the state of British technical progress, can be seen. Sir Anthony Eden, after his visit last year, said in a broadcast statement, "I have been very impressed to see how the British aviation industry in all its many variants is meeting the modern needs for aircraft and engines and is always preparing itself vigorously to meet the demands of the future". But it is first and foremost a shop-window. "Britain's aircraft industry", wrote one correspondent last year "seems to attract more international interest than that of any other country. Its main shop-window, the yearly flying display and exhibition, has become the principal international aeronautical occasion, although the S.B.A.C. display is strictly a national show". The benefits of this great popularity were spotlighted by Mr. J. J. Parkes during last year's display. "We must always keep in mind", he said, "that it is a business meeting and the best judges of that are the people who pay to come here—the business men from all over the free world and our member companies who take stand space and carry other charges". He stressed that it is part of our sales effort, particularly directed to export markets. "We, therefore, feel we have no need to apologise for showing products which have been steadily improved and are giving good service. It is hardly to be expected that any shopkeeper would remove from his window those articles which are enjoying the greatest share of public demand, nor open his shop less frequently when more customers wanted to enter". Orders are announced at displays from time to time—such as those for Viscounts and Hunters last year—but it is primarily a function at which influential people can meet, talk and look. That orders follow in due course is proved by the industry's record export orders in recent years.

AIR ACCIDENTS DURING PAST YEAR

THERE were 24 accidents to Indian registered aircraft and four to Indian registered gliders in 1955, according to a booklet *Accidents to Indian Registered Aircraft* during the year 1955, published by the Ministry of Communications. Some 19 of these accidents occurred in India and the remaining outside, six accidents were fatal and involved the death of 17 members of the crew and 17 passengers. None of the glider accidents involved any loss of life. Of the 24 accidents to aircraft, scheduled passenger services accounted for five, of which one was fatal resulting in the death of six passengers and four members of the crew. The court of enquiry, which investigated this accident, came to the conclusion that the probable cause was that the aircraft slipped into the ground in the course of a steep turn executed at night at a low altitude. There was only one accident on a scheduled freighter service in which three members of the crew lost their lives. The Court of enquiry, which investigated this accident, concluded that the probable cause was that the aircraft crashed in the course of a premature descent during the

final approach as a result of hitting arecanut trees which were obscured from view by a fog in the area. There were three accidents on non-scheduled passenger flights, including the crash of the *Kashmir Princess* in the South China Sea. The Indonesian authorities, who investigated this accident, came to the conclusion that it was caused by an explosion of a timed infernal machine placed in a wheel well of the aircraft. The explosion resulted in the puncturing of a fuel tank and an uncontrollable fire. Eleven passengers and five members of the crew lost their lives in this accident.

There were two accidents on non-scheduled freighter services, both of which were fatal, resulting in the death of three members of the crew. One of these occurred when the pilot was attempting to free a "bogged" aircraft by the use of engine power. The aircraft nosed over and the port propeller, rotating at a high speed, struck the ground, came adrift and fatally injured the captain. The other occurred when the aircraft stalled after having been pulled off too soon by the pilot in an attempt to avoid a man who was attempting to cross the runway during the take-off. Training flights accounted for seven accidents none of which was fatal. Private aircraft were involved in four accidents, and none was fatal. Two accidents have been listed in the miscellaneous category of which one was fatal. In this, an instructor and a N.C.C. Cadet lost their lives during an air display.

The booklet contains four tables bringing together complete data on each accident, including the date of the accident, the type of aircraft involved, the nature of the flight, the place of the accident, the casualties in each, the damage sustained by the aircraft and a summary of the cause of each accident. Accidents have been classified in separate tables by the nature of the flight and also by the phases of operation. The last-mentioned table shows that there was one accident to a stationary aircraft with engines running when the aircraft nosed over as a result of the misuse of engine power. Two accidents took place during the take-off run, the aircraft in both cases having nosed over as a result of an incorrect take-off technique in one case, and an attempted take-off from an unserviceable runway in the other. Two accidents occurred during the initial climb. The aircraft in one case slipped into the ground as a result of a steep turn at night at a low altitude. In the other case, the accident resulted from an unintentional stall when the aircraft was "pulled off" too soon. Three accidents took place en route. Two of these were caused by collision with terrain, as a result of mismanagement of the fuel system in one case, and a material failure of the engine in the other.

ADDITIONAL MEMBERS FOR RAILWAY BOARD

The Government has decided to strengthen the Railway Board's organisation in view of the additional work arising out of the second five year plan. Five officers of the status of general managers have been appointed in the Railway Board with the designation of Additional Members. They are: Messrs. N. K. Roy, S. R. Kalyanaraman and N. C. Deb, at present Directors in the Railway Board, Mr. K. Ramachandran, Chief Mechanical Engineer, Eastern Railway and Mr. S. L. Visvanadhan, Chief Engineer, Northern Railway.

SIGNS OF OIL FROM NEW WELL IN ASSAM

Faint but promising indications of oil have been reported from the test well at Mani, the Assam Oil Company announced from Digboi recently. On 12th June, a routine inspection of rock cuttings brought to the surface during drilling operations showed slight signs of petroleum when examined under a fluoroscope. The discovery was made shortly after the drill had penetrated sandstone rocks at the extreme depth of 11,065 feet (more than two miles). Drilling operations are continuing, and a careful watch is being kept for further indications as the well goes deeper into the zone of sandstone rocks. Whether the new well is capable of producing oil will not be known until the first test has been carried out. This is the first time oil has been noticed in this area of the Brahmaputra Valley, where test drilling began on 27th March. The nearest proved oil deposits are at Nahorkatiya, some 60 miles to the north-east, where 16 wells of an average depth of two miles each have been drilled by the Assam Oil Company since 1953.

FIRST INDIAN COMMERCIAL TANKER

The Great Eastern Shipping Company's new tanker, *Jag Jyoti*, carrying petroleum products from the Stanvac Bombay refinery arrived in Calcutta recently. Commenting on this, Mr. F. C. Osberg, Operations Manager for the Standard-Vacuum Oil Company in Calcutta, stressed the importance of the acquisition of the first Indian flag commercial tanker, and the significance of the chartering of this vessel by Standard-Vacuum. He stated that the purchase of the first tanker marked a new and important stage in the development of Indian shipping, while the charter agreement was another evidence of Standard-Vacuum's policy of maximising the use of local services, personnel and materials.

Owned by the Great Eastern Shipping Company, the tanker *Jag Jyoti* can carry about 13,125 dead-tonnage and has a draught of 27 feet 9 inches. This tanker will be used for moving kerosene, gasoline and automotive diesel oils from the Stanvac Bombay refinery to Kandla, Cochin, Madras and Calcutta.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY **

The Capital Index of Indian Industrial Activity (Base: 1935) has now been brought up to January 1956. Compared with the preceding month, there were decreases in cotton consumption 16.3 points, jute manufactures 10.5 points, steel ingots 6.5

points, cement 17.0 points, paper 11.0 points, coal 9.9 points and electricity 9.0 points, while pig iron and wagons loaded increased by 3.3 points and 1.9 points, respectively.

The index for cheque clearances also fell by

19.5 points, while that for notes in circulation rose by 2.7 points.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 9.7 points during January 1956.

Calcutta Markets

HIGH PREMIUM FOR GOOD TEAS AT EXPORT SALE

DUST PRICES EASIER

A T Sale No. 3, held on 25th and 26th June, Export offerings consisted of 24,330 packages. There was a very strong demand for the best liquoring C.T.C. grades which were on offer, and these were selling at prices up to Re. 1 or more over valuations. The good liquoring medium Assams were also strong and sold at dearer rates. The weakest feature were again the plain and low medium teas. These descriptions were rather heavy. Stylish leaf grades were dearer by 2 annas, while the more ordinary types were about firm. The tippy teas on offer met with very good demand from the buyers, while Darjeelings were rather irregular and generally easier in price.

Quotations

	1956	1955
Clean Black Pekoe	1 13 0 to 1 15 0	2 10 0 to 2 14 0
Plain B.P.	1 7 0 to 1 8 0	2 1 0 to 2 2 0
Medium Assam B.P.	1 14 0 to 2 0 0	2 5 0 to 2 6 0
Best CTC Assam B.P.	3 0 0 to 3 8 0	2 12 0 to 2 13 0

The quotations should be regarded as nominal as the quantity of truly representative teas on offer was small.

At the Internal Sale, Dust offerings consisted of 20,688 chests which consisted mainly of plain and unattractive old season's teas. The Sale opened with a good general demand but weakened as it progressed and closed 1 to 2 annas easier for poor liquoring sorts. The strongest features were once again the black leafy exportable types and the very few best C.T.C. teas. Poor residue kinds met with a fair demand, but were irregular and generally easier.

Quotations

	Rs.
Medium Doars Dust	1-60 (Nominal)
Medium Assam Grainy Dust	1-70 (")
Best Assam CTC Dust	2-60 (")

Other grades offered amounted to 170 packages which met with a fair demand at irregular rates.

FREIGHT MARKETS DEPRESSED

AMERICAN coal rates continue to decline and it is reported that 68s has been accepted for August loading which represents a fall of 11s to 12s from the peak rates of this year. The markets in general were depressed and charterers succeeded in obtaining reductions in some trades. Ceylon was in the market for tonnage for sugar and flour and fixed for the former at 80s from Java and 147s 6d from Queensland, while the latter was covered at 258s 9d from South Australia. There was a brisk demand for tonnage to carry rice from Rangoon to Chittagong or Chalna and a 2,000-tonner took four consecutive days at 72s 6d f.i.o.s. and Pakistan owners are reported to have secured Rs. 60 gross terms for other tonnage. The Indian ore trades were quiet and Japanese charterers reduced the Dungun-Japan rate by 2s at 60s for August shipment. In the time charter section, transatlantic round trips declined by 50 cents from \$(U.S.)5.50 to \$(U.S.)5.00.

RISE IN SUGAR MARKET

During the week ended 27th June, sugar sales in the Calcutta market averaged 4,000 bags a day. Arrivals daily were 2,000 bags and stocks totalled 30,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 32-12 for ordinary grain and Rs. 34 for big grain. Ex-mill delivery rates for the ordinary and big grain respectively were Rs. 28-10 and Rs. 29-14. The market continued to rise.

LINSEED

The scarcity of supplies has been the main feature of the past week. It has accounted for the apparent firmness of seed prices, which have been maintained throughout. Offers from uncountry for forward delivery have been meagre, while the movement of goods, already limited, is expected to be slowed down further by the heavy rain uncountry. Local crushers are in difficulties, with seed prices firmly held and oil values declining, leaving no margin of profit on a greatly reduced turnover. In the oil section, conditions have not improved; consumers are buying on a hand-to-mouth basis, and overseas markets are lifeless, with little prospect of an early revival. Latest quotations were as follows: Ready Rs. 21-10 a maund; June-July Rs. 21-6 a maund.

HIDES AND SKINS DULL

The market was dull and prices showed a downward tendency. Stocks were higher than in the previous week.

Bazaar Sales

(Between 19th June and 25th June, 1956)

Cowhides: Wet salted (Ord.) 6,000 pcs. on the basis of Rs. 5-8 to Rs. 5-10; Wet salted (Slaughtered) 17,000 pcs. on the basis of Rs. 12-8 to Rs. 20.

Goatskins: Wet salted (Daissee, Killed) 36,100 pcs. on the basis of Rs. 260 to Rs. 275; Rs. 300 to Rs. 325 and Rs. 350 to Rs. 375; Assam-Dinajpur-Jalpaiguri 25,000 pcs. on the basis of Rs. 230 to Rs. 247; Muzafferpore-Patina 21,900 pcs. on the basis of Rs. 225 to Rs. 247-8.

COMPANY AND PUBLIC NOTICES

BENGAL POTTERIES LIMITED.

NOTICE.

NOTICE is hereby given that the Forty-fourth Ordinary General Meeting of the Bengal Potteries Limited, will be held at the Registered Office of the Company, 45, Tangra Road, Calcutta, on Tuesday the 17th July, 1956 at 4.0 P.M. to transact the following items of business:—

1. To receive and adopt the Directors' Report, the Audited Balance Sheet and the Profit and Loss Account for the year ended 31st December, 1955.
2. To declare dividend.
3. To elect Directors.
4. To appoint Auditors for the current year.
5. Placing of the appointment of Allied Distributors & Co., as Sole Selling Agents of the Company, before the meeting under Section 294(3) of the Companies Act 1956.

6. To consider, and if thought fit, pass the following Resolutions as special resolutions:—
Special notice under Section 261-(2) has been received from shareholders sponsoring the Resolutions.

- (1) "Whereas Messrs. Bharat Ram Bhagat & Co., Managing Agents are authorized by the Agreement of Managing Agency to appoint Directors to the Board of this Company and, as such, under Section 261-(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents and whereas Shri D. N. Sen being a Director, and hence Officer of the Jay Engineering Works Ltd., a company under the management of M/s. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., one of the partners in the Firm of M/s. Bharat Ram Bhagat & Co. and is also an elected Director of this Company, who retires this year by rotation and whereas it may be construed that M/s. Jay Engineering Works Ltd., is under the Management of M/s. Bharat Ram Bhagat & Co., Managing Agents of this Company, it is resolved that the said Shri D. N. Sen be and is hereby elected a Director of this Company."

- (2) "Whereas M/s. Bharat Ram Bhagat & Co., Managing Agents are authorized by the agreement of the Managing Agency to appoint Directors to the Board of this Company, and as such, under Section 261-(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Shri Bishan Swarup Agarwal being an Officer of the Jay Engineering Works Ltd., a Company under the management of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., who are one of the partners of the Firm of M/s. Bharat Ram Bhagat & Co., and is also an elected Director of the Bengal Potteries Ltd., who retires this year by rotation and being eligible, offers himself for re-election, and whereas it may be construed that M/s. Jay Engineering Works Ltd., is under the management of M/s. Bharat Ram Bhagat & Co., Managing Agents of this Company, it is resolved that the said Shri Bishan Swarup Agarwal be and is hereby re-elected a Director of this Company."

- (3) "Whereas Messrs. Bharat Ram Bhagat & Co. are authorized by the Agreement of the Managing Agency to appoint Directors to the Board of this Company, and as such, under Section 261-(2) of the New Companies Act, a Special Resolution is required for appointment as elected Director of any person who is an Officer of any other body corporate under the management of the said Managing Agents, and whereas Lala Shri Dhar is a Director of Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., partner in the Firm of M/s. Bharat Ram Bhagat & Co. and hence is an Officer of M/s. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., and is also an elected Director of the Bengal Potteries Ltd., it is resolved that the appointment of the said Lala Shri Dhar as a Director of this Company be and is hereby approved."

Explanatory Note:—

With reference to Sub-Section 3 of Section 261 of the Companies Act 1956 the references which make the Resolutions necessary are stated in the body of the Resolutions. Strictly speaking the Jay Engineering Works Ltd., is not under the management of

the Managing Agents of this Company within the meaning of the Companies Act. However it will be advisable to pass a Special Resolution as required under the Act on the presumption that Messrs. Bharat Ram Bhagat & Co., being a Firm of which Messrs. Madan Mohan Lall Shri Ram & Co. (Private) Ltd., is a partner, this Company and the Jay Engineering Works Ltd., may be considered to be under the management of the same Managing Agents. It is therefore considered advisable that these Resolutions be passed at the Annual General Meeting of the Company and accordingly notice under Sub-Section 3 of Section 261 is being given to the Shareholders.

7. To consider and if thought fit, to pass the following Resolution as Ordinary Resolution:—

That the Registers and documents of the Company required to be maintained and disclosed under the Companies Act, 1956, an inspection of which is allowable under Provisions of the said Act, will be kept open for inspection by the persons entitled thereto between the hours of 2 P.M. to 4 P.M. on any working day of the Company, except during such periods when such registers, etc., are closed under provisions of the said Act.

The Share Transfer Register of the Company will be closed from 5th July to 23rd July, 1956, both days inclusive.

By Order of the Board of Directors,
BHARAT RAM BHAGAT & COMPANY,
Managing Agents.

45, Tangra Road,
Calcutta.

Dated, 22nd June, 1956.

N.B.—A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

THE INDIA PAPER PULP CO. LTD.

THE Board of Directors has today decided to recommend to the forthcoming General Meeting of Shareholders a dividend for the half-year ended 31st March, 1956 of 7% without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & COMPANY LTD.,
Managing Agents.
Calcutta, 27th June, 1956.

PRESIDENCY JUTE MILLS COMPANY, LIMITED.

NOTICE is hereby given that the Seventy-first Annual General Meeting of the Shareholders of PRESIDENCY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 30th July, 1956, at 3 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' and Auditors' Reports and to pass the Accounts for the half-year ended 31st December, 1955.
- (2) To declare a Dividend.
- (3) To appoint a Director in place of Mr. Alec. A. Leslie who retires by rotation, but who is eligible for re-appointment.
- (4) To appoint a Director in place of Mr. C. L. Bajoria who resigned in May, 1956.

And, in this connection, to consider, and if thought fit, to pass the following resolution as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto.

To be proposed as a Special Resolution

"That Mr. B. L. Bajoria an Associate of McLeod & Co. Ltd., the Managing Agents of the Company be and is hereby appointed a Director of the Company in place of Mr. C. L. Bajoria."

- (5) To consider, and if thought fit, to pass the following Ordinary Resolution pursuant to Section 293(1)(d) of the Companies Act, 1956, the relative explanatory statement, as required by Section 173 of the said Act, being annexed hereto.

"That the Board of Directors be and is hereby permitted with effect from the commencement of the Companies Act, 1956, to borrow moneys from time to time for the carrying on of the business of the Company notwithstanding that the moneys to be borrowed, together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) will exceed the aggregate of the Paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose."

- (6) To appoint Auditors for the year 1956 and to fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

The Share Transfer Books of the Company will be closed from 9th to 30th July, 1956, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
A. T. DOIG,
Managing Director,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 27th June, 1956.

NOTE:—Payment of the proposed dividend, if declared, will be made on or after 27th August, 1956, only to those members whose names are registered in the Books of the Company on the 30th July, 1956, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of shares on blank transfer will not be entertained.

Explanatory Statements

1. In the Special Notice given to the Company of the resolution under item No. 4 of the above Notice, it has been pointed out that Mr. B. L. Bajoria is an Associate of the Managing Agents and, in view thereof, it will be necessary for the Shareholders to pass a Special Resolution in accordance with Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company.

2. The resolution under item No. 5 of the above Notice is intended to provide the Board of Directors with the necessary authority to enable them to borrow moneys from time to time for the Company's business in excess of the paid-up capital of the Company and its free reserves pursuant to Section 293(1)(d) of the Companies Act, 1956.

THE BANK OF INDIA LIMITED, BOMBAY.
NOTICE

NOTICE is hereby given that the Share Transfer Books of the Bank of India Limited will be closed from Friday, the 13th July, 1956 to Saturday, the 28th July, 1956 (both days inclusive).

Dividend will be payable on and after Saturday, the 4th August, 1956.

T. R. LALWANI,
Acting General Manager.
Bombay:
26th June, 1956.

SHAW WALLACE & COMPANY LIMITED.
DIVIDEND ON PREFERENCE SHARES.

THE Directors have declared an Interim Dividend of 3%, less Income Tax, on the Company's Preference Shares in respect of the year 1956, payable to Members whose names appear in the Preference Share Register on the 16th July, 1956. Warrants will be posted on or after that date to the addresses or in accordance with the instructions, recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 9th to the 16th July, 1956, both days inclusive.

By Order of the Board,
C. A. CUNLIFFE,

TENDER NOTICE

Re: Laying a new 60 inch, alternatively 72 inch, Filtered Water Steel Main over 13.65 miles and

Cathodic Protection Works for protection of this new Water Main to be laid, as well as of the old existing Water Mains of the Corporation.

Tenders are invited in duplicate for the following and will be received by the 2nd Deputy Commissioner, on 31st July, 1956, up to 12-00 noon. Each tender in duplicate must be enclosed in a sealed cover and superscribed "Tender for". For specifications and tender forms, apply to the Keeper of Records. Price Rs. 50/- per set:—

Laying a new 60", alternatively 72", internal diameter electrically-welded steel pipe-line, about 13.65 miles in length from Pulta Pumping Station to Tallah Pumping Station for conveying filtered water from Pulta Pumping Station. The pipe-line will be laid underground.

The tenderer should be in a position to fabricate the pipes and to lay them underground, after carrying out necessary excavation works, within the time stipulated. The tenderer shall have also to undertake cathodic protection works as anti-corrosive measure for protection of the new as well as all the existing old mains.

The tenders will be opened on 31st July, 1956. The rates quoted in the tender are to hold good for six months from the date of opening.

B. GHOSH,
Secretary to the Corporation of Calcutta.
Dated, 22nd June, 1956.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

MISCELLANEOUS COMPANIES

O., Po., C. and Dd. indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CRITERIA FOR THE NEW TRANSPORT POLICY

NEW importance has come to be attached to transport in India, and it is this importance which we seek to reflect in the choice of coverage for our mid-year Survey for 1956. The importance owes primarily to the fact that economic development is gaining momentum. Agricultural and industrial production is rising, consumer prosperity is growing, and the economy as a whole offers a remarkable example of progress and stability. The problem now is no longer solely to shake the nation out of a centuries-old inertia before the needs of productive enterprise. It is becoming nearly as important to see that the fruits of that enterprise are spread out among the hungry masses of the new welfare State. The past few years have shown that quite often India has had the goods, but many Indians have not. While food-grains have lain stuffed in Government godowns, the drought- or flood-stricken masses of Andhra, Madras, Orissa, West Bengal or Gujarat have frequently had to go without them—for these could not be moved in time. While cloth and sugar have piled up in factories, people in distant areas have had to do without the basic needs for prolonged spells. The working of industry too has been hampered. The most notable example that comes to mind is that while the steady and wasteful accumulation of coal—the country's premier energy resource—has continued at the pitheads of West Bengal and Bihar, paper, cotton, electricity and a host of other units have sometimes almost had to slow down production for want of it.

The scale of expansion in national output during the past five years has been relatively modest in comparison with that which is proposed for the next five. This is the chief source of worry for the transport planners of today. Admittedly, the scale of expansion in transport facilities has also been modest during the past quinquennium in comparison with what is proposed for the current one. But doubts are widespread that these facilities will remain short of needs; in fact, the increase in production may so far outpace the expansion in transport that the gap may even grow. These doubts have been forcefully expressed by a member of the Planning Commission, Mr. K. C. Neogy; by visiting foreign experts, including Mr. Nicholas Kaldor; and, most of all, by the president of India's biggest transport enterprise, the Railway Minister, Mr. Lal-bahadur Shastri. The authority which backs forecasts of a growing transport shortage in years to come is thus formidable; but no concrete steps have yet been taken to ensure that planned facilities may cover more fully the expected shortcomings. In fact, recent moves may be said to have been almost in the reverse direction; there has been a sudden and sharp—though not unwelcome—blow-up in the food output target, but not much thought given to how this food will reach the needy and distant consumer.

Importance of the Railways

There is no doubt that the railways will occupy the position of first importance in the country's transport system for many, many years—if not decades—to come. The fact is implicit in the relative size of the allocations they have been given in the second five year plan, and those given to other forms of transport. Indeed, for speed, security and economy (all three factors taken together), it is doubtful whether any potentially competitive forms of transport will be able to gain much ground at their expense in the foreseeable future. Any trend in that direction, should it develop, may in any case be expected to meet with a quick and sharp reversal for the simple reason that the railways are the State's biggest commercial enterprise, a semi-monopolistic goose whose golden eggs have been a valuable gift to the Central coffers. It would be idle to deny that this semi-monopoly has already been partially exploited; the size of the annual contributions to the Central Exchequer, based on a guaranteed return under lop-sided Railway Conventions, is such that few competitive undertakings could assure their shareholders. The semi-monopolistic umbrella under which the railways have developed may in one sense be considered as having promoted their growth, and in another sense as having hampered it. It has promoted it in the sense that enterprises with assured markets are encouraged to expand; it has hampered it in the sense that without being exposed to the cold winds of competition, the true incentive to economy and efficiency can never be there. Whether the expansionary impetus of the first has been seriously weakened by the inertia implicit in the second, it is not easy to decide; but there is reason to believe that if the

various methods of transport had been allowed to develop along much more freely competitive lines than they have been, the facilities available might have been more commensurate with the country's needs—the railways themselves might have been cheaper, more efficient, and perhaps bigger.

This is a problem to which, after many years of neglect, attention has recently been returning, and that is all to the good. The attention has been returning mainly because the railways have demonstrated their inability to handle all the traffic they are offered, and have shown the prospect of being obliged to refuse to carry even larger quantities of goods as the years go by. The critics say that they will not need to if they improve their efficiency; the cynics say that they will not need to since the goods are anyway unlikely to be produced. Both these prognostications are not without an element of reason; but even so, it seems justifiable to argue that the physical facilities offered by various forms of transport, including and especially the railways, will need to be rather larger than has now been planned for in the majority of cases.

Scope for Expansion

The scope for expansion, as many of our contributors emphasise on later pages, is large enough to allow a vigorous policy to be followed by all the main methods of transport which now exist in this country. There is little fear that if, for instance, the railways expand, road and water transport operators, or the airways, will find themselves saddled with idle capacity. There is even less fear of the opposite happening—unless the railways went completely berserk and bumped up freight rates to wholly uneconomic levels. The real fear is if the Government, in its anxiety to safeguard the historical preserve of the railways, retains impediments in the expansion of their now weak competitors. The two chief alternatives to the railways in the country's transport system, as it stands today, are roads and coastal transport. It is primarily these which need to be encouraged. Other forms of transport serve highly useful, but limited and specialised, purposes; and their future significance to the economy is to that extent restricted. The airways, for instance, offer services that are inevitably far too expensive for most industrial and commercial freight needs. The inland waterways offer services which are cheap, but whose operation is straitjacketed by geographical factors, and which are therefore of not much more than regional significance. Road transport, however, offers a facility which is not only flexible in relation to the area of its operation, but which is also flexible in terms of costs and of carrying capacity. Coastal vessels offer a similar advantage in a country with a long coast-line, although to a much more limited extent.

The proper view of road transport is not as the snake beneath the railways' feet, but as partly competitive and partly complementary with the railways. Indeed, as the country's distributive economy develops and specialises, as monetisation creates the demand for a greater diversity of goods, the roads can play a positive rôle in actually increasing the demand for railway facilities. This can happen as the former open up the remoter parts of the country, which the railways cannot reach, for the spread of the new industrial civilisation—by roads bringing to railheads the "feeder" traffic which otherwise would not get there. The roads can thereby add to stability and prosperity in agriculture, which is one of the kingpins of an inflationary plan. The farmers who today mortgage their crops to the village moneylender, because he is the only buyer at hand and he alone can arrange their quick transport to a profitable market, will not need to depend on him; with better transport, they could move their produce themselves, and secure the fairer returns offered by a more mobile market.

Road Transport Policies

This is an advantage which the railways, for inherent physical reasons, will never be able extensively to offer. If they do, it will only be with an investment vastly greater than the country can for many years yet afford. That is why, although their expansion for long-distance traffic requirements is a matter of the first importance, the improvement of road transport is nearly as important. The unfortunate feature of the latter's situation is that although, in comparative terms, not much needs to be done, even that little is not done. Road transport operators do not ask for the roles and sub-

dies which a vast section of Indian business and industry are wont to cry out for today. All they ask for is that they should not be treated as milch cows of endless stamina. On later pages, correspondents refer in greater detail to the sharp rises in taxation, to nationalisation threats, and to the deplorable progress in road construction and improvement which are undermining the intrinsic health of this industry. The smug self-satisfaction with which the Government cuts tyre and tube prices on the plea of protecting the consumer, contrasts strangely with the indifference with which it retains heavy petroleum and vehicle taxes. It contrasts even more strangely with the readiness with which it allows motor vehicles to become more and more expensive, while nearly oblivious of the need to enforce quality standards without which a large part of the Indian automobile industry today will not be able to stand a slight whiff of external competition. Admittedly, it is not the same Government which is to blame for the whole collection of boons and sins; some State Governments have been more notorious than others, and far more notorious than the Centre, in their eagerness to squeeze motor transport operators. But surely it is for the various authorities themselves to get together in order to evolve a broad and uniform policy which transcends the financial exigencies of individual States.

Coastal Shipping

The problems of coastal shipping are more complex than those of roads. There has for long been considerable idle capacity which could have been beneficially utilised, but potential consumers have not been attracted in large enough numbers for a variety of reasons, an important one being that they considered freight rates too high. Coastal ship-owners, on the contrary, have felt, and still feel, that these rates are too low for economic working. There has been an encouraging improvement in the situation recently, and it is expected that more will be noticeable after the recommendations of the Rail-Sea Co-ordination Committee have been sifted and enforced. The Government's entry into the coastal tanker trade has been a notable development, but a problem to which far too little attention has been given is the delay in turn-round of ships at ports. This is ascribable to two main reasons—the sloth and indiscipline of dock labour, and the shortage of physical facilities to handle cargoes. The first is the more quickly curable; after years of trouble, accentuated by the introduction of the dock labour decasualisation scheme, realism is now beginning to dawn. Labour troubles at ports have affected not only coastal shipping, but also the overseas trade, at a time when world markets have become steadily more competitive. A start has been made in Bombay with a scheme of payment-by-results for dock workers, and, as the Government of India's Transport Secretary mentions on a later page, the results have been very encouraging. Further strenuous efforts will be necessary to boost the through-put capacity of major and minor ports, so that not only coastal but also overseas vessels may be able to work on a less uneconomic basis.

Taking transport as a whole, the fundamental need today is not arbitrarily to boost this form or that, on vague grounds of national prestige and the like. The fundamental need is to ensure that expansion, wherever it occurs, brings the richest possible dividends in economy, efficiency and national satisfaction. A great deal of nonsense has guided the extension of air services to quite unimportant centres; the pleas of "social necessity" and "national prestige" on which this has been done are effectively exploded by a special correspondent on a later page. On a much smaller scale, the same sort of ideas have sometimes dominated plans for the expansion of India's ocean shipping services; it is, for instance, still not quite certain whether the vessels operating between India and Russia under the recently-negotiated Shipping Agreement will be able to find suitably large cargoes to carry. The shortage of investment funds is too severe to allow the expenditure of money on impressing people, whether at home or abroad; any money that does come to be spent in this manner, however little, is the purest waste. India's transport needs today are great enough to exceed by far her investing capacity; the guiding principles in her transport policy must therefore be to co-ordinate and use intensively the facilities which exist, and to make economy and efficiency the sole criteria for expansion.

THE EXPANSION OF THE RAILWAYS IMPLICATIONS OF A TRUNCATED PLAN

• By G. PANDE •

Chairman of the Railway Board

It is interesting to speculate whether the pioneers of railway transport in India, farseeing men though they were, could even dimly have foreseen that their modest venture of a century ago would steadily grow into the vast empire which the Indian railways have become today. It is a safe guess, however, that these pioneers of the last century could not have foreseen the heavy dependence on the railway system which the country's economy has come to develop in the course of the past 100 years or so. How completely the national economy is dependent upon the railway system in India has been shown by the events of the past few years, particularly during the period of the first five year plan. Rail transport has come to occupy such a pivotal position that its adequacy or otherwise in the coming years may well spell the success or failure of the large industrialisation programme on which the country has embarked. Readers of newspapers have during the past few weeks been reading columns and columns of information on the various aspects of the second five year plan. If I may generalise, the public appears to have taken the transport part of the plan for granted. If the underlying assumption is that the railways will somehow deliver the goods, as they have done in the past, the compliment implied in such an assumption is indeed flattering. It seems, however, that there is in many quarters insufficient realisation of how intimately the success of the various sectors of the second five year plan is bound up with the development of railway transport, which should not only remain in step with development elsewhere but preferably keep at least one step ahead. What is the position of the railways under the second five year plan?

The Background

About a year ago, when the Planning Commission gave the Railway Board a broad indication, on the basis of the plan-frame, of the extent of industrial development expected during the second plan period, it was estimated that there would be an increase of 60.8 million tons in freight traffic. The more important increases related to steel, coal and cement. The anticipated increase in steel production was 5 million tons, and for this alone, it was estimated, transport capacity of 25 million tons was required, including coal and other raw materials. Excluding coal needed for the steel works, the increased capacity required for coal was of the order of 13 million tons. The additional capacity needed for cement was another 5 million tons. Thus, for these three basic industries, the total capacity required was of the order of 43 million tons, leaving a margin of 17.8 million tons for the increase in general goods traffic, based on a 5 percent annual increase, which was at that time regarded as a conservative estimate by the railways. As for passenger traffic, the volume handled in 1950-51 was about 250 percent of the traffic handled during 1928-39. In succeeding years, the traffic dropped slightly, but since 1954-55, signs of a speedy revival have been noticed. The plan-frame furnished by the Planning Commission envisaged an increase of 30 percent in train-miles to allow for an increase of 3 percent per annum, while the balance of 15 percent would help to ease overcrowding.

It was against this background that the Railway Board set out to prepare the details of the second five year plan. Again, in the first instance, it was felt that the rehabilitation of the entire over-aged rolling stock and track should be provided for, but it was subsequently agreed that we should retain the same number of over-aged rolling stock in various age groups at the end of the second plan as we had at the end of the first plan. The track renewal programme was also cut down by 25 percent. Subsequently, however, owing to financial limitations, the Railway Board was asked to readjust the plan within an allocation of Rs. 1,125 crores. The plan was revised. The allocation of Rs. 1,125 crores, as now finally provided for the railways, includes a contribution of Rs. 375 crores from railway revenues, made up of Rs. 225 crores from the Depreciation Reserve Fund and Rs. 150 crores from the surplus. The net contribution from the general revenues, therefore, will amount to Rs. 750 crores.

Effects of Reduction

What was the effect of this reduction in the size of the railway plan? New line constructions

were restricted mainly to operational lines required for the movement of coal and steel traffic aggregating about 850 miles, against the 3,000 miles originally provided for; electrification schemes were cut down from 1,600 miles to 826 miles; doublings and conversions from metre gauge to broad gauge sections were cut down from 3,500 miles to 1,750 miles; and the provision for additional traffic was reduced from 60.8 million tons to 42 million tons in the case of goods, and from 30 percent to 15 percent in the case of passengers.

The Planning Commission stipulated that full provision would have to be made for the transport of steel and its raw material requirements (including coal), but it was agreeable to reducing the provision for coal (other than for steel works) and cement to 6 million tons and 4 million tons respectively. This left a balance of only 7 million tons for general goods traffic, against the plan-frame target of 17.8 million tons, excluding in both cases the 5 million tons of arrears of traffic carried over from the first five year plan, for which assets have already been provided. It was realised that if the targets set for various industries, etc., were achieved, rail transport would fall short of the demand. The Planning Commission has, therefore, agreed to review the position from year to year and readjust the allocation in accordance with the tempo of development.

Distribution of Funds

How is the proposed allocation of Rs. 1,125 crores to be utilised? It is expected that about Rs. 380 crores will be spent on the procurement of rolling stock, about Rs. 66 crores on new lines, and Rs. 100 crores on the renewal and strengthening of track. Works intended to increase line capacity, which include doubling, conversions to broad gauge, re-modelling of important yards, etc., have been allocated a sum of Rs. 186 crores. A sum of Rs. 65 crores has been provided to re-model workshops and set up new ones to take care of additional rolling stock. The 850 miles of new lines required mainly in connection with the steel and coal industry will cost Rs. 66 crores. On sections where steam traction can no longer haul the traffic satisfactorily, the railways must modernise working with the funds allotted. To this end, tracks will be electrified over a length of 826 miles at an expenditure of Rs. 80 crores. It may be mentioned that, up to now, the route mileage of the electrified tracks on the Indian railways is only 240 miles. On a number of sections, the introduction of diesel engines is being actively considered but this will not affect outlay to any extent. Emphasis on providing amenities for rail-users will continue unabated during the second plan period. We have also provided Rs. 50 crores for housing for essential railway staff and for staff welfare measures. This is about two and a half times the sum spent during the first plan period.

The task before the Railway Board now is how to produce the maximum possible transport out of the funds placed at its disposal. There is a large body of informed persons who consider that the targets laid down for rail transport, as now revised, are definitely inadequate. In fact, many of them even contend that the original targets of the plan-frame itself were inadequate, especially for goods traffic, and feel that in every sphere there is going to be an unprecedented degree of development which will astound the planners. Some suggest restricting passenger travel by all possible means and others would like the railway plan to be whittled down further because they feel that the development in other sectors will not come up to the targets provided for.

Efficiency of Performance

There is also the opinion of some distinguished persons that there is a larger scope for efficiency on the railways beyond what has been provided for. In this connection, it may be stated that, in calculating its requirements of rolling stock, etc., the Railway Board had assumed that there would be an overall 10 percent improvement in operational efficiency above what has already been achieved recently. In addition to this, no provision has been made to cater for an increase in the average lead of goods which is bound to come about. The average lead, after partition, has registered an increase from 275 miles to 300 miles in six years and perhaps a 20 percent increase may materialise during the second plan. If this

comes about, the requirements of additional rolling stock would go up by almost 10 percent, which has not been provided for. Although, therefore, provision has been made for a 10 percent improvement in efficiency, the railways must continue to do better and cater also for a reasonable increase in the average lead of goods. The scope for bigger improvements is limited by various practical considerations; for example, because of the developmental programmes that have to be executed during this period, a large number of engineering works, like doublings, re-modelling of yards, etc., will have to be undertaken and will impose a large number of speed restrictions, thus slowing down trains. Similarly, on the passenger side, additional trains will mostly be the slow-moving passenger trains which reduce the scope for earning additional engine-miles beyond the present average.

The railways naturally welcome any technical advice which will promote greater efficiency, but the point which is generally overlooked is that each suggestion should be capable of immediate and large-scale application so as to produce quick results. In addition, certain fundamental concepts must inevitably be kept in view, namely: (a) due to large availability of labour too much mechanisation would not be desirable; (b) we should use, as far as possible, equipment and materials produced indigenously; and (c) maximum use should be made of the existing assets and resources of the railways. We have invited a team of American surveying engineers, and they are already at work on two basic studies concerning increased through-put on certain trunk lines and greater rail-sea co-ordination, particularly in coal transport. We shall give the fullest consideration to any recommendations which this team might make, but, once again, let me emphasise that, in the context of the second plan, we can take account of only those new ideas which can produce quick results. We are also sending out our own officers to other railways to undertake studies of the methods of working with a view to improving our own. This is apart from the work that our own Efficiency Bureau and research organisations are doing.

Doubling or Central Traffic Control

There is another technical question to which a brief reference may be made here, in view of its important repercussions on the financial aspects of the second railway plan. It is argued that the introduction of the modern central traffic control system would eliminate the necessity of large-scale investment on doubling of track envisaged during the second plan period. This question is being looked into, and if we can avoid the doubling of a section on a long-term basis, we shall certainly adopt the cheaper method. A point to note, however, is that the central traffic control system would prove economical only on those sections where the increase in traffic is not expected to be very heavy. On all sections where traffic capacity is expected to increase very substantially in this plan or by the next, the doubling of track right now would be the more profitable proposition.

Then, again, there is some controversy about the economics of electric traction *vis-à-vis* diesel traction. This controversy can easily be laid to rest since we cannot afford to go in for large-scale dieselisation of our railways unless ample reserves of oil have been developed within the country, as otherwise, apart from dependence on foreign supplies, this would involve perpetual inroads into our foreign exchange reserves. Meanwhile, on certain sections of the railways, we have decided on a limited scale to go in for diesel traction during the second plan period as there it is a "must".

Road and Rail Transport

There is a strong feeling that road transport should be developed in order to relieve pressure on the railways. This is a highly desirable objective, but has certain limitations. To the extent that road transport can supplement rail effort in areas where the railways are, or would be, in difficulties, such help would be most welcome. However, when we come to consider the economics of the problem, it is found on a rough assessment that the capital investment required for developing a carrying capacity of one million tons by road for a distance of 300 miles is of the order

ROLLING STOCK FOR THE RAILWAYS

PRODUCING MORE WAGONS IN INDIA

• By A CORRESPONDENT •

THE chief weakness of the Indian railway system is the inadequacy of rolling stock, especially wagons. What exists at present is not only insufficient, but much of it is over-aged. A large number of locomotives, coaches and wagons have outlasted their normal span of life and need to be replaced. The railways have been working under this handicap all through the postwar years, because no replacement was possible during the war period, when they were put to very heavy strain. Judging from the evidence available from official sources, the handicap is likely to continue for several years to come. It is an unfavourable commentary on the railway administration that little effort appears to have been made in the immediate postwar years to rectify the shortcomings which had developed. At the beginning of the first plan, there were 8,209 locomotives, 19,225 coaches and 222,441 wagons. Of these, as many as 2,112 locomotives, 7,011 coaches and 34,584 wagons were over-aged—that is, roughly 25 percent, 40 percent and 20 percent of the respective categories of stock. The seriousness of the position was obvious, so the first plan allocated Rs. 400 crores for railway development, the major portion of which was for the procurement of rolling stock.

The railway administration has prosecuted the development programme with speed and vigour over the past five years. It has utilised the entire allocation for rehabilitating and developing the system; it has even spent Rs. 32 crores more, and procurement targets have been exceeded in the case of locomotives and wagons. The Union Railway Minister's Budget speech this year showed that a total of Rs. 240 crores was spent on the purchase of 1,589 locomotives, 4,837 coaching vehicles and 61,773 wagons, against the targets of 1,038 locomotives, 5,674 coaches and 49,143 wagons. But arrears of replacement still remain. The final report of the second five year plan says that "the new stock received during the plan period has been used in part for the replacement of over-aged stock which could no longer be kept in service. The stock on line at the end of the first plan will be 9,262 locomotives, 23,779 coaches and 268,049 wagons (four-wheelers). Of these, 2,813 locomotives, 6,305 coaches and 49,568 wagons will be over-aged and due for replacement. Thus, despite large-scale procurement in recent years, there will be heavy arrears of replacement to be overtaken during the period of the second plan."

TABLE I

Locomotives		Wagons		Coaches	
On 31st March	Broad gauge	Metre gauge	Broad gauge	Metre gauge	Broad gauge
1951	23.0	31.0	13.3	29.4	29.5
1956	32.5	26.0	16.5	17.2	24.0
1961	16.2	22.5	6.6	11.9	10.0

The railway development programme for the current plan period provides for the purchase of 2,258 locomotives, 107,247 wagons and 11,364 coaches for replacement as well as development purposes. The figures represent a curtailment of the railways' original procurement programme. The railway authorities have been asked to bring back into use the replaced stock found in a serviceable condition, in order to "make the limited allotment for the railways go as far as possible in fulfilling the targets of the plan." This, of course, the Railway Ministry has been obliged to do, and Mr. Shastri's Railway Budget speech last February referred to the measures introduced to utilise obsolete stock in the manner suggested. "Since wagons were short of requirements," he said, "steps were taken to improve their availability for traffic by a reduction in the number of wagons under repair and by intensive utilisation. These efforts have borne fruit. The percentage of sick wagons in November and December 1955 came down to 4 percent on the broad gauge and 5.8 percent on the metre gauge, from 7 percent and 7.2 percent in the previous year." This however does not answer the question whether the present policy will meet the requirements of the situation effectively. The need to restrain expenditure particularly when a considerable amount of foreign exchange is involved is understandable. As it is, more than one-third, that is, Rs. 425 crores, of the revised capital outlay in the railway development plan, will have to be spent

TABLE II

	Locomotives			Wagons			Coaches		
	Broad gauge	Metre gauge	Narrow gauge	Broad gauge	Metre gauge	Narrow gauge	Broad gauge	Metre gauge	Narrow gauge
Development	533	373	...	66,575	16,820	...	2,149	2,768	...
Rehabilitation	1,062	209	81	14,879	4,552	4,021	4,392	1,422	633
Total	1,595	582	81	81,454	21,772	4,021	6,541	4,190	633

abroad mostly for rolling stock purchases. But it seems the policy of economising is being carried too far in this particular case.

The Railway Minister's reference to the problem in his Budget speech was disturbing. He said: "The railway plan has been reviewed, and it has been found that, within the revised allocation, it will be possible to provide only an additional transport capacity of 15 percent for passenger traffic and 47 million tons of goods. The total goods movement during the current year is likely to be 115 million

tons, against an estimated demand of 120 million tons, leaving a gap of 5 million tons, which is also to be covered by the expected increase, and, therefore, the net increase during the second five year plan would be of the order of 42 million tons, against the original estimate of 60.8 million tons. While this increase is expected to meet fully the additional traffic load of 25 million tons on account of coal and other raw materials required for the expanding steel industry and its finished products, six million tons more coal and four million tons

DELIVERING THE NATION'S GOODS

Transport in India is largely synonymous with the Railways.

There is hardly any long-distance bulk movement of goods that does not involve a journey by rail.

For over a century the Railways in India have played a vital role, helping to knit our vast and far-flung country into a single unit. Today, the Railways are called upon to play the most important part in India's programmes of development.

The Railways are carrying men and material smoothly and economically wherever needed and serving the needs of commerce, industry and the common man.

Tubfuls of coal waiting to be loaded

more cement, I am afraid it will leave a meagre margin for increases in trade and output in other sectors of our economy." Mr. Shastri made this statement after considering how much more traffic capacity could be created by taking special measures, such as retaining over-aged stock and speeding up repairs and overhauls.

The Planning Commission has not officially gone on record as differing from Mr. Shastri. In fact, the final report admits that, in spite of an increase of 8 percent in the traffic carried by the railways be-

tween 1953-54 and 1954-55 (in terms of originating tons), and a possible increase of a further 9 percent during 1955-56, the volume of traffic offered has increased more rapidly than the railways' carrying capacity, as during this period outstanding registrations rose at a greater rate than the average of daily loadings. Nor is it denied that, because of the revision of the plan, the railways will not be able to carry the 60.8 million tons of extra traffic resulting from higher industrial and agricultural production. If it is accepted that the additional traffic required to move coal,

steel and raw materials for the steel plants and cement will be about 43 million tons, which the Planning Commission has done, then Mr. Shastri has established his point that there will be only a small margin left to cope with increases in trade and output in other sectors of the economy. It is easy to appreciate the private sector's fear that the already unsatisfactory facilities may deteriorate further. Coal producers, particularly have suffered from the wagon shortage, partly because the private sector has been discriminated against where the claims of the public sector have come up. The Prime Minister's assurance in the latest Industrial Policy Statement that the two sectors should be treated alike is welcome, but it remains to be seen whether the promise is fulfilled by the lower hierarchy of officials.

The prospect that the railways' relative ability to handle all the traffic they are offered might well deteriorate suggests the need for urgent re-thinking on the size of their expansion plan. On at least one aspect, some change seems essential—the provision for wagons. The target is to procure 107,247 wagons, which gives an average of a little over 20,000 a year. A large proportion of these is to be imported, as in the foreign exchange budget of the railway plan, Rs. 81 crores is earmarked specifically for wagons and Rs. 125 crores for special types of rolling stock. A bigger share of the total orders could perhaps be placed with local producers who already have a rated capacity of 15,000 wagons and produce over 13,000 wagons annually. The following table shows the number manufactured by indigenous sources out of the total number procured during the first plan.

TABLE III

	Indian Manufacture	Imports	Total
Locomotives	496	1,093	1,589
Coaches	4,351	486	4,837
Wagons	41,192	20,521	61,713

They could increase their production capacity further if steel supplies were assured and more long-term orders given.

STONE'S

TRAIN-LIGHTING DYNAMOS AND SWITCHGEAR
Now Made in India

Since the introduction of the first electrically illuminated carriage on the South Indian Railway in the year 1897, Stones have supplied thousands of train-lighting equipments to the Indian Railways and its name today has become a by-word in the field of train-lighting. Behind this is a story of years of research, of pioneering effort and achievement.

The first major step in India was taken in the year 1931 when a workshop was opened by J. Stone & Company (India) Limited, in Calcutta, to manufacture the more simple items of train-lighting such as inter-vehicle couplings, junctions boxes, light fittings and fans.

These manufacturing facilities have gradually been expanded. NOW, for the first time in India, and as a fitting climax to over 60 years of service to the Indian Railways, STONES have pleasure in announcing their latest contribution towards the Country's self-sufficiency—their modern Factory at Behala, Calcutta, opened last year, for the complete manufacture of Train-lighting Dynamos and Switchgear.

AIR-CONDITIONING ON THE INDIAN RAILWAYS

In the year 1937, some 40 years after the introduction of electric lighting for Railway carriages, the Great Indian Peninsular Railway built 5 fully air-conditioned coaches for use on the Bombay-Calcutta Mail Service. The War retarded progress in air-conditioned travel. Nevertheless, during these years, the Railways were able to build 32 fully air-conditioned Ambulance Trains for the Army.

Since the end of the War, progress has been enormous. Over 100 Coaches have been put into service, and these will be followed with at least a further 90 to be built in the ensuing years.

It is a matter of pride to us that all these coaches have been fitted with Stone's electro-mechanical system of air-conditioning, providing trouble free service under rigorous conditions and a standard of comfort unmatched in any other mode of travel.

STONE'S RAILWAY SPECIALITIES

Include equipments for Carriage Lighting, Locomotive Lighting, Fluorescent Lighting, Air-conditioning, Refrigeration, Carriage Heating, Steam or Electric Ventilation, Water Heating, Water Raising, Gear Drives.

The Experience of this Company in the provision of equipment to suit the requirements of the world's railways has shown that operating conditions are never exactly duplicated. The Stone policy is, therefore, to keep abreast of all modern developments and recommend to each individual Railway the type of equipment which, on the basis of practical experience, is known best to suit the circumstances. It is upon the ability to produce the best system for each individual Railway that the world-wide reputation of J. STONE & COMPANY LIMITED, has been maintained.

RATIONALISING RAILWAY FREIGHTS

EARLY HAPHAZARD GROWTH AND THE PROBLEMS OF TODAY

• By I. S. PURI •

Former Financial Commissioner of Railways

THE early railways in India were built by British companies under a Government guarantee of return on the capital invested. Their contracts provided that the rates and fares should, in the first instance, be approved by the Government. Possessing no adequate knowledge of railway rating and being wedded to the policy of *laissez-faire*, the Government decided that its rôle should not go beyond protecting the railway user from being exploited. This it attempted to do by prescribing certain maxima within which each railway was free to charge whatever rates it thought fit.

The railway companies were equally new to the task of railway rate-making. Their knowledge was limited to the conditions prevailing in Britain. Conditions in India, with her then exclusively agricultural economy, were vastly different. Even in Europe and America, the railways had been operating for barely a quarter of a century, a period hardly sufficient for the development of a knowledge of the basic principles of railway freight rates. A long time was to elapse before the economics of rail transport began to be studied as a science.

No Uniformity

The approach of the railways to rate-making was, therefore, purely experimental the world over. The Indian railways also started their freight rates on an experimental basis. In view of the limited range and volume of the traffic which was offered, commodities were grouped under a small number of classes, four on some railways and five on others. There was, however, no uniformity of practice in either the grouping or the basis of charges. Still, certain practices were adopted by almost all railways. For instance, coal and foodstuffs were carried more cheaply than the rest of the merchandise and the basis of charges for traffic moving to and from ports was appreciably lower than that for merchandise moving within the country.

Each railway was free to fix its own rates, irrespective of what the others did, as it had a monopoly in its own area. The only competition it had to contend with was from the bullock cart and the pack animal. Inter-railway competition was non-existent. The picture, however, underwent a material change in the eighties of the last century. With the opening of the Rajputana Malwa, Indian Midland, the Bengal Nagpur and some other railways, there came into existence alternative routes to the ports of Bombay and Calcutta, particularly from the wheat-producing districts of northern India, and the cotton-producing districts of the Central Provinces, Berar and Khandesh. This started a rate war between the railways serving these ports. In this, both groups of railways were almost evenly matched. Whereas the Rajputana Malwa and the Indian Midland Railways brought Bombay nearer to the producing centres than Calcutta, the railways serving the latter had the advantage of cheap coal, generally easy gradients and the absence of ghat sections. The real sufferer from this rate war was, however, the Government of India, as the railway companies enjoyed the guarantee of a minimum return, more than which they were not earning in any case. The Government tried to check this rate war by laying down certain broad principles to be observed by every railway. A standard goods classification was prescribed. The freights were divided into mileage rates and terminals. For mileage rates maxima and minima were laid down, which no railway could infringe. As for terminals, railways were allowed complete liberty, subject to the right of the Government to fix a reasonable charge in case of dispute. Undue preference was not to be given to any railway, each being free to fix a special or exceptional classification for any commodity. The range between the minima and maxima was, however, very wide. For some classes the maximum was five or six times the minimum. This gave the railways very considerable latitude in laying

down the policy which it did, the Government provided itself with a weapon of only very limited utility against wasteful inter-railway competition.

Competition

This competition took various forms. A railway would place a commodity in a different class from that adopted in the standard classification. Schedule rates were quoted much below the standard class rates, each railway constructing its own schedule. Some had more than one schedule for one and the same commodity, based on quantities offered, different packing conditions, etc. A new schedule was evolved for any commodity which could not be fitted into the structure of class rates without reducing the competitive strength of the railway. The number of schedule rates increased rapidly and ultimately ran into thousands. Even this did not seem to satisfy either the railways or the traders; therefore station-to-station rates were quoted for traffic moving between specific points. They were a matter of negotiation between the consignor and the railway. In course of time, their number ran into lakhs. Sometimes "special" or "block" rates were quoted with the deliberate object of diverting traffic from another railway. Such special rates upset the already existing routing arrangements over a wide field and were a fruitful cause of intensified inter-railway competition.

Effect of Government Policy

Not unoften, reduced or exceptional rates were also quoted with the more laudable object of fostering trade and industry. At quite an early stage of their development, the railways had, through the efforts of the Government and its officers, been made to appreciate the advantage to themselves of encouraging long distance movements by quoting cheap rates. During the Bengal famines of 1868 and 1873, although the E. I. Railway was reluctant to quote rates without a Government guarantee against loss, cheap rates for foodgrain to famine-stricken areas were financially a great success and the railway made a substantial profit. Later, the Bengal Nagpur Railway found it profitable to quote reduced rates for cotton from Berar and the Central Provinces to Bengal. Sometimes a railway found it advantageous to quote special rates in order to enable regional industries to stand competition from those situated in areas served by other rail-

ways. Concessional rates were also quoted to enable a new industry of national importance to be established. Even unprofitable rates were sometimes quoted in the hope that they would be revised when the industry had established itself and would be a source of profit both to the promoters and the railway. A classic instance of such enlightened self-interest was the quotation of specially low rates by the B. N. Railway for the products and raw materials of the Tata Iron and Steel Company. The sugar industry also established itself with the help of low freight rates. It may be mentioned in passing that this policy of quoting low rates for traffic of special importance to the national economy has been observed throughout. During the period of depression, special rebates were given for coal and wheat intended for export, and at present there are special schedules for chemical manures and long distance wheat. Coal has all along been carried at special rates; in the opinion of some, actually at a loss.

A Complex Structure

Whatever advantages the railways might have derived from such a complicated freight structure, and whatever incidental benefits might have accrued to individual interests, the disadvantages were far greater. A freight structure for the country as such never existed. There were as many freight structures as there were railways, which freely manipulated rates from time to time.

The Indian Railway Conference Association made protracted efforts to bring about some measure of uniformity through voluntary agreement. It evolved a general classification of goods and a number of standard schedules, which were generally accepted for interchange traffic. But the railways continued to have their special classifications: each was free to apply to a particular commodity whatever schedule it chose and had its own separate schedules for local traffic. Thus, even as late as 1937, there was hardly any uniformity in schedules applicable even to the principal commodities, a feature of railway administration which drew adverse comments from the Wedgwood Committee.

Business interests were naturally loud in their complaints against the anomalies, complexities and drawbacks of such a chaotic freight structure, from which they suffered a great deal. For a trader, it was impossible to find his way through the maze of

PLANNING FOR BETTER ROADS MEASURES TO HELP REDUCE VEHICLE OPERATING COSTS

• By E. A. NADIRSHAH •

President, The Indian Roads and Transport Development Association, Bombay.

ON 31st March, 1943, there were 220,000 miles of roads in India, of which 88,000 miles or 40 percent had a hard-crust and 132,000 miles or 60 percent were of earth. Towards the end of that year, a conference of provincial chief engineers and representatives of the Central Government was held at Nagpur to assess road requirements on the basis of economic needs and after taking into consideration the facilities offered by other forms of transport. This conference evolved a scheme, which came to be recognised as India's blue-print for roads. Its main features were:

1. An increase in the total mileage from 220,000 to 331,000 by 1953. Of this, 123,000 miles or about 37 percent were to have a hard-crust, and 208,000 miles or about 63 percent were to be of earth.

2. A classification of the road system into: (a) the national highways, being the main arteries of the country; (b) State highways, being the main arteries of the States; (c) major district roads, being the main feeder roads; (d) other district roads, being also feeder roads but less important than (c); and (e) village roads, being roads passing through villages.

3. No village in a well-developed agricultural area would be more than five miles from a main road; no road would be considered in isolation but as part of a network; and no road surface would be of a higher standard than was required to carry the existing traffic or traffic expected in the immediate future.

Other aims were to join missing links, build a large number of bridges, widen the main traffic arteries, improve their surfaces and evolve suitable standards for the geometrical design of roads.

Progress of the Scheme

Although the scheme was to have been completed by 1953, only about 24,000 miles were constructed between 1944-45 and 1950-51. Thus, at the beginning of the first five year plan, India had 244,000 miles of roads—97,000 miles or about 39 percent with a hard surface, and 147,000 miles or about 61 percent of earth. During the five years ended March 1956, it was expected that about Rs. 156 crores would be spent on extension and improvement. This, it was thought, would allow about 10,000 miles of hard-crust and 20,000 miles of earth roads to be constructed; and the condition of existing roads to be improved. In addition, a number of bridges, including about 30 on national highways, were to be built. The construction of 31 bridges was already in hand. Now, in the second five year plan, about Rs. 275 crores have been provided. With this amount, it is expected that another 56,000 miles of roads will be built, excluding bridges. Thus, the target for additional mileage laid down in the Nagpur Plan is to be reached by 1960-61, though a number of bridges will still be left over for construction during the third plan.

Since the Nagpur Plan was drawn up, considerable economic progress has taken place. The per capita income, which was believed to be about Rs. 220 in 1942-43, rose to Rs. 255 in 1950-51 and Rs. 280 in 1955-56. It is expected to rise to around Rs. 330 in 1960-61. Railway freight, in originating tons, which amounted to about 80 million tons in 1942-43 in the territory now known as the Indian Union, increased to about 92 million tons in 1950-51 and 115 million tons in 1955-56. It is expected to increase to 181 million tons by 1960-61. Thus, at the end of the second plan, railway goods traffic is likely to be about 2½ times that of 1942-43, when the Nagpur Plan was prepared. This suggests that, instead of a 50 percent increase in the road mileage envisaged by the Nagpur Plan, an increase of at least 100 percent is required. In other words: it appears that, as against the provision for 111,000 additional miles in the Nagpur Plan, 220,000 miles will actually be needed by 1960-61. Against this background, the present targets seem too low.

Comparison with other Countries

India's backwardness in roads is generally admitted, but the two tables which follow show it in comparative terms. In this country, there is about one-fifth of a mile of road for each square mile of area, as against over two miles in the U.K. and one

mile in the United States. The following figures offer a comparison with various European countries.

ROAD MILEAGE FOR A SQUARE MILE OF AREA

Belgium	...	4.9
Denmark	...	2.2
U.K.	...	2.1
France	...	2.1
Switzerland	...	2.0
Ireland	...	1.9
Holland	...	1.8
West Germany	...	1.6
Italy	...	0.9
Austria	...	0.6
Yugoslavia	...	0.5
Portugal	...	0.5
Sweden	...	0.5
Spain	...	0.4
Finland	...	0.3

While it is hardly possible to compete with the highly developed countries, a target of about half a mile of road for a square mile of area does not seem too high. The figure of 220,000 miles suggested by me, based on the increase in railway goods freight between 1942-43 and 1960-61, is less than what this target would require.

The following table compares the road mileage in various countries in relation to population.

ROAD MILEAGE FOR 100,000 OF POPULATION

Australia	...	5,854
Canada	...	3,955
U.S.A.	...	2,107
France	...	1,212
Spain	...	485
Ethiopia	...	391
U.K.	...	364
Iraq	...	246
Ceylon	...	221
Malaya	...	114
Philippines	...	77
India	...	68

Again, leaving out the more advanced areas, the position of the last five countries—Iraq, Ceylon, Malaya, the Philippines and India—is interesting. An average of about 115 miles of roads for a lakh of population, it appears, would not be over-ambitious. For this average, India's requirements would work out to a total road mileage of about 440,000, that is, an addition of about 220,000 miles, the same as has been indicated already.

Other Factors

The construction of roads is not an end in itself; it is a means to an end, the end being an economical system of transportation. It is necessary to see that it is done in such a way as to help reduce the operating costs of vehicles. Unless these are low, full use of the facilities will not be made. Here three factors are particularly important: the geometric design of the roads, which affects the speed and safety of vehicles; modern surfaces, which affect maintenance and running costs; and the provision of bridges capable of carrying greater laden weights, which reduces hauling charges. The Indian Roads Congress has been doing excellent work on the geometric design of roads. It has studied the requirements in great detail, and in the light of other countries' experience, has standardised road widths, cambers, gradients, super-elevations at curves and a number of other details, including suitable milestones. As these standards are implemented, the country will have quicker and safer facilities for road travel. For surfaces, the first need is to increase the mileage of hard-crust roads. In the Nagpur Plan target, hard-crust roads were to be about 37 percent of the total mileage and earth roads about 63 percent. This is a serious defect since earth roads are not suitable for fast traffic and they prove more expensive in the long run as heavy maintenance is necessary. The aim should be to have the entire road mileage of hard-crust. Furthermore, hard-crust roads should have modern surfaces on the main arteries.

In 1949-50, the aggregate lengths of various surfaces were as follows:

1. Bituminous and concrete	13,098 miles
2. Water-bound macadam	82,826 miles
3. Earth	147,314 miles
	243,238 miles

Laying a bituminous road surface

THE PROBLEMS OF ROAD CONSTRUCTION IN INDIA

MEETING REQUIREMENTS OF VARIOUS TYPES OF VEHICLES

● By R. F. DAVIES ●

TRANSPORTATION methods in the economy of a country are of great importance, but are so involved in our daily lives that they are taken for granted and tend to be overlooked. It has been estimated that transport and handling costs represent from 20 to 80 percent of the final price of a product paid by the consumer. Unfortunately, the diversity of the means of handling and the number of stages make control of these costs difficult, but it is obvious that efficient transport systems tend to reduce them. The development of roads and road vehicles has been such that road transport becomes more important as the productivity of a people increases. This is essentially because of the great flexibility of this method of moving goods or people by vehicles capable of travelling over all sorts of surfaces with the minimum of centralised control. Apart from the ability to handle heavy loads over long distances as a primary carrier, the road transport vehicle is necessary as a secondary carrier for the initial collection and final distribution of goods carried by rail or water. In this rôle, no other method can offer the speed, convenience and, generally, the economy of road transport—if the roads are in reasonably good condition. It is also obvious, but is often overlooked, that bicycles, bullock carts or bulldozers will all move more quickly, safely, and cheaply on a good road than on a bad one. The economies are in time, maintenance, fuel, depreciation costs and in increased payloads, and should be set against the cost of the road.

Construction

The Indian road system is in many ways inadequate but is being extended and improved fairly rapidly in spite of the many difficulties facing the engineer. Broadly speaking, a road consists of the sub-base or earth-work which finally carries the load, the base course or soling which distributes the load to suit the nature of the sub-base, and the wearing course or surface which provides a suitable running surface. Whether a road is completed to the first, second or third stage depends on the terrain, climate, soil and traffic density and type. The road builder first surveys the land, selects the most desirable route or alignment and then designs a road to suit prevailing or anticipated conditions. In India, his problem is complicated by natural difficulties such as wide, turbulent and unpredictable rivers, by widely differing types of traffic, and, of course, by finance.

The problems of bridging the greater Indian rivers fall outside the scope of the normal road designer, so they will be ignored here. The designer is therefore only concerned with the road on the surface of the earth. Having decided on the route, the alignment is detailed considering the gradients allowable, the maximum speeds of the vehicles using the road and the drainage of the country. On this alignment, the sub-base or earthwork is constructed. This earthwork will finally carry the weight of the vehicles using the road and the work should be considered of the greatest importance. The load-bearing capacity of a particular soil under given climatic conditions can be evaluated by a series of tests, which indicate the best methods of improving the bearing value during construction. Briefly, the generally accepted tests are:

The Sieve analysis, which shows the proportions of gravel, sand and silt or clay present, and whether a greater quantity of any type should be added.

The Liquid Limit and Plastic Limit tests, which determine the maximum and minimum moisture contents at which the soil remains a stable and homogenous mass.

The Optimum Moisture Content test, which determines the moisture content at which the soil may be best compacted.

The California Bearing Ratio test, which indicates the bearing capacity of the compacted soil.

Soil Conditions

Certain soils will give better results than others and this is taken into account when deciding on the

second stage—the base course or soling—of construction. The actual construction of the earthwork consists of levelling of rises and dips to the desired gradient and lifting the surface of the road above the high water level of the area, leaving means for drainage along and across the roadbed. The earth is normally obtained either from the high spots and filled into the low spots of the proposed road or taken from borrow pits along the sides of the road. The parts of the road from which earth has been removed leaving a solid base are said to be "in cut", and those areas where loose earth has been placed and compacted are "in fill"; the difference in stability must be allowed for. The compaction of the earth-work is normally carried out by spreading in layers and rolling with a conventional road roller, or in special cases by using sheep's-foot or pneumatic tyred rollers, which have a kneading action.

In India, until a few years ago virtually all earth-work was done by manual labour, the tools being a pick and shovel or a Kodali, and baskets for the carriage of the excavated earth by animals or human beings. Since the last war, the advantages of mechanical earth-moving equipment, particularly where huge quantities must be dealt with in a short time in difficult conditions, have become apparent, and this type of equipment will no doubt be used for more and more earth-work. The principle is the same as in the old method. The pick shovel and basket are reproduced on a huge scale in the excavator and tipping truck, or in the motor scraper which is all in one. They dig earth in the "cut", and then carry it to and spread it in the "fill" area. In addition, this heavy mechanical plant compacts the earth-work as it goes along, leaving only the finishing touches to the familiar road roller. After compaction and final dressing the earth-work is left to settle for as long as possible before the next stage is undertaken. This is to allow the base to come to a condition of stability under prevailing climatic conditions, any deformations are then corrected

before the comparatively thin and expensive base and wearing course are applied.

Distributing Traffic Load

The primary job of the base course is to distribute the traffic load safely on to the sub-base or earth-work. For design purposes, it may be assumed that a point load is distributed as a cone downwards through the base course. Thus the thickness of the base course depends on the bearing capacity of the sub-base and the expected maximum load of the traffic. For example, if the bearing capacity of the sub-base is 100 lbs a square inch and a bullock cart weighing 2,000 lbs loaded is to be carried, the contact area of the wheels is considered and the base course thickness calculated to reduce the load on the soil to a safe level. The thickness of the base course being determined, the material to be used must be decided upon, taking into consideration local conditions. As the job of this course is to distribute load, it must be composed of something capable of taking heavy loads itself without crushing or deforming much. The normal materials are broken boulders of large size packed to give mechanical interlocking, or bricks laid with or without some form of mortar or smaller broken stone using earth, cement or a bituminous material to give additional cohesive strength to mechanical interlocking. The first two types are laid by hand to the desired thickness and camber, the third being loosely spread by hand or machine and rolled to compact it to the final thickness as a homogenous mass.

The base course may consist of one or more layers of any of these types individually or in combination to suit the design, available material and plant, and depending on whether the surface is to carry traffic itself or whether a final wearing course is to be provided. The type of surface or wearing course will largely depend on the kind of traffic to be carried and should provide a level riding surface, resist damage to itself and the base

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LTD.

levied by three administrations—the Centre, the States, and local bodies. The Centre levies an import or excise duty on motor spirit, tyres and tubes; the States levy a sales tax on motor spirit, a sales tax on vehicles and accessories and a vehicle tax; while the local bodies have such levies as a wheel tax, octroi and passenger tax. The average incidence of Central and State taxes alone on each motor vehicle (including motor cycles) during the period 1934-35 to 1954-55 worked out as follows: 1934-35 Rs. 567; 1939-40 Rs. 808; 1944-45 Rs. 611; 1949-50 Rs. 1,115; and 1954-55 Rs. 1,906.

There is no example in any other country in the world of such a steep increase in taxes. Although the Motor Vehicles Taxation Enquiry Committee reported in 1950 that Indian taxes on motor vehicles were the highest anywhere, the Government raised them by over 33 percent, from Rs. 1,115 in 1949-50 to Rs. 1,906 in 1954-55. As a result, the cost a ton-mile for a road truck is about 6 annas, as against an average rail freight of less than 1 anna a ton-mile. On this basis, no transport can be popular even if it does not suffer other restrictions. The present taxes amount to over 33 percent of the operating cost, as against about 4.5 percent in the United States. They are equal to 2 annas a ton-mile—more than twice the average overall rail freight. The extent to which the road transport industry has been crippled can now be clearly seen.

Nationalisation

Since about 1948, various States have started to nationalise passenger road transport. The policy in every case has been to displace from profitable routes operators who have spent years in developing them and to confine them to routes which are less lucrative and that, too, on permits for short periods, often for a mere six months or so. Naturally, this has scared away entrepreneurs, for they can hardly be expected to invest large sums of money in using a permit for six months, only to be pushed out thereafter if the permit is not renewed. Apart from its obvious unfairness, the policy is irrational since it is not possible for States to nationalise even one-fourth of road transport in the next 15 years or so. At the end of 1952, the nationalised sector covered about 26½ percent of passenger transport, excluding cars; less than 2 percent of goods transport; less than 1 percent of taxi transport; and about 8½ percent of the total under these three heads in 21 administrations. As for investment, the relative position is as follows:

	Estimated Investment In Crores of Rupees	
	As at 1st April, 1954	As at 1st April, 1961
Nationalised Sector	30	50
Private Sector	200	475

The investment in the nationalised sector is thus at present about one-seventh of that in the private sector and is estimated to be only about one-ninth by 1960-61. It is clear that there is not enough money to nationalise even a substantial fraction of road transport, and the only effect of States persisting in their present policy is to restrict expansion by discouraging private operators. The Planning Commission has realised this to a certain extent, but its directive that States should slow down the process of nationalisation until 1960-61 has not produced results. Even the directive, assuming that it were followed, would not be enough. A new venture requires four or five years merely to find its feet, and it is essential to ensure freedom from nationalisation for at least 15 years if new operators are to come in in large numbers.

Credit Purchase

The road transport industry was started by individual operators in the days when prices of vehicles were about Rs. 3,000 to Rs. 5,000 each. Out of about 48,000 operators in 1950-51, over 46,000 owned about five vehicles or less each. That is, over 90 percent of the industry was developed by people with a capital of Rs. 5,000 to Rs. 25,000, or an average of about Rs. 10,000 each. This is no longer possible with the prices of vehicles ranging from about Rs. 20,000 to Rs. 30,000. Small units of the type operating formerly are no longer feasible as both workshop facilities and the cost of operation are now high. The only solution is to have big units of, say, 15 vehicles each, which means a capital outlay of Rs. 3 to Rs. 4½ lakhs on vehicles alone. Individuals cannot be expected to invest so much money easily, so it is necessary for the State to start a finance corporation, as in the case of other industries, which would advance loans at low rates. In other countries, credit purchase systems have been extremely useful in popularising many goods; in the United States, loans for motor vehicles alone totalled around \$12,532 million in 1954. As credit purchases through private agencies are not always possible in this country, they have to be done under State auspices.

Transport is a service which can be popular only if it is economical. If it is not, consignors will pre-

fer to withhold despatches, except where the goods are perishable. To make road transport popular, it is necessary to reduce costs of operation. There are three main ways of doing this: reasonable taxation, smooth road surfaces and greater permissible laden weights of vehicles.

Transport Policy

In the Constitution, road transport has been put in the Concurrent List, but its administration is largely in the hands of States. This is mainly responsible for the present malaise, since it allows wide differences in taxation, nationalisation and permit policies. The construction and maintenance of roads is the responsibility of the Government, while the operation of vehicles is the responsibility of individuals. The industry as a whole is therefore not compact, and this makes it difficult to evolve a consistent long-term policy. In contrast, the railways are controlled by the Centre, and it is responsible for everything connected with their development, which makes it easier for them to meet requirements. This suggests that it is necessary to have a separate Central Ministry for road transport and shipping, as recommended by the Transport Committee of the Congress Parliamentary Party and also by the Estimates Committee of the Lok Sabha. Experience shows that it is difficult for a single Ministry to handle both the railways and other forms of transport; if it

does, the latter invariably suffer. The railways have a great deal to do and need all the attention they can get. It is, therefore, desirable that they have a Ministry of their own, while other types of transport are looked after by a separate one.

In sum, the handicaps of road transport are:

1. Restrictive provisions under the Motor Vehicles Act, 1940, and the Code of Principles and Practice. They should be withdrawn in their entirety.
2. Heavy taxation. This should be reduced substantially.
3. Threats of nationalisation. These should be held in abeyance for at least 15 years.
4. Lack of credit facilities for purchases. These should be provided by the State at low rates of interest.
5. Lack of modern road surfaces. These should be provided on the main roads.
6. Lack of uniformity in the permissible laden weights of vehicles. This should be corrected and weight limits increased.
7. Lack of uniformity in the transport policy for the country as a whole. This should be corrected by setting up a Central Ministry for road transport and shipping.

ONE-MAN ROAD BUILDER

Once an area has been cleared of trees, stumps, boulders and other obstructions, a trained operator can build a complete road, start to finish, with a Caterpillar No. 12 Motor Grader.

One of the many important reasons for the machine's versatility lies in its mechanical power controls:

- (1) raises or lowers left end of blade
- (2) raises or lowers the scarifier
- (3) rotates the blade on the circle
- (4) shifts the blade to right or left

- (5) leans the front wheels to right or left
- (6) raises or lowers right end of blade

Mechanical controls deliver full power to all operations even though the operator engages two controls simultaneously. Caterpillar is the only motor grader manufacturer who builds all major components—engine, frame, transmission, final drive, tandem drive and mechanical controls. We'll be glad to show you other exclusive advantages of the Caterpillar No. 12 Motor Grader.

DEVELOPMENT OF BRIDGE-BUILDING NEW MATERIALS AND TECHNIQUES

• By K. C. ROY AND A. BANERJEA •

ANCIENT bridges were mainly of three types—beam or girder, arch and suspension—though not exactly of the form known today. Arch bridges appear to have originated in the ancient cities between the Tigris and the Euphrates about 2,000 years before the Roman conquest. The Egyptians knew the science of arch construction around the eighteenth century B.C. The arches built in Persia were of ogival or pointed type. The first semi-circular arch with timber centering was probably built by the Etruscans. Actually, it was after the Roman conquest that the construction of arch bridges spread over the whole of Europe. Suspension bridges in their simplest primitive form were generally meant for one-way traffic. They consisted of a cable made of creepers or bamboo skins, tied to some hold-fast at the two opposite banks of a river, with a loop hanging from the cable meant for the traveller to sit, who in turn helped himself by pulling in crossing the river. Even recently, such old types of suspension bridges have been found in remote parts of the Himalayas, and in China, Africa and South America. Another type of bridge used in ancient times was the pontoon, which was a special type of girder bridge supported by floating boats held in position by anchors. Herodotus narrates how in 481 B.C. Xerxes, the Persian king, crossed the Hellespont during his military expedition against Greece; 674 vessels were tied together and held in position by a proper anchorage, then wooden planks were laid across, with rammed earth as a roadway over it. This type of bridge was generally used in war.

The Roman Age

There was a great development of the bridge-building art during the Roman age, that is, from 700 B.C. to 500 A.D. approximately. As the Roman empire spread over Europe, highways with many semi-circular arch bridges were constructed. But the most important achievement was the discovery of *pozzolana*, which forms hydraulic cement when mixed with lime. Bricks were also prepared, but the chief materials for bridge construction were stone and mortar. Joints in the Roman bridges were all normal to the inner surface of the arch, which spoke highly for the workers' efficiency in shaping the stones. But a peculiar feature was

Mr. K. C. Roy is Associate Professor at the B. E. College. Mr. A. Banerjea is a research scholar at the same institution.

that although the Romans could dress their stones very accurately, the spans in their arch bridges were not equal. The width of piers as a rule was one-third of the span, and these were all designed as abutments, that is, designed to take the horizontal thrust. Some Roman bridges still exist and Pont du Gard is probably the finest example. It is a three-tiered aqueduct 860 feet long and 160 feet high. The first tier consists of six arches with spans varying from 50 to 80 feet. Over this runs

thick. There was a chapel on the third pier of the bridge. The old London bridge was also a work of "The Brothers of the Bridges". Mediaeval bridges were built not only to carry traffic but were often fortified or built as war bridges; houses, shops, chapels and sites for tournaments and feats of arms were put on them.

During the Renaissance (1500 A.D.—1750 A.D.), bridge-building received a new impetus. An engineering school, the first of its type, was established in France, with Jean Perronet as director. Perronet discovered the utility of open spandrel arches, and was also the first to construct the intermediate piers of an arch bridge with smaller thickness to carry vertical loads only, allowing the horizontal thrust to be transferred from pier to pier until it met the heavy abutment at the ends. Palladio, the great Italian architect of the sixteenth century, investigated the possibility of constructing wooden trusses. The fundamental principle of the long span trussed bridges existing today is based on his theory. The first Renaissance bridge was the Pont Notre Dame in France. It consisted of six arches, of which the central four had a span of 57 feet each. Among the many Renaissance bridges, Pont Neuf in Paris, Santa Trinita in Florence and the Rialto bridge in Venice are notable.

A bridge in Switzerland built in 1933

the second row of 11 arches, and at the top is a row of 35 semi-circular arches of 16 feet diameter. The channel at the top is 4 feet wide and 6 feet deep. The design of the aqueduct is exceptionally bold in the sense that the ratio of the thickness of the piers to the span is only one-fifth instead of the usual one-third.

Reign of the Barons

After the Roman age, there was a decline in the art of bridge building. This Dark Age (500 A.D.—1100 A.D.), as it is called, was featured by the reign of the barons. There was little internal trade, so very few bridges were built. In the latter half of the middle ages, during the twelfth century, an organisation was set up by a group of Benedictine monks called Pontis Friars, which assisted travellers and pilgrims, particularly by the construction of bridges. The organisation was known as "The Brothers of the Bridges". It raised money from the public for constructing bridges, and it was in this way that the famous bridge at Avignon was built under the direction of St. Benezet. This bridge was nearly 3,000 feet long, with pointed arches of 100-feet spans and piers about 25 feet

Until this period, wood, stone and brick were the three main materials for bridge construction. But after the industrial revolution in England, iron was used and soon began to supplement the older materials. The first notable iron bridge was the famous Coalbrookdale bridge across the Severn. It was an iron arch of 100-foot span designed by Thomas Farnolls Pritchard. The first wrought iron bridge was built in 1832 near Glasgow. This newly-improved wrought iron was malleable, ductile and much stronger in tension than cast iron. The rivetting machine was also invented at this time. The development of iron bridges was mainly due to great engineers like Telford, Stephenson, Brunel and others. In the latter half of the nineteenth century, iron gave way to steel for use in bridge construction and better methods of sinking foundations below the water level were steadily developed. Like most important innovations, the use of steel was slow to spread. Its use in bridges was banned by the British Board of Trade for a long time, and it was in 1877, just before the construction of the Forth bridge, that the ban was removed. The St. Louis bridge over the Mississippi was the first big steel

THE FUTURE OF LIGHT ROAD TRANSPORT ENCOURAGING THE MANUFACTURE OF BICYCLES AND SMALL POWERED VEHICLES

• By S. K. SEN •

Chairman, Sen-Raleigh Industries of India Ltd.

THE importance of the bicycle and motor-cycle industries in supplying the needs of light road passenger transport is stressed in both the first and the second five year plans. In the first plan, the annual manufacture of 500,000 bi-cycles was expected by 1955. This target was reached by the end of last year, when the ten units from which statistics were obtainable showed a production of 470,000. The output of the nine other assembly units and of the small-scale factories raised the figure to 550,000, according to a statement made in Parliament by the Minister of Commerce and Industries. However, he estimated consumption at 650,000, as against the figure of 500,000 mentioned by the Tariff Commission to justify the liberalisation of imports. These statistics, however, are incomplete. Bicycle imports, which were about 96,000 or 97,000 units in 1954, increased to 118,052 in 1955 with more liberal licensing. But the value of accessories imports decreased under liberalised licensing to Rs. 1,87,67,727 last year from nearly Rs. 2 crores in 1954, showing greater confidence in indigenous components and their increased use by assemblers. The indigenous manufacture of accessories, in fact, rose to about Rs. 175 lakhs—an increase of 16 percent.

Imports of Accessories

Imports of accessories included 488,220 free-wheels, 152,204 pairs of hubs, 564,274 chains, 74,520 saddles, 63,370 pairs of rims, 72,732 pairs of pedals, 18,000 handlebars, spokes 270,000 units gross of chain-wheels. The total value of these imports was Rs. 4,122,000, and the value of the other accessories imported was Rs. 1,46,45,583. The latter included frame pipes, bottom brackets, lugs and shells, axles, pedal and hub axles, cups and races and other precision wearing parts. Analysing these figures, it seems that a large proportion of the accessories can be supplied by indigenous manufacturers, especially chain-wheels, chains, handlebars, pedals, hubs (except racing bicycle hubs), spokes and saddles. The quantities imported are not large and domestic capacity is sufficient to meet the demand. About Rs. 36 lakhs could be saved if the Government encouraged small-scale industries by banning the import of a number of parts and accessories.

There is a considerable difference of opinion about the actual demand for bicycles. The Government's figures are not very reliable as it does not collect the statistics properly and its opinions are influenced by pressure from the import trade. No statistical data on the sales and complete manufacture of all units exist, so estimation is largely a guessing game. The second plan expects that the output of bicycles will increase from 500,000 to 1,250,000. Of the latter figure, 350,000 have been reserved for small-scale and co-operative units, leaving 900,000 for the larger manufacturers and assemblers. The latter are working only one shift, except Hind which works two, T.I., Sen-shaft, and Atlas propose to work a single or double shift as required. The capacity of the four big manufacturing units is 200,000 bicycles each, or 800,000 in all. The other 15 manufacturing units have a minimum capacity of 150,000 and a maximum of 250,000 at present. The four big units now getting into their stride. The four big units are uncertain about the future policy of the Government and the extent to which the other development schemes will be pushed forward, particularly new roads, community centres, hydro-electric schemes and river projects. They can easily increase their output by 100,000 bicycles a year, reaching the 1 million mark in five years, or an even higher figure, if they work two shifts. The bicycle industry is thus self-sufficient now and can fulfil the target of the second plan if demand increases.

Coming to accessories, the Indian Standards Institution has indicated a few standards, but more standards and specifications for a larger number of accessories are necessary. Among precision components, chains, hubs, pedals, axles and saddles are now made by the bigger units to world standards. The Ludhiana and West Bengal small-scale factories are also improving their quality. If the small-scale industry is to be developed and

protected, assemblers as well as the small-scale bicycle manufacturers should utilise much more of its products. To reach the target of 1,250,000 bi-cycles, the small-scale industry will have to increase its output of accessories to about Rs. 5 crores by 1961 as compared with the present output of Rs. 1.75 crores. A ban on the import of some more varieties of accessories, which are produced in sufficient quantity and quality, could secure the desired result. This increase can be obtained partly with the help of the large-scale industries.

Imports and Exports

At present, imports of bicycles and accessories are allowed to increase simultaneously with an expansion in indigenous manufacture, resulting in periodical slumps. If a clear-cut policy were laid down, the manufacturers could plan with greater confidence, better and more effectively. It is hoped that the Government will help the large-scale indigenous manufacturers by adopting a suitable policy. Indigenous bicycles are now very popular, and the quality is considered up to the mark. Though 40 percent of the sales are of the higher-priced varieties, these have lately been in short supply because of strikes and labour troubles. This situation has now improved and it is hoped that the next eight months will show a much larger production to remedy the temporary short-

age. A great deal of talk is going on about the export of bicycles, but this seems to be at present no more than a dream as neither the Indian prices nor the import restrictions in other countries make large exports feasible. The export of accessories, however, may have better prospects once the use of proper raw material and gauges is enforced and I.S.I. standards maintained, because prices here are competitive.

Motor-Cycles

Coming now to motor-cycles, scooters and auto-cycles or Mopeds, in all countries the high-powered motor-cycle is losing ground and the low horsepower 125 c.c. or utility Mopeds and auto-cycles are flourishing, mainly because of a general shift toward cheaper vehicles. Scooters seem to have caught the public's fancy. There is one motor-cycle and one scooter and Moped manufacturer. Total imports of motor-cycles have been declining, and after a 50 percent cut in licences, are about 3,800 units. The proportion of the cheaper varieties of lower c.c. vehicles and Mopeds and auto-cycles is increasing. About 70 percent of the heavier models are bought by Government and Defence establishments. The preference for the cheaper varieties is based on the fact that people want to have a utility article rather than just a racing unit. The high prices of the other varieties

and changing tastes among the younger generation encourage the trend. Many young persons cannot afford the 250, 350 and 500 c.c. motor-cycles at the prices now prevailing, so 125 c.c. or 49 c.c. Mopeds are preferred. Though the Customs duty on parts and accessories has been lowered and manufacturing and assembly licences have been given, the prices of indigenous motor-cycles are beyond the average man's purchasing power. A lower distribution commission has not been of much help.

High ruling prices are a deterrent to sales. Prices have to be adjusted to the purchasing power of the people, and to popularise high-powered motor-cycles more economical manufacture and larger production leading to lower overheads a unit are necessary. If this cannot be done, the future of high-powered motor-cycles seems to be uncertain, though essentially they are not competitive with auto-cycles or Mopeds. The use of motor-cycle rickshaws can develop only if higher horse-power motor-cycles are cheaper. At present, in spite of the 50 percent cut in licences, imports exceed indigenous manufacture. The Mopeds or auto-cycles like N.S.U. Lambretta, Phillips, Victoria, etc., are all becoming increasingly popular and account for a large measure of imports. The field for scooters and motor-propelled cycles (Mopeds or light auto-cycles) of 49 c.c. or nearabouts seems to have expanded in every country. In Germany, their production has increased by 300 percent. In Italy and France, they are extremely popular, and recently 11 British units, including a large number of reputed bicycle manufacturers, have taken to the manufacture or assembly of Mopeds. A large number of motor-cycle firms have also taken to scooters as these are very useful for short distances and town running and are being equipped with shields and weather protection devices. High-powered motor-cycles are now used more for racing purposes and by the more adventurous who like speeding.

Light Vehicles

There is ample opportunity for developing the market for Mopeds and scooters in India. Manufacturing units of 5,000 are stated to be economic, but at the low prices ruling for these and the still lower prices which local manufacture will ensure, it is estimated that 20,000 units can be sold. Popularising such lines requires the existence of a number of manufacturers to do the required volume of publicity and to reach all markets. In bicycles, six units were licensed earlier; there is

Where Precision Counts

Engineers have a saying: "A 'thou' is as big as a house", meaning thereby that an error of 1/1000th of an inch is too great for a precision job. The automatic machine above is typical of the very modern equipment at the Sen-Raleigh factory to ensure precision where it counts—yet another reason for super quality in Sen-Raleigh bicycles.

SEN RALEIGH

CLEARING THE LINES

FOR PROGRESS

Over India's life-lines—her railways and roads—travel millions of passengers daily and millions of maunds of the nation's food and freight. But maintaining these life-lines becomes more arduous as the national economy expands.

To keep pace with progress, *three lakhs of rupees every hour* will be spent in the next five years to develop India's internal surface transport. Totalling 1,168 crores of rupees, this sum will be utilized, among other things, to construct new roads and rail-tracks, to purchase extra equipment, to provide more amenities for travellers and staff.

We too are doing our part to help these life-lines keep pace with progress by ensuring a steady supply of petroleum products—lubricants, cutting, furnace, diesel and quenching oils, as well as petrol and kerosine.

SECOND FIVE-YEAR PLAN (1956-61)

RAIL DEVELOPMENT

NEW MILEAGE	850 MILES
DOUBLING OF LINES	1,600 ..
ELECTRIFICATION	800 ..
CHANGE-OVER FROM METRE TO BROAD GAUGE	265 ..
DIESEL POWER	1,293 ..

ROAD DEVELOPMENT

CONSTRUCTION AND IMPROVEMENT OF ROADS	11,350 MILES
MISSING LINKS (NATIONAL HIGHWAYS)	600 ..
WIDENING OF CARRIAGE WAYS	3,750 ..
MAJOR BRIDGES	60

Burmah-Shell supply a lot of oil to Indian railways. And the railways move a lot of oil for Burmah-Shell—in fact, they have the lion's share in the transportation of Burmah-Shell oil. In one year they carry not far short of five hundred million gallons of oil to the cities, towns and villages of this country. The railways and the oil industry do a vital job for each other—and they're doing it round the clock, year in, year out, through the length and breadth of India.

Towards a Great National Mercantile Marine...

SCINDIA'S EPIC STRUGGLE is the story of a glorious fight for freedom against economic and political domination. In the face of bitter foreign opposition, Scindia's have built up national shipping and ship-building industries at considerable cost and sacrifice.

As far back as 1938, Pandit Jawaharlal Nehru had said: "I have no doubt that if India had been a free country... we would have developed long ago a national mercantile marine worthy of our country... The Scindia Company has been a pioneer in this field and, in spite of opposition and obstruction, has made good... I am impatient to see Indian ships carrying the flag of India across distant seas to far away countries."

We, as the largest Indian shipping enterprise, inspired by these words of our Prime Minister, are building up a great national mercantile marine true to India's glorious traditions!

fore grateful to the Transport Minister for saying in clear terms that "the Government has been assisting and will continue to assist the Indian overseas ships by allotting them as much Government cargo as is feasible"; and reiterating its policy that "the Government cannot, however, forgo its right to nominate ships for cargoes moving on its own account—a right which is enjoyed by all shippers". But if the cargo is offered for carriage at tariff rates less 40 to 50 percent and in some cases even 70 percent, the result of such "preferential" treatment for the Indian shipping companies would be disastrous. On the data available, it is estimated that the drastic reduction in freight rates would have compelled shipping companies engaged in the overseas trade to suffer a reduction in their earnings of about Rs. 60 lakhs in a year. The Government is, therefore, urged to grant the shipping companies fair, legitimate and economic rates so that they can expand overseas tonnage with confidence and put it on a sound and economic basis.

Coastal Freight

Indian companies are hampered by many factors which are beyond the control of shipowners. Among these are:

1. *Freight rates on the coast:* Shipowners cannot raise freight rates on the coast without the permission of the Government. The cost of opera-

tion has been rising, but after protracted negotiations, the Government has given permission to raise the rates on general cargo by only 10 percent. Some of the special commodities such as coal have been excluded from this full rise. And yet shipowners are expected to respond to the appeal of the Transport Minister and acquire 25 to 30 ships more for the coastal trade. Private enterprise builds its activities with the money invested by a large number of shareholders, and it cannot afford to work at a loss. How can the Government expect it to get this additional tonnage unless reasonable rates of freight are allowed? It is surprising that timely and effective action is not taken here, particularly when one considers that freight rates and fares are raised without hesitation on the railways and the air services.

2. *Delay in Turn-round of Ships:* No arguments are necessary now to establish the serious effect on the economic working of ships as a result of the "go slow" policy of labour and the absence of necessary facilities at the ports. Even Sir William Currie, Chairman of the P. & O. Company, remarked last year that "the effect of these delays is that the trade to India now requires about 25 percent more tonnage to maintain a given frequency of sailing than before the war". The shortage of deep sea berths at Bombay port and the vagaries of the tides on the Hooghly cause serious delays to ships, affecting their earning capacity.

With modern mechanical equipment, ships can discharge up to 10,000 tons of coal in two days in foreign ports. They take nearly ten days to do so in India. These are matters beyond the control of shipowners. It is the responsibility of the State to see that modern facilities for quick working are provided at the ports under their control and that effective steps are taken to ensure that labour does full work for the wages it gets.

Lower Taxes

3. *Taxation Policy:* While shipowners are grateful to the Government for allowing them a 25 percent development rebate for the new ships they purchase (at a prohibitive price), the present taxation policy makes it impossible for them either to plough back sufficient profits in the business or to build up reserves to meet the high replacement cost of the old ships which constitute their fleet. All this seriously impairs their competitive capacity and substantially reduces their total earnings.

These are some of the vital questions which merit the immediate, earnest and favourable consideration of the Government of India, if it wants, to ensure that the drive and decision which private enterprise has shown hitherto should gain further momentum; and that Indian shipowners should play their important rôle in building as soon as possible a merchant navy commensurate with the needs of the economy, security and strategic position of the country.

The Port of Calcutta is the

PLANS FOR INLAND WATERWAYS **IMPROVING NAVIGATIONAL FACILITIES**

● By N. M. AYYAR ●

Secretary to the Government of India, Ministry of Transport

THE use of navigable waterways is one of the oldest forms of transport. In countries which have such waterways, their importance can never fade however "go ahead" its road and rail competitors may be. In the United States, for example, where road and rail transport are very highly developed, 29,000 miles of waterways out of a potential 65,000 miles are navigable for commercial craft. In 1953, they carried 262,439 million ton-miles of cargo, as against 301,752 million ton-miles carried by U.S. railways in the first half of that year on 224,000 miles of railway track. In India, there are 34,000 miles of railways, which in 1952 carried 28,250 million ton-miles of goods traffic. Navigable waterways stretch over approximately 5,500 miles. Most of them are in north-east India comprising the Ganges-Brahmaputra system of rivers serving the States of U.P., Bihar, Assam and West Bengal. Statistics in "ton-miles" for the goods moving on these waterways are not available for making a comparison with the railways. However, it is known that well over 1 million tons are handled on the Ganges-Brahmaputra system of rivers annually and the route distances covered vary from 500 to 1,100 miles. These are impressive figures which should firmly counter any pessimistic view of the future of inland water transport in India.

In the rest of India, there are the Godavari, the Krishna and the Mahanadi rivers, which are navigable up to 283, 52 and 14 miles respectively. There are also the rivers, backwaters and canals in Travancore-Cochin, the Buckingham Canal in Madras and Andhra States, and the west coast canals linking Malabar with Travancore-Cochin. These undoubtedly play a significant part in moving goods locally, but it is mainly in north-east India and Travancore-Cochin that the waterways are truly vital to the economy of the regions served by them. The Travancore-Cochin problem do not present any insuperable navigation problems, but the Ganges-Brahmaputra system has some which are peculiar to itself. The navigability in the upper reaches of the Ganges has over the past several decades suffered gradual deterioration, due to the withdrawal of water for irrigation purposes. This, coupled with the development of the railways, has caused a decline in the transport of goods and passengers by river in these stretches. On the main Brahmaputra, the navigability is conditioned not so much by the inadequacy of depths (except perhaps in the feeder rivers), but by the problems created by floods, strong currents, shifting banks and moving sands.

Co-ordinated Development

Navigational and traffic problems in river transport often transacted State or regional considerations, and a prime requisite for co-ordinated development is a central authority or body which can apply itself to "source to mouth" consideration. In India, the executive responsibility for these problems vests in State Governments. Under the Constitution, Parliament can legislate on waterways declared as "National Waterways". Although the Ganges-Brahmaputra system of rivers is in fact a National Waterway, it has not so far been declared as such by Parliament, principally because a period of study and preparation is required before legislation can be undertaken. As a first step, however, the Central Government and the State Governments concerned have joined together and constituted the Ganges-Brahmaputra Water Transport Board, which has been functioning for four years. One of the first problems it has considered is improving the navigability of the upper reaches of the Ganges, and investigating the special type of tugs and barges which will be required to negotiate the shallow stretches of river in these reaches. The Board has received assistance from a U.N. technical expert who, after an on-the-spot study, has recommended that a pilot project be undertaken to determine the

feasibility of operating shallow draught push tow boats on the upper Ganges. He has also assisted in designing the tug and barges for this project. The equipment has been ordered and is expected to be delivered early in 1957. The project involves the acquisition of small dredgers for deepening channels, so an order for these has also been placed. When this pilot project has been in operation for some time, it is confidently expected that the much needed stimulus for reviving water transport in the upper Ganges will be forthcoming, and that this new water transport system will be well used by commercial interests as supplementing the capacity of the railways in those regions. It is not as if the new system of push tow boats will be economical to operate only on shallow stretches. The pilot project is bound to pave the way for the introduction of modern craft on the deeper sections of the rivers also.

Brahmaputra Region

A similar pilot project has been planned with smaller craft on the feeder rivers of the Brahmaputra in Assam. Apart from the introduction of new types of craft to cope with restricted navigability, river transport is faced with problems relating to the adequacy or otherwise of shore facilities. At none of the ghats in north-east India are there in existence at present modern port facilities of a permanent nature with modern handling equipment. Companies operating transport on these rivers have floating godowns and sheds ashore. The railways have loading ramps and barges at points where river railway ferries ply. All the handling involved is manual and the operation is necessarily slow. Consideration has, therefore, been given to improving these facilities and establishing a system of inland river ports at selected places. The most important traffic points where such ports have to be developed are Gauhati, Pandu, Dhubri, Karimganj, Patna and Manihari.

In 1954, the traffic passing through these ghats totalled 1,351,000 tons. The handling of such large tonnages would be facilitated if mechanical handling equipment and modern facilities were available. Proposals for the development of inland ports at these places, which have been included in the second five year plan, cover the building of cargo sheds on shore with pontoons, gantries and approaches and with jetties, piers and mechanical handling equipment where necessary. Hitherto, no governmental authority has taken the responsibility for providing such facilities. With the execution of these works, an important amenity will be added to the water transport system in these areas.

River Control and Conservancy

Other measures which have been formulated and provided for in the second plan are improvements in river control and conservancy, including dredging and the establishment of a modern system of "aids to navigation" involving the provision of radio-telephonic communication. At present, the maintenance of quick and easy contact is extremely difficult, particularly when units of fleets are detained by groundings or accidents. In Assam, the nature of the countryside through which the rivers flow, and the damage caused to telegraphic communications by recurring floods and storms, call for the introduction of such modern communication facilities. In the initial stages, it is proposed to have radio-telephonic stations with a controlling base at Gauhati and outstations at Dhubri, Tezpur, Neamat, Dibrugarh and Silchar—each to be equipped with radio-telephonic equipment—and four mobile stations to be established on pilot superintendents' launches. The system will later be extended to Patna and to the outstations at Monghyr, Manihari, Lalgaol and Buxar. These proposals give concrete expression to the Government's interest in financially assisting works connected with the conservancy and

development of the waterway system in India. Other measures to promote the growth of inland water transport are intended to ensure close co-operation with other forms of transport, particularly the railways.

Competition from Railways

Complaints having been received on the one hand from commercial interests about what they considered the excessive freight rates charged by inland water operators, and on the other hand from the operators themselves about the stiff competition presented by the railways, a Committee was appointed by the Government to enquire fully into this. The findings of this Committee, which are now being examined by the Government, will be of great help in removing misunderstandings and suspicions about the official approach to the co-ordinated development of land and water transport. As early as 1949, a policy statement was made by the then Minister for Transport and Railways, Mr. Gopalaswami Ayyangar, to the effect that "the Government is interested in co-ordinating all forms of transport—river, road and railways—and that if the river services are found to be better suited to meet the needs of a particular area, the Government would be prepared to consider its development even in preference to the railways or to make the railways co-ordinate their activities with the river services, so as to enable the two to work in collaboration and that there will be no question of the railways pulling one way all the time away from the river services." There can be nothing clearer than this statement. All the steps which the Government has taken for inland water transport development in the second plan are to implement this policy. The fact remains that for north-east India inland water transport is vital. One can go further and say that it is vital even for foreign trade when one considers that most of the tea and jute, which, after processing, from a big proportion of exports, have to be moved from north-east India to Calcutta by river.

In the rest of India, the range and scale of inland water transport operations are much less than in north-east India. Nevertheless, the Buckingham Canal, originally established as a work of famine relief, has over several decades served as an important link between Andhra and Madras. It has been used by country craft for transporting appreciable quantities of local merchandise. It needs to be improved by widening and deepening. Provision has been made for this purpose as well as for improving the capacity of certain canals near the west coast.

Economic Considerations

A sum of Rs. 3 crores has been provided in the second plan for financing the inland water transport development works described in this article. It is to be hoped that with the successful completion of these works, the way will be paved for further development. It is necessary, however, to qualify the enthusiastic suggestions made in certain quarters from time to time about the limitless possibilities of developing inland water transport in India. Economic considerations have to be allowed to play their part in decisions for the improvement of existing waterways or the construction of new ones. The economy of water transport lies in the existence of well defined, navigable waterways which do not call for large expenditure on maintenance. The opening of new water ways by artificial means, such as linking rivers separated by large distances, is not practicable. What is satisfactory is to have a sizeable mileage of excellent waterways serving the important regions, and to exploit them to the fullest possible extent by the use of more modern craft, better port facilities and navigational aids, according to a phased programme. In a developing economy, there is ample scope for the expansion of all forms of transport if progress is not to be retarded in other spheres.

CONSTRUCTING COASTAL AND RIVER VESSELS

THE VARIETY OFFERED BY AN EXPANDING INDUSTRY

• By A SPECIAL CORRESPONDENT •

A shallow-draught river tug under construction

THE vast coastline and the long, navigable rivers of India offer commercial routes which are both convenient and economical for the trader. With the growth in popularity of water transport, facilities for the supply and maintenance of the many types of vessels employed must naturally follow, and today India can boast an efficient and expanding boat-building industry, reflecting the prosperity of the country as a whole. While she is making her name in the shipping world by turning out high-class, ocean-going passenger and cargo vessels, it is the intention of this article to deal mainly with the smaller craft which ply the rivers, estuaries and sheltered coastal waters. Thousands of vessels involving hundreds of designs have been built to meet the particular requirements of their owners, but it might be admissible to classify these, very broadly, in the following manner:

1. *Coastal passenger and cargo vessels:* These range in length from about 120 to 180 feet with a speed of 9 to 10 knots. Where both passengers and cargo are carried, the propelling machinery is usually arranged amidships, with the passenger accommodation at the sides of the machinery casing, and a cargo hatch forward and aft. If the vessel is to be used solely for cargo, it is preferable to fit the engines right aft, with one forward cargo hold and one large hatch. These coastal craft are usually of moderate to shallow draught, allowing them to enter shallow draught harbours, and are equipped with water-ballast tanks to enable them to obtain immersion when making voyages in the light condition in rough seas.

2. *Passenger river vessels:* Numerous designs of passenger river vessels are in existence, and while there is wide scope for variation in the arrangement of cabins, deck accommodation and other details, the methods of propulsion are strictly limited. Thus, a vessel of this type may be described as a "stern wheeler", paddle steamer or screw vessel. By the nature of their service, these vessels are all designed for shallow draught. While the two former types have many advantages, they are costly to construct, and if fitted with steam machinery, more costly to run; so they are gradually giving place to the more economical twin screw, diesel-engined type.

Power and Manoeuvrability

3. *Tugs:* From the handling of "dumb" barges and lighters to assisting in the manoeuvring of battleships and liners, the diverse duties which tugs are called upon to perform have necessitated a great variety of designs. Today there are in service tugs ranging from 35 to 180 feet in length, fitted with propelling machinery developing from 30 to about 3,000 brake horse-power. At one end of the scale might be placed the estuary and harbour tugs which are mainly employed in manoeuvring large ocean-going vessels to and from their moorings in restricted waters. For obvious reasons, there is no special restriction on the draught of these vessels and, in fact, where power and manoeuvrability are the first essentials an additional bit of weight can be used to advantage in coaxing their big brothers to behave in an orderly manner. There are numerous types of harbour and shallow draught river tugs—those which tow barges and lighters, stern, others whose charges are towed alongside, the push-tow boats which, as the name suggests, push their loads in line ahead, and the small service launch tugs.

4. *Dredgers:* In almost every port and waterway, there is a never-ending struggle against the silting of navigable channels, and vessels carrying dredging units, designed to deal with this parti-

cular problem, are in constant demand. A familiar sight in most ports is the bucket dredger, which usually works in conjunction with a hopper barge for receiving the dredged materials and carrying it to the dumping grounds. Many port authorities favour the combined self-propelled Grab and Hopper Dredger. This vessel is fitted with the propelling machinery right aft, the hopper amidships and either one or two grab cranes with self-contained engines, according to the quantity of material which is required to be raised every hour. When the hopper is filled, the vessel proceeds a few miles out to sea under her own power, where the dredgings are discharged through hinged doors in the bottom of the hopper. For handling free soil and sand, Suction Dredgers have an advantage over Bucket and Grab Dredgers by virtue of their capacity to handle considerably more tonnage an hour. Substantially constructed centrifugal pumps suck the soil from the river

bed and discharge it through floating pipelines to the shore.

Of the scores of other craft that go to make up the vast fleet of "little ships", we can only mention in passing the fishing boats, pilot vessels, lightships, survey and special service launches, passenger and vehicular ferries, yachts, rowing boats and runabouts. Today boat-builders offer an endless variety of these latter types of pleasure craft, and the coastal and inland waters of India provide considerable scope for the increasing numbers of people who are turning to the water for pleasure.

Methods of Construction

To those whose experience lies outside the world of shipping and ship-building, a brief account in non-technical language of the construction of a small, modern, steel coasting vessel may be of interest. When an agreement is reached between the

purchaser and the builder on the dimensions of the vessel, the amount of cargo that can be carried, the type of propelling machinery, cargo handling equipment, etc., to be installed, work commences in the drawing office on the structural plans. To avoid delays in construction, it is essential to order the steel plates and angles as soon as possible. This is done when plans are sufficiently far advanced to enable an accurate assessment to be made of the required material. While awaiting delivery of the steel, work can proceed on the detailed drawings showing the lay-out of accommodation, deck fittings, machinery installation, etc. In the meantime, information on the "lines" of the vessel has been issued to the shipyard and the shape of the hull is drawn, full size, in elevation plan and section, in white lines on the black floor of the mould loft. From these lines, templates can be lifted, of the shapes of the various shell plates, floors, frames, etc., and from these templates each structural member is shaped, sheared, punched and made ready for erection. Those items which require bending and bevelling, such as the frames or "ribs", and some of the shell plates, are first heated in oil or coal-fired furnaces.

In the sequence of erection, the keel plates of course take first place. These are laid on previously prepared blocks at a height of four to five feet above the ground to facilitate riveting under the bottom. The blocks are spaced about four feet apart to allow easy passage between them, and the actual height of each set of blocks is governed by the slope required for launching, say $\frac{1}{4}$ inch a foot. When the keel plates are in position the centre girder (or vertical keel) is fitted, followed by the floor plates and frames. It is usual to erect the after frames first and to work on towards the fore end of the ship. As successive frames are erected they are shored up and bolted to ribbands, that is, long wooden battens running in a fore and aft direction along the outside of the frames, and on which the positions of the frames have been previously marked. The upper deck beams are then temporarily attached to the frames, shored and tied in a similar manner. After a number of frames have been erected, they are "faired", that is, adjusted to their true position. They are first centred over the keel by hanging a plumb line from the centre of the beam and adjusting the frames transversely until the plumb blob is directly over the centre girder. Next, they are set at right angles to the keel, either by using a large square or by triangulation from a point on the keel, an operation known as "horning". Finally, they are set perpendicular to the keel by means of either a special plumb line which allows for the slope of the blocks, or by a square. The beams are then faired, their centres being adjusted to the proper height by checking from a batten

on which the measurements have been marked in the mould loft. When finally faired, the frames and beams are permanently fastened together by "knees" or brackets.

Skeleton Structure

The bulkheads, stem and sternpost are usually erected at about the same time as the frames, and the skeleton structure, which is now beginning to reveal the shape of the hull, is ready to receive the shell and deck plating. The plating is first of all bolted in position and the rivet holes checked for fairness before they are finally riveted, caulked and made watertight. Work now proceeds on the internal structure such as deck girders and pillar, minor bulkheads, hatch coamings, bulwarks and deck erections.

So far, it might appear that only platers, riveters and carpenters are involved in bringing the vessel into being. But this is not so, for in the meantime there has been much activity among the various trades which contribute to the success of the finished article, every item of which bears its own importance and reflects the skill and pride of the craftsman. In the workshops the plumbers have been preparing their bilge and ballast piping, fire and wash deck mains and other sanitary and fresh water supplies. The foundry has turned out castings in the shape of mooring bits, hawse pipes for the anchor cables, fairleads, etc. The joiners have been making the furniture for the cabins. In the sheet metal shop the familiar cowls are appearing, and cable trays, light steel tanks, lockers and bins for the stowage of oil and paint, ship's gear and dry stores are being made. Blacksmiths have been forging the special fittings for cargo gear, steering gear, guard rail stanchions, hatch locking devices and steel door fittings, while in the engineering shops the fitters, turners and machinists have been making preparations for the installation of the engines and auxiliary machinery.

Launching the Vessel

The steel construction of the vessel is now sufficiently advanced to allow these various trades to carry out their specialised tasks on board, it being desirable to advance the fitting out work as much as possible before launching. The engineers begin lining up the shaft bearers, boring out for the stern tube, fitting the tailshaft, propeller, rudder and all sea connections. Preparations then begin for the day when the vessel is to enter the water for the first time. The hull is thoroughly cleaned and painted both inside and outside, and the launch ways are arranged in position. These consist of two rows of fixed ways surmounted by sliding ways between which a lubricant, usually a thick coating of soft soap and

tallow, is inserted. The top members of the keel blocks are then gradually removed until, at the latest possible moment, the whole weight of the ship is taken on the launch ways. To prevent the sliding ways from moving, until the time for launching arrives, several efficient devices are in use, with sometimes novel methods of release. For the smaller vessels, the most simple is the use of steel triggers secured by wires and a manilla rope which is led across the front of the platform from which the launching ceremony will be performed. When the ship is duly named and the traditional bottle broken against her bows, the rope is cut, the triggers released, and the vessel slides down into the water, where she is received by the attendant tugs and escorted to the fitting-out jetty. The engines and other heavy gear are then lifted on board and secured in position, and other outstanding work on the accommodation and general fittings completed. Various tests of the machinery, cargo gear and other equipment are then carried out, followed by the official speed and endurance trials before handing over to the owner.

Electric Welding

It is not possible to deal here with the many aspects of modern shipyard practice as applied to the construction of small craft, whether in steel, wood or aluminium. (Some builders are even specialising in the production of hulls for launches and other small pleasure craft in moulded plastics). Mention should, however, be made of the wide use of electric welding in steel construction in place of riveting. Contrary to the popular idea, this is by no means a new technique, the first all-welded cargo vessels having been constructed more than 30 years ago. Today all-welded vessels are a common product of the shipyards, while a combination of welding and riveting is almost universally adopted. A great advantage of welding over riveting from the owners' point of view lies in the substantial saving in steel weight which is effected, the carriage of the maximum amount of cargo being the first consideration. That electric welding in ship-building has come to stay, there can be no doubt, but the extent to which it is used on any particular construction is governed by several important factors. Old and well-tried methods are not easily discarded and the riveted vessel which has proved its worthiness, still finds many supporters among shipowners who, perhaps through lack of confidence, are reluctant to accept changes. On the other hand, hesitation in embarking on a programme of full-scale welding may be shown by the ship-builder whose yard, equipment and labour force, which have been developed for riveted work, are not readily adaptable to methods of pre-fabrication which assist production and for which welding is particularly suitable.

THE DEVELOPMENT OF INDIAN PORTS

BASIC OBJECTIVES UNDER THE SECOND PLAN

• By N. M. AYYAR •

Secretary to the Government of India, Ministry of Transport

SEA ports function as focal points for the interchange of traffic between the internal transport system and ocean shipping, and are therefore vital to a nation's economy. If junction capacity in a railway network can help or hinder the free flow of railway traffic, so can the adequacy or otherwise of port capacity influence the volume and tempo of the export and import trade. A rational development policy in an expanding and planned economy should, therefore, seek to ensure that port capacity is well ahead of the expected traffic demand on the specified target date. For this purpose the planning authorities should, firstly, have correct data on capacity as well as traffic demands at the commencement of the period, and whether that capacity is deficient, adequate or excessive. Secondly, means should be available to estimate the additional traffic that will develop, in terms of volume and types of cargo as well as their origin, destination and port-wise break-up. If the data for these two factors is complete, it should not be difficult to estimate the nature of the additional facilities required at existing ports in terms of berths, transit sheds, railway yards, cranes and similar shore installations, and dredgers, tugs, launches and connected marine facilities. Should there be limitations, technical or otherwise, on the expansion of a port to the capacity planned for it, consideration will have to be given to the development of ports at new sites.

Is port development in the first and second five year plans satisfactory on the basis just described? The reader should not expect me to give an unqualified answer in the affirmative to this question. The fact is that the port authorities in India began to give serious thought to development problems long before the first plan was conceived. The severest test they were put to was during the Second World War, when they were called upon to take peak loads under difficult conditions. Some of the traffic handling records established in war-time have still not been exceeded. Calcutta, for example, handled 10.88 million tons of cargo in 1945-46 as against 7.81 million tons in 1954-55. Madras, in 1944-45, took a load of 2.58 million tons against 2.20 million tons in 1954-55. These war-time peak loads, however, severely strained the resources of the ports and emphasised the need for adopting an early programme of rehabilitation and renovation of worn-out assets. An all-India study of port problems was, therefore, made by the Government Technical Committee appointed by the Government of India in 1946. This Committee concluded that the needs of the east coast in the postwar period would demand the development of Visakhapatnam as a sheltered deep sea port capable of accommodating ships up to 650 feet in length with drafts up to 30 feet, and the enlargement of Madras port by the addition of four berths in a new wet dock to be built within ten years.

The West Coast

On the west coast, the Committee foresaw the need for two more major ports, one between Bombay and Cochin, and the other north of Bombay, probably in Sika in Saurashtra. Then came partition in 1947, which gave urgency to the establishment of a new major port on the west coast to serve the regions formerly served by Karachi. This led to the appointment, in 1948, of the West Coast Major Port Development Committee, which recommended the siting of the new port at Kandla, a recommendation which was accepted and which led to the commencement of the project even before the first plan was fully formulated. In Bombay, apart from the reconstruction of the damage caused by the great explosion of 1944, the Port Trust started preparing a scheme for the modernisation of the Princes and Victoria Docks. In Calcutta, several capital works designed to replace and repair old assets were put in hand.

Much advance planning had thus been done and the execution of many schemes was taken up or completed by the time the port authorities were called upon in 1951 to prepare their five year plan. The data relating to the existing capacity of ports (referred to in the first paragraph) was then fully available. In fact, some port authorities were rather sceptical whether the expansion of traffic might materialise would in fact call for increased port facilities on any substantial scale, considering the diminishing trends in traffic that

were apparent as compared with the previous peak figures. No one was, however, in doubt about the need for pressing to a speedy conclusion the rehabilitation and modernisation programmes of the existing ports which had already been visualised and the earliest possible completion of the new Kandla port project. The final list of port development schemes for the first plan was not, however, approved until early 1953.

Port Trust Finances

One factor which contributed to the delay was the doubt over the place of "local bodies" such as port trusts in the first plan. The port trusts are statutory bodies established by Acts of Parliament and they are required to be financially self-supporting. They have powers to raise loans in the open market with the sanction of the Government for financing their capital expenditure. But the financial outlay involved in the execution of a development programme of the size contemplated was so large that the chances of obtaining loans in the open market on reasonable terms in the conditions created by the launching of the first plan appeared to be slender. As most of the works were essentially for rehabilitation and therefore presented little prospect of bringing in additional revenue, the need for loan assistance from the Central Government was apparent; the extent and terms of such assistance took time to be settled. During the

plan period, new projects, the need for which was not contemplated before, also came in view. These included a large scheme for the marine oil terminal at Bombay required for the new refineries, and a smaller oil terminal at Visakhapatnam.

When all these schemes were finalised, the first plan of port development crystallised into the following objectives:

1. To rehabilitate and modernise facilities in all existing ports.
2. To provide additional capacity in Cochin, Madras and Visakhapatnam.
3. To develop a new major port in Kandla.
4. To construct marine oil terminals in Bombay and Visakhapatnam.
5. To carry out some of the more urgent improvements in important minor ports.

The estimated expenditure on these schemes totalled nearly Rs. 62 crores, but it was obvious that, having been finalised so late in the first plan, a sizeable portion of the expenditure would have to be carried forward to the second plan. The evolution of the first plan objectives indicates that a precise estimate of traffic and capacity targets was not possible in the circumstances. The object of the schemes was to render existing capacity more effective by the modernisation and replacement of worn-out docks and equipment, to remove the

known deficiencies, and to provide for additional capacity where it was clearly likely to be needed.

Labour Efficiency

With the experience gained, it has now become possible to estimate the programme during the second plan with a clearer eye towards meeting the demands of additional traffic. Port capacity is not measured by the sum total of physical facilities alone. The efficiency of the personnel involved is an important factor. Unfortunately, the three closing years of the first plan saw a gradual decline in the rate of loading and unloading of cargo which finally reached alarming proportions. This was attributable to the schemes for decasualisation of stevedore labour which were introduced in 1952-53 with the object of regulating the employment of such workers—schemes which unfortunately did not provide adequate incentives for a higher output. The Government, therefore, appointed a Committee to enquire into the matter and revised schemes for Dock Labour Boards are now being finalised. In Bombay, the system of "payment by results", recommended by this Committee, was introduced in March 1956 on the lines of the award given by the Labour Appellate Tribunal. These developments augur well for an improvement in the output of workers and it is reasonable to take them into account in estimating port capacity at the end of the second plan. Other factors which have helped in forecasting traffic trends are:

1. The emphasis placed in the second plan on industrial development, particularly on heavy industries, and knowledge of the details of such schemes.

2. The adoption of State trading schemes with specified targets for imports and exports of certain commodities, such as steel, cement and ores.

3. The shipping development plan which has been adopted, including the agreements concluded with Russia and Poland for starting two new shipping services.

We now come to an analysis of what port capacity is now and what it should be at the end of the second plan. The following figures compare the peak traffic handled in past years with the traffic handled in 1954-55.

Ports	Traffic handled during peak period. (in million tons)	Traffic handled during 1954-1955
Calcutta	10.88 (1945-46)	7.81
Bombay		7.58
Madras	2.58 (1944-45)	2.20
Cochin	1.58 (1951-52)	1.55
Visakhapatnam	1.39 (1953-54)	1.03
	24.01	20.17

These five major ports have thus handled 24 million tons at peak times, although the 1954-55 figure is 4 million tons short of it. The completion of the new development works already undertaken and which it is proposed to undertake in the second plan is calculated to provide the following additional capacities:

Calcutta	...	1.5 million tons.
Madras	...	2.0 "
Cochin	...	1.25 "
Visakhapatnam	...	1.75 "
Kandla	...	1.75 "
Total	...	8.25 million tons.

The planned increase in capacity arising solely from additional physical port facilities is thus 33 percent. To this has to be added the increase in capacity that may reasonably be expected as a result of more efficient work by dock labour. The diminution in labour output referred to earlier was of the order of 30 to 40 percent in some cases. The introduction of the piece-rate system in Bombay has resulted in a 40 to 50 percent increase in output. One should expect a similar increase, if not to quite the same extent, at other ports. On a conservative estimate, an average of 15 percent increase in capacity by more efficient loading and unloading should be possible, even after making allowance for the slower rate that will have to be assumed for the loading and unloading of heavier types of cargo such as steel and heavy machinery, the proportion of which is increasing. On this basis, the overall capacity of major ports at the end of the second plan should be expected to rise from 25 million tons to about 38 million tons, that is, by about 50 percent. On the railways, it is expected that by the end of the second plan an increase of 50 percent in goods traffic will take place. The planned increase in port capacity is thus more or less in step with the planned increase in railway capacity.

Minor Ports

I have confined my observations to a critical study of the basis of port development and am not attempting to catalogue the details of development projects proposed at various ports as these are available in other documents. This account will not, however, be complete without a reference to minor ports, which have also received attention in co-ordinated planning. In 1951, the first study of the requirements of minor ports was made by Mr. Nanjundiah. After visiting a number of them, he estimated that work to arrest the deterioration that was taking place would call for an expenditure of about Rs. 2½ crores in the first plan. The Central Government assisted State Governments with a loan of Rs. 1 crore for this purpose and most of the works have been commenced or completed. Nearly a year before the formulation of the second plan, an engineer officer was appointed to visit all the ports once again, assess the results achieved and recommend further measures to ensure that development proceeds in step with requirements. His studies have emphasised the importance of minor ports as a solid "second line of defence" after the major ports. They have also revealed the potentialities for development so as to handle a substantial volume of cargo with comparatively smaller expenditure. The second plan provides a sum of Rs. 5 crores for assistance to State Governments for undertaking these works. Some of these ports, such as Kakinada and Masulipatam, already export ores in substantial quantities. Studies which have so far been made point to the feasibility of developing Paradip as a minor port in the first instance, capable of handling about 500,000 tons of ore exports by the end of the second plan. A committee which recently examined the question of opening a ship canal from the Gulf of Mannar to Palk Bay has reported on the feasibility of the scheme, linking it with the further development of Tuticorin harbour. These are some of the significant features in the development of minor ports. Such ports now handle 5 million tons of exports and imports. They may be expected to be in a position to deal with 1 or 2 million tons more by 1960-61. They can thus function as a useful subsidiary to major ports, and offer substantial help in times of peak traffic and emergencies.

Importance of Calcutta and Bombay

Future development has necessarily to be based on the fact that Calcutta and Bombay will handle most of the export and import trade. Historically and economically, these are the ports which serve the largest industrial, raw material and trade centres. Calcutta has plenty of scope for handling a still larger share of trade. Bombay's ability to expand is conditioned by the physical limitations of the harbour and the dock system. Visakhapatnam has great future potentialities. Madras is looking forward to handling twice its present load by the end of the second plan. So is Cochin. Kandla will take its full place as a major port by early 1957. Its main user at present is the oil trade, but ore exports promise to start in the near future.

Critics closely connected with shipping and trade may find grounds for complaint at certain delays that occur now and then in ports. Such delays are not infrequent at other ports in the world and arise from a variety of transitory factors, such as unforeseen bunching of ships, occasional labour troubles, etc. But what has been said above gives valid grounds for optimism that the port system is essentially in a sound condition and will keep pace with the general expansion in the economic activities of the country.

NAVIGATIONAL HEADACHES OF CALCUTTA PORT

SCHEMES FOR TRAINING HOOGLY RIVER

By **COMMANDER C. J. MOHAN, I. N. (Retd.)**

Deputy Conservator of Calcutta Port

WHILE the importance of Calcutta as one of the biggest ports in the East is widely known, the average person is hardly aware of any of its peculiar problems which have earned it the reputation of being one of the most hazardous in the world for the navigation of ships. The purpose of this article is to explain the intricacies of the problems of navigation in the Hooghly river, and the schemes which are afoot to solve them on the basis of the most modern techniques available to the port authority. For a proper appreciation of the problems, it is necessary to have some knowledge of the extent and range of the port, and its physical features. The port is located on the left bank of the Hooghly river about 80 miles downstream from the confluence of the Bhagirathi and Bhairab Jalengi, the two spill channels of the parent river, Ganges. The seaward approach is at Sandheads, a distance of 126 miles from Calcutta, and the navigation of sea-going vessels from this point is undertaken by qualified pilots. The other rivers which flow into the Hooghly are the Churni, Damodar, Rupnarain, Haldia and Rasulpur. Between Khijiri and Saugor Island, the Hooghly flows into the Bay of Bengal. There is a distance of about 74 miles from Calcutta. There are various shoal patches formed by sands at the mouth of the river restrict the navigation of sea-going vessels to certain well-defined channels until the southern limits of pilotage at Sandheads.

Although the Commissioners' jurisdiction extends from half a mile north of the confluence of the Bhagirathi and Bhairab-Jalengi, to a distance of about 139 miles south of Calcutta, the actual port limits extend from Konnagar to Budge Budge, which are nine miles and 13 miles upstream and downstream of Calcutta respectively. Within the port limits, downstream of the Howrah Bridge on the left bank of the river, are located the various river mooring berths, Calcutta and Garden Reach jetties, and Kidderpore and King George's docks. On the right bank are the mooring buoys for inland vessels. At Budge Budge, on the left bank of the river, berths are available for oil tankers. There are 14 bars-crossings from Calcutta to Sandheads. Eleven of these are located in the stretch of the river from Diamond Harbour to Calcutta and the remaining three between Sandheads and Diamond Harbour. To mark the channel and ensure safety of navigation for vessels entering and leaving the port, there are about 76 gas buoys, 85 channel buoys, three attended and two unattended light vessels, one shore lighthouse and 116 shore navigation lights. In addition, there are also tide gauges and tidal semaphores at various stations on the river to indicate the rise of the tide both in the day and at night. Because of constant siltation and seasonal changes, these bars and crossings are subject to considerable fluctuations in depth. Maintenance dredging has to be carried out on an extensive scale throughout the year, involving an expenditure of about Rs. 50 lakhs. This also includes the dredging of berths in the river and docks in the port area by a fleet of small dredgers and ancillary craft. For the pilotage of ships, dredging of the river channel and berths and the maintenance of the buoys, lights, shore marks, etc., a large organisation of the Marine Service has to be maintained.

Marine Service

The Marine Service in the port is the largest in India, and compares favourably, both in efficiency and in the nature of the work it does, with any of the biggest ports in the world. There are four main marine services in the Deputy Conservator's Department, and safety of navigation depends, to a large extent on their efficiency:

1. Hooghly Pilot Service.
2. Hooghly River Survey Service.
3. Harbour Master's Service.
4. Dredger and Despatch Service.

The officers of the Hooghly Pilot Service are responsible for navigating vessels from Sandheads to

Garden Reach and vice versa. One pilot vessel is always stationed at Sandheads to embark and disembark pilots from ships. Because of the dangers arising from the width of the various bars and crossings, strong tidal conditions, etc. in the Hooghly, a thorough knowledge of the navigable channel and its peculiar conditions is essential for handling vessels. Consequently, pilotage is compulsory for all sea-going vessels, including naval ships, visiting the port.

Constant fluctuations in the depth of the river necessitate soundings being taken and surveys being carried out on an extensive scale to a high degree of accuracy—to the nearest three inches at frequent intervals—by the port authority. About 5,000 to 6,000 charts and river notices are published annually. All this is done by the River Survey Service.

The Harbour Master's Service, which is the largest branch of the Marine Service, is responsible for handling vessels from Garden Reach to berths in the river and docks, and vice versa. It is also responsible for maintaining the river moorings, buoys, dredging at the berths, docks, etc., and handling of oil tankers at Budge Budge.

The Dredger and Despatch Service is employed for dredging the bars and crossings in the river, and for maintaining the buoys, lights and marks

in the navigable channel from Calcutta to Sandheads. The towing of merchant vessels, and salvage operations when any vessel meets with an accident within the Port Commissioners' jurisdiction, are also undertaken by this service with the help of despatch vessels, tugs, launches, etc.

Apart from the four main marine services there are the marine engineers, lighting officer and dry docks sections, which also form part of the marine services.

Draught Restrictions

One of the main problems of ships using the port is the restriction imposed on day-to-day draughts. All ships, whether bound inward or outward, have to negotiate the various bars and crossings from one anchorage to another when there is a sufficient rise in the tide. As the depths on the various bars change frequently, in spite of dredging, and since there are day-to-day variations in the rise of the tide, restrictions on draughts are unavoidable, particularly when certain bars have been known to shoal by as much as five feet in 12 hours. The draught forecasts made by the port authority accord better draughts to ships with higher speed, as the faster ships can cross over the bars in good time. It has been the aim to achieve a minimum draught of at least 26 feet for a ship on any day of the year. With this object in view, various proposals have

1,000,000 SKF AXLEBOXES

To the railway engineer, the fact that SKF has supplied 1,000,000 roller bearing axleboxes to the railways of the world is of special significance. Why?

Because only SKF can draw on the experience gained from the use of 1,000,000 roller bearing axleboxes—experience that embraces many different designs and widely varying working conditions. That is why SKF axleboxes can be depended on to give complete reliability for exceptionally high mileages—whatever the loads and speeds.

RIVER TRANSPORT IN NORTH-EAST INDIA

ITS IMPORTANCE IN INDUSTRIAL DEVELOPMENT

• By A SPECIAL CORRESPONDENT •

THE Ganges, Brahmaputra, Barak and Sunderbans region covers an important system of inland waterways in north-east India. The port of Calcutta is connected with the region by some 4,000 miles of navigable waterways. Few people realise the vital part which these waterways have played, and will continue to play, in the development and expansion of trade and industry. The late Sir W. W. Hunter, in assessing the importance of the rivers of northern India, said: "In order to understand the plains of India, we must have a clear idea of the part played by the great rivers; for the rivers first create the land, then fertilise it and finally distribute its produce."

Rivers like the Ganges, Bhagirathi, Brahmaputra, Padma, Meghna, Bhairab and their tributaries have for centuries been the natural highways of north-east India over which the trade and produce of the country have been transported. They have been closely connected with the history and religion of India from the very earliest times. Judged by the standards of those days, there is little doubt that river transportation was highly developed. It played an important part in the expansion of the Moghul Empire, and in the development of trade during that period. It was, however, slow, depending for propulsion on manpower, the vagaries of the weather and river currents. Early records show that it took many months for consignments, shipped down from the upper Ganges in fleets of country boats, to reach their destinations in Calcutta or in the Delta area. Apart from the slowness in transport, there were the ever-present hazards of weather and dangers of pilferage by river pirates. Despite the handicaps, however, considerable quantities of goods were moved by river vessels.

The Introduction of Steam Power

With the introduction of steam power in the early nineteenth century, the whole prospect for water transportation changed. In India, as in other countries in Europe and in the U.S.A., was seen the growth of a new industry which not only opened up the hinterland but helped other industries to expand and develop. In 1823, the first power-propelled steam vessel commenced operations on an Indian river. The *Diana*, a vessel of 89 tons, sailed up the Hooghly with passengers from Kulpi Roads

Private Enterprise

The introduction of vessels powered by steam was the start of a boom period for inland water transport. Private enterprise began to play an important part in the expansion and development of this industry in India. In 1844, the India General Steam Navigation Company (now known as the India General Navigation and Railway Co. Ltd.) built a number of large paddle

"Florican", an ordinary passenger steamer

steamers and established a passenger and goods service between Calcutta, Patna and Allahabad on the Ganges. Some years later, it enlarged its fleet and extended its operations to the Brahmaputra and Meghna rivers in Assam and East Bengal. In 1862 the Rivers Steam Navigation Company commenced operations on the Brahmaputra. In 1889, the two companies combined to form what is now known as the Joint Steamer Companies; they today operate 90 percent of the powered river vessels in north-east India.

The growth of powered transport on the rivers is linked directly with the development of trade and industries in north-east India. In the initial stages, it was water transport which carried labour, machinery and equipment for the indigo factories, the tea gardens and the jute presses which were being developed in Bihar, Assam, Sylhet and Cachar Valleys and in East Bengal about 100 years ago. Today, approximately 90 percent of Assam's tea crop and 85 percent of the jute crop, together with large quantities of sugar and grains from Bihar, are carried by the same water transport to warehouses and mills on the banks of the Hooghly and for distribution to world markets through the port of Calcutta.

The Expansion of the Railways

Concurrent with the decline of inland water transport throughout the world during the latter half of the nineteenth century, powered river transport in India felt the impact of rapid railway expansion. In Bihar and Uttar Pradesh, railways were being built along both banks of the Ganges and along the banks of its main tributaries; rapid railway expansion was also taking place in north and east Bengal. It was only a matter of time before rail communication were extended as far as Assam. It was clear that the speed of the railways had greatly impressed the business community. They forgot for the time being that, ton for ton and mile for mile, it was cheaper to transport goods by water than by rail, so they chose the superior speed and certainty of the railways. From about 1870 onwards, therefore, in north-east India the railways expanded and developed while water transportation declined.

During this period, there was also a widespread increase in irrigation facilities. Major irrigation projects were undertaken in Uttar Pradesh. They

"Sikkim", fitted with modern Kortz nozzles, is a screw tug towing barges and flats

The Commissioners' despatch and buoy-lifting vessel

been formulated by the port authority in the last few years for undertaking works for the training of the Hooghly river in some of the difficult stretches.

River Training Works

When difficult problems on river training measures have to be solved, the recognised modern practice is to turn in the first instance to model experiments. This procedure prevents the expenditure of money on training works which may not serve the purpose or which may produce results that are contrary to expectations. In Calcutta, a training wall was built in Akra many years before

model experiments came into vogue. This training wall, instead of correcting flow conditions as it was expected to, further aggravated the problems in this stretch of the river. In the light of this experience, the Calcutta port authority has realised the importance and value of model experiments for the successful implementation of large river training schemes. It has accordingly carried out, during the last seven years, experiments with models of the Hooghly river at a cost of about Rs. 11 lakhs at the Central Water and Power Research Station in Poona.

The principal object in most of these experiments is to attain better draughts by improving flow

conditions in the troublesome stretches of the navigable channel. The bars and crossings in the river generally deteriorate in the dry seasons, and if flow conditions are not satisfactory, seasonal shoaling is further accentuated. If the axis of the ebb and flow currents are not in the same line, the bar tends to shoal. Even dredging efforts offer only a temporary solution to the problem. Hence the necessity of improving conditions by appropriate river training schemes.

The important experiments so far carried out on models in Poona are:

1. Construction of a spur in Akra.
2. Fulta Point Scheme.
3. Improving flow conditions at King George's Dock entrance.
4. Improving the depths at Balari Bar.

The spur was constructed in Sankral Reach, nine miles downstream of Calcutta. Due to the abnormal width and unusual configuration of both banks, which is continuously affecting the depths of the Sankral-Munikhali bars, the construction of the old training wall in this reach did not solve the problem. The experiments carried out on the models indicated that a repelling spur with a top 1,200 feet long, constructed on the left bank of the river, would improve flow conditions and the depth of water available in this reach. This scheme was undertaken in 1954. As a result, flow conditions have improved considerably and the depths obtained at present are much better than those obtained during the past five years.

The restriction on draughts of ships navigating upstream of Diamond Harbour is governed mainly by the variable depths in the James and Marry Reach. To improve conditions in this notorious Reach, which includes the Ninan-Eastern Gut bars, extensive experiments were carried out on models. As a result of these, a scheme known as the Fulta Hooghly Point Scheme has been finalised. The work proposed under it briefly involves the recession of a protrusion on the left bank of the river, that is, Fulta Point, opposite to the outfall of the Damodar, so as to form a uniform concave curvature, with a corresponding reclamation of areas upstream and downstream of the outfall of the Damodar so as to eliminate the abnormal flow conditions in this reach. It is proposed to undertake this scheme in the second five year plan period.

King George's dock was constructed along with the Garden Reach jetties after the first world war. Unfortunately, the orientation of the approach jetty to the dock restricts the use of the latter to ebb tides and slacker periods of flood. Apart from this, the considerable siltation at the dock entrance necessitates continuous dredging. Model experiments are being carried out to ascertain the ideal solution which would facilitate the ingress and egress of ships in King George's dock during all states of the tide, and to eliminate siltation at the dock entrance. It is expected that experiments on this scheme, which are still in progress, will be finalised shortly and river training measures will be undertaken during the second five year plan period.

Balari Bar has been the governing bar in the recent years. The depths of water available there have been steadily deteriorating. There has been a gradual worsening of flow conditions due to the formation of the Haldia island and erosion of the left bank of the river in the vicinity. Experiments are still in progress to ascertain the ideal solution for improving depths on this bar. The reduction in the depth of water available at Balari to a mere 10 ft. 6 in. last year caused great concern to the port authority. Since then, it has been carrying out hydrographical and hydrological investigations of the Rangafalla channel, which obviates using the Balari Bar. The channel is now being used for daylight navigation since the depth available in it is three feet more than that available at Balari Bar, thereby allowing a better draught allocation to ships. It is intended to light this channel to facilitate night navigation. Until the results of model experiments for improving depths at Balari Bar are known, the Rangafalla channel is being used for navigation.

Improving draught allocation to vessels depends to a large extent on the execution of river training schemes which have been duly proved by model experiments, and on the intensification of dredging efforts. For the latter, the port authority has already placed an order with Messrs. Wm. Simons and Co. for a large suction dredger, which is due for delivery by the end of next year. When it joins the fleet, dredging capacity will be considerably increased. This, coupled with the restoration of head water supply and the implementation of suitable river training schemes, will enable the port authority to look forward with confidence towards achieving its target of a minimum draught of at least 26 feet on any day of the year.

"Manchurian", towing two other vessels, is one of the largest plying on inland waterways.

caused a considerable volume of water to be diverted from the Ganges and its tributaries, thereby reducing the flow, particularly during the dry season. The deterioration of channels brought about river conditions which were extremely unfavourable to the continued existence of powered water transport.

These developments struck a severe blow to the water transport industry. Several small private river transport concerns were closed or sold. For a time, water transportation by power-operated vessels ceased entirely in the Ganges valley. There were several reasons why all this was allowed to happen, but the lack of a central co-ordinated authority to develop and maintain the waterways, provide navigation and terminal port facilities, and combine river, rail and road transport resources was the greatest single factor.

Inland Water Transport Today

The result of these developments was that inland water transport in north-east India, during normal times, was obliged to struggle against wasteful and harmful railway competition. It has only managed to survive as a result of being able to continue operating during a series of national disasters and abnormal conditions caused by wars, floods, earthquakes, etc., when other modes of transport have been overburdened or completely disrupted. In north Bengal, the Doars and Assam, however, powered river transport is playing an increasingly important rôle and is helping in the development of trade and industry in the Brahmaputra, Cachar and Sylhet valleys. This area which is liable to severe annual flooding, when other modes of transport are at a standstill, the flood periods may be of three or four months' duration and it is greatly to the credit of inland water transport operators that they are able to maintain their services in the difficult conditions which prevail.

A further great advantage, and one of particular interest to Assam, is the ability to send by water transport, heavy packages, machinery and lengths of heavy pipe sections to areas where new industries are being developed, the transport of which cannot be conveniently catered for by roads or by rail. The importance of this mode of transport to north-east India may be gauged from the fact that approximately one-twelfth of the total cargo which moves into and out of the port of Calcutta is carried by inland water transport vessels. A study of the following figures gives some idea of the tonnages of the major commodities which were carried by powered river transport vessels between Calcutta and Assam during 1955. These tonnages relate to quantities carried by only one of the major river transport operators and are in no way indicative of the very much greater quantities carried by country boats and others.

TONNAGES CARRIED BY RIVER TO AND FROM CALCUTTA AND ASSAM BY A MAJOR INLAND WATER TRANSPORT OPERATOR

Year	Cargo	From Calcutta to Brahmaputra Valley	From Calcutta to Cachar Valley and Tripura	Totals
		Tons	Tons	
1955	General	387,000	74,200	461,200

Year	Cargo	From Brahmaputra Valley to Calcutta	From Cachar Valley and Tripura to Calcutta	Totals
		Tons	Tons	
1955	Tea	155,100	20,500	175,600
1955	Jute	82,900	1,200	84,100
1955	General	69,000	21,500	90,500
	Totals	307,000	43,200	350,200
Grand Totals		694,000	117,400	811,400

During the last 20 or 30 years, one of the most remarkable achievements of the more developed countries of the world is the ample provision which has been made for increasing and cheapening transport facilities. Two world wars have hastened this progress. In the United States, the development of inland water transport has been particularly rapid. The U.S. Government has spent many millions of dollars on schemes for the waterways of the Mississippi, Missouri and Tennessee valleys. It has connected these waterways by means of canals with those of the great lakes in the northern States. As a result, the transport

lift by water in the United States during the last decade has been quadrupled.

The more highly developed countries of western Europe have come to appreciate that the basic requirements for the development of inland water transport are river control and co-ordination. Most of these countries have also seen that inland waterways are of major importance, necessitating the support of public funds for their proper development and use. This appreciation has resulted in a large measure of co-ordination between the river, rail and road transport systems to prevent wasteful competition. Together with the co-ordination has gone an appreciation of the need for the maximum degree of freedom from national and provincial controls. The recognition of these fundamental principles has led to the evolution of suitable compromises. The Central Rhine Commission may be quoted as an excellent example of such co-ordination. The Commission has made it possible for the European countries bordering on the Rhine to develop a vast and efficient inland water transport industry which operates with the minimum of border and provincial controls.

The rapid economic and industrial growth of western European countries and of the U.S.A. during the last decade owes as much to the development and co-ordination of their transportation resources as to their ability to manufacture goods. In these countries, quick and efficient transportation has encouraged the growth of industries. The fact is as significant for India's industrial development today as it has been for other countries in the past. With the industrial development envisaged in the second five year plan it is necessary that all forms of transport should be co-ordinated and given equal advantage if the country's needs are to be served in the most economical way.

Development by the Public Sector

The Indian Government is fully aware of the need to control, co-ordinate and develop inland water transport resources. Its recent plans include the setting up of the Ganga-Brahmaputra Water Transport Board, the principal function of which will be to co-ordinate and control all matters connected with the improvement and development of water transport within the Ganges, Brahmaputra, Barak and Sunderbans waterways system. Among the plans proposed are the improvement of navigable channels with the aid of dredging and river training, the development of terminal port facilities at a number of important river stations and rail-river junctions, the introduction of mechanical aids to navigation, the development of a system of radio telephony to assist communication on the rivers and for the greater safety of water transport, the recognition of the need to establish facilities at border stations for the uninterrupted movement of river transport across the India-East Pakistan border points, and the provision of modern terminal facilities at non-tidal berths for inland water transport vessels in the port of Calcutta.

The development of the diesel engine and improved propulsion methods have made it possible considerably to cheapen water transport in other countries. Inland water transport operators in India are now investigating the extent to which these modern developments can be applied to powered river transport in this country. With the new plans, new developments and new methods intended for implementation during the next five years, fresh possibilities are being opened up for an era of prosperity for inland water transport.

A cargo flat of 600 to 700 tons capacity

You are never alone. In each of the 73 countries and lands PAA serves, there's always a warm welcome ready. Pan American is big enough to serve the world—but never too big to be personally interested in serving you.

"We were expecting you..."

Anywhere you fly in the world,
one of Pan American's 411
offices is at your service

Wherever you fly by Clipper*, friendly, capable PAA people stand ready to help you. They speak your language, will assist you through customs, with baggage, hotel reservations, directions, introductions—and offer the same smiling courtesy and understanding service you get in your local Pan American World Airways office.

On any flight you take, by Clipper, you get the priceless advantage of Round-the-World experience. Only Pan American circles the globe... has made over 50,000 Atlantic crossings... and has 1200 pilots who have flown over a million miles each! A record of unmatched experience—ready to serve you.

THE DOMESTIC AIRLINES IN INDIA

PETROL TAX AND PASSENGER FARES: THE BENEFITS OF FLEET MODERNISATION

By A SPECIAL CORRESPONDENT

IN any study of the present activities and future prospects of the Indian airlines, it is necessary initially to deal with the problems of air transport in general and then with those of domestic air transport in India in particular. Air transport naturally has to compete for both passengers and cargo with surface transport; that is to say, with railways, shipping and, at times, with road vehicles. An air service primarily sells speed; comfort is, of course, an aim, but air transport is generally at a disadvantage in this respect vis-à-vis comparably priced travel by sea or rail. Speed is best exploited over medium or long distances, where the saving of time is most important. Thus, not only is there a natural advantage in selling long-distance travel, but this form of car-selling (usually inter-continental) is less costly to operate, in terms of ton or seat-mileage, than is the "short haul". The long haul operator has one further advantage; he receives, generally speaking, a substantially better average return on a seat-mile basis than does the short-distance carrier—who is, of course, usually an operator of domestic services.

Advantages of International Operators

Two statements here need to be explained further—firstly, that the long-haul carrier, international or inter-continental, can operate on a ton or seat-mile basis at less cost than the short-haul or domestic carrier; and secondly, that the former is also better rewarded. The first statement rests partly on the assumption that a large aircraft (such as a Constellation or DC 6) is used. The larger it is, within reason, the lower the cost a ton or a seat-mile of operation. The advantage, however, does not stop there. By international convention, all international air services obtain their petrol or other fuel free of any duty which may be levied in the various countries through which their routes pass. This is not so with the domestic services of those countries; for instance, the Indian Airlines Corporation, for instance, is heavily handicapped in comparison with Air-India International. As far as the second statement is concerned, fares on international air transport are standardised and controlled by the International Air Transport Association (I.A.T.A.); there is, therefore, no price competition between the major airlines, who are members of the Association. Under the circumstances, although it would not be true to say that fares are kept at an artificially high level—it would, in fact, be very far from the truth because the fares have to be competitive with shipping—the fares have to be maintained at a level which gives the efficient operator a reasonable return. Domestic fares, on the other hand, are very often determined by the Government concerned, and the aim may not always be the economic success of the undertaking. The pressure of competition from surface transport is, as a rule, also more severe in the case of domestic or short-haul carriage than in the case of inter-continental operations.

It is necessary to emphasise these points in view of the constant criticism that since the I.A.C.'s financial results have been adverse, whereas those of Air-India International have been favourable, the former must be less efficient. It is not intended here to offer any opinion on that particular subject. All it is intended to do is to make clear that the All it is intended to do is to make clear that the cases of the two undertakings are by no means parallel, and that their financial results cannot be reasonably compared unless all the basic facts are taken into consideration. The I.A.C., moreover, has difficulties which domestic operators in many other parts of the world do not have to contend with, or have to do so only in a lesser degree. Take competition with surface transport, for example. India has a very well-developed railway system. One of the most striking features of which is a modest passenger fare tariff. This suggests one of the major difficulties confronting the I.A.C. On the one hand, it has a cost of operation no whit less—and in many cases more—than countries such as the U.K., Australia or America. On the other, it has to compete with a railway system offering first-class, air-conditioned travel at appreciably

lower fares than in many of those countries. In the United States, "Pullman" travel often costs appreciably more than air "coach".

Ceiling on Fares

The ceiling fare on India's internal services has, for many years and in spite of an all-round rise in the costs of operation, remained frozen at four annas a passenger-mile. In view of the cost of first-class, air-conditioned rail travel—approximately 2.3 annas a mile—this ceiling is not unreasonable. But, unfortunately, so high is the cost of operation that domestic air services can hardly work except at a loss. Take a simple example. A Dakota aircraft costs—inclusive of overheads—about Rs. 4.4 a mile to operate; assuming an average journey of 300 miles, the cost to the I.A.C. amounts to Rs. 1,275. The fare for this journey is Rs. 75; to break even, therefore, the Corporation must fill 17 seats. This represents a load factor in excess of 80 percent, an almost impossible target to attain. The biggest single item of cost in the operation of air transport is fuel. Apart from the high price of aviation spirit, there is a Central tax which amounts to a fraction less than Re. 1 a gallon, to say nothing of the sales taxes levied by many of the States. The reason for a proportion, at least, of the annual losses incurred by the I.A.C. during the past three years is thus at once apparent. Indeed, this petrol tax mauls the Corporation of almost Rs. 1 crore each year; and considering the total turnover, it is no exaggeration to describe it as a crushing burden. It is in the light of these facts that any appraisal of the I.A.C.'s past performance and future prospects should be made.

Ignoring the first incomplete year of operation (August 1953 to March 1954), the loss incurred in the financial year, April 1954 to March 1955, was Rs. 120 lakhs. This, however, was a period of reorganisation, and much of the management's energy and attention was necessarily absorbed by internal administration. There were also expenses of an exceptional nature, such as on the overhaul and general renovation of aircraft cabin interiors and the replacement of surface transport. The heavy incidence of petrol taxation, which amounted to almost Rs. 1 crore, has already been mentioned. It is necessary, however, to observe that, although the former private companies received during the last year or two of their operation a tax rebate of 6 annas a gallon, the aggregate loss incurred was, on an average, not a quarter of that now sustained by the I.A.C. Nevertheless, taking all relevant factors into consideration, it may be said that a great part of the loss for 1954-55 was due to circumstances of a rather exceptional nature.

Bigger Losses

It is when we are told that the losses for the financial year 1955-56 are likely considerably to exceed those of 1954-55, that doubts can no longer be stifled. Re-organisation must have been completed long ago; one is entitled to expect that measures to promote greater efficiency and economy should by now have borne fruit. Nor can one entirely accept a plea, advanced by a spokesman of the Corporation, that uneconomic services have to be operated on "social" grounds. The point is worth examining closely. During the year 1955, some 425,000 tickets were sold on the I.A.C.'s routes. That does not mean that 425,000 individuals travelled; those who travelled twice, thrice or oftener have to be taken into account. Applying an accepted formula, it is likely that some 300,000 individuals travelled by the I.A.C. during the year in question. In terms of the population of India, this represents a percentage of 0.07. Such an infinitesimal percentage is hard to reconcile with the plea of "social" necessity, which surely implies, in its generally accepted sense, value of the service to the people as a whole. Those who use the air services belong obviously to the more well-to-do sections. They can, generally speaking, be divided into three main classes: those who travel on Central Government or State Government duty; those who travel on behalf of commerce and industry;

and those who travel on holiday or on their own affairs, and of these a very fair proportion are foreign tourists. It can hardly be claimed that air transport should be subsidised—and the annual reimbursement of losses by the State amounts to nothing less—by the taxpayer for the benefit of these three classes of travellers. It is readily conceded that commercial air transport is a vital concern of the State, and plays an important part in the administration, commerce, industry, internal security, and ultimately the defence of the country. But it does not necessarily follow that, as an undertaking, it need not be self-supporting. Indeed, whatever views are held on the relative merits of private enterprise and State ownership, few, one imagines, would contest the principle that an industry should ultimately pay its way. Contrary to the popular belief, air transport—as has been amply demonstrated elsewhere—need be no exception.

Replacing Old Aircraft

It is often claimed, with considerable theoretical justification, that as far as the I.A.C. is concerned, greater economy of operation can only materialise when a large measure of fleet replacement has been effected. It may be of interest to examine this point more closely. The Corporation's present fleet consists of six DC 4s (Skymasters), 11 Vickers Vikings, eight D.H. Herons, and approximately 75 DC 3s (Dakotas). Of these, four of the DC 4s and eight Herons have only recently been purchased. It is to be presumed, therefore, that "fleet replacement" refers only to the Vikings and Dakotas. Both these types of aircraft are obsolescent, and the Vikings—because of speed and carrying capacity—can no longer be considered entirely suitable for the country's main trunk routes. To replace the Vikings, an order has already been placed for five of the 700 series Vickers Viscounts, with an option for five additional units.

The Viscount (700 series) is a turbo-prop aircraft (gas-turbine engine driving propellers) with a seating capacity (normal) for 44 passengers, a cruising speed in the neighbourhood of 290 m.p.h., and an optimum operating range of 700 to 1,000 miles, which is ideal for most of the I.A.C.'s trunk routes. It has proved to be an unqualified success,

and has been sold in considerable numbers to airlines all over the world. It has even penetrated the hitherto impregnable American domestic market, and Capital Airlines, an American carrier, which placed an initial order for 60 units, has lately placed an additional order for some more of the later, and larger, 800 series. The aircraft has a great reputation for trouble-free and economic operation; there can be no doubt that the I.A.C., in selecting it, has made the best possible choice. The *Viscounts* are likely to render excellent service both to the Corporation and to the public—but whether their introduction on I.A.C. routes will materially reduce the present losses is quite another matter.

Here are some figures (converted to rupees) taken from the British European Airways' statistics on *Viscount* operations during the year 1954. The total flight time, on which these figures are based, was 17,111 hours, of which the revenue hours were 15,836. Fleet utilisation was 1,457 hours a unit.

Cost a seat-mile	3.95 annas
Cost an aircraft-mile	Rs. 10.1
Cost a revenue hour	Rs. 2.283
Break-even load factor	63.1 percent

It is admitted that the figures are two years old, and that the present *Viscount* has an improved performance. Even so, it is probable that the figures represent, reasonably closely, the economics of the aircraft. Assuming that to be the case, let us apply these figures to the Bombay-Calcutta route. At 270 m.p.h. block speed—that is, the average block speed which the aircraft is likely to achieve on this length of route—the flight time will be 3.9 hours, and the cost Rs. 7,800. (I have taken for this purpose Rs. 2,000 an hour because the proportion of the B.E.A.'s total to revenue hours may be considered too high.) At the current I.A.C. fare, in order to break even, it would be necessary to sell space on the aircraft equivalent to 40 passenger seats. I do not think this rather dismal picture requires any elaboration. Incidentally, the B.E.A.'s break-even load factor of 63.1 percent is based on European fares. These are substantially higher than those prevailing in India: the fare from London to Rome for example—almost the same distance as from Bombay to Calcutta—is the equivalent of Rs. 352.

Economy in Administration

These figures have not been quoted with the object of criticising the choice of the *Viscount*; indeed, it is sincerely believed that it is the best possible choice that could have been made and that, moreover, the replacement of the *Vikings* is essential. The intention is to highlight the very difficult position in which the I.A.C. is placed. That some measure of economy—both in the operational route network and in the internal administration—can be effected is doubtless true. Nevertheless, such measures, however desirable, will not be entirely effective unless other steps are taken to increase revenue and to reduce the cost taken to increase revenue and to reduce the cost of operation. The case of the *Viscount* clearly demonstrates this fact. To achieve the first objective, and disregarding a normal annual increase in the volume of traffic, and the consequent improvement of the average load factor—both of which should materialise during the second five year plan—the obvious immediate remedy is judiciously to raise fares. It is unlikely, in view of the nature of the traffic (already described) which predominates on the airways, that any material diminution in volume would ensue. This question, among others, has been examined by the Air Transport Council, and the result of its deliberations should soon be known.

Raising Morale

The only method of effectively and immediately reducing the operating cost is either to lighten—or possibly to remove completely—the Central tax on aviation spirit. It can be argued, of course, that such a measure is merely robbing Peter to pay Paul. However, that is only one point of view. Actually, such a step would make it possible (combined with some additional revenue) for the Corporation to balance its budget and that would—lead to a distinct rise in morale and, as a direct consequence, to a general improvement in efficiency. There is nothing so disheartening for the intelligent employee than to read constant criticism of the concern in which he works, or to feel that retrenchment is hanging, like Damocles's sword, over his head.

To return to the I.A.C.'s fleet replacement programme. The biggest problem will be suitably to replace the *Dakotas*. It is a very curious thing that although airlines the world over have been seeking a *Dakota* replacement for the last ten years, there are still some 3,000 *Dakotas* in service. The fact is that the *Dakota* is unique. Probably no other transport has its versatility, its reliability or its tractability. The allocation of funds to the I.A.C.

under the second plan includes, it is understood, a sum of Rs. 21.64 crores for re-equipment. This will allow the purchase of ten *Viscounts* (five now on order plus five on option), and approximately 28 to 30 medium aircraft to replace the *Dakotas*. The choice is limited; there is the Handley Page *Herald* (four Alvis "Leonides" piston engines) and the Fokker *Friendship* (two turbojet "Darts"). Both aircraft have achieved a certain number of sales, and fair orders for the *Friendship* have lately been forthcoming from the United States. It is probable that the I.A.C. may wish to study operational results before committing itself—a wise policy. In the meantime, it has been studying the *Ilyushin 14*, two of which were recently presented by Russia to the Prime Minister. An initial purchase of 12 of this type to replace *Dakotas* on some of the I.A.C.'s passenger routes is, it is said, contemplated.

Rapid Expansion

Air transport, as a whole, is entering a period of very rapid expansion. The volume of traffic is increasing by about 15 million passengers every

year and cargo carriage is keeping pace. The advent of the gas-turbine engine, whether turbojet or turboprop, will not only reduce the present times of long-distance travel by a half but, it is hoped, will materially reduce the costs of operation. The "boom" is naturally at present more to the advantage of international airlines operating inter-continental services; but domestic services also will in due course benefit substantially. There can be little doubt that the future of the I.A.C. is assured. The suggestions which I have made about the fares on our internal services, together with a reduction in the petrol tax, should not be construed as indicating a pessimistic outlook; the intention is merely to suggest an interim solution to pressing economic problems. The time will undoubtedly come when air transport will serve a far greater section of the public, when it will in fact be the normal means of travel for many more, and when fares will be a quarter of those ruling today. In the meanwhile, if domestic air transport is to serve the nation with self-respect, zeal and efficiency, it is a matter of no small importance to make it self-supporting. It can be done.

At every stage in the manufacture of the elegant Hindustan Landmaster, from components to assembly, the governing principle is Quality First. Experienced foremen, supervisors and technical experts go around inspecting every single part that goes into the production of the popular Landmaster, casting aside defective parts regardless of the time and money spent on them. The criterion by which each part, and the finished Landmaster, is judged is Quality First.

the wheels of progress

One of the greatest single factors in the development of our national economy is an extensive, efficient railway system. The smooth running of India's 34,000 miles plus of railroads is largely made possible by the supply of dependable railway materials made of Tata Steel.

move on paths of Steel

During 1954-55 the Indian Railways were supplied with 84,000 tons of rails and fish-plates and 23,000 tons of wheels, tyres and axles.

and taxi tracks would exceed Rs. 1 crore, on an average, at each airfield.

Mere improvement of the runways, important though it is, will not meet the situation which will shortly be created by the new turbojet and turboprop aircraft. There still remains the question of the airways system and the control of aircraft. While none of the three airports in question are highly congested, all will have to improve their aircraft control systems to meet the new conditions. This will require improved communications, up-to-date instrument landing facilities, better approach lighting (realignment and re-positioning of approach lighting would in any case be necessitated by the runway extensions), and "ground control approach" in one form or another—a system of aircraft control monitored by radar. This latter item will be essential in view of the greatly increased danger of collision created by very fast aircraft, and the virtual impossibility—even in good visibility conditions—of avoiding collision merely by visual sighting. Finally, but of almost equal importance, will be the necessity of providing terminal buildings of adequate size to cater for the greatly increased volume of traffic. This new generation of aircraft will carry 130 to 175 passengers a service; with two departures and an arrival coinciding—a by no means unusual occurrence even today—there could be as many as 500 passengers requiring Customs clearance, ticketing, meals, transport, etc. at one and the same time.

Probable Expenditure

If all these additional requirements are met—as they will have to be in the next five years—it is difficult to visualise an expenditure of less than Rs. 1 crore for each of the three airports; or a total expenditure, inclusive of runway extensions, of Rs. 6 crores—and this figure may well prove to be a gross under-estimate. So much so, indeed, that it may well be considered impractical to rebuild and equip all three major airports; one, or at the most two, may be deemed adequate for the immediate future. From many points of view, such a decision might be wise. It would enable the authorities to extend more than one runway at the field or fields selected—a desirable precaution—and it might suit the operators to concentrate on one airport. Where frequencies are less

than daily, to maintain, at two or three different airports, staff, surface transport, and other facilities, sufficient to handle the comparatively large number of passengers on each service, would add enormously to overheads. Furthermore, not only does a first class airport cost a great deal to build and equip, but the annual recurring charges to staff and maintain it are also considerable. At very busy airports, such as Idlewild or London, a great deal of the cost is met by revenue, but at airports such as Santa Cruz and Palam, where aircraft movements are few, almost the entire cost would have to be met by the Government. Whatever the final decision, and whether one, two or three airports are extended and equipped, the outlay will run into crores of rupees. There should be no attempt to disguise this fact.

It can be argued that since most countries on the routes from Europe to the Far East, and not only India, will be faced with almost identical airport problems when the large turbojets go into service, it is likely that these aircraft will be confined to trans-America and trans-Atlantic routes. There is some substance in this argument, but the history of air transport does not support it fully. Experience shows that progress cannot be stayed, and whenever faster, heavier and more advanced aircraft have been produced and successfully operated, major airports all over the world have had to step up their runway lengths and other facilities. One foreign operator at least has already announced plans to use the DC 8 on routes which presently traverse India. There is also a distinct possibility that Air-India International may have either the DC 8 or the Boeing 707 in view for future fleet replacement.

Airfields for Domestic Services

So much, then, for the problem of airports catering for international services; what, however, of the large number of airfields in daily use by our domestic services? These, admittedly, will not be required to accommodate the giant jets and turboprops which will operate between continents; but they will have to be adequately equipped and of sufficient size for aircraft of much greater speed and weight than those using them today. In addition to the ten Viscounts which, it is understood, have already been ordered, a provision has

been made—in the funds allotted to the domestic corporation—for the purchase of 28 medium transports to replace the Dakota fleet. These replacements may be either Handley Paige *Heralds*, Fokker *Friendships* (a turbojet aircraft) or some other modern type. Whatever type is chosen, it is almost certain to require greater runway lengths and better facilities than now exist at the majority of fields in use. Here, then, is another potential, and major, item of expenditure.

Allocation for Training

So, finally, we return to the second five year plan. The purposes for which Rs. 18 crores have been allocated are, doubtless, well worthwhile. The general aim seems to be to promote and improve our internal air transport system. The construction of eight new airfields (modest, single runway fields, one presumes) will no doubt stimulate traffic. The provision of more up-to-date aids and communications is also highly desirable—and may well prove to be essential. The allocation for training relates, presumably, to a modern, well equipped training centre for pilots, navigators, and aerodrome control officers. An improved training centre of this kind would not only be of immense benefit to aviation in India, but is fast becoming an absolute necessity. It is purposeless to build airfields equipped with the most up-to-date directional aids, radar and telecommunications, or to introduce modern gas turbine aircraft in our external and domestic services, if the personnel to man the airfields and the aircraft is not properly trained.

Rather than divert any of the funds presently allotted to those objectives, it will be necessary to make further funds available for the equally pressing requirements which I have endeavoured to outline in this article. Whether sufficient funds can be allotted to fulfil all objectives remains to be seen. The civil aviation authorities will clearly have to exercise all their powers of persuasion. It would be most unfortunate if India were to lag behind in the sphere of international air transport and, by failing to make her airfields suitable for aircraft of the jet age, to lose her eminent place on the air map of the world—a place, incidentally, which gives her almost unique advantages, such as in the promotion of tourism within her borders.

'Glad we won. Now I must rush — I've another case in Bombay tomorrow. I'm going by air, of course.'

When you have a journey to make, think first of flying. It's the fastest way to travel, and often the only way to get there in time. You escape all the tedium of a long journey — flying is so quick, convenient, and wonderfully comfortable.

MOVING WITH THE TIMES—IN THE AIR

A PERIOD OF CONSOLIDATION

• By HUBERT E. WOUTERS •

IT is just two and a half years since I discussed in these columns the economics of aircraft operation and endeavoured to prove by reference to comparative performance statistics just how the various leading civil aircraft available at that time fitted into the air transport picture. This, however, is a short period in the development life of an aircraft, where ten years between the drawing-board and production stages is quite a conservative estimate. Research and development have already proceeded to a stage somewhat in advance of current needs and we are now passing through a very necessary period of consolidation. As no less an authority than Sir Frederick Handley Page has pointed out, all the basic aerodynamic, structural and material developments have been carried to a point where today in civil aviation we can think of the aeroplane as a means of transport and transport only—a vehicle comparable with the train or the bus on the roads—but one which happens to be used in the air. We have now reached the point where we can think of transport in the air as something that enables someone to go from point A to point B with security, regularity and safety at an economical price. Flying, in fact, is no longer a novelty. Nowadays we fly for profit, whether as producers and providers of the facilities or as users thereof.

Keeping this fact in mind, it is easy to understand the waning and waxing of popularity for different types of aircraft. Backed by a large civil and military domestic market, American aircraft manufacturers were enabled to dominate the long-range field after the war with the Lockheed Constellation and the Douglas DC models. Their only competitors were adaptations for civil use of aircraft designed mainly for military purposes by the manufacturers of other countries. The impact of the de Havilland Comet I, pioneering the turbojet formula, which was a big advance on the piston-engined American machines, resulted in a rapid switching of interest. Unfortunately that was at least partly dissipated by the disasters which resulted from technical mistakes, but there are indications that a better appreciation of the problems to which these have given rise will result, in the to which these have given rise will result, in the Comet III and the even larger Comet IV, in a strong revival in this type of aircraft before the Douglas

A rear view of the de Havilland Gyron engine

and Boeing companies are ready to offer their alternatives in this field to world markets.

"Turboprop" versus "Jet"

The leap-frog process is even more marked in the case of the turboprop, as represented by what is undoubtedly the outstanding aircraft of today—the Vickers Viscount. It represents so considerable an advance in basic design and has offered such satisfactory results in service in the matter of passenger comfort, four-engined security, lower initial and operating costs by comparison with aircraft hitherto used to cover the ranges and services on which it operates, that it is hardly surprising that it has found favour with airlines all over the world. In the turboprop sphere—and likely to benefit from the Viscount's success—we also have the Bristol Britannia.

Before leaving the subject of inter-continental air transport, where the turboprop versus the jet is likely to be the main issue for the next ten years, it is worth considering the pros and cons. Pan

American World Airways have ordered 20 Boeing 707s, which will have 104 seats in the standard arrangement and 125 in the tourist version, for delivery between December, 1958, and November, 1959, to be followed by 25 Douglas DC 8s, seating 108 and 131 passengers in the respective versions, between December, 1959, and January, 1961. All will be powered by Pratt and Whitney jet engines to enable them to fly at 575 m.p.h. non-stop between New York and London in 6 hours 15 minutes. The Boeing 707 is a development from a military specification and is a contemporary of the Comet IV which will come into service with B.O.A.C. at about the same time but with a non-stop range of 2,500 miles, a speed of just over 500 m.p.h. and accommodation for 58 first-class or 76 tourist passengers. The Douglas DC 8 is a later plane, and, in the words of the President of the Company, "the most advanced of its kind." Britain's answer to the long-range non-stop challenge of the Americans will probably be the Vickers 1,000—an advanced version of military transport to be powered by the new Rolls-Royce "Conway" engine—a prototype of which is expected to fly next summer. The jets have an advantage in speed, but the noise problem of the larger engines has yet to be solved. On the other hand, they are much less economical to operate. On the transatlantic trip it will depend on whether a saving of two hours will justify a difference in cost of about £40 on a return fare. It might be worth it for first-class traffic, but turboprop aircraft would most likely be the choice for tourist services.

Standard Passenger Aircraft

In the purely middle range, as already mentioned, the Vicker Viscount has set up new standards of passenger attraction and profitability, to say nothing of over 40 speed records on airline routes. Its success has been phenomenal. The development story of this aircraft is already a familiar one. It started in B.E.A. service in April, 1953, at 56,000 lbs. all-up weight and a cruising speed of just over 300 m.p.h. Today the Viscount is of 62,000 lbs. all-up weight and has a cruising speed of 328 m.p.h. The maximum payload sector distance (with full reserves) has increased from just

FACTORS IN THE GROWTH OF A TOURIST INDUSTRY

BETTER ACCOMMODATION, MORE EFFICIENT TRANSPORT

• By A CORRESPONDENT •

A wall sculpture in the Ellora caves

THE tourist industry depends for its growth on five main factors. Broadly, these are the "tourist worthiness" of a region, publicity, accessibility, accommodation and guide service. A country must have something interesting to offer before it can attract tourists. Architecture, scenery, fauna, ancient customs and manners—these are some of the traditional attractions, and if a country is so unfortunate as to possess very few of them, it may be advisable for it not to waste money on encouraging tourist traffic. India fortunately has the attractions, and to a greater degree than do many other countries. It is, therefore, economically sound for her to take steps to exploit this source of income. It is very necessary to publicise the attractions widely. The value of advertisements in any industry is obvious, and even industries which produce articles of worldwide use and utility have to conduct elaborate campaigns. Public memory is proverbially short and needs to be constantly refreshed. This is especially so in the case of the tourist industry.

The various places of interest must be accessible. The more easily they can be reached, the more people will visit them. The tempo of modern life is so fast that even if one has the time, it is disappointing to have to spend longer than is necessary on anything. The easier travel is, the more popular will tourism be. The provision of board and lodging facilities, and efficient vision of board and lodging facilities, and efficient guide services, is equally necessary. It is extremely difficult for an ordinary individual to appreciate on his own the qualities of different styles of architecture, for instance, or their significance. The guides have to be trained in the art of talking informatively and of making their explanations interesting.

Functions of Various Agencies

All the factors contributing to the growth of tourism cannot as a matter of convenience, and should not as a matter of principle, be handled by a single agency. The maintenance and improvement of tourist centres should be the responsibility of the State or, depending on the nature of the centre, the local authority. Publicity can be handled on a State or municipal level, as well as on an individual level. In other words, it may be done by both Government and private undertakings. The State can encourage private enterprise, especially cultural and educational institutions, the cinematograph industry, publishing houses, etc., to use publicity media for the various aspects of national culture with which they are concerned. The aim in producing tourist literature, to mention one of the most popular of publicity media, is to interpret the nature and the attractions of the country in an appealing manner, so that those who are not aware of the subtle beauties of, say, a piece of sculpture might be interested to visit the place. The special technique of writing tourist literature has not yet been properly exploited. A tourist brochure should be instructive without being too detailed, clearly written and interesting to read without being superficial. Another factor which should be kept in view is that tourist literature should have universal appeal, and should conform as far as possible to a standard acceptable to different types of people. In India, centres of tourist interest are scattered all over the country. Some can be easily reached and others cannot. There is a fairly efficient network of air and rail services,

and the road development plan is quite ambitious, but generally the transportation system has grown on strategic and economic considerations rather than with a view to meeting tourist needs. In such countries as France and Switzerland, the importance of tourism has been recognised for a long time and transportation facilities have been developed accordingly.

More "Internal Tourism"

Tourism has not yet made a big contribution to India's foreign exchange earnings. Reliable figures are not yet available, but it is roughly calculated that in 1954 they amounted to only \$10 million—a sum which is very small in proportion

to India's total foreign trade. While there is every indication that the number of foreign tourists will gradually increase, it is doubtful whether the cost of providing better transport purely for their needs will pay its way in the foreseeable future. Foreign tourists come to India mostly from Europe and America. Since this country is far away, we cannot reasonably hope that their numbers will very soon reach the levels familiar in western countries. There is admittedly a vast tourist potential in countries neighbouring India which has not yet been properly exploited. But a major handicap is the comparative poverty of the region which makes travel for sightseeing a luxury and the growth of tourism difficult. The

AN OBEROI HOTEL

The Sanchi stupa, a Buddhist pilgrimage centre

The Gwalior Palace

The Cheena Kesava temple in Belur, Mysore State

rapid and far-reaching changes which have been taking place in Asia in modern times will undoubtedly encourage more people to travel in the region, and it seems desirable that efforts should be made in a systematic manner to develop tourist markets. But "external tourism" cannot flourish without a solid basis of "internal tourism". A million visitors from abroad, for example (a target which appears almost illusory at present), cannot make so great an impact on the economy as to justify expenditure on the scale required for the development of tourism. It is necessary therefore to develop "internal tourism" in order that it may provide additional support for expanding transport and other services.

In India, transportation is mostly State-controlled (railways, airways, highways and State transport undertakings), but accommodation is very largely the concern of private enterprise. Most hotels are privately owned and have therefore been established on purely economic considerations. Some of the most important tourist centres, such as the Ajanta and Ellora caves, are out of the way, and it does not pay to run good hotels there until there is a steady stream of tourists. But tourists will be less inclined to go unless good accommodation exists. It is, therefore, necessary that a non-profit-making agency should step in to break the vicious circle. Municipalities and other local bodies do not have enough funds to undertake the task, so it has to be done by the Government. Steps are being taken to construct rest-houses at important centres where accommodation facilities are not adequate.

Providing Better Accommodation

Apart from out-of-the-way places, there is a need for good, moderately priced hotels—both for foreign and Indian tourists—even in big cities where first-class hotels exist. It is no use publicising tourist attractions and asking people to visit them unless there is somewhere to stay. The provision of accommodation can, and should, be left to private enterprise. But it may be necessary, at least until there are many more tourists to make the investments economically justifiable, to afford assistance either in the form of loans at low interest rates or by offering suitable sites on concessional terms. The assistance should be given only after proper safeguards. In such countries as Italy, assistance has been given and the results have been satisfactory. The provision of guide services is essential in any scheme to promote tourist traffic. This is an administrative rather than an economic problem and steps have been taken by the Government to train guides in different parts of the country.

To summarise the points made in this analysis, it may be said that:

1. External tourist traffic is a good potential source of foreign exchange.
2. It cannot develop unless there is a solid basis of home tourism.
3. Considerable sums of money have to be spent on publicity media in India and abroad.
4. The transportation system, though fairly satisfactory as far as air and rail services are concerned, needs to be improved in the case of road transport.

The development of the tourist industry is a long-term affair and it is not possible to assess results over a period of, say, five or so years. It is a "luxury" industry and depends on many indirect factors, such as political and economic stability in the world. Even when conditions are favourable, people take a fairly long time to make up their minds, which places they should go to. There is always so much to see, so little money to spend and so little time to spare. As in other trades, there is keen competition among many countries to attract tourists, and sometimes it is perplexing for them to have to make up their minds in the confusing stream of publicity from different countries. Nevertheless, the returns, in economic and other terms, are so alluring that most countries which are short of foreign exchange compete strongly in the tourist market of the world.

Impetus to Cottage Industries

A point which has not often been considered is the impetus given to cottage industries by tourists. Most of them buy souvenirs or some distinctive articles of the countries they visit. Beautiful articles are made by India's cottage industries and an increase in the volume of tourist traffic will benefit them immensely. They are not yet properly organised, especially on the marketing side, with the result that buyers are not always sure that they are paying the right price for the right quality of article. This is very important and steps should be taken to ensure that they get their money's worth.

THE FUNCTIONS OF TRAVEL AGENTS

FUTURE POSSIBILITIES FOR THE DIVERSIFICATION OF ACTIVITIES

● By A SPECIAL CORRESPONDENT ●

IT was 115 years ago that Thomas Cook organised his first excursion to a temperance meeting. From that small beginning has grown up the travel agency system as known and accepted throughout the world today. One hundred years ago, Cook organised the first conducted tour from the U.K. of Belgium. Germany and France; of greater local interest is the fact that his son, John Mason Cook, sailed for India in 1880 to investigate the possibilities of travel in India which resulted in the establishment of the offices of Thos. Cook and Son in Bombay and Calcutta 75 years ago. John Mason Cook undertook this journey with the previous blessing of the then British Government and Opposition; the records show that the Cook family stated at the time that "while it would be well to arrange for the visit of Englishmen to India, it would be even more serviceable if the wealthy inhabitants of India could be induced to visit Europe". How right they were.

During this tour of India in 1880-81, John Mason Cook appointed representatives throughout India. In addition to the establishment of offices in Bombay and Calcutta, he arranged for the issue of International tickets throughout the whole Indian railway system as it then existed. As soon as these arrangements had been completed, the Government of India asked him to take over preparations for the Haj pilgrimage to Mecca, which at that time were in the hands of unscrupulous individuals whose main interest was in making as much money as possible out of the intending pilgrims. The Cook family had not expected this complication but took it in its stride, although the financial results were far from satisfactory. The first really lucrative business derived from its Indian offices was the handling of the visit to Europe of the Indian Princes who attended the Jubilee celebrations of Queen Victoria in 1887.

A Convenient Link

The increasing activities of travel agents today are based on the fact that they are a convenient link between those who wish to "buy" travel and those who wish to "sell" it. Many of the latter, such as the airlines, steamship companies and the railways, cannot afford to open offices throughout the world. They can at best provide offices and agents only in the territories they serve. For instance, a business man in India wishing to travel by train in France goes to a travel agent for his booking, as obviously the French Railways have no justification for maintaining offices in this country yet. This applies equally to any form of public transport, hotel accommodation, etc., wherever it may be required. The travel agent is there to help by co-ordinating the services and facilities offered by all his principals, whether the traveller is proceeding independently or whether planned travel in the form of a tour is being offered. In particular, the travel agent is always trying to create travel in off-season periods, which benefits not only himself but also the transportation companies and hotels in addition to the fact that off-season travel may save money for the passenger.

The travel agent often does considerable pioneering work. Thus, certain enterprising agents foresaw the future of air travel two generations ago and even in those early days set up special departments to plan and sell air holidays backed by their belief in the future of this form of transport. At the present time, an intending traveller may read the advertisements of travel agencies in the Press. Assuming that he wishes to undertake a straight journey to a foreign destination, the travel agent gives him full and unbiased information on all transportation services by air or sea to his destination and, according to the wishes of the traveller, applies for accommodation to the transportation companies concerned. This is a specially valuable facility when passages by sea or air are required either at short notice or during a peak season. If the intending traveller requires a complicated business or holiday trip, the travel agent provides specimen itineraries and quotations

covering the whole journey. He arranges bookings and reservations, hotel accommodation, and sightseeing trips; if required, he also arranges for the traveller to be met and transferred by car to and from his hotel at all centres. He provides the passengers with the latest information on baggage problems, ensures that visa requirements are properly attended to before departure and renders assistance in getting income-tax clearance certificates, health certificates and in completing other similar formalities. The travel agent advises the passenger of the latest foreign exchange regulations, not only in India, but also in the countries to be visited, so that he may know beforehand if any special requirements have to be observed. Through his offices or agents, the travel agent can gather any specific information which is required and even in some cases can arrange for local introductions in advance.

Close Liaison

The efficient operation of the travel industry throughout the world today depends to a large extent on a close liaison between the travel agents and their principals, whether the latter be air, sea, rail or motor companies or hotels. Happily, this close liaison exists almost universally and there is mutual co-operation and understanding of one another's problems. A traveller using the services of a travel agent thus comes into the fortunate position of having more than one person interested in his welfare, because it is natural that both the travel agent and his principals are anxious to see that the requirements are met to the fullest possible extent; for in travel, as in many other industries, it is the satisfied customer who ensures increased business in future for all concerned.

By virtue of India's geographical position and association with Britain, her travel agents in the past tended to concentrate on passage business by air and sea to and from Europe and other parts of the world; the industry in this country as a whole lagged behind its counterpart in the west in encouraging travel by the organisation of tours. In recent years, however, the more progressive agents in India have started to pay considerable attention to this aspect of their business and tours are offered from India to various parts of the world. The conducted tour is an attraction for many people who wish to travel abroad but are perhaps reluctant to face the language and other difficulties involved, and whose pocket does not permit them to travel luxuriously. As a member of a conducted tour, the passenger is in the company of friends and people with a similar outlook, yet many of the worries are taken away by the presence of an experienced escort who ensures the comfort and pleasure of the journey. He sees that the various formalities required in foreign countries are properly handled. In Europe, at the present time there is a tendency to offer tours for people with special interests, such as one to Austria to study Alpine flowers and another for railway enthusiasts to visit small out-of-the-way railways. In India, however, it has not yet been possible to be so selective and tours are normally directed to Europe or the Far East, or in connection with special international functions such as the Coronation of Queen Elizabeth in 1953 or the Olympic Games.

Coach Tours and Cruises

In the west, motor coach tours and cruises are becoming increasingly popular, but conditions do not yet permit the organisation of either of these activities in India and its surrounding countries. There is, however, a steady demand for sea voyages (cruises) in this area, but the lack of shipping accommodation has prevented the extension of this delightful holiday arrangement except for the holiday return tickets offered by certain shipping companies to Australia and the Far East in relation to which conducted tours are now offered.

There is, of course, a consistent demand for travel to and through America, but for personal convenience or pleasure, the Indian Exchange Control Regulations restrict visits. This spring, a well known Indian travel agent offered for the first

time a round-the-world air tour but the poor response has unfortunately resulted in the cancellation of this project. India's economy derives considerable gain from visiting round-the-world passengers whose journeys originate in America, Europe and elsewhere, and the travel industry looks forward to the day when this business becomes fully reciprocal.

Travel today does not mean business only for the travel industry. It brings extra money to restaurants, and to sellers of souvenirs, luxury goods, clothing, etc. It also means more business for banks, theatres and cinemas; in fact, it affects commercial fields far beyond the bounds of travel. Much has been written about the contribution made by travel to international understanding. From this aspect, it is interesting to see that a leading Indian travel agency has recently advertised a conducted tour to Europe, which includes a visit to Russia; the benefits of such a visit by ordinary people, rather than only by official Government delegations, needs no stress.

Travel agents work on a small margin and their main item of expense, which is staff, is now running about 200 percent above the prewar level. It is estimated that fares in general have not increased by more than 150 percent. The increase in world travel has saved the situation and a certain portion of the increase is directly attributable to the activities of agents. Travel must be a two-way business for all countries. Agents cannot exist on inward travel alone and the facilities and opportunities must be at their disposal to encourage foreign travel among the nationals of the country in which they are operating. Passports seem to have come to stay, but visa problems are easing as time goes on and as more and more countries are beginning to realise the value to their economy of the invisible exports represented by the expenditure of incoming tourists.

Other Facilities

Travel agents arrange for a variety of facilities related to banking and insurance. As the business of Thos. Cook and Son prospered, the question of foreign exchange arose and in the beginning some of his excursionists even had to pawn their watches to raise their fare. It was in 1879 that Cooks established a banking department. From this activity has sprung the travellers' cheque which is now accepted throughout the world as the equivalent of cash, but which carries with it the protection against loss which is missing in the carriage of currency notes. The travellers' cheque is not recognised only by travellers but also by Governments throughout the world, as is seen from the fact that whereas the movement of currency notes is heavily restricted almost universally, the carriage of travellers' cheque is freely permitted. Travel agents can always arrange for passengers to purchase travellers' cheques or letters of credit and can make other financial arrangements. They can also bring exchange business to banks in the form of remittances to and from their foreign agents and correspondents. In many countries, travel agents are authorised to maintain stocks of travellers' cheques and to issue them to passengers within the framework of local exchange regulations, but in India only authorised dealers in foreign exchange enjoy this facility and the travel agent passes this business to such dealers. All travel agents offer insurance facilities covering life, accident and baggage, while those who maintain a forwarding department also do considerable marine business. In all these cases, insurance cover is provided through established insurance companies.

The work of a travel agent is varied and satisfying. Each day brings fresh requests and problems; to solve them maintains his interest and represents a challenge to the organisation. The services are used by all nationalities and all classes from royalty down to the man-in-the-street. There can be few prominent people in India today who have not used a travel agent at some time or other; even Mahatma Gandhi, although he preferred to travel very unostentatiously, was a regular user of travel agents for his international journeys.

THE ADVANTAGES OF USING ELECTRICITY IN TRANSPORT

• By A CORRESPONDENT •

Electric trucks reduce production costs

NOW that plans are well advanced in north-east India for the electrification of many miles of railway, there has been a renewal of interest in the advantages of this type of traction. Electricity can be put to many uses in moving things and people from one place to another, but it is necessary to emphasise first that in India it is produced primarily from water and coal; very little is generated by the use of imported oil. As long as only a small fraction of the country's oil requirements can be obtained from indigenous sources, the authorities may be expected to look with favour on a rapid increase in the use of electricity in transport.

Calcutta is fortunate in that it has one of the finest tramway systems in the East. It is true that a tramway suffers from the disadvantage that it has to be provided with rails. But this need not always necessarily be a disadvantage, as is seen on Chowringhee, where thousands of people every day are carried into central Calcutta—not on Chowringhee, but along the side of it. It all the

are comfortable, extremely quiet and cool, and of course they have almost the same mobility as an ordinary oil or petrol driven omnibus. A typical modern trolley bus is illustrated in the picture below. Another effective form of electric transport which is particularly suited to under-developed rural regions is the overhead cable railway. The great advantage of this form of transport is the relative cheapness by which serious obstacles such as wide rivers can be traversed.

From aerial transport, a descent must be made to the underground railway, of which there are now many examples in Europe and America. The underground railway, however, is not limited to carrying passengers which it does with speed, efficiency and comfort. The technique is also an asset in the mining industry and electrically operated underground railways are now common in many progressive mines throughout the world. Here again, the electric transporter proves its worth in providing a reliable and safe service and in maintaining an unpolluted atmosphere hundreds

of feet below the earth's surface. An example of the type of equipment used in a modern mine is shown in the picture above on the right.

Electric Cranes

In many factories, electric cranes are used which are operated exclusively by electric batteries. Another method of lifting enormous loads over short distances is the gigantic electric magnet which is lifted by a crane over the metal it is desired to move. When the current is switched on, the magnet attracts the metal and moves it to the area desired. It is then released by cutting off the current. There are many extensions to the electric crane and perhaps the most astonishing of all is a modern electric coal dredging plant. A coal dredger and loader scrapes the coal off the earth's surface, lifts it and actually loads it into waiting railway trucks—all in one continuous operation. It is supplied with electricity straight from high-voltage electric mains, which are con-

A modern trolley-bus

passengers were to be carried in other forms of transport over the road itself, peak-hour congestion would be very serious. The substantial increase necessary in alternative forms of transport would also result in an even greater pollution of the atmosphere than is at present taking place. Electric trams provide a fast, efficient and reliable service, they are conducive to a minimum of accidents and they do not pollute the atmosphere of the city.

Trolley Buses and Cable Railways

In many parts of the world, the electric trolley bus has found favour and there is no doubt that there could be a considerable future for this form of transport in many cities in India. Trolley buses

of feet below the earth's surface. An example of the type of equipment used in a modern mine is shown in the picture above on the right.

Electric transport is not limited to railways and trams. There are many modern industrial applications, and factories all over the world are now appreciating the advantage of moving goods by means of small electric trucks. These little units will run about a factory all day long without using any fuel, and when their job is done all that is necessary is to plug them into a supply point. By the following morning, the little machine will be ready for another hard day's work. No petrol is required, and practically no oil. There is no

needed to it by means of specially pliable armoured cables.

These are but a few examples of the contribution which electricity is making to transport. Many of the electrical devices can be classified as labour-saving, but this does not mean that their use leads to unemployment. On the contrary, the increase in efficiency and the fall in costs tends to stimulate demand which in turn creates skilled vacancies. The experience of the United States, with its high level of output, is proof of this—and it is output which eventually leads to the higher standard of living which everyone in India is endeavouring to achieve.

THE GROWTH OF THE CALCUTTA TRAMWAYS

76 YEARS OF SERVICE IN A CONGESTED CITY

• By A SPECIAL CORRESPONDENT •

REGISTERED in London in 1880, the Calcutta Tramways Company began operations in Calcutta in 1881 with metre-gauge horse-drawn trams. The system was gradually expanded to cover the principal streets of Calcutta; in one section outside the city, steam locomotives were introduced in place of horses. By the end of the century, 19 miles of street tramways, served by 186 vehicles, mostly horse-drawn, were in operation. In a year, approximately 2 million miles were run and nearly 13 million passengers were carried. The year 1900 was important in the company's history as it marked the commencement of a programme of complete reorganisation under which the foundations of the present modern and successful system were laid. The company had just concluded an agreement with the Corporation of Calcutta, whereby in consideration of the system being converted from steam and horse to electric traction and the track reconstructed on the standard gauge, a new concession was granted. This gave the company a guaranteed tenure of 30 years, the Corporation having the option to purchase on 1st January, 1931, or at intervals of seven years thereafter.

Electrification

Work on electrification was commenced in 1900 and the first line was opened for regular service in March 1902. By the end of the same year, the entire system had been converted to electric traction. Since that date, the system has been considerably extended and new lines have been laid to connect the rising suburbs to the north and south of the city. In addition, a network of tramways has been laid within the city to serve all important business areas.

Under an agreement with the Howrah Commissioners in 1905, a system of tramways was opened that town. The first section was completed in June 1905 and the whole system was completed in October 1908. The only road connection between Calcutta and Howrah was by the old floating bridge which was incapable of carrying the tramcars, but this obstacle was removed by the completion in 1942 of the new Howrah Bridge. Tracks were laid over the bridge, and in February 1943, Calcutta tramcars were able to run into Howrah.

The company originally generated its own electricity, operating two power stations, one in Calcutta and one in Howrah. The capacity of these power stations, however, was inadequate to cope with the rapid expansion of the undertaking and a supplementary supply was taken from the Calcutta Electric Supply Corporation. Generation ceased altogether in 1927, since when all current has been purchased in bulk.

Of the present-day fleet of 458 tramcars, 415 are in service daily over 42 miles of route. The annual miles run are now over 15 million and more than 14 million passengers are carried every day. To cope with this very substantial movement of passengers, the company employs a traffic staff of 6,000 drivers, conductors, regulators and inspectors. Cashiers and clerical staff number 780, while 3,500 are employed in the engineering department.

Special City Traffic Problems

Controversy has raged for many years as to which is the most efficient method of transporting passengers in densely populated areas, and in this respect Calcutta presents a special problem. Not only is it one of the most thickly populated cities in the world, but its streets are probably the most congested. In order to test the value of buses in such conditions, the company introduced these vehicles in Calcutta in 1921 and ran them for some years. Far from contributing to a solution, however, they added to the problem and, in fact, served to demonstrate the superiority of tramcars for carrying large numbers of passengers to their destinations more quickly and at cheaper fares.

Since that experiment, the company's policy has been concentrated on the improvement of the tramcars and travelling conditions. All cars were fitted with air brakes, the electrical controls were improved, and better lighting and ventilation installed. This programme of improvement has been

progressive and continues to this day. Up to 1931, all electric trams in Calcutta comprised a "train" of two single-deck coaches, each carried on a four-wheeled truck. The leading coach incorporated the motors and was reserved for first-class passengers, while second-class passengers travelled in the trailing coach. All termini are provided with turning circles so that the trams always operate uni-directionally.

New Rolling Stock

From 1931 onwards, the company has undertaken the replacement of its old type rolling stock

A steam "train" of 1900

and has introduced in its place articulated cars, well upholstered and containing the most modern improvements, making for extremely smooth running. The first-class compartment is provided with electric fans, a luxury hitherto unknown in any street passenger vehicle.

The trucks and electrical equipment of these new type cars were supplied by the English Electric Company Limited, the bodies being built in Calcutta—some by the company and some by local contractors. Each car has two coaches (first and second-class), the rear end of the leading coach and the forward end of the trailing coach articulated on a centre bogie. The front of the leading car and the rear of the trailing car rest on maximum traction trucks, each of which is fitted with a 60 h.p. motor. Their use is mainly confined to the faster running routes in Calcutta. These articulated cars have seating capacity for 36 in the first-class and 42 in the second-class, while there is considerable space for standing passengers.

Modernised Two-Car Units

The older and slower type of "train" is more suitable for the congested areas and a programme of modernisation of those still retained in service is in progress. Trucks are being replaced and fitted

with more powerful motors and new bodies of a streamlined type are being built, incorporating all the latest improvements. Substantial progress in this conversion has been made which will be continued until all old-type cars are dealt with.

The efficiency of the fleet depends largely on a regular and thorough maintenance programme. A routine inspection of all cars is made every week in the depots where servicing and necessary running repairs are carried out. The trucks and bodies are thoroughly cleaned and the interior disinfected. This is supplemented by a daily exterior wash and interior sweeping. In the workshops, major inspections and servicing are carried out on all cars at intervals of six months, while after two years' service, every car is completely dismantled, each part thoroughly overhauled and tested, and the bodies renovated and repainted throughout. After re-assembly, the car is again thoroughly tested.

In addition to progressive modernisation and maintenance of rolling stock, a large force is engaged on the maintenance of the track and overhead system. A comparatively recent innovation, the complete realignment of the lay-out of Esplanade junction, has resulted in a marked reduction of the congestion formerly met with at the crossing of Dharamtolla and Chowringhee roads. The new junction has already proved to be of considerable benefit to the travelling public. When the whole

conception has been completed including the setting out of lawns, flower beds and shrubberies, with adequate lighting, Calcutta will be able to boast of a traffic junction such as few great cities of the world possess.

Low Fares

The company operates its services with the lowest fares possible, consistent with the provision of an efficient form of transport and comfort for the passengers. The standard fares average out at a little less than 1½ pies a mile for first-class passengers and 1¼ pies a mile for second-class passengers. In addition, a form of monthly ticket is issued which offers further reductions on the above rates. It is claimed that for the standard of travel provided, the fares are the cheapest in the world. In fact, with the general increase in wages and the cost of materials, they are no longer economic.

In 1951, an agreement was signed under which the Government of West Bengal took over all rights over the tramways held by the local authorities and the company's tenure was extended until 1st January, 1972. The Government has the right to acquire the undertaking on that date at a fixed price or at any time thereafter on giving two years' previous notice.

The latest streamlined "articulated" tramcar in Calcutta.

ALUMINIUM IN RAIL TRANSPORT

SOME INTERESTING POSSIBILITIES IN COACH AND WAGON CONSTRUCTION

• By A. L. SABHARWAL •

THE second five year plan seeks to attain self-sufficiency in rolling stock by 1961. With this end in view, increases of 186 percent in the production of wagons and 150 percent in that of passenger coaches have been envisaged, placing the target for wagons at 20,000 and for passenger coaches at 2,000. Various economic considerations make the use of aluminium in the design and construction of railway rolling stock an attractive commercial proposition. The unique advantages of aluminium have caused the rapid development of the use of this metal in railway rolling stock during the last half century in western countries. In India, the use of aluminium has just commenced and promises to develop considerably in coming years. This is not surprising because, in addition to the basic advantages of the metal itself, the country is favourably placed for its extensive production in all the required rolled and extruded forms.

The main properties which make aluminium a suitable metal for rolling stock are its light weight, coupled with great strength, corrosion resistance and ease of manufacture. Since the chief aim of designers is to reduce non-revenue-earning weight without sacrificing strength, safety and comfort, aluminium recommends itself with its special advantages. Despite their light weight, aluminium alloys which are recommended for rolling stock have mechanical properties approaching those of steel. Their proof stress is practically the same as the yield strength of steel. Gauge to gauge substitution for steel in the panelling of coaches or plating of wagons is thus recommended, while in the case of mineral wagons, which are liable to exposure and severe corrosion, aluminium of thin-gauge than would be possible with steel is often employed, thereby reducing the initial cost. On account of the corrosion-resistance of aluminium, it requires no painting. However, painting is sometimes specified to bring the vehicles into a uniform colour scheme or to improve the appearance. Due to its corrosion-resistance, aluminium gives greater life to the wagon or coach. In most workshops it is as easily handled as steel; in cases the cost of construction is lower because it is light, and is easy to transport and manipulate. The higher initial price, as compared to steel, is thus justified, because ultimately it may be more economical.

Use in Coaches

The limited adoption of aluminium by the railways in India is only of recent origin. But wherever the metal has been used in this country, the results have been satisfactory. The most outstanding examples are the coaches running on the Kalka-Simla section: they were panelled in aluminium over 25 years ago, but since then the panels have not been changed. Some coaches panelled in aluminium are also running on the coastal routes and showing excellent results. The advantages of aluminium panelling are detailed below:

1. **Saving of Steel:** The railways have been, and still are, experiencing an acute shortage of steel and have had to import a substantial quantity every year to fulfil their production programme. Aluminium alloys are now freely available in India from indigenous production. The use of aluminium as a replacement would not only conserve domestic steel supplies but would also reduce the need for imports.

2. **Reduction of Corrosion:** As is well known, mild steel is subject to heavy corrosion in India, particularly in the coastal areas where the atmosphere is humid and salty. Protection of steel involves expensive chemical anti-corrosion treatment as well as anti-corrosion painting which add to the overall cost of the coach, and even then corrosion takes place. Since aluminium is more resistant to corrosion, the cost of anti-corrosion treatment is saved. The life span of the aluminium

A narrow gauge aluminium panelled coach

panels is also much greater. Further, the maintenance cost is less during the useful life of aluminium panelled rail coaches. This reduces not only the heavy burden on the railway workshops but also the time the coaches have to spend there—thereby increasing their earning capacity.

3. **Decrease in weight:** Aluminium has only one-third the weight of steel, and can be used more extensively for the panelling or the manufacture of complete broad gauge coaches. A weight of about 1½ tons can be saved if panelling alone is used, and about four tons if the complete superstructure is built of aluminium. With lighter coaches, there is not only less wear and tear, but also a reduction in operating costs, which in time increases passenger carrying capacity and brings in more revenue. The reduction in the tare weight of a coach superstructure also lowers the centre of gravity, thus increasing stability. This is an important factor for metre gauge or narrow gauge stock, and in areas where trains have to run through strong winds.

4. **Ease of Manufacture:** From the workshop point of view, aluminium is easier to work with than steel. This increases the life of the tooling and means greater efficiency in assembly work. In certain cases, it reduces assembly man-hours and thus lowers production costs.

Water Tanks

Roof water tanks, fitted in coaches, are normally made from zinc sheets or galvanised (zinc-coated) steel. Zinc sheets have to be imported and

are more expensive than aluminium while the galvanised tanks, which are only about 25 percent cheaper, do not last more than six or eight years. Aluminium tanks are being installed in the Hindustan Aircraft coaches and will also be used in the swiss-designed integral coaches which are being built at Perambur. Standardisation of aluminium tanks will reduce the deadweight of a coach by about 600 lbs and ensure a supply of cleaner and rust-free water for passengers.

Rail coach windows in India are normally made of timber, which easily absorbs moisture and warps, thereby resulting in jammed windows, particularly in the wet season. Steel windows have been tried out, but being heavy (about 10 to 12 lbs.), they are difficult to handle. Aluminium windows have been designed to give the same sturdiness and protection and weigh only 5 or 6 lbs. Besides reducing the deadweight of the coach by about 600 lbs., they require little maintenance, are easier to operate, last much longer and retain their attractive appearance throughout the life of the carriage. Aluminium window louvres, which were fitted to the E.M.U. stock on the Madras suburban services and introduced in 1931, are giving excellent results and have shown no signs of deterioration so far.

Aluminium alloy sheets can be directly secured to the roof structure to replace steel sheets or timber decking. This reduces the weight by about 1,000 lbs. A steel roof often requires frequent repairs or replacement, while timber decking has to be covered. For the latter, thin gauge aluminium sheets can be tried. This method has been extensively used for wagon construction in Switzerland. It has been proved that the interior of aluminium-covered structures remains cool and comfortable because the metal has good heat reflection properties. Aluminium alloy extruded flanged channel sections, bent to the contour of the roof sticks, can replace the heavy steel carlines used at present. Their use saves a weight of approximately 1,500 lbs. a coach and costs only Rs. 250 more.

Over one ton of deadweight can be saved in a coach by replacing the existing method of covering the timber decking with oxychloride flooring compound by a specially developed aluminium floor. This method comprises aluminium dovetail corrugated section floor sheets which are secured

Manchester-Bury stock of 1915-16

A Calcutta Port Commissioners' wagon for carrying wet ash

to the underframe members transversely all along the length of the coach. The upper corrugation grooves are then filled and covered with cork and rubber flooring. This method is being extensively used for the construction of modern stock in Europe and America. Carriages with a similar type of flooring and meant for the suburban electrified systems have been imported into India and are giving excellent service.

Interior Fittings

Many interior fittings of a railway coach can be made with aluminium. The metal has proved effective for bathroom walls, floors and toilet fit-

tings. Aluminium seat frames, luggage racks, ceilings and partitions have adequate strength, and they combine lightness, attractive appearance and good serviceability. These characteristics are of special importance when efforts are being made to give more comfort to the travelling public. Aluminium seat frames are a standard fitting in Metro-Cammel coaches, which are already well-known in India. The low weight of aluminium makes it very suitable for the outer as well as the inner doors, of both the slam and the sliding type. They are generally one-piece castings. Cast aluminium sliding doors have been used in the E.M.U. stock running on the Madras suburban route and at the last inspection, were reported to be as good as new. Similar doors have been used by the British, Dutch and Swiss Federal railways and have given years of trouble-free service. Aluminium buffers are probably the most promising item for extensive use in underframe equipment. The Swiss railways have equipped a large number of coaches with aluminium buffers and have saved a weight of about 600 lbs. a coach.

Alloys of aluminium have been successfully used for plating the floor and body sides of goods and mineral wagons. After satisfactory trials with open mineral aluminium wagons since 1945, the British railways have ordered a large number of them for carrying coal. Hopper wagons have been in service for a considerable period in France, Canada and the United States. In India, 100 wagons were plated with aluminium in 1949-50 and were put in service to examine the suitability of the metal. So far, they have suffered practically no corrosion. In wagons used for the transport of minerals and high density commodities, the maximum load is limited by the permissible gross weight and not by the space. Thus, a saving in tare weight means an increase in payload. An important reason for using aluminium in goods wagons is its permanence and freedom from deterioration even when exposed to corrosive materials like coal, sulphur, ash, etc. This is particularly so in the case of open mineral wagons, the internal surfaces of which cannot be protected and are therefore continuously exposed to the weather, and other corrosive agents, and often the abrasive action of the load carried. In 1953, the Calcutta Port Commissioners plated the bottom panels, including the flooring, of six open type wagons with aluminium. These were used for the transport of wet coal ash, which has a high corrosive effect on steel and limits its maximum life to 1½ or two years. A recent examination after over two years of constant service has revealed no signs of deterioration in the aluminium plates, which are practically as good as new, whereas the steel plates are already showing signs of corrosion.

Comparative Costs

The complete plating of a wagon with aluminium costs initially about Rs. 1,000 to 1,200 more, but reduces its tare weight by one ton, thereby increasing the payload capacity by the same margin. This is an important advantage in carrying mineral traffic where, to meet the needs of industry, the railways have had to permit overloading, which has increased wear and tear and involved higher maintenance expenses. The use of aluminium even for the lower panels and flooring alone reduces maintenance costs considerably. Experience has shown that corrosion first starts in these places. The saving can be achieved by spending approximately Rs. 550 extra a wagon. The substitution of aluminium for steel in the roofs of covered wagons not only obviates the need for frequent replacement, which is unavoidable in the case of steel because it corrodes rapidly, but also permits an additional payload of 5 cwt. at an extra cost of about Rs. 200 only. Steel wagons are known to have a limited life and need to be withdrawn from service regularly for maintenance and repairs. If wagons can be used for longer periods, their efficiency increases. An additional feature is that painting is not necessary, or can be confined to the parts which remain in steel. The initial extra cost of plating the wagons with this metal is as low as Rs. 1,200 for every ton of weight saved. This capital investment produces a three-fold return; a marked reduction in maintenance; an improvement in wagon availability; and a reduction in operating costs a ton-mile. Moreover, when the vehicle has reached the end of its service life the aluminium still has a high scrap value of over Rs. 1,000.

Cattle trucks have to endure very difficult conditions in service, not only because harsh treatment is received from the hoofs and horns of animals but also on account of the severe corrosion caused by animal excreta and the need for frequent washing. Wood is often used, although its absorbent nature reduces its durability and makes it rather difficult to keep clean. Aluminium successfully resists the corrosive effect of the animal excreta and, being non-absorbent, is hygienic, easily cleaned and durable.

ONLY A CLERK—but still part owner!

*This is Mr. Sen...part owner of a jute mill,
a coal mine, an insurance company
and a couple of tea gardens.
One would imagine that Mr. Sen
is a rich man. But he is not...*

LET'S HEAR WHAT HE HAS TO SAY ABOUT HIMSELF:

"I am a clerk in a Mercantile Organisation. I have invested my savings in the shares of a number of industrial organisations. My money is safe, and it is earning me much-needed *extra* income in dividends. Besides, it gives me a feeling of pride that my money, by helping to build more mills and factories, produce more, and provide more employment, is directly assisting in the implementation of some of the industrial schemes undertaken in the Second Five Year Plan."

Today, hundreds of thousands of small men like Mr. Sen—office workers, traders, professional people—have acquired a vital stake in the System of Free Competitive Enterprise by investing their savings in the shares of industrial concerns. Free Enterprise owes its strength and efficiency, its

stimulus for continual progress and expansion of national trade and investment, to this fact of public participation and public ownership and scrutiny. Free Competitive Enterprise serves the small man...makes possible a continually improving standard of living for all.
